HOW TO USE THIS AUTOMATIC TRANSAXLE REPAIR MANUAL

0100T–01

GENERAL INFORMATION

1. GENERAL DESCRIPTION

(a) This manual is made in accordance with SAE J2008.

(b) Repair operations can be separated mainly in the following 3 processes:
1. Diagnosis
2. Removing and Installing, Replacing, Disassembling, Installing and Checking, Adjusting
3. Final Inspection

(c) This text explains the 1st process of ”Diagnosis” (placed in the ”Diagnostics” section) and the 2nd process, ”Removing & Installing, Replacing, Disassembling, Installing & Checking, Adjusting”, but the 3rd process of ”Final Inspection” are omitted.

(d) The following essential operations are not written down in the this manual, these operations, however, must be done in the practical situation.
(1) Operation with a jack and lift
(2) Cleaning of a removed part when necessary
(3) Visual check

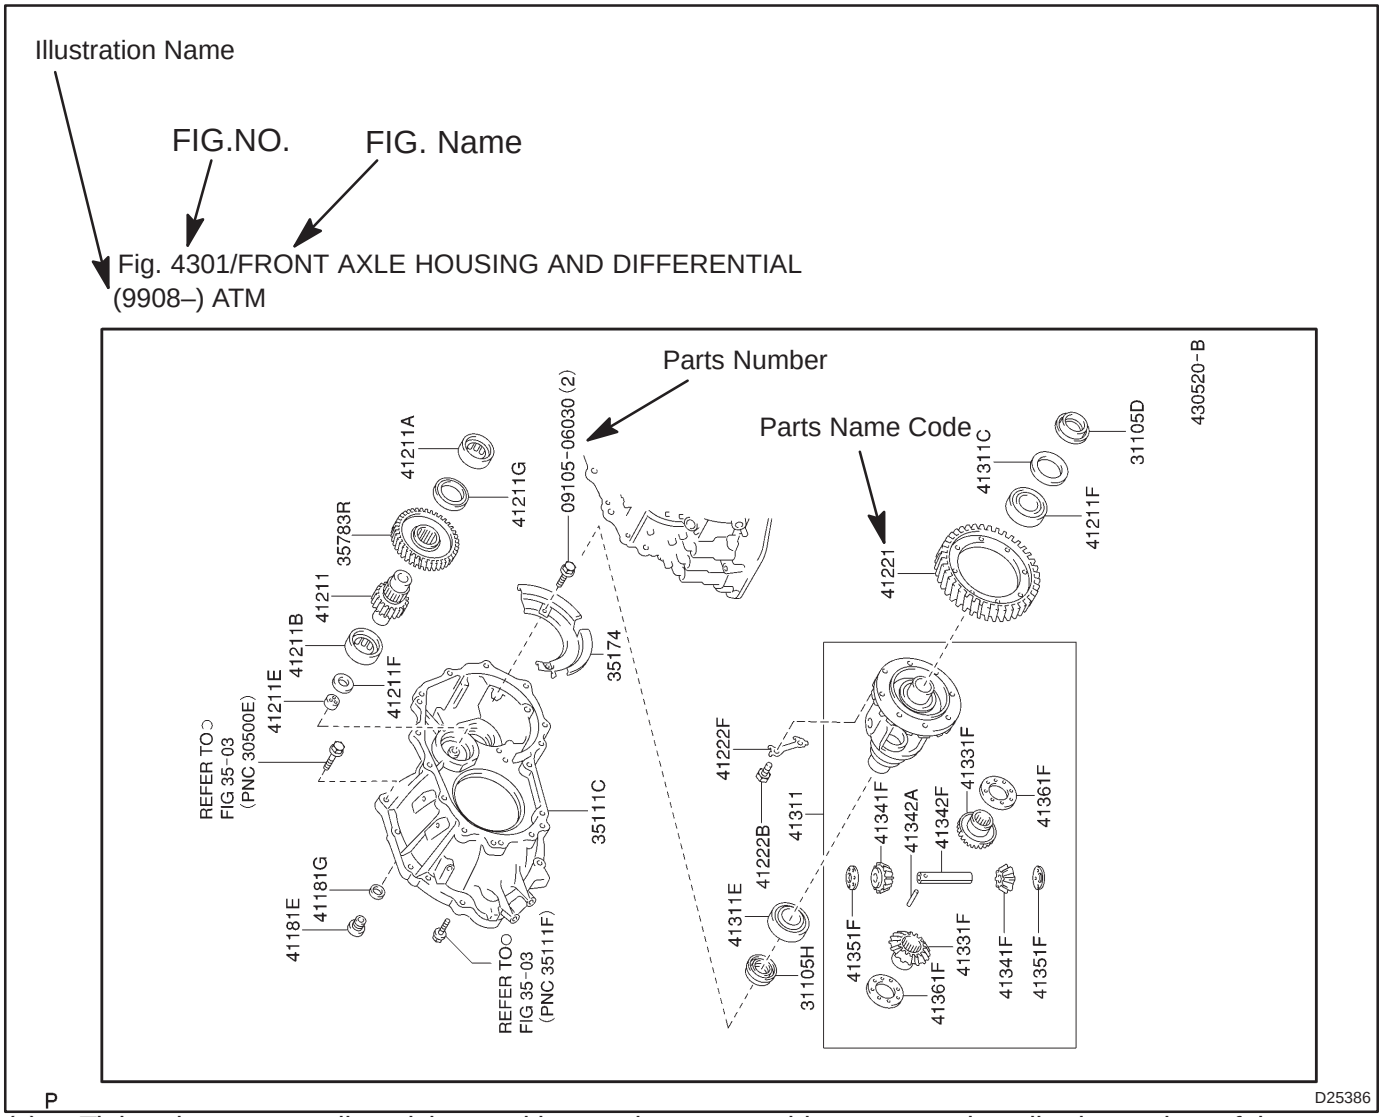
2. INDEX

(a) An INDEX is provided on the first to page XX of each section to the guide you to the item to be repaired.

3. PREPARATION

(a) Use of special service tools (SST) and special service materials (SSM) may be required, depending on the repairing condition. Be sure to use SST and SSM when they are required and follow the working procedure properly. A list of SST and SSM is in the Preparation section in this manual.

4. REPAIR PROCEDURES



(a) Component drawing is placed as ”Component section.” It enables you to understand the fitting condition of the components.

(b) Illustrations of the parts catalog is placed as the component drawing. (In the illustration, parts code of the parts catalog is described.)

NOTICE:

The parts code described in this text is as of August, 2000. There is a case where the parts code or ten digits of the parts No. may change, so be sure to place an order using the parts catalog.

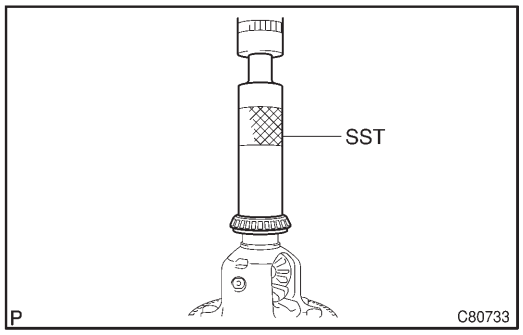
Example:

(c) Tightening torque, oil applying position, and non–reusable parts are described as points of the procedure.

NOTICE:

In case that the above items can be indicated only by an illustration, component drawing which describes the points is placed. In that case, all the information such as torque, oil, etc. are described in the illustration.

(d) Installing procedure of the operation items is performed in the reverse procedure of the removing and only the case with points is described.



(e) Only items with points are described in the procedure, and the operational portion and content are placed using an illustration. In the explanations, details of the operational method, standard value and notice are placed.

(f) There may be a case where the illustrations are used in common with similar models. Therefore there is a case where the details are different from one of the actual vehicle.

(g) The procedures are presented in a step–by–step format:
  (1) The illustration shows what to do and where to do it.
  (2) The task heading tells what to do.
  (3) The detailed text tells how to perform the task and gives other information such as specifications and warnings.

Example:

Illustration: what to do and where

Task heading: what to do

87. INSTALL FR DIFFERENTIAL CASE FRONT TAPERED ROLLER BEARING

[41311 / 4301] ← *Part name code / FIG. NO.*

(a) Using SST and a press, install the front differential case tapered roller bearing front inner race to the differential case.

SST 09316–60011 (09316–00011)

Detailed text: how to do task

Set part No. *Component part No.*

P D25387

HINT:

This format provides an experienced technician with a FAST TRACK to the information needed. The upper case task heading can be read at a glance when necessary, and the text below it provides detailed information. Important specifications and warnings always stand out in bold type.

5. SERVICE SPECIFICATIONS

(a) Specifications are presented in bold type throughout the text where needed. You never have to leave the procedure to look up your specifications. They are also found in the Service Specifications section for a quick reference.

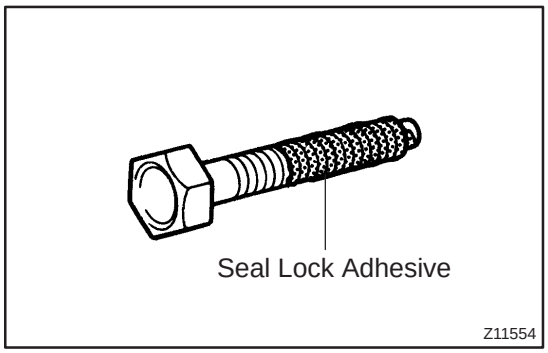
6. TERMS DEFINITION

CAUTION	Indicate the possibility of injury to you or other people.
NOTICE	Indicate the possibility of damage to the components being repaired.
HINT	Provide additional information to help you perform the repair efficiently.

7. SI UNIT

(a) The UNITS given in this manual are primarily expressed according to the SI UNIT (International System of Unit), and alternately expressed in the metric system and in the English System.

Example:



Torque: 30 N·m (310 kgf·cm, 22 ft·lbf)

REPAIR INSTRUCTION FOR AUTOMATIC TRANSAXLE REPAIR MANUAL

0100U–01

PRECAUTION

1. BASIC REPAIR HINT

(a) PRECOATED PARTS

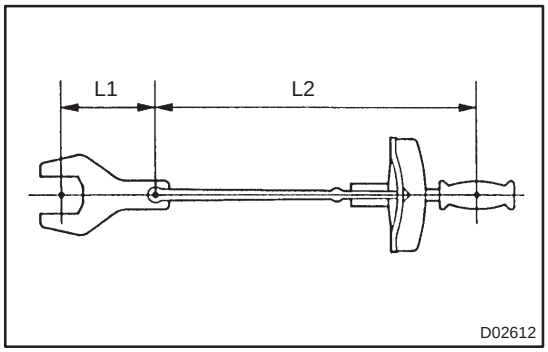
(1) Precoated parts are bolts, nuts, etc. that are coated with a seal lock adhesive at the factory.

(2) If a precoated part is retightened, loosened or caused to move in any way, it must be recoated with the specified adhesive.

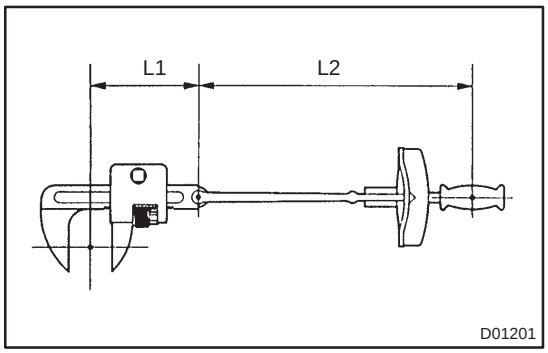
(3) When reusing precoated parts, clean off the old adhesive and dry with compressed air. Then apply the specified seal lock adhesive to the bolt, nut or threads.

NOTICE:

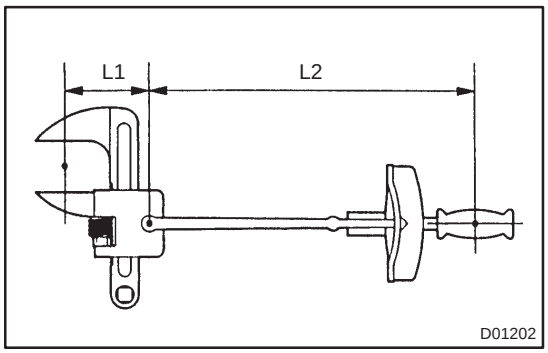
Do the torque checking with the lower limit value of the torque tolerance.



(4) Depending on the seal lock agent to apply, there may be a case where it is necessary to leave it for a specified time until it hardens.



(b) GASKETS



When necessary, use a sealer on gaskets to prevent leaks.

(c) BOLTS, NUTS AND SCREWS

Carefully observe all specifications for bolt tightening torques. Always use a torque wrench.

(d) TORQUE WHEN USING EXTENSION TOOL WITH TORQUE WRENCH

(1) In case of tightening by extending the entire length of the torque wrench combined with SST or tool, if you tighten until the reading of the torque wrench reached the specified torque value, the actual torque becomes excessive.

(2) In this text, only the specified torque is described. In case of using SST or extension tool, find the reading of the torque wrench by the formula.

(3) Formula T'=T x L2/(L1 + L2)

T'	Reading of torque wrench {N·m (kgf·cm, ft·lbf)}
T	Torque {N·m (kgf·cm, ft·lbf)}
L1	Length of SST or tool (cm)
L2	Length of torque wrench (cm)

TERMS FOR AUTOMATIC TRANSAXLE REPAIR MANUAL

0100V–01

ABBREVIATIONS USED IN THIS MANUAL

Abbreviations	Meaning
ASSY	Assembly
ATF	Automatic Transmission Fluid
B_2	2nd Brake
C_2	Direct Clutch
C_3	Reverse Clutch
FIPG	Formed In Place Gasket
O/D	Overdrive
SST	Special Service Tools
1ST	First
2ND	Second

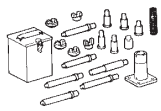
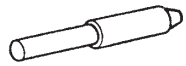
GLOSSARY OF SAE AND TOYOTA(LEXUS) TERMS

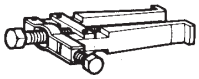
This glossary lists all SAE–J1930 terms and abbreviations used in this manual in compliance with SAE recommendations, as well as their Toyota equivalents.

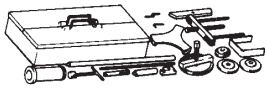
SAE ABBREVIATIONS	SAE TERMS	TOYOTA TERMS ( )—ABBREVIATIONS
A/C	Air Conditioning	Air Conditioner
ACL	Air Cleaner	Air Cleaner
AIR	Secondary Air Injection	Air Injection (AI)
AP	Accelerator Pedal	–
B+	Battery Positive Voltage	+B, Battery Voltage
BARO	Barometric Pressure	–
CAC	Charge Air Cooler	Inter cooler
CARB	Carburetor	Carburetor
CFI	Continuous Fuel Injection	–
CKP	Crankshaft Position	Crank Angle
CL	Closed Loop	Closed Loop
CMP	Camshaft position	Cam Angle
CPP	Clutch Pedal Position	–
CTOX	Continuous Trap Oxidizer	–
CTP	Closed Throttle Potion	–
DFI	Direct Fuel Injection (Diesel)	Direct Injection (DI)
DI	Distributor Ignition	–
DLC1 DLC2 DLC3	Data Link Connector 1 Data Link Connector 2 Data Link Connector 3	1: Check Connector 2: Total Diagnosis Communication Link (TDCL) 3: OBD II Diagnostic Connector
DTC	Diagnostic Trouble Code	Diagnostic Code
DTM	Diagnostic Test Mode	–
ECL	Engine Control Level	–
ECM	Engine Control Module	Engine ECU (Electronic Control Unit)
ECT	Engine Control Temperature	Coolant Temperature, Water Temperature (THW)
EEPROM	Electrically Erasable Programmable Read Only memory	Electrically Erasable Programmable Read Only memory (EEPROM), Erasable Programmable Read Only memory (EPROM)
EFE	Early Fuel Evaporation	Cold Mixture Heater (CMH), Heat Control Valve (HCV)
EGR	Exhaust Gas Recirculation	Exhaust Gas Recirculation (EGR)
EI	Electronic Ignition	Distributorless Ignition (DI)
EM	Engine Modification	Engine Modification (EM)
EPROM	Erasable Programmable Read Only Memory	Programmable Read Only Memory (PROM)
EVAP	Evaporative Emission	Evaporative Emission Control (EVAP)
FC	Fan Control	–
FEEPROM	Flash Electrically Erasable Programmable Read Only Memory	–
FEPROM	Flash Erasable Programmable Read Only Memory	–
FF	Flexible Fuel	–
FP	Fuel Pump	Fuel Pump
GEN	Generator	Alternator
GND	Ground	Ground (GND)
HO2S	Heated Oxygen Sensor	Heated Oxygen Sensor (HO2S)
IAC	Idol Air Control	Idol Speed Control (ISC)
IAT	Intake Air Temperature	Intake or Inlet Air Temperature
ICM	Ignition Control Module	–
IFI	Indirect Fuel Injection	Indirect Injection
IFS	Inertia Fuel–Shutoff	–

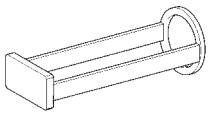
ISC	Idle Speed Control	–
KS	Knock Sensor	Knock Sensor
MAF	Mass Air Flow	Air Flow Meter
MAP	Manifold Absolute Pressure	Manifold Pressure Intake Vacuum
MC	Mixture Control	Electric Bleed Air Control Valve (EBCV) Mixture Control Valve (MCV) Electric Air Control Valve (EACV)
MDP	Manifold Differential Pressure	–
MFI	Multiport Fuel Injection	Electronic Fuel Injection (EFI)
MIL	Malfunction Indicator Lamp	Check Engine Light
MST	Manifold Surface temperature	–
MVZ	Manifold Vacuum Zone	–
NVRAM	Non–Volatile Random Access Memory	–
O2S	Oxygen Sensor	Oxygen Sensor, O_2 Sensor (O_{2S})
OBD	On–Board Diagnostic	On–Board Diagnostic (OBD)
OC	Oxidation Catalytic Converter	Oxidation Catalyst Converter (OC), CC_0
OP	Open Loop	Open Loop
PAIR	Pulsed Secondary Air Injection	Air Suction (AS)
PCM	Powertrain Control Module	–
PNP	Park/Neutral Position	–
PROM	Programmable Read Only Memory	–
PSP	Power Steering Pressure	–
PTOX	Periodic Trap Oxidizer	Diesel Particulate Filter (DPF) Diesel Particulate Trap (DPT)
RAM	Random Access Memory	Random Access Memory (RAM)
RM	Relay Module	–
ROM	Read Only Memory	Read Only Memory (ROM)
RPM	Engine Speed	Engine Speed
SC	Supercharger	Supercharger
SCB	Supercharger Bypass	–
SFI	Sequential Multiport Fuel Injection	Electronic Fuel Injection (EFI), Sequential Injection
SPL	Smoke Puff Limiter	–
SRI	Service Reminder Indicator	–
SRT	System Readiness Test	–
ST	Scan Tool	–
TB	Throttle Body	Throttle Body
TBI	Throttle Body Fuel Injection	Single Point Injection Central Fuel Injection (Ci)
TC	Turbocharger	Turbocharger
TCC	Torque Converter Clutch	Torque Converter
TCM	Transmission Control Module	Transmission ECU (Electronic Control Unit)
TP	Throttle Position	Throttle Position
TR	Transmission Range	–
TVV	Thermal Vacuum Valve	Bimetallic Vacuum Switching Valve (BVSV) Thermostatic Vacuum Switching Valve (TVSV)
TWC	Three–Way Catalytic Converter	Three–Way Catalytic (TWC) CC_{RO}
TWC+OC	Three–Way + Oxidation Catalytic Converter	$CC_R + CC_O$
VAF	Volume Air Flow	Air Flow Meter
VR	Voltage Regulator	Voltage Regulator
VSS	Vehicle Speed Sensor	Vehicle Speed Sensor (Read Switch Type)
WOT	Wide Open Throttle	Full Throttle

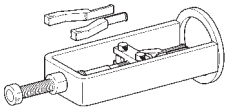


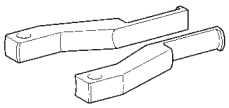


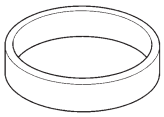












WU–OC	Warm Up Oxidation Catalytic Converter	–
WU–TWC	Warm Up Three–Way Catalytic Converter	Manifold Converter
3GR	Third Gear	–
4GR	Fourth Gear	–

Pump body bushing inside diameter	STD	38.113 – 38.138 mm (1.50050 – 1.50149 in.)
	Max	38.138 mm (1.50149 in.)
Oil seal in depth		0 ± 0.5 mm (0 ± 0.020 in.)
Stator shaft bushing inside diameter	STD	21.500 – 21.526 mm (0.84646 – 0.84748 in.)
	Max	21.526 mm (0.84748 in.)

FORWARD CLUTCH		
Pack clearance		1.406 – 1.806 mm (0.0553 – 0.0711 in.)
Piston return spring free length		21.69 mm (0.8540 in.)
Flange thickness	Mark	
	–	3.00 mm (0.1181 in.)
	1	3.20 mm (0.1260 in.)
	2	3.40 mm (0.1339 in.)
	3	3.60 mm (0.1417 in.)

DIRECT AND REVERSE CLUTCH		
Pack clearance	Direct clutch	0.62 – 1.02 mm (0.0244 – 0.0402 in.)
	Reverse clutch	0.86 – 1.26 mm (0.0339 – 0.0496 in.)
Piston return spring free length (Direct clutch)		32.9 mm (1.2953 in.)
Flange thickness (Direct clutch)	Mark	
	–	3.0 mm (0.118 in.)
	1	3.2 mm (0.126 in.)
	2	3.4 mm (0.134 in.)
	3	3.6 mm (0.142 in.)
Flange thickness (Reverse clutch)	Mark	
	–	3.0 mm (0.118 in.)
	1	3.2 mm (0.126 in.)
	2	3.4 mm (0.134 in.)
	3	3.6 mm (0.142 in.)

1ST AND REVERSE BRAKE		
Pack clearance		0.806 – 1.206 mm (0.0317 – 0.0475 in.)

Piston return spring free length		13.96 mm (0.5496 in.)
Flange thickness	Mark	
	–	3.4 mm (0.134 in.)
	1	3.6 mm (0.142 in.)
	2	3.8 mm (0.150 in.)
	3	4.0 mm (0.157 in.)

2ND COAST AND O/D BRAKE		
Pack clearance (O/D brake)		2.091 – 2.491 mm (0.0823 – 0.0981 in.)
Piston return spring free length (O/D brake)		17.88 mm (0.7039 in.)
Flange thickness	Mark	
	4	4.0 mm (0.1575 in.)
	5	4.2 mm (0.1654 in.)
	6	4.4 mm (0.1732 in.)
	7	4.6 mm (0.1811 in.)

2ND BRAKE		
Pack clearance		0.847 – 1.247 mm (0.0333 – 0.0491 in.)
Piston return spring free length		14.65 mm (0.5768 in.)
Flange thickness	Mark	
	–	3.0 mm (0.118 in.)
	1	3.2 mm (0.126 in.)
	2	3.4 mm (0.134 in.)
	3	3.6 mm (0.142 in.)

MANUAL VALVE LEVER SHAFT	
Manual valve lever shaft oil seal in depth	0 ± 0.5 mm (0 ± 0.020 in.)

INTERMEDIATE SHAFT	
Intermediate shaft clearance	0.204 – 0.966 mm (0.008 – 0.038 in.)

INPUT SHAFT	
End play	0.37 – 1.29 mm (0.0146 – 0.0508 in.)

ACCUMULATOR

Spring	Free length/Outer diameter	Color
B_2	66.90 mm (2.6339 in.) / 15.50 mm (0.6102 in.)	Green
C_2	66.90 mm (2.6339 in.) / 17.20 mm (0.6772 in.)	–
C_3	80.20 mm (3.1575 in.) / 18.70 mm (0.7362 in.)	–

TRANSAXLE REAR COVER ASSY	
Needle roller bearing clearance	25.2 mm (0.992 in.)

TRANSMISSION VALVE BODY ASSY		
Valve body assy installation bolt length	A	32 mm (1.26 in.)
	B	22 mm (0.87 in.)
	C	55 mm (2.17 in.)
	D	45 mm (1.77 in.)
Detente spring installation bolt length	A	14 m m (0.55 in.)
	B	45 mm (1.77 in.)

COUNTER DRIVE GEAR	
Rotating torque	0.20 – 0.49 N·m (2 – 5 kgf·cm, 2 – 4 in.·lbf)

DIFFERENTIAL	
Differential drive pinion plug clearance	2.5 – 2.6 mm (0.0984 – 0.1023 in.)

Side gear backlash		0.05 – 0.20 mm (0.0020 – 0.0079 in.)
Thrust washer thickness	Mark	
	–	0.95 mm (0.0374 in.)
	–	1.00 mm (0.0394 in.)
	–	1.05 mm (0.0413 in.)
	–	1.10 mm (0.0433 in.)
	–	1.15 mm (0.0453 in.)
	–	1.20 mm (0.0472 in.)
Preload (at starting)		
New bearing		0.98 – 1.57 N·m (10.0 – 16.0 kgf·cm, 8.7 – 13.9 in.·lbf)
Used bearing		0.49 – 0.78 N·m (5.0 – 8.0 kgf·cm, 4.3 – 6.9 in.·lbf)
Shim thickness	Mark	
	01	1.90 mm (0.0748 in.)
	02	1.95 mm (0.0768 in.)
	03	2.00 mm (0.0787 in.)
	04	2.05 mm (0.0807 in.)

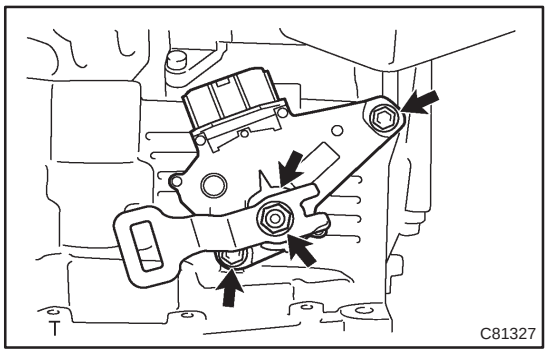
TORQUE SPECIFICATION

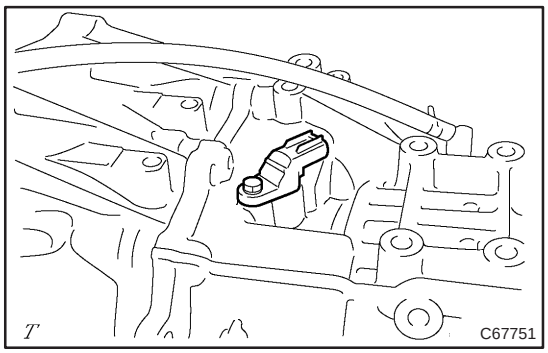
Part Tightened		N·m	kgf·cm	ft·lbf
Parking lock pawl bracket x Transaxle case		20	200	14
Counter drive gear nut x Transaxle case		280	2,855	207
Transaxle rear cover assy x Transaxle case		24.5	250	18
Oil pump assy x Transaxle case		22	220	16
Bearing lock plate x Transaxle case		11	110	8
Transaxle housing oil separator x Transaxle case		9.8	100	7
Transaxle housing x Transaxle case	Bolt A	29	300	21
	Bolt B	22	220	16
Transmission wire x Transaxle case		5.4	55	48 in.·lbf
Transmission valve body assy x Transaxle case		11	110	8
Valve body oil strainer assy x Transaxle case		11	110	8
Automatic transaxle oil pan sub–assy x Transaxle case		7.8	80	71 in.·lbf
Transaxle case No. 1 plug x Transaxle		7.4	75	65 in.·lbf
Oil cooler tube union (Inlet oil cooler union) x Transaxle		27	275	20
Oil cooler tube union (Outlet oil cooler union) x Transaxle		27	275	20
Transmission revolution sensor x Transaxle		5.4	55	48 in.·lbf
Neutral start switch x Nut		6.9	70	61 in.·lbf
Neutral start switch x Transaxle		5.4	55	48 in.·lbf
Neutral start switch x Control shaft lever		13	130	10
Stator shaft assy x Oil pump body		9.8	100	87 in.·lbf
Transaxle rear cover plug x Transaxle rear cover		7.4	75	65 in.·lbf
Transmission 3 way solenoid assy x Transmission valve body		11	110	8
Transmission 3 way solenoid assy No. 2 x Transmission valve body		11	110	8
Lock up control solenoid assy x Transmission valve body		11	110	8
Transmission 3 way solenoid assy No. 3 x Transmission valve body		11	110	8
Line pressure control solenoid assy x Transmission valve body		11	110	8
TRANSMISSION VALVE BODY ASSY (U34#E Series)–OVERHAUL–TIGHTEN BOLT		11	110	8
Valve body assy x Transaxle case	8 mm bolt	6.6	67	58 in.·lbf
	10 mm bolt	11	110	8
Differential ring gear x Differential case		88	900	65



AUTOMATIC TRANSAXLE ASSY (U34#E Series)

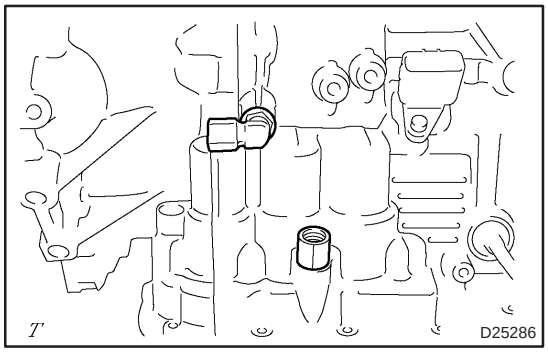
4002G–01

OVERHAUL



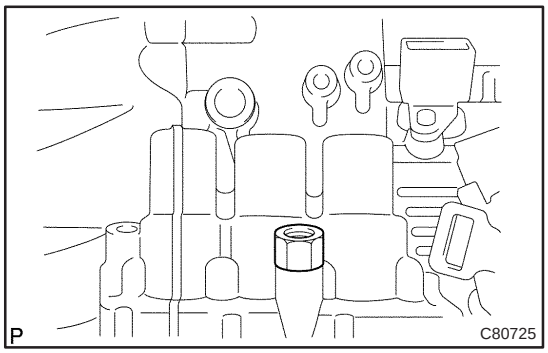
1. REMOVE SPEEDOMETER (ATM) SENSOR
[83181E / 3505]

2. REMOVE SPEEDOMETER DRIVEN (ATM) GEAR SUB–ASSY
[33403G / 3505]



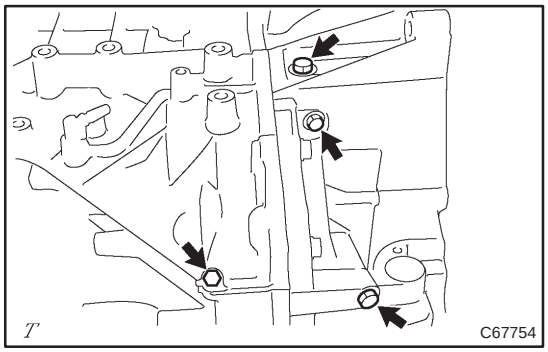
3. REMOVE NEUTRAL START SWITCH ASSY
[84540G / 3513]

(a) Remove the nut, washer and control lever.
(b) Using a screwdriver, unstake the lock nut and remove the lock washer and lock nut.
(c) Remove the 2 bolts and pull out the neutral position switch.



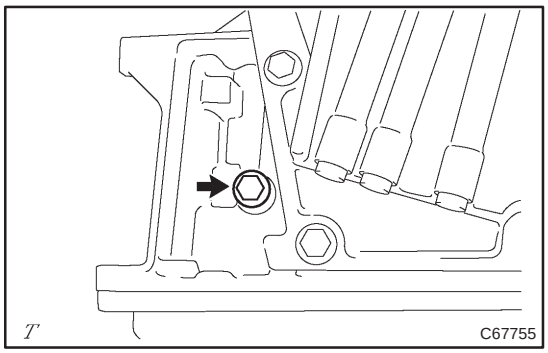
4. REMOVE TRANSMISSION REVOLUTION SENSOR
[89413E / 3512]

(a) Remove the bolt and transaxle revolution sensor.



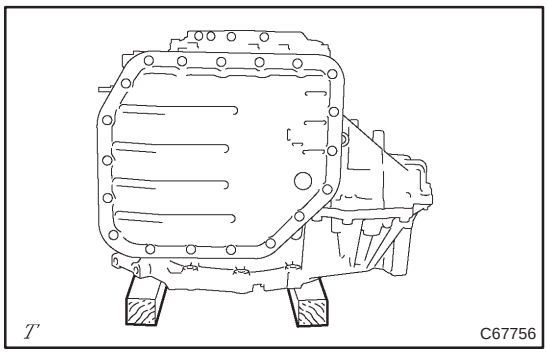
5. REMOVE OIL COOLER TUBE UNION(OUTLET OIL COOLER UNION)
[32921C / 3514]

(a) Remove the oil cooler tube union.
(b) Remove the O–ring from the oil cooler tube union.



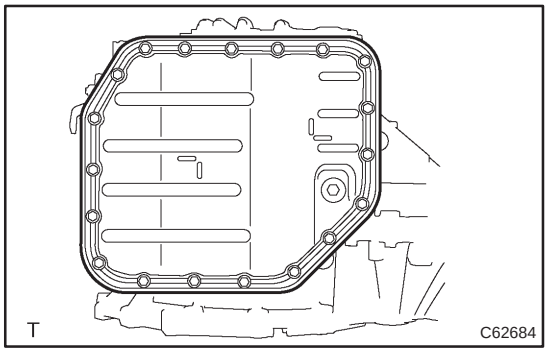
6. REMOVE OIL COOLER TUBE UNION(INLET OIL COOLER UNION)
[32921C / 3514]

(a) Remove the oil cooler tube union.
(b) Remove the O–ring from the oil cooler tube union.



7. REMOVE TRANSAXLE CASE NO.1 PLUG
[35104Q / 3503]

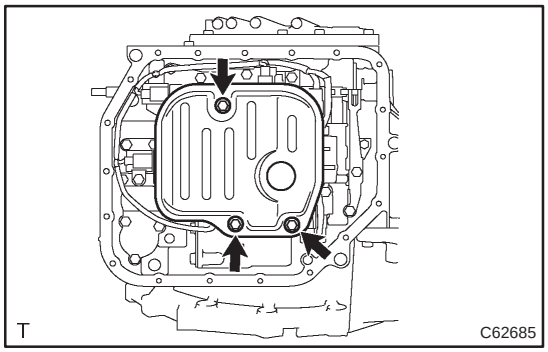
(a) Remove the 4 transaxle case No.1 plugs from the transaxle housing and transaxle case.



(b) Remove the transaxle case No.1 plug from the transaxle case.

(c) Remove the 5 O–rings from the transaxle cases.

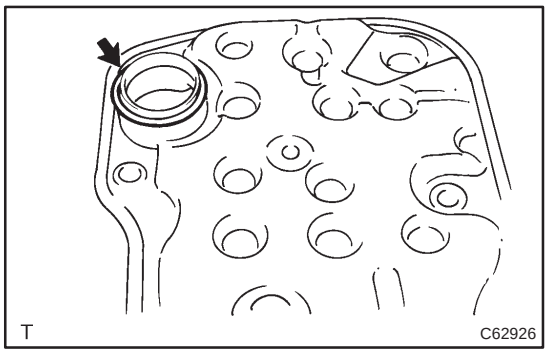
8. FIX AUTOMATIC TRANSAXLE ASSY
[30500 / 3501]



9. REMOVE AUTOMATIC TRANSAXLE OIL PAN SUB–ASSY
[35106D / 3503]

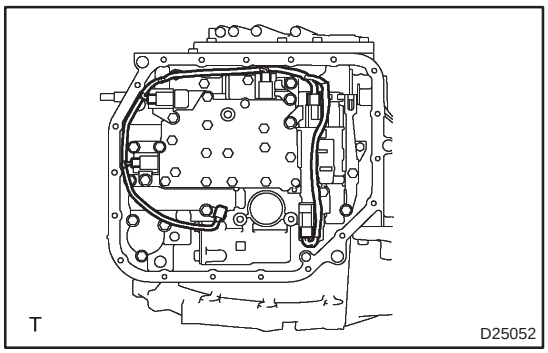
(a) Remove the drain plug and gasket from the oil pan.

(b) Remove the 19 bolts.



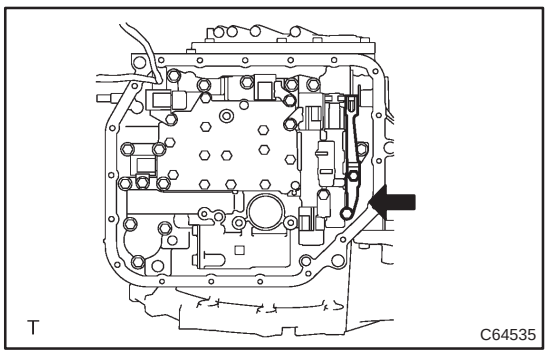
(c) Remove the oil pan and gasket.

10. REMOVE AUTOMATIC TRANSAXLE OIL PAN GASKET
[35168A / 3503]

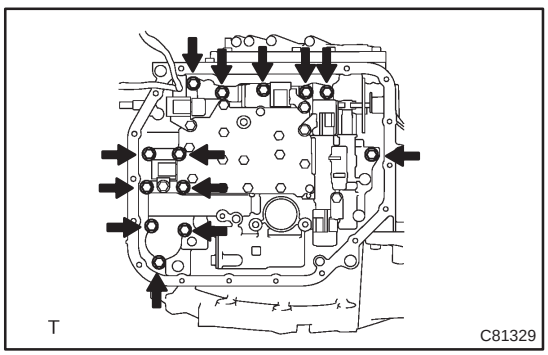


11. REMOVE VALVE BODY OIL STRAINER ASSY [35330 / 3512]

(a) Remove the 3 bolts and oil strainer assy.

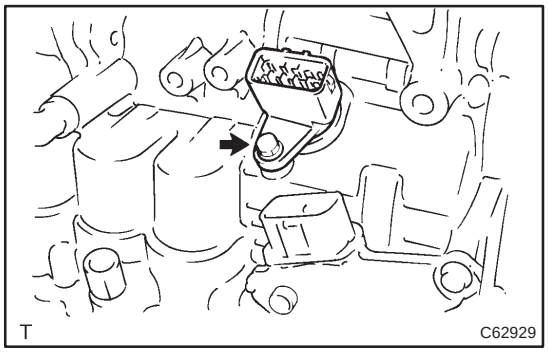


(b) Remove the O–ring from the oil stainer.



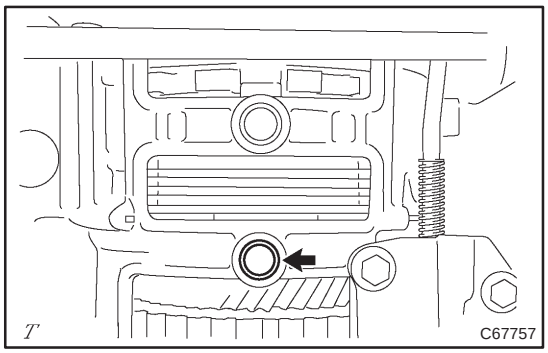
12. REMOVE TRANSMISSION VALVE BODY ASSY [35410 / 3512]

(a) Disconnect the 5 solenoid connectors.

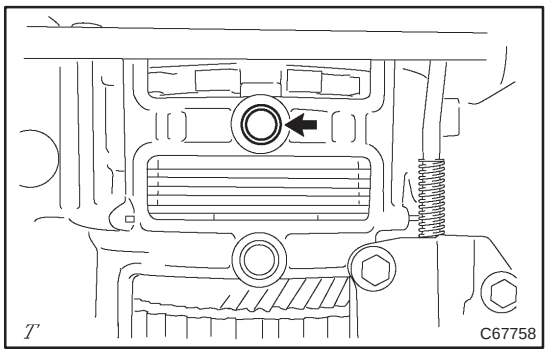


(b) Remove the bolt, lock plate and ATF temperature sensor.

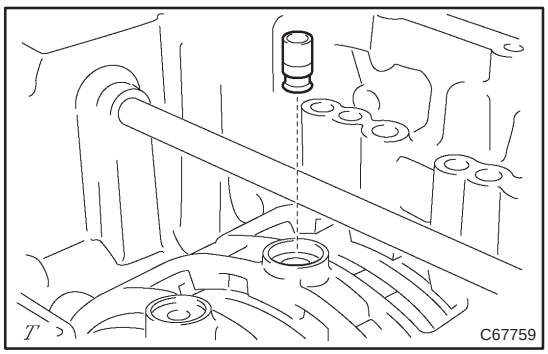
(c) Remove the 2 bolts, detente spring cover and detente spring.



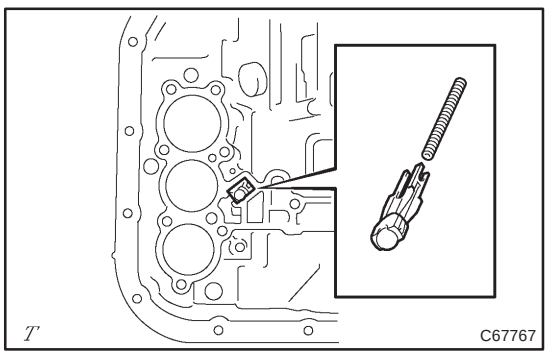
(d) Remove 13 bolts and valve body assy.



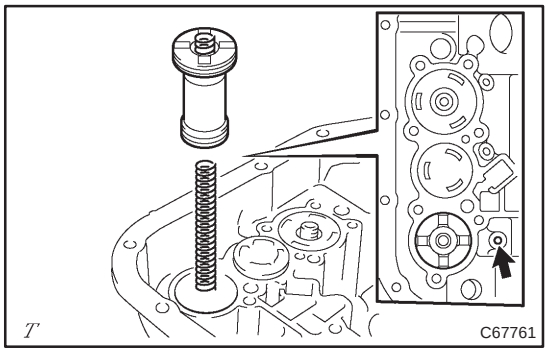
13. REMOVE TRANSMISSION WIRE
[82125J / 3512]



(a) Remove the bolt.
(b) Remove the transmission wire from the transaxle case.



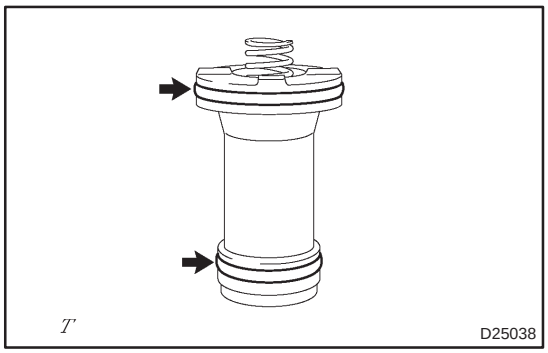
14. REMOVE TRANSAXLE CASE 2ND BRAKE GASKET
[35149B / 3503]



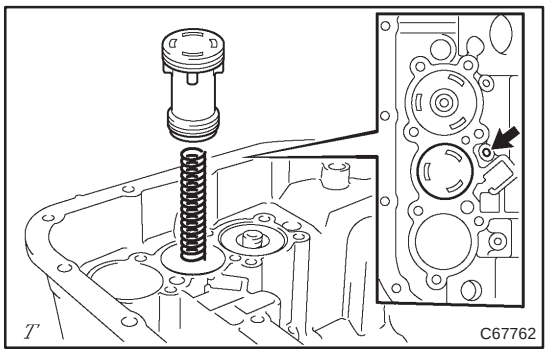
15. REMOVE TRANSAXLE CASE GASKET
[35145C / 3503]

16. REMOVE BRAKE DRUM GASKET
[35159 / 3503]

17. REMOVE CHECK BALL BODY
[35251 / 3512]



18. REMOVE B–2 ACCUMULATOR PISTON [35423 / 3512]

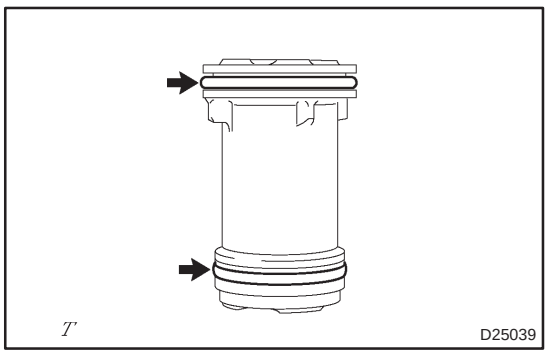


(a) Apply compressed air (392 kPa, 4.0 kgf·cm^2, 57 psi) to the oil hole and remove the B_2 accumulator piston and spring. Remove the spring.

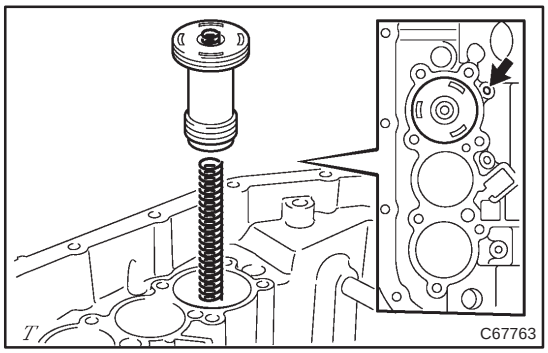
NOTICE:

- **Blowing off the air may cause the piston's jump–out. When removing the piston, holding it with your hand using a waste cloth.**
- **Take care not to splash ATF when air–blowing.**

(b) Remove the 2 O–rings from the B_2 accumulator piston.



19. REMOVE C–3 ACCUMULATOR PISTON [35426D / 3512]

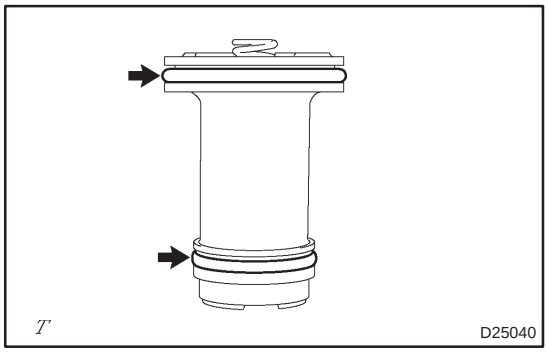


(a) Apply compressed air (392 kPa, 4.0 kgf·cm^2, 57 psi) to the oil hole and remove the C_3 accumulator piston and spring. Remove the spring.

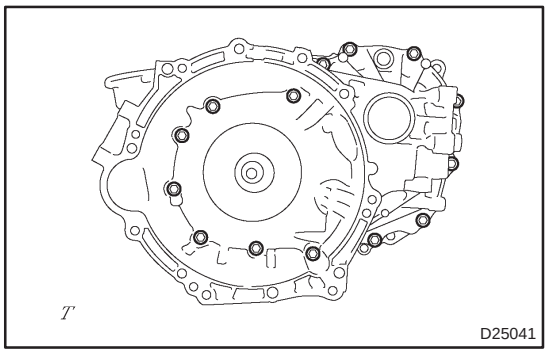
NOTICE:

- **Blowing off the air may cause the piston's jump–out. When removing the piston, holding it with your hand using a waste cloth.**
- **Take care not to splash ATF when air–blowing.**

(b) Remove the 2 O–rings from the C_3 accumulator piston.



20. REMOVE C–2 ACCUMULATOR PISTON [35425A / 3512]

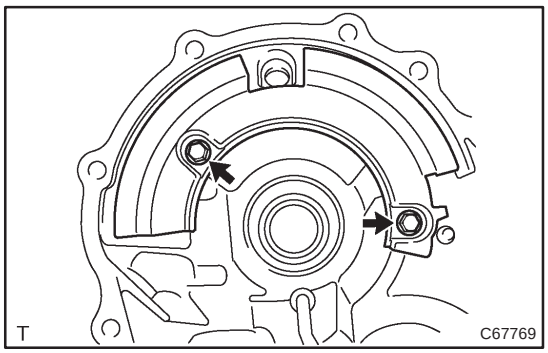


(a) Apply compressed air (392 kPa, 4.0 kgf·cm^2, 57 psi) to the oil hole and remove the C_2 accumulator piston and spring. Remove the spring.

NOTICE:

- **Blowing off the air may cause the piston's jump–out. When removing the piston, holding it with your hand using a waste cloth.**
- **Take care not to splash ATF when air–blowing.**

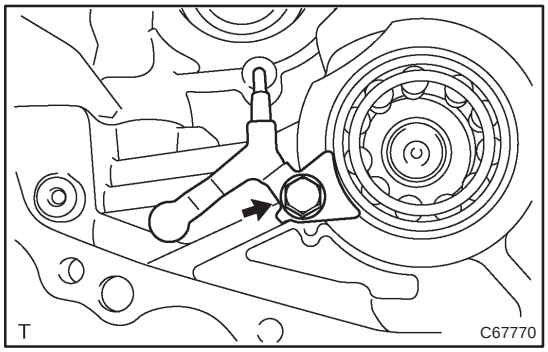
(b) Remove the 2 O–rings from the C_2 accumulator piston.



21. REMOVE TRANSAXLE HOUSING [35111C / 4301]

(a) Remove the 14 bolts.

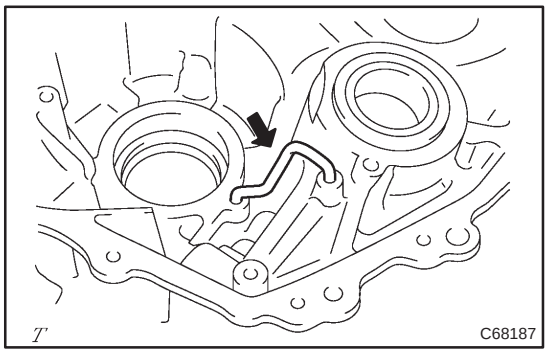
(b) Tap on the circumference of the transaxle housing with a plastic hammer to remove the transaxle housing from the transaxle case.



NOTICE:

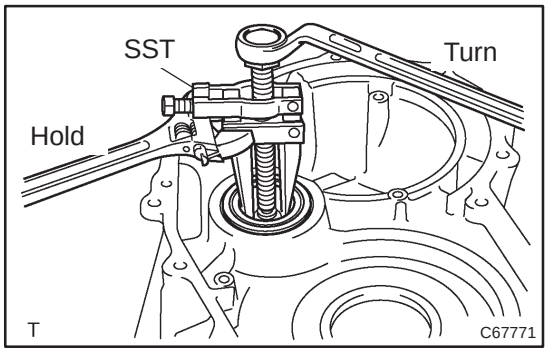
Differential gear assembly may be accidentally removed when the transaxle housing is removed.

22. REMOVE TRANSAXLE HOUSING OIL SEPARATOR [35174 / 4301]



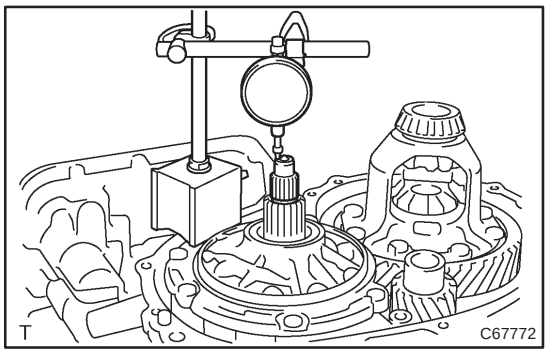
(a) Remove the 2 bolts and transaxle housing oil separator from the transaxle housing.

23. REMOVE BEARING LOCK PLATE [33326E / 3510]



(a) Remove the bolt.

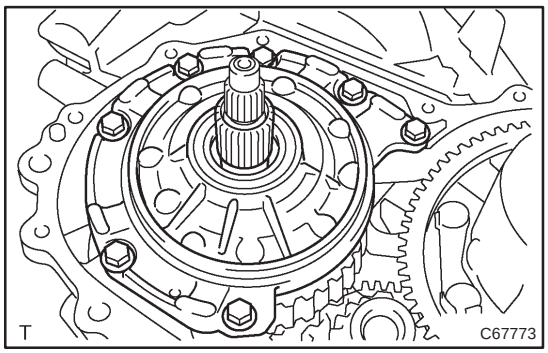
(b) Remove the bearing lock plate.



24. REMOVE DIFFERENTIAL GEAR LUBE APPLY TUBE [35882D / 3510]

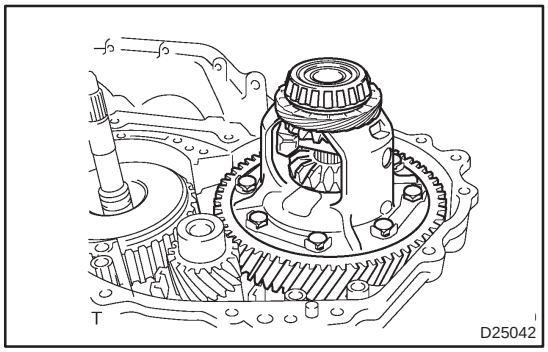
(a) Remove the bolt and differential gear lube apply tube from the transaxle housing.

25. REMOVE FRONT DRIVE PINION FRONT TAPERED ROLLER BEARING
[41211A / 4301]



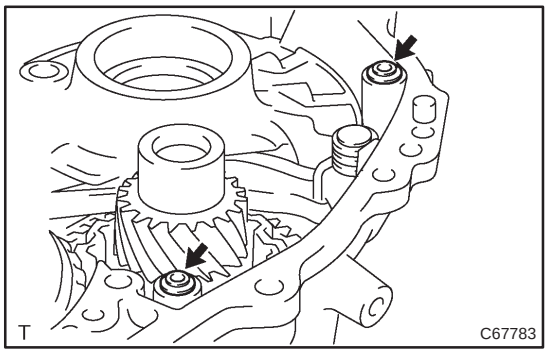
(a) Using SST, remove the RH cylindrical roller bearing from the transaxle housing.
SST 09308–10010

26. INSPECT INPUT SHAFT ENDPLAY



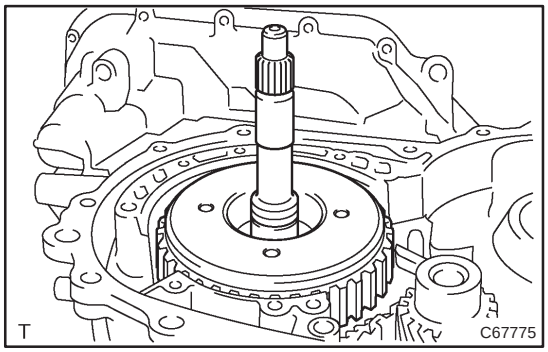
(a) Measure the end play in axial direction.
End play: 0.37 – 1.29 mm (0.0146 – 0.0508 in.)

If the end play is not as specified, select and replace the thrust needle roller bearing.



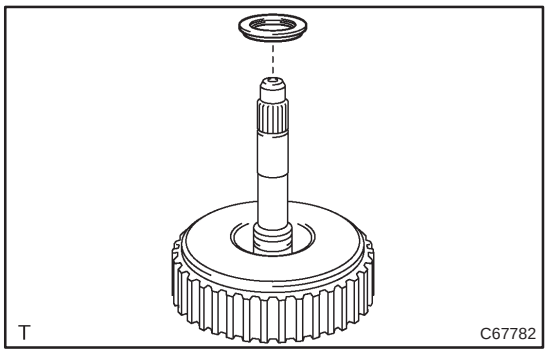
27. REMOVE OIL PUMP ASSEMBLY

(a) Remove the 7 bolts and oil pump assy.



28. REMOVE DIFFERENTIAL GEAR ASSEMBLY

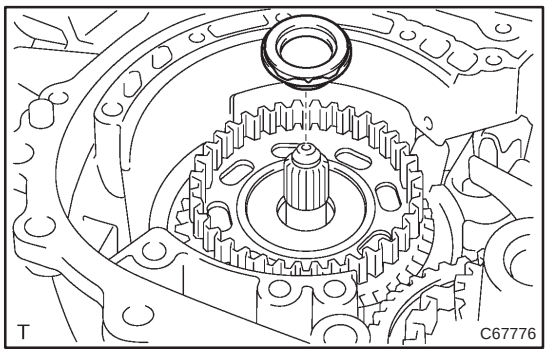
(a) Remove the differential gear assy.



29. REMOVE OVERDRIVE BRAKE GASKET
[35179 / 3503]

(a) Using a screwdriver, remove the 2 O/D brake gaskets from the transaxle case.

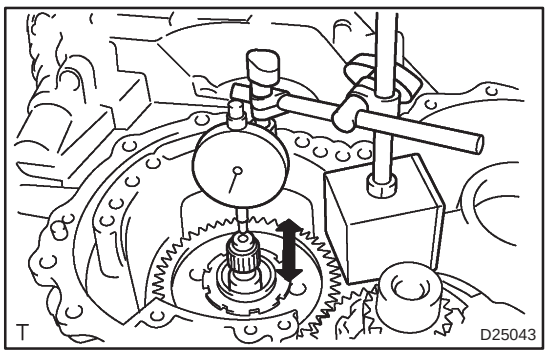
30. REMOVE INPUT SHAFT ASSY



(a) Remove the input shaft assy from the transaxle case.

31. REMOVE STATOR SHAFT THRUST NEEDLE ROLLER BEARING

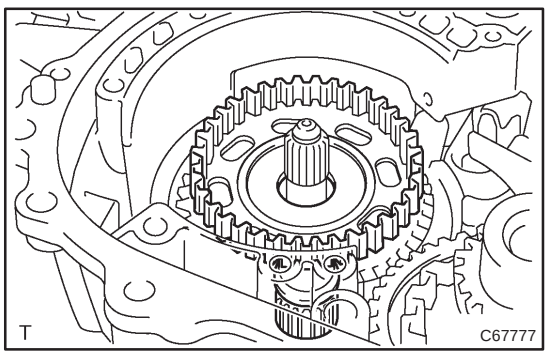
[35370A / 3502]



(a) Remove the thrust needle roller bearing from the input shaft.

32. REMOVE FORWARD CLUTCH HUB THRUST NEEDLE ROLLER BEARING

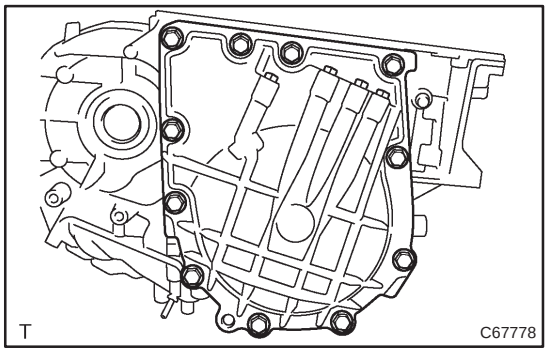
[35061C / 3507]



(a) Remove the thrust needle roller bearing from the forward clutch hub.

33. INSPECT INTERMEDIATE SHAFT ASSY

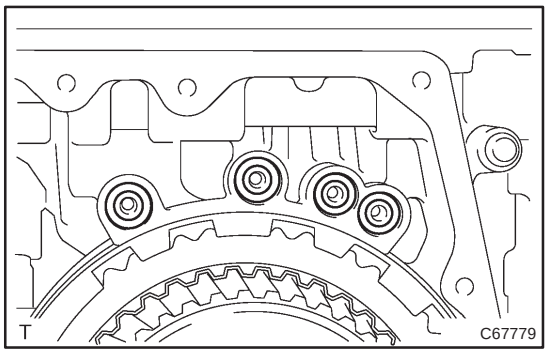
(a) Using a dial indicator, measure the rickety of inter mediate shaft.



Standard clearance:
0.204 – 0.966 mm (0.008 – 0.038 in.)

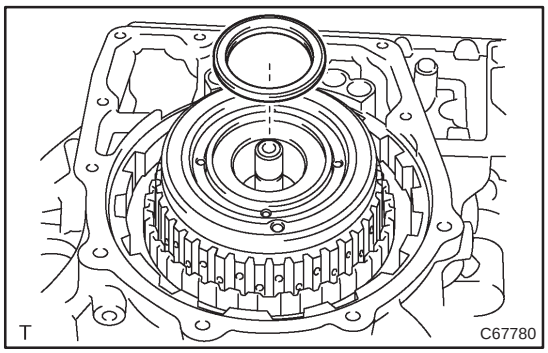
34. REMOVE FORWARD CLUTCH HUB SUB–ASSY

[35061 / 3507]



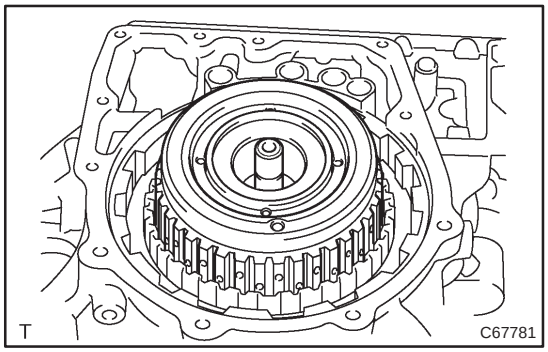
(a) Remove the forward clutch hub from the transaxle case.

35. REMOVE TRANSAXLE REAR COVER ASSY



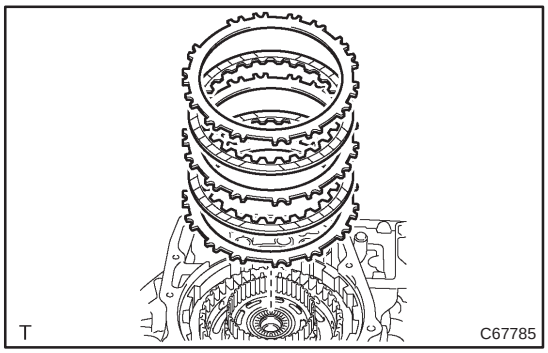
(a) Remove the 11 bolts.

(b) Tap on the circumference of the transaxle rear cover with a plastic hammer to remove the transaxle rear cover from the transaxle case.



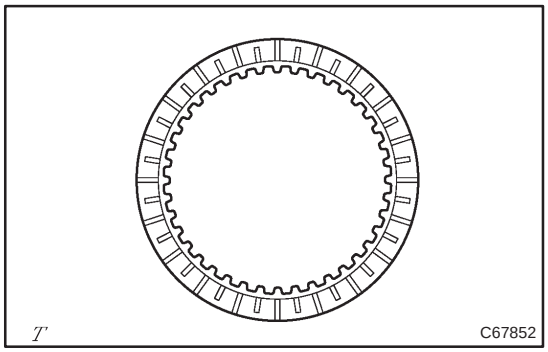
36. REMOVE TRANSAXLE CASE GASKET
[35145C / 3503]

(a) Remove the 4 transaxle case gaskets.



37. REMOVE REAR CLUTCH DRUM THRUST NEEDLE ROLLER BEARING
[35651B / 3507]

(a) Using a magnetic hand, remove the thrust needle roller bearing.

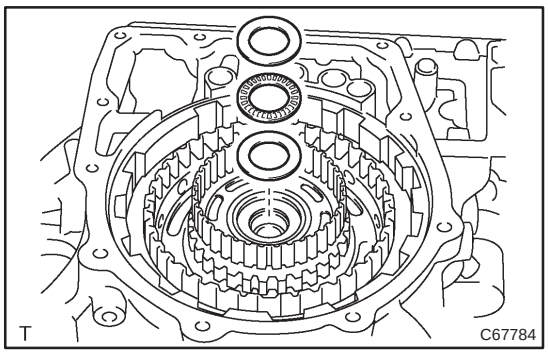


38. REMOVE INTERMEDIATE SHAFT ASSY

(a) Remove the intermediate shaft assy from the transaxle case.

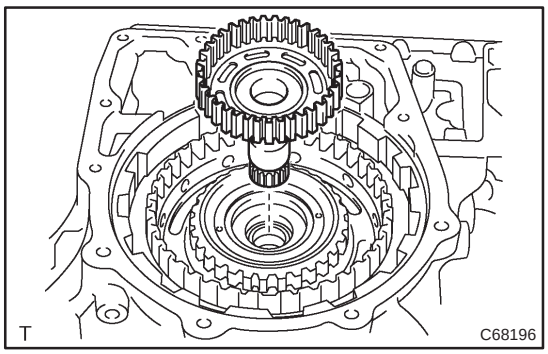
39. REMOVE 2ND COAST & OVERDRIVE BRAKE DISC
[34633 / 3509]

(a) Remove the flange, 2 discs and 2 flanges No.2 from the transaxle.



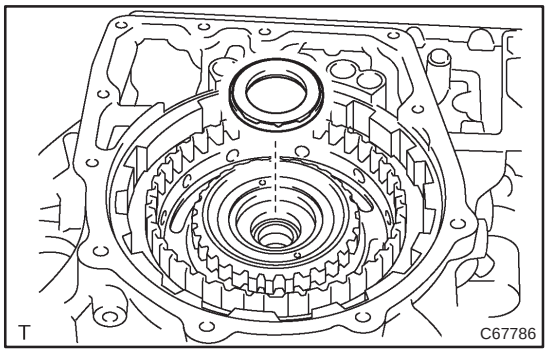
40. INSPECT 2ND COAST & OVERDRIVE BRAKE DISC [34633 / 3509]

(a) Check to see if the sliding surface of the disc, plate and flange are worn or burnt.
If necessary, replace them.



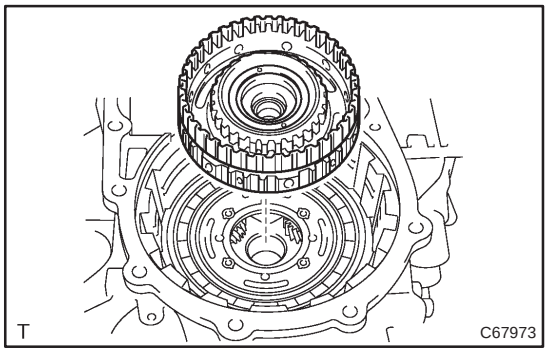
HINT:

- **If the lining of he disc is peeling off or discolored, or even if a part of the printed number is defaced, replace all discs.**
- **Before assembling new discs, soak them in ATF for at least 15 minutes.**



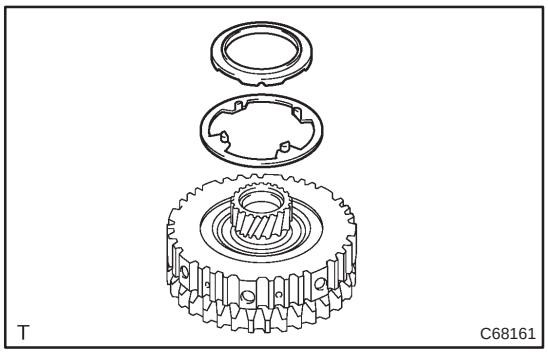
41. REMOVE THRUST NEEDLE ROLLER BEARING [35605B / 3507]

(a) Using a magnetic finger, remove the C_2 hub thrust bearing race, thrust needle roller bearing and thrust bearing race from the direct clutch hub.



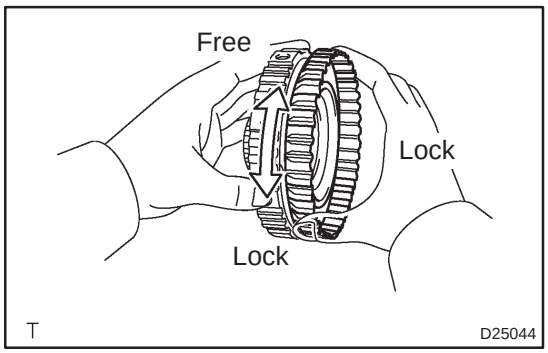
42. REMOVE DIRECT CLUTCH HUB [35654B / 3507]

(a) Remove the direct clutch hub from the transaxle case.



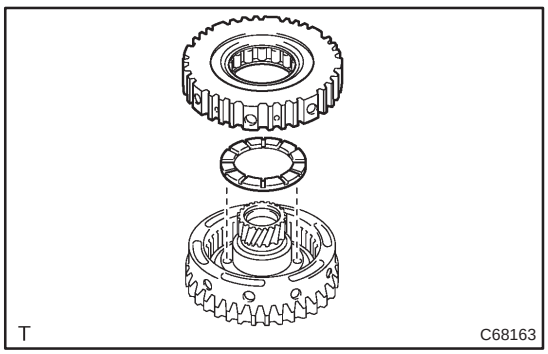
43. REMOVE REAR PLANETARY SUN GEAR, NO.2 THRUST NEEDLE BEARING [35730C / 3510]

(a) Using a magnet finger, remove the thrust bearing from the rear thrust needle bearing.



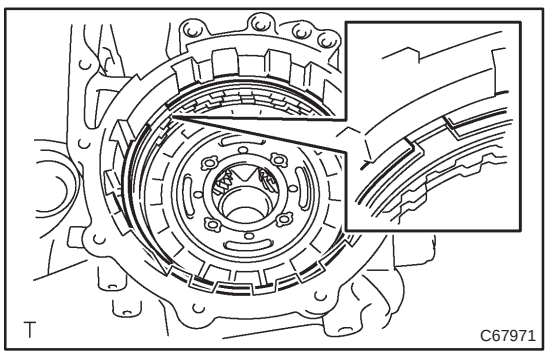
44. REMOVE REAR PLANETARY SUN GEAR ASSY
[35730 / 3510]

(a) Remove rear planetary sun gear from the transaxle case.



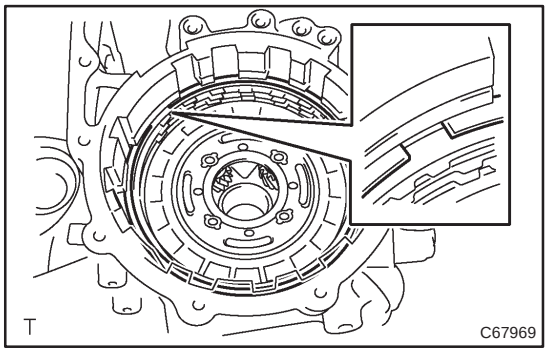
45. REMOVE REAR PLANERARY SUN GEAR THRUST NEEDLE ROLLER BEARING
[35730B / 3510]

(a) Remove rear planetary sun gear thrust needle roller bearing and thrust washer No.1 from the rear planetary sun gear.



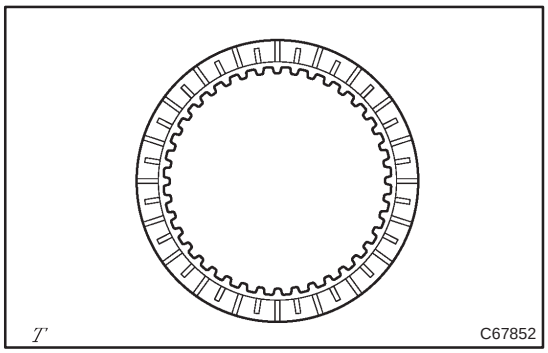
46. INSPECT 1 WAY CLUTCH ASSY
[35790A / 3510]

(a) Hold the rear planetary sun gear and turn the 1 way clutch. The 1 way clutch should turn freely clockwise and should lock counterclockwise.



47. REMOVE 1 WAY CLUTCH ASSY
[35790A / 3510]

(a) Remove the 1 way clutch assy and planetary carrier thrust washer No.2 from the rear planetary sun gear.

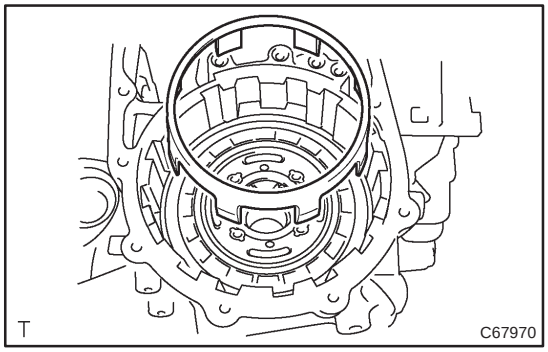


48. REMOVE 2ND COAST & OVERDRIVE BRAKE FLANGE HOLE SNAP RING
[34625E / 3509]

(a) Using a screwdriver, remove the snap ring from the transaxle case.

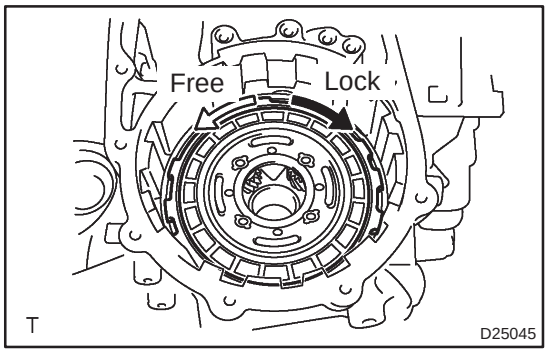
49. REMOVE 2ND BRAKE BRAKE DISC
[35682 / 3509]

(a) Using a screwdriver, remove the snap ring.
(b) Remove the flange, 3 discs and 3 plates from the transaxle.



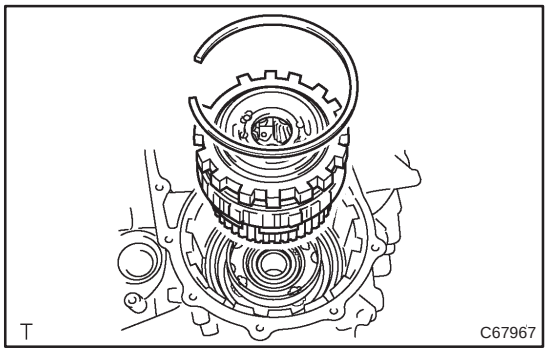
50. INSPECT 2ND BRAKE BRAKE DISC
[35682 / 3509]

(a) Check to see if the sliding surface of the disc, plate and flange are worn or burnt.
If necessary, replace them.



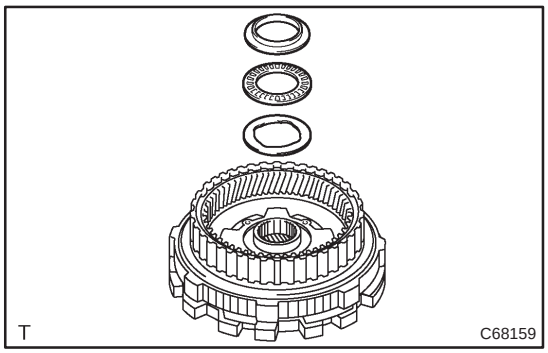
HINT:

- **If the lining of the disc is peeling off or discolored or even if a part of the printed mark is defaced, replace all discs.**
- **Before assembling new discs, soak them in ATF for at least 15 minutes.**



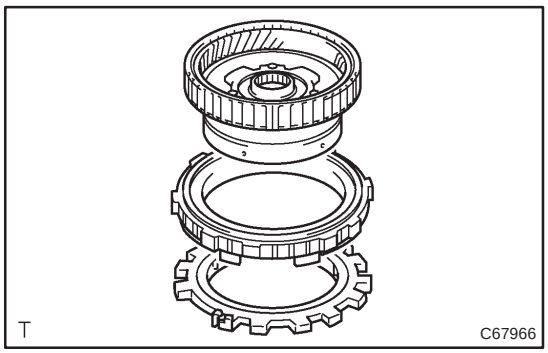
51. REMOVE 2ND BRAKE PISTON SLEEVE
[35626D / 3509]

(a) Remove the 2nd brake piston sleeve from the transaxle case.



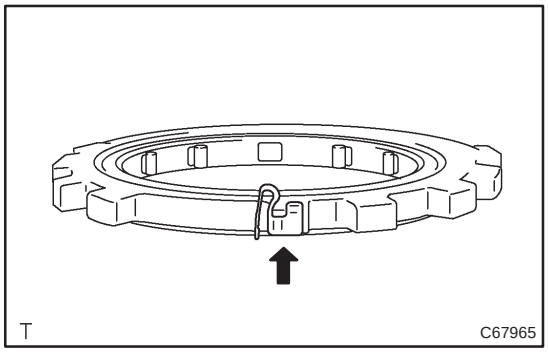
52. INSPECT 1 WAY CLUTCH NO.2
[35792C / 3509]

(a) Install the 1 way clutch and thrust washer to the rear planetary sun gear.
(b) Hold the rear planetary sun gear and turn the 1 way clutch. The 1 way clutch should turn freely clockwise and should lock counterclockwise.



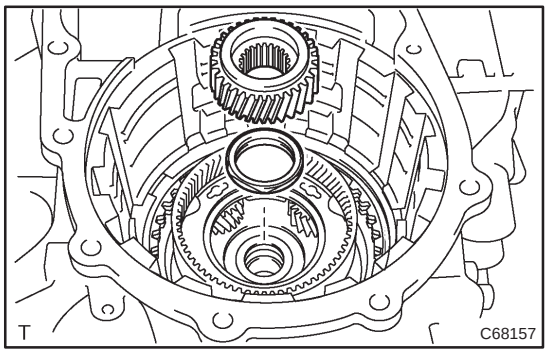
53. REMOVE REAR PLANETARY GEAR ASSY
[35760 / 3510]

(a) Using a screwdriver, remove the snap ring.
(b) Remove the rear planetary gear assy from the transaxle case.



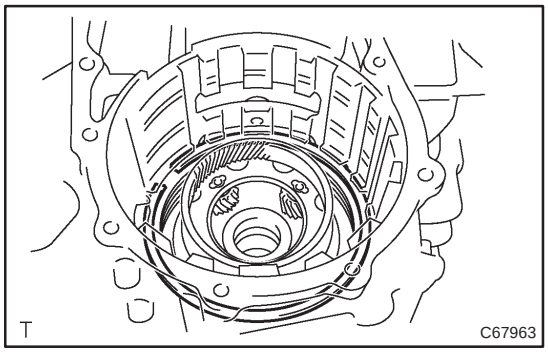
54. REMOVE PLANETARY GEAR REAR THRUST NEEDLE ROLLER BEARING
[35720K / 3510]

(a) Remove the thrust needle roller bearing and 2 bearing races from the rear planetary gear assy.



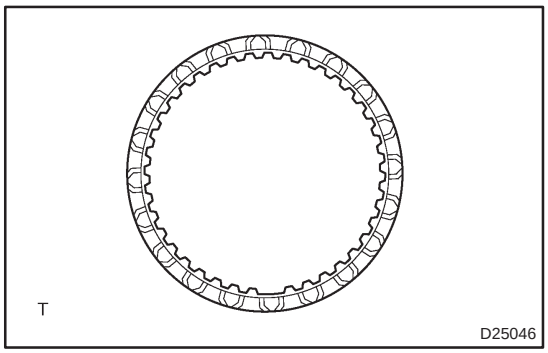
55. REMOVE 1 WAY CLUTCH NO.2
[35792C / 3509]

(a) Separate the 2nd brake cylinder, 1 way clutch No.2 and rear planetary gear.



56. REMOVE OUTER RACE RETAINER
[34365A / 3503]

(a) Remove the retainer from the 1 way clutch No.2.

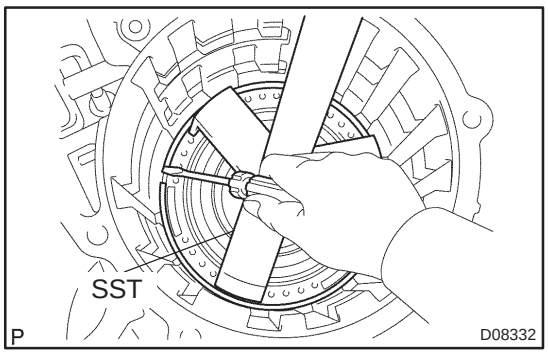


57. REMOVE FR PLANETARY SUN GEAR
[35714D / 3510]

(a) Remove the front planetary sun gear and thrust needle roller bearing from the transaxle case.

58. REMOVE 1ST & REVERSE BRAKE DISC
[35683 / 3509]

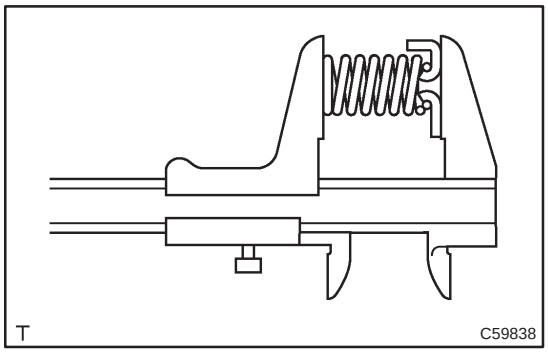
(a) Using a screwdriver, remove the snap ring.
(b) Remove the flange, 4 discs and 4 plates from the transaxle case.



59. INSPECT 1ST & REVERSE BRAKE DISC
[35683 / 3509]

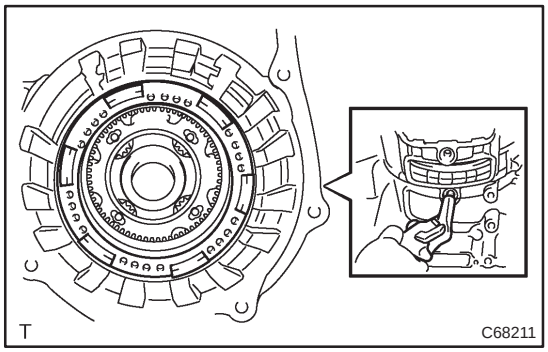
(a) Check to see if the sliding surface of the disc, plate and flange are worn or burnt.

If necessary, replace them.



HINT:

- **If the lining of the disc is peeling off or discolored, or even if a part of the printed mark is defaced, replace all discs.**
- **Before assembling new discs, soak in ATF for at least 15 minutes.**

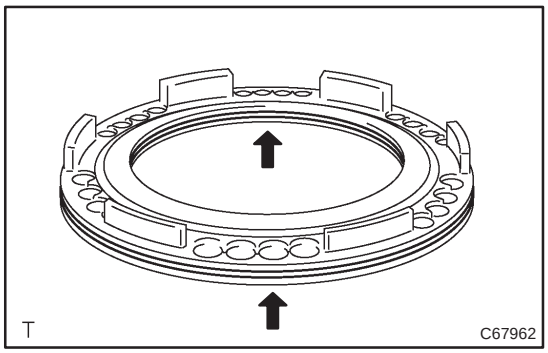


60. REMOVE 1ST & REVERSE BRAKE RETURN SPRING SUB–ASSY
[35068 / 3509]

(a) Using SST, a press and a screwdriver, remove the snap ring.
SST 09387–00070
(b) Remove the 1st & reverse brake return spring sub–assy.

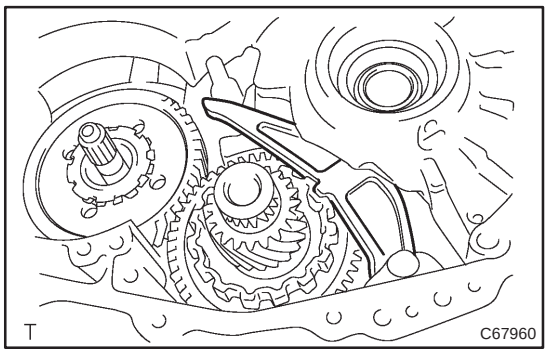
61. INSPECT 1ST & REVERSE BRAKE RETURN SPRING SUB–ASSY
[35068 / 3509]

(a) Using a vernier calipers, measure the free length of the spring together with the spring seat.
Standard free length: 13.96 mm (0.5496 in.)



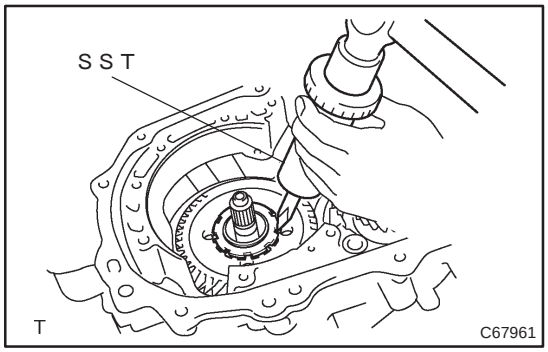
62. REMOVE 1ST & REVERSE BRAKE PISTON NO.2 [35623P / 3509]

(a) Apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the transaxle case to remove the 1st & reverse brake piston.



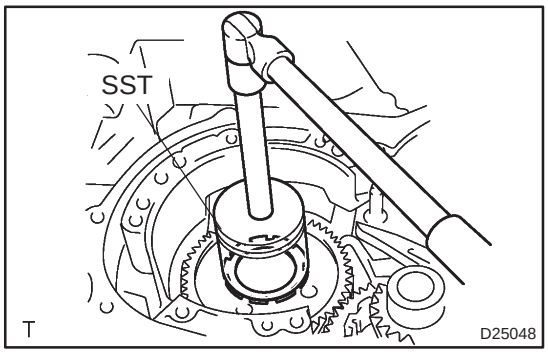
NOTICE:

- **Blowing off the air may cause the piston's jump–out. When removing the piston, hold it with your hand using a waste cloth.**
- **Take care not to splash ATF when air–blowing.**

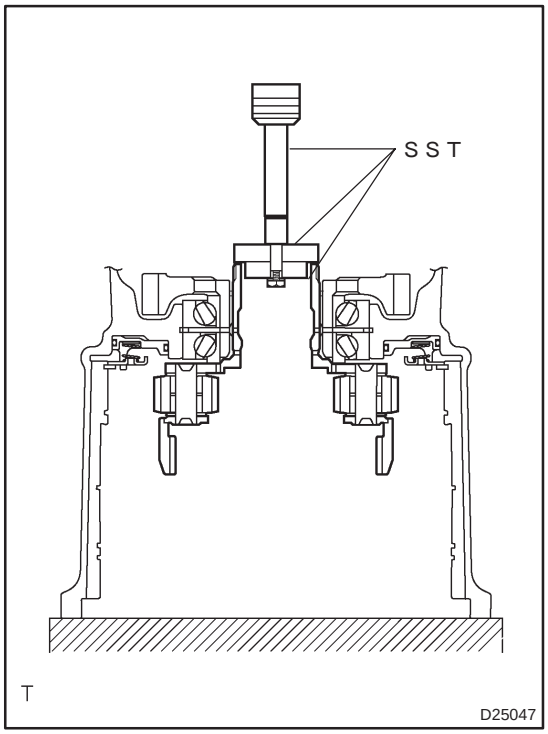


63. REMOVE 1ST & REVERSE BRAKE PISTON NO.2 O–RING [35623Q / 3509]

(a) Remove the 2 O–rings from the1st & reverse brake piston No.2.

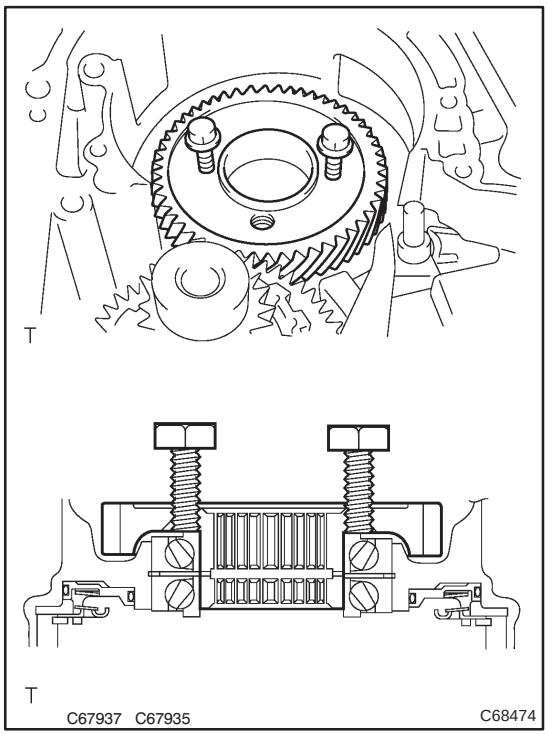


64. REMOVE COUNTER DRIVE GEAR NUT [35782H / 3510]



(a) Fix the counter driven gear with the parking lock pawl.

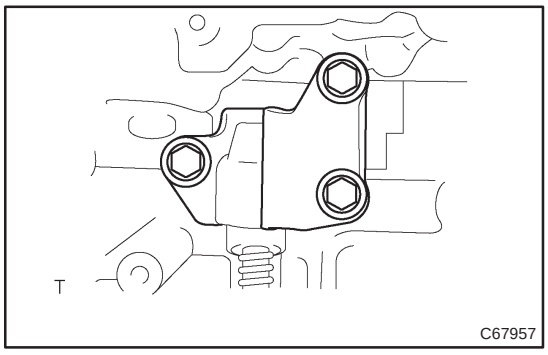
(b) Using SST and a hammer, unstake the lock washer.
SST 09930–00010



(c) Using SST, remove the nut and lock washer.
SST 09387–00120

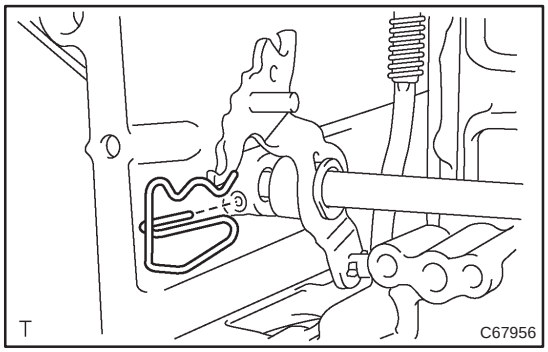
65. REMOVE PLANETARY GEAR ASSY
[35720G / 3510]

(a) Using SST and a press, remove the planetary gear assy from the transaxle case.
SST 09950–60010 (09951–00400, 09951–00320, 09952–06010), 09950–70010 (09951–07100)



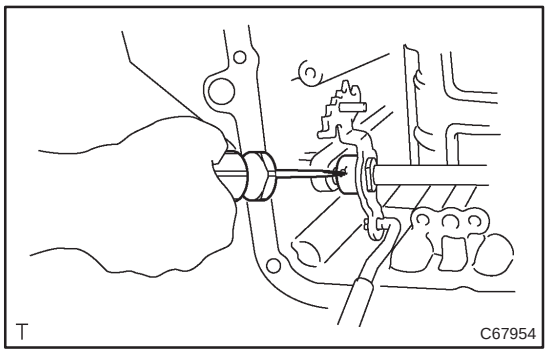
66. REMOVE COUNTER DRIVE GEAR
[35782C / 3510]

(a) Install the 2 bolts to the counter drive gear.
Bolt (M6):
L=40 – 80 mm
Pitch = 1.0 mm



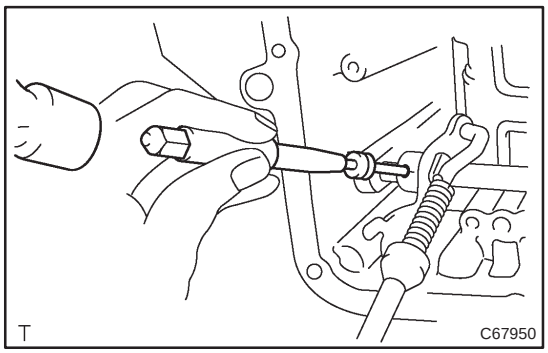
(b) Rotate 2 bolts in order and remove the counter drive gear and front planetary sun gear.

(c) Remove 2 radial ball bearings from the counter drive gear and front planetary sun gear.



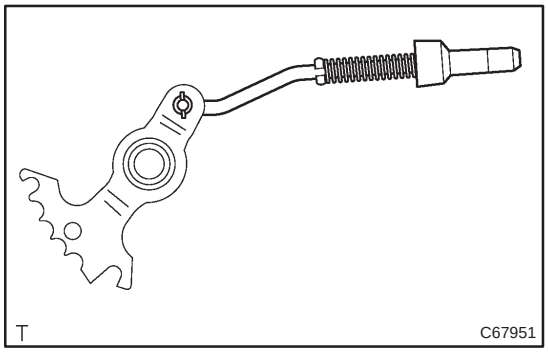
67. REMOVE PARKING LOCK PAWL BRACKET
[35595 / 3513]

(a) Remove the 3 bolts, cam guide and bracket.



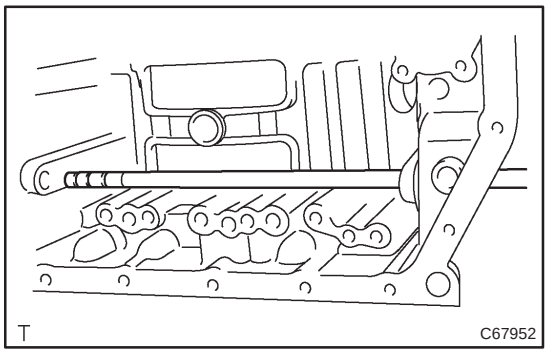
68. REMOVE MANUAL VALVE LEVER SHAFT RETAINER SPRING
[35506J / 3513]

(a) Remove the retainer spring.

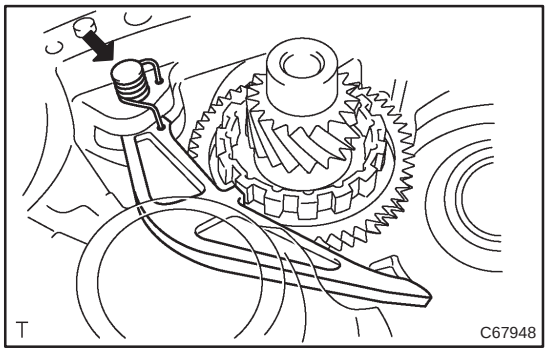


69. REMOVE MANUAL VALVE LEVER SUB–ASSY
[35505 / 3513]

(a) Using a screwdriver, unstake and remove the spacer.

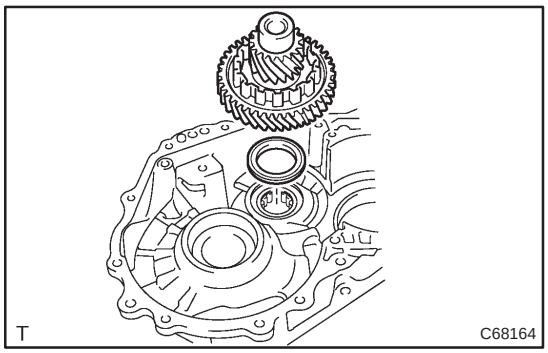


(b) Using a pin punch and hammer, drive out the pin.
(c) Remove the manual valve lever shaft and manual valve lever.



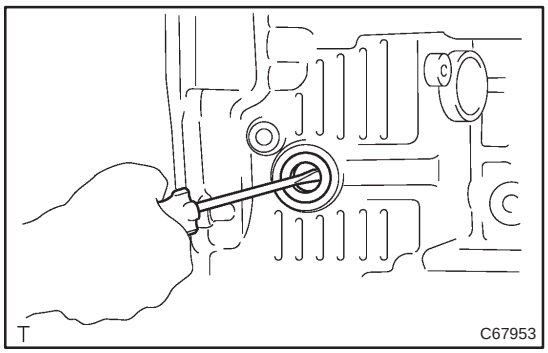
70. REMOVE PARKING LOCK ROD SUB–ASSY
[35501 / 3513]

(a) Remove the parking lock rod from the manual valve lever.



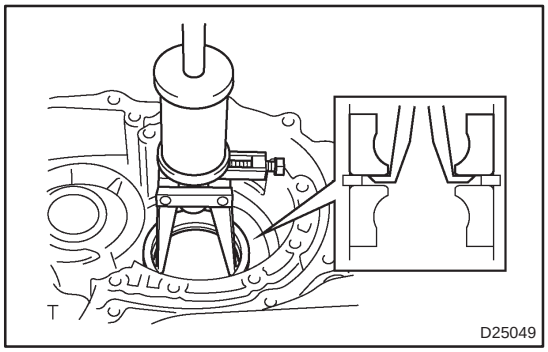
71. REMOVE MANUAL VALVE LEVER SHAFT
[35561 / 3513]

(a) Remove the manual valve lever shaft from the transaxle case.



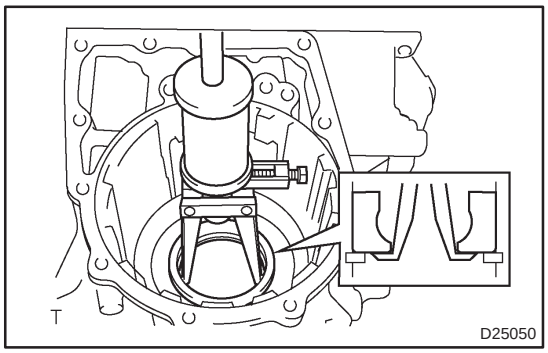
72. REMOVE PARKING LOCK PAWL
[35557 / 3513]

(a) Using a screwdriver, remove the parking lock pawl shaft.
(b) Remove the torsion spring and parking lock pawl.



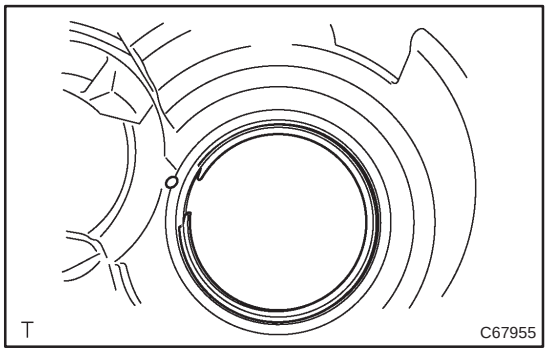
73. REMOVE COUNTER DRIVEN GEAR
[35783R / 4301]

(a) Remove the counter driven gear, drive pinion and thrust needle roller bearing from the transaxle case.



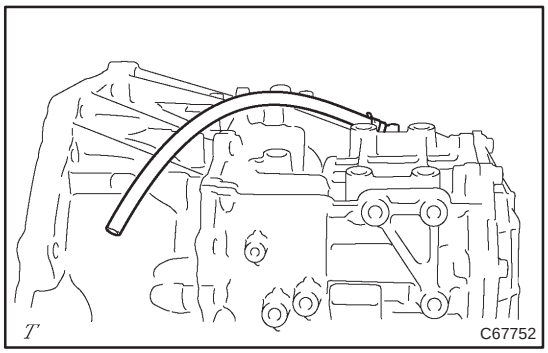
74. REMOVE MANUAL VALVE LEVER SHAFT OIL SEAL
[35506F / 3513]

(a) Using a screwdriver, remove the oil seal.

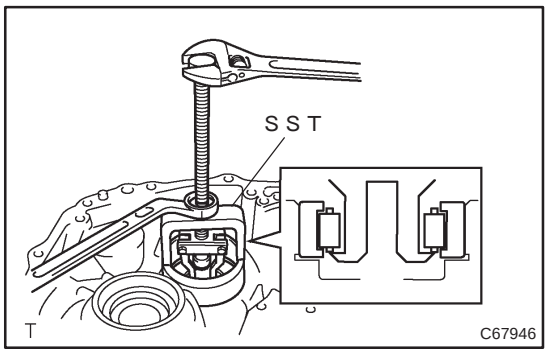


75. REMOVE COUNTER DRIVE GEAR BEARING
[35782E / 3510]

(a) Remove the 2 counter drive gear bearing inner races RH the transaxle case.
(b) Using SST, remove the counter drive gear bearing LH outer race from the transaxle case
SST 09308–00010

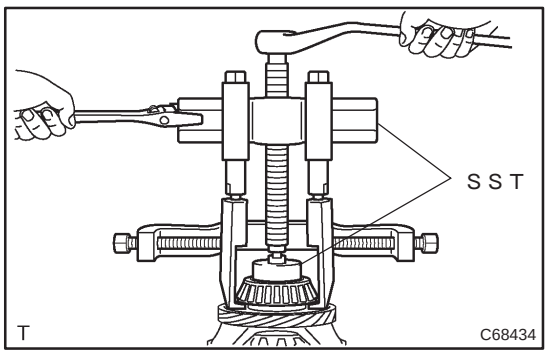


(c) Using SST, remove the counter drive gear bearing rear outer race from the transaxle case.
SST 09308–00010

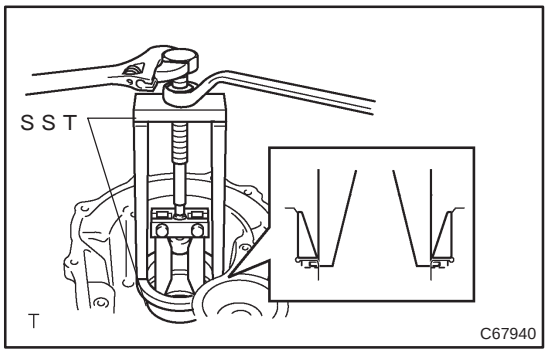


76. REMOVE COUNTER DRIVE GEAR HOLE SNAP RING [35782D / 3510]

(a) Using a screwdriver, remove the counter drive gear hole snap ring from the transaxle case.

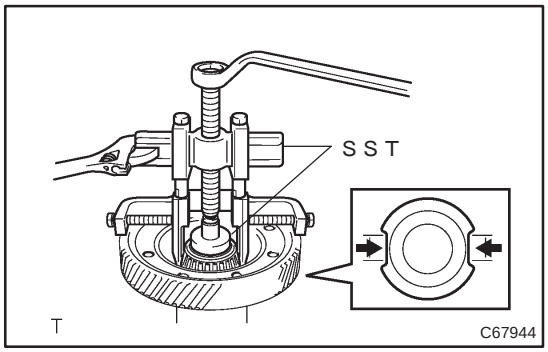


77. REMOVE BREATHER PLUG HOSE(U340E A/T) [35104V / 3503]



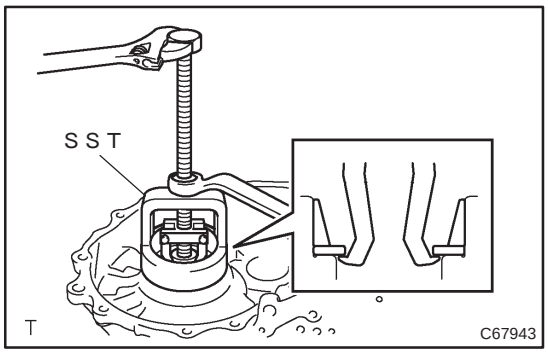
78. REMOVE FRONT DRIVE PINION REAR TAPERED ROLLER BEARING [41211B / 4301]

(a) Using SST, remove front drive pinion LH cylindrical roller bearing from the transaxle case.
SST 09612–65014 (09612–01040)

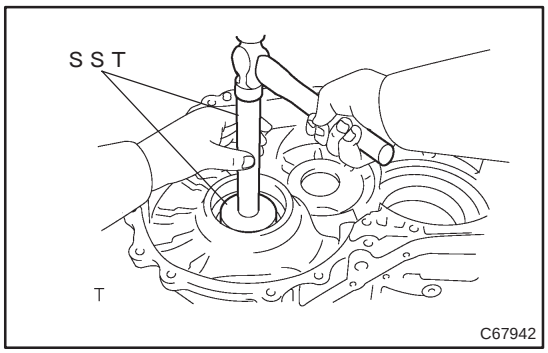


79. REMOVE FR DIFFERENTIAL CASE FRONT TAPERED ROLLER BEARING [41311E / 4301]

(a) Using SST, remove the front differential case RH tapered roller bearing from the differential case.
SST 09950–40011 (09951–04010, 09952–04010, 09953–04030, 09954–04010, 09955–04061, 09957–04010, 09958–04011), 09950–60010 (09951–00390)

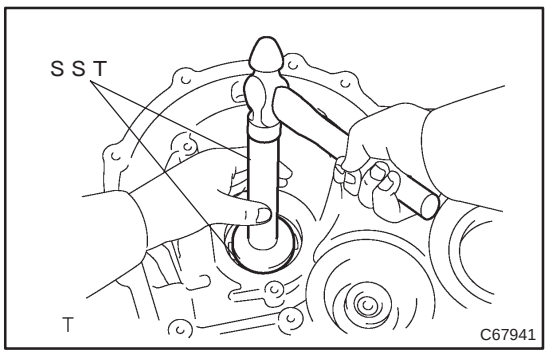


(b) Using SST, remove the front differential case RH tapered roller bearing outer race from the transaxle housing.
SST 09387–00040 (09387–02020, 09387–02010)



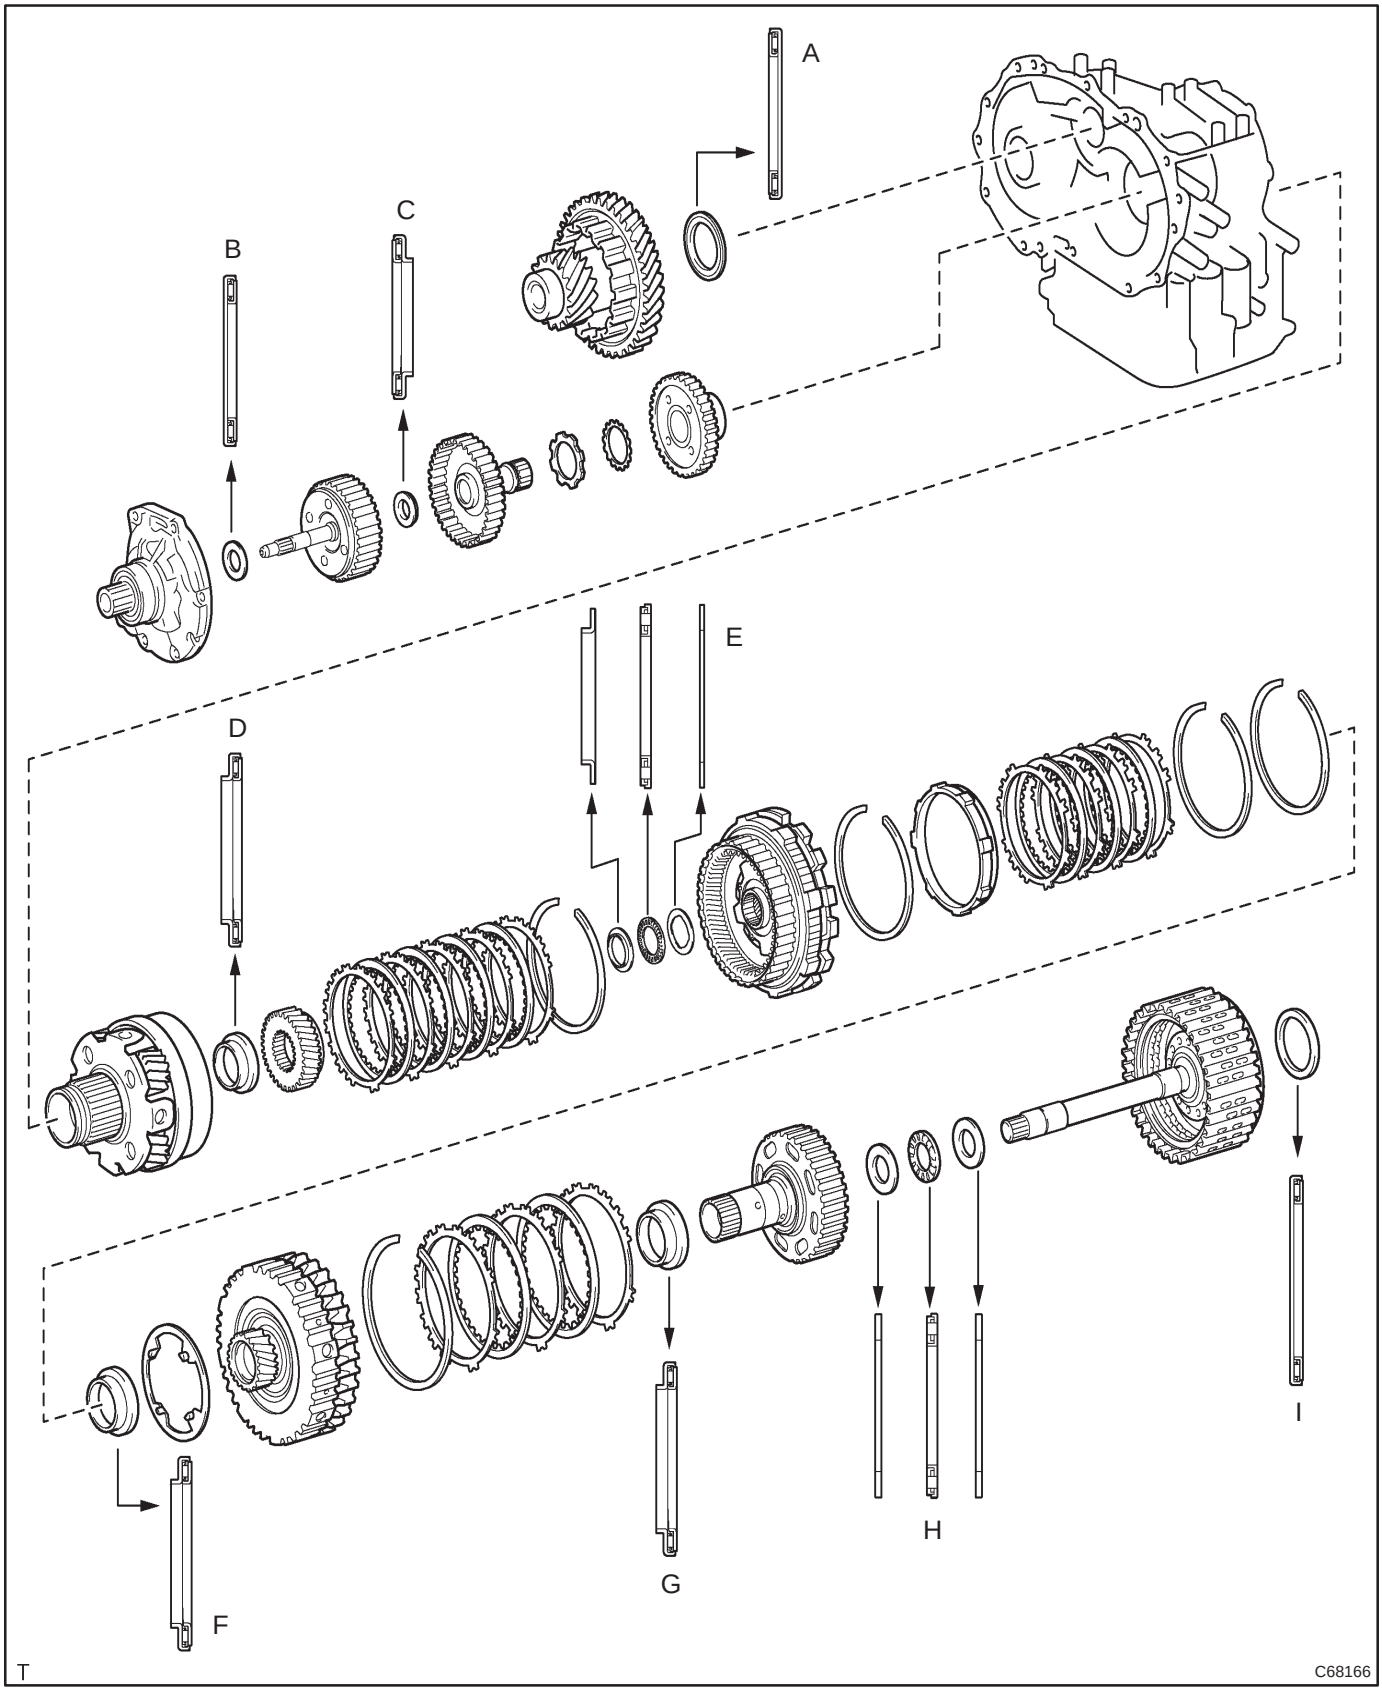
80. REMOVE FR DIFFERENTIAL CASE REAR TAPERED ROLLER BEARING
[41311F / 4301]

(a) Using SST, remove the front differential case tapered roller bearing from the differential case.
SST 09950–40011 (09951–04010, 09952–04010, 09953–04020, 09954–04010, 09955–04061, 09957–04010, 09958–04011), 09950–60010 (09951–00430)

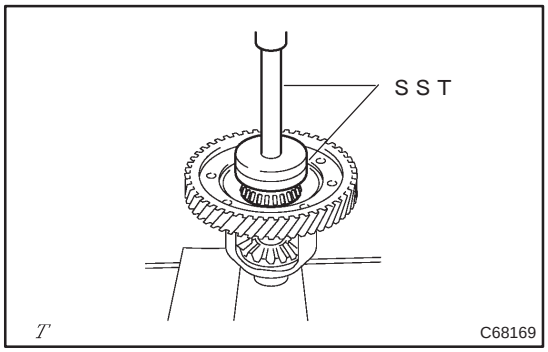


(b) Using SST, remove front differences.
SST 09612–65014 (09612–01010)

81. REMOVE FRONT TRANSAXLE CASE OIL SEAL
[31105D / 4301]



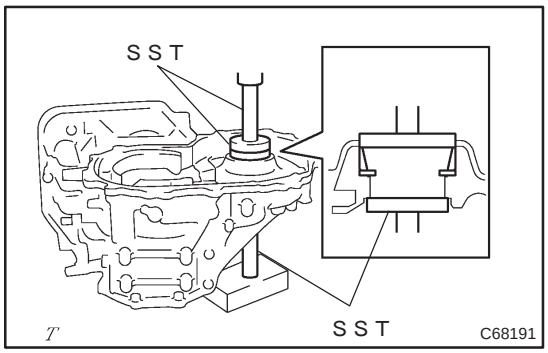
(a) Using SST and a hammer, remove the oil seal from the transaxle case.
SST 09950–60010 (09951–00550), 09950–70010 (09951–07100)



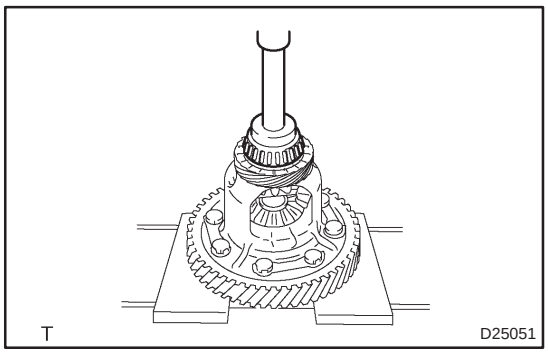
82. REMOVE TRANSAXLE CASE OIL SEAL
[31105H / 4301]

(a) Using SST and a hammer, remove the transaxle case oil seal from the transaxle housing.
SST 09950–60010 (09951–00530), 09950–70010 (09951–07100)

83. BEARING POSITION

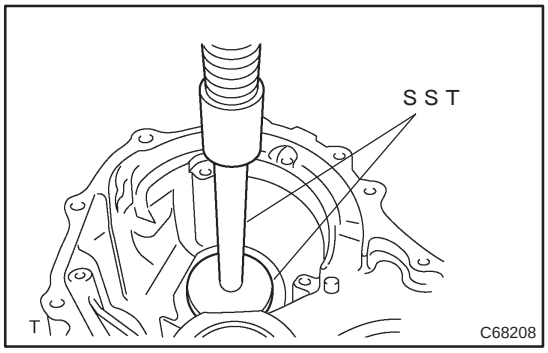


Mark	Front Race Diameter Inside / Outside mm (in.)	Thrust Bearing Diameter Inside / Outside mm (in.)	Rear Race Diameter Inside / Outside mm (in.)
A	–	45.1 (1.7756) / 65.1 (2.5630)	–
B	–	26 (1.0236) / 43.4 (1.7087)	–
C	–	21 (0.8268) / 34.85 (1.3721)	–
D	–	32.0 (1.260) / 48.0 (1.890)	–
E	36.75 (1.447) / 49.95 (1.967)	33.9 (1.335) / 52.0 (2.047)	– / 51.7 (2.035)
F	–	43.45 (1.7101) / 58.5 (2.3031)	–
G	–	29.4 (1.1574) / 44.4 (1.7480)	–
H	23.5 (0.9252) / 37.3 (1.4685)	22.5 (0.8858) / 37.3 (1.4685)	20.3 (0.7992) / 33.8 (1.3307)
I	–	43.45 (1.7101) / 61.2 (2.4094) or 43.45 (1.7101) / 61.74 (2.4307)	–

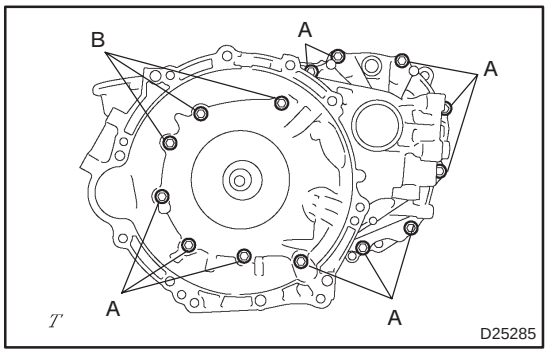


84. INSTALL FR DIFFERENTIAL CASE REAR TAPERED ROLLER BEARING
[41311F / 4301]

(a) Using SST and a press, install the front differential case LH tapered roller bearing inner race to the differential case.
SST 09726–40010, 09950–60020 (09951–00790)

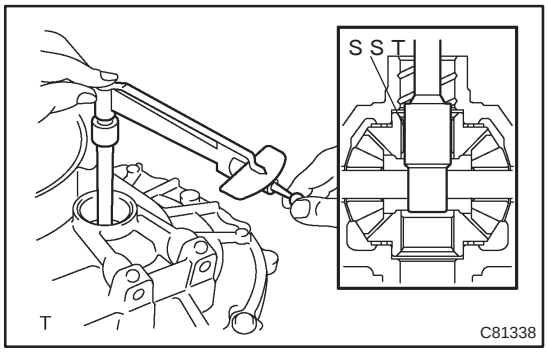


(b) Using SST and a press, install the shim and bearing outer race to the transaxle case.
SST 09950–60010 (09951–00650), 09950–60020 (09951–00720), 09950–70010 (09951–07100, 09951–07200)



85. INSTALL FR DIFFERENTIAL CASE FRONT TAPERED ROLLER BEARING
[41311E / 4301]

(a) Using SST and a press, install the bearing inner race to the differential case.
SST 09950–60010 (09951–00460), 09950–70010 (09951–07100)

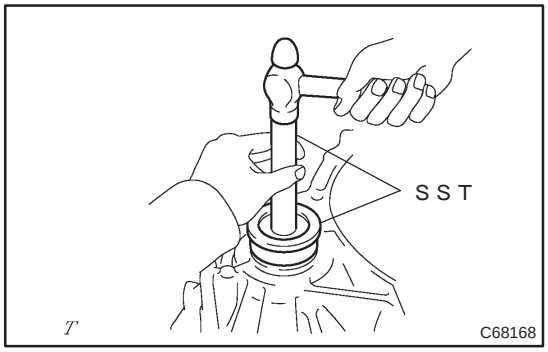


(b) Using SST and a press, install the tapered roller bearing to the transaxle housing.
SST 09950–60020 (09951–00680), 09950–70010 (09951–07150)

86. TAPERED POLLER BEARING PRELOAD

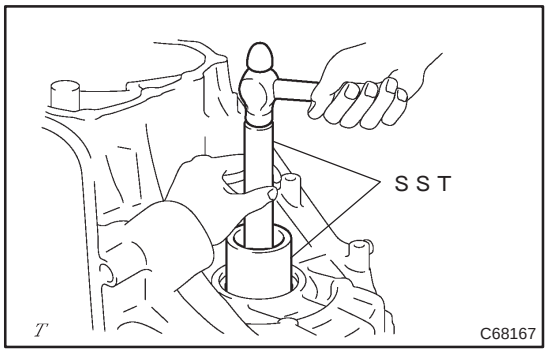
(a) Coat the front differential case and bearing with ATF and install them to the transaxle case.

(b) Install the 14 bolts and transaxle housing.
Torque:
Bolt A: 29 N·m (300 kgf·cm, 21 ft·lbf)
Bolt B: 22 N·m (220 kgf·cm, 16 ft·lbf)



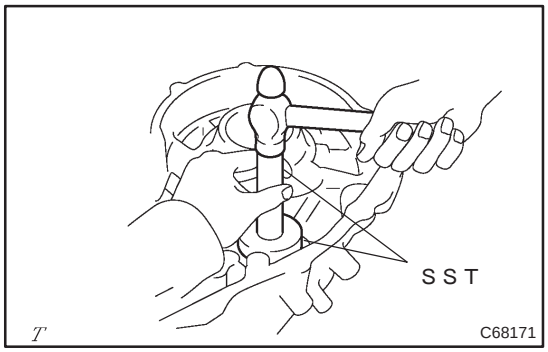
(c) Using SST and small torque wrench, measure the preload of the differential gear.
SST 09564–32011
Preload:
New bearing:
0.98 – 1.57 N·m (10.0 – 16.0 kgf·cm 8.7 – 13.9 in.·lbf)
Used bearing:
0.49 – 0.78 N·m (5.0 – 8.0 kgf·cm 4.3 – 6.9 in.·lbf)

If the preload is not within the specification, remove the differential from the transaxle case. Re–select the transaxle case side adjusting shim according to the following table.



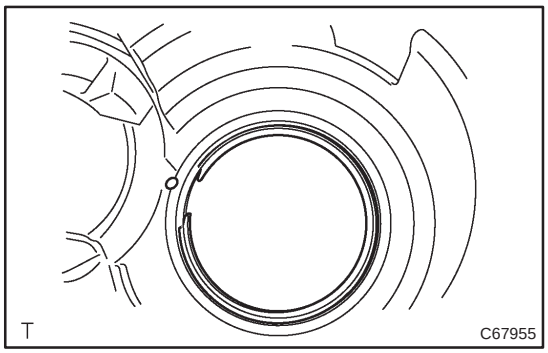
Adjusting shim thickness: mm (in.)

Mark	Thickness	Mark	Thickness
01	1.90 (0.0748)	11	2.40 (0.0945)
02	1.95 (0.0768)	12	2.45 (0.0965)
03	2.00 (0.0787)	13	2.50 (0.0984)
04	2.05 (0.0807)	14	2.55 (0.1004)
05	2.10 (0.0827)	15	2.60 (0.1024)
06	2.15 (0.0846)	16	2.65 (0.1043)
07	2.20 (0.0866)	17	2.70 (0.1063)
08	2.25 (0.0885)	18	2.75 (0.1082)
09	2.30 (0.0906)	19	2.80 (0.1102)
10	2.35 (0.0925)	–	–



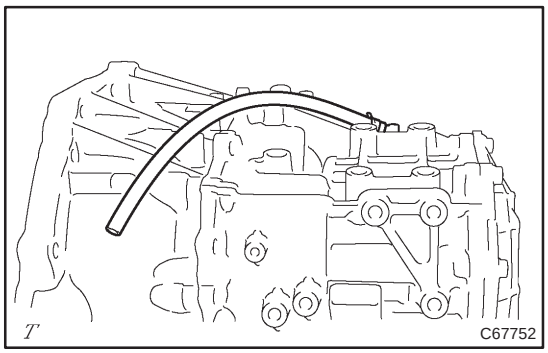
87. INSTALL TRANSAXLE CASE OIL SEAL [31105H / 4301]

(a) Using SST and a hammer, drive in a new oil seal.
SST 09554–14010, 09950–70010 (09951–07100)
Oil seal in depth:
2 ± 0.5 mm (0.079 ± 0.020 in.)



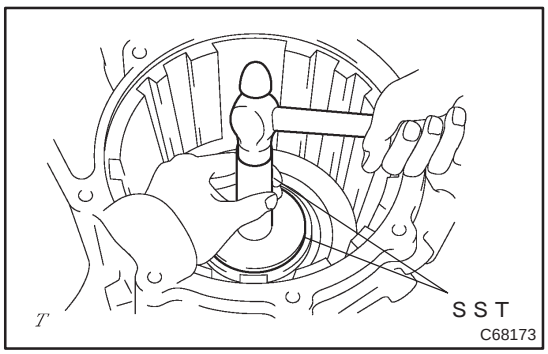
88. INSTALL FRONT TRANSAXLE CASE OIL SEAL [31105D / 4301]

(a) Using SST and a hammer, drive in a new oil seal.
SST 09726–27012 (09726–02041), 09950–70010 (09951–07150)
Oil seal in depth:
5.9 ± 0.5 mm (0.232 ± 0.020 in.)



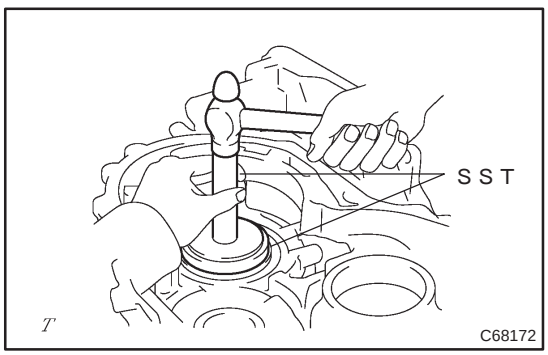
89. INSTALL FRONT DRIVE PINION REAR TAPERED ROLLER BEARING
[41211B / 4301]

(a) Using SST and a hammer, install the roller bearing in to the transaxle case.
SST 09950–60010 (09951–00610), 09950–70010 (09951–07150)

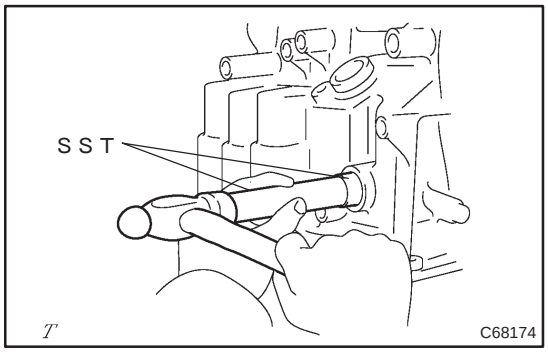


90. INSTALL COUNTER DRIVE GEAR HOLE SNAP RING
[35782D / 3510]

(a) Using a screwdriver, install the counter drive gear hole snap ring to the transaxle case.



91. INSTALL BREATHER PLUG HOSE(U340E A/T)
[35104V / 3503]

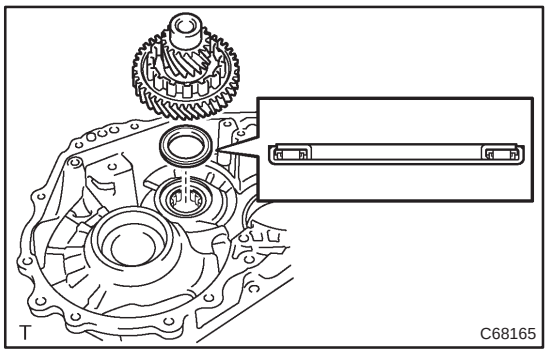


92. INSTALL COUNTER DRIVE GEAR BEARING
[35782E / 3510]

(a) Using SST and a hammer, install the counter drive gear bearing LH outer race to the transaxle case.
SST 09950–60020 (09951–00890), 09950–70010 (09951–07150)

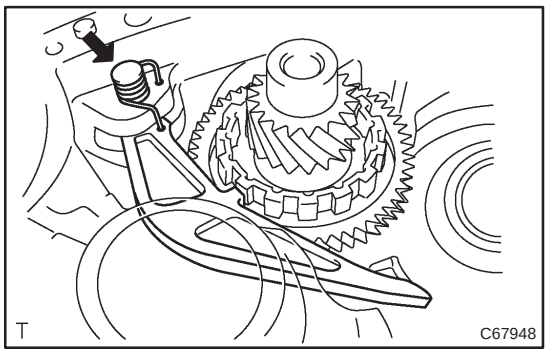
(b) Using SST and a hammer, install the counter drive gear bearing RH outer race to the transaxle case.
SST 09950–60020 (09951–00890), 09950–70010 (09951–07150)

(c) Install the counter drive gear bearing to the transaxle case.



93. INSTALL MANUAL VALVE LEVER SHAFT OIL SEAL [35506F / 3513]

(a) Using SST and a hammer, install the new manual valve lever shaft oil seal.

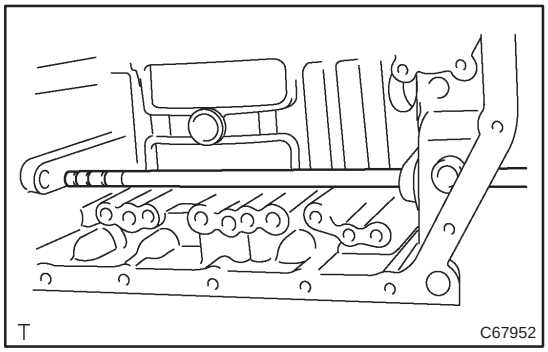


SST 09950–60010 (09951–00220), 09950–70010 (09951–07100)

Oil seal in depth:
0 ± 0.5 mm (0 ± 0.020 in.)

94. INSTALL COUNTER DRIVEN GEAR [35783R / 4301]

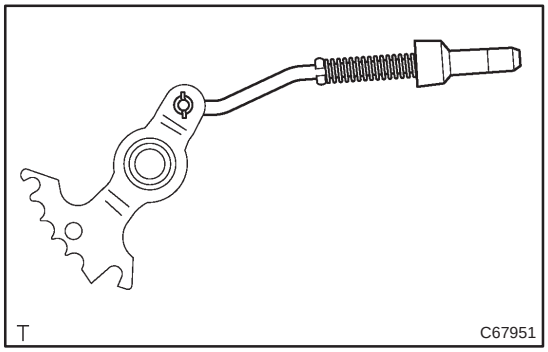
(a) Install the counter driven gear and drive pinion thrust bearing to the transaxle case.



95. INSTALL PARKING LOCK PAWL [35557 / 3513]

(a) Coat the parking lock pawl shaft with ATF.

(b) Install the parking lock pawl, torsion spring and shaft to the transaxle case.

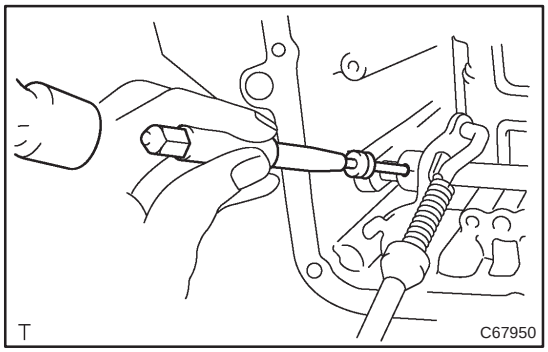


HINT:
Check that the parking lock pawl can move smoothly.

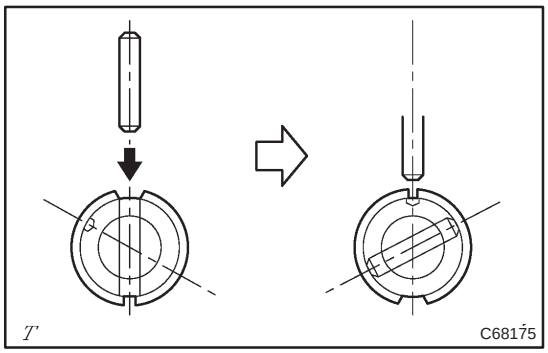
96. INSTALL MANUAL VALVE LEVER SHAFT [35561 / 3513]

(a) Install the manual valve lever shaft to the transaxle case.

NOTICE:
Be careful not to damage the oil seal lip.

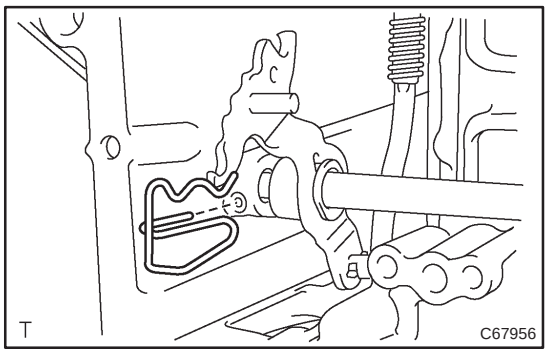


97. INSTALL PARKING LOCK ROD SUB–ASSY [35501 / 3513]



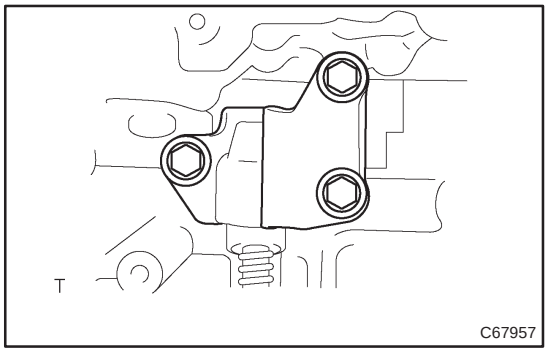
98. INSTALL MANUAL VALVE LEVER SUB–ASSY [35505 / 3513]

(a) Coat the manual valve lever sub–assy with ATF.

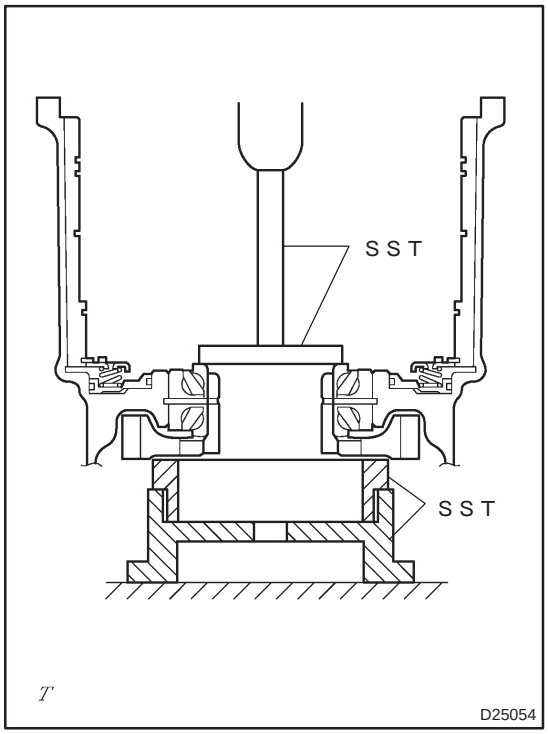


(b) Install the manual valve lever and a new manual valve lever spacer to the manual valve lever shaft.

(c) Using a pin punch and hammer, drive in the pin.

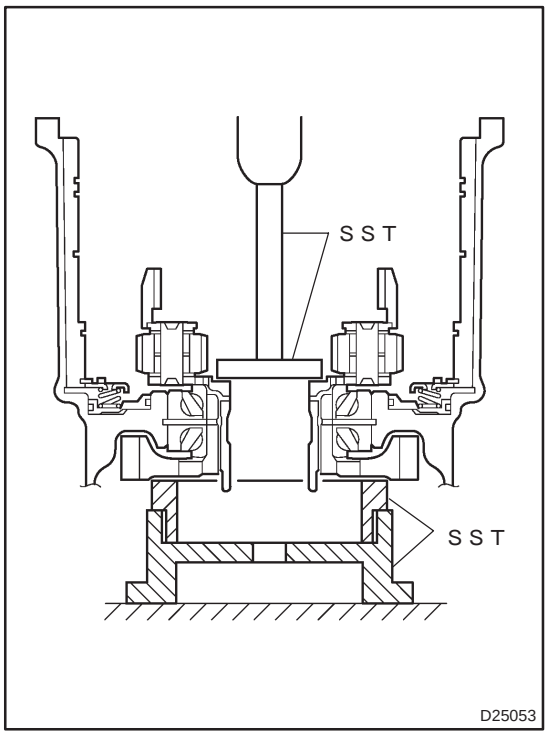


(d) Turn the spacer and lever shaft to align the small hole for locating the staking position in the spacer with the staking position mark on the lever shaft.
(e) Using a pin punch, stake the spacer through the small hole.
(f) Check that the space does not turn.



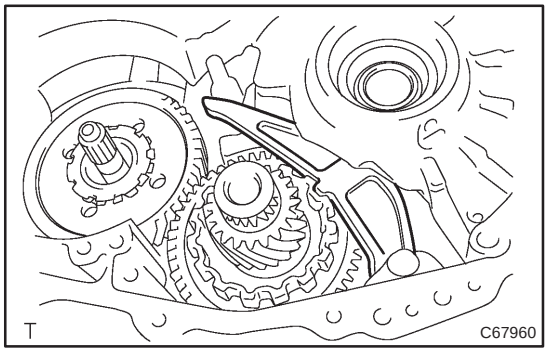
99. INSTALL MANUAL VALVE LEVER SHAFT RETAINER SPRING
[35506J / 3513]

(a) Install the retainer spring.



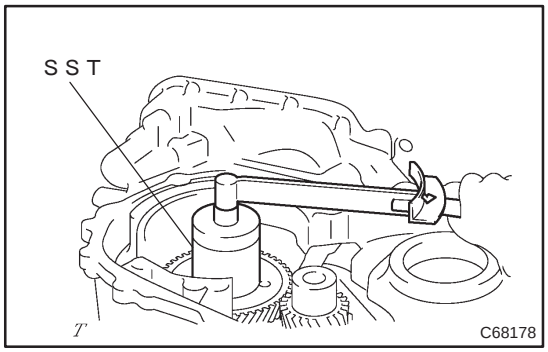
100. INSTALL PARKING LOCK PAWL BRACKET
[35595 / 3513]

(a) Install the cam guide, bracket and 3 bolts.
Torque: 20 N·m (200 kgf·cm, 14 ft·lbf)



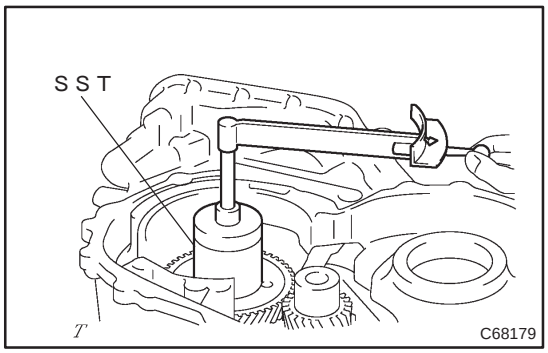
101. INSTALL COUNTER DRIVE GEAR
[35782C / 3510]

(a) Using SST and a press, install the counter drive gear to the transaxle case.
SST 09223–15030, 09527–17011, 09950–60010 (09951–00650), 09950–70010 (09951–07150)

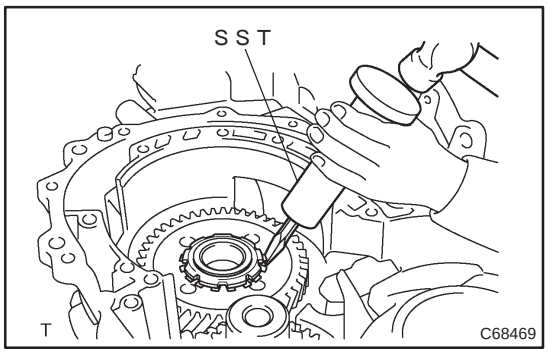


102. INSTALL PLANETARY GEAR ASSY
[35720G / 3510]

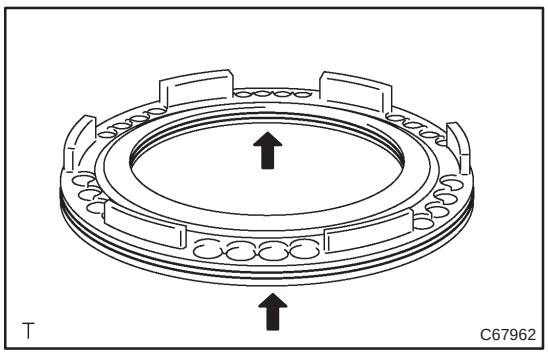
(a) Using SST and a press, install the planetary gear assy to the transaxle case.
SST 09950–60010 (09951–00480), 09223–15030, 09527–17011, 09950–70010 (09951–07150)



103. INSTALL COUNTER DRIVE GEAR NUT
[35782H / 3510]

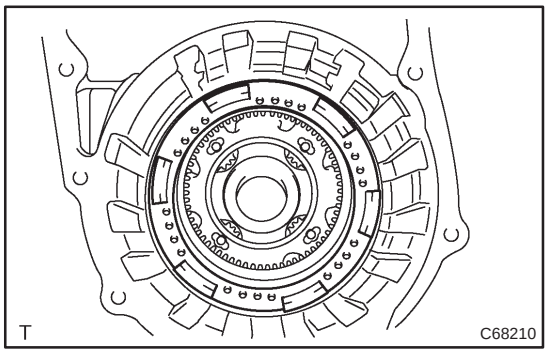


(a) Fix the counter driven gear with the parking lock pawl.



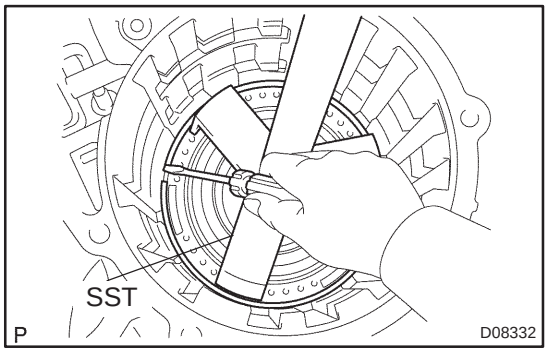
(b) Using SST, install a new lock washer and nut.
SST 09387–00120
Torque: 280 N·m (2,855 kgf·cm, 207 ft·lbf)

(c) Using SST and a small torque wrench, while turning to counter drive gear 60 turn par minute and measure the rotating torque.
SST 09387–00120
Rotating torque:
0.20 – 0.49 N·m (2 – 5 kgf·cm, 2 – 4 in.·lbf)



(d) Using SST and a hammer, stake the lock nut washer.
SST 09930–00010

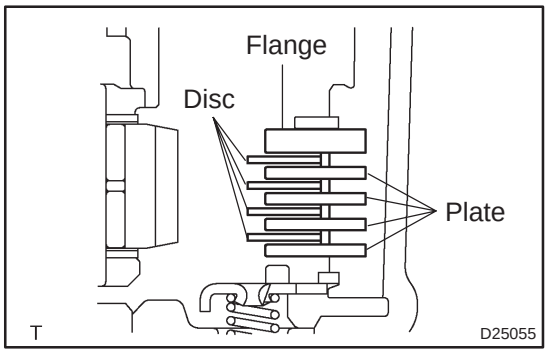
104. INSTALL 1ST & REVERSE BRAKE PISTON NO.2 O–RING
[35623Q / 3509]



(a) Install the 2 O–rings.

105. INSTALL 1ST & REVERSE BRAKE PISTON NO.2
[35623P / 3509]

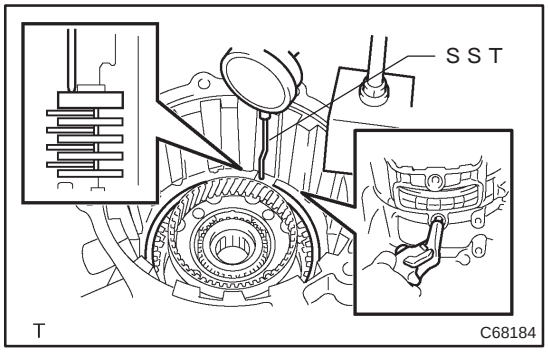
(a) Install the 1st & reverse brake piston to the transaxle case.



NOTICE:
Be careful not to damage the oil seal lip.

106. INSTALL 1ST & REVERSE BRAKE RETURN SPRING SUB–ASSY
[35068 / 3509]

(a) Install the 1st & reverse brake return spring sub–assy to the transaxle case.



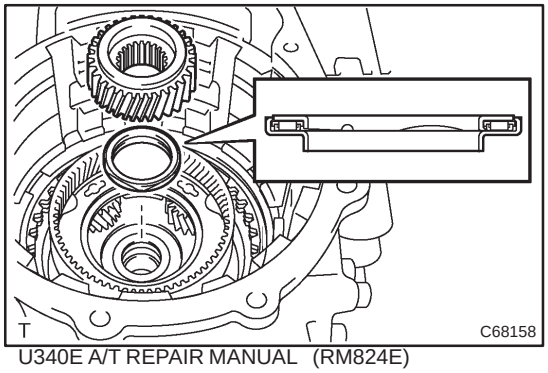
(b) Using SST, a press and a screwdriver, install the snap ring.
SST 09387–00070

107. INSTALL 1ST & REVERSE BRAKE DISC
[35683 / 3509]

(a) Install the 4 plates, 4 discs and flange to the transaxle case.

(b) Using a screwdriver, install the snap ring.

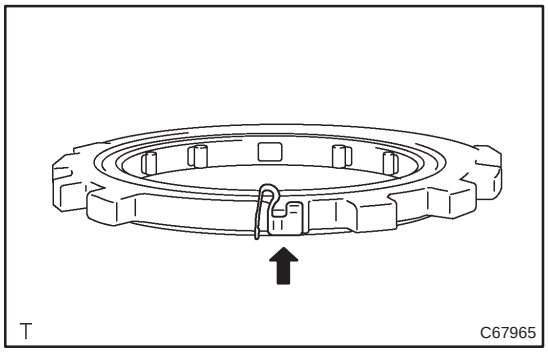
108. INSPECT PACK CLEARANCE OF FIRST & REVERSE BRAKE



(a) Using SST and a dial indicator, measure the dimension "A" in the illustration while pressing the disc and plate from the rear side.
SST 09350–36010 (09350–06110)
Pack clearance: 0.806 – 1.206 mm (0.0317 – 0.0475 in.)

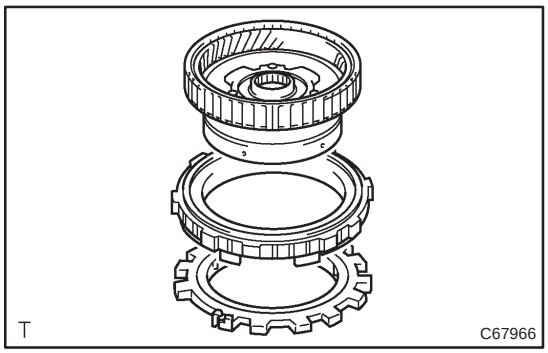
HINT:
Pack clearance = Dimension A – Flange thickness – Snap ring thickness

Select flange thickness: mm (in.)



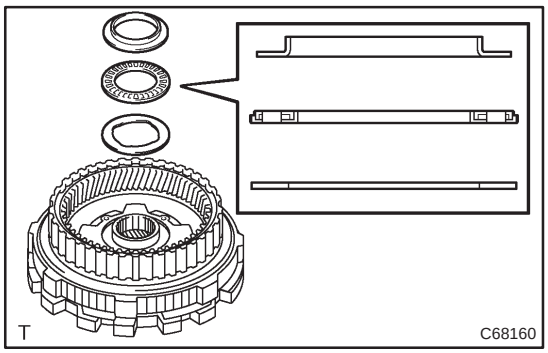
Mark	Thickness	Mark	Thickness
–	3.4 (0.134)	2	3.8 (0.150)
1	3.6 (0.142)	3	4.0 (0.157)

(b) Check that the 1st & reverse brake piston moves when applying compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the oil hole.



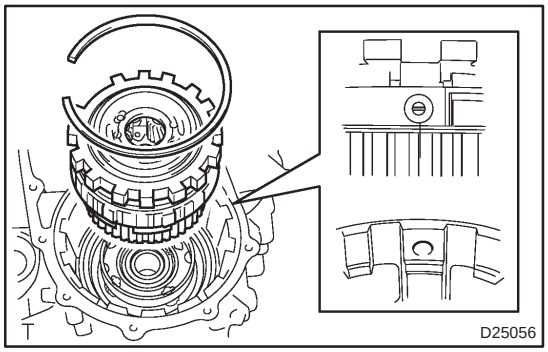
109. INSTALL FR PLANETARY SUN GEAR
[35714D / 3510]

(a) Install the planetary sun gear and needle roller bearing to the planetary gear assy.



110. INSTALL OUTER RACE RETAINER
[34365A / 3503]

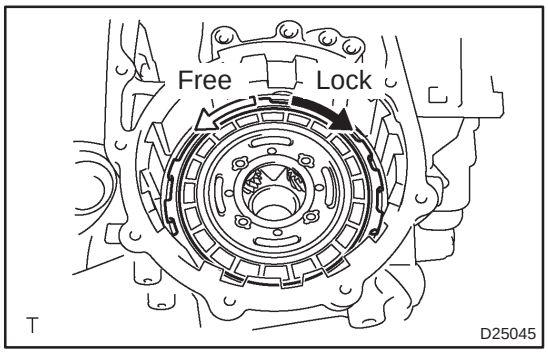
(a) Install outer retainer to the 1 way clutch No.2.



111. INSTALL 1 WAY CLUTCH NO.2
[35792C / 3509]

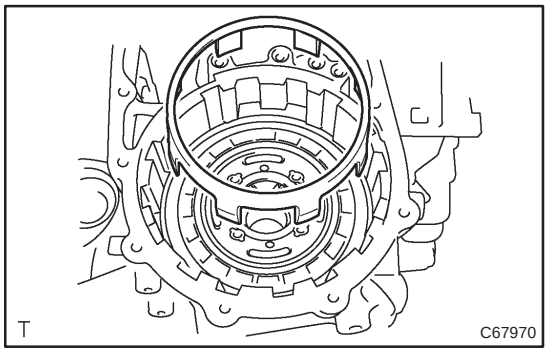
(a) Install the 1 way clutch and a 2nd brake piston assy to the rear planetary gear assy.

112. INSTALL PLANETARY GEAR REAR THRUST NEEDLE ROLLER BEARING
[35720K / 3510]



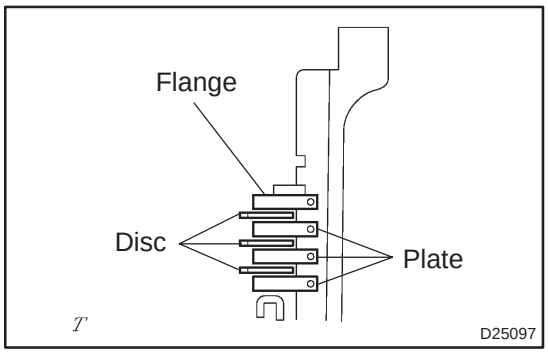
(a) Install the thrust bearing race No. 2, planetary gear thrust needle roller bearing and a thrust bearing race No.1 to the rear planetary gear assy.

113. INSTALL REAR PLANETARY GEAR ASSY
[35760 / 3510]



(a) Install the rear planetary gear assy to the transaxle case to the transaxle case.

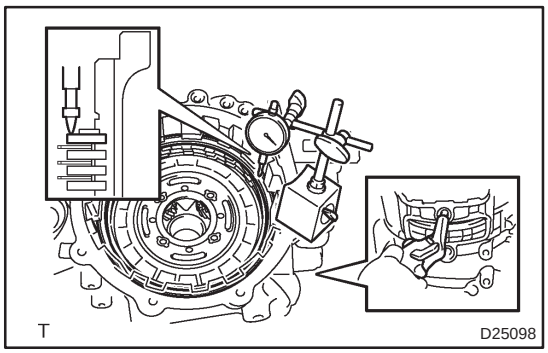
(b) Using a screwdriver, install the snap ring.



114. INSPECT 1 WAY CLUTCH NO.2
[35792C / 3509]

(a) Check that the rear planetary gear turns freely counter-clockwise and locks clockwise.

115. INSTALL 2ND BRAKE PISTON SLEEVE
[35626D / 3509]



(a) Install the 2nd brake piston sleeve to the transaxle case.

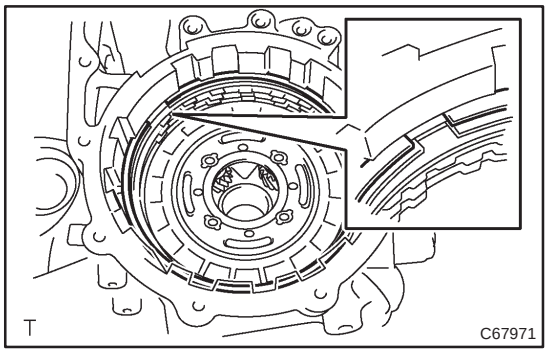
116. INSTALL 2ND BRAKE BRAKE DISC
[35682 / 3509]

(a) Install the 3 discs, 3 plates and flange to the transaxle case.

(b) Using a screwdriver, install the snap ring to the transaxle case.

117. INSPECT PACK CLEARANCE OF SECOND BRAKE

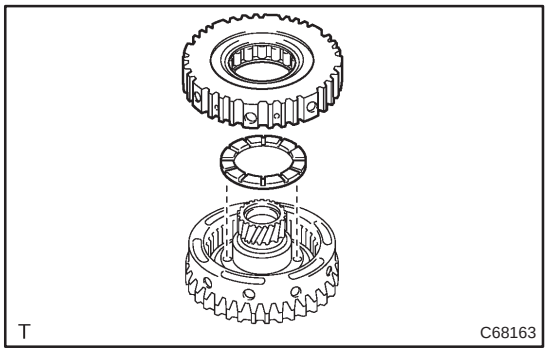
(a) Using a dial indicator, measure the 2nd brake pack clearance while applying and releasing compressed air (392 – 785 kPa, 4 – 8 kgf·cm^2, 57 – 114 psi).



Pack clearance: 0.847 – 1.247 mm (0.0333 – 0.0491 in.)

HINT:

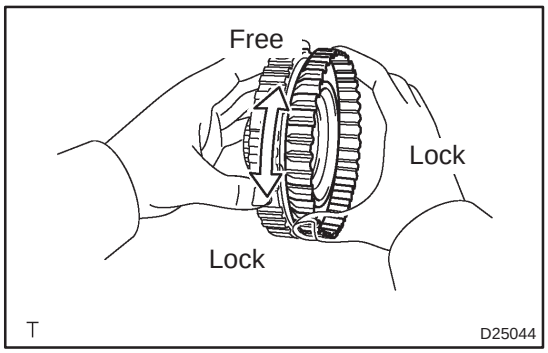
Pack clearance = Dimension A – Selected flange thickness – Snap ring thickness.



Selected flange thickness: mm (in.)

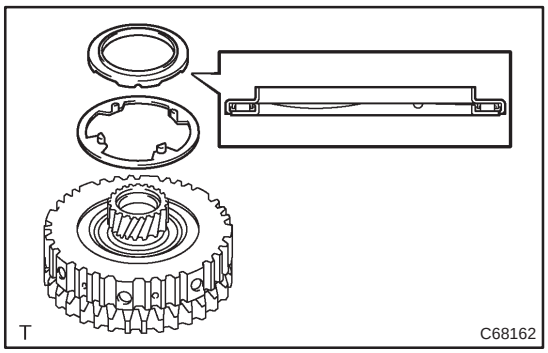
Mark	Thickness	Mark	Thickness
–	3.0 (0.118)	2	3.4 (0.134)
1	3.2 (0.126)	3	3.6 (0.142)

118. INSTALL 2ND COAST & OVERDRIVE BRAKE FLANGE HOLE SNAP RING
[34625E / 3509]



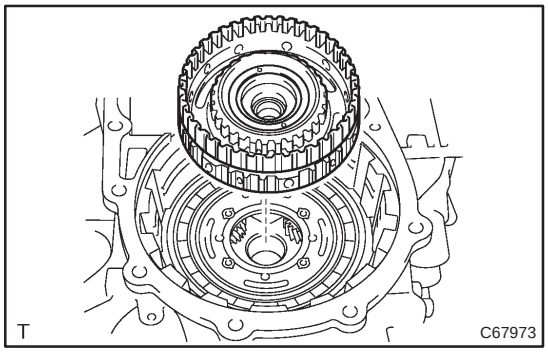
(a) Using a screwdriver, install the snap ring to the transaxle case.

119. INSTALL 1 WAY CLUTCH ASSY
[35790A / 3510]



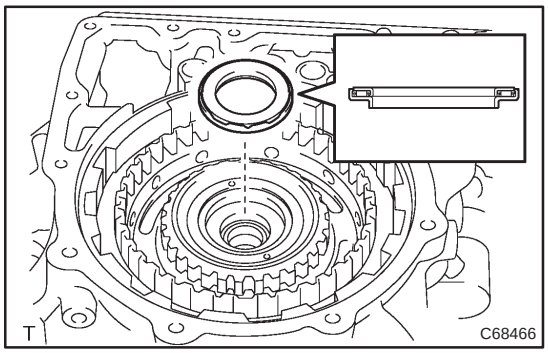
(a) Install the thrust washer No.2 to the rear planetary gear assy.

(b) Install the 1 way clutch assy to the rear planetary sun gear assy.



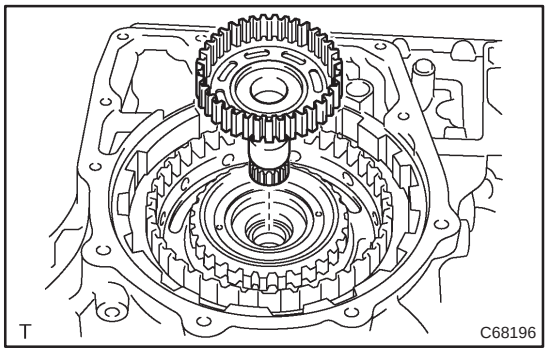
120. INSPECT 1 WAY CLUTCH ASSY
[35790A / 3510]

(a) Hold the rear planetary sun gear and turn the 1 way clutch. The 1 way clutch should turn freely clockwise and should lock counterclockwise.



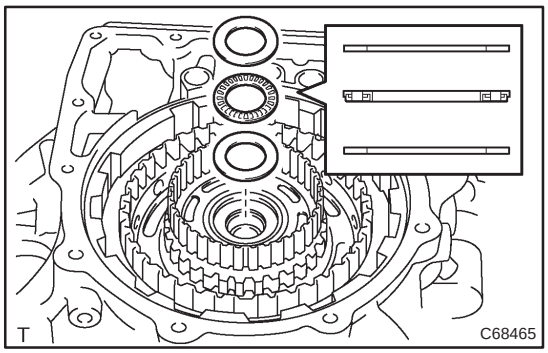
121. INSTALL REAR PLANERARY SUN GEAR THRUST NEEDLE ROLLER BEARING
[35730B / 3510]

(a) Install the thrust bearing and a washer to the rear planetary sun gear.



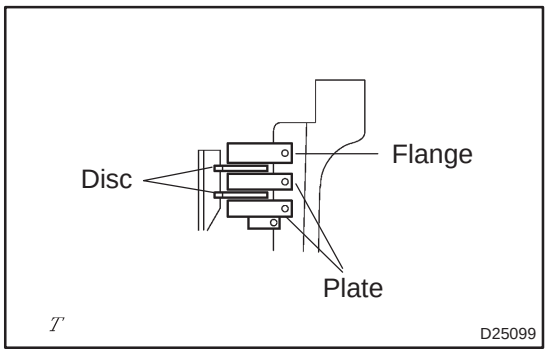
122. INSTALL REAR PLANETARY SUN GEAR ASSY
[35730 / 3510]

(a) Install the rear planetary sun gear assy.



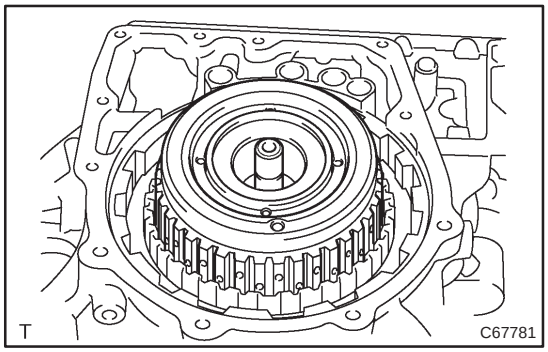
123. INSTALL REAR PLANETARY SUN GEAR, NO.2 THRUST NEEDLE BEARING
[35730C / 3510]

(a) Install the thrust bearing to the rear planetary sun gear.



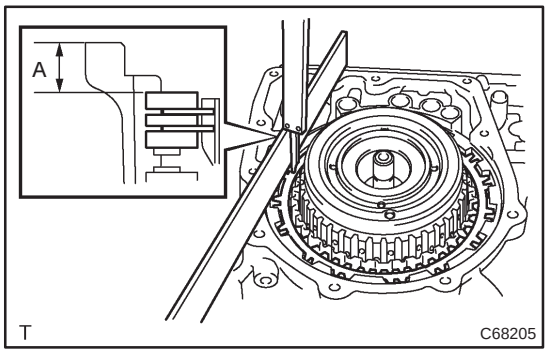
124. INSTALL DIRECT CLUTCH HUB [35654B / 3507]

(a) Install the direct clutch hub.



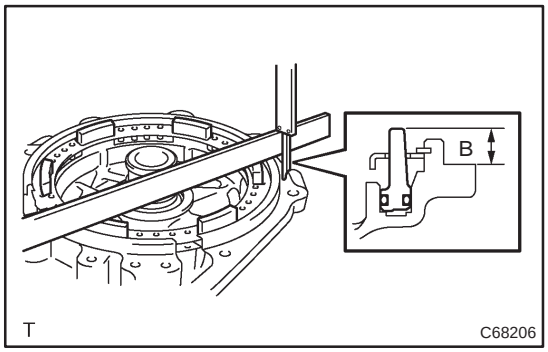
125. INSTALL THRUST NEEDLE ROLLER BEARING [35605B / 3507]

(a) Install the thrust bearing race No.3, thrust needle roller bearing and a C_2 hub thrust bearing race to the direct clutch hub.



126. INSTALL 2ND COAST & OVERDRIVE BRAKE DISC [34633 / 3509]

(a) Install the 2 discs, 2 plates and a flange to the transaxle case.



127. INSTALL INTERMEDIATE SHAFT ASSY

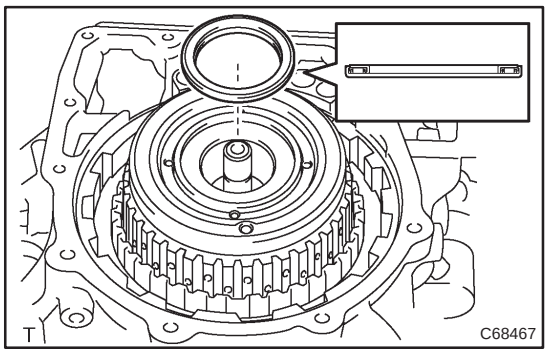
(a) Install the intermediate shaft assy to the transaxle case.

128. INSPECT PACK CLEARANCE OF SECOND COAST & OVER DRIVE BRAKE

(a) As shown in the illustration, place a straight edge on the transaxle case and measure the distance between the 2nd coast & O/D brake flange and straight edge using vernier calipers. (Dimension A)

(b) As shown in the illustration, place a straight edge on the O/D brake piston and measure the distance between the transaxle rear cove and straight edge using vernier calipers. (Dimension B)

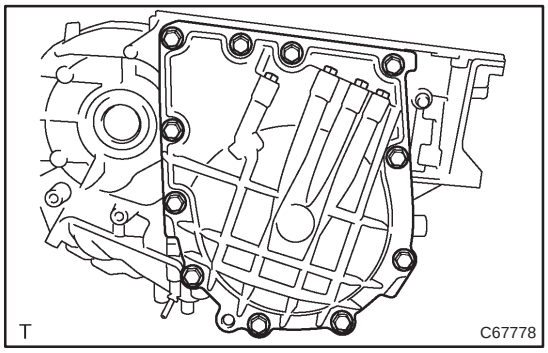
Calculate the piston stroke value using the following formula. Select a flange which satisfies the piston stroke value and install it.



Pack clearance: 2.091 – 2.491 mm (0.0823 – 0.0981 in)

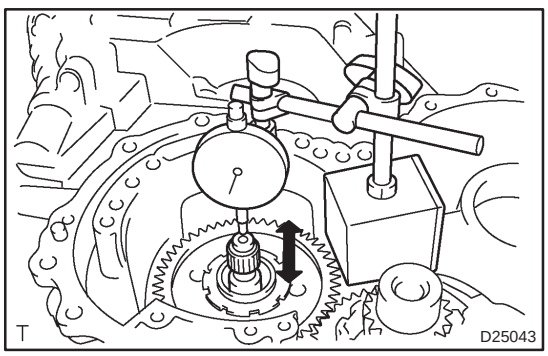
HINT:

Pack clearance = Dimension ”A” – Dimension ”B” – Selected flange thickness.



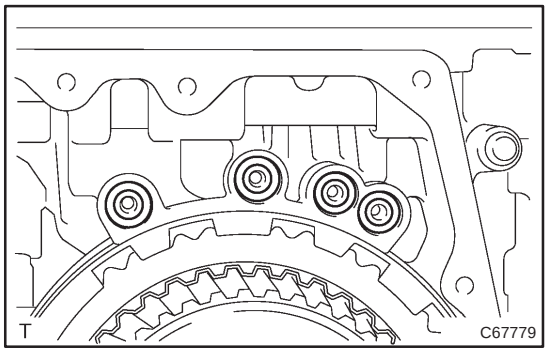
Selected flange thickness: mm (in.)

Mark	Thickness	Mark	Thickness
4	4.0 (0.1575)	6	4.4 (0.1732)
5	4.2 (0.1654)	7	4.6 (0.1811)



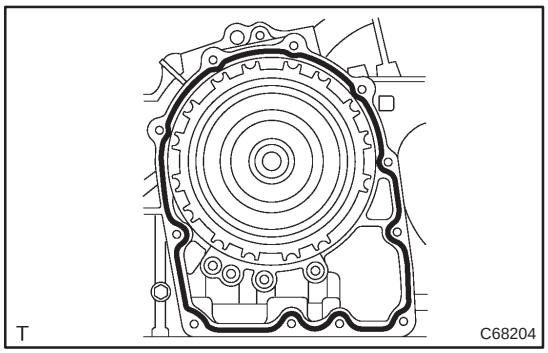
129. INSTALL REAR CLUTCH DRUM THRUST NEEDLE ROLLER BEARING
[35651B / 3507]

(a) Install the bearing to the intermediate shaft.



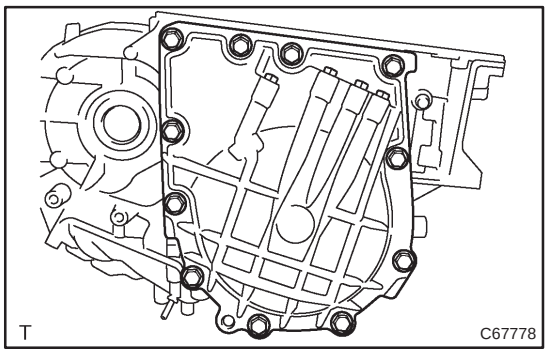
130. INSPECT INTERMEDIATE SHAFT ASSY

(a) Install the transaxle rear cover and 11 bolts.
Torque: 24.5 N·m (250 kgf·cm, 18 ft·lbf)



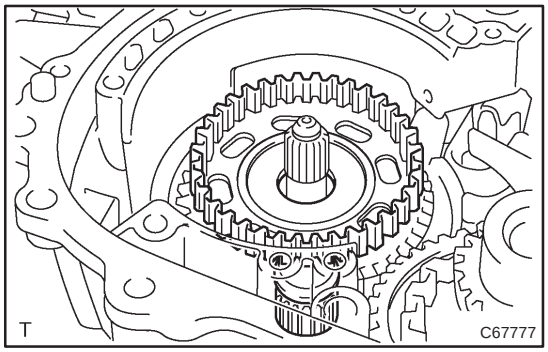
(b) Using a dial indicator, measure the rickety of intermediate shaft.
Standard clearance:
0.204 – 0.966 mm (0.008 – 0.038 in.)

(c) Remove 11 bolts and transaxle rear cover.



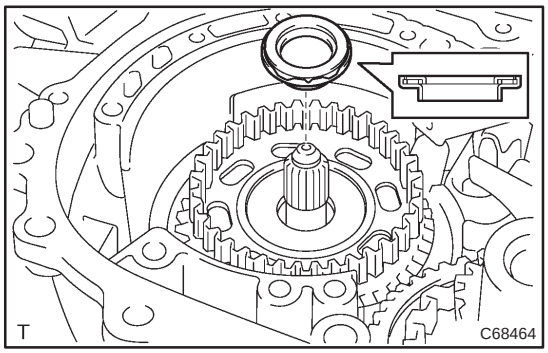
131. INSTALL TRANSAXLE CASE GASKET
[35145C / 3503]

(a) Install the 4 new gaskets to the transaxle case.

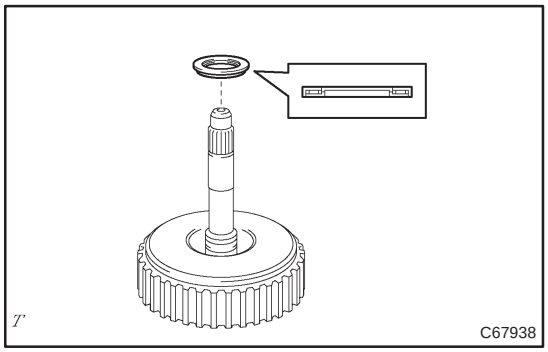


132. INSTALL TRANSAXLE REAR COVER ASSY

(a) Apply FIPG to the transaxle case.
FIPG:
Part NO. 08826–00090, THREE BOND 1281 or equivalent

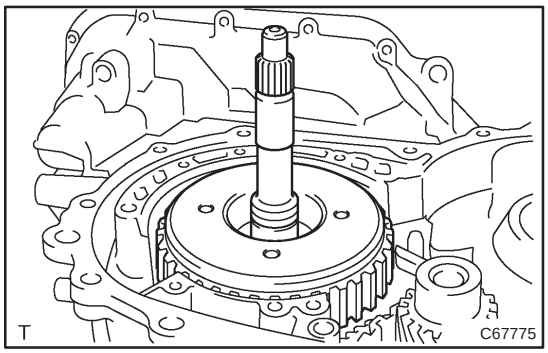


(b) Install the transaxle rear cover and 11 bolts.
Torque: 24.5 N·m (250 kgf·cm, 18 ft·lbf)



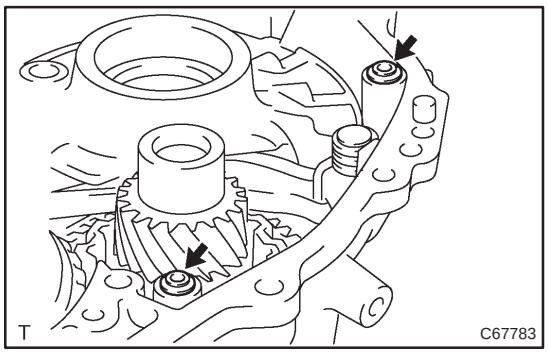
133. INSTALL FORWARD CLUTCH HUB SUB–ASSY
[35061 / 3507]

(a) Install the forward clutch hub sub–assy to the transaxle case.



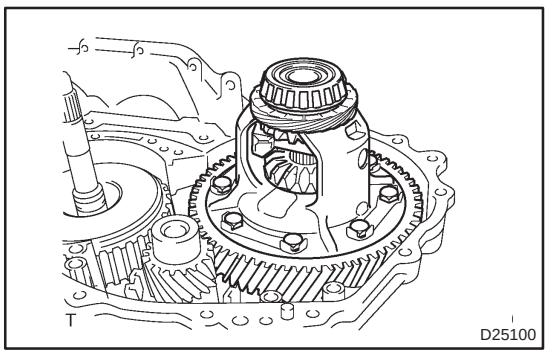
134. INSTALL FORWARD CLUTCH HUB THRUST NEEDLE ROLLER BEARING
[35061C / 3507]

(a) Install the bearing to the forward clutch hub.



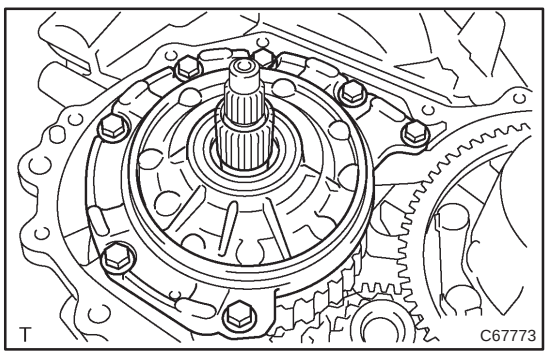
135. INSTALL STATOR SHAFT THRUST NEEDLE ROLLER BEARING
[35370A / 3502]

(a) Install the bearing to the input shaft assy.



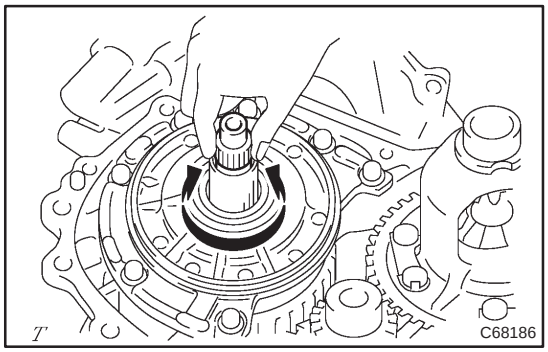
136. INSTALL INPUT SHAFT ASSY

(a) Install the input shaft assy to the transaxle case.



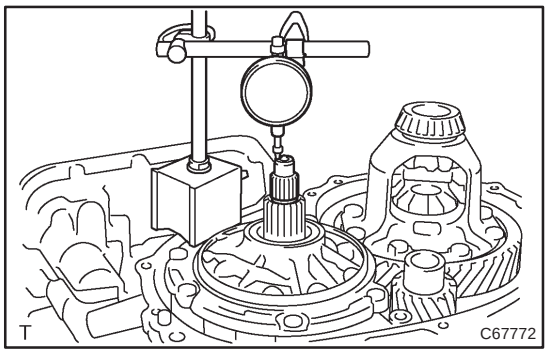
137. INSTALL OVERDRIVE BRAKE GASKET
[35179 / 3503]

(a) Install 2 new gaskets to the transaxle case.



138. INSTALL DIFFERENTIAL GEAR ASSEMBLY

(a) Install the differential gear assy to the transaxle case.



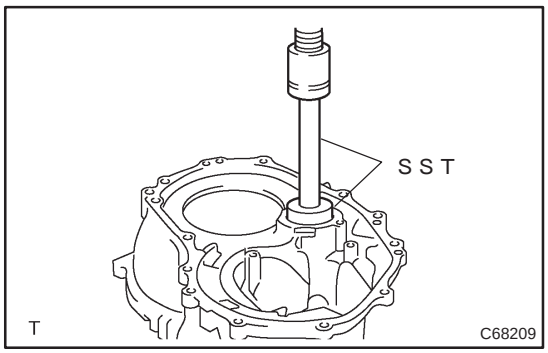
139. INSTALL OIL PUMP ASSEMBLY

(a) Install the 7 bolts and oil pump.
Torque: 22 N·m (220 kgf·cm, 16 ft·lbf)

140. INSPECT INPUT SHAFT ASSY

(a) Make sure that the input shaft turns smoothly.

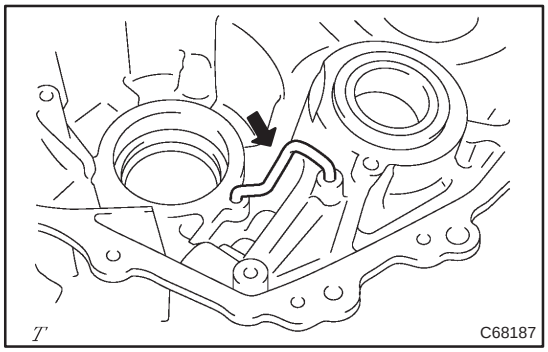
141. INSPECT INPUT SHAFT ENDPLAY



(a) Measure the end play in axial direction.

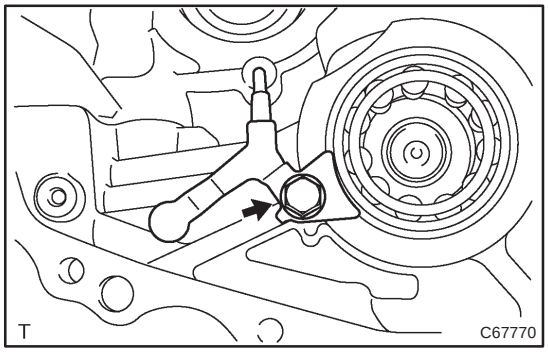
End play: 0.37 – 1.29 mm (0.0146 – 0.0508 in.)

If the end play is not as specified, select and replace the thrust needle roller bearing.



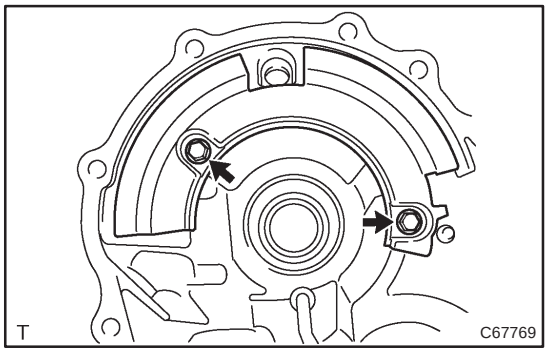
142. INSTALL FRONT DRIVE PINION FRONT TAPERED ROLLER BEARING
[41211A / 4301]

(a) Install the thrust bearing to the transaxle housing.



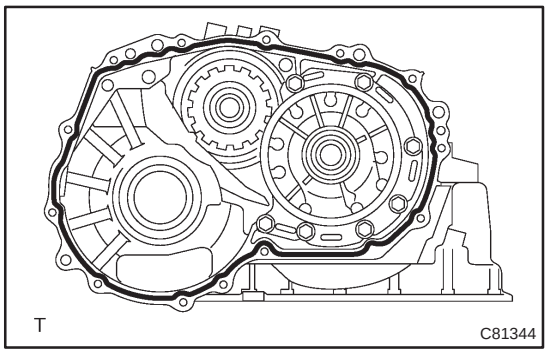
(b) Using SST and a press, install the cylindrical roller bearing to the transaxle housing.

SST 09950–60010 (09951–00650), 09950–70010 (09951–07150)



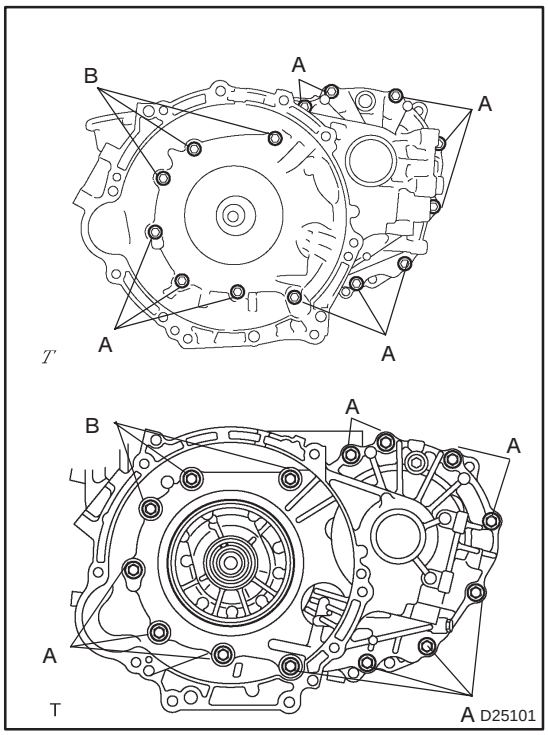
143. INSTALL DIFFERENTIAL GEAR LUBE APPLY TUBE
[35882D / 3510]

144. INSTALL BEARING LOCK PLATE
[33326E / 3510]



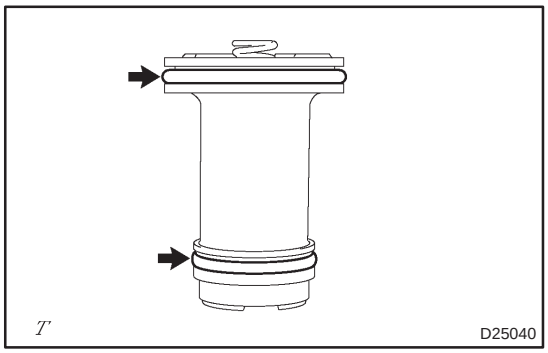
(a) Install the bolt and bearing lock plate to the transaxle housing.

Torque: 11 N·m (110 kgf·cm, 8 ft·lbf)



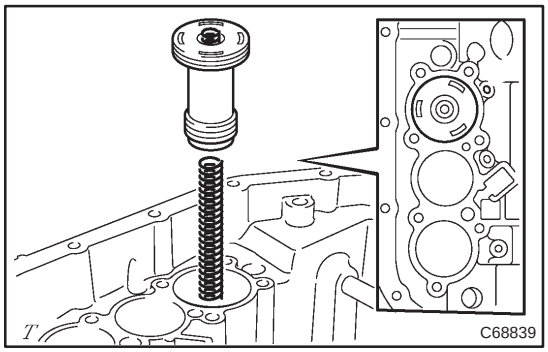
145. INSTALL TRANSAXLE HOUSING OIL SEPARATOR [35174 / 4301]

(a) Install the 2 bolts and oil separator to the transaxle housing.
Torque: 9.8 N·m (100 kgf·cm, 7 ft·lbf)



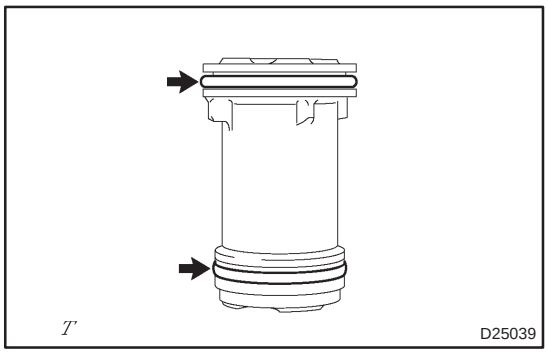
146. INSTALL TRANSAXLE HOUSING [35111C / 4301]

(a) Apply FIPG to the transaxle case.
FIPG:
Part No.08826–00090, THREE BOND 1281 or equivalent



(b) Install the 14 bolts and transaxle housing.
Torque:
Bolt A: 29 N·m (300 kgf·cm, 21 ft·lbf)
Bolt B: 22 N·m (220 kgf·cm, 16 ft·lbf)

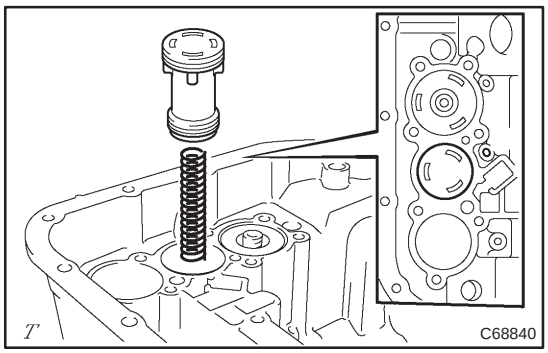
147. INSTALL C–2 ACCUMULATOR PISTON [35425A / 3512]



(a) Coat new 2 O–rings with ATF and install them to the C_2 Accumulator piston.

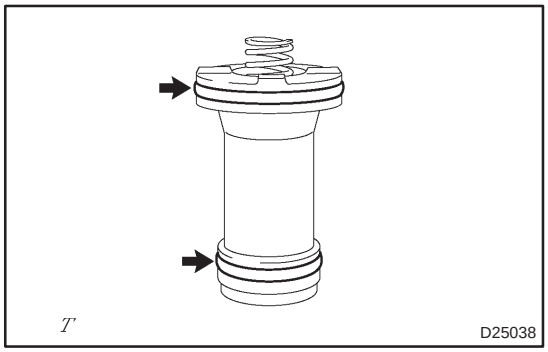
NOTICE:
Be careful not to damage the O–ring.

(b) Install the spring and C_2 accumulator piston.
Accumulator spring:



Spring	Free length/ Outer diameter mm (in.)	Color
C_2	66.90 (2.6339)/ 17.20 (0.6772)	–

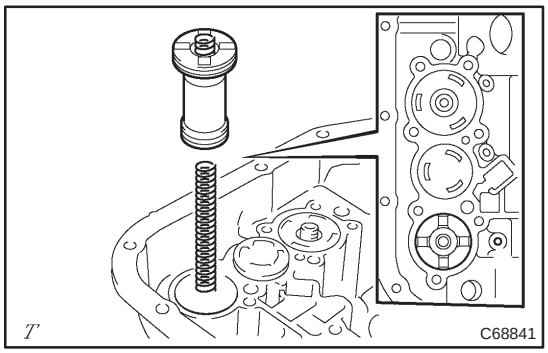
148. INSTALL C–3 ACCUMULATOR PISTON [35426D / 3512]



(a) Coat new 2 O–rings with ATF and install them to the C_3 accumulator piston.

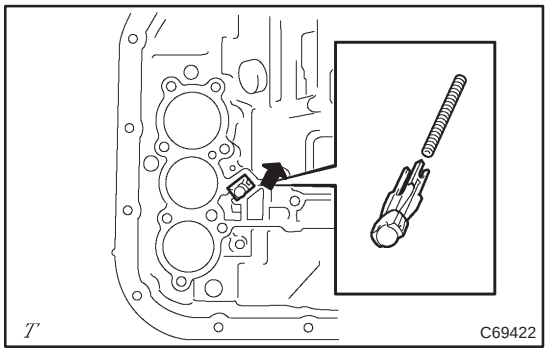
NOTICE:
Be careful not to damage the O–ring.

(b) Install the spring and C_3 accumulator piston.
Accumulator spring:



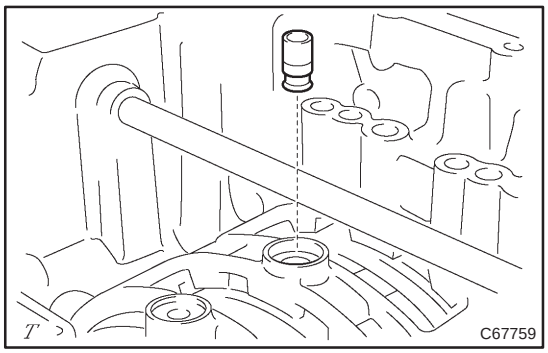
Spring	Free length/ Outer diameter mm (in.)	Color
C_3	80.20 (3.1575)/ 18.70 (0.7362)	Blue

149. INSTALL B–2 ACCUMULATOR PISTON [35423 / 3512]



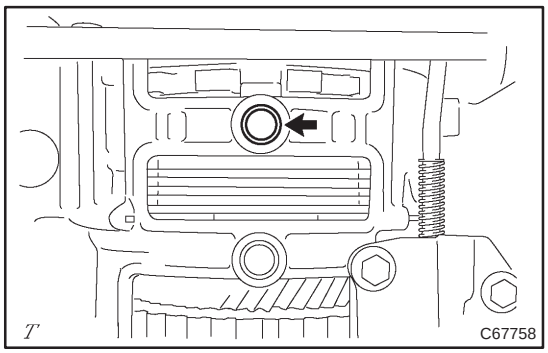
(a) Coat new 2 O–rings with ATF and install them to the B_2 accumulator piston.

NOTICE:
Be careful not to damage the O–ring.



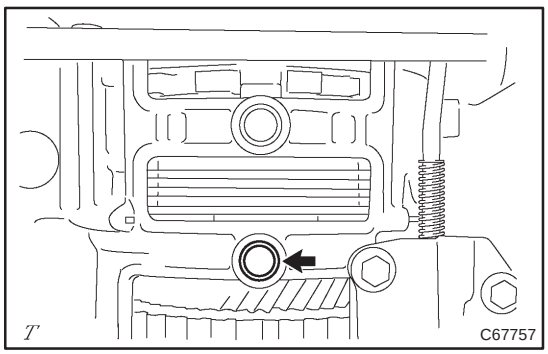
(b) Install the spring and B_2 accumulator piston.
Accumulator spring:

Spring	Free length/ Outer diameter mm (in.)	Color
B_2	66.90 (2.6339)/ 15.50 (0.6102)	Green



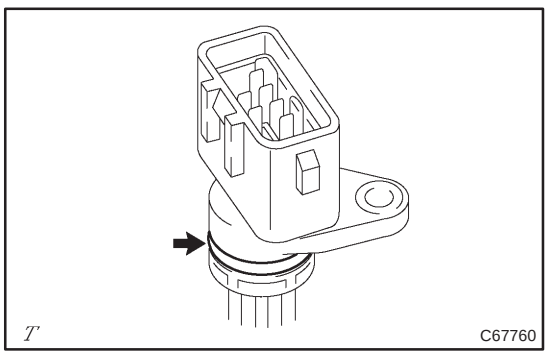
150. INSTALL CHECK BALL BODY
[35251 / 3512]

(a) Install the spring and check ball body.



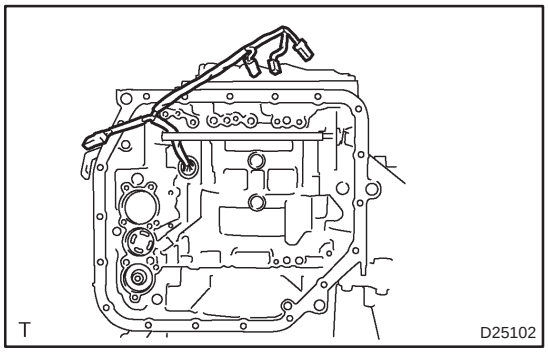
151. INSTALL BRAKE DRUM GASKET
[35159 / 3503]

(a) Install a new brake drum gasket.



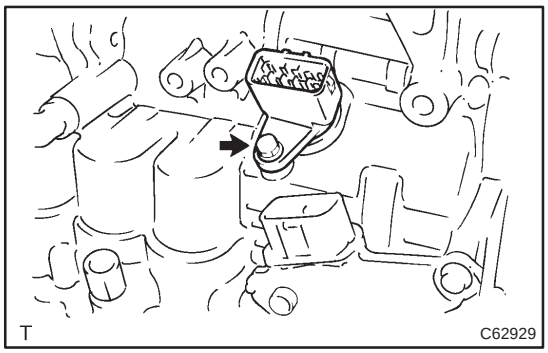
152. INSTALL TRANSAXLE CASE GASKET
[35145C / 3503]

(a) Install a new transaxle case gasket.

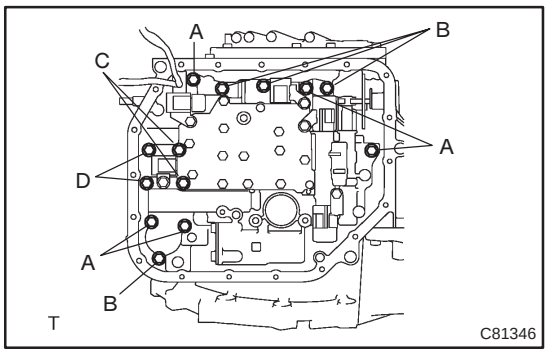


153. INSTALL TRANSAXLE CASE 2ND BRAKE GASKET
[35149B / 3503]

(a) Install a new transmission case 2nd brake gasket.

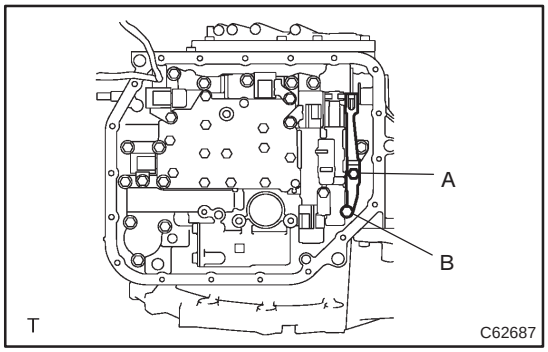


154. INSTALL TRANSMISSION WIRE
[82125J / 3512]

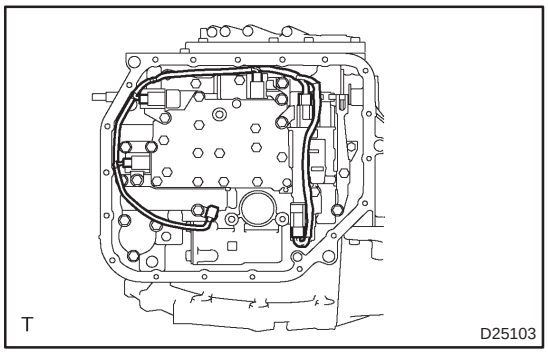


(a) Coat a new O–ring with ATF, install it to the transaxle wire.

(b) Pierce the transmission wire to the transaxle.



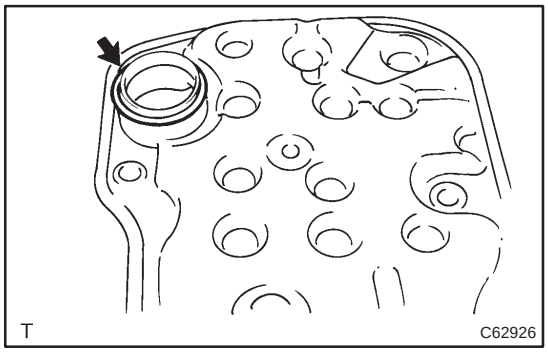
(c) Install the bolt and transaxle wire.
Torque: 5.4 N·m (55 kgf·cm, 48 ft·lbf)



155. INSTALL TRANSMISSION VALVE BODY ASSY [35410 / 3512]

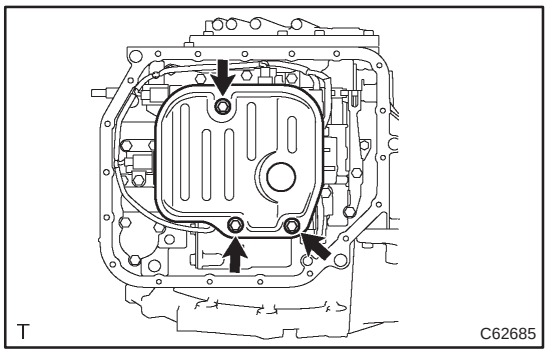
(a) Install the valve body assembly and 13 bolts.
Torque: 11 N·m (110 kgf·cm, 8 ft·lbf)
Bolt length:
Bolt A: 32 mm (1.26 in.)
Bolt B: 22 mm (0.87 in.)
Bolt C: 55 mm (2.17 in.)
Bolt D: 45 mm (1.77 in.)

(b) Install the detente spring, detente spring cover and 2 bolts.
Torque: 11 N·m (110 kgf·cm, 8 ft·lbf)
Bolt length:
Bolt A: 14 mm (0.55 in.)
Bolt B: 45 mm (1.77 in.)



(c) Check that the manual valve lever is touching the center of the detente spring tip roller.

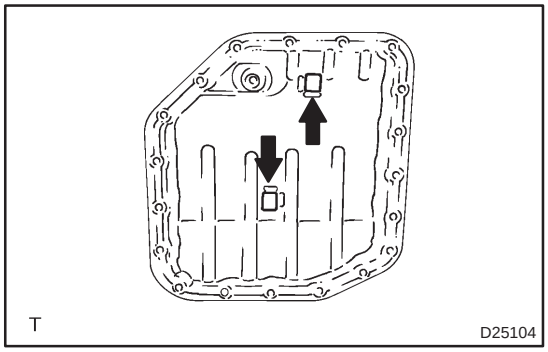
(d) Connect the 5 solenoid connectors.



(e) Coat a new O–ring with ATF, install it to the ATF temperature sensor.

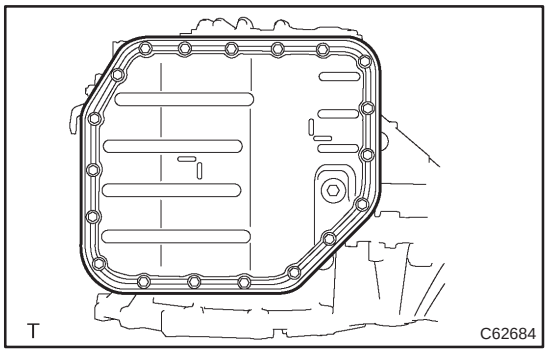
(f) Install the ATF temperature sensor, lock plate and bolt.
Torque: 11 N·m (110 kgf·cm, 8 ft·lbf)
Bolt length: 55 mm (2.17 in.)

156. INSTALL VALVE BODY OIL STRAINER ASSY [35330 / 3512]



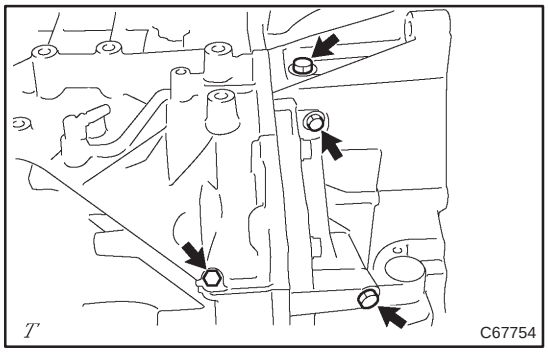
(a) Coat a new O–ring with ATF, install it to the oil strainer.

(b) Install the oil strainer and 3 bolts.
Torque: 11 N·m (110 kgf·cm, 8 ft·lbf)



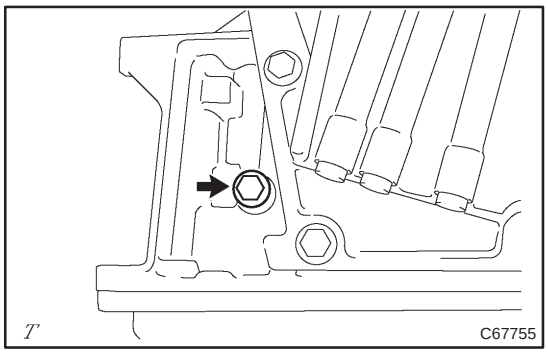
157. INSTALL AUTOMATIC TRANSAXLE OIL PAN GASKET [35168A / 3503]

(a) Install the new gasket to the oil pan.

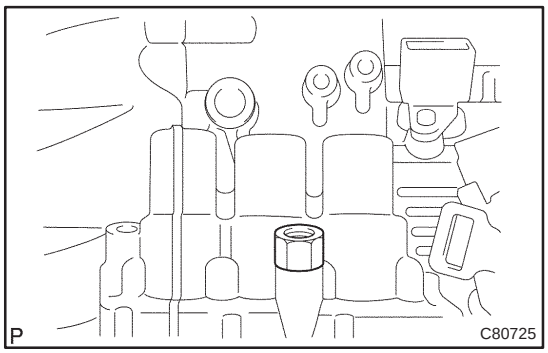


158. INSTALL AUTOMATIC TRANSAXLE OIL PAN SUB–ASSY [35106D / 3503]

(a) Install the 2 magnets in the oil pan.



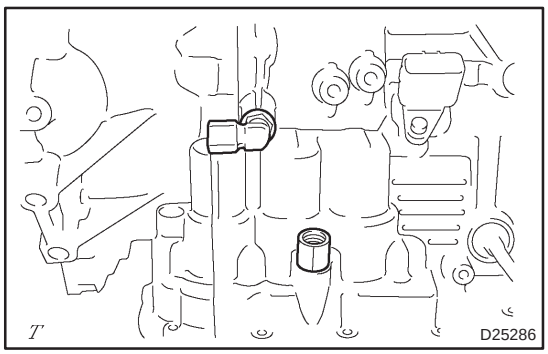
(b) Install the oil pan sub–assy and 19 bolts.
Torque: 7.8 N·m (80 kgf·cm, 71 in.·lbf)



159. INSTALL TRANSAXLE CASE NO.1 PLUG
[35104Q / 3503]

(a) Coat 5 new O–rings with ATF, install them to the screw plugs.

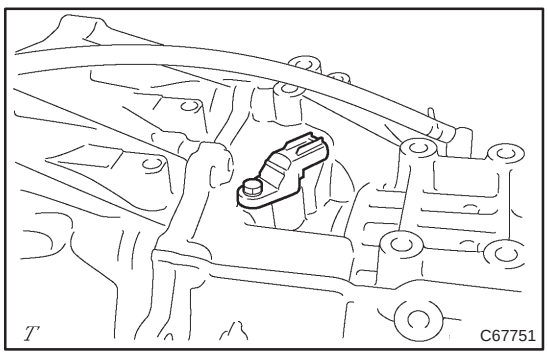
(b) Install the 4 screw plugs.
Torque: 7.4 N·m (75 kgf·cm, 65 in.·lbf)



(c) Install the screw plug.
Torque: 7.4 N·m (75 kgf·cm, 65 in.·lbf)

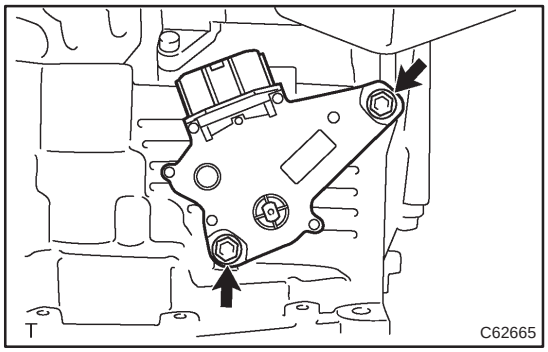
160. INSTALL OIL COOLER TUBE UNION(INLET OIL COOLER UNION)
[32921C / 3514]

(a) coat 2 new O–rings with ATF, install them to the union.



(b) Install the union.
Torque: 27 N·m (275 kgf·cm, 20 ft·lbf)

161. INSTALL OIL COOLER TUBE UNION(OUTLET OIL COOLER UNION)
[32921C / 3514]

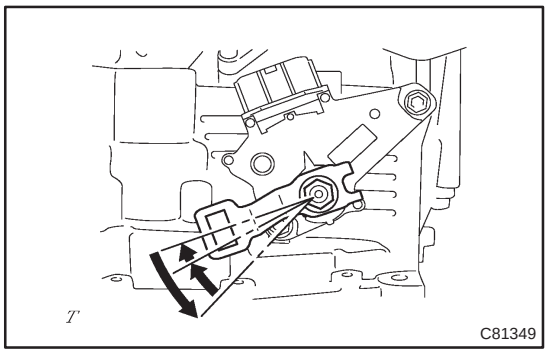


(a) coat 2 new O–rings with ATF, install them to the elbow.

(b) Install the elbow.
Torque: 27 N·m (275 kgf·cm, 20 ft·lbf)

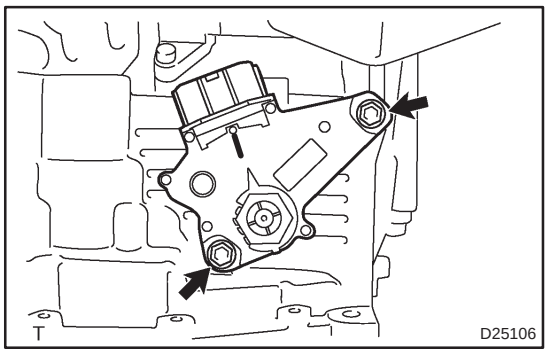
162. INSTALL TRANSMISSION REVOLUTION SENSOR
[89413E / 3512]

(a) Install the bolt and transmission revolution sensor.
Torque: 5.4 N·m (55 kgf·cm, 48 in.·lbf)



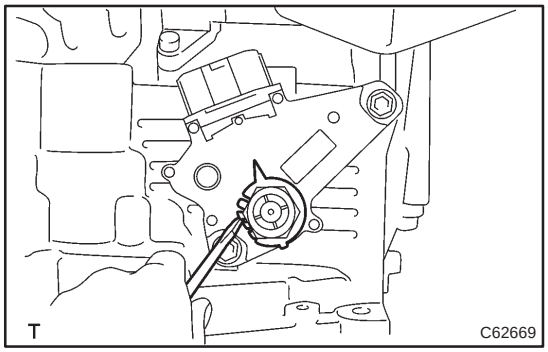
163. INSTALL NEUTRAL START SWITCH ASSY [84540G / 3513]

(a) Install the park/neutral position switch onto the manual valve lever shaft and temporarily install the 2 adjusting bolts.



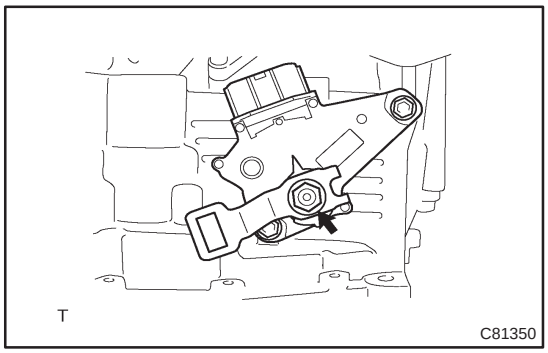
(b) Install a new lock washer and nuts.
Torque: 6.9 N·m (70 kgf·cm, 61 in.·lbf)

(c) Temporarily install the control lever.



(d) Turn the lever counterclockwise until it stops, then turn it clockwise 2 notches.

(e) Remove the control lever.

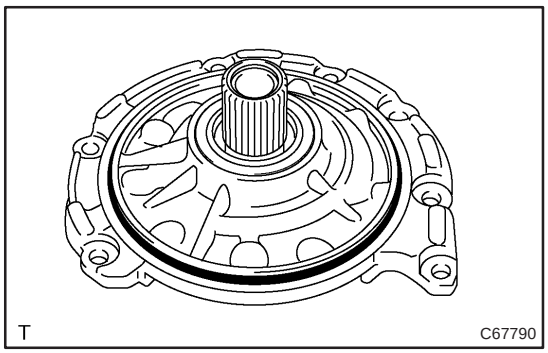


(f) Align the groove with neutral basic line.

(g) Tighten the 2 bolts.
Torque: 5.4 N·m (55 kgf·cm, 48 in.·lbf)

(h) Using a screwdriver, stake the nut with the lock washer.

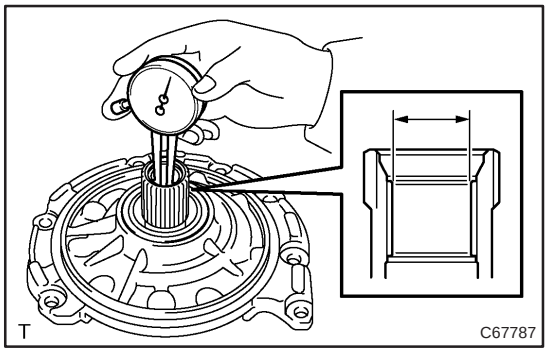
(i) Install the control lever, washer and nut.
Torque: 13 N·m (130 kgf·cm, 10 ft·lbf)



164. INSTALL SPEEDOMETER DRIVEN (ATM) GEAR SUB–ASSY
[33403G / 3505]

165. INSTALL SPEEDOMETER (ATM) SENSOR
[83181E / 3505]

OIL PUMP ASSY (U34#E Series)

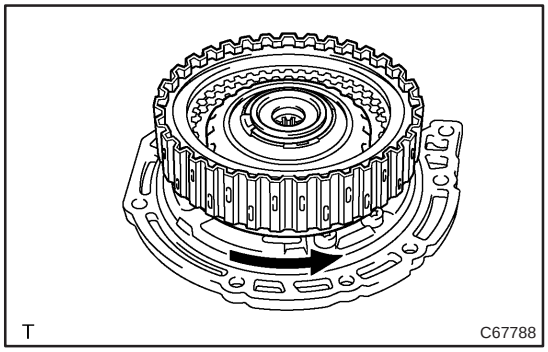


OVERHAUL

4002H–01

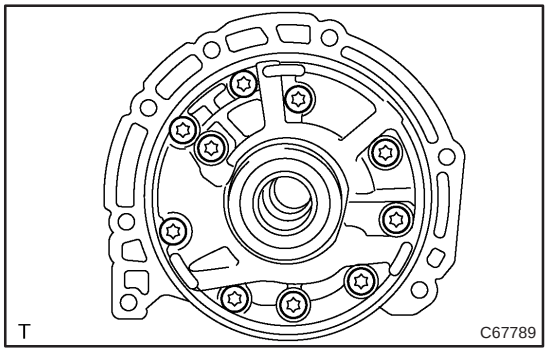
1. REMOVE FRONT OIL PUMP BODY O–RING [35301B / 3502]

(a) Remove the O–ring from the oil pump.



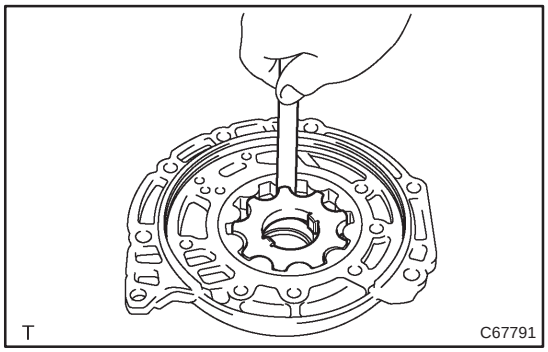
2. INSPECT STATOR SHAFT ASSY [35370 / 3502]

(a) Using a dial indicator, measure the inside diameter of the stator shaft bushings.



Standard inside diameter:
21.500 – 21.526 mm (0.84646 – 0.84748 in.)
Maximum inside diameter: 21.526 mm (0.84748 in.)

If the inside diameter is greater than the maximum, replace the stator shaft.

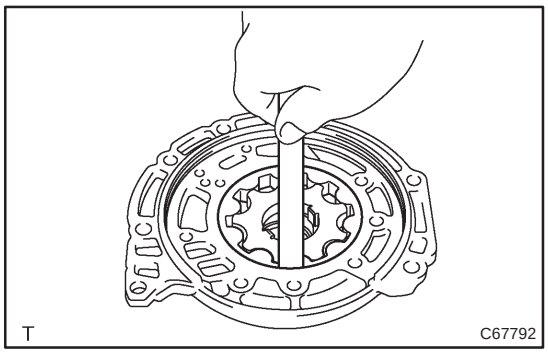


(b) Install the input shaft assy to the stator shaft assy, check that the input shaft assy turns smoothly.

NOTICE:
Replace the stator shaft assy with new one if rough movement or unusual noise is identified. When replacing, inspect the input shaft's contact surface with the bearing and if any damage or discolor is found, replace the input shaft with new one.

3. REMOVE STATOR SHAFT ASSY [35370 / 3502]

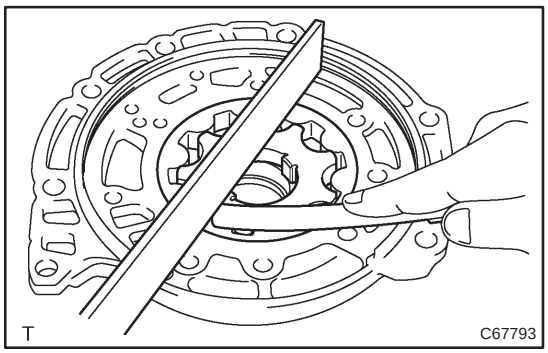
(a) Using a torx socket wrench (T30), remove the 10 torx screws.



4. INSPECT CLEARANCE OF OIL PUMP ASSEMBLY

(a) Measure the tip clearance between the driven gear teeth and drive gear teeth.

Standard tip clearance:
0.07 – 0.15 mm (0.0028 – 0.0059 in.)
Maximum tip clearance: 0.15 mm (0.0059 in.)



If the tip clearance is greater than the maximum, replace the oil pump body sub–assembly.

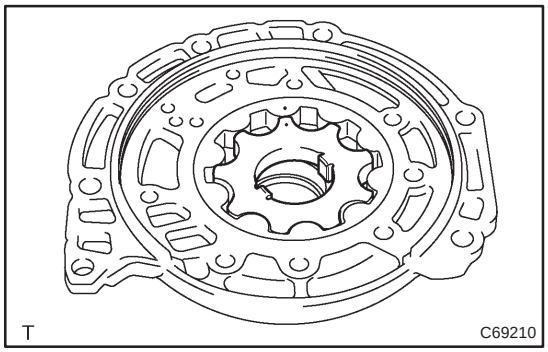
(b) Push the driven gear to one side of the body. Using a feeler gauge, measure the clearance.

Standard body clearance:
0.10 – 1.15 mm (0.0039 – 0.0059 in.)
Maximum body clearance: 0.15 mm (0.0059 in.)

If the body clearance is greater than the maximum, replace the oil pump body sub–assembly.

(c) Using a steel straight edge and feeler gauge, measure the side clearance of both gears.

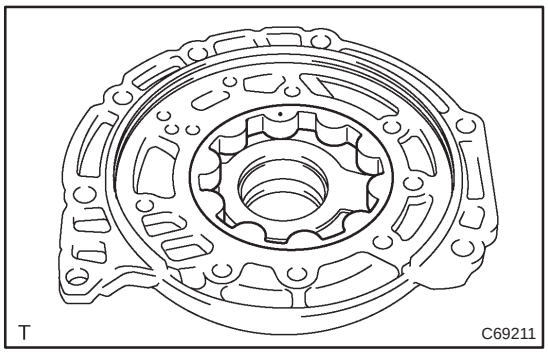
Standard side clearance:
0.02 – 0.05 mm (0.0008 – 0.0020 in.)
Maximum side clearance: 0.05 mm (0.0020 in.)



If the side clearance is greater than the maximum, replace the drive gear, driven gear or pump body.

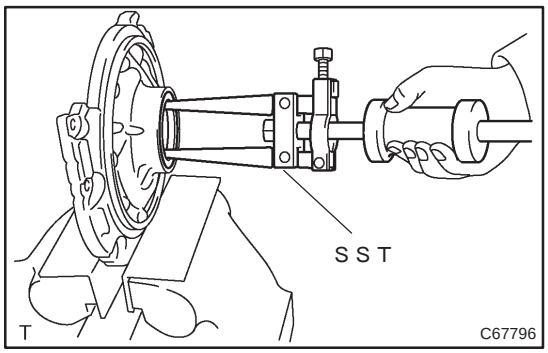
Drive gear thickness: mm (in.)

No.	Thickness
1	9.44 – 9.45 (0.3709 –0.3713)
2	9.45 – 9.46 (0.3713 – 0.3717)
3	9.46 – 9.47 (0.3717 – 0.3721)
4	9.47 – 9.48 (0.3721 – 0.3725)
5	9.48 – 9.49 (033725 – 0.3729)



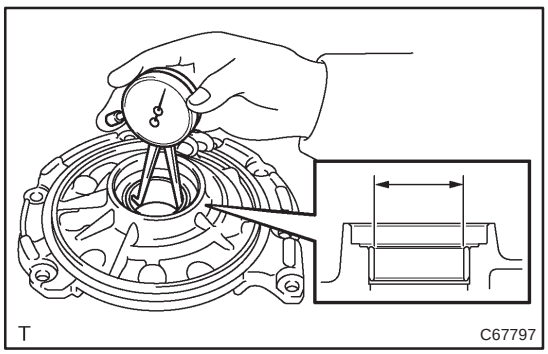
Driven gear thickness: mm (in.)

No.	Thickness
1	9.44 – 9.45 (0.3709 –0.3713)
2	9.45 – 9.46 (0.3713 – 0.3717)
3	9.46 – 9.47 (0.3717 – 0.3721)
4	9.47 – 9.48 (0.3721 – 0.3725)
5	9.48 – 9.49 (033725 – 0.3729)



5. REMOVE FRONT OIL PUMP DRIVE GEAR [35321 / 3502]

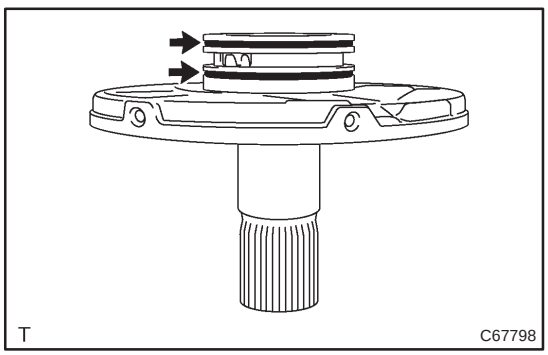
(a) Remove the front oil pump drive gear from the oil pump body.



6. REMOVE FRONT OIL PUMP DRIVEN GEAR [35322 / 3502]

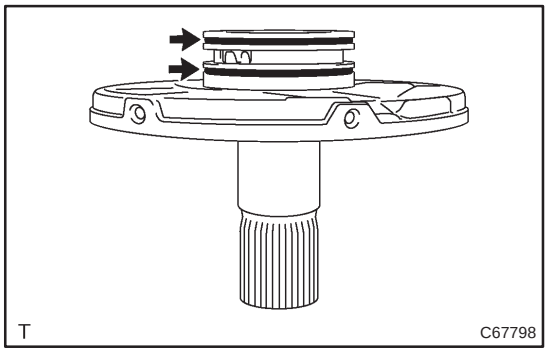
(a) Remove the front oil pump driven gear from the oil pump body.

7. REMOVE FRONT OIL PUMP OIL SEAL [35301A / 3502]



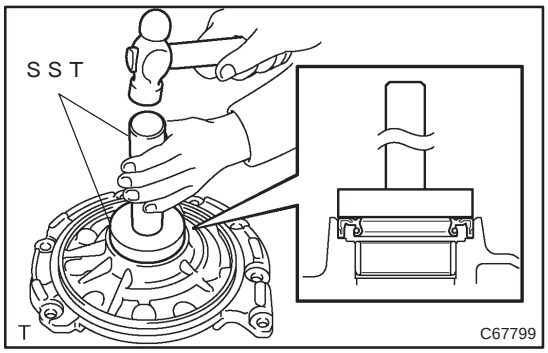
(a) Using SST, remove the oil seal from the oil pump body.
SST 09308–00010

8. INSPECT FRONT OIL PUMP BODY SUB–ASSY [35301 / 3502]



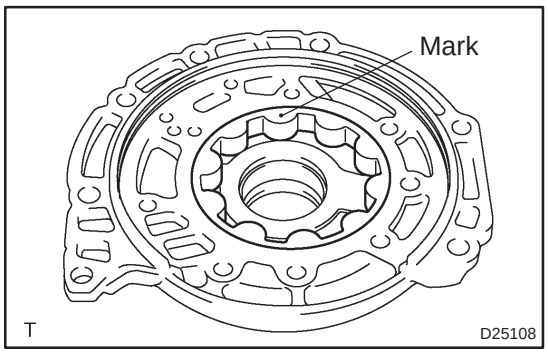
(a) Using a dial indicator, measure the inside diameter of the oil pump body bushing.
Standard inside diameter:
38.113 – 38.138 mm (1.50050 – 1.50149 in.)
Maximum inside diameter: 38.138 mm (1.50149 in.)

If the inside diameter is greater than the maximum, replace the oil pump body sub–assy.



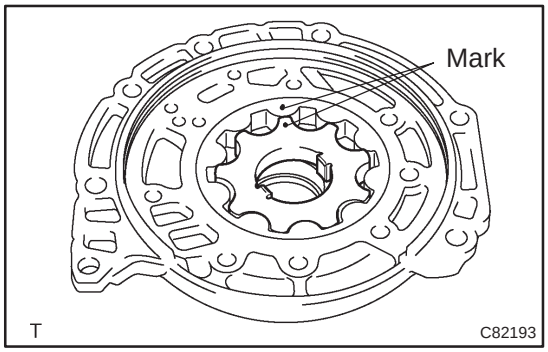
9. REMOVE CLUTCH DRUM OIL SEAL RING [35617 / 3502]

(a) Using a screwdriver, remove the 2 oil seals from the stator shaft assy.



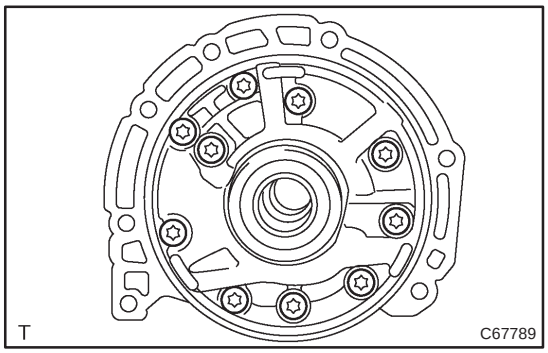
10. INSTALL CLUTCH DRUM OIL SEAL RING
[35617 / 3502]

(a) Install the 2 seal rings to the stator shaft assy.



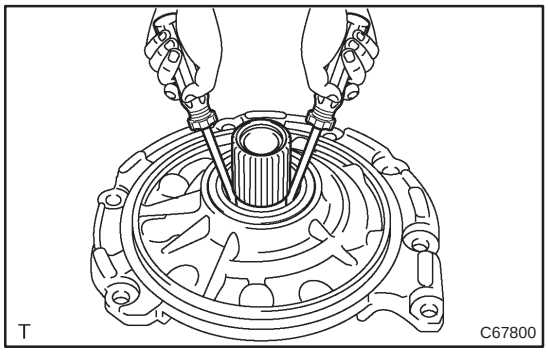
11. INSTALL FRONT OIL PUMP OIL SEAL
[35301A / 3502]

(a) Using SST, install the oil seal to the oil pump body.
SST 09950–60010 (09951–00550), 09950–70010 (09951–07100)
Oil seal in depth:
0 ± 0.5 mm (0 ± 0.020 in.)



12. INSTALL FRONT OIL PUMP DRIVEN GEAR
[35322 / 3502]

(a) Apply ATF to the front oil pump driven gear and install it to the oil pump body with the marked side up.

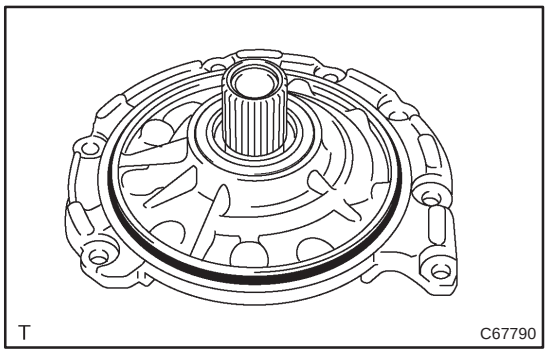


13. INSTALL FRONT OIL PUMP DRIVE GEAR
[35321 / 3502]

(a) Apply ATF to the front oil pump drive gear and install it to the oil pump body with the marked side up.

14. INSTALL STATOR SHAFT ASSY
[35370 / 3502]

(a) Using a torx socket wrench (T30), install the 10 torx screws.
Torque: 9.8 N·m (100 kgf·cm, 87 in.·lbf)

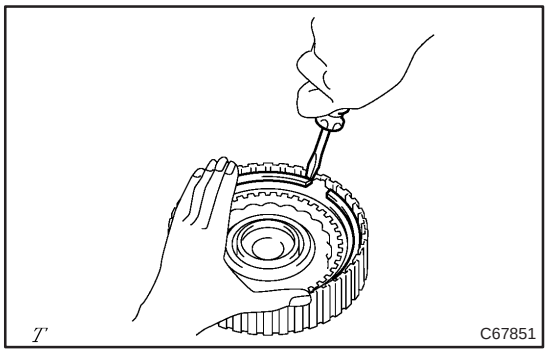


15. INSPECT OIL PUMP ASSEMBLY

(a) Turn the drive gear with 2 screwdrivers and make sure it rotates smoothly.

NOTICE:

Be careful not to damage the oil seal lip.

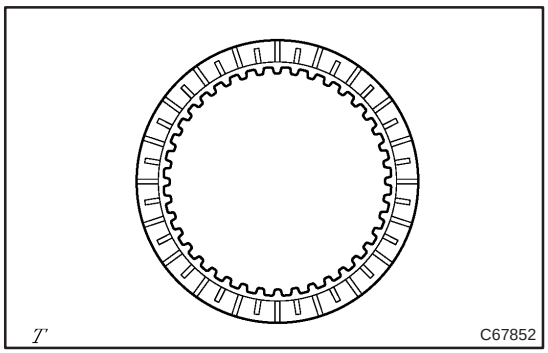


16. INSTALL FRONT OIL PUMP BODY O–RING [35301B / 3502]

(a) Apply ATF to the O–ring and install it to the oil pump sassy.

INPUT SHAFT ASSY (U34#E Series)

OVERHAUL

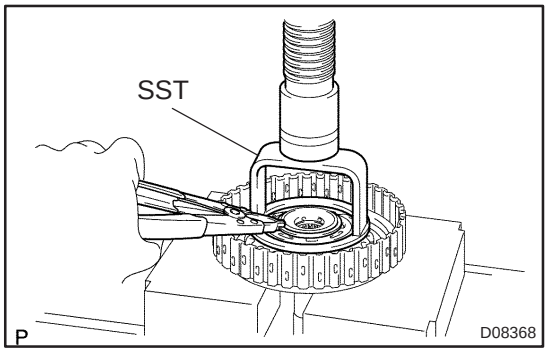


4002I–01

1. REMOVE FRONT CLUTCH CLUTCH DISC
[35633 / 3507]

(a) Using a screwdriver, remove the snap ring.

(b) Remove the flange, 4 discs and 4 plates.



2. INSPECT FRONT CLUTCH CLUTCH DISC
[35633 / 3507]

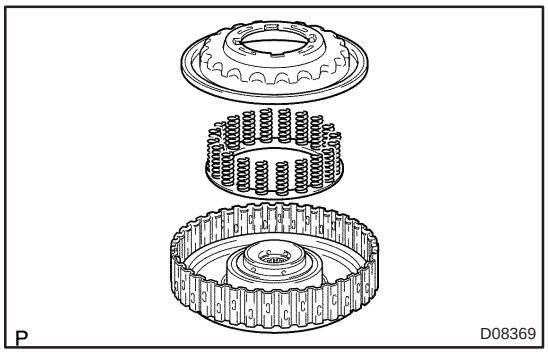
(a) Check to see if the sliding surface of the disc, plate and flange are worn or burnt.

If necessary, replace them.

HINT:

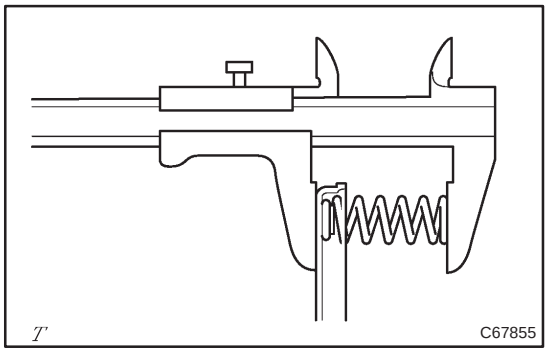
- **If the lining of the disc is peeling off or discolored, or even if a part of the printed number is defaced, replace all discs.**
- **Before assembling new discs, soak them in ATF for at least 15 minutes.**

3. REMOVE FORWARD CLUTCH RETURN SPRING SUB–ASSY
[35603A / 3507]



(a) Using SST on the clutch balancer, and compress the return spring with a press.

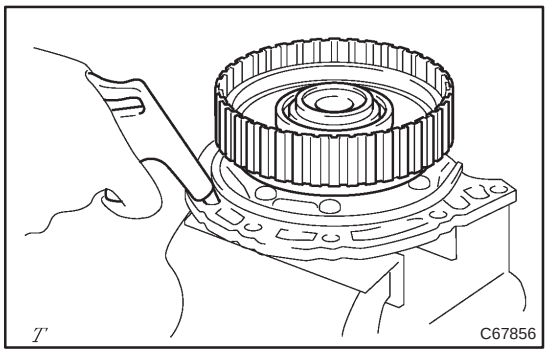
SST 09320–89010



NOTICE:

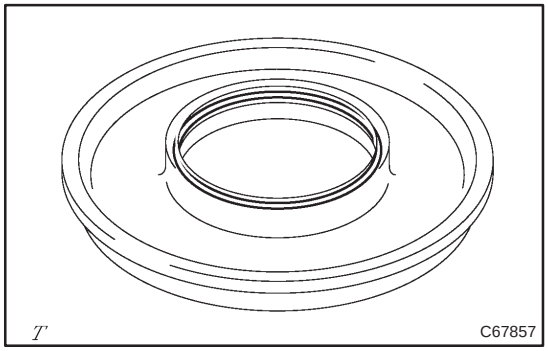
Do not compress the return spring excessively.

(b) Using a snap ring expander, remove the snap ring.



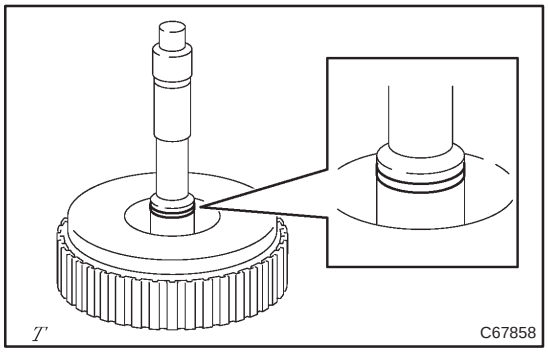
(c) Remove the clutch balancer and piston return spring.

4. INSPECT FORWARD CLUTCH RETURN SPRING SUB–ASSY
[35603A / 3507]



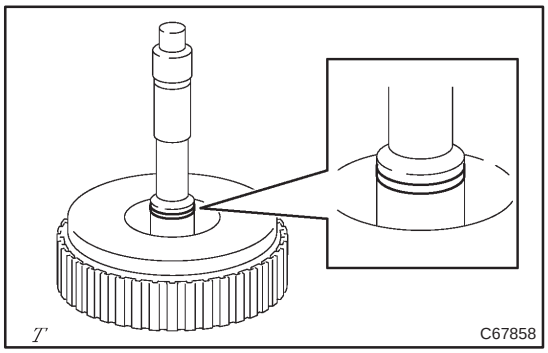
(a) Using a vernier calipers, measure the free length of the spring together with the spring seat.
Standard free length: 21.69 mm (0.8540 in.)

5. REMOVE FORWARD CLUTCH PISTON
[35612B / 3507]



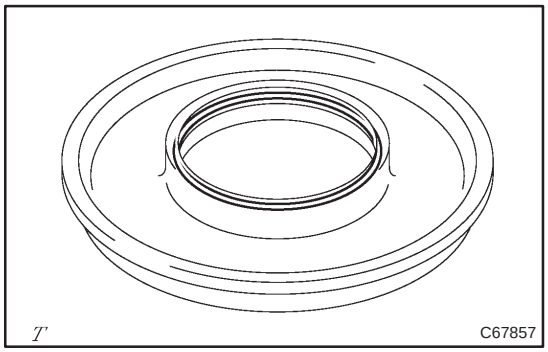
(a) Place the input shaft onto the oil pump.
(b) Holding the forward clutch piston with your hand, apply compressed air (392 kPa, 4.0 kgf·cm^2, 57 psi) to the oil pump to remove the forward clutch piston.

HINT:
When the piston can not be removed as it is slanted, either blow the air again with the protruding side pushed or remove the piston using the needle nose plier with vinyl tape on the tip.



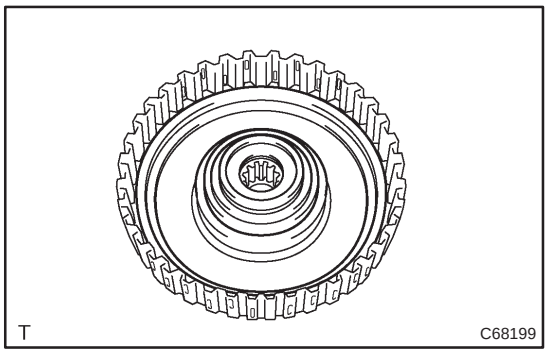
6. REMOVE FORWARD CLUTCH PISTON O–RING
[35612C / 3507]

(a) Using a screwdriver, remove the O–ring.



7. REMOVE INPUT SHAFT OIL SEAL RING
[35712A / 3507]

(a) Using a screwdriver, remove the oil seal ring from the input shaft.

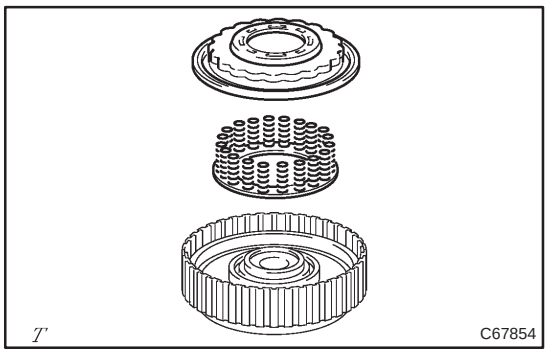


8. INSTALL INPUT SHAFT OIL SEAL RING
[35712A / 3507]

(a) Coat a new oil seal ring with ATF, and install it to the input shaft.

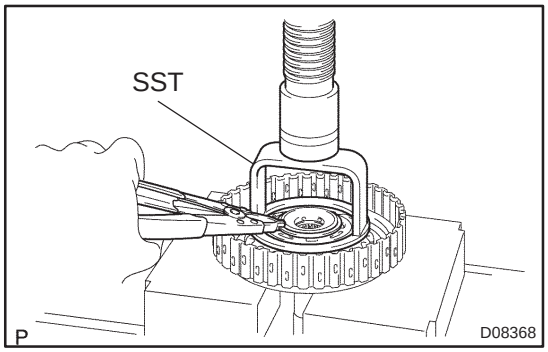
9. INSTALL FORWARD CLUTCH PISTON O–RING [35612C / 3507]

(a) Coat a new O–ring with ATF, and install it to the forward clutch piston.



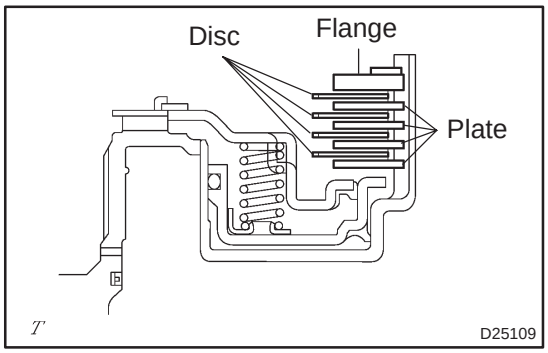
10. INSTALL FORWARD CLUTCH PISTON [35612B / 3507]

(a) Install the forward clutch piston to the input shaft.



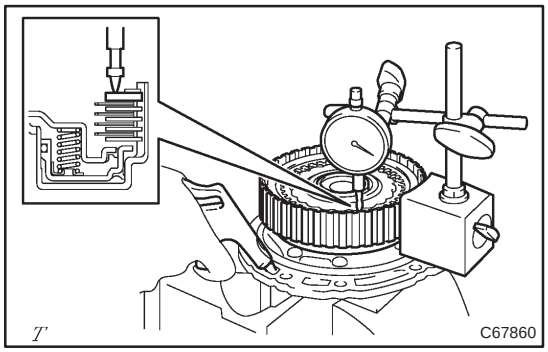
NOTICE:

Be careful not to damage the O–ring.



11. INSTALL FORWARD CLUTCH RETURN SPRING SUB–ASSY [35603A / 3507]

(a) Install the clutch balancer and return spring to the input shaft.



(b) Using SST, a press and a snap ring plier, install the snap ring to the forward clutch return spring.
SST 09320–89010

12. INSTALL FRONT CLUTCH CLUTCH DISC [35633 / 3507]

(a) Install the 4 plates, 4 discs and flange.

(b) Using a screwdriver, install the snap ring.

13. INSPECT PACK CLEARANCE OF FORWARD CLUTCH

(a) Using a dial indicator, measure the pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf·cm^2, 57 psi).

Pack clearance:

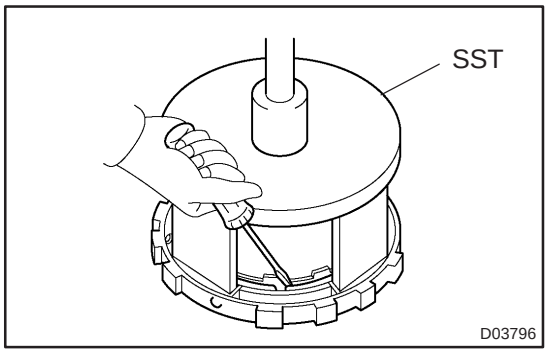
1.406 – 1.806 mm (0.05535 – 0.07110 in.)

If the piston stroke is less than the limit, parts may have been assembled incorrectly, check and reassemble again.

If the clearance is non–standard, select another flange.

HINT:

There are 4 different flanges in thickness.

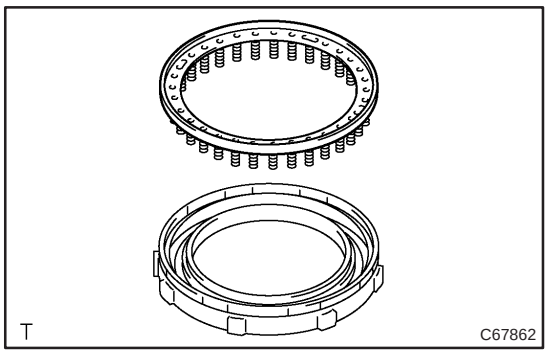


Flange thickness: mm (in.)

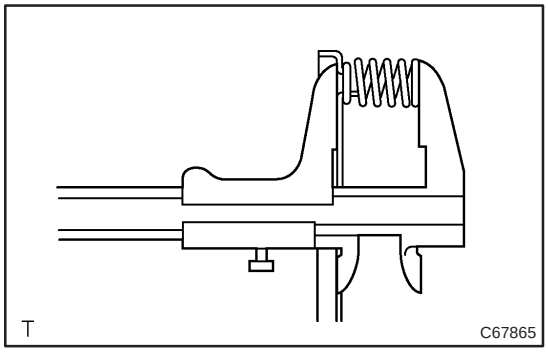
No.	Thickness	No.	Thickness
–	3.00 (0.1181)	2	3.40 (0.1339)
1	3.20 (0.1260)	3	3.60 (0.1417)

SECOND BRAKE PISTON ASSY (U34#E Series)

4002J–01



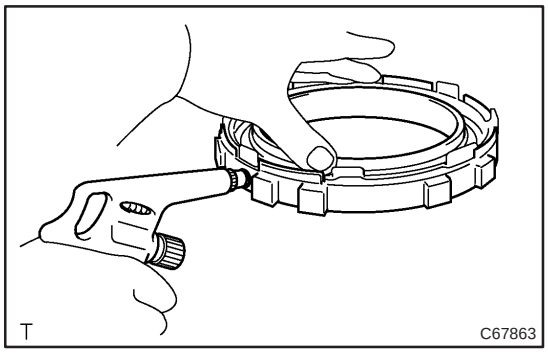
OVERHAUL



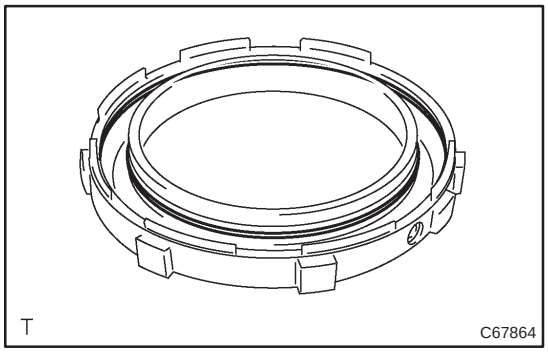
1. REMOVE 2ND BRAKE PISTON RETURN SPRING SUB–ASSY
[35608L / 3509]

(a) Place SST on the piston return spring and compress.
SST 09387–00060

(b) Using a screwdriver, remove the snap ring.

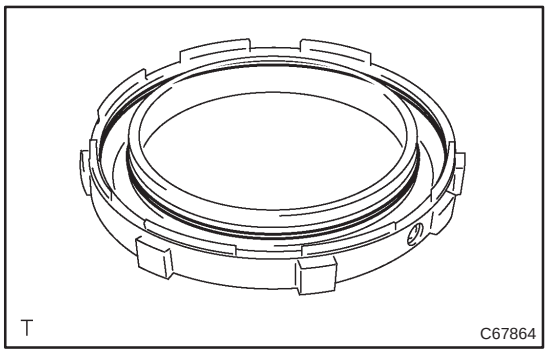


(c) Remove the 2nd brake return spring from the 2nd brake cylinder.



2. INSPECT 2ND BRAKE PISTON RETURN SPRING SUB–ASSY
[35608L / 3509]

(a) Using vernier calipers, measure the free length of the spring together with the spring seat.
Standard free length: 14.65 mm (0.5768 in.)

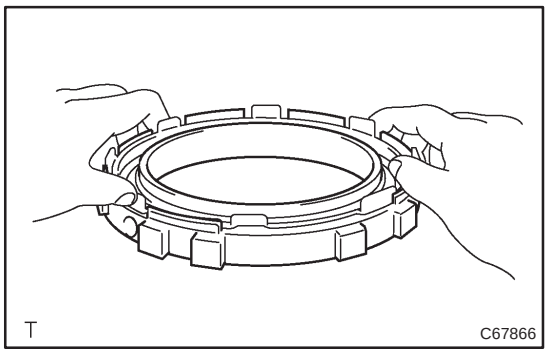


3. REMOVE 2ND BRAKE PISTON
[35624E / 3509]

(a) Hold the 2nd brake piston and apply compressed air (392 kPa, 4.0 kgf·cm^2, 57 psi) to the 2nd brake cylinder to remove the 2nd brake piston.

4. REMOVE 2ND BRAKE CYLINDER O–RING
[35664D / 3509]

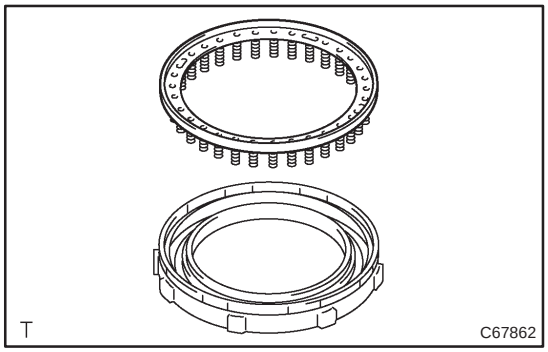
(a) Using a screwdriver, remove the 2 O–rings from the 2nd brake cylinder.



5. INSTALL 2ND BRAKE CYLINDER O–RING
[35664D / 3509]

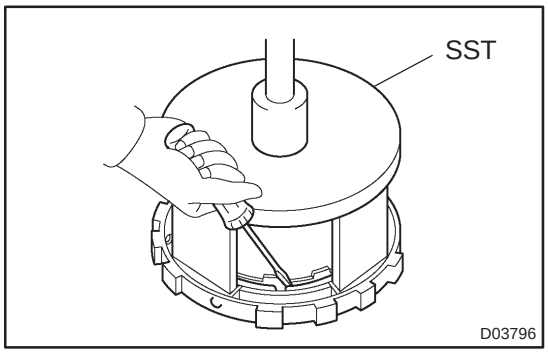
(a) Install 2 new O–ring to the 2nd brake cylinder.

NOTICE:



Be careful not to damage the O–ring.

6. INSTALL 2ND BRAKE PISTON
[35624E / 3509]



(a) Coat 2 new O–rings with ATF and install them in the 2nd brake cylinder.

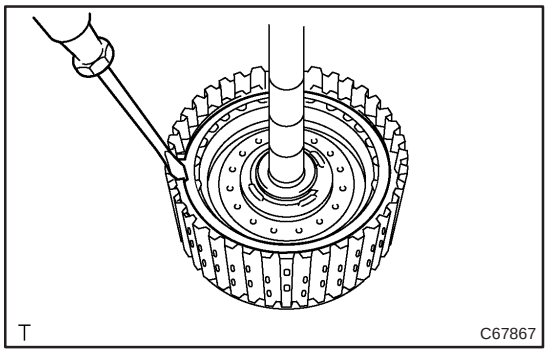
(b) Be careful not to damage the O–rings and press in the 2nd brake piston into the 2nd brake cylinder with a your hands.

7. INSTALL 2ND BRAKE PISTON RETURN SPRING SUB–ASSY
[35608L / 3509]

(a) Install the piston return spring.

(b) Place SST on the piston return spring, and compress the piston return spring with a press.
SST 09387–00060

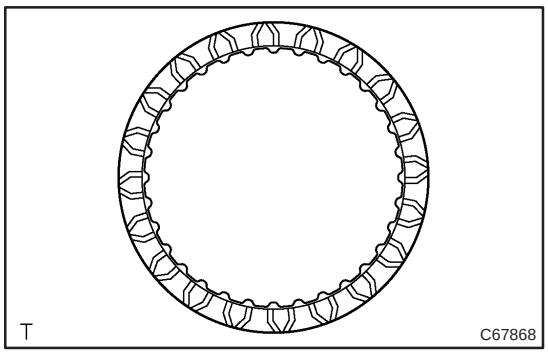
(c) Using a screwdriver, install the snap ring.



NOTICE:

Be sure the end gap of the snap ring is not aligned with the piston return spring claw.

INTERMEDIATE SHAFT ASSY (U34#E Series)

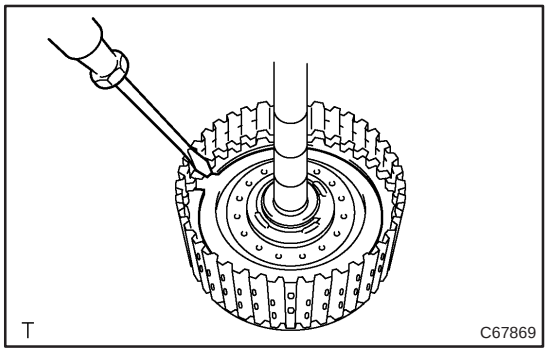


4002K–01

OVERHAUL

1. REMOVE FORWARD CLUTCH DISC [35677H / 3507]

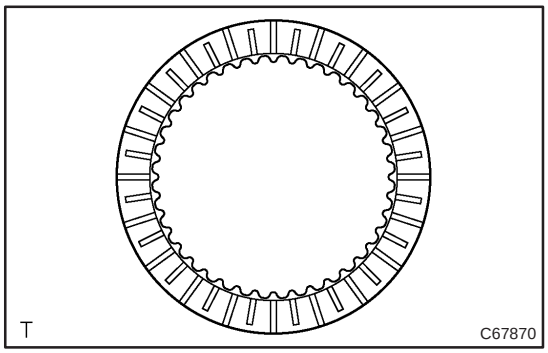
(a) Using a screwdriver, remove the snap ring.
(b) Remove the flange, 2 discs and 2 plates.



2. INSPECT FORWARD CLUTCH DISC [35677H / 3507]

(a) Check to see if the sliding surface of the disc, plate and flange are worn or burnt.

If necessary, replace them.

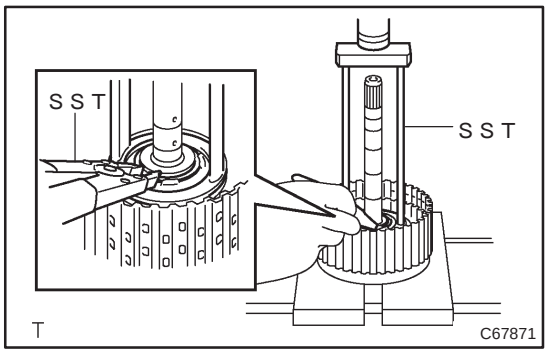


HINT:

- **If the lining of the disc is peeling off or discolored, or even if a part of the printed mark is defaced, replace all discs.**
- **Before assembling new discs, soak them in ATF for at least 15 minutes.**

3. REMOVE DIRECT CLUTCH DISK [35667A / 3507]

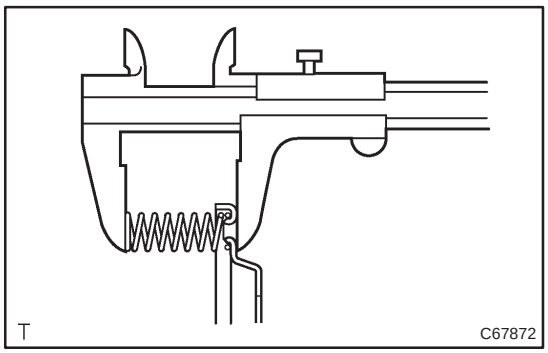
(a) Using a screwdriver, remove the snap ring.
(b) Remove the 3 plates, flange and 3 discs.



4. INSPECT DIRECT CLUTCH DISK [35667A / 3507]

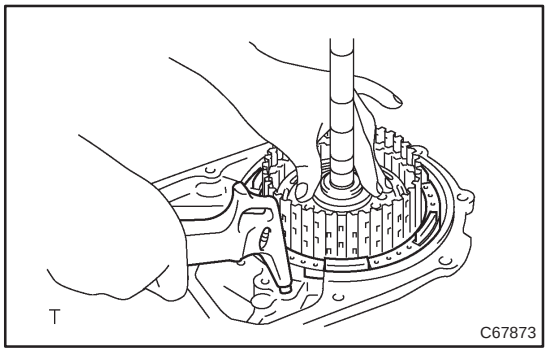
(a) Check to see if the sliding surface of the disc, plate and flange are worn or burnt.

If necessary, replace them.



HINT:

- **If the lining of the disc is peeling off or discolored, or even if a part of the printed mark is defaced, replace all discs.**
- **Before assembling new discs, soak them in ATF for at least 15 minutes.**



5. REMOVE DIRECT CLUTCH RETURN SPRING SUB–ASSY
[35604 / 3507]

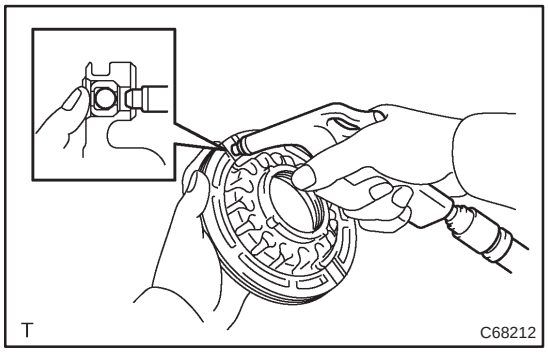
(a) Using SST and a press, remove the snap ring and direct clutch return spring from the intermediate shaft.
SST 09387–00020

6. INSPECT DIRECT CLUTCH RETURN SPRING SUB–ASSY
[35604 / 3507]

(a) Using a vernier calipers, measure the free length of the spring together with the spring seat.
Standard free length: 32.9 mm (1.2953 in.)

7. REMOVE DIRECT CLUTCH PISTON SUB–ASSY
[35606A / 3507]

(a) Install the direct and reverse clutch on the transaxle rear cover.

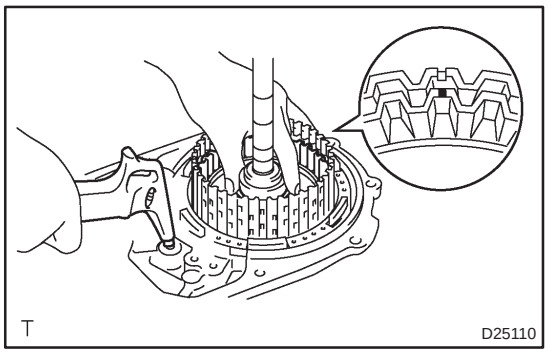


(b) Apply compressed air (392kPa, 4.0 kgf·cm^2, 57 psi) to the transaxle rear cover to remove the direct clutch drum and direct clutch piston.

NOTICE:

- **Blowing off the air may cause the piston's jump–out. When removing the piston, hold it with your hand using a waste cloth.**
- **Take care not to splash ATF when air–blowing**

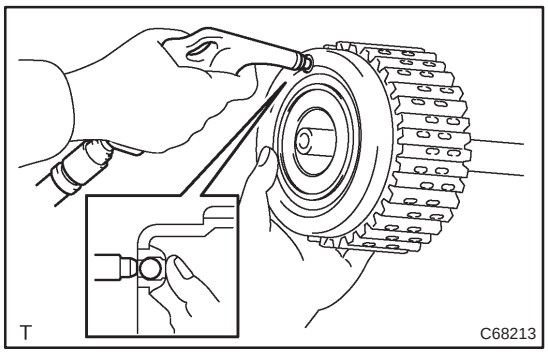
HINT:



When the piston can not be removed as it is slanted, either blow the air again with the protruding side pushed or removed the piston using a needle nose pliers with vinyl tape on the tip.

8. INSPECT DIRECT CLUTCH PISTON SUB–ASSY [35606A / 3507]

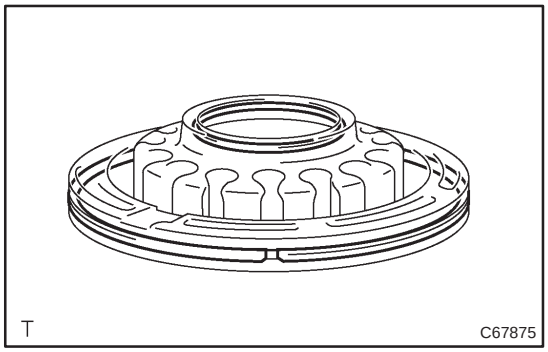
(a) Shake the direct clutch pin and check that a check ball is not stuck.



(b) Apply low pressure air to the check ball with compressed air and check that no air leak is identified.

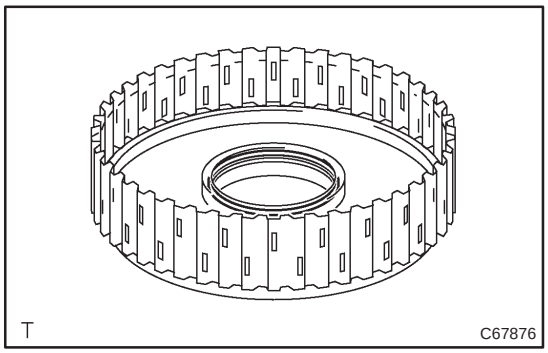
9. REMOVE DIRECT CLUTCH DRUM SUB–ASSY [35605A / 3507]

(a) Put a match–mark on the direct clutch drum at the same position with the cutout of the intermediate shaft assy.



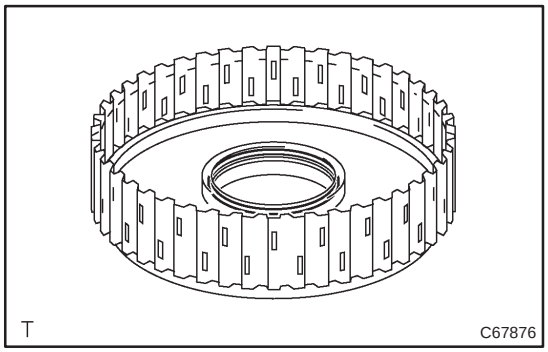
(b) Apply compressed air into the oil hole shown in the illustration and remove the direct clutch drum from the intermediate shaft.

10. INSPECT INTERMEDIATE SHAFT SUB–ASSY [35708G / 3507]



(a) Shake the direct clutch pin and check that a check ball is not stuck.

(b) Apply low pressure air to the check ball with compressed air and check that no air leak is identified.

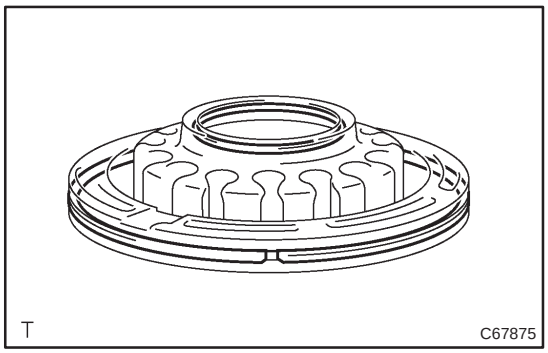


11. REMOVE DIRECT CLUTCH PISTON O–RING [35606C / 3507]

(a) Using a screwdriver, remove the 2 O–rings.

12. REMOVE DIRECT CLUTCH DRUM O–RING [35605D / 3507]

(a) Using a screwdriver, remove the O–ring.



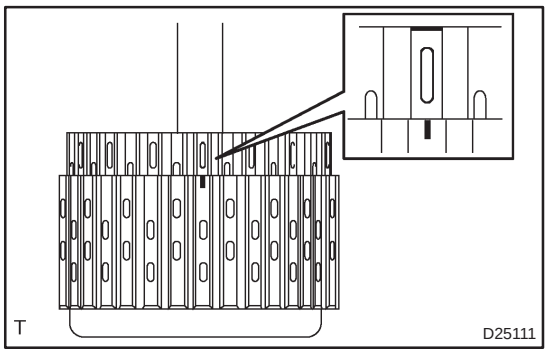
13. INSTALL DIRECT CLUTCH DRUM O–RING [35605D / 3507]

(a) Coat the O–ring with ATF, install it to the direct clutch drum.

NOTICE:

Be careful not to damage the O–ring.

14. INSTALL DIRECT CLUTCH PISTON O–RING [35606C / 3507]

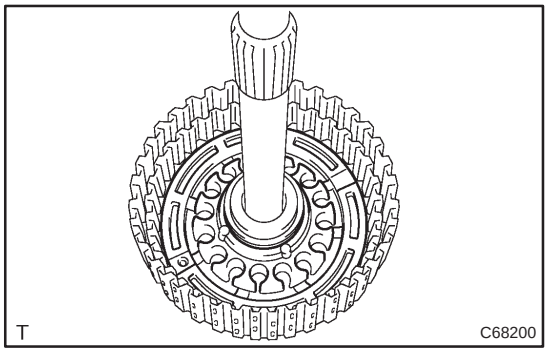


(a) Coat the 2 O–rings with ATF, install them to the direct clutch piston.

NOTICE:

Be careful not to damage the O–ring.

15. INSTALL DIRECT CLUTCH DRUM SUB–ASSY [35605A / 3507]

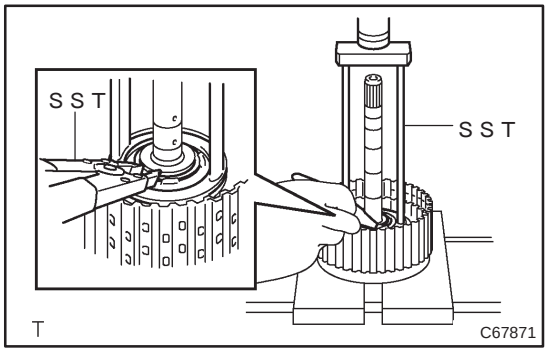


(a) Coat the direct clutch drum with ATF.

(b) Aligning the cutout in the intermediate shaft assy with the match–mark on the direct clutch drum, install the direct clutch drum to the intermediate shaft assy.

NOTICE:

Be careful not to damage the O–ring and clutch drum's lip.



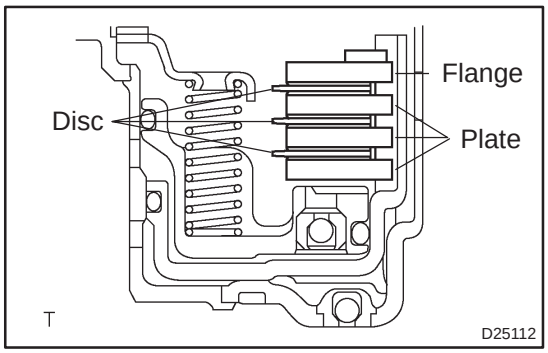
16. INSTALL DIRECT CLUTCH PISTON SUB–ASSY [35606A / 3507]

(a) Coat the direct clutch piston with ATF, install it to the intermediate shaft.

NOTICE:

- **Do not damage the O–ring the direct clutch piston's.**

17. INSTALL DIRECT CLUTCH RETURN SPRING SUB–ASSY [35604 / 3507]

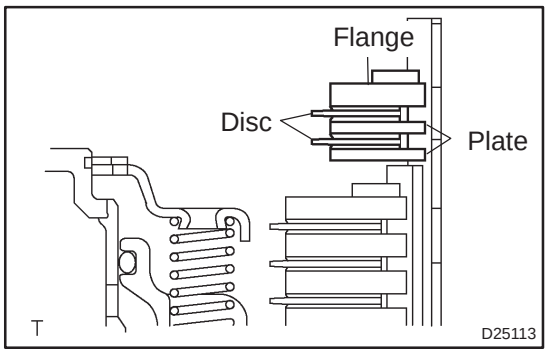


(a) Install the direct clutch return spring on the direct clutch piston.

(b) Place SST on the piston return spring and compress the springs with a press.
SST 09387–00020

(c) Using a snap ring expander , install the snap ring from the direct clutch drum.

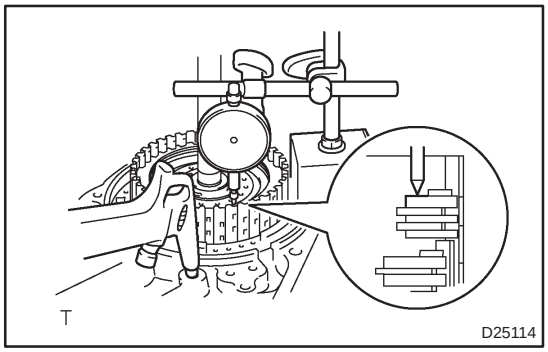
NOTICE:



- **Stop the press when the spring sheet is lowered to the place 1 – 2 mm (0.039 – 0.078 in.) from the snap ring groove, preventing the spring sheet from the deforming.**
- **Do not expand the snap ring excessively.**

18. INSTALL DIRECT CLUTCH DISK
[35667A / 3507]

(a) Coat the 3 plates, 3 discs and flange with ATF, install them to the intermediate shaft.



(b) Install the snap ring.

19. INSTALL FORWARD CLUTCH DISC
[35677H / 3507]

(a) Install the 2 plates, 2 discs and a flange.

(b) Install the snap ring.

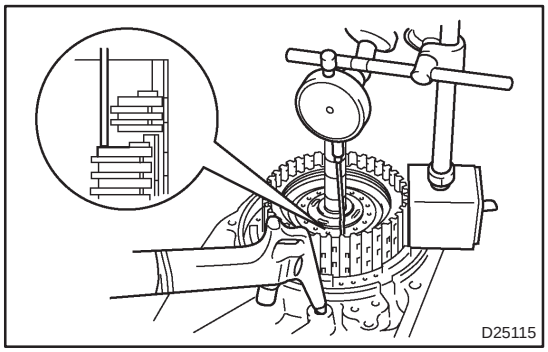
20. INSPECT PACK CLEARANCE OF REVERSE CLUTCH

(a) Install the forward and reverse clutch and thrust needle roller bearing on the transaxle rear cover.

(b) Using a dial indicator, measure the reverse clutch pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf·cm^2, 57 psi)

Pack clearance:
0.86 – 1.26 mm (0.0339 – 0.0496 in.)

If the pack clearance is less than the limit of pack clearance, parts may have been assembled incorrectly, so check and reassemble again.



If the pack clearance is non–standard, select another flange.

HINT:

There are 4 flanges in different thickness.

Flange Thickness: mm (in.)

No.	Thickness	No.	Thickness
–	3.0 (0.118)	2	3.4 (0.134)
1	3.2 (0.126)	3	3.6 (0.142)

21. INSPECT PACK CLEARANCE OF DIRECT CLUTCH

(a) Install the direct and reverse clutch and thrust needle roller bearing on the transaxle rear cover.

(b) Using a dial indicator and measuring terminal (SST), measure the forward clutch pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf·cm^2, 57 psi)

SST 09350–36010 (09350–06110)

HINT:

The direct and reverse clutch will come out as you apply the compressed air. Therefore, while the checking is being done, press on the input shaft of the direct and reverse clutch using stamping machine or alike so that the pressure is not applied on the direct and reverse clutch.

Pack clearance:

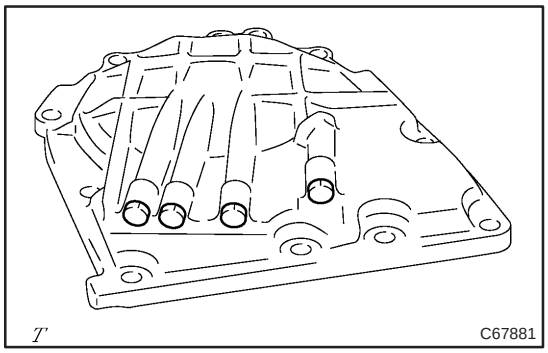
0.62 – 1.02 mm (0.0244 – 0.0402 in.)

If the pack clearance is less than the limit of pack clearance, parts may have been assembled incorrectly, so check and reassemble again..

If the pack clearance is non–standard, select another flange.

HINT:

There are 4 flanges in different thickness.

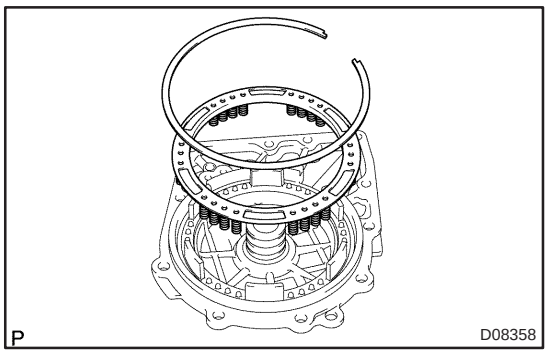


Selected flange thickness: mm (in.)

No.	Thickness	No.	Thickness
–	3.0 (0.118)	2	3.4 (0.134)
1	3.2 (0.126)	3	3.6 (0.142)

TRANSAXLE REAR COVER ASSY (U34#E Series)

4002L–01

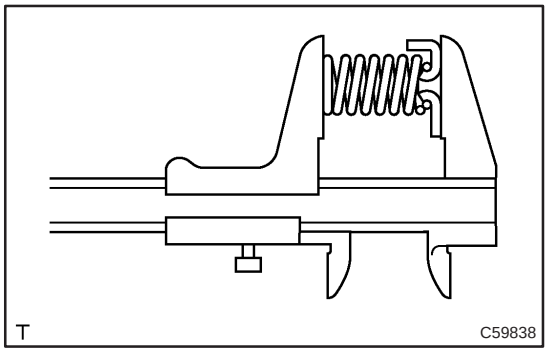


OVERHAUL

1. REMOVE TRANSAXLE REAR COVER PLUG
[35102B / 3503]

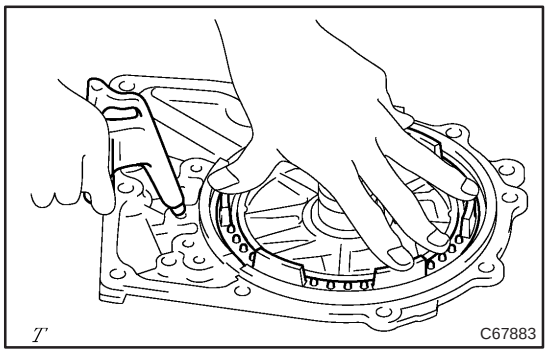
(a) Remove the 4 transaxle rear cover plug from the transaxle rear cover.

(b) Using a screwdriver, remove the O–ring from the transaxle rear cover plug.



2. REMOVE OVERDRIVE BRAKE RETURN SPRING SUB–ASSY
[34603B / 3509]

(a) Using SST, a press and a screwdriver, remove the snap ring.
SST 09387–00070

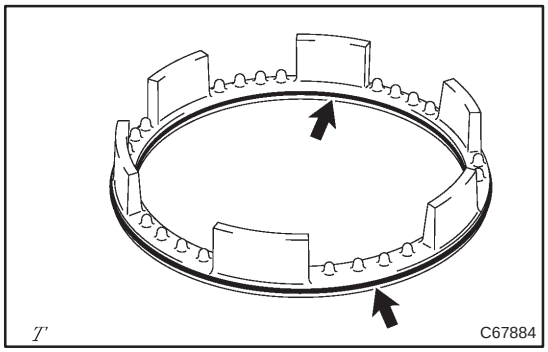


NOTICE:
Stop the press when the O/D brake piston is lowered 1 – 2 mm (0.039 – 0.078 in.) from the snap ring groove, preventing the O/D brake piston from being deformed.

(b) Remove the O/D brake return spring.

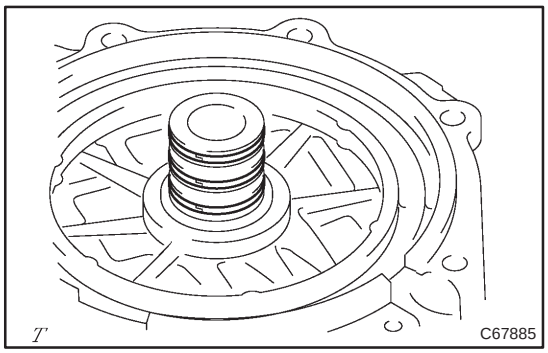
3. INSPECT OVERDRIVE BRAKE RETURN SPRING SUB–ASSY
[34603B / 3509]

(a) Using a vernier calipers, measure the free length of the spring together with the spring seat.
Standard free length: 17.88mm (0.7039 in.)



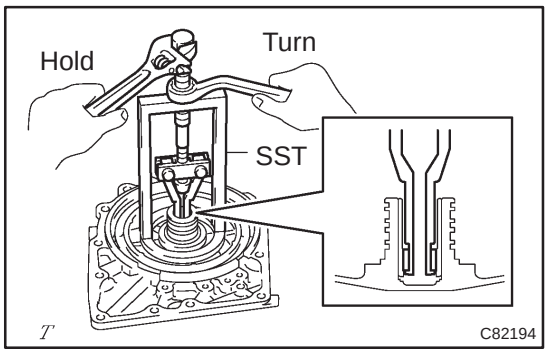
4. REMOVE 2ND COAST & OVERDRIVE BRAKE PISTON
[34622B / 3509]

(a) Apply compressed air (392 kPa, 4.0 kgf·cm^2, 57 psi) to the transaxle rear cover to remove the O/D brake piston.



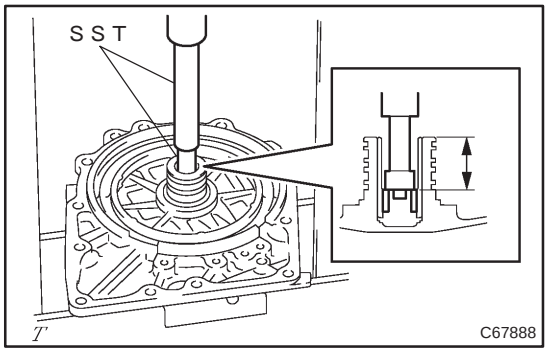
NOTICE:

- **Blowing off the air may cause the piston's jump–out. When removing the piston, holding it with your hand using a waste cloth.**
- **Take care not to splash ATF when air–blowing.**



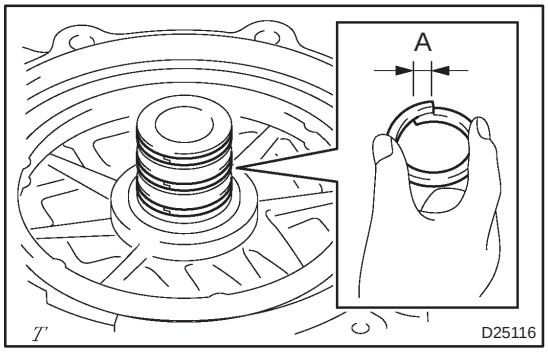
5. REMOVE 2ND COAST & OVERDRIVE O–RING
[34622C / 3509]

(a) Using a screwdriver, remove the 2 O–ring from the 2nd coast & O/D brake piston.



6. REMOVE CLUTCH DRUM OIL SEAL RING
[35617G / 3507]

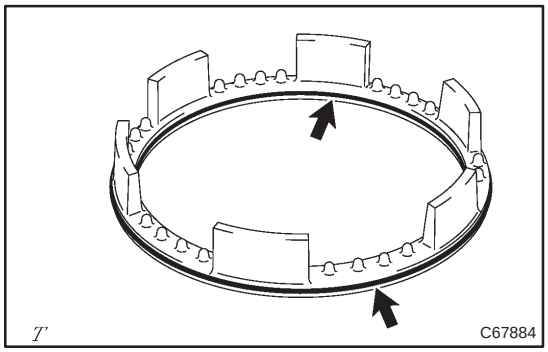
(a) Remove the 3 oil seals.



7. REMOVE TRANSAXLE REAR COVER NEEDLE ROLLER BEARING
[35102D / 3503]

(a) Using SST, remove the bearing.
SST 09387–00040 (09387–01020)

8. INSTALL TRANSAXLE REAR COVER NEEDLE ROLLER BEARING
[35102D / 3503]

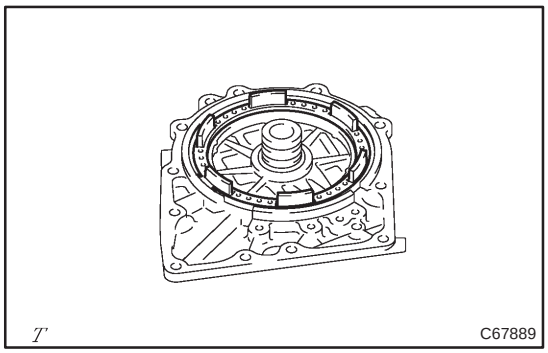


(a) Using SST and a press, install the new bearing to the transaxle rear cover.
SST 09950–60010 (09951–00190, 09952–06010), 09950–70010 (09951–07100)
Standard clearance: 25.2 mm (0.992 in.)

9. INSTALL CLUTCH DRUM OIL SEAL RING
[35617G / 3507]

(a) Compress the oil seal ring from both sides to reduce dimension A.
Dimension A: 5.0 mm (0.197 in.)

(b) Coat the oil seal ring with ATF and install it to the transaxle rear cover.

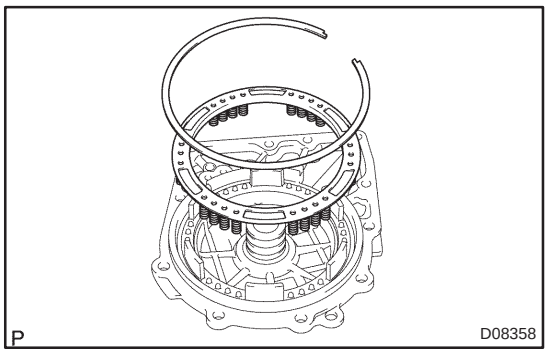


10. INSTALL 2ND COAST & OVERDRIVE O–RING [34622C / 3509]

(a) Coat the 2 new O–rings with ATF, install them to the transaxle rear cover.

NOTICE:

Be careful not to damage the oil seal lip.

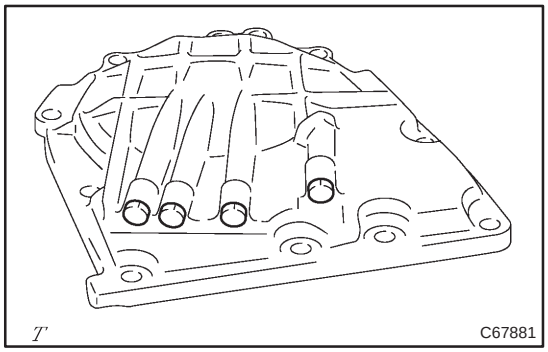


11. INSTALL 2ND COAST & OVERDRIVE BRAKE PISTON [34622B / 3509]

(a) Coat the piston with ATF, install it to the transaxle rear cover.

NOTICE:

Be careful not to damage the oil seal lip.



12. INSTALL OVERDRIVE BRAKE RETURN SPRING SUB–ASSY [34603B / 3509]

(a) Using SST and a press, install the O/D brake return spring and snap ring to the transaxle rear cover.

SST 09387–00070

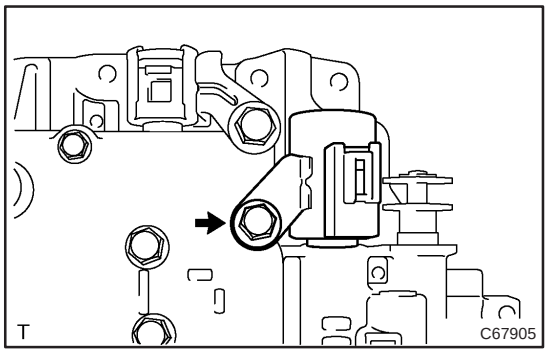
NOTICE:

Stop the press when the O/D brake piston is lowered 1 – 2 mm (0.039 – 0.078 in.) from the snap ring groove, preventing the O/D brake piston from being deformed.

13. INSTALL TRANSAXLE REAR COVER PLUG [35102B / 3503]

(a) Install 4 new O–rings and the 4 screw plugs to the transaxle rear cover.

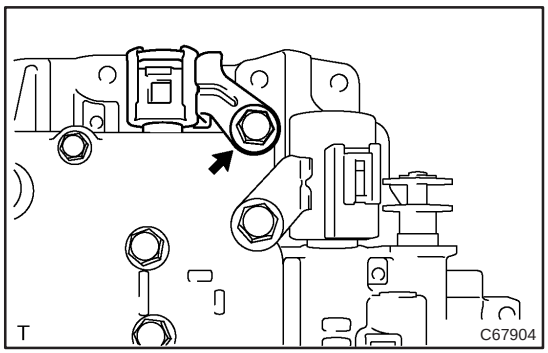
Torque: 7.4 N·m (75 kgf·cm, 65 in.·lbf)



NOTICE:

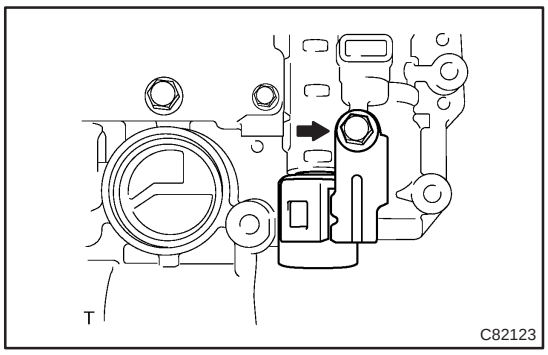
Be careful not to damage the oil seal lip.

TRANSMISSION VALVE BODY ASSY (U34#E Series)



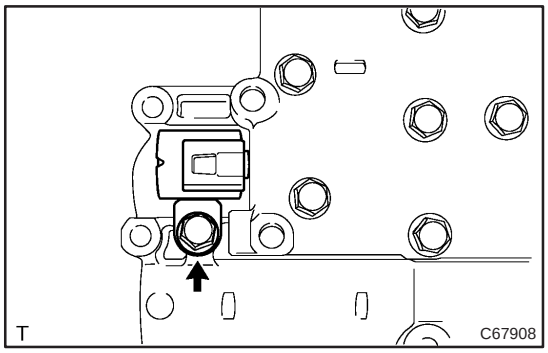
4002M–01

OVERHAUL



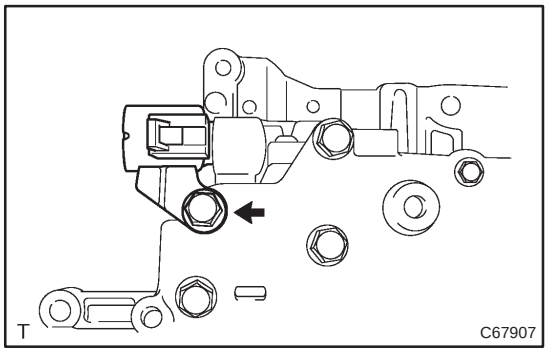
1. REMOVE LINE PRESSURE CONTROL SOLENOID ASSY
[35290A / 3512]

(a) Remove the bolt, and pull out the line pressure control solenoid assy.



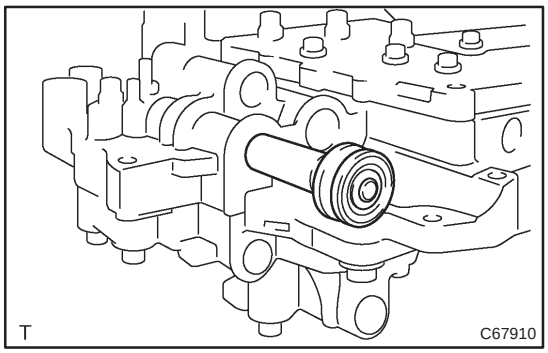
2. REMOVE TRANSMISSION 3WAY SOLENOID ASSY NO.3
[35250A / 3512]

(a) Remove the bolt, and pull out the transmission 3 way solenoid assy No. 3.



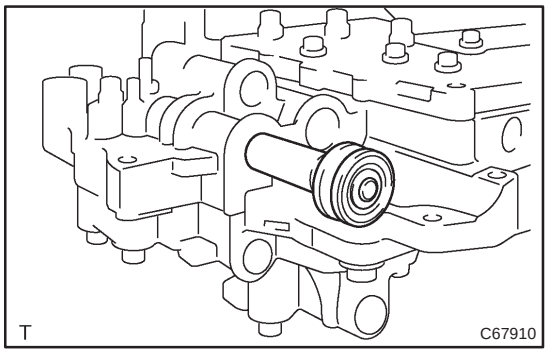
3. REMOVE LOCK UP CONTROL SOLENOID ASSY
[35280 / 3512]

(a) Remove the bolt, and pull out the lock up control solenoid assy.



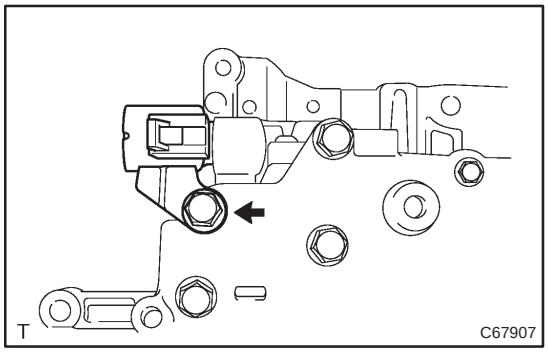
4. REMOVE TRANSMISSION 3WAY SOLENOID ASSY NO.2
[35230 / 3512]

(a) Remove the bolt, and pull out the transmission 3 way solenoid assy No. 2.



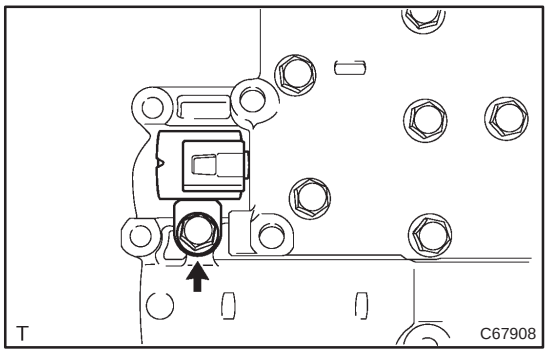
5. REMOVE AUTOMATIC TRANSMISSION 3WAY SOLENOID ASSY
[35240 / 3512]

(a) Remove the bolt, and pull out the automatic transmission 3 way solenoid assy.



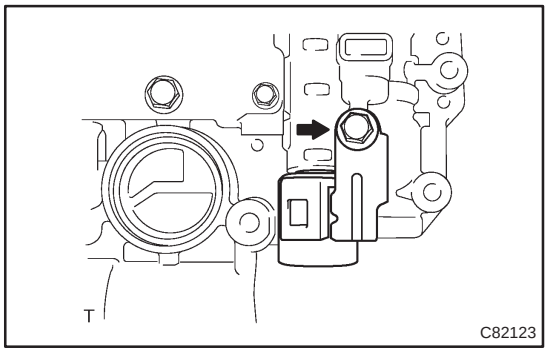
6. REMOVE MANUAL VALVE
[35418 / 3512]

(a) Remove the manual valve from the valve body assy.



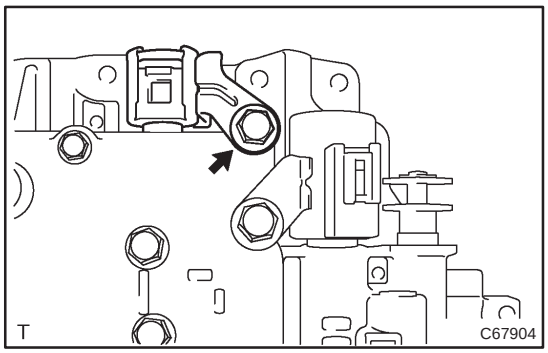
7. INSTALL MANUAL VALVE
[35418 / 3512]

(a) Coat the manual valve with ATF and install it to the valve body assy.



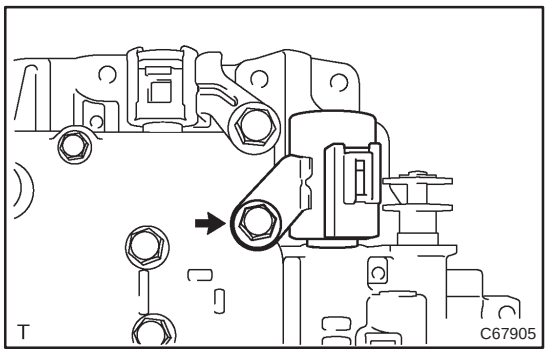
8. INSTALL AUTOMATIC TRANSMISSION 3WAY SOLENOID ASSY
[35240 / 3512]

(a) Install the automatic transmission 3 way solenoid assy with the bolt.
Torque: 11 N·m (110 kgf·cm, 8 ft·lbf)



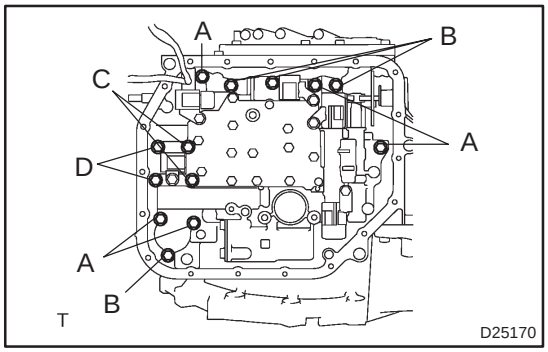
9. INSTALL TRANSMISSION 3WAY SOLENOID ASSY NO.2
[35230 / 3512]

(a) Install the transmission 3 way solenoid assy No. 2 with the bolt.
Torque: 11 N·m (110 kgf·cm, 8 ft·lbf)



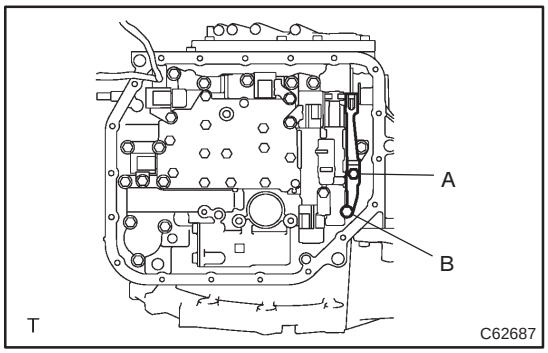
10. INSTALL LOCK UP CONTROL SOLENOID ASSY
[35280 / 3512]

(a) Install the lock up control solenoid assy with the bolt.
Torque: 11 N·m (110 kgf·cm, 8 ft·lbf)



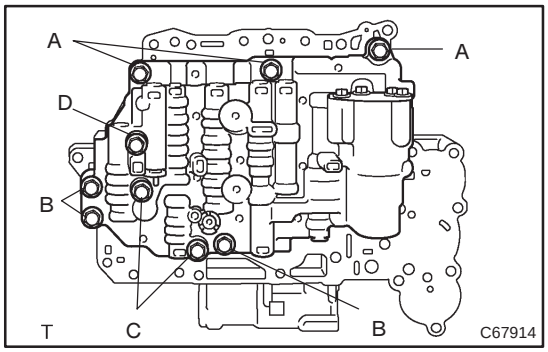
11. INSTALL TRANSMISSION 3WAY SOLENOID ASSY NO.3
[35250A / 3512]

(a) Install the transmission 3 way solenoid assy No. 3 with the bolt.
Torque: 11 N·m (110 kgf·cm, 8 ft·lbf)



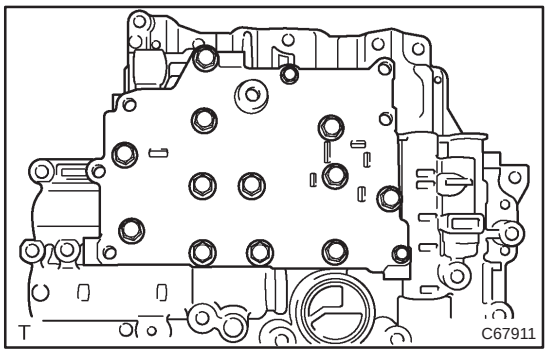
12. INSTALL LINE PRESSURE CONTROL SOLENOID ASSY
[35290A / 3512]

(a) Install the line pressure control solenoid assy with the bolt.
Torque: 11 N·m (110 kgf·cm, 8 ft·lbf)



13. TIGHTEN BOLT

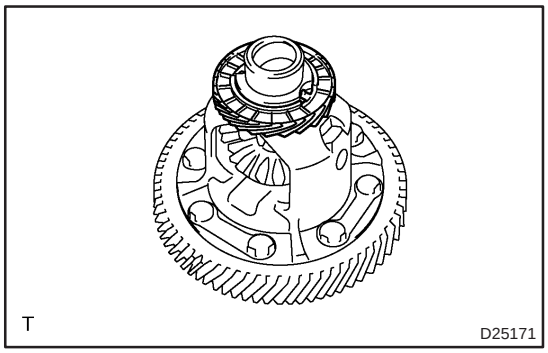
(a) Install the valve body assembly and 13 bolts.
Torque: 11 N·m (110 kgf·cm, 8 ft·lbf)
Bolt length:
Bolt A: 32 mm (1.26 in.)
Bolt B: 22 mm (0.87 in.)
Bolt C: 55 mm (2.17 in.)
Bolt D: 45 mm (1.77 in.)



(b) Install the detente spring, detente spring cover and 2 bolts.
Torque: 11 N·m (110 kgf·cm, 8 ft·lbf)
Bolt length:
Bolt A: 14 mm (0.55 in.)
Bolt B: 45 mm (1.77 in.)

(c) Check that the manual valve lever is touching the center of the detente spring tip roller.

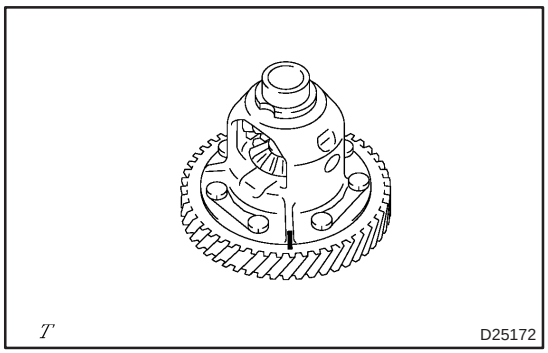
(d) Fasten the upper valve body with 9 bolts.
Torque: 11 N·m (110 kgf·cm, 8 ft·lbf)



(e) Fasten the valve body cover lower with 14 bolts.
Torque:
8 mm bolt: 6.6 N·m (67 kgf·cm, 58 in.·lbf)
10 mm bolt: 11 N·m (110 kgf·cm, 8 ft·lbf)

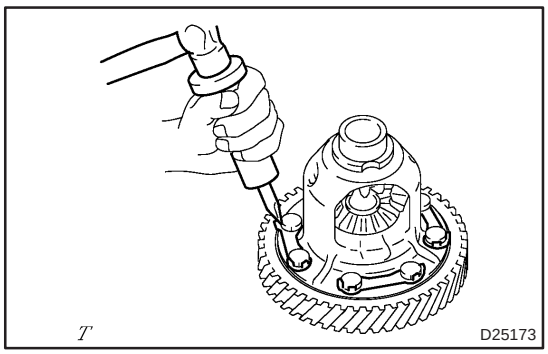
(f) Fasten the solenoid with 5 bolts.
Torque: 11 N·m (110 kgf·cm, 8 ft·lbf)

FRONNT DIFFERENTIAL ASSY (U34#E Series)



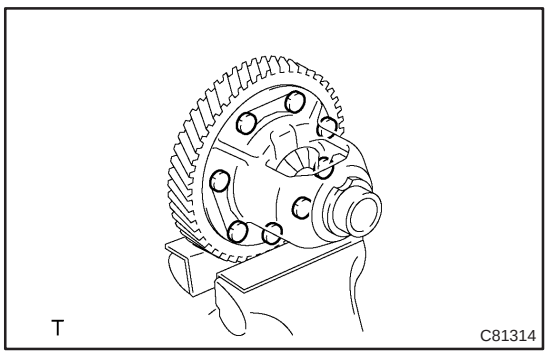
4002N–01

OVERHAUL

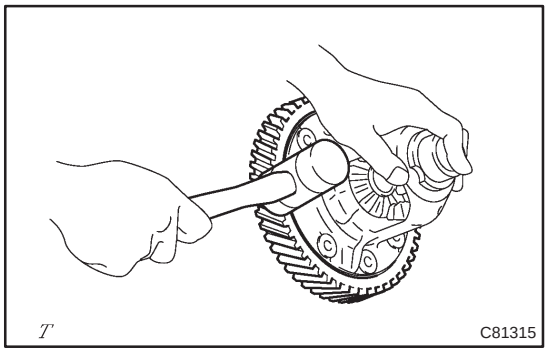


1. REMOVE SPEEDOMETER DRIVE (ATM) GEAR [33481X / 4301]

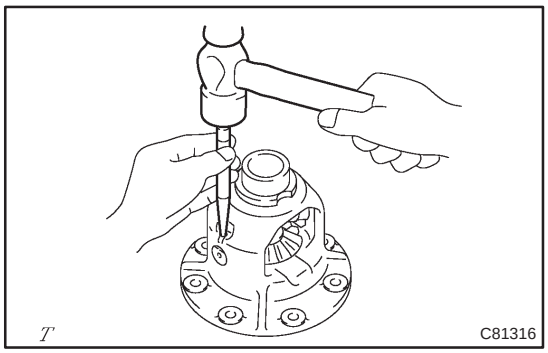
(a) Remove the speedometer drive gear from the differential case.



2. REMOVE FRONT DIFFERENTIAL RING GEAR [41221 / 4301]

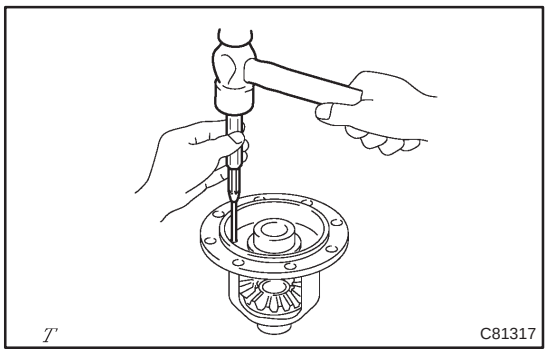


(a) Put match–marks on the front differential ring gear and differential case.

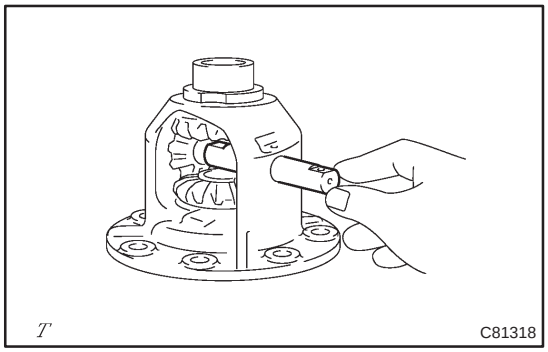


(b) Using SST and a hammer, unstake the lock plate.
SST 09930–00010

(c) Remove the 8 bolts and lock plate.

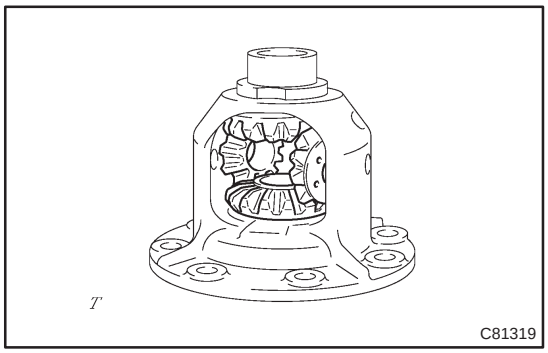


(d) Using a plastic hammer, remove the front differential ring gear from the differential case.

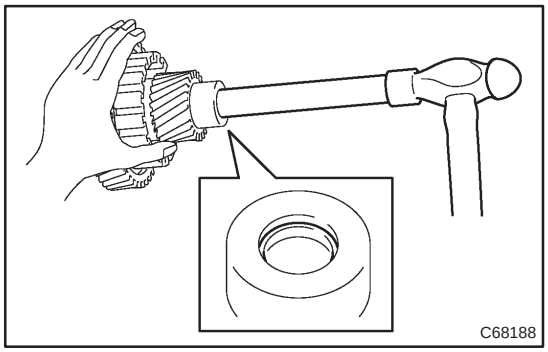


3. REMOVE FRONT DIFFERENTIAL PINION SHAFT STRAIGHT PIN
[41342A / 4301]

(a) Using a punch and a hammer, unstake the differential case.

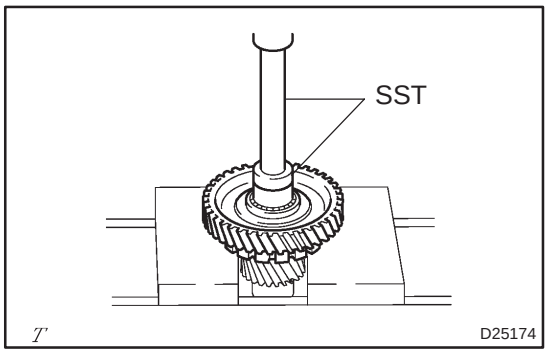


(b) Using a pin punch and a hammer, remove the straight pin.



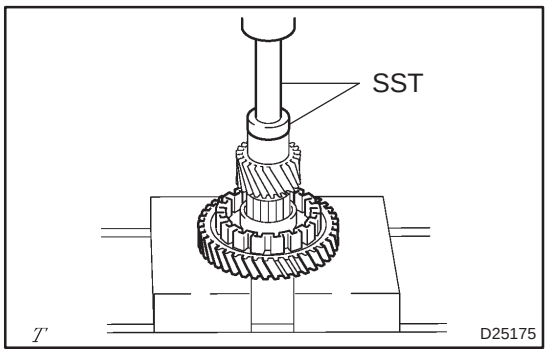
4. REMOVE FRONT DIFFERENTIAL PINION SHAFT NO.1
[41342F / 4301]

(a) Remove the pinion shaft from the front differential case.



5. REMOVE FRONT DIFFERENTIAL SIDE GEAR
[41331F / 4301]

(a) Remove the 2 pinions, 2 thrust washers, 2 side gears and 2 thrust washers No.1 from the front differential case.

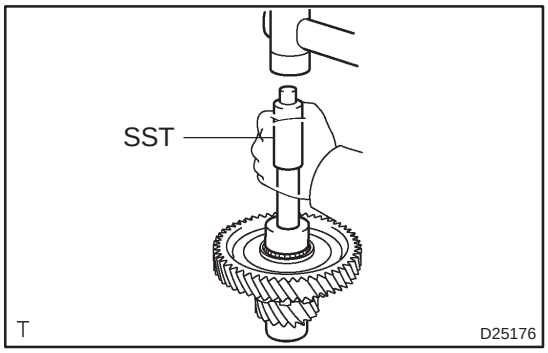


6. REMOVE DIFFERENTIAL DRIVE PINION PLUG [41211E / 4301]

(a) Using a brass bar and a hammer, remove the differential drive pinion plug.

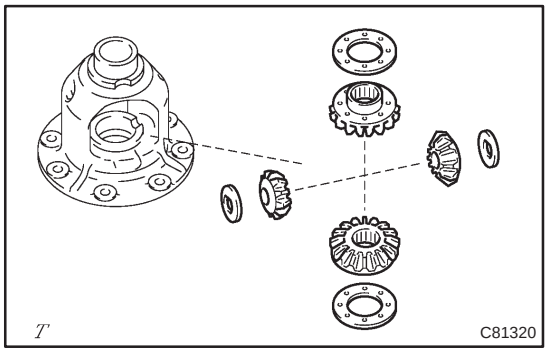
7. REMOVE COUNTER DRIVEN GEAR [35783R / 4301]

(a) Using SST and a press, remove the counter driven gear from the differential drive pinion.
SST 09950–60010 (09951–00350), 09950–70010 (09951–07150)



8. INSTALL COUNTER DRIVEN GEAR [35783R / 4301]

(a) Using SST and a press, install the counter driven gear to the differential drive pinion.
SST 09950–60010 (09951–00350), 09950–70010 (09951–07150)

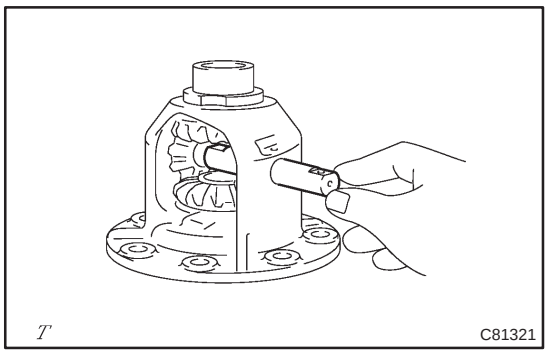


NOTICE:
When replacing the counter driven gear, replace the counter drive gear in the transaxle case, too.

HINT:
The differential drive pinion shall be press–fit until it comes to contact with the counter driven gear.

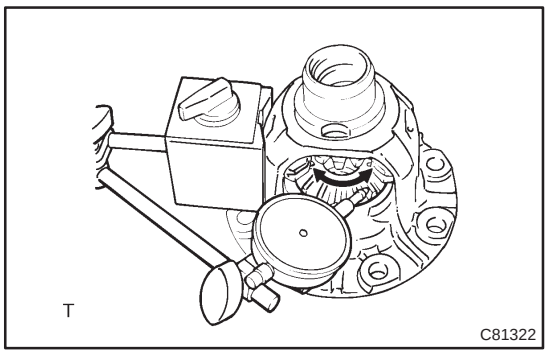
9. INSTALL DIFFERENTIAL DRIVE PINION PLUG [41211E / 4301]

(a) Using SST and a plastic hammer, install a new differential drive pinion plug to the differential drive pinion
SST 09221–25026 (09221–00071)
Standard clearance:
2.5 – 2.6 mm (0.0984 – 0.1023 in.)



10. INSTALL FRONT DIFFERENTIAL SIDE GEAR [41331F / 4301]

(a) After applying ATF to the 2 front differential side gears, 2 side gear thrust washers No. 1, 2 front differential pinions and 2 pinion thrust washers, install them to the front differential case.



HINT:

At the time of installation, set the alignment of the front differential pinions perpendicular to that of the side gear and rotate them so that their holes will be aligned with the holes in the differential case.

11. INSTALL FRONT DIFFERENTIAL PINION SHAFT NO.1 [41342F / 4301]

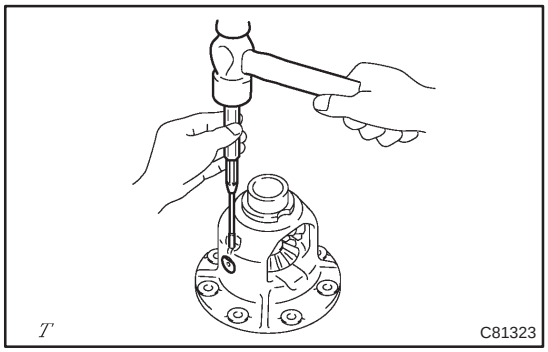
(a) Install the pinion shaft so as to align the lock pin holes on the pinion shaft and differential case.

12. INSPECT BACKLASH

(a) Measure the side gear backlash while holding 1 pinion gear toward the case.

Standard backlash:

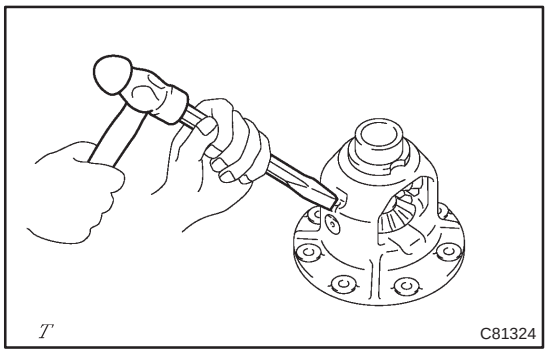
0.05 – 0.20 mm (0.0020 – 0.0079 in.)



If the backlash is out of specification, install the correct thrust washer to the side gear.

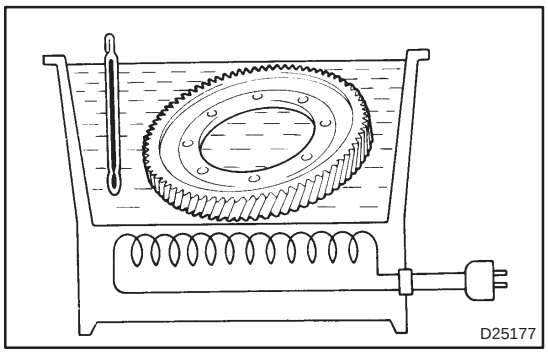
(b) Referring to the table below, select thrust washers which will ensure that the backlash is within for both sides.

Thrust washer thickness: mm (in.)



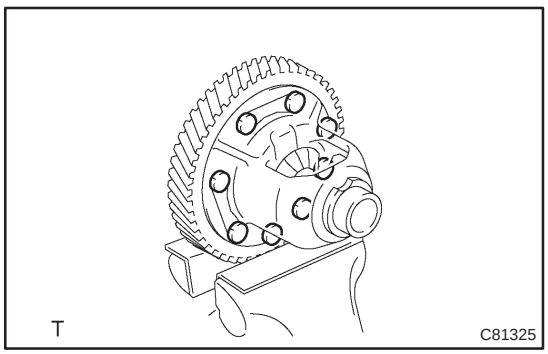
Thickness	Thickness
0.95 (0.0374)	1.10 (0.0433)
1.00 (0.0394)	1.15 (0.0453)
1.05 (0.0413)	1.20 (0.0472)

If the backlash is not within the specification, install a thrust washer of a different thickness.

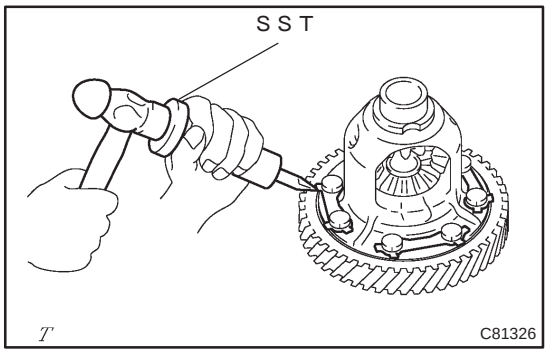


13. INSTALL FRONT DIFFERENTIAL PINION SHAFT STRAIGHT PIN
[41342A / 4301]

(a) Using a pin punch and a hammer, install the pinion shaft straight pin.

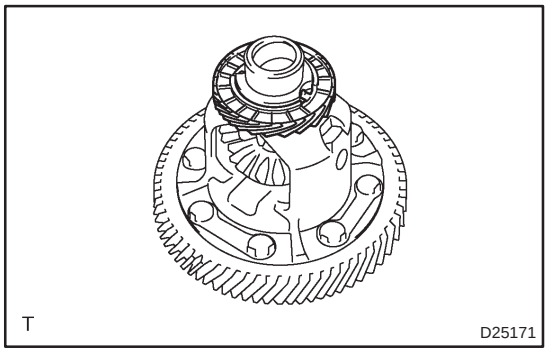


(b) Using a chisel and a hammer, stake the differential case.



14. INSTALL FRONT DIFFERENTIAL RING GEAR
[41221 / 4301]

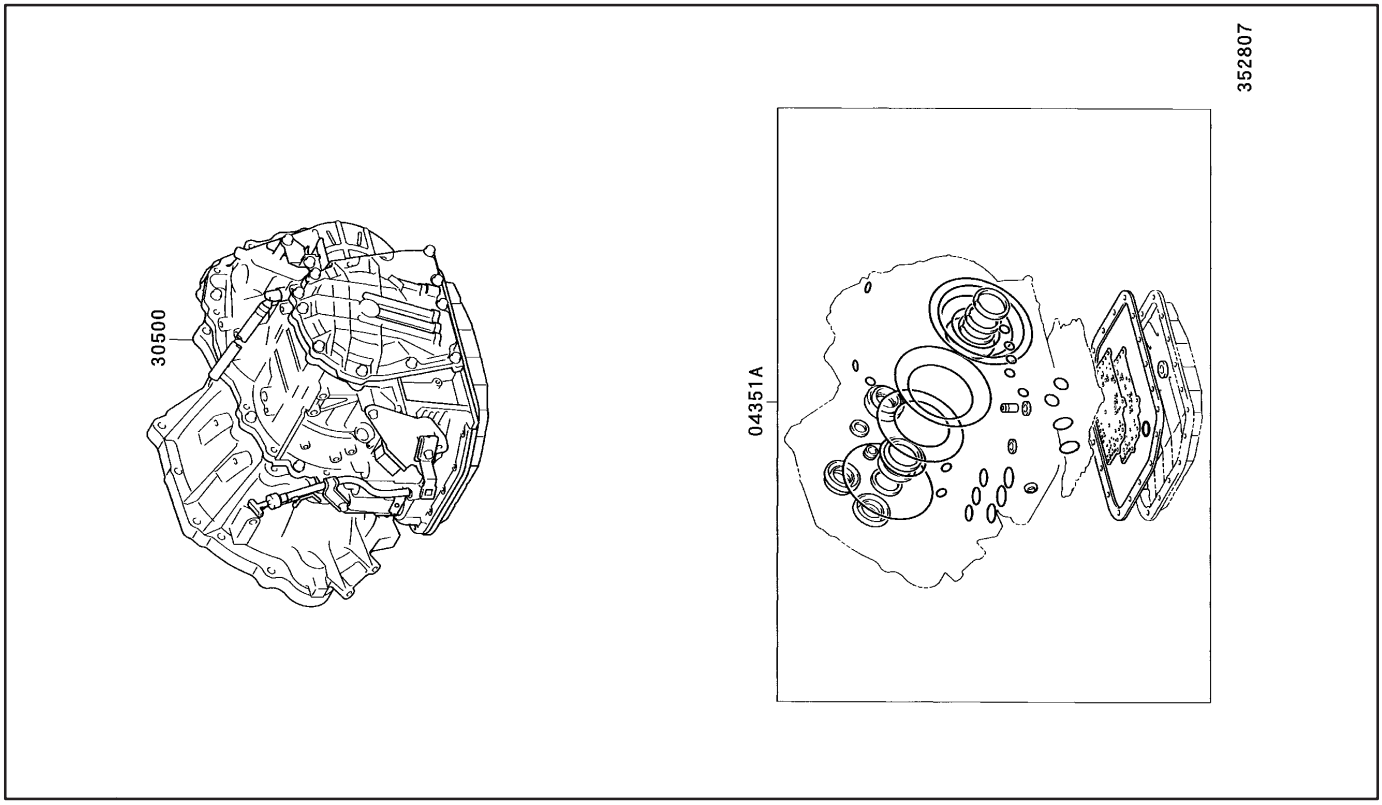
(a) Using ATF and heater, hear the front differential ring gear to 90 – 110 °C (194.0 – 230.0 °F).



(b) Clean the contact surface of the front differential case.

(c) Install the 4 lock plates and 8 bolts.
Torque: 88 N·m (900 kgf·cm, 65 ft·lbf)

(d) Using SST, stake the ring gear lock plate.
SST 09930–00010



15. INSTALL SPEEDOMETER DRIVE (ATM) GEAR [33481X / 4301]

(a) Install the speedometer drive gear to the differential case.

HOW TO USE THIS MANUAL

0103I–01

GENERAL INFORMATION

1. GENERAL DESCRIPTION

(a) This manual is made in accordance with SAE J2008.

(b) Repair operations can be separated mainly in the following 3 processes:
1. Diagnosis
2. Removing and Installing, Replacing, Disassembling, Installing and Checking, Adjusting
3. Final Inspection

(c) This text explains the 1st process of ”Diagnosis” (placed in the ”Diagnostics” section) and the 2nd process, ”Removing & Installing, Replacing, Disassembling, Installing & Checking, Adjusting”, but the 3rd process of ”Final Inspection” are omitted.

(d) The following essential operations are not written down in the this manual, these operations, however, must be done in the practical situation.
(1) Operation with a jack and lift
(2) Cleaning of a removed part when necessary
(3) Visual check

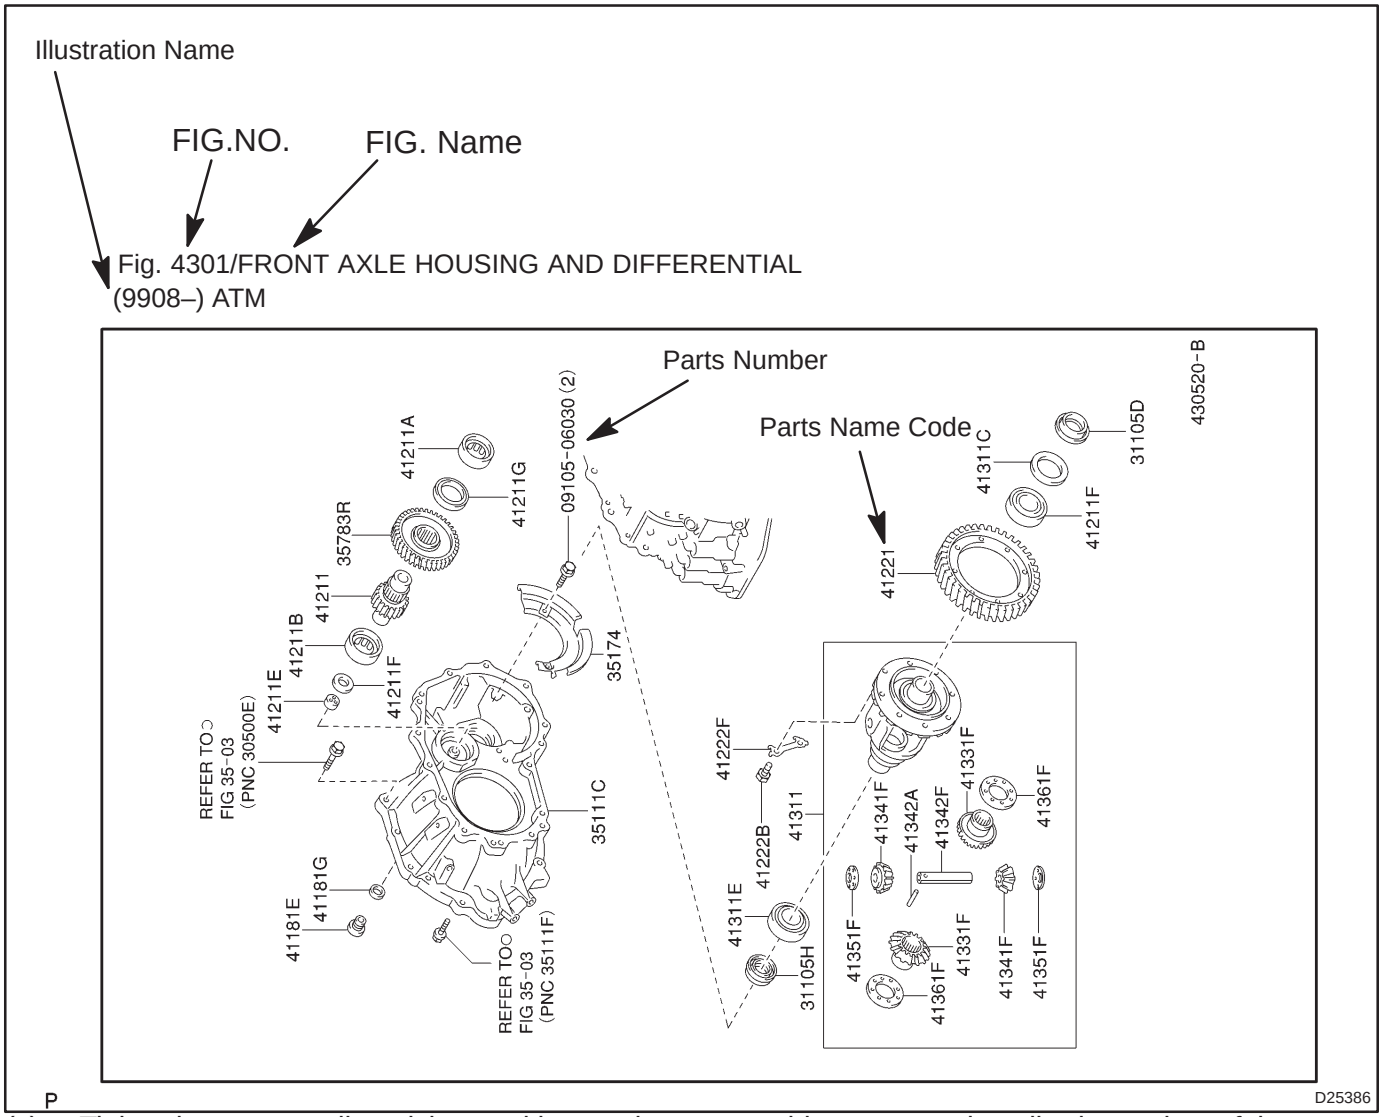
2. INDEX

(a) An INDEX is provided on the first to page XX of each section to the guide you to the item to be repaired.

3. PREPARATION

(a) Use of special service tools (SST) and special service materials (SSM) may be required, depending on the repairing condition. Be sure to use SST and SSM when they are required and follow the working procedure properly. A list of SST and SSM is in the Preparation section in this manual.

4. REPAIR PROCEDURES



(a) Component drawing is placed as ”Component section.” It enables you to understand the fitting condition of the components.

(b) Illustrations of the parts catalog is placed as the component drawing. (In the illustration, parts code of the parts catalog is described.)

NOTICE:

The parts code described in this text is as of August, 2000. There is a case where the parts code or ten digits of the parts No. may change, so be sure to place an order using the parts catalog.

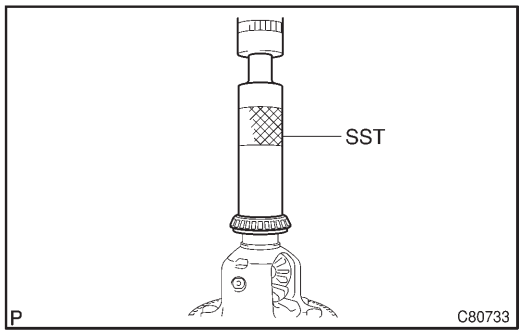
Example:

(c) Tightening torque, oil applying position, and non–reusable parts are described as points of the procedure.

NOTICE:

In case that the above items can be indicated only by an illustration, component drawing which describes the points is placed. In that case, all the information such as torque, oil, etc. are described in the illustration.

(d) Installing procedure of the operation items is performed in the reverse procedure of the removing and only the case with points is described.



(e) Only items with points are described in the procedure, and the operational portion and content are placed using an illustration. In the explanations, details of the operational method, standard value and notice are placed.

(f) There may be a case where the illustrations are used in common with similar models. Therefore there is a case where the details are different from one of the actual vehicle.

(g) The procedures are presented in a step–by–step format:
  (1) The illustration shows what to do and where to do it.
  (2) The task heading tells what to do.
  (3) The detailed text tells how to perform the task and gives other information such as specifications and warnings.

Example:

Illustration:
what to do and where

Task heading: what to do

87. INSTALL FR DIFFERENTIAL CASE FRONT TAPERED ROLLER BEARING
[41311 / 4301] ← *Part name code / FIG. NO.*

(a) Using SST and a press, install the front differential case tapered roller bearing front inner race to the differential case.
SST 09316–60011 (09316–00011)

Detailed text: how to do task

Set part No. *Component part No.*

P D25387

HINT:
This format provides an experienced technician with a FAST TRACK to the information needed. The upper case task heading can be read at a glance when necessary, and the text below it provides detailed information. Important specifications and warnings always stand out in bold type.

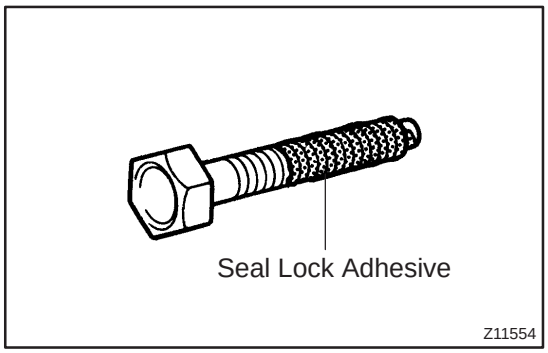
5. SERVICE SPECIFICATIONS

(a) Specifications are presented in bold type throughout the text where needed. You never have to leave the procedure to look up your specifications. They are also found in the Service Specifications section for a quick reference.

6. TERMS DEFINITION

CAUTION	Indicate the possibility of injury to you or other people.
NOTICE	Indicate the possibility of damage to the components being repaired.
HINT	Provide additional information to help you perform the repair efficiently.

7. SI UNIT



(a) The UNITS given in this manual are primarily expressed according to the SI UNIT (International System of Unit), and alternately expressed in the metric system and in the English System.
Example:
Torque: 30 N·m (310 kgf·cm, 22 ft·lbf)

REPAIR INSTRUCTION FOR AUTOMATIC TRANSAXLE REPAIR MANUAL

0103J–01

PRECAUTION

1. BASIC REPAIR HINT

(a) PRECOATED PARTS

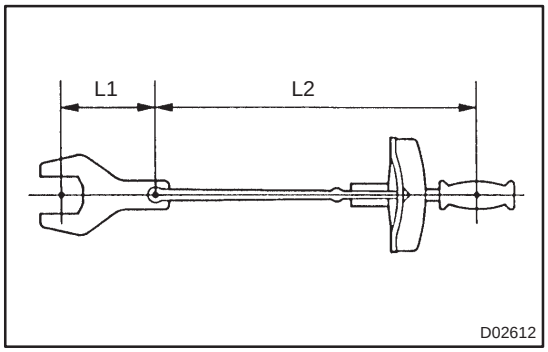
(1) Precoated parts are bolts, nuts, etc. that are coated with a seal lock adhesive at the factory.

(2) If a precoated part is retightened, loosened or caused to move in any way, it must be recoated with the specified adhesive.

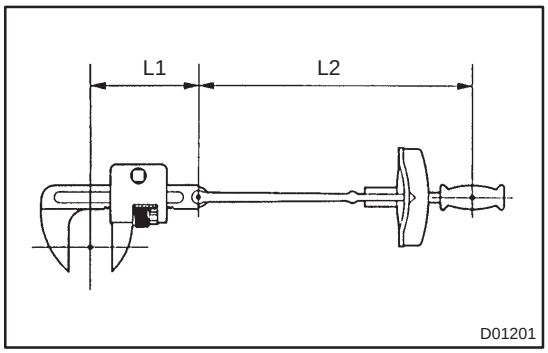
(3) When reusing precoated parts, clean off the old adhesive and dry with compressed air. Then apply the specified seal lock adhesive to the bolt, nut or threads.

NOTICE:

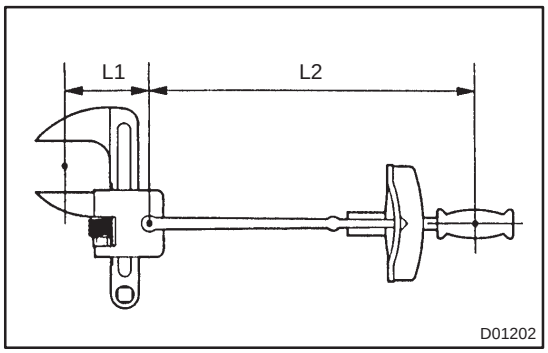
Do the torque checking with the lower limit value of the torque tolerance.



(4) Depending on the seal lock agent to apply, there may be a case where it is necessary to leave it for a specified time until it hardens.



(b) GASKETS



When necessary, use a sealer on gaskets to prevent leaks.

(c) BOLTS, NUTS AND SCREWS

Carefully observe all specifications for bolt tightening torques. Always use a torque wrench.

(d) TORQUE WHEN USING EXTENSION TOOL WITH TORQUE WRENCH

(1) In case of tightening by extending the entire length of the torque wrench combined with SST or tool, if you tighten until the reading of the torque wrench reached the specified torque value, the actual torque becomes excessive.

(2) In this text, only the specified torque is described. In case of using SST or extension tool, find the reading of the torque wrench by the formula.

(3) Formula T'=T x L2/(L1 + L2)

T'	Reading of torque wrench {N·m (kgf·cm, ft·lbf)}
T	Torque {N·m (kgf·cm, ft·lbf)}
L1	Length of SST or tool (cm)
L2	Length of torque wrench (cm)

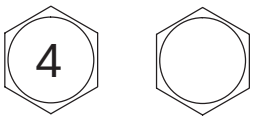
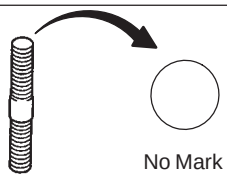
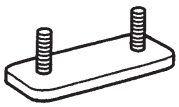
GLOSSARY OF SAE AND TOYOTA TERMS

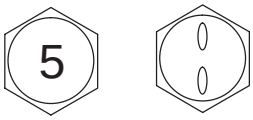
This glossary lists all SAE–J1930 terms and abbreviations used in this manual in compliance with SAE recommendations, as well as their Toyota equivalents.

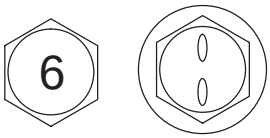
SAE ABBREVIATIONS	SAE TERMS	TOYOTA TERMS ( )—ABBREVIATIONS
A/C	Air Conditioning	Air Conditioner
ACL	Air Cleaner	Air Cleaner
AIR	Secondary Air Injection	Air Injection (AI)
AP	Accelerator Pedal	–
B+	Battery Positive Voltage	+B, Battery Voltage
BARO	Barometric Pressure	–
CAC	Charge Air Cooler	Inter cooler
CARB	Carburetor	Carburetor
CFI	Continuous Fuel Injection	–
CKP	Crankshaft Position	Crank Angle
CL	Closed Loop	Closed Loop
CMP	Camshaft position	Cam Angle
CPP	Clutch Pedal Position	–
CTOX	Continuous Trap Oxidizer	–
CTP	Closed Throttle Potion	–
DFI	Direct Fuel Injection (Diesel)	Direct Injection (DI)
DI	Distributor Ignition	–
DLC1 DLC2 DLC3	Data Link Connector 1 Data Link Connector 2 Data Link Connector 3	1: Check Connector 2: Total Diagnosis Communication Link (TDCL) 3: OBD II Diagnostic Connector
DTC	Diagnostic Trouble Code	Diagnostic Code
DTM	Diagnostic Test Mode	–
ECL	Engine Control Level	–
ECM	Engine Control Module	Engine ECU (Electronic Control Unit)
ECT	Engine Control Temperature	Coolant Temperature, Water Temperature (THW)
EEPROM	Electrically Erasable Programmable Read Only memory	Electrically Erasable Programmable Read Only memory (EEPROM), Erasable Programmable Read Only memory (EPROM)
EFE	Early Fuel Evaporation	Cold Mixture Heater (CMH), Heat Control Valve (HCV)
EGR	Exhaust Gas Recirculation	Exhaust Gas Recirculation (EGR)
EI	Electronic Ignition	Distributorless Ignition (DI)
EM	Engine Modification	Engine Modification (EM)
EPROM	Erasable Programmable Read Only Memory	Programmable Read Only Memory (PROM)
EVAP	Evaporative Emission	Evaporative Emission Control (EVAP)
FC	Fan Control	–
FEEPROM	Flash Electrically Erasable Programmable Read Only Memory	–
FEPROM	Flash Erasable Programmable Read Only Memory	–
FF	Flexible Fuel	–
FP	Fuel Pump	Fuel Pump
GEN	Generator	Alternator
GND	Ground	Ground (GND)
HO2S	Heated Oxygen Sensor	Heated Oxygen Sensor (HO2S)
IAC	Idol Air Control	Idol Speed Control (ISC)
IAT	Intake Air Temperature	Intake or Inlet Air Temperature
ICM	Ignition Control Module	–
IFI	Indirect Fuel Injection	Indirect Injection
IFS	Inertia Fuel–Shutoff	–

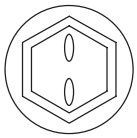


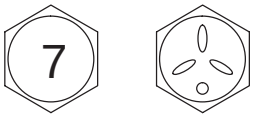


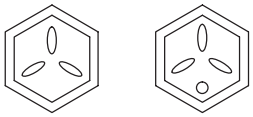


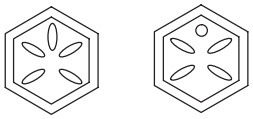


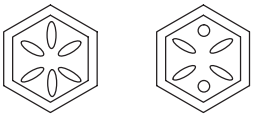












ISC	Idle Speed Control	–
KS	Knock Sensor	Knock Sensor
MAF	Mass Air Flow	Air Flow Meter
MAP	Manifold Absolute Pressure	Manifold Pressure Intake Vacuum
MC	Mixture Control	Electric Bleed Air Control Valve (EBCV) Mixture Control Valve (MCV) Electric Air Control Valve (EACV)
MDP	Manifold Differential Pressure	–
MFI	Multiport Fuel Injection	Electronic Fuel Injection (EFI)
MIL	Malfunction Indicator Lamp	Check Engine Light
MST	Manifold Surface temperature	–
MVZ	Manifold Vacuum Zone	–
NVRAM	Non–Volatile Random Access Memory	–
O2S	Oxygen Sensor	Oxygen Sensor, O_2 Sensor (O_{2S})
OBD	On–Board Diagnostic	On–Board Diagnostic (OBD)
OC	Oxidation Catalytic Converter	Oxidation Catalyst Converter (OC), CC_0
OP	Open Loop	Open Loop
PAIR	Pulsed Secondary Air Injection	Air Suction (AS)
PCM	Powertrain Control Module	–
PNP	Park/Neutral Position	–
PROM	Programmable Read Only Memory	–
PSP	Power Steering Pressure	–
PTOX	Periodic Trap Oxidizer	Diesel Particulate Filter (DPF) Diesel Particulate Trap (DPT)
RAM	Random Access Memory	Random Access Memory (RAM)
RM	Relay Module	–
ROM	Read Only Memory	Read Only Memory (ROM)
RPM	Engine Speed	Engine Speed
SC	Supercharger	Supercharger
SCB	Supercharger Bypass	–
SFI	Sequential Multiport Fuel Injection	Electronic Fuel Injection (EFI), Sequential Injection
SPL	Smoke Puff Limiter	–
SRI	Service Reminder Indicator	–
SRT	System Readiness Test	–
ST	Scan Tool	–
TB	Throttle Body	Throttle Body
TBI	Throttle Body Fuel Injection	Single Point Injection Central Fuel Injection (Ci)
TC	Turbocharger	Turbocharger
TCC	Torque Converter Clutch	Torque Converter
TCM	Transmission Control Module	Transmission ECU (Electronic Control Unit)
TP	Throttle Position	Throttle Position
TR	Transmission Range	–
TVV	Thermal Vacuum Valve	Bimetallic Vacuum Switching Valve (BVSV) Thermostatic Vacuum Switching Valve (TVSV)
TWC	Three–Way Catalytic Converter	Three–Way Catalytic (TWC) CC_{RO}
TWC+OC	Three–Way + Oxidation Catalytic Converter	$CC_R + CC_O$
VAF	Volume Air Flow	Air Flow Meter
VR	Voltage Regulator	Voltage Regulator
VSS	Vehicle Speed Sensor	Vehicle Speed Sensor (Read Switch Type)
WOT	Wide Open Throttle	Full Throttle

WU–OC	Warm Up Oxidation Catalytic Converter	–
WU–TWC	Warm Up Three–Way Catalytic Converter	Manifold Converter
3GR	Third Gear	–
4GR	Fourth Gear	–

0103O–01

HOW TO DETERMINE NUT STRENGTH

Nut Type			Class
Present Standard Hexagon Nut	Old Standard Hexagon Nut		
	Cold Forging Nut	Cutting Processed Nut	
 No Mark			4N
 No Mark (w/ Washer)	 No Mark (w/ Washer)	 No Mark	5N (4T)
 6N			6N
		 *	7N (5T)
 8N			8N
 10N		 No Mark	10N (7T)
 11N			11N
 12N			12N

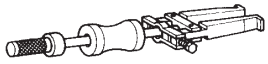
*: Nut with 1 or more marks on one side surface of the nut.

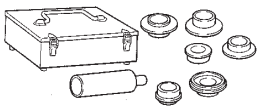
B06432

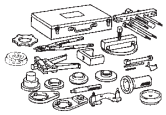
HINT:

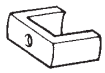
Use the nut with the same number of the nut strength classification or the greater than the bolt strength classification number when tightening parts with a bolt and nut.

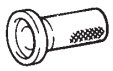
Example: Bolt = 4T

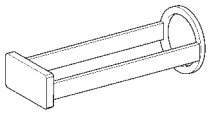


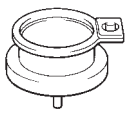


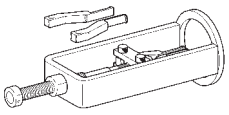


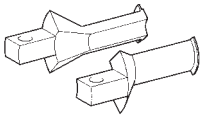


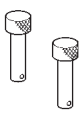












Nut = 4N or more

SERVICE DATA

Oil pump		
Body clearance	STD	0.10 – 0.17 mm (0.0039 – 0.0067 in.)
	Max.	0.17 mm (0.0067 in.)
Tip clearance	STD	0.07 – 0.15 mm (0.0028 – 0.0059 in.)
	Max.	0.15 mm (0.0059 in.)
Side clearance	STD	0.02 – 0.05 mm (0.0008 – 0.0020 in.)
	Max.	0.05 mm (0.0020 in.)
Drive gear thickness	Mark	
	1	10.690 –10.699 mm (0.4209 – 0.4212 in.)
	2	10.700 –10.709 mm (0.4213 – 0.4216 in.)
	3	10.710 –10.720 mm (0.4217 – 0.4220 in.)
	4	10.721 –10.730 mm (0.4221 – 0.4224 in.)
	5	10.731 –10.740 mm (0.4225 – 0.4228 in.)
Driven gear thickness	Mark	
	1	10.690 –10.699 mm (0.4209 – 0.4212 in.)
	2	10.700 –10.709 mm (0.4213 – 0.4216 in.)
	3	10.710 –10.720 mm (0.4217 – 0.4220 in.)
	4	10.721 –10.730 mm (0.4221 – 0.4224 in.)
	5	10.731 –10.740 mm (0.4225 – 0.4228 in.)
Pump body bushing inside diameter	STD	38.11 – 38.14 mm (1.5005 – 1.5015 in.)
	Max.	38.19 mm (1.5035 in.)
Stator shaft bushing inside diameter	STD	20.50 – 21.53 mm (0.8465 – 0.8475 in.)
	Max.	21.57 mm (0.8492 in.)

Forward Clutch		
Piston stroke		1.74 – 2.08 mm (0.0685 – 0.0819 in.)
Piston return spring free length		28.23 mm (1.1114 in.)
Flange thickness	No.	
	1	3.00 mm (0.1181 in.)
	2	3.15 mm (0.1240 in.)
	3	3.30 mm (0.1299 in.)
	4	3.45 mm (0.1358 in.)
	5	3.60 mm (0.1417 in.)

Direct clutch		
Pack clearance		0.605 – 0.825 mm (0.02382 – 0.03248 in.)
Piston return spring free length		22.58 mm (0.8890 in.)
Flange thickness	No.	
	1	3.0 mm (0.118 in.)
	2	3.1 mm (0.122 in.)
	3	3.2 mm (0.126 in.)
	4	3.3 mm (0.130 in.)
	5	3.4 mm (0.134 in.)
	6	3.5 mm (0.138 in.)
End play		0.198 – 0.936 mm (0.00800 – 0.03685 in.)

2ND brake		
Pack clearance		0.62 – 0.91 mm (0.0244 – 0.0358 in.)
Piston return spring free length		16.61 mm (0.6539 in.)
Flange thickness	Mark	
	1	3.0 mm (0.118 in.)
	2	3.1 mm (0.122 in.)
	3	3.2 mm (0.126 in.)
	4	3.3 mm (0.130 in.)
	5	3.4 mm (0.134 in.)
	6	3.5 mm (0.138 in.)
	7	3.6 mm (0.142 in.)

Input shaft	
End play	0.26 – 1.25 mm (0.0103 – 0.0492 in.)

U/D clutch		
Pack clearance		1.51 – 1.90 mm (0.0594 – 0.0748 in.)
U/D clutch drum busing inside diameter	STD	32.56 – 32.58 mm (1.2818 – 1.2826 in.)
	Max	32.63 mm (1.2846 in.)
Piston return spring free length		17.14 mm (0.6748 in.)
Flange thickness	Mark	
	A	3.0 mm (0.118 in)
	B	3.2 mm (0.126 in.)
	C	3.4 mm (0.134 in.)

U/D brake		
Piston stroke		1.81 – 2.20 mm (0.0713 – 0.0866 in.)
Piston return spring free length		14.04 mm (0.5213 in.)
Flange thickness	Mark	
	1	3.0 mm (0.118 in.)
	2	3.2 mm (0.126 in.)
	3	3.4 mm (0.134 in.)

1ST & reverse brake	
Pack clearance	1.02 – 1.21 mm (0.0402 – 0.0476 in.)
Piston return spring free length	15.51 mm (0.6106 in.)

Front planetary gear		
Bearing turning torque at 60 rpm	New bearing:	0.5 – 1.0 N·m (5.1 – 10.0 kgf·cm, 4.4 – 8.7 in.·lbf)
	Used bearing:	0.3 – 0.5 N·m (3.1 – 5.1 kgf·cm, 2.7 – 4.4 in.·lbf)

U/D planetary gear		
U/D output shaft turning torque	at 60 rpm	0.23 – 5.01 N·m (2 – 51 kgf·cm, 2.0 – 44.3 in.·lbf)
End play		0.20 – 0.69 mm (0.0079 – 0.0272 in.)

Transmission valve body		
Bolt length	A	25 mm (0.984 in.)
	B	41 mm (1.614 in.)
	C	45 mm (1.771 in.)

Accumulator			
Spring		Free length/Outer diameter	Color
B_3	Inner	60.24 (2.3716) / 15.9 (0.626)	Yellowish Green
	Outer	74.61 (2.9374) / 21.7 (0.854)	Blue
C_1		81.53 (3.2098) / 18.5 (0.728)	Pink
C_3		90.49 (3.5626) / 19.2 (0.756)	White

Differential	
Side gear backlash	0.05 – 0.20 mm (0.0020 – 0.0079 in.)
Thrust washer thickness	1.0 mm (0.039 in) 1.1 mm (0.043 in.) 1.2 mm (0.047 in.) 1.3 mm (0.051 in.)

Preload (at starting)		
New bearing		0.20 – 0.69 N·m (2 – 7 kgf·cm, 1.8 – 6.1 in.·lbf)
Used bearing		0.10 – 0.35 N·m (1 – 4 kgf·cm, 0.9 – 3.1 in.·lbf)
Shim thickness	Mark	
	0	1.90 mm (0.0748 in.)
	1	1.95 mm (0.0768 in.)
	2	2.00 mm (0.0787 in.)

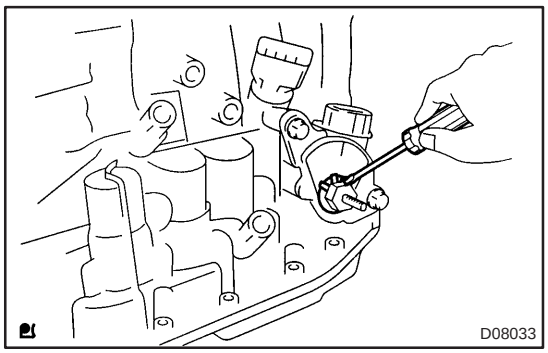
AUTOMATIC TRANSAXLE ASSY (U241E)

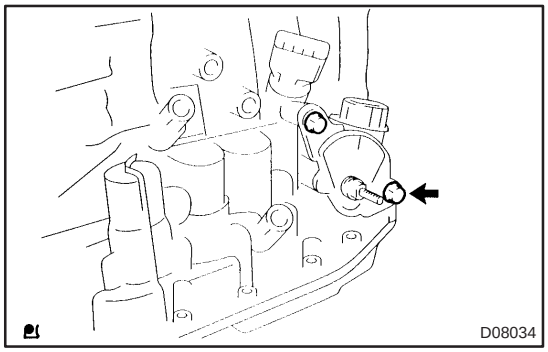
4006Z–01

OVERHAUL



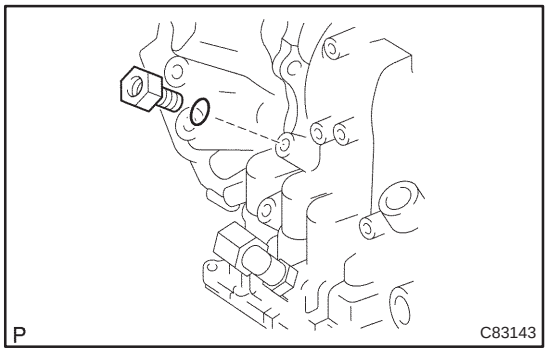
1. REMOVE SPEEDOMETER DRIVEN HOLE (ATM) COVER SUB–ASSY

(a) Remove the bolt and speedometer driven hole cover sub–assy from the transaxle assy.
(b) Remove the O–ring from the speedometer driven hole cover.



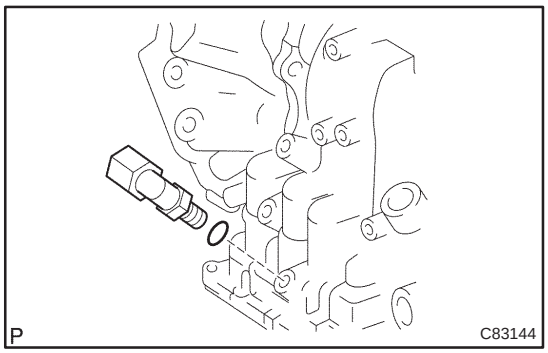
2. REMOVE PARK/NEUTRAL POSITION SWITCH ASSY

(a) Remove the nut, washer and control shaft lever.



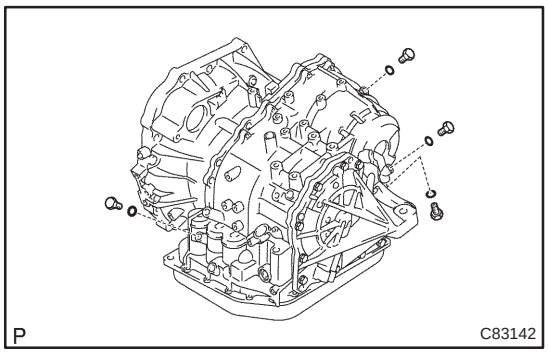
(b) Using a screwdriver, unstake the nut stopper and remove the lock nut and stopper.

(c) Remove the 2 bolts and pull out the park/neutral position switch.



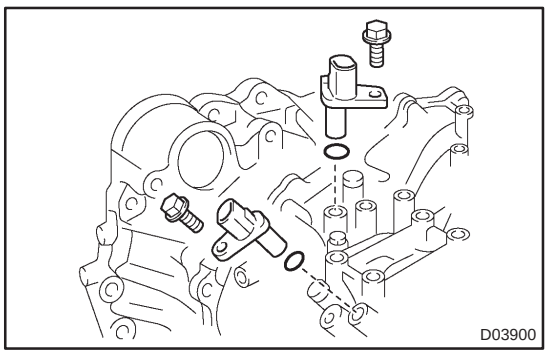
3. REMOVE BREATHER PLUG HOSE

(a) Remove the breather plug hose from the breather No. 2 plug.



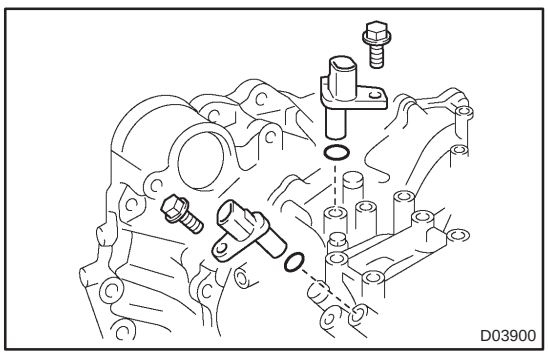
4. REMOVE OIL COOLER TUBE UNION(INLET OIL COOLER UNION)

(a) Remove the union.
(b) Remove the O–ring from the union.



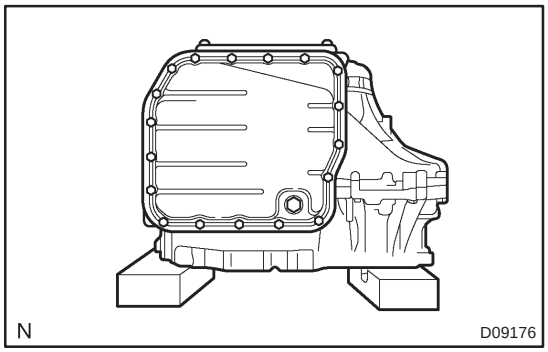
5. REMOVE OIL COOLER TUBE UNION(OUTLET OIL COOLER UNION)

(a) Remove the elbow.
(b) Remove the O–ring from the elbow.



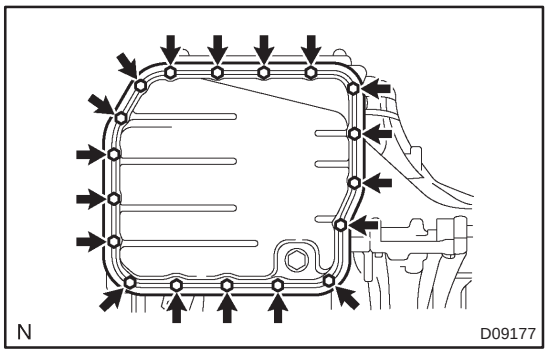
6. REMOVE TRANSAXLE CASE NO.1 PLUG

(a) Remove the 4 transaxle case No. 1 plugs from the transaxle case.
(b) Remove 4 O–rings from the 4 transaxle case No. 1 plugs.



7. REMOVE SPEED SENSOR(TMC –MADE)

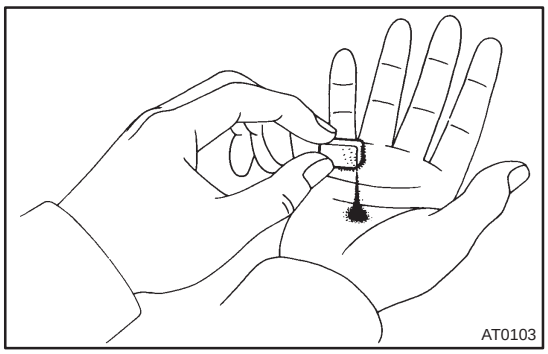
(a) Remove the 2 bolts and the 2 speed sensors from the transaxle assy.
(b) Remove the 2 O–rings from the sensors.



8. REMOVE TRANSMISSION REVOLUTION SENSOR(AISIN –MADE)

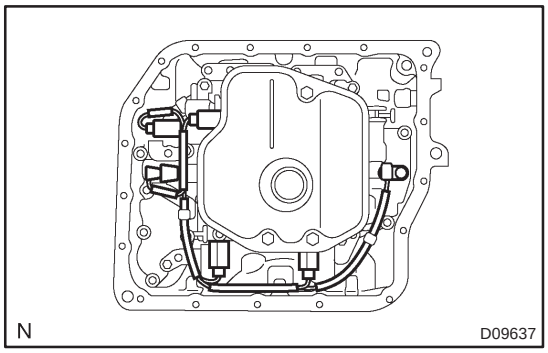
(a) Remove the 2 bolts and the 2 transmission revolution sensors from the transaxle assy.
(b) Remove the 2 O–rings from the sensors.

9. FIX AUTOMATIC TRANSAXLE ASSY



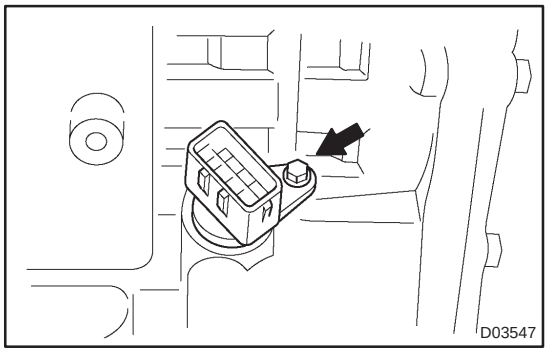
10. REMOVE AUTOMATIC TRANSAXLE OIL PAN SUB–ASSY

(a) Remove the 18 bolts.
(b) Remove the oil pan and 2 magnets.



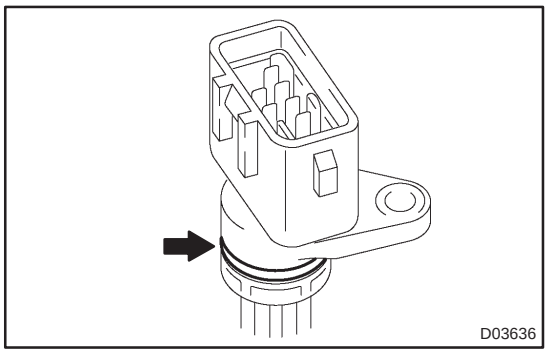
11. REMOVE AUTOMATIC TRANSAXLE OIL PAN GASKET

(a) Remove the gasket from the oil pan.

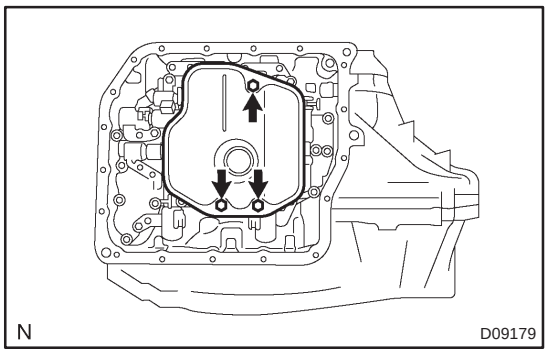


12. INSPECT AUTOMATIC TRANSAXLE OIL PAN SUB–ASSY

(a) Remove the magnets and use them to collect any steel chips. Examine the chips and particles in the pan and on the magnet to determine what type of wear has occurred in the transaxle:
Steel (magnetic).... bearing, gear and plate wear
Brass (non–magnetic).... bushing wear

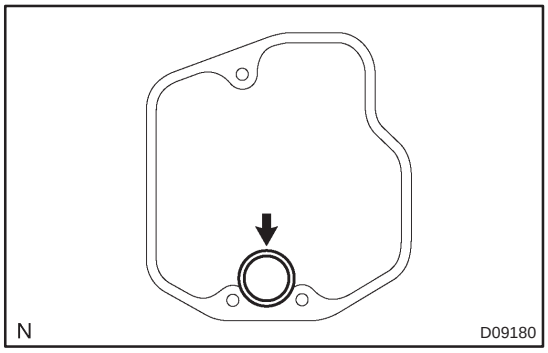


13. REMOVE TRANSMISSION WIRE

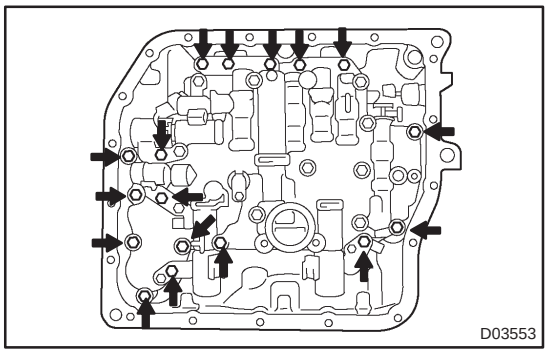


(a) Remove the 5 connectors from the shift solenoid valves.
(b) Remove the bolt, clamp and ATF temperature sensor.

(c) Remove the bolt and transaxle solenoid wire from the transaxle case.

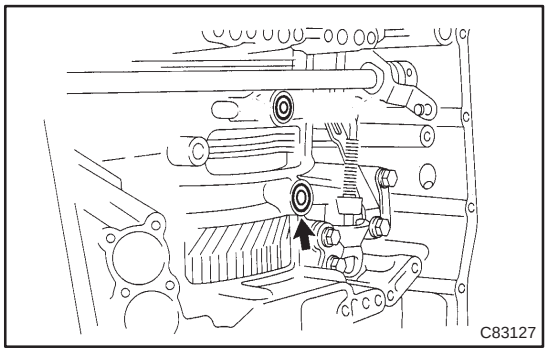


(d) Remove the O–ring from the transaxle solenoid wire.

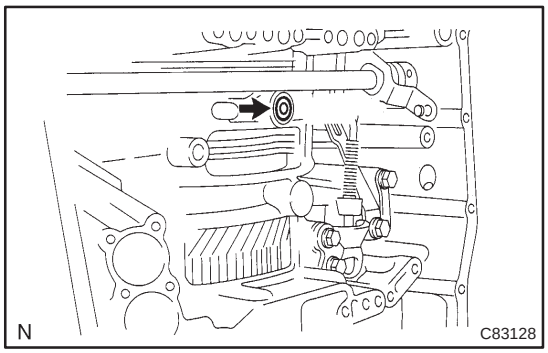


14. REMOVE VALVE BODY OIL STRAINER ASSY

(a) Remove the 3 bolts and oil strainer.

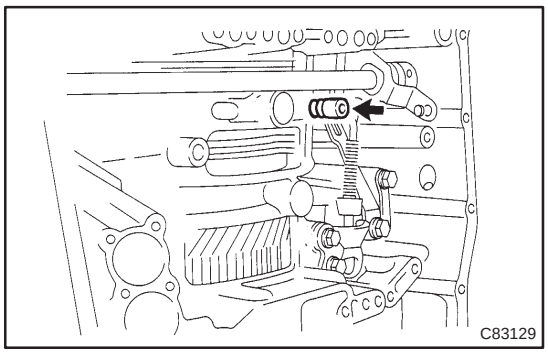


(b) Remove the O–ring from the oil strainer.



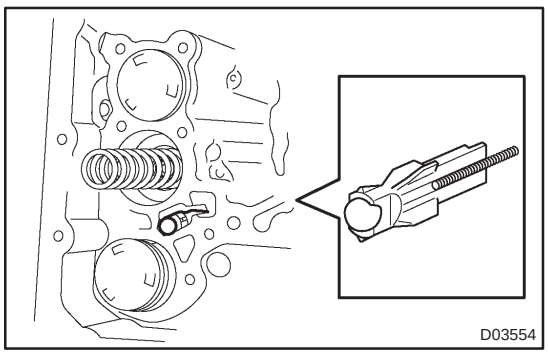
15. REMOVE TRANSMISSION VALVE BODY ASSY

(a) Support the valve body assy and remove the 17 bolts and the valve body assy.



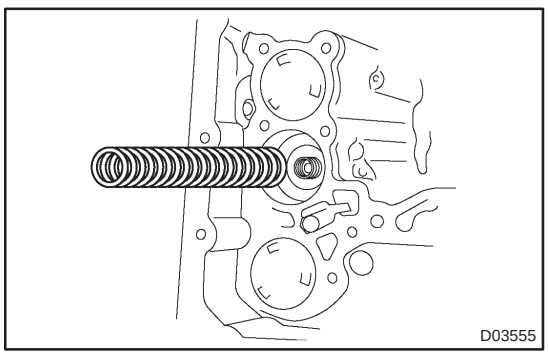
16. REMOVE GOVERNOR APPLY GASKET NO.1

(a) Remove the governor apply gasket No. 1 from the transaxle case.



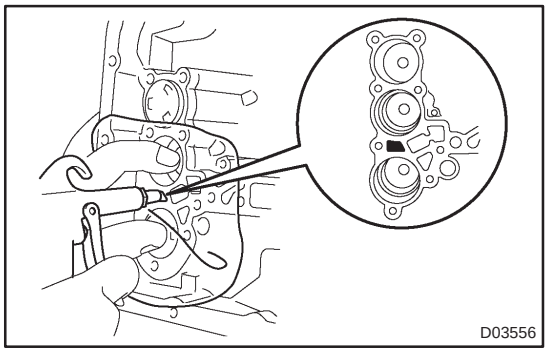
17. REMOVE TRANSAXLE CASE 2ND BRAKE GASKET

(a) Remove the transaxle case 2ND brake gasket from the transaxle case.



18. REMOVE BRAKE DRUM GASKET

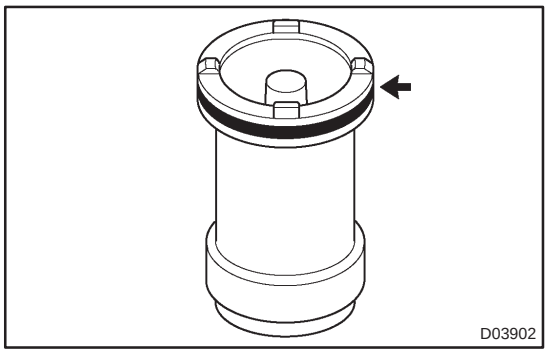
(a) Remove the brake drum gasket from the transaxle case.



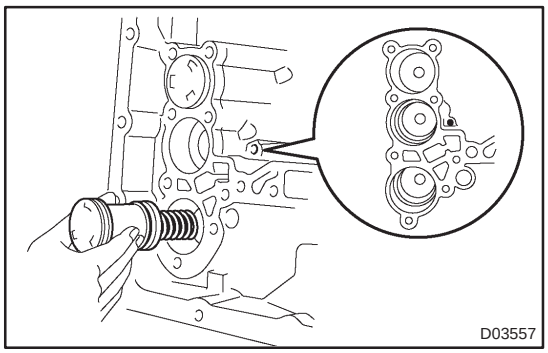
19. REMOVE CHECK BALL BODY

(a) Remove the check ball body and spring from the transaxle case.

20. REMOVE C–3 ACCUMULATOR PISTON



(a) Remove the compression spring from the C_3 accumulator piston.

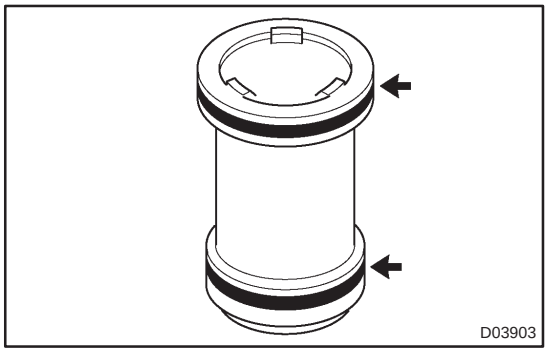


(b) Apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the oil hole and remove the C_3 accumulator piston.

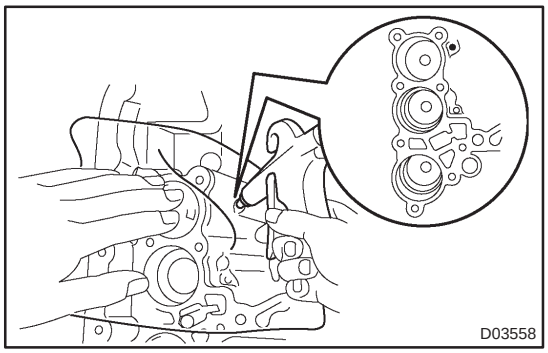
NOTICE:

- **Blowing off the air may cause the piston's jump–out. When removing the piston, hold it with your hand using a waste cloth.**
- **Take care not to splash ATF when air–blowing.**

(c) Remove the O–ring from the C_3 accumulator piston.



21. REMOVE C–1 ACCUMULATOR PISTON

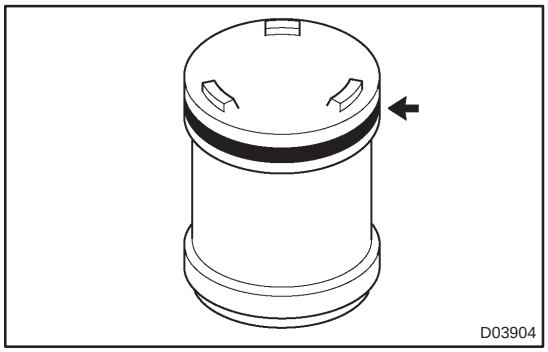


(a) Apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the oil hole and remove the C_1 accumulator piston and compression spring.

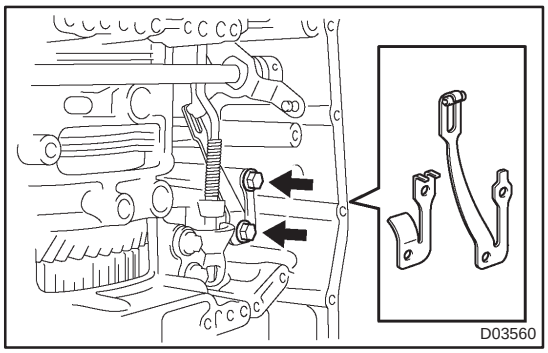
NOTICE:

- **Blowing off the air may cause the piston's jump–out. When removing the piston, hold it with your hand using a waste cloth.**
- **Take care not to splash ATF when air–blowing.**

(b) Remove the 2 O–rings from the C_1 accumulator piston.



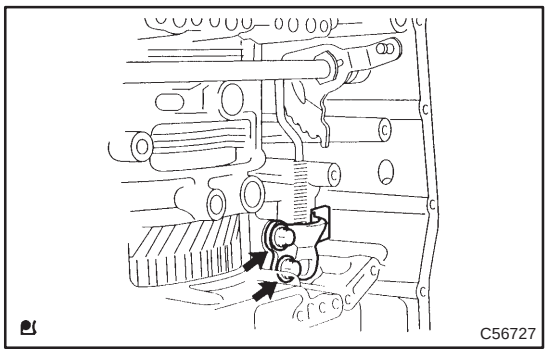
22. REMOVE B–3 ACCUMULATOR PISTON



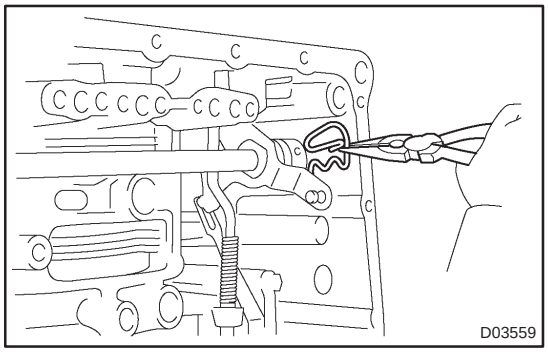
(a) Apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the oil hole and remove the B_3 accumulator piston and 2 compression springs.

NOTICE:

- **Blowing off the air may cause the piston's jump–out. When removing the piston, hold it with your hand using a waste cloth.**
- **Take care not to splash ATF when air–blowing.**

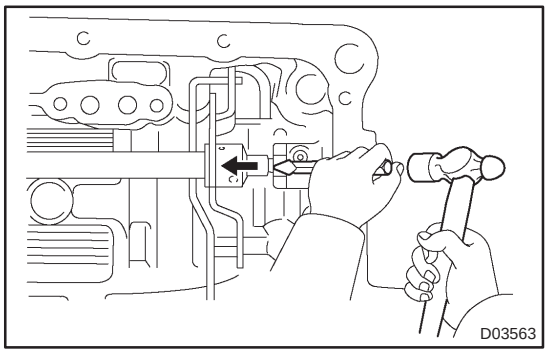


(b) Remove the O–ring from the B_3 accumulator piston.



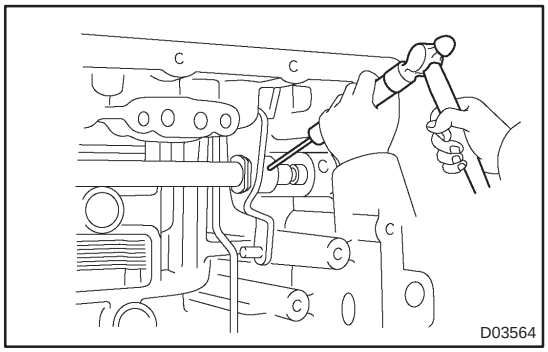
23. REMOVE MANUAL DETENT SPRING SUB–ASSY

(a) Remove the 2 bolts, the manual detent spring sub–assy and spring cover.



24. REMOVE PARKING LOCK PAWL BRACKET

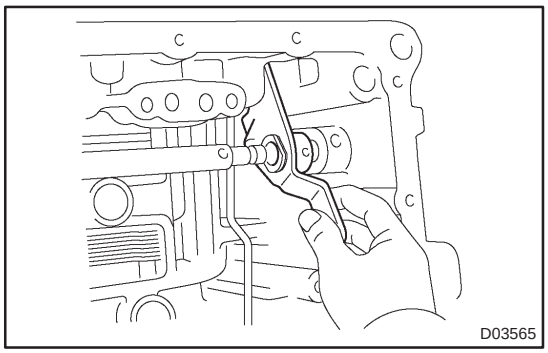
(a) Remove the 2 bolts and the parking lock pawl bracket.



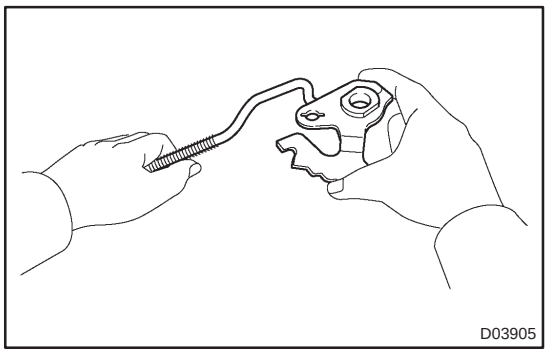
25. REMOVE MANUAL VALVE LEVER SHAFT RETAINER SPRING

(a) Using needle–nose pliers, remove the manual valve lever shaft retainer spring.

26. REMOVE MANUAL VALVE LEVER SUB–ASSY



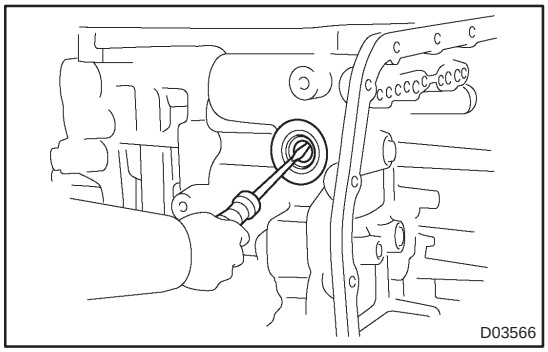
(a) Using a chisel and hammer, unstake and remove the manual valve lever spacer.



(b) Using a pin punch and hammer, drive out the manual valve lever shaft spring pin.

HINT:

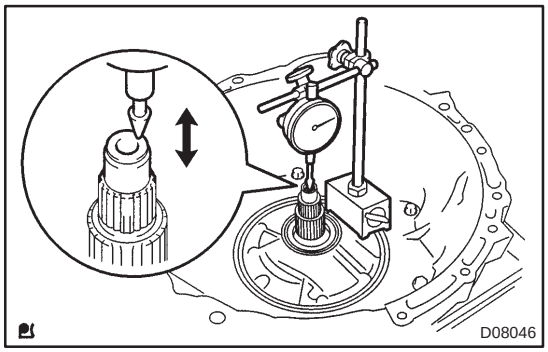
Slowly drive out the pin so that it will not fall into the transaxle case.



(c) Remove the manual valve lever shaft and manual valve lever.

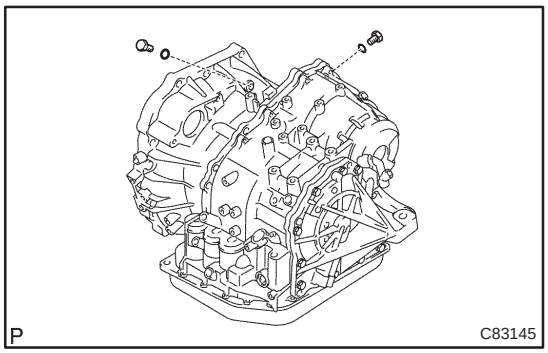
27. REMOVE PARKING LOCK ROD SUB–ASSY

(a) Remove the parking lock rod from the manual valve lever.



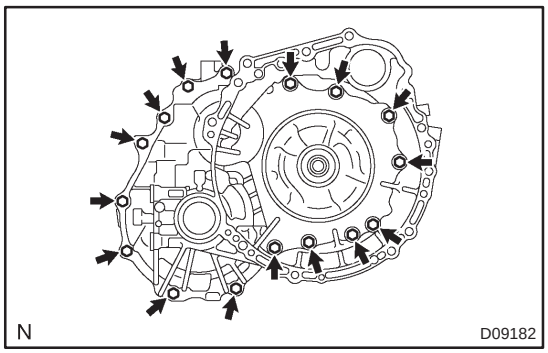
28. REMOVE MANUAL VALVE LEVER SHAFT OIL SEAL

(a) Using a screwdriver, remove the oil seal from the transaxle case.



29. FIX AUTOMATIC TRANSAXLE ASSY

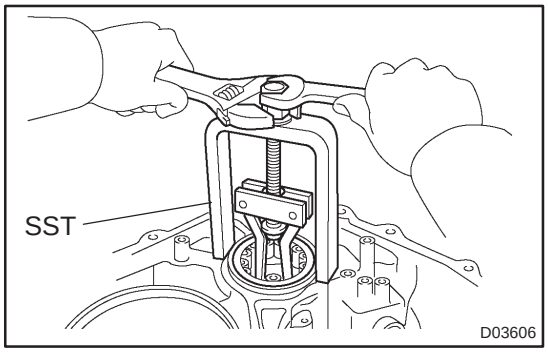
(a) Fix the transaxle case with the oil pump side facing up.



30. INSPECT INPUT SHAFT ENDPLAY

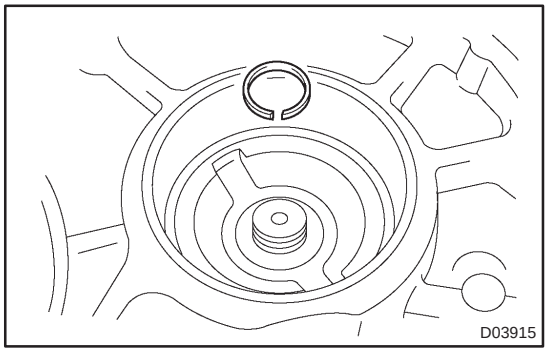
(a) Using a dial indicator, measure the input shaft end play.
END Play: 0.26 – 1.25 mm (0.0103 – 0.0492 in.)

31. REMOVE TRANSAXLE CASE NO.1 PLUG



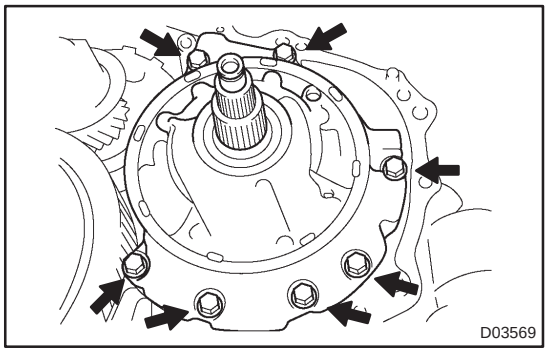
(a) Remove the 2 transaxle case No 1 plugs.
(b) Remove the 2 O–rings from the transaxle case plug.

32. REMOVE TRANSAXLE HOUSING



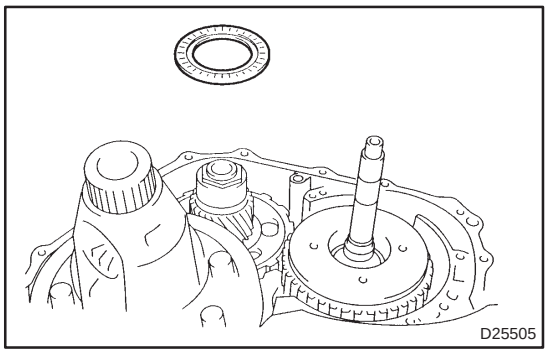
(a) Remove the 16 bolts.
(b) Tap on the circumference of the transaxle housing with a plastic hammer to remove the transaxle housing from the transaxle case.

NOTICE:
Differential may be accidentally removed when the transaxle housing is removed.



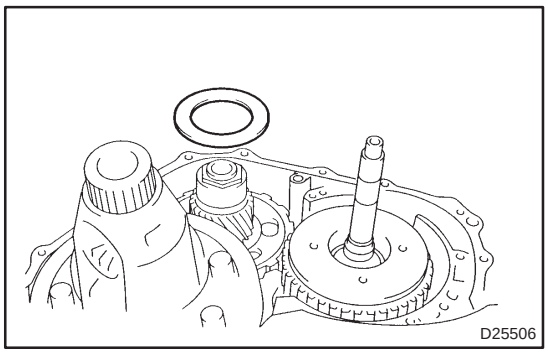
33. REMOVE UNDERDRIVE CYLINDRICAL ROLLER BEARING

(a) Using SST, remove the cylindrical roller bearing from the transaxle case.
SST 09514–35011



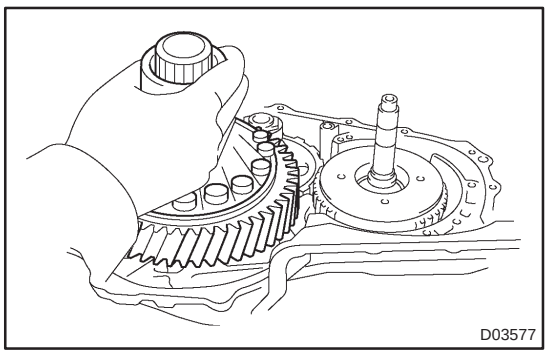
34. REMOVE UNDERDRIVE OUTPUT SHAFT OIL SEAL RING

(a) Remove the oil seal ring from the transaxle housing.



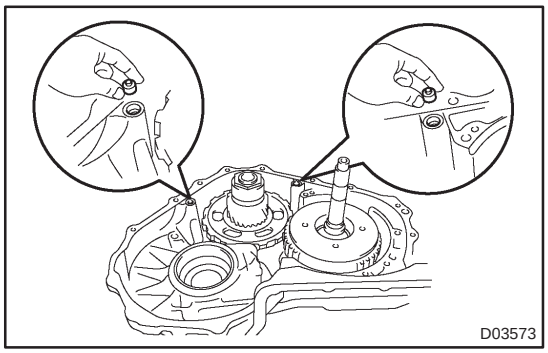
35. REMOVE OIL PUMP ASSY

(a) Remove the 7 bolts and oil pump assy from the transaxle case.



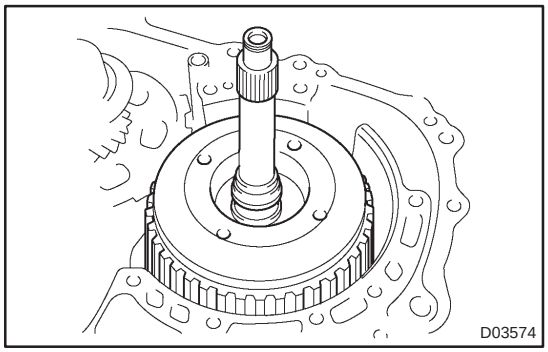
36. REMOVE THRUST NEEDLE ROLLER BEARING

(a) Remove thrust needle roller bearing from the U/D planetary gear assy.



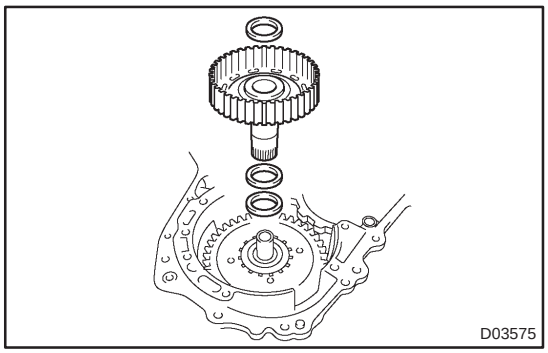
37. REMOVE THRUST BEARING UNDERDRIVE RACE NO.2

(a) Remove thrust bearing race No. 2 from the U/D planetary gear assy.



