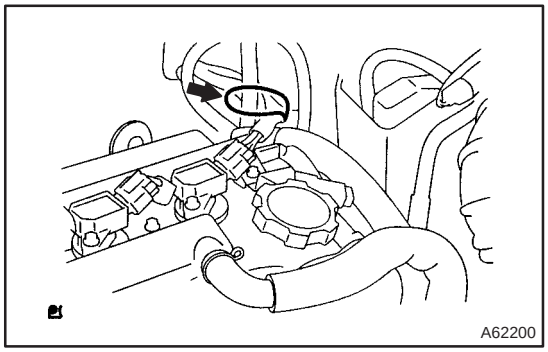
1. **INSPECT COOLANT (See page 16–1)**
2. **INSPECT ENGINE OIL (See page 17–1)**
3. **INSPECT BATTERY (See page 19–5)**
4. **INSPECT AIR CLEANER FILTER ELEMENT SUB–ASSY**
5. **INSPECT SPARK PLUG (See page 18–3)**
6. **INSPECT FAN AND GENERATOR V BELT**

HINT:
You don't need to check the belt deflection because auto tensioner is adopted.

7. **INSPECT IGNITION TIMING**

(a) Warm up engine.
(b) When using hand–held tester:
(1) Connect the hand–held tester to the DLC3.
(2) Enter DATA LIST MODE on the hand–held tester.
Ignition timing: 8 to 12°BTDC



HINT:
Please refer to the hand–held tester operator's manual if you need help to select DATA LIST.

(c) When not using hand–held tester:
(1) Using SST, connect terminal 13 (TC) and 4 (CG) of the DLC3.
SST 09843–18040

NOTICE:

- **Make sure of the terminal numbers before connecting them. Connection with a wrong terminal can damage the engine.**
- **Turn OFF all electrical systems before connecting the terminals.**
- **Operate the inspection after the cooling fan motor is turned OFF**

(2) Remove the 2 nuts, and 2 clips, and then remove the cylinder head cover.
(3) Pull out the wire harness as shown in the illustration.
(4) Connect the clip of the timing light to the engine.

NOTICE:

- **Use a timing light which detects the first signal.**
- **After checking, be sure to wrap the wire harness with tape.**

(5) Inspect ignition timing at idle.

Ignition timing: 8 to 12°BTDC

NOTICE:

When checking the ignition timing, shift the transmission to the neutral position.

HINT:

Run the engine at 1,000 to 1,300 rpm for 5 seconds, check that the engine rpm returns to the idle speed.

(6) Disconnect the terminal 13 (TC) and 4 (CG) of the DLC3.

(7) Inspect ignition timing at idle.

Ignition timing:

10 to 18 °BTDC (1ZZ–FE)

3.5 to 11.5 °BTDC (3ZZ–FE)

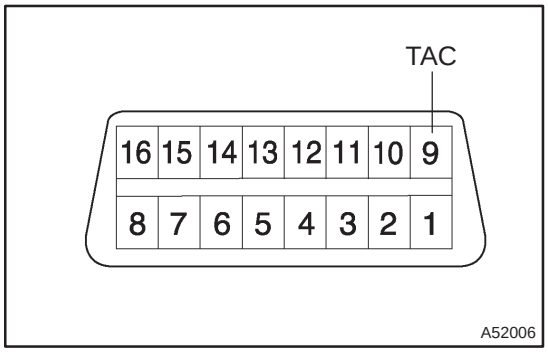
(8) Confirm that ignition timing to go advanced angle side when the engine rpm is increased.

(9) Remove the timing light.

(10) Install the cylinder head cover with the 2 nuts and 2 clips.

Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)

8. INSPECT ENGINE IDLE SPEED



(a) Warm up engine.

(b) When using hand–held tester:

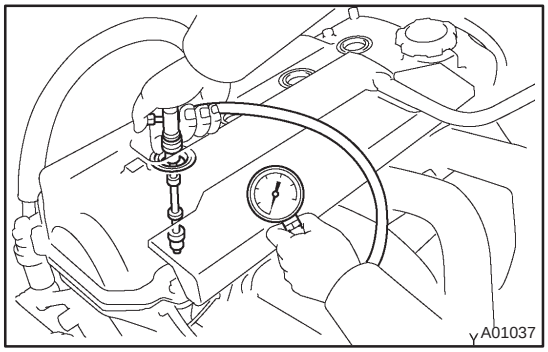
(1) Connect the hand–held tester to the DLC3.

HINT:

Please refer to the hand–held tester operator's manual if you need help to select DATA LIST.

(c) When not using hand–held tester:

(1) Using SST, connect the tachometer test prove to terminal 9 (TAC) of DLC3.



SST 09843–18040

(d) Check the idle speed.

Idle speed: 600 to 700 rpm

NOTICE:

- **Check the idle speed with the cooling fan OFF.**
- **Switch off all accessories and air conditioning before connecting the test prove to the terminal.**

9. INSPECT COMPRESSION

(a) Warm up and stop the engine.

(b) Remove the ignition coil.

(c) Remove the spark plugs.

(d) Inspect cylinder compression pressure.

SST 09992–00500

(1) Insert a compression gauge into the spark plug hole.

(2) Fully open the throttle.

(3) While cranking the engine, measure the compression pressure.

Compression pressure :
1,300 kPa (13.3 kgf·cm^2, 189 psi)
Minimum pressure: 1,000 kPa (10.2 kgf·cm^2, 145 psi)
Difference between each cylinder:
100 kPa (1.0 kgf·cm^2, 14 psi)

NOTICE:

- **Always use a fully charged battery to obtain engine speed of 250 rpm or more.**
- **Check other cylinder's compression pressure in the same way.**
- **This measurement must be done in as short a time as possible.**

(4) If the cylinder compression in one or more cylinders is low, pour a small amount of engine oil into the cylinder through the spark plug hole and repeat steps (1) through (3) for the cylinders that have low compression.

HINT:

- If adding oil helps increase the compression, the piston rings and/or cylinder bore may be worn or damaged.
- If pressure stays low, a valve may be sticking or seating improperly, or there may be leakage past the gasket.

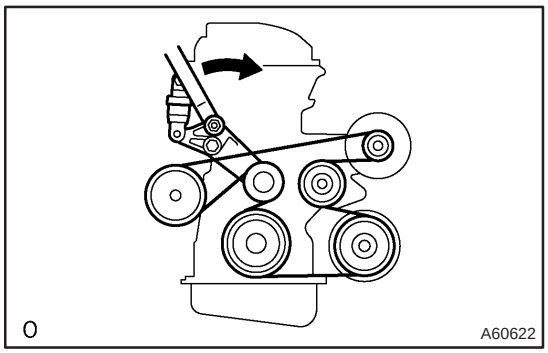
10. INSPECT CO/HC

(a) Start the engine.
(b) Run the engine at 2,500 rpm for approximately 180 seconds.
(c) Insert CO/HC meter testing probe at least 40 cm (1.3 ft) into the tailpipe during idling.
(d) Check CO/HC concentration at idle.

Idle CO concentration: 0 to 0.5 %
Idle HC concentration: Applicable local regulation

If the CO/HC concentration does not conform to specifications, perform troubleshooting in the order given below.

- Check heated oxygen sensor operation.
- See the table below for possible causes, and then inspect and repair the applicable causes if necessary.



CO	HC	Problems	Causes
Normal	High	Rough idle	1. Faulty ignitions: • Incorrect timing • Fouled, shorted or improperly gapped plugs 2. Incorrect valve clearance 3. Leaks in intake and exhaust valves 4. Leaks in cylinders
Low	High	Rough idle (Fluctuating HC reading)	1. Vacuum leaks: • PCV hoses • Intake manifold • Throttle body • ISC valve • Brake booster line 2. Lean mixture causing misfire
High	High	Rough idle (Black smoke form exhaust)	1. Restricted air filter 2. Plugged PCV valve 3. Faulty EFI systems: • Faulty pressure regulator • Defective water temperature sensor • Defective mass air flow meter • Faulty ECM • Faulty injectors • Faulty throttle position sensor

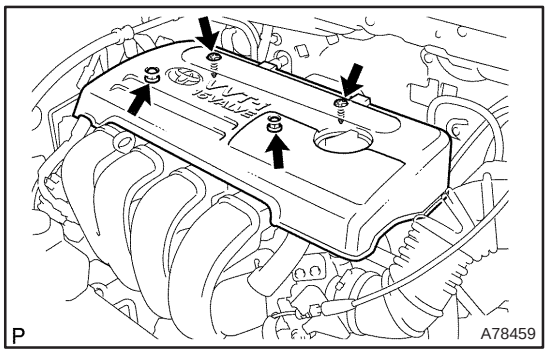
FAN AND GENERATOR V BELT (1ZZ–FE/3ZZ–FE)

141CD–01

REPLACEMENT

1. REMOVE RADIATOR SUPPORT OPENING COVER (See page 14–27)
2. REMOVE ENGINE ROOM COVER SIDE (See page 14–27)
3. REMOVE ENGINE UNDER COVER SUB–ASSY NO.1 (See page 14–27)

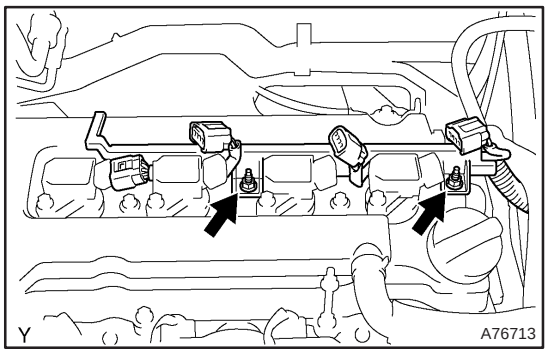
4. **REMOVE FAN AND GENERATOR V BELT**



(a) Turn the V–ribbed belt tensioner clockwise slowly and loosen it. Then, remove the fan and generator V belt and put back the V–ribbed belt tensioner carefully.

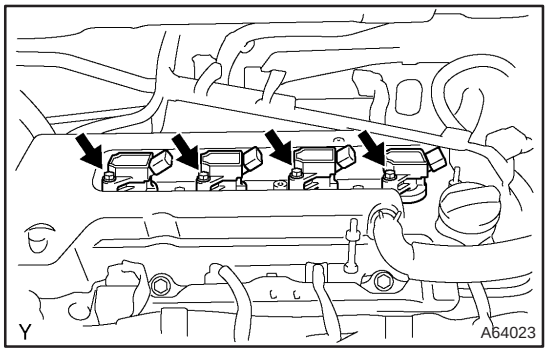
VALVE CLEARANCE (1ZZ–FE/3ZZ–FE)

141CE–01



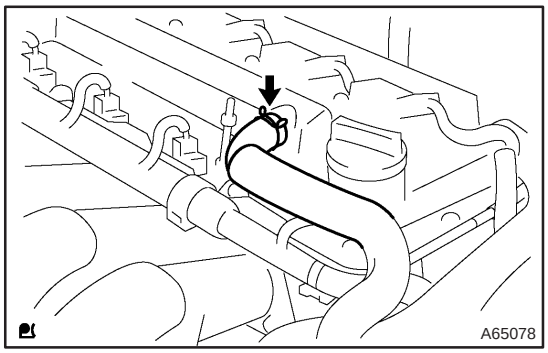
ADJUSTMENT

1. REMOVE RADIATOR SUPPORT OPENING COVER (See page 14–27)
2. REMOVE ENGINE ROOM COVER SIDE (See page 14–27)



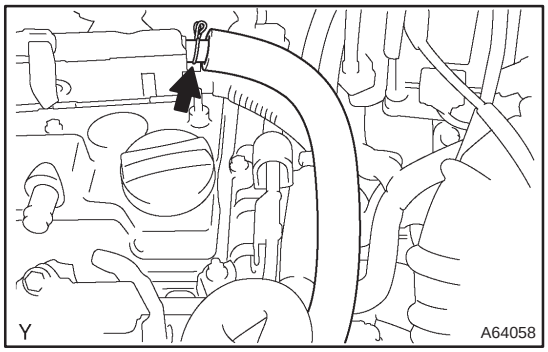
3. REMOVE CYLINDER HEAD COVER NO.2

(a) Remove the 2 nuts and 2 clips and detach cylinder head cover No.2.

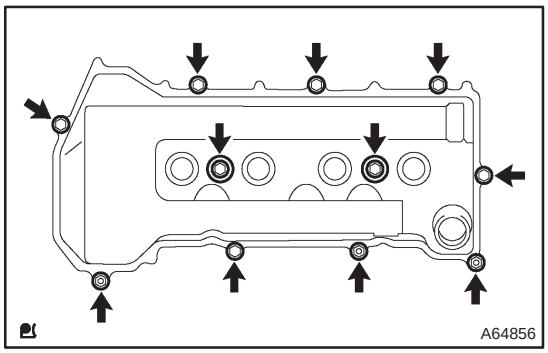


4. DISCONNECT IGNITION COIL ASSY

(a) Remove the 5 clamps from the 5 clamp brackets.
(b) Disconnect the 4 ignition coil connectors.
(c) Remove the 2 nuts which are used to secure the engine wire.



(d) Remove the 4 bolts and the 4 ignition coils.

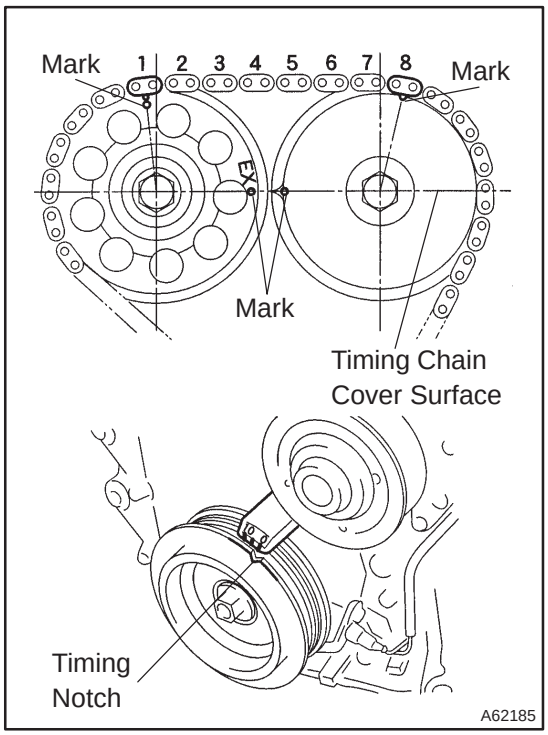


5. DISCONNECT VENTILATION HOSE

(a) Disconnect the ventilation hose from the cylinder head cover.

6. DISCONNECT VENTILATION HOSE NO.2

(a) Disconnect the ventilation hose from the cylinder head cover.

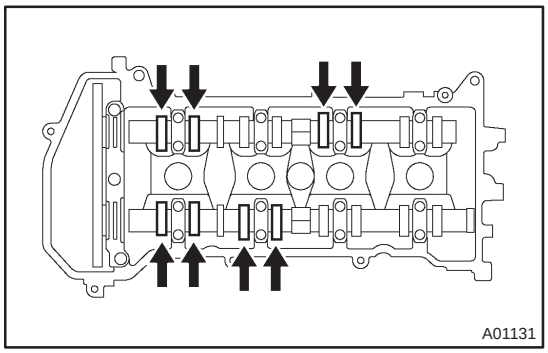


7. REMOVE CYLINDER HEAD COVER SUB–ASSY

(a) Remove the 9 bolts, 2 seal washers, 2 nuts, 3 clamp brackets and cylinder head cover.

8. REMOVE ENGINE UNDER COVER SUB–ASSY NO.1

9. REMOVE ENGINE UNDER COVER RH



10. SET NO. 1 CYLINDER TO TDC/COMPRESSION

(a) Turn the crankshaft pulley, and align the timing notch with timing mark ”0” of the timing chain cover.

(b) Check that the point marks of the camshaft timing sprocket and VVT timing sprocket are in straight line on the timing chain cover surface as shown in the illustration.

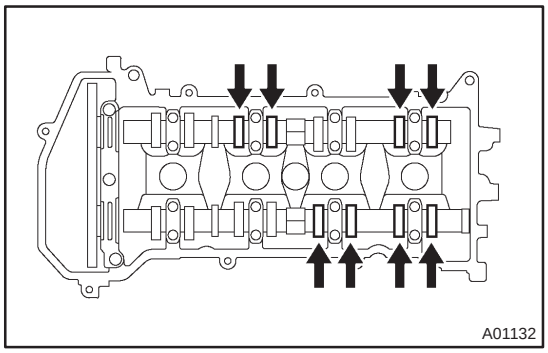
HINT:

If not, turn the crankshaft 1 revolution (360°) and align the marks as above.

11. INSPECT VALVE CLEARANCE

(a) Check the valves indicated in the illustration.

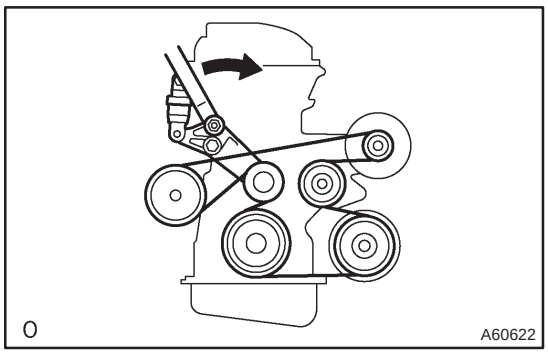
(1) Using a feeler gauge, measure the clearance between the valve lifter and the camshaft.



(2) Record the out–of specification valve clearance measurements. They will be used later to determine the required replacement valve lifter.

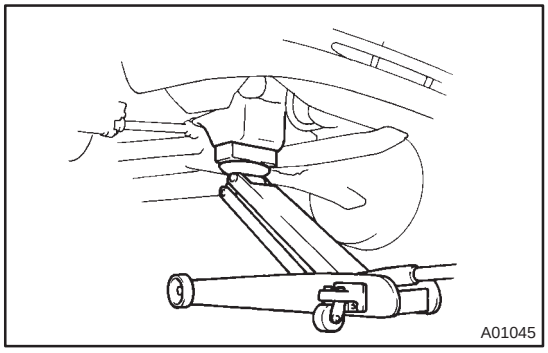
Valve clearance (Cold):

Intake 0.15 to 0.25 mm (0.0059 to 0.0098 in.)



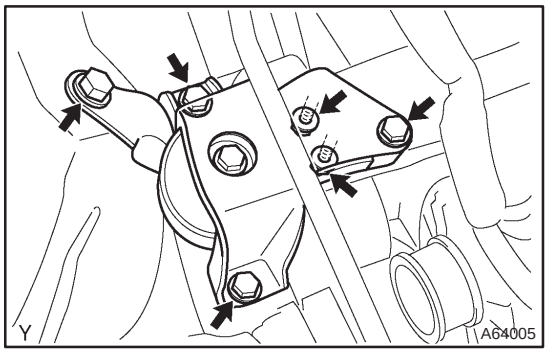
Exhaust 0.25 to 0.35 mm (0.0098 to 0.0138 in.)

(b) Turn the crankshaft 1 revolution (360 °) and set No. 4 cylinder to TDC/compression.

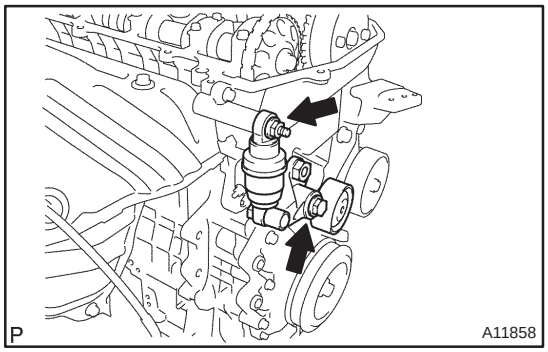


(c) Check the valves indicated in the illustration.
(1) Using a feeler gauge, measure the clearance between the valve lifter and camshaft.
(2) Record the out–of specification valve clearance measurements. They will be used later to determine the required replacement valve lifter.

Valve clearance (Cold):
Intake 0.15 to 0.25 mm (0.0059 to 0.0098 in.)
Exhaust 0.25 to 0.35 mm (0.0098 to 0.0138 in.)



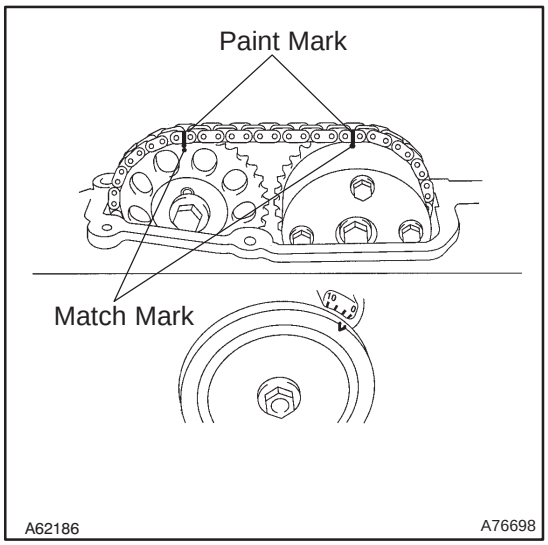
12. REMOVE FAN AND GENERATOR V BELT



(a) Turn the V–ribbed belt tensioner clockwise slowly and loosen it. Then, remove the fan and generator V belt and put back the V–ribbed belt tensioner carefully.

13. REMOVE ENGINE MOUNTING INSULATOR SUB–ASSY RH

(a) Place a wooden block on a jack underneath the engine. Remove the 4 bolts and 2 nuts and detach the engine mounting insulator RH.

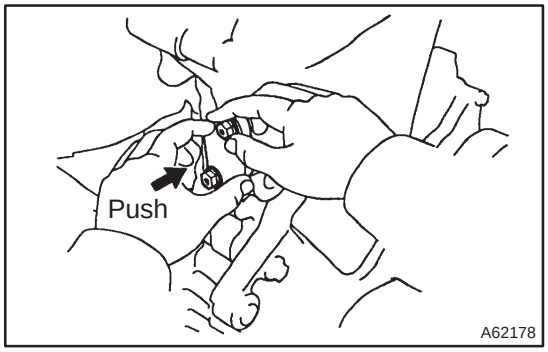


14. REMOVE V–RIBBED BELT TENSIONER ASSY

(a) Remove the bolt and nut, then remove the V–ribbed belt tensioner.

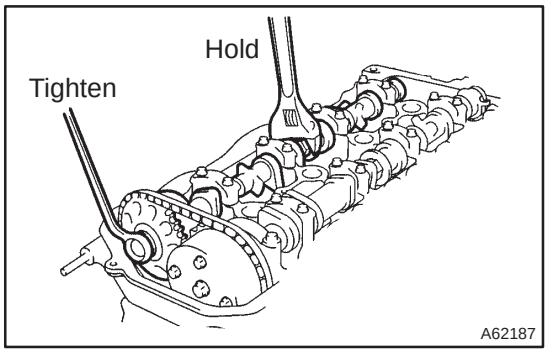
HINT:

Jack up and down to remove the bolt.



15. ADJUST VALVE CLEARANCE

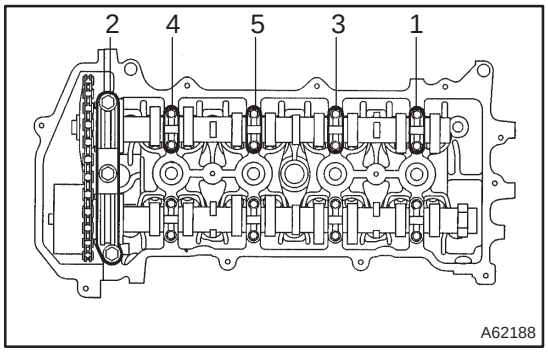
NOTICE:



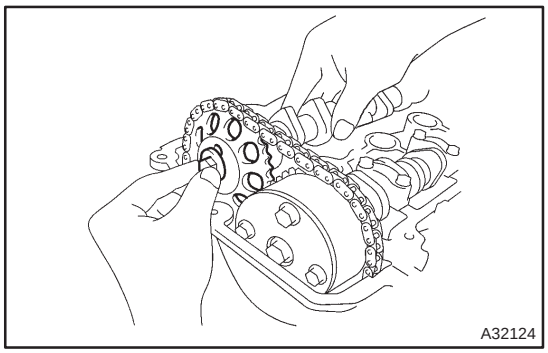
Be sure not to revolve the crankshaft without the chain tensioner.

(a) Set the No. 1 cylinder to the TDC/compression.

(b) Place match marks on the 2 camshaft sprockets and paint marks on the timing chain.

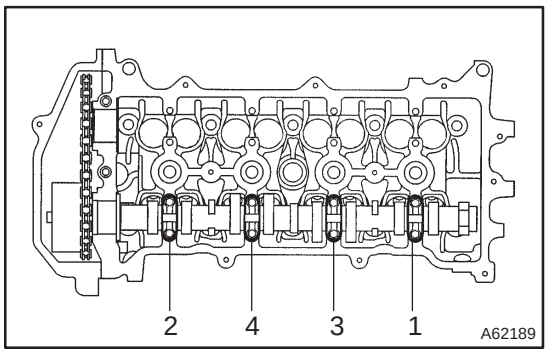


(c) Remove the 2 nuts and the chain tensioner.

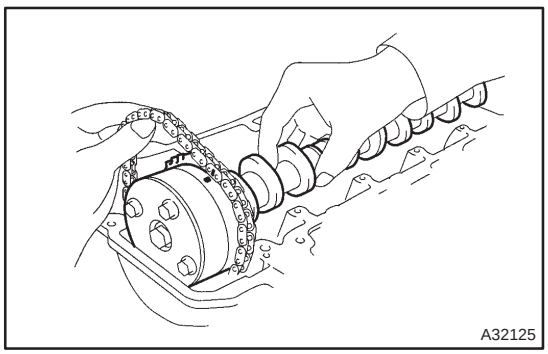


(d) Hold the camshaft with a wrench, loosen the camshaft timing gear set bolt.

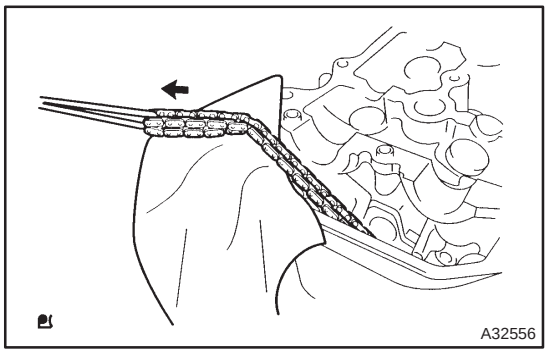
NOTICE:



Be careful not to damage the valve lifter.

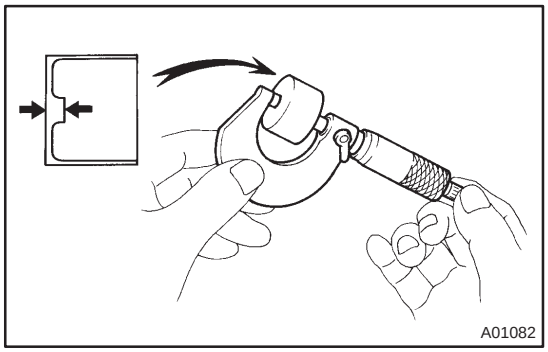


(e) Using several steps, loosen the camshaft bearing cap bolts on the No. 2 camshaft in the sequence shown in the illustration and remove the bearing caps.



(f) Remove the camshaft timing gear as shown in the illustration.

(g) Using several steps, loosen the camshaft bearing cap bolts on the camshaft in the sequence shown in the illustration and remove the bearing caps.



(h) Remove the camshaft while holding the timing chain.

(i) Tie the timing chain with a string as shown in the illustration.

NOTICE:

Be careful not to drop anything inside the timing chain cover.

(j) Remove the valve lifters.

(k) Using a micrometer, measure the thickness of the removed lifter.

(l) Calculate the thickness of a new lifter so that the valve clearance comes within the specified value.

A	Thickness of new lifter
B	Thickness of used lifter
C	Measured valve clearance

Valve clearance:
Intake A = B + (C – 0.20 mm (0.0079 in.))
Exhaust A = B + (C – 0.30 mm (0.0118 in.))

Example (Intake):
Measure intake valve clearance = 0.40 mm (0.0158 in.)
0.40 mm (0.0158 in.) – 0.20 mm (0.0079 in.) = 0.20 mm (0.0079 in.)
(Measured – Specification = Excess clearance)
Used lifter measurement = 5.250 mm (0.2067 in.)
0.20 mm (0.0079 in.) + 5.250 mm (0.2067 in.) = 5.450 mm (0.2146 in.)
(Excess clearance + Used lifter = Ideal new lifter)
Closest new lifter = 5.460 mm (0.2150 in.)
Select No. 46 lifter

HINT:

- Select a new lifter with a thickness as close as possible to the calculated values.
- Lifter are available in 35 sizes in increments of 0.020 mm (0.0008 in.), from 5.060 mm (0.1992 in.) to 5.740 mm (0.2260 in.).
- Refer to new lifter thickness table on the next 2 pages.

1ZZ–FE, 3ZZ–FE: Valve Lifter Selection Chart (Intake)

Measured clearance mm (in.) \ Installed lifter thickness mm (in.)	5.060 (0.1992)	5.080 (0.2000)	5.100 (0.2008)	5.120 (0.2016)	5.140 (0.2024)	5.160 (0.2031)	5.180 (0.2039)	5.200 (0.2047)	5.210 (0.2051)	5.220 (0.2055)	5.230 (0.2059)	5.240 (0.2063)	5.250 (0.2067)	5.260 (0.2071)	5.270 (0.2075)	5.280 (0.2079)	5.290 (0.2083)	5.300 (0.2087)	5.310 (0.2091)	5.320 (0.2094)	5.330 (0.2098)	5.340 (0.2102)	5.350 (0.2106)	5.360 (0.2110)	5.370 (0.2114)	5.380 (0.2118)	5.390 (0.2122)	5.400 (0.2126)	5.410 (0.2130)	5.420 (0.2134)	5.430 (0.2138)	5.440 (0.2142)	5.450 (0.2146)	5.460 (0.2150)	5.470 (0.2154)	5.480 (0.2157)	5.490 (0.2161)	5.500 (0.2165)	5.510 (0.2169)	5.520 (0.2173)	5.530 (0.2177)	5.540 (0.2181)	5.550 (0.2185)	5.560 (0.2189)	5.570 (0.2193)	5.580 (0.2197)	5.590 (0.2201)	5.600 (0.2205)	5.620 (0.2213)	5.640 (0.2220)	5.660 (0.2228)	5.680 (0.2236)	5.700 (0.2244)	5.720 (0.2252)	5.740 (0.2260)

Intake valve clearance (Cold):
0.15 – 0.25 mm (0.006 – 0.010 in.)

EXAMPLE: The 5.250 mm (0.2067 in.) lifter is installed, and the measured clearance is 0.400 mm (0.0157 in.).
Replace the 5.250 mm (0.2067 in.) lifter with a new No. 46 lifter.

New lifter thickness mm (in.)

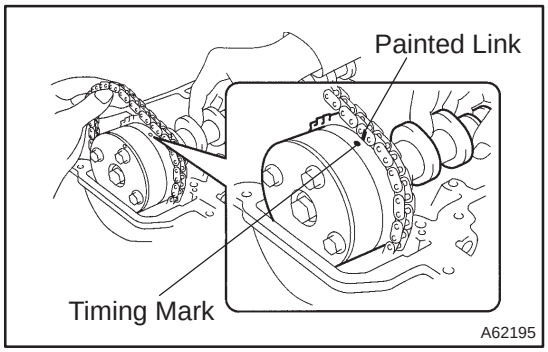
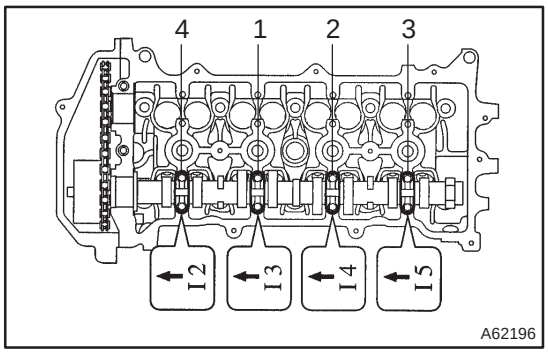
Exhaust valve clearance (Cold):



0.25 – 0.35 mm (0.010 – 0.014 in.)

EXAMPLE: The 5.340 mm (0.2102 in.) lifter is installed, and the measured clearance is 0.440 mm (0.0173 in.).
Replace the 5.340 mm (0.2102 in.) lifter with a new No. 48 lifter.



New lifter thickness mm (in.)

Lifter No.	Thickness	Lifter No.	Thickness	Lifter No.	Thickness
06	5.060 (0.1992)	30	5.300 (0.2087)	54	5.540 (0.2181)
08	5.080 (0.2000)	32	5.320 (0.2094)	56	5.560 (0.2189)
10	5.100 (0.2008)	34	5.340 (0.2102)	58	5.580 (0.2197)
12	5.120 (0.2016)	36	5.360 (0.2110)	60	5.600 (0.2205)
14	5.140 (0.2024)	38	5.380 (0.2118)	62	5.620 (0.2213)
16	5.160 (0.2031)	40	5.400 (0.2126)	64	5.640 (0.2220)
18	5.180 (0.2039)	42	5.420 (0.2134)	66	5.660 (0.2228)

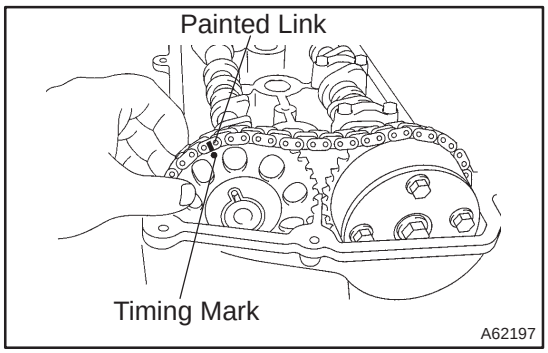
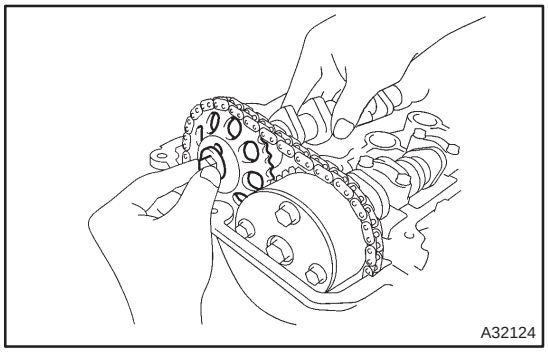
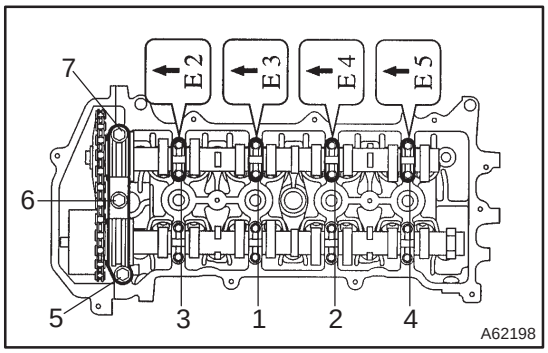
26	5.260 (0.2071)	50	5.500 (0.2165)	74	5.740 (0.2260)
28	5.280 (0.2079)	52	5.520 (0.2173)		



A79323

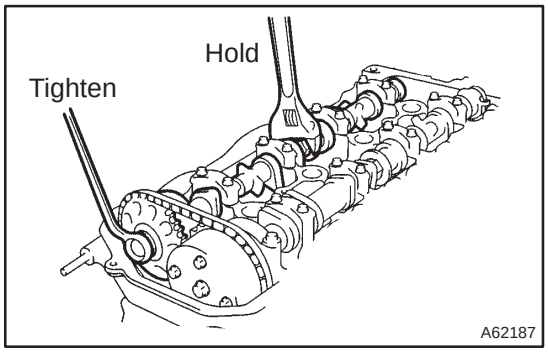


(m) Install the timing chain on the camshaft timing gear with the painted links aligned with the timing marks on the camshaft timing sprocket as shown in the illustration.



(n) Examine the front marks and numbers and tighten the bolts in the sequence shown in the illustration.
Torque: 13 N·m (133 kgf·cm, 10 ft·lbf)

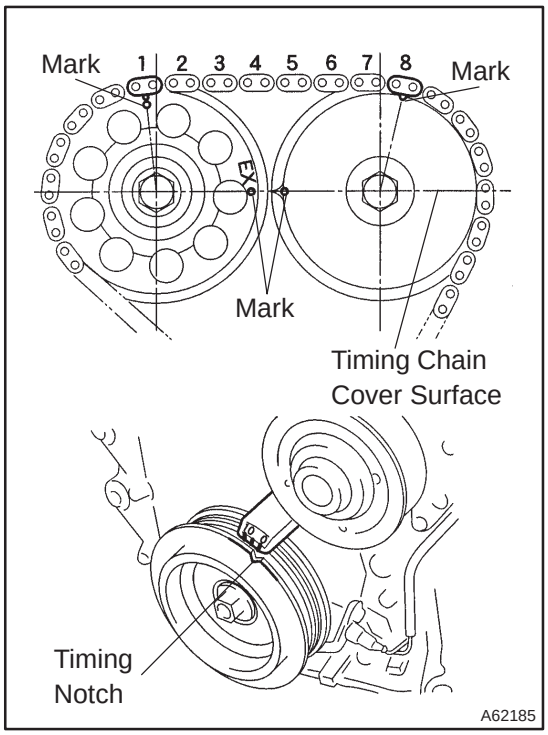
(o) Put the camshaft No.2 on the cylinder head with the painted links of the chain aligned with the timing mark on the camshaft timing sprocket.



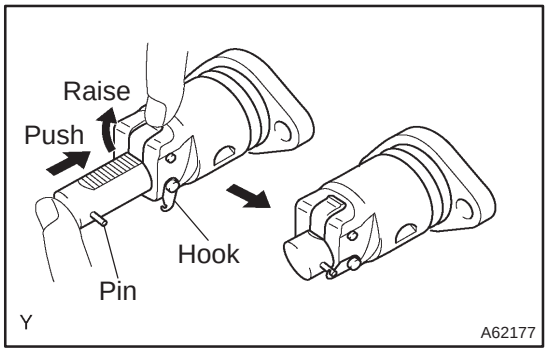
(p) Tighten the camshaft timing gear set bolt temporarily.

(q) Examine the front marks and numbers and tighten the bolts in the sequence shown in the illustration.
Torque: 13 N·m (133 kgf·cm, 10 ft·lbf)

(r) Install the bearing cap No. 1.
Torque: 23 N·m (235 kgf·cm, 17 ft·lbf)



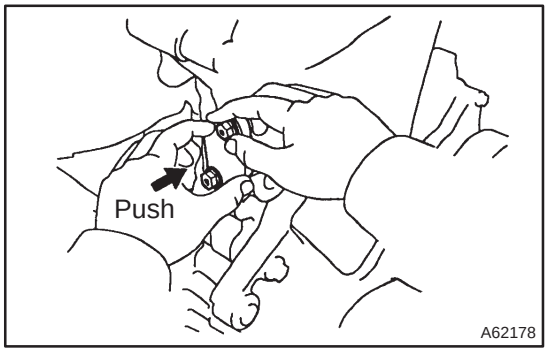
(s) Hold the camshaft with a wrench, tighten the camshaft timing gear set bolt.



Torque: 54 N·m (551 kgf·cm, 40 ft·lbf)

NOTICE:

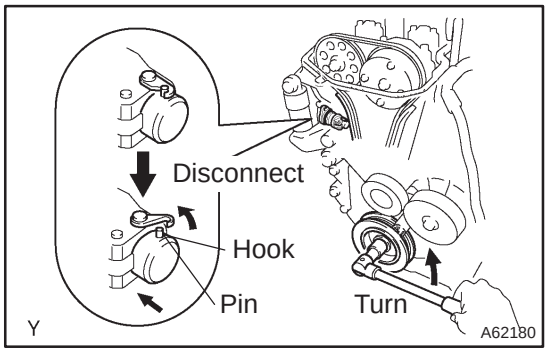
Be careful not damage the valve lifter.



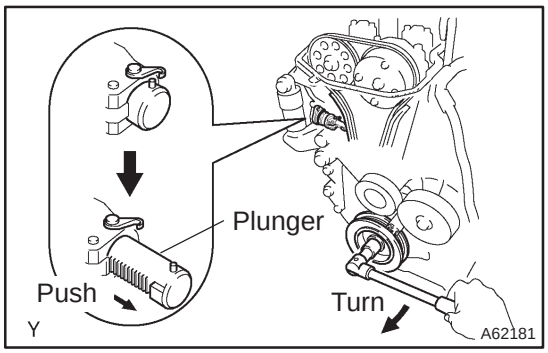
(t) Check the match marks on the 2 camshaft sprockets are aligned with each other and aligned with the painted links of the timing chain as shown in the illustration. Also, check the timing notch is aligned with the timing mark ”0” of the chain cover.

(u) Install chain tensioner.

(1) Check that the O–ring is clean, and set the hook as shown in the illustration.



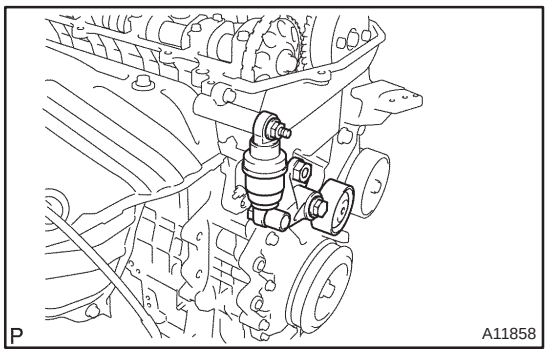
(2) Apply engine oil to the chain tensioner and install it with the 2 nuts.



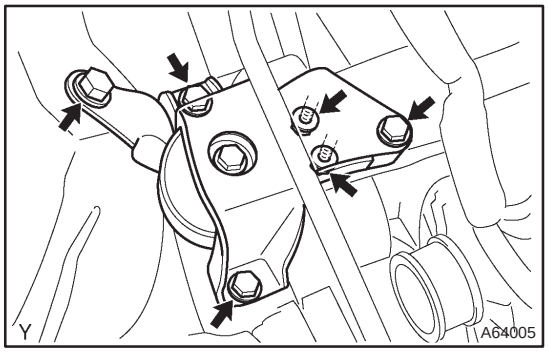
Torque: 9.0 N·m (92 kgf·cm, 80 in·lbf)

NOTICE:

If the hook released the plunger during installation, re–hook the plunger by the hook to fixit.

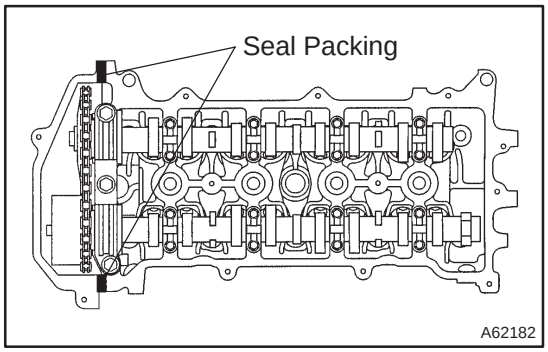


(3) Turn the crankshaft counterclockwise, and take the hook off the knock pin to release the plunger.



(4) Turn the crankshaft clockwise, and check that the plunger is extended.

HINT:
If the plunger does not be extended, press the slipper into the chain tensioner using a screwdriver so that the hook is took off from the knock pin and let the plunger can be extended.



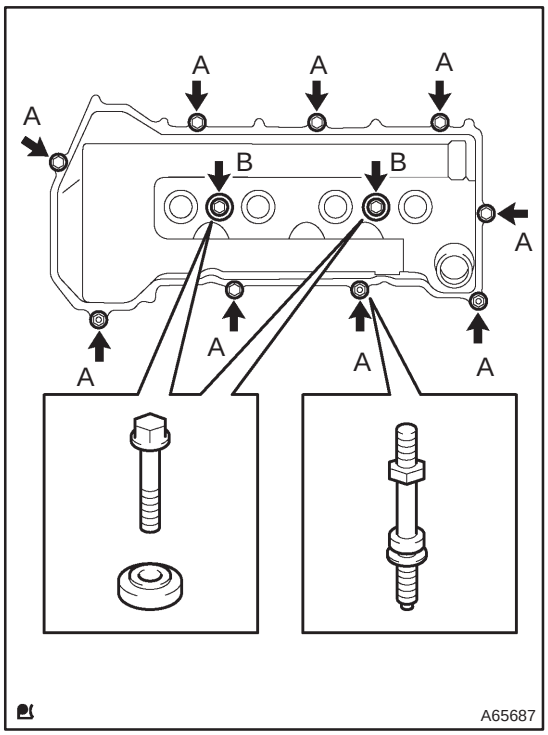
16. INSTALL V–RIBBED BELT TENSIONER ASSY

(a) Install the V–ribbed belt tensioner with the nut and bolt.
Torque:
29 N·m (296 kgf·cm, 21 ft·lbf) for Nut
69 N·m (704 kgf·cm, 51 ft·lbf) for Bolt

17. INSTALL ENGINE MOUNTING INSULATOR SUB–ASSY RH

(a) Install the engine mounting insulator with the 4 bolts and 2 nuts.
Torque: 52 N·m (530 kgf·cm, 38 ft·lbf)

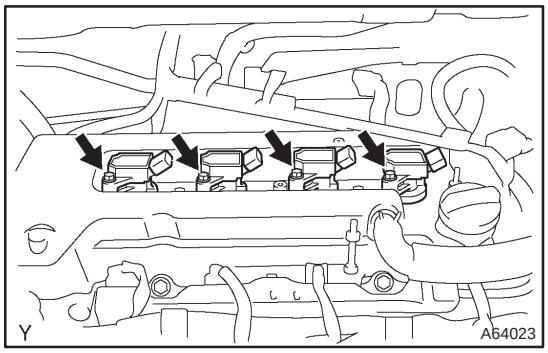
18. INSTALL CYLINDER HEAD COVER SUB–ASSY



(a) Remove any old packing (FIPG) material.

(b) Apply seal packing to the 2 locations as shown in the illustration.

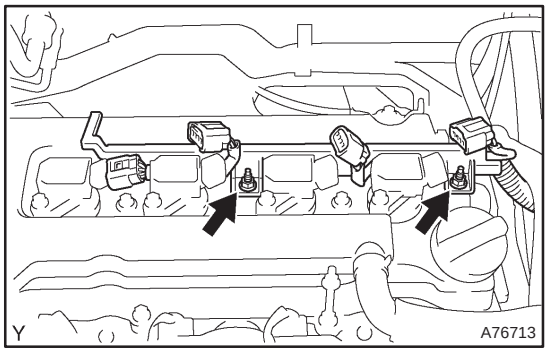
Seal packing: Part No. 08826–00080 or equivalent



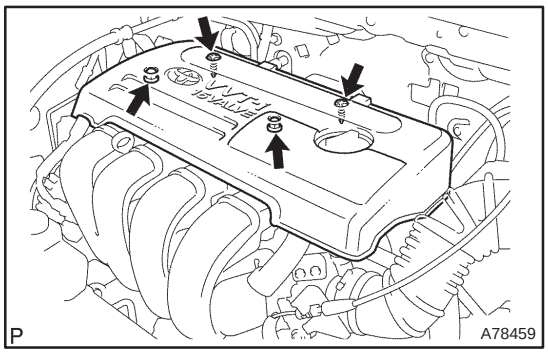
NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes after applying seal packing.**
- **Do not expose the seal to engine oil 2 hours after installing.**

(c) Install the cylinder head cover and cable bracket with the 9 bolts, 2 seal washers and 2 nuts. Tighten the bolts and nuts uniformly in the several steps.



Torque:
11 N·m (112 kgf·cm, 8 ft·lbf) for A
9.0 N·m (92 kgf·cm, 80 in·lbf) for B



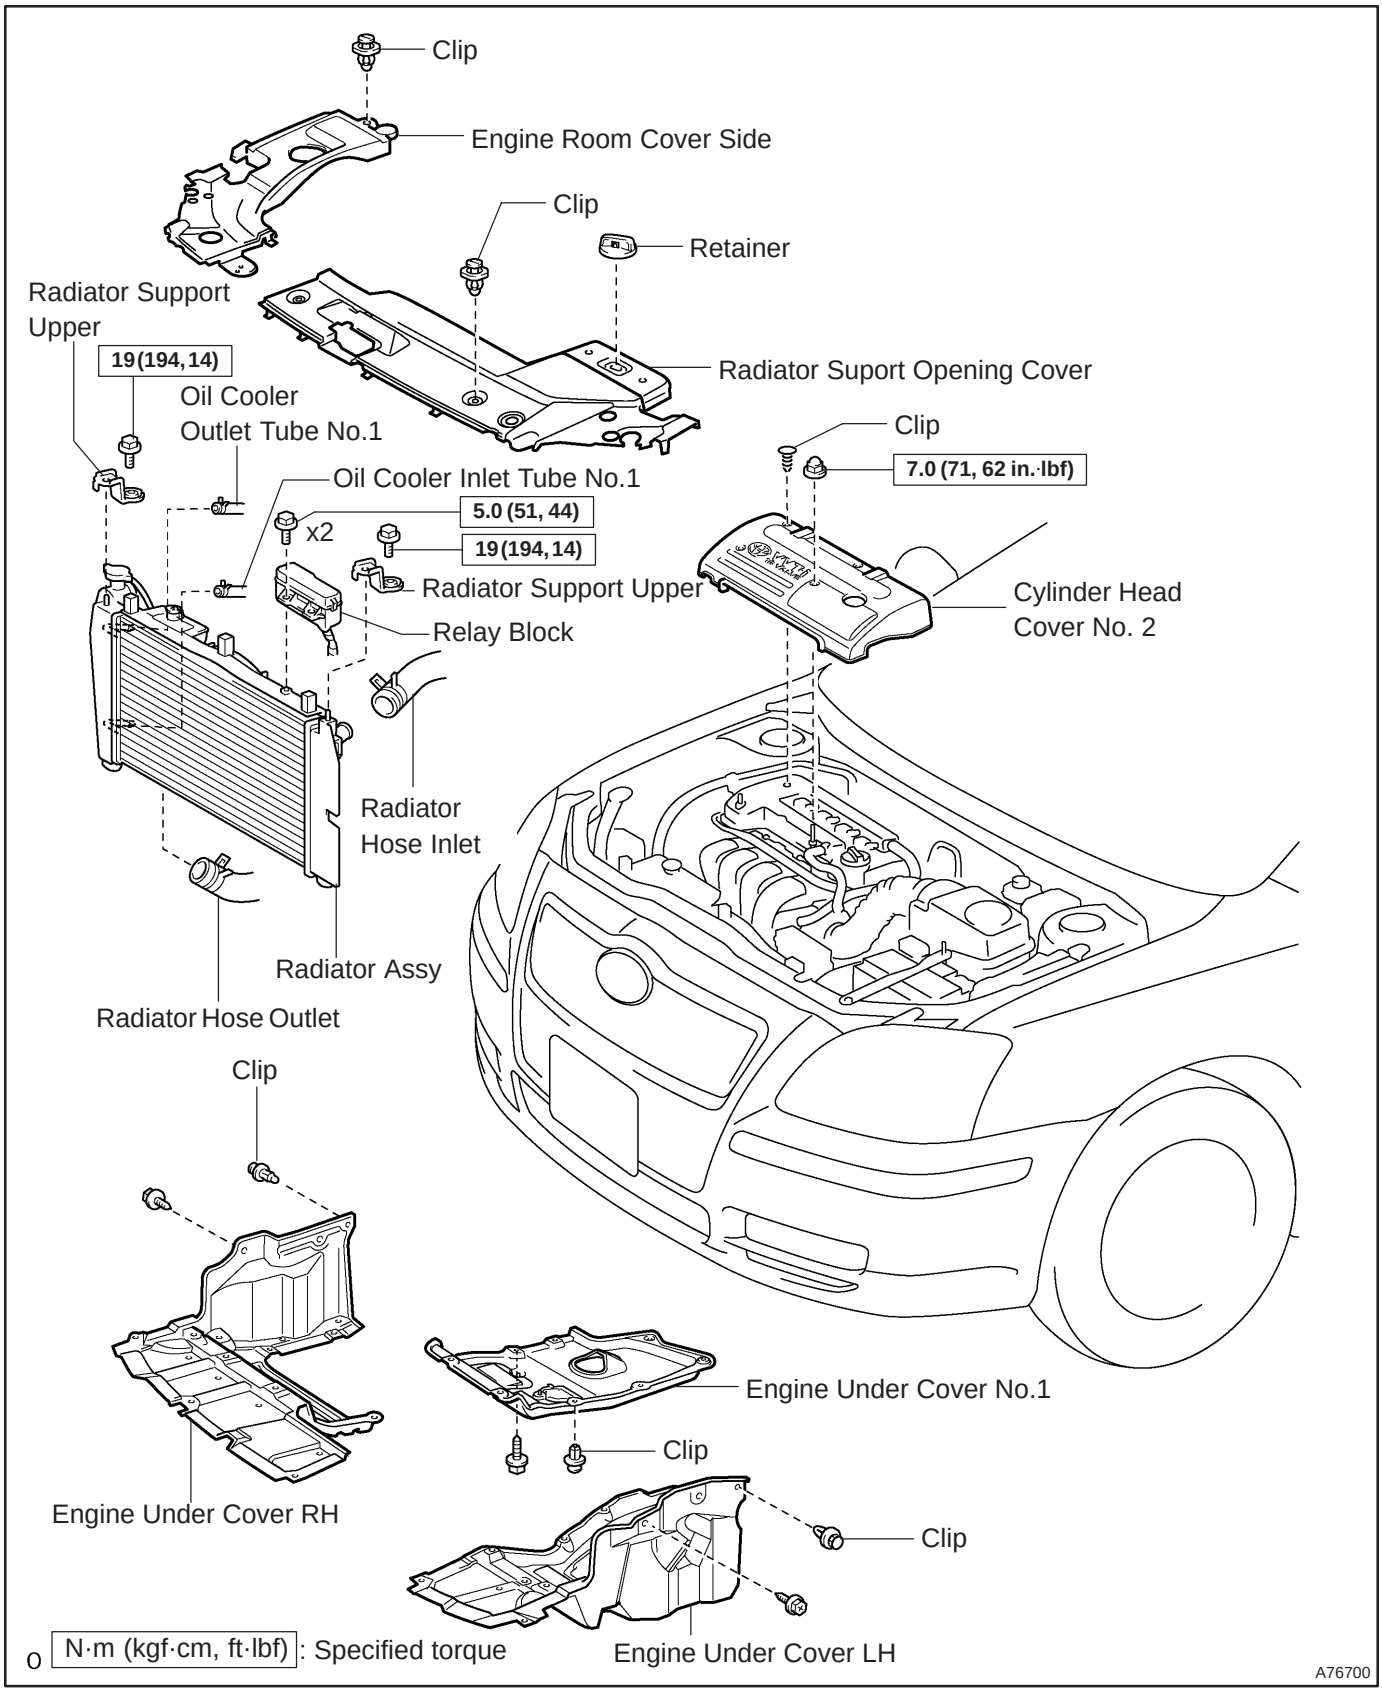
19. INSTALL IGNITION COIL ASSY

(a) Install the 4 ignition coils with the 4 bolts.

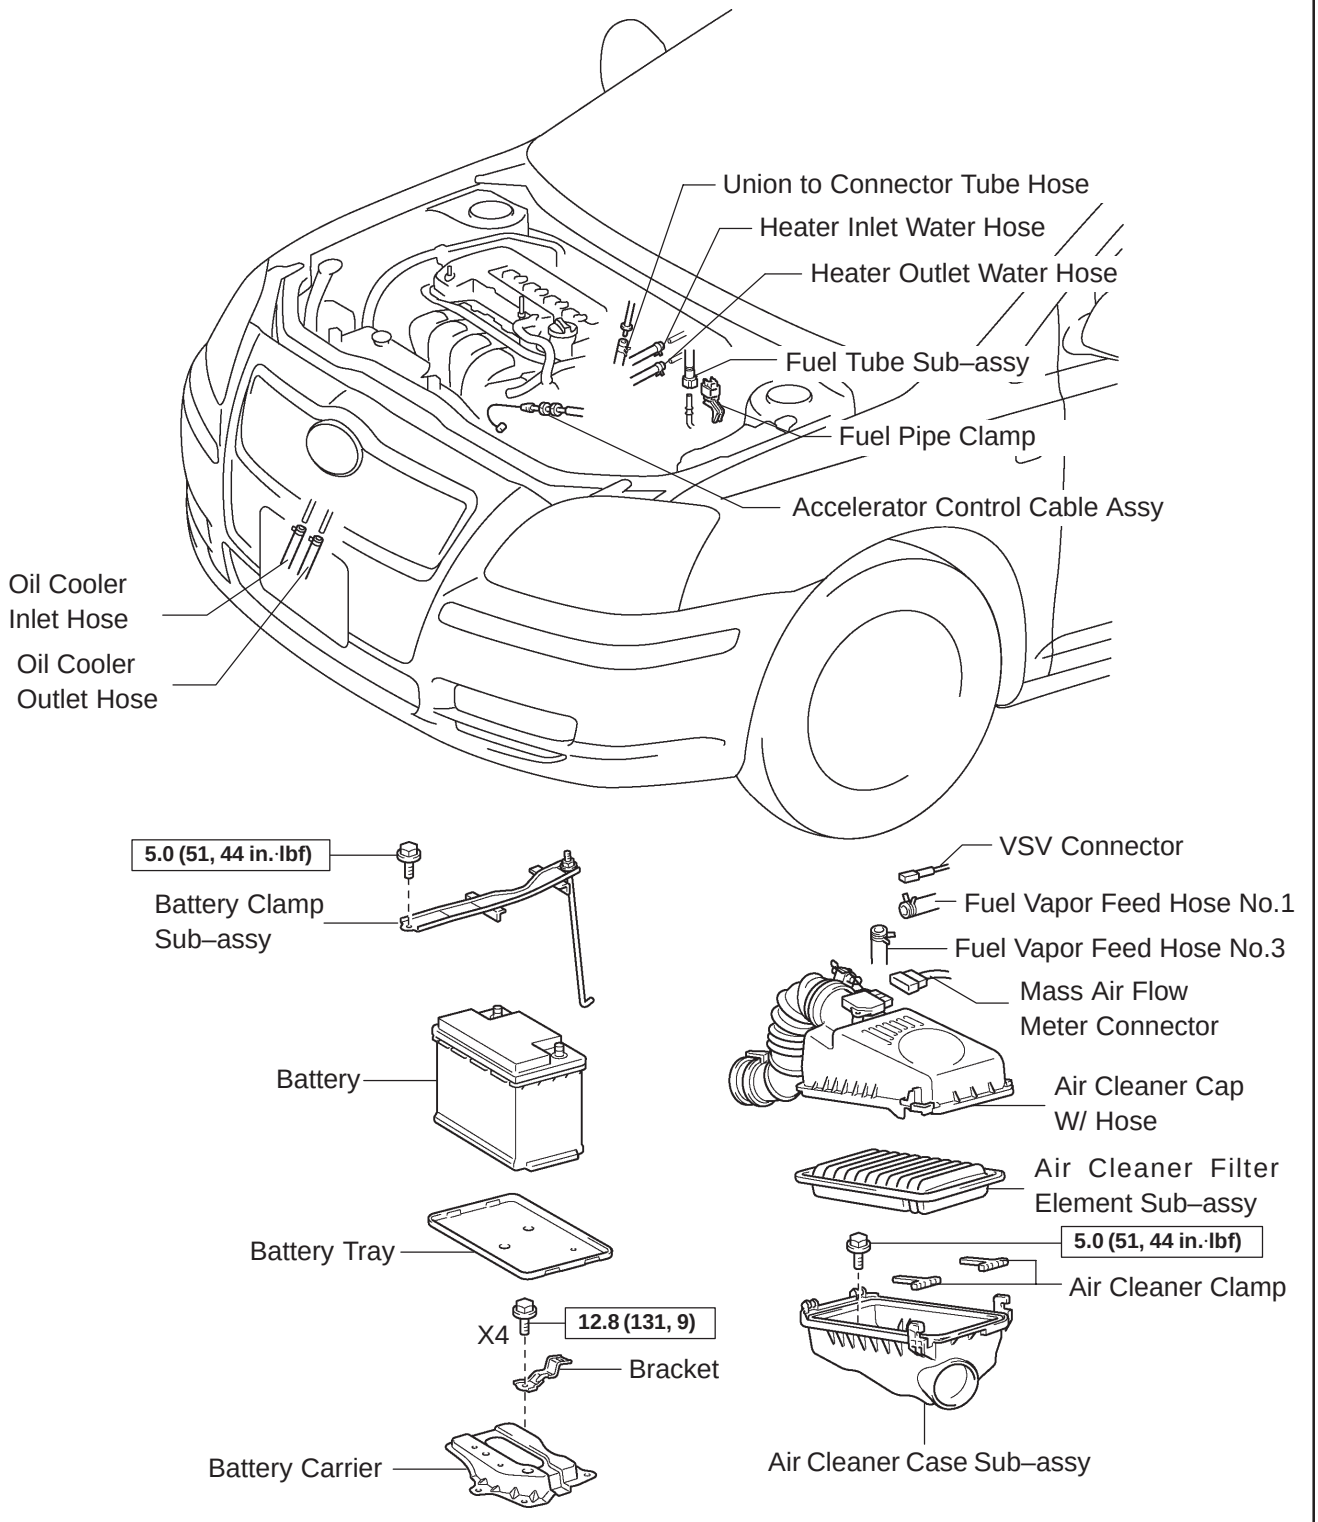
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

(b) Install the engine wire with the 2 nuts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

20. INSTALL CYLINDER HEAD COVER NO.2



(a) Install the cylinder head cover with the 2 nuts and 2 clips.
Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)



21. CHECK FOR ENGINE OIL LEAKS

PARTIAL ENGINE ASSY (1ZZ–FE/3ZZ–FE)

141CF–01

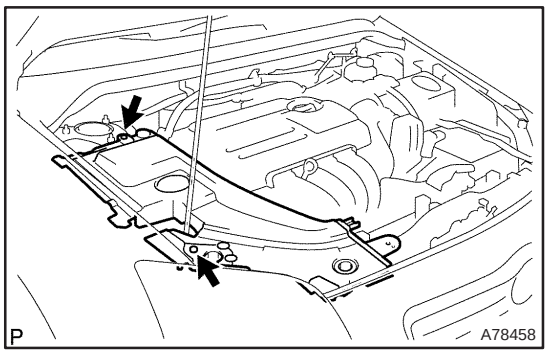
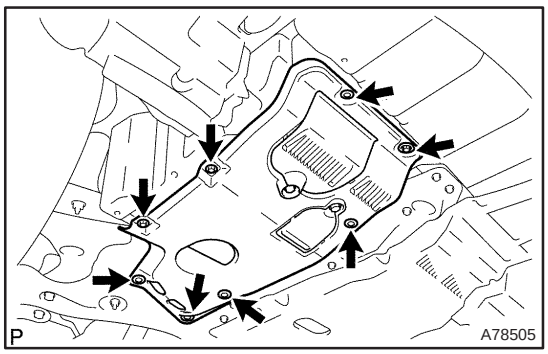
REPLACEMENT



1. DISCHARGE FUEL SYSTEM PRESSURE (See page 11–1)

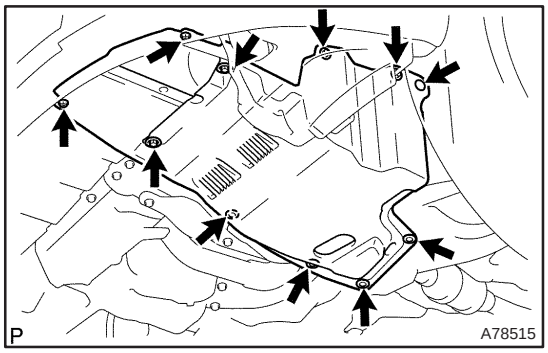
2. REMOVE RADIATOR SUPPORT OPENING COVER

(a) Remove the retainer and the 4 clips.