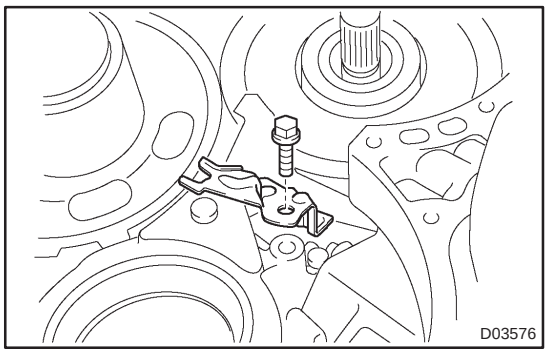
38. REMOVE FRONNT DIFFERENTIAL ASSY

(a) Remove the front differential assy from the transaxle case.



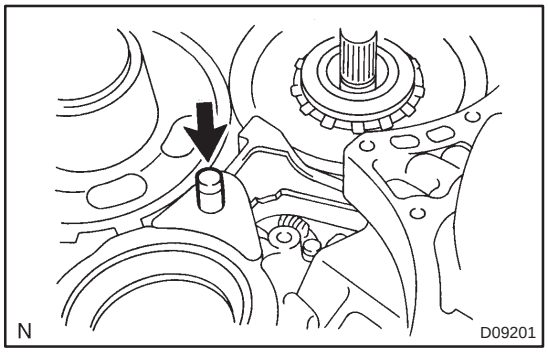
39. REMOVE OVERDRIVE BRAKE GASKET

(a) Remove the 2 O/D brake gaskets from the transaxle case.



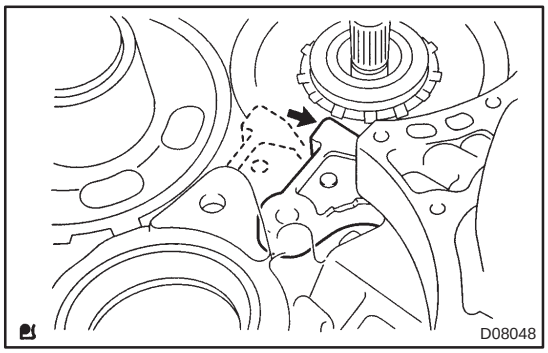
40. REMOVE FORWARD CLUTCH ASSY

(a) Remove the forward clutch from the transaxle case.



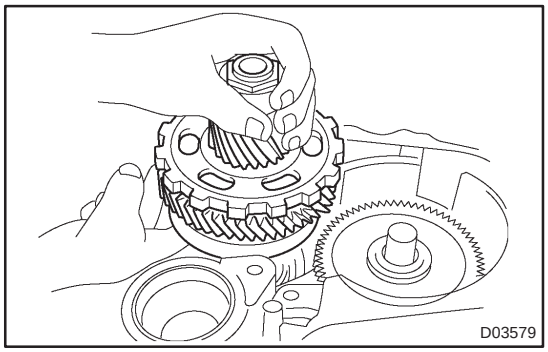
41. REMOVE MULTIPLE DISC CLUTCH CLUTCH HUB

(a) Remove the thrust bearing, multiple clutch hub, needle roller bearing and bearing race from the transaxle case.



42. REMOVE UNDERDRIVE PLANETARY GEAR ASSY

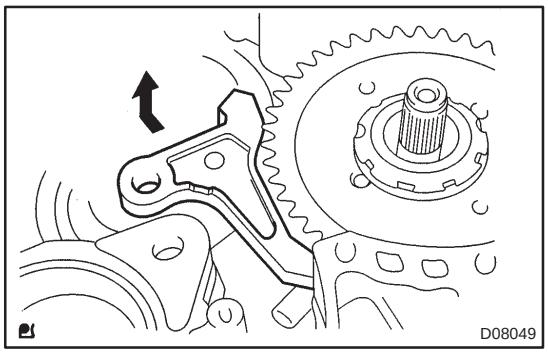
(a) Remove the bolt and parking pawl shaft clamp.



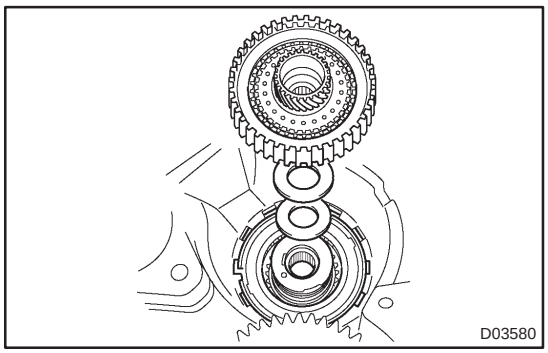
(b) Remove the parking lock pawl shaft.

(c) Push the parking lock pawn.

HINT:



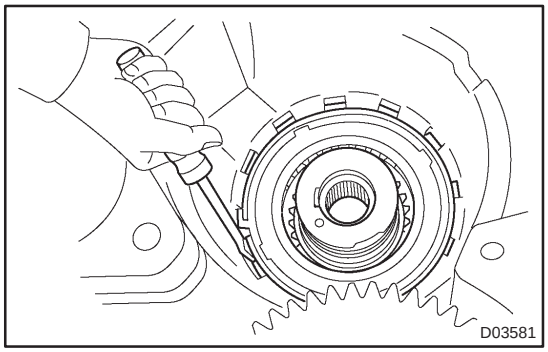
Failure to do so will cause interference when the U/D planetary gear is removed.



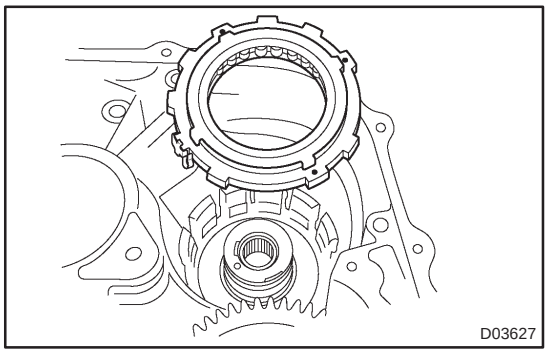
(d) Remove the U/D planetary gear assy from the transaxle case.

NOTICE:

Be careful so that the U/D planetary gear assy will not fall out.

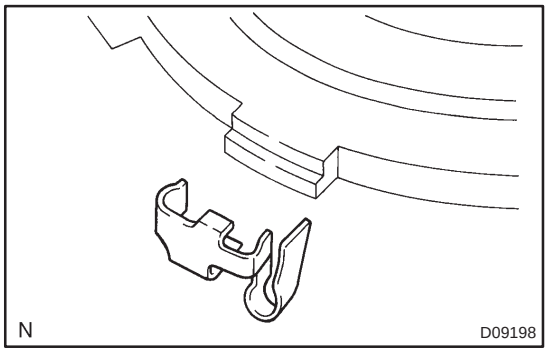


(e) Remove the spring, pawl pin and parking lock pawl.

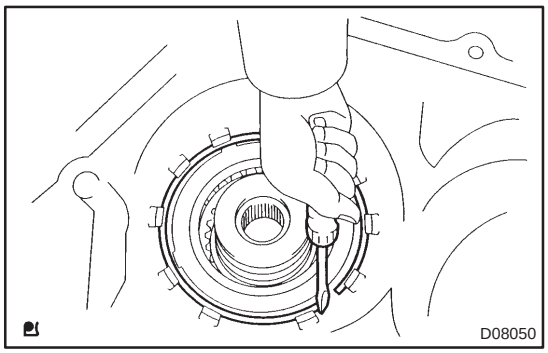


43. REMOVE UNDERDRIVE CLUTCH ASSY

(a) Remove the U/D clutch assy, needle roller bearing, thrust bearing U/D race No. 3 from the transaxle case.

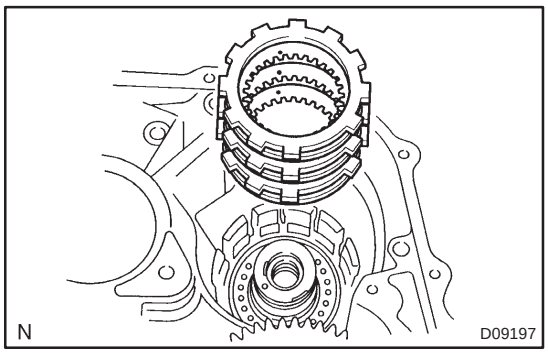


44. REMOVE UNDERDRIVE 1 WAY CLUTCH ASSY

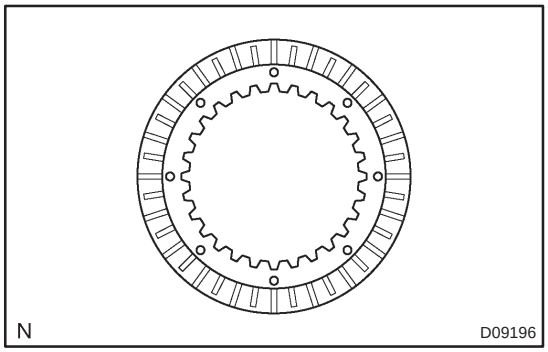


(a) Using a screwdriver, remove the snap ring from the transaxle case.

(b) Remove the 1–way clutch from the transaxle case.



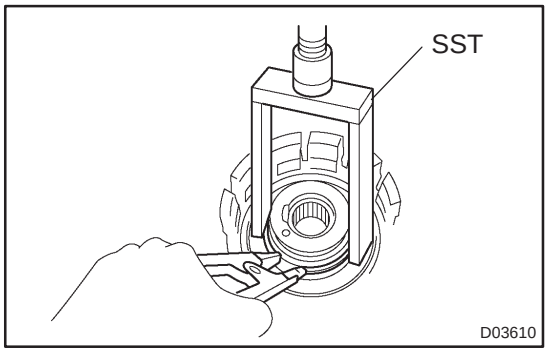
(c) Remove the outer race retainer from the 1–way clutch.



45. REMOVE UNDERDRIVE CLUTCH DISC NO.2

(a) Using a screwdriver, remove the snap ring from the transaxle case.

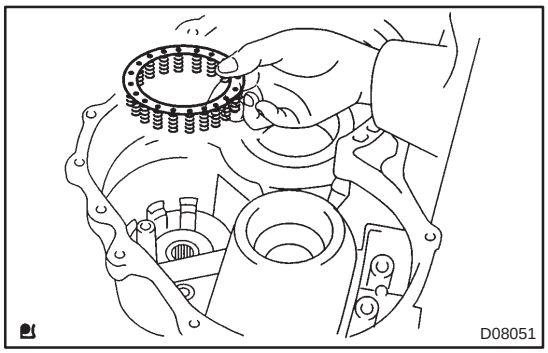
(b) Remove the flange, 3 discs and 3 plates from the transaxle case.



46. INSPECT UNDERDRIVE CLUTCH DISC NO.2

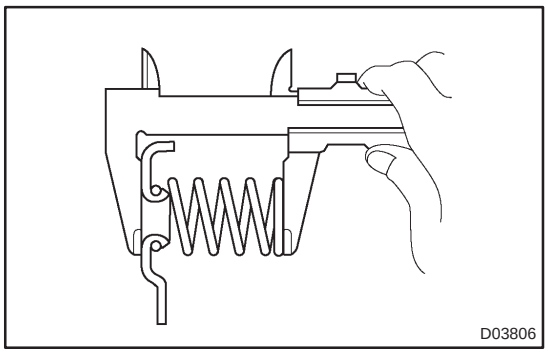
(a) Check to see if the sliding surface of the disc, plate and flange are worn or burnt.

If necessary, replace them.



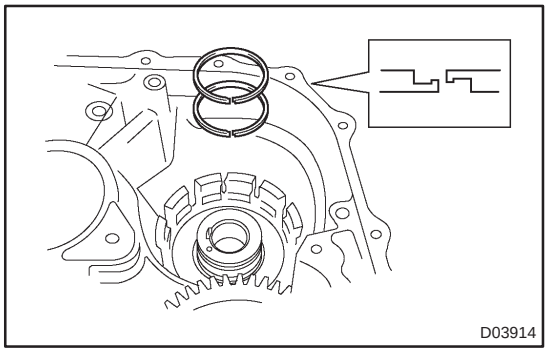
NOTICE:

- **If the lining of the disc is peeling off or discolored, or even if a part of the groove is defaced, replace all discs.**
- **Before assembling new discs, soak them in ATF for at least 15 minutes.**

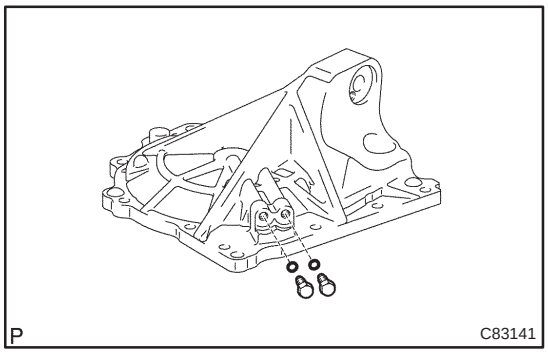


47. REMOVE UNDERDRIVE BRAKE RETURN SPRING SUB–ASSY

(a) Using SST, a snap ring expander and a press, remove the snap ring from the transaxle case.
SST 09387–00020

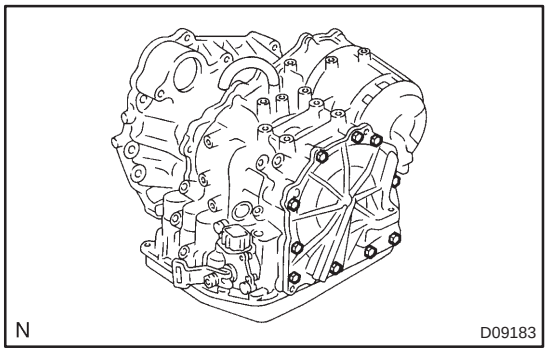


(b) Remove the U/D brake return spring sub–assy from the U/D brake piston.



48. INSPECT UNDERDRIVE BRAKE RETURN SPRING SUB–ASSY

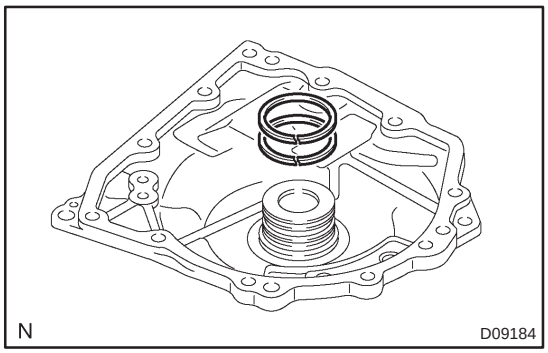
(a) Using vernier calipers, measure the free length of the U/D brake return spring sub–assy together with the spring seat.
Standard free length: 14.04 mm (0.5213 in.)



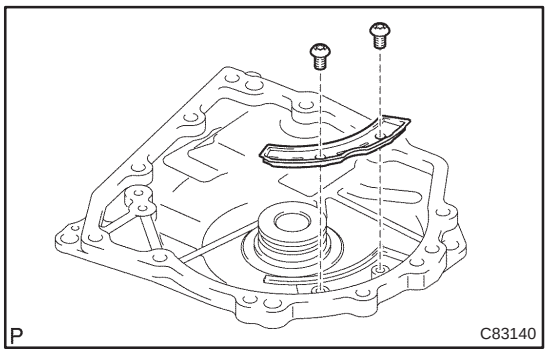
49. REMOVE UNDERDRIVE CLUTCH DRUM OIL SEAL RING

(a) Remove the 2 U/D clutch drum oilseal rings from the transaxle case.

50. REMOVE TRANSAXLE CASE NO.1 PLUG

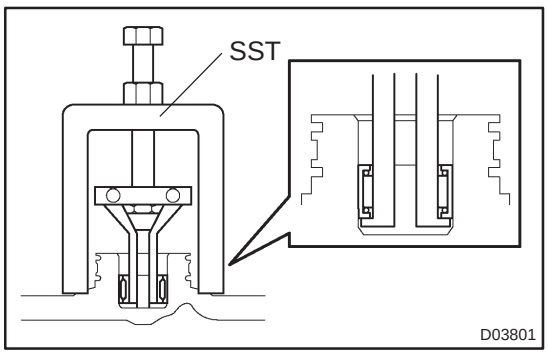


(a) Remove 2 transaxle case No. 1 plugs from the transaxle rear cover.
(b) Remove 2 O–rings from the 2 transaxle case No. 1 plugs.



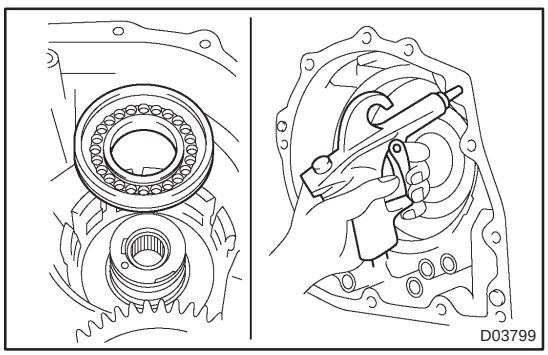
51. REMOVE TRANSAXLE REAR COVER SUB–ASSY

(a) Remove the 11 bolts.

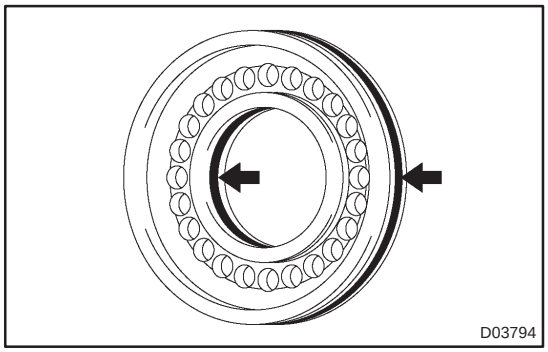


(b) Tap in the circumference of the rear cover with a plastic hammer to remove the transaxle rear cover from the transaxle case.

(c) Remove the 2 outer rear clutch oil seal rings from the transaxle rear cover.

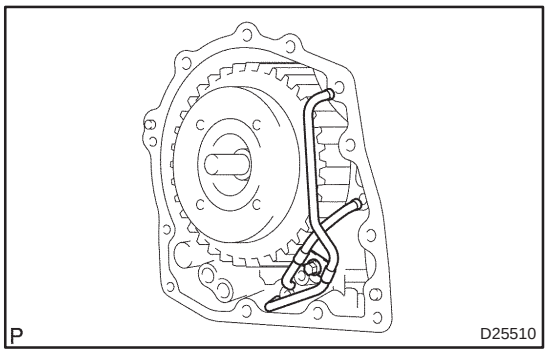


(d) Using a torx socket wrench T30, remove the 2 screws and transaxle rear cover plate.



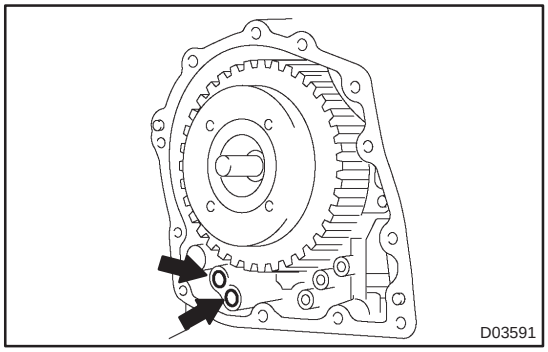
(e) Using SST, remove the needle–roller bearing from the transaxle rear cover.

SST 09387–00040 (09387–01010, 09387–01030, 09387–01040)



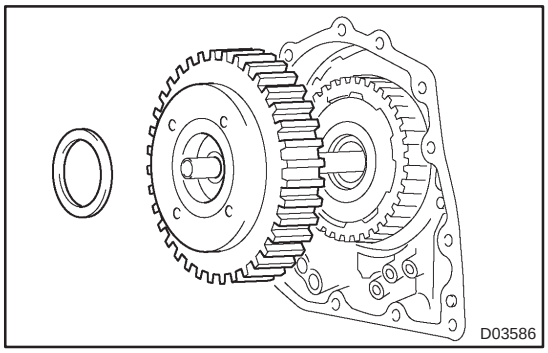
52. REMOVE UNDERDRIVE BRAKE PISTON

(a) Apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the transaxle case to remove the U/D brake piston.



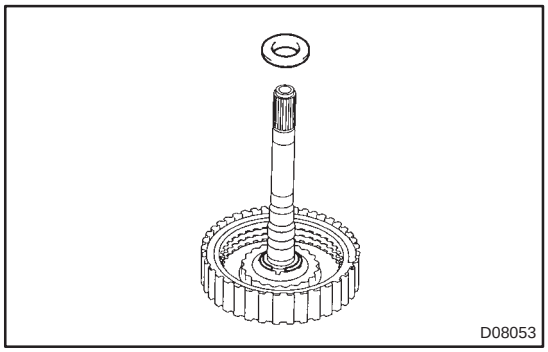
(b) Remove the 2 O–rings from the U/D brake piston.

53. REMOVE BRAKE APPLY TUBE



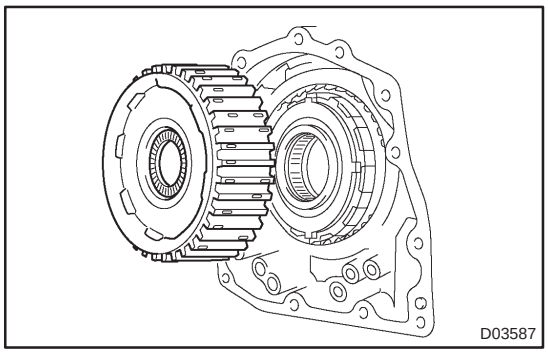
(a) Remove a bolt, clamp and 2 brake apply tubes.
(b) Remove the brake apply tube from the clamp.

54. REMOVE FRONT CLUTCH APPLY TUBE



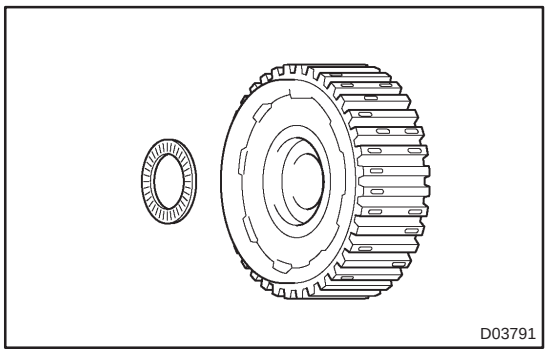
55. REMOVE GOVERNOR APPLY GASKET NO.1

(a) Using a screwdriver, remove the 2 governor apply gasket No. 1.

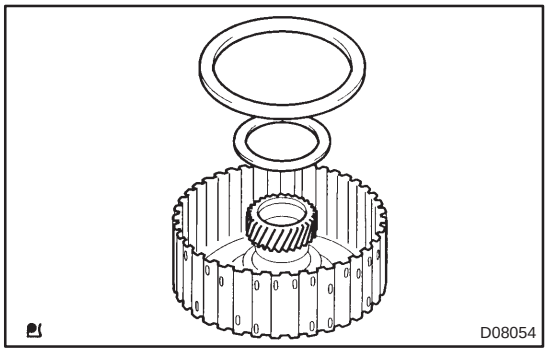


56. REMOVE DIRECT CLUTCH ASSY

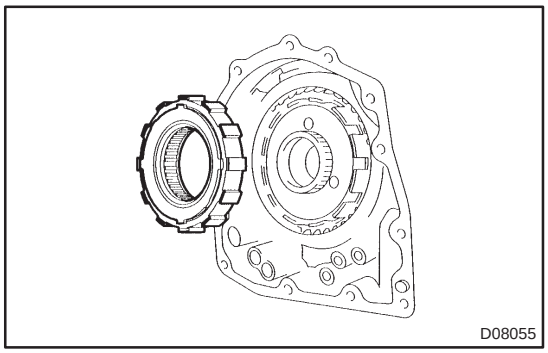
(a) Remove the thrust bearing and the direct clutch assy from the transaxle case.



(b) Remove the bearing race from the direct clutch.

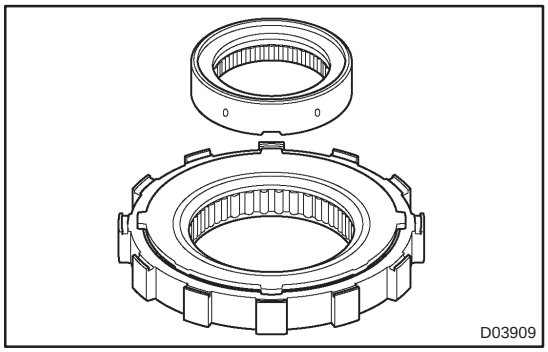


57. REMOVE REAR PLANETARY SUN GEAR ASSY

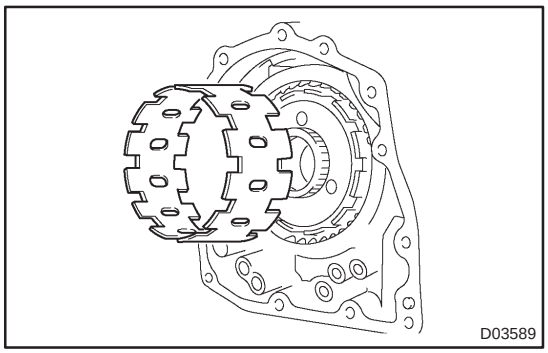


(a) Remove the rear planetary sun gear assy from the transaxle case.

(b) Remove the rear planetary sun gear thrust bearing from the rear planetary sun gear.

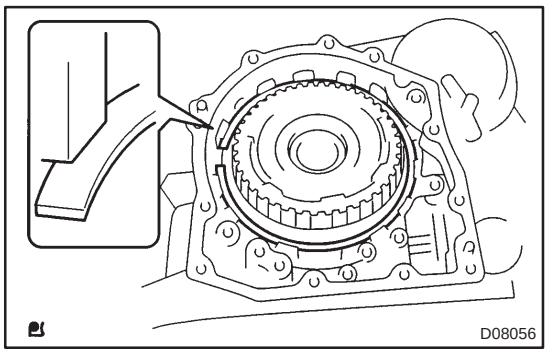


(c) Remove the thrust washer No. 1 and 1–way clutch thrust bearing from the rear planetary sun gear.

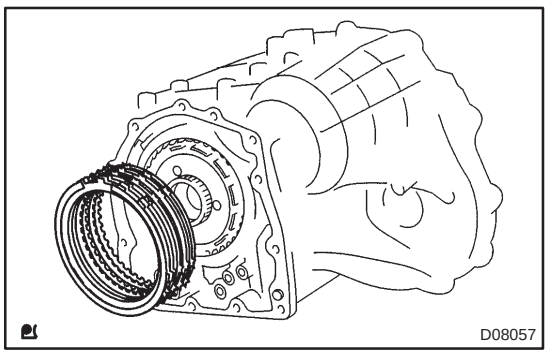


58. REMOVE 1 WAY CLUTCH ASSY

(a) Remove the 1–way clutch assy from the transaxle case.

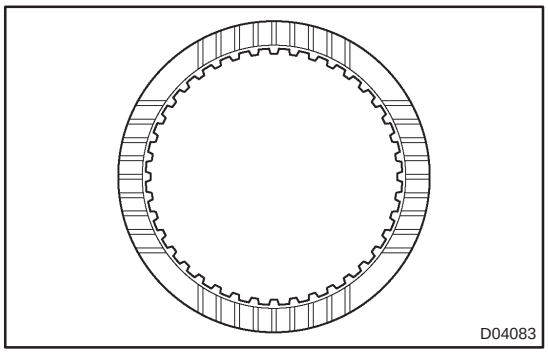


(b) Remove the 1–way clutch inner race from the 1–way clutch assy.



59. REMOVE 1WAY CLUTCH SLEEVE OUTER

(a) Remove the 1–way clutch sleeve outer.

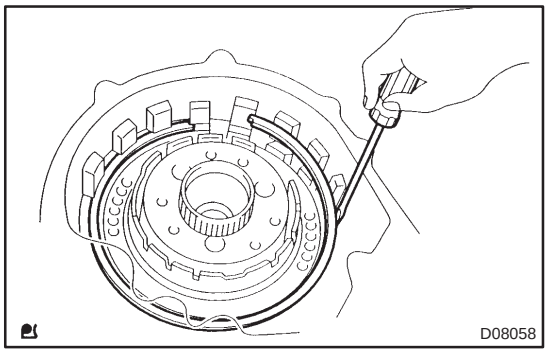


60. REMOVE 2ND BRAKE CLUTCH DISC

(a) Using a screwdriver, remove the 2ND brake hole snap ring from the transaxle case.

(b) Remove the flange, 3 discs and 3 plates from the transaxle case.

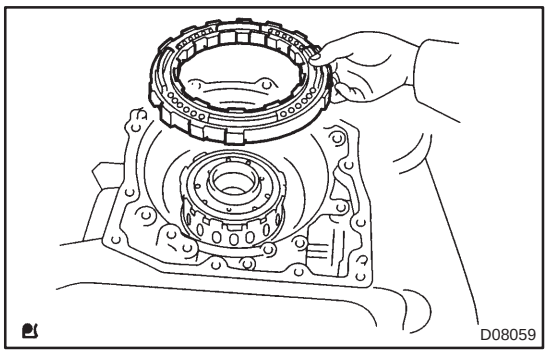
61. INSPECT 2ND BRAKE CLUTCH DISC



(a) Check to see if the sliding surface of the disc, plate and flange are worn or burnt.

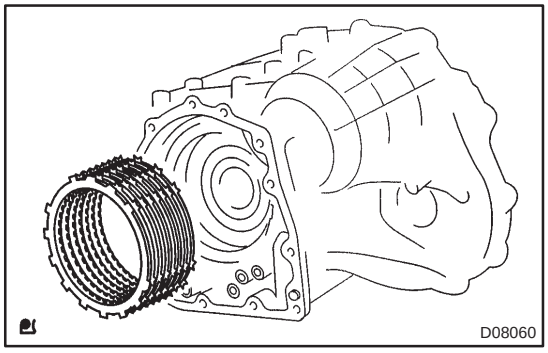
If necessary, replace them.

NOTICE:



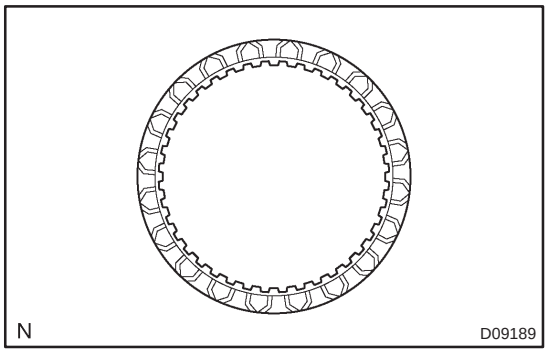
- **If the lining of the disc is peeling off or discolored, or even if a part of the printed number is defaced, replace all discs.**

- **Before assembling new discs, soak them in ATF for at least 15 minutes.**



62. REMOVE SECOND BRAKE PISTON ASSY

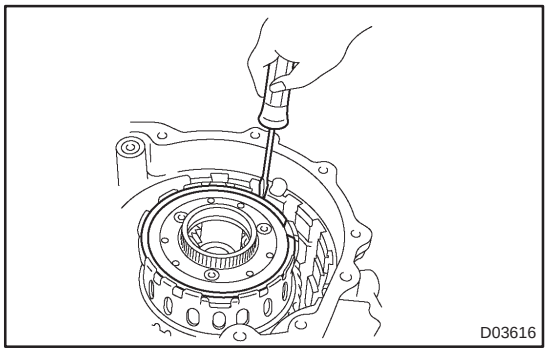
(a) Using a screwdriver, remove the 2ND brake cylinder hole snap ring from the transaxle case.



(b) Remove the 2ND brake cylinder from the transaxle case.

63. REMOVE 1ST & REVERSE BRAKE CLUTCH DISC

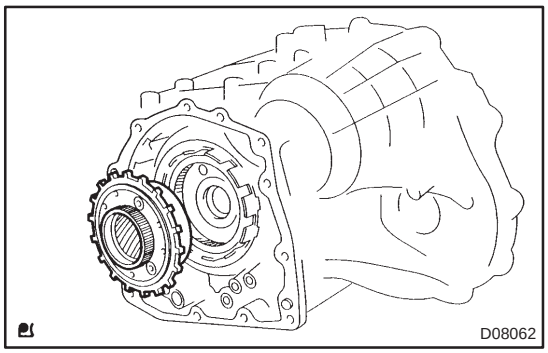
(a) Remove the flange, 5 discs and 5 plates from the transaxle case.



64. INSPECT 1ST & REVERSE BRAKE CLUTCH DISC

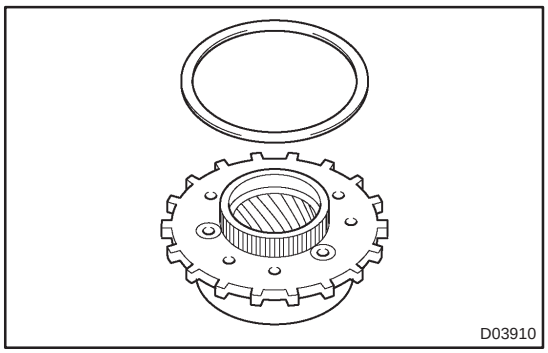
(a) Check to see if the sliding surface of the disc, plate, and flange are worn or burnt.

If necessary, replace them.

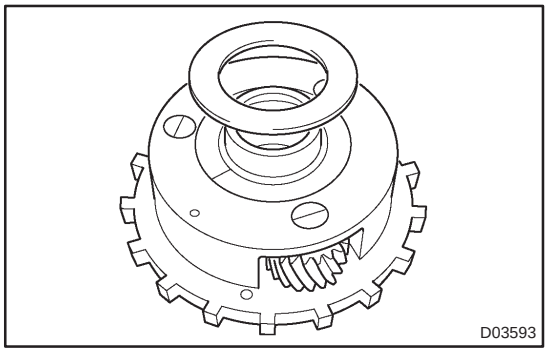


NOTICE:

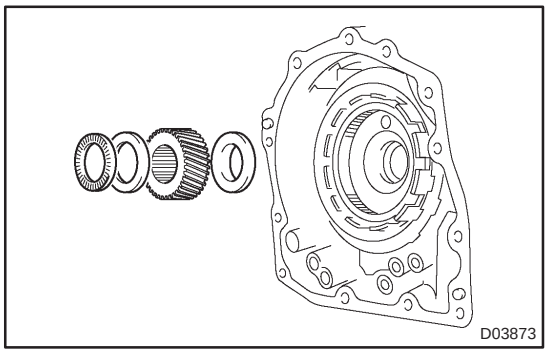
- **If the lining of the disc is peeling off or discolored, or even if a part of the groove is defaced, replace all discs.**
- **Before assembling new discs, soak them in ATF for at least 15 minutes.**



65. REMOVE REAR PLANETARY GEAR ASSY

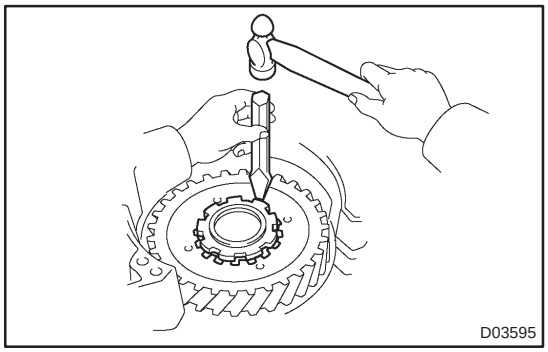


(a) Using a screwdriver, remove the snap ring from the brake hub.



(b) Remove the rear planetary gear assy from the transaxle case.

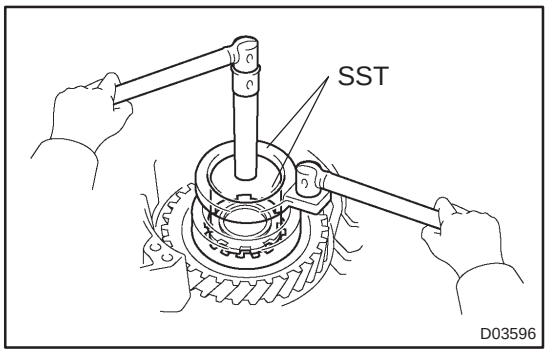
(c) Remove the thrust washer No. 2 from the rear planetary gear assy.



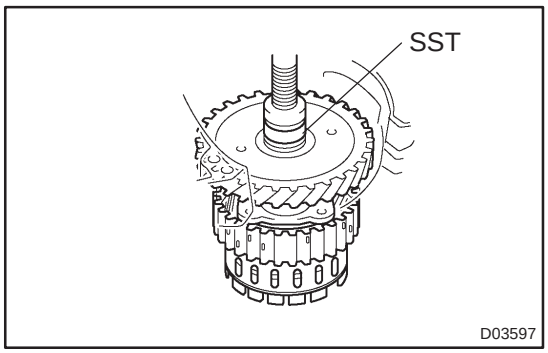
(d) Remove the thrust bearing race No. 3 from the rear planetary gear assy.

66. REMOVE INPUT SUN GEAR

(a) Remove the 2 thrust bearings, the bearing race and the input sun gear from the transaxle case.

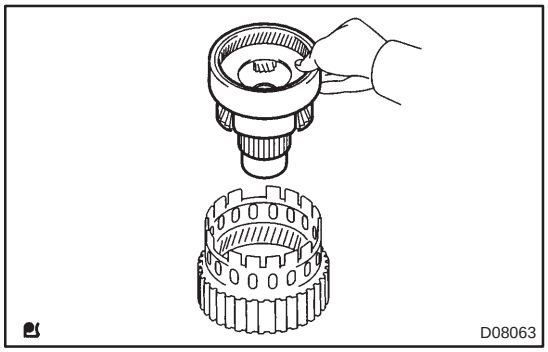


67. REMOVE FRONT PLANETARY GEAR ASSY

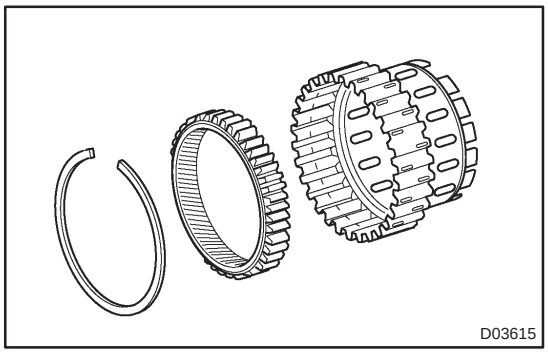


(a) Using a chisel and a hammer, unstake the lock washer.

NOTICE:

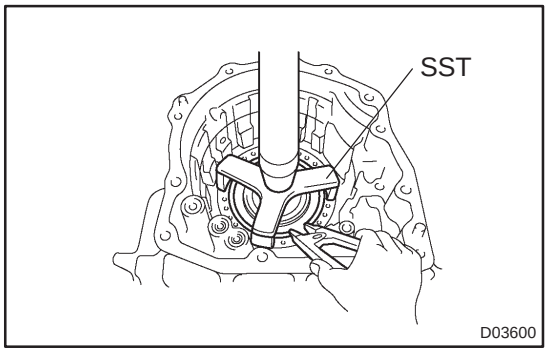


Push down all claws of the washer. Otherwise SST can not be fully pressed against the nut and can not loosen the nut.



(b) Using SST, remove the nut.
SST 09387–00030, 09387–00080

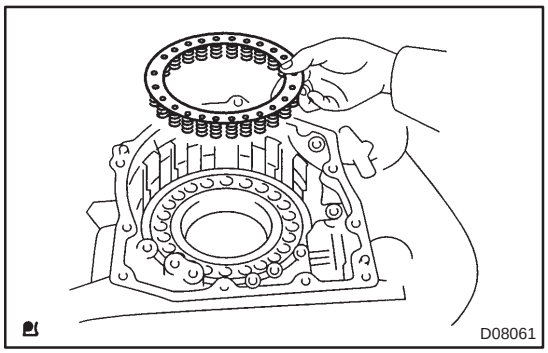
(c) Using SST and a press, remove the front planetary gear assy from the counter drive gear.
SST 09950–60010 (09951–00450)



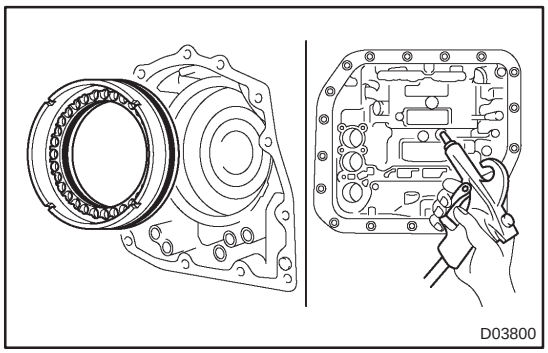
(d) Remove front planetary gear assy from the brake hub.

68. REMOVE FRONT PLANETARY RING GEAR

(a) Using a screwdriver, remove the brake hub snap ring and front planetary ring gear from the brake hub.



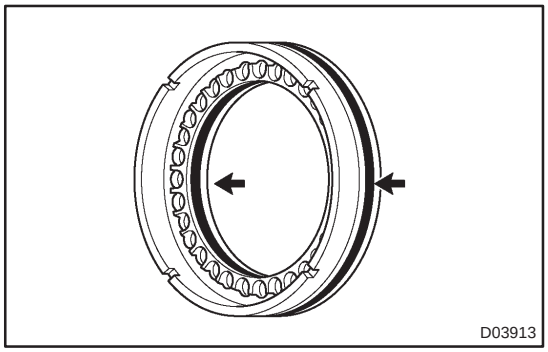
69. REMOVE 1ST & REVERSE BRAKE PISTON



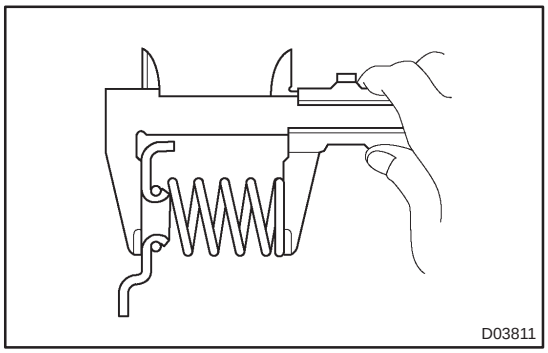
(a) Using SST, a press and a snap ring expander, remove snap ring and the piston return spring.
SST 09387–00070

NOTICE:

- **Stop the press when the spring sheet is lowered 1 – 2 mm (0.039 – 0.078 in.) from the snap ring groove, preventing the spring sheet from deforming.**
- **Do not expand the snap ring excessively.**



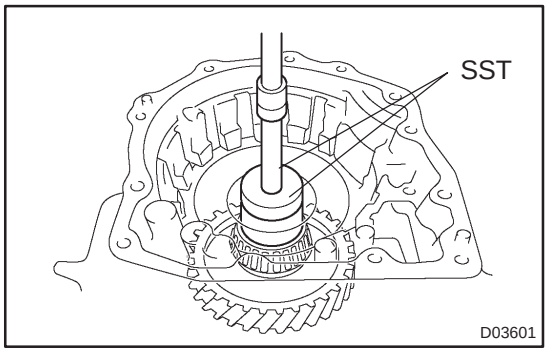
(b) Remove the1ST & reverse brake return spring from the 1ST & reverse brake piston.



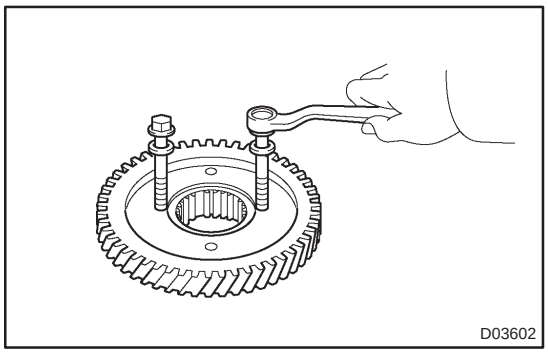
(c) Apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the transaxle case to remove 1ST & reverse brake piston.

NOTICE:

- **Blowing off the air may cause the piston jump–out. When removing the piston, hold it with your hand using a waste cloth.**
- **Take care not to splash ATF when air–blowing.**

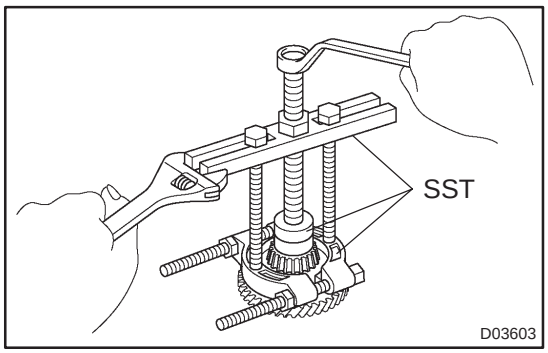


(d) Remove 2 O–rings from the 1ST & reverse brake piston.

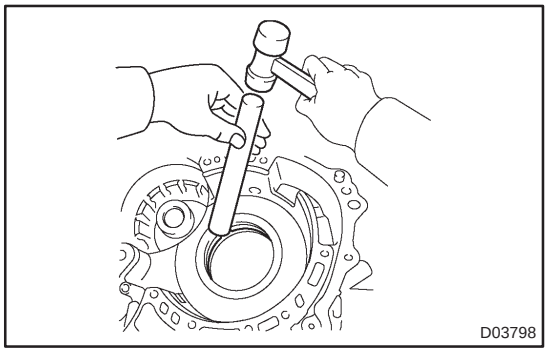


70. INSPECT 1ST & REVERSE BRAKE RETURN SPRING SUB–ASSY

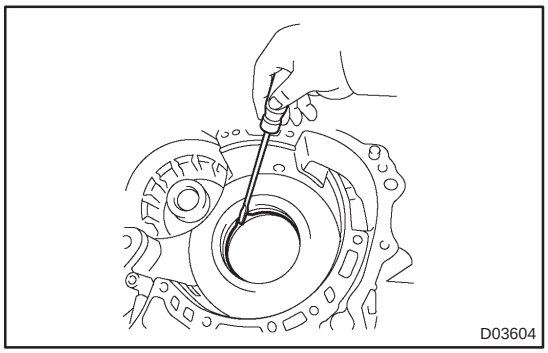
(a) Using vernier calipers, measure the free length of the 1ST & reverse brake return spring together with the spring seat.
Standard free length: 15.51 mm (0.6106 in.)



71. REMOVE COUNTER DRIVE GEAR

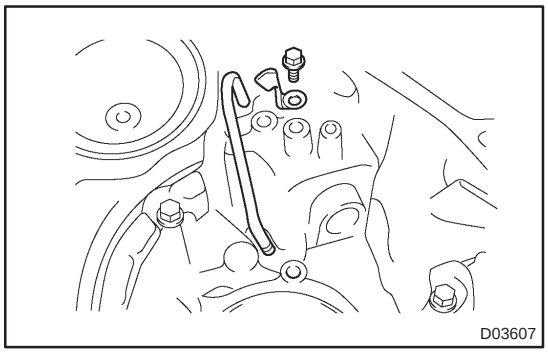


(a) Using SST and a press, remove the counter drive gear from the transaxle case.
SST 09950–60010 (09951–00600), 09950–70010 (09951–07100)



(b) As shown in the illustration, tighten 2 bolts evenly and make clearance of approx. 20.0 mm (0.797 in.) between the counter drive gear and the inner race.

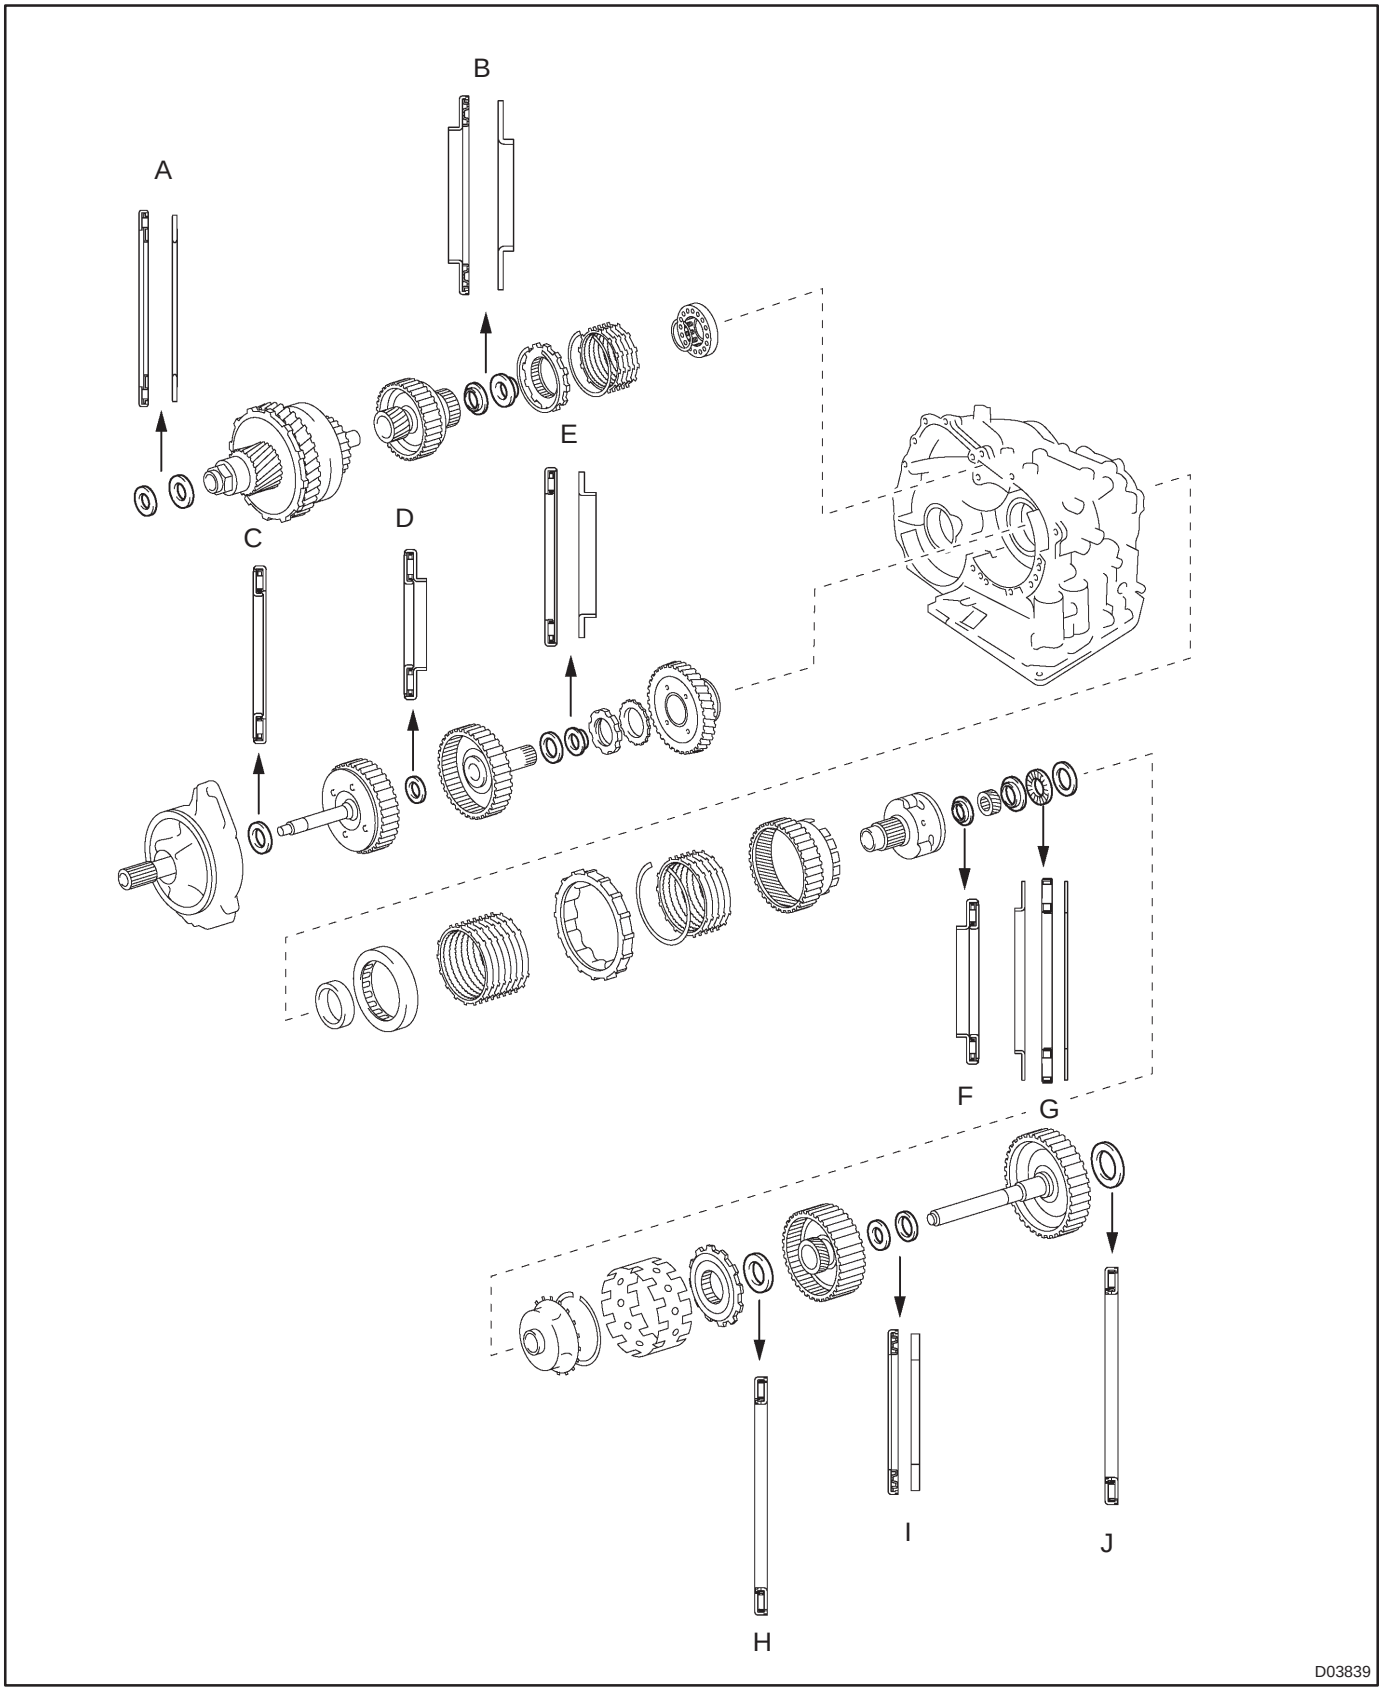
(c) Using SST, remove the tapered roller bearing.
SST 09950–60010 (09951–00600), 09950–40011 (09951–04010, 09952–04010, 09953–04020, 09954–04010, 09955–04011, 09958–04011)



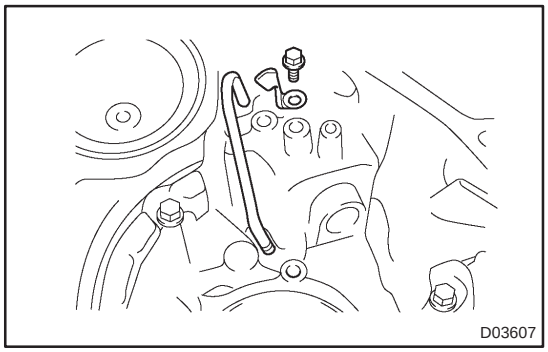
(d) Using a brass bar and a hammer, remove the 2 counter drive gear bearing outer races from the transaxle case.

72. REMOVE COUNTER DRIVE GEAR HOLE SNAP RING

(a) Using a screwdriver, remove the snap ring from the transaxle case.



73. REMOVE BREATHER PLUG NO.2 (ATM)

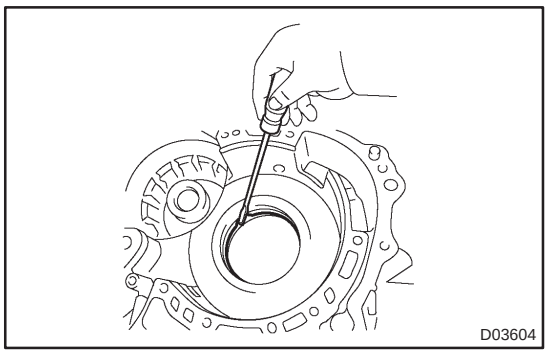


74. REMOVE DIFFERENTIAL GEAR LUBE APPLY TUBE

(a) Remove the bolt, the transaxle apply tube clamp No. 2 and the differential gear loop apply tube from the transaxle case.

75. BEARING POSITION

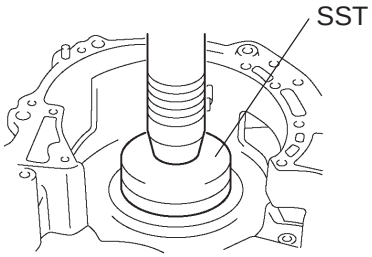
Mark	Front Race Diameter Inside / Outside mm (in.)	Thrust Bearing Diameter Inside / Outside mm (in.)	Rear Race Diameter Inside / Outside mm (in.)
A	–	53.0 (2.087) / 78.2 (3.079)	52.1 (2.051) / 75.5 (2.972)
B	–	37.73 (1.4854) / 58.0 (2.283)	29.9 (1.177) / 55.5 (2.185)
C	–	33.85 (1.3327) / 52.2 (2.055)	–
D	–	23.5 (0.925) / 44.0 (1.732)	–
E	–	36.3 (1.429) / 52.2 (2.055)	34.5 (1.358) / 48.5 (1.909)
F	–	34.6 (1.362) / 52.2 (2.055)	–
G	40.3 (1.587) / 58.0 (2.283)	38.6 (1.520) / 60.0 (2.362)	38.6 (1.520) / 58.0 (2.283)
H	–	53.6 (2.110) / 69.6 (2.740)	–
I	–	33.7 (1.327) / 48.2 (1.898)	30.3 (1.193) / 46.0 (1.811)
J	–	53.6 (2.110) / 70.18 (2.763) or 69.6 (2.740)	–



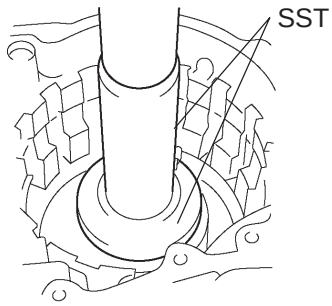
76. INSTALL DIFFERENTIAL GEAR LUBE APPLY TUBE

(a) Install the apply tube, and apply tube clamp No. 2 with the bolt to the transaxle housing.
Torque: 9.8 N·m (100 kgf·cm, 87 in.·lbf)

NOTICE:
Make sure to insert the tube to the stopper.



77. INSTALL BREATHER PLUG NO.2 (ATM)

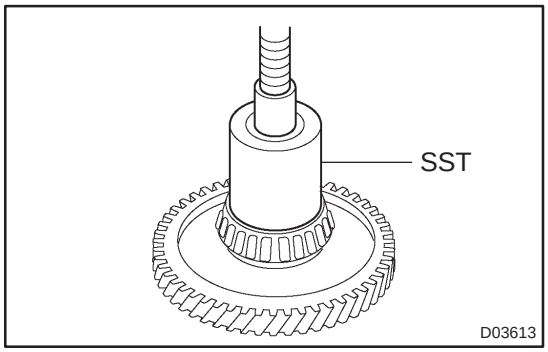


78. INSTALL COUNTER DRIVE GEAR HOLE SNAP RING

(a) Using a screwdriver, install the hole snap ring to the transaxle case.

Counter Drive Gear Side:

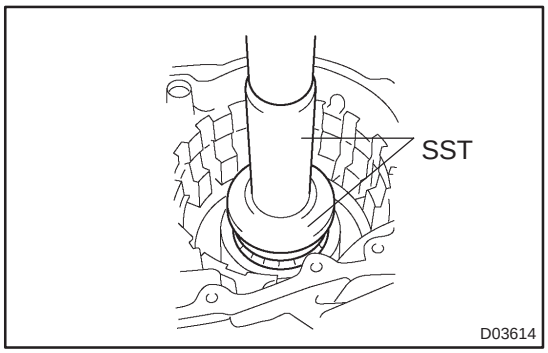
Front Planetary Gear Side:



79. INSTALL COUNTER DRIVE GEAR

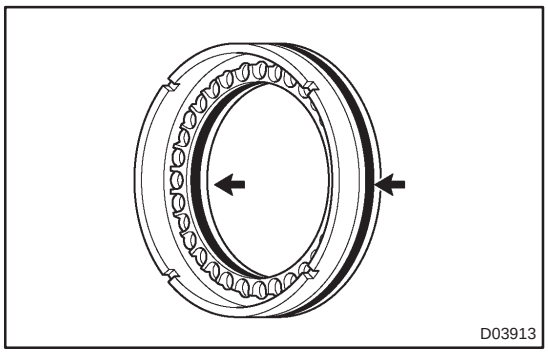
(a) Using SST and a press, instal the 2 counter drive gear bearings outer races to the transaxle case.

NOTICE:
- **Press–fit the bearing race until it contacts the snap ring.**
- **Do not apply excessive pressure to it.**



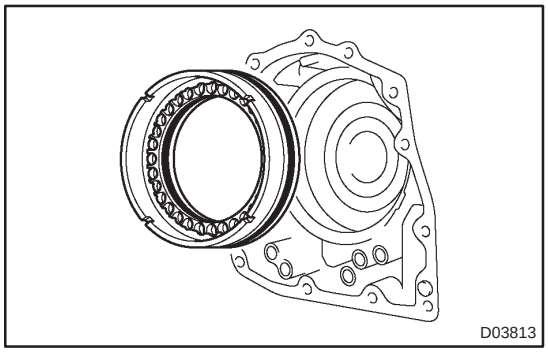
SST 09950–60020 (09951–00890), 09950–70010 (09951–07150)

(b) Using SST and a press, install the tapered roller bearing to the counter drive gear.
SST 09649–17010



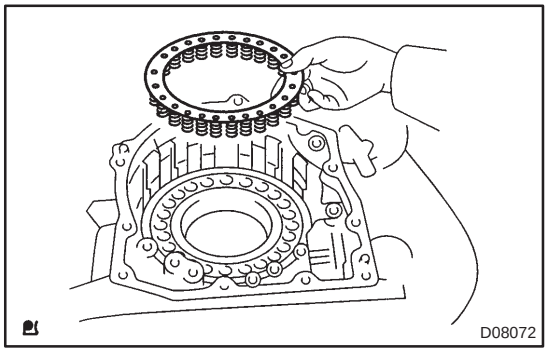
NOTICE:

- **Press–fit the bearing inner race until contacts the counter drive gear.**
- **Do not apply excessive pressure to it.**

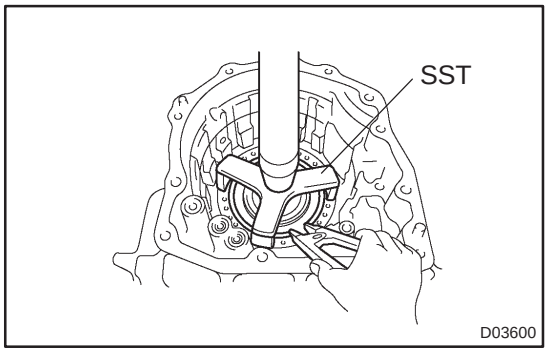


(c) Using SST and a press, install the counter drive gear and bearing to the transaxle case.
SST 09950–60020 (09951–00890), 09950–70010 (09951–07150)

NOTICE:
Do not apply excessive pressure to it.

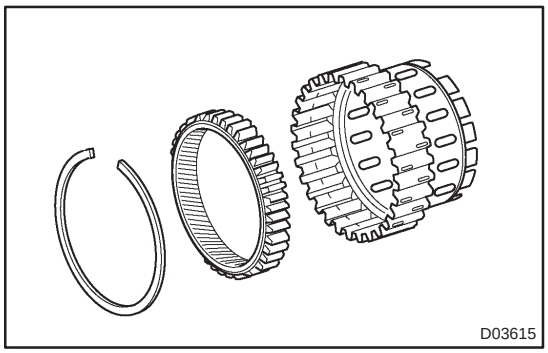


80. INSTALL 1ST & REVERSE BRAKE PISTON



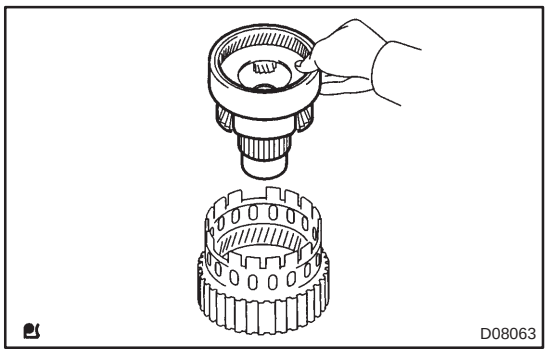
(a) Coat 2 new O–rings with ATF.
(b) Install the 2 O–ring to the 1st & reverse brake piston.

(c) Coat a 1st & reverse brake piston with ATF, install it to the transaxle case.



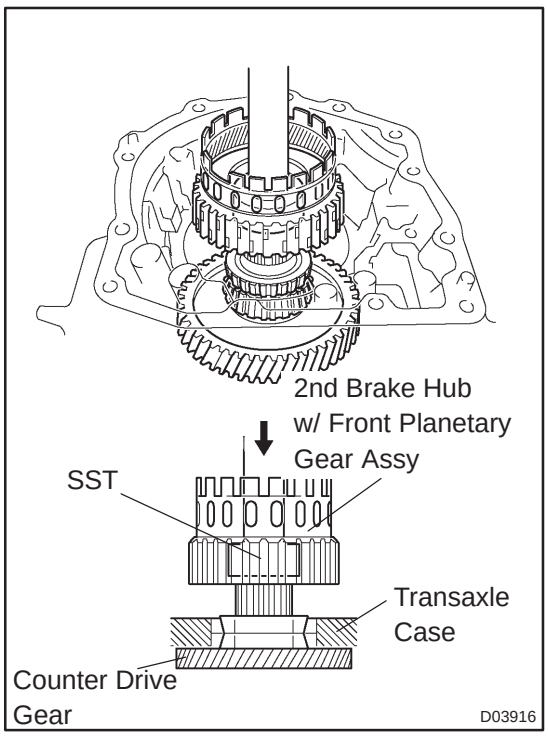
(d) Install the 1st & reverse brake return spring to the 1st & reverse brake piston.

(e) Using SST, a press and snap ring expander, install the piston return spring and snap ring to the transaxle case.
SST 09387–00070



NOTICE:

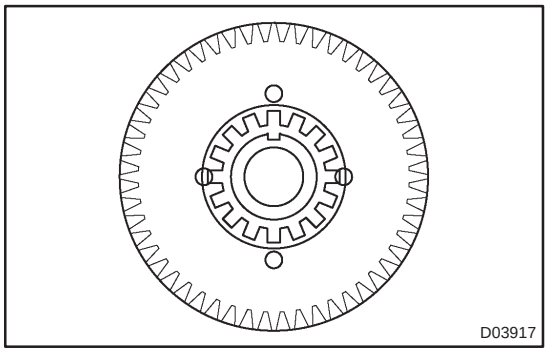
- **Stop the press when the spring sheet is lowered to the place 1 – 2 mm (0.039 – 0.078 in.) from the snap ring groove, preventing the spring sheet from being deform.**
- **Do not expand the snap ring excessively.**



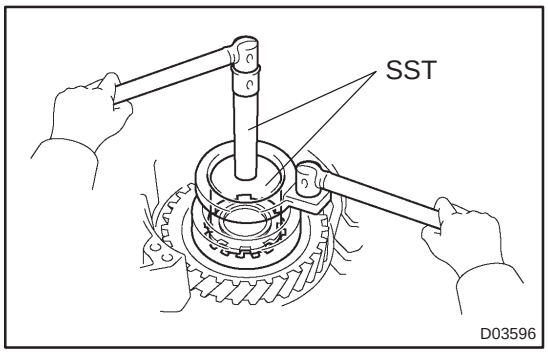
81. INSTALL FRONT PLANETARY RING GEAR

(a) Using a screwdriver, install the front planetary ring gear and brake hub snap ring to the brake hub.

82. INSTALL FRONT PLANETARY GEAR ASSY

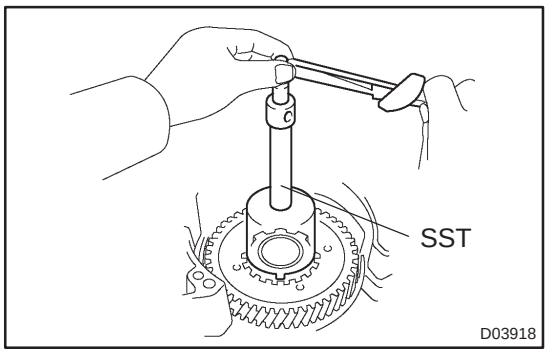


(a) Install the front planetary gear assy to the brake hub.

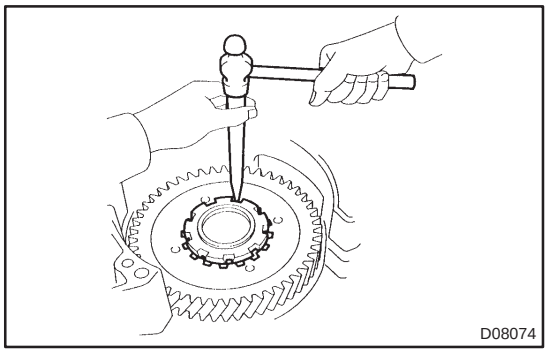


(b) Using SST and a press, press–fit the front planetary gear assy.

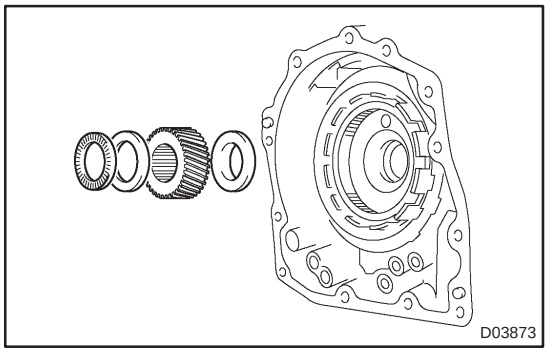
NOTICE:



Do not apply excessive pressure to it.

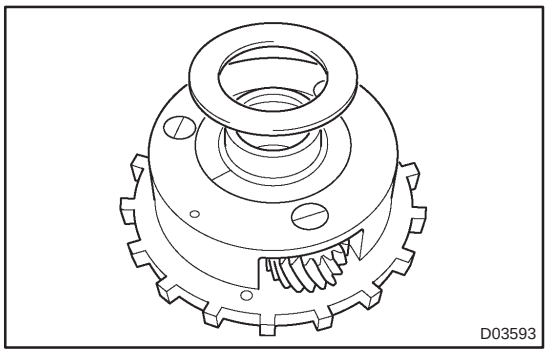


(c) Install the front planetary gear washer, as shown in the illustration.



(d) Using SST, install the nut.
SST 09387–00030, 09387–00080
Torque: 268 N·m (2,728 kgf·cm, 197 ft·lbf)

(e) Using SST and a torque wrench, measure the turning torque of the bearing while rotating SST at 60 rpm. When the measured value is not within the specified value, gradually tighten the nut until it reaches the specified value.
SST 09950–60010 (09951–00400), 09950–70010 (09951–07100), 09387–00030, 09387–00080
Turning torque at 60 rpm:
New Bearing
0.5 – 1.0 N·m (5.1 – 10.0 kgf·cm, 4.4 – 8.7 in.·lbf)
Used Bearing
0.3 – 0.5 N·m (3.1 – 5.1 kgf·cm, 2.7 – 4.4 in.·lbf)

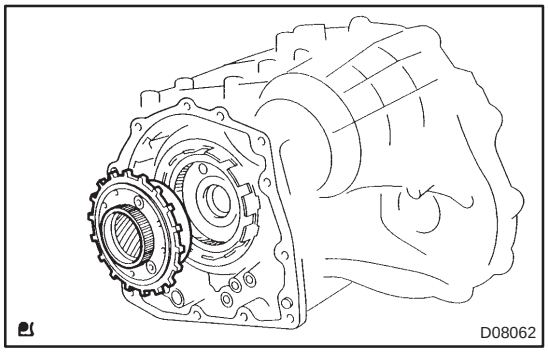


(f) Using a chesel and hammer, stake the front planetary gear washer.

83. INSTALL INPUT SUN GEAR

(a) Install the 2 thrust bearings, the bearing race and the front planetary sun gear to the front planetary gear assy.
Bearing and race diameter: mm (in.)

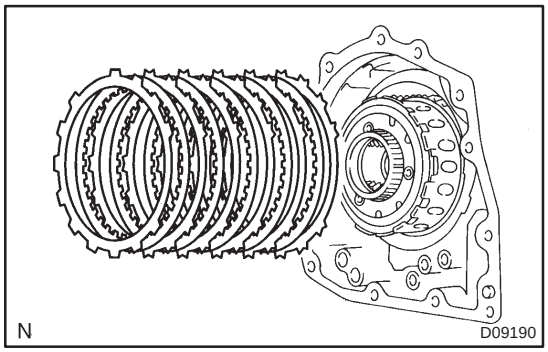
	inside	outside
Bearing	34.6 (1.362)	52.2 (2.055)
Race	40.3 (1.587)	58.0 (2.283)
Bearing	38.6 (1.520)	60.0 (2.362)



84. INSTALL REAR PLANETARY GEAR ASSY

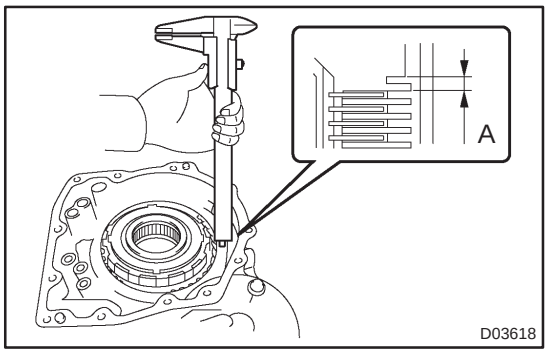
(a) Coat a bearing race with ATF, install it to the rear planetary gear assy.
Bearing race diameter: mm (in.)

	inside	outside
Race	38.6 (1.520)	58.0 (2.283)



(b) Install the planetary carrier thrust washer No. 2 to the planetary gear assy.

(c) Install the rear planetary gear to the rear planetary ring gear.



(d) Using a screwdriver, install the snap ring to the brake hub.

85. INSTALL 1ST & REVERSE BRAKE CLUTCH DISC

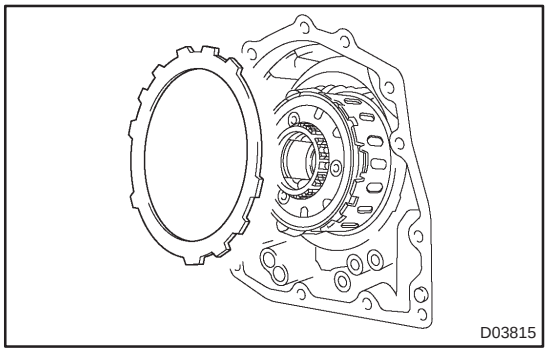
(a) Install the 5 plates and 5 discs.

86. INSPECT PACK CLEARANCE OF FIRST & REVERSE BRAKE

(a) Using vernier calipers,measure the distance between the disc surface and the contact surface of the 2nd brake cylinder and transaxle case.(Dimension A)

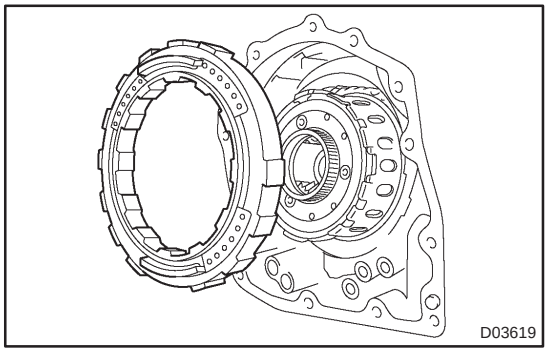
(b) Select an appropriate flange so that the piston stroke will meet the specified value.

Pack clearance:



1.02 – 1.21 mm (0.0402 – 0.0476 in.)

HINT:



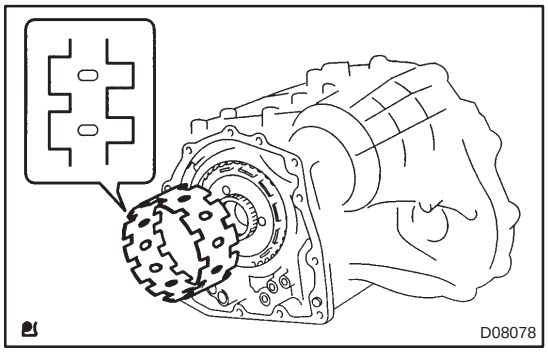
Piston stroke = Dimension A –Flange thickness

Flange thickness: mm (in.)

Mark	Thickness	Mark	Thickness
1	1.8 (0.071)	5	2.2 (0.087)
2	1.9 (0.075)	6	2.3 (0.091)
3	2.0 (0.079)	7	2.4 (0.094)
4	2.1 (0.083)	8	2.5 (0.098)

(c) Install the flange.

87. INSTALL 2ND BRAKE CYLINDER

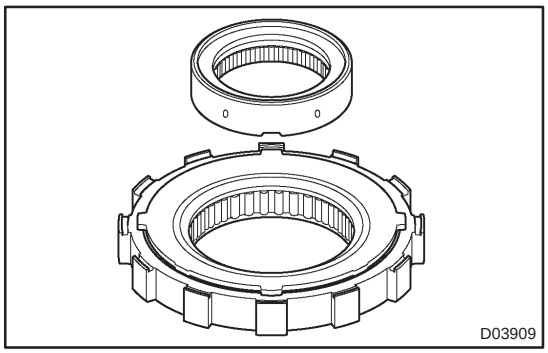


(a) Install the 2nd brake piston assy to the transaxle case.

(b) Install the snap ring and measure the inside diameter.

Inside diameter: More than 167 mm (6.57 in.)

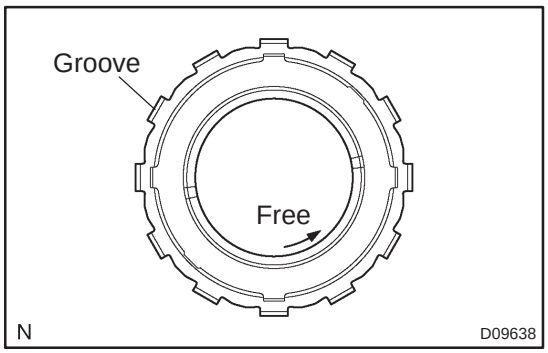
NOTICE:



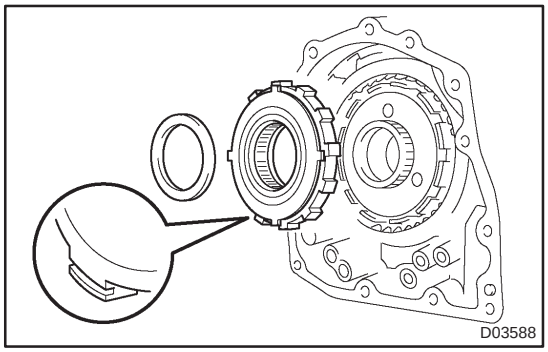
- **Because the taper snap ring has the positioning direction, check it when installing.**
- **When the diameter does not satisfy the specified value, replace the snap ring with new one.**

88. INSTALL 1WAY CLUTCH SLEEVE OUTER

(a) Install the 1–way clutch outer sleeve to the 2nd brake cylinder assy.



NOTICE:
Check the positioning direction of the outer sleeve.

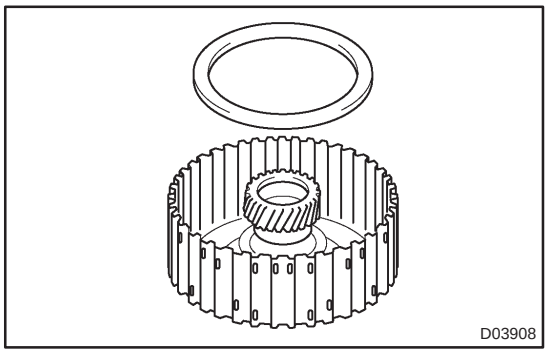


89. INSTALL 1 WAY CLUTCH ASSY

(a) Install the inner race to the 1–way clutch.

NOTICE:
Check the direction of the inner race.

(b) Check the rotating direction of 1–way clutch for the lock or free operation, as shown in illustration.



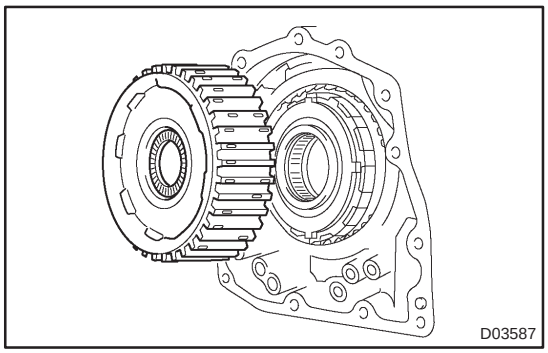
(c) Install the 1–way clutch and bearing to the 1–way clutch outer race sleeve.

Bearing diameter: mm (in.)

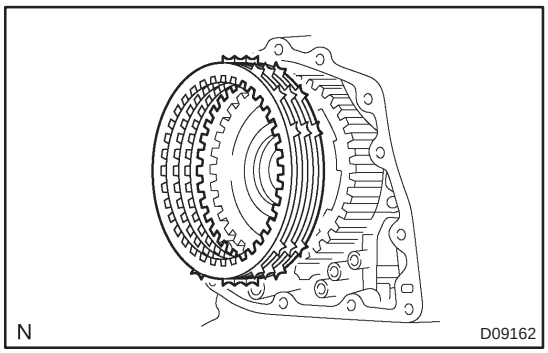
	Inside	Outside
Bearing	53.6 (2.110)	69.6 (2.740)

NOTICE:
Install the thrust bearing properly so that no–colored race will be visible.

90. INSTALL REAR PLANETARY SUN GEAR ASSY



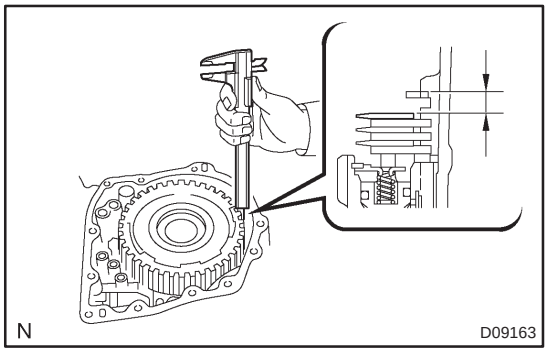
(a) Coat the planetary carrier thrust washer No. 1 with petroleum jelly, install it onto the rear planetary sun gear.



(b) Coat the bearing with petroleum jelly, install it onto the rear planetary sun gear.

Bearing diameter: mm (in.)

	Inside	Outside
Bearing	33.8 (1.331)	48.2 (1.898)



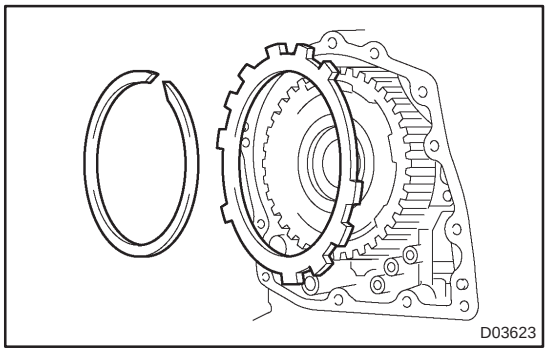
(c) Install the rear planetary sun gear assy to the rear planetary gear.

91. INSTALL 2ND BRAKE CLUTCH DISC

(a) Install the 3 discs and 3 plates to the transaxle case.
(b) Temporarily install the snap ring.

92. INSPECT PACK CLEARANCE OF SECOND BRAKE

(a) Using vernier calipers, measure the distance between the disc surface and snap ring surface.
(b) Select an appropriate flange so that the piston stroke will meet the specified value.

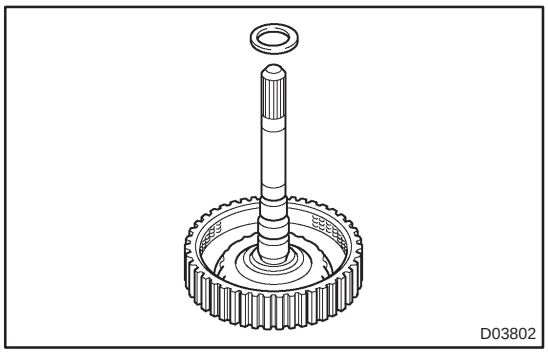


Pack clearance: 0.62 – 0.91 mm (0.0244 – 0.0358 in.)

HINT:

Piston stroke = Clearance – Flange thickness – Snap ring thickness 1.6 mm (0.063 in.)

Flange thickness: mm (in.)

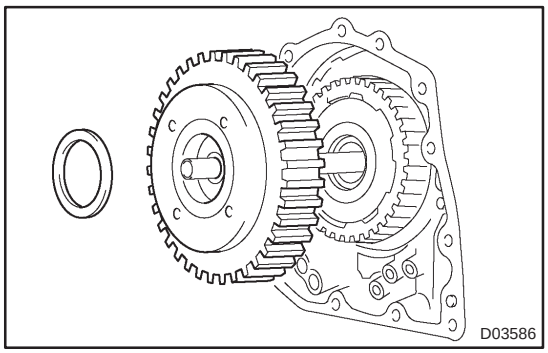


Mark	Thickness	Mark	Thickness
1	3.0 (0.118)	5	3.4 (0.134)
2	3.1 (0.122)	6	3.5 (0.138)
3	3.2 (0.126)	7	3.6 (0.142)
4	3.3 (0.130)	8	–

(c) Temporarily remove the snap ring, attach the selected flange and restore the snap ring.

NOTICE:

Secure the snap ring so that its gap is visible through the groove of the transaxle case.



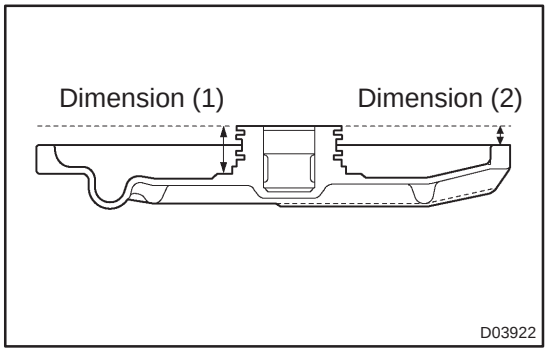
93. INSTALL DIRECT CLUTCH ASSY

(a) Install the bearing race to the direct clutch.

Bearing race diameter : mm (in.)

	Inside	Outside
Bearing race	30.3 (1.193)	46.0 (1.811)

(b) Install direct clutch assy and thrust needle roller bearing to the rear planetary sun gear assy.



NOTICE:

The disc in the direct clutch should completely mate with the hub attached outside the rear planetary sun gear. Otherwise, the rear cover can not be installed.

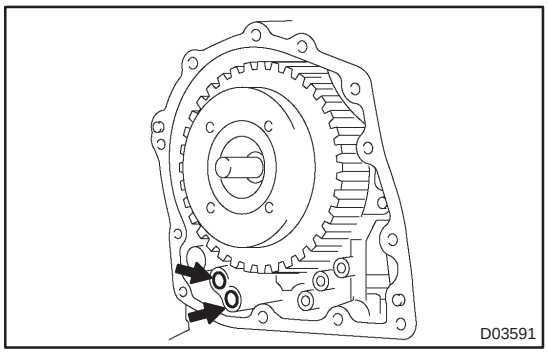
(c) Clean the connecter part of the transaxle case and rear cover.

(d) As shown in the illustration, place a straight edge on the direct clutch drum and measure the distance between the the transaxle case and the straight edge using vernier calipers. (Dimension B)

(e) Measure the 2 places of the rear cover as shown in the illustration and calculate a dimension C using the following formula.

HINT:

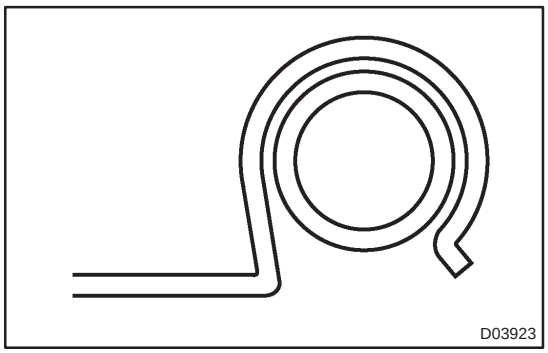
Dimension C = Dimension (1) – Dimension (2)



(f) Calculate the end play value using the following formula. Select a thrust bearing which satisfies the end play value and install it.

End play: 0.198 – 0.936 mm (0.00800 – 0.03685 in.)

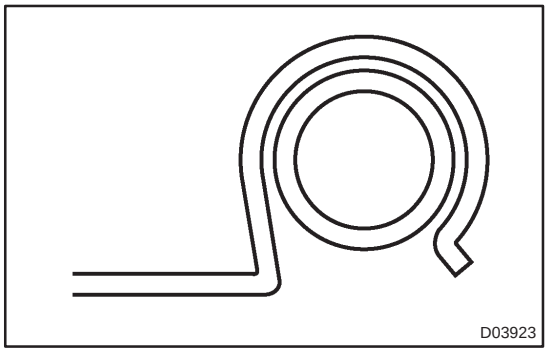
NOTICE:
Make sure that the colored race side is facing the direct clutch assy.
HINT:
End play = Dimension C – Dimension B



Bearing thickness and diameter : mm (in.)

Thickness	Inside	Outside
3.55 (0.1397)	53.6 (2.110)	69.6 (2.740)
3.85 (0.1515)	53.6 (2.110)	70.18 (2.763)

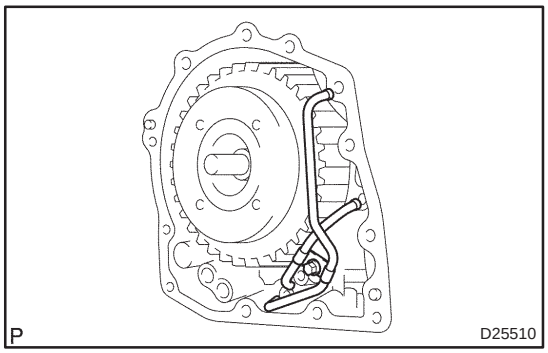
94. INSTALL GOVERNOR APPLY GASKET NO.1



(a) Install 2 new apply gaskets to the transaxle case.

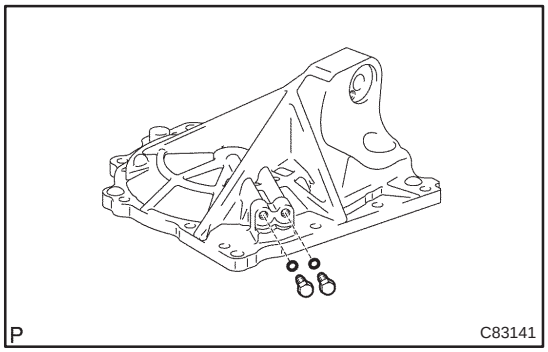
95. INSTALL FRONT CLUTCH APPLY TUBE

(a) Install the clamp to the front clutch apply tube.



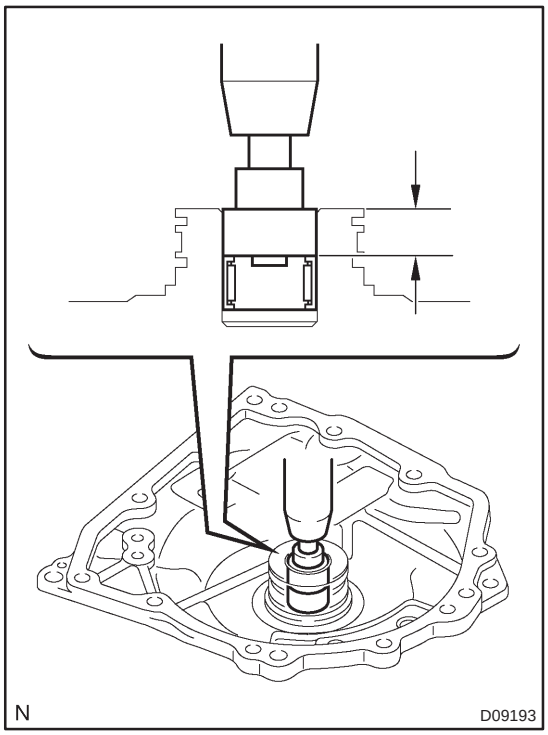
NOTICE:
Make sure to install the clamp to the apply pipe before installing the apply pipe to the transaxle case. This prevents the apply pipe from being deformed or damaged.

96. INSTALL BRAKE APPLY TUBE



(a) Install the clamp to the brake apply tube.

NOTICE:
Make sure to install the clamp to the apply pipe before installing the apply pipe to the transaxle case. This prevents the apply pipe from being deformed or damaged.

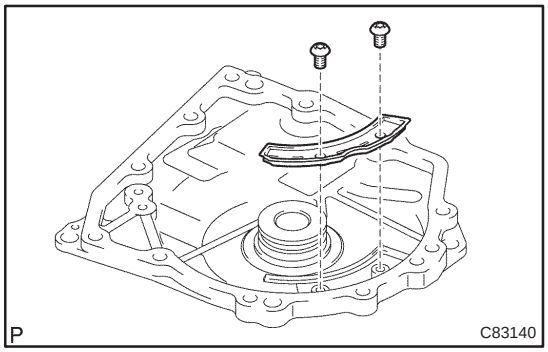


(b) Install the 2 apply tubes and a bolt to the transaxle case.
Torque: 5.4 N·m (55 kgf·cm, 48 in.·lbf)

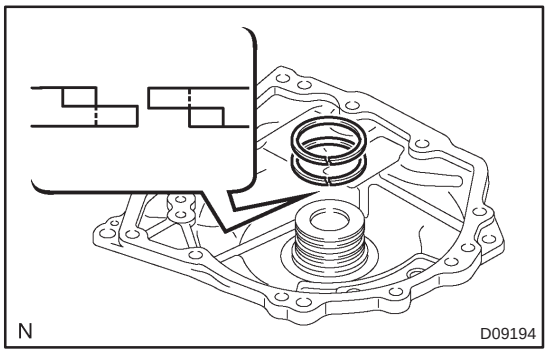
NOTICE:
Each pipe should be securely inserted until it reaches the stopper.

97. INSTALL TRANSAXLE CASE NO.1 PLUG

(a) Install 2 new O–rings to the 2 transaxle case No. 1 plugs.
(b) Install 2 transaxle case No. 1 plugs to the transaxle rear cover.
Torque: 7.4 N·m (75 kgf·cm, 65 in.·lbf)

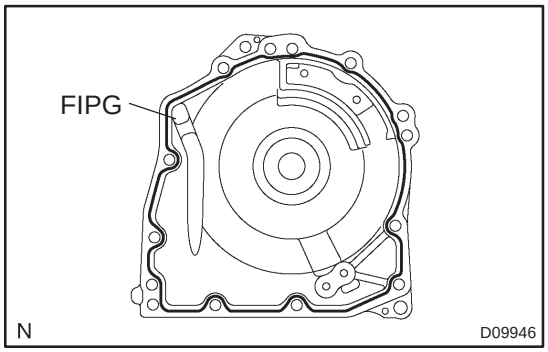


98. INSTALL TRANSAXLE REAR COVER SUB–ASSY



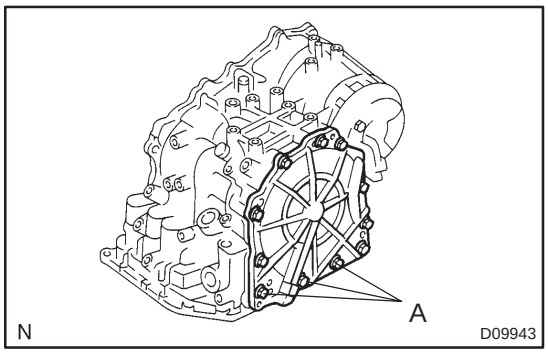
(a) Using SST and a press, install the bearing.
SST 09950–60010 (09951–00230, 09951–00350)
Press fit depth: 12.05 – 12.75 mm (0.4744 – 0.5020 in.)

NOTICE:
- **Face the inscribed mark side of the bearing race up.**
- **Repeat the press fit until the specified value is obtained.**



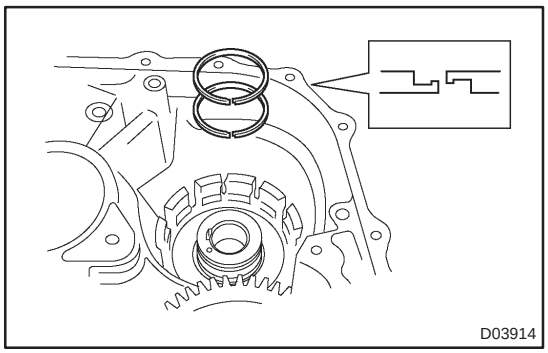
(b) Apply liquid sealer to the 2 screws.
Sealant:
Part No. 08833–00080, THREE BOND 2430 or equivalent.

(c) Using a torx socket wrench T30, install the transaxle rear cover plate with the 2 screws.
Torque: 7.5 N·m (76 kgf·cm, 66 in.·lbf)



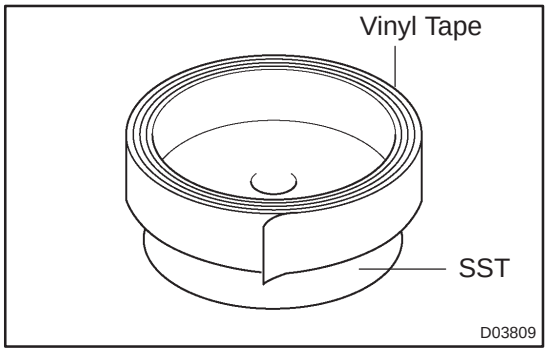
(d) Coat 2 new oil seal rings with ATF, install them to the transaxle rear cover.

(e) Remove any packing material and be careful not to get oil on the contacting surfaces of the transaxle rear cover or the transaxle case.



(f) Apply FIPG to the cover.
FIPG:
Part No. 08826–00090, THREE BOND 1281 or equivalent.

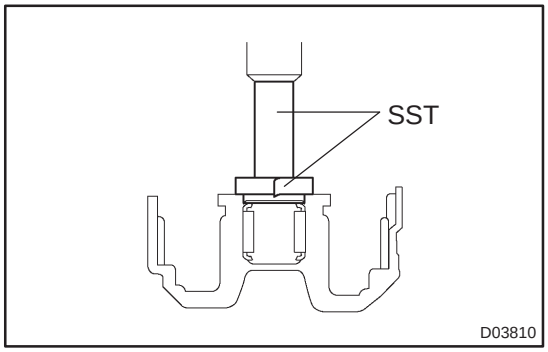
(g) Coat a needle roller bearing with ATF.



(h) Apply liquid sealer to the ”A” bolt threads.
Sealant:
Part No. 08833–00080, THREE BOND 1344, LOCTITE 242 or equivalent.

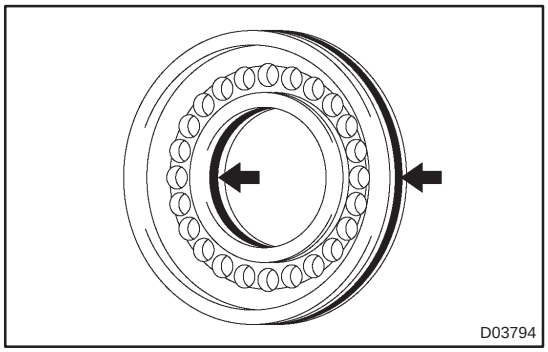
(i) Install the 11 bolts.
Torque:
Bolt A: 18.6 N·m (190 kgf·cm, 14 ft·lbf)
Other bolt: 24.5 N·m (250 kgf·cm, 18 ft·lbf)

99. INSTALL UNDERDRIVE CLUTCH DRUM OIL SEAL RING



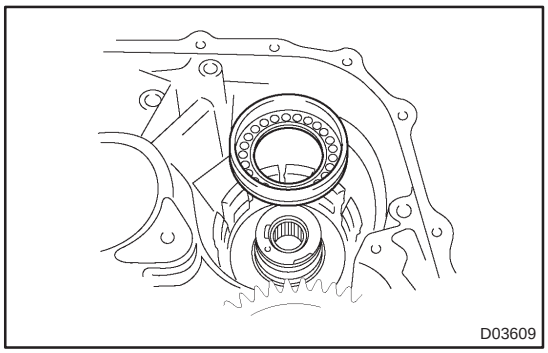
(a) Install the new 2 oil seal rings to the transaxle case.

100. INSTALL UNDERDRIVE BRAKE PISTON

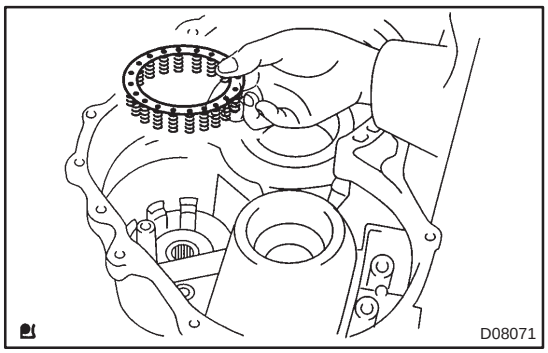


(a) Wind a vinyl tape around SST at the place 4.0 mm (0.157 in.) above from the bottom end until the thickness of the wound tape is about 5.0 mm (0.197 in.).
SST 09550–60010 (09951–00320)

NOTICE:
Clean SST to remove deposited oil, before winding a vinyl tape.

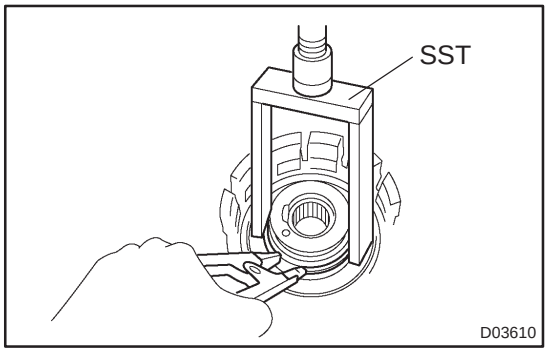


(b) Using SST and a press, install the needle–roller bearing to the transaxle case.
SST 09550–60010 (09951–00320), 09950–70010 (09951–07100), 09387–00020

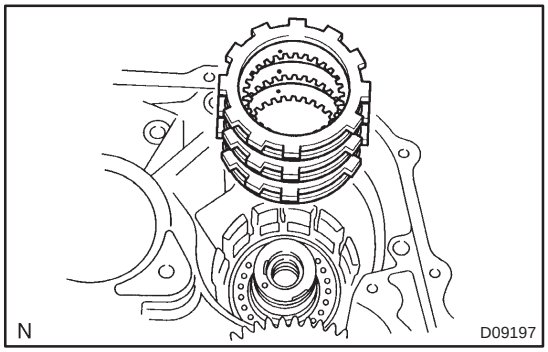


NOTICE:
When the wound vinyl tape contacts the transaxle case, stop press–fitting.

(c) Coat 2 new O–rings with ATF, install them to the U/D brake piston.

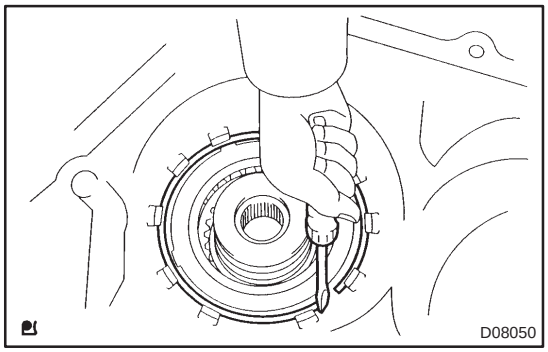


(d) Install the U/D brake piston to the transaxle case.



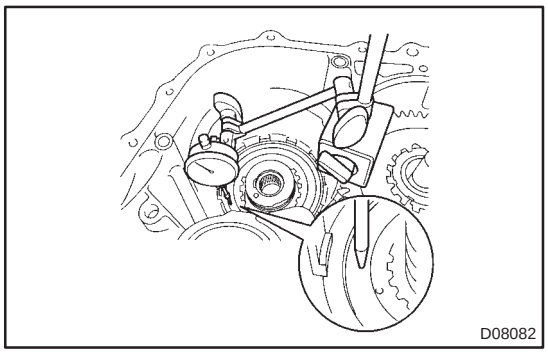
101. INSTALL UNDERDRIVE BRAKE RETURN SPRING SUB–ASSY

(a) Install the U/D brake return spring to the U/D brake piston.



(b) Using SST, a snap ring expander and a press, install the snap ring to the transaxle case.
SST 09387–00020

NOTICE:
Do not apply excessive pressure to it.



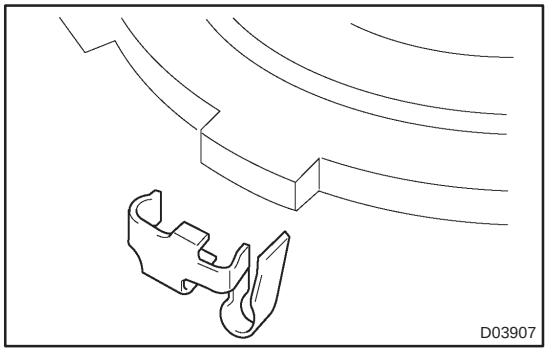
102. INSTALL UNDERDRIVE CLUTCH DISC NO.2

(a) Install the 3 discs and 3 plates to the transaxle case.

(b) Using a screwdriver, install the snap ring.

(c) Using a dial indicator, measure the U/D brake piston stroke while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).

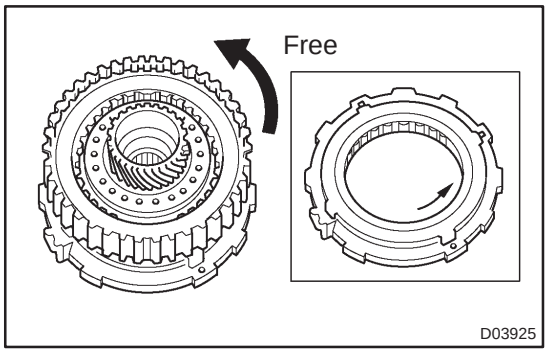
Piston stroke: 1.81 – 2.20 mm (0.0713 – 0.0866 in.)



HINT:

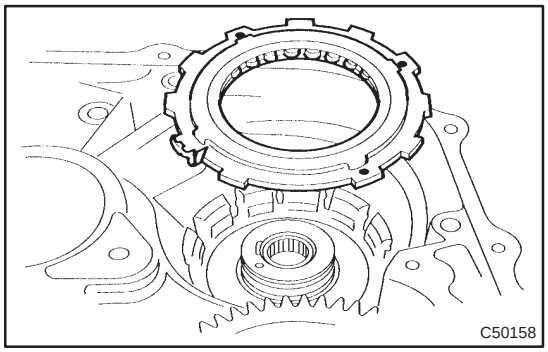
Select an appropriate flange from the table below so that it will meet the specified value.

Flange thickness: mm (in.)



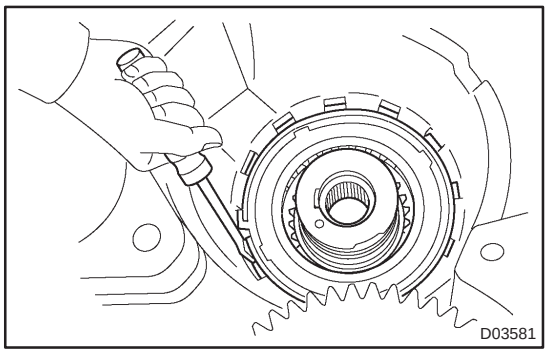
Mark	Thickness	Mark	Thickness
1	3.0 (0.118)	3	3.4 (0.134)
2	3.2 (0.126)	–	–

(d) Temporally remove the snap ring and attach the flange. Restore the snap ring.

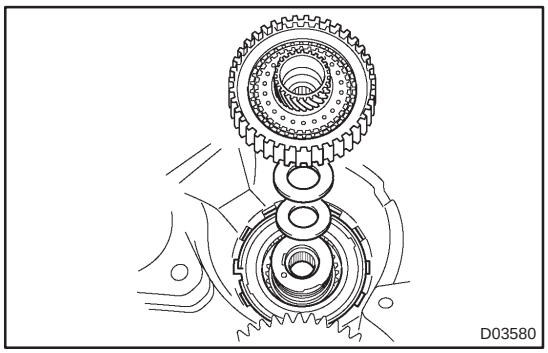


103. INSTALL UNDERDRIVE 1 WAY CLUTCH ASSY

(a) Install the outer race retainer to the 1–way clutch.



(b) Install the U/D clutch assy to the 1–way clutch. Rotate the U/D clutch assy to check the rotating direction for the lock or free operation.

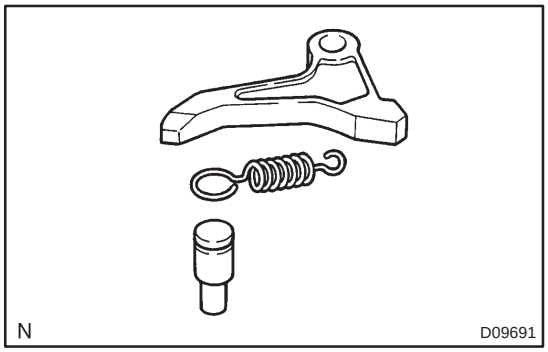


(c) Install the 1–way clutch to the transaxle case.

NOTICE:

Make sure that the mark on the 1–way clutch outer race is visible.

(d) Using screwdriver, install the snap ring to the transaxle case.



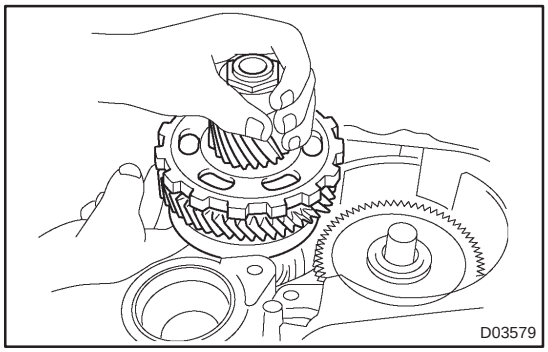
104. INSTALL UNDERDRIVE CLUTCH ASSY

(a) Coat the bearing and bearing race with petroleum jelly, install them onto the U/D clutch.

Race diameter: mm (in.)

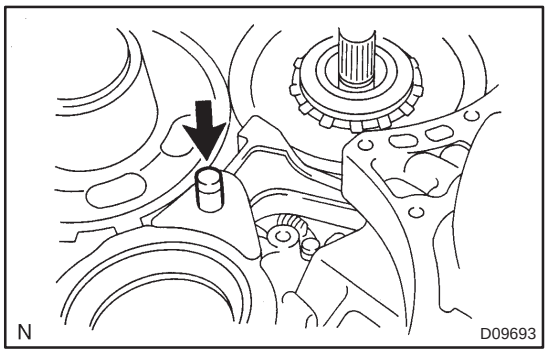
	Inside	Outside
Bearing	37.73 (1.4854)	58.0 (2.283)
Race	29.9 (1.177)	55.5 (2.185)

(b) Install the U/D clutch assy to the transaxle case.

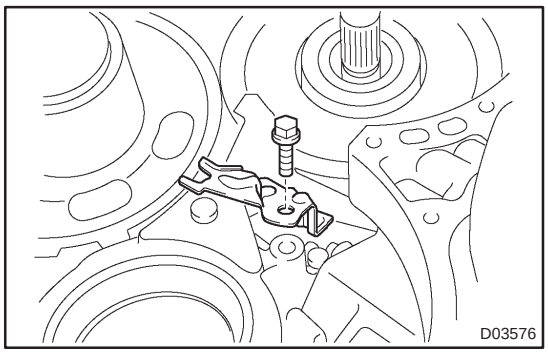


105. INSTALL UNDERDRIVE PLANETARY GEAR ASSY

(a) Install the parking lock pawl pin and torsion spring to the parking lock pawl.

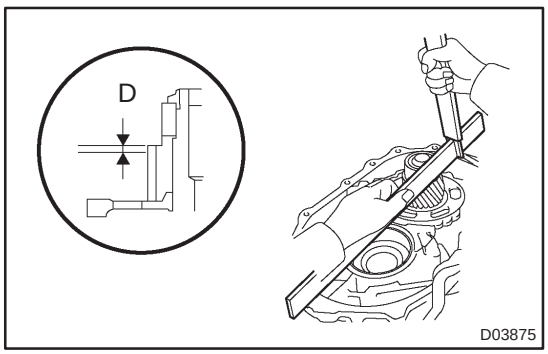


(b) Temporarily install the parking lock pawl, shaft and spring to the transaxle case as shown in the illustration.



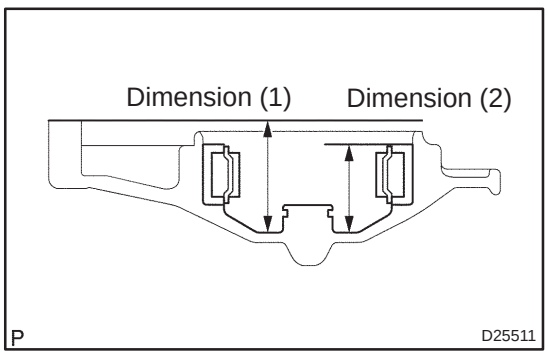
(c) Install the U/D planetary gear assy to the transaxle case.

NOTICE:



Engage all the discs of U/D clutch and hub splines of the U/D planetary gear assy firmly and assemble them securely.

(d) Install the parking lock pawl shaft.

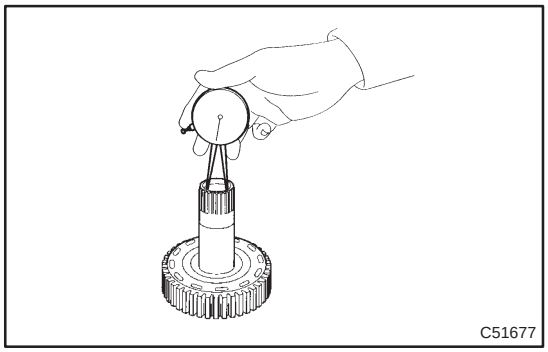


(e) Install the pawl shaft clamp with the bolt.
Torque: 9.8 N·m (100 kgf·cm, 87 in.·lbf)

(f) Using a straight edge and vernier calipers as shown in the illustration, measure the gap between the top of the differential drive pinion in the U/D planetary gear and contact surface of the transaxle case and housing. (Dimension D)

NOTICE:

Note down the dimension D as it is necessary for the following process.



(g) As shown in the illustration, measure the 2 places of the transaxle housing, Calculate the dimension E using the formula.

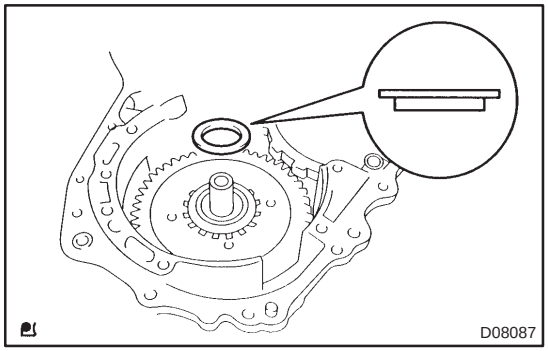
NOTICE:

NOte down the dimension E as it is necessary for the following process.

HINT:

Dimension E = Dimension (1) – Dimension (2)

C51677

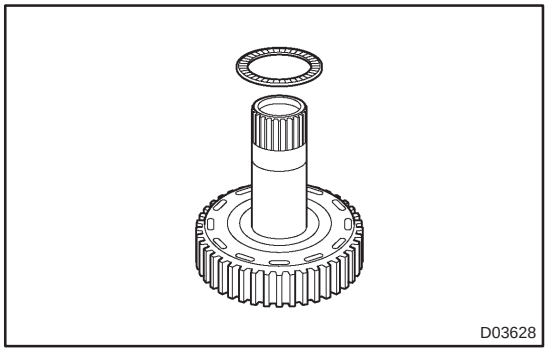


106. INSPECT MULTIPLE DISC CLUTCH CLUTCH HUB

(a) Using a dial indicator, measure the inside diameter of the forward clutch hub bushing
Standard inside diameter:
23.025 – 23.045 mm (0.9065 – 0.9073 in.)
Maximum inside diameter: 23.09 mm (0.9091 in.)

NOTICE:

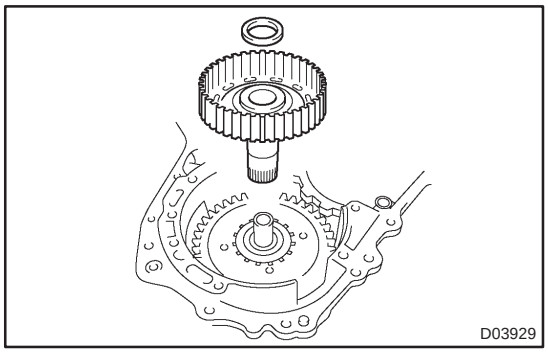
- **When the diameter is over the maximum, replace the multiple disc clutch hub with new one.**
- **Check the contact surface of the bush in the direct clutch shaft. If any scratch or discolor is identified, replace the direct clutch sub–assy with new one.**



If the inside diameter is greater than the maximum, replace the forward clutch hub.

D08087

107. INSTALL MULTIPLE DISC CLUTCH CLUTCH HUB



(a) Install the bearing race to the transaxle while checking its direction.
Bearing race diameter: mm (in.)

	Inside	Outside
Bearing race	34.5 (1.358)	48.5 (1.909)

D03628

(b) Coat the thrust needle roller bearing and race with petroleum jelly, install them onto the multiple disc clutch hub.
Thrust bearing and race diameter: mm (in.)

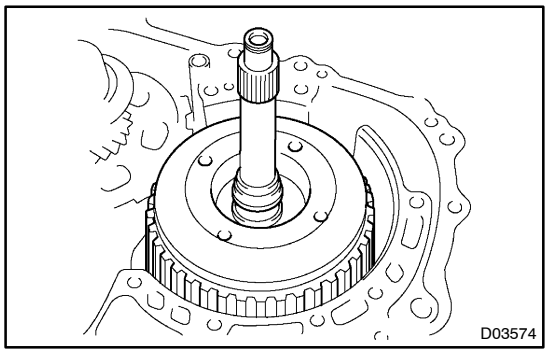
	Inside	Outside
Bearing	36.3 (1.429)	52.2 (2.055)

D03929

(c) Install the input shaft thrust bearing to the multiple clutch hub.
Bearing diameter: mm (in.)

	Inside	Outside
Bearing	23.5 (0.925)	44.0 (1.732)

(d) Install the forward clutch hub to the transaxle case.

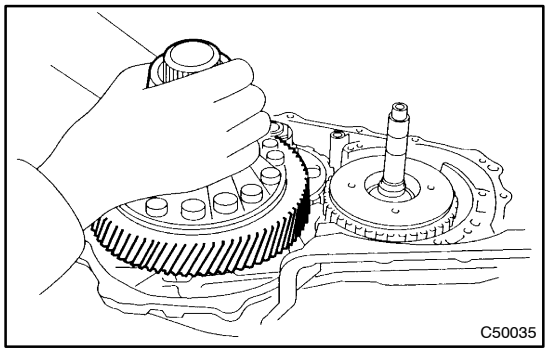


108. INSTALL FORWARD CLUTCH ASSY

(a) Install the input shaft thrust bearing to the forward clutch.
Bearing diameter: mm (in.)

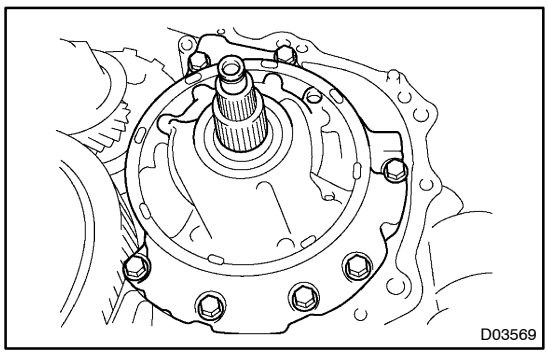
	Inside	Outside
Bearing	33.85 (1.3327)	52.2 (2.055)

NOTICE:
Install the thrust bearing properly so that the race ”B” will be visible.



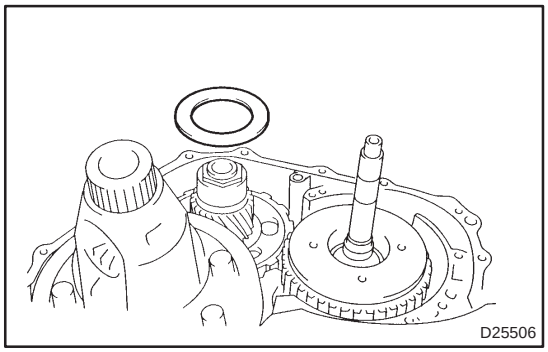
(b) Install the forward clutch to the multiple clutch hub.

NOTICE:
Align the splines of all discs in the forward clutch with those of multiple clutch hub to assemble them securely.



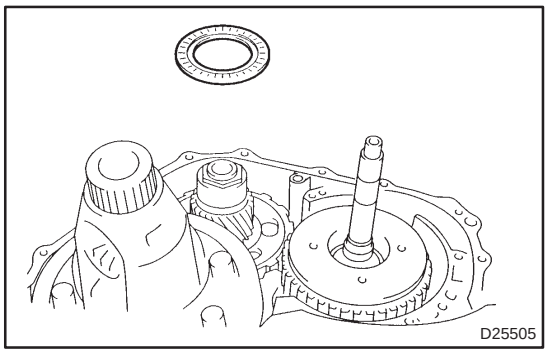
109. INSTALL OVERDRIVE BRAKE GASKET
[35179 / 98–3]

(a) Install 2 new O/D brake gaskets to the transaxle case.



110. INSTALL FRONNT DIFFERENTIAL ASSY

(a) Install the differential assy to the transaxle case.



111. INSTALL OIL PUMP ASSEMBLY

(a) Install the oil pump assy and 7 bolts to the transaxle case.
Torque: 22 N·m (226 kgf·cm, 16 ft·lbf)

112. INSTALL THRUST BEARING UNDERDRIVE RACE NO.2

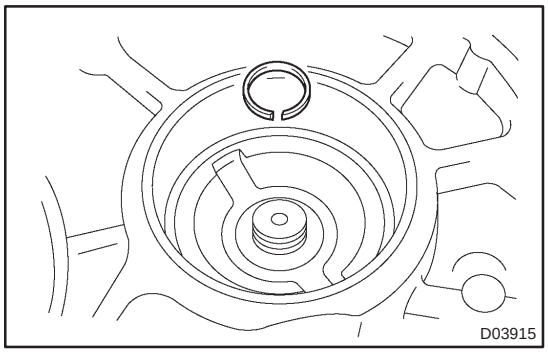
(a) Install the thrust bearing race to the U/D planetary gear assy.

113. INSTALL THRUST NEEDLE ROLLER BEARING

(a) Calculate the end play value using the following formula and values of Dimension D and E that ware measured when installing cylindrical roller bearing and U/D planetary gear, Select an appropriate U/D planetary gear thrust bearing race No. 2 which satisfies the specified end play value, and install it.

End play: 0.20 – 0.69 mm (0.0079 – 0.0272 in.)

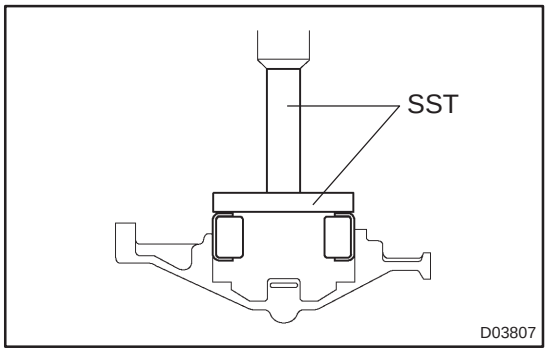
HINT:



End play = Dimension E – Dimension D – thrust bearing thickness 3.28 mm (0.1291 in.) – U/D thrust bearing race No. 2 thickness.

Race thickness: mm (in.)

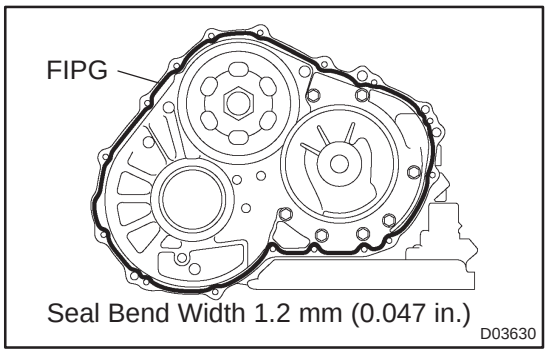
E – D	Thickness
Less than 7.34 (0.2890)	3.5 (0.138)
7.34 (0.2890)	3.8 (0.150)



Bearing and bearing race diameter: mm (in.)

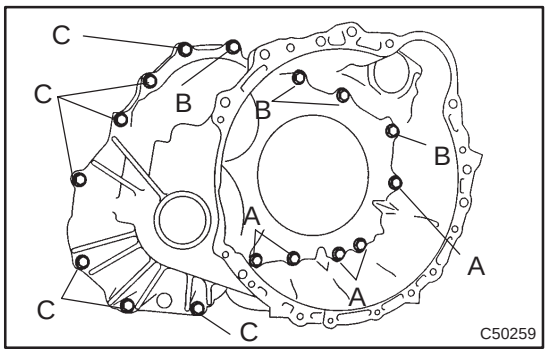
	Inside	Outside
Bearing	53.0 (2.087)	78.2 (3.079)
Bearing race	52.1 (2.051)	75.5 (2.972)

114. INSTALL UNDERDRIVE OUTPUT SHAFT OIL SEAL RING



(a) Install new oil seal ring to the transaxle housing.

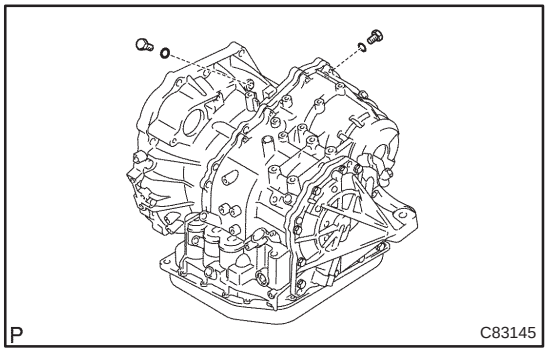
115. INSTALL UNDERDRIVE CYLINDRICAL ROLLER BEARING



(a) Using SST and a press, install the U/D cylindrical roller bearing.
SST 09950–60020 (09951–00810), 09950–70010 (09951–07100)

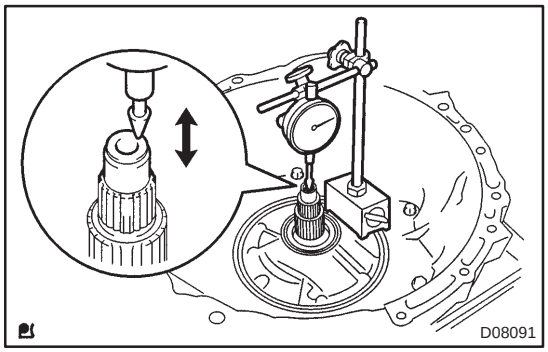
NOTICE:
Do not apply excessive pressure to it.

116. INSTALL TRANSAXLE HOUSING



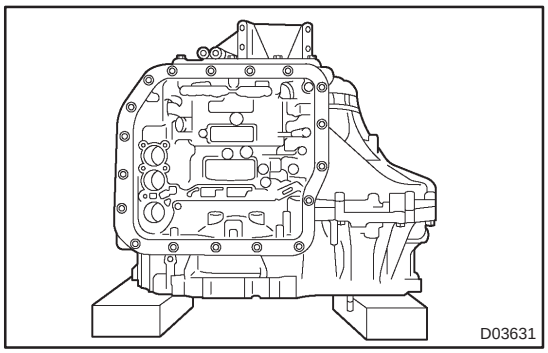
(a) Remove any parking material and be careful not to get oil on the contacting surfaces of the transaxle case or transaxle housing.
(b) Apply FIPG to the transaxle case.
FIPG:
Part No. 08826–00090, THREE BOND 1281 or equivalent

(c) Install the transaxle housing and 16 bolts to the transaxle case.
Torque:
Bolt A: 22 N·m (226 kgf·cm, 16 ft·lbf)
Bolt B and C: 29 N·m (300 kgf·cm, 22 ft·lbf)



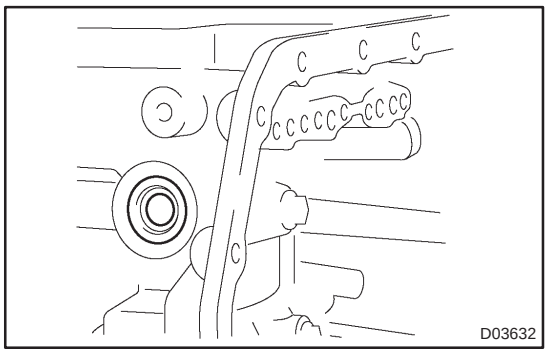
HINT:
Apply seal packing or equivalent to the bolt A.
Seal packing:
THREE BOND 2403 or equivalent
Bolt length:
Bolt A: 50 mm (1.969 in.)
Bolt B: 50 mm (1.969 in.)
Bolt C: 42 mm (1.654 in.)

NOTICE:
Because the bolt A is a seal bolt, apply the seal packing to new bolts and tighten them within 10 minutes after application.



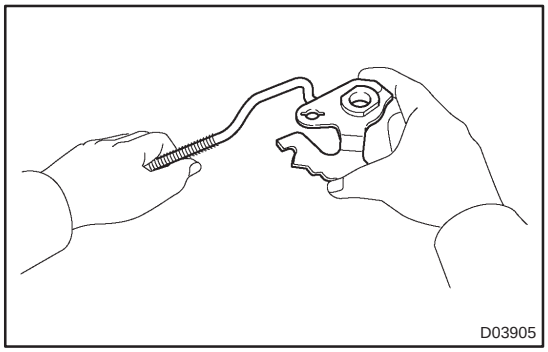
117. INSTALL TRANSAXLE CASE NO.1 PLUG

(a) Install 2 new O–rings to the 2 transaxle case No. 1 plugs.
(b) Install the 2 transaxle case No. 1 plugs to the transaxle housing.
Torque: 7.4 N·m (75 kgf·cm, 65 in.·lbf)

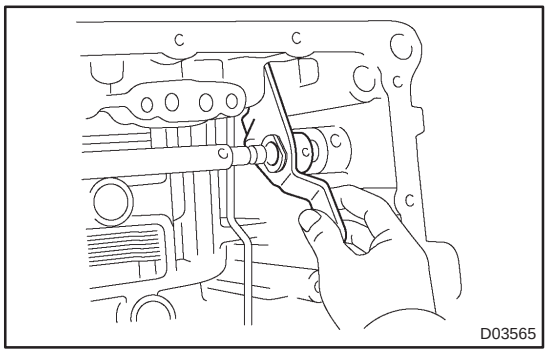


118. INSPECT INPUT SHAFT ENDPLAY

(a) Using a dial indicator, measure the input shaft end play.
End play: 0.26 – 1.25 mm (0.0103 – 0.0492 in.)

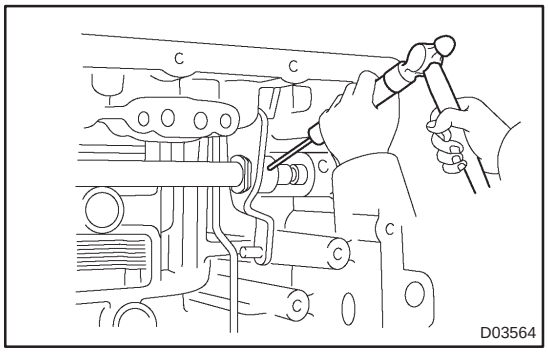


119. FIX AUTOMATIC TRANSAXLE ASSY



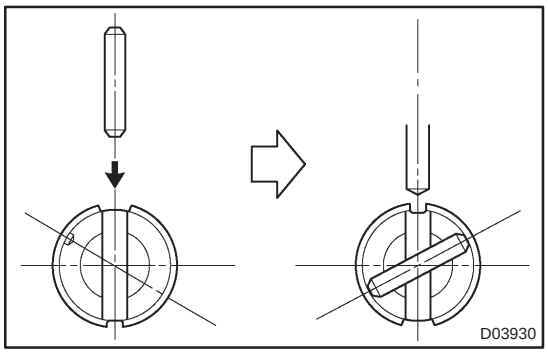
120. INSTALL MANUAL VALVE LEVER SHAFT OIL SEAL

(a) Coat a new oil seal with ATF, install it to the transaxle case.
(b) Install the oil seal to the transaxle case.

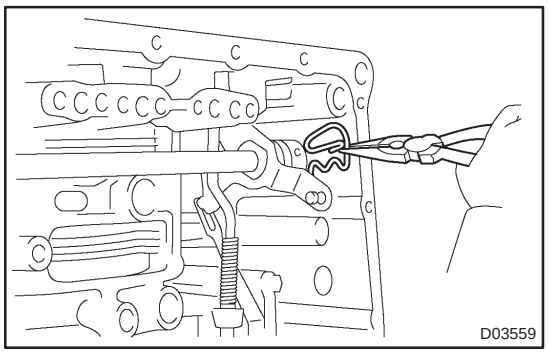


121. INSTALL PARKING LOCK ROD SUB–ASSY

(a) Install the parking lock rod to the manual valve lever.

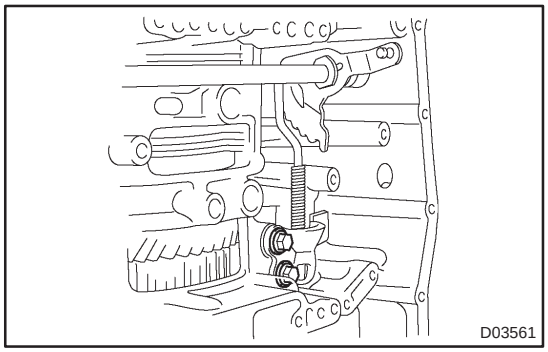


122. INSTALL MANUAL VALVE LEVER SUB–ASSY

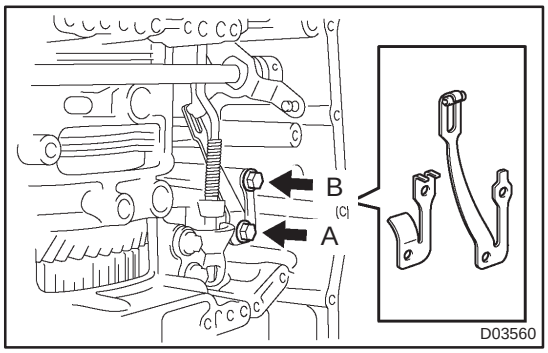


(a) Install a new spacer and manual valve lever shaft to the transaxle case.

(b) Using a pin punch and a hammer, drive in a new pin.



(c) Turn the spacer and the lever shaft to align the small hole for locating the staking position in the spacer with the staking position mark on the lever shaft.
(d) Using a pin punch, stake the spacer through the small hole.
(e) Check that the spacer does not turn.

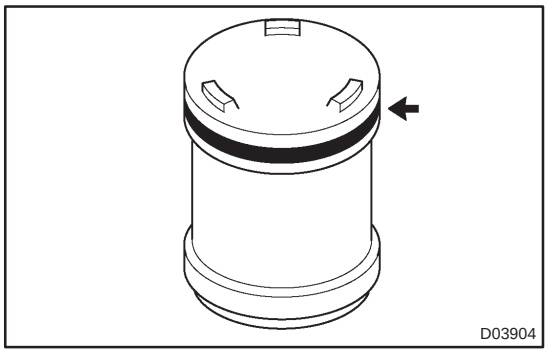


123. INSTALL MANUAL VALVE LEVER SHAFT RETAINER SPRING

(a) Using needle–nose pliers, install the retainer spring.

124. INSTALL PARKING LOCK PAWL BRACKET

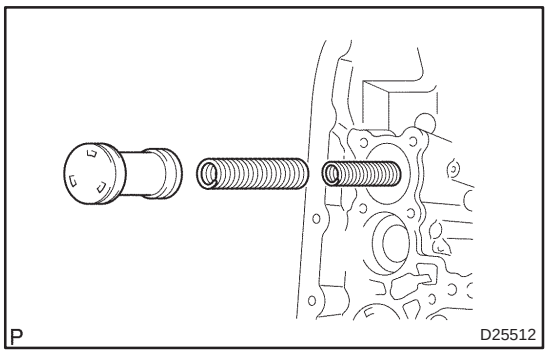
(a) Install the parking lock pawl bracket with the 2 bolts.
Torque: 20 N·m (205 kgf·cm, 15 ft·lbf)
Bolt length: 25 mm (0.984 in.)



125. INSTALL MANUAL DETENT SPRING SUB–ASSY

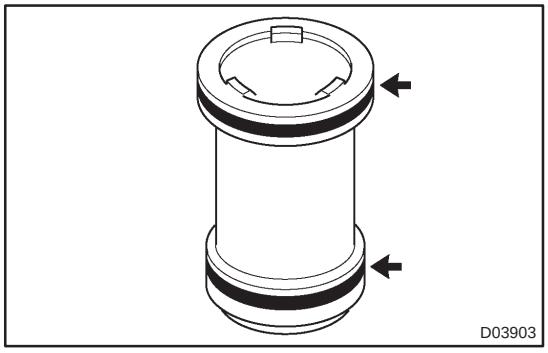
(a) Install the manual detent spring with the 2 bolts.

NOTICE:
Make sure to install the manual detent spring and cover in this order.



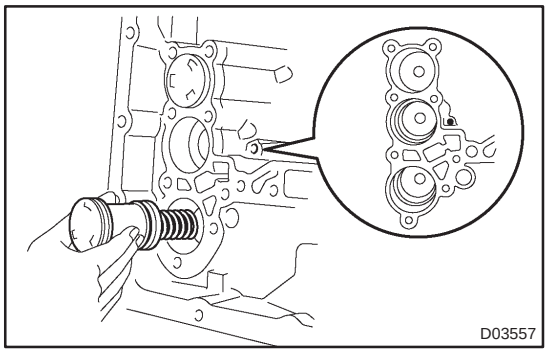
Torque:
Bolt A: 20 N·m (205 kgf·cm, 15 ft·lbf)
Bolt B: 12 N·m (120 kgf·cm, 9 ft·lbf)

Bolt length:
Bolt A: 27 mm (1.063 in.)
Bolt B: 16 mm (0.630 in.)



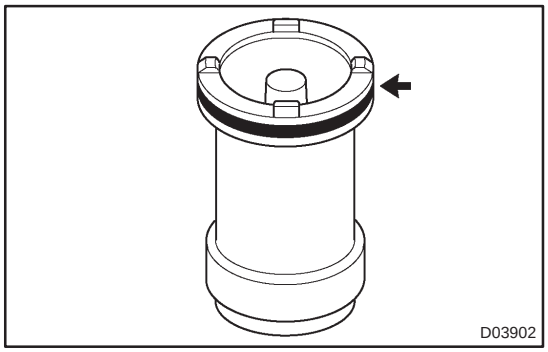
126. INSTALL B–3 ACCUMULATOR PISTON

(a) Coat a new O–ring with ATF, install it to the B_3 accumulator piston.



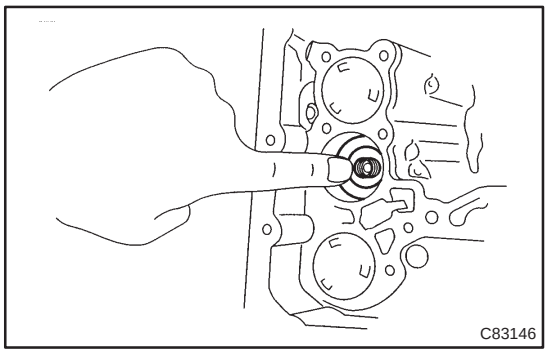
(b) Coat the accumulator B_3 piston and spring with ATF, install them to the transaxle case.
Accumulator spring:

Free length Outer diameter mm (in.)	Color
Inner 60.24 (2.3716) / 15.9 (0.626)	Yellowish green
Outer 74.61 (2.9374) / 21.7 (0.854)	Blue



127. INSTALL C–1 ACCUMULATOR PISTON

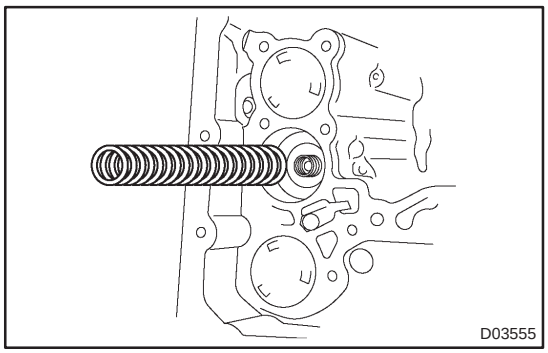
(a) Coat 2 new O–rings with ATF, install them to the C_1 accumulator piston.



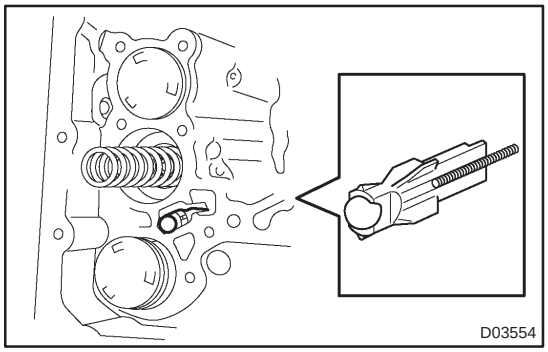
(b) Coat accumulator C_1 piston with ATF, install it to the transaxle case.
Accumulator spring:

Free length Outer diameter mm (in.)	Color
81.53 (3.2098) / 18.5 (0.728)	Pink

128. INSTALL C–3 ACCUMULATOR PISTON



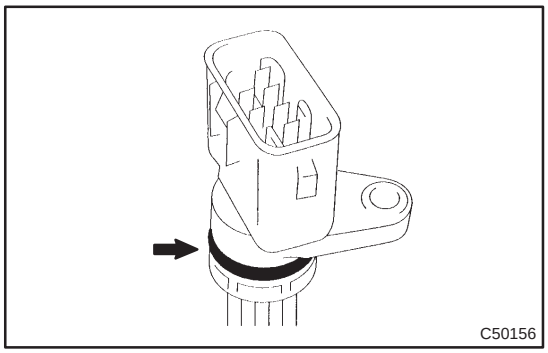
(a) Coat a new O–ring with ATF, install it to the C_3 accumulator piston.



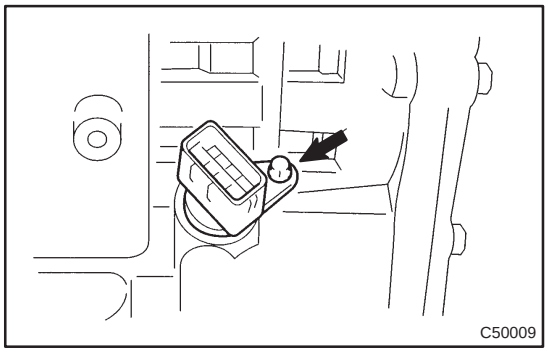
(b) Coat the C_3 accumulator piston with ATF, install it to the transaxle case.

Accumulator spring:

Free length Outer diameter mm (in.)	Color
90.49 (3.5626) / 19.2 (0.756)	White

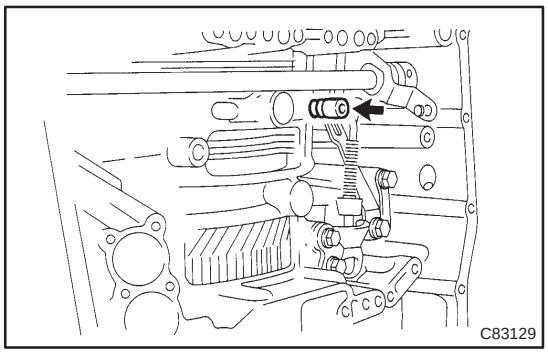


(c) Install the compression spring from the C_3 accumulator piston.



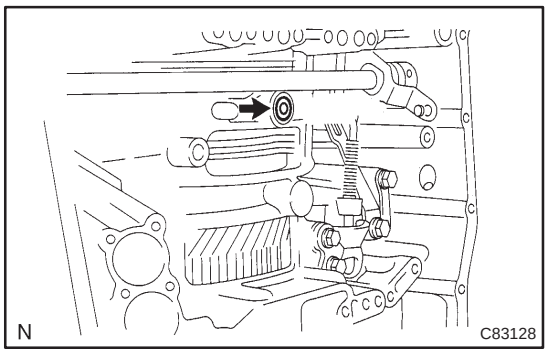
129. INSTALL CHECK BALL BODY

(a) Install the check ball body and spring.

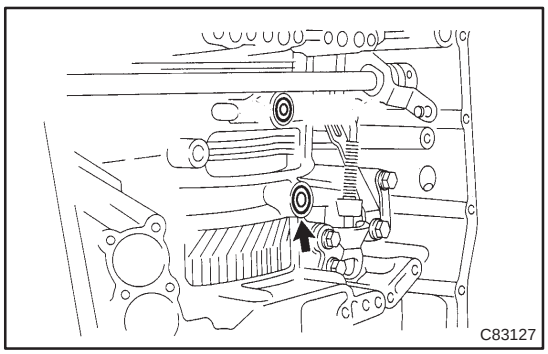


130. INSTALL TRANSMISSION WIRE

(a) Coat a new O–ring with ATF, install it to the transaxle solenoid wire.

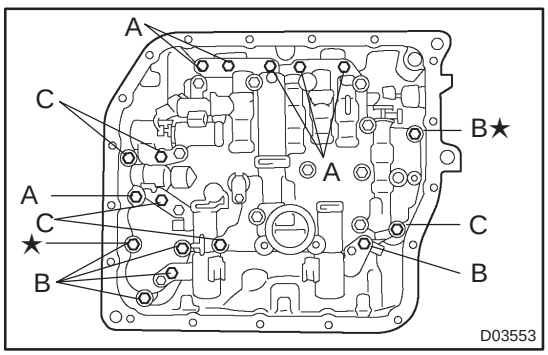


(b) Install the solenoid wire retaining bolt
Torque: 5.4 N·m (55 kgf·cm, 48 in.·lbf)



131. INSTALL BRAKE DRUM GASKET

(a) Coat a new brake drum gasket with ATF, install it to the transaxle case.

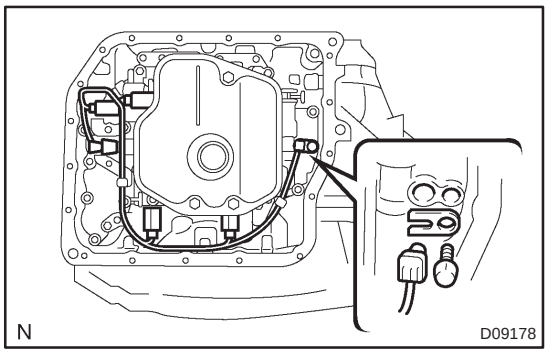


132. INSTALL TRANSAXLE CASE 2ND BRAKE GASKET

(a) Coat a new transaxle case 2nd brake gasket with ATF, install it to the transaxle case.

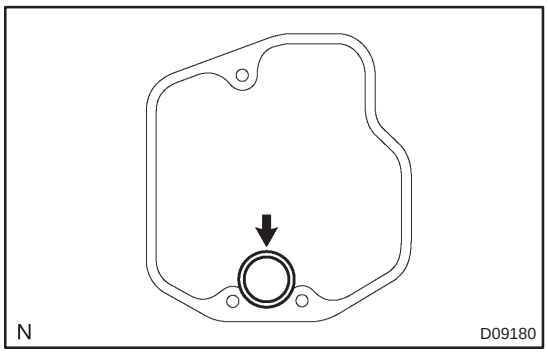
133. INSTALL GOVERNOR APPLY GASKET NO.1

(a) Coat a new governor apply gasket No. 1 with ATF, install it to the transaxle case.



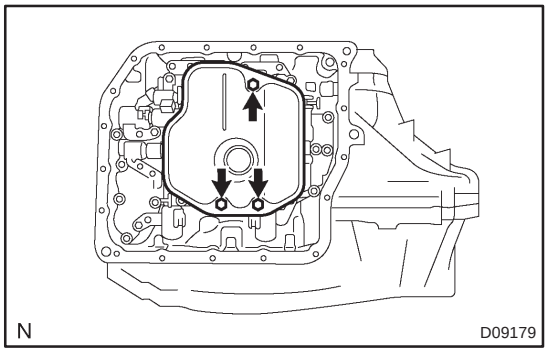
134. INSTALL TRANSMISSION VALVE BODY ASSY

(a) Make sure that the manual valve lever position, install the valve body with 17 bolts to the transaxle case.
Torque: 11 N·m (110 kgf·cm, 8 ft·lbf)
Bolt length:
Bolt A: 25 mm (0.984 in.)
Bolt B: 41 mm (1.614 in.)
Bolt C: 45 mm (1.771 in.)



NOTICE:

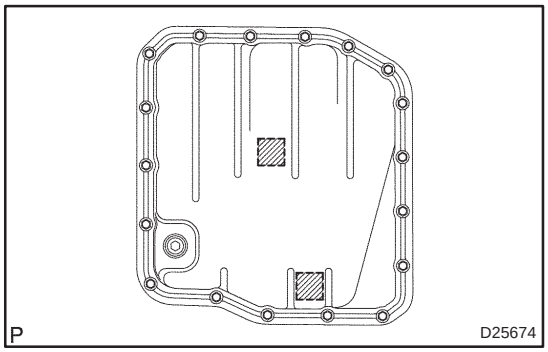
- **Push the valve body against the accumulator piston spring and the check ball body to install it.**
- **When installing the valve body to the transaxle case, do not hold the solenoids.**
- **Tighten those bolts marked by ★ in the illustration first temporarily because they are positioning bolts.**



(b) Connect the 5 solenoid connectors.

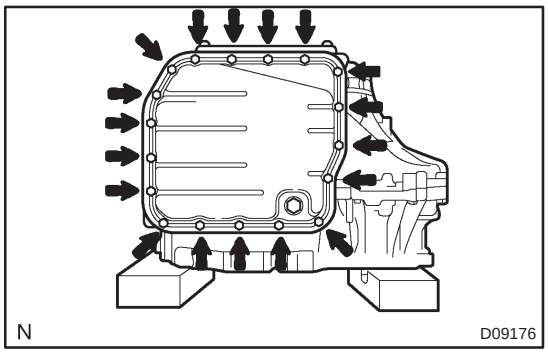
(c) Install the ATF temperature sensor, clamp and bolt.
Torque: 6.6 N·m (67 kgf·cm, 58 in·lbf)

135. INSTALL VALVE BODY OIL STRAINER ASSY



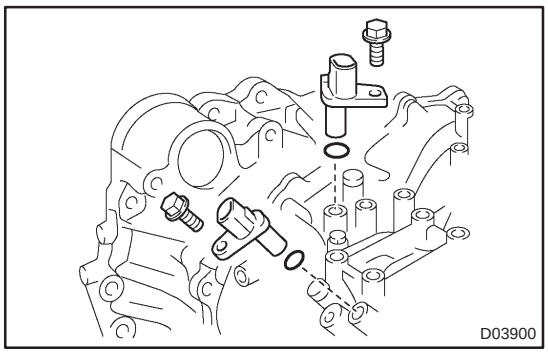
(a) Coat a new O–ring with ATF, install it to the oil strainer.

(b) Install the oil strainer and 3 bolts to the valve body.
Torque: 11 N·m (110 kgf·cm, 8 ft·lbf)



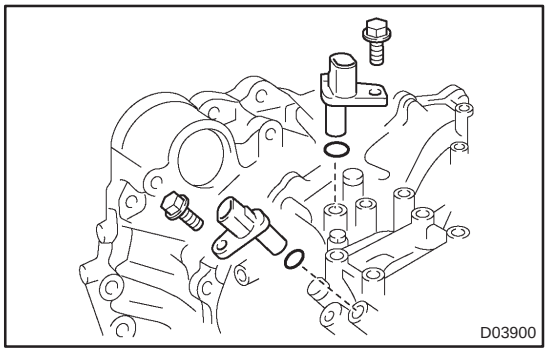
136. INSTALL AUTOMATIC TRANSAXLE OIL PAN GASKET

(a) Install a new oil pan gasket to the oil pan.



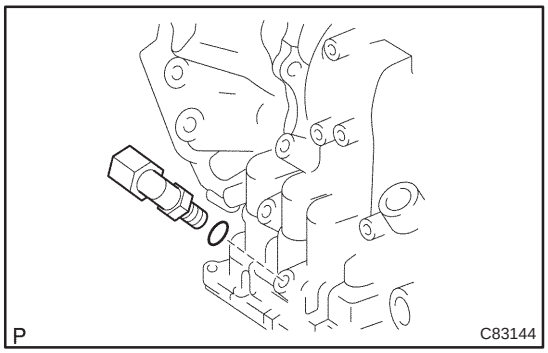
137. INSTALL AUTOMATIC TRANSAXLE OIL PAN SUB–ASSY

(a) Install the 2 magnets in the oil pan.
(b) Apply seal packing or equivalent to new 18 bolts.
Seal packing:
THREE BOND 2430 or equivalent



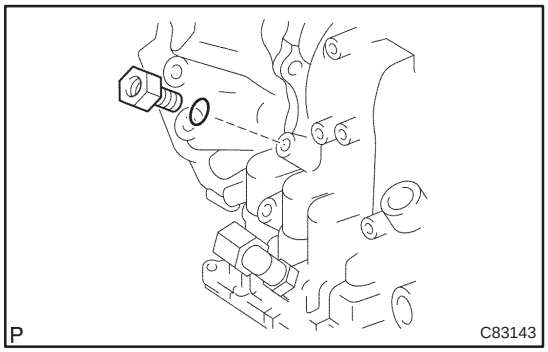
(c) Install oil pan and 18 bolts to the transaxle case.
Torque: 7.8 N·m (80 kgf·cm, 69 in.·lbf)

NOTICE:
Because the bolts should be seal bolts, apply seal packing to new bolts and tighten them within 10 minutes after application.



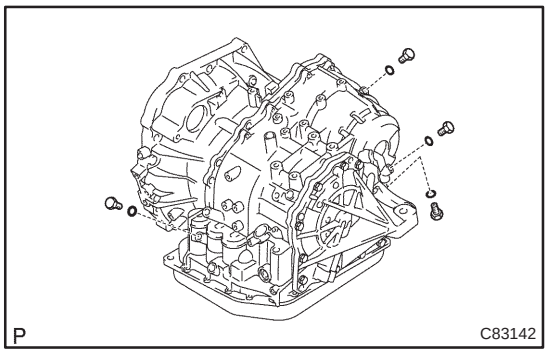
138. INSTALL SPEED SENSOR(TMC –MADE)

(a) Coat 2 new O–rings with ATF, install them to the 2 sensors.
(b) Install the 2 sensors with the 2 bolts to the transaxle case.
Torque: 11.3 N·m (115 kgf·cm, 8 ft·lbf)



139. INSTALL TRANSMISSION REVOLUTION SENSOR(AISIN –MADE)

(a) Coat 2 new O–rings with ATF, install them to the 2 sensors.
(b) Install the 2 sensors with the 2 bolts to the transaxle case.
Torque: 11.3 N·m (115 kgf·cm, 8 ft·lbf)

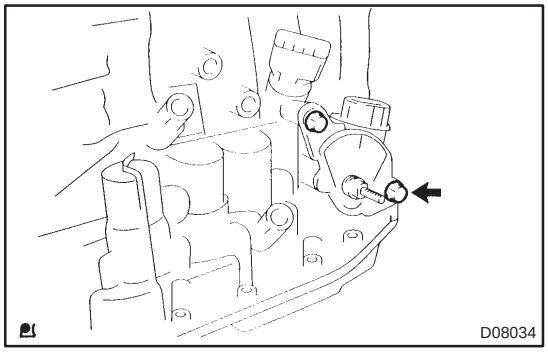


140. INSTALL OIL COOLER TUBE UNION

(a) Coat a new O–ring with ATF, install it to the elbow.
(b) Install the elbow to the transaxle case.
Torque: 27 N·m (276 kgf·cm, 20 ft·lbf)

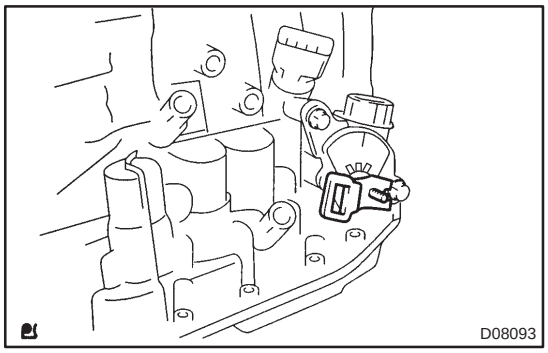
141. INSTALL OIL COOLER TUBE UNION

(a) Coat a new O–ring with ATF, install it to the union.
(b) Install the union to the transaxle case.
Torque: 27 N·m (280 kgf·cm, 20 ft·lbf)



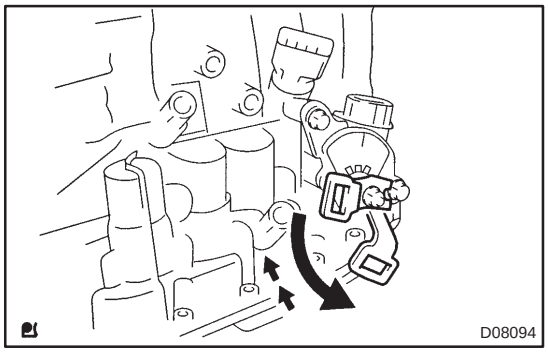
142. INSTALL TRANSAXLE CASE NO.1 PLUG

(a) Coat 4 new O–rings with ATF, install them to the 4 transaxle case No. 1 plugs.
(b) Install the 4 transaxle case No. 1 plugs to the transaxle case.
Torque: 7.4 N·m (75 kgf·cm, 65 in.·lbf)

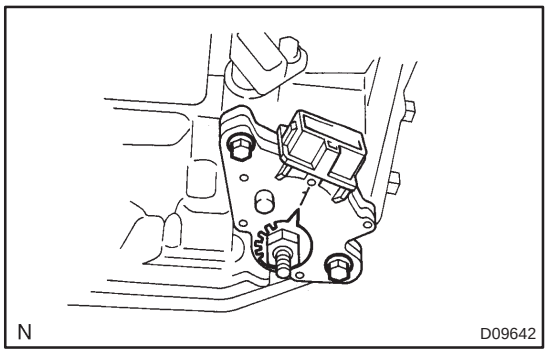


143. INSTALL BREATHER PLUG HOSE

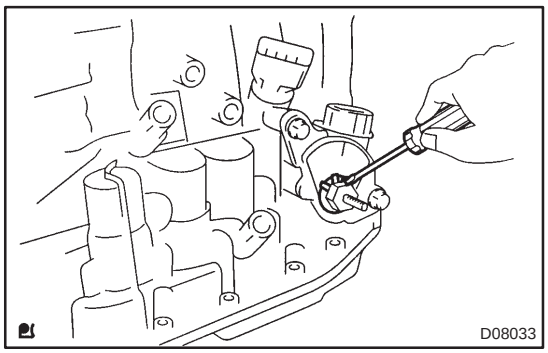
(a) Install the breather plug hose to the breather No. 2 plug.



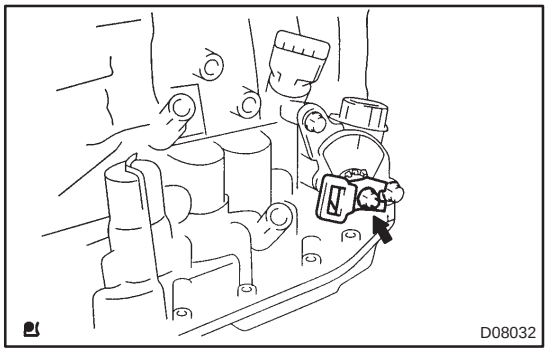
144. INSTALL PARK/NEUTRAL POSITION SWITCH ASSY



(a) Install the park/neutral position switch onto the manual valve lever shaft and temporarily install the 2 adjusting bolts.
(b) Install a new nut stopper and nut.
Torque: 6.9 N·m (70 kgf·cm, 61 in.·lbf)



(c) Temporarily install control shaft lever.

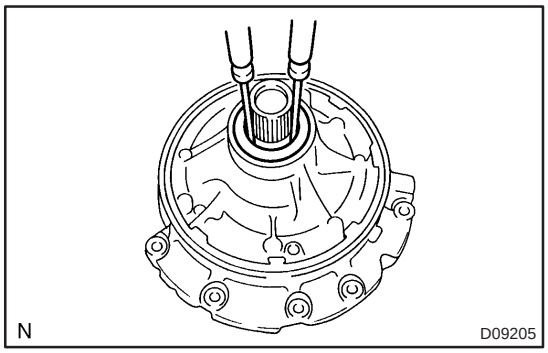


(d) Turn the lever counterclockwise until it stops, and then turn it clockwise 2 notches.
(e) Remove the control shaft lever.

(f) Align the groove with neutral basic line.
(g) Tighten the 2 bolts.
Torque: 5.4 N·m (55 kgf·cm, 48 in.·lbf)

(h) Using a screwdriver, stake the nut with the nut stopper.

(i) Install the control shaft lever, washer and nut.
Torque: 13 N·m (133 kgf·cm, 10 ft·lbf)



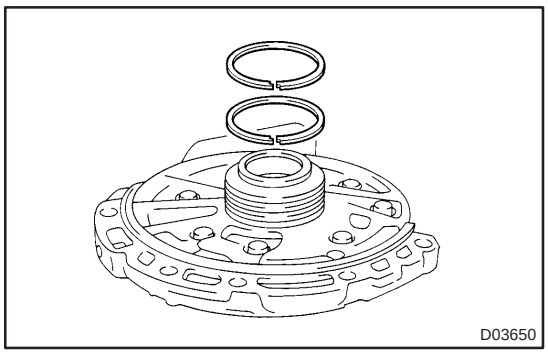
145. INSTALL SPEEDOMETER DRIVEN HOLE (ATM) COVER SUB–ASSY

(a) Coat the new O–ring with ATF and install it to the speedometer driven hole cover.
(b) Install the bolt and speedometer driven hole cover sub–assy to the transaxle assy.
Torque: 7.0 N·m (70 kgf·cm, 61 in.·lbf)

OIL PUMP ASSY (U241E)

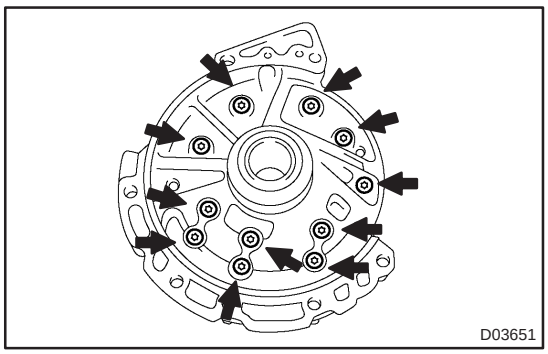
OVERHAUL

4006P–01



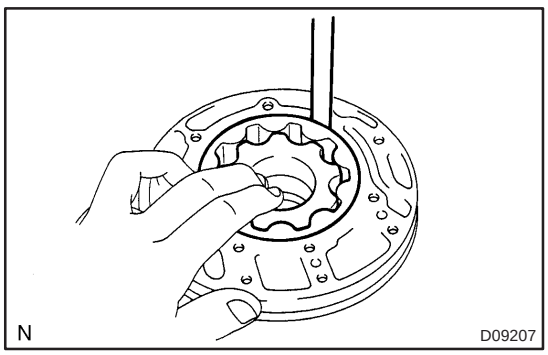
1. INSPECT OIL PUMP ASSY

(a) Turn the drive gear with 2 screwdrivers and make sure it rotates smoothly.



NOTICE:

Be careful not to damage the oil seal lip.



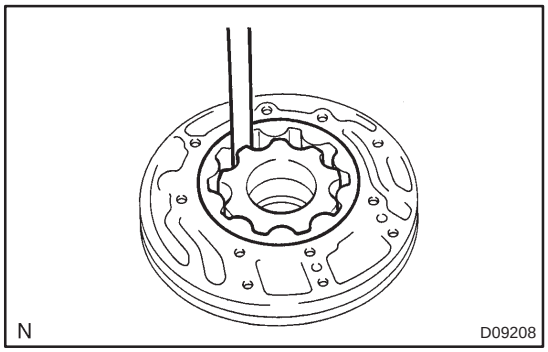
2. REMOVE CLUTCH DRUM OIL SEAL RING

(a) Remove 2 clutch drum oil seal rings.

3. REMOVE STATOR SHAFT ASSY

(a) Using a torx socket (T30), remove the 11 bolts and stator shaft.

4. INSPECT CLEARANCE OF OIL PUMP ASSEMBLY

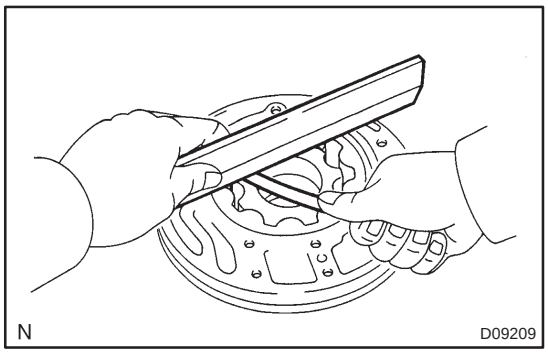


(a) Push the driven gear to one side of the body. Using a feeler gauge, measure the clearance.

Standard body clearance:

0.10 – 0.17 mm (0.0039 – 0.0067 in.)

Maximum body clearance: 0.17 mm (0.0067 in.)

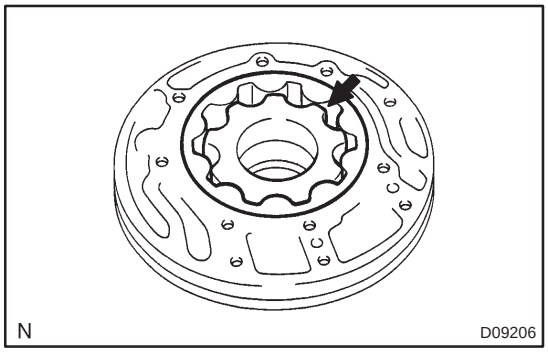


If the body clearance is greater than the maximum, replace the oil pump body sub–assy.

(b) Measure the tip clearance between the driven gear teeth and drive gear teeth.

Standard tip clearance:
0.07 – 0.15 mm (0.0028 – 0.0059 in.)
Maximum tip clearance: 0.15 mm (0.0059 in.)

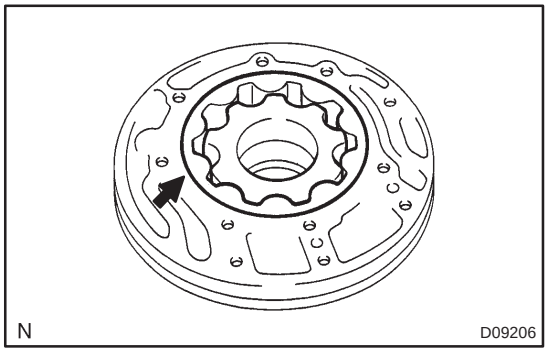
If the tip clearance is greater than the maximum, replace the oil pump body sub–assy.



(c) Using a straight edge and feeler gauge, measure the side clearance of both gears.

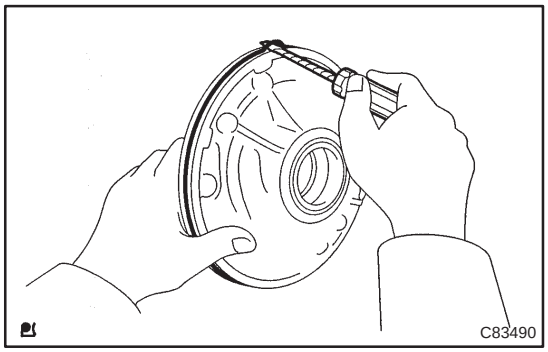
Standard side clearance:
0.02 – 0.05 mm (0.0008 – 0.0020 in.)
Maximum side clearance: 0.05 mm (0.0020 in.)
Drive gear thickness: mm (in.)

Mark	Thickness
1	10.690 – 10.699 (0.4209 – 0.4212)
2	10.700 – 10.709 (0.4213 – 0.4216)
3	10.710 – 10.720 (0.4217 – 0.4220)
4	10.721 – 10.730 (0.4221 – 0.4224)
5	10.731 – 10.740 (0.4225 – 0.4228)



Driven gear thickness: mm (in.)

Mark	Thickness
1	10.690 – 10.699 (0.4209 – 0.4212)
2	10.700 – 10.709 (0.4213 – 0.4216)
3	10.710 – 10.720 (0.4217 – 0.4220)
4	10.721 – 10.730 (0.4221 – 0.4224)
5	10.731 – 10.740 (0.4225 – 0.4228)

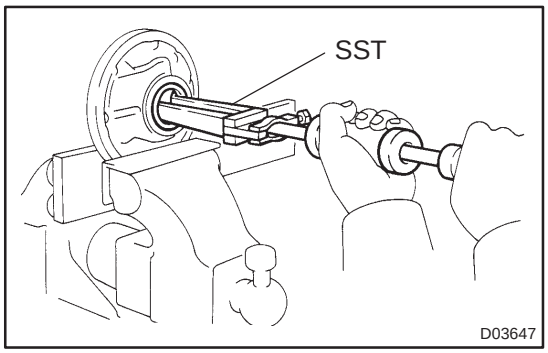


5. REMOVE FRONT OIL PUMP DRIVE GEAR

(a) Remove the front oil pump drive gear.

6. REMOVE FRONT OIL PUMP DRIVEN GEAR

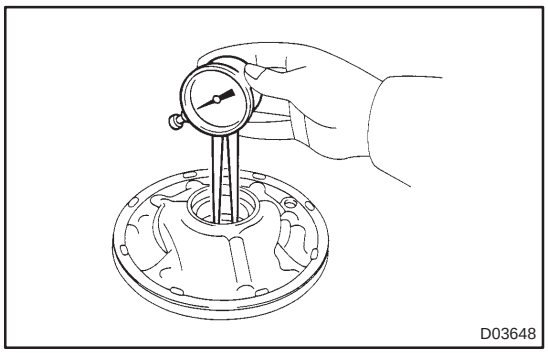
(a) Remove the front oil pump driven gear.



7. REMOVE FRONT OIL PUMP BODY O–RING

(a) Using a screwdriver, remove the O–ring.

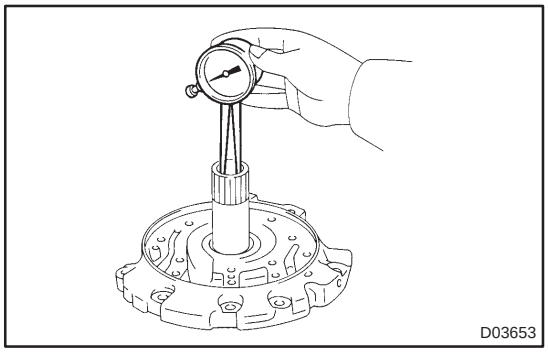
HINT:



Tape the screwdriver before use.

8. REMOVE FRONT OIL PUMP OIL SEAL

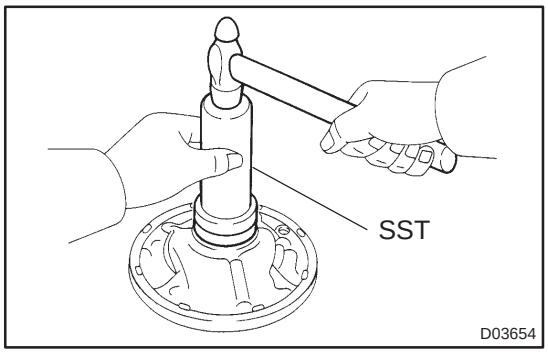
(a) Mount oil pump in a soft jaw vise.



(b) Using SST, remove oil seal from the oil pump body.
SST 09308–00010

9. INSPECT FR OIL PUMP & GEAR BODY SUB–ASSY

(a) Using a dial indicator, measure the inside diameter of the oil pump body bushing.
Standard inside diameter:
38.11 – 38.14 mm (1.5005 – 1.5015 in.)
Maximum inside diameter: 38.19 mm (1.5035 in.)

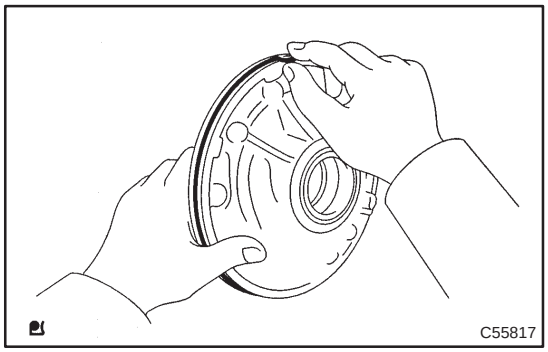


If the inside diameter is greater than the maximum, replace the oil pump body sub–assy.

10. INSPECT STATOR SHAFT ASSY

(a) Using a dial Indicator, measure the inside diameter of the stator shaft bushings.
Standard inside diameter:
20.50 – 21.53 mm (0.8465 – 0.8475 in.)
Maximum inside diameter: 21.57 mm (0.8492 in.)

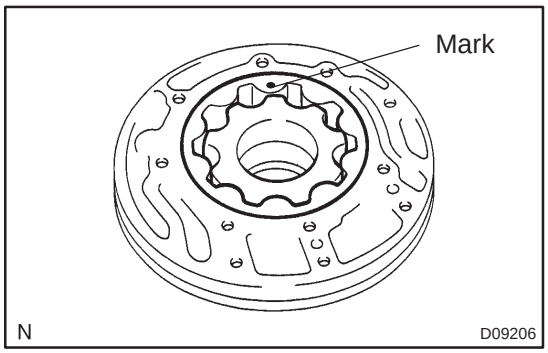
If the inside diameter is greater than maximum, replace the stator shaft.



11. INSTALL FRONT OIL PUMP OIL SEAL

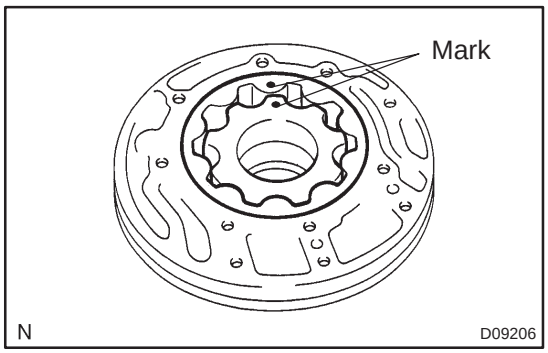
(a) Using SST, install a new oil seal to the pump.
SST 09350–32014 (09351–32140)

HINT:



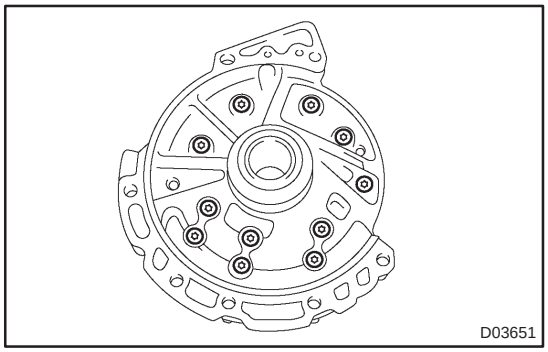
The seal end should be flush with the outer edge of the oil pump.

(b) Coat the lip of the oil seal with petroleum jelly.



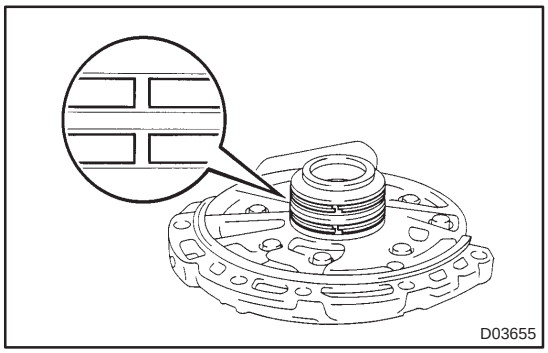
12. INSTALL FRONT OIL PUMP BODY O–RING

(a) Coat a new O–ring with ATF, install it to the oil pump body.



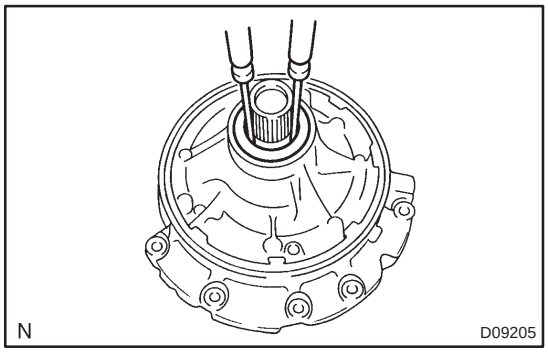
13. INSTALL FRONT OIL PUMP DRIVEN GEAR

(a) Coat the front oil pump driven gear with ATF, install it to the oil pump body with the maked side up.



14. INSTALL FRONT OIL PUMP DRIVE GEAR

(a) Coat the front oil pump drive gear with ATF, install it to the oil pump body with the maked side up.



15. INSTALL STATOR SHAFT ASSY

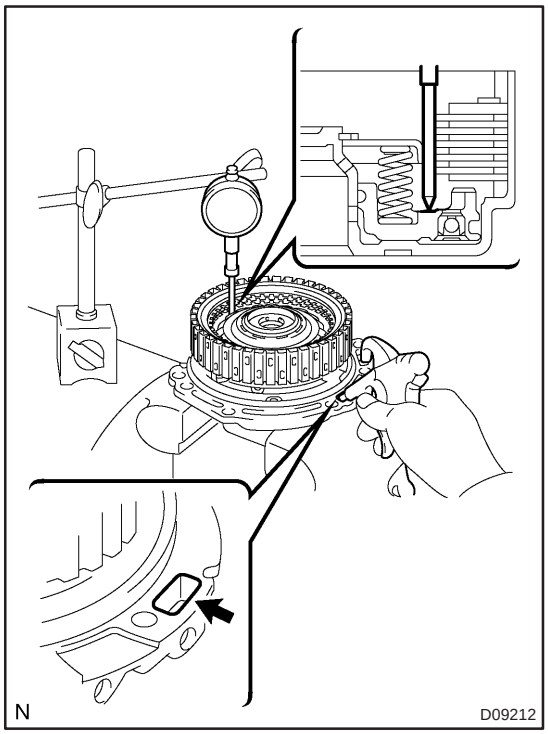
(a) Set the stator shaft by aligning each bolt hole.
(b) Using a torx socket T30, install the 11 bolts.
Torque: 9.8 N·m (100 kgf·cm, 87 in.·lbf)

16. INSTALL CLUTCH DRUM OIL SEAL RING

NOTICE:
Do not expand the ring ends excessively.

17. INSPECT OIL PUMP ASSY

(a) Turn the drive gear with 2 screwdrivers and make sure it rotates smoothly.



NOTICE:

Be careful not to damage the oil seal lip.

FORWARD CLUTCH ASSY (U241E)

OVERHAUL

4006Q–01

1. INSPECT PACK CLEARANCE OF FORWARD CLUTCH

(a) Install the forward clutch on the oil pump.

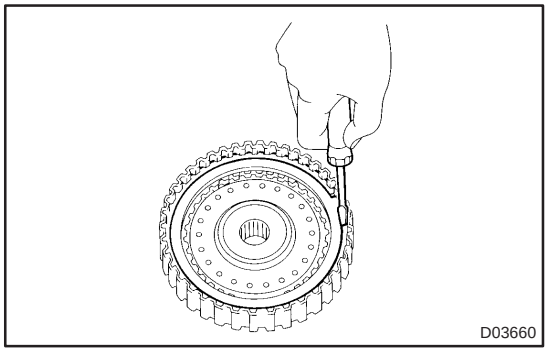
NOTICE:

Be careful not to damage the oil seal ring of oil pump.

(b) Using a dial indicator, measure the forward clutch piston stroke while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).

Piston stroke: 1.74 – 2.08 mm (0.0685 – 0.0819 in.)

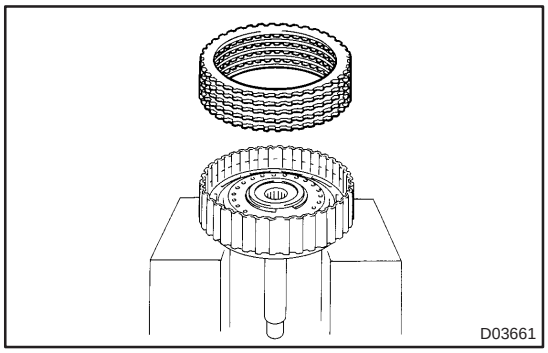
If the piston stroke is less than the minimum, parts may have been assembled incorrectly. Check and reassemble again.



If the clearance is non–standard, select another flange.

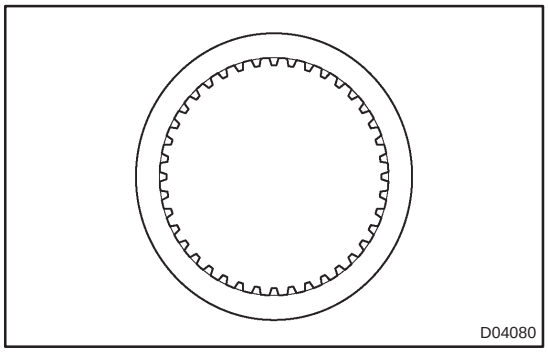
HINT:

There are 5 different flanges in thickness.



Flange thickness: mm (in.)

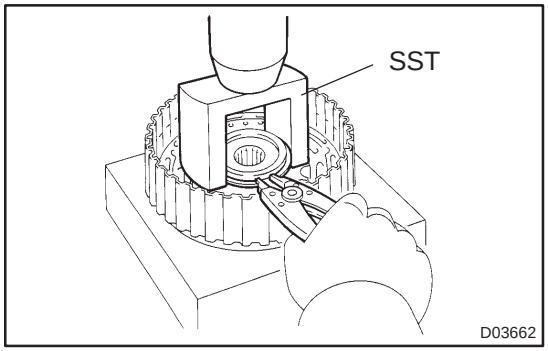
No.	Thickness	No.	Thickness
1	3.00 (0.1181)	4	3.45 (0.1358)
2	3.15 (0.1240)	5	3.60 (0.1417)
3	3.30 (0.1299)	–	–



2. REMOVE FORWARD MULTIPLE DISC CLUTCH CLUTCH DISC

(a) Using a screwdriver, remove the snap ring.

(b) Remove the flange, 5 discs and 5 plates.



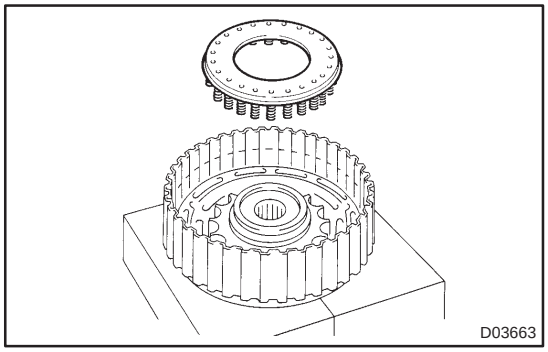
3. INSPECT FORWARD MULTIPLE DISC CLUTCH CLUTCH DISC

(a) Check to see if the sliding surface of the disc, plate and flange are worn or burnt.

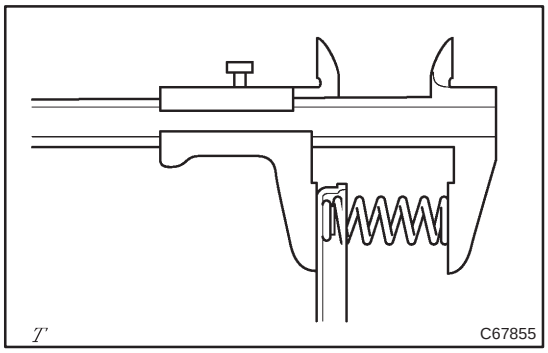
If necessary, replace them.

HINT:

- If the lining of the disc is peeling off or discolored, or even if replace all discs.
- Before assembling new discs, soak them in ATF for at least 15 minutes.



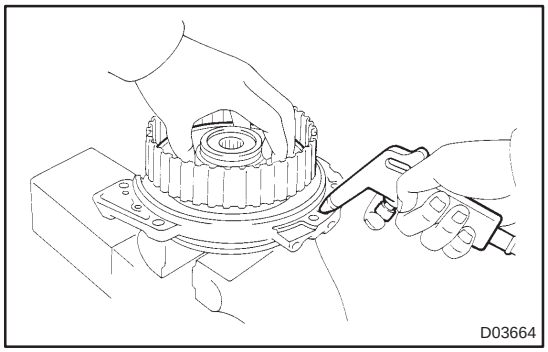
4. REMOVE FORWARD CLUTCH RETURN SPRING SUB–ASSY



(a) Place SST on the spring retainer and compress the return spring with a press.

SST 09350–32014 (09351–32070)

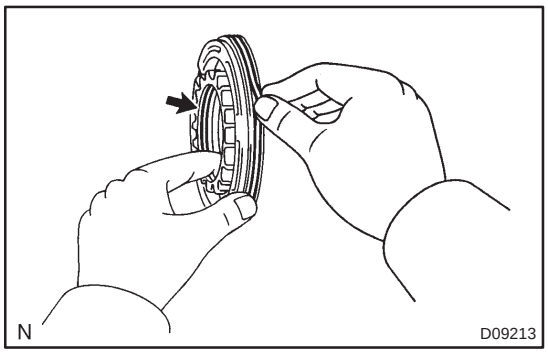
(b) Using a snap ring expander, remove the snap ring.



(c) Remove the piston return spring.

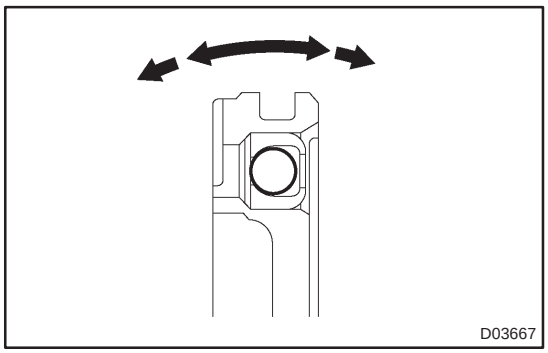
5. INSPECT FORWARD CLUTCH RETURN SPRING SUB–ASSY

(a) Using a vernier calipers, measure the free length of the spring together with the spring seat.



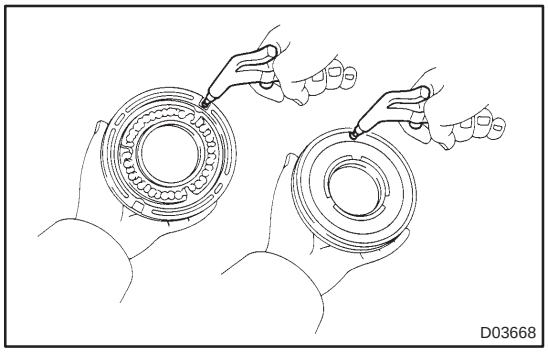
Standard free length: 28.23 mm (1.1114 in.)

6. REMOVE FORWARD CLUTCH PISTON SUB–ASSY



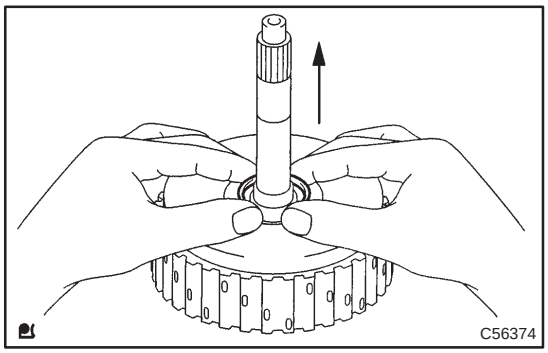
(a) Place the forward clutch drum onto the oil pump.
(b) Holding the forward clutch piston with your hard, apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the oil pump to remove the forward clutch piston.

HINT:
When the piston can not be removed as it is slanted, either blow the air again with the protruding side pushed or remove the piston using the needle nose plier with vinyl tape on the tip.

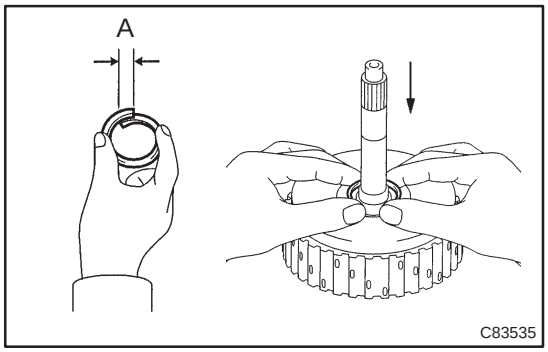


7. REMOVE FORWARD CLUTCH PISTON O–RING

(a) Remove the 2 O–rings.

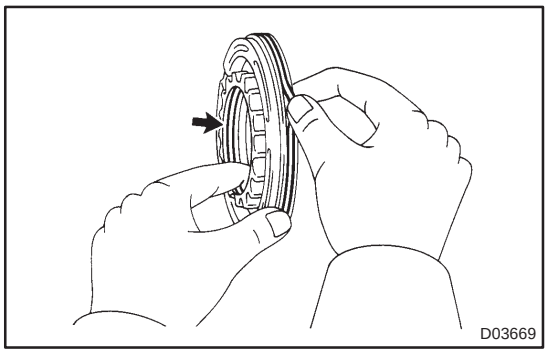


8. INSPECT FORWARD CLUTCH PISTON SUB–ASSY



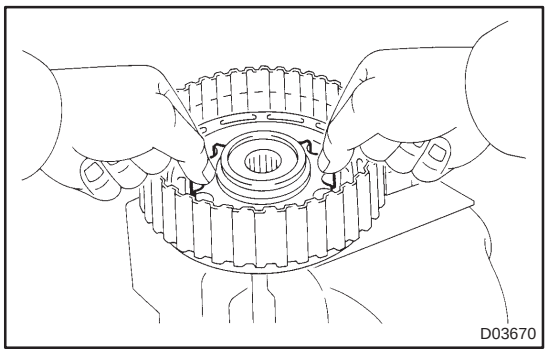
(a) Shake the piston to check that the check ball is not stuck.

(b) Check that the valve does not leak when applying low compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).



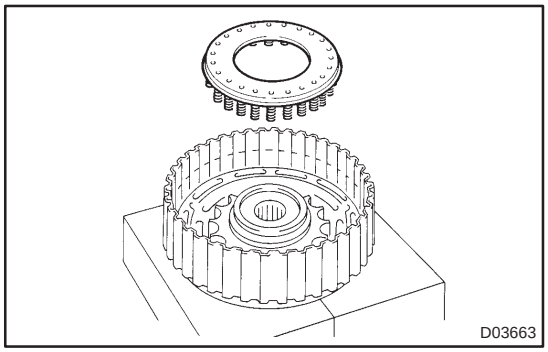
9. REMOVE INPUT SHAFT OIL SEAL RING

10. INSTALL INPUT SHAFT OIL SEAL RING



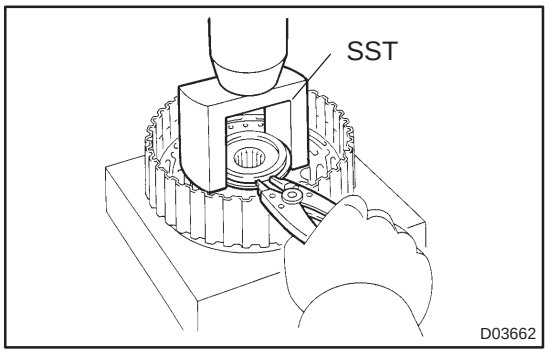
(a) Compress the oil seal ring from both sides to reduce dimension A.
Dimension A:
5.0 mm (0.197 in.)

(b) Coat the oil seal ring with ATF and install it to the input shaft.



11. INSTALL FORWARD CLUTCH PISTON O–RING

(a) Coat 2 new O–rings with ATF, install them to the forward clutch piston.

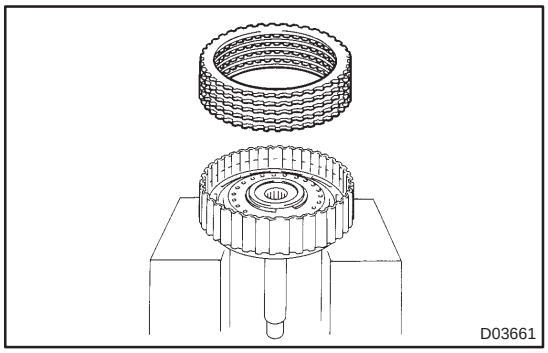


12. INSTALL FORWARD CLUTCH PISTON SUB–ASSY

(a) Install the forward clutch piston sub–assy to the forward clutch drum.

13. INSTALL FORWARD CLUTCH RETURN SPRING SUB–ASSY

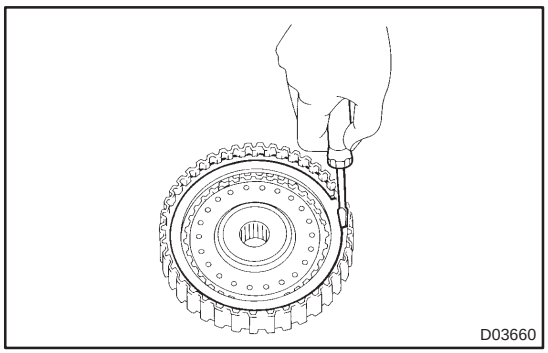
(a) Place the forward clutch return spring sub–assy onto the forward clutch piston.



(b) Place SST on the return spring, and compress the return spring with a press.
SST 09350–32014 (09351–32070)

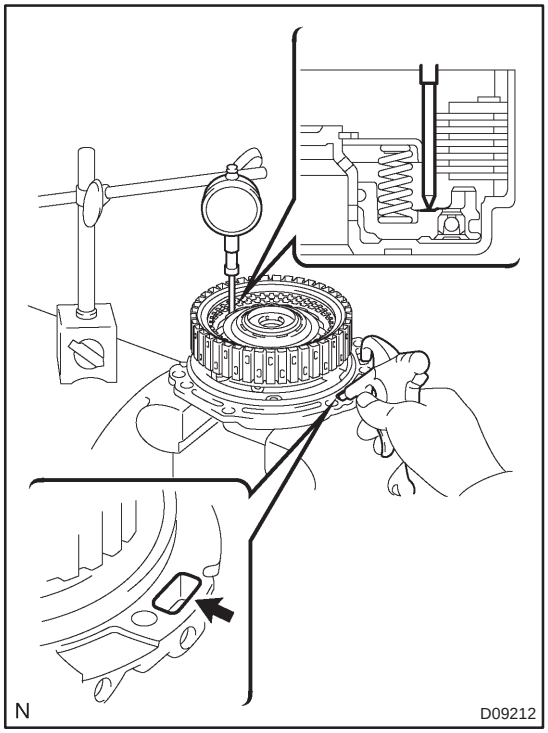
(c) Install the snap ring with a snap ring expander. Be sure the end gap of the snap ring is not aligned with the spring retainer claw.

NOTICE:



- **Stop the press when the spring sheet is lowered to the place 1 – 2 mm (0.039 – 0.078 in.) from the snap ring grove.**

- **This prevents the spring sheet from being deformed.**
- **Do not expand the snap ring excessively.**

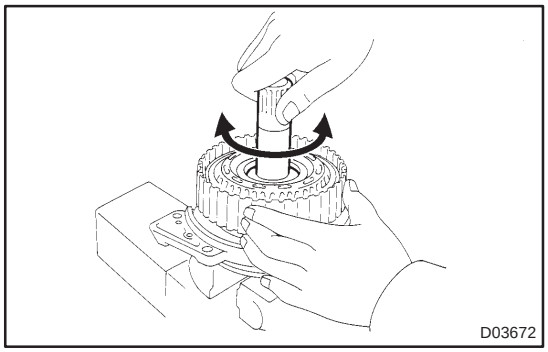


14. INSTALL FORWARD CLUTCH FLANGE HOLE SNAP RING

(a) Install the 5 plates, 5 discs and a flange.

(b) Using a screwdriver, install the snap ring.
(c) Check that the end gap of the snap ring is not aligned with one of the cutouts.

15. INSPECT PACK CLEARANCE OF FORWARD CLUTCH



(a) Using a dial indicator, measure the forward clutch piston stroke while applying and releasing compressed air (392 kgf·cm^2, 4.0 kPa, 57 psi).

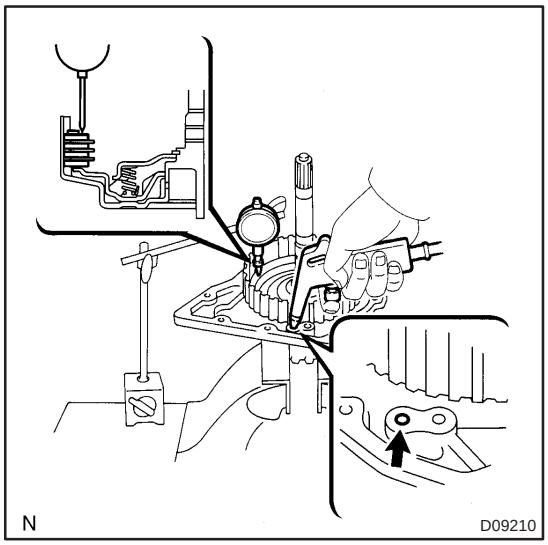
Piston stroke: 1.74 – 2.08 mm (0.0685 – 0.0819 in.)

If the piston stroke is less than the minimum, parts may have been assembled incorrectly. Check and reassemble again.
If the clearance is non–standard, select another flange.
HINT:
There are 5 different flanges in thickness.

Flange thickness: mm (in.)

No.	Thickness	No.	Thickness
1	3.00 (0.1181)	4	3.45 (0.1358)
2	3.15 (0.1240)	5	3.60 (0.1417)
3	3.30 (0.1299)	–	–

16. INSPECT FORWARD MULTIPLE DISC CLUTCH CLUTCH DISC



(a) Inspect the clutch disc rotation.
  (1) Check that the disc lightly rotates when rotating the forward clutch assembly after inserting the multiple disc clutch into it.

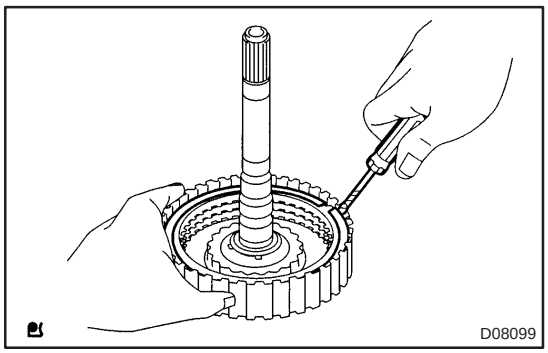
NOTICE:
Do not place the forward clutch assy in a vise.

DIRECT CLUTCH ASSY (U241E)

OVERHAUL

4006R–01

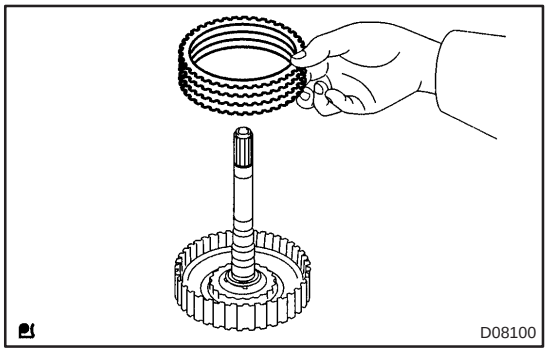
1. INSPECT PACK CLEARANCE OF DIRECT CLUTCH



(a) Install the direct clutch and needle roller bearing on the transaxle rear cover.

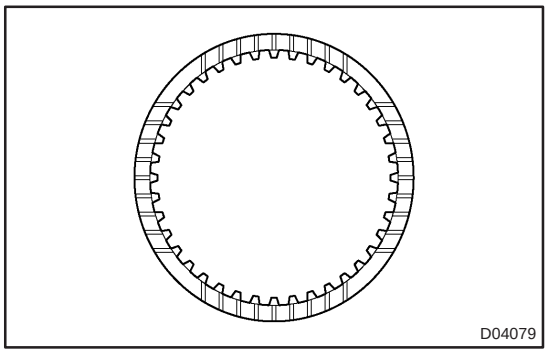
(b) Using a dial indicator, measure the direct clutch pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).

Pack clearance:



0.605 – 0.825 mm (0.02382 – 0.03248 in.)

If the pack clearance is non–standard, inspect the discs, plates and flange.

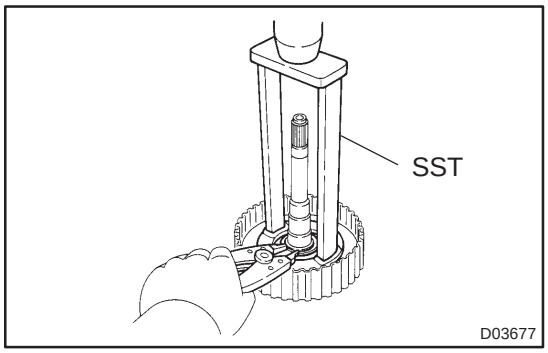


2. REMOVE DIRECT MULTIPLE DISC CLUTCH CLUTCH DISC

(a) Using a screwdriver, remove the snap ring from the direct clutch drum.

(b) Remove the flange, 3 discs and 3 plates from the direct clutch drum.

3. INSPECT DIRECT MULTIPLE DISC CLUTCH CLUTCH DISC



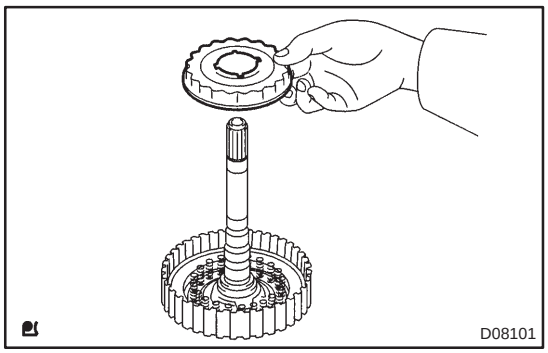
(a) Check to see if the sliding surface of the disc, plate and flange are worn or burnt.

If necessary, replace them.

HINT:

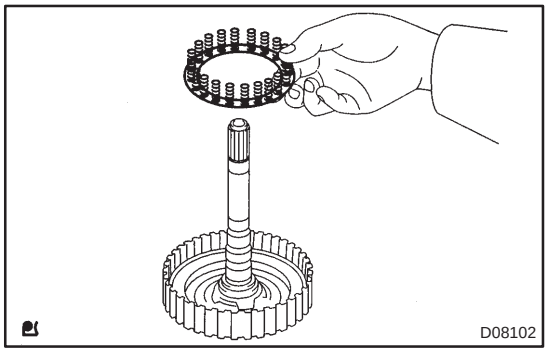
- If the lining of the disc is peeling off or discolored, or even if a part of the printed mark is defaced, replace all discs.

- Before assembling new discs, soak them in ATF for at least 15 minutes.



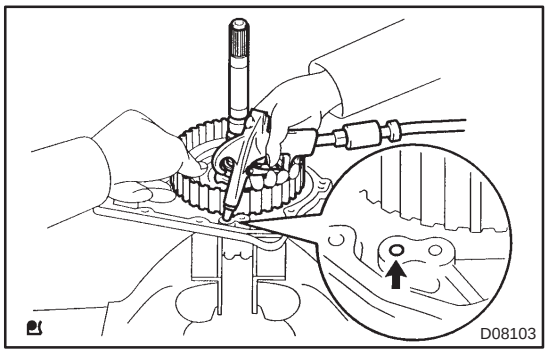
4. REMOVE DIRECT CLUTCH RETURN SPRING SUB–ASSY

(a) Place SST on the clutch balancer and compress the spring with a press.
SST 09387–00020



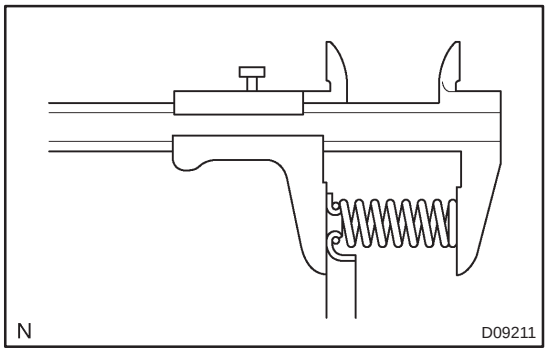
(b) Using a snap ring expander, remove the snap ring from the direct clutch drum.

NOTICE:

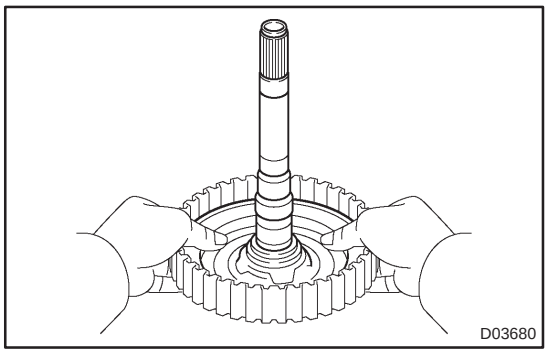


- **Stop the press when the spring sheet is lowered to the place 1 – 2 mm (0.039 – 0.078 in.) from the snap ring grove.**
- **This prevents the spring sheet from being deformed.**
- **Do not expand the snap ring excessively.**

(c) Remove the clutch balancer from the direct clutch drum.



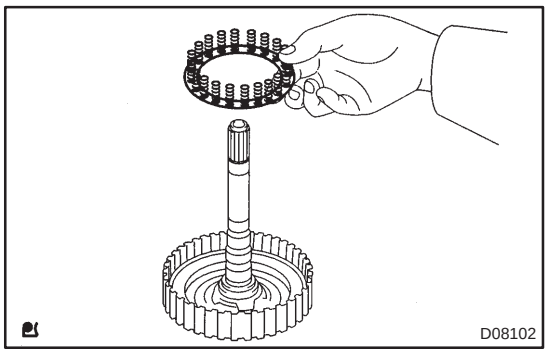
(d) Remove the piston return spring from the direct clutch drum.



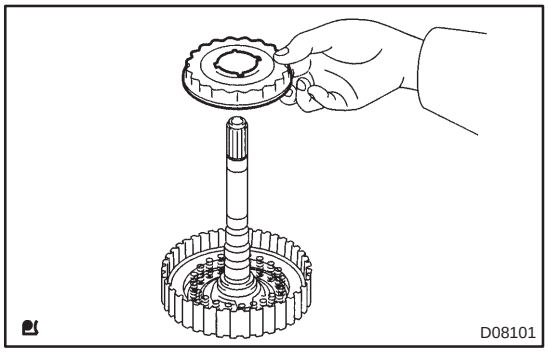
(e) Install direct clutch drum on the transaxle rear cover.

(f) Holding the direct clutch piston with your hand, apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the transaxle rear cover to remove the direct clutch piston.

5. INSPECT DIRECT CLUTCH RETURN SPRING SUB–ASSY



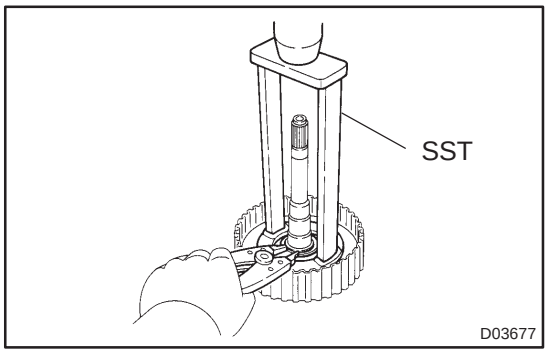
(a) Using vernier calipers, measure the free length of the spring together with the spring seat.
Standard free length: 22.58 mm (0.8890 in.)



6. INSTALL DIRECT CLUTCH RETURN SPRING SUB–ASSY

(a) Coat the direct clutch piston with ATF, and install it to the direct clutch drum.

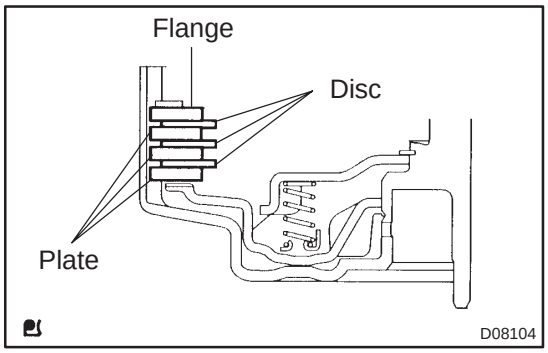
NOTICE:
Be careful not to damage the lip seal of the direct clutch piston.



(b) Install the piston return spring to the direct clutch drum.

(c) Install the clutch balancer to the direct clutch drum.

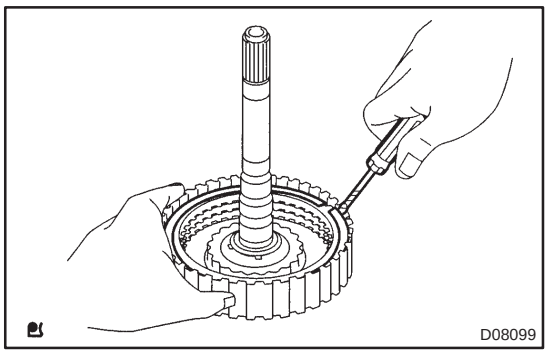
NOTICE:
Be careful not to damage the lip seal of the direct clutch balancer.



(d) Place SST on the clutch balancer and compress the piston return spring with a press.
SST 09387–00020

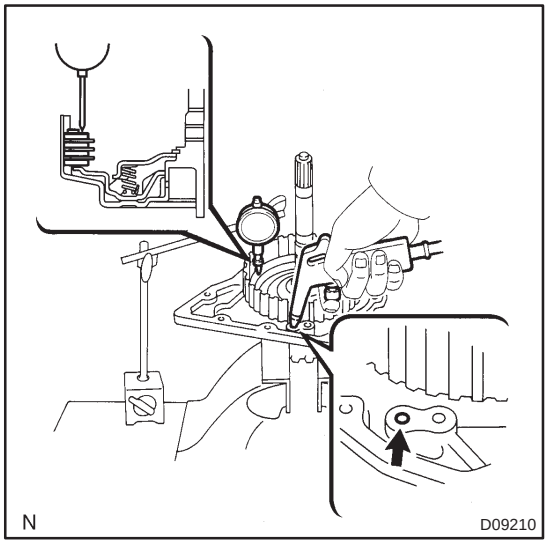
(e) Using a snap ring expander, install the snap ring to the direct clutch drum.

NOTICE:



- **Be sure the end gap of the snap ring is not aligned with the clutch balancer claw.**

- **Stop the press when the spring sheet is lowered to the place 1 – 2 mm (0.039 – 0.078 in.) from the snap ring grove.**
- **This prevents the spring sheet from being deformed.**
- **Do not expand the snap ring excessively.**

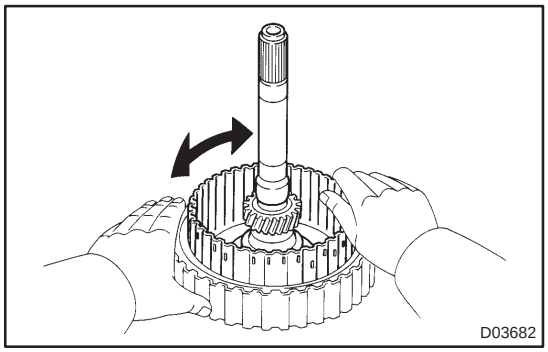


7. INSTALL DIRECT MULTIPLE DISC CLUTCH CLUTCH DISC

(a) Install the 3 plates, 3 discs and flange.

(b) Using a screwdriver, install the snap ring.
(c) Check that the end gap of the snap ring is not aligned with one of the cutouts.

8. INSPECT PACK CLEARANCE OF DIRECT CLUTCH



(a) Install the direct clutch on the transaxle rear cover.
(b) Using a dial indicator, measure the direct clutch pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).

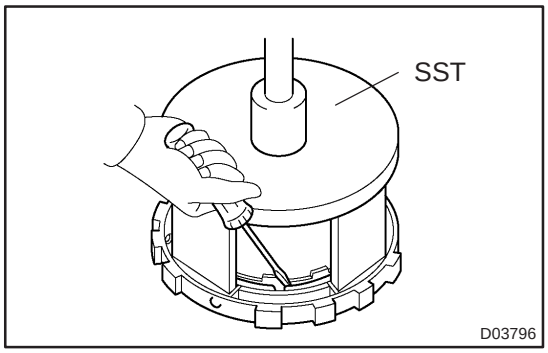
Park clearance:
0.605 – 0.825 mm (0.02382 – 0.03248 in.)

If the pack clearance is less than the minimum, parts may have been assembled incorrectly, so check and reassemble again.
If the stroke is non–standard, select another flange.
HINT:
There are 6 flanges in different thickness.

Flange thickness: mm (in.)

No.	Thickness	No.	Thickness
1	3.0 (0.118)	4	3.3 (0.130)
2	3.1 (0.122)	5	3.4 (0.134)
3	3.2 (0.126)	6	3.5 (0.138)

9. INSPECT DIRECT MULTIPLE DISC CLUTCH CLUTCH DISC

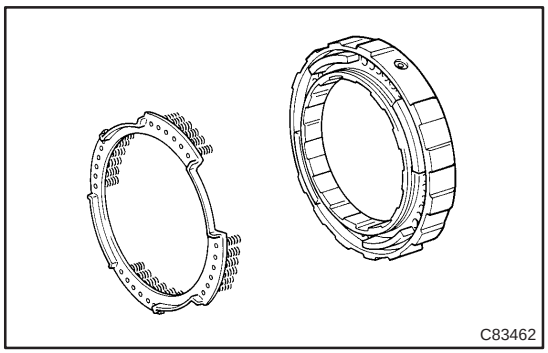


(a) Inspect the clutch disc rotation.
  (1) Check that the disc rotates when rotating the disc after inserting the rear planetary sun gear.

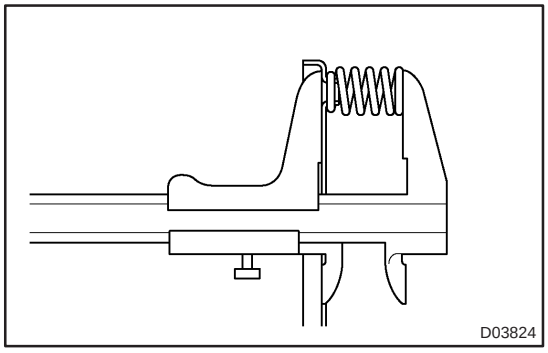
NOTICE:
Do not place the rear planetary sun gear in a vise.

SECOND BRAKE PISTON ASSY (U241E)

OVERHAUL



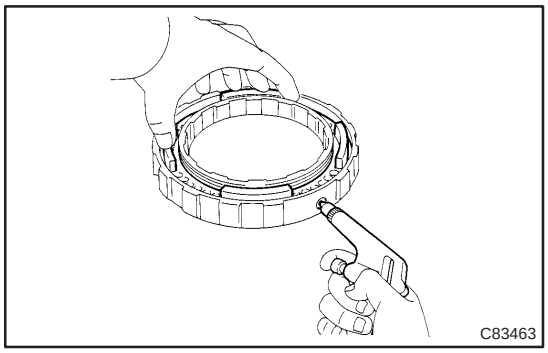
4006S–01



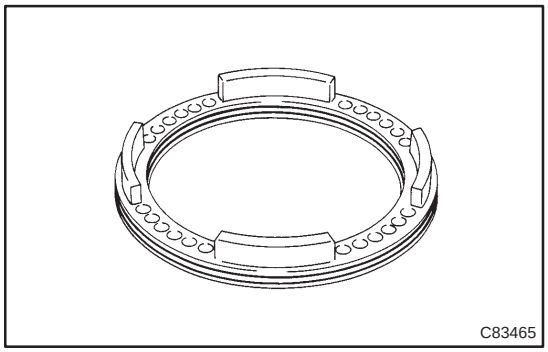
1. REMOVE 2ND BRAKE PISTON RETURN SPRING SUB–ASSY

(a) Place SST on the return spring and compress.
SST 09387–00060

(b) Using a screwdriver, remove the snap ring.

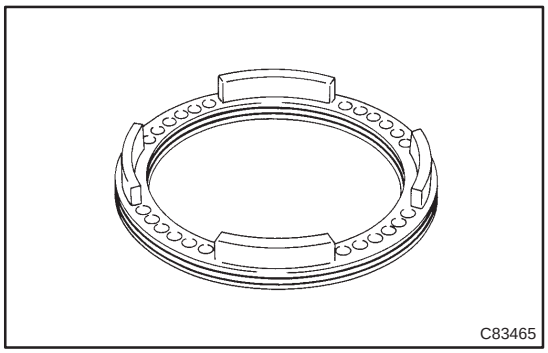


(c) Remove the piston return spring.



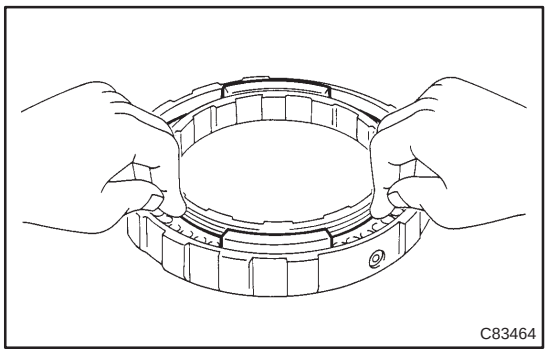
2. INSPECT 2ND BRAKE PISTON RETURN SPRING SUB–ASSY

(a) Using a vernier calipers, measure the free length of the spring together with the spring seat.
Standard free length: 16.61 mm (0.6539 in.)



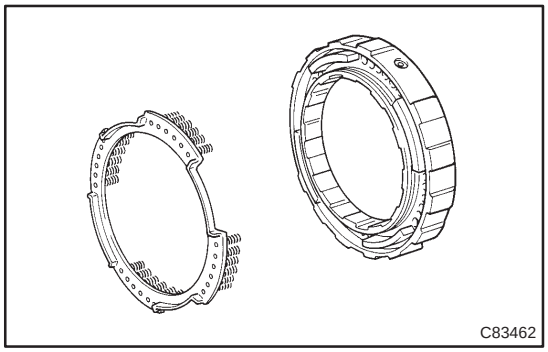
3. REMOVE 2ND BRAKE PISTON

(a) Hold the 2ND brake piston and apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the 2ND brake cylinder to remove the 2ND brake piston.



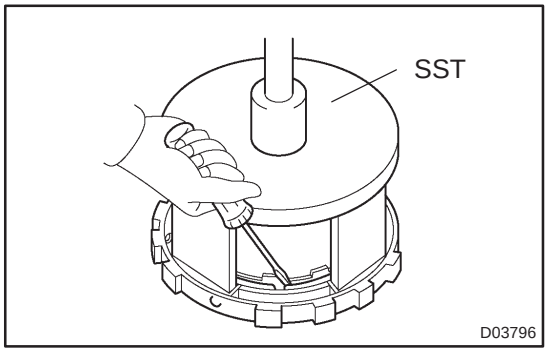
4. REMOVE 2ND BRAKE PISTON O–RING

(a) Remove the 2 O–rings from the 2ND brake piston.



5. INSTALL 2ND BRAKE PISTON O–RING

(a) Coat 2 new O–rings with ATF and install them in the 2ND brake piston.



6. INSTALL 2ND BRAKE PISTON

(a) Press in the 2ND brake piston into the 2ND brake cylinder with your hands.

7. INSTALL 2ND BRAKE PISTON RETURN SPRING SUB–ASSY

(a) Install the piston return spring.

(b) Place SST on the piston return spring, and compress the piston return spring with a press.
SST 09387–00060

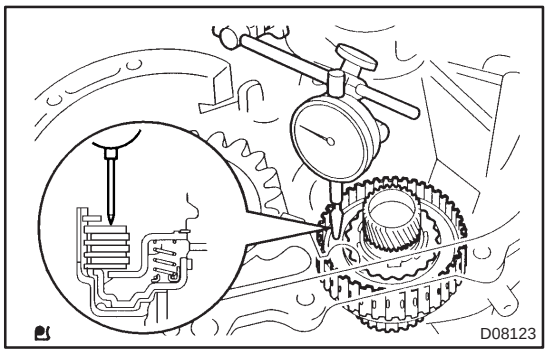
(c) Using a screwdriver, install the snap ring.

NOTICE:

Be sure the end gap of the snap ring is not aligned with the piston return spring claw.

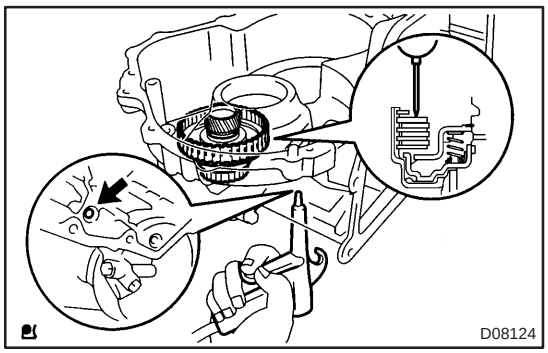
UNDERDRIVE CLUTCH ASSY (U241E)

4006T–01



OVERHAUL

1. INSPECT UNDERDRIVE PACK CLEARANCE

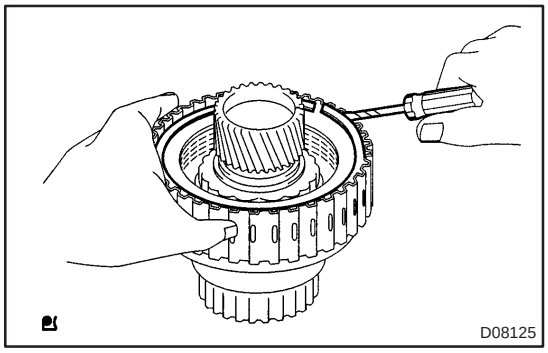


(a) Inspect the U/D clutch to the transaxle case.

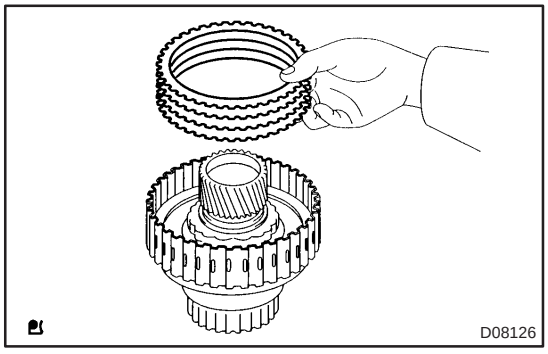
NOTICE:

Be careful not to damage the oil seal rings.

(b) Install a dial indicator as shown in the illustration.

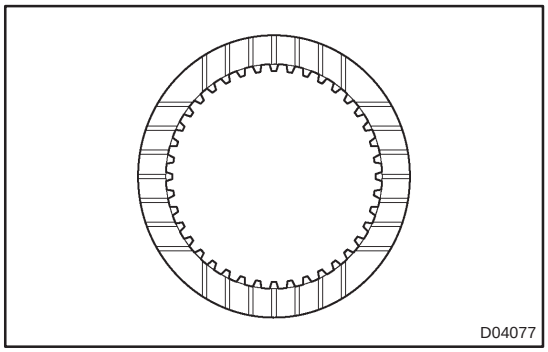


(c) Measure the U/D clutch pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).



Pack clearance: 1.51 – 1.90 mm (0.0594 – 0.0748 in.)

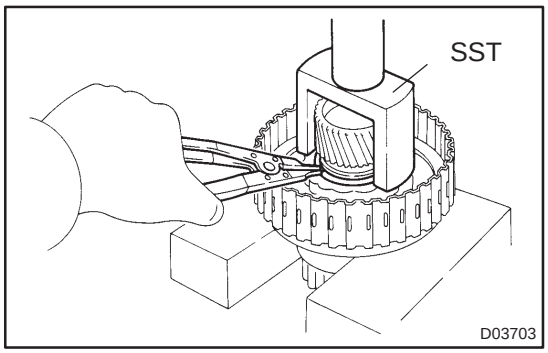
If the pack clearance is non–standard, inspect the discs, plates and flange.



2. REMOVE UNDERDRIVE CLUTCH DISC NO.1

(a) Using a screwdriver, remove the snap ring.

(b) Remove the flange, 3 discs and 3 plates from the U/D clutch drum.

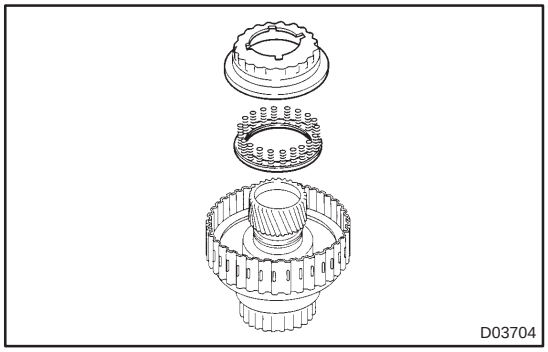


3. INSPECT UNDERDRIVE CLUTCH DISC NO.1

(a) Check to see if the sliding surface of the disc, plate and flange are worn or burnt. If necessary, replace them.

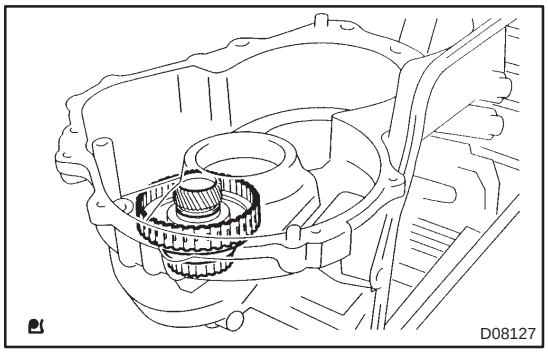
HINT:

- If the lining of the disc is peeling off or discolored, or even if a part of the printed mark is defaced, replace all discs.
- Before assembling new discs, soak them in ATF for at least 15 minutes.



4. REMOVE UNDERDRIVE CLUTCH PISTON SET

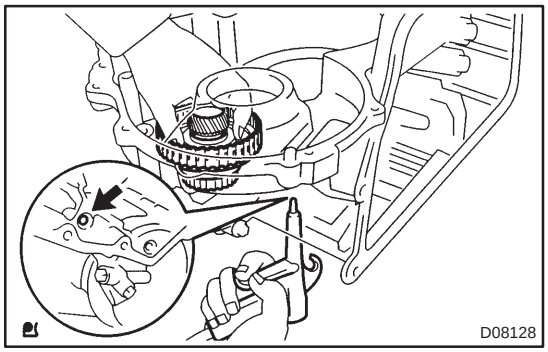
(a) Place SST on the clutch balancer and compress the spring with a press.
SST 09350–32014 (09351–32070)



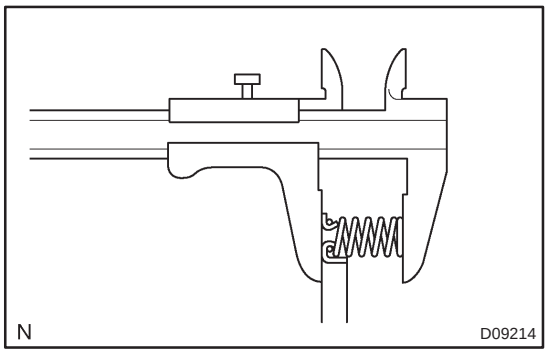
(b) Using a snap ring expander, remove the snap ring.

NOTICE:

- **Stop the press when the spring sheet is lowered to the place 1 – 2 mm (0.039 – 0.078 in.) from the snap ring grove.**
- **This prevents the spring sheet from being deformed.**
- **Do not expand the snap ring excessively.**



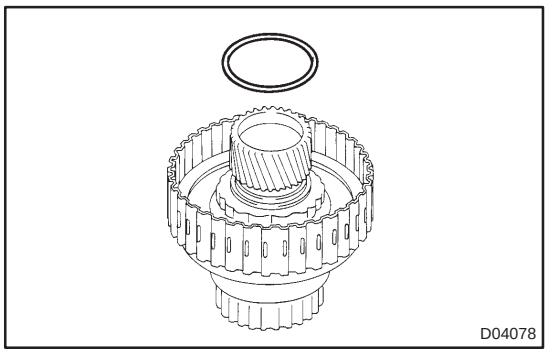
(c) Remove the clutch balancer and piston return spring from the U/D clutch drum.



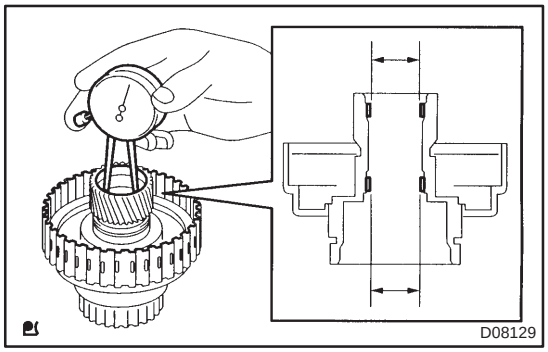
(d) Install the U/D clutch to the transaxle case.

NOTICE:

Be careful not to damage the oil seal rings.

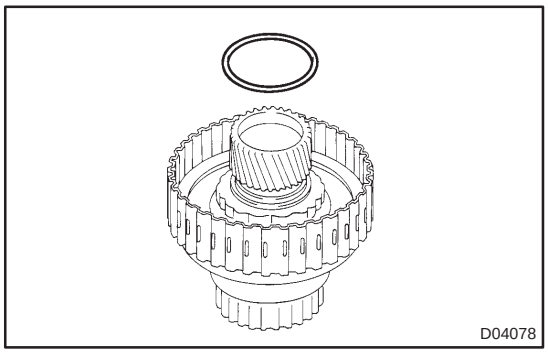


(e) Holding the U/D clutch piston with your hand, apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the transaxle case to remove the U/D clutch piston.



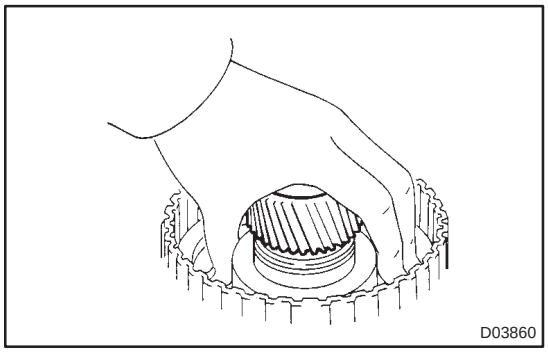
5. INSPECT UNDERDRIVE CLUTCH RETURN SPRING SUB–ASSY

(a) Using vernier calipers, measure the free length of the spring together with the spring seat.
Standard free length: 17.14 mm (0.6748 in.)



6. REMOVE UNDERDRIVE CLUTCH DRUM O–RING

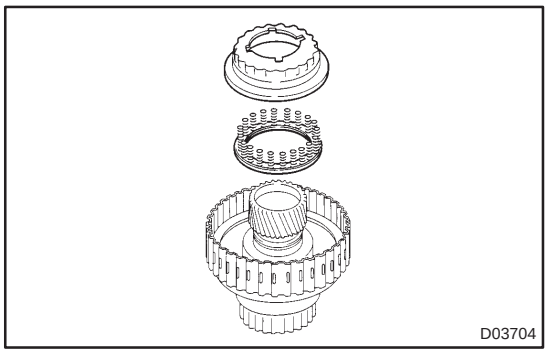
7. INSPECT UNDERDRIVE CLUTCH DRUM SUB–ASSY



(a) Using a dial indicator, measure the inside diameter of the U/D clutch drum bushing.
Standard drum bushing:
32.56 – 32.58 mm (1.2818 – 1.2826 in.)
Maximum drum bushing: 32.63 mm (1.2846 in.)

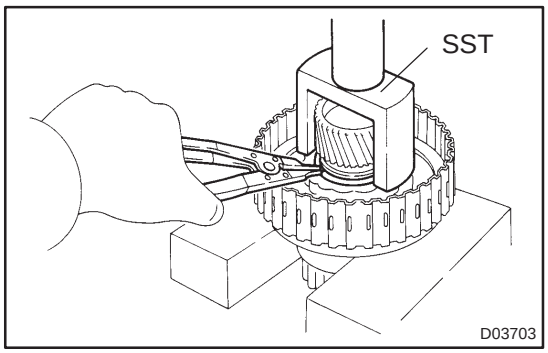
If the inside diameter is greater than the maximum, replace the U/D clutch drum.

8. INSTALL UNDERDRIVE CLUTCH DRUM O–RING



(a) Coat a new O–ring with ATF and install it to the U/D clutch drum.

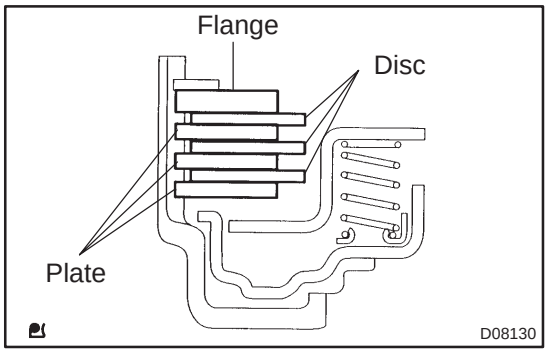
9. INSTALL UNDERDRIVE CLUTCH PISTON SET



(a) Coat the U/D clutch piston with ATF, and install it to the U/D clutch piston drum.

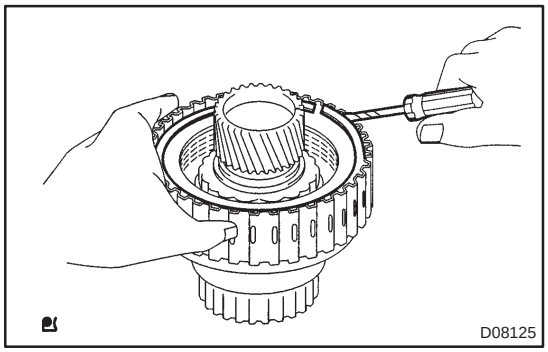
NOTICE:
Be careful not to damage the O–ring.

(b) Install the piston return spring and clutch balancer to the U/D clutch drum.



NOTICE:
Be careful not to damage the lip seal of the clutch balancer.

(c) Place SST on the clutch balancer and compress the piston return spring with a press.
SST 09350–32014 (09351–32070)

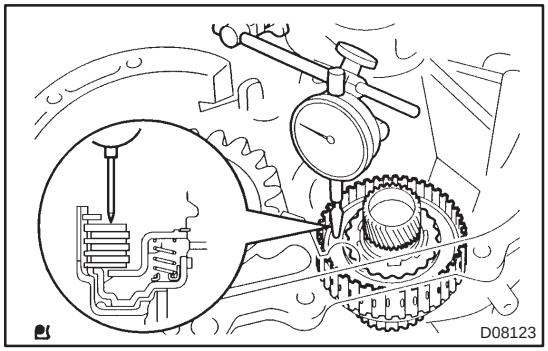


(d) Using a snap ring expander, install the snap ring to U/D clutch drum.

NOTICE:
- **Be sure the end gap of the snap ring is not aligned with the clutch balancer's claw.**
- **Stop the press when the spring sheet is lowered to the place 1 – 2 mm (0.039 – 0.078 in.) from the snap ring groove.**
- **This prevents the spring sheet from being deformed.**
- **Do not expand the snap ring excessively.**

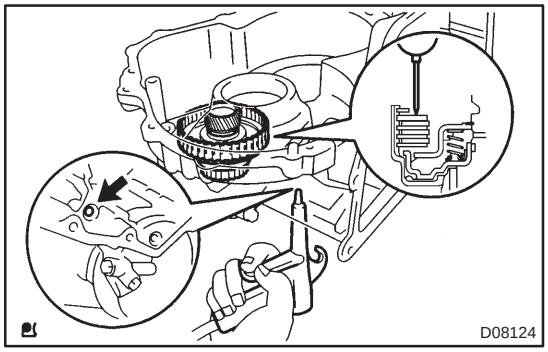
10. INSTALL UNDERDRIVE CLUTCH DISC NO.1

(a) Install the 3 plates, 3 discs and flange.



(b) Using a screwdriver, install the snap ring.
(c) Check that the end gap of the snap ring is not aligned with one of the cutouts.

11. INSPECT UNDERDRIVE PACK CLEARANCE



(a) Install the U/D clutch to the transaxle case.

NOTICE:

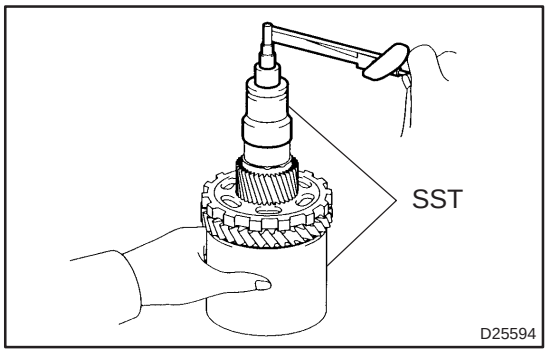
Be careful not to damage the oil seal rings.

(b) Set a dial indicator as shown in the illustration.

(c) Measure the U/D clutch piston stroke while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).

Park clearance: 1.51 – 1.90 mm (0.0594 – 0.0748 in.)

If the pack clearance is less than the minimum, parts may have been assembled incorrectly, so check and reassemble again.
If the park clearance is non–standard, select another flange.
HINT:
There are 3 flanges in different thickness.

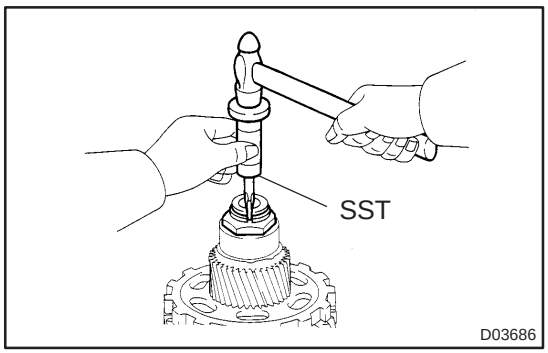


Flange thickness: mm (in.)

No.	Thickness	No.	Thickness
A	3.0 (0.118)	C	3.4 (0.134)
B	3.2 (0.126)	–	–

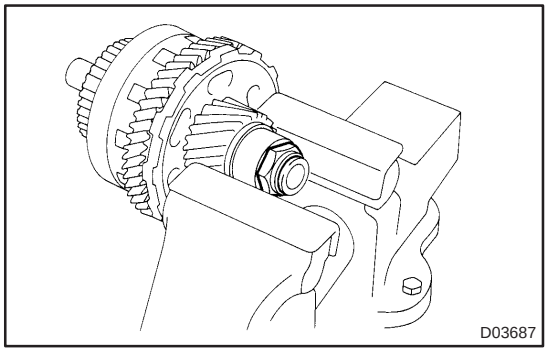
UNDERDRIVE PLANETARY GEAR ASSY (U241E)

4006U–01



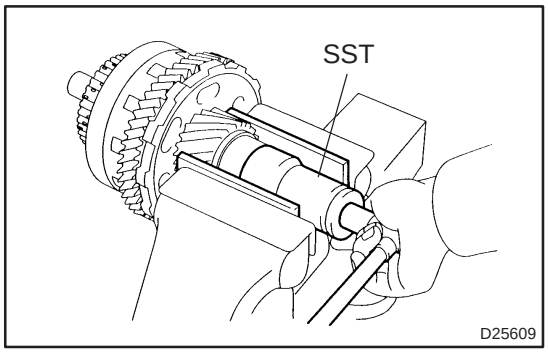
OVERHAUL

1. INSPECT UNDERDRIVE PLANETARY GEAR PRELOAD



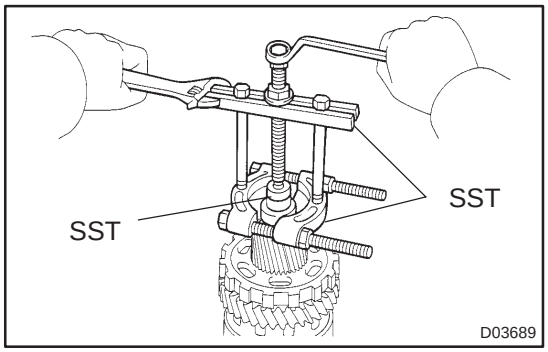
(a) Using SST a torque wrench, measure the turning torque of U/D planetary gear assy while rotating the torque wrench at 60 rpm.
SST 09387–00050, 09564–16020
Turning torque at 60 rpm:
0.23 – 5.01 N·m (2 – 51 kgf·cm, 2.0 – 44.3 in.·lbf)

HINT:
Use a torque wrench with a fulcrum length of 160 mm (6.3 in.).

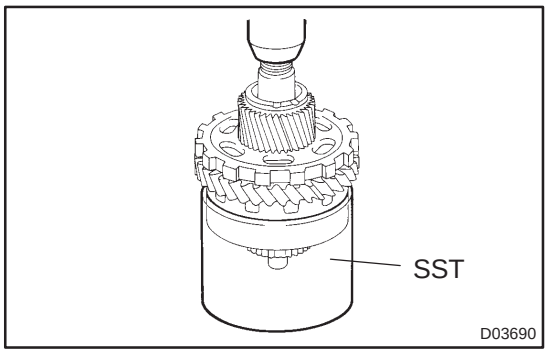


2. REMOVE CYLINDRICAL ROLLER BEARING RACE INNER

(a) Using SST, loosen the staked part of the nut.
SST 09930–00010 (09931–00010, 09931–00020), 09387–00050

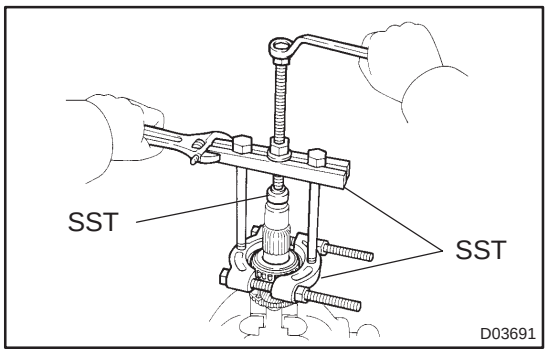


(b) Clamp the U/D planetary gear in soft jaw vise.

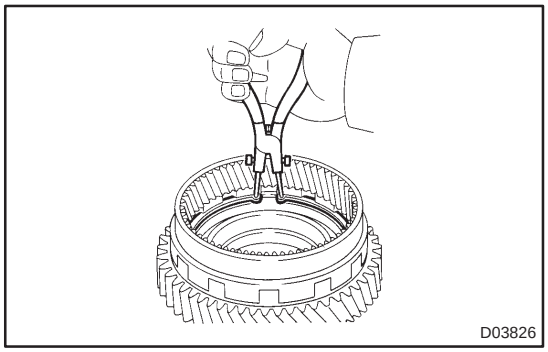


NOTICE:
Be careful not to damage the differential drive pinion.

(c) Using SST, remove lock nut.
SST 09564–16020

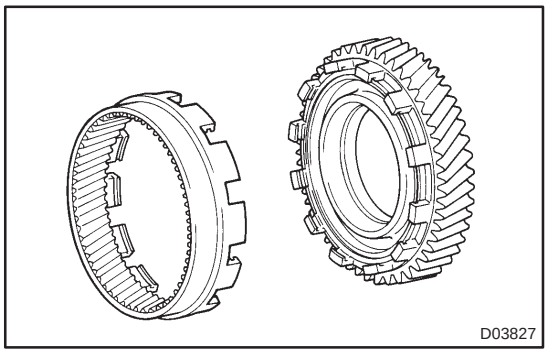


(d) Using SST, remove cylindrical roller bearing inner race.
SST 09950–00020, 09950–00030, 09950–60010 (09951–00340)

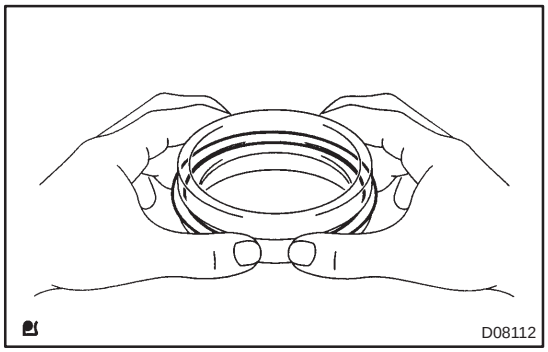


3. REMOVE UNDERDRIVE PLANETARY GEAR ASSY

(a) Using SST and press, remove the differential drive pinion, parking lock gear, counter driven gear with U/D planetary ring gear and front tapered roller bearing.
SST 09387–00050

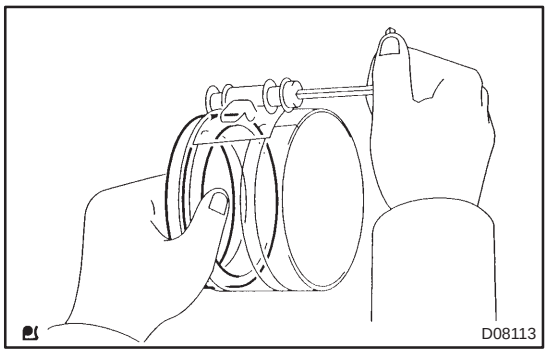


(b) Clamp the U/D planetary gear in soft jaw vise.
(c) Using SST, remove rear tapered roller bearing form the U/D planetary gear.
SST 09950–00020, 09950–00030, 09950–60010 (09951–00320)

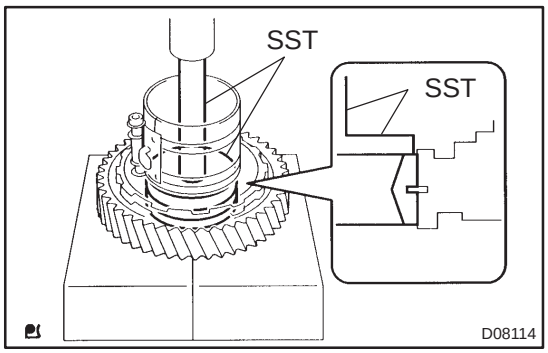


4. REMOVE UNDERDRIVE PLANETARY RING GEAR

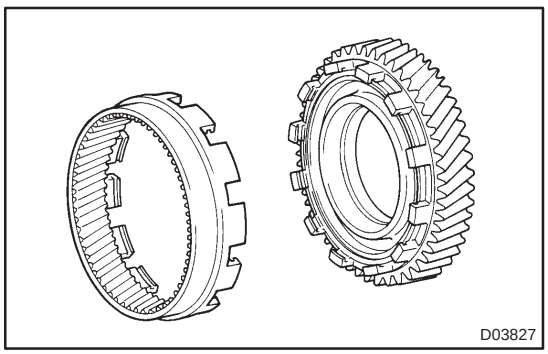
(a) Using a snap ring pliers, remove the snap ring.



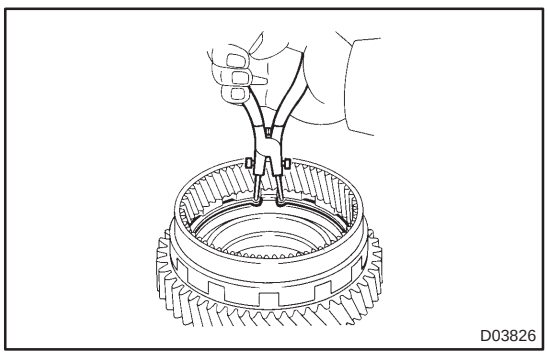
(b) Remove the U/D planetary ring gear from the counter driven gear.



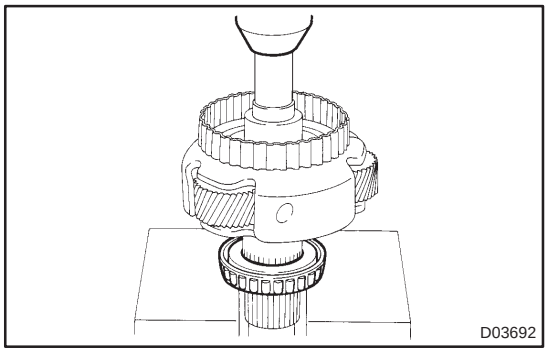
5. INSTALL UNDERDRIVE PLANETARY RING GEAR



(a) Install a new snap ring to the outer race of the tapered roller bearing.

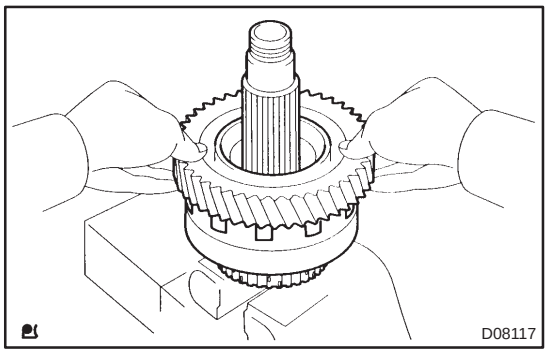


(b) Using a piston ring compressor, squeeze the snap ring.

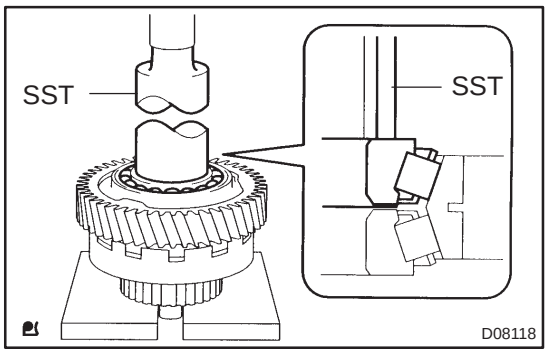


(c) Using SST a press, press in the outer race of the tapered roller bearing.
SST 09950–60020 (09951–00890), 09950–70010 (09951–07100)

(d) Install the underdrive planetary ring gear to the counter driven gear.



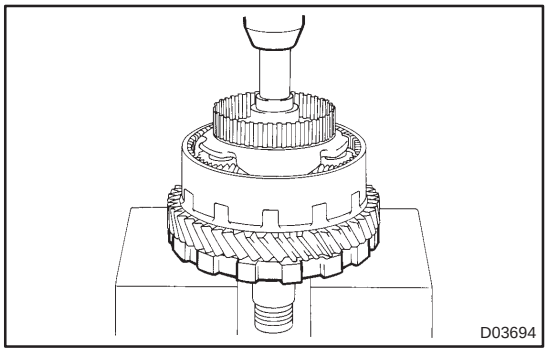
(e) Using snap ring pliers, install the snap ring.



6. INSTALL UNDERDRIVE PLANETARY GEAR ASSY

(a) Using a press, install the tapered roller bearing.

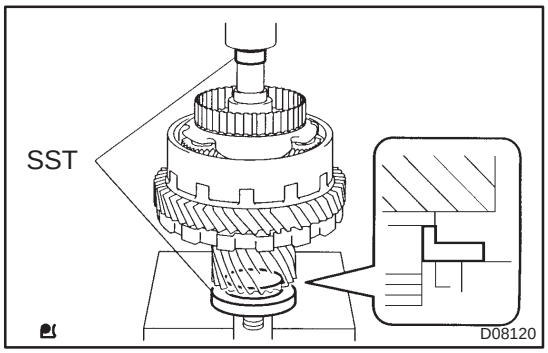
(b) Install the counter driven gear with planetary ring gear to the U/D planetary gear.



(c) Using SST and a press, press in the tapered roller bearing.

SST 09316–60011 (09316–00011)

NOTICE:

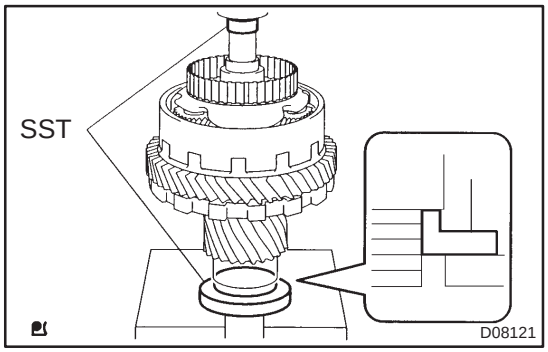


Press in the counter driven gear while rotating it.

(d) Using a press, install the parking lock gear.

NOTICE:

Press in the counter driven gear while rotating it.

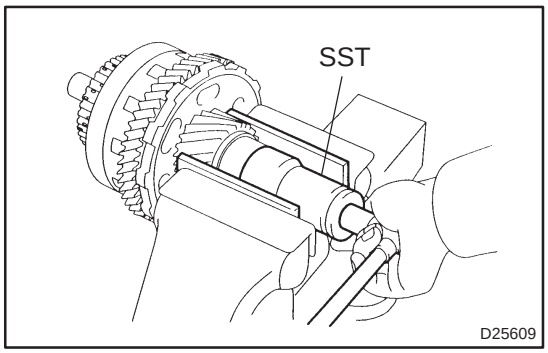


(e) Using SST and a press, install the differential drive pinion.

NOTICE:

Press in the counter driven gear while rotating it.

SST 09506–35010, 09950–60010 (09951–00250)



(f) Using SST and a press, in the cylindrical roller bearing inner race.

NOTICE:

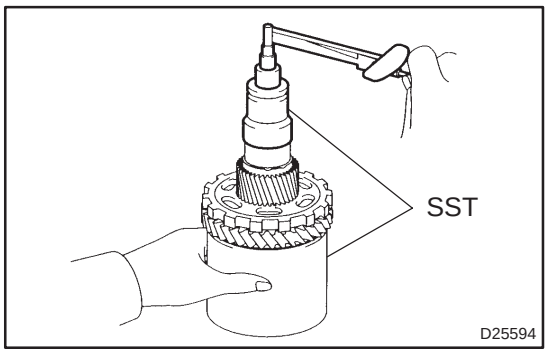
Press in the counter driven gear while rotating it.

SST 09506–35010, 09950–60010 (09951–00250)

(g) Clamp the U/D planetary gear in soft jaw vise.

NOTICE:

Be careful not to damage the differential drive pinion.



(h) Using SST, install a new lock nut.

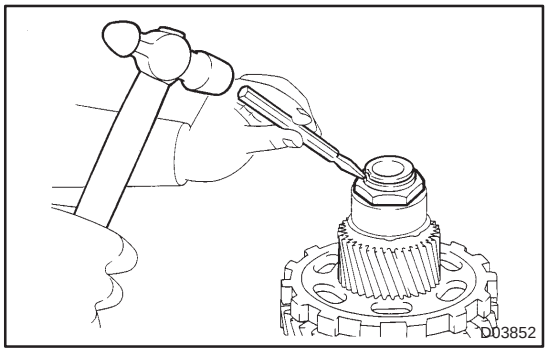
Torque: 280 N·m (2,855 kgf·cm, 207 in.·lbf)

SST 09564–16020

HINT:

Use a torque wrench with a fulcrum length of 750 mm (29.53 in.).

(i) Using SST and a torque wrench, measure the turning torque of U/D planetary gear assy while rotating the torque wrench at 60 rpm.



SST 09564–16020, 09387–00050

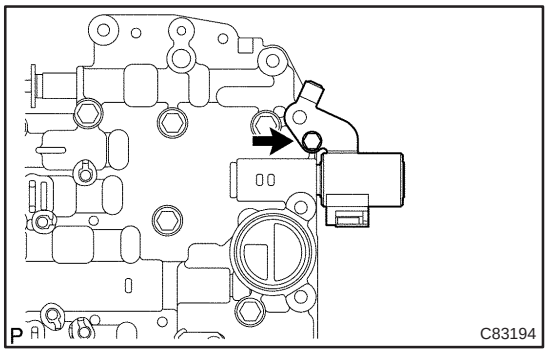
Turning torque at 60 rpm:

0.23 – 5.01 N·m (2 – 51 kgf·cm, 2.0 – 44.3 in.·lbf)

HINT:

Use a torque wrench with a fulcrum length of 160 mm (6.30 in.).

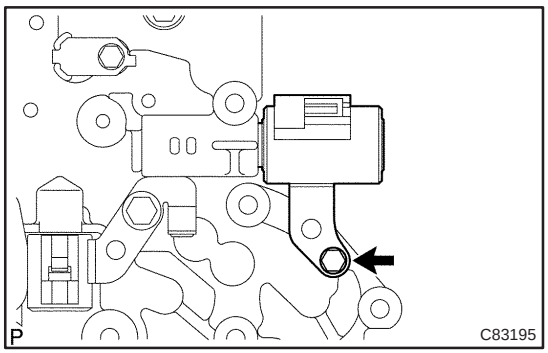
(j) Using a pin punch and hammer, stake the lock nut.



NOTICE:

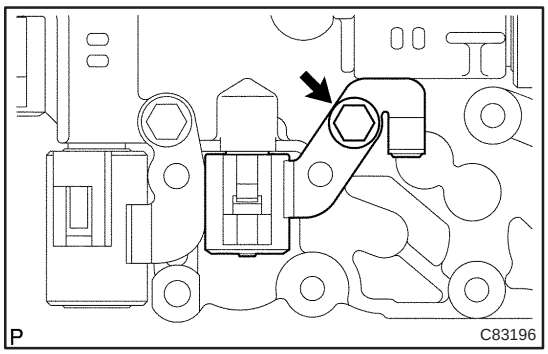
Make sure that there are no cracks on the nut.

TRANSMISSION VALVE BODY ASSY (U241E)



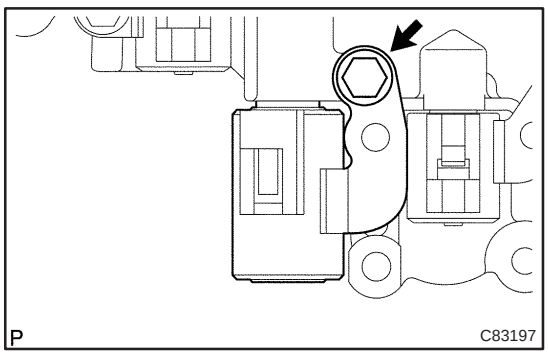
OVERHAUL

4006V–01



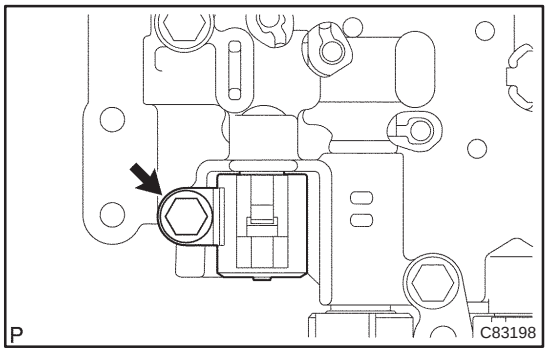
1. REMOVE LINE PRESSURE CONTROL SOLENOID ASSY

(a) Remove the bolt and line pressure control solenoid assy.



2. REMOVE SHIFT SOLENOID VALVE SL1

(a) Remove the bolt and shift solenoid valve SL1.



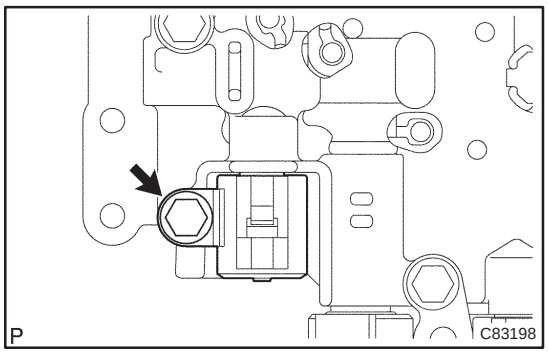
3. REMOVE SHIFT SOLENOID VALVE DSL

(a) Remove the bolt and shift solenoid valve DSL.

4. REMOVE SHIFT SOLENOID VALVE SL2

(a) Remove the bolt and shift solenoid valve SL2.

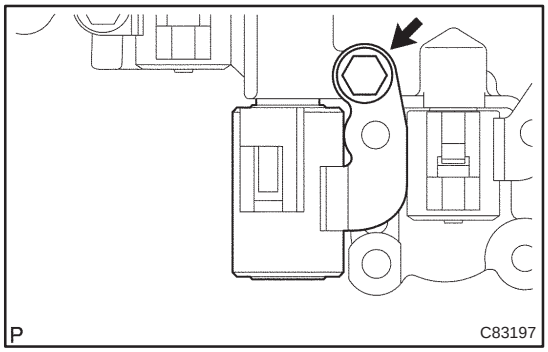
5. REMOVE SHIFT SOLENOID VALVE S4



(a) Remove the bolt and shift solenoid valve S4.

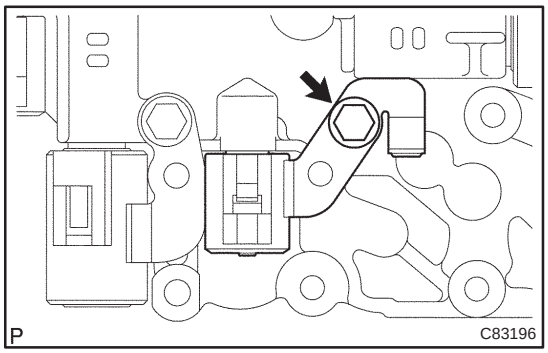
6. REMOVE MANUAL VALVE

(a) Remove the manual valve from the valve body assy.



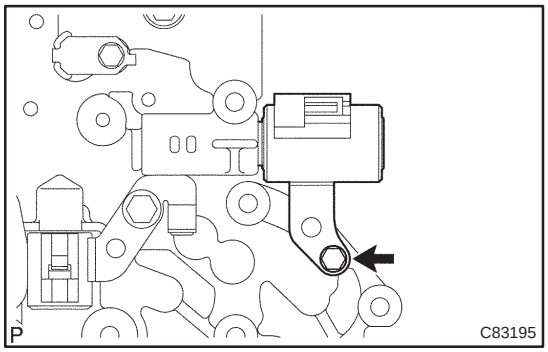
7. INSTALL MANUAL VALVE

(a) Coat the manual valve with ATF, install it to the valve body assy.



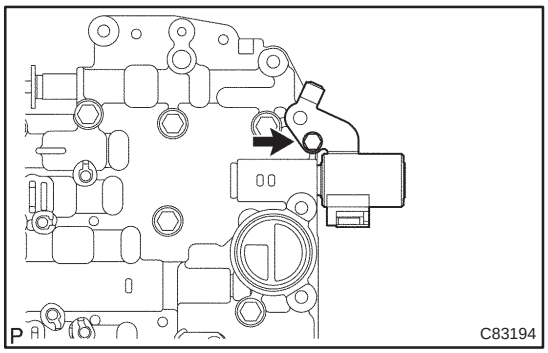
8. INSTALL SHIFT SOLENOID VALVE S4

(a) Install the bolt and shift solenoid valve S4.



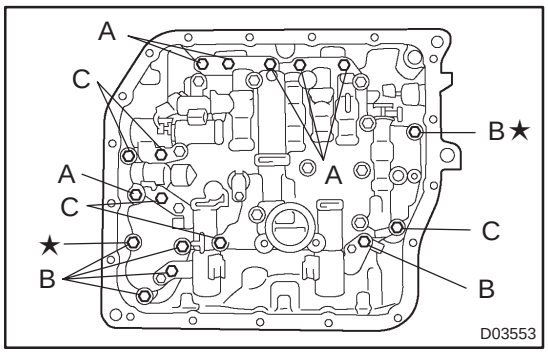
9. INSTALL SHIFT SOLENOID VALVE SL2

(a) Install the bolt and shift solenoid valve SL2.



10. INSTALL SHIFT SOLENOID VALVE DSL

(a) Install the bolt and shift solenoid valve DSL.



11. INSTALL SHIFT SOLENOID VALVE SL1

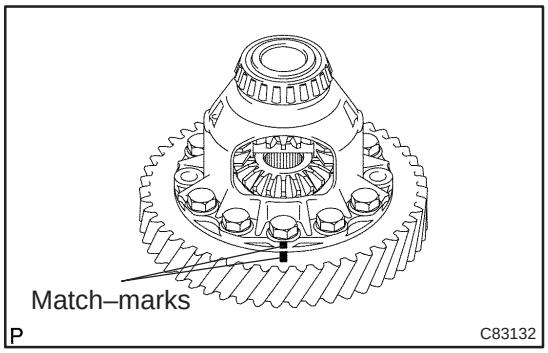
(a) Install the bolt and shift solenoid valve SL1.

12. INSTALL LINE PRESSURE CONTROL SOLENOID ASSY

(a) Install the bolt and line pressure control solenoid assy.

13. INSTALL TRANSMISSION VALVE BODY ASSY

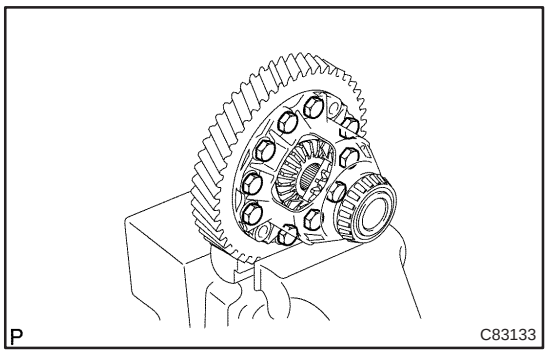
(a) Align the groove of the manual valve with the pin of lever.
(b) Install the 17 bolts.
Torque: 11 N·m (110 kgf·cm, 8 ft·lbf)
Bolt length:
Bolt A: 25 mm (0.984 in.)
Bolt B: 41 mm (1.614 in.)
Bolt C: 45 mm (1.771 in.)



NOTICE:

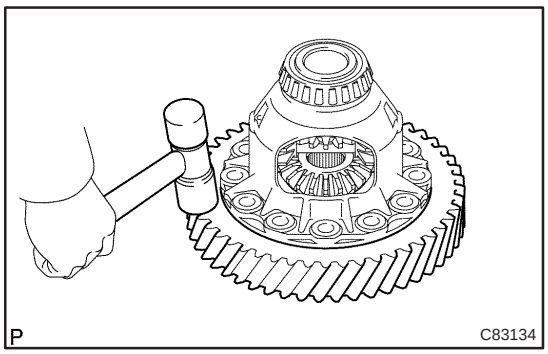
- **Push the valve body against the accumulator piston spring and the check ball body to install it.**
- **Tighten those bolts marked by ★ in the illustration first temporarily because they are positioning bolts.**

FRONT DIFFERENTIAL ASSY (U241E)

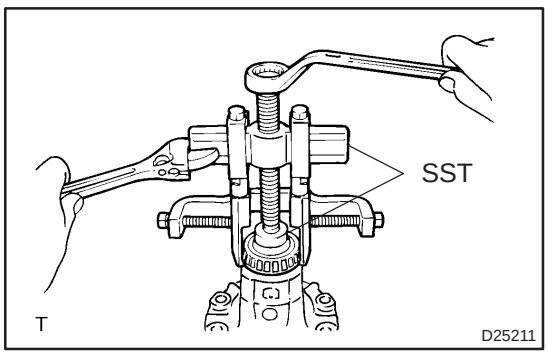


OVERHAUL

4006W–01

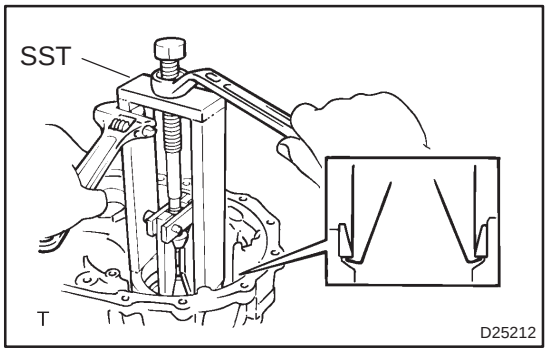


1. REMOVE FRONT DIFFERENTIAL RING GEAR

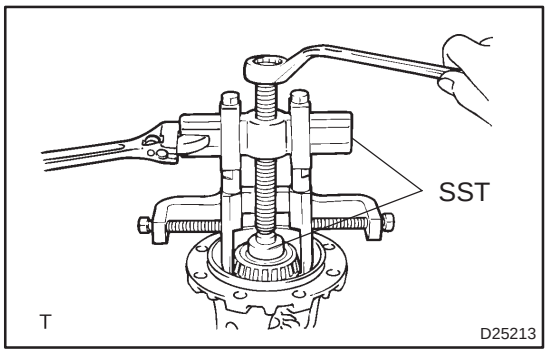


(a) Place the match–marks on the ring gear and differential case.

(b) Remove the 10 bolts.



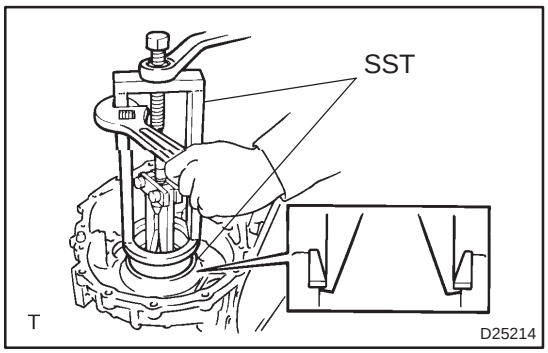
(c) Using a plastic hammer, tap on the ring gear to remove it from the case.



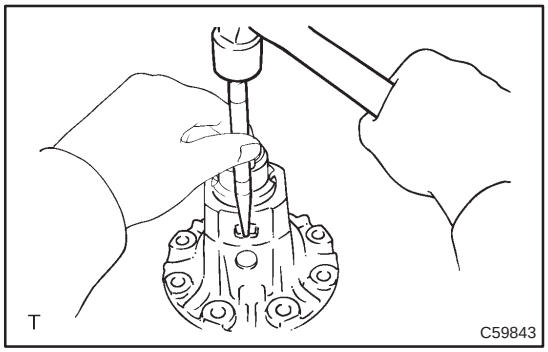
2. REMOVE FR DIFFERENTIAL CASE FRONT TAPERED ROLLER BEARING

(a) Using SST, remove the front differential case tapered roller bearing front inner race from the differential case.

SST 09950–40011 (09951–04020, 09952–04010, 09953–04020, 09954–04010, 09955–04061, 09957–04010, 09958–04011), 09950–60010 (09951–00340)

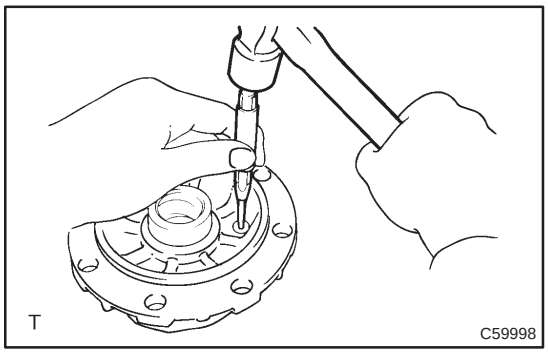


(b) Using SST, remove the front differential case tapered roller bearing front outer race and differential case washer.
SST 09387–00040 (09387–01030, 09387–01040, 09387–02010, 09387–02020)

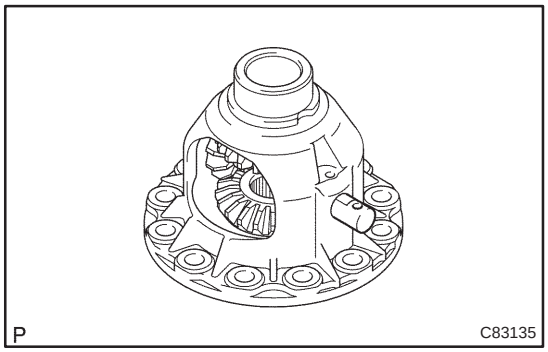


3. REMOVE FR DIFFERENTIAL CASE REAR TAPERED ROLLER BEARING

(a) Using SST, remove the front differential case tapered roller bearing rear inner race from the differential case.
SST 09950–40011 (09951–04020, 09952–04010, 09953–04020, 09954–04010, 09955–04061, 09957–04010, 09958–04011), 09950–60010 (09951–00340)

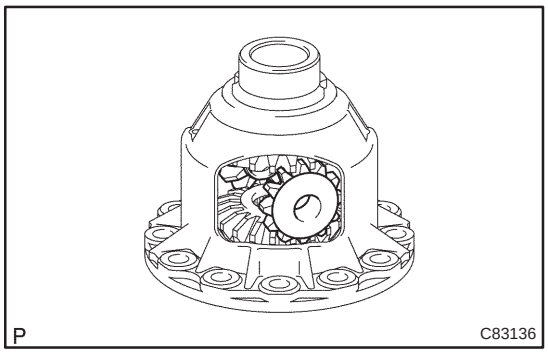


(b) Using SST, front differential case tapered roller bearing rear outer race and differential case washer.
SST 09387–00040 (09387–01030, 09387–01040, 09387–02010, 09387–02020)

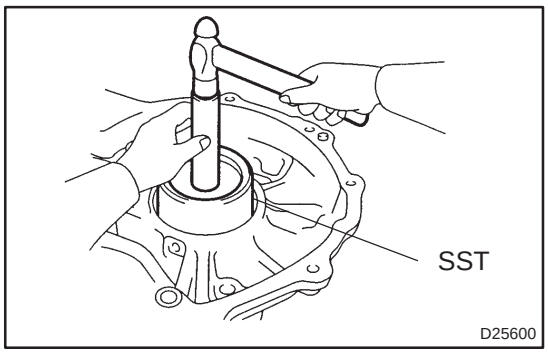


4. REMOVE FRONT DIFFERENTIAL PINION SHAFT STRAIGHT PIN

(a) Using a punch and a hummer, loosen the staked part of the differential case.

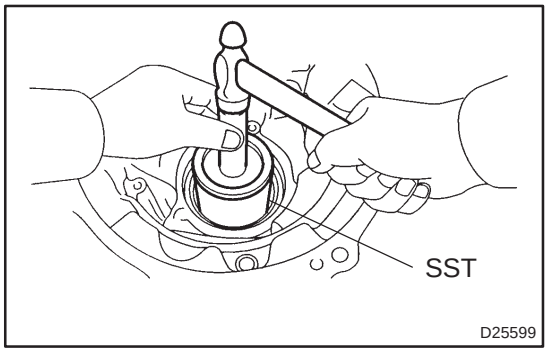


(b) Using a pin punch (5 mm), drive out the pin from ring gear side.



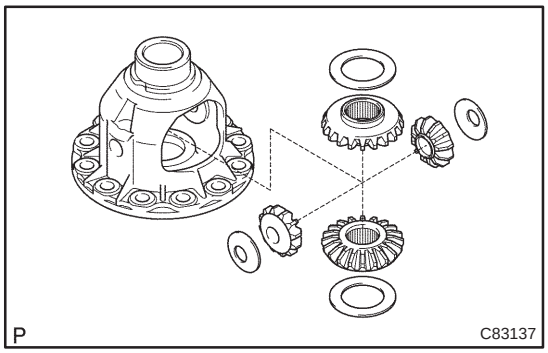
5. REMOVE FRONT DIFFERENTIAL PINION SHAFT NO.1

(a) Remove the front differential pinion shaft No. 1 from the differential case.



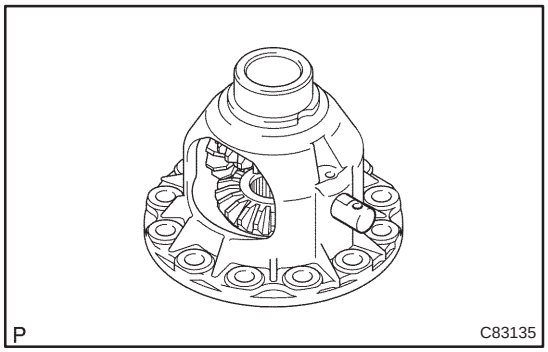
6. REMOVE FRONT DIFFERENTIAL SIDE GEAR

(a) Remove the 2 front differential pinions, 2 pinion thrust washers, 2 front differential side gears and 2 side gear thrust washers from the differential case.



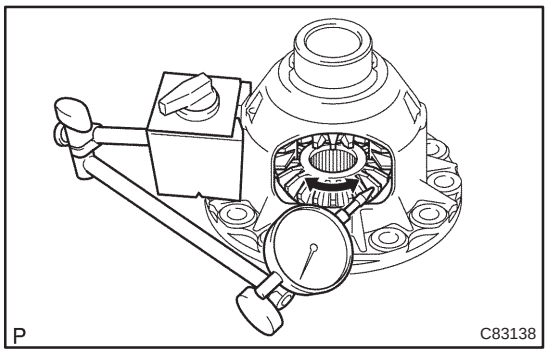
7. REMOVE DIFFERENTIAL SIDE BEARING RETAINER OIL SEAL

(a) Place the transaxle case in vise.
(b) Using SST, remove the oil seal.
SST 09308–00010



8. REMOVE TRANSAXLE HOUSING OIL SEAL

(a) Place the transaxle housing in vise.
(b) Using SST, remove the oil seal.
SST 09308–00010

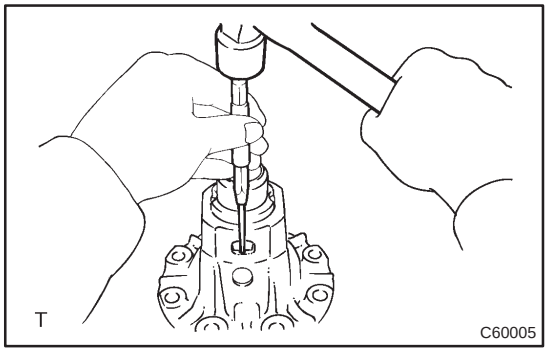


9. INSTALL FRONT DIFFERENTIAL SIDE GEAR

(a) Coat the 2 front differential side gears, 2 side gear thrust washers, 2 front differential pinions and 2 pinion thrust washers with ATF and install them to the differential case.

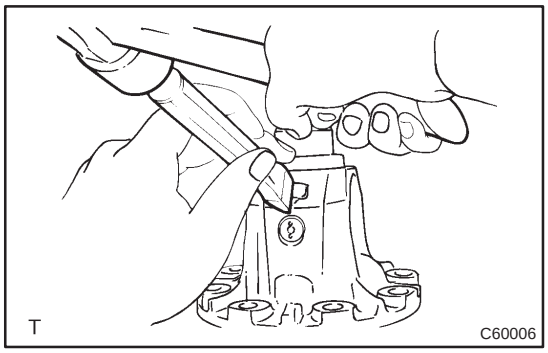
10. INSTALL FRONT DIFFERENTIAL PINION SHAFT NO.1

(a) Coat the front differential pinion shaft No. 1 with ATF and install it to the differential case.



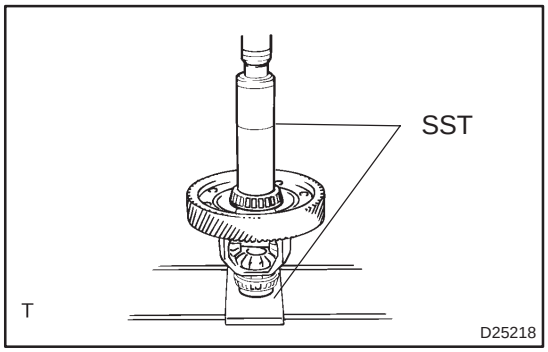
11. INSPECT FRONT DIFFERENTIAL SIDE GEAR BACKLASH

(a) Using a dial indicator, inspect the backlash of the side gear.



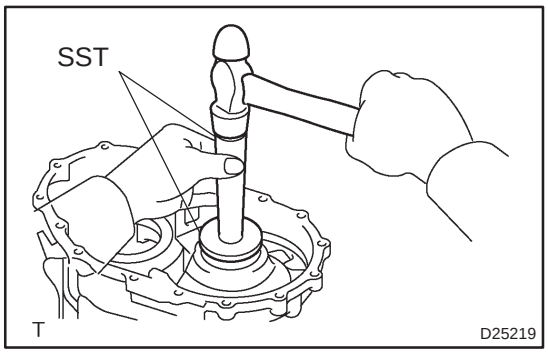
Standard backlash:
0.05 – 0.20 mm (0.0020 – 0.0079 in.)
Thrust washer thickness:

Mark	Thickness
–	1.0 mm (0.0394 in.)
–	1.1 mm (0.0433in.)
–	1.2 mm (0.0472 in.)
–	1.3 mm (0.0512 in.)

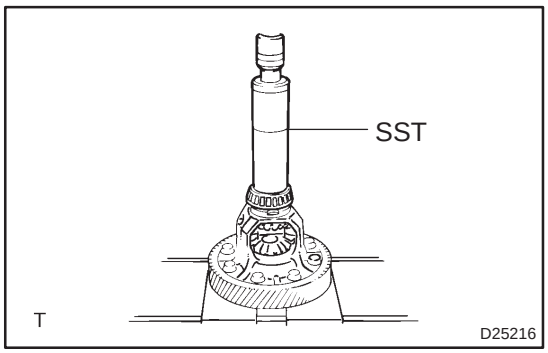


12. INSTALL FRONT DIFFERENTIAL PINION SHAFT STRAIGHT PIN

(a) Using a pin punch and hammer, install the pinion shaft straight pin.

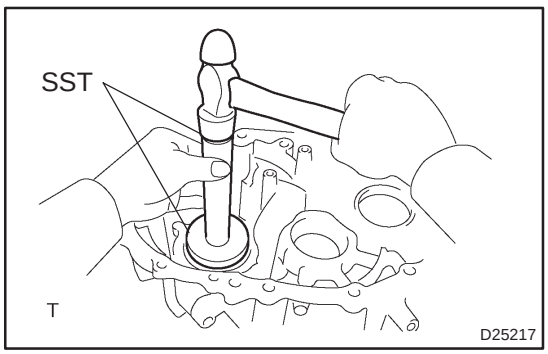


(b) Using a chisel and hammer, stake the differential case.

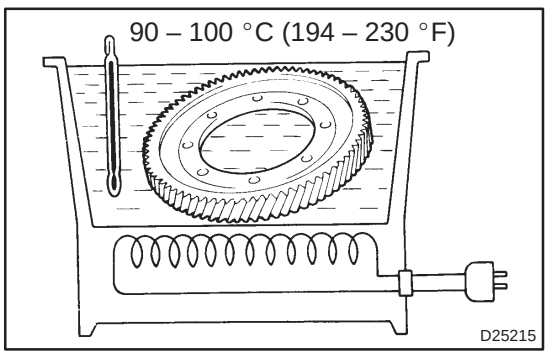


13. INSTALL FR DIFFERENTIAL CASE REAR TAPERED ROLLER BEARING

(a) Using SST and a press, install the front differential case tapered roller bearing rear inner race to the differential case.
SST 09608–06041

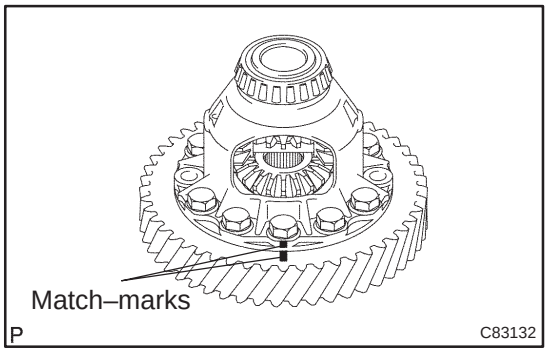


(b) Using SST and a hammer, install the case washer and front differential case tapered roller bearing rear outer race to the transaxle case.
SST 09950–60020 (09951–00710), 09950–70010 (09951–07100)

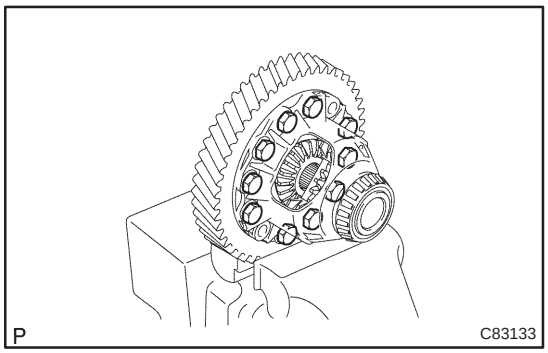


14. INSTALL FR DIFFERENTIAL CASE FRONT TAPERED ROLLER BEARING

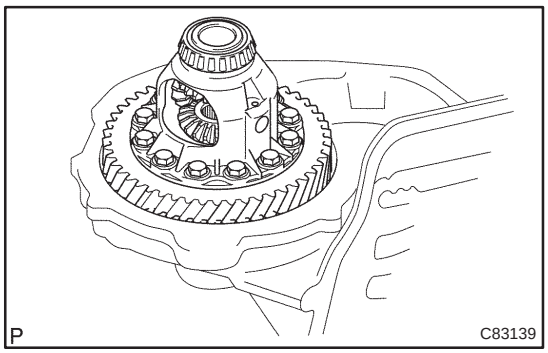
(a) Using SST and a press, install the front differential case tapered roller bearing front inner race to the differential case.
SST 09608–06041



(b) Using SST and a hammer, install the front differential case tapered roller bearing front outer race to the transaxle housing.
SST 09950–60020 (09951–00680), 09950–70010 (09951–07100), 09950–60010 (09951–00340)

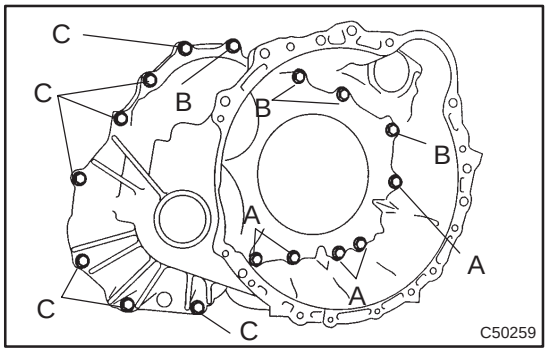


15. INSTALL FRONT DIFFERENTIAL RING GEAR



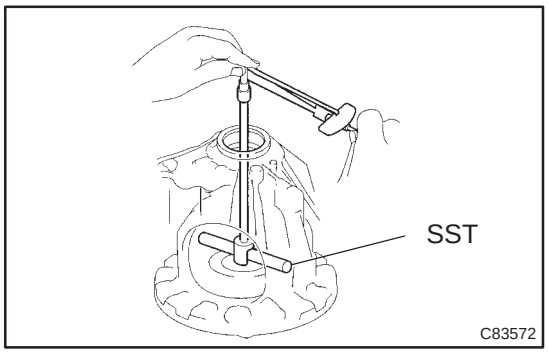
(a) Using ATF and hear, hear the front differential ring gear to 90 – 110 °C (194.0 – 230.0 °F).
(b) Clean the contact surface of the front differential case.

(c) Set the match–marks, install the front differential ring gear case quickly.



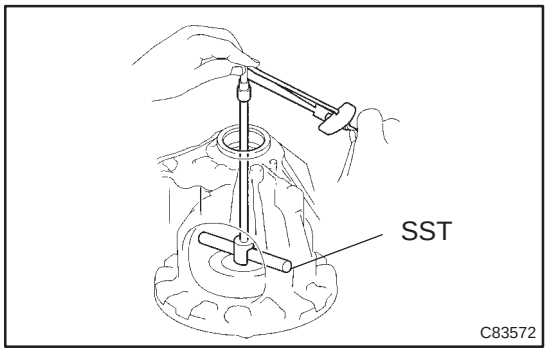
(d) Tighten the 10 bolts.
Torque: 95 N·m (969 kgf·cm, 70 ft·lbf)

16. INSPECT TAPERED POLLER BEARING PRELOAD



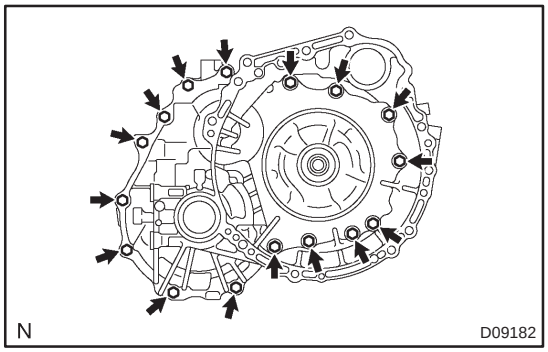
(a) Install the differential assy to the transaxle case.

(b) Install the transaxle housing to the transaxle case.

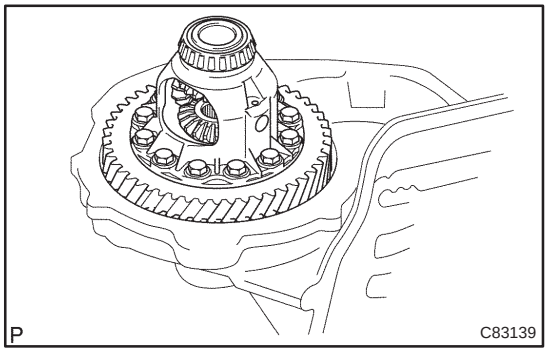


(c) Install the 16 bolts.
Torque:
Bolt A, B: 29.4 N·m (300 kgf·cm, 21.7 ft·lbf)
Bolt C: 22.1 N·m (225 kgf·cm, 16.3 ft·lbf)

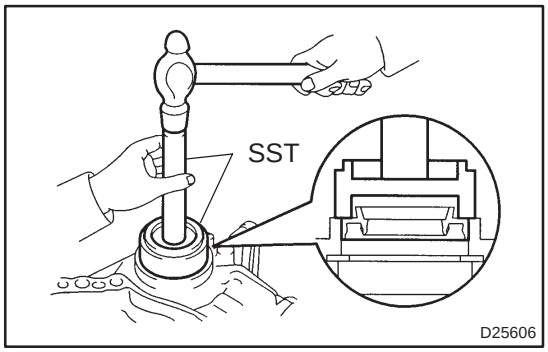
Bolt	Bolt length (mm)
A, B	42
C	50



(d) Using SST, turn the differential assy.
SST 09564–32011

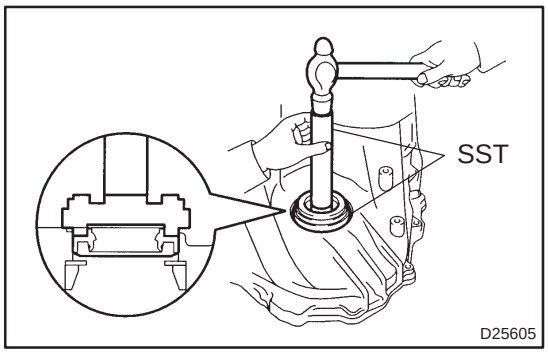


(e) Using SST and torque wrench, measure the preload of the differential assy.
SST 09564–32011
Preload
New bearing:
0.20 – 0.69 N·m (2.0 – 7.0 kgf·cm, 1.8 – 6.1 in.·lbf)
Used bearing:
0.10 – 0.35 N·m (1.0 – 3.6 kgf·cm, 0.9 – 3.1 in.·lbf)
Adjusting shim thickness: mm (in.)



Mark	Thickness
0	1.90 (0.074)
1	1.95 (0.077)
2	2.00 (0.079)
3	2.05 (0.081)
4	2.10 (0.083)
5	2.15 (0.085)
6	2.20 (0.087)
7	2.25 (0.089)
8	2.30 (0.091)
9	2.35 (0.093)
A	2.40 (0.094)
B	2.45 (0.096)
C	2.50 (0.098)
D	2.55 (0.100)
E	2.60 (0.102)
F	2.65 (0.104)
G	2.70 (0.106)
H	2.75 (0.108)
J	2.80 (0.110)

(f) Remove the 16 bolts.
(g) Using a practice hammer, remove the transaxle housing.



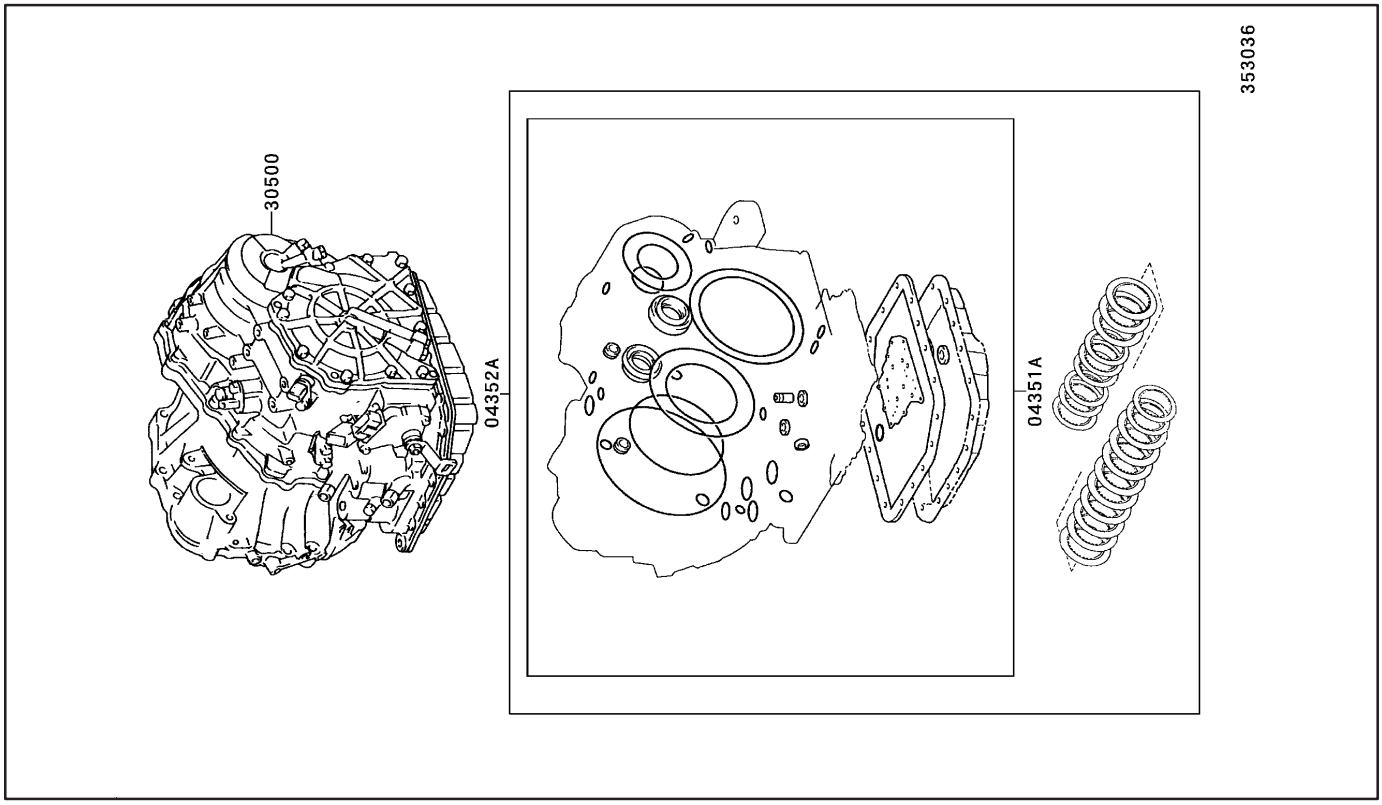
(h) Remove the differential assy.

17. INSTALL TRANSAXLE HOUSING OIL SEAL

(a) Using SST, drive into a new oil seal.
SST 09350–32014 (09351–32150), 09950–70010 (09951–07150)

(b) Coat the rip of oil seal with a little MP grease.

18. INSTALL DIFFERENTIAL SIDE BEARING RETAINER OIL SEAL



(a) Using SST, drive into a new oil seal.
SST 09350–32014 (09351–32150), 09950–70010 (09951–07150)

(b) Coat the rip of the oil seal with a little MP grease.

HOW TO USE THIS ENGINE REPAIR MANUAL (1AZ–FE)

0107M–01

GENERAL INFORMATION

1. GENERAL DESCRIPTION

(a) This manual is made in accordance with SAE J2008.

(b) Generally repair operations can be separated in the following 3 main processes:
1. Diagnosis
2. Removing and Installing, Replacing, Disassembling, Installing and Checking, Adjusting
3. Final Inspection

(c) This manual explains ”Removing and Installing, Replacing, Disassembling, Installing and Checking, Adjusting”, but ”Final Inspection” is omitted.

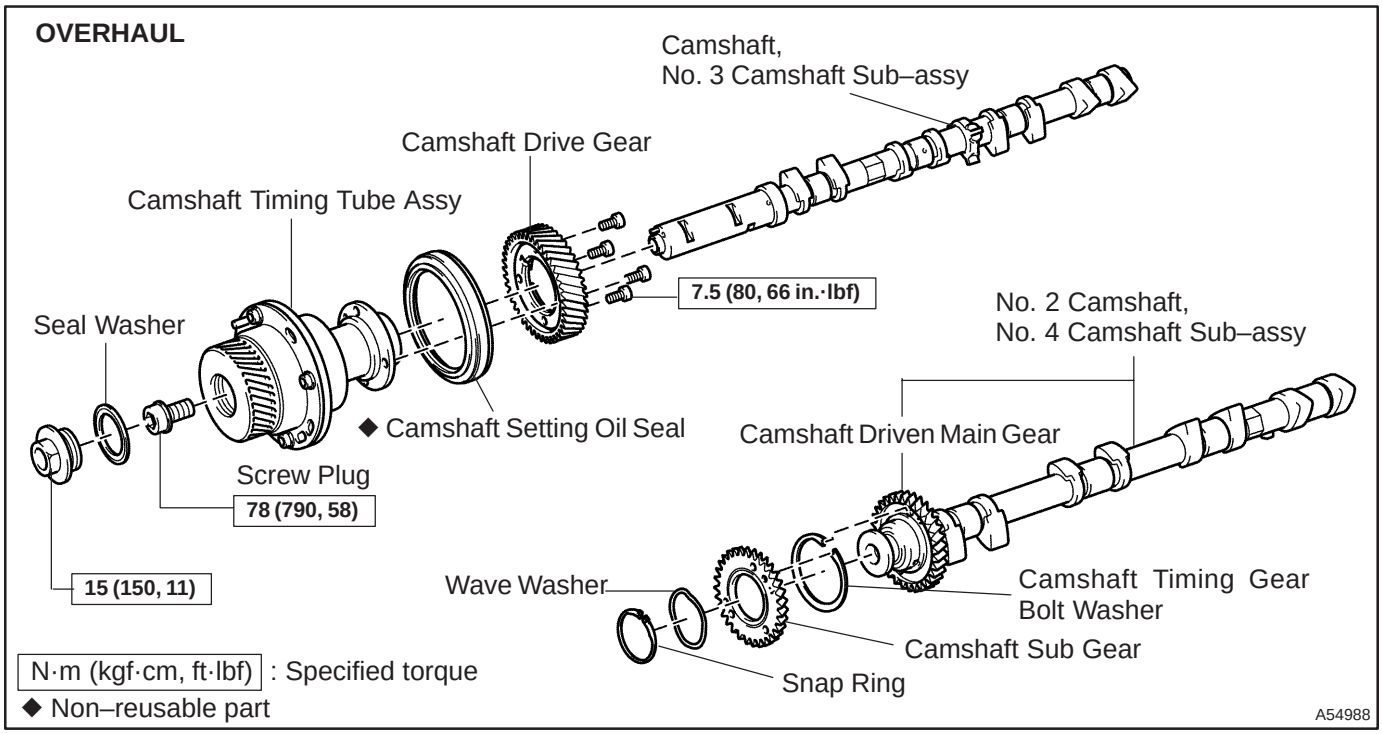
(d) The following essential operations are not written in this manual, however these operations must be done in the practical situation.
(1) Operation with a jack or lift
(2) Cleaning of a removed part when necessary
(3) Visual check

2. INDEX

(a) An alphabetical INDEX is provided as a section on the end of the book to guide you to the item to be repaired.

3. PREPARATION

(a) Use of special service tools (SST) and special service materials (SSM) may be required, depending on the repairing condition. Be sure to use SST and SSM when they are required and follow the working procedure properly. A list of SST and SSM is in the Preparation section of this manual.



4. REPAIR PROCEDURES

(a) Component drawing is placed as the section or title when necessary.

(b) Illustrations of the parts catalog are placed as the ”disassembled parts drawing” so that it enables you to understand the fitting condition of the components.

(c) Non–reusable parts, grease applied parts, precoated parts and tightening torque are specified in the components drawing.

Example:

(d) Tightening torque, oil applying position, and non–reusable parts are described as important points in the procedure.

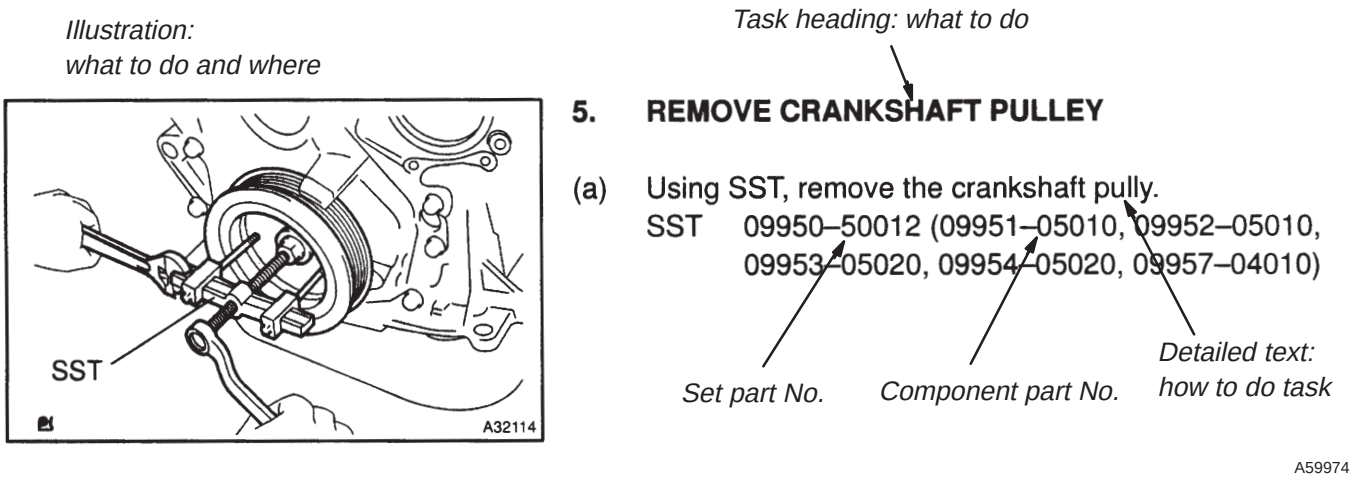
NOTICE:

There are cases where such information can only be indicated by an illustration. In that case, all the information such as torque, oil, etc. are described in the illustration.

(e) Installing procedure of operation items is performed in the reverse order of the removing, and only the important points are described.

(f) Only items with points are described in the procedure, and the operational portion and content are placed using an illustration. In the explanations, details of the operational method, standard value and notice are placed.

(g) There may be a case where the illustrations of similar models are used. In that case the details may be different from the actual vehicle.



(h) The procedures are presented in a step–by–step format:

(1) The illustration shows what to do and where to do it.

(2) The task heading tells what to do.

(3) The detailed text tells how to perform the task and gives other information such as specifications and warnings.

Example:

HINT:

This format provides an experienced technician with a FAST TRACK to the necessary information. The task heading can be read at a glance when necessary, and the text below provides detailed information. Important specifications and warnings always stand out in bold type.

5. SERVICE SPECIFICATIONS

(a) Specifications are presented in bold type throughout the manual. You never have to leave the procedure to look up your specifications. The specifications are also found in the Service Specifications section for a quick reference.

6. TERMS DEFINITION

CAUTION	Indicate the possibility of injury to you or other people.
NOTICE	Indicate the possibility of damage to the components being repaired.
HINT	Provide additional information to help you perform the repair efficiently.

7. SI UNIT

(a) The UNITS given in this manual are primarily expressed according to the SI UNIT (International System of Unit), and alternately expressed in the metric system and in the English System.

Example:

Torque: 30 N·m (310 kgf·cm, 22 ft·lbf)

REPAIR INSTRUCTION FOR ENGINE REPAIR MANUAL (1AZ–FE)

0107N–01

PRECAUTION

1. TO PREVENT FROM ENTERING FOREIGN SUBSTANCES.

(a) When foreign substances such as dust, grain of sand or metallic dust enter inside of engine, it often causes functional failure of the engine.

(1) Precaution before disassembly.

- Remove adequately all sand and mud adhere to the outside of engine .

(2) Precaution at reassembly.

- Protect disassembled parts from dust by using vinyl sheet to cover.

2. TO PREVENT SCRATCHES ON THE PARTS.

(a) The existence of scratches on the contact and revolving surfaces often causes oil leak and seisure.

(1) Precautions at disassembly and reassembly.

- When disassemble the contact surface of the parts, use plastic hummer striking lightly. (Do not pry out by screwdriver).
- When fix the parts to the vise, do not directly catch it in the vise. Fix the parts through aluminum bar.

3. TO CLEAN AND WASH THE PARTS.

(a) Each parts needs to be well cleaned, washed, and dried by air, and apply specified oil before reassembly.

(1) Cleaning and washing by alkaline solvent is prohibited:

- Parts made of aluminum and rubber. (ex. cylinder head cover gasket etc.)

(2) Cleaning and washing by flushing oil (ex. kerosene, white gasoline etc.) is prohibited:

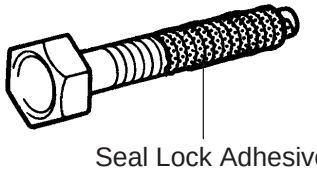
- Parts made of rubber. (ex. cylinder head cover gasket etc.)

4. POSITION AND DIRECTION OF EACH PARTS.

(a) Each parts needs to be reassembled as the same position and direction as it disassembled.

(1) Precautions at disassembly and reassembly.

- Follow the directions when the manual designates to mark the matchmark and/or direction mark.
- Disassembled parts needs to be put in order as disassembled, not to change position and/or direction.
- Follow the directions when the manual instructs the position and direction.



5. INSTALL ENGINE ASSEMBLY TO OVERHAUL STAND WHEN OVERHAUL THE ENGINE.

6. PUT THE DISASSEMBLED PARTS IN ORDER AS THEY DISASSEMBLED.

7. APPLY ENGINE OIL TO THE SLIDING AND ROTATING SURFACES.

8. NON–REUSABLE PARTS SUCH AS GASKET AND SEAL NEEDS TO BE CHANGED TO THE NEW PARTS.

9. BASIC REPAIR HINT

1AZ–FE ENGINE REPAIR MANUAL (RM865E) Z11554

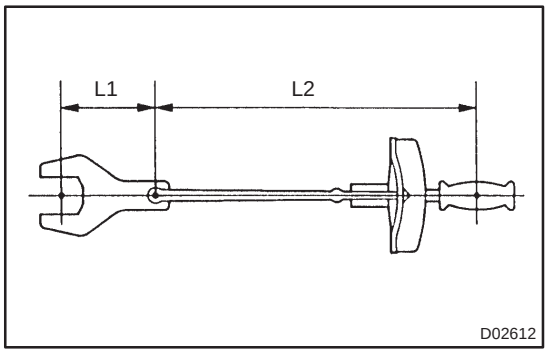
(a) Precoated Parts:

(1) Precoated parts are bolts, nuts, etc. that are coated with a seal lock adhesive at the factory.

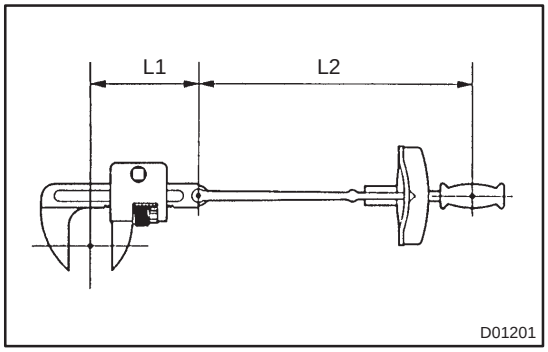
(2) If a precoated part is retightened, loosened or caused to move in any way, it must be recoated with the specified adhesive.

(3) When reusing precoated parts, clean off the old adhesive and dry with compressed air. Then apply

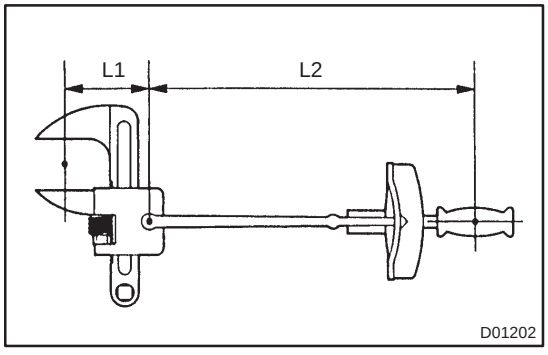
the specified seal lock adhesive to the bolt, nut or threads.



NOTICE:



Do the torque checking with the lower limit value of the torque tolerance.



(4) Depending on the seal lock agent to apply, there may be a case where it is necessary to leave it for a specified time until it hardens.

(b) Gaskets:
When necessary, use a sealer on gaskets to prevent leaks.

(c) Bolts, Nuts and Screws:
Carefully observe all specifications for bolt tightening torques. Always use a torque wrench.

(d) Torque When Using Extension Tool with Torque Wrench:

(1) In case of tightening by extending the entire length of the torque wrench combined with SST or tool, if you tighten until the reading of the torque wrench reached the specified torque value, the actual torque becomes excessive.

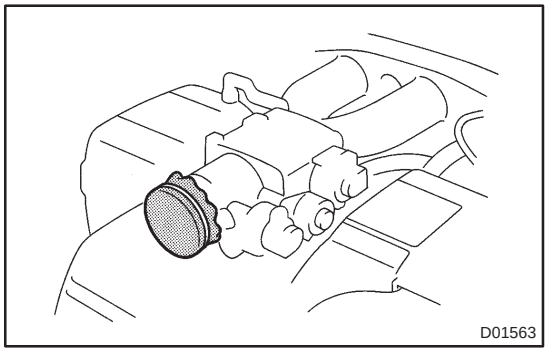
(2) In this text, only the specified torque is described. In case of using SST or extension tool, find the reading of the torque wrench by the formula.

(3) Formula T'=T x L2/(L1 + L2)

T'	Reading of torque wrench {N·m (kgf·cm, ft·lbf)}
T	Torque {N·m (kgf·cm, ft·lbf)}
L1	Length of SST or tool (cm)
L2	Length of torque wrench (cm)

10. REMOVAL AND INSTALLATION OF FUEL CONTROL PARTS

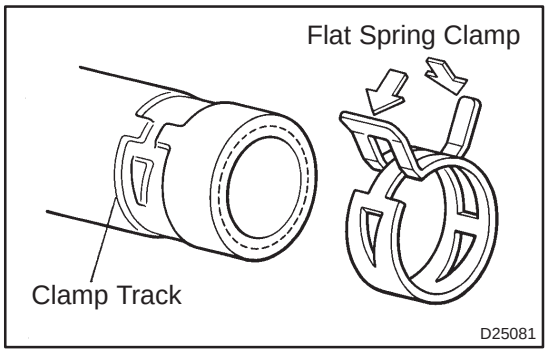
(a) Place for Removing and Installing Fuel System Parts:



(1) Place with good air ventilation and without anything flammable such as welder, grinder, drill, electric motor or stove in the surroundings.

(2) Never work in a place like a pit or nearby pit as there is a possibility that vaporized fuel fills those places.

(b) Removing and Installing of Fuel System Parts:



(1) Prepare a fire extinguisher before starting the operation.

(2) For prevention of the static electricity, install a ground on the fuel changer, vehicle and fuel tank, and do not spray much water so as to prevent slipping.
(3) Never use any electric equipment like an electric motor or a working light as they may cause spark or high temperature.
(4) Never use an iron hammer as it may cause spark.
(5) Dispose the shop lag separately from any fuel deposit.

D01563

11. REMOVAL AND INSTALLATION OF ENGINE INTAKE PARTS

(a) If any metal tip is mixed in the inlet pass, that may give a bad effect to the engine and turbo charger.
(b) When removing and installing of the inlet system parts, close the opening of the removed inlet system parts and the engine with a clean shop lag or gum tape.
(c) When installing the inlet system parts, check that there is no mixing of a metal tip.

D25081

12. HANDLING OF HOSE CLAMPS

(a) Before removing the hose, check the depth of inserting portion and the clamp position to restore it surely.
(b) Change a deformed or dented into a new one.
(c) In case of reusing the hose, install the clamp on the hose where it has a clamp track.
(d) For a flat spring type clamp, make it adjust by adding force to the arrow mark direction after the installation.

TERMS FOR ENGINE REPAIR MANUAL (1AZ–FE)

0107O–01

ABBREVIATIONS USED IN THIS MANUAL

Abbreviations	Meaning
ABS	Anti–Lock Brake System
A/C	Air Conditioner
AC	Alternating Current
ACC	Accessory
ACIS	Acoustic Control Induction System
ACSD	Automatic Cold Start Device
A.D.D.	Automatic Disconnecting Differential
A/F	Air–Fuel Ratio
AHC	Active Height Control Suspension
ALR	Automatic Locking Retractor
ALT	Alternator
AMP	Amplifier
ANT	Antenna
APPROX.	Approximately
ASSY	Assembly
A/T	Automatic Transmission (Transaxle)
ATF	Automatic Transmission Fluid
AUTO	Automatic
AUX	Auxiliary
AVG	Average
AVS	Adaptive Variable Suspension
B+	Battery Voltage
BACS	Boost Altitude Compensation System
BAT	Battery
BDC	Bottom Dead Center
B/L	Bi–Level
B/S	Bore–Stroke Ratio
BTDC	Before Top Dead Center
BVSV	Bimetallic Vacuum Switching Valve
CB	Circuit Breaker
CCo	Catalytic Converter For Oxidation
CD	Compact Disc
CF	Cornering Force
CG	Center Of Gravity
CH	Channel
CKD	Complete Knock Down
COMB.	Combination
CPE	Coupe
CPS	Combustion Pressure Sensor
CPU	Central Processing Unit
CRS	Child Restraint System
CTR	Center
C/V	Check Valve
CV	Control Valve
CW	Curb Weight
DC	Direct Current
DEF	Defogger
DFL	Deflector

Abbreviations	Meaning
DIFF.	Differential
DIFF. LOCK	Differential Lock
D/INJ	Direct Injection
DLC	Data Link Connector
DLI	Distributorless Ignition
DOHC	Double Overhead Cam
DP	Dash Pot
DS	Dead Soak
DSP	Digital Signal Processor
DTC	Diagnostic Trouble Code
ECAM	Engine Control And Measurement System
ECD	Electronic Controlled Diesel
ECDY	Eddy Current Dynamometer
ECT	Electronic Control Transmission
ECU	Electronic Control Unit
ED	Electro–Deposited Coating
EDU	Electronic Driving Unit
EDIC	Electric Diesel Injection Control
EFI	Electronic Fuel Injection
E/G	Engine
EGR	Exhaust Gas Recirculation
EGR–VM	EGR–Vacuum Modulator
ELR	Emergency Locking Retractor
ENG	Engine
ESA	Electronic Spark Advance
ETCS	Electronic Throttle Control System
EVAP	Evaporative Emission Control
EVP	Evaporator
E–VRV	Electric Vacuum Regulating Valve
EX	Exhaust
FE	Fuel Economy
FF	Front–Engine Front–Wheel–Drive
F/G	Fuel Gauge
FIPG	Formed In Place Gasket
FL	Fusible Link
F/P	Fuel Pump
FPU	Fuel Pressure Up
FR	Front
F/W	Flywheel
FW/D	Flywheel Damper
FWD	Front–Wheel–Drive
GAS	Gasoline
GND	Ground
HAC	High Altitude Compensator
H/B	Hatchback
H–FUSE	High Current Fuse
HI	High
HID	High Intensity Discharge (Head Lamp)
HSG	Housing
HT	Hard Top
HWS	Heated Windshield System

Abbreviations	Meaning
IC	Integrated Circuit
IDI	Indirect Diesel Injection
IFS	Independent Front Suspension
IG	Ignition
IIA	Integrated Ignition Assembly
IN	Intake (Manifold, Valve)
INT	Intermittent
I/P	Instrument Panel
IRS	Independent Rear Suspension
ISC	Idle Speed Control
J/B	Junction Block
J/C	Junction Connector
KD	Kick–Down
LAN	Local Area Network
LB	Liftback
LCD	Liquid Crystal Display
LED	Light Emitting Diode
LH	Left–Hand
LHD	Left–Hand Drive
L/H/W	Length, Height, Width
LLC	Long–Life Coolant
LNG	Liquified Natural Gas
LO	Low
LPG	Liquified Petroleum Gas
LSD	Limited Slip Differential
LSP & PV	Load Sensing Proportioning And Bypass Valve
LSPV	Load Sensing Proportioning Valve
MAP	Manifold Absolute Pressure
MAX.	Maximum
MIC	Microphone
MIL	Malfunction Indicator Lamp
MIN.	Minimum
MP	Multipurpose
MPI	Multipoint Electronic Injection
MPX	Multiplex Communication System
M/T	Manual Transmission
MT	Mount
MTG	Mounting
N	Neutral
NA	Natural Aspiration
NO.	Number
O2S	Oxygen Sensor
O/D	Overdrive
OEM	Original Equipment Manufacturing
OHC	Overhead Camshaft
OHV	Overhead Valve
OPT	Option
O/S	Oversize
P & BV	Proportioning And Bypass Valve
PCS	Power Control System
PCV	Positive Crankcase Ventilation

Abbreviations	Meaning
PKB	Parking Brake
PPS	Progressive Power Steering
PS	Power Steering
PTO	Power Take–Off
P/W	Power Window
R & P	Rack And Pinion
R/B	Relay Block
RBS	Recirculating Ball Type Steering
R/F	Reinforcement
RFS	Rigid Front Suspension
RRS	Rigid Rear Suspension
RH	Right–Hand
RHD	Right–Hand Drive
RLY	Relay
ROM	Read Only Memory
RR	Rear
RRS	Rear–Wheel Drive
RWD	Rear–Wheel Drive
SDN	Sedan
SEN	Sensor
SICS	Starting Injection Control System
SOC	State Of Charge
SOHC	Single Overhead Camshaft
SPEC	Specification
SPI	Single Point Injection
SRS	Supplemental Restraint System
SSM	Special Service Materials
SST	Special Service Tools
STD	Standard
STJ	Cold–Start Fuel Injection
SW	Switch
SYS	System
T/A	Transaxle
TACH	Tachometer
TBI	Throttle Body Electronic Fuel Injection
TC	Turbocharger
TCCS	TOYOTA Computer–Controlled System
TCV	Timing Control Valve
TDC	Top Dead Center
TEMP.	Temperature
TEMS	TOYOTA Electronic Modulated Suspension
TFT	Toyota Free–Tronic
TIS	Total Information System For Vehicle Development
T/M	Transmission
TMC	TOYOTA Motor Corporation
TMMK	TOYOTA Motor Manufacturing Kentucky, Inc.
TRC	Traction Control System
TURBO	Turbocharge
TWC	Three–Way Catalyst
U/D	Underdrive
U/S	Undersize

Abbreviations	Meaning
VCV	Vacuum Control Valve
VENT	Ventilator
VIN	Vehicle Identification Number
VPS	Variable Power Steering
VSC	Vehicle Skid Control
VSV	Vacuum Switching Valve
VTV	Vacuum Transmitting Valve
VVT–i	Variable Valve Timing–intelligent
W/	With
WGN	Wagon
W/H	Wire Harness
W/O	Without
1ST	First
2ND	Second
2WD	Two Wheel Drive Vehicle (4 x 2)
3RD	Third
4TH	Fourth
4WD	Four Wheel Drive Vehicle (4 x 4)
4WS	Four Wheel Steering System
5TH	Fifth

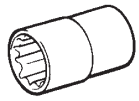
0107P–01

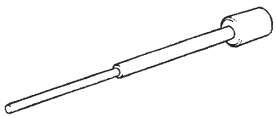
GLOSSARY OF SAE AND TOYOTA TERMS

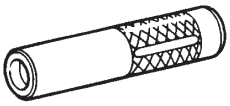
This glossary lists all SAE–J1930 terms and abbreviations used in this manual in compliance with SAE recommendations, as well as their TOYOTA equivalents.

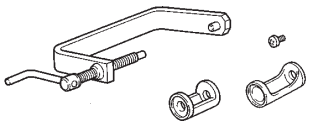
SAE ABBREVIATIONS	SAE TERMS	TOYOTA TERMS ( )—ABBREVIATIONS
A/C	Air Conditioning	Air Conditioner
ACL	Air Cleaner	Air Cleaner, A/CL
AIR	Secondary Air Injection	Air Injection (AI)
AP	Accelerator Pedal	–
B+	Battery Positive Voltage	+B, Battery Voltage
BARO	Barometric Pressure	HAC
CAC	Charge Air Cooler	Intercooler
CARB	Carburetor	Carburetor
CFI	Continuous Fuel Injection	–
CKP	Crankshaft Position	Crank Angle
CL	Closed Loop	Closed Loop
CMP	Camshaft Position	Cam Angle
CPP	Clutch Pedal Position	–
CTOX	Continuous Trap Oxidizer	–
CTP	Closed Throttle Position	LL ON, Idle ON
DFI	Direct Fuel Injection (Diesel)	Direct Injection (DI)
DI	Distributor Ignition	–
DLC1 DLC2 DLC3	Data Link Connector 1 Data Link Connector 2 Data Link Connector 3	1: Check Connector 2: Total Diagnosis Comunication Link (TDCL) 3: OBD II Diagnostic Connector
DTC	Diagnostic Trouble Code	Diagnostic Code
DTM	Diagnostic Test Mode	–
ECL	Engine Control Level	–
ECM	Engine Control Module	Engine ECU (Electronic Control Unit)
ECT	Engine Coolant Temperature	Coolant Temperature, Water Temperature (THW)
EEPROM	Electrically Erasable Programmable Read Only Memory	Electrically Erasable Programmable Read Only Memory (EEPROM), Erasable Programmable Read Only Memory (EPROM)
EFE	Early Fuel Evaporation	Cold Mixture Heater (CMH), Heat Control Valve (HCV)
EGR	Exhaust Gas Recirculation	Exhaust Gas Recirculation (EGR)
EI	Electronic Ignition	TOYOTA Distributorless Ignition (TDI)
EM	Engine Modification	Engine Modification (EM)
EPROM	Erasable Programmable Read Only Memory	Programmable Read Only Memory (PROM)
EVAP	Evaporative Emission	Evaporative Emission Control (EVAP)
FC	Fan Control	–
FEEPROM	Flash Electrically Erasable Programmable Read Only Memory	–
FEPROM	Flash Erasable Programmable Read Only Memory	–
FF	Flexible Fuel	–
FP	Fuel Pump	Fuel Pump
GEN	Generator	Alternator
GND	Ground	Ground (GND)

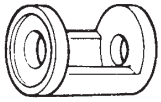
HO2S	Heated Oxygen Sensor	Heated Oxygen Sensor (HO_2S)
IAC	Idle Air Control	Idle Speed Control (ISC)
IAT	Intake Air Temperature	Intake or Inlet Air Temperature
ICM	Ignition Control Module	–
IFI	Indirect Fuel Injection	Indirect Injection (IDL)
IFS	Inertia Fuel–Shutoff	–
ISC	Idle Speed Control	–
KS	Knock Sensor	Knock Sensor
MAF	Mass Air Flow	Air Flow Meter
MAP	Manifold Absolute Pressure	Manifold Pressure Intake Vacuum
MC	Mixture Control	Electric Bleed Air Control Valve (EBCV) Mixture Control Valve (MCV) Electric Air Control Valve (EACV)
MDP	Manifold Differential Pressure	–
MFI	Multiport Fuel Injection	Electronic Fuel Injection (EFI)
MIL	Malfunction Indicator Lamp	Check Engine Lamp
MST	Manifold Surface Temperature	–
MVZ	Manifold Vacuum Zone	–
NVRAM	Non–Volatile Random Access Memory	–
O2S	Oxygen Sensor	Oxygen Sensor, O_2 Sensor (O_2S)
OBD	On–Board Diagnostic	On–Board Diagnostic System (OBD)
OC	Oxidation Catalytic Converter	Oxidation Catalyst Convert (OC), CCo
OP	Open Loop	Open Loop
PAIR	Pulsed Secondary Air Injection	Air Suction (AS)
PCM	Powertrain Control Module	–
PNP	Park/Neutral Position	–
PROM	Programmable Read Only Memory	–
PSP	Power Steering Pressure	–
PTOX	Periodic Trap Oxidizer	Diesel Particulate Filter (DPF) Diesel Particulate Trap (DPT)
RAM	Random Access Memory	Random Access Memory (RAM)
RM	Relay Module	–
ROM	Read Only Memory	Read Only Memory (ROM)
RPM	Engine Speed	Engine Speed
SC	Supercharger	Supercharger
SCB	Supercharger Bypass	E–ABV
SFI	Sequential Multiport Fuel Injection	Electronic Fuel Injection (EFI), Sequential Injection
SPL	Smoke Puff Limiter	–
SRI	Service Reminder Indicator	–
SRT	System Readiness Test	–
ST	Scan Tool	–
TB	Throttle Body	Throttle Body
TBI	Throttle Body Fuel Injection	Single Point Injection Central Fuel Injection (Ci)
TC	Turbocharger	Turbocharger
TCC	Torque Converter Clutch	Torque Converter

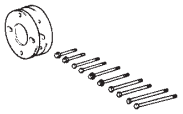












TCM	Transmission Control Module	Transmission ECU, ECT ECU
TP	Throttle Position	Throttle Position
TR	Transmission Range	–
TVV	Thermal Vacuum Valve	Bimetallic Vacuum Switching Valve (BVSV) Thermostatic Vacuum Switching Valve (TVSV)
TWC	Three–Way Catalytic Converter	Three–Way Catalytic (TWC) Manifold Converter CC_{RO}
TWC+OC	Three–Way + Oxidation Catalytic Converter	CC_R + CCo
VAF	Volume Air Flow	Air Flow Meter
VR	Voltage Regulator	Voltage Regulator
VSS	Vehicle Speed Sensor	Vehicle Speed Sensor
WOT	Wide Open Throttle	Full Throttle
WU–OC	Warm Up Oxidation Catalytic Converter	–
WU–TWC	Warm Up Three–Way Catalytic Converter	–
3GR	Third Gear	–
4GR	Fourth Gear	–

030BS–01

HOW TO DETERMINE NUT STRENGTH

Nut Type			Class
Present Standard Hexagon Nut	Old Standard Hexagon Nut		
	Cold Forging Nut	Cutting Processed Nut	
 No Mark			4N
 No Mark (w/ Washer)	 No Mark (w/ Washer)	 No Mark	5N (4T)
 6N			6N
		 *	7N (5T)
 8N			8N
 10N		 No Mark	10N (7T)
 11N			11N
 12N			12N

*: Nut with 1 or more marks on one side surface of the nut.

B06432

HINT:

Use the nut with the same number of the nut strength classification or the greater than the bolt strength classification number when tightening parts with a bolt and nut.

Example: Bolt = 4T

Nut = 4N or more

ENGINE MECHANICAL

SERVICE DATA

030BF–01

Oil pump drive gear		
Gear diameter (w/chain)	Minimum	48.2 mm (1.898 in.)
Oil pump drive shaft gear		
Gear diameter (w/chain)	Minimum	48.2 mm (1.898 in.)
Crankshaft timing gear or sprocket		
Gear diameter (w/chain)	Minimum	51.6 mm (2.031 in.)
Chain tensioner slipper		
Wear	Maximum	1.0 mm (0.039 in.)
Chain vibration damper No.1		
Wear	Maximum	1.0 mm (0.039 in.)
Cylinder head set bolt		
Bolt length	Standard	161.3 – 162.7 mm (6.350 – 6.406 in.)
	Maximum	164.2 mm (6.465 in.)
Chain sub–assy		
Elongation	Maximum	115.4 mm (4.543 in.)
Camshaft timing gear or sprocket		
Sprocket diameter (w/chain)	Minimum	97.3 mm (3.831 in.)
Camshaft		
Circle runout	Maximum	0.03 mm (0.0012 in.)
Cam lobe height	Standard	46.495 – 46.595 mm (1.8305 – 1.8345 in.)
	Minimum	46.385 mm (1.8262 in.)
No. 1 journal diameter		35.971 – 35.985 mm (1.4165 – 1.4167 in.)
Other journal diameter		22.959 – 22.975 mm (0.9039 – 0.9045 in.)
Thrust clearance		
Intake	Standard	0.040 – 0.095 mm (0.0016 – 0.0037 in.)
	Maximum	0.11 mm (0.0043 in.)
Exhaust	Standard	0.080 – 0.135 mm (0.0032 – 0.0053 in.)
	Maximum	0.15 mm (0.0059 in.)
Oil clearance		
Intake No. 1 journal bearing mark 1	Standard	0.007 – 0.038 mm (0.0028 – 0.00150 in.)
Intake No. 1 journal bearing mark 2	Standard	0.008 – 0.038 mm (0.0031 – 0.00150 in.)
Intake No. 1 journal bearing mark 3	Standard	0.008 – 0.038 mm (0.0031 – 0.00150 in.)
Exhaust No. 1 journal	Standard	0.040 – 0.079 mm (0.0016 – 0.003 in.)
Other journals	Standard	0.025 – 0.062 mm (0.00098 – 0.00244 in.)
Intake No. 1 journal	Maximum	0.07 mm (0.0028 in.)
Other journals	Maximum	0.10 mm (0.0039 in.)
Camshaft No.2		
Circle runout	Maximum	0.03 mm (0.0012 in.)
Cam lobe height	Standard	45.983 – 46.083 mm (1.8104 – 1.8143 in.)
	Minimum	45.873 mm (1.8060 in.)
No. 1 journal diameter		35.971 – 35.985 mm (1.4165 – 1.4167 in.)
Other journal diameter		22.959 – 22.975 mm (0.9039 – 0.9045 in.)
Thrust clearance		
Intake	Standard	0.040 – 0.095 mm (0.0016 – 0.0037 in.)
	Maximum	0.11 mm (0.0043 in.)
Exhaust	Standard	0.080 – 0.135 mm (0.0032 – 0.0053 in.)
	Maximum	0.15 mm (0.0059 in.)
Oil clearance		
Intake No. 1 journal bearing mark 1	Standard	0.007 – 0.038 mm (0.0028 – 0.00150 in.)
Intake No. 1 journal bearing mark 2	Standard	0.008 – 0.038 mm (0.0031 – 0.00150 in.)
Intake No. 1 journal bearing mark 3	Standard	0.008 – 0.038 mm (0.0031 – 0.00150 in.)
Exhaust No. 1 journal	Standard	0.015 – 0.054 mm (0.0059 – 0.00213 in.)
Other journals	Standard	0.025 – 0.062 mm (0.00098 – 0.00244 in.)
Intake No. 1 journal	Maximum	0.07 mm (0.0028 in.)
Other journals	Maximum	0.10 mm (0.0039 in.)

Valve clearance		
Intake	(cold)	0.19 – 0.29 mm (0.0075 – 0.0114 in.)
Exhaust		0.30 – 0.40 mm (0.0118 – 0.0157 in.)
Cylinder head		
Warpage	Maximum Cylinder block side	0.05 mm (0.0020 in.)
	Intake manifold side	0.08 mm (0.0031 in.)
	Exhaust manifold side	0.08 mm (0.0031 in.)
Inner compression spring		
Free length		45.7 mm (1.799 in.)
Deviation	Maximum	1.6 mm (0.063 in.)
Angle (reference)	Maximum	2°
Intake valve		
Overall length	Standard	101.71 mm (4.0043in.)
	Minimum	101.21 mm (3.9846in.)
Valve stem diameter		5.470 – 5.485 mm (0.2154 – 0.2159 in.)
Margin thickness	Standard	1.05 – 1.45 mm (0.041 – 0.057 in.)
	Minimum	0.5 mm (0.020 in.)
Exhaust valve		
Overall length	Standard	101.15 mm (3.9823in.)
	Minimum	100.70 mm (3.9646 in.)
Valve stem diameter		5.465 – 5.480 mm (0.2152 – 0.2157 in.)
Margin thickness	Standard	1.2 – 1.6 mm (0.047 – 0.063 in.)
	Minimum	0.5 mm (0.020 in.)
Intake valve guide bush		
Bushing inside diameter		5.510 – 5.530 mm (0.2169 – 0.2177 in.)
Oil clearance	Standard	0.025 – 0.060 mm (0.0010 – 0.0024 in.)
	Maximum	0.08 mm (0.0031 in.)
Diameter		10.285 – 10.306 mm (0.4049 – 0.4057 in.)
Protrusion height		9.6 – 10.0 mm (0.3779 – 0.3937 in.)
Exhaust valve guide bush		
Bushing inside diameter		5.510 – 5.530 mm (0.2169 – 0.2177 in.)
Oil clearance	Standard	0.030 – 0.065 mm (0.0012 – 0.0026 in.)
	Maximum	0.10 mm (0.0039 in.)
Diameter		10.285 – 10.306 mm (0.4049 – 0.4057 in.)
Protrusion height		9.6 – 10.0 mm (0.3779 – 0.3937 in.)
Valve lifter		
Lifter diameter		30.966 – 30.976 mm (1.2191 – 1.2195 in.)
Lifter bore diameter		31.009 – 31.025 mm (1.2208 – 1.2215 in.)
Oil clearance	Standard	0.033 – 0.059 mm (0.0013 – 0.0023 in.)
	Maximum	0.07 mm (0.0028 in.)
Ring w/head pin		
Protrusion height		5.5 mm (0.2165 in.)
Connecting rod		
Thrust clearance	Standard	0.160 – 0.362 mm (0.0063 – 0.0143 in.)
	Maximum	0.362 mm (0.0143 in.)
Oil clearance	Standard	0.024 – 0.048 mm (0.0009 – 0.0019 in.)
	Maximum	0.08 mm (0.0031 in.)
Bushing inside diameter		22.005 – 22.014 mm (0.8663 – 0.8667 in.)
Out–of–alignment	Maximum per 100 mm (3.94 in.)	0.05 mm (0.0020 in.)
Rod twist	Maximum per 100 mm (3.94 in.)	0.15 mm (0.0059 in.)
Connecting rod bolt		
Diameter	Standard	7.2 – 7.3 mm (0.283 – 0.287 in.)
	Minimum	7.0 mm (0.276 in.)

Crankshaft		
Thrust clearance	Standard	0.040 – 0.240 mm (0.0016 – 0.0094 in.)
	Maximum	0.30 mm (0.0118 in.)
Thrust washer thickness		1.930 – 1.980 mm (0.0760 – 0.0780 in.)
Circle runout	Maximum	0.03 mm (0.0012 in.)
Main journal diameter		54.988 – 55.000 (2.1648 – 2.1654 in.)
Crank pin taper and out– of –round	Maximum	0.003 mm (0.0001 in.)
Crank pin diameter		47.990 – 48.000 mm (1.8894 – 1.8898 in.)
Cylinder block		
Warpage	Maximum	0.05 mm (0.0020 in.)
Bore diameter	Standard	86.000 – 86.013 mm (3.4843 – 3.4848 in.)
	Maximum	86,013 mm (3.4848 in.)
Piston		
Piston diameter		85.927 – 85.937 mm (3.3829 – 3.3833 in.)
Piston oil clearance	Standard	0.063 – 0086 mm (0.0025 – 0.0034 in.)
	Maximum	0.1 mm (0.0039 in.)
Piston ring		
Ring groove clearance	No. 1	0.020 – 0.070 mm (0.0008 – 0.0028 in.)
	No. 2	0.020 – 0.060 mm (0.0008 – 0.0024 in.)
End gap	Standard No. 1	0.30 – 0.40 mm (0.0118 – 0.0157 in.)
	No. 2	0.47 – 0.62 mm (0.0185 – 0.0244 in.)
	Oil (side rail)	0.10 – 0.35 mm (0.0039 – 0.0138 in.)
	Maximum No. 1	0.89 mm (0.0350 in.)
	No. 2	1.37 mm (0.0531 in.)
	Oil (side rail)	0.73 mm (0.0287 in.)
Piston pin		
Bushing inside diameter		22.001 – 22.010 mm (0.8662 – 0.8665 in.)
Piston pin diameter		21.997 – 22.009 mm (0.8660 – 0.8665 in.)
Oil clearance	Standard	0.005 – 0.011 mm (0.0002 – 0.0004 in.)
	Maximum	0.010 mm (0.0020 in.)
Crankshaft bearing cap set bolt		
Diameter	Standard	7.5 – 7.6 mm (0.295 – 0.299 in.)
	Minimum	7.2 mm (0.283 in.)

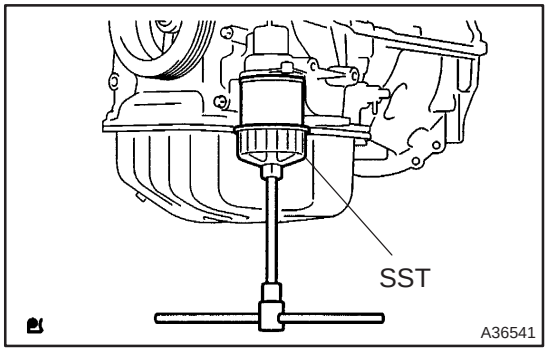
PARTIAL ENGINE ASSY (1AZ–FE)

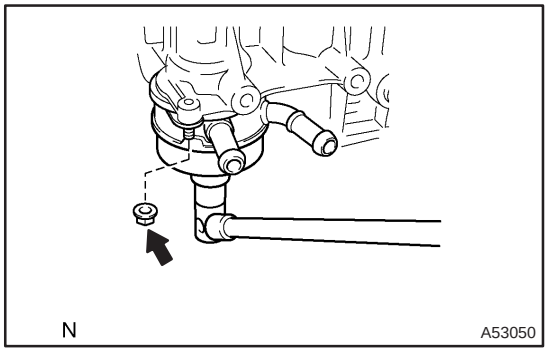
140DU–01



OVERHAUL

1. REMOVE OIL FILLER CAP SUB–ASSY

2. REMOVE OIL FILLER CAP GASKET

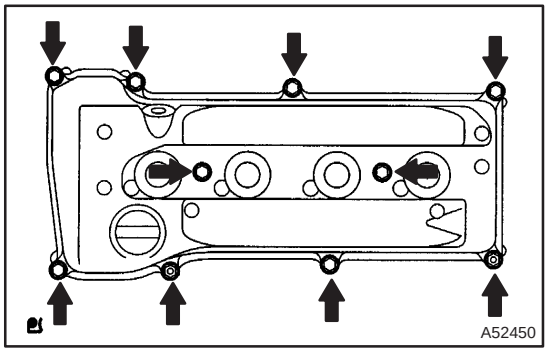


3. REMOVE VENTILATION VALVE SUB–ASSY

4. REMOVE SPARK PLUG

5. REMOVE OIL FILTER SUB–ASSY

(a) Using SST, remove the oil filter.
SST 09228–06501

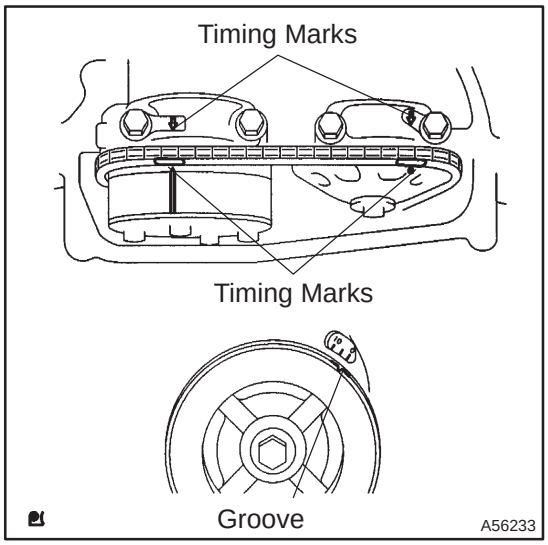


6. REMOVE OIL COOLER ASSY(W/ OIL COOLER)

(a) Remove the flange nut.
(b) Remove the union bolt and oil cooler.
(c) Remove the O–ring from the oil cooler.

7. REMOVE OIL FILTER UNION(W/O OIL COOLER)

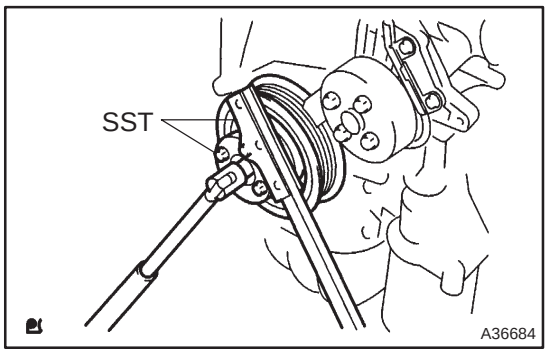
(a) Using a 12 mm hexagon wrench, remove the oil filter union.



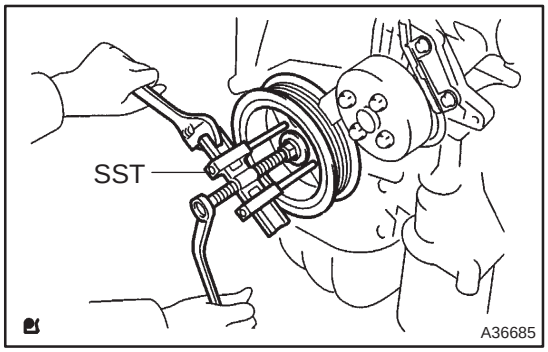
8. REMOVE CYLINDER HEAD COVER SUB–ASSY

(a) Remove 8 bolts, 2 nuts, and cylinder head cover sub assembly.

9. REMOVE CYLINDER HEAD COVER GASKET

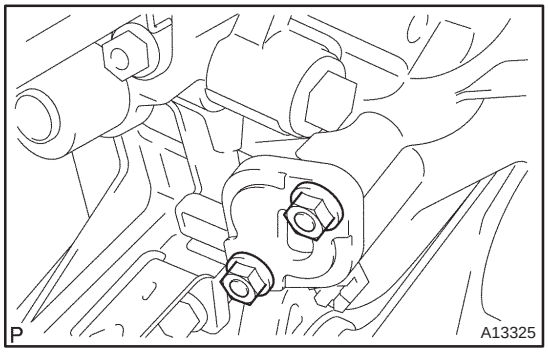


10. REMOVE CAMSHAFT POSITION SENSOR



11. REMOVE CRANKSHAFT PULLEY

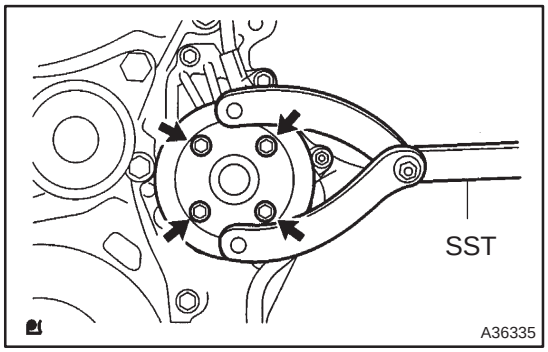
(a) Turn the crankshaft pulley, and align its groove with the timing mark ”0” of the timing chain cover.



(b) Check that the timing marks of the camshaft timing sprockets are aligned with the timing marks of the No. 1 bearing cap as shown in the illustration.

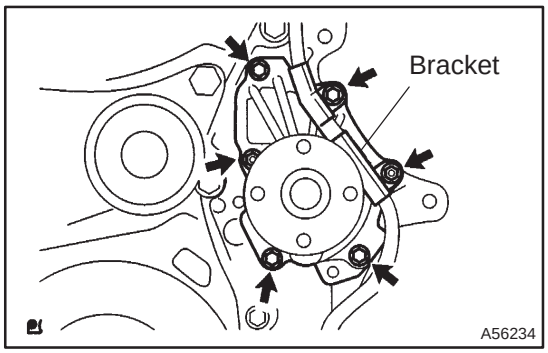
(c) Using SST, fix the crankshaft pulley and loosen a pulley set bolt.
SST 09213–54015 (91651–60855), 09330–00021

(d) Using a pulley set bolt and SST, remove the crankshaft pulley.
SST 09950–50013 (09951–05010, 09952–05010, 09953–05020, 09954–05021), 09950–40011 (09957–04010)



12. REMOVE CHAIN TENSIONER ASSY NO.1

(a) Remove the 2 nuts, timing chain tensioner and gasket.

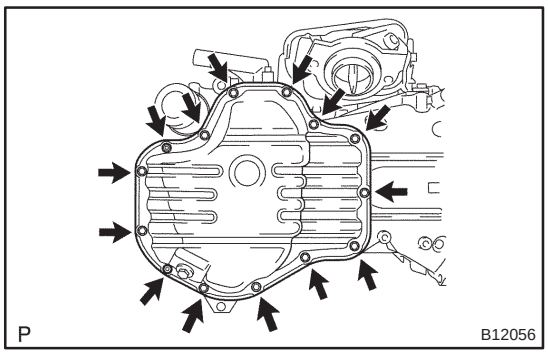


NOTICE:

Be sure not to turn the crankshaft without the chain tensioner.

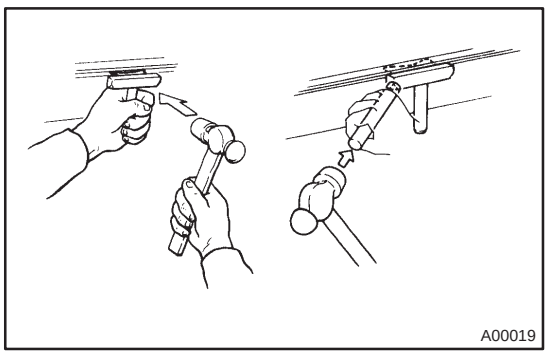
13. REMOVE WATER PUMP PULLEY

(a) Using SST, remove the water pump pulley.
SST 09960–10010 (09962–01000, 09963–00600)



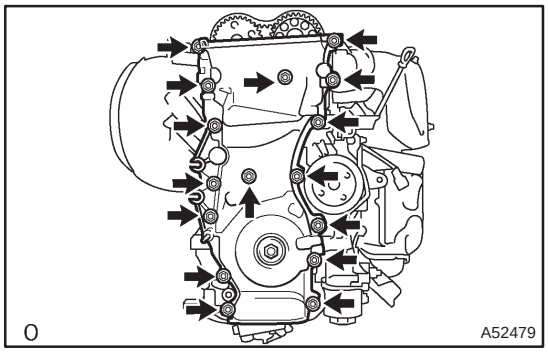
14. REMOVE WATER PUMP ASSY

(a) Remove the 4 bolts, 2 nuts, bracket and water pump.



15. REMOVE CRANK POSITION SENSOR

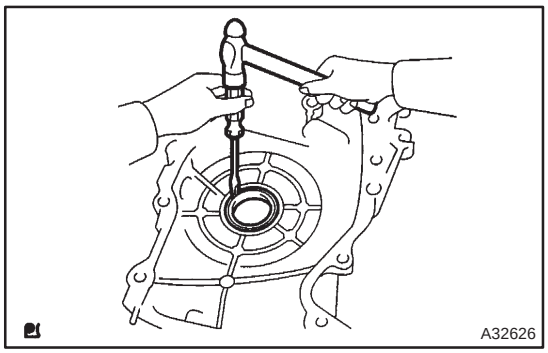
16. REMOVE OIL PAN DRAIN PLUG



17. REMOVE OIL PAN SUB–ASSY

(a) Remove the 12 bolts and 2 nuts.

(b) Insert the blade of SST between the crank case and oil pan, cut off applied sealer and remove the oil pan.
SST 09032–00100



NOTICE:
Be careful not to damage the contact surface of the cylinder block and oil pan.

18. REMOVE TIMING CHAIN OR BELT COVER SUB–ASSY

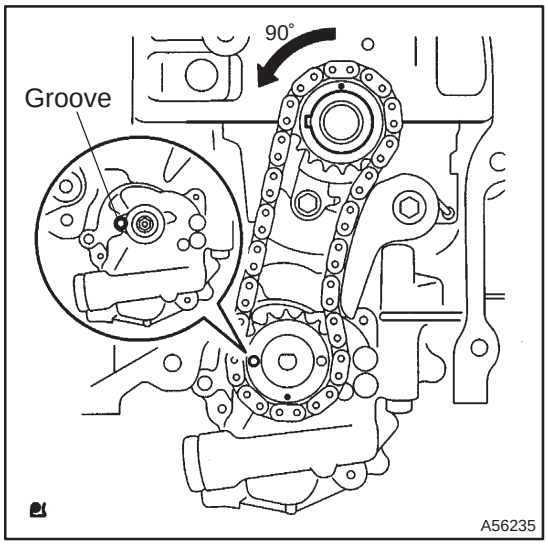
(a) Remove the 14 bolts and 2 nuts.
(b) Remove the timing chain cover by prying the portions between the timing chain cover and cylinder head or cylinder block with a screwdriver.

NOTICE:
Be careful not to damage the contact surfaces of the timing chain cover, cylinder block and cylinder head.

19. REMOVE TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL

(a) Using a screwdriver, remove the oil seal.

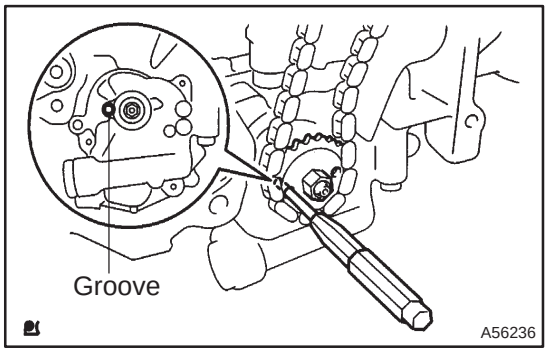
20. REMOVE CRANKSHAFT POSITION SENSOR PLATE NO.1



21. REMOVE TIMING CHAIN GUIDE

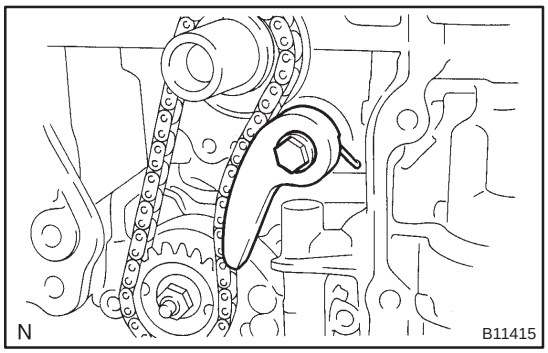
22. REMOVE CHAIN TENSIONER SLIPPER

23. REMOVE CHAIN VIBRATION DAMPER NO.1

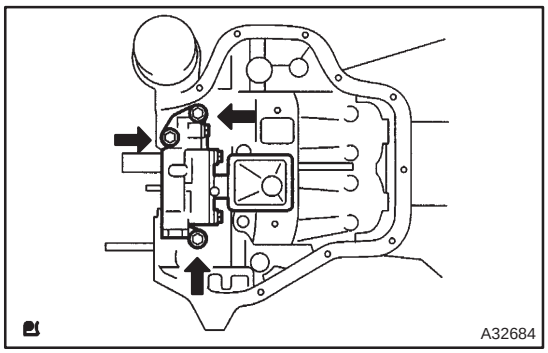


24. REMOVE CHAIN SUB–ASSY

25. REMOVE CRANKSHAFT TIMING GEAR OR SPROCKET

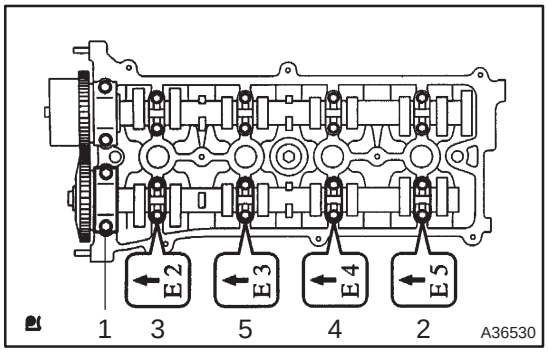


26. REMOVE NO.2 CHAIN SUB–ASSY

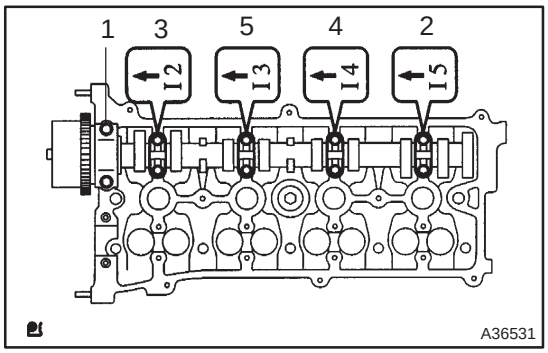


(a) Turn the crankshaft counterclockwise 90°, and align an adjusting hole of the oil pump drive shaft gear with the groove of the oil pump.

(b) Put a bar (ϕ 4 mm) in the adjusting hole of the oil pump drive shaft gear to lock in position, and remove a nut.



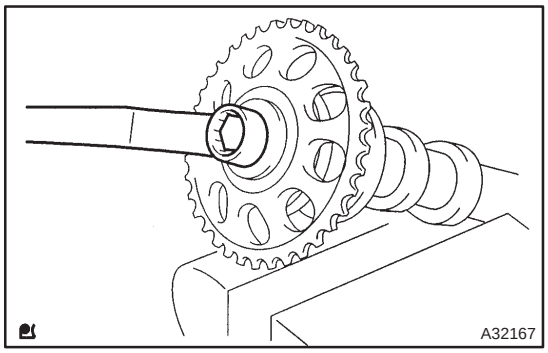
(c) Remove bolt and a chain tensioner plate.
(d) Remove the oil pump drive gear, oil pump drive shaft gear and No. 2 chain sub assembly.



27. REMOVE OIL PUMP ASSY

(a) Remove 3 bolts and the oil pump assembly.

28. REMOVE NO.2 CAMSHAFT

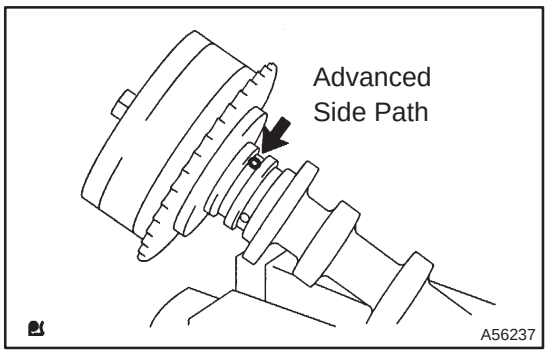


(a) Remove No. 1 and No. 2 camshaft bearing caps as the sequence shown in the illustration.
(b) Remove No. 2 camshaft.

29. REMOVE CAMSHAFT

(a) Remove No. 1 and No. 3 camshaft bearing caps as the sequence shown in the illustration.
(b) Remove No. 1 camshaft.

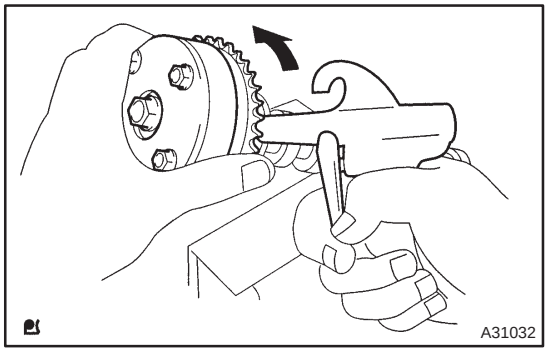
30. REMOVE CAMSHAFT BEARING NO.1



31. REMOVE CAMSHAFT TIMING GEAR OR SPROCKET

(a) Fix the No. 2 camshaft with a vise, and remove the camshaft timing gear.

NOTICE:

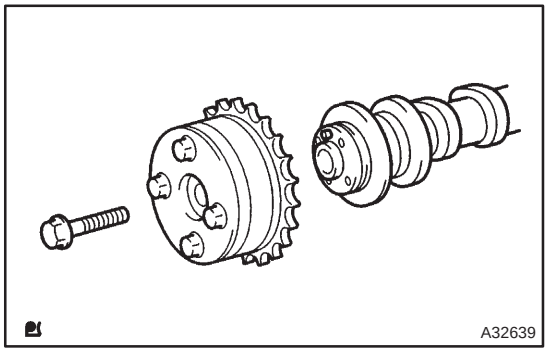


Be careful not to damage the camshaft.

32. REMOVE CAMSHAFT TIMING GEAR ASSY

(a) Fix the No. 1 camshaft with a vise, and make sure the camshaft timing gear assembly does not move.

(b) Cover all the paths with vinyl tape except an advanced side path as shown in the illustration.

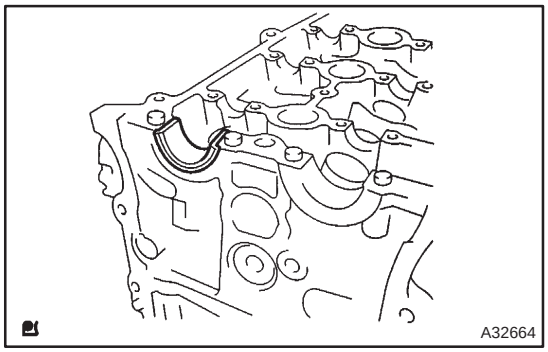


(c) Put air pressure into the oil path with 150 kPa (1.5 kgf/cm^2 21psi), and turn the camshaft timing gear assembly to the advance direction (counterclockwise) by force.

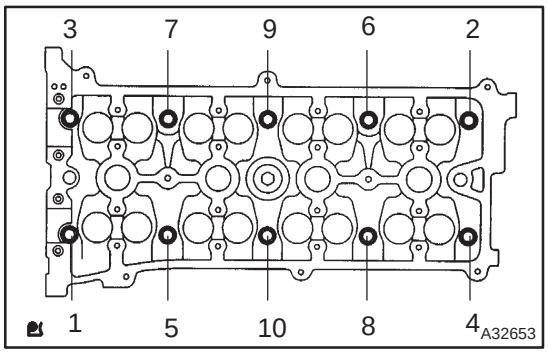
NOTICE:

Cover the paths with shop rag to avoid oil splashing.

HINT:



Depending on the air pressure, the VVT timing sprocket will turn to the advance angle side without applying force by hand. Also, under the condition that the pressure can be hardly applied because of the air leakage form the port, there may be the case that the lock pin could be hardly released.



(d) Remove a fringe bolt of camshaft timing gear assembly.

NOTICE:

- **Be sure not to remove the other 4 bolts.**
- **In case of reusing the camshaft timing gear assembly, release the straight pin lock first, and then install the gear.**

33. REMOVE CAMSHAFT BEARING NO.2

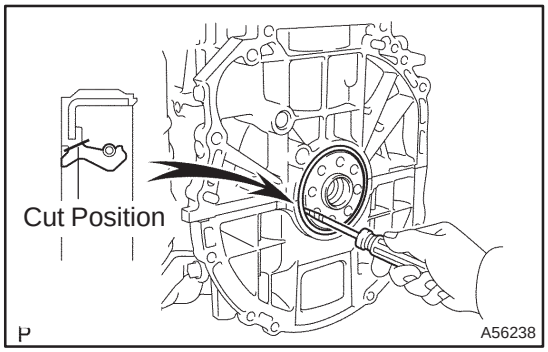
34. REMOVE CYLINDER HEAD SUB–ASSY

(a) Using a 10 mm bi–hexagon wrench, uniformly loosen and remove the 10 cylinder head bolts, in several passes, in the sequence shown. Remove the 10 cylinder head bolts and plate washers.

NOTICE:

- **Be careful not to drop washers into the cylinder head.**
- **Head warpage or cracking could result from removing bolts in and incorrect order.**

35. REMOVE CYLINDER HEAD GASKET



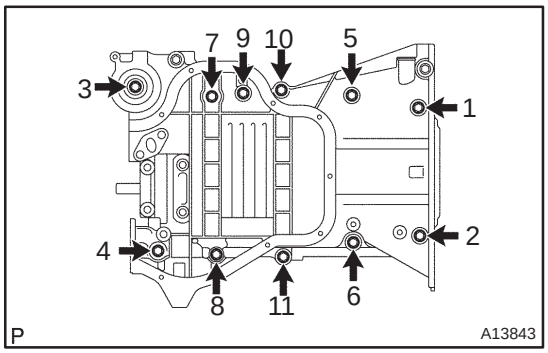
36. REMOVE CYLINDER BLOCK WATER DRAIN COCK SUB–ASSY

37. REMOVE UNION(W/ OIL COOLER)

38. REMOVE OIL CONTROL VALVE FILTER

(a) Using a 6 mm socket hexagon wrench, remove a plug and oil control valve filter.

39. REMOVE W/HEAD TAPER SCREW PLUG NO.1



40. REMOVE ENGINE REAR OIL SEAL

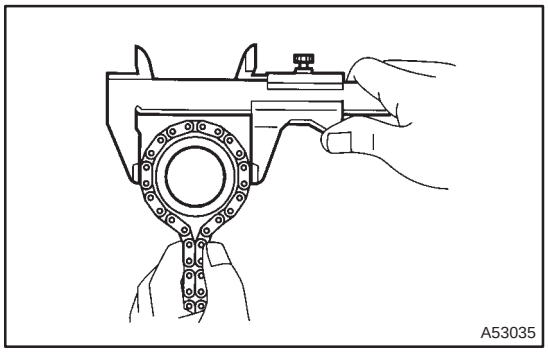
(a) Using a knife, cut off the oil seal lip.

(b) Using a screwdriver with its tip taped, pry out the oil seal.

NOTICE:

After the removal, check the crankshaft is not damaged. If there is, mend it with a sandpaper (#400).

41. REMOVE STIFFENING CRANKCASE ASSY



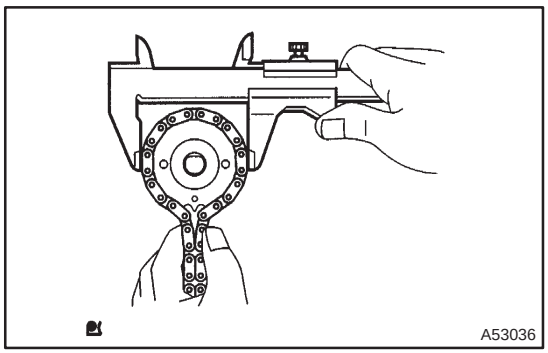
(a) Uniformly loosen and remove the 11 bolts, in several passes, in the sequence shown.

(b) Using a screwdriver, remove the crankcase by prying the portions between the crankcase and cylinder block.

NOTICE:

Be careful not to damage the contact surfaces of the crankcase and cylinder block.

(c) Remove the O–ring from the cylinder block.



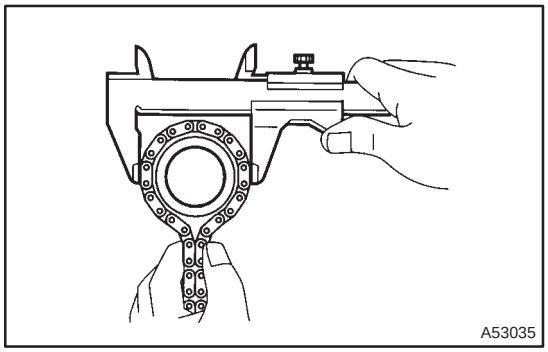
42. INSPECT OIL PUMP DRIVE GEAR

(a) Wrap the chain around the drive gear.
(b) Using vernier calipers, measure the drive gear diameter with the chain.

NOTICE:
Vernier calipers must contact the chain rollers for the measuring.

Minimum gear diameter (w/chain): 48.2 mm (1.898 in.)

(c) If the diameter is less than minimum, replace the chain and drive gear.



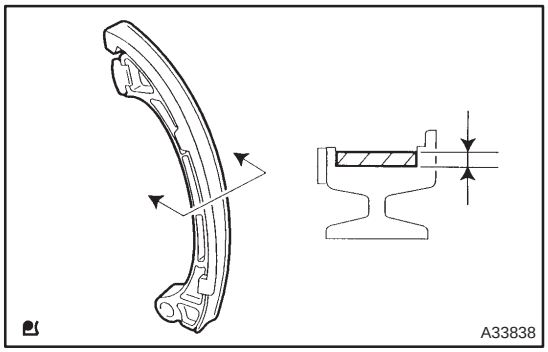
43. INSPECT OIL PUMP DRIVE SHAFT GEAR

(a) Wrap the chain around the drive shaft gear.
(b) Using vernier calipers, measure the drive shaft gear diameter with the chain.

NOTICE:
Vernier calipers must contact the chain rollers for the measuring.

Minimum gear diameter (w/chain): 48.2 mm (1.898 in.)

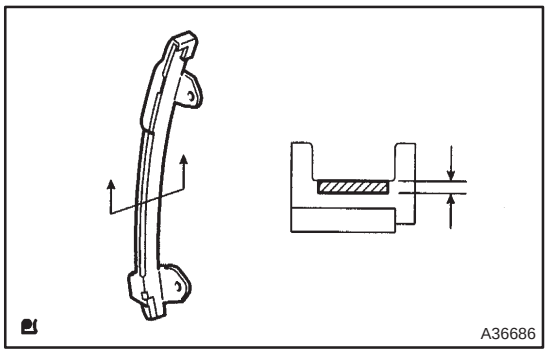
(c) If the diameter is less than minimum, replace the chain and drive shaft gear.



44. INSPECT CRANKSHAFT TIMING GEAR OR SPROCKET

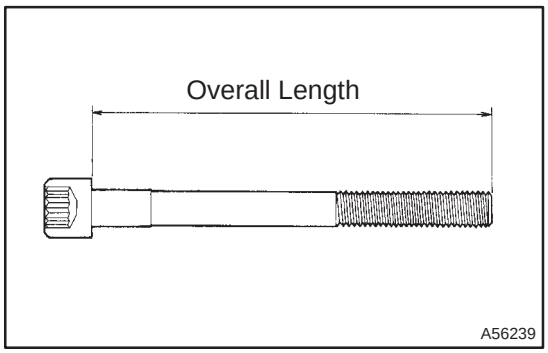
(a) Wrap the chain around the timing gear.
(b) Using vernier calipers, measure the timing gear diameter with the chain.

NOTICE:
Vernier calipers must contact the chain rollers for the measuring.



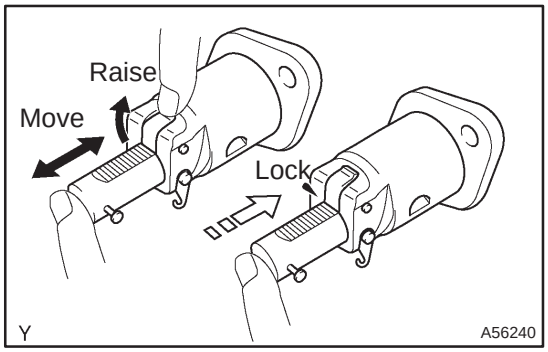
Minimum gear diameter (w/chain): 51.6 mm (2.031 in.)

(c) If the diameter is less than minimum, replace the chain and timing gear.



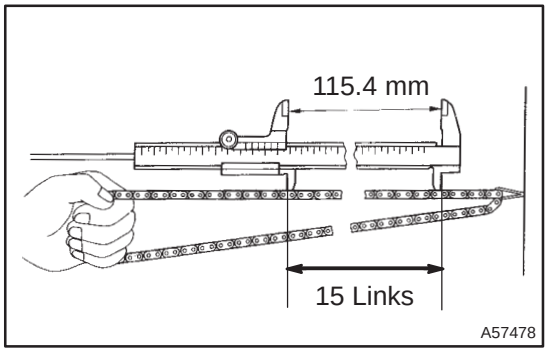
45. INSPECT CHAIN TENSIONER SLIPPER

(a) Measure the chain tensioner slipper wears.
Maximum wear: 1.0 mm (0.039 in.)
(b) If the wear is greater than maximum, replace the chain tensioner slipper.



46. INSPECT CHAIN VIBRATION DAMPER NO.1

(a) Measure the chain vibration damper No. 1 wears.
Maximum wear: 1.0 mm (0.039 in.)
(b) If the wear is greater than maximum, replace the chain vibration damper No. 1.



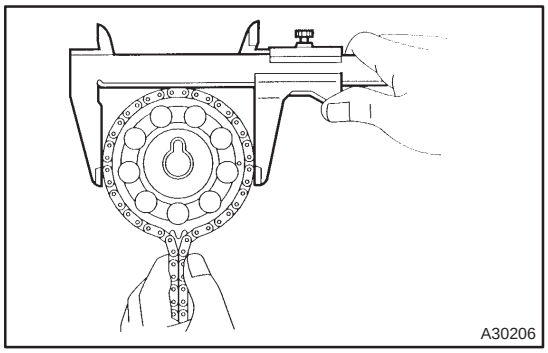
47. INSPECT CYLINDER HEAD SET BOLT

(a) Using vernier calipers, measure the length of head bolts from the seat to the end.
Standard bolt length:
161.3 – 162.7 mm (6.350 – 6.405 in.)
Maximum bolt length: 164.2 mm (6.465 in.)
(b) If the length is greater than maximum, replace the bolt.

48. INSPECT CHAIN TENSIONER ASSY NO.1

(a) Check the plunger moves smoothly when the ratchet pawl is raised, and when the ratchet pawl is released, the plunger is locked in place.
(b) Release the ratchet pawl and check that the plunger is locked in place by the ratchet pawl and does not move when pushed with finger.

49. INSPECT CHAIN SUB–ASSY



(a) Using vernier calipers, measure the length of the 15 links with the chain fully stretched.
Maximum chain elongation: 115.4 mm (4.543 in.)

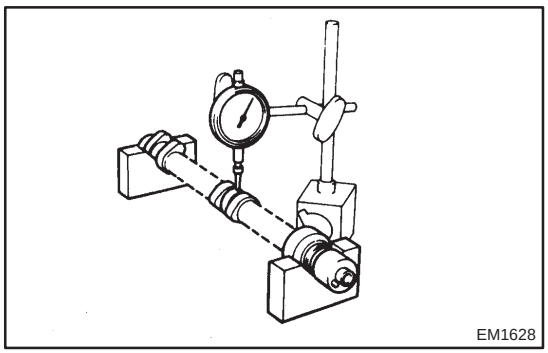
If the elongation is greater than maximum, replace the chain.
HINT:
Make the same pulling measurements at 3 or more places selected at random.

(b) If the elongation is greater than maximum, replace the chain.

NOTICE:

Make the same measurements pulling at 3 or more places selected at random, and average the length.

50. INSPECT CAMSHAFT TIMING GEAR OR SPROCKET



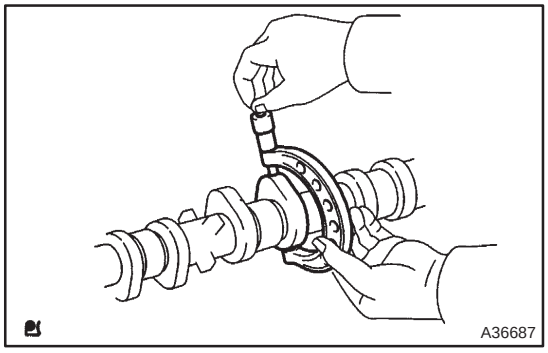
(a) Wrap the chain around the timing sprocket.

(b) Using a vernier calipers, measure the timing sprocket diameter with the chain.

Minimum sprocket diameter (w/chain):
97.3 mm (3.831 in.)

NOTICE:

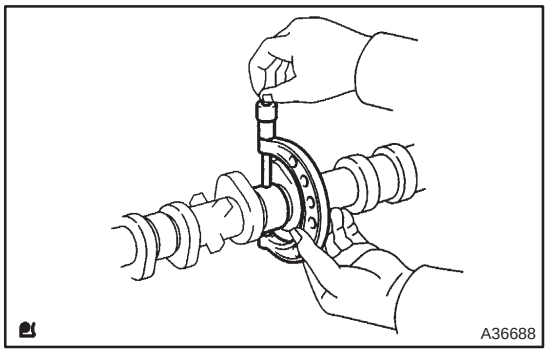
Vernier calipers must contact the chain rollers for the measuring.



51. INSPECT CAMSHAFT

(a) Inspect the camshaft for runout.
  (1) Place the camshaft on V–blocks.
  (2) Using a dial indicator, measure the circle runout at the center journal

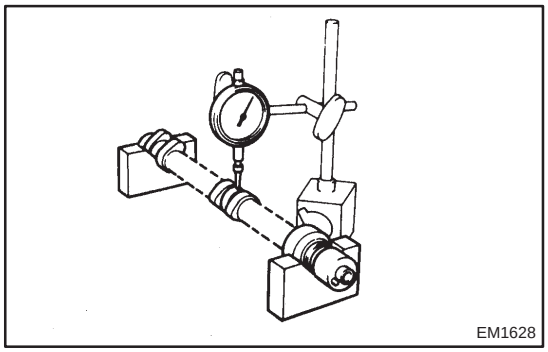
Maximum circle runout: 0.03 mm (0.0012 in.)



(b) If the circle runout is greater than maximum, replace the camshaft.

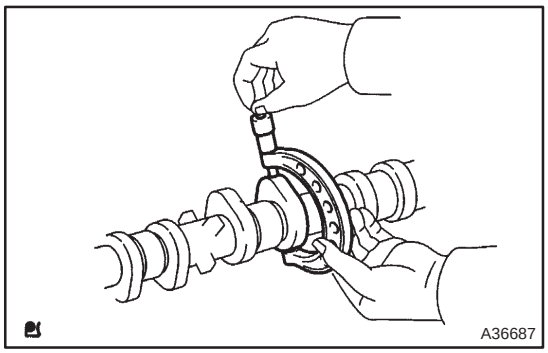
(c) Inspect cam lobe height.
  (1) Using a micrometer, measure the cam lobe height.