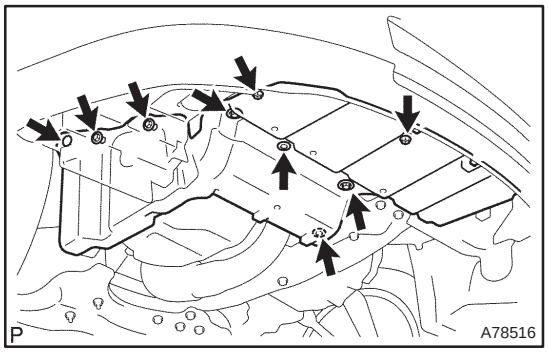
(b) Unfasten the 5 claws, and remove the radiator support opening cover.

3. REMOVE ENGINE ROOM COVER SIDE



(a) Remove the 2 clips and the engine room cover side.

4. REMOVE FRONT WHEELS



5. REMOVE ENGINE UNDER COVER SUB–ASSY NO.1

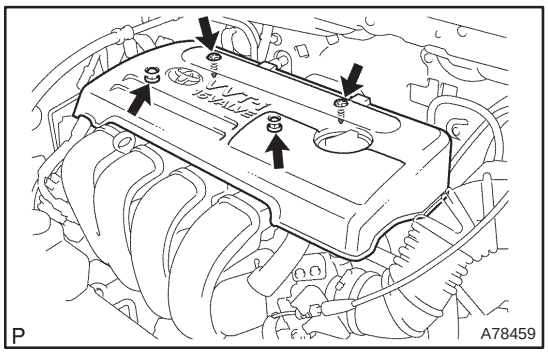
(a) Remove the 5 clips, 2 screws, bolt and detach the engine under cover.

6. REMOVE ENGINE UNDER COVER LH

(a) Remove the 6 screws and 5 clips, then detach the engine under cover.

7. REMOVE ENGINE UNDER COVER RH

(a) Remove the 6 screws and 3 clips, then detach the engine under cover.



8. DRAIN ENGINE COOLANT (See page 16–7)

9. DRAIN ENGINE OIL

(a) Install a new gasket and the drain plug after draining engine oil.
Torque: 37 N·m (377 kgf·cm, 27 ft·lbf)

10. DRAIN MANUAL TRANSAXLE OIL (M/T TRANSAXLE) (See page 41–15)

11. DRAIN AUTOMATIC TRANSAXLE FLUID (A/T TRANSAXLE) (See page 40–42)

12. REMOVE CYLINDER HEAD COVER NO.2

(a) Remove the 2 nuts and 2 clips, then detach cylinder head cover No.2.

13. REMOVE AIR CLEANER ASSEMBLY WITH HOSE (See page 10–9 or 10–15)

14. REMOVE AIR CLEANER FILTER ELEMENT SUB–ASSY

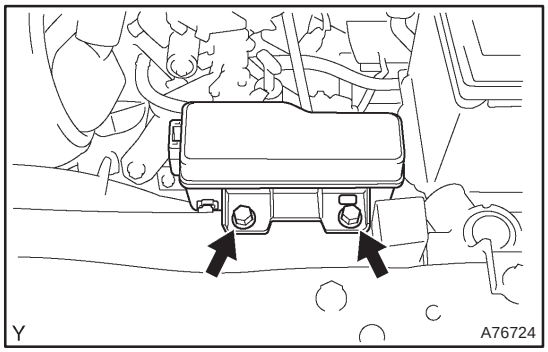
15. REMOVE AIR CLEANER CASE SUB–ASSY

(a) Remove the 3 bolts and the air cleaner case.

16. DISCONNECT RADIATOR HOSE INLET

(a) Disconnect the radiator hose inlet from the radiator.

17. DISCONNECT RADIATOR HOSE OUTLET



(a) Disconnect the radiator hose outlet from the radiator.

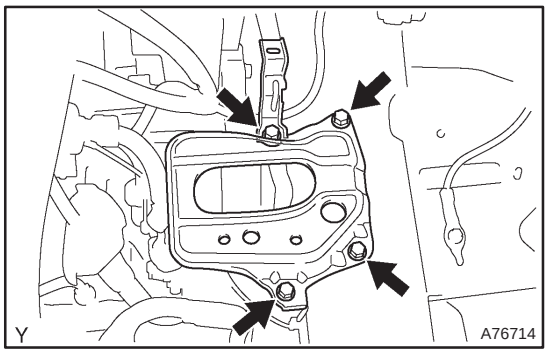
18. DISCONNECT OIL COOLER INLET TUBE NO.1 (A/T TRANSAXLE)

(a) Disconnect the oil cooler inlet tube from the radiator.

19. DISCONNECT OIL COOLER OUTLET TUBE NO.1 (A/T TRANSAXLE)

(a) Disconnect the oil cooler outlet tube from the radiator.

20. REMOVE RADIATOR ASSY



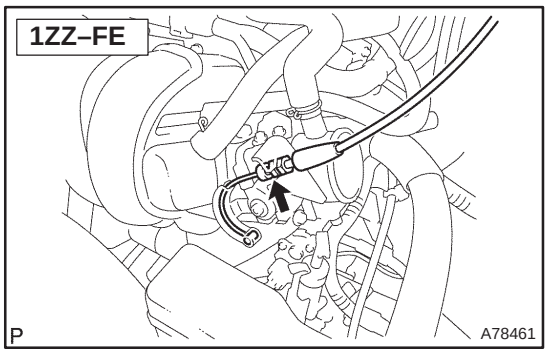
(a) Remove the 2 bolts and the relay block.

(b) Disconnect the connector and the 2 harness clamps.

(c) Remove the 2 bolts, the 2 radiator support upper and the radiator.

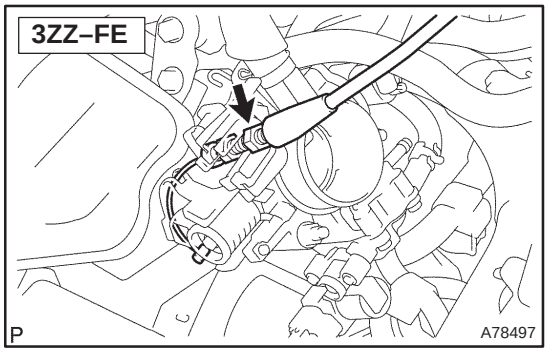
21. REMOVE BATTERY

22. REMOVE BATTERY TRAY



23. REMOVE BATTERY CARRIER

(a) Remove the 4 bolts, the battery carrier and the bracket.



24. REMOVE EFI FUEL PIPE CLAMP (See page 11–11)

25. DISCONNECT FUEL TUBE SUB–ASSY (See page 11–11)

26. SEPARATE ACCELERATOR CONTROL CABLE ASSY

(a) Loosen the nut and separate the accelerator control cable.

27. DISCONNECT UNION TO CONNECTOR TUBE HOSE

(a) Disconnect the union to connector tube hose.

28. DISCONNECT HEATER INLET WATER HOSE

(a) Disconnect the heater inlet water hose from the heater core inlet tube.

29. DISCONNECT HEATER OUTLET WATER HOSE

(a) Disconnect the heater outlet water hose from the heater core outlet tube.

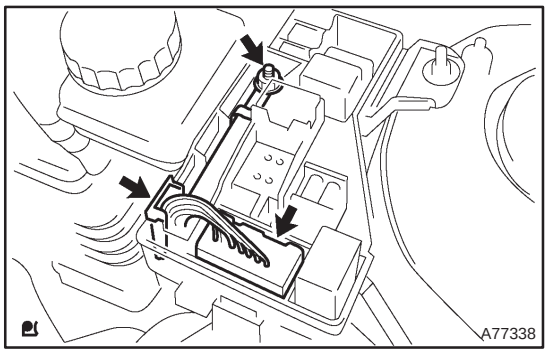
30. DISCONNECT OIL COOLER INLET HOSE (A/T TRANSAXLE)

(a) Disconnect the oil cooler inlet hose from the automatic transaxle.

31. DISCONNECT OIL COOLER OUTLET HOSE (A/T TRANSAXLE)

(a) Disconnect the oil cooler outlet hose from the automatic transaxle.

32. SEPARATE FLOOR SHIFT CABLE TRANSMISSION CONTROL SELECT (M/T TRANSAXLE) (See page 41–15)



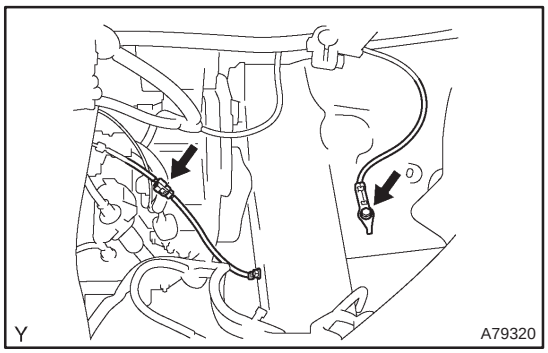
33. SEPARATE FLOOR SHIFT CABLE TRANSMISSION CONTROL SHIFT (M/T TRANSAXLE) (See page 41–15)

34. SEPARATE FLOOR SHIFT CABLE TRANSMISSION CONTROL SHIFT (A/T TRANSAXLE) (See page 40–11)

35. SEPARATE CLUTCH RELEASE CYLINDER ASSY (M/T TRANSAXLE) (See page 41–15)

36. REMOVE GLOVE COMPARTMENT DOOR ASSY (See page 71–11)

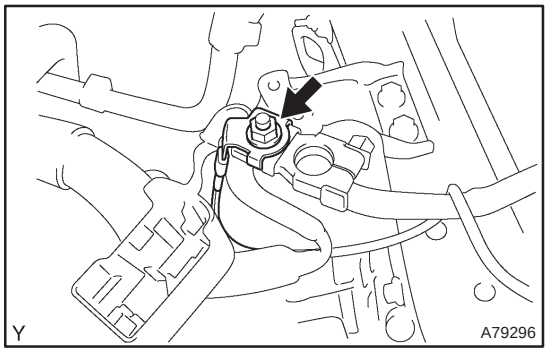
37. REMOVE INSTRUMENT PANEL UNDER COVER SUB–ASSY NO.2



38. DISCONNECT ENGINE WIRE

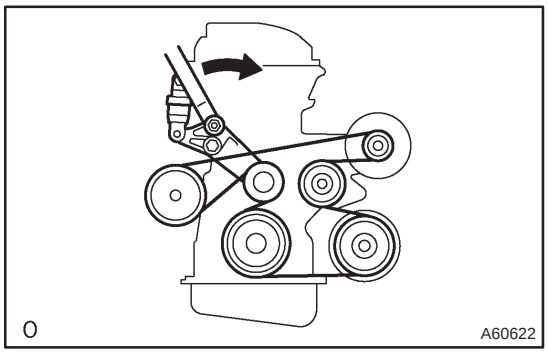
(a) Disconnect the engine wire from the ECM and junction block.

(b) Pull out the engine wire.



(c) Remove the engine room relay block No.2 cover.

(d) Remove a nut and disconnect a connector as shown in the illustration.



(e) Remove the bolt and disconnect the ground terminal.

(f) Disconnect the ground terminal connector.

(g) Remove the nut and disconnect the battery terminal B.

39. REMOVE FAN AND GENERATOR V BELT

(a) Turn the V–ribbed belt tensioner clockwise slowly and loosen it. Then, remove the fan and generator V belt and put back the V–ribbed belt tensioner carefully.

40. REMOVE GENERATOR ASSY (See page 19–7)

41. SEPARATE COMPRESSOR AND MAGNETIC CLUTCH (W/ AIR CONDITIONING)

HINT:

- Secure the compressor and hoses off to the side instead of discharging the A/C system.
- 1ZZ–FE (See page 55–74)
- 3ZZ–FE (See page 55–70)

42. REMOVE COLUMN HOLE COVER SILENCER SHEET

(a) Remove the 2 clips and the column hole cover silencer sheet.

43. SEPARATE STEERING INTERMEDIATE SHAFT (See page 50–9)

44. REMOVE FRONT DOOR SCUFF PLATE RH (See page 71–11)

45. REMOVE COWL SIDE TRIM BOARD RH (See page 71–11)

46. REMOVE FRONT FLOOR FOOTREST

47. REMOVE FLOOR PANEL BRACE FRONT

(a) Remove the 2 nuts and the floor panel brace front.

48. REMOVE EXHAUST PIPE ASSY FRONT (See page 15–2)

49. REMOVE FRONT AXLE HUB LH NUT (See page 30–6)

SST 09930–00010

50. REMOVE FRONT AXLE HUB RH NUT

SST 09930–00010

HINT:

Perform the same procedure as above on the opposite side.

51. SEPARATE TIE ROD END SUB–ASSY LH (See page 30–6)

SST 09628–62011

52. SEPARATE TIE ROD END SUB–ASSY RH

SST 09628–62011

HINT:

Perform the same procedure as above on the opposite side.

53. SEPARATE FRONT STABILIZER LINK ASSY LH (See page 30–6)

54. SEPARATE FRONT STABILIZER LINK ASSY RH

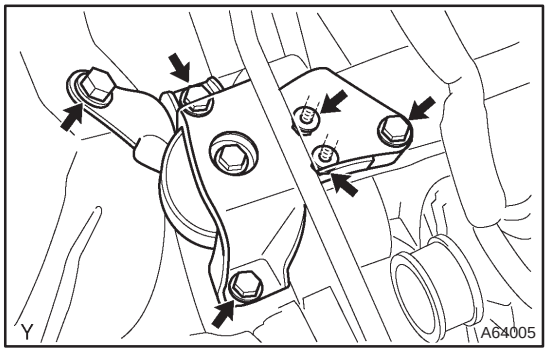
HINT:

Perform the same procedure as above on the opposite side.

55. SEPARATE FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH (See page 30–6)

56. SEPARATE FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 RH

HINT:

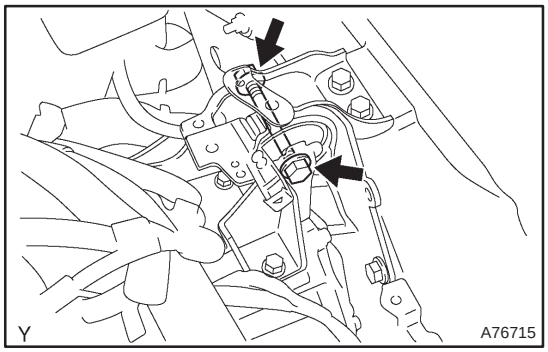


Perform the same procedure as above on the opposite side.

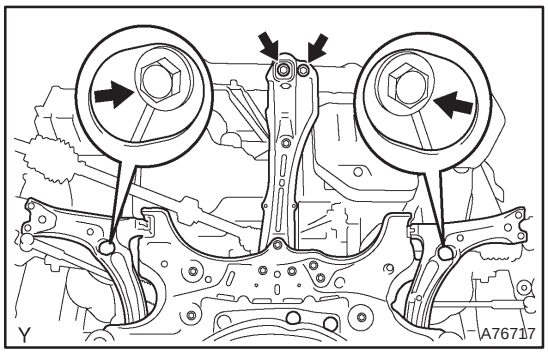
57. SEPARATE FRONT AXLE ASSY LH (See page 30–6)

58. SEPARATE FRONT AXLE ASSY RH

HINT:

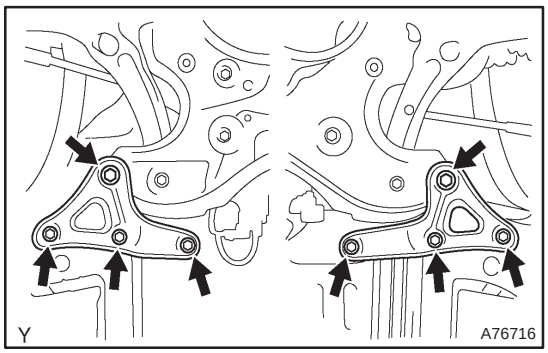


Perform the same procedure as above on the opposite side.



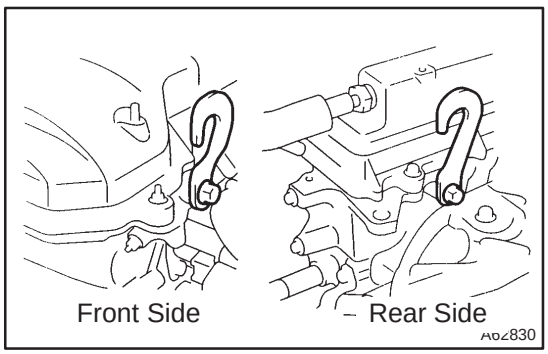
59. REMOVE ENGINE ASSEMBLY WITH TRANSAXLE

(a) Set the engine lifter.



(b) Remove the 4 bolts and 2 nuts, and detach the engine mounting insulator.

(c) Remove the through bolt and nut, detach the engine mounting insulator from the vehicle.



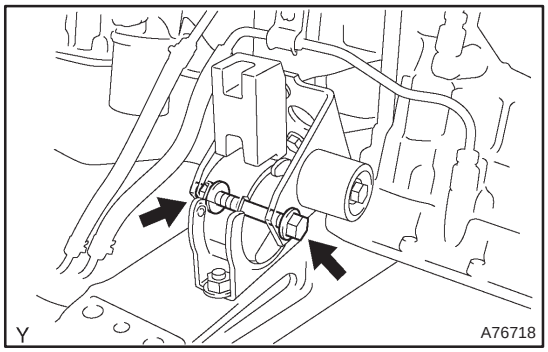
(d) Remove the 2 bolts and 2 nuts as shown in the illustration.

(e) Remove the 8 bolts and the front suspension member brace rear RH and LH.

(f) Carefully remove the engine with transaxle from the engine compartment.

(g) Install the engine hanger No. 1 (12281–15040) and the bolt (91512–B1016).

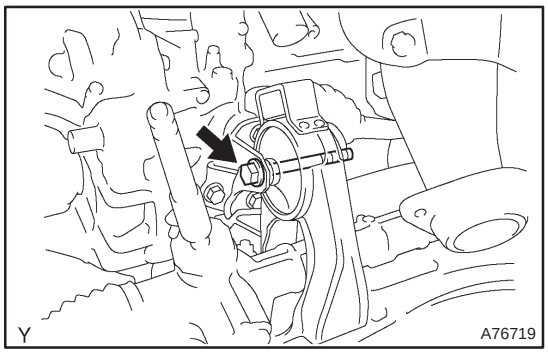
Torque: 38 N·m (387 kgf·cm, 28 ft·lbf)



(h) Install the engine hanger (12281–22021) and the bolt (91512–B1016).

Torque: 38 N·m (387 kgf·cm, 28 ft·lbf)

HINT:



Securely install the front engine hanger (12281–22021) and the rear engine hanger No. 1 (12281–15040) to the engine assembly.

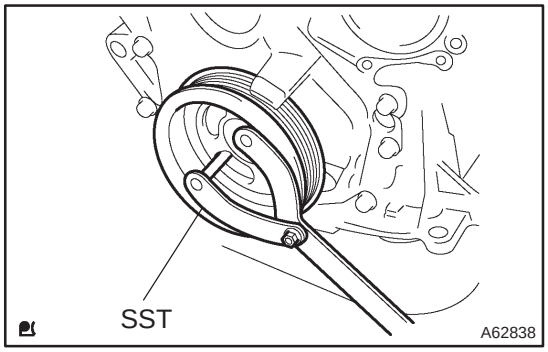
(i) Attach the engine sling and hang the engine with the chain block.

60. REMOVE FRONT SUSPENSION CROSSMEMBER W/CENTER MEMBER

(a) Remove the through bolt and nut, detach the engine mounting insulator FR from the engine mounting bracket.

(b) Remove the through bolt, detach the engine mounting insulator RR from the suspension crossmember.

(c) Separate the engine and the transaxle assembly from the suspension crossmember and the engine mounting member.

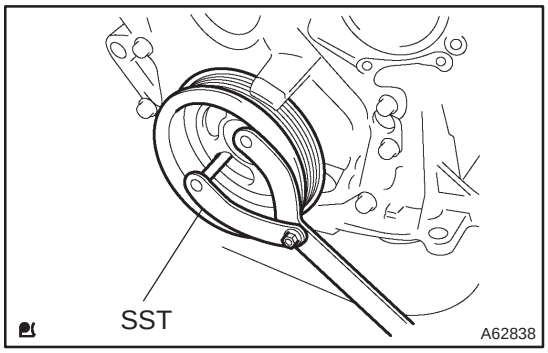


61. REMOVE STARTER ASSY (See page 19–3)

62. REMOVE MANUAL TRANSAXLE ASSY (M/T TRANSAXLE) (See page 41–15)

63. REMOVE AUTOMATIC TRANSAXLE ASSY (A/T TRANSAXLE) (See page 40–11)

64. REMOVE CLUTCH COVER ASSY (M/T TRANSAXLE) (See page 42–26)

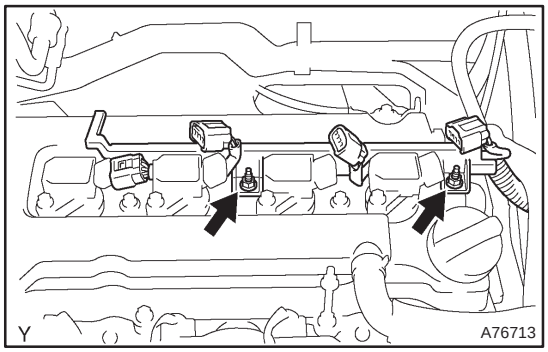


65. REMOVE CLUTCH DISC ASSY (M/T TRANSAXLE) (See page 42–26)

66. REMOVE FLYWHEEL SUB–ASSY (M/T TRANSAXLE)

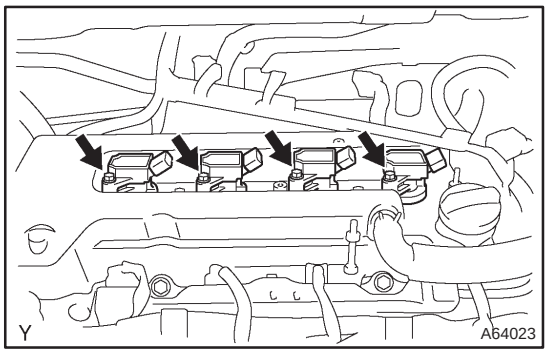
(a) Hold the crankshaft with SST, remove the 8 bolts and the flywheel.

SST 09960–10010 (09962–01000, 09963–01000)



67. REMOVE DRIVE PLATE & RING GEAR SUB–ASSY (A/T TRANSAXLE)

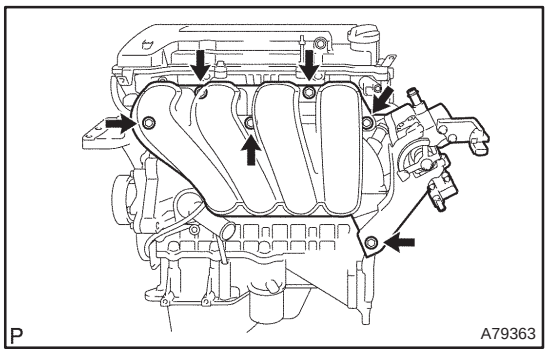
(a) Hold the crankshaft with SST, remove the 8 bolts and the drive plate & ring gear.



SST 09960–10010 (09962–01000, 09963–01000)

68. REMOVE IGNITION COIL ASSY

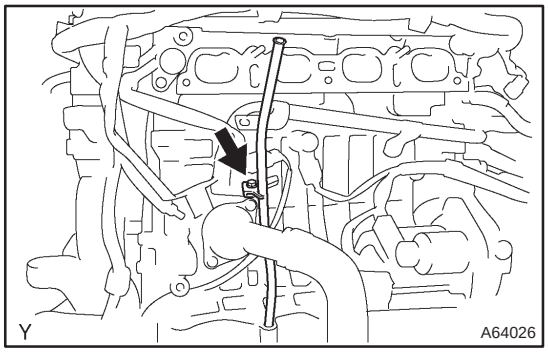
(a) Disconnect the 4 ignition coil connectors.



(b) Remove the 2 nuts which are used to secure the engine wire.

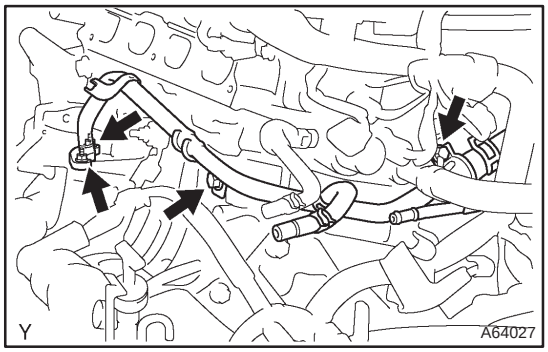
(c) Remove the 4 bolts and the 4 ignition coils.

69. REMOVE FUEL DELIVERY PIPE SUB–ASSY
(See page 11–11)



70. REMOVE INTAKE MANIFOLD

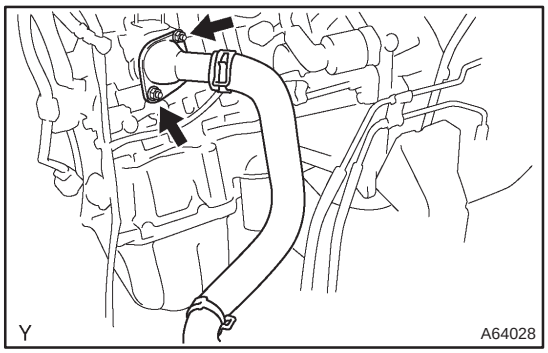
(a) Disconnect the 2 water hoses from the throttle body.
(b) Disconnect the ventilation hose and the ventilation hose No. 2 from the cylinder head cover.
(c) Disconnect the vacuum hose from the water by–pass pipe No. 1.
(d) Remove the 4 bolts, 2 nuts and 2 wire brackets,then remove the intake manifold and the throttle body assembly.
(e) Remove the gasket from the intake manifold and the throttle body assembly.



71. REMOVE OIL LEVEL GAGE SUB–ASSY

(a) Remove the oil level gage from the oil level gage guide.