Standard cam lobe height:
46.495 – 46.595 mm (1.8305 – 1.8345 in.)
Minimum cam lobe height: 46.385 mm (1.8262 in.)



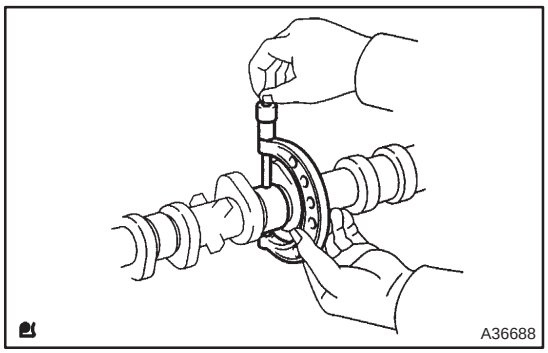
(d) If the cam lobe height is less than minimum, replace the camshaft.

(e) Inspect camshaft journal diameter.
  (1) Using a micrometer, measure the journal diameter.

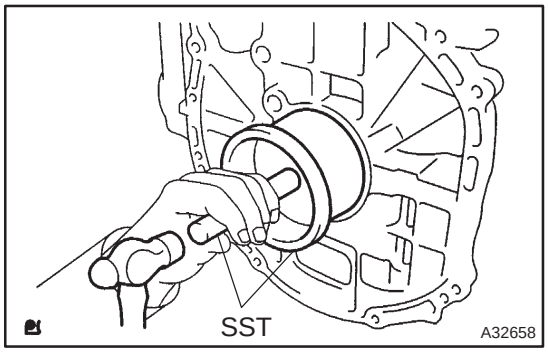


No. 1 journal diameter:
35.971 – 35.985 mm (1.4162 – 1.4167 in.)
Other journal diameter:
22.959 – 22.975 mm (0.9039 – 0.9045 in.)

(f) If the journal diameter is not as specified, check the oil clearance.

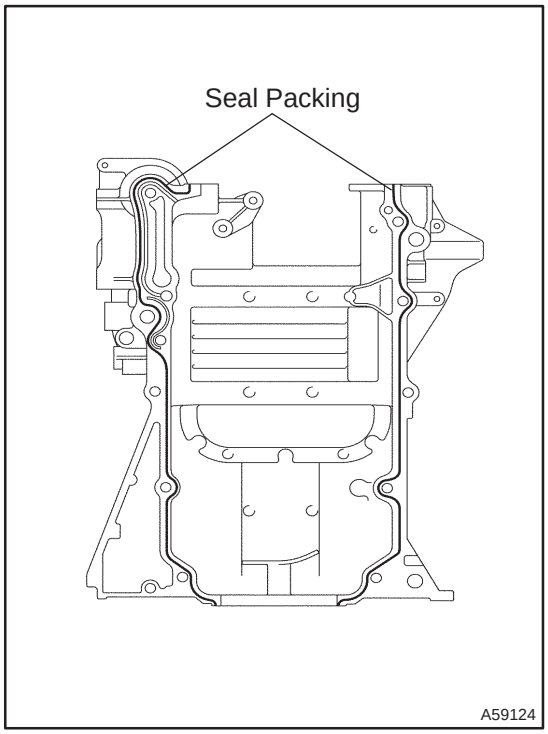


52. INSPECT NO.2 CAMSHAFT



(a) Place the camshaft on V–blocks.
(b) Using a dial indicator, measure the circle runout at the center journal.
Maximum circle runout: 0.03 mm (0.0012 in.)
(c) If the circle runout is greater than maximum, replace the camshaft.

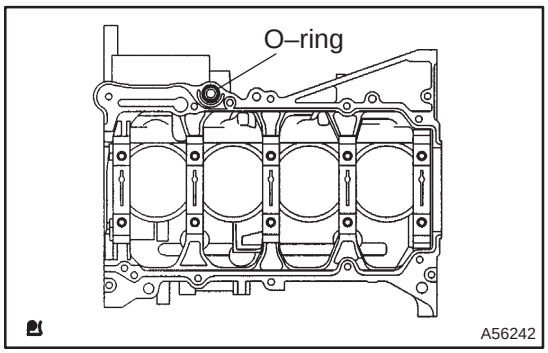
(d) Inspect cam lobe height.
(1) Using a micrometer, measure the cam lobe height.
Standard cam lobe height:
45.983 – 46.083 mm (1.8104 – 1.8143 in.)
Minimum cam lobe height: 45.873 mm (1.8060 in.)
(e) If the cam lobe height is less than minimum, replace the camshaft.



(f) Inspect camshaft journal diameter.
(1) Using a micrometer, measure the journal diameter.
No. 1 journal diameter:
35.971 – 35.985 mm (1.4162 – 1.4167 in.)
Other journal diameter:
22.959 – 22.975 mm (0.9039 – 0.9045 in.)
(g) If the journal diameter is not as specified, check the oil clearance.

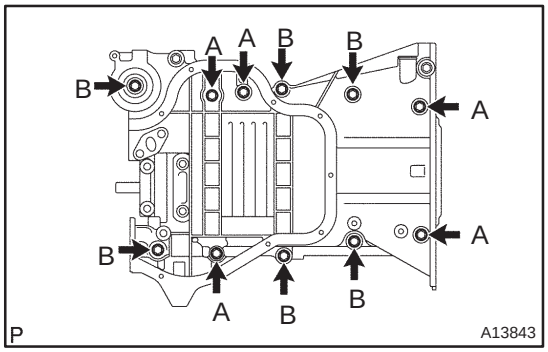
53. INSTALL ENGINE REAR OIL SEAL

(a) Apply MP grease to a new oil seal lip.
NOTICE:
Keep the lip off the foreign materials.
(b) Using SST and a hammer, evenly tap the oil seal until its surface is flush with the rear oil seal retainer edge.
SST 09223–15030, 09950–70010 (09951–07100)
NOTICE:
Wipe off extra grease on the crank shaft.



54. INSTALL STIFFENING CRANKCASE ASSY

(a) Apply seal packing in the shape of bead (Diameter 2.5 mm – 3 mm (0.098 – 0.118 in.)) the places shown in the illustration.



Seal packing: Part No. 08826–00080 or equivalent

NOTICE:

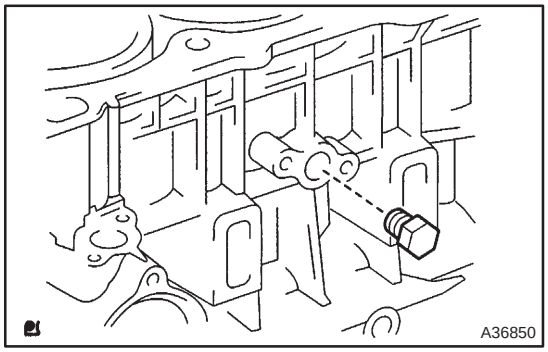
- **Remove any oil from the contact surface.**
- **Install the crank case within 3 minutes after applying seal packing.**
- **Do not start the engine within 2 hours after installing.**

(b) Install a new O–ring the place shown in the illustration.

(c) Temporarily install the crank case with the 11 bolts.

HINT:

Each bolt length is indicated in the illustration.



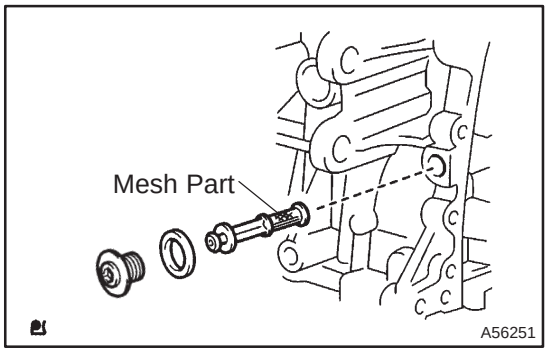
Bolt length:

112 mm (4.41 in.) for A of 12 mm head

35 mm (1.38 in.) for B of 12 mm head

(d) Uniformly tighten the bolts, stud bolts and nuts in several passes.

Torque: 33 N·m (332 kgf·cm, 24 ft·lbf)

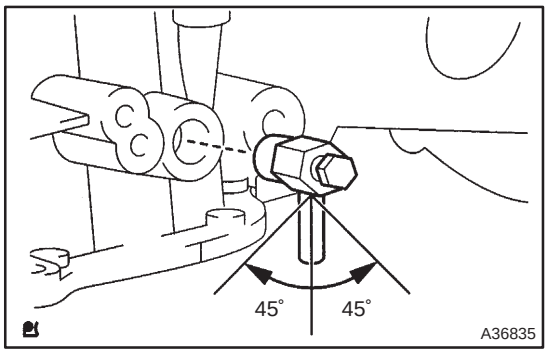


55. INSTALL W/HEAD TAPER SCREW PLUG NO.1

(a) Apply adhesive to the threads of the plug and install.

Adhesive:

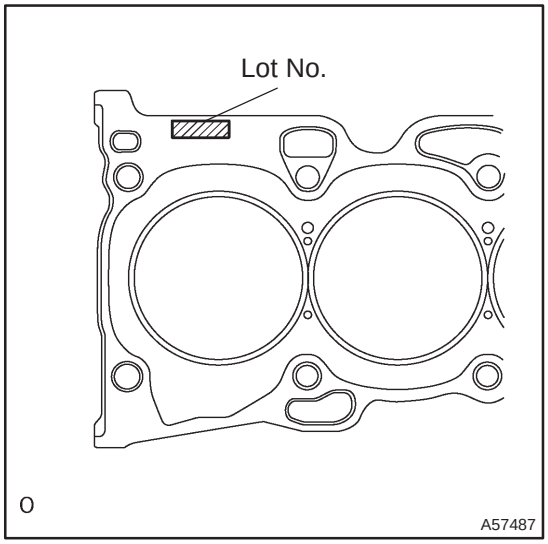
Part No. 08833–00070, THREE BOND 1324 or equivalent.



Torque: 26 N·m (265 kgf·cm, 19 ft·lbf)

56. INSTALL OIL CONTROL VALVE FILTER

(a) Check that no foreign substance on the mesh part of the filter.

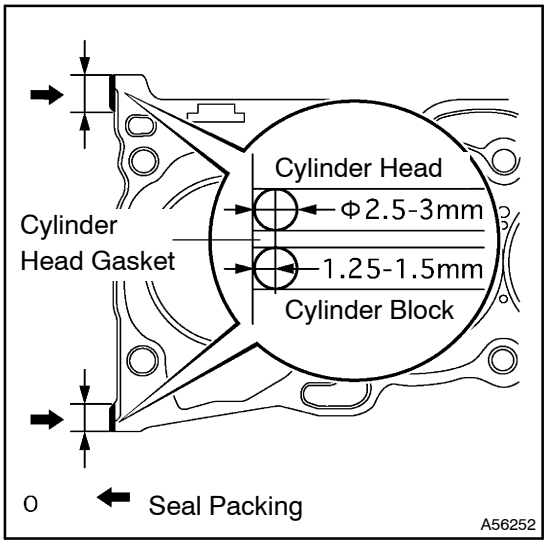


(b) Using a 8 mm socket hexagon wrench, install the oil control valve filter with a new gasket.
Torque: 30 N·m (306 kgf·cm, 22 ft·lbf)

57. INSTALL CYLINDER BLOCK WATER DRAIN COCK SUB–ASSY

(a) Install the water drain cock sub assembly within the range shown in the illustration.
Torque: 25 N·m (255 kgf·cm, 18 ft·lbf)

58. INSTALL UNION(W/ OIL COOLER)
Torque: 40 N·m (408 kgf·cm, 29 ft·lbf)



59. INSTALL CYLINDER HEAD GASKET

(a) Place a new cylinder head gasket on the cylinder block surface with the Lot No. stamp upward.

NOTICE:
- **Remove any oil from contact surface.**
- **Be careful of the installation direction.**
- **Place the cylinder head quietly in order not to damage the gasket with the bottom part of the head.**

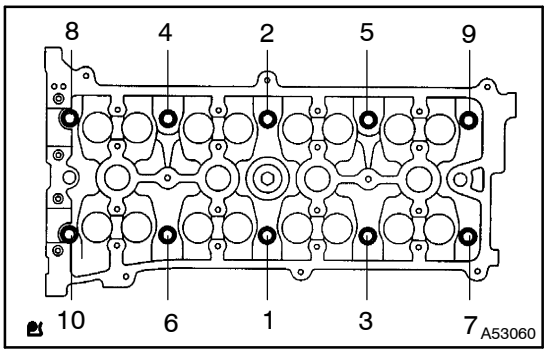
60. INSTALL CYLINDER HEAD SUB–ASSY

HINT:
The cylinder head bolts are tightened in 2 progressive steps.

(a) Apply seal packing in the shape of bead (Diameter 2.5 – 3 mm (0.098 – 0.118 in.)) consequently as shown in the illustration.

Seal packing: Part No. 08826–00080 or equivalent

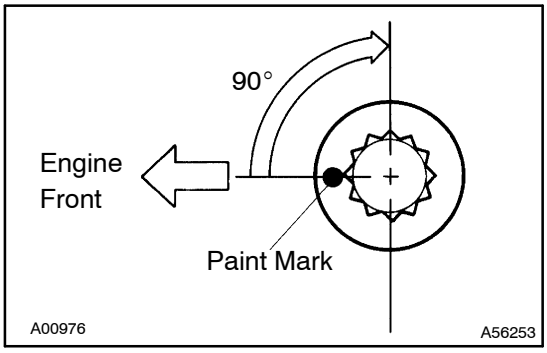
NOTICE:



- **Remove any oil from contact surface.**
- **Install the cylinder head within 3 minutes after applying seal packing.**
- **After installing the cylinder head, cylinder head bolts must be tightened within 15 minutes.**

(b) Apply a light coat of engine oil on the threads and under the heads of the cylinder head bolts.

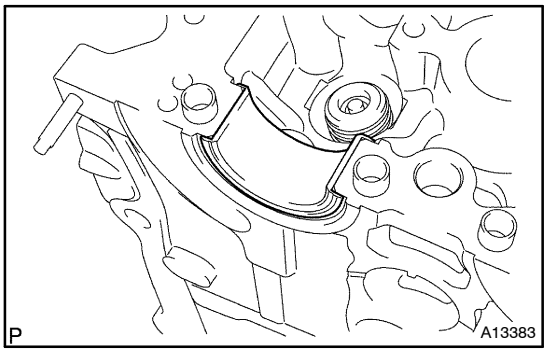
(c) Install bolts and plate washers to the cylinder head.



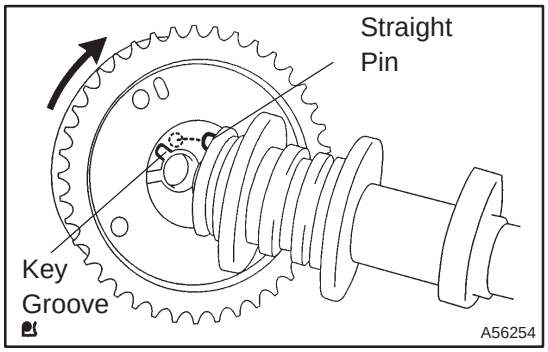
NOTICE:

Do not drop the washers into the cylinder head.

(d) Using a 10 mm bi–hexagon wrench, temporarily tighten each bolts in the several passes, as the sequence shown in the illustration, and fully tighten with specified torque.



Torque: 79 N·m (806 kgf·cm, 58 ft·lbf)



(e) Mark the front side of each cylinder head bolt with paint.

(f) Retighten the cylinder head bolts by 90° in the sequence shown.

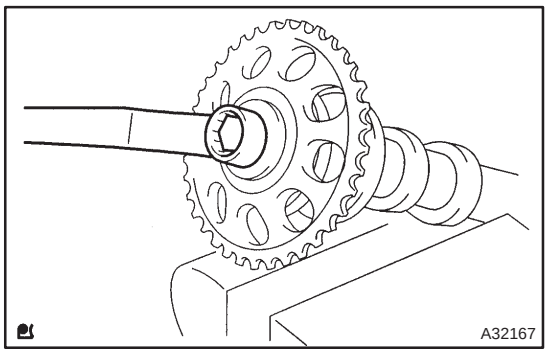
(g) Check that the painted marks are now at a 90° angle to the front.

61. INSTALL CAMSHAFT BEARING NO.2

62. INSTALL CAMSHAFT TIMING GEAR ASSY

(a) Put the camshaft timing gear assembly and the camshaft together with the straight pin of the key groove.

(b) Turn the camshaft timing gear assembly to the left direction (as shown in the illustration) with pushing it lightly against the camshaft. Push further at the position where the pin gets into the groove.

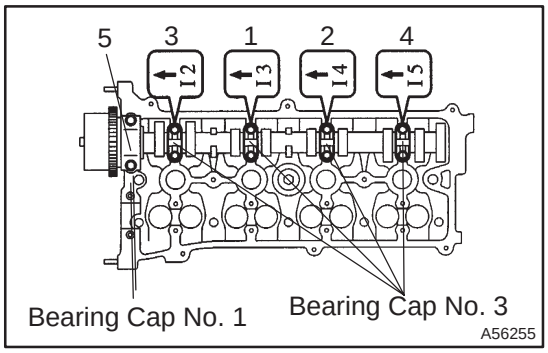


CAUTION:

Be sure not to turn the camshaft timing gear to the retard angle side (to the right angle).

(c) Check that there is no clearance between the gear's fringe and the camshaft.

(d) Tighten the fringe bolt with the camshaft timing gear fixed.
Torque: 54 N·m (551 kgf·cm, 50 ft·lbf)

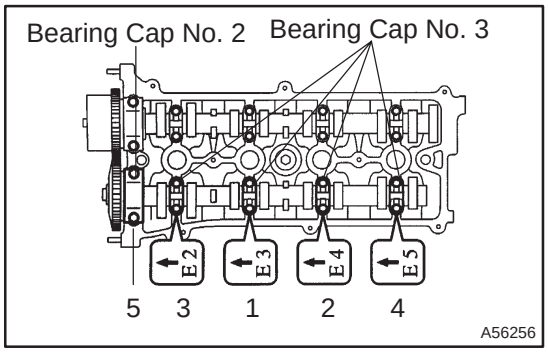


(e) Check that the camshaft timing gear assembly can move to the retard angle side (the right direction), and is locked at the most retarded position.

63. INSTALL CAMSHAFT TIMING GEAR OR SPROCKET

(a) Fix the camshaft No. 2 to the vise, and install camshaft No. 2 timing gear.
Torque: 54 N·m (551 kgf·cm, 40 ft·lbf)

64. INSTALL CAMSHAFT BEARING NO.1

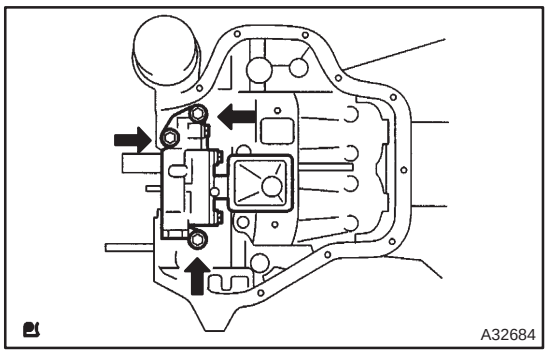


65. INSTALL CAMSHAFT

(a) Tighten camshaft bearing cap No.1 and No. 3 as the sequence shown in the illustration.
Torque:
Bearing cap No. 1 29.5 N·m (300 kgf·cm, 22 ft·lbf)
Bearing cap No. 3 9 N·m (90 kgf·cm, 80 in.·lbf)

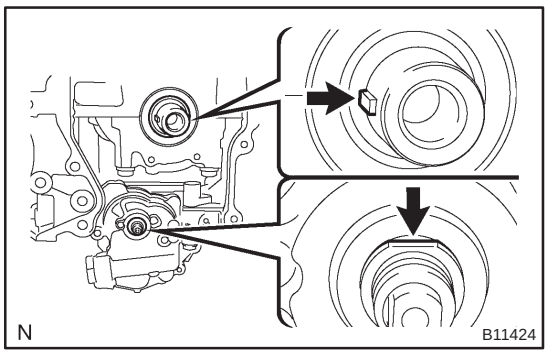
NOTICE:

- **Tighten the bolts after deciding the position for the thrust direction of the camshaft by bearing cap No. 1.**
- **Install the camshaft with its timing mark of camshaft timing gear on top.**



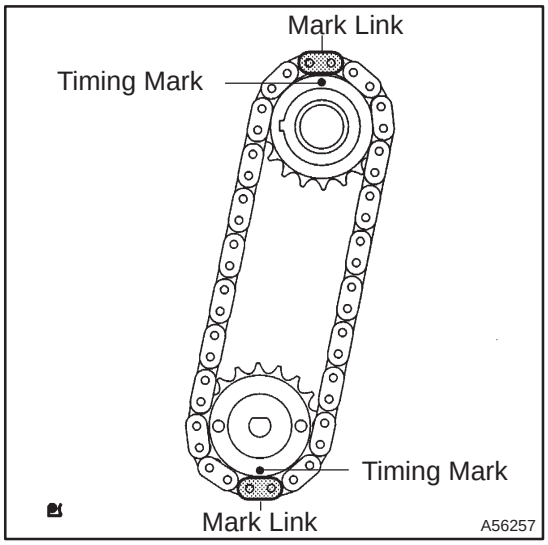
66. INSTALL NO.2 CAMSHAFT

(a) Tighten camshaft bearing cap No.2 and No. 3 as the sequence shown in the illustration.
Torque:
Bearing cap No. 2 29.5 N·m (300 kgf·cm, 22 ft·lbf)
Bearing cap No. 3 9 N·m (90 kgf·cm, 80 in.·lbf)



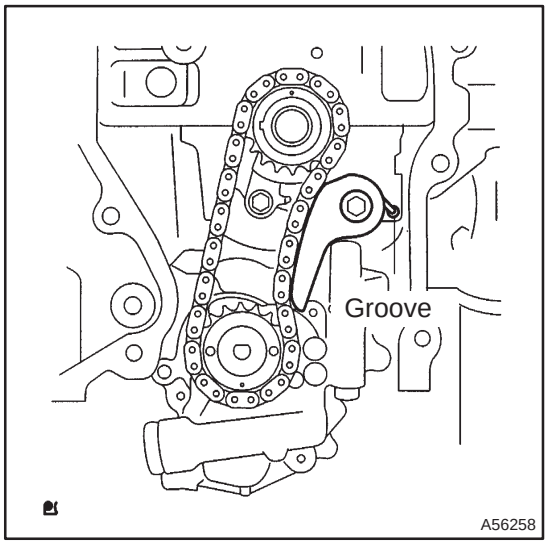
NOTICE:

- **Tighten the bolts after deciding the position for the thrust direction of the camshaft by bearing cap No. 2.**
- **Install the camshaft with its timing mark of camshaft timing gear on top.**

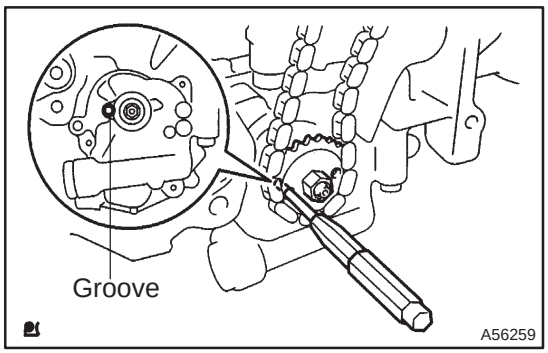


67. INSTALL OIL PUMP ASSY

(a) Install oil pump assembly with 3 bolts and a new gaskets.
Torque: 19 N·m (195 kgf·cm, 15 ft·lbf)

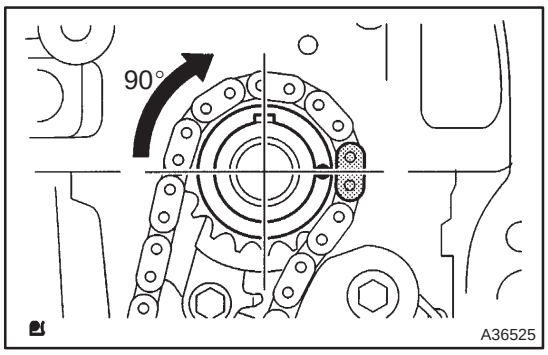


68. INSTALL NO.2 CHAIN SUB–ASSY



(a) Set the crankshaft key into the left horizontal position.
(b) Turn the cutout of the drive shaft to the top.

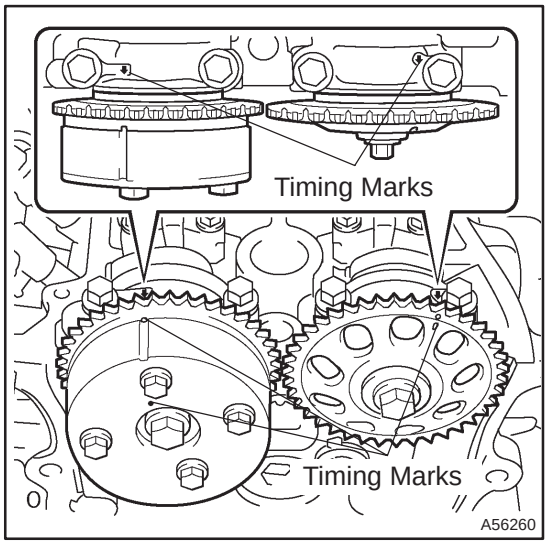
(c) Align the mark links (yellow colored links) with the timing marks of gear as shown in the illustration.
(d) Insert the gear with chain to the crankshaft and oil pump shaft.
(e) Temporarily tighten the oil pump drive shaft gear by a nut.



(f) Insert the damper spring into the adjusting hole, and install the chain tensioner plate by a bolt.
Torque: 12 N·m (120 kgf·cm, 9 ft·lbf)

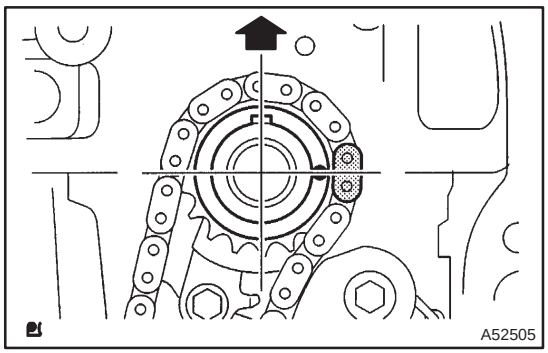
(g) Align an adjusting hole of the sprocket with the groove of the oil pump.

(h) Put a bar (ϕ 4mm) into the adjusting hole of the sprocket to lock in position, and assemble a nut.
Torque: 29.5 N·m (300 kgf·cm, 20 ft·lbf)



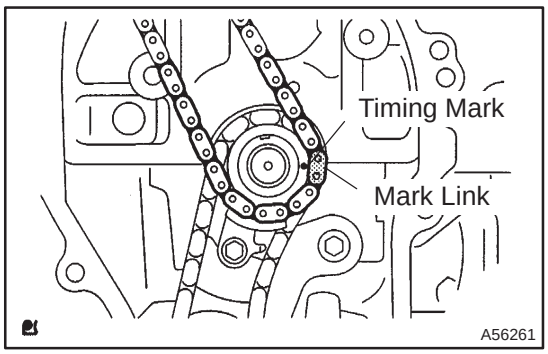
(i) Rotate the crankshaft clockwise 90°, and align the crankshaft key with the top.

69. INSTALL CRANKSHAFT TIMING GEAR OR SPROCKET

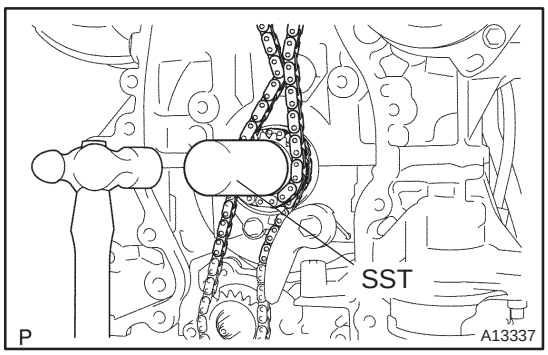


70. INSTALL CHAIN VIBRATION DAMPER NO.1

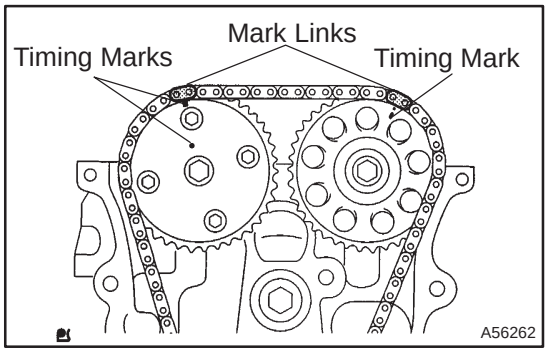
(a) Install the chain vibration damper with the 2 bolts.
Torque: 9 N·m (90 kgf·cm, 80 in.·lbf)



71. INSTALL CHAIN SUB–ASSY



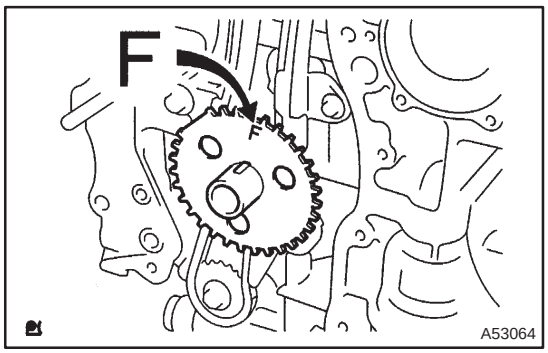
(a) Set No. 1 cylinder to TDC/compression.
(1) Align the timing marks of the camshaft timing sprockets and No. 1 bearing caps.



(2) Using the crankshaft pulley bolt, turn the crankshaft and set the set key on the crankshaft upward.

(b) Align the mark plate (blue or orange colored link) with the timing mark of the crankshaft timing gear.

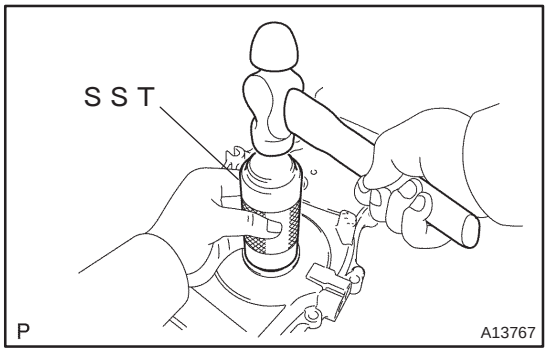
(c) Using SST, install the sprocket.
SST 09309–37010



(d) Align the mark l;inks (gold or yellow colored links) with the timing marks of the camshaft timing gear, and install the chain.

72. INSTALL CHAIN TENSIONER SLIPPER

Torque: 19 N·m (195 kgf·cm, 14 ft·lbf)

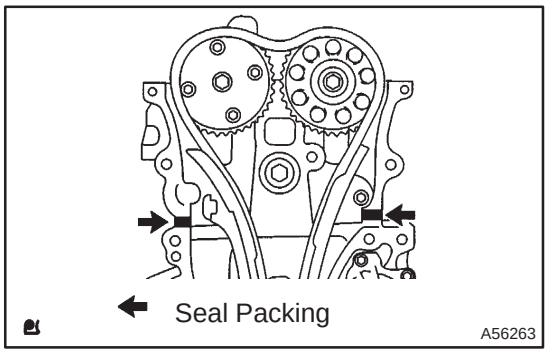


73. INSTALL TIMING CHAIN GUIDE

Torque: 9 N·m (90 kgf·cm, 80 in.·lbf)

74. INSTALL CRANKSHAFT POSITION SENSOR PLATE NO.1

(a) Install crank angle sensor plate with the ”F” mark facing forward.

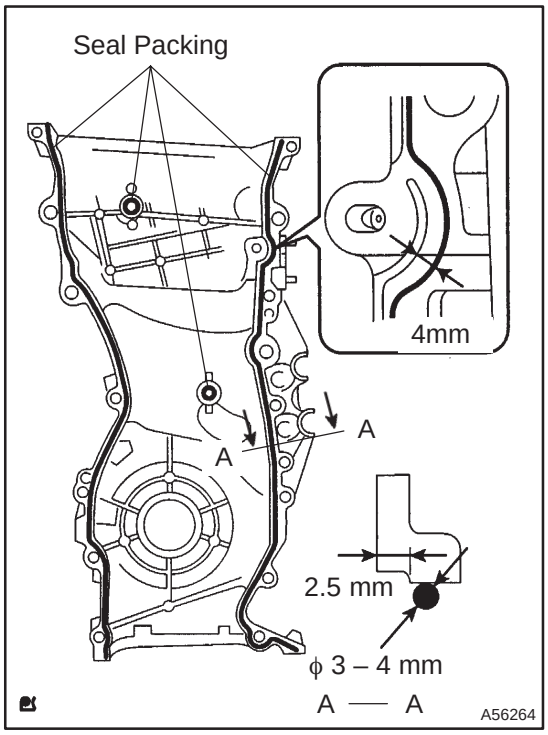


75. INSTALL TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL

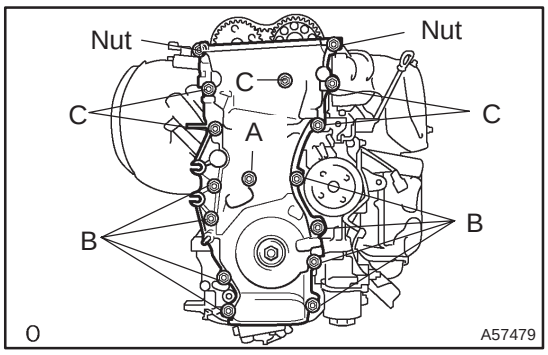
(a) Using SST and a hammer, tap in a new oil seal until its surface is flush with the timing chain cover edge.
SST 09309–37010

(b) Apply a light coat of MP grease to the lip of a new oil seal.

NOTICE:
Keep the lip off foreign materials.

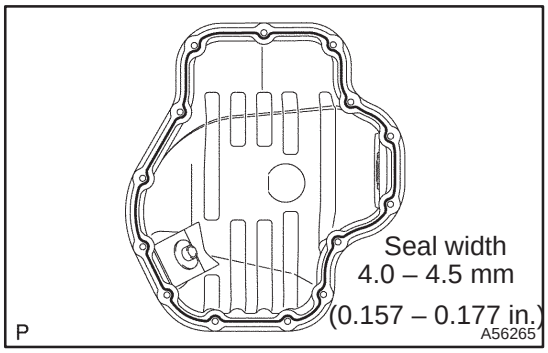


76. INSTALL TIMING CHAIN OR BELT COVER SUB–ASSY



NOTICE:
- **Remove any oil from the contact surface.**
- **Install the chain cover within 3 minutes after applying seal packing.**
- **Do not start the engine within 2 hours after installing.**

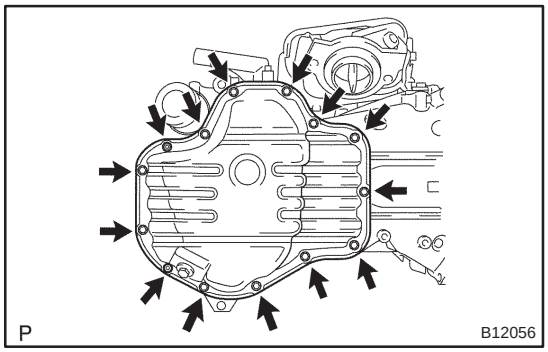
(a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the timing chain cover, cylinder head and cylinder block.



(b) Apply seal packing in the shape of bead (Diameter 2 mm (0.09 in.)) as shown in the illustration.
Seal packing: Part No. 08826–00080 or equivalent

(c) Apply seal packing in the shape of bead (Diameter 3 – 4 mm (0.118 – 0.157 in.)) as shown in the illustration.
Seal packing: Part No. 08826–00080 or equivalent

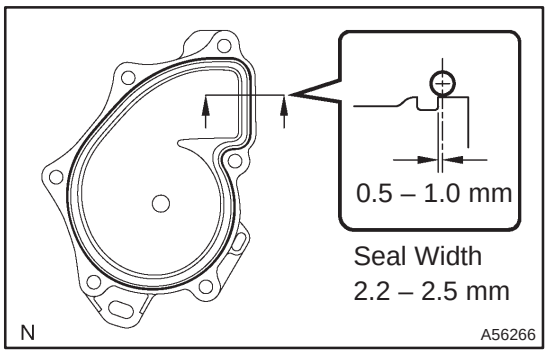
(d) Install the timing chain cover with the 14 bolts and 2 nuts.
Torque:
Bolt A 9.0 N·m (90 kgf·cm, 80 in.·lbf)
Bolt B 21 N·m (220 kgf·cm, 15 ft·lbf)
Bolt C 43 N·m (440 kgf·cm, 32 ft·lbf)
Nut 9.0 N·m (90 kgf·cm, 80 in.·lbf)



77. INSTALL OIL PAN SUB–ASSY

NOTICE:
- **Remove any oil from the contact surface.**
- **Install the oil pan within 3 minutes after applying seal packing.**
- **Do not start the engine within 2 hours after installing.**

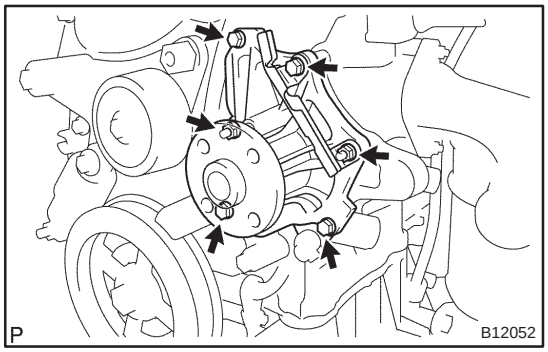
(a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the cylinder block and oil pan.



(b) Apply seal packing in the shape of bead (Diameter 3 mm – 4 mm (0.157 in.)) as shown in the illustration, and install the oil pan.
Seal packing: Part No. 08826–00080 or equivalent

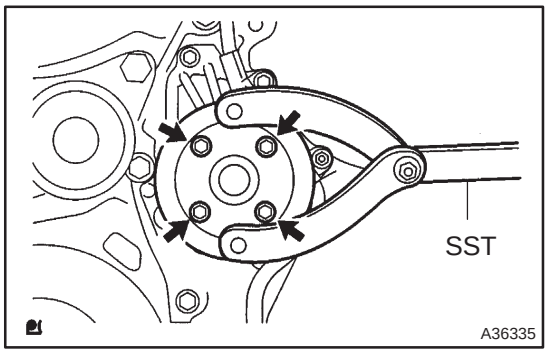
(c) Install the oil pan with the 12 bolts and 2 nuts.
Torque: 9.0 N·m (90 kgf·cm, 80 in.·lbf)

78. INSTALL OIL PAN DRAIN PLUG



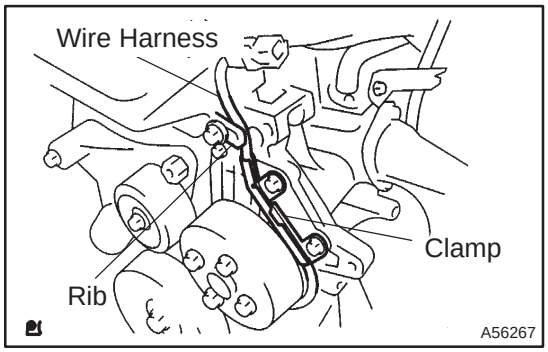
(a) Install an oil pan drain plug with a new gasket.
Torque: 25 N·m (250 kgf·cm, 18 ft·lbf)

79. INSTALL WATER PUMP ASSY



(a) Clean the contact surface of the cylinder block.
(b) Apply seal packing in the shape of bead (Diameter 2.2 – 2.5 mm) to the outside edge of the water pump.
Seal packing: Part No. 08826–00100 or equivalent

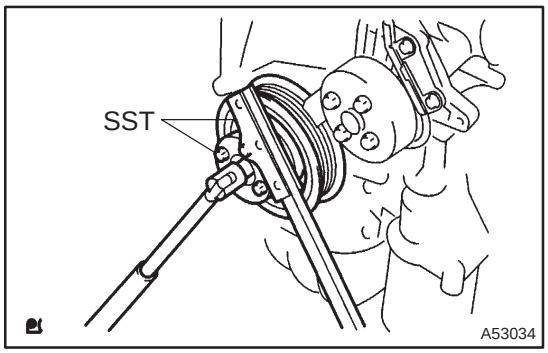
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the water pump within 5 minutes after applying seal packing.**
- **Do not start the engine within 2 hours after installing.**



(c) Install the water pump assembly with 4 bolts and 2 nuts.
Torque: 9.0 N·m (90 kgf·cm, 80 in.·lbf)

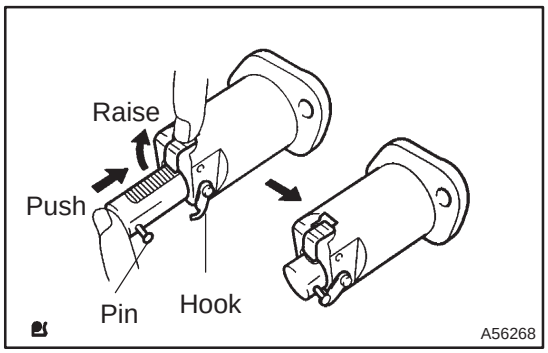
NOTICE:
Tighten the outside bolts and nuts with the clamp.

80. INSTALL WATER PUMP PULLEY



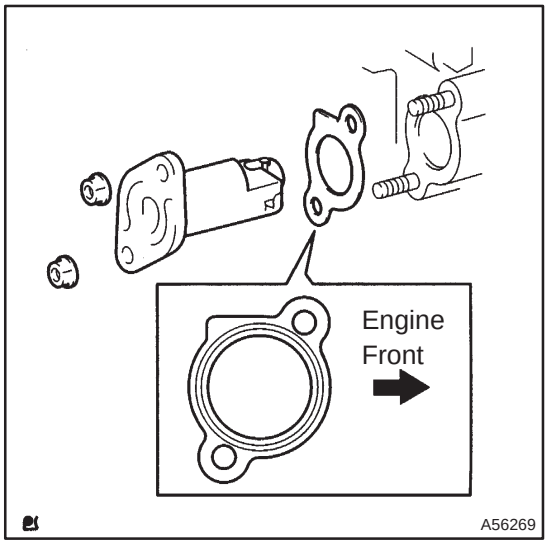
(a) Using SST, install the water pump pulley.
SST 09960–10010 (09962–01000, 09963–00600)
Torque: 26 N·m (265 kgf·cm, 19 ft·lbf)

81. INSTALL CRANK POSITION SENSOR



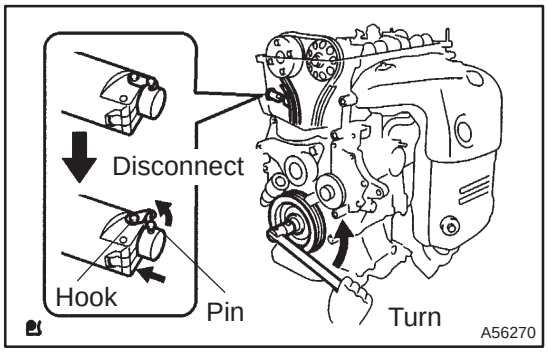
(a) Install the bolt and crankshaft position sensor.
Torque: 9.0 N·m (90 kgf·cm, 80 in.·lbf)

(b) Confirm the wire harness of the crank position sensor is placed as shown in the illustration.



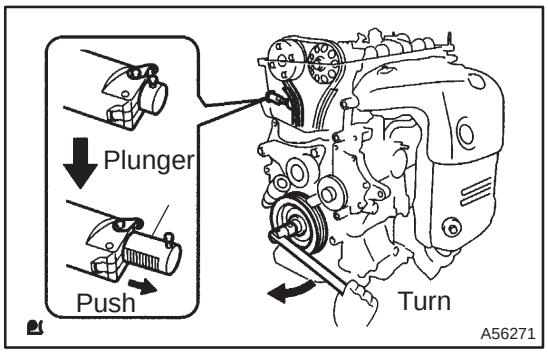
82. INSTALL CRANKSHAFT PULLEY

(a) Using SST, tighten the set bolt.
SST 09213–54015 (91651–60855), 09330–00021
Torque: 170 N·m (1735 kgf·cm, 125 ft·lbf)

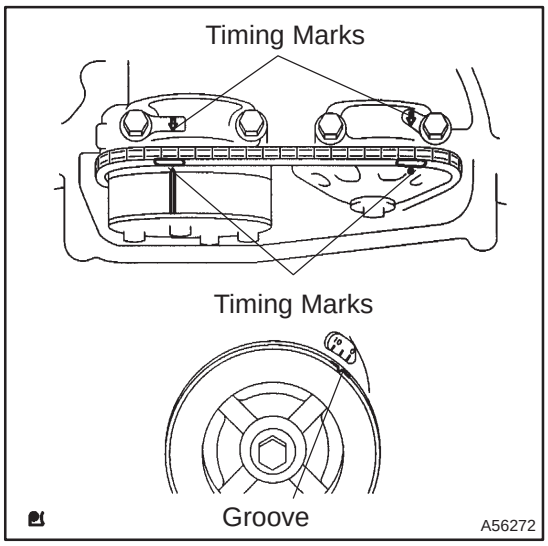


83. INSTALL CHAIN TENSIONER ASSY NO.1

(a) Release the ratchet pawl, fully push in the plunger and apply the hook to the pin so that the plunger cannot spring out.

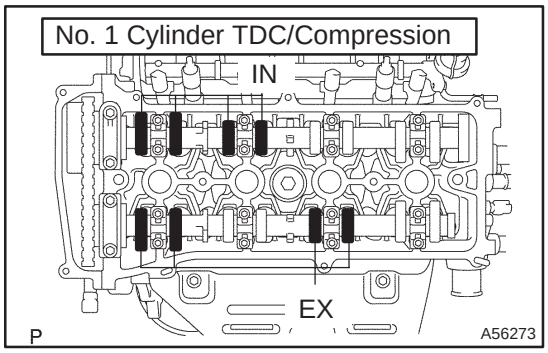


(b) Install a new gasket chain tensioner with 2 nuts.
Torque: 9.0 N·m (90 kgf·cm, 80 in.·lbf)



NOTICE:
If the hook is released wile inserting, apply the hook again, and insert the chain tensioner.

(c) Turn the crankshaft counterclockwise, and check the plunger knock pin is disconnected from the hook.

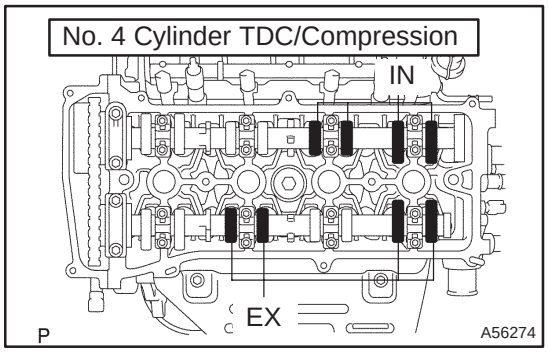


(d) Turn the crankshaft clockwise, and check the plunger is pushed by the plunger.

84. INSPECT VALVE CLEARANCE

(a) Turn the crankshaft pulley, and align its groove with the timing mark ”0” of the timing chain cover.

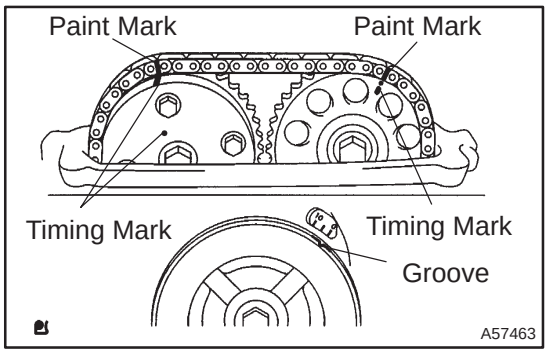
(b) Check that the timing marks of the camshaft timing sprockets are aligned with the timing marks of the No. 1 bearing cap as shown in the illustration.



(c) Check only the valve indicated.

(1) Using a feeler gauge, measure the clearance between the valve lifter and camshaft.

(2) Record the out–of–specification valve clearance measurements. They will be used later to determine the required replacement valve lifter.

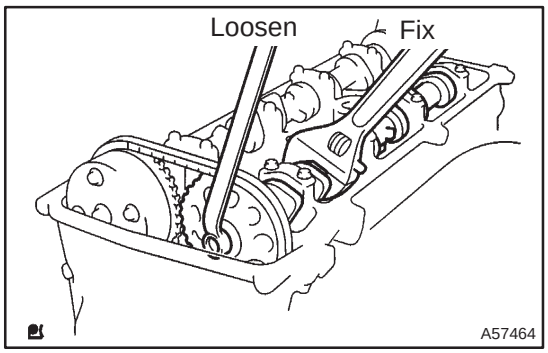


Valve clearance (cold):
Intake 0.19 – 0.29 mm (0.008 – 0.011 in.)
Exhaust 0.30 – 0.40 mm (0.012 – 0.016 in.)

(d) Turn the crankshaft 1 revolution (360°) clockwise, and set No.4 cylinder to TDC/compression.

(e) Check only the valve indicated.
(1) Using a feeler gauge, measure the clearance between the valve lifter and camshaft.
(2) Record the out–of–specification valve clearance measurements. They will be used later to determine the required replacement valve lifter.

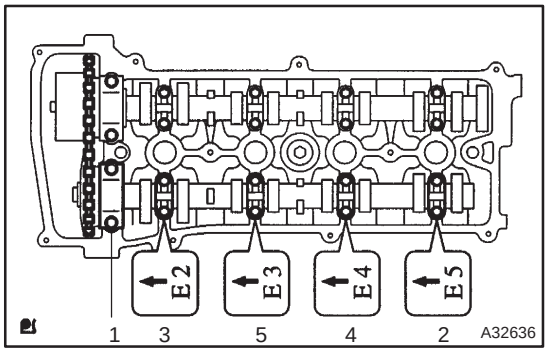
Valve clearance (cold):
Intake 0.19 – 0.29 mm (0.008 – 0.011 in.)
Exhaust 0.30 – 0.40 mm (0.012 – 0.016 in.)



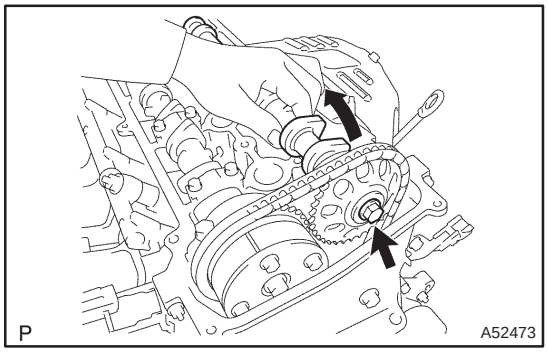
85. ADJUST VALVE CLEARANCE

NOTICE:

Do not turn the crankshaft without the chain tensioner.

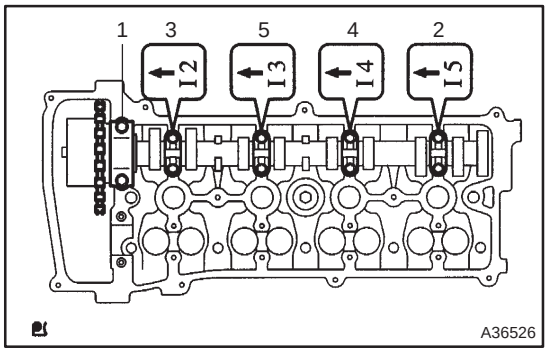


(a) Turn the crankshaft 1 revolution (360°) clockwise, and set No. 1 cylinder to TDC/compression.
(b) Place matchmarks on the timing chain and camshaft timing gear.
(c) Remove the 2 bolts and chain tensioner.



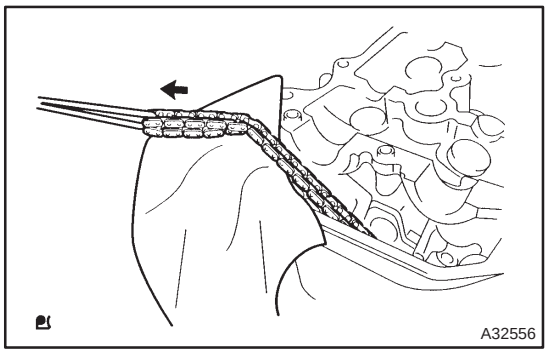
(d) Fix the camshaft with a spanner and so on, then loosen the camshaft timing gear set bolt.

NOTICE:

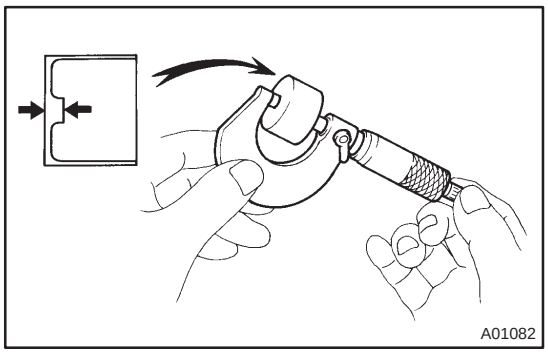


Be careful not to damage the valve lifter.

(e) Loosen the camshaft bearing cap bolts on No. 2 camshaft in the sequence shown in the illustration in several passes, and remove the caps.



(f) Raising the camshaft, remove the set bolt.
(g) Remove the timing chain sprocket from the camshaft with timing chain.
(h) Remove the timing chain sprocket from the timing chain.

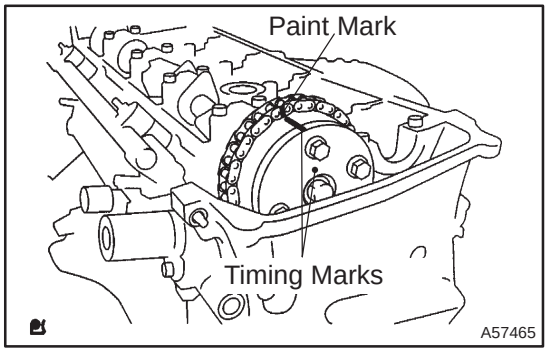


(i) Loosen the camshaft bearing cap bolts on camshaft in the sequence shown in the illustration, in several passes, and remove the caps.

(j) Remove the intake camshaft.

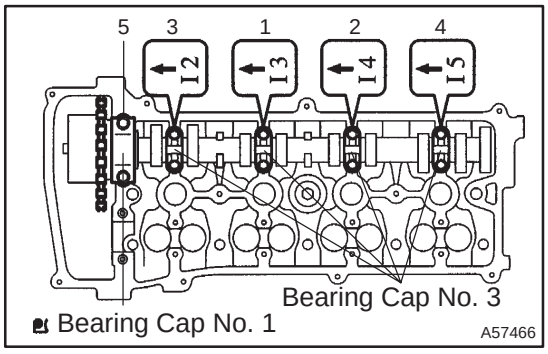
(k) Tie the timing chain with a string.

(l) Using a micrometer, measure the thickness of the removed lifter.



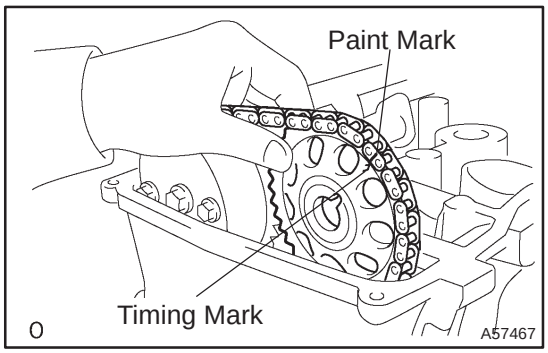
(m) Calculate the thickness of a new lifter so that the valve clearance comes within the specified value.

A	Thickness of the new lifter
B	Thickness of the used lifter
C	Measured valve clearance

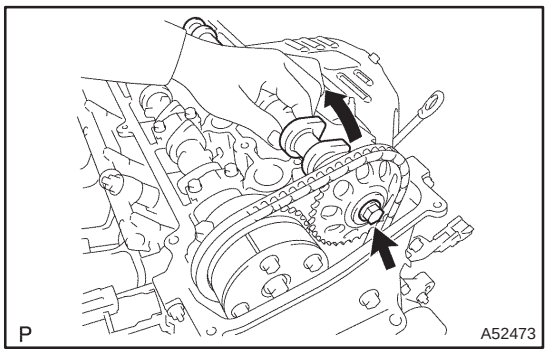


Valve clearance:
Intake A = B + (C – 0.24 mm (0.0094 in.))
Exhaust A = B + (C – 0.35 mm (0.0138 in.))

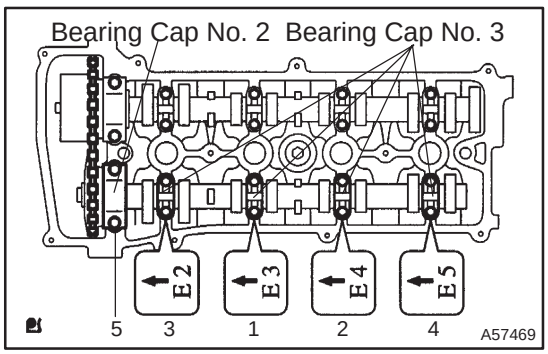
HINT:



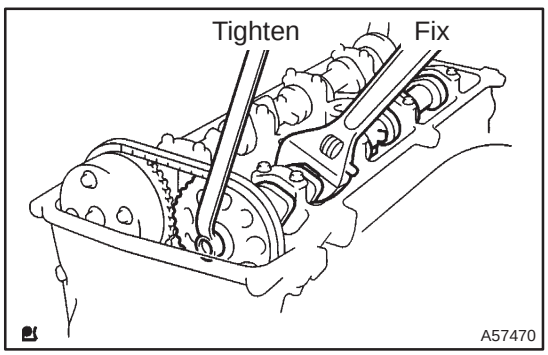
- Select a new lifter with a thickness as close as possible to the calculated values.
- Lifter are available in 35 sizes in increments of 0.020 mm (0.0008 in.), from 5.060 mm (0.1992 in.) to 5.740 mm (0.2260 in.).



(n) Install the timing chain on the camshaft timing gear, with the painted links aligned with the timing marks on the camshaft timing sprockets.

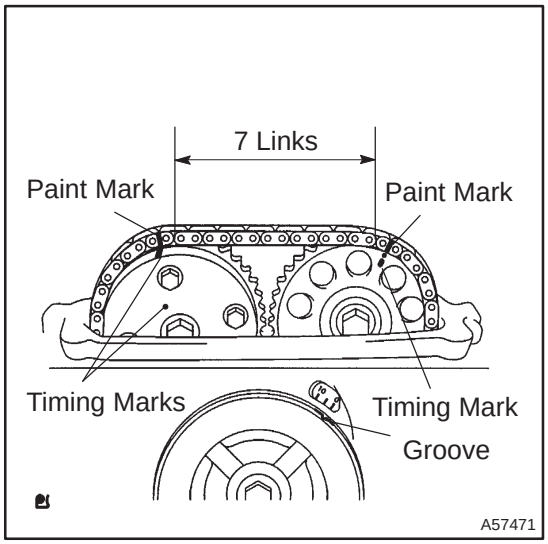


(o) Examine the front marks and numbers and tighten the bolts in the order shown in the illustration.
Torque:
Bearing cap No. 1 29.5 N·m (300 kgf·cm, 22 ft·lbf)
Bearing cap No. 3 9.0N·m (90 kgf·cm, 80 in.·lbf)



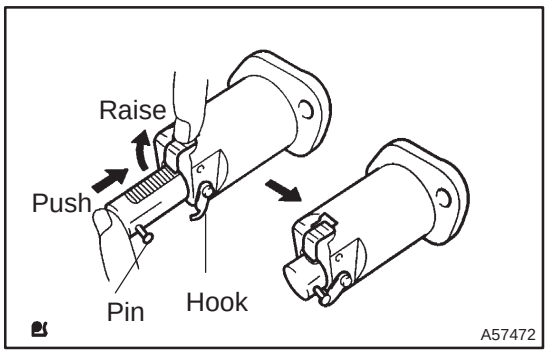
(p) Put the camshaft No. 2 on the cylinder head with the painted links of chain aligned with the timing mark on the camshaft timing sprockets.

(q) Raising the camshaft, tighten the set bolt temporarily.



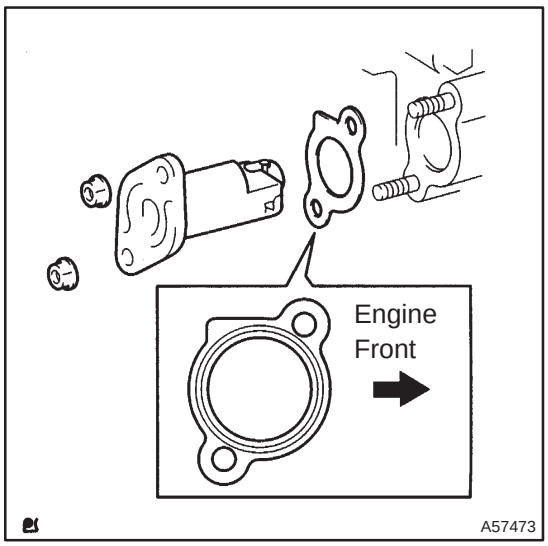
(r) Examine the front marks and numbers and tighten the bolts in the sequence shown in the illustration.
Torque:
Bearing cap No. 2 29.5 N·m (300 kgf·cm, 22 ft·lbf)
Bearing cap No. 3 9.0N·m (90 kgf·cm, 80 in.·lbf)

(s) Fix the camshaft with a spanner and so on, then tighten the camshaft timing gear set bolt.
Torque: 54 N·m (550 kgf·cm, 40 ft·lbf)



NOTICE:
Be careful not to damage the valve lifter.

(t) As shown in the illustration, check the matchmarks on the timing chain and camshaft timing sprockets and the alignment of the pulley groove with timing mark of the chain cover.

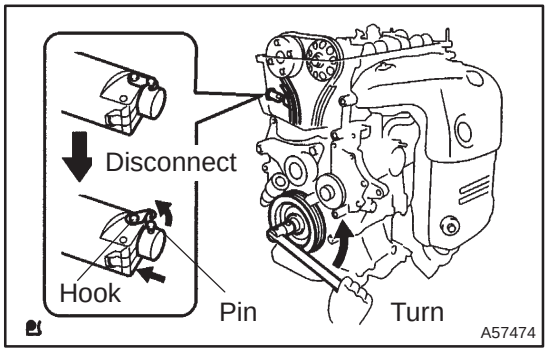


HINT:

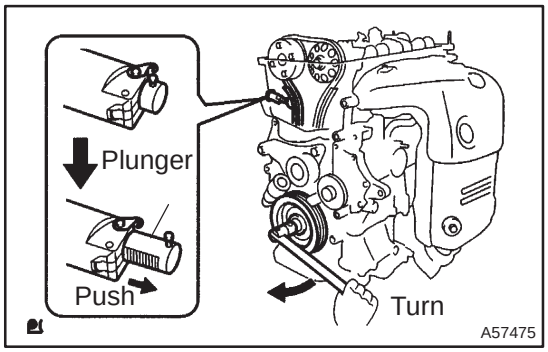
There are 7 links between the timing marks.

(u) Install chain tensioner.

(1) Release the ratchet pawl, fully push in the plunger and apply the hook to the pin so that the plunger cannot spring out.



(2) Install a new gasket and chain tensioner with the 2 nuts.



Torque: 9.0N·m (90 kgf·cm, 80 in.·lbf)

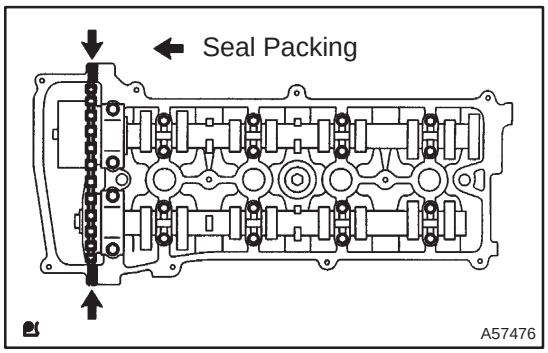
NOTICE:

When installing the tensioner, set the hook again if the hook releases the plunger.

(3) Turn the crankshaft counterclockwise, and disconnect the plunger knock pin form the hook.

(4) Turn the crankshaft clockwise, and check that the slipper is pushed by the plunger.

86. INSTALL CAMSHAFT POSITION SENSOR



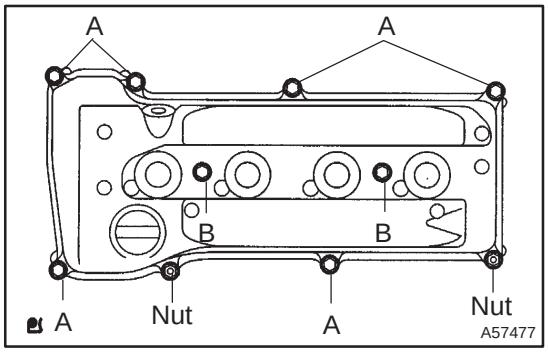
Torque: 9.0 N·m (90 kgf·cm, 80 in.·lbf)

87. INSTALL CYLINDER HEAD COVER GASKET

(a) Install the gasket to the cylinder head cover.

88. INSTALL CYLINDER HEAD COVER SUB–ASSY

(a) Remove any old packing (FIPG) material.

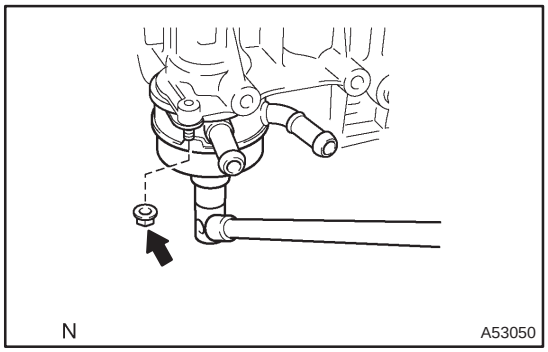


(b) Apply seal packing to 2 locations as shown in the illustration.

Seal packing: Part No. 08826–00080 or equivalent

NOTICE:

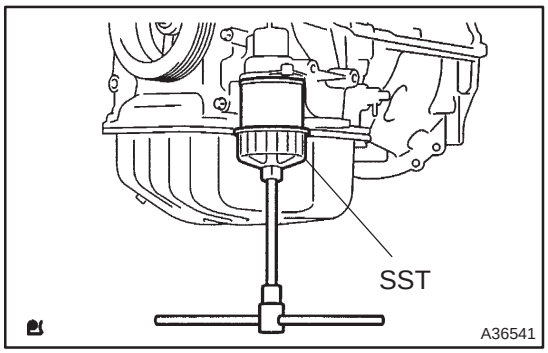
- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes after applying seal packing.**
- **Do not put into engine oil 2 hours after installing.**



(c) Install the cylinder head cover with the 8 bolts and 2 nuts.

Torque:
Bolt A 11 N·m (112 kgf·cm, 8 ft·lbf)
Bolt B 14 N·m (143 kgf·cm, 10 ft·lbf)
Nut 11 N·m (112 kgf·cm, 8 ft·lbf)

89. INSTALL OIL FILTER UNION(W/O OIL COOLER)



(a) Using a 12 mm hexagon wrench, install the oil filter union.

Torque: 30 N·m (306 kgf·cm, 22 ft·lbf)

90. INSTALL OIL COOLER ASSY(W/ OIL COOLER)

(a) Install a new O–ring to the oil cooler.
(b) Apply a light coat of engine oil on the threads and under the head of the union bolt.
(c) Install the oil cooler and union bolt.
Torque: 78.5 N·m (800 kgf·cm, 58 ft·lbf)
(d) Install the flange nut.
Torque: 9.0 N·m (90 kgf·cm, 80 in.·lbf)

91. INSTALL OIL FILTER SUB–ASSY

(a) Check and clean the oil filter installation surface.
(b) Apply clean engine oil to the gasket of a new oil filter.
(c) Lightly screw the oil filter into place, and tighten it until the gasket contacts the seat.
(d) Using SST, tighten it an additional 3/4 turn.
SST 09228–06501

92. INSTALL SPARK PLUG

Torque: 19 N·m (194 kgf·cm, 14 ft·lbf)

93. INSTALL VENTILATION VALVE SUB–ASSY

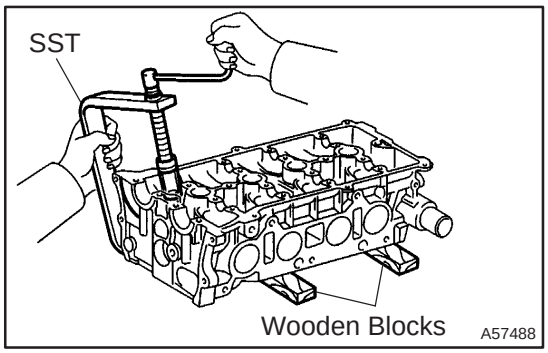
(a) Apply adhesive on the threads of the ventilation valve.
Torque: 19 N·m (194 kgf·cm, 14 ft·lbf)
Adhesive: Part No. 08833–00070 THREE BOND 1324 or equivalent

94. INSTALL OIL FILLER CAP GASKET

(a) Install the gasket to the oil filter cap.

95. INSTALL OIL FILLER CAP SUB–ASSY

CYLINDER HEAD ASSY (1AZ–FE)



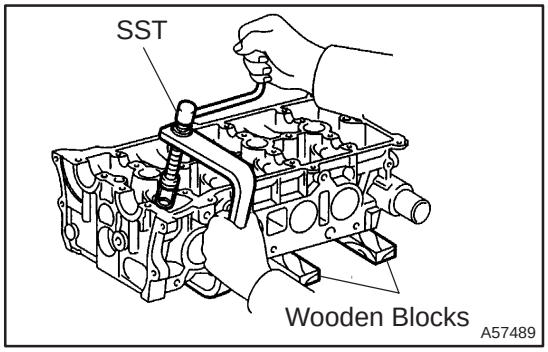
140DV–01

OVERHAUL

1. REMOVE VALVE LIFTER

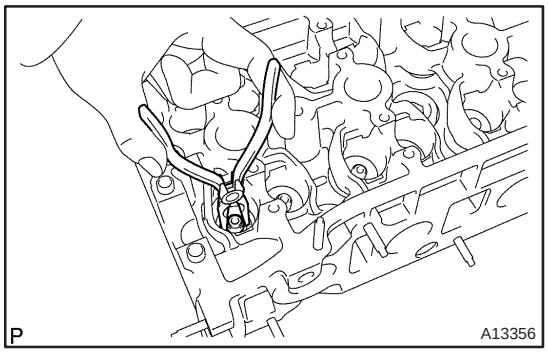
HINT:
Arrange the valve lifters in the correct order.

2. REMOVE INTAKE VALVE



(a) Using SST and wooden blocks, compress and remove the 8 valve spring retainer locks.
SST 09202–70020 (09202–00010)
(b) Remove the parts below from the cylinder head.

1	Retainer
2	Valve spring
3	Intake valve

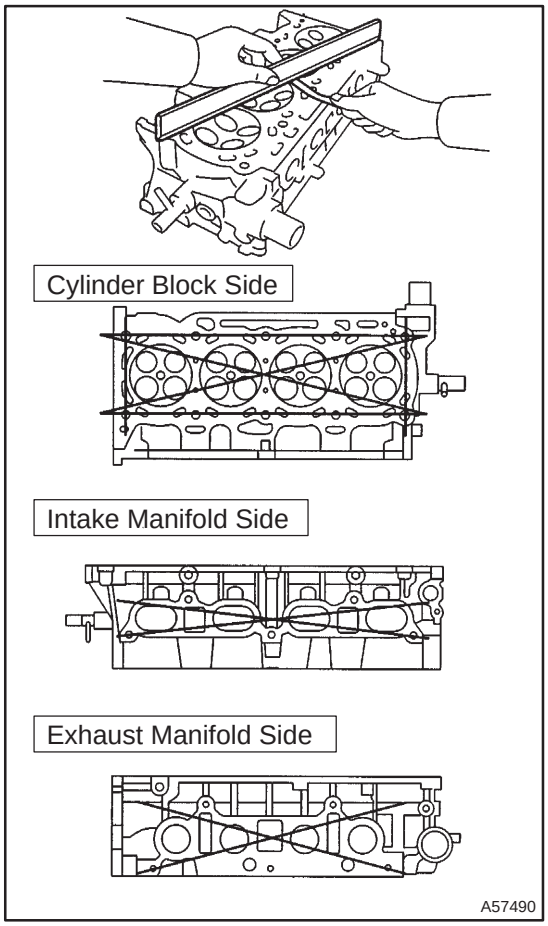


HINT:
Arrange the removed parts in the correct order.

3. REMOVE EXHAUST VALVE

(a) UsIng SST and wooden blocks, compress and remove the 8 valve spring retainer locks.
SST 09202–70020 (09202–00010)
(b) Remove the parts below from the cylinder head.

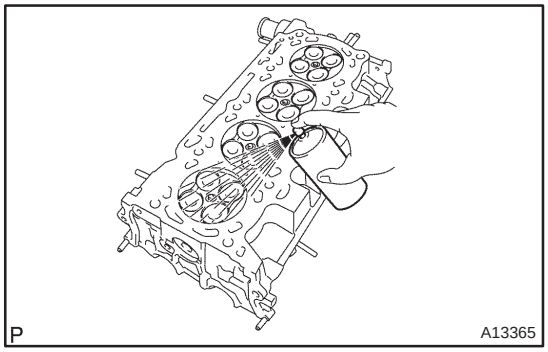
1	Retainer
2	Valve spring
3	Exhaust valve



4. REMOVE VALVE STEM OIL O SEAL OR RING

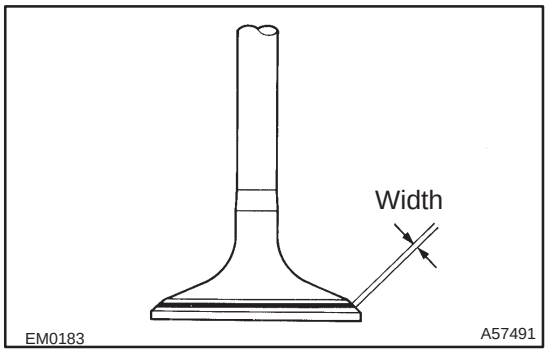
(a) Using needle–nose pliers, remove the oil seals.

5. REMOVE VALVE SPRING SEAT



6. REMOVE STUD BOLT

7. INSPECT CYLINDER HEAD FOR FLATNESS



(a) Using a precision straight edge and a feeler gauge, measure the surface contacting the cylinder block and the manifolds for warpage.

Maximum warpage:
Cylinder block side 0.08 mm (0.0031 in.)
Intake manifold side 0.08 mm (0.0031 in.)
Exhaust manifold side 0.08 mm (0.0031 in.)

8. INSPECT CYLINDER HEAD FOR CRACKS

(a) Using a dye penetrate, check the intake ports, exhaust ports and cylinder surface for cracks.

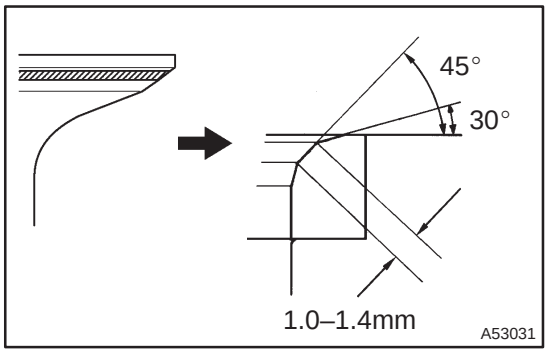
9. INSPECT VALVE SEATS

(a) Apply a light coat of prussian blue (or white lead) to the valve face.

(b) Lightly press the valve against the seat.

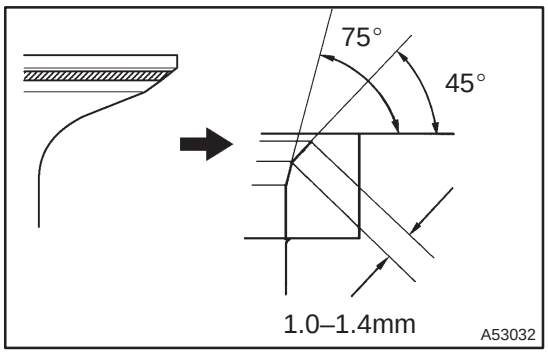
(c) Check the valve face and seat according to the following procedure.

(1) If blue appears 360° around the face, the valve is concentric. If not, replace the valve.



(2) If blue appears 360° around the valve sat, the guide and face are concentric. If not, resurface the seat.

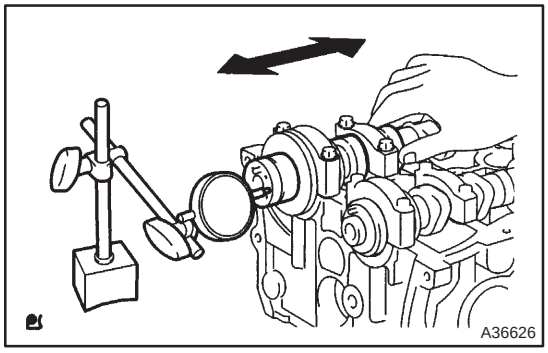
(3) Check that the sat contact is in the middle of the valve face with the width between 1.0 – 1.4 mm (0.039 – 0.055 in.).



10. REPAIR VALVE SEATS

NOTICE:

Take off a cutter gradually to make smooth seats.

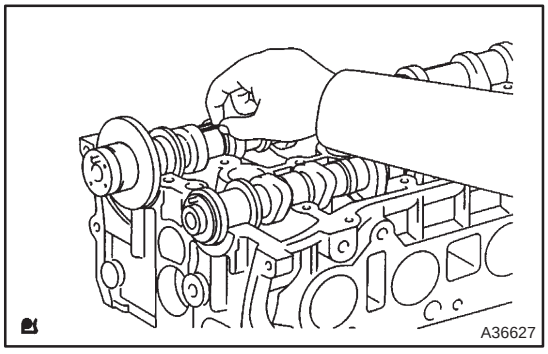


(a) If the seating is too high on the valve face, use 30° and 45° cutters to correct the seat.

(b) If the seating is too low on the valve face, use 75° and 45° cutters to correct the seat.

(c) Hand–lap the valve and valve sat with an abrasive compound.

(d) Check the valve seating position.



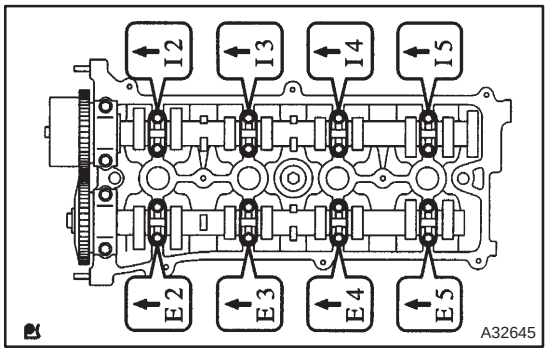
11. INSPECT CAMSHAFT THRUST CLEARANCE

(a) Install the camshafts.

(b) Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.

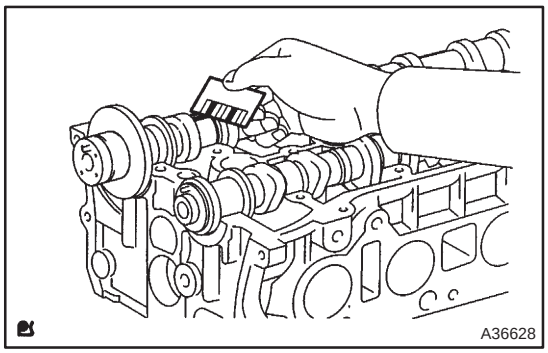
Standard thrust clearance:
Intake 0.040 – 0.095 mm (0.0016 – 0.0037 in.)
Exhaust 0.080 – 0.135 mm (0.0032 – 0.0053 in.)
Maximum thrust clearance:
Intake 0.11 mm (0.0043 in.)
Exhaust 0.15 mm (0.0059 in.)

(c) If the thrust clearance is greater than maximum, replace the cylinder head. If the thrust surface is damaged, replace the camshaft.



12. INSPECT CAMSHAFT OIL CLEARANCE

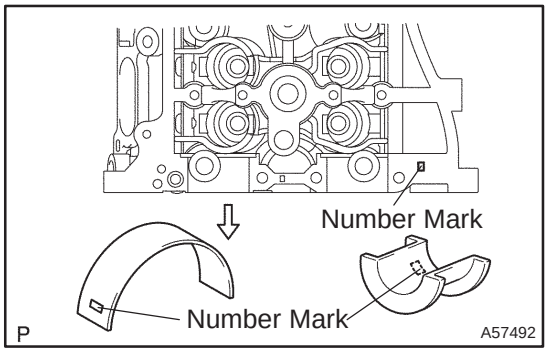
(a) Clean the bearing caps and camshaft journals.



(b) Place the camshafts on the cylinder head.

(c) Lay a strip of plastigage across each of the camshaft journal.

(d) Install the bearing caps.
Torque:
29.5 N·m (300 kgf·cm, 22 ft·lbf) for No. 1
29.5 N·m (300 kgf·cm, 22 ft·lbf) for No. 2
9 N·m (90 kgf·cm, 80 in.·lbf) for No. 3



NOTICE:
Do not turn the camshaft.

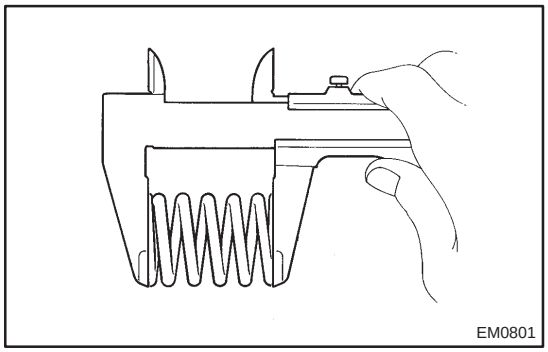
(e) Remove the bearing cap, and measure the plastigage at its widest point.
Standard oil clearance:
Intake No. 1 journal bearing mark 1
0.007 – 0.038 mm (0.0028 – 0.00150 in.)
Exhaust No. 1 journal
0.040 – 0.079 mm (0.0016 – 0.003 in.)
Other journals
0.025 – 0.062 mm (0.00098 – 0.00244 in.)
Maximum oil clearance:
Intake No. 1 journal 0.07 mm (0.0028 in.)
Other journals 0.10 mm (0.0039 in.)

NOTICE:
Completely remove the plastigage after the inspection.

(f) If the oil clearance is greater than maximum, replace the camshaft. If necessary, replace the cylinder head.

(g) If the oil clearance on No.1 journal is greater than maximum, choose and replace the bearing.

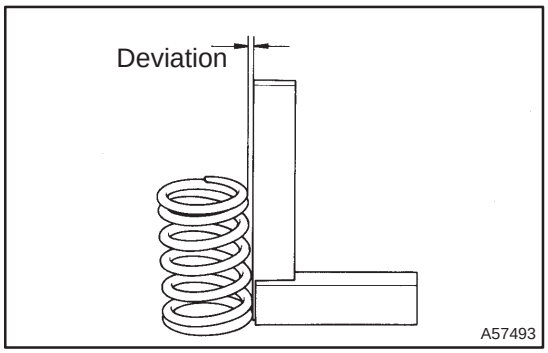
Cylinder head journal bore diameter



Mark "1"	40.000 – 40.008 mm (1.57480 – 1.57511 in.)
Mark "2"	40.009 – 40.017 mm (1.57515 – 1.57547 in.)
Mark "3"	40.018 – 40.025 mm (1.57551 – 1.57578 in.)

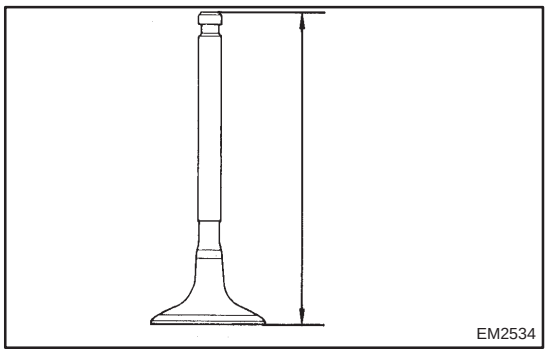
Standard bearing center wall thickness

Mark "1"	2.000 – 2.004 mm (0.07874 – 0.07890 in.)
Mark "2"	2.005 – 2.008 mm (0.07894 – 0.07905 in.)
Mark "3"	2.009 – 2.012 mm (0.07909 – 0.07921 in.)



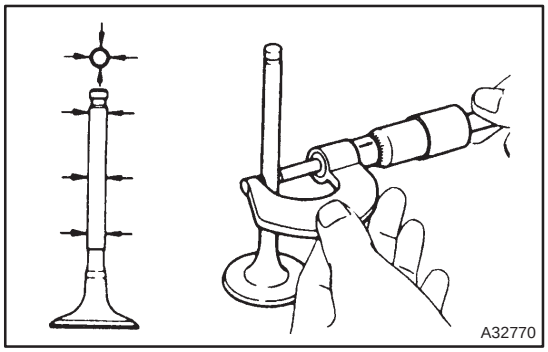
Camshaft journal diameter

	35.971 – 35.985 mm (1.41648 – 1.41673 in.)

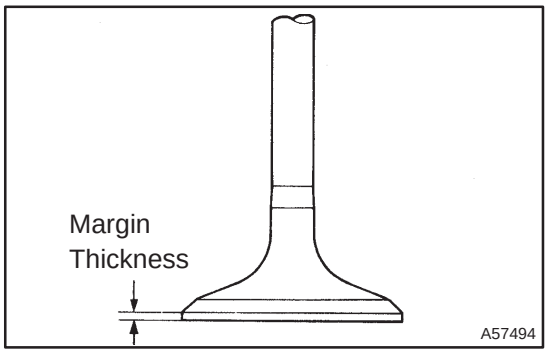


13. INSPECT INNER COMPRESSION SPRING

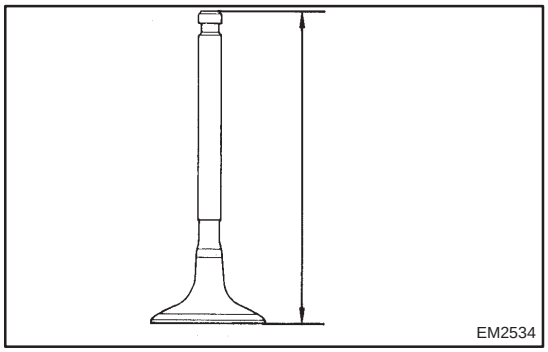
(a) Check the free length.
(1) Using vernier calipers, measure the free length of the valve spring.
Free length: 45.7 mm (1.799 in.)



(b) Check the deviation.
(1) Using a steel square, measure the deviation of the valve spring.
Maximum deviation: 1.6 mm (0.063 in.)
Maximum angle (reference): 2°

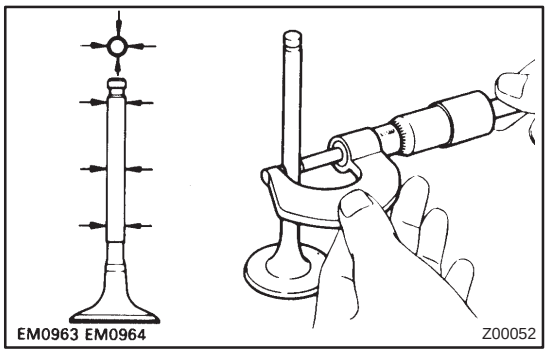


14. INSPECT INTAKE VALVE

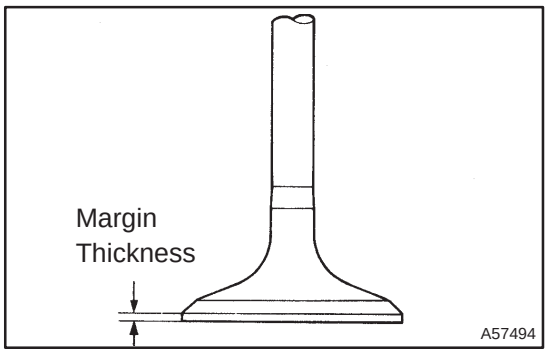


(a) Check the valve overall length.
(1) Using vernier calipers, measure the valve overall length.
Standard overall length: 101.71 mm (4.0043in.)
Minimum overall length: 101.21 mm (3.9846in.)

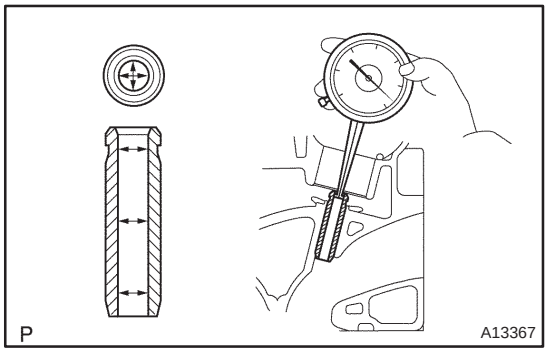
(b) Check the diameter of the valve stem.
(1) Using a micrometer, measure the diameter of the valve stem.
Valve stem diameter:
5.470 – 5.485 mm (0.2154 – 0.2159 in.)



(c) Check the valve head margin thickness.
(1) Using vernier calipers, measure the valve head margin thickness.
Standard margin thickness:
1.05 – 1.45 mm (0.041 – 0.057 in.)
Minimum margin thickness: 0.5 mm (0.020 in.)

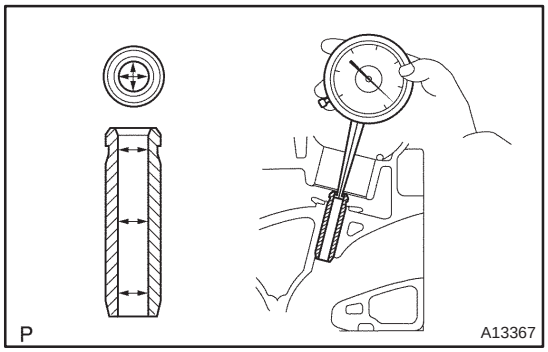


15. INSPECT EXHAUST VALVE



(a) Check the valve overall length.
(1) Using vernier calipers, measure the valve overall length.
Standard overall length: 101.15 mm (3.9823in.)
Minimum overall length: 100.70 mm (3.9646 in.)

(b) Check the diameter of the valve stem.
(1) Using a micrometer, measure the diameter of the valve stem.
Valve stem diameter:
5.465 – 5.480 mm (0.2152 – 0.2157 in.)

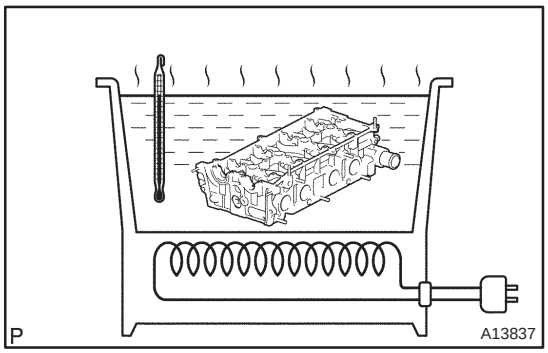


(c) Check the valve head margin thickness.
(1) Using vernier calipers, measure the valve head margin thickness.
Standard margin thickness:
1.2 – 1.6 mm (0.047 – 0.063 in.)
Minimum margin thickness: 0.5 mm (0.020 in.)

16. INSPECT INTAKE VALVE GUIDE BUSHING

(a) Using a caliper gauge, measure the inside diameter of the guide bushing.
Bushing inside diameter:
5.510 – 5.530 mm (0.2169 – 0.2177 in.)

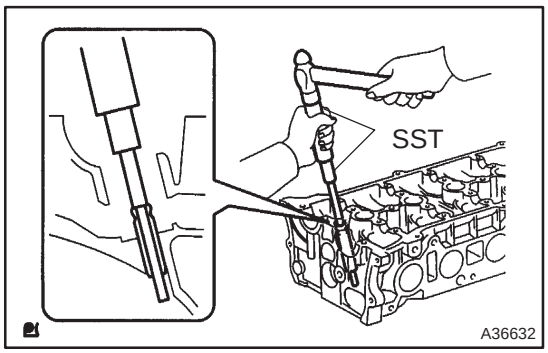
(b) Subtract the valve stem diameter measurement from the guide bushing inside diameter measurement.
Standard oil clearance:
0.025 – 0.060 mm (0.0010 – 0.0024 in.)
Maximum oil clearance: 0.08 mm (0.0031 in.)



17. INSPECT EXHAUST VALVE GUIDE BUSHINGS

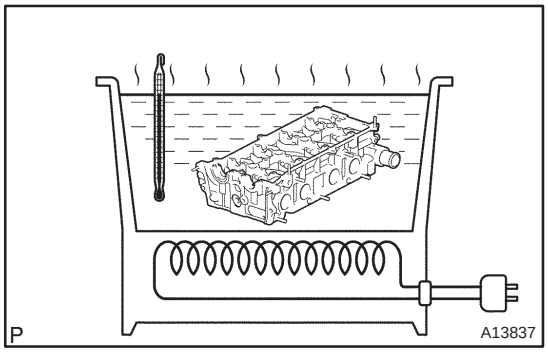
(a) Using a caliper gauge, measure the inside diameter of the guide bushing.

Bushing inside diameter:
5.510 – 5.530 mm (0.2169 – 0.2177 in.)



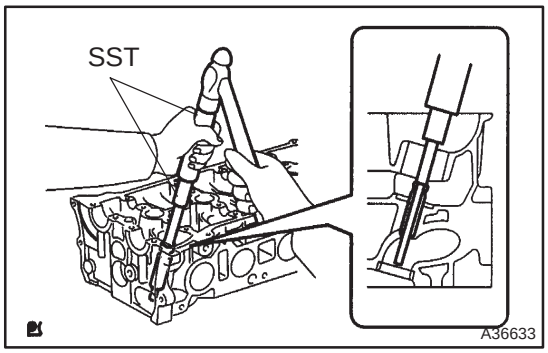
(b) Subtract the valve stem diameter measurement from the guide bushing inside diameter measurement.

Standard oil clearance:
0.030 – 0.065 mm (0.0012 – 0.0026 in.)
Maximum oil clearance: 0.10 mm (0.0039 in.)



18. REMOVE INTAKE VALVE GUIDE BUSHING

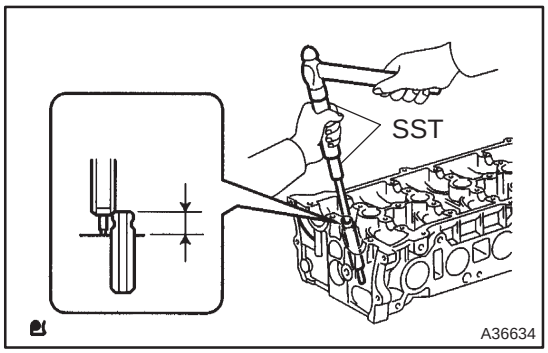
(a) Gradually heat the cylinder head to 80 – 100°C (176 – 212°F).



(b) Using SST and a hammer, tap out the guide bushing.
SST 09201–01055, 09950–70010 (09951–07100)

19. REMOVE EXHAUST VALVE GUIDE BUSHINGS

(a) Gradually heat the cylinder head to 80 – 100°C (176 – 212°F).



(b) Using SST and a hammer, tap out the guide bushing.
SST 09201–01055, 09950–70010 (09951–07100)

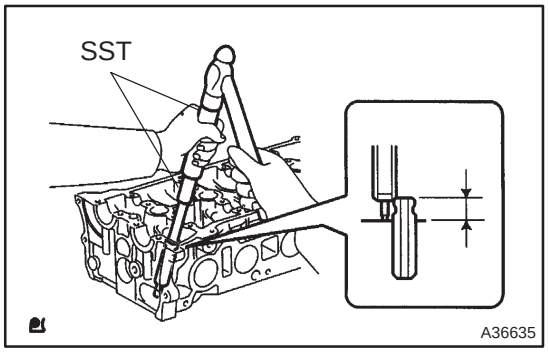
20. INSTALL INTAKE VALVE GUIDE BUSHING

(a) Using a caliper gauge, measure the bushing bore diameter of the cylinder head.
Diameter: 10.285 – 10.306 mm (0.4049 – 0.4057 in.)

(b) Install the STD bushing if the diameter is within specified diameter.

STD	10.333 – 10.344 mm (0.4068 – 0.4072 in.)

(c) Using SST and a hammer, tap in a new guide bushing to the specified protrusion height.
Protrusion height: 9.6 – 10.0 mm (0.3779 – 0.3937 in.)
SST 09201–01055, 09950–70010 (09951–07100), 23801



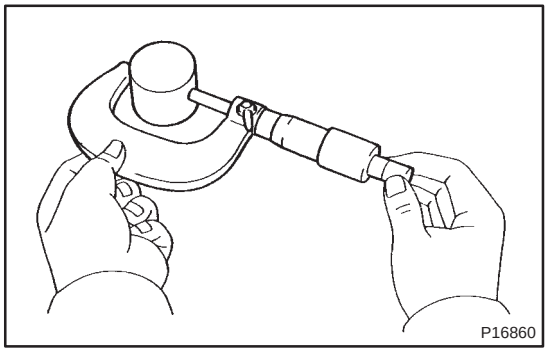
(d) Using a sharp 5.5 mm reamer, ream the guide bushing to obtain the standard specified clearance between the guide bushing and valve stem.
Standard oil clearance:
0.025 – 0.060 mm (0.00098 – 0.00236 in.)

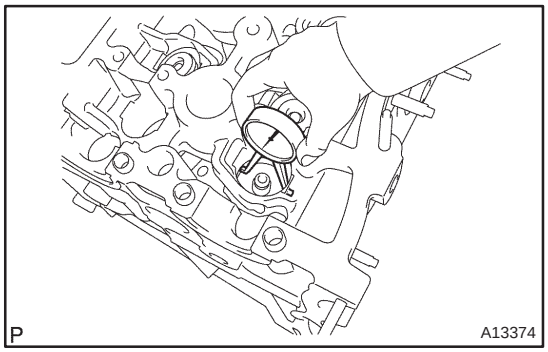
21. INSTALL EXHAUST VALVE GUIDE BUSHINGS

(a) Using a caliper gauge, measure the bushing bore diameter of the cylinder head.
Diameter: 10.285 – 10.306 mm (0.4049 – 0.4057 in.)

(b) Install the STD bushing if the diameter is within specified diameter.

STD	10.333 – 10.344 mm (0.4068 – 0.4072 in.)



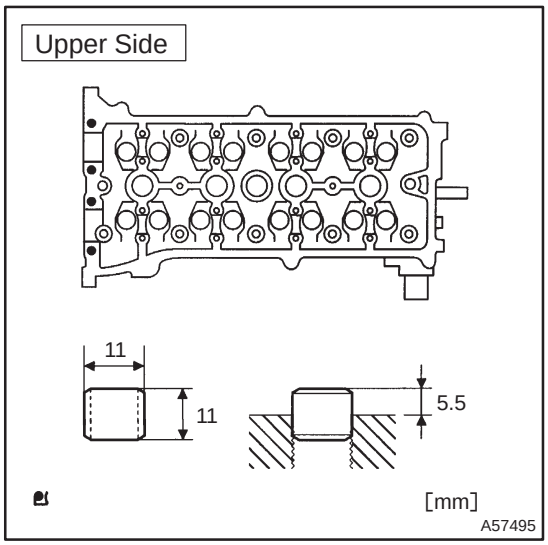


(c) Using SST and a hammer, tap in a new guide bushing to the specified protrusion height.
Protrusion height: 9.6 – 10.0 mm (0.3779 – 0.3937 in.)

(d) Using a sharp 5.5 mm reamer, ream the guide bushing to obtain the standard specified clearance between the guide bushing and valve stem.
SST 09201–01055, 09950–70010 (09951–07100), 23801
Standard oil clearance:
0.030 – 0.065 mm (0.00118 – 0.00256 in.)

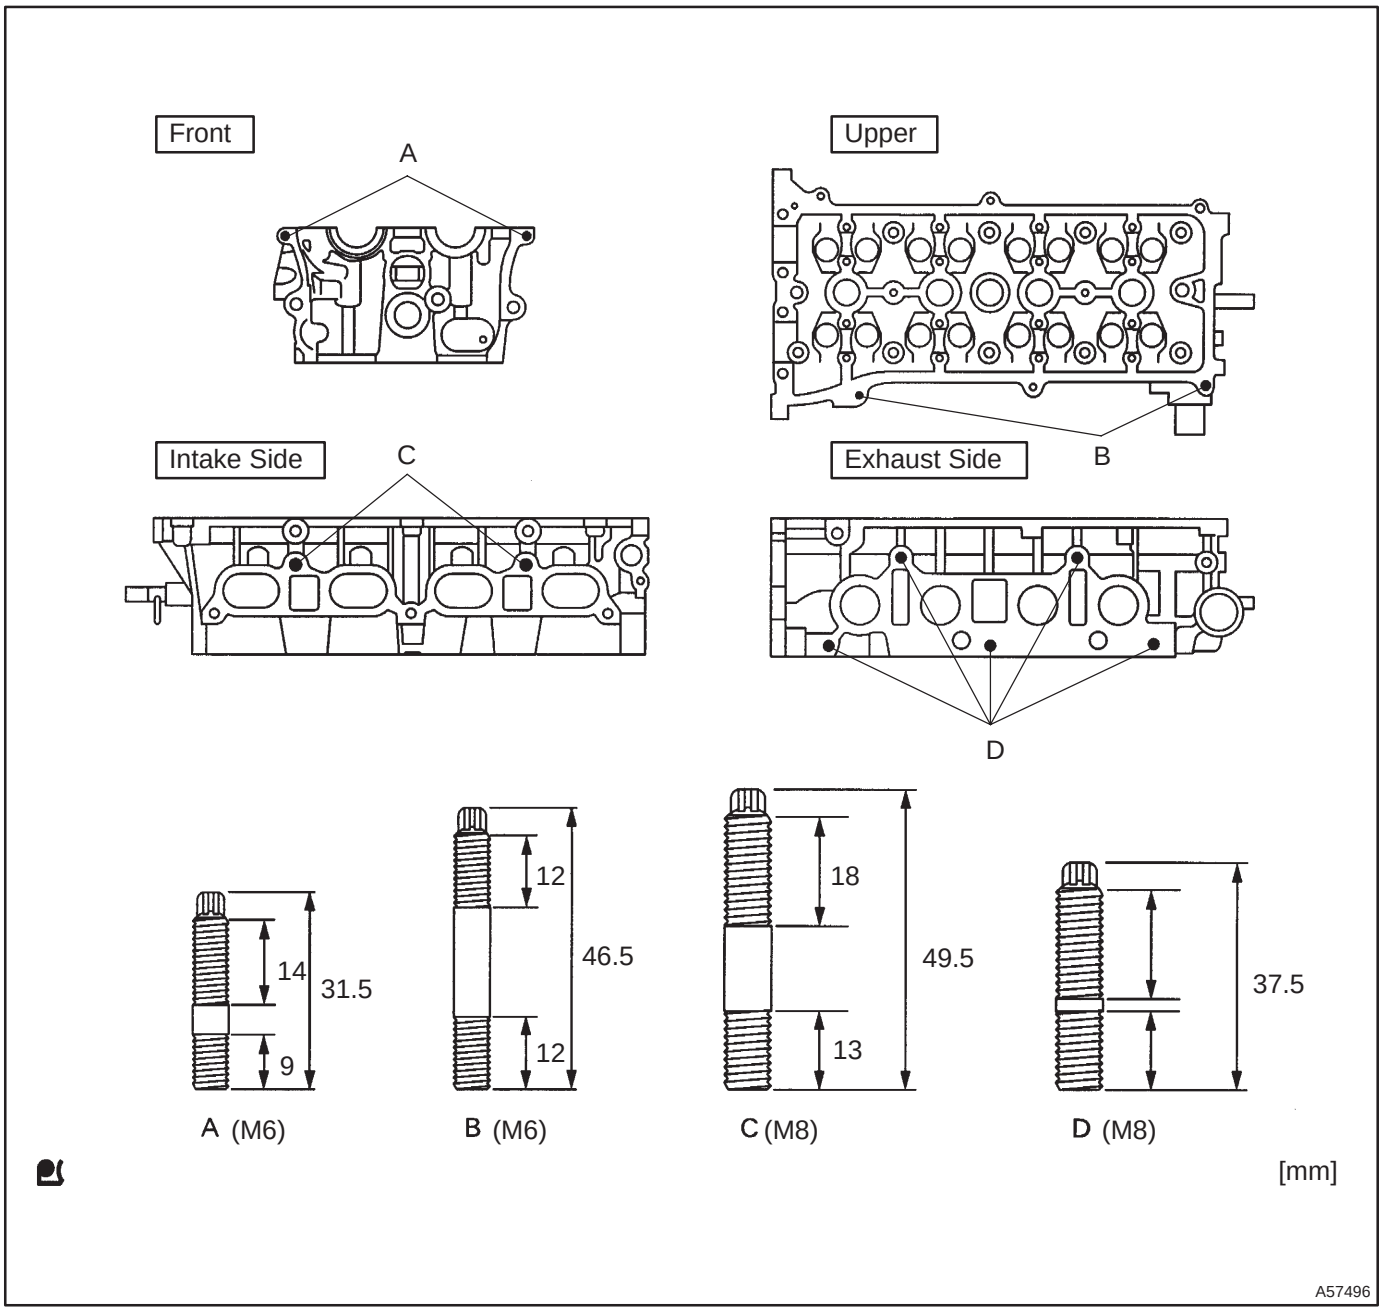
22. INSPECT VALVE LIFTER

(a) Check the lifter diameter.
(1) Using a micrometer, measure the lifter diameter.
Lifter diameter:
30.966 – 30.976 mm (1.2191 – 1.2195 in.)

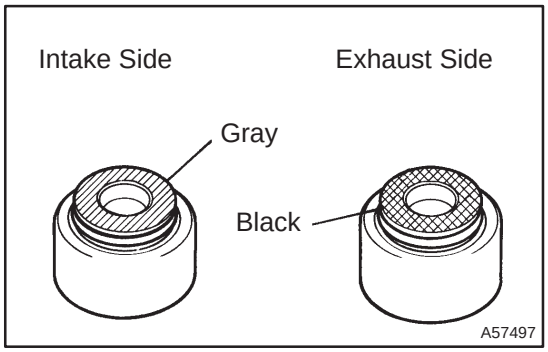


(b) Check the valve lifter oil clearance.
(1) Using a caliper gauge, measure the lifter bore diameter of the cylinder head.
Lifter bore diameter:
31.009 – 31.025 mm (1.2208 – 1.2215 in.)

(c) Subtract the lifter diameter measurement from the lifter bore diameter measurement.
Standard oil clearance:
0.033 – 0.059 mm (0.0013 – 0.0023 in.)
Maximum oil clearance: 0.07 mm (0.0028 in.)



23. INSTALL RING W/HEAD PIN



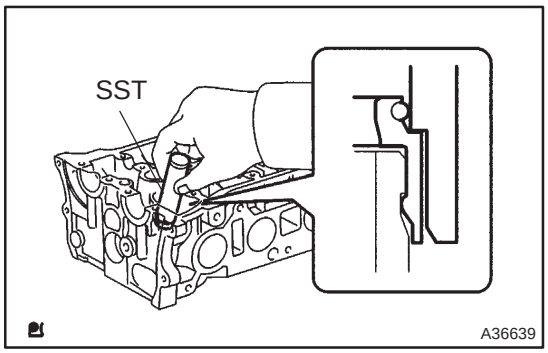
(a) Using a plastic–faced hammer, tap in a new ring pin to the specified protrusion height.
Protrusion height: 5.5 mm (0.2165 in.)

24. INSTALL STUD BOLT

Torque:
Bolt A 5 N·m (51 kgf·cm, 44 in.·lbf)
Bolt B 5 N·m (51 kgf·cm, 44 in.·lbf)
Bolt C 10 N·m (97 kgf·cm, 84 in.·lbf)
Bolt D 10 N·m (97 kgf·cm, 84 in.·lbf)

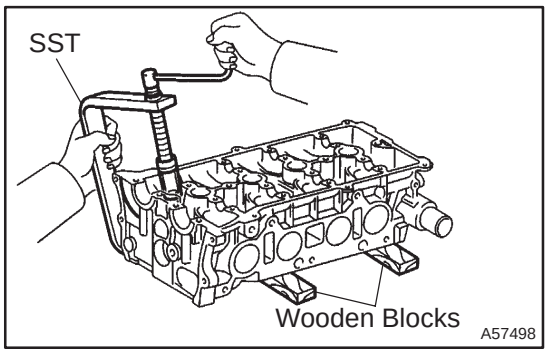
25. INSTALL VALVE SPRING SEAT

26. INSTALL VALVE STEM OIL O SEAL OR RING



(a) Apply a light coat of engine oil on new valve stem seals.

NOTICE:

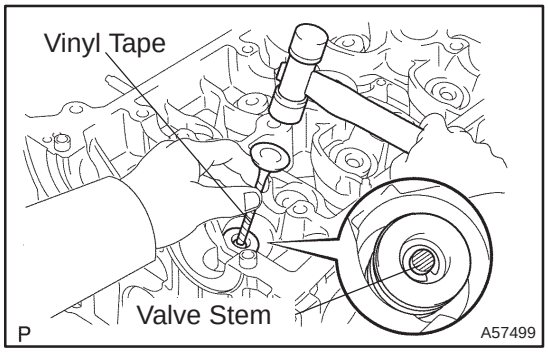


Pay much attention assembling the oil seal for intake and exhaust. Assembling the wrong one may cause a failure.

HINT:

The intake valve oil seal is gray and the exhaust valve oil seal is black.

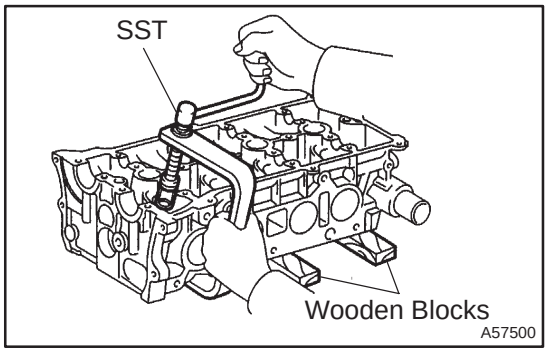
(b) Using SST, push in a the oil seal.
SST 09201–41020



27. INSTALL INTAKE VALVE

(a) Install the parts below to the cylinder head.

1	Intake valve
2	Spring
3	Retainer

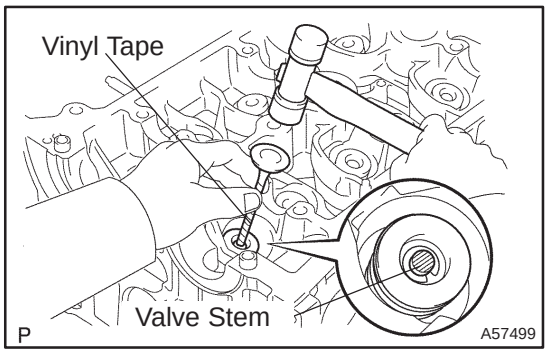


(b) Using SST and wooden blocks, compress and install 2 valve spring retainer locks.
SST 09202–70020 (09202–00010)

(c) Using a plastic–faced hammer and the valve stem (not in use) tip wound with vinyl tape, lightly tap the valve stem tip to ensure a proper fit.

NOTICE:

Be careful not to damage the valve stem tip.



28. INSTALL EXHAUST VALVE

(a) Install the parts below to the cylinder head.

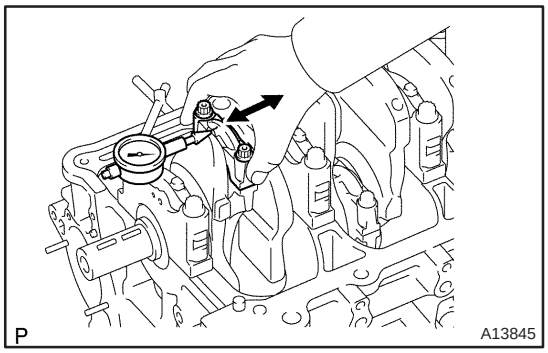
1	Exhaust valve
2	Spring
3	Retainer

(b) Using SST and wooden blocks, compress and install 2 valve spring retainer locks.
SST 09202–70020 (09202–00010)

(c) Using a plastic–faced hammer and the valve stem (not in use) tip wound with vinyl tape, lightly tap the valve stem tip to ensure a proper fit.

NOTICE:
Be careful not to damage the valve stem tip.

29. INSTALL VALVE LIFTER

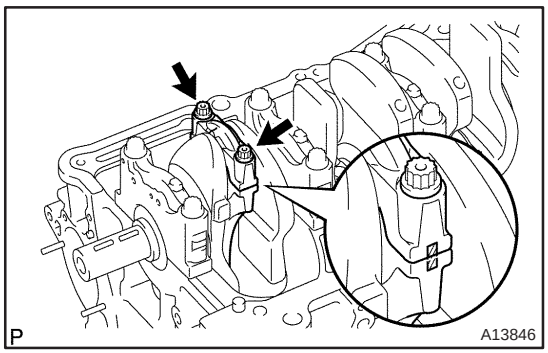


(a) Assemble the valve lifter and the tip of the valve stem with a light coat of engine oil applied.

NOTICE:
Install the valve lifters originally placed.

CYLINDER BLOCK (1AZ–FE)

OVERHAUL

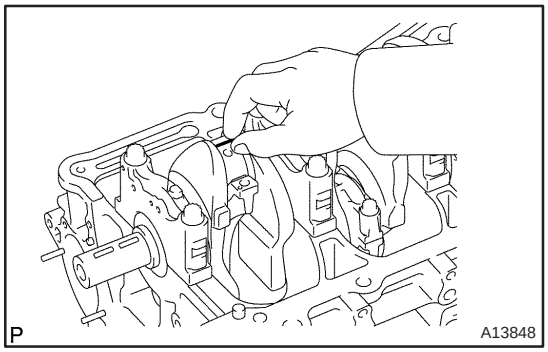


140DW–01

1. INSPECT CONNECTING ROD THRUST CLEARANCE

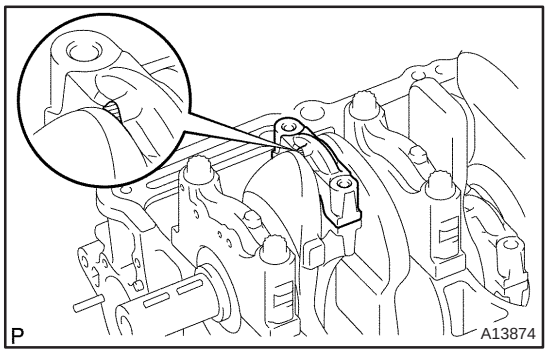
(a) Using a dial indicator, measure the thrust clearance while moving the connecting rod back and forth.
Standard thrust clearance:
0.160 – 0.362 mm (0.0063 – 0.0143 in.)
Maximum thrust clearance: 0.362 mm (0.0143 in.)

(b) If the thrust clearance is greater than maximum, replace the connecting rod assembly(s). If necessary, replace the crankshaft.



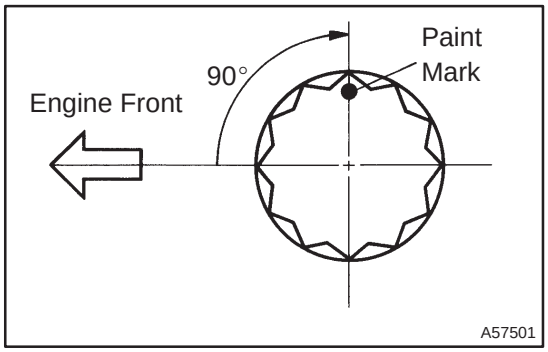
2. INSPECT CONNECTING ROD OIL CLEARANCE

HINT:
The connecting rod cap bolts are tightened in 2 progressive steps.



(a) Check the matchmarks on the connecting rod and cap are aligned to ensure correct reassembly.

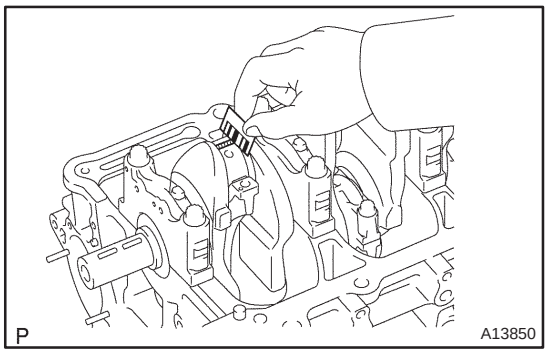
HINT:
The matchmarks on the connecting rods and caps are for ensuring correct reassembly.



(b) Remove the 2 connecting rod cap bolts.
(c) Clean the crank pin and bearing.
(d) Check the crank pin and bearing for pitting and scratches.

(e) Lay a strip of plastigage on the crank pin.

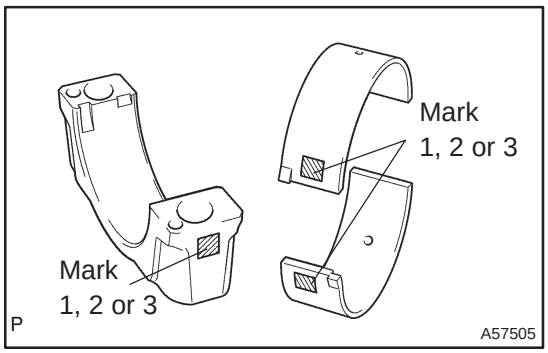
(f) Check that the protrusion of the connecting rod cap is facing in the correct direction.
(g) Apply a light coat of engine oil on the threads and under the heads of the connecting rod cap bolts.
(h) Tighten the bolts in several passes by the specified torque.
Torque: 25 N·m (250 kgf·cm, 18 ft·lbf)



(i) Mark the front of the connecting rod cap bolts with paint.
(j) Retighten the cap bolts by 90° as shown in the illustration.

NOTICE:

Do not turn the crankshaft.

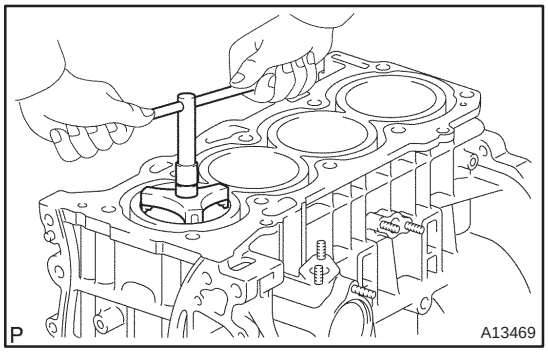


(k) Remove the 2 bolts, connecting rod cap and lower bearing.

(l) Measure the plastigage at its widest point.
Standard oil clearance:
0.024 – 0.048 mm (0.0009 – 0.0019 in.)
Maximum oil clearance: 0.08 mm (0.0031 in.)

NOTICE:

Completely remove the plastigage.

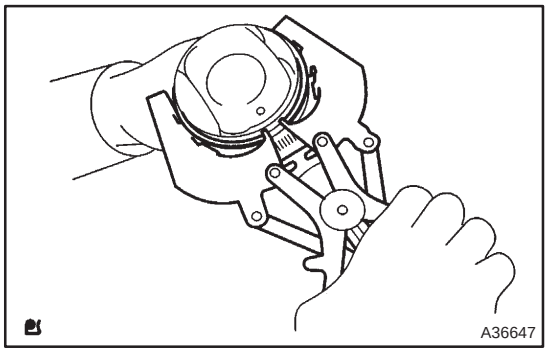


(m) If replacing a bearing, replace it with one having the same number as marked on the connecting rod. There are 3 sizes of standard bearings, marked ”1”, ”2” and ”3” accordingly.

HINT:

Standard bearing center wall thickness.

Mark 1	1.485 – 1.488 mm (0.0585 – 0.0586 in.)
Mark 2	1.488 – 1.491 mm (0.0586 – 0.0587 in.)
Mark 3	1.491 – 1.494 mm (0.0587 – 0.0588 in.)

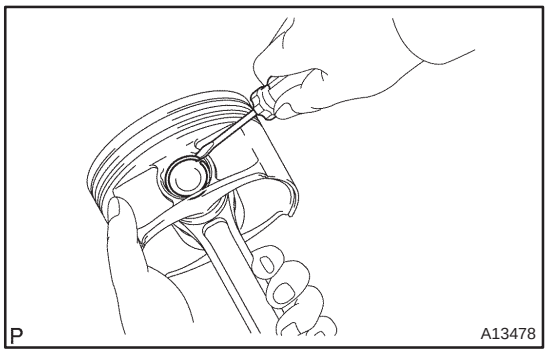


3. REMOVE PISTON SUB–ASSY W/CONNECTING ROD

(a) Using a ridge reamer, remove all the carbon from the top of the cylinder.
(b) Push the piston, connecting rod assembly and upper bearing through the top of the cylinder block.

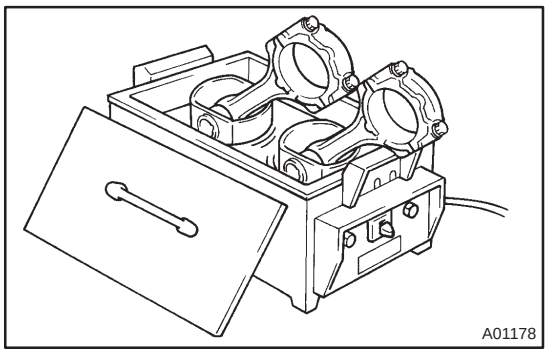
HINT:

- Keep the bearing, connecting rod and cap together.
- Arrange the piston and connecting rod assemblies in the correct order.



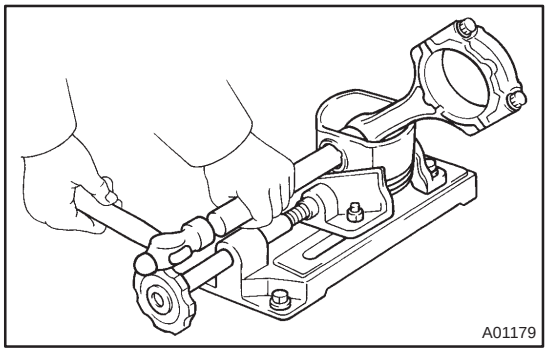
4. REMOVE CONNECTING ROD BEARING

5. REMOVE PISTON RING SET



(a) Using a piston ring expander, remove the 2 compression rings.

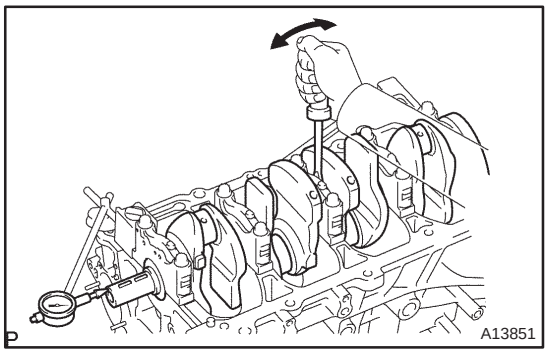
(b) Remove the 2 side rails and oil ring by hand.



6. REMOVE PISTON PIN HOLE SNAP RING

(a) Using a small screwdriver, pry out the 2 snap rings.

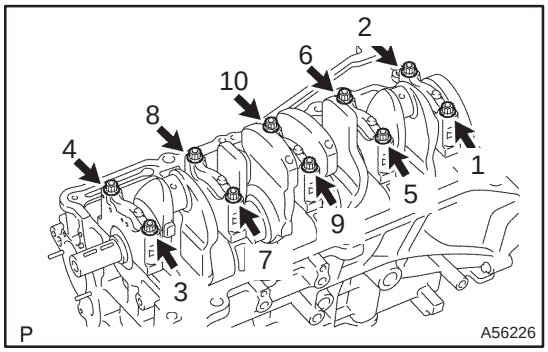
7. REMOVE PISTON



(a) Gradually heat the piston to 80 – 90 °C (176 – 194 °F).

(b) Using a plastic–faced hammer and brass bar, lightly tap out the piston pin and remove the connecting rod.

HINT:



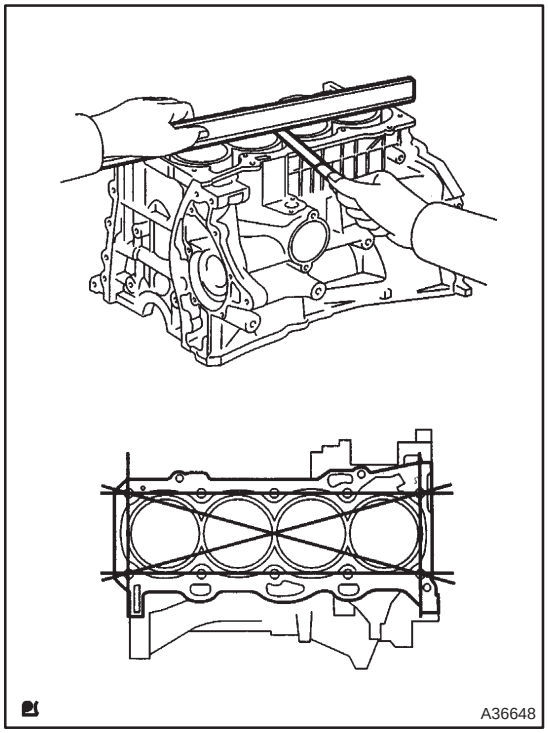
- The piston and pin are a matched set.
- Arrange the pistons, pins, rings, connecting rods and bearings in the correct order.

8. INSPECT CRANKSHAFT THRUST CLEARANCE

(a) Using a dial indicator, measure the thrust clearance while prying the crankshaft back and forth with a screwdriver.
Standard thrust clearance:
0.040 – 0.240 mm (0.0016 – 0.0094 in.)
Maximum thrust clearance: 0.30 mm (0.0118 in.)

(b) If the thrust clearance is greater than maximum, replace the thrust washers as a set.
Thrust washer thickness:
1.930 – 1.980 mm (0.0760 – 0.0780 in.)

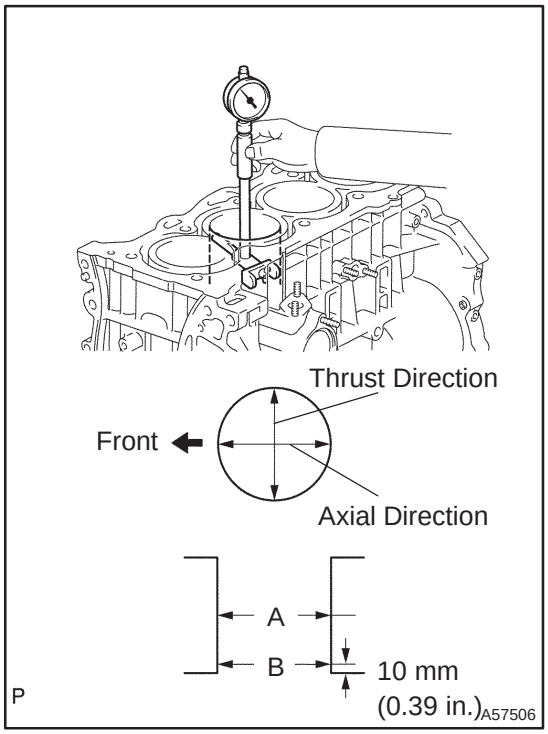
9. REMOVE CRANKSHAFT



(a) Uniformly loosen and remove the 10 bearing cap sub–assembly bolts, in several passes, in the sequence shown.
(b) Remove the bearing cap and crankshaft.

10. REMOVE CRANKSHAFT THRUST WASHER UPPER

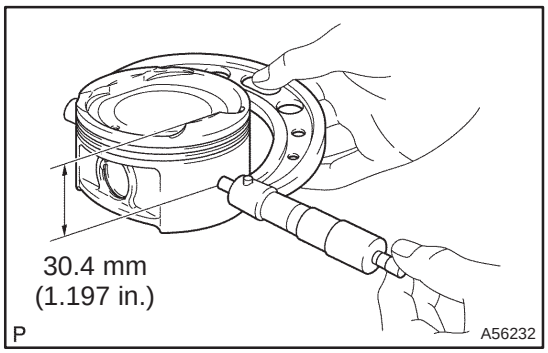
11. REMOVE CRANKSHAFT BEARING



NOTICE:
Arrange the bearings in the correct order.
12. REMOVE CRANKSHAFT BEARING NO.2

NOTICE:
Arrange the main bearings and thrust washers in the correct order.
13. REMOVE STUD BOLT

14. INSPECT CYLINDER BLOCK FOR FLATNESS

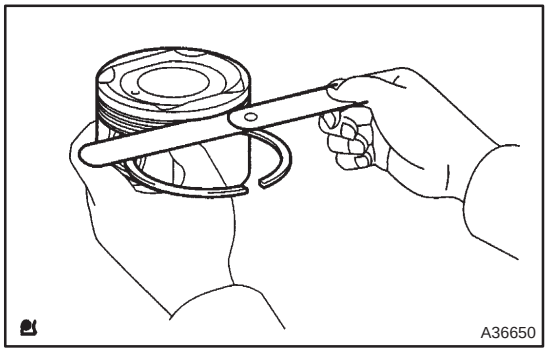


(a) Using a precision straight edge and feeler gauge, measure the surface contacting the cylinder head gasket for warpage.
Maximum warpage: 0.05 mm (0.0020 in.)

15. INSPECT CYLINDER BORE

(a) Using a cylinder gauge, measure the cylinder bore diameter at positions A and B in the thrust and axial directions.
Standard diameter:
86.000 – 86.013 mm (3.3858 – 3.3863 in.)
Maximum diameter: 86.013 mm (3.3863 in.)

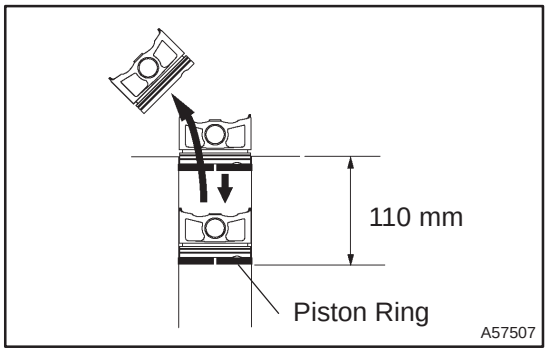
(b) If the diameter is greater than maximum, replace the cylinder block.



16. INSPECT PISTON DIAMETER

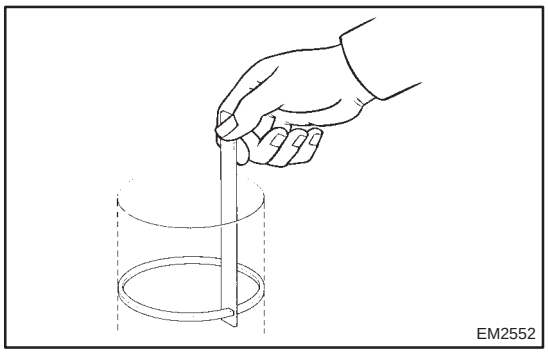
(a) Using a micrometer, measure the piston diameter at right angles to the piston pin center line, 30.3 mm (1.193 in.) from the piston head.
Piston diameter:
85.927 – 85.937 mm (3.3829 – 3.3833 in.)

17. INSPECT PISTON CLEARANCE



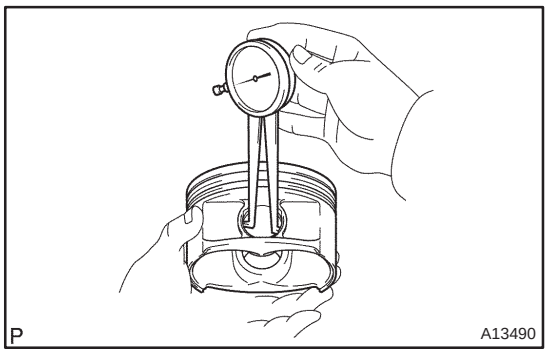
(a) Subtract the piston diameter measurement from the cylinder bore diameter measurement.
Standard oil clearance: 0.063 – 0.086 mm (0.0025 – 0.0034 in.)
Maximum oil clearance: 0.1 mm (0.0039 in.)

(b) If the clearance is greater than maximum, replace all the 4 pistons. If necessary, replace the cylinder block.



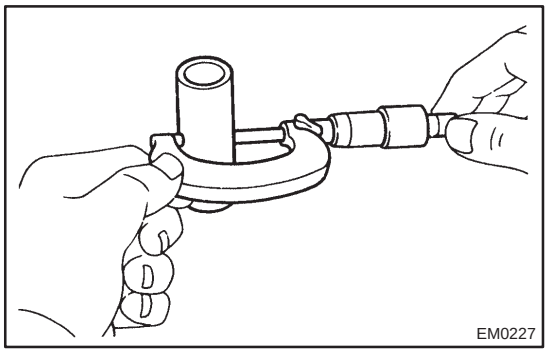
18. INSPECT RING GROOVE CLEARANCE

(a) Using a feeler gauge, measure the clearance between the piston ring and the wall of the ring groove.
Ring groove clearance:
No. 1 0.020 – 0.070 mm (0.0008 – 0.0028 in.)
No. 2 0.020 – 0.060 mm (0.0008 – 0.0024 in.)
Oil ring (side rail)
w/ TWC 0.070 – 0.150 (0.0028 – 0.0059 in.)
w/o TWC 0.060 – 0.140 (0.0024 – 0.0055 in.)



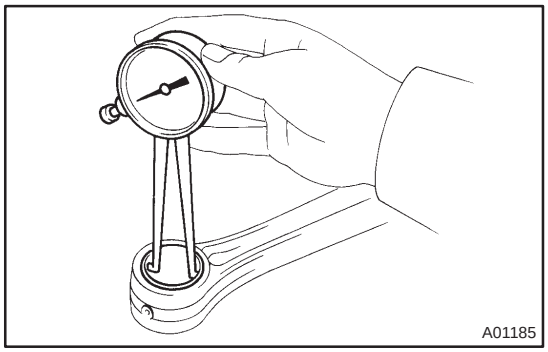
19. INSPECT PISTON RING END GAP

(a) Using a piston, push the piston ring a little beyond the bottom of the ring travel, 110 mm (4.33 in.) from the top of the cylinder block.



(b) Using a feeler gauge, measure the end gap.
Standard end gap:
No. 1 0.30 – 040 mm (0.0118 – 0.0157 in.)
No. 2 0.47 – 0.62 mm (0.0185 – 0.0244 in.)
Oil (side rail) 0.10 – 0.35 mm (0.0039 – 0.0138 in.)
Maximum end gap:
No. 1 0.89 mm (0.0350 in.)
No. 2 1.37 mm (0.0539 in.)
Oil (side rail) 0.73 mm (0.0287 in.)

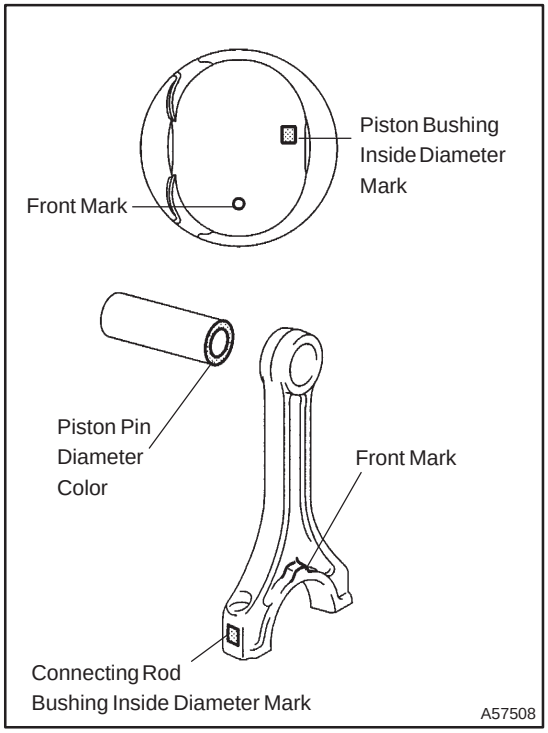
20. INSPECT PISTON PIN OIL CLEARANCE



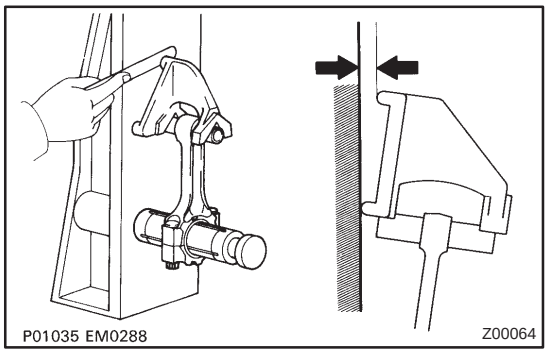
(a) Using caliper gauge, measure the inside diameter of the piston bushing.
Bushing inside diameter:
22.001 – 22.010 mm (0.8662 – 0.8665 in.)
Bushing inside diameter

Mark	mm (in.)
A	22.001 – 22.004 (0.8662 – 0.8663)
B	22.004 – 22.007 (0.8663 – 0.8664)
C	22.007 – 22.010 (0.8664 – 0.8665)

(b) Using a micrometer, measure the piston pin diameter.
Piston pin diameter:
21.997 – 22.009 mm (0.8660 – 0.8665 in.)
Piston pin diameter



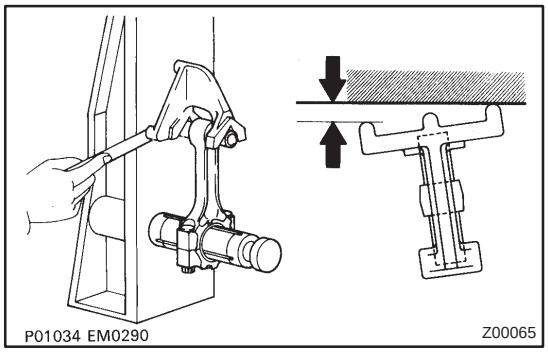
Mark	Color	mm (in.)
A	Blue	21.997 – 22.000 (0.8660 – 0.8661)
B	Green	22.000 – 22.003 (0.8661 – 0.8663)
C	Colorless	22.003 – 22.006 (0.8663 – 0.8664)
D		22.006 – 22.009 (0.8664 – 0.8665)



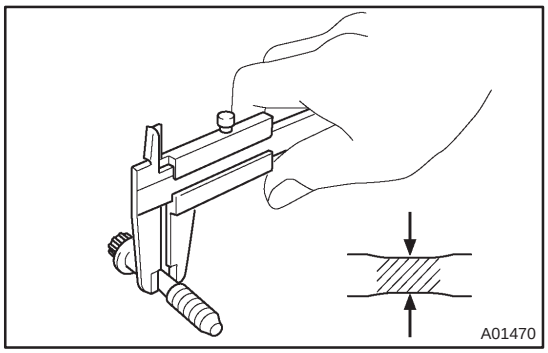
(c) Using a caliper gauge, measure the inside diameter of the connecting rod bushing.
Bushing inside diameter:
22.005 – 22.014 mm (0.8663 – 0.8667 in.)
Bushing inside diameter

Mark	mm (in.)
A	22.005 – 22.008 (0.8663 – 0.8665)
B	22.008 – 22.011 (0.8665 – 0.8666)
C	22.011 – 22.014 (0.8666 – 0.8667)

(d) Subtract the piston pin diameter measurement from the piton pin hole diameter measurement.
Standard oil clearance:
0.001 – 0.007 mm (0.00004 – 0.00028 in.)
Maximum oil clearance: 0.010 mm (0.0020 in.)



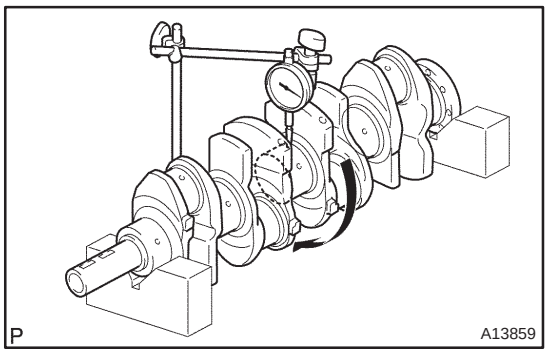
(e) If the oil clearance is greater than maximum, replace the connecting rod. If necessary, replace the piston and piston pin as a set.
(f) Subtract the piston pin diameter measurement form the bushing inside diameter measurement.
Standard oil clearance:
0.005 – 0.011 mm (0.0002 – 0.0004 in.)
Maximum oil clearance: 0.010 mm (0.0020 in.)
(g) If the oil clearance is greater than maximum, replace the connecting rod. If necessary, replace the connecting rod and piston pin as a set.



21. INSPECT CONNECTING ROD SUB–ASSY

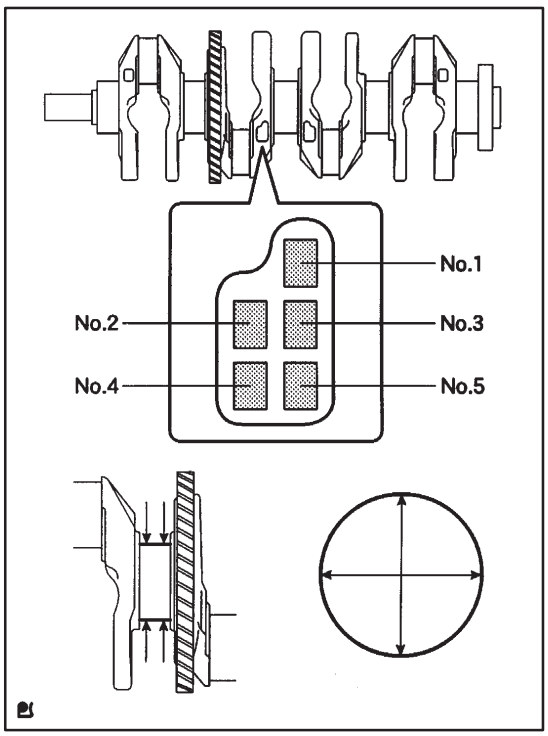
(a) Using a rod aligner and feeler gauge, check the connecting rod alignment.
(1) Check for out–of–alignment.
Maximum out–of–alignment:
0.05 mm (0.0020 in.) per 100 mm (3.94 in.)
(b) If out–of alignment is greater than maximum, replace the connecting rod assembly.

(1) Check for twist.
Maximum twist:
0.15 mm (0.0059 in.) per 100 mm (3.94 in.)



(c) If twist is greater than maximum, replace the connecting rod assembly.

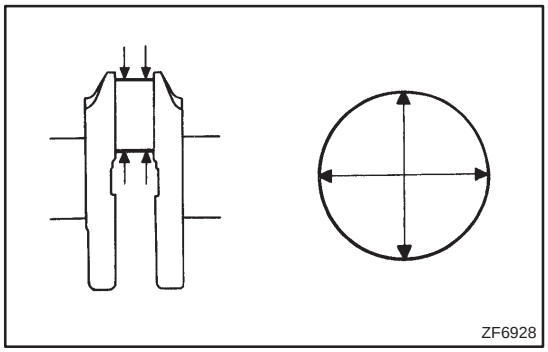
22. INSPECT CONNECTING ROD BOLT



(a) Using a vernier calipers, measure the tension portion diameter of the bolt.
Standard diameter: 7.2 – 7.3 mm (0.283 – 0.287 in.)
Minimum diameter: 7.0 mm (0.276 in.)

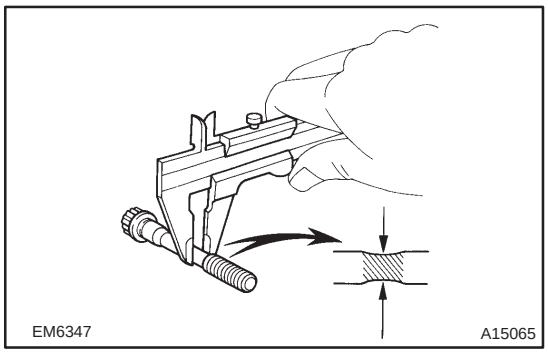
(b) If the diameter is less than minimum, replace the bolt.

23. INSPECT CRANKSHAFT



(a) Using a dial indicator and V–blocks, measure the circle runout, ash shown in the illustration.
Maximum circle runout: 0.03 mm (0.0012 in.)

(b) Using a micrometer, measure the diameter of each main journal.
Diameter: 54.988 – 55.000 (2.1648 – 2.1654 in.)

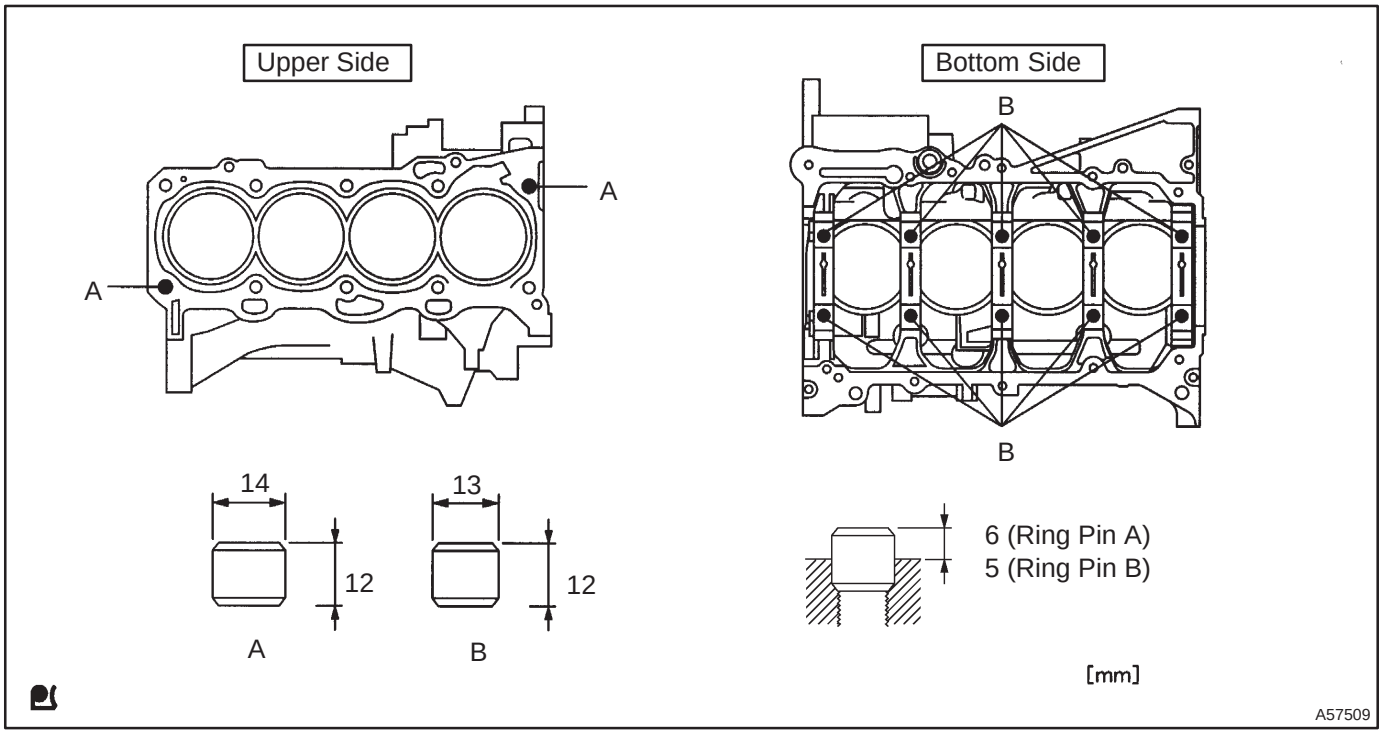


(c) Check each main journal for taper and out–of–round as shown.
Maximum taper and out– of –round:
0.003 mm (0.0001 in.)

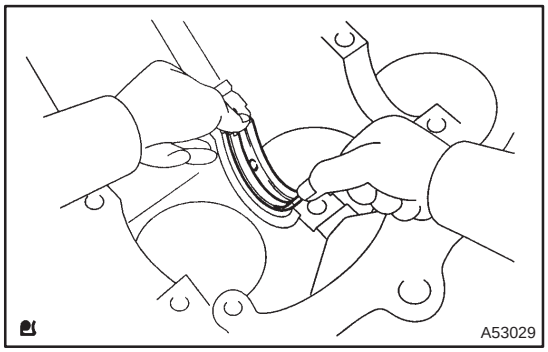
Mark	mm (in.)
0	54.998 – 55.000 (2.16528 – 2.16535)
1	54.996 – 54.998 (2.16520 – 2.16528)
2	54.994 – 54.996 (2.16512 – 2.16520)
3	54.992 – 54.994 (2.16504 – 2.16512)
4	54.990 – 54.992 (2.16496 – 2.16504)
5	54.988 – 54.990 (2.16490 – 2.16496)

(d) Using a micrometer, measure the diameter of each crank pin.
Diameter: 47.990 – 48.000 mm (1.8894 – 1.8898 in.)

(e) Check each crank pin for taper and out–of–round as shown.
Maximum taper and out–of–round:
0.003 mm (0.0001 in.)



24. INSPECT CRANKSHAFT BEARING CAP SET BOLT



(a) Using vernier calipers, measure the tension portion diameter of the bolt.
Standard diameter: 7.5 – 7.6 mm (0.295 – 0.299 in.)
Minimum diameter: 7.2 mm (0.283 in.)

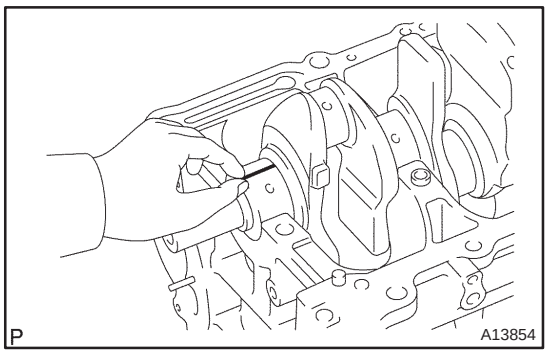
If the diameter is less than minimum, replace the bolt.

25. INSTALL RING PIN

(a) Using a plastic–faced hammer, tap into the ring pin.
Standard protrusion:
Ring pin A 6 mm (0.236 in.)
Ring pin B 5 mm (0.197 in.)

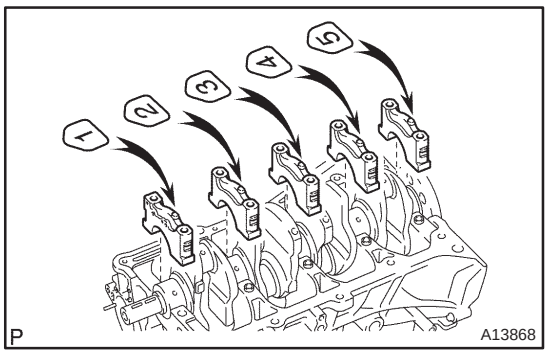
26. INSPECT CRANKSHAFT OIL CLEARANCE

NOTICE:



- **Clean the backside of the bearing and the bearing surface of the bearing cap and let not stick the oils and fats.**
- **The bearing cap bolts are tightened in 2 progressive steps.**

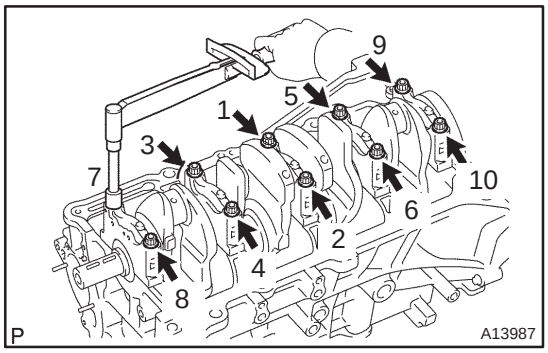
(a) Clean each main journal and bearing.



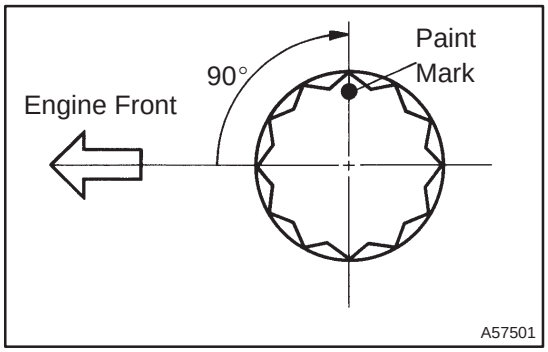
(b) Install the upper bearing with an oil groove on cylinder block.

(c) Install the lower bearing on the bearing cap sub assembly.

(d) Place the crankshaft on the cylinder block.



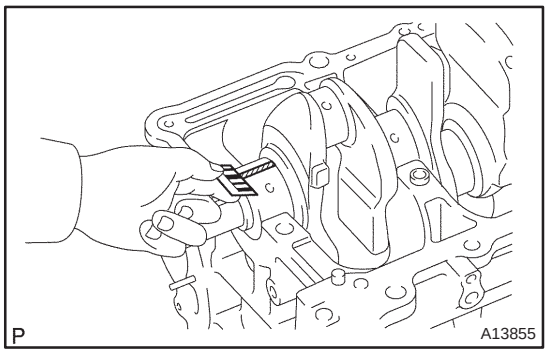
(e) Lay a strip of plastigage across each journal.



(f) Examine the front marks and install the bearing caps on the cylinder block.

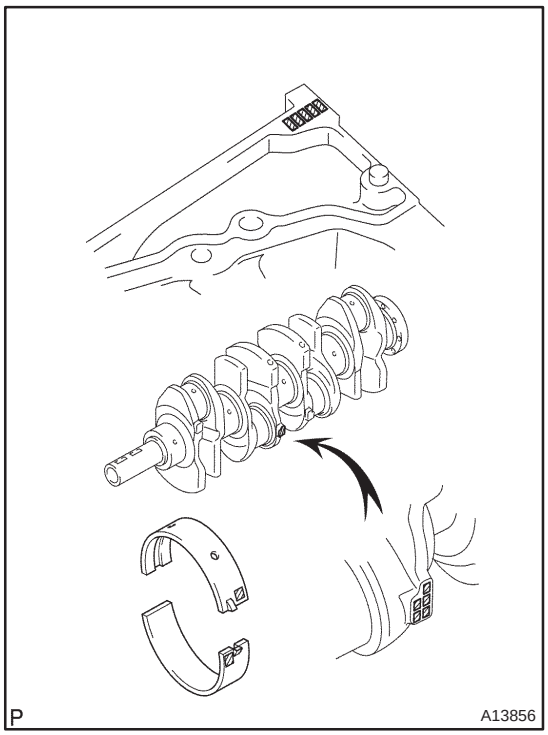
(g) Apply a light coat of engine oil on the threads and under the bearing cap bolts.

(h) Tighten the bolts in several passes, in the sequence shown, by the specified torque.
Torque: 20 N·m (205 kgf·cm, 15 ft·lbf)



(i) Retighten the bolts in several passes, in the sequence shown, by the specified torque.
Torque: 40 N·m (410 kgf·cm, 30 ft·lbf)

(j) Mark the front of the bearing cap bolts with paint.
(k) Retighten the bearing cap bolts by 90° in the numerical order shown.
(l) Check that the painted mark is now at a 90° angle to the front.



NOTICE:
Do not turn the crankshaft.

(m) Remove the bearing cap.

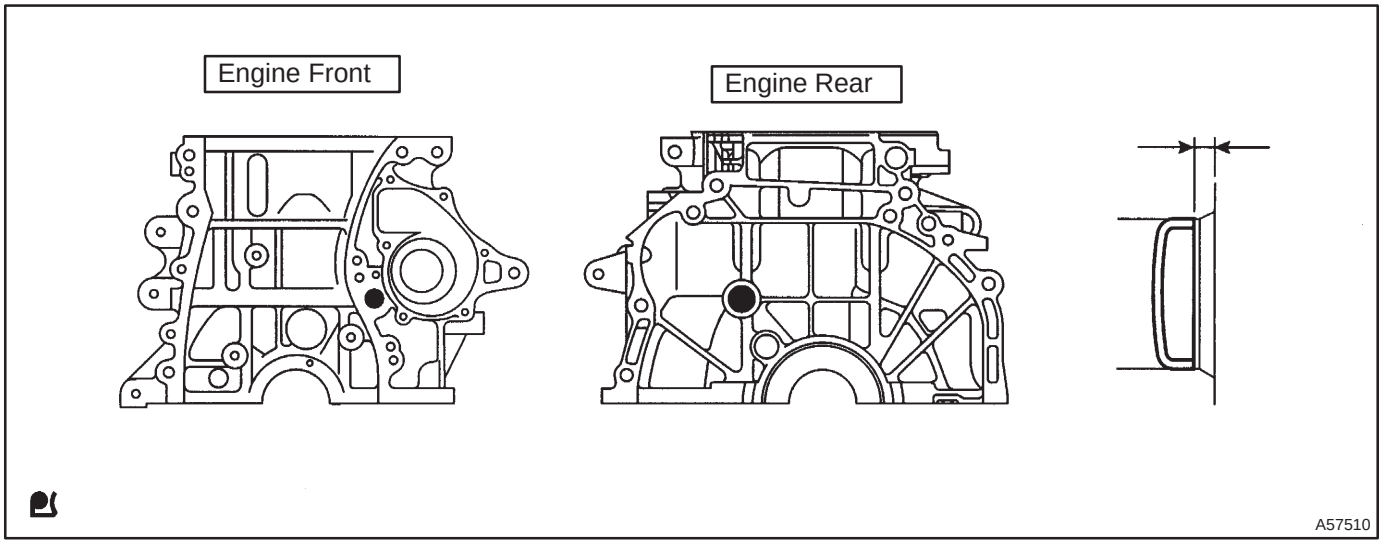
(n) Measure the plastigage at its widest point.
Standard oil clearance:
0.017 – 0.040 mm (0.0007 – 0.0016 in.)
Maximum oil clearance: 0.07 mm (0.0028 in.)

NOTICE:
Completely remove the plastigage.

(o) If using a standard bearing, replace it with one having the same number. If the number of the bearing cannot be determined, select the correct bearing by adding together the numbers imprinted on the cylinder block and crankshaft, then selecting the bearing with the same number as the total. There are 4 sizes of standard bearings, marked ”1”, ”2”, ”3” and ”4” accordingly.

Cylinder block (A) + Crankshaft (B)	0 – 2	3 – 5	6 – 8	9 – 11
Use bearing	”1”	”2”	”3”	”4”

HINT:
EXAMPLE
Cylinder block ”4” (A) + Crankshaft ”3” (B) =
Total number 7 (Use bearing ”3”)

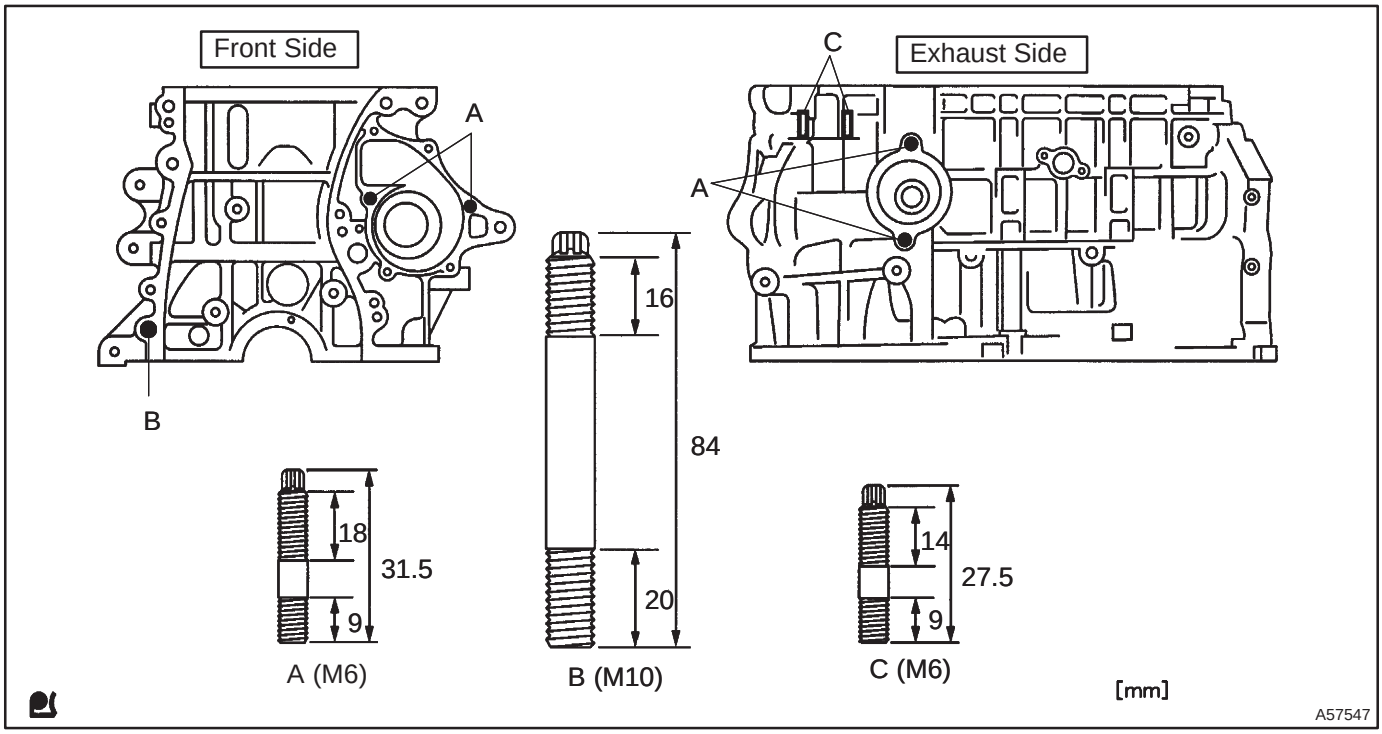


Reference:

Item	Mark	mm (in.)
Cylinder block main journal bore diameter (A)	0	59.000 – 59.002 (2.32283 – 2.32291)
	1	59.003 – 59.004 (2.32295 – 2.32299)
	2	59.005 – 59.006 (2.32303 – 2.32307)
	3	59.007 – 59.009 (2.32311 – 2.32318)
	4	59.010 – 59.011 (2.32322 – 2.32326)
	5	59.012 – 59.013 (2.32330 – 2.32334)
	6	59.014 – 59.016 (2.32338 – 2.32346)
Crankshaft main journal diameter (B)	0	54.998 – 55.000 (2.16527 – 2.16535)
	1	54.996 – 54.998 (2.16519 – 2.16527)
	2	54.994 – 54.996 (2.16511 – 2.16519)
	3	54.992 – 54.994 (2.16503 – 2.16511)
	4	54.990 – 54.992 (2.16496 – 2.16504)
	5	54.988 – 54.990 (2.16488 – 2.16496)
Standard bearing center wall thickness	1	1.993 – 1.996 (0.07846 – 0.07858)
	2	1.996 – 1.999 (0.07858 – 0.07870)
	3	1.999 – 2.002 (0.07870 – 0.07882)
	4	2.002 – 2.005 (0.07882 – 0.07894)

27. INSTALL TIGHT PLUG

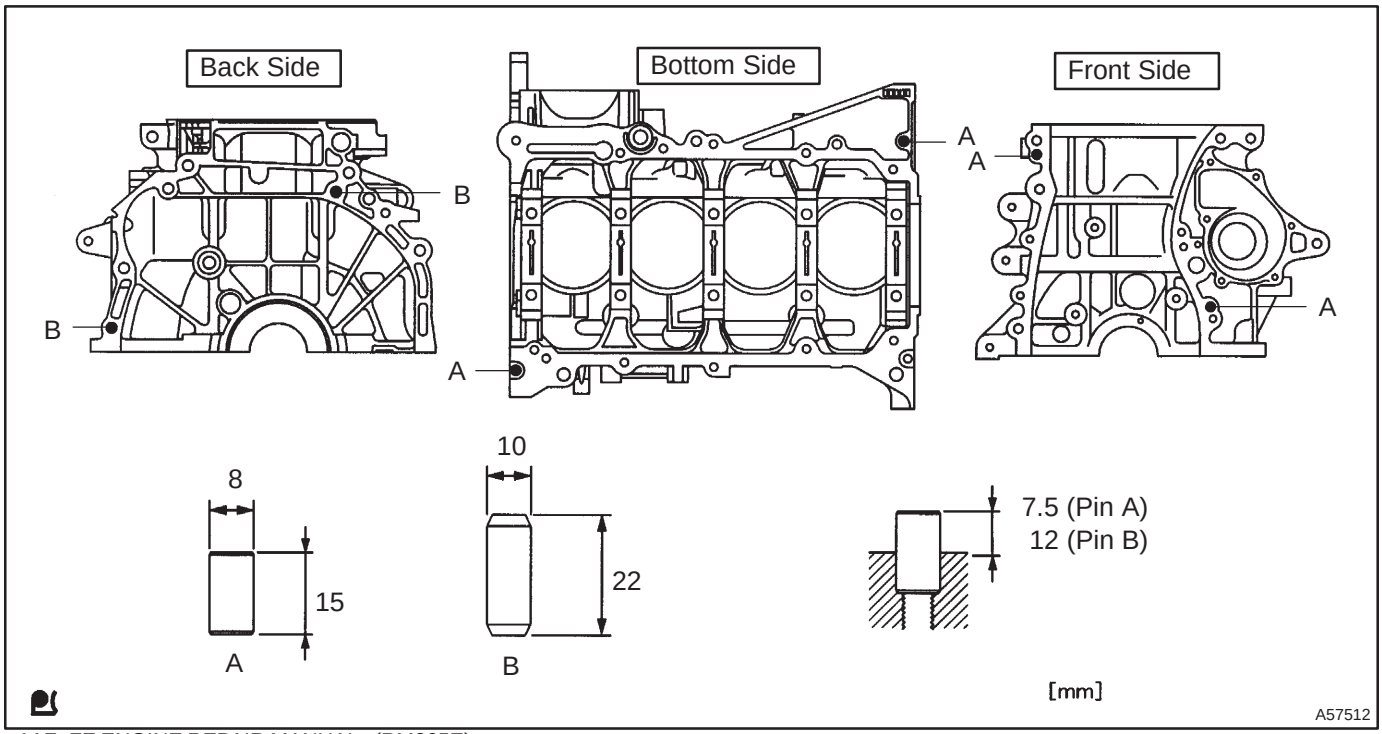
(a) Apply adhesive around tight plugs.
Adhesive: Part No. 08833–00070, THREE BOND 1324 or equivalent.



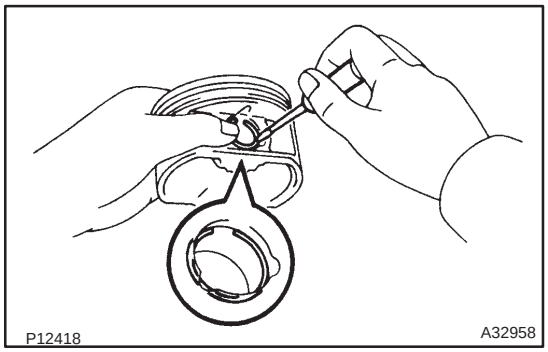
(b) Using SST, into the tight plugs as shown in the illustration.
SST 09950–60010 (09951–00200), 09950–70010 (09951–07100)
Standard depth:
Engine front 1.7 – 2.7 mm (0.067 – 0.106 in.)
Engine rear 2.2 – 3.2 mm (0.087 – 0.126 in.)

28. INSTALL STUD BOLT

(a) Install the stud bolts as shown in the illustration.

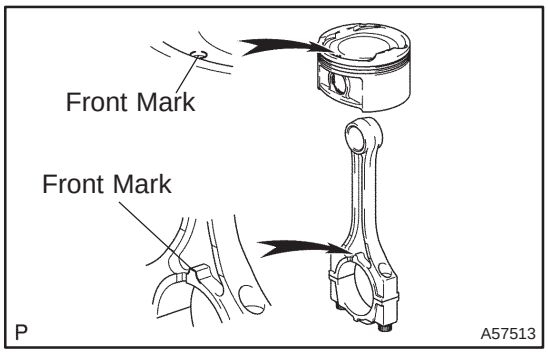


Torque:
Stud bolt A 5.0 N·m (51 kgf·cm, 44 in.·lbf)
Stud bolt B 10N·m (97 kgf·cm, 84 in.·lbf)
Stud bolt C 5.0N·m (51 kgf·cm, 44 in.·lbf)

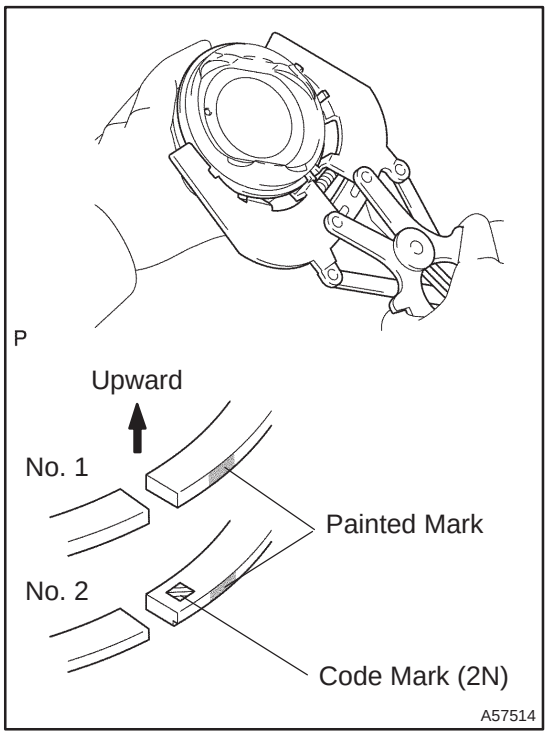


29. INSTALL STRAIGHT PIN

(a) Using a plastic–faced hammer, tap into the straight pin.

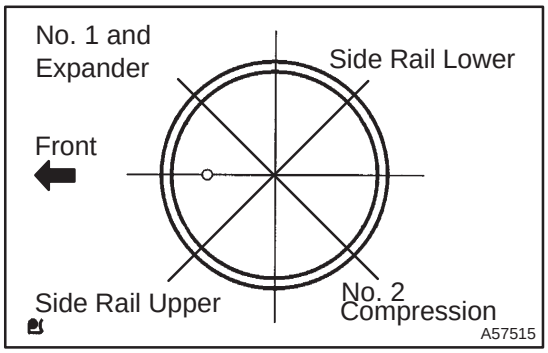


Standard protrusion
Pin A 7.5 mm (0.295 in.)
Pin B 12 mm (0.472 in.)

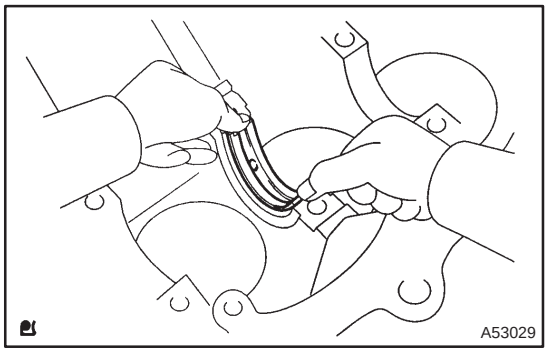


30. INSTALL PISTON

(a) Using a small screwdriver, install a new snap ring at one end of the piston pin hole.
(b) Gradually hat the piston to 80 – 90°C (176 – 194°F).



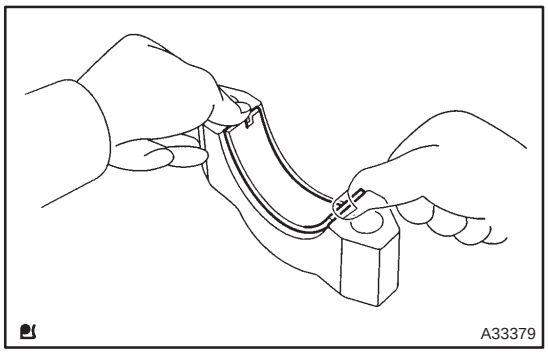
(c) Align the front marks on the piston with connecting rod, and push in the piston with your thumb.
(d) Using a small screwdriver, install a new snap ring on the other end of the piston pin hole.



31. INSTALL PISTON RING SET

(a) Install the oil ring expander and 2 side rails by hand.
(b) Using a piston ring expander, install the 2 compression rings with the point mark facing right side.

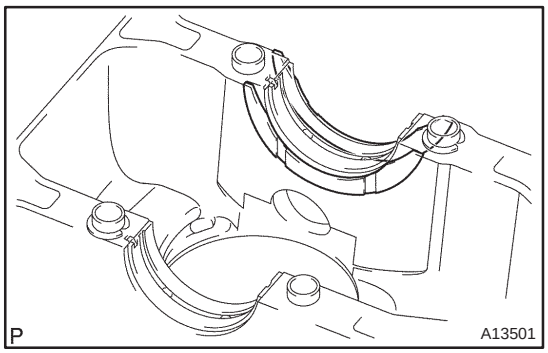
NOTICE:
Install the compression ring No. 2 with the code mark (2N) facing upward.



(c) Position the piston rings so that the ring ends are as shown.

32. INSTALL CRANKSHAFT BEARING

(a) Install the upper bearing with an oil groove on cylinder block.

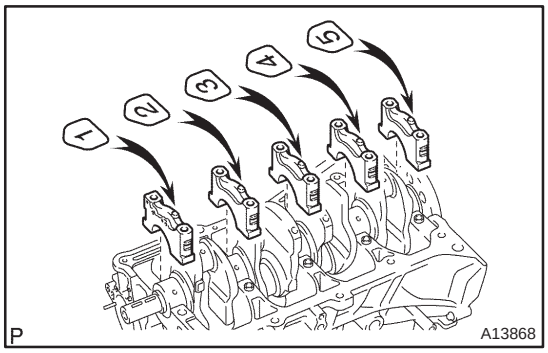


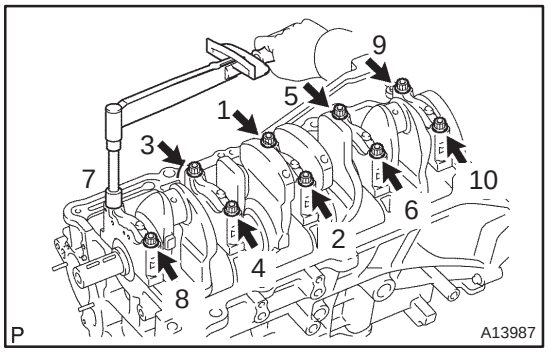
NOTICE:
Clean the back side of the bearing and the bearing surface of the cylinder block and let not stick the oils and fats.

33. INSTALL CRANKSHAFT BEARING NO.2

(a) Install the lower bearing on bearing cap.

NOTICE:
Clean the back side of the bearing and the bearing surface of the bearing cap and let not stick the oils and fats.

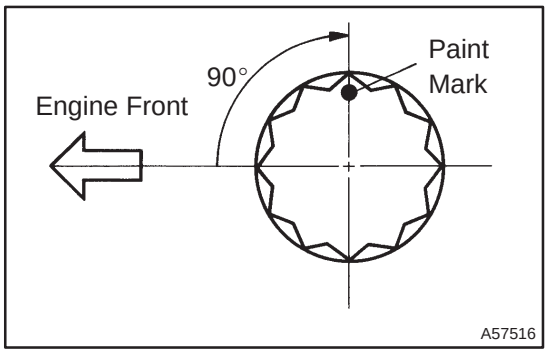




34. INSTALL CRANKSHAFT THRUST WASHER UPPER

(a) Install the 2 thrust washers under the No. 3 journal position of the cylinder block with the oil grooves facing outward.

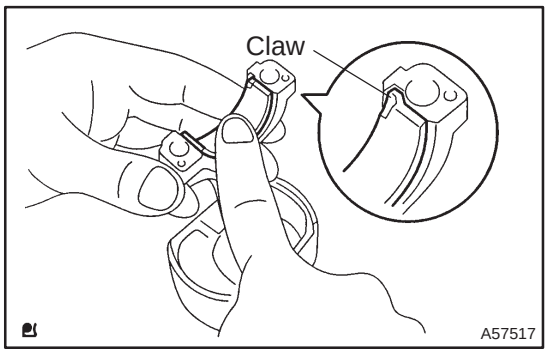
35. INSTALL CRANKSHAFT



(a) Apply engine oil to upper bearing and install the crankshaft on the cylinder block.
(b) Apply engine oil to lower bearing.
(c) Examine the front marks and install the bearing caps on the cylinder block.
(d) Apply a light coat of engine oil on the threads and under the bearing cap bolts.

(e) Tighten the blots in several passes, in the sequence shown, by the specified torque.
Torque: 20 N·m (205 kgf·cm, 15 ft·lbf)

(f) Tighten the bolts in several passes, in the sequence shown, by the specified torque.
Torque: 40 N·m (410 kgf·cm, 30 ft·lbf)



(g) Mark the front of the bearing cap bolts with paint.

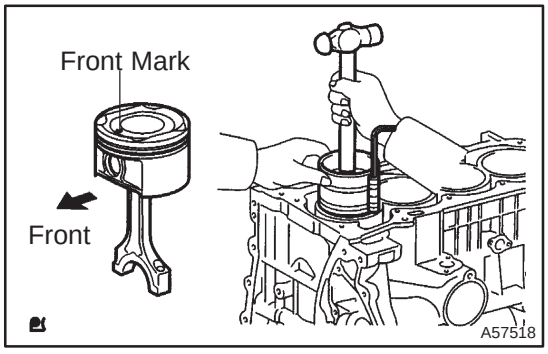
(h) Retighten the bearing cap bolts by 90° in the numerical order shown.

(i) Check that the painted mark is now at a 90° angle to the front.

(j) Check the crankshaft turns smoothly.

36. INSTALL CONNECTING ROD BEARING

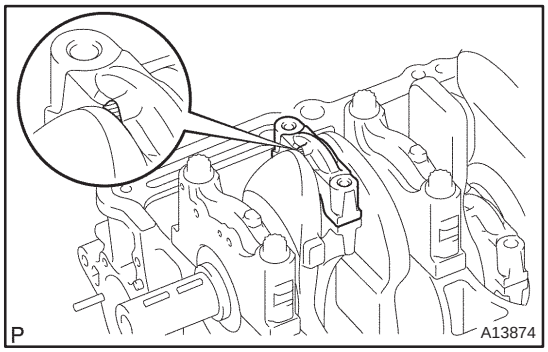
(a) Align the bearing claw with the groove of the connecting rod or connecting cap.



NOTICE:
Clean the back side of the bearing and the bearing surface of the bearing cap and let not stick the oils and fats.

37. INSTALL PISTON

NOTICE:
The connecting rod cap bolts are tightened in 2 progressive steps.

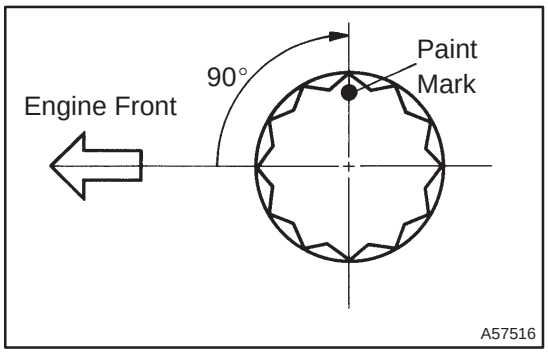


(a) Apply engine oil to the cylinder walls, the pistons, and the surfaces of connecting rod bearings.

(b) Check the position of the piston ring ends.

(c) Using a piston ring compressor, push the correctly numbered piston and connecting rod assemblies into each cylinder with the front mark of the piston facing forward.

NOTICE:
Match the numbered connecting rod cap with the connecting rod.



(d) Check that the protrusion of the connecting rod cap is facing in the correct direction.

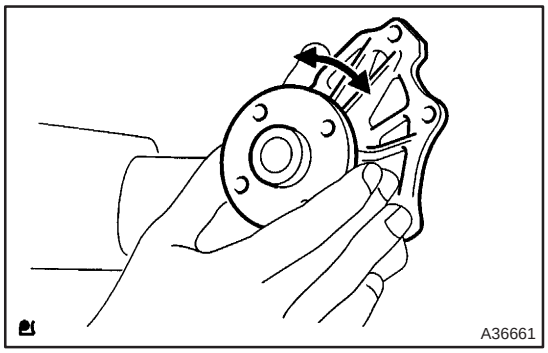
(e) Apply a light coat of engine oil on the threads and under the heads of the connecting rod cap bolts.

(f) Tighten the bolts in several passes by the specified torque.

Torque: 25 N·m (250 kgf·cm, 18 ft·lbf)

(g) Mark the front of the connecting cap blots with paint.

(h) Retighten the cap bolts by 90° as shown in the illustration.



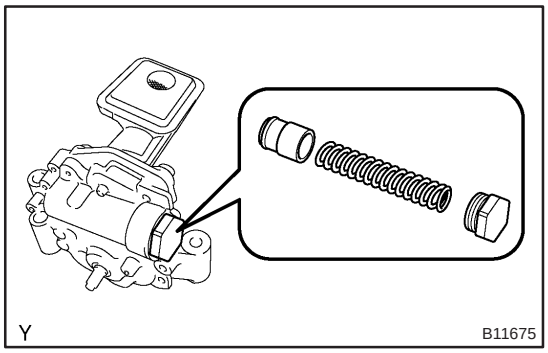
(i) Check that the crankshaft turns smoothly.

SST 09011–38121, 99999–60012

WATER PUMP ASSY (1AZ–FE)

1606X–01

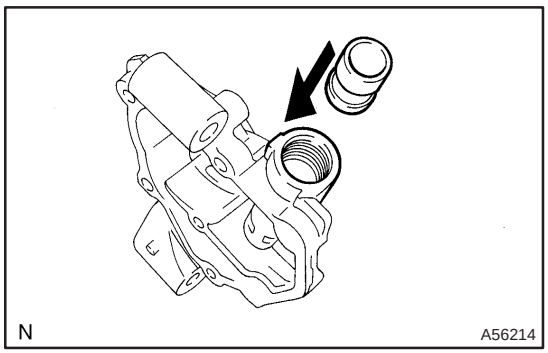
INSPECTION



1. INSPECT WATER PUMP ASSY

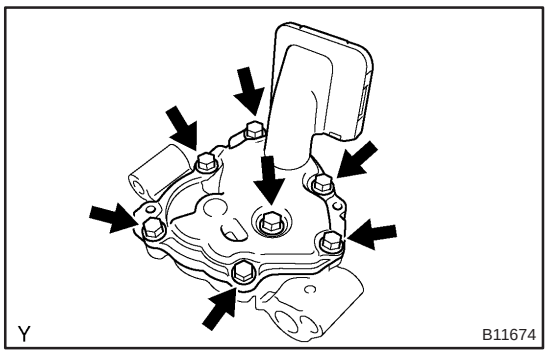
(a) Visually check the drain hole coolant leakage.
(b) Turn the pulley, and check that the water pump bearing moves smoothly and quietly.

OIL PUMP ASSY (1AZ–FE)

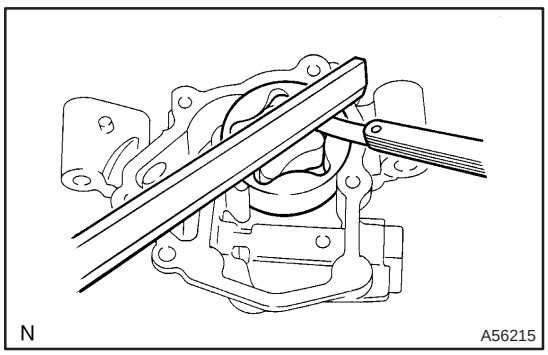


OVERHAUL

1704E–01

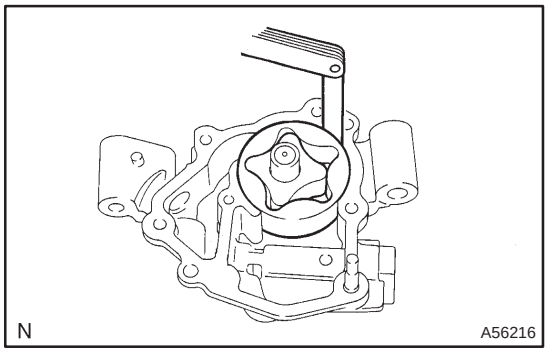


1. INSPECT OIL PUMP ASSY

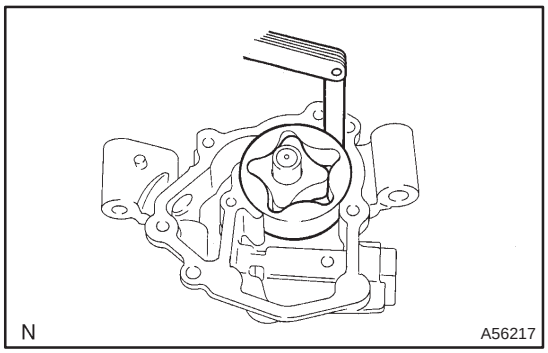


(a) Remove oil pump relief valve.
  (1) Remove the relief valve plug.
  (2) Remove the oil pump relief valve spring.
  (3) Remove the relief valve.

(b) Inspect oil pump relief valve.
  (1) Coat the valve with engine oil and check that it falls smoothly into the valve hole by its own weight.

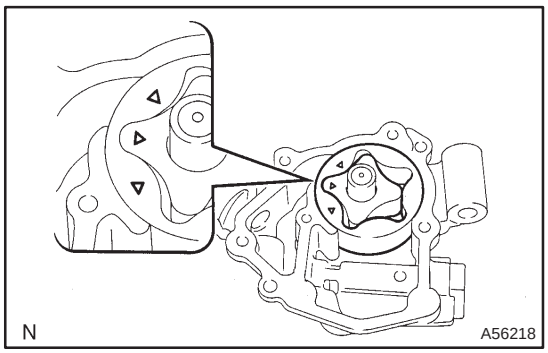


(c) Remove the oil pump cover.
  (1) Remove the 7 bolts, pump body cover, drive and driven rotors.

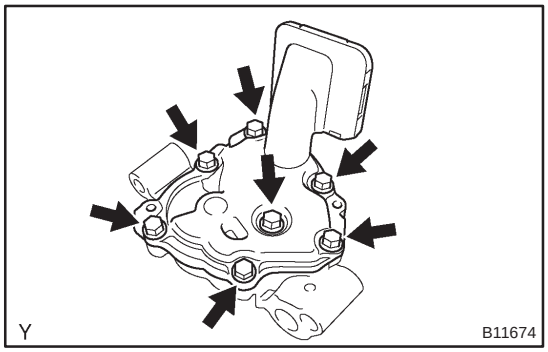


(d) Inspect rotor side clearance.
  (1) Using a feeler gauge and precision straight edge, measure the clearance between the rotors and precision straight edge.

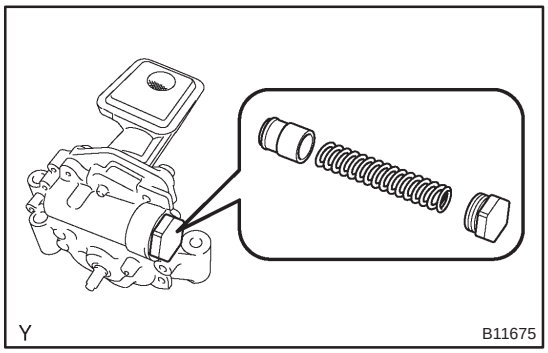
Standard side clearance:
0.030 – 0.085 mm (0.0012 – 0.0033 in.)
Maximum side clearance:
0.16 mm (0.0063 in.)



(e) Inspect rotor tip clearance.
(1) Using a feeler gauge, measure the clearance between the drive and driven rotor tips.
Standard tip clearance:
0.080 – 0.160 mm (0.0031 – 0.0063 in.)
Maximum side clearance:
0.35 mm (0.0138 in.)



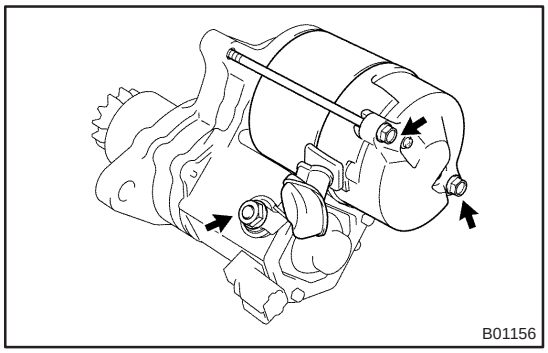
(f) Inspect rotor body clearance.
(1) Using a feeler gauge, measure the clearance between the driven rotor and body.
Standard body clearance:
0.100 – 0.170 mm (0.00394 – 0.00669 in.)
Maximum side clearance:
0.325 mm (0.01280 in.)



(g) Remove the oil pump rotor set.

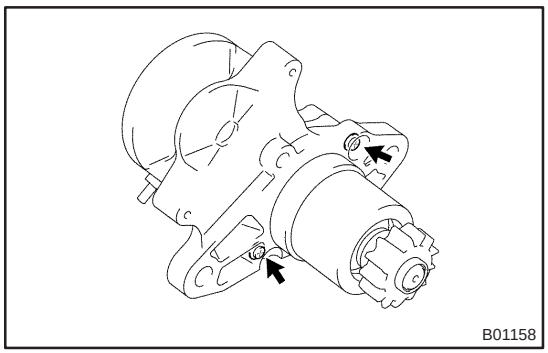
(h) Install the oil pump rotor set.
(1) Coat the drive rotor and driven rotors with engine oil.
(2) Place the drive and driven rotors into pump body with the marks facing the pump body cover side.

(i) Install oil pump cover.
(1) Install the pump body cover with 5 bolts.
Torque: 8.8 N·m (90 kgf·cm, 80 in.·lbf)



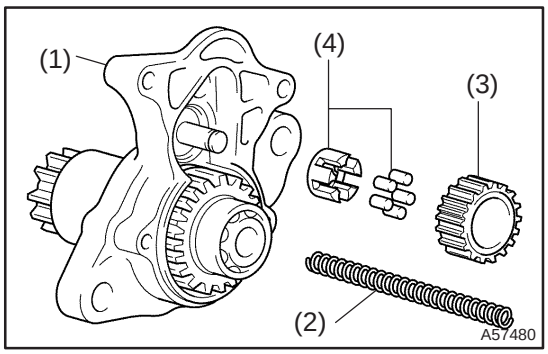
(j) Install oil pump relief valve.
(1) Coat the oil pump relief valve with engine oil.
(2) Insert the relief valve and spring into the pump body hole.
(3) Install the relief valve plug.

STARTER ASSY(1.2KW) (1AZ–FE)



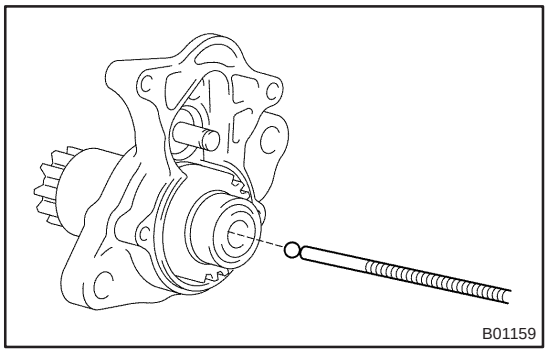
OVERHAUL

1906K–01

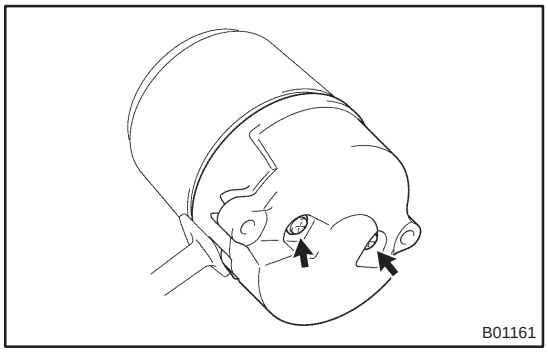


1. REMOVE STARTER YOKE ASSY

(a) Remove the starter cover.
(b) Remove the nut, and disconnect the lead wire from the C terminal.
(c) Remove the 2 through bolts. Pull out the field frame together with the armature.
(d) Remove the O–ring from the field frame.

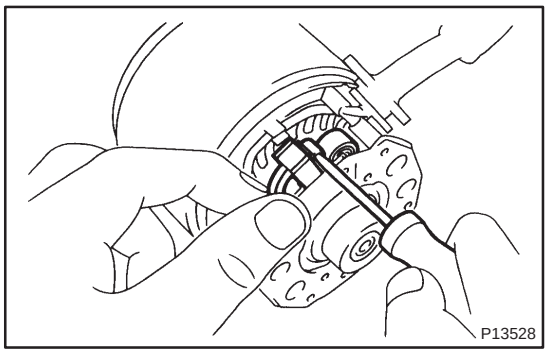


2. REMOVE STARTER CLUTCH SUB–ASSY



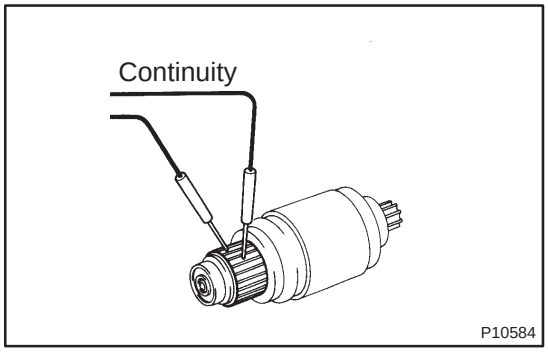
(a) Remove the 2 screws.

(b) Remove the starter housing and clutch assembly (1), return spring (2), idler gear (3) and bearing from the magnetic switch.



(c) Using a magnetic finger, remove the steel ball from the clutch shaft hole.

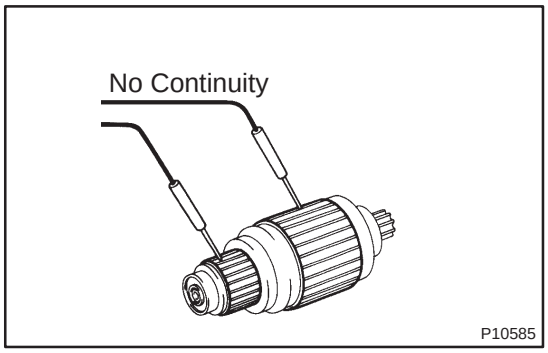
3. REMOVE STARTER BRUSH HOLDER ASSY



(a) Remove the 2 screws and end cover from the field frame.
(b) Remove the O–ring from the field frame.

(c) Using a screwdriver, hold the spring back and disconnect the brush from the brush holder. Disconnect the 4 brushes, and remove the brush holder.

NOTICE:
At the time of reassembly, check that the positive (+) lead wires are not grounded.

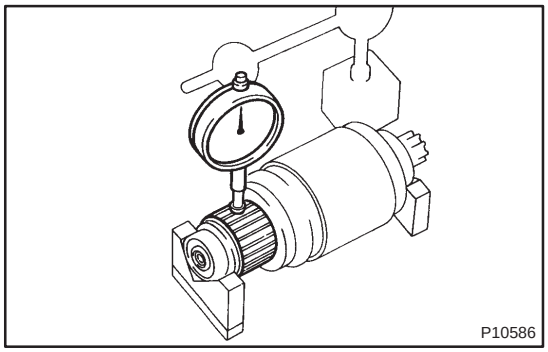


4. REMOVE STARTER ARMATURE ASSY

5. INSPECT STARTER ARMATURE ASSY

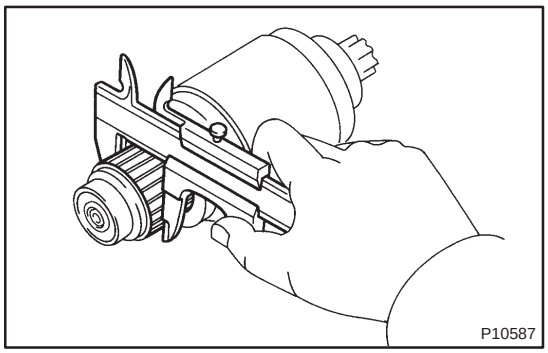
(a) Check the commutator for open circuit.
  (1) Using and ohmmeter, check that there is continuity between the segments of the commutator.

If there is no continuity between any segment, replace the armature.



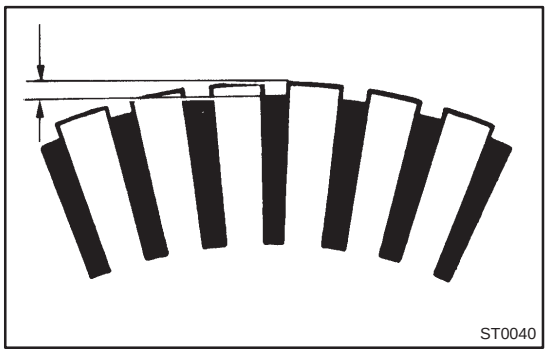
(b) Check the commutator for ground.
  (1) Using an ohmmeter, check that there is no continuity between the commutator and armature coil core.

If there is continuity, replace the armature.



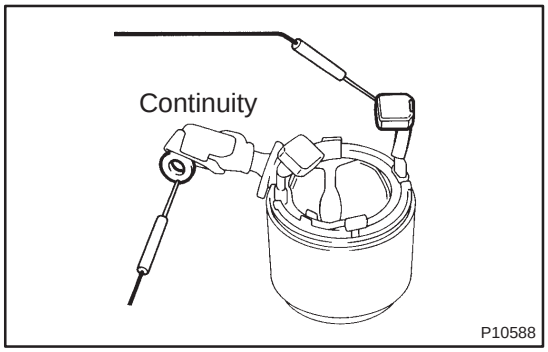
(c) Check the commutator for the dirty and burnt surfaces.

If the surface is dirty or burnt, correct it with the sandpaper (No. 400) or on a lathe.



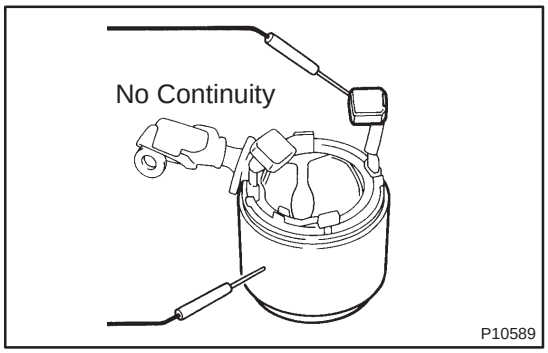
(d) Place the commutator on V–blocks.
(1) Using a dial gauge, measure the circle runout.
Maximum circle runout: 0.05 mm (0.0020 in.)

If the circle runout is greater than maximum, replace the armature.



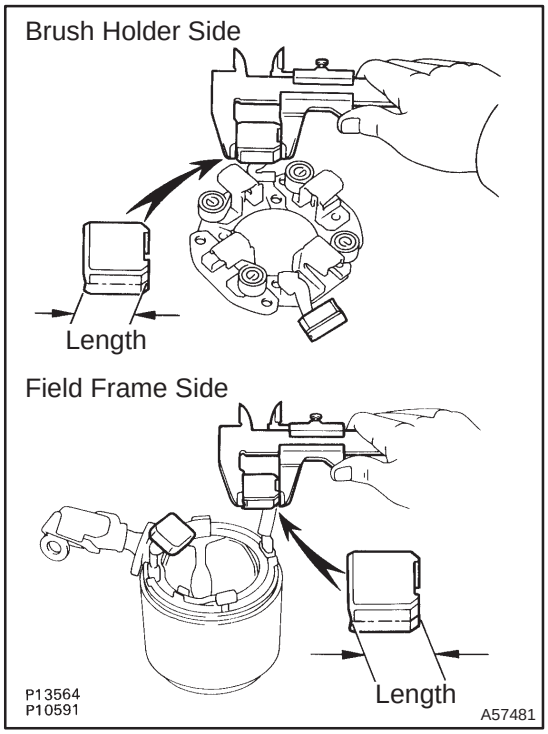
(e) Using vernier calipers, measure the commutator diameter.
Standard diameter: 30.0 mm (1.181 in.)
Minimum diameter: 29.0 mm (1.142 in.)

If the diameter is less than minimum, replace the armature.



(f) Check that the undercut depth is clean and free of foreign materials. Smooth out the edge.
Standard undercut depth: 0.6 mm (0.024 in.)
Minimum undercut depth: 0.2 mm (0.008 in.)

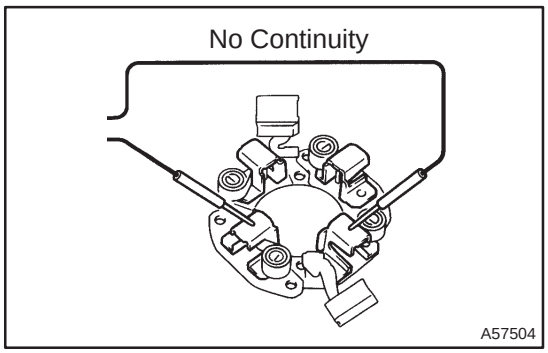
If the undercut depth is less than minimum, correct it with a hacksaw blade.



(g) Check the field coil for open circuit.
(1) Using an ohmmeter, check that there is continuity between the lead wire and field coil brush lead.

If there is no continuity, replace the field frame.

(h) Check the field coil for ground.
(1) Using an ohmmeter, check that there is no continuity between the field coil brush lead and field frame.



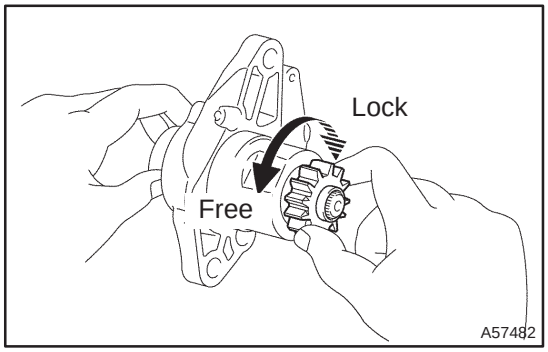
If there is continuity, repair or replace the field frame.

6. INSPECT STARTER BRUSH HOLDER ASSY

(a) Using vernier calipers, measure the brush length.
Standard length: 15.5 mm (0.610 in.)
Minimum length: 10 mm (0.394 in.)

If the length is less than minimum, replace the brush holder and field frame.

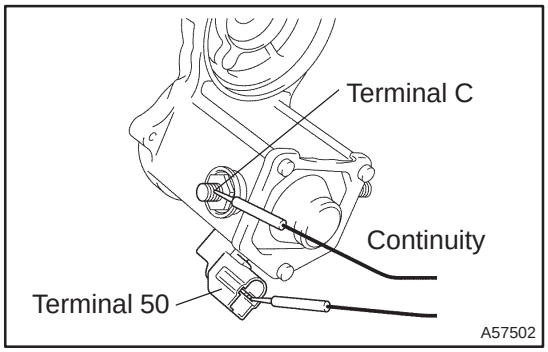
(b) Using an ohmmeter, check that there is no continuity between the positive (+) and negative (–) brush holders.



If there is continuity, repair or replace the brush holder.

7. INSPECT STARTER CLUTCH SUB–ASSY

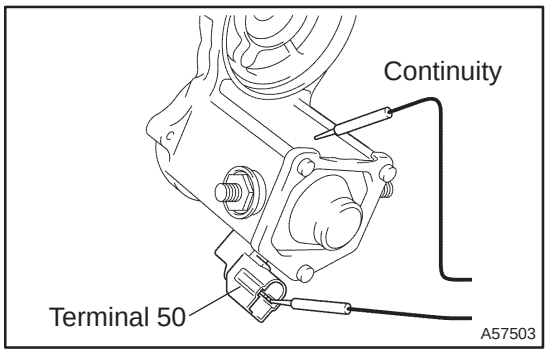
(a) Check the gear teeth on the pinion gear, idler gear and clutch assembly for wear or damage.



If damaged, replace the gear or clutch assembly.

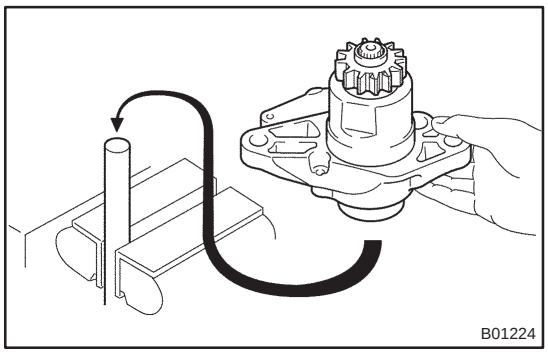
If damaged, also check the ring gear of the flywheel/drive plate for wear or damage.

(b) Hold the starter clutch and rotate the pinion gear counterclockwise, and check that it turns freely. Try to rotate the pinion gear clockwise and check that it locks.



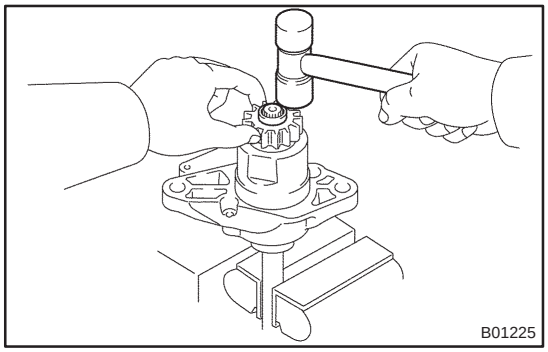
If necessary, replace the clutch assembly.

8. INSPECT MAGNET STARTER SWITCH ASSY



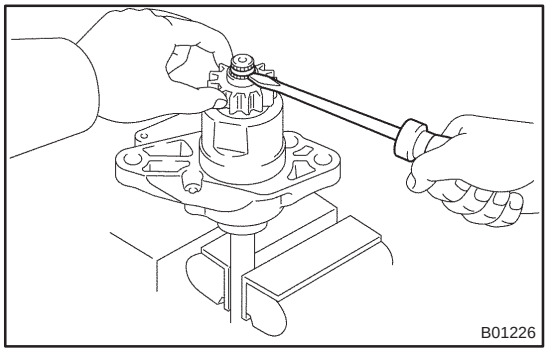
(a) Using an ohmmeter, check that there is continuity between terminals 50 and C.

If there is no continuity, check and replace the magnetic switch.



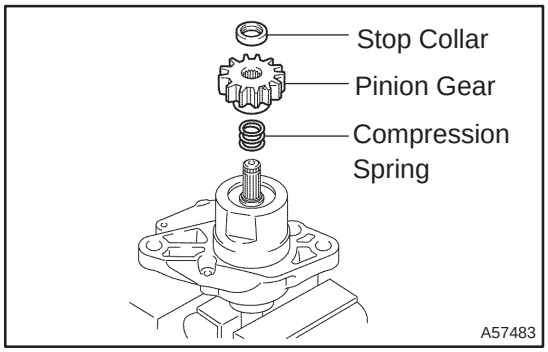
(b) Using an ohmmeter, check that there is continuity between the terminal 50 and the switch body.

If there is no continuity, replace the magnetic switch.

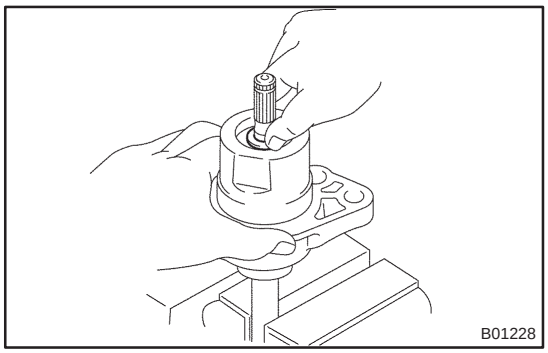


9. REPLACE STARTER CLUTCH SUB–ASSY

(a) Mount a brass bar in a vise, and install the starter housing and clutch assembly to the brass bar.

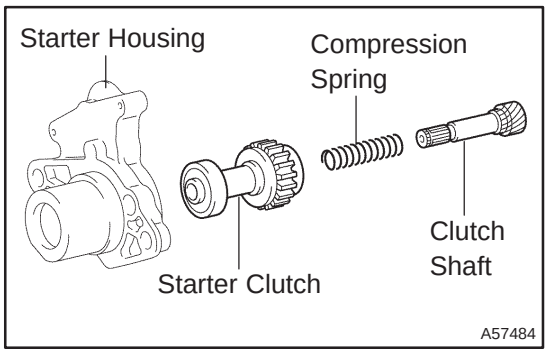


(b) Push down the pinion gear.

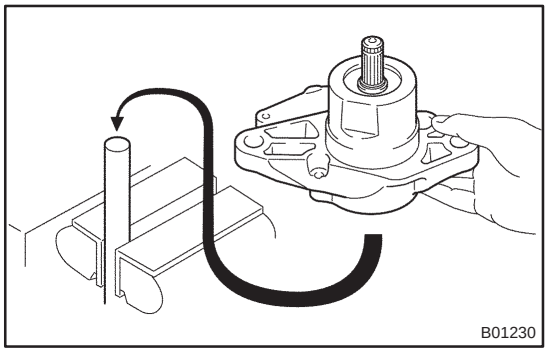


(c) Using a plastic–faced hammer, tap down the stop collar.

(d) Using a screwdriver, pry out the snap ring.

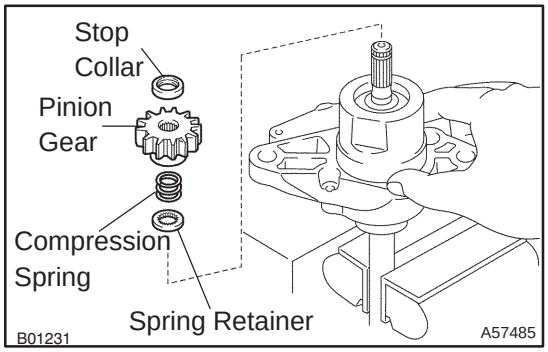


(e) Remove the stop collar, pinion gear and compression spring.

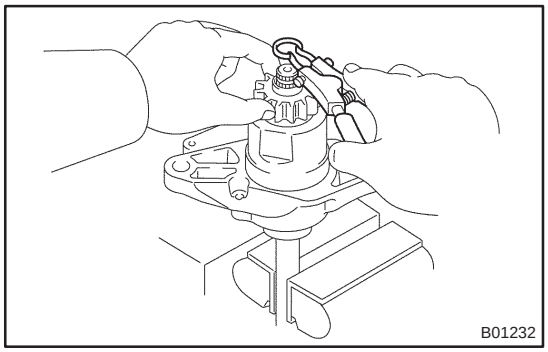


(f) Push down the starter housing, and remove the spring retainer.

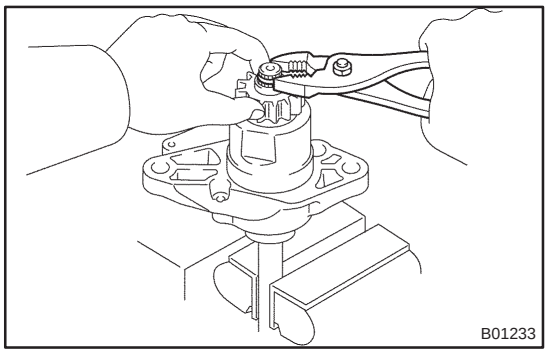
(g) Remove the clutch shaft, compression spring and starter clutch from the starter housing.



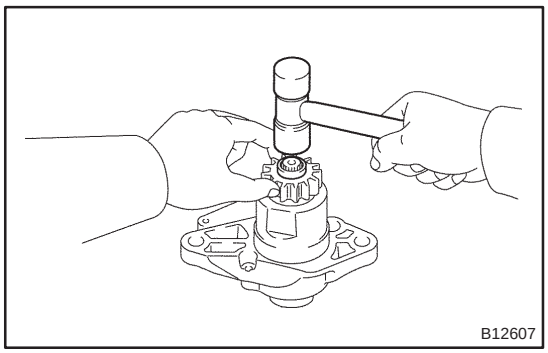
(h) Assemble the starter housing and the clutch assembly.



(1) Install the starter clutch, compression spring, and clutch shaft to the starter housing.

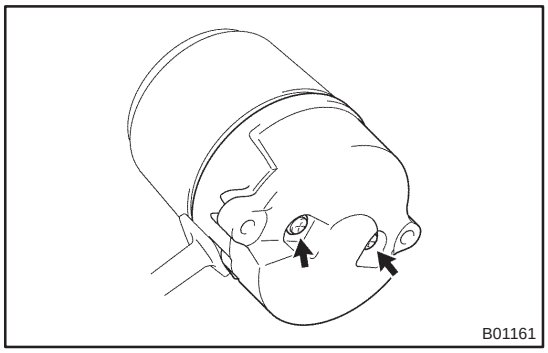


(2) Mount a brass bar in a vise, install the starter housing and clutch assembly to the brass bar.



(3) Push down the starter housing, and install the spring retainer, compression spring, pinion gear and stop collar.

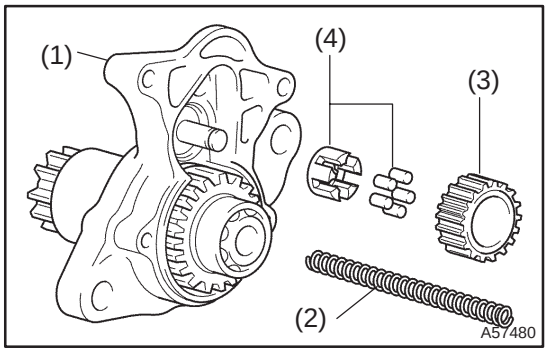
(4) Push down the pinion gear.
(5) Using snap ring pliers, install a new snap ring.



(6) Using pliers, compress the snap ring.
(7) Check that the snap ring fits correctly.
(8) Remove the starter housing and clutch assembly from the brass bar.

(i) Using a plastic–faced hammer, tap the clutch shaft and install the stop collar onto the snap ring.

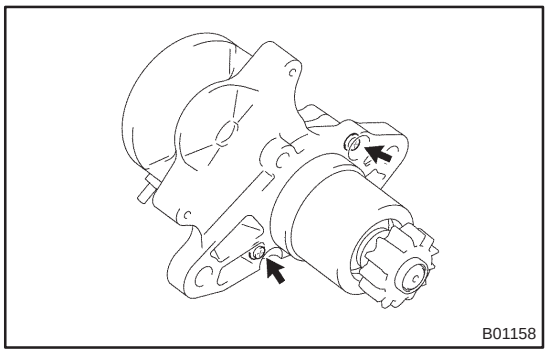
10. INSTALL STARTER ARMATURE ASSY



11. INSTALL STARTER BRUSH HOLDER ASSY

(a) Install the brush holder.
(b) Install an O–ring to the groove of the field frame.
(c) Install the end frame with the 2 screws.
Torque: 1.5 N·m (15 kgf·cm, 13 in.·lbf)

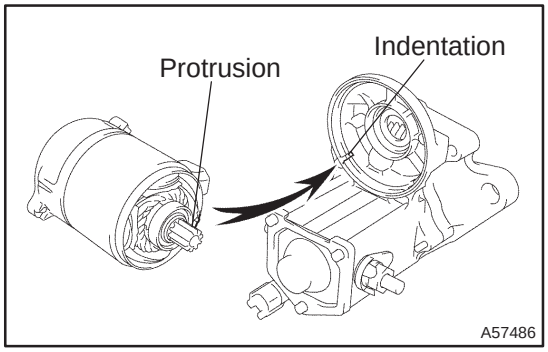
12. INSTALL STARTER CLUTCH SUB–ASSY



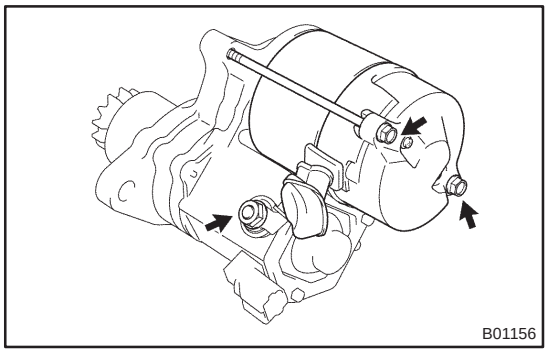
(a) Apply grease to the steel ball, and install it to the clutch shaft hole.

(b) Apply grease to the these parts, and install them to the starter housing.

(1)	Starter magnet switch return spring
(2)	Starter idle gear pinion
(3)	Starter idle gear retainer
(4)	Starter idle gear clutch roller



(c) Apply grease to the clutch gear.

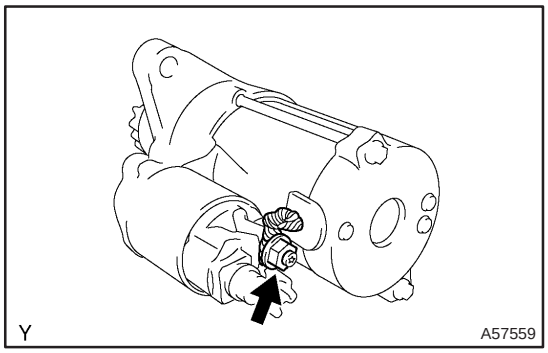


(d) Install the starter housing and clutch assembly with the 2 screws.
Torque: 5.9 N·m (60 kgf·cm, 52 in.·lbf)

13. INSTALL STARTER YOKE ASSY

(a) Install an O–ring to the groove of the field frame.

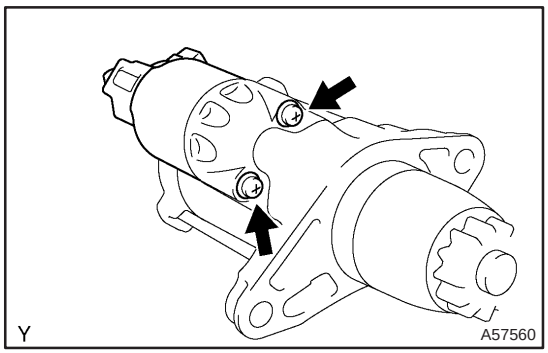
(b) Pull out the field frame together with the armature.
HINT:
Align the protrusion of the field frame with the indentation of the magnetic switch.



(c) Install the field frame and armature assembly with the 2 through bolts.
Torque: 5.9 N·m (60 kgf·cm, 52 in.·lbf)

(d) Connect the lead wire to the C terminal with the nut.
Torque: 5.9 N·m (60 kgf·cm, 52 in.·lbf)

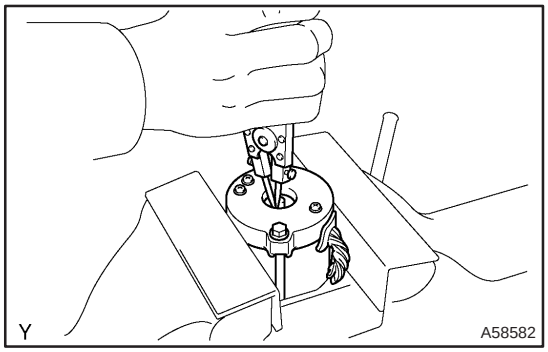
STARTER ASSY(1.3KW) (1AZ–FE)



OVERHAUL

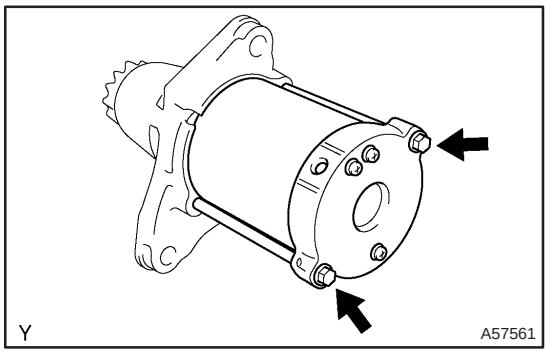
1906L–01

1. REMOVE REPAIR SERVICE STARTER KIT



(a) Remove the nut, and disconnect the lead wire from the repair service starter kit.

(b) Remove the 2 screws holding the repair service starter kit to the starter housing.
(c) Remove the repair service starter kit.
(d) Remove the return spring and plunger.

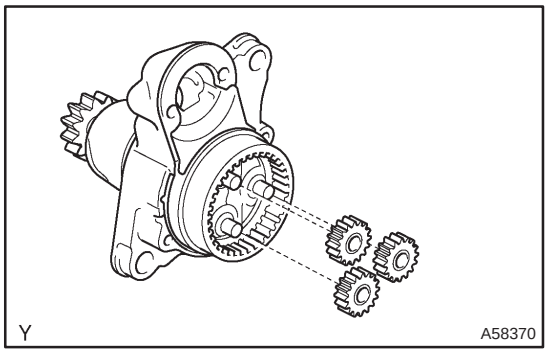


2. REMOVE STARTER COMMUTATOR END FRAME COVER

(a) Using a screwdriver, remove the cover.

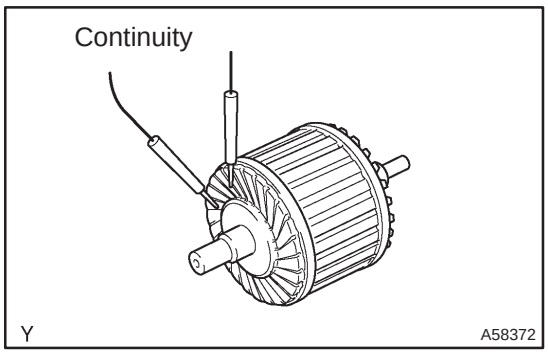
3. REMOVE STARTER COMMUTATOR END FRAME ASSY

(a) Using snap ring pliers, remove the snap ring and plate washer.



(b) Remove the 2 through bolts, and pull out the starter yoke assy together with the commutator end frame assy.

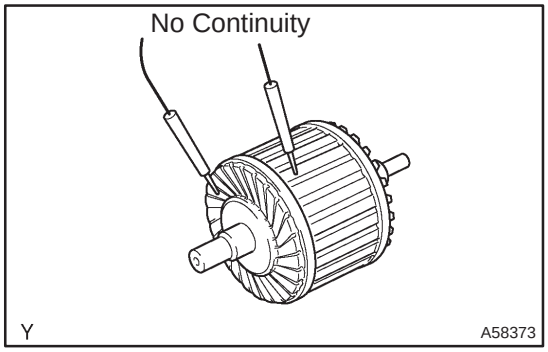
4. REMOVE STARTER YOKE ASSY



(a) Remove the starter armature assy from starter yoke assy.

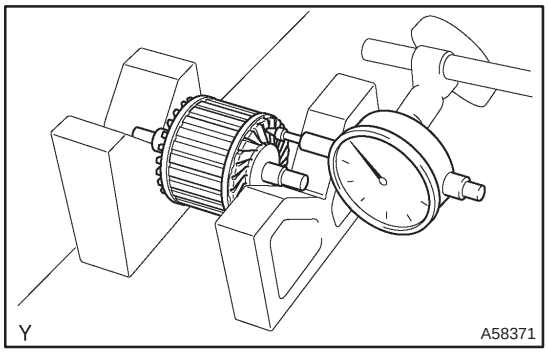
5. REMOVE STARTER ARMATURE PLATE

6. REMOVE PLANET GEAR



(a) Remove the 3 planetary gears.

7. INSPECT STARTER ARMATURE ASSY

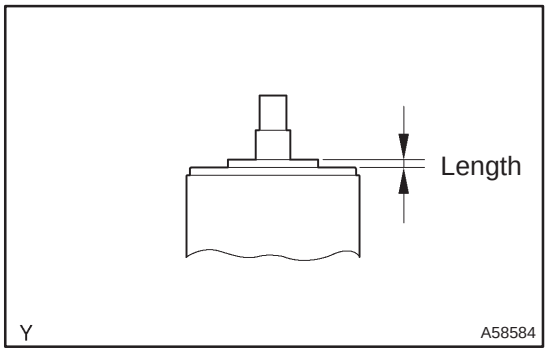


(a) Check the commutator for open circuit.
  (1) Using an ohmmeter, check that there is continuity between the segments of the commutator.

If there is no continuity between any segments, replace the armature.

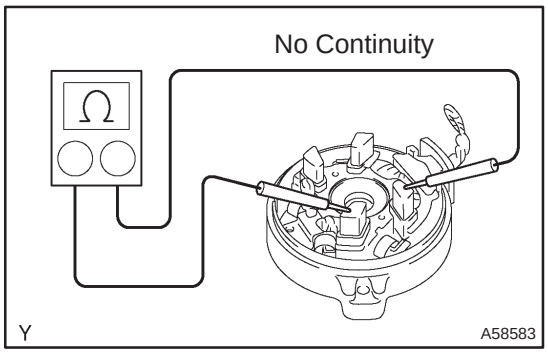
(b) Check the commutator for ground.
  (1) Using an ohmmeter, check that there is no continuity between the commutator and armature coil core.

If there is continuity, replace the armature.



(c) Check the commutator for dirty and burn on surface.

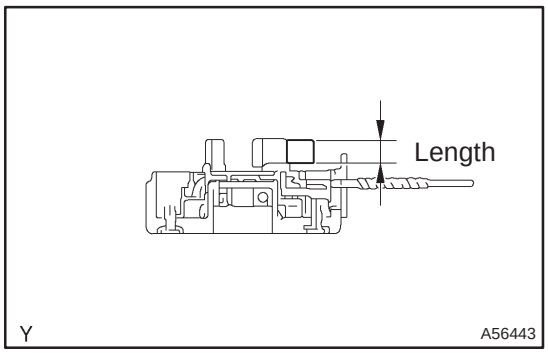
If the surface is dirty or burnt, correct it with sandpaper (No.400) or a lathe.



(d) Check for the commutator circuit runout.
  (1) Place the commutator on V–blocks.
  (2) Using a dial indicator, measure the circle runout.
  Maximum circle runout: 0.05 mm (0.0020 in.)

If the circle runout is greater than maximum, replace the armature.

(e) Using vernier calipers, measure the commutator length.
Standard length: 3.3 mm (0.1299 in.)
Maximum length: 4.0 mm (0.1575 in.)



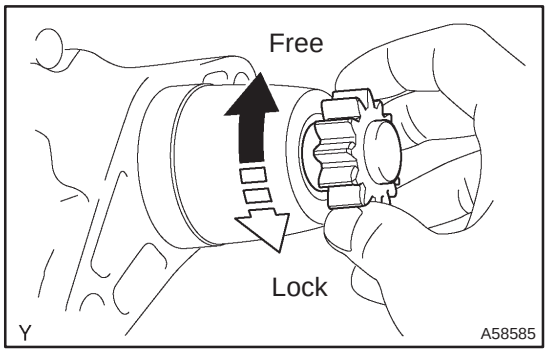
If the length is greater than maximum, replace the armature.

8. INSPECT STARTER COMMUTATOR END FRAME ASSY

(a) Check the brush holder.
(1) Using an ohmmeter, check that there is no continuity between the positive (+) and negative (–) brush holders.

If the there is continuity repair or replace the starter commutator end frame assy.

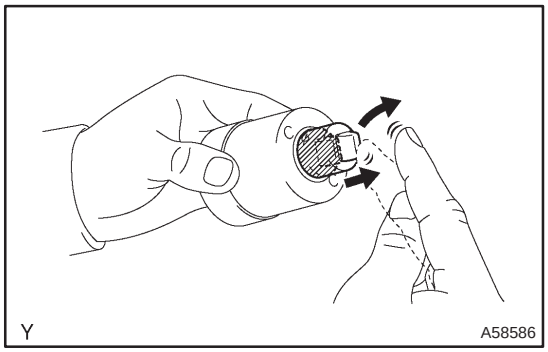
(b) Using vernier calipers, measure the brush holder length.
Standard length: 9.0 mm (0.3543 in.)
Maximum length: 4.0 mm (0.0787 in.)



If the length is greater than maximum, replace the starter commutator end frame assy.

9. INSPECT MOTOR TERMINAL STARTER KIT

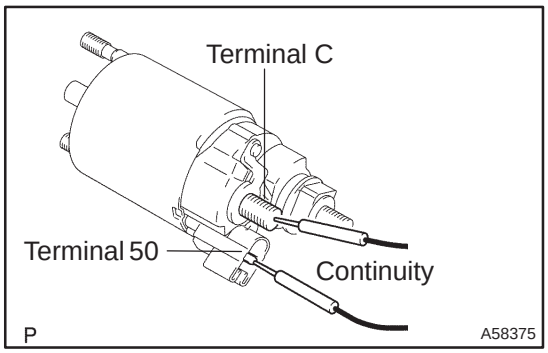
(a) Check the gear teeth on the planetary gear, internal gear and starter clutch for wear or damage.



If the gear is damaged, replace it.

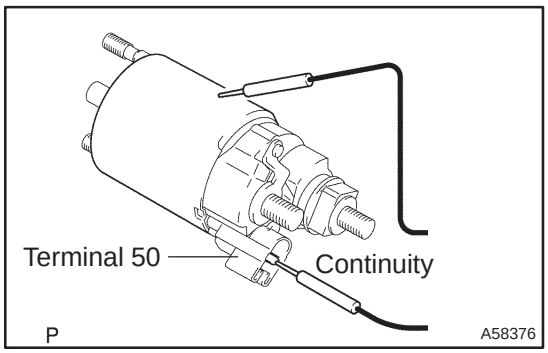
If damaged, replace the gear or clutch assembly. If damaged, also check the drive plate ring gear for wear or damage.

(b) Check the starter clutch.
(1) Rotate the clutch pinion gear clockwise and check that it turns freely. Try to rotate the clutch pinion gear counterclockwise and check that it locks.



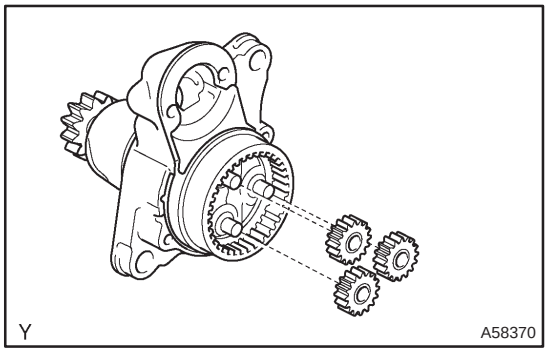
If necessary, replace the starter clutch.

10. INSPECT REPAIR SERVICE STARTER KIT



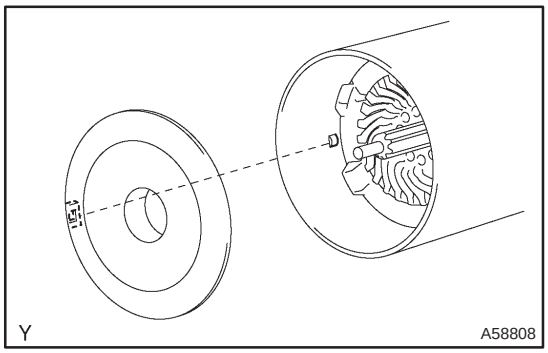
(a) Check the plunger.
  (1) Push in the plunger and check that it returns quickly to its original position.

If necessary, replace the repair service starter kit.



(b) Check the pull–in coil for open circuit.
  (1) Using an ohmmeter, check that there is continuity between terminals 50 and C.

If there is no continuity, replace the repair service starter kit.

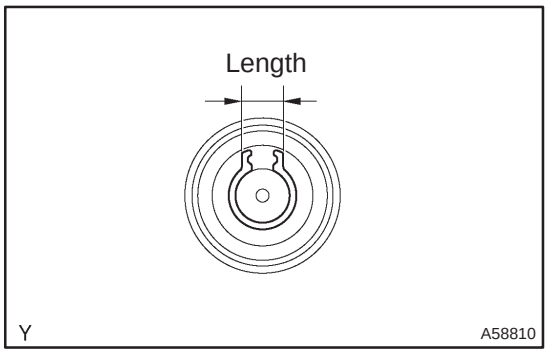


(c) Check the hold–in coil for open circuit.
  (1) Using an ohmmeter, check that there is continuity between terminal 50 and the switch body.

If there is no continuity, replace the repair service kit.

11. INSTALL PLANET GEAR

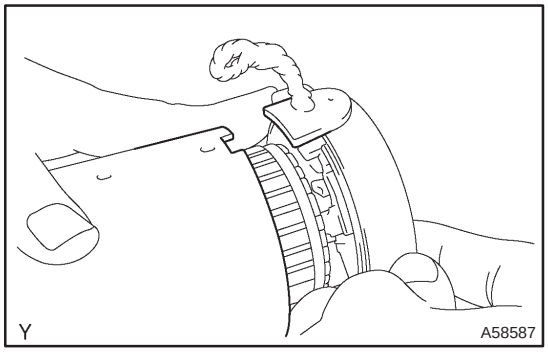
(a) Apply grease to the planetary gears and pin parts of the planetary shaft.
(b) Install the 3 planetary gears.
(c) Align the cutout of the plate with the protrusion inside the shock absorber.



12. INSTALL STARTER ARMATURE PLATE

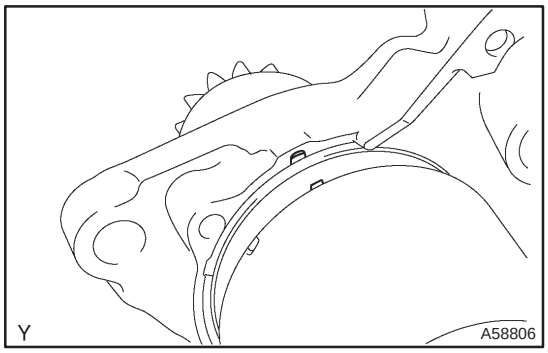
(a) Apply grease to the planetary gears and pin parts of the planetary shaft.
(b) Align the cutout of the plate with the protrusion inside the shock absorber, and install the plate.

13. INSTALL STARTER ARMATURE ASSY



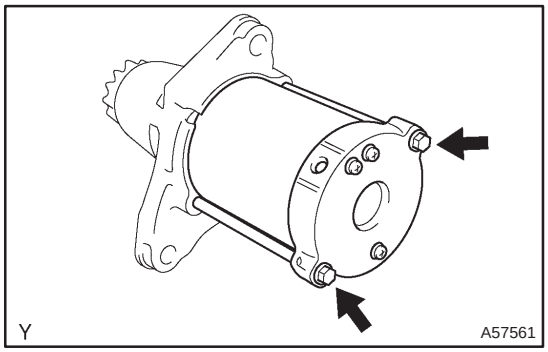
(a) Apply grease to the washer plate and armature shaft.
(b) Install the armature shaft to the starter commutator end frame assy.
(c) Using snap ring pliers, install the plate washer and new snap ring.

(d) Using vernier calipers, mesure the snap ring.
Maximum length: 5.0 mm (0.1969 in.)



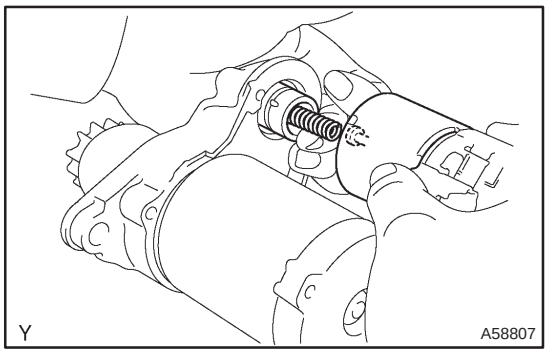
If the length is greater than maximum, replace the new snap ring.

14. INSTALL STARTER COMMUTATOR END FRAME COVER



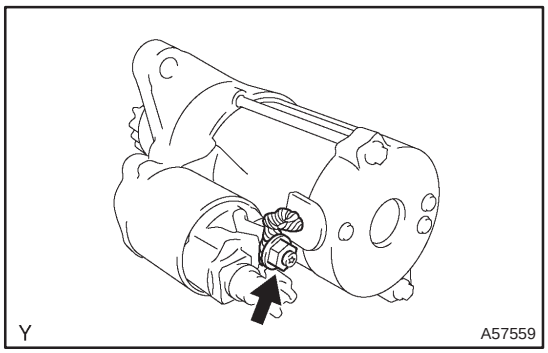
15. INSTALL STARTER YOKE ASSY

(a) Align the starter commutator rubber end frame with the cutout of starter yoke.
(b) Install starter yoke assy to starter commutator end frame.



16. INSTALL STARTER COMMUTATOR END FRAME ASSY

(a) Align the starer yoke assy with the cutout of motor terminal starter kit.



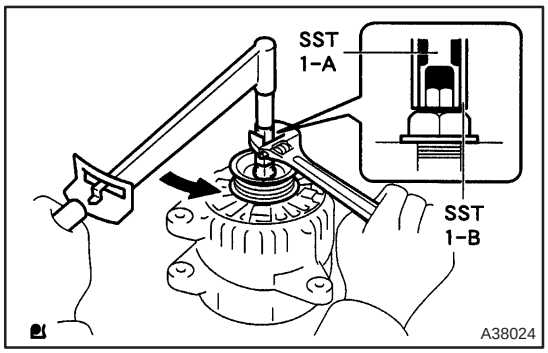
(b) Install the starter yoke assy with the 2 through bolts.
Torque: 6.0 N·m (61 kgf·cm, 52 in.·lbf)

17. INSTALL REPAIR SERVICE STARTER KIT

(a) Apply grease to the plunger and hook.
(b) Hang the plunger hook of the repair service starter kit to the drive lever.
(c) Install the plunger and return spring.
(d) Install the repair service starter kit with the 2 screws.
Torque: 7.5 N·m (80 kgf·cm, 69 in.·lbf)
(e) Apply grease to the nut of the lead wire.

(f) Connect the lead wire to the terminal with the nut.
Torque: 6.5 N·m (66 kgf·cm, 58 in.·lbf)

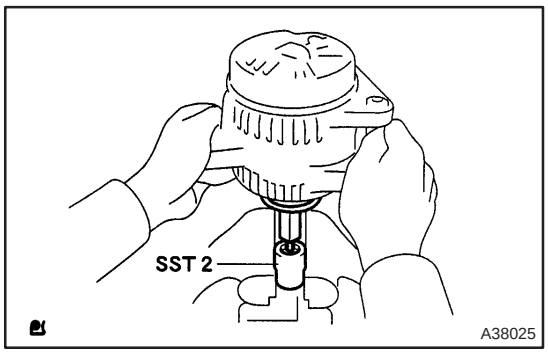
GENERATOR ASSY (1AZ–FE)



OVERHAUL

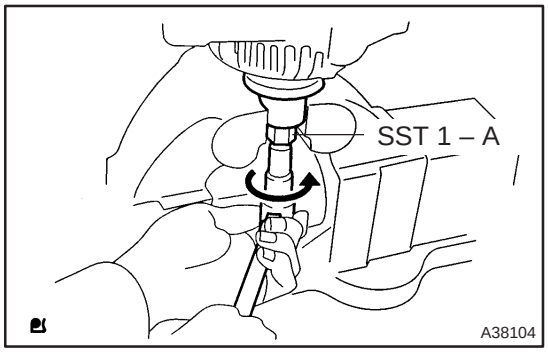
1906M–01

1. REMOVE GENERATOR PULLEY



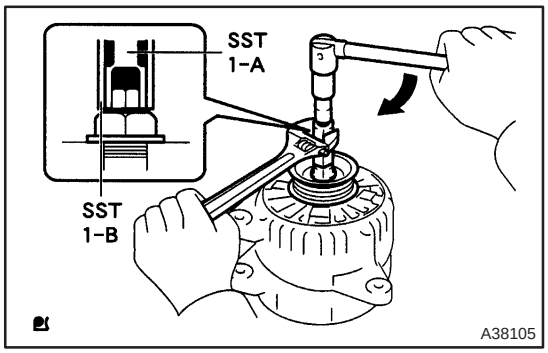
SST 09820–63010 (09820–06010, 09820–06020)

SST 1 – A, B	09820–06010
SST 2	09820–06020



(a) Hold SST 1 – A with a torque wrench, and tighten SST 1 – B clockwise to the specified torque.
Torque: 39 N·m (400 kgf·cm, 29 ft·lbf)

NOTICE:
Check that SST is secured to the rotor shaft.



(b) Mount SST 2 in a vise.
(c) Insert SST 1 – A, B into SST 2, and attach the pulley nut to SST 2.

(d) To loosen the pulley nut, turn SST 1 – A in the direction shown in the illustration.

NOTICE:
To prevent damage to the rotor shaft, do not loosen the pulley nut more than one–half of a turn.

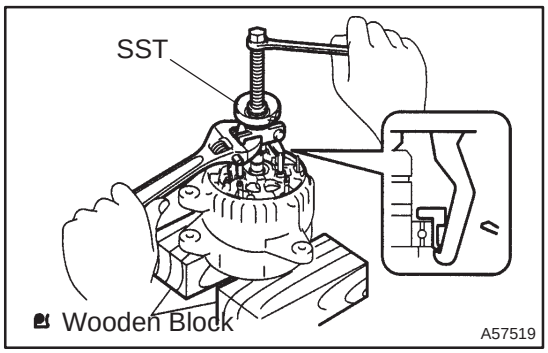
(e) Remove the alternator from SST 2.

(f) Turn SST 1 – B, and remove SST 1 – A, B.
(g) Remove the pulley nut and pulley.

2. REMOVE GENERATOR BRUSH HOLDER ASSY

(a) Remove the nut and terminal insulator.
(b) Remove the bolt, 3 nuts, plate terminal and end cover.
(c) Remove the brush cover.
(d) Remove the 2 screws and brush holder.

3. REMOVE GENERATOR REGULATOR ASSY



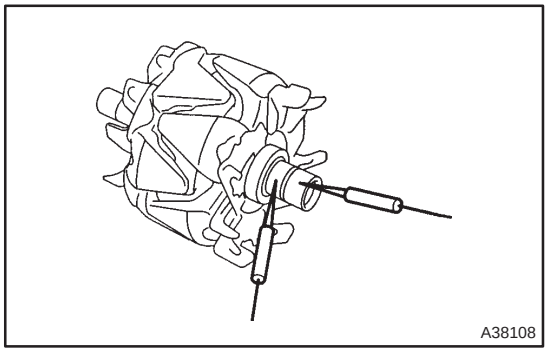
(a) Remove the 3 screws and voltage regulator.

4. REMOVE GENERATOR HOLDER W/RECTIFIER

(a) Remove the 4 screws and rectifier holder.

5. REMOVE ALTERNATOR RECTIFIRE END FRAME

(a) Remove the rubber insulator.
(b) Remove the seal plate.
(c) Remove the 4 nuts and cord clip.

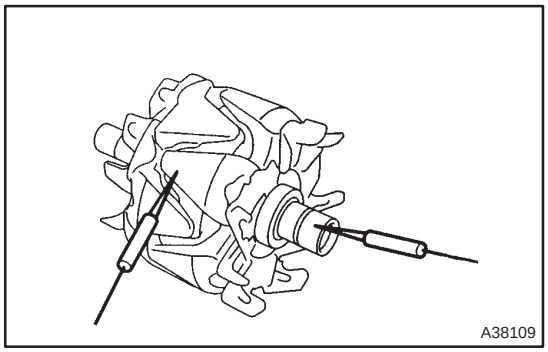


(d) Using bearing puller set, remove the rectifier end frame.

6. REMOVE GENERATOR ROTOR ASSY

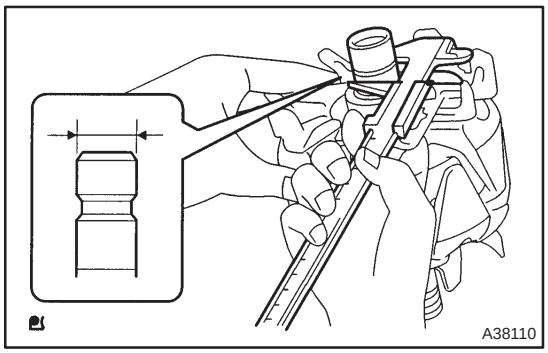
(a) Remove the alternator washer from the rotor.
(b) Remove the rotor from drive end frame.

NOTICE:
Do not drop the rotor.



7. INSPECT GENERATOR ROTOR ASSY

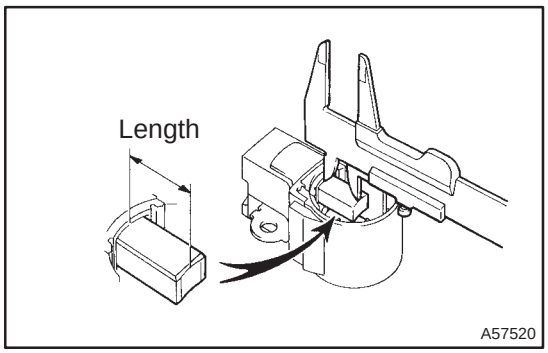
(a) Inspect rotor for open circuit.
(1) Using an ohmmeter, check that there is continuity between the slip rings.



Standard resistance: 2.1 – 2.5 Ω at 20°C (68°F)

If there is no continuity, replace the rotor.

(b) Inspect rotor for ground.
(1) Using an ohmmeter, check that there is no continuity between the slip ring and rotor.



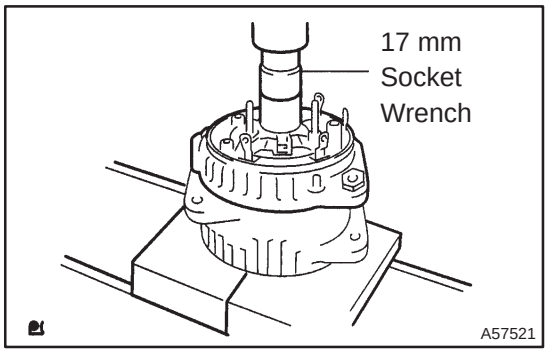
If there is continuity, replace the rotor.

(c) Inspect slip rings.
(1) Using vernier calipers, measure the slip ring diameter.

Standard diameter: 14.2 – 14.4 mm (0.559 – 0.567 in.)
Minimum diameter: 12.8 mm (0.504 in.)

If the diameter is less than minimum, replace the rotor.

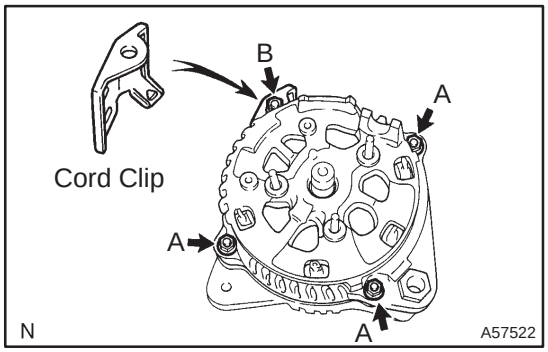
8. INSPECT BRUSH



(a) Using vernier calipers, measure the exposed brush length.

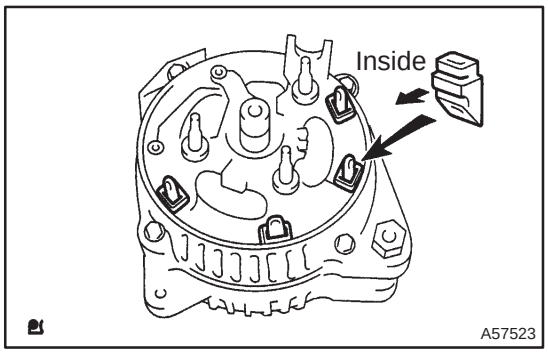
Standard exposed length:
9.5 – 11.5 mm (0.374 – 0.453 in.)
Minimum exposed length: 1.5 mm (0.059 in.)

If the exposed length is less than minimum, replace the brush holder assembly.



9. INSTALL GENERATOR ROTOR ASSY

(a) Install the generator rotor.
(b) Install the alternator washer to the rotor.



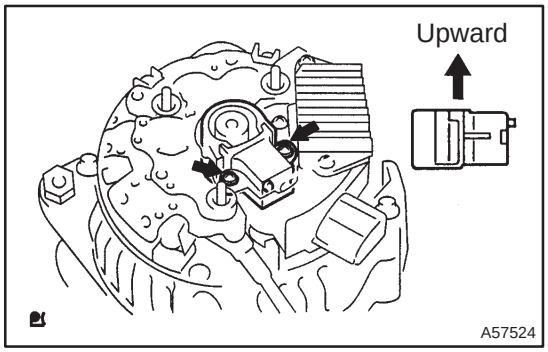
10. INSTALL ALTERNATOR RECTIFIRE END FRAME

(a) Using a 17 mm socket wrench and press, slowly press in the rectifier end frame.

(b) Install the cord clip and 4 nuts.
Torque:
Nut A 4.5 N·m (46 kgf·cm, 39 in.·lbf)
Nut B 5.4 N·m (55 kgf·cm, 47 in.·lbf)

(c) Install the seal plate on the rectifier end frame.

(d) Install the 4 rubber insulators on the lead wires.



NOTICE:
Be careful of the rubber insulators installation direction.

11. INSTALL GENERATOR HOLDER W/RECTIFIER

(a) Install the rectifier holder while pushing it with the 4 screws.
Torque: 2.9 N·m (30 kgf·cm, 26 in.·lbf)

12. INSTALL GENERATOR REGULATOR ASSY

(a) Instal the 3 screws and voltage regulator.

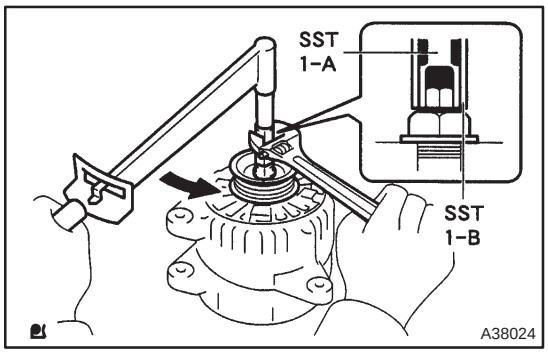
13. INSTALL GENERATOR BRUSH HOLDER ASSY

(a) Install the 2 screws and brush holder.

NOTICE:
Be careful of the holder installation direction.

(b) Install the brush cover.

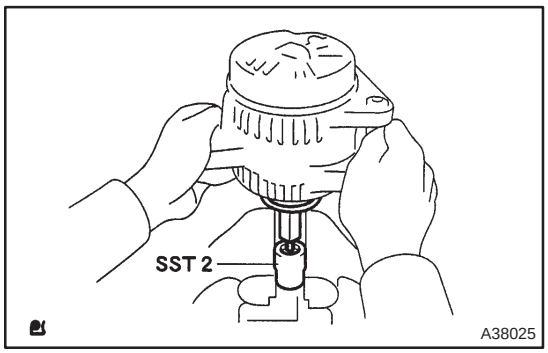
(c) Instal the end cover and plate terminal with the bolt and 3 nuts.
Torque:
Nut 4.4 N·m (45 kgf·cm, 39 in.·lbf)
Bolt 3.9 N·m (39 kgf·cm, 35 in.·lbf)



(d) Install the terminal insulator with the nut.
Torque: 4.1 N·m (42 kgf·cm, 36 in.·lbf)

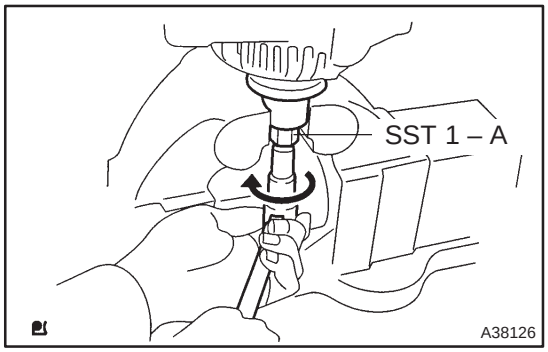
14. INSTALL GENERATOR PULLEY

SST 09820–63010 (09820–06010, 09820–06020)

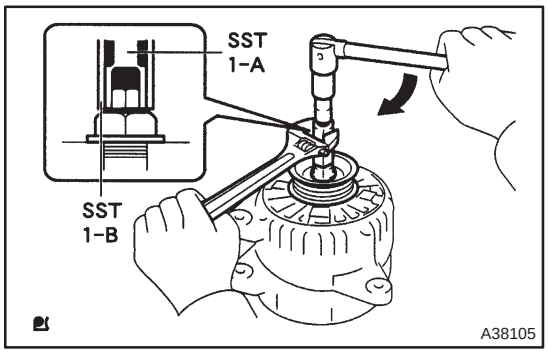


SST 1 – A, B	09820–06010
SST 2	09820–06020

(a) Install the pulley to the rotor shaft by tightening the pulley nut by hand.



(b) Hold SST 1 – A with a torque wrench, and tighten SST 1 – B clockwise with the specified torque.
Torque: 39 N·m (400 kgf·cm, 29 ft·lbf)



NOTICE:
Check that SST is secured to the pulley shaft.

(c) Mount SST 2 in a vise.
(d) Insert SST 1 – A, B into SST 2, and attach the pulley nut to SST 2.

(e) Tighten the pulley nut, turn SST 1 – A in the direction shown in the illustration.
Torque: 111 N·m (1,125 kgf·cm, 81 ft·lbf)
(f) Remove the alternator from SST 2.

(g) Turn SST 1 – B, and remove SST 1 – A, B.
(h) Turn the pulley, and check that the pulley moves smoothly.

HOW TO USE THIS MANUAL TRANSAXLE REPAIR MANUAL

01018–02

GENERAL INFORMATION

1. GENERAL DESCRIPTION

(a) This manual is made in accordance with SAE J2008.

(b) Generally repair operations can be separated in the following 3 main processes:
1. Diagnosis
2. Removing and Installing, Replacing, Disassembling, Installing and Checking, Adjusting
3. Final Inspection

(c) This manual explains ”Removing and Installing, Replacing, Disassembling, Installing and Checking, Adjusting”, but ”Final Inspection” is omitted.

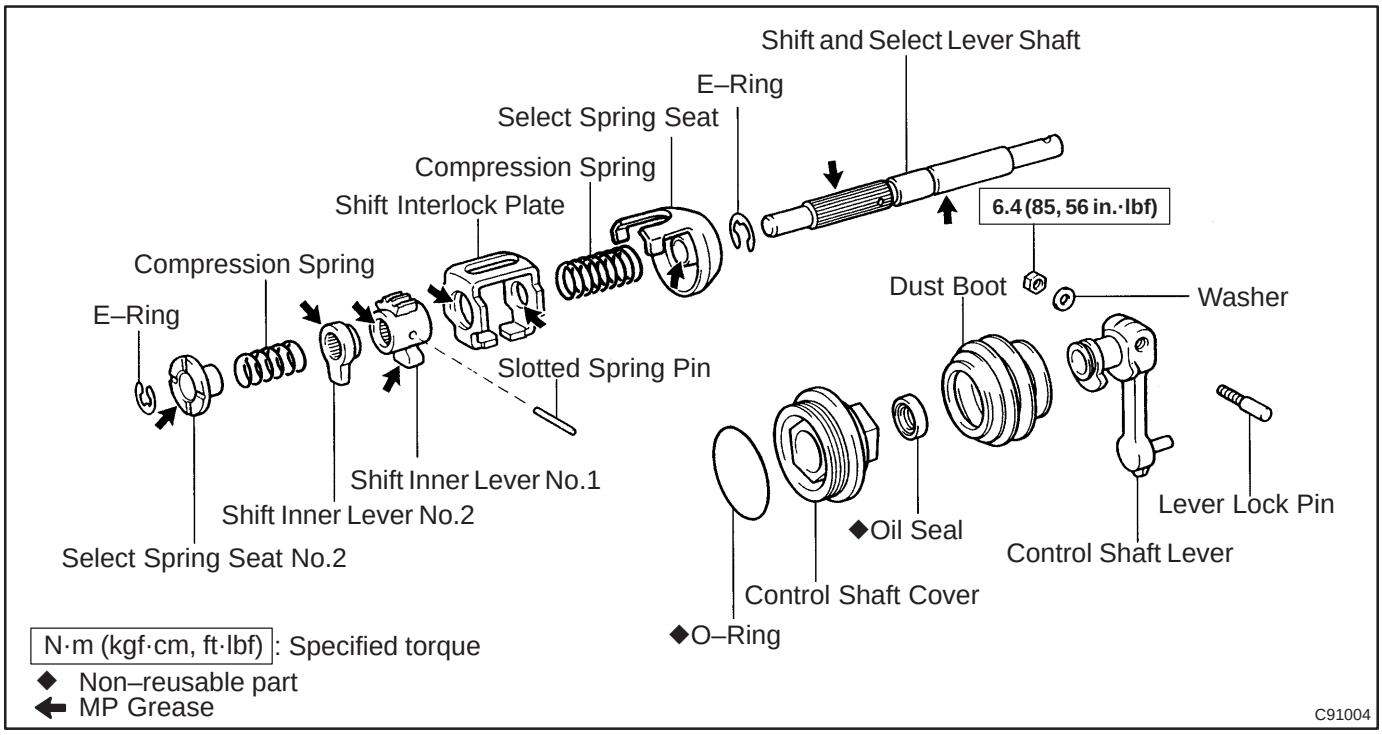
(d) The following essential operations are not written in this manual, however these operations must be done in the practical situation.
(1) Operation with a jack or lift
(2) Cleaning of a removed part when necessary
(3) Visual check

2. INDEX

(a) An alphabetical INDEX is provided as a section on the end of the book to guide you to the item to be repaired.

3. PREPARATION

(a) Use of special service tools (SST) and special service materials (SSM) may be required, depending on the repairing condition. Be sure to use SST and SSM when they are required and follow the working procedure properly. A list of SST and SSM is in the Preparation section of this manual.



4. REPAIR PROCEDURES

(a) Component drawing is placed as the section or title when necessary.

(b) Illustrations of the parts catalog are placed as the ”disassembled parts drawing” so that it enables you to understand the fitting condition of the components.

(c) Non–reusable parts, grease applied parts, precoated parts and tightening torque are specified in the components drawing.

Example:

(d) Tightening torque, oil applying position, and non–reusable parts are described as important points in the procedure.

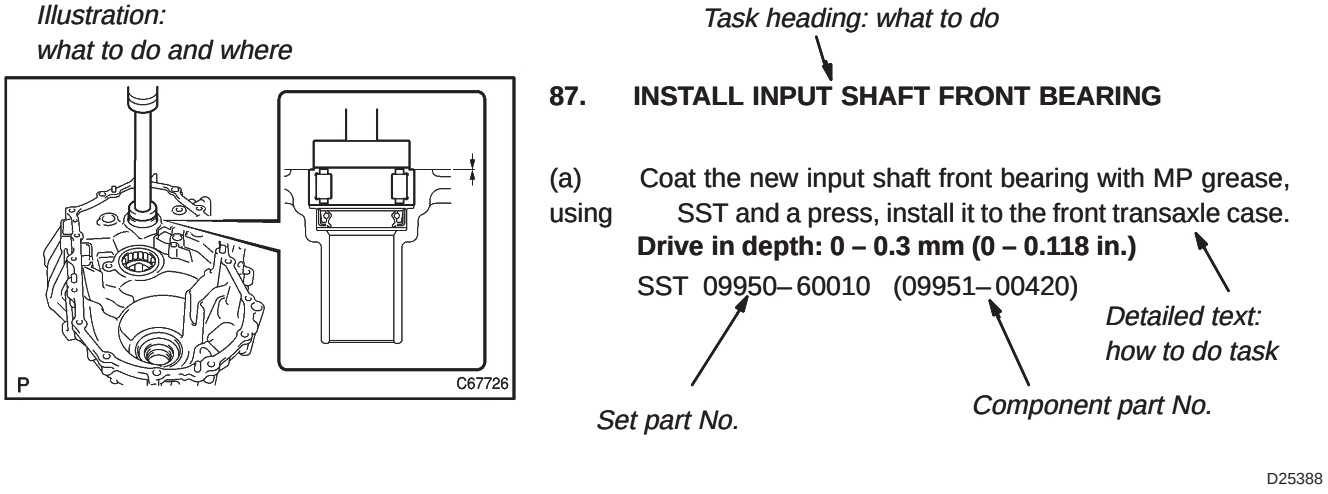
NOTICE:

There are cases where such information can only be indicated by an illustration. In that case, all the information such as torque, oil, etc. are described in the illustration.

(e) Installing procedure of operation items is performed in the reverse order of the removing, and only the important points are described.

(f) Only items with points are described in the procedure, and the operational portion and content are placed using an illustration. In the explanations, details of the operational method, standard value and notice are placed.

(g) There may be a case where the illustrations of similar models are used. In that case the details may be different from the actual vehicle.



(h) The procedures are presented in a step–by–step format:

(1) The illustration shows what to do and where to do it.

(2) The task heading tells what to do.

(3) The detailed text tells how to perform the task and gives other information such as specifications and warnings.

Example:

HINT:

This format provides an experienced technician with a FAST TRACK to the necessary information. The task heading can be read at a glance when necessary, and the text below provides detailed information. Important specifications and warnings always stand out in bold type.

5. SERVICE SPECIFICATIONS

(a) Specifications are presented in bold type throughout the manual. You never have to leave the procedure to look up your specifications. The specifications are also found in the Service Specifications section for a quick reference.

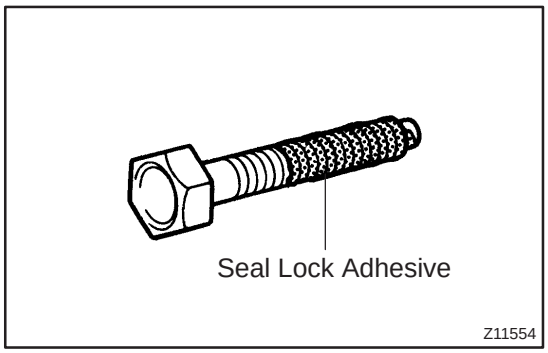
6. TERMS DEFINITION

CAUTION	Indicate the possibility of injury to you or other people.
NOTICE	Indicate the possibility of damage to the components being repaired.
HINT	Provide additional information to help you perform the repair efficiently.

7. SI UNIT

(a) The UNITS given in this manual are primarily expressed according to the SI UNIT (International System of Unit), and alternately expressed in the metric system and in the English System.

Example:



Torque: 30 N·m (310 kgf·cm, 22 ft·lbf)

REPAIR INSTRUCTION FOR MANUAL TRANSAXLE REPAIR MANUAL

01019–02

PRECAUTION

1. BASIC REPAIR HINT

(a) PRECOATED PARTS

(1) Precoated parts are bolts, nuts, etc. that are coated with a seal lock adhesive at the factory.

(2) If a precoated part is retightened, loosened or caused to move in any way, it must be recoated with the specified adhesive.

(3) When reusing precoated parts, clean off the old adhesive and dry with compressed air. Then apply the specified seal lock adhesive to the bolt, nut or threads.

NOTICE:

Do the torque checking with the lower limit value of the torque tolerance.

(4) Depending on the seal lock agent to apply, there may be a case where it is necessary to leave it for a specified time until it hardens.

(b) GASKETS

When necessary, use a sealer on gaskets to prevent leaks.

(c) BOLTS, NUTS AND SCREWS

Carefully observe all specifications for bolt tightening torques. Always use a torque wrench.

TERMS FOR MANUAL TRANSAXLE REPAIR MANUAL

0101A–02

ABBREVIATIONS USED IN THIS MANUAL

Abbreviations	Meaning
E/G	Engine
FIPG	Formed In Plce Gasket
MAX	Maximum
MIN	Minimum
MP	Multipurpose
M/T	Manual Transmission
N	Neutral
No.	Number
RH	Right–Hand
SPEC	Specification
SSM	Special Service Materials
SST	Special service Tools
STD	Standard
T/A	Transaxle
T/M	Transmission
TMC	TOYOTA Motor Coporation
w/	With
w/o	Without
1st	First
2nd	Second

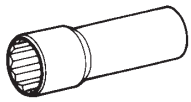
0101B–02

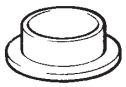
GLOSSARY OF SAE AND TOYOTA TERMS

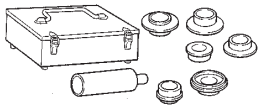
This glossary lists all SAE–J1930 terms and abbreviations used in this manual in compliance with SAE recommendations, as well as their Toyota equivalents.

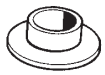
SAE ABBREVIATIONS	SAE TERMS	TOYOTA TERMS ( )—ABBREVIATIONS
A/C	Air Conditioning	Air Conditioner
ACL	Air Cleaner	Air Cleaner
AIR	Secondary Air Injection	Air Injection (AI)
AP	Accelerator Pedal	–
B+	Battery Positive Voltage	+B, Battery Voltage
BARO	Barometric Pressure	–
CAC	Charge Air Cooler	Inter cooler
CARB	Carburetor	Carburetor
CFI	Continuous Fuel Injection	–
CKP	Crankshaft Position	Crank Angle
CL	Closed Loop	Closed Loop
CMP	Camshaft position	Cam Angle
CPP	Clutch Pedal Position	–
CTOX	Continuous Trap Oxidizer	–
CTP	Closed Throttle Potion	–
DFI	Direct Fuel Injection (Diesel)	Direct Injection (DI)
DI	Distributor Ignition	–
DLC1 DLC2 DLC3	Data Link Connector 1 Data Link Connector 2 Data Link Connector 3	1: Check Connector 2: Total Diagnosis Communication Link (TDCL) 3: OBD II Diagnostic Connector
DTC	Diagnostic Trouble Code	Diagnostic Code
DTM	Diagnostic Test Mode	–
ECL	Engine Control Level	–
ECM	Engine Control Module	Engine ECU (Electronic Control Unit)
ECT	Engine Control Temperature	Coolant Temperature, Water Temperature (THW)
EEPROM	Electrically Erasable Programmable Read Only memory	Electrically Erasable Programmable Read Only memory (EEPROM), Erasable Programmable Read Only memory (EPROM)
EFE	Early Fuel Evaporation	Cold Mixture Heater (CMH), Heat Control Valve (HCV)
EGR	Exhaust Gas Recirculation	Exhaust Gas Recirculation (EGR)
EI	Electronic Ignition	Distributorless Ignition (DI)
EM	Engine Modification	Engine Modification (EM)
EPROM	Erasable Programmable Read Only Memory	Programmable Read Only Memory (PROM)
EVAP	Evaporative Emission	Evaporative Emission Control (EVAP)
FC	Fan Control	–
FEEPROM	Flash Electrically Erasable Programmable Read Only Memory	–
FEPROM	Flash Erasable Programmable Read Only Memory	–
FF	Flexible Fuel	–
FP	Fuel Pump	Fuel Pump
GEN	Generator	Alternator
GND	Ground	Ground (GND)
HO2S	Heated Oxygen Sensor	Heated Oxygen Sensor (HO2S)
IAC	Idol Air Control	Idol Speed Control (ISC)
IAT	Intake Air Temperature	Intake or Inlet Air Temperature
ICM	Ignition Control Module	–
IFI	Indirect Fuel Injection	Indirect Injection
IFS	Inertia Fuel–Shutoff	–

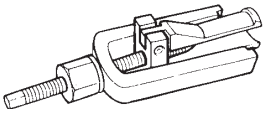
ISC	Idle Speed Control	–
KS	Knock Sensor	Knock Sensor
MAF	Mass Air Flow	Air Flow Meter
MAP	Manifold Absolute Pressure	Manifold Pressure Intake Vacuum
MC	Mixture Control	Electric Bleed Air Control Valve (EBCV) Mixture Control Valve (MCV) Electric Air Control Valve (EACV)
MDP	Manifold Differential Pressure	–
MFI	Multiport Fuel Injection	Electronic Fuel Injection (EFI)
MIL	Malfunction Indicator Lamp	Check Engine Light
MST	Manifold Surface temperature	–
MVZ	Manifold Vacuum Zone	–
NVRAM	Non–Volatile Random Access Memory	–
O2S	Oxygen Sensor	Oxygen Sensor, O_2 Sensor (O_{2S})
OBD	On–Board Diagnostic	On–Board Diagnostic (OBD)
OC	Oxidation Catalytic Converter	Oxidation Catalyst Converter (OC), CC_0
OP	Open Loop	Open Loop
PAIR	Pulsed Secondary Air Injection	Air Suction (AS)
PCM	Powertrain Control Module	–
PNP	Park/Neutral Position	–
PROM	Programmable Read Only Memory	–
PSP	Power Steering Pressure	–
PTOX	Periodic Trap Oxidizer	Diesel Particulate Filter (DPF) Diesel Particulate Trap (DPT)
RAM	Random Access Memory	Random Access Memory (RAM)
RM	Relay Module	–
ROM	Read Only Memory	Read Only Memory (ROM)
RPM	Engine Speed	Engine Speed
SC	Supercharger	Supercharger
SCB	Supercharger Bypass	–
SFI	Sequential Multiport Fuel Injection	Electronic Fuel Injection (EFI), Sequential Injection
SPL	Smoke Puff Limiter	–
SRI	Service Reminder Indicator	–
SRT	System Readiness Test	–
ST	Scan Tool	–
TB	Throttle Body	Throttle Body
TBI	Throttle Body Fuel Injection	Single Point Injection Central Fuel Injection (Ci)
TC	Turbocharger	Turbocharger
TCC	Torque Converter Clutch	Torque Converter
TCM	Transmission Control Module	Transmission ECU (Electronic Control Unit)
TP	Throttle Position	Throttle Position
TR	Transmission Range	–
TVV	Thermal Vacuum Valve	Bimetallic Vacuum Switching Valve (BVSV) Thermostatic Vacuum Switching Valve (TVSV)
TWC	Three–Way Catalytic Converter	Three–Way Catalytic (TWC) CC_{RO}
TWC+OC	Three–Way + Oxidation Catalytic Converter	$CC_R + CC_O$
VAF	Volume Air Flow	Air Flow Meter
VR	Voltage Regulator	Voltage Regulator
VSS	Vehicle Speed Sensor	Vehicle Speed Sensor (Read Switch Type)
WOT	Wide Open Throttle	Full Throttle

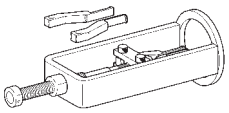


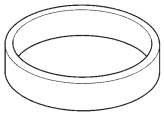


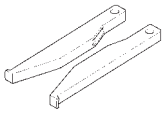


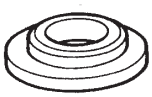


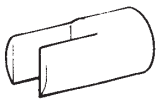












WU–OC	Warm Up Oxidation Catalytic Converter	–
WU–TWC	Warm Up Three–Way Catalytic Converter	Manifold Converter
3GR	Third Gear	–
4GR	Fourth Gear	–

030BV–02

HOW TO DETERMINE NUT STRENGTH

Nut Type			Class
Present Standard Hexagon Nut	Old Standard Hexagon Nut		
	Cold Forging Nut	Cutting Processed Nut	
 No Mark			4N
 No Mark (w/ Washer)	 No Mark (w/ Washer)	 No Mark	5N (4T)
 6N			6N
		 *	7N (5T)
 8N			8N
 10N		 No Mark	10N (7T)
 11N			11N
 12N			12N

*: Nut with 1 or more marks on one side surface of the nut.

B06432

HINT:

Use the nut with the same number of the nut strength classification or the greater than the bolt strength classification number when tightening parts with a bolt and nut.

Example: Bolt = 4T

Nut = 4N or more

MANUAL TRANSMISSION / TRANSAXLE

03010–04

SERVICE DATA

5th gear thrust clearance		0.10 – 0.65 mm (0.0040 – 0.0258 in.)
5th gear radial clearance		0.009 – 0.050 mm (0.0036 – 0.0200 in.)
Reverse idler gear sub–assy inside diameter	STD	20.056 – 20.074 mm (0.762 – 0.7969in.)
	Max	20.074 mm (0.7969 in.)
Reverse idler gear shaft outer diameter	STD	19.984 – 20.000 mm (0.7934 – 0.7940)
	Min	19.984 mm (0.7934 in.)
Transmission hub sleeve No.3 and gear shift fork No.3 clearance		0.15–0.35 mm (0.005600 – 0.0139 in.)
Shift & select lever shaft bimetal formed bush clearance		0.081 – 0.149 mm (0.0032 – 0.0059 in.)
Transmission case oil seal clearance		3.0 – 4.0 mm (0.1191 – 0.1588 in.)
Output shaft rear bearing shim thickness	0	1.30 mm (0.0516 in.)
	1	1.35 mm (0.0536 in.)

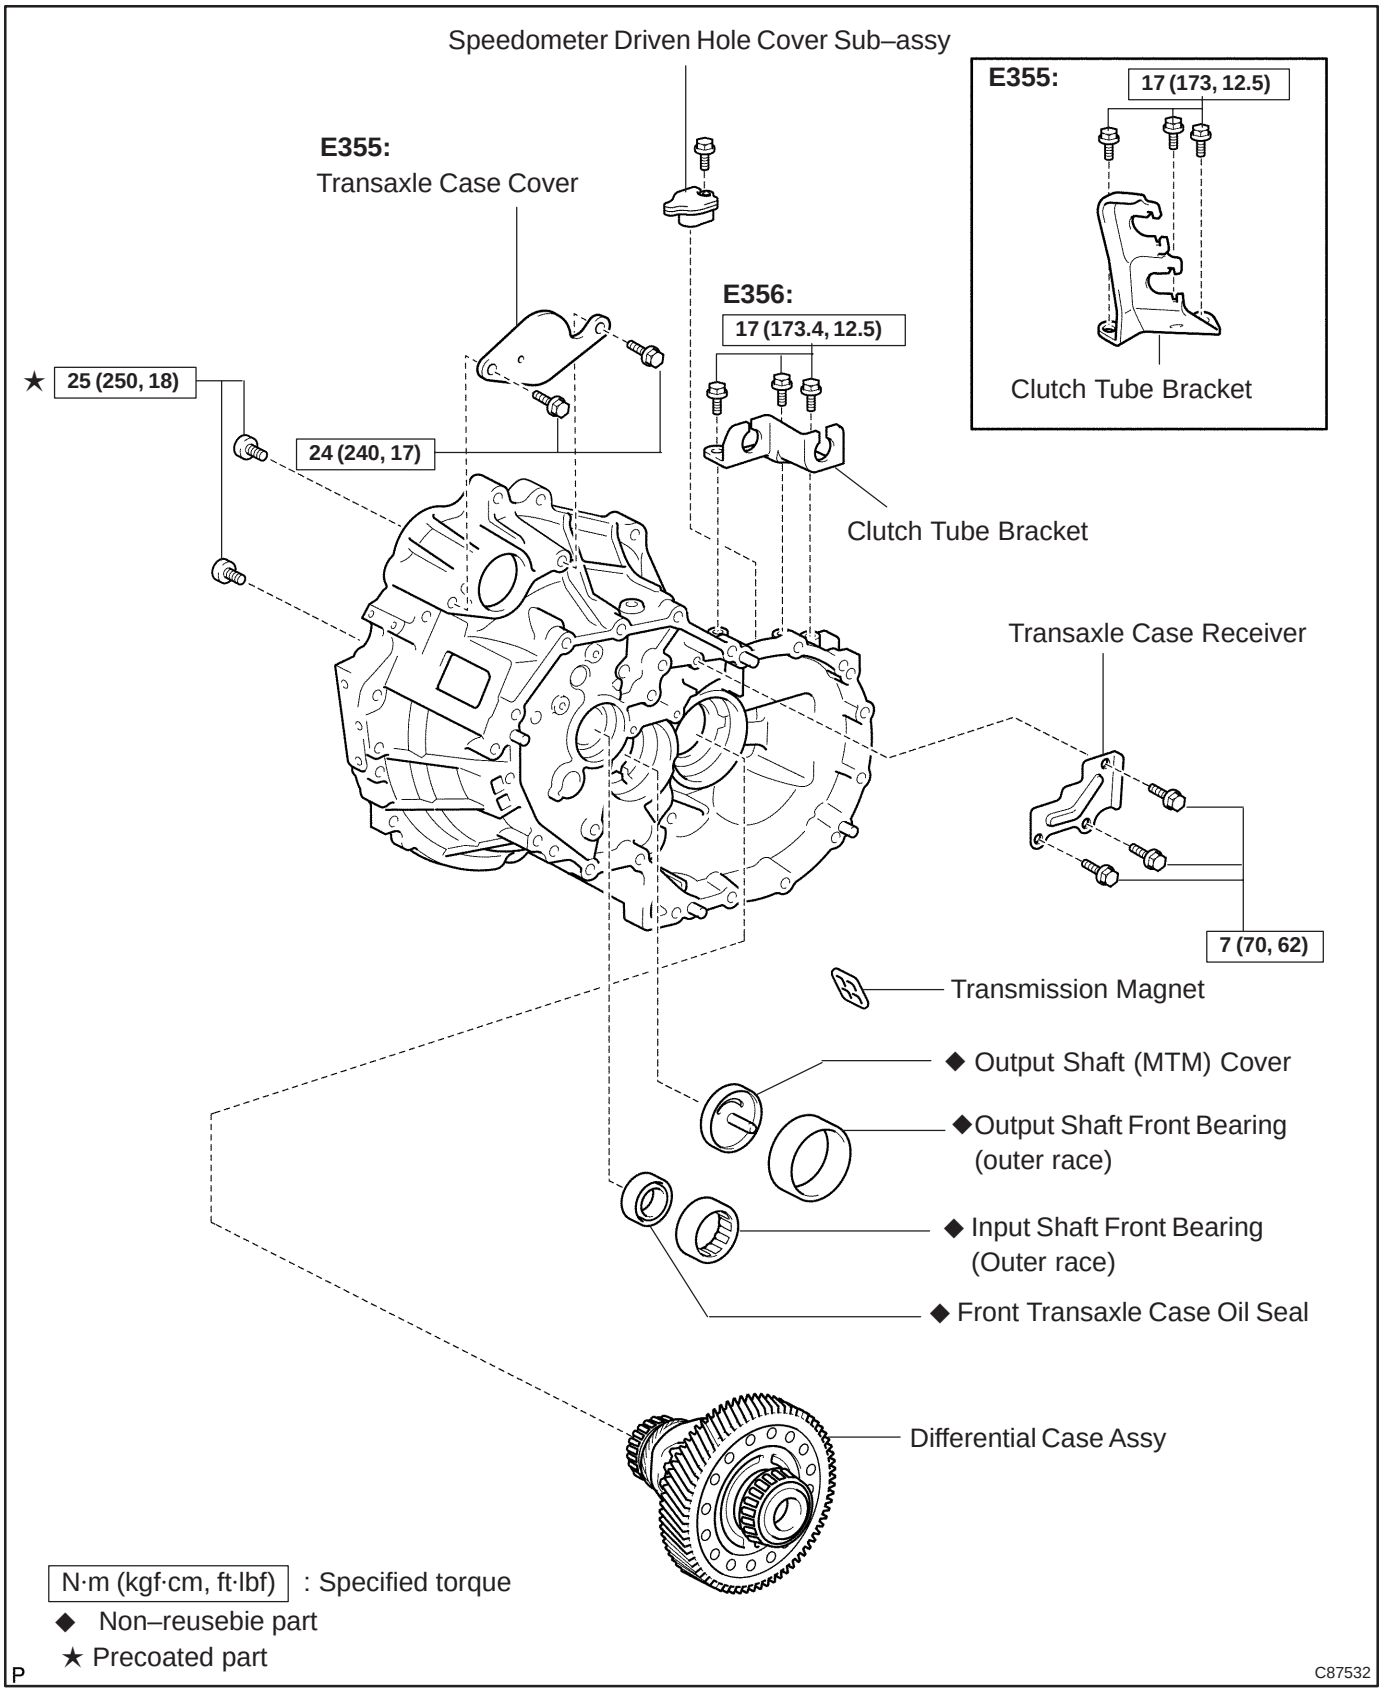
	H	2.85 mm (0.1131 in.)
Front transaxle case oil seal clearance		1 – 2 mm (0.0397 in. – 0.0794 in.)
Input shaft front bearing clearance		4.28 – 4.60 mm (0.1699 in. – 0.1826 in.)
Reverse restrict pin slotted pin clearance		12.5 – 13.5 mm (0.4963 – 0.53595 in.)

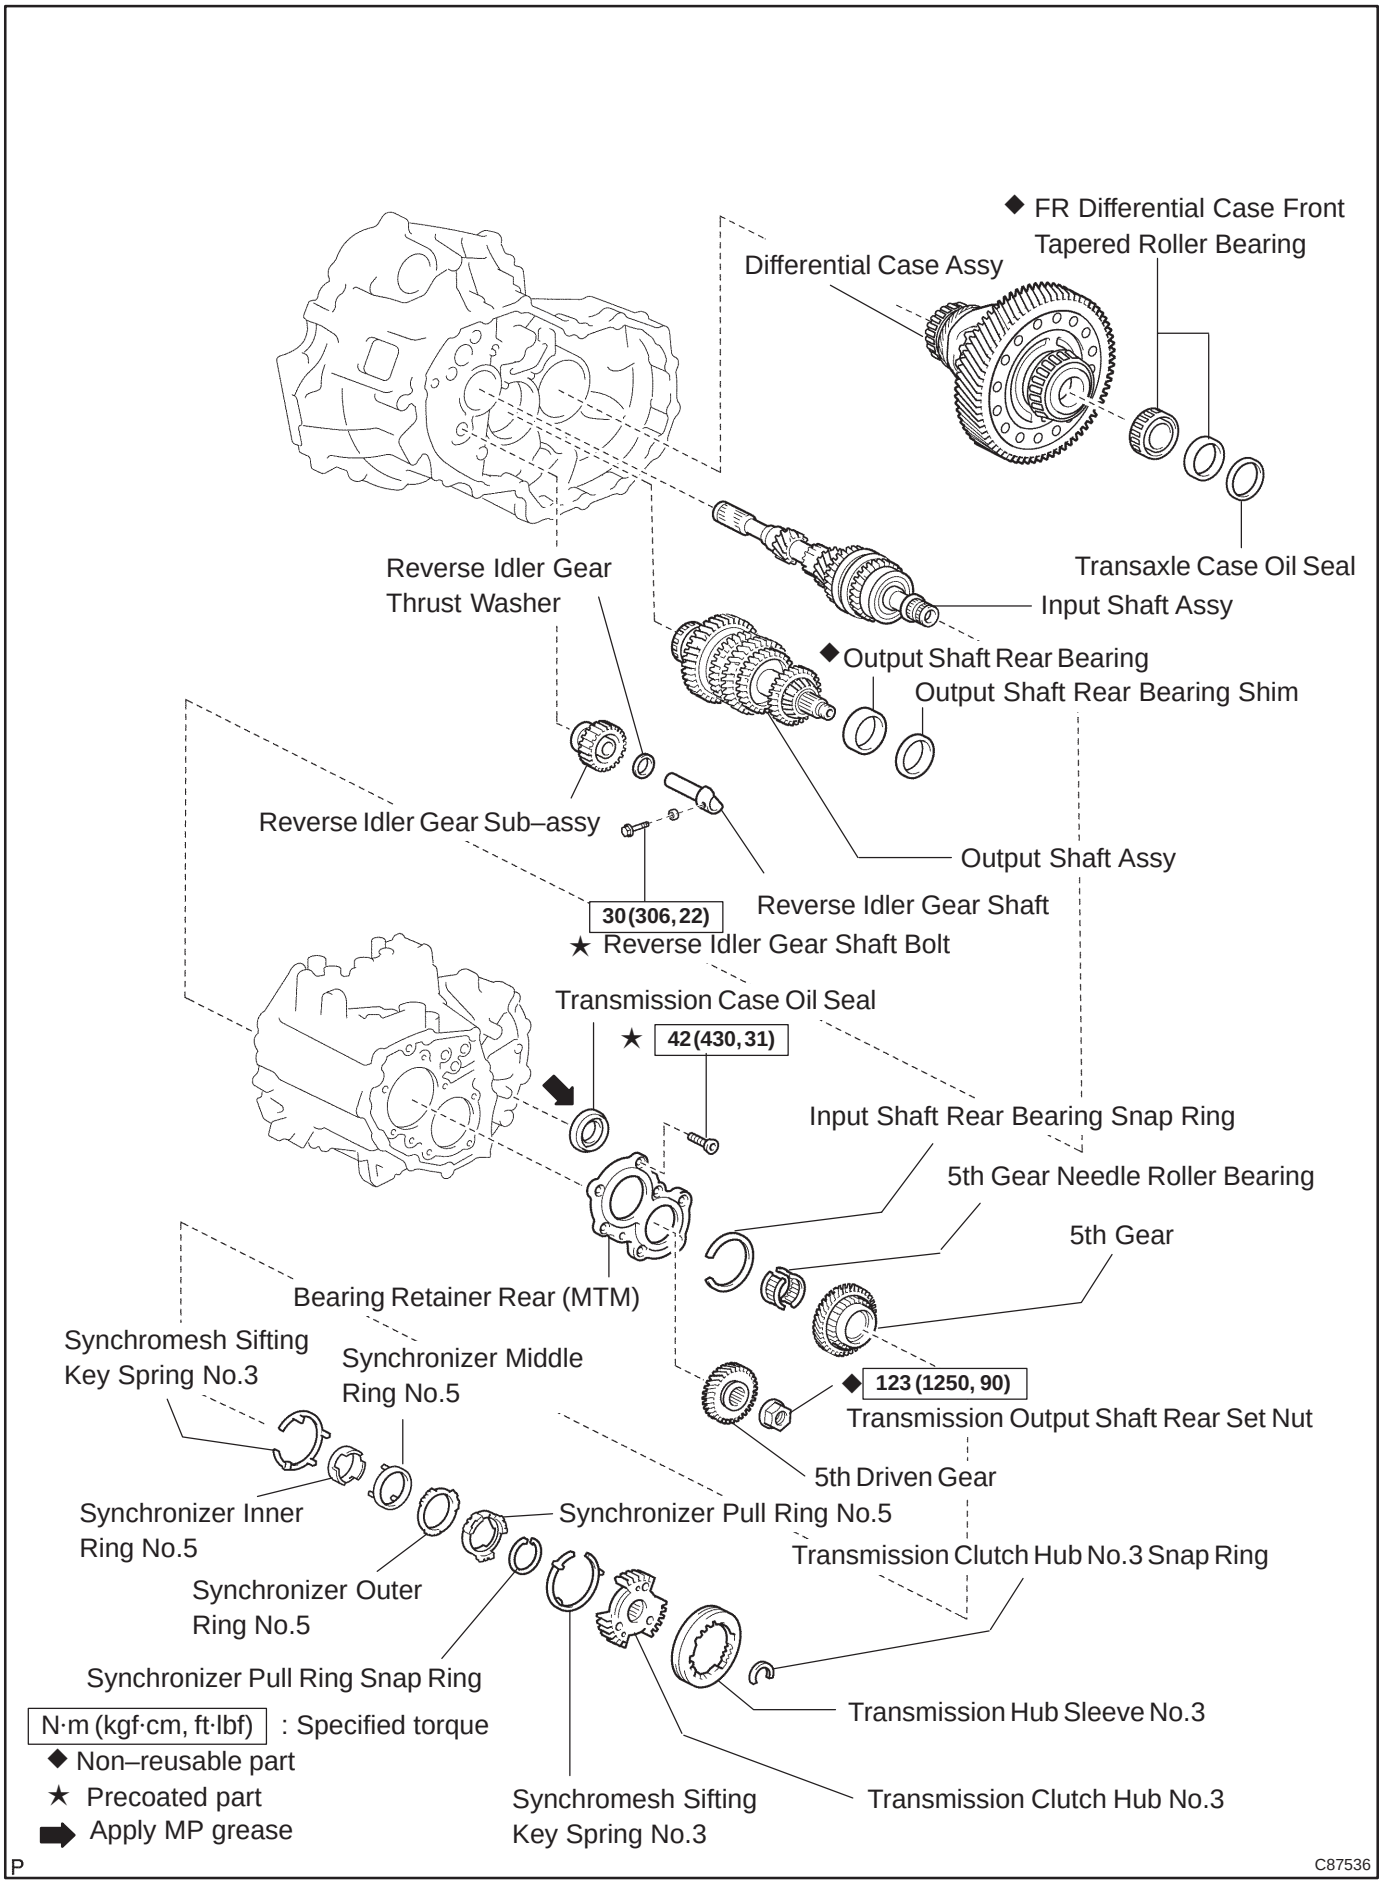
Transmission clutch hub No.3 snap ring clearance		0.1 mm or less (0.004 in. or less)
Transmission clutch hub No.3 snap ring thickness	A	1.75 – 1.80 mm (0.0695 – 0.0715 in.)
	B	1.80 – 1.85 mm (0.0715 – 0.0734 in.)
	C	1.85 – 1.90 mm (0.0734 – 0.0754 in.)
	D	1.90 – 1.95 mm (0.0754 – 0.0774 in.)
	E	1.95 – 2.00 mm (0.0774 – 0.0794 in.)
	F	2.00 – 2.05 mm (0.0794 – 0.0814 in.)
	G	2.05 – 2.10 mm (0.0814 – 0.0834 in.)
	H	2.10 – 2.15 mm (0.0834 – 0.0854 in.)
	J	2.15 – 2.20 mm(0.0854 – 0.0873 in.)
5 th gear radial clearance		0.009 – 0.050 mm (0.0004 – 0.0020 in.)
5 th gear thrust clearance		0.10 – 0.65 mm (0.0040 – 0.0258 in.)
4 th gear thrust clearance		0.1 – 0.57 mm (0.0039– 0.0224 in.)
3 rd gear thrust clearance		0.1 – 0.35 mm (0.0039 – 0.0014 in.)
4 th gear radial clearance	KOYO made	0.009 – 0.053 mm (0.0004 – 0.0021 in.)
	NSK made	0.009 – 0.051 mm (0.0004 – 0.0020 in.)
3 rd gear radial clearance	KOYO made	0.009 – 0.053 mm (0.0004 – 0.0021 in.)
	NSK made	0.009 – 0.051 mm (0.0004 – 0.0020 in.)
Input shaft run out	Max	0.03 mm (0.001191 in.)
Input shaft outer diameter	STD: A	35.984 – 36.000 mm (1.4286 – 1.4292 in.)
	B	35.984 – 36.000 mm (1.4286 – 1.4292 in.)
	C	27.957 – 27.972 mm (1.1100 – 1.1105 in.)
	Min: A	35.984 mm (1.4286 in.)
	B	35.984 mm (1.4286 in.)
	C	27.957 mm (1.1100 in.)
4 th gear inside diameter	STD	42.009 – 42.025 mm (1.6678 – 1.6684 in.)
	Max	42.025 mm (1.6684 in.)
3 rd gear inside diameter	STD	43.009– 43.025 mm (1.7075 – 1.7081 in.)
	Max	43.025 mm (1.7081 in.)
Synchronizer outer ring and 4th gear clearance		0.75 – 1.65mm (0.0297 – 0.0655 in.)
Synchronizer ring No.3 and 3 rd gear clearance		0.65 – 1.75 mm (0.0258 – 0.0695 in.)
Transmission hub sleeve No.2 and gear shift fork No.2 clearance		0.15 – 0.35 mm (0.0060 – 0.0139 in.)
Transmission clutch hub No.2 snap ring clearance		0.1 mm or less (0.0039 in. or less)
Transmission clutch hub No.2 snap ring thickness	H	2.30 – 2.35 mm (0.0917 – 0.0933 in.)
	J	2.35 – 2.40 mm (0.0933 – 0.0953 in.)
	K	2.40 – 2.45 mm (0.0953 – 0.0973 in.)
	L	2.45 – 2.50 mm (0.0973 – 0.0993 in.)
	M	2.50 – 2.55 mm (0.0993 – 0.1012 in.)
	N	2.55 – 2.60 mm (0.1012 – 0.1032 in.)
	P	2.60 – 2.65 mm(0.1032 – 0.1052 in.)
Input shaft radial ball bearing snap ring clearance		0.1 mm or less (0.0039 in. or less)
Input shaft radial ball bearing snap ring thickness	1	2.35 – 2.40 mm (0.0933 – 0.0953 in.)
	2	2.40 – 2.45 mm (0.0953 – 0.0973 in.)
	3	2.45 – 2.50 mm (0.0973 – 0.0993 in.)
	4	2.50 – 2.55 mm (0.0993 – 0.1012 in.)
	5	2.55 – 2.60 mm (0.1012 – 0.1032 in.)
	6	2.60 – 2.65 mm(0.1032 – 0.1052 in.)
	7	2.65 – 2.70 mm (0.1052 – 0.1072 in.)
	8	2.70 – 2.75 mm (0.1072 – 0.1092 in.)
3 rd gear radial clearance	KOYO made	0.009 – 0.053 mm (0.0004 – 0.0021 in.)
	NSK made	0.009 – 0.051 mm (0.0004 – 0.0020 in.)
4 th gear radial clearance	KOYO made	0.009 – 0.053 mm (0.0004 – 0.0021 in.)
	NSK made	0.009 – 0.051 mm (0.0004 – 0.0020 in.)
3 rd gear thrust clearance		0.1 – 0.35 mm (0.0039 – 0.0139 in.)
4 th gear thrust clearance		0.1 – 0.57 mm (0.0039 – 0.0226 in.)
1 st gear thrust clearance		0.25 – 0.4 mm (0.0099 – 0.0159 in.)
2 nd gear thrust clearance		0.1 – 0.35 mm (0.0004 – 0.0139 in.)

1 st gear radial clearance	KOYO made	0.009 – 0.053 mm (0.0004 – 0.0021 in.)
	NSK made	0.009 – 0.051 mm (0.0004 – 0.0020 in.)
2 nd gear radial clearance	KOYO made	0.009 – 0.053 mm (0.0004 – 0.0021 in.)
	NSK made	0.009 – 0.051 mm (0.0004 – 0.0020 in.)
output shaft run out	Max	0.03 mm (0.0012 in.)
output shaft outer diameter	STD: A	37.610 – 37.626 mm (1.4931 – 1.4938 in)
	B	37.610 – 37.626 mm (1.4931 – 1.4938 in)
	C	34.802 – 34.512 mm (1.3816 – 1.3701 in.)
	Min: A	37.610 mm (1.4931 in.)
	B	37.610 mm (1.4931 in.)
	C	34.802 mm (1.3816 in.)
2 nd gear inside diameter	STD	50.009 – 50.025 mm (1.9854 – 1.9860 in.)
	Max	50.025 mm (1.9860 in.)
1 st gear inside diameter	STD	51.009 – 51.025 mm (2.0250 – 2.0257 in.)
	Max	51.025 mm (2.0257 in.)
Synchronizer ring set No.2 and 2nd gear clearance		0.70 – 1.45 mm (0.0278 – 0.0576 in.)
Synchronizer ring set No.1 and 1 st gear clearance		0.70 – 1.45 mm (0.0278 – 0.0576 in.)
Reverse gear and reverse gear shift frok No.1		0.15 – 0.35 mm (0.0060 – 0.0139 in.)
2 nd gear radial clearance	KOYO made	0.009 – 0.053 mm (0.0004 – 0.0021 in.)
	NSK made	0.009 – 0.051 mm (0.0004 – 0.0020 in.)
1 st gear radial clearance	KOYO made	0.009 – 0.053 mm (0.0004 – 0.0021 in.)
	NSK made	0.009 – 0.051 mm (0.0004 – 0.0020 in.)
2 nd gear thrust clearance		0.1 – 0.35 mm (0.0039 – 0.0139 in.)
1 st gear thrust clearance		0.25 – 0.4 mm (0.099 – 0.0159 in.)
Front differential side gear backlash		0.05 – 0.2 mm (0.0020 – 0.0079 in.)
Front differential pinion thrust washer thickness	Min	0.94 mm (0.03701 in)
Front differential side gear backlash		0.05 – 0.2 mm (0.0020 – 0.0079 in.)
Front differential side gear thrust washer thickness	1	1.00 mm (0.0397 in.)
	2	1.10 mm (0.0437 in.)
	3	1.20 mm (0.0476 in.)
	4	1.30 mm (0.0516 in.)
Shift lever slotted pin clearance(Select lever shaft x Select spring seat No.1)		–0.5 – 0.5 mm (–0.0199 – 0.0199 in.)
Shift lever slotted pin clearance(Select lever shaft x Sift lever inner NO.2)		5.8 – 6.8mm (0.2303 – 0.2700 in.)

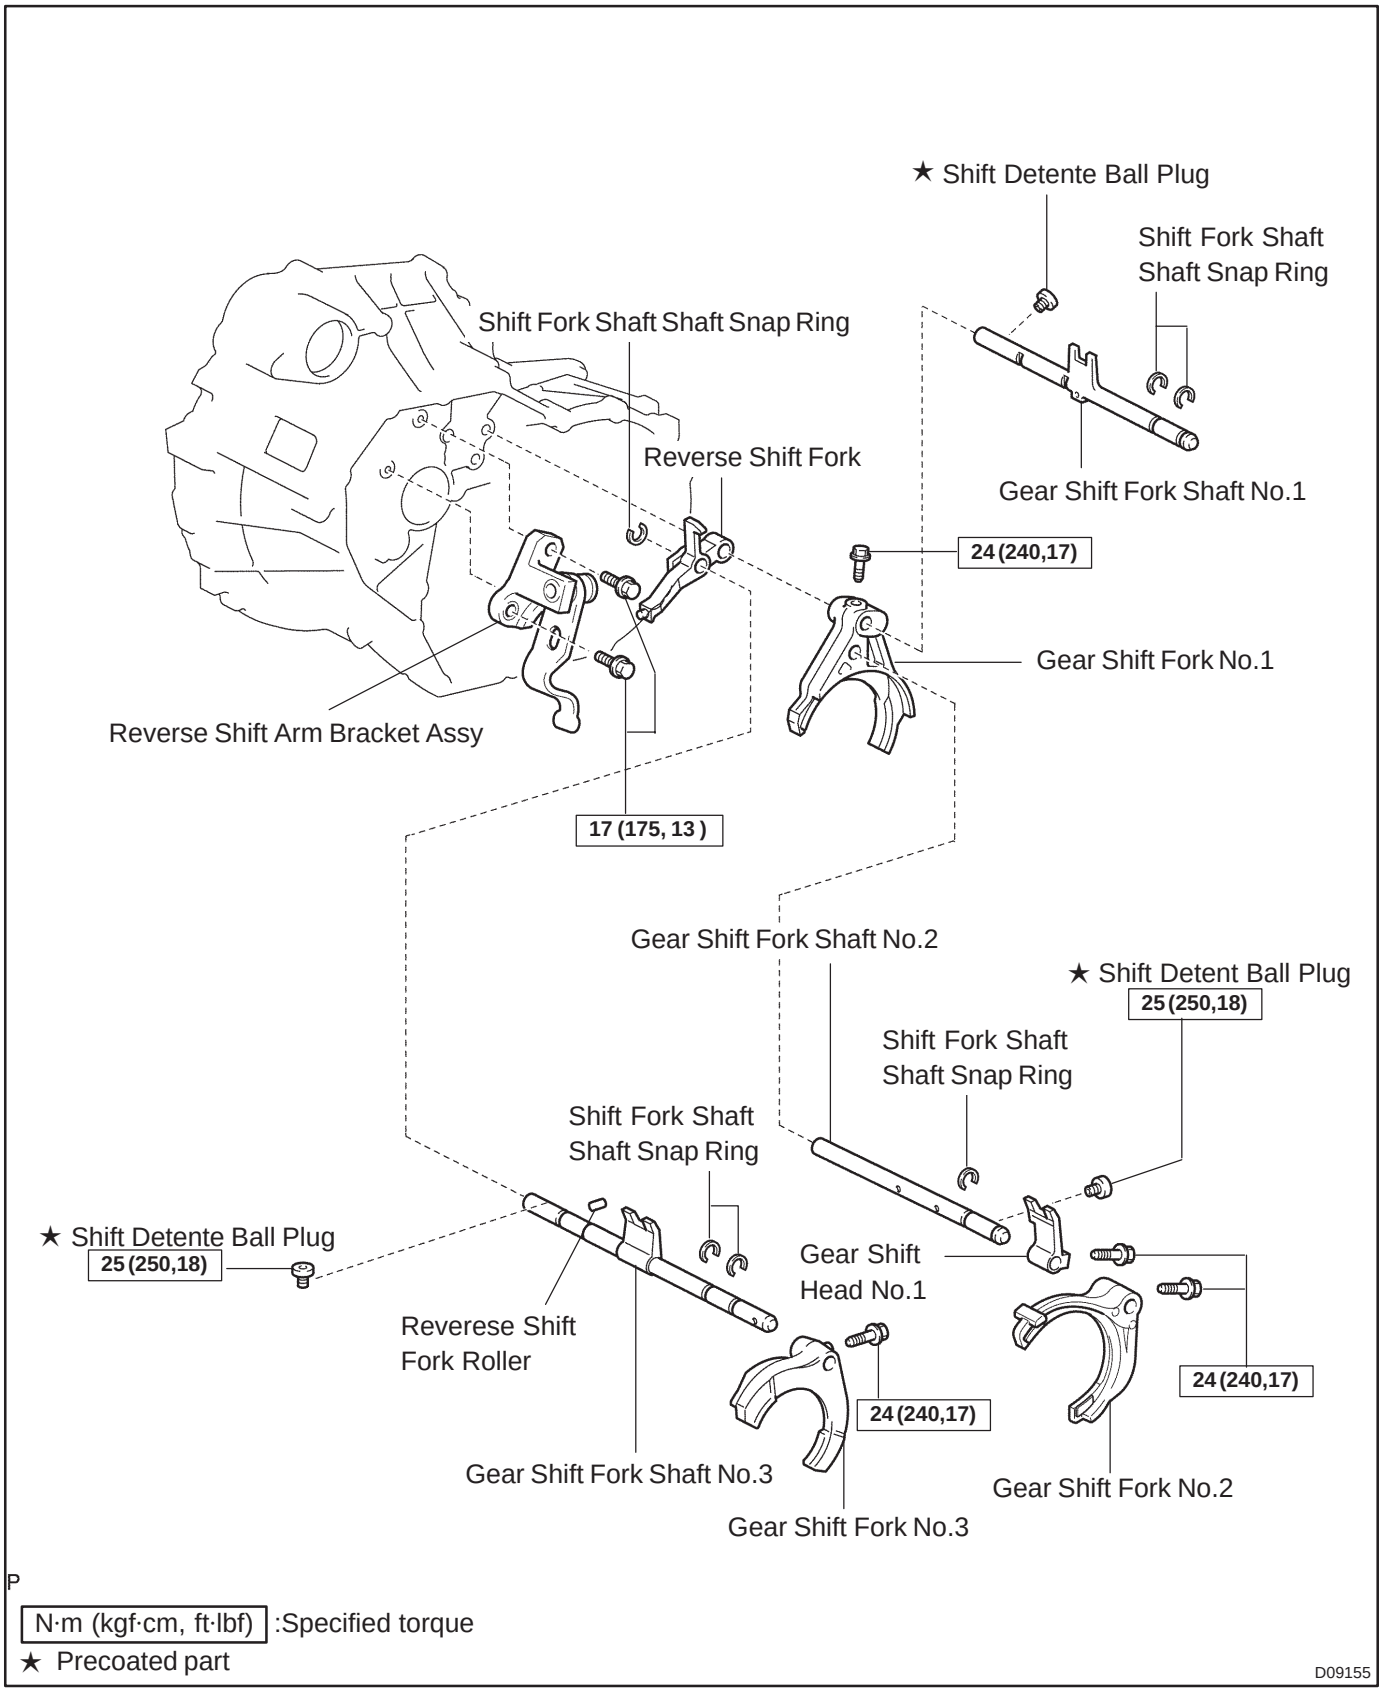
0300Z–04



TORQUE SPECIFICATION



Part Tightened		N·m	kgf·cm	ft·lbf
Transmission case x Manual transaxle case		29	300	21
Manual transaxle case x Transmission case		30	306	22
Bearing retainer RR x Transmission case		42	430	31
Manual transaxle case receiver x Manual transaxle case		7	70	62
Gear shift head No.1 x Gear shift fork shaft No.2		24	240	17
Gear shift fork No.1 x Gear shift fork shaft No.1		24	240	17
Reverse shift arm bracket x Manual transaxle case		17	175	13
Reverse restrict pin plug x Transmission case		13	133	9.6
Oil receiver pipe No.1 x Transmission case		17	175	13
Oil receiver pipe No.2 x Transmission case		17	175	13
Clutch tube bracket x Transmission case		17	173	14
Reverse idler gear shaft bolt x Transmission case		30	306	22
Shift detente ball plug x Manual transaxle assy		25	250	18
Transmission clutch hub No.3 gear shift fork shaft x input shaft		24	244	17
Manual transmission output rear set nat. x Output shaft		123	1250	90
Drain (MTM) plug sub–assy x Transmission case		49	500	36
Manual transmission filler plug x Transmission case		49	500	36
Back up lamp switch assy x Transmission case		40	410	30
Manual transmission breather plug x Transmission case		49	500	36
Lock ball assy No.1 x Transmission case		29	300	22
Control shift cover x Transmission case		20	200	14
Control shift lever x Shift & select lever assy		6.4	65	57 in.·lbf
Selecting bell crank assy x Transmission case		20	200	14
Release fork support x Manual transaxle case	E355 E356	39.2 47.1	400 480	28.91 34.74
Front differential ring gear x Front differential case		106	1080	77
Selecting bell crank support sub–assy x Selecting bellcrank No.2 plate washer		106	1080	77



MANUAL TRANSMISSION / TRANSAXLE (E355/E356)

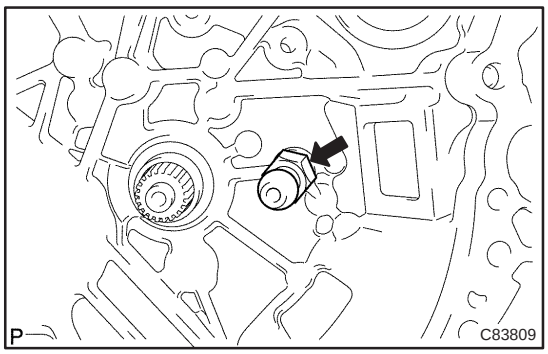
MANUAL TRANSAXLE ASSY (E355/E356)

4103W–01

OVERHAUL

HINT:

COMPONENTS: See page 41–1



1. REMOVE CLUTCH RELEASE FORK SUB–ASSY

(a) Remove the clutch release fork with clutch release bearing from the manual transaxle case.

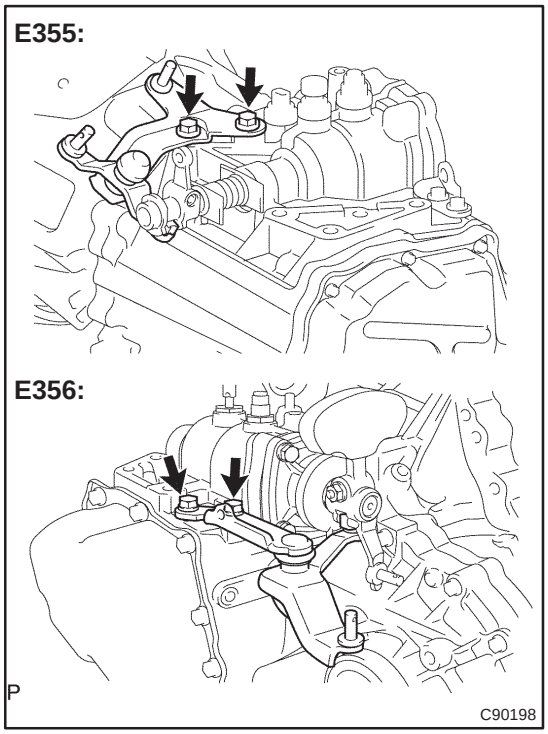
2. REMOVE CLUTCH RELEASE BEARING ASSY

(a) Remove the clutch release bearing assy and clutch release bearing hub clip from the clutch release fork sub–assy.

3. REMOVE RELEASE FORK SUPPORT

(a) Remove the release fork support from the manual transaxle case.

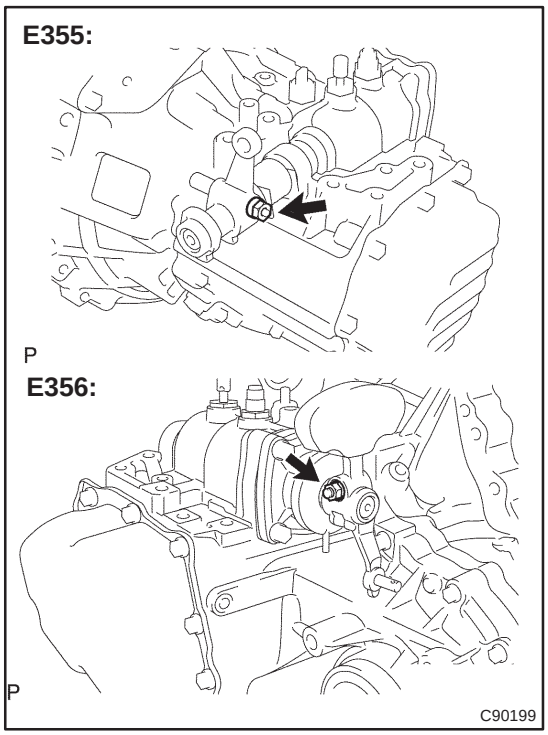
4. REMOVE CLUTCH RELEASE FORK BOOT



(a) Remove the clutch release fork boot from the manual transaxle case.

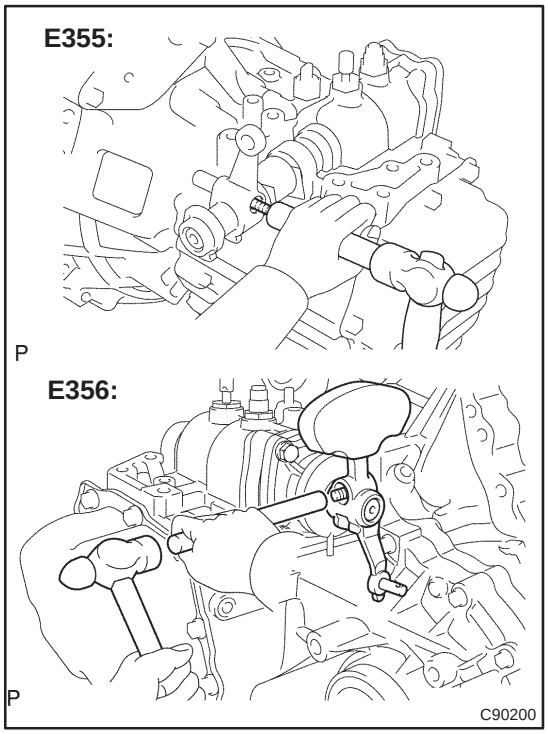
5. REMOVE SPEEDOMETER DRIVEN HOLE COVER SUB–ASSY

(a) Remove the bolt and speedometer driven hole cover.



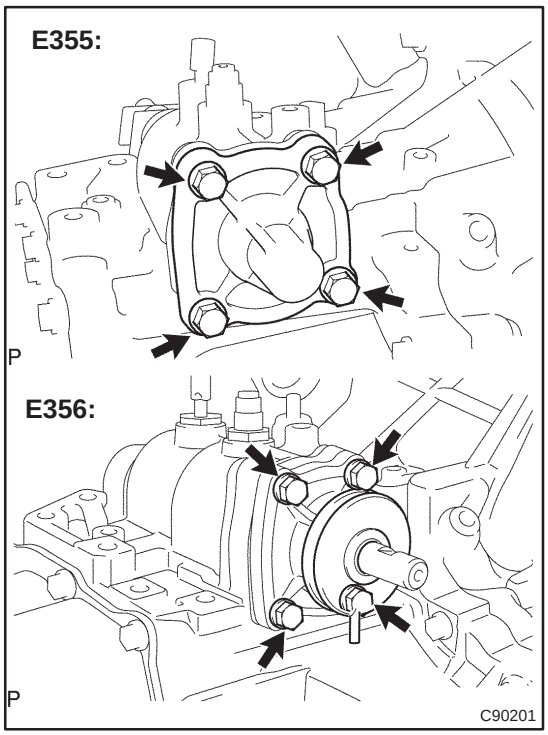
6. REMOVE TRANSAXLE CASE COVER

(a) Remove the 2 bolt and transaxle case cover.



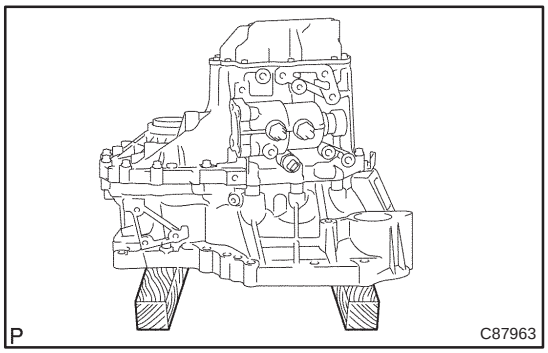
7. REMOVE SELECTING BELL CRANK ASSY

(a) Remove the 2 bolts and selecting bell crank assy from manual transmission case.



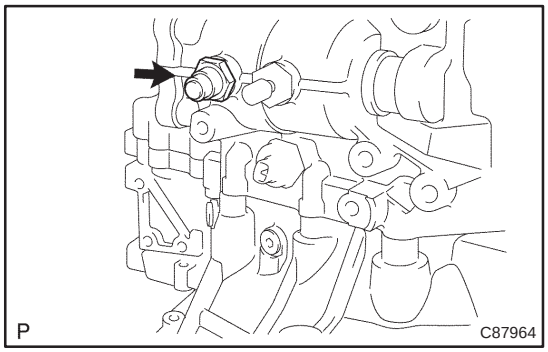
8. REMOVE CONTROL SHIFT LEVER

(a) Remove the nut and spring washer.



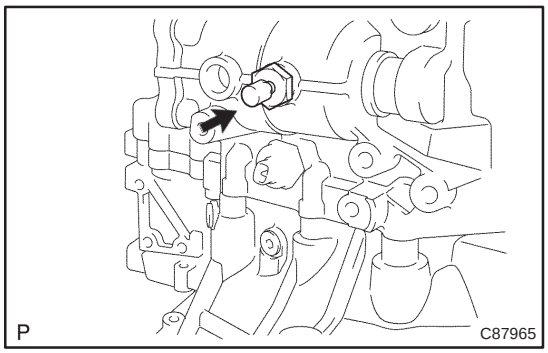
(b) Using a brass bar and hammer, remove the shift outer lock pin.

(c) Remove the control shift lever.



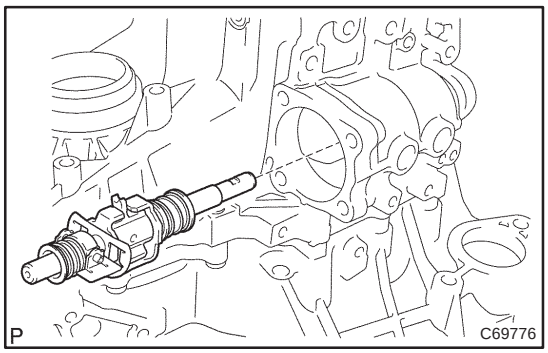
9. REMOVE CONTROL SHAFT COVER

(a) Remove the 4 bolts and control shaft cover from the manual transmission case.



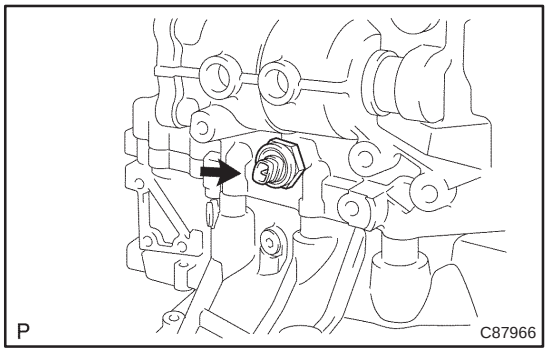
10. FIX MANUAL TRANSAXLE ASSY

(a) Using wooden brooks, fix the manual transaxle assy.



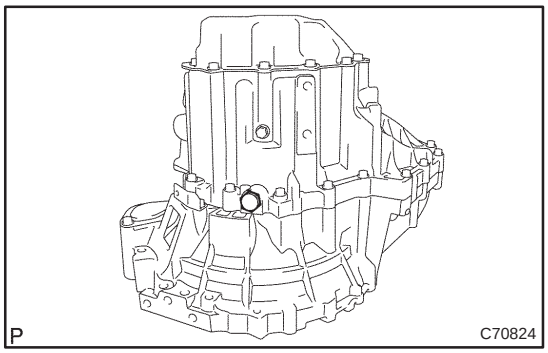
11. REMOVE LOCK BALL ASSY NO.1

(a) Remove the lock ball assy No. 1 from the manual transmission case.



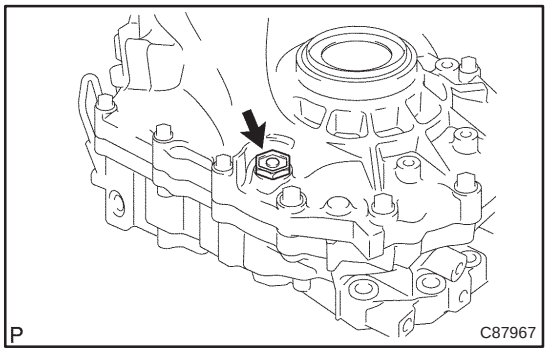
12. REMOVE MANUAL TRANSMISSION BREATHER PLUG

(a) Remove the manual transmission breather plug and gasket.



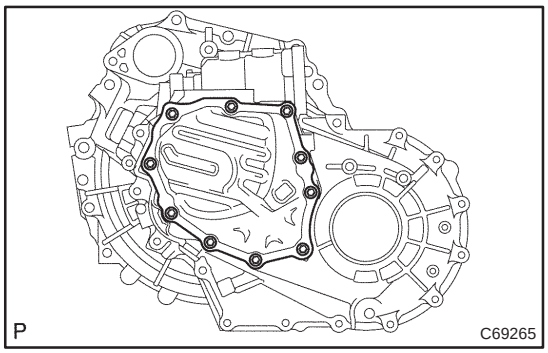
13. REMOVE SHIFT & SELECT LEVER SHAFT ASSY

(a) Remove the shift & select lever shaft assy from the manual transmission case.



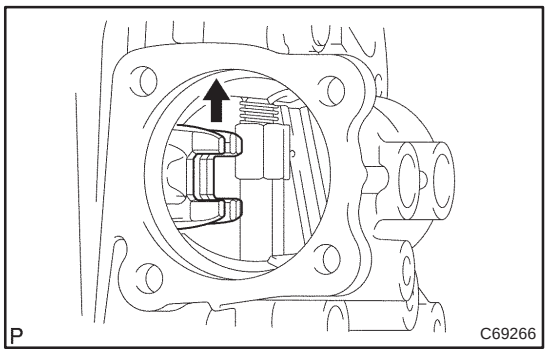
14. REMOVE BACK UP LAMP SWITCH ASSY

(a) Remove the back up lamp switch assy and gasket from the manual transmission case.



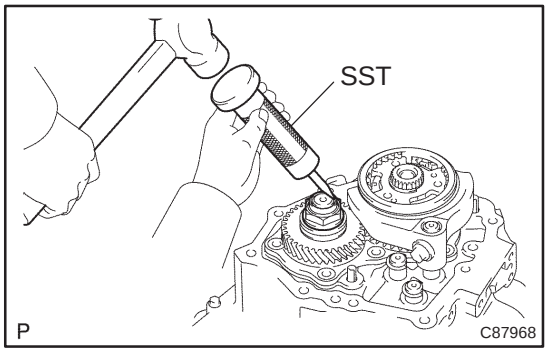
15. REMOVE MANUAL TRANSMISSION FILLER PLUG

(a) Remove the manual transmission filler plug and gasket from the manual transmission case.



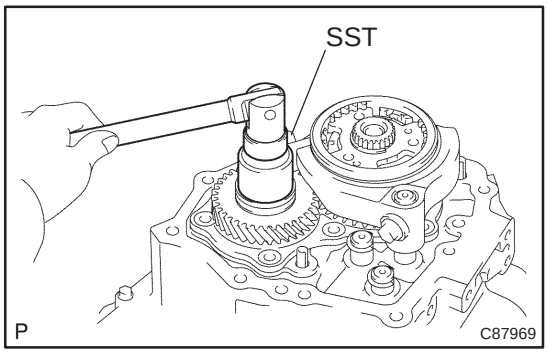
16. REMOVE DRAIN (MTM) PLUG SUB–ASSY

(a) Remove the drain (MTM) plug sub–assy and gasket from the manual transmission case.



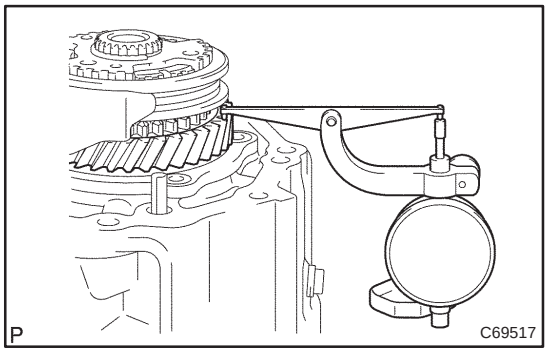
17. REMOVE MANUAL TRANSMISSION CASE COVER SUB–ASSY

(a) Remove the 10 bolts and manual transmission case cover from the manual transmission case.



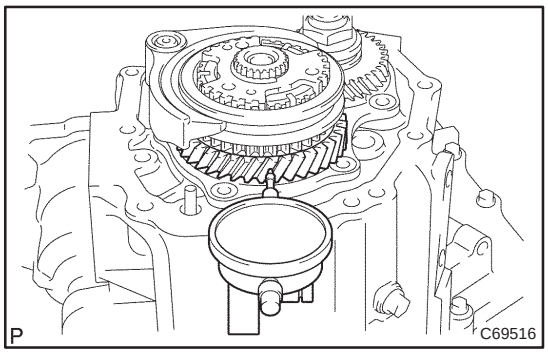
18. REMOVE MANUAL TRANSMISSION OUTPUT SHAFT REAR SET NUT

(a) Engage the gear to the double meshing.



(b) Using SST and a hammer, loosen the staked part of the manual transmission output shaft rear set nut.
SST 09930–00010

(c) Using SST, remove the manual transmission output shaft rear set nut from the output shaft.
SST 09229–55010

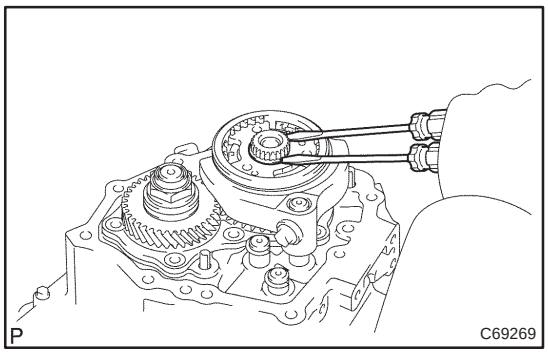


(d) Disengage the double meshing of the gear.

19. INSPECT 5TH GEAR THRUST CLEARANCE

(a) Using a dial indicator, inspect the 5th gear thrust clearance.

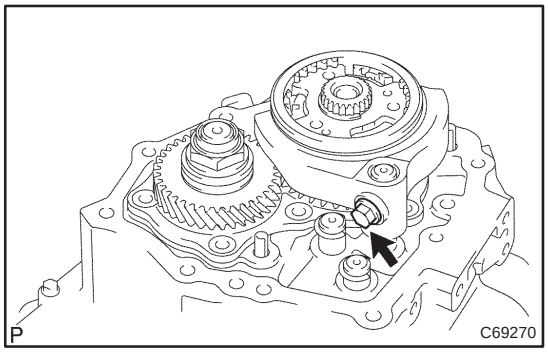
Standard clearance:
0.10 – 0.65 mm (0.0040 – 0.0258 in.)



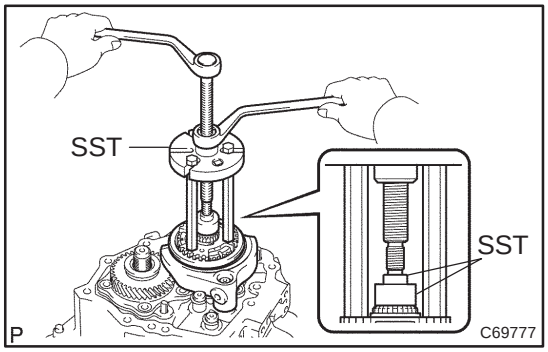
20. INSPECT 5TH GEAR RADIAL CLEARANCE

(a) Using a dial indicator, inspect the 5th gear radial clearance.

Standard clearance:
0.009 – 0.050 mm (0.0036 – 0.0200 in.)



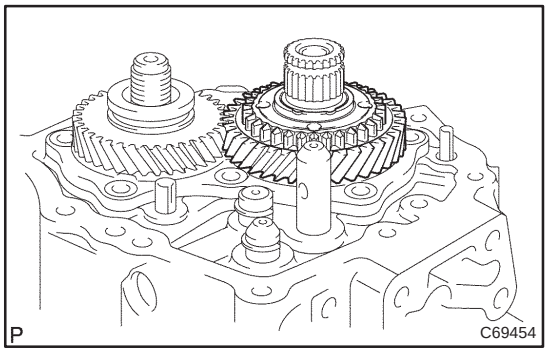
HINT:
If the clearance is out of the specification, replace 1st gear needle roller bearing.



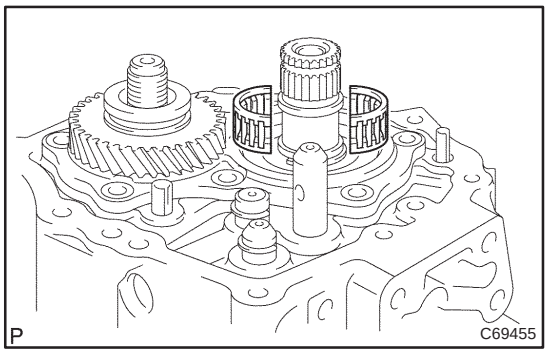
21. REMOVE TRANSMISSION CLUTCH HUB NO.3

(a) Using 2 screwdrivers and hammer, remove the transmission clutch hub No. 3 shaft snap ring from the input shaft.

HINT:
Using a waste to prevent the snap ring from bearing scattered.

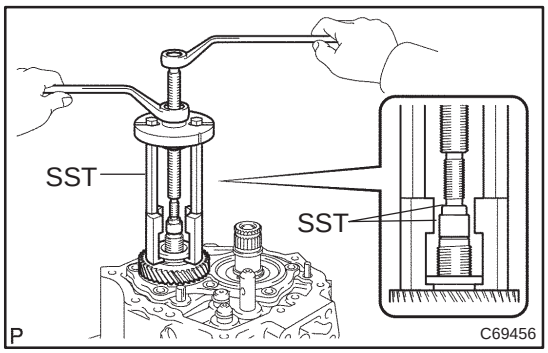


(b) Remove the gear shift fork bolt from the gear shift fork No. 3.



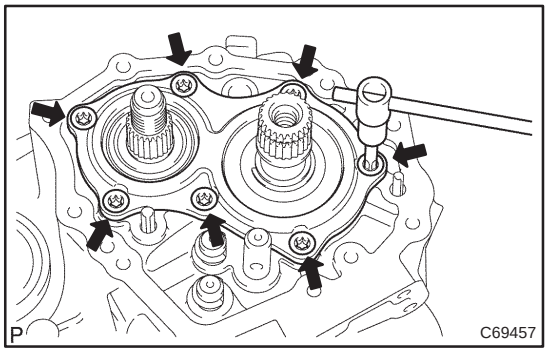
(c) Using SST, remove the transmission clutch hub No. 3 and gear shift fork No. 3 from the input shaft.

SST 09950–30012 (09951–03010, 09953–03010, 09954–03010), 09950–50013 (09957–04010), 09950–60010 (09951–00280)



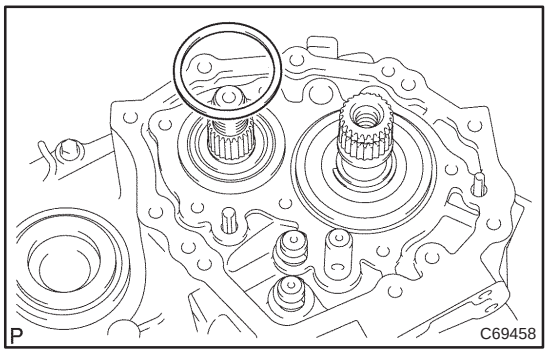
22. REMOVE 5TH GEAR

(a) Remove the 5th gear from the input shaft.



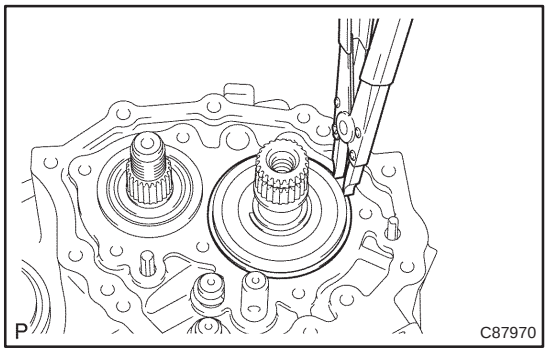
23. REMOVE 5TH GEAR NEEDLE ROLLER BEARING

(a) Remove the 5th gear needle roller bearing from the input Shaft.



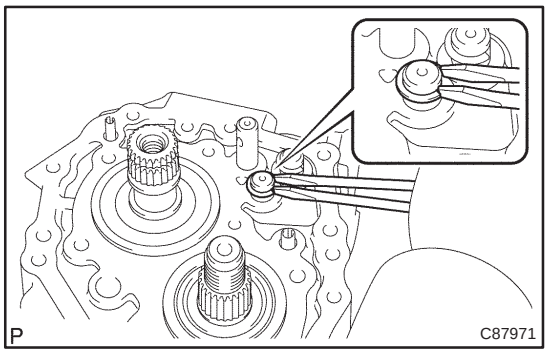
24. REMOVE 5TH DRIVEN GEAR

(a) Using SST, remove the 5th driven gear from the output shaft.
SST 09950–30012 (09951–03010, 09953–03010, 09954–03010, 09957–04010), 09950–60010 (09951–00180, 09955–03011), 09950–50013



25. REMOVE BEARING RETAINER REAR (MTM)

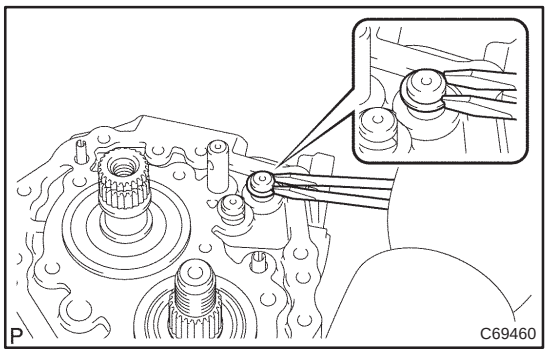
(a) Using a torx socket wrench(T45), remove the 7 torx screws and bearing retainer rear (MTM) from the manual transmission case.



26. REMOVE OUTPUT SHAFT REAR BEARING SHIM

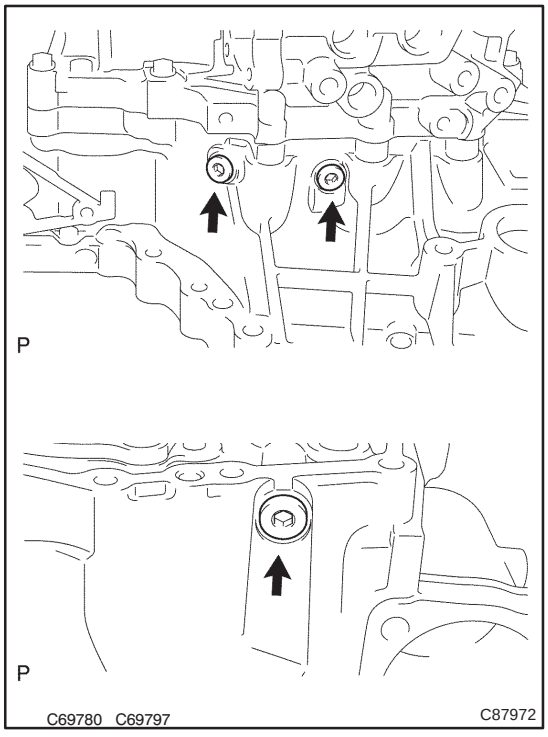
(a) Remove the output shaft rear bearing shim from the output shaft.

27. REMOVE INPUT SHAFT REAR BEARING SHAFT SNAP RING



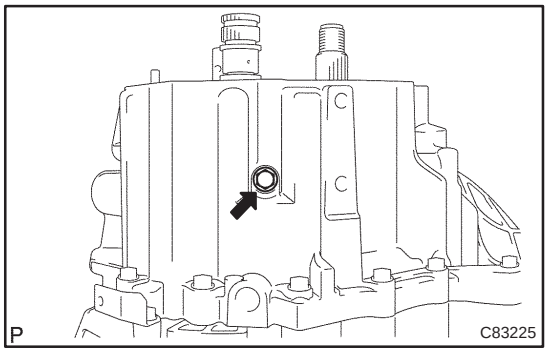
(a) Using a snap ring expander, remove the input shaft rear bearing shaft snap ring from the input shaft.

28. REMOVE SHIFT FORK SHAFT SHAFT SNAP RING



(a) Using 2 screw drivers and a hammer, remove the shift fork shaft shaft snap ring from the gear shift fork shaft No. 1.

HINT:
Using a waste to prevent the snap ring from being scattered.

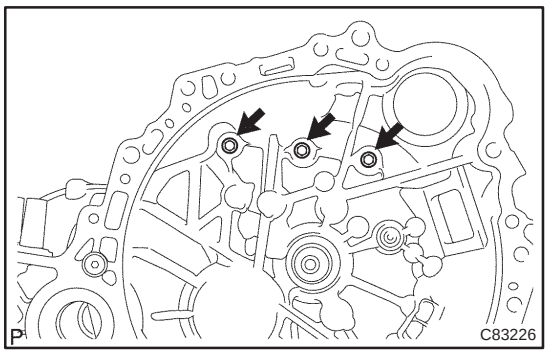


(b) Using 2 screw drivers and a hammer, remove the shift fork shaft shaft snap ring from the gear shift fork shaft No. 2.

HINT:
Using a waste to prevent the snap ring from being scattered.

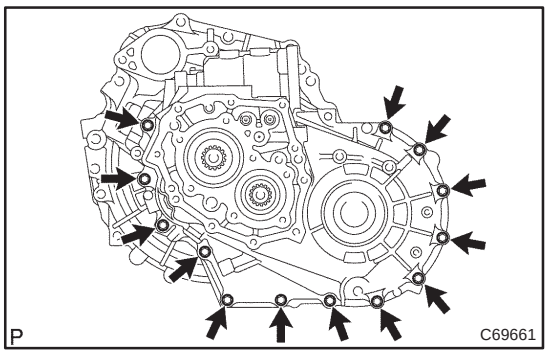
29. REMOVE SHIFT DETENT BALL PLUG

(a) Using a hexagon wrench (6 mm), remove the 3 shift detente ball plug from the manual transaxle case.



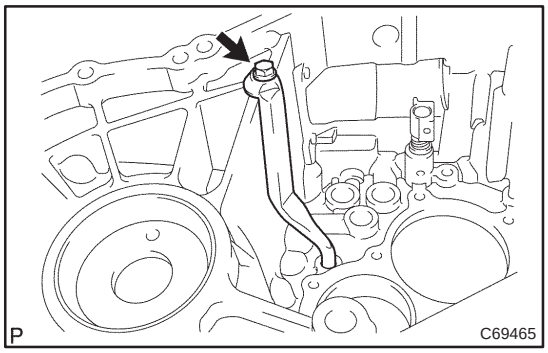
30. REMOVE REVERSE IDLER GEAR SHAFT BOLT

(a) Remove the reverse idler gear shaft bolt and gasket.



31. REMOVE CLUTCH TUBE BRACKET

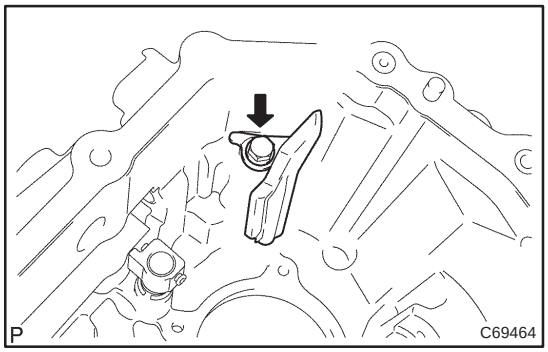
(a) Remove the 3 bolts and remove the clutch tube bracket.



32. REMOVE MANUAL TRANSMISSION CASE

(a) Remove the 3 bolts of the manual transaxle case side.

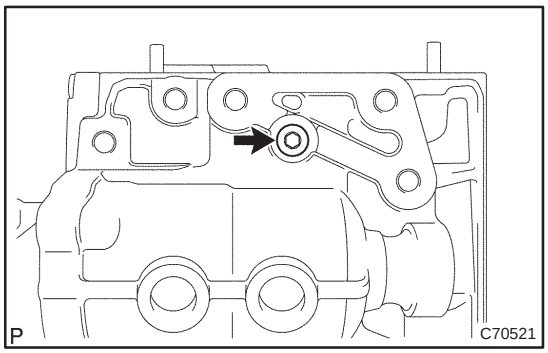
(b) Remove the 14 bolts of the manual transmission case side.



(c) Using a plastic hammer, remove the manual transmission case.

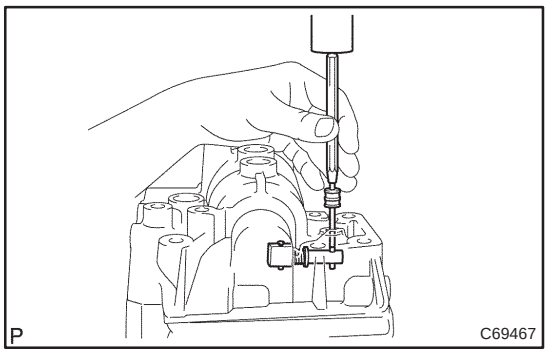
33. REMOVE OIL RECEIVER PIPE NO.2 (MTM)

(a) Remove the bolt and oil receiver pipe No. 2 (MTM) from the manual transmission case.



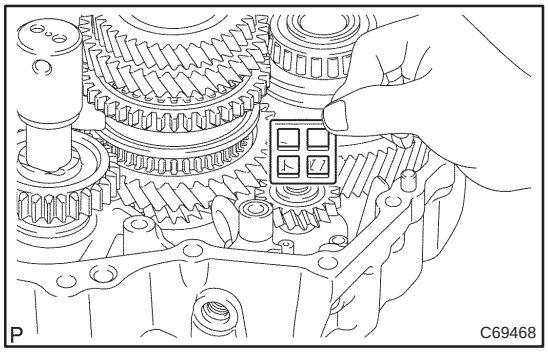
NOTICE:
Do not damage the pipe.

34. REMOVE OIL RECEIVER PIPE NO.1 (MTM)



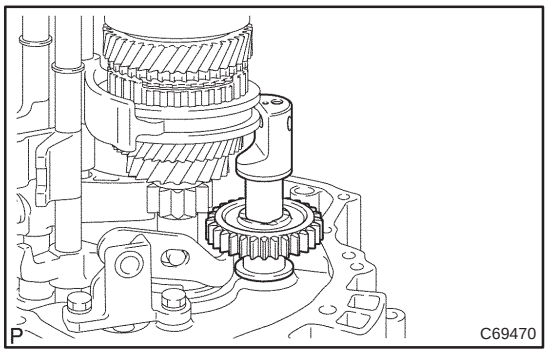
(a) Remove the bolt and oil receiver pipe No. 1 (MTM) from the manual transmission case.

NOTICE:
Do not damage the pipe.

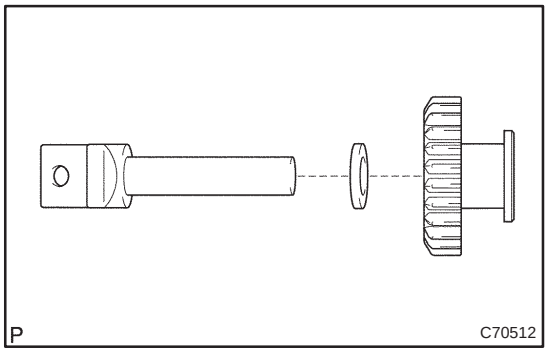


35. REMOVE REVERSE RESTRICT PIN ASSY

(a) Using a hexagon wrench (6 mm), remove the reverse restrict pin plug from the manual transmission case.

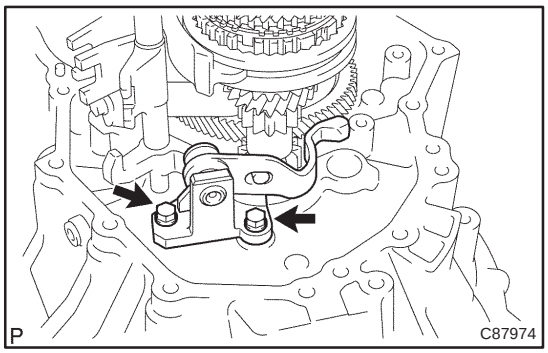


(b) Using a pin punch(ϕ 5 mm), remove the slotted pin and reverse restrict pin assy.



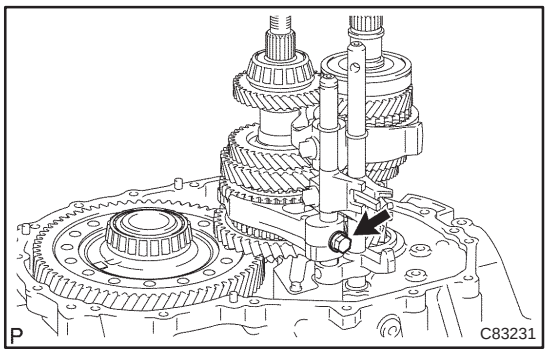
36. REMOVE TRANSMISSION MAGNET

(a) Remove the transmission magnet from the manual transaxle case.

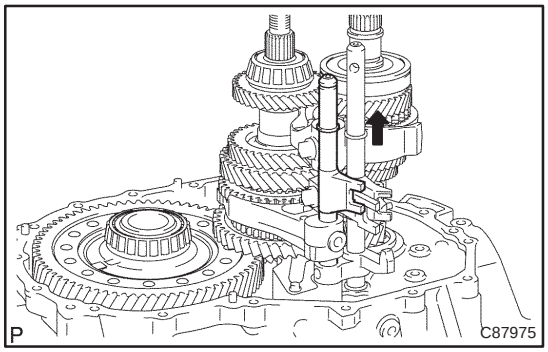


37. REMOVE REVERSE IDLER GEAR SUB–ASSY

(a) Remove the reverse idler gear sub–assy from the manual transaxle case.

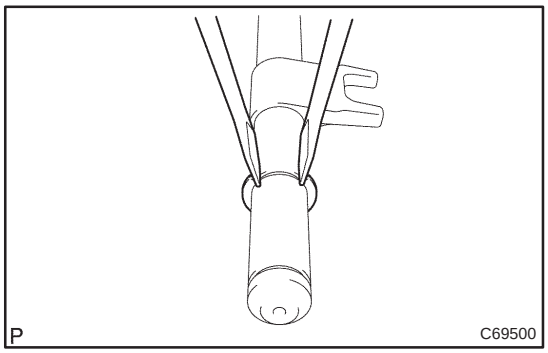


(b) Remove the reverse gear and reverse idler thrust washer from the reverse idler gear shaft.



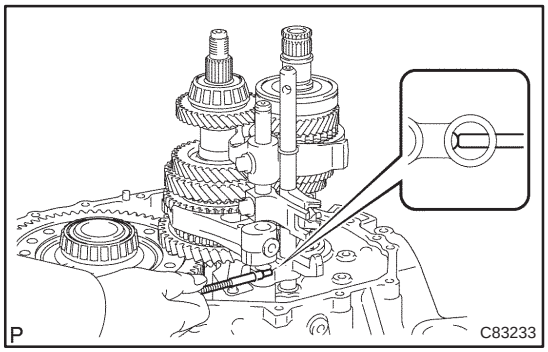
38. REMOVE REVERSE SHIFT ARM BRACKET ASSY

(a) Remove the 2 bolts and reverse shift arm bracket from the manual transaxle case.



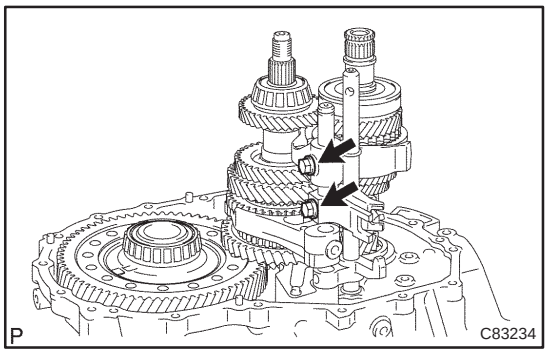
39. REMOVE GEAR SHIFT FORK SHAFT NO.1

(a) Remove the shift fork bolt from the gear shift fork No. 1.



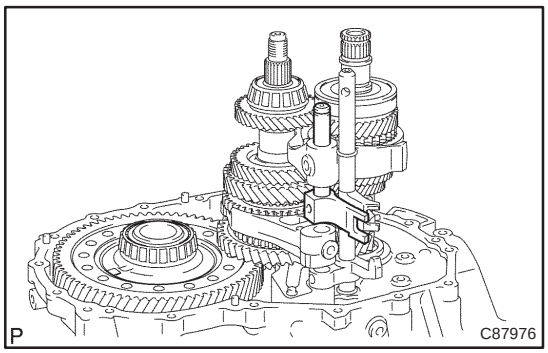
(b) Pull out the gear shift fork shaft No. 1 while the gear fork shaft No. 3 in pulled up.

(c) Using 2 screwdrivers and a hammer, remove the shift fork shaft snap ring form the gear shift fork shaft No.1.



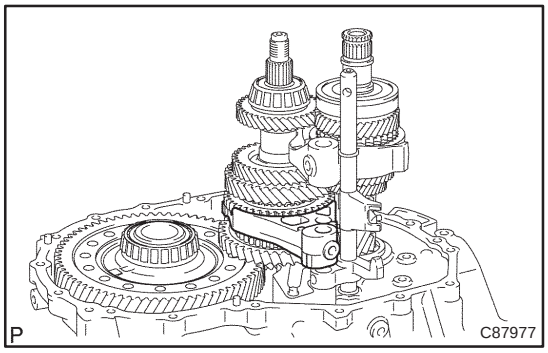
NOTICE:

Using a waste to prevent the snap ring from being scattered.



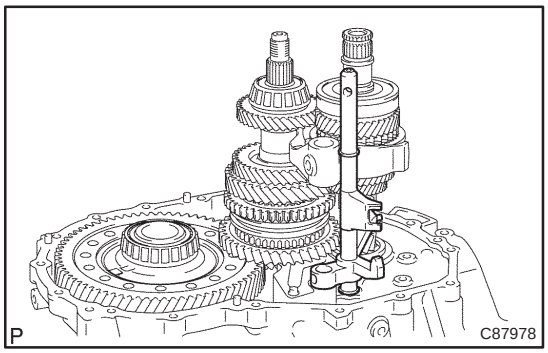
40. REMOVE REVERSE SHIFT FORK ROLLER

(a) Using a magnetic finger, remove the reverse shift fork roller from the reverse shift fork.

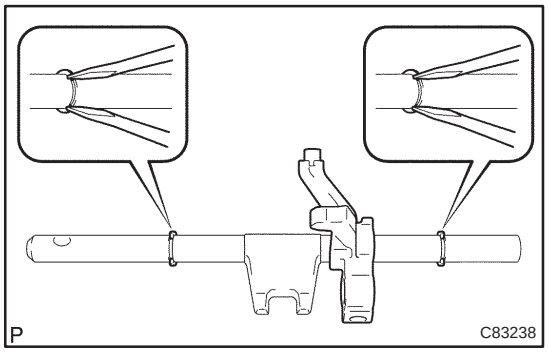


41. REMOVE GEAR SHIFT FORK SHAFT NO.2

(a) Remove the 2 shift fork bolts from the gear shift fork No. 2 and gear shift head No.1.

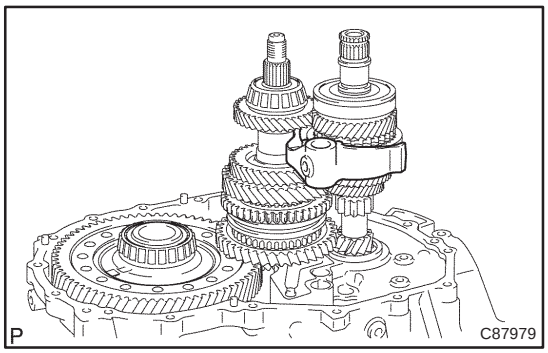


(b) Remove the gear shift fork shaft No. 2 and gear shift head No.1 from the manual transaxle case.



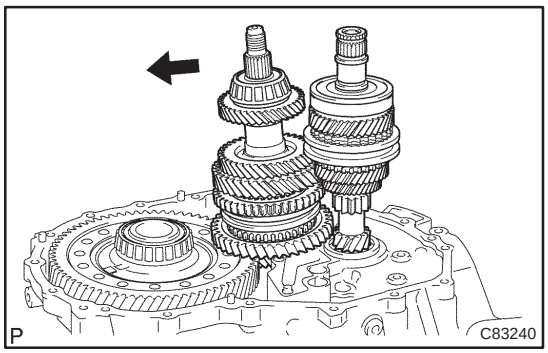
42. REMOVE GEAR SHIFT FORK NO.1

(a) Remove the gear shift fork No.1 from the output shaft assy.



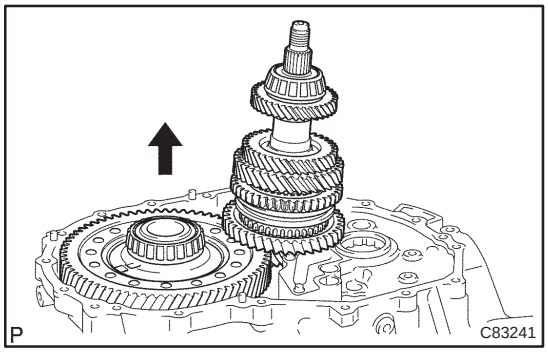
43. REMOVE GEAR SHIFT FORK SHAFT NO.3

(a) Remove the gear shift fork shaft No.3 from the manual transaxle case.



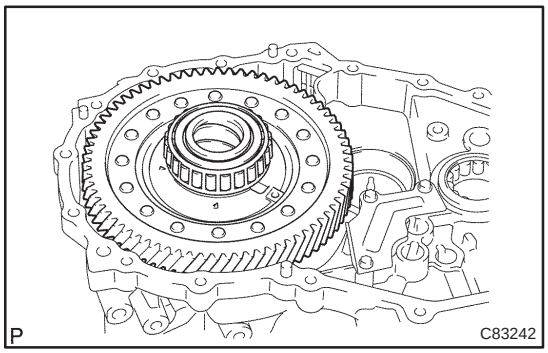
(b) Using 2 screwdriver and a hammer, remove the 2 shift fork shaft snap rings from the gear shift fork shaft No. 3.

(c) Remove the reverse shift fork from the gear shift fork shaft No.3.



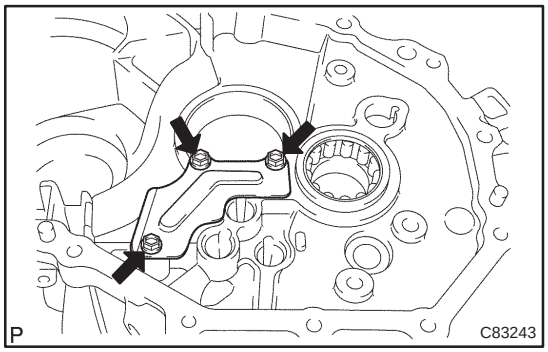
44. REMOVE GEAR SHIFT FORK NO.2

(a) Remove the gear shift fork No.2 from the input shaft assy.



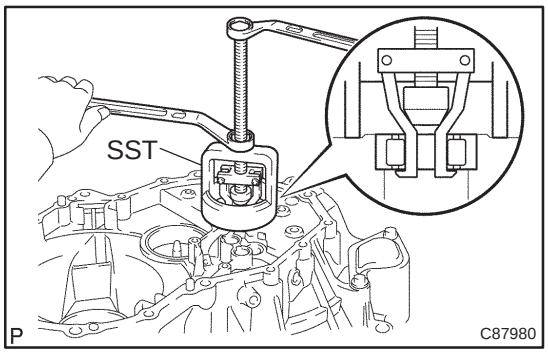
45. REMOVE INPUT SHAFT ASSY

(a) Incline the output shaft then remove the input shaft from the manual transaxle case.



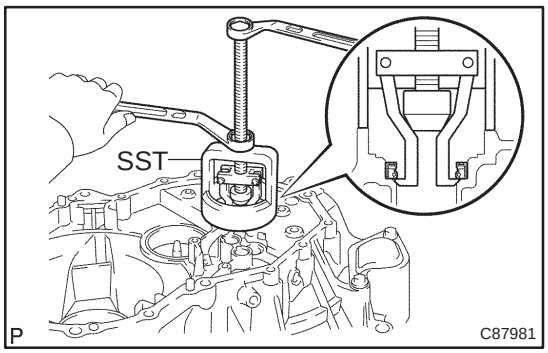
46. REMOVE OUTPUT SHAFT ASSY

(a) Remove the output shaft from the manual transaxle case.



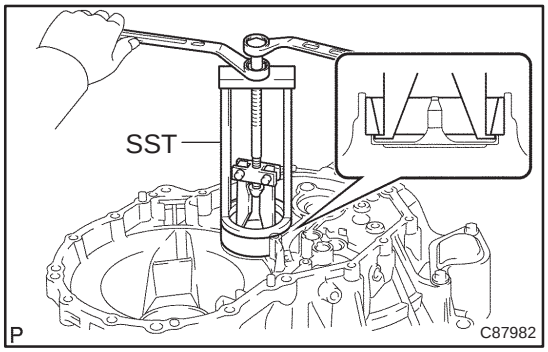
47. REMOVE DIFFERENTIAL CASE ASSY

(a) Remove the differential case assy from the manual transaxle case.



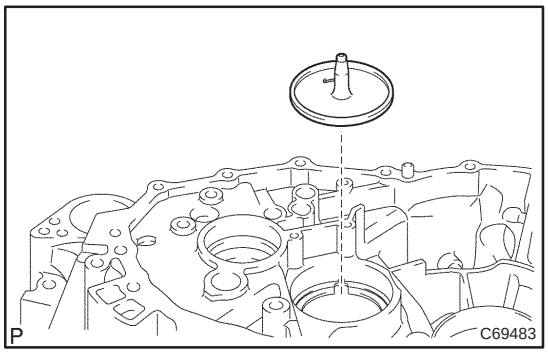
48. REMOVE MANUAL TRANSAXLE CASE RECEIVER

(a) Remove the 3 bolts and manual transaxle case receiver from the manual transaxle case.



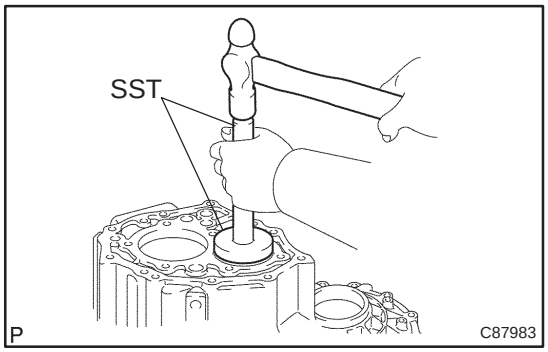
49. REMOVE INPUT SHAFT FRONT BEARING

(a) Using SST, remove the input shaft front bearing (outer race) from the manual transaxle case.
SST 09612–65014 (09612–01040, 09612–01050)



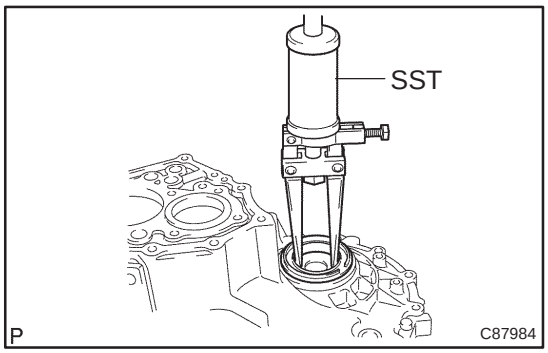
50. REMOVE FRONT TRANSAXLE CASE OIL SEAL

(a) Using SST, remove the manual transaxle case oil seal from the manual transaxle case.
SST 09612–65014 (09612–01040, 09612–01050)



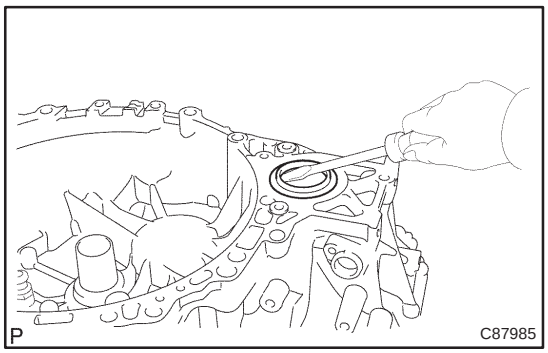
51. REMOVE OUTPUT SHAFT FRONT BEARING

(a) Using SST, remove the output shaft front bearing (outer race) from the manual transaxle case.
SST 09387–00040 (09387–02020, 09387–02010)



52. REMOVE OUTPUT SHAFT (MTM) COVER

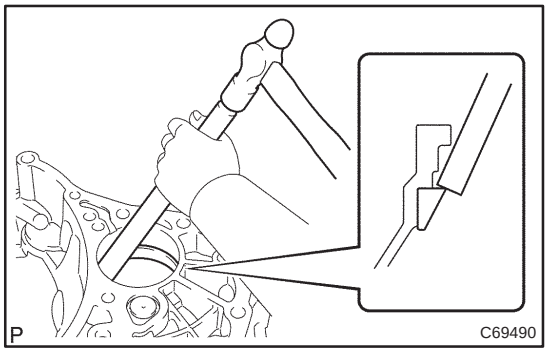
(a) Remove the output shaft (MTM) cover from the manual transaxle case.



53. REMOVE OUTPUT SHAFT REAR BEARING

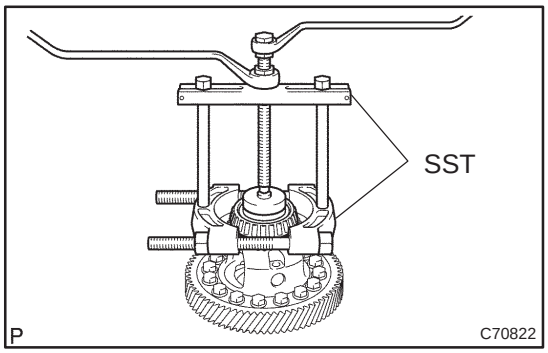
(a) Using SST, remove the output shaft rear bearing from the manual transmission case (outer race).
SST 09950–60010 (09951–00680), 09950–70010 (09951–07100)

54. REMOVE TRANSMISSION CASE OIL SEAL



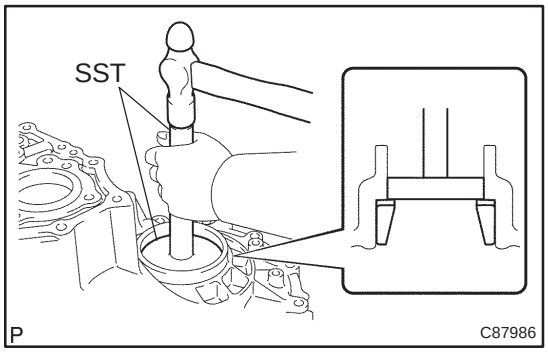
(a) Using SST, remove the transmission case oil seal from the manual transmission case.
SST 09308–00010

55. REMOVE FRONT TRANSAXLE CASE COVER OIL SEAL



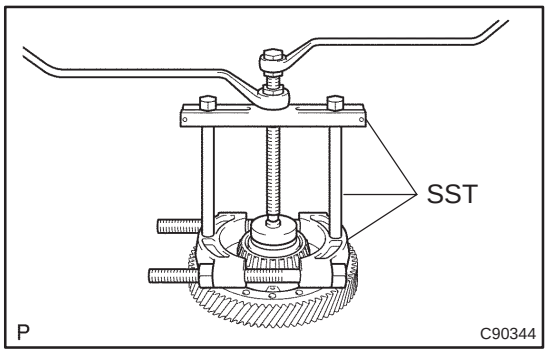
(a) Using a screwdriver, remove the front transaxle case cover oil seal.

HINT:
Tape the screwdriver tip before use.

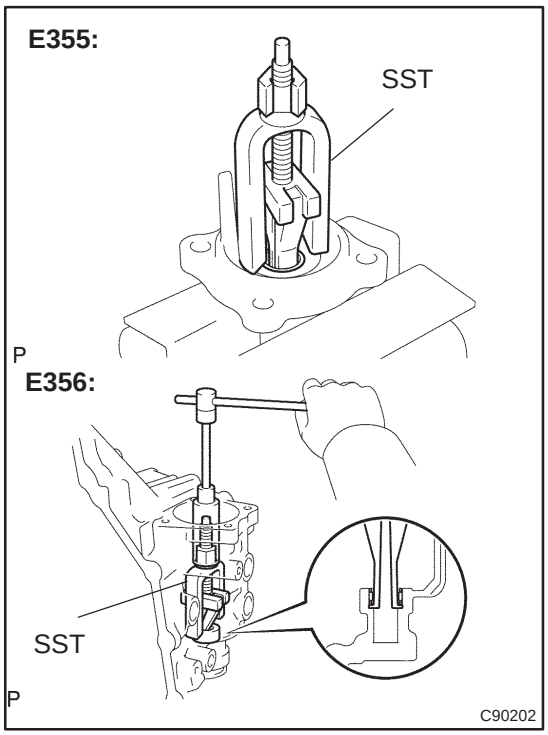


56. REMOVE FR DIFFERENTIAL CASE REAR TAPERED ROLLER BEARING

(a) Using a brass bar and a hammer, remove the FR differential case rear tapered roller bearing (outer race) from the manual transaxle case.

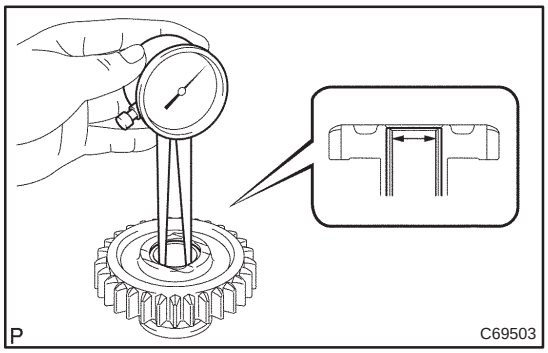


(b) Using SST, remove the front differential case rear tapered roller bearing from the front differential case.
SST 09950–00020, 09950–00030, 09950–40011 (09957–04010), 09950–60010 (09951–00560)



57. REMOVE FR DIFFERENTIAL CASE FRONT TAPERED ROLLER BEARING

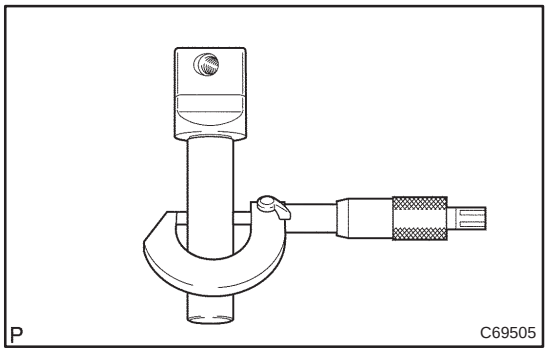
(a) Using SST and hammer, remove the FR differential case front taped roller bearing (outer race) and FR differential case rear shim from the manual transmission case.
SST 09950–60020 (09951–00790), 09950–70010 (09951–07100)



(b) Using SST, remove the FR differential case front tapered roller bearing (inner race) from front differential case.
SST 09950–00020, 09950–00030, 09950–40011 (09957–04010), 09950–60010 (09951–00490)

58. REMOVE SHIFT & SELECT LEVER SHAFT BIMETAL FORMED BUSH

(a) Using SST, remove the shift & select lever shaft bimetal formed bush.
SST 09319–60020



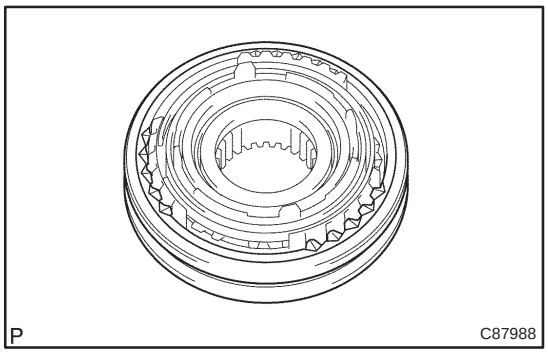
59. INSPECT REVERSE IDLER GEAR SUB–ASSY

(a) Using a callipers gauge, measure the inside diameter of the reverse idler gear.

Inside diameter: mm (in)

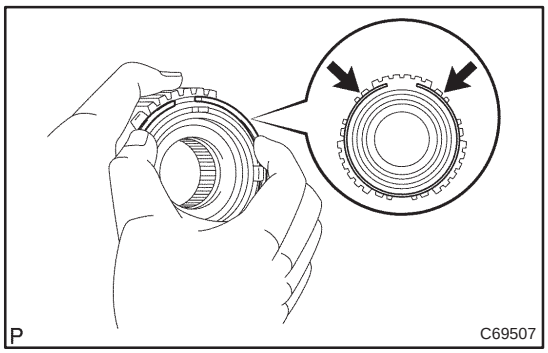
Standard inside diameter	Maximum inside diameter
20.056–20.074 (0.7962 – 0.7969)	20.074 (0.7969)

If the inside diameter is exceeds than the maximum, replace the reverse idler gear.



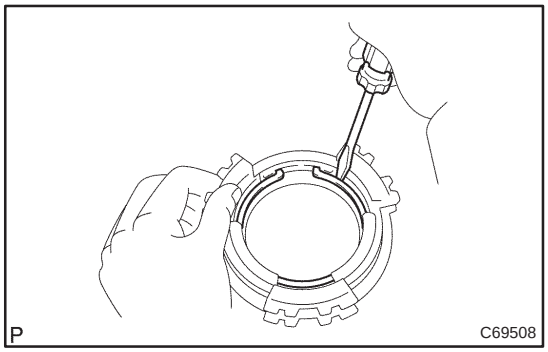
(b) Using a micro meter, measure the outer diameter of the reverse idler gear shaft.

Outer diameter: mm (in)



Standard outer diameter	Minimum outer diameter
19.984–20.000 (0.7934 – 0.7940)	19.984 (0.7934)

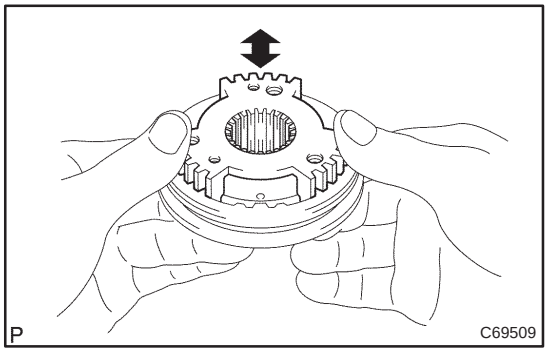
If the outer diameter is less than the minimum, replace the reverse idler gear shaft.



60. REMOVE TRANSMISSION HUB SLEEVE NO.3

(a) Remove the transmission hub sleeve No.3 from the transmission clutch hub No.3.

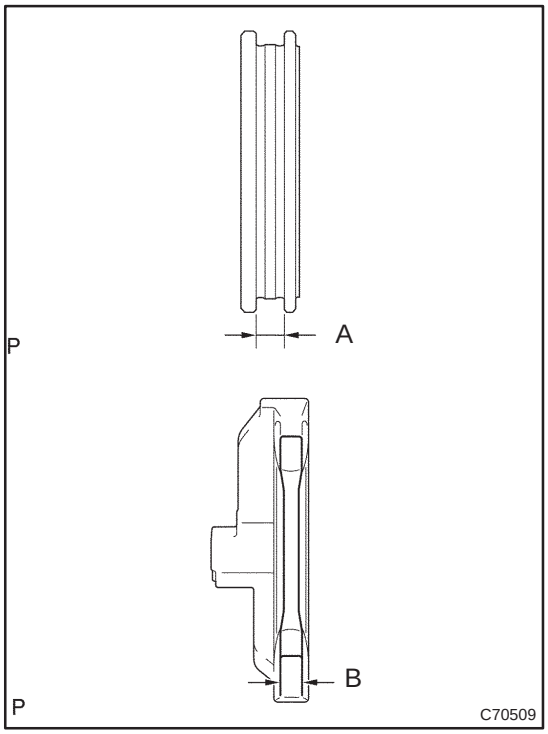
61. REMOVE SYNCHROMESH SHIFTING KEY SPRING NO.3



(a) Push the synchromesh shifting key spring No.3 then remove the 2 synchromesh shifting key spring No.3 from the transmission clutch hub No.3.

62. REMOVE SYNCHRONIZER PULL RING

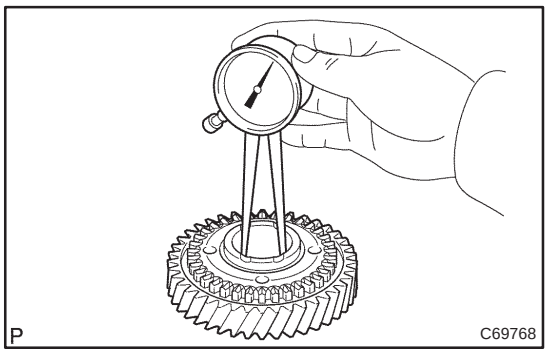
(a) Using a screwdriver, remove the synchronizer pull ring snap ring.



(b) Remove the synchronizer pull ring, synchronizer outer ring No.5, synchronizer inner ring No.5 and synchronizer middle ring No.5 from the synchronizer ring No.5.

63. INSPECT TRANSMISSION CLUTCH HUB NO.3

(a) Inspect the sliding condition between transmission clutch hub No.3 and transmission hub sleeve No.3.

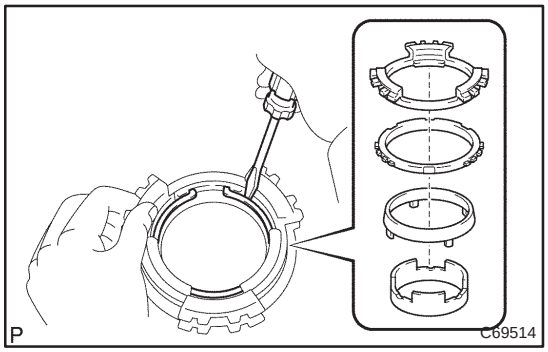


(b) Inspect tip of spline gear on the transmission hub sleeve No.3 for wear.

64. INSPECT TRANSMISSION HUB SLEEVE NO.3

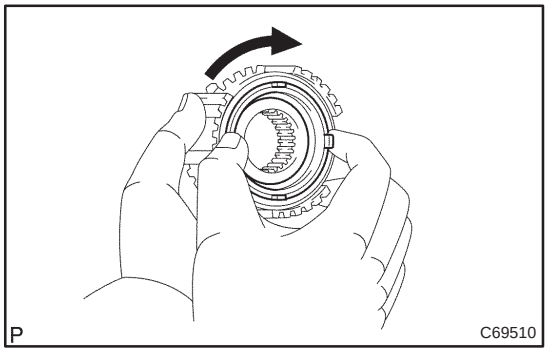
(a) Using vernier calipers, measure the transmission hub sleeve No.3 groove and the thickness of the claw part on gear shift fork No.3, and calculate the clearance.
Standard clearance:
0.15–0.35 mm (0.005600 – 0.0139 in.) {A – B}

If the clearance is out of the specification, replace the transmission hub sleeve No.3 and gear shift fork No.3 with the new one.



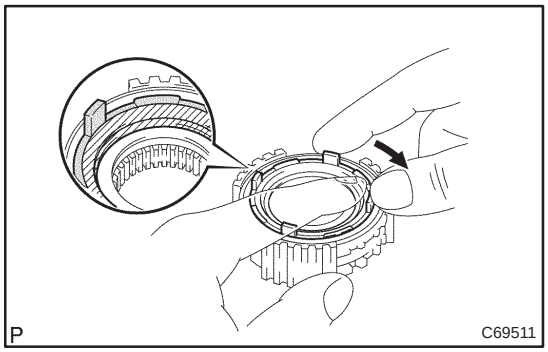
65. INSPECT 5TH GEAR

(a) Using a calipers gauge, measure the inner diameter of the 5th gear.
Inner diameter: mm (in)



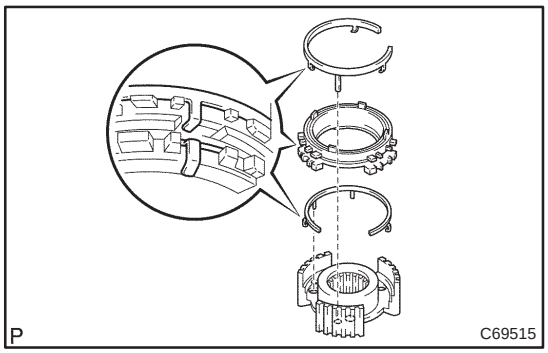
Standard inner diameter	Maximum inner diameter
34.981–34.997 (1.3887 – 1.3893)	34.997 (1.3893)

If the inner diameter is exceeds than the maximum, replace the 5th gear.



66. INSTALL SYNCHRONIZER PULL RING

(a) Install the synchronizer middle ring No.5, synchronizer ring outer No.5 and synchronizer pull ring to the synchronizer ring inner No.5. using a screwdriver, fix with snap ring.



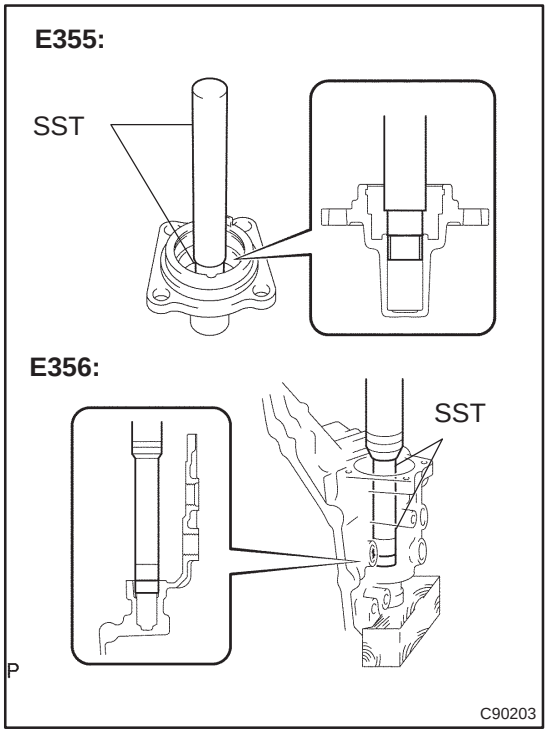
67. INSPECT SYNCHRONIZER RING MIDDLE NO.5

(a) Check that the synchronizer ring middle No.5 rotates smoothly.

(b) Check the the synchronizer ring middle No.5 does not rotate while it is being pushed to the clutch hub No.3.

68. INSTALL SYNCHROMESH SHIFTING KEY SPRING NO.3

(a) Install the synchromesh shifting key spring No.3 to the transmission clutch hub No.3.



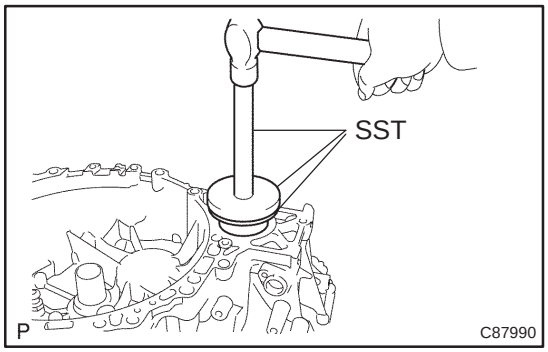
NOTICE:

Align the projection of the shifting key spring with the hole of the clutch hub No. 3 and install them.

(b) Install the synchronizer ring set and synchromesh shifting key spring No.3 to the transmission clutch hub No.3.

NOTICE:

- **Install the shifting key spring claw to the center of the teeth of the synchronizer ring.**
- **Align the projection of the shifting key spring with the hole of the clutch hub No. 3 and install them.**

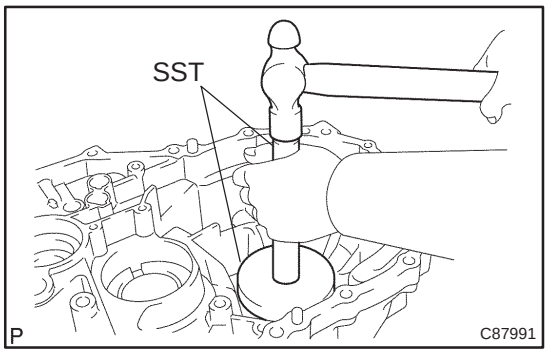


69. INSTALL SHIFT & SELECT LEVER SHAFT BIMETAL FORMED BUSH

(a) Using SST, install the shift & select lever shaft bimetal formed bush.

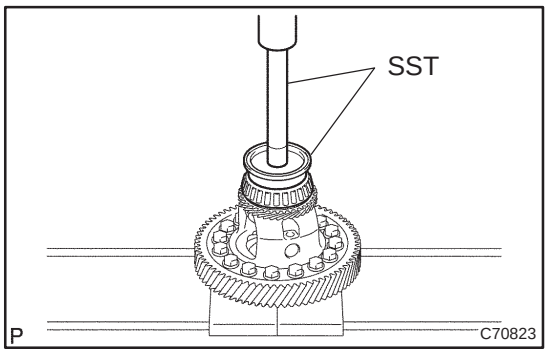
SST 09950–60010 (09951–00180), 09950–70010 (09951–07100)

Clearance:



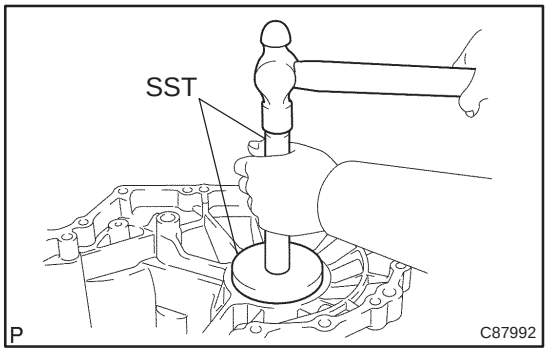
0.081 – 0.149 mm (0.0032 – 0.0059 in.)

70. INSTALL FRONT TRANSAXLE CASE COVER OIL SEAL



(a) Using SST and a hammer, install the front transaxle case cover oil seal.
SST 09316–20011, 09950–60020 (09951–00910), 09950–70010 (09951–07150)

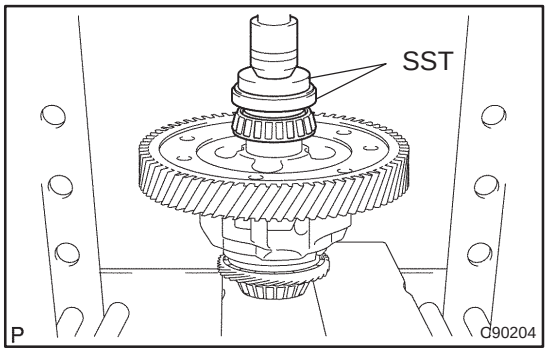
(b) Coat the lip of front transaxle case cover oil seal with MP grease.



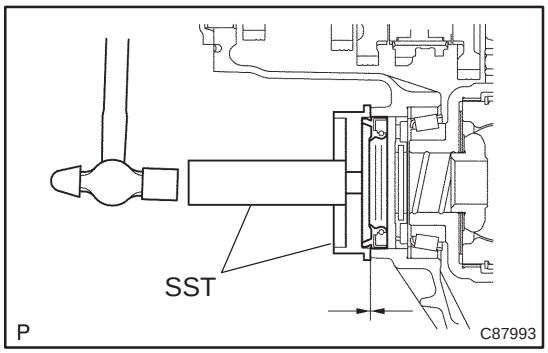
71. INSTALL FR DIFFERENTIAL CASE REAR TAPERED ROLLER BEARING

(a) Using SST and a hammer, install the FR differential case rear tapered roller bearing (outer race) to the front transaxle case.
SST 09950–60020 (09951–00910), 09950–70010 (09951–07100)

(b) Using SST and press, install the FR Differential case rear tapered roller bearing (inner race) to the front differential case.
SST 09950–70010 (09951–07100, 09951–07150), 09608–10010



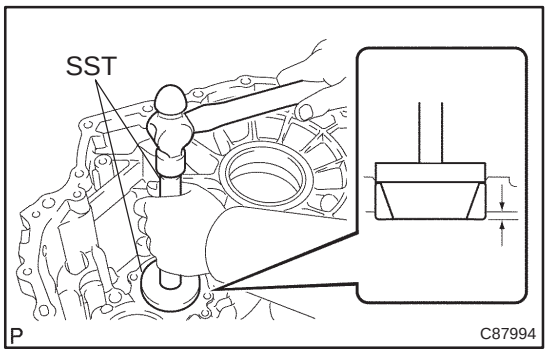
72. INSTALL FR DIFFERENTIAL CASE FRONT TAPERED ROLLER BEARING



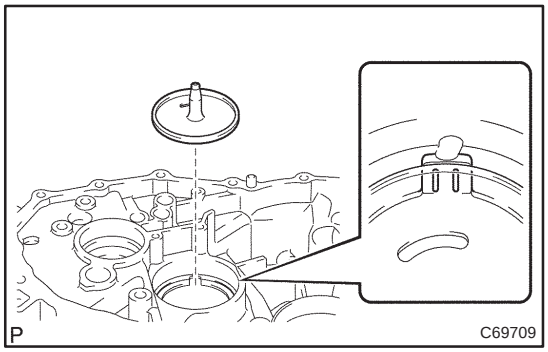
(a) Install the front differential case shim rear.

(b) Using SST and a hammer, install FR differential case front tapered roller bearing (outer race).
SST 09950–60020 (09951–00890), 09950–70010 (09951–07100)

NOTICE:
Install the same thickness of case shim as the removed one.



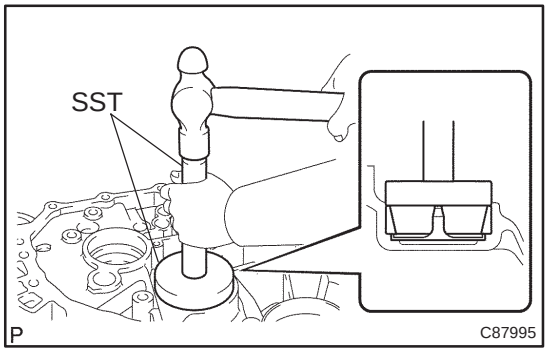
(c) Using SST, remove the FR differential case front tapered roller bearing (inner race)
SST 09631–12090, 09950–60010 (09951–00600), 09950–70010 (09951–07100)



73. INSTALL TRANSMISSION CASE OIL SEAL

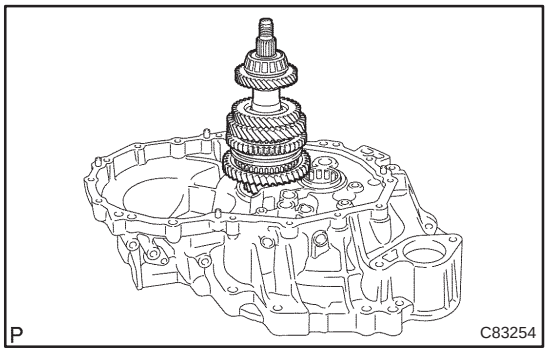
(a) Using SST and a hammer, install the transmission case oil seal to the manual transmission case.
SST 09608–32010, 09950–70010 (09951–07150)
(b) Coat the lip of transmission case oil seal with MP grease.

74. INSTALL OUTPUT SHAFT REAR BEARING



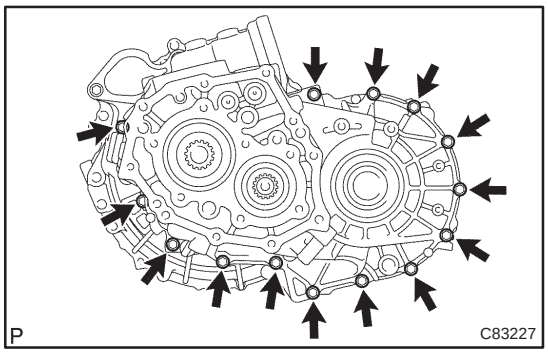
(a) Using SST and a hammer, install the output shaft rear bearing (outer race) to the manual transmission case.
SST 09950–60020 (09951–00680), 09950–70010 (09951–07100)
Clearance:3.8 – 4.4 mm (0.1509 – 0.1747 in.)

75. INSTALL OUTPUT SHAFT (MTM) COVER



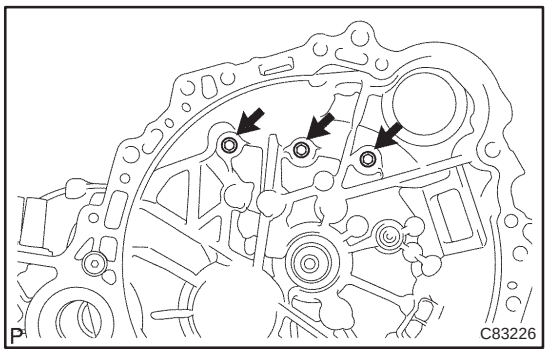
(a) Coat the output shaft (MTM) cover with MP grease, install it to the manual transaxle case.

NOTICE:
Align the projection of the output shaft with the transmission grooves and install them.

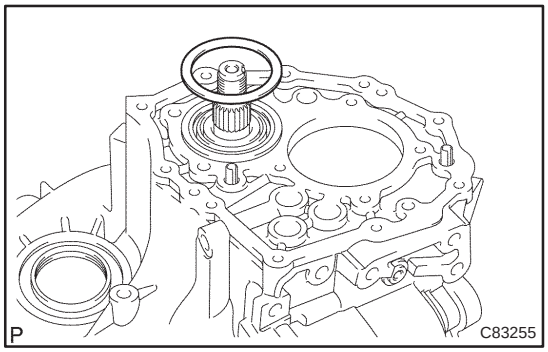


76. INSTALL OUTPUT SHAFT FRONT BEARING

(a) Using SST and a hammer, install the output shaft front bearing (outer race).
SST 09950–60020 (09951–00730), 09950–70010 (09951–07100)

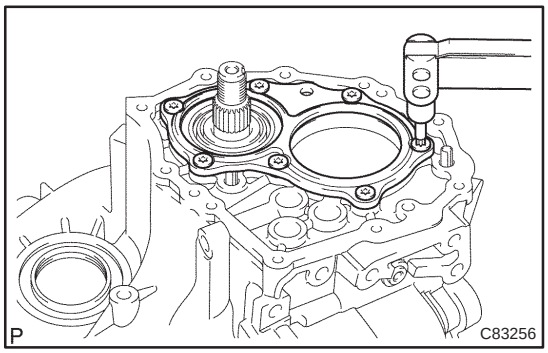


77. ADJUST OUTPUT SHAFT BEARING PRERELOAD

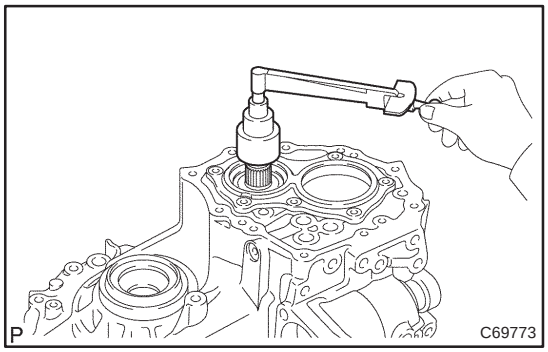


(a) Install the output shaft to the manual transaxle case.

(b) Install the transmission case with 14 bolts to the manual transaxle case.
Torque: 29 N·m (300 kgf·cm, 21 ft·lbf)



(c) Install the 3 bolts to the manual transaxle side.
Torque: 30 N·m (306 kgf·cm, 22 ft·lbf)



(d) Install the output shaft rear bearing shim to the output shaft.

HINT:
Install the same thickness of case shim as the removed one.

(e) Using a torx socket wrench(T45), install the bearing retainer RR with 7 screws to the manual transmission case.
Torque:42 N·m (430 kgf·cm, 31 ft·lbf)

(f) Install the new output rear set nut to the output shaft.

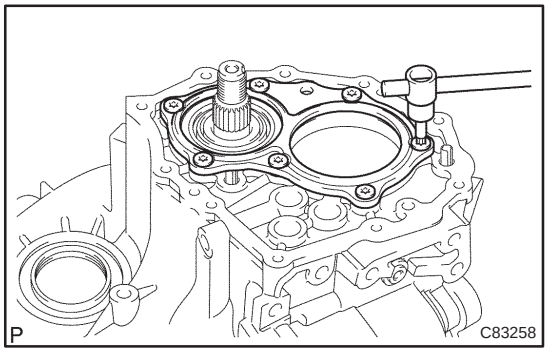
(g) Turn the output shaft in both directions to get it to smooth.

(h) Using a socket wrench and torque wrench, inspect the preload.

Preload:mm (in.)

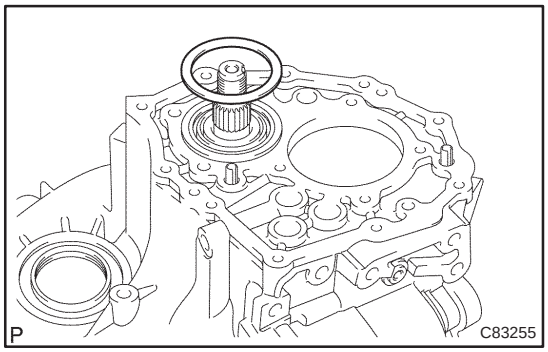
Bearing	Torque
New	0.8–1.6 (8.16 – 16.32, 7.1–14.2)
Used	0.5–1.0 {5.10 – 10.20, 4.4 – 8.6)

(i) If the preload is out of the specification, select the output shaft rear bearing shim and adjust it.



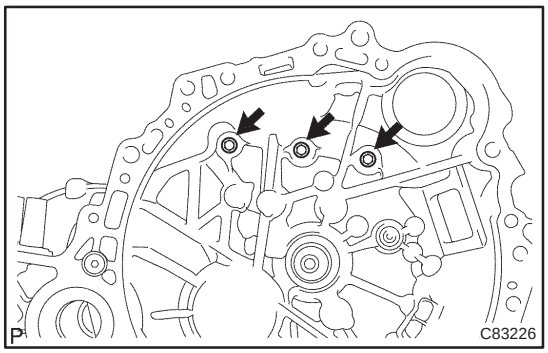
HINT:

The preload of the output shaft rear bearing shim varies in torque from about 0.04 to 0.06 N·m is one size.

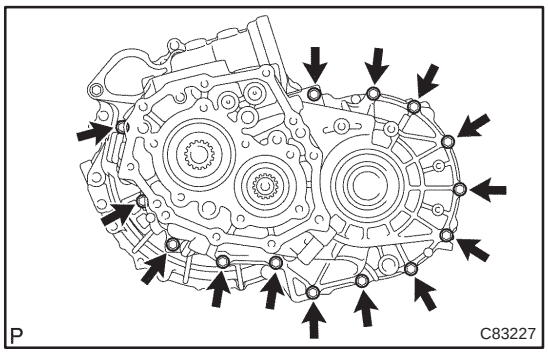


Shim: mm (in.)

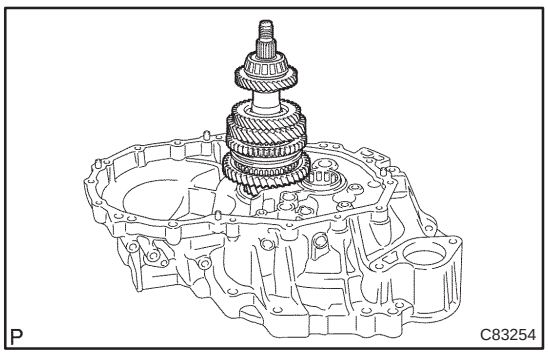
Part No.	thickness:mm(in.)	Make
90564 – 59001	1.30 (0.0516)	0
90564 – 59002	1.35 (0.0536)	1
90564 – 59003	1.40 (0.0556)	2
90564 – 59004	1.45 (0.0576)	3
90564 – 59005	1.50 (0.0596)	4
90564 – 59006	1.55 (0.0615)	5
90564 – 59007	1.60 (0.0635)	6
90564 – 59008	1.65 (0.0655)	7
90564 – 59009	1.70 (0.0675)	8
90564 – 59010	1.75 (0.0695)	9
90564 – 59011	1.80 (0.0715)	A
90564 – 59012	1.85 (0.0734)	B
90564 – 59013	1.90 (0.0754)	C
90564 – 59014	1.95 (0.0774)	D
90564 – 59015	2.00 (0.0794)	E
90564 – 59016	2.05 (0.0814)	F
90564 – 59017	2.10 (0.0834)	G
90564 – 59018	2.15 (0.0854)	H
90564 – 59019	2.20 (0.0873)	J
90564 – 59020	2.25 (0.0893)	K
90564 – 59021	2.30 (0.0913)	L
90564 – 59022	2.35 (0.0933)	M
90564 – 59023	2.40 (0.0953)	N
90564 – 59024	2.45 (0.0973)	P
90564 – 59025	2.50 (0.0993)	Q



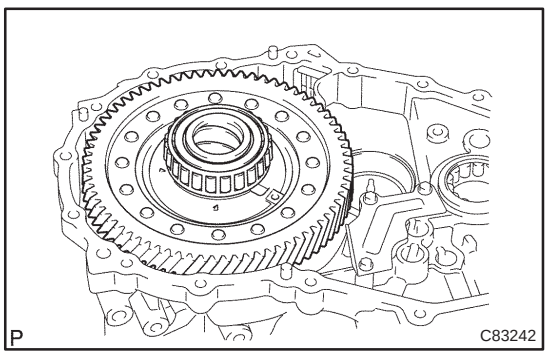
(j) Remove the output shaft rear set nut from the output shaft.



(k) Using a torx socket wrench(T45), remove the 7 screws and bearing retainer RR from the manual transmission case.

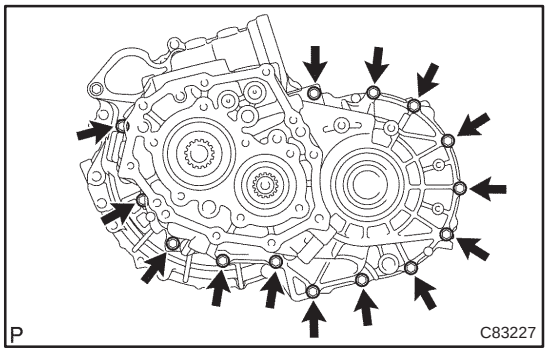


(l) Remove the output shaft rear bearing shim from the output shaft.

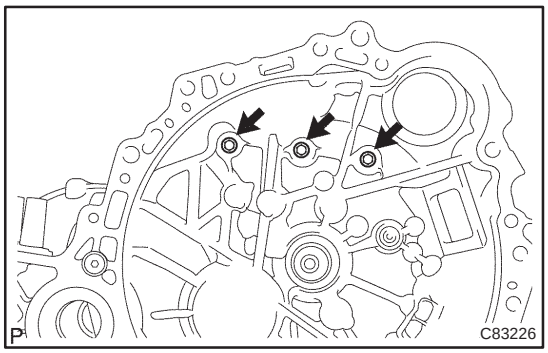


(m) Remove the 3 bolts.

(n) Remove the 14 bolts and manual transmission case from the manual transaxle case.

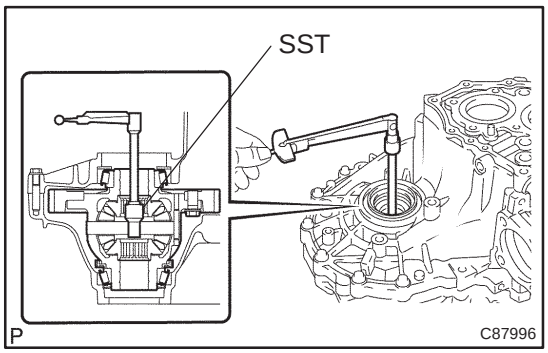


(o) Remove the output shaft assy from the front manual transaxle case.



78. ADJUST TAPERED POLLER BEARING PRELOAD

(a) Install differential case assy to the manual transaxle case.

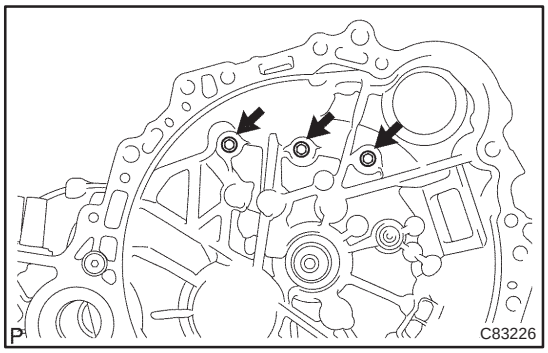


(b) Install the 14 bolts and manual transmission case to the manual transaxle case.
Torque: 29 N·m (300 kgf·cm, 21 ft·lbf)

(c) Install the 3 bolts and front manual transaxle case side.
Torque: 30 N·m (306 kgf·cm, 22 ft·lbf)

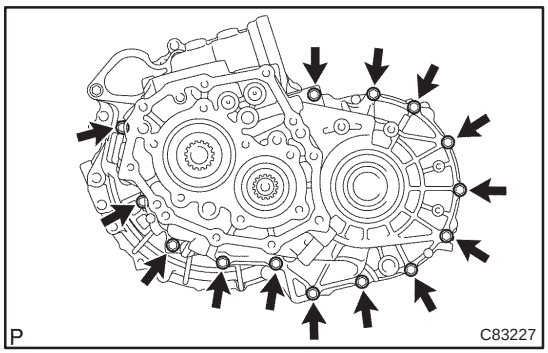
(d) Turn the differential case in both directions to get it to smooth.

(e) Using SST and torque wrench, inspect preload.
SST 09564–32011
Preload: N·m (kgf·cm, 22 ft·lbf)



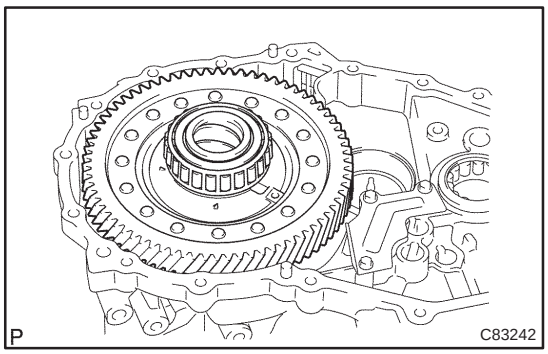
Bearing	Torque
New	0.8 – 0.16 (8.15 – 1.63, 7.1–14.2)
Used	0.5 – 1.0 (5.09 – 10.1, 4.4 – 8.6)

If the preload is out of the specification, select the front differential case shim RR and adjust it.
HINT:
The preload of the front differential case shim RR varies in torque from about 0.04 to 0.06 N·m is one size.

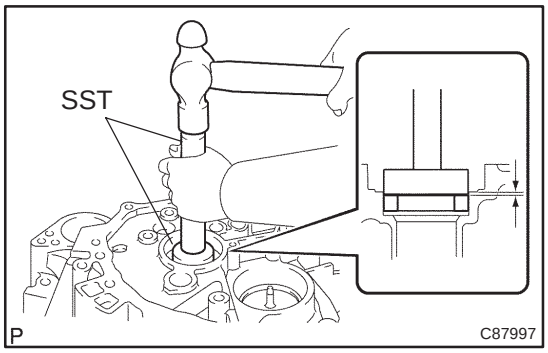


Shim:mm (in.)

Part No.	Thickness	Mark
90564 – 56055	2.00 (0.0794)	0
90564 – 56056	2.05 (0.0814)	1
90564 – 56057	2.10 (0.0834)	2
90564 – 56058	2.15 (0.0854)	3
90564 – 56059	2.20 (0.0873)	4
90564 – 56060	2.25 (0.0893)	5
90564 – 56061	2.30 (0.0913)	6
90564 – 56062	2.35 (0.0933)	7
90564 – 56063	2.40 (0.0953)	8
90564 – 56064	2.45 (0.0973)	9
90564 – 56065	2.50 (0.0993)	A
90564 – 56066	2.55 (0.1012)	B
90564 – 56067	2.60 (0.1032)	C
90564 – 56068	2.65 (0.1052)	D
90564 – 56069	2.70 (0.1071)	E
90564 – 56070	2.75 (0.1092)	F

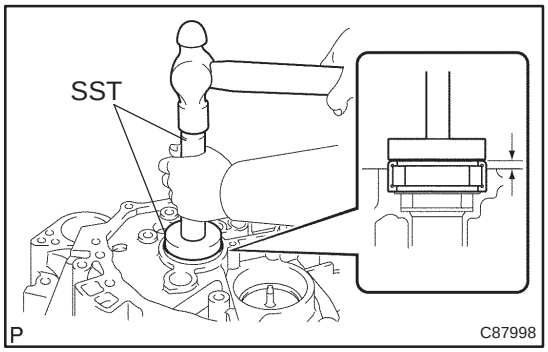


Part No.	Thickness	Mark
90564 – 56071	2.80 (0.1112)	G
90564 – 56072	2.85 (0.1131)	H



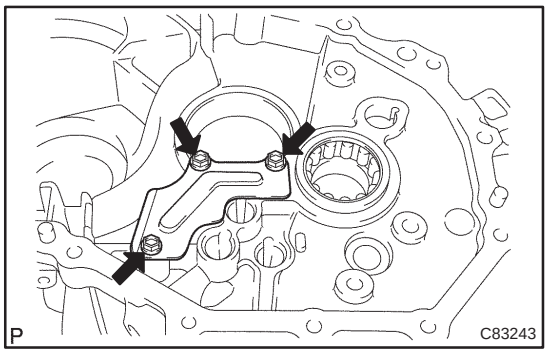
(f) Remove the 3 bolts.

(g) Remove the 14 bolts and manual transmission case to the manual transaxle case.



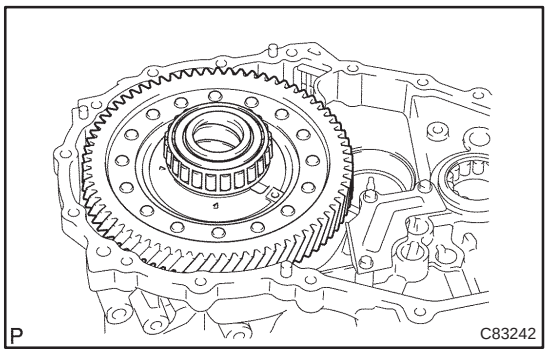
(h) Remove the differential case assy from the manual transaxle case.

79. INSTALL FRONT TRANSAXLE CASE OIL SEAL



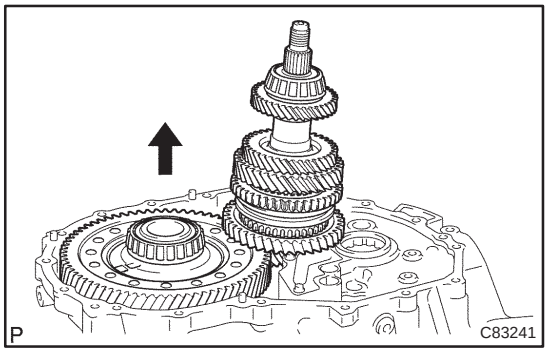
(a) Using SST and a hammer, install the front transaxle case oil seal No. 1 to the manual transaxle case.
SST 09950–60010 (09951–00420), 09950–70010 (09951–07150)

(b) Coat the lip of front transaxle case oil seal No. 1 with MP grease.
Clearance:1 – 2 mm (0.0397 –0.0794 in.)



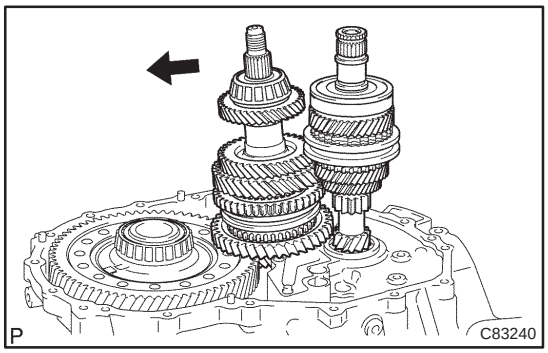
80. INSTALL INPUT SHAFT FRONT BEARING

(a) Coat the input shaft front bearing with gear oil, install it to the manual transaxle case.
SST 09950–60010 (09951–00570), 09950–70010 (09951–07150)
Clearance:4.28 – 4.60 mm (0.1699 in. – 0.1826 in.)



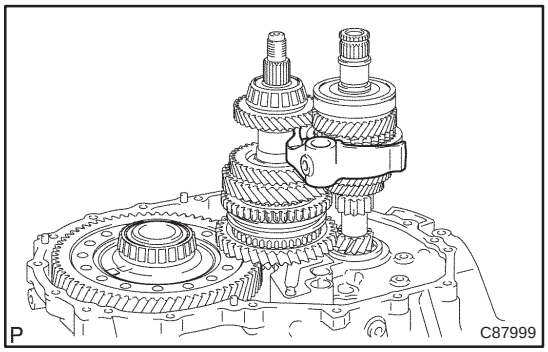
81. INSTALL MANUAL TRANSAXLE CASE RECEIVER

(a) Install the 3 bolts and manual transaxle case receiver to the manual transaxle case.
Torque:7 N·m (70 kgf·cm, 62 ft·lbf)



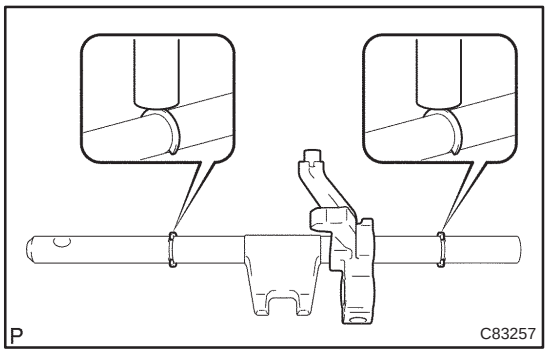
82. INSTALL DIFFERENTIAL CASE ASSY

(a) Coat the differential case taper roller bearing with gear oil, install the differential case assy to the manual transaxle case.



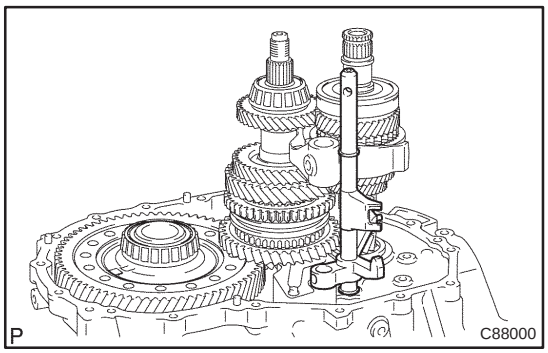
83. INSTALL OUTPUT SHAFT ASSY

(a) Apply gear oil to each sliding part of the output shaft assy.
(b) Lift the differential case assy up, leaning the output shaft assy install to the manual transaxle case.



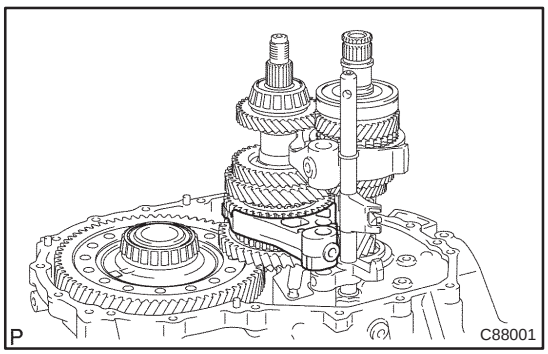
84. INSTALL INPUT SHAFT ASSY

(a) Apply gear oil to each sliding part of the input shaft assy.
(b) Leaning output shaft assy, install the input shaft assy to the manual transaxle case.



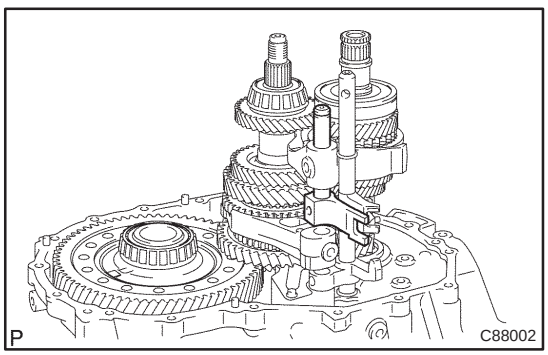
85. INSTALL GEAR SHIFT FORK NO.2

(a) Coat the gear shift fork No. 2 with gear oil, install it to the input shaft assy.

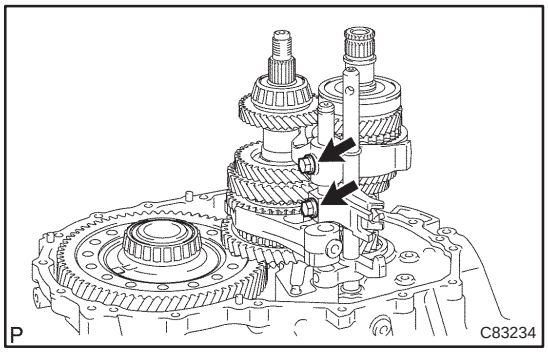


86. INSTALL GEAR SHIFT FORK NO.3

(a) Install the gear shift fork No.3 to the gear shift fork shaft No. 3.
(b) Using a brass bar and hammer, install the 2 shift fork shaft snap rings to the gear shift fork shaft.

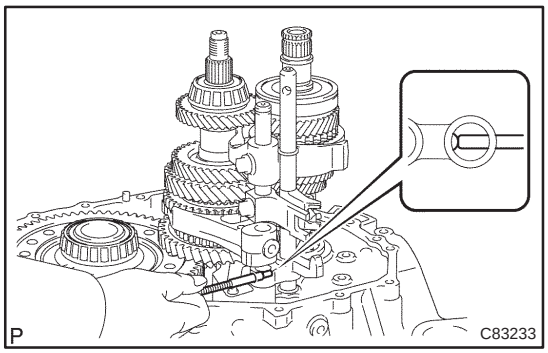


(c) Apply gear oil to each sliding part of the gear shift fork shaft No.3, install it to the manual transaxle case.



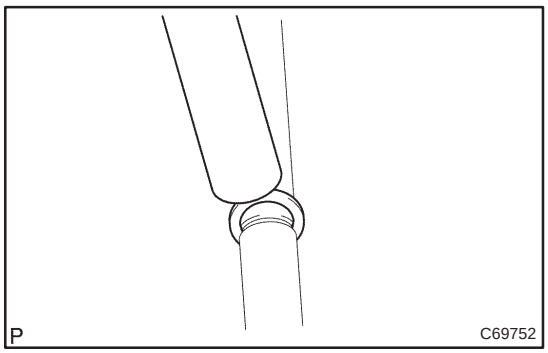
87. INSTALL GEAR SHIFT FORK NO.1

(a) Apply gear oil to each sliding part of the gear shift fork No.1, install it to the output shaft assy.

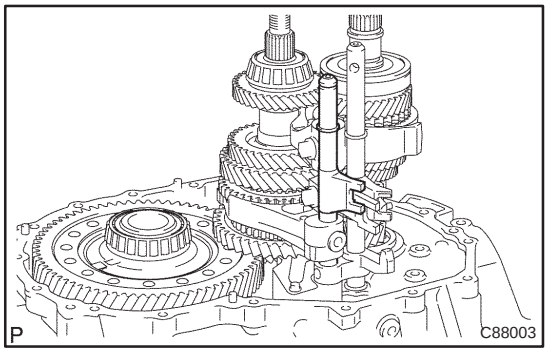


88. INSTALL GEAR SHIFT FORK SHAFT NO.2

(a) Install the gear shift head No.1 to the gear shift fork shaft No.2.
(b) Apply gear oil to each sliding part of the gear shift fork shaft No.2, install it to the manual transaxle case.

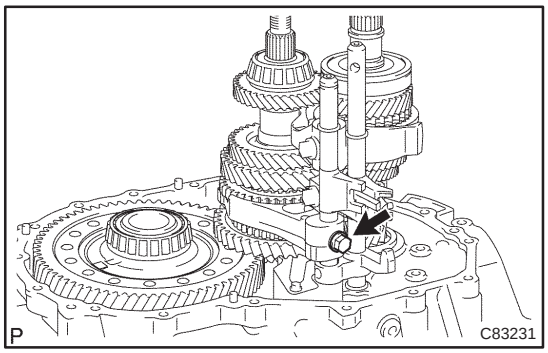


(c) Install the 2 shift fork bolts to the gear shift head No.1.
Torque:24 N·m (240 kgf·cm, 17 ft·lbf)

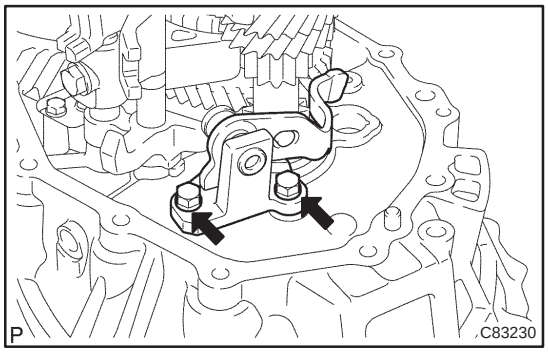


89. INSTALL REVERSE SHIFT FORK ROLLER

(a) Using a magnetic finger, install the reverse shift fork roller to the reverse shift fork.

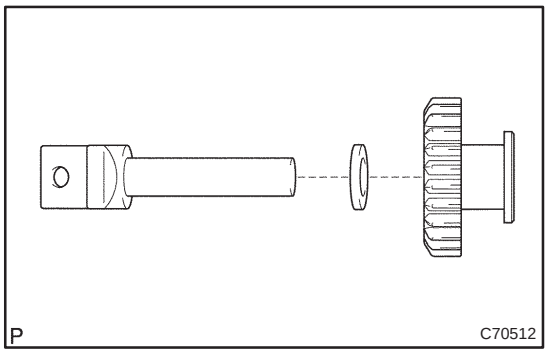


90. INSTALL GEAR SHIFT FORK SHAFT NO.1

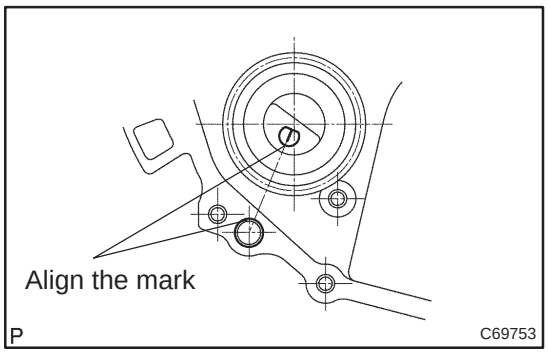


(a) Using a brass bar and hammer, install the shift fork shaft snap ring to the shift fork shaft No.1.

(b) Install the gear shift fork shaft No. 1 to the manual transaxle case.

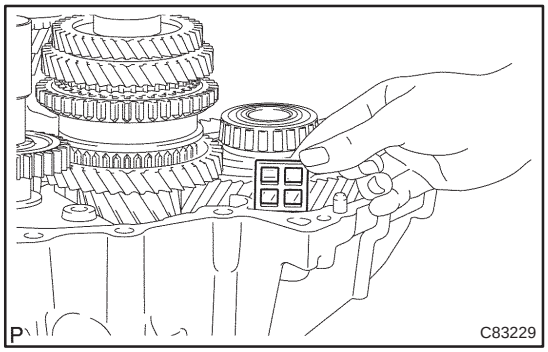


(c) Install the shift fork bolt to the gear shift fork No. 1.
Torque:24 N·m (240 kgf·cm, 17 ft·lbf)



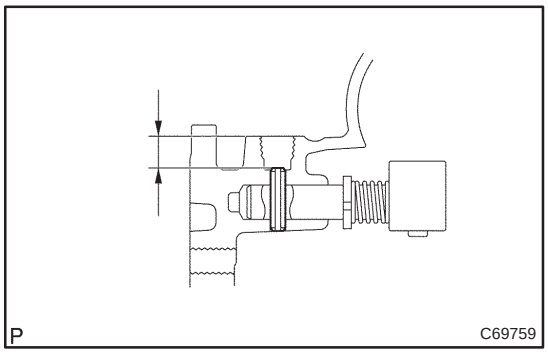
91. INSTALL REVERSE SHIFT ARM BRACKET ASSY

(a) Install the 2 bolts and reverse shift arm bracket assy to the manual transaxle case.
Torque:17 N·m (175 kgf·cm, 13 ft·lbf)

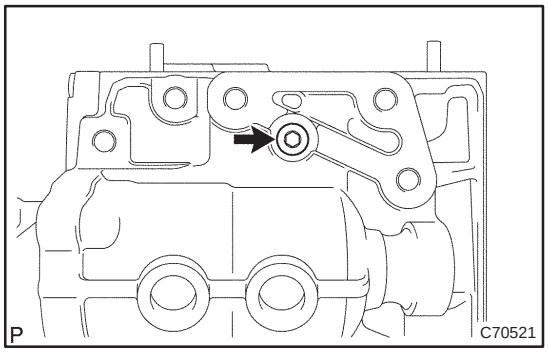


92. INSTALL REVERSE IDLER GEAR SUB–ASSY

(a) Coat the reverse idler gear and reverse idler thrust washer with MP grease, install them to the reverse idler gear shaft.

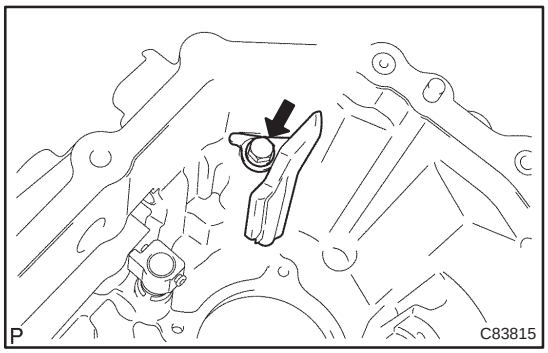


(b) Install the reverse idler gear to the manual transaxle case.
HINT:
Align the mark of the reverse idler gear shaft with the hole of the bolt.



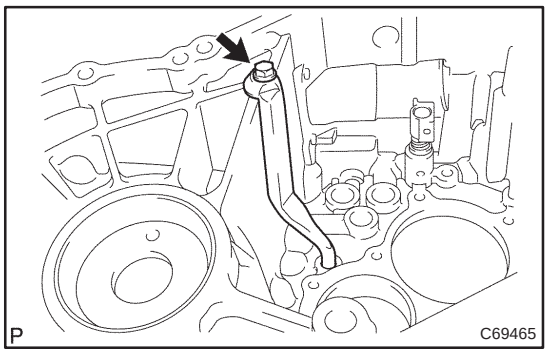
93. INSTALL TRANSMISSION MAGNET

(a) Clean the transmission magnet, install it to the manual transaxle case.



94. INSTALL REVERSE RESTRICT PIN ASSY

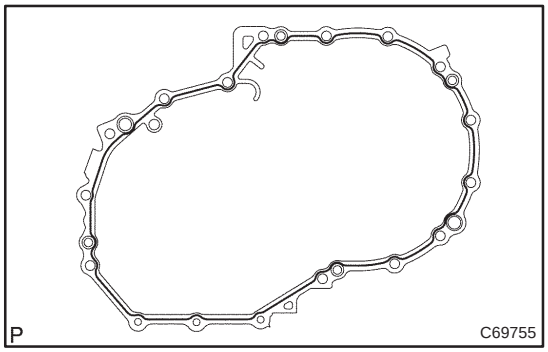
(a) Using a pin punch(ϕ 5mm), install the reverse restrict pin and reverse restrict pin assy.
Clearance:12.5 – 13.5 mm (0.4963 – 0.53595 in.)



(b) Coat the reverse restrict pin plug with adhesive 1324, using hexagon wrench(6mm), install the manual transmission case.
Torque:13 N·m (133 kgf·cm, 9.6 ft·lbf)

95. INSTALL OIL RECEIVER PIPE NO.1 (MTM)

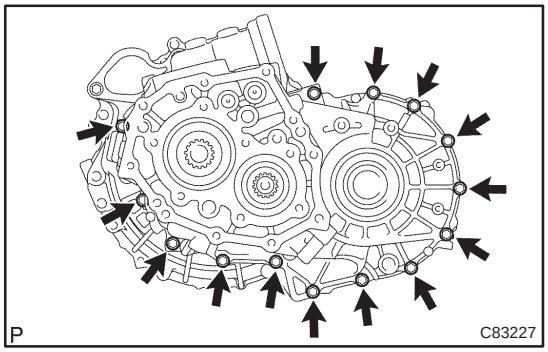
(a) Install the bolt and oil receiver pipe No. 1 (MTM) to the manual transmission case.
Torque:17 N·m (175 kgf·cm, 13 ft·lbf)



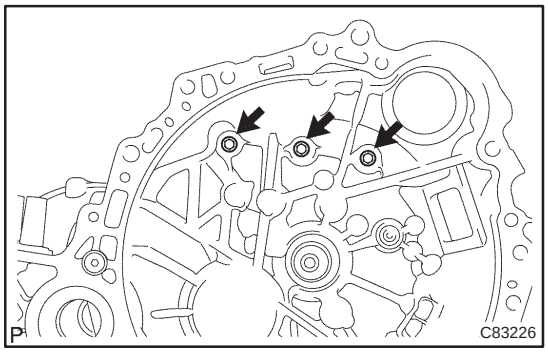
HINT:
Tighten the oil receiver pipe No. 1 with the bolt while transmission case is being put.

96. INSTALL OIL RECEIVER PIPE NO.2 (MTM)

(a) Install the bolt and oil receiver pipe No. 2 (MTM) to the manual transmission case.
Torque:17 N·m (175 kgf·cm, 13 ft·lbf)



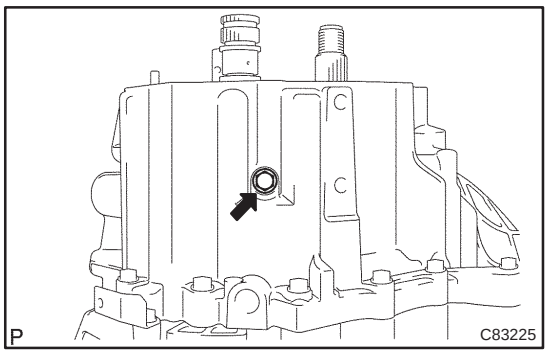
HINT:
Tighten the oil receiver pipe No. 2 (MTM) with the bolt while manual transmission case is being put.



97. INSTALL MANUAL TRANSMISSION CASE

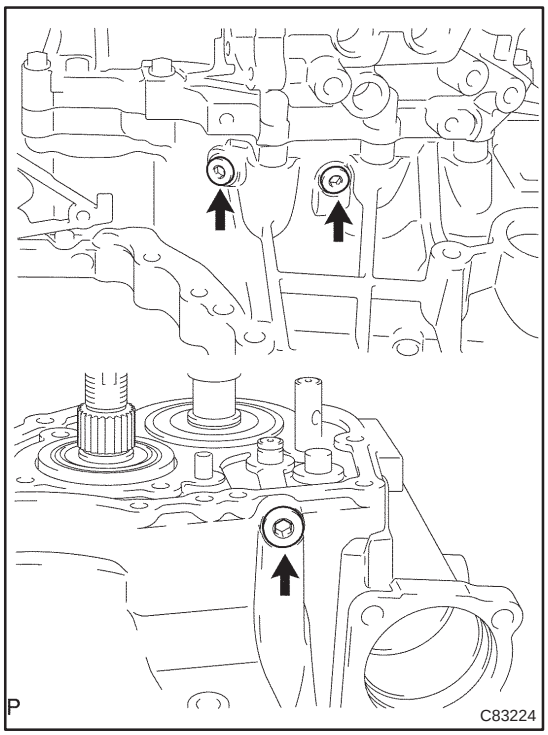
(a) Apply FIPG bead condition sequentially to the shown position in the diagram of the manual transmission case.

HINT:
Install within 10 minutes after applying FIPG.



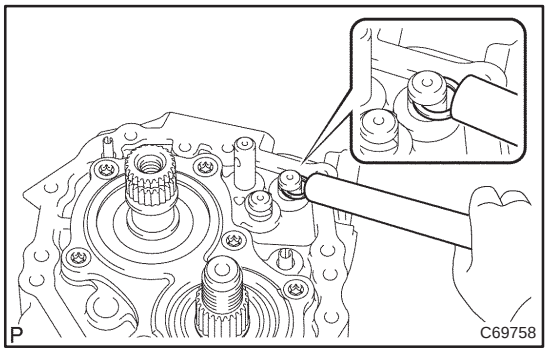
(b) Install the manual transmission case and 14 bolts to the manual transaxle case.
Torque:29 N·m (300 kgf·cm, 22 ft·lbf)

(c) Install the 3 bolts to the manual transaxle case side.
Torque:30 N·m (306 kgf·cm, 22 ft·lbf)



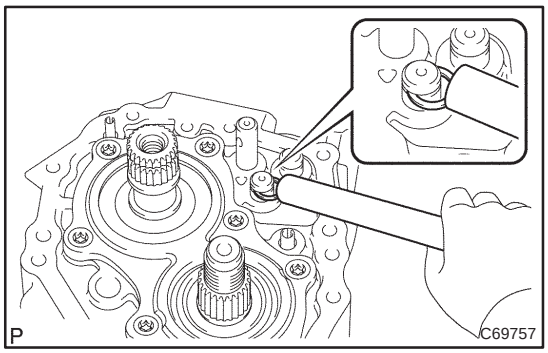
98. INSTALL CLUTCH TUBE BRACKET

(a) Install the clutch tube with 3 bolt bracket.
Torque:17 N·m (173 kgf·cm, 14 ft·lbf)



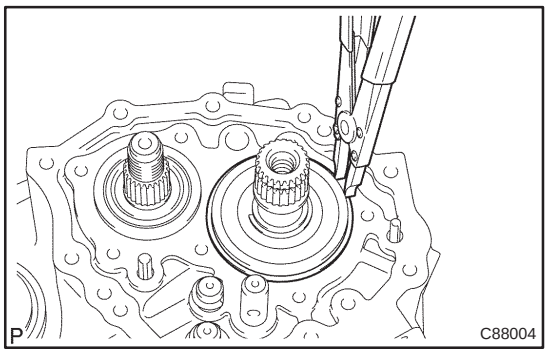
99. INSTALL REVERSE IDLER GEAR SHAFT BOLT

(a) Coat the 4 bolts with sealant, install it and new gasket to the manual transmission case.
Torque:30 N·m (306 kgf·cm, 22 ft·lbf)
Sealant:
Part No. 08833 – 00080, THREE BOND 1344, LOCTITE 242 or equivalent



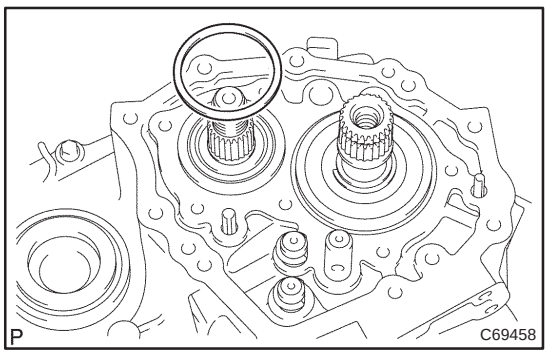
100. INSTALL SHIFT DETENT BALL PLUG

(a) Coat the shift detente ball plug with sealant, install it with using a hexagon wrench(6 mm).
Torque: 25 N·m (250 kgf·cm, 18 ft·lbf)
Sealant:
Part No. 08833 – 00080, THREE BOND 1344, LOCTITE



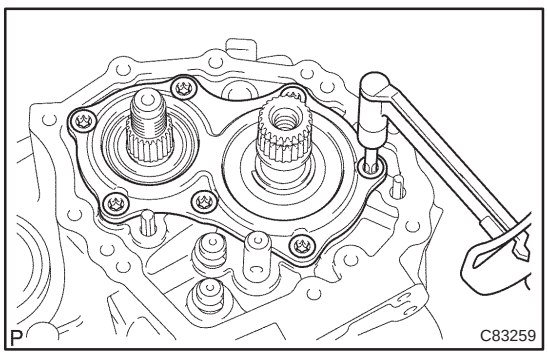
101. INSTALL SHIFT FORK SHAFT SHAFT SNAP RING

(a) Using a brass bar and hammer, install the shift fork shaft snap ring to the gear shift fork shaft No. 1.



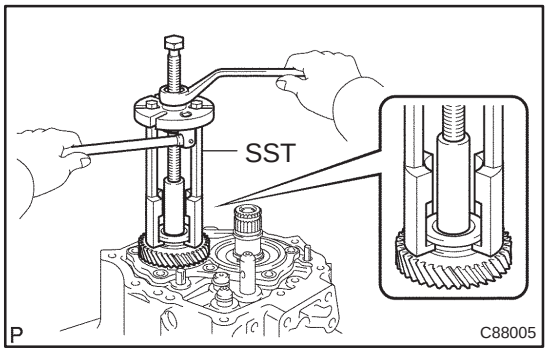
(b) Using a brass bar and hammer, install the shift fork shaft snap ring to the gear shift fork shaft No. 2.

102. INSTALL INPUT SHAFT REAR BEARING SHAFT SNAP RING



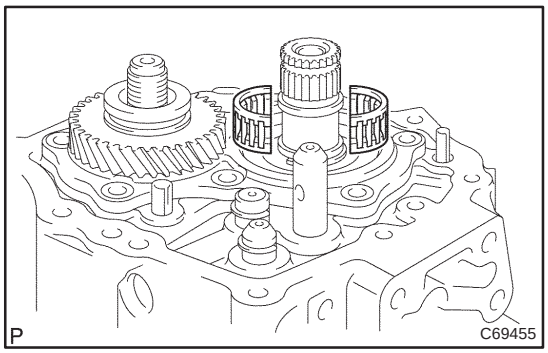
(a) Using a snap ring expander, install the input shaft rear bearing hole snap ring.

103. INSTALL OUTPUT SHAFT REAR BEARING SHIM



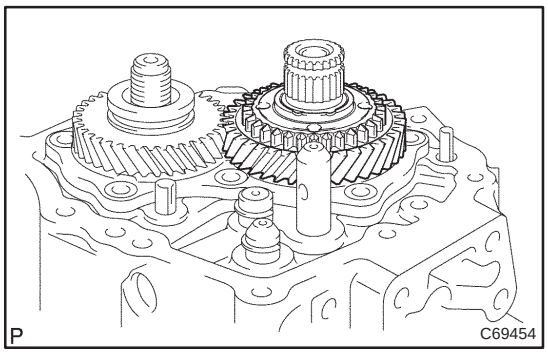
(a) Install the output shaft rear bearing shim to the output shaft.

HINT:
Install the same thickness of the case shim as the remove one.



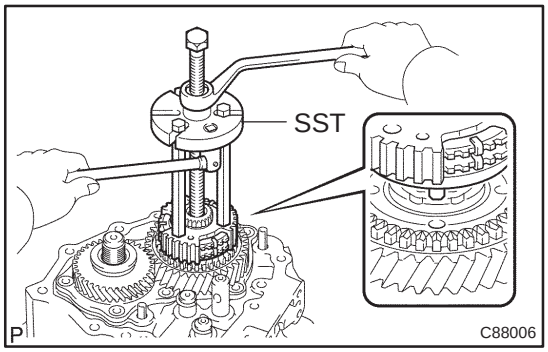
104. INSTALL BEARING RETAINER REAR (MTM)

(a) Coat the bearing retainer rear (MTM) with sealant, install it with using a torx wrench(T45).
Torque:42 N·m (430 kgf·cm, 31 ft·lbf)



105. INSTALL 5TH DRIVEN GEAR

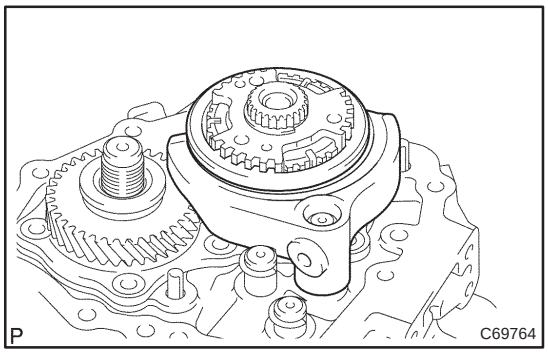
(a) Using SST, install the 5th driven gear to the output shaft.
SST 09950–30012 (09951–03010, 09953–03010, 09954–03010, 09956–03030, 09955–03011)



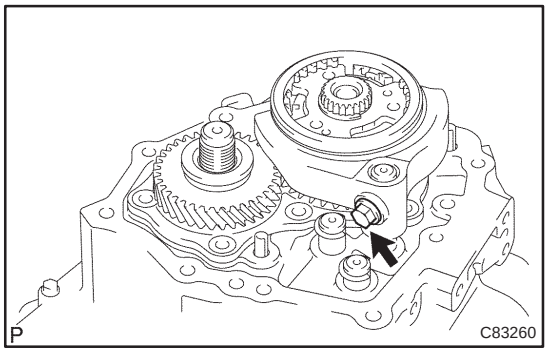
106. INSTALL 5TH GEAR NEEDLE ROLLER BEARING

(a) Coat the 5th gear needle roller bearing with gear oil, install it to the input shaft.

107. INSTALL 5TH GEAR

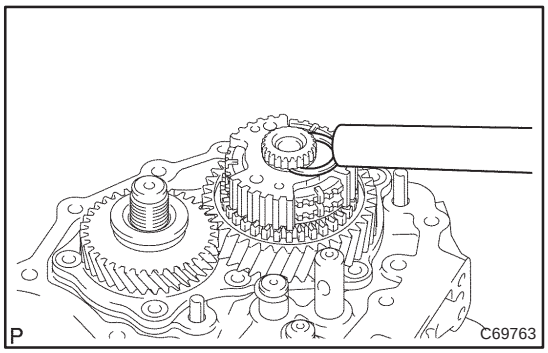


(a) Coat the 5th gear with gear oil, install it to the input shaft.



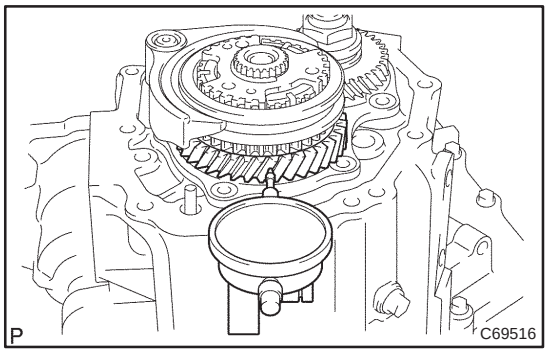
108. INSTALL TRANSMISSION CLUTCH HUB NO.3

(a) Using SST, install the transmission clutch hub No. 3 to the input shaft.
SST 09950–30012 (09951–03010, 09953–03010, 09954–03010)

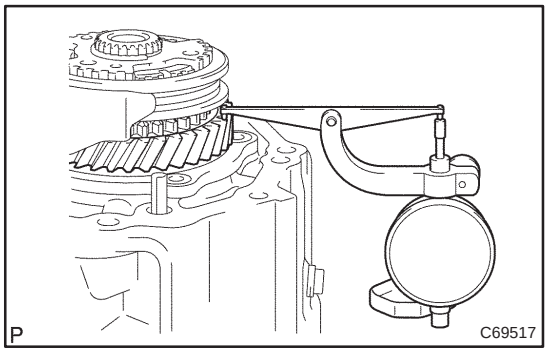


NOTICE:
Align the projection of the synchronizer ring with the hole of the 5th gear and install them.

(b) Install the transmission hub sleeve No. 3 and gear shift fork No. 3 to the transmission clutch hub No. 3.

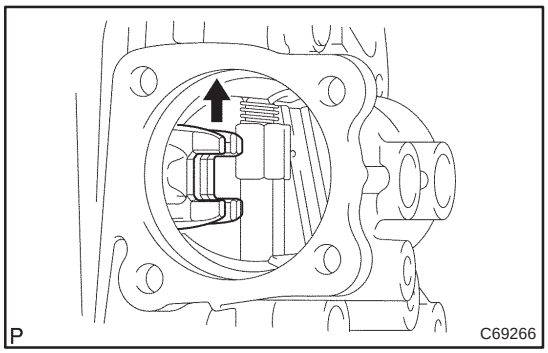


(c) Coat the shift fork bolt with sealant, install it to the gear shift fork No. 3.
Sealant:
Part No. 08833 – 00080, THREE BOND 1344, LOCTITE 242 or equivalent
Torque: 24 N·m (244 kgf·cm, 17 ft·lbf)



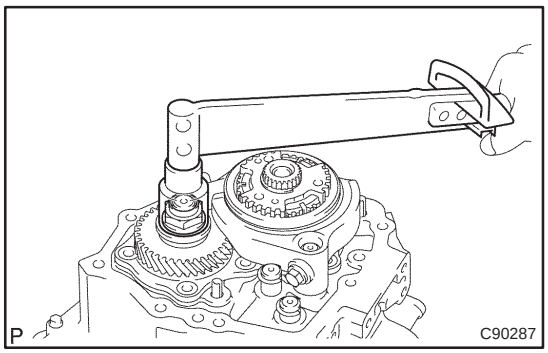
(d) Select a snap ring that will minimum axial play. Using a brass bar and a hammer, install the shaft snap ring.
Clearance:0.1 mm or less
Snap ring:mm (in.)

Part No.	Thickness	Mark
90520–27061	1.75 – 1.80 (0.0695 – 0.0715)	a
90520–27062	1.80 – 1.85 (0.0715 – 0.0734)	b
90520–27063	1.85 – 1.90 (0.0734 – 0.0754)	c
90520–27064	1.90 – 1.95 (0.0754 – 0.0774)	d
90520–27065	1.95 – 2.00 (0.0774 – 0.0794)	e
90520–27066	2.00 – 2.05 (0.0794 – 0.0814)	f
90520–27067	2.05 – 2.10 (0.0814 – 0.0834)	g
90520–27068	2.10 – 2.15 (0.0834 – 0.0854)	h
90520–27069	2.15 – 2.20 (0.0854 – 0.0873)	j



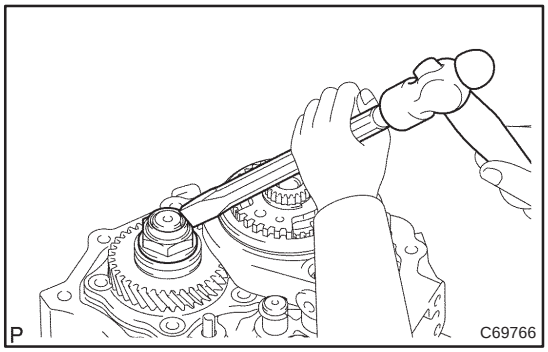
109. INSPECT 5TH GEAR RADIAL CLEARANCE
(a) Using a dial indicator, inspect the 5th gear radial clearance.
Standard clearance:
0.009 – 0.050 mm (0.0004 – 0.0020 in.)
If the clearance is out of the specification, replace 1st gear needle roller bearing.

110. INSPECT 5TH GEAR THRUST CLEARANCE



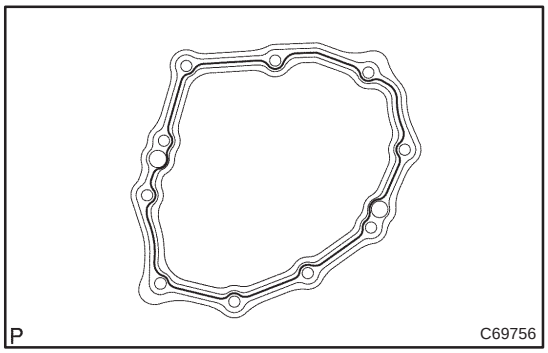
(a) Using a dial indicator, inspect the 5th gear thrust clearance.

Standard clearance:
0.10 – 0.65 mm (0.0040 – 0.0258 in.)



111. INSTALL MANUAL TRANSMISSION OUTPUT SHAFT REAR SET NUT

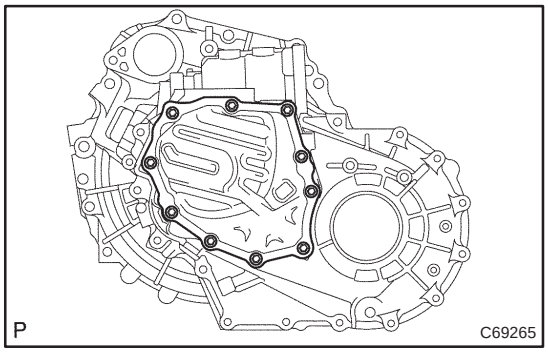
(a) Engage the gear double meshing.



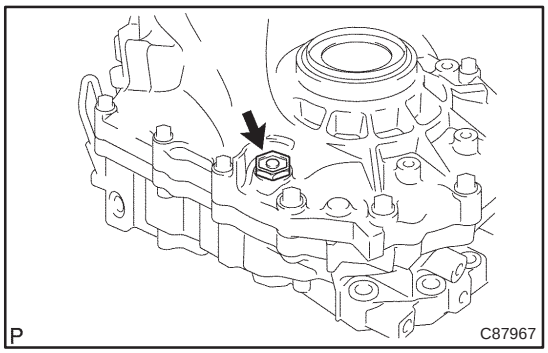
(b) Install the new manual transmission output shaft rear set nat.

Torque: 123 N·m (1250 kgf·cm, 90 ft·lbf)

(c) Using a chisel and a hammer, stake the manual transmission output shaft rear set nat.



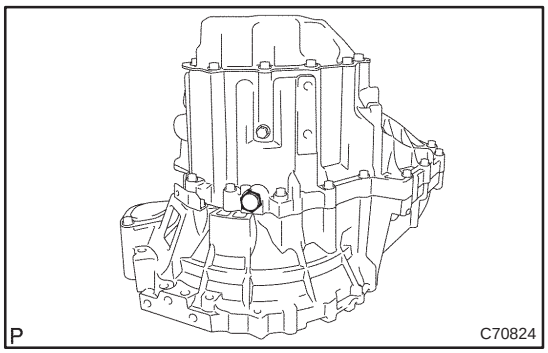
112. INSTALL MANUAL TRANSMISSION CASE COVER SUB–ASSY



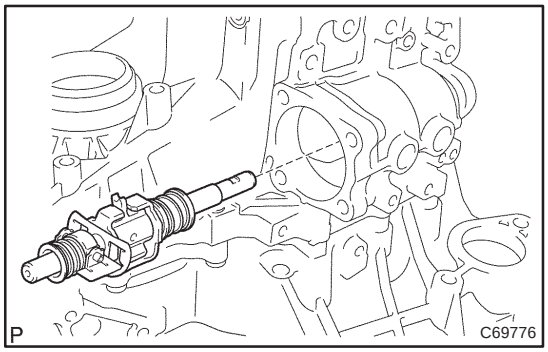
(a) Apply FIPG to the transaxle case cover sub–assy, as shown to the installation.

FIPG:
Part No. 08826–00090, THREE BOND 1281

NOTICE:
Parts must be assembled 10 minutes of application otherwise the packing (FIPG) material

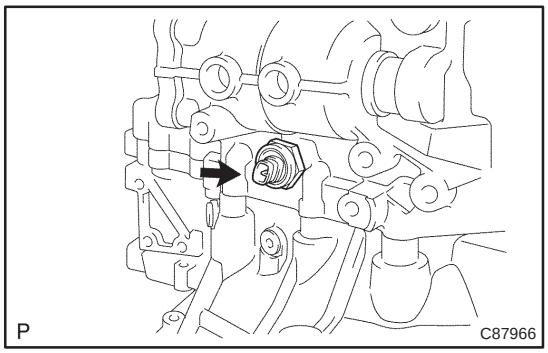


(b) Install the transmission case cover sub–assy with 10 bolts to the manual transaxle case.



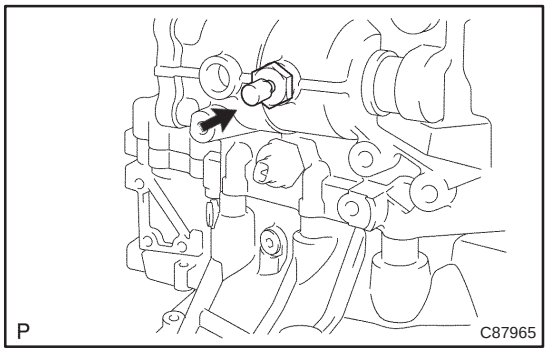
113. INSTALL DRAIN (MTM) PLUG SUB–ASSY

(a) Install the drain plug sub–assy with new gasket to the manual transmission case.
Torque:49 N·m (500 kgf·cm, 36 ft·lbf)



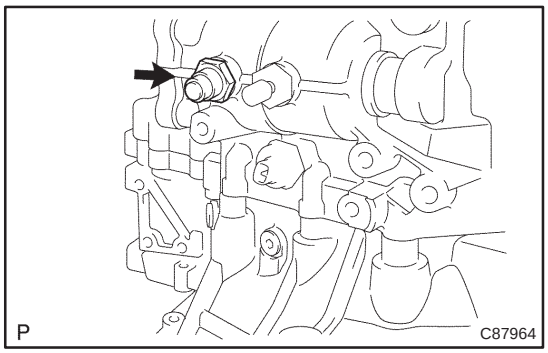
114. INSTALL MANUAL TRANSMISSION FILLER PLUG

(a) Install the manual transmission filler plug with new gasket to the oil seal.
Torque:49 N·m (500 kgf·cm, 36 ft·lbf))



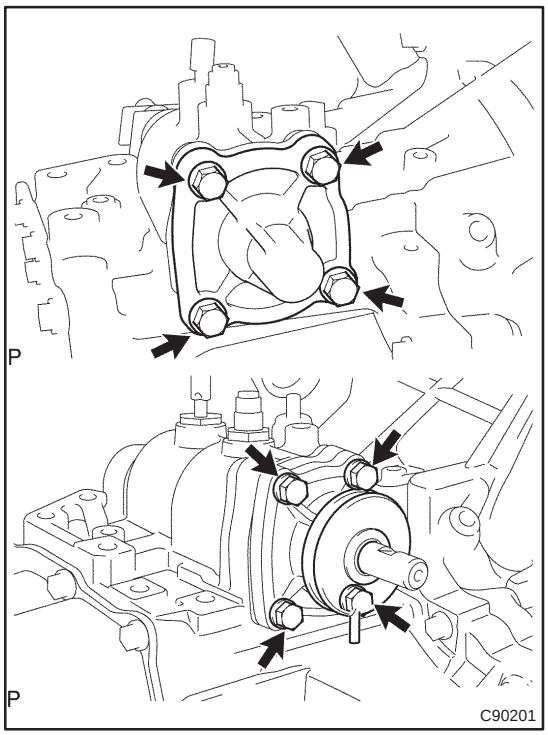
115. INSTALL SHIFT & SELECT LEVER SHAFT ASSY

(a) coat the shift & select lever shaft assy with gear oil, install it to the manual transmission case.



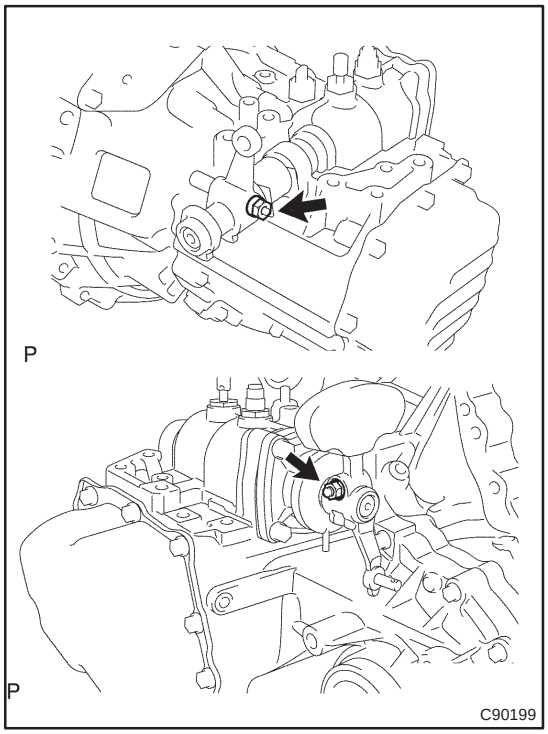
116. INSTALL BACK UP LAMP SWITCH ASSY

(a) install back up lamp switch assy to the manual transmission case.
Torque:40 N·m (410 kgf·cm, 30 ft·lbf)



117. INSTALL MANUAL TRANSMISSION BREATHER PLUG

(a) Install the new gasket with manual transmission breather plug to the manual transmission cease.
Torque:49 N·m (500 kgf·cm, 36 ft·lbf)



118. INSTALL LOCK BALL ASSY NO.1

(a) Install the lock ball assy No.1 to the manual transmission case.
Torque:29 N·m (300 kgf·cm, 22 ft·lbf)

119. INSTALL CONTROL SHAFT COVER

(a) Coat the 4 bolts with sealant, install it, new gasket with control shaft cover.
Sealant:
Part No. 08833 – 00080, THREE BOND 1344, LOCTITE 242 or equivalent
Torque:20 N·m (200 kgf·cm, 14 ft·lbf)

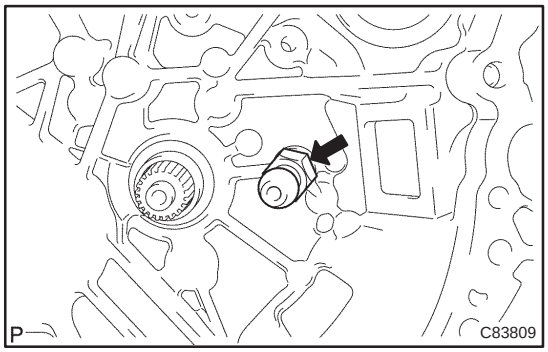
120. INSTALL CONTROL SHIFT LEVER

(a) Install the control shift lever with shift outer lock pin to the
(b) install the spring washer with nat.
Torque: 6.4 N·m (65 kgf·cm, 57 in.·lbf)

121. INSTALL SELECTING BELL CRANK ASSY

(a) Coat the 2 bolts with sealant, install it with selecting bell clank assy to the manual transmission cease.
Sealant:
Part No. 08833 – 00080, THREE BOND 1344, LOCTITE 242 or equivalent
Torque: 20 N·m (200 kgf·cm, 14 ft·lbf)

122. INSTALL TRANSAXLE CASE COVER



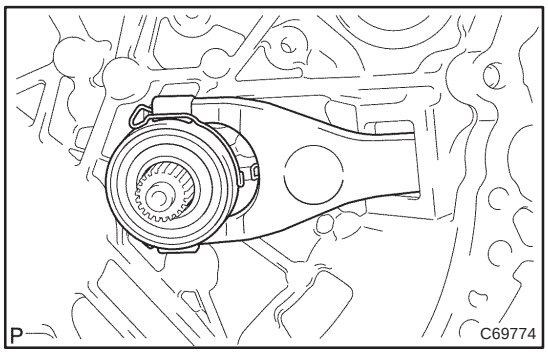
(a) Install the transaxle case cover with 2 bolts.

123. INSTALL SPEEDOMETER DRIVEN HOLE COVER SUB–ASSY

(a) Install the bolt and speedometer driven hole cover sub–assy to the transmission case.

124. INSTALL CLUTCH RELEASE FORK BOOT

(a) Install the clutch release fork bolt to the manual transaxle case.



125. INSTALL RELEASE FORK SUPPORT

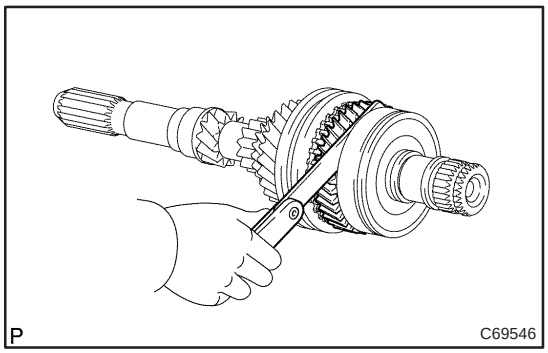
(a) Using a deep socket wrench, install the release fork support to the manual transaxle case.
Torque:
E355:39.2 N·m (400 kgf·cm, 28.91 ft·lbf)
E356 :47.1 N·m (480 kgf·cm, 34.74 ft·lbf)

126. INSTALL CLUTCH RELEASE BEARING ASSY

(a) Coat the clutch release bearing assy with release hub grease, install it to the clutch release fork sub–assy.
Sealant:
Part No. 0887 – 01806, RELEASE HUB GREASE or equivalent
(b) Apply clutch spline grease to the input shaft spline.

127. INSTALL CLUTCH RELEASE FORK SUB–ASSY

(a) Install the clutch release fork sub – assy to the input shaft.

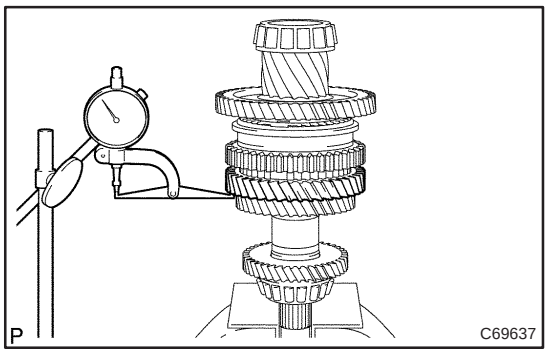


INPUT SHAFT ASSY (E355/E356)

4103X–01

OVERHAUL

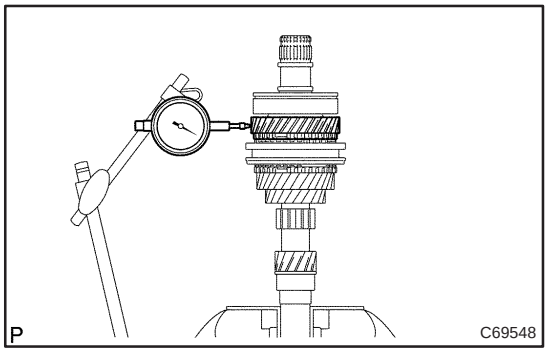
HINT:



COMPONENTS:See page 41–1

1. INSPECT 4TH GEAR THRUST CLEARANCE

(a) Using a feeler gauge, measure the 4th gear thrust clearance.

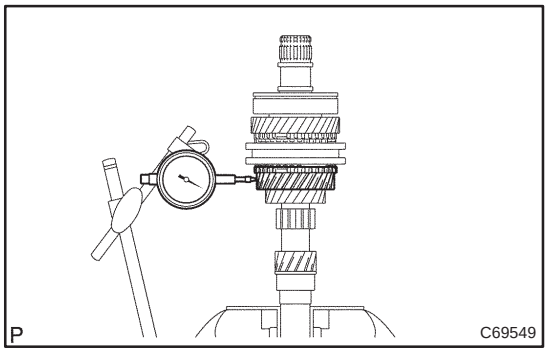


Standard clearance:
0.1 – 0.57 mm (0.0039– 0.0224 in.)

2. INSPECT 3RD GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 3rd gear thrust clearance.

Standard clearance:
0.1 – 0.35 mm (0.0039 – 0.0014 in.)



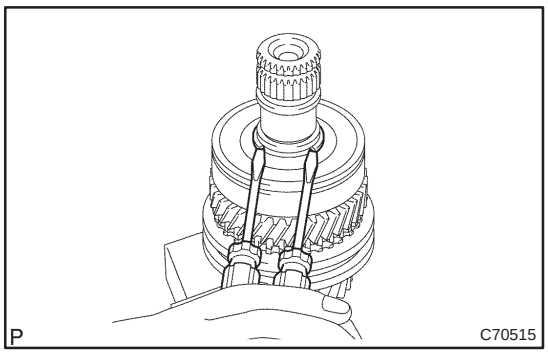
3. INSPECT 4TH GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 4th gear radial clearance.

Standard clearance: mm (in.)

Bearing	Standard clearance
KOYO made	0.009 – 0.053] (0.0004 – 0.0021)
NSK made	0.009 – 0.051 (0.0004 – 0.00020)

If the clearance exceeds the maximum, replace the 4th gear needle roller bearing.



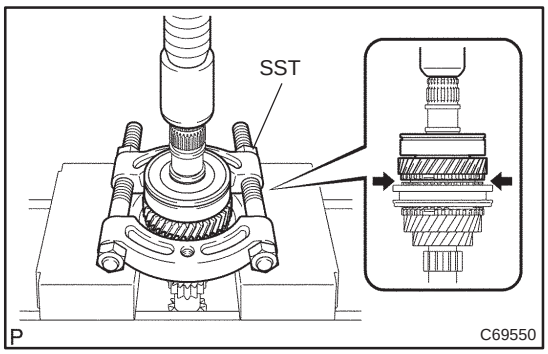
4. INSPECT 3RD GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 3rd gear radial clearance.

Standard clearance: mm (in.)

Bearing	Standard clearance
KOYO made	0.009 – 0.053 (0.0004 – 0.0021)
NSK made	0.009 – 0.051 (0.0004 – 0.0020)

If the clearance exceeds the maximum, replace the 3rd gear needle roller bearing.



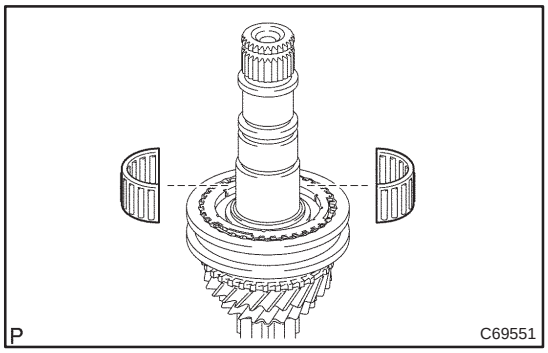
5. REMOVE 4TH GEAR

(a) Fix the input shaft assy and soft jaws to the valse.

(b) Using a 2 screwdrivers and a hammer, remove the input shaft rear bearing shaft snap ring from the input shaft.

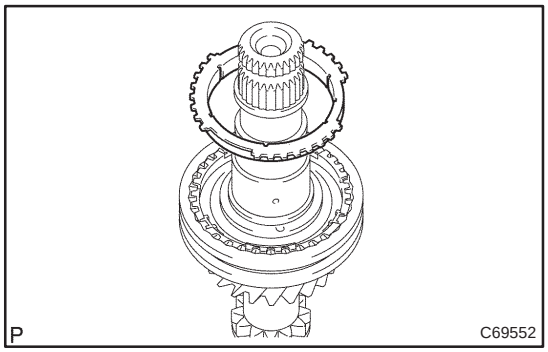
NOTICE:

Using a waste to prevent the snap ring from being scattered.



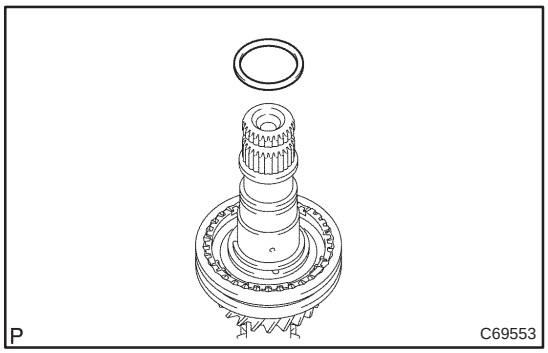
(c) Using SST and a press, remove the input shaft rear bearing and 4th gear.

SST 09950–00020



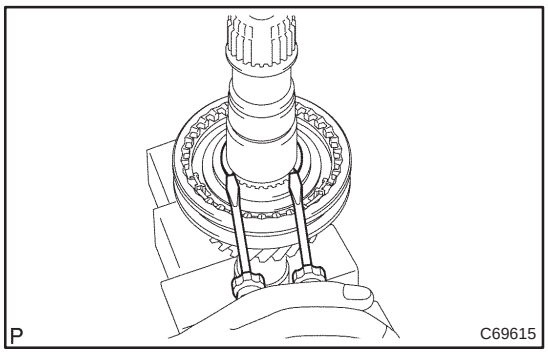
NOTICE:

Do not tighten SST excessively.



6. REMOVE 4TH GEAR NEEDLE ROLLER BEARING

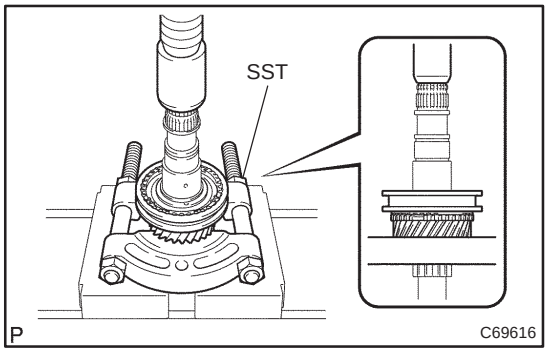
(a) Remove the 4th gear needle roller bearing from the input shaft.



7. REMOVE 2ND SYNCHRONIZER OUTER RING

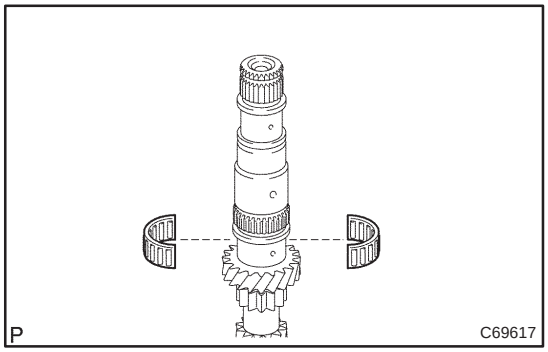
(a) Remove the 2nd synchronizer outer ring from the transmission clutch hub No.2.

8. REMOVE 4TH GEAR BEARING SPACER



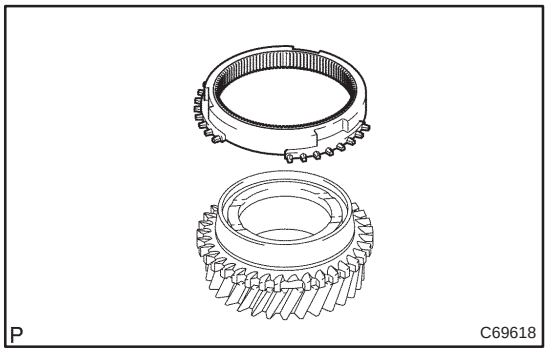
(a) Remove the 4th gear bearing spacer from the transmission clutch hub No.2.

9. REMOVE 3RD GEAR



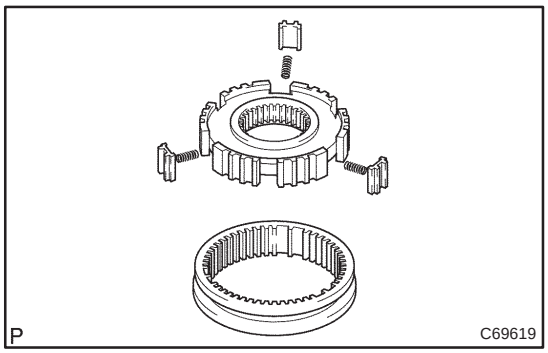
(a) Using 2 screwdrivers and a hammer, remove the clutch hub No.2 setting shaft snap ring from the input shaft.

NOTICE:
Using a waste to prevent the snap ring from being scattered.



(b) Using SST and a press, remove the transmission clutch hub No.2 and 3rd gear from the input shaft.
SST 09950–00020

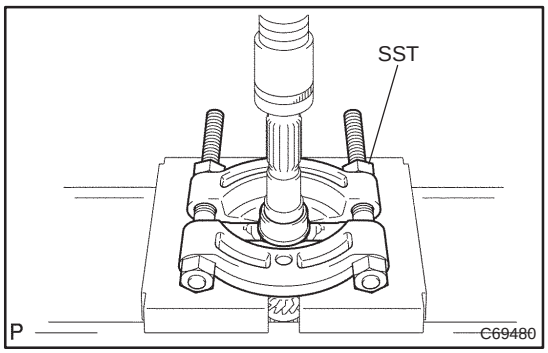
NOTICE:
Do not tighten SST excessively.



10. REMOVE 3RD GEAR NEEDLE ROLLER BEARING

(a) Remove the 3rd gear needle roller bearing from the input shaft.

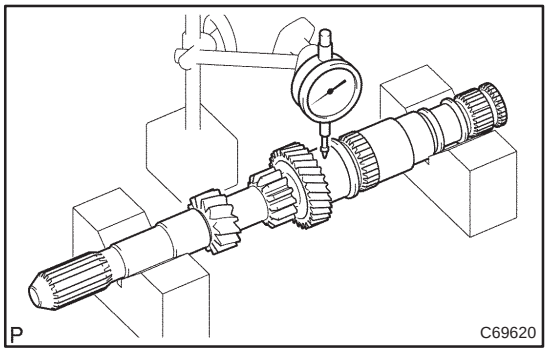
11. REMOVE SYNCHRONIZER RING NO.3



(a) Remove the synchronizer ring No.3 from the 3rd gear.

12. REMOVE TRANSMISSION HUB SLEEVE NO.2

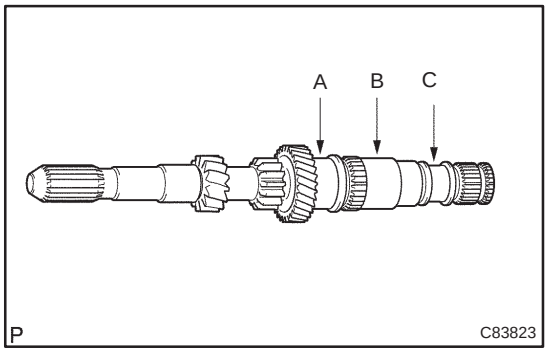
(a) Remove the transmission hub sleeve No.2, 3 synchromesh sifting keys and 3 synchromesh sifting key springs from the transmission clutch hub No.2.



NOTICE:
Using a waste to prevent the sifting key and sifting key spring from being scattered.

13. REMOVE INPUT SHAFT FRONT BEARING

(a) Using SST and a press, remove the input shaft bearing front (inner race) from the input shaft.
SST 09950–00020

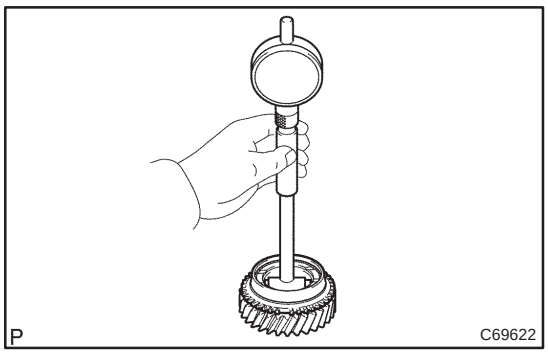


NOTICE:
Do not tighten SST excessively.

14. INSPECT INPUT SHAFT

(a) Using V–block and dial indicator, measure the shaft run out.
Maximum run out:0.03 mm (0.001191 in.)

If the run out exceeds the maximum, replace the input shaft.

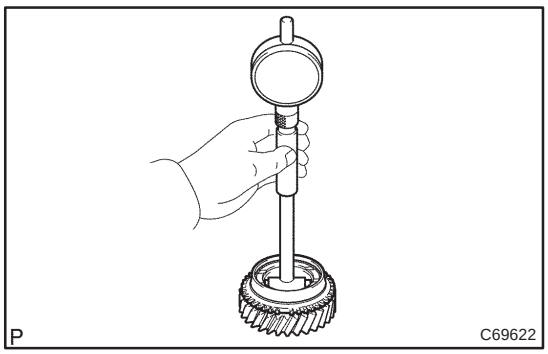


(b) Using a micrometer, measure the outer diameter of the input shaft jarnal surface.

Outer diameter: mm (in.)

	Standard outer diameter	Minimum outer diameter
A	35.984 – 36.000 (1.4286 – 1.4292)	35.984 (1.4286)
B	35.984 – 36.000 (1.4286 – 1.4292)	35.984 (1.4286)
C	27.957 – 27.972 (1.1100 – 1.1105)	27.957 (1.1100)

If the outer diameter is less than the minimum replace the input shaft.

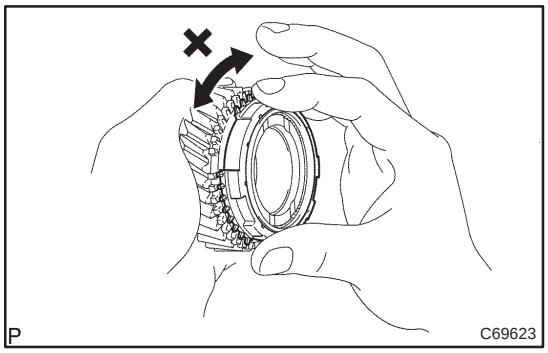


15. INSPECT 4TH GEAR

(a) Using a cylinder gauge, measure the inside diameter of the 4th gear.

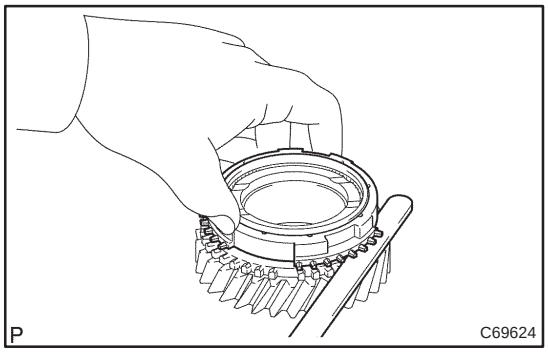
Inside diameter: mm (in.)

Standard inside diameter	Maximum inside diameter
42.009 – 42.025 (1.6678 – 1.6684)	42.025 (1.6684)



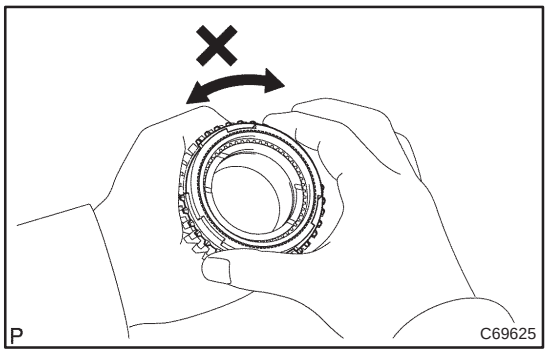
16. INSPECT 3RD GEAR

(a) Using a cylinder gauge, measure the inside diameter of the 3rd gear.



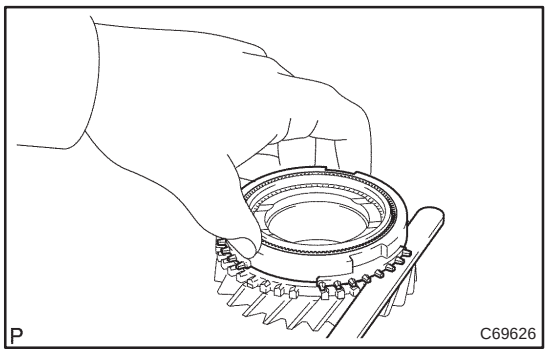
Inside diameter: mm (in.)

Standard inside diameter	Maximum inside diameter
43.009 – 43.025 (1.7075 – 1.7081)	43.025 (1.7081)



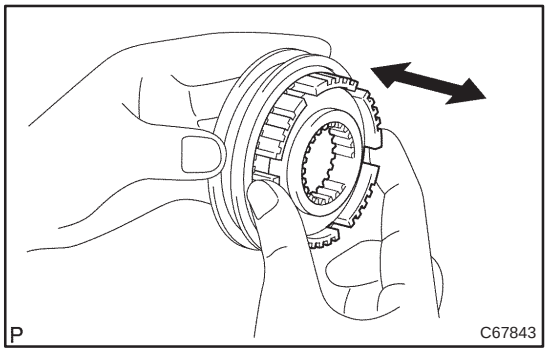
17. INSPECT 2ND SYNCHRONIZER OUTER RING

(a) Coat the 4th gear cone with gear oil. Turn in the synchronizer ring No.3 in one direction while pushing it to the 4th gear cone. Check that the ring locks.



(b) Using a feeler gauge, measure the clearance between the synchronizer outer ring back and 4th gear spline end.
Standard clearance:
0.75 – 1.65mm (0.0297 – 0.0655 in.)

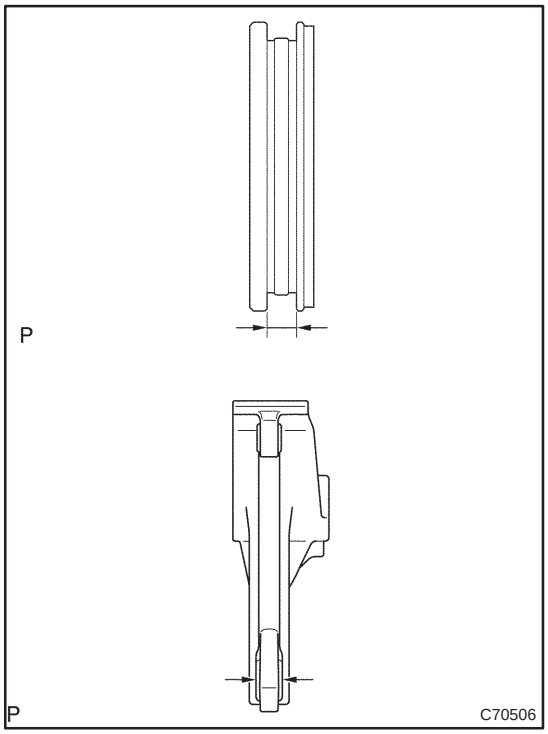
If the standard clearance is out of specification, replace the synchronizer ring.



18. INSPECT SYNCHRONIZER RING NO.3

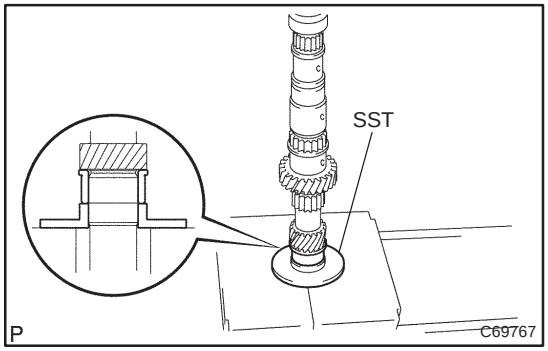
(a) Coat the 3rd gear cone with gear oil. Turn in the synchronizer outer ring in one direction while pushing it to the 3rd gear cone. Check that the ring locks.

(b) Using a feeler gauge, measure the clearance between the synchronizer ring No.3 back and 3rd gear spline end.
Standard clearance:
0.65 – 1.75 mm (0.0258 – 0.0695 in.)



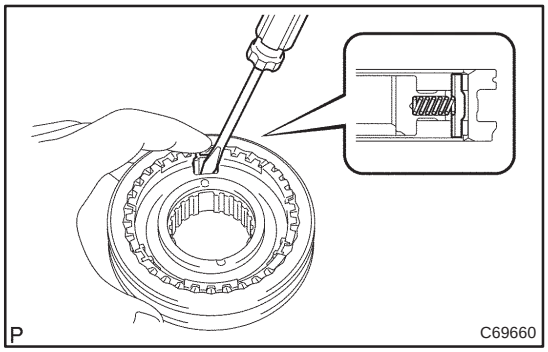
If the standard clearance is out of specification, replace the synchronizer ring No.3.

19. INSPECT TRANSMISSION HUB SLEEVE NO.2



(a) Inspect the sliding condition between transmission hub sleeve No.2 and transmission clutch hub No.2.

(b) Inspect tip of spline gear on the transmission hub sleeve No.2 for wear.

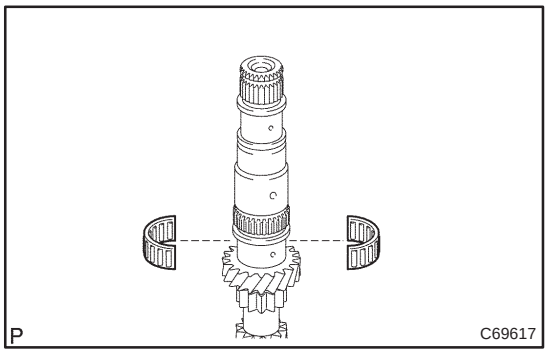


(c) Using a vernier calipers, measure the transmission hub sleeve No.3 groove and the thickness of the claw part on gear shift fork No.1, and calculate the clearance.
Standard clearance:
0.15 – 0.35 mm (0.0060 – 0.0139 in.)

If the clearance is out of the specification, replace the transmission hub sleeve No.2 and gear shift fork No.2 with the new one.

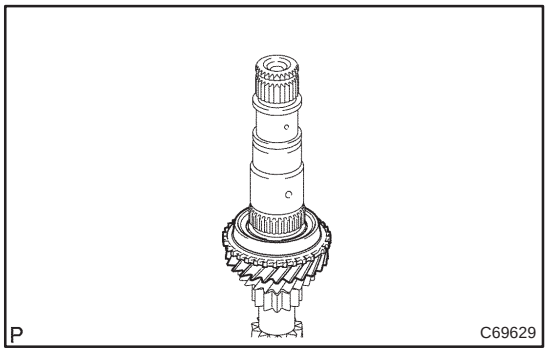
20. INSTALL INPUT SHAFT FRONT BEARING

(a) Using SST and a press, install the input shaft front bearing(inner race).
SST 09608–00071



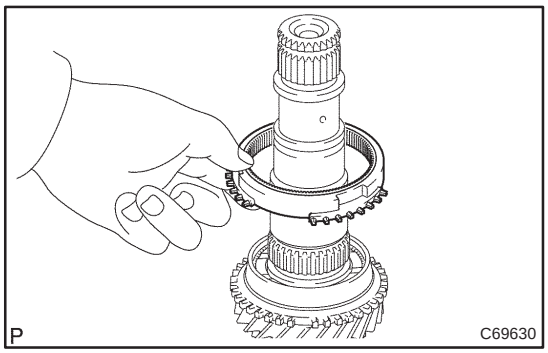
21. INSTALL TRANSMISSION HUB SLEEVE NO.2

(a) Coat the transmission hub sleeve No.2 with gear oil.
(b) Install the 3 synchromesh key springs with transmission hub sleeve No.2.



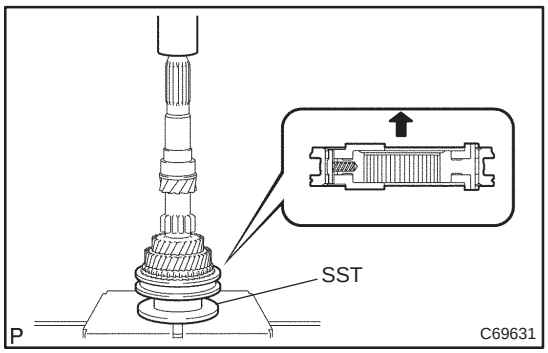
NOTICE:
Do not the transmission clutch hub sleeve No.2 and the transmission clutch hub No.2 incorrect orientation.

(c) Using a screwdriver, install the synchromesh shifting key to the input shaft.



22. INSTALL 3RD GEAR NEEDLE ROLLER BEARING

(a) Coat the 3rd gear bearing with gear oil, install it to the input shaft.

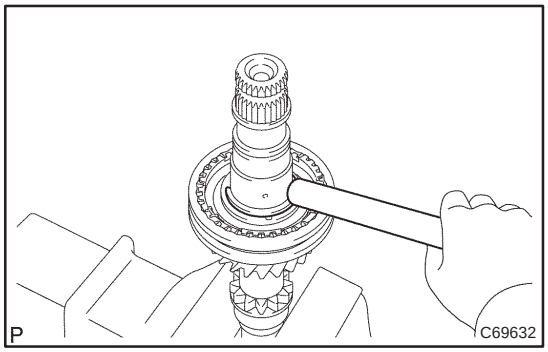


23. INSTALL 3RD GEAR

(a) Coat the 3rd gear with gear oil, install it to the input shaft.

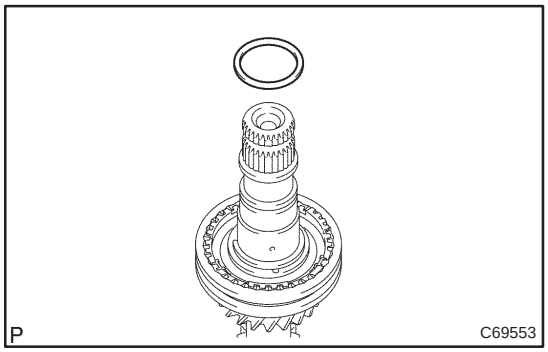
24. INSTALL SYNCHRONIZER RING NO.3

(a) Coat the synchronizer ring No.3 with gear oil, install it to the 3rd gear.



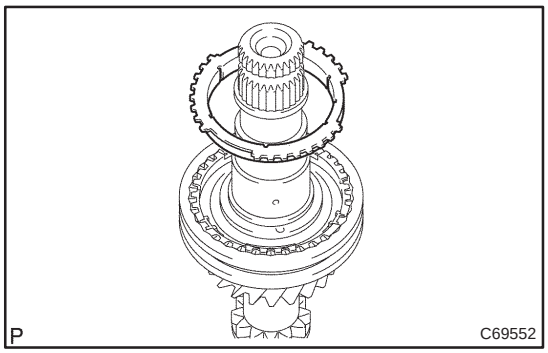
25. INSTALL TRANSMISSION CLUTCH HUB NO.2

(a) Using SST and a press, install the transmission clutch hub No.2 to the input shaft.
SST 09316–60011 (09316–00041)



NOTICE:

- **Align the claw of clutch hub No.2 and notch of synchronizer ring No.3 and install them.**
- **Make sure that the 3rd gear should rotate.**

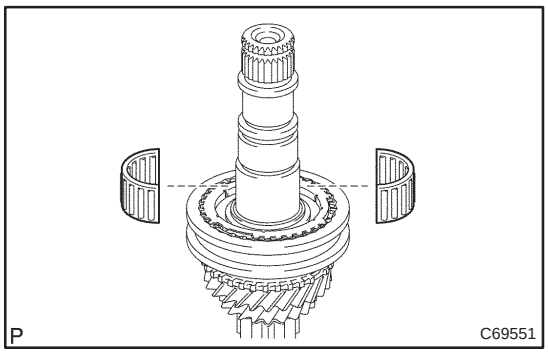


(b) Select a snap ring so that clearance between the transmission clutch hub No.2 and the clutch hub No.2 shaft snap ring will be the standard clearance. Using a brass bar and a hammer, install the snap ring.
Standard clearance:0.1 mm or less (0.0039 or less)
Snap ring thickness

Part No.	Thickness: mm (in.)	Mark
90520 – 34003	2.30 – 2.35 (0.0917 – 0.0933)	H
90520 – 34004	2.35 – 2.40 (0.0933 – 0.0953)	J
90520 – 34005	2.40 – 2.45 (0.0953 – 0.0973)	K
90520 – 34006	2.45 – 2.50 (0.0973 – 0.0993)	L
90520 – 34007	2.50 – 2.55 (0.0993 – 0.1012)	M
90520 – 34008	2.55 – 2.60 (0.1012 – 0.1032)	N
90520 – 34009	2.60 – 2.65 (0.1032–0.1052)	P

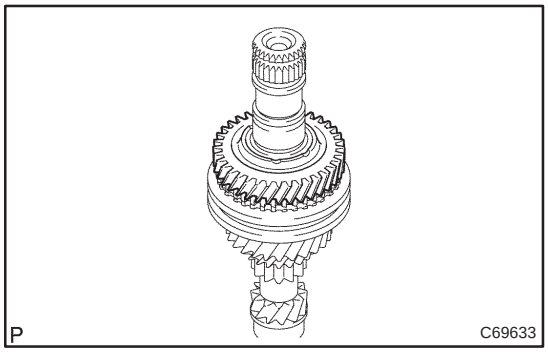
26. INSTALL 4TH GEAR BEARING SPACER

(a) Coat the 4th gear bearing spacer with gear oil,install it to the input shaft.



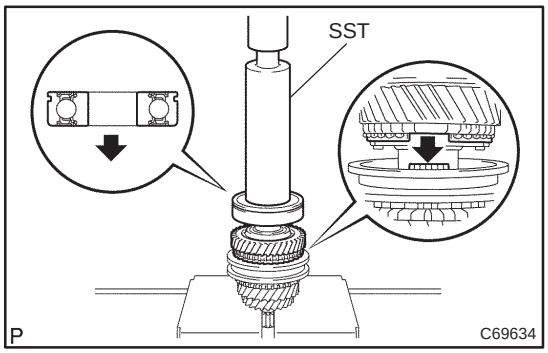
27. INSTALL 2ND SYNCHRONIZER OUTER RING

(a) Coat the 2nd synchronizer outer ring with gear oil, install it to the transmission the transmission clutch clutch hub No.2.



NOTICE:

Align the claw of the clutch hub No.2 with the noch of the 2nd synchronizer outer ring and assemble.

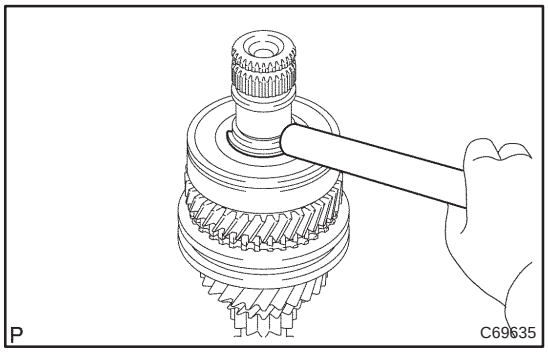


28. INSTALL 4TH GEAR NEEDLE ROLLER BEARING

(a) Coat the 4th gear needle roller bearing with gear oil, install it to the input shaft.

29. INSTALL 4TH GEAR

(a) Coat the 4th gear with gear oil, install it to the input shaft.

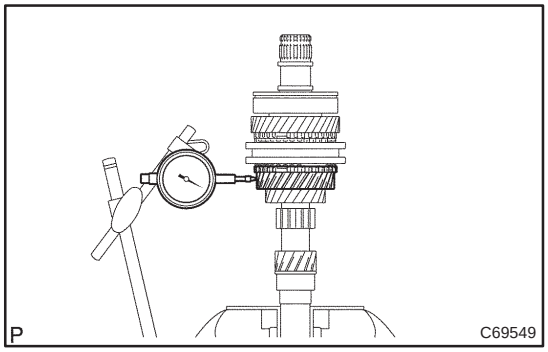


30. INSTALL INPUT SHAFT REAR RADIAL BALL BEARING

(a) Using SST and a press, install the input shaft rear radial ball bearing to the input shaft.
SST 09608–06041

NOTICE:

- **Make the groove on the bearing face to the rear and install.**
- **Make sure that the 3rd gear should rotate.**

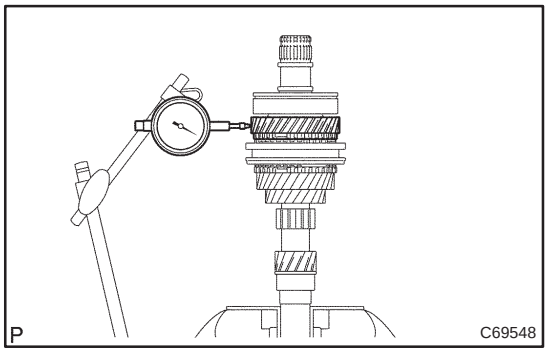


(b) Select a snap ring so that the clearance between the Input shaft radial ball rear bearing and the input shaft rear bearing snap ring will be the standard clearance. Using a brass bar and a hammer, install the snap ring.

Standard clearance:0.1 mm or less

Snap ring

Part No.	thickness: mm (in.)	Mark
90520–30008	2.35 – 2.40 (0.0935 – 0.0953)	1
90520–30009	2.40 – 2.45 (0.0953 – 0.0973)	2
90520–30010	2.45 – 2.50 (0.0973 – 0.0993)	3
90520–30011	2.50 – 2.55 (0.0993 – 0.1012)	4
90520–30012	2.55 – 2.60 (0.1012 – 0.1032)	5
90520–30013	2.60 – 2.65 (0.1032 – 0.1052)	6
90520–30021	2.65 – 2.70 (0.1052 – 0.1072)	7
90520–30022	2.70 – 2.75 (0.1072 – 0.1092)	8



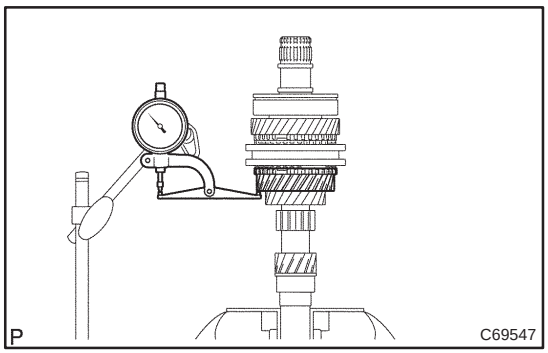
31. INSPECT 3RD GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 3rd gear radial clearance.

Standard clearance: mm (in.)

Bearing	Standard clearance
KOYO made	0.009 – 0.053 (0.0004 – 0.0021)
NSK made	0.009 – 0.051 (0.0004 – 0.0020)

If the clearance exceeds the maximum, replace the 3rd gear needle roller bearing.

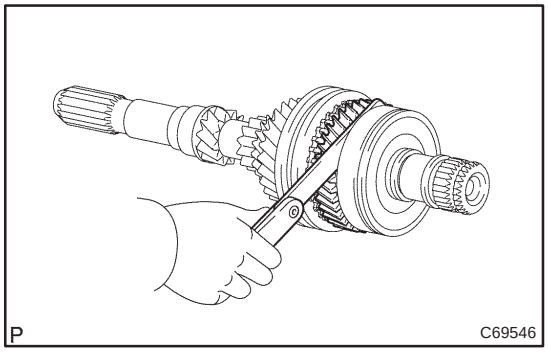


32. INSPECT 4TH GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 4th gear radial clearance.

Standard clearance: mm (in.)

Bearing	Standard clearance
KOYO made	0.009 – 0.053 (0.0004 – 0.0021)
NSK made	0.009 – 0.051 (0.0004 – 0.0020)



If the clearance exceeds the maximum, replace the 4th gear needle roller bearing.

33. INSPECT 3RD GEAR THRUST CLEARANCE

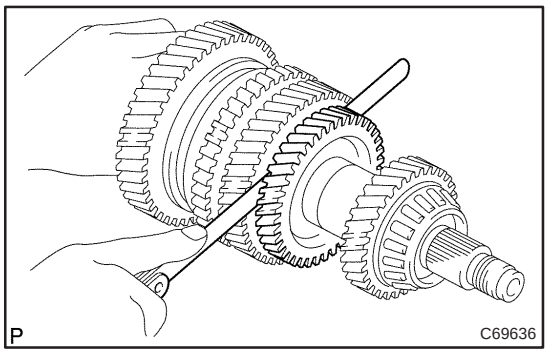
(a) Using a dial indicator, measure the 3rd gear thrust clearance.

Standard clearance:
0.1 – 0.35 mm (0.0039 – 0.0139 in.)

34. INSPECT 4TH GEAR THRUST CLEARANCE

(a) Using a feeler gauge, measure the 4th gear thrust clearance.

Standard clearance:
0.1 – 0.57 mm (0.0039 – 0.0226 in.)



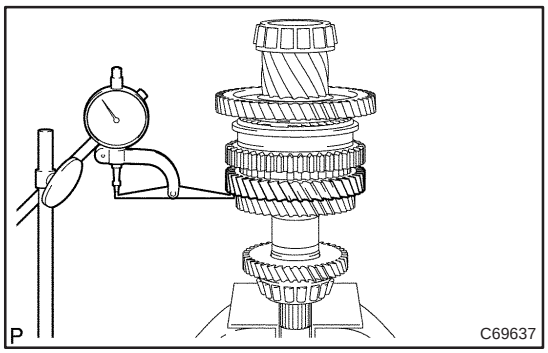
OUTPUT SHAFT ASSY (E355/E356)

4103Y–01

OVERHAUL

HINT:

COMPONENTS:See page 41–1

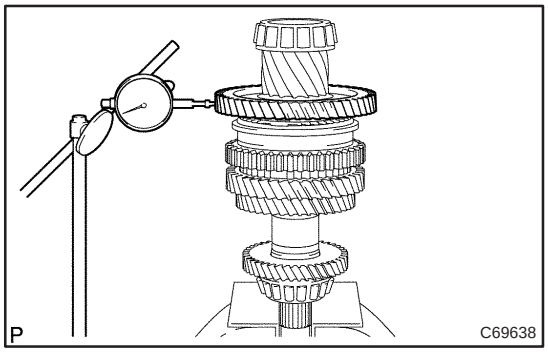


1. INSPECT 1ST GEAR THRUST CLEARANCE

(a) Using a fleer gauge, measure the 1st gear thrust clearance.

Standard clearance:

0.25 – 0.4 mm (0.0099 – 0.0159 in.)

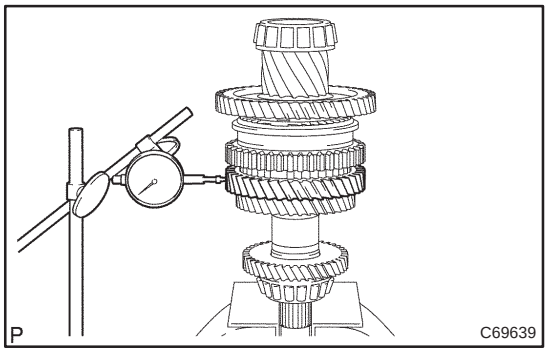


2. INSPECT 2ND GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 2nd gear thrust clearance.

Standard clearance:

0.1 – 0.35 mm (0.0004 – 0.0139 in.)



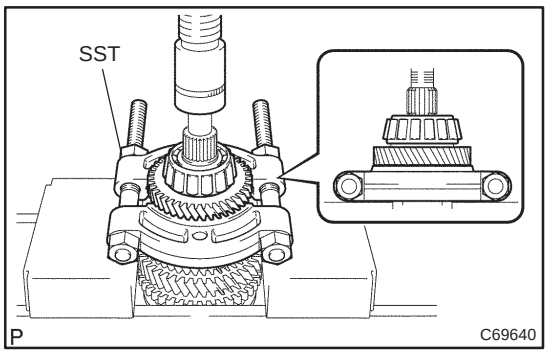
3. INSPECT 1ST GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 1st gear radial clearance.

Standard clearance:mm (in.)

Bearing	Standard clearance
KOYO made	0.009 – 0.053 (0.0004 – 0.0021)
NSK made	0.009 – 0.051 (0.0004 – 0.0020)

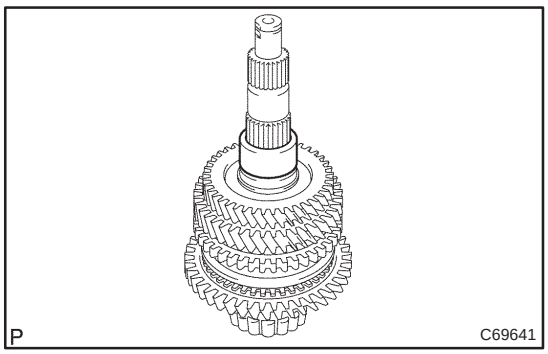
If the clearance is out of the specification, replace the 1st gear needle roller bearing.



4. INSPECT 2ND GEAR RADIAL CLEARANCE

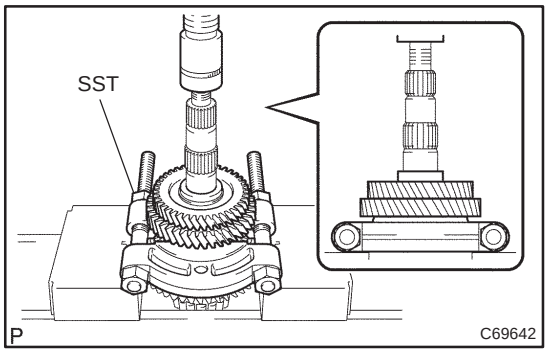
(a) Using a dial indicator, measure the 2nd gear radial clearance.

Standard clearance:mm (in.)



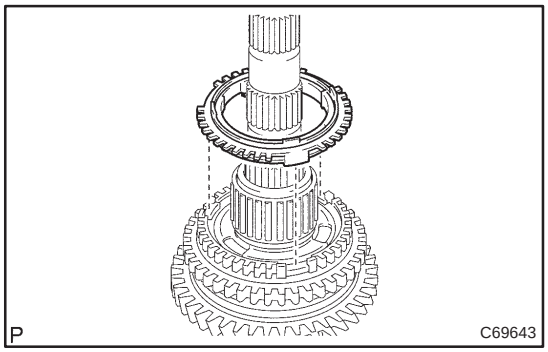
Bearing	Standard clearance
KOYO made	0.009 – 0.053 (0.0004 – 0.0021)
NSK made	0.009 – 0.051 (0.0004 – 0.0020)

If the clearance is out of the specification, replace the 2nd gear needle roller bearing.



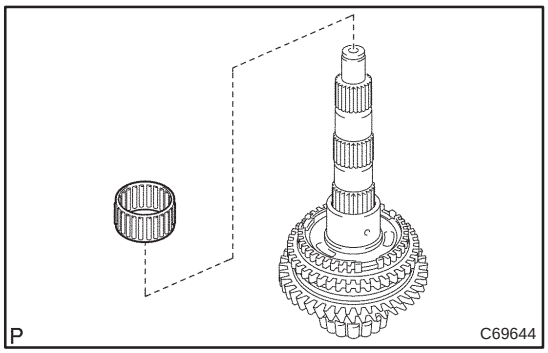
5. REMOVE 4TH DRIVEN GEAR

(a) Using SST and a press, remove the output shaft bearing rear (inner race) and 4th driven gear.
SST 09950–00020



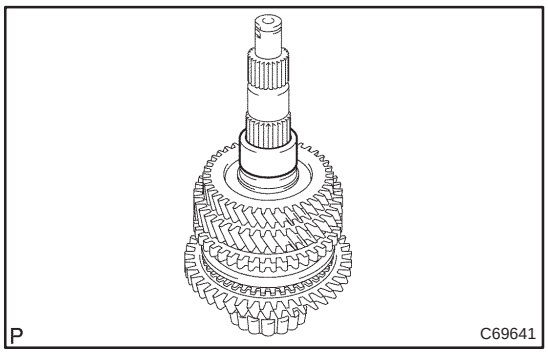
6. REMOVE OUTPUT GEAR SPACER

(a) Remove the out put gear spacer from the output shaft.



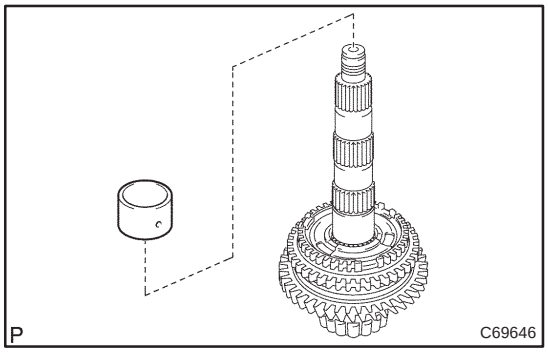
7. REMOVE 2ND GEAR

(a) Using SST and a press, remove the 3rd driven gear and 2nd gear from the out put shaft.
SST 09950–00020



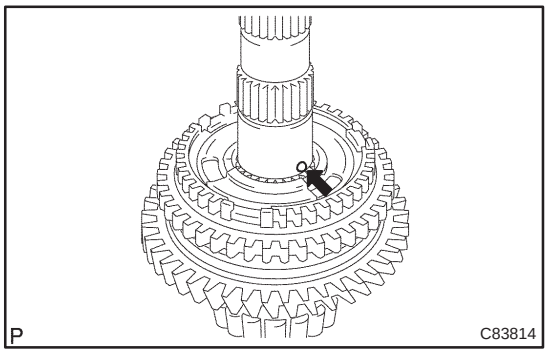
8. REMOVE SYNCHRONIZER RING SET NO.2

(a) Remove the synchronizer ring set No.2 from the transmission clutch hub No.1.



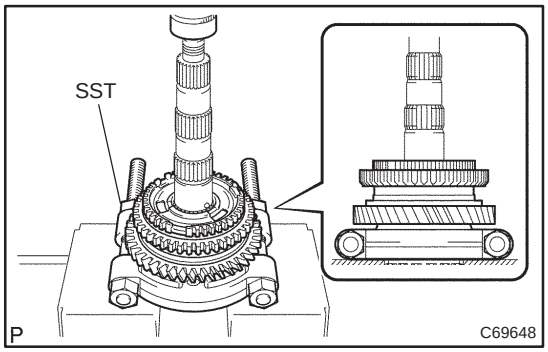
9. REMOVE 2ND GEAR NEEDLE ROLLER BEARING

(a) Remove the 2nd gear needle roller bearing from the output shaft.



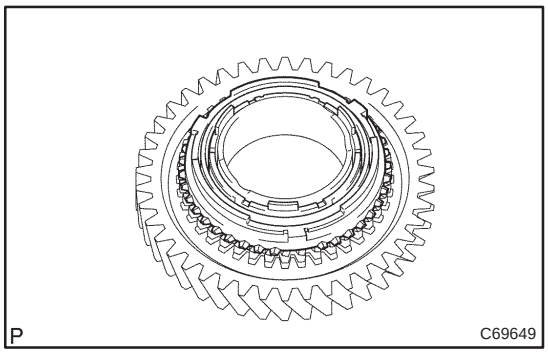
10. REMOVE 2ND GEAR BEARING SPACER

(a) Remove the 2nd gear bearing spacer from the output shaft.



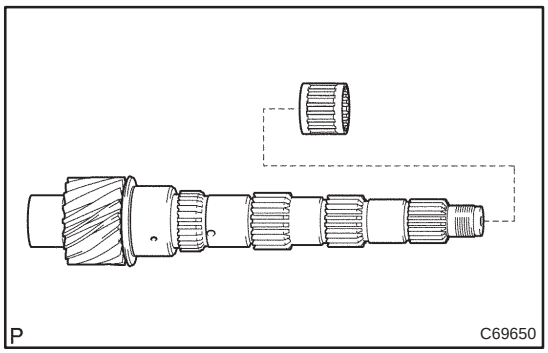
11. REMOVE 2ND GEAR BUSH

(a) Remove the 2nd gear bush from the output shaft.



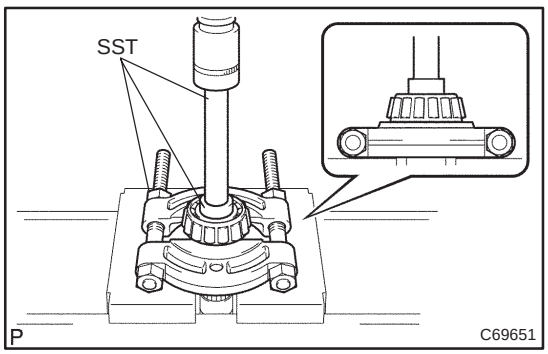
12. REMOVE 2ND GEAR BUSH BALL

(a) Using a magnetic finger, remove the 2nd gear bush ball from the output shaft.



13. REMOVE 1ST GEAR

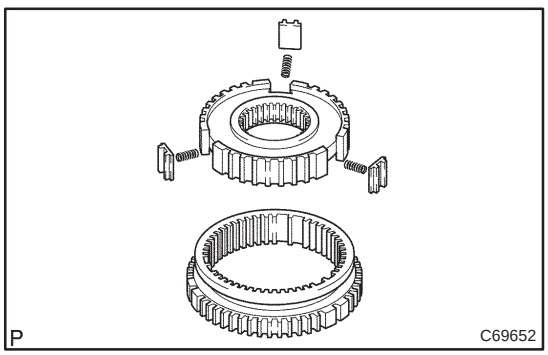
(a) Using SST and a press, remove the transmission clutch hub No.1 and 1st gear from the output shaft.
SST 09950–00020



14. REMOVE SYNCHRONIZER RING SET NO.1

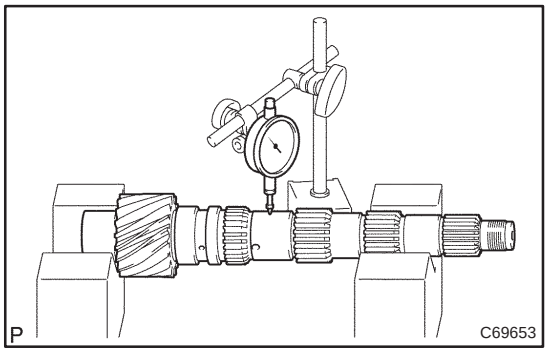
(a) Remove the synchronizer ring set No.1 from the 1st gear.

15. REMOVE 1ST GEAR NEEDLE ROLLER BEARING



(a) Remove the 1st gear needle roller bearing from the output shaft.

16. REMOVE OUTPUT SHAFT FRONT BEARING

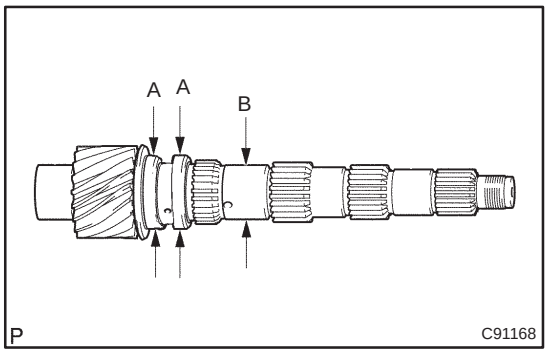


(a) Using SST and a press, remove the output shaft front bearing (inner race) from the output shaft.
SST 09950–00020, 09950–60010 (09951–00320), 09950–70010 (09951–07150)

NOTICE:
Do not tighten SST excessively.

17. REMOVE REVERSE GEAR

(a) Remove the reverse gear, 3 synchromesh shifting keys and 3 synchromesh shifting key springs from the transmission clutch hub No.1.

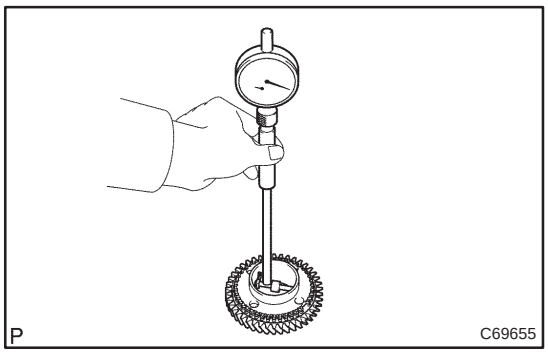


18. INSPECT OUTPUT SHAFT

(a) Using V – block and a dial indicator, measure the shaft run out.

Maximum run out:0.03 mm (0.0012 in.)

If the run out exceeds the maximum, replace the input shaft.

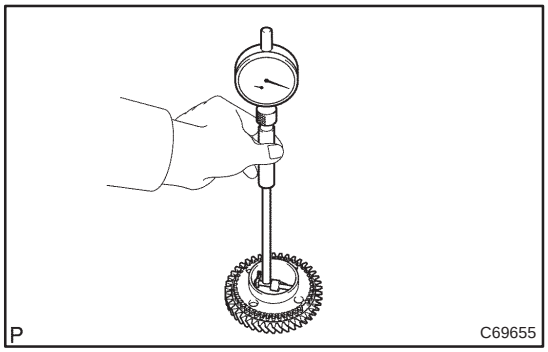


(b) Using a micrometer, measure the outer diameter of the output shaft jarnal surface.

Outer diameter: mm (in.)

Part	Standard outer diameter	minimum outer diameter
A	37.610 – 37.626 (1.4931 – 1.4938)	37.610 (1.4931)
B	34.802 – 34.512 (1.3816 – 1.3701)	34.802 (1.3816)

If the outer diameter is less than the minimum replace the input shaft.



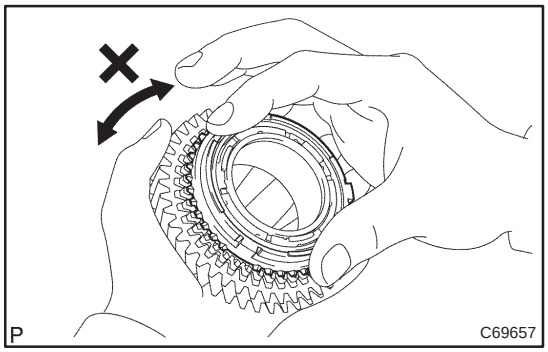
19. INSPECT 2ND GEAR

(a) Using a cylinder gauge, measure the inside diameter of the 2 nd gear.

Inside diameter: mm (in.)

Standard inside diameter	Maximum inside diameter
50.009–50.025 (1.9854 – 1.9860)	50.025 (1.9860)

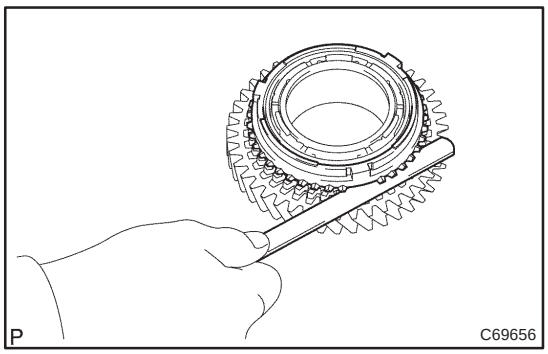
If the inside diameter exceeds the maximum, replace the 2nd gear.



20. INSPECT 1ST GEAR

(a) Using a cylinder gauge, measure the inside diameter of the 1st gear.

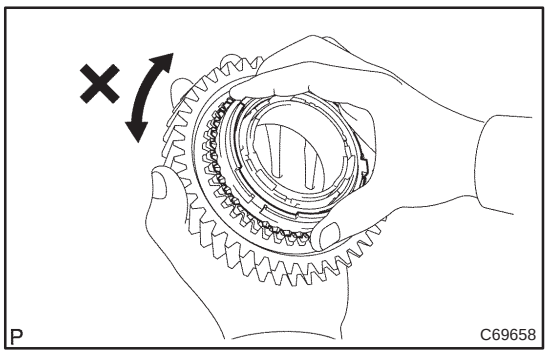
Inside diameter: mm (in.)



Standard inside diameter	Maximum inside diameter
51.009–51.025 (2.0250 – 2.0257)	51.025 (2.0257)

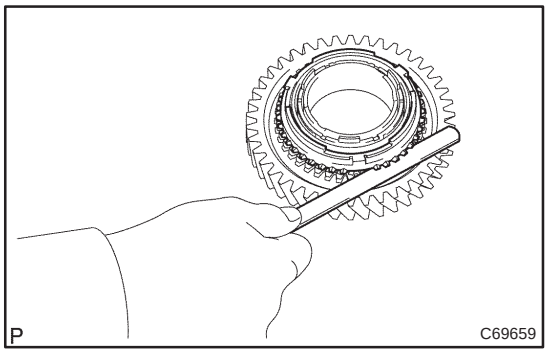
If the inside diameter exceeds the maximum, replace the 1st gear.

21. INSPECT SYNCHRONIZER RING SET NO.2



(a) Coat the cone of the 2nd gear with gear oil, check that it does not turn in the both circumference directions wile pushing it to the synchronizer ring No.2.

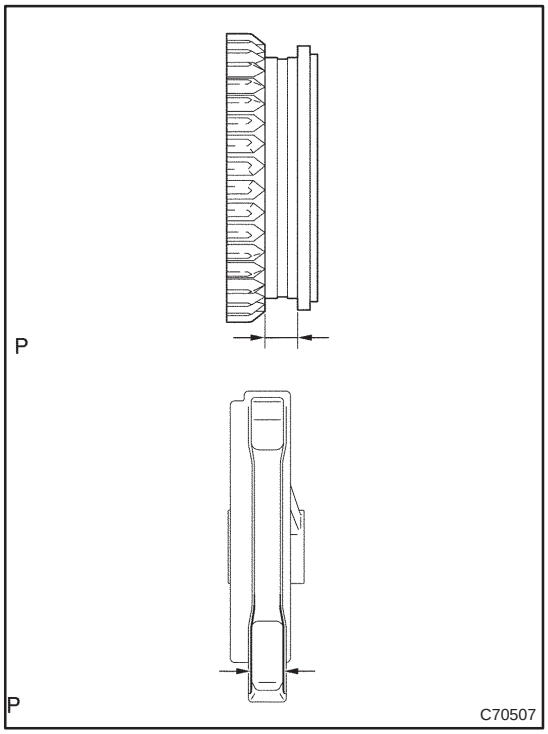
(b) Check the clearance between the synchronizer ring No.2 and 2nd gear while pushing it to the synchronizer ring No.2.



Standard clearance:
0.70 – 1.45 mm (0.0278 – 0.0576 in.)

If the standard clearance is out of the specification, replace the synchronizer ring set No.2 with a new one.

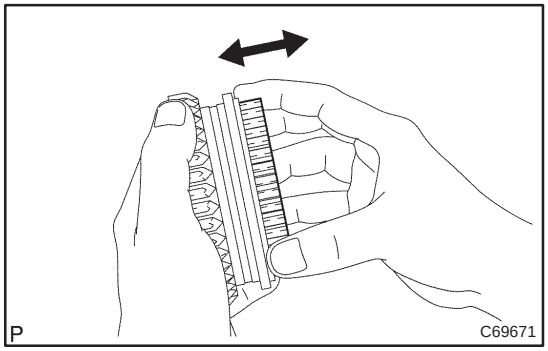
22. INSPECT SYNCHRONIZER RING SET NO.1



(a) Coat the 1st gear cone with gear oil. Turn the synchronizer ring set No.1. in one direction while pushing it to the 1st gear cone. Check that the ring locks.

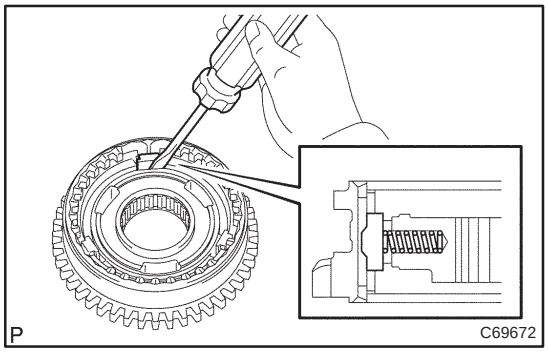
(b) Check the clearance between the synchronizer ring set No.1 and 1st gear while pushing it to the cone of synchronizer ring set No.1.

Standard clearance:
0.70 – 1.45 mm (0.0278 – 0.0576 in.)



If the standard clearance is out of the specification, replace the synchronizer ring set No.1 with a new one.

23. INSPECT REVERSE GEAR

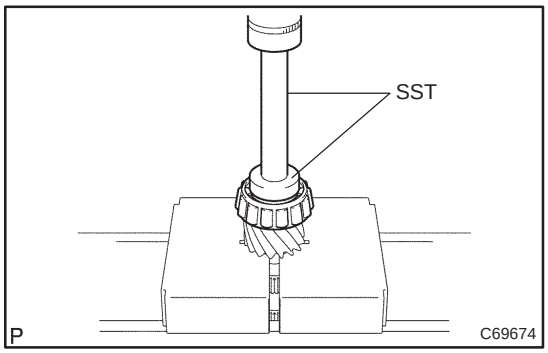


(a) Using a vernier calipers, measure the reverse gear groove and thickness of the claw part on gear shift fork No.1, and calculate
Standard clearance:
0.15 – 0.35 mm (0.0060 – 0.0139 in.)

If the clearance is bout of the specification, replace the reverse gear and gear shift fork No.1 with the new one.

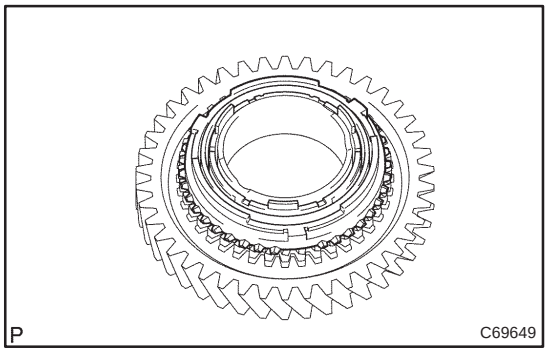
24. INSPECT TRANSMISSION CLUTCH HUB NO.1

(a) Check the sliding condition between the transmission clutch hub No.1 and reverse gear.
(b) Check the tip of spline gear on the sleeve of reverse gear for wear.



25. INSTALL REVERSE GEAR

(a) Coat the reverse gear with gear oil.
(b) Install the 3 synchromesh shifting key spring No.1 and transmission clutch hub No.1 to the reverse gear.

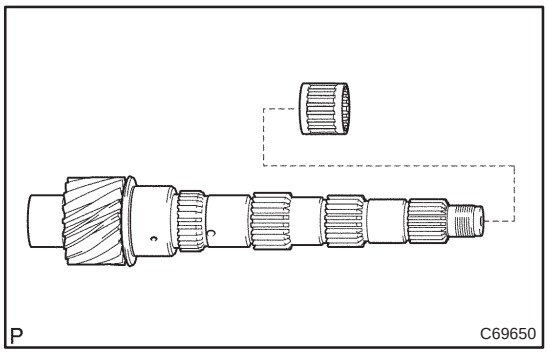


NOTICE:
Do not set the reverse gear and the transmission clutch hub No.1 in incorrect direction.

(c) Using a screwdriver, install the synchromesh sifting key No.1 to the reverse gear.

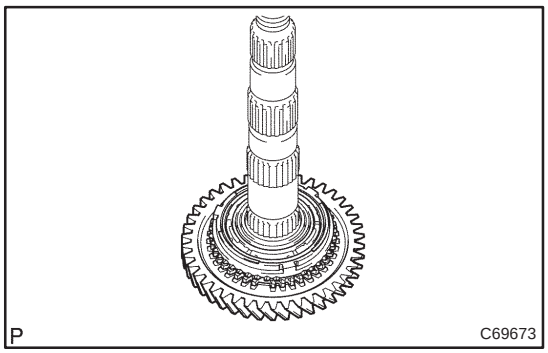
26. INSTALL OUTPUT SHAFT FRONT BEARING

(a) Using SST and a press, install the output shaft front bearing (inner race) to the output shaft.
SST 09950–60010 (09951–00430), 09950–70010 (09951–07150)



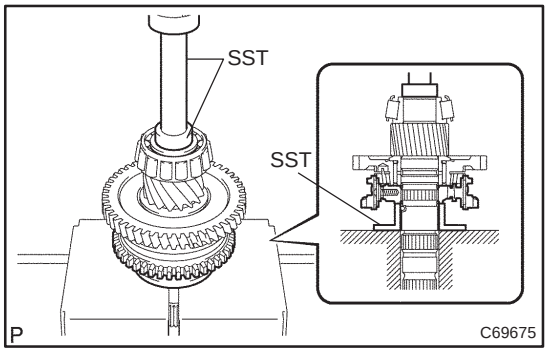
27. INSTALL SYNCHRONIZER RING SET NO.1

(a) Coat the synchronizer ring set No.1 with gear oil, install it to the 1st gear.



NOTICE:

Align the synchronizer ring set No.1 with the hole of 1st gear and install.

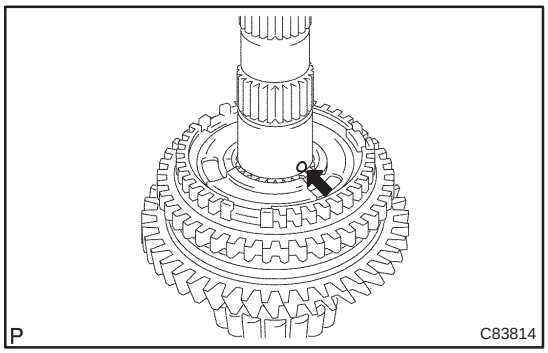


28. INSTALL 1ST GEAR NEEDLE ROLLER BEARING

(a) Coat the 1st gear needle roller bearing with gear oil,install it to the output shaft.

29. INSTALL 1ST GEAR

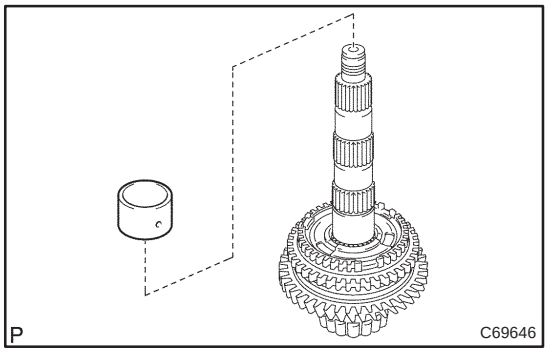
(a) Coat the 1st gear with gear oil, install it to the output shaft.



30. INSTALL TRANSMISSION CLUTCH HUB NO.1

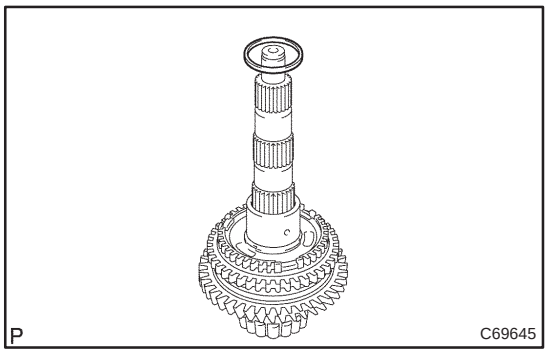
(a) Using SST and a press, install transmission clutch hub No.1 to the output shaft.

SST 09316–60011 (09316–00031), 09950–60010 (09951–00320), 09950–70010 (09951–07100)



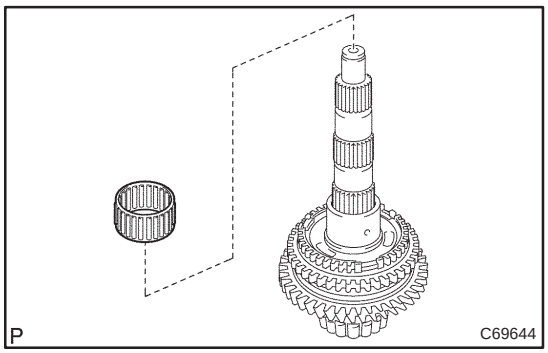
NOTICE:

- **Align the synchronizer ring No.1 with synchromesh shifting key No.1 and install.**
- **Make sure that the 1st gear rotates.**



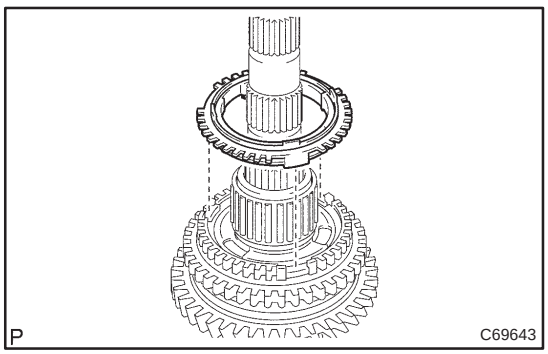
31. INSTALL 2ND GEAR BUSH BALL

(a) Coat the gear bush with MP grease, install it to the output shaft.



32. INSTALL 2ND GEAR BUSH

(a) Coat the gear 2nd gear bush with gear oil, install it to the output shaft.

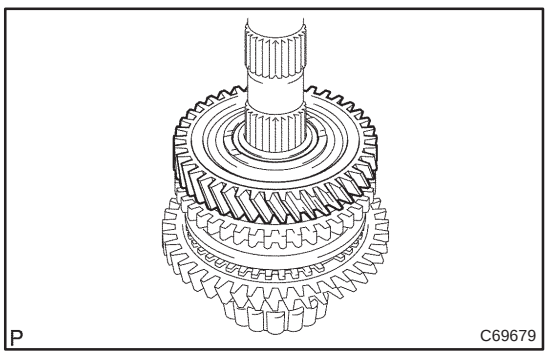


33. INSTALL 2ND GEAR BEARING SPACER

(a) Coat the gear 2nd gear bearing spacer with gear oil, install it to the output shaft.

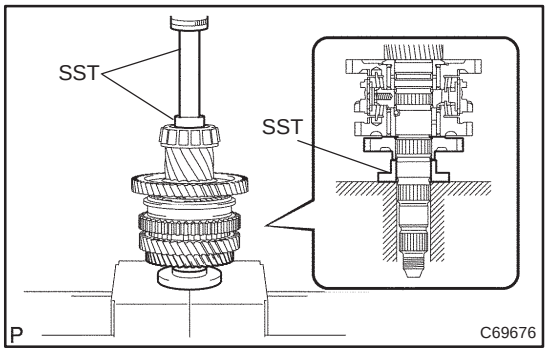
34. INSTALL 2ND GEAR NEEDLE ROLLER BEARING

(a) Coat the 2nd gear needle roller bearing with gear oil, install it to the output shaft.



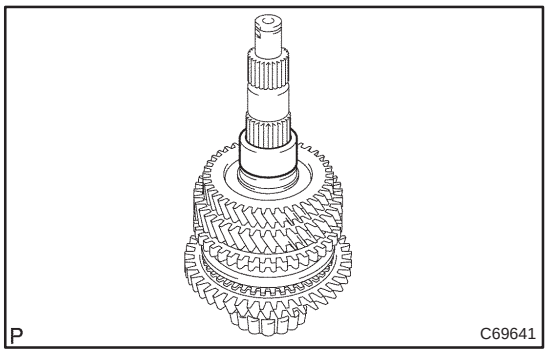
35. INSTALL SYNCHRONIZER RING SET NO.2

(a) Coat the synchronizer ring set No.2 with gear oil, install it to the transmission clutch hub No.1



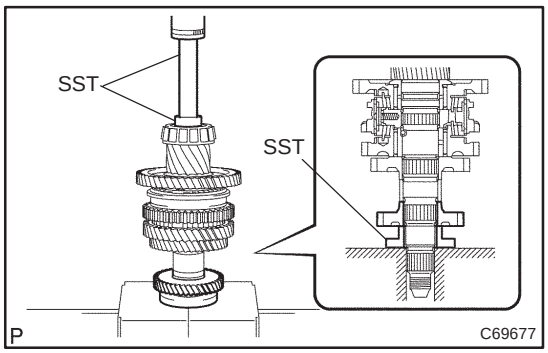
NOTICE:

Align the key groove on the synchronizer ring set No.2 with the synchromesh shifting key No.1.



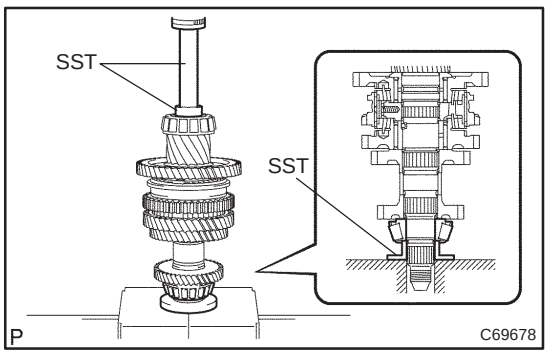
36. INSTALL 2ND GEAR

(a) Coat the 2nd gear with gear oil, install it to the output shaft.



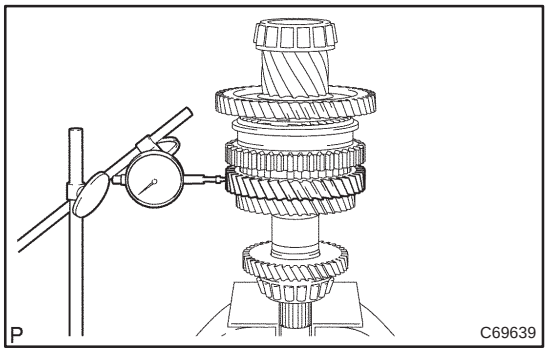
37. INSTALL 3RD DRIVEN GEAR

(a) Using SST and a press, install the 3rd driven gear to the output shaft.
SST 09608–00071, 09950–60010 (09951–00320), 09950–70010 (09951–07100)



38. INSTALL OUTPUT GEAR SPACER

(a) install the output gear spacer to the output shaft.

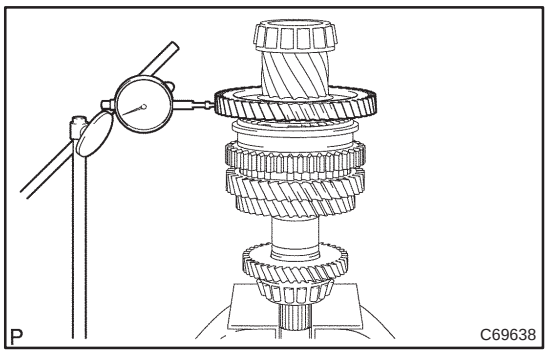


39. INSTALL 4TH DRIVEN GEAR

(a) Using SST and a press, install the 4th driven gear to the output shaft.
SST 09608–00071, 09950–60010 (09951–00320), 09950–70010 (09951–07100)

40. INSTALL OUTPUT SHAFT FRONT BEARING

(a) Using SST and a press, install the output shaft front bearing (inner race) to the output shaft.
SST 09506–30012, 09950–60010 (09951–00320), 09950–70010 (09951–07100)



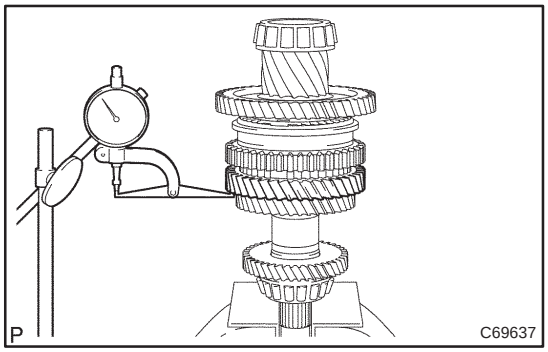
41. INSPECT 2ND GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 2nd gear radial clearance.

Standard clearance:mm (in.)

Bearing	Standard clearance
KOYO made	0.009 – 0.053 (0.0004 – 0.0021)
NSK made	0.009 – 0.051 (0.0004 – 0.0020)

If the clearance is out of the specification, replace the 2nd gear needle roller bearing.



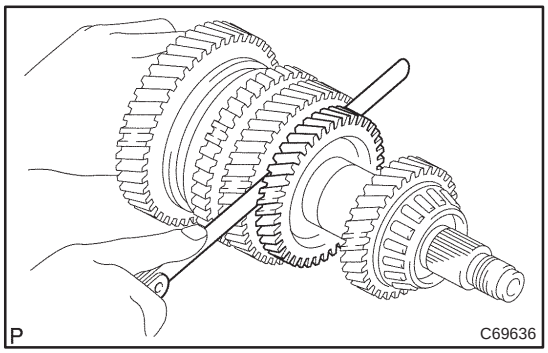
42. INSPECT 1ST GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 1st gear radial clearance.

Standard clearance:mm (in.)

Bearing	Standard clearance
KOYO made	0.009 – 0.053 (0.0004 – 0.0021)
NSK made	0.009 – 0.051 (0.0004 – 0.0020)

If the clearance is out of the specification, replace the 1st gear needle roller bearing.



43. INSPECT 2ND GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 2nd gear thrust clearance.

Standard clearance:
0.1 – 0.35 mm (0.0039 – 0.0139 in.)

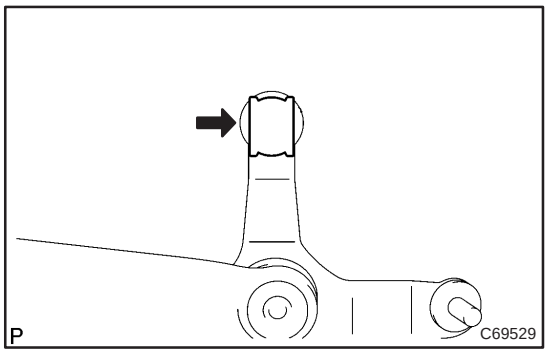
(b) Using a fleer gauge, measure the 1st gear thrust clearance.

Standard clearance:
0.25 – 0.4 mm (0.099 – 0.0159 in.)

44. INSPECT 1ST GEAR THRUST CLEARANCE

(a) Using a fleer gauge, measure the 1st gear thrust clearance.

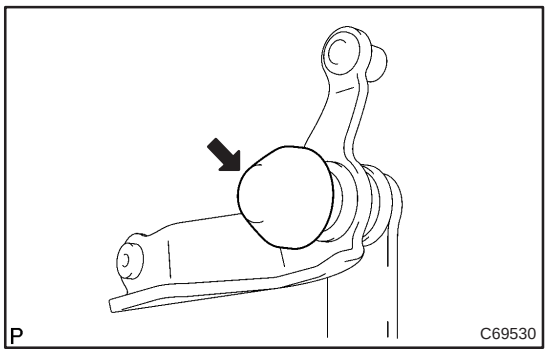
Standard clearance:
0.25 – 0.4 mm (0.099 in. – 0.0159 in.)



SHIFT & SELECT LEVER SHAFT ASSY (E355/E356)

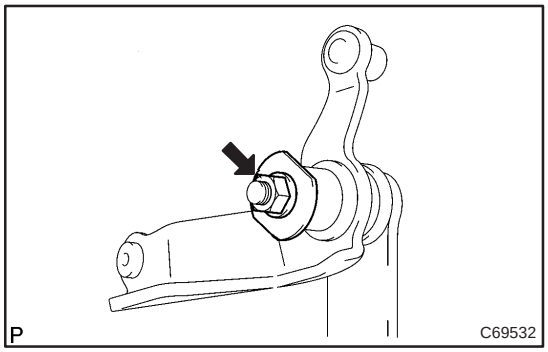
41041–01

OVERHAUL



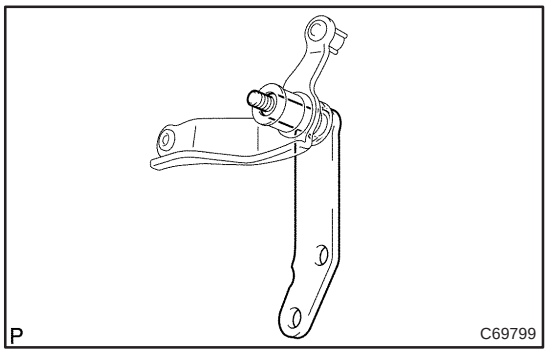
HINT:

COMPONENTS: See page 41–1



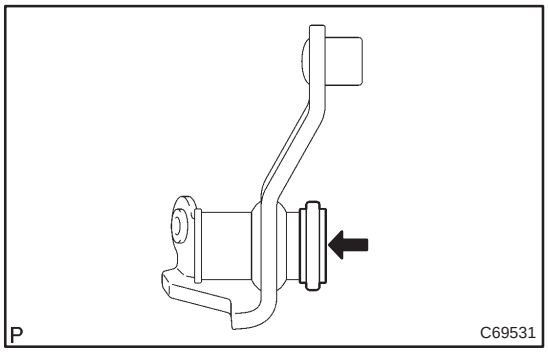
1. REMOVE CONTROL SHIFT LEVER BUSH

(a) Remove the control shift lever bush from the selecting bellcrank No.2.



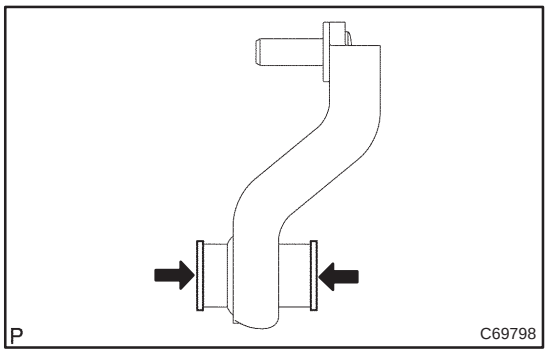
2. REMOVE SELECTING BELLCRANK DUST COVER NO.1

(a) Remove the selecting bellcrank dust cover No.1 from the selecting bellcrank No.2.

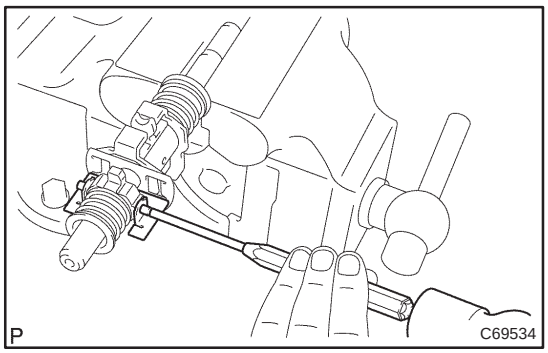


3. REMOVE SELECTING BELLCRANK SUPPORT SUB–ASSY

(a) Remove the nut, washer and selecting bell crank No.2 plate washer from the selecting bellcrank No.2.



(b) Remove the selecting bellcrank support sub–assy from the selecting bell crank No.2.



4. REMOVE SELECTING BELLCRANK DUST COVER NO.2

(a) Remove the selecting bell crank dust cover No.2 from the selecting bellcrank no.2.

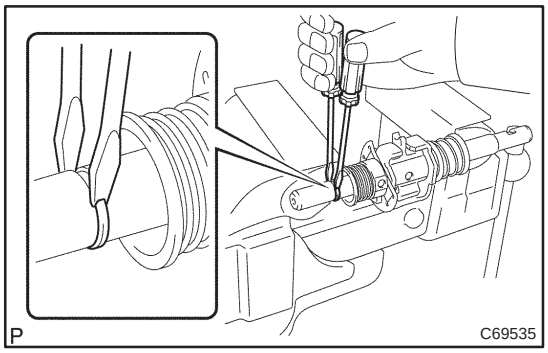
5. REMOVE SELECTING BELLCRANK NO.2 BUSH

(a) Remove the selecting bellcrank bush from the selecting bellcrank No.2.

6. REMOVE SHIFT LEVER INNER NO.2

(a) Fix the shift & select lever on the the vise through the soft jaw.

NOTICE:

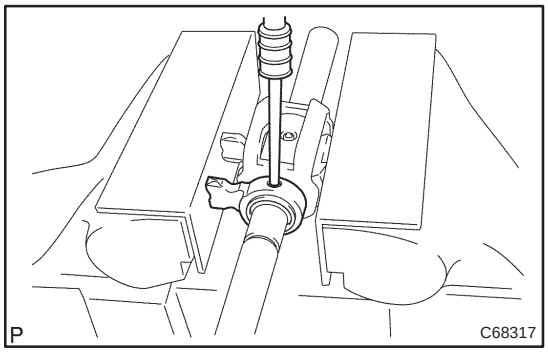


Do not damage the shift & select lever shaft.

(b) Using a pin punch(ϕ 5 mm), remove the shift & select lever inner slotted pin and oil baffle.

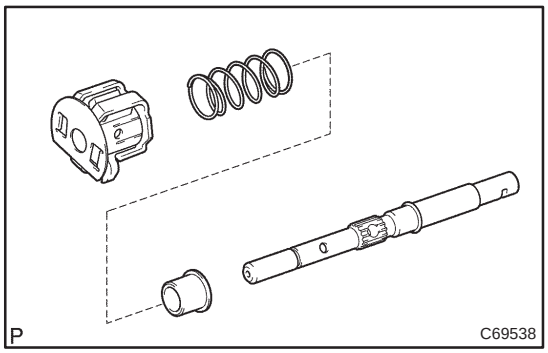
NOTICE:

Do not damage the shift & select lever shaft.



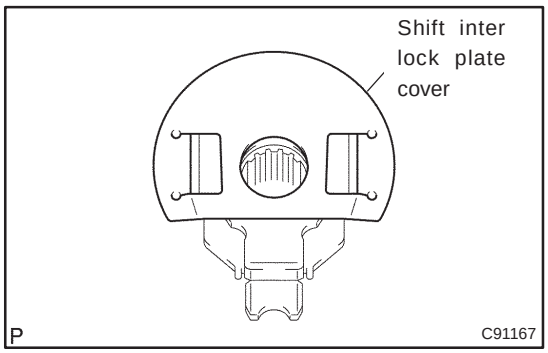
(c) Apply the force to the select return spring No.1 and select return spring No.2 and fix it on the vise through the soft jaw.

(d) Using 2 screwdrivers and a hammer, remove the select seat snap ring from the shift & select lever shaft.



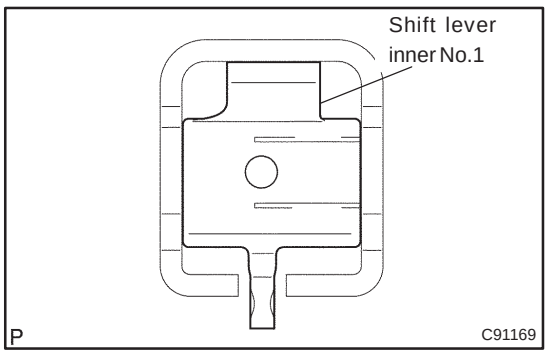
NOTICE:

Do not damage the shift & select lever shaft.

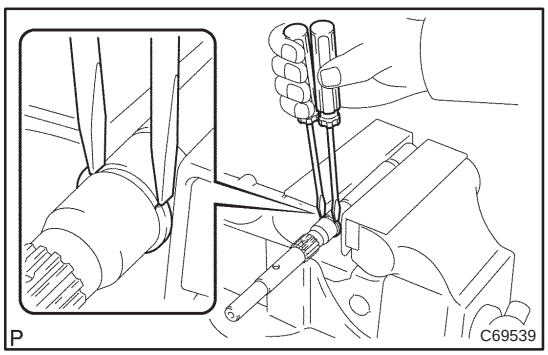


7. REMOVE SELECT SPRING SEAT NO.1

(a) Using a pin punch(ϕ 5 mm), remove the shift inner lever slotted pin from the shift & select lever shaft.



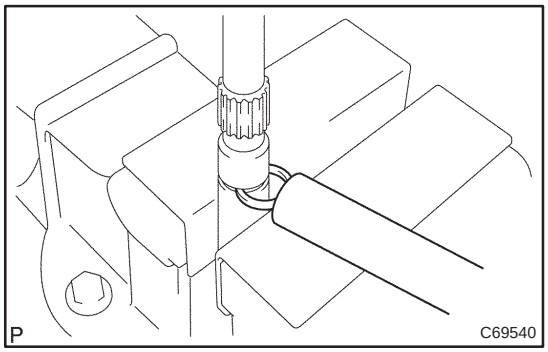
(b) Remove the shift lever assy select return spring No.1 and select spring seat from the shift & select lever shaft.



8. REMOVE SHIFT INTER LOCK PLATE COVER

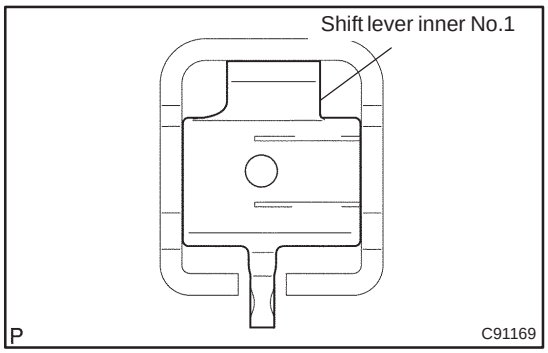
(a) Remove the shift inter lock plate cover from the shift inter lock plate.

9. REMOVE SHIFT LEVER INNER NO.1



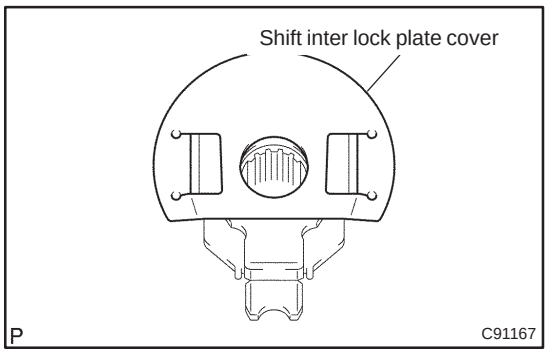
(a) Remove the shift lever inner No.1 from the shift inter lock plate.

10. REMOVE SELECT SPRING NO.1 SEAT SHAFT SNAP RING



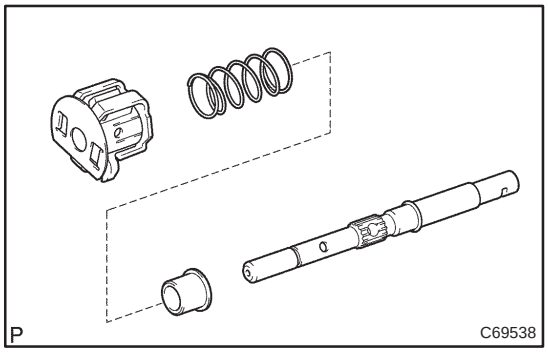
(a) Using 2 screwdrivers and a hammer, remove the select spring No.1 seat shaft snap ring.

NOTICE:
Do not damage the shaft.



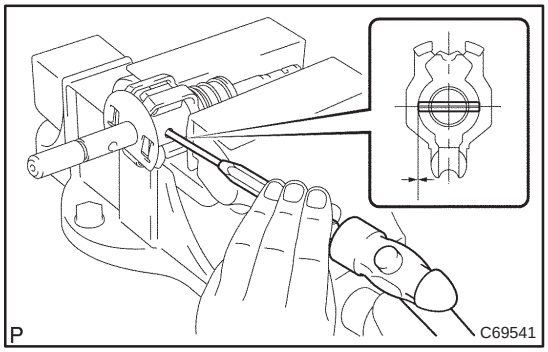
11. INSTALL SELECT SPRING NO.1 SEAT SHAFT SNAP RING

(a) Using a brass bar and a hammer, install the select spring No.1 seat shaft snap ring.



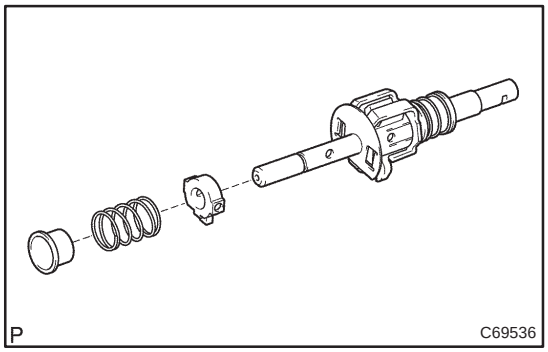
12. INSTALL SHIFT LEVER INNER NO.1

(a) Install the shift lever inner No.1 to the shift inter lock plate.



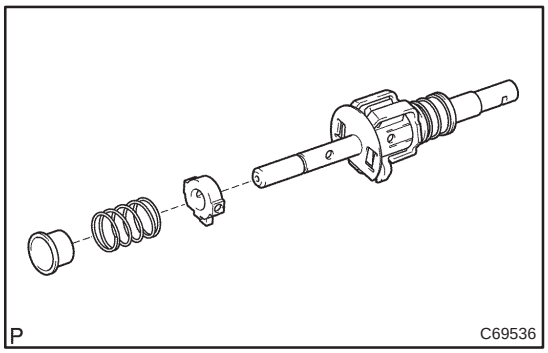
13. INSTALL SHIFT INTER LOCK PLATE COVER

(a) Install the shift inter lock plate cover to the shift inter lock plate.

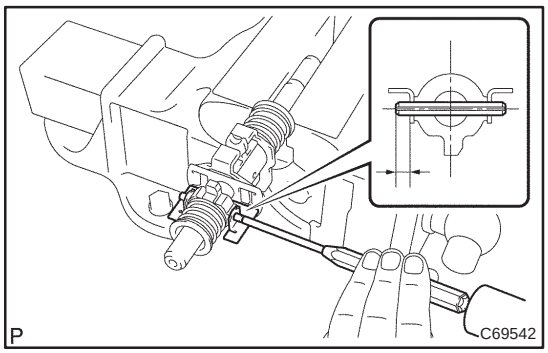


14. INSTALL SELECT SPRING SEAT NO.1

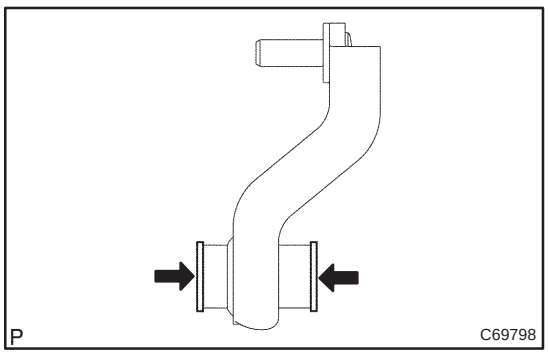
(a) Install the select spring seat No.1, select return spring No.1 and shift lever inner assy to the shift & select lever shaft.



(b) Fix the shift & select lever on the vise through the soft jaw.
(c) Using a pin punch(ϕ 5 mm), install the shift lever slotted pin to the shift & select lever shaft.
Clearance:–0.5 – 0.5 mm (– 0.0199 – 0.0199 in.)

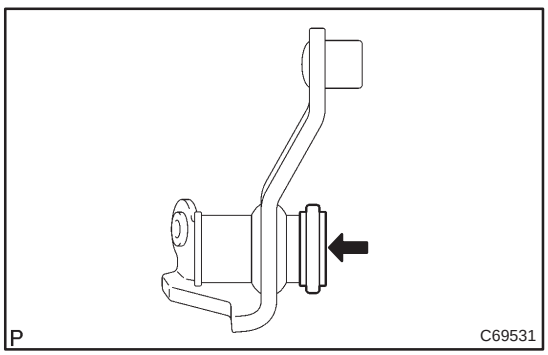


15. INSTALL SHIFT LEVER INNER NO.2

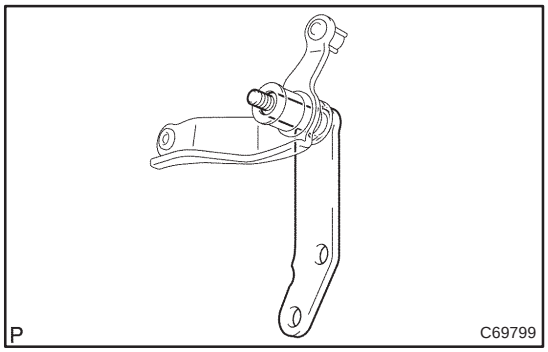


(a) shift lever inner No.2, select return spring No.2 and select return spring seat No.2 to the shift & select lever shaft.

(b) Using a brass bar and a hammer, install the select seat snap ring to the shift & select lever shaft.

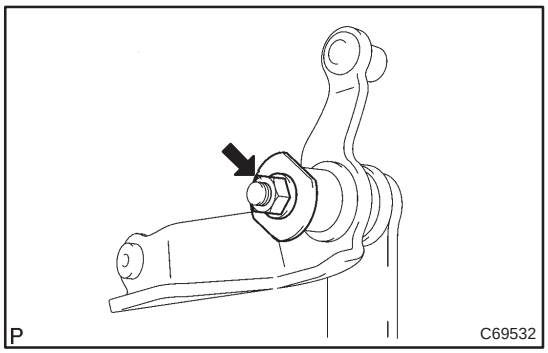


(c) Install the transmission oil baffle. Using a pin punch(ϕ 5 mm) and a hammer, install the shift inner lever slotted pin to the shift & select lever shaft.
Clearance:5.8 – 6.8mm (0.2303 – 0.2700 in.)



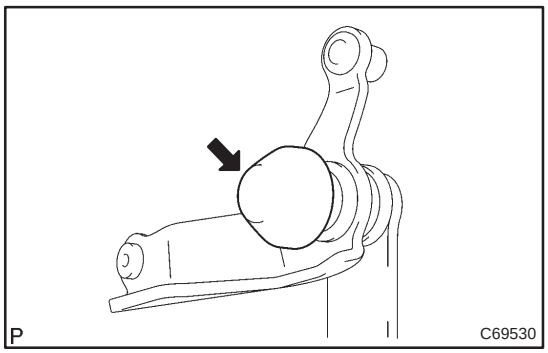
16. INSTALL SELECTING BELLCRANK NO.2 BUSH

(a) Coat the 2 selecting bellcrank No.2 bushes with MP grease, install it to the selecting bellcrank No.2.



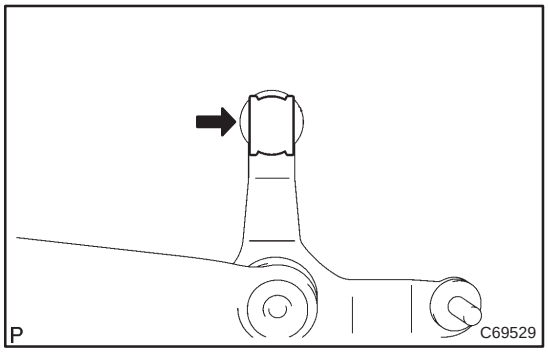
17. INSTALL SELECTING BELLCRANK DUST COVER NO.2

(a) Coat the selecting bellcrank dust cover No.2 with MP grease, install it to the selecting bellcrank No.2.



18. INSTALL SELECTING BELLCRANK SUPPORT SUB–ASSY

(a) Install the selecting bellcrank support sub–assy to the selecting bellcrank No.2.



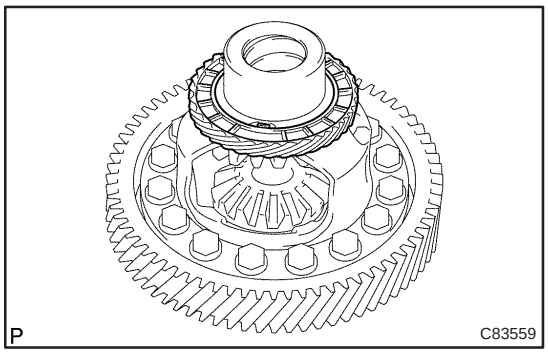
(b) Install the selecting bellcrank No.2 plate washer, washer and nut.
Torque:12N·m (120 kgf·cm, 9 ft·lbf)

19. INSTALL SELECTING BELLCRANK DUST COVER NO.1

(a) Install the selecting bellcrank dust cover No.1 to the selecting bellcrank No.2.

20. INSTALL CONTROL SHIFT LEVER BUSH

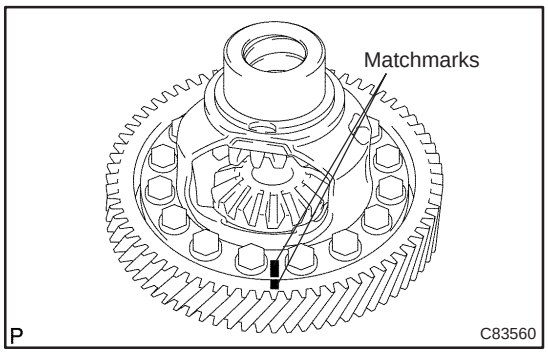
(a) Install the control shift lever bush to the selecting bell crank No.2.



DIFFERENTIAL CASE ASSY (E355/E356)

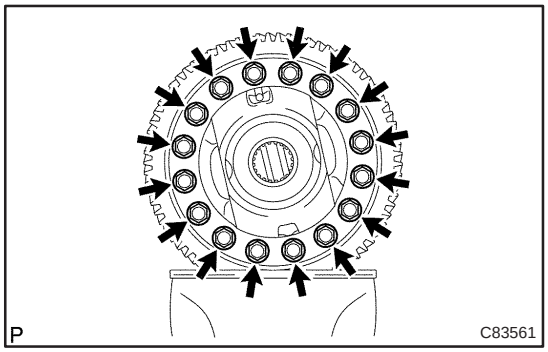
4103Z–01

OVERHAUL



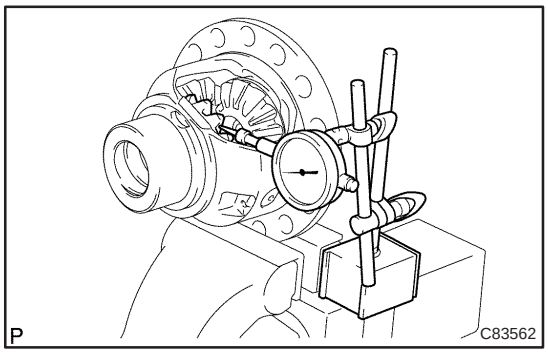
HINT:

COMPONENTS: See page 41–1



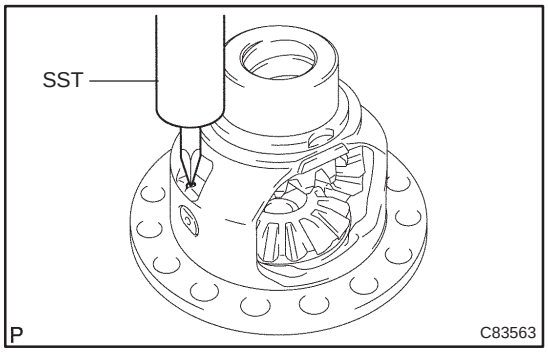
1. REMOVE SPEEDOMETER DRIVE (MTM) GEAR

(a) Remove the speedometer drive (MTM) gear from front differential case assy.



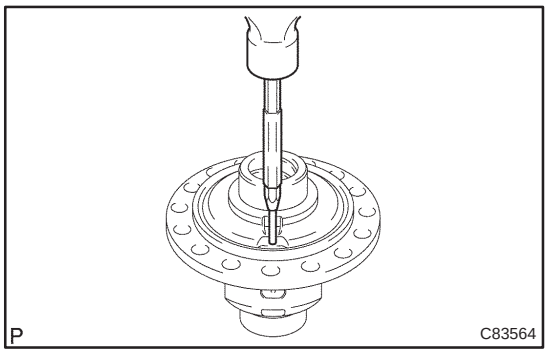
2. REMOVE FRONT DIFFERENTIAL RING GEAR

(a) Place machmarks on the from the front differential ring gear and from the front differential case.



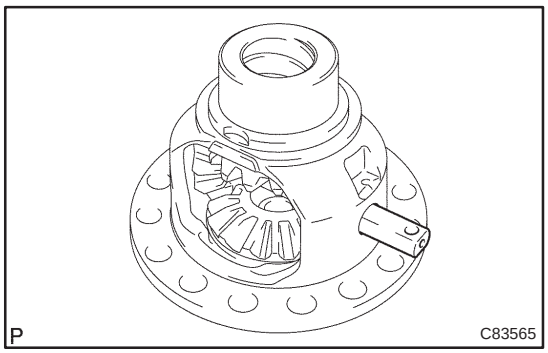
(b) Remove the 16 bolts. using a plastic hammer, remove the front differential case.

3. INSPECT FRONT DIFFERENTIAL SIDE GEAR BACKLASH



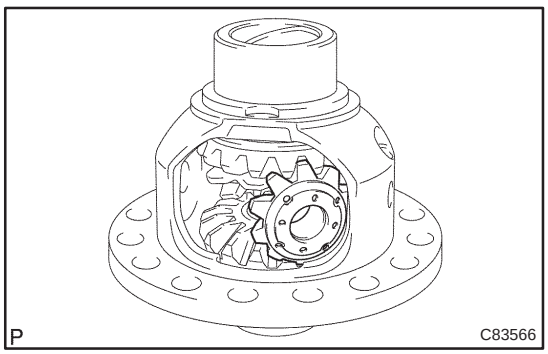
(a) Fixing the front differential pinion to the front differential case side. Using a dial indicator, measure the front differential side gear backlash.

Standard backlash: 0.05 – 0.2 mm (0.0020 – 0.0079 in.)



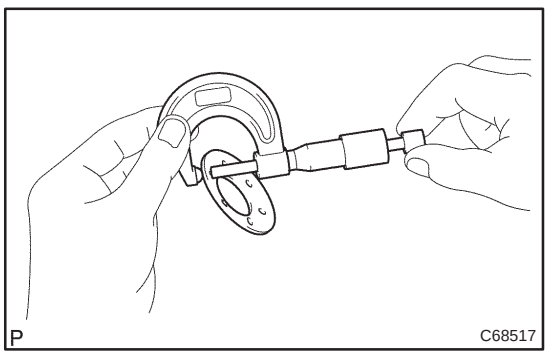
4. REMOVE FRONT DIFFERENTIAL PINION SHAFT STRAIGHT PIN

(a) Using SST and a hammer, loosen the stacked part of the front differential case.
SST 09930–00010



(b) Using a pin punch and a hammer, remove the front differential pinion shaft straight pin from the front differential case.

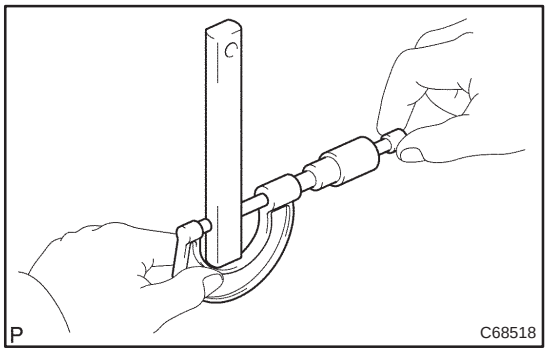
5. REMOVE FRONT DIFFERENTIAL PINION SHAFT NO.1



(a) Remove the front differential pinion shaft No.1 to the front differential case.

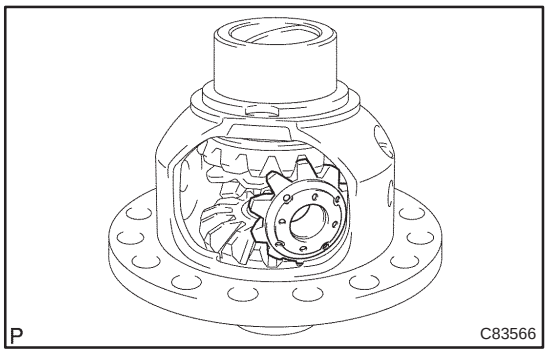
6. REMOVE FRONT DIFFERENTIAL SIDE GEAR

(a) Remove the 2 front differential pinions, 2 front differential pinion thrust washers, 2 front differential side gear and 2 front differential side gear thrust washer No.1 from the front differential case.



HINT:
Revolving front differential pinion, remove the 2 pinion thrust washers and side gear thrust washers.

7. INSPECT FRONT DIFFERENTIAL PINION THRUST WASHER

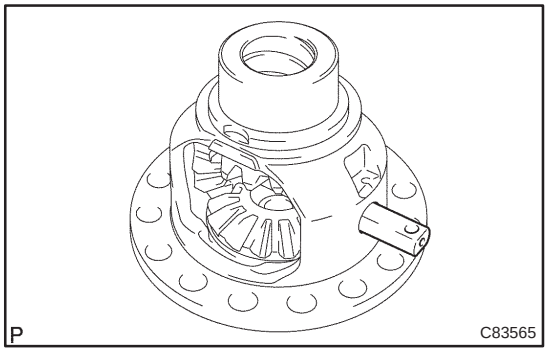


(a) Using a micrometer, measure the thickness of the front differential pinion thrust washer.
Minimum thickness: 0.94 mm (0.03701 in)

If the thickness exceed the minimum, replace the front differential pinion thrust washer.

8. INSPECT FRONT DIFFERENTIAL PINION SHAFT NO.1

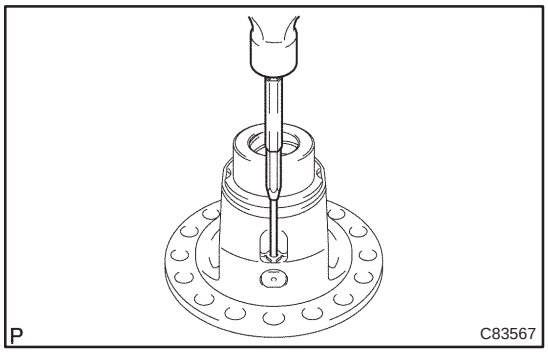
(a) Using a micrometer, measure the outer diameter of the front differential pinion shaft No.1.



9. INSTALL FRONT DIFFERENTIAL SIDE GEAR

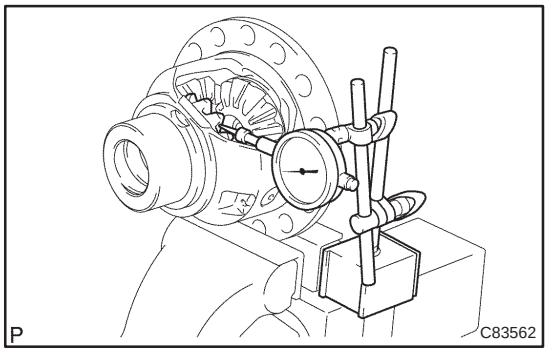
(a) Coat the rotating surface of the front differential side gear with gear oil.
(b) Install the 2 front differential side gear thrust washers to the 2 front differential side gears.

HINT:



(c) Install the 2 front differential side gears, 2 front differential pinions and front differential thrust washers to the front differential case.

HINT:
Revolving the front differential pinion, install the 2 front differential pinions with front differential washers.

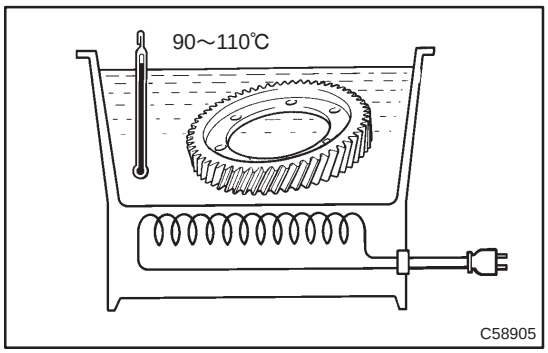


10. INSTALL FRONT DIFFERENTIAL PINION SHAFT NO.1

(a) Coat the rotating surface of the front differential pinion shaft No.1 with gear oil.
(b) Install the front differential pinion shaft No.1 to the front differential case so that the hole for the front differential pinion shaft straight pin is aliened with the hole in the front differential case.

11. INSTALL FRONT DIFFERENTIAL PINION SHAFT STRAIGHT PIN

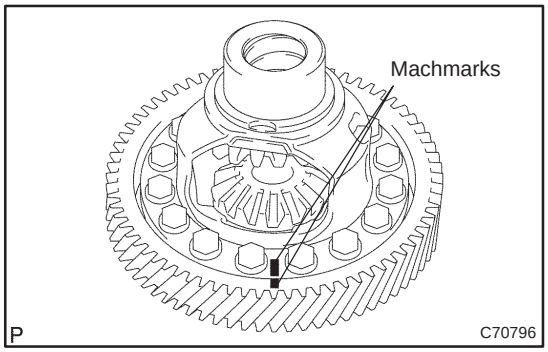
(a) Using a pin punch and a hammer, install the front differential pinion shaft straight pin to the front differential case.



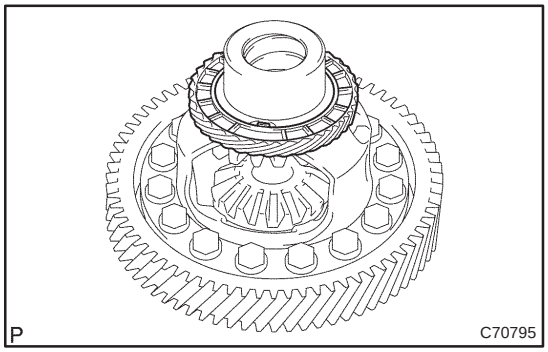
12. ADJUST FRONT DIFFERENTIAL SIDE GEAR BACKLASH

(a) Fixing the front differential pinion to the front differential case side. Using a dial indicator, measure the front differential side gear backlash.
Standard backlash: 0.05 – 0.2 mm (0.0020 – 0.0079 in.)

(b) If the backlash is out of the specification, select the front differential side gear thrust washer and ajust it.
Thrust washer: mm (in.)



Part No.	Thickness	Mark
41361 – 28230	1.00 (0.0397)	1
41361 – 28240	1.10 (0.0437)	2
41361 – 28250	1.20 (0.0476)	3
41361 – 28260	1.30 (0.0516)	4



13. INSTALL FRONT DIFFERENTIAL RING GEAR

(a) Using a heater, heart the front differential ring gear to 90 – 100 °C (194.0 – 230.0 °F).

(b) Clean the contact surface differential case.

(c) Aligning the both matchmarks, quickly install the front differential ring gear to the front differential case.
Torque: 106 N·m (1080 kgf·cm, 77 ft·lbf)

14. INSTALL SPEEDOMETER DRIVE (MTM) GEAR

(a) Install the speedometer drive (MTM) gear to the front differential case.

HOW TO USE THIS MANUAL (1ZZ–FE/3ZZ–FE)

010BH–01

GENERAL INFORMATION

1. GENERAL DESCRIPTION

(a) This manual is made in accordance with SAE J2008.

(b) Generally repair operations can be separated in the following 3 main processes:
1. Diagnosis
2. Removing and Installing, Replacing, Disassembling, Installing and Checking, Adjusting
3. Final Inspection

(c) This manual explains ”Removing and Installing, Replacing, Disassembling, Installing and Checking, Adjusting”, but ”Final Inspection” is omitted.

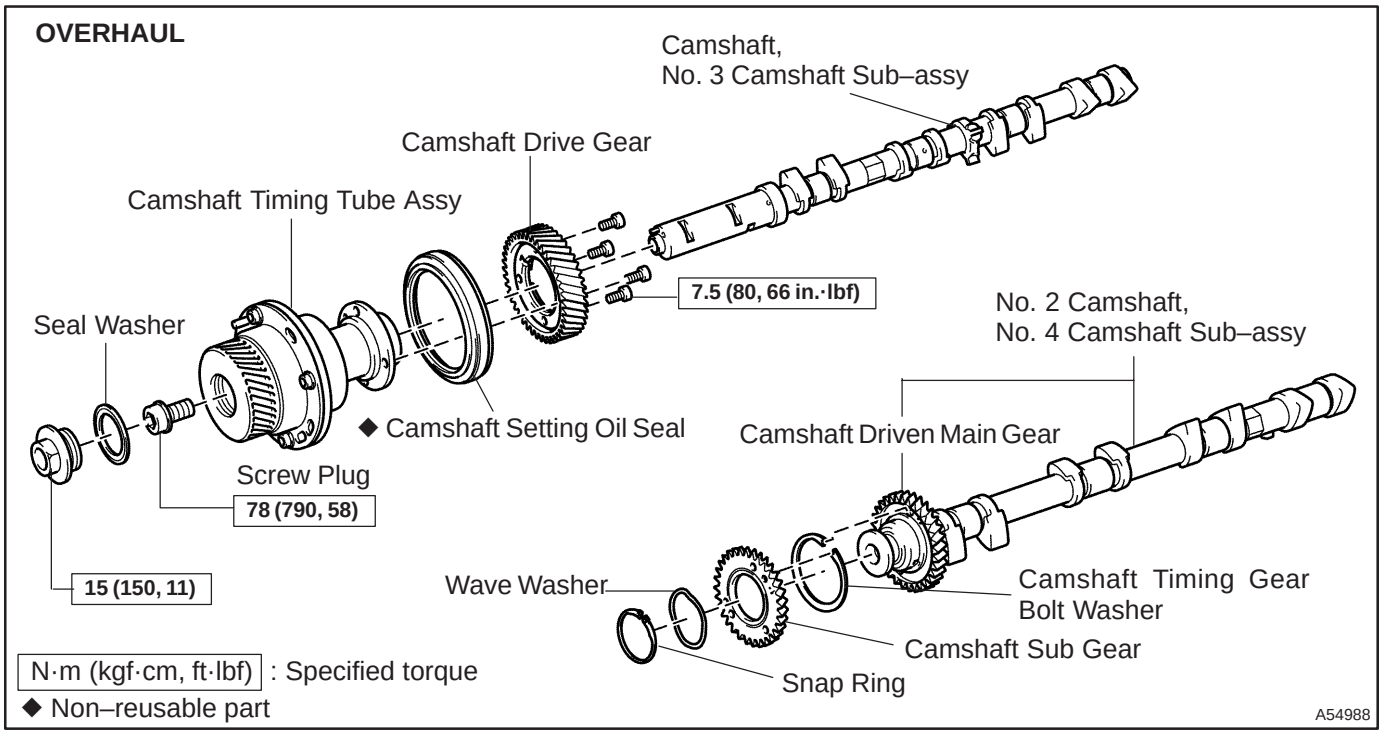
(d) The following essential operations are not written in this manual, however these operations must be done in the practical situation.
(1) Operation with a jack or lift
(2) Cleaning of a removed part when necessary
(3) Visual check

2. INDEX

(a) An alphabetical INDEX is provided as a section on the end of the book to guide you to the item to be repaired.

3. PREPARATION

(a) Use of special service tools (SST) and special service materials (SSM) may be required, depending on the repairing condition. Be sure to use SST and SSM when they are required and follow the working procedure properly. A list of SST and SSM is in the Preparation section of this manual.



4. REPAIR PROCEDURES

(a) Component drawing is placed as the section or title when necessary.

(b) Illustrations of the parts catalog are placed as the ”disassembled parts drawing” so that it enables you to understand the fitting condition of the components.

(c) Non–reusable parts, grease applied parts, precoated parts and tightening torque are specified in the components drawing.

Example:

(d) Tightening torque, oil applying position, and non–reusable parts are described as important points in the procedure.

NOTICE:

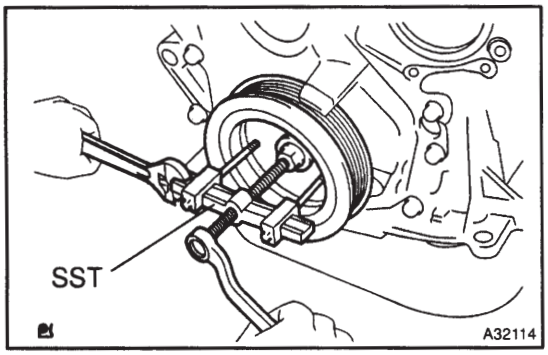
There are cases where such information can only be indicated by an illustration. In that case, all the information such as torque, oil, etc. are described in the illustration.

(e) Installing procedure of operation items is performed in the reverse order of the removing, and only the important points are described.

(f) Only items with points are described in the procedure, and the operational portion and content are placed using an illustration. In the explanations, details of the operational method, standard value and notice are placed.

(g) There may be a case where the illustrations of similar models are used. In that case the details may be different from the actual vehicle.

(h) The procedures are presented in a step–by–step format:



(1) The illustration shows what to do and where to do it.

(2) The task heading tells what to do.

(3) The detailed text tells how to perform the task and gives other information such as specifications and warnings.

Example:

Illustration: what to do and where

Task heading: what to do

5. REMOVE CRANKSHAFT PULLEY

(a) Using SST, remove the crankshaft pully.
SST 09950–50012 (09951–05010, 09952–05010, 09953–05020, 09954–05020, 09957–04010)

Set part No. *Component part No.* *Detailed text: how to do task*

A59974

HINT:

This format provides an experienced technician with a FAST TRACK to the necessary information. The task heading can be read at a glance when necessary, and the text below provides detailed information. Important specifications and warnings always stand out in bold type.

5. SERVICE SPECIFICATIONS

(a) Specifications are presented in bold type throughout the manual. You never have to leave the procedure to look up your specifications. The specifications are also found in the Service Specifications section for a quick reference.

6. TERMS DEFINITION

CAUTION	Indicate the possibility of injury to you or other people.
NOTICE	Indicate the possibility of damage to the components being repaired.
HINT	Provide additional information to help you perform the repair efficiently.

7. SI UNIT

(a) The UNITS given in this manual are primarily expressed according to the SI UNIT (International System of Unit), and alternately expressed in the metric system and in the English System.

Example:

Torque: 30 N·m (310 kgf·cm, 22 ft·lbf)

REPAIR INSTRUCTION (1NZ–FE/2NZ–FE)

010BI–01

PRECAUTION

1. TO PREVENT FROM ENTERING FOREIGN SUBSTANCES.

(a) When foreign substances such as dust, grain of sand or metallic dust enter inside of engine, it often causes functional failure of the engine.
  (1) Precaution before disassembly.
    • Remove adequately all sand and mud adhere to the outside of engine.
  (2) Precaution at reassembly.
    • Protect disassembled parts from dust by using vinyl sheet to cover.

2. TO PREVENT SCRATCHES ON THE PARTS.

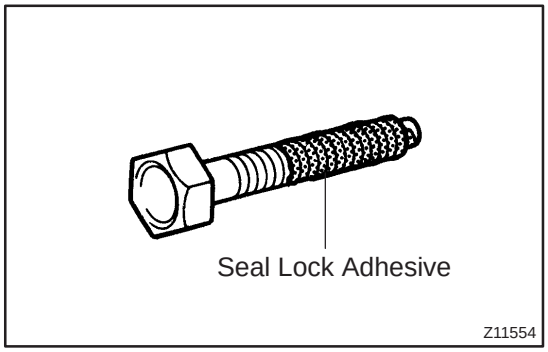
(a) The existence of scratches on the contact and revolving surfaces often causes oil leak and seisure.
  (1) Precautions at disassembly and reassembly.
    • When disassemble the contact surface of the parts, use plastic hummer striking lightly. (Do not pry out by screwdriver).
    • When fix the parts to the vise, do not directly catch it in the vise. Fix the parts through aluminum bar.

3. TO CLEAN AND WASH THE PARTS.

(a) Each parts needs to be well cleaned, washed, and dried by air, and apply specified oil before reassembly.
  (1) Cleaning and washing by alkaline solvent is prohibited:
    • Parts made of aluminum and rubber. (ex. cylinder head cover gasket etc.)
  (2) Cleaning and washing by flushing oil (ex. kerosene, white gasoline etc.) is prohibited:
    • Parts made of rubber. (ex. cylinder head cover gasket etc.)

4. POSITION AND DIRECTION OF EACH PARTS.

(a) Each parts needs to be reassembled as the same position and direction as it disassembled.
  (1) Precautions at disassembly and reassembly.
    • Follow the directions when the manual designates to mark the matchmark and/or direction mark.
    • Disassembled parts needs to be put in order as disassembled, not to change position and/or direction.
    • Follow the directions when the manual instructs the position and direction.



5. INSTALL ENGINE ASSEMBLY TO OVERHAUL STAND WHEN OVERHAUL THE ENGINE.

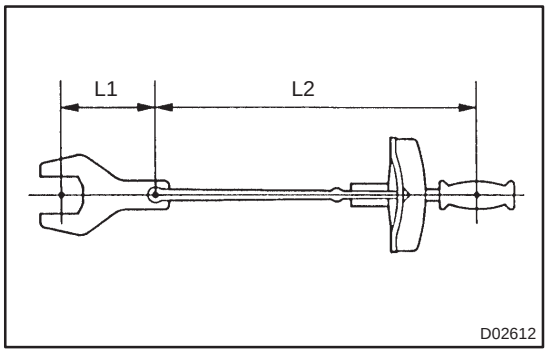
6. PUT THE DISASSEMBLED PARTS IN ORDER AS THEY DISASSEMBLED.

7. APPLY ENGINE OIL TO THE SLIDING AND ROTATING SURFACES.

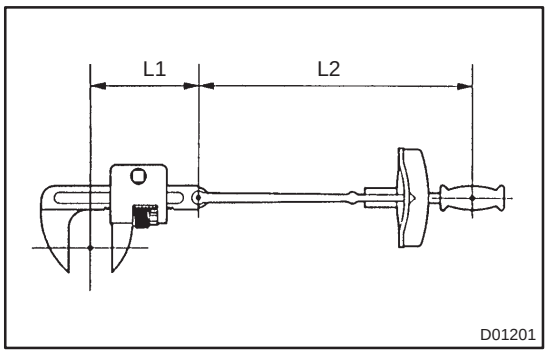
8. NON–REUSABLE PARTS SUCH AS GASKET AND SEAL NEEDS TO BE CHANGED TO THE NEW PARTS.

9. BASIC REPAIR HINT

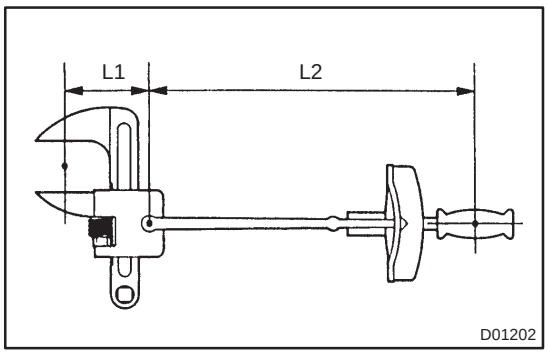
(a) Precoated Parts:
  (1) Precoated parts are bolts, nuts, etc. that are coated with a seal lock adhesive at the factory.
  (2) If a precoated part is retightened, loosened or caused to move in any way, it must be recoated with the specified adhesive.
  (3) When reusing precoated parts, clean off the old adhesive and dry with compressed air. Then apply the specified seal lock adhesive to the bolt, nut or threads.



NOTICE:



Do the torque checking with the lower limit value of the torque tolerance.



(4) Depending on the seal lock agent to apply, there may be a case where it is necessary to leave it for a specified time until it hardens.

(b) Gaskets:
When necessary, use a sealer on gaskets to prevent leaks.

(c) Bolts, Nuts and Screws:
Carefully observe all specifications for bolt tightening torques. Always use a torque wrench.

(d) Torque When Using Extension Tool with Torque Wrench:

(1) In case of tightening by extending the entire length of the torque wrench combined with SST or tool, if you tighten until the reading of the torque wrench reached the specified torque value, the actual torque becomes excessive.

(2) In this text, only the specified torque is described. In case of using SST or extension tool, find the reading of the torque wrench by the formula.

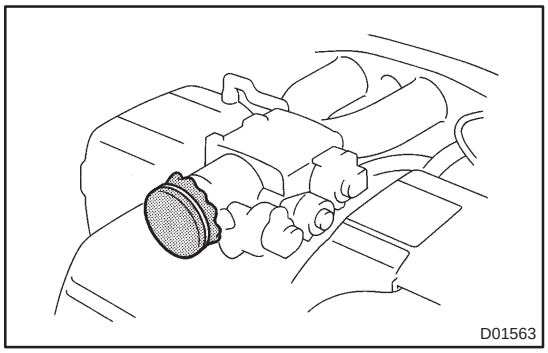
(3) Formula T'=T x L2/(L1 + L2)

T'	Reading of torque wrench {N·m (kgf·cm, ft·lbf)}
T	Torque {N·m (kgf·cm, ft·lbf)}
L1	Length of SST or tool (cm)
L2	Length of torque wrench (cm)

10. REMOVAL AND INSTALLATION OF FUEL CONTROL PARTS

(a) Place for Removing and Installing Fuel System Parts:

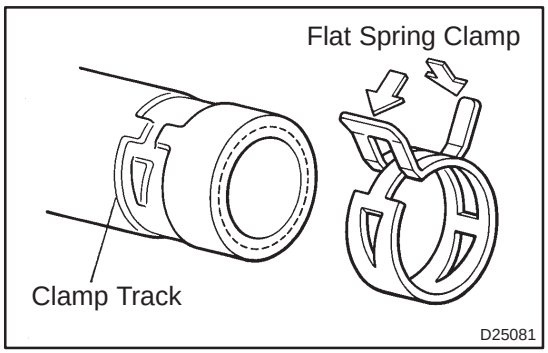
(1) Place with good air ventilation and without anything flammable such as welder, grinder, drill, electric motor or stove in the surroundings.



(2) Never work in a place like a pit or nearby pit as there is a possibility that vaporized fuel fills those places.

(b) Removing and Installing of Fuel System Parts:

(1) Prepare a fire extinguisher before starting the operation.



(2) For prevention of the static electricity, install a ground on the fuel changer, vehicle and fuel tank, and do not spray much water so as to prevent slipping.

(3) Never use any electric equipment like an electric motor or a working light as they may cause spark or high temperature.
(4) Never use an iron hammer as it may cause spark.
(5) Dispose the shop lag separately from any fuel deposit.

11. REMOVAL AND INSTALLATION OF ENGINE INTAKE PARTS

(a) If any metal tip is mixed in the inlet pass, that may give a bad effect to the engine and turbo charger.
(b) When removing and installing of the inlet system parts, close the opening of the removed inlet system parts and the engine with a clean shop lag or gum tape.
(c) When installing the inlet system parts, check that there is no mixing of a metal tip.

12. HANDLING OF HOSE CLAMPS

(a) Before removing the hose, check the depth of inserting portion and the clamp position to restore it surely.
(b) Change a deformed or dented into a new one.
(c) In case of reusing the hose, install the clamp on the hose where it has a clamp track.
(d) For a flat spring type clamp, make it adjust by adding force to the arrow mark direction after the installation.

TERMS (1ZZ–FE/3ZZ–FE)

ABBREVIATIONS USED IN THIS MANUAL

010BJ–01

Abbreviations	Meaning
ABS	Anti–Lock Brake System
A/C	Air Conditioner
AC	Alternating Current
ACC	Accessory
ACIS	Acoustic Control Induction System
ACSD	Automatic Cold Start Device
A.D.D.	Automatic Disconnecting Differential
A/F	Air–Fuel Ratio
AHC	Active Height Control Suspension
ALR	Automatic Locking Retractor
ALT	Alternator
AMP	Amplifier
ANT	Antenna
APPROX.	Approximately
ASSY	Assembly
A/T	Automatic Transmission (Transaxle)
ATF	Automatic Transmission Fluid
AUTO	Automatic
AUX	Auxiliary
AVG	Average
AVS	Adaptive Variable Suspension
B+	Battery Voltage
BACS	Boost Altitude Compensation System
BAT	Battery
BDC	Bottom Dead Center
B/L	Bi–Level
B/S	Bore–Stroke Ratio
BTDC	Before Top Dead Center
BVSV	Bimetallic Vacuum Switching Valve
CB	Circuit Breaker
CCo	Catalytic Converter For Oxidation
CD	Compact Disc
CF	Cornering Force
CG	Center Of Gravity
CH	Channel
CKD	Complete Knock Down
COMB.	Combination
CPE	Coupe
CPS	Combustion Pressure Sensor
CPU	Central Processing Unit
CRS	Child Restraint System
CTR	Center
C/V	Check Valve
CV	Control Valve
CW	Curb Weight
DC	Direct Current
DEF	Defogger
DFL	Deflector

Abbreviations	Meaning
DIFF.	Differential
DIFF. LOCK	Differential Lock
D/INJ	Direct Injection
DLC	Data Link Connector
DLI	Distributorless Ignition
DOHC	Double Overhead Cam
DP	Dash Pot
DS	Dead Soak
DSP	Digital Signal Processor
DTC	Diagnostic Trouble Code
ECAM	Engine Control And Measurement System
ECD	Electronic Controlled Diesel
ECDY	Eddy Current Dynamometer
ECT	Electronic Control Transmission
ECU	Electronic Control Unit
ED	Electro–Deposited Coating
EDU	Electronic Driving Unit
EDIC	Electric Diesel Injection Control
EFI	Electronic Fuel Injection
E/G	Engine
EGR	Exhaust Gas Recirculation
EGR–VM	EGR–Vacuum Modulator
ELR	Emergency Locking Retractor
ENG	Engine
ESA	Electronic Spark Advance
ETCS	Electronic Throttle Control System
EVAP	Evaporative Emission Control
EVP	Evaporator
E–VRV	Electric Vacuum Regulating Valve
EX	Exhaust
FE	Fuel Economy
FF	Front–Engine Front–Wheel–Drive
F/G	Fuel Gauge
FIPG	Formed In Place Gasket
FL	Fusible Link
F/P	Fuel Pump
FPU	Fuel Pressure Up
FR	Front
F/W	Flywheel
FW/D	Flywheel Damper
FWD	Front–Wheel–Drive
GAS	Gasoline
GND	Ground
HAC	High Altitude Compensator
H/B	Hatchback
H–FUSE	High Current Fuse
HI	High
HID	High Intensity Discharge (Head Lamp)
HSG	Housing
HT	Hard Top
HWS	Heated Windshield System

Abbreviations	Meaning
IC	Integrated Circuit
IDI	Indirect Diesel Injection
IFS	Independent Front Suspension
IG	Ignition
IIA	Integrated Ignition Assembly
IN	Intake (Manifold, Valve)
INT	Intermittent
I/P	Instrument Panel
IRS	Independent Rear Suspension
ISC	Idle Speed Control
J/B	Junction Block
J/C	Junction Connector
KD	Kick–Down
LAN	Local Area Network
LB	Liftback
LCD	Liquid Crystal Display
LED	Light Emitting Diode
LH	Left–Hand
LHD	Left–Hand Drive
L/H/W	Length, Height, Width
LLC	Long–Life Coolant
LNG	Liquified Natural Gas
LO	Low
LPG	Liquified Petroleum Gas
LSD	Limited Slip Differential
LSP & PV	Load Sensing Proportioning And Bypass Valve
LSPV	Load Sensing Proportioning Valve
MAP	Manifold Absolute Pressure
MAX.	Maximum
MIC	Microphone
MIL	Malfunction Indicator Lamp
MIN.	Minimum
MP	Multipurpose
MPI	Multipoint Electronic Injection
MPX	Multiplex Communication System
M/T	Manual Transmission
MT	Mount
MTG	Mounting
N	Neutral
NA	Natural Aspiration
NO.	Number
O2S	Oxygen Sensor
O/D	Overdrive
OEM	Original Equipment Manufacturing
OHC	Overhead Camshaft
OHV	Overhead Valve
OPT	Option
O/S	Oversize
P & BV	Proportioning And Bypass Valve
PCS	Power Control System
PCV	Positive Crankcase Ventilation

Abbreviations	Meaning
PKB	Parking Brake
PPS	Progressive Power Steering
PS	Power Steering
PTO	Power Take–Off
P/W	Power Window
R & P	Rack And Pinion
R/B	Relay Block
RBS	Recirculating Ball Type Steering
R/F	Reinforcement
RFS	Rigid Front Suspension
RRS	Rigid Rear Suspension
RH	Right–Hand
RHD	Right–Hand Drive
RLY	Relay
ROM	Read Only Memory
RR	Rear
RRS	Rear–Wheel Drive
RWD	Rear–Wheel Drive
SDN	Sedan
SEN	Sensor
SICS	Starting Injection Control System
SOC	State Of Charge
SOHC	Single Overhead Camshaft
SPEC	Specification
SPI	Single Point Injection
SRS	Supplemental Restraint System
SSM	Special Service Materials
SST	Special Service Tools
STD	Standard
STJ	Cold–Start Fuel Injection
SW	Switch
SYS	System
T/A	Transaxle
TACH	Tachometer
TBI	Throttle Body Electronic Fuel Injection
TC	Turbocharger
TCCS	TOYOTA Computer–Controlled System
TCV	Timing Control Valve
TDC	Top Dead Center
TEMP.	Temperature
TEMS	TOYOTA Electronic Modulated Suspension
TFT	Toyota Free–Tronic
TIS	Total Information System For Vehicle Development
T/M	Transmission
TMC	TOYOTA Motor Corporation
TMMK	TOYOTA Motor Manufacturing Kentucky, Inc.
TRC	Traction Control System
TURBO	Turbocharge
TWC	Three–Way Catalyst
U/D	Underdrive
U/S	Undersize

Abbreviations	Meaning
VCV	Vacuum Control Valve
VENT	Ventilator
VIN	Vehicle Identification Number
VPS	Variable Power Steering
VSC	Vehicle Skid Control
VSV	Vacuum Switching Valve
VTV	Vacuum Transmitting Valve
VVT–i	Variable Valve Timing–intelligent
W/	With
WGN	Wagon
W/H	Wire Harness
W/O	Without
1ST	First
2ND	Second
2WD	Two Wheel Drive Vehicle (4 x 2)
3RD	Third
4TH	Fourth
4WD	Four Wheel Drive Vehicle (4 x 4)
4WS	Four Wheel Steering System
5TH	Fifth

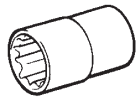
010BK–01

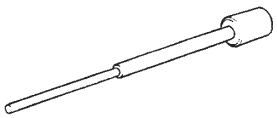
GLOSSARY OF SAE AND TOYOTA TERMS

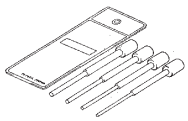
This glossary lists all SAE–J1930 terms and abbreviations used in this manual in compliance with SAE recommendations, as well as their TOYOTA equivalents.

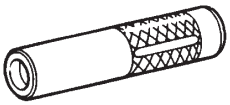
SAE ABBREVIATIONS	SAE TERMS	TOYOTA TERMS ( )—ABBREVIATIONS
A/C	Air Conditioning	Air Conditioner
ACL	Air Cleaner	Air Cleaner, A/CL
AIR	Secondary Air Injection	Air Injection (AI)
AP	Accelerator Pedal	–
B+	Battery Positive Voltage	+B, Battery Voltage
BARO	Barometric Pressure	HAC
CAC	Charge Air Cooler	Intercooler
CARB	Carburetor	Carburetor
CFI	Continuous Fuel Injection	–
CKP	Crankshaft Position	Crank Angle
CL	Closed Loop	Closed Loop
CMP	Camshaft Position	Cam Angle
CPP	Clutch Pedal Position	–
CTOX	Continuous Trap Oxidizer	–
CTP	Closed Throttle Position	LL ON, Idle ON
DFI	Direct Fuel Injection (Diesel)	Direct Injection (DI)
DI	Distributor Ignition	–
DLC1 DLC2 DLC3	Data Link Connector 1 Data Link Connector 2 Data Link Connector 3	1: Check Connector 2: Total Diagnosis Comunication Link (TDCL) 3: OBD II Diagnostic Connector
DTC	Diagnostic Trouble Code	Diagnostic Code
DTM	Diagnostic Test Mode	–
ECL	Engine Control Level	–
ECM	Engine Control Module	Engine ECU (Electronic Control Unit)
ECT	Engine Coolant Temperature	Coolant Temperature, Water Temperature (THW)
EEPROM	Electrically Erasable Programmable Read Only Memory	Electrically Erasable Programmable Read Only Memory (EEPROM), Erasable Programmable Read Only Memory (EPROM)
EFE	Early Fuel Evaporation	Cold Mixture Heater (CMH), Heat Control Valve (HCV)
EGR	Exhaust Gas Recirculation	Exhaust Gas Recirculation (EGR)
EI	Electronic Ignition	TOYOTA Distributorless Ignition (TDI)
EM	Engine Modification	Engine Modification (EM)
EPROM	Erasable Programmable Read Only Memory	Programmable Read Only Memory (PROM)
EVAP	Evaporative Emission	Evaporative Emission Control (EVAP)
FC	Fan Control	–
FEEPROM	Flash Electrically Erasable Programmable Read Only Memory	–
FEPROM	Flash Erasable Programmable Read Only Memory	–
FF	Flexible Fuel	–
FP	Fuel Pump	Fuel Pump
GEN	Generator	Alternator
GND	Ground	Ground (GND)

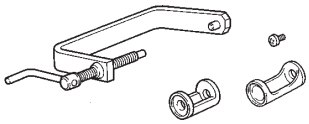
HO2S	Heated Oxygen Sensor	Heated Oxygen Sensor (HO_2S)
IAC	Idle Air Control	Idle Speed Control (ISC)
IAT	Intake Air Temperature	Intake or Inlet Air Temperature
ICM	Ignition Control Module	–
IFI	Indirect Fuel Injection	Indirect Injection (IDL)
IFS	Inertia Fuel–Shutoff	–
ISC	Idle Speed Control	–
KS	Knock Sensor	Knock Sensor
MAF	Mass Air Flow	Air Flow Meter
MAP	Manifold Absolute Pressure	Manifold Pressure Intake Vacuum
MC	Mixture Control	Electric Bleed Air Control Valve (EBCV) Mixture Control Valve (MCV) Electric Air Control Valve (EACV)
MDP	Manifold Differential Pressure	–
MFI	Multiport Fuel Injection	Electronic Fuel Injection (EFI)
MIL	Malfunction Indicator Lamp	Check Engine Lamp
MST	Manifold Surface Temperature	–
MVZ	Manifold Vacuum Zone	–
NVRAM	Non–Volatile Random Access Memory	–
O2S	Oxygen Sensor	Oxygen Sensor, O_2 Sensor (O_2S)
OBD	On–Board Diagnostic	On–Board Diagnostic System (OBD)
OC	Oxidation Catalytic Converter	Oxidation Catalyst Convert (OC), CCo
OP	Open Loop	Open Loop
PAIR	Pulsed Secondary Air Injection	Air Suction (AS)
PCM	Powertrain Control Module	–
PNP	Park/Neutral Position	–
PROM	Programmable Read Only Memory	–
PSP	Power Steering Pressure	–
PTOX	Periodic Trap Oxidizer	Diesel Particulate Filter (DPF) Diesel Particulate Trap (DPT)
RAM	Random Access Memory	Random Access Memory (RAM)
RM	Relay Module	–
ROM	Read Only Memory	Read Only Memory (ROM)
RPM	Engine Speed	Engine Speed
SC	Supercharger	Supercharger
SCB	Supercharger Bypass	E–ABV
SFI	Sequential Multiport Fuel Injection	Electronic Fuel Injection (EFI), Sequential Injection
SPL	Smoke Puff Limiter	–
SRI	Service Reminder Indicator	–
SRT	System Readiness Test	–
ST	Scan Tool	–
TB	Throttle Body	Throttle Body
TBI	Throttle Body Fuel Injection	Single Point Injection Central Fuel Injection (Ci)
TC	Turbocharger	Turbocharger
TCC	Torque Converter Clutch	Torque Converter

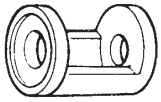


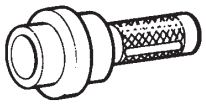












TCM	Transmission Control Module	Transmission ECU, ECT ECU
TP	Throttle Position	Throttle Position
TR	Transmission Range	–
TVV	Thermal Vacuum Valve	Bimetallic Vacuum Switching Valve (BVSV) Thermostatic Vacuum Switching Valve (TVSV)
TWC	Three–Way Catalytic Converter	Three–Way Catalytic (TWC) Manifold Converter CC_{RO}
TWC+OC	Three–Way + Oxidation Catalytic Converter	CC_R + CCo
VAF	Volume Air Flow	Air Flow Meter
VR	Voltage Regulator	Voltage Regulator
VSS	Vehicle Speed Sensor	Vehicle Speed Sensor
WOT	Wide Open Throttle	Full Throttle
WU–OC	Warm Up Oxidation Catalytic Converter	–
WU–TWC	Warm Up Three–Way Catalytic Converter	–
3GR	Third Gear	–
4GR	Fourth Gear	–

030K7–01

HOW TO DETERMINE NUT STRENGTH

Nut Type			Class
Present Standard Hexagon Nut	Old Standard Hexagon Nut		
	Cold Forging Nut	Cutting Processed Nut	
 No Mark			4N
 No Mark (w/ Washer)	 No Mark (w/ Washer)	 No Mark	5N (4T)
 6N			6N
		 *	7N (5T)
 8N			8N
 10N		 No Mark	10N (7T)
 11N			11N
 12N			12N

*: Nut with 1 or more marks on one side surface of the nut.

B06432

HINT:

Use the nut with the same number of the nut strength classification or the greater than the bolt strength classification number when tightening parts with a bolt and nut.

Example: Bolt = 4T

Nut = 4N or more

ENGINE MECHANICAL

SERVICE DATA

0300O–02

Chain sub–assy		
Length at 16 links	Maximum	112.6 mm (4.433 in.)
Camshaft timing gear or sprocket		
Diameter (w/ chain)	Minimum	97.3 mm (3.831 in.)
Crankshaft timing gear or sprocket		
Diameter (w/ chain)	Minimum	51.6 mm (2.032 in.)
Chain tensioner slipper		
Wear	Maximum	1.0 mm (0.039 in.)
Chain vibration damper No. 1		
Wear	maximum	1.0 mm (0.039 in.)
Cylinder head set bolt		
Length	Standard	156.0 – 159.0 mm (6.142 – 6.260 in.)
	Maximum	159.5 mm (6.280 in.)
Camshaft		
Circle runout	Maximum	0.03 mm (0.0012 in.)
Lobe height	Standard Intake	44.333 – 44.433 mm (1.7454 – 1.7493 in.)
	Exhaust	43.761 – 43.861 mm (1.7229 – 1.7268 in.)
	Minimum Intake	44.18 mm (1.7394 in.)
	Exhaust	43.61 mm (1.7169 in.)
Journal diameter	No. 1	34.449 – 34.465 mm (1.3563 – 1.3569 in.)
	Others	22.949 – 22.965 mm (0.9035 – 0.9041 in.)
Thrust clearance	Standard	0.040 – 0.095 mm (0.0009 – 0.0023 in.)
	Maximum	0.110 mm (0.0043 in.)
Oil clearance	Standard	0.035 – 0.072 mm (0.0014 – 0.0028 in.)
	Maximum	0.10 mm (0.0039 in.)
Valve clearance (Cold)	Intake	0.15 – 0.25 mm (0.006 – 0.010 in.)
	Exhaust	0.25 – 0.35 mm (0.010 – 0.014 in.)
Cylinder head sub–assy		
Warpage	Maximum Cylinder block side	0.05 mm (0.0020 in.)
	Intake manifold side	0.10 mm (0.0040 in.)
	Exhaust manifold side	0.10 mm (0.0040 in.)
Valve guide bushing		
Inside diameter		5.510 – 5.530 mm (0.2169 – 0.2177 in.)
Oil clearance	Standard Intake	0.025 – 0.060 mm (0.0010 – 0.0024 in.)
	Exhaust	0.030 – 0.065 mm (0.0012 – 0.0026 in.)
	Maximum Intake	0.08 mm (0.0031 in.)
	Exhaust	0.01 mm (0.0039 in.)
Bore diameter		10.285 – 10.306 mm (0.4049 – 0.4057 in.)
Protrusion height		8.7 – 9.1 mm (0.342 – 0.358 in.)
Valve stem		
Diameter	Intake	5.470 – 5.485 mm (0.2154 – 0.2159 in.)
	Exhaust	5.465 – 5.480 mm (0.2152 – 0.2158 in.)
Inner compression spring		
Free length		43.40 mm (1.7087 in.)
Deviation	Maximum	2.0 mm (0.078 in.)
Angle (reference)	Maximum	2°
Valve		
Overall length	Standard Intake	88.65 mm (3.4902 in.)
	Exhaust	88.69 mm (3.4917 in.)
	Minimum Intake	88.35 mm (3.4874 in.)
	Exhaust	88.39 mm (3.4799 in.)
Head margin thickness	Standard	1.0 mm (0.039 in.)
	Minimum	0.7 mm (0.028 in.)

Valve lifter		
Diameter		30.966 – 30.976 mm (1.2191 – 1.2195 in.)
Bore diameter		31.000 – 31.025 mm (1.2205 – 1.2215 in.)
Oil clearance	Standard	0.024 – 0.059 mm (0.0016 – 0.0037 in.)
	Maximum	0.1 mm (0.0039 in.)
Straight pin		
Protrusion height		5 mm (0.20 in.)
Union protrusion		
Protrusion height	Standard A	29 mm (1.14 in.)
	B	66.5 mm (2.62 in.)
	C	24 mm (0.95 in.)
Connecting rod sub–assy		
Thrust clearance	Standard	0.160 – 0.342 mm (0.063 – 0.0135 in.)
	Maximum	0.342 mm (0.0135 in.)
Oil clearance	Standard	0.028 – 0.060 mm (0.0011 – 0.0024 in.)
	Maximum	0.080 mm (0.0031 in.)
Out–of alignment	Maximum per/100 mm (3.94 in.)	0.05 mm (0.0020 in.)
Twist	Maximum per/100 mm (3.94 in.)	0.05 mm (0.0020 in.)
Connecting rod bearing		
Center wall thickness	Reference Mark 1	1.486 – 1.490 mm (0.0585 – 0.0587 in.)
	Mark 2	1.490 – 1.494 mm (0.0587 – 0.0588 in.)
	Mark 3	1.494 – 1.498 mm (0.0588 – 0.0590 in.)
Crankshaft		
Thrust clearance	Standard	0.04 – 0.24 mm (0.0016 – 0.0094 in.)
	Maximum	0.30 mm (0.0118 in.)
Circle runout	Maximum	0.03 mm (0.0012 in.)
Main journal diameter		47.988 – 48.000 mm (1.8893 – 1.8898 in.)
	Maximum taper and out–of–round	0.02 mm (0.0008 in.)
Oil clearance	Standard	0.013 – 0.030 mm (0.0005 – 0.0012 in.)
	Maximum	0.05 mm (0.0020 in.)
Cylinder block sub–assy		
Warpage	Maximum	0.05 mm (0.0020 in.)
Bore diameter	Standard	79.000 – 79.013 mm (3.1073 – 3.1108 in.)
	Maximum	79.013 mm (3.1108 in.)
Piston		
Diameter (at 29.8 mm (1.173 in.) from the piston head)	1ZZ–FE	78.925 – 78.935 mm (3.1073 – 3.1077 in.)
	3ZZ–FE	78.955 – 78.965 mm (3.1085 – 3.1089 in.)
Oil clearance	Standard 1ZZ–FE	0.065 – 0.088 mm (0.0026 – 0.0035 in.)
	3ZZ–FE	0.035 – 0.058 mm (0.0014 – 0.0023 in.)
	Maximum 1ZZ–FE	0.088 mm (0.0035 in.)
	3ZZ–FE	0.058 mm (0.0023 in.)
Piston ring		
Groove clearance	No. 1	0.020 – 0.070 mm (0.0008 – 0.0028 in.)
	No. 2	0.030 – 0.070 mm
End gap	Standard No. 1	0.25 – 0.35 mm (0.0098 – 0.0138 in.)
	No. 2	0.35 – 0.50 mm (0.0138 – 0.0197 in.)
	Maximum No. 1	0.74 mm (0.029 in.)
	No. 2	0.89 mm (0.035 in.)
Piston pin		
Diameter		20.004 – 20.013 mm (0.7876 –0.7879 in.)
Connecting rod bolt		
Diameter	Standard	6.6 –6.7 mm (0.260 – 0.264 in.)
	Maximum	6.4 mm (0.252 in.)
Crank pin		
Diameter		43.992 – 44.000 mm (1.7320 – 1.7323 in.)
	Maximum taper and out–of–round	0.02 mm (0.0008 in.)
Crankshaft bearing cap set bolt		
Diameter	Standard	7.3 – 7.5 mm (0.287 – 0.295 in.)
	Maximum	7.2 mm (0.283 in.)

Straight pin	
Timing chain or belt cover sub–assy x cylinder block sub–assy

OVERHAUL

1. REMOVE OIL FILLER CAP SUB–ASSY

(a) Remove the oil filler cap from the cylinder head cover.

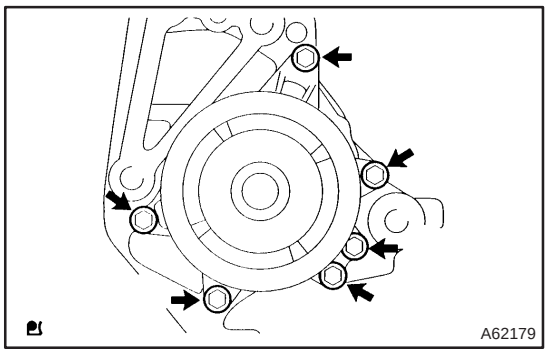
2. REMOVE OIL FILLER CAP GASKET

(a) Remove the gasket from the oil filler cap.

3. REMOVE VENTILATION VALVE SUB–ASSY

(a) Remove the ventilation valve from the cylinder head cover.

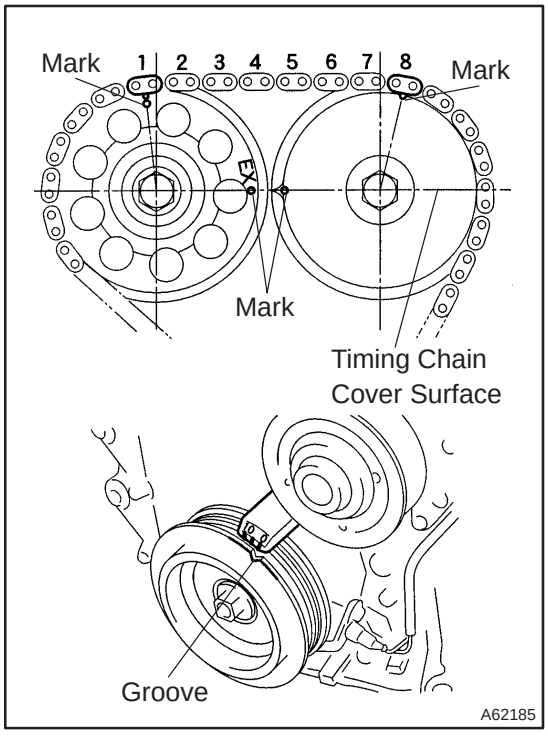
4. REMOVE SPARK PLUG



(a) Using a spark plug wrench, remove the 4 spark plugs.

5. REMOVE CYLINDER HEAD COVER SUB–ASSY

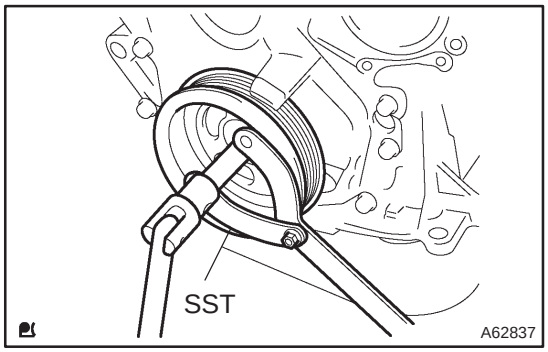
(a) Remove the 9 bolts, 2 seal washer, 2 nuts and cylinder head cover.



6. REMOVE CYLINDER HEAD COVER GASKET

(a) Remove the gasket from the cylinder head cover.

7. REMOVE WATER PUMP ASSY

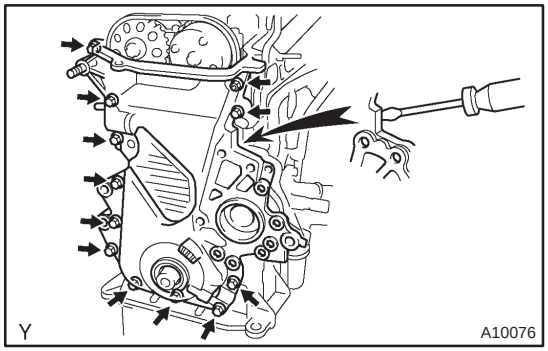


(a) Remove the 6 bolts, water pump and O–ring.

8. REMOVE CRANKSHAFT PULLEY

(a) Set No. 1 cylinder to TDC/compression.
  (1) Turn the crankshaft pulley, and align its groove with timing mark ”0” of the timing chain cover.
  (2) Check that the point marks of the camshaft timing sprocket and VVT timing sprocket are in straight line on the timing chain cover surface as shown in the illustration.

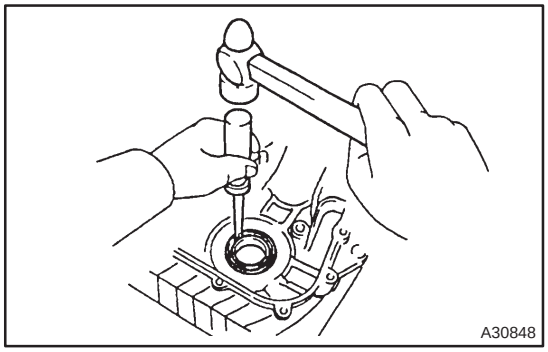
HINT:
If not, turn the crankshaft 1 revolution (360°) and align the marks as above.



(b) Using SST, remove the pulley bolt.
SST 09960–10010 (09962–01000, 09963–01000)
(c) Remove the crankshaft pulley from the crankshaft.

9. REMOVE CHAIN TENSIONER ASSY NO.1

(a) Remove the 2 nuts and chain tensioner.



NOTICE:
Be sure not to revolve the crank shaft without the chain tensioner.

10. REMOVE TIMING CHAIN OR BELT COVER SUB–ASSY

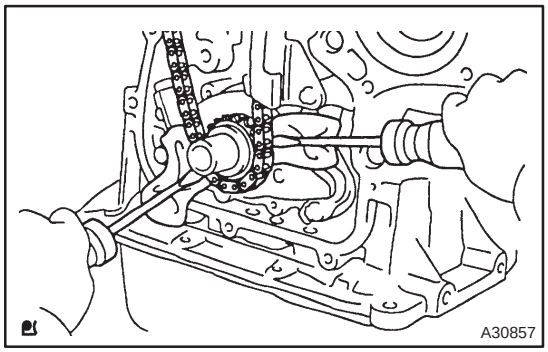
(a) Remove the 11 bolts and nuts.
(b) Remove the timing chain cover by prying the portions between the cylinder head and cylinder block with a screwdriver.

NOTICE:
Be careful not to damage the contact surfaces of the timing chain cover, cylinder head and cylinder block.

11. REMOVE TIMING GEAR COVER OIL SEAL

(a) Using a screwdriver remove the oil seal.

12. REMOVE CRANKSHAFT POSITION SENSOR PLATE NO.1



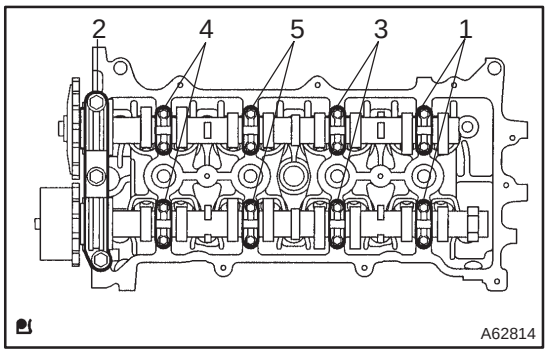
(a) Remove the crankshaft position sensor plate from the crankshaft.

13. REMOVE CHAIN TENSIONER SLIPPER

(a) Remove the bolt and chain tensioner slipper.

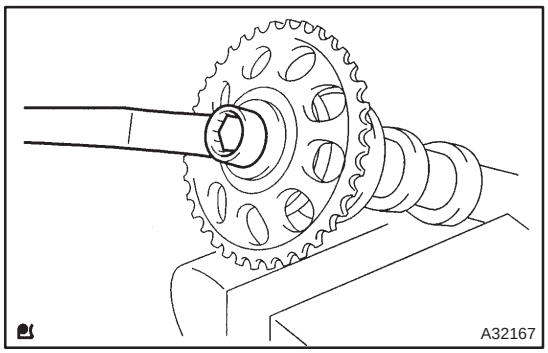
14. REMOVE CHAIN VIBRATION DAMPER NO.1

(a) Remove the 2 bolts and chain vibration damper.



15. REMOVE CHAIN SUB–ASSY

(a) Using screwdrivers, ply out the timing chain with the crankshaft timing gear as shown in the illustration.

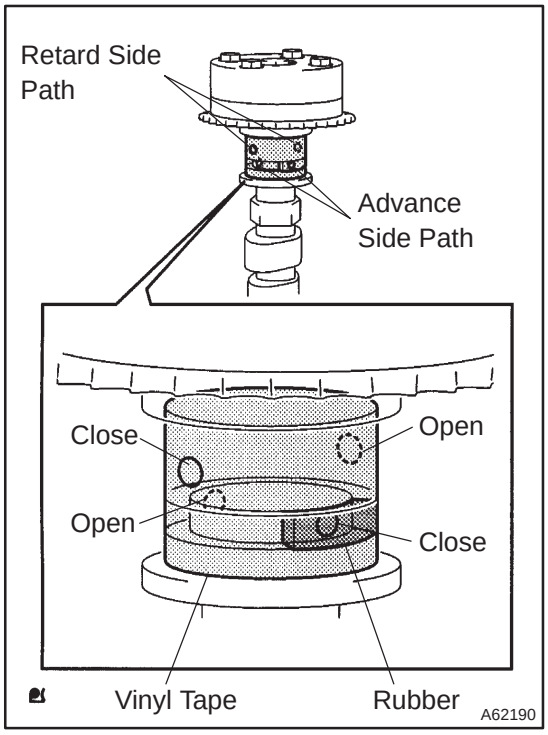


NOTICE:

- **Put shop rag to protect the engine.**
- **In case of revolving the camshafts with the chain off the sprockets, turn the crankshaft 1/4 revolution for valves not to touch the pistons.**

16. REMOVE CAMSHAFT

(a) Uniformly loosen and remove the 19 bearing cap bolts, in several passes, in the sequence shown, and remove the 9 bearing caps, intake and exhaust camshafts.



17. REMOVE CAMSHAFT TIMING GEAR OR SPROCKET

(a) Grip the camshaft with a vice, and remove the bolt and camshaft timing gear.

NOTICE:

Be careful not to damage the camshaft.

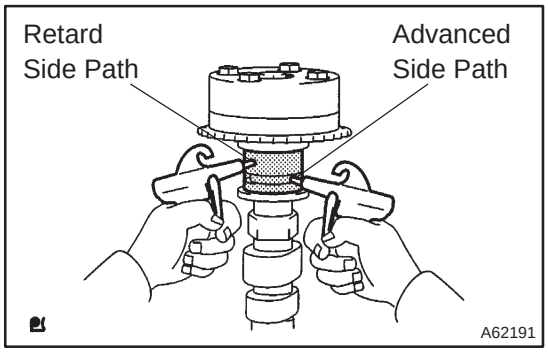
18. INSPECT CAMSHAFT TIMING GEAR ASSY

(a) Check the lock of camshaft timing gear.

(1) Grip the camshaft with a vice, and confirm the camshaft timing gear is locked.

NOTICE:

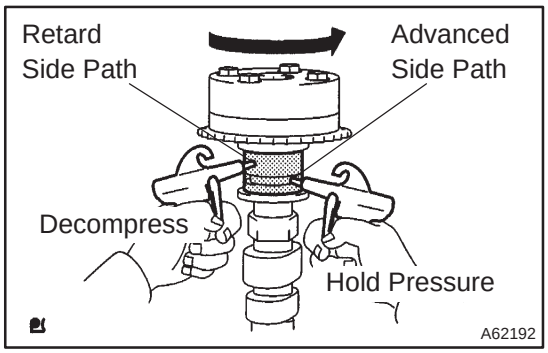
Be careful not to damage the camshaft.



(b) Release lock pin.

(1) Cover 4 oil paths of cam journal with vinyl tape as shown in the illustration.

HINT:



Two advance side paths are provided in the groove of the camshaft. Plug one of the path with a rubber piece.

(2) Break through the tapes of the advance side path and the retard side path on the opposite side of the groove.

(3) Put air pressure into two broken paths (the advance side path and the retard side path) with about 150 kPa {1.5 kgf·cm}.

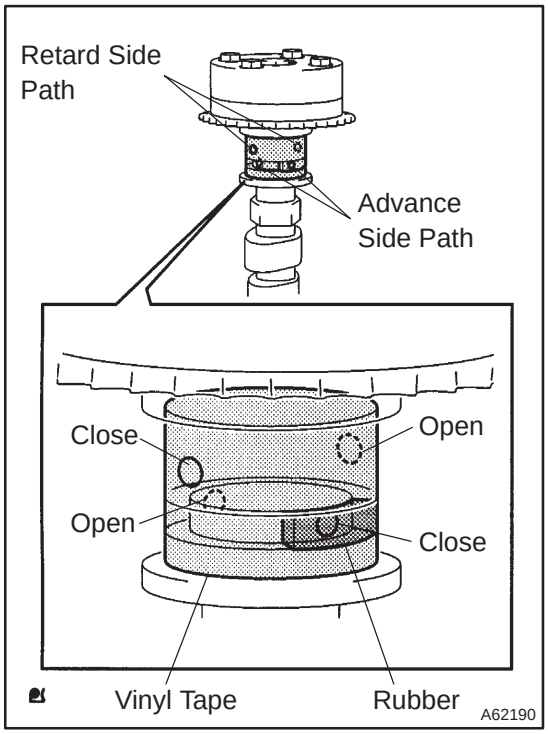
CAUTION:
Cover the pathes with shop rag to avoid oil splashing.

(4) Confirm if the camshaft timing gear assembly revolves in the timing advance direction when weakening the air pressure of the timing retard path.

HINT:
The lock pin is released, and camshaft timing gear, revolves in the advance direction.

(5) When the camshaft timing gear comes to the most advanced position, take out the air pressure of the timing retard side path, and then, take out that of timing advance side path.

CAUTION:
Camshaft timing assembly gear occasionally shifts to the retard side abruptly, if the air compression of the advanced side path is released before retard side path. It often causes the breakage of the lock pin.



(c) Check smooth revolution

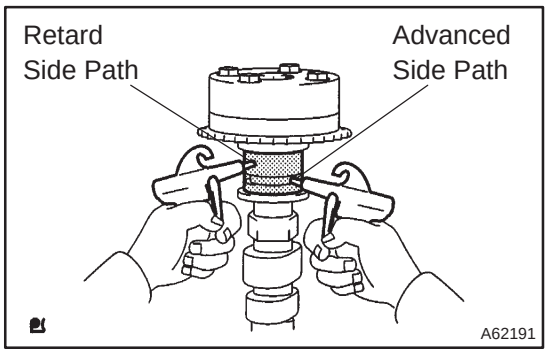
(1) Revolve the camshaft timing gear assembly within the movable range except for the most retarded position several times, and check the smooth revolution.

CAUTION:
Be sure to perform this check by hand, instead of air pressure.

(d) Check the lock in the most retarded position.

(1) Confirm that the camshaft timing gear assembly is locked at the most retarded position.

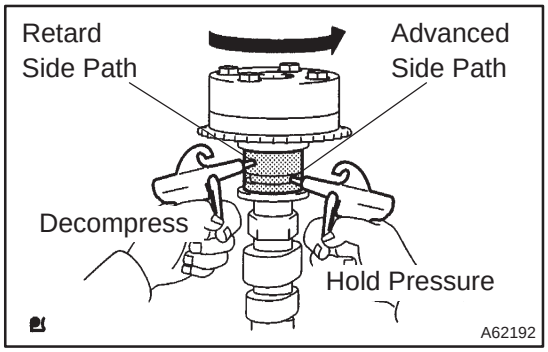
19. REMOVE CAMSHAFT TIMING GEAR ASSY



(a) Grip the camshaft with a vice, and confirm that the gear is locked.

CAUTION:
Be careful not to damage the camshaft.

(b) Cover 4 oil paths of cam journal with vinyl tape as shown in the illustration.

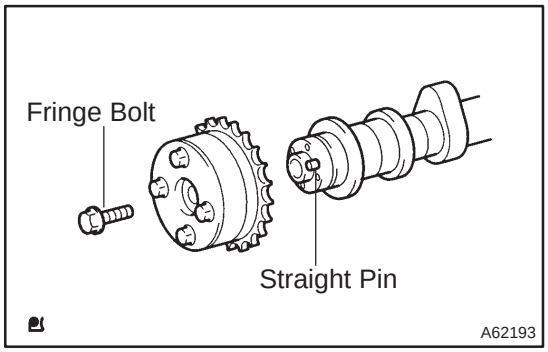


HINT:
Two advance side paths are provided in the groove of the camshaft. Plug one of the path with a rubber piece.

(c) Break through the tapes of the advance side path and the retard side path on the opposite side of the groove.

(d) Put air pressure into two broken paths (the advance side path and the retard side path) with about 150 kPa {1.5 kgf/cm^2}.

CAUTION:
Cover the pathes with shop rag to avoid oil splashing.

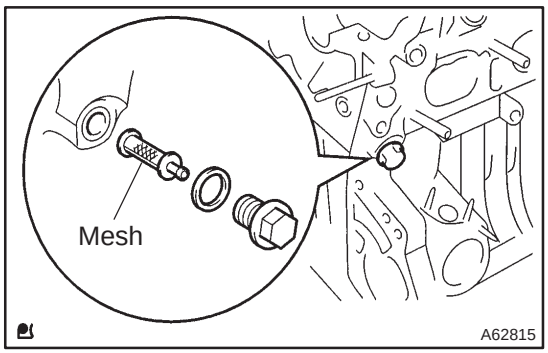


(e) Confirm if the camshaft timing gear assembly revolves in the timing advance direction when weakening the air pressure of the timing retard path.

HINT:
The lock pin is released, and camshaft timing gear revolves in the advance direction.

(f) When the camshaft timing gear comes to the most advanced position, take out the air pressure of the timing retard side path, and then, takeout that of timing advance side path.

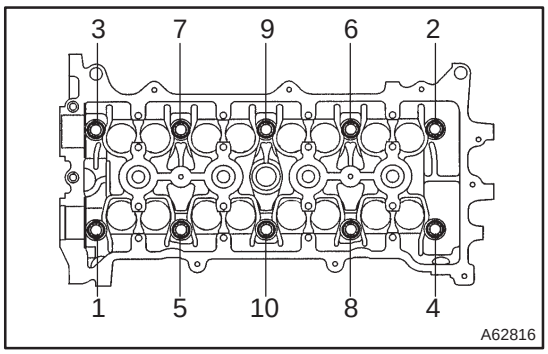
CAUTION:
Camshaft timing gear assembly occasionally shifts to the retard side abruptly, if the air compression of the advanced side path is released before retard side paths. It often causes the breakage of the lock pin.



(g) Remove the fringe bolt of camshaft timing gear assembly.

NOTICE:

- **Be sure not to remove the other 4 bolts.**
- **In case of reusing the camshaft timing gear, release the strait pin locking first, and then install the gear.**



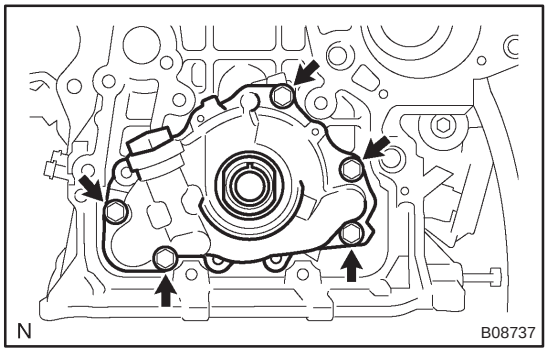
20. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSY

(a) Remove the bolt and camshaft timing oil control valve.

21. REMOVE OIL CONTROL VALVE FILTER

(a) Remove the bolt, gasket and oil control valve filter.

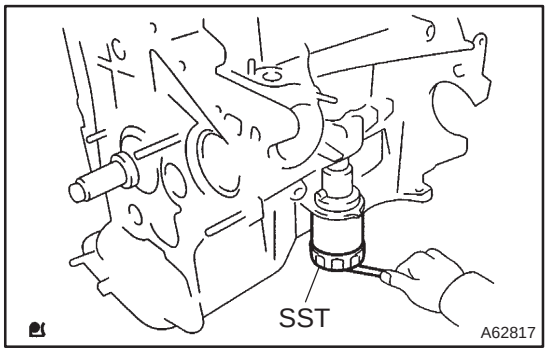
22. REMOVE CYLINDER HEAD SUB–ASSY



(a) Using a bi–hexagon wrench 10, uniformly loosen and remove the 10 cylinder head bolts, in several passes, in the sequence shown. Remove the 10 cylinder head bolts and plate washers.

NOTICE:

- **Be careful not to drop washers into the cylinder head.**
- **Head warpage or cracking could result from removing bolts in an incorrect order.**

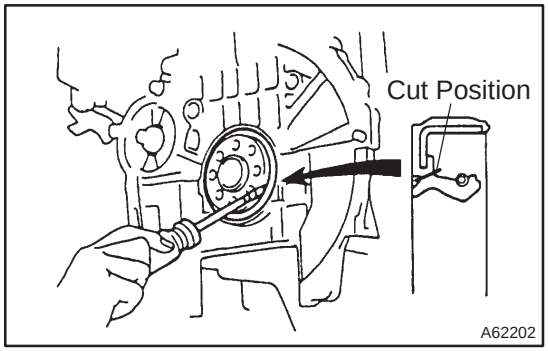


23. REMOVE CYLINDER HEAD GASKET

(a) Remove the gasket from the cylinder block.

24. REMOVE OIL PUMP ASSY

(a) Remove the 5 bolts, oil pump and gasket.

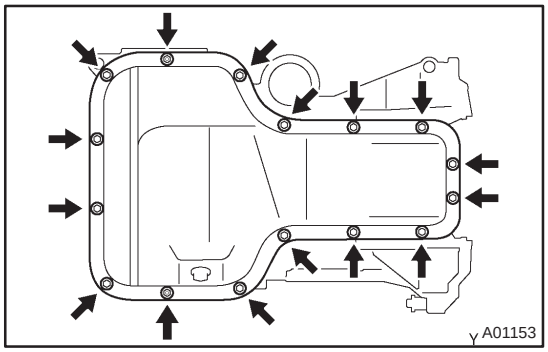


25. REMOVE OIL FILTER SUB–ASSY

(a) Using SST, remove the oil filter.
SST 09228–06501

26. REMOVE OIL FILTER UNION

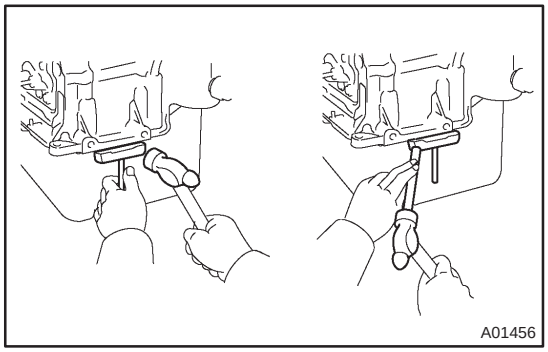
(a) Using a socket hexagon wrench 12, remove the oil filter union.



27. REMOVE ENGINE REAR OIL SEAL

(a) Using a knife, cut off the oil seal lip.
(b) Using a screwdriver with its tip taped, pry out the oil seal.

NOTICE:
After the removal, check if the crankshaft is not damaged. If there is, mend it with a sandpaper (# 400).



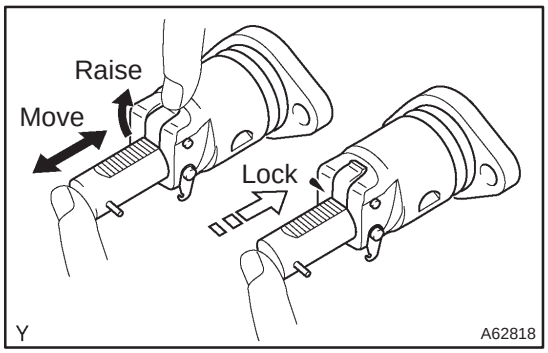
28. REMOVE OIL PAN DRAIN PLUG

(a) Remove the oil pan drain plug and gasket from the oil pan.

29. REMOVE OIL PAN SUB–ASSY

(a) Remove the 14 bolts and 2 nuts.

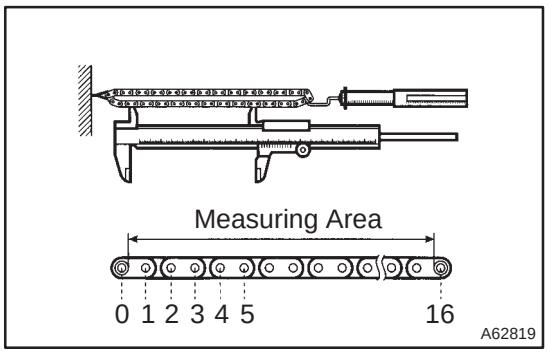
(b) Insert the blade of SST between the bearing cap sub–assembly and oil pan, and cut off applied sealer and remove the oil pan.
SST 09032–00100



NOTICE:
Be careful not to damage the oil pan contact surface of the bearing cap sub–assembly and the oil pan flange.

30. REMOVE OIL STRAINER SUB–ASSY

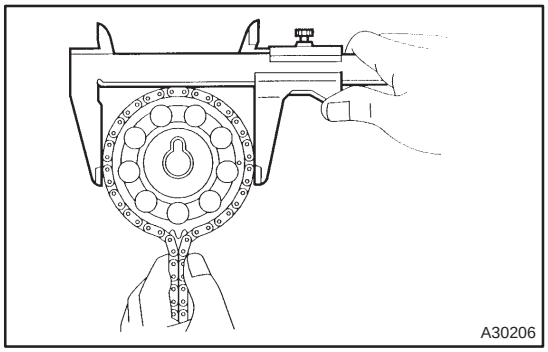
(a) Remove the bolt, 2 nuts, oil strainer and gasket.



31. REMOVE CYLINDER BLOCK WATER DRAIN COCK SUB–ASSY

(a) Remove the cylinder block water drain cock from the cylinder block.

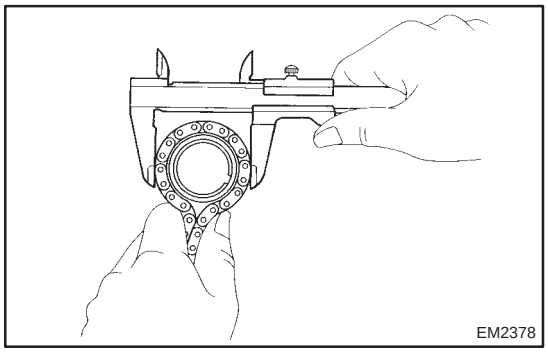
32. INSPECT CHAIN TENSIONER ASSY NO.1



(a) Check that the plunger moves smoothly when the ratchet pawl is raised with your finger.
(b) Release the ratchet pawl and check that the plunger is locked in place by the ratchet pawl and does not move when pushed with your finger.

33. INSPECT CHAIN SUB–ASSY

(a) Using a spring tension gauge and vernier calipers, pull the timing chain with 140 N (4.3 kgf, 315 lb) and measure the length of it.
Maximum chain elongation : 112.6 mm (4.433 in.)

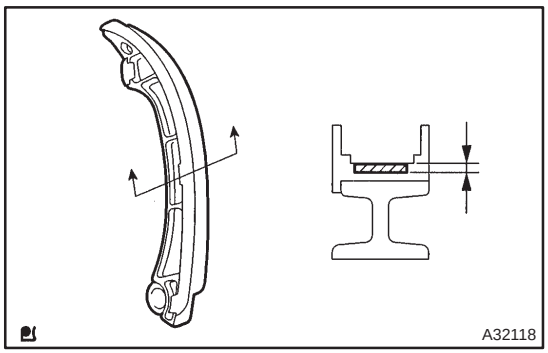


HINT:
Make the same measurements pulling at 3 or more places selected at random.

34. INSPECT CAMSHAFT TIMING GEAR OR SPROCKET

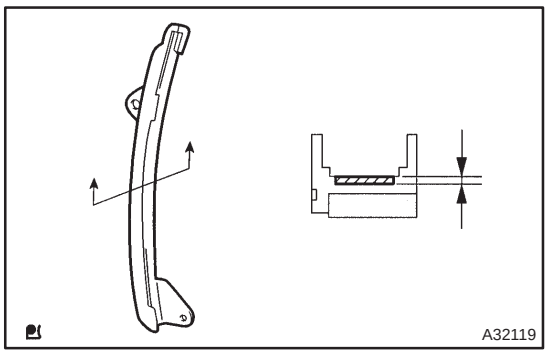
(a) Wrap the chain around the timing sprocket.
(b) Using a vernier calipers, measure the timing sprocket diameter with the chain.
Minimum sprocket diameter (w / chain):
97.3mm (3.831 in.)

NOTICE:
Vernier calipers must contact the chain rollers for measuring.



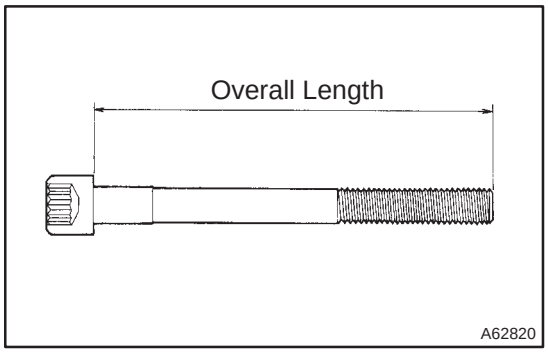
35. INSPECT CRANKSHAFT TIMING GEAR OR SPROCKET

(a) Wrap the chain around the timing sprocket.
(b) Using a vernier calipers, measure the timing sprocket diameter with the chain.



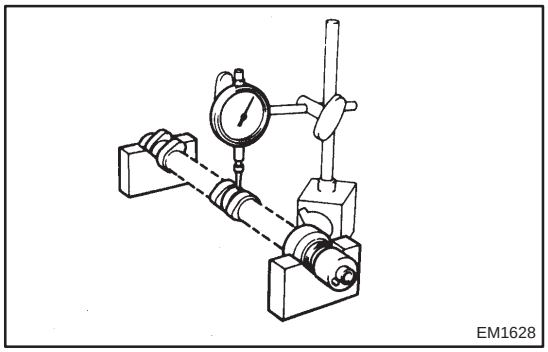
NOTICE:
Vernier calipers must contact the chain rollers for the measuring.

Minimum sprocket diameter (w / chain):
51.6mm (2.032 in.)



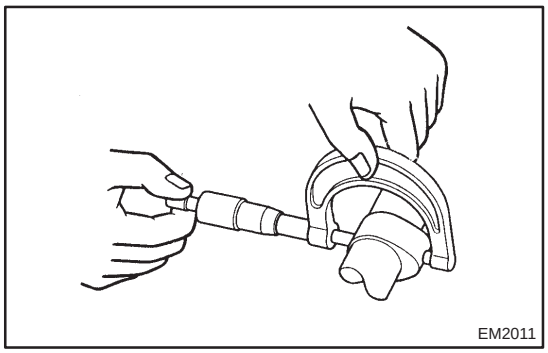
36. INSPECT CHAIN TENSIONER SLIPPER

(a) Using a vernier calipers, measure the chain tensioner slipper wears.
Maximum wear: 1.0 mm (0.039 in.)



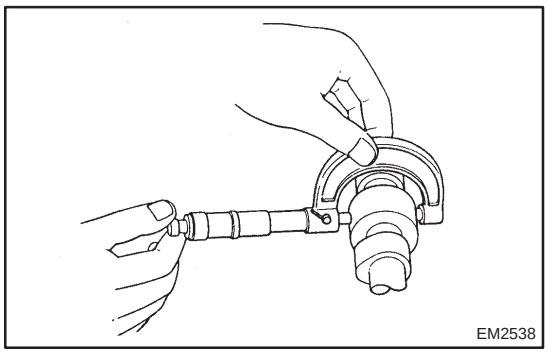
37. INSPECT CHAIN VIBRATION DAMPER NO.1

(a) Using a vernier calipers, measure the vibration damper wears.
Maximum wear: 1.0 mm (0.039 in.)



38. INSPECT CYLINDER HEAD SET BOLT

(a) Using a vernier calipers, measure the length of head bolts from the seat to the end.
Standard bolt length:
156.0 – 159.0 mm (6.142–6.260 in.)
Maximum bolt length: 159.5 mm (6.280 in.)



EM1628

39. INSPECT CAMSHAFT

(a) Inspect camshaft for runout.
  (1) Place the camshaft on V–blocks.
  (2) Using a dial indicator, measure the circle runout at the center journal.
  Maximum circle runout: 0.03 mm (0.0012 in.)

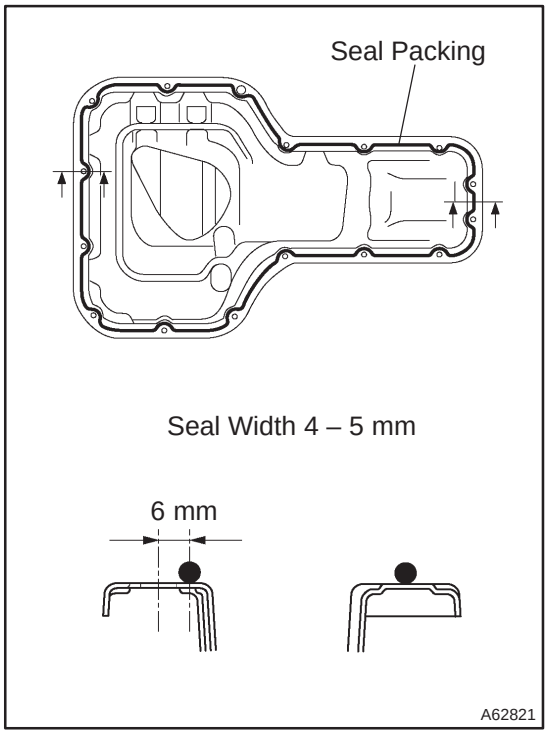
EM2011

(b) Inspect cam lobes.
  (1) Using a micrometer, measure the cam lobe height.
  Standard cam lobe height:
  Intake 44.333 – 44.433 mm (1.7454 – 1.7493 in.)
  Exhaust 43.761 – 43.861 mm (1.7229 – 1.7268 in.)
  Minimum cam lobe height:
  Intake 44.18 mm (1.7394 in.)
  Exhaust 43.61 mm (1.7169 in.)

EM2538

(c) Inspect camshaft journals.
  (1) Using a micrometer, measure the journal diameter.
  No. 1 journal diameter:
  34.449 – 34.465 mm (1.3563 – 1.3569 in.)
  Others journal diameter:
  22.949 – 22.965 mm (0.9035 – 0.9041 in.)

If the journal diameter is not as specified, check the oil clearance.



40. INSTALL CYLINDER BLOCK WATER DRAIN COCK SUB–ASSY

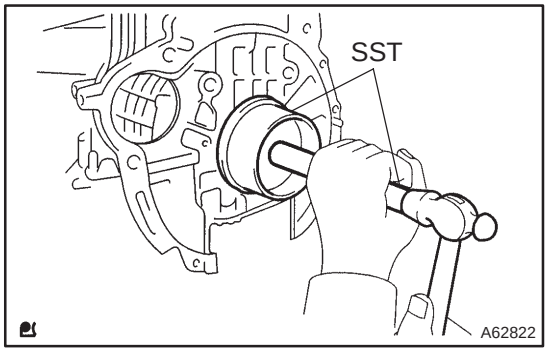
(a) Apply two or three threads of adhesive to the drain union, and install it within 3 minutes.
  Torque: 20 N·m (204 kgf·cm15 ft·lbf)
(b) After applying the specified torque, rotate the drain union clockwise until its drain port faces downward.

NOTICE:
- **Do not put into coolant in an hour after the installation.**
- **Do not rotate the drain union more than 360° in (b), and never loosen it after setting the union correctly.**

41. INSTALL OIL STRAINER SUB–ASSY

(a) Install a new gasket and the oil strainer with the 2 nuts and a bolt.
  Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

42. INSTALL OIL PAN SUB–ASSY



(a) Remove any old packing material from the contact surface.
(b) Apply seal packing in the shape of bead (Diameter 3.5 mm – 4.5 mm(0.1379–0.177in)) consequently as shown in the illustration.
Seal packing: Part No. 08826–00080 or equivalent

NOTICE:
- **Remove any oil from the contact surface.**
- **Install the oil pan within 3 minutes after applying seal packing.**
- **Do not put into engine oil within 2 hours after installing.**

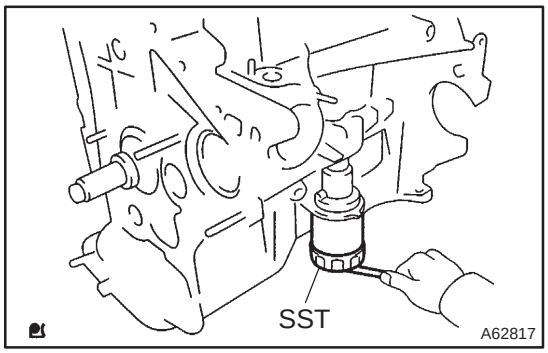
(c) Install the oil pan with the 14 bolts and 2 nuts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

43. INSTALL OIL PAN DRAIN PLUG

(a) Place a new gasket on the oil pan drain plug, and install it.
Torque: 37 N·m (377 kgf·cm, 27 ft·lbf)

44. INSTALL ENGINE REAR OIL SEAL

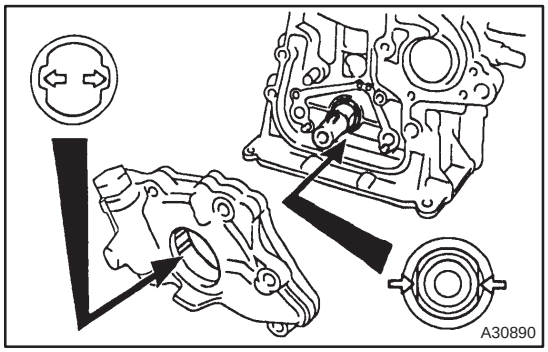
(a) Apply MP grease to a new oil seal lip.



NOTICE:
Keep the lip off foreign materials.

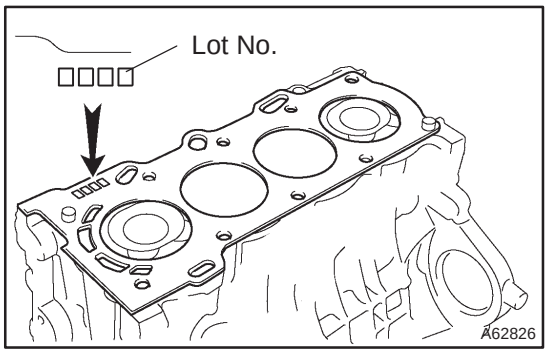
(b) Using SST, tap in the oil seal until its surface is flush with the oil seal retainer edge.
SST 09223–15030, 09950–70010 (09951–07100)

NOTICE:
Wipe off extra grease on the crank shaft.



45. INSTALL OIL FILTER UNION

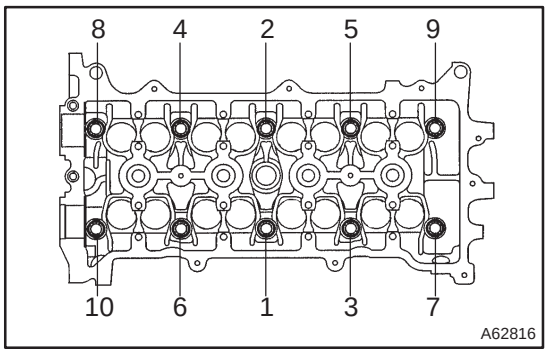
(a) Using a socket hexagon wrench 12, install the oil filter union.
Torque: 30 N·m (306 kgf·cm, 22 ft·lbf)



46. INSTALL OIL FILTER SUB–ASSY

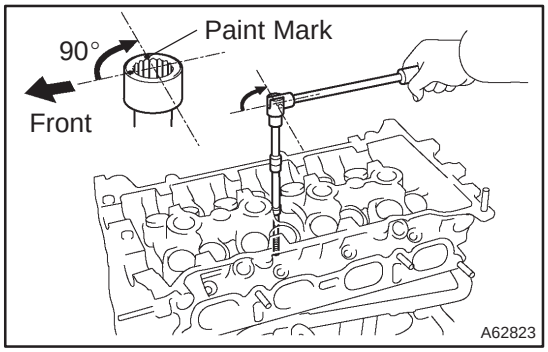
(a) Check and clean the oil filter installation surface.
(b) Apply clean engine oil to the gasket of a new oil filter.
(c) Lightly screw the oil filter into place, and tighten it until the gasket contacts the seat.
(d) Using SST, tighten it an additional 3/4 turn.
SST 09228–06501

47. INSTALL OIL PUMP ASSY

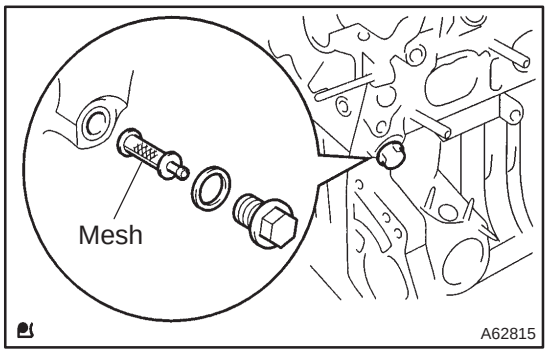


(a) Engage the spline teeth of the oil pump drive rotor with the large teeth of the crankshaft, and side the oil pump.
(b) Install the oil pump with the 5 bolts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

48. INSTALL CYLINDER HEAD GASKET



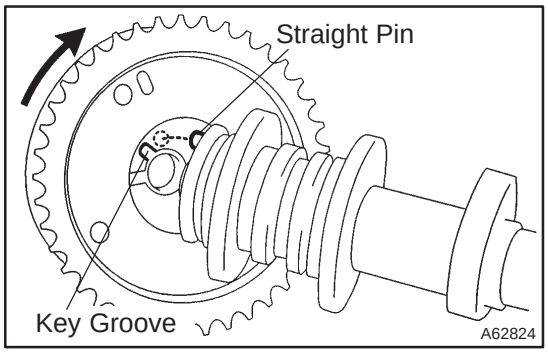
(a) Place a new cylinder head gasket on the cylinder block surface with the Lot No. stamp upward.



NOTICE:
- **Pay attention to the installation direction.**
- **Place the cylinder head quietly in order not to damage the gasket with the bottom part of the head.**

49. INSTALL CYLINDER HEAD SUB–ASSY

HINT:
The cylinder head bolts are tightened in 2 progressive steps.
(a) Apply a light coat of engine oil on the threads and under the heads of the cylinder head bolts.
(b) Using a bi–hexagon wrench 10, install and uniformly tighten the 10 cylinder head bolts with plate washers, in several passes, in the sequence shown.
Torque: 49 N·m (500 kgf·cm, 36 ft·lbf)
(c) Mark the front of the cylinder head bolt with paint.
(d) Retighten the cylinder head bolts 90° in the numerical order shown.
(e) Check that the point marked bolts are moved at 90 ° angle.

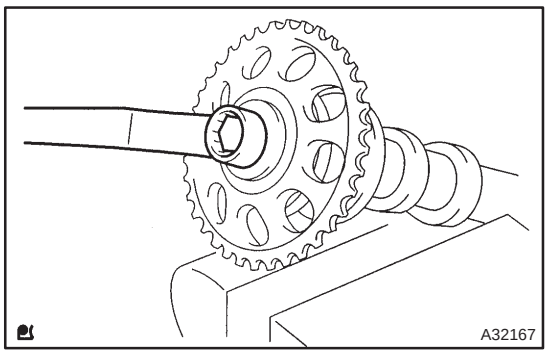


50. INSTALL OIL CONTROL VALVE FILTER

(a) Confirm that the filter is clear.
(b) Install the oil control valve filter to the cylinder head.
(c) Place a new gasket on the bolt, and install it.
Torque: 30 N·m (306 kgf·cm, 22 ft·lbf)

51. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSY

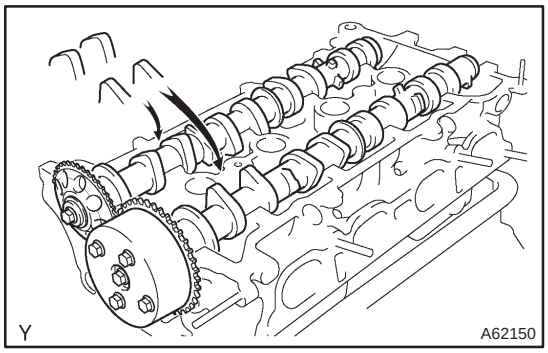
(a) Install a new O–ring to the camshaft timing oil control valve.
(b) Install the camshaft timing oil control valve with the bolt.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)



52. INSTALL CAMSHAFT TIMING GEAR ASSY

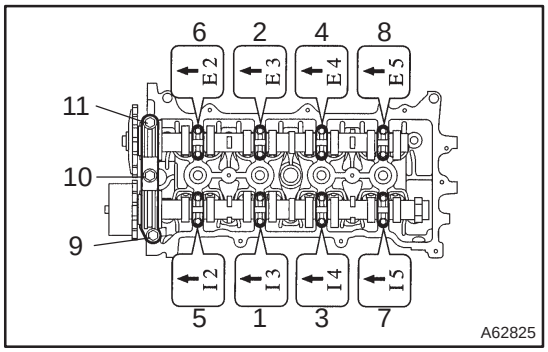
(a) Put the camshaft timing gear assembly and the camshaft together with the straight pin off the key groove.
(b) Turn the camshaft timing gear assembly to the left direction (as shown in the illustration) with pushing it lightly against the camshaft. Push further at the position where the pin gets into the groove.

CAUTION:
Be sure not to turn the camshaft timing gear to the retard angle side (to the right angle).



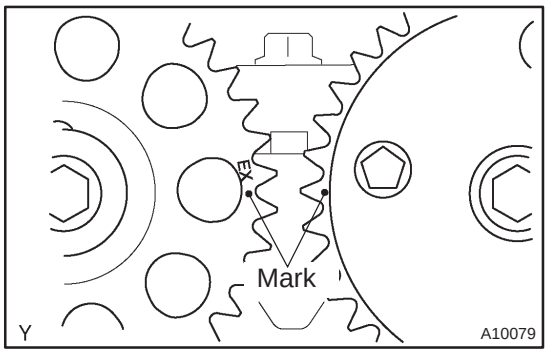
(c) Check that there is no clearance between the gear's fringe and the camshaft.
(d) Tighten the fringe bolt with the camshaft timing gear fixed.
Torque: 54 N·m (551 kgf·cm 40 ft·lbf)
(e) Check that the camshaft timing gear assembly can move to the retard angle side (the right angle), and is locked at the most retarded position.

53. INSTALL CAMSHAFT TIMING GEAR OR SPROCKET



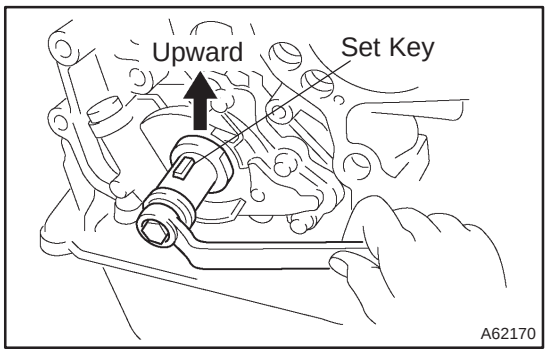
(a) Grip the camshaft with a vice, and install the camshaft timing gear.
Torque: 54 N·m (551 kgf·cm 40 ft·lbf)

NOTICE:
Be careful not to damage the camshaft.

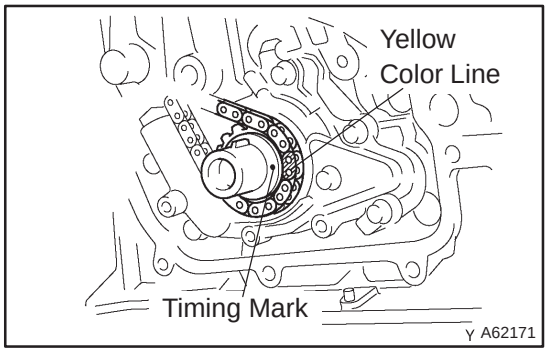


54. INSTALL CAMSHAFT

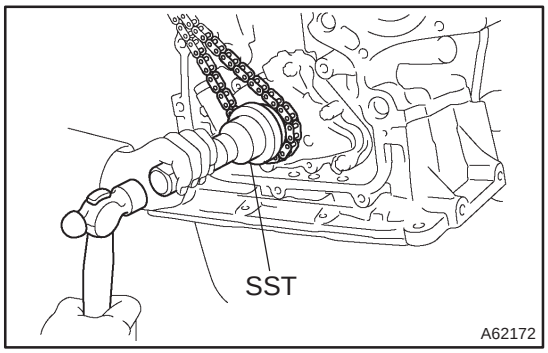
(a) Apply light coat of engine oil on the camshaft journals.
(b) Place the 2 camshafts on the cylinder head with the No. 1 cam lobes facing as shown the illustration.



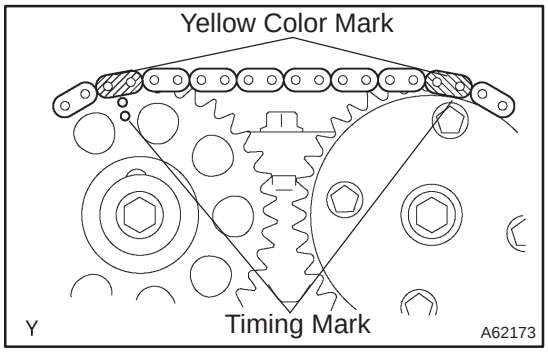
(c) Examine the front marks and numbers and tighten the bolts in the order shown in the illustration.
Torque:
Bearing cap No. 1 23 N·m (235 kgf·cm, 17 ft·lbf)
Bearing cap No. 3 13 N·m (133 kgf·cm, 10 ft·lbf)



55. INSTALL CHAIN SUB–ASSY



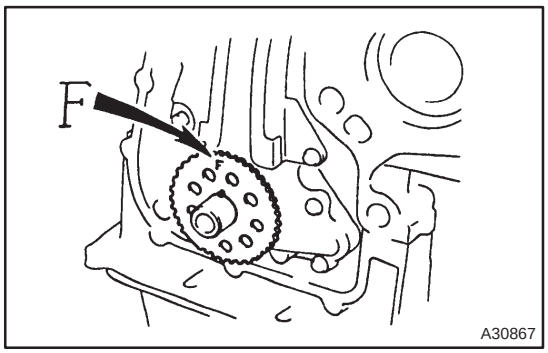
(a) Set No. 1 cylinder to TDC/compression.
(1) Turn the hexagonal wrench head portion of the camshafts, and align the point marks of the camshaft timing gears.



(2) Using a crankshaft pulley bolt, turn the crankshaft and set the set key on the crankshaft upward.

(b) Install the timing chain on the crankshaft timing sprocket with the yellow color link aligned with the timing mark on the crankshaft timing sprocket.

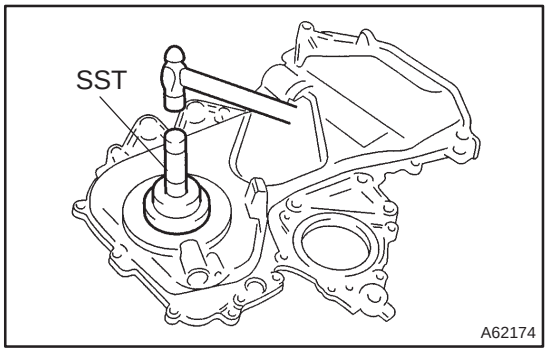
(c) Using a SST, install the sprocket.
SST 09223–22010



(d) Install the timing chain on the camshaft timing sprockets with the yellow color links aligned with the timing marks on the camshaft timing sprockets.

56. INSTALL CHAIN VIBRATION DAMPER NO.1

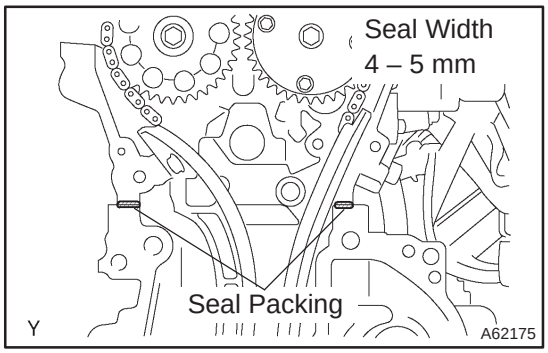
(a) Install the chain vibration damper with the 2 bolts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)



57. INSTALL CHAIN TENSIONER SLIPPER

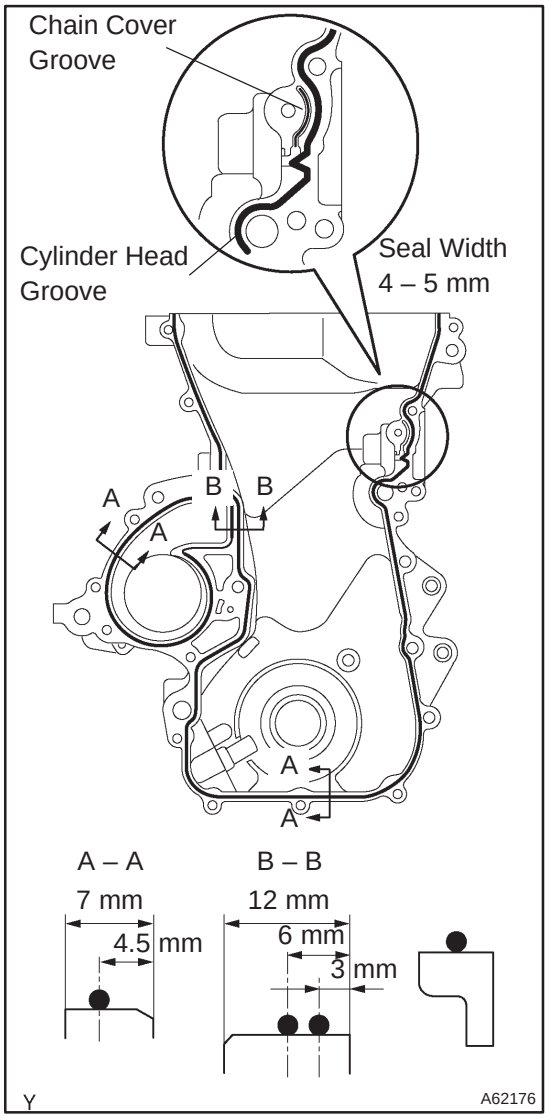
(a) Install the chain tensioner slipper with the bolt.
Torque: 19 N·m (194 kgf·cm, 14 ft·lbf)

58. INSTALL CRANKSHAFT POSITION SENSOR PLATE NO.1



(a) Install the plate with the ”F” mark facing forward.

59. INSTALL TIMING GEAR COVER OIL SEAL

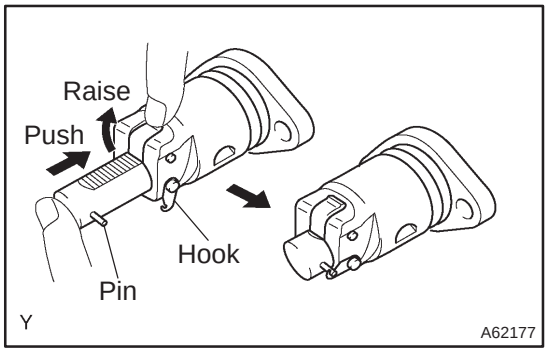


(a) Apply MP grease to the oil seal lip.
(b) Using SST, tap in a new oil seal until its surface is flush with the timing chain cover edge.
SST 09223–22010

NOTICE:
Keep the lip off foreign materials.

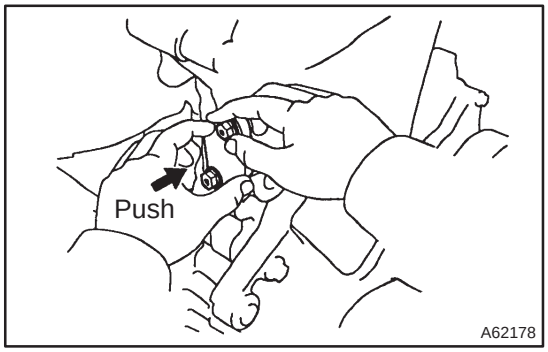
60. INSTALL TIMING CHAIN OR BELT COVER SUB–ASSY

(a) Remove any old packing material from the contact surface.



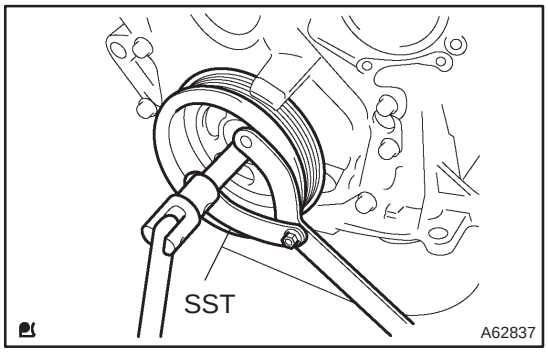
(b) Apply seal packing in the shape of bead (Diameter 3.5 mm – 4.5 mm(0.1379–0.177in)) consequently as shown in the illustration.
Seal packing:
Water pump part part No. 08826–00100 or equivalent
Other part part No. 08826–00080 or equivalent

(c) Install the timing chain cover, with the 12 bolts and nut.
Torque:
M6 13 N·m (133 kgf·cm, 10 ft·lbf)
M8 19 N·m (194 kgf·cm, 14 ft·lbf)



NOTICE:

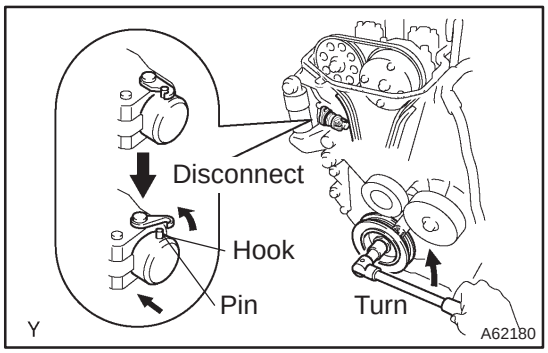
- **Remove any oil from the contact surface.**
- **Install the oil pan within 3 minutes after applying seal packing.**
- **Do not put into engine oil within 2 hours after installing.**



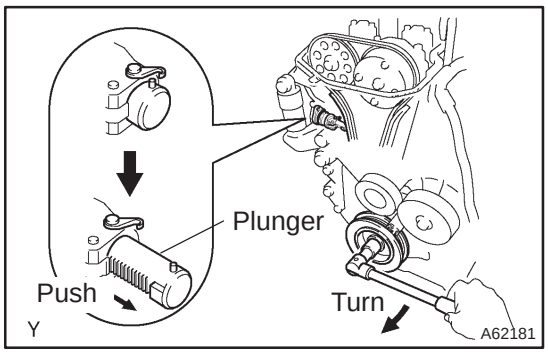
61. INSTALL CHAIN TENSIONER ASSY NO.1

(a) Check the O–ring is clean, and set the hook as shown in the illustration.

(b) Apply engine oil to the chain tensioner and install it with the 2 nuts..
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

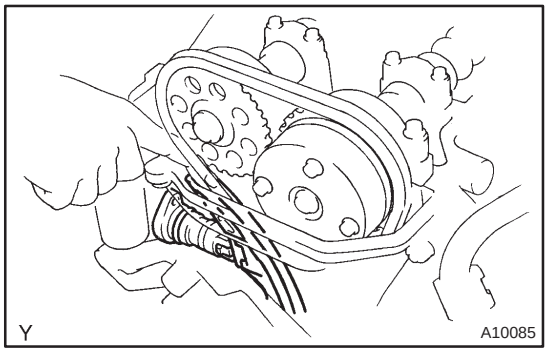


NOTICE:
When installing the tensioner, set the hook again if the hook releases the plunger.

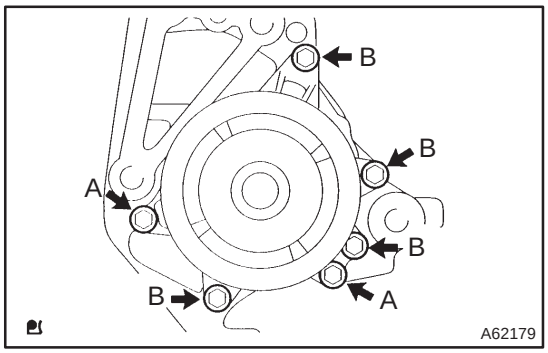


62. INSTALL CRANKSHAFT PULLEY

(a) Align the pulley set key with the key groove of the pulley, and slide on the pulley.



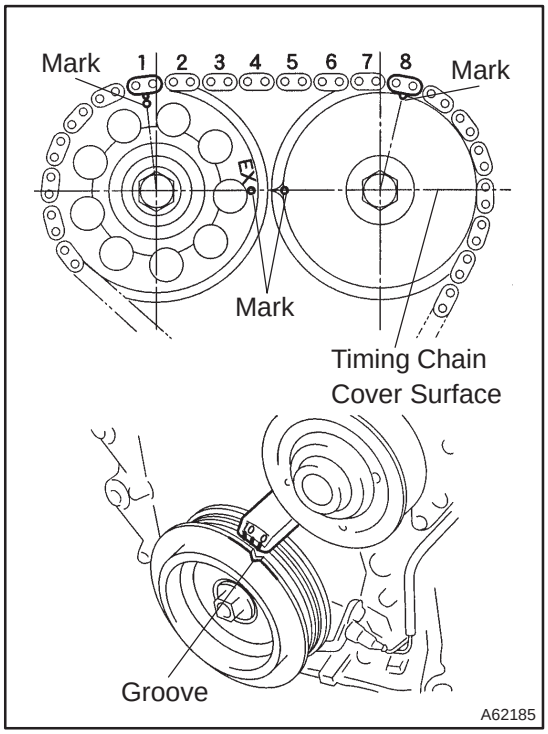
(b) Using SST, install the pulley bolt.
SST 09960–10010 (09962–01000, 09963–01000)
Torque: 138 N·m (1,407 kgf·cm, 102 ft·lbf)



(c) Turn the crankshaft counterclockwise, and disconnect the plunger knock pin from the hook.

(d) Turn the crankshaft clockwise, and check that the slipper is pushed by the plunger.

HINT:
If the plunger does not spring out, press the slipper into the chain tensioner with a screwdriver or your finger so that the hook is released from the knock pin and the plunger springs out.



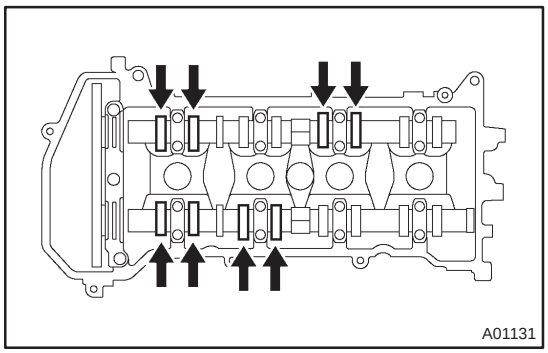
63. INSTALL WATER PUMP ASSY

(a) Place a new O–ring on the timing chain cover.

(b) Install the water pump with the 6 bolts.
Torque:
Bolt A 9.0 N·m (92 kgf·cm, 80 in·lbf)
Bolt B 11 N·m (112 kgf·cm, 8 ft·lbf)

HINT:
Each bolt length is indicated in the illustration.

64. INSPECT VALVE CLEARANCE



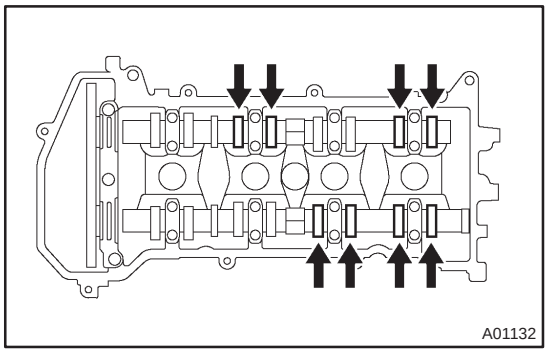
(a) Set No. 1 cylinder to TDC/compression.

(1) Turn the crankshaft pulley, and align its groove with timing mark ”0” of the timing chain cover.

(2) Check that the point marks of the camshaft timing sprocket and VVT timing sprocket are in straight line on the timing chain cover surface as shown in the illustration.

HINT:

If not, turn the crankshaft 1 revolution (360°) and align the marks as above.



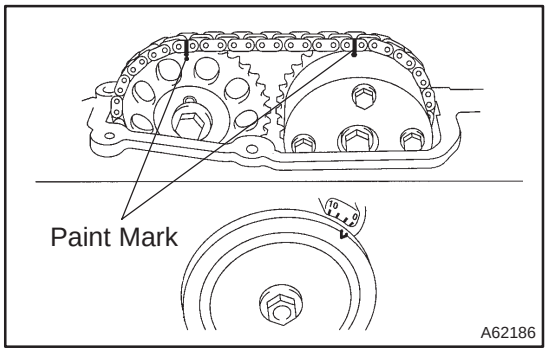
(b) Check only the valves indicated.

(1) Using a feeler gauge, measure the clearance between the valve lifter and camshaft.

(2) Record the out–of specification valve clearance measurements. They will be used later to determine the required replacement adjusting shim.

Valve clearance (Cold):
Intake 0.15 – 0.25 mm (0.006 – 0.010 in.)
Exhaust 0.25 – 0.35 mm (0.010 – 0.014 in.)

(c) Turn the crankshaft 1 revolution (360°) and set No. 4 cylinder to TDC/compression.



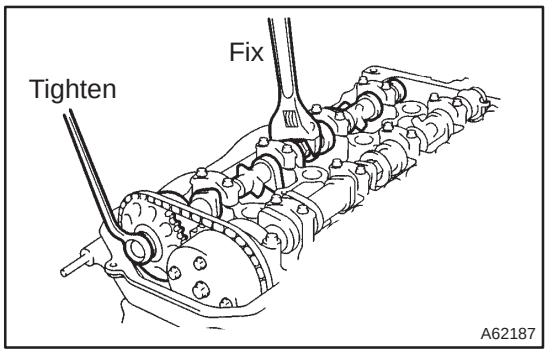
(d) Check only the valves indicated.

(1) Using a feeler gauge, measure the clearance between the valve lifter and camshaft.

(2) Record the out–of specification valve clearance measurements. They will be used later to determine the required replacement adjusting shim.

Valve clearance (Cold):
Intake 0.15 – 0.25 mm (0.006 – 0.010 in.)
Exhaust 0.25 – 0.35 mm (0.010 – 0.014 in.)

65. ADJUST VALVE CLEARANCE

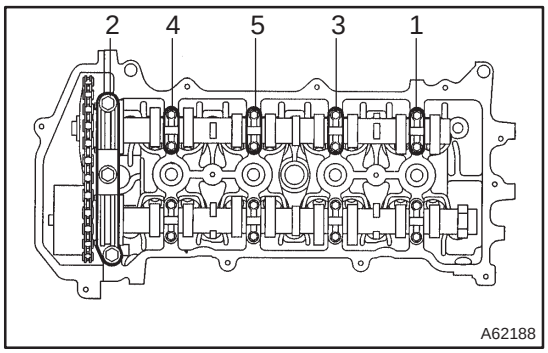


NOTICE:

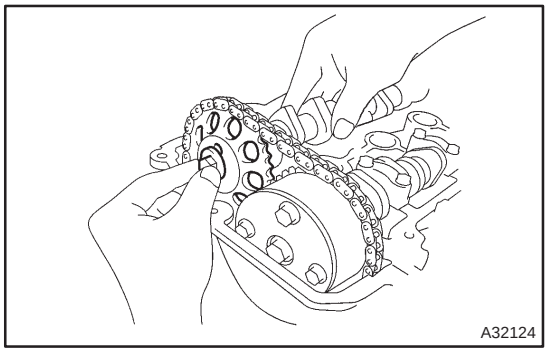
Be sure not to revolve the crankshaft without the chain tensioner.

(a) Set the No. 1 cylinder to the TDC/compression.

(b) Place match marks on the timing chain and camshaft timing sprockets.

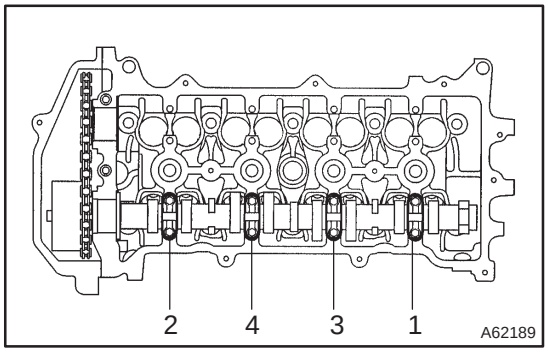


(c) Remove the 2 bolts and chain tensioner.

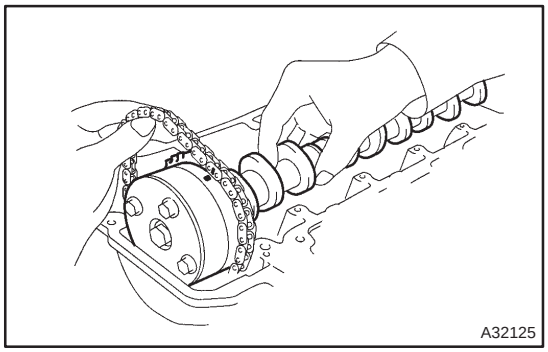


(d) Fix the camshaft with a spanner and so on, then loosen the camshaft timing gear set bolt.

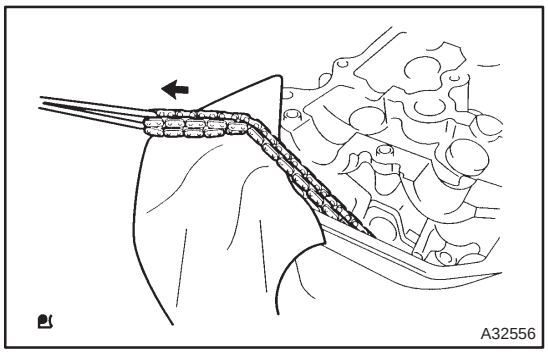
NOTICE:



Be careful not to damage the valve lifter.



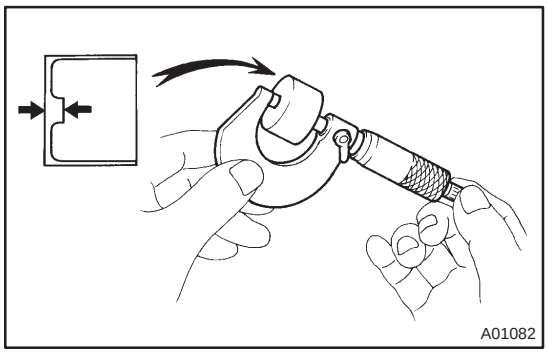
(e) Loosen the camshaft bearing cap bolts on No. 2 camshaft in the order as shown in the illustration in several passes, and remove the caps.



(f) Remove the camshaft timing gear as shown in the illustration.

(g) Loosen the camshaft bearing cap bolts on camshaft in the order as shown in the illustration in several passes, and remove the caps.

(h) Remove the camshaft with holding the timing chain.



(i) Tie the timing chain with a string as shown in the illustration.

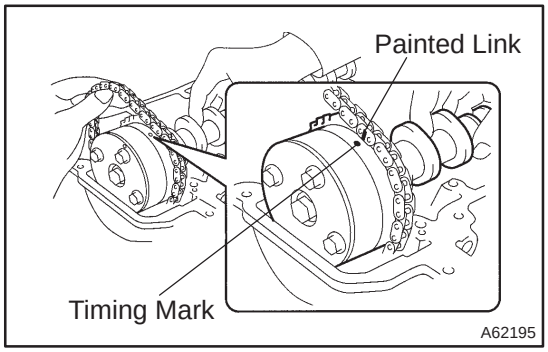
NOTICE:

Be careful not to drop anything inside the timing chain cover.

(j) Remove the valve lifters.

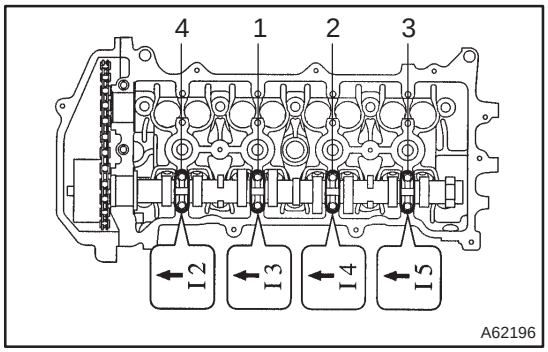
(k) Using a micrometer, measure the thickness of the removed lifters.

(l) Calculate the thickness of a new lifter so that the valve clearance comes within the specified value.



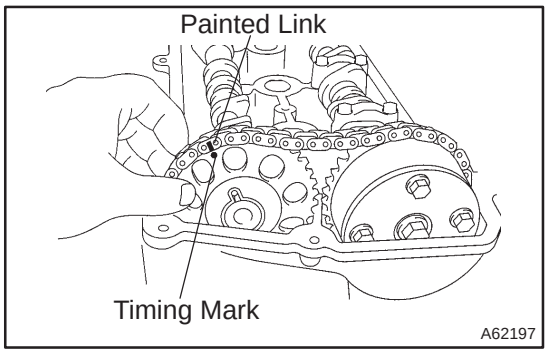
A	Thickness of new lifter
B	Thickness of used lifter
C	Measured valve clearance

Intake: A = B + (C – 0.20 mm (0.008 in.))

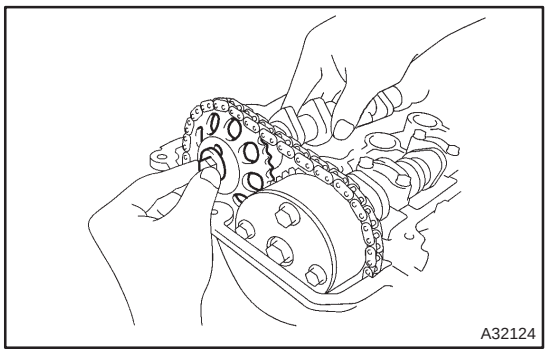


Exhaust: A = B + (C – 0.30 mm (0.012 in.))

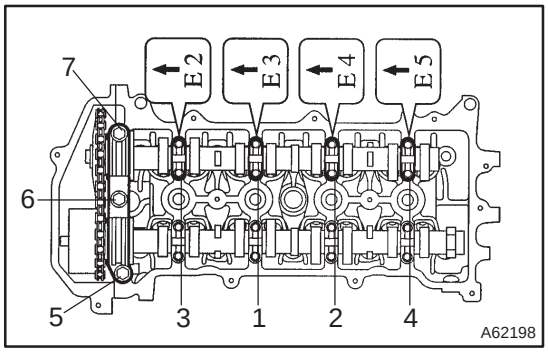
HINT:



- Select a new lifter with a thickness as close as possible to the calculated values.
- Lifter are available in 35 sizes in increments of 0.020 mm (0.0008 in.), from 5.060 mm (0.1992 in.) to 5.740 mm (0.2260 in.).

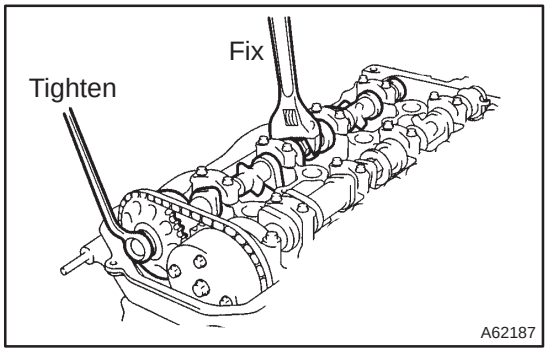


(m) As shown in the illustration, install the timing chain on the camshaft timing gear, with the painted links aligned with the timing marks on the camshaft timing sprockets.

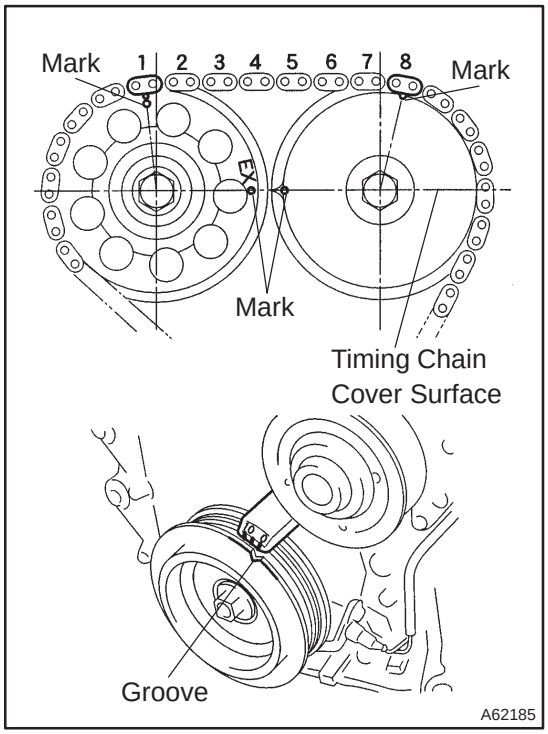


(n) Examine the front marks and numbers and tighten the bolts in the order shown in the illustration.
Torque: 13 N·m (133 kgf·cm, 10 ft·lbf)

(o) Put the camshaft No.2 on the cylinder head with the painted links of the chain aligned with the timing mark on the camshaft timing sprockets.

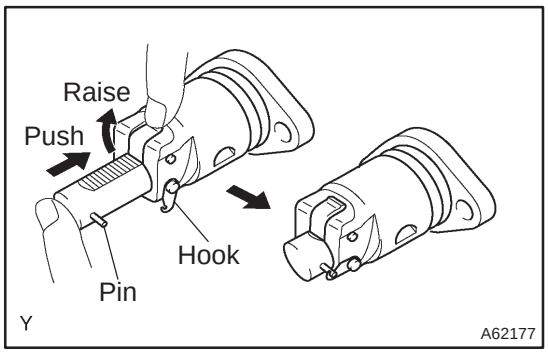


(p) Tighten the set bolt temporarily.



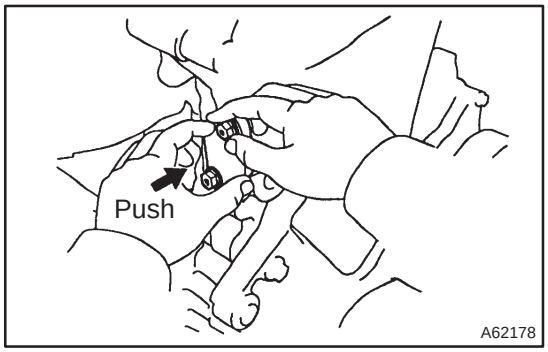
(q) Examine the front marks and numbers and tighten the bolts in the order shown in the illustration.
Torque: 13 N·m (133 kgf·cm, 10 ft·lbf)

(r) Install the bearing cap No. 1.
Torque: 23 N·m (235 kgf·cm, 17 ft·lbf)



(s) Fix the camshaft with a spanner and so on, then tighten the camshaft timing gear set bolt.
Torque: 54 N·m (551 kgf·cm, 40 ft·lbf)

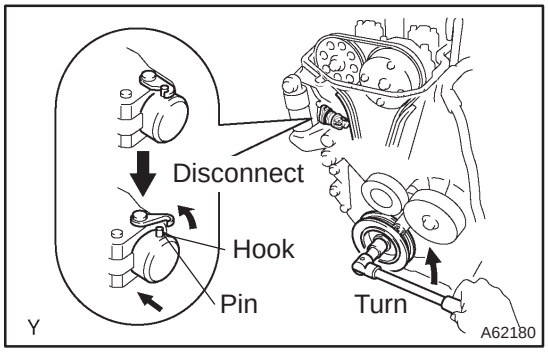
NOTICE:
Be careful not to damage the valve lifter.



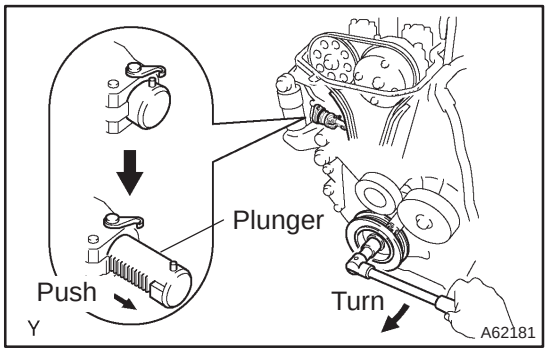
(t) Check the match marks on the timing chain and camshaft timing sprockets, and then the alignment of the pulley groove with timing mark of the chain cover as shown in the illustration.

(u) Install chain tensioner.

(1) Check the O–ring is clean, and set the hook as shown in the illustration.

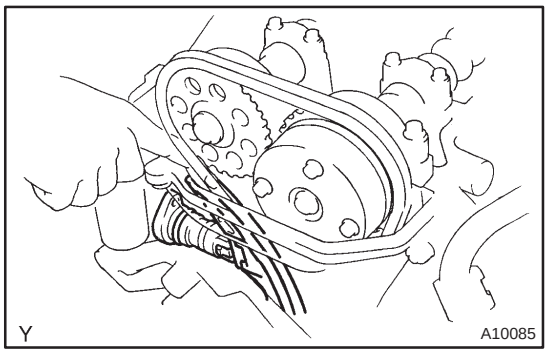


(2) Apply engine oil to the chain tensioner and install it.

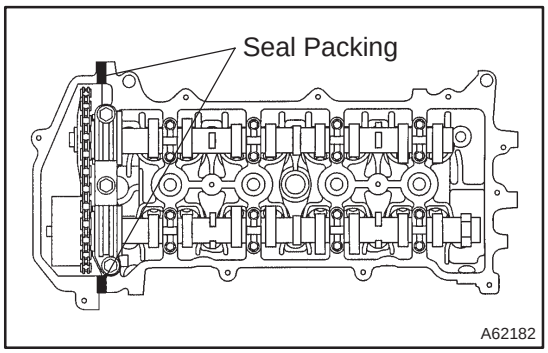


Torque: 9.0 N·m (92 kgf·cm, 80 in·lbf)

NOTICE:



When installing the tensioner, set the hook again if the hook release the plunger.



(3) Turn the crankshaft counterclockwise, and disconnect the plunger knock pin from the hook.

(4) Turn the crankshaft clockwise, and check that the slipper is pushed by the plunger.

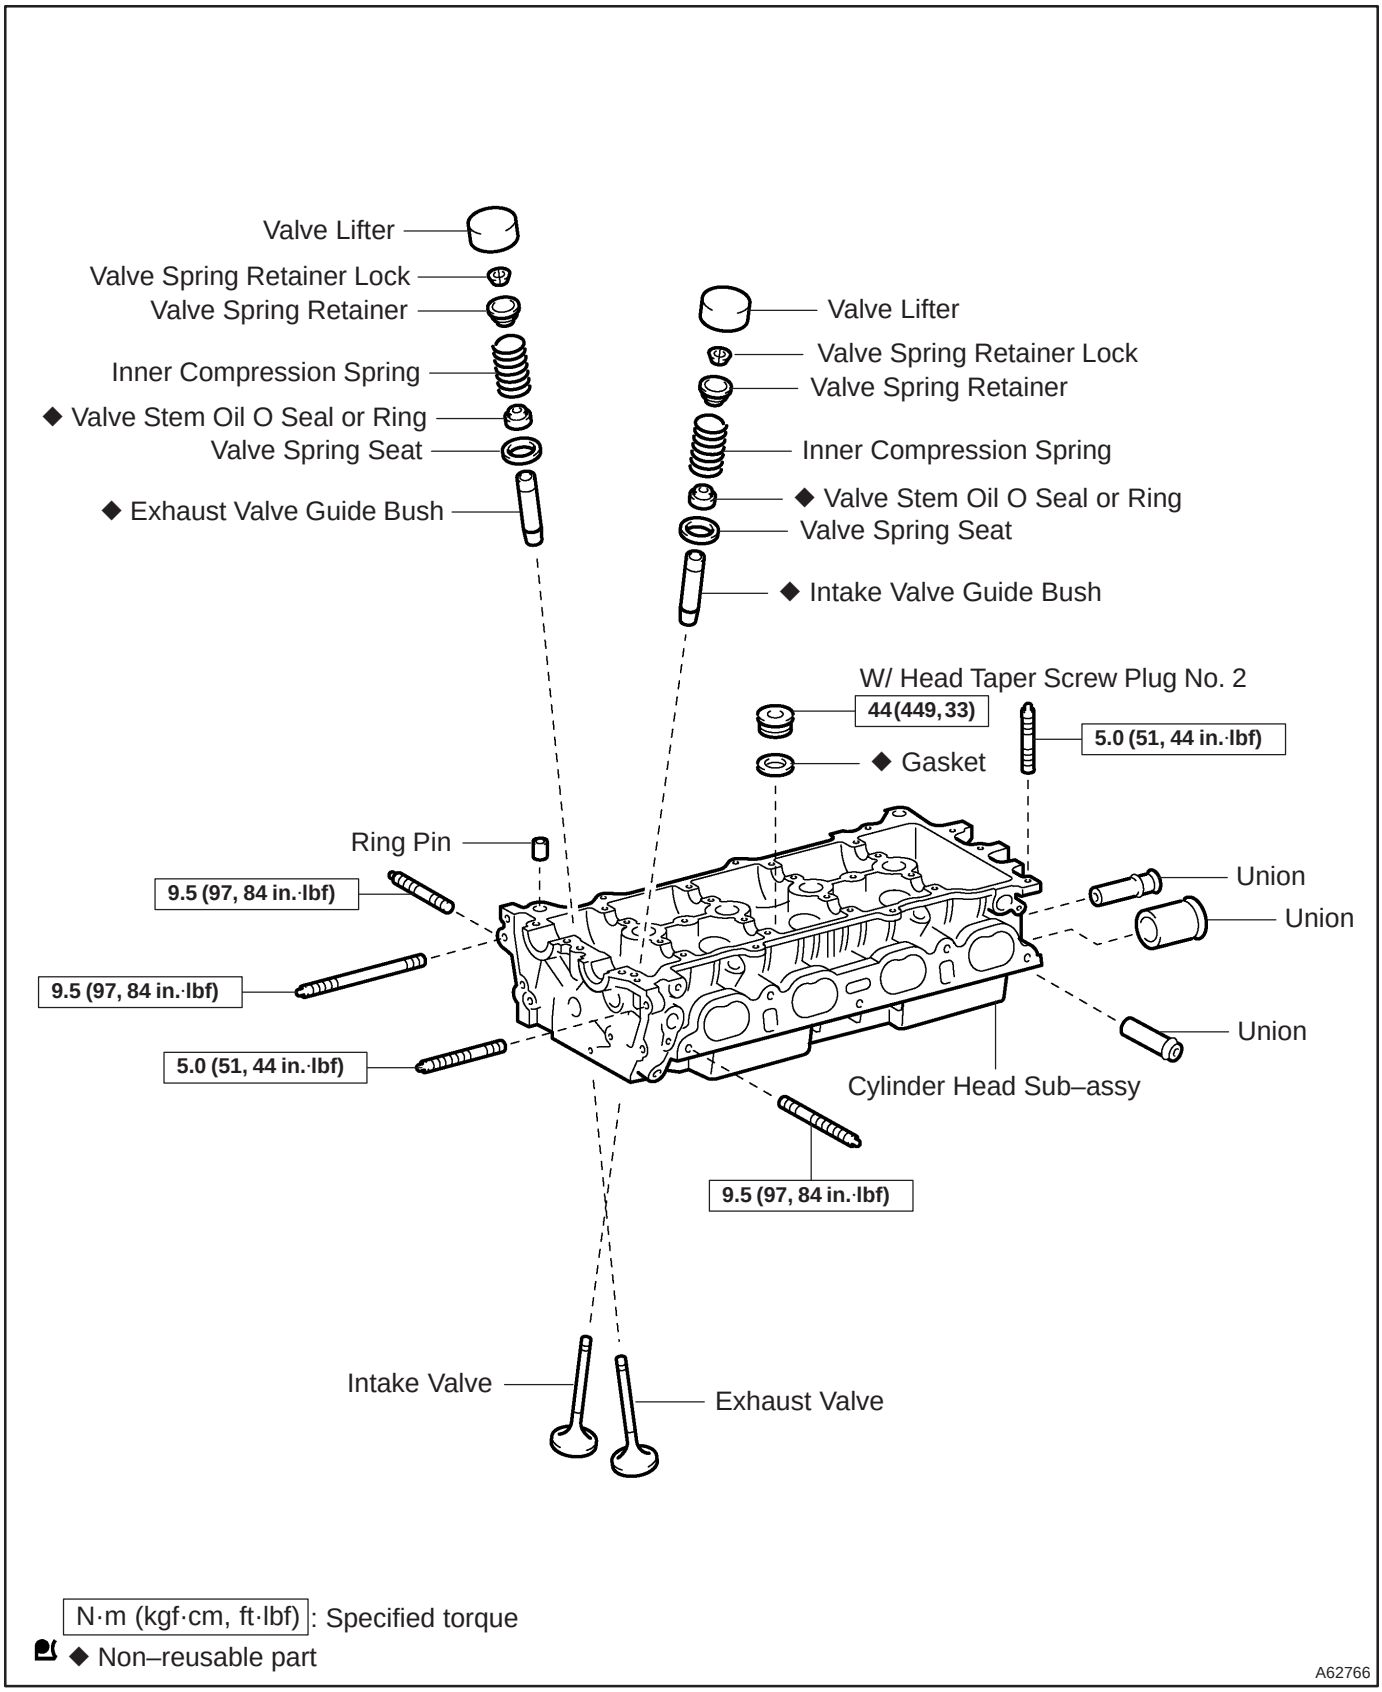
HINT:
If the plunger does not spring out, press the slipper into the chain tensioner with a screwdriver or your finger so that the hook is released from the knock pin and the plunger springs out.

66. INSTALL CYLINDER HEAD COVER SUB–ASSY

(a) Install the gasket to the cylinder head cover.
(b) Remove any old packing (FIPG) material.
(c) Apply seal packing to 2 locations as shown in the illustration.
Seal packing: Part No. 08826–00080 or equivalent

NOTICE:
- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes after applying seal packing.**
- **Do not put into engine oil 2 hours after installing.**

(d) Install the cylinder head cover and cable bracket with the 9 bolts, 2 seal washers and 2 nuts
Uniformly tighten the bolts and nuts, in the several passes.
Torque:
w/o washer 11 N·m (112 kgf·cm, 8 ft·lbf)
w/ washer 9.0 N·m (92 kgf·cm, 80 in·lbf)



67. INSTALL SPARK PLUG

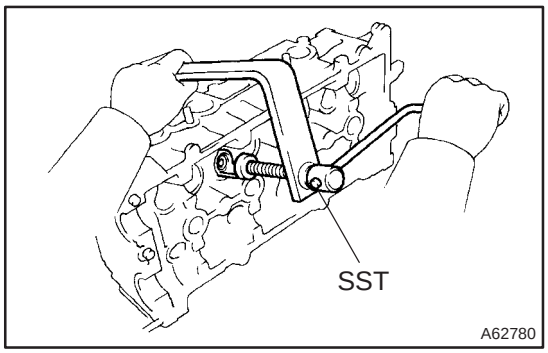
(a) Using a spark lug wrench, install the 4 spark plugs.
Torque: 25 N·m (255 kgf·cm, 18 ft·lbf)

CYLINDER HEAD ASSY (1ZZ–FE/3ZZ–FE)

140KM–01

COMPONENTS

140KN–01



OVERHAUL

1. REMOVE W/HEAD TAPER SCREW PLUG NO.2

(a) Using a socket hexagon wench 10, remove the taper screw plug and gasket.

2. REMOVE VALVE LIFTER

(a) Remove the 16 valve lifters from the cylinder head.

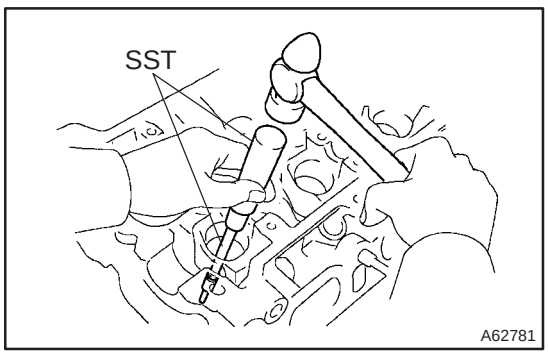
3. REMOVE INNER COMPRESSION SPRING

(a) Using SST, compress the valve spring and remove the 2 keepers, the retainer, and the spring seat.
SST 09202–70020 (09202–00010)

4. REMOVE INTAKE VALVE

(a) Remove the 8 intake valves from the cylinder head.

5. REMOVE EXHAUST VALVE



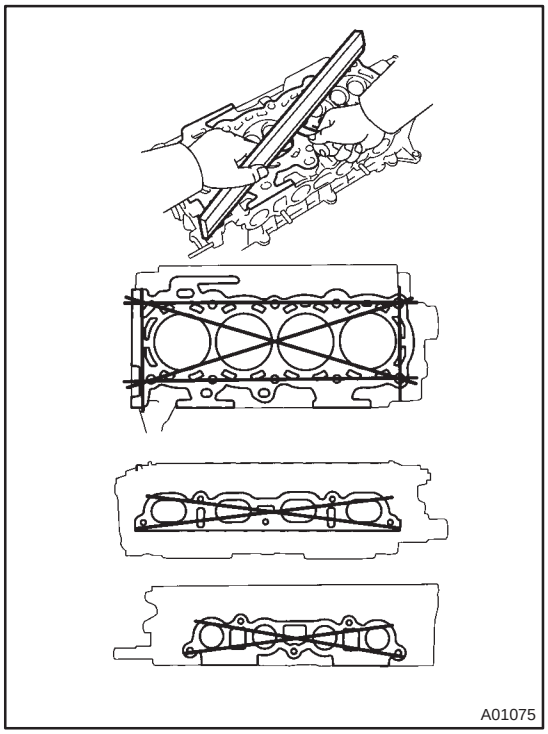
(a) Remove the 8 exhaust valves from the cylinder head.

6. REMOVE VALVE STEM OIL O SEAL OR RING

(a) Remove the 16 valve stem oil seals from the valve guide bush.

7. REMOVE VALVE SPRING SEAT

(a) Remove the 16 valve spring seats from the cylinder head.

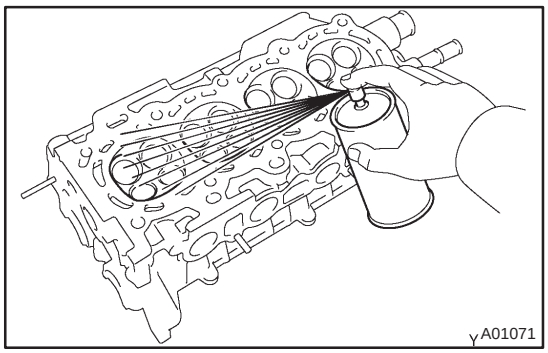


8. REMOVE VALVE GUIDE BUSH

(a) Heat the cylinder head to 80 – 100°C (176 – 212°F).
(b) Using SST, tap out the valve guide bush.
SST 09201–10000, 09201–01055, 09950–70010 (09951–07100)

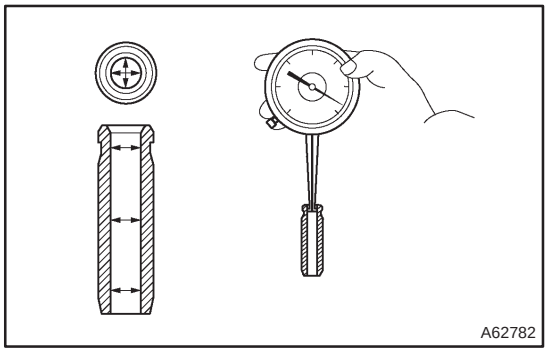
9. REMOVE STUD BOLT

(a) Remove the 11 stud bolts from the cylinder head.



10. INSPECT CYLINDER HEAD FOR FLATNESS

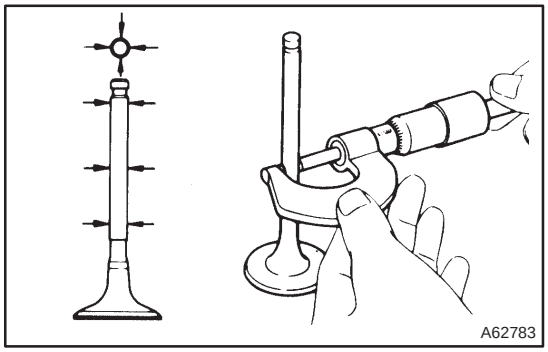
(a) Using a precision straight edge and a feeler gauge, measure the surface contacting the cylinder block and the manifolds for warpage.



Maximum warpage:

Cylinder block side	0.05 mm (0.0020 in.)
Intake manifold side	0.10 mm (0.0040 in.)
Exhaust manifold side	0.10 mm (0.0040 in.)

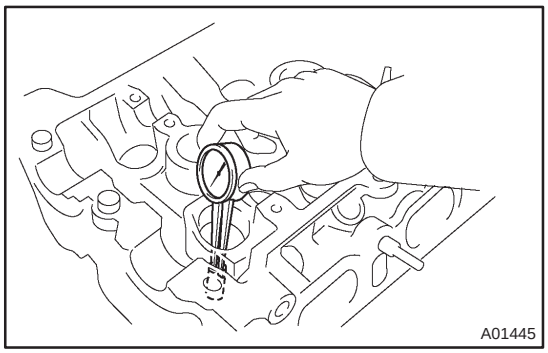
11. INSPECT CYLINDER HEAD FOR CRACKS



(a) Using a dye penetrate, check the combustion chamber, intake ports, exhaust ports and cylinder block surface for cracks.

12. INSPECT VALVE GUIDE BUSHING OIL CLEARANCE

(a) Using a caliper gauge, measure the inside diameter of the valve guide bush.

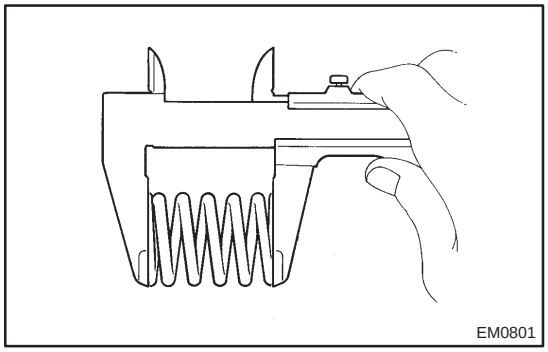


Busing inside diameter:
5.510 – 5.530 mm (0.2169 – 0.2177 in.)

(b) Using a micrometer, measure the diameter of the valve stem.

Valve stem diameter:
Intake 5.470 – 5.485 mm (0.2154 – 0.2159 in.)
Exhaust 5.465 – 5.480 mm (0.2152 – 0.2158 in.)

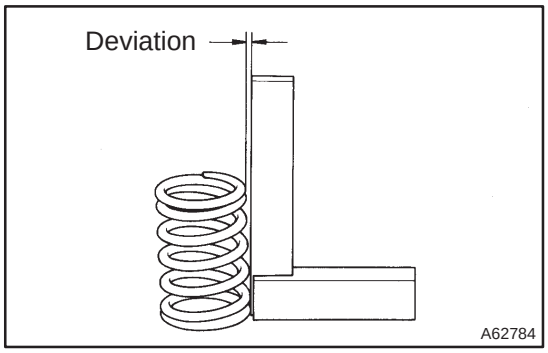
(c) Subtract the valve stem diameter measurement from the guide bushing inside diameter measurement.
Standard oil clearance:
Intake 0.025 – 0.060 mm (0.0010 – 0.0024 in.)
Exhaust 0.030 – 0.065 mm (0.0012 – 0.0026 in.)
Maximum oil clearance:
Intake 0.08 mm (0.0031 in.)
Exhaust 0.01 mm (0.0039 in.)



13. INSPECT VALVE GUIDE BUSH

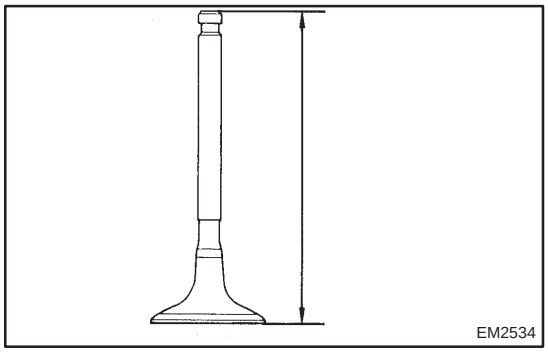
(a) Using a caliper gauge, measure the bushing bore diameter of the cylinder head.
Diameter: 10.285 – 10.306 mm (0.4049 – 0.4057 in.)

(b) If the bushing bore diameter of the cylinder head is greater than 10.306 mm (0.4057 in.), machine the bushing bore to the dimension of 10.335 – 10.356 mm (0.4068 – 0.4077 in.) to install a over size bushing.



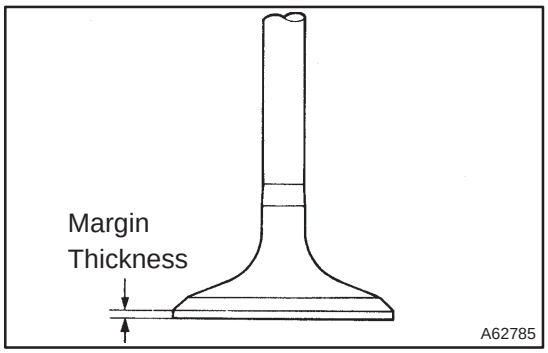
HINT:

bushing bore diameter mm (in.)	Bushing size
10.285 – 10.306 (0.4049 – 0.4057)	Use STD
10.335 – 10.356 (0.4068 – 0.4077)	Use O/S 0.05

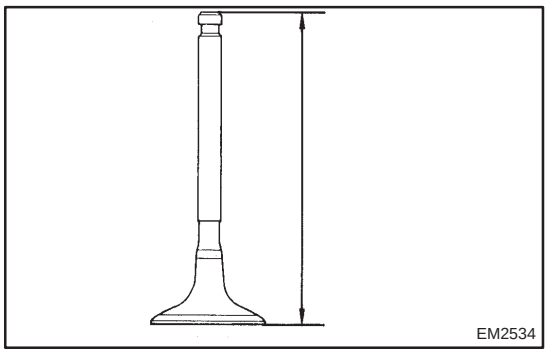


14. INSPECT INNER COMPRESSION SPRING

(a) Using a vernier caliper, measure the free length of the valve spring.
Free length: 43.40 mm (1.7087 in.)

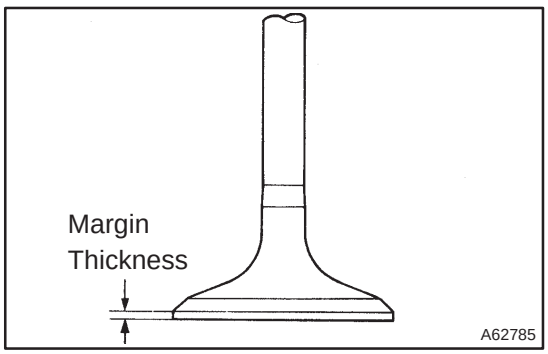


(b) Using a steel square, measure the deviation of the valve spring.
Maximum deviation: 2.0 mm (0.078 in.)
Maximum angle (reference): 2°

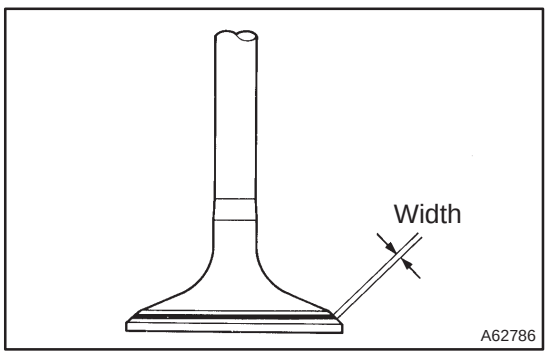


15. INSPECT INTAKE VALVE

(a) Using a vernier calipers, check the valve overall length.
Standard overall length: 88.65 mm (3.4902 in.)
Minimum overall length: 88.35 mm (3.4784 in.)



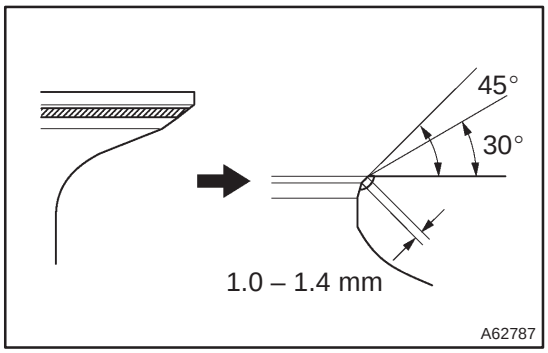
(b) Using a vernier calipers, check the valve head margin thickness.
Standard margin thickness: 1.0 mm (0.039 in.)
Minimum margin thickness: 0.7 mm (0.028 in.)



16. INSPECT EXHAUST VALVE

(a) Using a vernier calipers, check the valve overall length.
Standard overall length: 88.69 mm (3.4917 in.)
Minimum overall length: 88.39 mm (3.4799 in.)

(b) Using a vernier calipers, check the valve head margin thickness.
Standard margin thickness: 1.0 mm (0.039 in.)
Minimum margin thickness: 0.7 mm (0.028 in.)

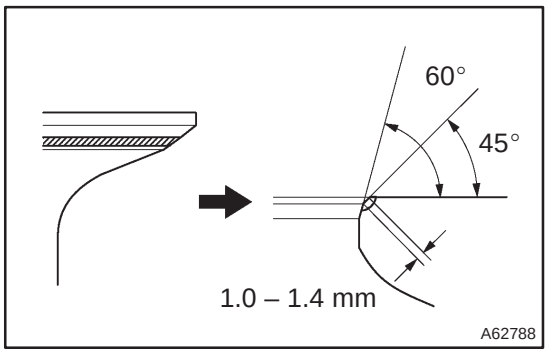


17. INSPECT VALVE SEATS

(a) Apply a light coat of prussian blue (or white lead) to the valve face.
(b) Lightly press the valve against the seat.
(c) Check the valve face and seat according to the following procedure.
  (1) If blue appears 360° around the face, the valve is concentric. If not, replace the valve.

(2) If blue appears 360° around the valve seat, the guide and face are concentric. If not, resurface the seat.

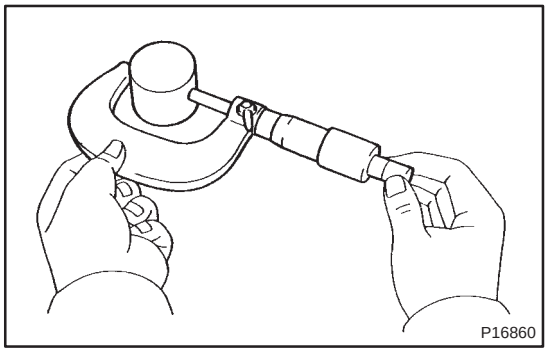
(3) Check that the seat contact is in the middle of the valve face with the width between 1.0 – 1.4 mm (0.039 – 0.055 in.).



18. REPAIR VALVE SEATS

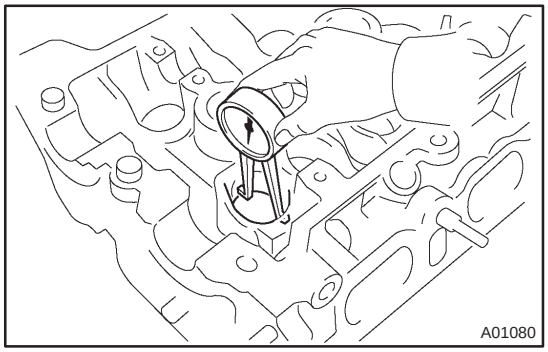
NOTICE:

Take off a cutter gradually to make smooth valve seats.



(a) If the seating is too high on the valve face, use 30° and 45 ° cutters to correct the seat.

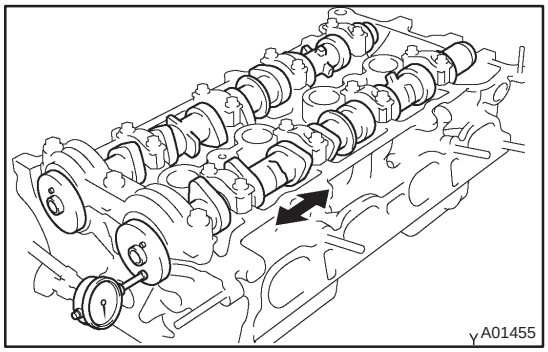
(b) If the seating is too low on the valve face, use 75° and 45° cutters to correct the seat.



(c) Hand–lap the valve and valve seat with an abrasive compound.

(d) Check the valve seating position.

19. INSPECT VALVE LIFTER

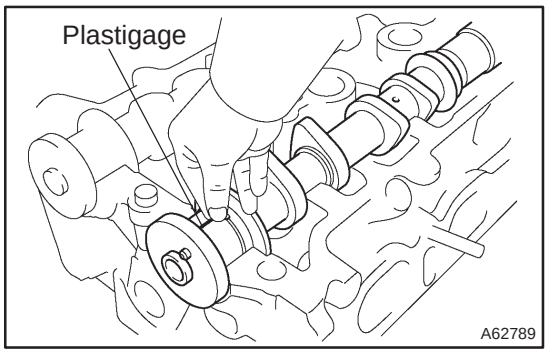


(a) Using a micrometer, measure the lifter diameter.
Lifter diameter:
30.966 – 30.976 mm (1.2191 –1.2195 in.)

20. INSPECT VALVE LIFTER OIL CLEARANCE

(a) Using a caliper gauge, measure the lifter bore diameter of the cylinder head.
Lifter bore diameter:
31.000 – 31.025 mm (1.2205 – 1.2215 in.)

(b) Subtract the lifter diameter measurement from the lifter bore diameter measurement.
Standard oil clearance:
0.024 – 0.059 mm (0.0009 – 0.0023 in.)
Maximum oil clearance: 0.1 mm (0.0039 in.)



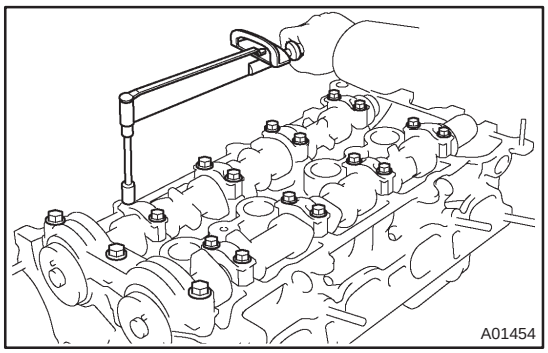
21. INSPECT CAMSHAFT THRUST CLEARANCE

(a) Install the 2 camshafts.

(b) Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.

Standard thrust clearance:
0.040 – 0.095 mm (0.0016 – 0.0037 in.)
Maximum thrust clearance: 0.110 mm (0.0043 in.)

(c) If the thrust clearance is greater than maximum, replace the cylinder head. If damages are found on the camshaft thrust surfaces, the camshaft also has to be replaced.

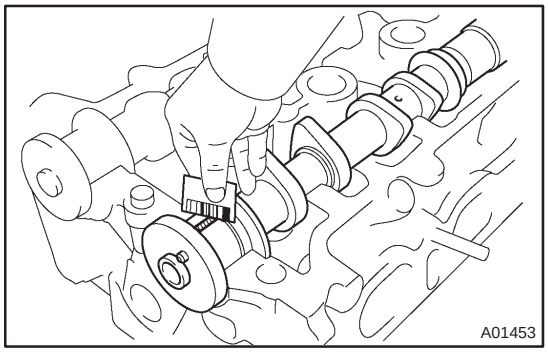


22. INSPECT CAMSHAFT OIL CLEARANCE

(a) Clean the bearing caps and camshaft journals.

(b) Place the camshafts on the cylinder head.

(c) Lay a strip of Plastigage across each of the camshaft journal.



(d) Install the bearing caps (See page 14–4).

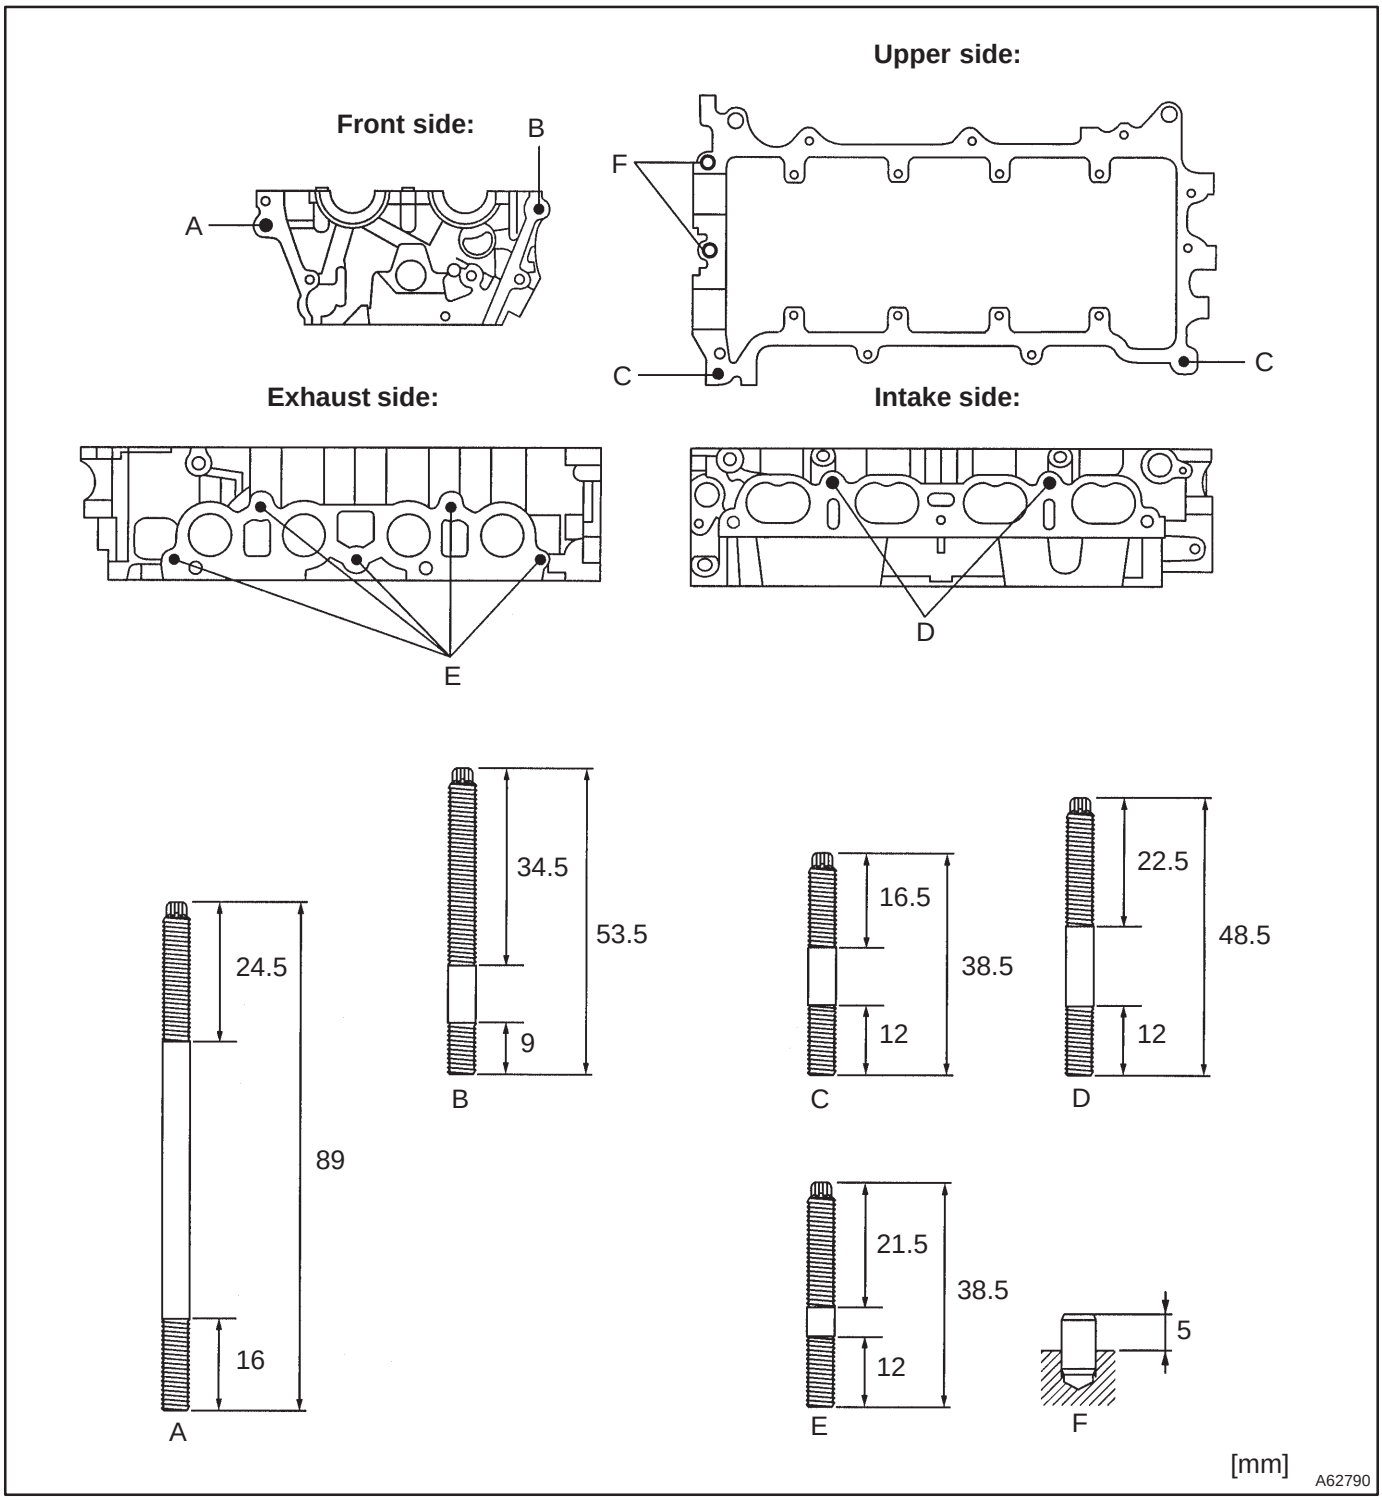
Torque:
No. 1 23 N·m (235 kgf·cm, 17 ft·lbf)
No. 3 13 N·m (132 kgf·cm, 10 ft·lbf)

NOTICE:
Do not turn the camshaft.

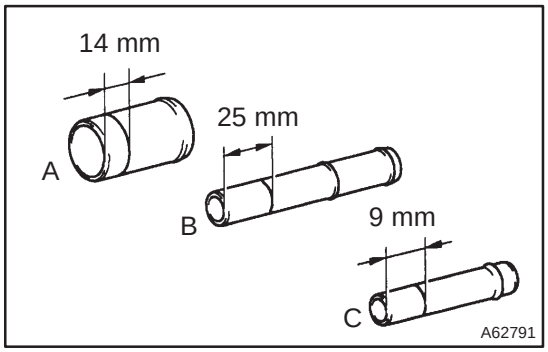
(e) Remove the bearing caps.

(f) Measure the plastigage at its widest point.

Standard oil clearance:
0.035 – 0.072 mm (0.0014 – 0.0028 in.)
Maximum oil clearance: 0.10 mm (0.0039 in.)



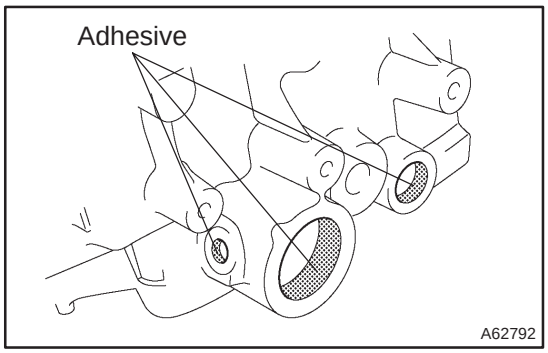
NOTICE:
Completely remove the Plastigage after the measuring.



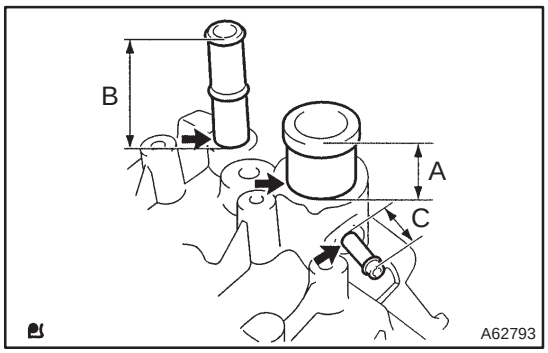
If the oil clearance is greater than maximum, replace the cylinder head.

23. INSTALL STUD BOLT AND RING PIN

(a) Install the 11 stud bolts to cylinder head,
Torque:
Stud bolt A, D and E 9.5 N·m (97, 84 in.·lbf)
Stud bolt B and C 5.0 N·m (51, 44 in.·lbf)



(b) Using a plastic hammer, install the new 2 ring pins to the cylinder head.
Standard protrusion: 5 mm (0.020 in.)

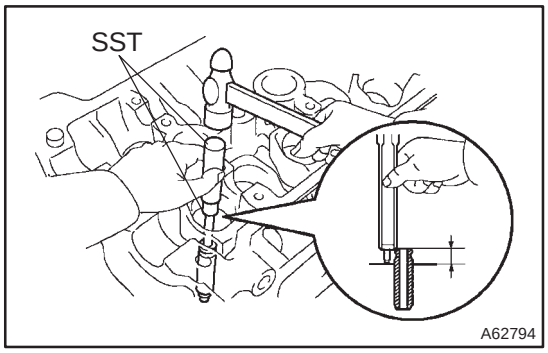


24. INSTALL UNION

(a) Mark the standard position away from the edge, onto the water hose union as shown in the illustration.

(b) Apply adhesive to the water hose union hole of the cylinder head.

Adhesive:
Part No. 08833–00070, THREE BOND 1324 or equivalent.

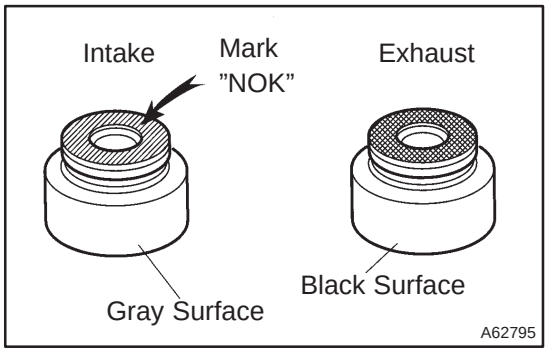


(c) Using a press, press in a new water hose union until the standard marks come to the level of the cylinder head surface.

Standard protrusion:
A 29 mm (1.14 in.)
B 66.5 mm (2.62 in.)
C 24 mm (0.95 in.)

NOTICE:

- **Install the water hose union within 3 minutes after applying adhesive.**
- **Do not put into coolant within an hour after installing.**



25. INSTALL VALVE GUIDE BUSH

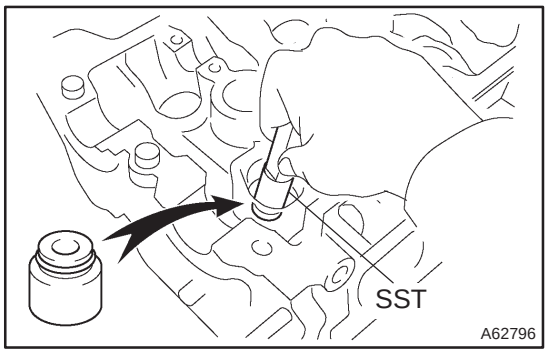
(a) Gradually heat the cylinder head to 80 – 100°C (176 – 212°F).

(b) Using SST and a hammer, tap in a new guide bushing to the specified protrusion height.

SST 09201–10000, 09201–01055, 09950–70010 (09951–07100)

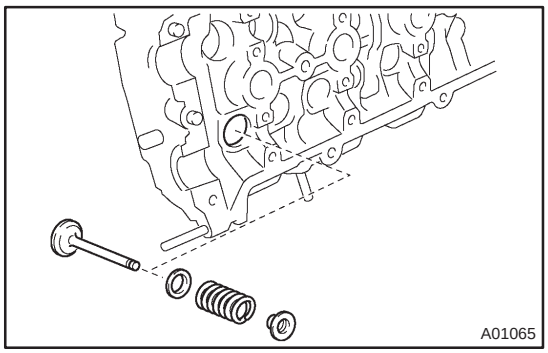
Protrusion height: 8.7 – 9.1 mm (0.342 – 0.358 in.)

26. INSTALL VALVE STEM OIL O SEAL OR RING



(a) Apply a light coat of engine oil on the valve stem oil seals.

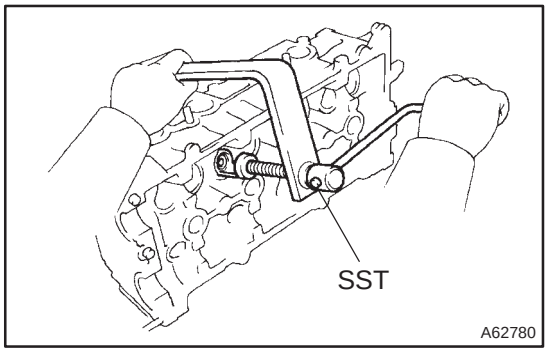
NOTICE:



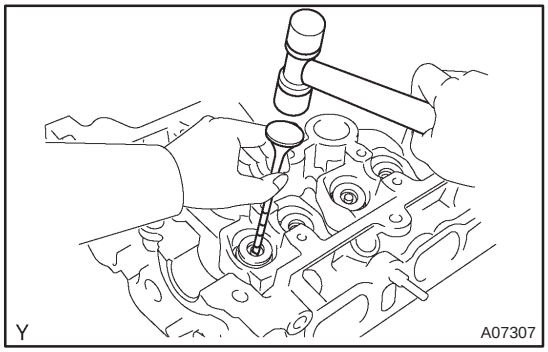
Be very careful to assemble the oil seal for intake and exhaust. Assembling the wrong one may cause a failure.

HINT:

The intake valve stem oil seal is gray and the exhaust valve stem oil seal is black.



(b) Using SST, push in a new valve stem oil seal.
SST 09201–41020



27. INSTALL INNER COMPRESSION SPRING

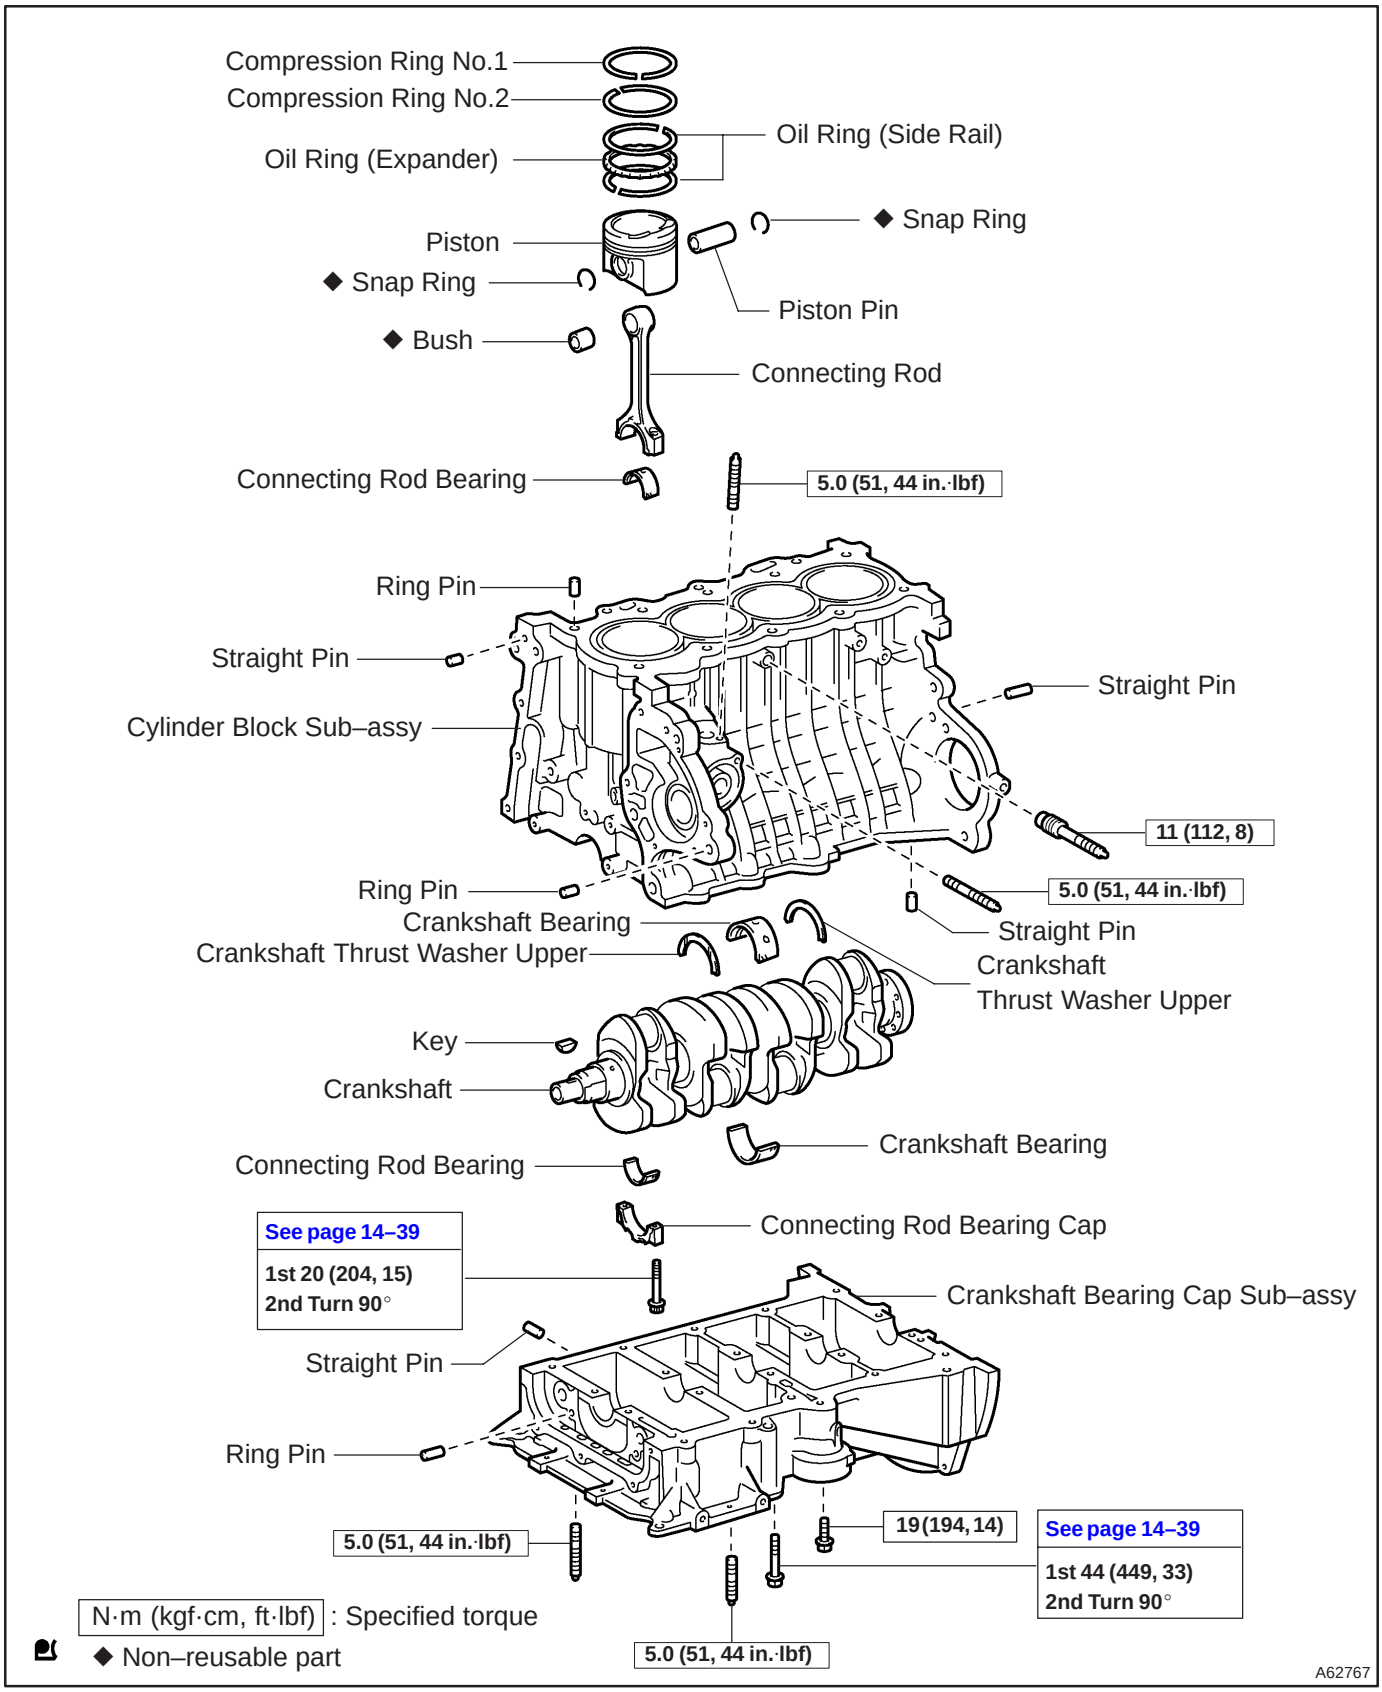
(a) Install the valve, spring seat, valve spring, and spring retainer.

(b) Using SST, compress the valve spring and place the 2 keepers around the valve stem.
SST 09202–70020 (09202–00010)

(c) Using a plastic hammer and the valve stem (not in use) tip wound with vinyl tape, lightly tap the valve stem tip to ensure a proper fit.

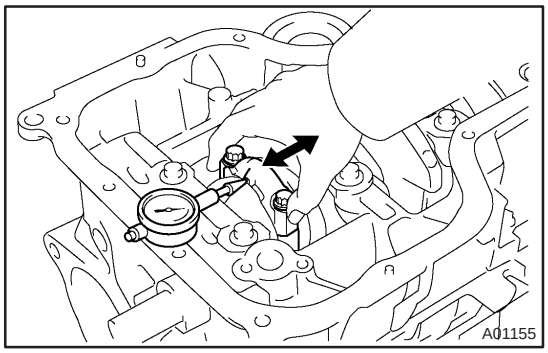
NOTICE:

Be careful not to damage the valve stem tip.



28. INSTALL W/HEAD TAPER SCREW PLUG NO.2

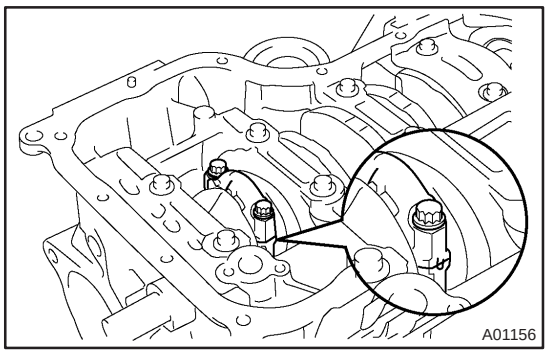
(a) Using a socket hexagon wrench 10, install the taper screw plug with a new gasket.
Torque: 44 N·m (449 kgf·cm, 33 ft·lbf)



CYLINDER BLOCK (1ZZ–FE/3ZZ–FE)

140KO–01

COMPONENTS



OVERHAUL

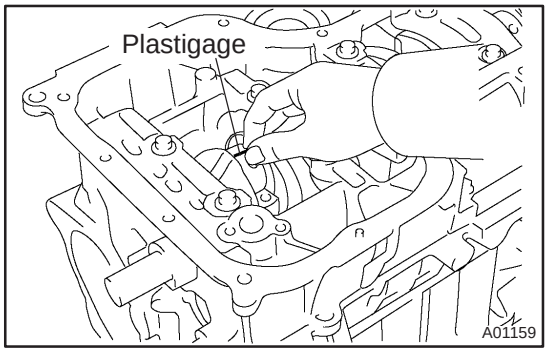
1. INSPECT CONNECTING ROD THRUST CLEARANCE

(a) Using a dial indicator, measure the thrust clearance while moving the connecting rod back and forth.

Standard thrust clearance:
0.160 – 0.342 mm (0.063 – 0.0135 in.)
Maximum thrust clearance: 0.342 mm (0.0135 in.)

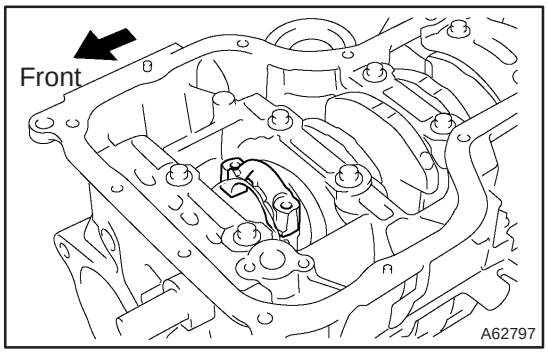
2. INSPECT CONNECTING ROD BEARING OIL CLEARANCE

NOTICE:
Do not turn the crankshaft.



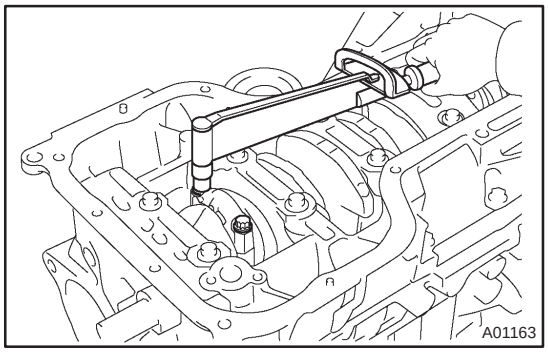
(a) Using marking paint, write the matched cylinder number on each connecting rod and cap.

HINT:
The match marks on the connecting rods and caps are for ensuring correct reassembly.

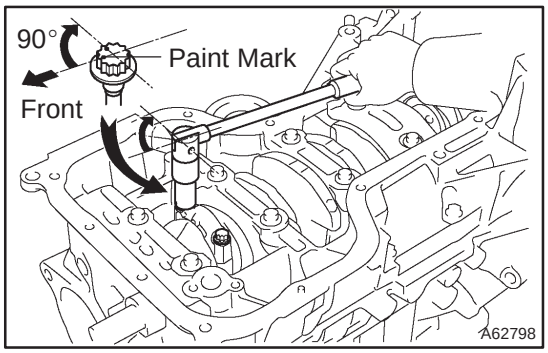


(b) Using SST, remove the 2 connecting rod cap bolts.
SST 09205–16010

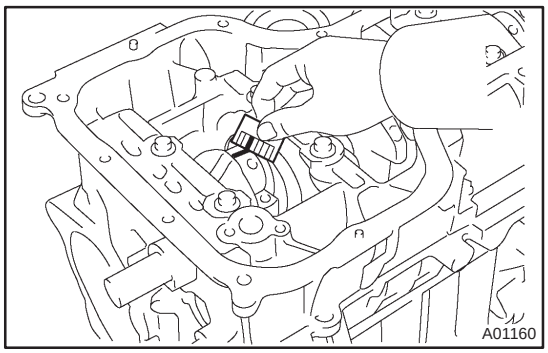
(c) Clean the crank pin and bearing.



(d) Check the crank pin and bearing for pitting and scratches.

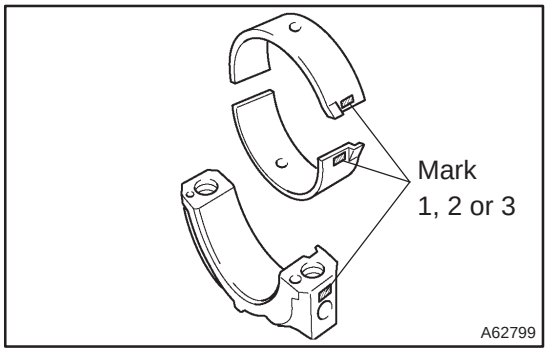


(e) Lay a strip of Plastigage across the crank pin.

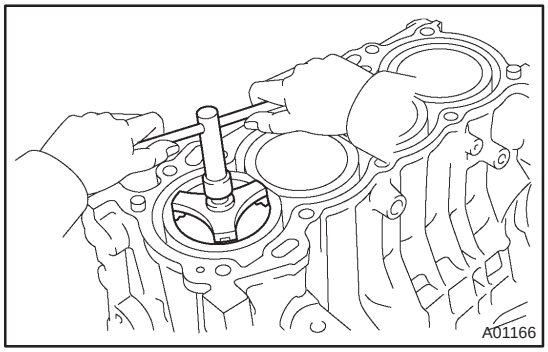


(f) Check that the protrusion of the connecting rod cap is facing in the correct direction.

(g) Apply a light coat of engine oil on the threads and under the heads of the connecting rod cap bolts.
(h) Using SST, tighten the bolts in several passes by the specified torque.
SST 09205–16010
Torque: 20 N·m (204 kgf·cm, 15 ft·lbf)



(i) Mark the front of the connecting cap bolts with paint.
(j) Retighten the cap bolts by 90° as shown in the illustration.
(k) Check that the crankshaft turns smoothly.
(l) Remove the 2 bolts, connecting rod cap and lower bearing.

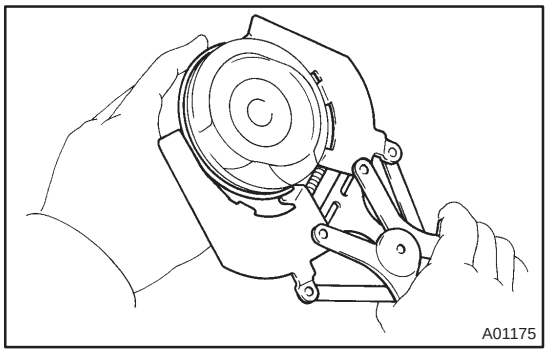


(m) Measure the Plastigage at its widest point.
Standard oil clearance:
0.028 – 0.060 mm (0.0011 – 0.0024 in.)
Maximum oil clearance: 0.080 mm (0.0031 in.)