72. REMOVE OIL LEVEL GAGE GUIDE

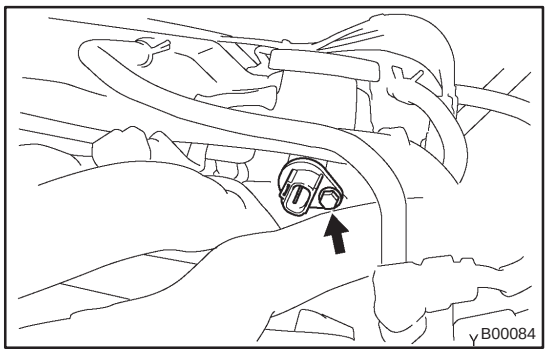


(a) Disconnect the crank shaft position sensor cramp.
(b) Remove the bolt and the oil level gage guide.

73. REMOVE WATER BY–PASS PIPE NO.1

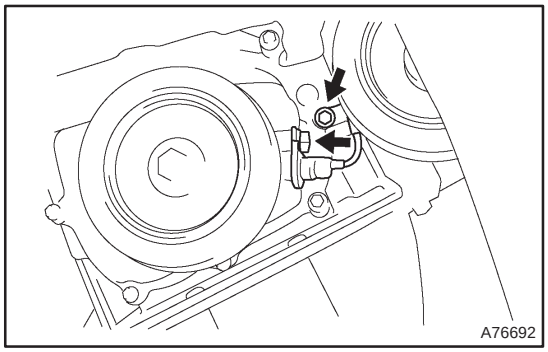
(a) Disconnect the knock sensor cramp.

(b) Remove the 2 bolts and 2 nuts, then detach the water by–pass pipe and the gasket.



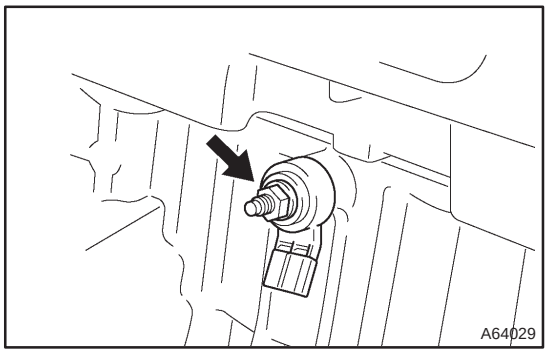
74. REMOVE WATER INLET

(a) Remove the 2 nuts and the water inlet.



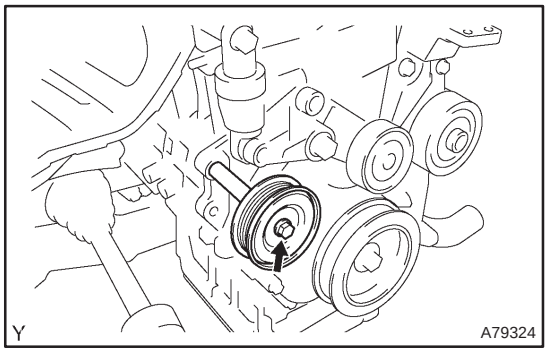
75. REMOVE THERMOSTAT

76. REMOVE ENGINE OIL PRESSURE SWITCH ASSY (See page 17–1)



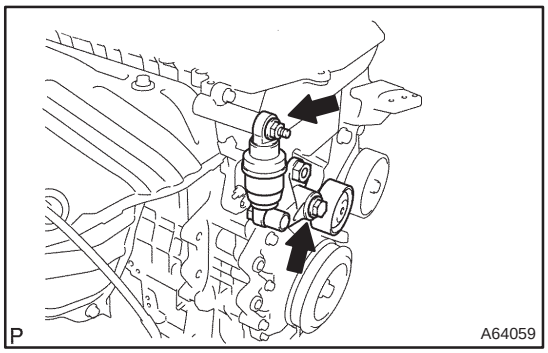
77. REMOVE CAMSHAFT POSITION SENSOR

(a) Remove the bolt and the camshaft position sensor.



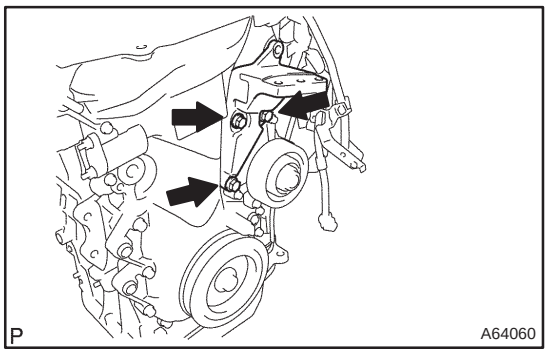
78. REMOVE CRANKSHAFT POSITION SENSOR

(a) Remove the 2 bolts and the crankshaft position sensor.



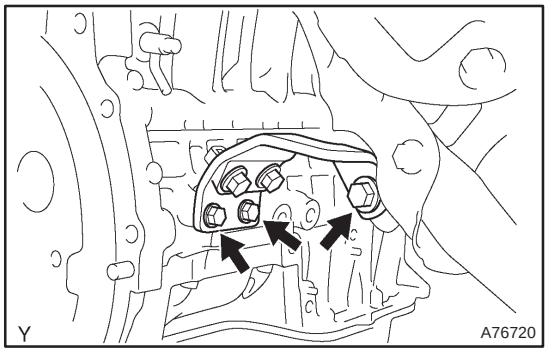
79. REMOVE KNOCK SENSOR

(a) Remove the nut and the knock sensor.



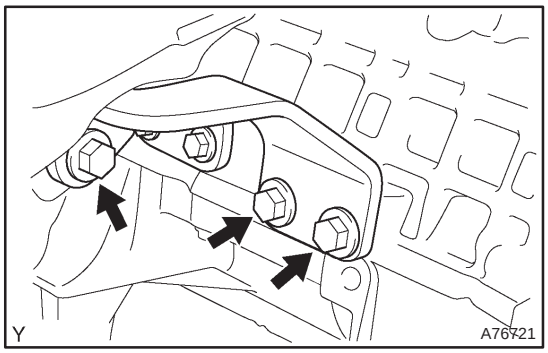
80. REMOVE V–RIBBED IDLER ASSY NO.1

(a) Remove the nut, bolt, tube and the idler.



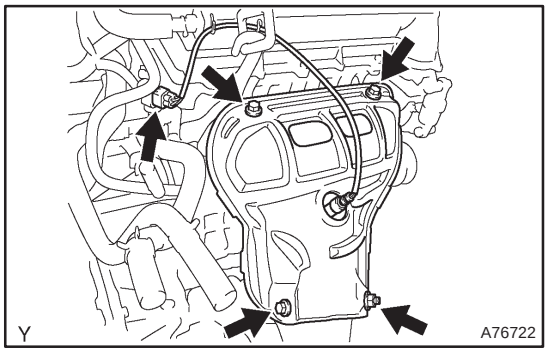
81. REMOVE V–RIBBED BELT TENSIONER ASSY

(a) Remove the bolts, nut and the V–ribbed belt tensioner.



82. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

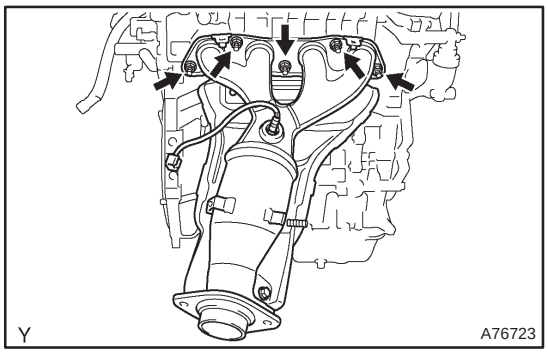
(a) Remove the 3 bolts and the transverse engine mounting bracket.



83. REMOVE MANIFOLD STAY

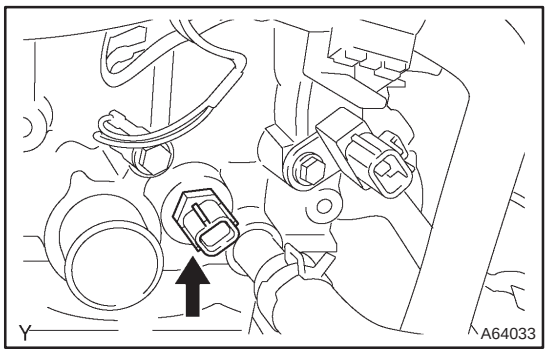
(a) Remove the 3 bolts and the manifold stay.

84. REMOVE MANIFOLD STAY NO.2



(a) Remove the 3 bolts and the manifold stay.

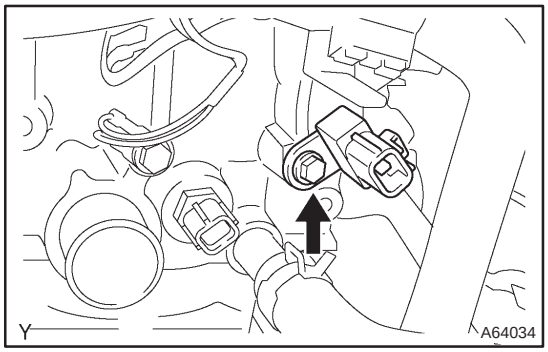
85. REMOVE EXHAUST MANIFOLD HEAT INSULATOR NO.1



(a) Disconnect the heated oxygen sensor connector.

(b) Remove the 3 bolts and the nut, and then remove the exhaust manifold heat insulator.

86. REMOVE EXHAUST MANIFOLD



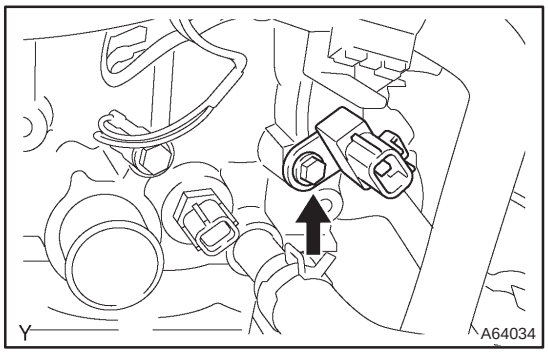
(a) Remove the 5 nuts, then remove the exhaust manifold and the gasket.

87. REMOVE ENGINE COOLANT TEMPERATURE SENSOR

(a) Using SST, remove the engine coolant temperature sensor.

SST 09817–33190

88. REMOVE RADIO SETTING CONDENSER

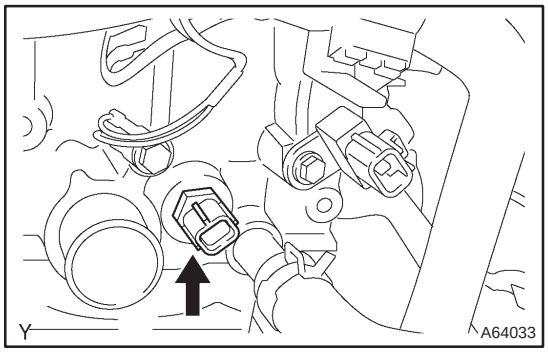


(a) Remove the bolt and the condenser.

89. REMOVE WATER BY–PASS HOSE NO.2

90. REMOVE RADIATOR HOSE INLET

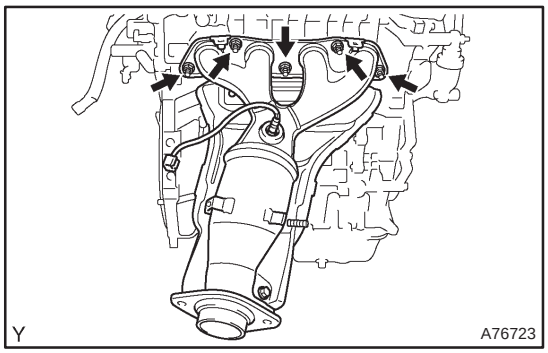
91. REMOVE HEATER INLET WATER HOSE



92. REPLACE PARTIAL ENGINE ASSY

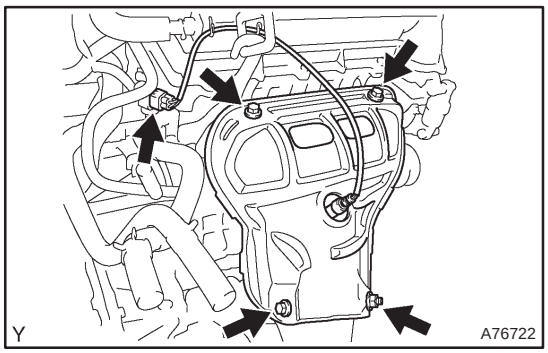
93. INSTALL RADIO SETTING CONDENSER

(a) Install the condenser with the bolt.



Torque: 10 N·m (102 kgf·cm, 7 ft·lbf)

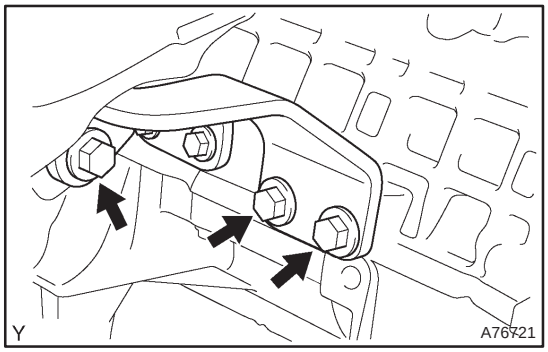
94. INSTALL ENGINE COOLANT TEMPERATURE SENSOR



(a) Install a new gasket to the engine coolant temperature sensor.

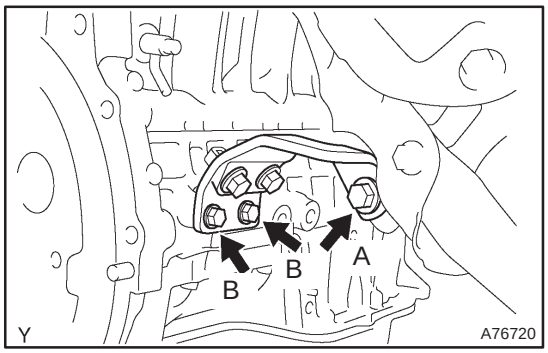
(b) Using SST, install the engine coolant temperature sensor.
SST 09817–33190
Torque: 20 N·m (204 kgf·cm, 15 ft·lbf)

95. INSTALL EXHAUST MANIFOLD



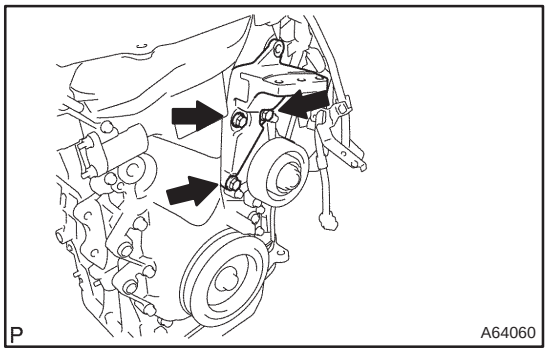
(a) Install a new gasket and the exhaust manifold with the 5 nuts.
Torque: 37 N·m (377 kgf·cm, 27 ft·lbf)

96. INSTALL EXHAUST MANIFOLD HEAT INSULATOR NO.1



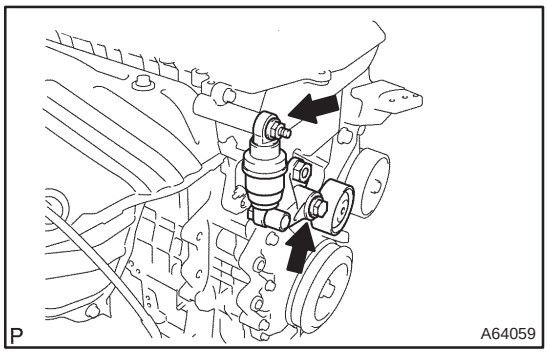
(a) Install the exhaust manifold heat insulator,then install the 3 bolts and nut.
Torque:
18 N·m (184 kgf·cm, 13 ft·lbf) for Bolt
12 N·m (122 kgf·cm, 9 ft·lbf) for Nut

(b) Connect the heated oxygen sensor connector.



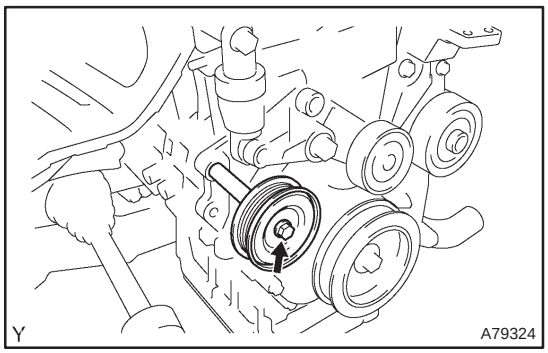
97. INSTALL MANIFOLD STAY NO.2

(a) Install the manifold stay with the 3 bolts.
Torque: 49 N·m (500 kgf·cm, 36 ft·lbf)



98. INSTALL MANIFOLD STAY

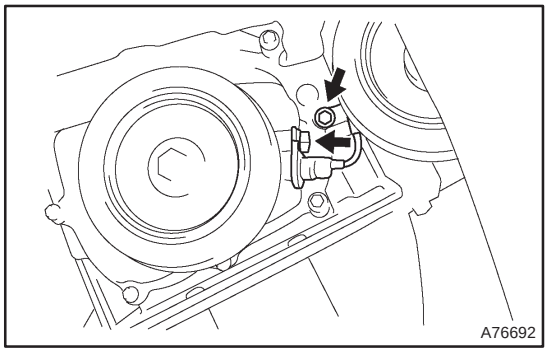
(a) Install the manifold stay with the 3 bolts.
Torque:
49 N·m (500 kgf·cm, 36 ft·lbf) for A
37 N·m (377 kgf·cm, 27 ft·lbf) for B



99. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Install the transverse engine mounting bracket with the bolts.
Torque: 47 N·m (479 kgf·cm, 35 ft·lbf)

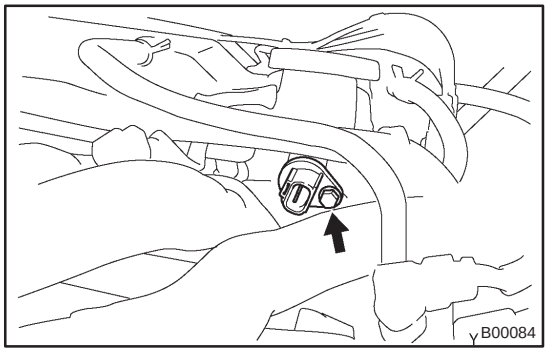
100. INSTALL V–RIBBED BELT TENSIONER ASSY



(a) Install the V–ribbed belt tensioner with the bolt and nut.
Torque:
29 N·m (296 kgf·cm, 21 ft·lbf) for Nut
69 N·m (704 kgf·cm, 51 ft·lbf) for Bolt

101. INSTALL V–RIBBED IDLER ASSY NO.1

(a) Install the tube and idler with the nut and bolt.
Torque: 39.2 N·m (400 kgf·cm, 29 ft·lbf)

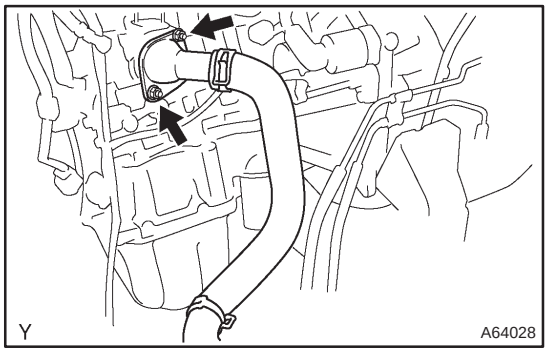


102. INSTALL KNOCK SENSOR (See page 10–17)

103. INSTALL CRANKSHAFT POSITION SENSOR

(a) Apply a light coat of engine oil to the O–ring on the crankshaft position sensor.

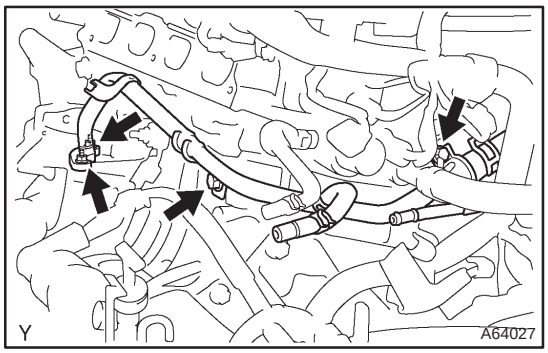
(b) Install the crankshaft position sensor with the 2 bolts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)



104. INSTALL CAMSHAFT POSITION SENSOR

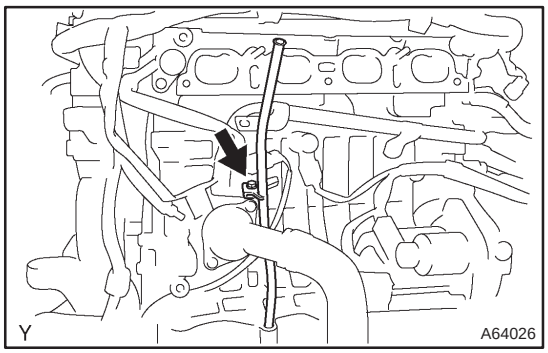
(a) Apply a light coat of engine oil to the O–ring on the camshaft position sensor.

(b) Install the camshaft position sensor with the bolt.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)



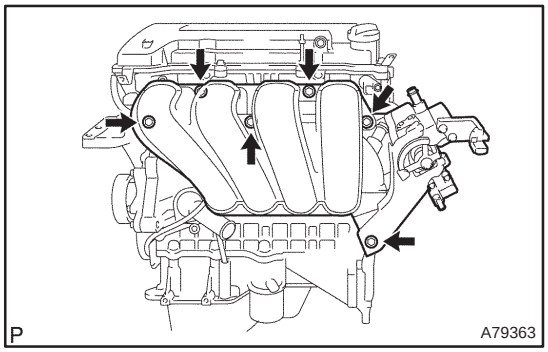
105. INSTALL ENGINE OIL PRESSURE SWITCH ASSY (See page 17–1)
Adhesive: Part No.08833 – 00080, THREE BOND 1344.

106. INSTALL THERMOSTAT (See page 16–9)



107. INSTALL WATER INLET

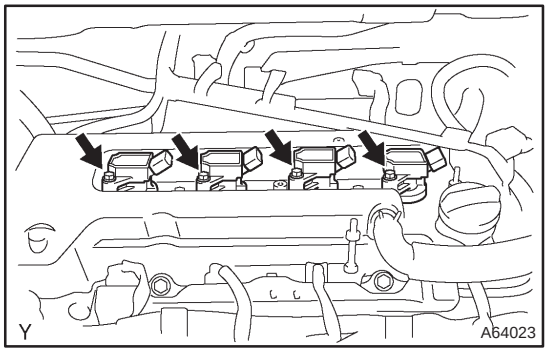
(a) Install the water inlet with the 2 nuts.
Torque: 11 N·m (112 kgf·cm, 8 ft·lbf)



108. INSTALL WATER BY–PASS PIPE NO.1

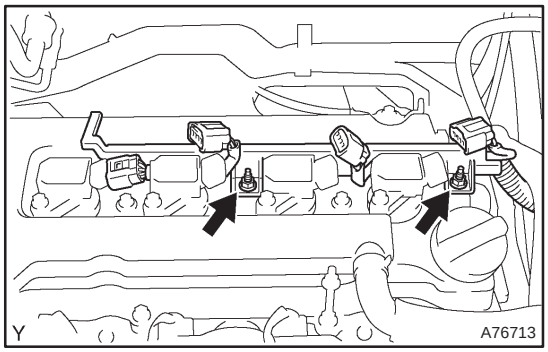
(a) Install a new gasket and water by–pass pipe with the 2 nuts and 2 bolts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

109. INSTALL OIL LEVEL GAGE GUIDE



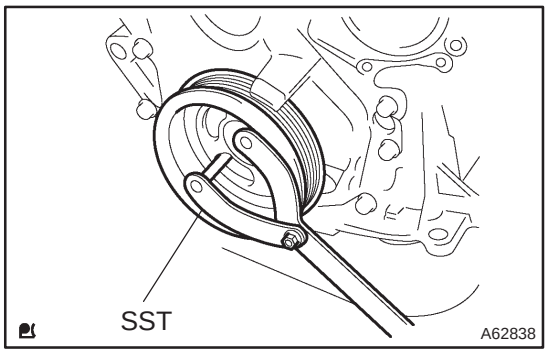
(a) Apply a light coat of engine oil a new O–ring and install it to the oil level gage guide.
(b) Install the oil level gage guide with the bolt.
Torque: 13 N·m (133 kgf·cm, 10 ft·lbf)

110. INSTALL INTAKE MANIFOLD



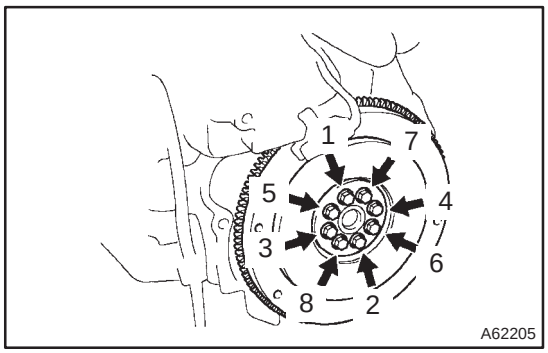
(a) Install a new gasket to the intake manifold.
(b) Install the intake manifold and 2 clamp brackets with the 2 nuts and 4 bolts.
Torque: 30 N·m (306 kgf·cm, 22 ft·lbf)

111. INSTALL FUEL DELIVERY PIPE SUB–ASSY
(See page 11–11)

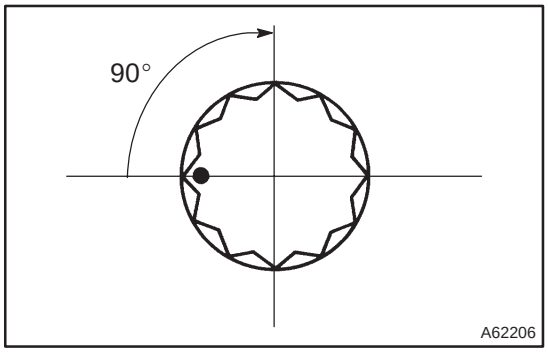


112. INSTALL IGNITION COIL ASSY

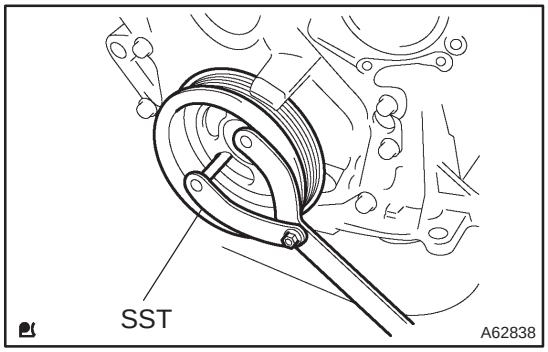
(a) Install the 4 ignition coils with the 4 bolts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)



(b) Install the engine wire with the 2 nuts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

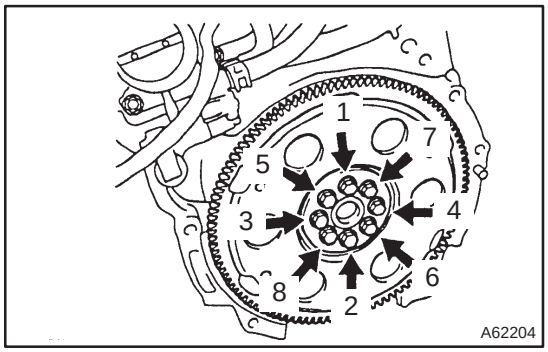


113. INSTALL FLYWHEEL SUB–ASSY (M/T TRANSAXLE)

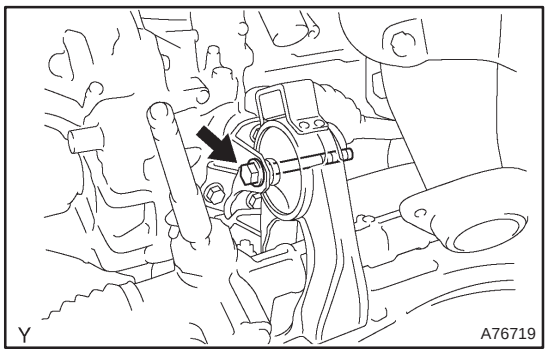


(a) Hold the crankshaft with SST.
SST 09960–10010 (09962–01000, 09963–01000)

(b) Clean the bolt and bolt hole.
(c) Apply adhesive to the bolts.
Adhesive:
Part No. 09330–00070, THREE BOND or equivalent.
(d) Using several steps, install and tighten the 8 bolts uniformly in the sequence shown in the illustration.
Torque: 49 N·m (500 kgf·cm, 36 ft·lbf)

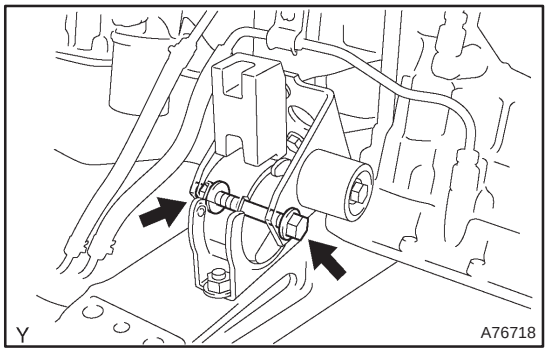


(e) Mark each bolt head with paint.
(f) Retighten the bolts by an additional 90° in the same sequence as step (d).
(g) Check that the paint marks are at 90° angle about the original position.