NOTICE:
Remove the Plastigage completely after the measurement.

(n) If replacing a bearing, select a new one having the same number as marked on the connecting rod. There are 3 sizes of standard bearings, marked ”1”, ”2” and ”3” accordingly.
Reference:
Standard bearing center wall thickness

Mark	mm (in.)
1	1.486 – 1.490 (0.0585 – 0.0587)
2	1.490 – 1.494 (0.0587 – 0.0588)
3	1.494 – 1.498 (0.0588 – 0.0590)

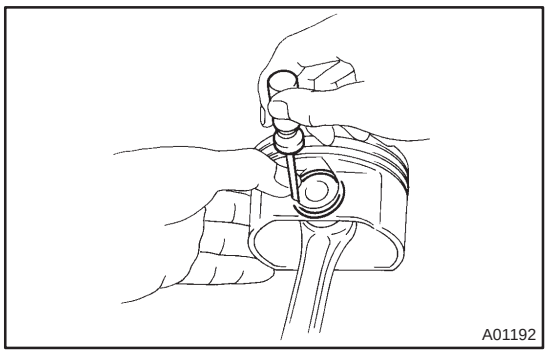


3. REMOVE PISTON SUB–ASSY W/CONNECTING ROD

(a) Using a ride reamer, remove all the carbon from the top of the cylinder.
(b) Push the piston, connecting rod assembly and upper bearing through the top of the cylinder block.

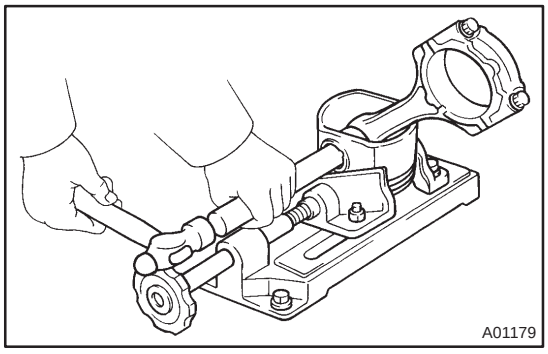
HINT:
- Keep the bearing, connecting rod and cap together.
- Arrange the piston and connecting rod assemblies in the correct order.

4. REMOVE CONNECTING ROD BEARING



(a) Remove the connecting rod bearing from the connecting rod and crankshaft.

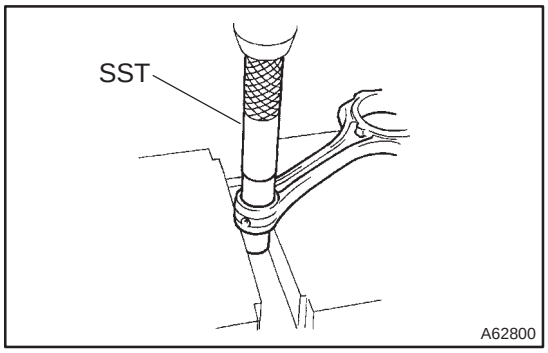
5. REMOVE PISTON RING SET



HINT:
Take care not to misplace the piston rings on both the match with the piston and the direction of the rings.

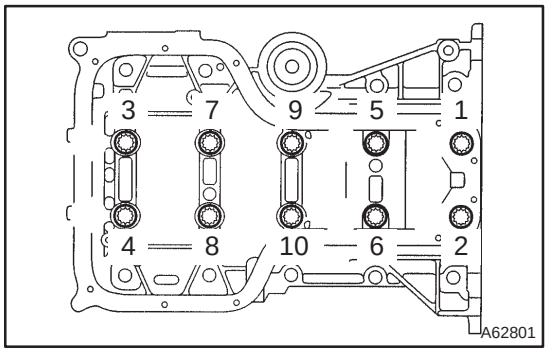
(a) Using a piston ring expander, remove the 2 compression rings.
(b) Remove the 2 side rails and oil ring by hand.

6. REMOVE PISTON PIN HOLE SNAP RING



(a) Using a small screwdriver, pry out the 2 snap rings.

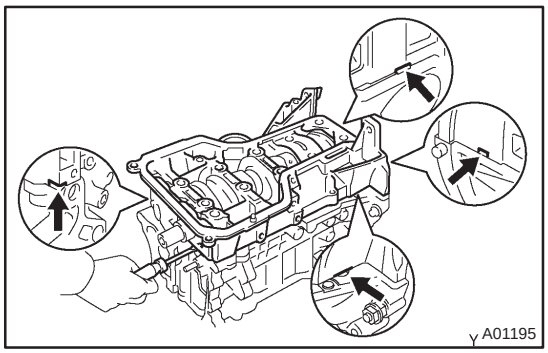
7. REMOVE W/PIN PISTON SUB–ASSY



(a) Gradually heat the piston to 80 – 90°C (176 – 194°F).
(b) Using a plastic hammer and brass bar, lightly tap out the piston pin and remove the connecting rod.

HINT:
- The piston and pin are a matched set.
- Arrange the piston, pins, ring, connecting rod and bearings in the correct order.

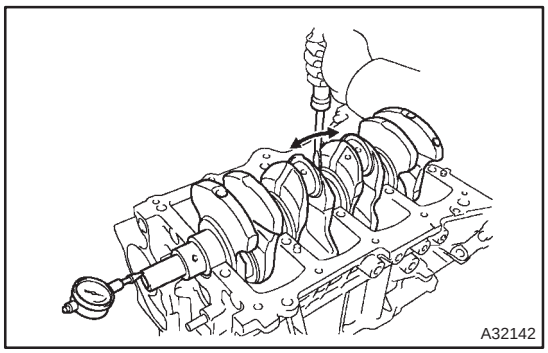
8. REMOVE CONNECTING ROD SMALL END BUSH



(a) Using SST and a press, press out the bushing.
SST 09222–30010

9. REMOVE CRANKSHAFT BEARING CAP SUB ASSY

(a) Remove the 10 bearing cap bolts.



(b) Uniformly loosen the 10 bearing cap sub–assy bolts, in several passes, in the sequence shown in the illustration.
SST 09011–38121

(c) Using a screwdriver, remove the bearing cap sub–assembly by prying the indicated portions between the cylinder block and bearing cap sub–assembly. Remove the 5 lower main bearings.

NOTICE:

Be careful not to damage the contact surfaces of the cylinder block and bearing cap sub–assembly.

10. INSPECT CRANKSHAFT THRUST CLEARANCE

(a) Using a dial indicator, measure the thrust clearance while prying the crankshaft back and forth with a screwdriver.
Standard thrust clearance:
0.04 – 0.24 mm (0.0016 – 0.0094 in.)
Maximum thrust clearance: 0.30 mm (0.0118 in.)

(b) If the thrust clearance is greater than maximum, measure the thrust washer thickness. If the thickness is not specified, replace the thrust washer.
Thrust washer thickness:
2.430 – 2.480 mm (0.0957 – 0.0976 in.)

11. REMOVE CRANKSHAFT THRUST WASHER UPPER

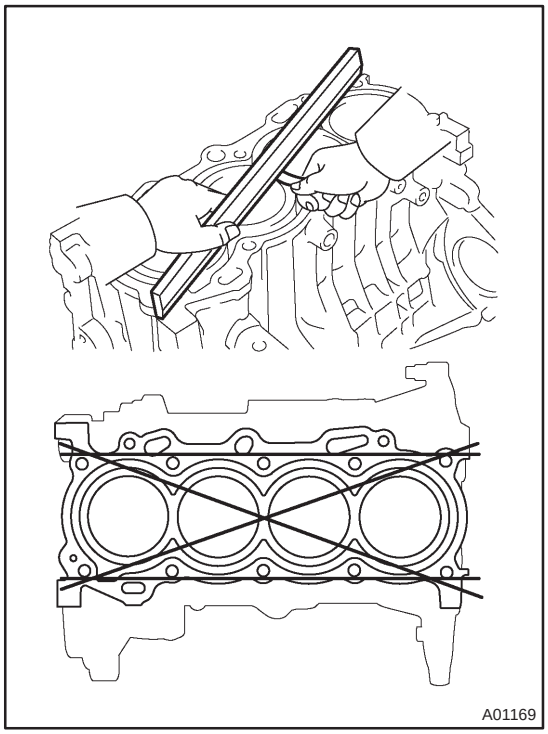
(a) Remove the crankshaft thrust washer from the cylinder block.

12. REMOVE CRANKSHAFT

(a) Lift out the crankshaft.

(b) Remove the 5 upper main bearings and 2 thrust washers from the cylinder block.

NOTICE:

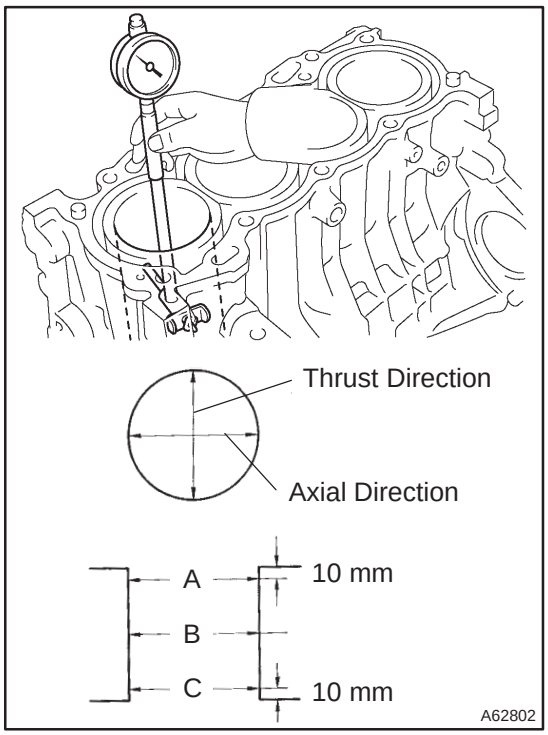


Arrange the main bearings and thrust washers in the correct order.

13. REMOVE CRANKSHAFT BEARING

(a) Remove the crankshaft bearing from the cylinder block.

14. REMOVE STUD BOLT

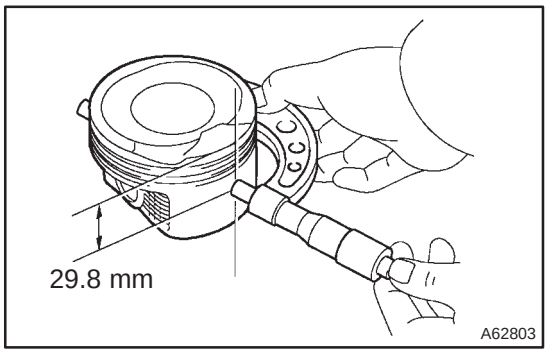


(a) Remove the 9 stud bolts from the cylinder block.

15. INSPECT CYLINDER BLOCK FOR FLATNESS

(a) Using a precision straight edge and feeler gauge, measure the surface contacting the cylinder head gasket for warpage.

Maximum warpage: 0.05 mm (0.0020 in.)



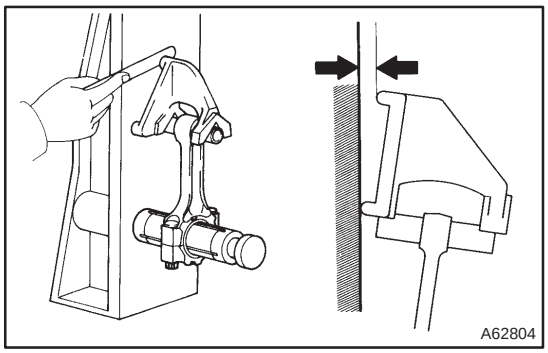
16. INSPECT CYLINDER BORE

(a) Using a cylinder gauge, measure the cylinder bore diameter at positions A, B and C in the thrust and axial directions.

Standard diameter:
79.000 – 79.013 mm (3.1102 – 3.1108 in.)
Maximum diameter: 79.013 mm (3.1108 in.)

If the diameter is greater than the maximum, replace the cylinder block.

17. INSPECT PISTON DIAMETER

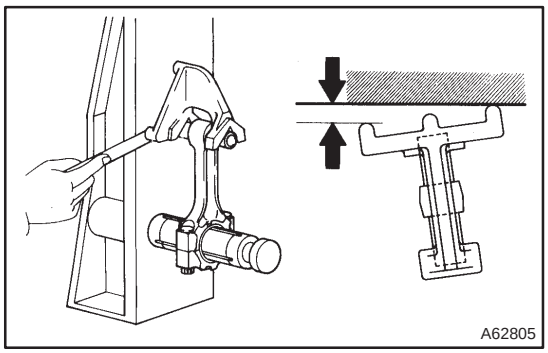


(a) Using a micrometer, measure the piston diameter at a right angle to the piston pin hole, and at the piston of 29.8 mm (1.173 in.) from the piston head.

Piston diameter:
1ZZ–FE 78.925 – 78.935 mm (3.1073 – 3.1077 in.)
3ZZ–FE 78.955 – 78.965 mm (3.1085 – 3.1089 in.)

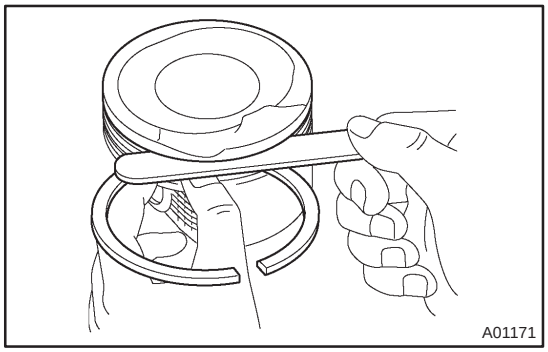
18. INSPECT PISTON OIL CLEARANCE

(a) Subtract the piston diameter measurement from the cylinder bore diameter measurement.
Standard oil clearance:
1ZZ–FE 0.065 – 0.088 mm (0.0026 – 0.0035 in.)
3ZZ–FE 0.035 – 0.058 mm (0.0014 – 0.0023 in.)
Maximum oil clearance:
1ZZ–FE 0.088 mm (0.0035 in.)
3ZZ–FE 0.058 mm (0.0023 in.)



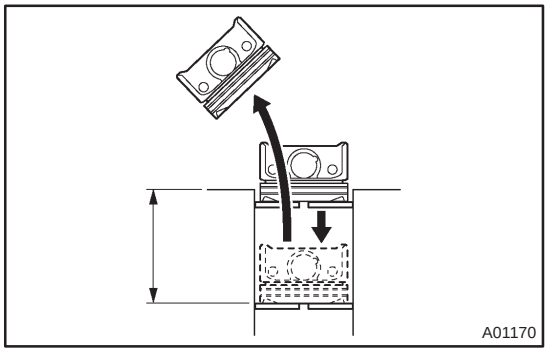
If the oil clearance is greater than maximum, replace all the 4 pistons. If necessary, replace the cylinder block.

19. INSPECT CONNECTING ROD SUB–ASSY



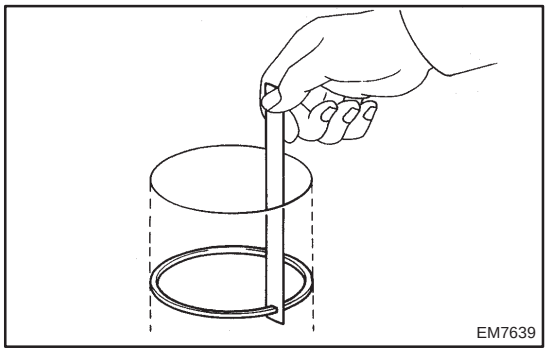
(a) Using a connecting rod aligner and feeler gauge, check the connecting rod alignment.
(1) Check for out–of–alignment.
Maximum out–of alignment:
0.05 mm (0.0020 in.) per 100 mm (3.94 in.)

If out–of alignment is greater than maximum, replace the connecting rod assembly.



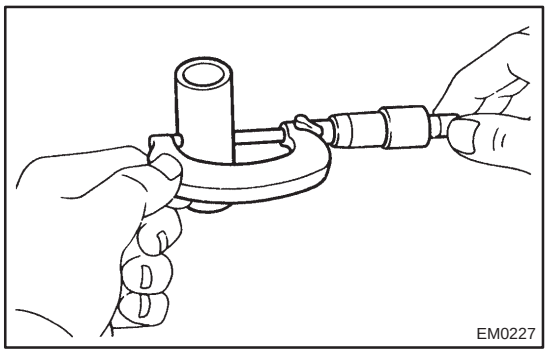
(2) Check for twist.
Maximum twist:
0.05mm (0.0020 in.) per 100 mm (3.94 in.)

If twist is greater than maximum, replace the connecting rod assembly.



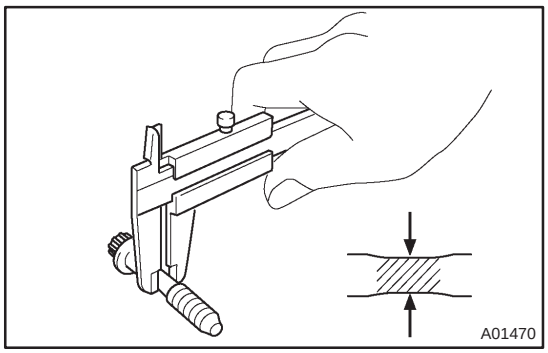
20. INSPECT RING GROOVE CLEARANCE

(a) Using a feeler gauge, measure the clearance between the new piston ring and the wall of the ring groove.
Ring groove clearance:
No. 1 0.020 – 0.070 mm (0.0008 – 0.0028 in.)
No. 2 0.030 – 0.070 mm (0.0012 – 0.0028 in.)



21. INSPECT PISTON RING END GAP

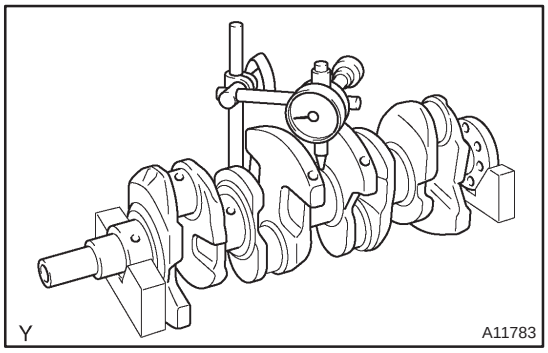
(a) Using a piston, push the piston ring a little beyond the bottom of the ring travel, that means 100 mm (3.94 in.) from the top of the cylinder block.



(b) Using a feeler gauge, measure the end gap.
Standard end gap:
No. 1 0.25 – 0.35 mm (0.0098 – 0.0138 in.)
No. 2 0.35 – 0.50 mm (0.0138 – 0.0197 in.)
Maximum end gap:
No. 1 0.74 mm (0.029 in.)
No. 2 0.89 mm (0.035 in.)

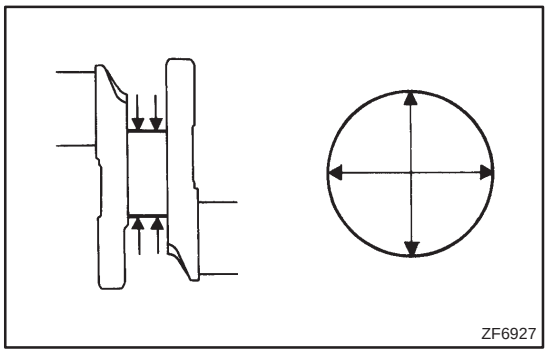
22. INSPECT PISTON PIN

(a) Using a micrometer, measure the piston pin diameter.
Piston pin diameter:
20.004 – 20.013 mm (0.7876 – 0.7879 in.)



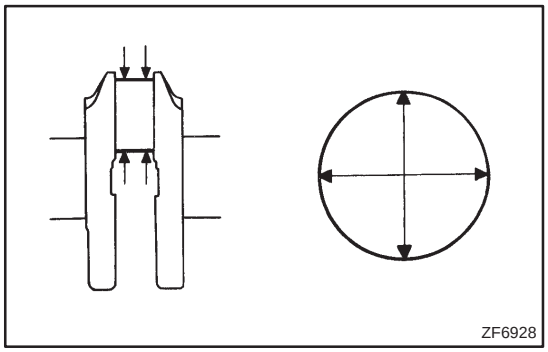
NOTICE:
Push the piston pin into the matched piston.

23. INSPECT CONNECTING ROD BOLT



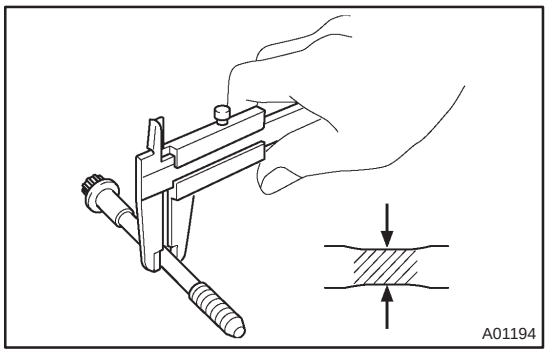
(a) Using a vernier caliper, measure the tension portion diameter of the bolts.
Standard diameter:
6.6 – 6.7 mm (0.260 – 0.264 in.)
Maximum diameter: 6.4 mm (0.252 in.)

(b) If the diameter is less than minimum, replace the bolt.



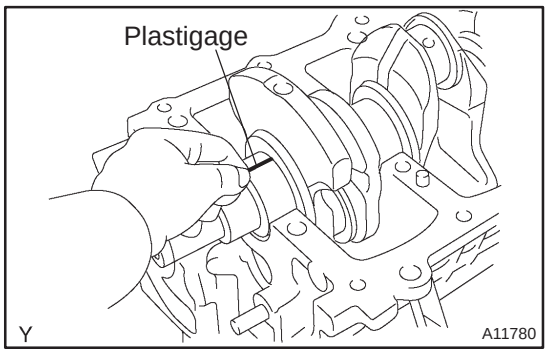
24. INSPECT CRANKSHAFT

(a) Using a dial indicator and V–blocks, measure the circle runout, as shown in the illustration.
Maximum circle runout: 0.03 mm (0.0012 in.)



(b) Using a micrometer, measure the diameter of each main journal at the points shown in the illustration.
Diameter: 47.988 – 48.000 mm (1.8893 – 1.8898 in.)

(c) Check each main journal for taper and out–of–round as shown.
Maximum taper and out–of–round:
0.02 mm (0.0008 in.)

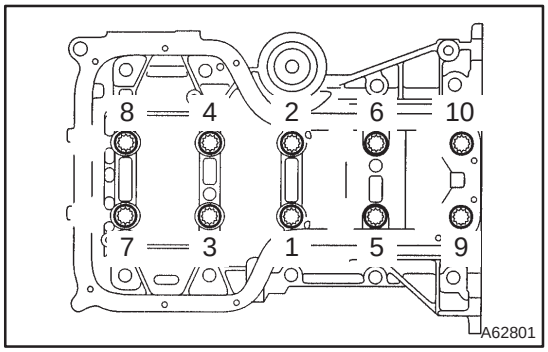


(d) Using a micrometer, measure the diameter of each crank pin at the points shown in the illustration.
Diameter: 43.992 – 44.000 mm (1.7320 – 1.7323 in.)

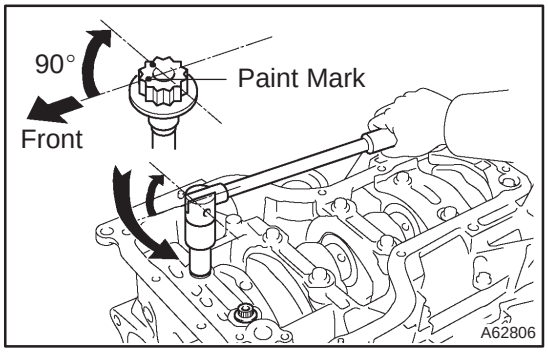
(e) Check each crank pin for taper and out–of–round as shown.
Maximum taper and out–of–round:
0.02 mm (0.0008 in.)

25. INSPECT CRANKSHAFT BEARING CAP SET BOLT

(a) Using vernier caliper, measure the tension portion diameter of the bolts.
Standard diameter: 7.3 – 7.5 mm (0.287 – 0.295 in.)
Minimum diameter: 7.2 mm (0.283 in.)



26. INSPECT CRANKSHAFT OIL CLEARANCE



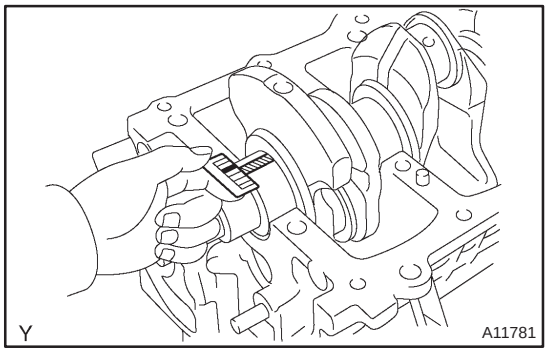
(a) Clean each main journal and bearing.

(b) Place the crankshaft on the cylinder block.

(c) Lay a strip of Plastigage across each journal.

(d) Using SST, tighten the bolts in several passes, in the sequence shown, by the specified torque.
SST 09011–38121
Torque: 44 N·m (449 kgf·cm, 33 ft·lbf)

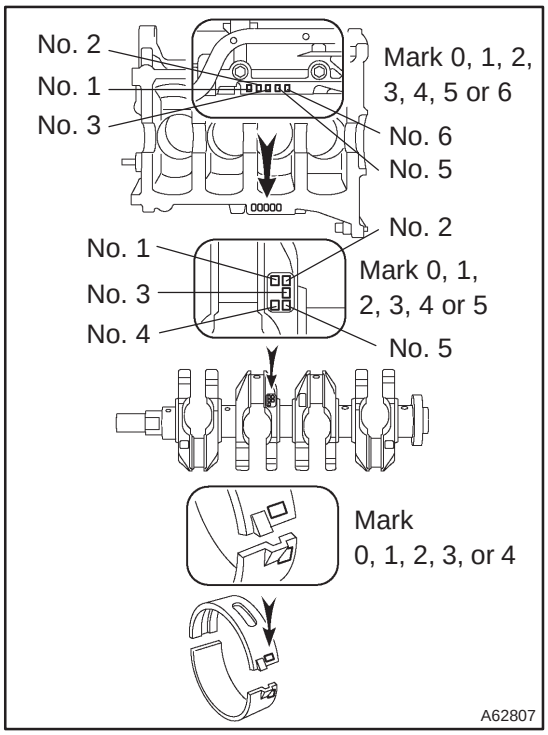
(e) Mark the front of the bearing cap sub–assembly bolts with paint.



(f) Retighten the bearing cap sub–assy bolts by 90° as shown in the illustration.

(g) Check that the painted mark is now at a 90° angle to the front.

NOTICE:



Do not turn the crankshaft.

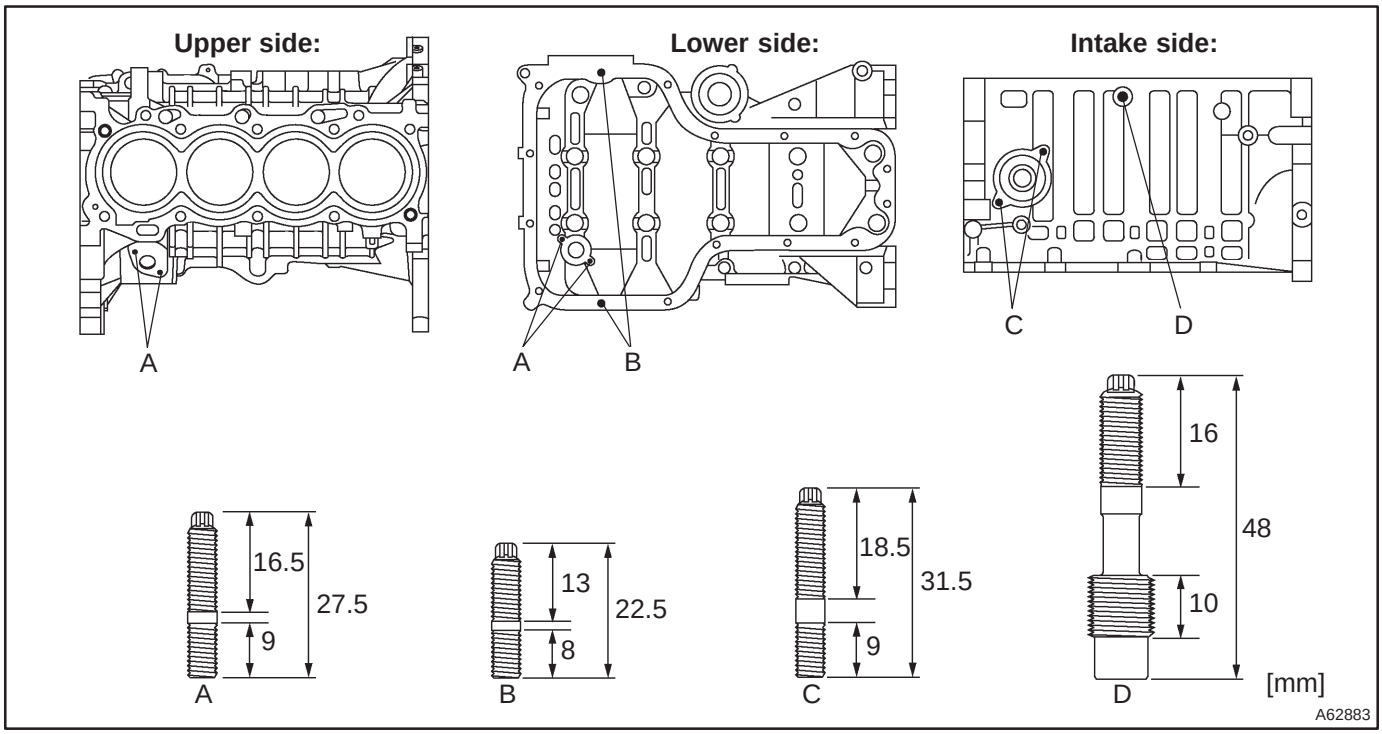
(h) Remove the bearing cap sub–assy.

(i) Measure the Plastigage at its widest point.
Standard oil clearance:
0.013 – 0.030 mm (0.0005 – 0.0012 in.)
Minimum oil clearance: 0.05 mm (0.0020 in.)

NOTICE:
Completely remove the plastigage

(j) If replacing a bearing, select a new one having the same number. If the number of the bearing cannot be determined, calculate the correct use bearing number by adding together the numbers imprinted on the cylinder block and crankshaft, then select a new bearing having the calculated number. There are 4 sizes of standard bearings, marked "1", "2", "3" and "4" accordingly.

Cylinder block (A) + Crankshaft (B)	0–2	3–5	6–8	9–11
Use bearing	"1"	"2"	"3"	"4"

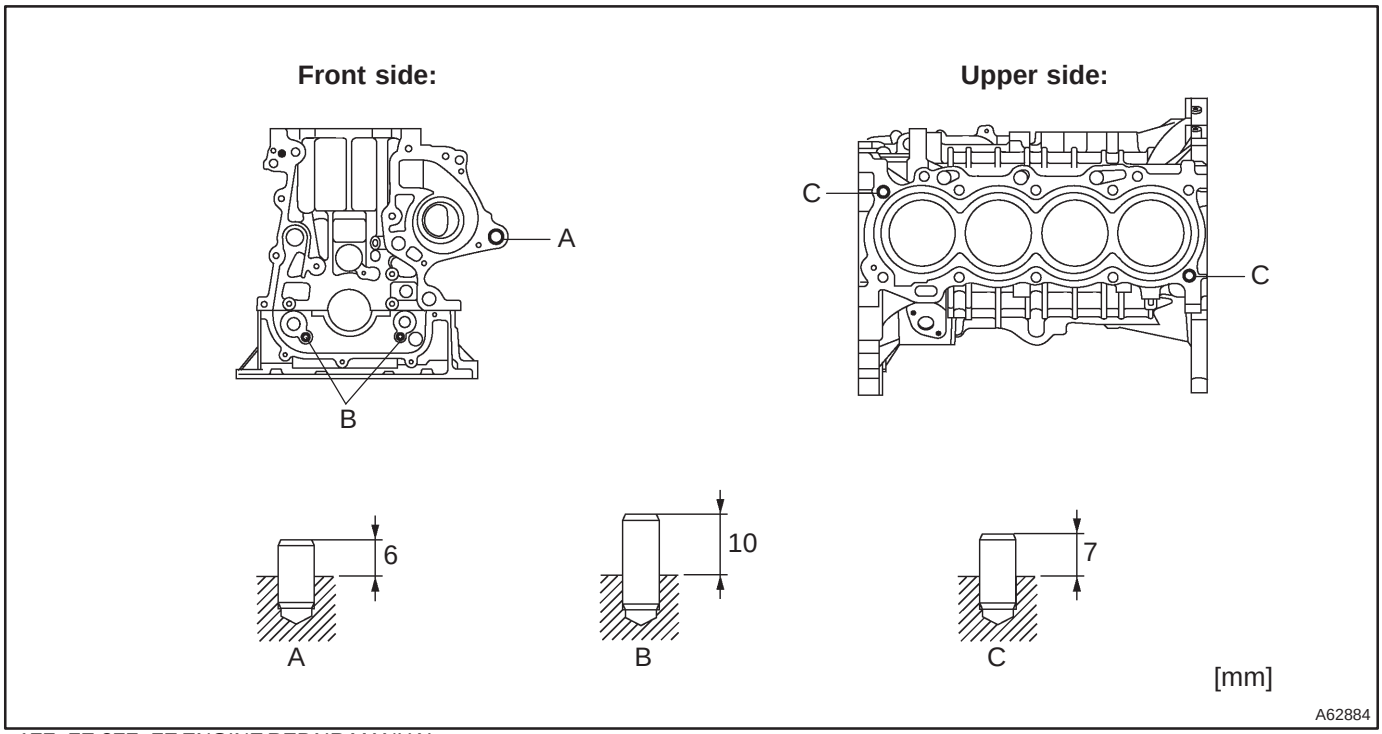


HINT:
EXAMPLE:
Cylinder block "4" (A) + Crankshaft "3" (B) = Total number 7 (Use bearing "3")

Item	Mark	mm (in.)
Cylinder block main journal bore diameter (A)	"0"	52.000 – 52.003 (2.0472 – 2.0473)
	"1"	52.003 – 52.005 (2.0473 – 2.0474)
	"2"	52.005 – 52.007 (2.0474 – 2.0475)
	"3"	52.007 – 52.010 (2.0475 – 2.0476)
	"4"	52.010 – 52.012 (2.0476 – 2.0477)
	"5"	52.012 – 52.014 (2.0477 – 2.0478)
	"6"	52.014 – 52.016 (2.0478 – 2.0479)
Crankshaft main journal diameter (B)	"0"	47.998 – 48.000 (1.8897 – 1.8898)
	"1"	47.996 – 47.998 (1.8896 – 1.8897)
	"2"	47.994 – 47.996 (1.8895 – 1.8896)
	"3"	47.992 – 47.994 (1.8894 – 1.8895)
	"4"	47.990 – 47.992 (1.8893 – 1.8894)
	"5"	47.988 – 47.990 (1.8892 – 1.8893)
Standard bearing center wall thickness	"1"	1.994 – 1.997 (0.0785 – 0.0786)
	"2"	1.997 – 2.000 (0.0786 – 0.0787)
	"3"	2.000 – 2.003 (0.0787 – 0.0789)
	"4"	2.003 – 2.006 (0.0789 – 0.0790)

27. INSTALL STUD BOLT

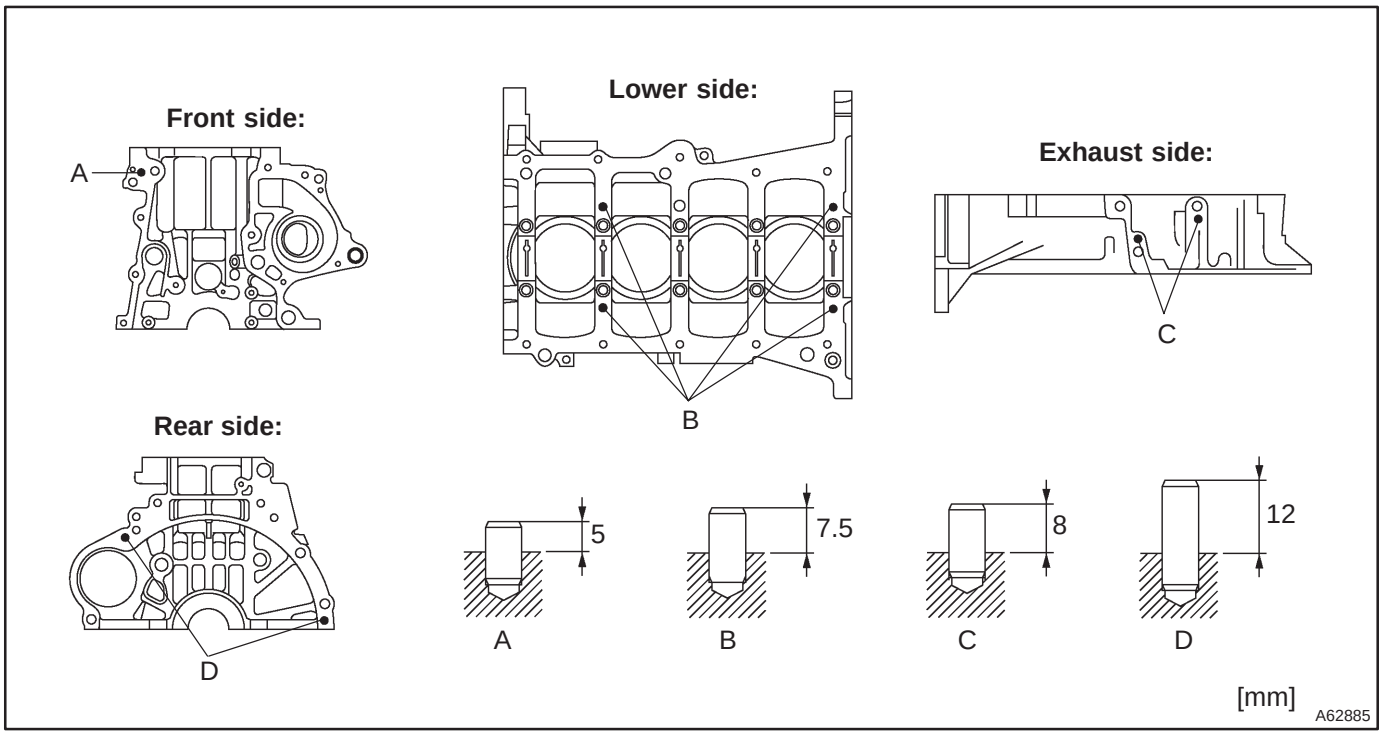
(a) Install the 9 stud bolt to the cylinder block.



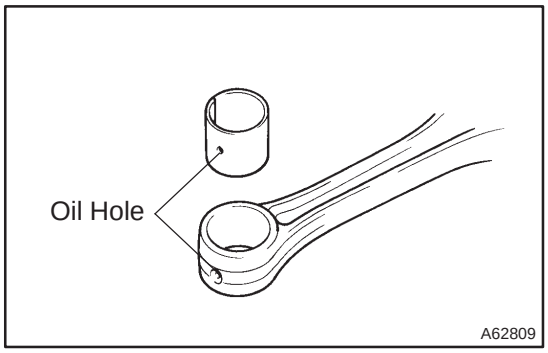
Torque:
Stud bolt A, B and C 5.0 N·m (51 kgf·cm, 44 in.·lbf)
Stud bolt D 11 N·m (112 kgf·cm, 8 ft·lbf)

28. INSTALL RING PIN

(a) Using a plastic hammer, install the 5 ring pins to the cylinder block.

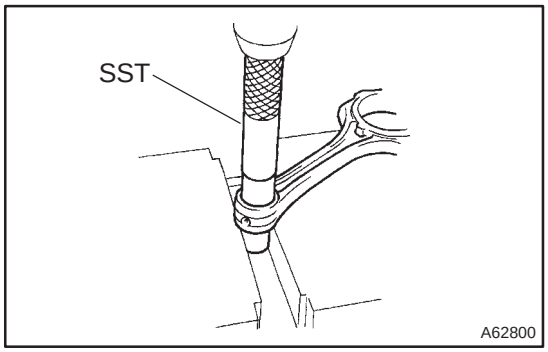


Standard protrusion:
Ring pin A 6 mm (0.24 in.)
Ring pin B 10 mm (0.39 in.)
RIng pin C 7 mm (0.28 in.)

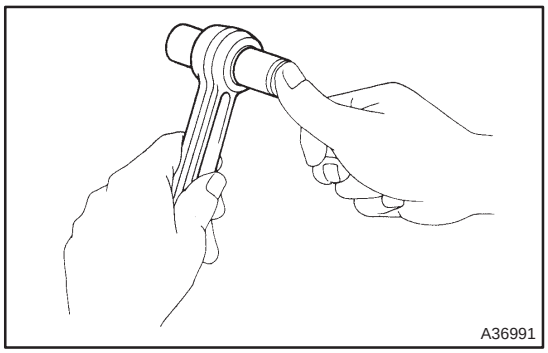


29. INSTALL STRAIGHT PIN

(a) Using a plastic hammer, install the 9 straight pins to the cylinder block.

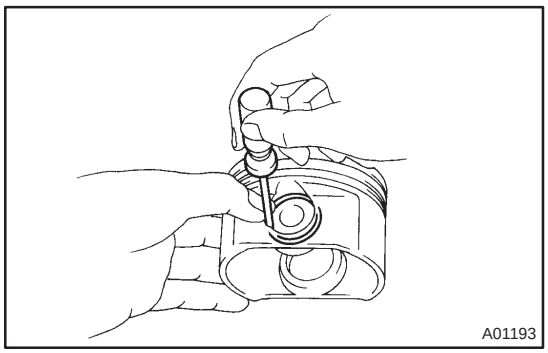


Standard protrusion:
Straight pin A 5 mm (0.20 in.)
Straight pin B 7.5 mm (0.30 in.)
Straight pin C 8 mm (0.31 in.)
Straight pin D 12 mm (0.47 in.)



30. INSTALL CONNECTING ROD SMALL END BUSH

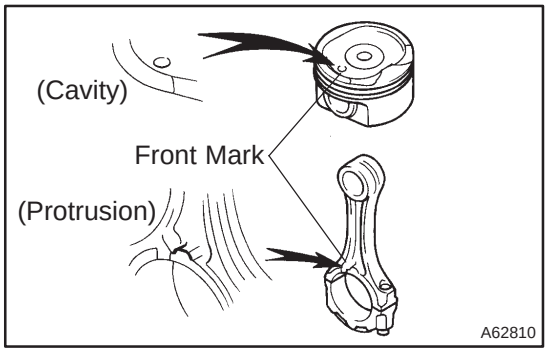
(a) Align the oil hole of a new bushing with the one of the connecting rod.



(b) Using SST and a press, press into the small end bushing.
SST 09222–30010

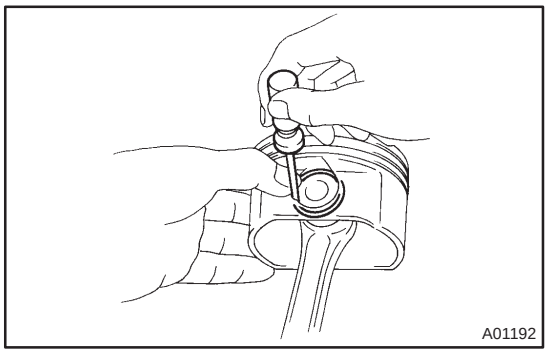
(c) After installing the bushing, check that the oil hole of the connecting rod is aligned with the hole of the small end bushing and that the oil clearance measured on both sides of connecting rod are equal.

(d) Horn the connecting rod end bushing to obtain the standard specified oil clearance.
Oil clearance: 0.005 – 0.011 mm (0.0002 – 0.0004 in.)



HINT:
When pushing the piston pin with engine oil applied into the connecting rod with thumb, the piston pin is supposed to have a little resistance to insert at normal room temperature.

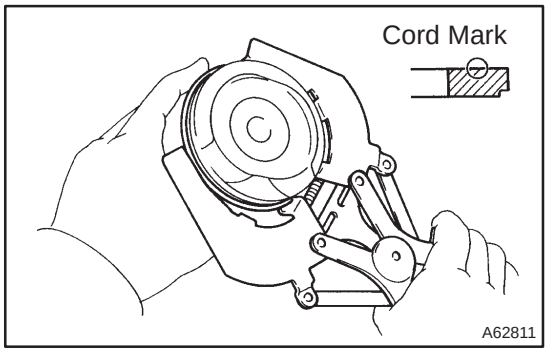
31. INSTALL PISTON PIN HOLE SNAP RING



(a) Using a small screwdriver, install a new snap ring at one end of the piston pin hole.

HINT:
Be sure that end gap of the snap ring is aligned with the pin hole cutout portion of the piston.

32. INSTALL W/PIN PISTON SUB–ASSY

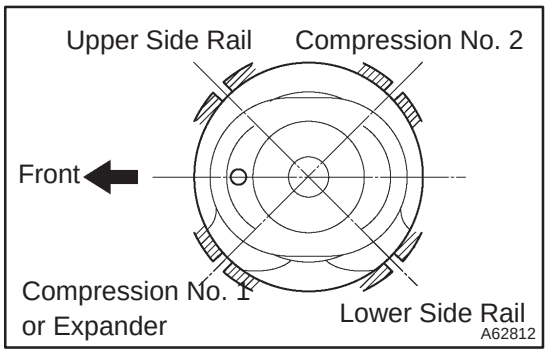


(a) Gradually heat the piston to 80 – 90°C (176–194°F).
(b) Align the front marks on the piston with connecting rod, and push in the piston with your thumb.

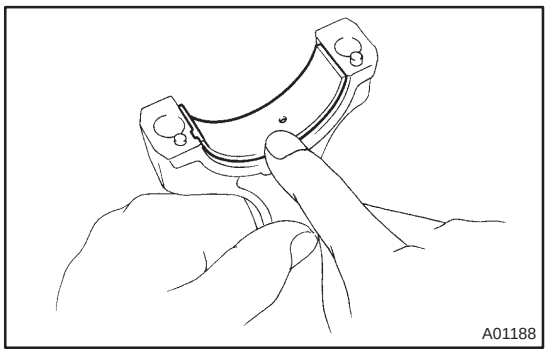
33. INSTALL PISTON PIN HOLE SNAP RING

(a) Using a small screwdriver, install a new snap ring on the other end of the piston pin hole.

HINT:
Be sure that end gap of the snap ring is aligned with the pin hole cutout portion of the piston.



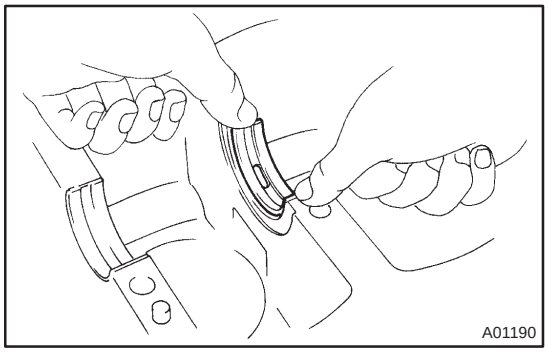
34. INSTALL PISTON RING SET



HINT:
In case of reusing the piston rings, install them to the matched pistons with the surfaces faced correctly.

(a) Install the oil ring expander and 2 side rails by hand.

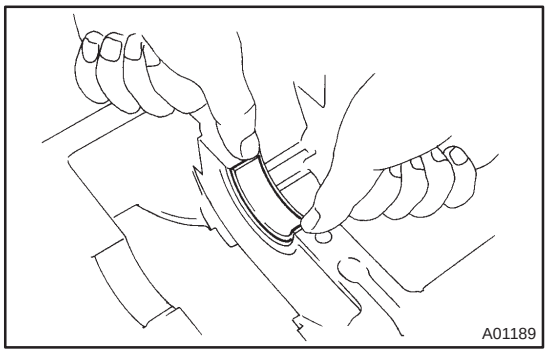
(b) Using a piston ring expander, install the 2 compression rings with the code mark facing upward.
Code mark (No.2 only): T or 2R



(c) Position the piston rings so that the ring ends are as shown.

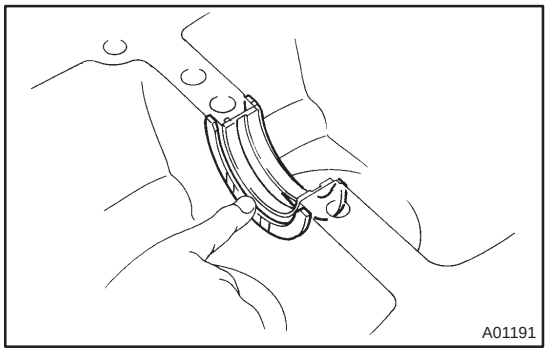
35. INSTALL CONNECTING ROD BEARING

(a) Align the bearing claw with the groove of the connecting rod or connecting cap.



NOTICE:
Clean the backside of the bearing and the bearing surface of the connecting rod and let not stick the oils and fats.

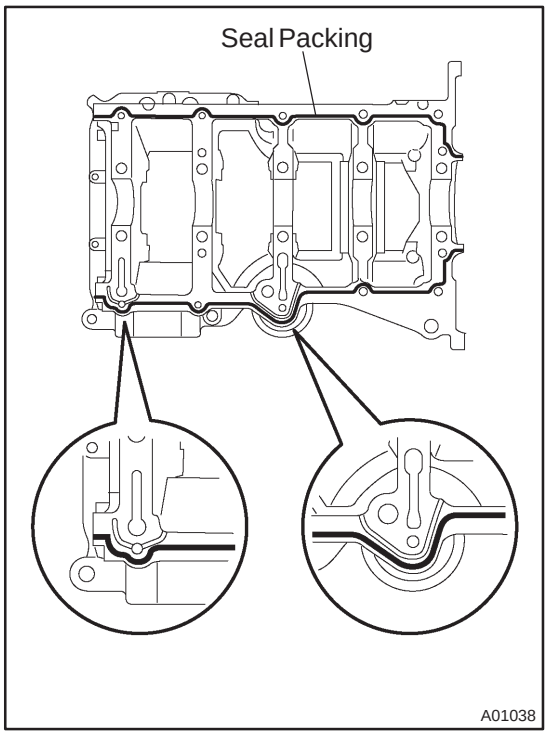
36. INSTALL CRANKSHAFT



(a) Install the upper bearing with an oil groove on cylinder block.

NOTICE:
Clean the backside of the bearing and the bearing surface of the bearing cap and let not stick the oils and fats.

(b) Install the lower bearing on the bearing cap sub–assy.

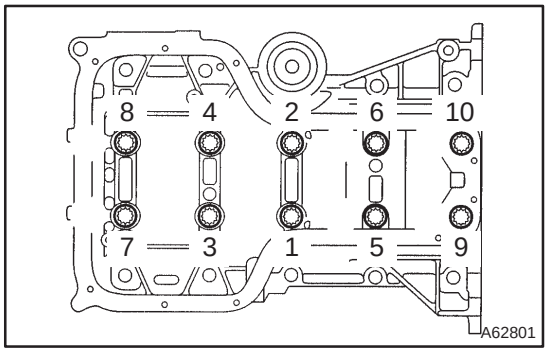


NOTICE:
Clean the backside of the bearing and the bearing surface of the bearing cap and let not stick the oils and fats.

(c) Install the 2 thrust washers under the No. 3 journal position of the cylinder block with the oil grooves facing outward.

(d) Apply engine oil to upper bearing and install the crankshaft on the cylinder block.

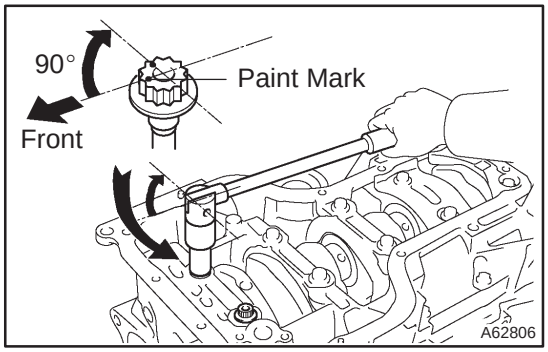
(e) Apply a light coat of engine oil on the bolt threads, the bolt seats, and the bearings of the bearing cap sub–assy.



(f) Apply seal packing in the shape of bead (Diameter 2.5 – 3.5 mm (0.08 – 0.12 in.) consequently as shown in the illustration.

Seal packing: Part No. 08826–00080 or equivalent

NOTICE:

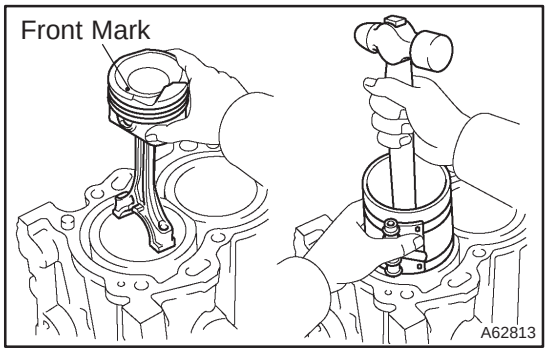


- **Remove any oil from the contact surface.**
- **Install the bearing cap sub–assembly within 3 minutes after applying seal packing.**
- **Do not put into engine oil within 2 hours after the installation.**

(g) Using SST, tighten the bolts in several passes, in the sequence shown, by the specified torque.

SST 09011–38121

Torque: 44 N·m (449 kgf·cm, 33 ft·lbf)



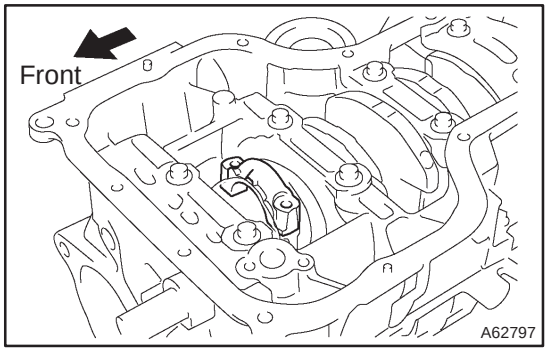
(h) Mark the front of the bearing cap sub–assy bolts with paint.

(i) Retighten the bearing cap sub–assy bolts by 90° as shown in the illustration.

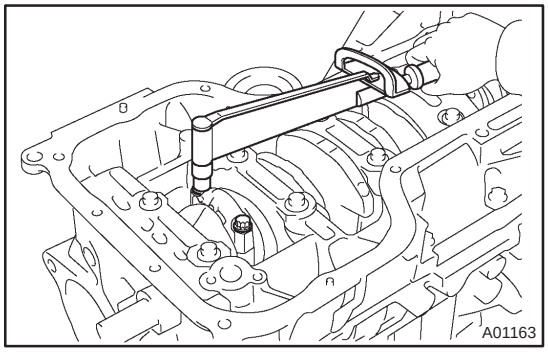
(j) Check that the painted mark is now at a 90° angle to the front.

(k) Tighten 10 other bolts for the bearing cap.

Torque: 19 N·m (194 kgf·cm, 14 ft·lbf)

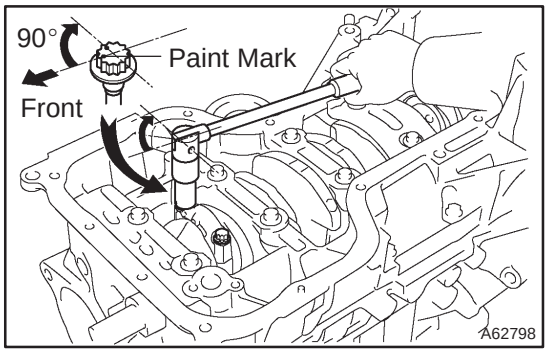


37. INSTALL CONNECTING ROD SUB–ASSY



(a) Apply engine oil to the cylinder walls, the pistons, and the surfaces of connecting rod bearings.
(b) Check the position of the piston ring ends.
(c) Using a piston ring compressor, push the correctly numbered piston and connecting rod assemblies into each cylinder with the front mark of the piston facing forward.
(d) Align the pin dowels of the connecting rod cap with the pins of the connecting rod, and install the connecting rod.

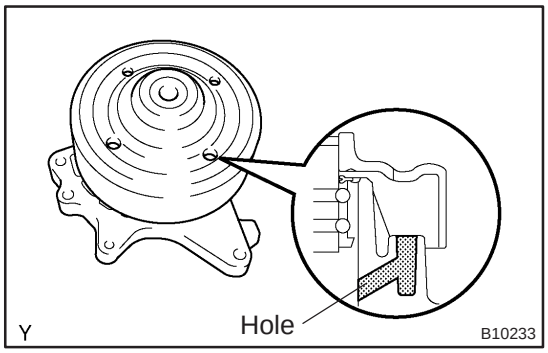
NOTICE:



- **Clean the backside and the surface of the connecting rod cap bearing and let not stick the oils and fats.**
- **Match the numbered connecting rod cap with the same numbered connecting rod.**

(e) Check that the protrusion of the connecting rod cap is facing in the correct direction.

(f) Apply a light coat of engine oil on the threads and under the heads of the connecting rod cap bolts.
(g) Using SST, tighten the bolts in several passes by the specified torque.
SST 09205–16010
Torque: 20 N·m (204 kgf·cm, 15 ft·lbf)

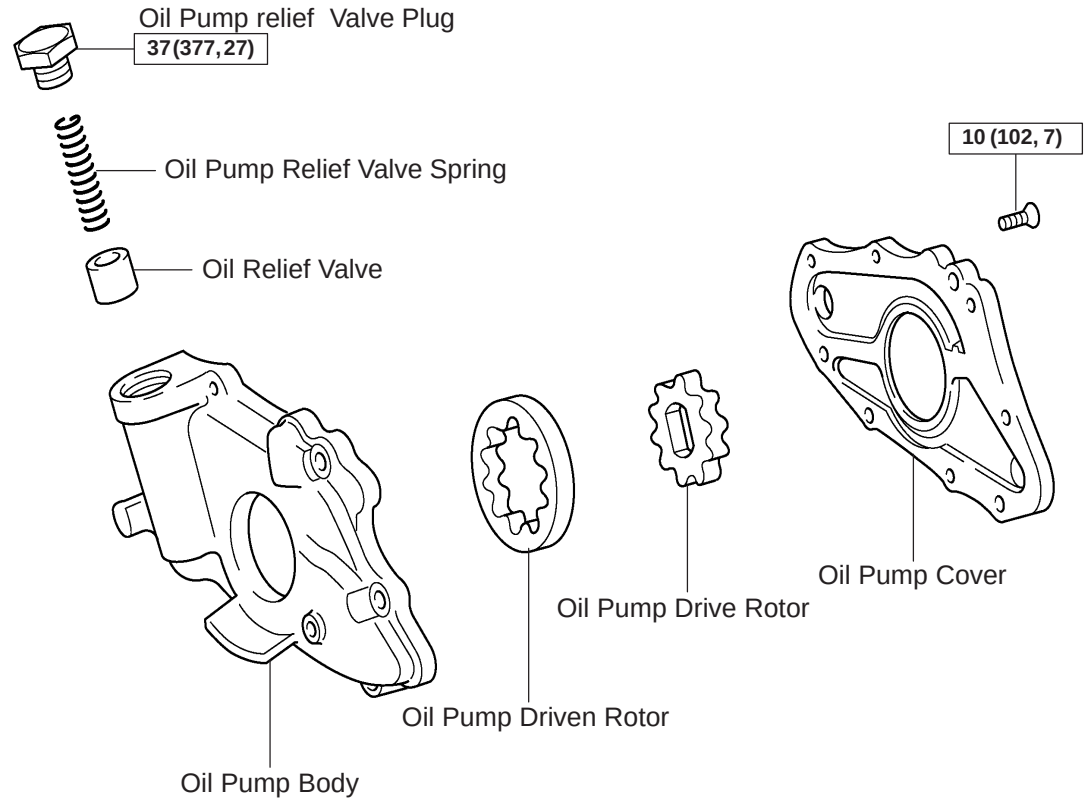


(h) Mark the front of the connecting cap bolts with paint.
(i) Retighten the cap bolts by 90° as shown in the illustration.
(j) Check that the crankshaft turns smoothly.

WATER PUMP ASSY (1ZZ–FE/3ZZ–FE)

160AO–01

INSPECTION



1. INSPECT WATER PUMP ASSY

(a) Visually check the drain hole for coolant leakage.

OIL PUMP ASSY (1ZZ–FE/3ZZ–FE)

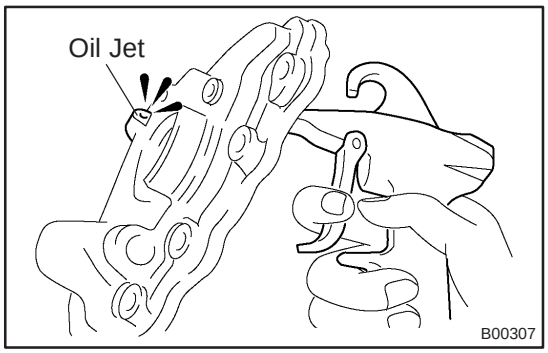
1706D–01

COMPONENTS

N·m (kgf·cm, ft·lbf) : Specified torque

A62218

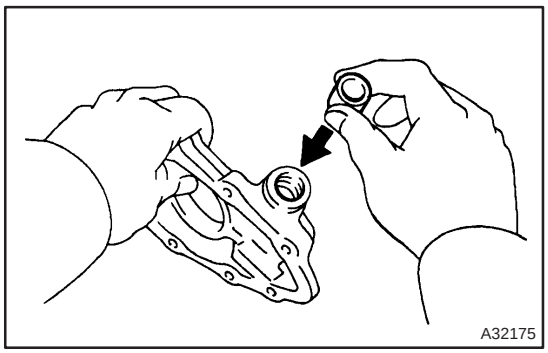
OVERHAUL



1. REMOVE OIL PUMP DRIVE AND DRIVEN ROTORS

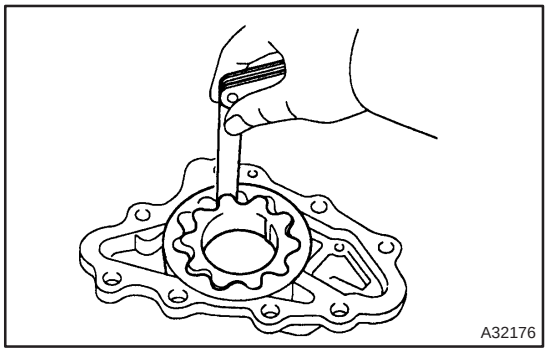
(a) Remove the 3 screws and oil pump cover.

(b) Remove the oil pump drive and driven rotors from the oil pump.



2. REMOVE VALVE, OIL PUMP RELIEF

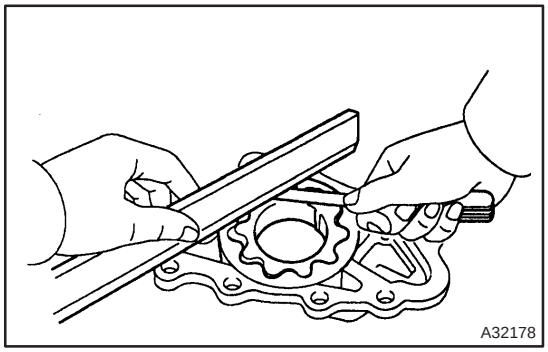
(a) Remove the plug, spring and valve from the oil pump.



3. INSPECT OIL JET

(a) Check the oil jet for damage or clogging.

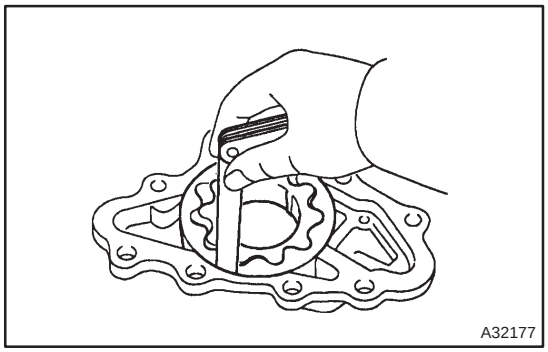
4. INSPECT OIL PUMP RELIEF VALVE



(a) Coat the oil pump relief valve with engine oil, and check that it falls smoothly into the valve hole by its own weight.

5. INSPECT ROTOR TIP CLEARANCE

(a) Using a feeler gauge, measure the clearance between the drive and driven rotor tips.

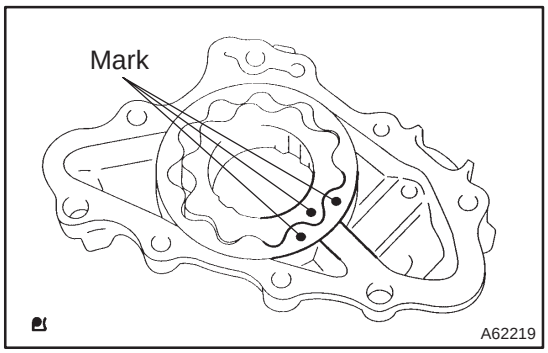


Standard tip clearance:
0.040 – 0.160 mm (0.0016 – 0.0063 in.)
Maximum tip clearance: 0.160 mm (0.0063 in.)

6. INSPECT ROTOR SIDE CLEARANCE

(a) Using a feeler gauge and precision straight edge, measure the clearance between the 2 rotors and precision straight edge.

Standard side clearance:
0.025 – 0.071 mm (0.0010 – 0.0028 in.)
Maximum side clearance: 0.071 mm (0.0028 in.)

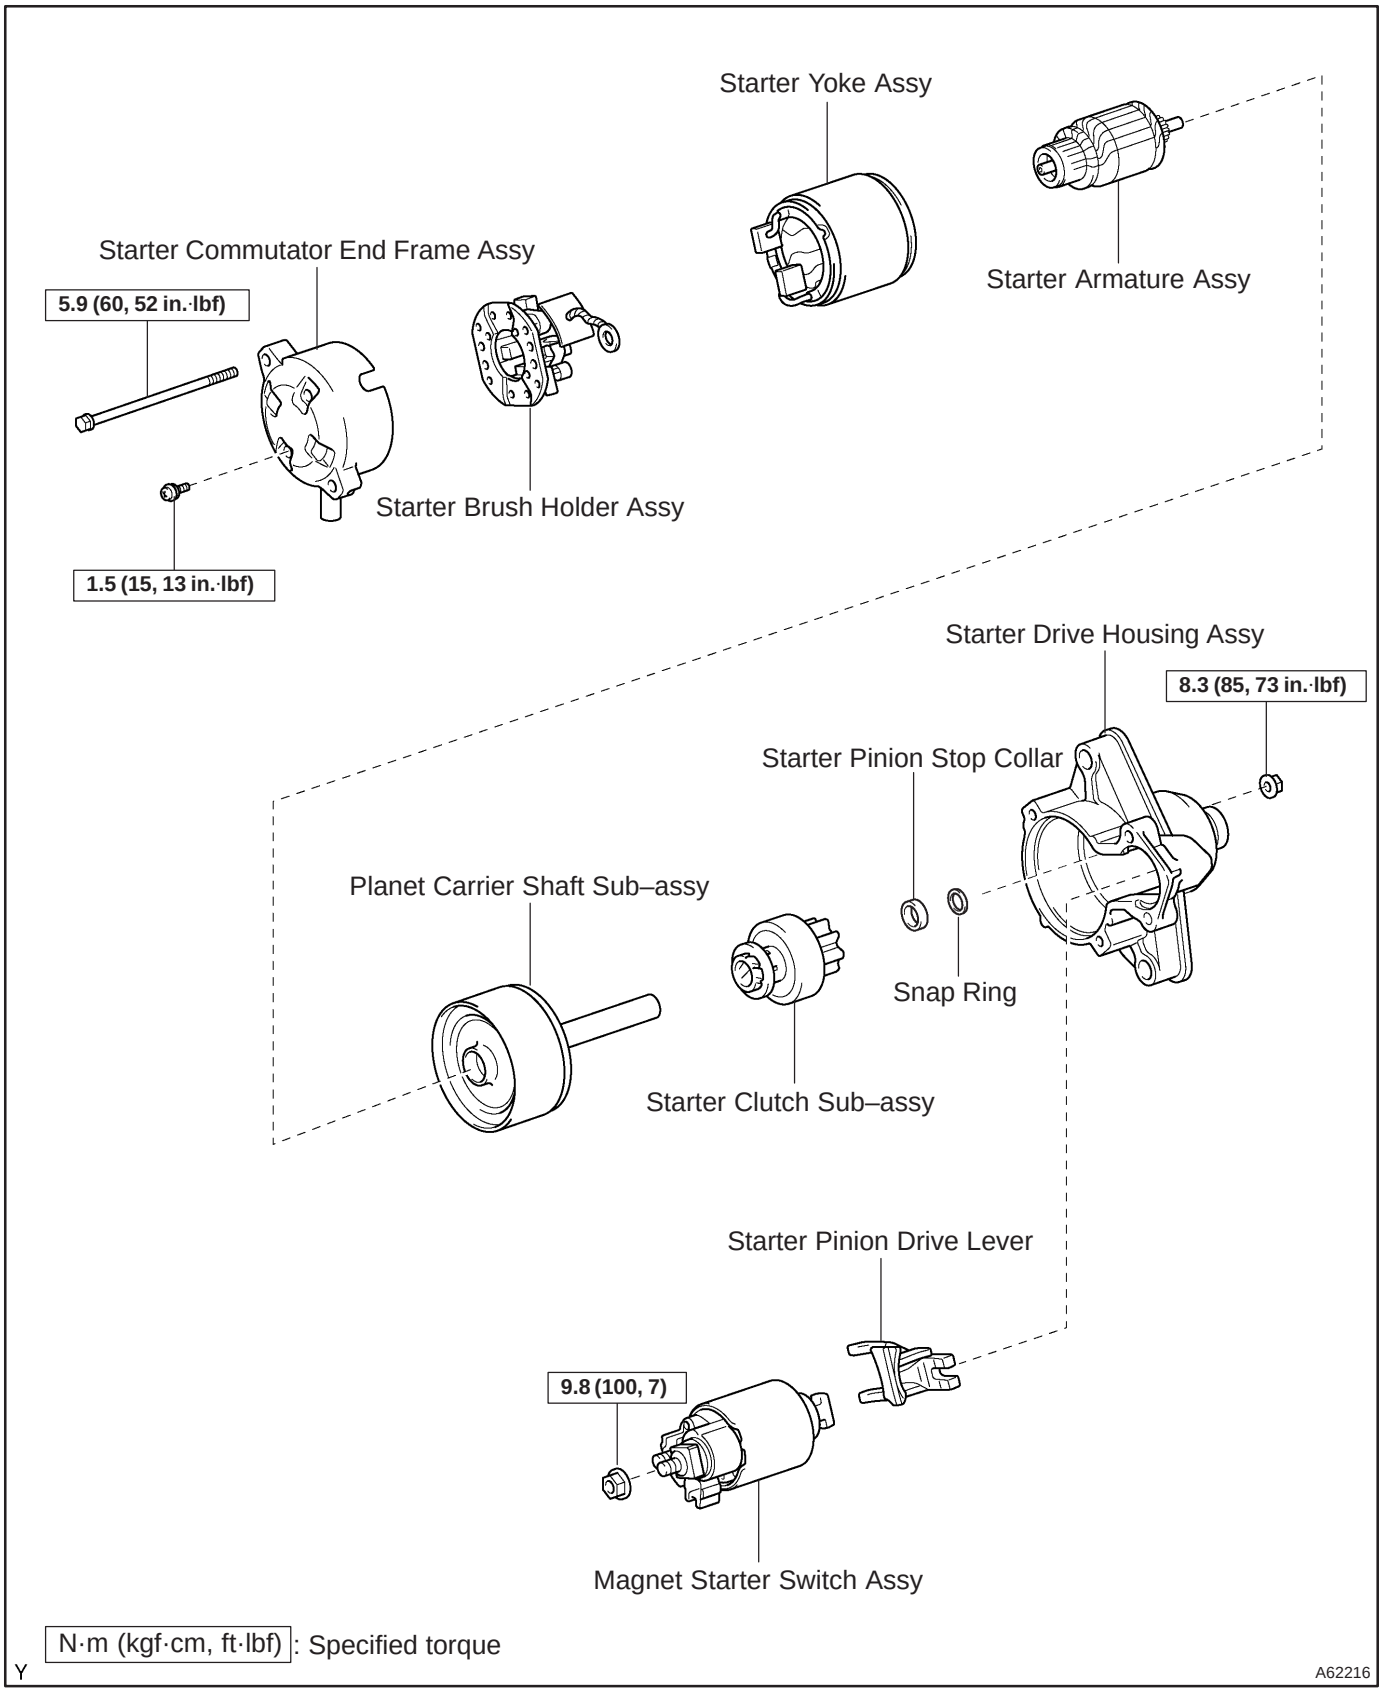


7. INSPECT BODY CLEARANCE

(a) Using a feeler gauge, measure the clearance between the driven rotor and oil pump body.
Standard body clearance:
0.260 – 0.325 mm (0.0102 – 0.0128 in.)
Maximum body clearance: 0.325 mm (0.0128 in.)

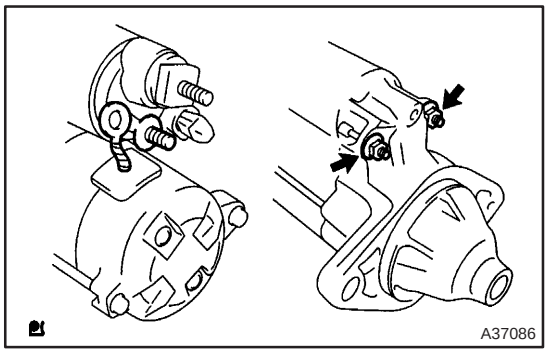
8. INSTALL OIL PUMP RELIEF VALVE

(a) Coat the oil pump relief valve with engine oil, and insert oil pump relief valve and spring to the valve hole.
(b) Install the oil pump relief valve plug.
Torque: 37 N·m (377 kgf·cm, 27 ft·lbf)



9. INSTALL OIL PUMP DRIVE AND DRIVEN ROTORS

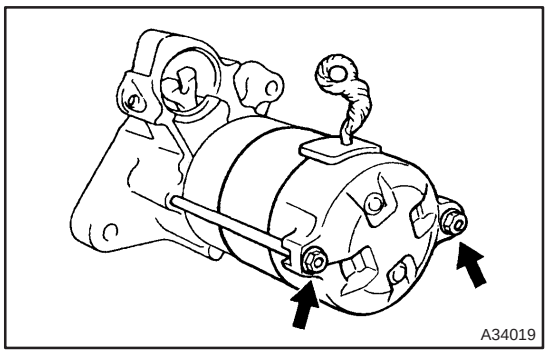
(a) Coat the oil pump drive and driven rotors with engine oil, and place it into the oil pump with marks facing the oil pump cover side.
(b) Install the oil pump cover with the 3 screw.
Torque: 10 N·m (102 kgf·cm, 7 ft·lbf)



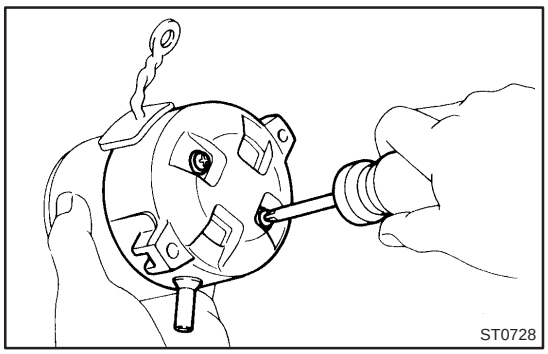
STARTER ASSY (1ZZ–FE/3ZZ–FE)

COMPONENTS

190A8–01



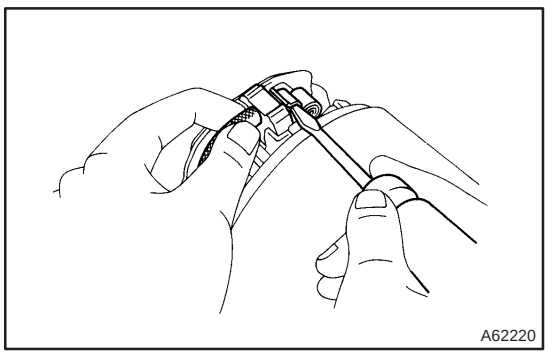
OVERHAUL



1. REMOVE MAGNET STARTER SWITCH ASSY

(a) Remove the nut, and disconnect the lead wire from the magnetic switch terminal.
(b) Loosen the 2 nuts holding the magnetic switch to the starter housing.
(c) Pull the magnetic switch and while lifting the front part of the magnetic switch, release the plunger hook from the driver lever, then release the magnetic switch.

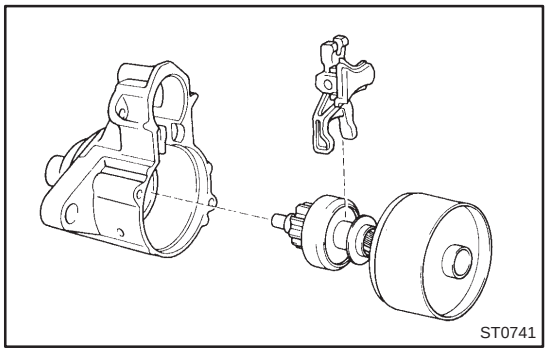
2. REMOVE STARTER YOKE ASSY



(a) Remove the 2 through bolts, and pull out the field frame together with the armature.

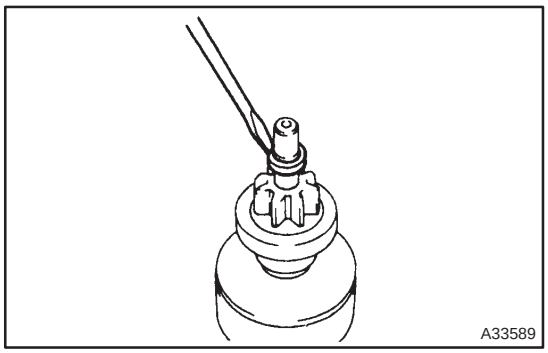
3. REMOVE STARTER BRUSH HOLDER ASSY

(a) Remove the 2 screws and commutator end frame, and hold down the lead wire while releasing the commutator end frame.



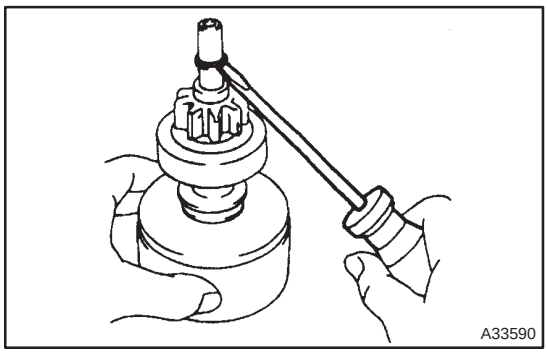
NOTICE:
To avoid interference between the brush holder and the dust protector pull the commutator end frame away at an angle.

(b) Using a screwdriver, hold the spring back and disconnect the brush holder.
(c) Disconnect the 4 brushes, and remove the starter brush holder.

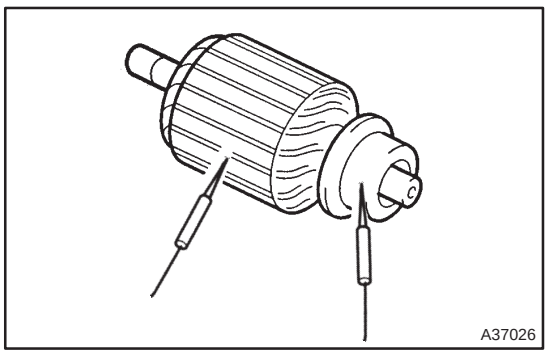


4. REMOVE STARTER ARMATURE ASSY

(a) Remove the starter armature from the starter yoke.

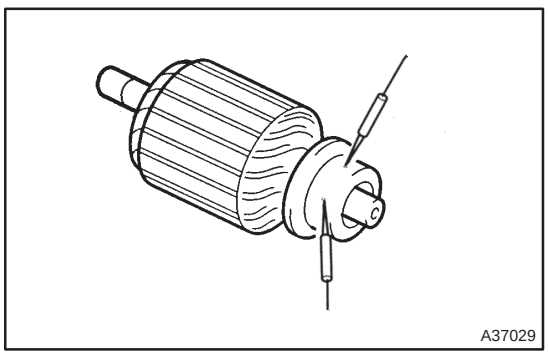


5. REMOVE STARTER CLUTCH SUB–ASSY

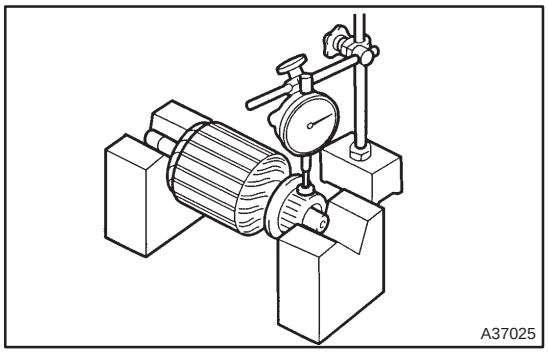


(a) Remove drive lever and starter clutch with shock absorber from starter housing.

(b) Using a screwdriver, tap in the stop collar towards the starter clutch.

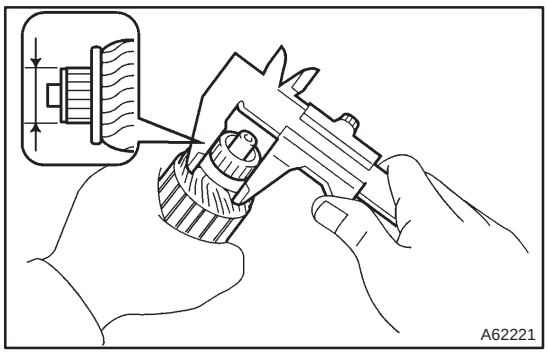


(c) Using a screwdriver, pry off the snap ring.
(d) Remove the stop collar and starter clutch from the planetary shaft.

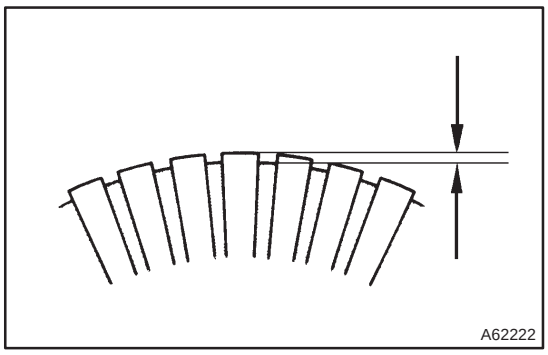


6. INSPECT STARTER ARMATURE ASSY

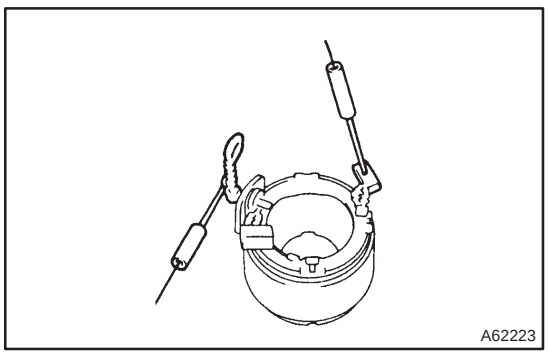
(a) Using an ohmmeter, check that there is no continuity between the commutator and armature coil core.



(b) Using an ohmmeter, check that there is continuity between the segments of the commutator.

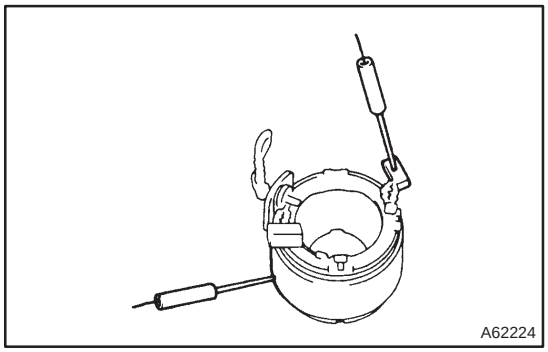


(c) Check the commutator for dirty and burn on surface.
If the surface is dirty or burnt, correct it with sandpaper (No. 400) or a lathe.

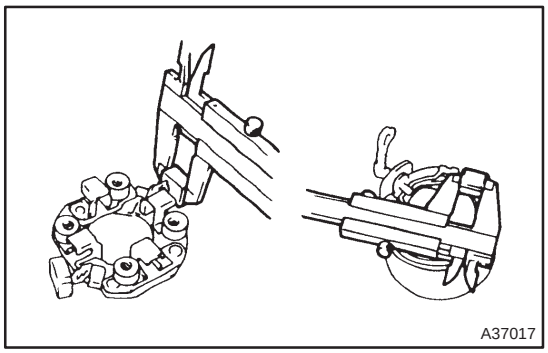


(d) Place the commutator on V – blocks.
(e) Using a dial indicator, measure the circle runout.
Maximum circle runout: 0.05 mm (0.0020 in.)

(f) Using a vernier calipers, measure the commutator diameter.
Standard diameter: 28 mm (1.102 in.)
Minimum diameter: 27 mm (1.063 in.)

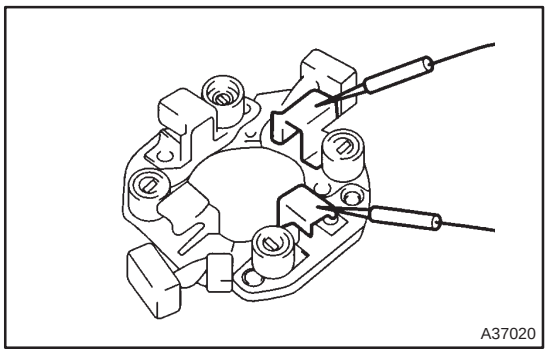


(g) Check that the undercut depth is clean and free of foreign materials. Smooth out the edge.
Standard undercut depth: 0.6 mm (0.024 in.)
Minimum undercut depth: 0.2 mm (0.008 in.)

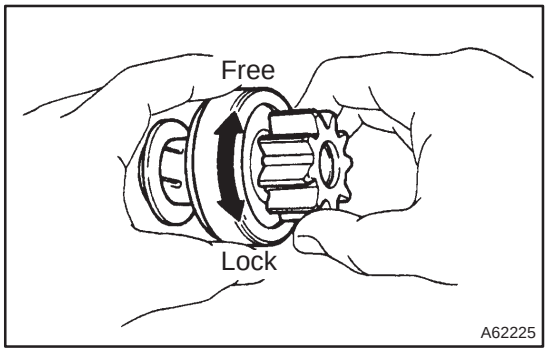


7. INSPECT FIELD COIL

(a) Using an ohmmeter, check that there is continuity between the lead wire and field coil brush lead.

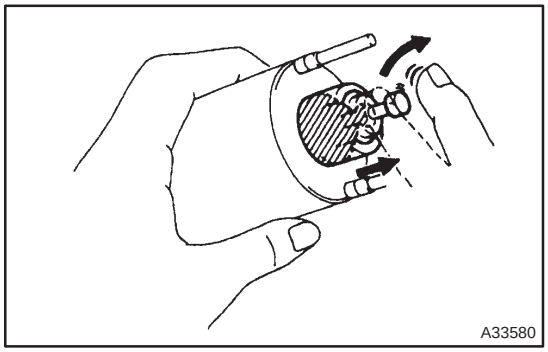


(b) Using an ohmmeter, check that there is no continuity between the field coil end and field frame.



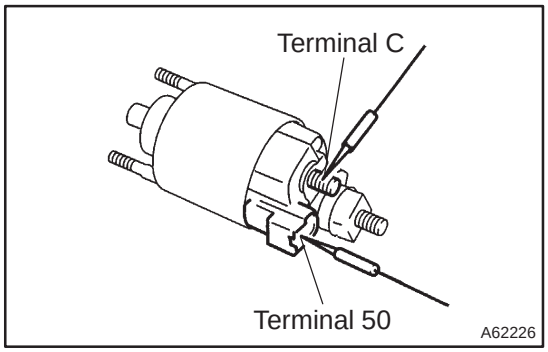
8. INSPECT BRUSH

(a) Using a vernier calipers, measure the brush length.
Standard length: 14 mm (0.551 in.)
Minimum length: 9 mm (0.354 in.)



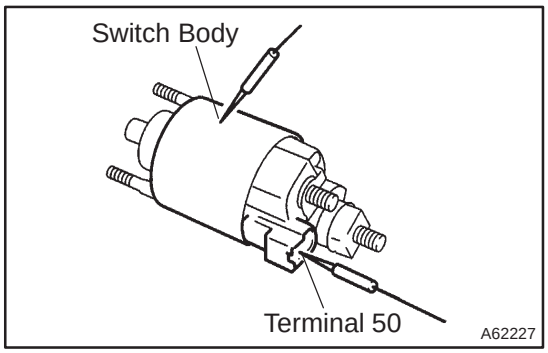
9. INSPECT STARTER BRUSH HOLDER ASSY

(a) Using an ohmmeter, check that there is no continuity between the positive (+) and negative (–) brush holders.

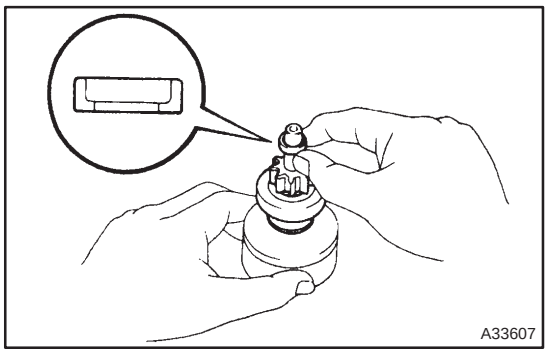


10. INSPECT STARTER CLUTCH SUB–ASSY

(a) Rotate the clutch pinion gear clockwise and check that it turns freely. Try to rotate the clutch pinion gear counterclockwise and check that it locks.

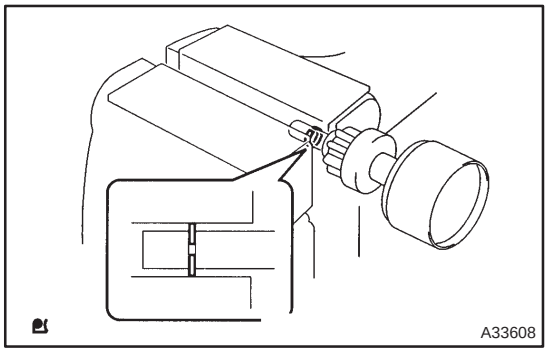


11. INSPECT MAGNET STARTER SWITCH ASSY

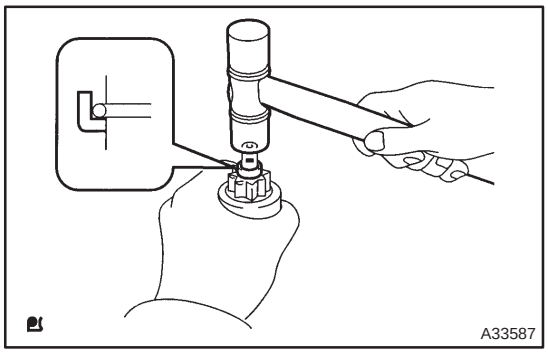


(a) Push in the plunger and check that it returns quickly to its original position.

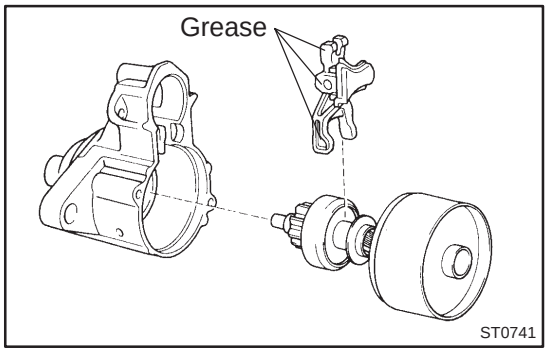
(b) Using an ohmmeter, check that there is continuity between terminals 50 and C.



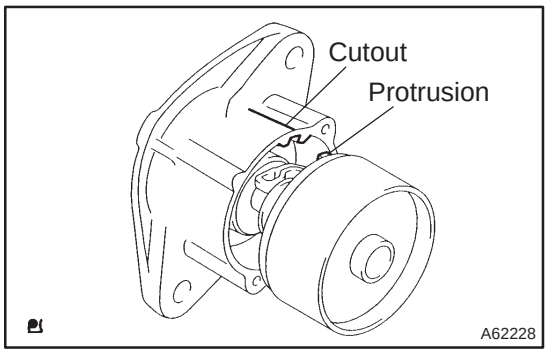
(c) Using an ohmmeter, check that there is continuity between terminals 50 and the switch body.



12. INSTALL STARTER CLUTCH SUB–ASSY

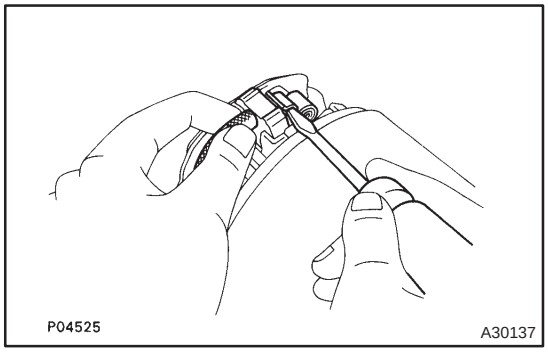


(a) Apply grease to the bushing and spline of the starter clutch and stop collar.
(b) Place the starter clutch and stop collar on the planetary shaft.
(c) Apply grease to the snap ring, and install it to the planetary shaft groove.



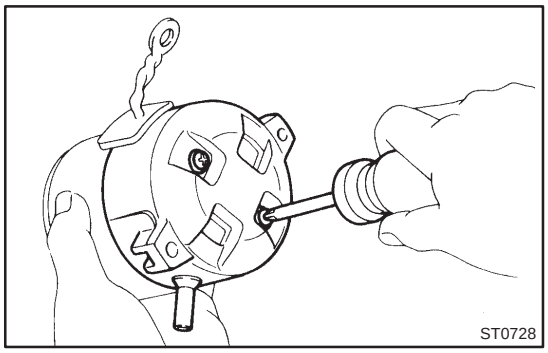
(d) Using a vise, compress the snap ring.

(e) Hold the starter clutch, tap the planetary shaft and install the stop collar onto the snap ring with a plastic hammer.



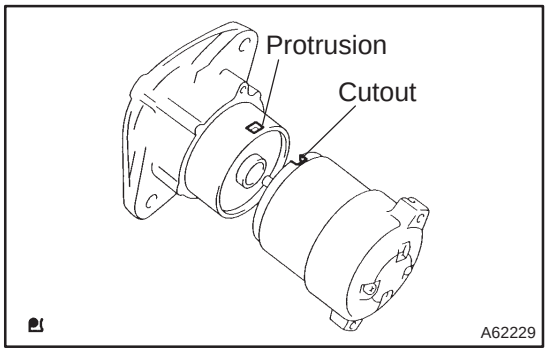
(f) Apply grease to the drive lever touching the starter pivot part of the drive lever.
(g) Install the drive lever to the starter clutch.

(h) Align the protrusion of the shock absorber with the cutout of the starter housing and install them.



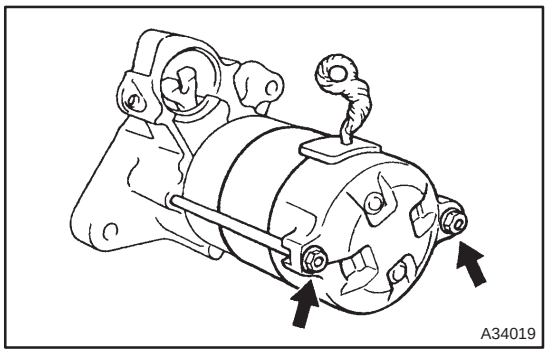
13. INSTALL STARTER ARMATURE ASSY

(a) Install the starter armature to the starter yoke.



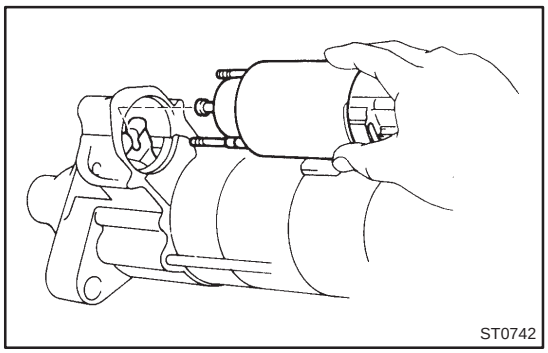
14. INSTALL STARTER BRUSH HOLDER ASSY

(a) Install the brush holder.
(b) Using a screwdriver, hold the brush spring back, and connect the brush into the brush holder.
Connect the 4 brushes.
(c) Apply turbine oil with additives to the bearing of the end frame.



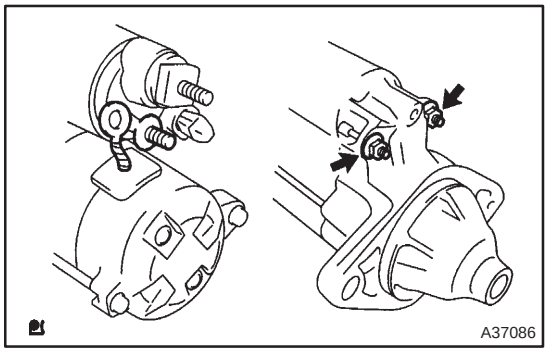
(d) Install the end frame with 2 new screws.
Torque: 1.5 N·m (15 kgf·cm, 13 in.·lbf)

NOTICE:
To avoid interference between the brush holder and the dust protector push the commutator and frame away at an angle.



15. INSTALL STARTER YOKE ASSY

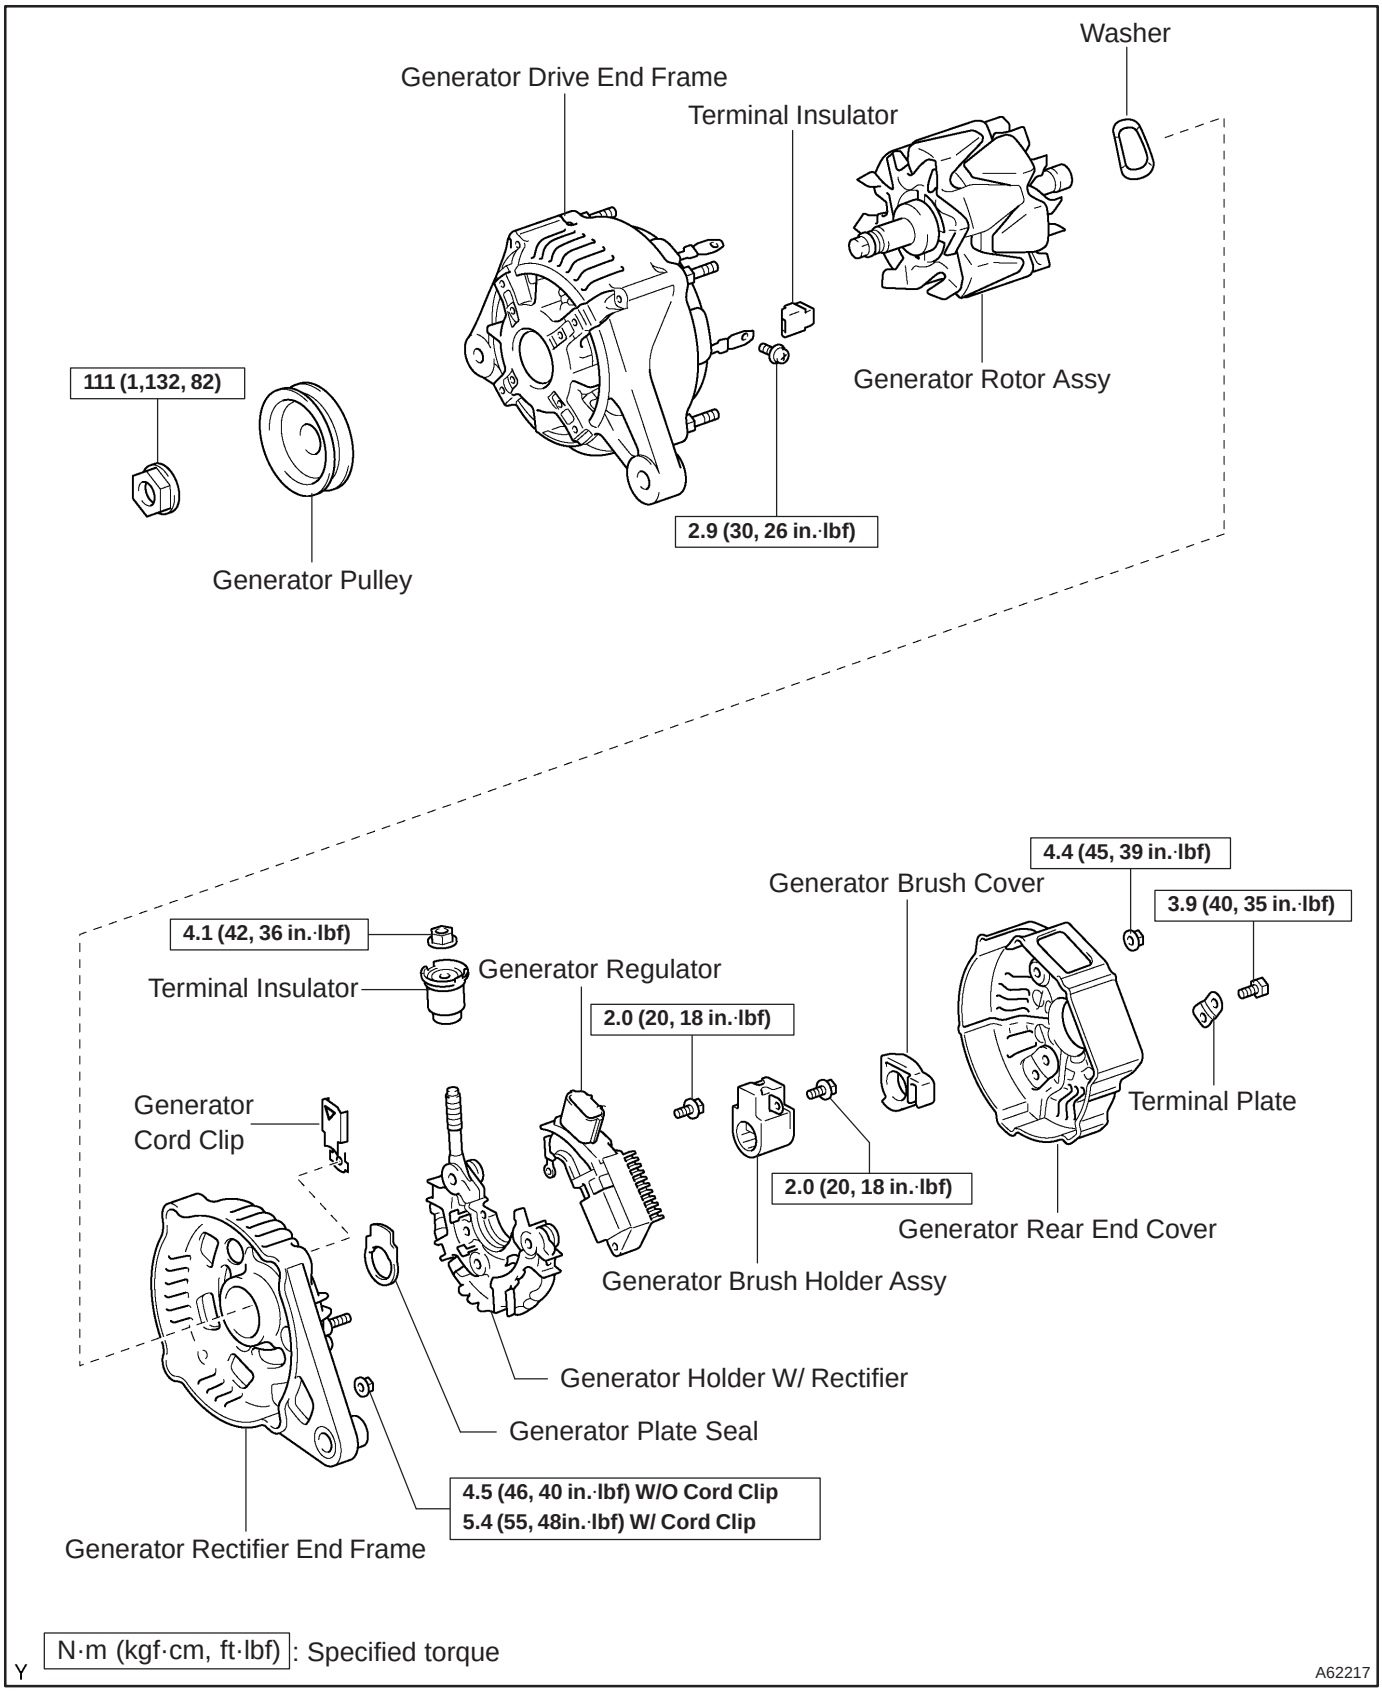
(a) Align the cutout of the field frame with the protrusion of the shock absorber.



(b) Install the field frame and armature assembly with the 2 through bolts.
Torque: 5.9 N·m (60 kgf·cm, 52 in.·lbf)

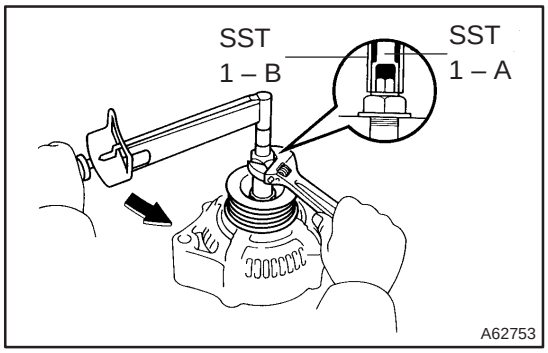
16. INSTALL MAGNET STARTER SWITCH ASSY

(a) Hang the plunger of the magnetic switch to the driver lever from the upper side.



(b) Install the magnetic switch with the 2 nuts.
Torque: 8.3 N·m (85 kgf·cm, 73 in.·lbf)

(c) Connect the lead wire to the terminal with the nut.
Torque: 9.8 N·m (100 kgf·cm, 7 ft·lbf)



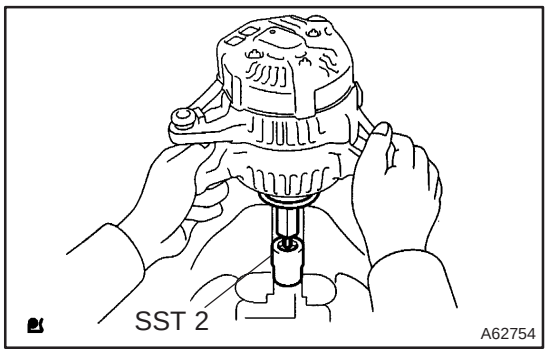
GENERATOR ASSY (1ZZ–FE/3ZZ–FE)

190A9–01

COMPONENTS

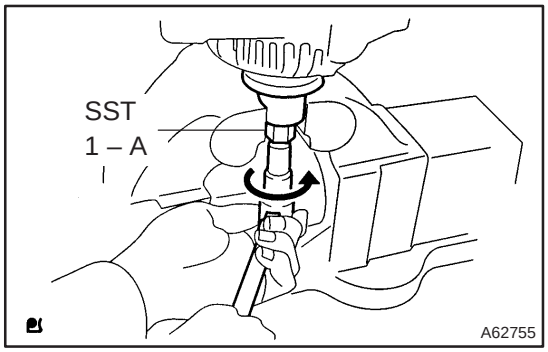
OVERHAUL

1. REMOVE GENERATOR PULLEY



SST 09820–63010 (09820–06010, 09820–06020)

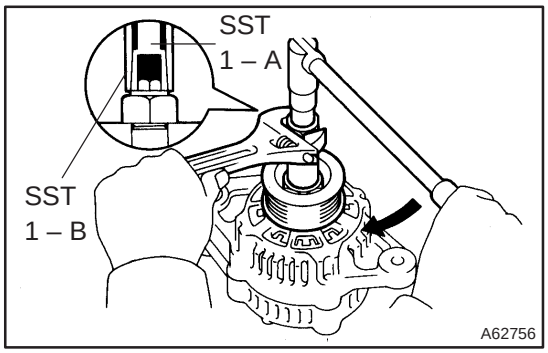
HINT:



SST1 – A, B	09820–06010
SST2	09820–06020

(a) Hold SST 1 – A with a torque wrench, and tighten SST 1 – B clockwise to the specified torque.
Torque: 39 N·m (398 kgf·cm, 29 ft·lbf)

NOTICE:
Check that SST is secured to the rotor shaft.



(b) Mount SST 2 in a vise.
(c) Insert SST 1 – A, B into SST 2, and attach the pulley nut to SST 2.

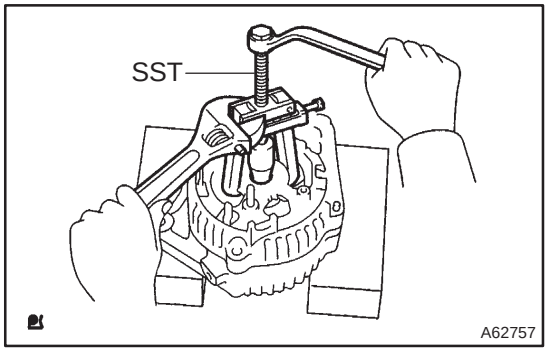
(d) To loosen the pulley nut, turn SST 1 – A in the direction shown in the illustration.

NOTICE:
To prevent damage to the rotor shaft, do not loosen the pulley nut more than one–half of a turn.

(e) Remove the alternator form SST 2.

(f) Turn SST 1 – B, and remove SST 1 – A, B.
(g) Remove the pulley nut and pulley.

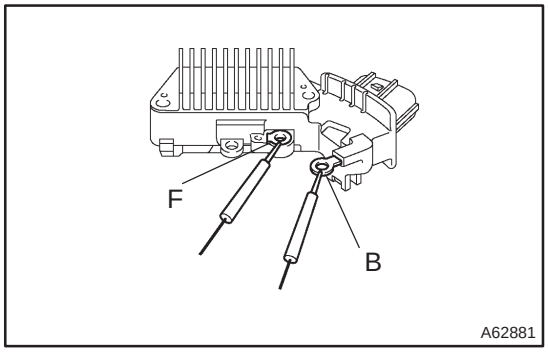
2. REMOVE GENERATOR BRUSH HOLDER ASSY



(a) Remove the nut and terminal insulator.
(b) Remove the screw, nut and terminal plate.
(c) Remove the 2 nuts and rear end cover.
(d) Remove the brush cover from the brush holder.
(e) Remove the 2 screw and brush holder.

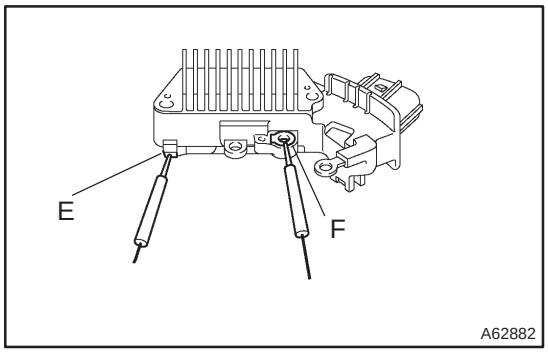
3. REMOVE GENERATOR REGULATOR ASSY

(a) Remove the 3 screws and regulator.



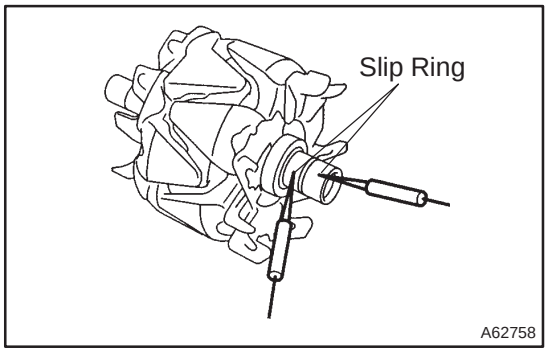
4. REMOVE GENERATOR HOLDER W/RECTIFIER

(a) Remove the 4 screws and holder w/ rectifier.



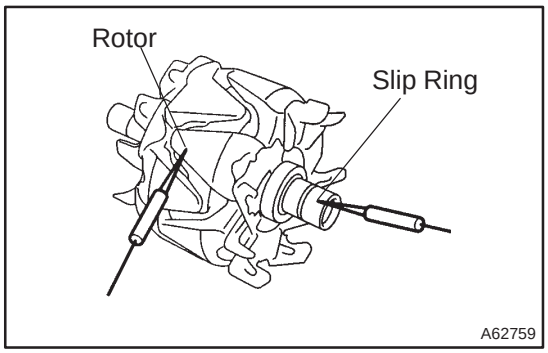
5. REMOVE GENERATOR ROTOR ASSY

(a) Remove the plate seal from the rectifier end frame.
(b) Remove the 4 terminal insulator, 4 nuts and cord clip.
(c) Using SST, remove the rectifier end frame.
SST 09286–46011
(d) Remove the rotor from drive end frame.

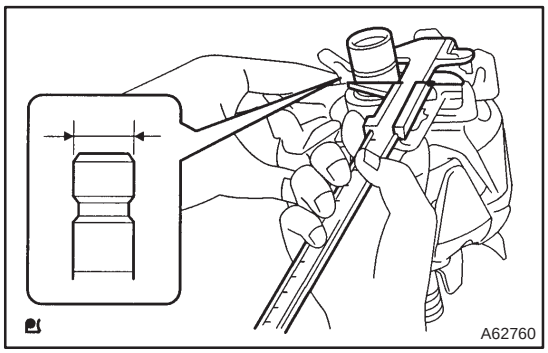


6. INSPECT GENERATOR REGULATOR ASSY

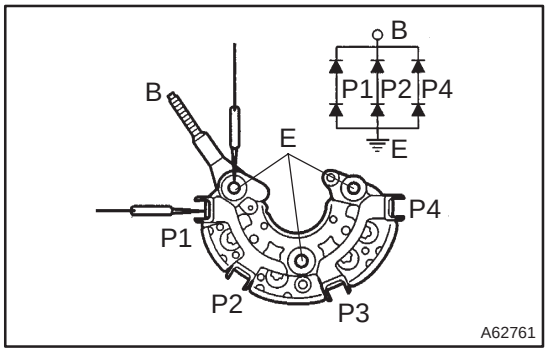
(a) Using an ohmmeter, check the continuity between terminals F and B.
Standard:
When the positive and negative poles between terminals F and B are exchanged, there is continuity in one way but no continuity in another way.



(b) Using an ohmmeter, check the continuity between terminals F and E.
Standard:
When the positive and negative poles between terminals F and E are exchanged, there is continuity in one way but no continuity in another way.

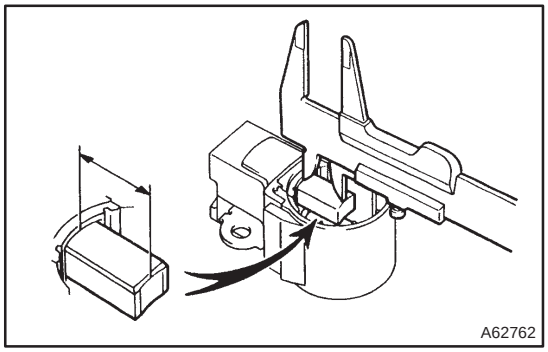


7. INSPECT GENERATOR ROTOR ASSY

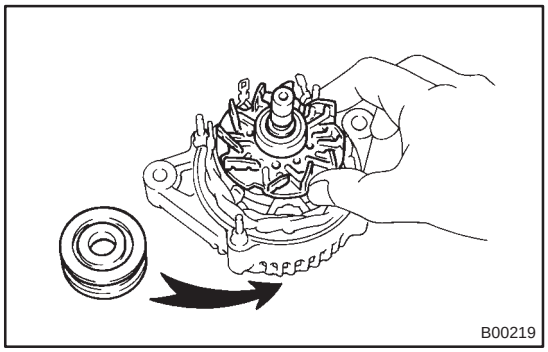


(a) Using an ohmmeter, check that there is continuity between the slip rings.
Standard resistance: 2.1 – 2.5 Ω at 20°C (68°F)

(b) Using an ohmmeter, check that there is no continuity between the slip ring and rotor.

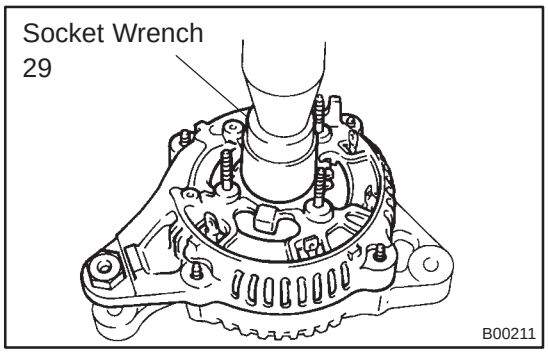


(c) Using a vernier calipers, measure the slip ring diameter.
Standard diameter: 14.2 – 14.4 mm (0.559 – 0.567 in.)
Minimum diameter: 12.8 mm (0.504 in.)



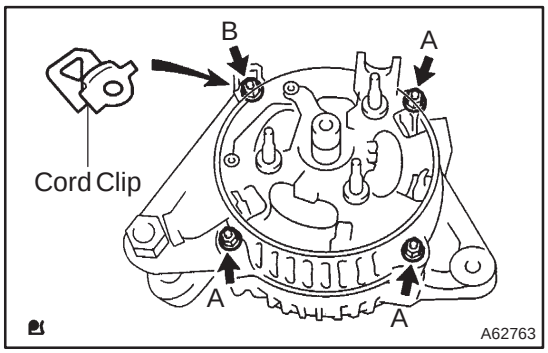
8. INSPECT GENERATOR HOLDER W/RECTIFIER

(a) Using an ohmmeter, connect one tester probe to the B or E terminal and the other to each rectifier terminal.
(b) Reverse the polarity of the tester probes and repeat step (a).
(c) Check that one shows continuity and the other shows no continuity.



9. INSPECT GENERATOR BRUSH HOLDER ASSY

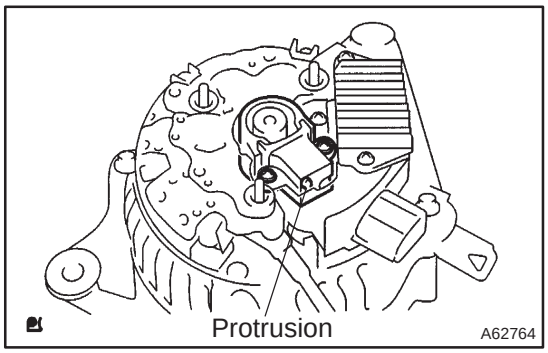
(a) Using a vernier calipers, measure the exposed brush length.
Standard exposed length:
9.5 – 11.5 mm (0.374 – 0.453 in.)
Minimum exposed length: 1.5 mm (0.059 in.)



10. INSTALL GENERATOR ROTOR ASSY

(a) Install the rotor to the drive end frame.

(b) Using a socket wrench 29 and press, slowly press in the rectifier end frame.



(c) Install the cord clip and 4 nuts.
Torque:
Nut A 4.5 N·m (46 kgf·cm, 40 in.·lbf)
Nut B 5.4 N·m (55 kgf·cm, 48 in.·lbf)

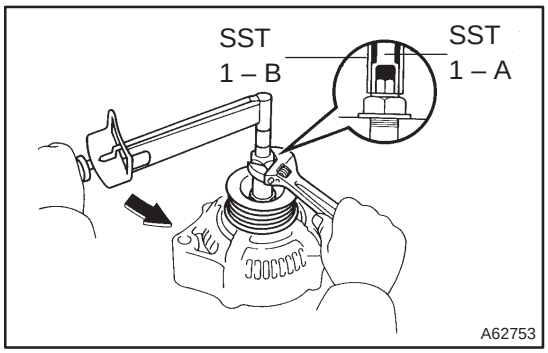
11. INSTALL GENERATOR HOLDER W/RECTIFIER

(a) Install the holder w/ rectifier with 4 screws.
Torque: 2.9 N·m (30 kgf·cm, 26 in.·lbf)

12. INSTALL GENERATOR REGULATOR ASSY

(a) Install the regulator with the 3 screw.
Torque: 2.0 N·m (20 kgf·cm, 18 in.·lbf)

13. INSTALL GENERATOR BRUSH HOLDER ASSY



(a) Install the brush holder with the 2 screws.
Torque: 2.0 N·m (20 kgf·cm, 18 in.·lbf)

NOTICE:
Pay attention to the holder installation direction.

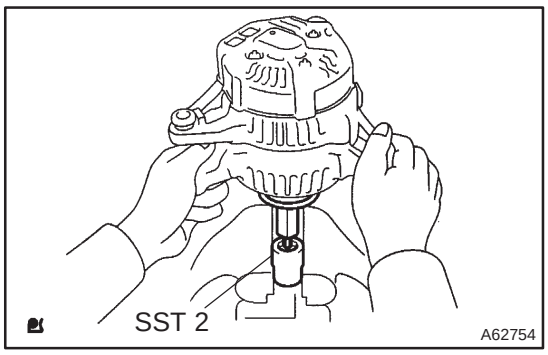
(b) Install the rear end cover with the 2 nuts.
Torque: 4.4 N·m (45 kgf·cm, 39 in.·lbf)

(c) Install the terminal plate with the screw and nut.
Torque:
Bolt 3.9 N·m (40 kgf·cm, 35 in.·lbf)
Nut 4.4 N·m (45 kgf·cm, 39 in.·lbf)

(d) Install the terminal insulator withe the nut.
Torque: 4.1 N·m (42 kgf·cm, 36 in.·lbf)

14. INSTALL GENERATOR PULLEY

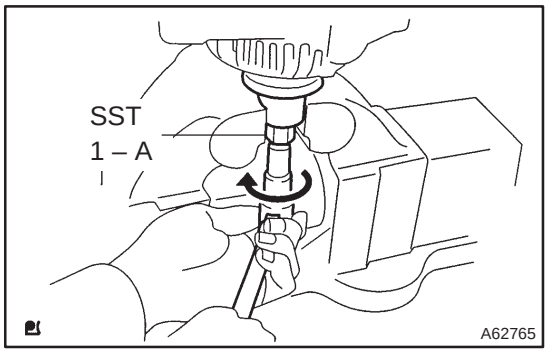
SST 09820–63010 (09820–06010, 09820–06020)



HINT:

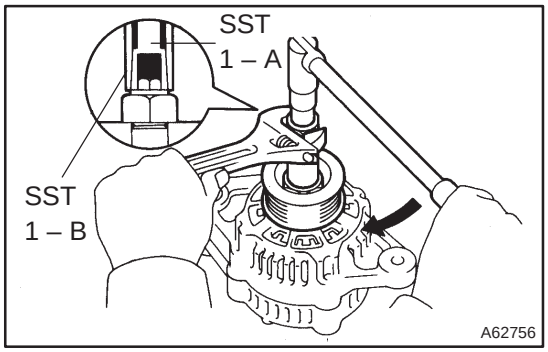
SST1 – A, B	09820–06010
SST2	09820–06020

(a) Install the pulley to the rotor shaft by tightening the pulley nut by hand.



(b) Hold SST 1 – A with a torque wrench, and tighten SST 1 – B clockwise to the specified torque.
Torque: 39 N·m (398 kgf·cm, 29 ft·lbf)

NOTICE:
Check that SST is secured to the pulley shaft.



(c) Mount SST 2 in a vise.

(d) Insert SST 1 – A, B into SST 2, and attach the pulley nut to SST 2.

(e) Tighten the pulley nut, turn SST 1 – A in the direction shown in the illustration.
Torque: 111 N·m (1,132 kgf·cm, 82 ft·lbf)

(f) Remove the alternator form SST 2.

(g) Turn SST 1 – B, and remove SST 1 – A, B.
(h) Turn the pulley, and check that the pulley moves smoothly.

HOW TO USE THIS MANUAL

0106E–06

GENERAL INFORMATION

1. GENERAL DESCRIPTION

(a) This manual is made in accordance with SAE J2008.

(b) Generally repair operations can be separated in the following 3 main processes:
1. Diagnosis
2. Removing and Installing, Replacing, Disassembling, Installing and Checking, Adjusting
3. Final Inspection

(c) This manual explains ”Removing and Installing, Replacing, Disassembling, Installing and Checking, Adjusting”, but ”Final Inspection” is omitted.

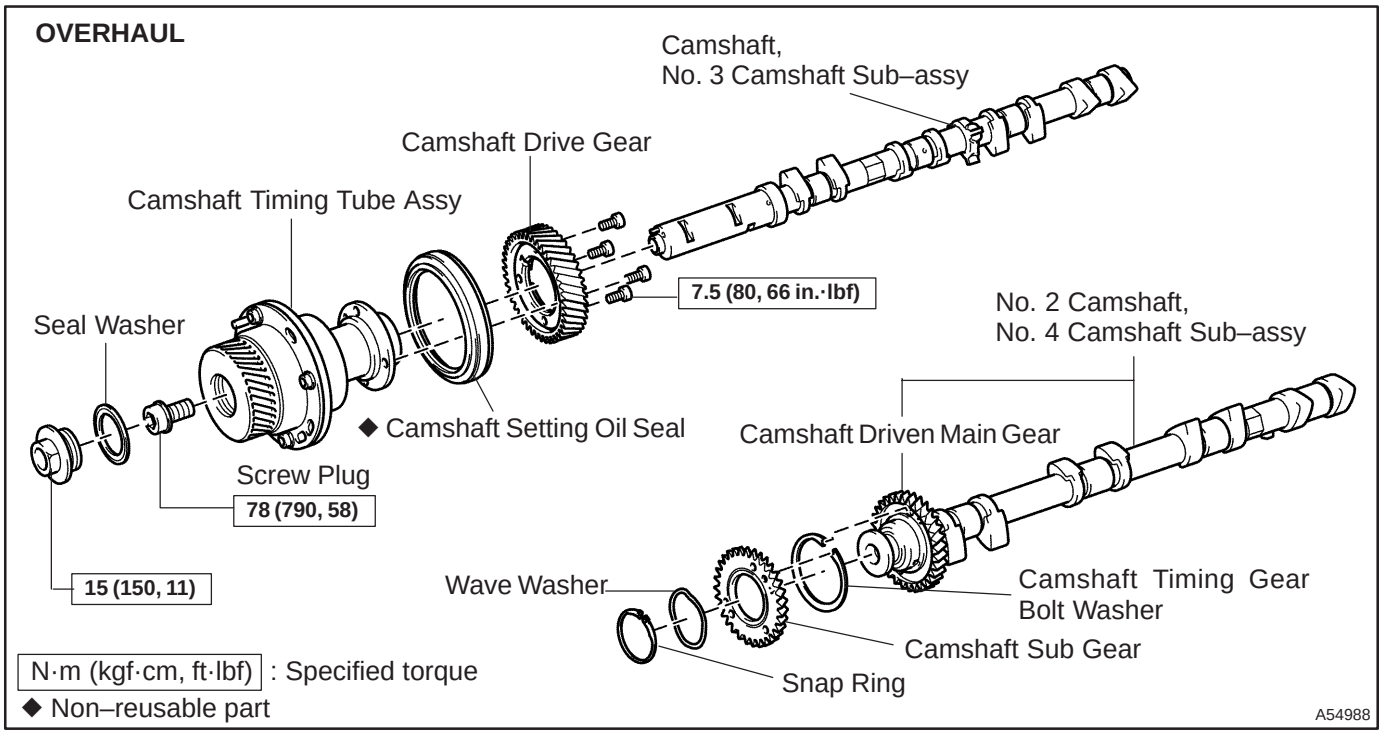
(d) The following essential operations are not written in this manual, however these operations must be done in the practical situation.
(1) Operation with a jack or lift
(2) Cleaning of a removed part when necessary
(3) Visual check

2. INDEX

(a) An alphabetical INDEX is provided as a section on the end of the book to guide you to the item to be repaired.

3. PREPARATION

(a) Use of special service tools (SST) and special service materials (SSM) may be required, depending on the repairing condition. Be sure to use SST and SSM when they are required and follow the working procedure properly. A list of SST and SSM is in the Preparation section of this manual.



4. REPAIR PROCEDURES

(a) Component drawing is placed as the section or title when necessary.

(b) Illustrations of the parts catalog are placed as the ”disassembled parts drawing” so that it enables you to understand the fitting condition of the components.

(c) Non–reusable parts, grease applied parts, precoated parts and tightening torque are specified in the components drawing.

Example:

(d) Tightening torque, oil applying position, and non–reusable parts are described as important points in the procedure.

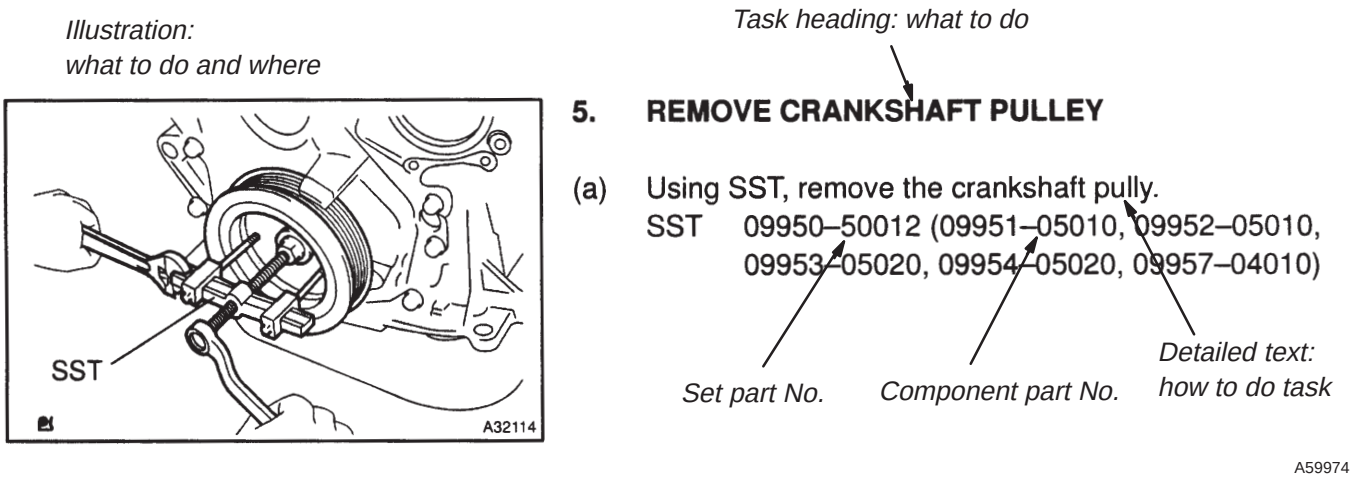
NOTICE:

There are cases where such information can only be indicated by an illustration. In that case, all the information such as torque, oil, etc. are described in the illustration.

(e) Installing procedure of operation items is performed in the reverse order of the removing, and only the important points are described.

(f) Only items with points are described in the procedure, and the operational portion and content are placed using an illustration. In the explanations, details of the operational method, standard value and notice are placed.

(g) There may be a case where the illustrations of similar models are used. In that case the details may be different from the actual vehicle.



(h) The procedures are presented in a step–by–step format:

(1) The illustration shows what to do and where to do it.

(2) The task heading tells what to do.

(3) The detailed text tells how to perform the task and gives other information such as specifications and warnings.

Example:

HINT:

This format provides an experienced technician with a FAST TRACK to the necessary information. The task heading can be read at a glance when necessary, and the text below provides detailed information. Important specifications and warnings always stand out in bold type.

5. SERVICE SPECIFICATIONS

(a) Specifications are presented in bold type throughout the manual. You never have to leave the procedure to look up your specifications. The specifications are also found in the Service Specifications section for a quick reference.

6. TERMS DEFINITION

CAUTION	Indicate the possibility of injury to you or other people.
NOTICE	Indicate the possibility of damage to the components being repaired.
HINT	Provide additional information to help you perform the repair efficiently.

7. SI UNIT

(a) The UNITS given in this manual are primarily expressed according to the SI UNIT (International System of Unit), and alternately expressed in the metric system and in the English System.

Example:

Torque: 30 N·m (310 kgf·cm, 22 ft·lbf)

REPAIR INSTRUCTION

010BM–01

PRECAUTION

1. TO PREVENT FROM ENTERING FOREIGN SUBSTANCES.

(a) When foreign substances such as dust, grain of sand or metallic dust enter inside of engine, it often causes functional failure of the engine.
  (1) Precaution before disassembly.
    • Remove adequately all sand and mud adhere to the outside of engine .
  (2) Precaution at reassembly.
    • Protect disassembled parts from dust by using vinyl sheet to cover.

2. TO PREVENT SCRATCHES ON THE PARTS.

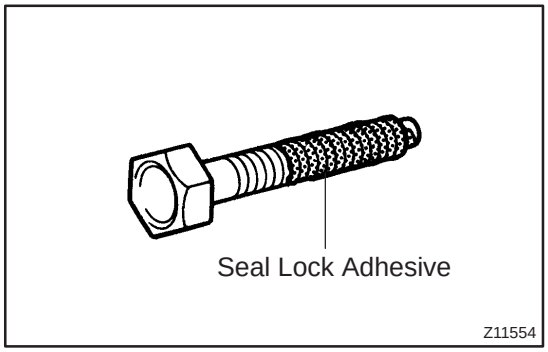
(a) The existence of scratches on the contact and revolving surfaces often causes oil leak and seisure.
  (1) Precautions at disassembly and reassembly.
    • When disassemble the contact surface of the parts, use plastic hummer striking lightly. (Do not pry out by screwdriver).
    • When fix the parts to the vise, do not directly catch it in the vise. Fix the parts through aluminum bar.

3. TO CLEAN AND WASH THE PARTS.

(a) Each parts needs to be well cleaned, washed, and dried by air, and apply specified oil before reassembly.
  (1) Cleaning and washing by alkaline solvent is prohibited:
    • Parts made of aluminum and rubber. (ex. cylinder head cover gasket etc.)
  (2) Cleaning and washing by flushing oil (ex. kerosene, white gasoline etc.) is prohibited:
    • Parts made of rubber. (ex. cylinder head cover gasket etc.)

4. POSITION AND DIRECTION OF EACH PARTS.

(a) Each parts needs to be reassembled as the same position and direction as it disassembled.
  (1) Precautions at disassembly and reassembly.
    • Follow the directions when the manual designates to mark the matchmark and/or direction mark.
    • Disassembled parts needs to be put in order as disassembled, not to change position and/or direction.
    • Follow the directions when the manual instructs the position and direction.



5. INSTALL ENGINE ASSEMBLY TO OVERHAUL STAND WHEN OVERHAUL THE ENGINE.

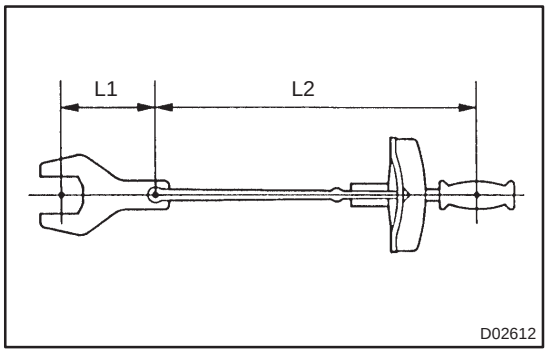
6. PUT THE DISASSEMBLED PARTS IN ORDER AS THEY DISASSEMBLED.

7. APPLY ENGINE OIL TO THE SLIDING AND ROTATING SURFACES.

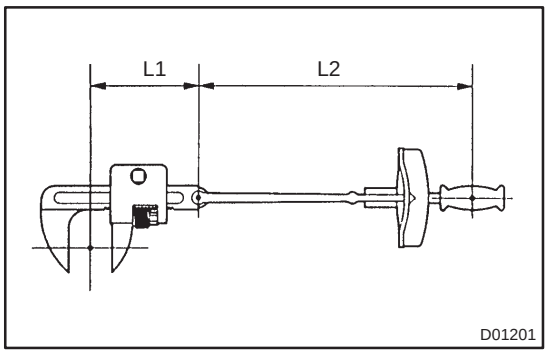
8. NON–REUSABLE PARTS SUCH AS GASKET AND SEAL NEEDS TO BE CHANGED TO THE NEW PARTS.

9. BASIC REPAIR HINT

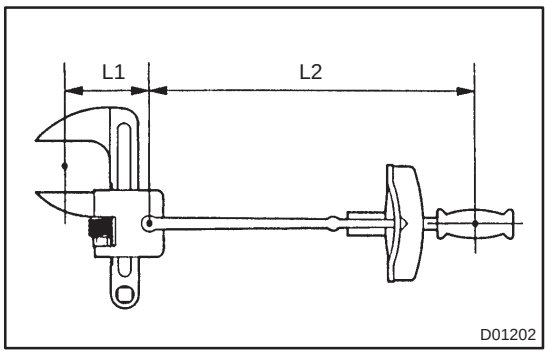
(a) Precoated Parts:
  (1) Precoated parts are bolts, nuts, etc. that are coated with a seal lock adhesive at the factory.
  (2) If a precoated part is retightened, loosened or caused to move in any way, it must be recoated with the specified adhesive.
  (3) When reusing precoated parts, clean off the old adhesive and dry with compressed air. Then apply the specified seal lock adhesive to the bolt, nut or threads.



NOTICE:



Do the torque checking with the lower limit value of the torque tolerance.



(4) Depending on the seal lock agent to apply, there may be a case where it is necessary to leave it for a specified time until it hardens.

(b) Gaskets:
When necessary, use a sealer on gaskets to prevent leaks.

(c) Bolts, Nuts and Screws:
Carefully observe all specifications for bolt tightening torques. Always use a torque wrench.

(d) Torque When Using Extension Tool with Torque Wrench:

(1) In case of tightening by extending the entire length of the torque wrench combined with SST or tool, if you tighten until the reading of the torque wrench reached the specified torque value, the actual torque becomes excessive.

(2) In this text, only the specified torque is described. In case of using SST or extension tool, find the reading of the torque wrench by the formula.

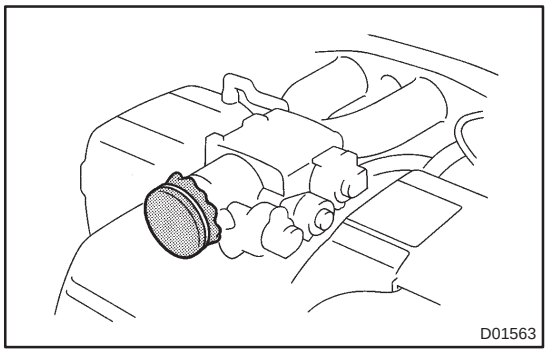
(3) Formula T'=T x L2/(L1 + L2)

T'	Reading of torque wrench {N·m (kgf·cm, ft·lbf)}
T	Torque {N·m (kgf·cm, ft·lbf)}
L1	Length of SST or tool (cm)
L2	Length of torque wrench (cm)

10. REMOVAL AND INSTALLATION OF FUEL CONTROL PARTS

(a) Place for Removing and Installing Fuel System Parts:

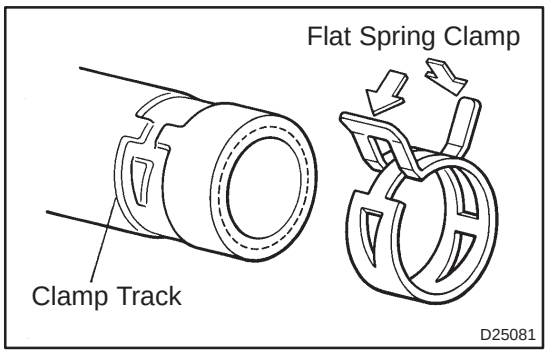
(1) Place with good air ventilation and without anything flammable such as welder, grinder, drill, electric motor or stove in the surroundings.



(2) Never work in a place like a pit or nearby pit as there is a possibility that vaporized fuel fills those places.

(b) Removing and Installing of Fuel System Parts:

(1) Prepare a fire extinguisher before starting the operation.



(2) For prevention of the static electricity, install a ground on the fuel changer, vehicle and fuel tank, and do not spray much water so as to prevent slipping.

(3) Never use any electric equipment like an electric motor or a working light as they may cause spark or high temperature.
(4) Never use an iron hammer as it may cause spark.
(5) Dispose the shop lag separately from any fuel deposit.

11. REMOVAL AND INSTALLATION OF ENGINE INTAKE PARTS

(a) If any metal tip is mixed in the inlet pass, that may give a bad effect to the engine and turbo charger.
(b) When removing and installing of the inlet system parts, close the opening of the removed inlet system parts and the engine with a clean shop lag or gum tape.
(c) When installing the inlet system parts, check that there is no mixing of a metal tip.

12. HANDLING OF HOSE CLAMPS

(a) Before removing the hose, check the depth of inserting portion and the clamp position to restore it surely.
(b) Change a deformed or dented into a new one.
(c) In case of reusing the hose, install the clamp on the hose where it has a clamp track.
(d) For a flat spring type clamp, make it adjust by adding force to the arrow mark direction after the installation.

TERMS

ABBREVIATIONS USED IN THIS MANUAL

010B9–02

Abbreviations	Meaning
ABS	Anti–Lock Brake System
AC	Alternating Current
ACC	Accessory
ACIS	Acoustic Control Induction System
ACSD	Automatic Cold Start Device
A.D.D.	Automatic Disconnecting Differential
A/F	Air–Fuel Ratio
AHC	Active Height Control Suspension
ALR	Automatic Locking Retractor
ALT	Alternator
AMP	Amplifier
ANT	Antenna
APPROX.	Approximately
ASSY	Assembly
A/T, ATM	Automatic Transmission (Transaxle)
ATF	Automatic Transmission Fluid
AUTO	Automatic
AUX	Auxiliary
AVG	Average
AVS	Adaptive Variable Suspension
B+	Battery Voltage
BA	Brake Assist
BACS	Boost Altitude Compensation System
BAT	Battery
BDC	Bottom Dead Center
B/L	Bi–Level
B/S	Bore–Stroke Ratio
BTDC	Before Top Dead Center
BVSV	Bimetallic Vacuum Switching Valve
Calif.	California
CB	Circuit Breaker
CCo	Catalytic Converter For Oxidation
CD	Compact Disc
CF	Cornering Force
CG	Center Of Gravity
CH	Channel
COMB.	Combination
CPE	Coupe
CPS	Combustion Pressure Sensor
CPU	Central Processing Unit
CRS	Child Restraint System
CTR	Center
C/V	Check Valve
CV	Control Valve
CW	Curb Weight
DC	Direct Current
DEF	Defogger
DFL	Deflector

Abbreviations	Meaning
DIFF.	Differential
DIFF. LOCK	Differential Lock
D/INJ	Direct Injection
DLC	Data Link Connector
DLI	Distributorless Ignition
DOHC	Double Overhead Cam
DP	Dash Pot
DS	Dead Soak
DSP	Digital Signal Processor
DTC	Diagnostic Trouble Code
DVD	Digital Versatible Disc
EBD	Electric Brake force Distribution
ECAM	Engine Control And Measurement System
ECD	Electronic Controlled Diesel
ECDY	Eddy Current Dynamometer
ECU	Electronic Control Unit
ED	Electro–Deposited Coating
EDU	Electronic Driving Unit
EDIC	Electric Diesel Injection Control
EFI	Electronic Fuel Injection
E/G	Engine
EGR	Exhaust Gas Recirculation
EGR–VM	EGR–Vacuum Modulator
ELR	Emergency Locking Retractor
EMPS	Electric Motor Power Steering
ENG	Engine
ESA	Electronic Spark Advance
ETCS–i	Electronic Throttle Control System–intelligent
EVAP	Evaporative Emission Control
EVP	Evaporator
E–VRV	Electric Vacuum Regulating Valve
EX, EXH	Exhaust
FE	Fuel Economy
FF	Front–Engine Front–Wheel–Drive
F/G	Fuel Gauge
FIPG	Formed In Place Gasket
FL	Fusible Link
F/P	Fuel Pump
FPU	Fuel Pressure Up
Fr	Front
FR	Front–Engine Rear–Wheel–Drive
F/W	Flywheel
FW/D	Flywheel Damper
FWD	Front–Wheel–Drive
GAS	Gasoline
GND	Ground
GPS	Global Positioning System
HAC	High Altitude Compensator
H/B	Hatchback
H–FUSE	High Current Fuse
HI	High

Abbreviations	Meaning
HID	High Intensity Discharge (Head Lamp)
HPU	Hydrraulic Power Unit
HSG	Housing
HT	Hard Top
HWS	Heated Windshield System
IAC	Idel Air Control
IC	Integrated Circuit
IDI	Indirect Diesel Injection
IFS	Independent Front Suspension
IG	Ignition
IIA	Integrated Ignition Assembly
IN	Intake (Manifold, Valve)
INT	Intermittent
I/P	Instrument Panel
IRS	Independent Rear Suspension
ISC	Idle Speed Control
J/B	Junction Block
J/C	Junction Connector
KD	Kick–Down
LAN	Local Area Network
LB	Liftback
LCD	Liquid Crystal Display
LED	Light Emitting Diode
LH	Left–Hand
LHD	Left–Hand Drive
L/H/W	Length, Height, Width
LLC	Long–Life Coolant
LNG	Liquified Natural Gas
LO	Low
LPG	Liquified Petroleum Gas
LSD	Limited Slip Differential
LSP & PV	Load Sensing Proportioning And Bypass Valve
LSPV	Load Sensing Proportioning Valve
MAP	Manifold Absolute Pressure
MAX.	Maximum
M–FUSE	Mediam Current Fuse
MIC	Microphone
MIL	Malfunction Indicator Lamp
MIN.	Minimum
MG1	Motor Generator No.1
MG2	Motor Generator No.2
MP	Multipurpose
MPI	Multipoint Electronic Injection
MPX	Multiplex Communication System
M/T, MTM	Manual Transmission
MT	Mount
MTG	Mounting
N	Neutral
NA	Natural Aspiration
No.	Number
O/D	Overdrive

Abbreviations	Meaning
OEM	Original Equipment Manufacturing
OHC	Overhead Camshaft
OHV	Overhead Valve
OPT	Option
ORVR	On–board Refilling Vapor Recovery
O/S	Oversize
P & BV	Proportioning And Bypass Valve
PCS	Power Control System
PCV	Positive Crankcase Ventilation
PKB	Parking Brake
PPS	Progressive Power Steering
PS	Power Steering
PTO	Power Take–Off
P/W	Power Window
R & P	Rack And Pinion
RAM	Random Access Memory
R/B	Relay Block
RBS	Recirculating Ball Type Steering
R/F	Reinforcement
RFS	Rigid Front Suspension
RH	Right–Hand
RHD	Right–Hand Drive
RLY	Relay
ROM	Read Only Memory
Rr	Rear
RR	Rear–EngineRear–Wheel–Drive
RRS	Rigid Front Suspension
RWD	Rear–Wheel–Drive
SDN	Sedan
SEN	Sensor
SICS	Starting Injection Control System
SOC	State Of Charge
SOHC	Single Overhead Camshaft
SPEC	Specification
SPI	Single Point Injection
SRS	Supplemental Restraint System
SSM	Special Service Materials
SST	Special Service Tools
STD	Standard
STJ	Cold–Start Fuel Injection
SW	Switch
SYS	System
T/A	Transaxle
TACH	Tachometer
TBI	Throttle Body Electronic Fuel Injection
TC	Turbocharger
TCCS	TOYOTA Computer–Controlled System
TCV	Timing Control Valve
TDC	Top Dead Center
TEMP.	Temperature
TEMS	TOYOTA Electronic Modulated Suspension

Abbreviations	Meaning
TFT	Toyota Free–Tronic
TIS	Total Information System For Vehicle Development
T/M	Transmission
TMC	TOYOTA Motor Corporation
TMMK	TOYOTA Motor Manufacturing Kentucky, Inc.
TRC	Traction Control System
TURBO	Turbocharge
TWC	Three–Way Catalyst
U/D	Underdrive
U/S	Undersize
VCV	Vacuum Control Valve
VENT	Ventilator
VIN	Vehicle Identification Number
VPS	Variable Power Steering
VSC	Vehicle Stability Control
VSV	Vacuum Switching Valve
VTV	Vacuum Transmitting Valve
VVT–i	Variable Valve Timing–intelligent
w/	With
WGN	Wagon
W/H	Wire Harness
w/o	Without
WU–TWC	Warm Up Three–way Catalytic Converter
WU–OC	Warm Up Oxidation Catalytic Converter
1st	First
2nd	Second
2WD	Two Wheel Drive Vehicle (4 x 2)
3rd	Third
4th	Fourth
4WD	Four Wheel Drive Vehicle (4 x 4)
4WS	Four Wheel Steering System
5th	Fifth

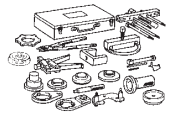
010BA–03

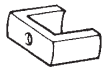
GLOSSARY OF SAE AND TOYOTA TERMS

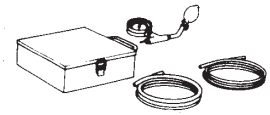
This glossary lists all SAE–J1930 terms and abbreviations used in this manual in compliance with SAE recommendations, as well as their TOYOTA equivalents.

SAE ABBREVIATIONS	SAE TERMS	TOYOTA TERMS ( )—ABBREVIATIONS
A/C	Air Conditioning	Air Conditioner
ACL	Air Cleaner	Air Cleaner, A/CL
AIR	Secondary Air Injection	Air Injection (AI)
AP	Accelerator Pedal	–
B+	Battery Positive Voltage	+B, Battery Voltage
BARO	Barometric Pressure	HAC
CAC	Charge Air Cooler	Intercooler
CARB	Carburetor	Carburetor
CFI	Continuous Fuel Injection	–
CKP	Crankshaft Position	Crank Angle
CL	Closed Loop	Closed Loop
CMP	Camshaft Position	Cam Angle
CPP	Clutch Pedal Position	–
CTOX	Continuous Trap Oxidizer	–
CTP	Closed Throttle Position	LL ON, Idle ON
DFI	Direct Fuel Injection (Diesel)	Direct Injection (DI)
DI	Distributor Ignition	–
DLC1 DLC2 DLC3	Data Link Connector 1 Data Link Connector 2 Data Link Connector 3	1: Check Connector 2: Total Diagnosis Comunication Link (TDCL) 3: OBD II Diagnostic Connector
DTC	Diagnostic Trouble Code	Diagnostic Code
DTM	Diagnostic Test Mode	–
ECL	Engine Control Level	–
ECM	Engine Control Module	Engine ECU (Electronic Control Unit)
ECT	Engine Coolant Temperature	Coolant Temperature, Water Temperature (THW)
EEPROM	Electrically Erasable Programmable Read Only Memory	Electrically Erasable Programmable Read Only Memory (EEPROM), Erasable Programmable Read Only Memory (EPROM)
EFE	Early Fuel Evaporation	Cold Mixture Heater (CMH), Heat Control Valve (HCV)
EGR	Exhaust Gas Recirculation	Exhaust Gas Recirculation (EGR)
EI	Electronic Ignition	TOYOTA Distributorless Ignition (TDI)
EM	Engine Modification	Engine Modification (EM)
EPROM	Erasable Programmable Read Only Memory	Programmable Read Only Memory (PROM)
EVAP	Evaporative Emission	Evaporative Emission Control (EVAP)
FC	Fan Control	–
FEEPROM	Flash Electrically Erasable Programmable Read Only Memory	–
FEPROM	Flash Erasable Programmable Read Only Memory	–
FF	Flexible Fuel	–
FP	Fuel Pump	Fuel Pump
GEN	Generator	Alternator
GND	Ground	Ground (GND)

HO2S	Heated Oxygen Sensor	Heated Oxygen Sensor (HO_2S)
IAC	Idle Air Control	Idle Speed Control (ISC)
IAT	Intake Air Temperature	Intake or Inlet Air Temperature
ICM	Ignition Control Module	–
IFI	Indirect Fuel Injection	Indirect Injection (IDL)
IFS	Inertia Fuel–Shutoff	–
ISC	Idle Speed Control	–
KS	Knock Sensor	Knock Sensor
MAF	Mass Air Flow	Air Flow Meter
MAP	Manifold Absolute Pressure	Manifold Pressure Intake Vacuum
MC	Mixture Control	Electric Bleed Air Control Valve (EBCV) Mixture Control Valve (MCV) Electric Air Control Valve (EACV)
MDP	Manifold Differential Pressure	–
MFI	Multiport Fuel Injection	Electronic Fuel Injection (EFI)
MIL	Malfunction Indicator Lamp	Check Engine Lamp
MST	Manifold Surface Temperature	–
MVZ	Manifold Vacuum Zone	–
NVRAM	Non–Volatile Random Access Memory	–
O2S	Oxygen Sensor	Oxygen Sensor, O_2 Sensor (O_2S)
OBD	On–Board Diagnostic	On–Board Diagnostic System (OBD)
OC	Oxidation Catalytic Converter	Oxidation Catalyst Convert (OC), CCo
OP	Open Loop	Open Loop
PAIR	Pulsed Secondary Air Injection	Air Suction (AS)
PCM	Powertrain Control Module	–
PNP	Park/Neutral Position	–
PROM	Programmable Read Only Memory	–
PSP	Power Steering Pressure	–
PTOX	Periodic Trap Oxidizer	Diesel Particulate Filter (DPF) Diesel Particulate Trap (DPT)
RAM	Random Access Memory	Random Access Memory (RAM)
RM	Relay Module	–
ROM	Read Only Memory	Read Only Memory (ROM)
RPM	Engine Speed	Engine Speed
SC	Supercharger	Supercharger
SCB	Supercharger Bypass	E–ABV
SFI	Sequential Multiport Fuel Injection	Electronic Fuel Injection (EFI), Sequential Injection
SPL	Smoke Puff Limiter	–
SRI	Service Reminder Indicator	–
SRT	System Readiness Test	–
ST	Scan Tool	–
TB	Throttle Body	Throttle Body
TBI	Throttle Body Fuel Injection	Single Point Injection Central Fuel Injection (Ci)
TC	Turbocharger	Turbocharger
TCC	Torque Converter Clutch	Torque Converter







TCM	Transmission Control Module	Transmission ECU, ECT ECU
TP	Throttle Position	Throttle Position
TR	Transmission Range	–
TVV	Thermal Vacuum Valve	Bimetallic Vacuum Switching Valve (BVSV) Thermostatic Vacuum Switching Valve (TVSV)
TWC	Three–Way Catalytic Converter	Three–Way Catalytic (TWC) Manifold Converter CC_{RO}
TWC+OC	Three–Way + Oxidation Catalytic Converter	CC_R + CCo
VAF	Volume Air Flow	Air Flow Meter
VR	Voltage Regulator	Voltage Regulator
VSS	Vehicle Speed Sensor	Vehicle Speed Sensor
WOT	Wide Open Throttle	Full Throttle
WU–OC	Warm Up Oxidation Catalytic Converter	–
WU–TWC	Warm Up Three–Way Catalytic Converter	–
3GR	Third Gear	–
4GR	Fourth Gear	–

030KR–01

HOW TO DETERMINE NUT STRENGTH

Nut Type			Class
Present Standard Hexagon Nut	Old Standard Hexagon Nut		
	Cold Forging Nut	Cutting Processed Nut	
 No Mark			4N
 No Mark (w/ Washer)	 No Mark (w/ Washer)	 No Mark	5N (4T)
 6N			6N
		 *	7N (5T)
 8N			8N
 10N		 No Mark	10N (7T)
 11N			11N
 12N			12N

*: Nut with 1 or more marks on one side surface of the nut.

B06432

HINT:

Use the nut with the same number of the nut strength classification or the greater than the bolt strength classification number when tightening parts with a bolt and nut.

Example: Bolt = 4T

Nut = 4N or more

Cylinder head		
Warpage	Cylinder brock side	0.08 mm (0.0031 in.)
	Intake manifold side	0.20 mm (0.0079 in.)
	Exhaust manifold side	0.20 mm (0.0079 in.)
Intake valve		
Overall length	Standard	102.53 mm (4.0366in.)
	Minimum	102.10 mm (4.0197in.)
Valve stem diameter		5.970 – 5.985 mm (0.2350 – 0.2356 in.)
Margin thickness	Standard	0.9 (0.035 in.)
	Minimum	0.6 mm (0.0247 in.)
Exhaust valve		
Overall length	Standard	101.97 mm (4.0146in.)
	Minimum	101.55 mm (3.9980 in.)
Valve stem diameter		5.960 – 5.975 mm (0.2346 – 0.2352 in.)
Margin thickness	Standard	0.9 mm (0.035 in.)
	Minimum	0.6 mm (0.024 in.)
Inner compression spring		
Free length		40.45 mm (1.5925 in.)
Deviation	Maximum	2.0 mm (0.079 in.)
Installed tension	at 31.1 mm (1.224 in.)	177–195 N (18.0 – 19.9 kgf, 39.7 – 44.1 lbf)
Intake Valve guide bush		
Bushing inside diameter		6.010 – 6.030 mm (0.2366 – 0.2374 in.)
Oil clearance	Standard	0.025 – 0.060 mm (0.0010 – 0.0024 in.)
	Maximum	0.08 mm (0.0031 in.)
Diameter		10.985 – 11.006 mm (0.4325 – 0.4333 in.)
Protrusion height		10.05 – 10.45 mm (0.3957 – 0.4114 in.)
Exhaust valve guide bush		
Bushing inside diameter		6.010 – 6.030 mm (0.2366 – 0.2374 in.)
Oil clearance	Standard	0.035 – 0.070 mm (0.0014 – 0.0028 in.)
	Maximum	0.10 mm (0.0039 in.)
Diameter		10.985 – 11.006 mm (0.4325 – 0.4333 in.)
Protrusion height		9.65 – 10.05 mm (0.3799 – 0.3957 in.)
Valve lifter		
Lifter diameter		27.975 – 27.985 mm (1.1014 – 1.1018 in.)
Lifter bore diameter		28.010 – 28.031 mm (1.1028 – 1.1036 in.)
Oil clearance	Standard	0.025 – 0.056 mm (0.0010 – 0.0022 in.)
	Maximum	0.08 mm (0.0031 in.)
Camshaft		
Circle runout	Maximum	0.06 mm (0.0024 in.)
Cam lobe height (No.1)	Standard	46.57 – 46.67 mm (1.8335 – 1.8374 in.)
	Minimum	46.10 mm (1.8150 in.)
Cam lobe height (No.2)	Standard	47.52 – 47.62 mm (1.8709 – 1.8748 in.)
	Minimum	47.05 mm (1.8524 in.)
Journal diameter		26.969 – 26.985 mm (1.0618 – 1.0624 in.)
Thrust clearance		0.035 – 0.11 mm (0.0014 – 0.0043 in.)
Oil clearance	Standard	0.025 – 0.062 mm (0.0010 – 0.0024 in.)
	Minimum	0.08 mm (0.0031 in.)
Gear backlash	Standard	0.014 – 0.070 mm (0.0006 – 0.0028 in.)
	Maximum	0.17 mm (0.0067 in.)
Connecting rod		
Thrust clearance	Standard	0.08 – 0.30 mm (0.0031 – 0.0118 in.)
	Maximum	0.40 mm (0.0157 in.)
Oil clearance	Standard	0.038 – 0.056 mm (0.0015 – 0.0022 in.)
	Maximum	0.10 mm (0.0039 in.)

Cylinder block		
Warpage	Maximum	0.05 mm (0.0020 in.)
Bore diameter	Standard	82.200 – 82.213 mm (3.2362 – 3.2367 in.)
	Maximum	82.400 mm (3.2441 in.)
Piston		
Piston diameter		82.118 – 82.132 mm (3.2330 – 3.2335 in.)
Piston oil clearance	Standard	0.068 – 0.095 mm (0.0027 – 0.0037 in.)
	Maximum	0.14 mm (0.0055 in.)
Bushing inside diameter		31.015 – 31.027 mm (1.2211 – 1.2215 in.)
Piston pin		
Piston pin diameter		31.000 – 31.012 mm (1.2205 – 1.2209 in.)
Oil clearance	Standard	0.030 – 0.027 mm (0.0001 – 0.0011 in.)
	Maximum	0.025 mm (0.0010 in.)
Cylinder head set bolt		
Out side diameter	Standard	10.75 – 11.00 mm (0.4234 – 0.4331 in.)
	Minimum	10.40 mm (0.4904 in.)
Connecting rod bolt		
Diameter	Standard	8.2 – 8.3 mm (0.323 – 0.327 in.)
	Minimum	8.0 mm (0.315 in.)
Connecting rod		
Out–of–alignment	Maximum per 100 mm (3.94 in.)	0.05 mm (0.0020 in.)
Rod twist	Maximum per 100 mm (3.94 in.)	0.15 mm (0.0059 in.)
Crankshaft		
Thrust clearance	Standard	0.040 – 0.240 mm (0.0016 – 0.0094 in.)
	Maximum	0.30 mm (0.0118 in.)
Circle runout	Maximum	0.025 mm (0.0010 in.)
Crank pin taper and out– of –round	Maximum	0.01 mm (0.0004 in.)
Crank pin diameter		50.482 – 50.500 mm (1.9875 – 1.9882 in.)
Main journal diameter		56.992 – 57.010 mm (2.2438 – 2.2445 in.)
Oil clearance	Standard	0.032 – 0.050 mm (0.0013 – 0.0020 in.)
	Maximum	0.10 mm (0.0039 in.)

0300P–05

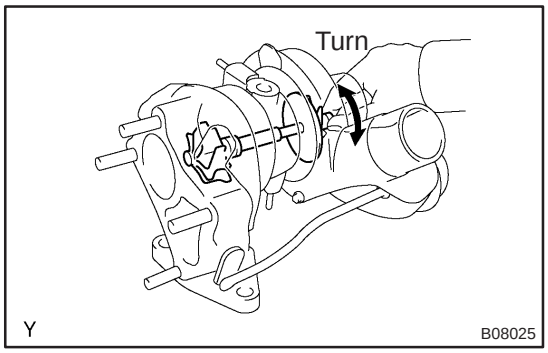
TURBOCHARGER ASSEMBLY (1CD–FTV)

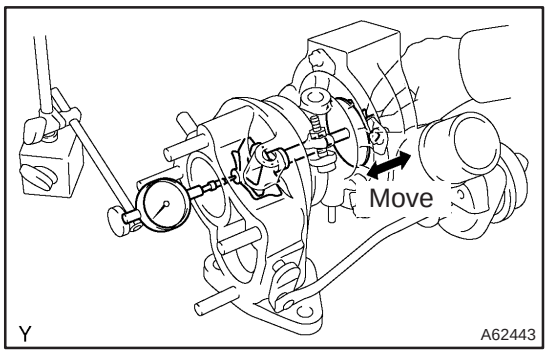
13034–01



COMPONENTS

OVERHAUL

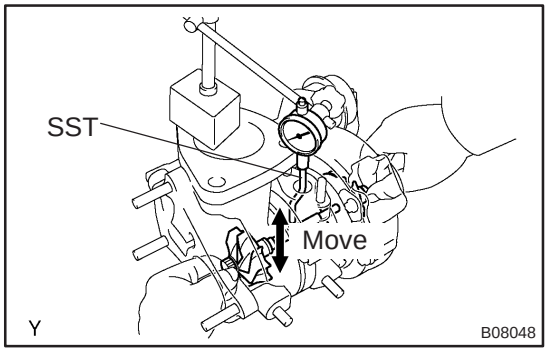
1. REMOVE COMPRESSOR INLET ELBOW



(a) Remove 2 bolts and the compressor inlet elbow.

2. INSPECT TURBOCHARGER SUB–ASSY

(a) Inspect turbine shaft rotation
  (1) Grasp the edge of the turbine shaft, and turn it.
  (2) Check that the turbine shaft turns smoothly.

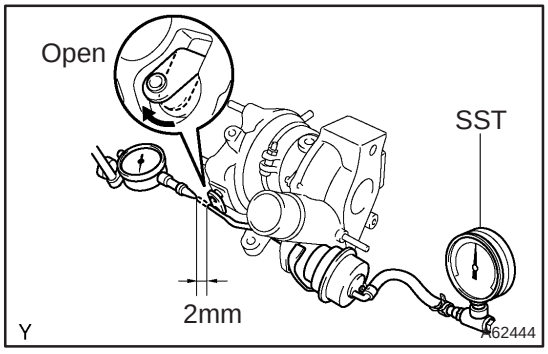


If the turbine shaft turns remarkably heavily or stuck, replace the bearing housing. At that time, check also the interference with the turbine housing and compressor housing.

(b) Inspect axial play of turbine shaft
  (1) Using a dial indicator, insert the needle of the dial indicator into the exhaust side.
  (2) Move the turbine shaft in an axial direction, measure the axial play of the turbine shaft.

Maximum oil clearance: 0.09 mm (0.0035 in.) or less

If the axial play is greater than maximum, replace the bearing housing. At that time, check also the interference with the turbine housing and compressor housing.



(c) Inspect radial play of turbine shaft
  (1) Using SST and a dial indicator, insert the needle of the dial indicator into the oil outlet hole, and set it in the center of the turbine shaft.

SST 09992–00600

  (2) Move the turbine shaft in a radial direction, measure the radial play of the turbine shaft.

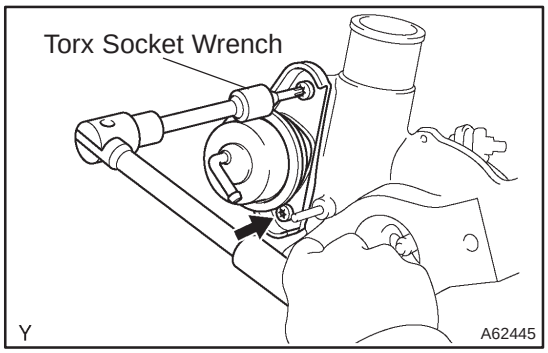
Maximum oil clearance: 0.16 mm (0.0063 in.) or less

If the radial play is greater than maximum, replace the bearing housing. At that time, check also the interference with the turbine housing and compressor housing.

(d) Inspect actuator and waste gate valve operation.
  (1) Disconnect the actuator hose from the compressor housing.
  (2) Using SST and a dial indicator, read the graduation of SST when the actuator push rod moved 2 mm (0.079 in.).

SST 09992–00242

Standard pressure:
129 – 140 kPa (1.32 – 1.43 kgf/cm^2, 18.7 – 20.3 psi)



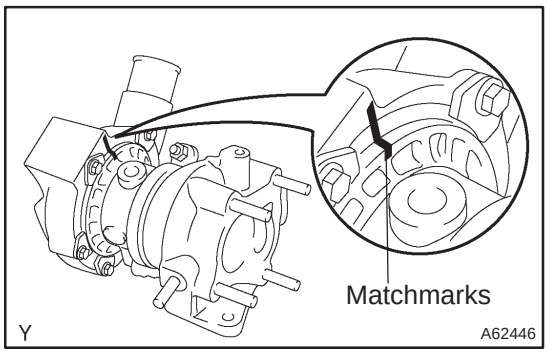
(e) Move the actuator push rod, and check that the waste gate valve is open.

If operation is not as specified, replace the actuator and/or turbine housing.

NOTICE:

Never apply more than 161 kPa (1.64 kgf/cm^2, 28.5 psi) of pressure on the actuator.

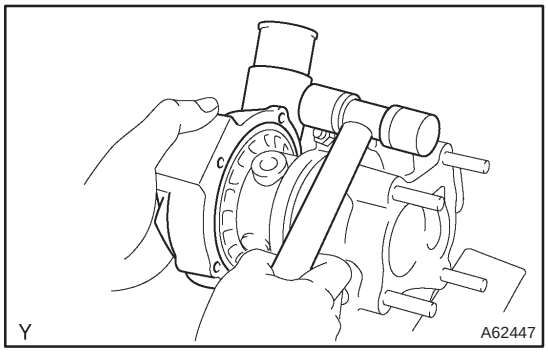
(f) Reconnect the actuator hose to the compressor housing.



3. REMOVE W/BRACKET ACTUATOR ASSY

(a) Remove the actuator hose.

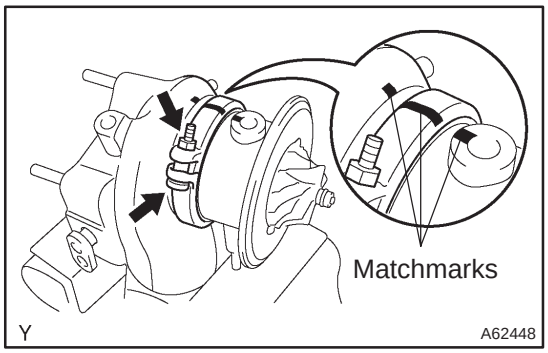
(b) Using a torx socket wrench (T30), remove the 2 screws holding the actuator to the compressor housing.



(c) Remove the E–ring holding the actuator push rod to the waste gate valve link, and remove the actuator w/ bracket.

4. REMOVE COMPRESSOR HOUSING SUB–ASSY

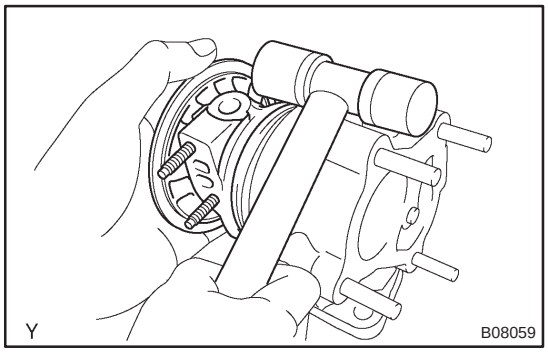
(a) Place the matchmarks on the compressor housing and the bearing housing.



(b) Remove the 5 bolts and 5 clamp plates.

(c) Using a plastic–faced hammer, tap out the compressor housing.

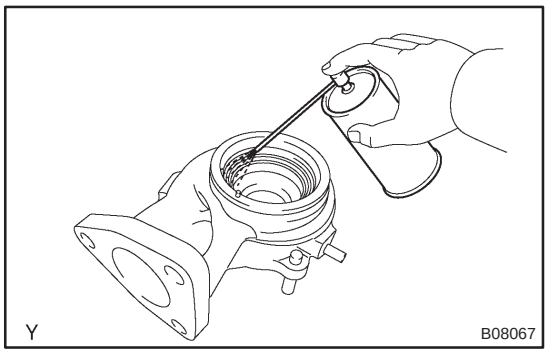
NOTICE:



Remove the compressor housing as straight as possible and do not make the impeller wheel interfere with the compressor housing.

5. REMOVE BEARING HOUSING SUB–ASSY

(a) Place the matchmarks on the V band, turbine housing and bearing housing.

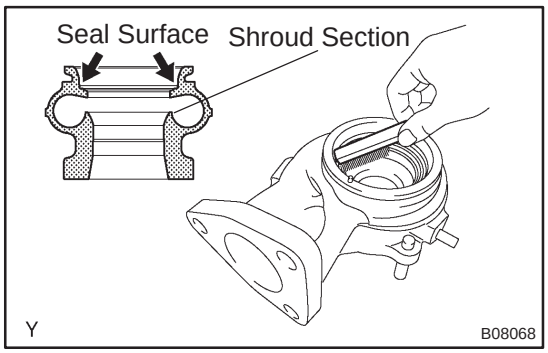


(b) Remove the flat head square neck bolt, nut and V band.

(c) Using a plastic–faced hammer, tap out the bearing housing.

NOTICE:

Remove the bearing housing as straight as possible and do not make the turbine wheel interfere with the turbine housing.

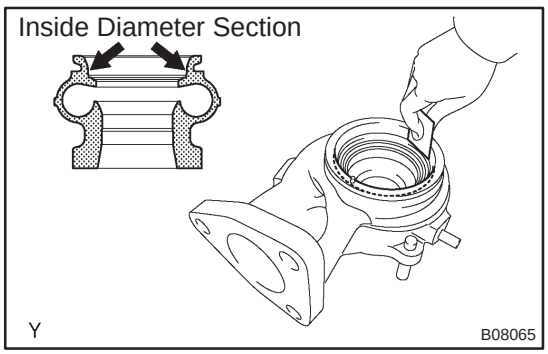


6. CLEAN TURBINE HOUSING

(a) Spray the engine conditioner to the section where the carbon dirt is adhered.

NOTICE:

Be careful not to erase the matchmark of the turbine housing.

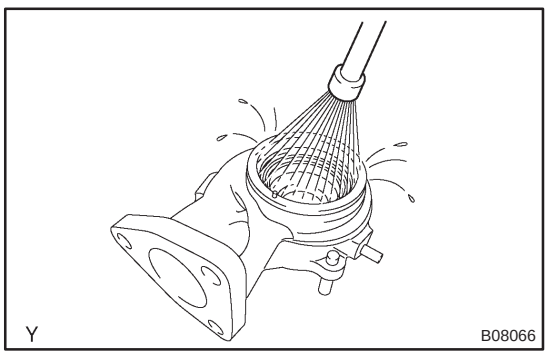


(b) Using a wire brush, remove all the carbon dirt inside the turbine housing.

NOTICE:

Clean the seal surface and shroud section shown in the illustration sufficiently. And clean the waste gate valve seat sufficiently, too.

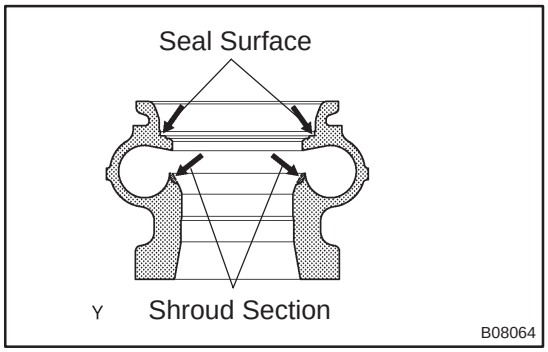
HINT:



When the carbon dirt is heavily adhered, remove it using the screwdriver and the like.

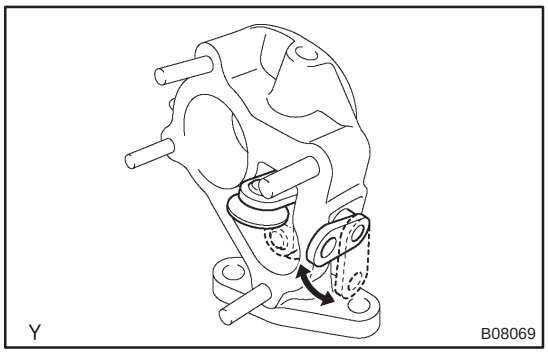
(c) Clean the inside diameter section with a sandpaper (No. 100) until the metal surface can be seen.

NOTICE:



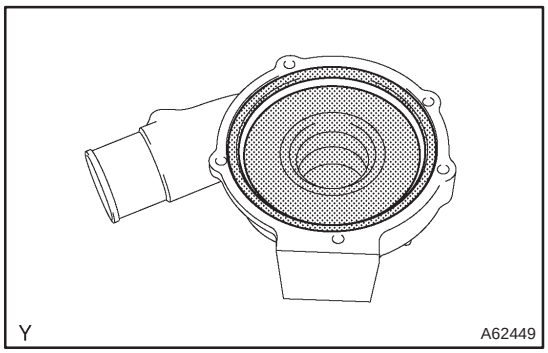
If the cleaning is not enough, installation of the bearing housing becomes harder, so clean it sufficiently.

(d) Wash with compressed air or a steam cleaner.



NOTICE:

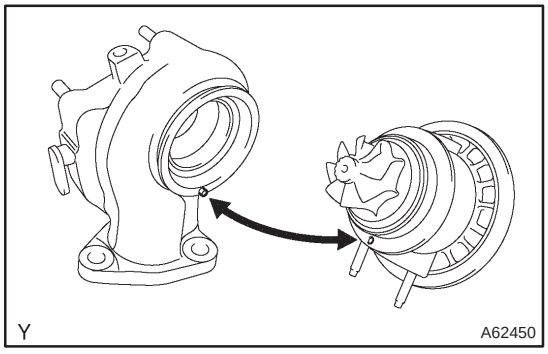
Wash sufficiently without leaving any irregular objects.



(e) Check that there is no severe damage on the seal surface with the bearing housing.
(f) Check that there is no bore made by the interference with the turbine wheel in the shroud section.

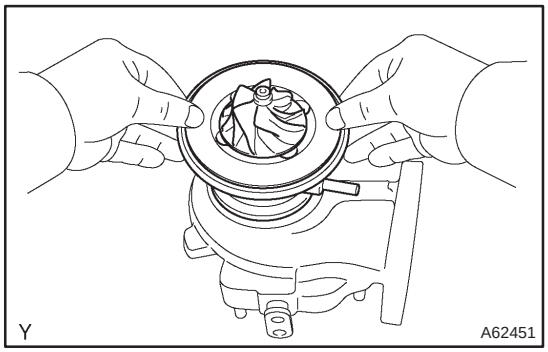
If the turbine housing is having remarkable damage or bore, replace the turbine housing and bearing housing.

(g) Move the waste gate valve link and check that it runs smoothly without sticking.



If the link is bad running, clean again. If it is bad running, even after cleaning, replace the turbine housing.

7. CLEAN COMPRESSOR HOUSING SUB–ASSY

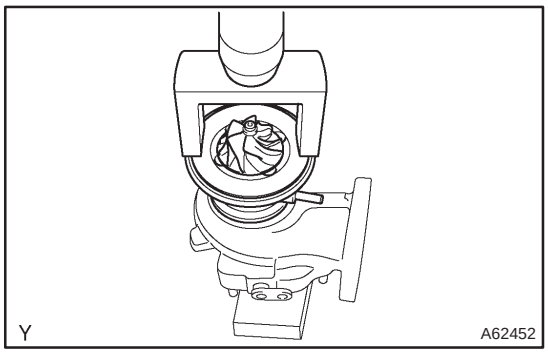


(a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the compressor housing and bearing housing.
  (1) Using a razor blade and gasket scraper, remove all the old packing (FIPG) material from the gasket surfaces.
  (2) Thoroughly clean all components to remove all the loose material.
  (3) Using a non–residue solvent, clean both sealing surfaces.
(b) Wipe off the dirt from the inside of the housing with a shop rag.
(c) Check that there is no severe interference with the impeller wheel.

If it is having bur made by a slight interference damage, remove it with a sandpaper (No. 400) and blow with compressed air.

8. INSTALL BEARING HOUSING SUB–ASSY

(a) Align the pin of the turbine housing with the pin hole of the bearing housing.

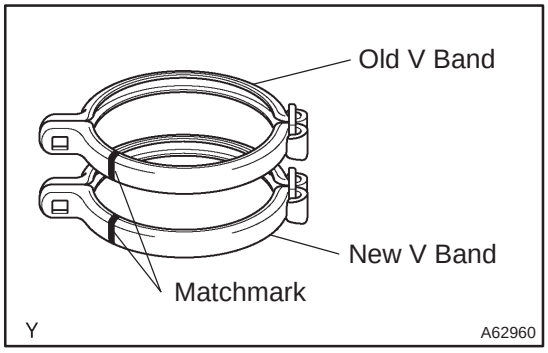


(b) Install the bearing housing to the turbine housing.

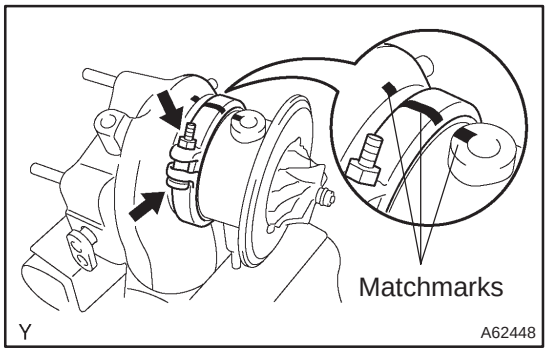
NOTICE:

- **Install the bearing housing straight, and be careful not to damage the turbine wheel.**
- **In case of having difficulty of pressing in the bearing housing to install with a hand due to hard engagement, apply the procedure (c).**

HINT:



Apply a little penetrate rust prevention lubricant onto the engagement section to make installation easier.

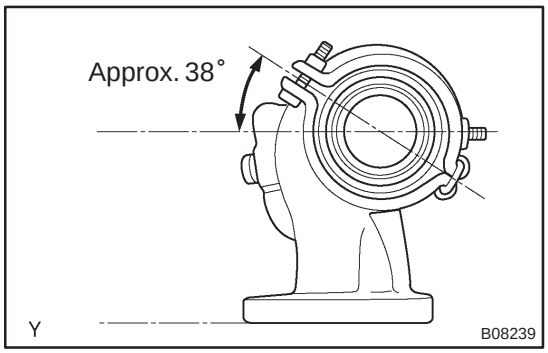


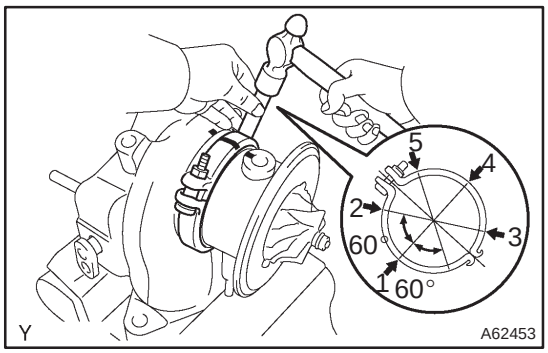
(c) In case that the engagement of the bearing housing is hard, using SST and a press, install the bearing housing while checking the smooth rotation of the impeller wheel.
SST 09350–32014 (09351–32070)

NOTICE:

- **Do not hold the turbine housing with the stud bolts.**
- **Be sure to install the bearing housing straight without tilting as the shaft may bent and cause the irregular noise.**
- **Press in the bearing housing slowly. When the rotation of the impeller wheel becomes heavy, return the press immediately and do the operation again.**
- **After installation, check that the turbine shaft turns smoothly.**

(d) Place a new and old (used) V bands in line, then reprint the matchmark position on the old V band to the new one.





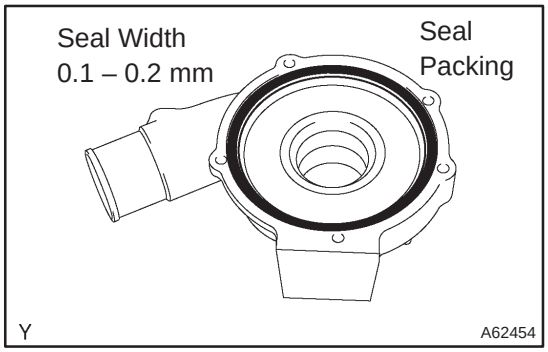
(e) Align the matchmarks on the new V band, turbine housing and bearing housing, and temporarily torque with a new bolt and nut.

Torque: 8.3 N·m (85 kgf·cm, 74 in.·lbf)

HINT:

When the marks are erased, make the matching openings meet at the position shown in the illustration.

(f) Using a brass bar and hammer, hit 2 or 3 times lightly at each place in order of 1 through 5.



(g) Torque the bolt and nut more.

Torque: 8.3 N·m (85 kgf·cm, 74 in.·lbf)

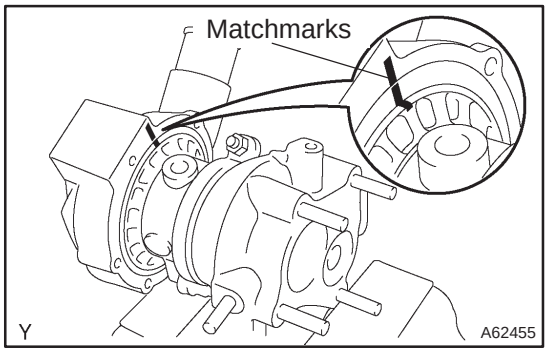
(h) Using a brass bar and hammer, hit 2 or 3 times lightly at each place of 1 and 4.

(i) Torque the bolt and nut completely.

Torque: 8.3 N·m (85 kgf·cm, 74 in.·lbf)

9. INSTALL COMPRESSOR HOUSING SUB–ASSY

(a) In case of reusing the compressor housing and bearing housing:

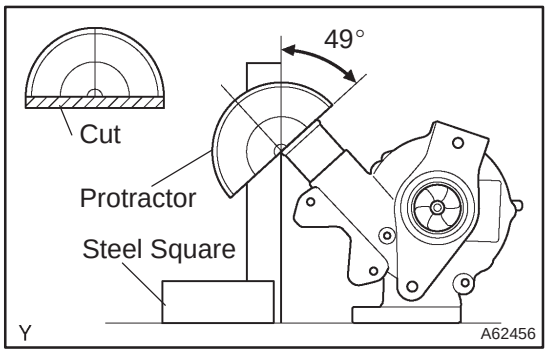


(1) Apply seal packing to the compressor housing as shown in the illustration.

Seal packing: Part No. 08826–00080 or equivalent

NOTICE:

Avoid applying an excessive amount to the surface.



- Install a nozzle that has been cut to a 0.1 – 0.2 mm (0.004 – 0.008 in.) opening.
- Parts must be assembled within 7 minutes of application. Otherwise the material must be removed and reapplied.
- Immediately remove nozzle from the tube and reinstall the cap.

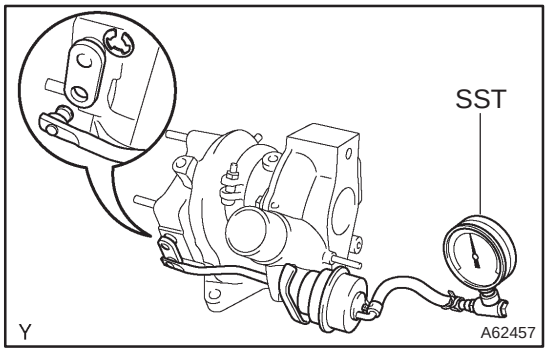
(2) Align the matchmarks on the compressor housing and bearing housing, and install them.

NOTICE:

- **Do not make the impeller wheel interfere with the compressor housing.**
- **Check that the turbine shaft turns smoothly.**

(3) Using a steel square and protractor, check the installation angle of the outlet port of the compressor housing shown in the illustration.

(4) Install the 5 clamp plates and bolts.



Torque: 4.7 N·m (48 kgf·cm, 42 in.·lbf)

(b) In case of using a new compressor housing and/or bearing housing :

(1) Temporally install the compressor housing on the bearing housing, make the installation angle of the outlet port of the compressor housing meet at the position shown in the illustration, and place the matchmarks.

(2) Remove the compressor housing.

(3) The following procedure is the same as that of reusing the compressor housing and/or bearing housing.

10. INSTALL W/BRACKET ACTUATOR ASSY

(a) Using a torx wrench (T30), install the actuator w/ bracket to the compressor housing with the 2 screws.

Torque: 7.8 N·m (80 kgf·cm, 69 in.·lbf)

(b) Using SST, move the actuator push rod.

SST 09992–00242

NOTICE:

Never apply more than 197 kPa (2.01 kgf/cm^2, 28.5 psi) of pressure on the actuator.

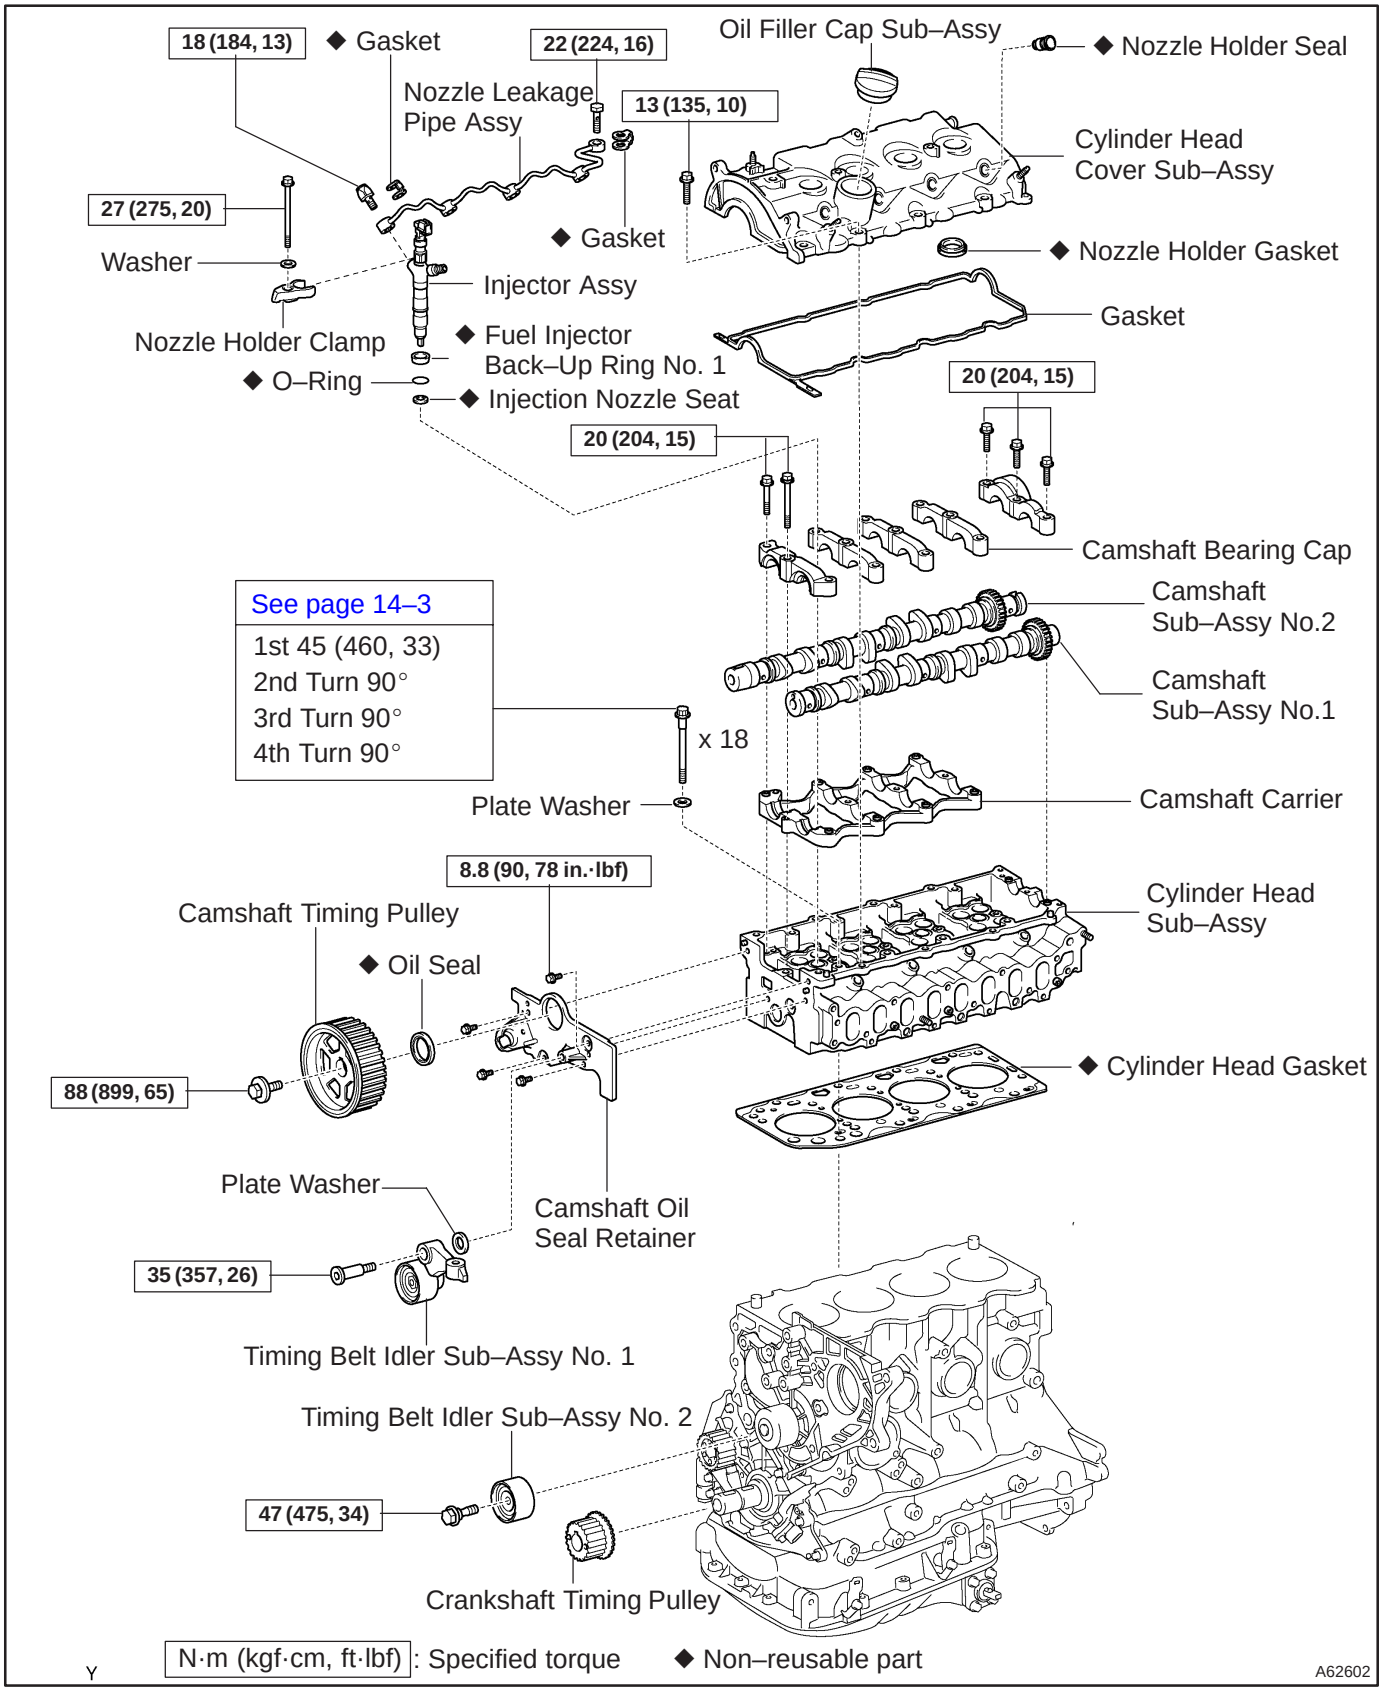
(c) Connect the actuator push rod to the waste gate valve link with a new E–ring.

NOTICE:

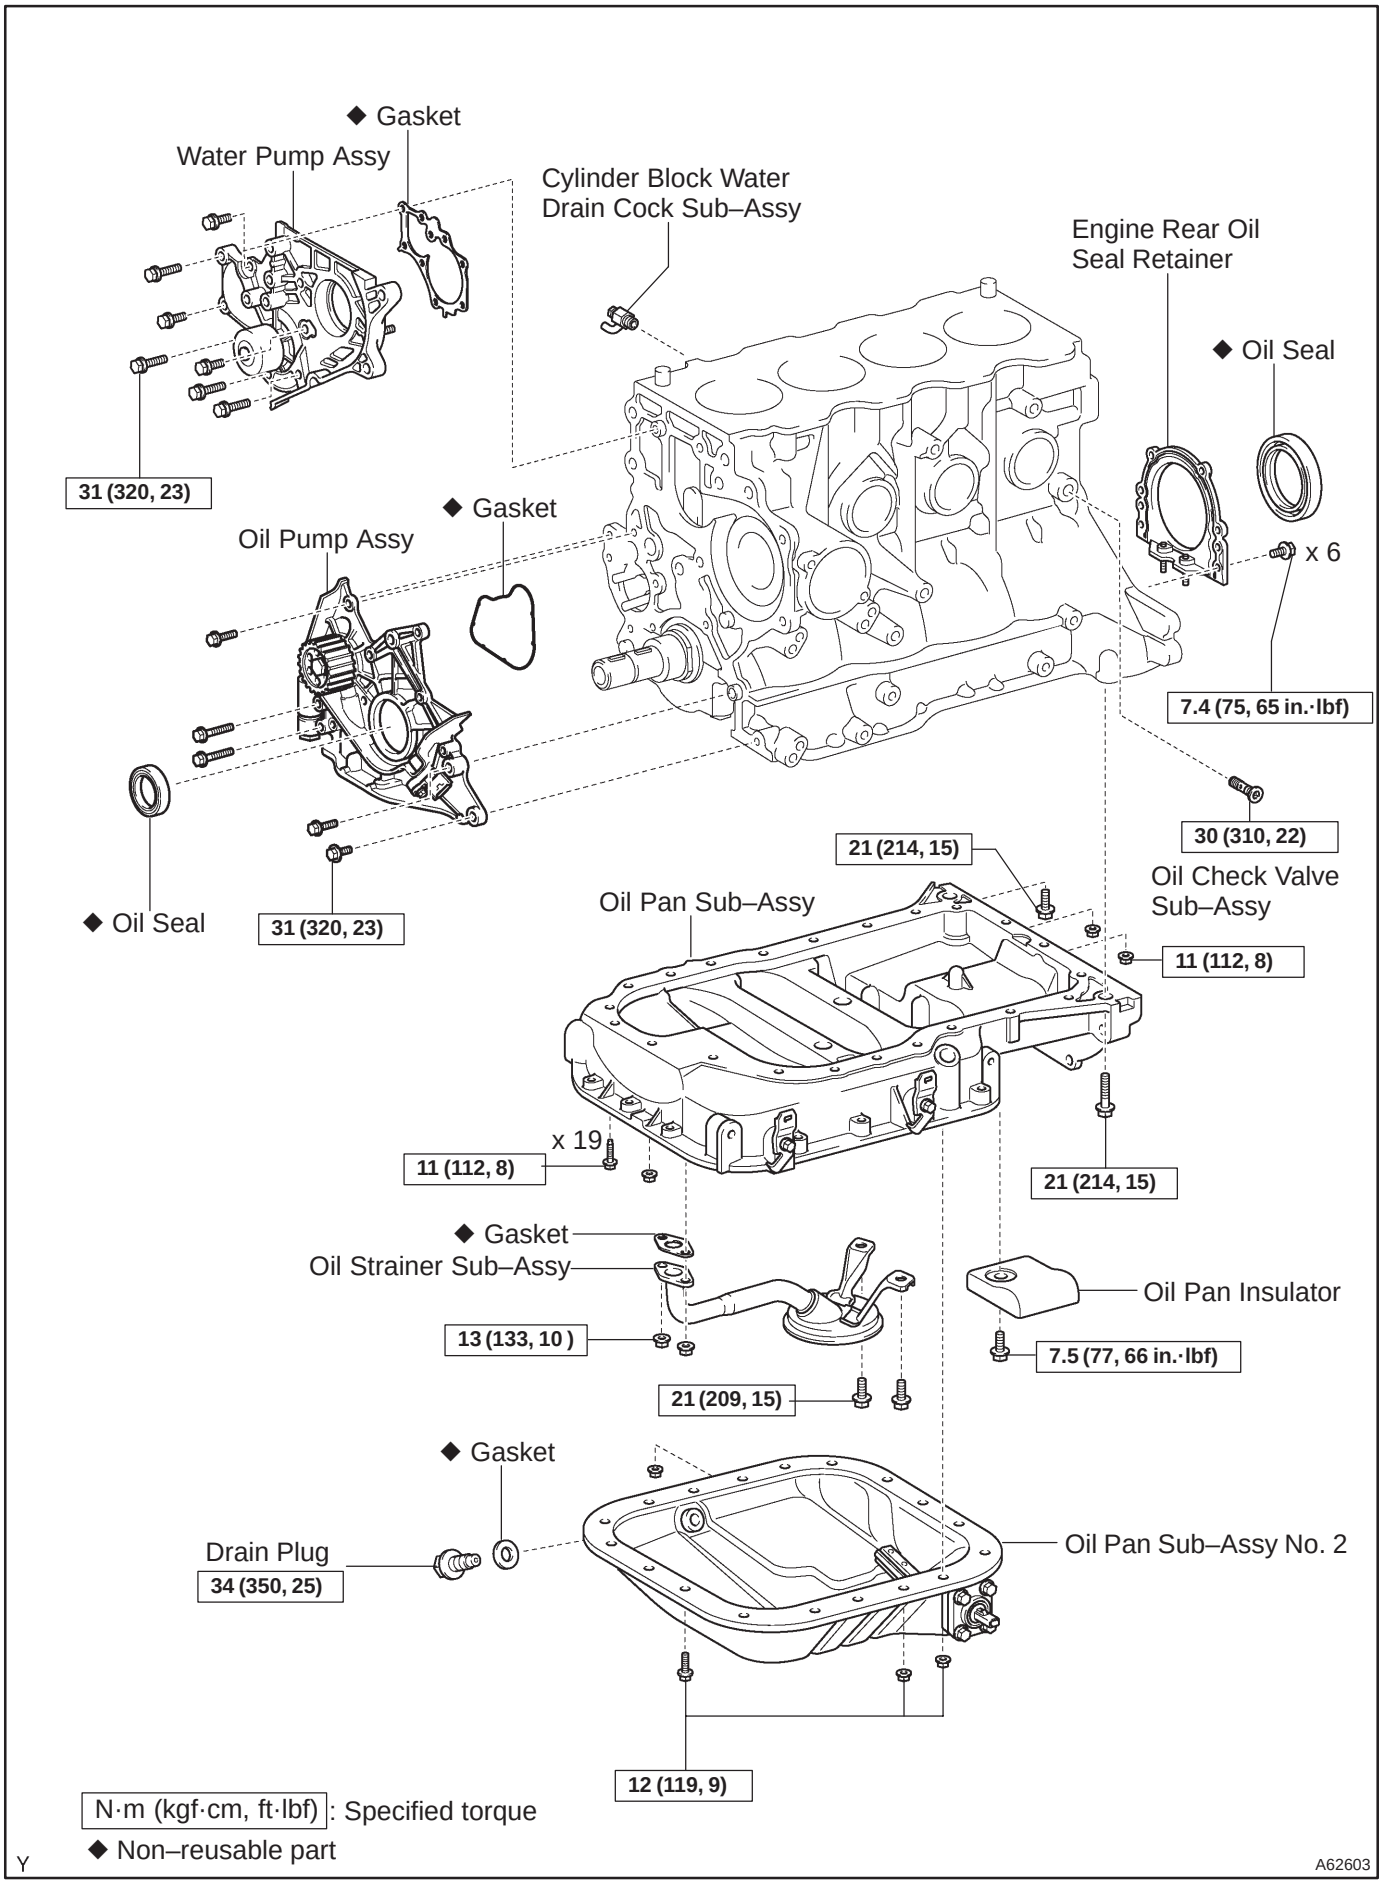
Do not use a hammer, etc. to force the actuator push rod onto the waste gate valve link.

(d) Remove the SST.

(e) Connect the actuator hose.



11. INSTALL COMPRESSOR INLET ELBOW



Torque: 23 N·m (235 kgf·cm, 17 ft·lbf)

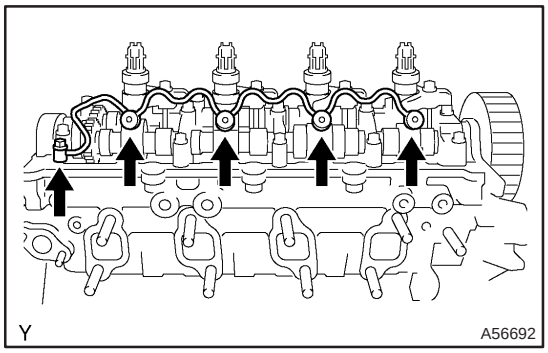
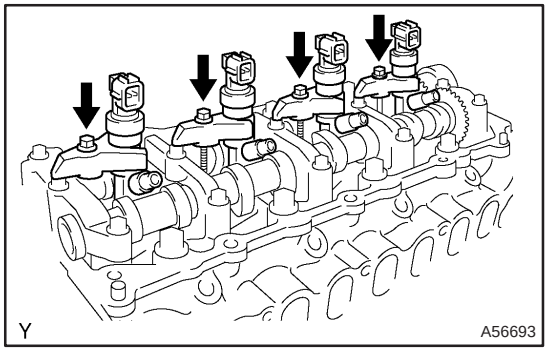
OVERHAUL

1. REMOVE OIL FILLER CAP SUB–ASSY



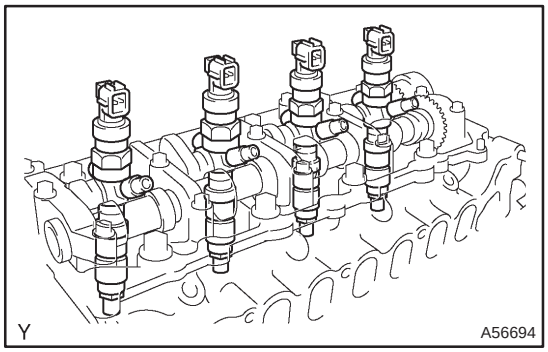
2. REMOVE NOZZLE HOLDER SEAL

(a) Using a screwdriver, pry out the 4 nozzle holder seals.



3. REMOVE CYLINDER HEAD COVER SUB–ASSY

(a) Remove the 10 bolts, cylinder head cover and gasket.

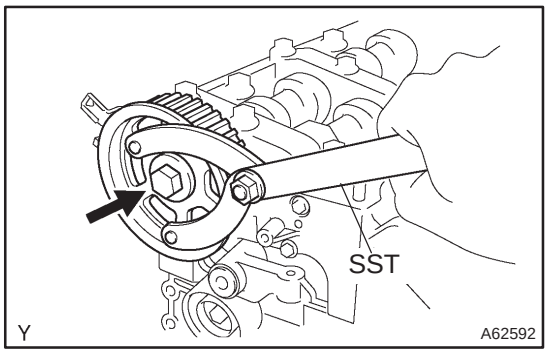


4. REMOVE NOZZLE LEAKAGE PIPE ASSY

(a) Using a hexagon wrench (6mm), remove 4 hollow screws.
(b) Remove the union bolt, nozzle leakage pipe and 5 gaskets from the cylinder head and injector.

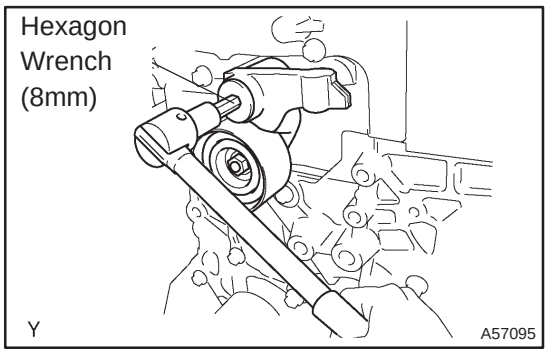
5. REMOVE NOZZLE HOLDER CLAMP

(a) Remove the 4 bolts, 4 washers and 4 nozzle holder clamps.



6. REMOVE INJECTOR ASSY

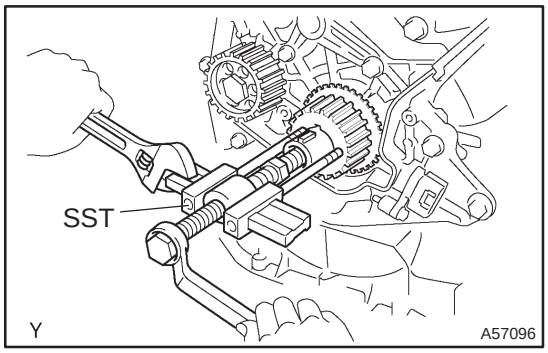
(a) Remove the 4 injectors from the cylinder head.



HINT:

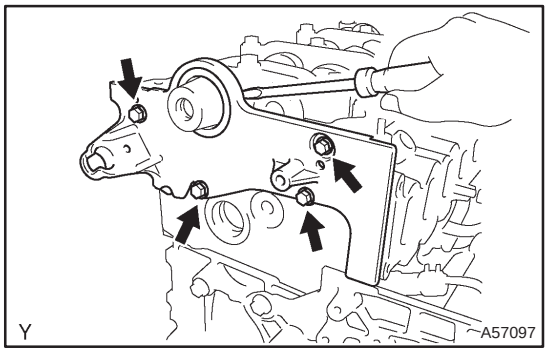
Arrange the injectors in correct order.

7. REMOVE CAMSHAFT TIMING PULLEY



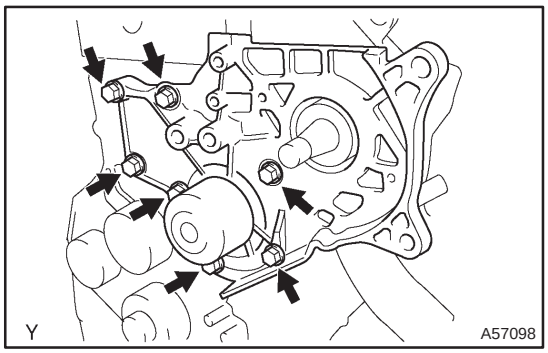
(a) Using SST, remove the pulley bolt.
SST 09960–10010 (09962–01000, 09963–01000)

8. REMOVE TIMING BELT IDLER SUB–ASSY NO.1



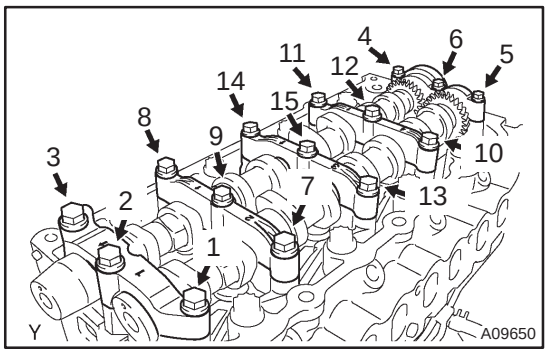
(a) Using hexagon wrench (8mm), remove the idler pulley shaft, idler pulley and plate washer.

9. REMOVE TIMING BELT IDLER SUB–ASSY NO.2



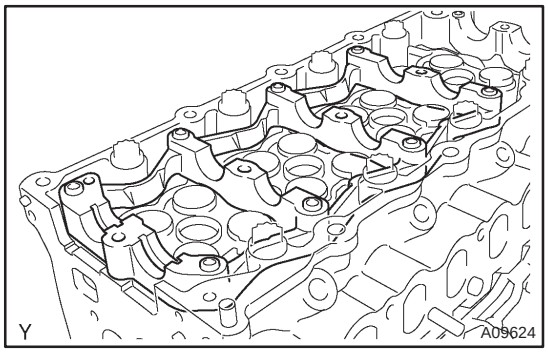
10. REMOVE CRANKSHAFT TIMING PULLEY

(a) If the pulley cannot be removed by hand, use SST to remove the timing pulley.
SST 09950–50013 (09951–05010, 09952–05010, 09953–05010, 09953–05020, 09954–05021)



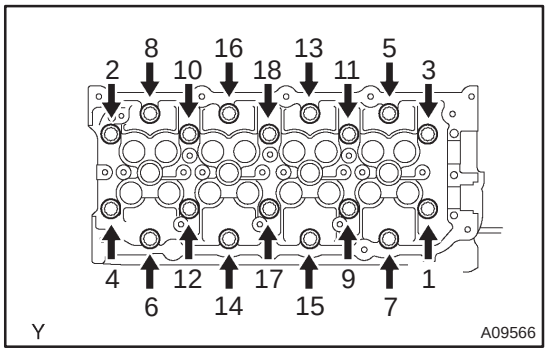
11. REMOVE CAMSHAFT OIL SEAL RETAINER

(a) Remove the 4 bolts.
(b) Using a screwdriver, remove the oil seal retainer by prying the portions between the oil seal retainer and camshaft bearing cap.



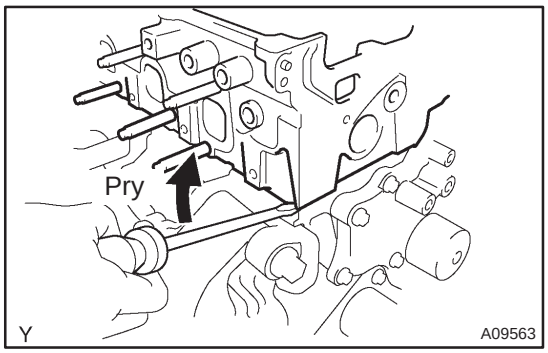
12. REMOVE WATER PUMP ASSY

(a) Remove the 7 bolts, water pump and gasket.



13. REMOVE CAMSHAFT SUB–ASSY, NO.2
(a) Uniformly loosen and remove the 15 bearing cap bolts in several passes in the sequence shown.
(b) Remove the 5 bearing caps.
(c) Remove the camshaft No. 2.

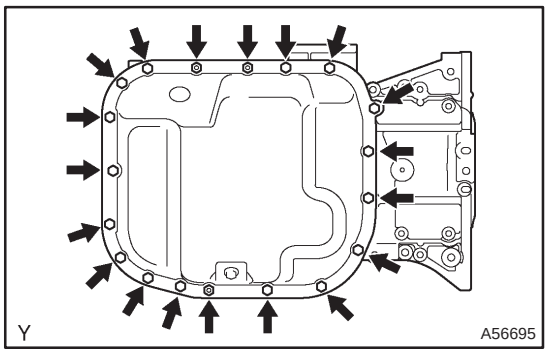
14. REMOVE CAMSHAFT SUB–ASSY, NO.1
(a) Remove the camshaft from the cylinder head.



(b) Remove the camshaft carrier from the cylinder head.

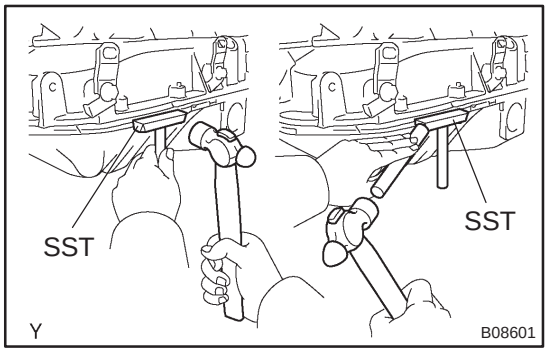
15. REMOVE CYLINDER HEAD SUB–ASSY

(a) Uniformly loosen the 18 cylinder head bolts in several passes in the sequence shown. Remove the 18 cylinder head bolts and plate washers.



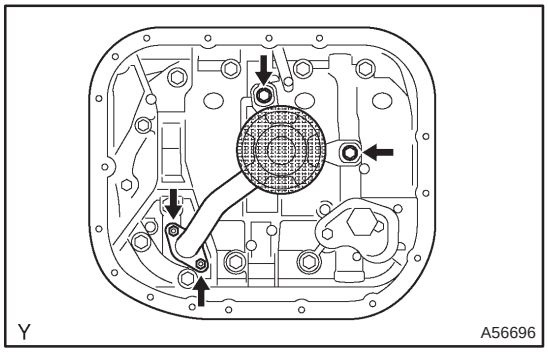
NOTICE:
Cylinder head warpage or cracking could result from removing bolts in incorrect order.

(b) Lift the cylinder head from the dowels on the cylinder block, and place the cylinder head on wooden blocks on a bench.



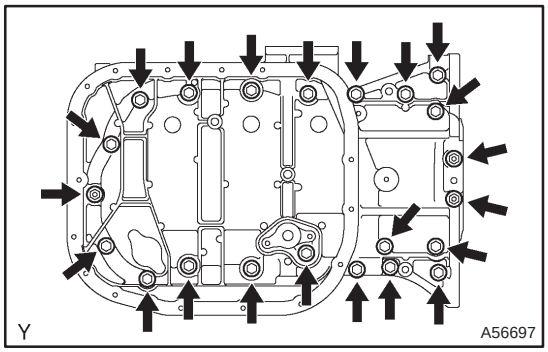
HINT:
If the cylinder head is lift off, pry between the cylinder head and cylinder block with a screwdriver.

NOTICE:
Be careful not to damage the contact surfaces of the cylinder head and cylinder block.



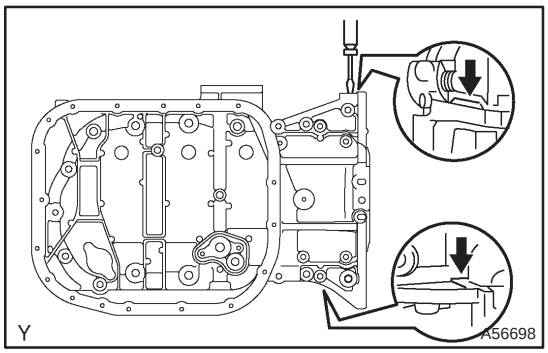
16. REMOVE OIL PAN SUB–ASSY NO.2

(a) Remove the 16 bolts and 3 nuts.



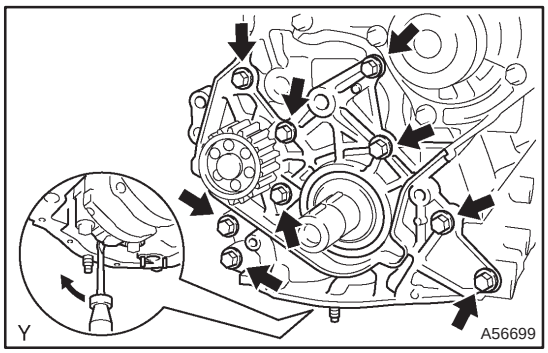
(b) Insert the blade of SST between the No. 1 and No. 2 oil pans, and cut off the applied seal and remove the No. 2 oil pan.
SST 09032–00100

NOTICE:
Be careful not to damage the contact surfaces of the No. 1 and No. 2 oil pans.



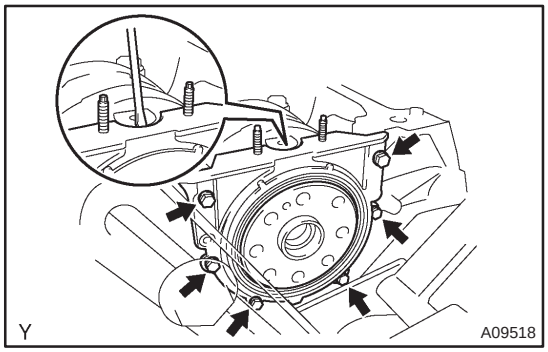
17. REMOVE OIL STRAINER SUB–ASSY

(a) Remove the 2 bolts, 2 nuts, oil strainer and gasket.



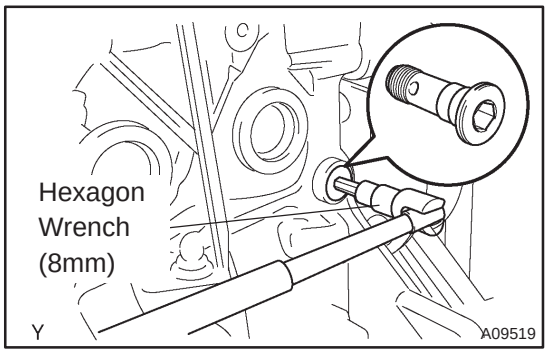
18. REMOVE OIL PAN SUB–ASSY

(a) Remove the 19 bolts and 3 nuts.



(b) Using a screwdriver, remove the oil pan by prying the portions between the cylinder block and No. 1 oil pan.

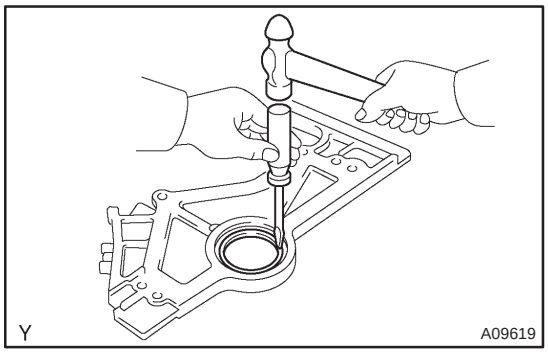
NOTICE:
Be careful not to damage the contact surfaces of the cylinder block and No. 1 oil pan.



19. REMOVE OIL PUMP ASSY

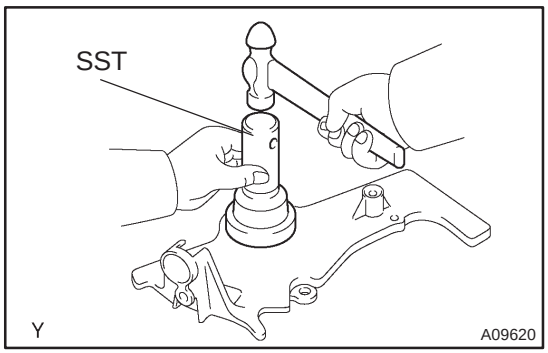
(a) Remove the 9 bolts.
(b) Remove the oil pump by prying a screwdriver between the oil pump and main bearing cap.
(c) Remove the gasket.

20. REMOVE ENGINE REAR OIL SEAL RETAINER



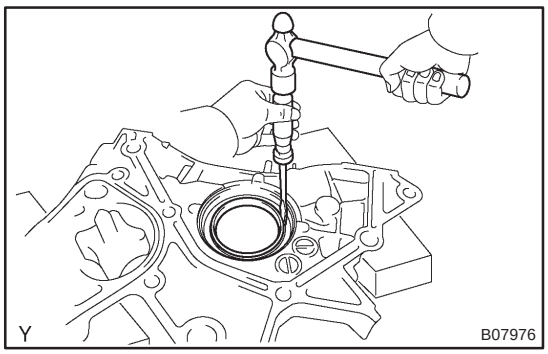
(a) Remove the 6 bolts.
(b) Using a screwdriver, remove the oil seal retainer by prying the portions between the oil seal retainer and main bearing cap.

21. REMOVE OIL CHECK VALVE SUB–ASSY



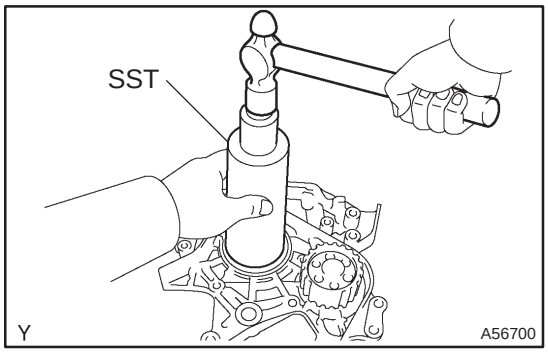
(a) Using hexagon wrench (8mm), remove the pressure valve and gasket.

22. REMOVE CYLINDER BLOCK WATER DRAIN COCK SUB–ASSY



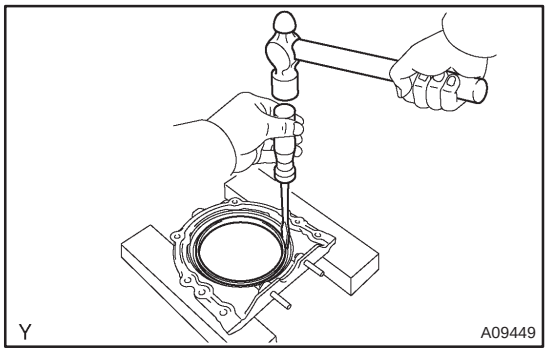
23. REMOVE CAMSHAFT OIL SEAL

(a) Using a screwdriver and a hammer, tap out the oil seal.



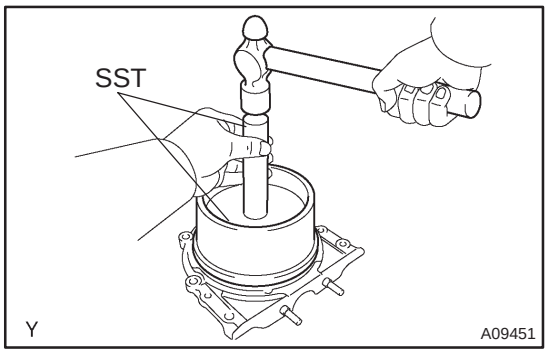
24. INSTALL CAMSHAFT OIL SEAL

(a) Using SST and a hammer, tap in a new oil seal until its surface is flush with the camshaft oil seal retainer edge.
SST 09223–46011



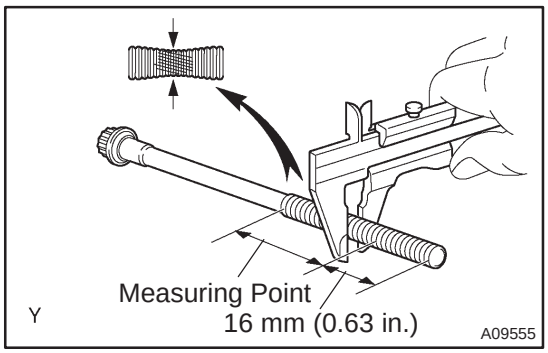
25. REMOVE CRANKSHAFT SEAL

(a) Using a screwdriver and a hammer, tap out the oil seal.



26. INSTALL CRANKSHAFT SEAL

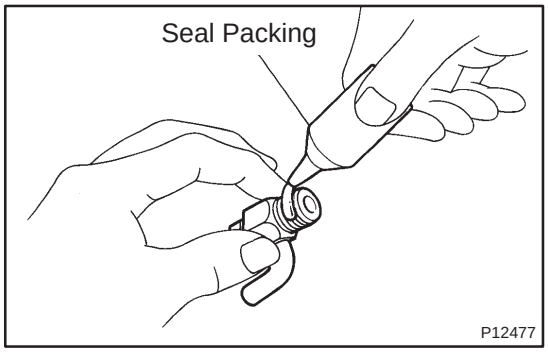
(a) Using SST and a hammer, tap in a new oil seal until its surface is flush with the oil pump edge.
SST 09316–60011 (09316–00011, 09316–00021)



27. REMOVE ENGINE REAR OIL SEAL

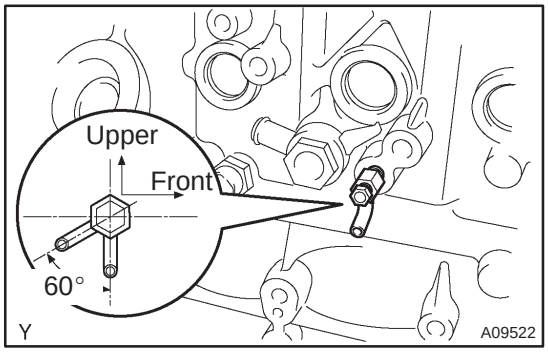
(a) Using a screwdriver and a hammer, tap out the oil seal.

28. INSTALL ENGINE REAR OIL SEAL



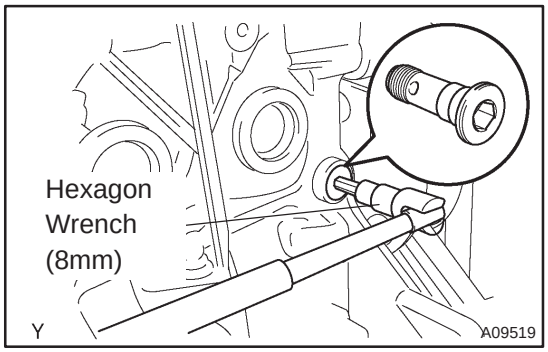
(a) Using SST and a hammer, tap in a new oil seal until its surface is flush with the rear oil seal retainer edge.
SST 09223–15030, 09950–70010 (09951–07100)

29. INSPECT CYLINDER HEAD SET BOLT



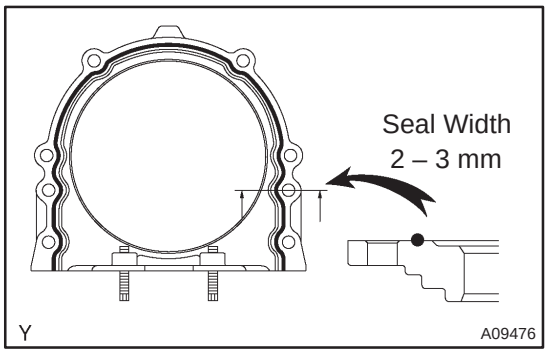
(a) Using vernier calipers, measure the tension portion diameter of the bolt.
Standard outside diameter:
10.75 – 11.00 mm (0.4232 – 0.4331 in.)
Minimum outside diameter: 10.40 mm (0.4094 in.)

If the diameter is less than minimum, replace the bolt.



30. INSTALL CYLINDER BLOCK WATER DRAIN COCK SUB–ASSY

(a) Apply seal packing 2 or 3 threads.
Seal packing: Part No. 08826–00100 or equivalent

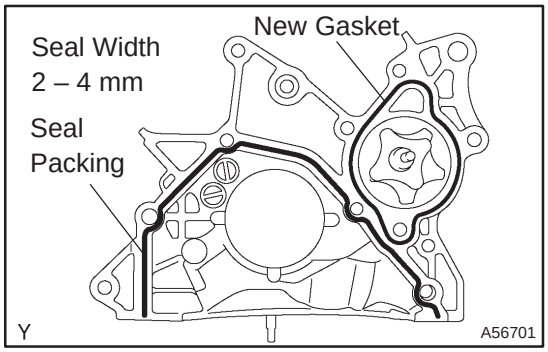


(b) Install the drain union.
Torque: 29 N·m (291 kgf·cm, 21 ft·lbf)

HINT:
After applying the specified torque, if the drain pipe of the drain union is not at the position shown in the illustration, rotate the drain union further clockwise and make the drain pipe face downward.

31. INSTALL OIL CHECK VALVE SUB–ASSY

(a) Using hexagon wrench (8mm), install a new gasket and the pressure valve.
Torque: 30 N·m (310 kgf·cm, 22 ft·lbf)



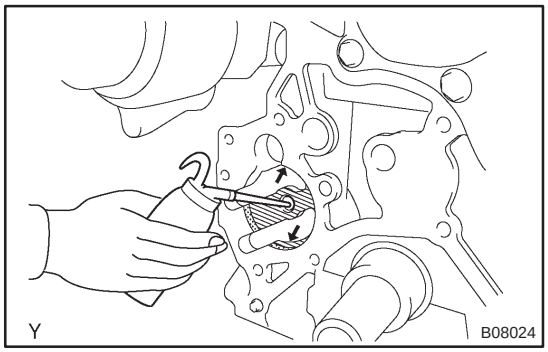
32. INSTALL ENGINE REAR OIL SEAL RETAINER

(a) Apply seal packing to the oil seal retainer as shown in the illustration.
Seal packing: Part No. 08826–00080 or equivalent

NOTICE:

- **Install a nozzle that has been cut to a 2 – 3 mm (0.08 – 0.12 in.) opening.**
- **Parts must be assembled within 15 minutes of application. Otherwise the material must be removed and reapplied.**
- **Immediately remove nozzle from the tube and reinstall the cap.**

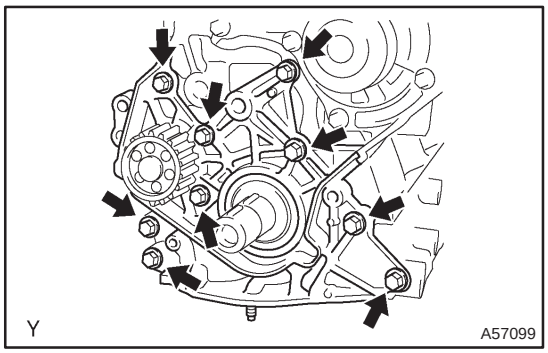
(b) Install the oil seal retainer with 6 bolts. Uniformly tighten the bolt in several passes.
Torque: 7.4 N·m (75 kgf·cm, 65 in.·lbf)



33. INSTALL OIL PUMP ASSY

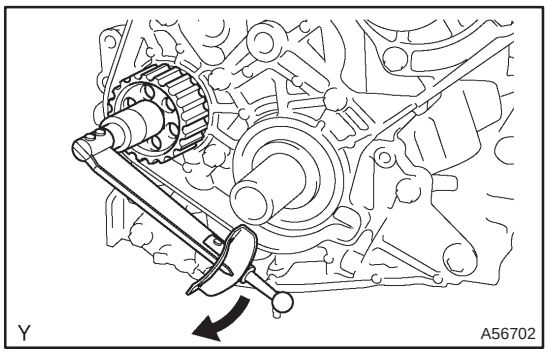
(a) Apply seal packing to the oil pump as shown in the illustration.
Seal packing: Part No. 08826–00080 or equivalent

NOTICE:

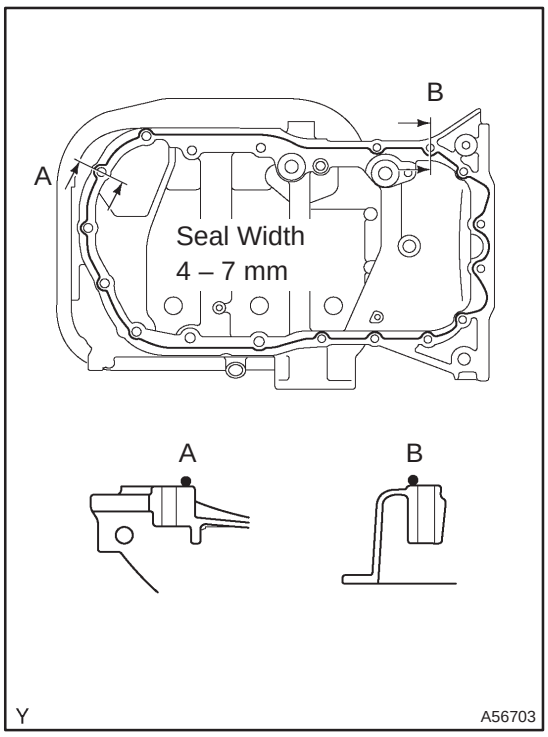


- **Avoid applying an excessive amount to the surface.**
- **Install a nozzle that has been cut to a 2 – 4 mm (0.08 – 0.16 in.) opening**
- **Parts must be assembled within 15 minutes of application. Otherwise the material must be removed and reapplied.**
- **Immediately remove nozzle from the tube and reinstall the cap.**

(b) Install a new gasket to the oil pump.



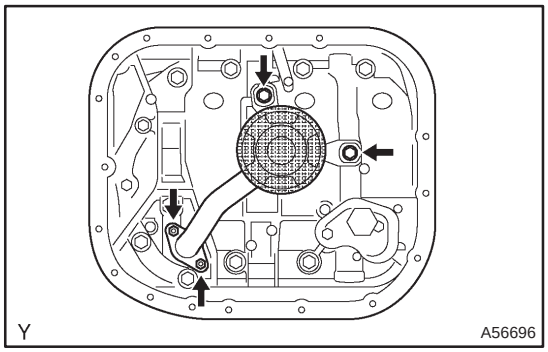
(c) Pour in 0.5 cm^3 (0.03 cu in.) or more of engine oil into the bushing of the cylinder block.



(d) Apply engine oil to the cylinder block side where it contacts with the oil pump driven rotor.

(e) Install the oil pump with the 9 bolts.
Torque: 31 N·m (320 kgf·cm, 23 ft·lbf)

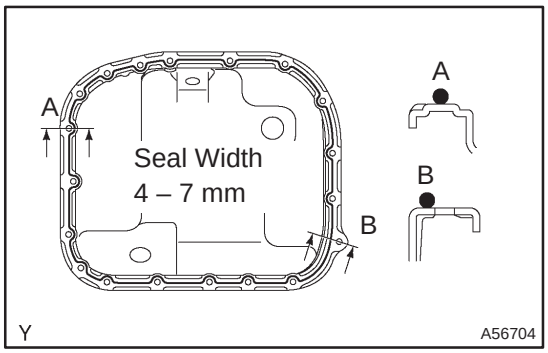
(f) Measure the oil pump rotating torque
(1) Check that the pump rotates smoothly without abnormal noise.
(2) Using a torque wrench, check the pump rotating torque.
Rotating torque: 3.0 N·m (30 kgf·cm, 26 in.·lbf) or less



34. INSTALL OIL PAN SUB–ASSY

(a) Apply seal packing to the No. 1 oil pan as shown in the illustration.
Seal packing: Part No. 08826–00080 or equivalent

NOTICE:

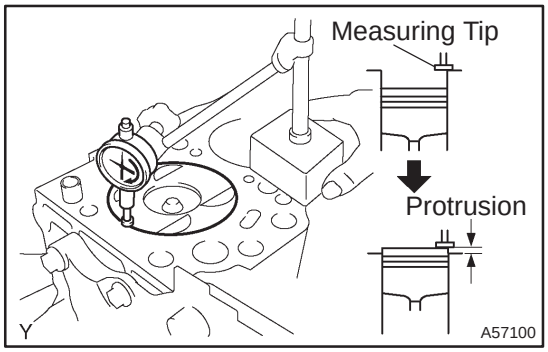


- **Install a nozzle that has been cut to a 4 – 7 mm (0.16 – 0.28 in.) opening.**
- **Parts must be assembled within 15 minutes of application. Otherwise the material must be removed and reapplied.**
- **Immediately remove nozzle from the tube and reinstall the cap.**

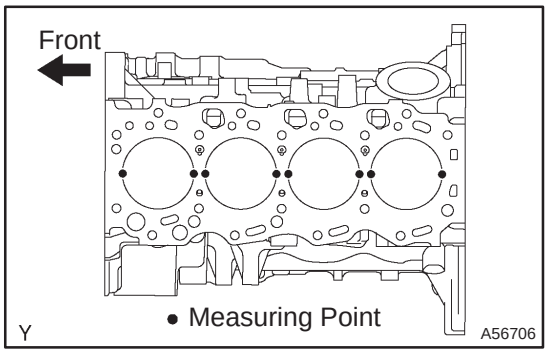
(b) Install the oil pan with 19 bolts and 3 nuts.
Torque:
11 N·m (112 kgf·cm, 8 ft·lbf) for 10 mm head bolt and nut
21 N·m (210 kgf·cm, 15 ft·lbf) for 12 mm head bolt
42 N·m (429 kgf·cm, 31 ft·lbf) for 14 mm head bolt

35. INSTALL OIL STRAINER SUB–ASSY

(a) Install a new gasket and the oil strainer with the 2 bolts and 2 nuts.
Torque:
21 N·m (210 kgf·cm, 15 ft·lbf) for bolt
13 N·m (135 kgf·cm, 10 ft·lbf) for nut



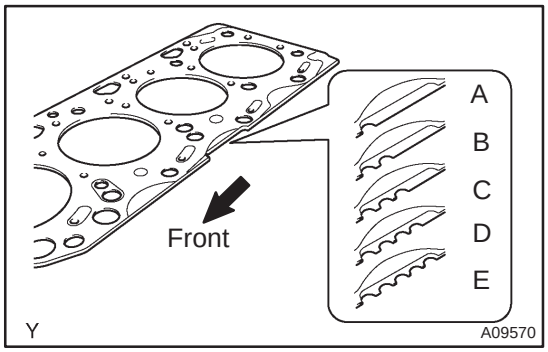
36. INSTALL OIL PAN SUB–ASSY NO.2



(a) Apply a seal packing to the oil pan as shown in the illustration.
Seal packing: Part No. 08826–00080 or equivalent

NOTICE:

- **Install a nozzle that has been cut to a 4 – 7 mm (0.16 – 0.28 in.) opening.**
- **Parts must be assembled within 15 minutes of application. Otherwise the material must be removed and reapplied.**
- **Immediately remove nozzle from the tube and reinstall the cap.**



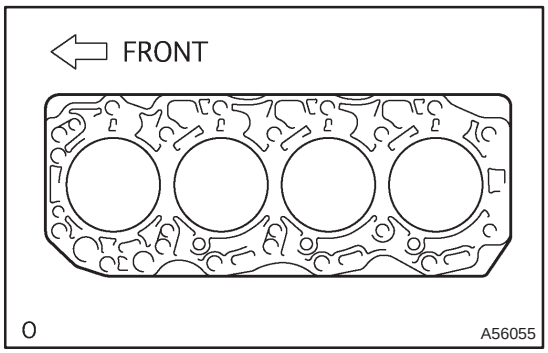
(b) Install the oil pan with 16 bolts and 3 nuts. Uniformly tighten the bolts and nuts in several passes.
Torque: 12 N·m (120 kgf·cm, 9 ft·lbf)

37. INSTALL CYLINDER HEAD SUB–ASSY

(a) Check piston protrusions for each cylinder.
(1) Find where the piston head protrudes most by slowly turning the crankshaft clockwise and counterclockwise.
(2) Measure each cylinder at 2 places as shown in the illustration, marking a total of 8 measurements.
(3) For the piston protrusion valve of each cylinder, use the average of the 2 measurements of each cylinder.
Protrusion: 0.165 – 0.425 mm (0.0065 – 0.0168 in.)

(b) Select a new cylinder head gasket.

HINT:



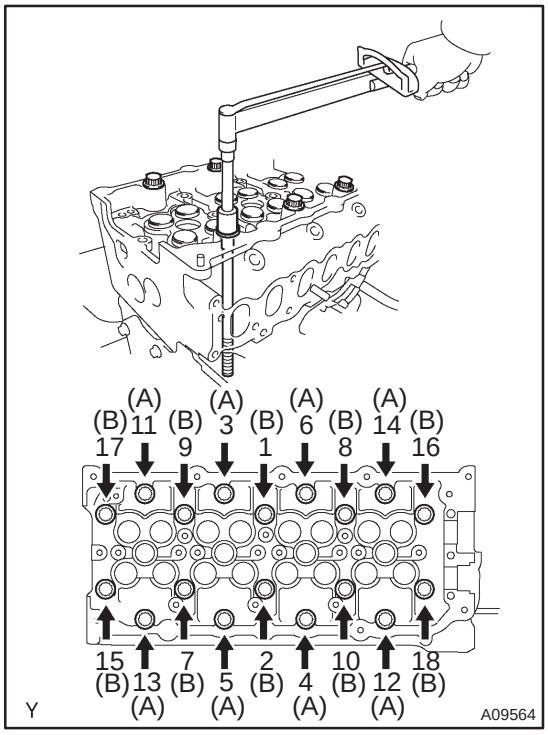
There are 5 sizes of new cylinder head gaskets, marked ”A”, ”B”, ”C”, ”D”, or ”E” according.

New installed cylinder head gasket thickness:

A	0.85 – 0.95 mm (0.0335 – 0.0374 in.)
B	0.90 – 1.00 mm (0.0354 – 0.0394 in.)
C	0.95 – 1.05 mm (0.0374 – 0.0413 in.)
D	1.00 – 1.10 mm (0.0394 – 0.0433 in.)
E	1.05 – 1.15 mm (0.0413 – 0.0453 in.)

(1) Select the largest piston protrusion value from the measurements made, then select a new appropriate gasket according to the table below.

Piston protrusion mm (in.)	Gasket size
0.165 – 0.220 (0.0065 – 0.0087)	Use A
0.220 – 0.270 (0.0087 – 0.0106)	Use B
0.270 – 0.320 (0.0106 – 0.0126)	Use C
0.320 – 0.370 (0.0126 – 0.0146)	Use D
0.370 – 0.425 (0.0146 – 0.0167)	Use E



(c) Place a new cylinder head gasket in position on the cylinder block.

NOTICE:

Be careful of the installation direction.

(d) Place the cylinder head in position on the cylinder head gasket.

(e) Install the cylinder head bolts.

HINT:

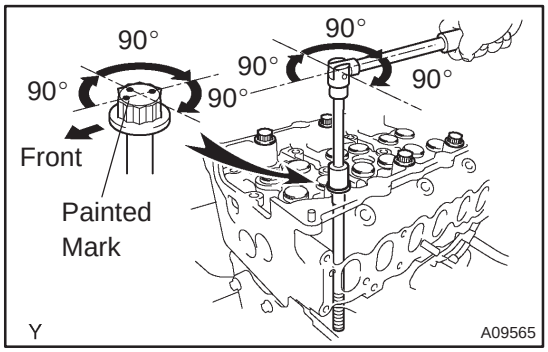
The cylinder head bolts are tightened in 4 progressive steps (steps (3), (5), (6) and (7)).

(1) Apply a light coat of engine oil on the threads and under the heads of the cylinder head bolts and plate washers.

(2) Install the plate washer to the cylinder head bolt.

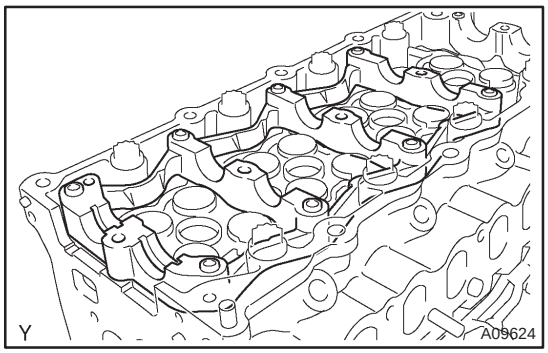
(3) Install and uniformly tighten the 18 cylinder head bolts and plate washers in several passes in the sequence shown.

Torque: 45 N·m (460 kgf·cm, 33 ft·lbf)



HINT:

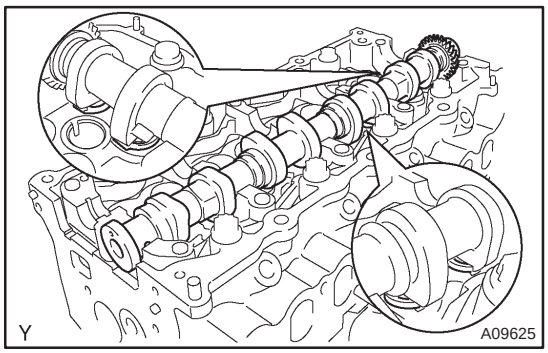
Each bolt length is indicated in the illustration.



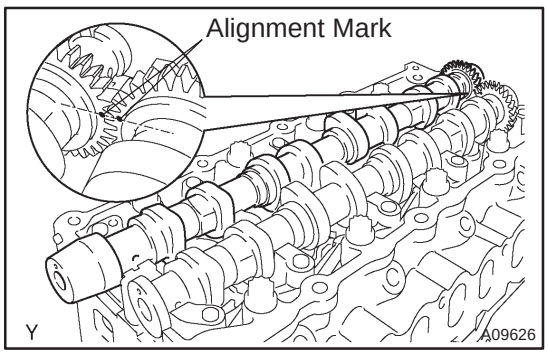
Bolt length:

(A)	160 mm (6.30 in.)
(B)	104 mm (4.09 in.)

If any of the cylinder head bolt does not meet the torque specification, replace the cylinder head bolts.

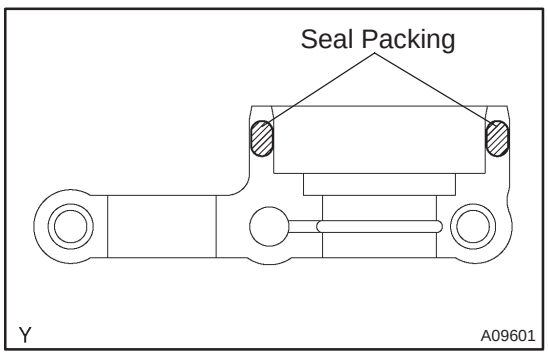


(4) Mark the front of the cylinder head bolt with paint.
(5) Retighten the cylinder head bolts additional 90° in the numerical order shown.
(6) Retighten the cylinder head bolts additional 90° in the numerical order shown.
(7) Retighten the cylinder head bolts additional 90° in the numerical order shown.
(8) Check that the painted mark is at the intake manifold side now.

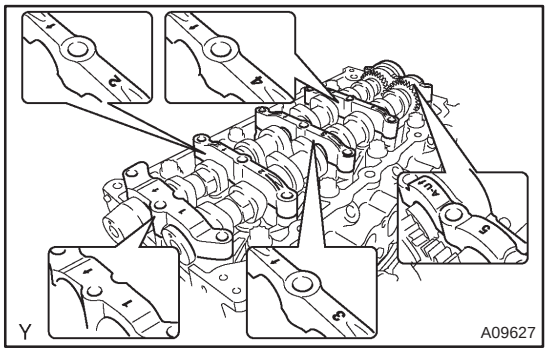


38. INSTALL CAMSHAFT SUB–ASSY, NO.1

(a) Place the camshaft carrier in position on the cylinder head.

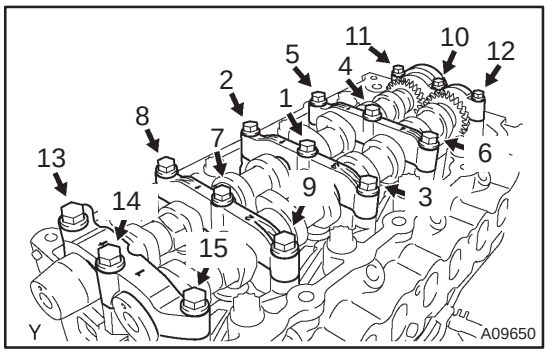


(b) Apply engine oil to the cam and gear of the camshaft, and the journal of the camshaft carrier.
(c) Place the intake camshaft on top of the camshaft carrier as shown in the illustration so that the No. 3 and No. 4 of cylinder cam lobes face downward.



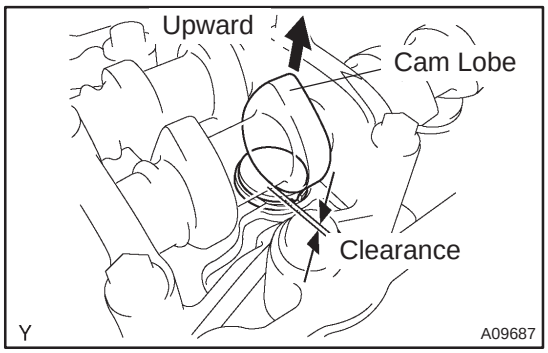
39. INSTALL CAMSHAFT SUB–ASSY, NO.2

(a) Apply engine oil to the cam and gear of the camshaft, and the journal of the camshaft carrier.
(b) Engage the exhaust camshaft gear to the intake camshaft gear by matching the alignment marks on each gear.
(c) Roll down the exhaust camshaft onto the bearing journals while engaging gears with each other.



(d) Install the camshaft bearing caps.
(1) Remove any old packing (FIPG) material from the No.5 camshaft bearing cap.
(2) Apply seal packing to the No. 5 camshaft bearing cap as shown in the illustration.

Seal packing: Part No. 08826–00080 or equivalent



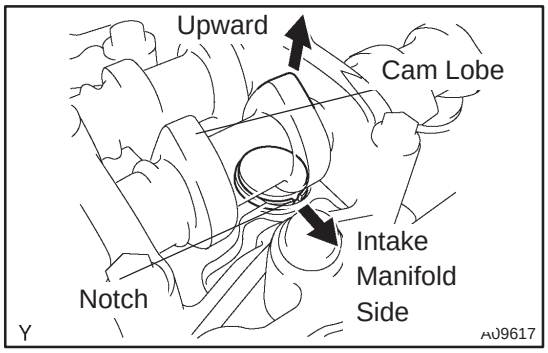
(3) Place the 5 bearing caps in their proper locations.

(4) Install and uniformly tighten the 15 bearing cap bolts in several passes and in the sequence shown.

Torque: 20 N·m (204 kgf·cm, 15 ft·lbf)

40. INSPECT VALVE CLEARANCE

(a) Turn the crankshaft so that the cam lobe of the camshaft on the inspecting valve points upward.



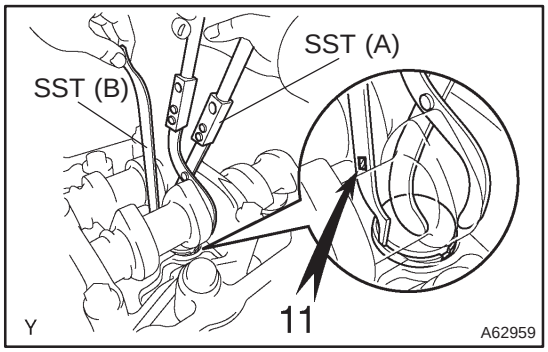
(b) Using a feeler gauge, measure the clearance between the valve lifter and the camshaft.

(c) Measure the clearance at 16 places.

(d) Record the out–of–specification valve clearance measurements. They will be used later to determine the required replacement adjusting shim.

Valve clearance (Cold) :

Intake	0.20 – 0.30 mm (0.008 – 0.012 in.)
Exhaust	0.35 – 0.45 mm (0.014 – 0.018 in.)

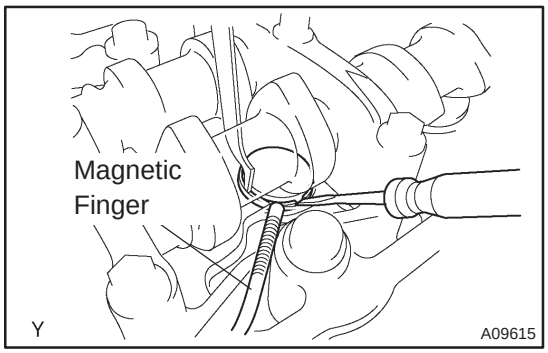


41. ADJUST VALVE CLEARANCE

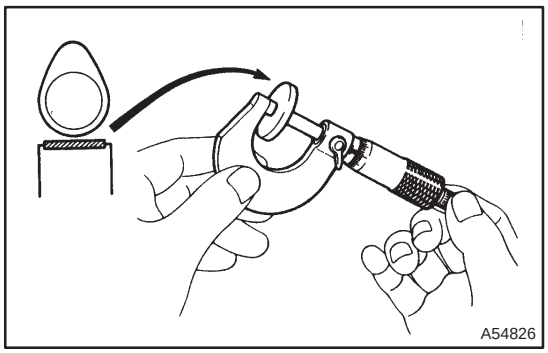
(a) Remove the adjusting shim.

(1) Turn the crankshaft so that the cam lobe of the camshaft on the adjusting valve points upward.

(2) Position the notch of the valve lifter facing the intake manifold side.



(3) Using SST (A), press down the valve lifter and place SST (B) between the camshaft and valve lifter. Remove SST (A).



SST 09248–55050 (09248–05510, 09248–05520)

HINT:

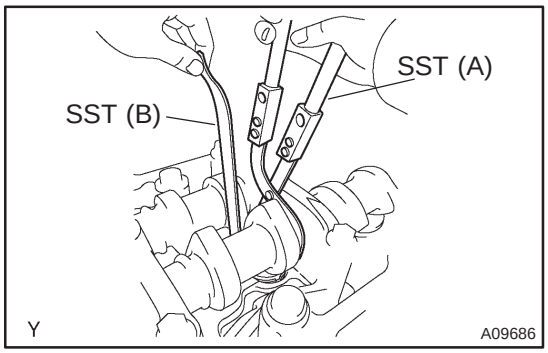
Apply SST (B) on the side marked with ”11”.

(4) Remove the adjusting shim with a small screwdriver and magnetic finger.

(b) Determine the replacement adjusting shim size by following the formula:

(1) Using a micrometer, measure the thickness of the removed shim.

(2) Calculate the thickness of a new shim so that the valve clearance comes within specified value.



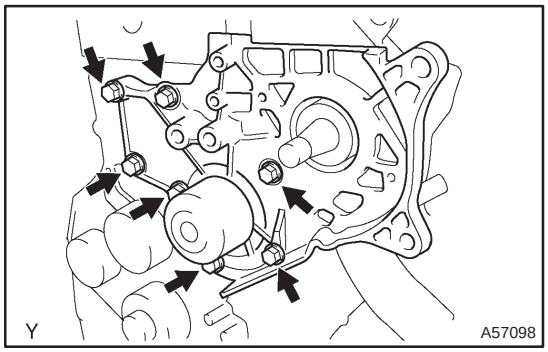
HINT:

- T ..... Thickness of removed adjusting shim
- A ..... Measured valve clearance
- N ..... Thickness of new adjusting shim
- Intake: N = T + (A – 0.25 mm (0.010 in.))
- Exhaust: N = T + (A – 0.40 mm (0.016 in.))

(3) Select a new shim with a thickness as close as possible to the calculated value.

HINT:

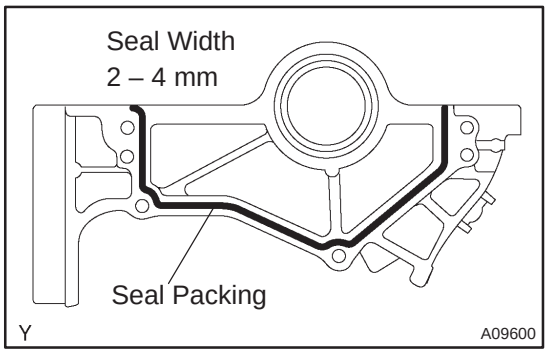
Shims are available in 17 sizes in increments of 0.05 mm (0.0020 in.), from 2.50 mm (0.0984 in.) to 3.30 mm (0.1299 in.).



(c) Install a new adjusting shim.

(1) Place a new adjusting shim on the valve lifter.

(2) Using SST (A), press down the valve lifter and remove SST (B).

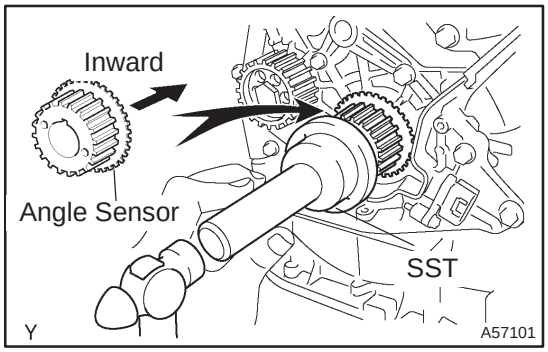


SST 09248–55050 (09248–05510, 09248–05520)

(d) Recheck the valve clearance.

42. INSTALL WATER PUMP ASSY

(a) Install a new gasket and the water pump with the 7bolts.
Torque: 31 N·m (320 kgf·cm, 23 ft·lbf)

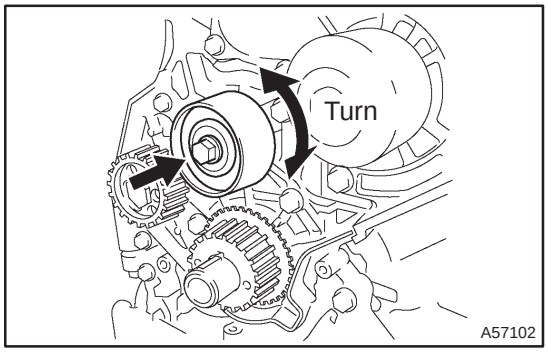


43. INSTALL CAMSHAFT OIL SEAL RETAINER

(a) Apply seal packing to the oil seal retainer as shown in the illustration.
Seal packing: Part No. 08826–00080 or equivalent

NOTICE:

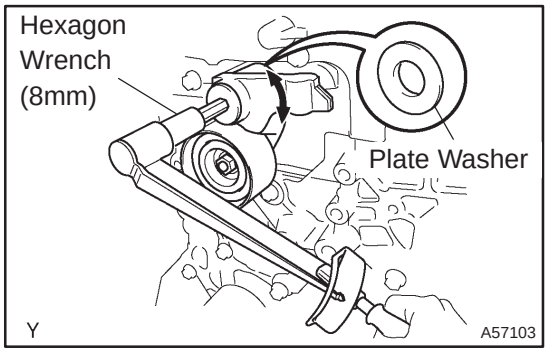
- **Install a nozzle that has been cut to a 2 – 4 mm (0.08 – 0.16 in.) opening.**
- **Parts must be assembled within 15 minutes of application. Otherwise the material must be removed and reapplied.**
- **Immediately remove nozzle from the tube and reinstall the cap.**



(b) Install the oil seal retainer with 4 bolts. Uniformly tighten the 4 bolts in several passes.
Torque: 8.8 N·m (90 kgf·cm, 78 in.·lbf)

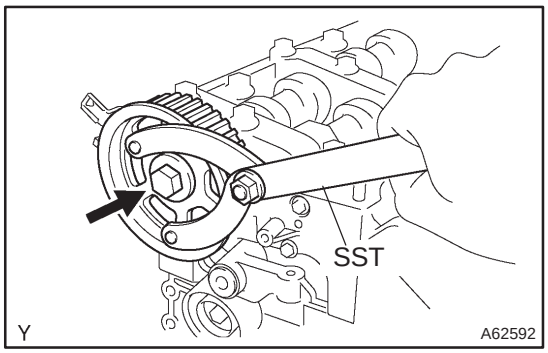
44. INSTALL CRANKSHAFT TIMING PULLEY

(a) Align the pulley set key with the key groove of the timing pulley.



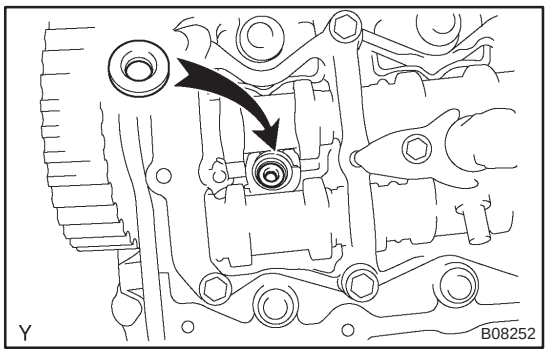
(b) Using SST and a hammer, tap in the timing pulley, facing the angle sensor inward.
SST 09223–46011

45. INSTALL TIMING BELT IDLER SUB–ASSY NO.2



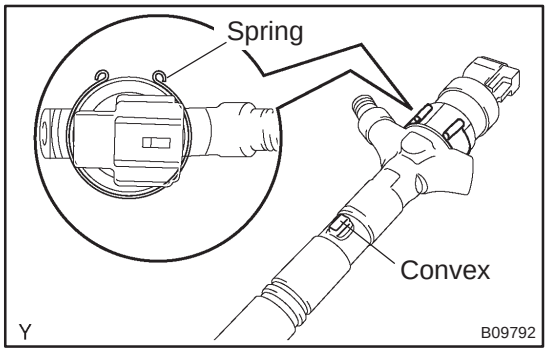
(a) Install the idler pulley with the bolt.
Torque: 47 N·m (475 kgf·cm, 34 ft·lbf)

(b) Check that the idler pulley moves smoothly.



46. INSTALL TIMING BELT IDLER SUB–ASSY NO.1

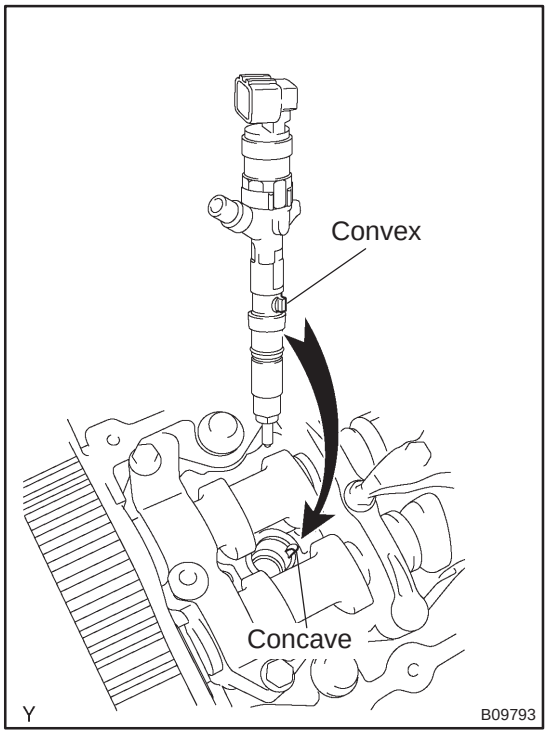
(a) Using an hexagon wrench (8mm), install the plate washer and idler pulley with the idler pulley shaft.
Torque: 35 N·m (350 kgf·cm, 25 ft·lbf)
(b) Check that the pulley bracket moves smoothly.



47. INSTALL CAMSHAFT TIMING PULLEY

(a) Install the pulley set key to the key groove of the camshaft.
(b) Align the pulley set key with the key groove of the timing pulley, and slide on the timing pulley.
(c) Using SST, install the pulley bolt.
SST 09960–10010 (09962–01000, 09963–01000)
Torque: 88 N·m (899 kgf·cm, 65 ft·lbf)

48. INSTALL INJECTOR ASSY

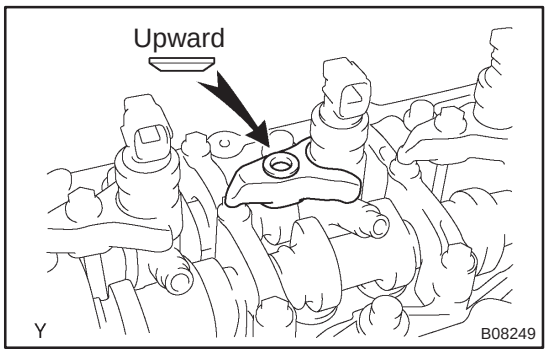


(a) Install 4 new nozzle seats to the cylinder head.

(b) Set the spring to each injector.

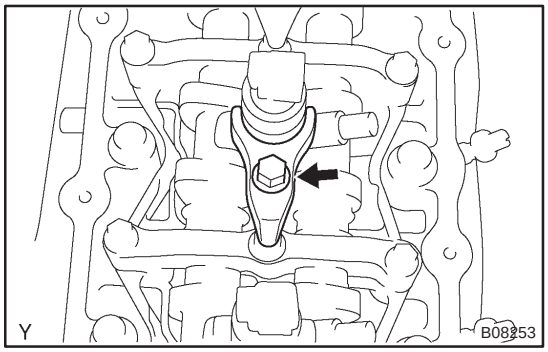
NOTICE:
Be sure to make the opening direction of the spring and the direction of the injector positioning convex meet.

(c) Install a new back–up ring and O–ring to each injector.
(d) Apply a light coat of oil onto O–ring for each injector.



(e) Meet the injector positioning convex to the positioning concave at the cylinder head side and install the injector to the cylinder head.

NOTICE:



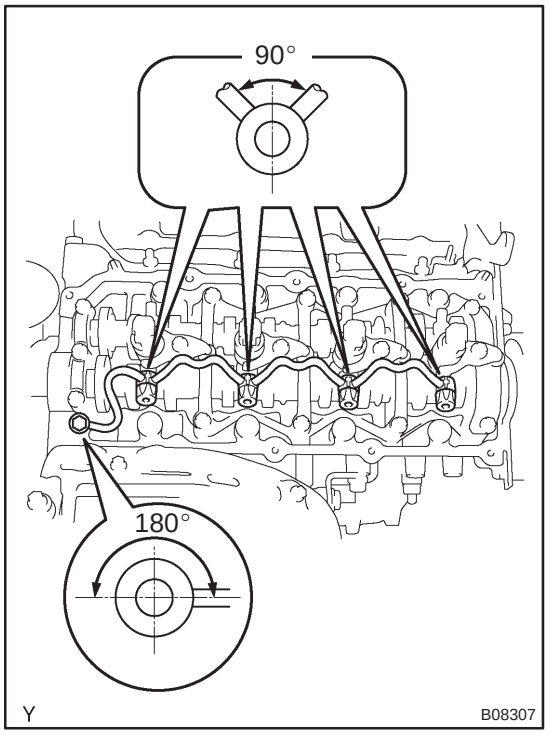
- **At this time, insert the injector until it touches the nozzle sheet surface.**
- **When installing the injector to the cylinder head and in case that the injector comes to float up with the reaction of O–ring, pull out the injector once, install it again.**
- **During the time after equipping the head cover and before installing the injection pipe, install the irregular object prevention cover.**
- **Do not exchange the injector cylinder.**

(f) Place the 4 nozzle holder clamps to each injector.

49. INSTALL NOZZLE HOLDER CLAMP

(a) Set the washer on the nozzle holder clamp as shown in the illustration.

(b) Tighten the bolts.



HINT:

Apply a light coat of engine oil on the threads and under the heads of the nozzle holder clamp bolts.

Torque: 27 N·m (275 kgf·cm, 20 ft·lbf)

NOTICE:

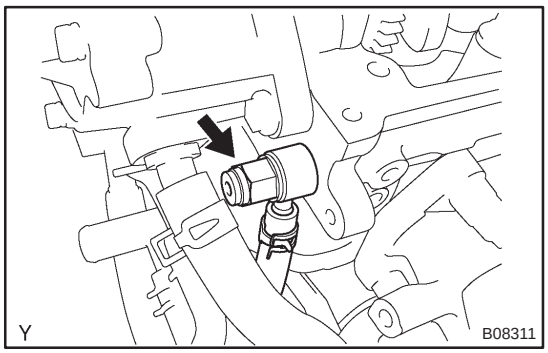
At this time, the clamp has its cam cap bolt as a fulcrum and clip the injector at the fork portion.

50. INSTALL NOZZLE LEAKAGE PIPE ASSY

(a) Place the leakage pipe and 5 new gaskets.

NOTICE:

Do the installation of the gasket craw within the angle range shown in the illustration.

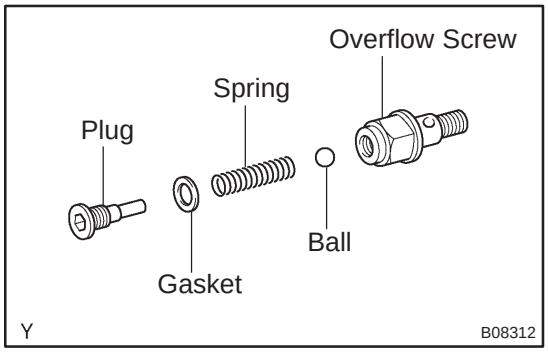


(b) Apply a light coat of oil onto 4 hollow screws and union bolt.

(c) Tighten the 4 hollow screws and union bolt by hand.

(d) Tighten the 4 hollow screws and union bolt.

Torque:
Hollow screw 18 N·m (184 kgf·cm, 13 ft·lbf)
Union bolt 22 N·m (224 kgf·cm, 16 ft·lbf)



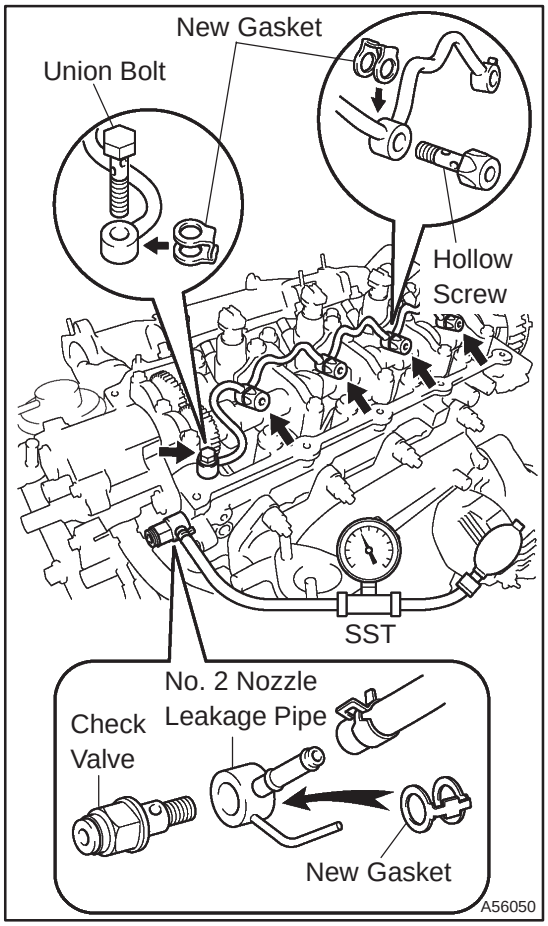
(e) Check that there is no leak from nozzle leakage pipe connection.

(1) Disconnect the fuel hose, and remove the check valve, No. 2 nozzle leakage pipe and gasket.

(2) Purchase a new check valve.

HINT:
Part No. 23122–27010

(3) Remove the plug, gasket, spring and ball.



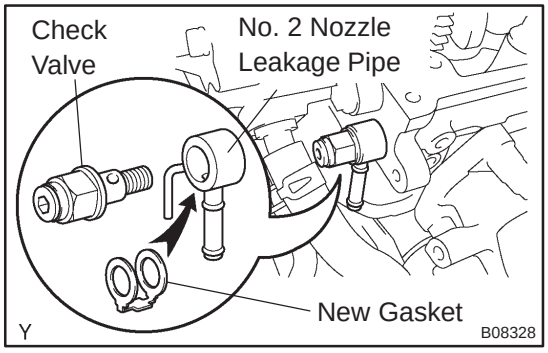
(4) Install the plug with the gasket to the overflow screw.

Torque: 9.8 N·m (100 kgf·cm, 7 ft.·lbf)

(5) Install the No. 2 nozzle leakage pipe and gasket with the check valve to the cylinder head.

Torque: 21 N·m (214 kgf·cm, 15 ft·lbf)

(6) Apply a light coat of soapy water (any fluid to detect fuel leakage) on the nozzle leakage pipe connection.

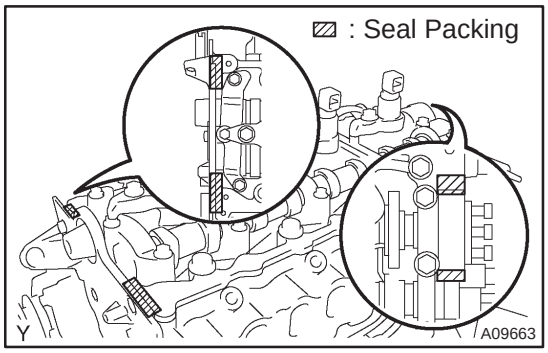


(7) Using SST (turbocharger pressure gauge), apply the SST to the fuel return side of the No. 2 nozzle leakage pipe, and maintain 100 kPa (1 kgf/cm^2, 14.5 psi) of pressure for 600 seconds to check that there are no bubbles from the soap–applied places.

SST 09992–00242

(8) After checking fuel leaks, wipe off soapy water from nozzle leakage pipe connection.

(9) Remove SST, check valve, No. 2 nozzle leakage pipe and gasket.



(10) Reinstall the No. 2 nozzle leakage pipe and a new gasket with the check valve.

Torque: 21 N·m (214 kgf·cm, 15 ft·lbf)

HINT:

Never reinstall the disassembled check valve on the engine.

(11) Reconnect the fuel hose to the No. 2 nozzle leakage pipe.

51. INSTALL CYLINDER HEAD COVER SUB–ASSY

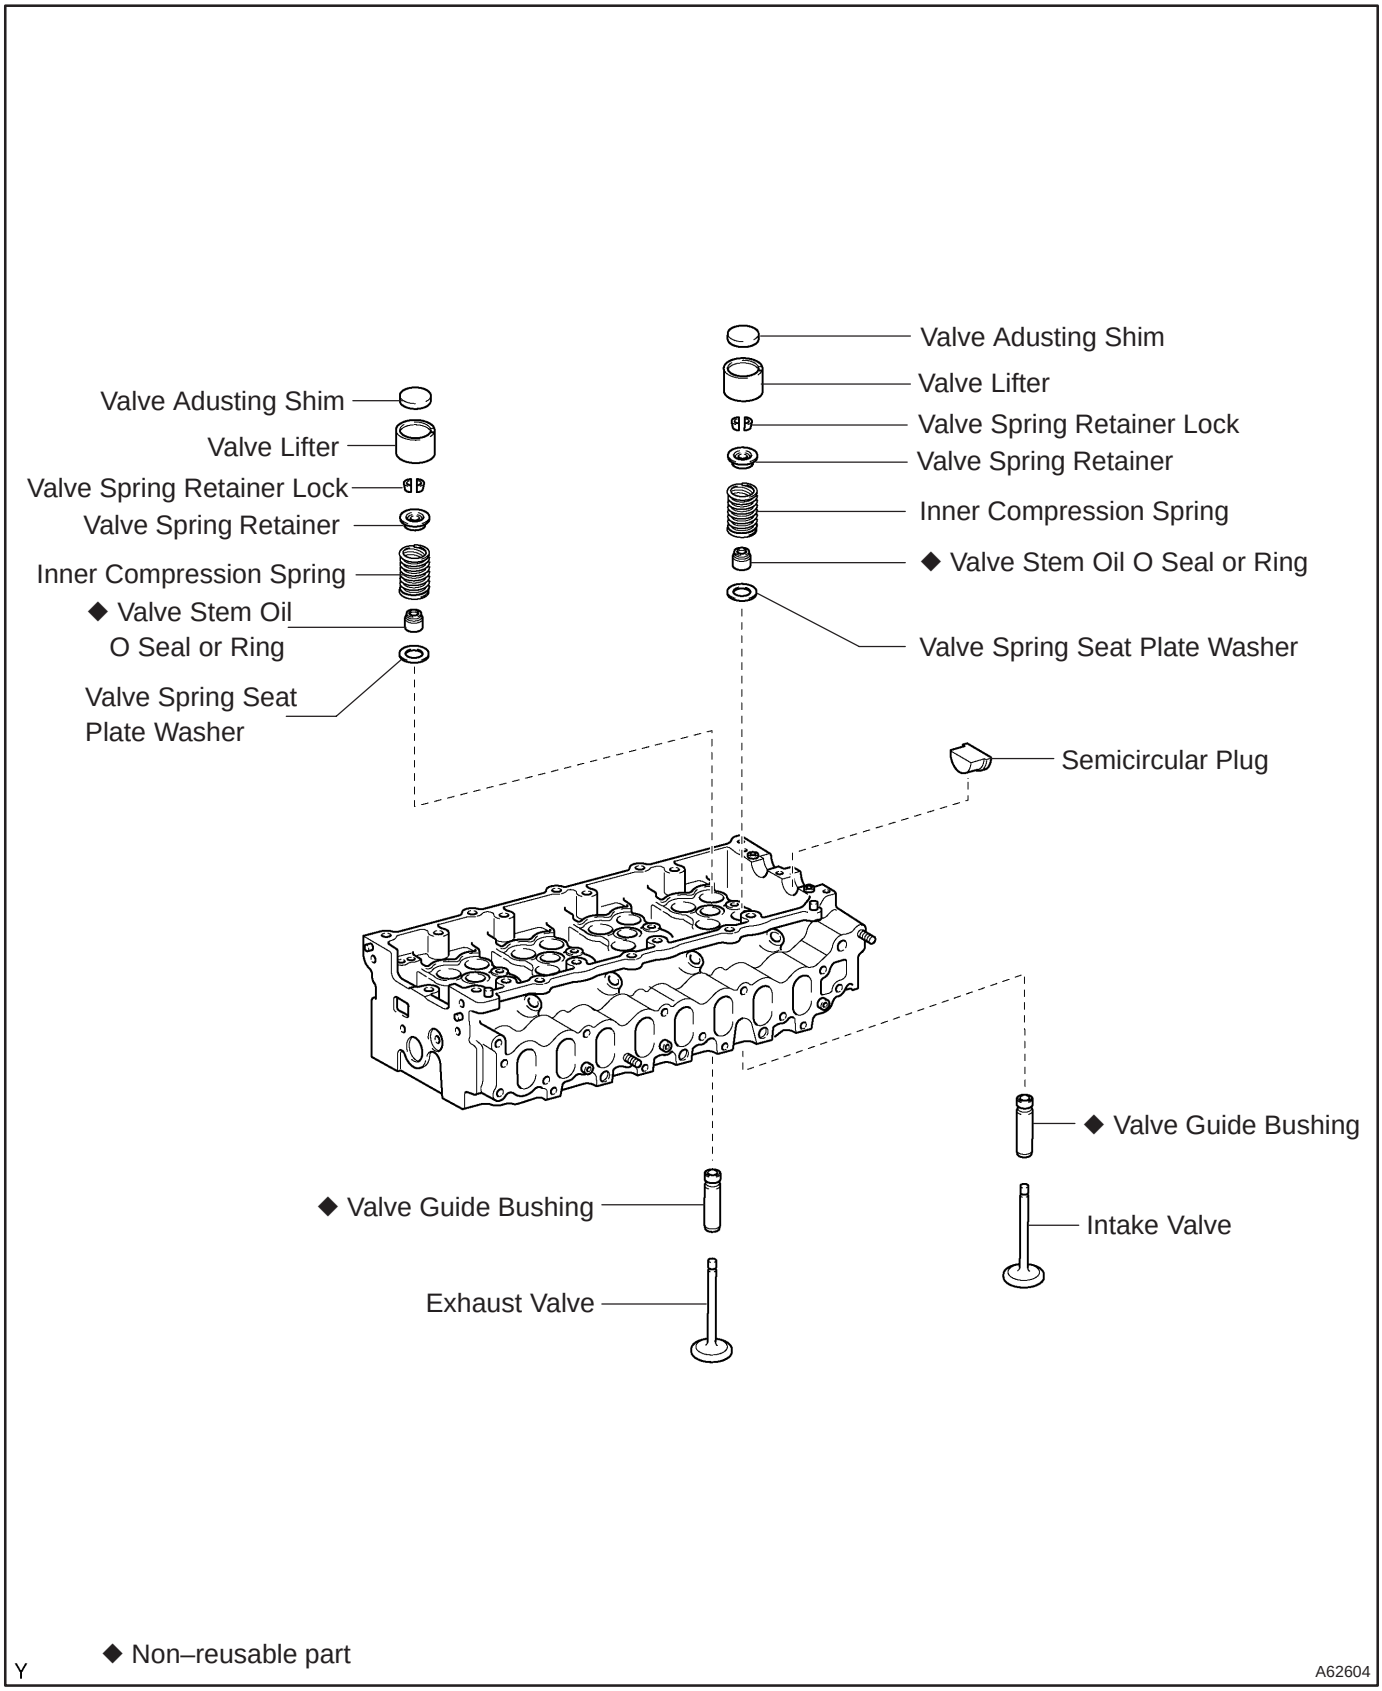
(a) Remove any old packing (FIPG) material.

(b) Apply seal packing to the cylinder head.

Seal packing: Part No. 08826–00080 or equivalent

(c) Install the gasket to the head cover.

(d) Install the cylinder head cover with 10 bolts.

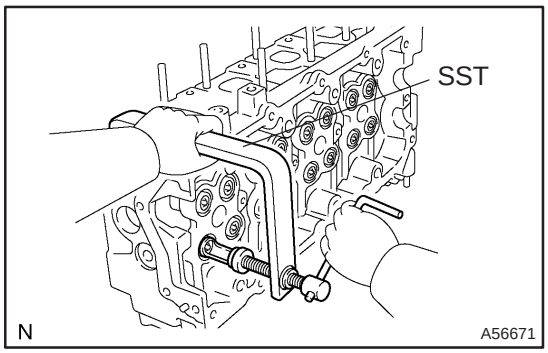


Torque: 13 N·m (135 kgf·cm, 10 ft·lbf)

(e) Install 4 new nozzle holder seals.

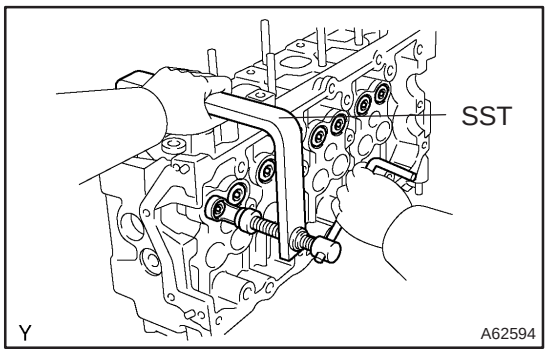
CYLINDER HEAD ASSY (1CD–FTV)

COMPONENTS



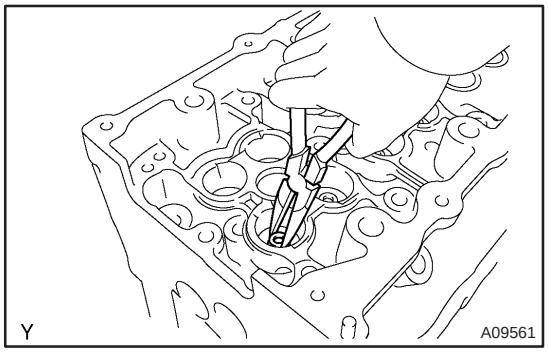
140L5–01

OVERHAUL



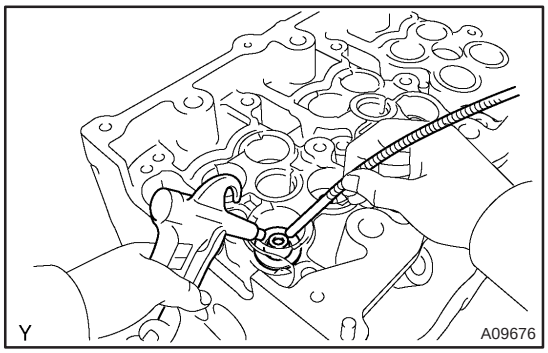
1. REMOVE VALVE LIFTER

HINT:
Arrange the valve lifters in the correct order.



2. REMOVE INTAKE VALVE

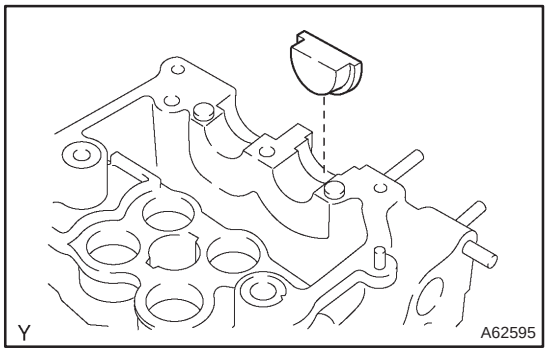
(a) Using SST, compress the valve spring and remove the 2 keepers.
SST 09202–70020 (09202–00010)
(b) Remove the spring retainer, valve spring and valve.



3. REMOVE EXHAUST VALVE

(a) Using SST, compress the valve spring and remove the 2 keepers.
SST 09202–70020 (09202–00010)
(b) Remove the spring retainer, valve spring and valve.

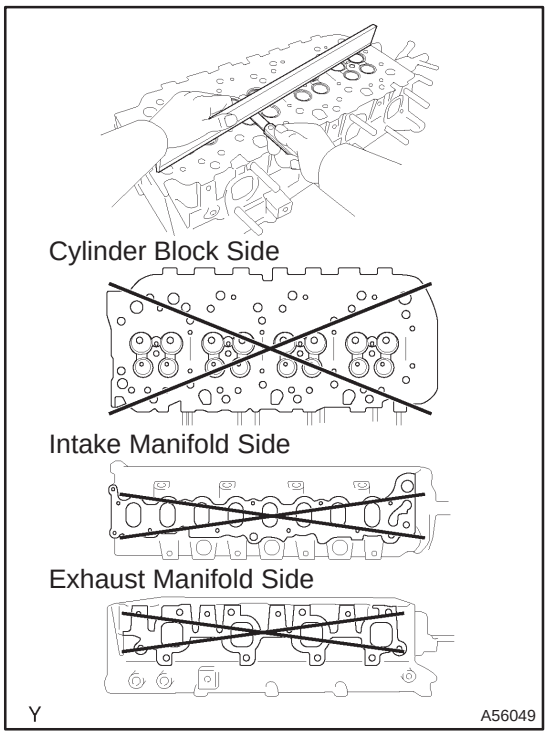
4. REMOVE VALVE STEM OIL O SEAL OR RING



(a) Using needle–nose pliers, remove the oil seal.

5. REMOVE VALVE SPRING SEAT PLATE WASHER

(a) Using compressed air and a magnetic finger, remove the spring seat by blowing air.

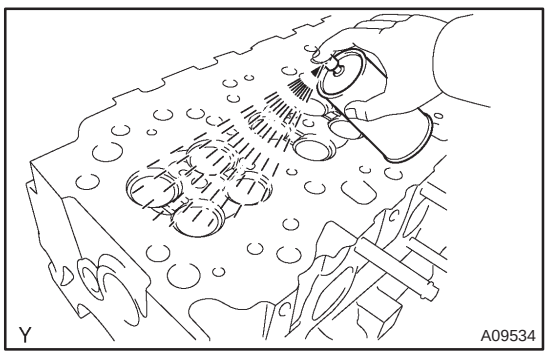


HINT:
Arrange the valves, valve springs, spring seats and spring retainers in the correct order.

6. REMOVE SEMICIRCULAR PLUG

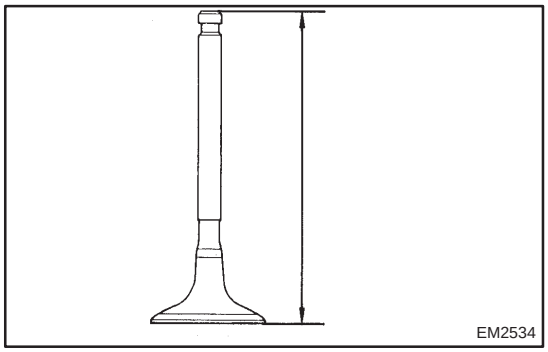
7. REMOVE W/HEAD TAPER SCREW PLUG NO.1

(a) Using a hexagon wrench (6mm), remove the 3 plugs.
SST 99999–70037



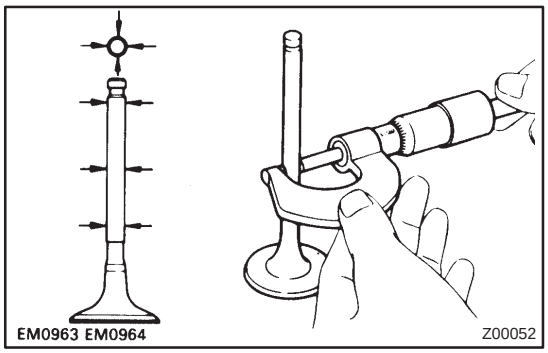
8. INSPECT CYLINDER HEAD FOR FLATNESS

(a) Using a precision straight edge and feeler gauge, measure the surfaces contacting the cylinder block and the manifolds for warpage.



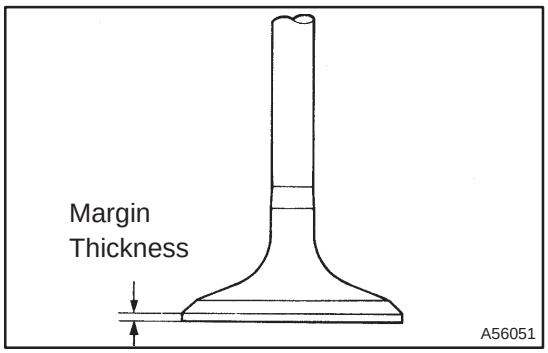
Maximum warpage:

Cylinder block side	0.08mm(0.0031in.)
Intake manifold side	0.20mm(0.0079in.)
Exhaust manifold side	0.20mm(0.0079in.)

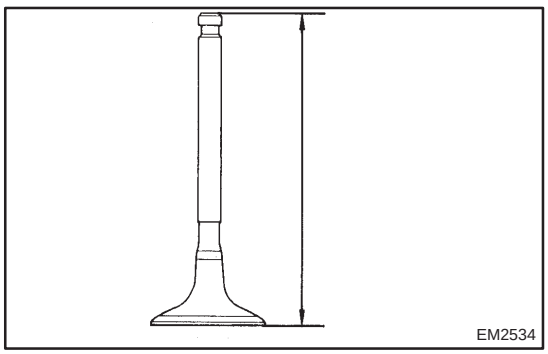


9. INSPECT CYLINDER HEAD FOR CRACKS

(a) Using dye penetrant, check the intake ports, exhaust ports and cylinder block contact surface for cracks.

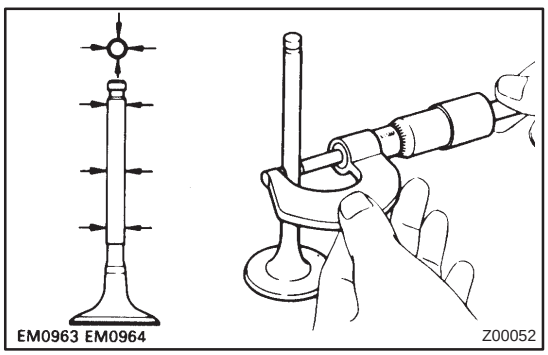


10. INSPECT INTAKE VALVE

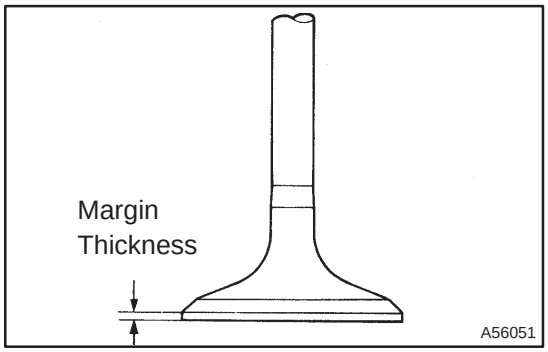


(a) Check the valve overall length.
Standard overall length: 102.53 mm (4.0366 in.)
Minimum overall length: 102.10 mm (4.0197 in.)

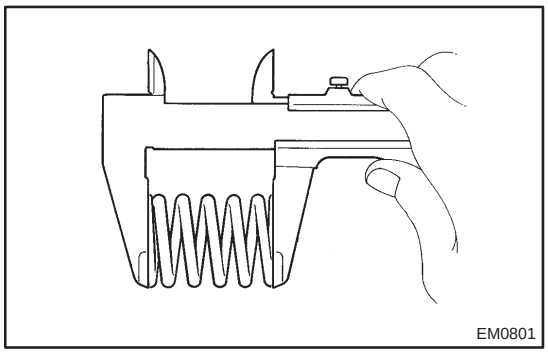
(b) Using a micrometer, measure the diameter of the valve stem.
Valve stem diameter:
5.970 – 5.985 mm (0.2350 – 0.2356 in.)



(c) Check the valve head margin thickness.
Standard margin thickness: 0.9 mm (0.035 in.)
Minimum margin thickness: 0.6 mm (0.0247 in.)

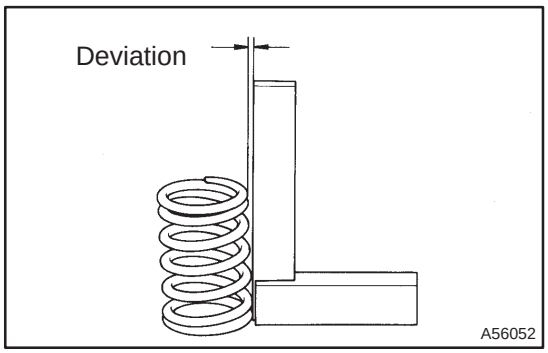


11. INSPECT EXHAUST VALVE

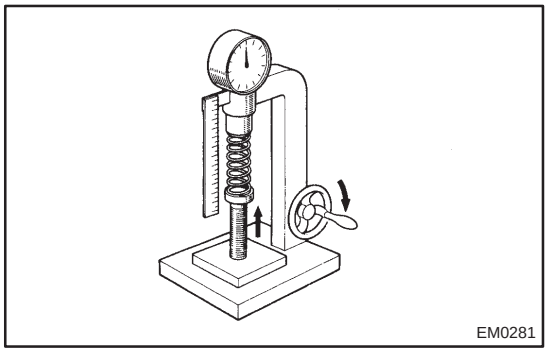


(a) Check the valve overall length.
Standard overall length: 101.97 mm (4.0146 in.)
Minimum overall length: 101.55 mm (3.9980 in.)

(b) Using a micrometer, measure the diameter of the valve stem.
Valve stem diameter:
5.960 – 5.975 mm (0.2346 – 0.2352 in.)

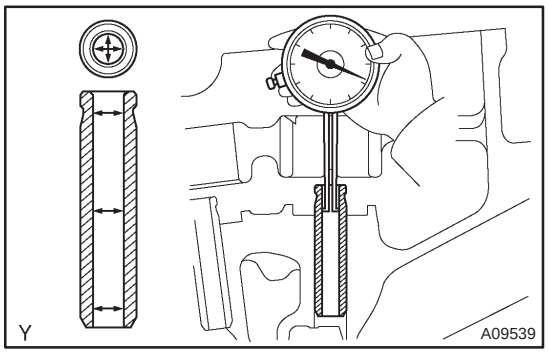


(c) Check the valve head margin thickness.
Standard margin thickness: 0.9 mm (0.035 in.)
Minimum margin thickness: 0.6 mm (0.024 in.)



12. INSPECT INNER COMPRESSION SPRING

(a) Using vernier calipers, measure the free length of the valve spring.
Free length: 40.45 mm (1.5925 in.)



(b) Using a steel square, measure the deviation of the valve spring.
Maximum deviation: 2.0 mm (0.079 in.)

(c) Using a spring tester, measure the tension of the valve spring at the specified installed length.
Installed tension:
177 – 195 N (18.0 – 19.9 kgf, 39.7 – 44.1 lbf) at 31.1 mm (1.224 in.)

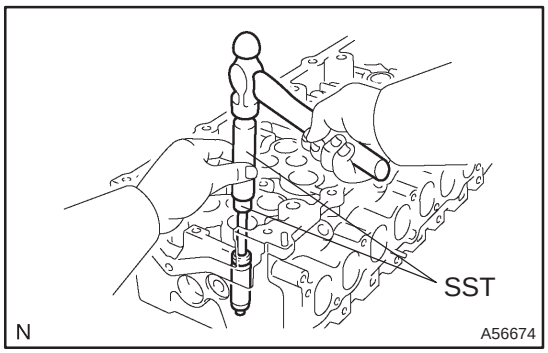
If the installed tension is not as specified, replace the valve spring.

13. INSPECT VALVE GUIDE BUSHING OIL CLEARANCE

(a) using a caliper gauge, measure the inside diameter of the guide bushing.
Bushing inside diameter:
6.010 – 6.030 mm (0.2366 – 0.2374 in.)

(b) Subtract the valve stem diameter measurement from the guide bushing inside diameter measurement.

Standard oil clearance:

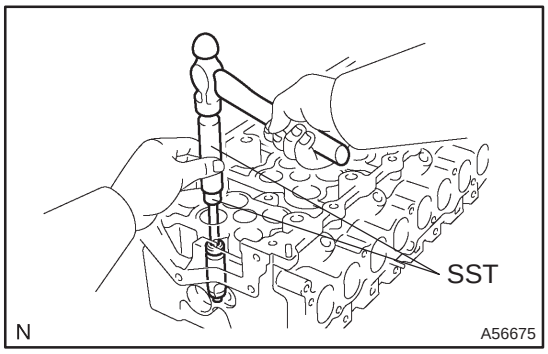


Intake	0.025 – 0.060 mm (0.0010 – 0.0024 in.)
Exhaust	0.035 – 0.070 mm (0.0014 – 0.0028 in.)

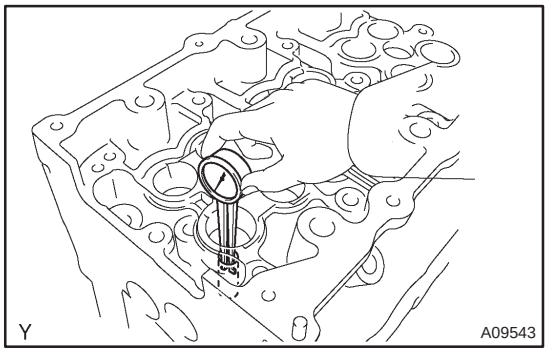
Maximum oil clearance:

Intake	0.08 mm (0.0031 in.)
Exhaust	0.10 mm (0.0039 in.)

14. REMOVE INTAKE VALVE GUIDE BUSH



(a) Heat the cylinder head to 80 – 100°C (176 – 212°F).



(b) Using SST and a hammer, tap out the guide bushing.
SST 09201–10000 (09201–01060), 09950–70010 (09951–07100)

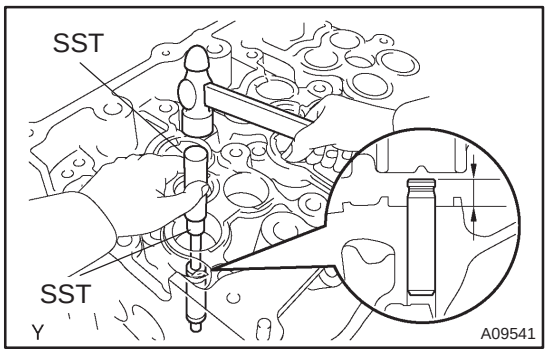
15. REMOVE EXHAUST VALVE GUIDE BUSH

(a) Heat the cylinder head to 80 – 100°C (176 – 212°F).

(b) Using SST and a hammer, tap out the guide bushing.
SST 09201–10000 (09201–01060), 09950–70010 (09951–07100)

16. INSTALL INTAKE VALVE GUIDE BUSH

(a) Using a caliper gauge, measure the bushing bore diameter of the cylinder head.

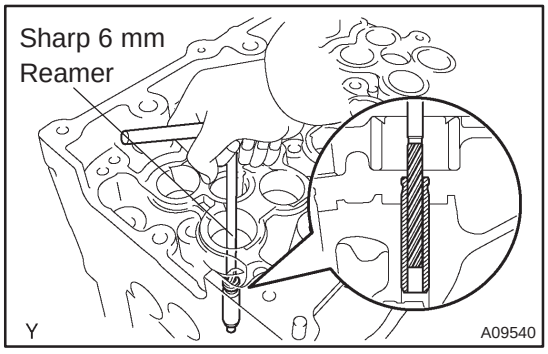


Diameter: 10.985 – 11.006 mm (0.4325 – 0.4333 in.)

If the bushing bore diameter of the cylinder head is greater then 11.006 mm (0.4333 in.), machine the bushing bore to the dimension of 11.035 – 11.056 mm (0.4344 – 0.4353 in.).

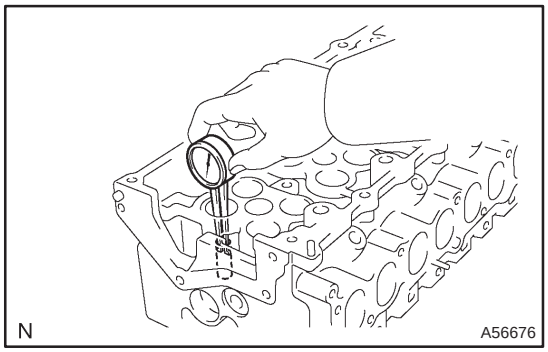
HINT:

Bushing size	Bushing bore diameter mm (in.)
Use STD	10.985 – 11.006 (0.4325 – 0.4333)
Use O/S 0.05	11.035 – 11.056 (0.4344 – 0.4353)



(b) Heat the cylinder head to 80 – 100°C. (176 – 212°F)

(c) Using SST and a hammer, top in a new guide bushing to the specified protrusion height.



SST 09201–10000 (09201–01060), 09950–70010 (09951–07100)

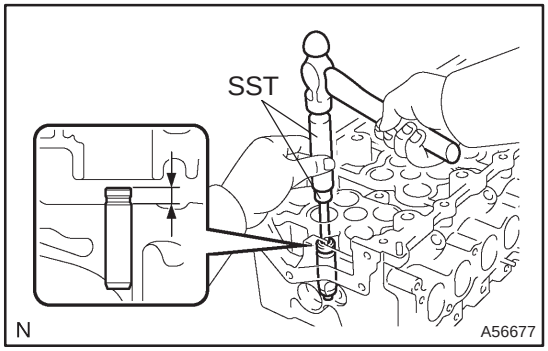
Protrusion height:
10.05 – 10.45 mm (0.3957 – 0.4114 in.)

(d) Using a sharp 6 mm reamer, ream the guide bushing to obtain the standard specified clearance between the guide bushing and valve stem.

Standard oil clearance:
0.025 – 0.060 mm (0.0010 – 0.0024 in.)

17. INSTALL EXHAUST VALVE GUIDE BUSH

(a) Using a caliper gauge, measure the bushing bore diameter of the cylinder head.

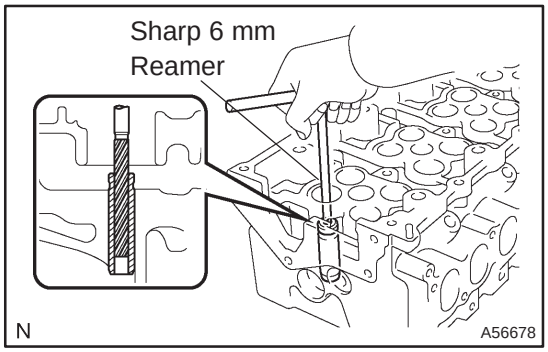


Diameter: 10.985 – 11.006 mm (0.4325 – 0.4333 in.)

If the bushing bore diameter of the cylinder head is greater then 11.006 mm (0.4333 in.), machine the bushing bore to the dimension of 11.035 – 11.056 mm (0.4344 – 0.4353 in.).

HINT:

Bushing size	Bushing bore diameter mm (in.)
Use STD	10.985 – 11.006 (0.4325 – 0.4333)
Use O/S 0.05	11.035 – 11.056 (0.4344 – 0.4353)

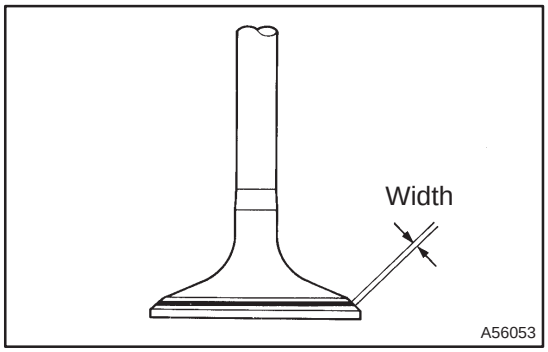


(b) Heat the cylinder head to 80 – 100°C. (176 – 212°F)

(c) Using SST and a hammer, tap in a new guide bushing to the specified protrusion height.

SST 09201–10000 (09201–01060), 09950–70010 (09951–07100)

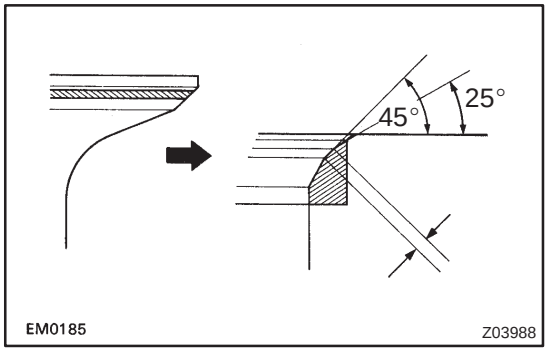
Protrusion height:
9.65 – 10.05 mm (0.3799 – 0.3957 in.)



(d) Using a sharp 6 mm reamer, ream the guide bushing to obtain the standard specified clearance between the guide bushing and valve stem.

Standard oil clearance:
0.035 – 0.070 mm (0.0014 – 0.0028 in.)

18. INSPECT VALVE SEATS

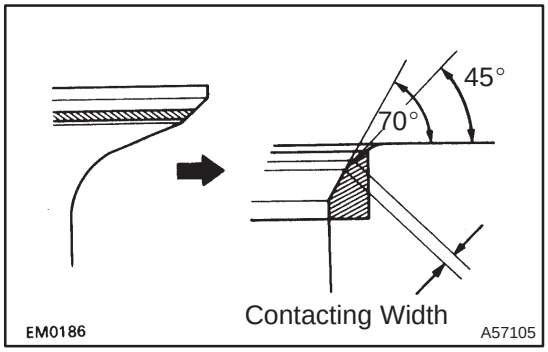


(a) Apply a light coat of prussian blue (or white lead) to the valve face.

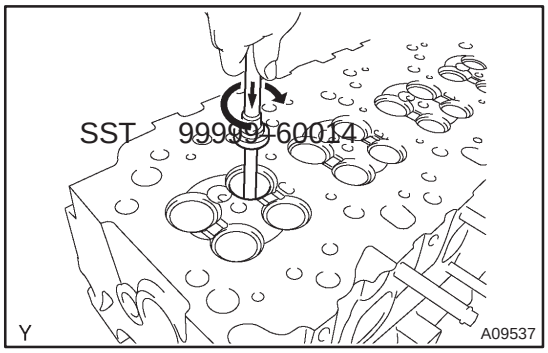
(b) Lightly press the valve against the seat.

(c) Check the valve face and seat according to the following procedure.
  (1) If blue appears 360° around the face, the valve is concentric. If not, replace the valve.
  (2) If blue appears 360° around the valve seat, the guide and face are concentric. If not, resurface the seat.
  (3) Check that the seat contact is in the middle of the valve face with the following width.

Intake	1.2 – 1.6 mm (0.047 – 0.063 in.)
Exhaust	1.6 – 2.0 mm (0.063 – 0.079 in.)



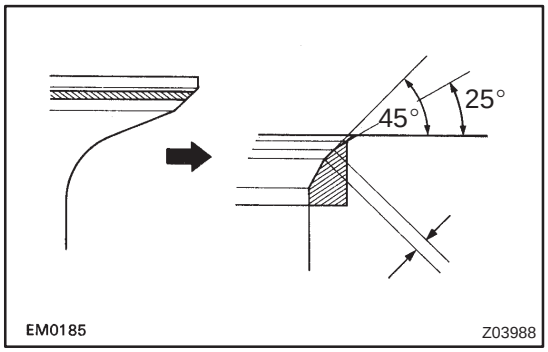
19. REPAIR INTAKE VALVE SEATS



NOTICE:

Take off a cutter gradually to make smooth valve seats.

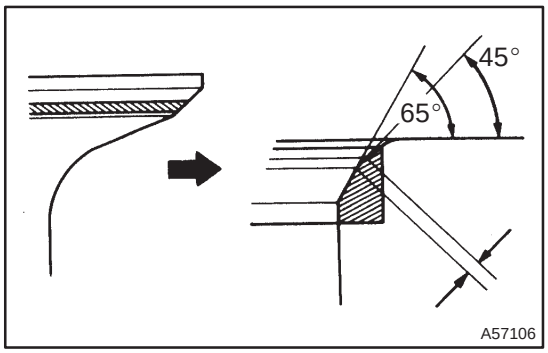
(a) If the seating is too high on the valve face, use 25° and 45° cutters to correct the seat.



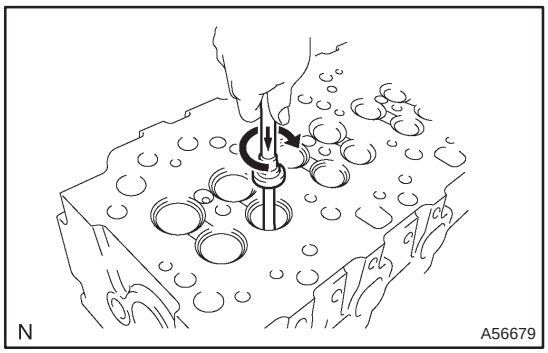
(b) If the seating is too low on the valve face, use 70 ° and 45° cutters to correct the seat.

(c) Hand–lap the valve and valve seat with an abrasive compound.

(d) Check the valve seating position.



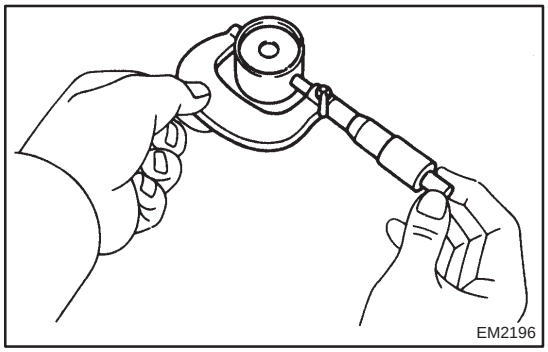
20. REPAIR EXHAUST VALVE SEATS



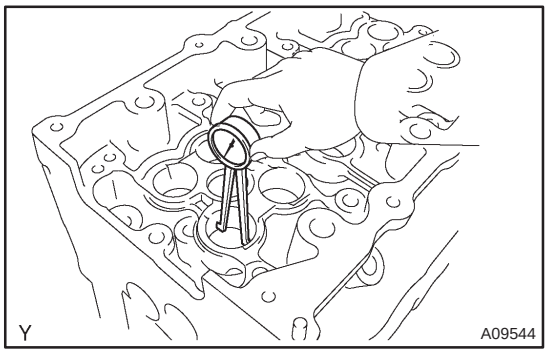
NOTICE:

Take off a cutter gradually to make smooth valve seats.

(a) If the seating is too high on the valve face, use 25° and 45° cutters to correct the seat.



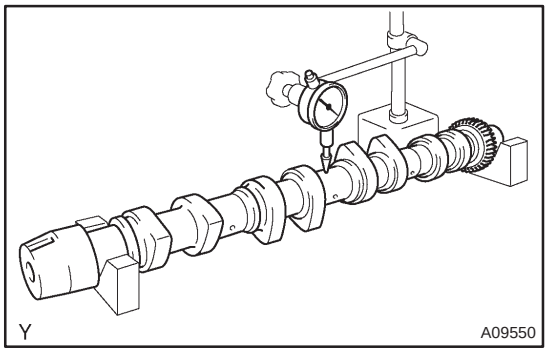
(b) If the seating is too low on the valve face, use 65° and 45° cutters to correct the seat.



(c) Hand–lap the valve and valve seat with an abrasive compound.

(d) Check the valve seating position.

21. INSPECT VALVE LIFTER



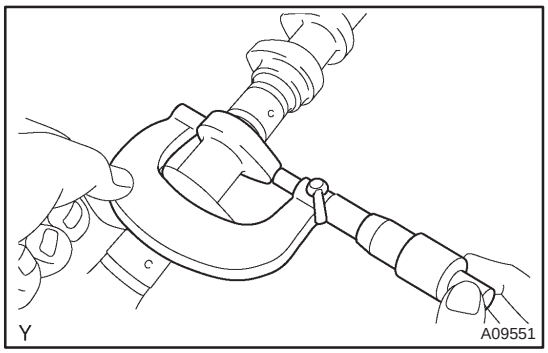
(a) Using a micrometer, measure the lifter diameter.
Lifter diameter:
27.975 – 27.985 mm (1.1014 – 1.1018 in.)

22. INSPECT VALVE LIFTER OIL CLEARANCE

(a) Using a caliper gauge, measure the lifter bore diameter of the cylinder head.
Lifter diameter:
28.010 – 28.031 mm (1.1028 – 1.1036 in.)

(b) Subtract the lifter diameter measurement from the lifter bore diameter measurement.
Standard oil clearance:
0.025 – 0.056 mm (0.0010 – 0.0022 in.)
Maximum oil clearance: 0.08 mm (0.0031 in.)

23. INSPECT CAMSHAFT



(a) Inspect the circle runout.

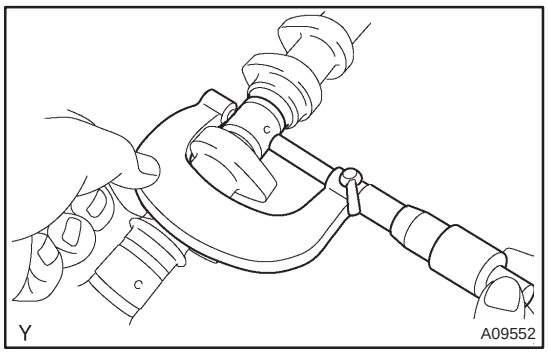
(1) Place the camshaft on V–blocks.

(2) Using a dial indicator, measure the circle runout at the center journal.

Maximum circle runout: 0.06 mm (0.0024 in.)

If the circle runout is greater then maximum, replace the camshaft.

(b) Using a micrometer, measure the cam lobe height.



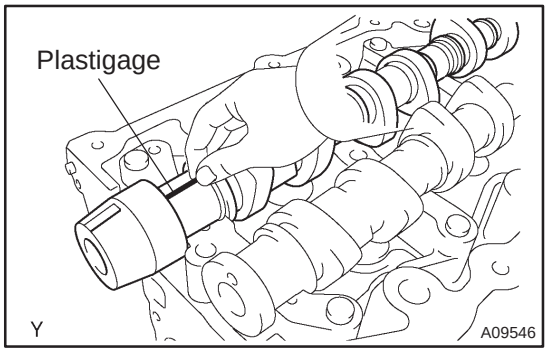
Standard cam lobe height:

Intake	46.57 – 46.67 mm (1.8335 – 1.8374 in.)
Exhaust	47.52 – 47.62 mm (1.8709 – 1.8748 in.)

Minimum cam lobe height:

Intake	46.10 mm (1.8150 in.)
Exhaust	47.05 mm (1.8524 in.)

If the cam lobe height is less than minimum, replace the camshaft.



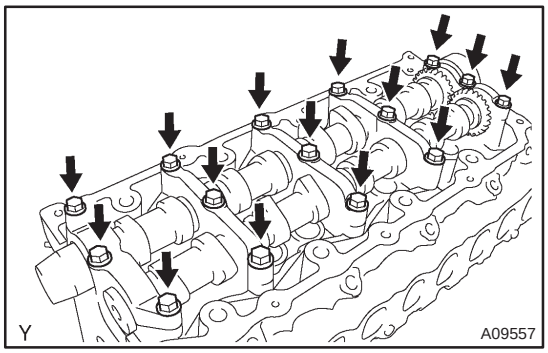
(c) Using a micrometer, measure the journal diameter.

Journal diameter:

26.969 – 26.985 mm (1.0618 – 1.0624 in.)

If the journal diameter is not as specified, check the oil clearance.

24. INSPECT CAMSHAFT OIL CLEARANCE



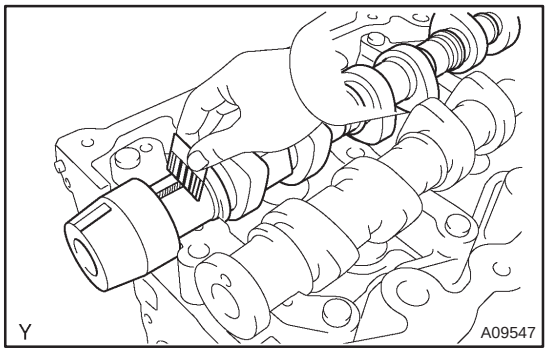
(a) Clean the bearing caps and camshaft carrier.

(b) Check the bearings for flaking and scoring.

If the bearings are damaged, replace the bearing caps, camshaft carrier and cylinder head as a set.

(c) Place the camshaft carrier and camshafts on the cylinder head.

(d) Lay a strip of Plastigage across each of the camshaft journals.

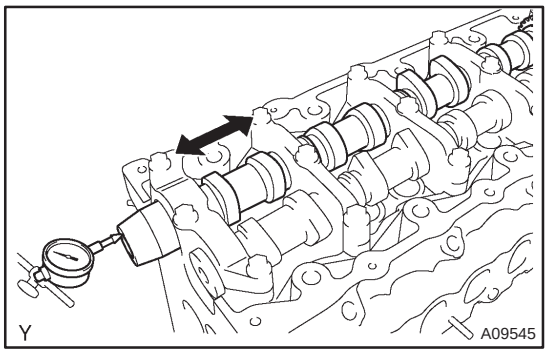


(e) Install the bearing caps.

Torque: 20 N·m (200 kgf·cm, 15 ft·lbf)

NOTICE:

Do not turn the camshaft.

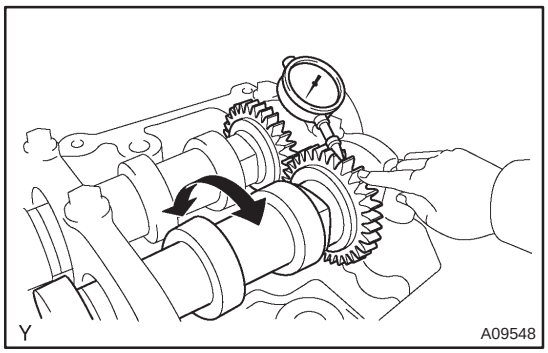


(f) Remove the bearing caps.

(g) Measure the Plastigage at its widest point.
Standard oil clearance:
0.025 – 0.062 mm (0.0010 – 0.0024 in.)
Maximum oil clearance: 0.08 mm (0.0031 in.)

If the oil clearance is greater than maximum, replace the camshaft. if necessary, replace the bearing caps, camshaft carrier and cylinder head as a set.

(h) Completely remove the Plastigage.



25. INSPECT CAMSHAFT THRUST CLEARANCE

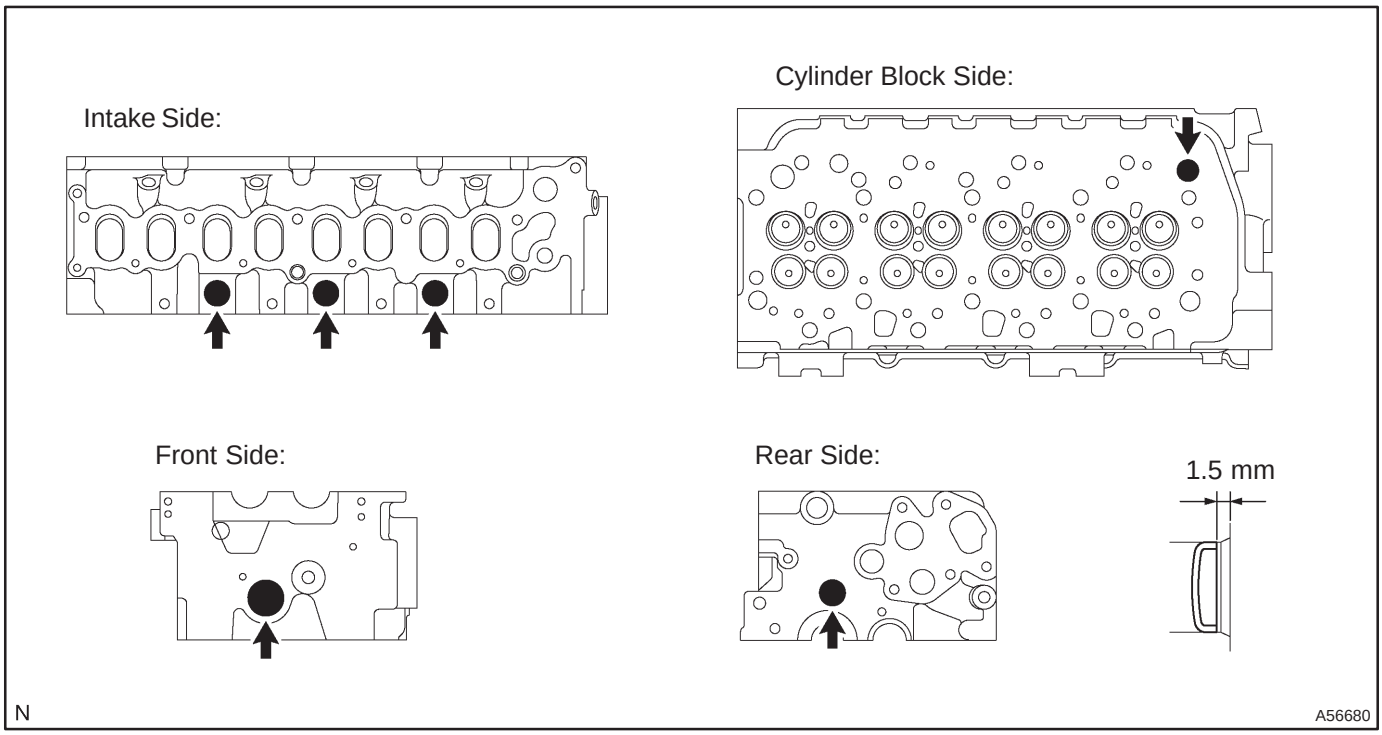
(a) Install the camshaft.

(b) Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.
Standard thrust clearance:
0.035 – 0.110 mm (0.0014 – 0.0043 in.)

If the thrust clearance is not as specified, replace the camshaft. If necessary, replace the bearing caps, camshaft carrier and cylinder head as a set.

26. INSPECT CAMSHAFT GEAR BACKLASH

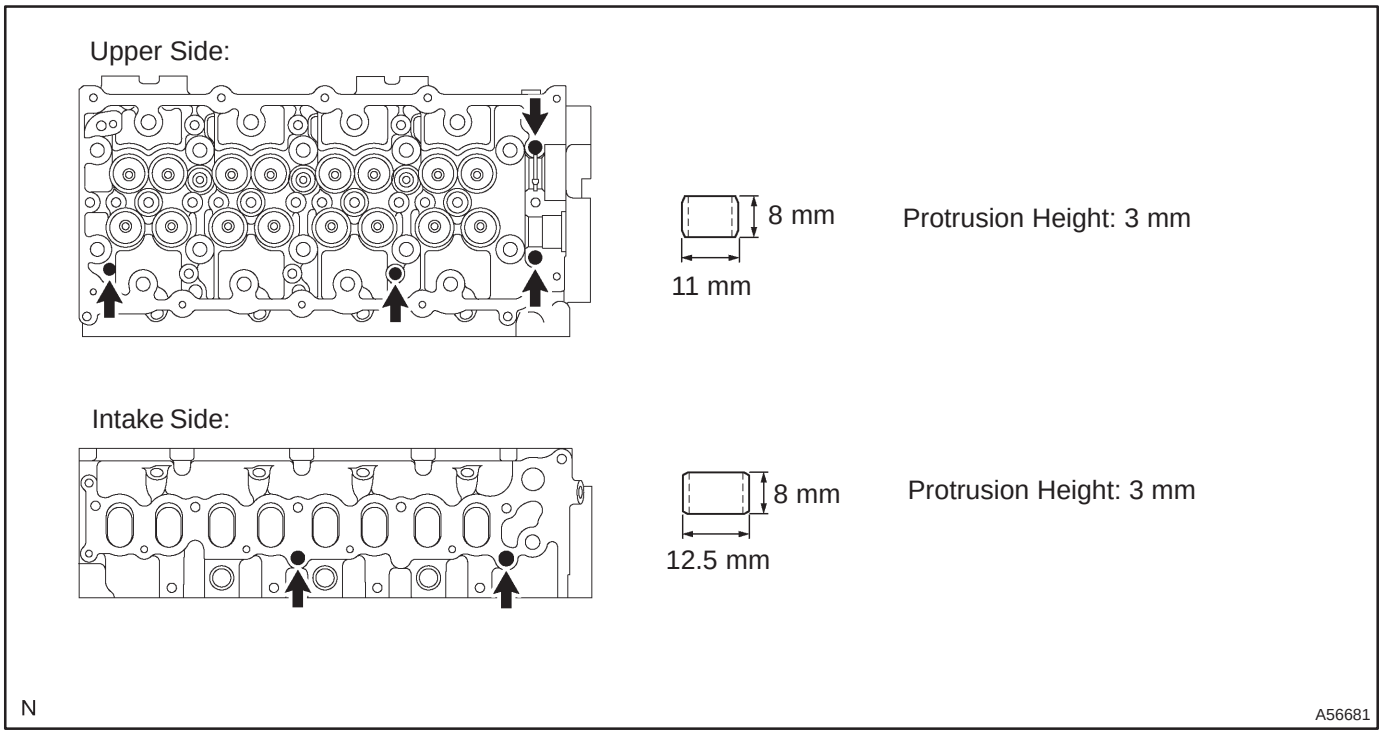
(a) Install the camshafts.



(b) Using a dial indicator, measure the backlash.
Standard backlash:
0.014 – 0.070 mm (0.0006 – 0.0028 in.)
Maximum backlash: 0.17 mm (0.0067 in.)

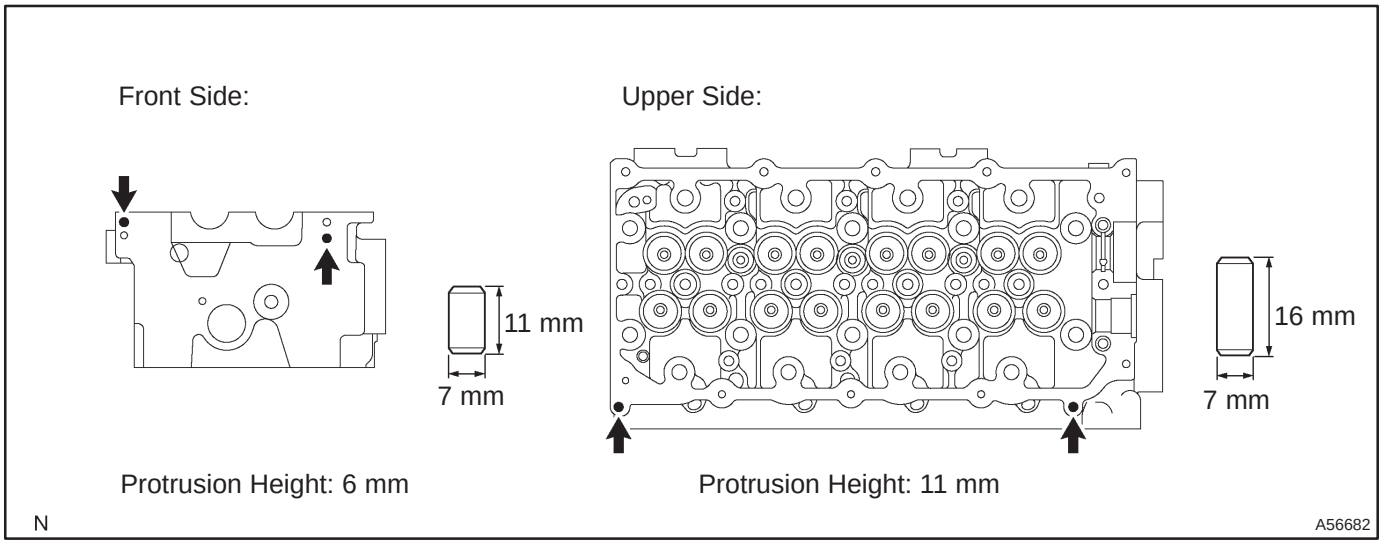
If the backlash is greater then maximum, replace the camshafts.

27. INSTALL TIGHT PLUG



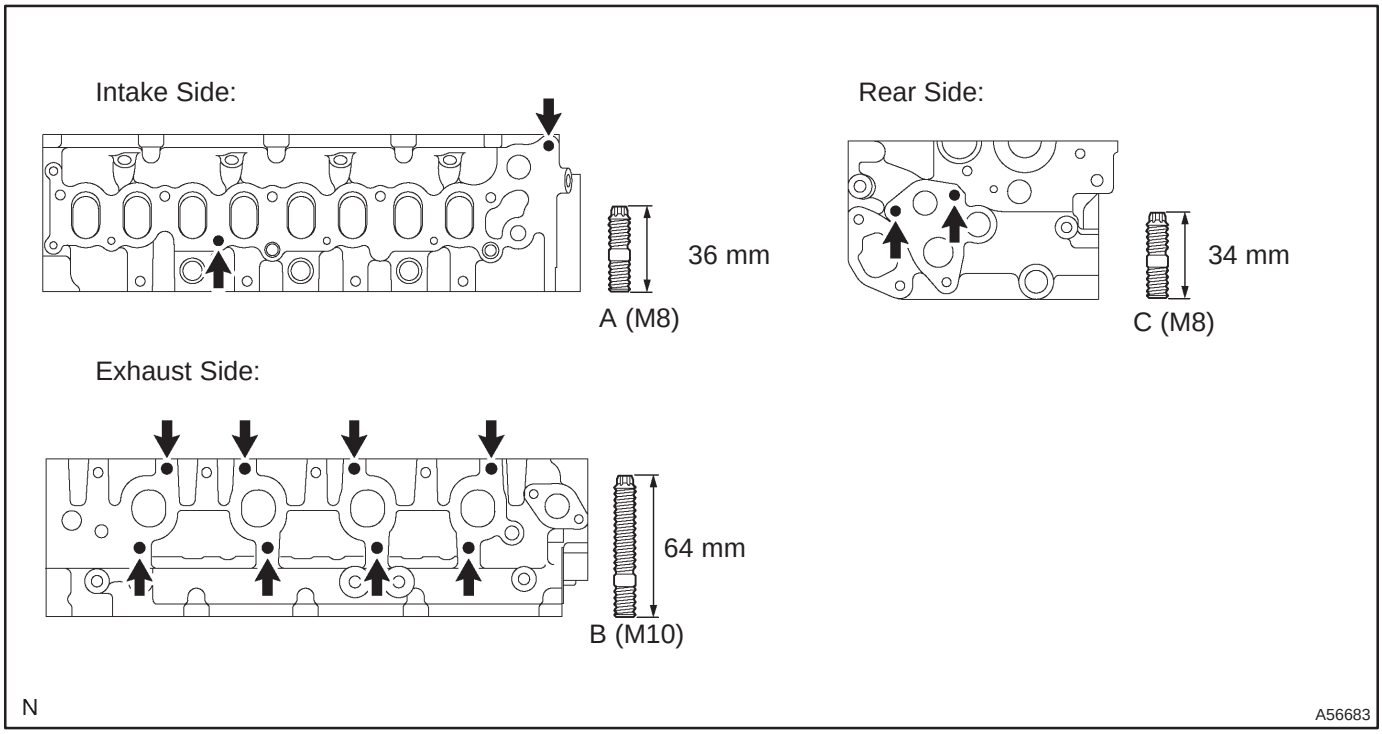
(a) Apply adhesive around tight plugs.
Adhesive: Part No.08833 – 00070, THREE BOND 1324 or equivalent

(b) Using SST, tap in the tight plugs as shown in the illustration.
SST 09950–60010 (09951–00210), 09950–70010 (09951–07100)



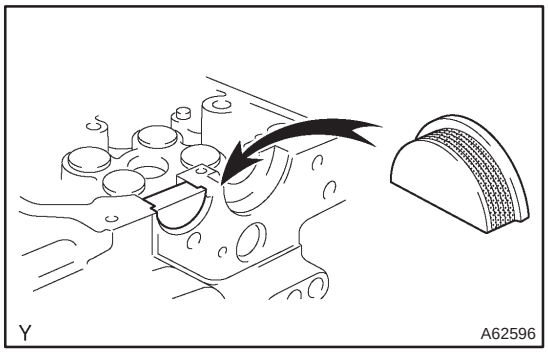
28. INSTALL RING PIN

(a) Using a plastic–faced hammer, tap in new ring pins to the specified protrusion height.



29. INSTALL STRAIGHT PIN

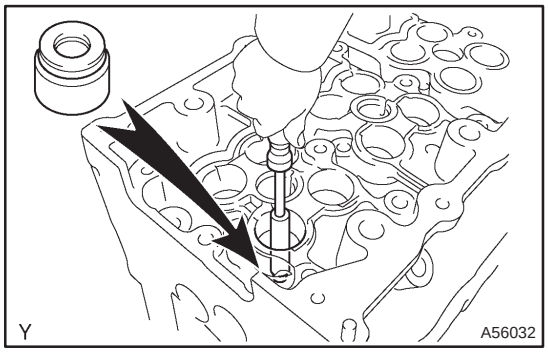
(a) Using a plastic–faced hammer, tap in the straight pin.



30. INSTALL STUD BOLT

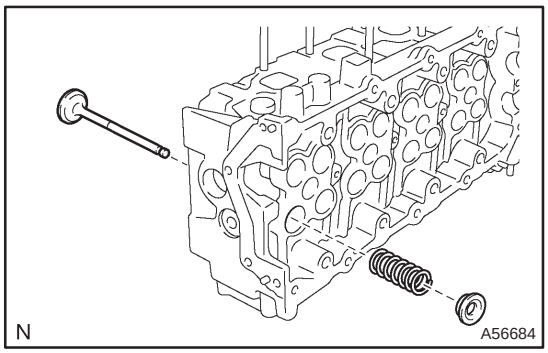
(a) Install the stud bolts as shown in the illustration.
Torque:
Bolt A 8.8N·m (90 kgf·cm, 78 in.·lbf)
Bolt B 12N·m (120 kgf·cm, 9 ft·lbf)
Bolt C 8.8N·m (90 kgf·cm, 78 in.·lbf)

31. INSTALL W/HEAD TAPER SCREW PLUG NO.1



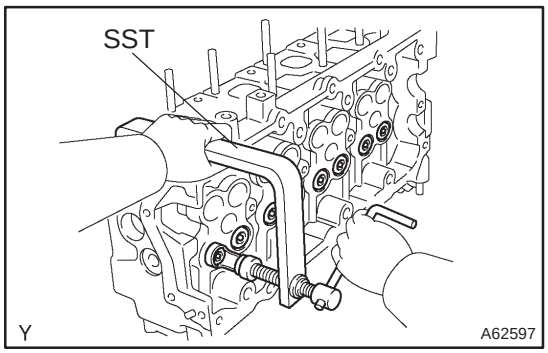
(a) Apply adhesive to the plugs end.
Adhesive: Part No. 08833 – 00070, THREE BOND 1324 or equivalent
(b) Using a hexagon wrench (6 mm), install the 3 plugs.
Torque:25N·m (255 kgf·cm, 18 ft·lbf)
SST 99999–70037

32. INSTALL SEMICIRCULAR PLUG



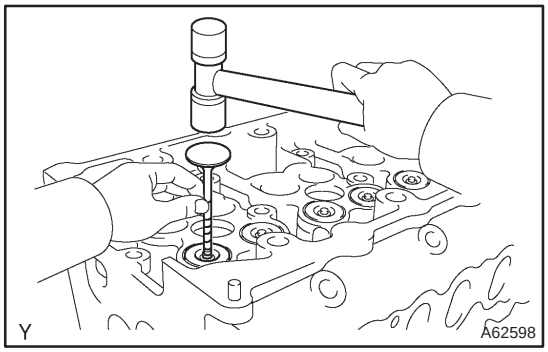
(a) Apply seal packing to the semi–circular plug grooves.
Seal packing: Part No. 08826 – 00080 or equivalent
(b) Install the semi–circular plug to the cylinder head.

33. INSTALL VALVE SPRING SEAT PLATE WASHER



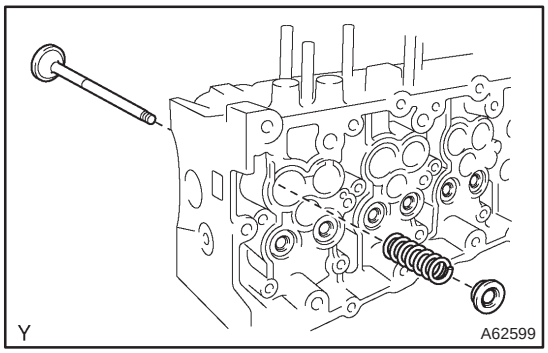
34. INSTALL VALVE STEM OIL O SEAL OR RING

(a) Apply a light coat of engine oil on the valve stem.
(b) Install a new oil seal on the valve guide bushing.

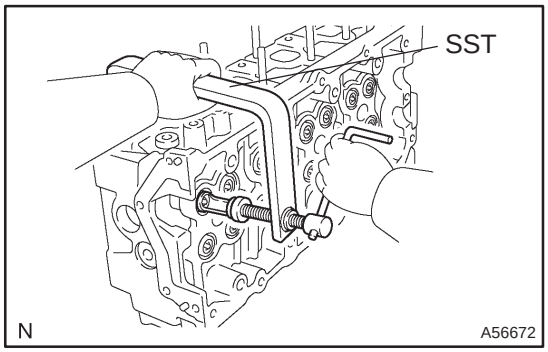


35. INSTALL INTAKE VALVE

(a) Install the valve, valve spring, and spring retainer.

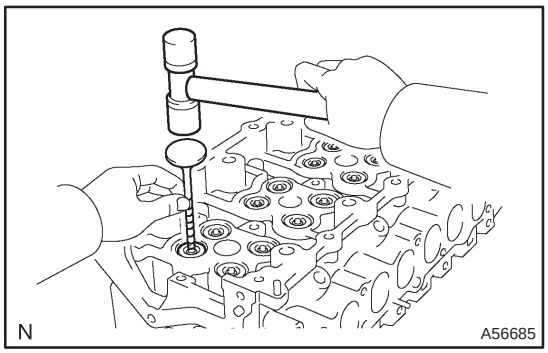


(b) Using SST, compress the valve spring and place the 2 keepers around the valve stem.
SST 09202–70020 (09202–00010)



(c) Using a plastic–faced hammer and the valve stem (not in use) tip wound with vinyl tape, lightly tap the valve stem tip to ensure a proper fit.

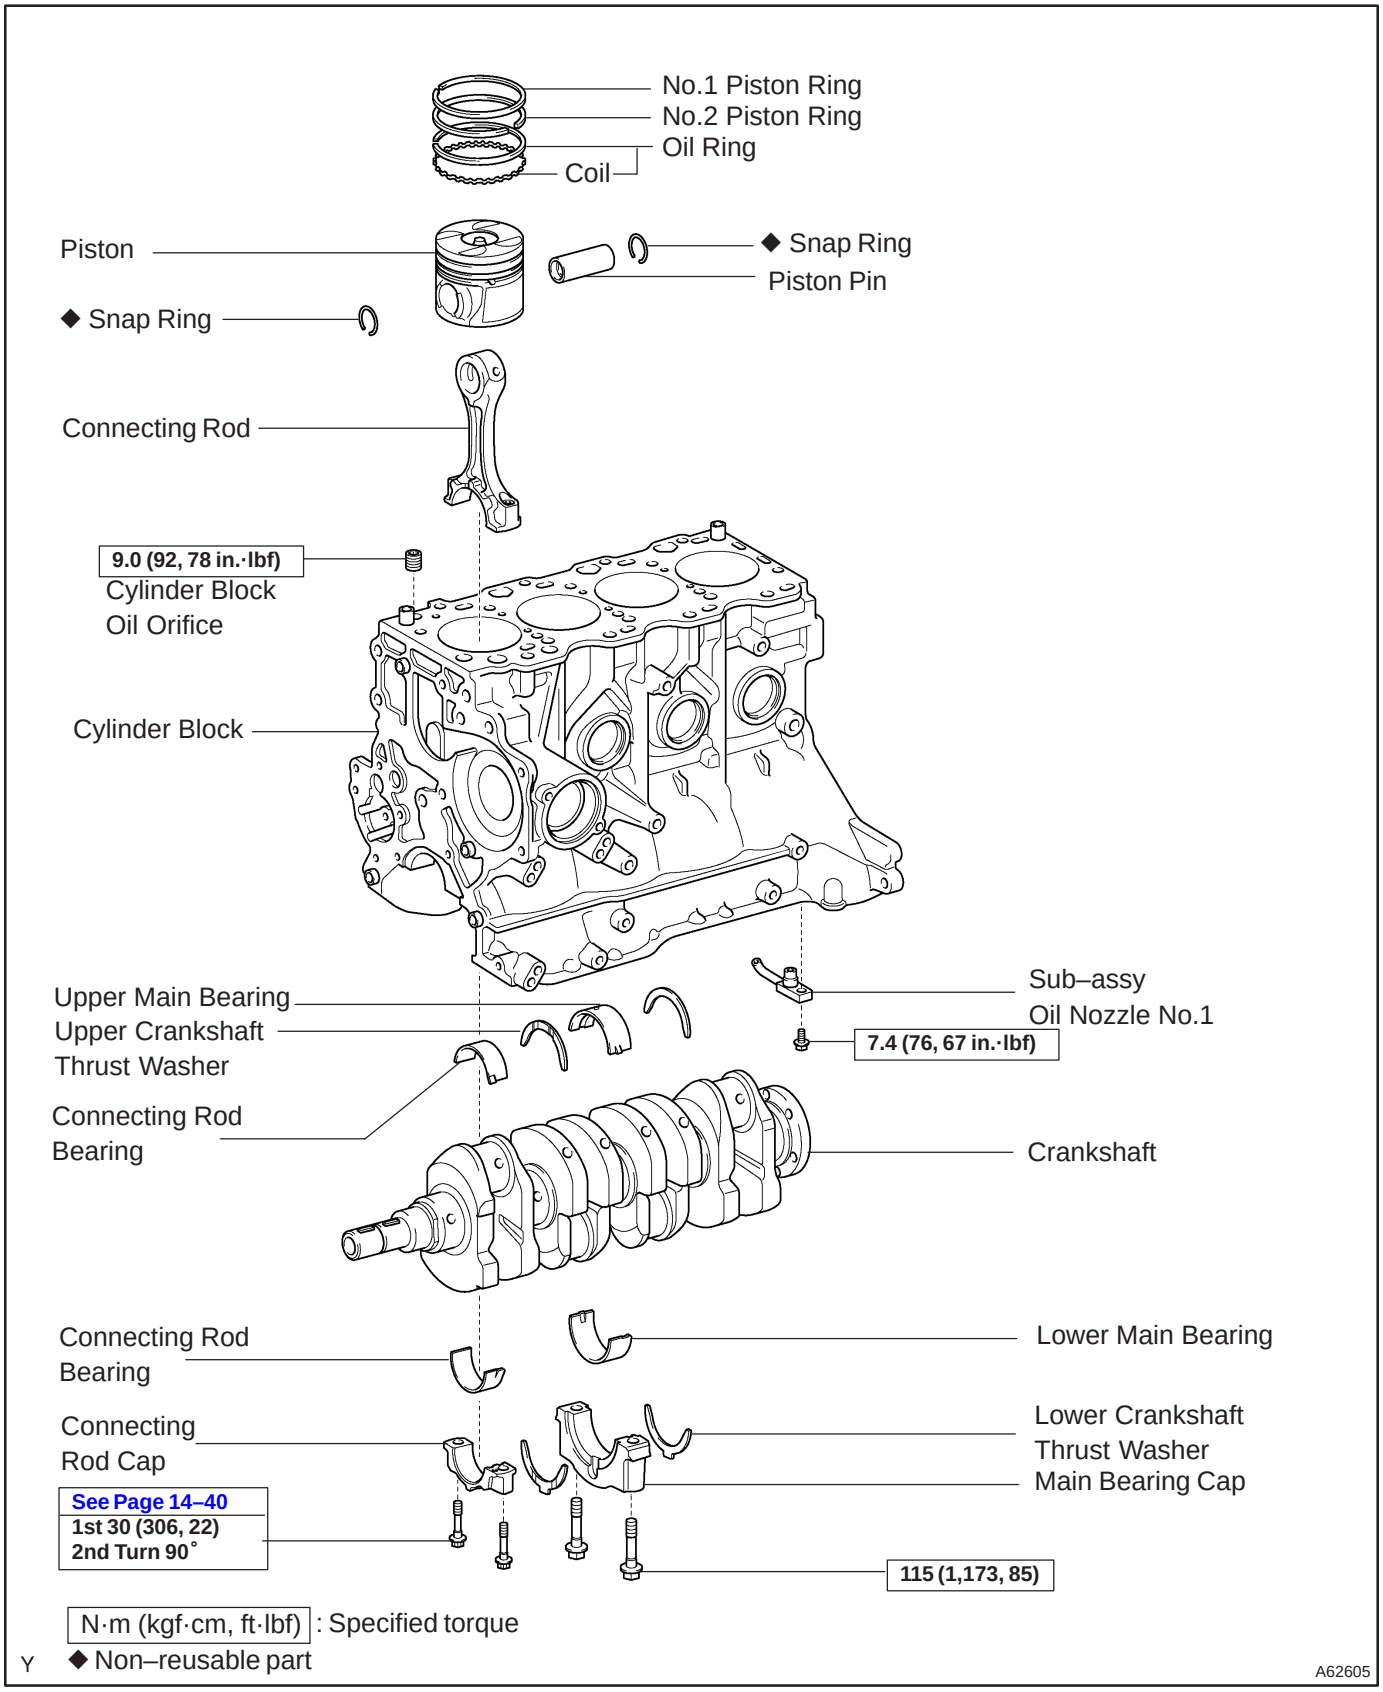
NOTICE:
Be careful not to damage the valve stem tip.



36. INSTALL EXHAUST VALVE

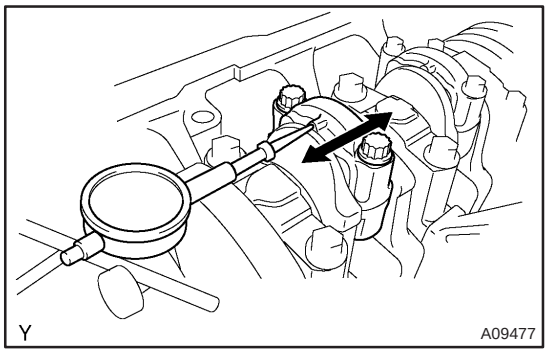
(a) Install the valve, valve spring, and spring retainer.

(b) Using SST, compress the valve spring and place the 2 keepers around the valve stem.
SST 09202–70020 (09202–00010)



(c) Using a plastic–faced hammer and the valve stem (not in use) tip wound with vinyl tape, lightly tap the valve stem tip to assure proper fit.

NOTICE:
Be careful not to damage the valve stem tip.

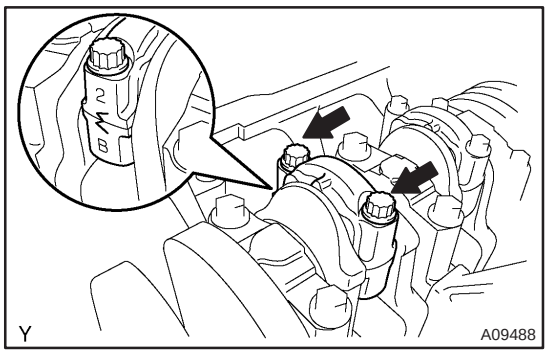


CYLINDER BLOCK (1CD–FTV)

COMPONENTS

140L6–01

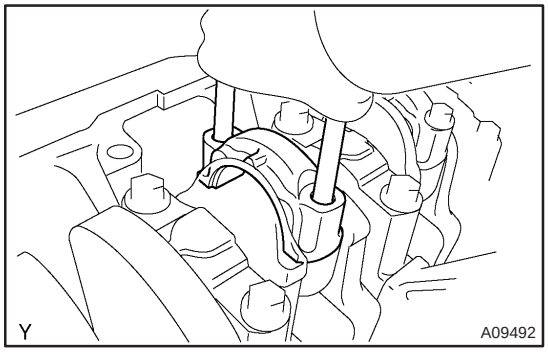
OVERHAUL



1. INSPECT CONNECTING ROD THRUST CLEARANCE

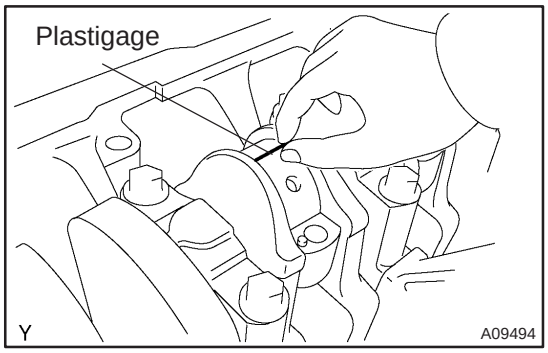
(a) Using a dial indicator, measure the thrust clearance while moving the connecting rod back and forth.

Standard thrust clearance:
0.08 – 0.30 mm (0.0031 – 0.0118 in.)
Maximum thrust clearance: 0.40 mm (0.0157 in.)



If the thrust clearance is greater then maximum, replace the connecting rod assembly(s). If necessary, replace the crankshaft.

2. INSPECT CONNECTING ROD OIL CLEARANCE

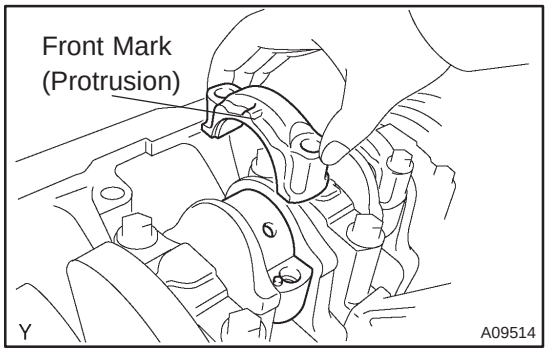


(a) Check the matchmarks on the connecting rod and cap to ensure correct reassembly.

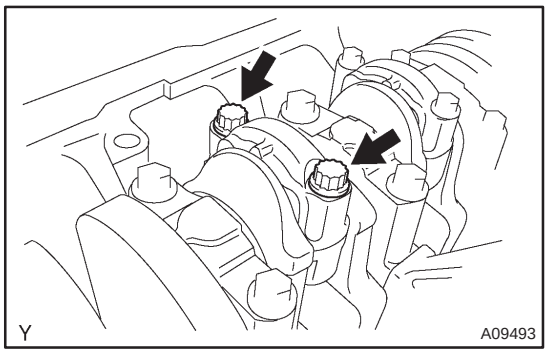
(b) Remove the 2 connecting rod cap bolts.

(c) Using 2 removed connecting rod cap bolts, remove the connecting rod cap and lower bearing by wiggling the connecting rod cap right and left.

HINT:
Keep the lower bearing inserted with the connecting rod cap.



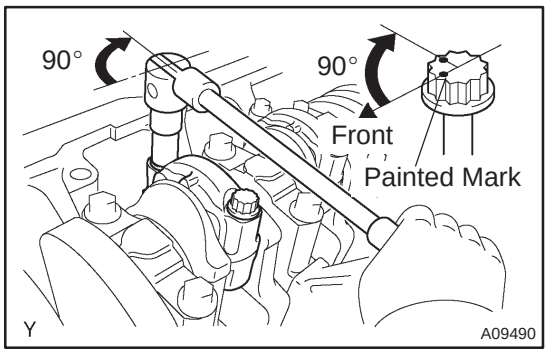
(d) Clean the crank pin and bearing.



(e) Check the crank pin and bearing for pits and scratches.

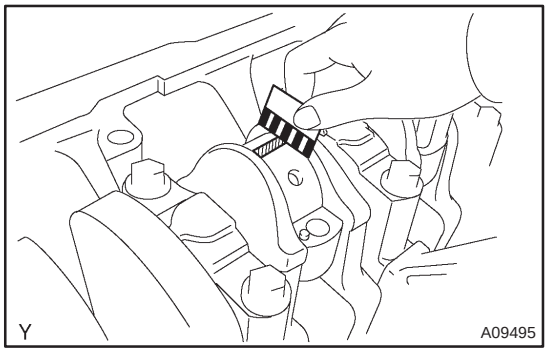
If the crank pin or bearing is damaged, replace the bearings. If necessary, replace the crankshaft.

(f) Lay a strip of plastigage across the crank pin.



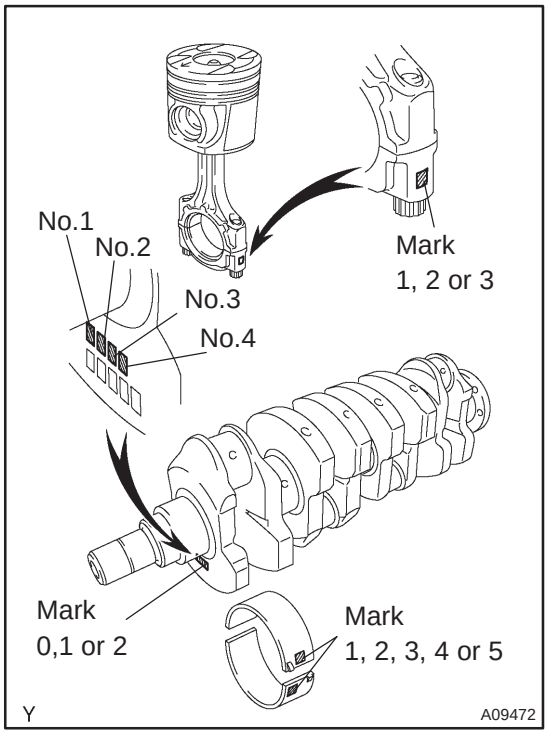
(g) Match the numbered connecting rod cap with the connecting rod.
(h) Install the connecting rod cap with the front mark facing forward.
(i) Apply a light coat of engine oil on the threads and under the heads of the connecting rod cap bolts.

(j) Install and alternately tighten the 2 cap bolts in several passes.
Torque: 30 N·m (306 kgf·cm, 22 ft·lbf)



If any of the cap bolts does not meet the torque specification, replace the connecting rod cap bolts.

(k) Mark the front of the cap bolt with the paint.
(l) Retighten the cap bolts 90° as shown.
(m) Check that the painted mark is now at a 90° angle to the front.



NOTICE:
Do not turn the crankshaft.

(n) Remove the 2 bolts, connecting rod cap and lower bearing.

(o) Measure the Plastigage at its widest point.
Standard oil clearance:
0.038 – 0.056 mm (0.0015 – 0.0022 in.)
Maximum oil clearance: 0.10 mm (0.0039 in.)

If the oil clearance is greater than maximum, replace the bearings. If necessary, replace the crankshaft.

(p) If using a standard bearing, replace it with one having the same number. If the number of the bearing cannot be determined, select the correct bearing by adding together the numbers imprinted on the crankshaft and connecting rod cap, then select the bearing with the same number as the total. There are 5 sizes of standard bearings, marked "1", "2", "3", "4" and "5" accordingly.

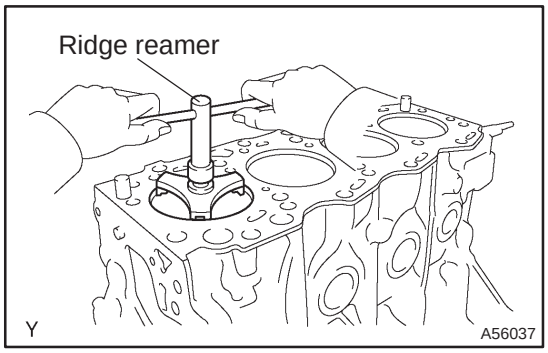
Connecting rod cap	Crankshaft	Use bearing
1	0	1
1	1	2
1	2	3
2	0	2
2	1	3
2	2	4
3	0	3
3	1	4
3	2	5

HINT:

EXAMPLE: Connecting rod cap "2" + Crankshaft "1"
= total number 3 (Use bearing "3")

Connecting rod big end inside diameter:

Mark "1"	53.500 – 53.506 mm (2.1063 – 2.1065 in.)
Mark "2"	53.506 – 53.512 mm (2.1065 – 2.1068 in.)
Mark "3"	53.512 – 53.518 mm (2.1068 – 2.1070 in.)



Crankshaft crank pin diameter:

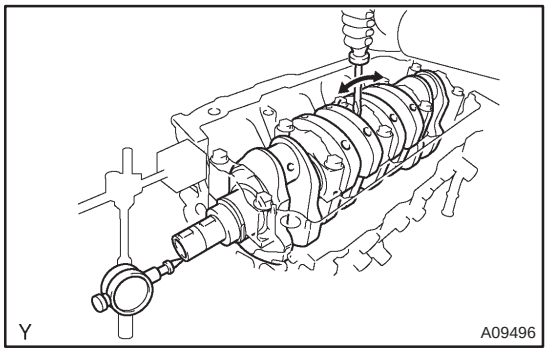
Mark "0"	50.494 – 50.500 mm (1.9880 – 1.9882 in.)
Mark "1"	50.488 – 50.494 mm (1.9877 – 1.9880 in.)
Mark "2"	50.482 – 50.488 mm (1.9875 – 1.9877 in.)

Standard sized bearing center wall thickness:

Mark "1"	1.478 – 1.481 mm (0.0582 – 0.0583 in.)
Mark "2"	1.481 – 1.484 mm (0.0583 – 0.0584 in.)
Mark "3"	1.484 – 1.487 mm (0.0584 – 0.0585 in.)
Mark "4"	1.487 – 1.490 mm (0.0585 – 0.0587 in.)
Mark "5"	1.490 – 1.493 mm (0.0587 – 0.0588 in.)

(q) Completely remove the Plastigage.

3. REMOVE PISTON SUB–ASSY W/CONNECTING ROD



(a) Using a ridge reamer, remove all the carbon from the top of the cylinder.

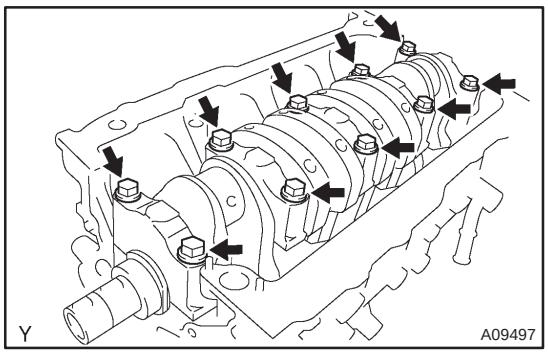
(b) Push the piston, connecting rod assembly and upper bearing through the top of the cylinder block.

HINT:

- Keep the bearing, connecting rod and cap together.
- Arrange the piston and connecting rod assemblies in the correct order.

4. REMOVE CONNECTING ROD BEARING

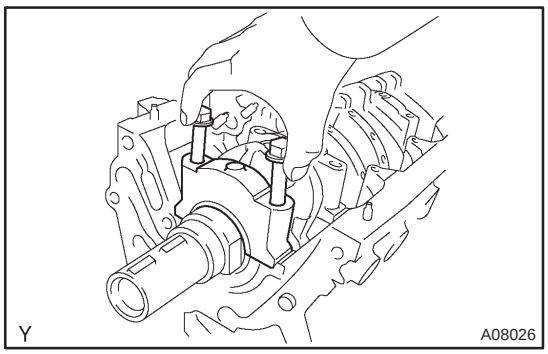
5. INSPECT CRANKSHAFT THRUST CLEARANCE



(a) Using a dial indicator, measure the thrust clearance while prying the crankshaft back and forth with a screwdriver.

Standard thrust clearance:
0.040 – 0.240 mm (0.0016 – 0.0009 in.)
Maximum thrust clearance: 0.30 mm(0.0118 in.)

If the thrust clearance is greater then maximum, replace the thrust washer as a set.



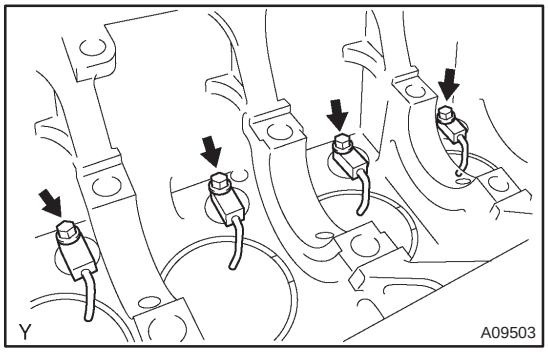
Thrust washer thickness:

STD	2.680 – 2.730 mm (0.1055 – 0.1075 in.)
O/S 0.125	2.743 – 2.793 mm (0.1080 – 0.1100 in.)
O/S 0.250	2.805 – 2.855 mm (0.1104 – 0.1124 in.)

6. REMOVE CRANKSHAFT

(a) Uniformly loosen and remove the 10 main bearing cap bolts.

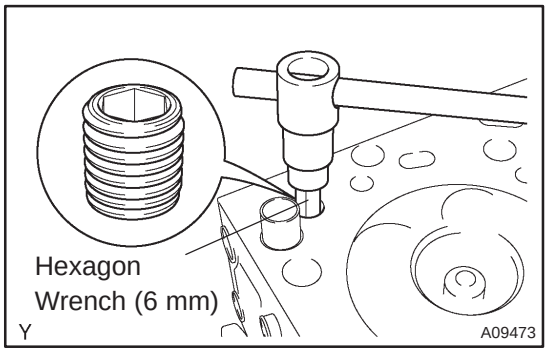
(b) Using the removed main bearing cap bolts, wiggle the cap back and forth, and remove the 5 main bearing caps, 5 lower bearings and 2 lower thrust washers (No. 3 main bearing cap only).



HINT:

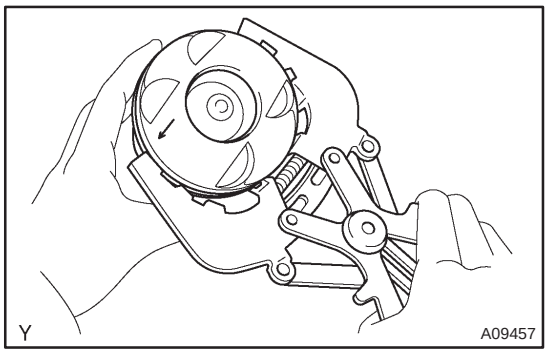
- Keep the lower bearing and main bearing cap together.
- Arrange the main bearing caps and lower thrust washers in the correct order.

(c) Lift out the crankshaft.



HINT:

Keep the upper bearing and upper thrust washers together with the cylinder block.



7. REMOVE SUB–ASSY OIL NOZZLE NO.1

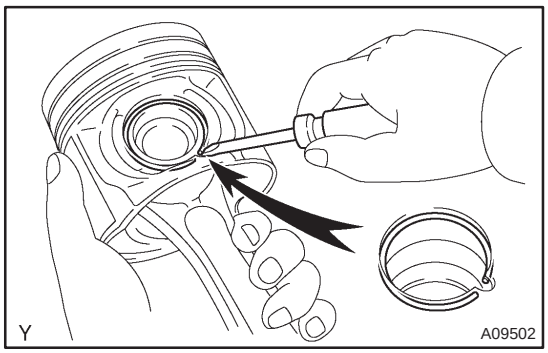
(a) Remove the bolt and 4 oil nozzles.

8. REMOVE CYLINDER BLOCK OIL ORIFICE

(a) Using a hexagon wrench (6 mm), remove the oil orifice.

9. REMOVE PISTON RING SET

(a) Using a piston ring expander, remove the No. 1 piston ring, No. 2 piston ring and oil ring.

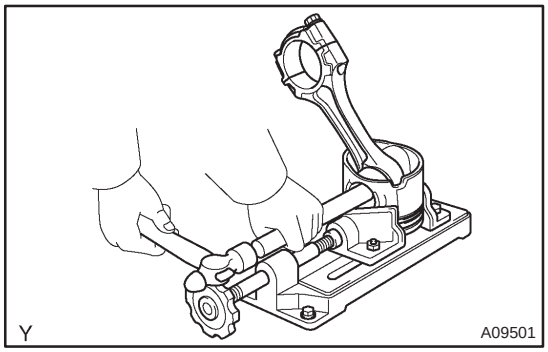


NOTICE:

Make the expansion of the piston ring as small as necessary.

(b) Remove the coil by hand.

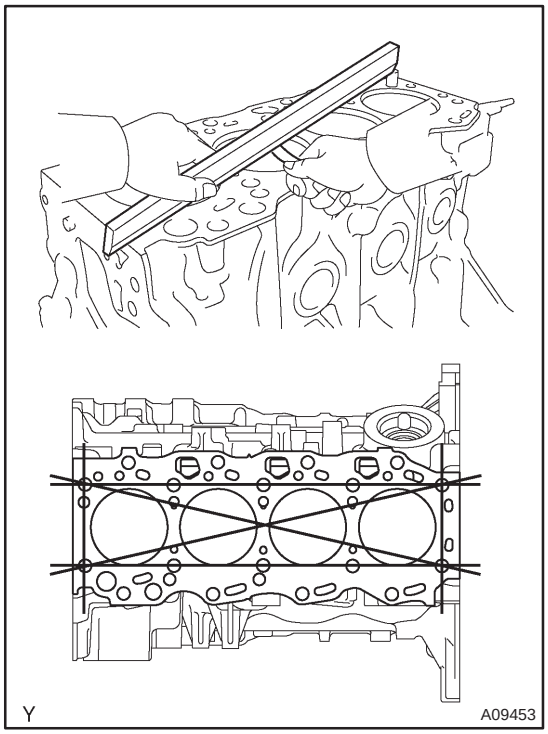
HINT:



Arrange the piston rings in correct order.

10. REMOVE W/PIN PISTON SUB–ASSY

(a) Using a small screwdriver, pry off the snap rings from the piston.

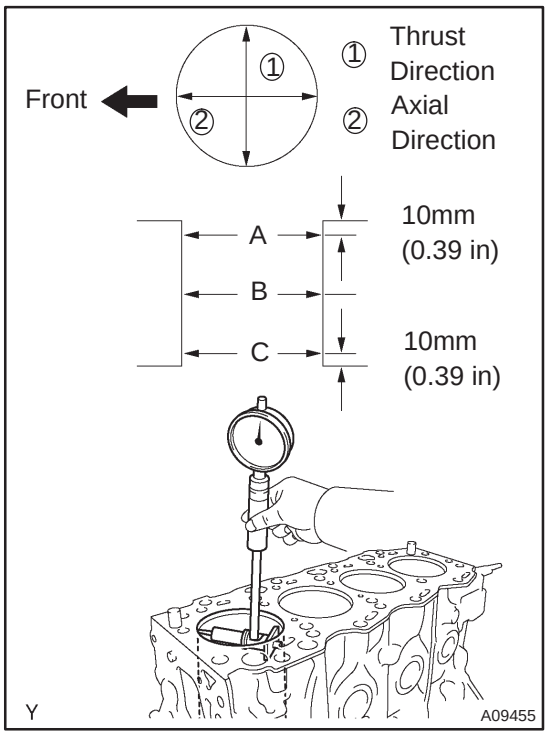


(b) Gradually heat the piston to approx. 60°C (140°F).

(c) Using a plastic–faced hammer and brass bar, lightly tap out the piston pin and remove the connecting rod.

HINT:

- The piston and pin are a matched set.
- Arrange the pistons, pins, rings, connecting rods and bearings in the correct order.

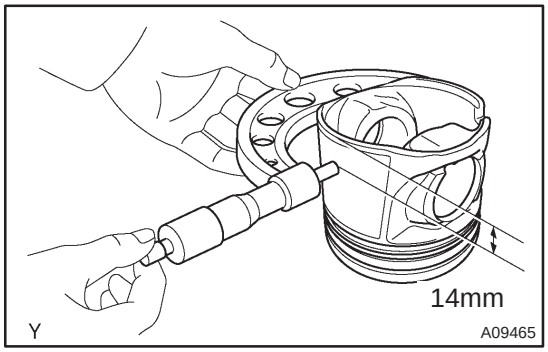


11. INSPECT CYLINDER BLOCK FOR FLATNESS

(a) Using a precision straight edge and feeler gauge, measure the surface contacting the cylinder head gasket for warpage.

Maximum warpage: 0.05 mm (0.0020 in.)

If warpage is greater than maximum, replace the cylinder block.

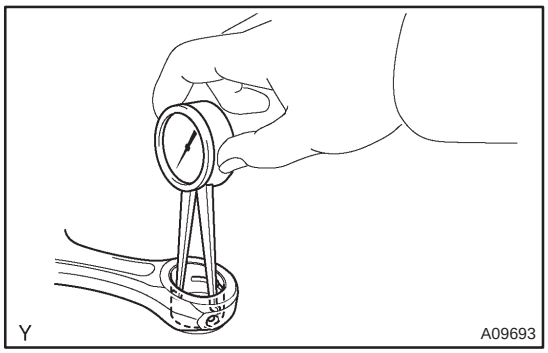


12. INSPECT CYLINDER BORE

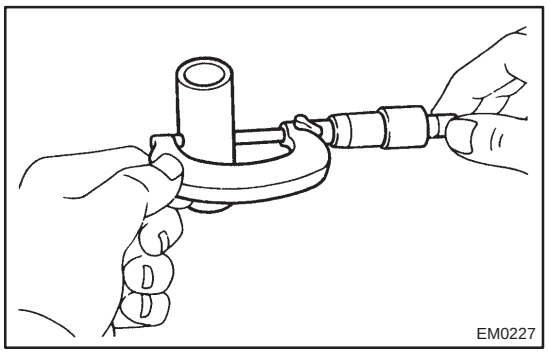
(a) Using a cylinder gauge, measure the cylinder bore diameter at the positions A, B and C in the thrust and axial directions.

Standard diameter:
82.200 – 82.213 mm (3.2362 – 3.2367 in.)
Maximum diameter: 82.400 mm (3.2441 in.)

If the diameter is greater than maximum, replace the cylinder block.



13. INSPECT W/PIN PISTON SUB–ASSY

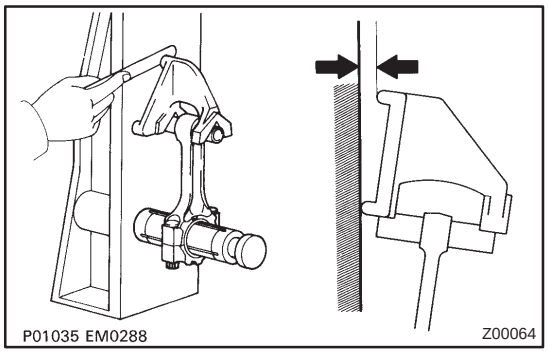


(a) Using a micrometer, measure the piston diameter at a right angles to the piston pin center line, 14 mm (0.55 in.) below the skirt bottom edge.

Piston diameter:
82.118 – 82.132 mm (3.2330 – 3.2335 in.)

(b) Subtract the piston diameter measurement from the cylinder bore diameter measurement.
Standard oil clearance:
0.068 – 0.095 mm (0.0027 – 0.0037 in.)
Maximum oil clearance: 0.14 mm (0.0055 in.)
If the oil clearance is greater than maximum, replace all the 4 pistons. If necessary, replace the cylinder block.

(c) Using a caliper gauge, measure the inside diameter of the connecting rod bushing.
Bushing inside diameter:
31.015 – 31.027 mm (1.2211 – 1.2215 in.)

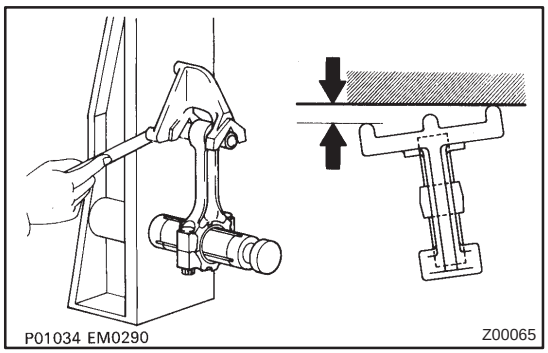


(d) Using a micrometer, measure the piston pin diameter.
Piston pin diameter:
31.000 – 31.012 mm (1.2205 – 1.2209 in.)

(e) Subtract the piston pin diameter measurement from the bushing inside diameter measurement.
Standard oil clearance:
0.003 – 0.027 mm (0.0001 – 0.0011 in.)
Maximum oil clearance: 0.025 mm (0.0010 in.)
If the oil clearance is greater than maximum, replace the connecting rod. If necessary, replace the piston and piston pin as a set.

14. INSPECT CONNECTING ROD SUB–ASSY

(a) Using a rod aligner and feeler gauge, check the connecting rod alignment.

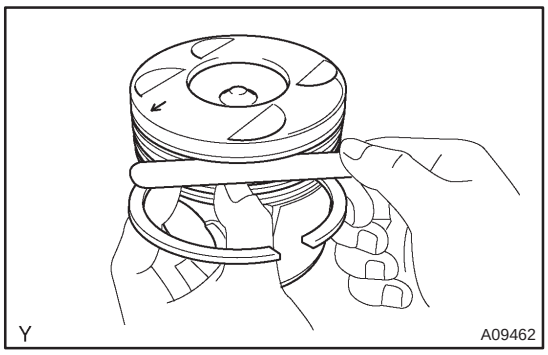


(1) Check for out–of–alignment.

Maximum out–of alignment:

0.05 mm (0.0020 in.) per 100 mm (3.94 in.)

If out–of alignment is greater than maximum, replace the connecting rod assembly.



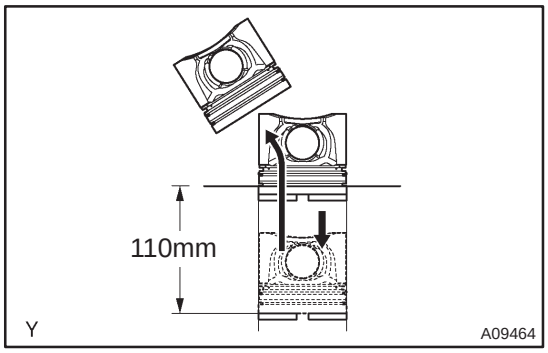
(2) Check for twist.

Maximum twist:

0.15 mm (0.0059 in.) per 100 mm (3.94 in.)

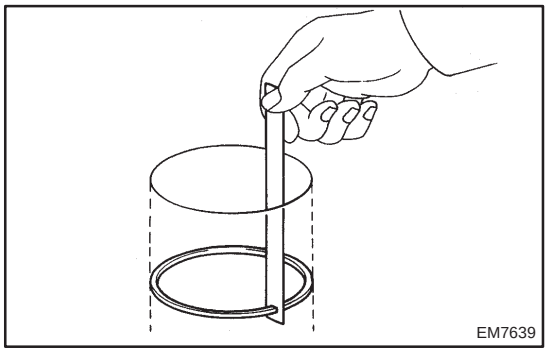
If twist is greater than maximum, replace the connecting rod assembly.

15. INSPECT RING GROOVE CLEARANCE



(a) Using a feeler gauge, measure the clearance between new piston ring and wall of the ring groove.

Ring groove clearance:



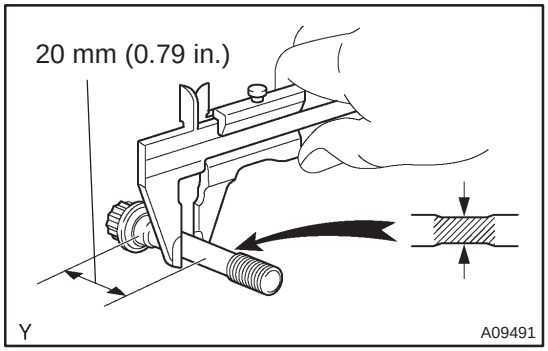
No. 1	0.08 – 0.12 mm (0.0031 – 0.0047 in.)
No. 2	0.05 – 0.09 mm (0.0020 – 0.0035 in.)
Oil	0.03 – 0.07 mm (0.0012 – 0.0028 in.)

If the clearance is not as specified, replace the piston.

16. INSPECT PISTON RING END GAP

(a) Using a piston, push the piston ring a little beyond the bottom of the ring travel, 110 mm (4.33 in.) from the top of the cylinder block.

(b) Using a feeler gauge, measure the end gap.



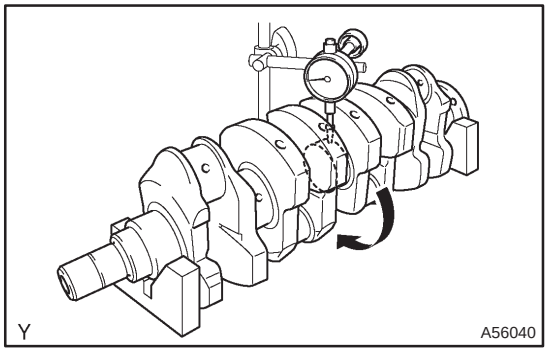
Standard end gap:

No. 1	0.27 – 0.43 mm (0.0106 – 0.0169 in.)
No. 2	0.39 – 0.58 mm (0.0154 – 0.0228 in.)
Oil	0.20 – 0.44 mm (0.0079 – 0.0173 in.)

Maximum end gap:

No. 1	0.82 mm (0.0323 in.)
No. 2	1.00 mm (0.0394 in.)
Oil	0.90 mm (0.0354 in.)

If the end gap is greater than maximum, replace the piston ring.
If the end gap is greater than maximum, even with a new piston ring, replace the cylinder block.

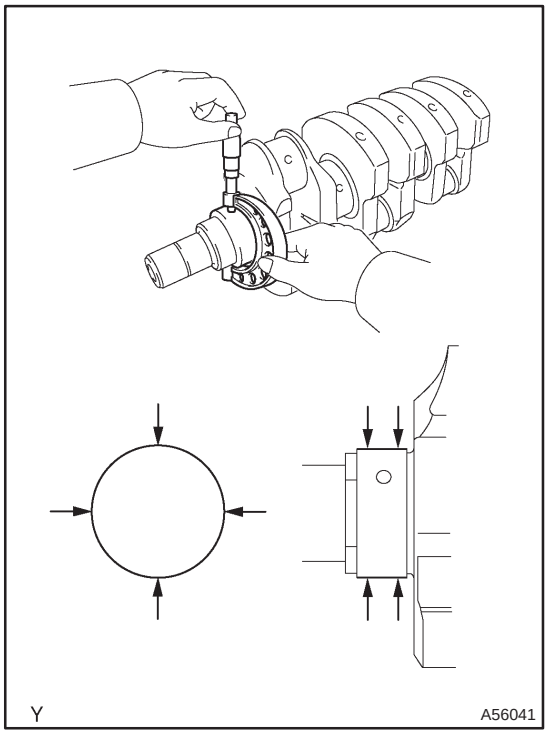


17. INSPECT CONNECTING ROD BOLT

(a) Using vernier calipers, measure the tension portion diameter.

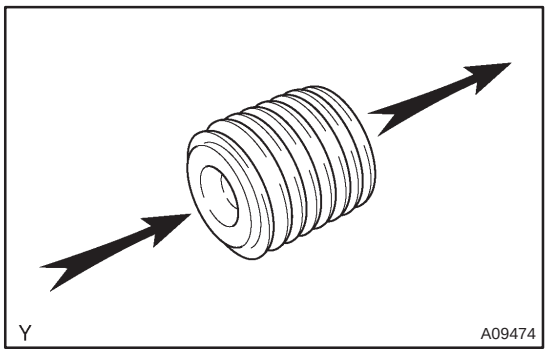
Standard diameter:
8.2 – 8.3 mm (0.323 – 0.327 in.)
Minimum diameter: 8.0 mm (0.315 in.)

If the diameter is less than minimum, replace the connecting rod bolt.



18. INSPECT CRANKSHAFT

(a) Place the crankshaft on V–blocks.
(b) Using a dial indicator, measure the circle runout at the center journal.

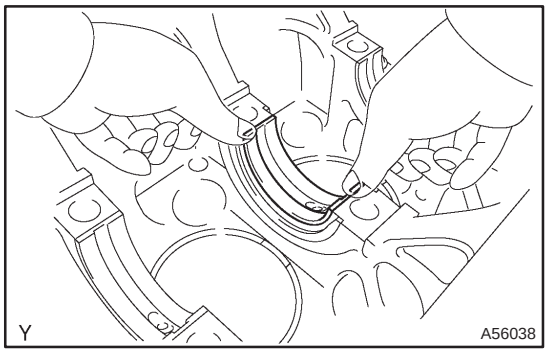


Maximum circle runout: 0.025 mm (0.0010 in.)

If the circle runout is greater than maximum, replace the crankshaft.

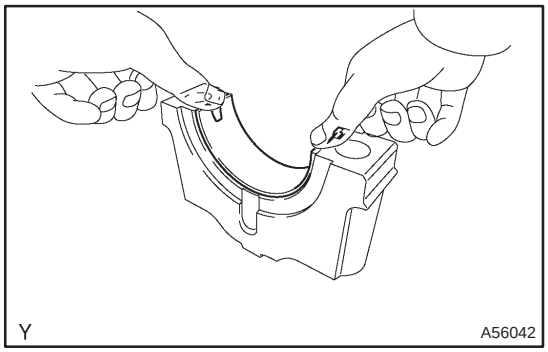
(c) Using a micrometer, measure the diameter of each main journal and crank pin.
Main journal diameter:
56.992 – 57.010 mm (2.2438 – 2.2445 in.)
Crank pin diameter:
50.482 – 50.500 mm (1.9875 – 1.9882 in.)
If the diameter is not as specified, replace the crankshaft.

(d) Check each main journal and crank pin for taper and out–of–round as shown.
Maximum taper and out–of–round:
0.01 mm (0.0004 in.)
If the taper and out–of–round is greater than maximum, replace the crankshaft.



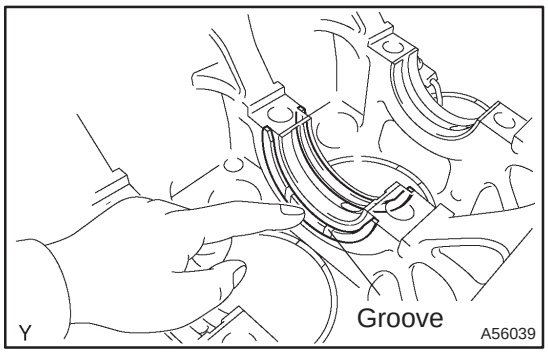
19. INSPECT CYLINDER BLOCK OIL ORIFICE

(a) Check the oil orifice for clogging.
If necessary, replace the oil orifice.

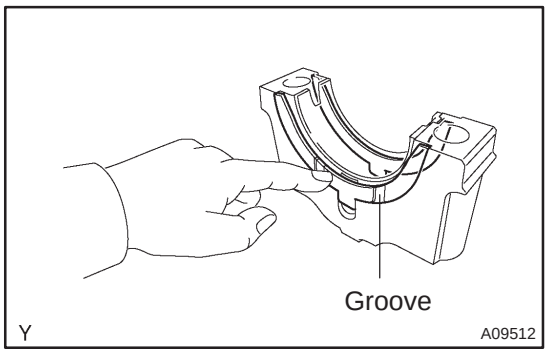


20. INSPECT CRANKSHAFT OIL CLEARANCE

(a) Clean each main journal and bearing.

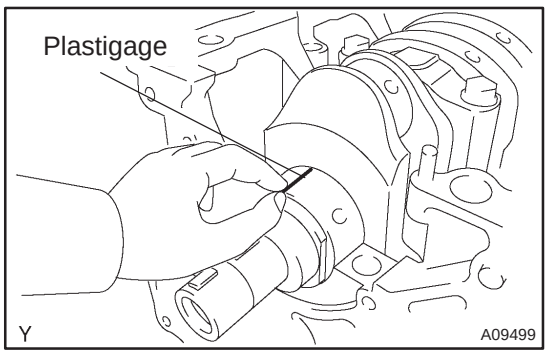


(b) Install the bearing on the cylinder block and bearing cap.
HINT:
Upper bearings have an oil groove and oil holes; lower bearings do not.

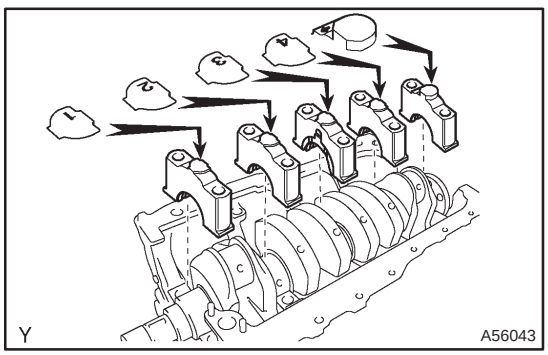


(1) Align the bearing claw with the claw groove of the cylinder clock, and push in the 5 upper bearings.

(2) Align the bearing claw with the claw groove of the main bearing cap, and push in the 5 lower bearings.

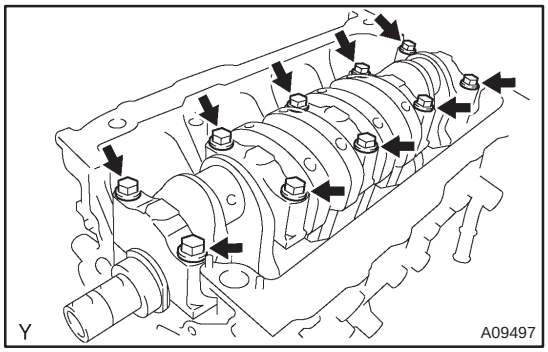


(c) Install the 2 thrust washers under the No. 3 journal position of the cylinder block with the oil grooves facing outward.



(d) Install the 2 thrust washers on the No. 3 bearing cap with the oil grooves facing outward.

(e) Place the crankshaft on the cylinder block.



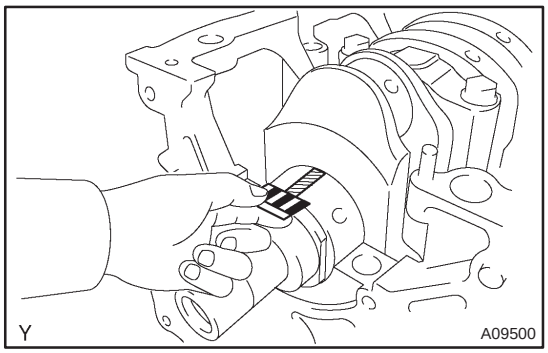
(f) Lay a strip of Plastigage across each journal.

(g) Install the 5 main bearing caps in their proper locations.

HINT:

Each bearing cap has a number and a front mark.

(h) Apply a light coat of engine oil on the threads and under the heads of the main bearing cap bolts.



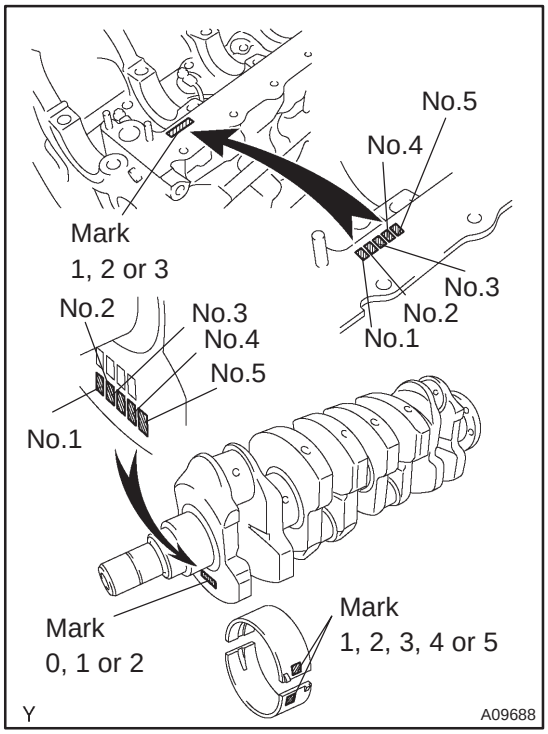
(i) Install and uniformly tighten the 10 bolts of the main bearing cap in several passes.

Torque: 115 N·m (1,173 kgf·cm, 85 ft·lbf)

NOTICE:

Do not turn the crankshaft.

(j) Remove the bearing cap.



(k) Measure the Plastigage at its widest point.

Standard oil clearance:

0.026 – 0.044 mm (0.0010 – 0.0017 in.)

Maximum oil Clearance: 0.10 mm (0.0039 in.)

If the oil clearance is greater then maximum, replace the bearings. If necessary, replace the crankshaft.

(l) If using a standard bearing, replace it with one having the same number. If the number of the bearing cannot be determined, select the correct bearing by adding together the numbers imprinted on the cylinder block and crankshaft, then select the bearing with the same number as the total. There are 5 sizes of standard bearings, marked ”1”, ”2”, ”3”, ”4” and ”5” accordingly.

Number Marked

Cylinder block	Crankshaft	Use bearing
1	0	1
1	1	2
1	2	3
2	0	2
2	1	3
2	2	4
3	0	3
3	1	4
3	2	5

HINT:

EXAMPLE

Cylinder block ”2” + Crankshaft ”1” = Total number 3 (Use bearing ”3”)

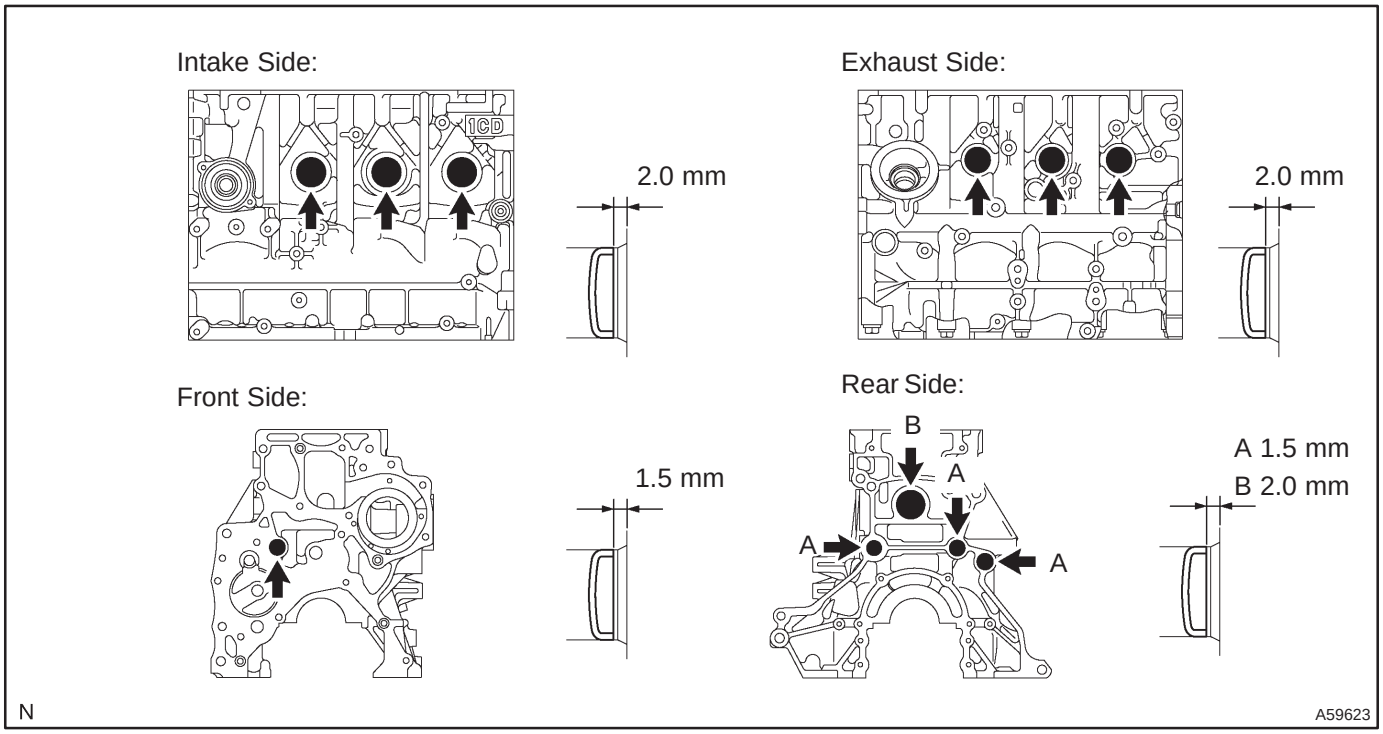
Cylinder block main journal bore diameter:

Mark ”1”	61.000 – 61.006 mm (2.4016 – 2.4018 in.)
Mark ”2”	61.006 – 61.012 mm (2.4018 – 2.4020 in.)
Mark ”3”	61.012 – 61.018 mm (2.4020 – 2.4023 in.)

Crankshaft main journal diameter:

Mark ”0”	57.004 – 57.010 mm (2.2442 – 2.2445 in.)
Mark ”1”	56.998 – 57.004 mm (2.2440 – 2.2442 in.)
Mark ”2”	56.992 – 56.998 mm (2.2438 – 2.2440 in.)

Standard sized bearing center wall thickness:



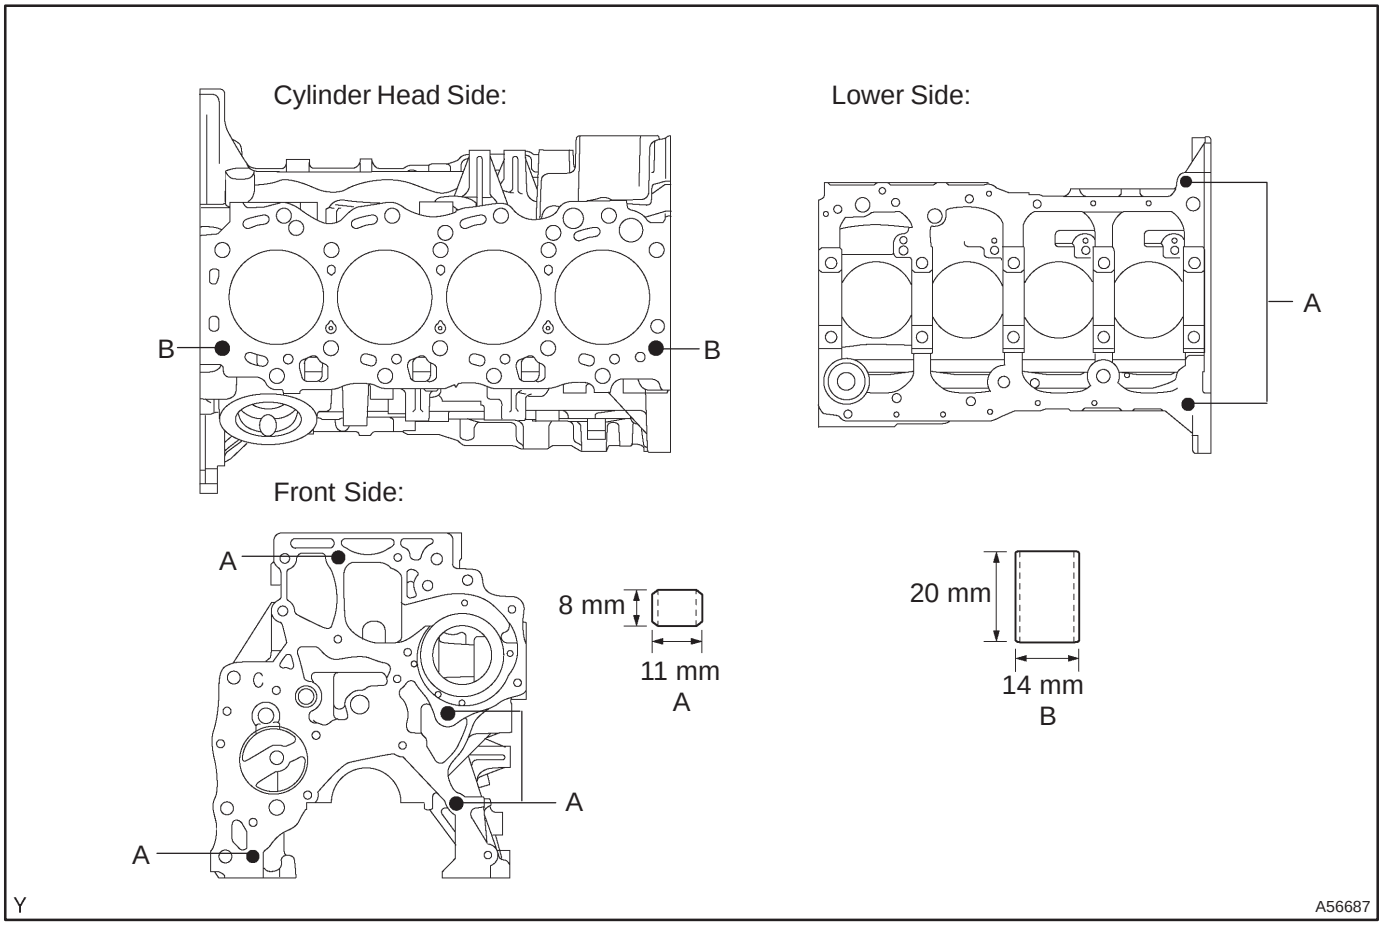
Mark ”1”	1.976 – 1.979 mm (0.0778 – 0.0779 in.)
Mark ”2”	1.979 – 1.982 mm (0.0779 – 0.0780 in.)
Mark ”3”	1.982 – 1.985 mm (0.0780 – 0.0781 in.)
Mark ”4”	1.985 – 1.988 mm (0.0781 – 0.0783 in.)
Mark ”5”	1.988 – 1.991 mm (0.0783 – 0.0784 in.)

(m) Completely remove the Plastigage.

21. INSTALL TIGHT PLUG

(a) Apply adhesive around tight plugs.
Adhesive: Part No.08833 – 00070, THREE BOND 1324 or equivalent.

(b) Using SST, tap to the tight plugs as shown tn the illustration.
SST 09950–60010 (09951–00350), 09950–70010 (09951–07100)
Standard depth:
Intake side: 2.0 mm (0.0787 in.)
Exhaust side: 2.0 mm (0.0787 in.)
Front side: 1.5 mm (0.0590 in.)
Rear side A: 1.5 mm (0.0590 in.)
B: 2.0 mm (0.0787 in.)



22. INSTALL RING PIN

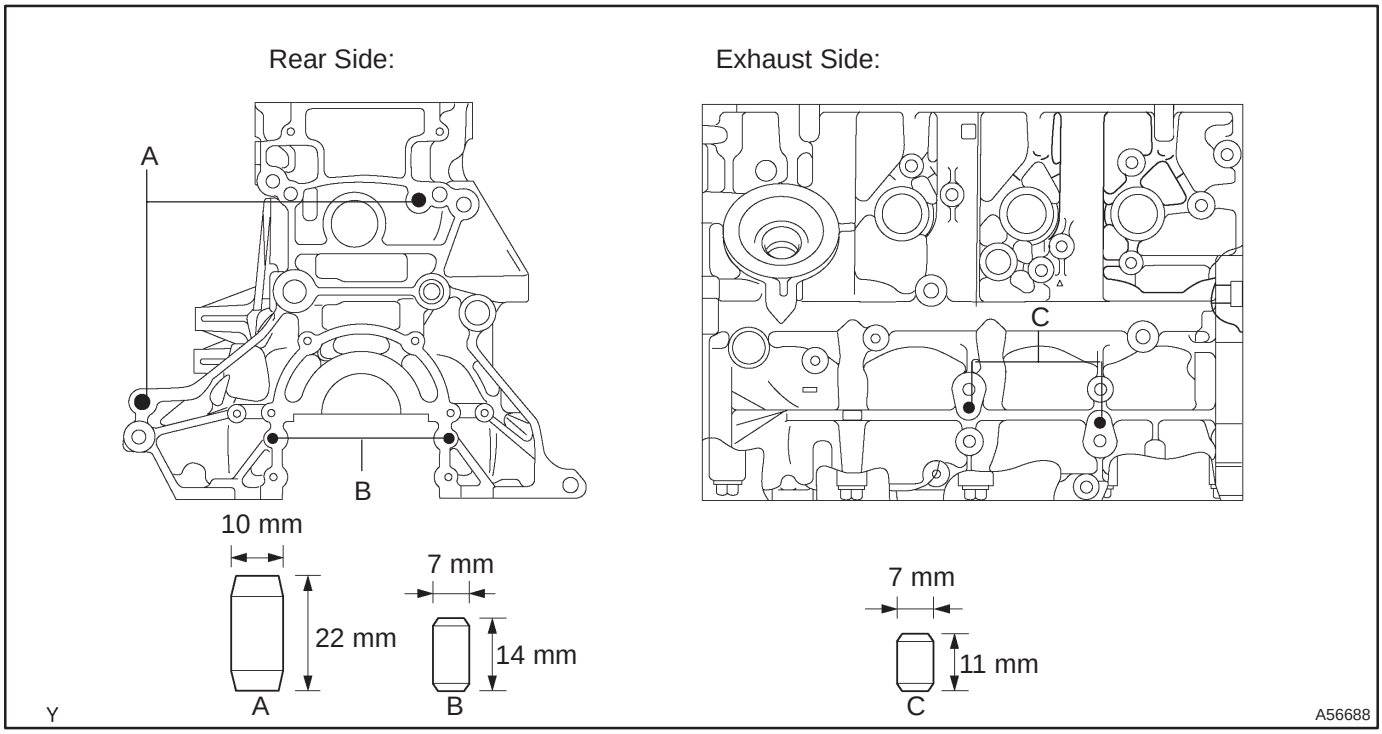
(a) Using a plastic–faced hammer, tap in new ring pins to the specified protrusion height.

Protrusion height:

A: 7.0 mm (0.2755 in.)

B: 13 mm (0.5118 in.)

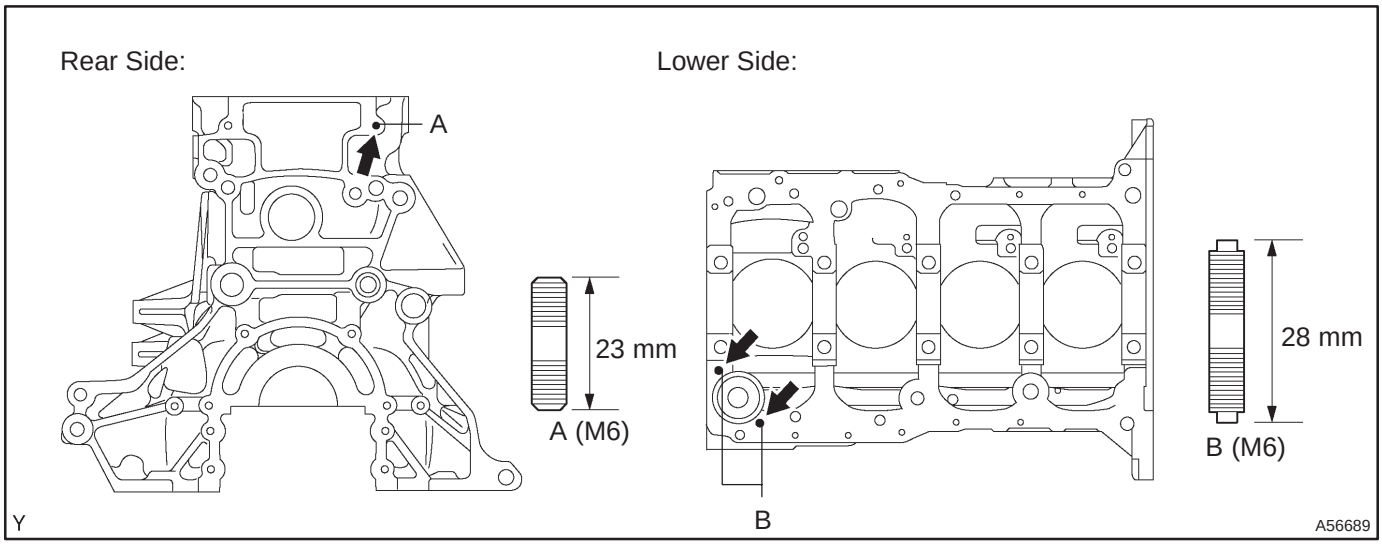
23. INSTALL STRAIGHT PIN



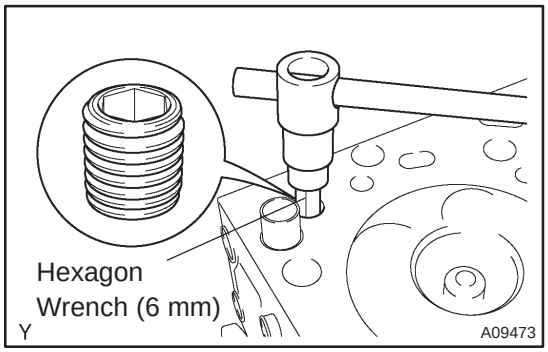
(a) Using a plastic–faced hammer, tap in the straight pin.

Standard protrusion:

A: 13 mm (0.5118 in.)

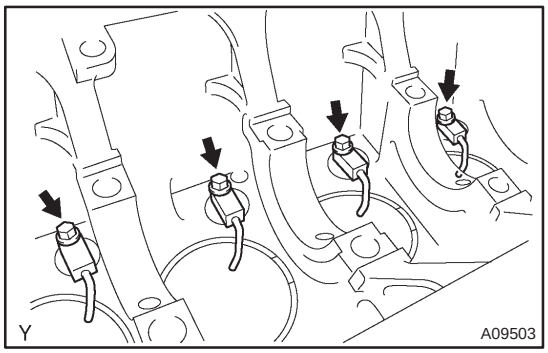


B: 7.0 mm (0.2755 in.)

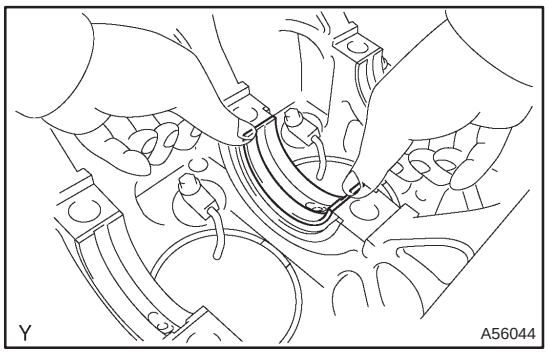


C: 5.0 mm (0.1968 in.)

24. INSTALL STUD BOLT



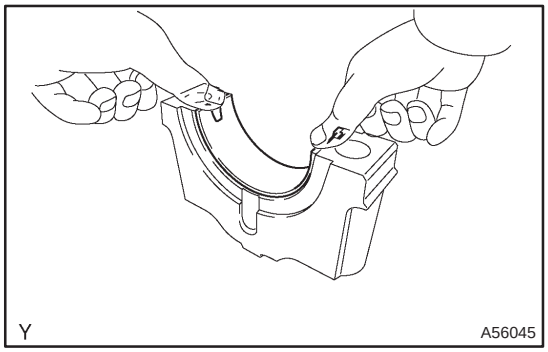
(a) Install the stud bolts as shown in the illustration.



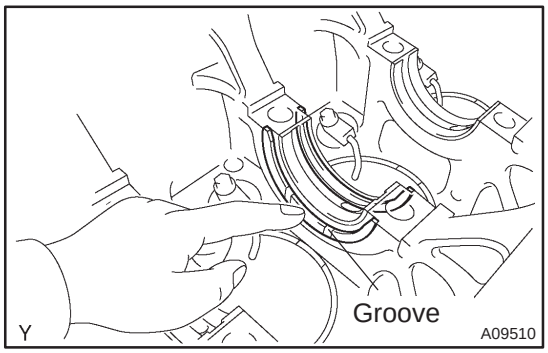
25. INSTALL CYLINDER BLOCK OIL ORIFICE

(a) Using a hexagon wrench (6 mm), install the oil orifice.
Torque: 9.0 N·m (92 kgf·cm, 78 in.·lbf)

26. INSTALL SUB–ASSY OIL NOZZLE NO.1

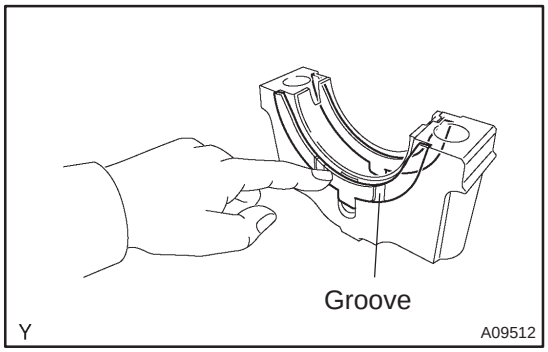


(a) Install the oil nozzle with the bolt. Install the 4 oil nozzles.
Torque: 7.4 N·m (76 kgf·cm, 67 in.·lbf)

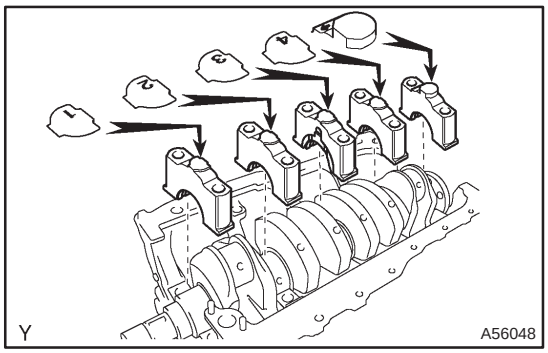


27. INSTALL CRANKSHAFT

(a) Install the bearing on the cylinder block and bearing cap.
HINT:
Upper bearings have an oil groove and oil holes; lower bearings do not.

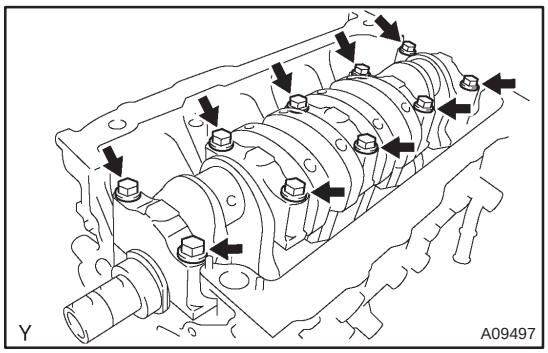


(1) Align the bearing claw with the claw groove of the cylinder block, and push in the 5 upper bearings.



(2) Align the bearing claw with the claw groove of the main bearing cap, and push in the 5 lower bearings.

(b) Install the 2 thrust washers under the No. 3 journal position of the cylinder block with the oil grooves facing outward.

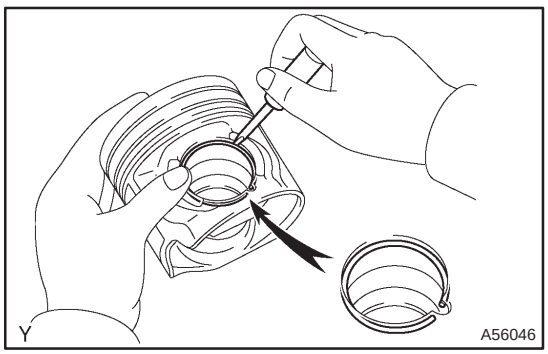


(c) Install the 2 thrust washers on the No. 3 bearing cap with the oil grooves facing outward.

(d) Install the 5 main bearing caps in their proper locations.

HINT:

Each bearing cap has a number and a font mark.

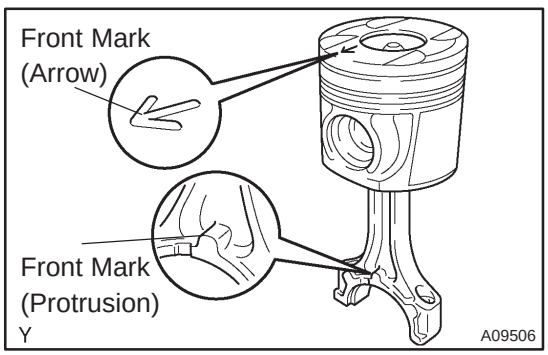


(e) Apply a light coat of engine oil on the threads and under the heads of the main bearing cap bolts.

(f) Install and uniformly tighten the 10 bolts of the main bearing cap in several passes.

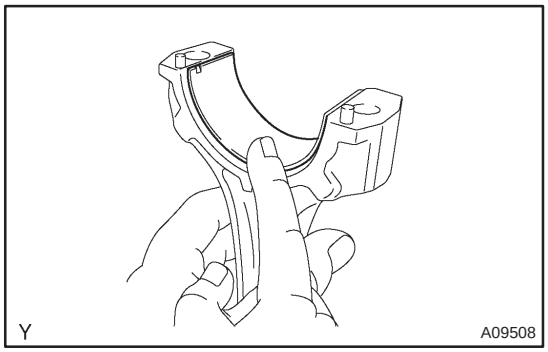
Torque: 115 N·m (1,173 kgf·cm, 85 ft·lbf)

(g) Check that the crankshaft turns smoothly.



28. INSTALL W/PIN PISTON SUB–ASSY

(a) Install a new snap ring on one side of the piston pin hole.

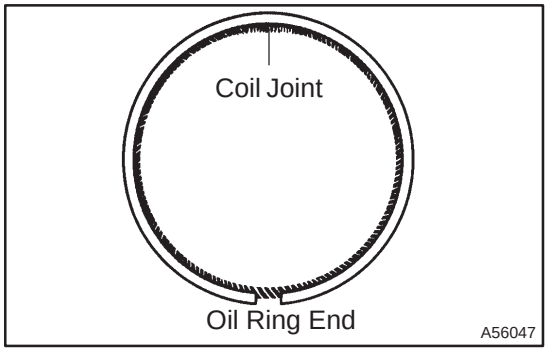


(b) Gradually heat the piston to 60°C (140°F).

(c) Coat the piston pin and piston hole of the piston with engine oil.

(d) Align the front marks of the piston and connecting rod, and push in the piston pin by hand.

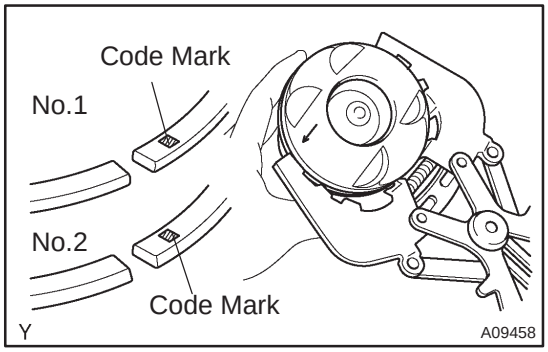
(e) Install a new snap ring on the other side of the piston pin hole.



29. INSTALL CONNECTING ROD BEARING

(a) Align the bearing claw with the groove of the connecting rod or connecting cap.
(b) Install the bearings in the connecting rod and connecting rod cap.

30. INSTALL PISTON RING SET

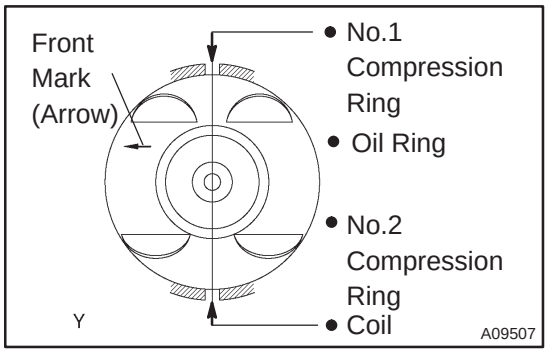


(a) Install the coil by hand.

(b) Using a piston ring expander, install the oil ring.

HINT:

Face the end gap of the oil ring in the opposite direction coil joint.

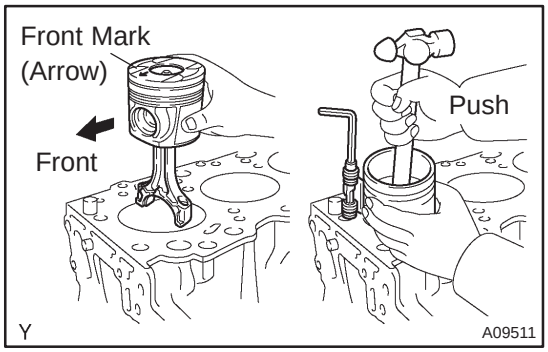


(c) Using a piston ring expander, install the No. 2 and No. 1 piston rings with the code mark facing upward.

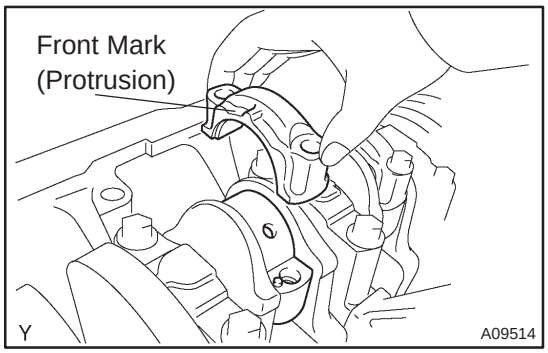
Code mark:

No.1	1T
No.2	2T

NOTICE:

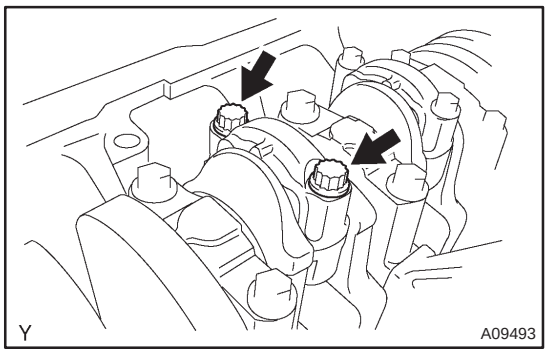


Make the expansion of the piston ring as small as necessary.



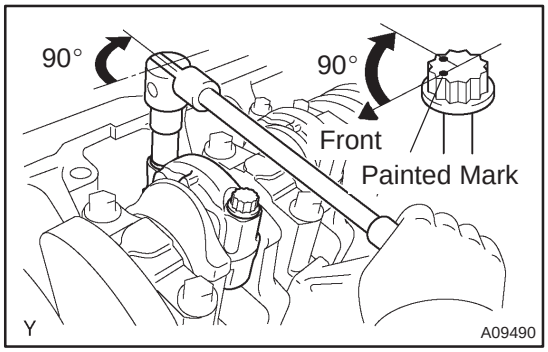
(d) Position the piston rings so that the ring ends are as shown.

31. INSTALL PISTON SUB–ASSY W/CONNECTING ROD



(a) Apply engine oil to the cylinder walls, pistons, and surfaces of connecting rod bearings.
(b) Check the position of the piston ring ends.

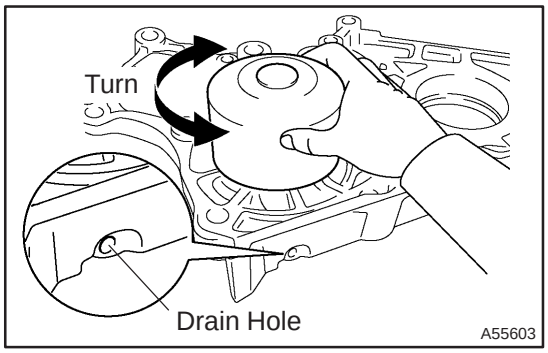
(c) Using a piston ring compressor, push the correctly numbered piston and connecting rod assemblies into each cylinder with the front mark of the piston facing forward.



(d) Match the numbered connecting rod cap with the connecting rod.
(e) Install the connecting rod cap with the front mark facing forward.
(f) Apply a light coat of engine oil on the threads and under the heads of the connecting rod cap bolts.

(g) Install and alternately tighten the 2 cap bolts in several passes.
Torque: 30 N·m (306 kgf·cm, 22 ft·lbf)

If any of the cap bolts does not meet the torque specification, replace the connecting rod cap bolts.

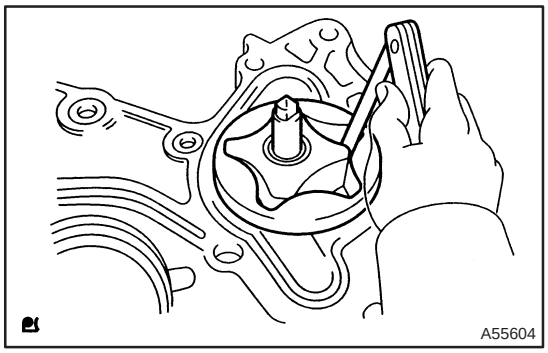


(h) Mark the front of the cap bolt with the paint.
(i) Retighten the cap bolts 90° as shown.
(j) Check that the painted mark is now at a 90° angle to the front.
(k) Check that the crankshaft turns smoothly.

WATER PUMP ASSY (1CD–FTV)

1606V–02

INSPECTION



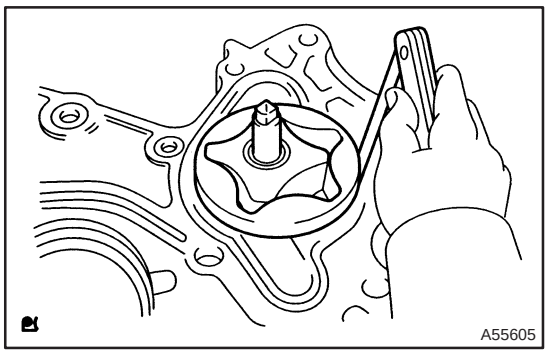
1. INSPECT WATER PUMP ASSY

(a) Visually check the drain hole for coolant leakage.
(b) Turn the pulley, and check that the water pump bearing moves smoothly and quietly.

OIL PUMP ASSY (1CD–FTV)

INSPECTION

1704C–02



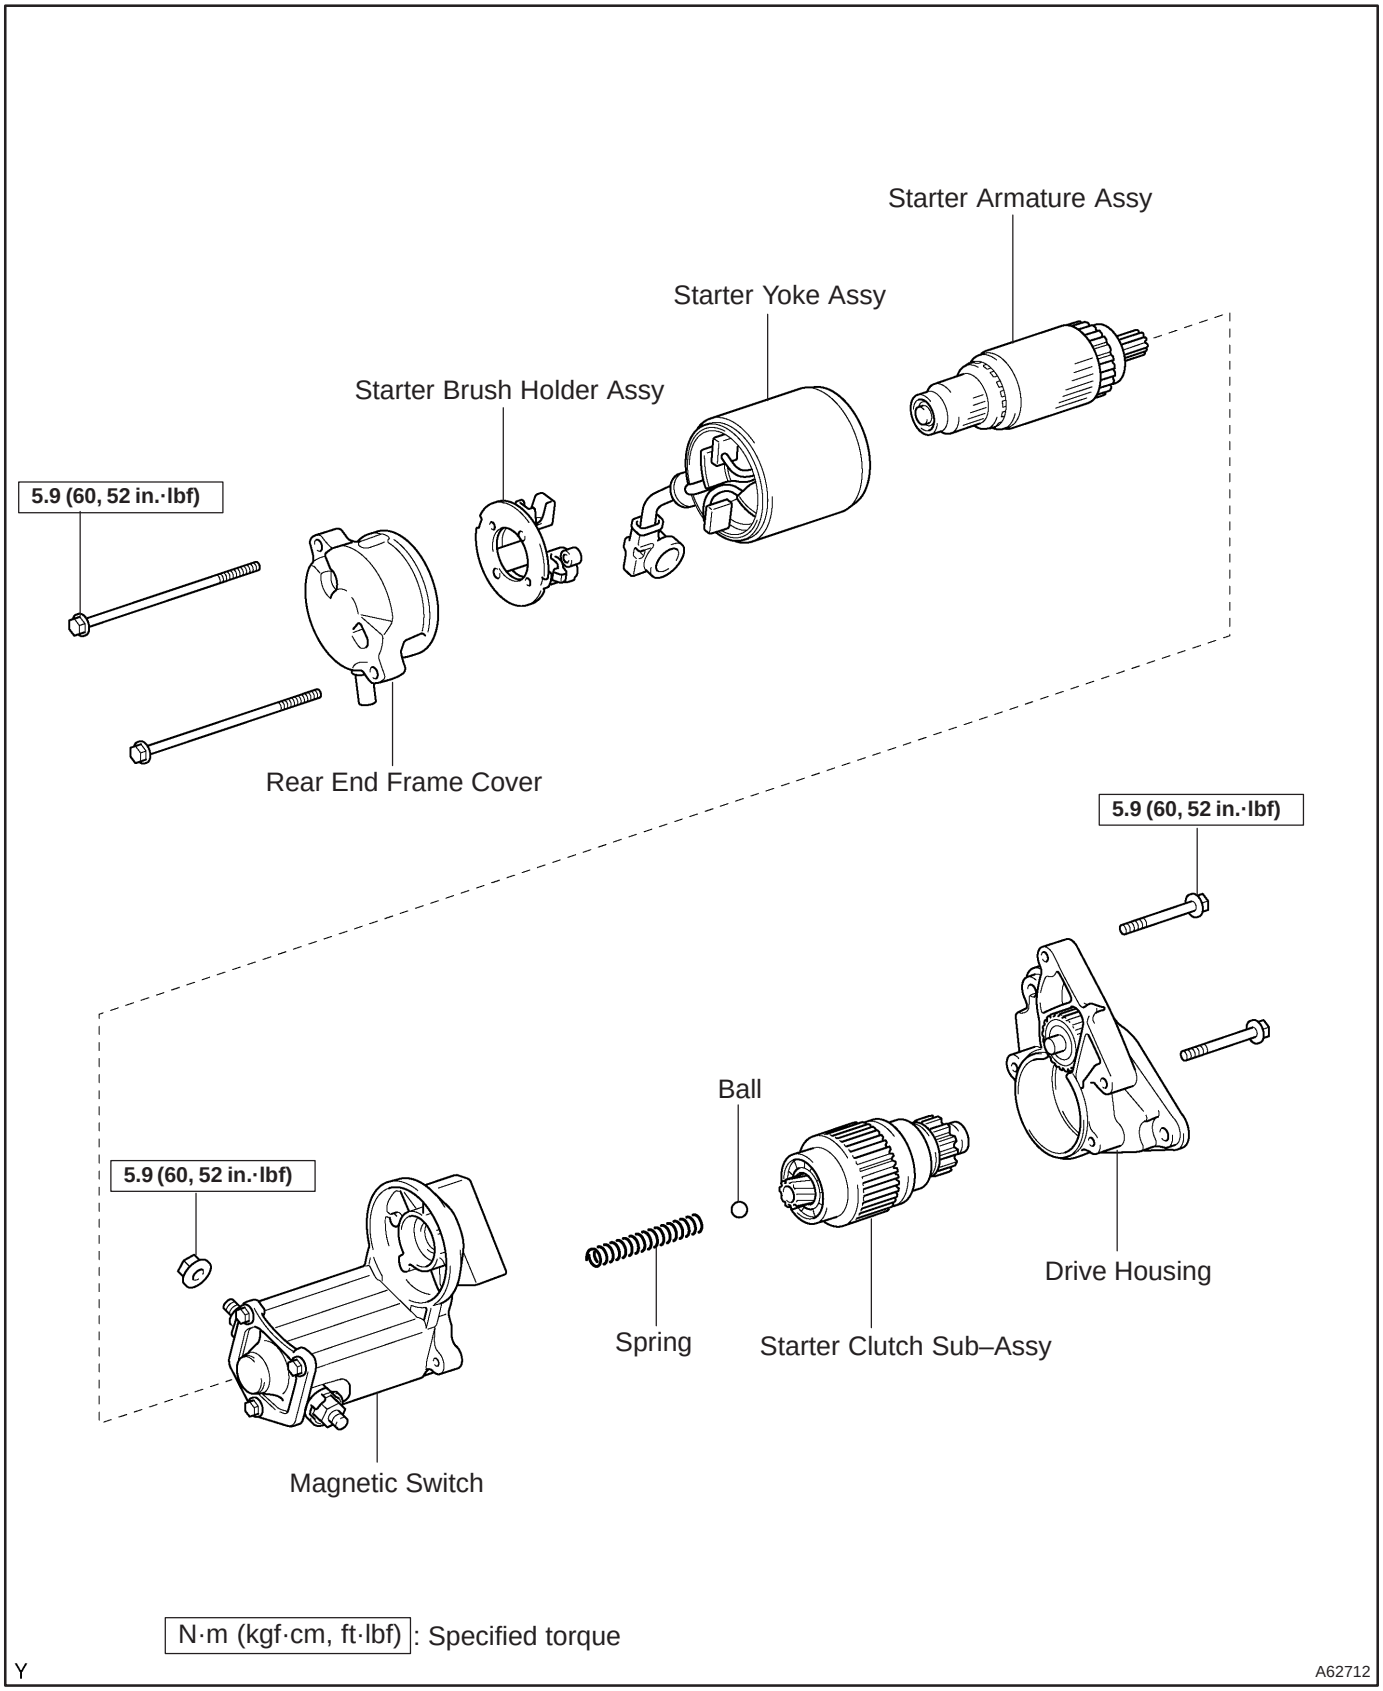
1. INSPECT OIL PUMP ASSY

(a) Inspect the rotors for tip clearance.

(1) Using a feeler gauge, measure the clearance between the drive and driven rotor tips.

Standard tip clearance:
0.08 – 0.16 mm (0.0031 – 0.0063 in.)
Maximum tip clearance: 0.2 mm (0.0079 in.)

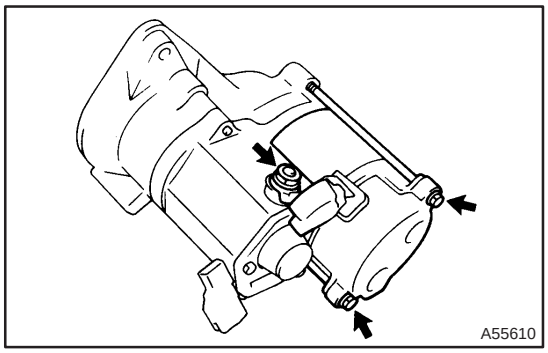
(b) Inspect the rotors for body clearance.



(1) Using a feeler gauge, measure the clearance between the driven rotor and body.

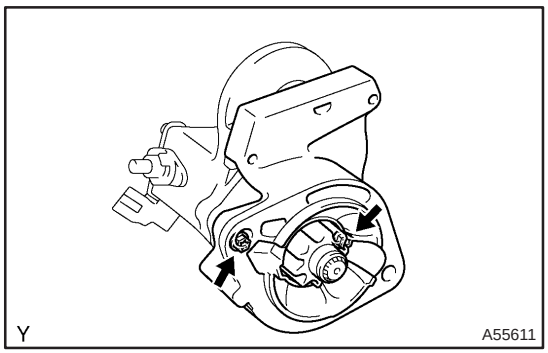
Standard body clearance:
0.1 – 0.17 mm (0.0039 – 0.0067 in.)
Maximum body clearance: 0.2 mm (0.0079 in.)

STARTER ASSY(1.4KW) (1CD–FTV)



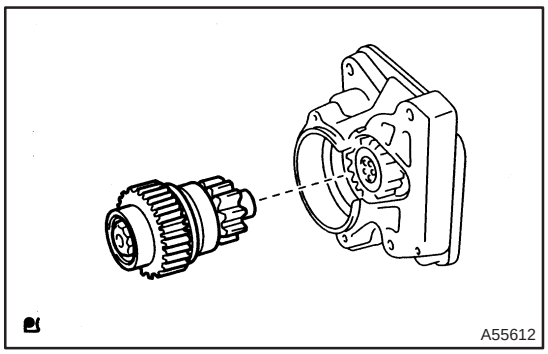
COMPONENTS

190AE–01



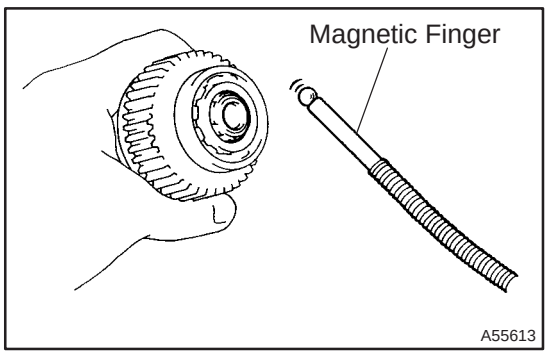
1906G–02

OVERHAUL

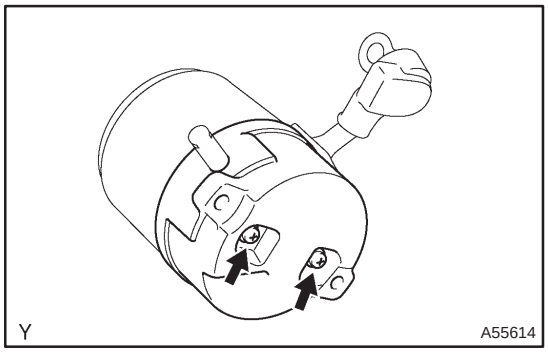


1. REMOVE STARTER YOKE ASSY

(a) Remove the nut, and disconnect the lead wire from the magnetic switch terminal.
(b) Remove the 2 through bolts.
(c) Pull out the yoke together with the armature from the magnetic switch.

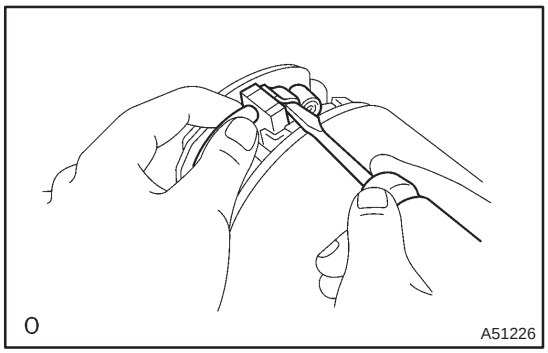


2. REMOVE STARTER CLUTCH SUB–ASSY



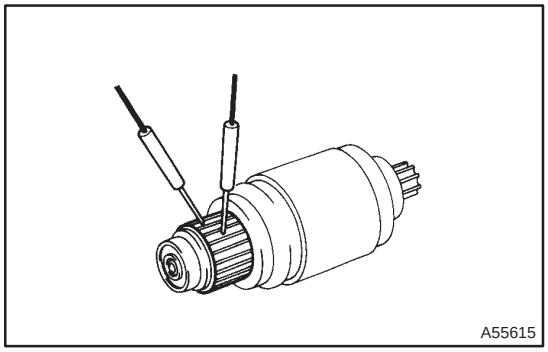
(a) Remove the 2 bolts and drive housing.

(b) Remove the clutch from the drive housing.



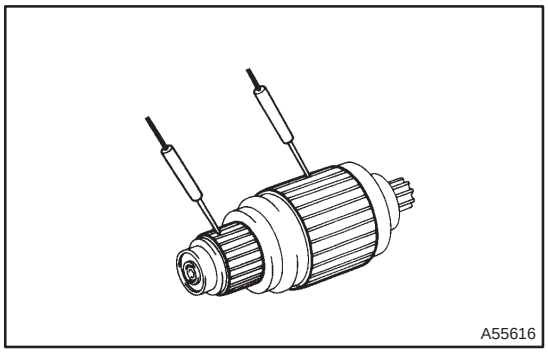
(c) Using a magnetic finger, remove the ball from the clutch shaft hole.

3. REMOVE STARTER BRUSH HOLDER ASSY



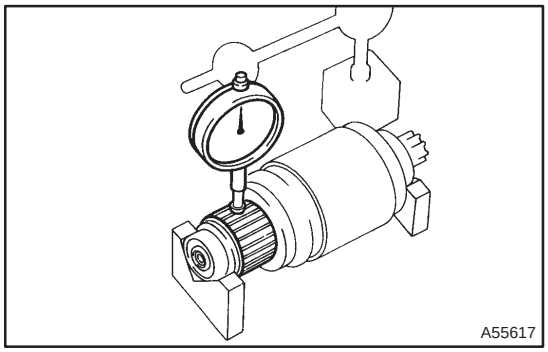
(a) Remove the 2 screws and end frame from the yoke.

(b) Using a screwdriver, hold the spring back disconnect the brush from the brush holder. Disconnect the 4 brushers and remove the brush holder.

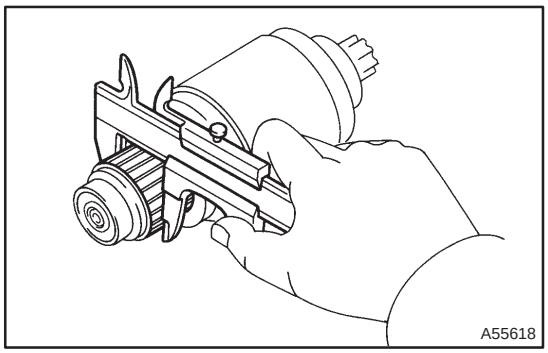


4. REMOVE STARTER ARMATURE ASSY

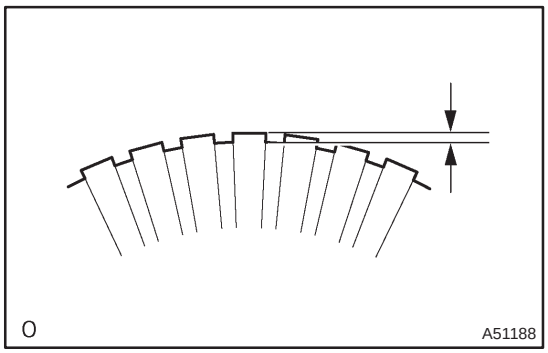
(a) Remove the armature from the yoke.



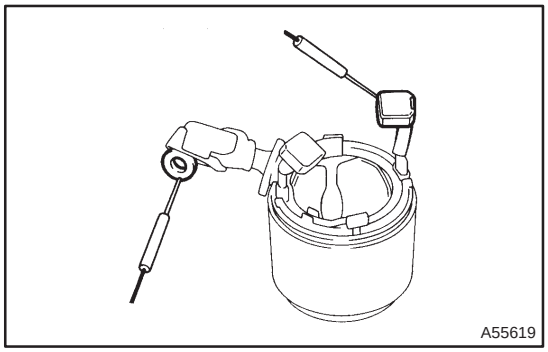
5. INSPECT STARTER ARMATURE ASSY



(a) Using an ohmmeter, check that there is continuity between the segments of the commutator.

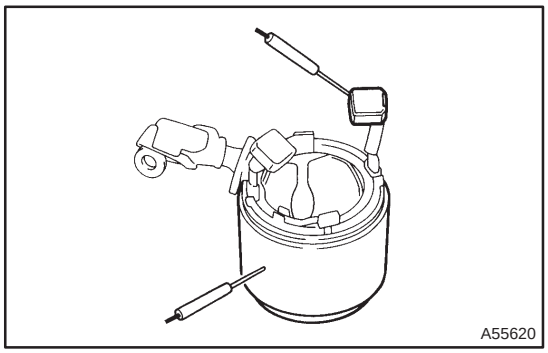


(b) Using an ohmmeter, check that there is no continuity between the commutator and armature coil core.

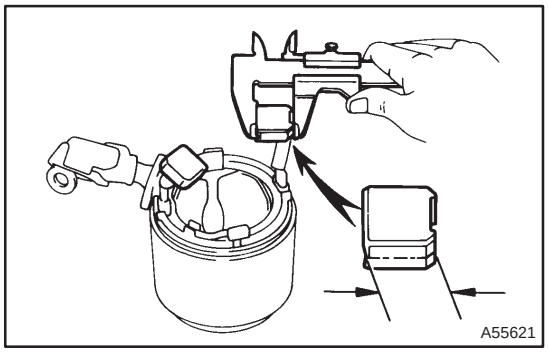


(c) Place the commutator on V–blocks.
(d) Using a dial gauge, measure the circle runout.
Maximum circle runout: 0.05 mm (0.002 in.)

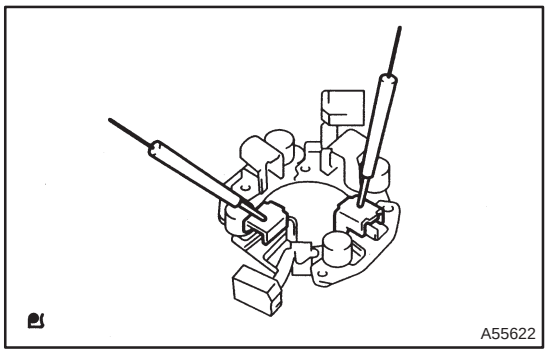
(e) Using vernier calipers, measure the commutator diameter.
Standard diameter: 30 mm (1.1811 in.)
Minimum diameter: 29 mm (1.1417 in.)



(f) Check that the undercut depth is clean and free of foreign materials. Smooth out the edge.
Standard undercut depth: 0.6 mm (0.024 in.)
Minimum undercut depth: 0.2 mm (0.008 in.)

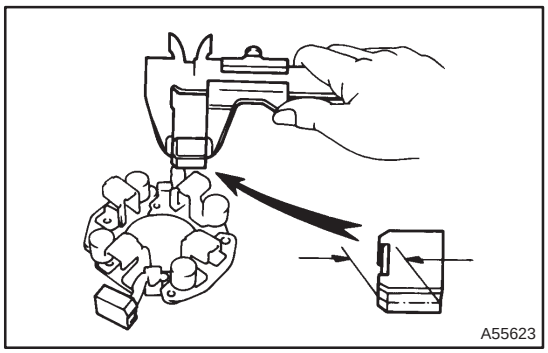


6. INSPECT STARTER YOKE ASSY

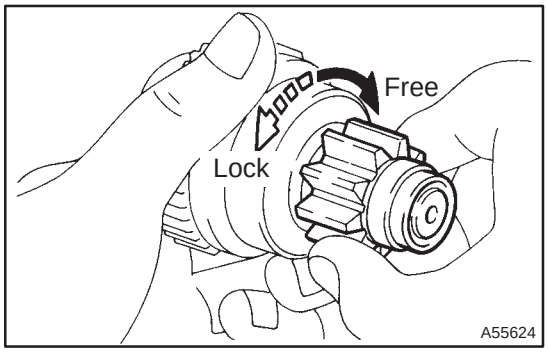


(a) Using an ohmmeter, check that there is continuity between the lead wire and field coil brush lead.

(b) Using an ohmmeter, check that there is no continuity between the field coil brush lead and yoke.

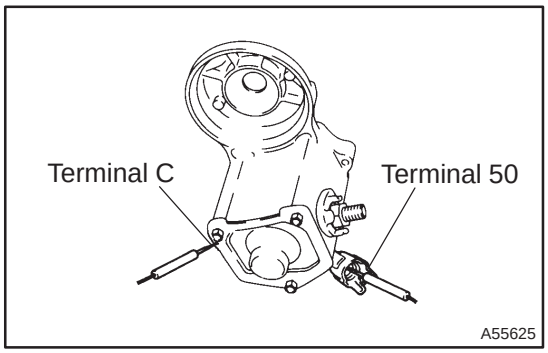


(c) Using vernier calipers, measure the brush length.
Standard length: 15.5 mm (0.6102 in.)
Minimum length: 8.5 mm (0.3346 in.)

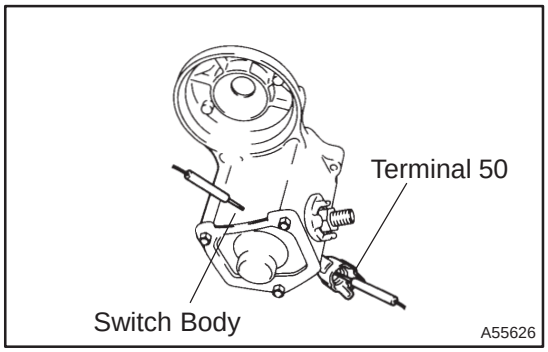


7. INSPECT STARTER BRUSH HOLDER ASSY

(a) Using an ohmmeter, check that there is no continuity between the positive (+) and negative (–) brush holders.



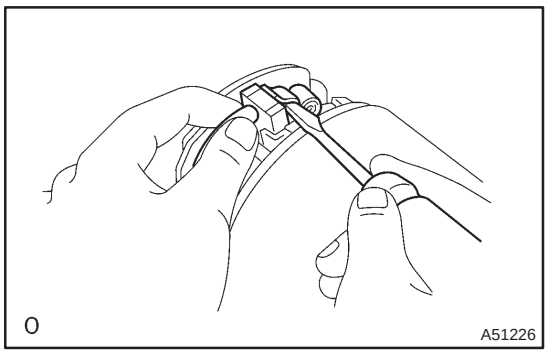
(b) Using vernier calipers, measure the brush length.
Standard length: 15.5 mm (0.6102 in.)
Minimum length: 8.5 mm (0.3346 in.)



8. INSPECT STARTER CLUTCH SUB–ASSY

(a) Rotate the pinion gear clockwise, and check that it turns freely. Try to rotate the pinion gear counterclockwise and check that it locks.

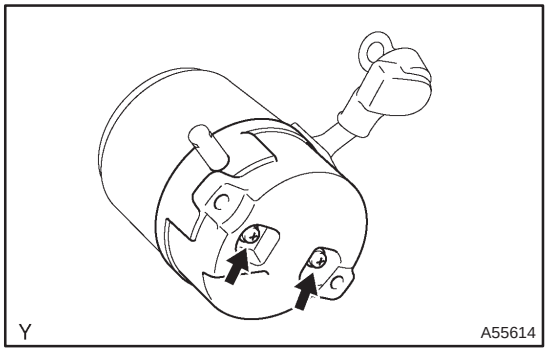
9. INSPECT MAGNET STARTER SWITCH ASSY



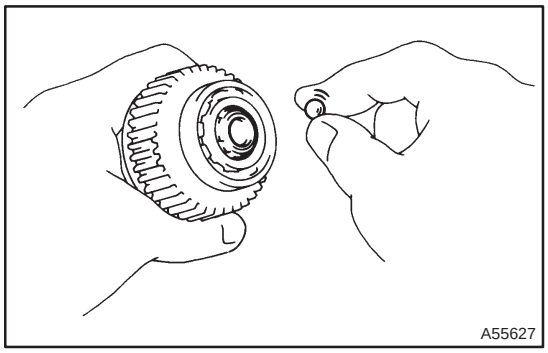
(a) Using an ohmmeter, check that there is continuity between terminal 50 and C.

(b) Using an ohmmeter, check that there is continuity between terminal 50 and the switch body.

10. INSTALL STARTER ARMATURE ASSY



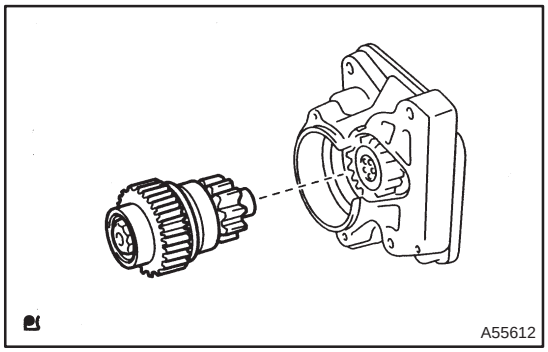
(a) Apply grease to the armature bearings and insert the armature into the yoke.



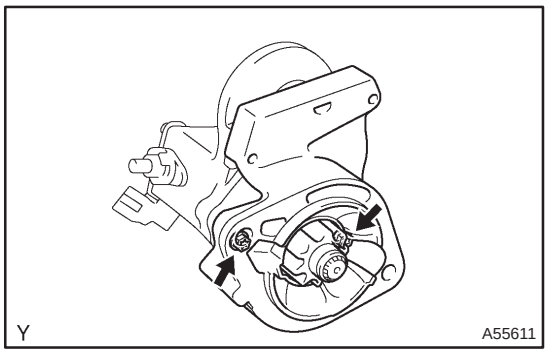
11. INSTALL STARTER BRUSH HOLDER ASSY

(a) Place the brush holder on the armature.
(b) Using a screwdriver, hold the brush spring back and connect the brush into the brush holder. Connect the 4 brushes.

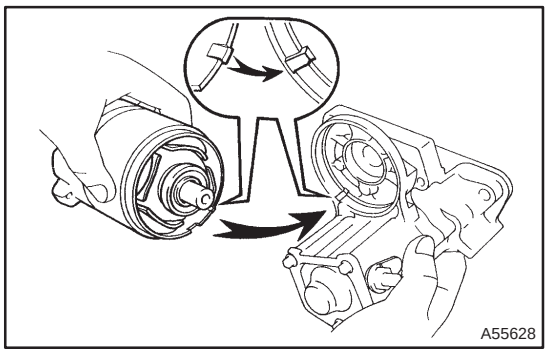
NOTICE:
Check that the positive (+) lead wires are not grounded.



(c) Install the end frame to the yoke with the 2 screws.
Torque: 1.5 N·m (15 kgf·cm, 13 in.·lbf)

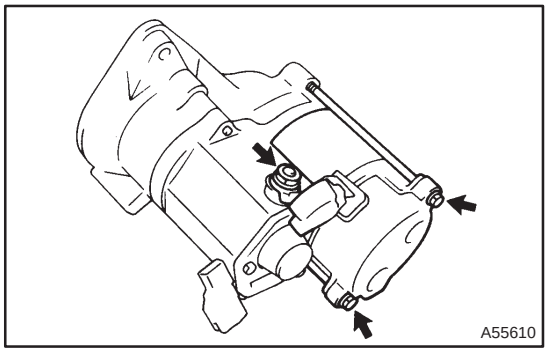


12. INSTALL STARTER CLUTCH SUB–ASSY



(a) Apply grease to the ball.
(b) Insert the ball into the clutch shaft hole.

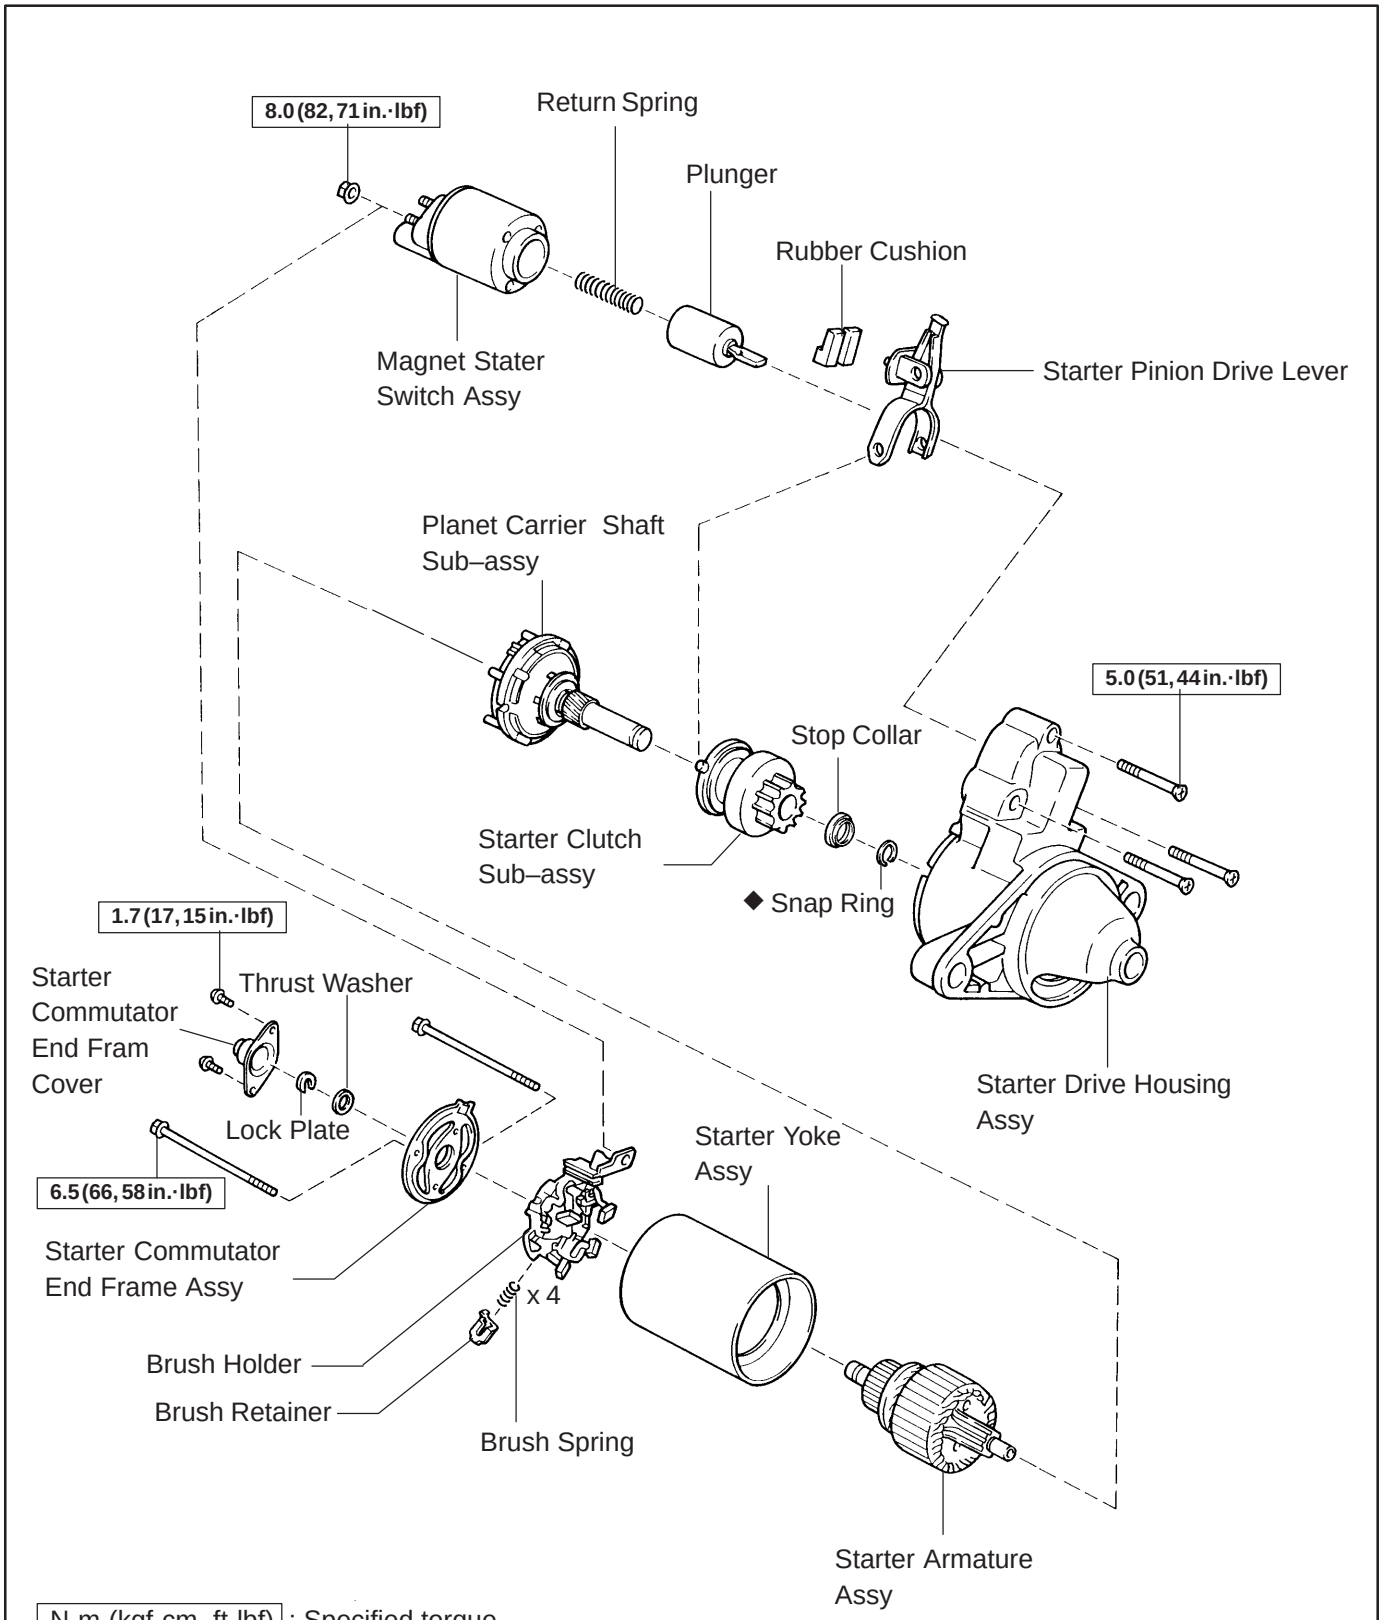
(c) Place the clutch on the drive housing.



(d) Install the drive housing to the magnetic switch with the 2 bolts.
Torque: 5.9 N·m (60 kgf·cm, 52 in.·lbf)

13. INSTALL STARTER YOKE ASSY

(a) Align the protrusion of the yoke with the cutout of the magnetic switch.



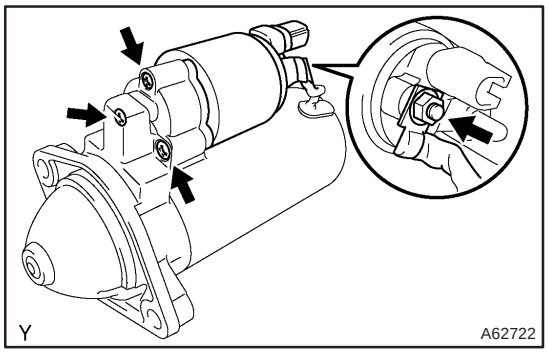
(b) Install the yoke and armature with the 2 through bolts.
Torque: 5.9 N·m (60 kgf·cm, 52 in.·lbf)

(c) Connect the lead wire to terminal C with the nut.
Torque: 5.9 N·m (60 kgf·cm, 52 in.·lbf)

STARTER ASSY(2.0KW) (1CD–FTV)

190AF–01

COMPONENTS

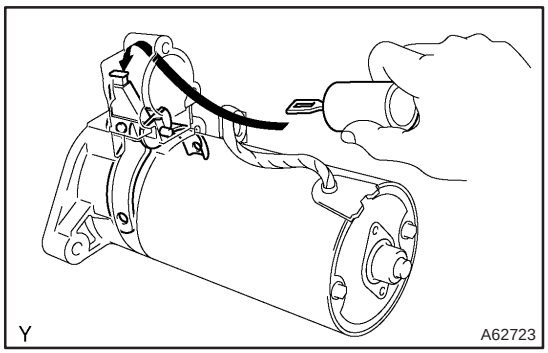


N·m (kgf·cm, ft·lbf) : Specified torque

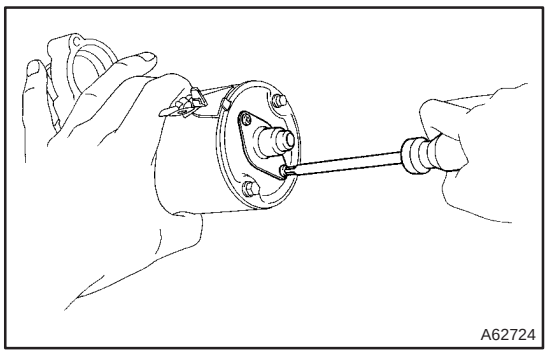
◆ Non–reusable part

N

A62721



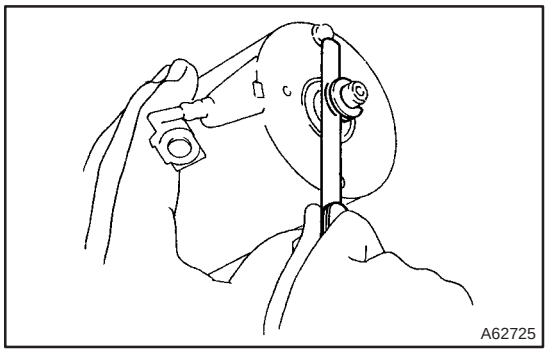
OVERHAUL



1. REMOVE MAGNET STARTER SWITCH ASSY

(a) Remove the nut, and disconnect lead wire from the magnet starter switch terminal.

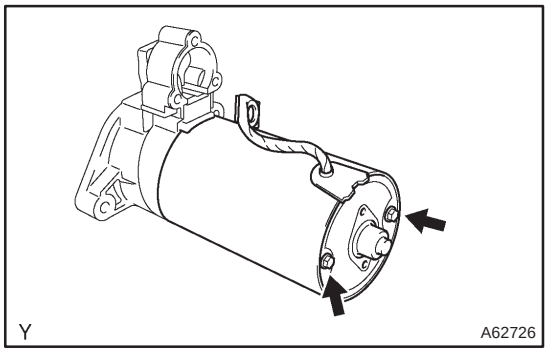
(b) Remove the 3 screws, magnet starter switch and return spring.



(c) Pull the plunger, and disconnect the plunger hook from the upper side of the drive lever.

2. REMOVE STARTER COMMUTATOR END FRAM COVER

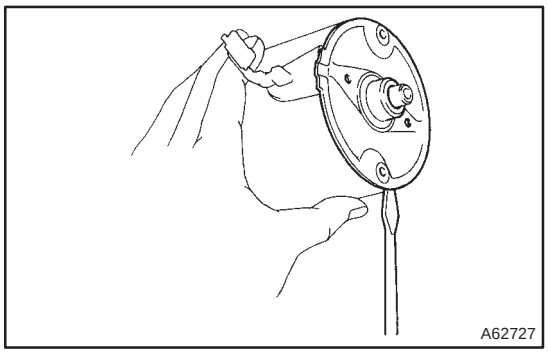
(a) Remove the 2 screws and end fram cover.



(b) Using a feeler gauge, measure the armature thrust clearance between the lock plate and end frame.

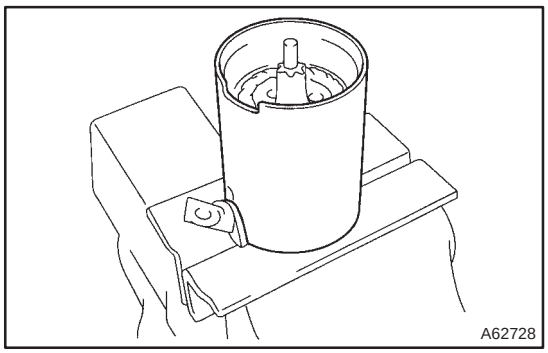
Standard thrust clearance: 0.3 mm (0.012 in.)

Maximum thrust clearance: 0.6 mm (0.024 in.)



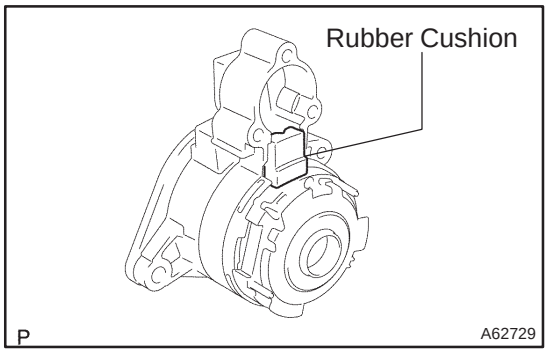
If the thrust clearance is greater the than maximum, replace the thrust washer.

(c) Remove the lock plate and thrust washer.



3. REMOVE STARTER YOKE ASSY

(a) Remove the 2 through bolts, and pull out the starter yoke together with the armature.

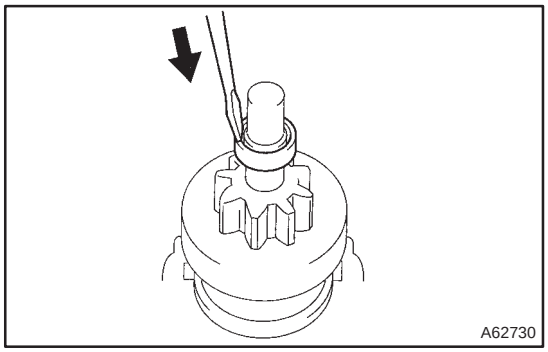


4. REMOVE STARTER COMMUTATOR END FRAM ASSY

(a) Using a screwdriver, pry out the commutator end frame.

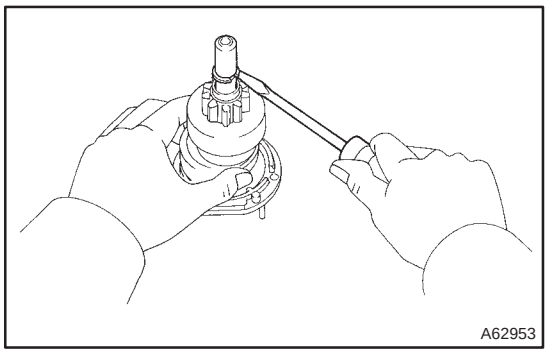
5. REMOVE STARTER ARMATURE ASSY

6. REMOVE STARTER BRUSH HOLDER ASSY



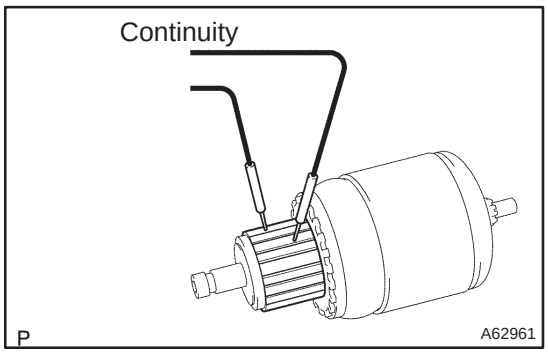
7. REMOVE PLANET CARRIER SHAFT SUB–ASSY

(a) Remove the rubber cushion.



(b) Remove the planet carrier shaft and starter clutch assembly.

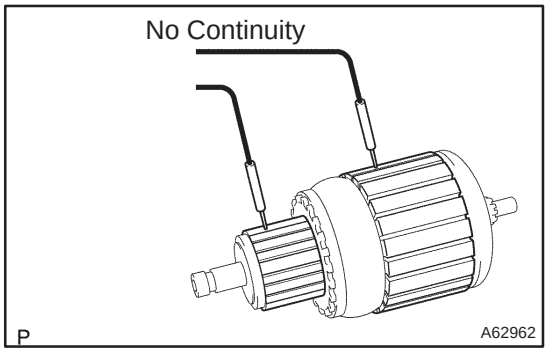
8. REMOVE STARTER PINION DRIVE LEVER



9. REMOVE STARTER CLUTCH SUB–ASSY

(a) Using a screwdriver, tap in the stop collar towards the starter clutch.

(b) Using a screwdriver, pry out the snap ring.

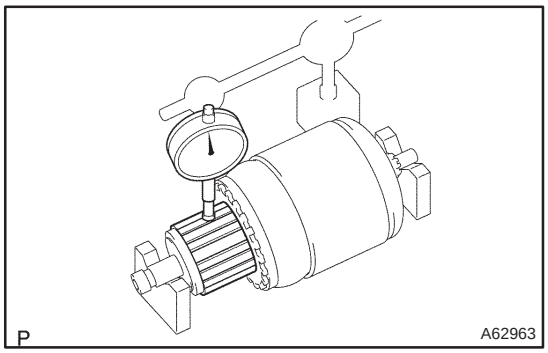


(c) Remove the stop collar from the shaft.

10. INSPECT STARTER ARMATURE ASSY

(a) Using an ohmmeter, check that there is continuity between the segments of the commutator.

If there is no continuity between any segments, replace the armature.

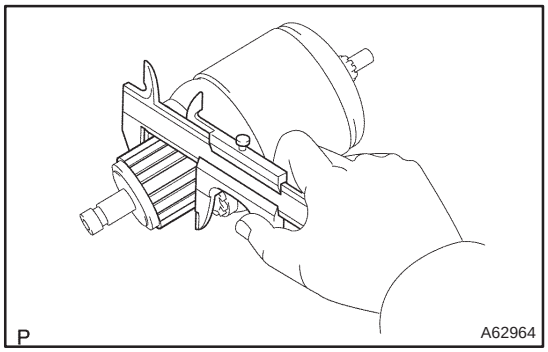


(b) Using an ohmmeter, check that there is no continuity between the commutator and armature coil core.

If there is continuity, replace the armature.

(c) Check the commutator for the dirty and burnt surface.

If the surface is dirty or burnt, correct with sandpaper (No.400) or a lathe.

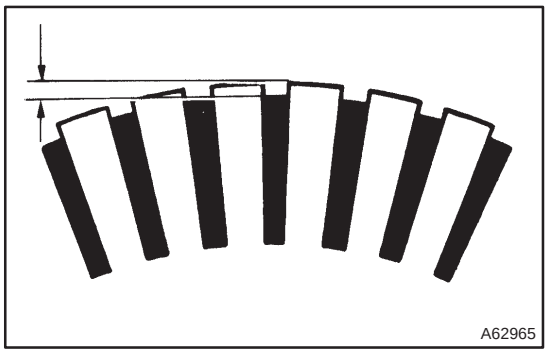


(d) Place the commutator on V–blocks.

(e) Using a dial indicator, measure the circle runout.

Maximum circle runout: 0.03 mm (0.0012 in.)

If the circle runout is greater than maximum, correct it on a lathe.

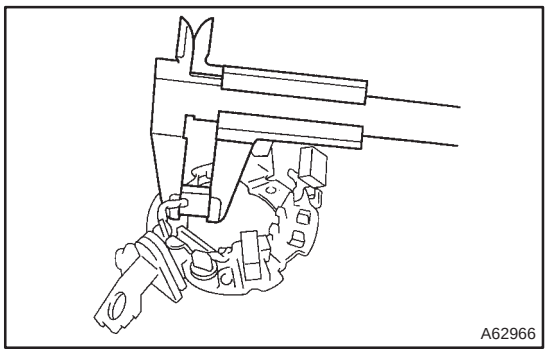


(f) Using vernier calipers, measure the commutator diameter.

Standard diameter: 32.3 mm (1.272 in.)

Minimum diameter: 30.5 mm (1.201 in.)

If the diameter is less than minimum, replace the armature.



(g) Check that the undercut depth is clean and free of foreign materials. Smooth out the edge.

Standard undercut depth: 0.9 mm (0.035 in.)

Minimum undercut depth: 0.3 mm (0.012 in.)

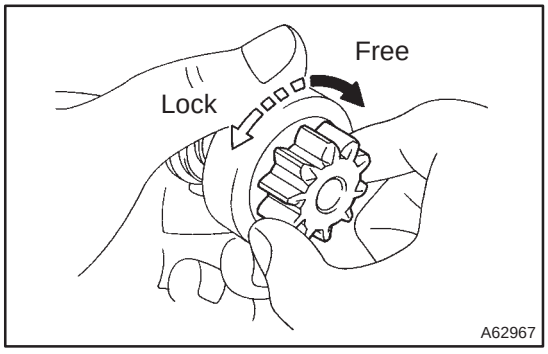
If the undercut depth is less than minimum, correct it with a hacksaw blade.

11. INSPECT STARTER BRUSH HOLDER ASSY

(a) Using vernier calipers, measure the brush length.

Standard length: 14.5 mm (0.571 in.)

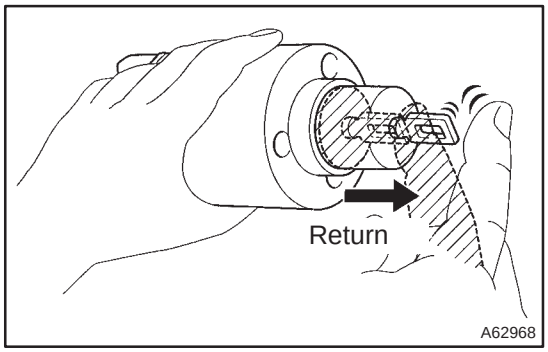
Minimum length: 9.0 mm (0.354 in.)



If the length is less than minimum, replace the brush holder.

12. INSPECT STARTER CLUTCH SUB–ASSY

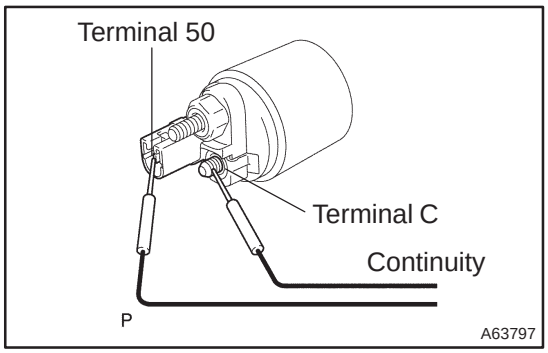
(a) Check the gear teeth on the starter clutch for wear or damage.



If the gear is damaged, replace it.

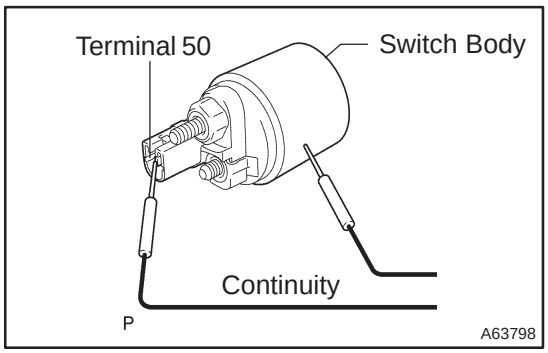
If damaged, replace the clutch assembly. If damaged, also check the drive plate ring gear for wear or damage.

(b) Rotate the clutch pinion gear clockwise and check that it turns freely. Try to rotate the clutch pinion gear counterclockwise and check that it locks.



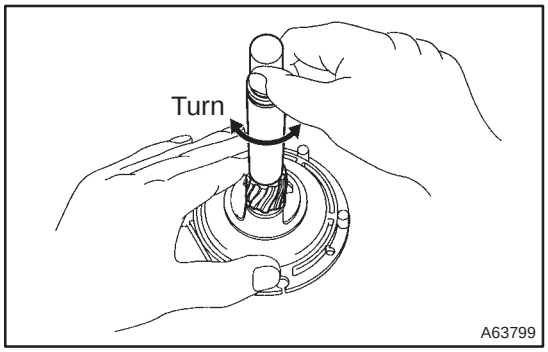
If necessary, replace the starter clutch.

13. INSPECT MAGNET STARTER SWITCH ASSY



(a) Push in the plunger and check that it returns quickly to its original position.

If necessary, replace the magnetic switch.



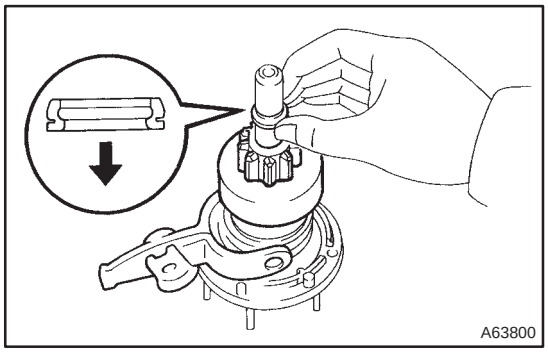
(b) Using an ohmmeter, check that there is continuity between terminals 50 and C.

If there is no continuity, replace the magnetic switch.

(c) Using an ohmmeter, check that there is continuity between terminal 50 and the switch body.

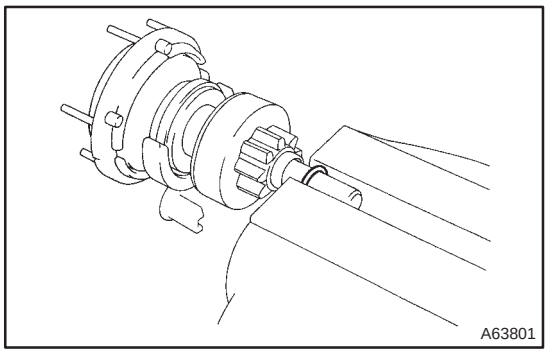
If there is no continuity, replace the magnet starter switch.

14. INSPECT PLANET CARRIER SHAFT SUB–ASSY



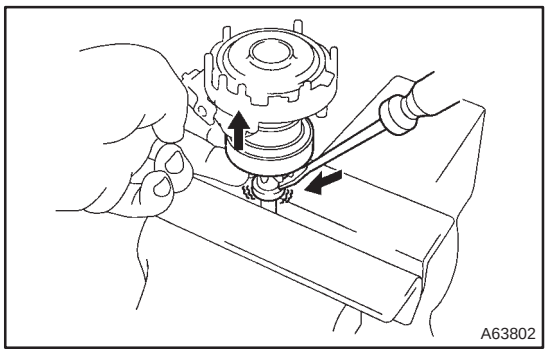
(a) Turn the shaft, and check that it is not rough or worn.

If it feels rough or worn, replace the planet carrier shaft.

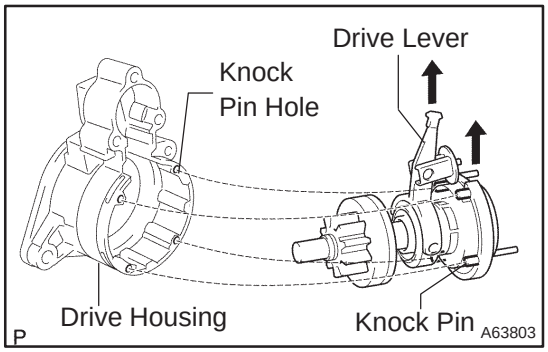


15. INSTALL STARTER PINION DRIVE LEVER

16. INSTALL STARTER CLUTCH SUB–ASSY

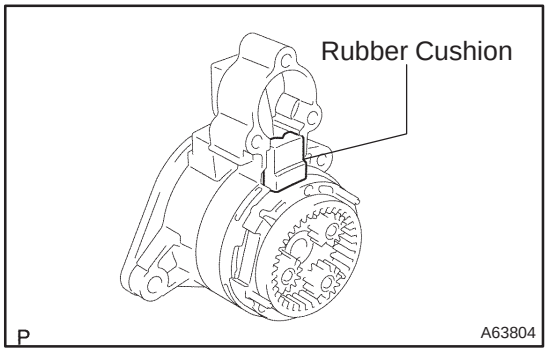


(a) Apply grease to the bushing and spline of the starter clutch and planet carrier shaft.

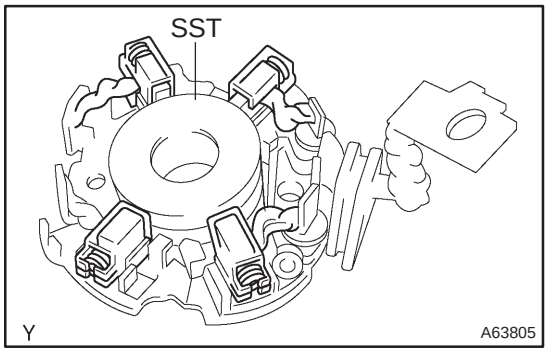


(b) Place the starter clutch and stop collar on the planet carrier shaft as shown in the illustration.

(c) Install a new snap ring to the planet carrier shaft groove.
(d) Using a vise, compress the snap ring.
(e) Check that the snap ring fits correctly.

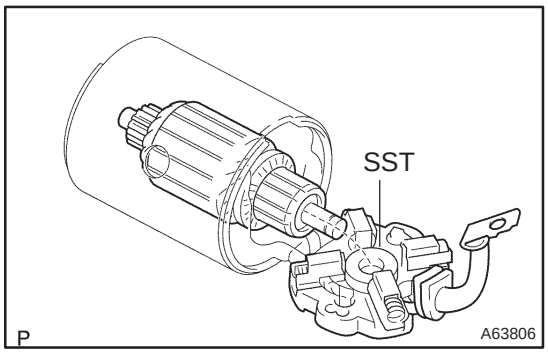


(f) Using a screwdriver, tap the stop collar to slide it onto the snap ring.

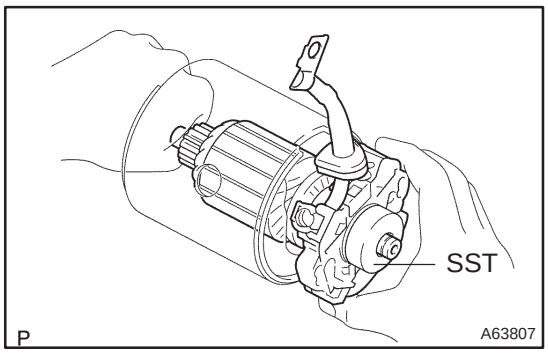


17. INSTALL PLANET CARRIER SHAFT SUB–ASSY

(a) Set the planet carrier shaft and drive lever in position as shown in the illustration.
(b) Align the holes of the drive housing with the knock pins.
(c) Install the planet carrier shaft and starter clutch to the drive housing.

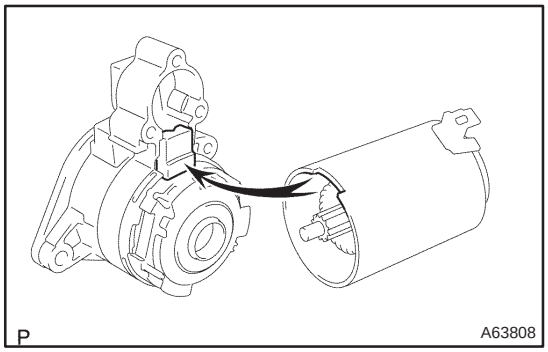


(d) Install the rubber cushion.



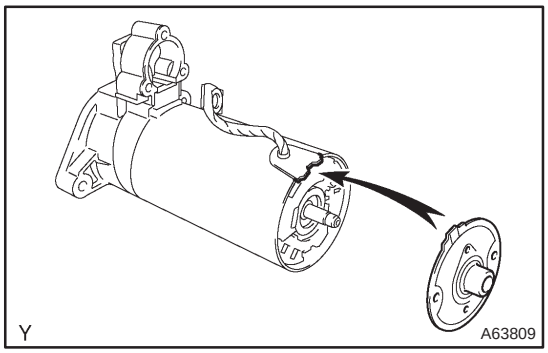
18. INSTALL STARTER BRUSH HOLDER ASSY

(a) Install the 4 brush retainers and 4 brush springs to the brush holder.



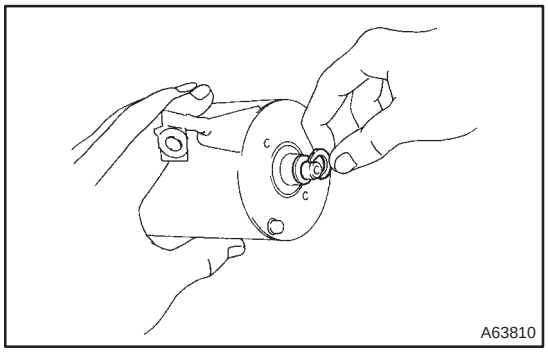
(b) Using SST, install the 4 brushes to the brush holder.
SST 09950–60010 (09951–00340)

(c) Attach the brush holder to the armature.



(d) Push the armature, and remove the SST.

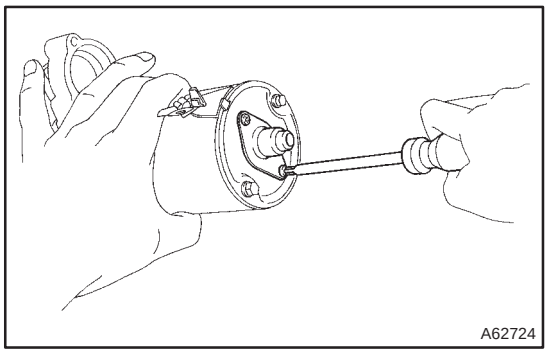
19. INSTALL STARTER YOKE ASSY



(a) Align the cushion rubber on the starter drive housing with the cutout of the starter yoke.

(b) Install the starter yoke and armature assembly.

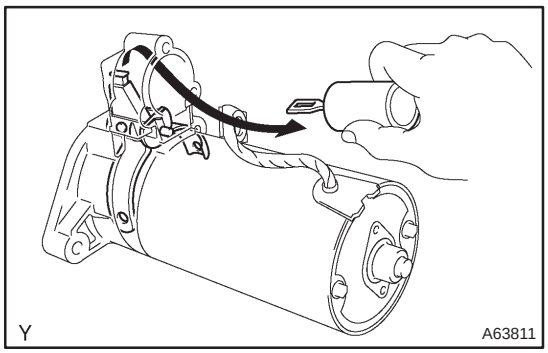
(c) Align the commutator end frame with the brush holder rubber part as shown in the illustration.



(d) Install the commutator end frame with the 2 through bolts.
6.5 N·m (66 kgf·cm, 58 in.·lbf)

20. INSTALL STARTER COMMUTATOR END FRAM COVER

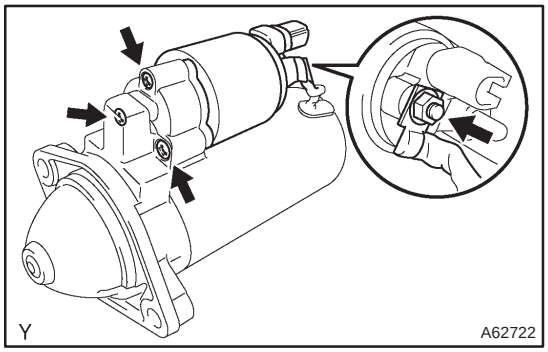
(a) Install the thrust washer and lock plate.



(b) Check the armature thrust clearance between the lock plate and the end frame cover. (See page 19–9)

(c) Pack grease to the commutator end cover.

(d) Install the commutator end fram cover with the 2 screws.



1.7 N·m (17 kgf·cm, 15 in.·lbf)

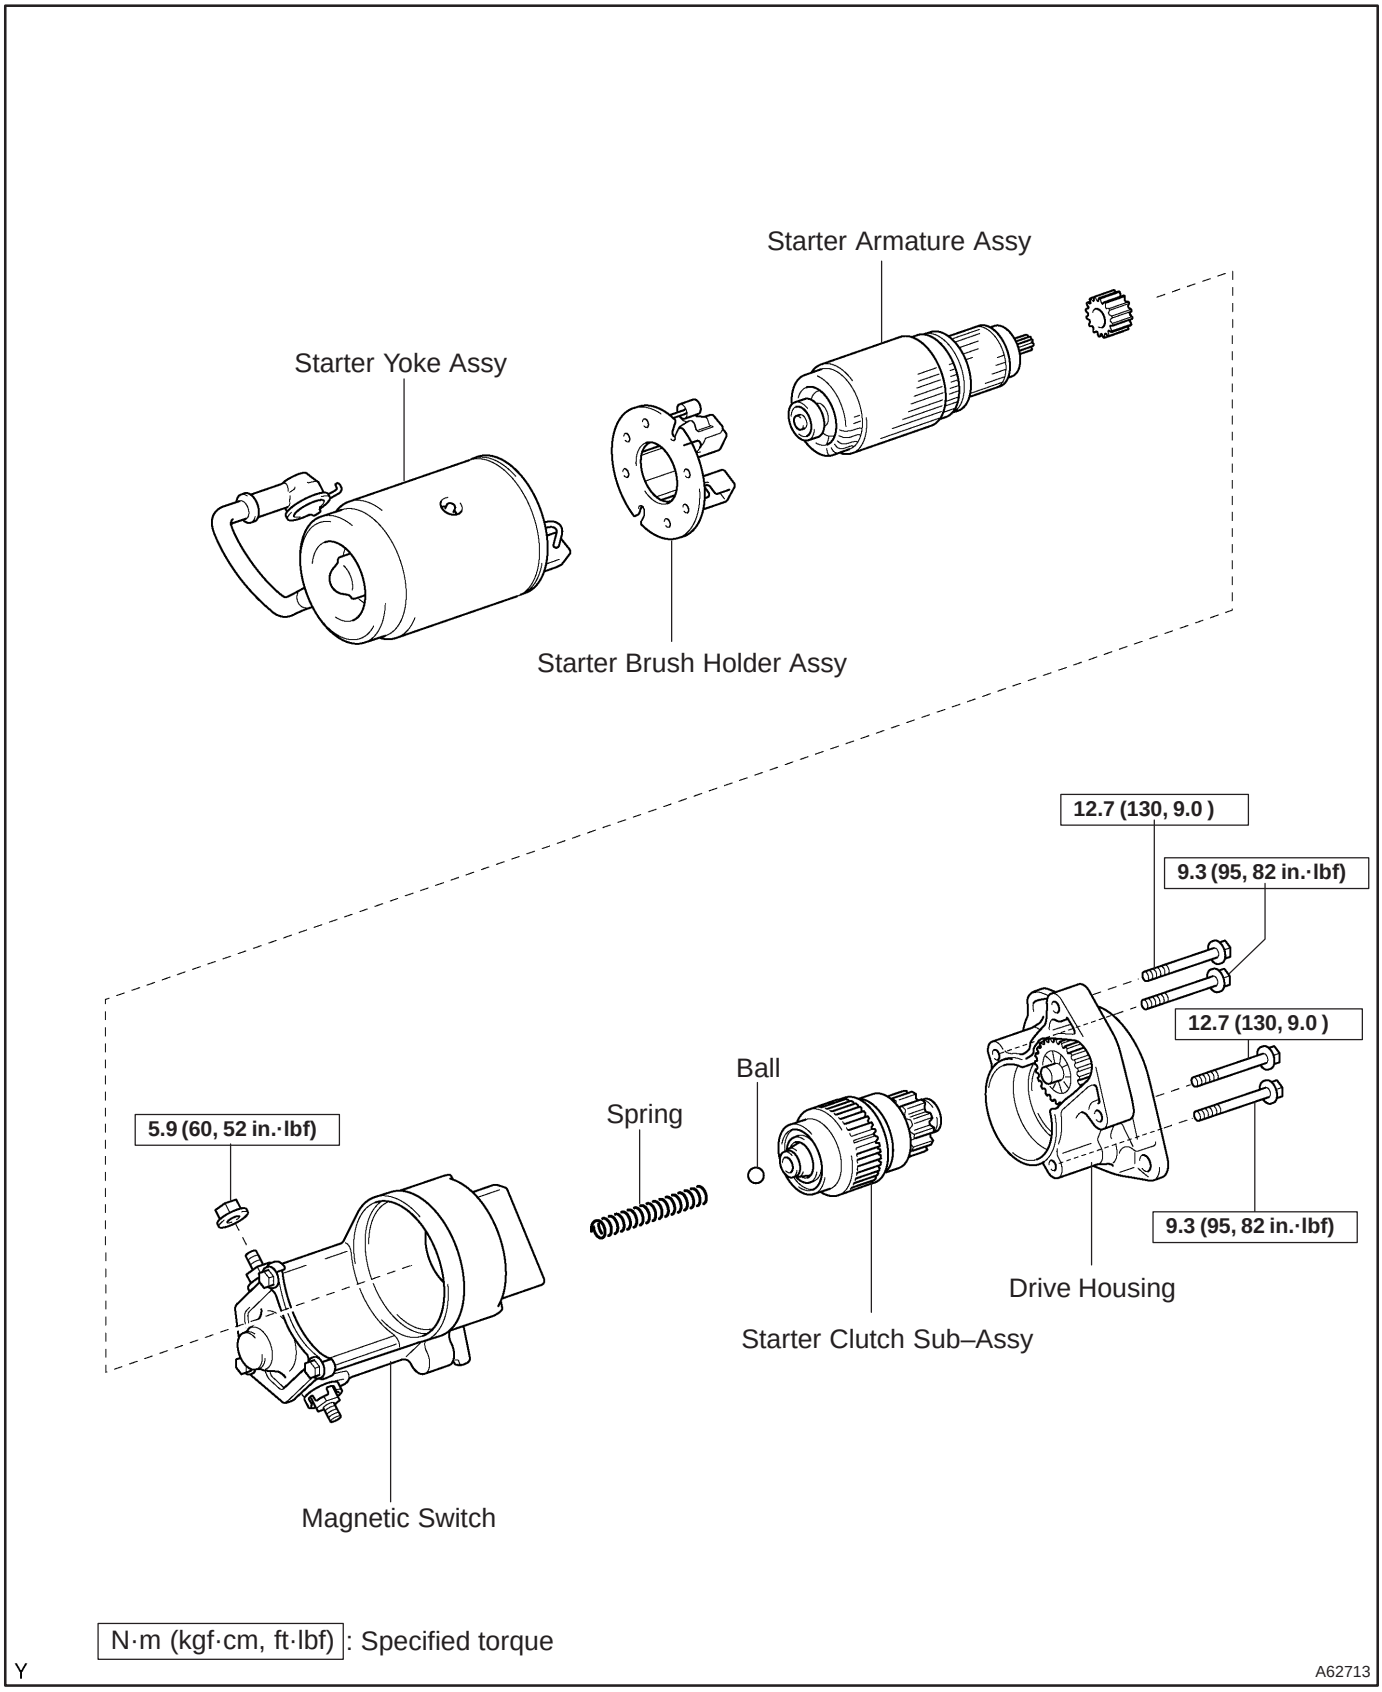
21. INSTALL MAGNET STARTER SWITCH ASSY

(a) Hang the plunger hook to the upper side of the drive lever.

(b) Install the return spring into the plunger.

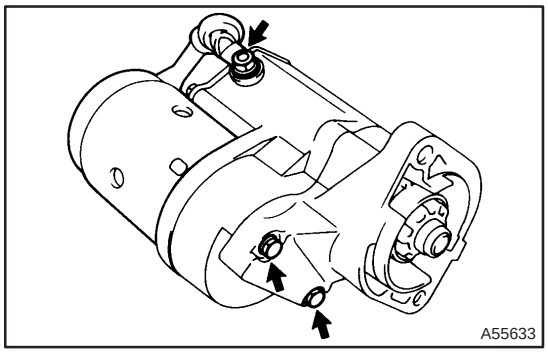
(c) Install the return spring and magnet sarter switch with the 3 screws.

5.0 N·m (51 kgf·cm, 44 in.·lbf)



(d) Connect the lead wire to the magnet starter switch terminal with the nut.

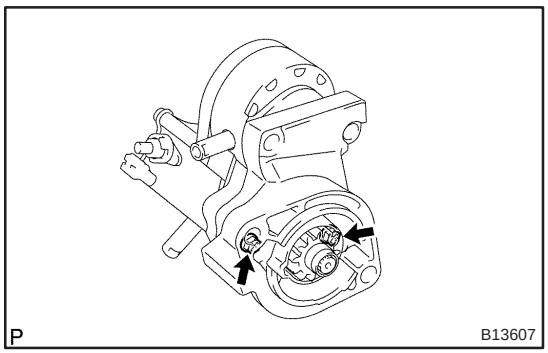
8.0 N·m (82 kgf·cm, 71 in.·lbf)



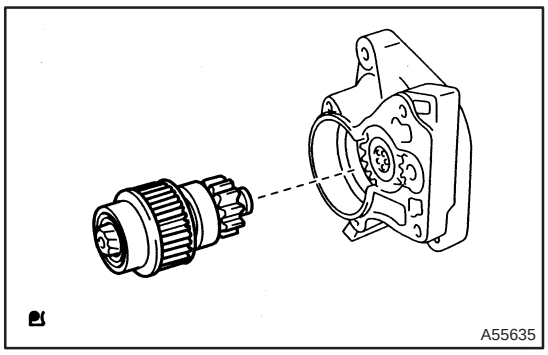
STARTER ASSY(2.2KW) (1CD–FTV)

COMPONENTS

190AH–01

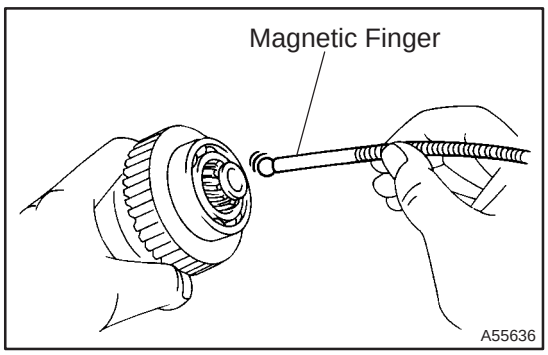


OVERHAUL

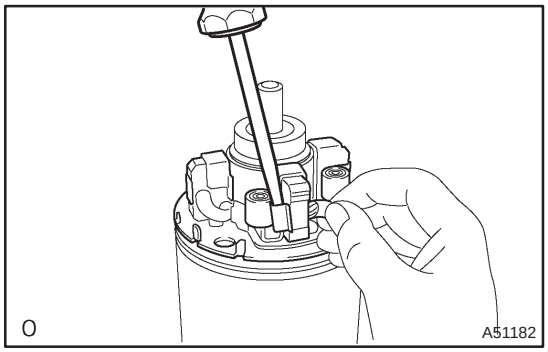


1. REMOVE STARTER YOKE ASSY

(a) Remove the nut, and disconnect the lead wire from the magnetic switch terminal.
(b) Remove the 2 through bolts.
(c) Pull out the yoke together with the armature from the magnetic switch.

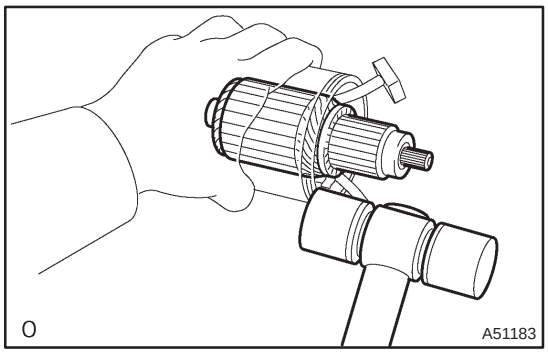


2. REMOVE STARTER CLUTCH SUB–ASSY

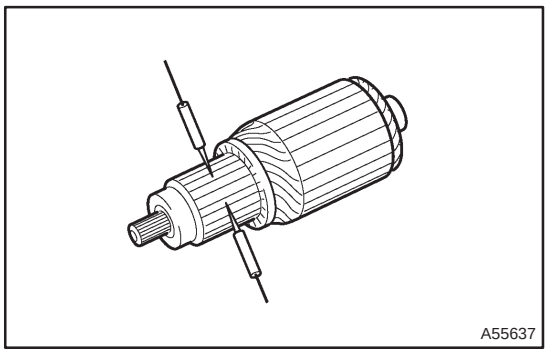


(a) Remove the 2 bolts and drive housing.

(b) Remove the clutch from the drive housing

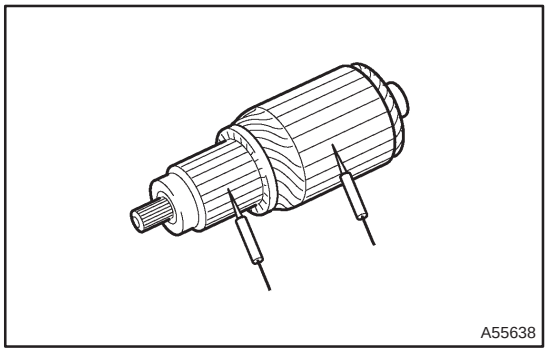


(c) Using a magnetic finger, remove the ball from the clutch shaft hole.



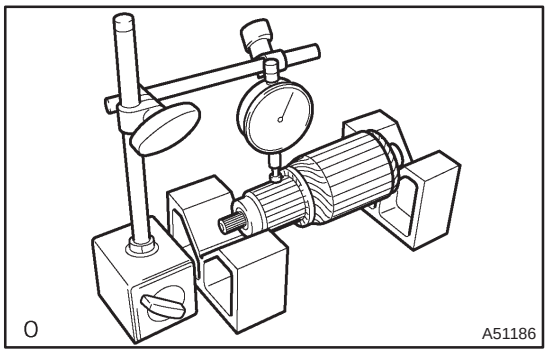
3. REMOVE STARTER BRUSH HOLDER ASSY

(a) Using a screwdriver, hold the spring back disconnect the brush from the brush holder. Disconnect the 4 brushers and remove the brush holder.

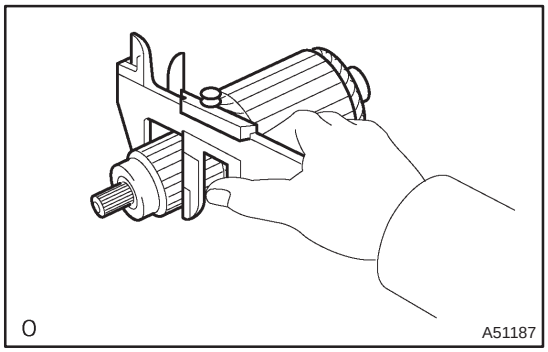


4. REMOVE STARTER ARMATURE ASSY

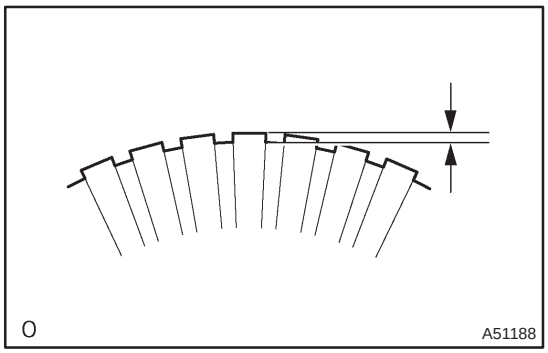
(a) Using a plastic–faced hammer, tap the yoke and remove the armature.



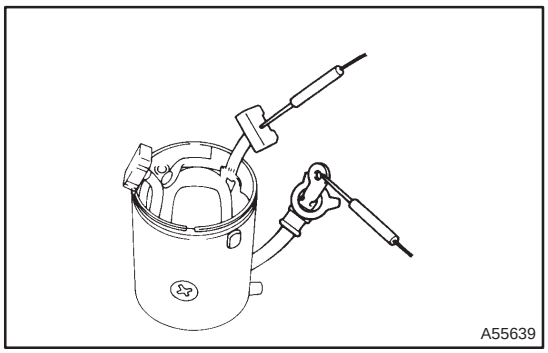
5. INSPECT STARTER ARMATURE ASSY



(a) Using an ohmmeter, check that there is continuity between the segments of the commutator.

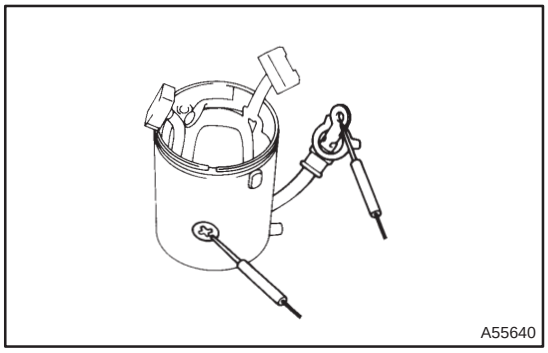


(b) Using an ohmmeter, check that there is no continuity between the commutator and armature coil core.

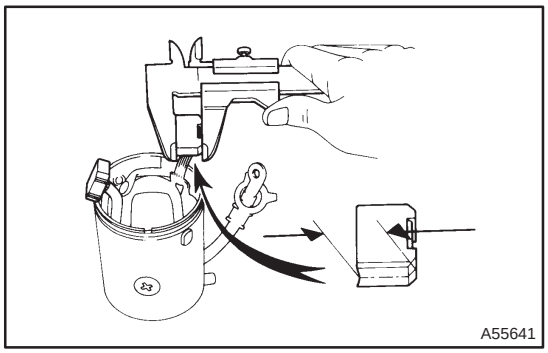


(c) Place the commutator on V–blocks.
(d) Using a dial gauge, measure the circle runout.
Maximum circle runout: 0.05 mm (0.002 in.)

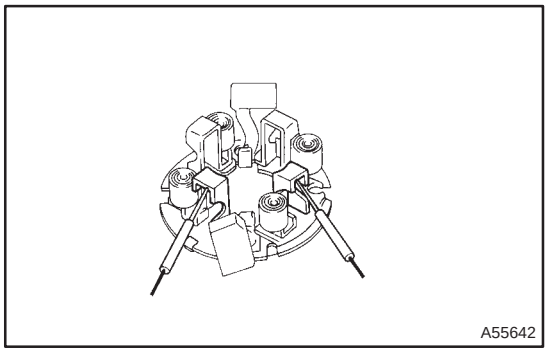
(e) Using vernier calipers, measure the commutator diameter.
Standard diameter: 35 mm (1.378 in.)
Minimum diameter: 34 mm (1.3386 in.)



(f) Check that the undercut depth is clean and free of foreign materials. Smooth out the edge.
Standard undercut depth: 0.7 mm (0.0276 in.)
Minimum undercut depth: 0.2 mm (0.079 in.)

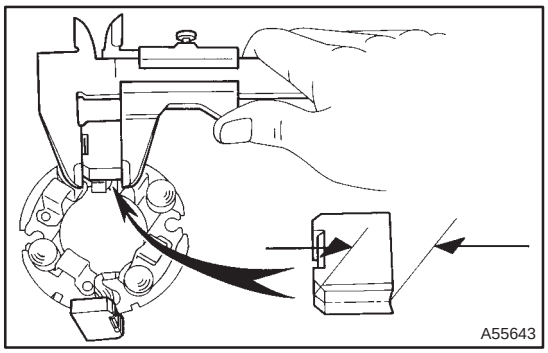


6. INSPECT STARTER YOKE ASSY

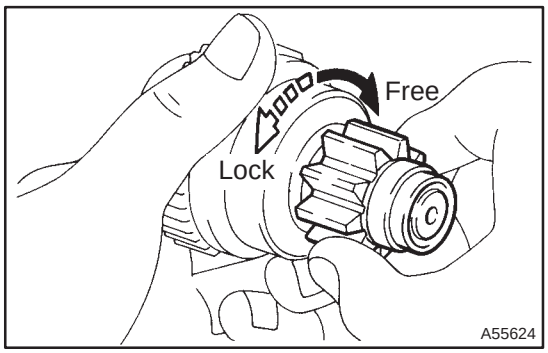


(a) Using an ohmmeter, check that there is continuity between the lead wire and field coil brush lead.

(b) Using an ohmmeter, check that there is no continuity between the field coil brush lead and yoke.

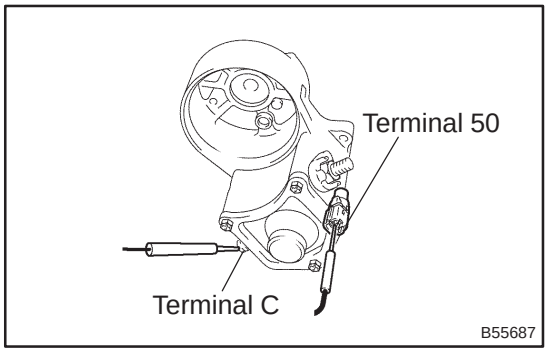


(c) Using vernier calipers, measure the brush length.
Standard length: 16.5 mm (0.6496 in.)
Minimum length: 9 mm (0.3543 in.)

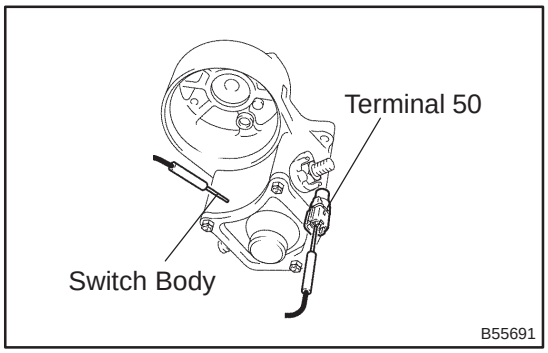


7. INSPECT STARTER BRUSH HOLDER ASSY

(a) Using an ohmmeter, check that there is no continuity between the positive (+) and negative (–) brush holders.

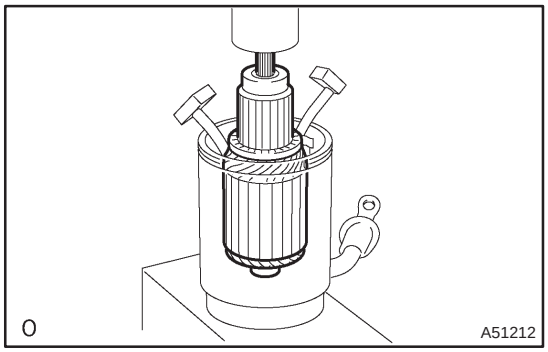


(b) Using vernier calipers, measure the brush length.
Standard length: 16.5 mm (0.6496 in.)
Minimum length: 9 mm (0.3543 in.)



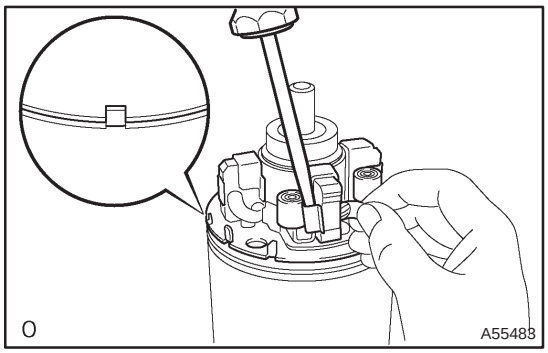
8. INSPECT STARTER CLUTCH SUB–ASSY

(a) Rotate the pinion gear clockwise, and check that it turns freely. Try to rotate the pinion gear counterclockwise and check that it locks.



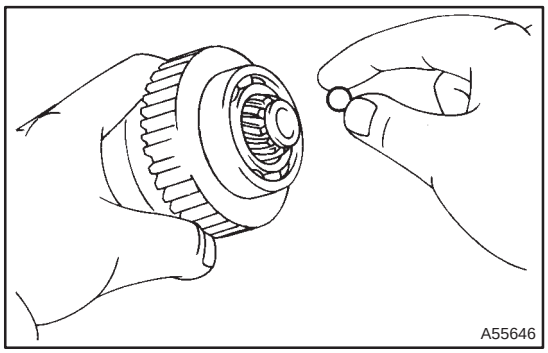
9. INSPECT MAGNET STARTER SWITCH ASSY

(a) Using an ohmmeter, check that there is continuity between terminals 50 and C.



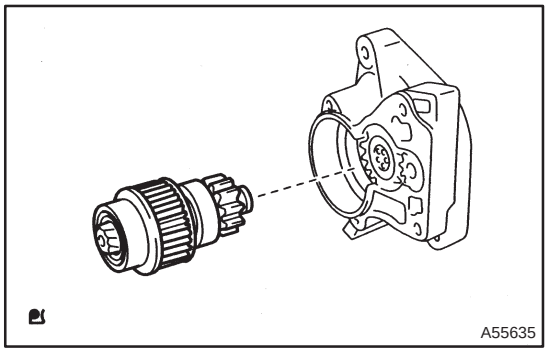
(b) Using an ohmmeter, check that there is continuity between terminal 50 and the switch body.

10. INSTALL STARTER ARMATURE ASSY



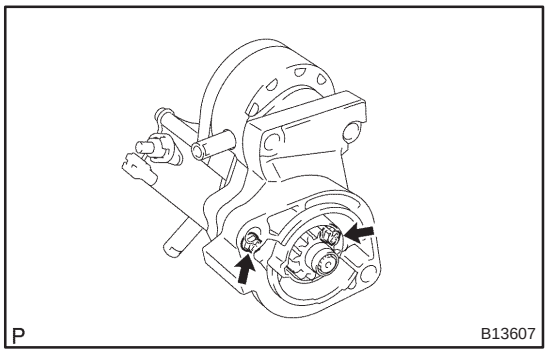
(a) Apply grease to the armature bearings.
(b) Using a press, press in armature.

11. INSTALL STARTER BRUSH HOLDER ASSY

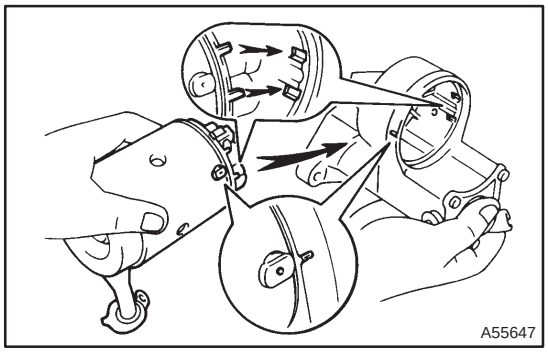


(a) Align the claw of the brush holder with the claw groove of the yoke.
(b) Place the brush on the yoke.
(c) Using a screwdriver, hold the brush spring back and connect the brush into the brush holder. Connect the 4 brushes.

NOTICE:
Check that the positive (+) lead wires are not grounded.

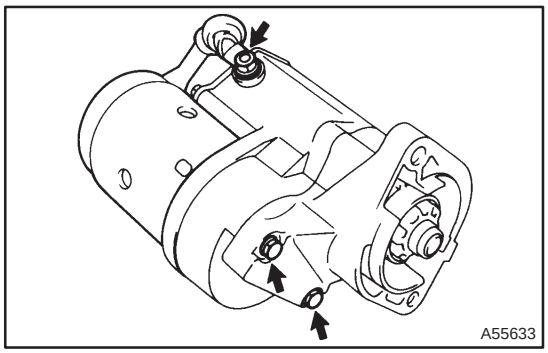


12. INSTALL STARTER CLUTCH SUB–ASSY



(a) Apply grease to the ball.
(b) Insert the ball into the clutch shaft hole.

(c) Place the clutch on the drive housing.

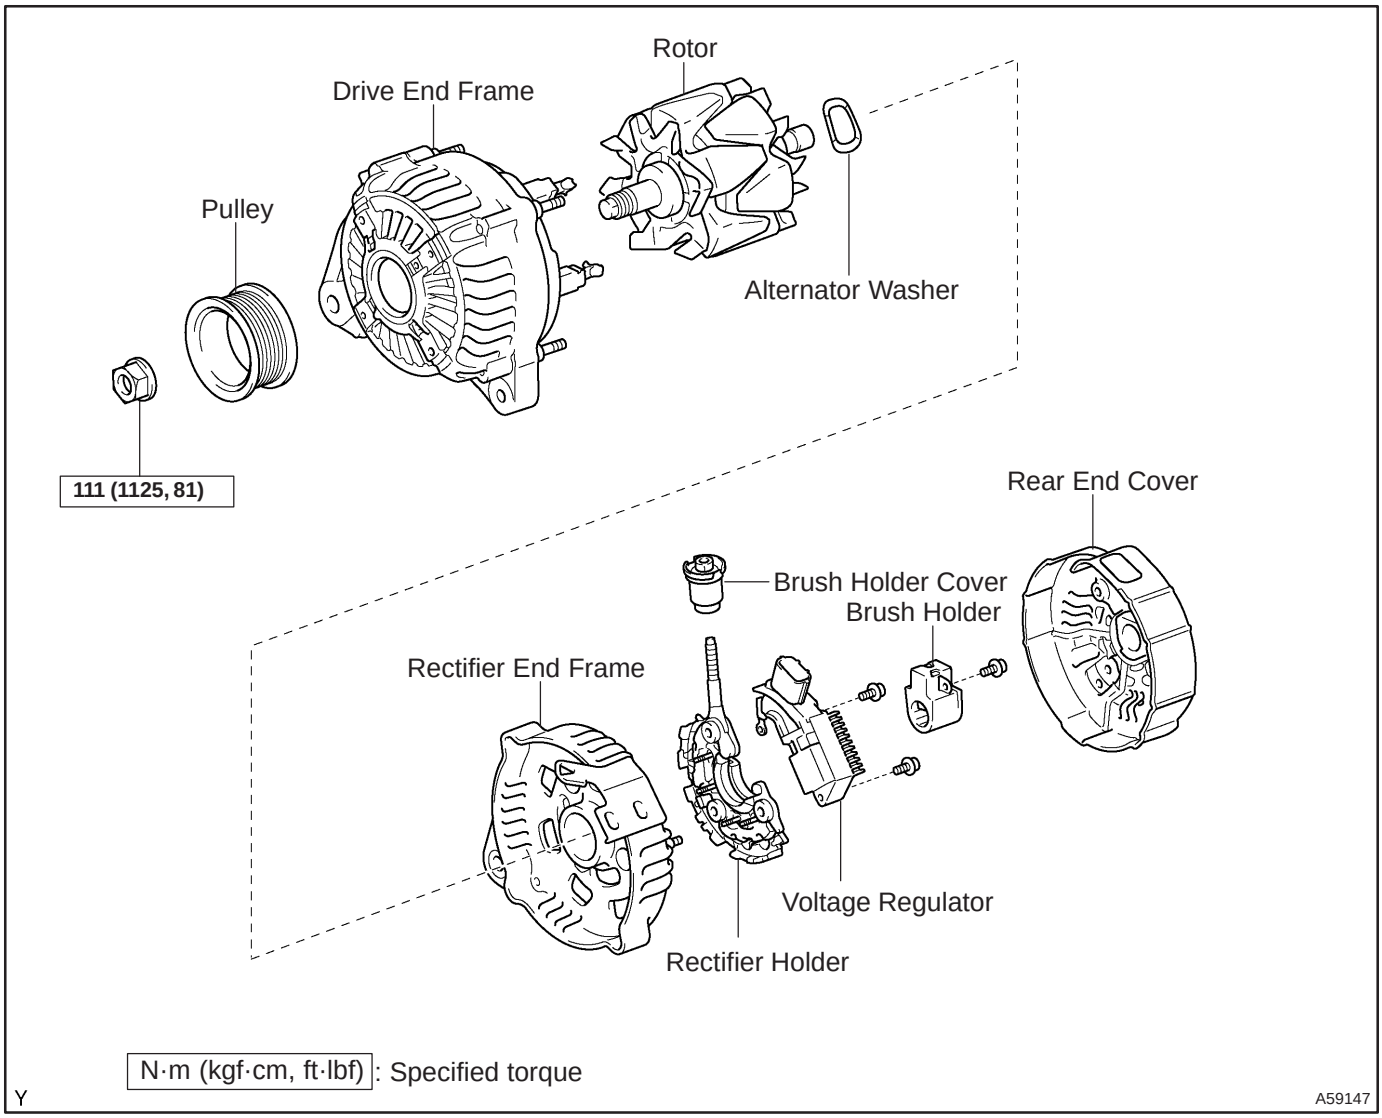


(d) Install the drive housing to the magnetic switch with the 2 bolts.
Torque: 9.3 N·m (95 kgf·cm, 82 in.·lbf)

13. INSTALL STARTER YOKE ASSY

(a) Align the claws of the brush holder with the grooves of the magnetic switch, and install the yoke and armature.

(b) Align the punch mark of the yoke with the line of the magnetic switch.



(c) Install the yoke and armature with the 2 through bolts.
Torque: 12.7 N·m (130 kgf·cm, 9 ft·lbf)

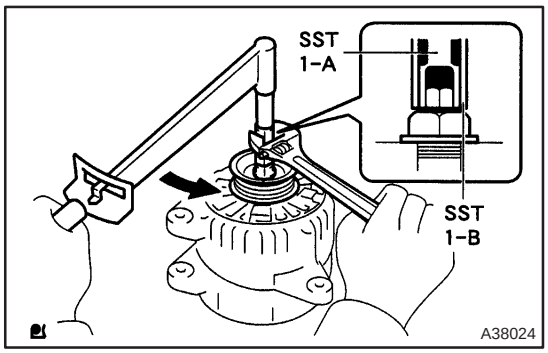
(d) Connect the lead wire to terminal C with the nut.
Torque: 5.9 N·m (60 kgf·cm, 52 in.·lbf)

GENERATOR ASSY(90A) (1CD–FTV)

19094–02

COMPONENTS

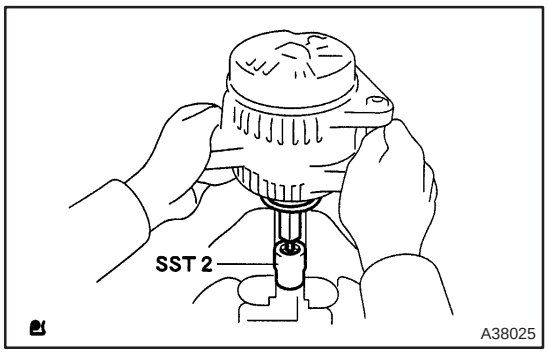
19095–02



OVERHAUL

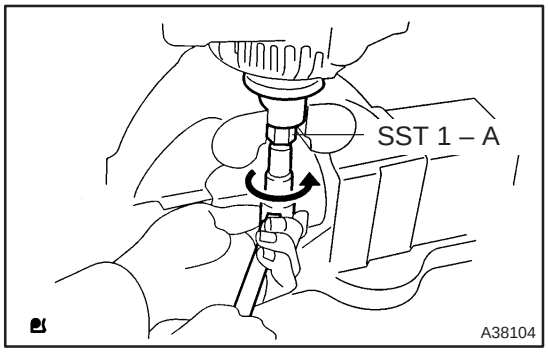
1. REMOVE GENERATOR PULLEY

SST 09820–63010 (09820–06010, 09820–06020)



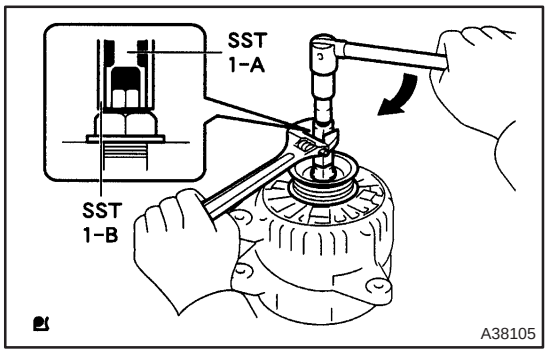
HINT:

SST1 – A, B	09820–06010
SST2	09820–06020



(a) Hold SST 1 – A with a torque wrench, and tighten SST 1 – B clockwise to the specified torque.
Torque: 39 N·m (400 kgf·cm, 29 ft·lbf)

NOTICE:
Check that SST is secured to the rotor shaft.



(b) Mount SST 2 in a vise.
(c) Insert SST 1 – A, B into SST 2, and attach the pulley nut to SST 2.

(d) To loosen the pulley nut, turn SST 1 – A in the direction shown in the illustration.

NOTICE:
To prevent damage to the rotor shaft, do not loosen the pulley nut more than one–half of a turn.

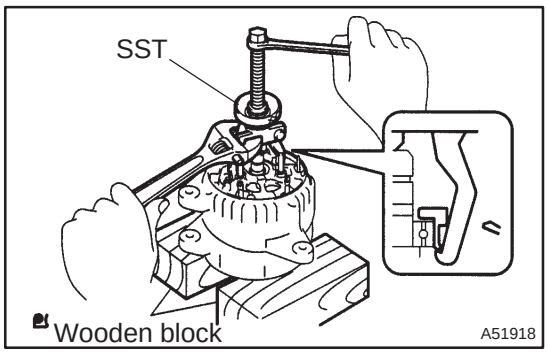
(e) Remove the alternator form SST 2.

(f) Turn SST 1 – B, and remove SST 1 – A, B.
(g) Remove the pulley nut and pulley.

2. REMOVE GENERATOR BRUSH HOLDER ASSY

(a) Remove the nut and terminal insulator.
(b) Remove the bolt, 3 nuts, plate terminal and end cover.
(c) Remove the brush cover.
(d) Remove the 2 screws and brush holder.

3. REMOVE GENERATOR REGULATOR ASSY



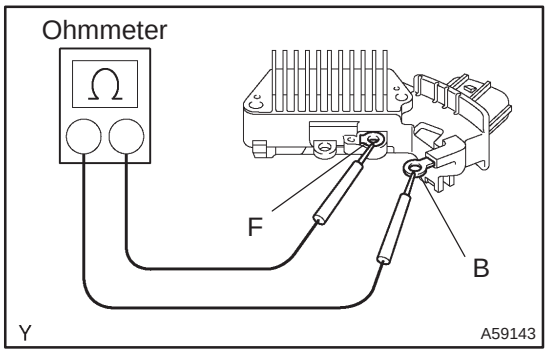
(a) Remove the 3 screws and voltage regulator.

4. REMOVE GENERATOR HOLDER W/RECTIFIER

(a) Remove the 4 screws and rectifier holder.

5. REMOVE ALTERNATOR RECTIFIRE END FRAME

(a) Remove the rubber insulator.
(b) Remove the seal plate.
(c) Remove the 4 nuts.

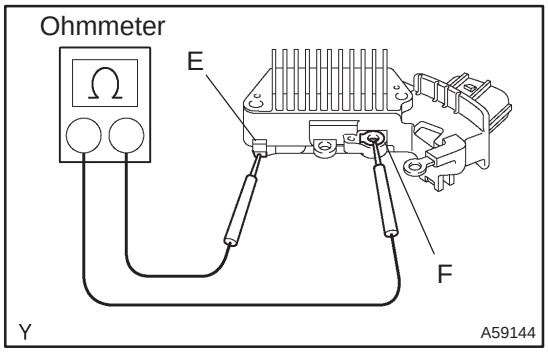


(d) Using bearing puller set, remove the rectifier end frame.

6. REMOVE GENERATOR ROTOR ASSY

(a) Remove the alternator washer from the rotor.
(b) Remove the rotor from drive end frame.

NOTICE:
Do not drop the rotor.

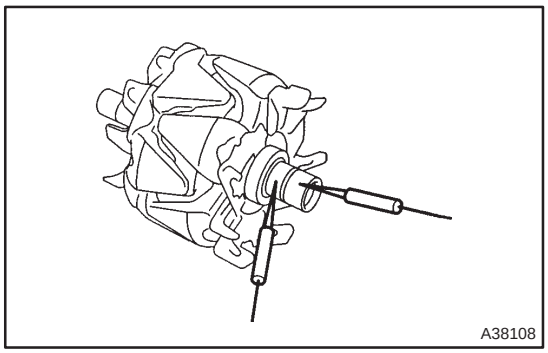


7. INSPECT GENERATOR REGULATOR ASSY

(a) Using an ohmmeter, check the continuity between terminals F and B.

Standard:
When the positive and negative poles between terminals F and B are exchanged, there is continuity in one way but no continuity in another way.

If the continuity is not as specified, replace the voltage regulator.

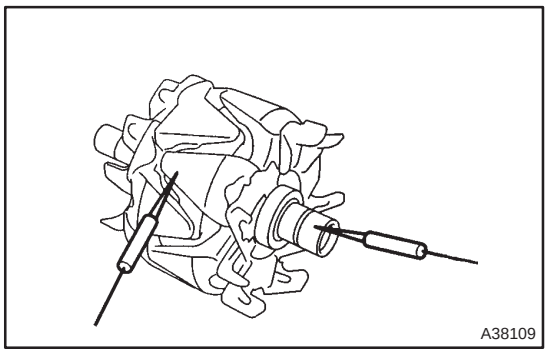


(b) Using an ohmmeter, check the continuity between terminals F and E.

Standard:

When the positive and negative poles between terminals F and E are exchanged, there is continuity in one way but no continuity in another way.

If the continuity is not as specified, replace the voltage regulator.

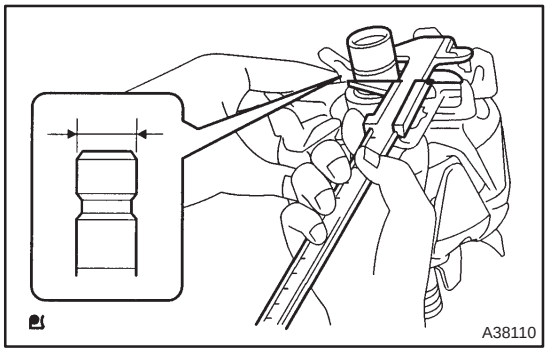


8. INSPECT GENERATOR ROTOR ASSY

(a) Inspect rotor for open circuit.

(1) Using an ohmmeter, check that there is continuity between the slip rings.

Standard resistance: 2.7 – 3.1 Ω at 20°C (68°F)

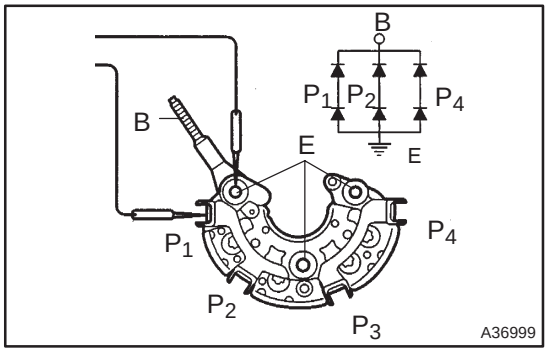


If there is no continuity, replace the rotor.

(b) Inspect rotor for ground.

(1) Using an ohmmeter, check that there is no continuity between the slip ring and rotor.

If there is continuity, replace the rotor.



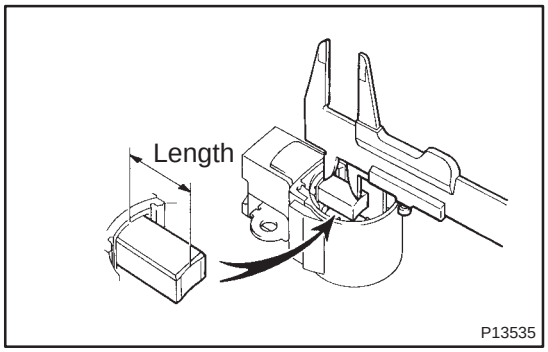
(c) Inspect slip rings.

(1) Using vernier calipers, measure the slip ring diameter.

Standard diameter: 14.2 – 14.4 mm (0.559 – 0.567 in.)

Minimum diameter: 12.8 mm (0.504 in.)

If the diameter is less than minimum, replace the rotor.

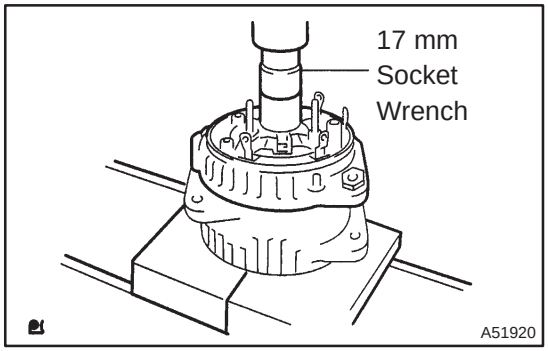


9. INSPECT GENERATOR HOLDER W/RECTIFIER

(a) Using an ohmmeter, connect one tester probe to the B or E terminal and the other to each rectifier terminal.

(b) Reverse the polarity of the tester probes and repeat step (a).

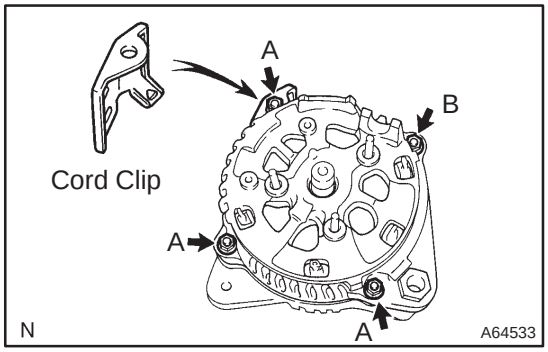
(c) Check that one shows continuity and the other shows no continuity.



10. INSPECT BRUSH

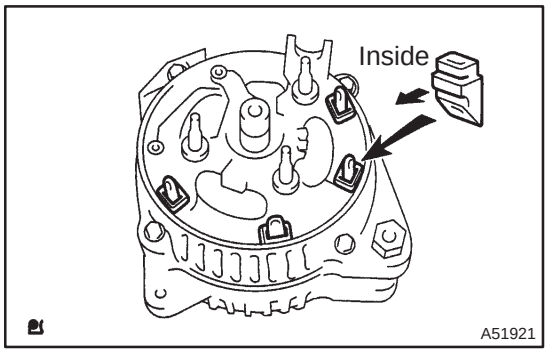
(a) Using vernier calipers, measure the exposed brush length.
Standard exposed length:
9.5 – 11.5 mm (0.374 – 0.453 in.)
Minimum exposed length: 1.5 mm (0.059 in.)

If the exposed length is less than minimum, replace the brush holder assembly.



11. INSTALL GENERATOR ROTOR ASSY

(a) Install the generator rotor.
(b) Install the alternator washer to the rotor.



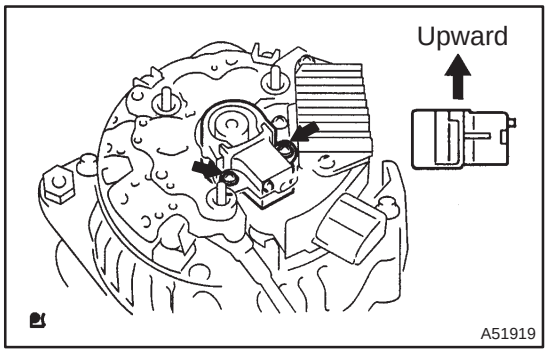
12. INSTALL ALTERNATOR RECTIFIRE END FRAME

(a) Using a 17 mm socket wrench and press, slowly press in the rectifier end frame.

(b) Install the cord clip and 4 nuts.
Torque:
Nut A 4.5 N·m (46 kgf·cm, 39 in.·lbf)
Nut B 5.4 N·m (55 kgf·cm, 47 in.·lbf)

(c) Install the seal plate on the rectifier end frame.

(d) Install the 4 rubber insulators on the lead wires.



NOTICE:
Be careful of the rubber insulators installation direction.

13. INSTALL GENERATOR HOLDER W/RECTIFIER

(a) Install the rectifier holder while pushing it with the 4 screws.
Torque: 2.9 N·m (30 kgf·cm, 26 in.·lbf)

14. INSTALL GENERATOR REGULATOR ASSY

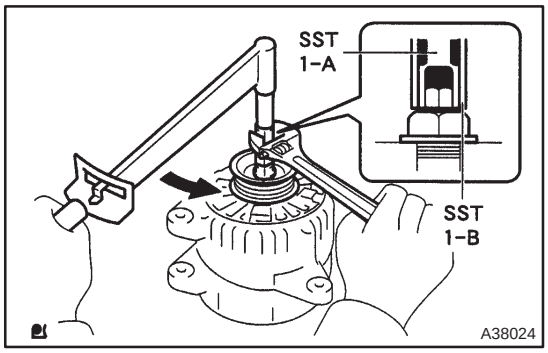
(a) Install the 3 screws and voltage regulator.
Torque: 3.9 N·m (40 kgf·cm, 35 in.·lbf)

15. INSTALL GENERATOR BRUSH HOLDER ASSY

(a) Install the 2 screws and brush holder.
Torque: 2.0 N·m (20 kgf·cm, 18 in.·lbf)

NOTICE:
Be careful of the holder installation direction.

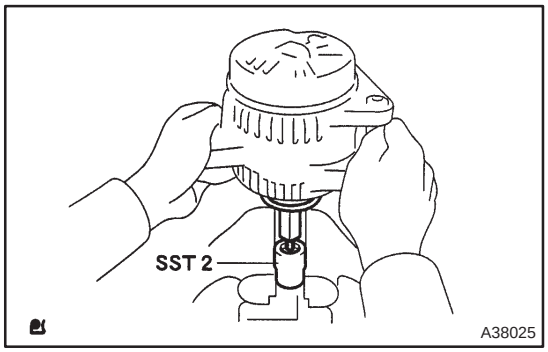
(b) Install the brush cover.
(c) Install the end cover and plate terminal with the bolt and 3 nuts.
Torque:
Nut 4.4 N·m (45 kgf·cm, 39 in.·lbf)
Bolt 3.9 N·m (39 kgf·cm, 35 in.·lbf)
(d) Install the terminal insulator with the nut.
Torque: 4.1 N·m (42 kgf·cm, 36 in.·lbf)



16. INSTALL GENERATOR PULLEY

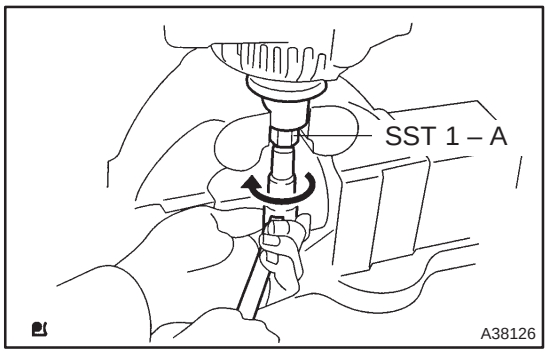
SST 09820–63010 (09820–06010, 09820–06020)

HINT:

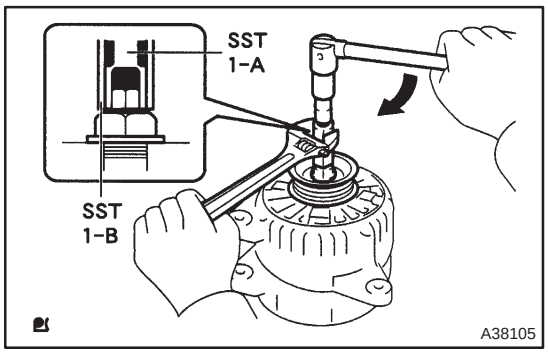


SST1 – A, B	09820–06010
SST2	09820–06020

(a) Install the pulley to the rotor shaft by tightening the pulley nut by hand.



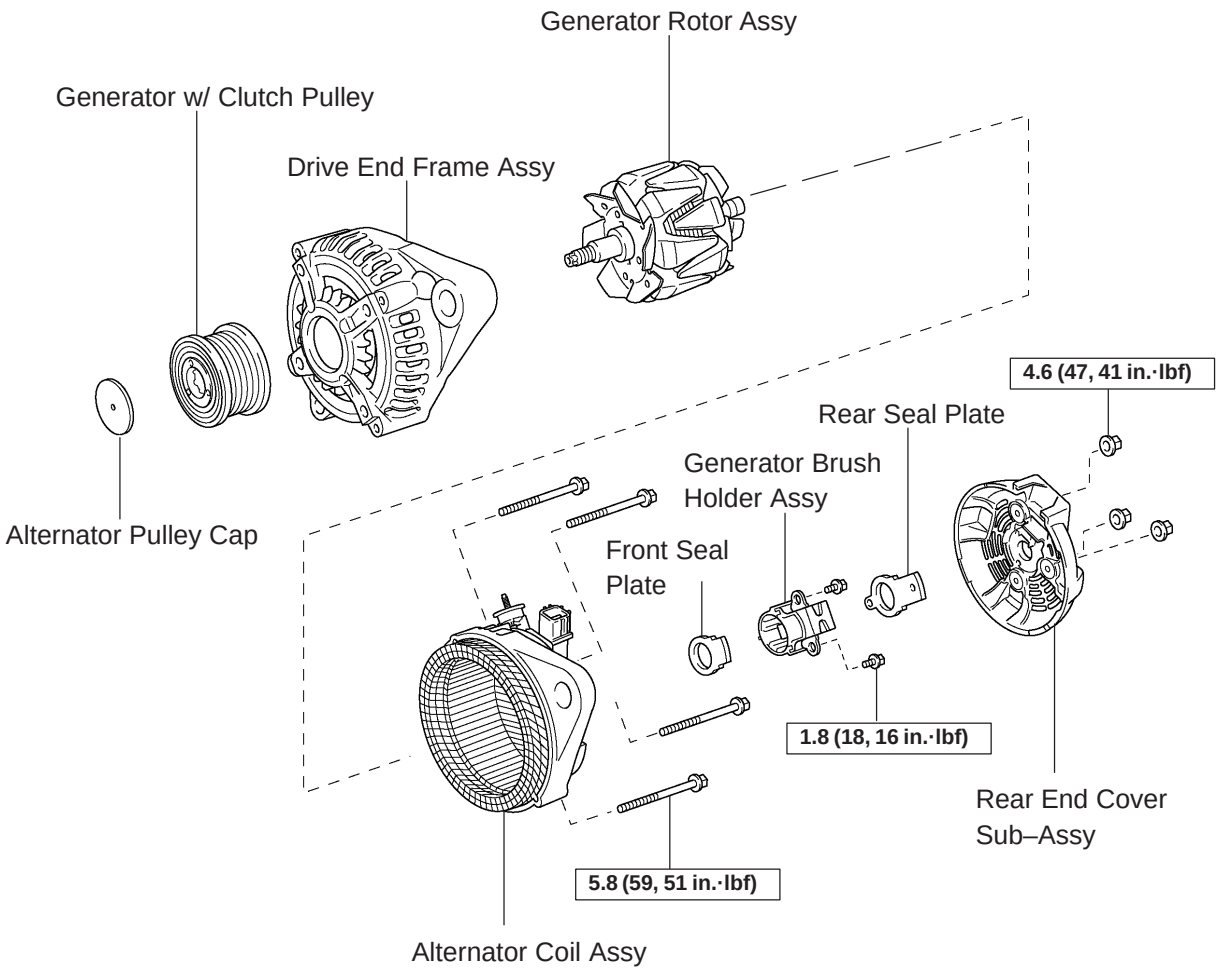
(b) Hold SST 1 – A with a torque wrench, and tighten SST 1 – B clockwise to the specified to torque.
Torque: 39 N·m (400 kgf·cm, 29 ft·lbf)



NOTICE:
Check that SST is secured to the pulley shaft.

(c) Mount SST 2 in a vise.
(d) Insert SST 1 – A, B into SST 2, and attach the pulley nut to SST 2.

(e) Tighten the pulley nut, turn SST 1 – A in the direction shown in the illustration.
Torque: 111 N·m (1,125 kgf·cm, 81 ft·lbf)
(f) Remove the alternator form SST 2.

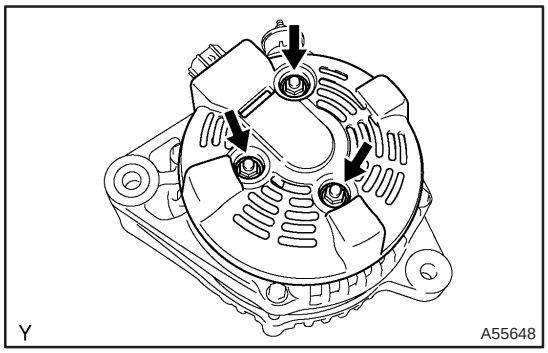


(g) Turn SST 1 – B, and remove SST 1 – A, B.
(h) Turn the pulley, and check that the pulley moves smoothly.

GENERATOR ASSY(130A) (1CD–FTV)

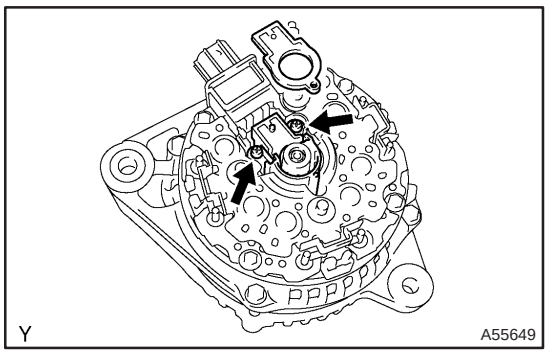
COMPONENTS

190AI–01



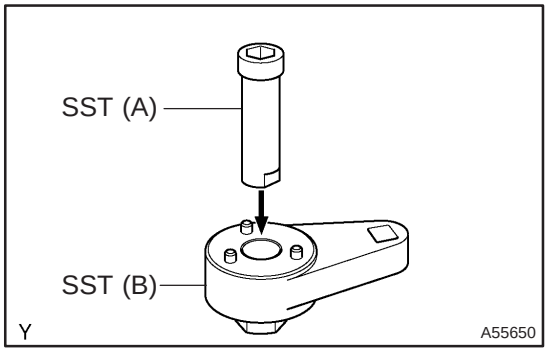
Y N·m (kgf·cm, ft·lbf): Specified torque

A62720



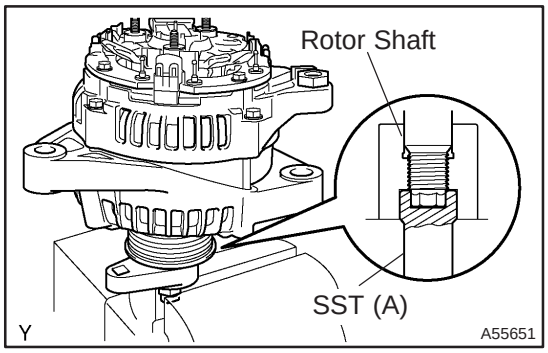
190AJ–01

OVERHAUL

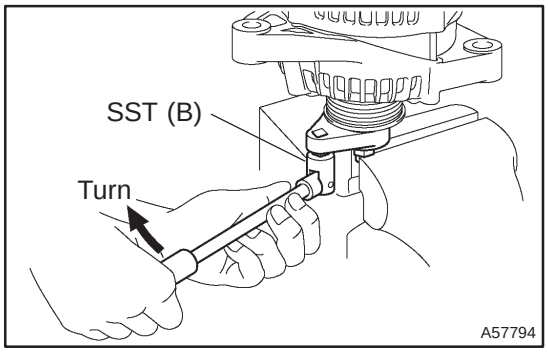


1. REMOVE GENERATOR BRUSH HOLDER ASSY

(a) Remove the 3 nuts and rear end cover.
(b) Remove the B terminal insulator.

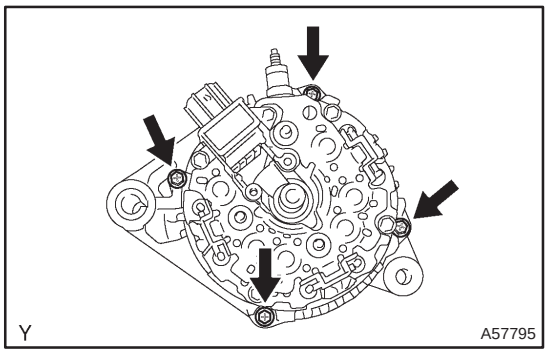


(c) Remove the rear plate seal from the brush holder.
(d) Remove the 2 screws and brush holder.
(e) Remove the front seal plate from the rear frame.



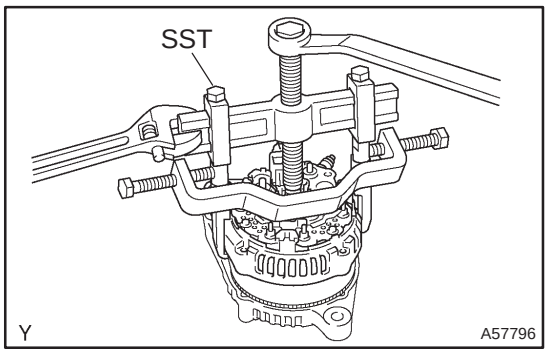
2. REMOVE GENERATOR W/CLUTCH PULLEY

(a) Set SST (A) and (B).
SST 09820–63020

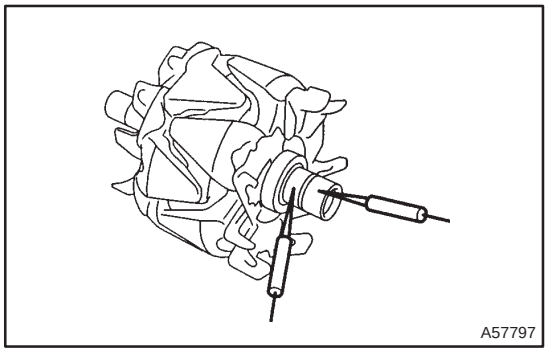


(b) Mount SST (A) in a vise.
(c) Set the alternator to SST.

NOTICE:
At this time, make sure that the alternator and SST are perpendicular to one another.

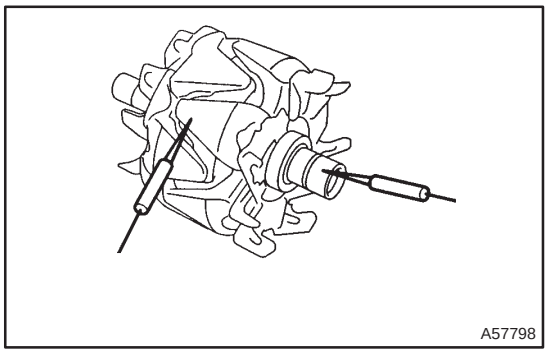


(d) Insert the 3 tabs of SST (B) into the 3 holes on the pulley.
(e) To loosen the pulley, turn SST (B) in the direction shown in the illustration.
(f) Remove the alternator from SST.
(g) Remove the pulley from the rotor shaft.

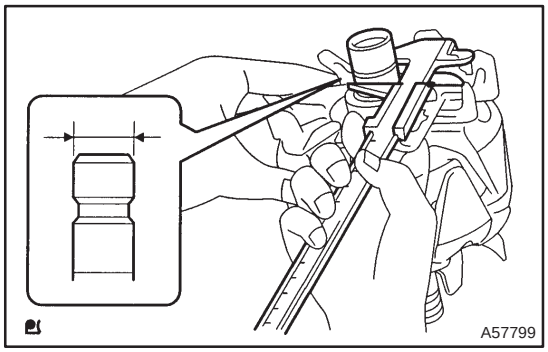


3. REMOVE GENERATOR ROTOR ASSY

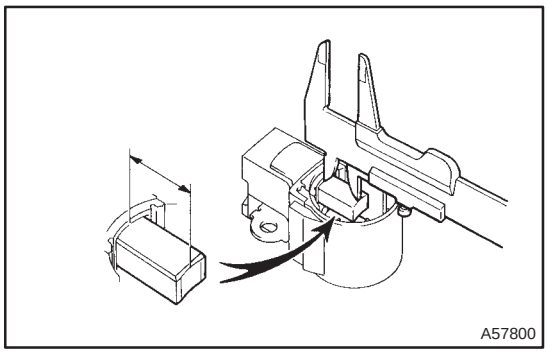
(a) Remove the 4 through bolts.



(b) Using SST, remove the coil assembly.
SST 09950–40011 (09951–04020, 09952–04010, 09953–04020, 09954–04010, 09955–04071, 09958–04011)
(c) Remove the alternator washer.
(d) Remove the rotor from the drive end frame.

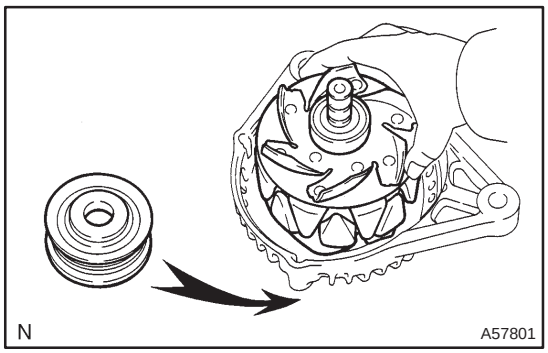


4. INSPECT GENERATOR ROTOR ASSY



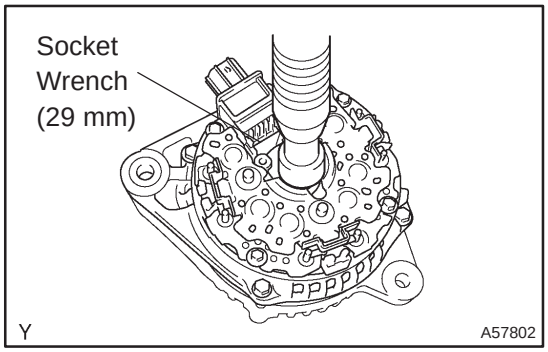
(a) Using an ohmmeter, check that there is continuity between the slip rings.
Standard resistance: 2.3 – 2.7 Ω at 20°C (68°F)

(b) Using an ohmmeter, check that there is no continuity between the slip ring and rotor.



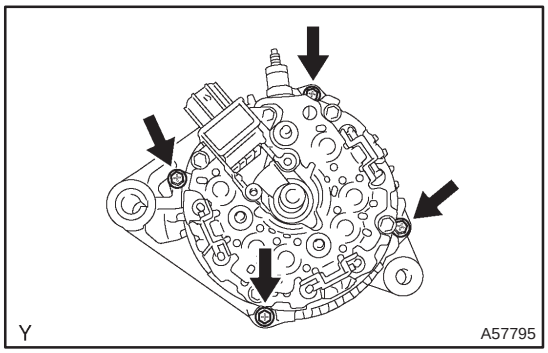
(c) Check that the slip rings are not rough or scored.
(d) Using vernier calipers, measure the slip ring diameter.
Standard diameter:
14.2 – 14.4 mm (0.5591 – 05669 in.)
Minimum diameter: 14.0 mm (0.551 in.)

5. INSPECT GENERATOR BRUSH HOLDER ASSY

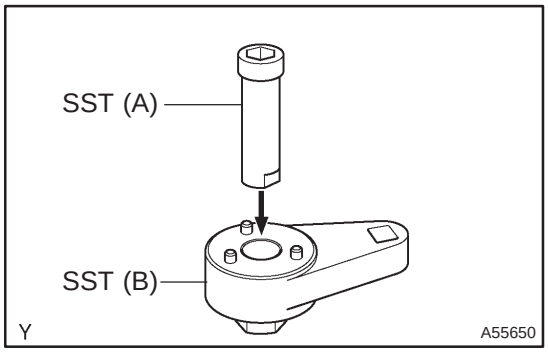


(a) Using vernier calipers, measure the exposed brush length.
Standard exposed length: 10.5 mm (0.4134 in.)
Minimum exposed length: 4.5 mm (0.177 in.)

HINT:
If the exposed length is less than minimum, replace the brush holder.

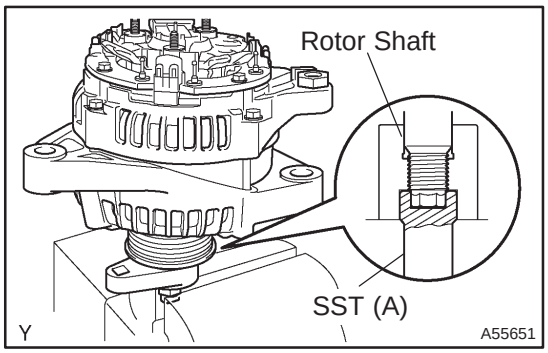


6. INSTALL GENERATOR ROTOR ASSY

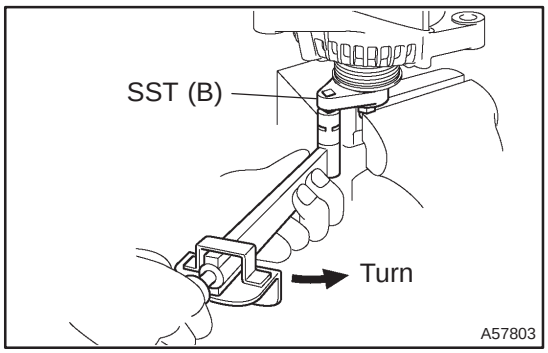


(a) Place the drive end frame.
(b) Install the rotor to the drive end frame.
(c) Place the alternator washer on the rear bearing.

(d) Using a socket wrench (29 mm)and press, slowly press in the coil assembly.



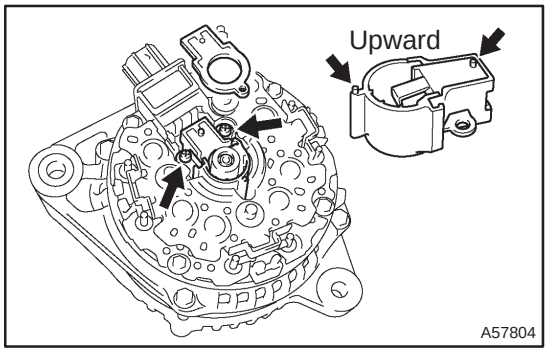
(e) Install the 4 through bolts.
Torque: 5.8 N·m (59 kgf·cm, 51in.·lbf)



7. INSTALL GENERATOR W/CLUTCH PULLEY

(a) Temporarily install the pulley to the rotor shaft.
(b) Set SST (A) and (B).
SST 09820–63020

(c) Mount SST (A) in a vise.
(d) Set the alternator to SST.

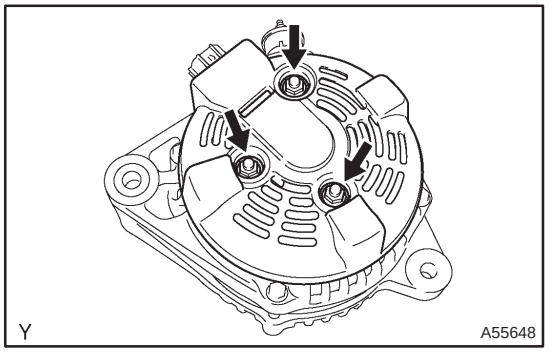


NOTICE:
At this time, make sure that the alternator and SST are perpendicular to one another.

(e) Insert the 3 tabs of SST (B) into the 3 holes on the pulley.
(f) To torque the pulley, turn SST (B) in the direction shown in the illustration.
Torque: 111 N·m (1132 kgf·cm, 82 ft·lbf) for using SST

HINT:
Use a torque wrench with a fulcrum length of 50 cm (19.69 in.).

(g) Remove the alternator from SST.
(h) Install a new alternator pulley cap.



8. INSTALL GENERATOR BRUSH HOLDER ASSY

(a) Place the front seal plate to the coil assembly.
(b) Install the brush holder with the 2 screws.
Torque: 1.8 N·m (18 kgf·cm, 16 in.·lbf)

NOTICE:
Be careful of the holder installation direction.

(c) Place the plate seal on the brush holder.

(d) Install the rear end cover with the 3 nuts.
Torque: 4.6 N·m (47 kgf·cm, 41 in.·lbf)

HOW TO USE THIS MANUAL

010B2–13

GENERAL INFORMATION

1. GENERAL DESCRIPTION

(a) This manual is made in accordance with SAE J2008.

(b) Generally, repair operations can be separated in the following 3 main processes:
1. Diagnosis
2. Removing/Installing, Replacing, Disassembling/Reassembling, Checking and Adjusting
3. Final Inspection

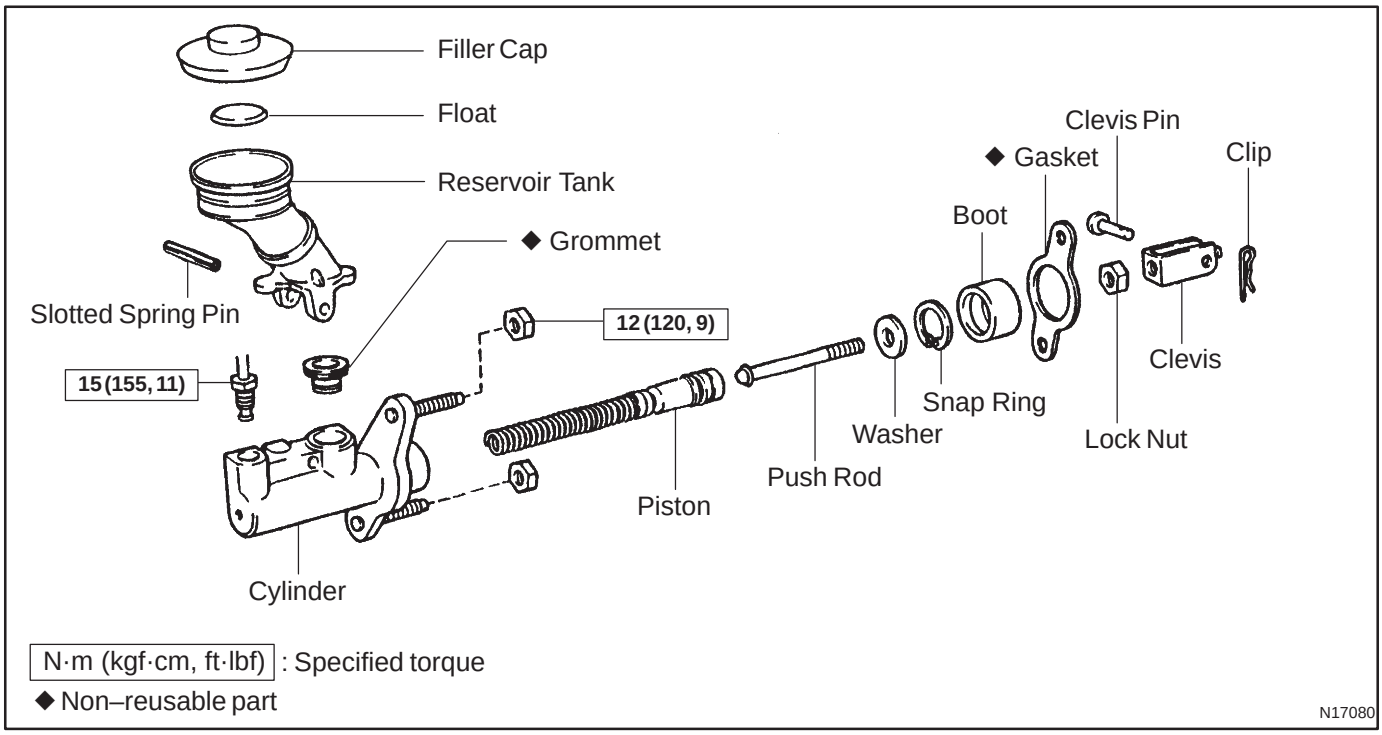
(c) This manual explains the 1st process of ”Diagnosis” (found in the ”Diagnostics” section), the 2nd process of ”Removing and Installing, Replacing, Disassembling, Installing and Checking, and Adjusting”, but the 3rd process of ”Final Inspection” is omitted.

(d) The following essential operations are not written in this manual. However, these operations must be performed in actual situations.
(1) Operations with a jack or lift
(2) Cleaning of a removed part when necessary
(3) Visual check

2. INDEX

(a) An alphabetical INDEX section is provided at the end of the book as a reference to help you find the item to be repaired.

3. PREPARATION



(a) Use of special service tools (SST) and special service materials (SSM) may be required, depending on the repair situation. Be sure to use SST and SSM when they are required and follow the working procedure properly. A list of SST and SSM is in the Preparation section of this manual.

4. REPAIR PROCEDURES

(a) Component drawing is placed under the title where necessary.

(b) Non–reusable parts, grease application area, precoated parts and tightening torque are specified in the component drawings.

Example:

(c) Tightening torque, grease application area, and non–reusable parts are described as important points in the procedures.

NOTICE:

There are cases where such information can only be explained by using an illustration. In these cases, all the information such as torque, oil, etc. are described in the illustration.

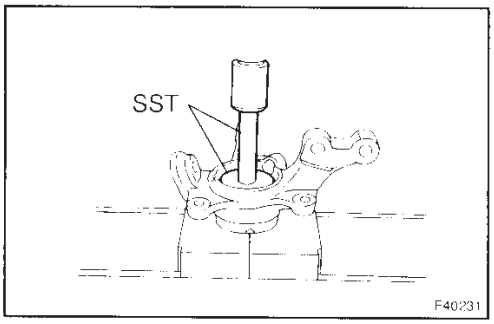
(d) Installing procedures are performed in the reverse order of the removal and only the important points are described.

(e) Only items with points are described in the procedure, and the operational portion and content are placed using an illustration. In the explanations, details of the operational method, standard value and notices are placed.

(f) There may be a case where the illustrations of similar models are used. In that case, specific details may be different from the actual vehicle.

(g) The procedures are presented in a step–by–step format:

(1) The illustration shows what to do and where to do it.



(2) The task heading tells what to do.

(3) The explanation text tells how to perform the task and gives other information such as specifications and warnings.

Example:

Illustration:

what to do and where

Task heading: what to do

14. INSTALL FRONT AXLE HUB LH BEARING

(a) Using SST and a press, install a new bearing to the steering knuckle. ← *Detailed text: how to perform task*

SST 09950–60020 (09951–00720), 09950–70010 (09951–07100)

Set part No

Component part No.

D31009

HINT:

This format provides an experienced technician with a FAST TRACK to the necessary information. The task heading can be read at a glance when necessary and the text below provides detailed information. Important specifications and warnings always are written in bold type to stand out from the rest of the text.

5. SERVICE SPECIFICATIONS

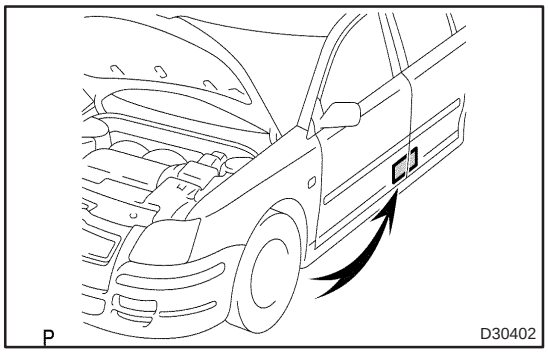
(a) Specifications are presented in bold type throughout the manual. You never have to leave the procedure to look up your specifications. The specifications are also found in the Service Specifications section for quick reference.

6. TERMS DEFINITION

CAUTION	Indicates the possibility of injury to you or other people.
NOTICE	Indicates the possibility of damage to the components being repaired.
HINT	Provides additional information to help you to perform the repair efficiently.

7. SI UNIT

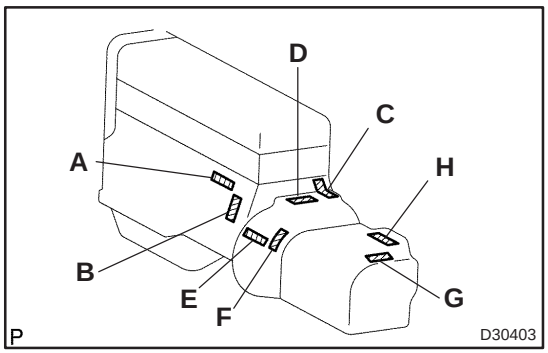
(a) The units given in this manual are primarily expressed according to the SI UNIT (International System of Units), and alternately expressed in the metric system and in the English System.



Example:

Torque: 30 N·m (310 kgf·cm, 22 ft·lbf)

IDENTIFICATION INFORMATION



VEHICLE IDENTIFICATION AND SERIAL NUMBERS

010LE–01

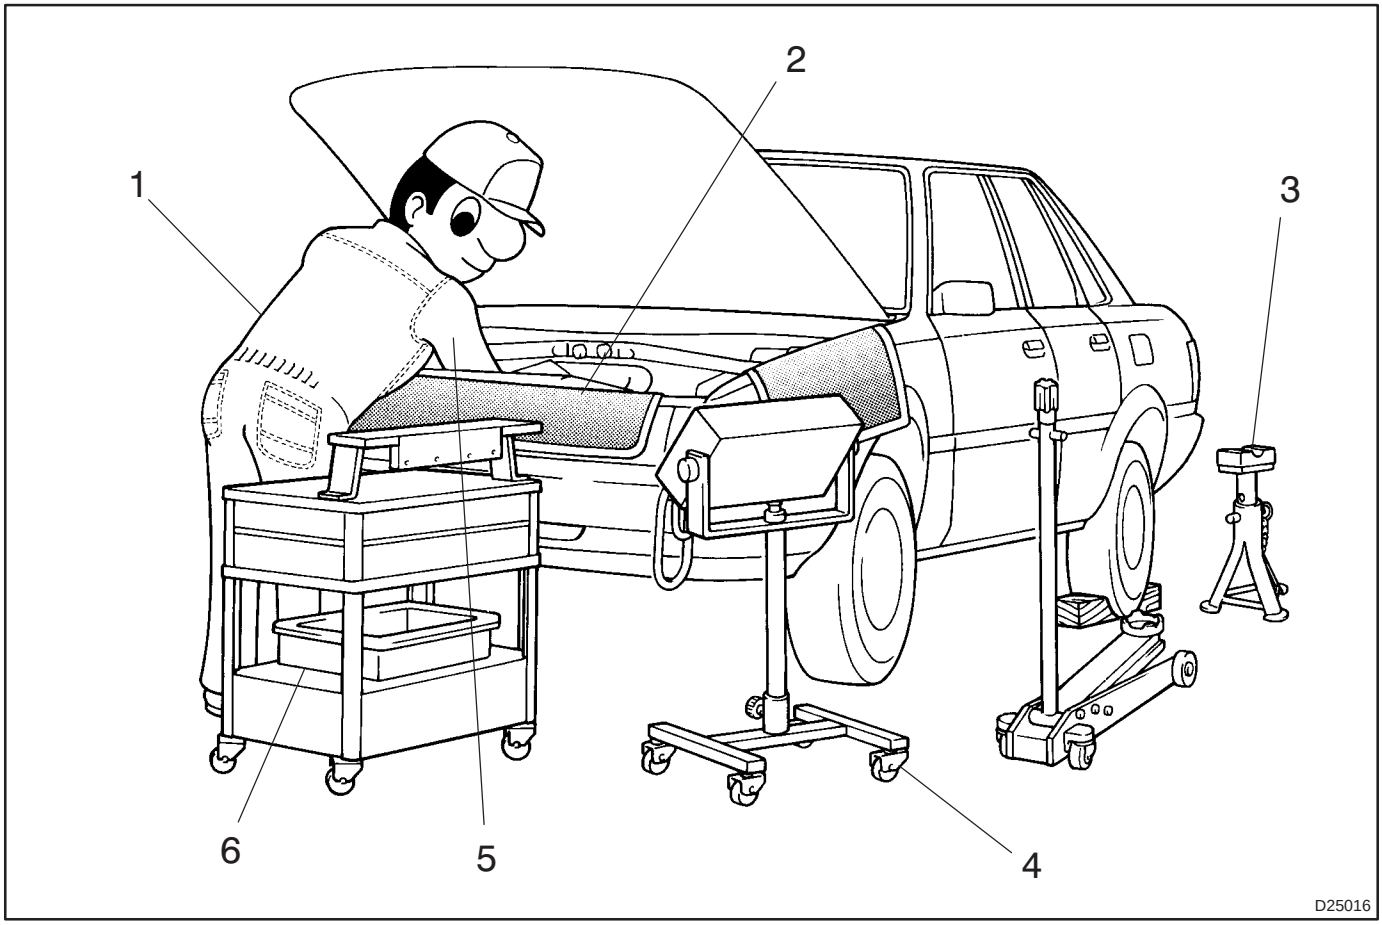
1. VEHICLE IDENTIFICATION NUMBER

(a) The vehicle identification number is stamped in the engine compartment, as shown in the illustration. This number has also been stamped on the manufacturer's plate.

2. ENGINE SERIAL NUMBER AND TRANSAXLE SERIAL NUMBER

(a) The engine serial number is stamped on the cylinder block of the engine and the transmission serial number is stamped on the housing as shown in the illustration.

A: 1CD–FTV
B: 1AZ–FE, 1AZ–FSE
C: 1ZZ–FE, 3ZZ–FE
D: C50, C250
E: U241E
F: E354, E357, U241E
G: U241E
H: U341E

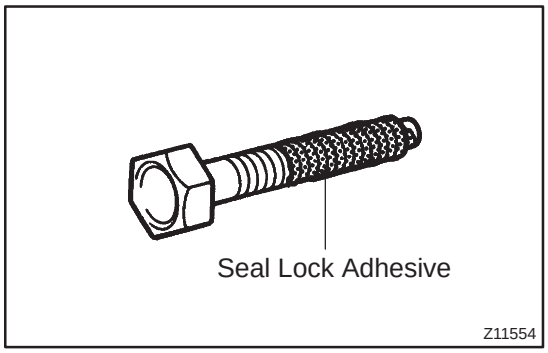


REPAIR INSTRUCTION

010LF–01

PRECAUTION

1. BASIC REPAIR HINT



(a) HINTS ON OPERATIONS

1	Looks	• Always wear a clean uniform. • Hat and safety shoes must be worn.
2	Vehicle protection	• Set a grill cover, fender cover, seat cover and floor mat before starting operation.
3	Safe operation	• When working with 2 or more persons, be sure to check the safety of one another. • When working with the engine running, pay attention to providing ventilation for exhaust fumes in the workshop. • When working with high–temperatures, rotating, moving or vibrating parts, be careful not to burn or injure yourself. • When jacking up the vehicle, be sure to support the specified location with a safety stand. • When lifting up the vehicle, use safety equipment.
4	Preparation of tools and measuring gauge	• Before starting repairs, prepare the tool stand, SST, gauge, oil, shop rag and parts for replacement.
5	Removal and installation, disassembly and assembly operations	• Diagnose with a thorough understanding of the trouble condition and perform effective operation. • Before removing the parts, check the general condition of the assembly, and for deformation and damage. • When the structure is complicated, take a notes or make matchmarks as not to make mistakes that affect the function of the parts. • Clean and wash the removed parts if necessary and assemble them after a thorough check.
6	Removed parts	• Place the removed parts in the correct order to avoid mixing them up or making them dirty. • As for non–reusable parts such as gaskets, O–rings, and self–locking nuts, replace them with new ones following the instructions in this manual. • Organize the parts that were replaced in a box and show them to the customer.

(b) JACKING UP AND SUPPORTING VEHICLE

(1) Care must be taken when jacking up and supporting the vehicle. Be sure to lift and support the vehicle at the proper locations (See page 01–19).

(c) PRECOATED PARTS

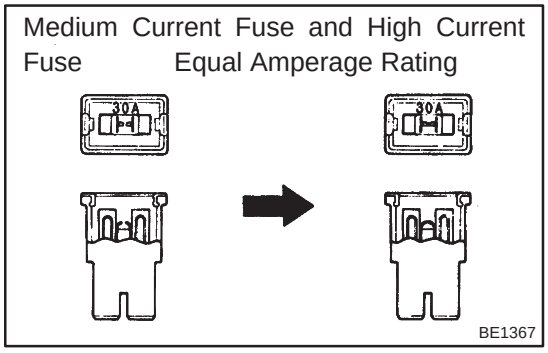
(1) Precoated parts such as bolts, nuts, etc., are coated with a seal lock adhesive at the factory.

(2) If a precoated part is retightened, loosened or caused to move in any way, it must be recoated with the specified adhesive.

(3) When reusing precoated parts, clean off the old adhesive and dry the part with compressed air. Then apply the specified seal lock adhesive to the bolt, nut or threads.

NOTICE:

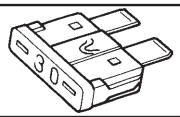
Check the torque with the lower limit value of the torque tolerance.

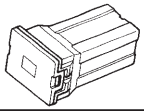


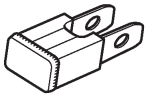
(4) Depending on the seal lock agent to be applied, there may be cases where it is necessary to leave it for a specified time until it hardens.

(d) GASKETS

(1) When necessary, use a sealer on gaskets to prevent leaks.







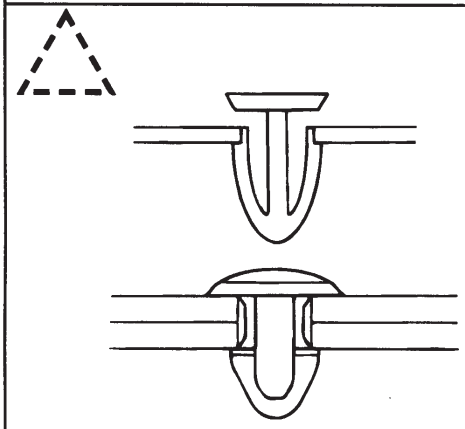
(e) BOLTS, NUTS AND SCREWS

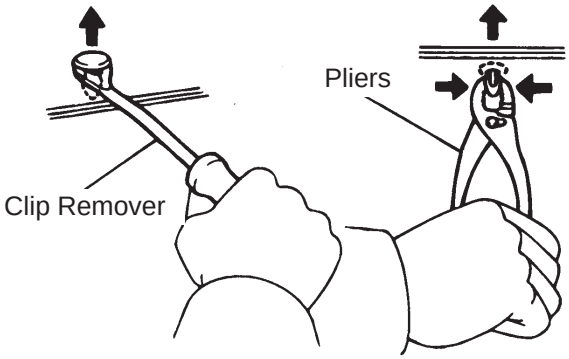
(1) Carefully follow all the specifications for tightening torques. Always use a torque wrench.

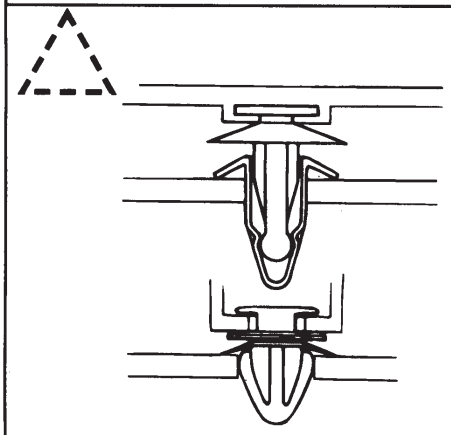
(f) FUSES

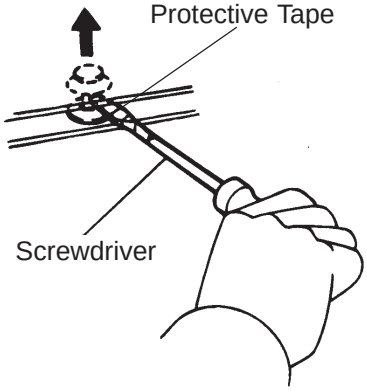
(1) When replacing fuses, be sure that a new fuse has the correct amperage rating. DO NOT exceed the rating, or use one with a lower rating.

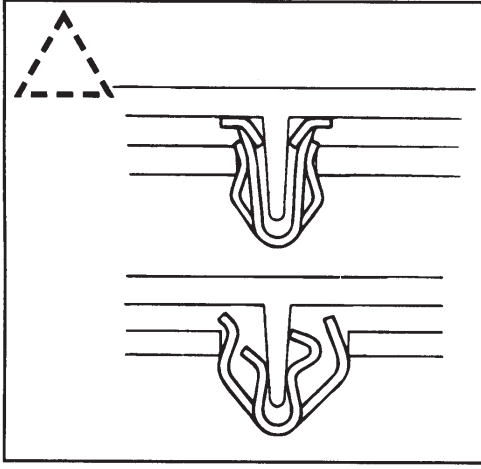
Illustration	Symbol	Part Name	Abbreviation
 BE5594	 IN0365	FUSE	FUSE
 BE5595	 IN0366	MEDIUM CURRENT FUSE	M–FUSE
 D27353	 IN0367	HIGH CURRENT FUSE	H–FUSE

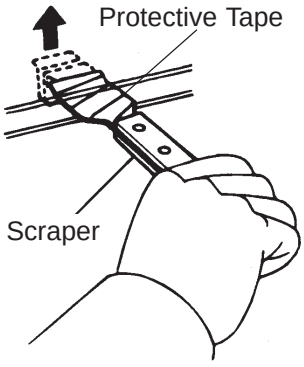






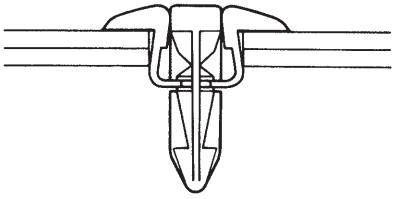


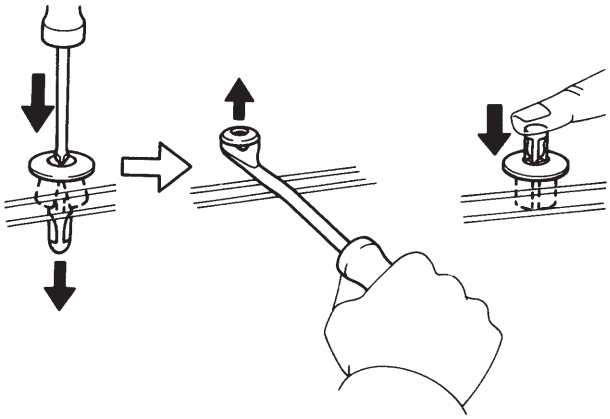


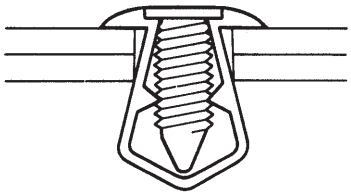


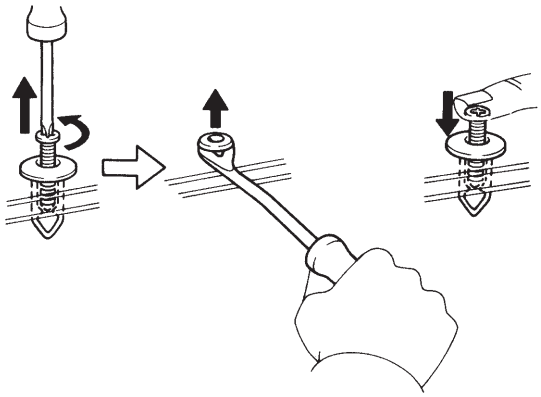
V35002

(g) CLIPS



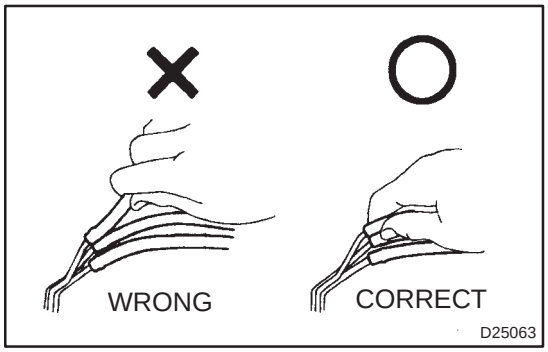






(1) The removal and installation methods of typical clips used in body parts are shown in the table below.

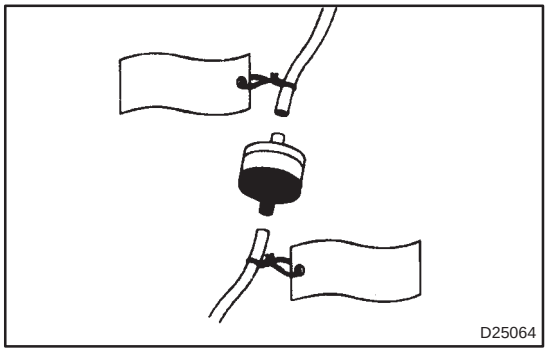
HINT:



If the clip is damaged during the operation, always replace it with a new clip.

Shape (Example)	Removal/Installation
	
	
	

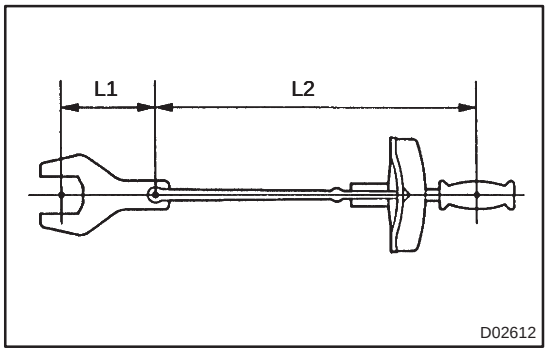
D25786



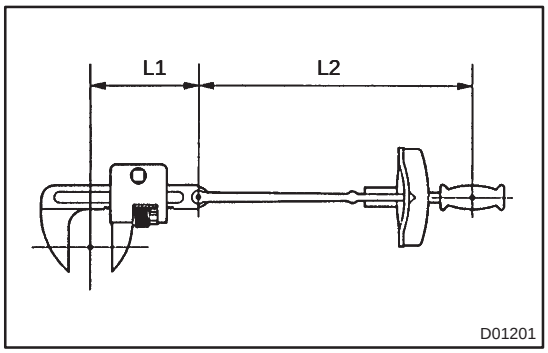
Shape (Example)	Removal/Installation
	
	

V00012

(h) REMOVAL AND INSTALLATION OF VACUUM HOSES



(1) To disconnect vacuum hoses, pull them by holding the end, not the middle of the hose.



(2) When disconnecting vacuum hoses, use tags to identify where they should be reconnected.

(3) After completing the job, make a double check whether the vacuum hoses are properly connected. A label under the hood shows the proper layout.

(4) When using a vacuum gauge, never force the hose onto a connector that is too large. Use a step–down adapter for adjustment. Once the hose has been stretched, it may leak air.

(i) TORQUE WHEN USING TORQUE WRENCH WITH EXTENSION TOOL

(1) When the torque wrench is combined with SST or an extension tool to extend the length, and you tighten until the torque wrench reads the specified torque value, the actual torque becomes excessive.

(2) In this manual, only the specified torque is described. In case of using SST or extension tool, calculate the reading of the torque wrench by the following formula.

(3) Formula T'=T x L2/(L1 + L2)

T'	Reading of torque wrench {N·m (kgf·cm, ft·lbf)}
T	Torque {N·m (kgf·cm, ft·lbf)}
L1	Length of SST or extension tool (cm)
L2	Length of torque wrench (cm)

2. FOR VEHICLES EQUIPPED WITH SRS AIRBAG AND SEAT BELT PRETENSIONER

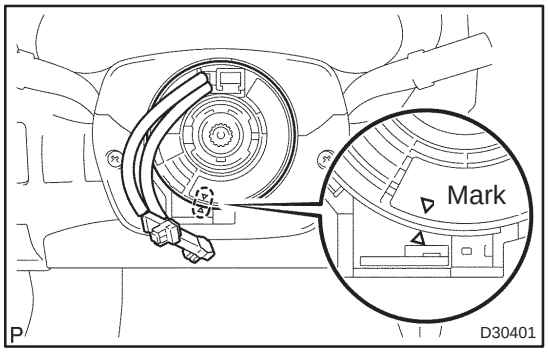
HINT:

The AVENSIS is equipped with an SRS (Supplemental Restraint System), which includes the driver airbag, front passenger airbag and seat belt pretensioner.

Failure to carry out the service operations in the correct sequence could cause the supplemental restraint system to unexpectedly deploy while servicing. This could cause a serious accident.

Furthermore, if a mistake is made when servicing the supplemental restraint system, it is possible that the SRS will fail to operate when required. Before servicing (including removal or installation of parts, inspection or replacement), be sure to read the following items carefully. Then follow the correct procedures described in this manual.

(a) GENERAL NOTICE

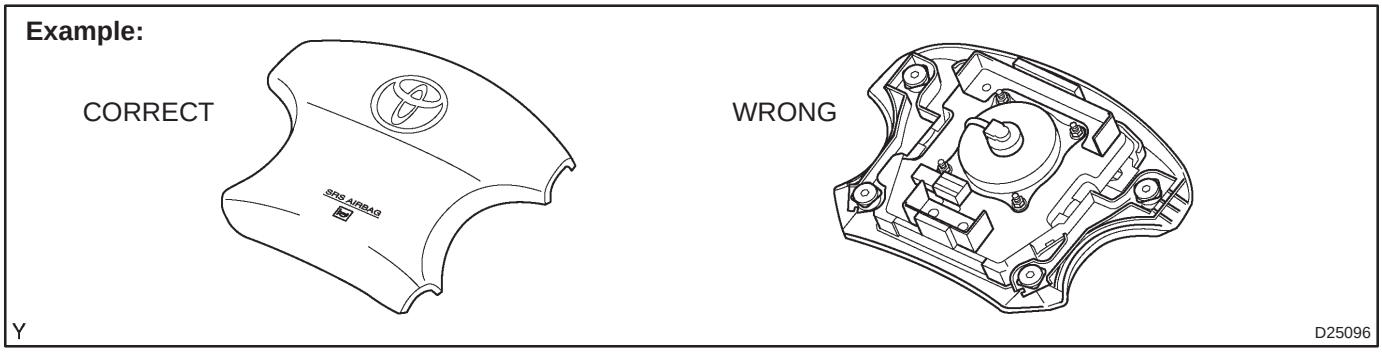


(1) Malfunction symptoms of the supplemental restraint system are difficult to confirm so the diagnostic trouble codes become the most important source of information when troubleshooting. When troubleshooting the supplemental restraint system, always check the diagnostic trouble codes before disconnecting the battery (See page 05–1184).

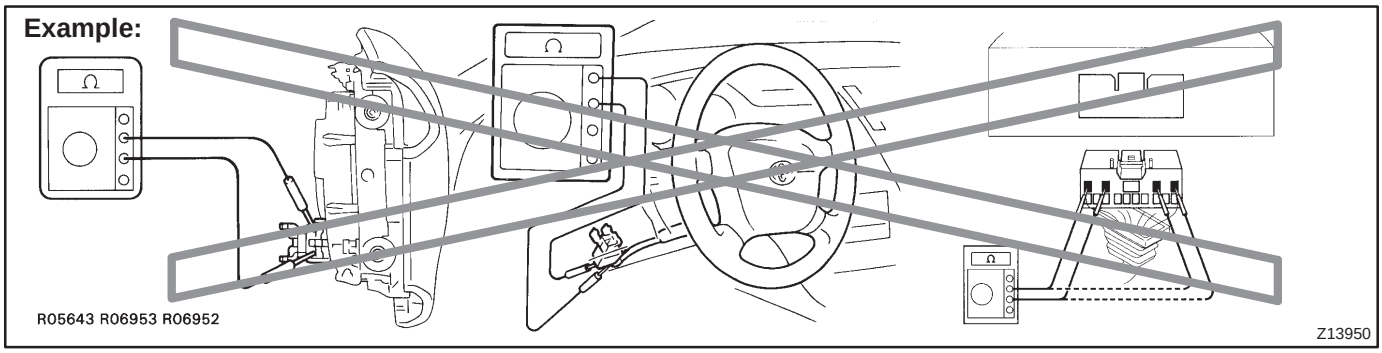
(2) Work must be started after 90 seconds from the time that the ignition switch is turned to the LOCK position and the negative (–) terminal cable is disconnected from the battery.

(The supplemental restraint system is equipped with a back–up power source. So, if work is started within 90 seconds after disconnecting the negative (–) terminal cable from the battery, the SRS may deploy).

When the negative (–) terminal cable is disconnected from the battery, memory of the clock and audio systems is cancelled. So, before starting work, make a record of the contents recorded in each memory system. Then, when work is finished, reset the clock and audio systems as before.



(3) Even in the case of a minor collision where the SRS does not deploy, the horn button assembly, instrument panel passenger airbag assembly and seat belt pretensioner should be inspected (See pages 60–19, 60–19 and 61–9).
(4) Never use the SRS related parts from another vehicle. When replacing the parts, replace them with new parts.
(5) Before repairs, remove the airbag sensor if there is a possibility of shock during repairs.
(6) Never disassemble and repair the center airbag sensor assembly, side airbag sensor assembly, horn button assembly, instrument panel passenger airbag assembly, front seat airbag assembly, curtain shield airbag assembly or seat belt pretensioner.
(7) If the center airbag sensor assembly, the side airbag sensor assembly, the horn button assembly, the instrument panel passenger airbag assembly have been dropped, or if there are cracks, dents or other defects in the case, bracket or connector, replace them with new ones.
(8) Do not directly expose the airbag sensor assembly, the side airbag sensor assembly, the horn button assembly, the instrument panel passenger airbag assembly or the seat belt pretensioner to hot air or flames.
(9) Use a volt/ohmmeter with high impedance (10 kΩ/V minimum) for troubleshooting electrical circuits.
(10) Information labels are attached to the SRS components. Follow the instructions on the notices.
(11) After work on the supplemental restraint system is completed, check the SRS warning light (See page 05–1184)



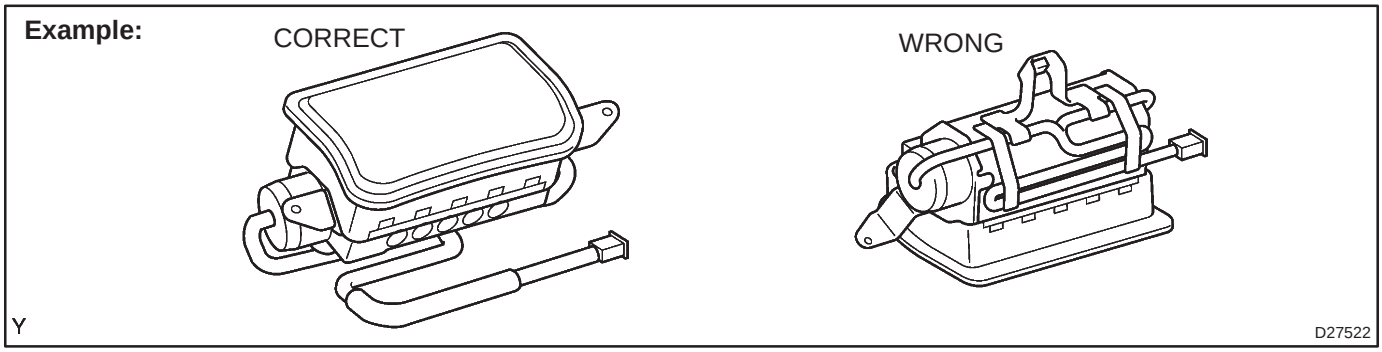
(b) SPIRAL CABLE (in Combination Switch)
(1) The steering wheel must be fitted correctly to the steering column with the spiral cable at the neutral position, otherwise cable disconnection and other troubles may occur. Refer to page 60–26 of this manual concerning the correct installation of the steering wheel.

(c) HORN BUTTON ASSEMBLY (with Airbag)
(1) When removing the horn button assembly or handling a new horn button, it should be placed with the top of the pad surface facing upward. Placing it with the pad surface facing downward may lead to a serious accident if the airbag deploys for some reasons. Also, do not place anything on top of the horn button.
(2) Never measure the resistance of the airbag squib (This may cause the airbag to inflate, which is very dangerous).
(3) Grease should not be applied to the horn button assembly, and the pad should not be cleaned with any type of detergent.
(4) Store the horn button assembly where the ambient temperature remains below 93˚C (200˚F), without high humidity and away from electrical noise.
(5) When using electric welding, disconnect the airbag connector (4 yellow pins) under the steering column near the combination switch connector before starting work.

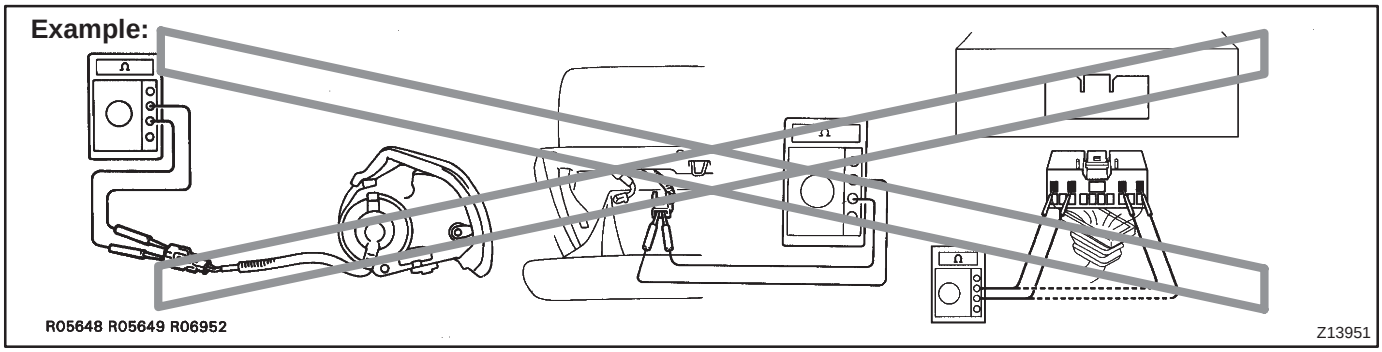
(6) When disposing the vehicle or the horn button assembly alone, the airbag should be inflated using an SST before disposal (See page 60–19).
Perform the operation in a safe place away from electrical noise.

(d) INSTRUMENT PANEL PASSENGER AIRBAG ASSEMBLY

(1) Always place a removed or new instrument panel passenger airbag assembly with the airbag inflation direction facing upward. Placing the airbag assembly with the airbag inflation direction facing downward could cause a serious accident if the airbag deploys.



(2) Never measure the resistance of the airbag squib (This may cause the airbag to inflate, which is very dangerous).



(3) Grease should not be applied to the instrument panel passenger airbag assembly and the airbag door should not be cleaned with detergents of any kind.

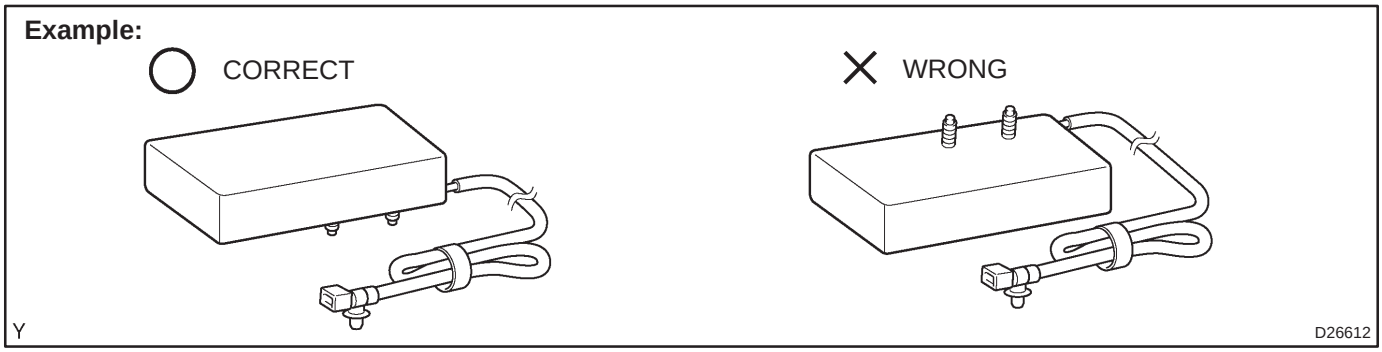
(4) Store the airbag assembly where the ambient temperature remains below 93˚C (200˚F), without high humidity and away from electrical noise.

(5) When using electric welding, disconnect the airbag connector (4 yellow pins) installed on the assembly before starting work.

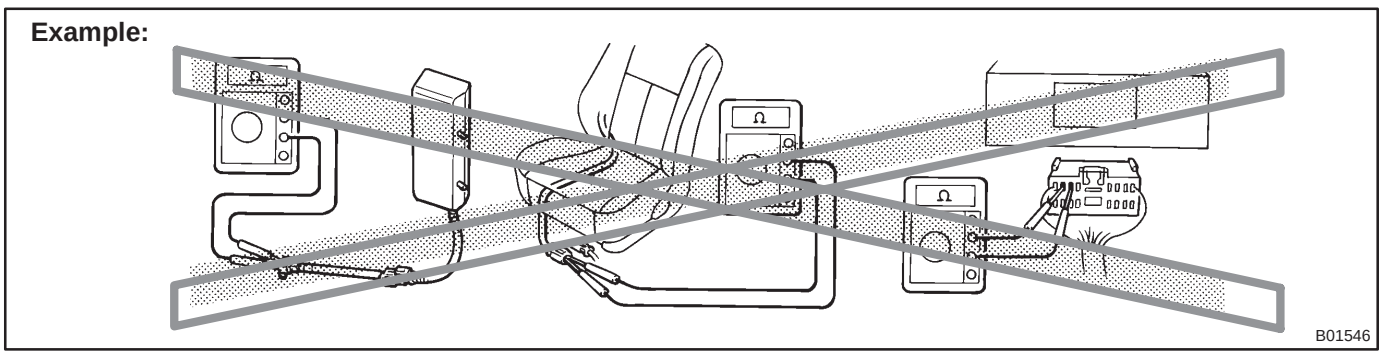
(6) When disposing of a vehicle or the airbag assembly unit, the airbag should be deployed using SST before disposal (See page 60–30).
Activate in a safe place away from electrical noise.

(e) FRONT SEAT AIRBAG ASSEMBLY

(1) Always store a removed or new front seat airbag assembly with the airbag inflating direction facing upward.
Placing the airbag assembly with the airbag inflation direction facing downward could cause a serious accident if the airbag inflates.



(2) Never measure the resistance of the airbag squib (This may cause the airbag to inflate, which is very dangerous.).



(3) Grease should not be applied to the front seat airbag assembly and the airbag door should not be cleaned with detergents of any kind.

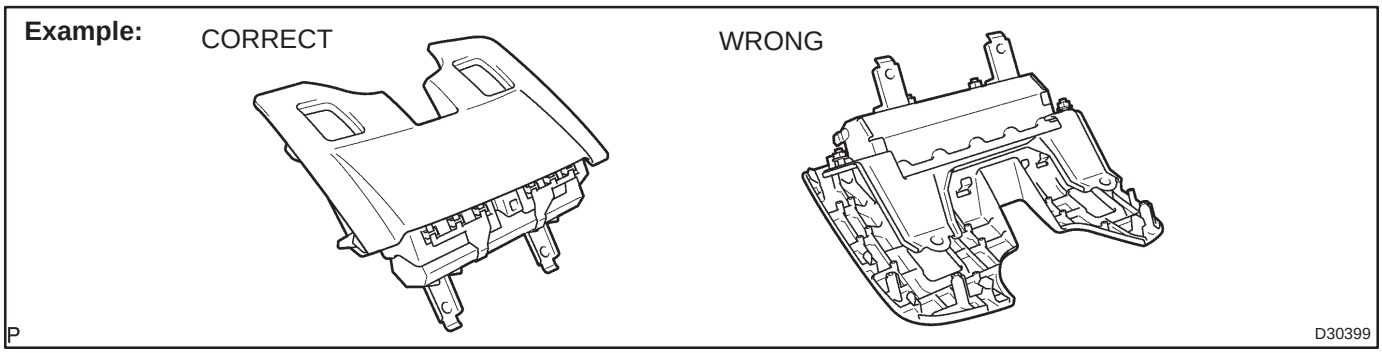
(4) Store the airbag assembly where the ambient temperature remains below 93˚C (200˚F), without high humidity and away from electrical noise.

(5) When using electric welding, first disconnect the airbag connector (2 yellow pins) installed on the assembly before starting work.

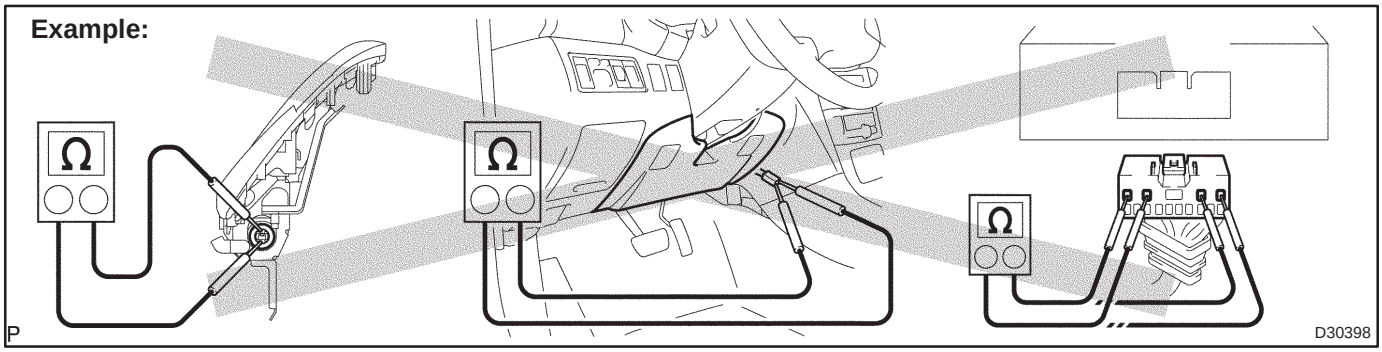
(6) When disposing of a vehicle or the side airbag assembly alone, the airbag should be inflated using an SST before disposal (See page 60–47).
Perform the operation in a safe place away from electrical noise.

(f) INSTRUMENT PANEL LOWER AIRBAG ASSEMBLY

(1) Always store a removed or new instrument panel lower airbag assembly with the airbag inflating direction facing upward.
Placing the airbag assembly with the airbag inflation direction facing downward could cause a serious accident if the airbag inflates.



(2) Never measure the resistance of the airbag squib (This may cause the airbag to inflate, which is very dangerous.).

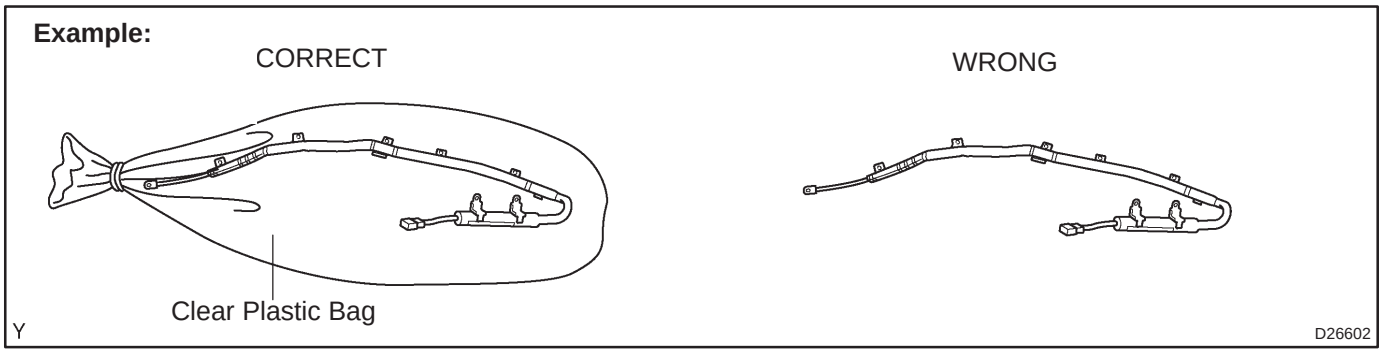


(3) Grease should not be applied to the instrument panel lower airbag assembly and the airbag door should not be cleaned with detergents of any kind.

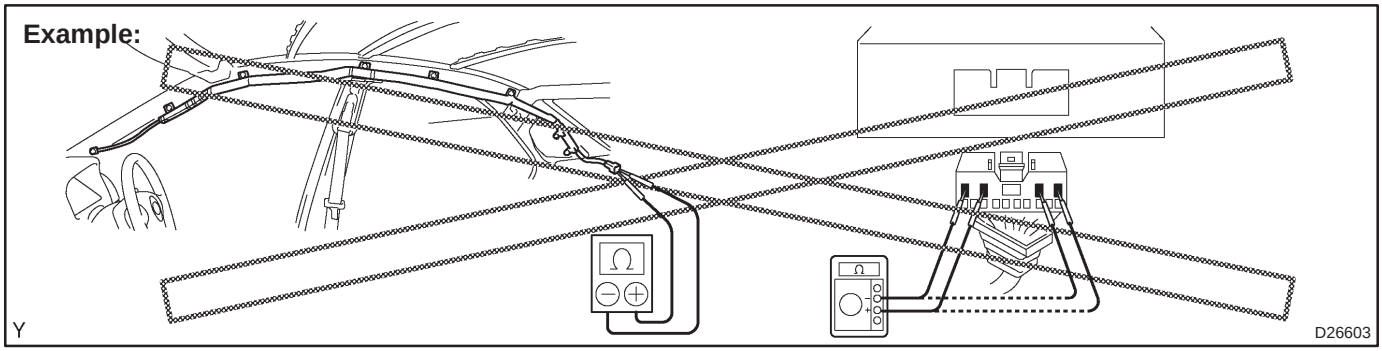
(4) Store the instrument panel lower airbag assembly where the ambient temperature remains below 93˚C (200˚F), without high humidity and away from electrical noise.

(5) When using electric welding, first disconnect the airbag connector (2 yellow pins) installed on the instrument panel lower airbag assembly before starting work.

(6) When disposing of a vehicle or the instrument panel lower airbag assembly alone, the airbag should be inflated using an SST before disposal (See page 60–55).
Perform the operation in a safe place away from electrical noise.



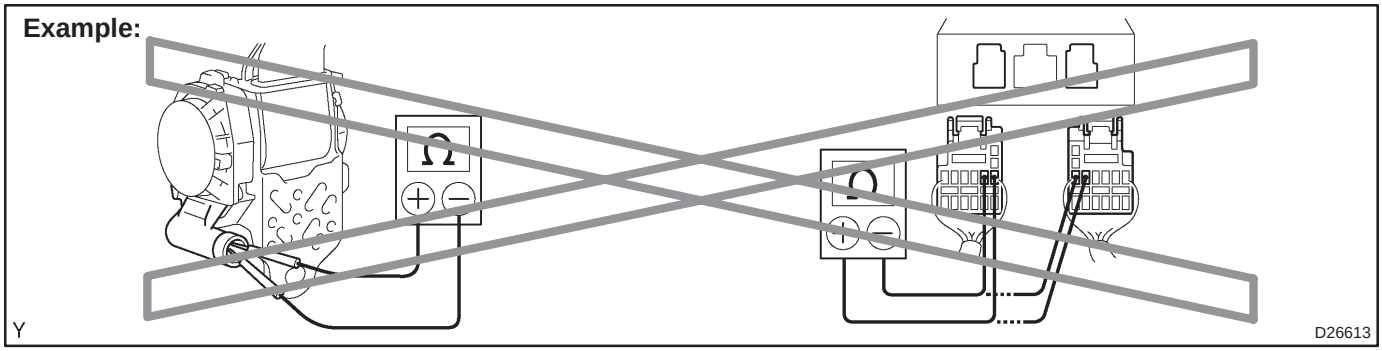
(g) CURTAIN SHIELD AIRBAG ASSEMBLY



(1) Always place the removed or new curtain shield airbag assembly in a clear plastic bag, and keep it in a safe place.

NOTICE:
Protection bag is not re–useable.
CAUTION:
Never disassemble the curtain shield airbag assembly.

(2) Never measure the resistance of the airbag squib (This may cause the airbag to inflate, which is very dangerous).

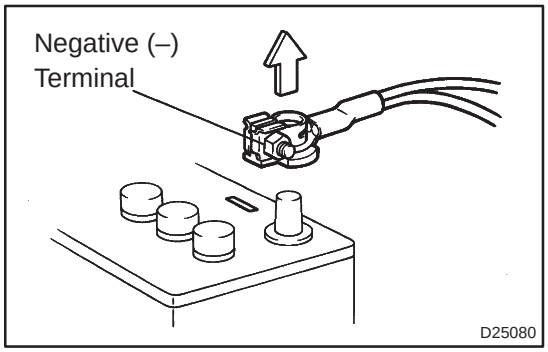


(3) Grease should not be attached to the curtain shield airbag assembly, and the surface should not be cleared with detergents of any kind.
(4) Store the airbag assembly where the ambient temperature remains below 93˚C (200˚F), without high humidity and away from electrical noise.
(5) When using electric welding, first disconnect the airbag connector (4 yellow pins) from the instrument panel before starting work.
(6) When disposing of a vehicle or the curtain shield airbag assembly alone, the airbag should be deployed using SST before the disposal (See page 60–41). Perform operation in a safe place away from electrical noise.

(h) SEAT BELT PRETENSIONER
(1) Never measure the resistance of the seat belt pretensioner (This may cause the seat belt pretensioner to activate, which is very dangerous.).
(2) Never disassemble the seat belt pretensioner.
(3) Never install the seat belt pretensioner in another vehicle.
(4) Store the seat belt pretensioner where the ambient temperature remains below 80˚C (176˚F) without high humidity and away from electrical noise.
(5) When using electric welding, first disconnect the connector (2 yellow pins) before starting work.
(6) When disposing of a vehicle or the seat belt pretensioner alone, the seat belt pretensioner should be activated before disposal (See page 61–9). Perform the operation in a safe place away from electrical noise.
(7) The seat belt pretensioner is hot after being activation, so allow some time for it to cool down sufficiently before disposal. Never apply water to cool down the seat belt pretensioner.

(8) Oil or water should not be put on the front seat outer belt and the front seat outer belt should be cleaned with the appropriate detergents.

(i) AIRBAG SENSOR ASSEMBLY



(1) Never reuse the airbag sensor assembly involved in a collision where the SRS has deployed.

(2) The connectors to the airbag sensor assembly should be connected or disconnected with the sensor mounted on the floor. If the connectors are connected or disconnected while the airbag sensor assembly is not mounted to the floor, it could cause an undesired ignition of the supplemental restraint system.

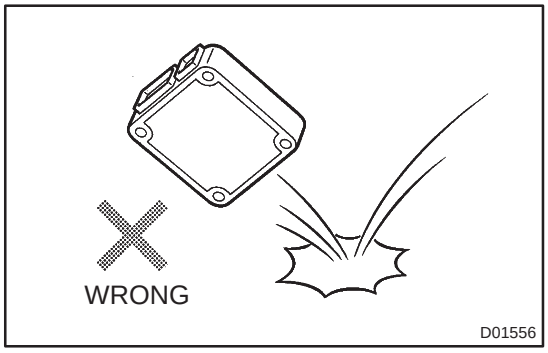
(3) Work must be started after 90 seconds from the time the ignition switch is turned to the ”LOCK” position and the negative (–) terminal cable is disconnected from the battery, even if only loosening the set bolts of the airbag sensor assembly.

(j) WIRE HARNESS AND CONNECTOR

(1) The SRS wire harness is integrated with the instrument panel wire harness assembly. All connectors in the system are a standard yellow color. If the SRS wire harness becomes disconnected or the connector becomes broken due to an accident, etc., repair or replace it.

3. ELECTRONIC CONTROL

(a) REMOVAL AND INSTALLATION OF BATTERY TERMINAL



(1) Before performing electronic work, disconnect the battery negative (–) terminal cable beforehand in order to prevent it from shorting and burning out.

(2) When disconnecting and installing the terminal cable, turn the ignition switch and lighting switch OFF, and loosen the terminal nut completely. Perform these operations without twisting or prying the terminal.

(3) When the battery terminal cable is removed, the memories of the clock, radio, DTCs, etc. are erased. So before removing it, check them and make a note of their settings.

(4) When the battery negative (–) terminal cable is disconnected, memories of various systems are erased. Therefore, refer to the PRE–CHECK for each system to make sure whether or not the system needs to be initialized after the battery negative

(–) terminal cable is disconnected. If necessary, be sure to initialize the system.

(b) HANDLING OF ELECTRONIC PARTS

(1) Do not open the cover or case of the ECU unless absolutely necessary (If the IC terminals are touched, the IC may be rendered inoperative by static electricity).

(2) To disconnect electronic connectors, pull the connector itself, not the wires.

(3) Be careful not to drop electronic components, such as sensors or relays. If they are dropped on a hard floor, they should be replaced and not be reused.

(4) When cleaning the engine with steam, protect the electronic components, air filter and emission–related components from water.

(5) Never use an impact wrench to remove or install temperature switches or temperature sensors.

(6) When checking the continuity at the wire connector, insert the tester probe carefully to prevent terminals from bending.

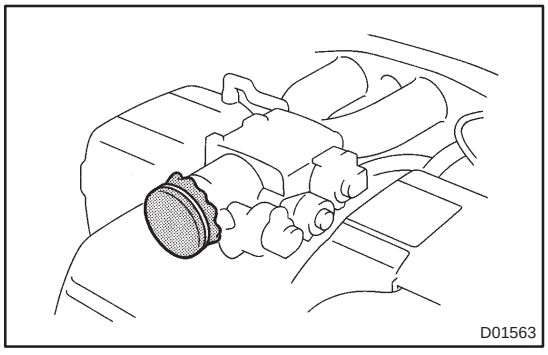
4. REMOVAL AND INSTALLATION OF FUEL CONTROL PARTS

(a) PLACE FOR REMOVING AND INSTALLING OF FUEL SYSTEM PARTS

(1) Work in a place with good air ventilation and without anything that could cause combustion around you such as a welder, grinder, drill, electric motor or stove.

(2) Never work in a place such as a pit or nearby a pit, as there is a possibility that vaporized fuel will collect in those places.

(b) REMOVING AND INSTALLING OF FUEL SYSTEM PARTS



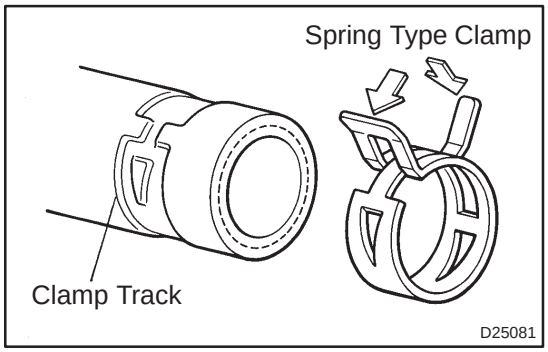
(1) Prepare a fire extinguisher before starting operations.

(2) To prevent static electricity, install a ground on the fuel changer, vehicle and fuel tank, and do not spray much water so as to prevent slipping.

(3) Never use any electric equipment like an electric motor or a working light, as they may create sparks or a high temperature.

(4) Never use an iron hammer, as it may create sparks.

(5) Dispose of shop rags containing fuel deposits separately.

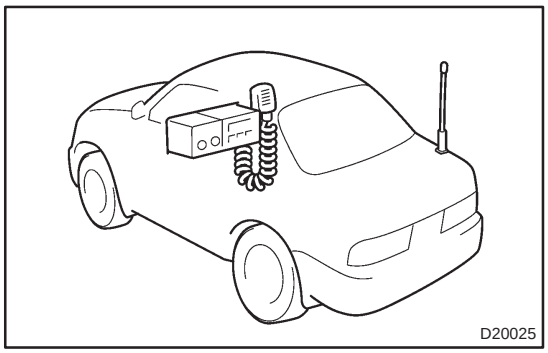


5. REMOVAL AND INSTALLATION OF ENGINE INTAKE PARTS

(a) If any metal tip is mixed in the inlet pass, this may give a bad effect to the engine and turbocharger.

(b) When removing and installing the inlet system parts, close the opening of the removed inlet system parts and the engine with a clean waste cloth or gum tape.

(c) When installing the inlet system parts, check that there is no mixing of a metal tip.



6. HANDLING OF HOSE CLAMPS

(a) Before removing the hose, check the depth of the inserting portion and the clamp position to restore it surely.

(b) Change a deformed or dented clamp for a new one.

(c) In case of reusing a hose, attach the clamp on the clamp track portion of the hose.

(d) For a spring type clamp, adjust it by adding force to the arrow mark direction after the installation.

7. FOR VEHICLES EQUIPPED WITH MOBILE COMMUNICATION SYSTEMS

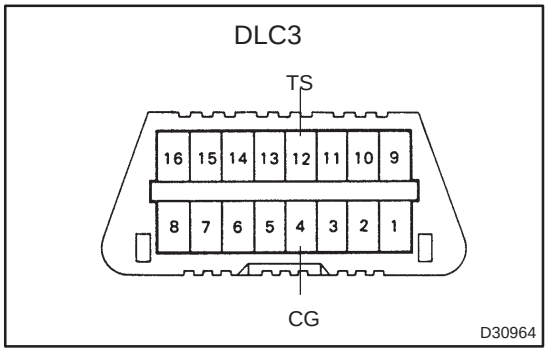
(a) Install the antenna as far away from the ECU and sensors of the vehicle electronic systems as possible.

(b) Install an antenna feeder at least 20 cm (7.87 in.) away from the ECU and sensors of the vehicle electronic systems. For details of the ECU and sensors locations, refer to the section on applicable components.

(c) Prevent the antenna feeder from getting entangled with the other wiring, and keep the antenna feeder separate from other wiring as much as possible.

(d) Check that the antenna and feeder are correctly adjusted.

(e) Do not install any high–powered mobile communication system.



8. FOR VEHICLES EQUIPPED WITH TRACTION CONTROL (TRC) SYSTEM

(a) NOTICES WHEN USING 2–WHEEL DRUM TESTER

(1) When using a 2–wheel drum tester such as a speedometer tester, a combination tester of speedometer and brake, chassis dynamometer or else, always turn the TRC system off via the TRC OFF switch before measurement.

NOTICE:

TRC system OFF condition can be confirmed by the indication, ”TRC OFF”, of the warning light in the combination meter.

9. FOR VEHICLES EQUIPPED WITH VEHICLE SKID CONTROL (VSC) SYSTEM

(a) NOTICES WHEN USING DRUM TESTER

(1) When using a drum tester, be sure to start the engine with the ignition OFF, and connect SST to the terminals TS and CG of the DLC3 before measurement in order to prohibit the VSC operation.

SST 09843–18040

NOTICE:

- **Confirm that the VSC warning light blinks.**
- **VSC system will be reset when the engine is re-started.**
- **Fasten the vehicle with lock chains.**

(b) NOTICES OF RELATED OPERATIONS TO VSC

(1) Do not carry out unnecessary installation and removal as it might disorder the adjustment of related parts to VSC.

(2) Be sure to carry out the preparation for operation and the confirmation of operation completion in accordance with the instruction of the text and when the related operations to VSC are performed.

10. FOR VEHICLES EQUIPPED WITH CATALYTIC CONVERTER

CAUTION:

If a large amount of unburned gasoline flows into the converter, it may cause overheating and is a fire hazard. To prevent this, observe the following precautions.

(a) Use only unleaded gasoline.

(b) Avoid prolonged idling.
Avoid idling the engine for more than 20 minutes.

(c) Avoid a spark jump test.

(1) Perform a spark jump test only when absolutely necessary. Perform this test as rapidly as possible.

(2) While testing, never race the engine.

(d) Avoid a prolonged engine compression measurement.
Engine compression measurements must be performed as rapidly as possible.

(e) Do not run the engine when the fuel tank is nearly empty. This may cause the engine to misfire and create an extra load on the converter.

010B5–11

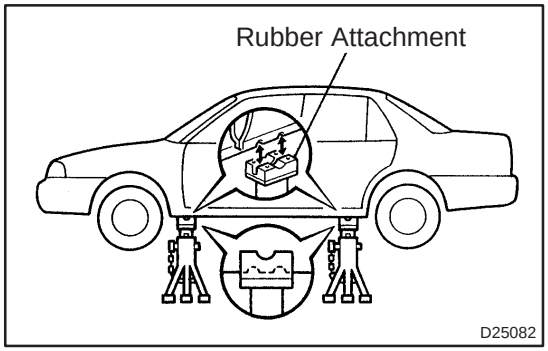
VEHICLE LIFT AND SUPPORT LOCATIONS

1. NOTICE ABOUT VEHICLE CONDITION WHEN JACKING UP

(a) As a rule, the vehicle must be unloaded when jacking up. Never jack up or lift up the vehicle loaded with things of heavy weight.

(b) When removing any parts of heavy weight like the engine and transmission, the center of gravity of the vehicle moves. Place a balance weight so as to keep it from rolling, or hold the jacking support location using the mission jack.

2. NOTICE FOR USING 4 POST LIFT



(a) Follow the instruction manual for a safety operation.

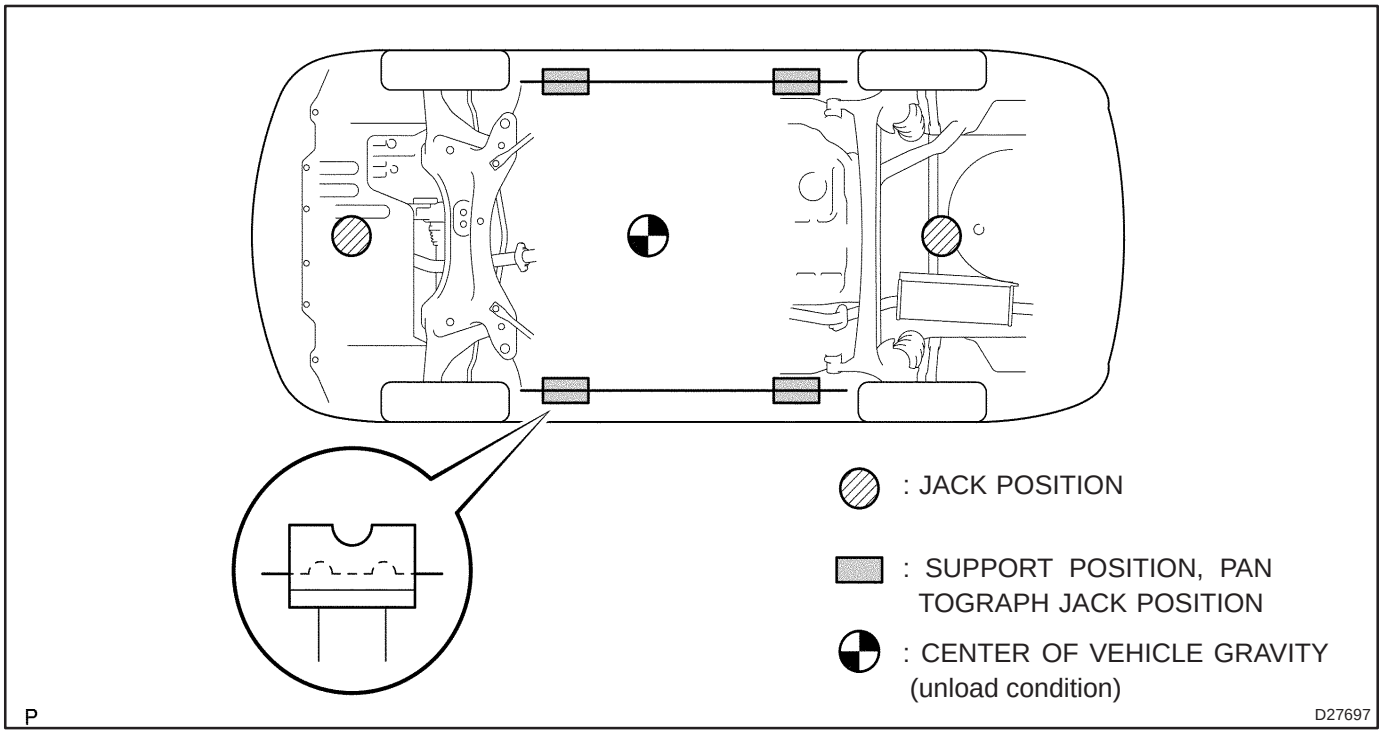
(b) Do not damage tires or wheels with a free wheel beam.

(c) Using a wheel stopper, fix the vehicle.

3. NOTICE FOR USING JACK AND SAFETY STAND

(a) Work in the flat place using a wheel stopper at all times.

(b) Use a safety stand with a rubber attachment, as shown in the illustration.



(c) Support the specified location with a jack and safety stand accurately.

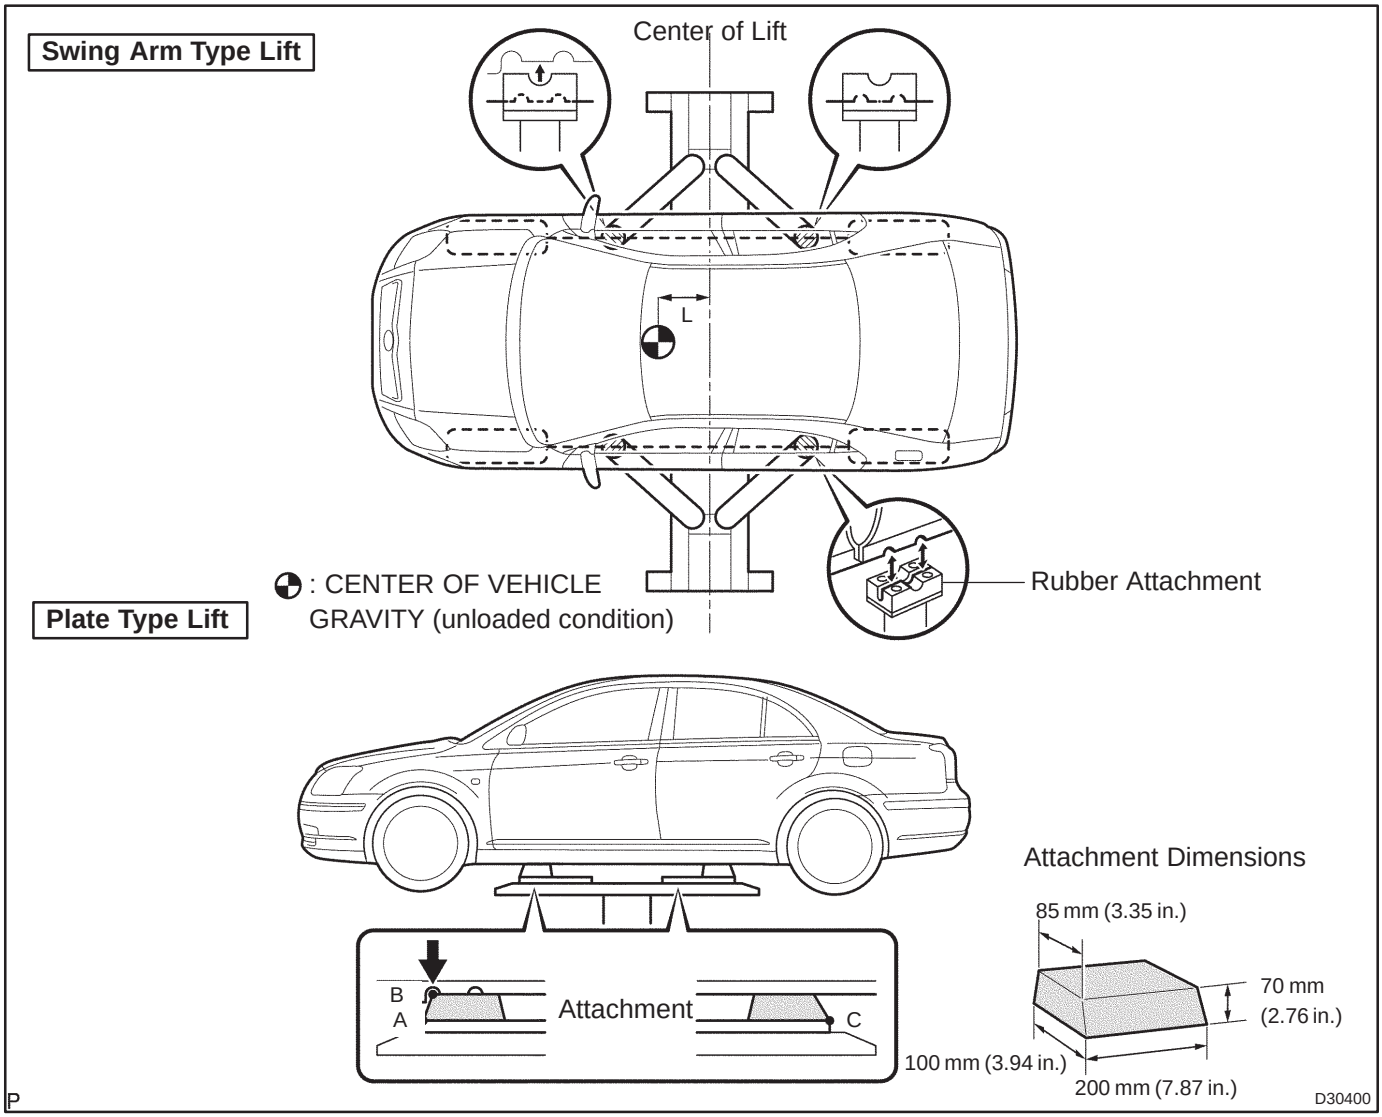
(d) When jacking up the front wheels, release the parking brake and place wheel stoppers only behind the rear wheels. When jacking up the rear wheels, place wheel stoppers only in front of the front wheels.

(e) Do not work or leave the vehicle supported only by a jack. Be sure to support the vehicle with a safety stand.

(f) When jacking up only the front wheels or only the rear wheels, place wheel stoppers to both sides of the wheels that contact ground.

(g) When jacking down the vehicle with its front wheels jacked up, release the parking brake and place wheel stoppers only in front of the rear wheels. When jacking down the vehicle with its rear wheels jacked up, place wheel stoppers only behind the front wheels.

4. NOTICE FOR USING SWING ARM TYPE LIFT



(a) Follow the instruction manual of the lift for a safe operation.
(b) Use a cradle with a rubber attachment, as shown in the illustration.
(c) Set in the vehicle so as to make its center of gravity as close as possible to the center of the lift. (”L” becomes short.)
(d) Place the vehicle horizontally by adjusting the height of the cradle, and match the groove of the cradle and the safety stand support location accurately.
(e) Be sure to lock the swing arm during the operation.
(f) Lift the vehicle up until the tires float, and shake the vehicle to make sure that the vehicle is stable.

5. NOTICE FOR USING PLATE TYPE LIFT

(a) Follow the instruction manual of the lift for a safe operation.
(b) Use a plate lift attachment.
(c) Be sure to set the vehicle to the specified position.

Right and left set position	• Place the vehicle over the center of the lift.
Front and rear set position	• Align the cushion gum ends of the plate with the attachment lower ends (A and C). • Align the attachment upper end (B) with the rocker flange front side notch.

(d) Lift the vehicle up until the tires float a bit, and shake the vehicle to make sure that the vehicle is stable.

HOW TO TROUBLESHOOT ECU CONTROLLED SYSTEMS

010B6–13

GENERAL INFORMATION

There are many ECU controlled systems used in the AVENSIS. In general, ECU controlled system are considered to be very intricate and require a high level of technical knowledge and expert skill to troubleshoot. The fact is, however, that if you proceed by inspecting the circuits one by one, troubleshooting of these systems is not complex. If you have adequate understanding of the system and basic knowledge of electricity, the problem can be accurately diagnosed and fixed. This manual is designed based on the above principle to help service technicians perform accurate and effective troubleshooting, and is compiled for the following major ECU controlled systems:

The troubleshooting procedures are described on the following pages.

System	Page
1. SFI System [1ZZ–FE, 3ZZ–FE]	05–1
2. SFI System [1AZ–FE]	05–143
3. SFI System [1AZ–FSE]	05–290
4. ECD System [1CD–FTV]	05–523
5. ABS with EBD System	05–696
6. ABS with EBD & BA & TRC & VSC System	05–752
7. Electronic Controlled Automatic Transmission [ECT] [U241 (1AZ–FE)]	05–856
8. Electronic Controlled Automatic Transmission [ECT] [U241 (1AZ–FSE)]	05–915
9. Electronic Controlled Automatic Transmission [ECT] [U341]	05–980
10.Electronic Motor Power Steering System	05–1042
11.Air Conditioning System	05–1088
12.Combustion Type Power Heater System	05–1161
13.Supplemental Restraint System	05–1181
14.Audio System	05–1393
15.Navigation System	05–1435
16.Combination Meter	05–1497
17.Power Door Lock Control System	05–1534
18.Wireless Door Lock Control System	05–1568
19.Key Reminder Warning System	05–1586
20.Engine Immobiliser System	05–1599
21.Theft Deterrent System	05–1627
22.Multiplex Communication System	05–1654
23.Cruise Control System	05–1697

FOR USING HAND–HELD TESTER

- Before using the tester, the tester's operator manual should be read thoroughly.
- If the tester cannot communicate with the ECU controlled systems when you have connected the cable of tester to the DLC3, turned the ignition switch ON and operated the tester, there is a problem on the vehicle side or tester side.
  (1) If the communication is normal when the tester is connected to another vehicle, inspect the diagnosis data link line (Bus⊕line) or ECU power circuit of the vehicle.
  (2) If the communication is still impossible when the tester is connected to another vehicle, the problem is probably in the tester itself, so perform the Self Test procedures outlined in the Tester Operator's Manual.

010B7–13

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

Carry out troubleshooting in accordance with the procedures on the following page. Here, only the basic procedures are shown. Details are provided in the Diagnostics Section, showing the most effective methods for each circuit. Confirm the troubleshooting procedures first for the relevant circuit before beginning troubleshooting of that circuit.

1	Vehicle brought to workshop

2	Customer problem analysis

(a) Ask the customer about the conditions and environment when the problem occurred.

3	Symptom confirmation and DTC (and freeze frame data) check

(a) Check the battery positive voltage.
Voltage: 11 – 14 V (Engine stopped)
(b) Visually check the wire harness, connectors and fuses for open and short, etc.
(c) Warm up the engine to the normal operating temperature.
(d) Confirm the problem symptoms and conditions, and check for DTCs according to the related chart.

OK → **Go to step 5**

NG

4	DTC chart

(a) Check the results obtained in step 3, then confirm the inspection procedures for the system or the part which should be checked using the DTC chart.

→ **Go to step 6**

5	Problem symptoms chart

(a) Check the results obtained in step 3, then confirm the inspection procedures for the system or the part which should be checked using the problem symptoms table.

6	Circuit inspection or parts inspection

(a) Confirm the circuit for the system or the part which should be checked using the problem symptoms table or the results obtained in step 4.

7	Repair

(a) Repair the affected system or part in accordance with the instructions in step 6.

8	Confirmation test

(a) After completing repairs, confirm that the problem has been solved (If the problem does not recur, perform a confirmation test under the same conditions and in the same environment as when it occurred for the first time).

END

CUSTOMER PROBLEM ANALYSIS

HINT:

- In troubleshooting, the problem symptoms must be confirmed accurately, meaning that all preconceptions must be set aside in order to make an accurate judgement. To ascertain what the problem symptoms are, it is extremely important to ask the customer about the problem and conditions when it occurred.
- The following 5 items are important points in the problem analysis. Past problems which are thought to be unrelated and the repair history, etc. may also help in some cases. Therefore, as much information as possible should be gathered and its relationship with the problem symptoms should be correctly ascertained for use as reference in troubleshooting. A customer problem analysis table is provided for your use in the Diagnostics Section for each system.

Important Points with Customer Problem Analysis

- What ——— Vehicle model, system name
- When ——— Date, time, occurrence frequency
- Where ——— Road conditions
- Under what conditions? ——— Running conditions, driving conditions, weather conditions
- How did it happen? ——— Problem symptoms

(Sample) Supplemental restraint system check sheet.

CUSTOMER PROBLEM ANALYSIS CHECK

Supplemental Restraint System Check Sheet

Inspector's Name

SYMPTOM CONFIRMATION AND DIAGNOSTIC TROUBLE CODE

HINT:

- The diagnostic system in AVENSIS has various functions. The first function is the Diagnostic Trouble Code (DTC) Check, in which a malfunction in the signal circuits to the ECU is stored in code form in the ECU memory. Another function is the Input Signal Check, which checks if the signals from various switches are sent to the ECU correctly. By using these check functions, it is possible to quickly narrow down potential problem areas and troubleshooting can be performed effectively. The diagnostic functions are incorporated in the following systems in the AVENSIS.

System	Diagnostic Trouble Code Check	Input Signal Check (Sensor Check)	Diagnostic Test Mode (Active Test)
SFI System (1AZ–FE/1AZ–FSE, 1ZZ–FE/3ZZ–FE)	○ (with Check Mode)	○	○
ECD System (1CD–FTV)	○ (with Check Mode)	○	○
ABS with EBD System	○	○	○
ABS with EBD & BA & TRC & VSC System	○	○	○
Electronically Controlled Automatic Transmission [ECT]	○ (with Check Mode)	○	
Air Conditioning System	○	○	
Supplemental Restraint System	○		
Audio System	○		
Power Door Lock Control System	○		○
Wireless Door Lock Control System	○		
Key Reminder Warning System	○		
Engine Immobiliser System	○		○
Theft Deterrent System	○		○
Multiplex Communication System	○		
Cruise Control System	○	○	

- In the DTC check, it is very important to determine whether the problem indicated by the DTC is still occurring or has occurred in the past but returned to normal at present. In addition during the problem symptom check, it a check must be made on whether the malfunction indicated by the DTC is directly related to the problem symptom or not. For this reason, the DTC should be checked before and after symptom confirmation to determine the current conditions. If this is not done, it may, depending on the case, result in unnecessary troubleshooting for systems that are operating normally. This would make more difficult to detect the problem area or to try to repair irrelevant areas. Therefore, always follow the procedures in the correct order and perform the DTC check.
- A flow chart showing how to proceed with troubleshooting using the diagnostic trouble code (DTC) check is shown the this page. This flow chart shows how to utilize the DTC check effectively. Then, by carefully checking the results, this chart indicates how to proceed either to the DTC troubleshooting or to the troubleshooting of the problem symptoms table.

1	**DTC check**

2	**Make a note of DTCs displayed and then clear the memory**

3	**Symptom confirmation**

a	Symptoms exist
b	No symptoms exist

a → **Go to step 5**

b

4 Simulation test using the symptom simulation methods

5 DTC check

a	DTC displayed
b	Normal code displayed

a → **Troubleshooting of problem indicated by DTC**

b

6 Symptom confirmation

a	No symptoms exist
b	Symptoms exist

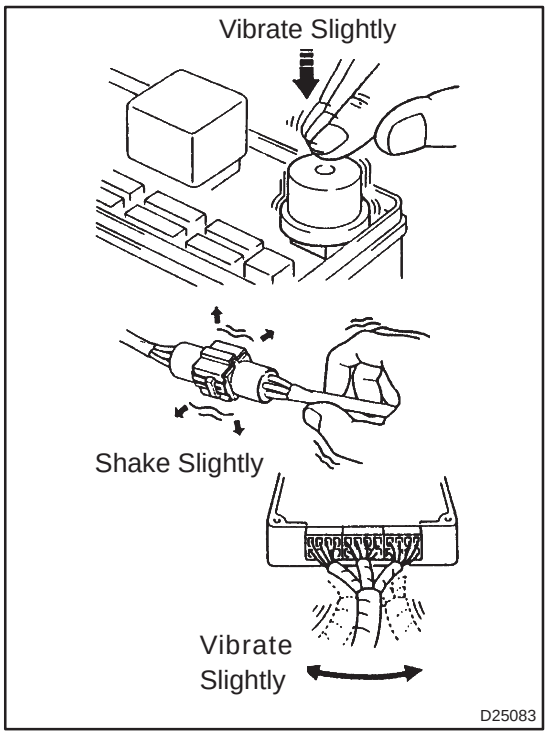
If a DTC is displayed in the initial DTC check, it indicates that a trouble may have occurred in a wire harness or connector in that circuit in the past. Therefore, check the wire harness and connectors (See page 01–32).

a → **System normal**

b

Troubleshooting of each problem symptom

The problem is still occurring in a place other than the diagnostic circuit (The DTC displayed first is either for a past problem or a secondary problem).



SYMPTOM SIMULATION

HINT:

The most difficult case in troubleshooting is when no symptoms occurs. In such cases, a thorough customer problem analysis must be carried out. Then the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be simulated. No matter how much experience a technician has, or how skilled he may be, if he proceeds to troubleshoot without confirming the problem symptoms, he will tend to overlook something important in the repair operation and make a wrong guess somewhere, which will only lead to a standstill. For example, for a problem which only occurs when the engine is cold, or for a problem which occurs due to vibration caused by the road during driving, etc., the problem can never be determined when the engine is hot or when the vehicles is at a standstill. Since vibration, heat or water penetration (moisture) is a likely cause for the problem which is difficult to reproduce, the symptom simulation tests introduced here are effective measures in a point that the external causes are applied to the vehicle in a stationary condition.

Important points in the symptom simulation test:

In the symptom simulation test, the problem symptoms should be confirmed, and the problem area or parts must also be discovered. To do so, reduce the possible problem circuits according to the symptoms before starting this type of test and have the hand–held tester connected beforehand. After that, carry out the symptom simulation test, judging whether the circuit being tested is defective or normal and also confirming the problem symptoms at the same time. Refer to the problem symptoms table of each system to narrow down the possible causes of the symptom.

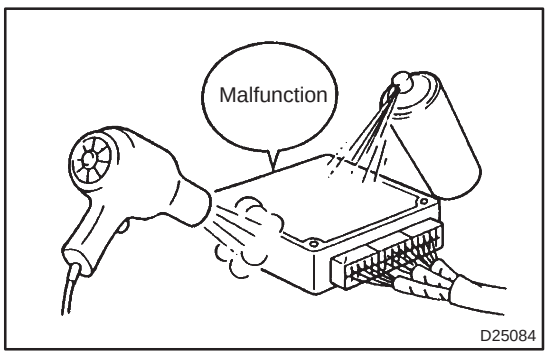
1. VIBRATION METHOD: When vibration seems to be the major cause.

(a) PART AND SENSOR

(1) Apply slight vibration with your finger to the part of the sensor considered to be the problem cause and check whether the malfunction occurs.

HINT:

Applying strong vibration to relays may result in open relays.



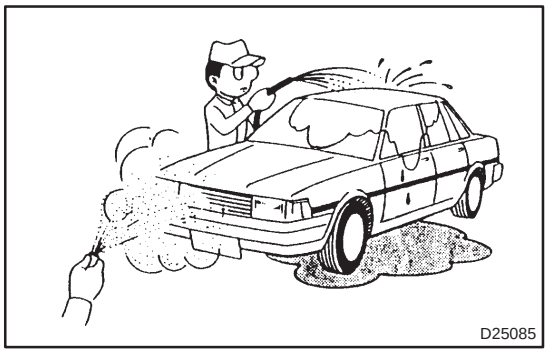
(b) CONNECTORS

(1) Slightly shake the connector vertically and horizontally.

(c) WIRE HARNESS

(1) Slightly shake the wire harness vertically and horizontally.

The connector joint and fulcrum of the vibration are the major areas that should be checked thoroughly.



2. HEAT METHOD: If the problem seems to occur when the area in question is heated.

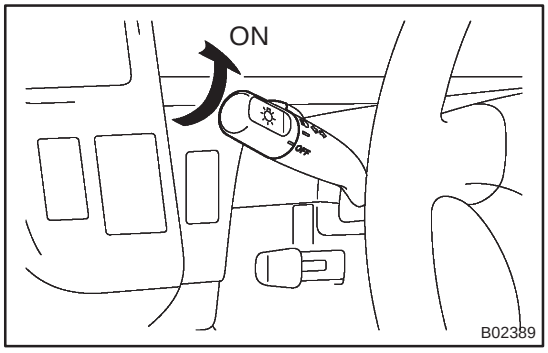
(a) Heat the component that is the possible cause of the malfunction with a hair dryer or similar object. Check if the malfunction occurs.

NOTICE:

- **Do not heat the components to more than 60°C (140°F) (Temperature is limited to keep the components from being damaged).**

- **Do not apply heat directly to the parts in the ECU.**

3. WATER SPRINKLING METHOD: When the malfunction seems to occur on a rainy day or in high–humidity.



(a) Sprinkle water onto the vehicle and check if the malfunction occurs.

NOTICE:

- **Never sprinkle water directly onto the engine compartment, but indirectly change the temperature and humidity by spraying a mist of water onto the radiator front surface.**
- **Never apply water directly onto the electronic components.**

HINT:

If a vehicle is subject to water leakage, the leaking water may contaminate the ECU. When testing a vehicle with a water leakage problem, this factor must also be considered.

4. OTHERS: If the malfunction seems to occur when electrical load is excessive.

(a) Turn on all the electrical equipment including the heater blower, headlights, rear window defogger, etc., and check if the malfunction occurs.

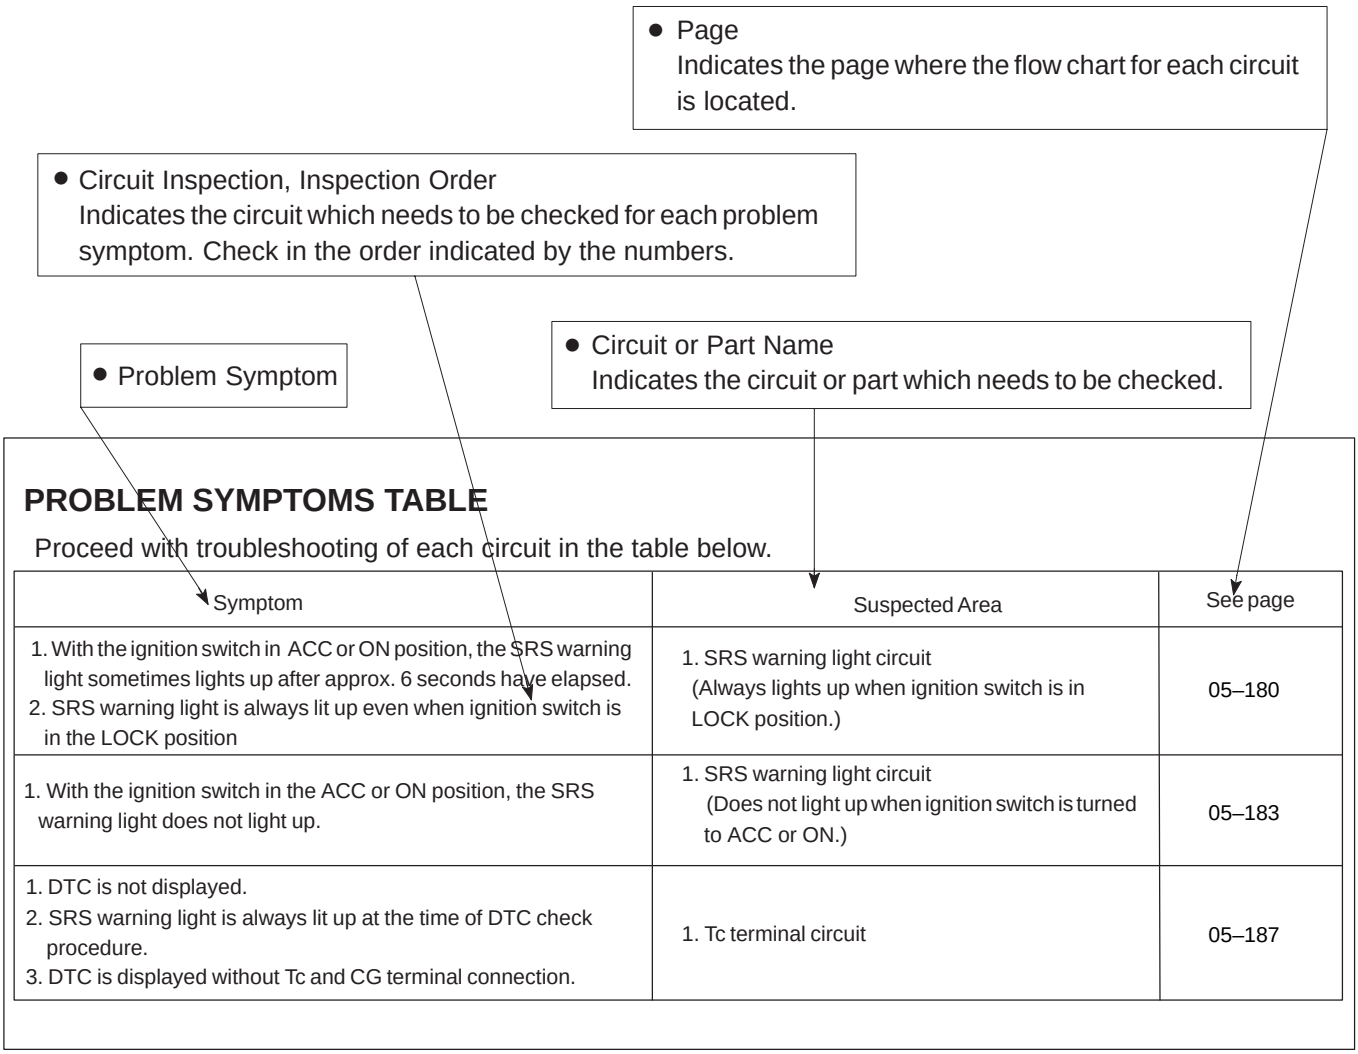
DIAGNOSTIC TROUBLE CODE CHART

The inspection procedures are shown in the table below. This table allows efficient and accurate troubleshooting using the diagnostic trouble codes displayed in the diagnostic trouble code chart. Proceed with troubleshooting in accordance with the inspection procedures listed in the diagnostic chart corresponding to the diagnostic trouble codes displayed. The diagnostic trouble code chart for the Supplemental Restraint System is shown below as an example.

- DTC No.
  Indicates the diagnostic trouble code.
- Page or Instructions
  Indicates the page where the inspection procedures for each circuit is to be found, or gives instructions for checking and repairs.

- Trouble Area
  Indicates the suspect areas of the problem.

- Detection Item
  Indicates the system or details of the problem.



DIAGNOSTIC TROUBLE CODE CHART

If a malfunction code is displayed during the DTC check, check the circuit for that code listed in the table below (Proceed to the page given for that circuit).

DTC No. (See page)	Detection Item	Trouble Area	SRS Warning Light
B0100/13 (05–119)	● Short in D squib circuit	● Steering wheel pad (squib) ● Spiral cable ● Airbag sensor assembly ● Wire harness	ON
B0101/14 (05–124)	● Open in D squib circuit	● Steering wheel pad (squib) ● Spiral cable ● Airbag sensor assembly ● Wire harness	ON
B0102/11 (05–128)	● Short in D squib circuit (to ground)	● Steering wheel pad (squib) ● Spiral cable ● Airbag sensor assembly ● Wire harness	ON
B0103/12 (05–132)	● Short in D squib circuit (to B+)	● Steering wheel pad (squib) ● Spiral cable ● Airbag sensor assembly ● Wire harness	ON
B0105/53 (05–136)	● Short in P squib circuit	● Front passenger airbag assembly (squib) ● Airbag sensor assembly ● Wire harness	ON
B0106/54	● Open in P squib circuit	● Front passenger airbag assembly (squib) ● Airbag sensor assembly ● Wire harness	
	circuit (to Ground)	● Front passenger airbag assembly (squib) ● Airbag sensor assembly ● Wire harness	

PROBLEM SYMPTOMS TABLE

The suspected circuits or parts for each problem symptom are shown in the table below. Use this table to troubleshoot the problem when a Normal code is displayed in the diagnostic trouble code chart but the problem is still occurring. Numbers in the table indicate the order in which the circuits or parts should be checked.
HINT:
When the problem is not detected by the diagnostic system even though the problem symptom is present, it may be that the problem is occurring outside the detection range of the diagnostic system.

PROBLEM SYMPTOMS TABLE

Proceed with troubleshooting of each circuit in the table below.

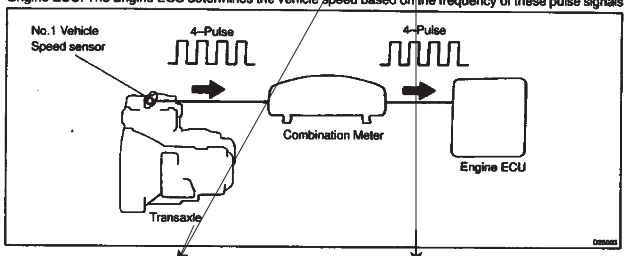
Symptom	Suspected Area	See page
1. With the ignition switch in ACC or ON position, the SRS warning light sometimes lights up after approx. 6 seconds have elapsed. 2. SRS warning light is always lit up even when ignition switch is in the LOCK position	1. SRS warning light circuit (Always lights up when ignition switch is in LOCK position.)	05–180
1. With the ignition switch in the ACC or ON position, the SRS warning light does not light up.	1. SRS warning light circuit (Does not light up when ignition switch is turned to ACC or ON.)	05–183
1. DTC is not displayed. 2. SRS warning light is always lit up at the time of DTC check procedure. 3. DTC is displayed without Tc and CG terminal connection.	1. Tc terminal circuit	05–187

CIRCUIT INSPECTION

How to read and use each page is shown below.

● Circuit Description
The major role and, operation of the circuit and its component parts are explained.

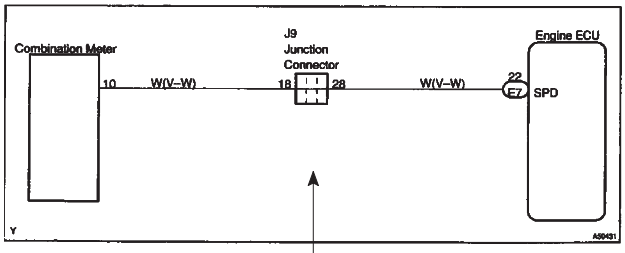
● Diagnostic Trouble Code No. and Detection Item



● Indicates the diagnostic trouble codes, diagnostic trouble code settings and suspect areas for a problem.

● Inspection Procedures
Use the inspection procedures to determine if the circuit is normal or abnormal. If it is abnormal, use it to determine whether the problem is located in the sensors, actuators, wire harness or ECU.

DTC P0500/42 VEHICLE SPEED SENSOR MALFUNCTION



CIRCUIT DESCRIPTION

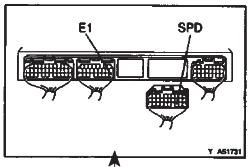
The vehicle speed sensor outputs a 4–pulse signal for every revolution of the rotor shaft, which is rotated by the transmission output shaft via the driven gear. After this signal is converted into a more precise rectangular waveform by the waveform shaping circuit inside the combination meter, it is then transmitted to the Engine ECU. The Engine ECU determines the vehicle speed based on the frequency of these pulse signals

DTC No.	DTC Detecting Condition	Trouble Area
P0500/42	During vehicle is being driven, no vehicle speed sensor signal to engine ECU (2 trip detection logic)	• Combination meter • Open or short in No.1 vehicle speed sensor circuit • No.1 vehicle speed sensor • Engine ECU

WIRING DIAGRAM

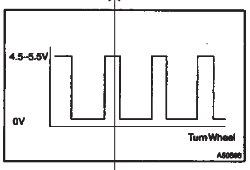
● Wiring Diagram
This shows a wiring diagram of the circuit.
Use this diagram together with ELECTRICAL WIRING DIAGRAM to thoroughly understand the circuit.
Wire colors are indicated by an alphabetical code.
B = Black, L = Blue, R = Red, BR = Brown,
LG = Light Green, V = Violet, G = Green,
O = Orange, W = White, GR = Gray, P = Pink,
Y = Yellow, SB = Sky Blue
The first letter indicates the basic wire color and the second letter indicates the color of the stripe.

INSPECTION PROCEDURE



1 READ VALUE OF VEHICLE SPEED VALUE(SPEEDOMETER OPERATION)

(a) Select data monitor on the hand–held tester.
(b) Perform a test drive of the vehicle.
(c) Read the vehicle speed on the hand–held tester.
RESULT: The same as the speed displayed on the speed meter.



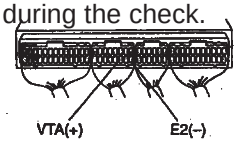
NG → **REPLACE COMBINATION METER ASSY**

OK

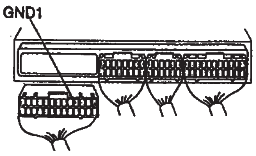
2 INSPECT ECU

(a) Check the output waveform.
HINT:
Using the oscilloscope function of hand–held tester, it is possible to check the function between the engine ECU and the knock control sensor. The waveform shown in the illustration is an example without noise and chattering.
(1) Connect the hand–held tester between the terminals SPD of the engine ECU E7 connector and E1 of the engine ECU E8 connector.
(2) Select the oscilloscope function on the hand–held tester. (Refer to the hand–held tester's instruction book for operating instructions.)

RESULT: Voltage is intermittently generated



ITEM	CONTENTS
TERMINAL	SPD⇔E1
EQUIPMENT SET	5V/DIV, 20ms/DIV
CONDITION	Running at 20 km/h



HINT:
• The multitude gets shorter as the engine speed becomes faster.

OK → **CHECK AND REPLACE ECU**

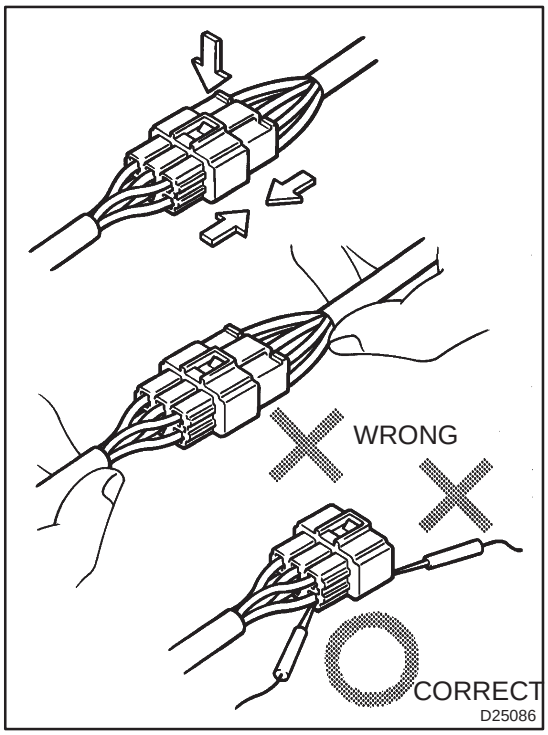
NG

● Indicates the condition of the connector of the ECU during the check.

Connector being checked is connected.
Connections of tester are indicated by (+), (–) after terminals name.

Connector being checked is disconnected.
For inspection of connector with body ground, there is nothing about the body ground written down.

D25842



010B8–08

ELECTRONIC CIRCUIT INSPECTION PROCEDURE

1. BASIC INSPECTION

(a) RESISTANCE MEASURING CONDITION OF ELECTRONIC PARTS

(1) Unless stated, all resistance is measured at an ambient temperature of 20°C (68°F). As the resistance may be outside the specifications if measured at high temperatures immediately after the vehicle has been running, measurements should be made when the engine has cooled down.

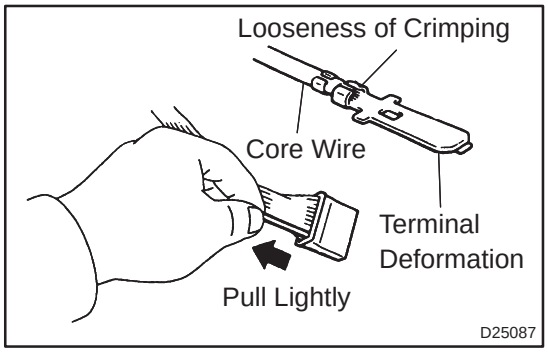
(b) HANDLING OF CONNECTOR

(1) When removing the connector with lock, press the connector in the direction of the engagement and remove the lock by lightly pressing the lock claw.

(2) When removing the connector, do not hold the harness, but hold the connector.

(3) Before connecting the connector, check that there is no deformation, damage or missing terminals.

(4) The connector with a lock should be securely connected until it makes a ”click” sound.

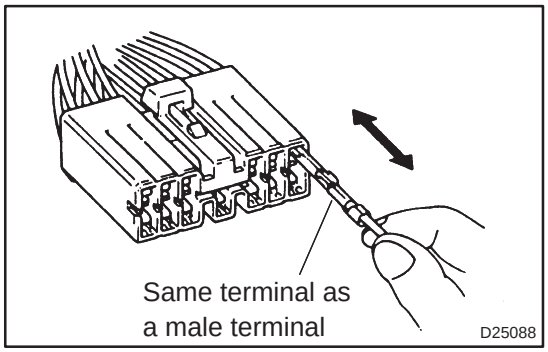


(5) When checking the connector with a Toyota electrical tester, check it from the backside (harness side) of the connector using a mini test lead.

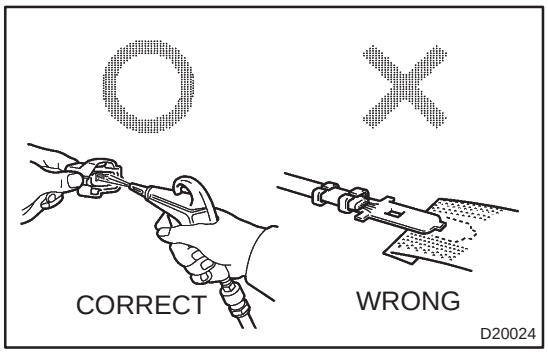
NOTICE:

- **As a water proof connector cannot be checked from the backside, check by connecting the sub–harness.**
- **Do not damage the terminals by moving the inserted tester needle.**

(c) CONNECTOR CHECKING POINTS



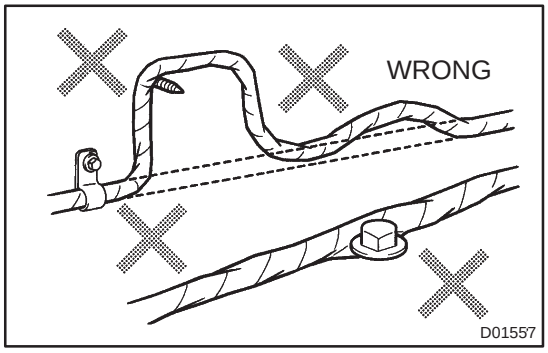
(1) Checking when the connector is connected:
By holding the connector, check the inserted condition and locking efficiency (engaged condition).



(2) Checking when the connector is removed:
Check by lightly pulling the wire harness (missing terminal, terminal crimping condition, core wire break).
Check visually for any rust, metal particles, water and bent terminals (rust, mixing of foreign object, terminal deformation).

NOTICE:

When testing a gold–plated female terminal, always use a gold–plated male terminal.



(3) Checking of the contact pressure of the terminal:
Prepare a spare male terminal.
Insert it into a female terminal, check the engaged condition and sliding resistance.

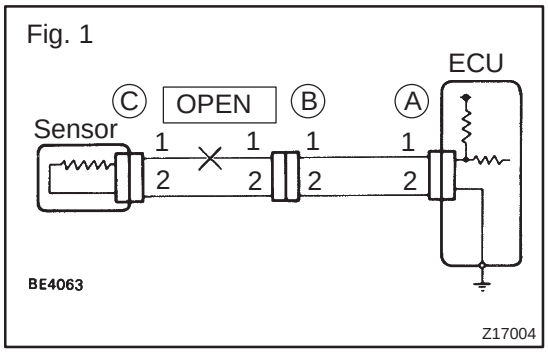
(d) REPAIR METHOD OF CONNECTOR TERMINAL

(1) If there is on the contact point, clean the contact point using an air gun or shop rag. However, never polish the contact point using sand paper as the platings may come off.

(2) In case of abnormal contact pressure, replace the female terminal. However, if a male terminal is gold–plated (gold color), use gold–plated female terminal and if it is silver–plated (silver color), use silver–plated female terminal.

(e) HANDLING OF WIRE HARNESS

(1) When removing the wire harness, check the positioning of the wiring and clamping before starting work in order to be able to restore it correctly.



(2) Never twist, pull or loosen the wire harness more than necessary.

(3) Never allow the wire harness to come into contact with a high–temperature, rotating, moving, vibrating or sharp (edge of the panel, tip of the screw, etc.) part.

(4) When installing parts, never let the wire harness be interfered with.

(5) Never cut or break the cover of the wire harness. If one is cut or broken, replace it or securely repair it with electrical tape.

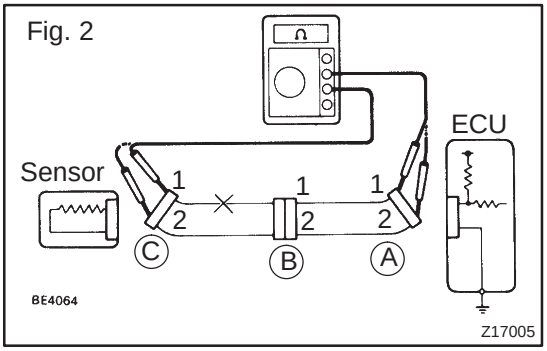


Fig. 1

2. CHECK OPEN CIRCUIT

(a) For the open circuit in the wire harness in Fig. 1, perform a continuity check in step (b) or a voltage check in step (c) to locate the section.

Fig. 2

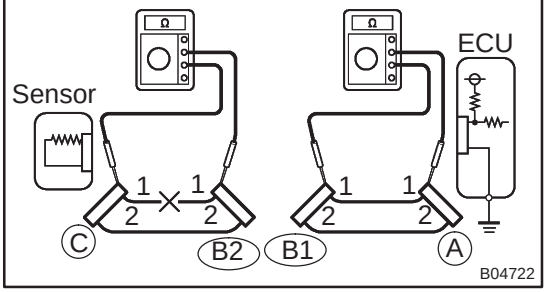
(b) Check the continuity.

(1) Disconnect connectors A and C and measure the resistance between them.

Resistance: 1 Ω or less

HINT:

Measure the resistance while lightly shaking the wire harness vertically and horizontally.



In the case of Fig. 2:

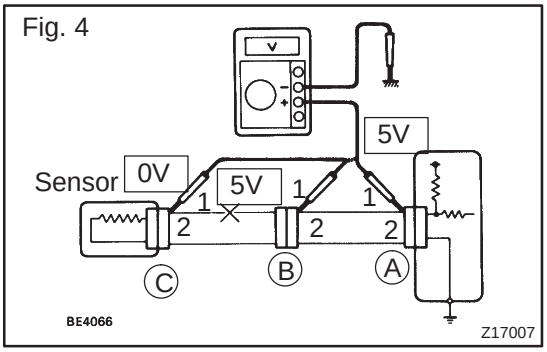
Between terminal 1 of connector A and terminal 1 of connector C → No continuity (open)

Between terminal 2 of connector A and terminal 2 of connector C → Continuity

Therefore, the cause is an open circuit between terminal 1 of connector A and terminal 1 of connector C.

Fig. 3

(2) Disconnect connector B and measure the resistance between the connectors.



In the case of Fig. 3:

Between terminal 1 of connector A and terminal 1 of connector B1 → Continuity

Between terminal 1 of connector B2 and terminal 1 of connector C → No continuity (open)

Therefore, the cause is an open circuit between terminal 1 of connector B2 and terminal 1 of connector C.

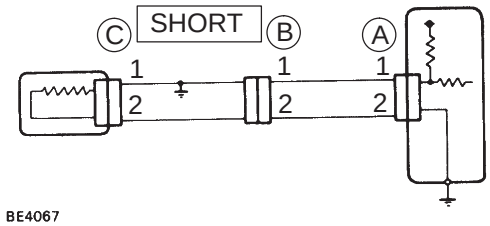
Fig. 4

(c) Check the voltage.

(1) In a circuit in which voltage is applied (to the ECU connector terminal), an open circuit can be checked by conducting a voltage check.

As shown in Fig. 4, with each connector still connected, measure the voltage between the body ground and terminal 1 of connector A at the ECU 5 V output terminal, terminal 1 of connector B, and terminal 1 of connector C, in that order.

(2) If the results are:



5 V: Between terminal 1 of connector A and body ground

5 V: Between terminal 1 of connector B and body ground

0 V: Between terminal 1 of connector C and body ground

Therefore, the cause is an open circuit in the wire harness between terminal 1 of connector B and terminal 1 of connector C.

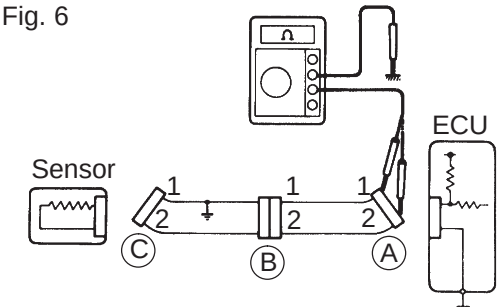


Fig. 5

3. CHECK SHORT CIRCUIT

(a) If the wire harness is ground shorted as shown in Fig. 5, locate the section by conducting a continuity check with the body ground in step (b).

Fig. 6

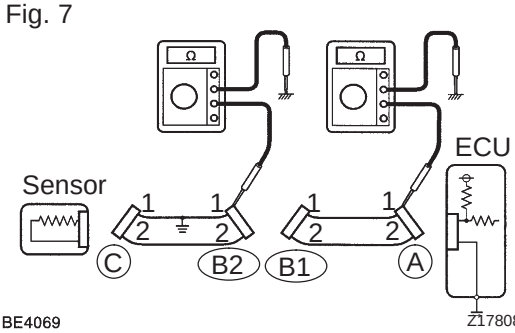
(b) Check the continuity with the body ground.

(1) Disconnect connectors A and C and measure the resistance between terminals 1 and 2 of connector A and the body ground.

Resistance: 10 kΩ or higher

HINT:

Measure the resistance while lightly shaking the wire harness vertically and horizontally.



In the case of Fig. 6:

Between terminal 1 of connector A and body ground → Continuity (short)

Between terminal 2 of connector A and body ground → No continuity

Therefore, the cause is a short circuit between terminal 1 of connector A and terminal 1 of connector C.

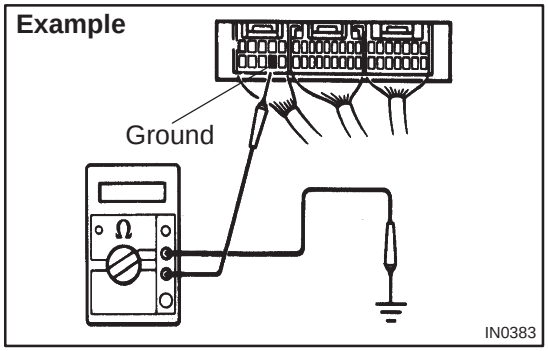
Fig. 7

(2) Disconnect connector B and measure the resistance between terminal 1 of connector A and the body ground, and terminal 1 of connector B2 and the body ground.

In the case of Fig. 7:

Between terminal 1 of connector A and body ground → No continuity

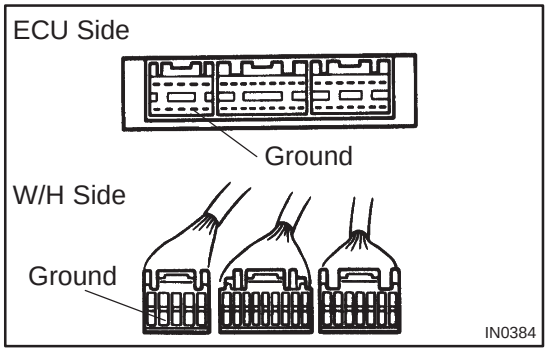
Between terminal 1 of connector B2 and body ground → Continuity (short)



Therefore, the cause is a short circuit between terminal 1 of connector B2 and terminal 1 of connector C.

4. CHECK AND REPLACE ECU

NOTICE:



- **Start an inspection of the connector from the backside of the connector on the wire harness side with the connector connected to the ECU.**
- **When no measurement condition is specified, perform the inspection with the engine stopped and also the ignition switch ON.**

(a) First check the ECU ground circuit. If it is faulty, repair it. If it is normal, the ECU could be faulty. In this case, replace the ECU with one that functions normally and check if the symptoms appear.

(1) Measure the resistance between the ECU ground terminal and body ground.

Resistance: 1 Ω or less

(2) Disconnect the ECU connector, check the ground terminals on the ECU side and wire harness side for bends and check the contact pressure.

TERMS

ABBREVIATIONS USED IN THIS MANUAL

010B9–11

Abbreviations	Meaning
ABS	Anti–Lock Brake System
A/C	Air Conditioner
AC	Alternating Current
ACC	Accessory
ACIS	Acoustic Control Induction System
ACSD	Automatic Cold Start Device
A.D.D.	Automatic Disconnecting Differential
A/F	Air–Fuel Ratio
AHC	Active Height Control Suspension
ALR	Automatic Locking Retractor
ALT	Alternator
AMP	Amplifier
ANT	Antenna
Approx.	Approximately
ASSY	Assembly
A/T, ATM	Automatic Transmission (Transaxle)
ATF	Automatic Transmission Fluid
AUTO	Automatic
AUX	Auxiliary
AVG	Average
AVS	Adaptive Variable Suspension
B+	Battery Voltage
BA	Brake Assist
BACS	Boost Altitude Compensation System
BAT	Battery
BDC	Bottom Dead Center
B/L	Bi–Level
B/S	Bore–Stroke Ratio
BTDC	Before Top Dead Center
BVSV	Bimetallic Vacuum Switching Valve
CAN	Controller Area Network
CB	Circuit Breaker
CCo	Catalytic Converter For Oxidation
CD	Compact Disc
CF	Cornering Force
CG	Center Of Gravity
CH	Channel
CKD	Complete Knock Down
COMB.	Combination
CPE	Coupe
CPS	Combustion Pressure Sensor
CPU	Central Processing Unit
CRS	Child Restraint System
CTR	Center
C/V	Check Valve
CV	Control Valve
CW	Curb Weight
DC	Direct Current

Abbreviations	Meaning
DEF	Defogger
DFL	Deflector
DIFF.	Differential
DIFF. LOCK	Differential Lock
D/INJ	Direct Injection
DLC	Data Link Connector
DLI	Distributorless Ignition
DOHC	Double Overhead Camshaft
DP	Dash Pot
DS	Dead Soak
DSP	Digital Signal Processor
DTC	Diagnostic Trouble Code
DVD	Digital Versatile Disc
EBD	Electric Brake Force Distribution
ECAM	Engine Control And Measurement System
ECD	Electronic Controlled Diesel
ECDY	Eddy Current Dynamometer
ECT	Electronic Control Transmission
ECU	Electronic Control Unit
ED	Electro–Deposited Coating
EDU	Electronic Driving Unit
EDIC	Electric Diesel Injection Control
EFI	Electronic Fuel Injection
E/G	Engine
EGR	Exhaust Gas Recirculation
EGR–VM	EGR–Vacuum Modulator
ELR	Emergency Locking Retractor
EMPS	Electric Motor Power Steering
ENG	Engine
ESA	Electronic Spark Advance
ETCS–i	Electronic Throttle Control System–intelligent
EVAP	Evaporative Emission Control
EVP	Evaporator
E–VRV	Electric Vacuum Regulating Valve
EX	Exhaust
FE	Fuel Economy
FF	Front–Engine Front–Wheel–Drive
F/G	Fuel Gauge
FIPG	Formed In Place Gasket
FL	Fusible Link
F/P	Fuel Pump
FPU	Fuel Pressure Up
Fr	Front
F/W	Flywheel
FW/D	Flywheel Damper
FWD	Front–Wheel–Drive
GAS	Gasoline
GND	Ground
GPS	Global Positioning System
HAC	High Altitude Compensator
H/B	Hatchback

Abbreviations	Meaning
H–FUSE	High Current Fuse
HI	High
HID	High Intensity Discharge (Head Lamp)
HSG	Housing
HT	Hard Top
HWS	Heated Windshield System
IC	Integrated Circuit
IDI	Indirect Diesel Injection
IFS	Independent Front Suspension
IG	Ignition
IIA	Integrated Ignition Assembly
IN	Intake (Manifold, Valve)
INT	Intermittent
I/P	Instrument Panel
IRS	Independent Rear Suspension
ISC	Idle Speed Control
J/B	Junction Block
J/C	Junction Connector
KD	Kick–Down
LAN	Local Area Network
LB	Liftback
LCD	Liquid Crystal Display
LED	Light Emitting Diode
LH	Left–Hand
LHD	Left–Hand Drive
L/H/W	Length, Height, Width
LLC	Long–Life Coolant
LNG	Liquified Natural Gas
LO	Low
LPG	Liquified Petroleum Gas
LSD	Limited Slip Differential
LSP & PV	Load Sensing Proportioning And Bypass Valve
LSPV	Load Sensing Proportioning Valve
MAP	Manifold Absolute Pressure
MAX.	Maximum
MIC	Microphone
MIL	Malfunction Indicator Lamp
MIN.	Minimum
MG1	Motor Generator No.1
MG2	Motor Generator No.2
MP	Multipurpose
MPI	Multipoint Electronic Injection
MPX	Multiplex Communication System
M/T, MTM	Manual Transmission (Transaxle)
MT	Mount
MTG	Mounting
N	Neutral
NA	Natural Aspiration
No.	Number
O2S	Oxygen Sensor
O/D	Overdrive

Abbreviations	Meaning
OEM	Original Equipment Manufacturing
OHC	Overhead Camshaft
OHV	Overhead Valve
OPT	Option
ORVR	On–board Refilling Vapor Recovery
O/S	Oversize
P & BV	Proportioning And Bypass Valve
PCS	Power Control System
PCV	Positive Crankcase Ventilation
PKB	Parking Brake
PPS	Progressive Power Steering
PTC	Positive Temperature Coefficient
PS	Power Steering
PTO	Power Take–Off
P/W	Power Window
R & P	Rack And Pinion
RAM	Random Access Memory
R/B	Relay Block

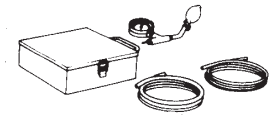
GLOSSARY OF SAE AND TOYOTA TERMS

This glossary lists all SAE–J1930 terms and abbreviations used in this manual in compliance with SAE recommendations, as well as their TOYOTA equivalents.

SAE ABBREVIATIONS	SAE TERMS	TOYOTA TERMS ( )—ABBREVIATIONS
A/C	Air Conditioning	Air Conditioner
ACL	Air Cleaner	Air Cleaner, A/CL
AIR	Secondary Air Injection	Air Injection (AI)
AP	Accelerator Pedal	–
B+	Battery Positive Voltage	+B, Battery Voltage
BARO	Barometric Pressure	HAC
CAC	Charge Air Cooler	Intercooler
CARB	Carburetor	Carburetor
CFI	Continuous Fuel Injection	–
CKP	Crankshaft Position	Crank Angle
CL	Closed Loop	Closed Loop
CMP	Camshaft Position	Cam Angle
CPP	Clutch Pedal Position	–
CTOX	Continuous Trap Oxidizer	–
CTP	Closed Throttle Position	LL ON, Idle ON
DFI	Direct Fuel Injection (Diesel)	Direct Injection (DI/INJ)
DI	Distributor Ignition	–
DLC1 DLC2 DLC3	Data Link Connector 1 Data Link Connector 2 Data Link Connector 3	1: Check Connector 2: Total Diagnosis Communication Link (TDCL) 3: OBD II Diagnostic Connector
DTC	Diagnostic Trouble Code	Diagnostic Trouble Code
DTM	Diagnostic Test Mode	–
ECL	Engine Control Level	–
ECM	Engine Control Module	Engine ECU (Electronic Control Unit)
ECT	Engine Coolant Temperature	Coolant Temperature, Water Temperature (THW)
EEPROM	Electrically Erasable Programmable Read Only Memory	Electrically Erasable Programmable Read Only Memory (EEPROM), Erasable Programmable Read Only Memory (EPROM)
EFE	Early Fuel Evaporation	Cold Mixture Heater (CMH), Heat Control Valve (HCV)
EGR	Exhaust Gas Recirculation	Exhaust Gas Recirculation (EGR)
EI	Electronic Ignition	Distributorless Ignition (DLI)
EM	Engine Modification	Engine Modification (EM)
EPROM	Erasable Programmable Read Only Memory	Programmable Read Only Memory (PROM)
EVAP	Evaporative Emission	Evaporative Emission Control (EVAP)
FC	Fan Control	–
FEEPROM	Flash Electrically Erasable Programmable Read Only Memory	–
FEPROM	Flash Erasable Programmable Read Only Memory	–
FF	Flexible Fuel	–
FP	Fuel Pump	Fuel Pump
GEN	Generator	Alternator
GND	Ground	Ground (GND)

HO2S	Heated Oxygen Sensor	Heated Oxygen Sensor (HO_2S)
IAC	Idle Air Control	Idle Speed Control (ISC)
IAT	Intake Air Temperature	Intake or Inlet Air Temperature
ICM	Ignition Control Module	–
IFI	Indirect Fuel Injection	Indirect Injection (IDL)
IFS	Inertia Fuel–Shutoff	–
ISC	Idle Speed Control	–
KS	Knock Sensor	Knock Sensor
MAF	Mass Air Flow	Air Flow Meter
MAP	Manifold Absolute Pressure	Manifold Pressure Intake Vacuum
MC	Mixture Control	Electric Bleed Air Control Valve (EBCV) Mixture Control Valve (MCV) Electric Air Control Valve (EACV)
MDP	Manifold Differential Pressure	–
MFI	Multiport Fuel Injection	Electronic Fuel Injection (EFI)
MIL	Malfunction Indicator Lamp	Check Engine Lamp
MST	Manifold Surface Temperature	–
MVZ	Manifold Vacuum Zone	–
NVRAM	Non–Volatile Random Access Memory	–
O2S	Oxygen Sensor	Oxygen Sensor, O_2 Sensor (O_2S)
OBD	On–Board Diagnostic	On–Board Diagnostic System (OBD)
OC	Oxidation Catalytic Converter	Oxidation Catalyst Convert (OC), CCo
OP	Open Loop	Open Loop
PAIR	Pulsed Secondary Air Injection	Air Suction (AS)
PCM	Powertrain Control Module	–
PNP	Park/Neutral Position	–
PROM	Programmable Read Only Memory	–
PSP	Power Steering Pressure	–
PTOX	Periodic Trap Oxidizer	Diesel Particulate Filter (DPF) Diesel Particulate Trap (DPT)
RAM	Random Access Memory	Random Access Memory (RAM)
RM	Relay Module	–
ROM	Read Only Memory	Read Only Memory (ROM)
RPM	Engine Speed	Engine Speed
SC	Supercharger	Supercharger
SCB	Supercharger Bypass	E–ABV
SFI	Sequential Multiport Fuel Injection	Electronic Fuel Injection (EFI), Sequential Injection
SPL	Smoke Puff Limiter	–
SRI	Service Reminder Indicator	–
SRT	System Readiness Test	–
ST	Scan Tool	–
TB	Throttle Body	Throttle Body
TBI	Throttle Body Fuel Injection	Single Point Injection Central Fuel Injection (Ci)
TC	Turbocharger	Turbocharger
TCC	Torque Converter Clutch	Torque Converter



TCM	Transmission Control Module	Transmission ECU, ECT ECU
TP	Throttle Position	Throttle Position
TR	Transmission Range	–
TVV	Thermal Vacuum Valve	Bimetallic Vacuum Switching Valve (BVSV) Thermostatic Vacuum Switching Valve (TVSV)
TWC	Three–Way Catalytic Converter	Three–Way Catalytic (TWC) Manifold Converter CC_{RO}
TWC+OC	Three–Way + Oxidation Catalytic Converter	CC_R + CCo
VAF	Volume Air Flow	Air Flow Meter
VR	Voltage Regulator	Voltage Regulator
VSS	Vehicle Speed Sensor	Vehicle Speed Sensor
WOT	Wide Open Throttle	Full Throttle
WU–OC	Warm Up Oxidation Catalytic Converter	–
WU–TWC	Warm Up Three–Way Catalytic Converter	–
3GR	Third Gear	–
4GR	Fourth Gear	–

030LM–05

HOW TO DETERMINE NUT STRENGTH

Nut Type			Class
Present Standard Hexagon Nut	Old Standard Hexagon Nut		
	Cold Forging Nut	Cutting Processed Nut	
 No Mark			4N
 No Mark (w/ Washer)	 No Mark (w/ Washer)	 No Mark	5N (4T)
 6N			6N
		 *	7N (5T)
 8N			8N
 10N		 No Mark	10N (7T)
 11N			11N
 12N			12N

*: Nut with 1 or more marks on one side surface of the nut.

B06432

HINT:

Use the nut with the same number of the nut strength classification or the greater than the bolt strength classification number when tightening parts with a bolt and nut.

Example: Bolt = 4T

Nut = 4N or more

ENGINE CONTROL SYSTEM

031DY–01

SERVICE DATA

1ZZ–FE/3ZZ–FE:

Power steering oil pressure switch		
Voltage	EMPS – E2	
	Not spin the steering wheel at engine idling	8 to 14 V
	Spin the steering wheel at engine idling	0 to 1.5 V
Idle air control valve		
Movement	Ignition switch ON	Half open → fully close → fully open → half open
Mass air flow meter		
Resistance	4 (THA) – 5 (E2)	
	at –20°C (–4°F)	13.6 to 18.4 kΩ
	at 20°C (68°F)	2.21 to .69 kΩ
	at 60°C (140°F)	0.49 to 0.67 kΩ
Camshaft timing oil control valve assy		
Resistance	at 20°C (68°F)	6.9 to 7.9 Ω
Throttle position sensor		
Resistance	VC – E2	2.5 to 6.0 kΩ
E.F.I. Engine coolant temperature sensor		
Resistance	Approx. 20°C (68°F)	2.32 to 2.59 kΩ
	Approx. 80°C (176°F)	0.310 to 0.326 kΩ
Knock control sensor		
Resistance	Approx. 20°C (68°F)	120 to 280 kΩ

1AZ–FE/1AZ–FSE:

Power steering oil pressure switch		
Voltage	PSW – E2	
	Not spin the steering wheel at engine idling	9 to 14 V
	Spin the steering wheel at engine idling	0 to 3 V
Idle air control valve		
Movement	Ignition switch ON	Half open → fully close → fully open → half open
Throttle body assy (1AZ–FSE)		
Throttle valve opening percentage		60 % or more
Idle speed		700 ± 50 rpm
Accelerator pedal position sensor (1AZ–FSE)		
Voltage	ACCEL POS Released	0.5 to 1.1 V
	Depress	2.6 to 4.5 V
	ACCEL POS #2 Released	1.2 to 2.0 V
	Depress	3.4 to 5.3 V
Mass air flow meter		
Resistance	4 (THA) – 5 (E2)	
	at –20°C (–4°F)	13.6 to 18.4 kΩ
	at 20°C (68°F)	2.21 to .69 kΩ
	at 60°C (140°F)	0.49 to 0.67 kΩ
Camshaft timing oil control valve assy		
Resistance	at 20°C (68°F)	6.9 to 7.9 Ω
Throttle position sensor (1AZ–FE)		
Resistance	VC – E2	2.5 to 5.0 kΩ
Throttle body assy (1AZ–FSE)		
Resistance	2 (M+) – 1 (M–)	0.3 to 100 Ω at 20°C (68°F)
E.F.I. Engine coolant temperature sensor		
Resistance	Approx. 20°C (68°F)	2.32 to 2.59 kΩ
	Approx. 80°C (176°F)	0.310 to 0.326 kΩ
Knock control sensor		
Resistance	Approx. 20°C (68°F)	120 to 280 kΩ

1CD–FTV:

Mass air flow meter		
Resistance	2 (THA) – 1 (E2)	
	at –20°C (–4°F)	12.5 to 16.9 kΩ
	at 20°C (68°F)	2.19 to 2.67 kΩ
	at 60°C (140°F)	0.50 to 0.68 kΩ
Intake shutter assy		
Resistance	at 20°C (68°F)	
	2 – 1, 3	18 to 22 Ω
	5 – 4, 6	18 to 22 Ω
Accelerator pedal assy (See page 10–56)		
Resistance	VPA1 – EP1	5.0 kΩ or less
	VPA2 – EP2	5.0 kΩ or less
	VCP1 – EP1	1.5 to 6.0 kΩ
	VCP2 – EP2	1.5 to 6.0 kΩ
Diesel turbo inlet air temperature sensor		
Resistance	Approx. 20°C (68°F)	2.21 to 2.65 kΩ
Crankshaft position sensor		
Resistance	at cold	1630 to 2740 Ω
	at hot	2065 to 3225 Ω
Camshaft position sensor		
Resistance	at cold	1630 to 2740 Ω
	at hot	2065 to 3225 Ω
Diesel engine engine coolant temperature sensor		
Resistance	Approx. 20°C (68°F)	2.32 to 2.59 kΩ
	Approx. 80°C (176°F)	0.310 to 0.326 kΩ
Injection or supply pump assy		
Resistance	THF – E2	
	Approx. 20°C (68°F)	2.21 to 2.69 kΩ
	Approx. 80°C (176°F)	0.287 to 0.349 kΩ

Cooling fan relay		
Specified condition	Between terminals 1 and 2	Continuity
	Between terminals 3 and 5	No continuity
		Continuity (Apply battery voltage terminals 1 and 2)
Cooling fan relay No.2		
Specified condition	Between terminals 1 and 2	Continuity
	Between terminals 3 and 4	Continuity
	Between terminals 3 and 5	No continuity
		Continuity (Apply battery voltage terminals 1 and 2)
Cooling fan relay No.3		
Specified condition	Between terminals 1 and 2	Continuity
	Between terminals 3 and 5	No continuity
		Continuity (Apply battery voltage terminals 1 and 2)

1AZ–FSE:

Thermostat		
Valve opening temperature		86 to 90°C (187 to 198°F)
Valve lift	at 95°C (203°F)	10 mm (0.394 in.) or more
Radiator cap sub–assy		
Standard opening pressure		74 to 103 kPa (0.75 to 1.05 kgf/cm2, 10.7 to 14.9 psi)
Minimum opening pressure		59 kPa (0.6 kgf/cm2, 8.5 psi)

Cooling fan		
Standard amperage	at 20°C (68°F)	5.2 to 8.2 A (M/T) 8.3 to 11.3 (A/T)
Standard amperage (No.2 (With Air Conditioner))	at 20°C (68°F)	5.2 to 8.2 A (M/T) 8.3 to 11.3 (A/T)
Cooling fan relay		
Specified condition	Between terminals 1 and 2	Continuity
	Between terminals 3 and 5	No continuity
		Continuity (Apply battery voltage terminals 1 and 2)
Cooling fan relay No.2		
Specified condition	Between terminals 1 and 2	Continuity
	Between terminals 3 and 4	Continuity
	Between terminals 3 and 5	No continuity
		Continuity (Apply battery voltage terminals 1 and 2)
Cooling fan relay No.3		
Specified condition	Between terminals 1 and 2	Continuity
	Between terminals 3 and 5	No continuity
		Continuity (Apply battery voltage terminals 1 and 2)

1CD–FTV:

Thermostat		
Valve opening temperature		80 – 84°C (176 – 183°F)
Valve lift	at 95°C (203°F)	8.5 mm (0.33 in.) or more
Radiator cap sub–assy		
Standard opening pressure		93 – 122 kPa (0.95 – 1.25 kgf/cm2, 13.4 – 17.6 psi)
Minimum opening pressure		78 kPa (0.8 kgf/cm2, 11.4 psi)
Cooling fan		
Standard amperage	at 20°C (68°F)	13.2 A
Cooling fan relay		
Specified condition	Between terminals 1 and 2	Continuity
	Between terminals 3 and 5	No continuity
		Continuity (Apply battery voltage terminals 1 and 2)
Cooling fan relay No.2		
Specified condition	Between terminals 1 and 2	Continuity
	Between terminals 3 and 4	Continuity
	Between terminals 3 and 5	No continuity
		Continuity (Apply battery voltage terminals 1 and 2)
Cooling fan relay No.3		
Specified condition	Between terminals 1 and 2	Continuity
	Between terminals 3 and 5	No continuity
		Continuity (Apply battery voltage terminals 1 and 2)

SERVICE DATA

1ZZ–FE/3ZZ–FE:

Starter assy		
	Rated voltage and output power	12 V 1.3 kW
Specified current		85 A or less at 11.5 V
Starter relay		
Specified condition	1 – 2	Continuity
	3 – 5	No continuity
Battery		
Voltage	at 20 ˚C (68 ˚F)	12.5 to 12.9 V
Voltage regulator	Regulating voltage	12.9 to 14.9 V
	Standard amperage	10 A or less

1AZ–FE:

Starter assy		
	Rated voltage and output power	12 V 1.3 kW
Specified current		85 A or less at 11.5 V
Starter relay		
Specified condition	1 – 2	Continuity
	3 – 5	No continuity
Battery		
Voltage	at 20 ˚C (68 ˚F)	12.5 to 12.9 V
Voltage regulator	Regulating voltage	12.9 to 14.9 V
	Standard amperage	10 A or less

1AZ–FSE:

Starter (1.3 kW type)		
	Rated voltage and output power	12 V 1.3 kW
No–load characteristics	Current	85 A or less at 11.5 V
Starter (1.6 kW type)		
	Rated voltage and output power	12 V 1.6 kW
No–load characteristics	Current	75 A or less at 11.5 V
Starter relay		
Specified condition	1 – 2	Continuity
	3 – 5	No continuity
Battery		
Voltage	at 20 ˚C (68 ˚F)	12.5 to 12.9 V
Voltage regulator	Regulating voltage	12.9 to 14.9 V
	Standard amperage	10 A or less

1CD–FTV:

Starter assy		
	Rated voltage and output power	12 V 2.0 kW
Specified current		190 A or less at 11.5 V
Starter relay		
Specified condition	1 – 2	Continuity
	3 – 5	No continuity
Battery		
Except maintenance–free battery	Standard specific gravity	1.25 to 1.29 at 20 ˚C (68 ˚F)
Voltage	at 20 ˚C (68 ˚F)	12.5 to 12.9 V
Voltage regulator	Regulating voltage	13.2 to 14.8 V
	Standard amperage	10 A or less
Glow plugs		
Resistance	at 20 ˚C (68 ˚F)	Approx. 0.72 Ω
Glow plug relay		
Specified condition	1 – 2	No continuity
	3 – 4	Continuity

HOW TO PROCEED WITH TROUBLESHOOTING

1	VEHICLE BROUGHT TO WORKSHOP

2	CUSTOMER PROBLEM ANALYSIS (See page 05–4)

3	CONNECT THE HAND–HELD TESTER TO DLC3

HINT:
If the display indicates a communication fault in the tool, inspect DLC3.

4	CHECK DTC AND FREEZE FRAME DATA (See page 05–5)

HINT:
Record or print DTC and freeze frame data, if needed.

5	CLEAR DTC AND FREEZE FRAME DATA (See page 05–5)

6	VISUAL INSPECTION

7	SETTING THE CHECK (TEST) MODE DIAGNOSIS (See page 05–5)

8	PROBLEM SYMPTOM CONFIRMATION

HINT:
If the engine does not start, perform steps 10 and 12 first.

A	Malfunction does not occur
B	Malfunction occurs

B → GO TO STEP 10

A

9	SYMPTOM SIMULATION

10	DTC CHECK (See page 05–5)

A	Malfunction code
B	No code

B → GO TO STEP 12

A

11	DTC CHART (See page 05–16)

GO TO STEP 14

12	BASIC INSPECTION (See page 05–5)

A	Wrong parts not confirmed
B	Wrong parts confirmed

B → GO TO STEP 17

A

13	PROBLEM SYMPTOMS TABLE (See page 05–22)

A	Wrong circuit confirmed
B	Wrong parts confirmed

B → GO TO STEP 17

A

14	CHECK ECM POWER SOURCE CIRCUIT (See page 05–124)

15	CIRCUIT INSPECTION

A	Malfunction not confirmed
B	Malfunction confirmed

B → GO TO STEP 18

A

16	CHECK FOR INTERMITTENT PROBLEMS (See page 05–5)

GO TO STEP 18

17	PARTS INSPECTION

18	IDENTIFICATION OF PROBLEM

19	ADJUSTMENT, REPAIR

20	CONFIRMATION TEST

END

0505N–04

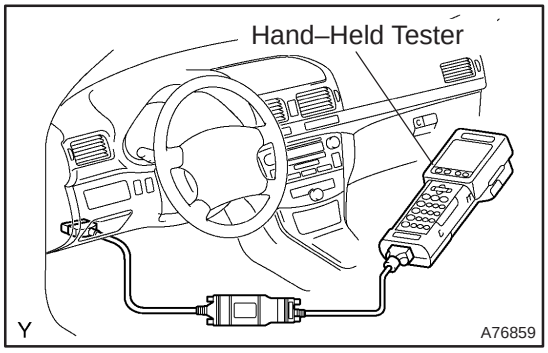
	Engine Temp.	☐ Cold ☐ Warming up ☐ After Warming up ☐ Any temp. ☐ Other _____
	Engine Operation	☐ Starting ☐ Just after starting (min.) ☐ Idling ☐ Racing ☐ Driving ☐ Constant speed ☐ Acceleration ☐ Deceleration ☐ A/C switch ON/OFF ☐ Other _____

Condition of check engine warning light (CHK ENG)		☐ Remains on ☐ Sometimes lights up ☐ Does not light up
DTC Inspection	Normal mode (Pre–check)	☐ Normal ☐ Malfunction code(s) (code) ☐ Freeze frame data ( )
	Check Mode	☐ Normal ☐ Malfunction code(s) (code) ☐ Freeze frame data ( )

05C66–01

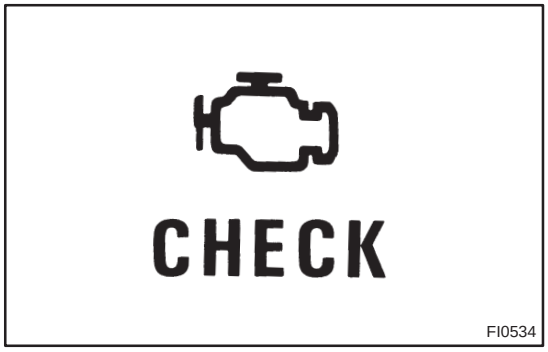


PRE–CHECK

1. DIAGNOSIS SYSTEM

(a) Description for Euro–OBD (European spec.)

- When troubleshooting Euro–OBD vehicles, the only difference from the usual troubleshooting procedure is that you connect the vehicle to the OBD scan tool complying with ISO 15031–4 or hand–held tester, and read the various data output from the vehicle's ECM.
- Euro–OBD regulations require that the vehicle's on–board computer illuminates the check engine warning light (CHK ENG) on the instrument panel when the computer detects a malfunction in the emission control system / components or in the power train control components which affect vehicle emissions, or a malfunction in the computer. In addition to an illumination of the CHK ENG when a malfunction is detected, the applicable Diagnostic Trouble Codes (DTC) prescribed by ISO 15031–4 are recorded in the engine ECU memory (See page 05–16). If the malfunction does not reoccur in 3 consecutive trips, the CHK ENG goes off automatically but the DTCs remain recorded in the ECM memory.

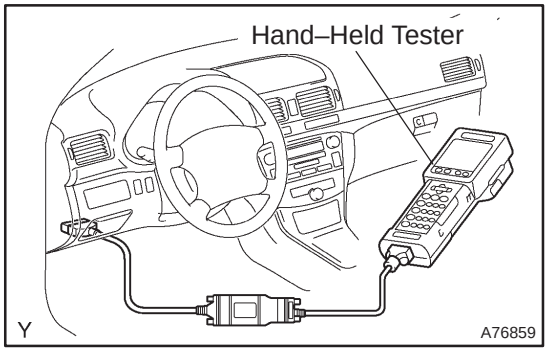


- To check the DTCs, connect the OBD scan tool or hand–held tester to Data Link Connector 3 (DLC3) on the vehicle. The OBD scan tool or hand–held tester also enables you to erase the DTCs and check freezed frame data and various forms of engine data. (For operating instructions, see the OBD scan tool's instruction book.)
  DTCs include ISO controlled codes and manufacturer controlled codes. ISO controlled codes must be set as prescribed by the ISO, while manufacturer controlled codes can be set freely by the manufacturer within the prescribed limits (See DTC chart on page 05–16).
- The diagnosis system operates in the normal mode during normal vehicle use. It also has a check (test) mode for technicians to simulate malfunction symptoms and troubleshoot. Most DTCs use 2 trip detection logic* to prevent erroneous detection, and to ensure a thorough malfunction detection. By switching the ECM to the check (test) mode using hand–held tester when troubleshooting, a technician can cause the CHK ENG to illuminate for a malfunction that is only detected once or momentarily (Hand–held tester only) (See step 3).
- * 2 trip detection logic
  When a logic malfunction is first detected, the pend-

ing fault code is stored in the ECM memory (1st trip). If the same malfunction is detected again during the second drive test, this second detection causes the CHK ENG to illuminate (2nd trip) (However, the ignition switch must be turned OFF between the 1st trip and 2nd trip).

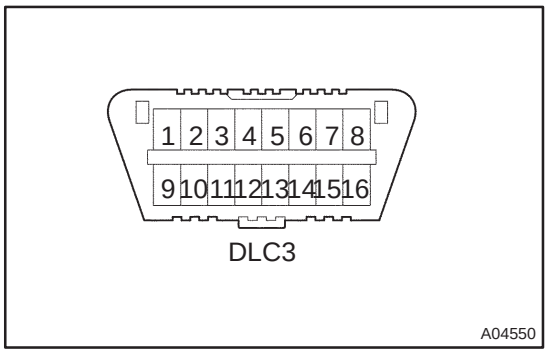
- Freeze frame data:
  Freeze frame data records the engine condition when a misfire (DTCs P0300 – P0304) or fuel trim malfunction (DTCs P0171) or other malfunction (first malfunction only), is detected.
  Because freeze frame data records the engine conditions (fuel system, calculated load, engine coolant temperature, fuel trim, engine speed, vehicle speed, etc.) when the malfunction is detected, when troubleshooting it is useful for determining whether the vehicle was running or stopped, the engine warmed up or not, the air–fuel ratio lean or rich, etc. at the time of the malfunction.
- Priorities for troubleshooting:
  If troubleshooting priorities for multiple DTCs are given in the applicable DTC chart, these should be followed.

If no instructions are given, troubleshoot according to the following priorities.



(1) DTCs other than fuel trim malfunction (DTCs P0171) and misfire (DTCs P0300 – P0304).
(2) Fuel trim malfunction (DTCs P0171).
(3) Misfire (DTCs P0300 – P0304).

(b) Description for M–OBD (Except European spec.)

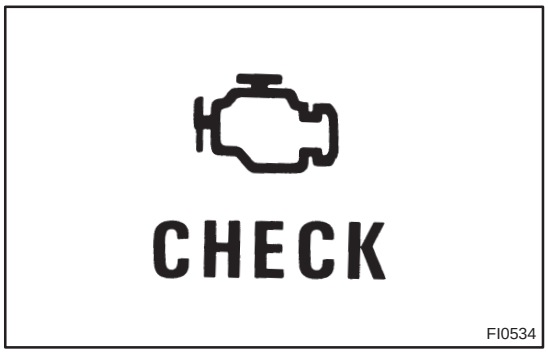


- When troubleshoot Multiplex OBD (M–OBD) vehicles, the only difference from the usual troubleshooting procedure is that you connect the hand–held tester to the vehicle, and read the various data output from the vehicle's ECM.

- The vehicle's on–board computer illuminates the check engine warning light (CHK ENG) on the instrument panel when the computer detects a malfunction in the computer itself or in drive system components. In addition to an illumination of the CHK ENG when a malfunction is detected, the applicable Diagnostic Trouble Codes (DTCs) are recorded in the ECM memory (See page 05–16). When the malfunction does not reoccur, the CHK ENG is indicated until the ignition switch is turned off, and then the CHK ENG is not indicated when the ignition switch is turned on but the DTCs remain recorded in the ECM memory.

- To check the DTCs, connect the hand–held tester to the Data Link Connector 3 (DLC3) on the vehicle or read the DTC which is indicated on the multi information display when TC and CG terminals on the DLC3 are connected. The hand–held tester also enables you to erase the DTCs and check the freeze frame data and various forms of engine data. (for operating instructions, see the instruction book.)
- The diagnosis system operates in the normal mode during normal vehicle use. It also has a check (test) mode for technicians to simulate malfunction symptoms and troubleshoot. Most DTCs use 2 trip detection logic* to prevent erroneous detection, and to ensure a thorough malfunction detection. By switching the ECM to the check (test) mode using hand–held tester when troubleshooting, a technician can cause the CHK ENG to illuminate for a malfunction that is only detected once or momentarily (Hand–held tester only) (See step 3).
- * 2 trip detection logic
  When a logic malfunction is first detected, the pending fault code is stored in the ECM memory (1st trip). If the same malfunction is detected again during the second drive test, this second detection causes the CHK ENG to illuminate (2nd trip) (However, the ignition switch must be turned OFF between the 1st trip and 2nd trip).

- Freeze frame data:
  Freeze frame data records the engine conditions (fuel system, calculator load, water temperature, fuel trim, engine speed, vehicle speed, etc.) when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.



(c) Check the DLC3.
The vehicle's ECM uses the ISO 9141–2 (Euro–OBD)/ ISO 14230(M–OBD) communication protocol. The terminal arrangement of DLC3 complies with ISO 15031–03 and matches the ISO 9141–2/ ISO 14230 format.

Terminal No.	Connection / Voltage or Residence	Condition
7	Bus + Line / Pulse generation+	During transmission
4	Chassis Ground – Body Ground / 1 Ω or less	Always
16	Battery Positive – Body Ground / 9 to 14 V	Always

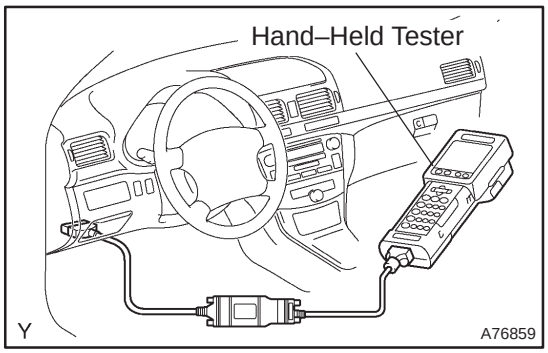
HINT:
If the display shows "UNABLE TO CONNECT TO VEHICLE" when you have connected the cable of the hand–held tester to the DLC3, turned the ignition switch ON and operated the hand–held tester, there is a problem on the vehicle side or tool side.

- If communication is normal when the tool is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still not possible is when the tool is connected to another vehicle, the problem is probably in the tool itself, so consult the Service Deparment listed in the tool's instruction manual.

(d) Inspect the battery voltage.
Battery voltage: 11 to 14 V
If voltage is below 11V, recharge the battery before proceeding.

(e) Check the CHK ENG.
(1) The CHK ENG lamp comes on when the ignition switch is turned ON and the engine is not running.

HINT:
If the CHK ENG lamp is not illuminated, troubleshoot the combination meter.



(2) When the engine is started, the CHK ENG should go off. If the lamp remains on, it means that the diagnosis system has detected a malfunction or abnormality in the system.

2. DTC CHECK (Nomal Mode) :

NOTICE:

Hand–held tester only:

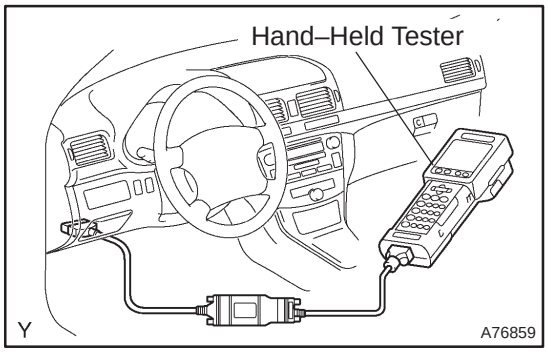
When the diagnosis system is switched from the normal mode to the check (test) mode, it erases all DTCs and freeze frame data recorded in the normal mode. So before switching modes, always check the DTCs and freeze frame data, and then write them down.

(a) Checking DTCs using the hand–held tester.
  (1) Connect the hand–held tester to the DLC3.
  (2) Turn the ignition switch ON and switch the hand–held tester main switch ON.
  (3) Use the hand–held tester to check the DTCs and freeze frame data and then write them down. The hand–held tester's instruction book.
  (4) See page 05–16 to confirm the details of the DTCs.

(b) Clearing the DTCs using the hand–held tester:
  (1) Connect the hand–held tester to the DLC3.
  (2) Turn the ignition switch ON.
  (3) When operating hand–held tester to erase the codes, the DTCs and freeze frame data will be erased. (See the hand–held tester's instruction book for operating instructions.)

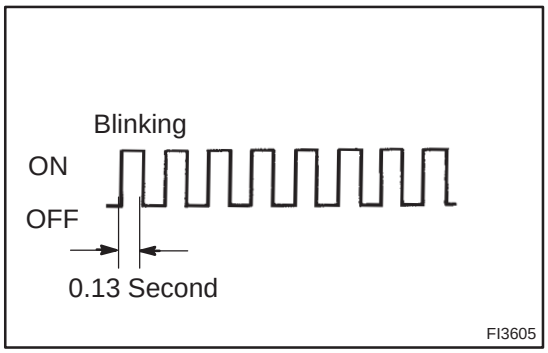
(c) Clearing the DTCs not using the hand–held tester:
  (1) Disconnect the battery terminal or remove the EFI fuse for more than 60 seconds.

3. DTC CHECK (Check Mode):



HINT:

Hand–held tester only:



Compared to the normal mode, the check mode has more sensing ability to detect malfunctions.

Furthermore, the same diagnostic items which are detected in the normal mode can also be detected in the check (test) mode.

(a) Proceduce for check mode using hand–held tester.
  (1) Check the initial conditions
    - Battery positive voltage 11V or more.
    - Throttle valve fully closed.
    - Transmission in the "P" or "N" position.
    - Air conditioning switched OFF.
  (2) Turn the ignition switch OFF.

(3) Connect the hand–held tester to the DLC3.
(4) Turn the ignition switch and the hand–held tester main switch ON.

(5) Switch the hand–held tester from the normal mode to the check (test) mode. The CHK ENG blinks in 0.13 sec interval as shown in the illustration.

NOTICE:

If the hand–held tester switches the ECM from the normal mode to the check mode or vice–versa, or if the ignition switch is turned from ON to ACC or OFF during the check mode, the DTC and freeze frame data will be erased.

(6) Start the engine. (The CHK ENG lamp goes out after the engine start.)
(7) Simulate the conditions of the malfunction described by the customer.

NOTICE:

Leave the ignition switch ON until you have checked the DTC, etc.

(8) After simulating the malfunction conditions, use the hand–held tester diagnosis selector to check the DTCs and freeze frame data, etc.

HINT:

Be sure not to turn the ignition switch OFF, because the diagnosis system is changed from the check mode to the nomal mode and will result in all of the DTCs and freeze frame data being erased.

(9) After checking the DTCs, inspect the applicable circuit.

(b) Clearing the DTCs using the hand–held tester
(1) Connect the hand–held tester to DLC3.
(2) Turn the ignition switch ON.
(3) When operating hand–held tester to erase the codes, the DTCs and freeze frame data will be erased. (See the hand–held tester's instruction book for operating instructions.)

(c) Clearing the DTCs not using the hand–held tester:
(1) Disconnect the battery terminal or remove the EFI fuse for more than 60 seconds.

4. FAIL–SAFE CHART

If any of the following codes are recorded, the engine ECM enters the fail–safe mode.

DTC No.	Fail–Safe Operation	Fail–Safe Deactivation Conditions
P0100	Ignition timing is fixed at 5° BTDC	If the ECM detects "Pass" condition, the ECM will return to "Nomal mode".
P0110	Intake air temperature is fixed at 20°C (68°F)	If the ECM detects "Pass" condition, the ECM will return to "Nomal mode".
P0115	Water temperature is fixed at 80°C (176°F)	If the ECM detects "Pass" condition, the ECM will return to "Nomal mode".
P0120	VTA is fixed at 0°	The following condition must be repeated at least 2 times consecutively when closed throttle position switch is OFF: VTA greater than 0.1 V and less than 0.95 V
P0135 P0141	The heater circuit in which an abnormality is detected is turned off	Ignition switch OFF
P0325	Max. timing retardation	Ignition switch OFF
P1300 P1305 P1310 P1315	Fuel cut	If the ECM detects "Pass" condition, the ECM will return to "Nomal mode".
P1656	It cut electrically the circuit in which an abnormality is detected	If the ECM detects "Pass" condition, the ECM will return to "Nomal mode".

5. CHECK FOR INTERMITTENT PROBLEMS

Hand–held tester only:

By putting the vehicle's engine ECM in check (test) mode, 1 trip detection logic is possible instead of 2 trip detection logic, and sensitivity to detect faults is increased. This makes it easier to detect intermittent problems.

(a) Clear the DTC. (See step 3.)
(b) Set the check (test) mode. (See step 3.)
(c) Perform a simulation test. (See page 01–32)
(d) Check the connector and terminal. (See page 01–32)
(e) Wiggle the harness and the connector. (See page 01–32)

6. DATA LIST

HINT:

Using the DATA LIST displayed by the hand–held tester, you can read the value of the switches, sensors, actuators and so on without parts removal. Reading the DATA LIST as a first step of troubleshooting is one of the method to shorten diagnostic time.

NOTICE:

The values given below for "Normal Condition" are representative values. A vehicle may still be normal even if the measured values are a little different from those listed here. Do not decide whether a part is faulty or not solely according to the "Normal Condition" here.

(a) Warm up the engine.
(b) Turn the ignition switch OFF.
(c) Connect the Hand–held tester to the DLC3.
(d) Turn the ignition switch ON.
(e) Push the "ON" button of the hand–held tester.
(f) Select the item "DIAGNOSIS / OBD/MOBD / DATA LIST / ALL".
(g) According to the display on tester, read the "DATA LIST".

Hand–held tester display	MeasurementItem/Range (Display)	Normal Condition*1	Diagnostic Note
FUEL SYS #1	Fuel System Bank 1 OPEN: Air–fuel ratio feedback stopped CLOSED: Air–fuel ratio feedback operating	Idling after warming up: CLOSED	—
CALC LOAD	Calculator Load: Current intake air volume as a proportion of max. intake air volume	Idling: 3.3 to 26.7 % Runnig without load (2,500rpm): 12.0 to 14.7 %	—
COOLANT TEMP	Coolanttemperature/ Min.: –40 °C, Max.: 140 °C	After warming up: 80 to 95°C (176 to 203°F)	If the value is "–40 °C" or "140 °C", sensor circuit is open or shorted.
INTAKE AIR	Intake air temperature/ Min.: –40 °C, Max.: 140 °C	Equivalent to Ambient Temp.	
SHORT FT #1	Short–term Fuel Trim Bank 1	0 ± 20%	—
LONG FT #1	Long–term Fuel Trim Bank 1	0 ± 20%	—
MAF/AFM	Air flow rate from mass air flow Meter	Idling: M/T 0.54 to 4.33 gm/sec. A/T 0.58 to 4.67 gm/sec. Running without load (2,500 rpm): 3.33 to 9.17 gm/sec.	—
ENGINE SPD	Engine Speed	Idling: 600 to 700 rpm	—
VEHICLE SPD	Vehicle Speed	Actual vehicle speed	Speed indicated on speedmeter.
IGN ADVANCE	Ignition Advance: Ignition Timing of Cylinder No. 1	Idling: BTDC 5 to 15°	—
THROTTLE POS	Voltage Output of Throttle Position Sensor Calculated as a percentage: 0 V → 0%, 5 V → 100%	Throttle Fully Closed: 6 to 16 % Throttle Fully Open: 64 to 98 %	Read the value with ignition switch ON (Do not start engine)
O2S B1, S1	Voltage Output of Heated Oxygen Sensor Bank 1, Sensor 1	Idling: 0.05 to 0.95 V	—
O2FT B1, S1	Heated Oxygen Sensor Fuel Trim Bank 1, Sensor 1 (Same as SHORT FT #1)	0 ± 20 %	—
INJECTOR	Fuel injection time for cylinder No.1	Idling: 1.0 to 3.0 ms	—
ISC DUTY RATIO	Intake Air Control Valve duty ratio Opening ratio rotary solenoid type ISC valve	Idling: 20 to 40 %	—
STARTER SIG	Starter Signal	Cranking: ON	—
CTP SW	Closed Throttle Position Switch Signal	Cranking: ON	—
A/C SIG	A/C Switch Signal	A/C ON: ON	—
STOP LIGHT SW *2	Stop Light Switch Signal	Stop light switch ON: ON	—
FC IDL	Fuel Cut Idle: Fuel cut when throttle valve fully closed, during deceleration	Fuel cut operating: ON	—
PNP SW/NSW *2	Neutral start switch signal	P or N position: ON	—
FC TAU	Fuel Cut TAU: Fuel cut during very light load	Fuel cut operating: ON	—
CYL#1, CYL#2, CYL#3, CYL#4	Abnormal revolution variation for each cylinder	0 %	—
FUEL PUMP	Fuel Pump Signal	Idling: ON	—
EVAP (PURGE) VSV	EVAP VSV Signal	VSV operation: Above 30 %	—

*1: If no conditions are specifically stated for ”Idling”, it means the shift lever is in the N or P position, the A/C switch is OFF and all accessory switches are OFF.
*2: A/T only

7. ACTIVE TEST

HINT:

Performing the ACTIVE TEST using the hand–held tester allows the relay, VSV, actuator and so on to operate without parts removal. Performing the ACTIVE TEST as a first step of troubleshooting is one of the method to shorten labor time.

It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Warm up the engine.
(b) Turn the ignition switch OFF.
(c) Connect the hand–held tester to the DLC3.
(d) Turn the ignition switch ON.
(e) Push the ”ON” button of the hand–held tester.
(f) Select the item ”DIAGNOSIS / OBD/MOBD / ACTIVE TEST”.
(g) According to the display on tester, perform the ”ACTIVE TEST”.

Hand–held Tester Display	Test Details	Diagnostic Note
INJ VOL	[Test Details] Control the injection volume Min.: –12.5 %, Max.: 25 % [Vehicle Condition] Engine speed: 3,000 rpm or less	• All injectors are tested at once. • Injection volume is gradually changed between –12.5 and 25%.
A/F CONTROL	[Test Details] Control the injection volume –12.5 or 25 % (Change the injection volume –12.5 % or 25 %.) [Vehicle Condition] Engine speed: 3,000 rpm or less	The following procedure of A/F CONTROL enables the technician to check and graph voltage outputs of the heated oxygen sensor. To display the graph indication, select O2S B1 S1 and press button ”F4” after selecting ”ACTIVE TEST/A/F CONTROL/USER DATA”.
ISC DUTY RATIO	[Test Details] Control the ISC duty ratio 0 to 90 % [Vehicle Condition] • Engine speed: 3,000 rpm or less • Vehicle speed: 0 km/h (0 mph) • Battery voltage: 8.5 V or more	—
EVAP VSV (ALONE)	[Test Details] Activate the VSV for EVAP control ON or OFF	—
FUEL PUMP / SPD	[Test Details] Control the fuel pump ON or OFF	—
TC/TE1	[Test Details] Connect the TC and TE1 ON or OFF	—
FC IDL PROHBT	[Test Details] Control the idle fuel cut prohibit ON or OFF	—

BASIC INSPECTION

When the malfunction is not confirmed in the DTC check, troubleshooting should be carried out in all the possible circuits considered as causes of the problem. In many cases, by carrying out the basic engine check shown in the following flow chart, the location causing the problem can be found quickly and efficiently. Therefore, using this check is essential in the engine troubleshooting.

1	CHECK BATTERY VOLTAGE

NOTICE:
Carry out this check with the engine stopped and ignition switch off.

Reference:

	OK	NG
Voltage	11 V or more	Less than 11 V

NG → **CHARGE OR REPLACE BATTERY**

OK

2	CHECK IF ENGINE WILL CRANK

NG → **PROCEED TO PROBLEM SYMPTOMS TABLE ON PAGE 05–22**

OK

3	CHECK IF ENGINE STARTS

NG → **GO TO STEP 6**

OK

4	CHECK AIR FILTER

(a) Visually check that the air filter is not excessively dirty or oily.

HINT:
If necessary, clean the filter with compressed air. First blow from the inside thoroughly, then blow from the outside of filter.

NG → **REPAIR OR REPLACE**

OK

5	CHECK IDLE SPEED (See page 14–1)

NG → **PROCEED TO PROBLEM SYMPTOMS TABLE ON PAGE 05–22**

OK

6	CHECK FUEL PRESSURE (See page 11–5)

NG → PROCEED TO PAGE 11–1 AND CONTINUE TO TROUBLESHOOT

OK

7	CHECK FOR SPARK (See page 18–1)

NG → PROCEED TO PAGE 18–1 AND CONTINUE TO TROUBLESHOOT

OK

PROCEED TO PROBLEM SYMPTOMS TABLE ON PAGE 05–22

0505J–04

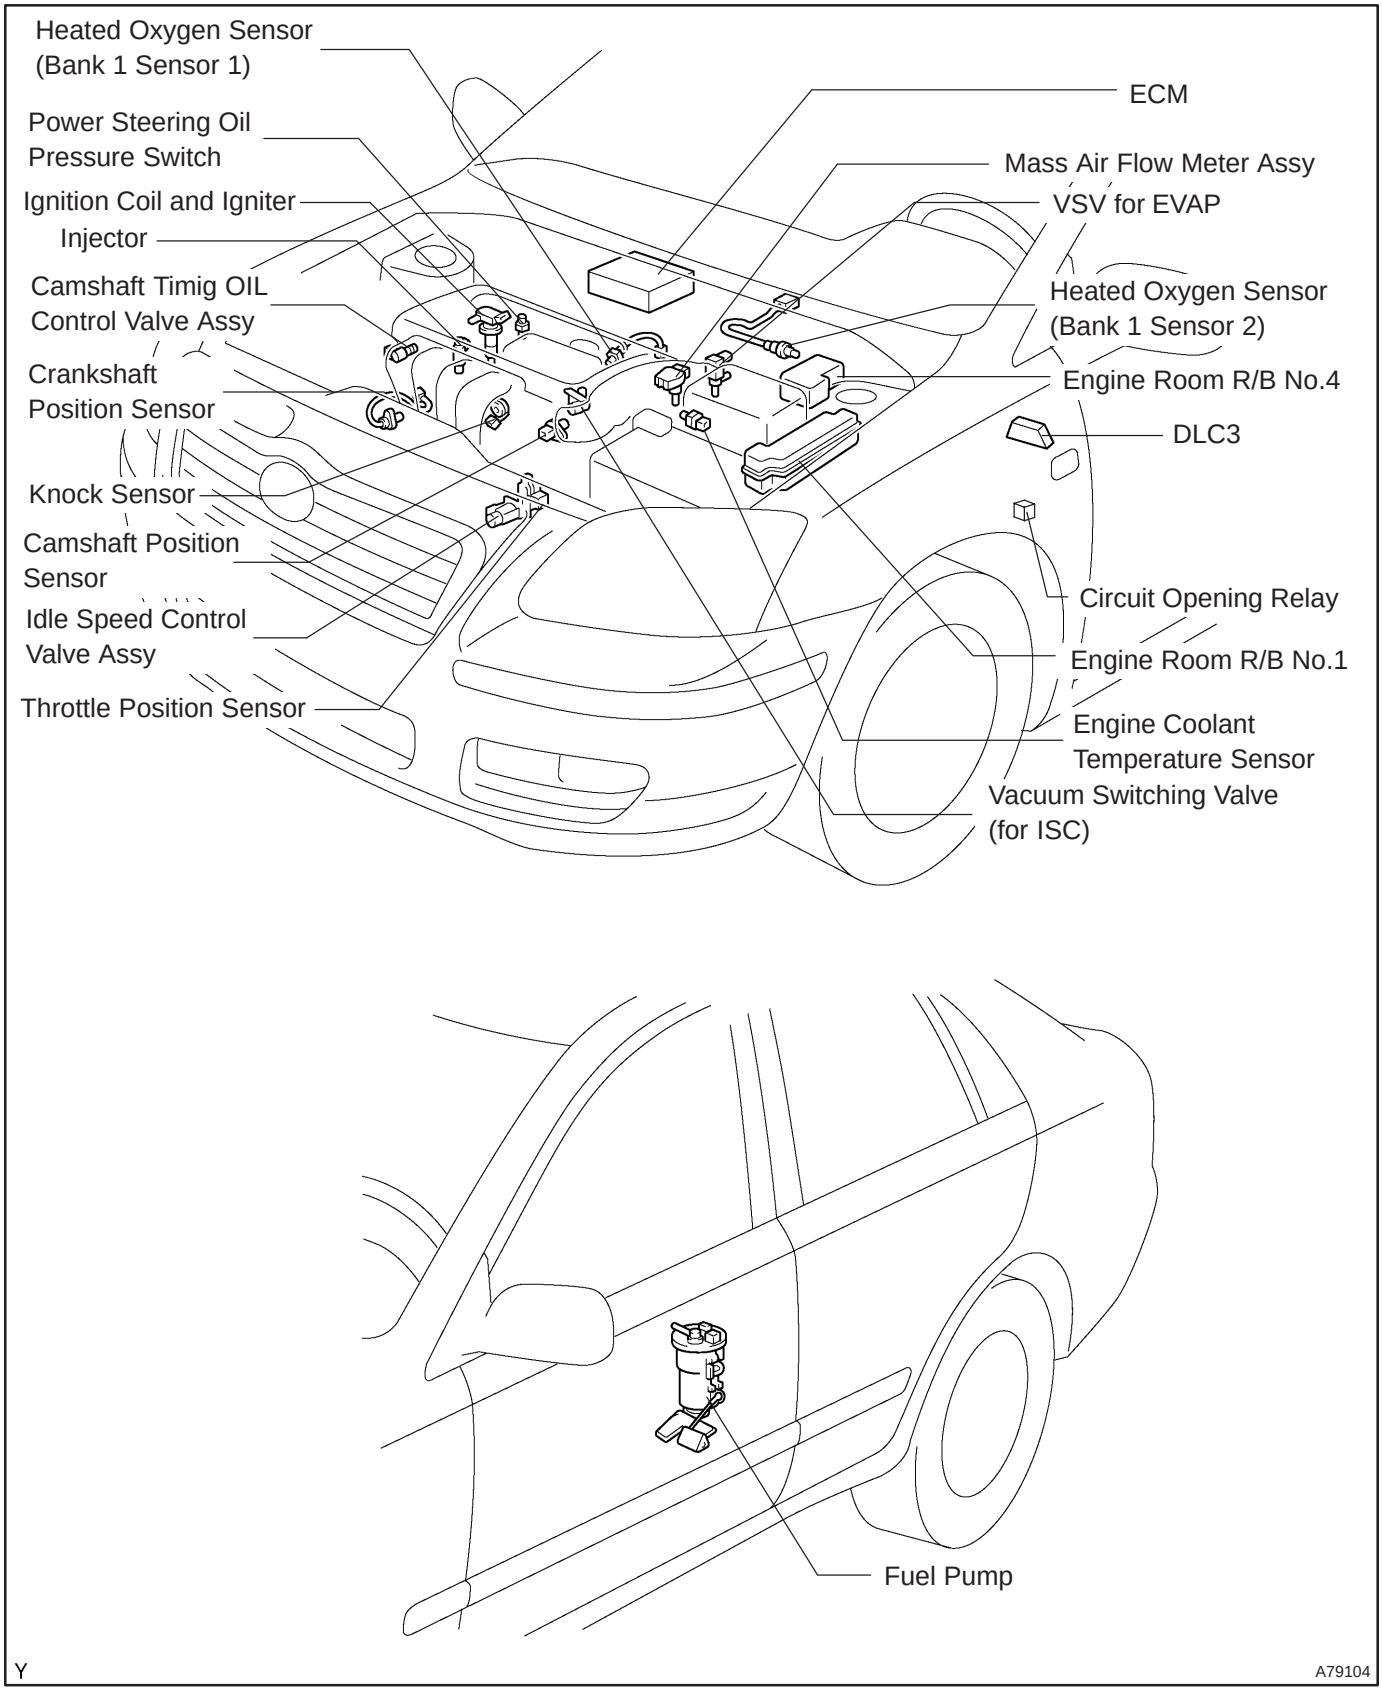
DIAGNOSTIC TROUBLE CODE CHART

HINT:

Parameters listed in the chart may not be exactly the same as your reading due to the type of instrument or other factors.

If a malfunction code is displayed during the DTC check in the check mode, check the circuit for the codes listed in the table below. For details of each code, refer to the ”See page ” under the respective ”DTC No.” in the DTC chart.

DTC No. (See page)	Detection Item	Trouble Area	*1 CHK ENG	Memory
P0100 (05–24)	Mass Air Flow Circuit Malfunction	• Open or short in mass air flow meter circuit • Mass air flow meter • ECM	○	○
P0110 (05–30)	Intake Air Temperature Circuit Malfunction	• Open or short in intake air temp. sensor circuit • Intake air temp. sensor (built into mass air flow meter) • ECM	○	○
P0115 (05–34)	Engine Coolant Temperature Circuit Malfunction	• Open or short in engine coolant temperature sensor circuit • Engine coolant temperature sensor • ECM	○	○
P0116 (05–38)	Engine Coolant Temperature Circuit Range/Performance Problem	• Engine coolant temperature sensor • Thermostat	○	○
P0120 (05–39)	Throttle Pedal Position Sensor/ Switch ”A” Circuit Malfunction	• Open or short in throttle position sensor circuit • Throttle position sensor • ECM	○	○
P0121 (05–44)	Throttle Pedal Position Sensor/ Switch ”A” Circuit Range/Performance Problem	• Throttle position sensor	○	○
P0125 (05–45)	Insufficient Coolant Temp. for Closed Loop Fuel Control	• Open or short in heated oxygen sensor circuit • Heated oxygen sensor • Air induction system • Fuel pressure • Injector • Gas leakage on exhaust system • ECM	○	○
P0130*3 (05–54)	Oxygen Sensor Circuit Malfunction (Bank 1 Sensor 1)	• Open or short in heated oxygen sensor circuit • Heated oxygen sensor • Air induction system • Fuel pressure • Injector	○	○
P0133*3 (05–60)	Oxygen Sensor Circuit Slow Response (Bank 1 Sensor 1)	• Open or short in heated oxygen sensor circuit • Heated oxygen sensor • Air induction system • Fuel pressure • Injector • ECM	○	○
P0135 (05–65)	Oxygen Sensor Heater Circuit Malfunction (Bank 1 Sensor 1)	• Open or short in heater circuit of heated oxygen sensor • Heated oxygen sensor heater • ECM	○	○
P0136 (05–54)	Oxygen Sensor Circuit Malfunction (Bank 1 Sensor 2)	• Open or short in heated oxygen sensor circuit • Heated oxygen sensor	○	○
P0141 (05–65)	Oxygen Sensor Heater Circuit Malfunction (Bank 1 Sensor 2)	• Open or short in heater circuit of heated oxygen sensor • Heated oxygen sensor heater • ECM	○	○



P0171*3 (05–67)	System too Lean (Fuel Trim) (Bank1)	• Air induction system • Injector blockage • PCV hose • Mass air flow meter • Engine coolant temperature sensor • Fuel pressure • Open or short in heated oxygen sensor circuit • Heated oxygen sensor • ECM	○	○
P0172*3 (05–67)	System too Rich (Fuel Trim) (Bank1)	• Injector leak, blockage • Mass air flow meter • Engine coolant temperature sensor • Ignition system • Fuel pressure • Open or short in heated oxygen sensor circuit • Gas leakage in exhaust system • Heated oxygen sensor • ECM	○	○
P0300*3 (05–73)	Random/Multiple Cylinder Misfire Detected	• Open or short in engine wire • Connector connection • Vacuum hose connection • PCV hose • Ignition system • Injector • Fuel pressure • Mass air flow meter • Engine coolant temperature sensor • Compression pressure • Valve clearance • Valve timing • ECM	○	○
P0301*3 (05–73)	Cylinder 1 Misfire Detected			
P0302*3 (05–73)	Cylinder 2 Misfire Detected			
P0303*3 (05–73)	Cylinder 3 Misfire Detected			
P0304*3 (05–73)	Cylinder 4 Misfire Detected			
P0325 (05–81)	Knock Sensor 1 Circuit Malfunction (Bank 1)	• Open or short in knock sensor circuit • Knock sensor (under–torqued or loose) • ECM	○	○
P0335 (05–84)	Crankshaft Position Sensor ”A” Circuit Malfunction	• Open or short in crankshaft position sensor circuit • Crankshaft position sensor • Crank angle sensor plate • ECM	○	○
P0340 (05–88)	Camshaft Position Sensor Circuit Malfunction	• Open or short in camshaft position sensor circuit • Camshaft position sensor • Intake camshaft • Timing chain has jumped a tooth • ECM	○	○
P0420*3 (05–91)	Catalyst System Efficiency Below Threshold (Bank 1)	• Gas leakage in exhaust system • Heated oxygen sensor • Three–way catalytic converter • ECM	○	○
P0443 (05–94)	Evaporative Emission Control System Purge Control Vent Circuit Malfunction	• Open or short in VSV for EVAP circuit • VSV for EVAP • ECM	○	○
P0500 (05–98)	Vehicle Speed Sensor Malfunction	• Open or short in speed sensor circuit • Speed sensor • Combination meter • ECM • Skid control ECU	○	○

P0505*3 (05–100)	Idle Control System Malfunction	• Open or short in ISC valve circuit • ISC valve is stuck or closed • PCV hose • A/C switch circuit • Air induction system • ECM	○	○
P1300 (05–103)	Igniter Circuit Malfunction (No. 1)	• Ignition system • Open or short in IGF or IGT1 circuit from No. 1 ignition coil with igniter to ECM • No. 1 ignition coil with igniter • ECM	○	○
P1305 (05–103)	Igniter Circuit Malfunction (No. 2)	• Ignition system • Open or short in IGF or IGT2 circuit from No. 2 ignition coil with igniter to ECM • No. 2 ignition coil with igniter • ECM	○	○
P1310 (05–103)	Igniter Circuit Malfunction (No. 3)	• Ignition system • Open or short in IGF or IGT3 circuit from No. 3 ignition coil with igniter to ECM • No. 3 ignition coil with igniter • ECM	○	○
P1315 (05–103)	Igniter Circuit Malfunction (No. 4)	• Ignition system • Open or short in IGF or IGT4 circuit from No. 4 ignition coil with igniter to ECM • No. 4 ignition coil with igniter • ECM	○	○
P1335 (05–84)	Crankshaft Position Sensor Circuit Malfunction (During engine running)	• Open or short in crankshaft position sensor circuit • Crankshaft position sensor • Crank angle sensor plate • ECM	—	○
P1346 (05–111)	VVT Sensor/Camshaft Position Sensor Circuit Range/Performance Problem (Bank 1)	• Mechanical system (Timing chain has janped a tooth, chain stretched) • ECM	○	○
P1349 (05–112)	VVT System Malfunction (Bank 1)	• Valve timing • OCV • VVT controller assembly • ECM	○	○
P1520*2 (05–115)	Stop Light Switch Circuit Malfunction	• Open or short in stop light switch signal circuit • Stop light switch • ECM	○	○
P1600 (05–119)	ECM BATT Malfunction	• Open in back up power source circuit • ECM	○	○
P1656 (05–122)	OCV Circuit Malfunction (Bank 1)	• Open or short in OCV circuit • OCV • ECM	○	○

0505L–04

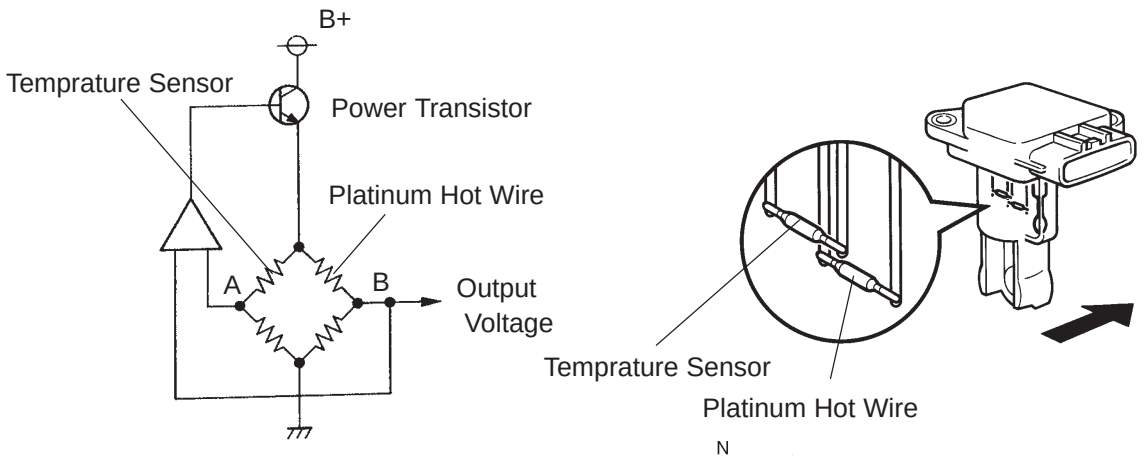
PROBLEM SYMPTOMS TABLE

When the malfunction code is not confirmed in the diagnostic trouble code check and the problem still can not be confirmed in the basic inspection, proceed to this problem symptoms tables and troubleshoot according to the numbered order given below.

Symptom	Suspect Area	See page
Engine does not crank (Does not start)	1. Starter and starter relay 2. Neutral start switch circuit*	19–1 —
No initial combustion (Does not start)	1. ECM power source circuit 2. Ignition coil (w/ Igniter) circuit 3. Fuel pump control circuit 4. Fuel system	05–124 05–103 05–131 11–1
No complete combustion (Does not start)	1. Fuel pump control circuit 2. Ignition coil (w/ Igniter) circuit 3. Fuel system	05–131 05–103 11–1
Engine cranks normally (Difficult to start)	1. Starter signal circuit 2. ISC valve circuit 3. Fuel pump control circuit 4. Ignition coil (w/ Igniter) 5. Spark plug 6. Compression 7. Fuel system	05–135 05–100 05–131 05–103 18–3 14–1 11–1
Cold engine (Difficult to start)	1. Starter signal circuit 2. ISC valve circuit 3. Fuel pump control circuit 4. Fuel system 5. Ignition coil (w/ Igniter) 6. Spark plug	05–135 05–100 05–131 11–1 05–103 18–3
Hot engine (Difficult to start)	1. Starter signal circuit 2. ISC valve circuit 3. Fuel pump control circuit 4. Fuel system 5. Ignition coil (w/ Igniter) 6. Spark plug	05–135 05–100 05–131 11–1 05–103 18–3
Incorrect first idle (Poor idling)	1. ISC valve circuit	05–100
High engine idle speed (Poor idling)	1. ISC valve circuit 2. ECM power source circuit 3. Neutral start switch circuit*	05–100 05–124 —
Low engine idle speed (Poor idling)	1. ISC valve circuit 2. Neutral start switch circuit* 3. Fuel pump control circuit 4. Fuel system	05–100 — 05–131 11–1
Rough idling (Poor idling)	1. ISC valve circuit 2. ECM power source circuit 3. Fuel pump control circuit	05–100 05–124 05–131
Hunting (Poor idling)	1. ISC valve circuit 2. ECM power source circuit 3. Fuel pump control circuit	05–100 05–124 05–131
Hesitation/Poor acceleration (Poor drivability)	1. Fuel system 2. Fuel pump control circuit 3. Ignition coil (w/ Igniter) circuit	11–1 05–131 05–103
Muffler explosion, after fire (Poor drivability)	1. Ignition coil (w/ Igniter) circuit 2. Spark plug 3. Fuel system	05–103 18–3 11–1
Surging (Poor drivability)	1. Fuel pump control circuit 2. Spark plug 3. Fuel system	05–131 18–3 11–1

Engine stall (Soon after starting)	1. Fuel pump control circuit 2. ISC valve circuit	05–131 05–100
Engine stall (After accelerator pedal released)	1. Injector circuit 2. ISC valve circuit 3. ECM	11–8 05–100 05–20
Engine stall (When shifting from N to D)	1. Neutral start switch circuit 2. ISC valve circuit	— 05–100

*: A/T only.



DTC	P0100	MASS AIR FLOW CIRCUIT MALFUNCTION

CIRCUIT DESCRIPTION

The mass air flow meter uses a platinum hot wire. The hot wire air flow meter consists of a platinum hot wire, temprature sensor and a control circuit installed in a plastic housing. The hot wire air flow meter works on the principle that the hot wire and temprature sensor located in the intake air bypass of the housing detect any changes in the intake air temperature.

The hot wire is maintained at the set temperature by controlling the current flow through the hot wire. This current flow is then measured as the output voltage of the mass air flow meter.

The circuit is constructed so that the platinum hot wire and temprature sensor provide a bridge circuit, with the power transistor controlled so that the potential of A and B remains equal to maintain the set temperature.

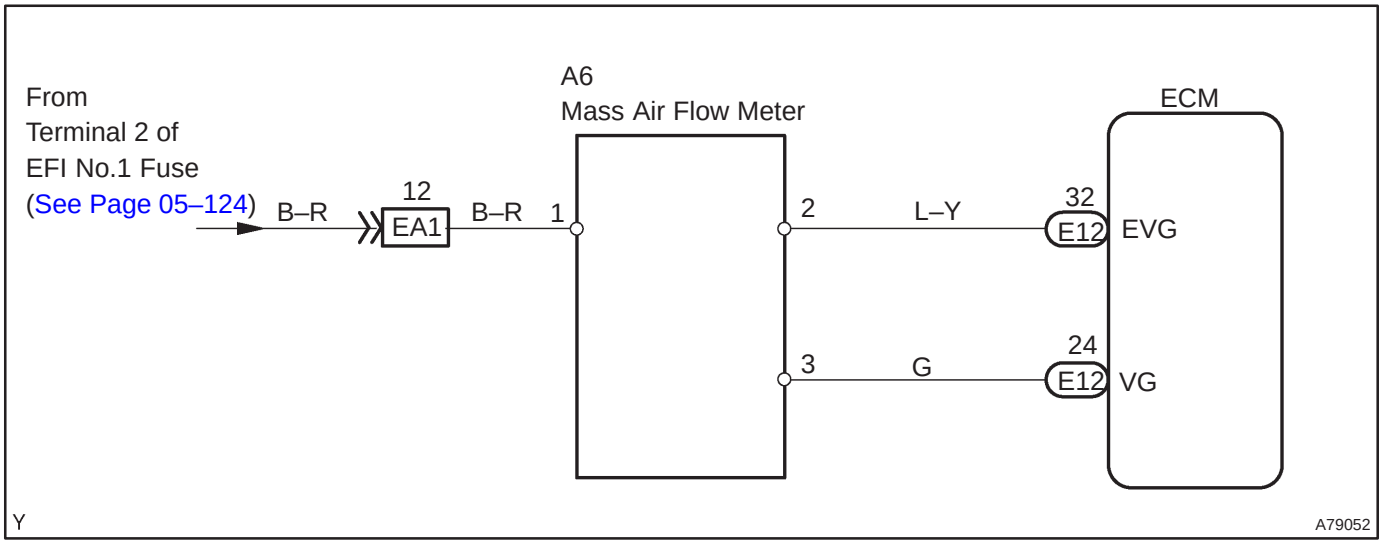
A75348



DTC No	DTC Detecting Condition	Trouble Area
P0100	Open or short in mass air flow meter circuit with engine speed less than 4,000 rpm for more than 3 sec.	• Open or short in mass air flow meter circuit • Mass air flow meter • ECM

HINT:

After confirming DTC ”P0100”, use the hand–held tester to confirm the air flow ratio in the ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL”.

Air Flow Value (gm/sec)	Malfunction
Approx. 0.0	• Mass air flow meter power source circuit open • VG circuit open or short
271.0 or more	• EVG circuit open

WIRING DIAGRAM

INSPECTION PROCEDURE

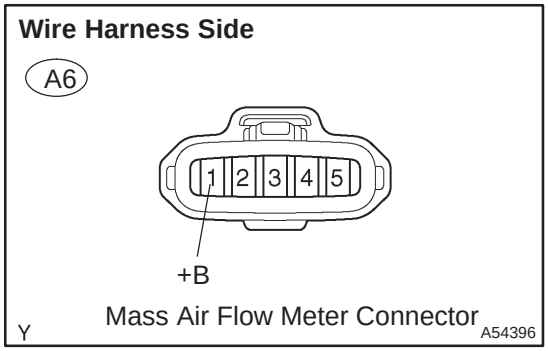
HINT:

Read freeze frame data using the hand – held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

1	READ VALUE OF HAND–HELD TESTER(MASS AIR FLOW RATE)

(a) Connect the hand–held tester to the DLC3.
(b) Start the engine.
(c) Read air flow rate on the hand–held tester.
(d) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / MAF” and read its value displayed on the hand–held tester.

Result:



Air flow rate (gm/sec)	Proceed to
0.0	A
271.0 or more	B
1 less than Mass Air Flow Rate less than 270.0 or more (*1)	C

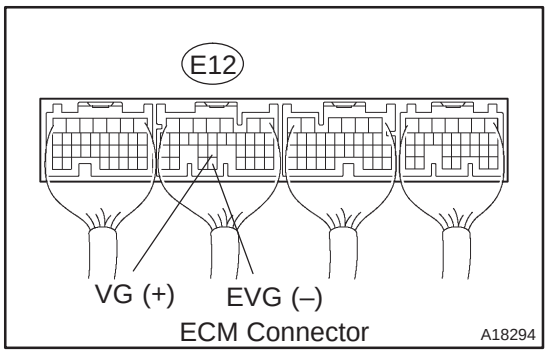
*1: The value must be changed when the throttle valve is opend or closed.

B	**Go to step 6**
C	**CHECK FOR INTERMITTENT PROBLEMS (See Page 05–5)**

A

2 INSPECT MASS AIR FLOW METER(POWER SORUCE VOLTAGE)

(a) Disconnect the mass air flow meter connector.
(b) Turn the ignition switch ON.
(c) Measure the voltage between the terminal of the wire harness side connector and the body ground.



Standard:

Symbols (Terminal No.)	Specified condition
+B (A6–1) – Body ground	9 to 14 V

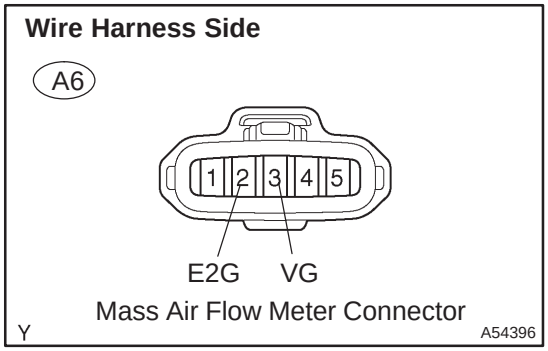
NG → **Go to step 5**

OK

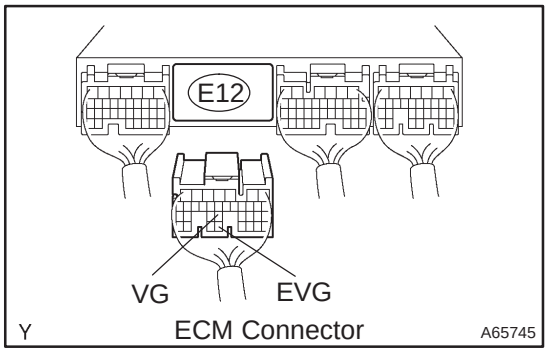
3 INSPECT ECM

(a) Turn the ignition switch ON.
(b) Measure the voltage between the terminals of the E12 ECM connector.

HINT:
The shift position should be P or N and the A/C switch should be turned OFF.



Standard:



Symbols (Terminal No.)	Condition	Specified condition
VG (E12–24) – EVG (E12–32)	Engine is idling	0.5 to 3.0 V

OK → **CHECK AND REPLACE ECM (See page 01–32)**

NG

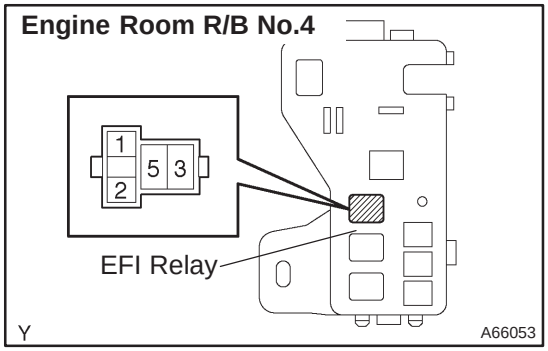
4 CHECK HARNESS AND CONNECTOR(ECM – MASS AIR FLOW METER)

(a) Disconnect the mass air flow meter connector.
(b) Disconnect the E12 ECM connector.
(c) Check for continuity between the wire harness side connectors.