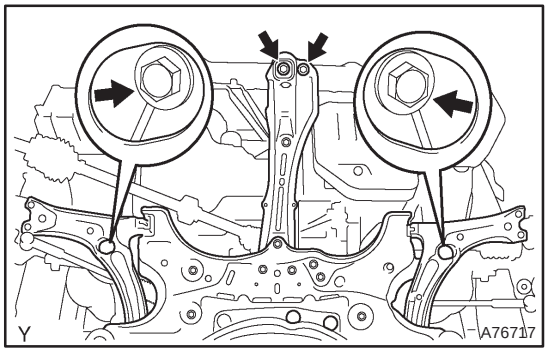


114. INSTALL DRIVE PLATE & RING GEAR SUB–ASSY (A/T TRANSAXLE)

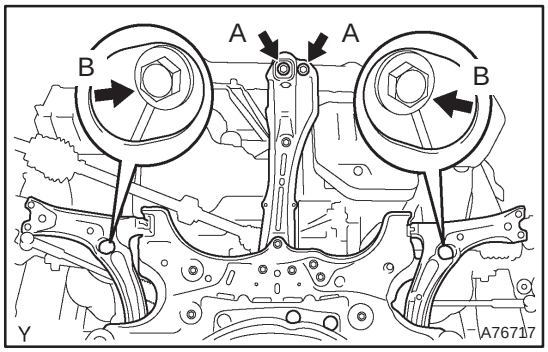
(a) Hold the crankshaft with SST.
SST 09960–10010 (09962–01000, 09963–01000)



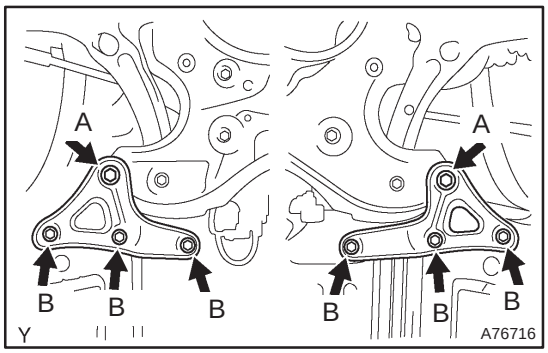
(b) Clean the bolt and bolt hole.
(c) Apply adhesive to the bolts.
Adhesive:
Part No. 09330–00070, THREE BOND or equivalent.
(d) Using several steps, install and tighten the 8 bolts uniformly in the sequence shown in the illustration.
Torque: 88 N·m (897 kgf·cm, 65 ft·lbf)



115. INSTALL CLUTCH DISC ASSY (M/T TRANSAXLE) (See page 42–26)
SST 09301–00210
116. INSTALL CLUTCH COVER ASSY (M/T TRANSAXLE) (See page 42–26)
SST 09301–00210
117. INSTALL MANUAL TRANSAXLE ASSY (M/T TRANSAXLE) (See page 41–15)
118. INSTALL AUTOMATIC TRANSAXLE ASSY (A/T TRANSAXLE) (See page 40–11)
119. INSTALL STARTER ASSY (See page 19–3)



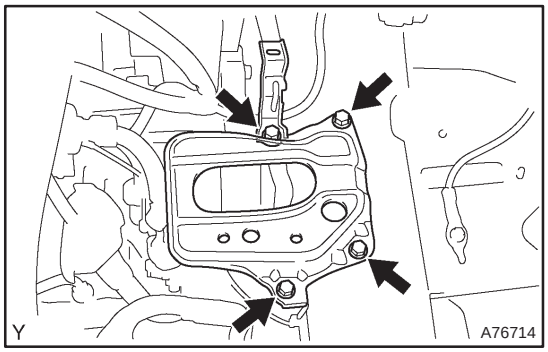
120. INSTALL FRONT SUSPENSION CROSSMEMBER W/CENTER MEMBER
(a) Attach the engine and transaxle assembly to the suspension crossmember and the engine mounting member.
(b) Install the bolt which is used to secure the rear engine mounting bracket to the mounting insulator.
Torque: 87 N·m (887 kgf·cm, 64 ft·lbf)



(c) Install the bolt which is used to secure the front engine mounting bracket to the mounting insulator.
Torque: 52 N·m (530 kgf·cm, 38 ft·lbf)
121. INSTALL ENGINE ASSEMBLY WITH TRANSAXLE
SST 09670–00010
(a) Set the engine assembly with transaxle on the engine lifter.

(b) Temporarily install the suspension crossmember with the 2 bolts and 2 nuts.
(c) Install the engine mounting insulator LH.
Torque: 80 N·m (816 kgf·cm, 59 ft·lbf)
(d) Install the engine mounting insulator RH.
Torque: 52 N·m (530 kgf·cm, 38 ft·lbf)

(e) Tighten the 2 bolts and 2 nuts.
Torque:
45 N·m (459 kgf·cm, 33 ft·lbf) for Bolt A
133 N·m (1,356 kgf·cm, 98 ft·lbf) for Nut B



(f) Install the front suspension member brace LH and RH with the 8 bolts.
Torque:
133 N·m (1,356 kgf·cm, 98 ft·lbf) for Bolt A
80 N·m (816 kgf·cm, 59 ft·lbf) for Bolt B

NOTICE:
When installing the crossmember, check that the positioning holes on the crossmember and on the vehicle are aligned with each other.

122. INSTALL FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH (See page 30–6)
123. INSTALL FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 RH
HINT:
Perform the same procedure as above on the opposite side.
124. INSTALL FRONT STABILIZER LINK ASSY LH (See page 30–6)
125. INSTALL FRONT STABILIZER LINK ASSY RH
HINT:
Perform the same procedure as above on the opposite side.
126. INSTALL TIE ROD END SUB–ASSY LH (See page 30–6)
127. INSTALL TIE ROD END SUB–ASSY RH
HINT:
Perform the same procedure as above on the opposite side.
128. INSTALL FRONT AXLE HUB LH NUT (See page 30–6)
129. INSTALL FRONT AXLE HUB RH NUT
HINT:
Perform the same procedure as above on the opposite side.
130. INSTALL EXHAUST PIPE ASSY FRONT (See page 15–2)
131. INSTALL FLOOR PANEL BRACE FRONT
Torque: 30 N·m (306 kgf·cm, 22 ft·lbf)
132. INSTALL STEERING INTERMEDIATE SHAFT (See page 50–9)
133. INSTALL GENERATOR ASSY (See page 19–7)
134. INSTALL COMPRESSOR AND MAGNETIC CLUTCH (W/ AIR CONDITIONING)
HINT:
- 1ZZ–FE (See page 55–74)
- 3ZZ–FE (See page 55–70)

135. INSTALL CLUTCH RELEASE CYLINDER ASSY (M/T TRANSAXLE)
(See page 41–15)
136. INSTALL FLOOR SHIFT CABLE TRANSMISSION CONTROL SHIFT (A/T TRANSAXLE)
(See page 40–11)

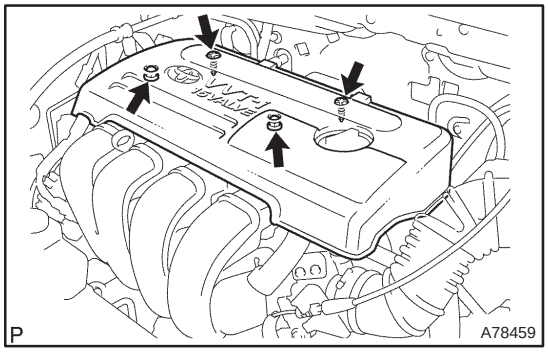
137. INSTALL BATTERY CARRIER

(a) Install the battery carrier and bracket with the 4 bolts.
Torque: 12.8 N·m (131 kgf·cm, 9 ft·lbf)

138. INSTALL BATTERY
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)

139. INSTALL RADIATOR SUPPORT NO.1

(a) Install the 2 radiator supports with the 2 bolts.
Torque: 19 N·m (194 kgf·cm, 14 ft·lbf)



140. INSTALL ACCELERATOR CONTROL CABLE ASSY (1ZZ–FE ENGINE TYPE) (See page 10–9)

141. INSTALL ACCELERATOR CONTROL CABLE ASSY (3ZZ–FE ENGINE TYPE) (See page 10–15)

142. INSTALL AIR CLEANER CASE SUB–ASSY

(a) Install the air cleaner case with the 3 bolts.
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)

143. INSTALL AIR CLEANER ASSEMBLY WITH HOSE (See page 10–9 or 10–15)

144. INSTALL CYLINDER HEAD COVER NO.2

(a) Install the cylinder head cover with the 2 nuts and 2 clips.
Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)

145. INSTALL FRONT WHEELS
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

146. ADD AUTOMATIC TRANSAXLE FLUID (A/T TRANSAXLE)

147. ADD ENGINE OIL

148. ADD ENGINE COOLANT (See page 16–7)

149. CHECK FOR ENGINE OIL LEAKS

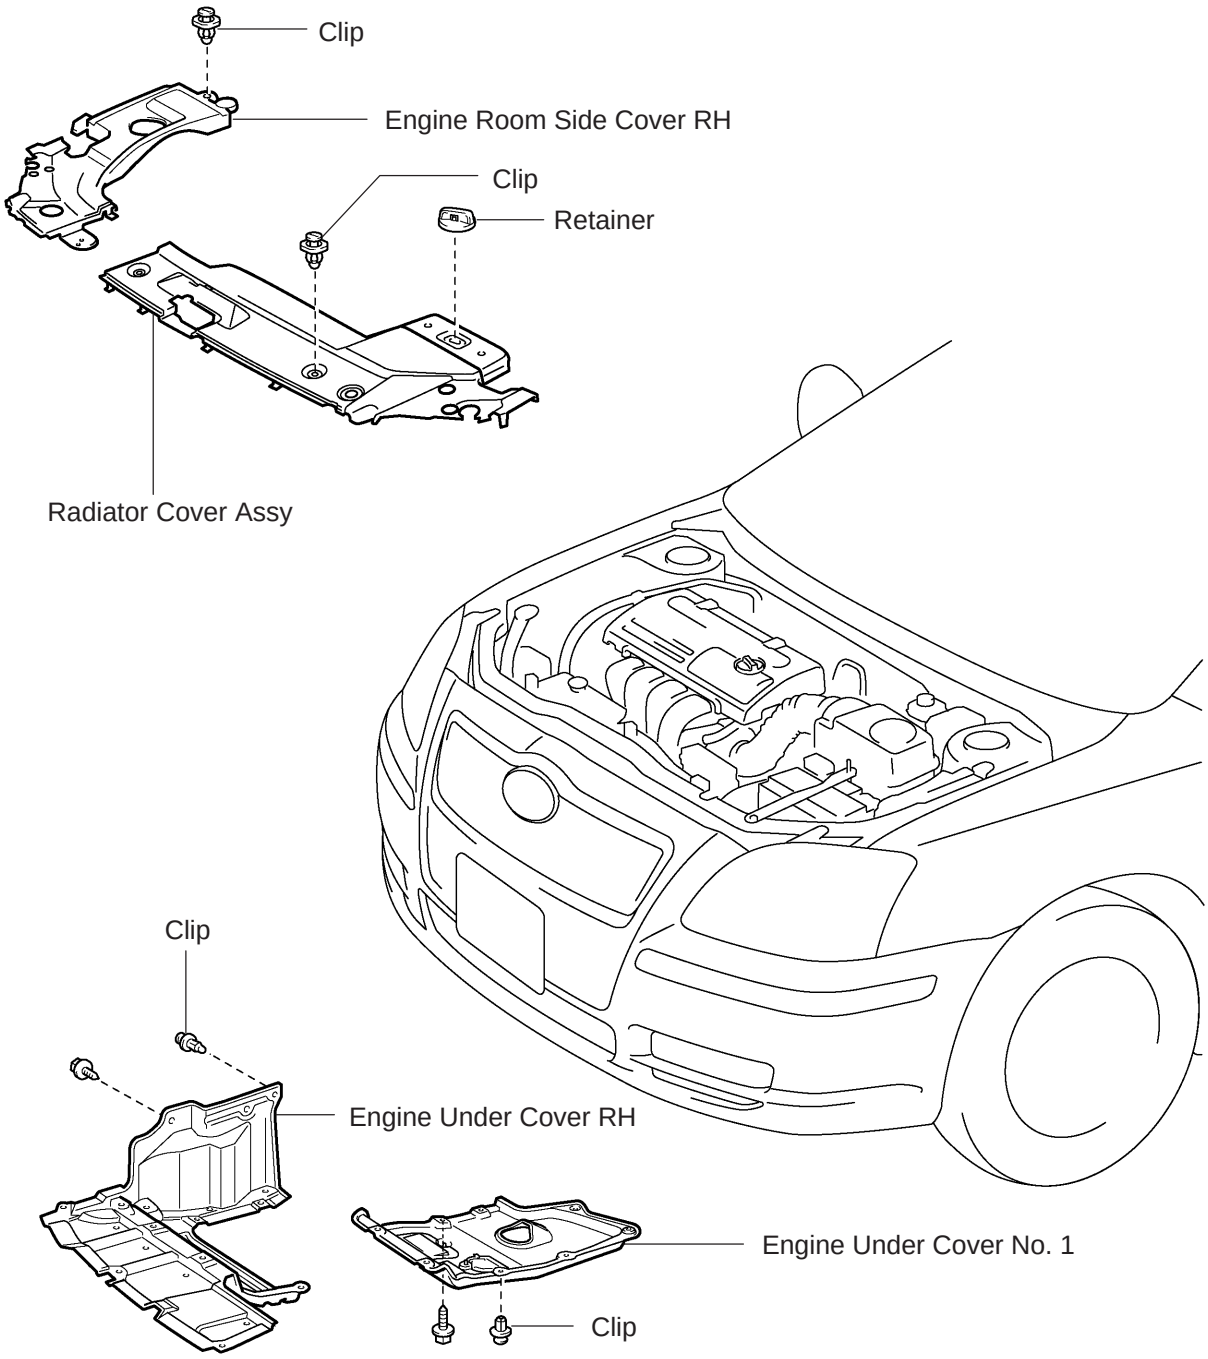
150. CHECK FOR ENGINE COOLANT LEAKS (See page 16–7)

151. CHECK FOR FUEL LEAKS

152. CHECK FOR EXHAUST GAS LEAKS

153. CHECK IDLE SPEED AND IGNITION TIMING (See page 14–1)
SST 09843–18040

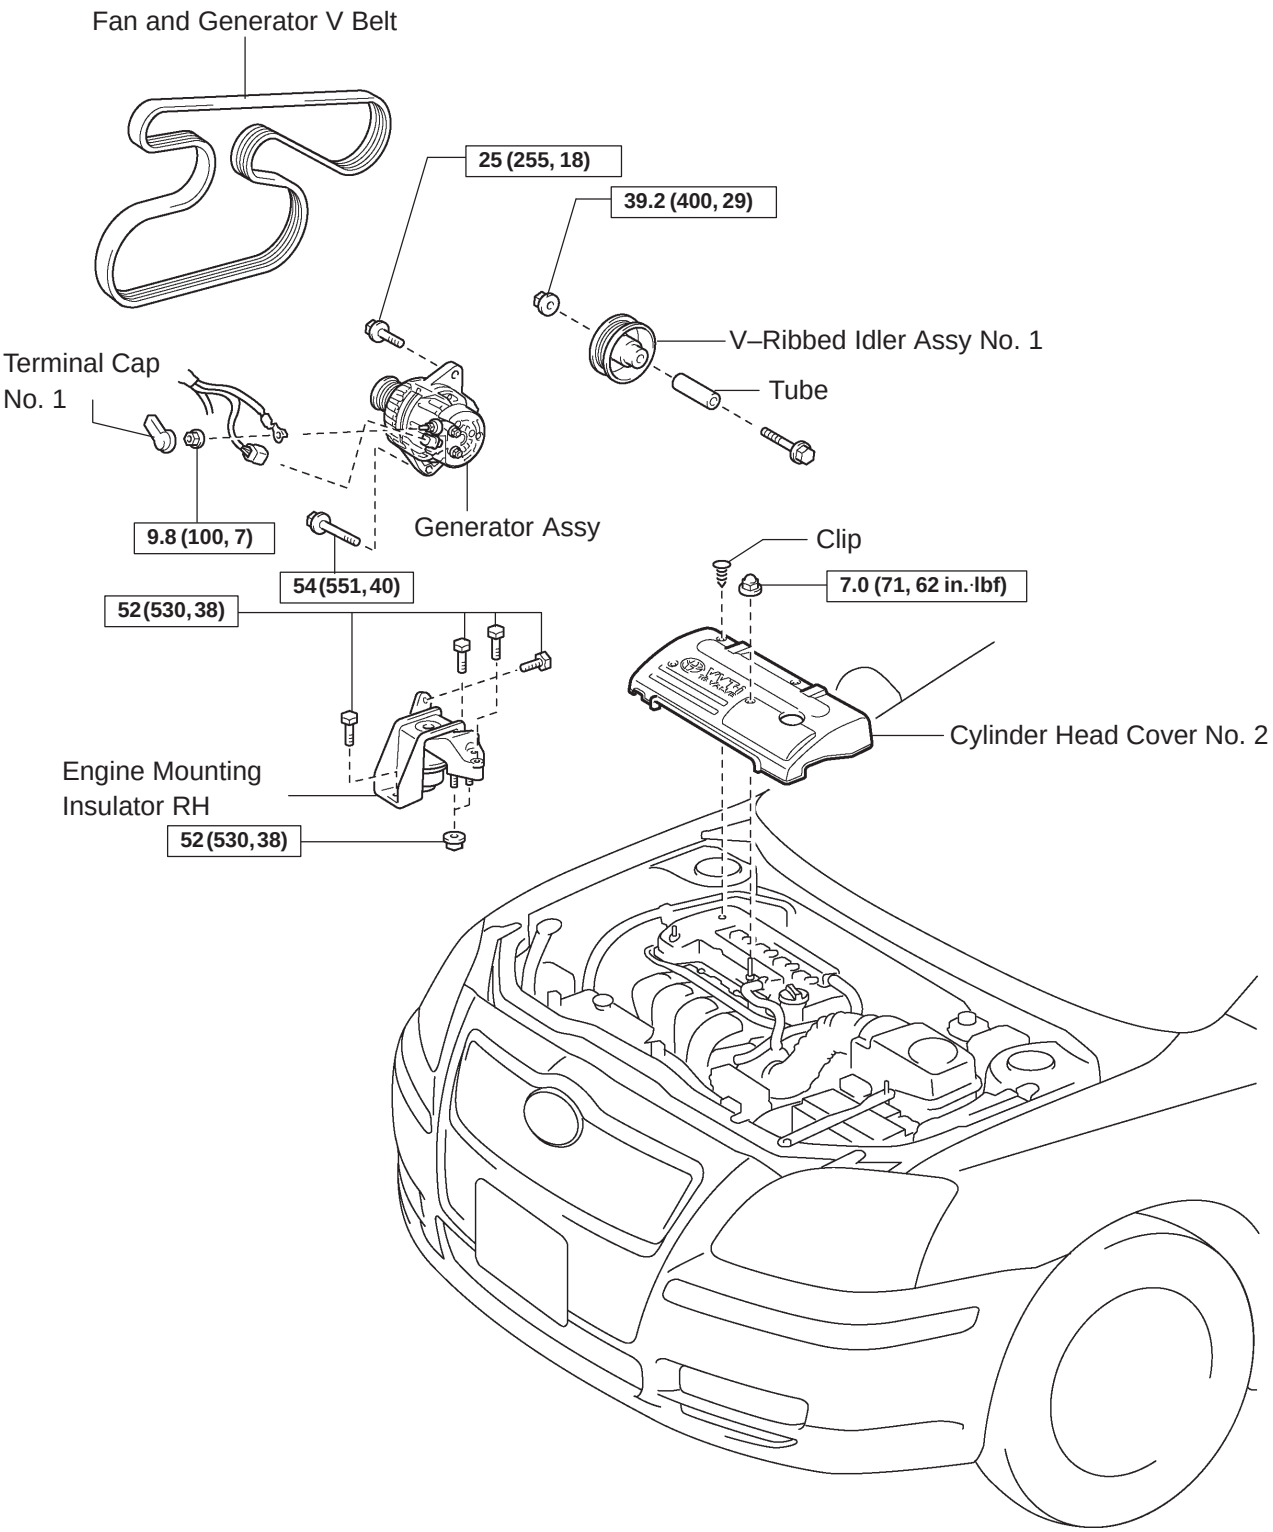
154. INSPECT CO/HC (See page 14–1)



155. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT (See page 26–6)

156. CHECK ABS SPEED SENSOR SIGNAL

CHAIN SUB–ASSY (1ZZ–FE/3ZZ–FE)



141CH–01

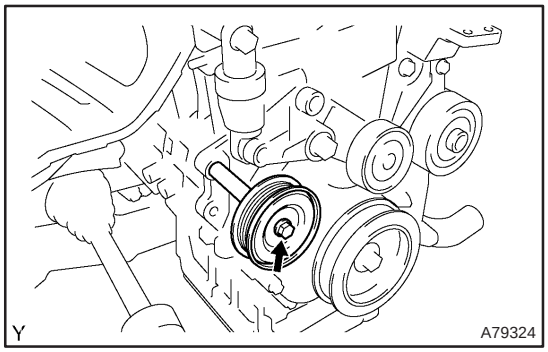
REPLACEMENT

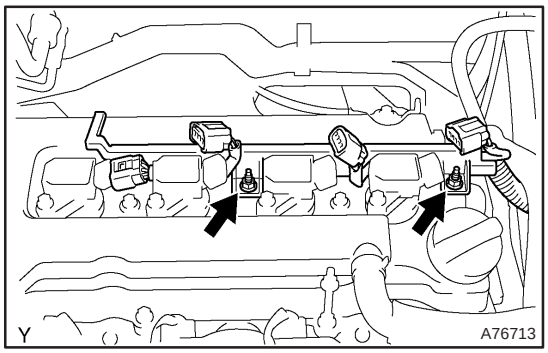
1. REMOVE RADIATOR SUPPORT OPENING COVER (See page 14–27)
2. REMOVE ENGINE ROOM COVER SIDE (See page 14–27)
3. REMOVE FRONT WHEEL RH
4. REMOVE ENGINE UNDER COVER SUB–ASSY NO.1 (See page 14–27)
5. REMOVE ENGINE UNDER COVER RH (See page 14–27)
6. DRAIN ENGINE COOLANT (See page 16–7)



7. REMOVE CYLINDER HEAD COVER NO.2

(a) Remove the 2 nuts and 2 clips and detach the cylinder head cover No.2.

8. REMOVE FAN AND GENERATOR V BELT

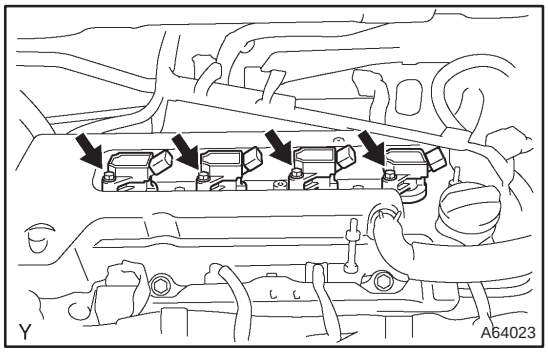


(a) Turn the V–ribbed belt tensioner clockwise slowly and loosen it. Then, remove the fan and generator V belt and put back the V–ribbed belt tensioner carefully.

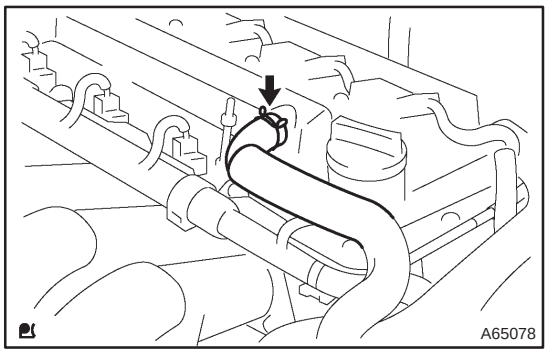
9. REMOVE V–RIBBED IDLER ASSY NO.1

(a) Remove the nut, bolt, tube and idler.

10. REMOVE GENERATOR ASSY (See page 19–7)



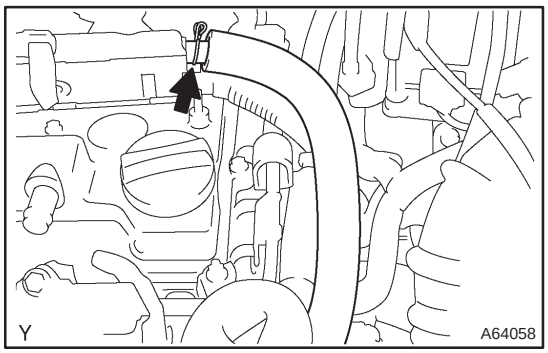
11. REMOVE IGNITION COIL ASSY



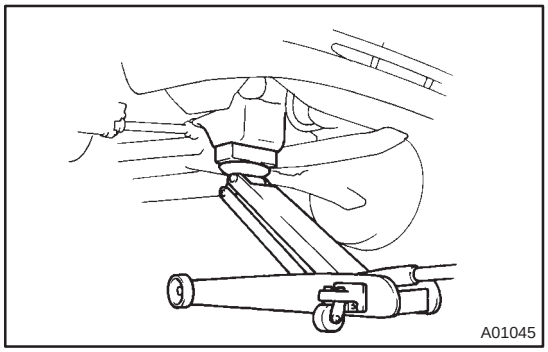
(a) Remove the 5 clamps from the 5 clamp brackets.

(b) Disconnect the 4 ignition coil connectors.

(c) Remove the 2 nuts which are used to secure the engine wire.

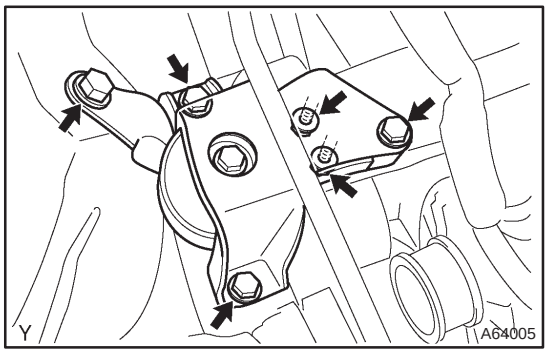


(d) Remove the 4 bolts and the 4 ignition coils.

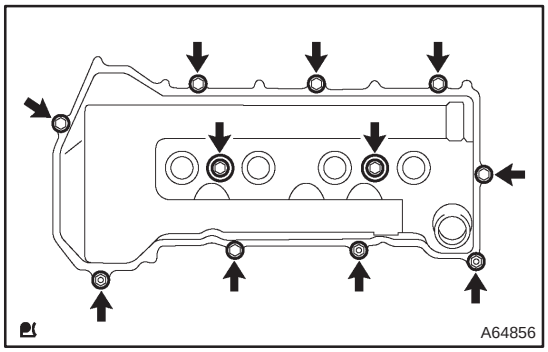


12. DISCONNECT VENTILATION HOSE

(a) Disconnect the ventilation hose from the cylinder head cover.

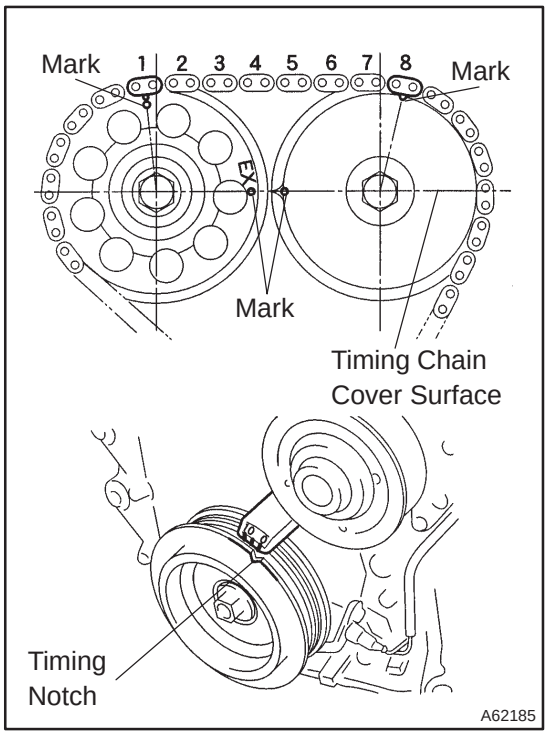


13. DISCONNECT VENTILATION HOSE NO.2



(a) Disconnect the ventilation hose from the cylinder head cover.

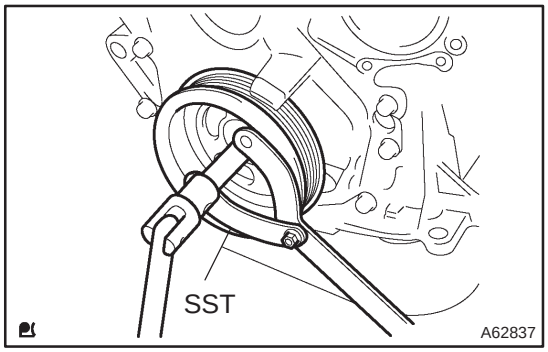
14. REMOVE ENGINE MOUNTING INSULATOR SUB–ASSY RH



(a) Place a wooden block on a jack underneath the engine. Remove the 4 bolts and 2 nuts and detach the engine mounting insulator RH.

15. REMOVE CYLINDER HEAD COVER SUB–ASSY

(a) Remove the 9 bolts, 2 seal washers, 2 nuts and 3 clamp brackets and detach the cylinder head cover.



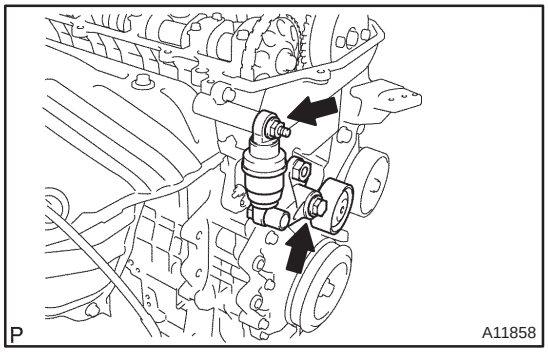
16. SET NO. 1 CYLINDER TO TDC/COMPRESSION

(a) Turn the crankshaft pulley to align the timing notch with timing mark ”0” of the timing chain cover.

(b) Check that the point marks of the camshaft timing sprocket and VVT timing sprocket are in straight line on the timing chain cover surface as shown in the illustration.

HINT:

If not, turn the crankshaft 1 revolution (360°) and align the marks as above.