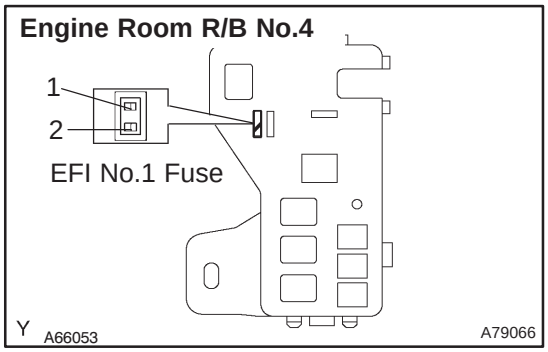
Standard (Check for open):

Symbols (Terminal No.)	Specified condition
VG (A6–3) – VG (E12–24)	Continuity
E2G (A6–2) – EVG (E12–32)	

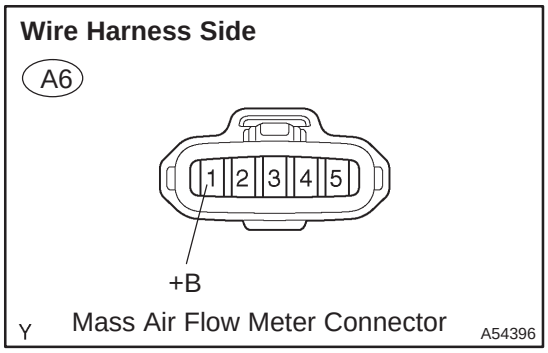
Standard (Check for short):



Symbols (Terminal No.)	Specified condition
VG (A6–3) or VG (E12–24) – Body ground	No continuity



NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**



OK

REPLACE MASS AIR FLOW METER

5 CHECK HARNESS AND CONNECTOR(EFI RELAY – MASS AIR FLOW METER)

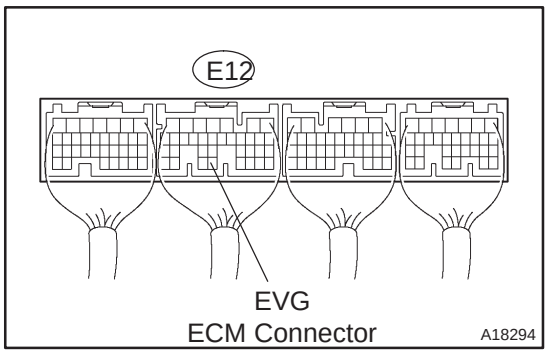
(a) Remove the EFI relay from the engine room R/B No.4.
(b) Remove the EFI No.1 fuse from the engine room R/B No.4.
(c) Disconnect the mass air flow meter connector.
(d) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
EFI relay (3) – EFI No.1 fuse (1)	Continuity
EFI No.1 fuse (2) – +B (A6–1)	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
EFI relay (3) or EFI No.1 fuse (1) – Body ground	No continuity
EFI No.1 fuse (2) or +B (A6–1) – Body ground	



NOTICE:
Do not insert the tester leads hard in the procedure (c), the holder may be damaged.

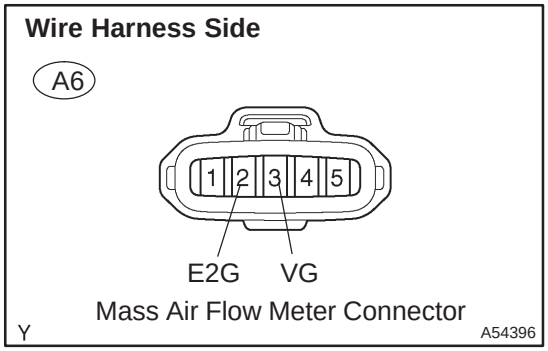
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

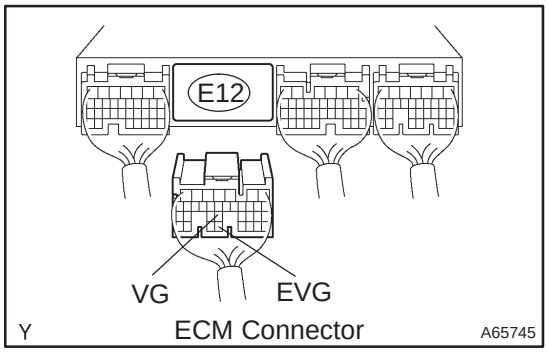
CHECK ECM POWER SOURCE CIRCUIT (See page 05–124)

6 INSPECT ECM

(a) Check for continuity between the terminal of the E12 ECM connector and the body ground.



Standard:



Symbols (Terminal No.)	Specified condition
EVG (E12–32) – Body ground	Continuity

NG → **CHECK AND REPLACE ECM (See page 01–32)**

OK

7 CHECK HARNESS AND CONNECTOR(ECM – MASS AIR FLOW METER)

(a) Disconnect the mass air flow meter connector.
(b) Disconnect the E12 ECM connector.
(c) Check for continuity between the wire harness side connectors.

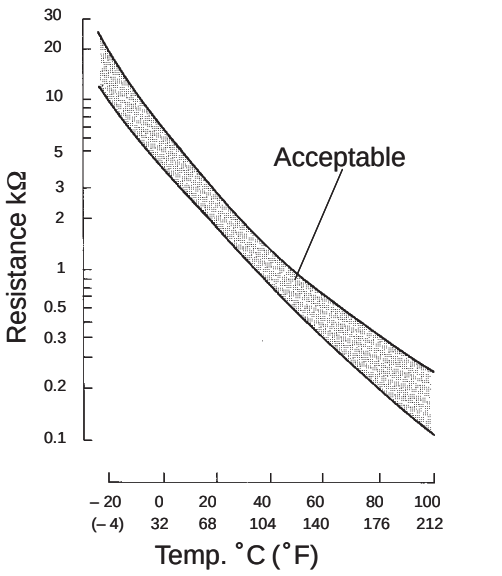
Standard (Check for open):

Symbols (Terminal No.)	Specified condition
VG (A6–3) – VG (E12–24)	Continuity
E2G (A6–2) – EVG (E12–32)	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
VG (A6–3) or VG (E12–24) – Body ground	No continuity

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**



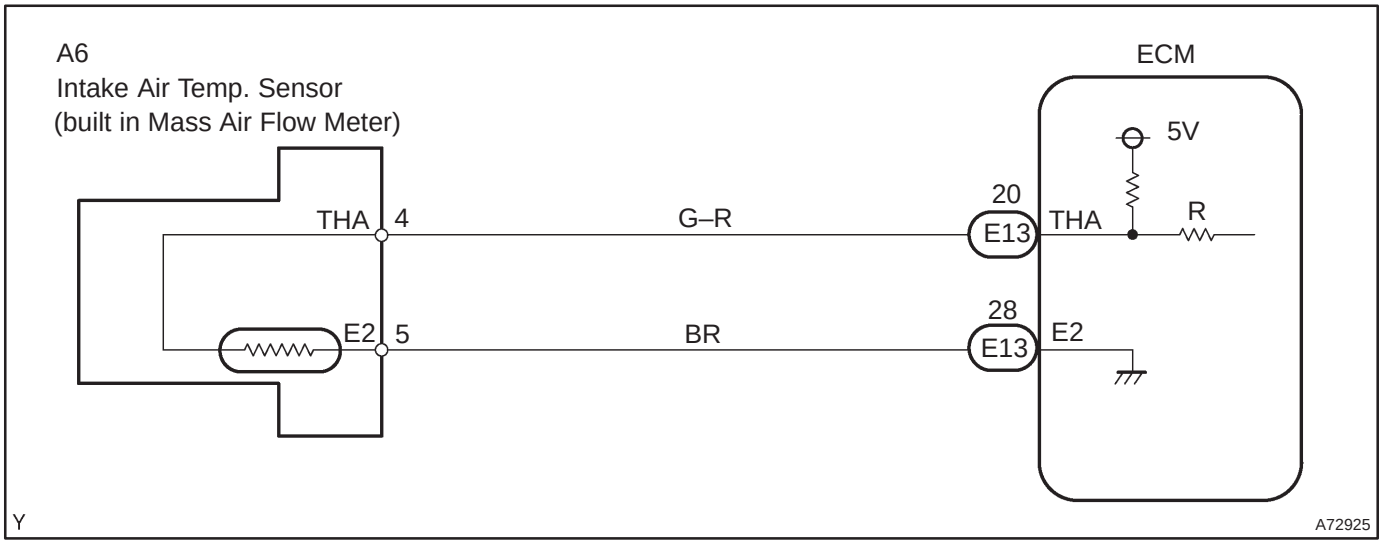
OK

CHECK AND REPLACE ECM (See page 01–32)

DTC P0110 INTAKE AIR TEMPERATURE CIRCUIT

CIRCUIT DESCRIPTION

(fig. 1)



The intake air temperature sensor is built into the mass air flow meter and senses the intake air temperature.
A thermistor built in the sensor changes the resistance value according to the intake air temperature.
The lower the intake air temperature, the greater the thermistor resistance value, and the higher the intake air temperature, the lower the thermistor resistance value (See fig. 1).
The intake air temperature sensor is connected to the ECM (See below). The 5 V power source voltage in the ECM is applied to the intake air temperature sensor from the terminal THA via resistor R.
That is, the resistor R and the intake air temperature sensor are connected in series. When the resistance value of the intake air temperature sensor changes in accordance with changes in the intake air temperature, the potential at terminal THA also changes. Based on this signal, the ECM increases the fuel injection volume to improve driveability during cold engine operation.

DTC No.	DTC Detecting Condition	Trouble Area
P0110	Open or short in intake air temp. sensor circuit	• Open or short in intake air temp. sensor circuit • Intake air temp. sensor (built into mass air flow meter) • ECM

If the ECM detects the DTC ”P0110”, it enters the fail–safe mode in which the intake air temperature is assumed to be 20 °C (68 °F).
HINT:
After confirming DTC ”P0110”, use the hand–held tester to confirm the intake air temperature from the ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL”.

Temperature Displayed	Malfunction
–40 °C (–40 °F)	Open circuit
140 °C (284 °F) or more	Short circuit

WIRING DIAGRAM

INSPECTION PROCEDURE

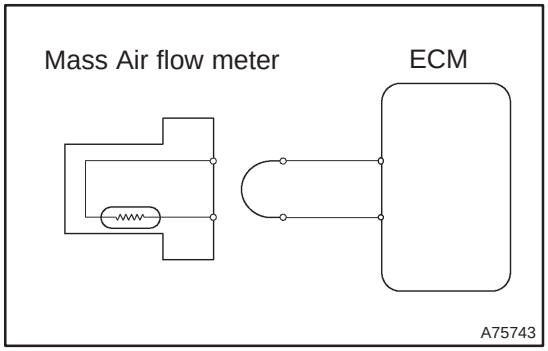
HINT:

- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.
- If different DTCs that are related to a different system are output simultaneously while terminal E2 is used as a ground terminal, terminal E2 may be open.

1	READ VALUE OF HAND–HELD TESTER(INTAKE AIR TEMPERATURE)

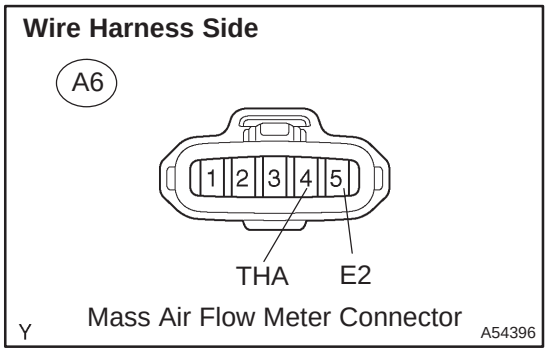
(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / INTAKE AIR” and read its value displayed on the hand–held tester.
Temperature: The same as actual intake air temperature
Result:

Temperature Displayed	Proceed to
–40 °C (–40 °F)	A
140 °C (284 °F) or more	B
OK (Same as present temperature)	C



HINT:

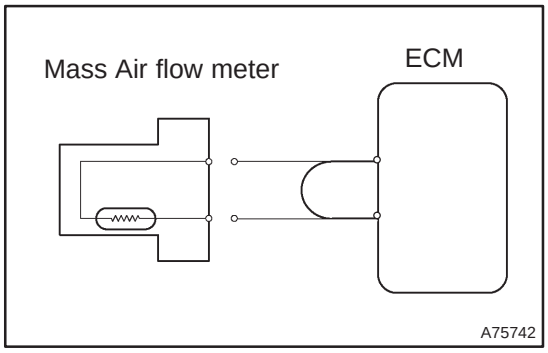
- If there is an open circuit, the hand–held tester indicates –40˚C (–40˚F).
- If there is a short circuit, the hand–held tester indicates 140˚C (284˚F) or more.



B	**Go to step 4**
C	**CHECK FOR INTERMITTENT PROBLEMS (See Page 05–5)**

A

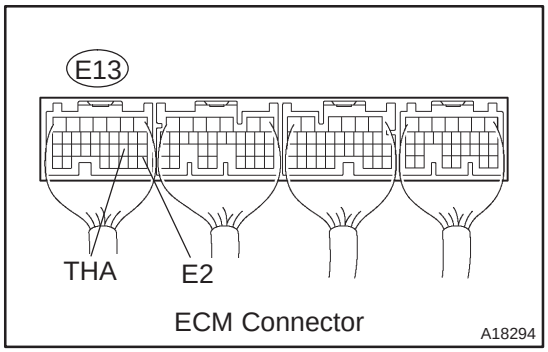
2 READ VALUE OF HAND–HELD TESTER(CHECK FOR OPEN IN HARNESS)



(a) Disconnect the mass air flow meter connector.
(b) Connect terminals THA and E2 of the mass air flow meter connector.
(c) Turn the ignition switch ON.
(d) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / INTAKE AIR” and read its value displayed on the hand–held tester.
Temperature value: 140°C (284°F) or more

OK → **REPLACE MASS AIR FLOW METER**

NG

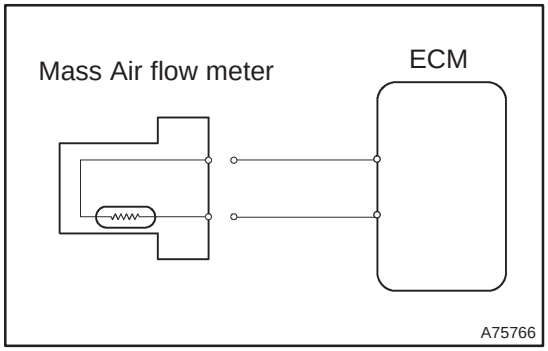


3 READ VALUE OF HAND–HELD TESTER(CHECK FOR OPEN IN ECM)

(a) Disconnect the mass air flow meter connector.
(b) Connect terminals THA and E2 of the E13 ECM connector.

HINT:
Before checking, do a visual and contact pressure check for the ECM connector.

(c) Turn the ignition switch ON.
(d) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / INTAKE AIR” and read its value displayed on the hand–held tester.
Temperature value: 140°C (284°F) or more

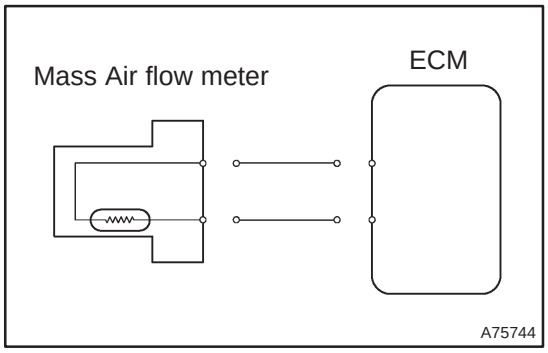


NG → **CHECK AND REPLACE ECM** (See page 01–32)

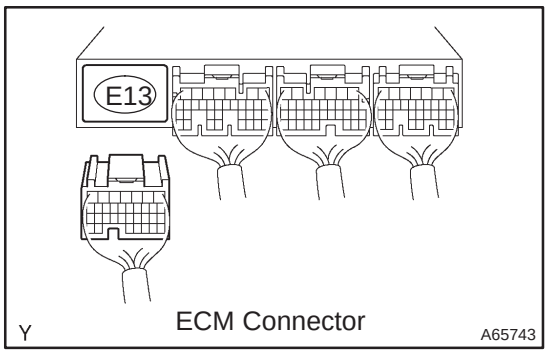
OK

REPAIR OR REPLACE HARNESS OR CONNECTOR

4 READ VALUE OF HAND–HELD TESTER(CHECK FOR SHORT IN HARNESS)



(a) Disconnect the mass air flow meter connector.
(b) Turn the ignition switch ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / INTAKE AIR” and read its value displayed on the hand–held tester.
Temperature: –40°C (–40°F)



OK → **REPLACE MASS AIR FLOW METER**

NG

5 READ VALUE OF HAND–HELD TESTER(CHECK FOR SHORT IN ECM)

(a) Disconnect the E13 ECM connector.
(b) Turn the ignition switch ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / INTAKE AIR” and read its value displayed on the hand–held tester.
Temperature value: –40°C (–40°F)

OK → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

NG

CHECK AND REPLACE ECM (See page 01–32)

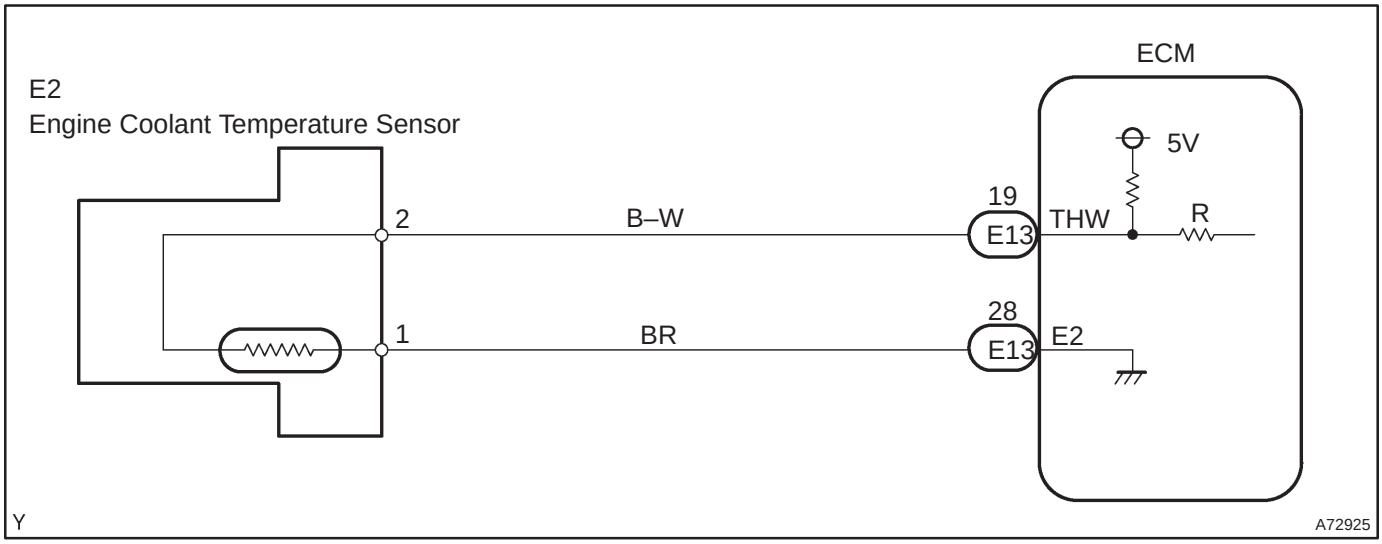
DTC P0115 ENGINE COOLANT TEMPERATURE CIRCUIT

CIRCUIT DESCRIPTION

A thermistor is built into the engine coolant temperature sensor and changes the resistance value according to the engine coolant temperature.

The structure of the sensor and connection to the ECM is the same as the ones of the intake air temperature sensor.

DTC No.	DTC Detecting Condition	Trouble Area
P0115	Open or short in water temp. sensor circuit	• Open or short in Engine coolant temperature sensor circuit • Engine coolant temperature sensor • ECM



If the ECM detects the DTC ”P0115”, it enters the fail–safe mode in which the engine coolant temperature is assumed to be 80 °C (176 °F).

HINT:

After confirming DTC P0115, use the hand–held tester to confirm the engine coolant temperature in ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL”.

Temperature Displayed	Malfunction
–40 °C (–40 °F)	Open circuit
140 °C (284 °F) or more	Short circuit

WIRING DIAGRAM

INSPECTION PROCEDURE

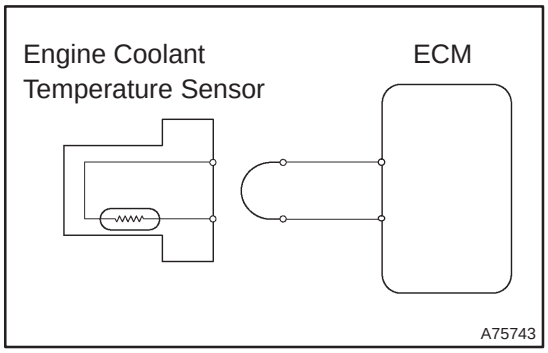
HINT:

- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.
- If different DTCs that are related to a different system are output simultaneously while terminal E2 is used as a ground terminal, terminal E2 may be open.

1 READ VALUE OF HAND–HELD TESTER(WATER TEMPERATURE)

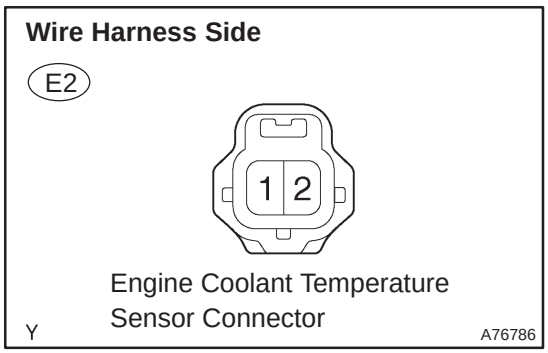
(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COOLANT TEMP” and read its value displayed on the hand–held tester.
Temperature: Same as actual engine coolant temperature
Result:

Temperature Displayed	Proceed to
–40 °C (–40 °F)	A
140 °C (284 °F) or more	B
OK (Same as present temperature)	C



HINT:
- If there is an open circuit, the hand–held tester indicates –40˚C (–40˚F).
- If there is a short circuit, the hand–held tester indicates 140˚C (284˚F) or more.

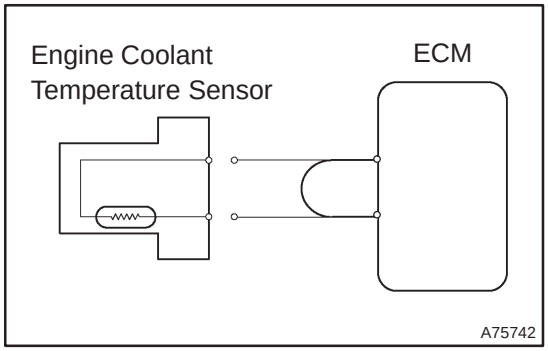
B → **Go to step 4**



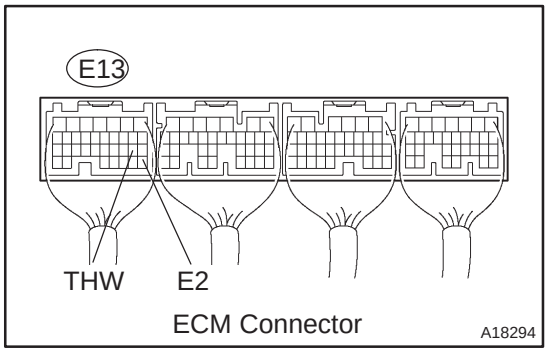
C → **CHECK FOR INTERMITTENT PROBLEMS (See Page 05–5)**

A

2 READ VALUE OF HAND–HELD TESTER(CHECK FOR OPEN IN HARNESS)



(a) Disconnect the engine coolant temperature sensor connector.
(b) Connect terminals 1 and 2 of the engine coolant temperature sensor connector.
(c) Turn the ignition switch ON.
(d) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COOLANT TEMP” and read its value displayed on the hand–held tester.
Temperature: 140 °C (284 °F) or more



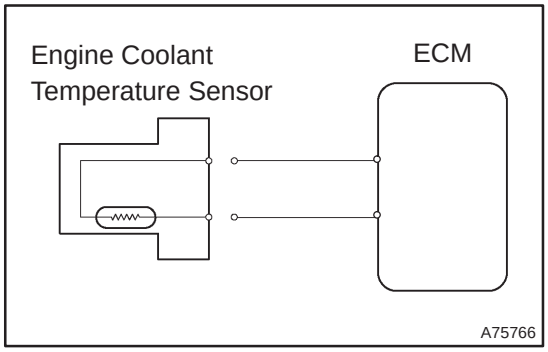
OK → **CONFIRM GOOD CONNECTION AT SENSOR. IF OK, REPLACE ENGINE COOLANT TEMP. SENSOR**

NG

3 READ VALUE OF HAND–HELD TESTER(CHECK FOR OPEN IN ECM)

(a) Disconnect the engine coolant temperature sensor connector.
(b) Connect terminals THW and E2 of the E13 ECM connector.

HINT:
Before checking, do a visual and contact pressure check for the ECM connector.



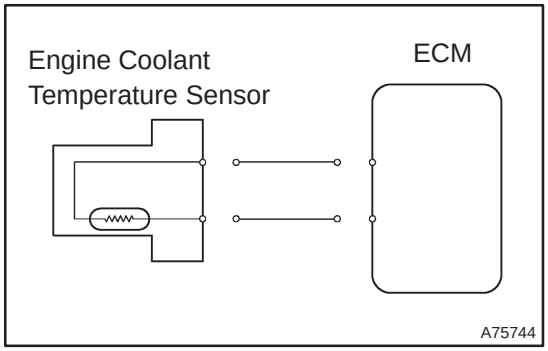
(c) Turn the ignition switch ON.
(d) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COOLANT TEMP” and read its value displayed on the hand–held tester.
Temperature: 140 °C (284 °F) or more

OK → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

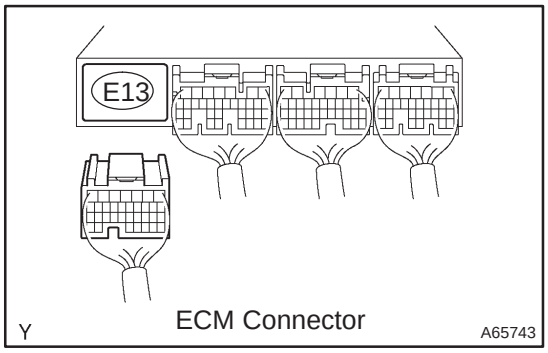
NG

CONFIRM GOOD CONNECTION AT ECM. IF OK, CHECK AND REPLACE ECM (See page 01–32)

4 READ VALUE OF HAND–HELD TESTER(CHECK FOR SHORT IN HARNESS)



(a) Disconnect the engine coolant temperature sensor connector.
(b) Turn the ignition switch ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COOLANT TEMP” and read its value displayed on the hand–held tester.
Temperature: –40°C (–40°F)



OK → **REPLACE ENGINE COOLANT TEMPERATURE SENSOR**

NG

5	READ VALUE OF HAND–HELD TESTER(CHECK FOR SHORT IN ECM)

(a) Disconnect the E13 ECM connector.
(b) Disconnect the engine coolant temperature sensor connector.
(c) Turn the ignition switch ON.
(d) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COOLANT TEMP” and read its value displayed on the hand–held tester.
Temperature: –40 °C (–40 °F)

OK → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

NG

CHECK AND REPLACE ECM (See page 01–32)

DTC	P0116	ENGINE COOLANT TEMPERATURE CIRCUIT RANGE/PERFORMANCE PROBLEM

CIRCUIT DESCRIPTION

Rfer to DTC P0115 on page 05–34

DTC No.	DTC Detecting Condition	Trouble Area
P0116	When the temperature of engine coolant is –7 °C (20 °F) with a cold engine, and if the engine coolant temperature sensor value is 20 °C (68 °F) or less even if it has been 20 min or more since the engine was warmed up. (2 trip detection logic)	• Engine coolant temperature sensor • Thermostat

INSPECTION PROCEDURE

HINT:

- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.
- If different DTCs that are related to a different systems are output simultaneously while terminal E2 is used as a ground terminal, terminal E2 may be open.

1	READ OUTPUT DTC(BESIDES P0116)

(a) Read the DTC using the hand–held tester.
Result:

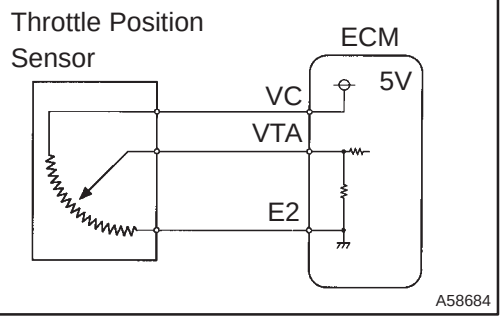
Display (DTC output)	Proceed to
Only ”P0116” is output	A
”P0116” and other DTCs are output	B

HINT:
If any other codes besides ”P0116” are output, perform the troubleshooting for those DTCs first.

B → GO TO RELEVANT DTC CHART

A

2	INSPECT THERMOSTAT (See Page 16–3)



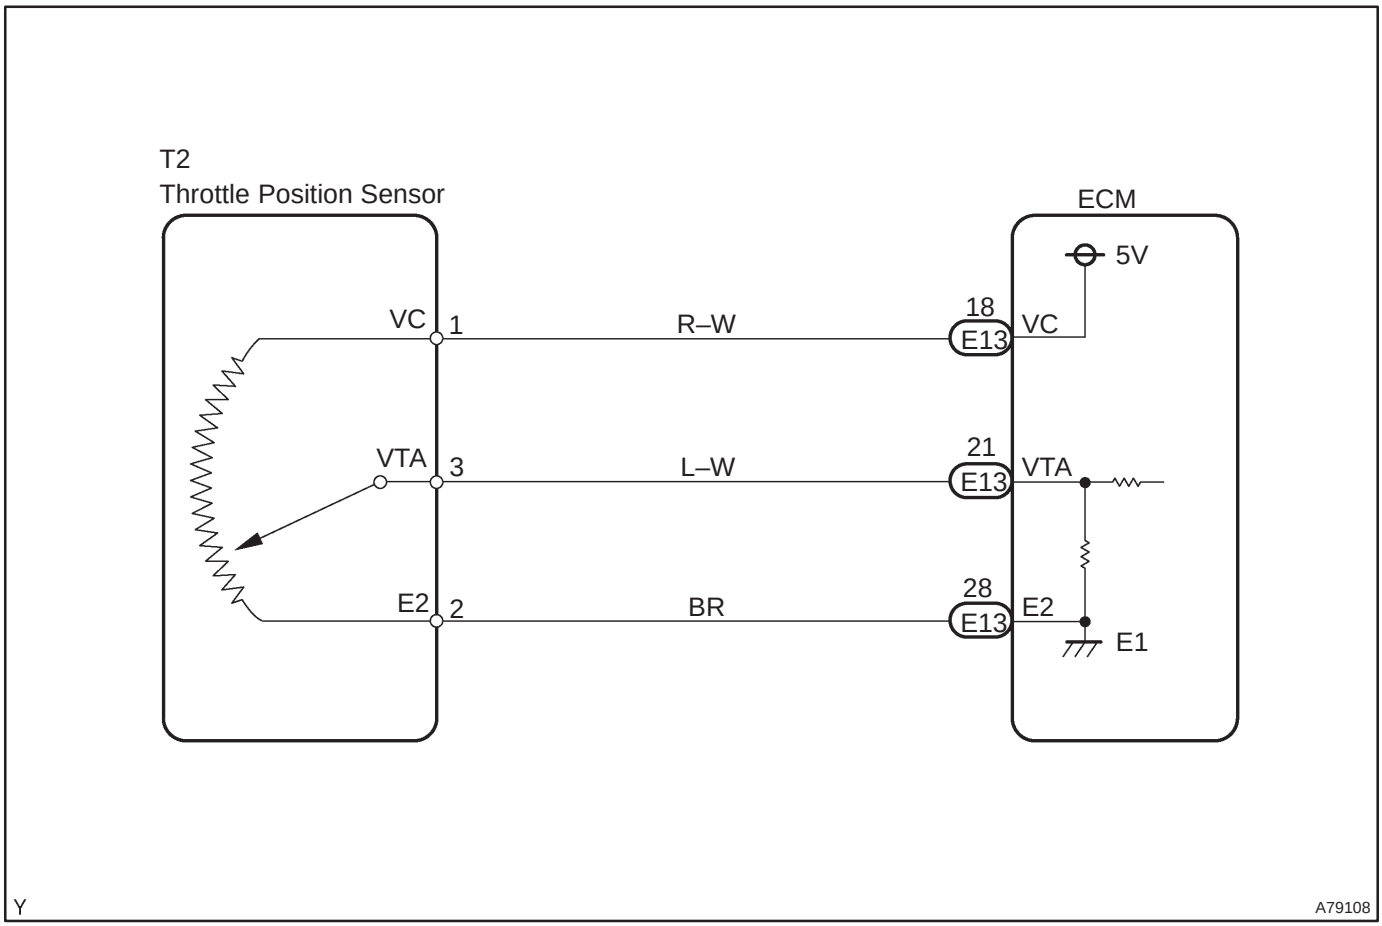
NG → REPLACE THERMOSTAT

OK

REPLACE ENGINE COOLANT TEMPERATURE SENSOR

DTC	P0120	THROTTLE PEDAL POSITION SENSOR/SWITCH ”A” CIRCUIT MALFUNCTION

CIRCUIT DESCRIPTION



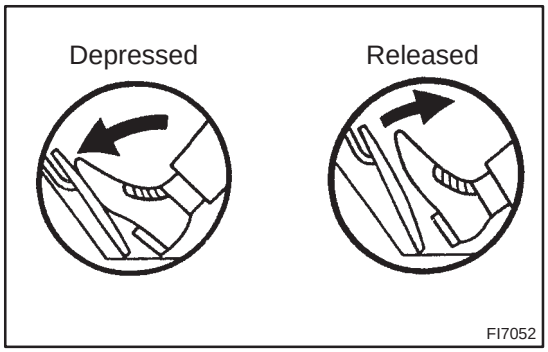
The throttle position sensor is mounted in the throttle body and detects the throttle valve opening angle.
When the throttle valve is fully closed, a voltage of approximately 0.7 V is applied to terminal VTA of the ECM. The voltage applied to terminal VTA of the ECM increases in proportion to the opening angle of the throttle valve and becomes approximately 3.5 to 5.0 V when the throttle valve is fully opened. The ECM judges the vehicle driving conditions from these signals input from terminal VTA, uses them as one of the conditions for deciding the air–fuel ratio correction, power increase correction and fuel–cut control etc.

DTC No.	DTC Detecting Condition	Trouble Area
P0120	Condition (a) or (b) continues for more than 5 sec. (a) VTA is less than 0.1 V (b) VTA is greater than 4.9 V	• Open or short in throttle position sensor circuit • Throttle position sensor • ECM

HINT:
After confirming DTC ”P0120”, use the hand–held tester to confirm the throttle valve opening percentage.

Throttle valve opening position expressed as percentage		Trouble Area
Throttle valve fully closed	Throttle valve fully open	
0 %	0 %	VC circuit open VTA circuit open or short
Approx. 100 %	Approx. 100 %	E2 circuit open

WIRING DIAGRAM



INSPECTION PROCEDURE

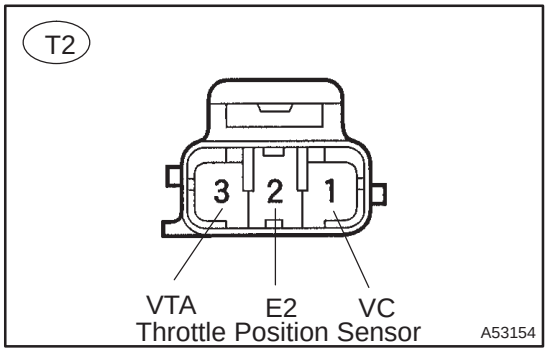
HINT:

- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.
- If different DTCs that are related to a different system are output simultaneously while terminal E2 is used as a ground terminal, terminal E2 may be open.

1	READ VALUE OF HAND–HELD TESTER(THROTTLE VALVE OPENING PERCENTAGE)

(a) Turn the ignition switch ON.
(b) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / THROTTLE POS” and read its value displayed on the hand–held tester.

Result:



Accelerator pedal operatuin	Throttle valve opening position expressed as percentage	Proceed to
Released→Depressed	0 %	A
	Approx. 10 %→ Approx. 75 %	B
	Approx. 100 %	C

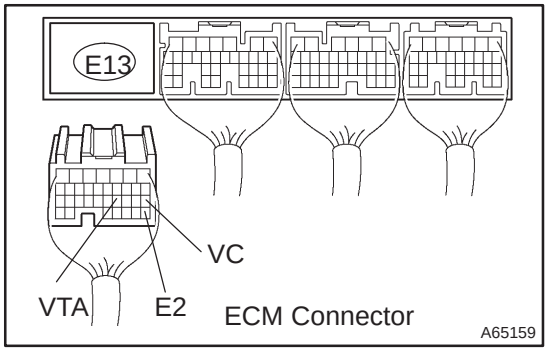
B → **CHECK FOR INTERMITTENT PROBLEMS (See page 05–5)**

C → **Go to step 4**

A

2	INSPECT THROTTLE POSITION SENSOR

(a) Disconnect the throttle position sensor connector.
(b) Measure the resistance between the terminals of the throttle position sensor.



Standard:

Symbols (Terminal No.)	Throttle Valve	Resistance
VC (T2–1) – E2 (T2–2)	—	2.5 to 5.9 kΩ
VTA (T2–3) – E2 (T2–2)	Fully closed	0.2 to 5.7 kΩ
	Fully open	2.0 to 10.2 kΩ

NG → **REPLACE THROTTLE POSITION SENSOR**

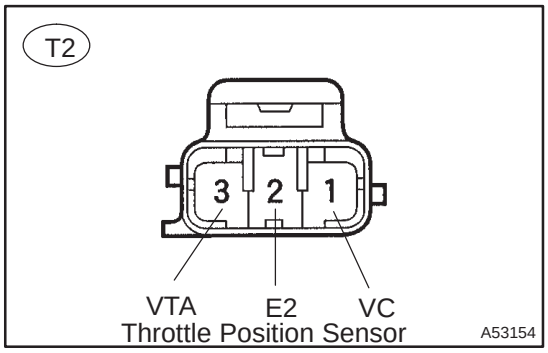
OK

3 CHECK HARNESS AND CONNECTOR(ECM – THROTTLE POSITION SENSOR)

(a) Disconnect the E13 ECM connector.
(b) Measure the resistance between the terminals of the E13 ECM connector.
Standard:

Symbols (Terminal No.)	Throttle valve	Resistance
VC (E13–18) – E2 (E13–28)	—	2.5 to 5.9 kΩ
VTA(E13–21) – E2 (E13–28)	Fully closed	0.2 to 5.7 kΩ
	Fully open	2.0 to 10.2 kΩ

(c) Check for continuity between the terminals of the E13 ECM connector.
Standard (Check for short):



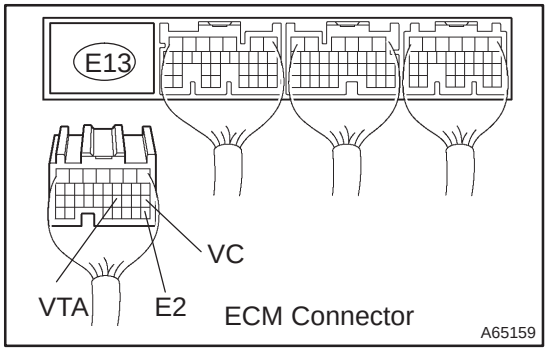
Symbols (Terminal No.)	Specified condition
VC (E13–18) – Body ground	No Continuity
VTA (E13–28) – Body ground	

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK AND REPLACE ECM (See page 01–32)

4 INSPECT THROTTLE POSITION SENSOR



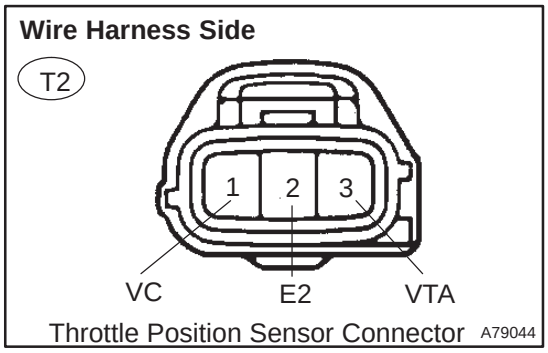
(a) Disconnect the throttle position sensor connector.
(b) Measure the resistance between the terminals of the throttle position sensor.
Standard:

Symbols (Terminal No.)	Throttle Valve	Resistance
VC (T2–1) – E2 (T2–2)	—	2.5 to 5.9 kΩ
VTA (T2–3) – E2 (T2–2)	Fully closed	0.2 to 5.7 kΩ
	Fully open	2.0 to 10.2 kΩ

NG → **REPLACE THROTTLE POSITION SENSOR**

OK

5 CHECK HARNESS AND CONNECTOR(ECM – THROTTLE POSITION SENSOR)



(a) Disconnect the E13 ECM connector.
(b) Disconnect the throttle position sensor connector.
(c) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
VC (T2–1) – VC (E13–18)	Continuity
VTA (T2–3) – VTA (E13–21)	
E2 (T2–2) – E2 (E13–28)	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
VC (T2–1) or VC (E13–18) – Body ground	No continuity
VTA (T2–3) or VTA (E13–21) – Body ground	

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK →

CHECK AND REPLACE ECM (See page 01–32)

DTC	P0121	THROTTLE/PEDAL POSITION SENSOR/SWITCH ”A” CIRCUIT RANGE/PERFORMANCE PROBLEM

CIRCUIT DESCRIPTION

Refer to DTC P0120 on page 05–39

HINT:

This is the troubleshooting procedure of the throttle position sensor.

DTC No.	DTC Detecting Condition	Trouble Area
P0121	After the vehicle speed has exceeded 30 km/h (19 mph) once, and an output value of the throttle position sensor is out of the applicable range, althought the vehicle speed is more than 0 km/h (0 mph). (2 trip detection logic)	• Throttle position sensor

INSPECTION PROCEDURE

HINT:

- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.
- If different DTCs that are related to a different system are output simultaneously while terminal E2 is used as a ground terminal, terminal E2 may be open.

1	ARE THERE ANY DTC BEING OUTPUT(BESIDES P0121)

(a) Read the DTC using the hand–held tester.

Result:

Display (DTC output)	Proceed to
Only ”P0121” is output	A
”P0121” and other DTCs are output	B

HINT:

If any other codes besides ”P0121” are output, perform the troubleshooting for those DTCs first.

B → GO TO RELEVANT DTC CHART

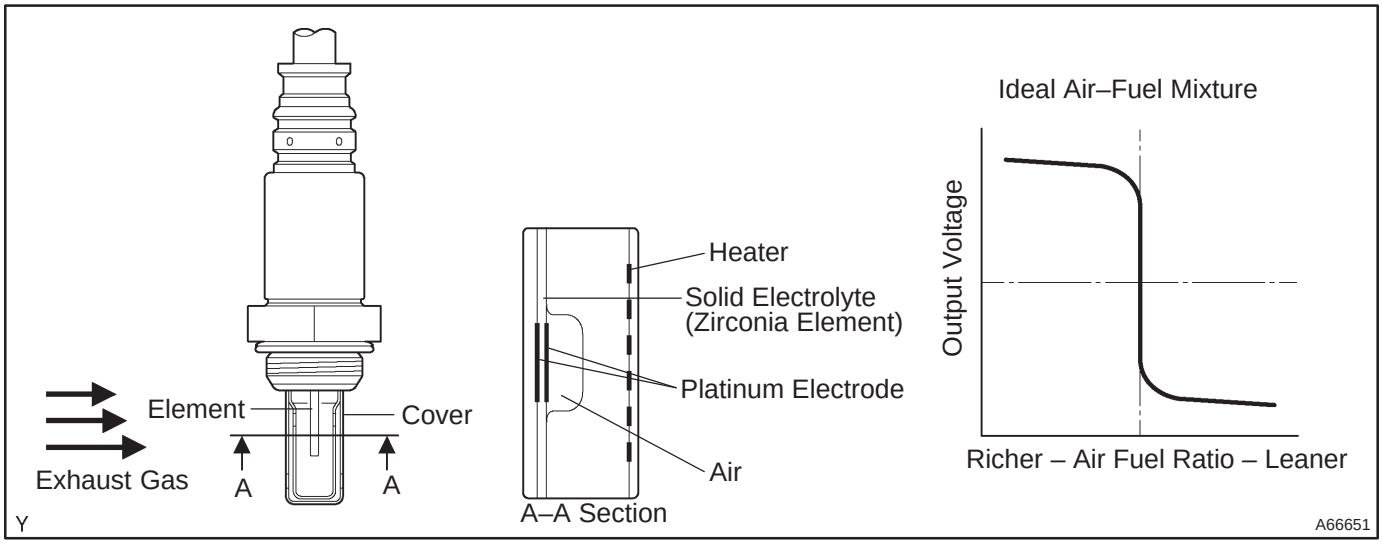
A

REPLACE THROTTLE POSITION SENSOR

DTC	P0125	INSUFFICIENT COOLANT TEMP. FOR CLOSED LOOP FUEL CONTROL

CIRCUIT DESCRIPTION

The heated oxygen sensor is the planar type. Compared to the conventional type, the sensor element and the heater portions have a narrower overall. The heater can directly conduct its heat to the zirconia element via the alumina, it helps to accerate the sensor activation.



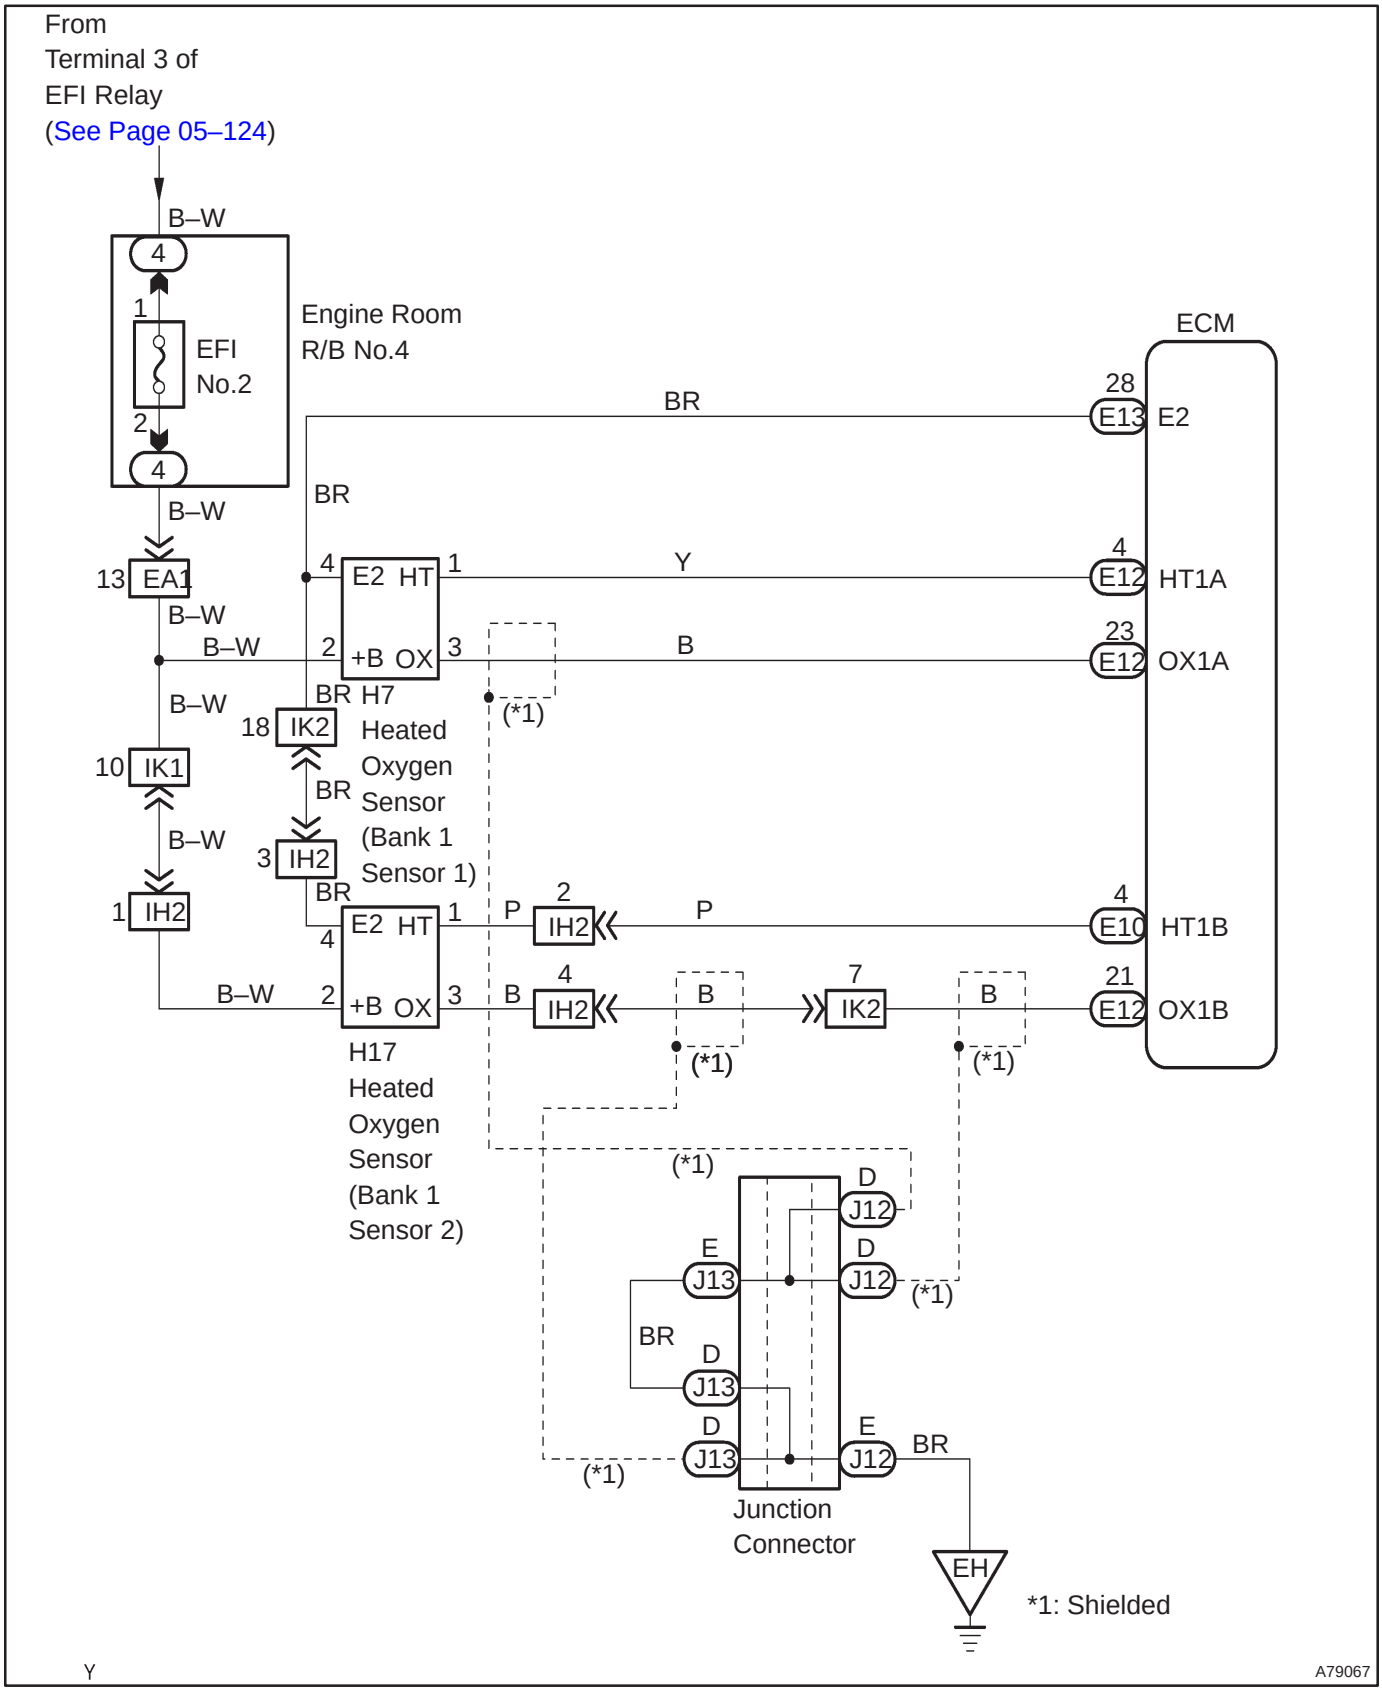
To obtain a high purification rate for the CO, HC and NOx components of the exhaust gas, a three – way catalytic converter is used. For the most efficient use of the three – way catalytic converter, the air – fuel ratio must be precisely controlled so that it is always close to the stoichiometric air – fuel ratio.

The heated oxygen sensor has the characteristic whereby its output voltage changes suddenly in the vicinity of the stoichiometric air–fuel ratio. This is used to detect the oxygen concentration in the exhaust gas and provide the ECM with feedback control the air–fuel ratio.

When the air–fuel ratio becomes LEAN, the oxygen concentration in the exhaust gas increases. And the heated oxygen sensor informs the ECM of the LEAN condition (low voltage, i. e. less than 0.45 V).

When the air–fuel ratio is RICHER than the stoichiometric air–fuel ratio, the oxygen concentration in the exhaust gas is reduced. And the heated oxygen sensor informs the ECM of the RICH condition (high voltage, i. e. more than 0.45V). The ECM judges by the voltage output from the heated oxygen sensor whether the air–fuel ratio is RICH or LEAN and controls the injection time accordingly. If the malfunction of the heated oxygen sensor causes an output of abnomal voltage, the ECM becomes unable to perform accurate air–fuel ratio control.

The heated oxygen sensors include a heater which heats the zirconia element. The heater is controlled by the ECM. When the intake air volume is low (the temperature of the exhaust gas is low), current flows to the heater in order to heat the sensor for the accurate oxygen concentration detection.



DTC No	DTC Detecting Condition	Trouble Area
P0125	After engine is warmed up, heated oxygen sensor output* does not change when conditions (a), (b), (c) and (d) continue for at least 1.5 min: *: Output value changes at inside of the ECM only (a) Engine speed: 1,400 rpm or more (b) Vehicle speed: 40 to 100 km/h (25 to 62 mph) (c) Throttle valve is not fully closed (d) 180 sec. or more after starting engine	• Open or short in heated oxygen sensor circuit • Heated oxygen sensor • Air induction system • Fuel pressure • Injector • Gas leakage in exhaust system • ECM

HINT:

- After confirming DTC ”P0125”, use the hand–held tester to confirm output voltage of the heated oxygen sensor the ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL”.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Hand–held tester only:

Narrowing down the trouble area is possible by performing ACTIVE TEST of the following ”A/F CONTROL” (heated oxygen sensor or other trouble areas can be distinguished).

(a) Perform ACTIVE TEST by the hand–held tester (A/F CONTROL).

HINT:

”A/F CONTROL” is an ACTIVE TEST which changes the injection volume –12.5 % or +25 %.

(1) Connect the hand–held tester to the DLC3 on the vehicle.
(2) Turn the ignition switch ON.
(3) Warm up the engine with the engine speed at 2,500 rpm for approximately 90 sec.
(4) Select the item ”DIAGNOSIS / OBD/MOBD / ACTIVE TEST / A/F CONTROL”.
(5) Perform ”A/F CONTROL” with the engine in an idle condition (press the right or left button).

Result:

Heated oxygen sensor reacts in accordance with increase and decrease of injection volume:
+25 % → rich output: More than 0.55 V
–12.5 % → lean output: Less than 0.4 V

NOTICE:

There is a few second delay in the sensor 1 (front sensor) output, and there is about 20 seconds delay in the sensor 2 (rear sensor)output.

	Output voltage of heated oxygen sensor (sensor 1: front sensor)	Output voltage of heated oxygen sensor (sensor 2: rear sensor)	Mainly suspect trouble area
Case 1	Injection volume +25 % –12.5 % Output voltage More than 0.55 V Less than 0.4V **OK**	Injection volume +25 % –12.5 % Output voltage More than 0.55 V Less than 0.4V **OK**	—
Case 2	Injection volume +25 % –12.5 % Output voltage No reaction **NG**	Injection volume +25 % –12.5 % Output voltage More than 0.55 V Less than 0.4V **OK**	Sensor 1: front sensor (sensor 1, heater, sensor 1 circuit)
Case 3	Injection volume +25 % –12.5 % Output voltage More than 0.55 V Less than 0.4V **OK**	Injection volume +25 % –12.5 % Output voltage No reaction **NG**	Sensor 2: rear sensor (sensor 2, heater, sensor 2 circuit)
Case 4	Injection volume +25 % –12.5 % Output voltage No reaction **NG**	Injection volume +25 % –12.5 % Output voltage No reaction **NG**	Extremely rich or lean of the actual air–fuel ratio (Injector, fuel pressure, gas leakage in exhaust system, etc.)

The following procedure of A/F CONTROL enable the technician to check and graph voltage output of the heated oxygen sensor.
For displaying the graph indication, enter ”ACTIVE TEST / A/F CONTROL / USER DATA,” then select ”O2S B1S1 and O2S B1S2” by pressing ”YES” button and push ”ENTER” button before pressing ”F4” button.
HINT:

- If different DTCs that are related to a different system are output simultaneously while terminal E2 is used as a ground terminal, terminal E2 may be open.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.
- A high heated oxygen sensor (sensor 1) voltage (0.55 V or more) could be caused by a rich air fuel mixture. Check for conditions that would cause the engine to run rich.
- A low heated oxygen sensor (sensor 1) voltage (0.4 V or less) could be caused by a lean air fuel mixture. Check for conditions that would cause the engine to run lean.

1	CHECK OTHER DTC OUTPUT(BESIDES DTC P0125)

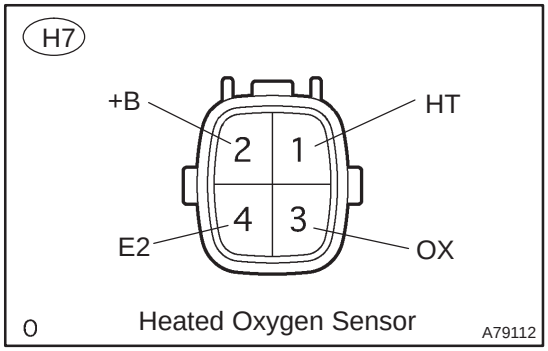
(a) Read the DTC using the hand–held tester.
Result:

Display (DTC output)	Proceed to
Only ”P0125” is output	A
”P0125” and other DTCs are output	B

HINT:
If any other codes besides ”P0125” are output, perform the troubleshoot on that DTC before.

B → **GO TO RELEVANT DTC CHART (See page 05–16)**

A



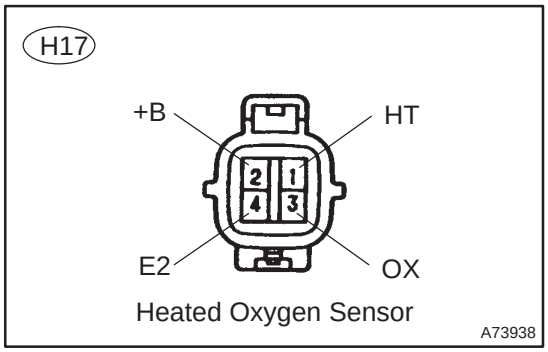
2	READ VALUE OF HAND–HELD TESTER(OUTPUT VOLTAGE OF HEATED OXYGEN SENSOR)

(a) Warm up the engine to the normal operating temperature above 75°C (169°F).
(b) Read the output voltage of the heated oxygen sensor when the engine rpm is suddenly increased.
HINT:
Quickly accelerate the engine to 4,000 rpm 3 times using the accelerator pedal.
Standard:
Heated oxygen sensor outputs a RICH signal (0.45 V or more) at least once.

OK → **Go to step 13**

NG

3 INSPECT HEATED OXYGEN SENSOR(HEATER RESISTANCE)



(a) Disconnect the heated oxygen sensor connector.
(b) Inspect the heated oxygen sensor.

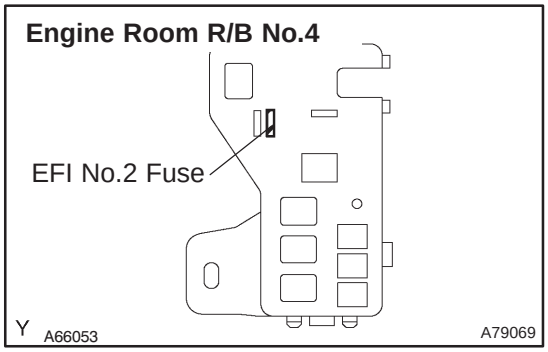
Standard: (Bank1 Sensor1)

Symbols (Terminal No.)	Condition	Specified condition
HT (H7–1) – +B (H7–2)	20°C (68°F)	6 to 9 Ω
HT (H7–1) – E2 (H7–4)	—	No Continuity

Standard: (Bank1 Sensor2)

Symbols (Terminal No.)	Condition	Specified condition
HT (H17–1) – +B (H17–2)	20°C (68°F)	11 to 16 Ω
HT (H17–1) – E2 (H17–4)	—	No Continuity

NG → **REPLACE HEATED OXYGEN SENSOR**



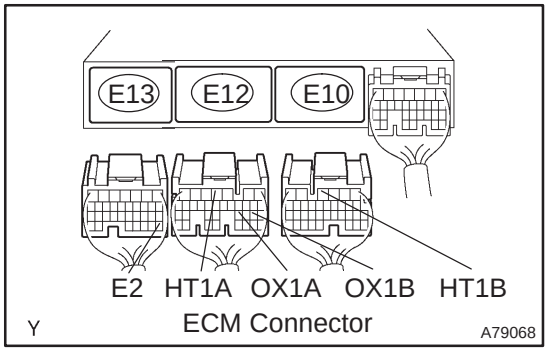
OK

4 INSPECT EFI RELAY (See page 10–3)

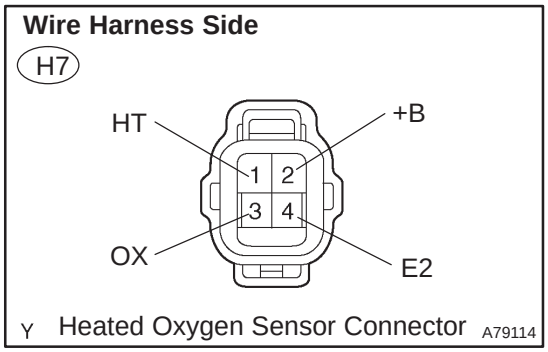
NG → **REPLACE EFI RELAY**

OK

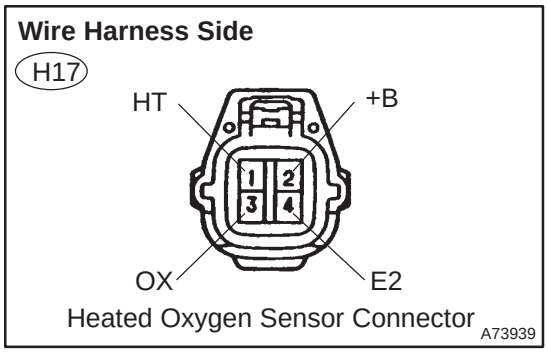
5 CHECK FUSE(EFI No.2)



(a) Remove the EFI No.2 fuse from the engine room R/B No.4.
(b) Check for continuity in the EFI fuse.



Standard: Continuity



NG → **CHECK FOR SHORT IN ALL HARNESS AND COMPONENTS CONNECTED FUSE**

OK

6 CHECK HARNESS AND CONNECTOR(HEATED OXYGEN SENSOR – ECM)

(a) Disconnect the heated oxygen sensor connector.
(b) Disconnect the E10, E12 and E13 ECM connector.
(c) Check for continuity between the wire harness side connectors.

Standard (Check for open): (Bank1 Sensor1)

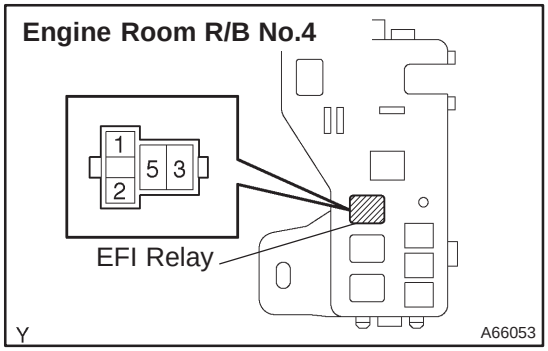
Symbols (Terminal No.)	Specified condition
HT (H7–1) – HT1A (E12–4)	Continuity
OX (H7–3) – OX1A (E12–23)	
E2 (H7–4) – E2 (E13–28)	

Standard (Check for short): (Bank1 Sensor1)

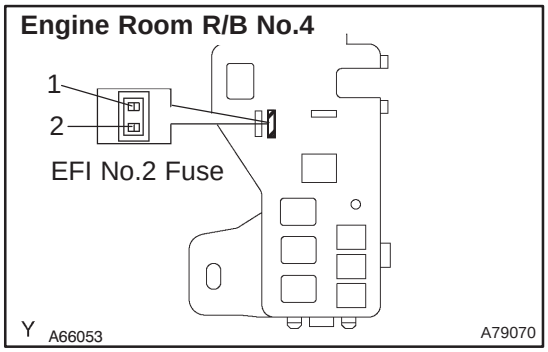
Symbols (Terminal No.)	Specified condition
HT (H7–1) or HT1A (E12–4) – Body ground	No continuity
OX (H7–3) or OX1A (E12–23) – Body ground	

Standard (Check for open): (Bank1 Sensor2)

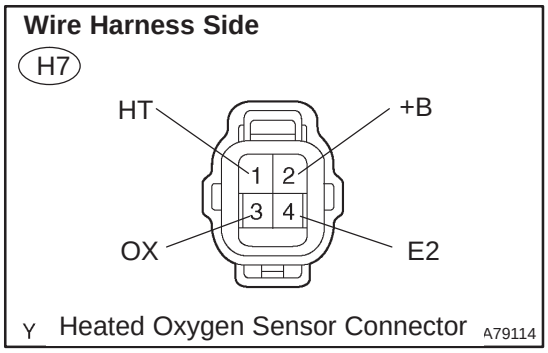
Symbols (Terminal No.)	Specified condition
HT (H17–1) – HT1B (E10–4)	Continuity
OX (H17–3) – OX1B (E12–21)	
E2 (H17–4) – E2 (E13–28)	



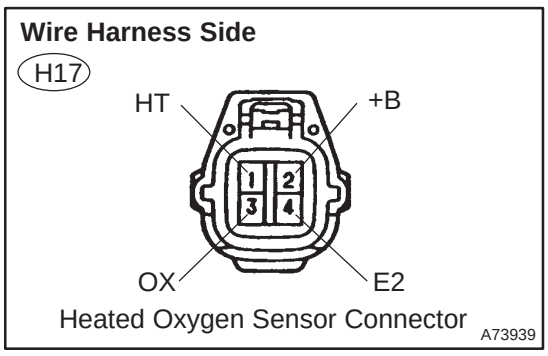
Standard (Check for short): (Bank1 Sensor2)



Symbols (Terminal No.)	Specified condition
HT (H17–1) or HT1B (E10–4) – Body ground	No continuity
OX (H17–3) or OX1B (E12–21) – Body ground	



NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**



OK

7 CHECK HARNESS AND CONNECTOR(EFI RELAY – HEATED OXYGEN SENSOR)

(a) Remove the EFI relay from the engine room R/BNo.4.
(b) Remove the EFI No.2 fuse from the engine room R/B No.4.
(c) Disconnect the heated oxygen sensor connector.
(d) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
EFI relay (3) – EFI No.2 fuse (1)	Continuity

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
EFI relay (3) or EFI No.2 fuse (1) – Body ground	No continuity

Standard (Check for open): (Bank1 Sensor1)

Symbols (Terminal No.)	Specified condition
EFI No.2 fuse (2) – +B (H7–2)	Continuity

Standard (Check for short): (Bank1 Sensor1)

Symbols (Terminal No.)	Specified condition
EFI No.2 fuse (2) or +B (H7–2) – Body ground	No continuity

Standard (Check for open): (Bank1 Sensor2)

Symbols (Terminal No.)	Specified condition
EFI No.2 fuse (2) – +B (H17–2)	Continuity

Standard (Check for short): (Bank1 Sensor2)

Symbols (Terminal No.)	Specified condition
EFI No.2 fuse (2) or +B (H17–2) – Body ground	No continuity

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

8	CHECK WHETHER MISFIRE IS OCCURRED OR NOT BY MONITORING DTC AND DATA LIST

NG → PERFORM TROUBLESHOOTING FOR MISFIRE (See page 05–5)

OK

9	CHECK AIR INDUCTION SYSTEM

(a) Check for vacuum leaks in air induction system.

NG → REPAIR OR REPLACE AIR INDUCTION SYSTEM

OK

10	CHECK FUEL PRESSURE (See page 11–5)

(a) Check the fuel pressure (high or low pressure).

NG → REPAIR OR REPLACE FUEL SYSTEM

OK

11	INSPECT FUEL INJECTOR ASSY(INJECTION AND VOLUME) (See page 11–8)

NG → REPLACE FUEL INJECTOR ASSY

OK

12	CHECK FOR EXHAUST GAS LEAK

NG → REPAIR OR REPLACE EXHAUST GAS LEAKAGE POINT

OK

REPLACE HEATED OXYGEN SENSOR

13	PERFORM CONFIRMATION DRIVING PATTERN (See page 05–54)

GO

14	READ OUTPUT DTC(DTC P0125 IS OUTPUT AGAIN)

(a) Read the DTC using the hand–held tester.
Result:

Display (DTC output)	Proceed to
”P0125” is not output again	A
”P0125” is output again	B

B → **CHECK AND REPLACE ECM (See page 01–32)**

A

15	CONFIRM IF VEHICLE HAS RUN OUT OF FUEL IN PAST

NO → **CHECK FOR INTERMITTENT PROBLEMS**

YES

DTC IS CAUSED BY RUNNING OUT OF FUEL

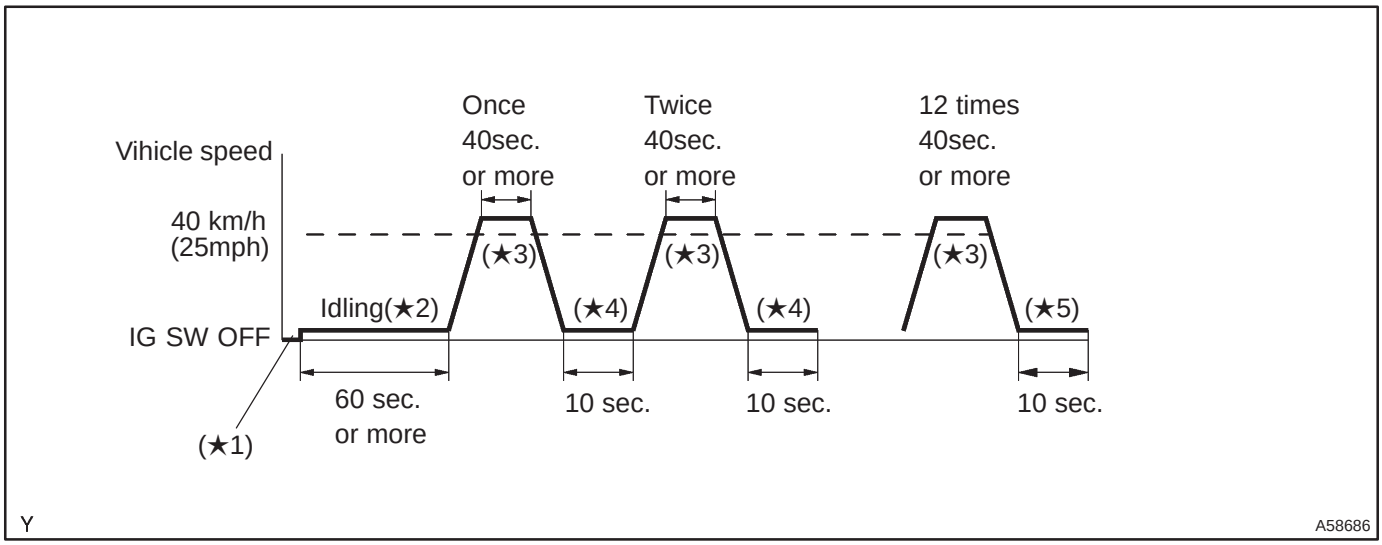
DTC	P0130	OXYGEN SENSOR CIRCUIT MALFUNCTION (BANK 1 SENSOR 1)

DTC	P0136	OXYGEN SENSOR CIRCUIT MALFUNCTION (BANK 1 SENSOR 2)

CIRCUIT DESCRIPTION

Refer to DTC P0125 on page 05–45.

DTC No	DTC Detecting Condition	Trouble Area
P0130	Voltage output of heated oxygen sensor remains between 0.40 V and 0.55 V during idling after the engine is warmed up	• Open or short in heated oxygen sensor circuit • Heated oxygen sensor • Air induction system • Fuel pressure • Injector • ECM
P0136	Voltage output of heated oxygen sensor remains 0.4 V or more or 0.5 V or less when vehicle is driven at 30 km/h (19 mph) or more after the engine is warmed up (2 trip detection loginc)	• Open or short in heated oxygen sensor circuit • Heated Oxygen sensor



HINT:

- Bank 1 refers to the bank that includes cylinder No. 1.
- Sensor 1 refers to the sensor closer to the engine assembly.
- The heated oxygen sensor output voltage and the short−term fuel trim value can be read using the hand−held tester.

WIRING DIAGRAM

Refer to DTC P0125 on page 05–45.

CONFIRMATION DRIVING PATTERN

1. **Connect the hand–held tester to the DLC3. (★1)**
2. **Switch the hand–held tester from the normal mode to the check mode (See page 05–5). (★1)**
3. **Start the engine and let the engine idle for 60 seconds or more. (★2)**
4. **Drive the vehicle at 40 km/h (25 mph) or more for 40 seconds or more. (★3)**
5. **Let the engine idle for 10 seconds or more. (★4)**
6. **Perform steps 4 to 5 12 times. (★5)**

HINT:

If a malfunction exists, the CHECK ENG will be illuminated on the multi–information display during step 6.

NOTICE:

If the conditions in this test are not strictly followed, detection of the malfunction will not be possible. If you do not have a hand–held tester, turn the ignition switch OFF after performing steps from 3 to 6, then perform steps from 3 to 6 again.

INSPECTION PROCEDURE

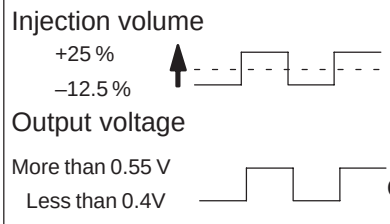
HINT:

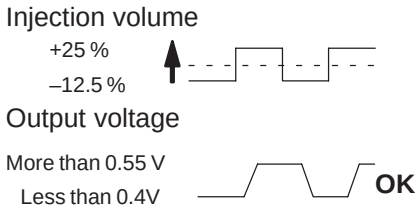
Hand–held tester only:

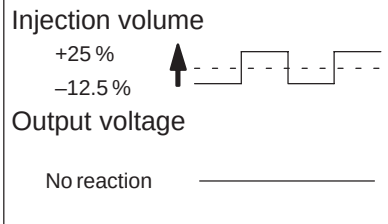
Narrowing down the trouble area is possible by performing ACTIVE TEST of the following ”A/F CONTROL” (heated oxygen sensor or other trouble areas can be distinguished).

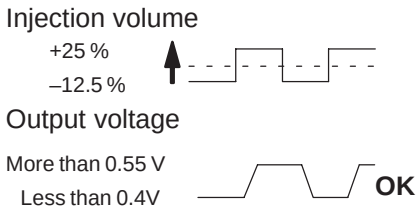
(a) Perform ACTIVE TEST using hand–held tester (A/F CONTROL).

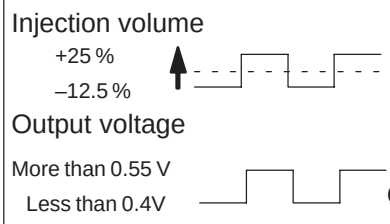
HINT:

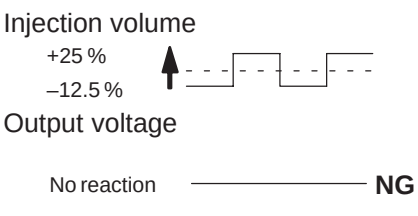


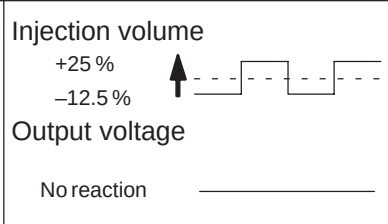


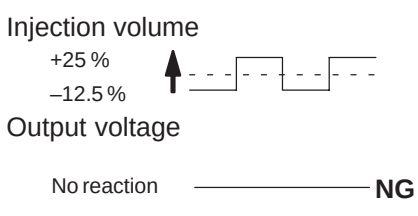












”A/F CONTROL” is an ACTIVE TEST which changes the injection volume –12.5 % or +25 %.

(1) Connect the hand–held tester to the DLC3 on the vehicle.
(2) Turn the ignition switch ON.
(3) Warm up the engine with the engine speed at 2,500 rpm for approximately 90 sec.
(4) Select the item ”DIAGNOSIS / OBD/MOBD / ACTIVE TEST / A/F CONTROL”.
(5) Perform ”A/F CONTROL” whith the engine in an idle condition (press the right or left button).

Result:

Heated oxygen sensor reacts in accordance with increase and decrease of injection volume:
+25 % → rich output: More than 0.55 V
–12.5 % → lean output: Less than 0.4 V

NOTICE:
There is a few second delay in the sensor 1 (front sensor) output, and there is about 20 seconds delay in the sensor 2 (rear sensor) output.

	Output voltage of heated oxygen sensor (sensor 1: front sensor)	Output voltage of heated oxygen sensor (sensor 2: rear sensor)	Mainly suspect trouble area
Case 1			—
Case 2			Sensor 1: front sensor (sensor 1, heater, sensor 1 circuit)
Case 3			Sensor 2: rear sensor (sensor 2, heater, sensor 2 circuit)
Case 4			Extremely rich or lean of the actual air–fuel ratio (Injector, fuel pressure, gas leakage in exhaust system, etc.)

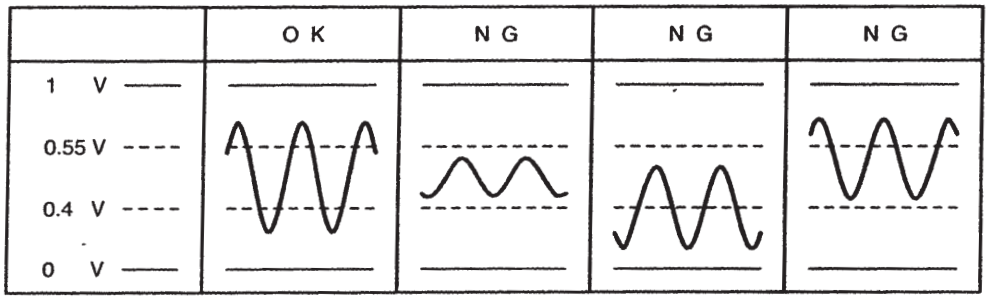
The following procedure of A/F CONTROL enable the technician to check and graph voltage output of the heated oxygen sensor.
For displaying the graph indication, enter ”ACTIVE TEST / A/F CONTROL / USER DATA,” then select ”O2S B1S1 and O2S B1S2” by pressing ”YES” button and push ”ENTER” button before pressing ”F4” button.
NOTICE:
If the vehicle has low fuel, the air–fuel ratio becomes LEAN and heated oxygen sensor DTCs will be recorded, and the CHK ENG lamp then comes on.
HINT:

- If different DTCs that are related to a different system are output simultaneously while terminal E2 is used as a ground terminal, terminal E2 may be open.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.
- A high heated oxygen sensor (sensor 1) voltage (0.55 V or more) could be caused by a rich air fuel mixture. Check for conditions that would cause the engine to run rich.
- A low heated oxygen sensor (sensor 1) voltage (0.4 V or less) could be caused by a lean air fuel mixture. Check for conditions that would cause the engine to run lean.

1	CHECK OTHER DTC OUTPUT(BESIDES HEATED OXYGEN SENSOR DTCS)

(a) Read the DTC using the hand–held tester.
Result:

Display (DTC output)	Proceed to
Only ”P0130 and/or P0136” are output	A
”P0130 and/or P0136” and other DTCs are output	B



HINT:
If any other codes besides ”P0130 and/or P0136” are output, perform the troubleshooting for those DTCs first.

B → **GO TO RELEVANT DTC CHART (See page 05–16)**

A

2	READ VALUE OF HAND–HELD TESTER(OUTPUT VOLTAGE OF HEATED OXYGEN SENSOR)

(a) Warm up the heated oxygen sensor with the engine speed at 2,500 rpm for approximately 90 seconds.
(b) Read the output voltage of the heated oxygen sensor during idling.
Heated oxygen sensor output voltage:
Alternates less than 0.4 V and more than 0.55 V (See the following table).

P18349

OK → **Go to step 11**

NG

3	INSPECT HEATED OXYGEN SENSOR(HEATER RESISTANCE) (See page 05–45)

NG → **REPLACE HEATED OXYGEN SENSOR**

OK

4	INSPECT EFI RELAY (See page 10–3)

NG → **REPLACE EFI RELAY**

OK

5	CHECK FUSE(EFI No.2) (See page 05–45)

NG → CHECK FOR SHORT IN ALL HARNESS AND COMPONENTS CONNECTED FUSE

OK

6	CHECK HARNESS AND CONNECTOR(HEATED OXYGEN SENSOR – ECM) (See page 05–45)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

7	CHECK HARNESS AND CONNECTOR(EFI RELAY – HEATED OXYGEN SENSOR) (See page 05–45)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

8	CHECK AIR INDUCTION SYSTEM

(a) Check for vacuum leaks in air induction system.

NG → REPAIR OR REPLACE AIR INDUCTION SYSTEM

OK

9	CHECK FUEL PRESSURE (See page 11–5)

(a) Check the fuel pressure (high or low pressure).

NG → REPAIR OR REPLACE FUEL SYSTEM

OK

10	INSPECT FUEL INJECTOR ASSY(INJECTION AND VOLUME) (See page 11–8)

NG → REPLACE FUEL INJECTOR ASSY

OK

REPLACE HEATED OXYGEN SENSOR

11	PERFORM CONFIRMATION DRIVING PATTERN

GO

12	READ OUTPUT DTC(HEATED OXYGEN SENSOR DTCS ARE OUTPUT AGAIN)

(a) Read the DTC using the hand–held tester.
Result:

Display (DTC output)	Proceed to
”P0130 and/or P0136” are not output again	A
”P0130 and/or P136” are output again	B

B → **CHECK FOR INTERMITTENT PROBLEMS**

A

REPLACE HEATED OXYGEN SENSOR

DTC	P0133	OXYGEN SENSOR CIRCUIT SLOW RESPONSE (BANK 1 SENSOR 1)

CIRCUIT DESCRIPTION

Refer to DTC P0125 on page 05–45.

DTC No	DTC Detecting Condition	Trouble Area
P0133	Response time for heated oxygen sensor voltage output to change from rich to lean, or from lean to rich, is 1.0 sec. or more during idling after engine is warmed up (2 trip detection logic)	• Open or short in heated oxygen sensor circuit • Heated oxygen sensor • Air induction system • Fuel pressure • Injector • ECM

HINT:

- Bank 1 refers to bank that includes cylinder No. 1.
- Sensor 1 refers to the sensor closer to the engine assembly.
- The heated oxygen sensor output voltage and the short−term fuel trim value can be read using the hand−held tester.

WIRING DIAGRAM

Refer to DTC P0125 on page 05–45.

INSPECTION PROCEDURE

HINT:

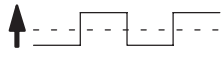
Hand–held tester only:

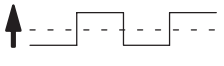
Narrowing down the trouble area is possible by performing ACTIVE TEST of the following ”A/F CONTROL” (heated oxygen sensor or other trouble areas can be distinguished).

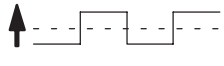
(a) Perform ACTIVE TEST using hand–held tester (A/F CONTROL).

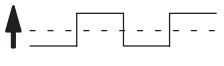
HINT:

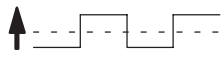
”A/F CONTROL” is an ACTIVE TEST which changes the injection volume –12.5 % or +25 %.

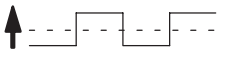


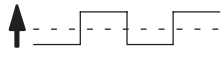


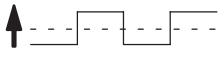












(1) Connect the hand–held tester to the DLC3 on the vehicle.
(2) Turn the ignition switch ON.
(3) Warm up the engine with the engine speed at 2,500 rpm for approximately. 90 sec.
(4) Select the item ”DIAGNOSIS / OBD/MOBD / ACTIVE TEST / A/F CONTROL”.
(5) Perform ”A/F CONTROL” with the engine in an idle condition (press the right or left button).

Result:

Heated oxygen sensor reacts in accordance with increase and decrease of injection volume:
+25 % → rich output: More than 0.55 V
–12.5 % → lean output: Less than 0.4 V

NOTICE:

There is a few second delay in the sensor 1 (front sensor) output, and there is about 20 seconds delay in the sensor 2 (rear sensor) output.

	Output voltage of heated oxygen sensor (sensor 1: front sensor)	Output voltage of heated oxygen sensor (sensor 2: rear sensor)	Mainly suspect trouble area
Case 1	Injection volume +25 % –12.5 %  Output voltage More than 0.55 V Less than 0.4V  **OK**	Injection volume +25 % –12.5 %  Output voltage More than 0.55 V Less than 0.4V  **OK**	—
Case 2	Injection volume +25 % –12.5 %  Output voltage No reaction **NG**	Injection volume +25 % –12.5 %  Output voltage More than 0.55 V Less than 0.4V  **OK**	Sensor 1: front sensor (sensor 1, heater, sensor 1 circuit)
Case 3	Injection volume +25 % –12.5 %  Output voltage More than 0.55 V Less than 0.4V  **OK**	Injection volume +25 % –12.5 %  Output voltage No reaction **NG**	Sensor 2: rear sensor (sensor 2, heater, sensor 2 circuit)
Case 4	Injection volume +25 % –12.5 %  Output voltage No reaction **NG**	Injection volume +25 % –12.5 %  Output voltage No reaction **NG**	Extremely rich or lean of the actual air–fuel ratio (Injector, fuel pressure, gas leakage in exhaust system, etc.)

The following procedure of A/F CONTROL enable the technician to check and graph volatge output of the heated oxygen sensor.

For displaying the graph indication, enter ”ACTIVE TEST / A/F CONTROL / USER DATA,” then select ”O2S B1S1 and O2S B1S2” by pressing ”YES” button and push ”ENTER” button before pressing ”F4” button.

NOTICE:

If the vehicle is lack of fuel, the air–fuel ratio becomes LEAN and DTC P0133 will be set, and the CHK ENG then comes on.

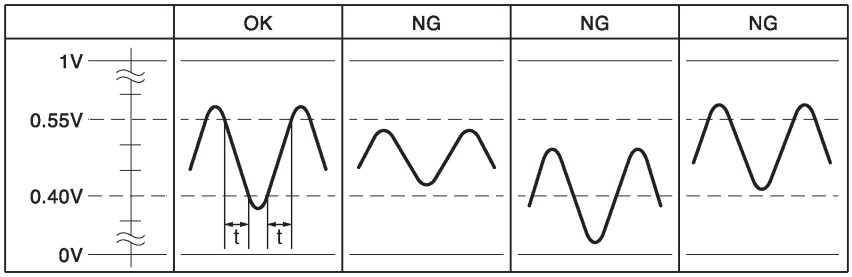
HINT:

- If different DTCs that are related to a different system are output simultaneously while terminal E2 is used as a ground terminal, terminal E2 may be open.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.
- A high heated oxygen sensor (sensor 1) voltage (0.55 V or more) could be caused by a rich air fuel mixture. Check for conditions that would cause the engine to run rich.
- A low heated oxygen sensor (sensor 1) voltage (0.4 V or less) could be caused by a lean air fuel mixture. Check for conditions that would cause the engine to run lean.

1	CHECK OTHER DTC OUTPUT(BESIDES DTC P0133)

(a) Read the DTC using the hand–held tester.
Result:

Display (DTC output)	Proceed to
Only ”P0133” is output	A
”P0133 or P0133” and other DTCs are output	B



HINT:
If any other codes besides ”P0133” are output, perform the troubleshooting for those DTCs first.

B → **GO TO RELEVANT DTC CHART (See page 05–16)**

A

2	READ VALUE OF HAND–HELD TESTER(HEATED OXYGEN SENSOR DURING IDLING)

(a) Warm up the heated oxygen sensor with the engine speed at 2,500 rpm for approximately 90 seconds.
(b) Read the output voltage of the heated oxygen sensor during idling.
Heated oxygen sensor output voltage:
Alternates less than 0.4 V and more than 0.55 V, and duration ”t” must exist more than 0.9 sec. (See the following table).

N A73686

OK → **Go to step 11**

NG

3	INSPECT HEATED OXYGEN SENSOR(HEATER RESISTANCE) (See page 05–45)

OK

3	CHECK FUSE(EFI No.2) (See page 05–45)

NG → CHECK FOR SHORT IN ALL HARNESS AND COMPONENTS CONNECTED FUSE

OK

4	INSPECT ECM(HTL OR HTL2 VOLTAGE)

(a) Turn the ignition switch ON.
(b) Measure the voltage between the terminals of the E10 and E12 ECM connector.

Standard:

Symbols (Terminal No.)	Specified condition
HT1A (E12–4) – E03 (E12–5)	9 to 14 V
HT1B (E10–4) – E03 (E12–5)	

OK → **CHECK AND REPLACE ECM (See page 01–32)**

NG

5	CHECK HARNESS AND CONNECTOR(EFI RELAY – HEATED OXYGEN SENSOR) (See page 05–45)

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK AND REPLACE ECM (See page 01–32)

DTC	P0171	SYSTEM TOO LEAN (FUEL TRIM) (BANK 1)

DTC	P0172	SYSTEM TOO RICH (FUEL TRIM) (BANK 1)

CIRCUIT DESCRIPTION

Fuel trim refers to the feedback compensation value compared against the basic injection time. Fuel trim includes short–term fuel trim and long–term fuel trim.

Short–term fuel trim is the short–term fuel compensation used to maintain the air–fuel ratio at stoichiometric air–fuel ratio. The signal from the heated oxygen sensor indicates whether the air–fuel ratio is RICH or LEAN compared to the stoichiometric air–fuel ratio, This variance triggers a reduction in fuel volume if the air–fuel ratio is rich, and an increase in the fuel volume if it is lean.

Long–term fuel trim is overall fuel compensation carried out long–term to compensate for a continual deviation of the short–term fuel trim from the central value, due to individual engine differences, wear over time and changes in the operating environment.

If both the short–term fuel trim and long–term fuel trim are LEAN or RICH beyond a certain value, it is detected as a malfunction and the CHK ENG is illuminated.

DTC No.	DTC Detecting Condition	Trouble Area
P0171	When air fuel ratio feedback is stable after warming up engine, fuel trim is considerably in error on LEAN side (2 trip detection logic)	• Air induction system • Injector blockage • PCV hose • Mass air flow meter • Engine coolant temperature sensor • Fuel pressure • Open or short in heated oxygen sensor circuit • Heated oxygen sensor • ECM
P0172	When air fuel ratio feedback is stable after warming up engine, fuel trim is considerably in error on RICH side (2 trip detection logic)	• Injector leak, blockage • Mass air flow meter • Engine coolant temperature sensor • Ignition system • Fuel pressure • Open or short in heated oxygen sensor circuit • Gas leakage in exhaust system • Heated oxygen sensor • ECM

HINT:

If the total of the short–term fuel trim value and long–term fuel trim value is within ± 25 %, the system is functioning normally.

WIRING DIAGRAM

Refer to DTC P0125 on page 05–45.

INSPECTION PROCEDURE

HINT:

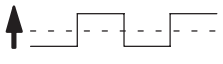
Hand–held tester only:

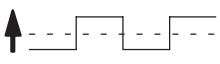
Narrowing down the trouble area is possible by performing ACTIVE TEST of the following ”A/F CONTROL” (heated oxygen sensor or other trouble areas can be distinguished).

(a) Perform ACTIVE TEST using the hand–held tester (A/F CONTROL).

HINT:

”A/F CONTROL” is an ACTIVE TEST which changes the injection volume –12.5 % or +25 %.





(1) Connect the hand–held tester to the DLC3 on the vehicle.
(2) Turn the ignition switch ON.
(3) Warm up the engine with the engine speed at 2,500 rpm for approximately 90 sec.
(4) Select the item ”DIAGNOSIS / OBD/MOBD / ACTIVE TEST / A/F CONTROL”.
(5) Perform ”A/F CONTROL” with the engine in an idle condition (press the right or left button).

Result:

Heated oxygen sensor reacts in accordance with increase and decrease of injection volume:
+25 % → rich output: More than 0.55 V
–12.5 % → lean output: Less than 0.4 V

NOTICE:

There is a few second delay in the sensor 1 (front sensor) output, and there is about 20 seconds delay in the sensor 2 (rear sensor) output.

	Output voltage of heated oxygen sensor (sensor 1: front sensor)	Output voltage of heated oxygen sensor (sensor 2: rear sensor)	Mainly suspect trouble area
Case 1	Injection volume +25 % –12.5 %  Output voltage More than 0.55 V Less than 0.4V  **OK**	Injection volume +25 % –12.5 %  Output voltage More than 0.55 V Less than 0.4V  **OK**	—
Case 2	Injection volume +25 % –12.5 %  Output voltage No reaction **NG**	Injection volume +25 % –12.5 %  Output voltage More than 0.55 V Less than 0.4V  **OK**	Sensor 1: front sensor (sensor 1, heater, sensor 1 circuit)
Case 3	Injection volume +25 % –12.5 %  Output voltage More than 0.55 V Less than 0.4V  **OK**	Injection volume +25 % –12.5 %  Output voltage No reaction **NG**	Sensor 2: rear sensor (sensor 2, heater, sensor 2 circuit)
Case 4	Injection volume +25 % –12.5 %  Output voltage No reaction **NG**	Injection volume +25 % –12.5 %  Output voltage No reaction **NG**	Extremely rich or lean of the actual air–fuel ratio (Injector, fuel pressure, gas leakage in exhaust system, etc.)

The following procedure of A/F CONTROL enable the technician to check and graph voltage output of the heated oxygen sensor.
For displaying the graph indication, enter ”ACTIVE TEST / A/F CONTROL / USER DATA,” then select ”O2S B1S1 and O2S B1S2” by pressing ”YES” button and push ”ENTER” button before pressing ”F4” button.
HINT:

- If different DTCs that are related to a different system are output simultaneously while terminal E2 is used as a ground terminal, terminal E2 may be open.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.
- A high heated oxygen sensor (sensor 1) voltage (0.55 V or more) could be caused by a rich air fuel mixture. Check for conditions that would cause the engine to run rich.
- A low heated oxygen sensor (sensor 1) voltage (0.4 V or less) could be caused by a lean air fuel mixture. Check for conditions that would cause the engine to run lean.

1	CHECK AIR INDUCTION SYSTEM

(a) Check for vacuum leaks in air induction system.

NG → REPAIR OR REPLACE AIR INDUCTION SYSTEM

OK ↓

2	INSPECT FUEL INJECTOR ASSY(INJECTION AND VOLUME) (See page 11–8)

NG → REPLACE FUEL INJECTOR ASSY

OK ↓

3	INSPECT MASS AIR FLOW METER (See page 10–3)

NG → REPLACE MASS AIR FLOW METER

OK ↓

4	INSPECT ENGINE COOLANT TEMPERATURE SENSOR(RESISTANCE) (See page 10–3)

NG → REPLACE ENGINE COOLANT TEMPERATURE SENSOR

OK ↓

5	CHECK FOR SPARK AND IGNITION (See page 18–1)

NG → REPAIR OR REPLACE

OK ↓

6	CHECK FUEL PRESSURE (See page 11–5)

(a) Check the fuel pressure (high or low pressure).

NG → CHECK AND REPLACE FUEL SYSTEM

OK

7	CHECK FOR EXHAUST GAS LEAKAGE

NG → REPAIR OR REPLACE EXHAUST GAS LEAKAGE POINT

OK

8	READ VALUE OF HAND–HELD TESTER(OUTPUT VOLTAGE OF HEATED OXYGEN SENSOR) (See page 05–54)

OK → Go to step 18

NG

9	INSPECT HEATED OXYGEN SENSOR(HEATER RESISTANCE) (See page 05–45)

NG → REPLACE HEATED OXYGEN SENSOR

OK

NG → REPLACE EFI RELAY

OK

11	CHECK FUSE(EFI No.2) (See page 05–45)

NG → CHECK FOR SHORT IN ALL HARNESS AND COMPONENTS CONNECTED FUSE

OK

12	CHECK HARNESS AND CONNECTOR(HEATED OXYGEN SENSOR – ECM) (See page 05–45)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

13	CHECK HARNESS AND CONNECTOR(EFI RELAY – HEATED OXYGEN SENSOR) (See page 05–45)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

14	REPLACE HEATED OXYGEN SENSOR

GO

15	PERFORM CONFIRMATION DRIVING PATTERN (See page 05–54)

GO

16	READ OUTPUT DTC(DTC P0171 AND/OR P0172 ARE OUTPUT AGAIN)

(a) Read the DTC using the hand–held tester.

Result:

Display (DTC output)	Proceed to
DTC ”P0171 and/or P0172” are not output again	A
DTC ”P0171 and/or P0172” are output again	B

B → CHECK AND REPLACE ECM (See page 01–32) AND PERFORM CONFIRMATION DRIVING PATTERN (See page 05–54)

A

17	CONFIRM IF VEHICLE HAS RUN OUT OF FUEL IN PAST

NO → CHECK FOR INTERMITTENT PROBLEMS (See page 05–5)

YES

DTC IS CAUSED BY RUNNING OUT OF FUEL (DTCS P0171 AND/OR P0172)

18	PERFORM CONFIRMATION DRIVING PATTERN (See page 05–54)

GO

19	READ OUTPUT DTC(DTC P0171 AND/OR P0172 ARE OUTPUT AGAIN)

(a) Read the DTC using the hand–held tester.
Result:

Display (DTC output)	Proceed to
DTC "P0171 and/or P0172" are not output again	A
DTC "P0171 and/or P0172" are output again	B

B → **Go to step 22**

A

20	REPLACE HEATED OXYGEN SENSOR

GO

21	READ OUTPUT DTC(DTC P0171 AND/OR P0172 ARE OUTPUT AGAIN)

(a) Read the DTC using the hand–held tester.
Result:

Display (DTC output)	Proceed to
DTC "P0171 and/or P0172" are not output again	A
DTC "P0171 and/or P0172" are output again	B

B → **CHECK AND REPLACE ECM (See page 01–32) AND PERFORM CONFIRMATION DRIVING PATTERN (See page 05–54)**

A

22	CONFIRM IF VEHICLE HAS RUN OUT OF FUEL IN PAST

NO → **CHECK FOR INTERMITTENT PROBLEMS (See Page 05–5)**

YES

DTC IS CAUSED BY RUNNING OUT OF FUEL

DTC	P0300	RANDOM/MULTIPLE CYLINDER MISFIRE DETECTED

DTC	P0301	CYLINDER 1 MISFIRE DETECTED

DTC	P0302	CYLINDER 2 MISFIRE DETECTED

DTC	P0303	CYLINDER 3 MISFIRE DETECTED

DTC	P0304	CYLINDER 4 MISFIRE DETECTED

CIRCUIT DESCRIPTION

Misfire: The ECM uses the crankshaft position sensor and camshaft position sensor to monitor changes in the crankshaft rotation of each cylinder.

The ECM counts the number of times from the engine speed change rate, indicating that misfire has occurred. When the misfire rate equals to or exceeds the count, indicating that the engine condition has deteriorated, the CHK ENG is illuminated.

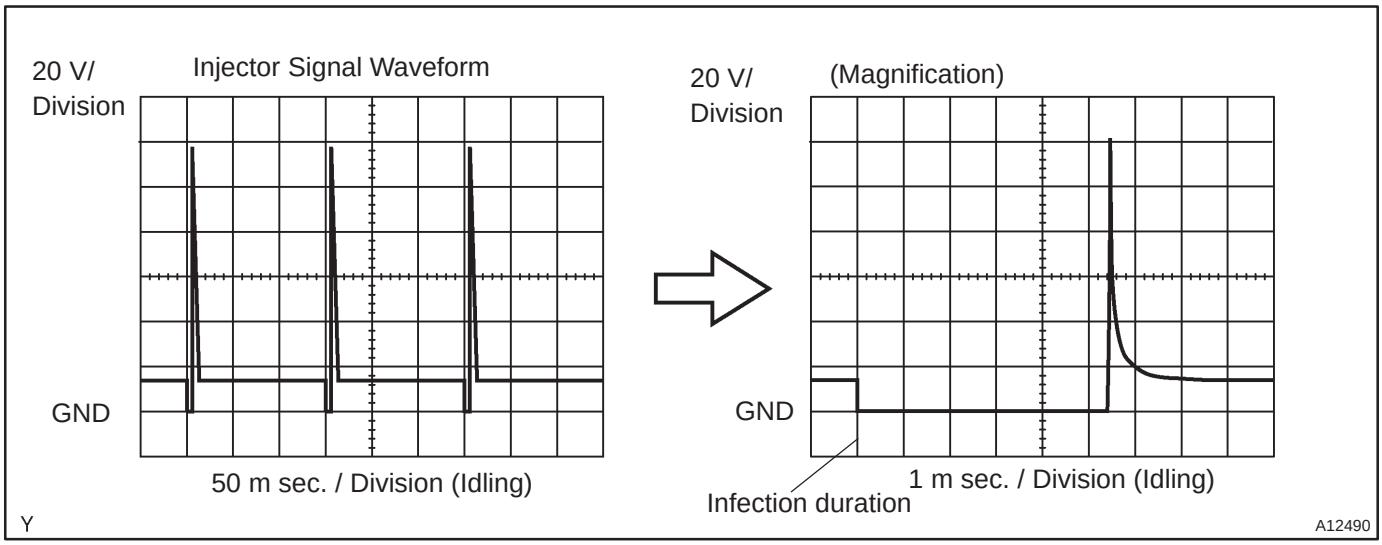
If the misfire rate is high enough and the driving conditions causes the catalyst to overheat, the CHK ENG blinks when the misfire occurs.

HINT:

- For any particular 200 revolutions of engine, misfiring which could result in overheating of catalyst is detected. This cause CHK ENG to blink (1 trip detection logic).
- For any particular 1,000 revolutions of engine, misfiring which could result in a deterioration of emissions is detected. This cause CHK ENG to illuminate (2 trip detection logic).

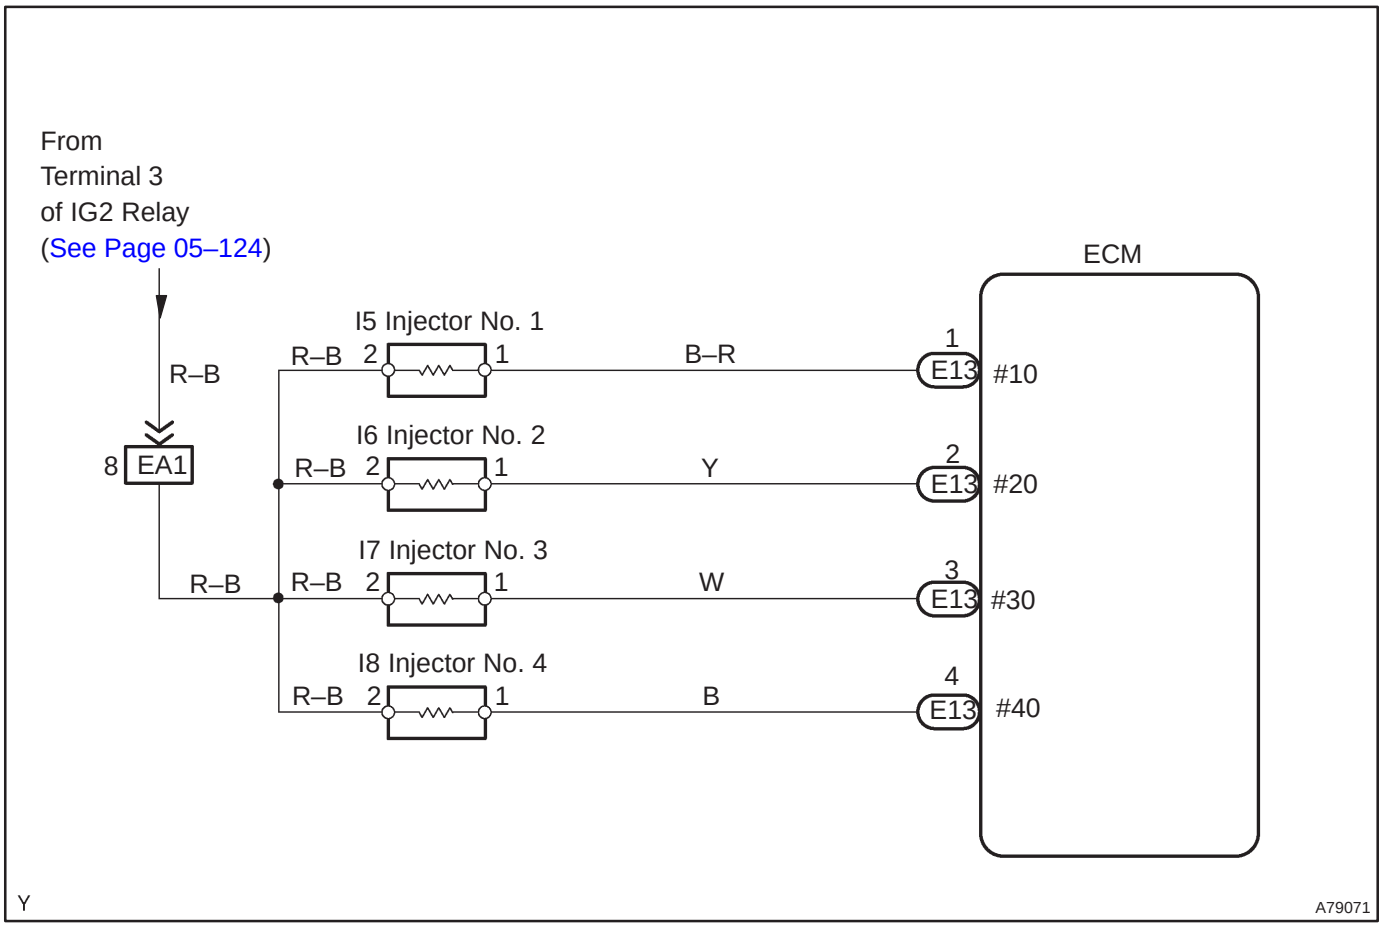
DTC No.	DTC Detecting Condition	Trouble Area
P0300	Misfiring of random cylinders is detected	• Open or short in engine wire • Connector connection • Vacuum hose connection • PCV hose • Ignition system • Injector • Fuel pressure • Mass air flow meter • Engine coolant temperature sensor • Compression pressure • Valve clearance • Valve timing • ECM
P0301 P0302 P0303 P0304	Misfiring of each cylinder is detected	

HINT:



When 2 or more codes for a misfiring cylinder are recorded repeatedly but no random misfire code is recorded, it is indicated that the misfires were detected and recorded at different times.

Reference: Inspection using an oscilloscope for injector signal waveform.



(1) With the engine idling, check the waveforms between terminals #1 – #4 and E1 of the ECM connector.

HINT:

The correct waveforms are shown below.

WIRING DIAGRAM

CONFIRMATION DRIVING PATTERN

(a) Connect the hand–held tester to the DLC3.
(b) Record the DTC and freeze frame data.
(c) Use the hand–held tester to set to the check mode (See page 05–5).
(d) Read the value on the misfire counter for each cylinder when idling. If the value is displayed on the misfire counter, skip the following procedure of confirmation driving.
(e) Drive the vehicle several times with the engine speed, load and its surrounding range shown with ENGINE SPD, CALC LOAD in the freeze frame data or MISFIRE RPM, MISFIRE LOAD in the data list. If you do not have the hand–held tester, turn the ignition switch OFF after the symptom is simulated once. Then repeat the simulation process again.

HINT:
In order to memorize the DTC of the misfire, it is necessary to drive around MISFIRE RPM, MISFIRE LOAD in the following data list. Be sure not to turn the ignition switch OFF, because the diagnosis system is changed from the check mode to the nomal mode and will result in all of the DTCs and the freeze frame data being erased.

Engine Speed	Time
Idling	5 minutes and 45 seconds or more
1,000 rpm	4 minutes or more
2,000 rpm	2 minutes and 30 seconds or more
3,000 rpm	1 minute and 30 seconds or more

(f) Check if there is misfire by monitoring the DTC and the freeze frame data, and then record them.
(g) Turn the ignition switch OFF and wait for at least 5 seconds.

INSPECTION PROCEDURE

HINT:

- If the other DTCs besides misfire are memorized simultaneously, perform the troubleshooting for them first.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.
- If the misfire is not occured when the vehicle is brought to the workshop, it can be confirmed by reproducing the condition of the freeze frame data. After finishing the repair, confirm that there is no misfire (See the confirmation driving pattern).
- When either of SHORT FT #1 or LONG FT #1 the freeze frame data is over the range of ±20%, there is a possibility that the air–fuel ratio is inclining either to ”RICH” (–20% or less) or ”LEAN” (+20% or more).
- When COOLANT TEMP in the freeze frame data is less than 80˚C (176˚F), there is a possibility of misfire only during warming up.
- In case that the misfire cannot be reproduced, this may be because of the driving with the shortage of fuel, the use of improper fuel, a stain of ignition plug and etc.

1	CHECK OTHER DTC OUTPUT(BESIDES MISFIRE DTCS)

(a) Read the DTC using the hand–held tester.
Result:

Display (DTC output)	Proceed to
Only ”P0300, P0301, P0302, P0303 and/or P0304” are output	A
”P0300, P0301, P0302, P0303 and/or P0304” and other DTCs are output	B

HINT:
If any other codes besides ”P0300, P0301, P0302, P0303 and/or P0304” are output, perform the trouble-shooting for those DTCs first.

B → **GO TO RELEVANT DTC CHART (See page 05–16)**

A

2	CHECK WIRE HARNESS, CONNECTOR AND VACUUM HOSE IN ENGINE ROOM

(a) Check the connection of the wire harness and the connector.
(b) Check the vacuum hose for disconnection, blockage and break.

NG → **REPAIR OR REPLACE, THEN CONFIRM THAT THERE IS NO MISFIRE**

OK

3	READ VALUE OF HAND–HELD TESTER(NUMBER OF MISFIRE)

(a) Connect the hand–held teste to the DLC3.
(b) Turn the ignition switch ON and push the hand–held tester main switch ON.
(c) Start the engine.
(d) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL/CYL#1 – CYL#4”.
(e) Read the number of misfire on the hand–held tester.
HINT:
When a misfire is not reproduced, be sure to branch below based on the stored DTC.
Result:

High Misfire Rate Cylinder	Proceed to
1 or 2 cylinders	A
More than 3 cylinders	B

B → **Go to step 15**

A

4	CHECK SPARK PLUG AND SPARK OF MISFIRING CYLINDER (See page 18–1)

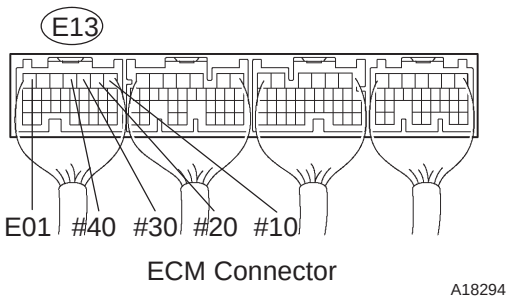
OK → **Go to step 7**

NG

5	CHANGE NORMAL SPARK PLUG AND CHECK SPARK OF MISFIRING CYLINDER (See page 18–1)

OK → REPLACE SPARK PLUG

NG



6	CHECK HARNESS AND CONNECTOR OF MISFIRING CYLINDER(IGNITION COIL – ECM) (See page 05–103)

OK → REPLACE IGNITION COIL ASSY (THEN CONFIRM THAT THERE IS NO MISFIRE)

NG

REPAIR OR REPLACE HARNESS OR CONNECTOR

7	INSPECT ECM TERMINAL OF MISFIRING CYLINDER(#1, #2, #3 OR #4 VOLTAGE)

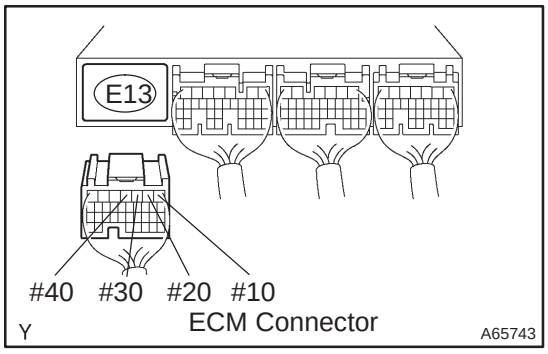
(a) Turn the ignition switch ON.

(b) Measure the voltage between the terminals of the E13 ECM connector.

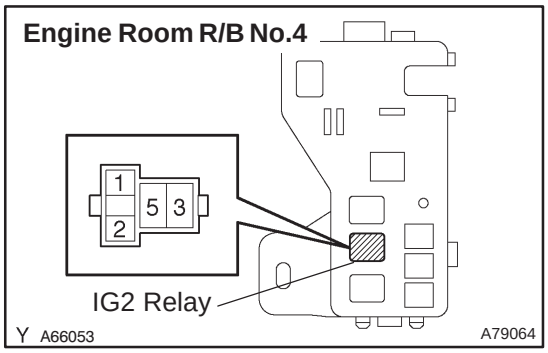
Standard:

Symbols (Terminal No.)	Specified condition
#10 (E13–1) – E01 (E13–7)	8 to 14 V
#20 (E13–2) – E01 (E13–7)	
#30 (E13–3) – E01 (E13–7)	
#40 (E13–4) – E01 (E13–7)	

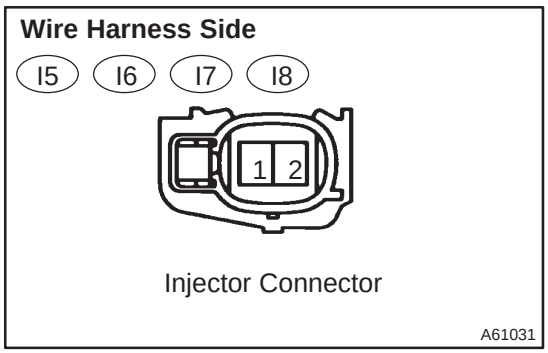
OK → Go to step 10



NG



8	INSPECT FUEL INJECTOR RESISTANCE OF MISFIRING CYLINDER (See page 11–8)



NG → REPLACE FUEL INJECTOR ASSY

OK

9	CHECK HARNESS AND CONNECTOR OF MISFIRING CYLINDER(IG2 RELAY – INJECTOR – ECM)

(a) Disconnect the ECM E13 connector.
(b) Remove the IG2 relay from the engine room R/B No.4.
(c) Disconnect the injector connector.
(d) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
IG2 Relay (3) – Injector No.1 (I5–2)	Continuity
IG2 Relay (3) – Injector No.2 (I6–2)	
IG2 Relay (3) – Injector No.3 (I7–2)	
IG2 Relay (3) – Injector No.4 (I8–2)	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
IG2 Relay (3) or Injector No.1 (I5–2) – Body ground	No continuity
IG2 Relay (3) or Injector No.2 (I6–2) – Body ground	
IG2 Relay (3) or Injector No.3 (I7–2) – Body ground	
IG2 Relay (3) or Injector No.4 (I8–2) – Body ground	

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
Injector No.1 (I5–1) – #10 (E13–1)	Continuity
Injector No.2 (I6–1) – #20 (E13–2)	
Injector No.3 (I7–1) – #30 (E13–3)	
Injector No.4 (I8–1) – #40 (E13–4)	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
Injector No.1 (I5–1) or #10 (E13–1) – Body ground	No continuity
Injector No.2 (I6–1) or #20 (E13–2) – Body ground	
Injector No.3 (I7–1) or #30 (E13–3) – Body ground	
Injector No.4 (I8–1) or #40 (E13–4) – Body ground	

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

10	INSPECT FUEL INJECTOR INJECTION AND VOLUME OF MISFIRING CYLINDER (See page 11–8)

NG → **REPLACE FUEL INJECTOR ASSY**

OK

11	CHECK CYLINDER COMPRESSION PRESSURE OF MISFIRING CYLINDER (See page 14–1)

NG → **REPAIR OR REPLACE**

OK

12	CHECK VALVE CLEARANCE OF MISFIRING CYLINDER (See page 14–6)

NG → ADJUST VALVE CLEARANCE

OK

13	SWITCH STEP BY NUMBER OF MISFIRE CYLINDER(REFER RESULT OF STEP 4)

High Misfire Rate Cylinder	Proceed to
1 or 2 cylinders	A
More than 3 cylinders	B

B → CHECK FOR INTERMITTENT PROBLEMS

A

14	CHECK VALVE TIMING(CHECK FOR LOOSE AND JUMPING TEETH OF TIMING BELT) (See page 14–49)

NG → ADJUST VALVE TIMING

OK

15	CHECK FUEL PRESSURE (See page 11–5)

NG → CHECK AND REPLACE FUEL PUMP, PRESSURE REGULATOR, FUEL PIPE LINE AND FILTER

OK

16	READ VALUE OF HAND–HELD TESTER(INTAKE AIR TEMPERATURE AND MASS AIR FLOW RATE)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch ON.
(c) Check the intake air temperature.
  (1) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / INTAKE AIR” and read its value displayed on the hand–held tester.

  Temperature: Equivalent to ambient temperature

(d) Check the air flow rate.
  (1) Select the item ”DIAGNOSIS / OBS/MOBD / DATA LIST / ALL / MAF” and read its value displayed on the hand–held tester.

  Standard:

Condition	Air flow rate (gm/s)
Ignition switch On (do not start engine)	0
Idling	4 to 6
Running without load (2,500 rpm)	13 to 20
Idling – Running	Air flow rate fluctuates

NG → REPLACE MASS AIR FLOW METER

OK

17	INSPECT ENGINE COOLANT TEMPERATURE SENSOR(RESISTANCE) (See page 10–3)

NG → REPLACE ENGINE COOLANT TEMPERATURE SENSOR

OK

18	SWITCH STEP BY NUMBER OF MISFIRE CYLINDER(REFER RESULT OF STEP 4)

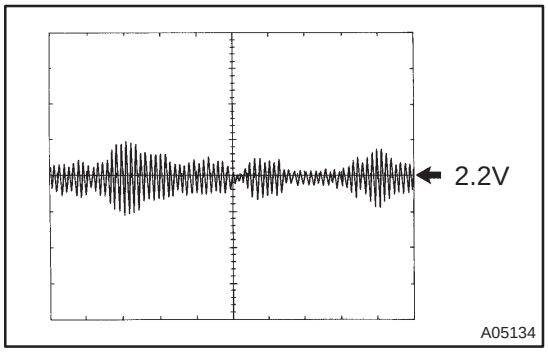
High Misfire Rate Cylinder	Proceed to
1 or 2 cylinders	A
More than 3 cylinders	B

B → AGAIN GO TO STEP5

A

CHECK FOR INTERMITTENT PROBLEMS (See page 05–5)

DTC	P0325	KNOCK SENSOR 1 CIRCUIT MALFUNCTION (BANK 1)



CIRCUIT DESCRIPTION

Knock sensor is fitted on the cylinder block to detect the engine knocking. This sensor contains a piezoelectric element which generates a voltage when it becomes deformed, which occurs when the cylinder block vibrates due to knocking. If engine knocking occurs, the ignition timing is delayed to suppress it.

DTC No.	DTC Detecting Condition	Trouble Area
P0325	No knock sensor signal to the ECM with engine speed 3,000 rpm or more	• Open or short in knock sensor circuit • Knock sensor (under–torqued or loose) • ECM

HINT:

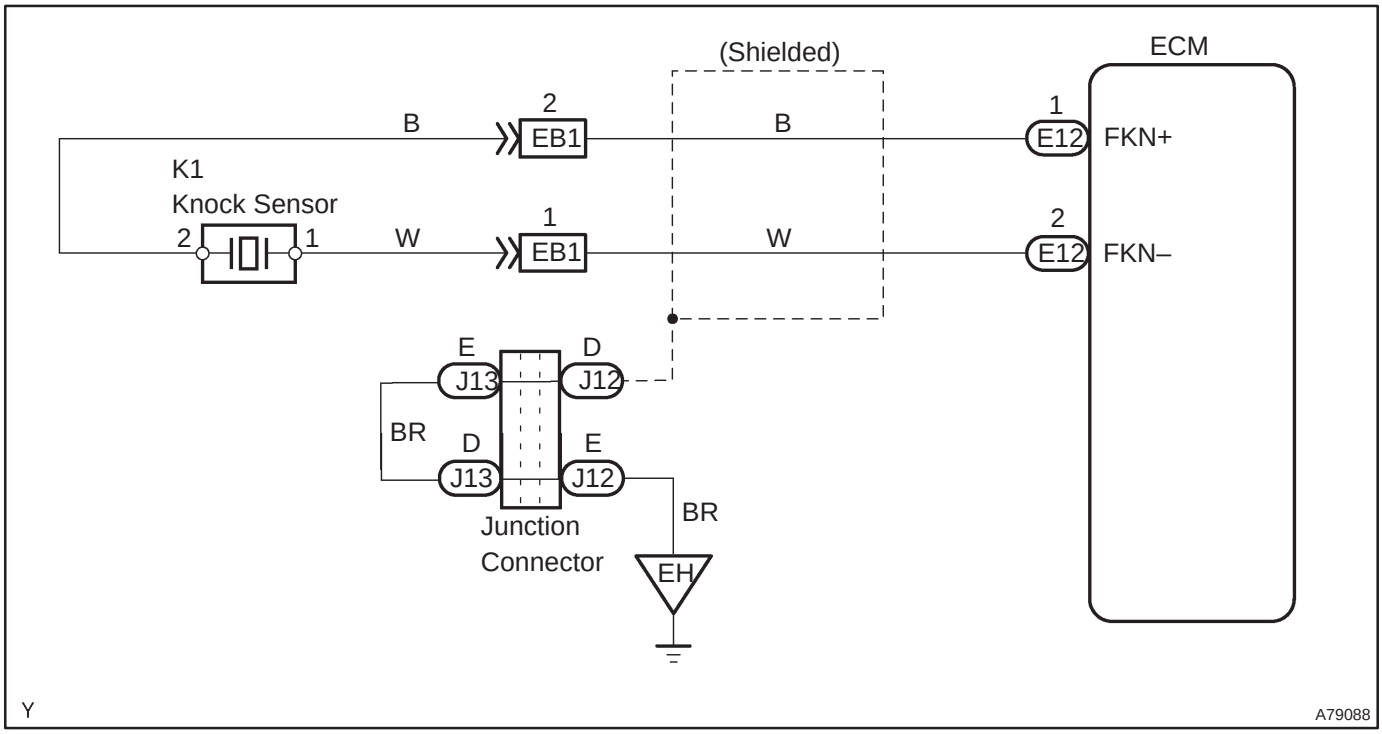
If the ECM detects the DTC "P0325", it enters the fail–safe mode in which the corrective retarded angle value is set to the maximum value.

Reference:

Inspection using the oscillascope.

(1) Run the engine at 4,000 rpm, check the waveform between terminal KNKL of the ECM connector and body ground.

HINT:



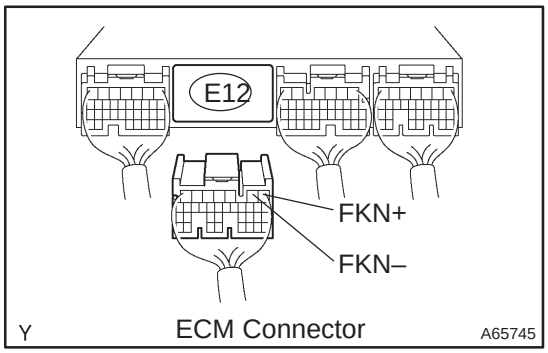
The correct waveform is as shown on the left.

(2) Spread the time on the horizontal axis, and confirm that period of the wave is 80 μ seconds (Normal mode vibration frequency of knock sensor: 11.7 kHz).

HINT:

If the vibration frequency in the normal mode is not 11.7 kHz, the sensor is out of order.

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

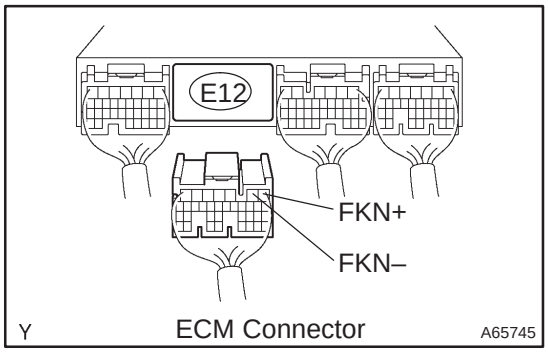
1	CHECK HARNESS AND CONNECTOR

(a) Disconnect the E12 ECM connector.
(b) Check for continuity between the wire harness side connectors.

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
FKN+ (E12–1) – FKN– (E12–2)	No continuity

OK	Go to step 3



NG

2	INSPECT KNOCK SENSOR (See page 10–3)

NG	REPLACE KNOCK SENSOR

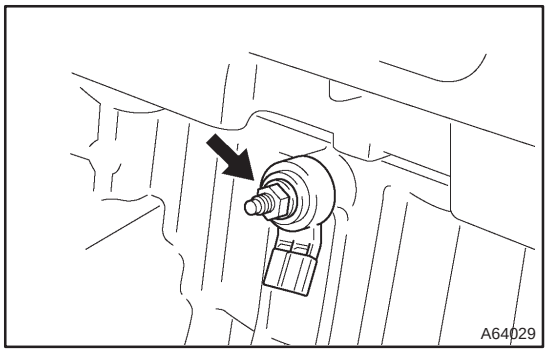
OK

3	CHECK HARNESS AND CONNECTOR(ECM – KNOCK SENSOR)

(a) Disconnect the E12 ECM connector.
(b) Disconnect the knock sensor connector.
(c) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
FKN+ (E12–1) – Knock sensor (K1–2)	Continuity
FKN– (E12–2) – Knock sensor (K1–1)	



Standard (Check for short):

Symbols (Terminal No.)	Specified condition
FKN+ (E12–1) or Knock sensor (K1–2) – Body ground	No continuity
FKN– (E12–2) or Knock sensor (K1–1) – Body ground	

NG	REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

4	CONFIRM THE MALFUNCTION DISAPPEAR WHEN A GOOD KNOCK SENSOR IS INSTALLED

(a) Change the knock sensor to a new one.
  (1) Remove the knock sensor.
  (2) Install a new knock sensor.
  Torque: 20 N·m (204 kgf·cm, 15 ft·lbf)
(b) Clear the DTC (See page 05–5).
(c) Perform the driving test.
(d) Read the DTC using the hand–held tester (See page 05–5).

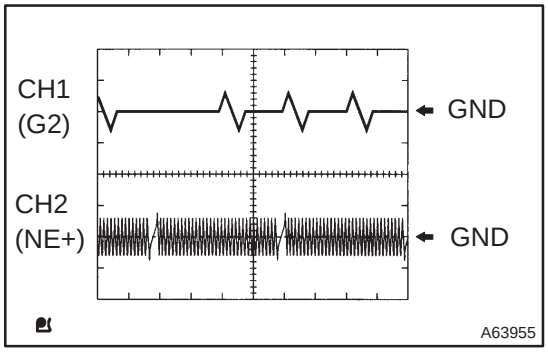
Result:

Display (DTC output)	Proceed to
”P0325” is output	A
”P0325” is not output	B

B → **REPLACE KNOCK SENSOR**

A

CHECK AND REPLACE ECM(See page 01–32)

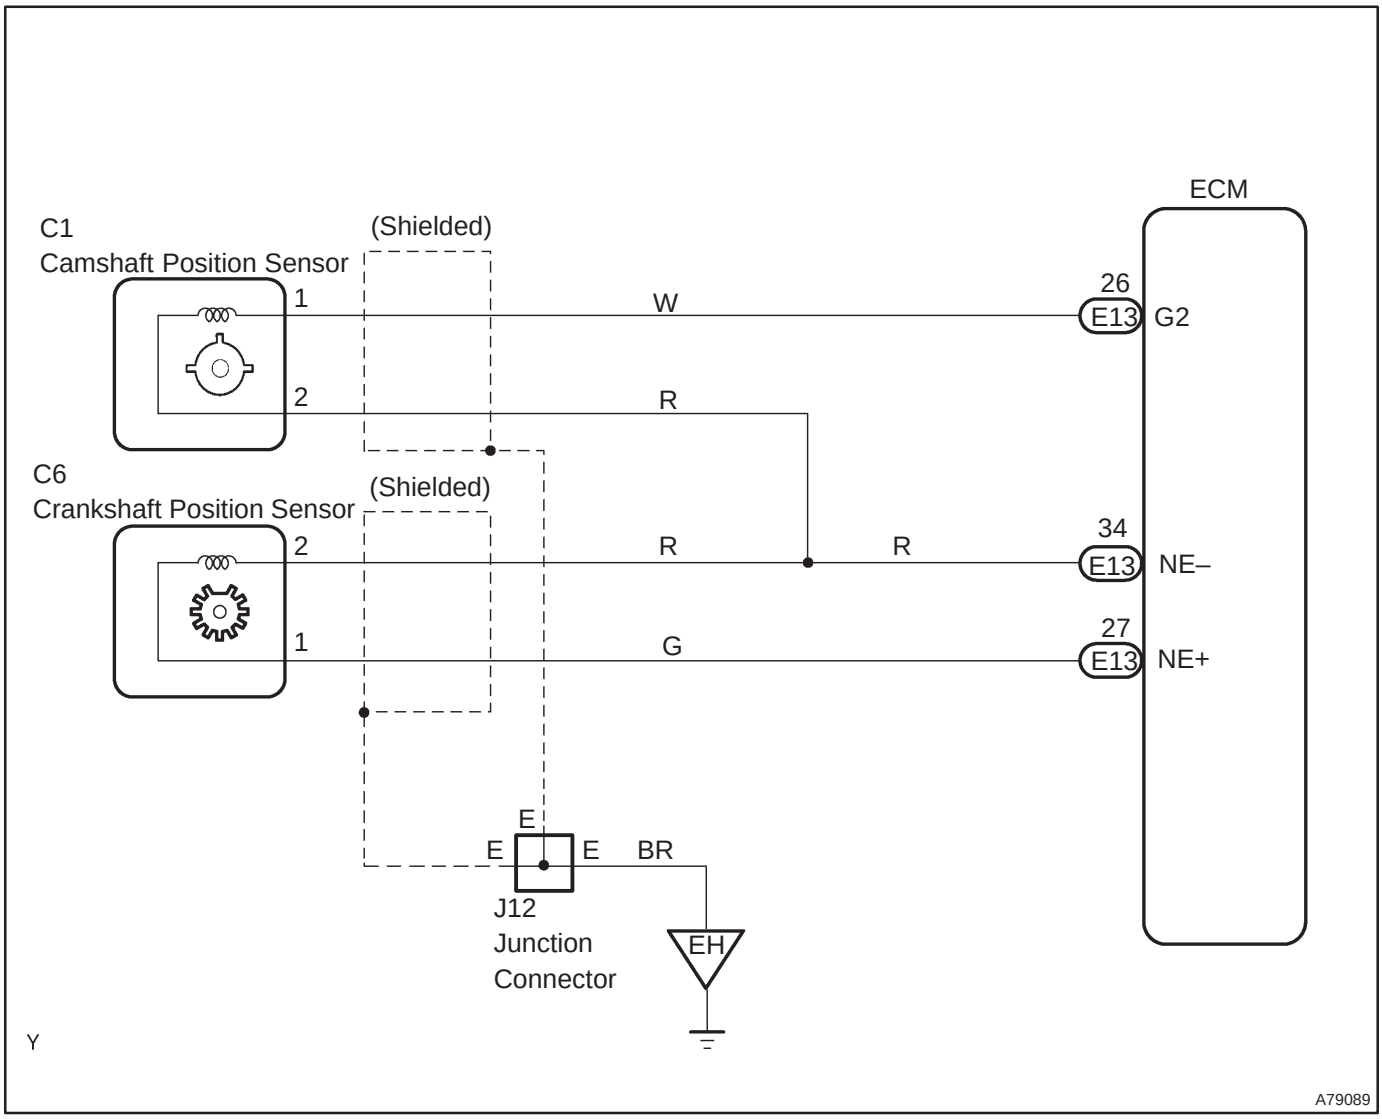


DTC	P0335	CRANKSHAFT POSITION SENSOR ”A” CIRCUIT MALFUNCTION

DTC	P1335	CRANKSHAFT POSITION SENSOR CIRCUIT MALFUNCTION (DURING ENGINE RUNNING)

CIRCUIT DESCRIPTION

The crankshaft position sensor (NE signal) consists of a magnet, iron core and pick up coil.
The NE signal plate (crankshaft timing pulley) has 34 teeth and is installed to the crankshaft. The NE signal sensor generates 34 signals at every engine revolution. The ECM detects the crankshaft angle and the engine revolution based on the NE signals, and the cylinder and the angle of the VVT based on the combination of the G2 and NE signals.

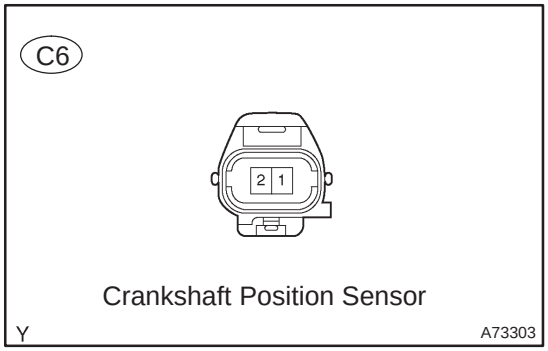


DTC No.	DTC Detecting Condition	Trouble Area
P0335	• No crankshaft position sensor signal to the ECM during cranking • Open in NE– circuit	• Open or short in crankshaft position sensor circuit • Crankshaft position sensor • Crank angle sensor plate • ECM
P1335	If conditions from (a) through (c) are met: (a) NE greater than 1,000 rpm (b) NE signal is not detected for over 0.05 sec. (c) Not during cranking	• Open or short in crankshaft position sensor circuit • Crankshaft position sensor • Crank angle sensor plate • ECM

Reference: Inspection using the oscilloscope.
HINT:
The correct waveform is as shown on the left.

Item	Contents
Terminal	CH1: G2 – NE– CH2: NE+ – NE–
Equipment Set	5V/DIV, 20ms/DIV
Condition	During cranking or idling

WIRING DIAGRAM



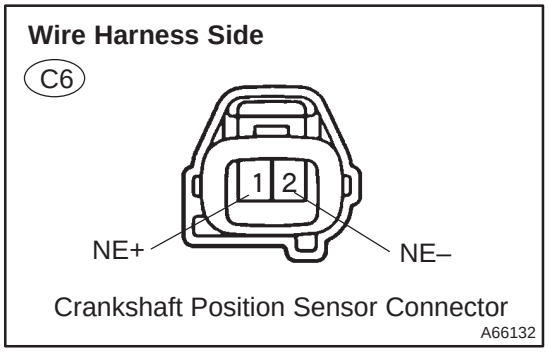
INSPECTION PROCEDURE

HINT:

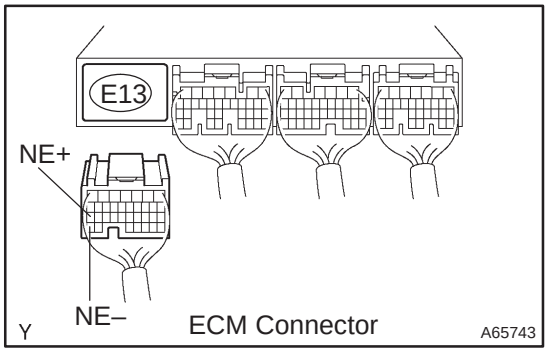
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.
- Perform troubleshooting on ”DTC P0335” first. If no trouble is found, troubleshoot the following mechanical system.

1 INSPECT CRANKSHAFT POSITION SENSOR(CHECK RESISTANCE)

(a) Measure the resistance between the terminals of the crankshaft posision sensor connector.



Resistance:
985 to 1,600 Ω (Cold)
1,265 to 1,890 Ω (Hot)



NOTICE:
"Cold" and "Hot" mean the temperature of the coils themselves. "Cold" is from –10°C (14°F) to 50°C (122°F) and "Hot" is from 50°C (122°F) to 100°C (212°F).

NG → **REPLACE CRANKSHAFT POSITION SENSOR**

OK

2 CHECK HARNESS AND CONNECTOR(ECM – CRANKSHAFT POSITION SENSOR)

(a) Disconnect the crankshaft position sensor connector.
(b) Disconnect the E13 ECM connector.
(c) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
NE+ (C6–1) – NE+ (E13–27)	Continuity
NE– (C6–2) – NE– (E13–34)	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
NE+ (C6–1) or NE+ (E13–27) – Body ground	No continuity
NE– (C6–2) or NE– (E13–34) – Body ground	

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

3 CHECK SENSOR INSTALLATION

(a) Check the crankshaft position sensor installation .

NG → **TIGHTEN SENSOR**

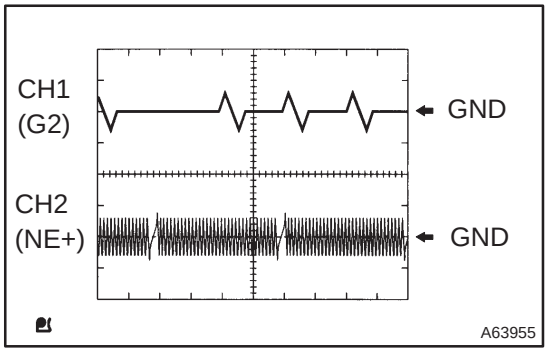
OK

4	INSPECT CRANKSHAFT(TEETH OF SIGNAL PLATE)

(a) Remove the oil pump assembly. (See page 17–3)
(b) Check the teeth of the signal plate.

NG → REPAIR OR REPLACE CRANKSHAFT

OK



CHECK AND REPLACE ECM (See page 01–32)

DTC	P0340	CAMSHAFT POSITION SENSOR CIRCUIT MALFUNCTION

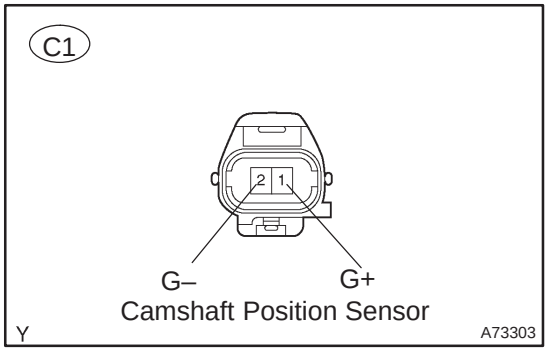
CIRCUIT DESCRIPTION

The camshaft position sensor (G2 signal) consists of a magnet, iron core and pickup coil.
The G2 signal plate has 3 teeth on its outer circumference and is installed on the camshaft timing pulley. When the camshafts rotate, the protrusion on the signal plate and the air gap on the pickup coil changes, causing fluctuations in the magnetic field and generating an electromotive force in the pickup coil.
The NE signal plate (crankshaft timing pulley) has 34 teeth and is installed to the crankshaft. The NE signal sensor generates 34 signals at every engine revolution. The ECM detects the crankshaft angle and the engine revolution based on the NE signals, and the cylinder and the angle of the VVT based on the combination of the G2 and NE signals.

DTC No.	DTC Detecting Condition	Trouble Area
P0340	• No camshaft position sensor signal to the ECM during cranking • Open in NE– circuit	• Open or short in camshaft position sensor circuit • Camshaft position sensor • Intake camshaft • Timing chain has jumped a tooth • ECM

Reference: Inspection using the oscilloscope.
HINT:
The correct waveform is as shown on the left.

Item	Contents
Terminal	CH1: G2 – NE– CH2: NE+ – NE–
Equipment Set	5V/DIV, 20ms/DIV
Condition	During cranking or idling



WIRING DIAGRAM

Refer to DTC P0335 on page05–84.

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

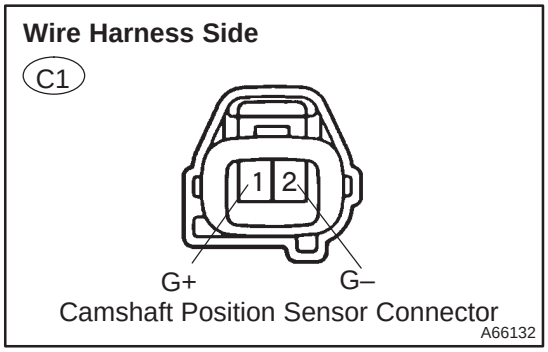
1 INSPECT CAMSHAFT POSITION SENSOR(CHECK RESISTANCE)

(a) Measure the resistance between the terminals of the camshaft posision sensor connector.

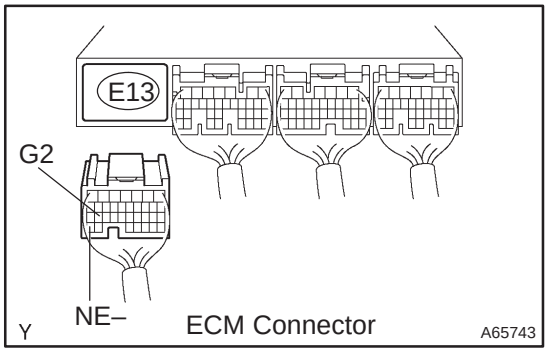
Resistance:

1,630 to 2,740 Ω (Cold)

2,065 to 3,225 Ω (Hot)



NOTICE:



"Cold" and "Hot" mean the temperature of the coils themselves. "Cold" is from –10°C (14°F) to 50°C (122°F) and "Hot" is from 50°C (122°F) to 100°C (212°F).

NG → **REPLACE CAMSHAFT POSITION SENSOR**

OK

2 CHECK HARNESS AND CONNECTOR(ECM – CAMSHAFT POSITION SENSOR)

(a) Disconnect the camshaft position sensor connector.

(b) Disconnect the E13 ECM connector.

(c) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
G+ (C1–1) – G2 (E13–26)	Continuity
G– (C1–2) – NE– (E13–34)	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
G+ (C1–1) or G2+ (E13–26) – Body ground	No continuity
G– (C1–2) or NE– (E13–34) – Body ground	

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

3 CHECK SENSOR INSTALLATION

(a) Check the camshaft position sensor installation.

NG → **TIGHTEN SENSOR**

OK

4	INSPECT CAMSHAFT

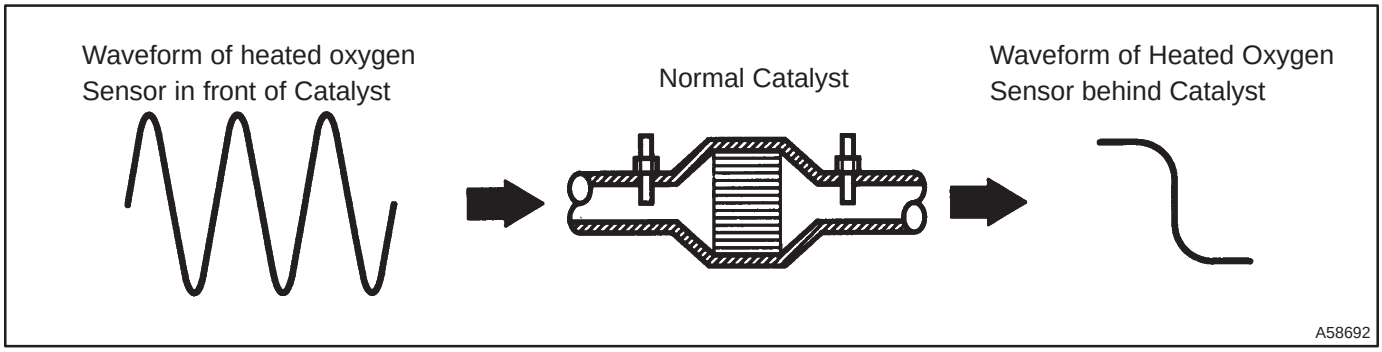
(a) Check the teeth of the signal plate.

NG → REPAIR OR REPLACE CAMSHAFT

OK

CHECK AND REPLACE ECM (See page 01–32)

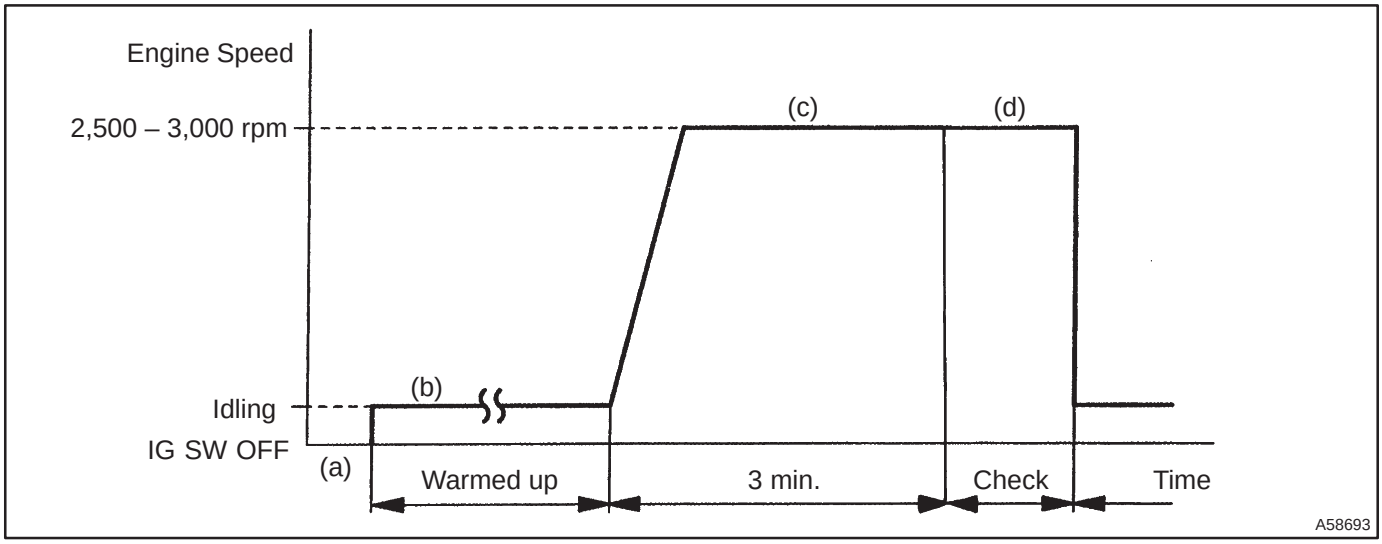
DTC	P0420	CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD (BANK 1)



CIRCUIT DESCRIPTION

The ECM compares the 2 waveforms of the heated oxygen sensors located before and after the catalyst to determine whether or not the catalyst performance has deteriorated.

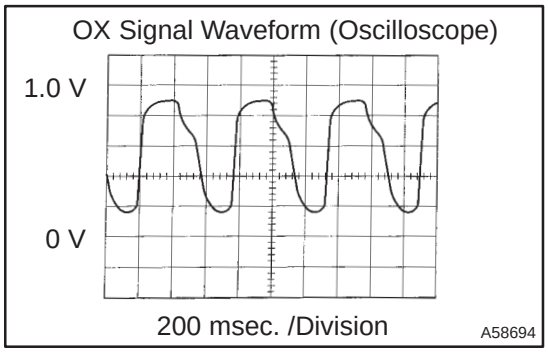
Air–fuel ratio feedback compensation keeps the waveform of the heated oxygen sensor in front of the catalyst alternates between back and forth, from rich to lean.



If the catalyst is functioning normally, the waveform of the heated oxygen sensor behind the catalyst switches back and forth between rich and lean much more slowly than the waveform of the heated oxygen sensor in front of the catalyst.

When both waveforms change at a similar rate, it indicates that the catalyst performance has deteriorated.

DTC No.	DTC Detecting Condition	Trouble Area
P0420	After engine and catalyst are warmed up, and while vehicle is driven within set vehicle and engine speed range, waveforms of heated oxygen sensors have same amplitude (2 trip detection logic)	• Gas leakage in exhaust system • Heated oxygen sensor • Three–way catalytic converter • ECM



CONFIRMATION DRIVING PATTERN

(a) Connect the hand–held tester to the DLC3, or connect the probe of the oscilloscope between terminals HT1A, HT1B, OX1A, OX1B and E1 of the ECM connector.
(b) Start the engine and warm it up with all the accessories switched OFF until the engine coolant temperature is stable.
(c) Run the engine at 2,500 to 3,000 rpm for about 3 min.
(d) After confirming that the waveform of the heated oxygen sensor (bank 1 sensor 1 (OX)) which oscillates around 0.5 V during feedback to the ECM, check the waveform of the heated oxygen sensor (bank 1 sensor 2 (OX)).

HINT:

- If there is a malfunction in the system, the waveform of the heated oxygen sensor (bank 1 sensor 2 (OX)) is similar to the wave from of the heated oxygen sensor (bank 1 sensor 1 (OX)) snown in the diagram on the left.
- There are some cases that, even though a malfunction exists, the CHK ENG may not be illuminated.

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand – held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

1	READ OUTPUT DTC(BESIDES P0420)

(a) Read the DTC using the hand–held tester.
Result:

Display (DTC output)	Proceed to
Only ”P0420” is output	A
”P0420” and other DTCs are output	B

HINT:

If any other codes besides ”P0420” are output, perform the troubleshooting for those DTCs first.

B → GO TO RELEVANT DTC CHART (See page 05–16)

A

2	CHECK FOR EXHAUST GAS LEAKS

NG → REPAIR OR REPLACE

OK

3	INSPECT HEATED OXYGEN SENSOR(BANK 1 SENSOR 1) (See Page 12–3)

NG → REPAIR OR REPLACE HEATED OXYGEN SENSOR

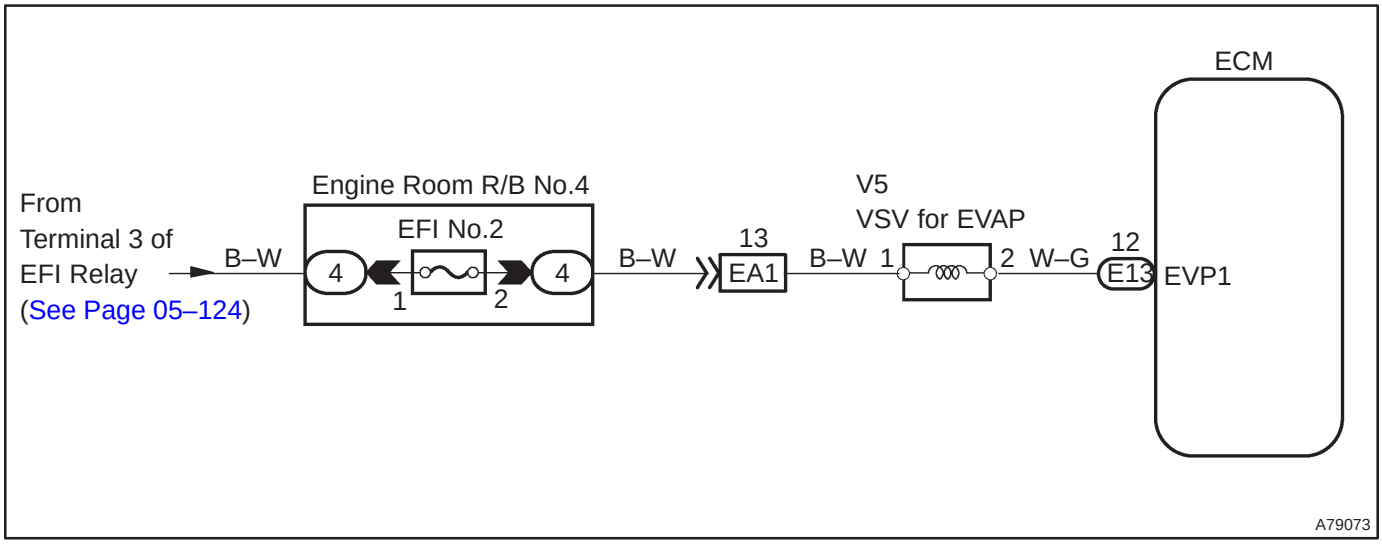
OK

4	INSPECT HEATED OXYGEN SENSOR(BANK 1 SENSOR 2) (See Page 12–3)

NG → REPAIR OR REPLACE HEATED OXYGEN SENSOR

OK

REPLACE THREE–WAY CATALYTIC CONVERTER

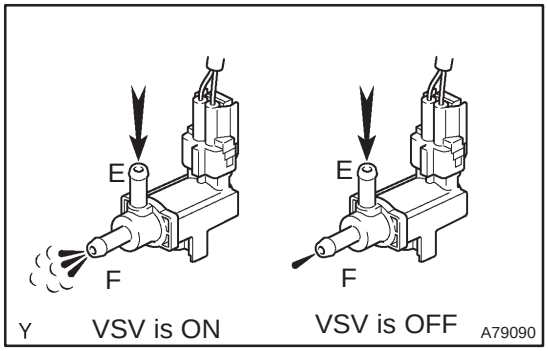


DTC	P0443	EVAPORATIVE EMISSION CONTROL SYSTEM PURGE CONTROL VALVE CIRCUIT MALFUNCTION

CIRCUIT DESCRIPTION

To reduce HC emissions, evaporated fuel from the fuel tank is routed through the charcoal canister to the intake manifold for combustion in the cylinders.
The ECM changes the duty signal to the VSV for EVAP so that the intake quantity of HC emissions becomse properly for the driving conditions (engine load, engine speed, vehicle speed, etc.) after the engine is warmed up.

DTC No.	DTC Detecting Condition	Trouble Area
P0443	Proper response to ECM command does not occur (1 trip detection logic)	• Open or short in VSV for EVAP circuit • VSV for EVAP • ECM

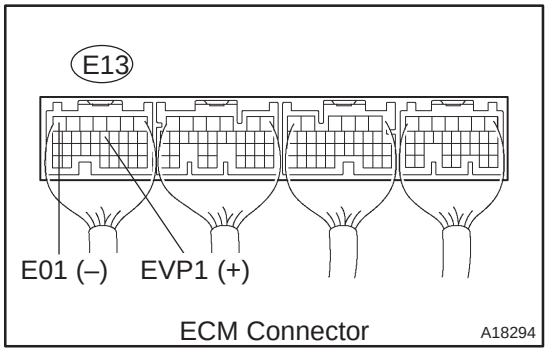


WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

1 PERFORM ACTIVE TEST BY HAND–HELD TESTER(VSV FOR EVAP)



(a) Select the ACTIVE TEST mode on the hand–held tester.
(b) Disconnect the vacuum hose from the VSV for EVAP.
(c) Start the engine.
(d) When the VSV for EVAP is operated by the hand–held tester, apply the disconnected hose to your finger to check the suction.

Result:
VSV is ON: Disconnected port sucks.
VSV is OFF: Disconnected port does not suck.

OK → **CHECK FOR INTERMITTENT PROBLEMS**

NG

2 INSPECT ECM(CHECK VOLTAGE)

(a) Turn the ignition switch ON.
(b) Measure the voltage between the terminals of the E13 ECM connector.

Standard:

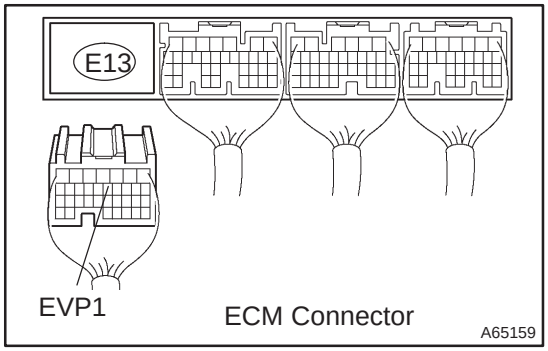
Symbols (Terminal No.)	Specified condition
EVP1 (E13–12) – E01 (E13–7)	8 to 14 V

OK → **CHECK AND REPLACE ECM**

NG

3 INSPECT VACUUM SWITCHING VALVE ASSY NO.1

NG → **REPLACE VACUUM SWITCHING VALVE ASSY NO.1**



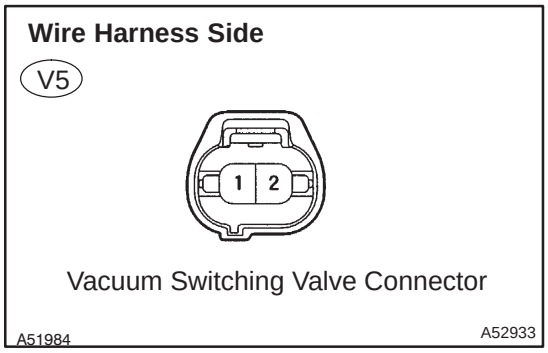
OK

4 CHECK FUSE(EFI No.2) (See page 05–45)

NG → **CHECK FOR SHORT IN ALL HARNESS AND COMPONENTS CONNECTED FUSE**

OK

5 CHECK HARNESS AND CONNECTOR(ECM – VSV FOR EVAP)

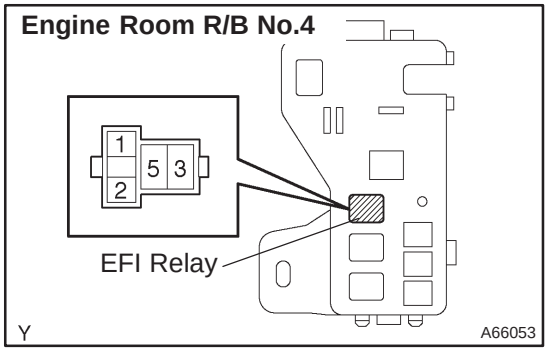


(a) Disconnect the E13 ECM connector.
(b) Disconnect the VSV connector.
(c) Check for continuity between the wire harness side connectors.

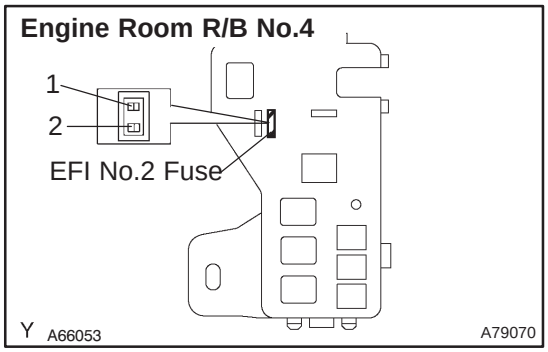
Standard (Check for open):

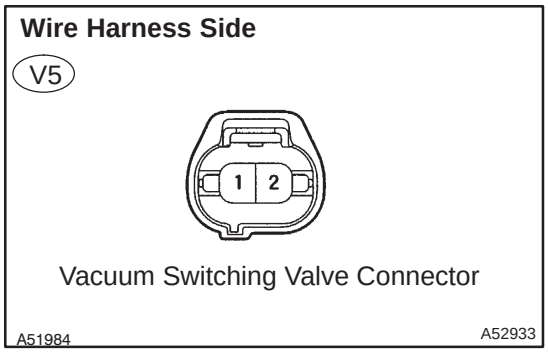
Symbols (Terminal No.)	Specified condition
VSV (V5–2) – EVP1 (E13–12)	Continuity

Standard (Check for short):



Symbols (Terminal No.)	Specified condition
VSV (V5–2) or EVP1 (E13–12) – Body ground	No continuity





NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6 CHECK HARNESS AND CONNECTOR(EFI RELAY – VSV FOR EVAP)

(a) Remove the EFI relay from the engine room R/B No.4.
(b) Remove the EFI No.2 fuse from the engine room R/B No.4.
(c) Disconnect the VSV connector.
(d) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
EFI relay (3) – EFI No.2 fuse (1)	Continuity
EFI No.2 fuse (2) – VSV (V5–1)	

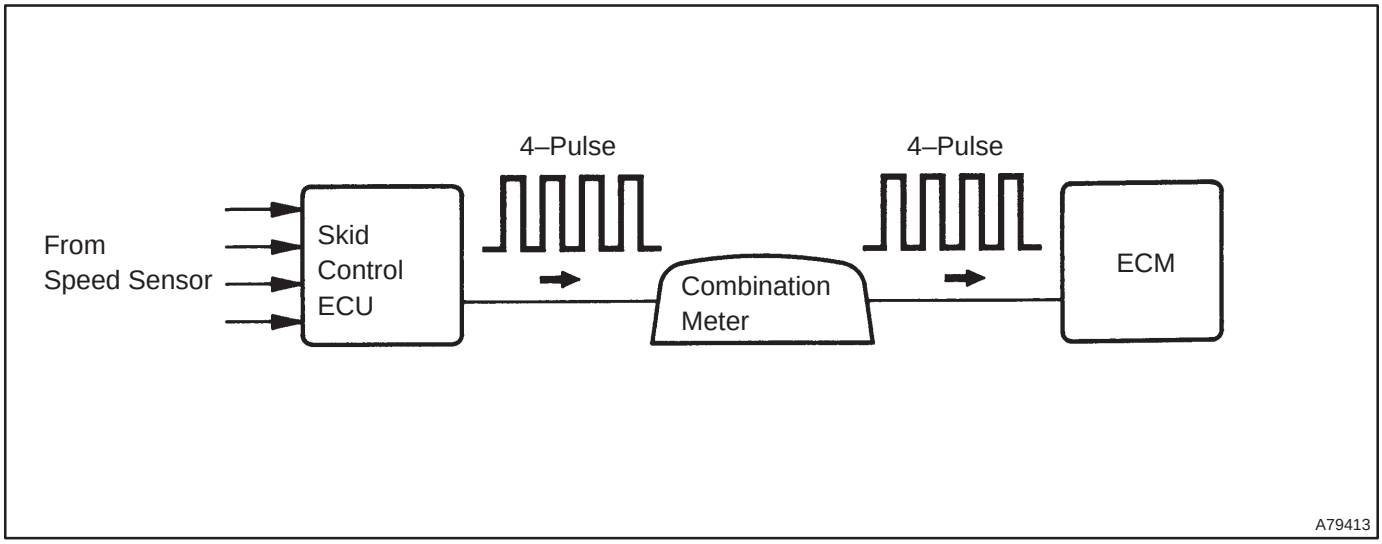
Standard (Check for short):

Symbols (Terminal No.)	Specified condition
EFI relay (3) or EFI No.2 fuse (1) – Body ground	No continuity
EFI No.2 fuse (2) or VSV (V5–1) – Body ground	

NOTICE:
Do not insert the tester leads hard in the procedure (c), the holder may be damaged.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

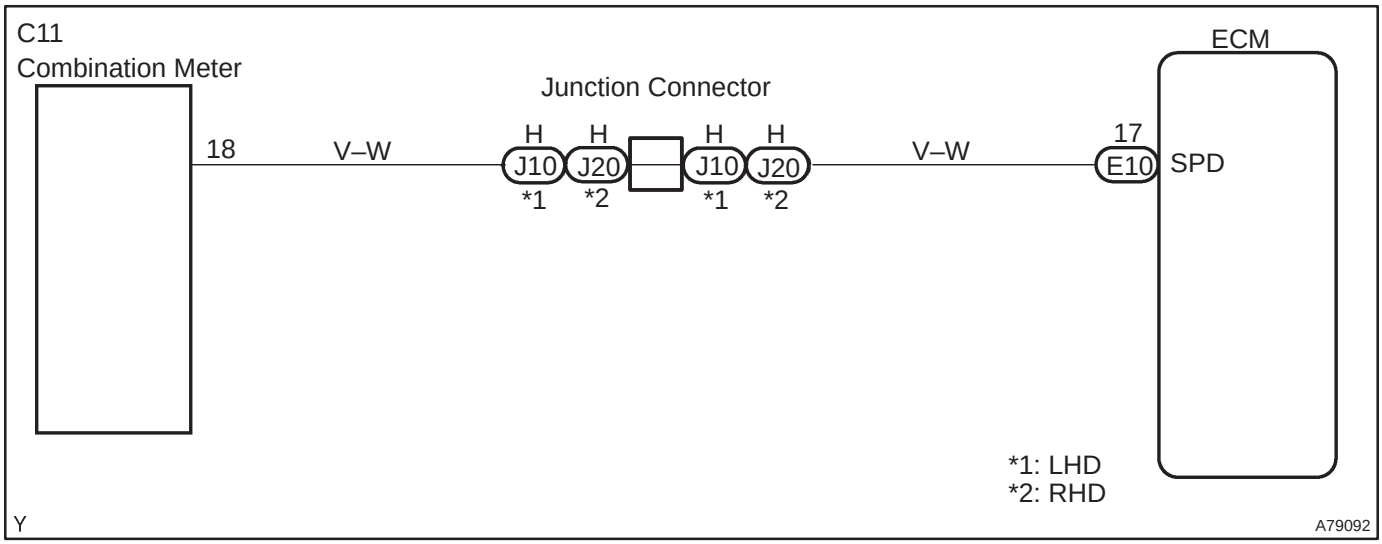
OK



CHECK FOR ECM POWER SOURCE CIRCUIT (See page 05–124)

DTC	P0500	VEHICLE SPEED SENSOR MALFUNCTION

CIRCUIT DESCRIPTION



The speed sensor for skid control ECU detects the wheel speed and sends the appropriate signals to the skid control ECU.

The skid control ECU converts these signals into a 4–pulse signal and outputs it to the combination meter. After this signal is converted into a more precise rectangular waveform by the waveform shaping circuit inside the combination meter, it is then transmitted to the ECM. The ECM determines the vehicle speed based on the frequency of these pulse signals.

DTC No.	DTC Detecting Condition	Trouble Area
P0500	During the vehicle is being driven, no vehicle speed sensor signal to the ECM (1 trip detection logic: A/T) (2 trip detection logic: M/T)	• Open or short in speed sensor circuit • Speed sensor • Combination meter • ECM • Skid control ECU

WIRING DIAGRAM

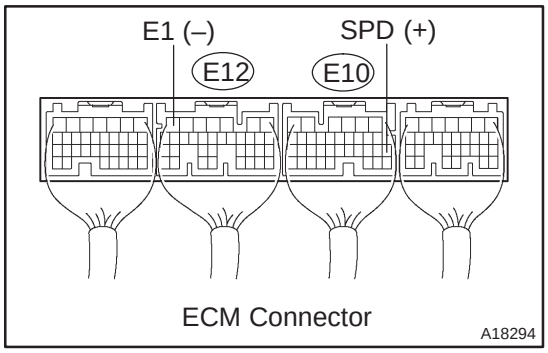
INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

1	CHECK OPERATION OF SPEEDOMETER(SPEEDOMETER OPERATION)

(a) Drive the vehicle and check that the operation of the speedometer in the combination meter is normal.

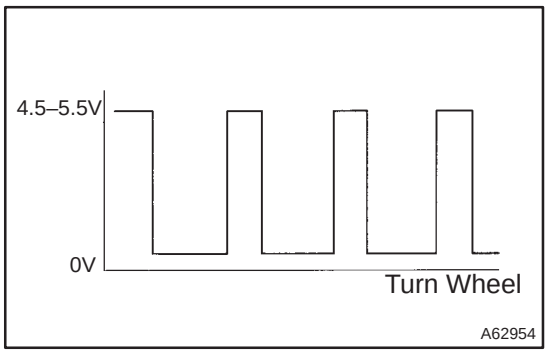


HINT:

The vehicle speed sensor is operating normally if the speedometer display is normal.

NG → CHECK SPEEDOMETER CIRCUIT

OK



2	INSPECT ECM(CHECK VOLTAGE)

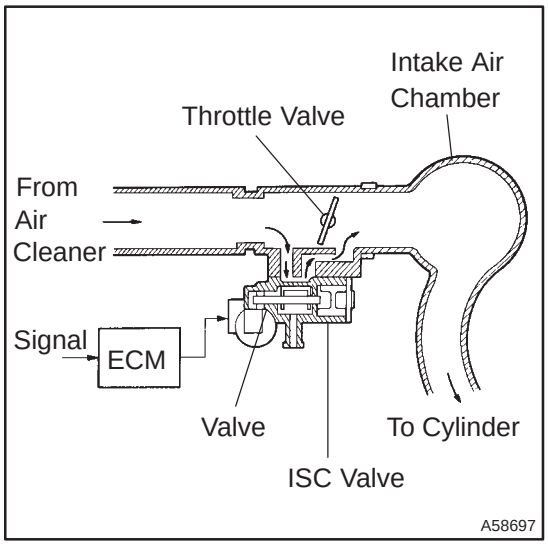
(a) Shift the lever to the neutral position.
(b) Jack up the vehicle.
(c) Turn the ignition switch ON.
(d) Measure the voltage between the terminals of the E10 and E12 ECM connectors as the wheel is turned slowly.

Standard:

Symbols (Terminal No.)	Specified condition
SPD (E10–17) – E1 (E12–7)	Generated intermittently

HINT:

The output voltage should fluctuate up and down similarly to the diagram on the left when the wheel is turned slowly.

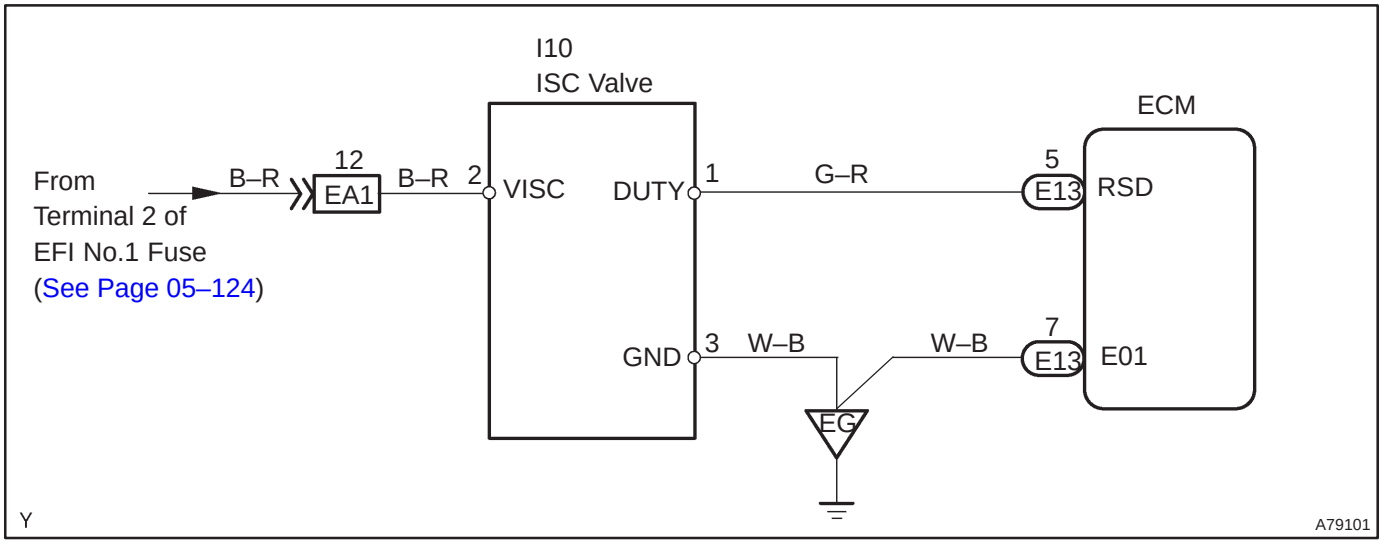


NG → REPAIR OR REPLACE HARNESS AND CONNECTOR

OK

CHECK AND REPLACE ECM (See page 01–32)

DTC P0505 IDLE CONTROL SYSTEM MALFUNCTION



CIRCUIT DESCRIPTION

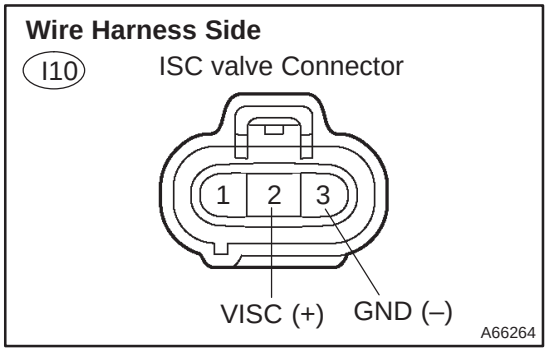
The rotary solenoid type of the idle speed control (ISC) valve is located under the throttle body and intake air bypassing the throttle valve is directed to the ISC valve through the passage. In this way the intake air volume bypassing the throttle valve is regulated, controls the engine speed.
The ECM operates the ISC valve only to perform idle–up and provide feedback for the target idling speed.

DTC No.	DTC Detecting Condition	Trouble Area
P0505	Idle speed continues to vary greatly from target speed (1 trip detection logic)	• Open or short in ISC valve circuit • ISC valve is stuck or closed • PCV hose • A/C switch circuit • Air induction system • ECM

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.



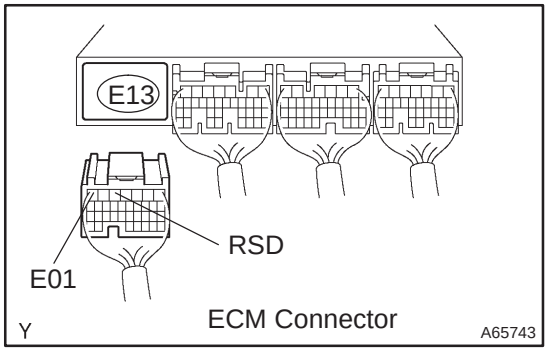
1	PERFORM ACTIVE TEST USING HAND–HELD TESTER(CHECK ISC VALVE OPERATION)

(a) Warm up the engine to the normal operating temperature.
(b) Switch off all the accessories.
(c) Switch off the A/C.
(d) Shift the lever to the neutral position.
(e) Connect the hand–held tester to the DLC3 on the vehicle.
(f) Select the item ”DIAGNOSIS / OBD/MOBD / ACTIVE TEST / ISC DUTY RATIO”.
(g) Check that the engine RPM varies when changing the ISC duty ratio.
Engine RPM:
Engine RPM fluctuates ups and downs in respose to the ISC duty ratio variation.

OK → **CHECK FOR INTERMITTENT PROBLEMS (See page 05–5)**

NG

2	CHECK HARNESS AND CONNECTOR



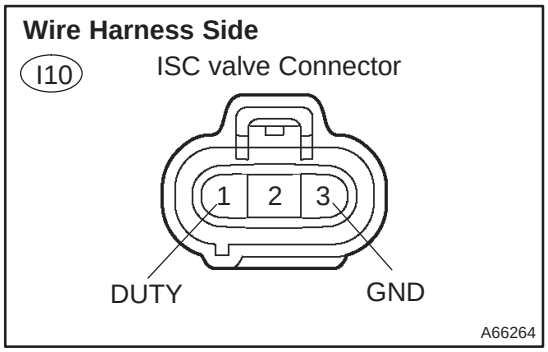
(a) Disconnect the ISC valve connector.
(b) Turn the ignition switch ON.
(c) Measure the voltage between the terminals of the ISC valve wire harness side connector.
Standard:

Symbols (Terminal No.)	Specified condition
VISC (I10–2) – GND (I10–3)	9 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	CHECK HARNESS AND CONNECTOR(RSD CIRCUIT)



(a) Disconnect the ISC valve connector.
(b) Disconnect the E13 ECM connector.
(c) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
DUTY (I10–1) – RSD (E13–5)	Continuity
GND (I10–3) – E01 (E13–7)	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
DUTY (I10–1) or RSD (E13–5) – Body groundr	No continuity

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	INSPECT THLOTTLE BODY IDLE SPEED CONTROL VALVE ASSY (See page 10–1)

NG → **REPLACE THLOTTLE BODY IDLE SPEED CONTROL VALVE ASSY**

OK

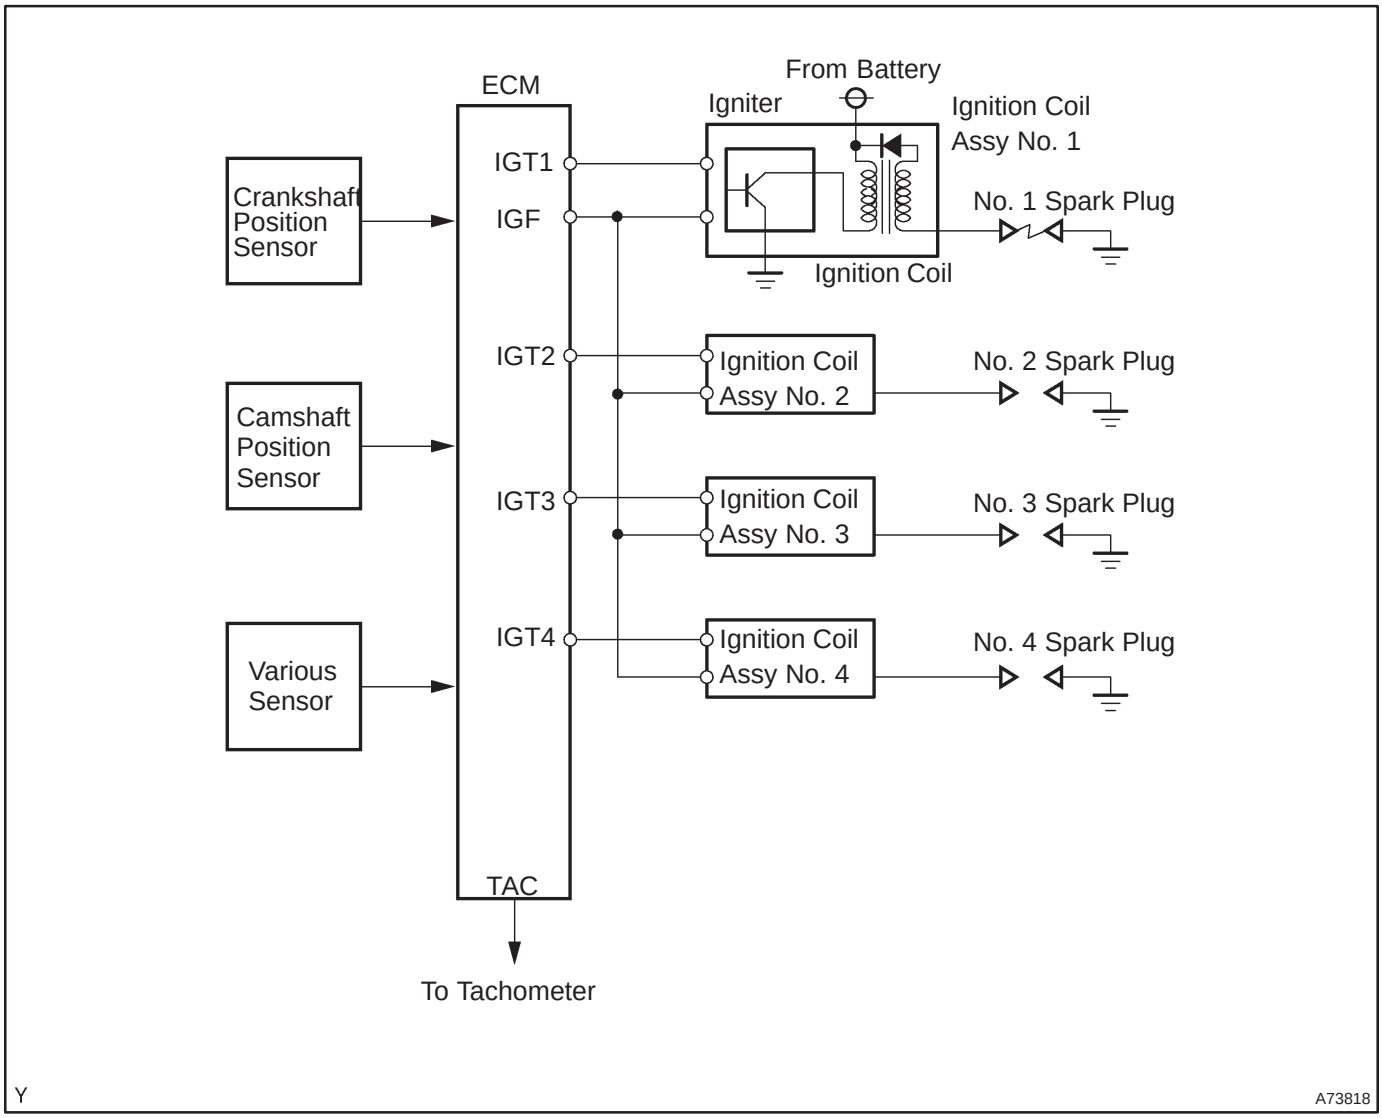
CHECK AND REPLACE ECM (See page 01–32)

DTC	P1300	IGNITER CIRCUIT MALFUNCTION (NO.1)

DTC	P1305	IGNITER CIRCUIT MALFUNCTION (NO.2)

DTC	P1310	IGNITER CIRCUIT MALFUNCTION (NO.3)

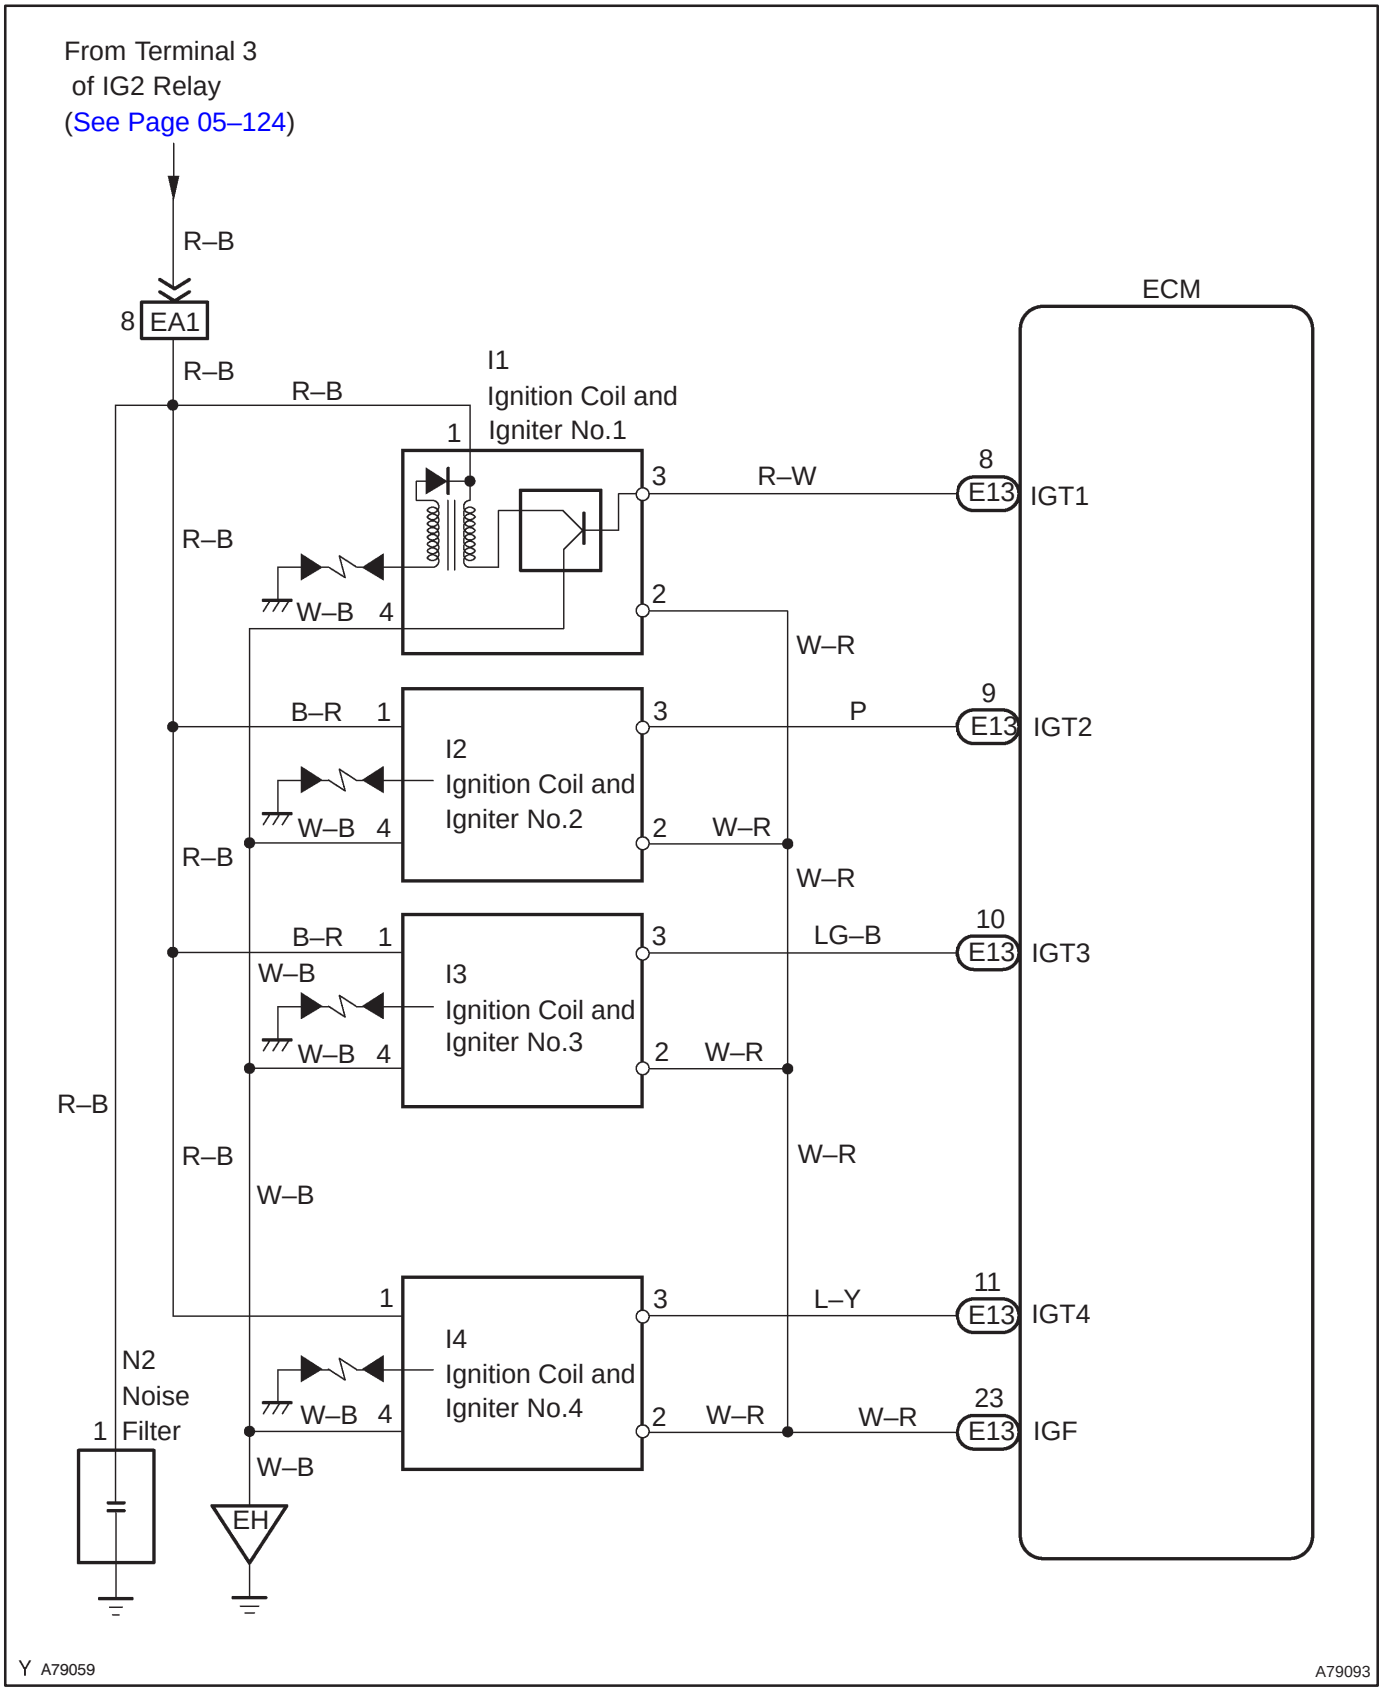
DTC	P1315	IGNITER CIRCUIT MALFUNCTION (NO.4)



CIRCUIT DESCRIPTION

HINT:

- If DTC P1300 is displayed, check No.1 ignition coil with igniter circuit.
- If DTC P1305 is displayed, check No.2 ignition coil with igniter circuit.
- If DTC P1310 is displayed, check No.3 ignition coil with igniter circuit.
- If DTC P1315 is displayed, check No.4 ignition coil with igniter circuit.



A Direct Ignition System (DIS) has been adopted. The DIS improves the ignition timing accuracy, reduces the high–voltage loss, and enhances overall reliability of the ignition system by eliminating the distributor. The DIS is a 1–cylinder ignition system which ignites one cylinder with one ignition coil. In the 1–cylinder ignition system, the spark plug is connected to the end of the secondary coil. High voltage generated in the secondary coil is applied directly to the spark plug. The spark of the spark plug passes through from the center electrode to the ground electrode.

The ECM determines ignition timing and outputs the ignition (IGT) signals of each cylinder. Based on IGT signals, the power transistors cut off the current to the primary coil in the ignition coil. At the same time, the igniter also sends an ignition confirmation (IGF) signal as a fail–safe measurement to the ECM.

DTC No.	DTC Detecting Condition	Trouble Area
P1300 P1305 P1310 P1315	No IGF signal to the ECM while engine is running	• Ignition system • Open or short in IGF or IGT1 circuit from No. 1 ignition coil with igniter to ECM • No.1 – No.4 ignition coil with igniter • ECM

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

1 PERFORM SIMULATION TEST

(a) Clear the DTC (See page 05–5)

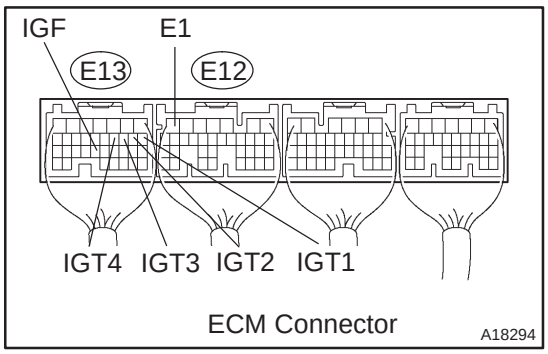
(b) Shuffle arrangement of the ighition coil and igniters.

NOTICE:

Do not shuffle the connectors.

(c) Perform the simulation test.

(d) Clear the DTC (See page 05–5)



Result:

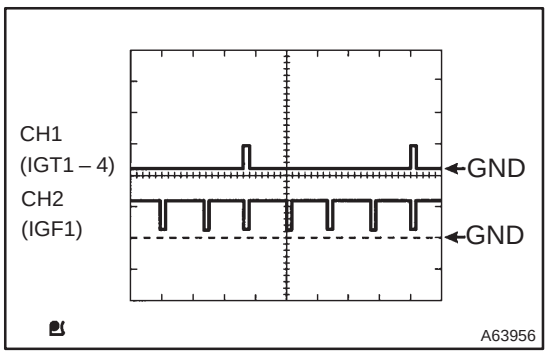
Display (DTC output)	Proceed to
The same DTC is output again	A
The other DTC is output	B

B → **REPLACE IGNITION COIL**

A

2 INSPECT ECM(IGT1, IGT2, IGT3, IGT4 AND IGF SIGNAL)

(a) Inspection using the oscilloscope.

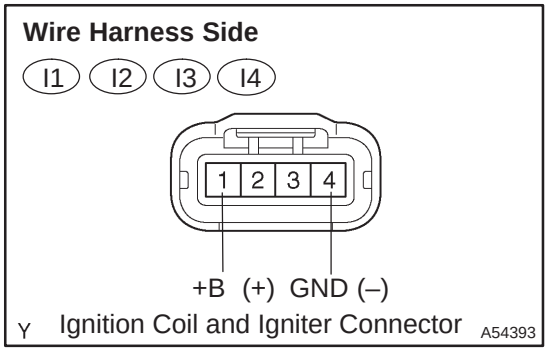


(b) During cranking or idling, check the waveform between terminals IGT1 to IGT4 and E1, and IGF1 and E1 of the ECM connector.

Standard:

Item	Contents
Terminal	CH1: IGT1, IGT2, IGT3, IGT4 – E1 CH2: IGF – E1
Equipment Set	2V/DIV, 20ms/DIV
Condition	While the engine is cranking or idling

HINT:



Correct waveform is as shown in the diagram on the left.

NG → **CHECK AND REPLACE ECM (See page 01–32)**

OK

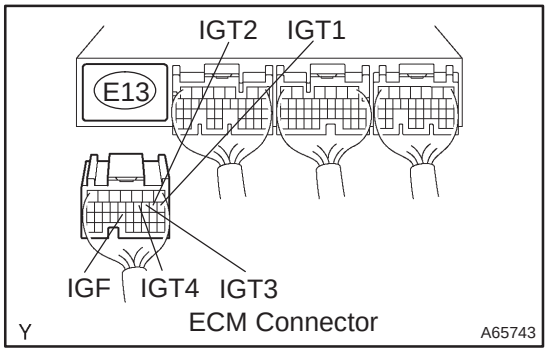
3 INSPECT IGNITION COIL(POWER SOURCE)

(a) Disconnect the ignition coil and igniter connector.
(b) Check for continuity between the wire harness side connectors.

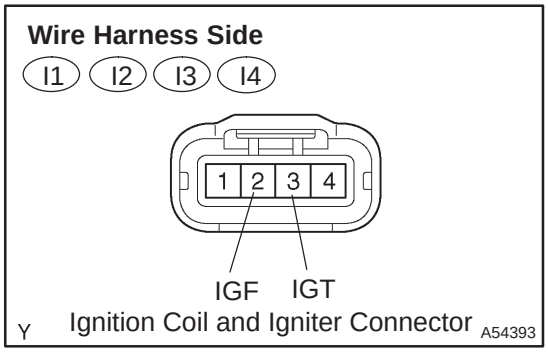
Standard (Check for open):

Symbols (Terminal No.)	Specified condition
GND (I1–4) – Body ground	Continuity
GND (I2–4) – Body ground	
GND (I3–4) – Body ground	
GND (I4–4) – Body ground	

(c) Turn the ignition switch ON.
(d) Measure the voltage between the terminals of the ignition coil and igniter connector.



Standard:



Symbols (Terminal No.)	Specified condition
+B (I1–1) – GND (4)	9 to 14 V
+B (I2–1) – GND (4)	
+B (I3–1) – GND (4)	
+B (I4–1) – GND (4)	

NG → **Go to step 5**

OK

4 CHECK HARNESS AND CONNECTOR(ECM – IGNITION COIL)

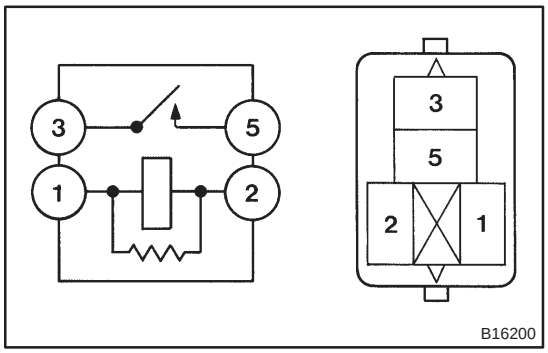
HINT:
The procedure below is for No.1 cylinder. If a malfunction is found on other cylinders, check the circuit for the cylinder with referring to this procedure.

(a) Disconnect the ignition coil and igniter connector.
(b) Disconnect the E13 ECM connector.
(c) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
IGT (I1–3) – IGT1 (E13–8)	Continuity
IGT (I2–3) – IGT2 (E13–9)	
IGT (I3–3) – IGT3 (E13–10)	
IGT (I4–3) – IGT4 (E13–11)	
IGF (I1–2) – IGF (E13–23)	
IGF (I2–2) – IGF (E13–23)	
IGF (I3–2) – IGF (E13–23)	
IGF (I4–2) – IGF (E13–23)	

Standard (Check for short):



Symbols (Terminal No.)	Specified condition
IGT (I1–3) or IGT1 (E13–8) – Body ground	No continuity
IGT (I2–3) or IGT2 (E13–9) – Body ground	
IGT (I3–3) or IGT3 (E13–10) – Body ground	
IGT (I4–3) or IGT4 (E13–11) – Body ground	
IGF (I1–2) or IGF (E13–23) – Body ground	
IGF (I2–2) or IGF (E13–23) – Body ground	
IGF (I3–2) or IGF (E13–23) – Body ground	
IGF (I4–2) or IGF (E13–23) – Body ground	

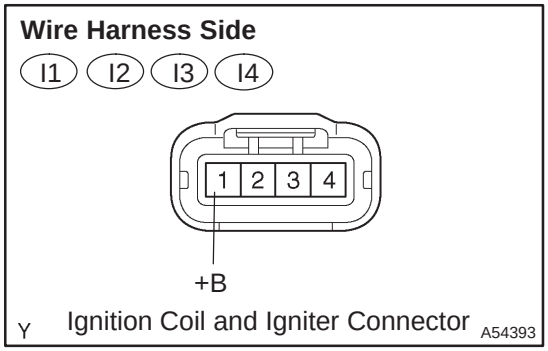
NG → **REPLACE HARNESS OR CONNECTOR**

OK

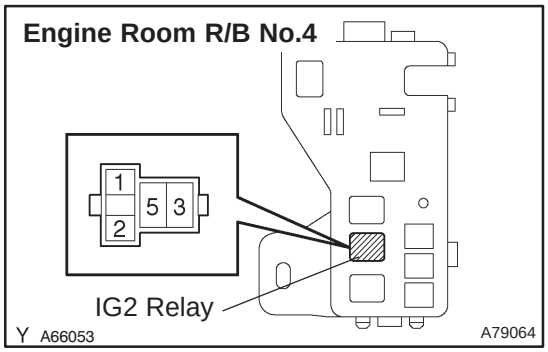
REPLACE IGNITION COIL

5 INSPECT IG2 RELAY

(a) Remove the IG2 relay from the engine room R/B No.4.
(b) Inspect the IG2 relay.



Standard:



Terminal No.	Specified condition
1 – 2	Continuity
3 – 5	No Continuity
	Continuity (Apply battery voltage Terminals 1 and 2)

NG → **REPLACE IG2 RELAY**

OK

6 CHECK HARNESS AND CONNECTOR(IG2 RELAY – IGNITION COIL)

(a) Disconnect the ignition coil and igniter connector.
(b) Remove the IG2 relay from the engine room R/B No.4.
(c) Check for continuity between the wire harness side connectors.

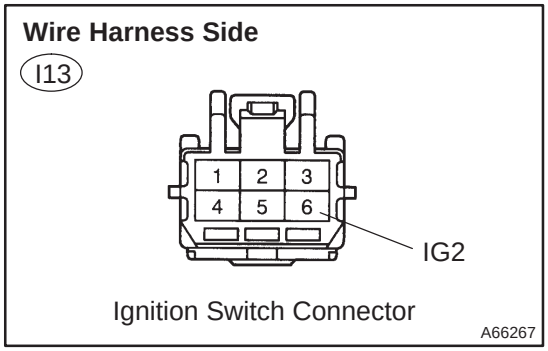
Standard (Check for open):

Symbols (Terminal No.)	Specified condition
+B (I1–1) – IG2 relay (3)	Continuity
+B (I2–1) – IG2 relay (3)	
+B (I3–1) – IG2 relay (3)	
+B (I4–1) – IG2 relay (3)	

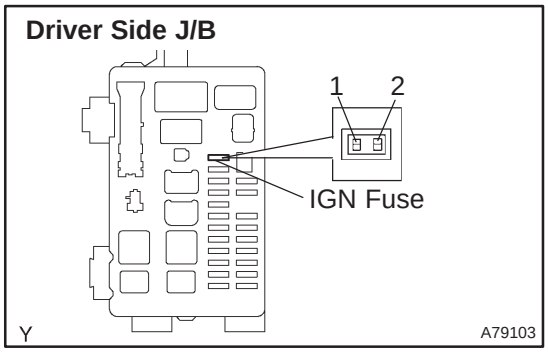
Standard (Check for short):

Symbols (Terminal No.)	Specified condition
+B (I1–1) or IG2 relay (3) – Body ground	No continuity
+B (I2–1) or IG2 relay (3) – Body ground	
+B (I3–1) or IG2 relay (3) – Body ground	
+B (I4–1) or IG2 relay (3) – Body ground	

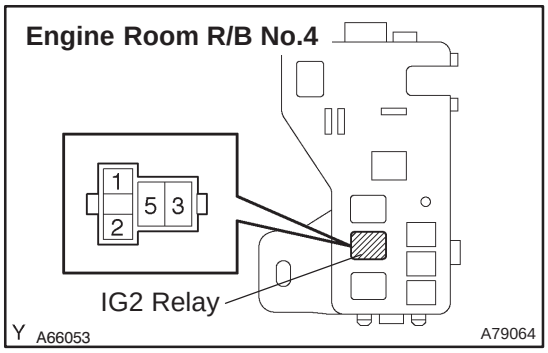
NG → **REPLACE HARNESS OR CONNECTOR**



OK



7 CHECK FUSE(IGN FUSE) (See page 05–124)



NG → **CHECK FOR SHORT IN ALL HARNESSES AND COMPONENTS CONNECTED FUSE**

OK

8 CHECK HARNESS AND CONNECTOR(IGNITION SWITCH – IG2 RELAY)

(a) Disconnect the battery negative (–) terminal.
(b) Disconnect the ignition switch connector.
(c) Remove the IGN fuse from the driver side J/B.
(d) Remove the IG2 relay from the engine room R/B No.4.
(e) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
IG2 (I13–6) – IGN fuse (1)	Continuity
IGN fuse (2) – IG2 relay (1)	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
IG2 (I13–6) or IGN fuse (1) – Body ground	No continuity
IGN fuse (2) or IG2 relay (1) – Body ground	

NG → **REPLACE HARNESS OR CONNECTOR**

OK

CHECK AND REPLACE POWER SOURCE CIRCUIT

DTC	P1346	VVT SENSOR/CAMSHAFT POSITION SENSOR CIRCUIT RANGE/PERFORMANCE PROBLEM (BANK 1)

CIRCUIT DESCRIPTION

Refer to DTC P0335 on page 05–84

DTC No.	Detection Item	Trouble Area
P1346	Deviation in crankshaft position sensor signal and camshaft position sensor signal (2 trip detection logic)	• Mechanical system (Timing chain has jumped a tooth, chain stretched) • ECM

WIRING DIAGRAM

Refer to DTC P0335 on page 05–84

INSPECTION PROCEDURE

HINT:

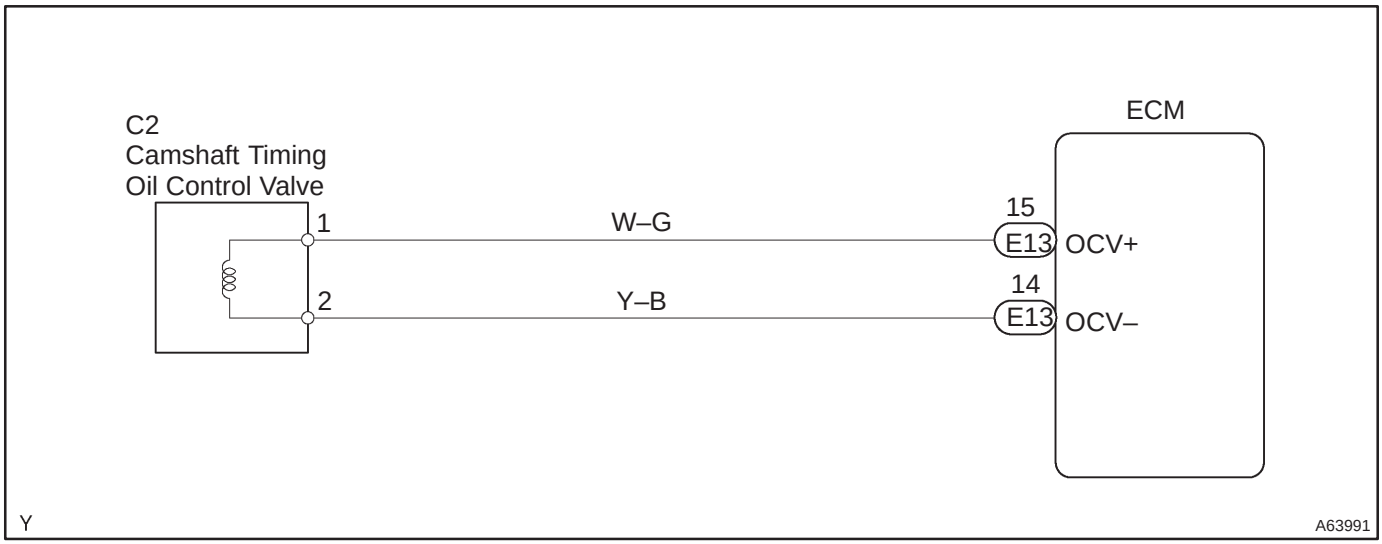
Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when the malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

1	CHECK VALVE TIMING (See page 14–49)

NG → ADJUST VALVE TIMING (See page 14–49)

OK

CHECK AND REPLACE ECM (See page 01–32)



DTC	P1349	VVT SYSTEM MALFUNCTION (BANK 1)

CIRCUIT DESCRIPTION

VVT system controls the intake valve timing to proper timing in response to driving condition.
The ECM controls the oil control valve (OCV) to make the intake valve timing properly, oil pressure regulated by the OCV is supplied to the valiable valve timing (VVT) controller, and then the VVT controller changes relative position between the camshaft and the crankshaft.

DTC No.	DTC Detecting Condition	Trouble Area
P1349	Condition (a) or (b) continues with engine speed at 400 to 4,000 rpm after the engine is warmed up (a) Valve timing does not change from the current valve timing (b) Current valve timing is fixed	• Valve timing • OCV • VVT controller assembly • ECM

WIRING DIAGRAM

INSPECTION PROCEDURE

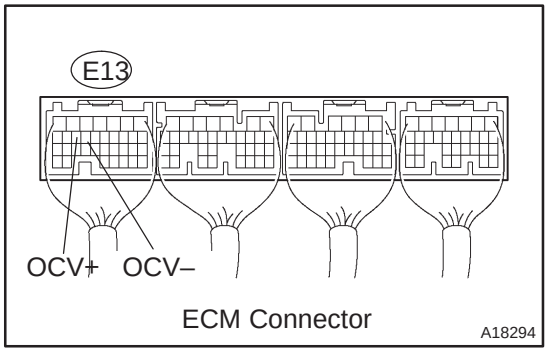
HINT:
Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

1	CHECK VALVE TIMING (See page 14–49)

NG → ADJUST VALVE TIMING (See page 14–49)

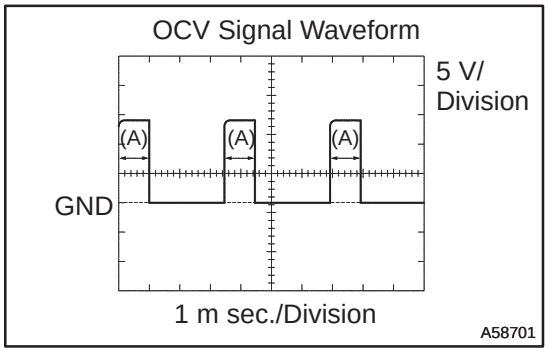
OK

2	PERFORM ACTIVE TEST BY HAND–HELD TESTER(OPERATE OF OCV)



(a) Start the engine and warm it up.
(b) Connect the hand–held tester and select VVT from the ACTIVE TEST menu.
(c) Check the engine speed while operating the OCV by the hand–held tester.
OCV is OFF: Normal engine speed
OCV is ON: Rough idle or engine stall

HINT:
DTC P1349 is also output when a foreign object is detected in some parts of the system in engine oil, and then the system returns to normal in a short time. There is also no problem on the VVT as the oil filter should catch the foreign object in engine oil.



OK	VVT SYSTEM OK

NG

3	INSPECT ECM(CHECK VOLTAGE)

(a) Turn the ignition switch ON.
(b) Check the waveform between terminals OCV+ and OCV– of the E13 ECM connector.

HINT:
- The correct waveform is as shown on the left.
- The waveform frequency (A) becomes longer as the engine speed becomes higher.

NG	CHECK AND REPLACE ECM (See page 01–32)

OK

4	INSPECT CAMSHAFT TIMING GEAR ASSY (See page14–64)

NG	REPLACE VVT CONTROLLER ASSEMBLY, AND THEN GO TO NEXT STEP

OK

5	INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSY (See page 10–3)

NG → REPLACE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY, AND THEN GO TO NEXT STEP

OK

6	CHECK OIL CONTROL VALVE FILTER(CHECK BLOCKAGE)

NG → REPAIR OR REPLACE OIL CONTROL VALVE FILTER

OK

7	PERFORM SIMULATION TEST(DTC CHECK)

(a) Clear the DTC (See page 05–5).
(b) Perform the simulation test.
(c) Check whether or not DTC P1349 is stored (See page 05–5).
Result:

DTC	Proceed to
”P1349” is output.	A
”P1349” is not output.	B

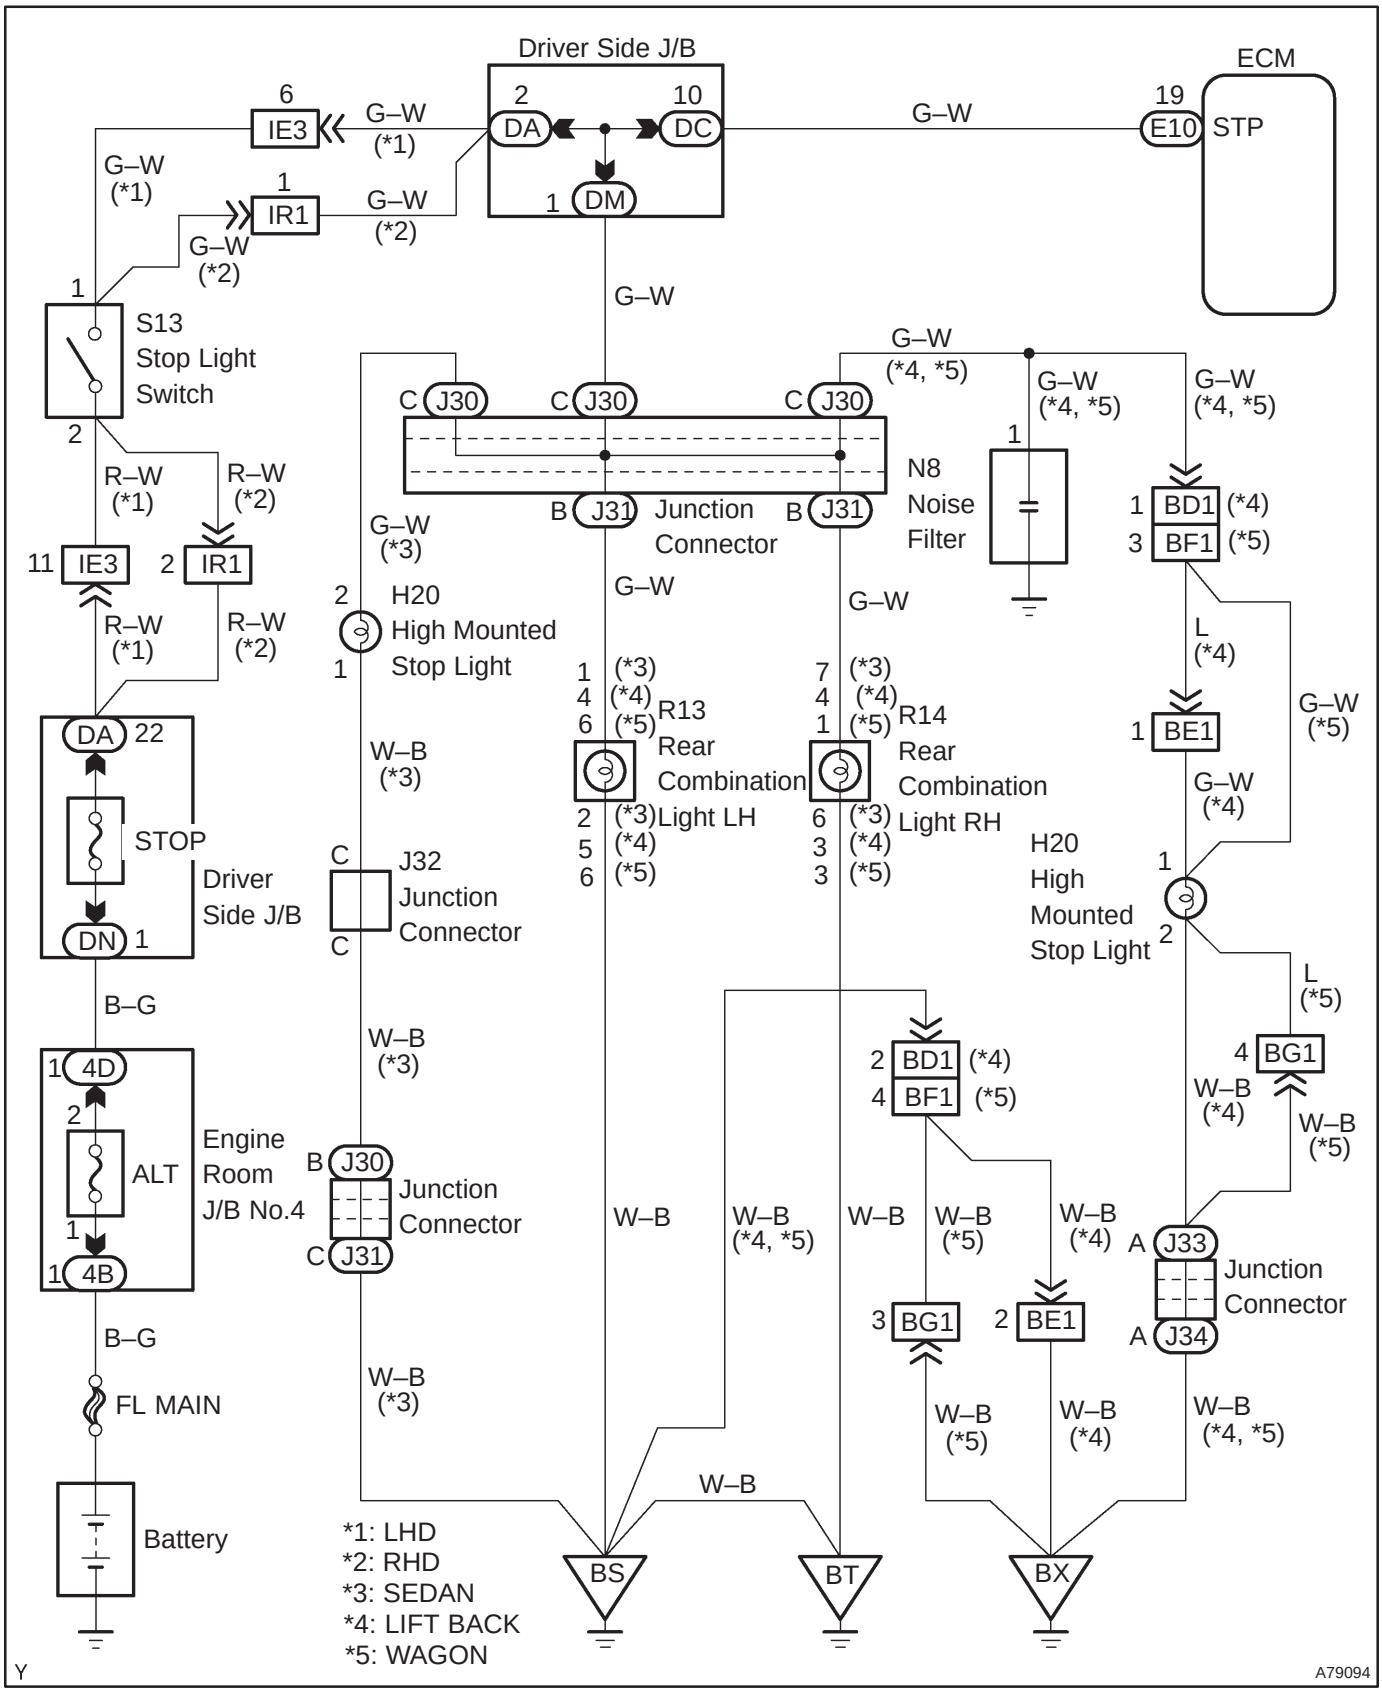
HINT:
DTC P1349 is also output when a foreign object is detected in some parts of the system in engine oil, and then the system returns to normal in a short time. There is also no problem on the VVT as the oil filter should catch the foreign object in the engine oil.

B → VVT SYSTEM OK

A

CHECK AND REPLACE ECM (See page 01–32)

DTC	P1520	STOP LIGHT SWITCH CIRCUIT MALFUNCTION



CIRCUIT DESCRIPTION

This signal is used to detect that the brakes have been applied. The STP signal voltage is the same as the one supplied to the stop lights.

The STP signal is used mainly to control the fuel cut–off engine speed (The fuel cut–off engine speed is reduced slightly when the vehicle is braking.).

DTC No.	DTC Detecting Condition	Trouble Area
P1520	Condition (a), (b) and (c) continue for 0.5 sec. or more: (a) Ignition switch ON (b) Brake pedal released (c) STP signal is OFF when the STP signal is OFF	• Open or short in stop light switch signal circuit • Stop light switch • ECM

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand – held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

1	CHECK OPERATION OF STOP LIGHT

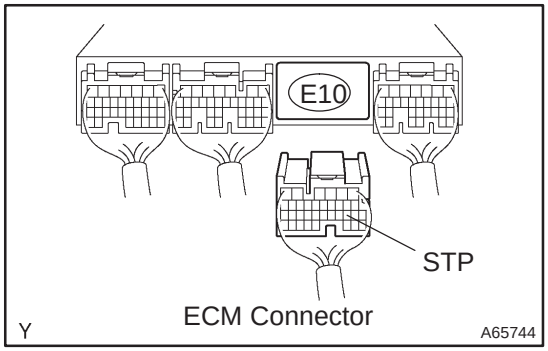
(a) Check if the stop lights go on and off normally when the brake pedal is depressed and released.

NG → REPAIR OR REPLACE STOP LAMP SWITCH CIRCUIT

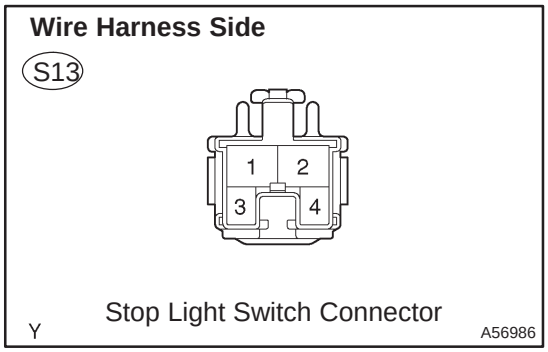
OK

2	READ VALUE OF HAND–HELD TESTER

(a) Connect the hand–held tester to the DLC3.
(b) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / STOP LIGHT SW” and read its value displayed the hand–held tester.
(c) Turn the ignition switch ON and push the hand–held tester main switch ON.
(d) Read the STP signal on the hand–held tester.



Result:



Brake Pedal	STP Signal
Depressed	ON
Released	OFF

OK → CHECK FOR INTERMITTENT PROBLEMS

NG

3	CHECK WIRE HARNESS OR CONNECTOR(ECM – STOP LIGHT SWITCH)

(a) Disconnect the stop light switch connector.
(b) Disconnect the the E10 ECM connector.
(c) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
Stop light switch (S13–1) – STP (E10–19)	Continuity

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
Stop light switch (S13–1) or STP (E10–19) – Body ground	No continuity

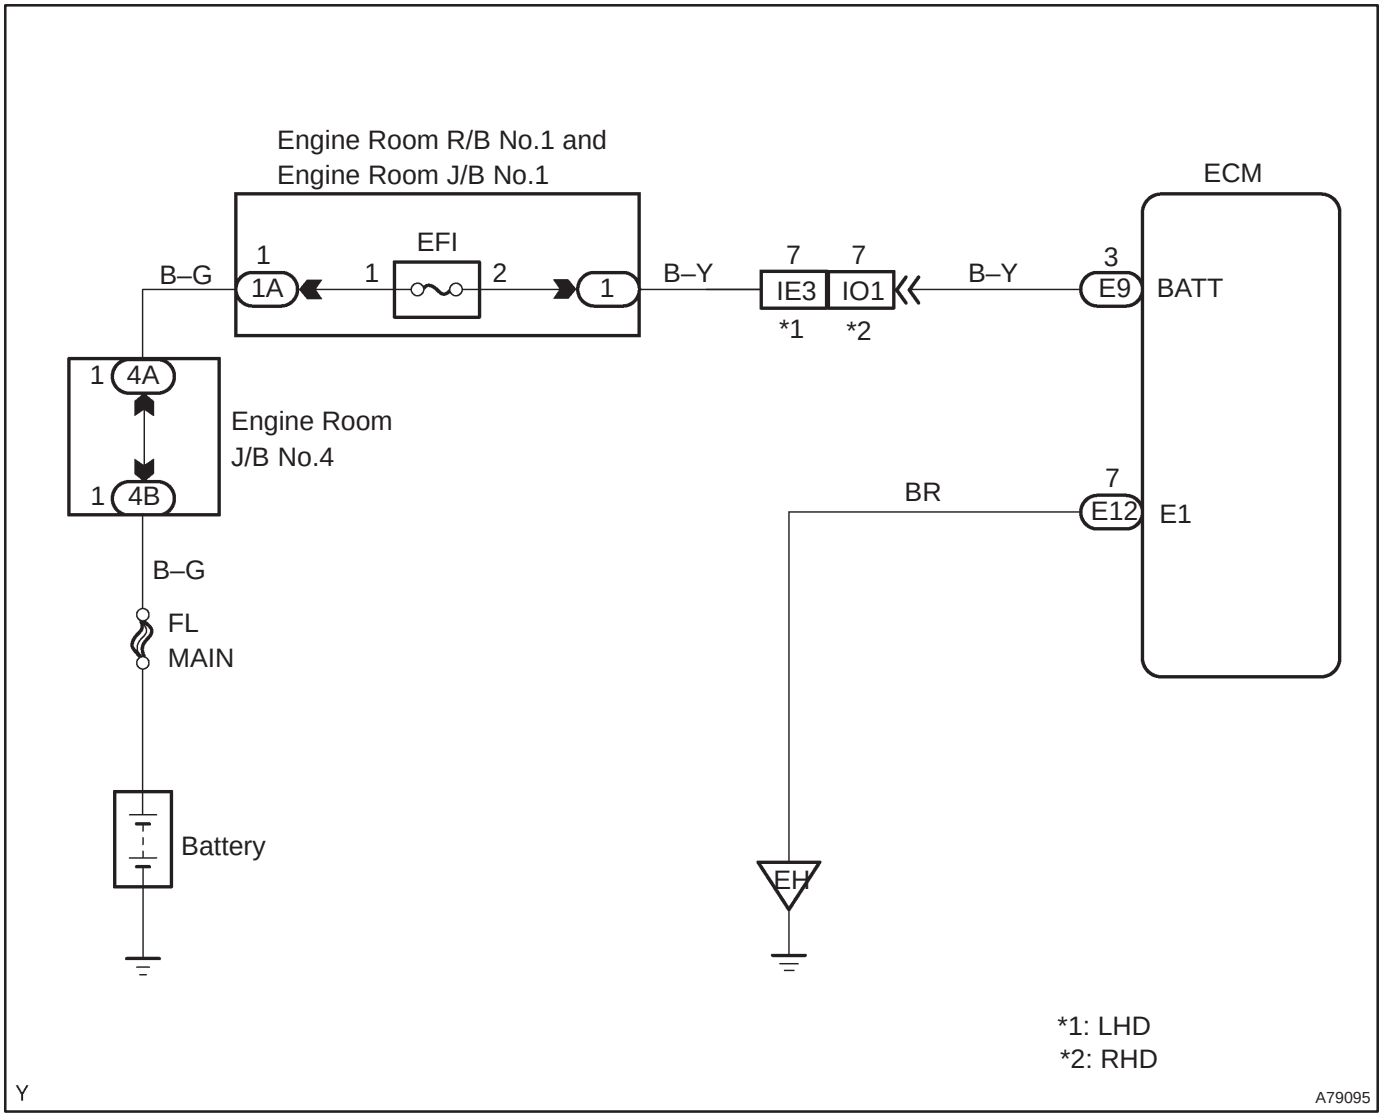
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK AND REPLACE ECM (See page 01–32)

DTC	P1600	ECM BATT MALFUNCTION

CIRCUIT DESCRIPTION



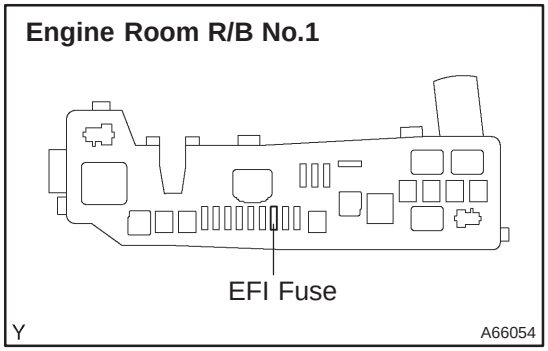
Battery positive voltage is applied to terminal BATT of the ECM even the ignition switch is OFF for the DTC memory and air–fuel ratio adaptive control value memory, etc.

DTC No.	DTC Detecting Condition	Trouble Area
P1600	Open in back up power source circuit	• Open in back up power source circuit • ECM

HINT:

If DTC P1600 is displayed, the ECM does not store other DTCs.

WIRING DIAGRAM

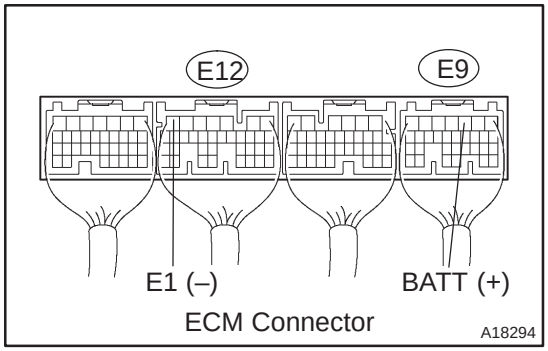


INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

1 CHECK FUSE(EFI FUSE)

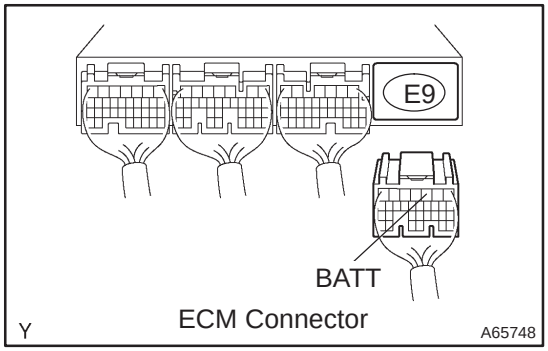


(a) Remove the EFI fuse from the engine room R/B No.1.
(b) Check for continuity in the EFI fuse.
Standard: Continuity

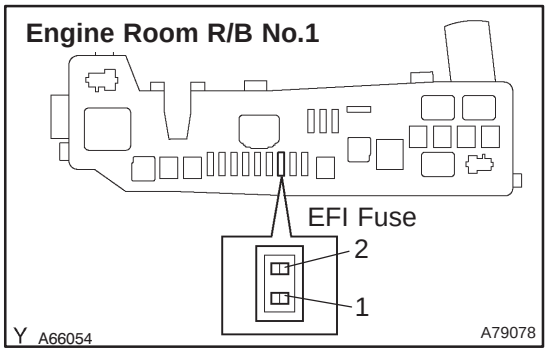
NG → **CHECK FOR SHORT IN ALL HARNESSES AND COMPONENTS CONNECTED FUSE**

OK

2 INSPECT ECM(CHECK VOLTAGE)



(a) Turn the ignition switch ON.
(b) Measure the voltage between the terminals of the E9 and E12 ECM connector.
Standard:



Symbols (Terminal No.)	Specified condition
BATT (E9–3) – E1 (E12–7)	8 to 14 V

OK → **CHECK AND REPLACE ECM (See page 01–32)**

NG

3 CHECK WIRE HARNESS OR CONNECTOR(EFI FUSE – ECM)

(a) Remove the EFI fuse from the engine room R/B No.1.
(b) Disconnect the ECM E9 connector.
(c) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
EFI fuse (2) – BATT (E9–3)	Continuity

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
EFI fuse (2) or BATT (E9–3) – Body ground	No continuity

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK AND REPLACE HARNESS OR CONNECTOR (BATTERY – EFI FUSE)

DTC	P1656	OCV CIRCUIT MALFUNCTION (BANK 1)

CIRCUIT DESCRIPTION

Refer to DTC P1349 on page 05–112.

DTC No.	DTC Detecting Condition	Trouble Area
P1656	Open or short in oil control valve (OCV) circuit	• Open or short in OCV circuit • OCV • ECM

WIRING DIAGRAM

Refer to DTC P1349 on page 05–112.

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand – held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

1	PERFORM ACTIVE TEST BY HAND–HELD TESTER(OCV OPERATION)

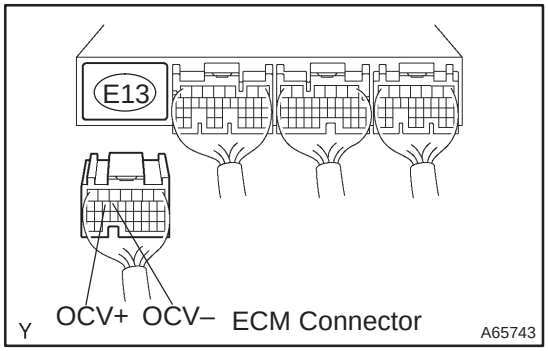
(a) Start the engine and warm it up.
(b) Connect the hand–held tester and select the VVT on the ACTIVE TEST menu.
(c) Check the engine speed while operating the OCV by using the hand–held tester.
Result:
VVT system is OFF (OCV is OFF): Normal engine speed
VVT system is ON (OCV is ON): Rough idle or engine stalled

OK → **CHECK FOR INTERMITTENT PROBLEMS (See page 05–5)**

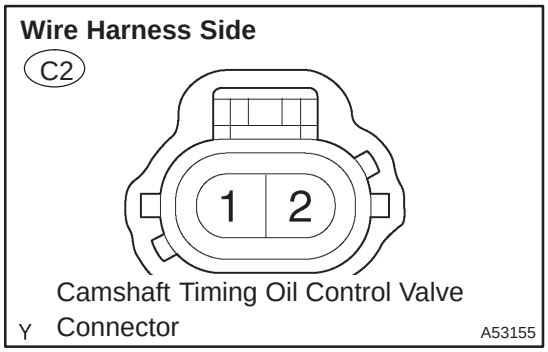
NG

2	INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSY (See page 10–3)

NG → **REPLACE CAMSHAFT TIMING OIL CONTROL VALVE ASSY**



OK



3	INSPECT ECM(CHECK VOLTAGE) (See page 05–20)

NG → **CHECK AND REPLACE ECM (See page 01–32)**

OK

4 CHECK HARNESS AND CONNECTOR(ECM – OCV)

(a) Disconnect the camshaft timing oil control valve connector.

(b) Disconnect the E13 ECM connector.

(c) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
Oil control valve (C2–1) – OCV+ (E13–14)	Continuity
Oil control valve (C2–2) – OCV– (E13–15)	

Standard (Check for short):

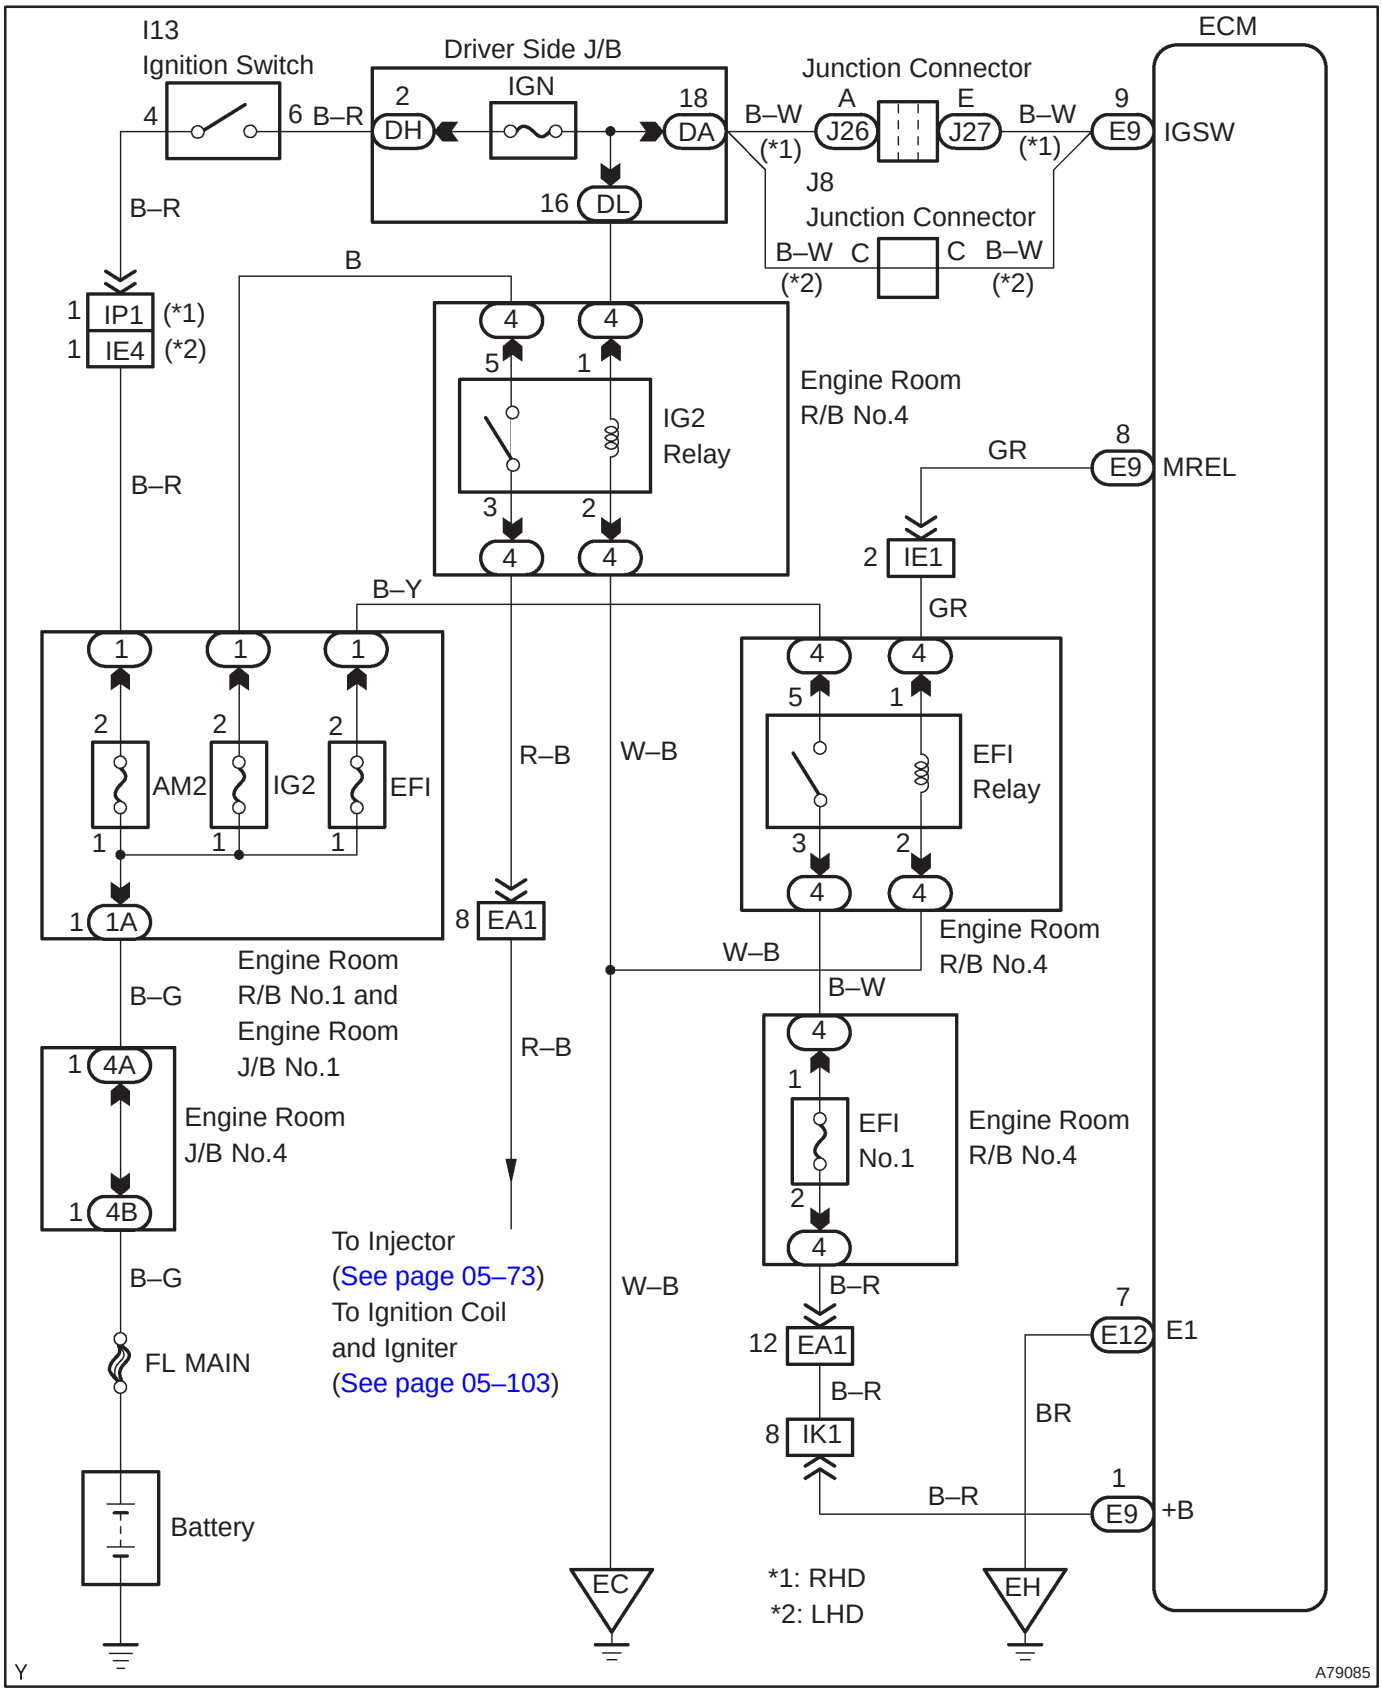
Symbols (Terminal No.)	Specified condition
Oil control valve (C2–1) or OCV+ (E13–14) – Body ground	No continuity
Oil control valve (C2–2) or OCV– (E13–15) – Body ground	

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK FOR INTERMITTENT PROBLEMS (See page 05–5)

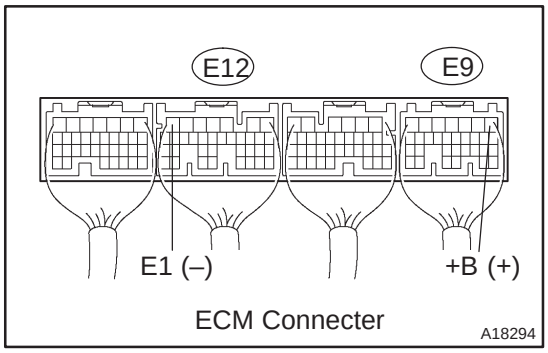
ECM POWER SOURCE CIRCUIT



CIRCUIT DESCRIPTION

When the ignition switch is turned ON, battery positive voltage is applied to terminal IGSW of the ECM and the EFI relay (Marking: EFI) control circuit in the ECM sends a signal to terminal MREL of the ECM switching on the EFI relay.

This signal causes current to flow to the coil, closing the contacts of the EFI relay and supplying power to terminal +B of the ECM.



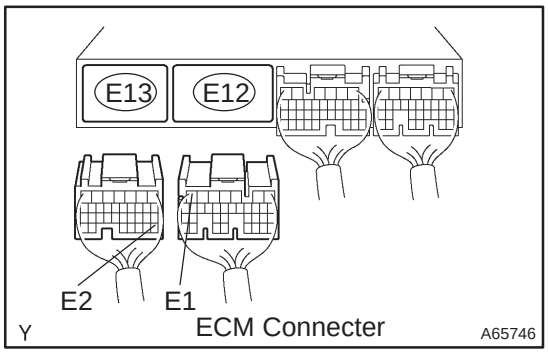
If the ignition switch is turned off, the ECM continues to switch on the EFI relay for a maximum of 2 seconds for the initial setting of the throttle valve.

WIRING DIAGRAM

INSPECTION PROCEDURE

1 INSPECT ECM(+B VOLTAGE)

(a) Turn the ignition switch ON.
(b) Measure the voltage between the terminals of the E9 and E12 ECM connector.



Standard:

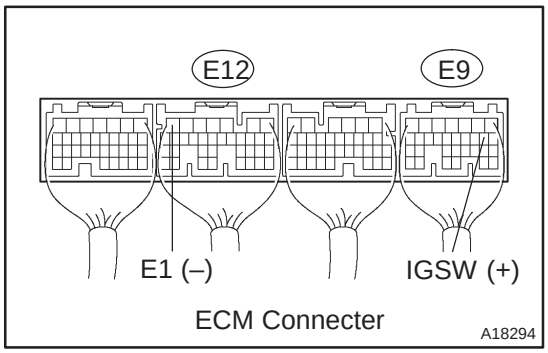
Symbols (Terminal No.)	Specified condition
+B (E9–1) – E1 (E12–7)	9 to 14 V

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN ON PROBLEM SYMPTOMS TABLE (See page 05–5)**

NG

2 CHECK HARNESS AND CONNECTOR(ECM – BODY GROUND)

(a) Disconnect the negative (–) battery terminal.
(b) Disconnect the E12 and E13 ECM connector.
(c) Check for continuity between the wire harness side connectors.



Standard (Check for open):

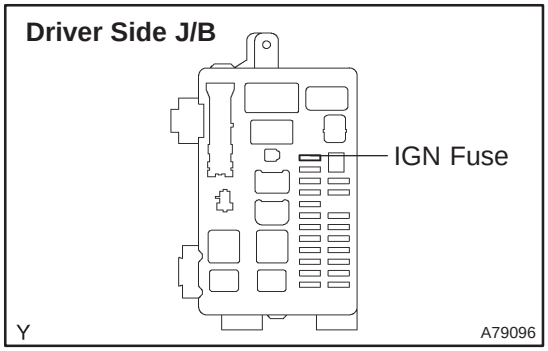
Symbols (Terminal No.)	Specified condition
E1 (E12–7) – Body ground	Continuity
E2 (E13–28) – Body ground	

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 INSPECT ECM(IGSW VOLTAGE)

(a) Turn the ignition switch ON.
(b) Measure the voltage between the terminals of the E9 and E12 ECM connector.



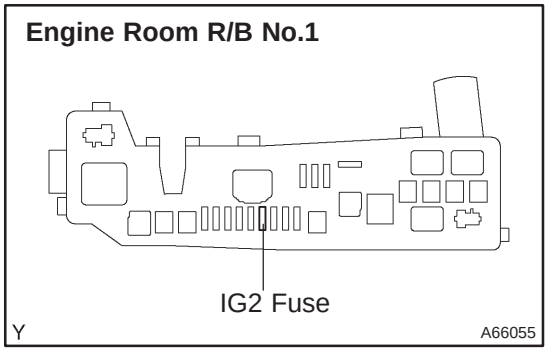
Standard:

Symbols (Terminal No.)	Specified condition
IGSW (E9–9) – E1 (E12–7)	9 to 14 V

OK → **Go to step 8**

NG

4 CHECK FUSE(IGN FUSE)

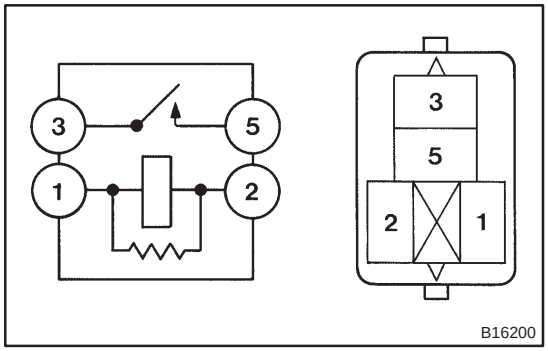


(a) Remove the IGN fuse from the driver side J/B.
(b) Check for continuity in the IGN fuse.
Standard: Continuity

NG → **CHECK FOR SHORT IN ALL HARNESSES AND COMPONENTS CONNECTED FUSE**

OK

5 CHECK FUSE(IG2 FUSE)

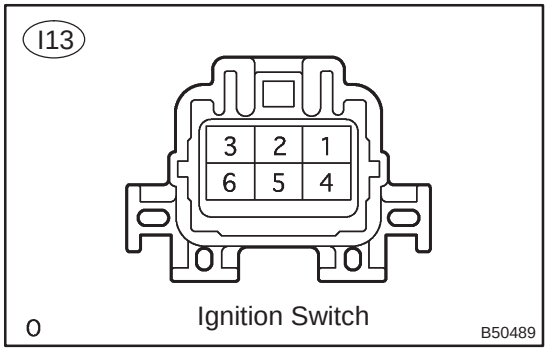


(a) Remove the IG2 fuse from the engine room R/B No.1.
(b) Check for continuity in the IG2 fuse.
Standard: Continuity

NG → **CHECK FOR SHORT IN ALL HARNESSES AND COMPONENTS CONNECTED FUSE**

OK

6 INSPECT IG2 RELAY



(a) Remove the IG2 relay from the engine room R/B No.4.
(b) Inspect the IG2 relay.
Standard:

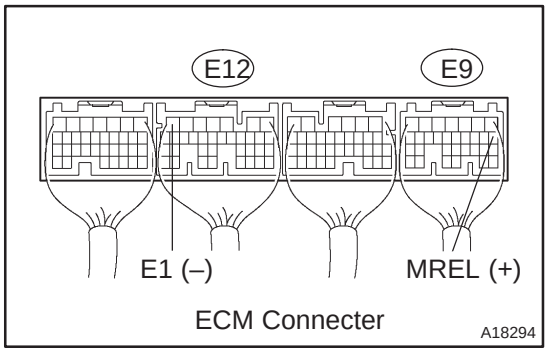
Terminal No.	Specified condition
1 – 2	Continuity
3 – 5	No Continuity
	Continuity (Apply battery voltage Terminals 1 and 2)

NG → **REPLACE IG2 RELAY**

OK

7 INSPECT IGNITION OR STARTER SWITCH ASSY

(a) Measure the resistance between the connector terminals shown in the chart below.



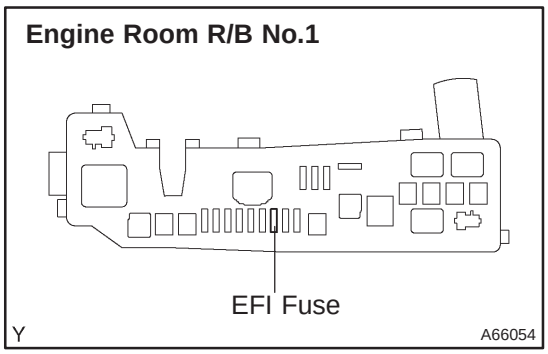
Switch	Terminal No.	Resisitance
LOCK	All Terminals	1MΩ or more
ACC	1–3	1Ω or less
ON	1–2, 1–3, 2–3, 5–6	1Ω or less
START	4–5, 4–6, 5–6, 1–2	1Ω or less

NG → **REPLACE IGNITION OR STARTER SWITCH ASSY**

OK

CHECK AND REPAIR HARNESS AND CONNECTOR (BATTERY – IGNITION SWITCH, IGNITION SWITCH – ECM)

8 INSPECT ECM(MREL VOLTAGE)



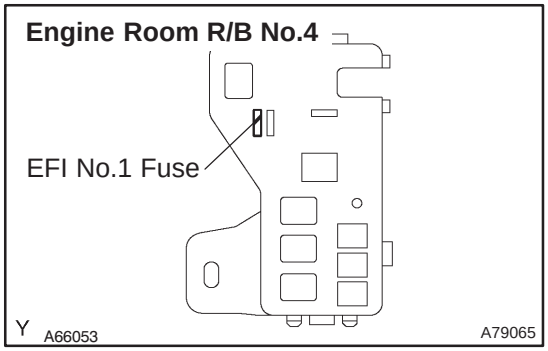
(a) Turn the ignition switch ON.
(b) Measure the voltage between the terminals of the E9 and E12 ECM connector.
Standard:

Symbols (Terminal No.)	Specified condition
MREL (E9–8) – E1 (E12–7)	9 to 14 V

NG → **CHECK AND REPLACE ECM**

OK

9 CHECK FUSE(EFI FUSE)

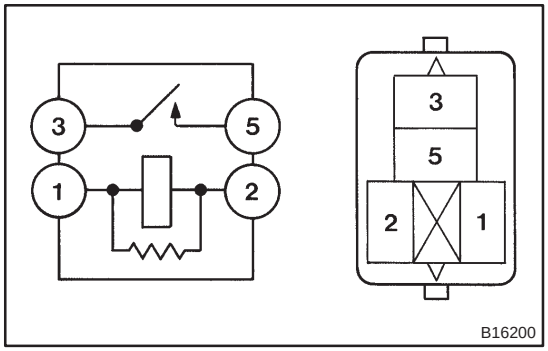


(a) Remove the EFI fuse from the engine room R/B No.1.
(b) Check for continuity in the EFI fuse.
Standard: Continuity

NG → **CHECK FOR SHORT IN ALL HARNESSES AND COMPONENTS CONNECTED FUSE**

OK

10 CHECK FUSE(EFI No.1 FUSE)

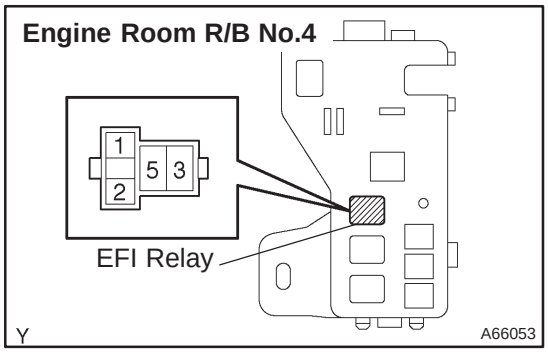


(a) Remove the EFI No.1 fuse from the engine room R/B No.4.
(b) Check for continuity in the EFI No.1 fuse.
Standard: Continuity

NG → **CHECK FOR SHORT IN ALL HARNESSES AND COMPONENTS CONNECTED FUSE**

OK

11 INSPECT EFI RELAY



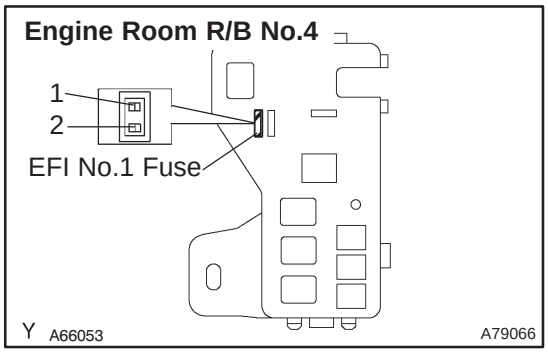
(a) Remove the EFI relay from the engine room R/B No.4.
(b) Inspect the EFI relay.
Standard:

Terminal No.	Specified condition
1 – 2	Continuity
3 – 5	No Continuity
	Continuity (Apply battery voltage Terminals 1 and 2)

NG → **REPLACE EFI RELAY**

OK

12	CHECK HARNESS AND CONNECTOR(EFI RELAY – ECM, EFI RELAY – BODY GROUND)

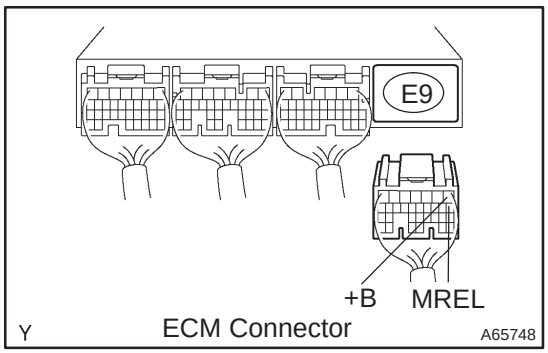


(a) Check the harness and connector between the EFI relay and ECM connector.
(1) Remove the EFI relay from the engine room R/B No.4.
(2) Remove the EFI No.1 fuse from the engine room R/B No.4.
(3) Disconnect the E9 ECM connector.
(4) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
EFI relay (1) – MREL (E9–8)	Continuity
EFI relay (3) – EFI No.1 fuse (1)	
EFI No.1 fuse (2) – +B (E9–1)	

Standard (Check for short):



Symbols (Terminal No.)	Specified condition
EFI relay (1) or MREL (E9–8) – Body ground	No continuity
EFI relay (3) or EFI No.1 fuse (1) – Body ground	
EFI No.1 fuse (2) or +B (E9–1) – Body ground	

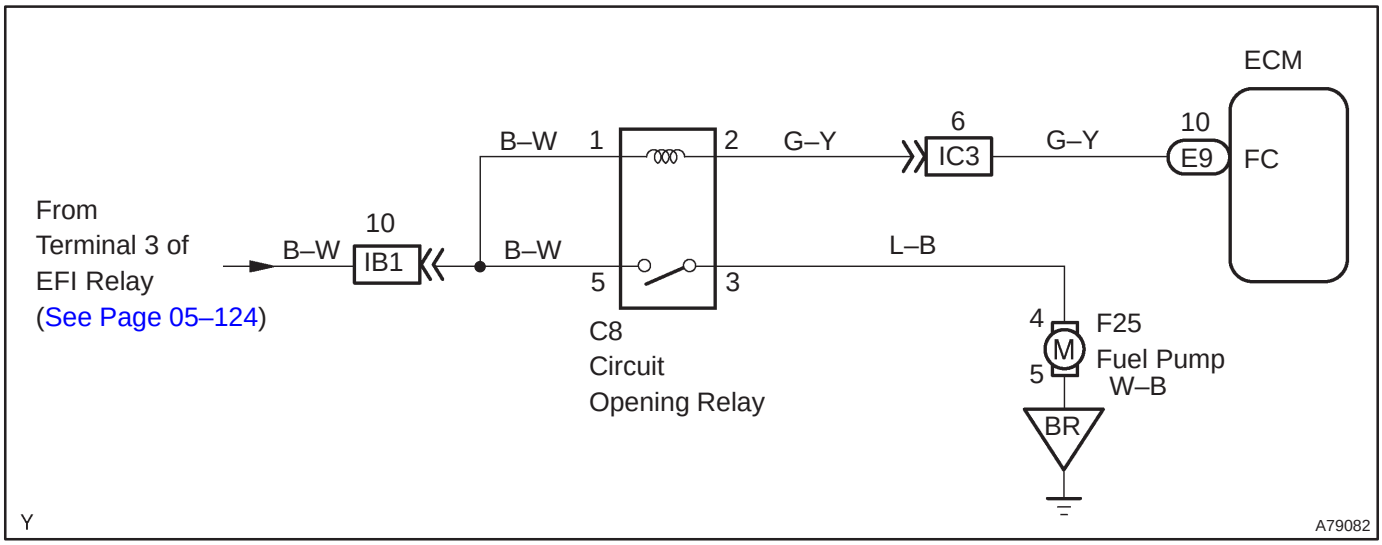
(b) Check the harness and connector between the EFI relay and body ground.
(1) Remove the EFI relay from the engine room J/B No.4.
(2) Check for continuity between the wire harness side connector and the body ground.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
EFI relay (2) – Body ground	Continuity

OK → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

NG



CHECK AND REPAIR HARNESS AND CONNECTOR (TERMINAL +B OF ECM – BATTERY POSITIVE TERMINAL)

FUEL PUMP CONTROL CIRCUIT

CIRCUIT DESCRIPTION

In the diagram below, when the engine is cranked, current flows from terminal ST of the ignition switch to the starter relay coil and also current flows to terminal STA of the ECM (STA signal).
When the STA signal and NE signal are input to the ECM, Tr is turned ON, current flows to the coil of the circuit opening relay, the relay switches on, power is supplied to the fuel pump and the fuel pump operates. While the NE signal is generated (engine running), the ECM keeps Tr ON (circuit opening relay ON) and the fuel pump also keeps operating.

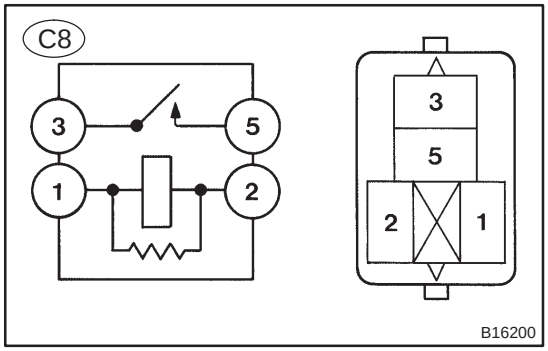
WIRING DIAGRAM

INSPECTION PROCEDURE

1	**PERFORM ACTIVE TEST USING HAND–HELD TESTER(OPERATION OF CIRCUIT OPENING RELAY)**

(a) Turn the ignition switch ON.
(b) Select the item ”DIAGNOSIS / OBD/MOBD / ACTIVE TEST / FUEL PUMP / SPD”.
(c) Perform the active test with the engine stopped.
Result: The circuit opening relay operates.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN ON PROBLEM SYMPTOMS TABLE**



NG

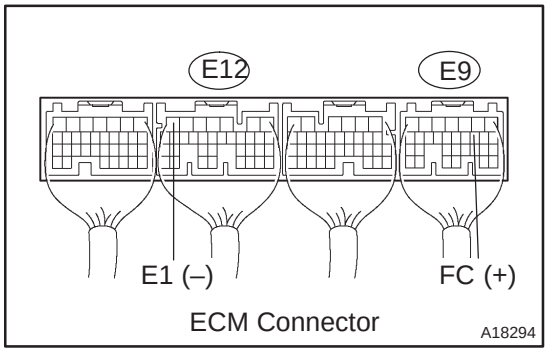
2	**CHECK FOR ECM POWER SOURCE CIRCUIT(See page 05–124)**

NG → **REPAIR OR REPLACE POWER SOURCE CIRCUIT**

OK

3 INSPECT CIRCUIT OPENING RELAY

(a) Remove the circuit opening relay.
(b) Inspect the circuit opening relay.



Standard:

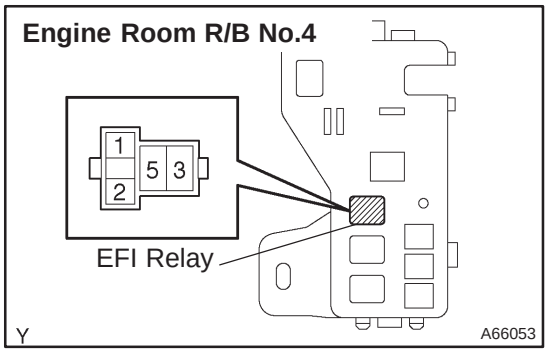
Terminal No.	Specified condition
1 – 2	Continuity
3 – 5	No Continuity
	Continuity (Apply battery voltage Terminals 1 and 2)

NG → **REPLACE CIRCUIT OPENING RELAY**

OK

4 INSPECT ECM

(a) Turn the ignition switch ON.
(b) Measure the voltage between the terminals of the E9 and E12 ECM connector.



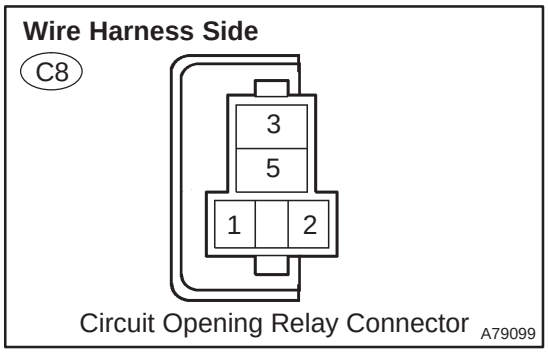
Standard:

Symbols (Terminal No.)	Specified condition
FC (E9–10) – E1 (E12–7)	8 to 14 V

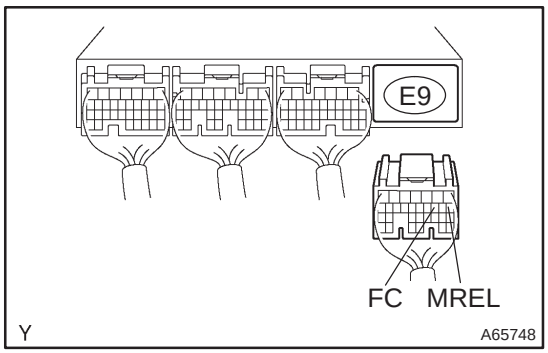
OK → **Go to step 6**

NG

5	CHECK HARNESS AND CONNECTOR(EFI RELAY – CIRCUIT OPENING RELAY, CIRCUIT OPENING RELAY – ECM)



(a) Remove the EFI relay from the engine room R/B No.4.
(b) Remove the circuit opening relay.
(c) Disconnect the E9 ECM connector.
(d) Check for continuity between the wire harness side connectors.



Standard (Check for open):

Symbols (Terminal No.)	Specified condition
EFI relay (3) – Circuit opening relay (C8–1)	Continuity
Circuit opening relay (C8–2) – FC (E9–10)	
EFI relay (1) – MREL (E9–8)	

Standard (Check for short):

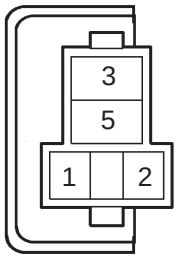
Symbols (Terminal No.)	Specified condition
EFI relay (3) or Circuit opening relay (C8–1) – Body ground	No continuity
Circuit opening relay (C8–2) or FC (E9–10) – Body ground	
EFI relay (1) or MREL (E9–8) – Body ground	

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK AND REPLACE ECM (See page 01–32)

6	INSPECT FUEL PUMP ASSY (See page 11–8)



NG → **REPAIR OR REPLACE FUEL PUMP ASSY**

OK

7	CHECK HARNESS AND CONNECTOR(CIRCUIT OPENING RELAY – FUEL PUMP, FUEL PUMP – BODY GROUND)

Wire Harness Side

C8

Circuit Opening Relay Connector

A79099

Wire Harness Side

F25

Fuel Pump Connector

A66276

(a) Remove the circuit opening relay.
(b) Disconnect the fuel pump connector.
(c) Check for continuity between the wire harness side connectors.

Standard (Check for open):

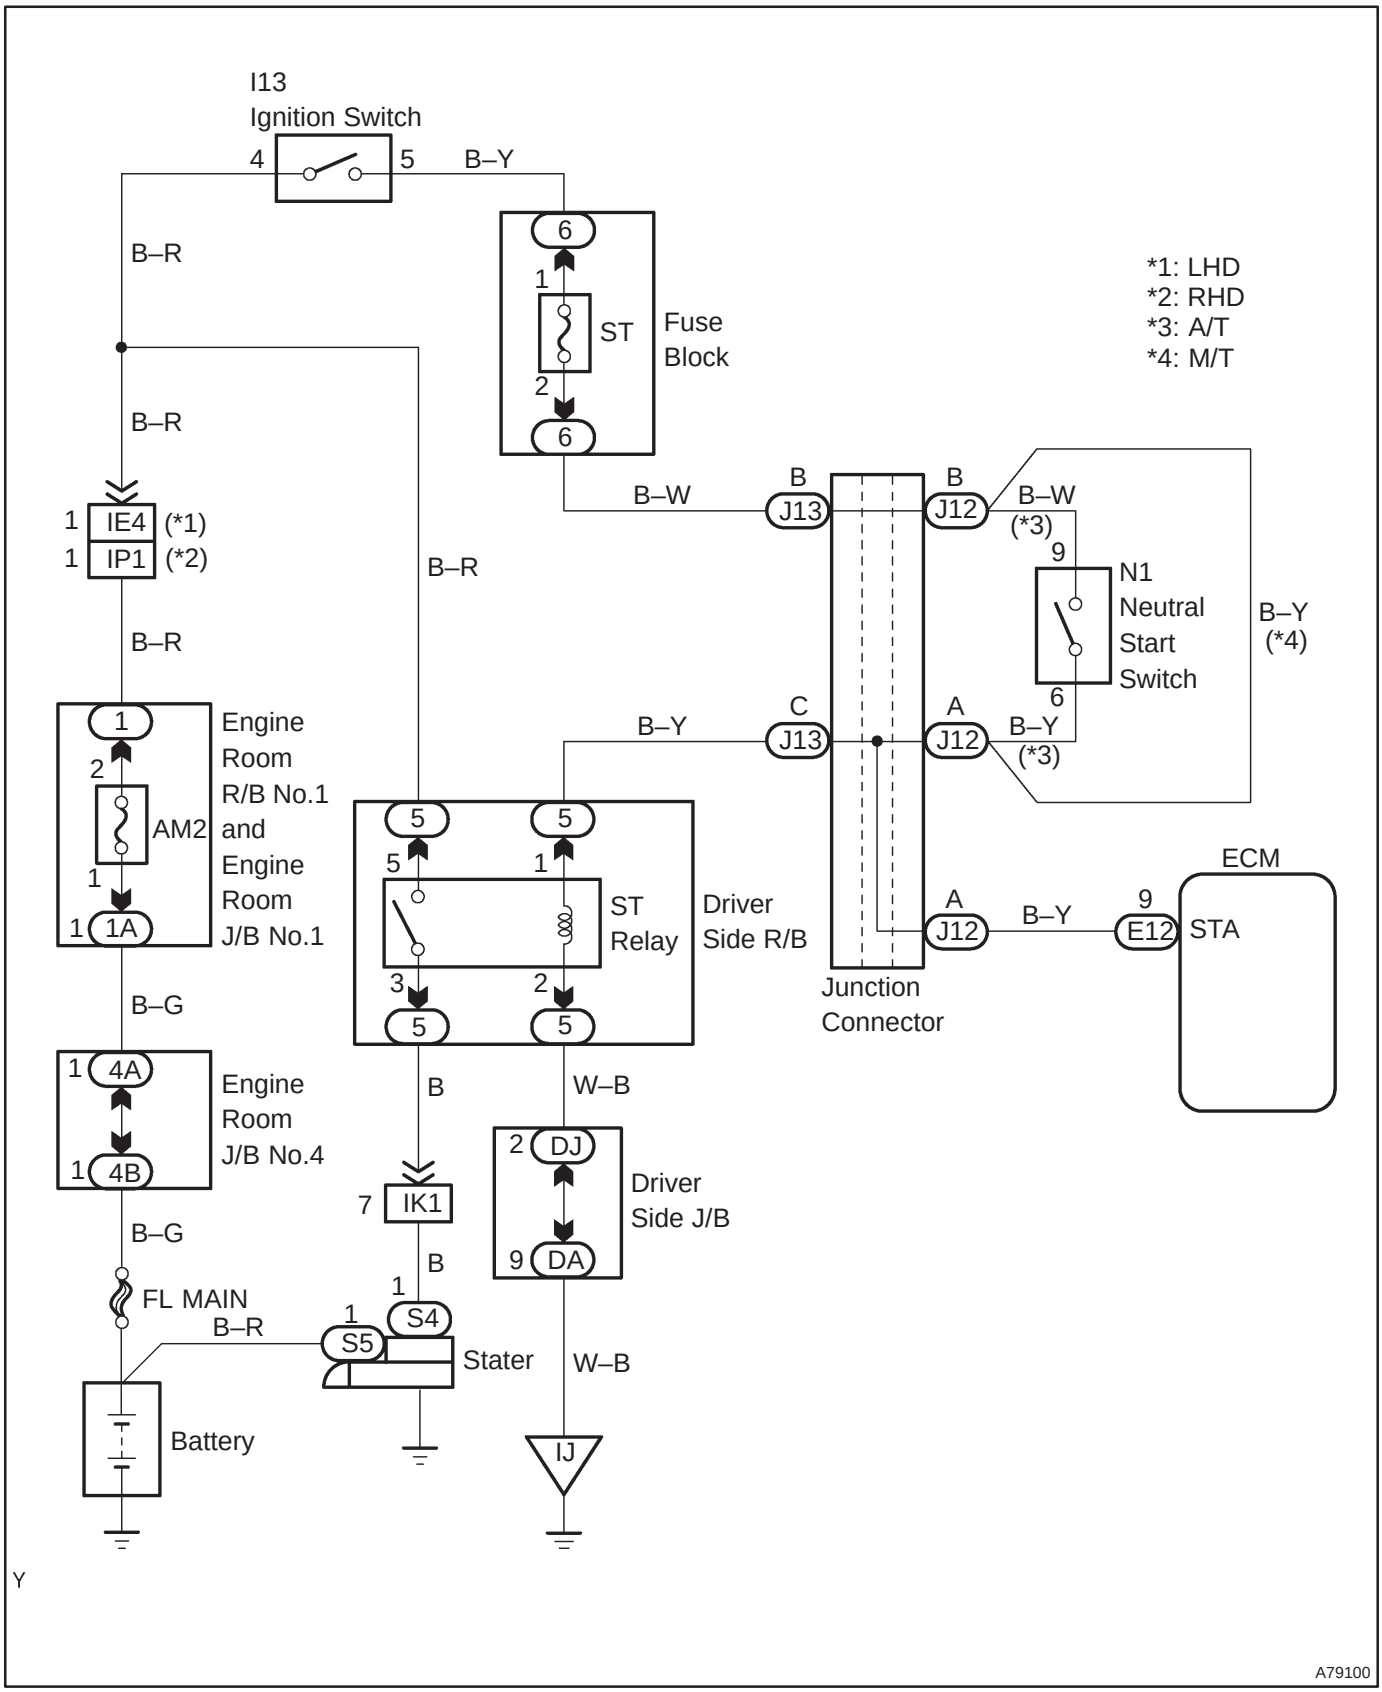
Symbols (Terminal No.)	Specified condition
Circuit opening relay (C8–3) – Fuel pump (F24–4)	Continuity
Fuel pump (F25–5) – Body ground	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
Circuit opening relay (C8–3) or Fuel pump (F24–4) – Body ground	No continuity

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK



CHECK AND REPLACE ECM (See page 01–32)

STARTER SIGNAL CIRCUIT

CIRCUIT DESCRIPTION

When the engine is cranked, the intake air flow becomes slow, so fuel vaporization is poor. A rich mixture is therefore necessary in order to achieve good startability. While the engine is being cranked, the battery voltage is applied to terminal STA of the ECM. The starter signal is mainly used to increase the fuel injection volume for the starting injection control and after–start injection control.

WIRING DIAGRAM

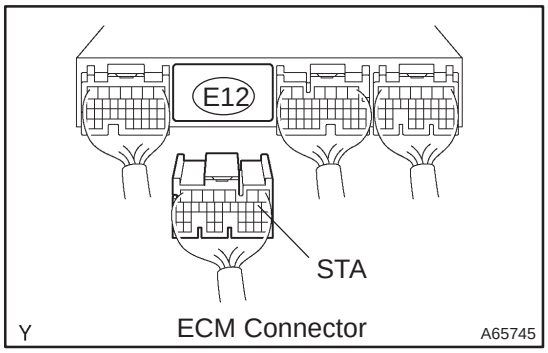
NSPECTION PROCEDURE

HINT:

This diagnostic chart is on the premise that the engine is cranked normally. If the engine is not cranked, proceed to the problem symptoms table on page 05–22.

1	READ VALUE OF HAND–HELD TESTER(STARTER SIGNAL)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch ON and push the hand–held tester main switch ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / STARTER SIG” and read its value displayed on the hand–held tester.



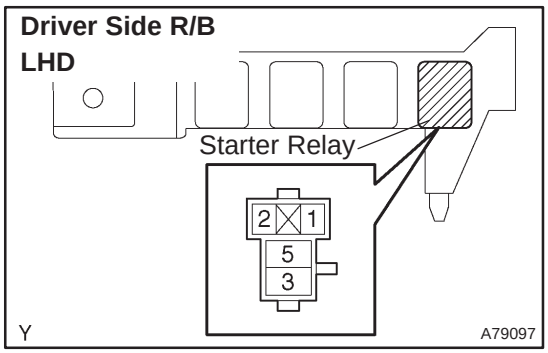
Result:

Ignition Switch Position	ON	START
STA Signal	OFF	ON

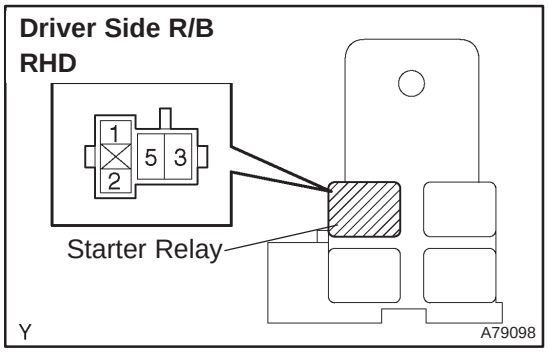
OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN ON PROBLEM SYMPTOMS TABLE**

NG

2	CHECK HARNESS AND CONNECTOR(ECM – STARTER RELAY)



(a) Disconnect the ECM E12 connector.
(b) Remove the starter relay from the driver side R/B.
(c) Check for continuity between the wire harness side connectors.



Standard (Check for open):

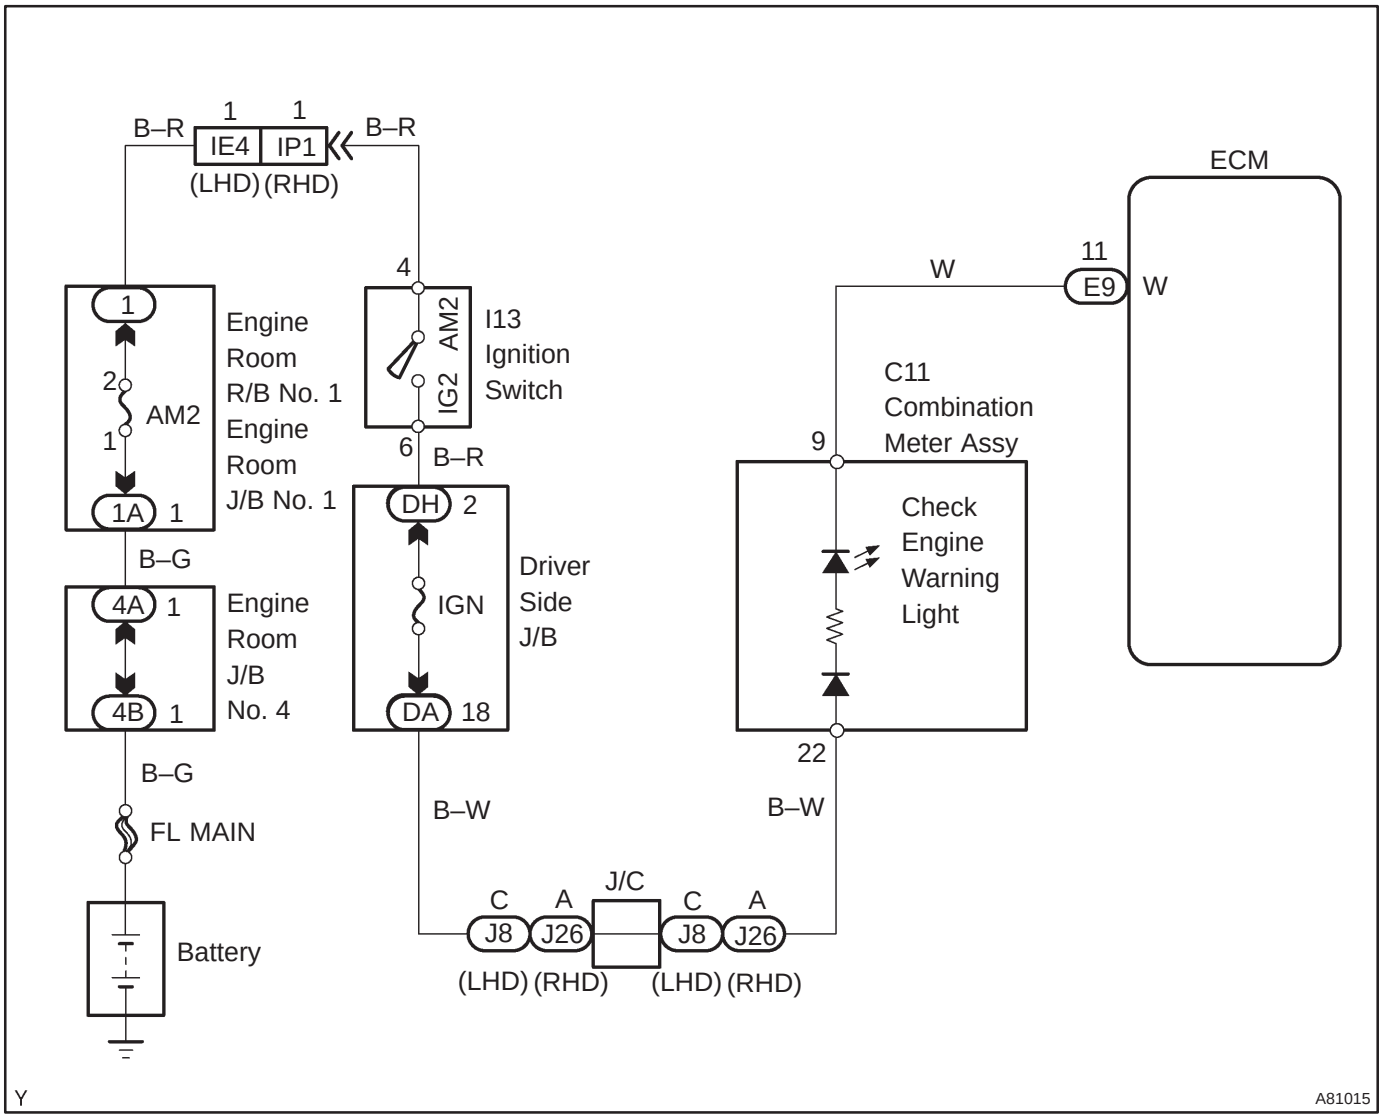
Symbols (Terminal No.)	Specified condition
Starter relay (1) – STA (E12–9)	Continuity

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
Starter relay (1) or STA (12–9) – Body ground	No continuity

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



CHECK AND REPLACE ECM (See page 01–32)

CHECK ENGINE WARNING LIGHT CIRCUIT

CIRCUIT DESCRIPTION

If the ECM detects a trouble, the CHK ENG is illuminated. At this time, the ECM records a DTC in the memory.

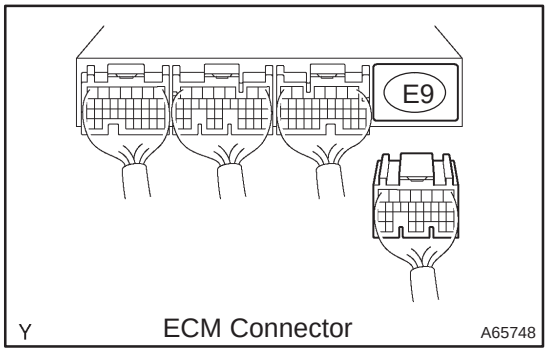
WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Troubleshoot each trouble symptom in accordance with the chart below .

CHK ENG remains on	Start inspection from step 1
CHK ENG is not illuminated	Start inspection from step 3



1	CLEAR DTC

(a) Connect the hand–held tester to the DLC 3.
(b) Turn the ignition switch ON and push the hand–held tester main switch ON.
(c) Read the DTC (See page 05–5).
(d) Clear the DTC (See page 05–5).
(e) Check that the CHK ENG is OFF.
Standard: CHK ENG is OFF

OK	REPAIR CIRCUIT INDICATED BY OUTPUT CODE (See page 05–16)

NG

2	CHECK HARNESS AND CONNECTOR(CHECK FOR SHORT IN WIRE HARNESS)

(a) Disconnect the E9 ECM connector.
(b) Turn the ignition switch ON.
(c) Check that the CHK ENG is OFF.
Standard: CHK ENG is OFF

OK	CHECK AND REPLACE ECM (See page 01–32)

NG

CHECK AND REPAIR HARNESS AND CONNECTOR

3	CHECK CHK ENG CONDITION

(a) Check that the CHK ENG is illuminated when turning the ignition switch ON.
Standard: CHK ENG is illuminated

OK	SYSTEM OK

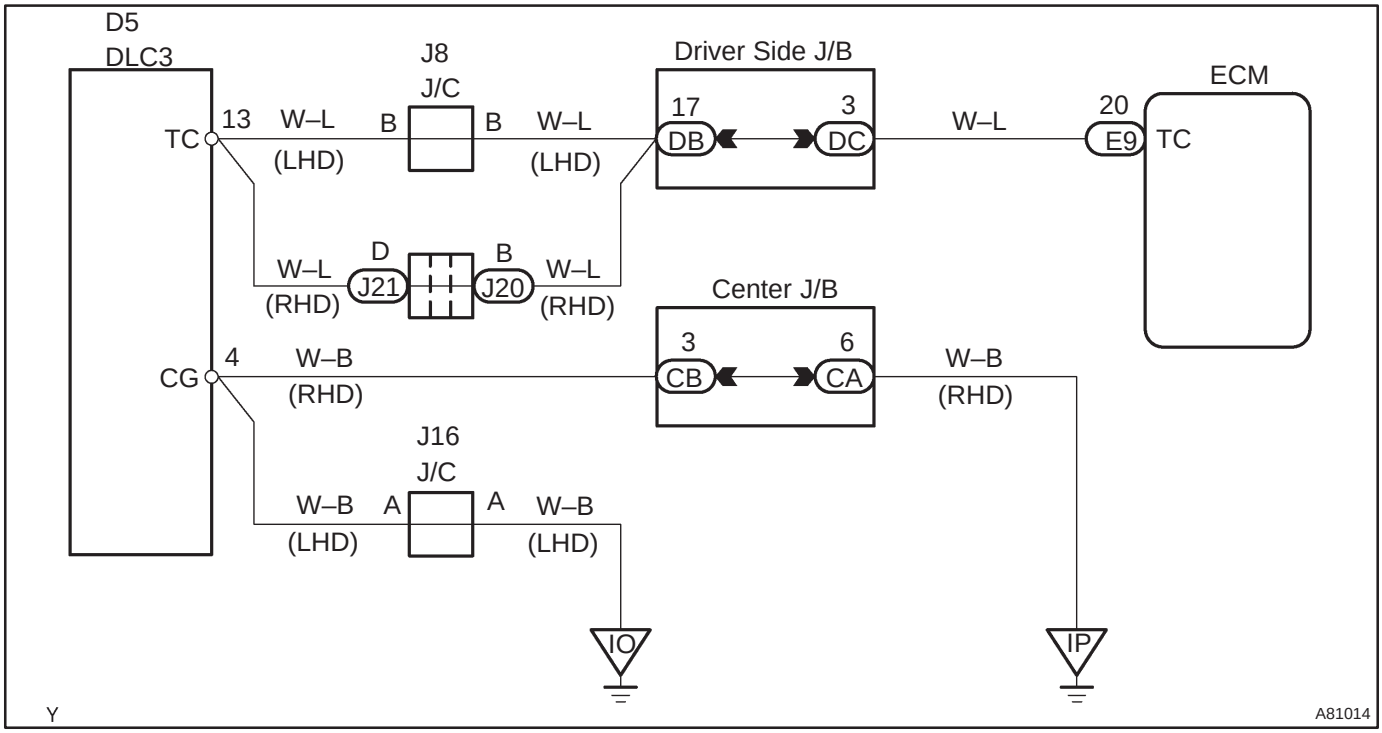
NG

4	INSPECT COMBINATION METER ASSY(CHK ENG CIRCUIT)

(a) See the combination meter troubleshooting on page 05–1509.

NG	REPAIR OR REPLACE BULB OR COMBINATION METER ASSEMBLY

OK



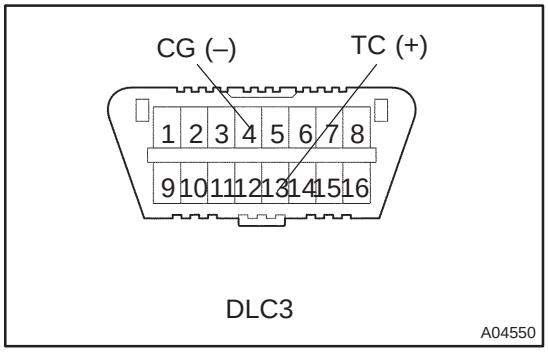
CHECK AND REPAIR HARNESS AND CONNECTOR (COMBINATION METER – ECM)

TC TERMINAL CIRCUIT

CIRCUIT DESCRIPTION

Terminals TC and CG are located in the DLC3. When connecting these terminals, DTCs in normal mode or check mode can be read through the CHK ENG flashing in the combination meter.

WIRING DIAGRAM



INSPECTION PROCEDURE

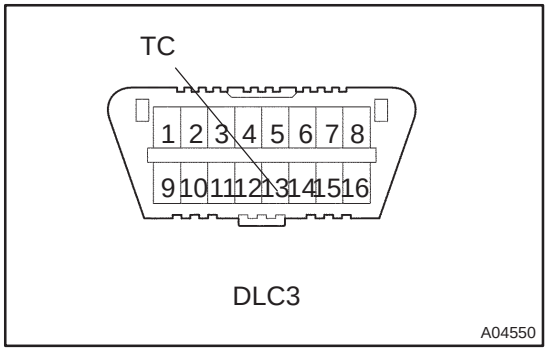
HINT:

- Even though terminal TC is not connected to terminal CG, the CHK ENG blinks.
- For the above phenomenon, an open or short in the wire harness, or malfunction inside the ECM is the likely cause.

1	CHECK DLC3(TC VOLTAGE)

(a) Turn the ignition switch ON.

(b) Measure the voltage between the terminals of the DLC3.



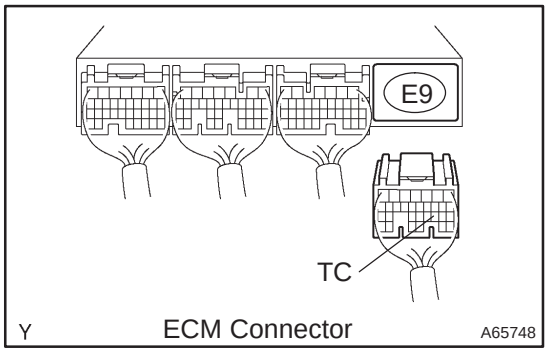
Standard:

Symbols (Terminal No.)	Specified condition
TC (13) – CG (4)	9 to 14 V

OK → **Go to step 3**

NG

2 CHECK HARNESS AND CONNECTOR(DLC3 – ECM)



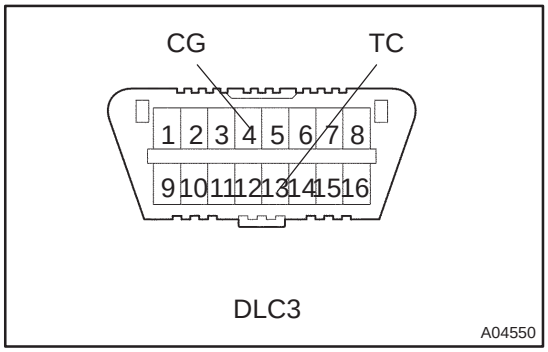
(a) Disconnect the E9 ECM connector.
(b) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
TC (13) – TC (E9–20)	Continuity

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
TC (13) or TC (E9–20) – Body ground	No continuity



NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK AND REPAIR HARNESS AND CONNECTOR (DLC3 – BODY GROUND)

3 CHECK CHK ENG CONDITION

SST 09843–18040

(a) Turn the ignition switch ON.
(b) Connect between terminals TC and CG of the DLC3 connector.
(c) Check that the CHK ENG blinks.

Standard: CHK ENG blinks

NG → **CHECK AND REPLACE ECM (See page 01–32)**

OK

NO PROBLEM

SFI SYSTEM (1AZ–FE)

HOW TO PROCEED WITH TROUBLESHOOTING

05C7H–01

When using hand–held tester, troubleshoot in accordance with the procedure shown below.

1	VEHICLE BROUGHT TO WORKSHOP

2	CUSTOMER PROBLEM ANALYSIS (See page 05–148)

3	CONNECT THE HAND–HELD TESTER TO DLC3

HINT:
If the display indicates a communication fault in the tool, inspect DLC3.

4	CHECK DTC AND FREEZE FRAME DATA (See page 05–149)

HINT:
Record or print DTC and freeze frame data, if needed.

5	CLEAR DTC AND FREEZE FRAME DATA (See page 05–149)

6	VISUAL INSPECTION

7	SETTING THE CHECK (TEST) MODE DIAGNOSIS (See page 05–149)

8	PROBLEM SYMPTOM CONFIRMATION

HINT:
If the engine does not start, perform steps 10 and 12 first.

A	Malfunction does not occur
B	Malfunction occurs

B	GO TO STEP 10

A

9	SYMPTOM SIMULATION

10	DTC CHECK (See page 05–149)

A	Malfunction code
B	No code

B → GO TO STEP 12

A

11	DTC CHART (See page 05–161)

GO TO STEP 14

12	BASIC INSPECTION (See page 05–149)

A	Wrong parts not confirmed
B	Wrong parts confirmed

B → GO TO STEP 17

A

13	PROBLEM SYMPTOMS TABLE (See page 05–168)

A	Wrong circuit confirmed
B	Wrong parts confirmed

B → GO TO STEP 17

A

14	CHECK ECM POWER SOURCE CIRCUIT (See page 05–257)

15	CIRCUIT INSPECTION

A	Malfunction not confirmed
B	Malfunction confirmed

B → GO TO STEP 18

A

16	CHECK FOR INTERMITTENT PROBLEMS (See page 05–149)

GO TO STEP 18

17	PARTS INSPECTION

18	IDENTIFICATION OF PROBLEM

19	ADJUSTMENT, REPAIR

20	CONFIRMATION TEST

END

When not using hand–held tester, troubleshoot in accordance with the procedure shown below.

1	VEHICLE BROUGHT TO WORKSHOP

2	CUSTOMER PROBLEM ANALYSIS (See page 05–148)

3	CHECK AND CLEAR DTC (See page 05–149)

4	PROBLEM SYMPTOM CONFIRMATION

A	Malfunction occurs
B	Malfunction does not occur

B → SYMPTOM SIMULATION (See page 01–22)

A

5	DTC CHECK (See page 05–149)

A	Malfunction code
B	No code

B → GO TO STEP 7

A

6	DTC CHART (See page 05–161)

GO TO STEP 9

7	BASIC INSPECTION (See page 05–149)

A	Wrong parts not confirmed
B	Wrong parts confirmed

B → GO TO STEP 12

A

8	PROBLEM SYMPTOMS TABLE (See page 05–168)

A	Wrong circuit confirmed
B	Wrong parts confirmed

B → GO TO STEP 12

A

9	CHECK ECM POWER SOURCE CIRCUIT (See page 05–257)

10	CIRCUIT INSPECTION

A	Malfunction not confirmed
B	Malfunction confirmed

B → GO TO STEP 13

A

11	CHECK FOR INTERMITTENT PROBLEMS (See page 05–149)

GO TO STEP 13

12	PARTS INSPECTION

13	IDENTIFICATION OF PROBLEM

14	ADJUSTMENT, REPAIR

15	CONFIRMATION TEST

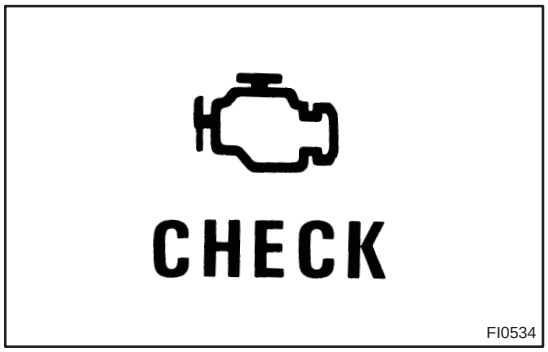
END

05C6L–01

CUSTOMER PROBLEM ANALYSIS CHECK

ENGINE CONTROL SYSTEM Check Sheet

Inspector's Name



Customer's Name		VIN

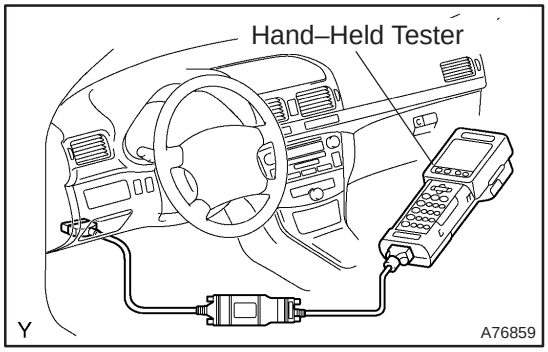
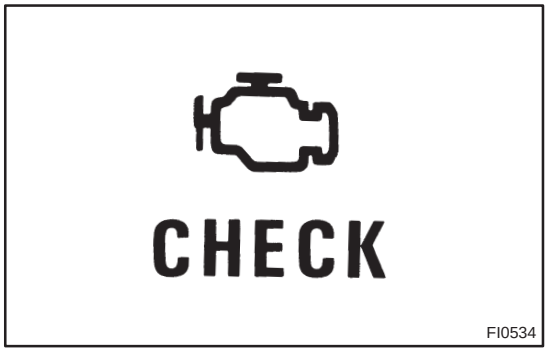
	Check Mode	☐ Normal ☐ Malfunction code(s) (code) ☐ Freeze frame data ( )

05C6M–01



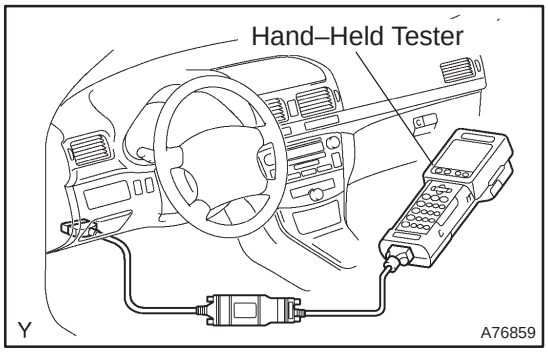
PRE–CHECK

1. DIAGNOSIS SYSTEM



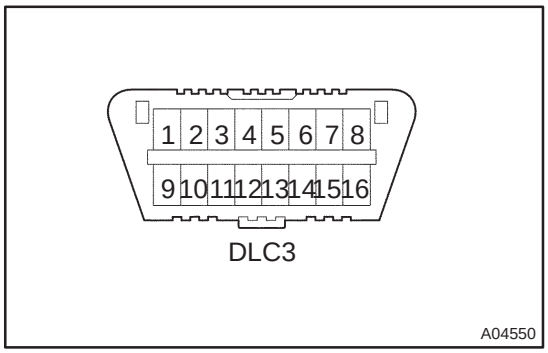
(a) Description for Euro–OBD (European spec.)

- When troubleshooting Euro–OBD vehicles, the only difference from the usual troubleshooting procedure is that you connect the vehicle to the OBD scan tool complying with ISO 15031–4 or hand–held tester, and read the various data output from the vehicle's ECM.
- Euro–OBD regulations require that the vehicle's on–board computer illuminates the check engine warning light (CHK ENG) on the instrument panel when the computer detects a malfunction in the emission control system / components or in the power train control components which affect vehicle emissions, or a malfunction in the computer. In addition to an illumination of the CHK ENG when a malfunction is detected, the applicable Diagnostic Trouble Codes (DTC) prescribed by ISO 15031–4 are recorded in the engine ECU memory (See page 05–161). If the malfunction does not reoccur in 3 consecutive trips, the CHK ENG goes off automatically but the DTCs remain recorded in the ECM memory.



- To check the DTCs, connect the OBD scan tool or hand–held tester to Data Link Connector 3 (DLC3) on the vehicle. The OBD scan tool or hand–held tester also enables you to erase the DTCs and check freezed frame data and various forms of engine data. (For operating instructions, see the OBD scan tool's instruction book.)
  DTCs include ISO controlled codes and manufacturer controlled codes. ISO controlled codes must be set as prescribed by the ISO, while manufacturer controlled codes can be set freely by the manufacturer within the prescribed limits (See DTC chart on page 05–161).
- The diagnosis system operates in the normal mode during normal vehicle use. It also has a check (test) mode for technicians to simulate malfunction symptoms and troubleshoot. Most DTCs use 2 trip detection logic* to prevent erroneous detection, and to ensure a thorough malfunction detection. By switching the ECM to the check (test) mode using hand–held tester when troubleshooting, a technician can cause the CHK ENG to illuminate for a malfunction that is only detected once or momentarily (Hand–held tester only) (See step 3).

- * 2 trip detection logic
  When a logic malfunction is first detected, the pending fault code is stored in the ECM memory (1st trip). If the same malfunction is detected again during the second drive test, this second detection causes the CHK ENG to illuminate (2nd trip) (However, the ignition switch must be turned OFF between the 1st trip and 2nd trip).
- Freeze frame data:
  Freeze frame data records the engine condition when a misfire (DTCs P0300 – P0304) or fuel trim malfunction (DTCs P0171) or other malfunction (first malfunction only), is detected.
  Because freeze frame data records the engine conditions (fuel system, calculated load, engine coolant temperature, fuel trim, engine speed, vehicle speed, etc.) when the malfunction is detected, when troubleshooting it is useful for determining whether the vehicle was running or stopped, the engine warmed up or not, the air–fuel ratio lean or rich, etc. at the time of the malfunction.
- Priorities for troubleshooting:
  If troubleshooting priorities for multiple DTCs are given in the applicable DTC chart, these should be followed.



(b) Description for M–OBD (Except European spec.)

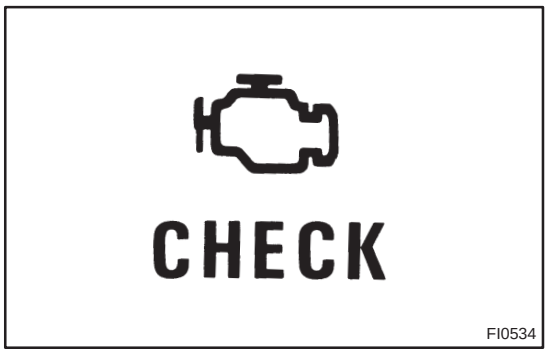
- When troubleshoot Multiplex OBD (M–OBD) vehicles, the only difference from the usual troubleshooting procedure is that you connect the hand–held tester to the vehicle, and read the various data output from the vehicle's ECM.
- The vehicle's on–board computer illuminates the check engine warning light (CHK ENG) on the instrument panel when the computer detects a malfunction in the computer itself or in drive system components. In addition to an illumination of the CHK ENG when a malfunction is detected, the applicable Diagnostic Trouble Codes (DTCs) are recorded in the ECM memory (See page 05–161). When the malfunction does not reoccur, the CHK ENG is indicated until the ignition switch is turned off, and then the CHK ENG is not indicated when the ignition switch is turned on but the DTCs remain recorded in the ECM memory.

- To check the DTCs, connect the hand–held tester to the Data Link Connector 3 (DLC3) on the vehicle or read the DTC which is indicated on the multi information display when TC and CG terminals on the DLC3 are connected. The hand–held tester also enables you to erase the DTCs and check the freeze frame data and various forms of engine data. (for operating instructions, see the instruction book.)
- The diagnosis system operates in the normal mode during normal vehicle use. It also has a check (test) mode for technicians to simulate malfunction symptoms and troubleshoot. Most DTCs use 2 trip detection logic* to prevent erroneous detection, and to ensure a thorough malfunction detection. By switching the ECM to the check (test) mode using hand–held tester when troubleshooting, a technician can cause the CHK ENG to illuminate for a malfunction that is only detected once or momentarily (Hand–held tester only) (See step 3).
- * 2 trip detection logic
  When a logic malfunction is first detected, the pending fault code is stored in the ECM memory (1st trip). If the same malfunction is detected again during the second drive test, this second detection causes the CHK ENG to illuminate (2nd trip) (However, the ignition switch must be turned OFF between the 1st trip and 2nd trip).
- Freeze frame data:
  Freeze frame data records the engine conditions (fuel system, calculator load, water temperature, fuel trim, engine speed, vehicle speed, etc.) when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

(c) Check the DLC3.
The vehicle's ECM uses the ISO 14230(M–OBD) communication protocol. The terminal arrangement of DLC3 complies with ISO 15031–03 and matches the ISO 14230 format.

Terminal No.	Connection / Voltage or Residence	Condition
7	Bus + Line / Pulse generation+	During transmission
4	Chassis Ground – Body Ground / 1 Ω or less	Always
16	Battery Positive – Body Ground / 9 to 14 V	Always

HINT:



If the display shows ”UNABLE TO CONNECT TO VEHICLE” when you have connected the cable of the hand–held tester to the DLC3, turned the ignition switch ON and operated the hand–held tester, there is a problem on the vehicle side or tool side.

- If communication is normal when the tool is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still impossible when the tool is connected to another vehicle, the problem is probably in the tool itself, so consult the Service Deparment listed in the tool’s instruction manual.

(d) Inspect the battery voltage.

Battery voltage: 11 to 14 V

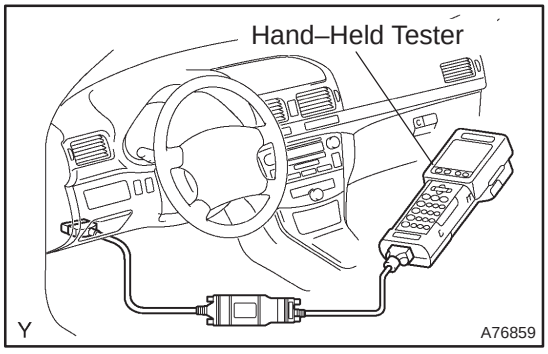
If voltage is below 11V, recharge the battery before proceeding.

(e) Check the CHK ENG.

(1) The CHK ENG lamp comes on when the ignition switch is turned ON and the engine is not running.

HINT:

If the CHK ENG lamp is not illuminated, troubleshoot the combination meter.



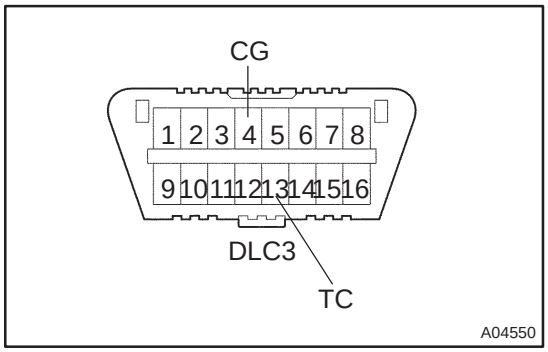
(2) When the engine is started, the CHK ENG should go off. If the lamp remains on, it means that the diagnosis system has detected a malfunction or abnormality in the system.

2. DTC CHECK (Nomal Mode) :

NOTICE:

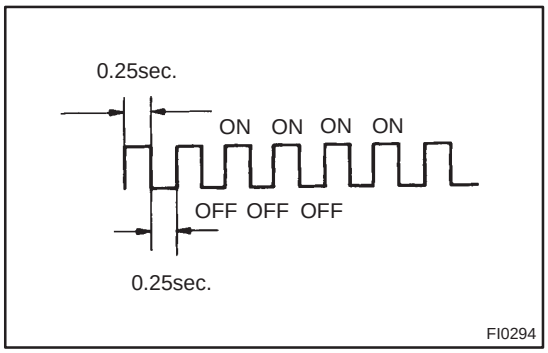
Hand–held tester only:

When the diagnosis system is switched from the normal mode to the check (test) mode, it erases all DTCs and freeze frame data recorded in the normal mode. So before switching modes, always check the DTCs and freeze frame data, and then write them down.



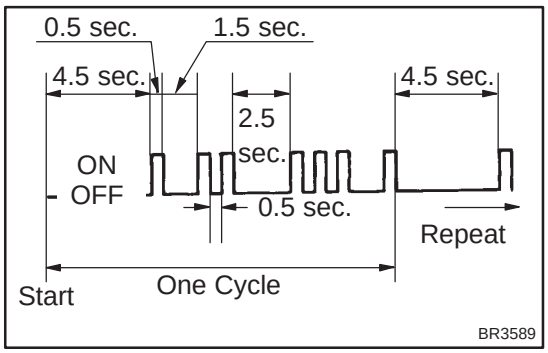
(a) Checking DTCs using the hand–held tester.

(1) Connect the hand–held tester to the DLC3.



(2) Turn the ignition switch ON and switch the hand–held tester main switch ON.

(3) Use the hand–held tester to check the DTCs and freeze frame data and then write them down. The hand–held tester’s instruction book.



(4) See page 05–161 to confirm the details of the DTCs.

(b) If you have no hand–held tester, perform the following steps (1) to (6).
(1) Turn the ignition switch ON.
(2) Using SST, connect between terminals 13 (TC) and 4 (CG) of the DLC3.
SST 09843–18040

(3) Read DTC by observing the CHK ENG lamp. If any DTC is not detected, the CHK ENG lamp blinks as shown in the illustration.

(4) Example
If DTC 12 and DTC 31 are detected, the CHK ENG flashes 1 time (for 0.5 sec) and flashes 2 times after the 1.5 sec interval, then flashes 3 times after a 2.5 sec interval from the previous DTC and flashes 1 time.
If the interval between the previous DTC and the next DTC is 4.5 sec, it means the previous DTC is the last one of the multiple string DTCs. The CHK ENG lamp repeats the indication of DTCs from the initial cycle. (Refer to the illustration on the left)
(5) Check the details of the malfunction using the DTC chart on page 05–16.
(6) After completing the check, disconnect terminals 13 (TC) and 4 (CG) and turn off the display.

HINT:
In the event that 2 or more DTCs are detected, the CHK ENG lamp will indicate the smaller number DTC first.

(c) Clearing the DTCs using the hand–held tester:
(1) Connect the hand–held tester to the DLC3.
(2) Turn the ignition switch ON.
(3) When operating hand–held tester to erase the codes, the DTCs and freeze frame data will be erased. (See the hand–held tester's instruction book for operating instructions.)

(d) Clearing the DTCs not using the hand–held tester:
(1) Disconnect the battery terminal or remove the EFI fuse for more than 60 seconds.

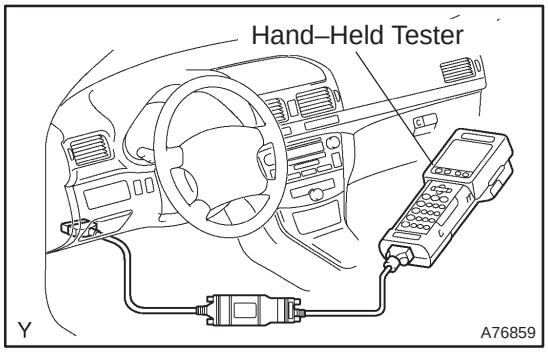
3. DTC CHECK (Check Mode):

HINT:

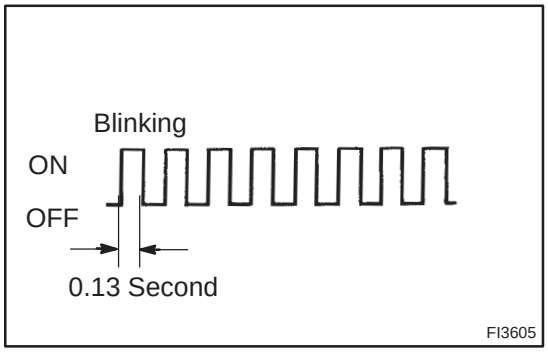
Hand–held tester only:

Compared to the normal mode, the check mode has more sensing ability to detect malfunctions.

Furthermore, the same diagnostic items which are detected in the normal mode can also be detected in the check (test) mode.



(a) Proceduce for check mode using hand–held tester.



(1) Check the initial conditions
- Battery positive voltage 11V or more.
- Throttle valve fully closed.
- Transmission in the ”P” or ”N” position.
- Air conditioning switched OFF.

(2) Turn the ignition switch OFF.

(3) Connect the hand–held tester to the DLC3.

(4) Turn the ignition switch and the hand–held tester main switch ON.

(5) Switch the hand–held tester from the normal mode to the check (test) mode. The CHK ENG blinks in 0.13 sec interval as shown in the illustration.

NOTICE:

If the hand–held tester switches the ECM from the normal mode to the check mode or vice–versa, or if the ignition switch is turned from ON to ACC or OFF during the check mode, the DTC and freeze frame data will be erased.

(6) Start the engine. (The CHK ENG lamp goes out after the engine start.)

(7) Simulate the conditions of the malfunction described by the customer.

NOTICE:

Leave the ignition switch ON until you have checked the DTC, etc.

(8) After simulating the malfunction conditions, use the hand–held tester diagnosis selector to check the DTCs and freeze frame data, etc.

HINT:

Be sure not to turn the ignition switch OFF, because the diagnosis system is changed from the check mode to the nomal mode and will result in all of the DTCs and freeze frame data being erased.

(9) After checking the DTCs, inspect the applicable circuit.

(b) Clearing the DTCs using the hand–held tester
(1) Connect the hand–held tester to DLC3.
(2) Turn the ignition switch ON.
(3) When operating hand–held tester to erase the codes, the DTCs and freeze frame data will be erased. (See the hand–held tester's instruction book for operating instructions.)

(c) Clearing the DTCs not using the hand–held tester:
(1) Disconnecting the battery terminal or remove the EFI fuse for more than 60 seconds.

4. FAIL–SAFE CHART

If any of the following codes are recorded, the engine ECM enters the fail–safe mode.

DTC No.	Fail–Safe Operation	Fail–Safe Deactivation Conditions
P0031/21 P0032/21 P0051/28 P0052/28	The heater circuit in which the abnormality is detected is turned off	Ignition switch OFF
P0100/31 P0102/31 P0103/31	Ignition timing is calculated from engine speed and a throttle angle	If the ECM detects "Pass" condition, the ECM will return to "Nomal mode".
P0110/24 P0112/24 P0113/24	Intake air temp. is fixed at 20°C (68°F)	If the ECM detects "Pass" condition, the ECM will return to "Nomal mode".
P0115/22 P0117/22 P0118/22	Engine coolant temp. is fixed at 80°C (176°F)	If the ECM detects "Pass" condition, the ECM will return to "Nomal mode".
P0120/41 P0122/41 P0123/41	Fuel cut intermittently while idling	Returned to normal condition and ignition switch OFF
P0325/52 P0327/52 P0328/52	Max. timing retardation	Ignition switch OFF
P0351/14 P0352/15 P0353/14 P0354/15	Fuel cut	If the ECM detects "Pass" condition, the ECM will return to "Nomal mode".

5. CHECK FOR INTERMITTENT PROBLEMS

Hand–held tester only:

By putting the vehicle's engine ECM in check (test) mode, 1 trip detection logic is possible instead of 2 trip detection logic, and sensitivity to detect faults is increased. This makes it easier to detect intermittent problems.

(a) Clear the DTC. (See step 3.)
(b) Set the check (test) mode. (See step 3.)
(c) Perform a simulation test. (See page 01–22)
(d) Check the connector and terminal. (See page 01–32)
(e) Wiggle the harness and the connector. (See page 01–32)

6. DATA LIST

HINT:

Using the DATA LIST displayed by the hand–held tester, you can read the value of the switches, sensors, actuators and so on without parts removal. Reading the DATA LIST as a first step of troubleshooting is one of the method to shorten diagnostic time.

NOTICE:

The values given below for ”Normal Condition” are representative values. A vehicle may still be normal even if the measured values are a little different from those listed here. Do not decide whether a part is faulty or not solely according to the ”Normal Condition” here.

(a) Warm up the engine.
(b) Turn the ignition switch OFF.
(c) Connect the Hand–held tester to the DLC3.
(d) Turn the ignition switch ON.
(e) Push the ”ON” button of the hand–held tester.
(f) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL”.
(g) According to the display on tester, read the ”DATA LIST”.

Hand–held Tester Display	Measurement Item/Range (Display)	Normal Condition	Diagnostic Note
INJECTOR	Injection period/ Min.: 0 ms, Max.: 32.64 ms	Idling: 1.92 to 3.37 ms	—
IGN ADVANCE	Ignition timing advance/ Min.: –64 deg., Max.: 63.5 deg.	Idling: BTDC 5 to 15 deg.	—
CALC LOAD	Calculated load by engine ECM/ Min.: 0 %, Max.: 100 %	• Idling: 3.3 to 26.7 % • Running without load (2,500 rpm): 12.0 to 14.7 %	—
MAF	Air flow rate from MAF sensor/ Min.: 0 gm/s, Max.: 655 gm/s	• Idling: M/T 0.54 to 4.33 gm/sec. A/T 0.58 to 4.67 gm/sec. • Runnning without load (2,500 rpm): 3.33 to 9.17 gm/sec.	—
ENGINE SPD	Engine Speed/ Min.: 0 rpm, Max.: 16,383 rpm	Idling: M/T 650 to 750 rpm A/T 550 to 750 rpm	—
COOLANT TEMP	Coolant temperature/ Min.: –40 °C, Max.: 140 °C	After warming up: 80 to 95°C (176 to 203°F)	If the value is ”–40 °C” or ”140 °C”, sensor circuit is open or shorted.
INTAKE AIR	Intake air temperature/ Min.: –40 °C, Max.: 140 °C	Equivalent to ambient temp.	
THROTTLE POS	Absolute throttle position sensor/ Min.: 0 %, Max.: 100 %	• Throttle fully closed: 6 to 16 % • Throttle fully open: 64 to 98 %	Read the value with ignition switch ON (Do not start engine)
CTP SW	Closed throttle position switch/ ON or OFF	• Throttle fully closed: ON • Throttle open: OFF	—
VEHICLE SPD	Vehicle speed/ Min.: 0 km/h, Max.: 255 km/h	Vehicle stopped: 0 km/h (0 mph)	—
O2S B1 S2	Oxygen sensor output voltage of the bank 1 sensor 2/ Min.: 0 V, Max.: 1.275 V	Idling: 0.1 to 0.9 V	—
AFS B1 S1	A/F sensor output voltage of the bank 1 sensor 1/ Min.: 0 V, Max.: 7.999 V	Idling: 2.8 to 3.8 V	—

SHORT FT #1	Short term fuel trim of bank 1/ Min.: –100 %, Max.: 100%	0 ± 20 %	—
LONG FT #1	Long term fuel trim of bank 1/ Min.: –100 %, Max.: 100 %	0 ± 20 %	—
TOTAL FT #1	Total fuel trim of bank 1/ Min.: 0.5, Max.: 1.496	Idling: 0.5 to 1.4	—
TOTAL FT #2	Total fuel trim of bank 2/ Min.: 0.5, Max.: 1.496	Idling: 0.5 to 1.4	—
AF FT B1 S1	Short term fuel trim associated with the bank 1, sensor 1/ Min.: 0, Max.: 1.999	• Lean: 0 < 1 • Stoichiometric Air–Fuel Ratio = 1 • Rich: 1 < 1.999	—
FUEL SYS #1	Fuel system status (Bank1) / OL or CL or OLDRIVE or OLFAULT or CLFAULT	Idling after warming up: CL	• OL: Open Loop–has not yet satisfied conditions to go closed loop. • CL: Closed Loop–using oxygen sensor(s) as feed back for fuel control. • OL DRIVE: Open loop due to driving conditions. (power enrichment, deceleration enleanment) • OL FAULT: Open loop due to detected system fault. • CL FAULT: Closed loop, but fault with at least one oxygen sensor may be using single oxygen sensor for fuel control.
FC IDL	Idle fuel cut / ON or OFF	Fuel cut operation: ON	—
CHK ENG	CHK ENG status / ON or OFF	CHK ENG ON: ON	—
STARTER SIG	Starter signal / ON or OFF	Cranking: ON	—
A/C SIG	A/C signal / ON or OFF	A/C ON: ON	—
PNP SW [NSW]	Neutral position switch signal / ON or OFF	P or N position: ON	—
ELECT LOAD SIG	Electrical load signal / ON or OFF	Defogger switch ON: ON	—
STOP LIGHT SW	Stop light switch / ON or OFF	• Brake pedal depressed: ON • Brake pedal released: OFF	—
PS OIL PRESS SW	Power steering signal / ON or OFF	Steering position is; center: OFF Except center:ON	—
PS SIGNAL	Power steering signal/ ON or OFF	• After engine start: OFF • After steer the steering: ON	—
FUEL PUMP / SPD	Fuel pump / speed status / ON/H or OFF/M,L	Idling: ON	—
EVAP VSV	VSV status for EVAP control / ON or OFF	VSV operating: ON	—
VVT CTRL B1	VVT control status / ON or OFF	VVT system operation: ON	—
IGNITION	Ignition counter/ Min.: 0, Max.: 400	0 to 400	—
CYL #1, #2, #3, #4	Misfire ratio of the cylinder 1/ Min.: 0 %, Max.: 50 %	0 %	—

THROTTLE POS	Throttle position sensor output voltage/ Min.: 0 V, Max.: 5 V	• Throttle fully closed: 0.3 to 0.8 V • Throttle fully open: 3.2 to 4.9 V	Read the value with ignition switch ON (Do not start engine)
THROTTLE TARGT	Target position of throttle valve/ Min.: 0 V, Max.: 5 V	Idling: 0.4 to 1.0 V	Read the value with ignition switch ON (Do not start engine)

If no conditions are specifically stated for ”Idling”, it means the shift lever is at N or P position, the A/C switch is OFF and all accessory switches are OFF.

7. ACTIVE TEST

HINT:

Performing the ACTIVE TEST using the hand–held tester allows the relay, VSV, actuator and so on to operate without parts removal. Performing the ACTIVE TEST as a first step of troubleshooting is one of the method to shorten diagnostic time.

It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Warm up the engine.
(b) Turn the ignition switch OFF.
(c) Connect the hand–held tester to the DLC3.
(d) Turn the ignition switch ON.
(e) Push the ”ON” button of the hand–held tester.
(f) Select the item ”DIAGNOSIS / OBD/MOBD / ACTIVE TEST”.
(g) According to the display on tester, perform the ”ACTIVE TEST”.

Hand–held Tester Display	Test Details	Diagnostic Note
INJ VOL	[Test Details] Control the injection volume Min.: –12.5 %, Max.: 25 % [Vehicle Condition] Engine speed: 3000 rpm or less.	• All injectors are tested at once. • Injection volume is gradually changed between –12.5 and 25%.
A/F CONTROL	[Test Details] Control the injection volume –12.5 % ⇔ 25 % (Change the injection volume –12.5 % or 25 %.) [Vehicle Condition] Engine speed: 3000 rpm or less.	The following procedure of A/F CONTROL enables the technician to check and graph the voltage outputs of both the A/F sensor and heated oxygen sensor. To display the graph indication, select O2S B1 S1 or A/F B1S1 and press button ”4” after selecting ”ACTIVE TEST/A/F CONTROL/ USER DATA”.
EVAP VSV (ALONE)	[Test Details] Activate the VSV for EVAP control. ON or OFF	—
FUEL PUMP / SPD	[Test Details] Control the fuel pump. ON or OFF	—
VVT CTRL B1	[Test Details] Activate the VVT system. ON or OFF	• ON: Rough idle or engine stall. • OFF: Normal engine speed.
TC/TE1	[Test Details] Connect the TC and TE1 ON or OFF	—
FC IDL PROHBT	[Test Details] Control the idle fuel cut prohibit ON or OFF	—

BASIC INSPECTION

When the malfunction is not confirmed in the DTC check, troubleshooting should be carried out in all the possible circuits considered as causes of the problem. In many cases, by carrying out the basic engine check shown in the following flow chart, the location causing the problem can be found quickly and efficiently. Therefore, using this check is essential in the engine troubleshooting.

1	CHECK BATTERY VOLTAGE

NOTICE:
Carry out this check with the engine stopped and ignition switch off.

Reference:

	OK	NG
Voltage	11 V or more	Less than 11 V

NG → **CHARGE OR REPLACE BATTERY**

OK

2	CHECK IF ENGINE WILL CRANK

NG → **PROCEED TO PROBLEM SYMPTOMS TABLE ON PAGE 05–168**

OK

3	CHECK IF ENGINE STARTS

NG → **GO TO STEP 6**

OK

4	CHECK AIR FILTER

(a) Visually check that the air filter is not excessively dirty or oily.

HINT:
If necessary, clean the filter with compressed air. First blow from the inside thoroughly, then blow from the outside of filter.

NG → **REPAIR OR REPLACE**

OK

5	CHECK IDLE SPEED (See page 14–101)

NG → **PROCEED TO PROBLEM SYMPTOMS TABLE ON PAGE 05–168**

OK

6	CHECK FUEL PRESSURE (See page 11–19)

NG → PROCEED TO PAGE 11–15 AND CONTINUE TO TROUBLESHOOT

OK

7	CHECK FOR SPARK (See page 18–7)

NG → PROCEED TO PAGE 18–7 AND CONTINUE TO TROUBLESHOOT

OK

PROCEED TO PROBLEM SYMPTOMS TABLE ON PAGE

05C6N–01

DIAGNOSTIC TROUBLE CODE CHART

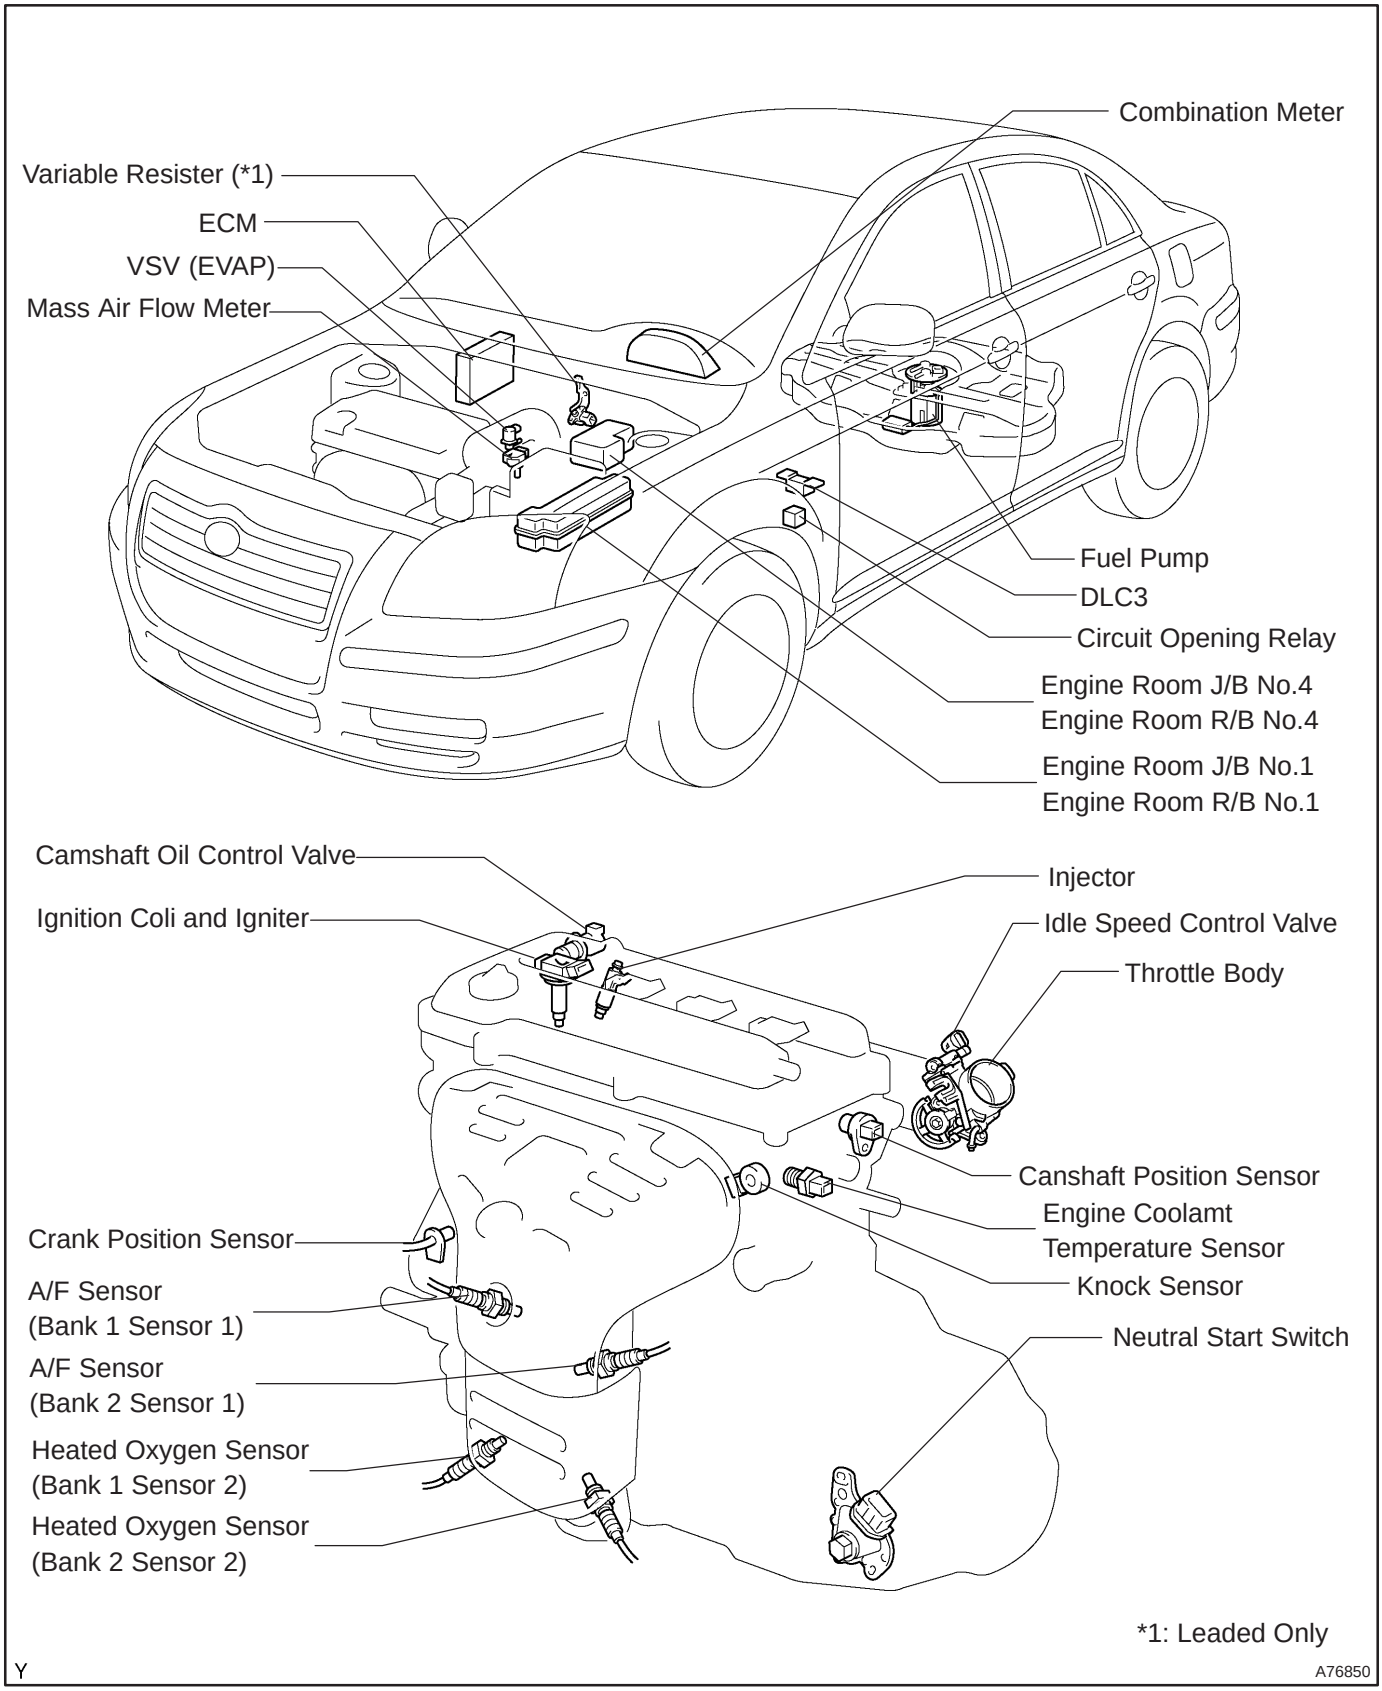
HINT:

Parameters listed in the chart may not be exactly the same as your readings due to the type of instrument or other factors.

If a malfunction code is displayed during the DTC check in the check mode, check the circuit for the codes listed in the table below. For details of each code, refer to the ”See page ” under the respective ”DTC No.” in the DTC chart.

DTC No. (See Page)	Detection Item	Trouble Area	*1 CHK ENG	Memory
P0010/39 *4 (05–169)	Camshaft Position ”A” Actuator Circuit (Bank 1)	• Open or short in oil control valve (OCV) circuit • Oil control valve • ECM	○	○
P0011/59 *4 (05–174)	Camshaft Position ”A” –Timing Over–Advanced or System Performance (Bank 1)	• Valve timing • Oil control valve (OCV) • Camshaft timing gear assy • ECM	—	○
P0012/59 *4 (05–174)	Camshaft Position ”A” –Timing Over– Retarded (Bank 1)		—	○
P0016/18 *4 (05–181)	Crankshaft Position – Camshaft Position Correlation (Bank 1 Sensor A)	• Mechanical system (Timing chain has jumped a tooth, chain stretched) • ECM	—	○
P0031/21 *2, *4 (05–182)	Oxygen (A/F) Sensor Heater Control Circuit Low (Bank 1 Sensor 1)	• Open or short in heater circuit of A/F sensor • A/F sensor heater • A/F relay • ECM	—	○
P0032/21 *2, *4 (05–182)	Oxygen (A/F) Sensor Heater Control Circuit High (Bank 1 Sensor 1)		—	○
P0051/28 *2, *4 (05–182)	Oxygen (A/F) Sensor Heater Control Circuit Low (Bank 2 Sensor 1)		—	○
P0052/28 *2, *4 (05–182)	Oxygen (A/F) Sensor Heater Control Circuit High (Bank 2 Sensor 1)		—	○
P0100/31 (05–186)	Mass Air Flow Circuit	• Open or short in mass air flow meter circuit • Mass air flow meter • ECM	○	○
P0102/31 (05–186)	Mass or volume Air Flow Circuit Low Input		○	○
P0103/31 (05–186)	Mass or volume Air Flow Circuit High Input		○	○
P0110/24 (05–194)	Intake Air Temperature Circuit	• Open or short in intake air temp. sensor circuit • Intake air temp. sensor (built in mass air flow meter) • ECM	—	○
P0112/24 (05–194)	Intake Air Temperature Circuit Low Input		—	○
P0113/24 (05–194)	Intake Air Temperature Circuit High Input		—	○
P0115/22 (05–199)	Engine Coolant Temperature Circuit	• Open or short in engine coolant temperature sensor circuit • Engine coolant temperature sensor • ECM	○	○
P0117/22 (05–199)	Engine Coolant Temperature Circuit Low Input		○	○
P0118/22 (05–199)	Engine Coolant Temperature Circuit High Input		○	○
P0120/41 (05–204)	Throttle/Pedal Position Sensor/ Switch ”A” Circuit	• Throttle position sensor (built in throttle body) • ECM	—	○
P0122/41 (05–204)	Throttle/Pedal Position Sensor/ Switch ”A” Circuit Low Input	• Throttle position sensor (built in throttle body) • Short in VTA1 circuit • Open in VC circuit • ECM	—	○

P0123/41 (05–204)	Throttle/Pedal Position Sensor/ Switch "A" Circuit High Input	• Throttle position sensor (built in throttle body) • Open in VTA1 circuit • open in E2 circuit • VC and VTA1 circuit are short–circuited • ECM	—	○
P0136/27*4 (05–211)	Oxygen Sensor Circuit Malfunction (Bank 1 Sensor 2)	• Open or short in heated oxygen sensor circuit • Heated oxygen sensor • Heated oxygen sensor heater • EFI relay	—	○
P0141/27*4 (05–218)	Oxygen Sensor Heater Circuit malfunction (Bank 1 Sensor 2)	• Open or short in heater circuit of heated oxygen sensor • Heated oxygen sensor heater • EFI relay • ECM	—	○
P0156/29*4 (05–211)	Oxygen Sensor Circuit Malfunction (Bank 2 Sensor 2)	• Open or short in heated oxygen sensor circuit • Heated oxygen sensor • Heated oxygen sensor heater • EFI relay	—	○
P0161/29*4 (05–218)	Oxygen Sensor Heater Circuit (Bank 2 Sensor 2)	• Open or short in heater circuit of heated oxygen sensor • Heated oxygen sensor heater • EFI relay • ECM	—	○
P0325/52 (05–222)	Knock Sensor 1 Circuit (Bank 1 or Single Sensor)	• Knock sensor 1 • Knock sensor 1 (under–torqued or loose) • ECM	○	○
P0327/52 (05–222)	Knock Sensor 1 Circuit Low Input (Bank 1 or Single Sensor)	• Short in knock sensor 1 circuit • Knock sensor 1 • ECM	○	○
P0328/52 (05–222)	Knock Sensor 1 Circuit High Input (Bank 1 or Single Sensor)	• Open in knock sensor 1 circuit • Knock sensor 1 • ECM	○	○
P0335/12, 13 (05–226)	Crankshaft Position Sensor "A" Circuit	• Open or short in crankshaft position sensor circuit • Crankshaft position sensor • Signal plate (crankshaft) • ECM	○	○
P0339/13 (05–226)	Crankshaft Position Sensor "A" Circuit Intermittent		—	○
P0340/12 (05–229)	Camshaft Position Sensor "A" Circuit (Bank 1 or Single Sensor)	• Open or short in camshaft position sensor circuit • Camshaft position sensor • Camshaft timing pulley • Timing chain has jumped a tooth • ECM	○	○
P0341/12 (05–229)	Camshaft Position Sensor "A" Circuit Range/Performance (Bank 1 or Single Sensor)		○	○
P0351/14*3 (05–232)	Ignition Coil "A" Primary/Secondary Circuit	• Ignition system • Open or short in IGF or IGT1 to 4 circuit from ignition coil with igniter to ECM • No. 1 to No. 4 ignition coil with igniter • IG2 relay • ECM	○	○
P0352/15*3 (05–232)	Ignition Coil "B" Primary/Secondary Circuit		○	○
P0353/14*3 (05–232)	Ignition Coil "C" Primary/Secondary Circuit		○	○
P0354/15*3 (05–232)	Ignition Coil "D" Primary/Secondary Circuit		○	○
P0500/42 (05–240)	Vehicle Speed Sensor "A"	• Open or short in speed sensor circuit • Speed sensor • Combination meter • ECM • Skid control ECU	○	○
P0511/33 (05–243)	Idle Air Control Circuit	• Open or short in idle speed control (ISC) valve circuit • Idle speed control (ISC) valve is stuck or closed • A/C switch circuit • Air induction system • ECM	○	○
P0606/89 (05–247)	ECM/PCM Processor	• ECM	○	○



P0710/38 (05–882)	Transmission Fluid Temperature Sensor "A" Circuit	• Electronic controlled automatic transmission (ECT)	○	○
P0712/38 (05–882)	Transmission Fluid Temperature Sensor "A" Circuit Low Input		○	○
P0713/38 (05–882)	Transmission Fluid Temperature Sensor "A" Circuit High Input		○	○
P0717/37 (05–884)	Input/Turbine Speed Sensor "A" Circuit No Signal		○	○
P0748/62 (05–886)	Pressure Control Solenoid "A" Electrocal (Shift Solenoid Valve SL1)		○	○
P0778/63 (05–886)	Pressure Control Solenoid "B" Electrocal (Shift Solenoid Valve SL2)		○	○
P0793/67 (05–892)	Intermediate Shaft Speed Sensor "A"		○	○
P0982/65 (05–886)	Shift Solenoid "D" Control Circuit Low (Shift Solenoid Valve S4)		○	○
P0983/65 (05–886)	Shift Solenoid "D" Control Circuit High (Shift Solenoid Valve S4)		○	○
P2237/21 *2, *4 (05–248)	Oxygen Sensor Pumping Current Circuit/ Open (for A/F sensor) (Bank 1 Sensor 1)	• Open or short in A/F sensor circuit • A/F sensor • A/F sensor heater • A/F sensor heater relay • A/F sensor heater and relay circuit • ECM	—	○
P2238/21 *2, *4 (05–248)	Oxygen Sensor Pumping Current Circuit Low (for A/F sensor) (Bank 1 Sensor 1)		—	○
P2239/21 *2, *4 (05–248)	Oxygen Sensor Pumping Current Circuit High (for A/F sensor) (Bank 1 Sensor 1)		—	○
P2240/28 *2, *4 (05–248)	Oxygen Sensor Pumping Current Circuit/ Open (for A/F sensor) (Bank 2 Sensor 1)		—	○
P2241/28 *2, *4 (05–248)	Oxygen Sensor Pumping Current Circuit Low (for A/F sensor) (Bank 2 Sensor 1)		—	○
P2242/28 *2, *4 (05–248)	Oxygen Sensor Pumping Current Circuit High (for A/F sensor) (Bank 2 Sensor 1)		—	○
P2251/21 *2, *4 (05–248)	Oxygen Sensor Reference Ground Circuit/ Open (for A/F senor) (Bank 1 Sensor 1)		—	○
P2252/21 *2, *4 (05–248)	Oxygen Sensor Reference Ground Circuit Low (for A/F senor) (Bank 1 Sensor 1)		—	○
P2253/21 *2, *4 (05–248)	Oxygen Sensor Reference Ground Circuit High (for A/F senor) (Bank 1 Sensor 1)		—	○
P2254/28 *2, *4 (05–248)	Oxygen Sensor Reference Ground Circuit/ Open (for A/F senor) (Bank 2 Sensor 1)		—	○
P2255/28 *2, *4 (05–248)	Oxygen Sensor Reference Ground Circuit Low (for A/F senor) (Bank 2 Sensor 1)		—	○
P2256/28 *2, *4 (05–248)	Oxygen Sensor Reference Ground Circuit High (for A/F senor) (Bank 2 Sensor 1)		—	○

P2716/77 (05–894)	Pressure Control Solenoid "D" Electrical	• Electronic controlled automatic transmission (ECT)	—	○
P2769/64 (05–897)	DSL Solenoid Circuit Low (Shift Solenoid Valve DSL)		—	○
P2770/64 (05–897)	DSL Solenoid Circuit High (Shift Solenoid Valve DSL)		—	○
B2799/99 (05–1625)	Engine Immobilizer System Malfunction	• Immobilizer system	—	○

*1: ○ ... CHK ENG is illuminated. — ... CHK ENG is not illuminated.
*2: This DTC is related to A/F sensor, although the caption is heated oxygen sensor.
*3: This DTC indicate a malfunction related to primary circuit.
*4: For European spec. only

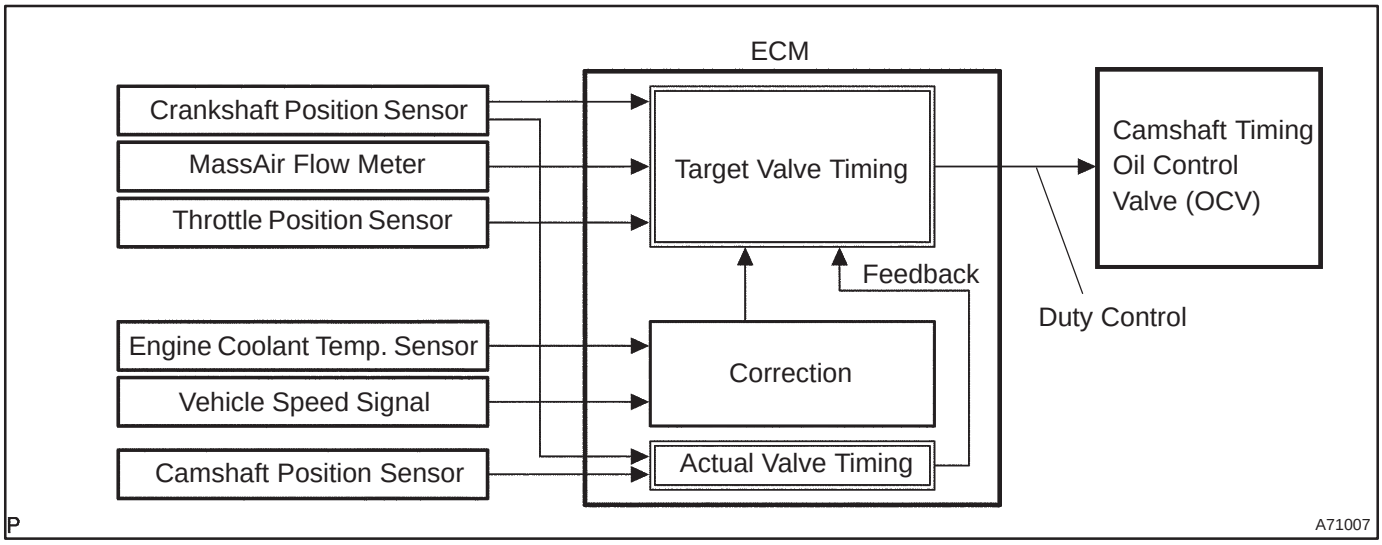
SIL (E9 – 18) – E1 (E12 – 7)	W–G – BR	Connect hand–held tester to DLC3	Pulse generation
ELS (E9 – 12) – E1 (E12 – 7)	G – BR	Taillight ON	9 to 14
		IG switch ON	Below 3.0
VAF (E13 – 32) – E2 (E13 – 28) *2	P – BR	IG switch ON	2.0 to 3.5

*1: For European spec. only

*2: Leaded only

05C6Q–01

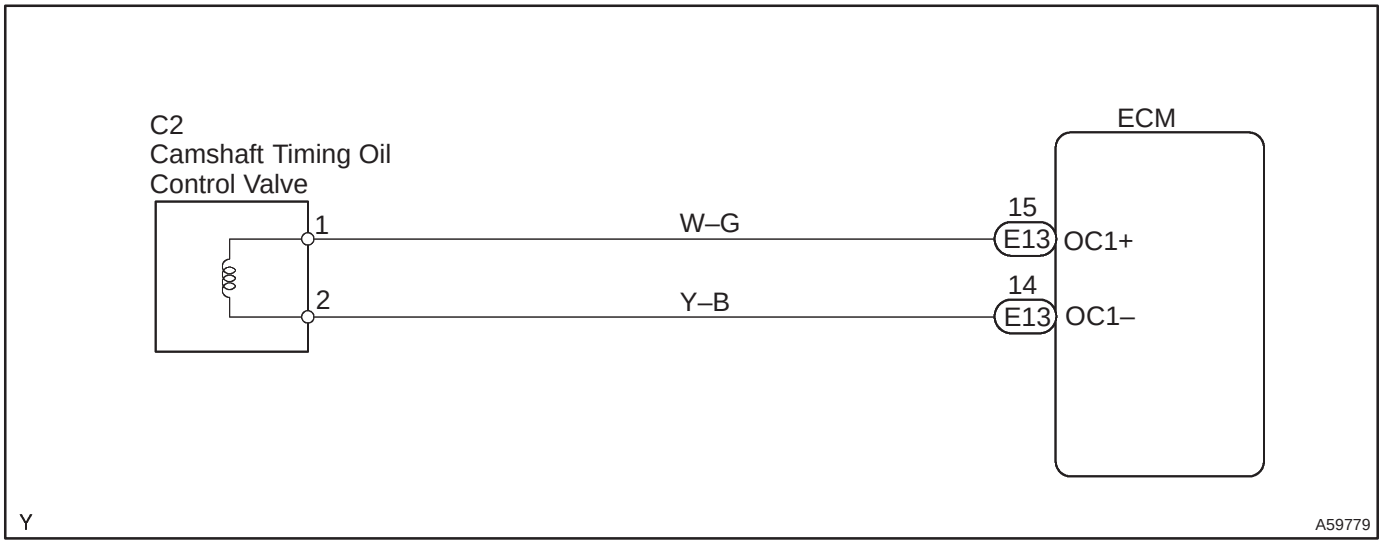
PROBLEM SYMPTOMS TABLE



Symptom	Suspected Area	See page
Engine does not crank (Does not start)	1. Starter 2. Starter relay	19–8 19–8
No initial combustion (Does not start)	1. ECM power source circuit 2. Fuel pump control circuit 3. ECM	05–257 05–264 01–32
No complete combustion (Does not start)	1. Fuel pump control circuit	05–264
Engine cranks normally (Difficult to start)	1. Starter signal circuit 2. Fuel pump control circuit 3. Compression	05–278 05–264 14–101
Cold engine (Difficult to start)	1. Starter signal circuit 2. Fuel pump control circuit	05–278 05–264
Hot engine (Difficult to start)	1. Starter signal circuit 2. Fuel pump control circuit	05–278 05–264
High engine idle speed (Poor idling)	1. A/C signal circuit (Compressor circuit) 2. ECM power source circuit	– 05–257
Low engine idle speed (Poor idling)	1. A/C signal circuit (Compressor circuit) 2. Fuel pump control circuit	– 05–264
Rough idling (Poor idling)	1. Compression 2. Fuel pump control circuit	14–101 05–264
Hunting (Poor idling)	1. ECM power source circuit 2. Fuel pump control circuit	05–257 05–264
Hesitation/Poor acceleration (Poor driveability)	1. Fuel pump control circuit 2. A/T faulty	05–264 05–879
Surging (Poor driveability)	1. Fuel pump control circuit	05–264
Engine stalls soon after starting	1. Fuel pump control circuit	05–264
Engine stalls during A/C operation	1. A/C signal circuit (Compressor circuit) 2. ECM	– 01–32
Unable to refuel/Difficult to refuel	1. ORVR system	–

DTC	P0010/39	CAMSHAFT POSITION ”A” ACTUATOR CIRCUIT (BANK 1)

CIRCUIT DESCRIPTION



The VVT system controls the intake camshaft to provide the optimal valve timing for every driving condition. This control is performed based on the signals, such conditions as intake air volume, throttle position and engine coolant temperature.

The ECM controls the oil control valve (OCV), based on the signals output from the sensors. The VVT controller regulates the intake camshaft angle using oil pressure through the oil control valve (OCV). As result, the relative position between the camshaft and the crankshaft becomes optimal, and the engine torque improves, fuel economy improves, exhaust emissions decrease under overall driving conditions. Also, the ECM detects the actual valve timing using the signals from the camshaft position sensor and the crankshaft position sensor, and performs feedback control. This is how target valve timing is achieved by the ECM.

DTC No.	DTC Detection Condition	Trouble Area
P0010/39	Open or short in oil control valve (OCV) circuit	• Open or short in oil control valve circuit • Oil control valve • ECM

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

When using hand–held tester:

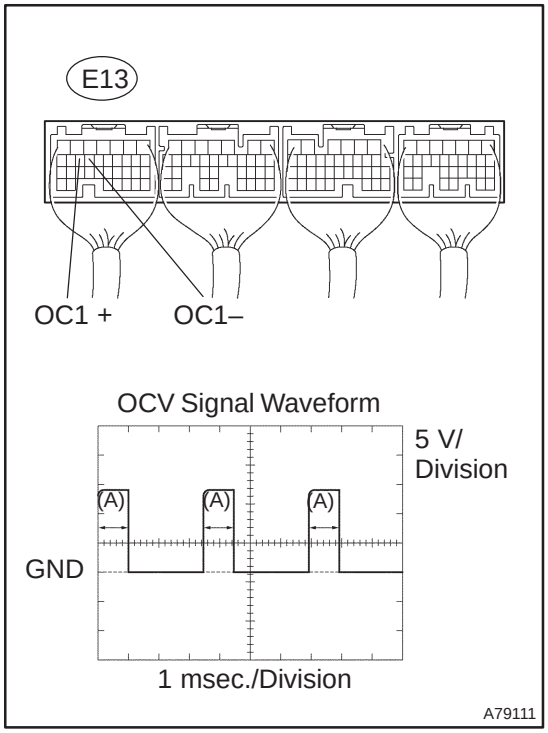
1	PERFORM ACTIVE TEST BY HAND–HELD TESTER(OCV OPERATION)

(a) Connect the hand–held tester to the DLC3.
(b) Start the engine and warm it up.
(c) Turn the ignition switch ON and push the hand–held tester main switch ON.
(d) Select the item ”DIAGNOSIS / OBD/MOBD/ ACTIVE TEST / VVT CTRL B1 or VVT CTRL B2”.
(e) Check the engine speed when operating the OCV by the hand–held tester.

Standard:

Tester operation	Specified condition
OCV is OFF	Normal engine speed
OCV is ON	Rough idle or engine stall

OK → **CHECK FOR INTERMITTENT PROBLEMS (See page 05–149)**



NG

2	INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSY (See page 10–20)

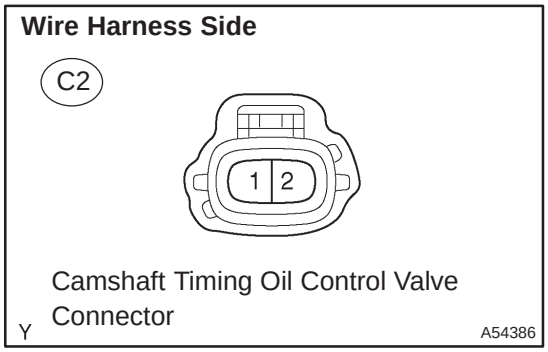
NG → **REPLACE CAMSHAFT TIMING OIL CONTROL VALVE ASSY**

OK

3 INSPECT ECM(OCV SIGNAL)

(a) Inspection using the oscilloscope.
(b) During idling, check the waveform between the terminals of the E13 ECM connector.

Standard:



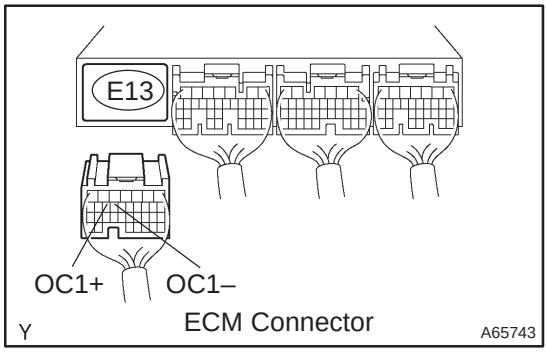
Symbols (Terminal No.)	Specified condition
OC1+ (E13–15) – OC1– (E13–14)	Correct waveform is as shown

HINT:
The waveform frequency (A) is lengthened as the engine speed becomes higher.

NG → **CHECK AND REPLACE ECM (See page 01–32)**

OK

4 CHECK HARNESS AND CONNECTOR(ECM – OCV)



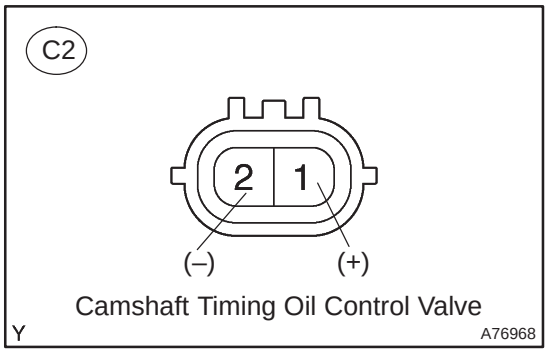
(a) Disconnect the camshaft timing oil control valve connector.
(b) Disconnect the E13 ECM connector.
(c) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
Oil control valve (C2–1) – OC1+ (E13–15)	Continuity
Oil control valve (C2–2) – OC1– (E13–14)	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
Oil control valve (C2–1) or OC1+ (E13–15) – Body ground	No continuity
Oil control valve (C2–2) or OC1– (E13–14) – Body ground	



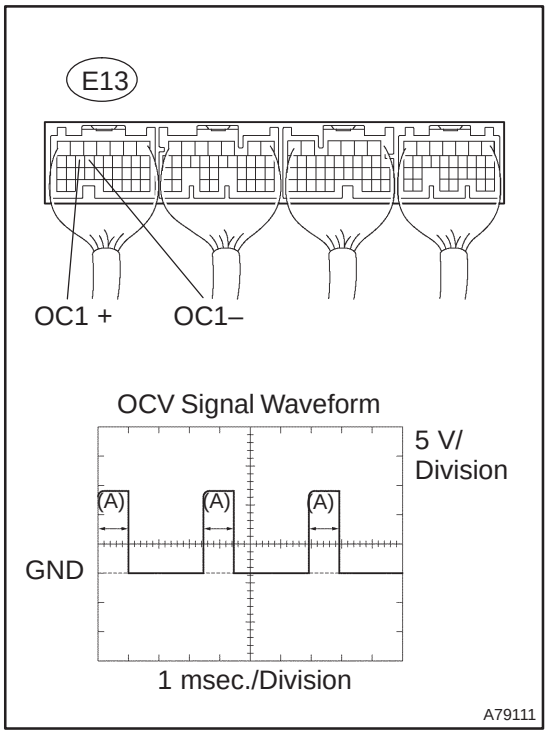
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK FOR INTERMITTENT PROBLEMS

When not using hand–held tester:

1	CHECK OPERATION OF OCV



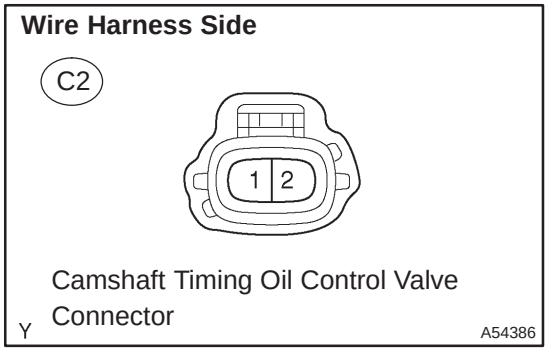
(a) Disconnect the camshaft timing oil control valve connector.
(b) Apply battery positive voltage between the terminals of the camshaft timing oil control valve.
(c) Check the engine speed.
Standard:
Engine speed is rough idle or engine is stalled.

NG → **REPLACE CAMSHAFT TIMING OIL CONTROL VALVE ASSY**

OK

2	INSPECT ECM(OCV SIGNAL)

(a) Inspection using the oscilloscope.
(b) During idling, check the waveform between the terminals of the E13 ECM connector.
Standard:



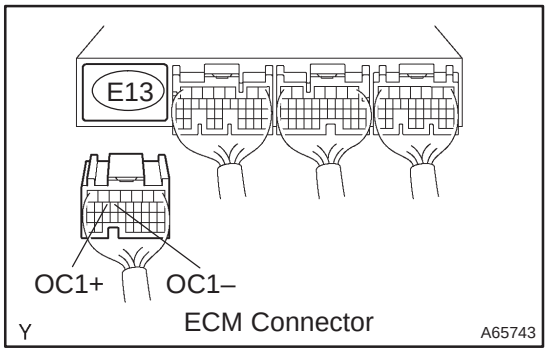
Symbols (Terminal No.)	Specified condition
OC1+ (E13–15) – OC1– (E13–14)	Correct waveform is as shown

HINT:
The waveform frequency (A) is lengthened as the engine speed becomes higher.

NG → **CHECK AND REPLACE ECM (See page)**

OK

3 CHECK HARNESS AND CONNECTOR(ECM – OCV)



(a) Disconnect the camshaft timing oil control valve connector.
(b) Disconnect the E13 ECM connector.
(c) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
Oil control valve (C2–1) – OC1+ (E13–15)	Continuity
Oil control valve (C2–2) – OC1– (E13–14)	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
Oil control valve (C2–1) or OC1+ (E13–15) – Body ground	No continuity
Oil control valve (C2–2) or OC1– (E13–14) – Body ground	

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK FOR INTERMITTENT PROBLEMS (See page 05–149)

DTC	P0011/59	CAMSHAFT POSITION ”A” –TIMING OVER–ADVANCED OR SYSTEM PERFORMANCE (BANK 1)

DTC	P0012/59	CAMSHAFT POSITION ”A” –TIMING OVER–RETARDED (BANK 1)

CIRCUIT DESCRIPTION

Refer to DTC P0010/39 on page 05–169.

DTC No.	DTC Detection Condition	Trouble Area
P0011/59	Condition (a) or (b) continues after engine is warmed up and engine speed at 400 to 4,000 rpm (Problem of the advanced oil control valve.): (a) Valve timing does not change from current valve timing (b) Current valve timing is fixed	• Valve timing • Oil control valve • Camshaft timing gear assy • ECM
P0012/59	Condition (a) or (b) continues after engine is warmed up and engine speed at 400 to 4,000 rpm (Problem of the retarded oil control valve.): (a) Valve timing does not change from current valve timing (b) Current valve timing is fixed	

WIRING DIAGRAM

Refer to DTC P0010/39 on page 05–169.

INSPECTION PROCEDURE

HINT:

Advanced timing over (Valve timing is out of specified range)	P0011/59
Retarded timing over (Valve timing is out of specified range)	P0012/59

- If DTC ”P0011/59 or P0012/59” is displayed, check VVT system circuit.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

When using hand–held tester:

1	CHECK VALVE TIMING (See page 14–139)

NG → ADJUST VALVE TIMING (See page 14–139)

OK

2	PERFORM ACTIVE TEST BY HAND–HELD TESTER(OPERATION OF OCV)

(a) Connect the hand–held tester to the DLC3.
(b) Start the engine and warm it up.
(c) Turn the ignition switch ON and push the hand–held tester main switch ON.
(d) Select the item ”DIAGNOSIS / OBD/MOBD / ACTIVE TEST / VVT CTRL B1”.
(e) Check the engine speed when operating the OCV by the hand–held tester.
Standard:

Tester operation	Specified condition
OCV is OFF	Normal engine speed
OCV is ON	Rough idle or engine stall

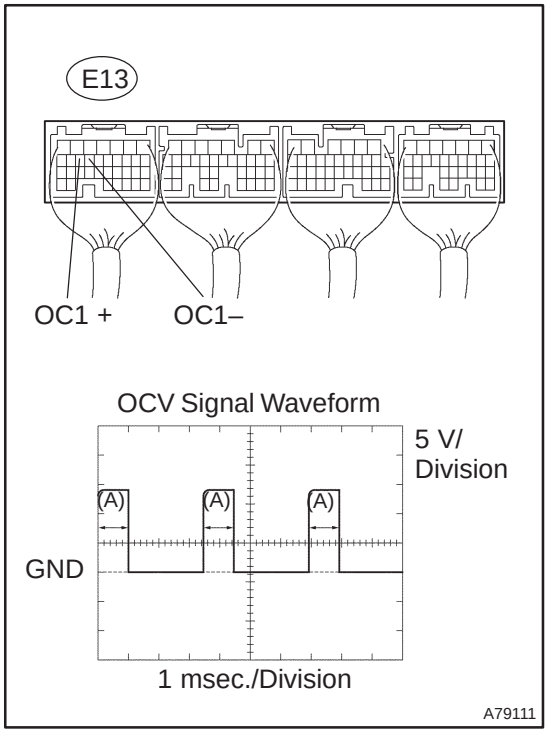
OK → **Go to step 4**

NG

3	READ OUTPUT DTC(CHECK IF DTC OUTPUT RECURS)

(a) Clear the DTC.
  (1) Operating the hand–held tester to erase the codes, or disconnecting the battery terminal or the EFI and ECTS fuses for more than 60 sec.
(b) Start and warm up the engine.
(c) Drive the vehicle around for 10 minutes or more.
(d) Read output DTC using the hand–held tester.

Standard: No DTC output.



HINT:

*: DTCs P0011/59 or P0012/59 is output when a foreign object in engine oil is caught in some part of the system. These codes will stay registered even if the system returns to normal after a short time. These foreign objects are then captured by the oil filter, thus eliminating the source of the problem.

OK → **VVT SYSTEM OK***

NG

4	CHECK ECM(OCV SIGNAL)

(a) Inspection using the oscilloscope.
(b) During idling, check the waveform between the terminals of the E13 ECM connector.
Standard:

Symbols (Terminal No.)	Specified condition
OC1+ (E13–15) – OC1– (E13–14)	Correct waveform is as shown

HINT:
The waveform frequency (A) is lengthened as the engine speed becomes higher.

NG → **CHECK AND REPLACE ECM (See page 01–32)**

OK

5	CHECK OIL CONTROL VALVE FILTER

NG → **REPLACE OIL CONTROL VALVE FILTER**

OK

6	CHECK CAMSHAFT TIMING OIL CONTROL VALVE ASSY(OCV) (See page 10–20)

OK → **Go to step 8**

NG

7	REPLACE CAMSHAFT TIMING OIL CONTROL VALVE ASSY(OCV)

GO

8	CHECK CAMSHAFT TIMING GEAR ASSY (See page 14–171)

OK → **Go to step 10**

NG

9	REPLACE CAMSHAFT TIMING GEAR ASSY

GO

10	CHECK FOR BLOCKAGE(OCV, OIL CHECK VALVE AND OIL HOLE)

NG → REPAIR OR REPLACE

OK

11	READ OUTPUT DTC(CHECK IF DTC OUTPUT RECURS)

(a) Clear the DTC.
  (1) Operating the hand–held tester to erase the codes, or disconnecting the battery terminal or the EFI and ECTS fuses for more than 60 sec.
(b) Start and warm up the engine.
(c) Drive the vehicle around for 10 minutes or more.
(d) Read output DTC using the hand–held tester.

Standard: No DTC output.

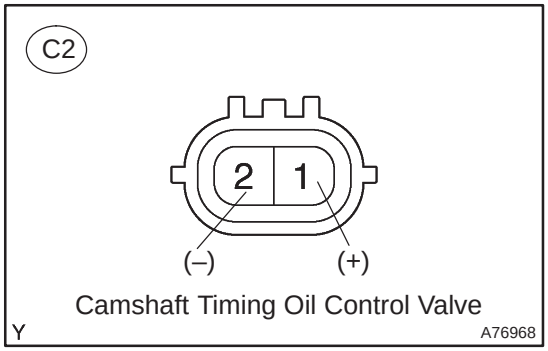
HINT:

*: DTCs P0011/59 or P0012/59 is output when a foreign object in engine oil is caught in some part of the system. These codes will stay registered even if the system returns to normal after a short time. These foreign objects are then captured by the oil filter, thus eliminating the source of the problem.

OK → VVT SYSTEM OK*

NG

CHECK AND REPLACE ECM (See page 01–32)



When not using hand–held tester:

1	CHECK VALVE TIMING (See page 14–139)

NG → ADJUST VALVE TIMING (See page 14–139)

OK

2 CHECK OPERATION OF OCV

(a) Start the engine.
(b) Check the engine speed with conditions (1) and then (2).
  (1) Disconnect the camshaft timing oil control valve connector.
  (2) Apply battery positive voltage between the terminals of the camshaft timing oil control valve.

Result:

Proceed to	Check (1)	Check (2)
A	Normal engine speed	Rough idle or engine stall
B	Conditions other than A	

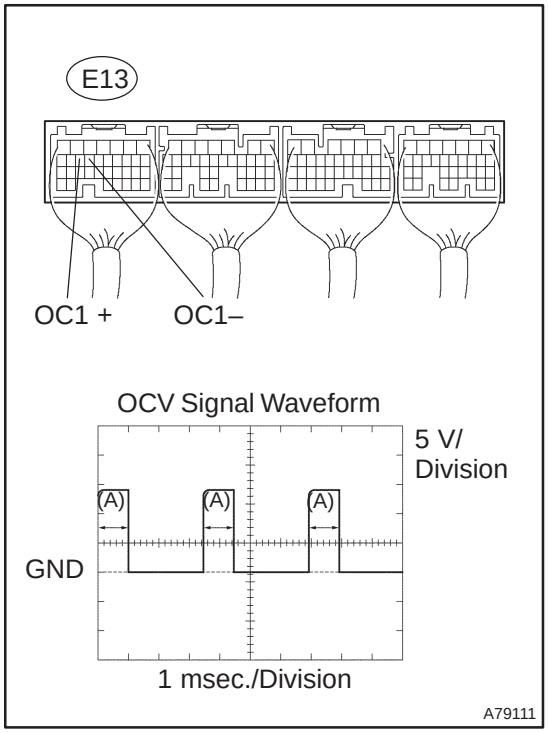
B → **Go to step 4**

A

3 READ OUTPUT DTC(CHECK IF DTC OUTPUT RECURS)

(a) Clear the DTC.
  (1) Disconnecting the battery terminal or removing the EFI and ECTS fuses for more than 60 sec.
(b) Start and warm up the engine.
(c) Drive the vehicle around for 10 minutes or more.
(d) Read output DTC.

Standard: No DTC output.



HINT:

*: DTCs P0011/59 or P0012/59 is output when a foreign object in engine oil is caught in some part of the system. These codes will stay registered even if the system returns to normal after a short time. These foreign objects are then captured by the oil filter, thus eliminating the source of the problem.

OK → **VVT SYSTEM OK***

NG

4	CHECK ECM(OCV SIGNAL)

(a) Inspection using the oscilloscope.
(b) During idling, check the waveform between the terminals of the E13 ECM connector.

Standard:

Symbols (Terminal No.)	Specified condition
OC1+ (E13–15) – OC1– (E13–14)	Correct waveform is as shown

HINT:
The waveform frequency (A) is lengthened as the engine speed becomes higher.

NG → **CHECK AND REPLACE ECM (See page 01–32)**

OK

5	CHECK OIL CONTROL VALVE FILTER

NG → **REPLACE OIL CONTROL VALVE FILTER**

OK

6	CHECK CAMSHAFT TIMING OIL CONTROL VALVE ASSY(OCV) (See page 10–20)

OK → **Go to step 8**

NG

7	REPLACE CAMSHAFT TIMING OIL CONTROL VALVE ASSY(OCV)

GO

8	CHECK CAMSHAFT TIMING GEAR ASSY (See page 14–171)

OK → **Go to step 10**

NG

9	REPLACE CAMSHAFT TIMING GEAR ASSY

GO

10	CHECK FOR BLOCKAGE(OCV, OIL CHECK VALVE AND OIL HOLE)

NG → REPAIR OR REPLACE

OK

11	READ OUTPUT DTC(CHECK IF DTC OUTPUT RECURS)

(a) Clear the DTC.
  (1) Disconnecting the battery terminal or removing the EFI and ECTS fuses for more than 60 sec.
(b) Start and warm up the engine.
(c) Drive the vehicle around for 10 minutes or more.
(d) Read output DTC.

Standard: No DTC output.

HINT:

*: DTCs P0011/59 or P0012/59 is output when a foreign object in engine oil is caught in some part of the system. These codes will stay registered even if the system returns to normal after a short time. These foreign objects are then captured by the oil filter, thus eliminating the source of the problem.

OK → VVT SYSTEM OK*

NG

CHECK AND REPLACE ECM (See page 01–32)

DTC	P0016/18	CRANKSHAFT POSITION –CAMSHAFT POSITION CORRELATION (BANK 1 SENSOR A)

CIRCUIT DESCRIPTION

Refer to DTC P0335/12, 13 and P0339/13 on page 05–226.

DTC No.	DTC Detection Condition	Trouble Area
P0016/18	Deviation in crankshaft position sensor signal and VVT sensor 1 signal (2 trip detection logic)	• Mechanical system (Timing chain has jumped a tooth, chain stretched) • ECM

WIRING DIAGRAM

Refer to DTC P0335/12, 13 and P0339/13 on page 05–226.

INSPECTION PROCEDURE

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

1	CHECK VALVE TIMING (See page 14–139)

NG → ADJUST VALVE TIMING (See page 14–139)

OK

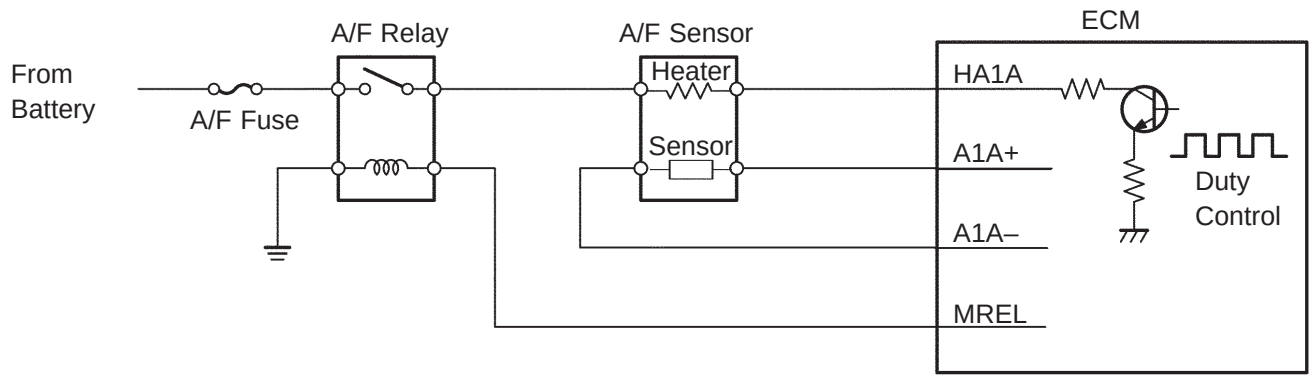
CHECK AND REPLACE ECM (See page 01–32)

DTC	P0031/21	OXYGEN (A/F) SENSOR HEATER CONTROL CIRCUIT LOW (BANK 1 SENSOR 1)

DTC	P0032/21	OXYGEN (A/F) SENSOR HEATER CONTROL CIRCUIT HIGH (BANK 1 SENSOR 1)

DTC	P0051/28	OXYGEN (A/F) SENSOR HEATER CONTROL CIRCUIT LOW (BANK 2 SENSOR 1)

DTC	P0052/28	OXYGEN (A/F) SENSOR HEATER CONTROL CIRCUIT HIGH (BANK 2 SENSOR 1)



CIRCUIT DESCRIPTION

Refer to DTC P2237/21 on page 05–248.

HINT:

- These DTCs are related to the air fuel raito (A/F) sensor, although the caption is the heated oxygen sensor.
- The ECM provides a pulse width modulated control circuit to adjust current through the heater. The heated oxygen sensor heater circuit uses a relay on the B+ side of the circuit.

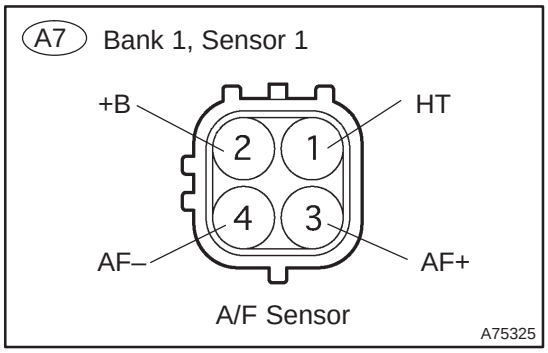
Reference (Bank 1 Sensor 1 System Drawing)

DTC No.	DTC Detection Condition	Trouble Area
P0031/21 P0051/28	Heated current is 0.8 A or less when heater operates (1 trip detection logic)	• Open or short in heater circuit of A/F sensor • A/F sensor heater • A/F relay • ECM
P0032/21 P0052/28	When the heater operates, heated current exceeds 19.7 A (1 trip detection logic)	

HINT:

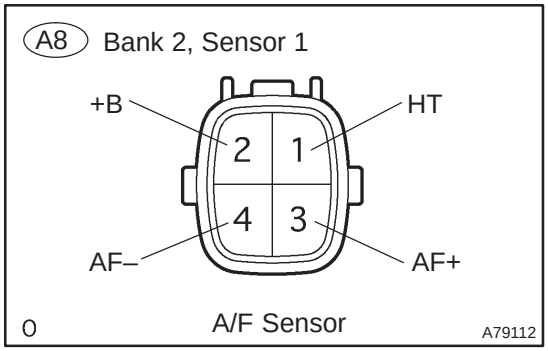
- Bank 1 refers to the bank that includes cylinder No.1.
- Bank 2 refers to the bank that does not include cylinder No.1.
- Sensor 1 refers to the sensor closest to the engine assembly.
- Sensor 2 refers to the sensor farthest away from the engine assembly.

WIRING DIAGRAM



Refer to DTC P2237/21 on page 05–248.

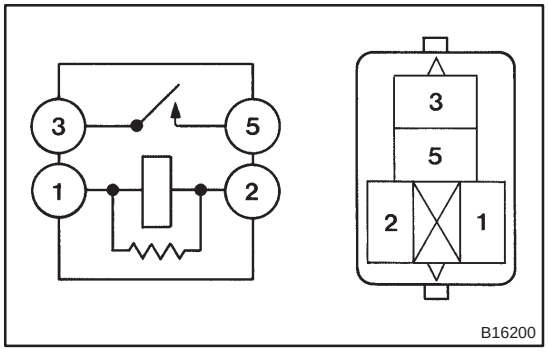
INSPECTION PROCEDURE



HINT:

- If different DTCs that are related to a different system are output simultaneously while terminal E2 is used as a ground terminal, terminal E2 may be open.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

1	INSPECT AIR FUEL RATIO SENSOR(RESISTANCE OF A/F SENSOR HEATER)

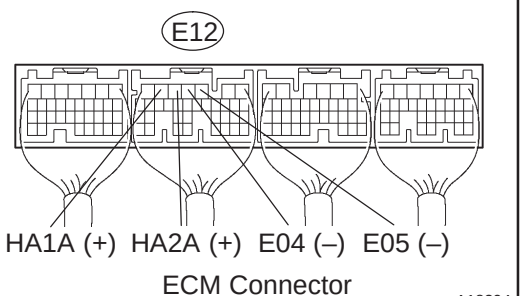


(a) Disconnect the A/F sensor connector.
(b) Measure resistance between terminals HT and +B of the A/F sensor.
Resistance: 1.8 to 3.4 Ω (20 °C)

NG → **REPLACE AIR FUEL RATIO SENSOR**

OK

2	INSPECT A/F RELAY



(a) Remove the A/F relay from the engine room R/B No.4.
(b) Inspect the A/F relay.
Standard:

Terminal No.	Specified condition
1 – 2	Continuity
3 – 5	No Continuity
	Continuity (Apply battery voltage terminals 1 and 2)

NG → **REPLACE A/F RELAY**

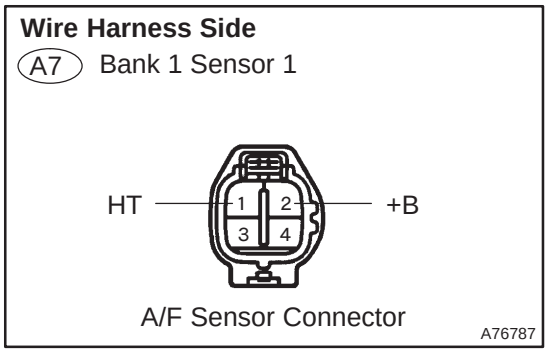
OK

3 INSPECT ECM(VOLTAGE)

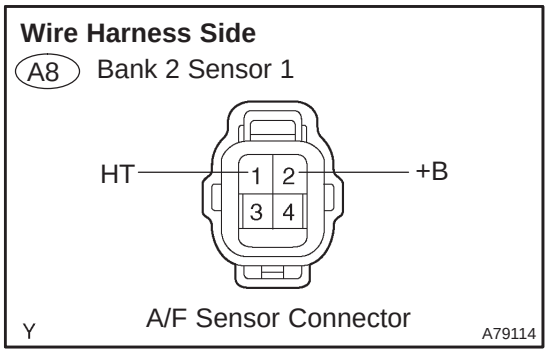
(a) Turn the ignition switch ON.
(b) Measure the voltage between the applicable terminals of the E12 ECM connectors.

Standard:

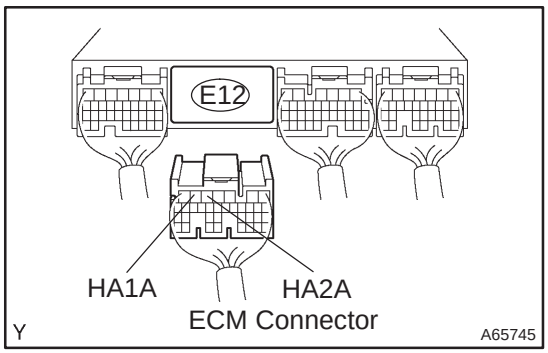
Symbols (Terminal No.)	Specified condition
HA1A (E12–6) – E04 (E12–4)	9 to 14 V
HA2A (E12–5) – E05 (E12–3)	



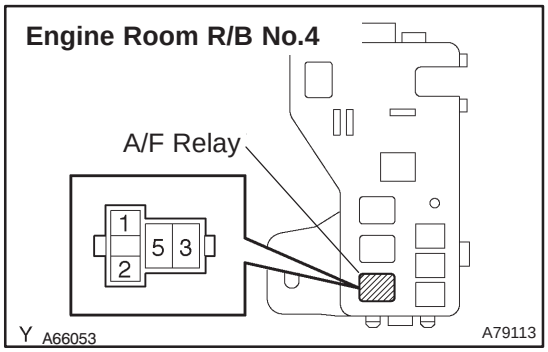
HINT:



- The HA1A means the heated oxygen sensor bank 1 sensor 1.
- The HA2A means the heated oxygen sensor bank 2 sensor 1.



OK → **CHECK AND REPLACE ECM (See page 01–32)**



NG

4 CHECK HARNESS AND CONNECTOR(A/F SENSOR – ECM, A/F SENSOR – A/F RELAY)

(a) Check the harness and connector between the ECM and A/F sensor connectors.

(1) Disconnect the A7 or A8 A/F sensor connector.

(2) Disconnect the E12 ECM connector.

(3) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
HT (A7–1) – HA1A (E12–6)	Continuity
HT (A8–1) – HA2A (E12–5)	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
HT (A7–1) or HA1A (E12–6) – Body ground	No continuity
HT (A8–1) or HA2A (E12–5) – Body ground	

(b) Check the harness and connector between the A/F sensor connector and A/F relay.

(1) Disconnect the A7 or A8 A/F sensor connector.

(2) Remove the A/F relay from the engine room R/B No.4.

(3) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
+B (A7–2) – A/F relay (3)	Continuity
+B (A8–2) – A/F relay (3)	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
+B (A7–2) or A/F relay (3) – Body ground	No continuity
+B (A8–2) or A/F relay (3) – Body ground	

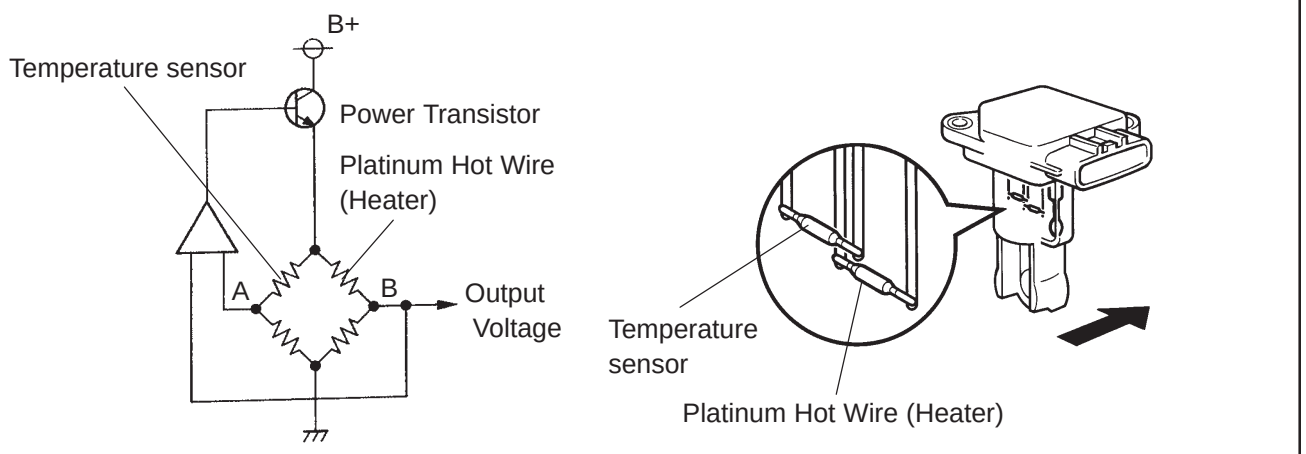
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK AND REPLACE ECM (See page 01–32)

DTC	P0100/31	MASS OR VOLUME AIR FLOW CIRCUIT

DTC	P0102/31	MASS OR VOLUME AIR FLOW CIRCUIT LOW INPUT



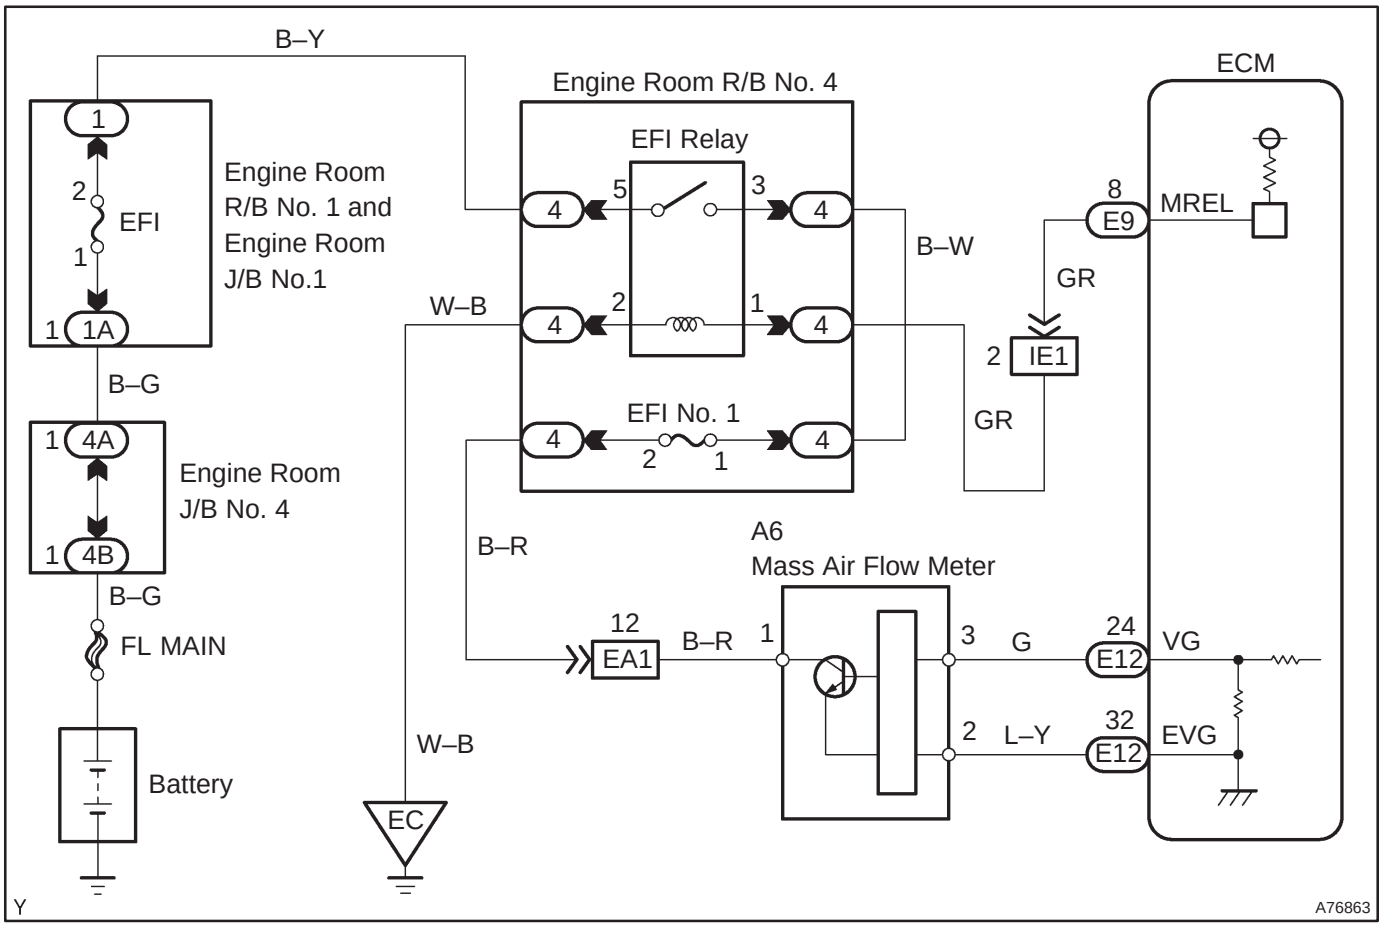
DTC	P0103/31	MASS OR VOLUME AIR FLOW CIRCUIT HIGH INPUT

CIRCUIT DESCRIPTION

The mass air flow meter uses a platinum hot wire. The hot wire mass air flow meter consists of a platinum hot wire, a temperature sensor and a control circuit installed in a plastic housing. The hot wire mass air flow meter works on the principle that the hot wire and temperature sensor located in the intake air bypass of the housing detect any changes in the intake air temperature.

The hot wire is maintained at the set temperature by controlling the current flow through the hot wire. This current flow is then measured as the output voltage of the mass air flow meter.

The circuit is constructed so that the platinum hot wire and temperature sensor provide a bridge circuit, with the power transistor controlled so that the potential of A and B remains equal to maintain the set temperature.



DTC No.	DTC Detection Condition	Trouble Area
P0100/31	Open or short in mass air flow meter circuit with engine speed 4,000 rpm or less for more than 3 sec.	• Open or short in mass air flow meter circuit • Mass air flow meter • ECM
P0102/31	Open in mass air flow meter circuit with engine speed 4,000 rpm or less for more than 3 sec.	
P0103/31	Short in mass air flow meter circuit with engine speed 4,000 rpm or less for more than 3 sec. (+B circuit)	

HINT:

After confirming DTC ”P0100/31, P0102/31 or P0103/31”, use the hand–held tester to confirm the mass air flow ratio in the ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL”.

Air Flow Value (gm/s)	Malfunction
Approx. 0.0	• Mass air flow meter power source circuit open • VG circuit open or short
271.0 or more	• E2G circuit open

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

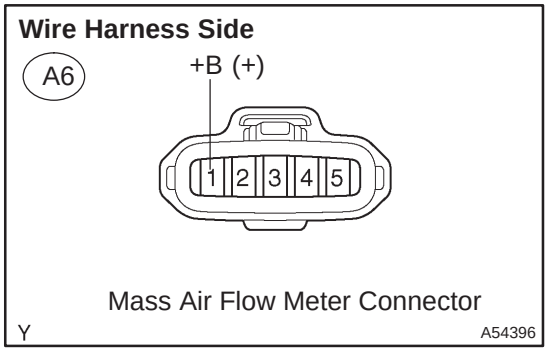
When using hand–held tester:

1	READ VALUE OF HAND–HELD TESTER(MASS AIR FLOW RATE)

(a) Connect the hand–held tester to the DLC3.
(b) Start the engine.
(c) Push the hand–held tester main switch ON.
(d) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / MAF” and read its value displayed on the hand–held tester.

Result:

Air flow rate (gm/s)	Proceed to
0.0	A
271.0 or more	B
1 ≦ Mass Air Flow Rate ≦ 270.0 or more (*1)	C



*1: The value must be changed when the throttle valve is opened or closed.

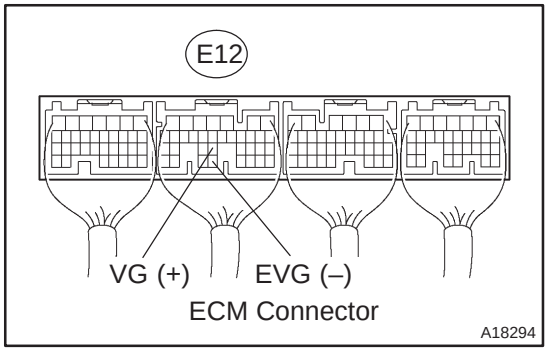
B → **Go to step 6**

C → **CHECK FOR INTERMITTENT PROBLEMS (See page 05–149)**

A

2	INSPECT MASS AIR FLOW METER(POWER SOURCE)

(a) Turn the ignition switch ON.
(b) Disconnect the mass air flow meter connector.
(c) Measure the voltage between the terminal of the wire harness side connector and the body ground.



Standard:

Symbols (Terminal No.)	Specified condition
+B (A6–1) – Body ground	9 to 14 V

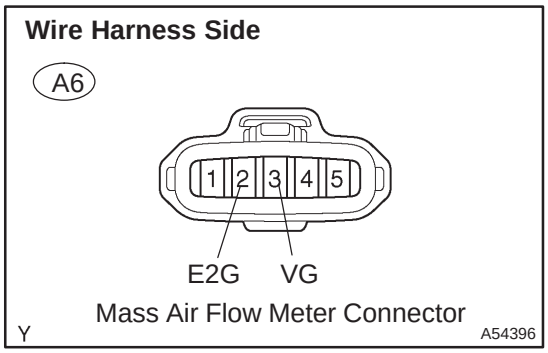
NG → **Go to step 5**

OK

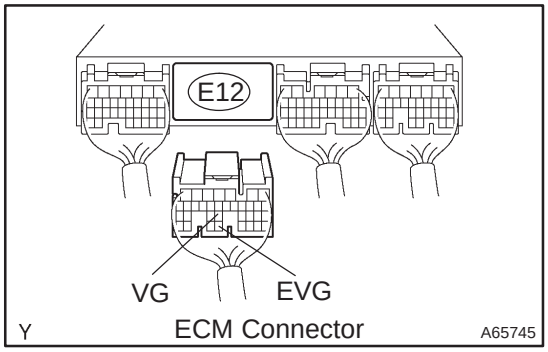
3 INSPECT ECM(VG VOLTAGE)

(a) Start the engine.
(b) Measure the voltage between the terminals of the E12 ECM connector.

HINT:
The shift position should be P or N and the A/C switch should be turned OFF.



Standard:



Symbols (Terminal No.)	Condition	Specified condition
VG (E12–24) – EVG (E12–32)	Engine is idling	0.5 to 3.0 V

OK → **CHECK AND REPLACE ECM (See page 01–32)**

NG

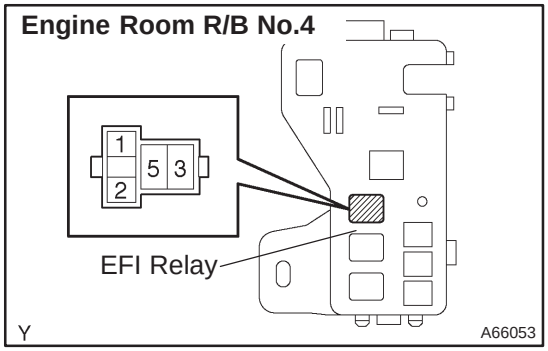
4 CHECK HARNESS AND CONNECTOR(MASS AIR FLOW METER – ECM)

(a) Disconnect the mass air flow meter connector.
(b) Disconnect the E12 ECM connector.
(c) Check for continuity between the wire harness side connectors.

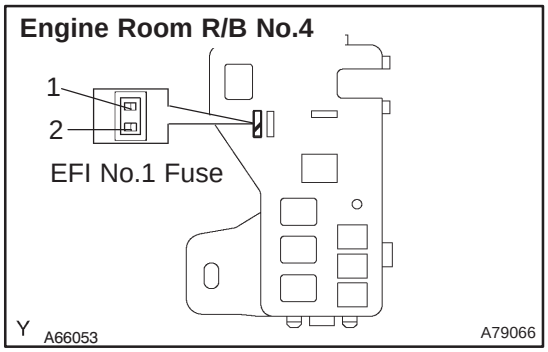
Standard (Check for open):

Symbols (Terminal No.)	Specified condition
VG (A6–3) – VG (E12–24)	Continuity
E2G (A6–2) – EVG (E12–32)	

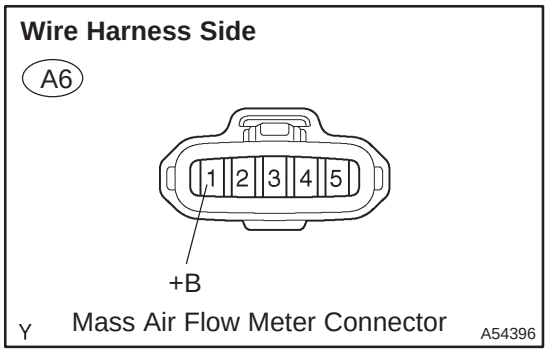
Standard (Check for short):



Symbols (Terminal No.)	Specified condition
VG (A6–3) or VG (E12–24) – Body ground	No continuity



NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**



OK

REPLACE MASS AIR FLOW METER

5 CHECK HARNESS AND CONNECTOR(MASS AIR FLOW METER – EFI RELAY)

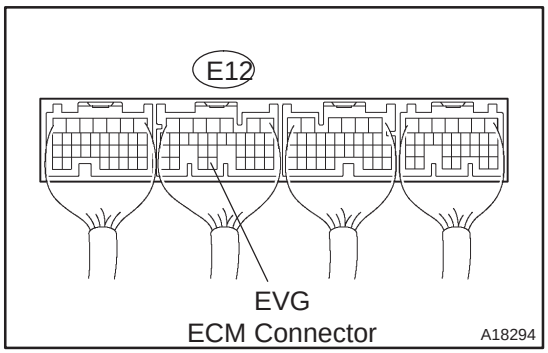
(a) Remove the EFI relay from the engine room R/B No.4.
(b) Remove the EFI No.1 fuse from the engine room R/B No.4.
(c) Disconnect the mass air flow meter connector.
(d) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
EFI relay (3) – EFI No.1 fuse (1)	Continuity
EFI No.1 fuse (2) – +B (A6–1)	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
EFI relay (3) or EFI No.1 fuse (1) – Body ground	No continuity
EFI No.1 fuse (2) or +B (A6–1) – Body ground	



NOTICE:
Do not insert the tester leads hard in the procedure (c), the holder may be damaged.

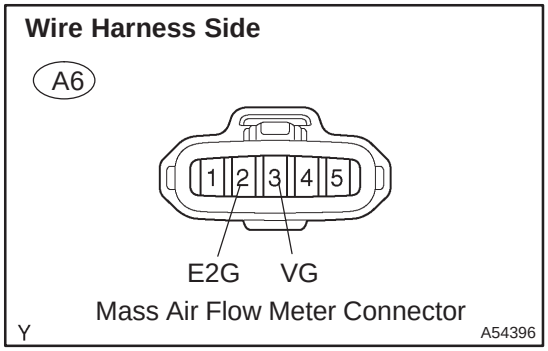
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK FOR ECM POWER SOURCE CIRCUIT (See page 05–257)

6 INSPECT ECM(SENSOR GROUND)

(a) Check for continuity between the terminal of the E12 ECM connector and the body ground.



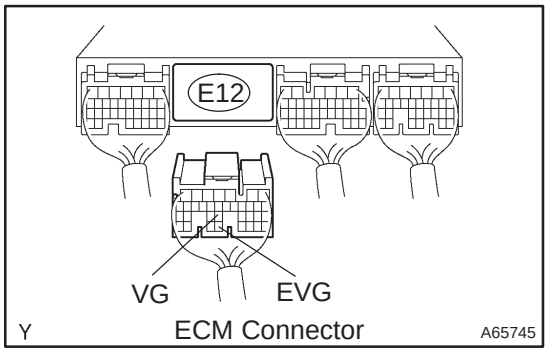
Standard:

Symbols (Terminal No.)	Specified condition
EVG (E12–32) – Body ground	Continuity

NG → **CHECK AND REPLACE ECM (See page 01–32)**

OK

7	CHECK HARNESS AND CONNECTOR(MASS AIR FLOW METER – ECM)



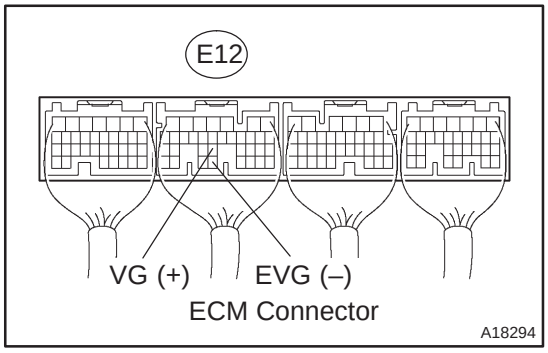
(a) Disconnect the mass air flow meter connector.
(b) Disconnect the E12 ECM connector.
(c) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
VG (A6–3) – VG (E12–24)	Continuity
E2G (A6–2) – EVG (E12–32)	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
VG (A6–3) or VG (E12–24) – Body ground	No continuity



NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK →

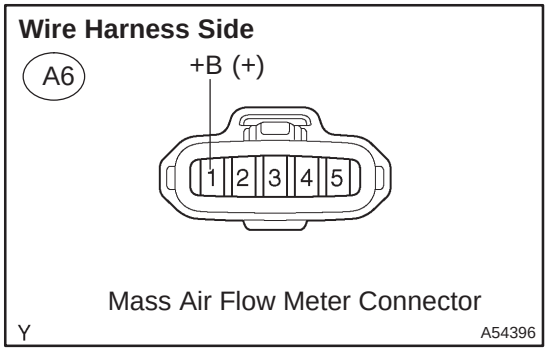
REPLACE MASS AIR FLOW METER

When not using hand–held tester:

1	INSPECT ECM(VG VOLTAGE)

(a) Start the engine.
(b) Measure the voltage between the terminals of the E12 ECM connector.

HINT:
The shift position should be P or N and the A/C switch should be turned OFF.



Standard:

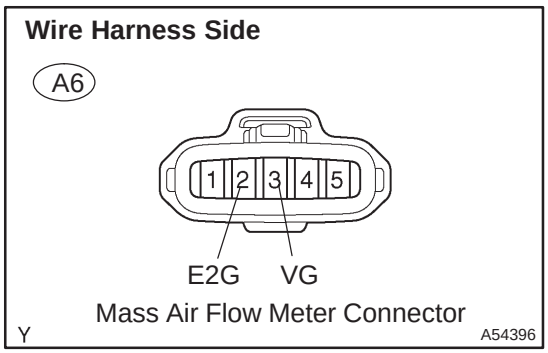
Symbols (Terminal No.)	Condition	Specified condition
VG (E12–24) – EVG (E12–32)	Engine is idling	0.5 to 3.0 V

OK → **CHECK AND REPLACE ECM (See page 01–32)**

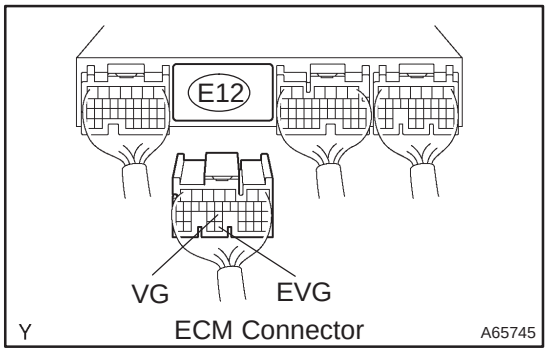
NG →

2 INSPECT MASS AIR FLOW METER(POWER SOURCE)

(a) Turn the ignition switch ON.
(b) Disconnect the mass air flow meter connector.
(c) Measure the voltage between the terminal of the wire harness side connector and the body ground.



Standard:



Symbols (Terminal No.)	Specified condition
+B (A6–1) – Body ground	9 to 14 V

NG → **Go to step 4**

OK

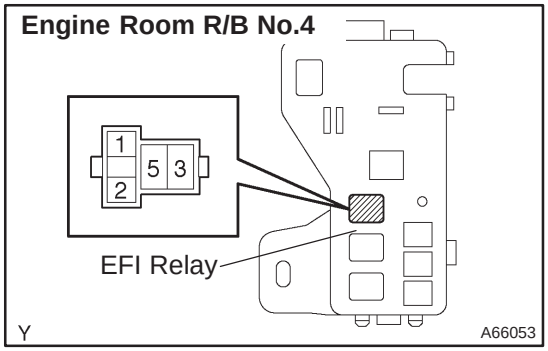
3 CHECK HARNESS AND CONNECTOR(MASS AIR FLOW METER – ECM)

(a) Disconnect the mass air flow meter connector.
(b) Disconnect the E12 ECM connector.
(c) Check for continuity between the wire harness side connectors.

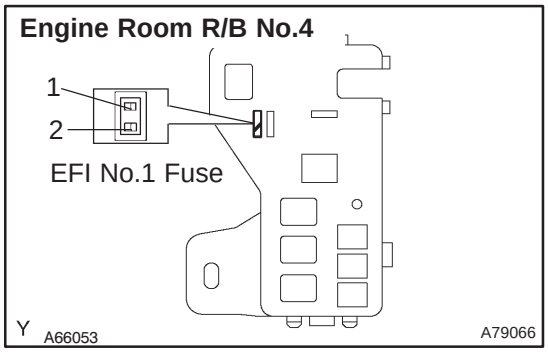
Standard (Check for open):

Symbols (Terminal No.)	Specified condition
VG (A6–3) – VG (E12–24)	Continuity
E2G (A6–2) – EVG (E12–32)	

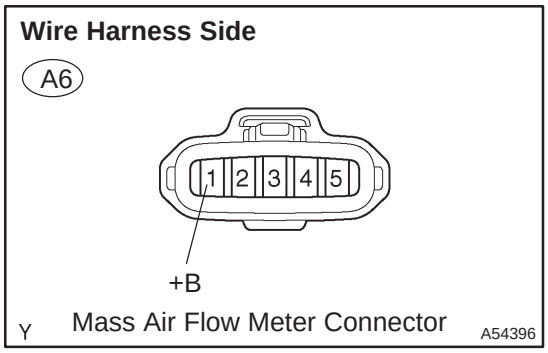
Standard (Check for short):



Symbols (Terminal No.)	Specified condition
VG (A6–3) or VG (E12–24) – Body ground	No continuity



NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**



OK

REPLACE MASS AIR FLOW METER

4 CHECK HARNESS AND CONNECTOR(MASS AIR FLOW METER – EFI RELAY)

(a) Remove the EFI relay from the engine room R/B No.4.
(b) Remove the EFI No.1 fuse from the engine room R/B No.4.
(c) Disconnect the mass air flow meter connector.
(d) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
EFI relay (3) – EFI No.1 fuse (1)	Continuity
EFI No.1 fuse (2) – +B (A6–1)	

Standard (Check for short):

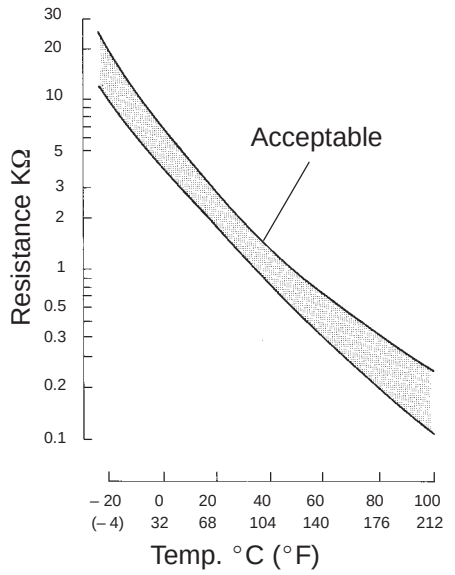
Symbols (Terminal No.)	Specified condition
EFI relay (3) or EFI No.1 fuse (1) – Body ground	No continuity
EFI No.1 fuse (2) or +B (A6–1) – Body ground	

NOTICE:
Do not insert the tester leads hard in the procedure (c), the holder may be damaged.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK FOR ECM POWER SOURCE CIRCUIT (See page 05–257)



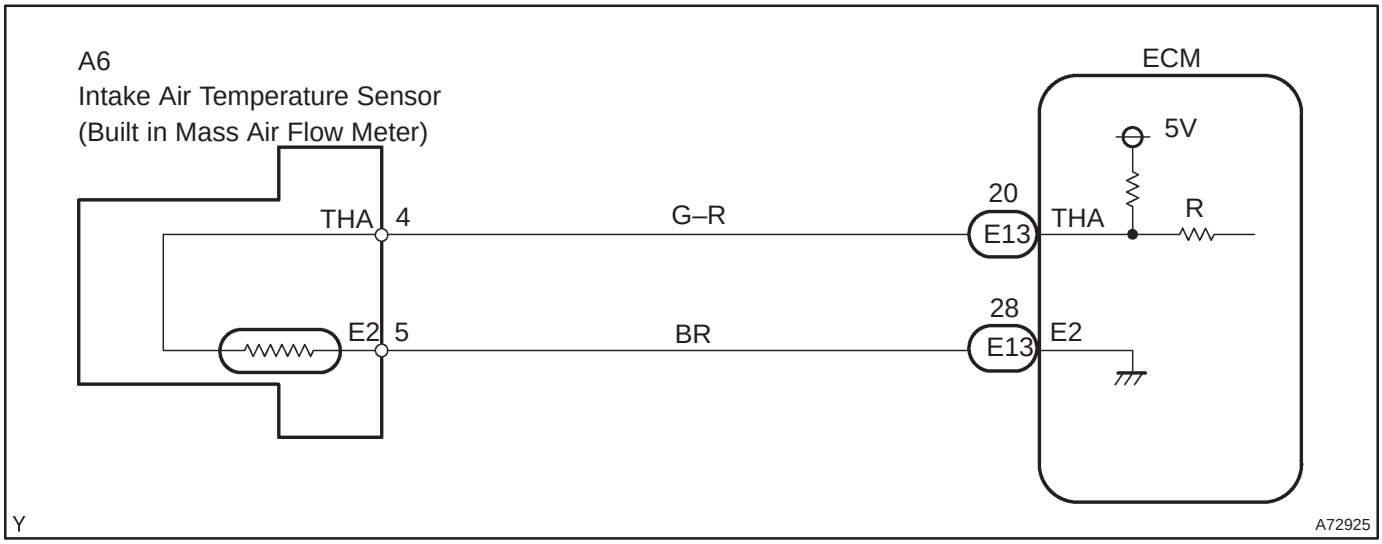
DTC	P0110/24	INTAKE AIR TEMPERATURE CIRCUIT MALFUNCTION

DTC	P0112/24	INTAKE AIR TEMPERATURE CIRCUIT LOW INPUT

DTC	P0113/24	INTAKE AIR TEMPERATURE CIRCUIT HIGH INPUT

CIRCUIT DESCRIPTION

(Fig.1)



The intake air temperature sensor is built in the mass air flow meter and senses the intake air temperature.
A thermistor built in the sensor changes the resistance value according to the intake air temperature.
The lower the intake air temperature is the greater the thermistor resistance value becomes and the higher the intake air temperature is the lower the thermistor resistance value becomes (See Fig. 1).
The intake air temperature sensor is connected to the ECM (See below). The 5 V power source voltage in the ECM is applied to the intake air temperature sensor from terminal THA (THAR) via resistor R.
That is, the resistor R and the intake air temperature sensor are connected in series. When the resistance value of the intake air temperature sensor changes in accordance with changes in the intake air temperature, the potential at terminal THA (THAR) also changes. Based on this signal, the ECM increases the fuel injection volume to improve the driveability during cold engine operation.

DTC No.	Proceed to	DTC Detection Condition	Trouble Area
P0110/24	Step 1	Open or short in intake air temp. sensor circuit for 0.5 sec.	• Open or short in intake air temperature sensor circuit • Intake air temperature sensor (built in mass air flow meter) • ECM
P0112/24	Step 4	Short in intake air temp. sensor circuit for 0.5 sec.	
P0113/24	Step 2	Open in intake air temp. sensor circuit for 0.5 sec.	

After confirming DTC ”P0110/24, P0112/24 or P0113/24”, use the hand–held tester to confirm the intake air temperature from the ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL”.

Temperature Displayed	Malfunction
–40˚C (–40˚F)	Open circuit
140˚C (284˚F) or more	Short circuit

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- If different DTCs that are related to a different system are output simultaneously while terminal E2 is used as a ground terminal, terminal E2 may be open.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

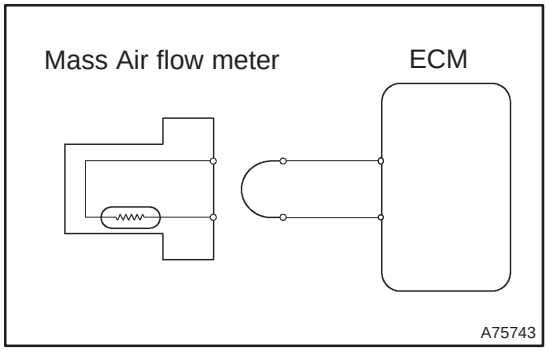
When using hand–held tester:

1	READ VALUE OF HAND–HELD TESTER(INTAKE AIR TEMPERATURE)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch ON and push the hand–held tester main switch ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / INTAKE AIR” and read its value displayed on the hand–held tester.
Temperature: Same value as the actual intake air temperature.
Result:

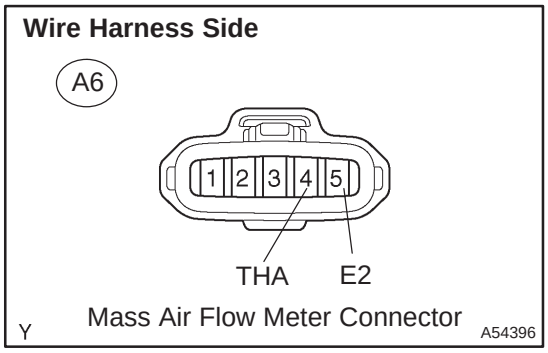
Temperature Displayed	Proceed to
–40˚C (–40˚F)	A
140˚C (284˚F) or more	B
OK (Same as present temperature)	C

HINT:



- If there is an open circuit, the hand–held tester indicates –40˚C (–40˚F).
- If there is a short circuit, the hand–held tester indicates 140˚C (284˚F) or more.

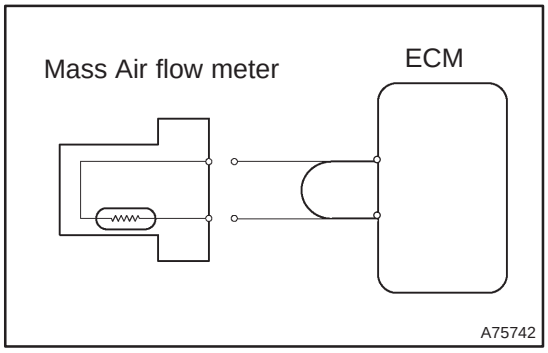
B → **Go to step 4**



C → **CHECK FOR INTERMITTENT PROBLEMS (See page 05–149)**

A

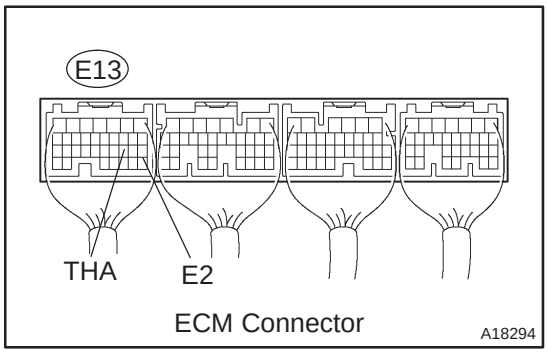
2 READ VALUE OF HAND–HELD TESTER(CHECK FOR OPEN IN WIRE HARNESS)



(a) Disconnect the mass air flow meter connector.
(b) Connect terminals THA and E2 of the mass air flow meter connector.
(c) Turn the ignition switch ON.
(d) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / INTAKE AIR” and read its value displayed on the hand–held tester.
Temperature value: 140°C (284°F) or more

OK → **CONFIRM GOOD CONNECTION AT SENSOR. IF OK, REPLACE MASS AIR FLOW METER**

NG

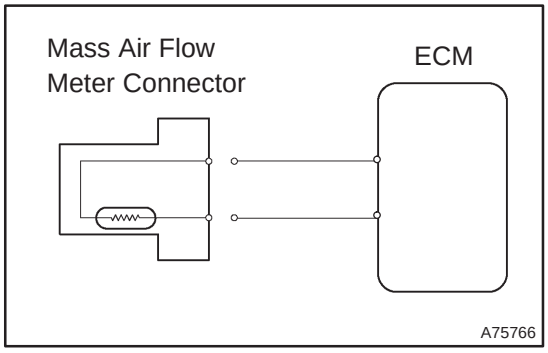


3 READ VALUE OF HAND–HELD TESTER(CHECK FOR OPEN IN ECM)

(a) Disconnect the mass air flow meter connector.
(b) Connect terminals THA and E2 of the E13 ECM connector.

HINT:
Before checking, do a visual and contact pressure check for the ECM connector.

(c) Turn the ignition switch ON.
(d) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / INTAKE AIR” and read its value displayed on the hand–held tester.
Temperature value: 140°C (284°F) or more

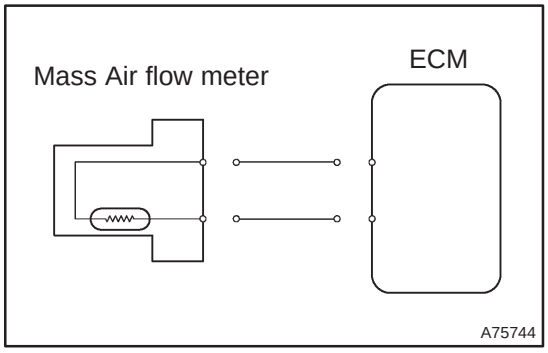


OK → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

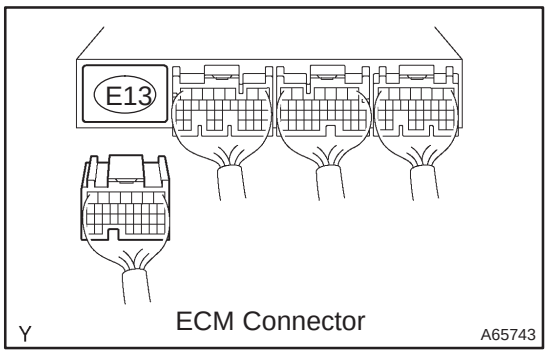
NG

CONFIRM GOOD CONNECTION AT ECM. IF OK, CHECK AND REPLACE ECM (See page 01–32)

4	READ VALUE OF HAND–HELD TESTER(CHECK FOR SHORT IN WIRE HARNESS)



(a) Disconnect the mass air flow meter connector.
(b) Turn the ignition switch ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / INTAKE AIR” and read its value displayed on the hand–held tester.
Temperature value: –40°C (–40°F)

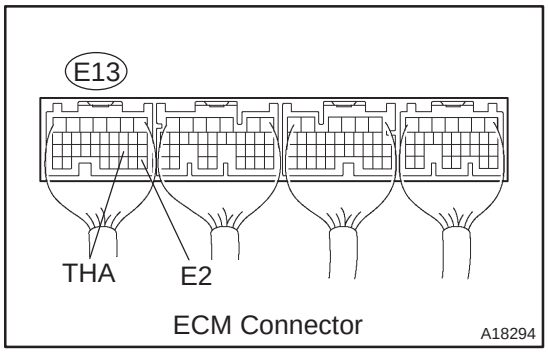


OK → **REPLACE MASS AIR FLOW METER**

NG

5	READ VALUE OF HAND–HELD TESTER(CHECK FOR SHORT IN ECM)

(a) Disconnect the E13 ECM connector.
(b) Turn the ignition switch ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / INTAKE AIR” and read its value displayed on the hand–held tester.
Temperature value: –40°C (–40°F)



OK → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

NG

CHECK AND REPLACE ECM (See page 01–32)

When not using hand–held tester:

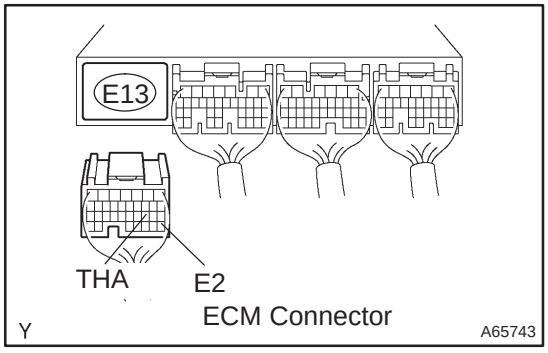
1 INSPECT ECM(THA VOLTAGE)

(a) Turn the ignition switch ON.
(b) Measure the voltage between terminals THA and E2 of the E13 ECM connector.

Voltage:

Intake air temp.	Voltage
20 °C (68 °F)	0.5 to 3.4 V
60 °C (140 °F)	0.2 to 1.0 V

OK → **CHECK FOR INTERMITTENT PROBLEMS (See page 05–149)**



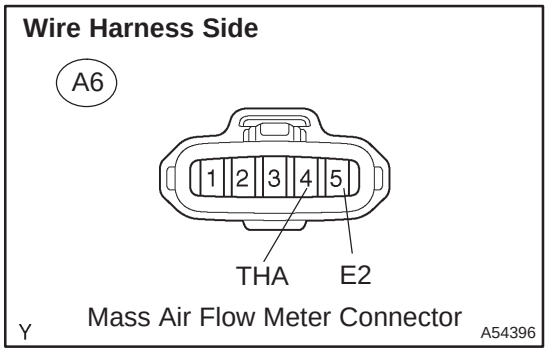
NG

2 INSPECT MASS AIR FLOW METER (See page 10–20)

NG → **REPLACE MASS AIR FLOW METER**

OK

3 CHECK HARNESS AND CONNECTOR(ECM – MASS AIR FLOW METER)



(a) Disconnect the E13 ECM connector.
(b) Disconnect the mass air flow meter connector.
(c) Check for continuity between the wire harness side connector.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
THA (E13–20) – THA (A6–4)	Continuity
E2 (E13–28) – E2 (A6–5)	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
THA (E13–20) or THA (A6–4) – Body ground	Continuity

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK AND REPLACE ECM (See page 01–32)

DTC	P0115/22	ENGINE COOLANT TEMPERATURE CIRCUIT

DTC	P0117/22	ENGINE COOLANT TEMPERATURE CIRCUIT LOW INPUT

DTC	P0118/22	ENGINE COOLANT TEMPERATURE CIRCUIT HIGH INPUT

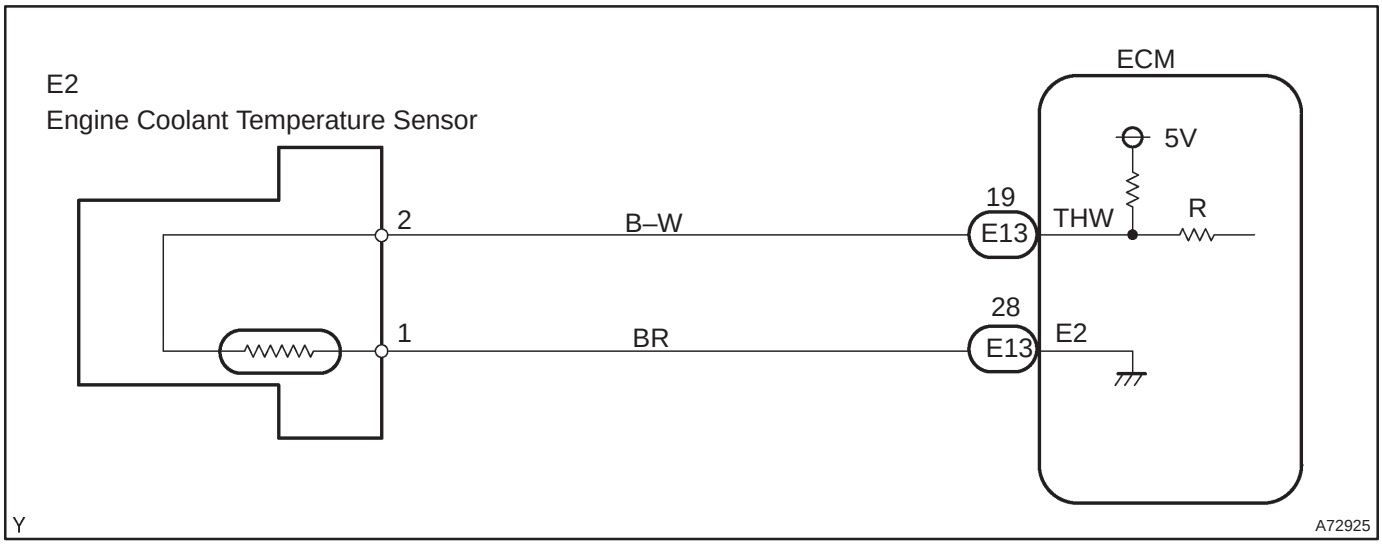
CIRCUIT DESCRIPTION

A thermistor is built in the engine coolant temperature sensor and changes the resistance value according to the engine coolant temperature.

The structure of the sensor and connection to the ECM is the same as those of the intake air temperature sensor.

HINT:

If the ECM detects the DTC ”P0115/22, P0117/22 or P0118/22” it enters the fail–safe mode in which the engine coolant temperature is assumed to be 80 °C (176 °F).



DTC No.	Proceed to	DTC Detection Condition	Trouble Area
P0115/22	Step 1	Open or short in engine coolant temp. sensor circuit for 0.5 sec.	• Open or short in engine coolant temperature sensor circuit • Engine coolant temperature sensor • ECM
P0117/22	Step 4	Short in engine coolant temp. sensor circuit for 0.5 sec.	
P0118/22	Step 2	Open in engine coolant temp. sensor circuit for 0.5 sec.	

HINT:

After confirming DTC ”P0115/22, P0117/22 or P0118/22”, use the hand–held tester to confirm the engine coolant temperature in the ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL”.

Temperature Displayed	Malfunction
–40˚C (–40˚F)	Open circuit
140˚C (284˚F) or more	Short circuit

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- If different DTCs that are related to a different system are output simultaneously while terminal E2 is used as a ground terminal, terminal E2 may be open.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

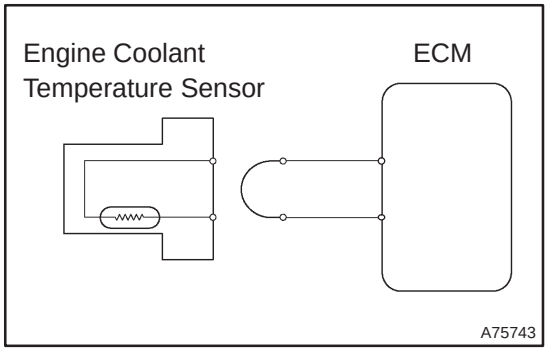
When using hand–held tester:

1	READ VALUE OF HAND–HELD TESTER(ENGINE COOLANT TEMPERATURE)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch ON and push the hand–held tester main switch ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COOLANT TEMP” and read its value displayed on the hand–held tester.
Temperature: Same value as the actual intake air temperature.
Result:

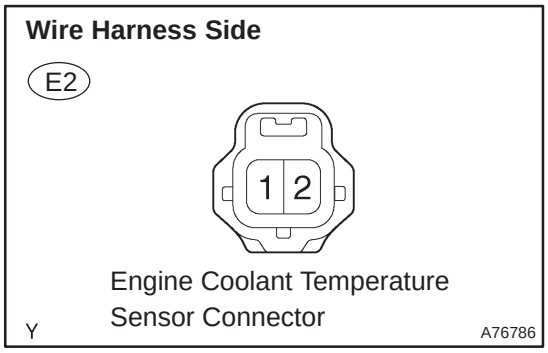
Temperature Displayed	Proceed to
–40˚C (–40˚F)	A
140˚C (284˚F) or more	B
OK (Same as present temperature)	C

HINT:



- If there is an open circuit, the hand–held tester indicates –40˚C (–40˚F).
- If there is a short circuit, the hand–held tester indicates 140˚C (284˚F) or more.

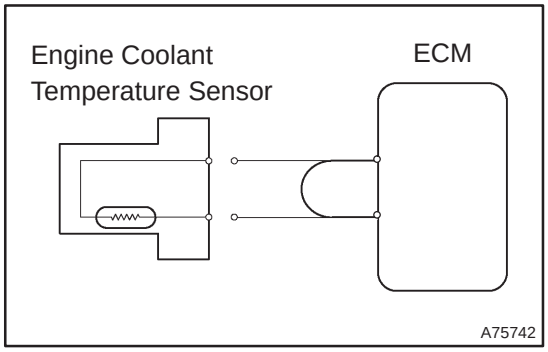
B → **Go to step 4**



C → **CHECK FOR INTERMITTENT PROBLEMS (See page 05–149)**

A

2 READ VALUE OF HAND–HELD TESTER(CHECK FOR OPEN IN WIRE HARNESS)



(a) Disconnect the engine coolant temperature sensor connector.
(b) Connect terminals 1 and 2 of the engine coolant temperature sensor connector.
(c) Turn the ignition switch ON.
(d) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COOLANT TEMP” and read its value displayed on the hand–held tester.

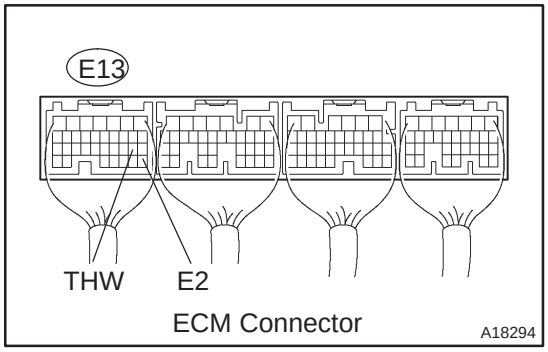
OK → **CONFIRM GOOD CONNECTION AT SENSOR. IF OK, REPLACE WATER TEMP. SENSOR**

NG

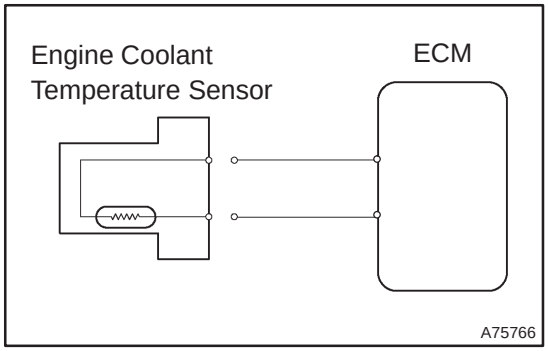


3 READ VALUE OF HAND–HELD TESTER(CHECK FOR OPEN IN ECM)

(a) Disconnect the engine coolant temperature sensor connector.
(b) Connect terminals THW and E2 of the E13 ECM connector.

HINT:
Before checking, do a visual and contact pressure check for the ECM connector.

(c) Turn the ignition switch ON.
(d) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COOLANT TEMP” and read its value displayed on the hand–held tester.
Temperature value: 140°C (284°F) or more

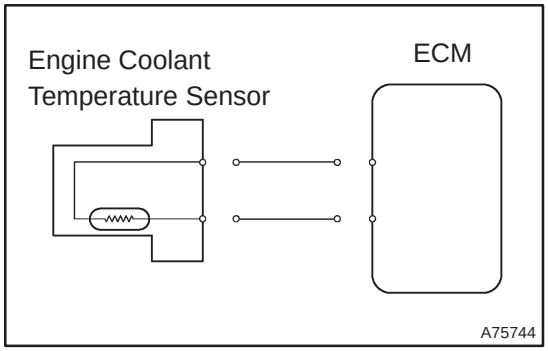


OK → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

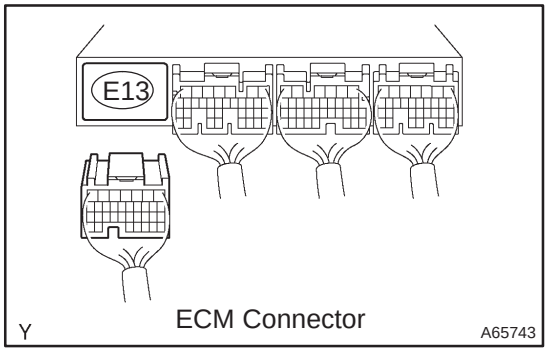
NG

CONFIRM GOOD CONNECTION AT ECM. IF OK, CHECK AND REPLACE ECM (See page 01–32)

4	READ VALUE OF HAND–HELD TESTER(CHECK FOR SHORT IN WIRE HARNESS)



(a) Disconnect the engine coolant temperature sensor connector.
(b) Turn the ignition switch ON.
(c) Select the item "DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COOLANT TEMP" and read its value displayed on the hand–held tester.
Temperature value: –40°C (–40°F)

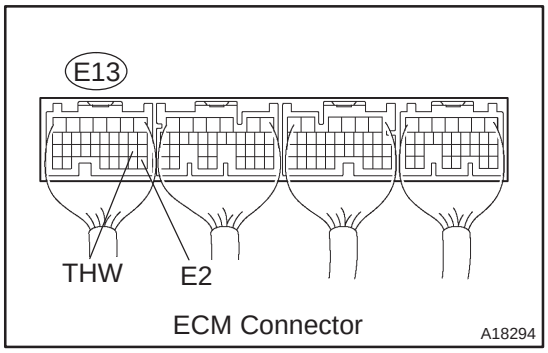


OK	REPLACE ENGINE COOLANT TEMPERATURE SENSOR

NG

5	READ VALUE OF HAND–HELD TESTER(CHECK FOR SHORT IN ECM)

(a) Disconnect the E13 ECM connector.
(b) Disconnect the engine coolant temperature sensor connector.
(c) Turn the ignition switch ON.
(d) Select the item "DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / COOLANT TEMP" and read its value displayed on the hand–held tester.
Temperature: –40°C (–40°F)



OK	REPAIR OR REPLACE HARNESS OR CONNECTOR

NG

CHECK AND REPLACE ECM (See page 01–32)

When not using hand–held tester:

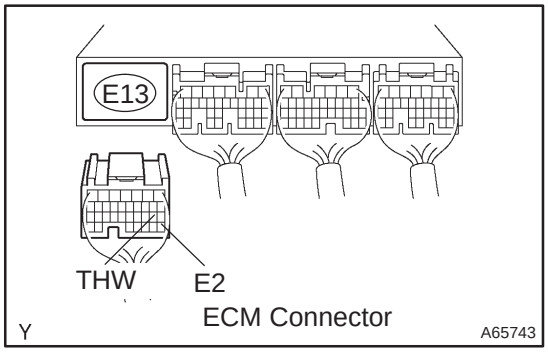
1 INSPECT ECM(THW VOLTAGE)

(a) Turn the ignition switch ON.
(b) Measure the voltage between terminals THW and E2 of the ECM connector.

Voltage:

Intake air temp.	Voltage
20 °C (68 °F)	0.5 to 3.4 V
60 °C (140 °F)	0.2 to 1.0 V

OK → **CHECK FOR INTERMITTENT PROBLEMS (See page 05–149)**



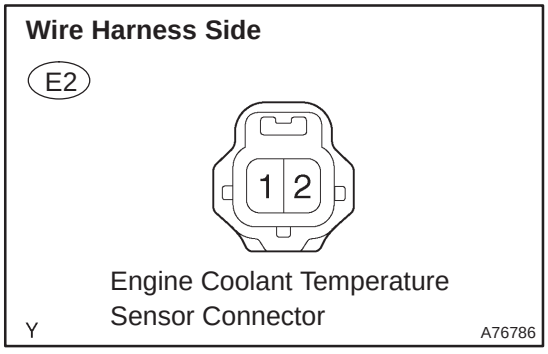
NG

2 INSPECT ENGINE COOLANT TEMPERATURE SENSOR (See page 10–20)

NG → **REPLACE ENGINE COOLANT TEMPERATURE SENSOR**

OK

3 CHECK HARNESS AND CONNECTOR(ECM – EFI WATER TEMP. SENSOR)



(a) Disconnect the E13 ECM connector.
(b) Disconnect the engine coolant temperature sensor connector.
(c) Check for continuity between the wire harness side connector.

Standard (Check for open):

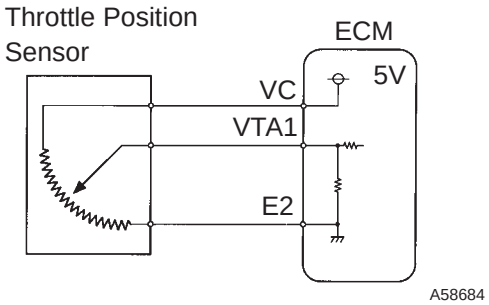
Symbols (Terminal No.)	Specified condition
THW (E13–19) – Engine coolant temperature sensor (E2–2)	Continuity
E2 (E13–28) – Engine coolant temperature sensor (E2–1)	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
THW (E13–19) or Engine coolant temperature sensor (E2–2) – Body ground	Continuity

MG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK



CHECK AND REPLACE ECM (See page 01–32)

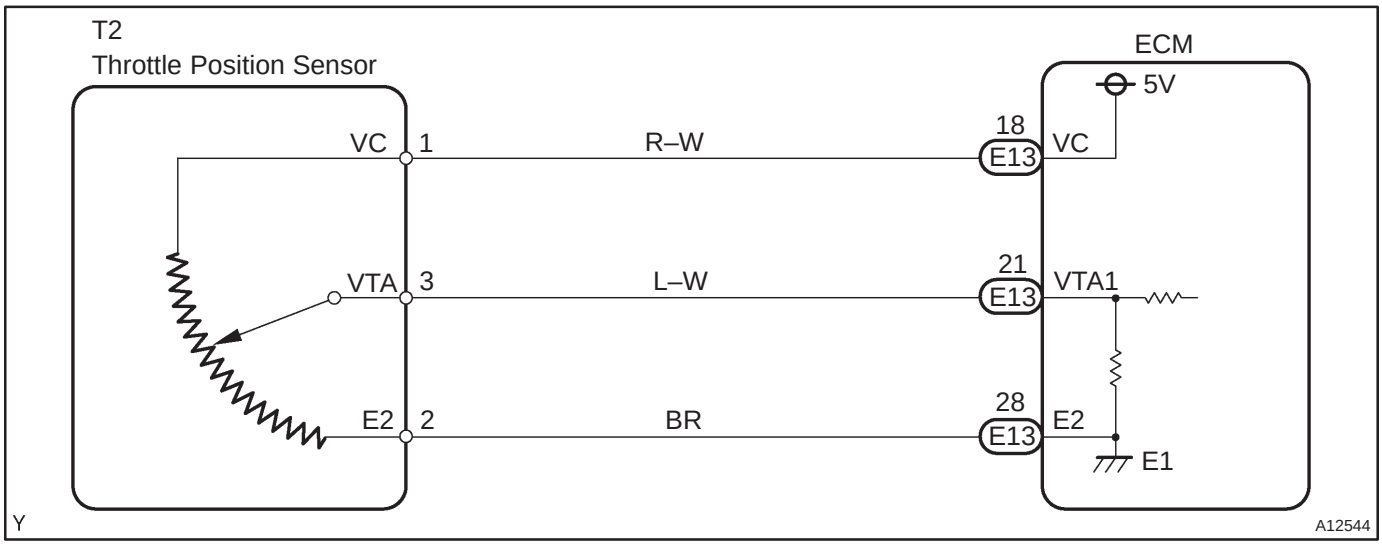
DTC	P0120/41	THROTTLE/PEDAL POSITION SENSOR/SWITCH ”A” CIRCUIT

DTC	P0122/41	THROTTLE/PEDAL POSITION SENSOR/SWITCH ”A” CIRCUIT LOW INPUT

DTC	P0123/41	THROTTLE/PEDAL POSITION SENSOR/SWITCH ”A” CIRCUIT HIGH INPUT

CIRCUIT DESCRIPTION

The throttle position sensor is mounted in the throttle body and detects the throttle valve opening angle.
When the throttle valve is fully closed, a voltage of approximately 0.7 V is applied to terminal VTA1 of the ECM. The voltage applied to terminal VTA1 of the ECM increases in proportion to the opening angle of the throttle valve and becomes approximately 3.5 to 5.0 V when the throttle valve is fully opened. The ECM judges the vehicle driving conditions from these signals input from terminal VTA1, uses them as one of the conditions for deciding the air–fuel ratio correction, power increase correction and fuel–cut control etc.



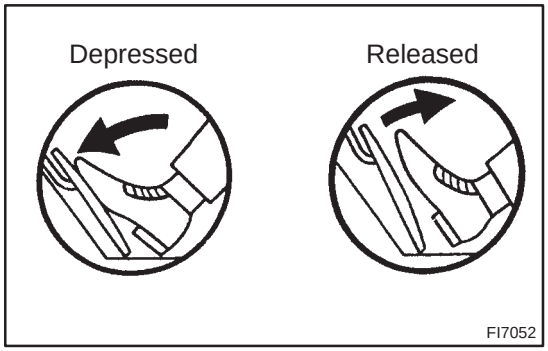
DTC No.	DTC Detection Condition	Trouble Area
Condition (a) of DTC P0120/41, P0122/41 or P0123/41 continues for 2 sec. (Open or short in throttle position sensor circuit)		
P0120/41	Detection conditions for DTCs P0122 and P0123 are not satisfied but condition (a) is satisfied (a) VTA1 less than 0.1 V, or VTA1 greater than 4.9 V	• Throttle position sensor (built in throttle body) • ECM
P0122/41	(a) VTA1 less than 0.1 V	• Throttle position sensor (built in throttle body) • Short in VTA1 circuit • Open in VC circuit • ECM
P0123/41	(a) VTA1 greater than 4.9 V	• Throttle position sensor (built in throttle body) • Open in VTA1 circuit • Open in E2 circuit • VC and VTA1 circuit are short–circuited • ECM

NOTICE:
When a malfunction is detected, the throttle valve is locked at a certain opening angle. Also, the whole electronically controlled throttle operation is cancelled until the system returns to normal and the ignition switch is turned OFF.
HINT:

- After confirming DTCs, use the hand–held tester to confirm the throttle valve opening percentage and closed throttle position switch condition.

Throttle valve opening position expressed as percentage		Trouble Area
Throttle valve fully closed	Throttle valve fully open	
0 %	0 %	VC circuit open VTA circuit open or short
Approx. 100 %	Approx. 100 %	E2 circuit open

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

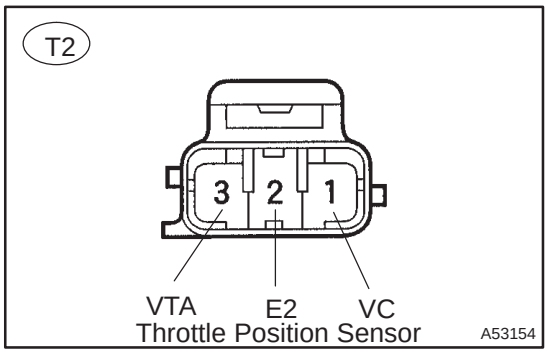
- Read freeze frame data using the hand−held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.
- If different DTCs that are related to a different system are output simultaneously while terminal E2 is used as a ground terminal, terminal E2 may be open.

When using hand–held tester:

1	READ VALUE OF HAND–HELD TESTER(THROTTLE VALVE OPENING PERCENTAGE)

(a) Turn the ignition switch ON.
(b) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / THROTTLE POS” and read its value displayed on the hand–held tester.

Result:



Accelerator pedal operation	Throttle valve opening position expressed as percentage	Proceed to
Released→Depressed	0 %	A
	Approx. 10 %→ Approx. 75 %	B
	Approx. 100 %	C

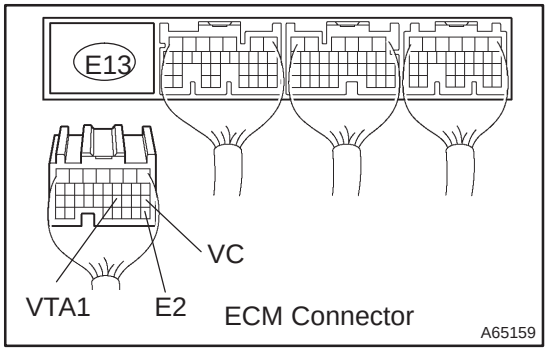
B → **CHECK FOR INTERMITTENT PROBLEMS (See page 05–149)**

C → **Go to step 4**

A

2	INSPECT THROTTLE POSITION SENSOR

(a) Disconnect the throttle position sensor connector.
(b) Measure the resistance between the terminals of the throttle position sensor.



Standard:

Symbols (Terminal No.)	Throttle Valve	Resistance
VC (T2–1) – E2 (T2–2)	—	2.5 to 5.9 kΩ
VTA (T2–3) – E2 (T2–2)	Fully closed	0.2 to 5.7 kΩ
	Fully open	2.0 to 10.2 kΩ

NG → **REPLACE THROTTLE POSITION SENSOR**

OK

3 INSPECT ECM

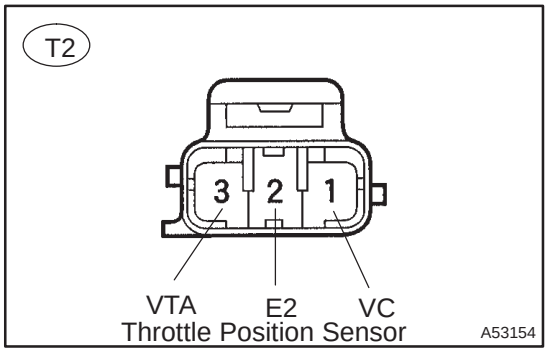
(a) Reconnect the throttle position sensor connector.
(b) Disconnect the E13 ECM connector.
(c) Measure the resistance between the terminals of the E13 ECM connector.

Standard:

Symbols (Terminal No.)	Throttle valve	Resistance
VC (E13–18) – EC (E13–28)	—	2.5 to 5.9 kΩ
VTA1 (E13–21) – E2 (E13–28)	Fully closed	0.2 to 5.7 kΩ
	Fully open	2.0 to 10.2 kΩ

(d) Check for continuity between the terminals of the E13 ECM connector.

Standard (Check for short):



Symbols (Terminal No.)	Specified condition
VC (E13–18) – Body ground	No Continuity
VTA1 (E13–21) – Body ground	

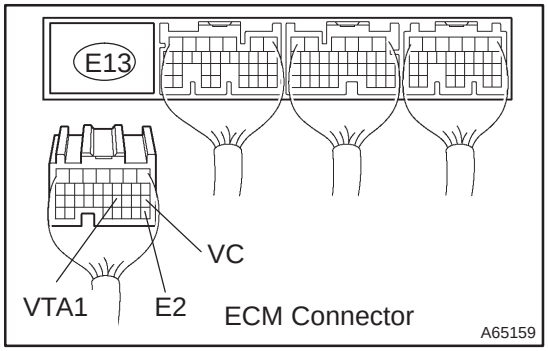
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK AND REPLACE ECM (See page 01–32)

4 INSPECT THROTTLE POSITION SENSOR

(a) Disconnect the throttle position sensor connector.
(b) Measure the resistance between the terminals of the throttle position sensor.



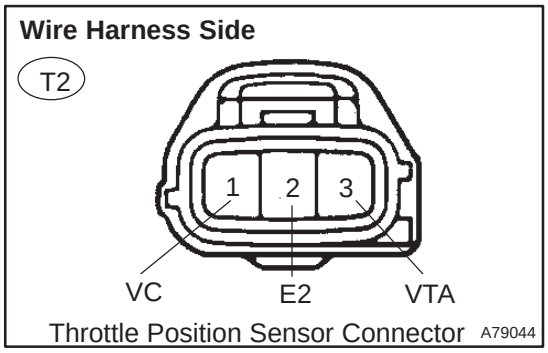
Standard:

Symbols (Terminal No.)	Throttle Valve	Resistance
VC (T2–1) – E2 (T2–2)	—	2.5 to 5.9 kΩ
VTA (T2–3) – E2 (T2–2)	Fully closed	0.2 to 5.7 kΩ
	Fully open	2.0 to 10.2 kΩ

NG → **REPLACE THROTTLE POSITION SENSOR**

OK

5 CHECK HARNESS AND CONNECTOR(ECM – THROTTLE POSITION SENSOR)



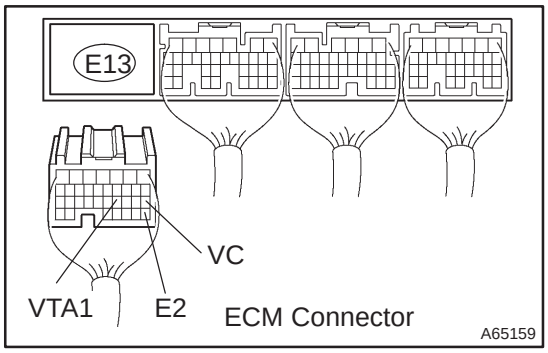
(a) Disconnect the E13 ECM connector.
(b) Disconnect the throttle position sensor connector.
(c) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
VC (T2–1) – VC (E13–18)	Continuity
VTA (T2–3) – VTA1 (E13–21)	
E2 (T2–2) – E2 (E13–28)	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
VC (T2–1) or VC (E13–18) – Body ground	No continuity
VTA (T2–3) or VTA1 (E13–21) – Body ground	



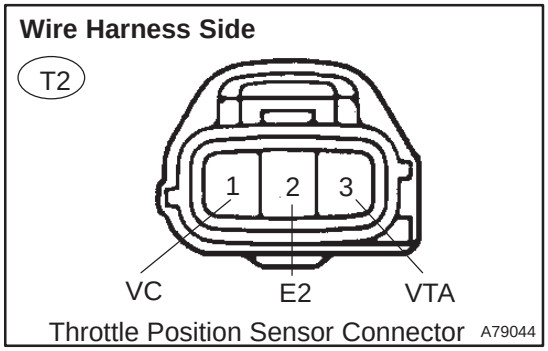
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK →

CHECK AND REPLACE ECM (See page 01–32)

When not using hand–held tester:

1	CHECK HARNESS AND CONNECTOR(THROTTLE POSITION SENSOR – ECM)

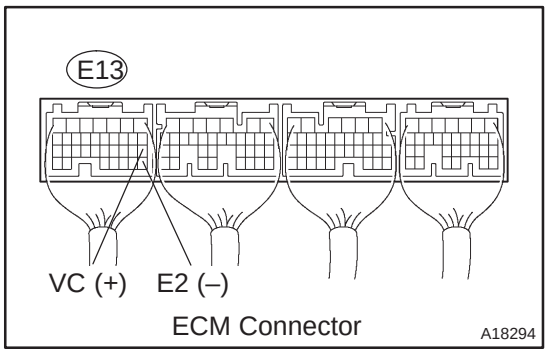


(a) Disconnect the E13 ECM connector.
(b) Disconnect the throttle position sensor connector.
(c) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
VC (T2–1) – VC (E13–18)	Continuity
VTA (T2–3) – VTA1 (E13–21)	
E2 (T2–2) – E2 (E13–28)	

Standard (Check for short):



Symbols (Terminal No.)	Specified condition
VC (T2–1) or VC (E13–18) – Body ground	No continuity
VTA (T2–3) or VTA1 (E13–21) – Body ground	

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2	INSPECT ECM(VC VOLTAGE)

(a) Disconnect the throttle position sensor connector.
(b) Turn the ignition switch ON.
(c) Measure the voltage between the terminals of the E13 ECM connector.

Standard:

Symbols (Terminal No.)	Specified condition
VC (E13–18) – E2 (E13–28)	4.5 to 5.5 V

NG → **CHECK AND REPLACE ECM (See page 01–32)**

OK

3	REPLACE THROTTLE BODY ASSY

GO

4	READ OUTPUT DTC(THROTTLE POSITION SENSOR DTCS ARE OUTPUT AGAIN)

(a) Clear the DTC (See page 05–149).
(b) Start the engine.
(c) Run the engine at idle for more than 15 seconds.
(d) Read the DTC (See page 05–149).

Result:

Display (DTC output)	Proceed to
”P0120/41, P0122/41 or P0123/41” is output again	A
”P0120/41, P0122/41 or P0123/41” is not output again	B

B → **SYSTEM OK**

A

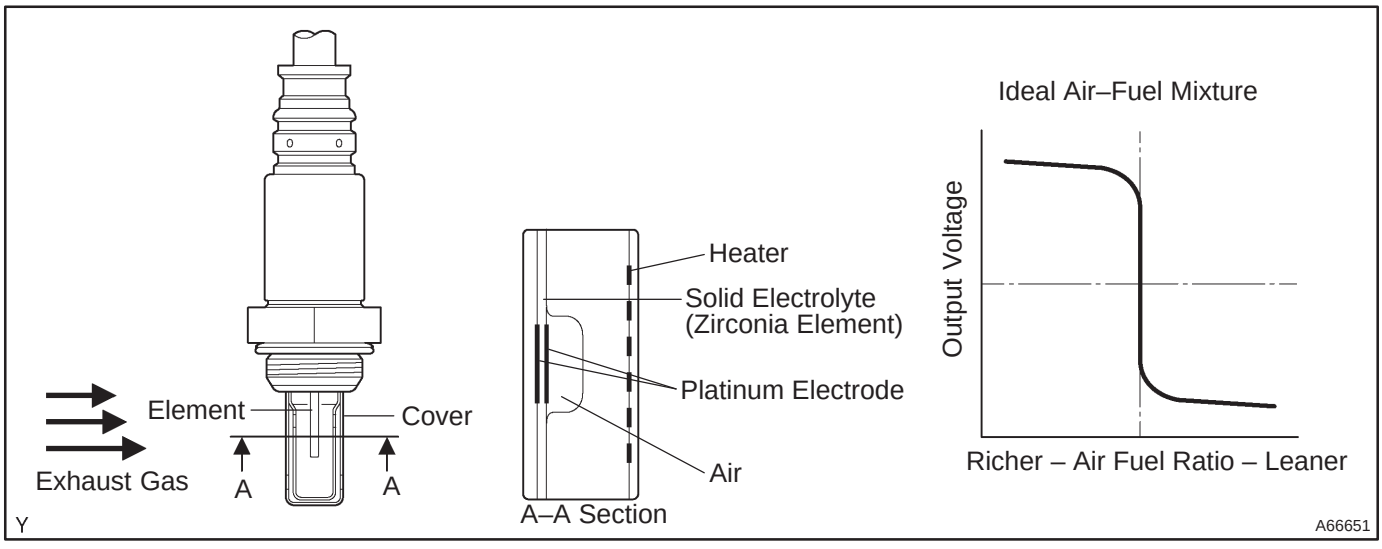
CHECK AND REPLACE ECM (See page 01–32)

DTC	P0136/27	OXYGEN SENSOR CIRCUIT MALFUNCTION (BANK 1 SENSOR 2)

DTC	P0156/29	OXYGEN SENSOR CIRCUIT MALFUNCTION (BANK 2 SENSOR 2)

CIRCUIT DESCRIPTION

The heated oxygen sensor is the lamination type. Compared to the conventional type, the sensor and heater portions of the lamination type are narrower overall. Because the heat of the heater acts directly on the alumina and zirconia (of the sensor portion) it accelerates the activation of the sensor.



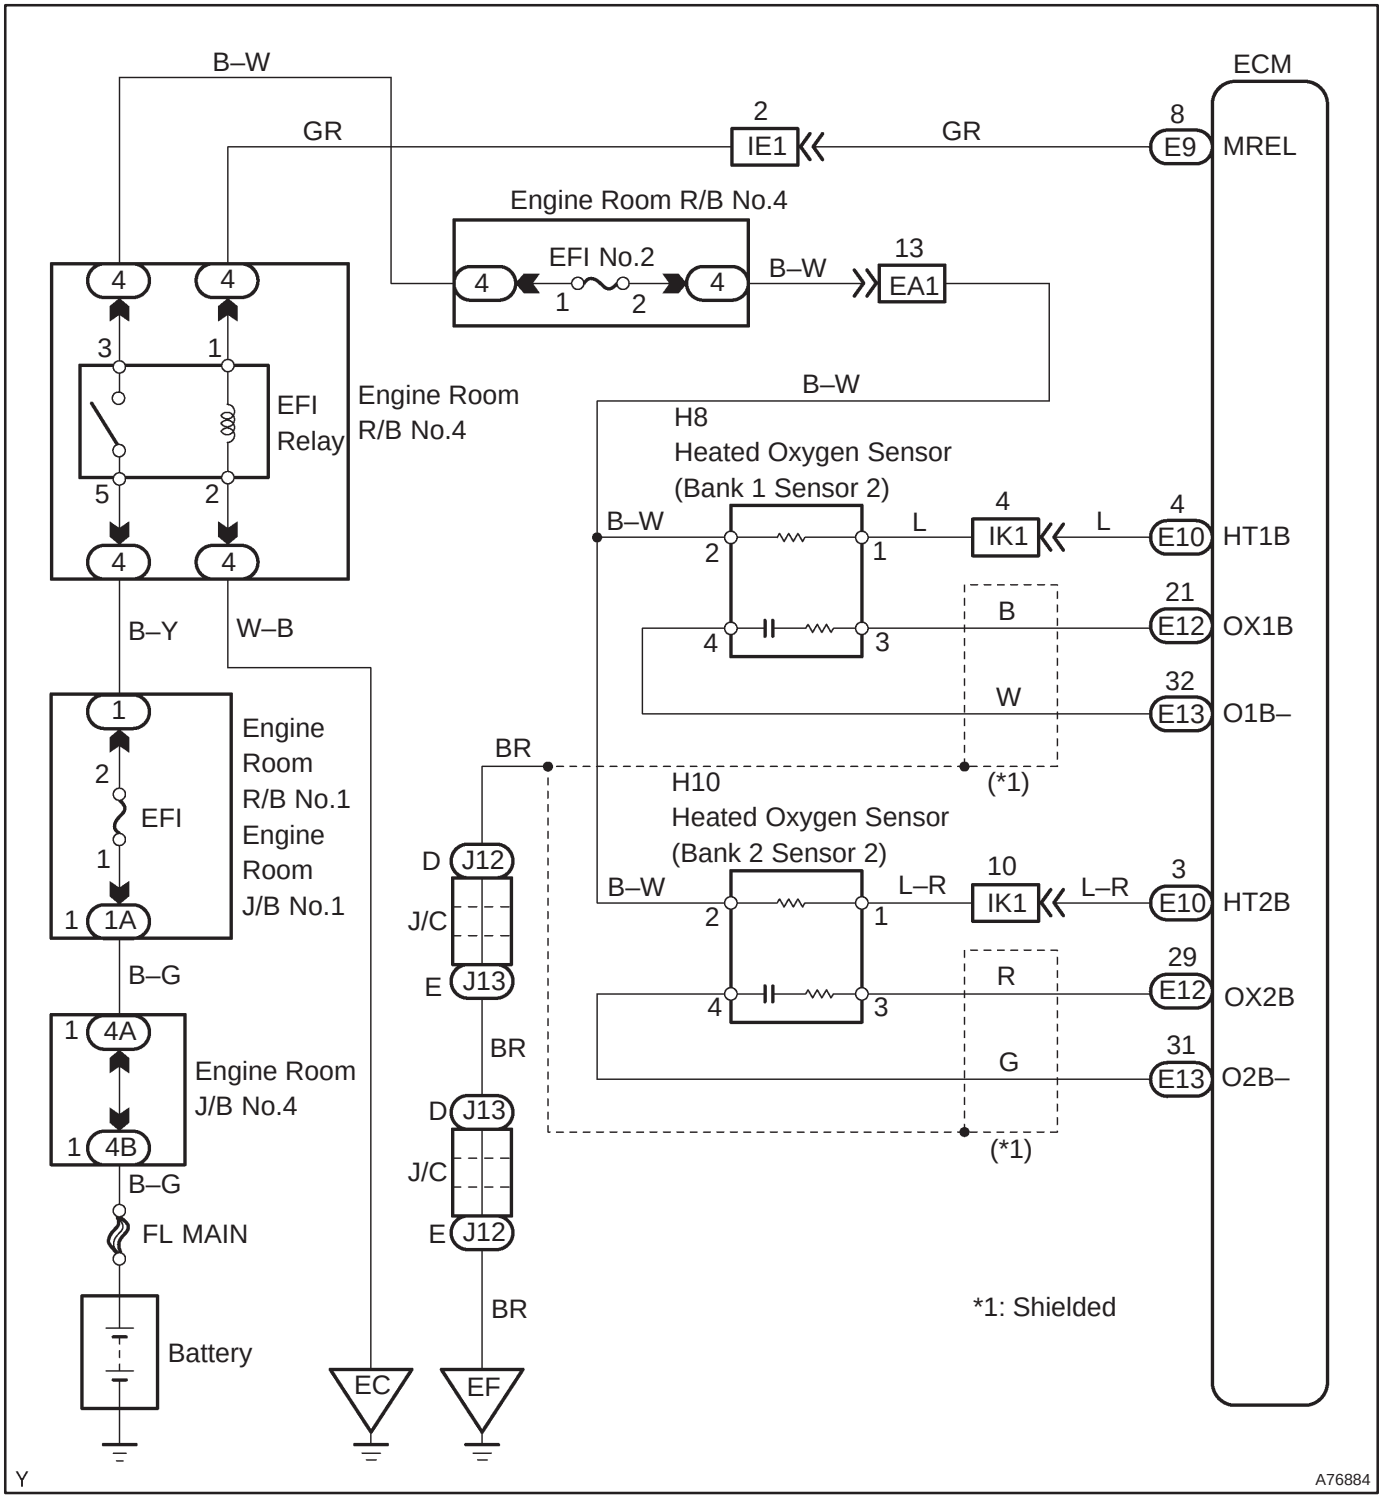
To obtain a high purification rate for the CO, HC and NOx components of the exhaust gas, a three–way catalytic converter is used. But for the most efficient use of the three–way catalytic converter, the air–fuel ratio must be precisely controlled so that it is always close to the stoichiometric air–fuel ratio.

The heated oxygen sensor has the characteristic whereby its output voltage changes suddenly in the vicinity of the stoichiometric air–fuel ratio. This is used to detect the oxygen concentration in the exhaust gas and provide the ECM with feedback control the air–fuel ratio.

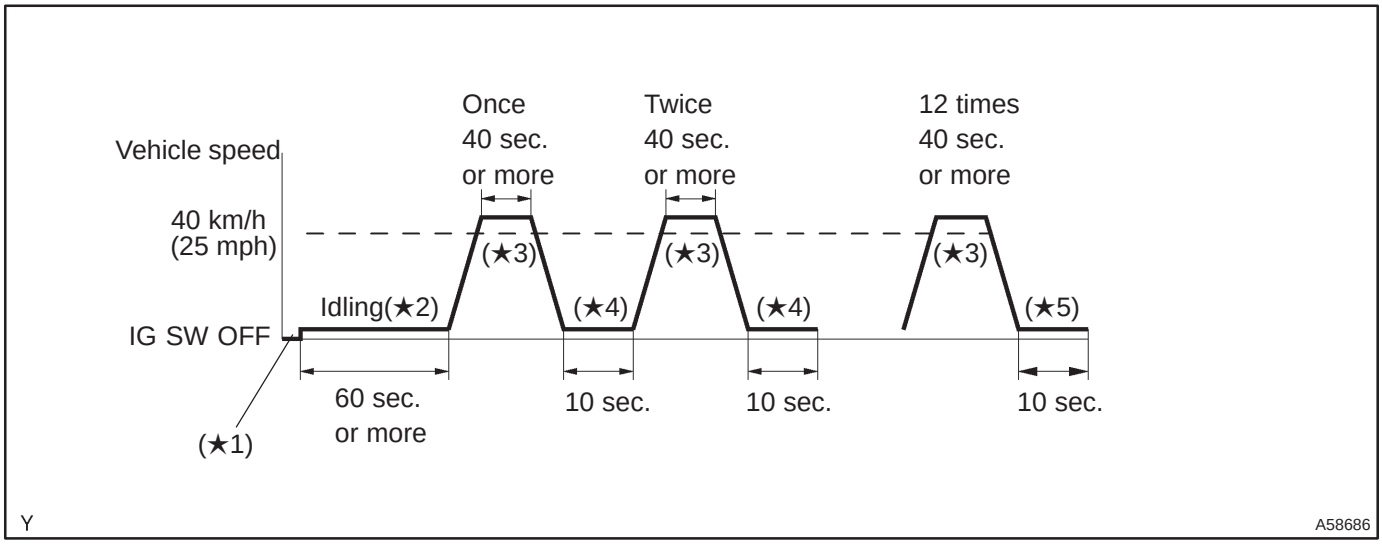
When the air–fuel ratio becomes LEAN, the oxygen concentration in the exhaust gas increases. And the heated oxygen sensor informs the ECM of the LEAN condition (low voltage, i.e. less than 0.45 V).

When the air–fuel ratio is RICHER than the stoichiometric air–fuel ratio, the oxygen concentration in the exhaust gas is reduced. And the heated oxygen sensor informs the ECM of the RICH condition (high voltage, i.e. more than 0.45 V). The ECM judges by the voltage output from the heated oxygen sensor whether the air–fuel ratio is RICH or LEAN and controls the injection time accordingly. However, if the malfunction of the heated oxygen sensor causes an output of abnormal voltage, the ECM becomes unable to perform accurate air–fuel ratio control.

The heated oxygen sensors include a heater which heats the zirconia element. The heater is controlled by the ECM. When the intake air volume is low (the temperature of the exhaust gas is low), current flows to the heater in order to heat the sensor for the accurate oxygen concentration detection.



DTC No	DTC Detection Condition	Trouble Area
P0136/27 P0156/29	The following condition continues for 480 sec. or more: • During driving with the engine warmed up, voltage output of the heated oxygen sensor remains at 0.45 V or more, or 0.60 V or less.	• Open or short in heated oxygen sensor (bank 1, 2 sensor 2) circuit • Heated oxygen sensor (bank 1, 2 sensor 2) • Heated oxygen sensor heater (bank 1, 2 sensor 2) • EFI relay



HINT:

- Bank 1 refers to the bank that includes cylinder No.1.
- Bank 2 refers to the bank that does not include cylinder No.1.
- Sensor 2 refers to the sensor farthest away from the engine assembly.

WIRING DIAGRAM

CONFIRMATION DRIVING PATTERN

1. **Connect the hand–held tester to the DLC3. (★1)**
2. **Switch the hand–held tester from the normal mode to the check mode (See page 05–149). (★1)**
3. **Start the engine and let the engine idle for 60 seconds or more. (★2)**
4. **Drive the vehicle at 40 km/h (25 mph) or more for 40 seconds or more. (★3)**
5. **Let the engine idle for 10 seconds or more. (★4)**
6. **Perform steps 4 to 5 12 times. (★5)**

HINT:

If a malfunction exists, the CHK ENG will be illuminated on the multi–information display during step 6.

NOTICE:

If the conditions in this test are not strictly followed, detection of the malfunction will be impossible. If you do not have a hand–held tester, turn the ignition switch OFF after performing steps from 3 to 6, then perform steps from 3 to 6 again.

INSPECTION PROCEDURE

HINT:

Hand–held tester only:

Narrowing down the trouble area is possible by performing ACTIVE TEST of the following ”A/F CONTROL” (A/F sensor, heated oxygen sensor or other trouble areas can be distinguished).

(a) Perform ACTIVE TEST using the hand–held tester (A/F CONTROL).

HINT:

”A/F CONTROL” is an ACTIVE TEST which changes the injection volume –12.5 % or +25 %.

(1) Connect the hand–held tester to the DLC3 on the vehicle.
(2) Turn the ignition switch ON.
(3) Warm up the engine with the engine speed at 2,500 rpm for approximately. 90 sec.
(4) Select the item ”DIAGNOSIS / OBD/MOBD / ACTIVE TEST / A/F CONTROL”.
(5) Perform ”A/F CONTROL” with the engine in an idle condition (press the right or left button).

Result:

A/F sensor reacts in accordance with increase and decrease of injection volume:
+25 % → rich output: Less than 3.0 V
–12.5 % → lean output: More than 3.35 V
Heated oxygen sensor reacts in accordance with increase and decrease of injection volume:
+25 % → rich output: More than 0.55 V
–12.5 % → lean output: Less than 0.4 V

NOTICE:
There is a few second delay in the A/F sensor output, and there is about 20 seconds delay in the heated oxygen sensor output.

	Output voltage of A/F sensor (sensor 1)	Output voltage of heated oxygen sensor (sensor 2)	Mainly suspect trouble area
Case 1	Injection volume +25 % –12.5 % Output voltage More than 3.35 V Less than 3.0 V **OK**	Injection volume +25 % –12.5 % Output voltage More than 0.55 V Less than 0.4V **OK**	—
Case 2	Injection volume +25 % –12.5 % Output voltage No reaction **NG**	Injection volume +25 % –12.5 % Output voltage More than 0.55 V Less than 0.4V **OK**	A/F sensor (A/F sensor, heater, A/F sensor circuit)
Case 3	Injection volume +25 % –12.5 % Output voltage More than 3.35 V Less than 3.0V **OK**	Injection volume +25 % –12.5 % Output voltage No reaction **NG**	Heated oxygen sensor (heated oxygen sensor, heater, heated oxygen sensor circuit)
Case 4	Injection volume +25 % –12.5 % Output voltage No reaction **NG**	Injection volume +25 % –12.5 % Output voltage No reaction **NG**	Extremely rich or lean actual air–fuel ratio (Injector, fuel pressure, gas leakage in exhaust system, etc.)

The following procedure of A/F CONTROL enables the technician to check and graph the voltage outputs of both the A/F sensor and heated oxygen sensor.
For displaying the graph indication, enter ”ACTIVE TEST/ A/F CONTROL/USER DATA”, then select ”AFS B1S1 and O2S B1S2” or ”AFS B2S1 and O2S B2S2” by pressing ”YES” button and push ”ENTER” button before pressing ”F4” button.
HINT:

- If different DTCs that are related to a different system are output simultaneously while terminal E2 is used as a ground terminal, terminal E2 may be open.
- Read freeze frame data using the hand−held tester Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

1	READ OUTPUT DTC(BESIDES DTC P0136/27)

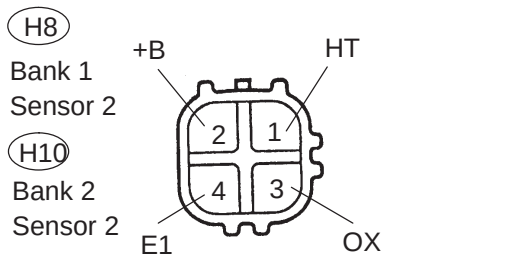
(a) Read the DTC.
Result:

Display (DTC output)	Proceed to
Only ”P0136/27” is output	A
”P0136/27” and other DTCs are output	B

HINT:
If any other codes besides ”P0136/27” are output, perform the troubleshooting for those DTCs first.

B → **GO TO RELEVANT DTC CHART (See page 05–161)**

A



2	READ VALUE OF HAND–HELD TESTER(OUTPUT VOLTAGE OF HEATED OXYGEN SENSOR)

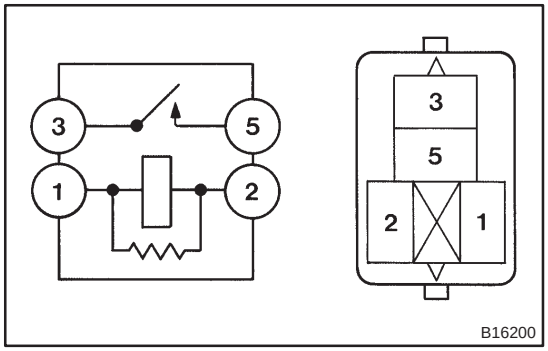
(a) After warming up the engine, run the engine at 2,500 rpm for 3 minutes.
(b) Read the output voltage of the heated oxygen sensor when the engine rpm is suddenly increased.
HINT:
Quickly accelerate the engine to 4,000 rpm 3 times by using the accelerator pedal.
Heated oxygen sensor output voltage: Alternates from 0.4 V or less to 0.5 V or more.

OK → **Go to step 6**

NG

3	INSPECT HEATED OXYGEN SENSOR(HEATER RESISTANCE)

Heated Oxygen Sensor Connector
A79117



(a) Disconnect the heated oxygen sensor connector.
(b) Inspect the heated oxygen sensor.
Standard:

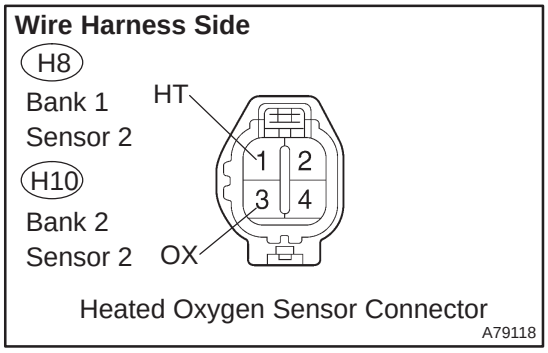
Symbols (Terminal No.)	Condition	Specified condition
HT (H8–1) – +B (H8–2)	20°C (68°F)	11 to 16 Ω
HT (H8–1) – E1 (H8–4)	—	No Continuity
HT (H10–1) – +B (H10–2)	20°C (68°F)	11 to 16 Ω
HT (H10–1) – E1 (H10–4)	—	No Continuity

NG → **REPLACE HEATED OXYGEN SENSOR**

OK

4 INSPECT EFI RELAY

(a) Remove the EFI relay from the engine room R/B No.4.
(b) Inspect the EFI relay.



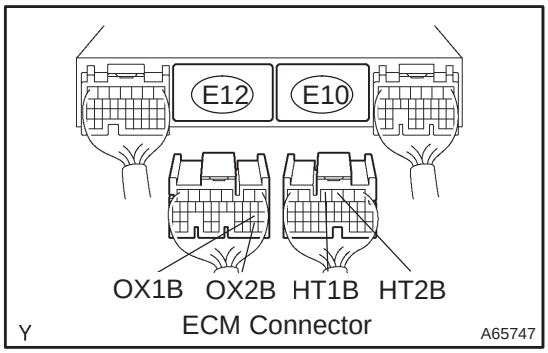
Standard:

Terminal No.	Specified condition
1 – 2	Continuity
3 – 5	No Continuity
	Continuity (Apply battery voltage Terminals 1 and 2)

NG → **REPLACE EFI RELAY**

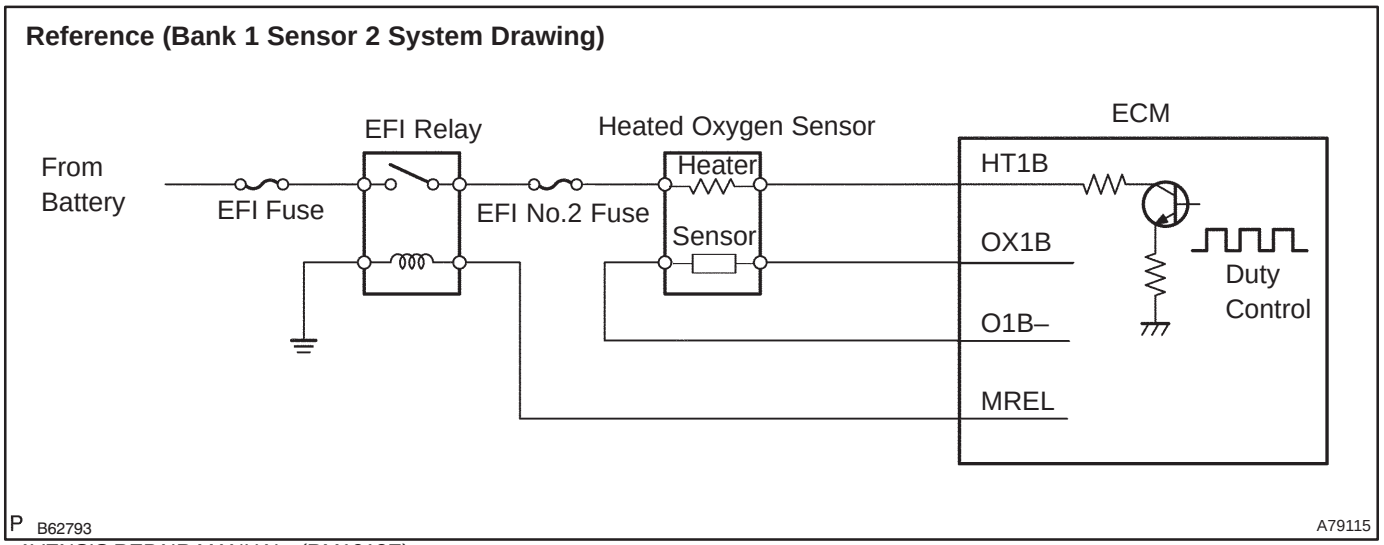
OK

5 CHECK HARNESS AND CONNECTOR(HEATED OXYGEN SENSOR – ECM)



(a) Disconnect the H8 or H10 heated oxygen sensor connector.
(b) Disconnect the E10 and E12 ECM connector.
(c) Check for continuity between the wire harness side connectors.

Standard (Check for open):



Symbols (Terminal No.)	Specified condition
OX (H8–3) – OX1B (E12–21)	Continuity
HT (H8–1) – HT1B (E10–4)	
OX (H10–3) – OX2B (E12–29)	
HT (H10–1) – HT2B (E10–3)	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
OX (H8–3) or OX1B (E12–21) – Body ground	No continuity
HT (H8–1) or HT1B (E10–4) – Body ground	
OX (H10–3) or OX2B (E12–29) – Body ground	
HT (H10–1) or HT2B (E10–3) – Body ground	

Reference (Bank 1 Sensor 2 System Drawing)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE HEATED OXYGEN SENSOR

6	PERFORM CONFIRMATION DRIVING PATTERN

HINT:
Clear all DTCs prior to perform the confirmation driving pattern.

GO

7	READ OUTPUT DTC(DTC P0136/27 IS OUTTPUT AGAIN)

(a) Read the DTC using the hand–held tester.
Result:

Display (DTC output)	Proceed to
”P0136/27” is not output again	A
”P0136/27” is output again	B

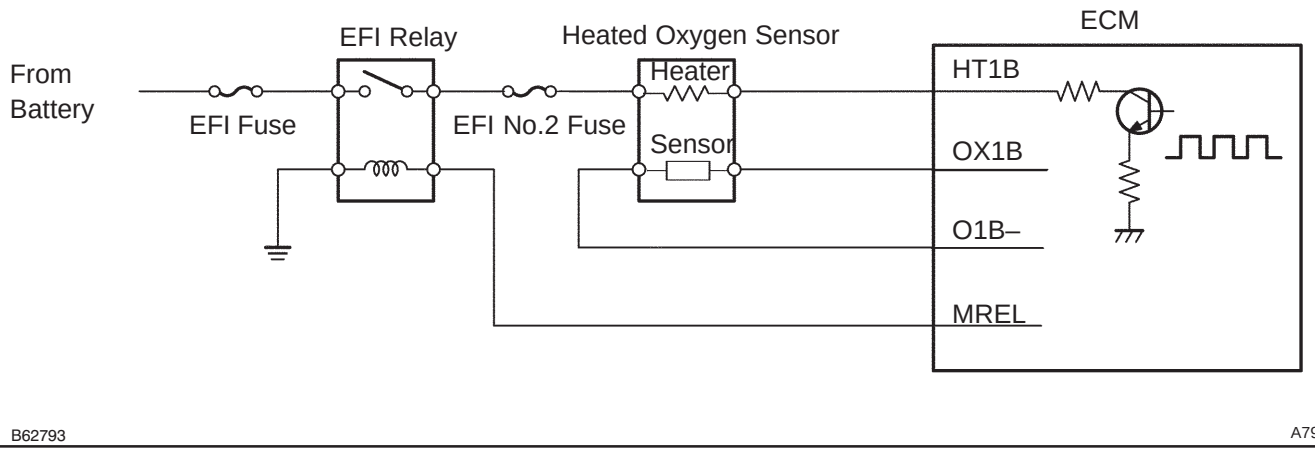
B → REPLACE HEATED OXYGEN SENSOR

A

CHECK FOR INTERMITTENT PROBLEMS (See page 05–149)

DTC	P0141/27	OXYGEN SENSOR HEATER CIRCUIT MALFUNCTION (BANK 1 SENSOR 2)

DTC	P0161/29	OXYGEN SENSOR HEATER CIRCUIT (BANK 2 SENSOR 2)



CIRCUIT DESCRIPTION

Refer to DTC P0136/27 on page 05–211.

HINT:

The ECM provides a pulse width modulated control circuit to adjust current through the heater. The heated oxygen sensor heater circuit uses a relay on the B+ side of the circuit.

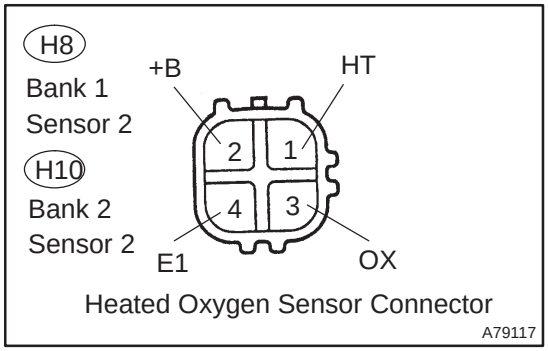
Reference (Bank 1 Sensor 2 System Drawing)

DTC No.	DTC Detection Condition	Trouble Area
P0141/27 P0161/29	Heated current is 0.2 A or less when heater operates (1 trip detection logic)	• Open or short in heater circuit of heated oxygen sensor • Heated oxygen sensor heater • EFI relay • ECM
	When heater operates, heated current exceeds 2 A (1 trip detection logic)	

HINT:

- Bank 1 refers to the bank that includes cylinder No.1.
- Bank 2 refers to the bank that does not include cylinder No.1.
- Sensor 1 refers to the sensor closest to the engine assembly.
- Sensor 2 refers to the sensor farthest away from the engine assembly.

WIRING DIAGRAM



Refer to DTC P0136/27 on page 05–211.

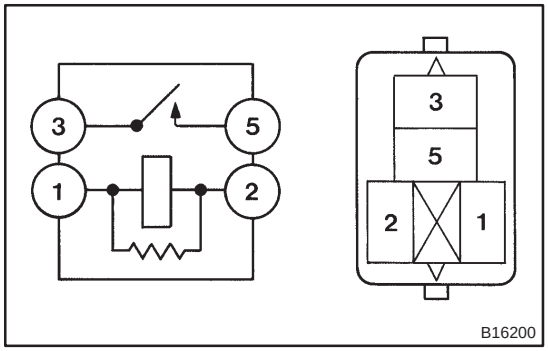
INSPECTION PROCEDURE

HINT:

- If different DTCs that are related to a different system are output simultaneously while terminal E2 is used as a ground terminal, terminal E2 may be open.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

1 INSPECT HEATED OXYGEN SENSOR(HEATER RESISTANCE)

(a) Disconnect the heated oxygen sensor connector.
(b) Inspect the heated oxygen sensor.



Standard:

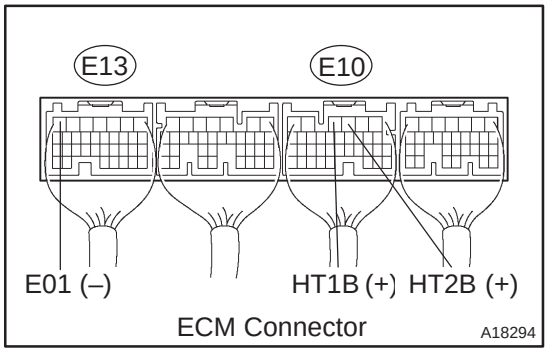
Symbols (Terminal No.)	Condition	Specified condition
HT (H8–1) – +B (H8–2)	20°C (68°F)	11 to 16 Ω
HT (H8–1) – E1 (H8–4)	—	No Continuity
HT (H10–1) – +B (H10–2)	20°C (68°F)	11 to 16 Ω
HT (H10–1) – E1 (H10–4)	—	No Continuity

NG → **REPLACE HEATED OXYGEN SENSOR**

OK

2 INSPECT EFI RELAY

(a) Remove the EFI relay from the engine room R/B.
(b) Inspect the EFI relay.



Standard:

Terminal No.	Specified condition
1 – 2	Continuity
3 – 5	No Continuity
	Continuity (Apply battery voltage terminals 1 and 2)

NG → **REPLACE EFI RELAY**

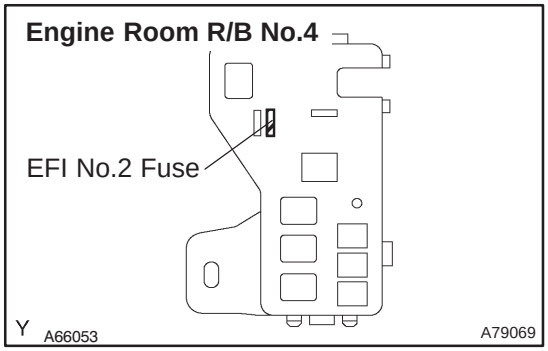
OK

3 INSPECT ECM(HT1B OR HT2B VOLTAGE)

(a) Turn the ignition switch ON.
(b) Measure the voltage between the applicable terminals of the E10 and E13 ECM connector.

Standard:

Symbols (Terminal No.)	Specified condition
HT1B (E10–4) – E01 (E13–7)	9 to 14 V
HT2B (E10–3) – E01 (E13–7)	



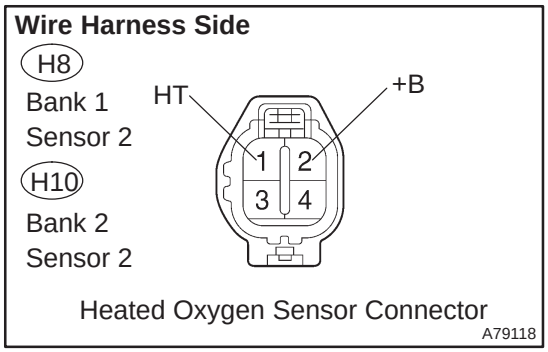
HINT:

- The HT1B means the heated oxygen sensor bank 1 sensor 2.
- The HT2B means the heated oxygen sensor bank 2 sensor 2.

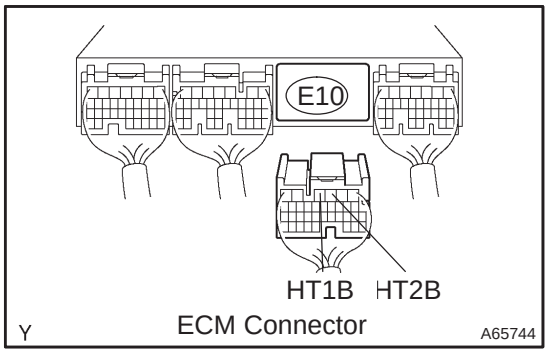
OK → **CHECK AND REPLACE ECM (See page 01–32)**

NG

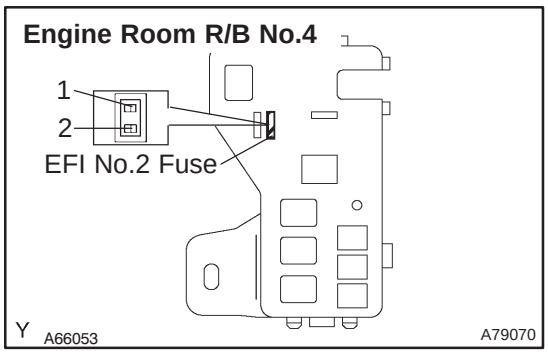
4	CHECK FUSE(EFI No.2)



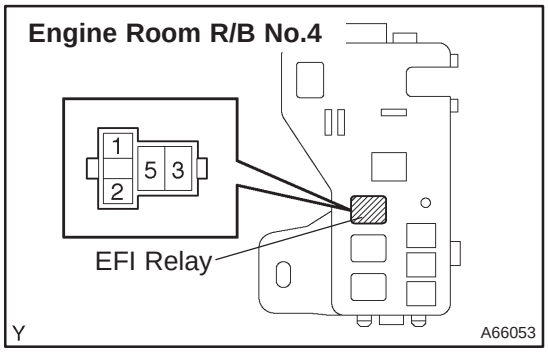
(a) Remove the EFI No.2 fuse from the engine room R/B No.4.



(b) Check for continuity in the EFI No.4 fuse.
Standard: Continuity



NG → **CHECK FOR SHORT IN ALL HARNESS AND COMPONENTS CONNECTED FUSE**



OK

5 CHECK HARNESS AND CONNECTOR(HEATED OXYGEN SENSOR – ECM, HEATED OXYGEN SENSOR – EFI RELAY)

(a) Check the harness and connector between the ECM and heated oxygen sensor connectors.

(1) Disconnect the H8 or H10 heated oxygen sensor connector.

(2) Disconnect the E10 ECM connector.

(3) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
HT (H8–1) – HT1B (E10–4)	Continuity
HT (H10–1) – HT2B (E10–3)	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
HT (H8–1) or HT1B (E10–4) – Body ground	No continuity
HT (H10–1) or HT2B (E10–3) – Body ground	

(b) Check the harness and connector between the heated oxygen sensor connector and EFI relay.

(1) Disconnect the H8 or H10 heated oxygen sensor connector.

(2) Remove the EFI No.2 fuse from the engine room R/B No.4.

(3) Remove the EFI relay from the engine room R/B No.4.

(4) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
+B (H8–2) – EFI No.2 fuse (2)	Continuity
+B (H10–2) – EFI No.2 fuse (2)	
EFI No.2 fuse (1) – EFI relay (3)	

Standard (Check for short):

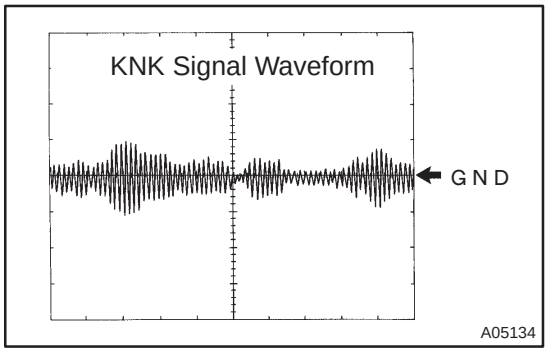
Symbols (Terminal No.)	Specified condition
+B (H8–2) or EFI No.2 fuse (2) – Body ground	No continuity
+B (H10–2) or EFI No.2 fuse (2) – Body ground	
EFI No.2 fuse (1) or EFI relay (3) – Body ground	

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK AND REPLACE ECM (See page 01–32)

DTC	P0325/52	KNOCK SENSOR 1 CIRCUIT (BANK 1 OR SINGLE SENSOR)

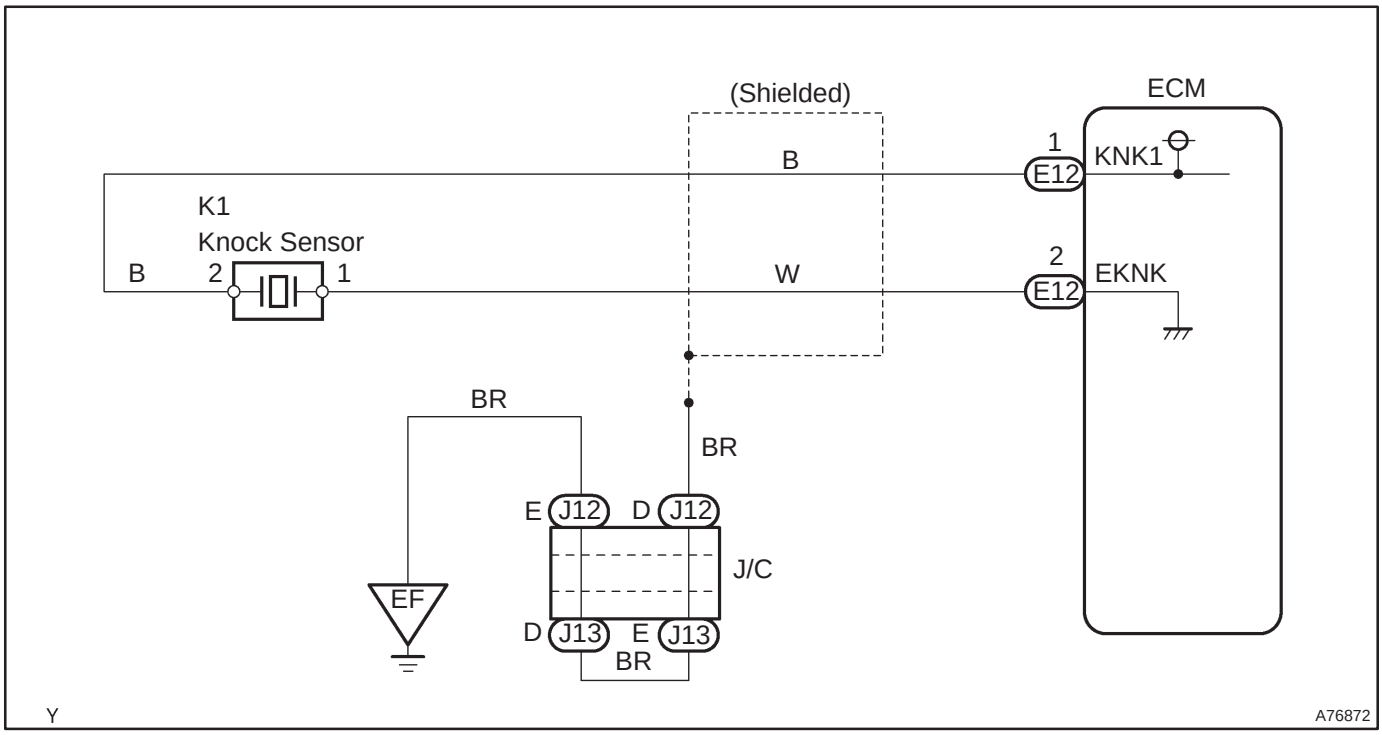


DTC	P0327/52	KNOCK SENSOR 1 CIRCUIT LOW INPUT (BANK 1 OR SINGLE SENSOR)

DTC	P0328/52	KNOCK SENSOR 1 CIRCUIT HIGH INPUT (BANK 1 OR SINGLE SENSOR)

CIRCUIT DESCRIPTION

A flat type knock sensor (non–resonant type) has the structure that can detect the vibration in a wider band of frequency from about 6 kHz to 15 kHz and has the following features.
Knock sensors are fitted on the cylinder block to detect the engine knocking.
Sensor contains a piezoelectric element which generates a voltage when it becomes deformed, which occurs when the cylinder block vibrates due to knocking. If engine knocking occurs, the ignition timing is retarded to suppress it.



DTC No.	DTC Detection Condition	Trouble Area
P0325/52	Output voltage of the knock sensor 1 decreases beyond a threshold. (Threshold varies according to an engine speed.)	• Knock sensor 1 • Knock sensor 1 (under–torqued or loose) • ECM
P0327/52	Output voltage the knock sensor 1 is 0.5 V or less.	• Short in knock sensor 1 circuit • Knock sensor 1 • ECM
P0328/52	Output voltage the knock sensor 1 is 4.5 V or more.	• Open in knock sensor 1 circuit • Knock sensor 1 • ECM

Reference:
The correct waveform is as shown.

Item	Contents
Terminal	KNK1 – EKNK
Equipment Set	0.01 to 10 V/ DIV, 0.01 to 10 msec./ DIV
Condition	After warming up the engine, keep the engine speed 4,000 rpm.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

1	READ OUTPUT DTC

(a) Clear the DTC (See page 05–149).
(b) Warm up the engine.
(c) Accelerate the engine to 3,000 rpm for 10 seconds or more.
(d) Read the DTC (See page 05–149).

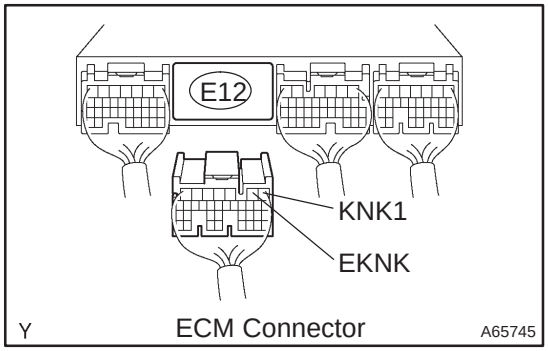
Result :

Display (DTC output)	Proceed to
Only "P0325/52" is output again	A
"P0325/52, P0327/52 and/or P0328/52" are output again	B

B → **Go to step 3**

A

2	CHECK KNOCK SENSOR



(a) Check the knock sensor installation.
Torque: 20 N·m (204 kgf·cm, 15 ft·lbf)

NG → TIGHTEN SENSOR

OK

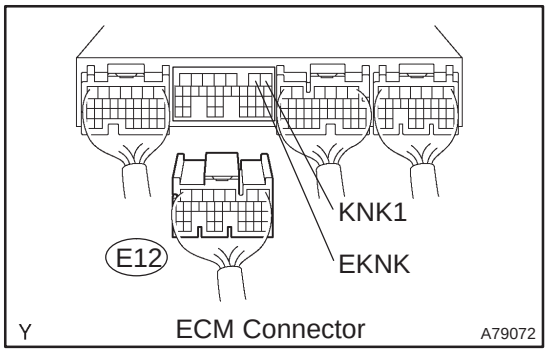
REPLACE KNOCK SENSOR

3	CHECK HARNESS AND CONNECTOR(ECM – KNOCK SENSOR)

(a) Disconnect the E12 ECM connector.
(b) Disconnect the knock sensor connector.
(c) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
KNK1 (E12–1) – Knock sensor (K1–2)	Continuity
EKNK (E12–2) – Knock sensor (K1–1)	



Standard (Check for short):

Symbols (Terminal No.)	Specified condition
KNK1 (E12–1) or Knock sensor (K1–2) – Body ground	No continuity
EKNK (E12–2) or Knock sensor (K1–1) – Body ground	

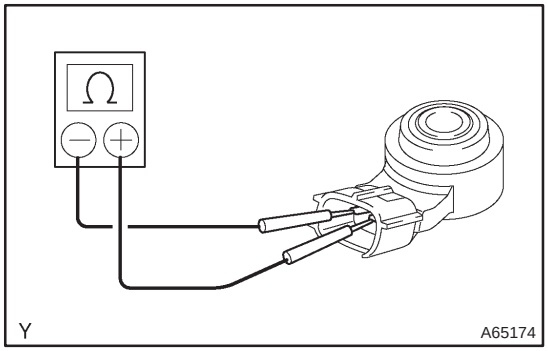
NG → Go to step 5

OK

4	INSPECT ECM(KNK1 VOLTAGE)

(a) Disconnect the E12 ECM connector.
(b) Turn the ignition switch ON.
(c) Measure the voltage between the terminals of the E12 ECM side terminals.

Standard:



Symbols (Terminal No.)	Specified condition
KNK1 (E12–1) – EKNK (E12–2)	4.5 to 5.5 V

NG → REPLACE ECM

OK

CHECK AND REPLACE ECM (See page 01–32)

5 INSPECT KNOCK SENSOR

(a) Remove knock sensor.
(b) Measure the resistance between the terminals.
Standard:

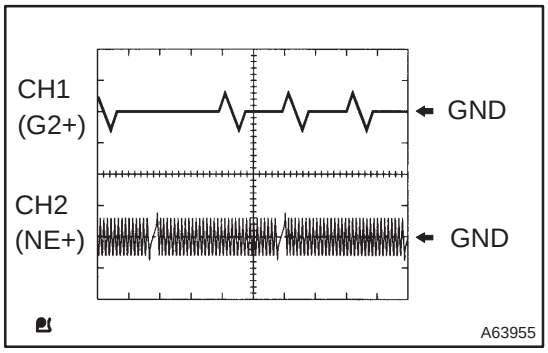
Symbols (Terminal No.)	Condition	Specified condition
FKN+ (1) – FKN– (2)	20 °C (68 °F)	120 to 280 Ω

NG → **REPLACE KNOCK SENSOR**

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR

DTC	P0335/12	CRANKSHAFT POSITION SENSOR ”A” CIRCUIT

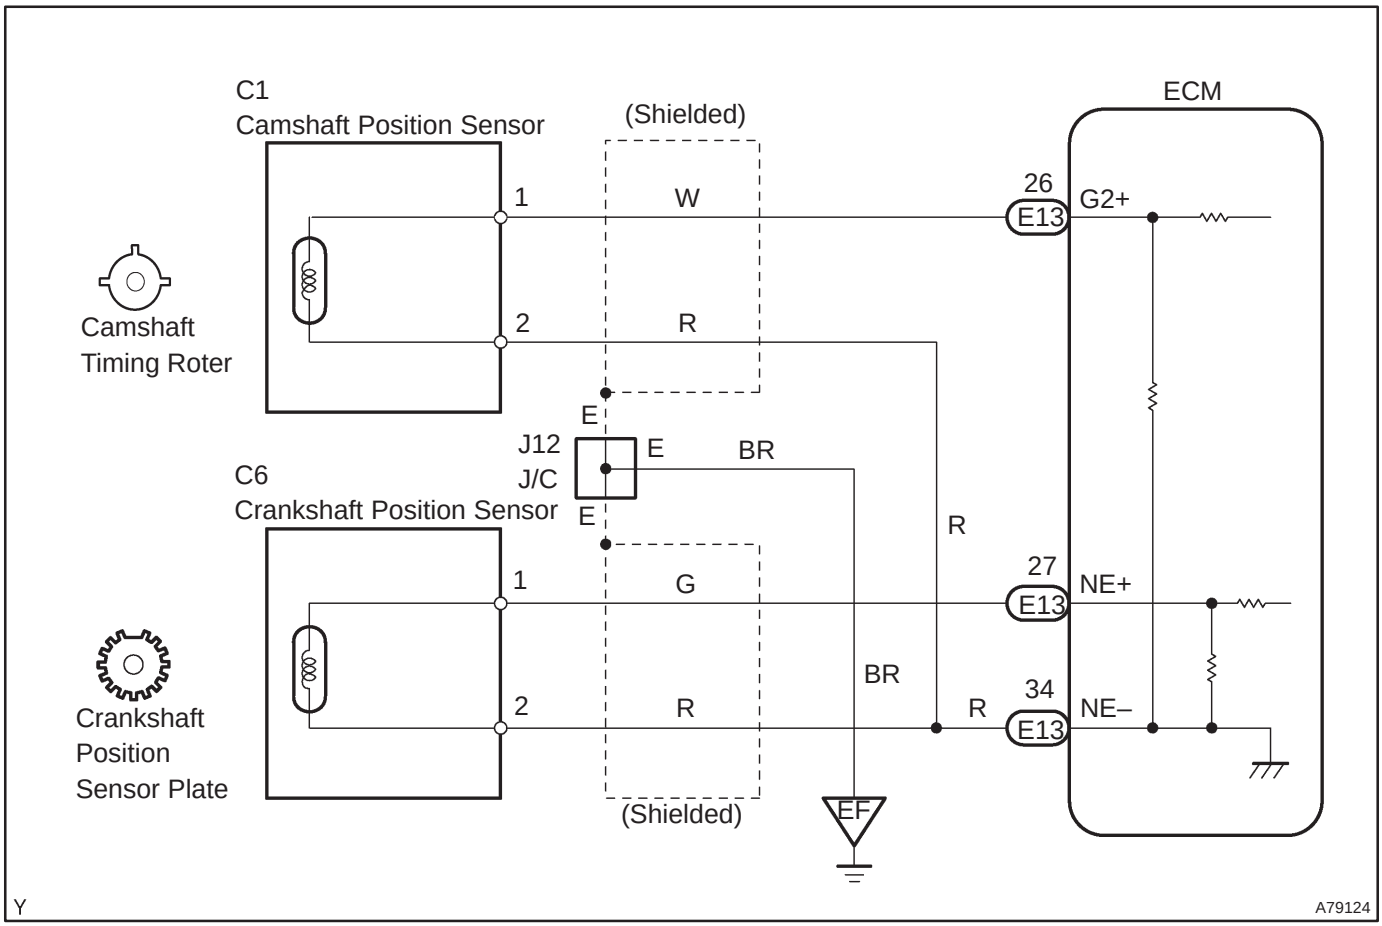


DTC	P0335/13	CRANKSHAFT POSITION SENSOR ”A” CIRCUIT

DTC	P0339/13	CRANKSHAFT POSITION SENSOR ”A” CIRCUIT INTERMITTENT

CIRCUIT DESCRIPTION

The crankshaft position sensor (NE signal) consists of a magnet, iron core and pickup coil.
The NE signal plate (crankshaft position sensor plate) has 34 teeth and is installed on the crankshaft. The NE signal sensor generates 34 signals at every engine revolution. The ECM detects the crankshaft angle and the engine revolution based on the NE signal, and the cylinder and the angle of the VVT based on the combination of the G and NE signal.

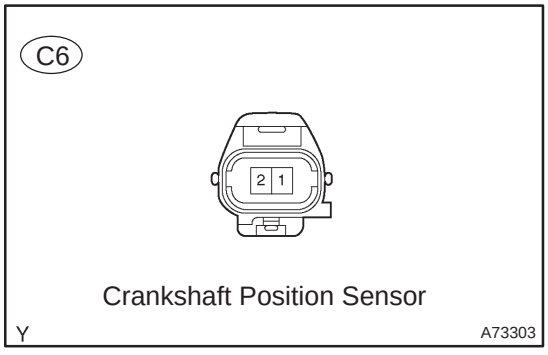


DTC No.	DTC Detection Condition	Trouble Area
P0335/12	No crankshaft position sensor signal to ECM during cranking (2 trip detection logic)	• Open or short in crankshaft position sensor circuit • Crankshaft position sensor • Signal plate (crankshaft) • ECM
P0335/13	No crankshaft position sensor signal to ECM with engine speed 600 rpm or more (1 trip detection logic)	
P0339/13	In condition (a), (b) and (c), when no crankshaft position sensor (NE) signal is input for 0.05 sec. or more. (a) Engine revolution 1,000 rpm or more (b) STA signal is OFF (c) 3 sec. or more has lapsed after STA signal is switched from ON to OFF.	

Reference: Inspection using the oscilloscope.
HINT:
The correct waveform is as shown on the left.

Item	Contents
Terminal	CH1: G2+ – NE– CH2: NE+ – NE–
Equipment Set	5V/DIV, 20ms/DIV
Condition	During cranking or idling

WIRING DIAGRAM



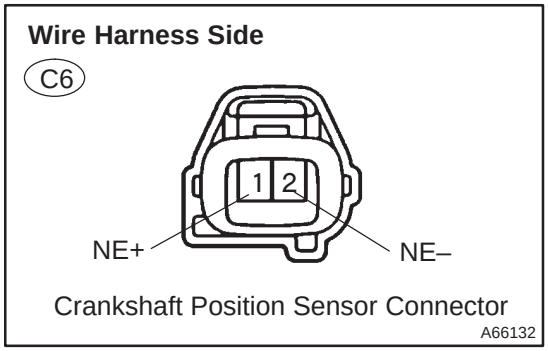
INSPECTION PROCEDURE

HINT:

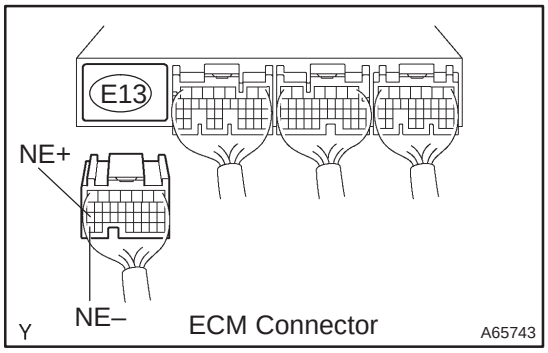
- Perform troubleshooting of DTC P0335/12, 13 first. If no trouble is found, troubleshoot the engine mechanical systems.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

1	INSPECT CRANKSHAFT POSITION SENSOR(RESISTANCE)

(a) Measure the resistance between the terminals of the crankshaft posision sensor connector.



Resistance:
985 to 1,600 Ω at cold
1,265 to 1,890 Ω at hot



NOTICE:
"Cold" and "Hot" shown above mean the temperature of the coils themselves. "Cold" is from –10°C (14°F) to 50 °C (122 °F) and "Hot" is from 50 °C (122 °F) to 100 °C (212 °F).

NG → **REPLACE CRANKSHAFT POSITION SENSOR**

OK

2 CHECK HARNESS AND CONNECTOR(CRANKSHAFT POSITION SENSOR – ECM)

(a) Disconnect the crankshaft position sensor connector.
(b) Disconnect the E13 ECM connector.
(c) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
NE+ (C6–1) – NE+ (E13–27)	Continuity
NE– (C6–2) – NE– (E13–34)	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
NE+ (C6–1) or NE+ (E13–27) – Body ground	No continuity
NE– (C6–2) or NE– (E13–34) – Body ground	

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 CHECK SENSOR INSTALLATION(CRANKSHAFT POSITION SENSOR)

(a) Check the crankshaft position sensor installation .

NG → **TIGHTEN SENSOR**

OK

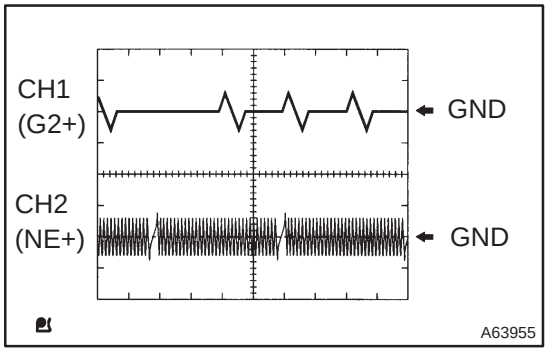
4 CHECK CRANKSHAFT POSITION SENSOR PLATE(TEETH OF SENSOR PLATE(CRANKSHAFT))

(a) Check the teeth of the sensor plate.

NG → **REPLACE CRANKSHAFT POSITION SENSOR PLATE (CRANKSHAFT)**

OK

CHECK AND REPLACE ECM (See page 01–32)



DTC	P0340/12	CAMSHAFT POSITION SENSOR ”A” CIRCUIT (BANK 1 OR SINGLE SENSOR)

DTC	P0341/12	CAMSHAFT POSITION SENSOR ”A” CIRCUIT RANGE/PERFORMANCE (BANK 1 OR SINGLE SENSOR)

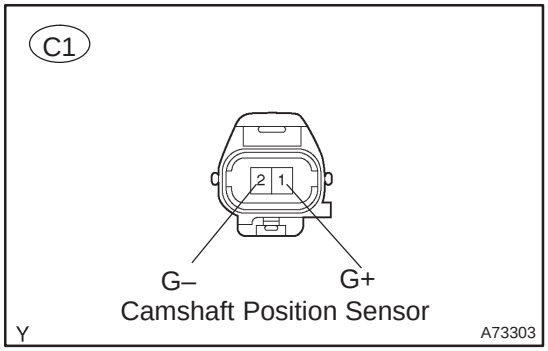
CIRCUIT DESCRIPTION

The camshaft position sensor (G signal) consists of a magnet, iron core and pickup coil.
The G signal rotor has 3 teeth on its outer circumference and is installed on the intake camshaft.
When the camshafts rotate, the protrusion on the signal plate and the air gap on the pickup coil changes, causing fluctuations in the magnetic field and generating an electromotive force in the pickup coil.
The NE signal plate (crankshaft position sensor plate) has 34 teeth and is installed to the crankshaft. The NE signal sensor generates 34 signals at every engine revolution. The ECM detects the crankshaft angle and the engine revolution based on the NE signals, and the cylinder and the angle of the VVT based on the combination of the G and NE signals.

DTC No.	DTC Detection Condition	Trouble Area
P0340/12	• No camshaft position sensor signal to ECM during cranking (1 trip detection logic) • No camshaft position sensor signal to ECM with engine speed 600 rpm or more (1 trip detection logic)	• Open or short in camshaft position sensor circuit • Camshaft position sensor • Camshaft timing pulley • Timing chain has jumped a tooth • ECM
P0341/12	While crankshaft rotates twice, camshaft position sensor signal is input to ECM 12 times or more (1 trip detection logic)	

Reference: Inspection using the oscilloscope.
HINT:
The correct waveform is as shown on the left.

Item	Contents
Terminal	CH1: G2+ – NE– CH2: NE+ – NE–
Equipment Set	5V/DIV, 20ms/DIV
Condition	During cranking or idling



WIRING DIAGRAM

Refer to DTC P0335/12, 13 and P0339/13 on page 05–226.

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

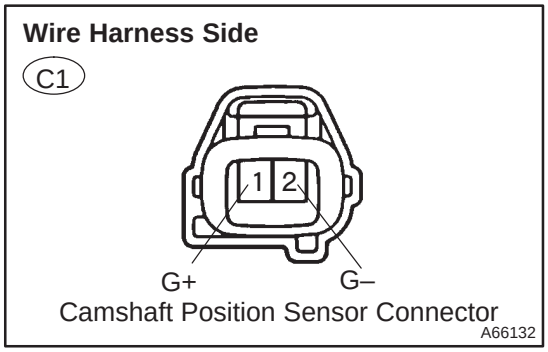
1 INSPECT CAMSHAFT POSITION SENSOR

(a) Measure the resistance between the terminals of camshaft posision sensor connector.

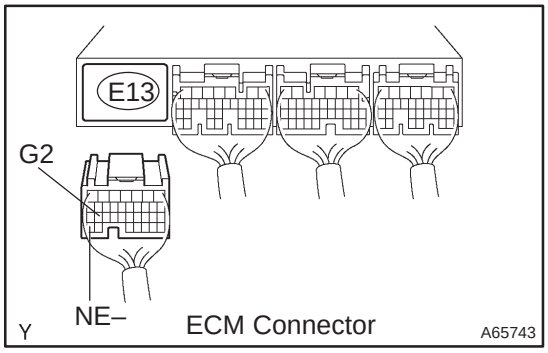
Resistance:

835 to 1,400 Ω (Cold)

1,060 to 1,645 Ω (Hot)



NOTICE:



"Cold" and "Hot" mean the temperature of the coils themselves. "Cold" is from –10°C (14°F) to 50°C (122°F) and "Hot" is from 50°C (122°F) to 100°C (212°F).

NG → **REPLACE CAMSHAFT POSITION SENSOR**

OK

2 CHECK HARNESS AND CONNECTOR(ECM – CAMSHAFT POSITION SENSOR)

(a) Disconnect the camshaft position sensor connector.

(b) Disconnect the E13 ECM connector.

(c) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
G+ (C1–1) – G2 (E13–26)	Continuity
G– (C1–2) – NE– (E13–34)	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
G+ (C1–1) or G2+ (E13–26) – Body ground	No continuity
G– (C1–2) or NE– (E13–34) – Body ground	

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 CHECK SENSOR INSTALLATION(CAMSHAFT POSITION SENSOR)

(a) Check the camshaft position sensor installation.

NG → **TIGHTEN SENSOR**

OK

4	INSPECT CAMSHAFT

(a) Check the teeth of the signal plate.

NG → REPLACE CAMSHAFT

OK

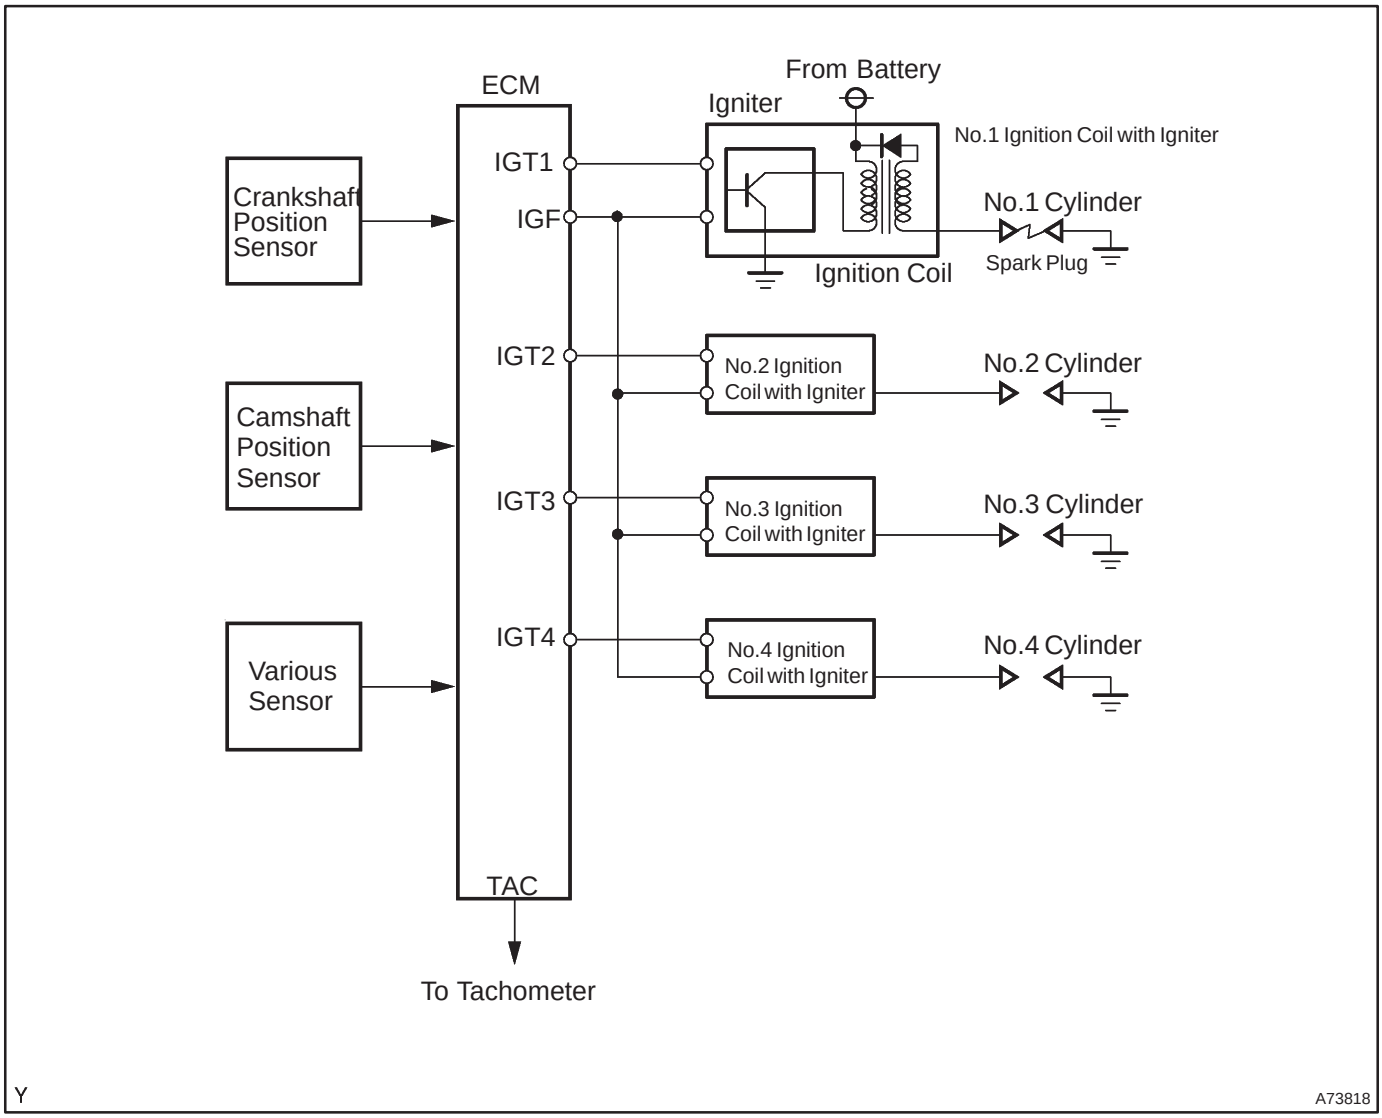
CHECK AND REPLACE ECM (See page 01–32)

DTC	P0351/14	IGNITION COIL ”A” PRIMARY/SECONDARY CIRCUIT

DTC	P0352/15	IGNITION COIL ”B” PRIMARY/SECONDARY CIRCUIT

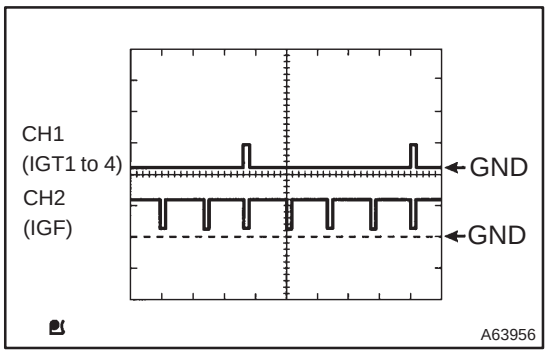
DTC	P0353/14	IGNITION COIL ”C” PRIMARY/SECONDARY CIRCUIT

DTC	P0354/15	IGNITION COIL ”D” PRIMARY/SECONDARY CIRCUIT



CIRCUIT DESCRIPTION

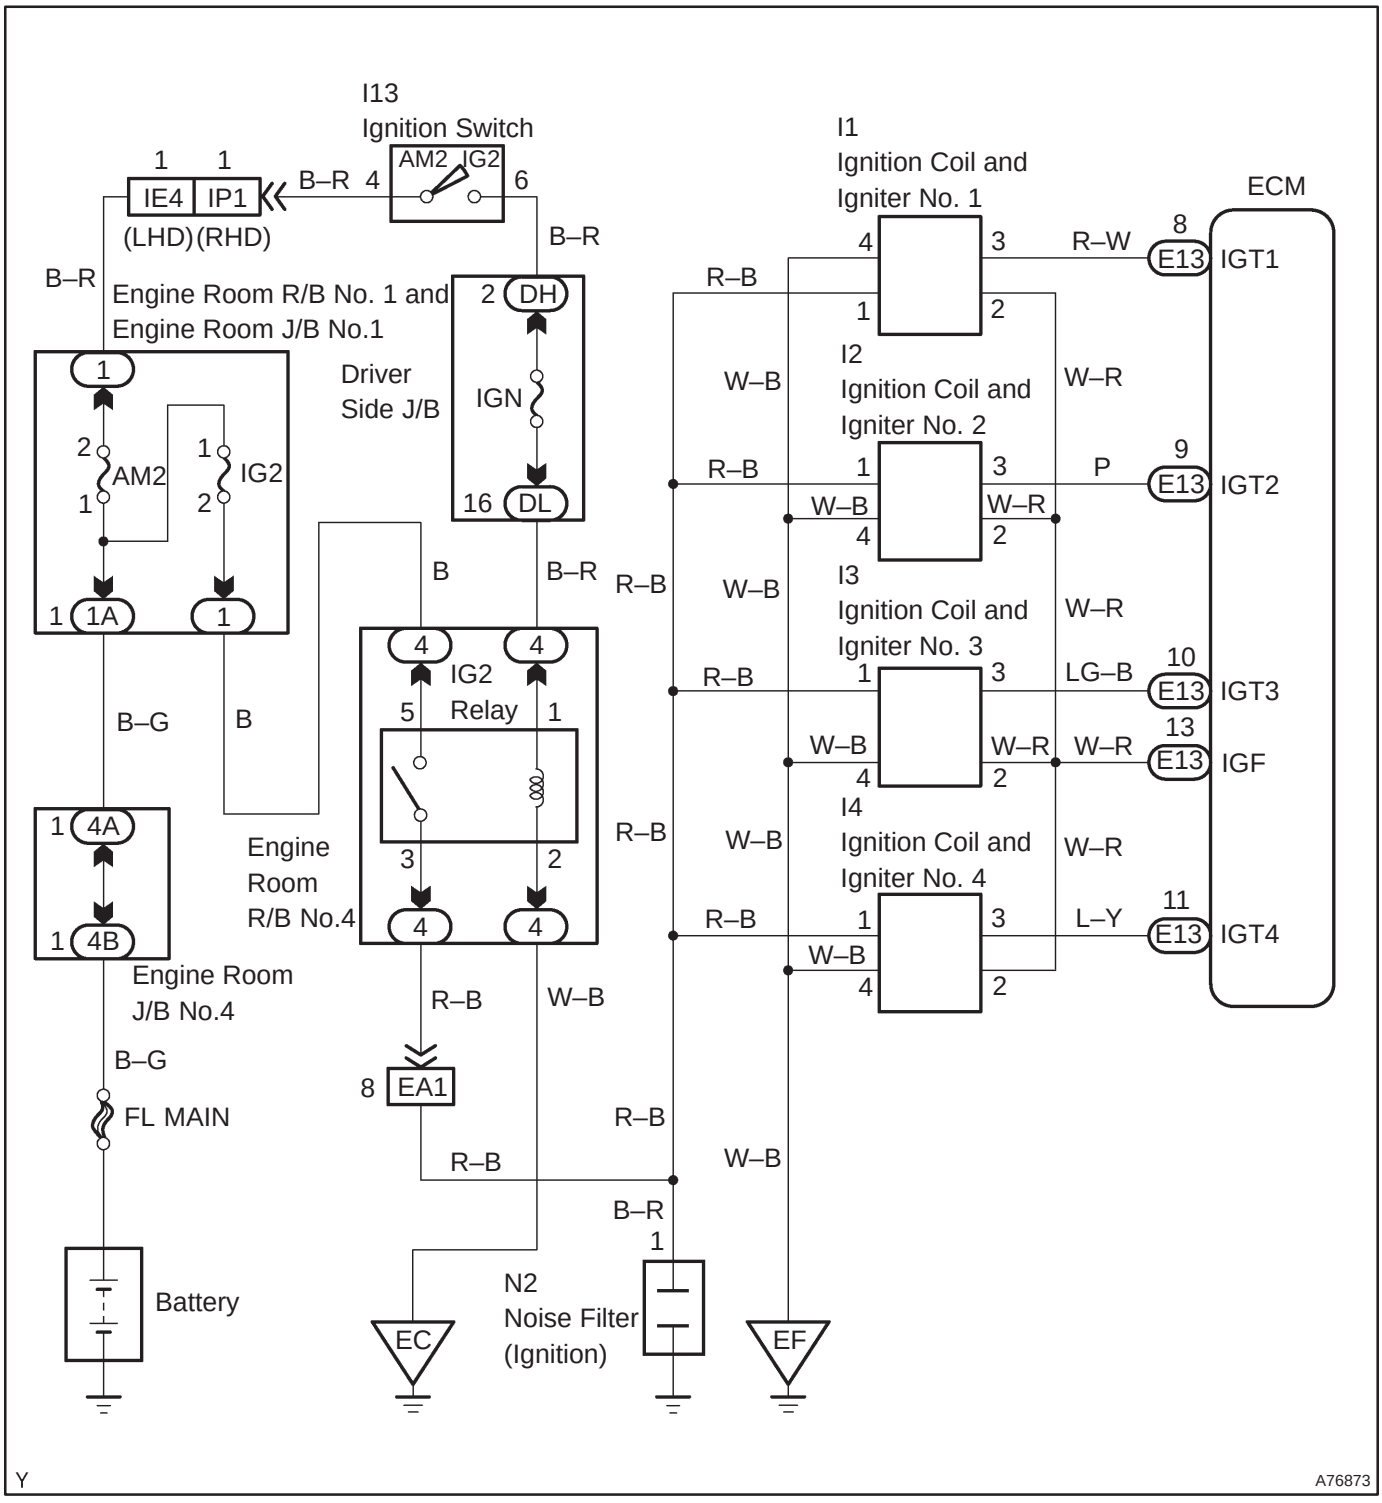
HINT:



- These DTCs indicate a malfunction related to primary circuit.
- If DTC P0351/14 is displayed, check No.1 ignition coil with igniter circuit.
- If DTC P0352/15 is displayed, check No.2 ignition coil with igniter circuit.
- If DTC P0353/14 is displayed, check No.3 ignition coil with igniter circuit.
- If DTC P0354/15 is displayed, check No.4 ignition coil with igniter circuit.

A Direct Ignition System (DIS) has been adopted. The DIS improves the ignition timing accuracy, reduces high–voltage loss, and enhances the overall reliability of the ignition system by eliminating the distributor. The DIS is a 1–cylinder ignition system which ignites one cylinder with one ignition coil. In the 1–cylinder ignition system, the one spark plug is connected to the end of the secondary winding. High voltage generated in the secondary winding is applied directly to the spark plug. The spark of the spark plug passes from the center electrode to the ground electrode.

The ECM determines the ignition timing and outputs the ignition (IGT) signals for each cylinder. Based on the IGT signals, the power transistors in the igniter cut off the current to the primary coil in the ignition coil is supplied to the spark plug that is connected to the end of the secondary coil. At the same time, the igniter also sends an ignition confirmation (IGF) signal as a fail–safe measure to the ECM.



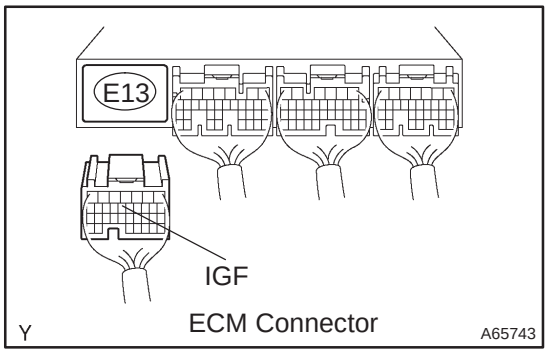
DTC No.	DTC Detection Condition	Trouble Area
P0351/14 P0352/15 P0353/14 P0354/15	No IGF signal to ECM while engine is running	• Ignition system • Open or short in IGF and IGT1 to 4 circuit from ignition coil with igniter to ECM • No. 1 to 4 ignition coil with igniter • IG2 relay • ECM

Reference: Inspection using the oscilloscope.
During cranking or idling, check the waveform between terminals IGT1 to IGT4 and E1, and IGF and E1 of the E4 and ECM connectors.

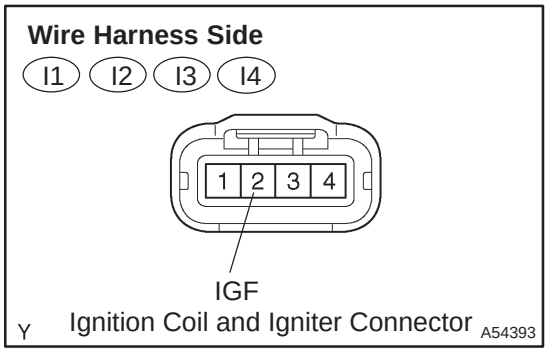
WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:



Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.



1	CHECK SPARK PLUG AND SPARK OF MISFIRING CYLINDER

NG → Go to step 4

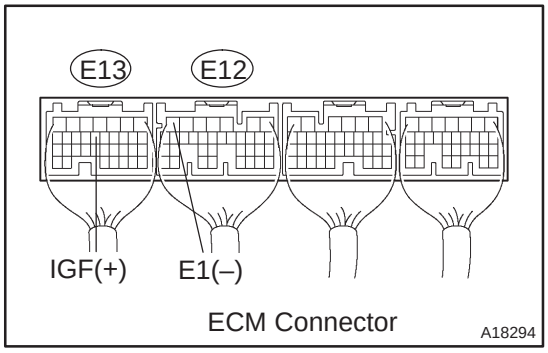
OK

2	CHECK HARNESS AND CONNECTOR(ECM – IGNITION COIL)

(a) Disconnect the I1, I2, I3 or I4 ignition coil and igniter connector.
(b) Disconnect the E13 ECM connector.
(c) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
IGF (I1–2) – IGF (E13–13)	Continuity
IGF (I2–2) – IGF (E13–13)	
IGF (I3–2) – IGF (E13–13)	
IGF (I4–2) – IGF (E13–13)	



Standard (Check for short):

Symbols (Terminal No.)	Specified condition
IGF (I1–2) or IGF (E13–13) – Body ground	No continuity
IGF (I2–2) or IGF (E13–13) – Body ground	
IGF (I3–2) or IGF (E13–13) – Body ground	
IGF (I4–2) or IGF (E13–13) – Body ground	

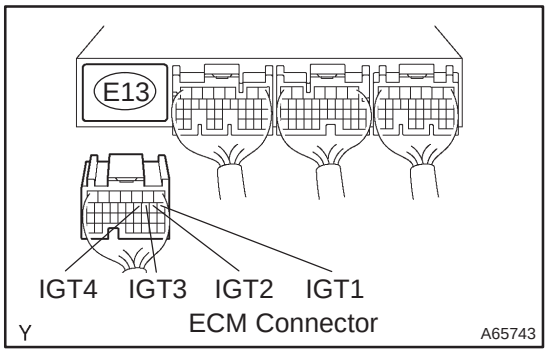
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

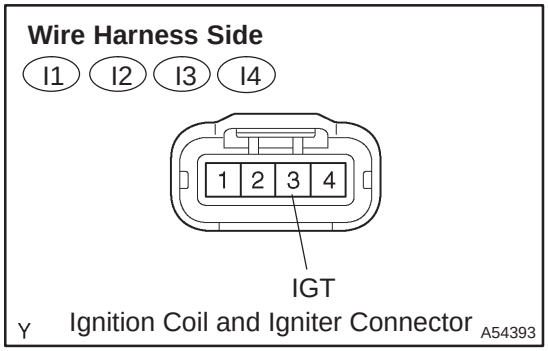
3	INSPECT ECM

(a) Disconnect the ignition coil and igniter connector.
(b) Turn the ignition switch ON.
(c) Measure the voltage between the terminals of the E12 and E13 ECM connector.

Standard:



Symbols (Terminal No.)	Specified condition
IGF (E13–13) – E1 (E12–7)	4.5 to 5.5 V



NG → CHECK AND REPLACE ECM (See page 01–32)

OK

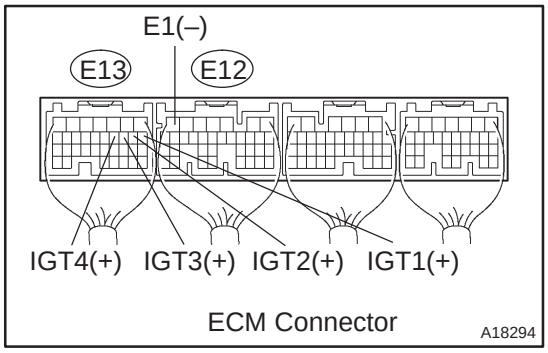
REPLACE IGNITION COIL ASSY

4 CHECK HARNESS AND CONNECTOR(ECM (IGT TERMINAL) – IGNITION COIL)

(a) Disconnect the I1, I2, I3 or I4 ignition coil and igniter connector.
(b) Disconnect the E13 ECM connector.
(c) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
IGT (I1–3) – IGT1 (E13–8)	Continuity
IGT (I2–3) – IGT2 (E13–9)	
IGT (I3–3) – IGT3 (E13–10)	
IGT (I4–3) – IGT4 (E13–11)	



Standard (Check for short):

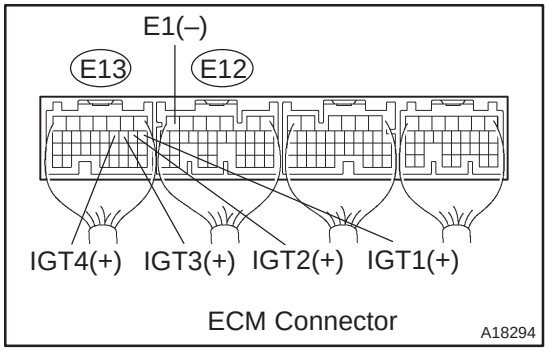
Symbols (Terminal No.)	Specified condition
IGT (I1–3) or IGT1 (E13–8) – Body ground	No continuity
IGT (I2–3) or IGT2 (E13–9) – Body ground	
IGT (I3–3) or IGT3 (E13–10) – Body ground	
IGT (I4–3) or IGT4 (E13–11) – Body ground	

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

5 INSPECT ECM(IGT1, IGT2, IGT3 AND IGT4 VOLTAGE)

(a) Measure the voltage between the terminals of the E12 and E13 ECM connectors when the engine is cranked.



Standard:

Symbols (Terminal No.)	Specified condition
IGT1 (E13–8) – E1 (E12–7)	Between 0.1 V and 4.5 V
IGT2 (E13–9) – E1 (E12–7)	
IGT3 (E13–10) – E1 (E12–7)	
IGT4 (E13–11) – E1 (E12–7)	

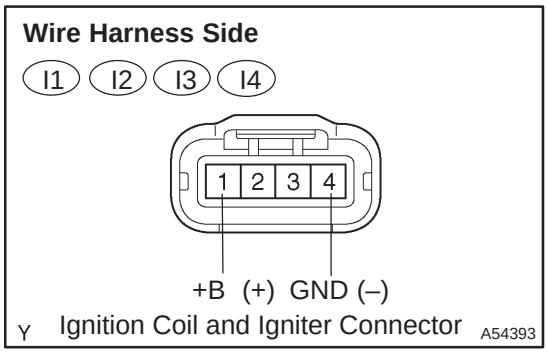
NG → CHECK AND REPLACE ECM (See page 01–32)

OK

6 INSPECT ECM(IGT1, IGT2, IGT3 AND IGT4 VOLTAGE)

(a) Disconnect the I1, I2, I3 or I4 ignition coil and igniter connector.

(b) Measure the voltage between the terminals of the E12 and E13 ECM connectors when the engine is cranked.



Standard:

Symbols (Terminal No.)	Specified condition
IGT1 (E13–8) – E1 (E12–7)	4.5 V or more
IGT2 (E13–9) – E1 (E12–7)	
IGT3 (E13–10) – E1 (E12–7)	
IGT4 (E13–11) – E1 (E12–7)	

NG → **CHECK AND REPLACE ECM (See page 01–32)**

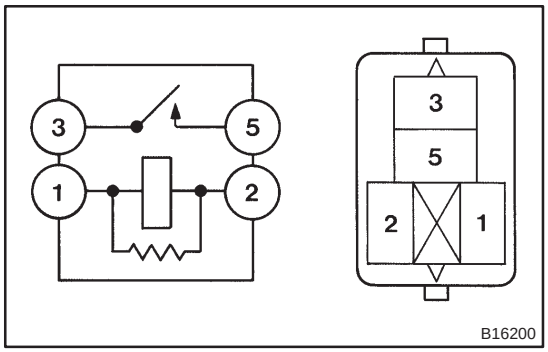
OK

7 INSPECT IGNITION COIL ASSY(POWER SOUSE CIRCUIT)

(a) Disconnect the I1, I2, I3 or I4 ignition coil and igniter connector.

(b) Turn the ignition switch ON position.

(c) Measure the voltage between the terminal of the wire harness side connector and body ground.



Standard:

Symbols (Terminal No.)	Specified condition
+B (I1–1) – GND (I1–4)	9 to 14 V
+B (I2–1) – GND (I2–4)	
+B (I3–1) – GND (I3–4)	
+B (I4–1) – GND (I4–4)	

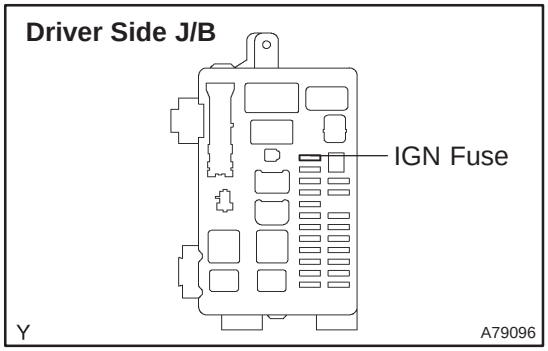
OK → **REPLACE IGNITION COIL ASSY**

NG

8 INSPECT IG2 RELAY

(a) Remove the IG2 relay from the engine room R/B No.4.

(b) Inspect the IG2 relay.



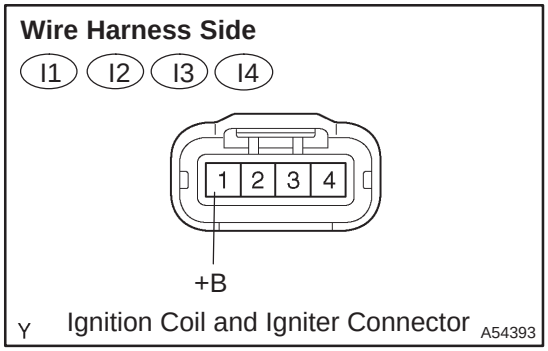
Standard:

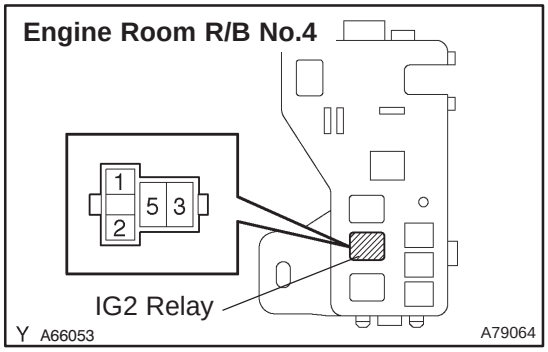
Terminal No.	Specified condition
1 – 2	Continuity
3 – 5	No Continuity
	Continuity (Apply battery voltage Terminals 1 and 2)

NG → **REPLACE IG2 RELAY**

OK

9 CHECK FUSE(IGN)





(a) Remove the IGN fuse from the driver side J/B.
(b) Check for continuity in the IGN fuse.
Standard: Continuity

NG → **CHECK FOR SHORT IN ALL HARNESS AND COMPONENTS CONNECTED FUSE**

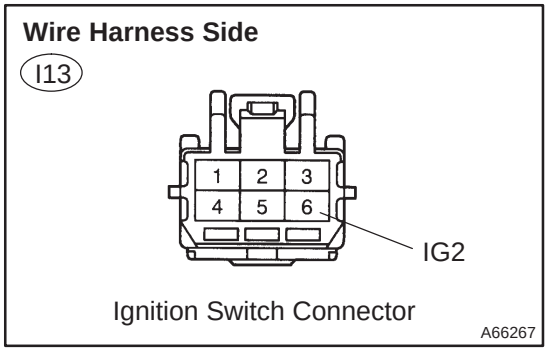
OK

10 CHECK HARNESS AND CONNECTOR(IG2 RELAY – IGNITION COIL AND IGNITER)

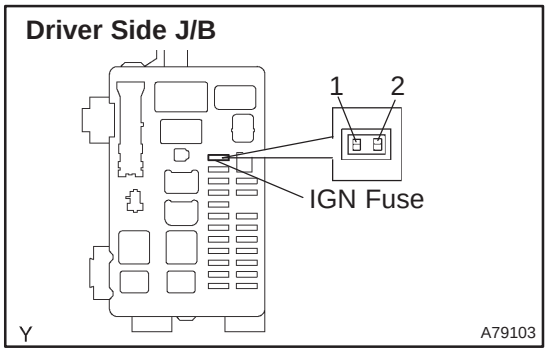
(a) Disconnect the I1, I2, I3 or I4 ignition coil and igniter connector.
(b) Remove the IG2 relay from the engine room R/B No.4.
(c) Check for continuity between the wire harness side connectors.

Standard (Check for open):

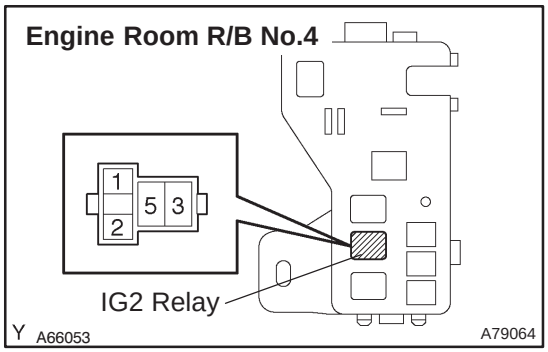
Symbols (Terminal No.)	Specified condition
+B (I1–1) – IG2 relay (3)	Continuity
+B (I2–1) – IG2 relay (3)	
+B (I3–1) – IG2 relay (3)	
+B (I4–1) – IG2 relay (3)	



Standard (Check for short):



Symbols (Terminal No.)	Specified condition
+B (I1–1) or IG2 relay (3) – Body ground	No continuity
+B (I2–1) or IG2 relay (3) – Body ground	
+B (I3–1) or IG2 relay (3) – Body ground	
+B (I4–1) or IG2 relay (3) – Body ground	



NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

11 CHECK HARNESS AND CONNECTOR(IGNITION SWITCH – IG2 RELAY)

(a) Disconnect the battery negative (–) terminal.
(b) Disconnect the ignition switch connector.
(c) Remove the IGN fuse from the driver side J/B.
(d) Remove the IG2 relay from the engine room R/B No.4.
(e) Check for continuity between the wire harness side connectors.

Standard (Check for open):

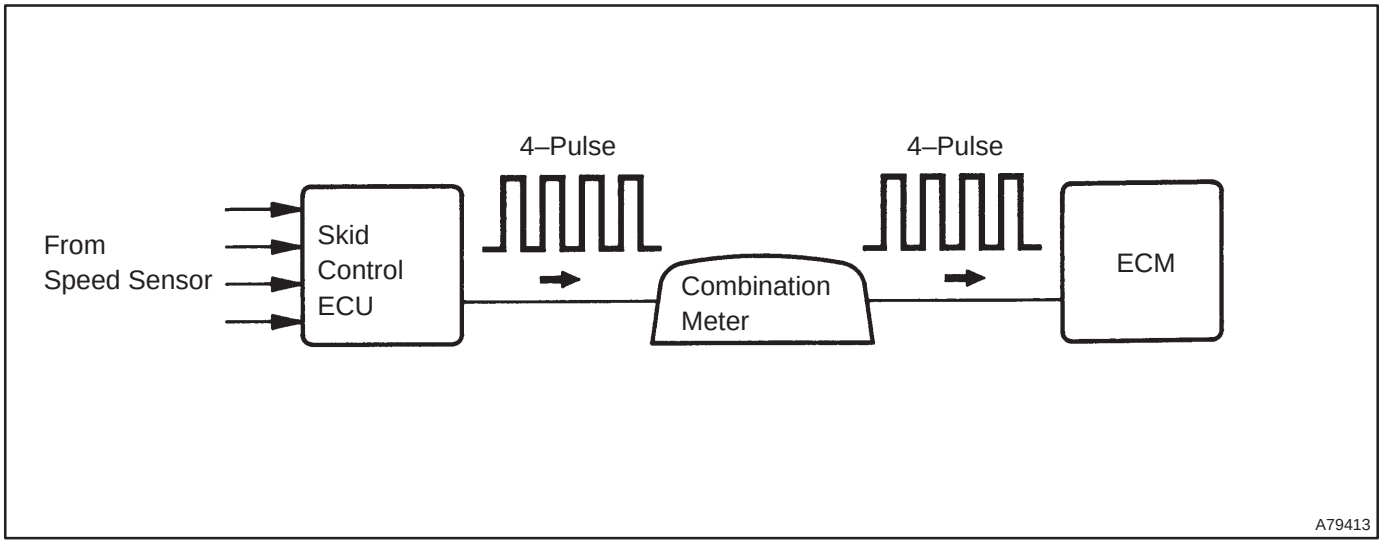
Symbols (Terminal No.)	Specified condition
IG2 (I13–6) – IGN fuse (1)	Continuity
IGN fuse (2) – IG2 relay (1)	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
IG2 (I13–6) or IGN fuse (1) – Body ground	No continuity
IGN fuse (2) or IG2 relay (1) – Body ground	

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

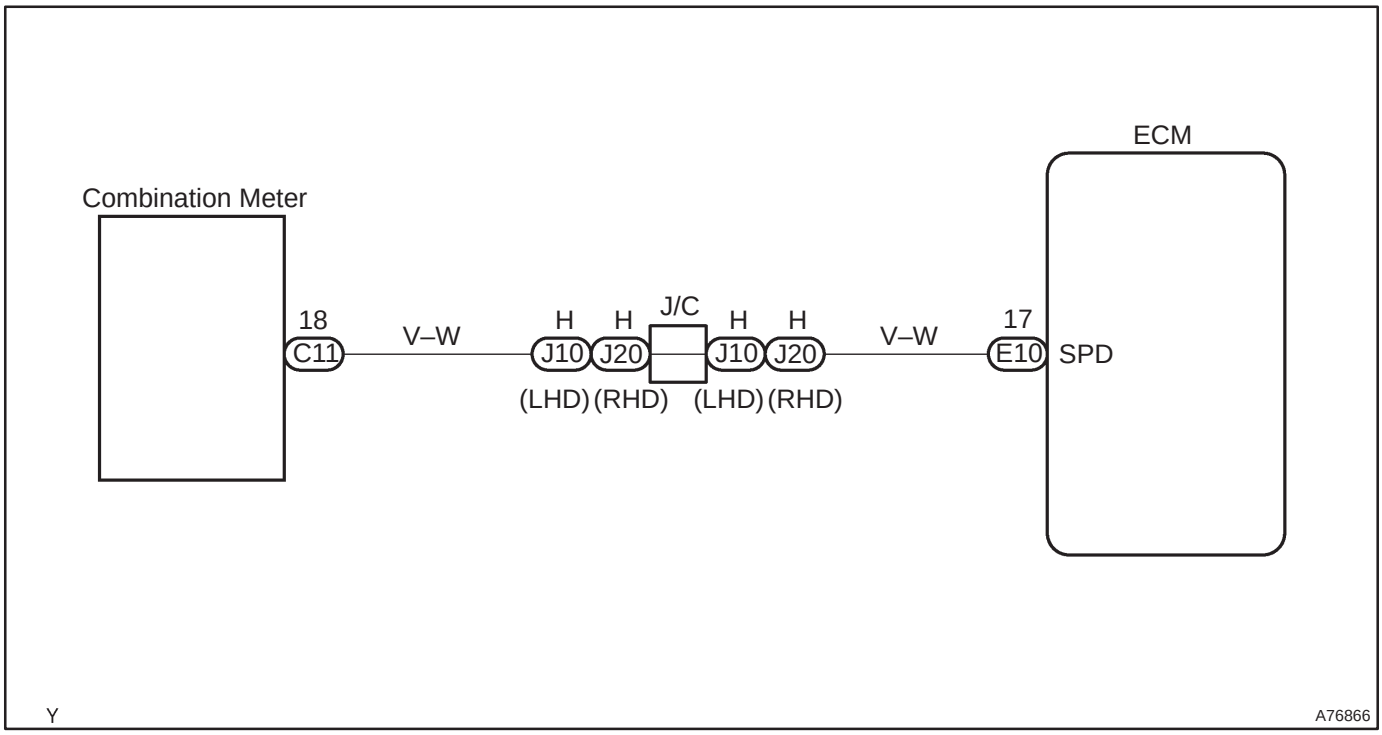
OK



CHECK AND REPLACE POWER SOURCE CIRCUIT

DTC	P0500/42	VEHICLE SPEED SENSOR ”A”

CIRCUIT DESCRIPTION



The speed sensor for skid control ECU detects the wheel speed and sends the appropriate signals to the skid control ECU.

The skid control ECU converts these signals into a 4–pulse signal and outputs it to the combination meter. After this signal is converted into a more precise rectangular waveform by the waveform shaping circuit inside the combination meter, it is then transmitted to the ECM. The ECM determines the vehicle speed based on the frequency of these pulse signals.

DTC No.	DTC Detection Condition	Trouble Area
P0500/42	During the vehicle is being driven, no vehicle speed sensor signal to the ECM (2 trip detection logic)	• Open or short in speed sensor circuit • Speed sensor • Combination meter • ECM • Skid control ECU

WIRING DIAGRAM

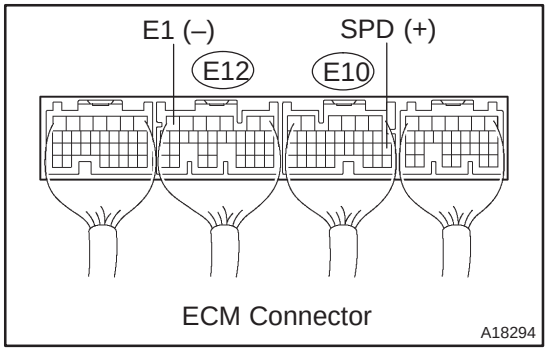
INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

1	CHECK OPERATION OF SPEEDOMETER

(a) Drive the vehicle and check that the operation of the speedometer in the combination meter is normal.

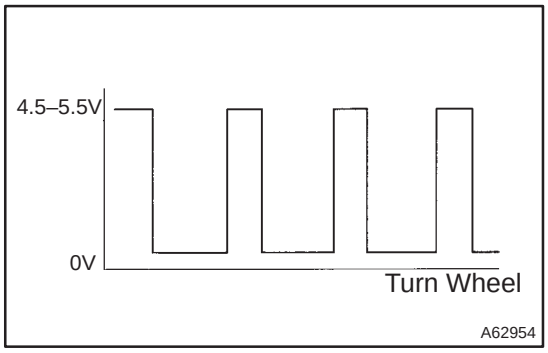


HINT:

The vehicle speed sensor is operating normally if the speedometer display is normal.

NG → **CHECK SPEEDOMETER CIRCUIT (See page 05–1500)**

OK



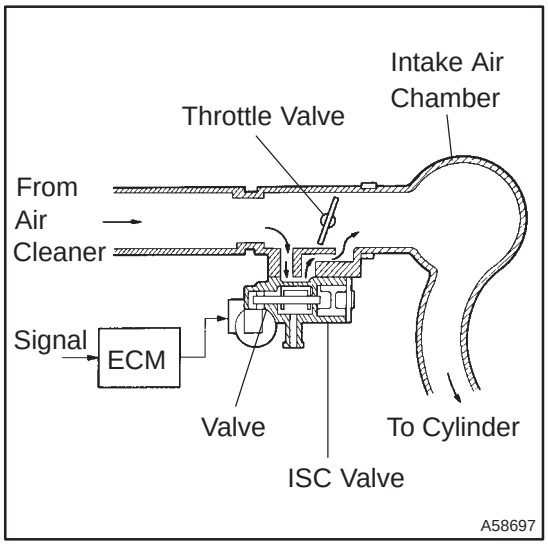
2 INSPECT ECM

(a) Shift the lever to the neutral position.
(b) Jack up the vehicle.
(c) Turn the ignition switch ON.
(d) Measure the voltage between the terminals of the E10 and E12 ECM connectors as the wheel is turned slowly.

Standard:

Symbols (Terminal No.)	Specified condition
SPD (E10–17) – E1 (E12–7)	Generated intermittently

HINT:
The output voltage should fluctuate up and down similarly to the diagram on the left when the wheel is turned slowly.

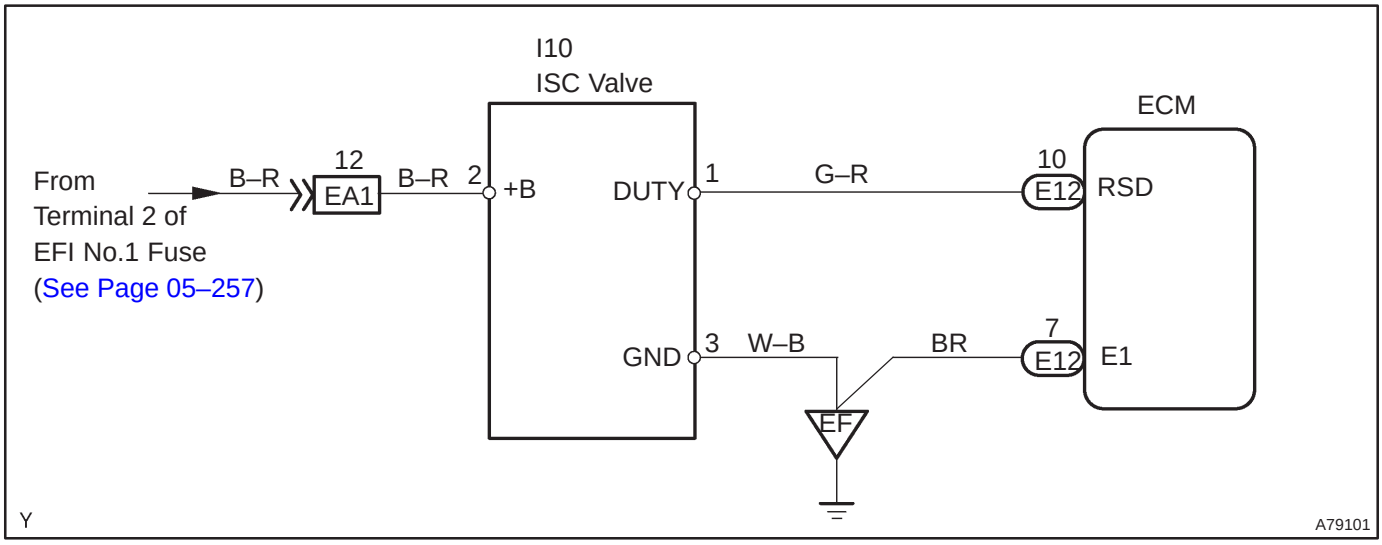


NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK AND REPLACE ECM (See page 01–32)

DTC P0511/33 IDLE AIR CONTROL CIRCUIT



CIRCUIT DESCRIPTION

The rotary solenoid type idle speed control (ISC) valve is located under the throttle body and intake air bypassing the throttle valve is directed to the idle speed control (ISC) valve through the passage.
In this way the intake air volume bypassing the throttle valve is regulated, controls the engine speed.
The ECM operates the idle speed control (ISC) valve only to perform idle–up and provide feedback for the target idling speed.

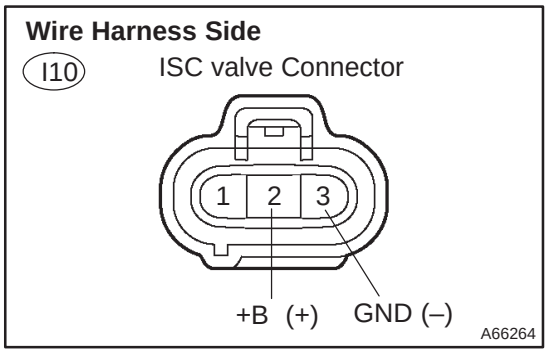
DTC No.	DTC Detecting Condition	Trouble Area
P0511/33	Idle speed continues to vary greatly from target speed (1 trip detection logic)	• Open or short in idle speed control (ISC) valve circuit • Idle speed control (ISC) valve is stuck or closed • A/C switch circuit • Air induction system • ECM

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

When using hand–held tester:



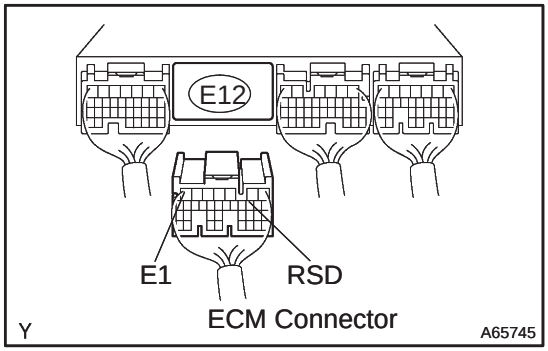
1	PERFORM ACTIVE TEST USING HAND–HELD TESTER(CHECK ISC VALVE OPERATION)

(a) Warm up the engine to the normal operating temperature.
(b) Switch off all the accessories.
(c) Switch off the A/C.
(d) Shift the lever to the neutral position.
(e) Connect the hand–held tester to the DLC3 on the vehicle.
(f) Select the item ”DIAGNOSIS / OBD/MOBD / ACTIVE TEST / ISC DUTY RATIO”.
(g) Check that the engine RPM varies when changing the ISC duty ratio.
Engine RPM:
Engine RPM fluctuates ups and downs in respose to the ISC duty ratio variation.

OK → **CHECK FOR INTERMITTENT PROBLEMS (See page 05–149)**

NG

2	CHECK HARNESS AND CONNECTOR



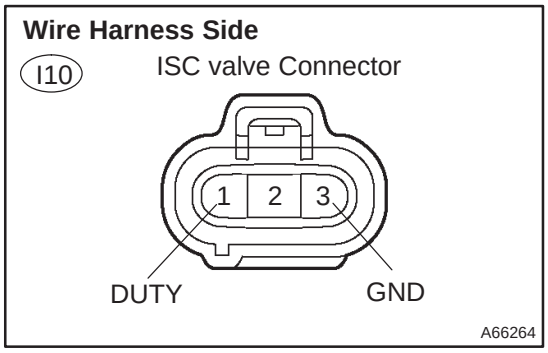
(a) Disconnect the ISC valve connector.
(b) Turn the ignition switch ON.
(c) Measure the voltage between the terminals of the ISC valve wire harness side connector.
Standard:

Symbols (Terminal No.)	Specified condition
+B (I10–2) – GND (I10–3)	9 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	CHECK HARNESS AND CONNECTOR(RSD CIRCUIT)



(a) Disconnect the ISC valve connector.
(b) Disconnect the E12 ECM connector.
(c) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
DUTY (I10–1) – RSD (E12–10)	Continuity
GND (I10–3) – E1 (E12–7)	

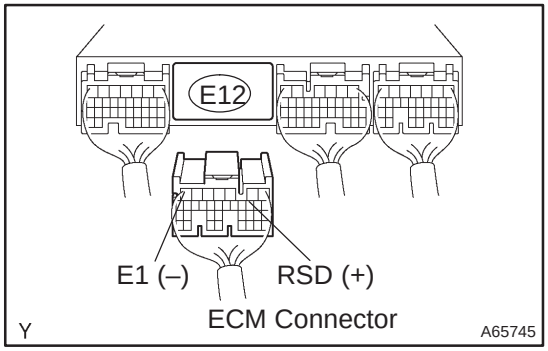
Standard (Check for short):

Symbols (Terminal No.)	Specified condition
DUTY (I10–1) or RSD (E12–10) – Body groundr	No continuity

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	INSPECT THLOTTLE BODY IDLE SPEED CONTROL VALVE ASSY (See page 10–18)



NG → **REPLACE THLOTTLE BODY IDLE SPEED CONTROL VALVE ASSY**

OK

CHECK AND REPLACE ECM (See page 01–32)

When not using hand–held tester:

1	INSPECT ECM

(a) Disconnect the E12 ECM connector.
(b) Turn the ignition switch ON.
(c) Measure the voltage between the terminals of the E4 ECM connector.

Standard:

Symbols (Terminal No.)	Specified condition
RSD (E12–10) – E1 (E12–7)	9 to 14 V

OK → **Go to step 3**

NG

2	INSPECT THLOTTLE BODY IDLE SPEED CONTROL VALVE ASSY (See page 10–18)

NG → REPAIR OR REPLACE THLOTTLE BODY IDLE SPEED CONTROL VALVE ASSY

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR

3	INSPECT THLOTTLE BODY IDLE SPEED CONTROL VALVE ASSY (See page 10–18)

NG → REPAIR OR REPLACE THLOTTLE BODY IDLE SPEED CONTROL VALVE ASSY

OK

4	CHECK BLOCKAGE OF ISC VALVE AND PASSAGE TO BYPASS THROTTLE VALVE

NG → REPAIR OR REPLACE THLOTTLE BODY IDLE SPEED CONTROL VALVE ASSY

OK

CHECK AND REPLACE ECM (See page 01–32)

DTC	P0606/89	ECM/PCM PROCESSOR

CIRCUIT DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
P0606/89	ECM inside error	• ECM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the hand – held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

CHECK AND REPLACE ECM (See page 01–32)

DTC	P2237/21	OXYGEN SENSOR PUMPING CURRENT CIRCUIT/OPEN (FOR A/F SENSOR)(BANK 1 SENSOR 1)

DTC	P2238/21	OXYGEN SENSOR PUMPING CURRENT CIRCUIT LOW (FOR A/F SENSOR)(BANK 1 SENSOR 1)

DTC	P2239/21	OXYGEN SENSOR PUMPING CURRENT CIRCUIT HIGH (FOR A/F SENSOR)(BANK 1 SENSOR 1)

DTC	P2240/28	OXYGEN SENSOR PUMPING CURRENT CIRCUIT/OPEN (FOR A/F SENSOR)(BANK 2 SENSOR 1)

DTC	P2241/28	OXYGEN SENSOR PUMPING CURRENT CIRCUIT LOW (FOR A/F SENSOR)(BANK 2 SENSOR 1)

DTC	P2242/28	OXYGEN SENSOR PUMPING CURRENT CIRCUIT HIGH (FOR A/F SENSOR)(BANK 2 SENSOR 1)

DTC	P2251/21	OXYGEN SENSOR REFERENCE GROUND CIRCUIT/OPEN (FOR A/F SENSOR)(BANK 1 SENSOR 1)

DTC	P2252/21	OXYGEN SENSOR REFERENCE GROUND CIRCUIT LOW (FOR A/F SENSOR)(BANK 1 SENSOR 1)

DTC	P2253/21	OXYGEN SENSOR REFERENCE GROUND CIRCUIT HIGH (FOR A/F SENSOR)(BANK 1 SENSOR 1)

DTC	P2254/28	OXYGEN SENSOR REFERENCE GROUND CIRCUIT/OPEN (FOR A/F SENSOR)(BANK 2 SENSOR 1)

DTC	P2255/28	OXYGEN SENSOR REFERENCE GROUND CIRCUIT LOW (FOR A/F SENSOR)(BANK 2 SENSOR 1)

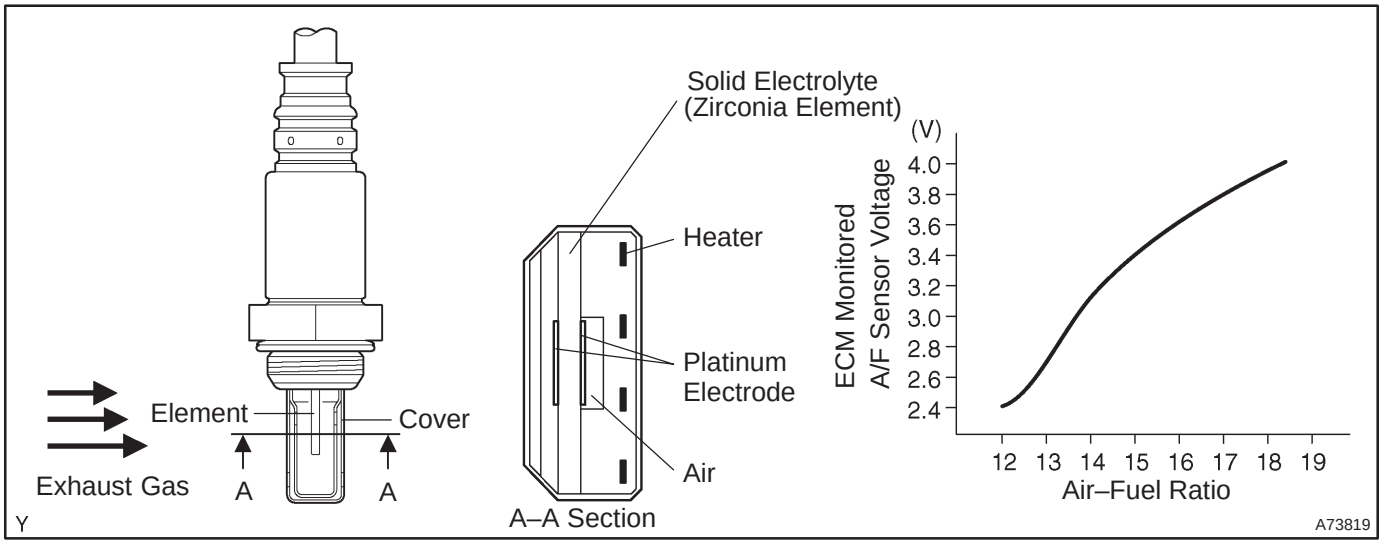
DTC	P2256/28	OXYGEN SENSOR REFERENCE GROUND CIRCUIT HIGH (FOR A/F SENSOR)(BANK 2 SENSOR 1)

CIRCUIT DESCRIPTION

HINT:

This DTC is recorded when A/F sensor has a malfunction, although the caption is healed oxygen sensor.

The air–fuel ratio sensor are the lamination type. Compared to the conventional type, the sensor and heater portions of the lamination type are narrower overall. Because the heat of the heater acts directly on the alumina and zirconia (of the sensor portion) it accelerates the activation of the sensor.



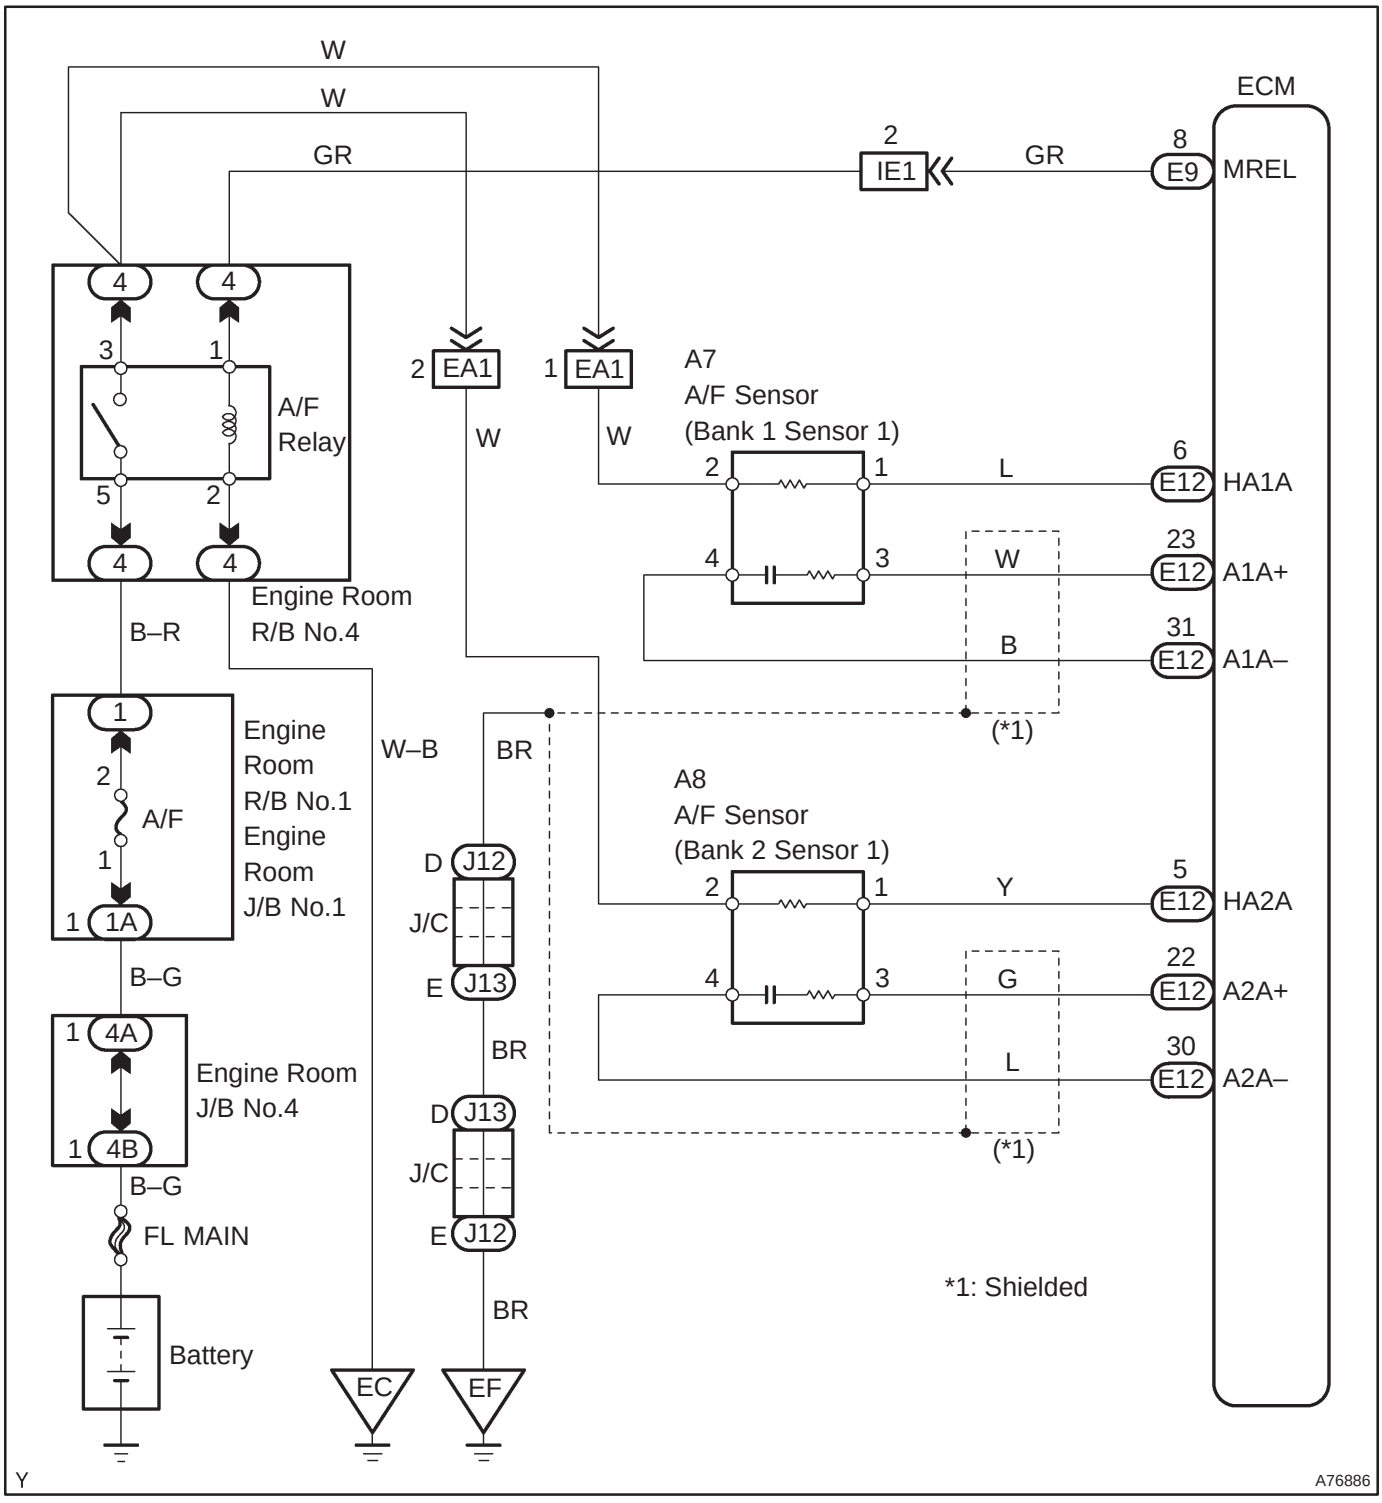
To obtain a high purification rate of the CO, HC and NOx components of the exhaust gas, a three–way catalytic converter is used. For the most efficient use of the three–way catalytic converter, the air–fuel ratio must be precisely controlled so that it is always close to the stoichiometric air–fuel ratio.

The A/F sensor has the characteristic that it provides output voltage* being approximately proportional to the existing air–fuel ratio. The A/F sensor output voltage* is used to provide feedback for the ECM to control the air–fuel ratio.

By the A/F sensor output, the ECM can determine the deviation amount from the stoichiometric air–fuel ratio and control the proper injection time immediately. If the A/F sensor is out of order, ECM is unable to perform the accurate air–fuel ratio control.

The A/F sensor is equipped with a heater which heats the zirconia element. The heater is controlled by the ECM. When the intake air volume is low (the temperature of the exhaust gas is low), the current flows to the heater to heat the sensor for the accurate oxygen concentration detection.

*: The voltage value changes at the inside of the ECM only.



DTC No.	DTC Detecting Condition	Trouble Area
P2237/21 P2240/28	A/F sensor circuit (bank 1 sensor 1)	HINT : Main trouble area • Open or short in A/F sensor circuit
	Conditions (a) and (b) continue for 5.0 sec. or more : (a) AF+ less than 0.5 V (b) AF+ greater than 4.5 V	• Open or short in A/F sensor circuit • A/F sensor • A/F sensor heater • A/F sensor heater relay • A/F sensor heater and relay circuit • ECM
	Conditions (a) and (b) continue for 5.0 sec. or more : (a) (AF+) – (AF–) less than 0.1 V (b) (AF+) – (AF–) greater than 0.8 V	
P2238/21 P2241/28	A/F sensor circuit low (bank 1 sensor 1)	HINT : Main trouble area • Open in A/F sensor circuit
	Condition (a) continues for 5.0 sec. or more : (a) AF+ less than 0.5 V	• Open or short in A/F sensor circuit • A/F sensor • A/F sensor heater • A/F sensor heater relay • A/F sensor heater and relay circuit • ECM
	Condition (a) continues for 5.0 sec. or more : (a) (AF+) – (AF–) less than 0.1 V	
P2239/21 P2242/28	A/F sensor circuit high (bank 1 sensor 1)	HINT : Main trouble area • Short in A/F sensor circuit
	Condition (a) continue for 5.0 sec. or more : (a) AF+ greater than 4.5 V	• Open or short in A/F sensor circuit • A/F sensor • A/F sensor heater • A/F sensor heater relay • A/F sensor heater and relay circuit • ECM
	Condition (a) continue for 5.0 sec. or more : (a) (AF+) – (AF–) greater than 0.8 V	
P2251/21 P2254/28	Conditions (a) and (b) continue for 5.0 sec. or more : (a) AF– less than 0.5 V (b) AF– greater than 4.5 V	• Open or short in A/F sensor circuit • A/F sensor • A/F sensor heater • A/F sensor heater relay • A/F sensor heater and relay circuit • ECM
P2252/21 P2255/28	Condition (a) continue for 5.0 sec. or more : (a) AF– less than 0.5 V	
P2253/21 P2256/28	Condition (a) continue for 5.0 sec. or more : (b) AF– greater than 4.5 V	

HINT:

- DTC P2237/28, P2238/28, P2239/28, P2251/28, P2252/28 and P2253/28 means malfunction related to bank 1 A/F sensor circuit.
- DTC P2240/21, P2241/21, P2242/21, P2254/21, P2255/21 and P2256/21 means malfunction related to bank 2 A/F sensor circuit.
- Bank 1 refers to the bank that includes cylinder No. 1.
- Bank 2 refers to the bank that includes cylinder No. 2.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Hand–held tester only:

Narrowing down the trouble area is possible by performing ACTIVE TEST of the following ”A/F CONTROL” (A/F sensor, heated oxygen sensor or other trouble areas can be distinguished).

(a) Perform ACTIVE TEST using the hand–held tester (A/F CONTROL).

HINT:

”A/F CONTROL” is an ACTIVE TEST which changes the injection volume –12.5 % or +25 %.

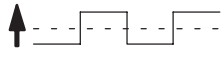
(1) Connect the hand–held tester to the DLC3 on the vehicle.
(2) Turn the ignition switch ON.
(3) Warm up the engine with the engine speed at 2,500 rpm for approximately 90 sec.
(4) Select the item ”DIAGNOSIS / OBD/MOBD / ACTIVE TEST / A/F CONTROL”.
(5) Perform ”A/F CONTROL” with the engine in an idle condition (press the right or left button).

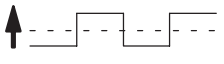
Result:

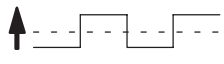
A/F sensor reacts in accordance with increase and decrease of injection volume:

+25 % → rich output: Less than 3.0 V

–12.5 % → lean output: More than 3.35 V







Heated oxygen sensor reacts in accordance with increase and decrease of injection volume:

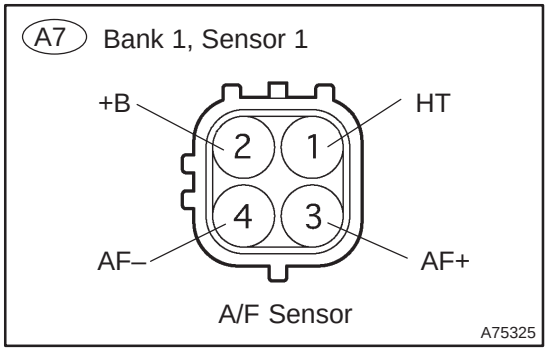
+25 % → rich output: More than 0.55 V

–12.5 % → lean output: Less than 0.4 V

NOTICE:

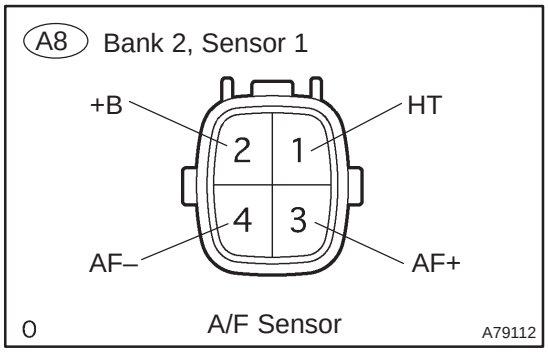
There is a few second delay in the A/F sensor output, and there is about 20 seconds delay in the heated oxygen sensor output.

	Output voltage of A/F sensor (sensor 1)	Output voltage of heated oxygen sensor (sensor 2)	Mainly suspect trouble area
Case 1	Injection volume +25 % –12.5 %  Output voltage More than 3.35 V Less than 3.0 V  **OK**	Injection volume +25 % –12.5 %  Output voltage More than 0.55 V Less than 0.4V  **OK**	—
Case 2	Injection volume +25 % –12.5 %  Output voltage No reaction **NG**	Injection volume +25 % –12.5 %  Output voltage More than 0.55 V Less than 0.4V  **OK**	A/F sensor (A/F sensor, heater, A/F sensor circuit)
Case 3	Injection volume +25 % –12.5 %  Output voltage More than 3.35 V Less than 3.0V  **OK**	Injection volume +25 % –12.5 %  Output voltage No reaction **NG**	Heated oxygen sensor (heated oxygen sensor, heater, heated oxygen sensor circuit)
Case 4	Injection volume +25 % –12.5 %  Output voltage No reaction **NG**	Injection volume +25 % –12.5 %  Output voltage No reaction **NG**	Extremely rich or lean actual air–fuel ratio (Injector, fuel pressure, gas leakage in exhaust system, etc.)



The following procedure of A/F CONTROL enables the technician to check and graph voltage output of both the A/F sensor and heated oxygen sensor.

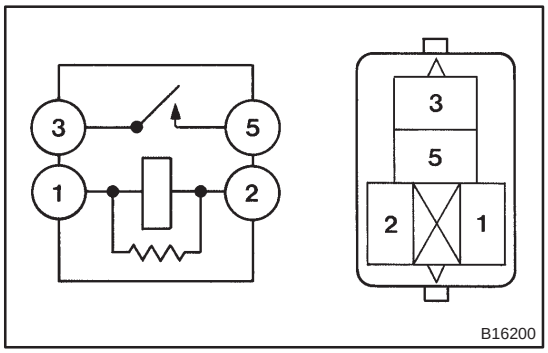
For displaying the graph indication, enter ”ACTIVE TEST/ A/F CONTROL/USER DATA”, then select ”AFS B1S1 and O2S B1S2” or ”AFS B2S1 and O2S B2S2” by pressing ”YES” button and push ”ENTER” button before pressing ”F4” button.



HINT:

- If DTC P2237/21, P2238/21, P2239/21, P2251/21, P2252/21 or P2253/21 is displayed, check bank 1 sensor 1 circuit.
- If DTC P2240/28, P2241/28, P2242/28, P2254/28, P2255/28 or P2256/28 is displayed, check bank 2 sensor 1 circuit.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

1 INSPECT AIR FUEL RATIO SENSOR(RESISTANCE OF A/F SENSOR HEATER)



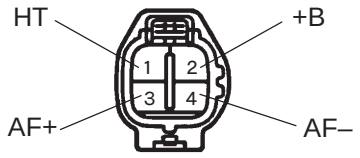
(a) Disconnect the A/F sensor connector.
(b) Measure resistance between terminals HT and +B of the A/F sensor.
Resistance: 1.8 to 3.4 Ω (20°C)

NG → **REPLACE AIR FUEL RATIO SENSOR**

OK

2 INSPECT A/F RELAY

(a) Remove the A/F sensor heater relay from the engine room R/B.
(b) Inspect the A/F senor heater relay.
Standard:

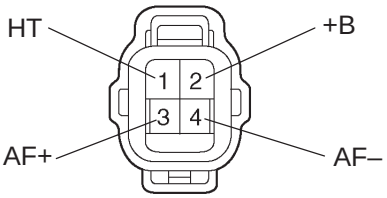


Terminal No.	Specified condition
1 – 2	Continuity
3 – 5	No Continuity
	Continuity (Apply battery voltage Terminals 1 and 2)

NG → **REPLACE A/F RELAY**

OK

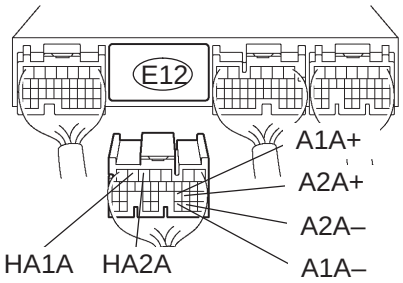
3 CHECK HARNESS AND CONNECTOR(ECM – A/F SENSOR)



Wire Harness Side
A7 Bank 1 Sensor 1

A/F Connector

A76787



Wire Harness Side
A8 Bank 2 Sensor 1

A/F Connector

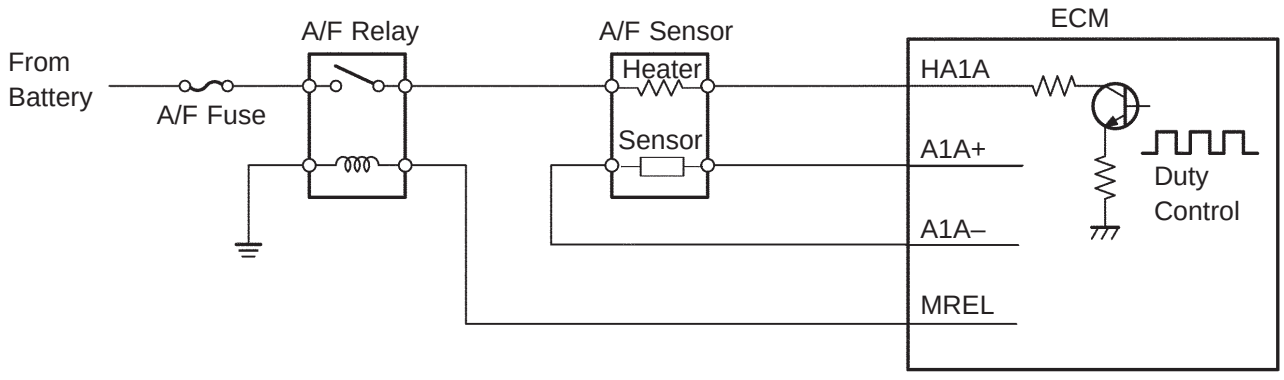
Y

A79114

Y

A65745

(a) Disconnect the A7 or A8 A/F sensor connector.
(b) Disconnect the E12 ECM connector.
(c) Check for continuity between the wire harness side connectors.



Standard (Check for open):

Symbols (Terminal No.)	Specified condition
AF+ (A7–3) – A1A+ (E12–23)	Continuity
AF– (A7–4) – A1A– (E12–31)	
HT (A7–1) – HA1A (E12–6)	
AF+ (A8–3) – A2A+ (E12–22)	
AF– (A8–4) – A2A– (E12–30)	
HT (A8–1) – HA2A (E12–5)	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
AF+ (A7–3) or A1A+ (E12–23) – Body ground	No continuity
AF– (A7–4) or A1A– (E12–31) – Body ground	
HT (A7–1) or HA1A (E12–6) – Body ground	
AF+ (A8–3) or A2A+ (E12–22) – Body ground	
AF– (A8–4) or A2A– (E12–30) – Body ground	
HT (A8–1) or HA2A (E12–5) – Body ground	

Reference (Bank 1 Sensor 1 System Drawing)

P

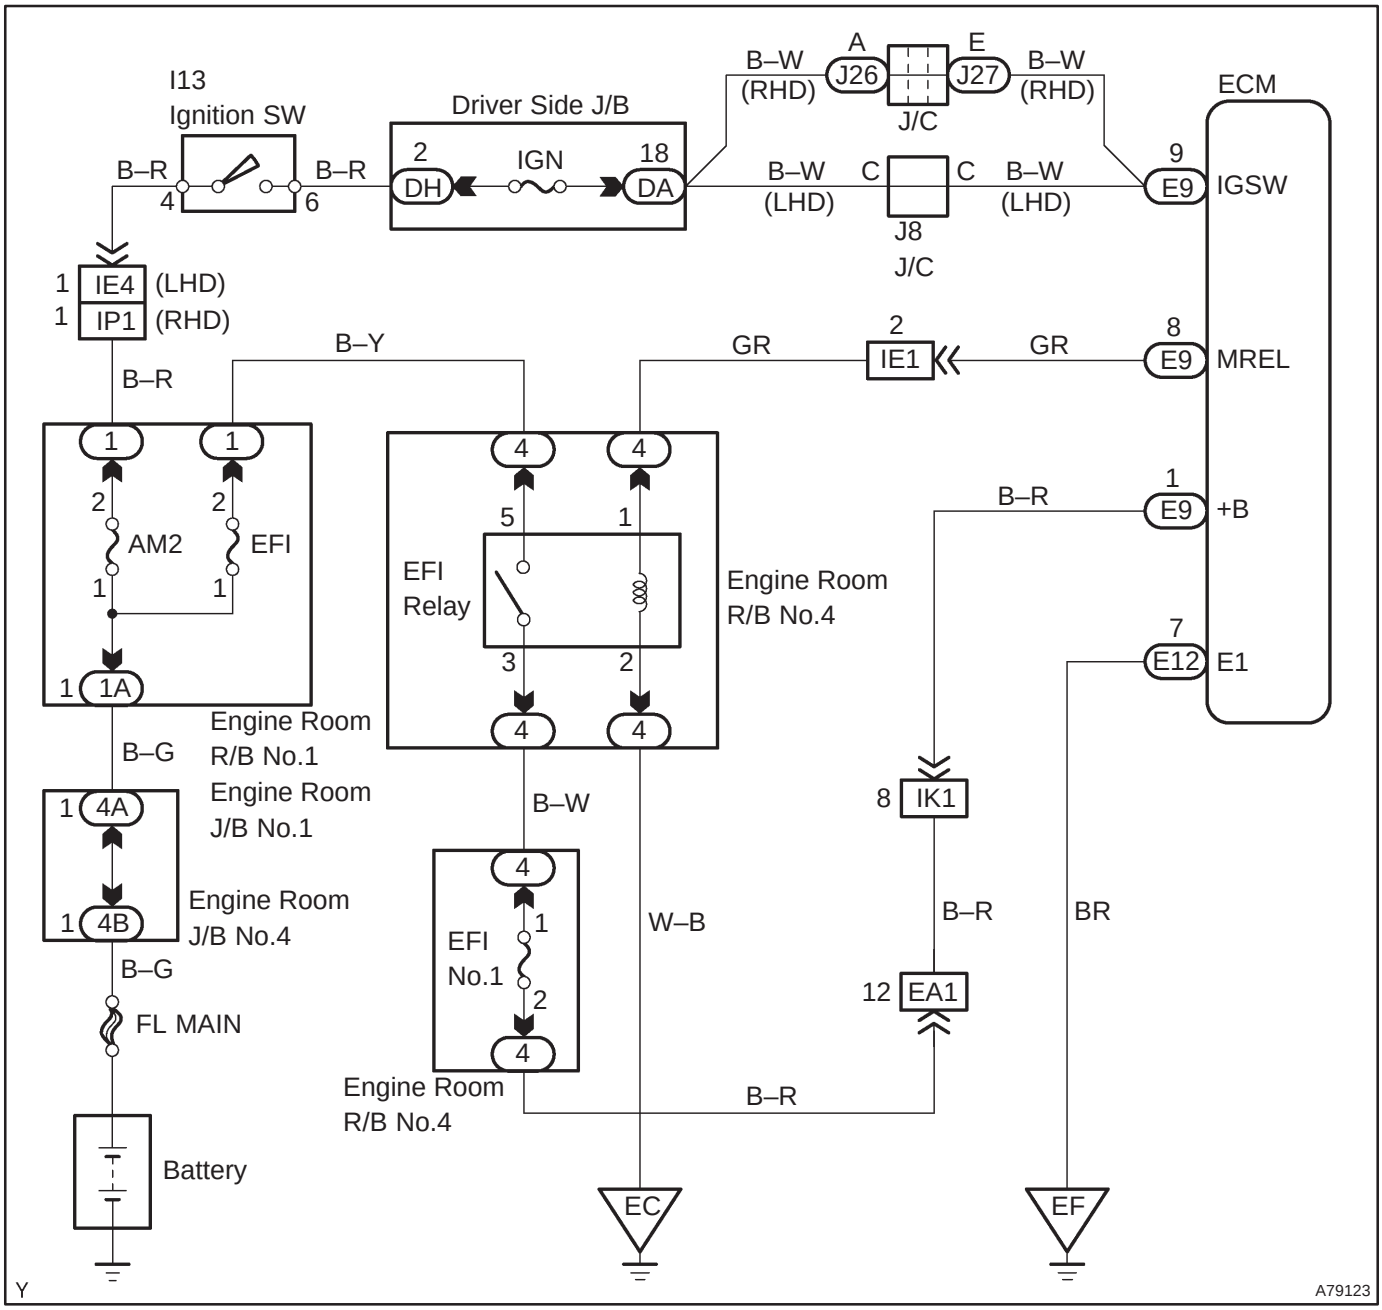
B62793

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

CHECK AND REPLACE ECM (See page 01–32)

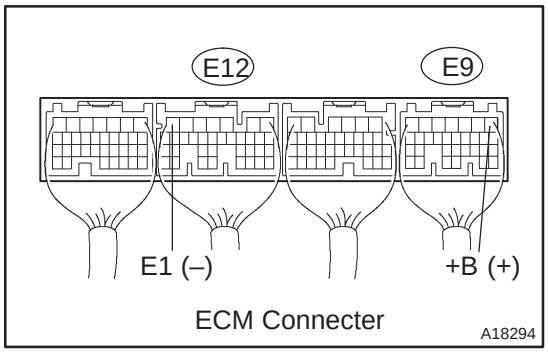
ECM POWER SOURCE CIRCUIT



CIRCUIT DESCRIPTION

When the ignition switch is turned ON, battery positive voltage is applied to terminal IGSW of the ECM and the EFI relay (Marking: EFI) control circuit in the ECM sends a signal to terminal MREL of the ECM switching on the EFI relay.

This signal causes current to flow to the coil, closing the contacts of the EFI relay and supplying power to terminal +B of the ECM.



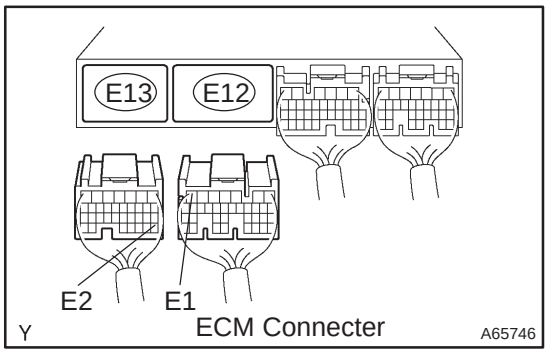
If the ignition switch is turned off, the ECM continues to switch on the EFI relay for a maximum of 2 seconds for the initial setting of the throttle valve.

WIRING DIAGRAM

INSPECTION PROCEDURE

1 INSPECT ECM(+B VOLTAGE)

(a) Turn the ignition switch ON.
(b) Measure the voltage between the terminals of the E9 and E12 ECM connector.



Standard:

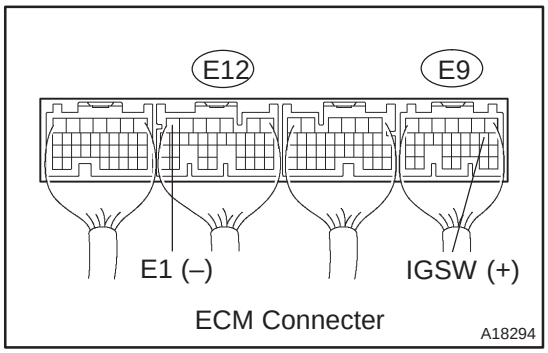
Symbols (Terminal No.)	Specified condition
+B (E9–1) – E1 (E12–7)	9 to 14 V

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN ON PROBLEM SYMPTOMS TABLE (See page 05–168)**

NG

2 CHECK HARNESS AND CONNECTOR(ECM – BODY GROUND)

(a) Disconnect the negative (–) battery terminal.
(b) Disconnect the E12 and E13 ECM connector.
(c) Check for continuity between the wire harness side connectors.



Standard (Check for open):

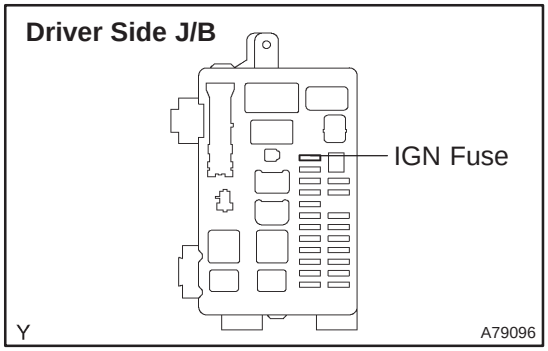
Symbols (Terminal No.)	Specified condition
E1 (E12–7) – Body ground	Continuity
E2 (E13–28) – Body ground	

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 INSPECT ECM(IGSW VOLTAGE)

(a) Turn the ignition switch ON.
(b) Measure the voltage between the terminals of the E9 and E12 ECM connector.



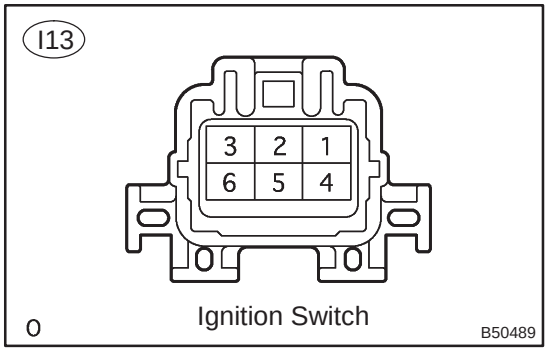
Standard:

Symbols (Terminal No.)	Specified condition
IGSW (E9–9) – E1 (E12–7)	9 to 14 V

OK → **Go to step 6**

NG

4 CHECK FUSE(IGN FUSE)



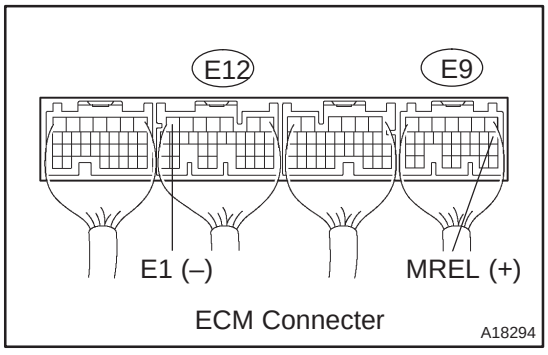
(a) Remove the IGN fuse from the driver side J/B.
(b) Check for continuity in the IGN fuse.
Standard: Continuity

NG → **CHECK FOR SHORT IN ALL HARNESSES AND COMPONENTS CONNECTED FUSE**

OK

5 INSPECT IGNITION OR STARTER SWITCH ASSY

(a) Measure the resistance between the connector terminals shown in the chart below.



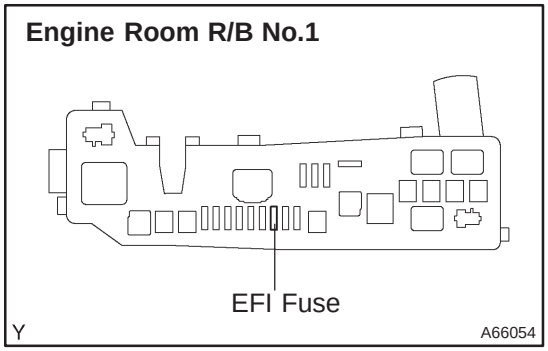
Switch	Terminal No.	Resisitance
LOCK	All Terminals	1MΩ or more
ACC	1–3	1Ω or less
ON	1–2, 1–3, 2–3, 5–6	1Ω or less
START	4–5, 4–6, 5–6, 1–2	1Ω or less

NG → **REPLACE IGNITION OR STARTER SWITCH ASSY**

OK

CHECK AND REPAIR HARNESS AND CONNECTOR (BATTERY – IGNITION SWITCH, IGNITION SWITCH – ECM)

6 INSPECT ECM(MREL VOLTAGE)



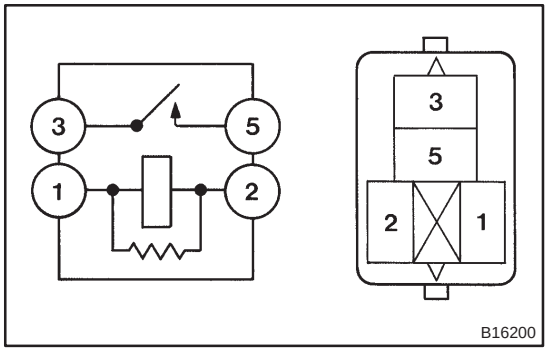
(a) Turn the ignition switch ON.
(b) Measure the voltage between the terminals of the E9 and E12 ECM connector.
Standard:

Symbols (Terminal No.)	Specified condition
MREL (E9–8) – E1 (E12–7)	9 to 14 V

NG → **CHECK AND REPLACE ECM**

OK

7 CHECK FUSE(EFI FUSE)

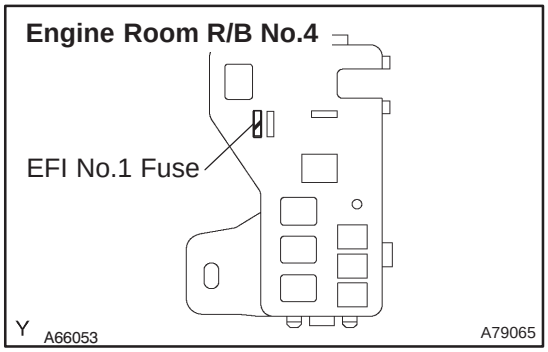


(a) Remove the EFI fuse from the engine room R/B No.1.
(b) Check for continuity in the EFI fuse.
Standard: Continuity

NG → **CHECK FOR SHORT IN ALL HARNESSES AND COMPONENTS CONNECTED FUSE**

OK

8 INSPECT EFI RELAY



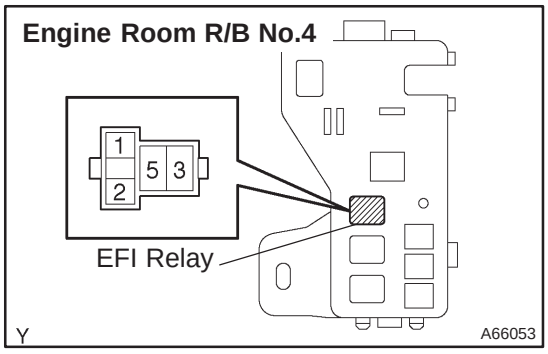
(a) Remove the EFI relay from the engine room R/B No.4.
(b) Inspect the EFI relay.
Standard:

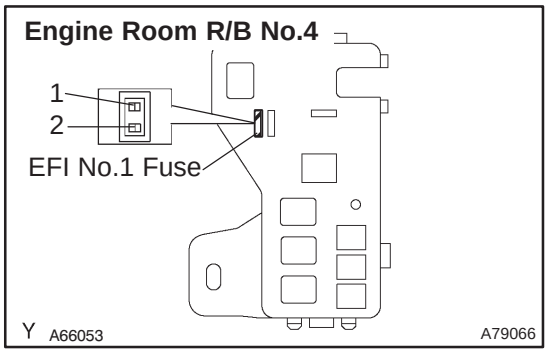
Terminal No.	Specified condition
1 – 2	Continuity
3 – 5	No Continuity
	Continuity (Apply battery voltage Terminals 1 and 2)

NG → **REPLACE EFI RELAY**

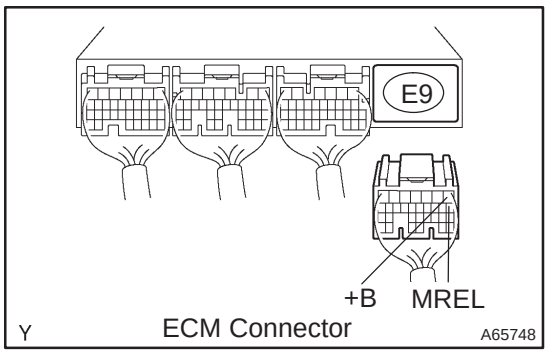
OK

9 CHECK FUSE(EFI No,1 FUSE)





(a) Remove the EFI No.4 fuse from the engine room R/B No.4.
(b) Check for continuity in the EFI No.4 fuse.
Standard: Continuity



NG → **CHECK FOR SHORT IN ALL HARNESSES AND COMPONENTS CONNECTED FUSE**

OK

10	CHECK HARNESS AND CONNECTOR(EFI RELAY – ECM, EFI RELAY – BODY GROUND)

(a) Check the harness and connector between the EFI relay and ECM connector.

(1) Remove the EFI relay from the engine room R/B No.4.

(2) Remove the EFI No.1 fuse from the engine room R/B No.4.

(3) Disconnect the E9 ECM connector.

(4) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
EFI relay (1) – MREL (E9–8)	Continuity
EFI relay (3) – EFI No.1 fuse (1)	
EFI No.1 fuse (2) – +B (E9–1)	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
EFI relay (1) or MREL (E9–8) – Body ground	No continuity
EFI relay (3) or EFI No.1 fuse (1) – Body ground	
EFI No.1 fuse (2) or +B (E9–1) – Body ground	

(b) Check the harness and connector between the EFI relay and body ground.

(1) Remove the EFI relay from the engine room J/B No.4.

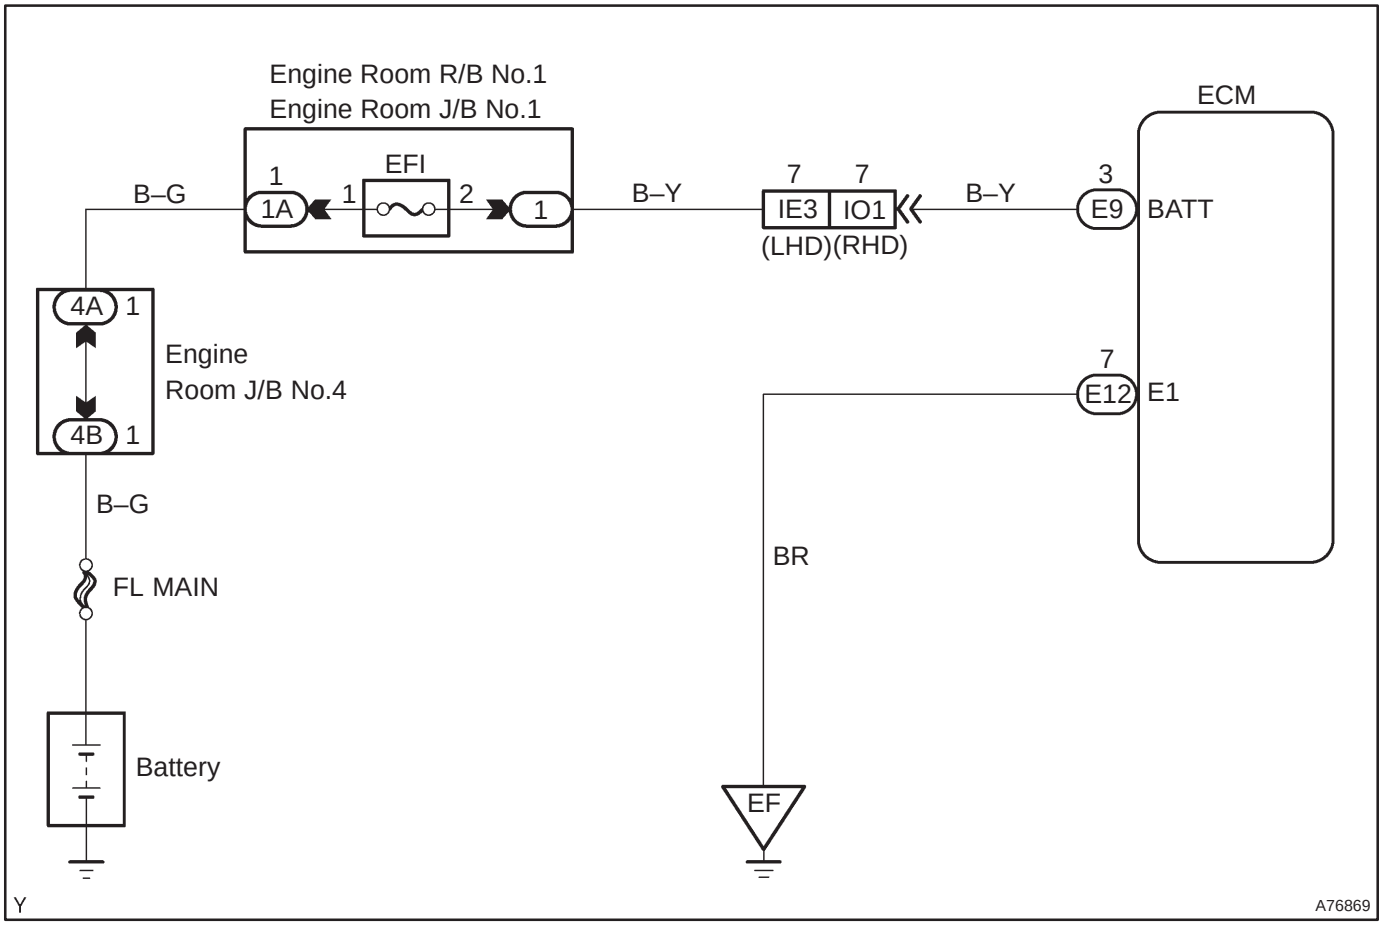
(2) Check for continuity between the wire harness side connector and the body ground.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
EFI relay (2) – Body ground	Continuity

OK → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

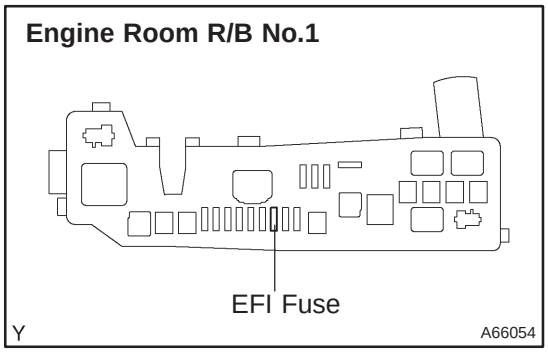
NG



CHECK AND REPAIR HARNESS AND CONNECTOR (TERMINAL +B OF ECM – BATTERY POSITIVE TERMINAL)

ECM BACK–UP POWER SOURCE CIRCUIT

CIRCUIT DESCRIPTION

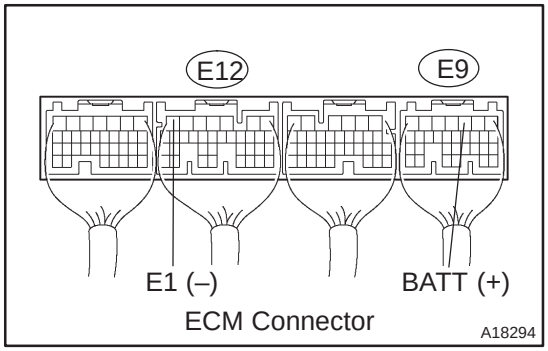


While the ignition switch is OFF, the battery positive voltage is supplied to terminal BATT of the ECM for the DTCs memory and air–fuel ratio adaptive control value memory, etc.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK FUSE(EFI FUSE)



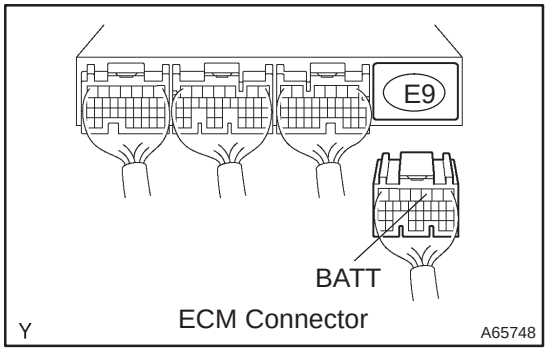
(a) Remove the EFI fuse from the engine room R/B No.1.
(b) Check for continuity in the EFI fuse.
Standard: Continuity

NG → **CHECK FOR SHORT IN ALL HARNESSES AND COMPONENTS CONNECTED FUSE**

OK

2 INSPECT ECM(BATT VOLTAGE)

(a) Turn the ignition switch ON.
(b) Measure the voltage between the terminals of the E9 and E12 ECM connector.



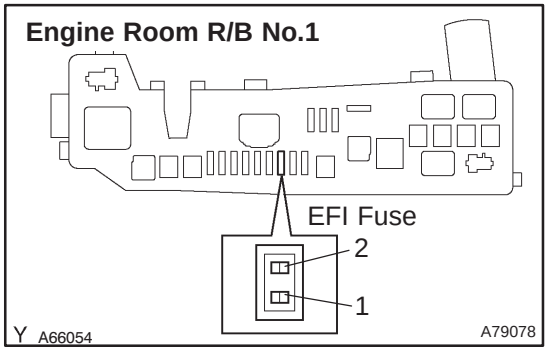
Standard:

Symbols (Terminal No.)	Specified condition
BATT (E9–3) – E1 (E12–7)	8 to 14 V

OK → **CHECK AND REPLACE ECM (See page 01–32)**

NG

3 CHECK HARNESS AND CONNECTOR(ECM – EFI FUSE, EFI FUSE – BATTERY)



(a) Check the harness and connector between the EFI fuse and ECM.
(1) Remove the EFI fuse from the engine room R/B.
(2) Disconnect the E9 ECM connector.
(3) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
EFI fuse (2) – BATT (E9–3)	Continuity

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
EFI fuse (2) or BATT (E9–3) – Body ground	No continuity

(b) Check the harness and connector between the EFI fuse and battery.
(1) Remove the EFI fuse from the engine room R/B.
(2) Disconnect the battery positive terminal.
(3) Check for continuity between the wire harness side connectors.

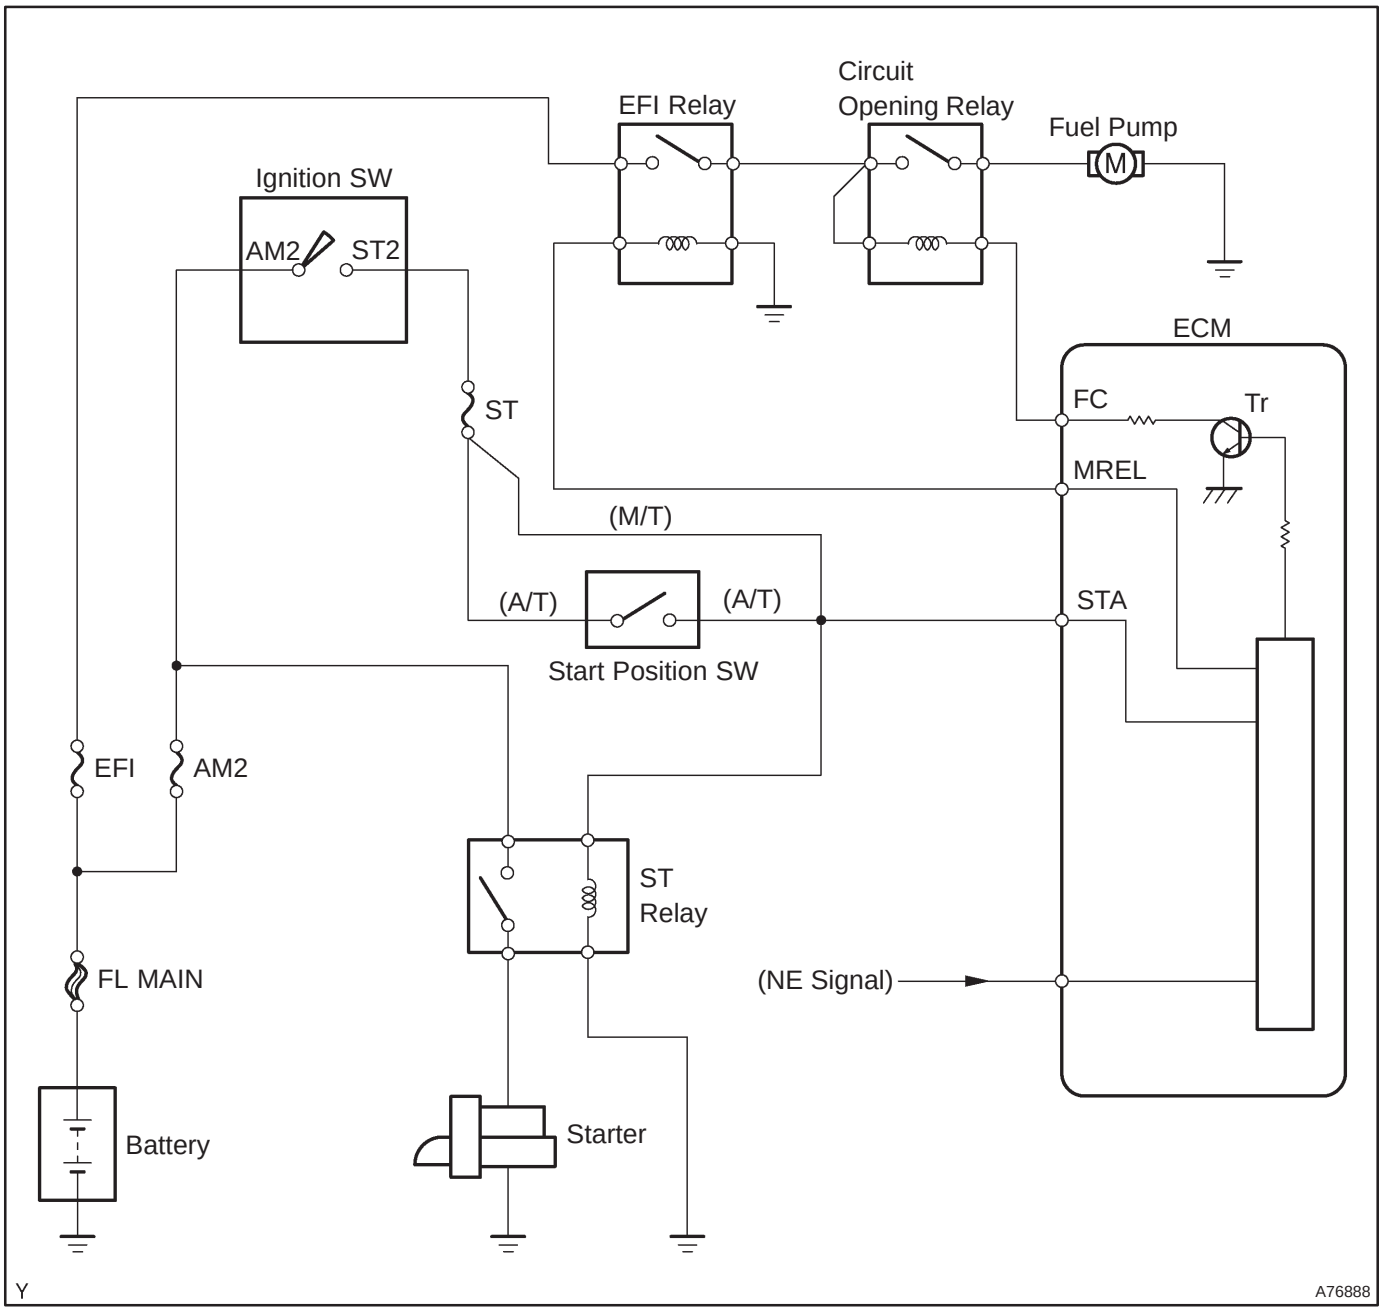
Standard (Check for open):

Symbols (Terminal No.)	Specified condition
Battery positive terminal – EFI fuse (1)	Continuity

Standard (Check for short):

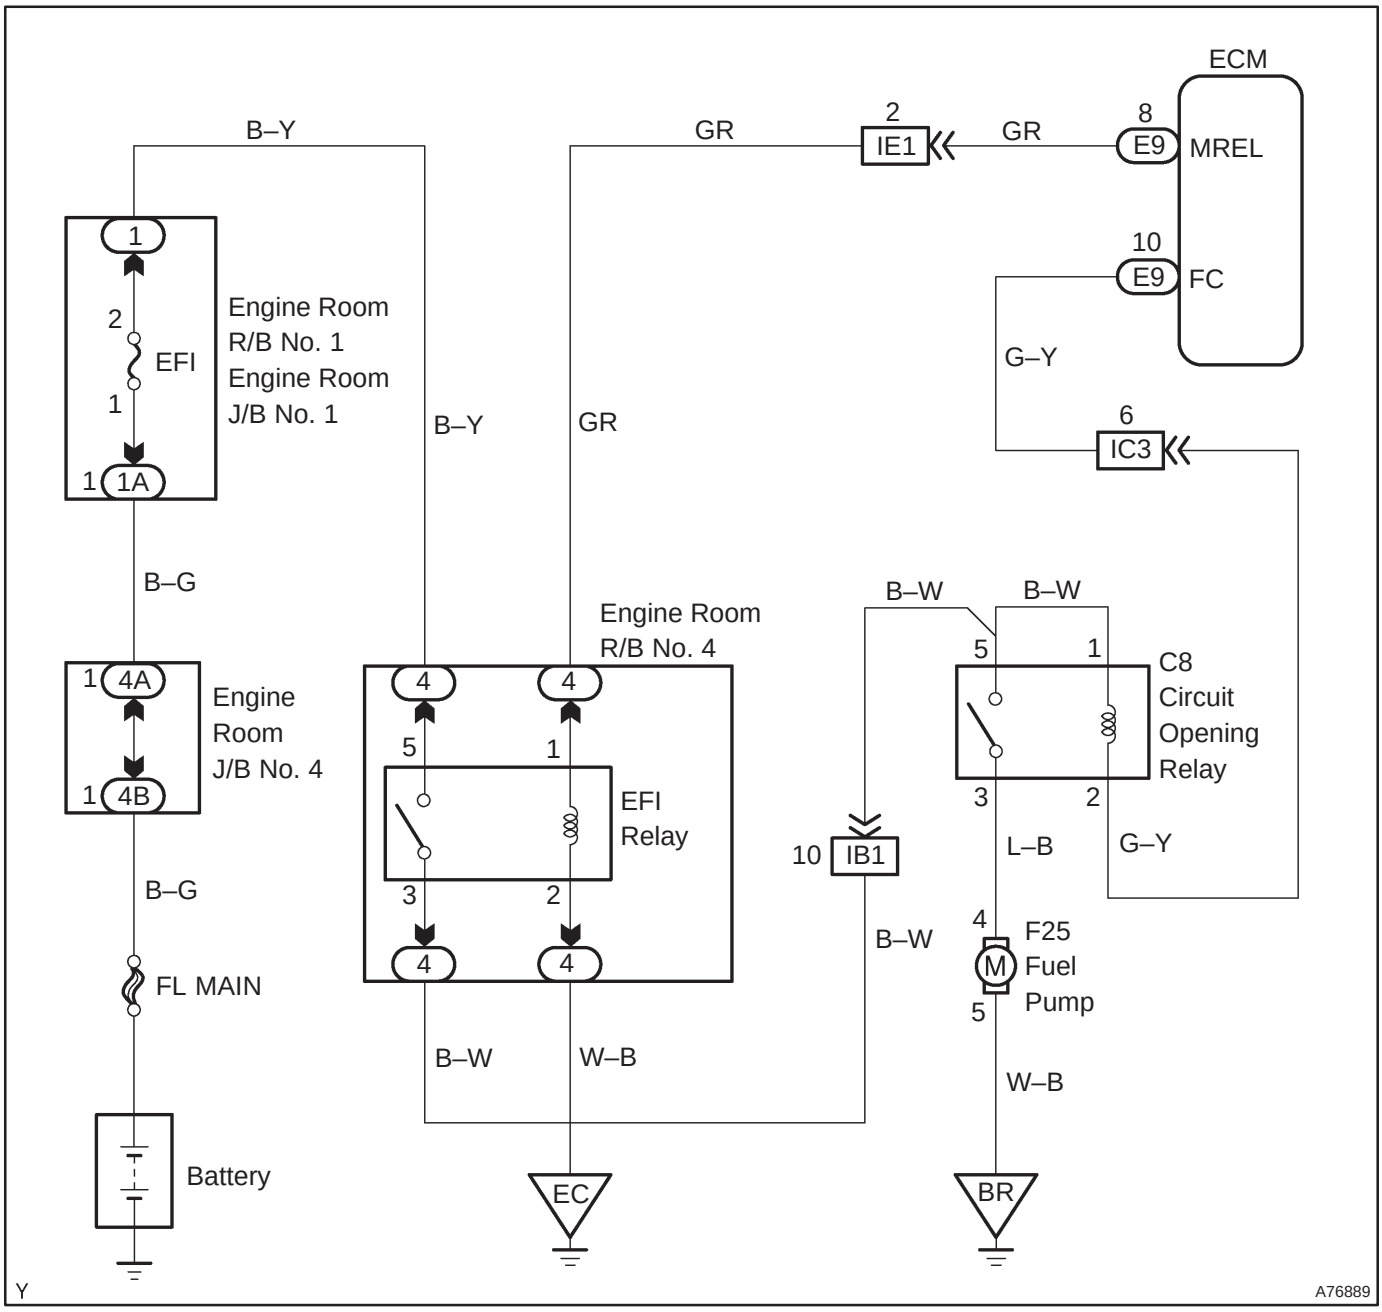
Symbols (Terminal No.)	Specified condition
Battery positive terminal or EFI fuse (1) – Body ground	No continuity

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**



OK

CHECK AND REPLACE ENGINE ROOM RELAY BLOCK



FUEL PUMP CONTROL CIRCUIT

CIRCUIT DESCRIPTION

In the diagram below, when the engine is cranked, current flows from terminal ST2 of the ignition switch to the starter relay coil and also current flows to terminal STA of the ECM (STA signal).
When the STA signal and NE signal are input to the ECM, Tr is turned ON, current flows to the coil of the E.F.I. circuit opening relay, the relay switches on, power is supplied to the fuel pump and the fuel pump operates.
While the NE signal is generated (engine running), the ECM keeps Tr ON (circuit opening relay ON) and the fuel pump also keeps operating.

WIRING DIAGRAM

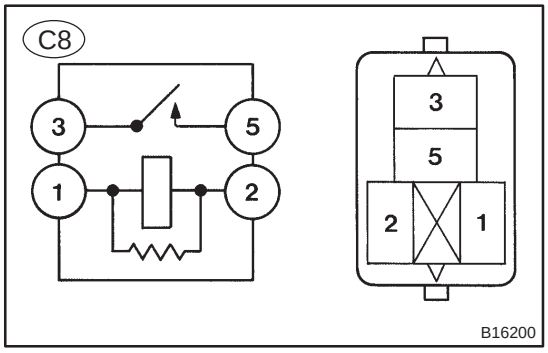
INSPECTION PROCEDURE

When using hand–held tester:

1	PERFORM ACTIVE TEST BY HAND–HELD TESTER(OPERATION OF CIRCUIT OPENING RELAY)

(a) Turn the ignition switch ON.
(b) Select the item ”DIAGNOSIS / OBD/MOBD / ACTIVE TEST / FUEL PUMP / SPD”.
(c) Perform the active test with the engine stopped.
Result: The circuit opening relay operates.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN ON PROBLEM SYMPTOMS TABLE**



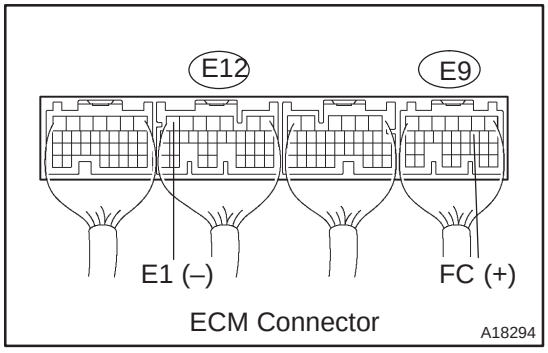
NG

2	CHECK ECM POWER SOURCE CIRCUIT (See page 05–257)

NG → **REPAIR OR REPLACE POWER SOURCE CIRCUIT**

OK

3	INSPECT CIRCUIT OPENING RELAY



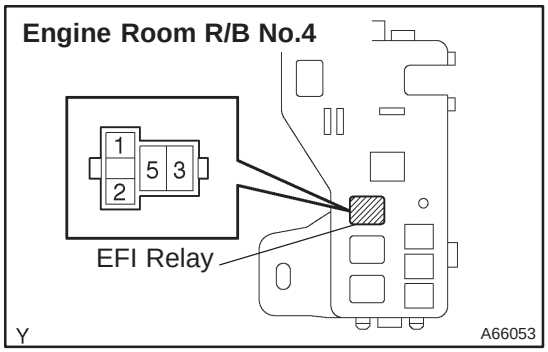
(a) Remove the circuit opening relay.
(b) Inspect the circuit opening relay.
Standard:

Terminal No.	Specified condition
1 – 2	Continuity
3 – 5	No Continuity
	Continuity (Apply battery voltage Terminals 1 and 2)

NG → **REPLACE CIRCUIT OPENING RELAY**

OK

4	INSPECT ECM(CHECK VOLTAGE)



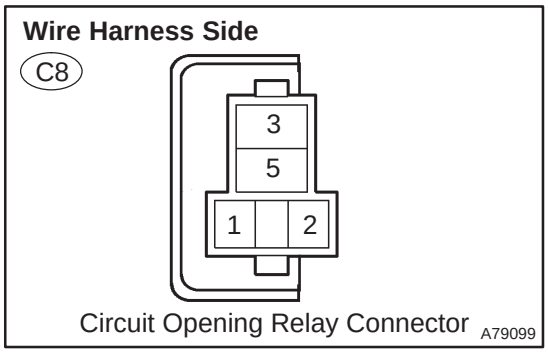
(a) Turn the ignition switch ON.
(b) Measure the voltage between the terminals of the E9 and E12 ECM connector.
Standard:

Symbols (Terminal No.)	Specified condition
FC (E9–10) – E1 (E12–7)	8 to 14 V

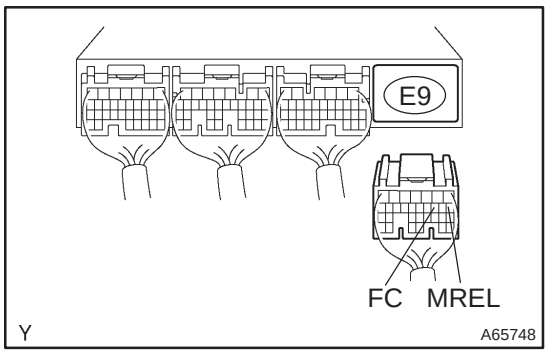
OK → **Go to step 6**

NG

5	CHECK HARNESS AND CONNECTOR(EFI RELAY – CIRCUIT OPENING RELAY, CIRCUIT OPENING RELAY – ECM)



(a) Remove the EFI relay from the engine room R/B No.4.
(b) Remove the circuit opening relay.
(c) Disconnect the E9 ECM connector.
(d) Check for continuity between the wire harness side connectors.



Standard (Check for open):

Symbols (Terminal No.)	Specified condition
EFI relay (3) – Circuit opening relay (C8–1)	Continuity
Circuit opening relay (C8–2) – FC (E9–10)	
EFI relay (1) – MREL (E9–8)	

Standard (Check for short):

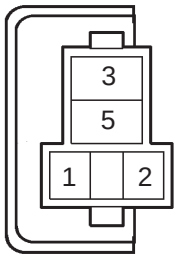
Symbols (Terminal No.)	Specified condition
EFI relay (3) or Circuit opening relay (C8–1) – Body ground	No continuity
Circuit opening relay (C8–2) or FC (E9–10) – Body ground	
EFI relay (1) or MREL (E9–8) – Body ground	

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK AND REPLACE ECM (See page 01–32)

6	INSPECT FUEL PUMP ASSY (See page 11–22)



NG → **REPAIR OR REPLACE FUEL PUMP ASSY**

OK

7	CHECK HARNESS AND CONNECTOR(CIRCUIT OPENING RELAY – FUEL PUMP, FUEL PUMP – BODY GROUND)

Wire Harness Side

C8

Circuit Opening Relay Connector

A79099

(a) Remove the circuit opening relay.
(b) Disconnect the fuel pump connector.
(c) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
Circuit opening relay (C8–3) – Fuel pump (F25–4)	Continuity
Fuel pump (F25–5) – Body ground	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
Circuit opening relay (C8–3) or Fuel pump (F25–4) – Body ground	No continuity

Wire Harness Side

F25

Fuel Pump Connector

A66276

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

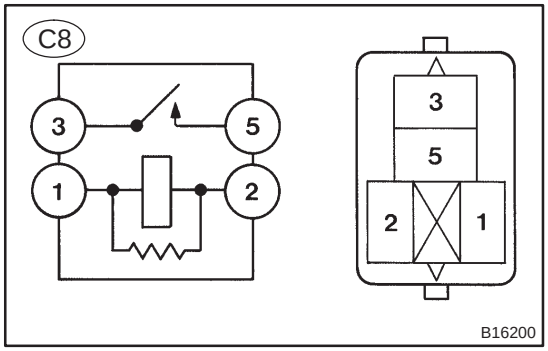
OK

CHECK AND REPLACE ECM (See page 01–32)

When not using hand–held tester:

1	CHECK OPERATION OF FUEL PUMP (See page 11–19)

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN ON PROBLEM SYMPTOMS TABLE**



NG

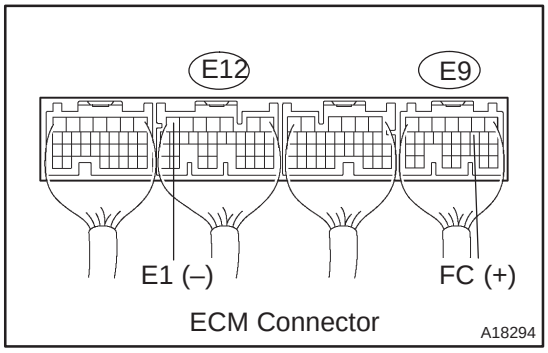
2	CHECK ECM POWER SOURCE CIRCUIT (See page 05–257)

NG → **CHECK FOR ECM POWER SOURCE CIRCUIT**

OK

3 INSPECT CIRCUIT OPENING RELAY

(a) Remove the circuit opening relay.
(b) Inspect the circuit opening relay.



Standard:

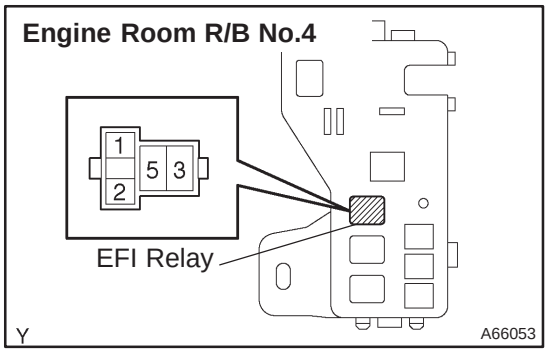
Terminal No.	Specified condition
1 – 2	Continuity
3 – 5	No Continuity
	Continuity (Apply battery voltage Terminals 1 and 2)

NG → **REPLACE CIRCUIT OPENING RELAY**

OK

4 INSPECT ECM(CHECK VOLTAGE)

(a) Turn the ignition switch ON.
(b) Measure the voltage between the terminals of the E9 and E12 ECM connector.



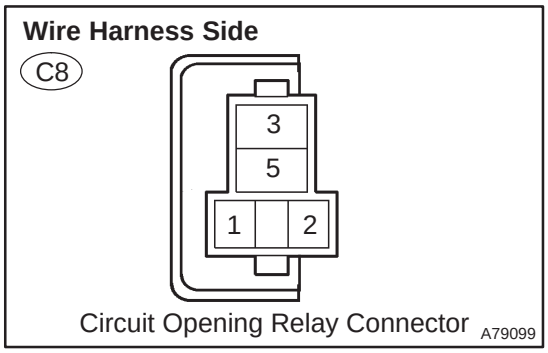
Standard:

Symbols (Terminal No.)	Specified condition
FC (E9–10) – E1 (E12–7)	8 to 14 V

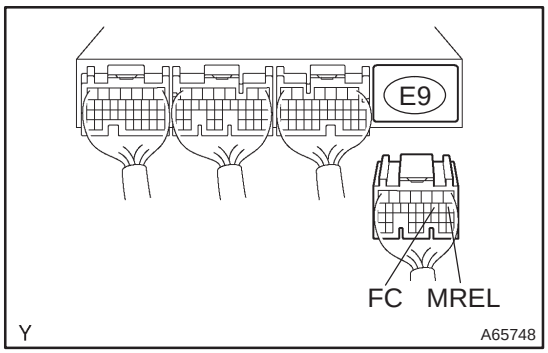
OK → **Go to step 6**

NG

5	CHECK HARNESS AND CONNECTOR(EFI RELAY – CIRCUIT OPENING RELAY, CIRCUIT OPENING RELAY – ECM)



(a) Remove the EFI relay from the engine room R/B No.4.
(b) Remove the circuit opening relay.
(c) Disconnect the E9 ECM connector.
(d) Check for continuity between the wire harness side connectors.



Standard (Check for open):

Symbols (Terminal No.)	Specified condition
EFI relay (3) – Circuit opening relay (C8–1)	Continuity
Circuit opening relay (C8–2) – FC (E9–10)	
EFI relay (1) – MREL (E9–8)	

Standard (Check for short):

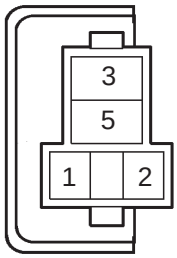
Symbols (Terminal No.)	Specified condition
EFI relay (3) or Circuit opening relay (C8–1) – Body ground	No continuity
Circuit opening relay (C8–2) or FC (E9–10) – Body ground	
EFI relay (1) or MREL (E9–8) – Body ground	

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK AND REPLACE ECM (See page 01–32)

6	INSPECT FUEL PUMP ASSY (See page 11–22)



NG → **REPAIR OR REPLACE FUEL PUMP ASSY**

OK

7	CHECK HARNESS AND CONNECTOR(CIRCUIT OPENING RELAY – FUEL PUMP, FUEL PUMP – BODY GROUND)

Wire Harness Side

C8

Circuit Opening Relay Connector

A79099

(a) Remove the circuit opening relay.
(b) Disconnect the fuel pump connector.
(c) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
Circuit opening relay (C8–3) – Fuel pump (F25–4)	Continuity
Fuel pump (F25–5) – Body ground	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
Circuit opening relay (C8–3) or Fuel pump (F25–4) – Body ground	No continuity

Wire Harness Side

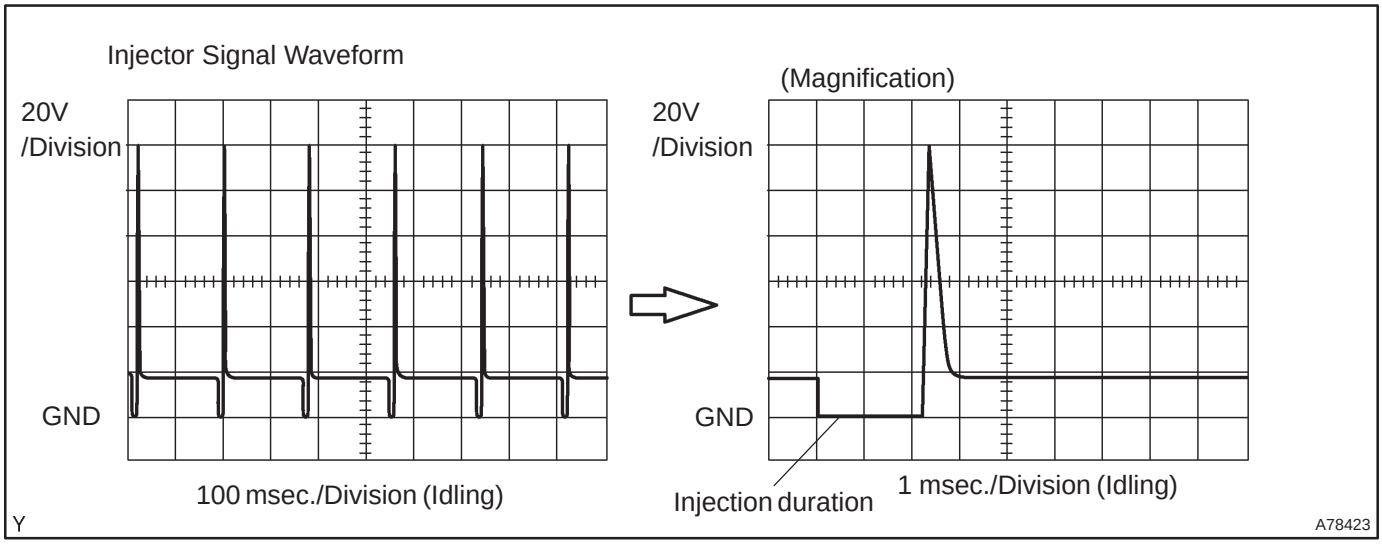
F25

Fuel Pump Connector

A66276

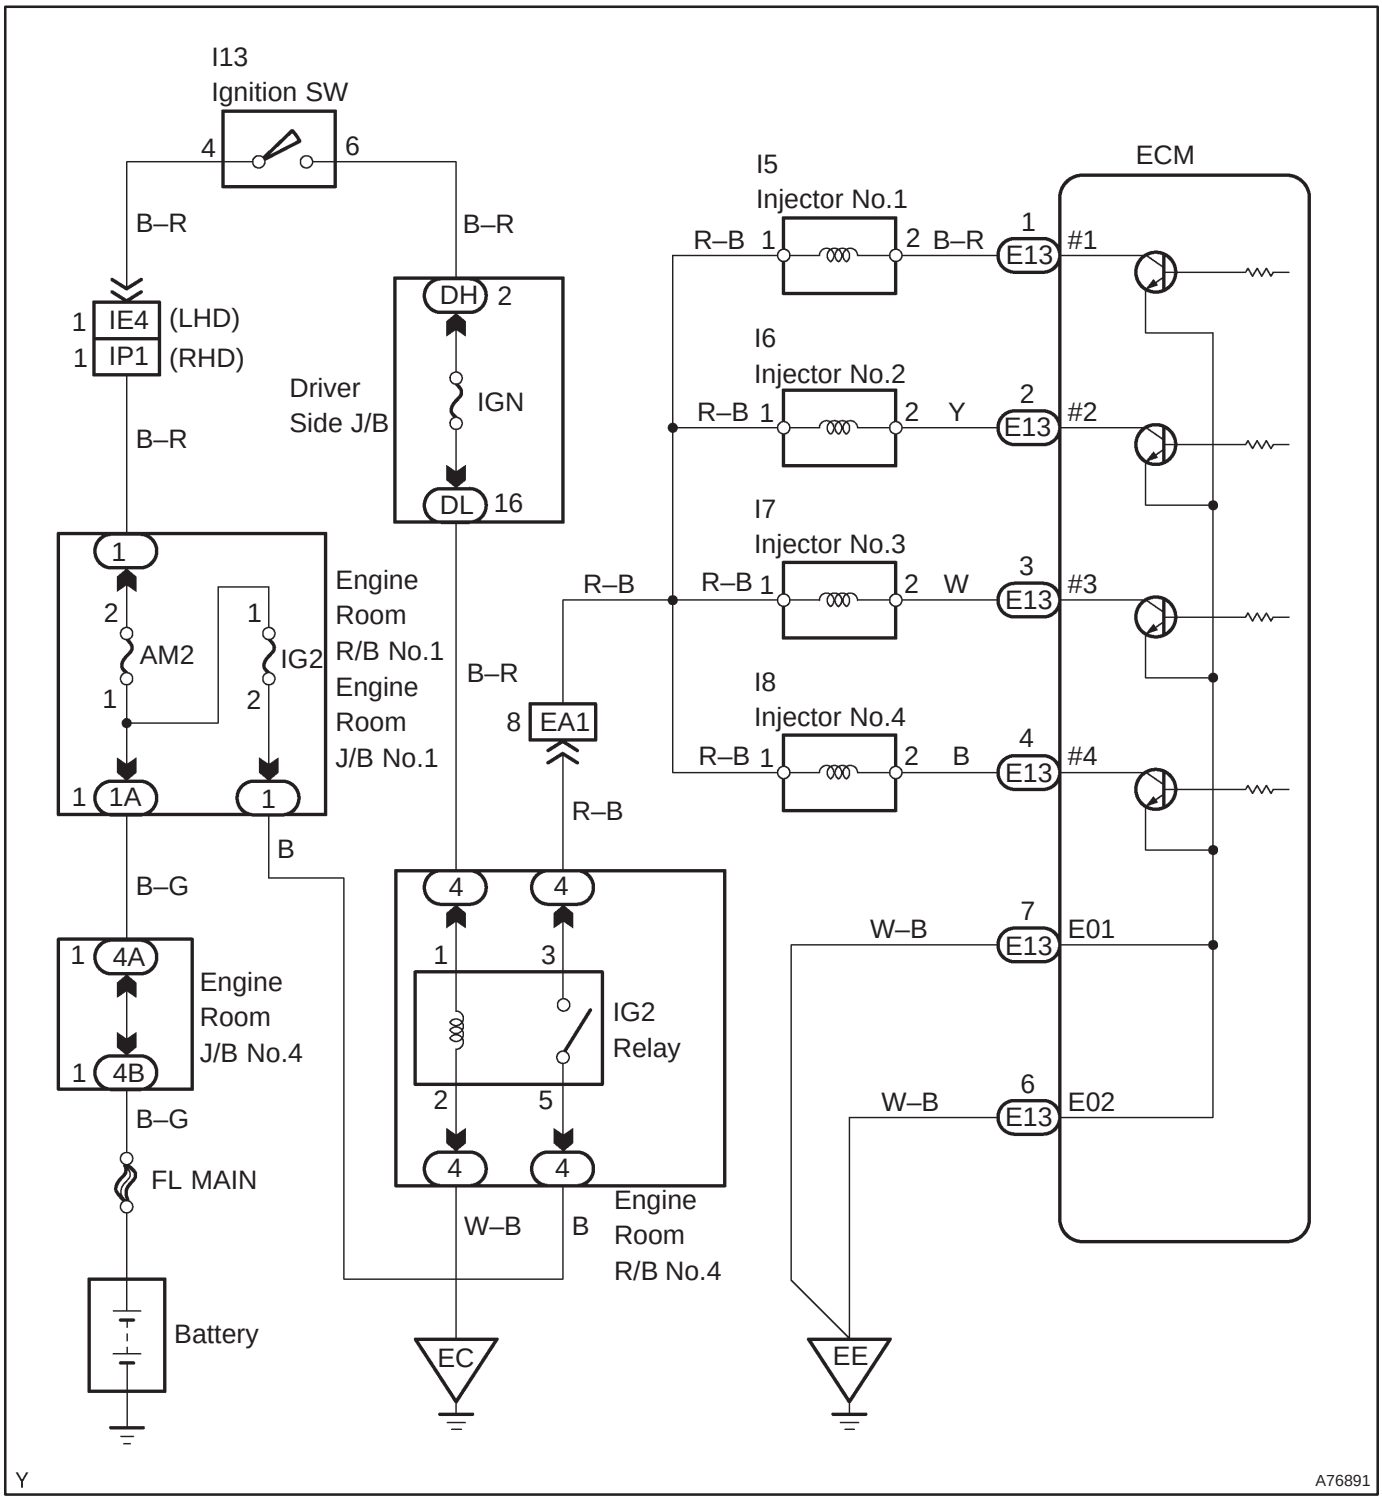
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK



CHECK AND REPLACE ECM (See page 01–32)

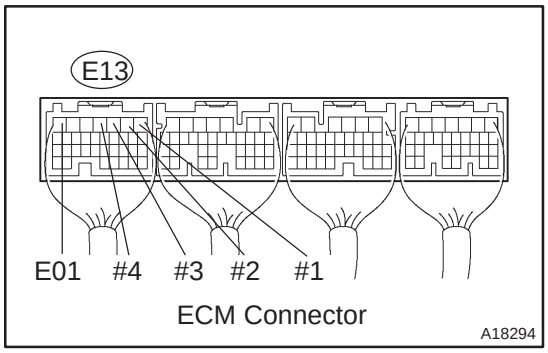
FUEL INJECTOR CIRCUIT



CIRCUIT DESCRIPTION

The fuel injectors are located on the intake manifold.
They inject fuel into the cylinders based on the signals from the ECM.
Reference: Inspection using oscilloscope
With the engine idling, check the waveform between terminals #1 to #4 and E01 of the ECM connectors.
HINT:

The correct waveform is as shown in the diagram below.



WIRING DIAGRAM

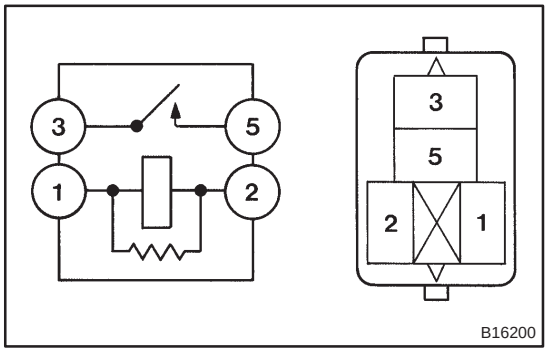
INSPECTION PROCEDURE

1 INSPECT ECM(#1, #2, #3 OR #4 VOLTAGE)

(a) Turn the ignition switch ON.
(b) Measure the voltage between the terminals of the E13 ECM connector.
Standard:

Symbols (Terminal No.)	Specified condition
#1 (E13–1) – E01 (E13–7)	9 to 14 V
#2 (E13–2) – E01 (E13–7)	
#3 (E13–3) – E01 (E13–7)	
#4 (E13–4) – E01 (E13–7)	

OK → **Go to step 7**



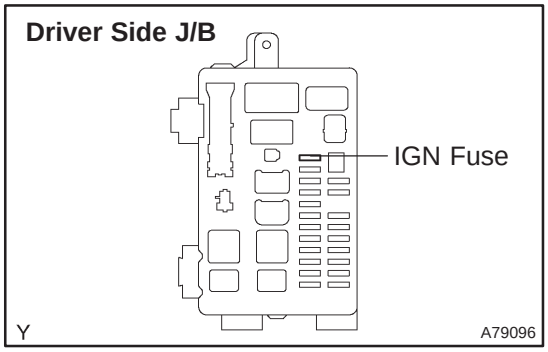
NG

2 INSPECT FUEL INJECTOR ASSY(CHECK RESISTANCE) (See page 11–22)

NG → **REPLACE FUEL INJECTOR ASSY**

OK

3 INSPECT IG2 RELAY



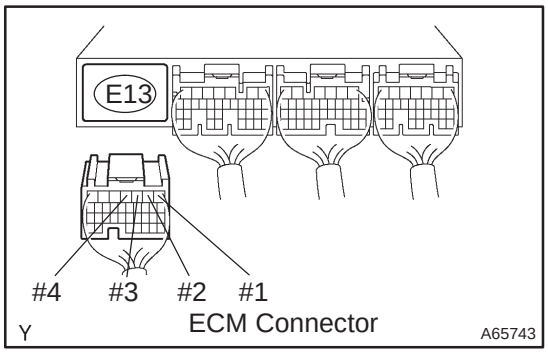
(a) Remove the IG2 relay from the engine room R/B No.4.
(b) Inspect the IG2 relay.
Standard:

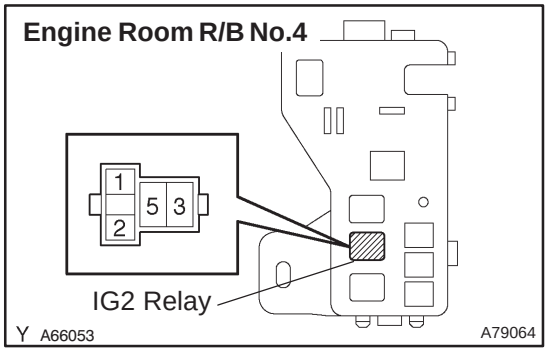
Terminal No.	Specified condition
1 – 2	Continuity
3 – 5	No Continuity
	Continuity (Apply battery voltage Terminals 1 and 2)

NG → **REPLACE IG2 RELAY**

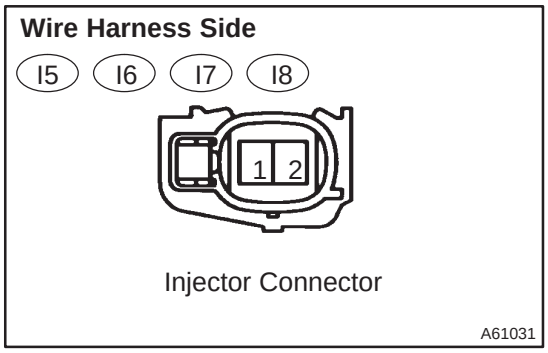
OK

4 CHECK FUSE(IGN FUSE)





(a) Remove the IGN fuse from the driver side J/B.
(b) Check for continuity in the IGN fuse.
Standard: Continuity



NG → **CHECK FOR SHORT IN ALL HARNESS AND COMPONENTS CONNECTED FUSE**

OK

5	CHECK HARNESS AND CONNECTOR OF MISFIRING CYLINDER(INJECTOR – ECM, INJECTOR – IG2 RELAY)

(a) Check the harness and connector between the injector connector and ECM connector.
(1) Disconnect the I5, I6, I7 or I8 injector connector.
(2) Disconnect the E13 ECM connector.
(3) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
Injector (I5–1) – #1 (E13–1)	Continuity
Injector (I6–1) – #2 (E13–2)	
Injector (I7–1) – #3 (E13–3)	
Injector (I8–1) – #4 (E13–4)	

Standard (Check for short):

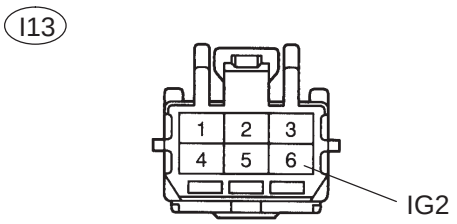
Symbols (Terminal No.)	Specified condition
Injector (I5–1) or #1 (E13–1) – Body ground	No continuity
Injector (I6–1) or #2 (E13–2) – Body ground	
Injector (I7–1) or #3 (E13–3) – Body ground	
Injector (I8–1) or #4 (E13–4) – Body ground	

(b) Check the harness and connector between the injector connector and ignition switch connector.
(1) Disconnect the I5, I6, I7 or I8 injector connector.
(2) Remove theIG2 relay from the engine room R/B No.4.
(3) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
Injector (I5–2) – IG2 Relay (3)	Continuity
Injector (I6–2) – IG2 Relay (3)	
Injector (I7–2) – IG2 Relay (3)	
Injector (I8–2) – IG2 Relay (3)	

Standard (Check for short):



Symbols (Terminal No.)	Specified condition
Injector (I5–2) or IG2 Relay (3) – Body ground	No continuity
Injector (I6–2) or IG2 Relay (3) – Body ground	
Injector (I7–2) or IG2 Relay (3) – Body ground	
Injector (I8–2) or IG2 Relay (3) – Body ground	

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

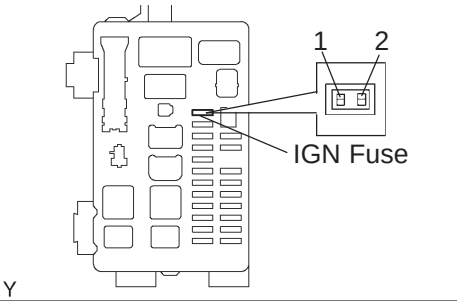
6 CHECK HARNESS AND CONNECTOR(IGNITION SWITCH – IG2 RELAY)

Wire Harness Side

Ignition Switch Connector

A66267

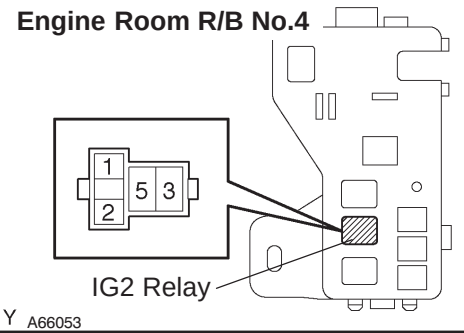
(a) Disconnect the battery negative (–) terminal.
(b) Disconnect the ignition switch connector.
(c) Remove the IGN fuse from the driver side J/B.
(d) Remove the IG2 relay from the engine room R/B No.4.
(e) Check for continuity between the wire harness side connectors.



Standard (Check for open):

Symbols (Terminal No.)	Specified condition
IG2 (I13–6) – IGN fuse (1)	Continuity
IGN fuse (2) – IG2 relay (1)	

Standard (Check for short):

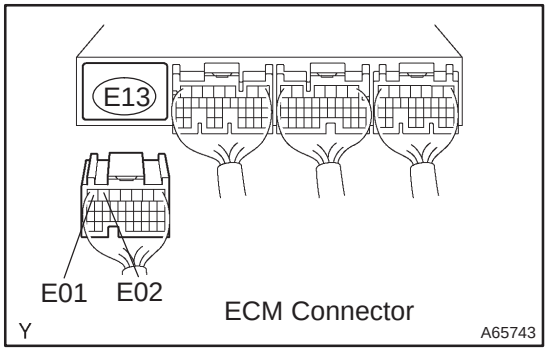


Symbols (Terminal No.)	Specified condition
IG2 (I13–6) or IGN fuse (1) – Body ground	No continuity
IGN fuse (2) or IG2 relay (1) – Body ground	

Driver Side J/B

A79103

Engine Room R/B No.4



A66053 A79064

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK →

CHECK FOR ECM POWER SOURCE CIRCUIT

7	INSPECT ECM

(a) Disconnect the ECM E13 connector.
(b) Check for continuity between the ECM connector and body ground.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
E01 (E13–7) – Body ground	Continuity
E02 (E13–6) – Body ground	

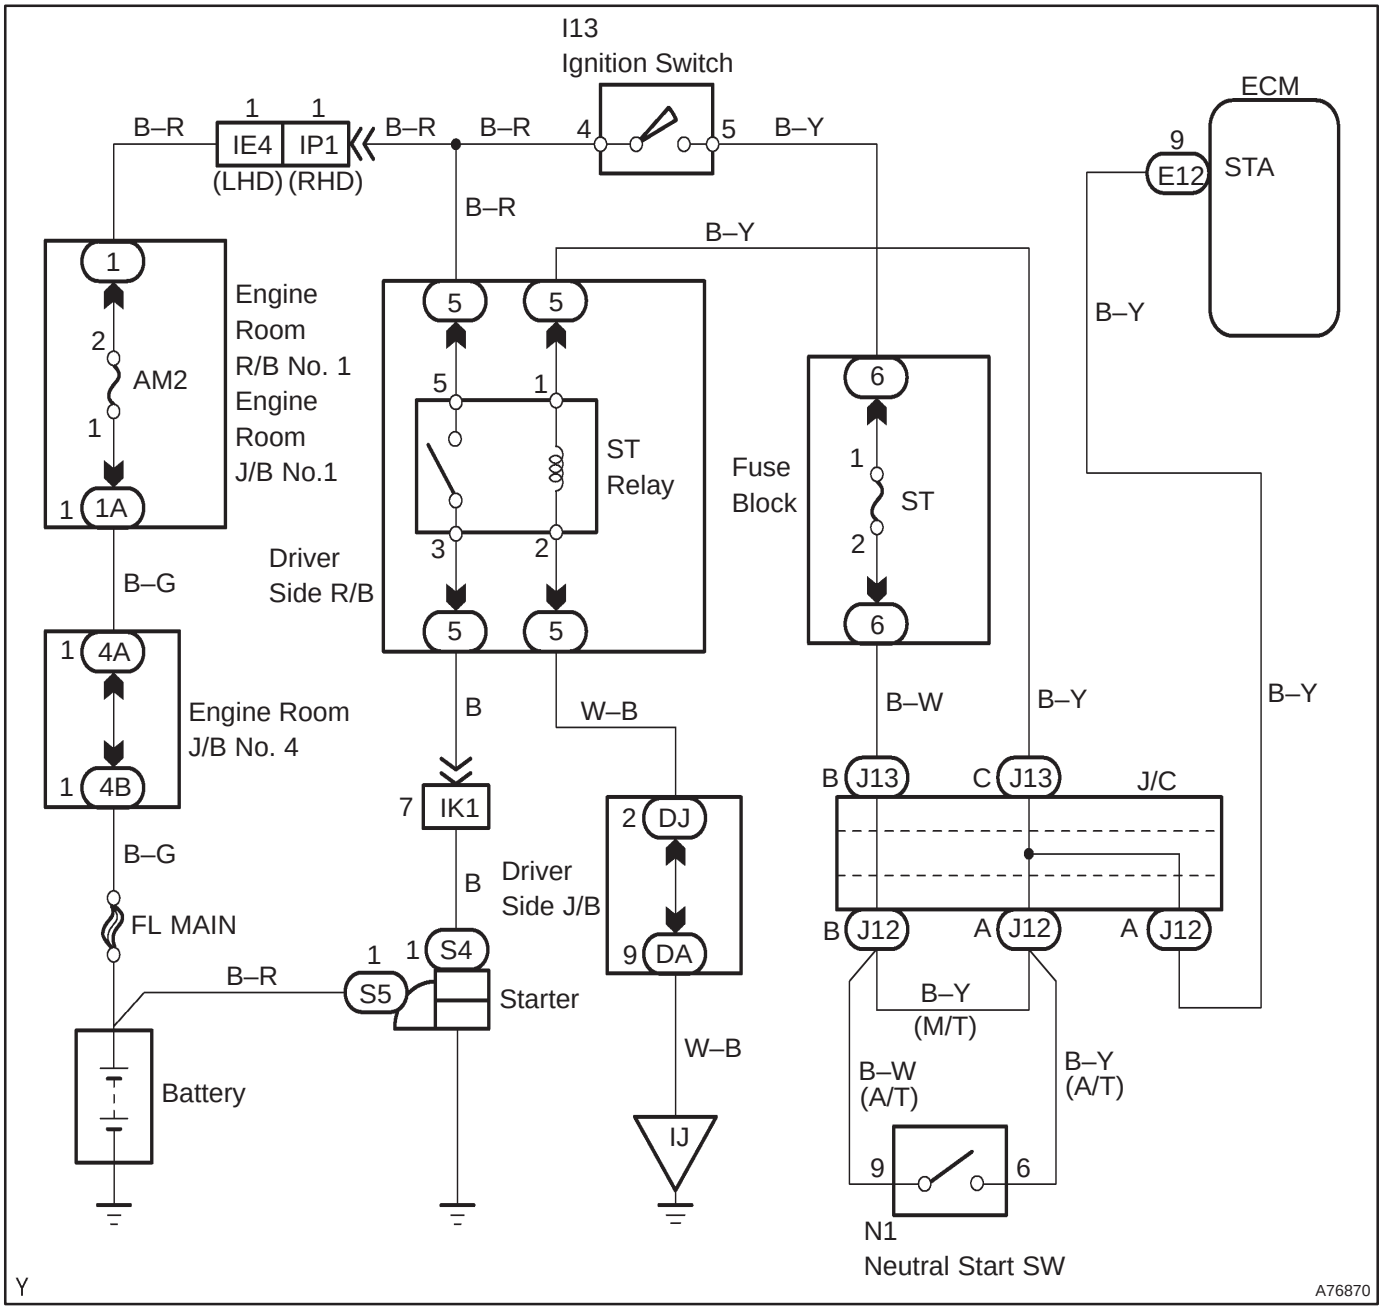
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

8	INSPECT FUEL INJECTOR ASSY(CHECK INJECTOR VOLUME) (See page 11–22)

NG → **REPLACE FUEL INJECTOR ASSY**

OK



PROCEED TO NEXT CIRCUIT INSPECTION SHOWN ON PROBLEM SYMPTOMS TABLE (See page 05–168)

STARTER SIGNAL CIRCUIT

CIRCUIT DESCRIPTION

When the engine is cranked, the intake air flow becomes slow, so fuel vaporization is poor. A rich mixture is therefore necessary in order to achieve good startability. While the engine is being cranked, the battery voltage is applied to terminal STA of the ECM. The starter signal is mainly used to increase the fuel injection volume for the starting injection control and after–start injection control.

WIRING DIAGRAM

INSPECTION PROCEDURE

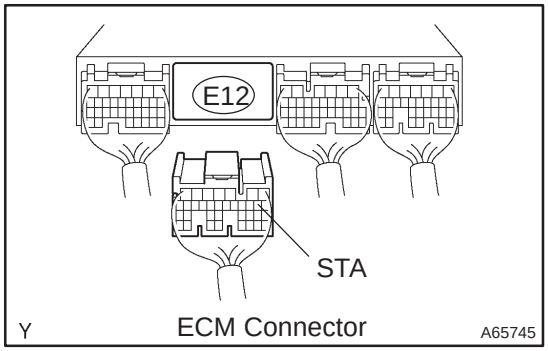
HINT:

This chart is on the premise that the engine is cranked normally. If the engine is not cranked, proceed to the problem symptoms table on page 05–168.

When using hand–held tester:

1	READ VALUE OF HAND–HELD TESTER(STA SIGNAL)

(a) Connect the hand–held tester to the DLC3.
(b) Turn the ignition switch ON and push the hand–held tester main switch ON.
(c) Select the item ”DIAGNOSIS / OBD/MOBD / DATA LIST / ALL / STARTER SIG” and read its value displayed on the hand–held tester.



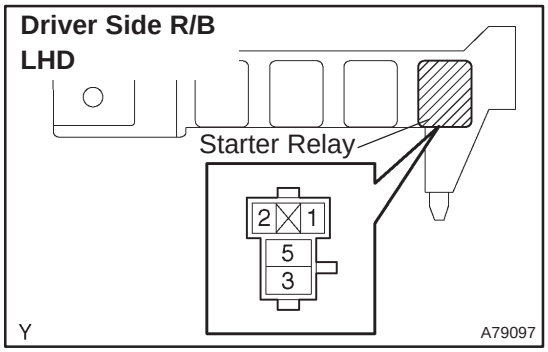
Result:

Ignition Switch Position	ON	START
STA Signal	OFF	ON

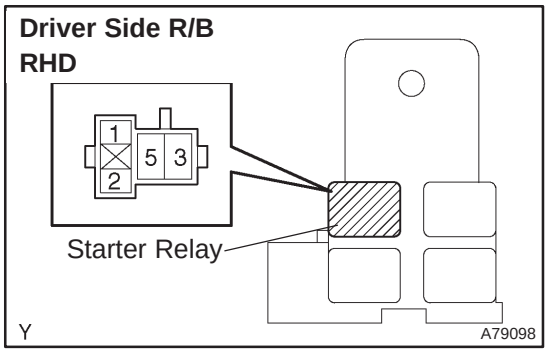
OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN ON PROBLEM SYMPTOMS TABLE (See page 05–149)**

NG

2	CHECK HARNESS AND CONNECTOR



(a) Disconnect the E12 ECM connector.
(b) Remove the starter relay from the driver side R/B.
(c) Check for continuity between the wire harness side connectors.

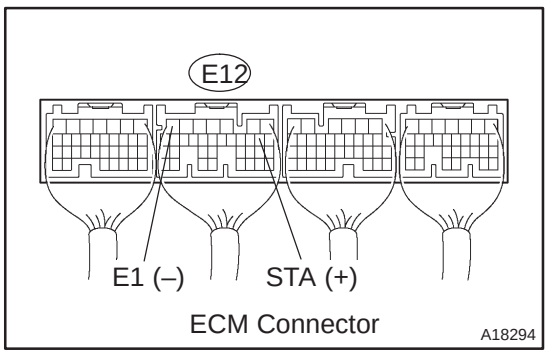


Standard (Check for open):

Symbols (Terminal No.)	Specified condition
Starter relay (1) – STA (E12–9)	Continuity

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
Starter relay (1) or STA (12–9) – Body ground	No continuity



NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK AND REPLACE ECM (See page 01–32)

When not using hand–held tester:

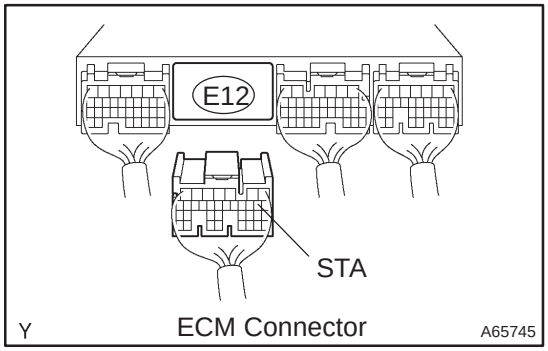
1	INSPECT ECM(STA VOLTAGE)

(a) Turn the ignition switch ON.
(b) Measure the voltage between the terminals of the E12 ECM connector.

Standard:

Symbols (Terminal No.)	Specified condition
STA (E12–9) – E1 (E12–7)	0 V

(c) Measure the voltage between the terminals of the E12 ECM connector when the engine is cranked.



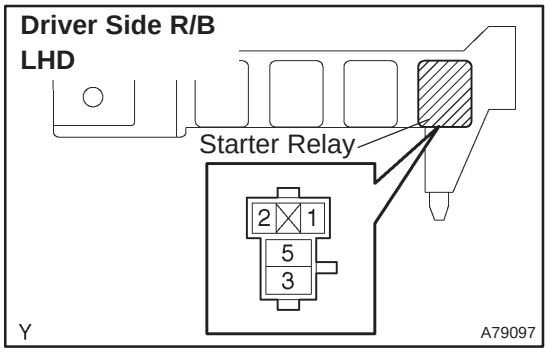
Standard:

Symbols (Terminal No.)	Specified condition
STA (E12–9) – E1 (E12–7)	6 V or more

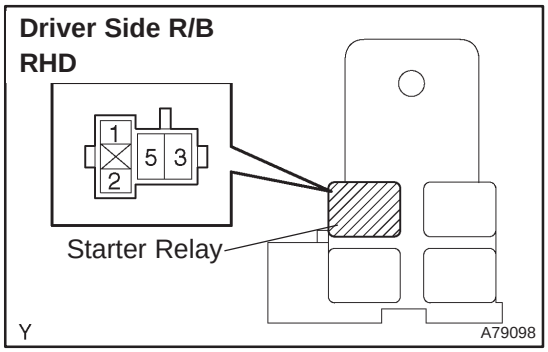
OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN ON PROBLEM SYMPTOMS TABLE (See page 05–149)**

NG

2 CHECK HARNESS AND CONNECTOR



(a) Disconnect the E12 ECM connector.
(b) Remove the starter relay from the driver side R/B.
(c) Check for continuity between the wire harness side connectors.



Standard (Check for open):

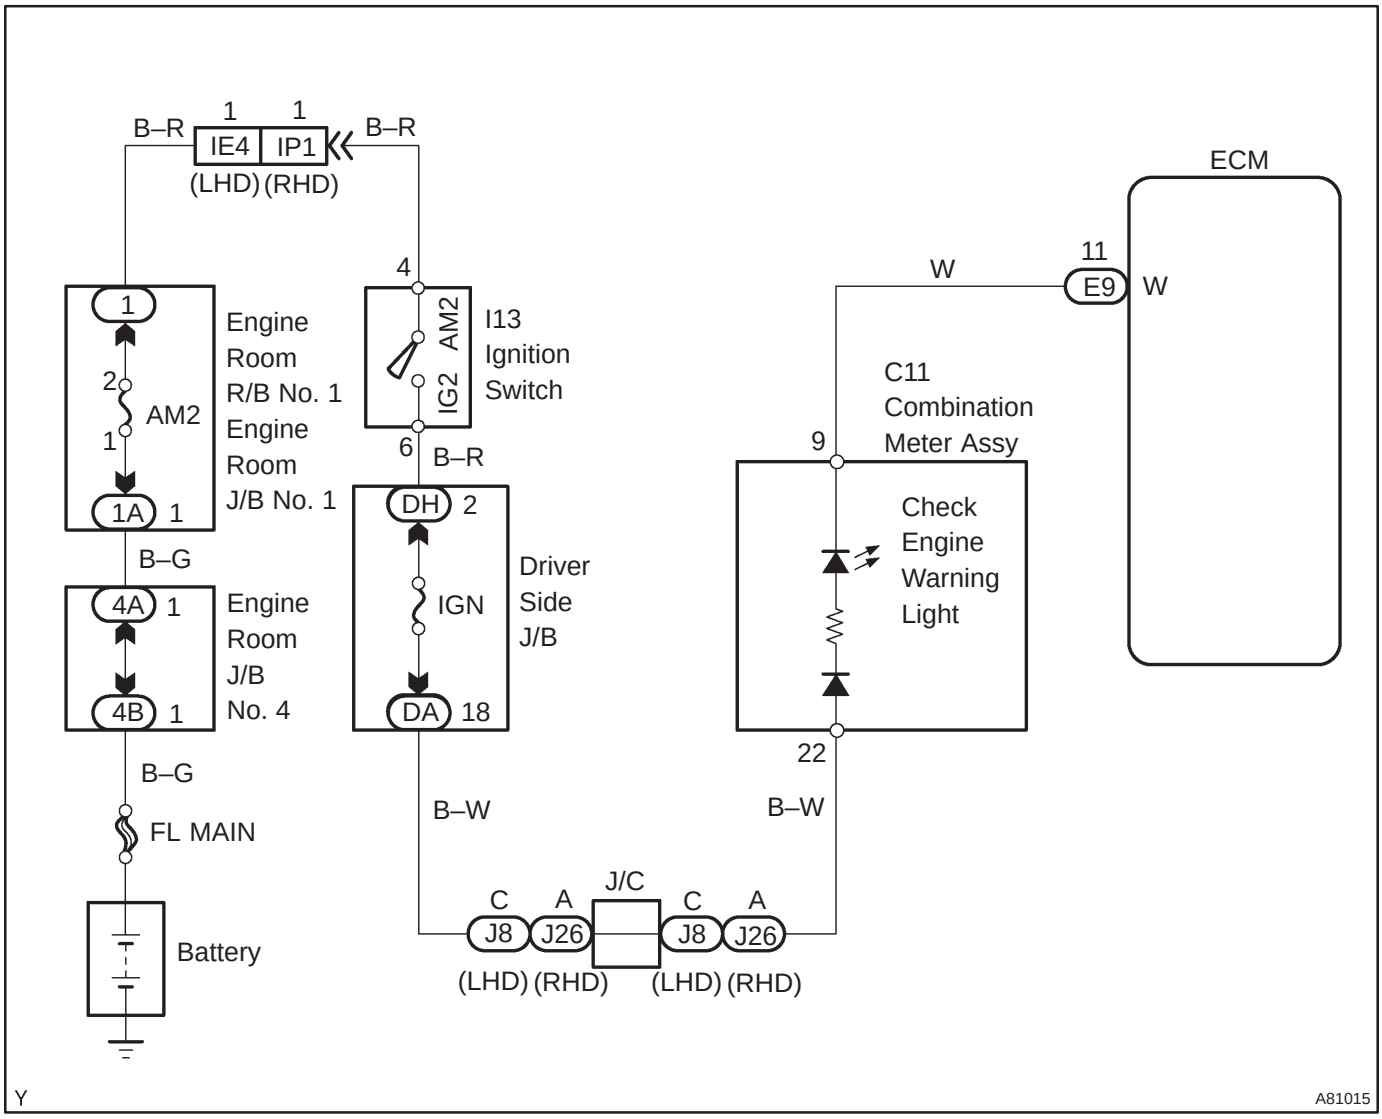
Symbols (Terminal No.)	Specified condition
Starter relay (1) – STA (E12–9)	Continuity

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
Starter relay (1) or STA (12–9) – Body ground	No continuity

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK



CHECK AND REPLACE ECM (See page 01–32)

CHECK ENGINE WARNING LIGHT CIRCUIT

CIRCUIT DESCRIPTION

If the ECM detects a trouble, the CHK ENG is illuminated. At this time, the ECM records a DTC in the memory.

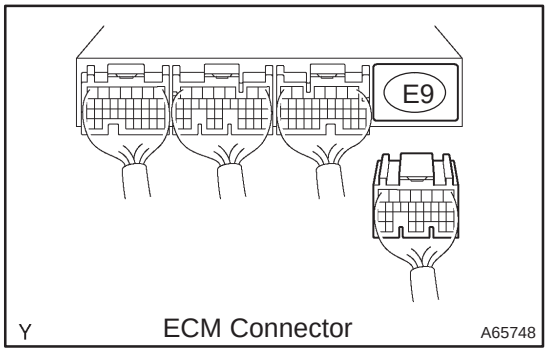
WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Troubleshoot each trouble symptom in accordance with the chart below .

CHK ENG remains on	Start inspection from step 1
CHK ENG is not illuminate	Start inspection from step 3



1	CLEAR DTC

(a) Connect the hand–held tester to the DLC 3.
(b) Turn the ignition switch ON and push the hand–held tester main switch ON.
(c) Read the DTC (See page 05–149).
(d) Clear the DTC (See page 05–149).
(e) Check that the CHK ENG is OFF.
Standard: CHK ENG is OFF

OK → **REPAIR CIRCUIT INDICATED BY OUTPUT CODE (See page 05–161)**

NG

2	CHECK HARNESS AND CONNECTOR(CHECK FOR SHORT IN WIRE HARNESS)

(a) Disconnect the E9 ECM connector.
(b) Turn the ignition switch ON.
(c) Check that the CHK ENG is OFF.
Standard: CHK ENG is OFF

OK → **CHECK AND REPLACE ECM (See page 01–32)**

NG

CHECK AND REPAIR HARNESS AND CONNECTOR

3	CHECK CHK ENG CONDITION

(a) Check that the CHK ENG is illuminated when turning the ignition switch ON.
Standard: CHK ENG is illuminated

OK → **CHECK AND REPAIR HARNESS AND CONNECTOR**

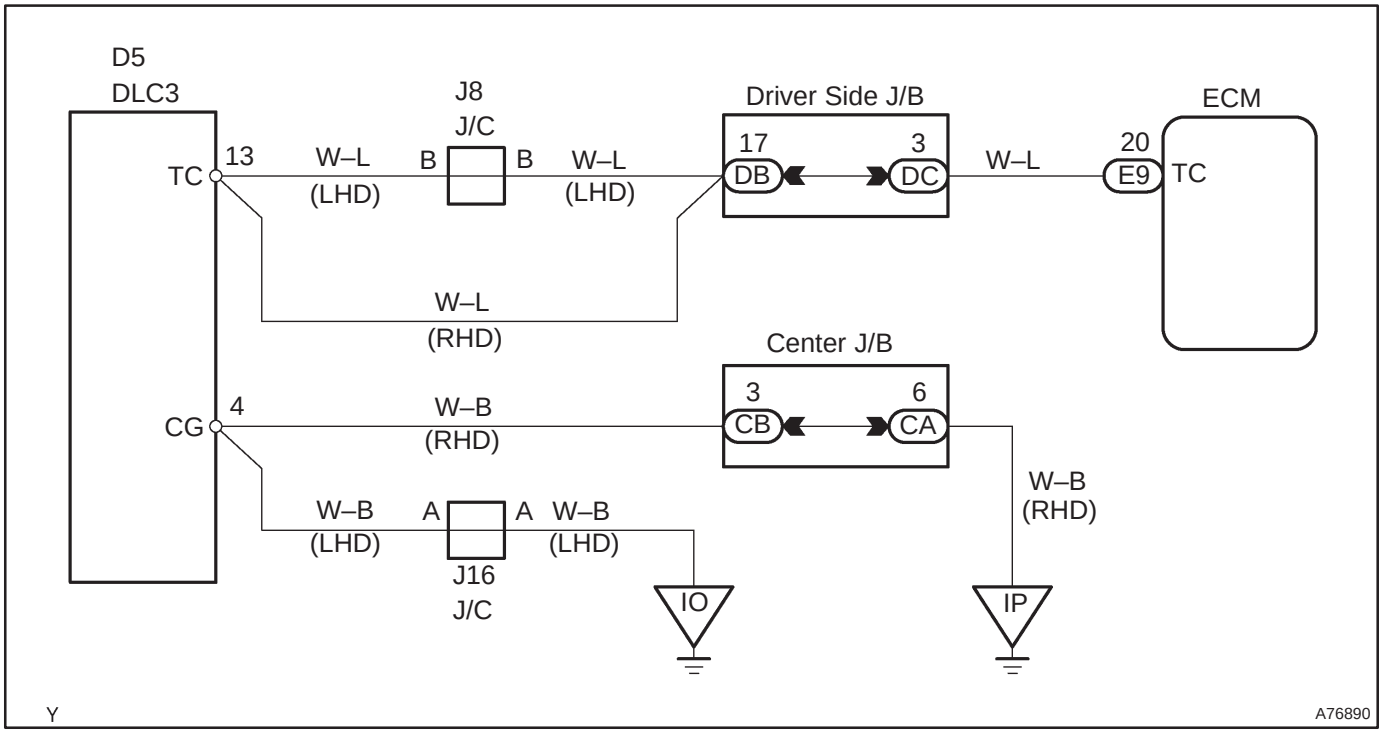
NG

4	INSPECT COMBINATION METER ASSY(CHK ENG CIRCUIT)

(a) See the combination meter troubleshooting on page 05–1509.

NG → **REPAIR OR REPLACE BULB OR COMBINATION METER ASSEMBLYSYSTEM OK**

OK



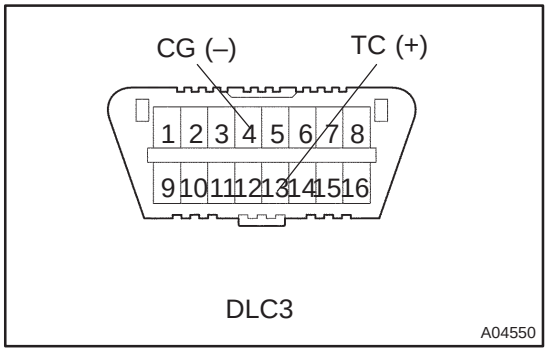
CHECK AND REPAIR HARNESS AND CONNECTOR

TC TERMINAL CIRCUIT

CIRCUIT DESCRIPTION

Terminals TC and CG are located in the DLC3. When connecting these terminals, DTCs in normal mode or check mode can be read through the CHK ENG flashing in the combination meter.

WIRING DIAGRAM



INSPECTION PROCEDURE

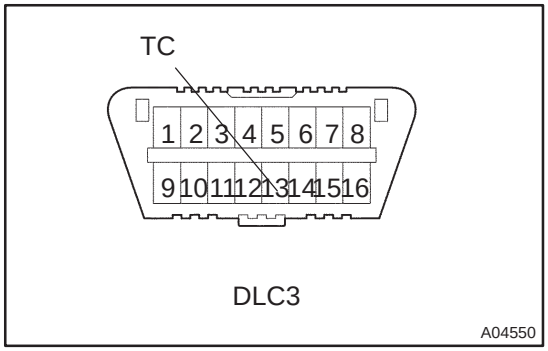
HINT:

- Even though terminal TC is not connected to terminal CG, the CHK ENG blinks.
- For the above phenomenon, an open or short in the wire harness, or malfunction inside the ECM is the likely cause.

1	CHECK DLC3(TC VOLTAGE)

(a) Turn the ignition switch ON.

(b) Measure the voltage between the terminals of the DLC3.



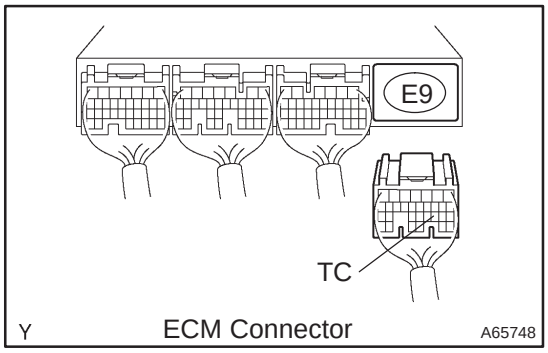
Standard:

Symbols (Terminal No.)	Specified condition
TC (13) – CG (4)	9 to 14 V

OK → **Go to step 3**

NG

2 CHECK HARNESS AND CONNECTOR(DLC3 – ECM)



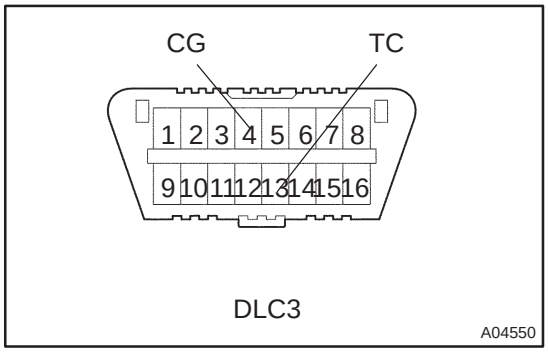
(a) Disconnect the E9 ECM connector.
(b) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
TC (13) – TC (E9–20)	Continuity

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
TC (13) or TC (E9–20) – Body ground	No continuity



NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK AND REPAIR HARNESS AND CONNECTOR

3 CHECK CHK ENG CONDITION

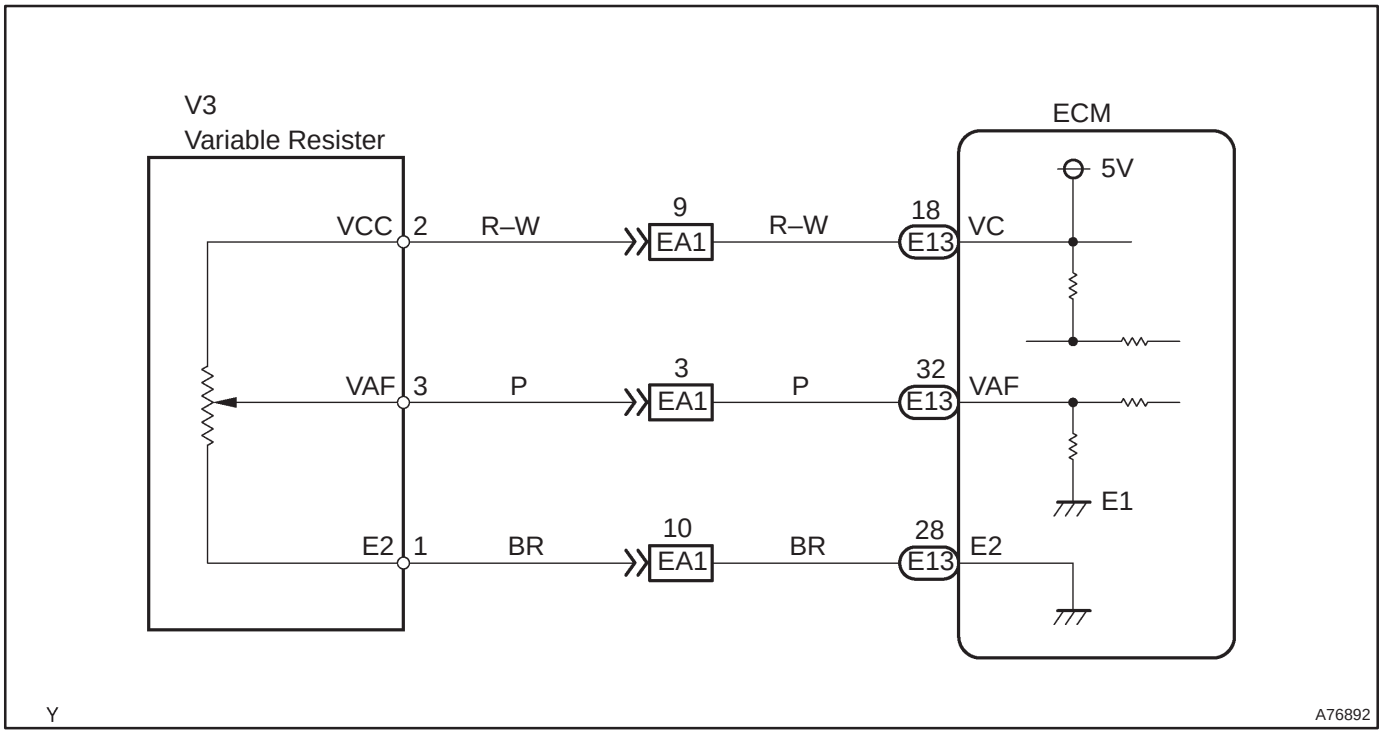
SST 09843–18040

(a) Turn the ignition switch ON.
(b) Connect between terminals TC and CG of the DLC3 connector.
(c) Check that the CHK ENG blinks.

Standard: CHK ENG blinks

NG → **CHECK AND REPLACE ECM (See page 01–32)**

OK



NO PROBLEM

VARIABLE RESISTOR CIRCUIT

CIRCUIT DESCRIPTION

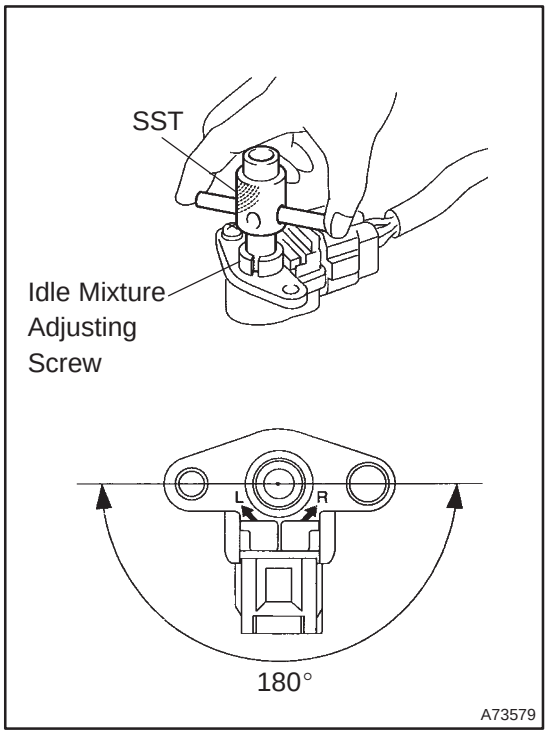
The variable resister has been adopted to leaded–type vehicle only.
This resistor is used change the air–fuel ratio of the air–fuel mixture.
The idle mixture is adjusted using this resistor.
Turning the idle mixture adjusting screw clockwise moves the contacts inside the resistor, raising the terminal VAF voltage. Conversely, turning the screw counterclockwise lowers the terminal VAF voltage.
When the terminal VAF voltage rises, the ECM increases the injection volume slightly, marking the air–fuel mixture a little richer.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Always use a CO meter when adjusting the idle mixture. If a CO meter is not available, DO NOT ATTEMPT TO ADJUST IDLE MIXTURE.



1	CHECK CO/HC (See page 14–101)

OK → CHECK FOR PROBLEM SYMPTOMS TABLE (See page 05–168)

NG

2	ADJUST CO CONCENTRATION

SST 09243–00020

(a) Same condition as step 1 this chart.

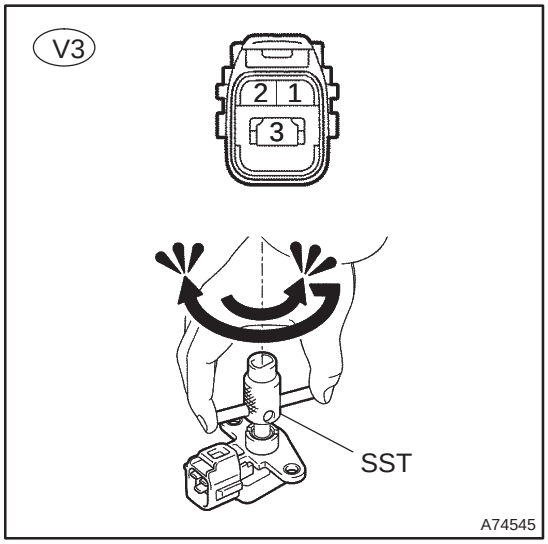
(b) Using SST, adjusting the idle mixture by turning the idle mixture adjusting screw in the variable resistor.

Result:

Result	Proceed
Connection: 1.5 ± 0.5 %	B
Change in CO connection	C
No change in CO connection	A

HINT:

- Always check idle speed after turning the idle mixture adjusting screw. If it is incorrect, readjust idle speed.
- Adjustable range of the idle mixture adjust to turn this screw is 180 degrees. Do not turn this screw more than it.



B → ADJUSTMENT COMPLETE

C → CHECK CO/HC (See page 14–101)

A

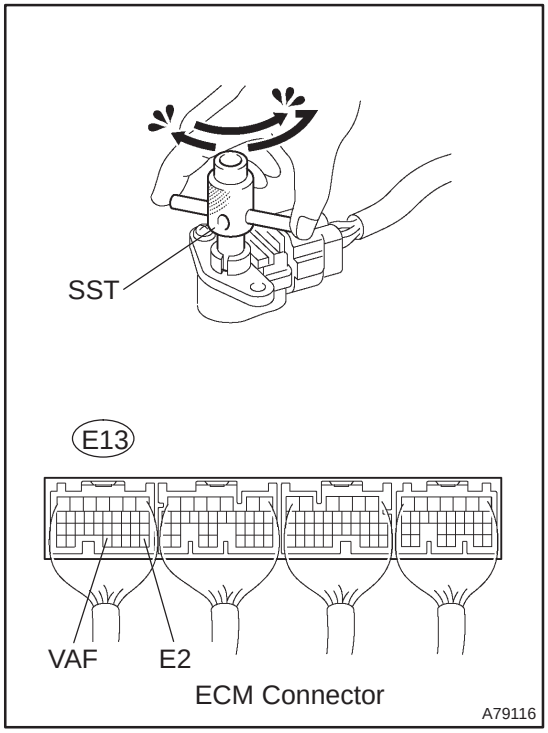
3 INSPECT VARIABLE RESISTOR

SST 09243–00020

(a) Measure the resistance between the terminals.
Resistance:

Symbols (Terminal No.)	Specified condition
1 – 2	3.5 – 6.5 Ω

(b) Measure the resistance between terminals 2 and 3 when turning the idle mixture adjusting screw fully clockwise and counterclockwise using SST
Resistance:



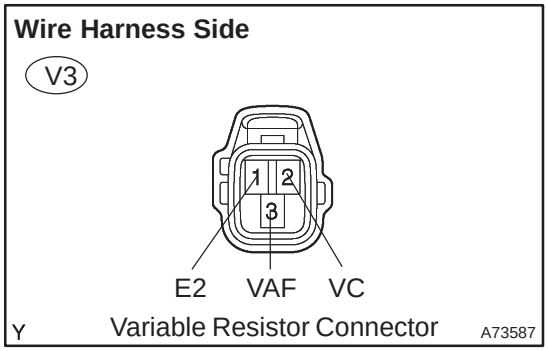
Symbols (Terminal No.)	Specified condition
2 – 3	Change from about 5 kΩ to 0 kΩ accordingly

NG → **REPLACE VARIABLE RESISTOR**

OK

4 CHECK ECM

SST 09243–00020



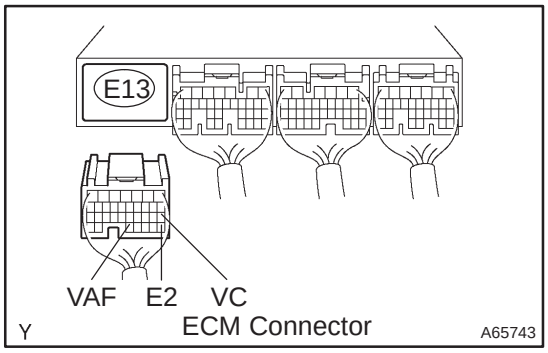
(a) Turn the ignition switch ON.
(b) Measure the voltage between the terminals of the E13 ECM connector while slowly turning the idle mixture adjusting screw first fully counterclockwise and then fully clockwise, using SST.
Voltage:

Symbols (Terminal No.)	Specified condition
VAF (E13–32) – E2 (E13–28)	Voltage changes smoothly from 0 V to about 5 V, i.e. does not suddenly jump up to 5 V down to 0 V

OK → **CHECK AND REPLACE ECM** (See page 01–32)

NG

5 CHECK HARNESS AND CONNECTOR(ECM – VARIABLE RESISTOR)



(a) Disconnect the V3 variable resistor connector.
(b) Disconnect the E13 ECM connector.
(c) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
VC (V3–2) – VC (E13–18)	Continuity
VAF (V3–3) – VAF (E13–32)	
E2 (V3–1) – E2 (E13–28)	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
VC (V3–2) or VC (E13–18) – Body ground	No continuity
VAF (V3–3) or VAF (E13–32) – Body ground	

OK

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

CHECK AND REPLACE ECM (See page 01–32)

SFI SYSTEM (1AZ–FSE)

05CDS–01

HOW TO PROCEED WITH TROUBLESHOOTING

1	VEHICLE BROUGHT TO WORKSHOP

2	CUSTOMER PROBLEM ANALYSIS (See page 05–293)

3	CONNECT THE HAND–HELD TESTER TO DLC3

HINT:
If the display indicates a communication fault in the tool, inspect the DLC3.

4	CHECK DTC AND FREEZE FRAME DATA (See page 05–294)

HINT:
Record or print DTC and freeze frame data, if needed.

5	CLEAR DTC AND FREEZE FRAME DATA (See page 05–294)

6	VISUAL INSPECTION

7	SETTING THE CHECK (TEST) MODE DIAGNOSIS (See page 05–294)

8	PROBLEM SYMPTOM CONFIRMATION

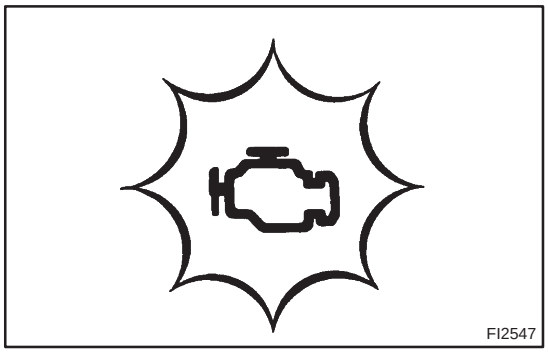
FI2547

PRE–CHECK

1. DIAGNOSIS SYSTEM

(a) Description for Euro–OBD (European spec.)

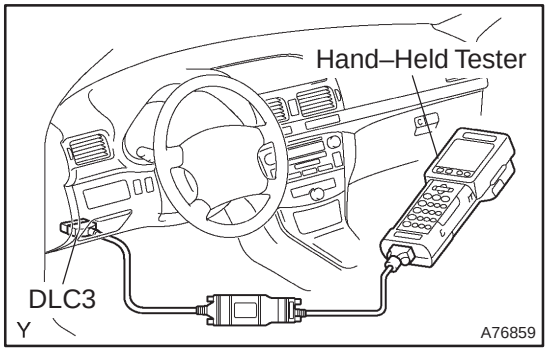
- When troubleshooting Euro–OBD vehicles, the only difference from the usual troubleshooting procedure is that you connect an OBD scan tool complying with ISO 15031–4 or a hand–held tester to the vehicle, and read off various data output from the vehicle's ECM.
- Euro–OBD regulations require that the vehicle's on–board computer illuminates the check engine warning light (CHK ENG) on the instrument panel when the computer detects a malfunction in the emission control system / components or in the power train control components which affect vehicle emissions, or a malfunction in the computer. In addition to an illumination of the CHK ENG when a malfunction is detected, the applicable Diagnostic Trouble Codes (DTCs) prescribed by ISO 15031–4 are recorded in the ECM memory (See page 05–309). If the malfunction does not reoccur in 3 consecutive trips, the CHK ENG goes off automatically but the DTCs remain recorded in the ECM memory.



- To check the DTCs, connect the OBD scan tool or hand–held tester to Data Link Connector 3 (DLC3) on the vehicle. The OBD scan tool or hand–held tester also enables you to erase the DTCs and check freeze frame data and various forms of engine data. (For operating instructions, see the OBD scan tool's instruction book.)
  DTCs include ISO controlled codes and manufacturer controlled codes. ISO controlled codes must be set as prescribed by the ISO, while manufacturer controlled codes can be set freely by the manufacturer within the prescribed limits (See DTC chart on page 05–309).
- The diagnosis system operates in the normal mode during normal vehicle use. It also has a check (test) mode for technicians to simulate malfunction symptoms and troubleshoot. Most DTCs use 2 trip detection logic* to prevent erroneous detection, and to ensure a thorough malfunction detection. By switching the ECM to the check (test) mode using hand–held tester when troubleshooting, a technician can cause the CHK ENG to illuminate for a malfunction that is only detected once or momentarily (Hand–held tester only) (See step 3).

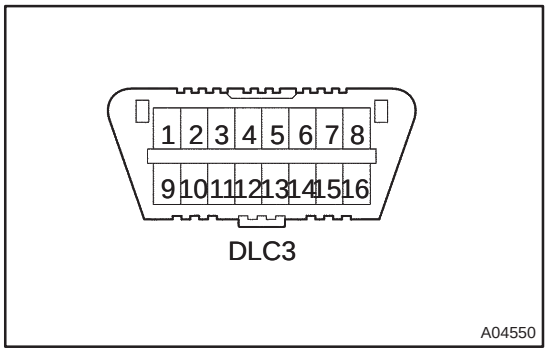
- * 2 trip detection logic
  When a logic malfunction is first detected, the malfunction is temporally stored in the ECM memory (1st trip). If the same malfunction is detected again during the second drive test, this second detection causes the CHK ENG to illuminate (2nd trip) (However, the ignition switch must be turned OFF between the 1st trip and 2nd trip).
- Freeze frame data:
  Freeze frame data records the engine condition when a misfire (DTCs P0300 – P0304) or fuel trim malfunction (DTCs P0171, P0172, P0174 and P0175) or other malfunction (first malfunction only) is detected.
  Because freeze frame data records the engine conditions (fuel system, calculated load, engine coolant temperature, fuel trim, engine speed, vehicle speed, etc.) when the malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine warmed up or not, the air–fuel ratio lean or rich, etc. at the time of the malfunction.
- Priorities for troubleshooting:
  If troubleshooting priorities for multiple DTCs are given in the applicable DTC chart, these should be followed.

If no instructions are given, troubleshoot according to the following priorities.



(1) DTCs other than fuel trim malfunction (DTCs P0171, P0172, P0174 and P0175) and misfire (DTCs P0300 – P0304).
(2) Fuel trim malfunction (DTCs P0171, P0172, P0174 and P0175).
(3) Misfire (DTCs P0300 – P0304).

FI2547



(b) Description for M–OBD (Except European spec.)

- When troubleshoot Multiplex OBD (M–OBD) vehicles, the only difference from the usual troubleshooting procedure is that you connect the hand–held tester to the vehicle, and read off various data output from the vehicle's ECM.

- The vehicle's on–board computer illuminates the check engine warning light (CHK ENG) on the instrument panel when the computer detects a malfunction in the computer itself or in drive system components. In addition to an illumination of the CHK ENG when a malfunction is detected, the applicable Diagnostic Trouble Codes (DTCs) are recorded in the ECM memory (See page 05–309). If the malfunction does not recur, the CHK ENG lamp will be disappeared by turning off the ignition switch but the recorded DTC will be remaining in the ECM memory.

- To check the DTCs, connect the hand–held tester to the Data Link Connector 3 (DLC3) on the vehicle. The hand–held tester also enables you to erase the DTCs and check the freeze frame data and various forms of engine data. (for operating instructions, see the instruction book.)
- The diagnosis system operates in the normal mode during normal vehicle use. It also has a check (test) mode for technicians to simulate malfunction symptoms and troubleshoot. Most DTCs use 2 trip detection logic* to prevent erroneous detection, and to ensure a thorough malfunction detection. By switching the ECM to the check (test) mode using hand–held tester when troubleshooting, a technician can cause the CHK ENG to illuminate for a malfunction that is only detected once or momentarily (Hand–held tester only) (See step 3).
- * 2 trip detection logic
  When a logic malfunction is first detected, the malfunction is temporally stored in the ECM memory (1st trip). If the same malfunction is detected again during the second drive test, this second detection causes the CHK ENG to illuminate (2nd trip) (However, the ignition switch must be turned OFF between the 1st trip and 2nd trip).
- Freeze frame data:
  Freeze frame data records the engine conditions (fuel system, calculator load, water temperature, fuel trim, engine speed, vehicle speed, etc.) when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

(c) Check the DLC3.
The vehicle's ECM uses the ISO 9141–2 (Euro–OBD)/ ISO 14230(M–OBD) communication protocol. The terminal arrangement of the DLC3 complies with ISO 15031–03 and matches the ISO 9141–2/ ISO 14230 format.

Symbol	Terminal No.	Connection/Voltage or Resistance	Condition
SIL	7	Bus + Line/Pulse generation	During transmission
CG	4	Chassis Ground – Body Ground/1 Ω or less	Always
SG	5	Signal Ground – Body Ground/1 Ω or less	Always
BAT	16	Battery Positive – Body Ground/9 to 14 V	Always

HINT:
If the display shows "UNABLE TO CONNECT TO VEHICLE" when you have connected the cable of the hand–held tester to the DLC3, turned the ignition switch ON and operated the hand–held tester, there is a problem on the vehicle side or tool side.

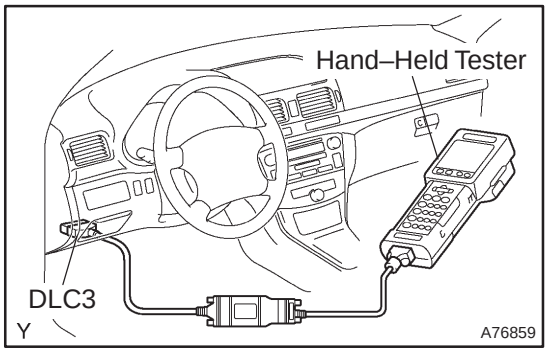
- If communication is normal when the tool is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still impossible when the tool is connected to another vehicle, the problem is probably in the tool itself, so consult the Service Department listed in the tool's instruction manual.

(d) Inspect the battery voltage.
Battery voltage: 11 to 14 V

If voltage is below 11 V, recharge the battery before proceeding.

(e) Check the CHK ENG.
(1) The CHK ENG lamp comes on when the ignition switch is turned ON and the engine is not running.

HINT:
If the CHK ENG is not illuminated, troubleshoot the combination meter.



(2) When the engine is started, the CHK ENG should go off. If the lamp remains on, it means that the diagnosis system has detected a malfunction or abnormality in the system.

2. DTC CHECK (Normal Mode)

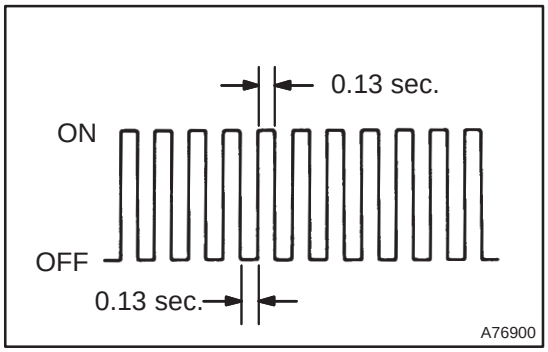
NOTICE:

Hand–held tester only:

When the diagnosis system is switched from the normal mode to the check (test) mode, it erases all DTCs and freeze frame data recorded in the normal mode. So before switching modes, always check the DTCs and freeze frame data, and note them down.

(a) Checking the DTCs using the hand–held tester.
  (1) Connect the hand–held tester to the DLC3.
  (2) Turn the ignition switch ON and switch the hand–held tester main switch ON.
  (3) Use the hand–held tester to check the DTCs and freeze frame data and note them down (for operating instructions, see the hand–held tester's instruction book).
  (4) See page 05–309 to confirm the details of the DTCs.

HINT:
In the event that 2 or more DTCs are detected, the CHK ENG lamp will indicate the smaller number DTC first.



(b) Clearing the DTCs using the hand–held tester.
  (1) Connect the hand–held tester to the DLC3.
  (2) Turn the ignition switch ON.
  (3) When operating the hand–held tester to erase the codes, the DTCs and freeze frame data will be erased. (See the hand–held tester's instruction book for operating instructions.)

(c) Clearing the DTCs not using the hand–held tester.
  (1) Disconnect the battery terminal or remove the EFI and THROTTLE fuses from the engine room R/B No. 1 for more than 60 seconds.

3. DTC CHECK (Check Mode)

HINT:
Hand–held tester only:
Compared to the normal mode, the check mode has more sensing ability to detect malfunctions.
Furthermore, the same diagnostic items which are detected in the normal mode can also be detected in the check (test) mode.

(a) Procedure for check mode using the hand–held tester.
  (1) Check the initial conditions
    - Battery positive voltage 11 V or more.
    - Throttle valve fully closed.
    - Transmission in the "P" or "N" position.
    - Air conditioning switched OFF.
  (2) Turn the ignition switch OFF.
  (3) Connect the hand–held tester to the DLC3.
  (4) Turn the ignition switch ON and switch the hand–held tester main switch ON.

(5) Switch the hand–held tester from the normal mode to the check (test) mode. The CHK ENG blinks in 0.13 sec. intervals as shown in the illustration.

NOTICE:

If the hand–held tester switches the ECM from the normal mode to the check mode or vice–versa, or if the ignition switch is turned from ON to ACC or OFF during the check mode, the DTC and freeze frame data will be erased.

(6) Start the engine. (The CHK ENG goes off after the engine start.)

(7) Simulate the conditions of the malfunction described by the customer.

NOTICE:

Leave the ignition switch ON until you have checked the DTC, etc.

(8) After simulating the malfunction conditions, use the hand–held tester diagnosis selector to check the DTCs and freeze frame data, etc.

HINT:

Be sure not to turn the ignition switch OFF, because the diagnosis system is changed from the check mode to the normal mode and will result in all of the DTCs and freeze frame data being erased.

(9) After checking the DTC, inspect the applicable circuit.

(b) Clearing the DTCs using the hand–held tester.

(1) Connect the hand–held tester to the DLC3.

(2) Turn the ignition switch ON.

(3) When operating the hand–held tester to erase the codes, the DTCs and freeze frame data will be erased. (See the hand–held tester's instruction book for operating instructions.)

(c) Clearing the DTCs not using the hand–held tester.

(1) Disconnect the battery terminal or remove the EFI and THROTTLE fuses from the engine room R/B No. 1 for more than 60 seconds.

4. FAIL–SAFE CHART

If any of the following codes is recorded, the ECM enters into the fail–safe mode.

DTC No.	Fail–Safe Operation	Fail–Safe Deactivation Conditions
P0031 P0032 P0037 P0038 P0051 P0052 P0057 P0058	Faulty heater circuit is turned off.	Ignition switch is OFF.
P0100 P0102 P0103	Ignition timing is calculated based on an engine speed and a throttle opening angle.	”Pass” detection has occurred. Upon this occurrence, the ECM will return to normal mode.
P0105 P0107 P0108	• Intake air pressure is controlled with a calculated value in proportion to the throttle opening angle and the engine speed. • Limit the engine speed to 3,000 rpm or less.	”Pass” detection has occurred. Upon this occurrence, the ECM will return to normal mode.
P0110 P0112 P0113	Intake air temperature is fixed at 20˚C (68˚F)	”Pass” detection has occurred. Upon this occurrence, the ECM will return to normal mode.
P0115 P0117 P0118	Engine coolant temperature is fixed at 80˚C (176˚F)	”Pass” detection has occurred. Upon this occurrence, the ECM will return to normal mode.
P0120 P0121 P0122 P0123 P0220 P0222 P0223 P2135	Turn off the power for the throttle motor, return the throttle valve in position using the return spring, and fuel cut intermittent.	Repeat the following conditions at least 2 seconds or more with the throttle position switch closed: • VTA is more than 0.1 V but less than 0.95 V • Engine speed is 0 km/h
P0190 P0191	• Stop the high–pressure pump operation. • Limit the engine speed to 2,000 rpm or less.	After it is returned to normal condition, turn the ignition switch ON.
P0200	Turn off the INJ relay and cut the power for the EDU.	After it is returned to normal condition, turn the ignition switch ON.
P0201 P0202 P0203 P0204	• Stop fuel injection for an abnormal cylinder and related other cylinders. • Limit the engine speed to 3,000 rpm or less.	
P0325 P0327 P0328	Maximum timing retardation	Ignition switch is OFF.
P0351 P0352 P0353 P0354	Stop fuel injection for all the cylinders.	”Pass” detection has occurred. Upon this occurrence, the ECM will return to normal mode.
P0604 P0606 P0607 P0657	Turn off the power for the throttle motor, return the throttle valve in position using the return spring, and fuel cut intermittent.	After it is returned to normal condition, turn the ignition switch ON.
P1235	• Stop the high–pressure pump operation. • Limit the engine speed to 2,000 rpm or less.	After it is returned to normal condition, turn the ignition switch ON.
P2008	Force IACV to close.	After it is returned to normal condition, turn the ignition switch ON.

DTC No.	Fail–Safe Operation	Fail–Safe Deactivation Conditions
P2102 P2103 P2111 P2112 P2118 P2119	Turn off the power for the throttle motor, return the throttle valve in position using the return spring, and fuel cut intermittent.	After it is returned to normal condition, turn the ignition switch ON.
P2120 P2121 P2122 P2123 P2125 P2127 P2128 P2138	• If both VPA1 and VPA2 are malfunctioning: Fixed at idle • If either of VPA1 or VPA2 is malfunctioning: Fuel cut intermittently	After it is returned to normal condition, turn the ignition switch ON.

5. CHECK FOR INTERMITTENT PROBLEMS

Hand–held tester only:

By putting the vehicle's ECM in the check mode, the 1 trip detection logic is possible instead of the 2 trip detection logic, and the sensitivity to detect faults is increased. This makes it easier to detect intermittent problems.

(a) Clear the DTCs (See step 2).
(b) Set the check mode (See step 3).
(c) Perform a simulation test (See page 01–22).
(d) Check the connector and terminal (See page 01–32).
(e) Wiggle the harness and the connector (See page 01–32).

6. DATA LIST

HINT:

Using the DATA LIST displayed by the hand–held tester, you can read the value of the switches, sensors, actuators and so on without parts removal. Reading the DATA LIST as a first step of troubleshooting is one method to shorten diagnostic time.

NOTICE:

The values given below for "Normal Condition" are representative values. A vehicle may still be normal even if its value differs from those listed here. So, do not solely depend on the "Normal Condition" here when deciding whether a part is faulty or not.

(a) Warm up the engine.
(b) Turn the ignition switch OFF.
(c) Connect the hand–held tester to the DLC3.
(d) Turn the ignition switch ON.
(e) Push the "ON" button of the hand–held tester.
(f) Select the item "DIAGNOSIS / OBD/MOBD / DATA LIST".
(g) According to the display on tester, read the "DATA LIST".

Hand–held Tester Display	Measurement Item/Range (Display)	Normal Condition *1	Diagnostic Note
INJECTOR	Injection period of the No. 1 cylinder/ Min.: 0 ms, Max.: 32.64 ms	Idling: 0.40 to 0.78 ms	—
IGN ADVANCE	Ignition timing advance for No. 1 cylinder/ Min.: –64 deg., Max.: 63.5 deg.	Idling: BTDC 5 to 23°	—
CALC LOAD	Calculated load by ECM/ Min.: 0 %, Max.: 100 %	• Idling: 21.6 to 31.4 % • Running without load (2,500 rpm): 19.6 to 29.4 %	—

Hand–held Tester Display	MeasurementItem/Range (Display)	Normal Condition *1	Diagnostic Note
MAF	Air flow rate from MAF sensor/ Min.: 0 gm/s, Max.: 655 gm/s	• Idling: 3.2 to 4.7 gm/s • Running without load (2,500 rpm): 13.1 to 18.9 gm/s	If the value is Approximately 0.0 gm/s: • Mass air flow meter power source circuit open • VG circuit open or short If the value is 160.0 gm/s or more: • E2G circuit open
MAP	Absolute pressure inside intake manifold/ Min.: 0 kPa, Max.: 224 kPa	• Idling: 22 to 32 kPa • Running without load (2,500 rpm): 20 to 30 kPa	If the value is Approximately 0.0 kPa: • PIM circuit short If the value is 142.0 kPa or more: • VC circuit open or short • PIM circuit open • E2 circuit open
ENGINE SPD	Engine speed/ Min.: 0 rpm, Max.: 16383 rpm	Idling: 625 to 725 rpm	—
COOLANT TEMP	Coolant temperature/ Min.: –40°C, Max.: 140°C	After warming up: 80 to 95°C (176 to 203°F)	If the value is –40°C (–40°F): • Sensor circuit is open. If the value is 140°C (284°F): • Sensor circuit is shorted.
INTAKE AIR	Intake air temperature/ Min.: –40°C, Max.: 140°C	Equivalent to Ambient Temp.	
THROTTLE POS	Absolute throttle position sensor/ Min.: 0 %, Max.: 100 %	• Throttle fully closed: 10 to 24 % • Throttle fully open: 64 to 96 %	Read the value with ignition switch ON (Do not start engine).
CTP SW	Closed throttle position switch/ ON or OFF	• Throttle fully closed: ON • Throttle open: OFF	—
VEHICLE SPD	Vehicle speed/ Min.: 0 km/h, Max.: 255 km/h	Actual vehicle speed	Speed indicated on speedometer
ACCEL POS #1	Accelerator pedal position sensor No.1 output voltage/ Min.: 0 V, Max.: 5 V	• Accelerator pedal released: 0.5 to 1.1 V • Accelerator pedal depressed: 2.5 to 4.6 V	Read the value with ignition switch ON (Do not start engine).
ACCEL POS #2	Accelerator pedal position sensor No.2 output voltage/ Min.: 0 V, Max.: 5 V	• Accelerator pedal released: 1.5 to 2.9 V • Accelerator pedal depressed: 3.5 to 5.5 V	Read the value with ignition switch ON (Do not start engine).
THROTTLE POS #2	Throttle position sensor No.2 output voltage/ Min.: 0 V, Max.: 5 V	• Throttle fully closed: 2.1 to 3.1 V • Throttle fully open: 4.5 to 5.5 V	Read the value with ignition switch ON (Do not start engine).
THROTTLE TARGT	Target position of throttle valve/ Min.: 0 V, Max.: 5 V	Idling: 0.4 to 1.1 V	—
THROTTLE OPN DUTY	Throttle motor opening duty ratio/ Min.: 0 %, Max.: 100 %	Throttle fully closed: 0 %	• When accelerator pedal is depressed, duty ratio is increased. • Read the value with ignition switch ON (Do not start engine)
THROTTLE CLS DUTY	Throttle motor closed duty ratio/ Min.: 0 %, Max.: 100 %	Throttle fully closed: 0 %	• When accelerator pedal is released quickly, duty ratio is increased. • Read the value with ignition switch ON (Do not start engine)
THROTTLE MOT	Whether or not throttle motor control is permitted/ ON or OFF	Idling: ON	—
+BM	Whether or not electric throttle control system power is inputted/ ON or OFF	Idling: ON	—

Hand–held Tester Display	MeasurementItem/Range (Display)	Normal Condition *1	Diagnostic Note
ACCEL IDL POS	Whether or not accelerator pedal position sensor is detecting idle/ ON or OFF	Idling: ON	—
THROTTLE IDL POS	Whether or not throttle position sensor is detecting idle/ ON or OFF	Idling: ON	—
FAIL #1	Whether or not fail safe function is executed/ ON or OFF	ETCS has failed: ON	—
FAIL #2	Whether or not fail safe function is executed/ ON or OFF	ETCS has failed: ON	—
THROTTLE INITIAL	Throttle fully closed learned value Min.: 0 V, Max.: 5 V	0.5 to 0.9 V	—
ACCEL LEARN VAL	Accelerator fully closed learned value Min.: 0 V, Max.: 5 V	0.4 to 1.4 V	—
THROTTLE MOT	Throttle motor current Min.: 0 A, Max.: 20 A	Idling: 0 to 3.0 A	—
O2S B1 S1	Heated oxygen sensor output voltage for bank 1 sensor 1/ Min.: 0 V, Max.: 1.0 V	Driving (50 km/h, 31 mph): 0.1 to 0.9 V	Performing the INJ VOL or A/F CONTROL function of the ACTIVE TEST enables the user to check the voltage output of each sensor.
O2S B1 S2	Heated oxygen sensor output voltage for bank 1 sensor 2/ Min.: 0 V, Max.: 1.0 V		
O2S B2 S1	Heated oxygen sensor output voltage for bank 2 sensor 1/ Min.: 0 V, Max.: 1.0 V		
O2S B2 S2	Heated oxygen sensor output voltage for bank 2 sensor 2/ Min.: 0 V, Max.: 1.0 V		
SHORT FT #1	Short term fuel trim of bank 1/ Min.: –100 %, Max.: 100%	0 ± 20 %	This item is the short–term fuel compensation used to maintain the air–fuel ratio at stoichiometric air–fuel ratio
LONG FT #1	Long term fuel trim of bank 1/ Min.: –100 %, Max.: 100 %	0 ± 20 %	This item is the overall fuel compensation carried out in long–term to compensate for a continual deviation of the short–term fuel trim from the central value.
TOTAL FT #1	Total fuel trim bank 1: Average value for fuel trim system of bank 1/ Min.: 0.5, Max.: 1.496	Idling: 0.5 to 1.4	—
SHORT FT #2	Short term fuel trim of bank 2/ Min.: –100 %, Max.: 100 %	0 ± 20 %	This item is the short–term fuel compensation used to maintain the air–fuel ratio at stoichiometric air–fuel ratio
LONG FT #2	Long term fuel trim of bank 2/ Min.: –100 %, Max.: 100 %	0 ± 20 %	This item is the overall fuel compensation carried out in long–term to compensate for a continual deviation of the short–term fuel trim from the central value.
TOTAL FT #2	Total fuel trim bank 2: Average value for fuel trim system of bank 2/ Min.: 0.5, Max.: 1.496	Idling: 0.5 to 1.4	—

Hand–held Tester Display	MeasurementItem/Range (Display)	Normal Condition *1	Diagnostic Note
O2FT B1 S1	Short term fuel trim associated with the bank 1 sensor 1/ Min.: –100 %, Max.: 100 %	0 ± 20 %	Same as SHORT FT #1
O2FT B1 S2	Short term fuel trim associated with the bank 1 sensor 2/ Min.: –100 %, Max.: 100 %	0 ± 20 %	Same as SHORT FT #1
O2FT B2 S1	Short term fuel trim associated with the bank 2 sensor 1/ Min.: –100 %, Max.: 100 %	0 ± 20 %	Same as SHORT FT #2
O2FT B2 S2	Short term fuel trim associated with the bank 2 sensor 2/ Min.: –100 %, Max.: 100 %	0 ± 20 %	Same as SHORT FT #2
FUEL SYS #1	Fuel system status (Bank1) / OL or CL or OL DRIVE or OL FAULT or CL FAULT	Idling after warming up: CL	• OL: Open Loop–has not yet satisfied conditions to go closed loop. • CL: Closed Loop–using heated oxygen sensor(s) as feed back for fuel control. • OL DRIVE: Open loop due to driving conditions. (fuel enrichment) • OL FAULT: Open loop due to detected system fault. • CL FAULT: Closed loop but one of heated oxygen sensors, which is used for fuel control, is functioningimproperly.
FUEL SYS #2	Fuel system status (Bank2) / OL or CL or OL DRIVE or OL FAULT or CL FAULT		
FC IDL	Fuel cut idle/ ON or OFF	Fuel cut operation: ON	FC IDL= ”ON” when throttle valve fully closed and engine speed is over 1,500 rpm.
MIL	MIL status/ ON or OFF	MIL ON: ON	—
O2 LR B1 S1	Oxygen sensor lean rich bank 1 sensor 1: Response time for oxygen sensor output to switch from lean to rich/ Min.: 0 ms, Max.: 16,711 ms	Idling after warming up: 0 to 1,000 msec.	—
O2 LR B2 S1	Oxygen sensor lean rich bank 2 sensor 1: Response time for oxygen sensor output to switch from lean to rich/ Min.: 0 ms, Max.: 16,711 ms		
O2 RL B1 S1	Oxygen sensor rich lean bank 1 sensor 1: Response time for oxygen sensor output to switch from rich to lean/ Min.: 0 ms, Max.: 16,711 ms		
O2 RL B2 S1	Oxygen sensor rich lean bank 2 sensor 1: Response time for oxygen sensor output to switch from rich to lean/ Min.: 0 ms, Max.: 16,711 ms		
STARTER SIG	Starter signal/ ON or OFF	Cranking: ON	—
A/C SIG	A/C signal/ ON or OFF	A/C ON: ON	—
PNP SW [NSW] *2	Park/neutral position switch signal/ ON or OFF	P or N position: ON	—

Hand–held Tester Display	MeasurementItem/Range (Display)	Normal Condition *1	Diagnostic Note
ELECT LOAD SIG	Electrical load signal/ ON or OFF	• Tail light switch ON: ON • Defogger switch ON: ON	—
STOP LIGHT SW	Stop light switch/ ON or OFF	• Brake pedal depressed: ON • Brake pedal released: OFF	—
PS OIL PRESS SW	Power steering signal/ ON or OFF	• While turning the steering wheel: ON • While not turning the steering wheel: OFF	The idle–up control is performed when PS is ON.
PS SIGNAL	Power steering signal/ ON or OFF	When the steering wheel is turned: ON	This signal is usually ON status until the IG switch is turned OFF.
SCV VSV	VSV status for intake air control valve/ ON or OFF	VSV operation: ON	—
FUEL PUMP / SPD	Fuel pump/speed status/ ON/H or OFF/M,L	Idling: ON	—
EVAP VSV	VSV status for EVAP control/ ON or OFF	VSV operating: ON	VSV for EVAP is controlled by the ECM (ground side duty control)
VVT CTRL B1	VVT control status (bank 1)/ ON or OFF	VVT system operation: ON	—
IGNITION	Ignition counter/ Min.: 0, Max.: 400	0 to 400	—
CYL #1, #2, #3, #4	Misfire ratio of the cylinder 1 to 4/ Min.: 0 %, Max.: 50 %	0 %	This item is displayed in only idling
MISFIRE RPM	Engine RPM for first misfire range/ Min.: 0 rpm, Max.: 6,375 rpm	Misfire 0: 0 rpm	—
FC TAU	Fuel Cut TAU: Fuel cut during very light load/ ON or OFF	Fuel cut operating: ON	The fuel cut is being performed under very light load to prevent the engine combustion from becoming incomplete.
CHECK MODE	Check mode/ ON or OFF	Check mode ON: ON	See step 3
O2 RL B1 S2	Oxygen sensor rich lean bank 1 sensor 2: Response time for oxygen sensor output to switch from rich to lean/ Min.: 0 ms, Max.: 16,702.5 ms	Idling after warming up: 0 to 1,000 msec.	—
O2 RL B2 S2	Oxygen sensor rich lean bank 2 sensor 2: Response time for oxygen sensor output to switch from rich to lean/ Min.: 0 ms, Max.: 16,702.5 ms		
MIL ON RUN DIST	Distance since activation of check engine warning light/ Min.: 0 km, Max.: 65,535 km	When there is no DTC: 0 km	—
FUEL PRESS	Fuel high pressure inside fuel delivery pipe/ Min.: 0 MPa, Max.: 819 MPa	• Idling: 8 to 13 MPa • Running without load (3,000 rpm): 9.5 to 10.5 MPa	—

*1: If no conditions are specifically stated for ”Idling”, it means the shift lever is at the N or P position, the A/C switch is OFF and all accessory switches are OFF.
*2: For A/T only

7. ACTIVE TEST

HINT:

Performing the ACTIVE TEST using the hand–held tester allows the relay, VSV, actuator and so on to operate without parts removal. Performing the ACTIVE TEST as a first step of troubleshooting is one method to shorten diagnostic time.

It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Warm up the engine.
(b) Turn the ignition switch OFF.
(c) Connect the hand–held tester to the DLC3.
(d) Turn the ignition switch ON.
(e) Push the ”ON” button of the hand–held tester.
(f) Select the item ”DIAGNOSIS / OBD/MOBD / ACTIVE TEST”
(g) According to the display on tester, perform the ”ACTIVE TEST”.

Hand–held Tester Display	Test Details	Diagnostic Note
INJ VOL	[Test Details] Control the injection volume Min.: –12.5 %, Max.: 25 % [Vehicle Condition] Engine speed: 3,000 rpm or less	• All injectors are tested at once. • Injection volume is gradually changed between –12.5 and 25 %.
A/F CONTROL	[Test Details] Control the injection volume –12.5 or 25 % (Change the injection volume –12.5 % or 25 %.) [Vehicle Condition] Engine speed: 3,000 rpm or less	The following procedure of A/F CONTROL enables the user to check its output (show its graph indication) of sensor 1 and sensor 2: For displaying the graph indication, enter ”ACTIVE TEST / A/F CONTROL / USER DATA”, then select ”O2S B1 S1 and O2S B1 S2” by pressing ”YES” button and push ”ENTER” button before pressing ”F4” button.
SCV VSV	[Test Details] Activate the VSV for intake air control valve. ON or OFF	—
EVAP VSV (ALONE)	[Test Details] Activate the VSV for EVAP control ON or OFF	—
FUEL PUMP / SPD	[Test Details] Control the fuel pump ON or OFF	—
VVT CTRL B1	[Test Details] Active the VVT system (Bank 1). ON or OFF	• ON: Rough idle or engine stall. • OFF: Normal engine speed.
TC/TE1	[Test Details] Connect the TC and TE1 ON or OFF	—
FC IDL PROHBT	[Test Details] Control the idle fuel cut prohibit ON or OFF	—

BASIC INSPECTION

When the malfunction code is not confirmed in the DTC check, troubleshooting should be carried out in all the possible circuits considered as causes of the problems. In many cases, by carrying out the basic engine check shown in the following flow chart, the location causing the problem can be found quickly and efficiently. Therefore, using this check is essential in the engine troubleshooting.

1	CHECK BATTERY VOLTAGE

NOTICE:
Carry out this check with the engine stopped and ignition switch OFF.

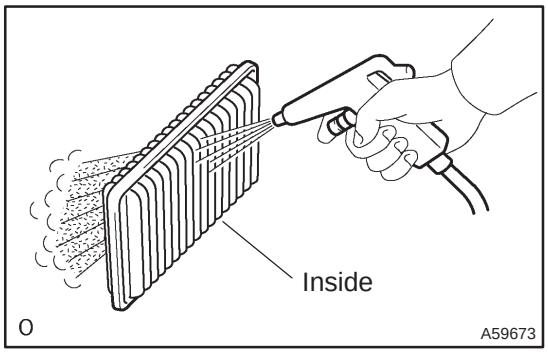
	OK	NG
Voltage	11 V or more	Less than 11 V

NG → **CHARGE OR REPLACE BATTERY**

OK

2	CHECK IF ENGINE WILL CRANK

NG → **PROCEED TO PROBLEM SYMPTOMS TABLE ON PAGE 05–320**



OK

3	CHECK IF ENGINE STARTS

NG → **GO TO STEP 7**

OK

4	CHECK AIR FILTER

(a) Visually check that the air filter is not excessively dirty or oily.

NOTICE:
If necessary, clean the filter with compressed air. First blow from the inside thoroughly, then blow from the outside of the filter.

NG → **CLEAN OR REPLACE**

OK

5	CHECK IDLE SPEED (See page 14–181)

NG → **PROCEED TO PROBLEM SYMPTOMS TABLE ON PAGE 05–320**

OK

6	CHECK IGNITION TIMING (See page 14–181)

NG → PROCEED TO PAGE AND CONTINUE TO TROUBLESHOOT

OK

PROCEED TO PROBLEM SYMPTOMS TABLE ON PAGE 05–320

7	CHECK FUEL PRESSURE (See page 11–33)

NG → PROCEED TO PAGE 11–33 AND CONTINUE TO TROUBLESHOOT

OK

8	CHECK FOR SPARK (See page 18–12)

NG → PROCEED TO PAGE 18–12 AND CONTINUE TO TROUBLESHOOT

OK

PROCEED TO PROBLEM SYMPTOMS TABLE ON PAGE 05–320

05CID–01

DIAGNOSTIC TROUBLE CODE CHART

HINT:

Parameters listed in the chart may not be exactly the same as your readings due to the type of instrument or other factors.

If a malfunction code is displayed during the DTC check in the check mode, check the circuit for the codes listed in the table below. For details of each code, refer to the ”See page ” under the respective ”DTC No.” in the DTC chart.

DTC No. (See Page)	Detection Item	Trouble Area	*1 CHK ENG	Memory
P0010 (05–322)	Camshaft Position ”A” Actuator Circuit (Bank 1)	• Open or short in OCV circuit • OCV • ECM	○	○
P0011 (05–325)	Camshaft Position ”A” –Timing Over– Advanced or System Performance (Bank 1)	• Valve timing • OCV • VVT controller assembly • ECM	○	○
P0012 (05–325)	Camshaft Position ”A” –Timing Over– Retarded (Bank 1)		○	○
P0016 (05–329)	Crankshaft Position – Camshaft Position Correlation (Bank 1 Sensor A)	• Mechanical system (Timing chain has jumped a tooth, chain stretched) • ECM	○	○
P0031 (05–330)	Oxygen Sensor Heater Circuit Low (Bank 1 Sensor 1)	• Open in heater circuit of heated oxygen sensor • Heated oxygen sensor heater • EFI relay • EFI fuse • EFI No. 2 fuse • ECM	○	○
P0032 (05–330)	Oxygen Sensor Heater Circuit High (Bank 1 Sensor 1)	• Short in heater circuit of heated oxygen sensor • Heated oxygen sensor heater • ECM	○	○
P0037 (05–330)	Oxygen Sensor Heater Control Circuit Low (Bank 1 Sensor 2)	• Same as DTC No. P0031	○	○
P0038 (05–330)	Oxygen Sensor Heater Control Circuit High (Bank 1 Sensor 2)	• Same as DTC No. P0032	○	○
P0051 (05–330)	Oxygen Sensor Heater Circuit Low (Bank 2 Sensor 1)	• Same as DTC No. P0031	○	○
P0052 (05–330)	Oxygen Sensor Heater Circuit High (Bank 2 Sensor 1)	• Same as DTC No. P0032	○	○
P0057 (05–330)	Oxygen Sensor Heater Control Circuit Low (Bank 2 Sensor 2)	• Same as DTC No. P0031	○	○
P0058 (05–330)	Oxygen Sensor Heater Control Circuit High (Bank 2 Sensor 2)	• Same as DTC No. P0032	○	○
P0100 (05–336)	Mass or volume Air Flow Circuit	• Open or short in mass air flow meter circuit • Mass air flow meter • ECM	○	○
P0102 (05–336)	Mass or volume Air Flow Circuit Low Input		○	○
P0103 (05–336)	Mass or volume Air Flow Circuit High Input		○	○

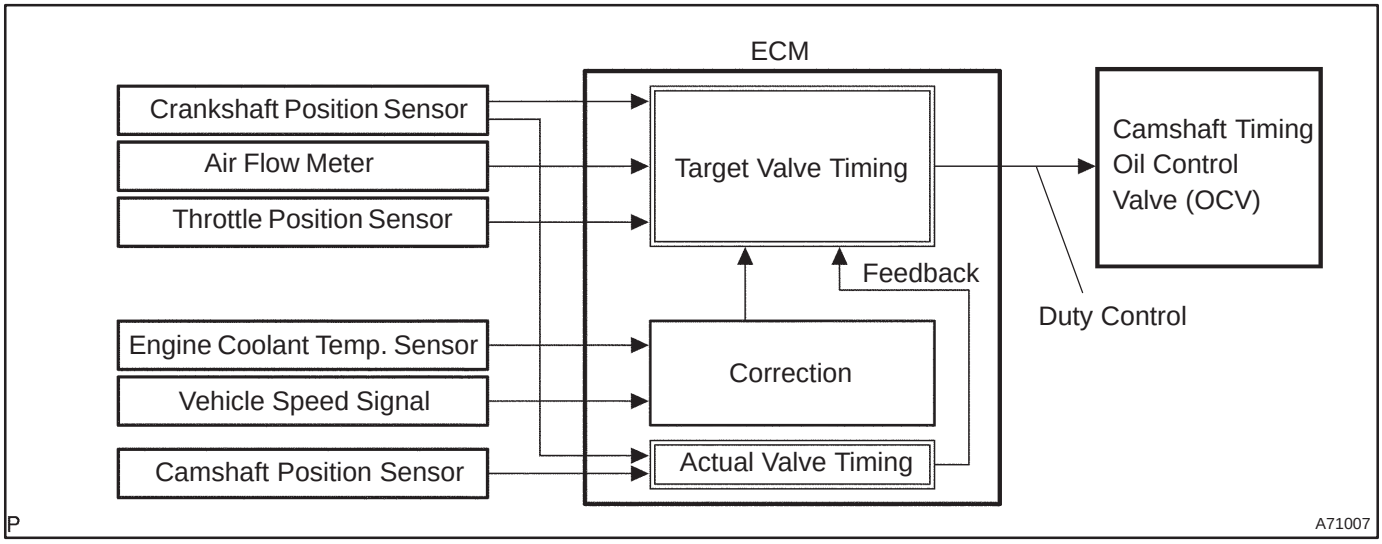
		IG switch ON	9 to 14
KNK1 (E12–1) – EKNK (E12–2)	B – W	Maintain engine speed at 4,000 rpm after warming up	Pulse generation (See page 05–429)
OC1+ (E11–16) – OC1– (E11–15)	W–G – Y–B	IG switch ON	Pulse generation (See page 05–322)
EVP1 (E13–34) – E01 (E13–7)	W–G – W–B	IG switch ON	9 to 14
SCV (E13–5) – E1 (E11–1)	L–B – BR	IG switch ON	9 to 14
PIM (E13–33) – E2 (E13–28)	G–W – BR	IG switch ON	3.3 to 3.9
		Apply vacuum 26.7 kPa (200 mmHg, 7.9 in.Hg)	2.6 to 3.0
PB (E13–26) – E2 (E13–28)	Y – BR	IG switch ON	3.3 to 3.9
		Apply vacuum 26.7 kPa (200 mmHg, 7.9 in.Hg)	2.6 to 3.0
PR (E13–23) – E2 (E13–28)	Y–G – BR	Idling	2.1 to 3.2
FP+ (E12–6) – E1 (E11–1) FP– (E12–3) – E1 (E11–1)	R – BR G – BR	Idling	Pulse generation (See page 05–477)
STA (E13–17) – E1 (E11–1)	B–Y – BR	Shift position in neutral, IG switch START	6.0 or more
STP (E10–19) – E1 (E11–1)	G–W – BR	Brake pedal is depressed	9 to 14
		Brake pedal is released	Below 1.5
ST1– (E10–12) – E1 (E11–1)	G–W – BR	IG switch ON, Brake pedal is depressed	Below 1.5
		IG switch ON, Brake pedal is released	7.5 to 14
W (E9–11) – E01 (E13–7)	W – W–B	Idling	9 to 14
		IG switch ON	Below 3.0
ELS (E9–12) – E1 (E11–1)	G – BR	Taillight switch ON, Defogger switch ON	7.5 to 14
		Taillight switch OFF, Defogger switch OFF	0 to 1.5
TACH (E9–5) – E1 (E11–1)	GR–R – BR	Idling	Pulse generation
SPD (E10–17) – E01 (E13–7)	V–W – W–B	IG switch ON	4.5 to 5.5
TC (E9–20) – E1 (E11–1)	W–L – BR	IG switch ON	9 to 14
SIL (E9–18) – E1 (E11–1)	W–G – BR	During charge of gears	Pulse generation
PSW (E11–10) – E1 (E11–1)	G – BR	While turning the steering wheel	Below 1.5
F/PS (E9–14) – E1 (E11–1)	LG–B – BR	IG switch ON	Below 1.5

05CDX–01

PROBLEM SYMPTOMS TABLE

When the malfunction is not confirmed in the DTC check and the problem still can not be confirmed in the basic inspection either, proceed to this problem symptoms table and troubleshoot according to the number given below.

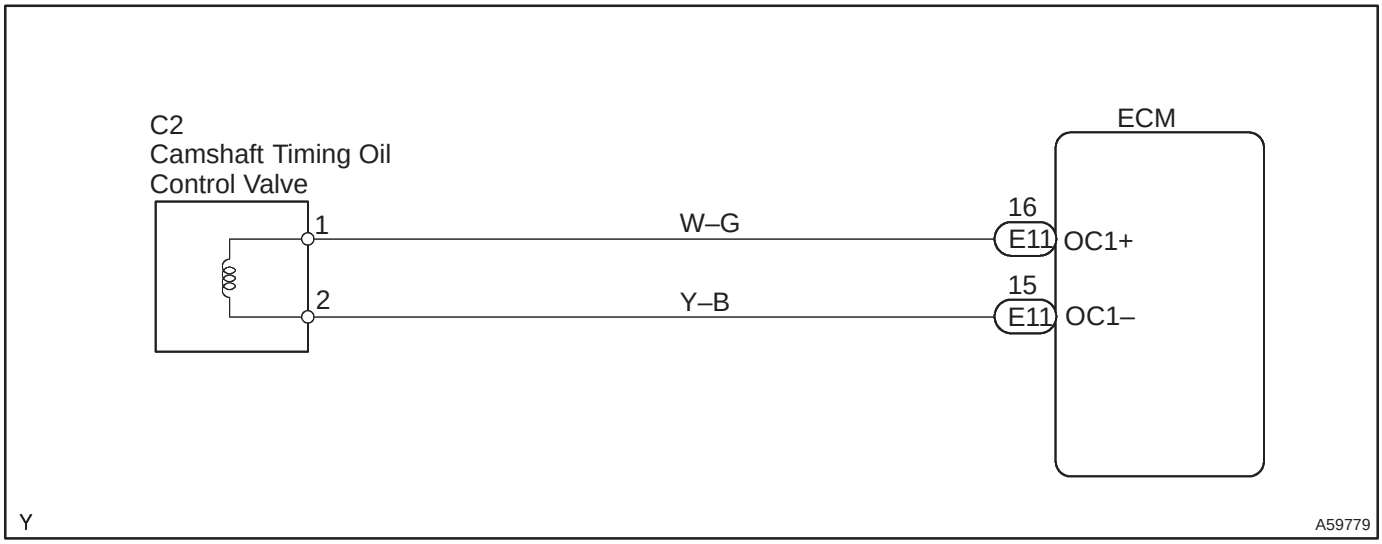
Symptom	Suspected Area	See page
Engine does not crank (Does not start)	2. Starter 3. Starter relay 4. Park/neutral position switch	19–10 19–10 40–8
No initial combustion (Does not start)	1. ECM power source circuit 2. Ignition coil assy 3. Fuel pump control circuit 4. Injector circuit	05–502 05–439 05–507 05–415
No complete combustion (Does not start)	1. Ignition coil assy 2. Fuel pump control circuit 3. Injector circuit	05–439 05–507 05–415
Engine cranks normally (Difficult to start)	1. Starter signal circuit 2. Ignition coil assy 3. Spark plug 4. Compression 5. Injector circuit 6. Fuel pump control circuit	05–513 05–439 18–14 14–181 05–415 05–507
Cold engine (Difficult to start)	1. Starter signal circuit 2. Injector circuit 3. Ignition coil assy 4. Spark plug 5. Fuel pump control circuit	05–513 05–415 05–439 18–14 05–507
Hot engine (Difficult to start)	1. Starter signal circuit 2. Injector circuit 3. Ignition coil assy 4. Spark plug 5. Fuel pump control circuit	05–513 05–415 05–439 18–14 05–507
High engine idle speed (Poor idling)	1. ECM power source circuit 2. Park/neutral position switch 3. Back up power source circuit	05–502 40–8 05–467
Low engine idle speed (Poor idling)	1. Park/neutral position switch 2. Injector circuit 3. Back up power source circuit 4. Fuel pump control circuit	40–8 05–415 05–467 05–507
Rough idling (Poor idling)	1. Mass air flow meter circuit 2. Vacuum sensor circuit 3. Injector circuit 4. Fuel pump control circuit 5. Ignition coil assy 6. Compression 7. Back up power source circuit	05–336 05–342 05–415 05–507 05–439 14–181 05–467
Hunting (Poor idling)	1. Mass air flow meter circuit 2. Vacuum sensor circuit 3. ECM power source circuit	05–336 05–342 05–502
Hesitation/Poor acceleration (Poor driveability)	1. Mass air flow meter circuit 2. Vacuum sensor circuit 3. Injector circuit 4. Ignition coil assy 5. Fuel pump control circuit	05–336 05–342 05–415 05–439 05–507
Muffler explosion after fire (Poor driveability)	1. Ignition coil assy 2. Spark plug 3. Injector circuit	05–439 18–14 05–415



Symptom	Suspected Area	See page
Surging (Poor driveability)	1. Spark plug 2. Injector circuit	18–14 05–415
Engine stall (Soon after starting)	1. Mass air flow meter circuit 2. Vacuum sensor circuit	05–336 05–342
Engine stall (After accelerator pedal depressed)	1. Mass air flow meter circuit 2. Vacuum sensor circuit	05–336 05–342
Engine stall (After accelerator pedal released)	1. Mass air flow meter circuit 2. Vacuum sensor circuit 3. ECM	05–336 05–342 01–32
Engine stall (During A/C operation)	1. A/C signal circuit (Compressor circuit) 2. ECM	05–1100 01–32
Engine stall (When shifting N to D)	1. Park/neutral position switch	40–8

DTC	P0010	CAMSHAFT POSITION ”A” ACTUATOR CIRCUIT (BANK 1)

HINT:
This is the procedure of oil control valve (OCV).



CIRCUIT DESCRIPTION

The VVT system controls the intake camshaft to provide the optimal valve timing for every driving condition. This control is performed based on the signals, such conditions as intake air volume, throttle position and engine coolant temperature.
The ECM controls the oil control valve (OCV), based on the signals output from the sensors. The VVT controller regulates the intake camshaft angle using oil pressure through the OCV. As result, the relative position between the camshaft and the crankshaft becomes optimal, and the engine torque improves, fuel economy improves, exhaust emissions decrease under overall driving conditions. Also, the ECM detects the actual valve timing using the signals from the camshaft position sensor and the crankshaft position sensor, and performs feedback control. This is how target valve timing is achieved by the ECM.

DTC No.	DTC Detection Condition	Trouble Area
P0010	Open or short in OCV circuit	• Open or short in OCV circuit • OCV • ECM

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

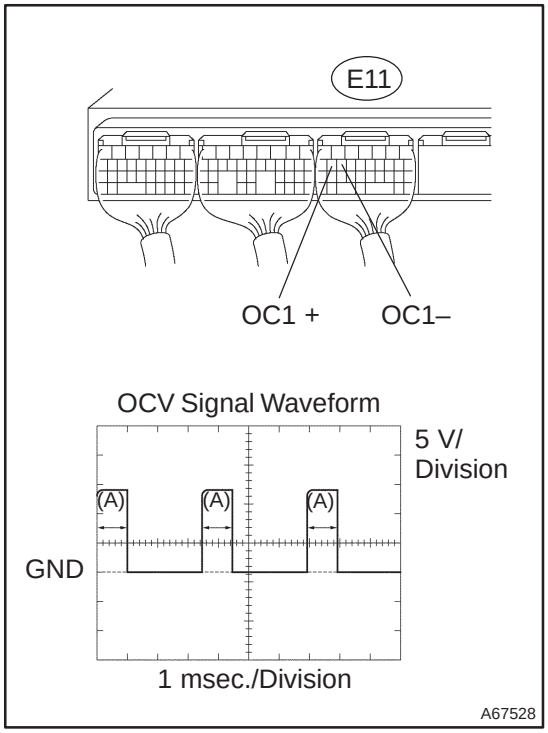
Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

1	PERFORM ACTIVE TEST BY HAND–HELD TESTER(OPERATE OCV)

(a) Connect the hand–held tester to the DLC3.
(b) Start the engine and warm it up.
(c) Turn the ignition switch ON and push the hand–held tester main switch ON.
(d) Select the item ”DIAGNOSIS / OBD/MOBD / ACTIVE TEST / VVT CTRL B1”.
(e) Check the engine speed when operating the OCV by the hand–held tester.
Standard:

Tester operation	Specified condition
OCV is OFF	Normal engine speed
OCV is ON	Rough idle or engine stall

OK → CHECK FOR INTERMITTENT PROBLEMS



NG

2	INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSY(OCV) (See page 10–39)

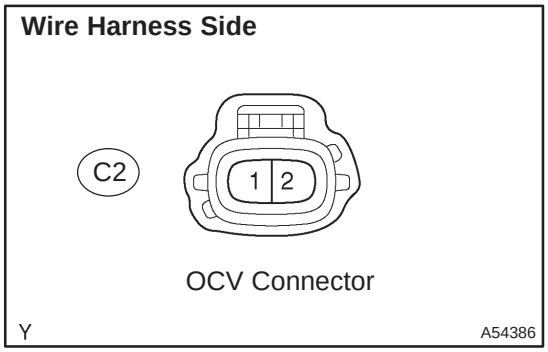
NG → REPLACE CAMSHAFT TIMING OIL CONTROL VALVE ASSY

OK

3 INSPECT ECM(OCV SIGNAL)

(a) Inspection using the oscilloscope.
(b) During idling, check the waveform between the terminals of the E11 ECM connector.

Standard:



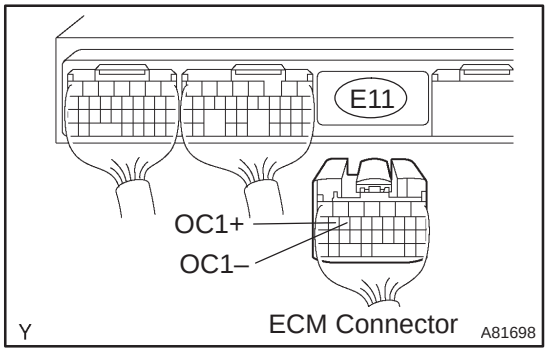
Symbols (Terminal No.)	Specified condition
OC1+ (E11–16) – OC1– (E11–15)	Correct waveform is as shown

HINT:
The waveform frequency (A) is lengthened as the engine speed becomes higher.

NG → **CHECK AND REPLACE ECM (See page 01–32)**

OK

4 CHECK HARNESS AND CONNECTOR(ECM – OCV)



(a) Disconnect the C2 OCV connector.
(b) Disconnect the E11 ECM connector.
(c) Check for continuity between the wire harness side connectors.

Standard (Check for open):

Symbols (Terminal No.)	Specified condition
OCV (C2–1) – OC1+ (E11–16)	Continuity
OCV (C2–2) – OC1– (E11–15)	

Standard (Check for short):

Symbols (Terminal No.)	Specified condition
OCV (C2–1) or OC1+ (E11–16) – Body ground	No continuity
OCV (C2–2) or OC1– (E11–15) – Body ground	

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK FOR INTERMITTENT PROBLEMS

DTC	P0011	CAMSHAFT POSITION ”A” –TIMING OVER–ADVANCED OR SYSTEM PERFORMANCE (BANK 1)

DTC	P0012	CAMSHAFT POSITION ”A” –TIMING OVER–RETARDED (BANK 1)

CIRCUIT DESCRIPTION

Refer to DTC P0010 on page 05–322.

DTC No.	DTC Detection Condition	Trouble Area
P0011	Condition (a) or (b) continues after engine is warmed up and engine speed at 400 to 4,000 rpm (Problem of the advanced OCV.): (a) Valve timing does not change from current valve timing (b) Current valve timing is fixed	• Valve timing • OCV • Camshaft timing gear assy • ECM
P0012	Condition (a) or (b) continues after engine is warmed up and engine speed at 400 to 4,000 rpm (Problem of the retarded OCV.): (a) Valve timing does not change from current valve timing (b) Current valve timing is fixed	

WIRING DIAGRAM

Refer to DTC P0010 on page 05–322.

INSPECTION PROCEDURE

HINT:

Advanced timing over (Valve timing is out of specified range)	P0011
Retarded timing over (Valve timing is out of specified range)	P0012

- If DTC ”P0011 or P0012” is displayed, check VVT system circuit.
- Read freeze frame data using the hand–held tester. Freeze frame data records the engine conditions when a malfunction is detected. When troubleshooting, it is useful for determining whether the vehicle was running or stopped, the engine was warmed up or not, the air–fuel ratio was lean or rich, etc. at the time of the malfunction.

1	CHECK VALVE TIMING (See page 14–186)