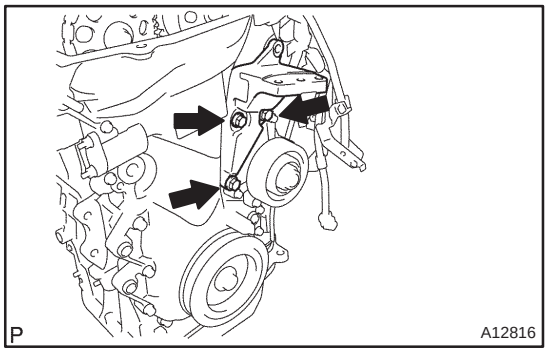


17. REMOVE CRANKSHAFT PULLEY

(a) Using SST, remove the pulley bolt.

SST 09960–10010 (09962–01000, 09963–01000)

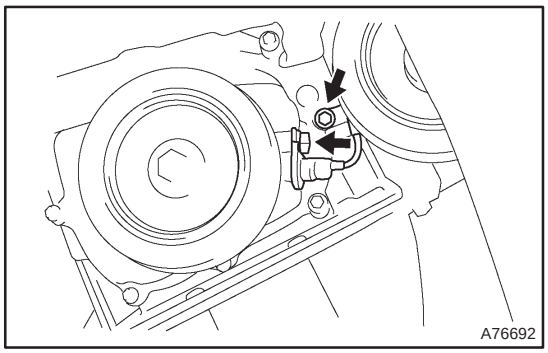
(b) Remove the crankshaft pulley from the crankshaft.



18. REMOVE V–RIBBED BELT TENSIONER ASSY

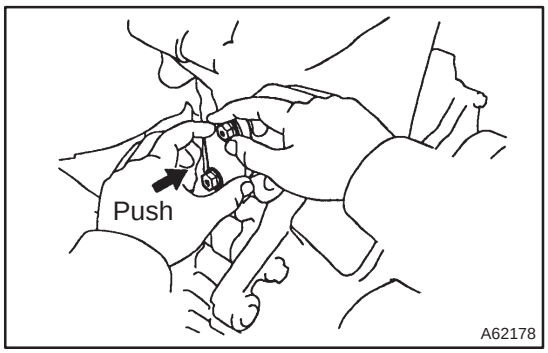
(a) Remove the bolt and nut and detach V–ribbed belt tensioner.

HINT:



Jack up and down to remove the bolt.

19. REMOVE WATER PUMP ASSY (See page 16–9)

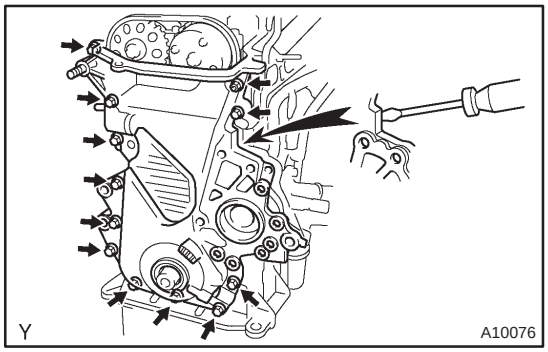


20. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Remove the 3 bolts and the transverse engine engine mounting bracket.

21. REMOVE CRANKSHAFT POSITION SENSOR

(a) Remove the 2 bolts which are used to secure the crankshaft position sensor.



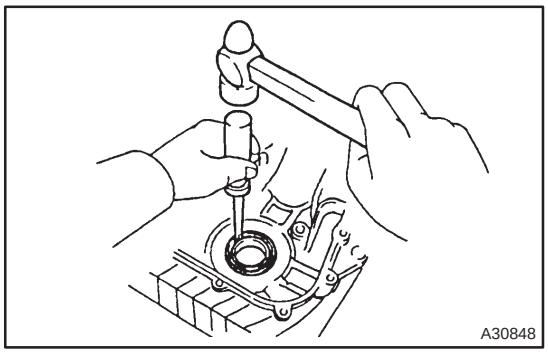
22. REMOVE CHAIN TENSIONER ASSY NO.1

(a) Remove the 2 nuts and the chain tensioner.

NOTICE:

Do not revolve the crankshaft without the chain tensioner.

23. REMOVE TIMING CHAIN OR BELT COVER SUB–ASSY



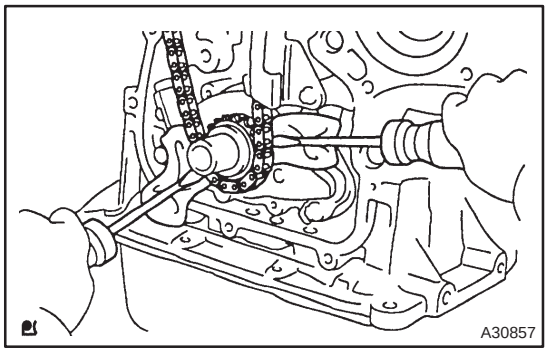
(a) Remove the 11 bolts and nuts.

(b) Using a torx wrench socket (E8), remove the stud bolt.

(c) Remove the timing chain cover by prying between the cylinder head and the cylinder block with a screwdriver.

NOTICE:

Be careful not to damage the timing chain cover, the cylinder head and the cylinder block.



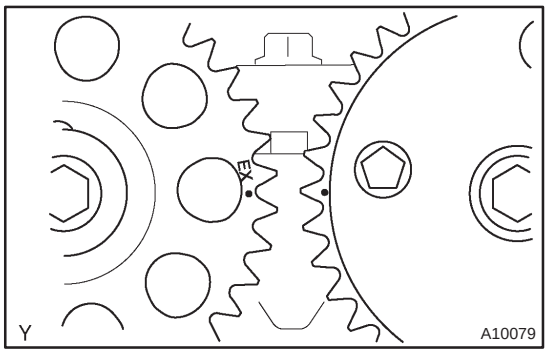
24. REMOVE TIMING GEAR COVER OIL SEAL

(a) Using a screwdriver, remove the oil seal.

25. REMOVE CRANKSHAFT POSITION SENSOR PLATE NO.1

26. REMOVE CHAIN TENSIONER SLIPPER

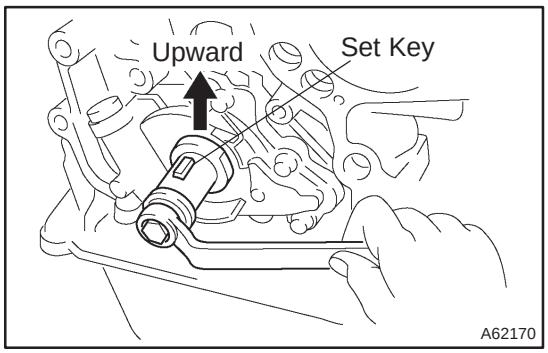
(a) Remove the bolt and the chain tensioner slipper.



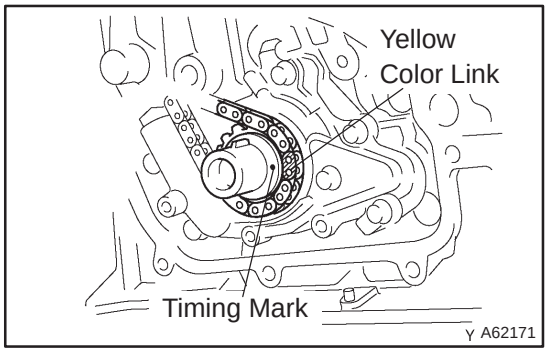
27. REMOVE CHAIN SUB–ASSY

(a) Remove the timing chain with the crankshaft timing gear by plying it using screwdrivers as shown in the illustration.

NOTICE:



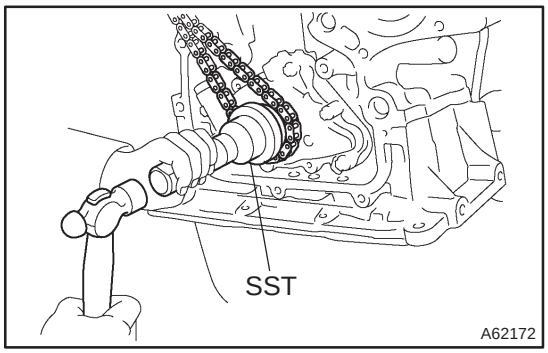
- **Put shop rag to protect the engine.**
- **In case of revolving the camshafts with the chain off the sprockets, turn the crankshaft 1/4 revolution counterclockwise for valves not to touch the pistons.**



28. INSTALL CHAIN SUB–ASSY

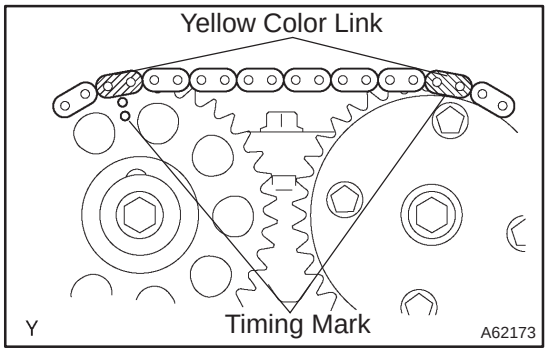
(a) Set No. 1 cylinder to TDC/compression.

(1) Turn the camshafts with a wrench and align the point marks of the camshaft timing sprockets.



(2) Using a crankshaft pulley bolt, turn the crankshaft and set the set key on the crankshaft upward.

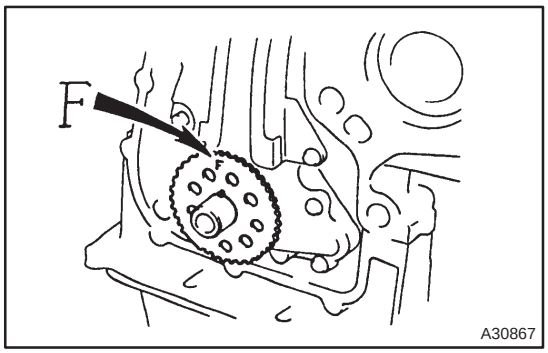
(b) Install the timing chain to the crankshaft timing sprocket with the yellow color link aligned with the timing mark on the crankshaft timing sprocket.



HINT:

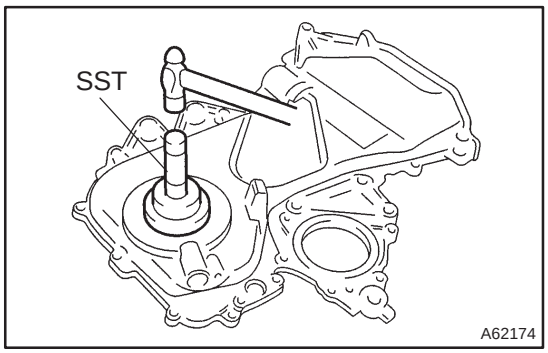
Three yellow color links are on the chain.

(c) Using SST, install the crankshaft timing sprocket.



SST 09223–22010

(d) Install the timing chain to the camshaft timing sprockets with the yellow color links aligned with the timing marks on the camshaft timing sprockets.

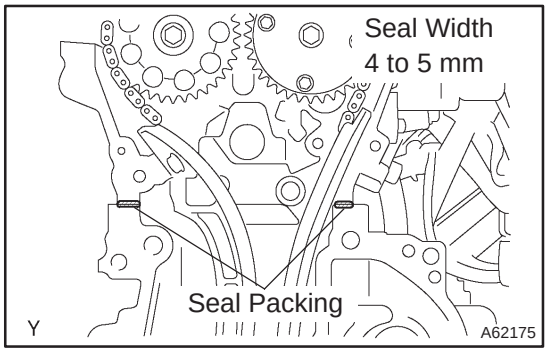


29. INSTALL CHAIN TENSIONER SLIPPER

(a) Install the chain tensioner slipper with the bolt.
Torque: 19 N·m (194 kgf·cm, 14 ft·lbf)

30. INSTALL CRANKSHAFT POSITION SENSOR PLATE NO.1

(a) Install the plate with the ”F” mark facing outward.



31. INSTALL TIMING GEAR COVER OIL SEAL

(a) Apply MP grease to a new oil seal lip.

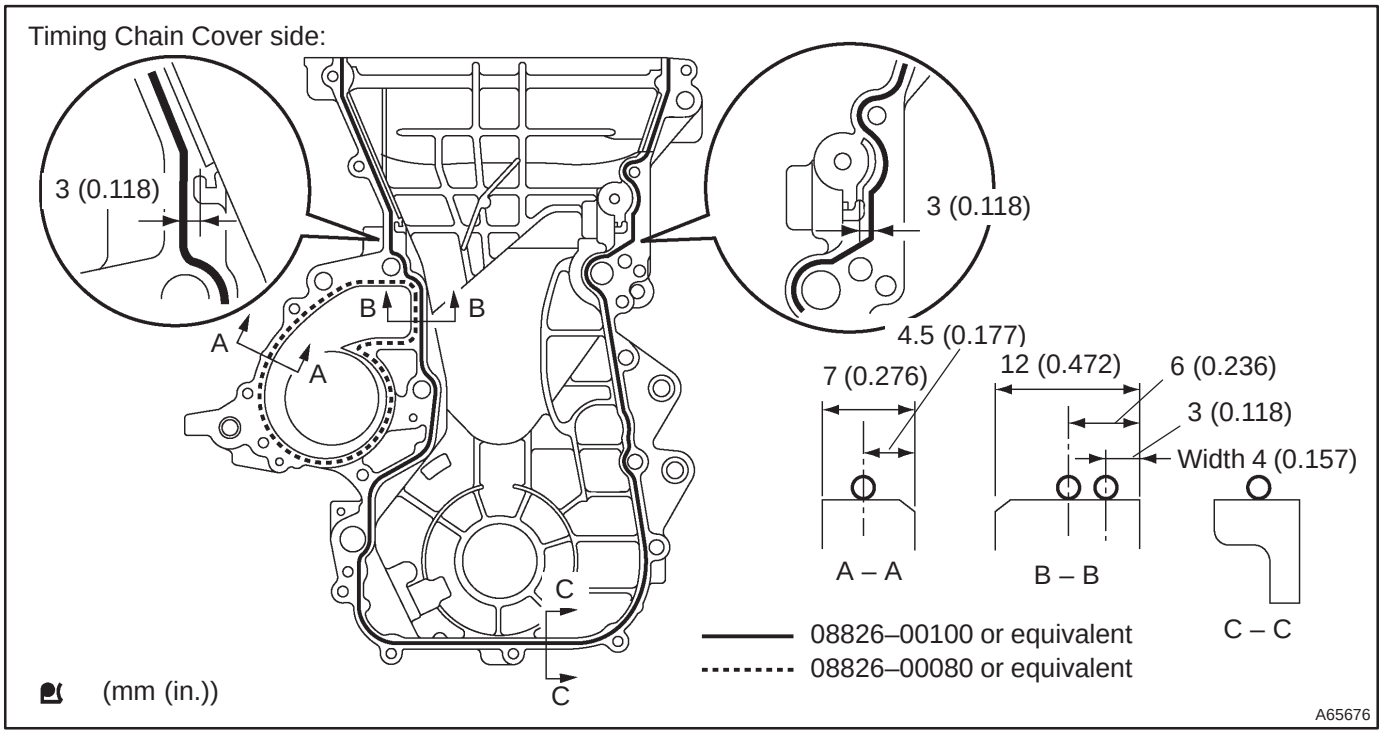
(b) Using SST, tap in the oil seal until its surface is flush with the timing chain cover edge.
SST 09223–22010

NOTICE:
Keep the lip free of foreign objects.

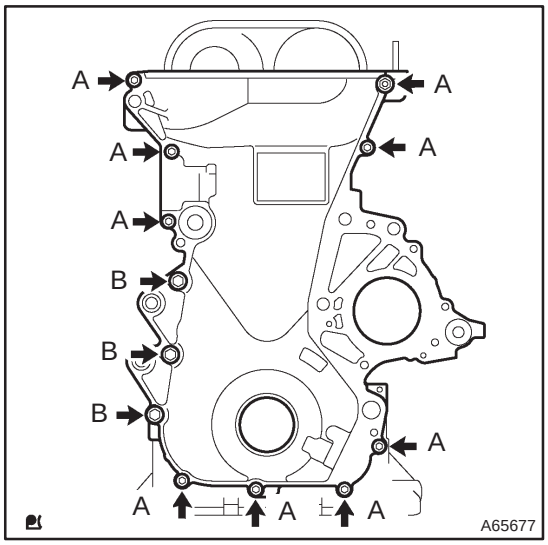
32. INSTALL TIMING CHAIN OR BELT COVER SUB–ASSY

(a) Remove any old packing (FIPG) material from the contact surface.

(b) Apply a continuous bead of seal packing (Diameter 3.5 mm to 4.5 mm (0.1379 to 0.177 in.)) as shown in the illustration.



Seal packing:



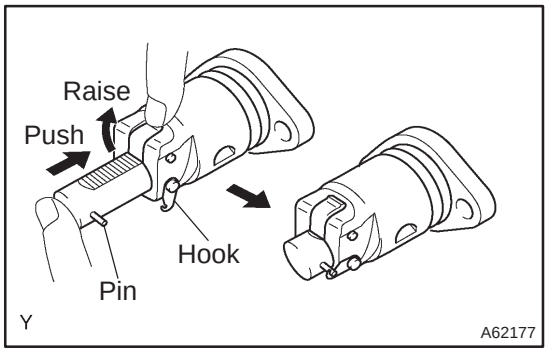
Water pump part part No. 08826–00100 or equivalent

Other part part No. 08826–00080 or equivalent.

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the oil pan within 3 minutes after applying seal packing.**
- **Do not expose the seal to engine oil within 2 hours after installing.**

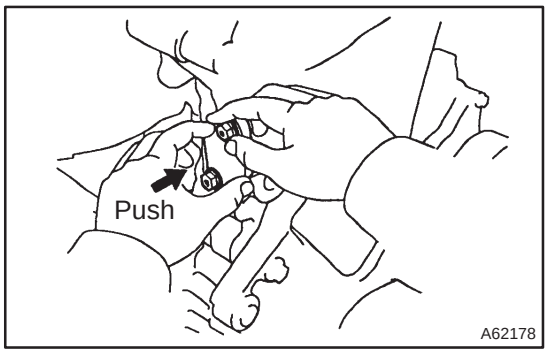
(c) Install the timing chain cover with the 11 bolts and nut.



Torque:

13 N·m (133 kgf·cm, 10 ft·lbf) for A

19 N·m (194 kgf·cm, 14 ft·lbf) for B

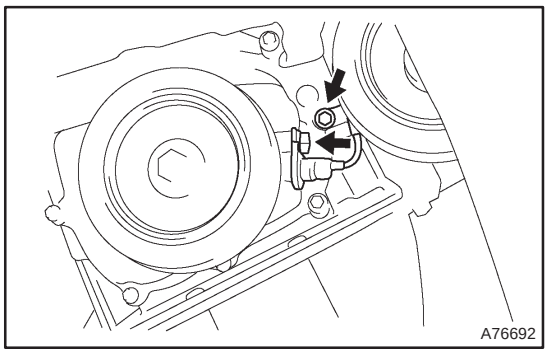


(d) Using a torx wrench socket (E8), install the stud bolt.

Torque: 9.5 N·m (97 kgf·cm, 84 in.·lbf)

33. INSTALL CHAIN TENSIONER ASSY NO.1

(a) Check that the O–ring is clean, and set the hook as shown in the illustration.

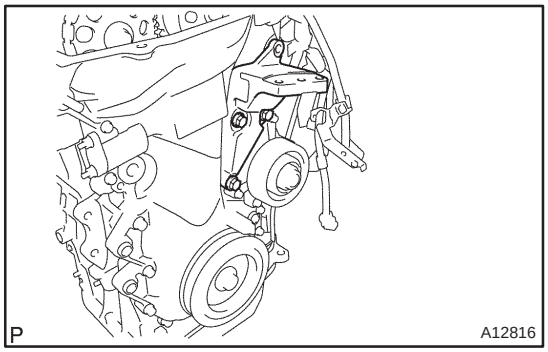


(b) Apply engine oil to the chain tensioner and install it with the 2 nuts.

Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

NOTICE:

If the hook released the plunger during installation, re–hook the plunger by the hook to fix it.

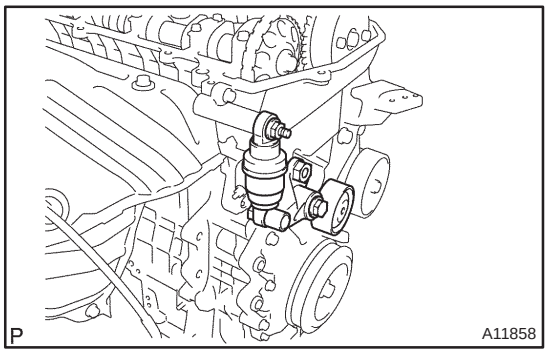


34. INSTALL CRANKSHAFT POSITION SENSOR

(a) Apply a coat of the engine oil to the O–ring of the crankshaft position sensor.

(b) Install the crankshaft position sensor with the 2 bolts.

Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

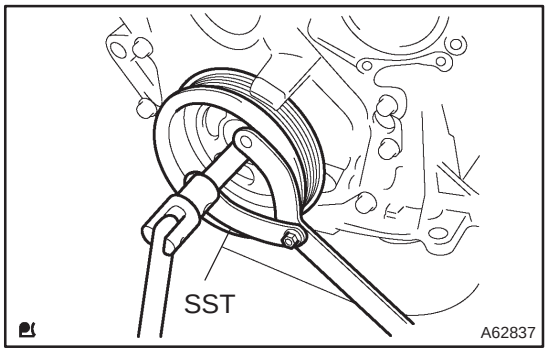


35. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Install the transverse engine engine mounting bracket with the 3 bolts.

Torque: 47 N·m (479 kgf·cm, 35 ft·lbf)

36. INSTALL WATER PUMP ASSY (See page 16–9)

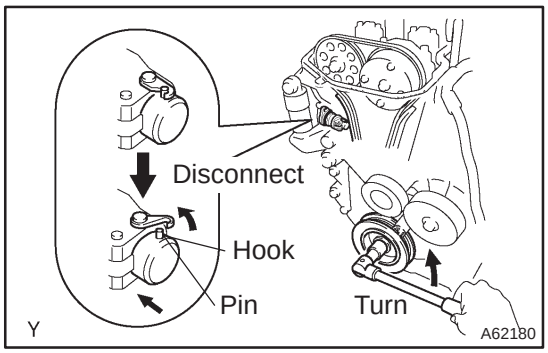


37. INSTALL V–RIBBED BELT TENSIONER ASSY

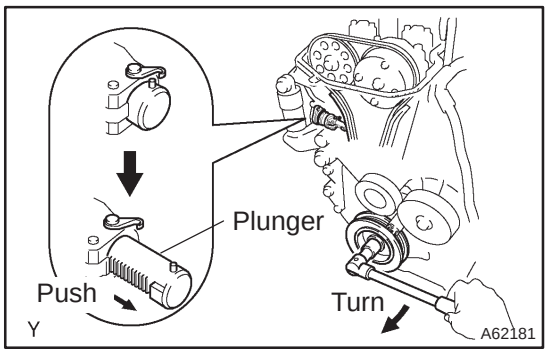
(a) Install the V–ribbed belt tensioner with the nut and bolt.

Torque:

29 N·m (296 kgf·cm, 21 ft·lbf) for Nut



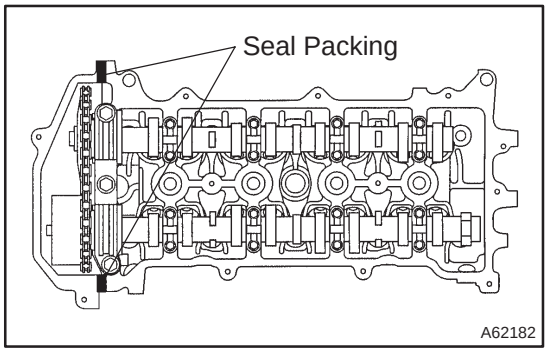
69 N·m (704 kgf·cm, 51 ft·lbf) for Bolt



38. INSTALL CRANKSHAFT PULLEY

(a) Align the keyway of the pulley with the key located on the crankshaft, and slide the pulley into place.

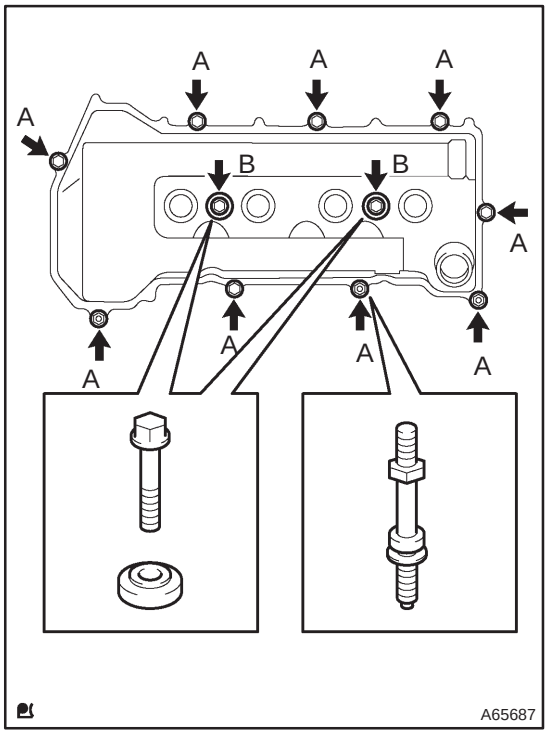
(b) Using SST, install the crankshaft pulley bolt.
SST 09960–10010 (09962–01000, 09963–01000)
Torque: 138 N·m (1,407 kgf·cm, 102 ft·lbf)



(c) Turn the crankshaft counterclockwise, and take the hook off the knock pin to release the plunger.

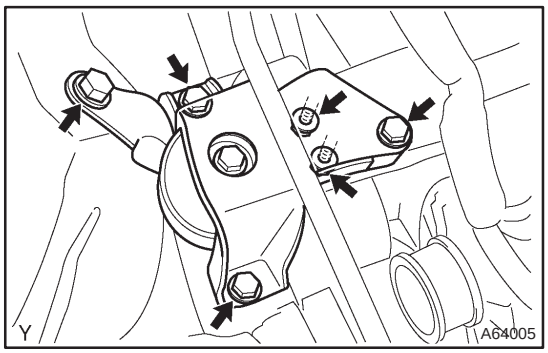
(d) Turn the crankshaft clockwise, and check that the plunger is extended.

HINT:
If the plunger does not be extended, press the slipper into the chain tensioner using a screwdriver so that the hook is took off from the knock pin and let the plunger can be extended.



39. INSTALL CYLINDER HEAD COVER SUB–ASSY

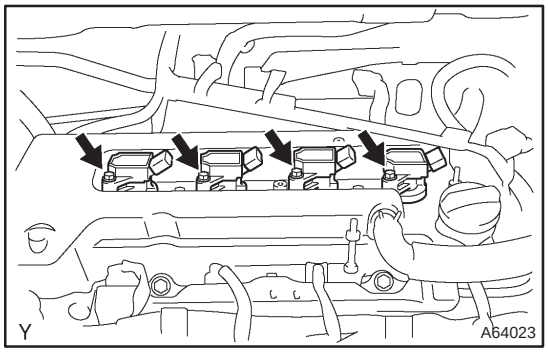
(a) Remove any old pacing (FIPG) material.



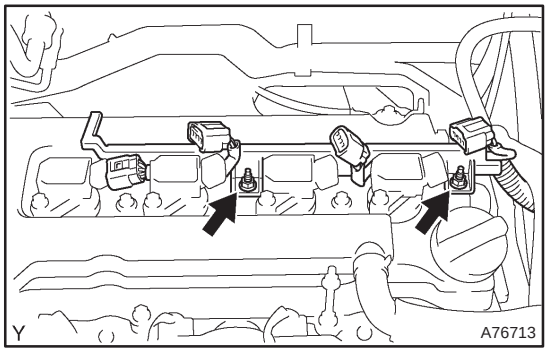
(b) Apply seal packing to the 2 locations as shown in the illustration.
Seal packing: Part No. 08826–00080 or equivalent

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes after applying seal packing.**
- **Do not expose the seal to engine oil 2 hours after installing.**

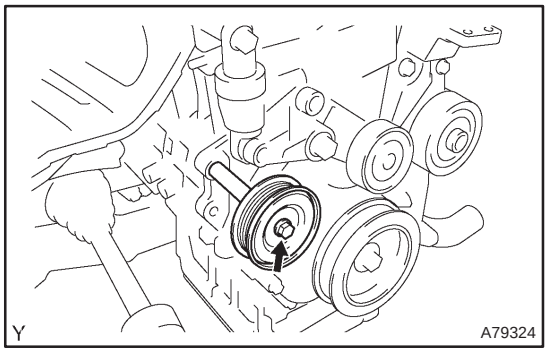


(c) Install the cylinder head cover and 3 cable brackets with the 9 bolts, 2 seal washers and 2 nuts. Tighten the bolts and nuts uniformly in the several steps.
Torque:
11 N·m (112 kgf·cm, 8 ft·lbf) for A
9.0 N·m (92 kgf·cm, 80 in.·lbf) for B



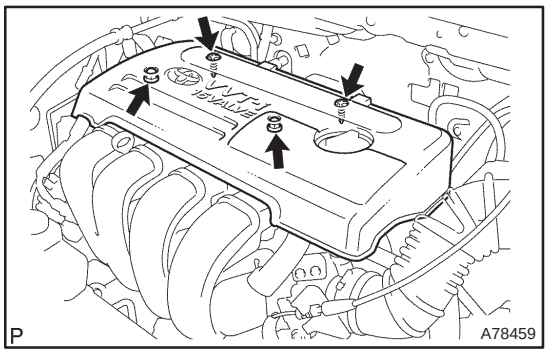
40. INSTALL ENGINE MOUNTING INSULATOR SUB–ASSY RH

(a) Install the engine mounting insulator with the 4 bolts and 2 nuts.
Torque: 52 N·m (530 kgf·cm, 38 ft·lbf)



41. INSTALL IGNITION COIL ASSY

(a) Install the 4 ignition coils with the 4 bolts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)



(b) Install the engine wire with the 2 nuts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

42. INSTALL GENERATOR ASSY (See page 19–7)

43. INSTALL V–RIBBED IDLER ASSY NO.1

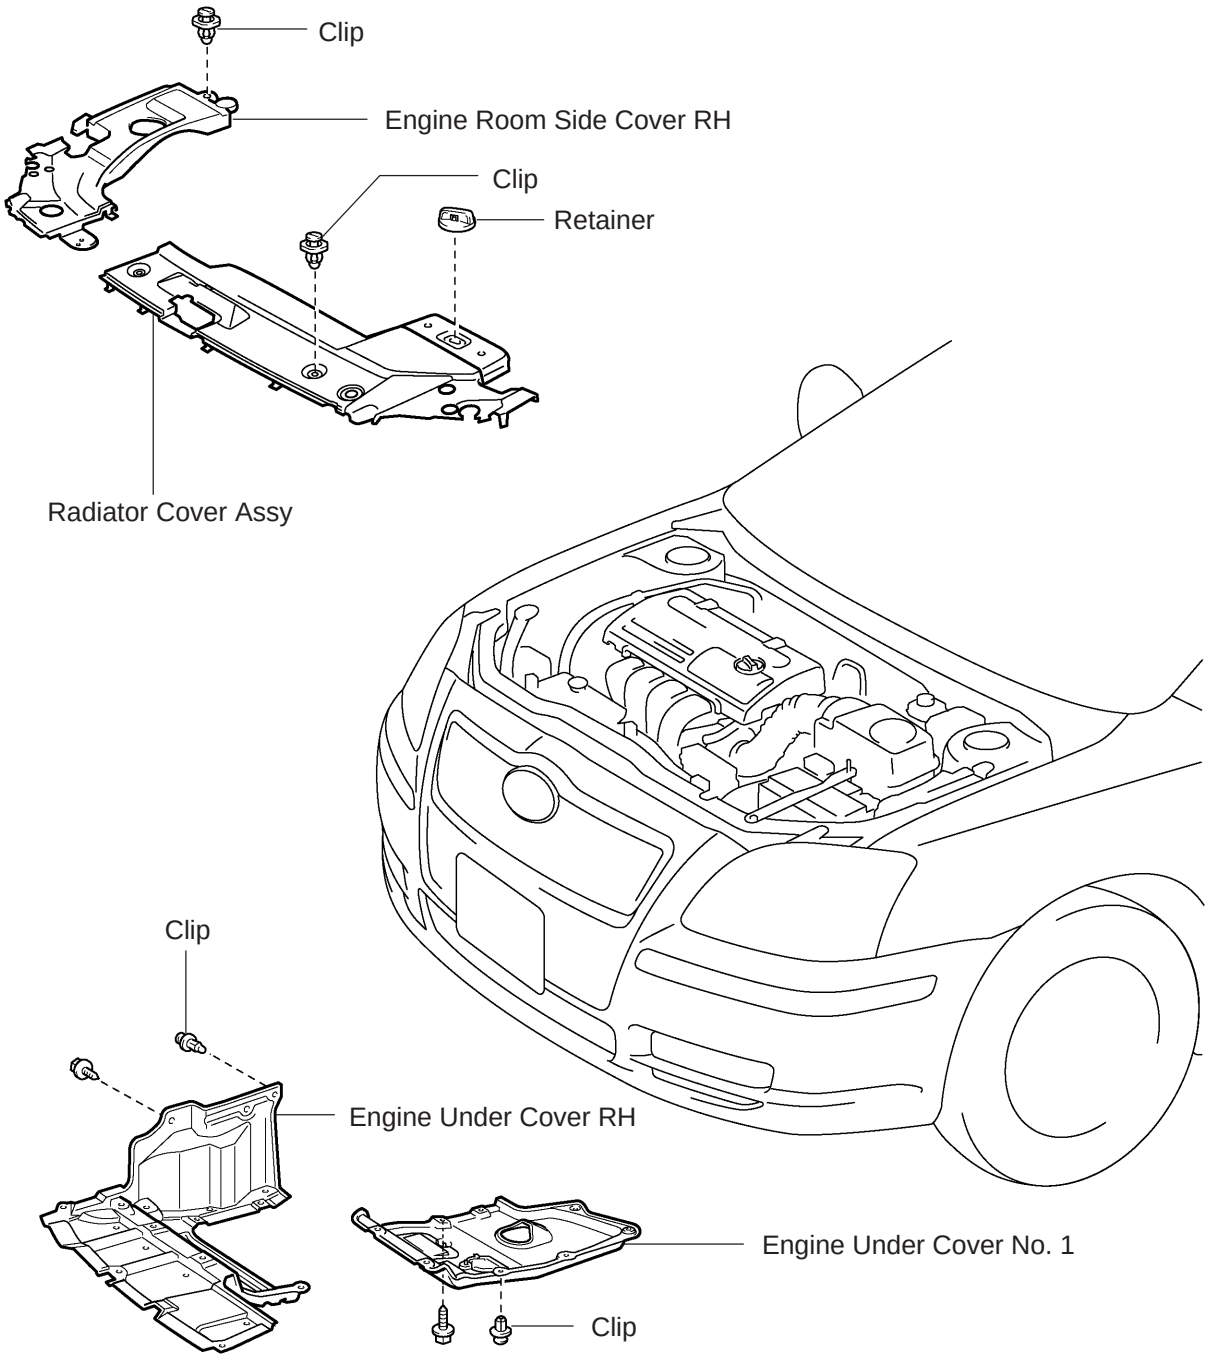
(a) Install the tube and idler with the nut and bolt.
Torque: 39.2 N·m (400 kgf·cm, 29 ft·lbf)

44. INSTALL CYLINDER HEAD COVER NO.2

(a) Install the cylinder head cover with the 2 nuts and 2 clips.
Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)

45. INSTALL FRONT WHEEL RH
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

46. ADD ENGINE COOLANT (See page 16–7)



47. CHECK FOR ENGINE COOLANT LEAKS (See page 16–7)

48. CHECK FOR ENGINE OIL LEAKS

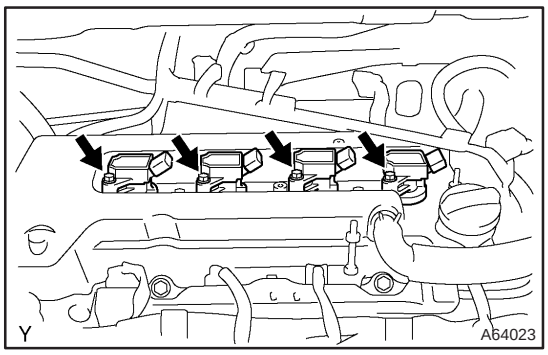
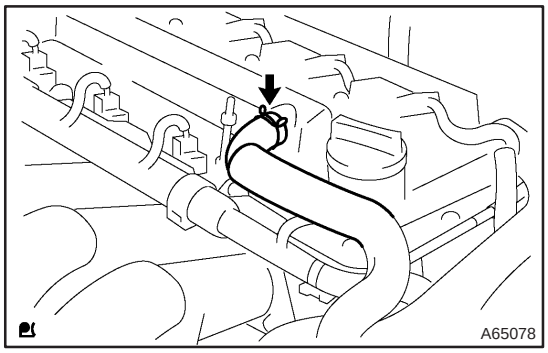
REPLACEMENT

1. REMOVE RADIATOR SUPPORT OPENING COVER (See page 14–27)
2. REMOVE ENGINE UNDER COVER RH (See page 14–27)



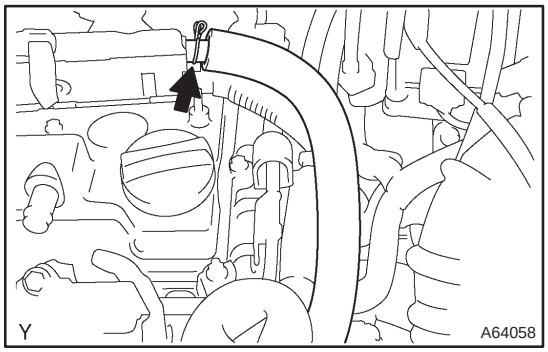
3. REMOVE CYLINDER HEAD COVER NO.2

(a) Remove and the 2 screw and 2 clips and detach the engine under cover No.2.

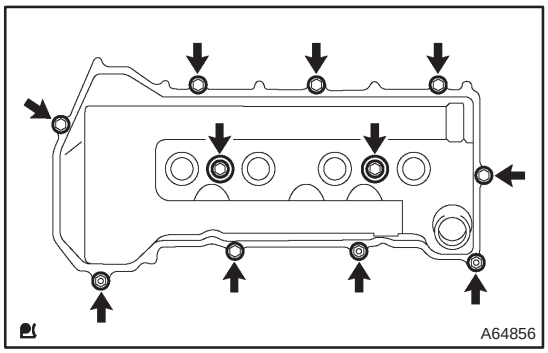


4. DISCONNECT COIL, IGNITION

(a) Remove the 5 clamps from the 5 clamp brackets.
(b) Disconnect the 4 ignition coil connectors.
(c) Remove the 2 nuts which are used to secure the engine wire.



(d) Remove the 4 bolts and the 4 ignition coils.

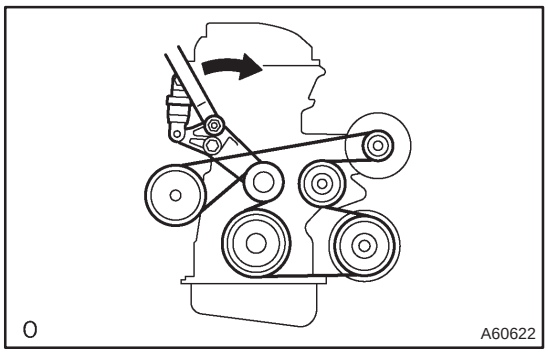


5. DISCONNECT VENTILATION HOSE

(a) Disconnect the ventilation hose from the cylinder head cover.

6. DISCONNECT VENTILATION HOSE NO.2

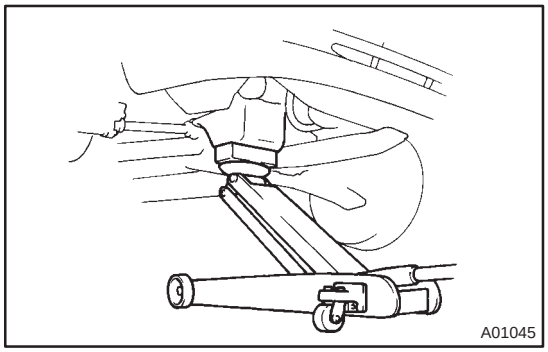
(a) Disconnect the ventilation hose from the cylinder head cover.



7. REMOVE CYLINDER HEAD COVER SUB–ASSY

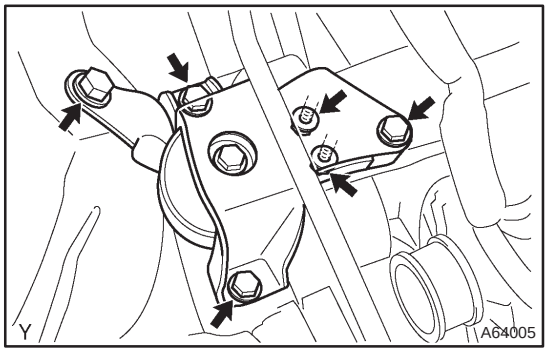
(a) Remove the 9 bolts, 2 seal washers, 2 nuts, and 3 clamp brackets.

(b) Remove the cylinder head cover.

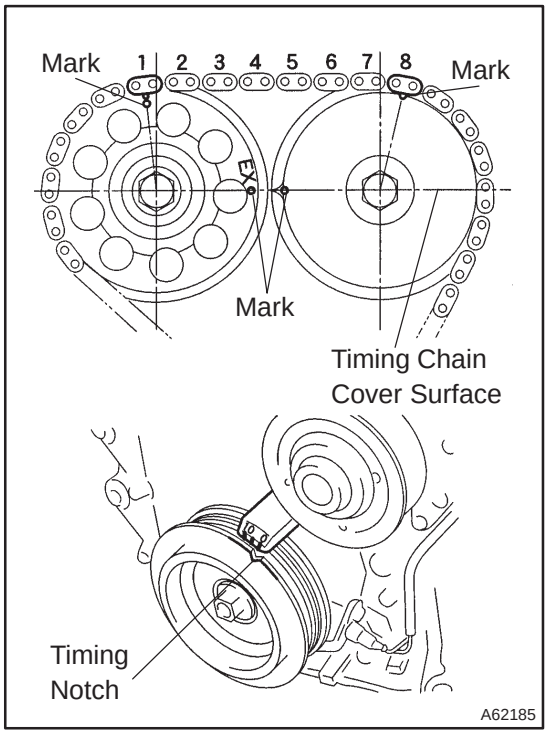


8. REMOVE ENGINE UNDER COVER SUB–ASSY NO.1 (See page 14–27)

9. REMOVE ENGINE ROOM COVER SIDE (See page 14–27)



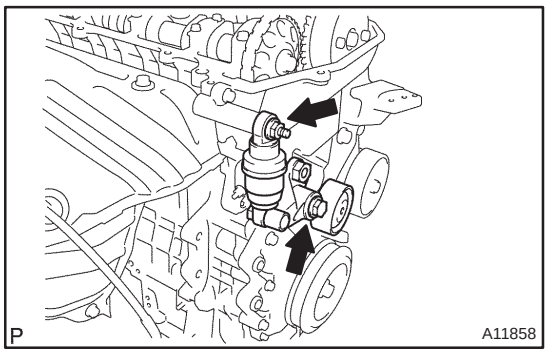
10. REMOVE FAN AND GENERATOR V BELT



(a) Turn the V–ribbed belt tensioner clockwise slowly and loosen it. Then, remove the fan and generator V belt and put back the V–ribbed belt tensioner carefully.

11. REMOVE ENGINE MOUNTING INSULATOR SUB–ASSY RH

(a) Place a wooden block on a jack underneath the engine. Remove the 4 bolts and 2 nuts and detach the engine mounting insulator RH.



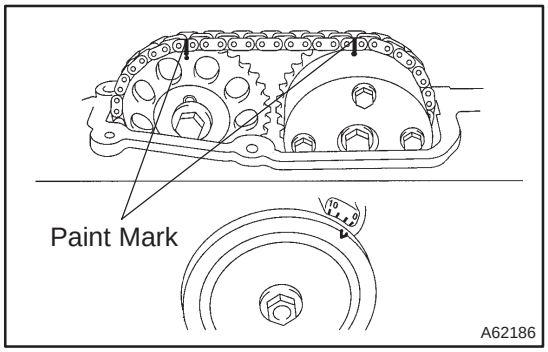
12. SET NO. 1 CYLINDER TO TDC/COMPRESSION

(a) Turn the crankshaft pulley to align the timing notch with timing mark ”0” of the timing chain cover.

(b) Check that the point marks of the camshaft timing sprocket and VVT timing sprocket are in straight line on the timing chain cover surface as shown in the illustration.

HINT:

If not, turn the crankshaft 1 revolution (360°) and align the marks as above.

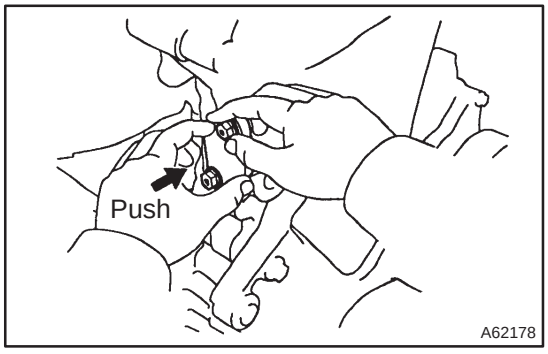


13. REMOVE V–RIBBED BELT TENSIONER ASSY

(a) Remove the bolt and nut, then remove the V–ribbed belt tensioner.

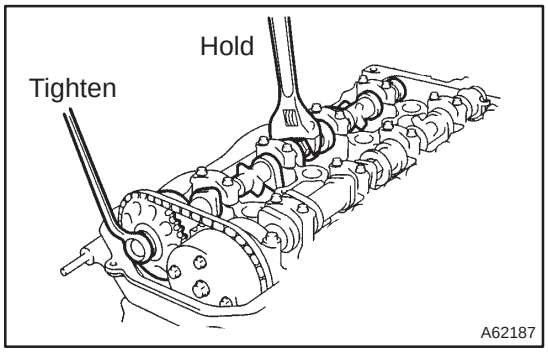
HINT:

Jack up and down to remove the bolt.



14. REMOVE CAMSHAFT

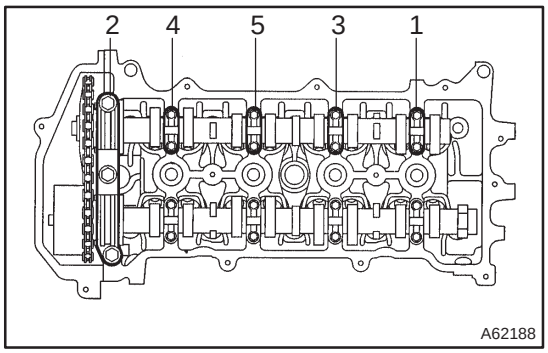
NOTICE:



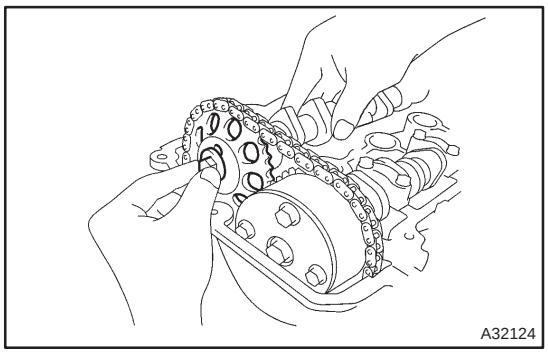
Do not revolve the crankshaft without the chain tensioner.

(a) Set the No. 1 cylinder to the TDC/compression.

(b) Place match marks on the timing chain and the camshaft timing sprockets.

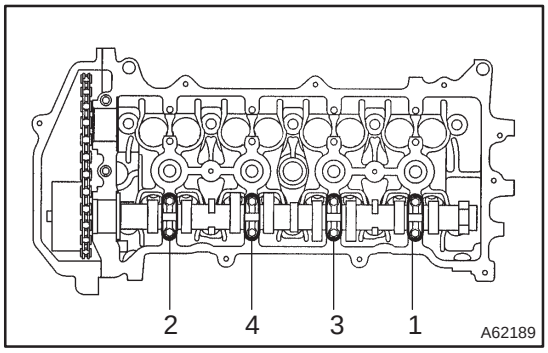


(c) Remove the 2 nuts and the chain tensioner.

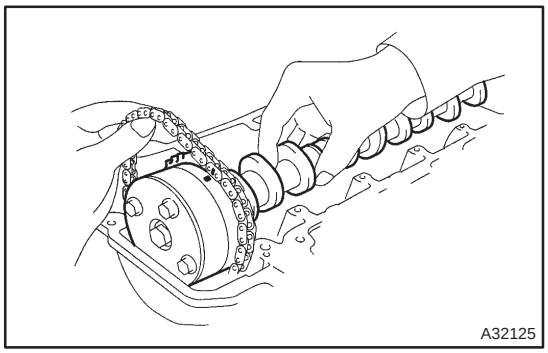


(d) Hold the camshaft with a wrench, loosen the camshaft timing gear set bolt.

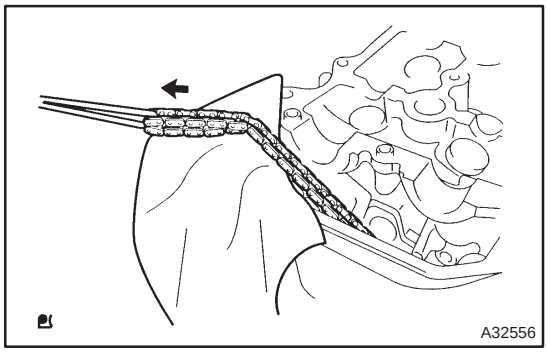
NOTICE:



Be careful not to damage the valve lifter.

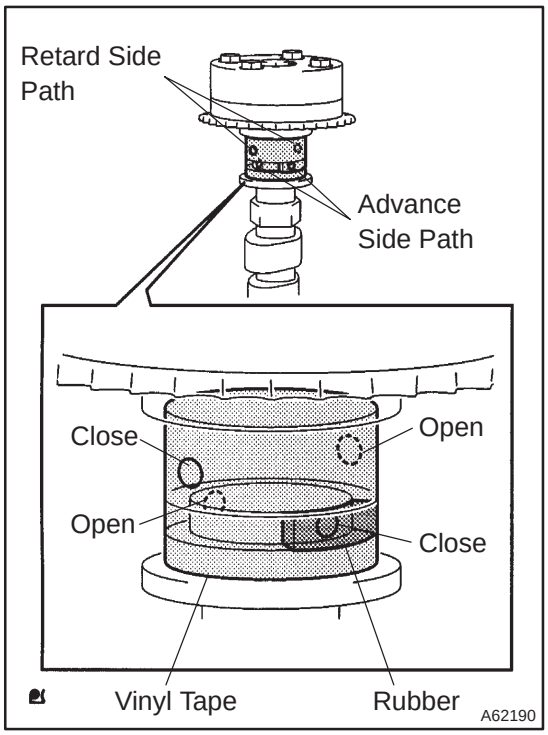


(e) Using several steps, loosen the camshaft bearing cap bolts on No. 2 camshaft in the sequence shown in the illustration. Remove the bearing caps.



(f) Remove the camshaft timing gear as shown in the illustration.

(g) Using several steps, loosen the camshaft bearing cap bolts on camshaft in the sequence shown in the illustration. Remove the bearing caps.



(h) Remove the camshaft as holding the timing chain.

(i) Tie the timing chain with a string as shown in the illustration.

NOTICE:

Be careful not to drop anything inside the timing chain cover.

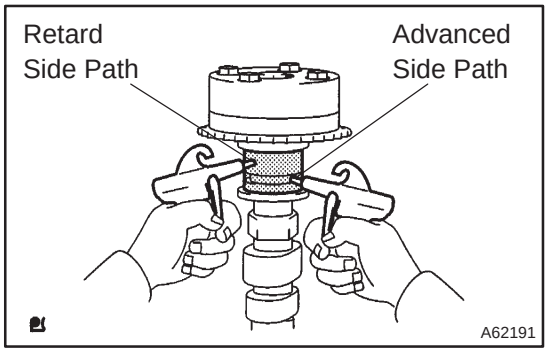
15. INSPECT CAMSHAFT TIMING GEAR ASSY

(a) Check the lock of camshaft timing gear.

(1) Clamp the camshaft in a vice, and confirm the camshaft timing gear is locked.

NOTICE:

Be careful not to damage the camshaft.

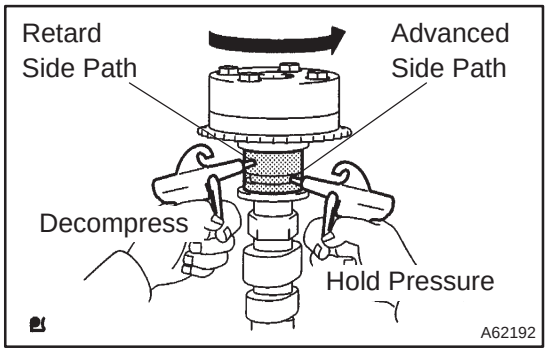


(b) Release lock pin.

(1) Cover 4 oil paths of the cam journal with vinyl tape as shown in the illustration.

HINT:

The one of the 2 glooves on the cam journal is for retards (upper) and the rest is for advances (lower). Each groove has the 2 oil paths. Plug one of the oil paths for each groove with rubber pieces before wrapping the cam journal with the tape.



(2) Punctuate the tape for the advance oil path and for the retard oil path in the opposite side from the advance as shown in the illustration.

(3) Put air pressure into two broken paths (the advance side path and the retard side path) with about 150 kPa {1.5 kgf·cm}.

CAUTION:

Cover the pathes with shop rag to avoid oil splashing.

(4) Confirm if the camshaft timing gear assembly revolves in the timing advance direction when weakening the air pressure of the timing retard path.

HINT:

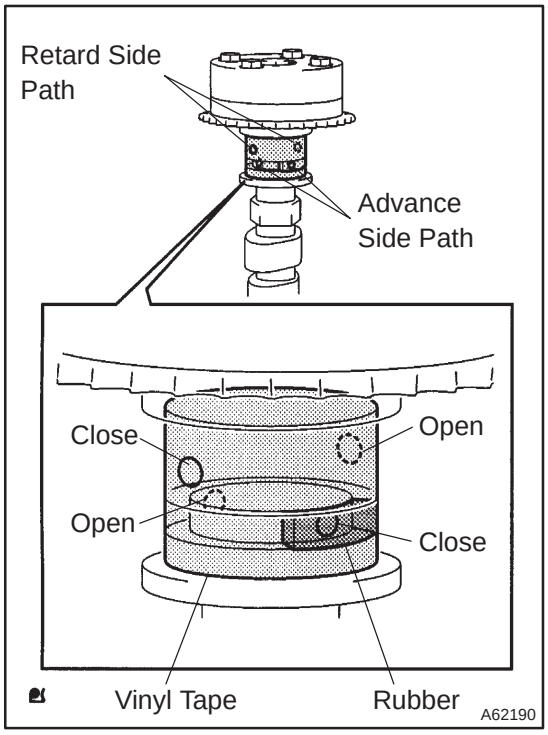
When the lock pin is released, the camshaft timing gear revolves in the advance direction.

(5) When the camshaft timing gear comes to the most advanced position, take out the air pressure of the timing retard side path, and then take out that of timing advance side path.

CAUTION:

Camshaft timing assembly gear occasionally shifts to the retard side abruptly, if the air compression of the advanced side path is released first. It often causes the breakage of the lock pin.

(c) Check smooth revolution



(1) Revolve the camshaft timing gear assembly within the movable range [20° (40°CA)] except for the most retarded position several times, and check the smooth revolution.

CAUTION:

Be sure to perform this check by hand, instead of air pressure.

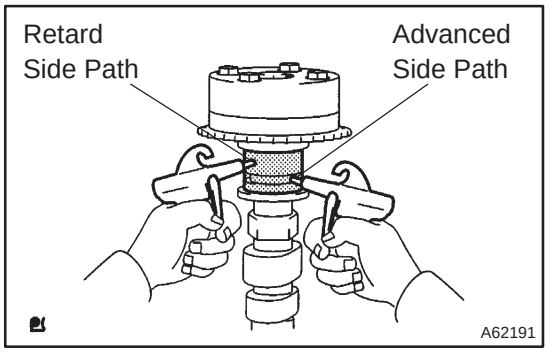
(d) Check the lock in the most retarded position.

(1) Confirm that the camshaft timing gear assembly is locked at the most retarded position.

16. REMOVE CAMSHAFT TIMING GEAR ASSY

(a) Clamp the camshaft in a vice, and confirm that the gear is locked.

CAUTION:

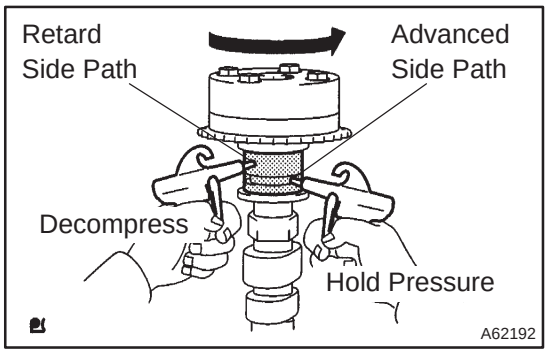


Be careful not to damage the camshaft.

(b) Cover 4 oil paths of cam journal with vinyl tape as shown in the illustration.

HINT:

The one of the 2 glooves on the cam journal is for retards (upper) and the rest is for advances (lower). Each groove has the 2 oil paths. Plug one of the oil paths for each groove with rubber pieces before wrapping the cam journal with the tape.



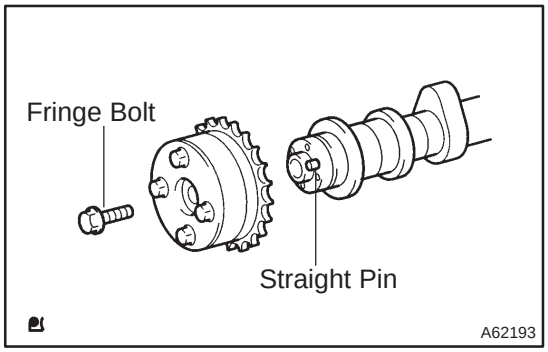
(1) Punctuate the tape for the advance oil path and for the retard oil path in the opposite side from the advance as shown in the illustration.

(c) Put air pressure into two broken paths (the advance side path and the retard side path) with about 150 kPa {1.5 kgf·cm}.

CAUTION:

Cover the paths with shop rag to avoid oil splashing.

(d) Confirm if the camshaft timing gear assembly revolves in the timing advance direction when weakening the air pressure of the timing retard path.

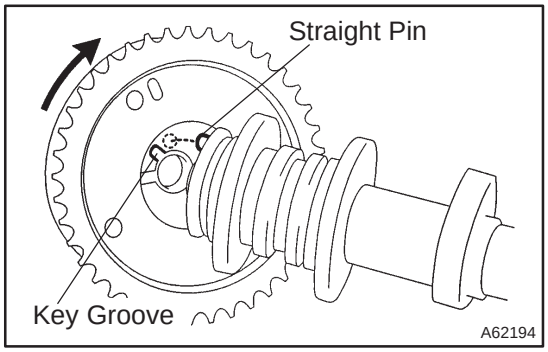


HINT:

When the lock pin is released, the camshaft timing gear revolves in the advance direction.

(e) When the camshaft timing gear comes to the most advanced position, take out the air pressure of the timing retard side path, next, take out that of timing advance side path.

CAUTION:



Camshaft timing gear assembly occasionally shifts to the retard side abruptly, if the air compression of the advanced side path is released first. It often causes the breakage of the lock pin.

(f) Remove the fringe bolt of camshaft timing gear assembly.

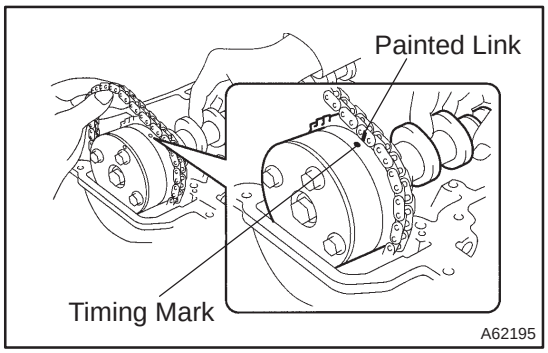
NOTICE:

- **Be sure not to remove the other 4 bolts.**
- **In case of reusing the camshaft timing gear, release the straight pin lock first, and then install the gear.**

17. INSTALL CAMSHAFT TIMING GEAR ASSY

(a) Put the camshaft timing gear assembly and the camshaft together with the straight pin off the key groove.

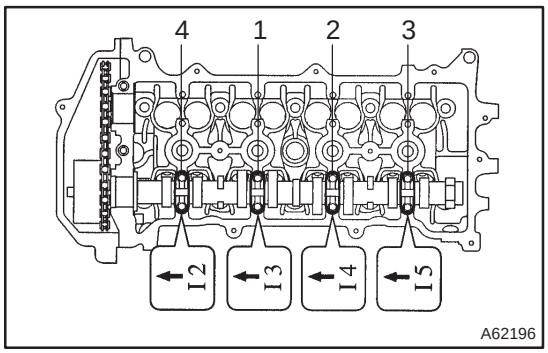
(b) Turn the camshaft timing gear assembly clockwise (as shown in the illustration) while pushing it lightly against the camshaft. Push further at the position where the pin gets into the groove.



CAUTION:

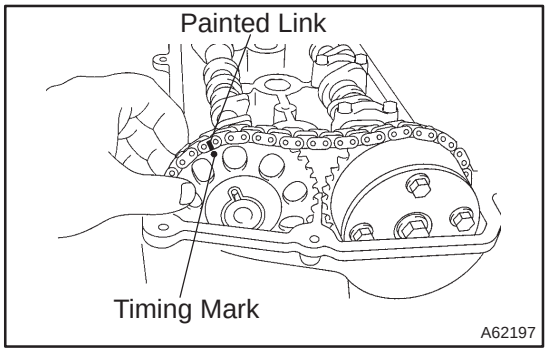
Be sure not to turn the camshaft timing gear to the retard angle side (to the right angle).

(c) Check that there is no clearance between the gear's fringe and the camshaft.

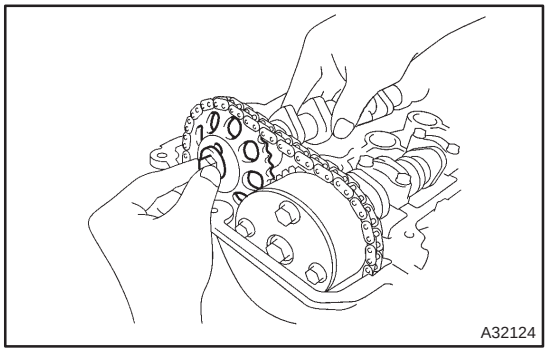


(d) Tighten the fringe bolt with the camshaft timing gear fixed.
Torque: 54 N·m (551 kgf·cm 40 ft·lbf)

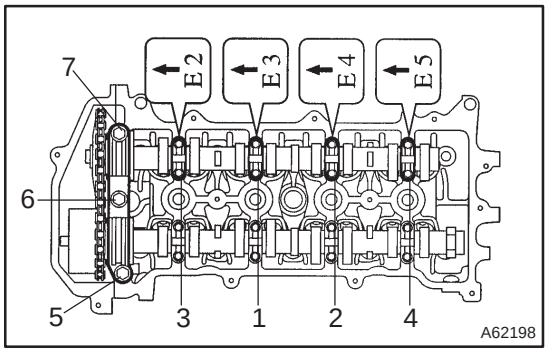
(e) Check that the camshaft timing gear assembly can move to the retard angle side (the right angle) and is locked at the most retarded position.



18. INSTALL CAMSHAFT

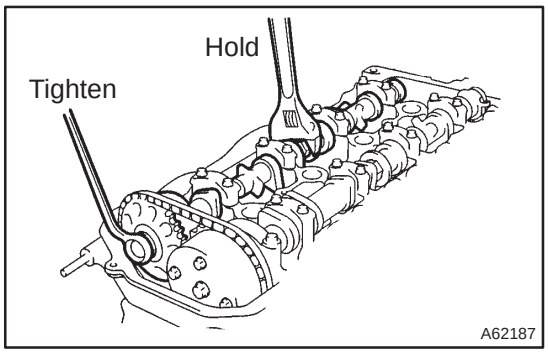


(a) Install the timing chain on the camshaft timing gear with the painted links aligned with the timing marks on the camshaft timing gear as shown in the illustration.

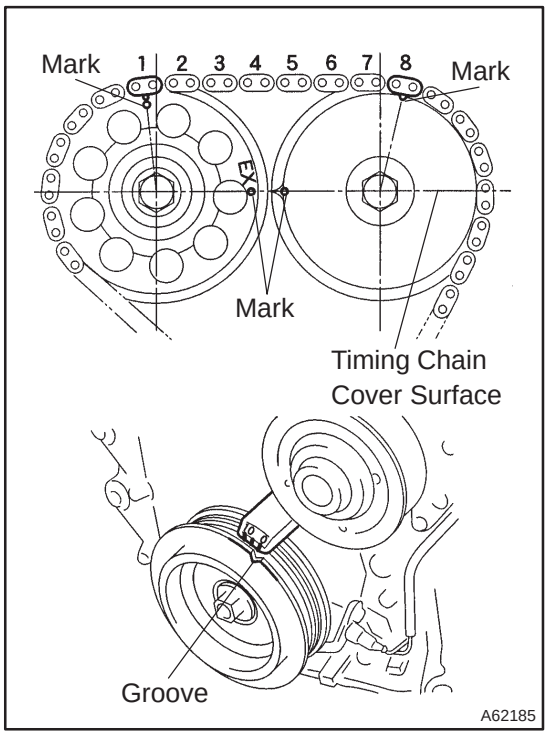


(b) Examine the front marks and numbers and tighten the bolts in the sequence shown in the illustration.
Torque: 13 N·m (133 kgf·cm, 10 ft·lbf)

(c) Put the camshaft No.2 on the cylinder head with the painted links of the chain aligned with the timing mark on the camshaft timing gear.

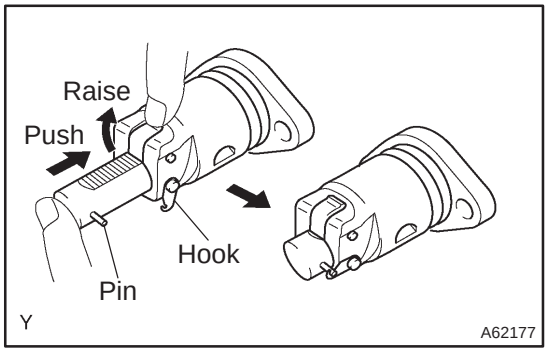


(d) Tighten the camshaft timing gear set bolt temporarily.

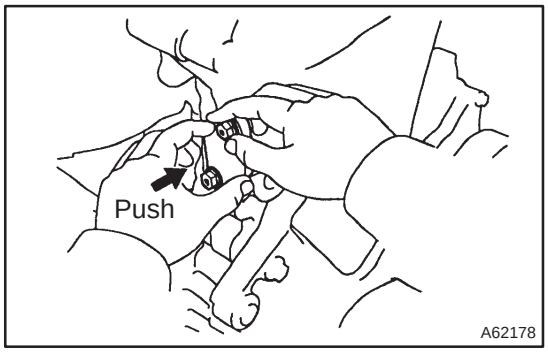


(e) Examine the front marks and numbers and tighten the bolts in the sequence shown in the illustration.
Torque: 13 N·m (133 kgf·cm, 10 ft·lbf)

(f) Install the bearing cap No. 1.
Torque: 23 N·m (235 kgf·cm, 17 ft·lbf)



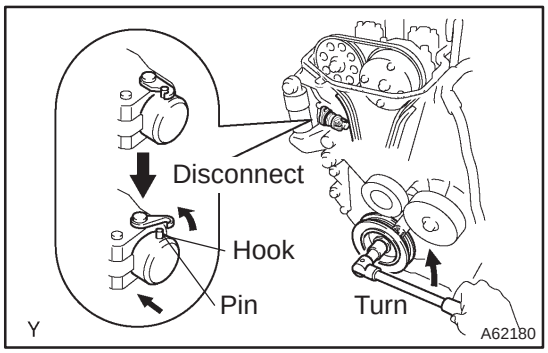
(g) Hold the camshaft with a wrench, tighten the camshaft timing gear set bolt.
Torque: 54 N·m (551 kgf·cm, 40 ft·lbf)



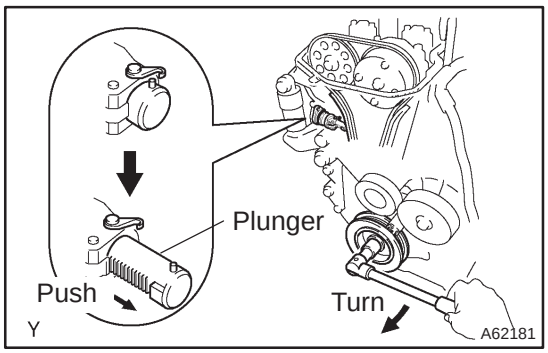
NOTICE:
Be careful not to damage the valve lifter.

(h) Check that the match marks on the 2 camshaft sprockets are aligned with each other and are aligned with the painted links of the timing chain as shown in the illustration. Also, check the timing notch is aligned with the timing mark ”0” of the chain cover.

(i) Install chain tensioner.
(1) Check that the O–ring is clean, and set the hook as shown in the illustration.



(2) Apply engine oil to the chain tensioner and install it with the 2 nuts.

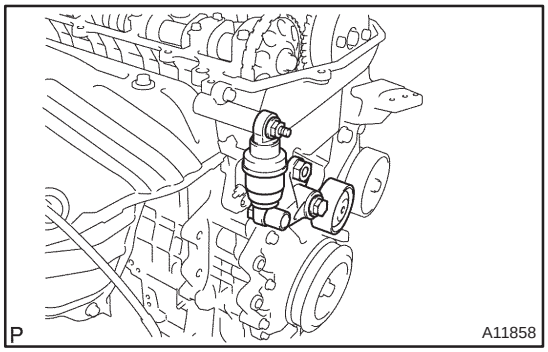


Torque: 9.0 N·m (92 kgf·cm, 80 in·lbf)

NOTICE:

If the hook released the plunger during installation, re–hook the plunger by the hook to fix it.

(3) Turn the crankshaft counter clockwise, and take the hook off the knock pin to release the plunger.

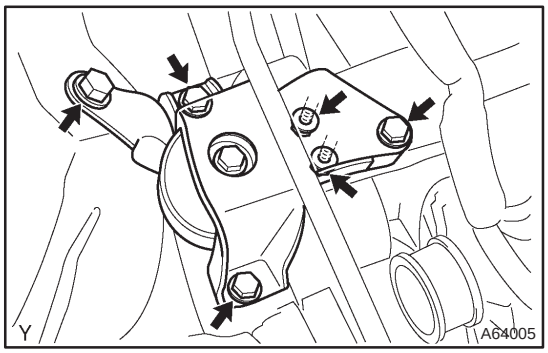


(4) Turn the crankshaft clockwise, and check that the plunger is extended.

HINT:

If the plunger does not be extended, press the slipper into the chain tensioner using a screwdriver so that the hook is took off from the knock pin and let the plunger can be extended.

19. ADJUST VALVE CLEARANCE (See page 14–6)

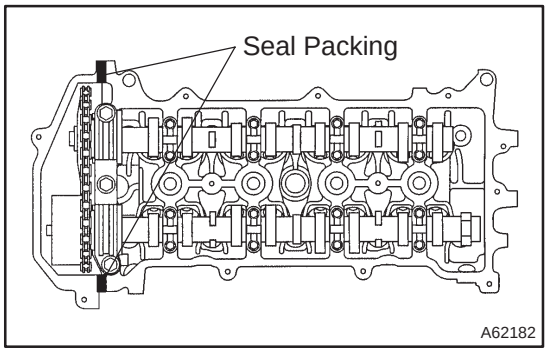


20. INSTALL V–RIBBED BELT TENSIONER ASSY

(a) Install the V–ribbed belt tensioner with the nut and bolt.

Torque:

29 N·m (296 kgf·cm, 21 ft·lbf) for Nut



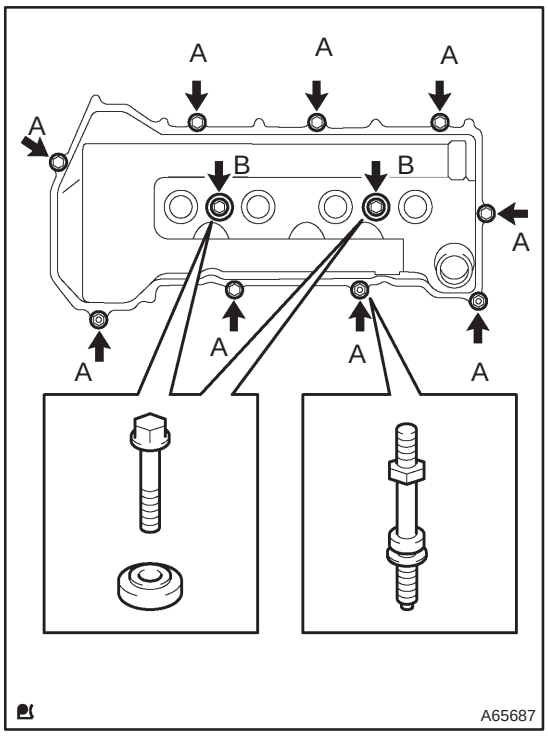
69 N·m (704 kgf·cm, 51 ft·lbf) for Bolt

21. INSTALL ENGINE MOUNTING INSULATOR SUB–ASSY RH

(a) Install the engine mounting insulator with the 4 bolts and 2 nuts.

Torque: 52 N·m (530 kgf·cm, 38 ft·lbf)

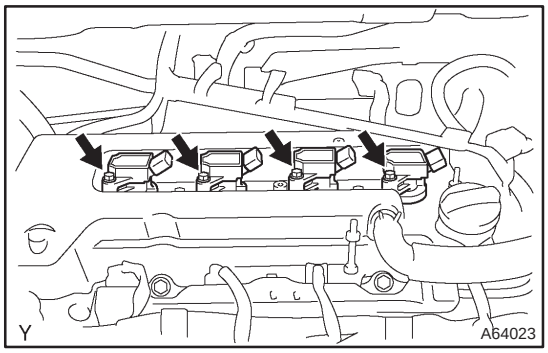
22. INSTALL CYLINDER HEAD COVER SUB–ASSY



(a) Remove any old packing (FIPG) material.

(b) Apply seal packing to the 2 locations as shown in the illustration.

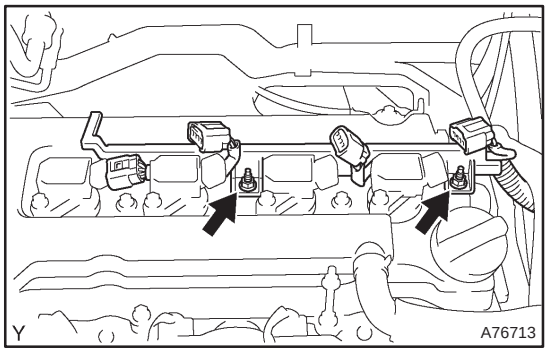
Seal packing: Part No. 08826–00080 or equivalent



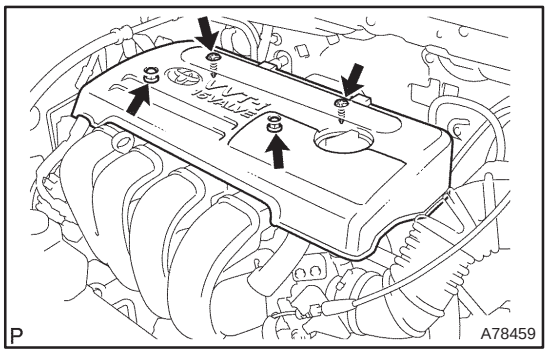
NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes after applying seal packing.**
- **Do not expose the seal to engine oil 2 hours after installing.**

(c) Install the cylinder head cover and 3 cable brackets with the 9 bolts, 2 seal washers and 2 nuts. Tighten the bolts and nuts uniformly in the several steps.



Torque:
11 N·m (112 kgf·cm, 8 ft·lbf) for A
9.0 N·m (92 kgf·cm, 80 in·lbf) for B



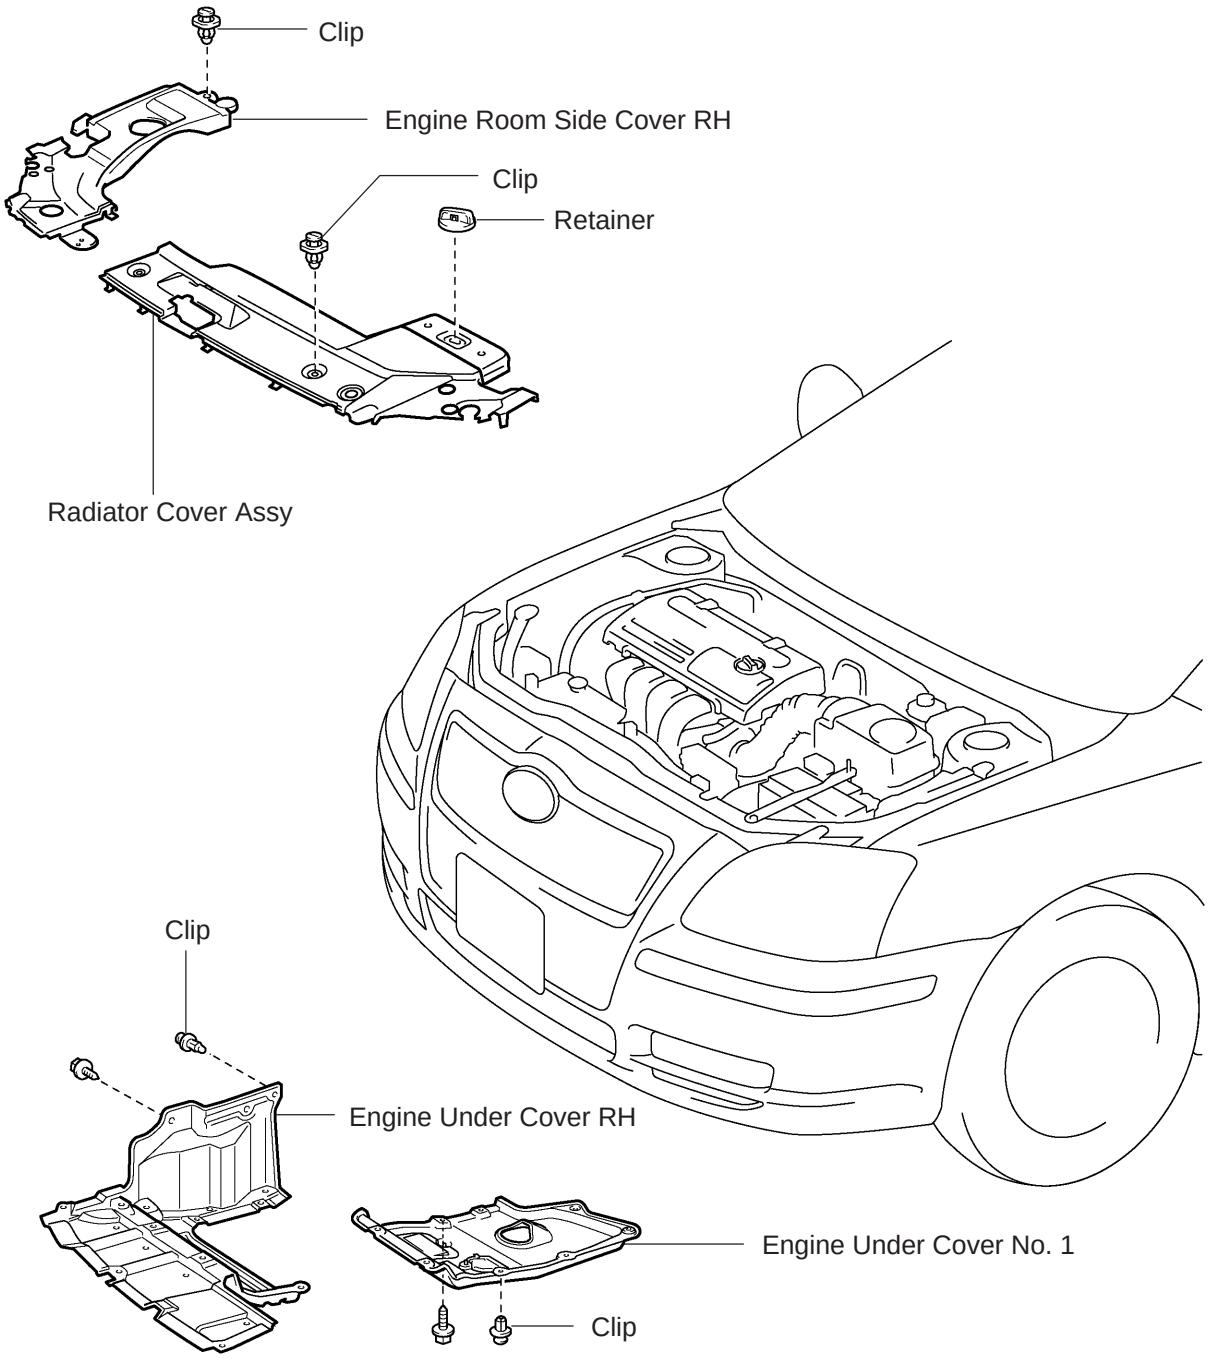
23. INSTALL IGNITION COIL ASSY

(a) Install the 4 ignition coils with the 4 bolts.

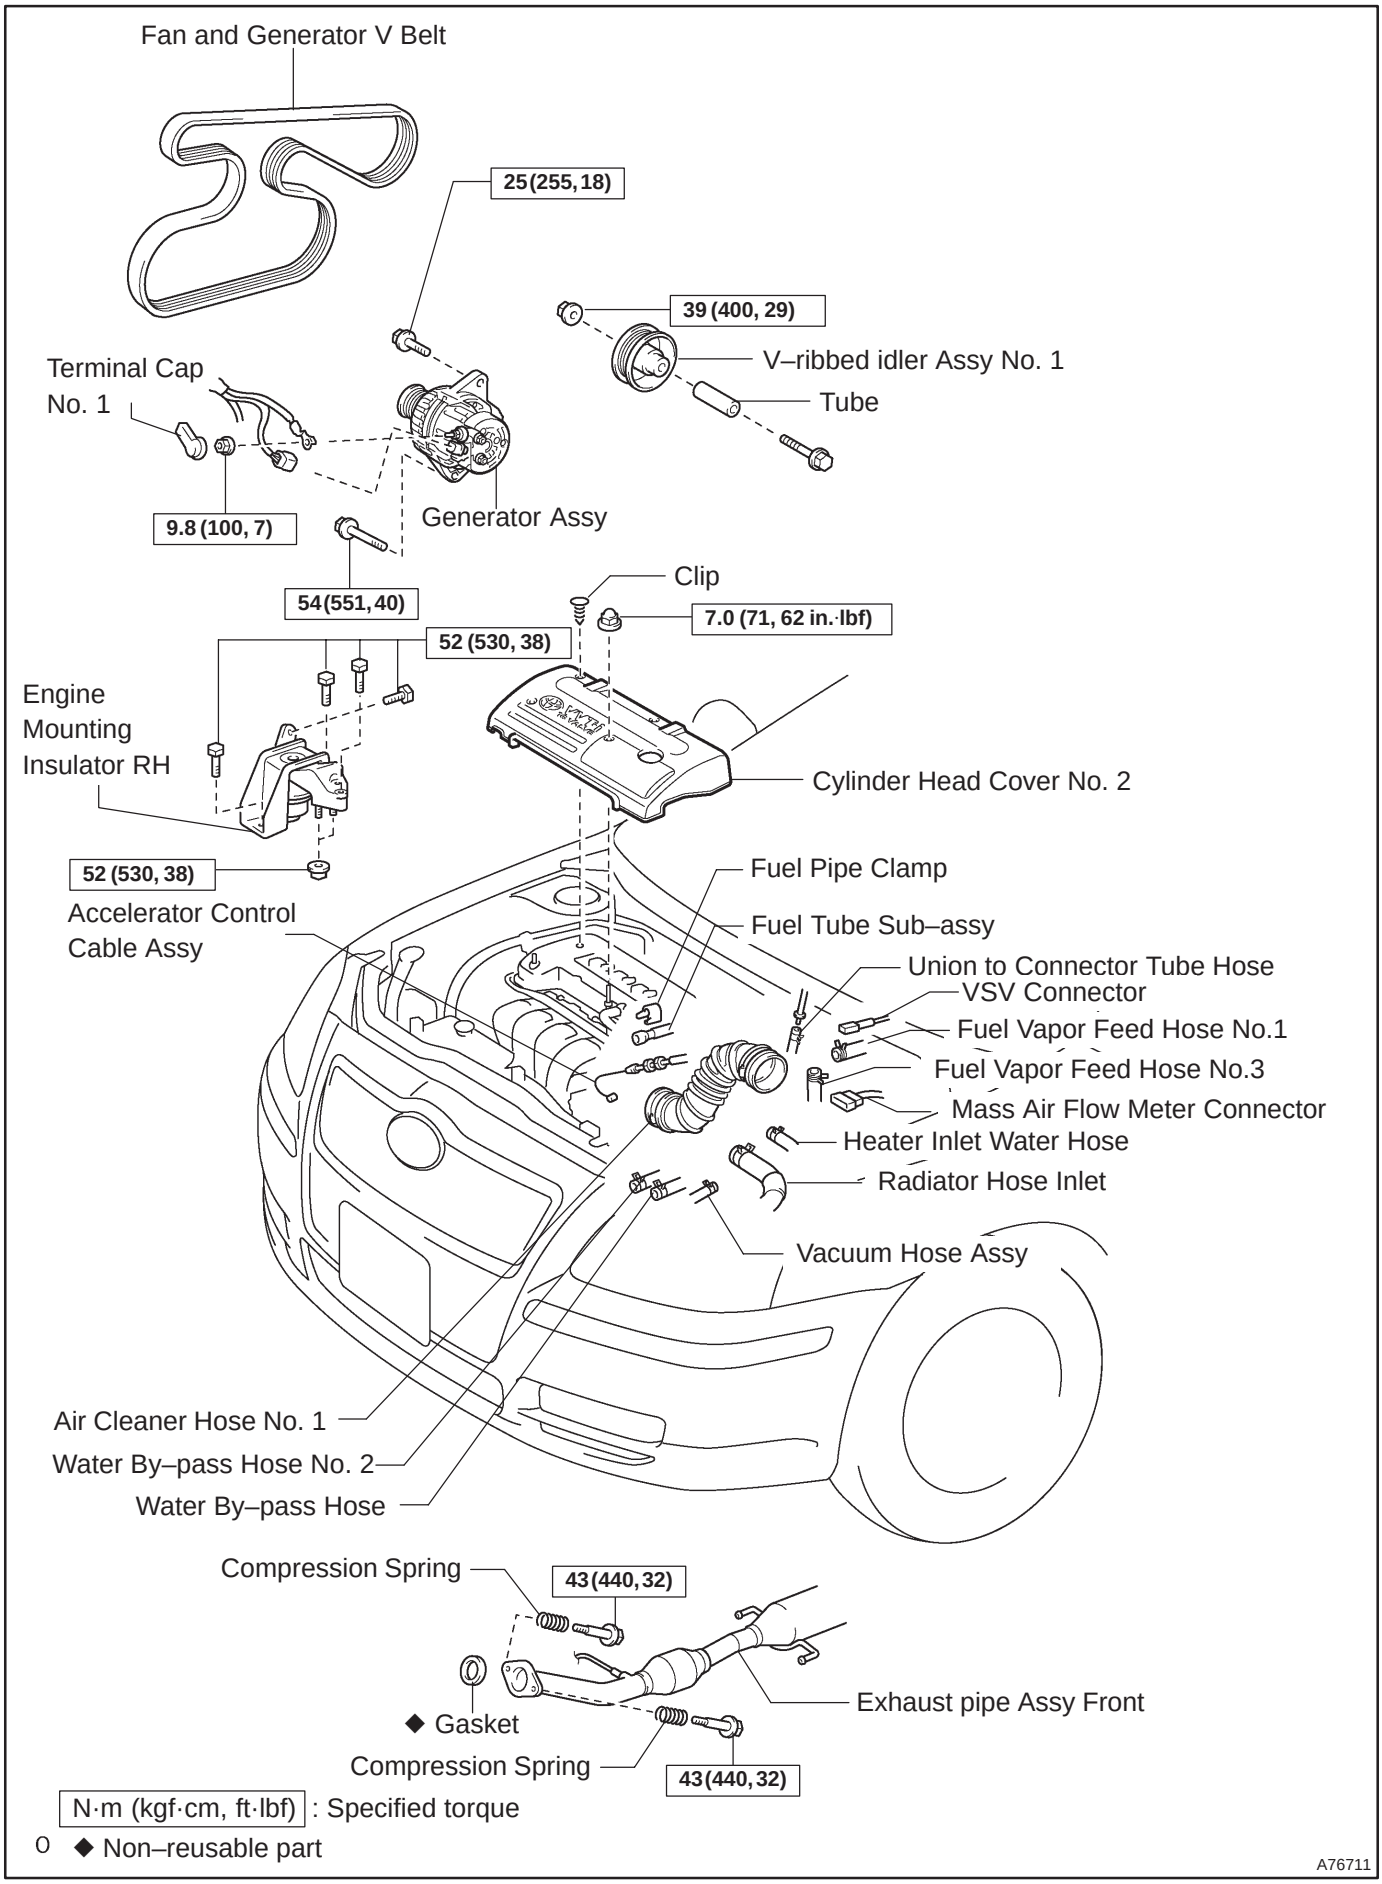
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

(b) Install the engine wire with the 2 nuts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

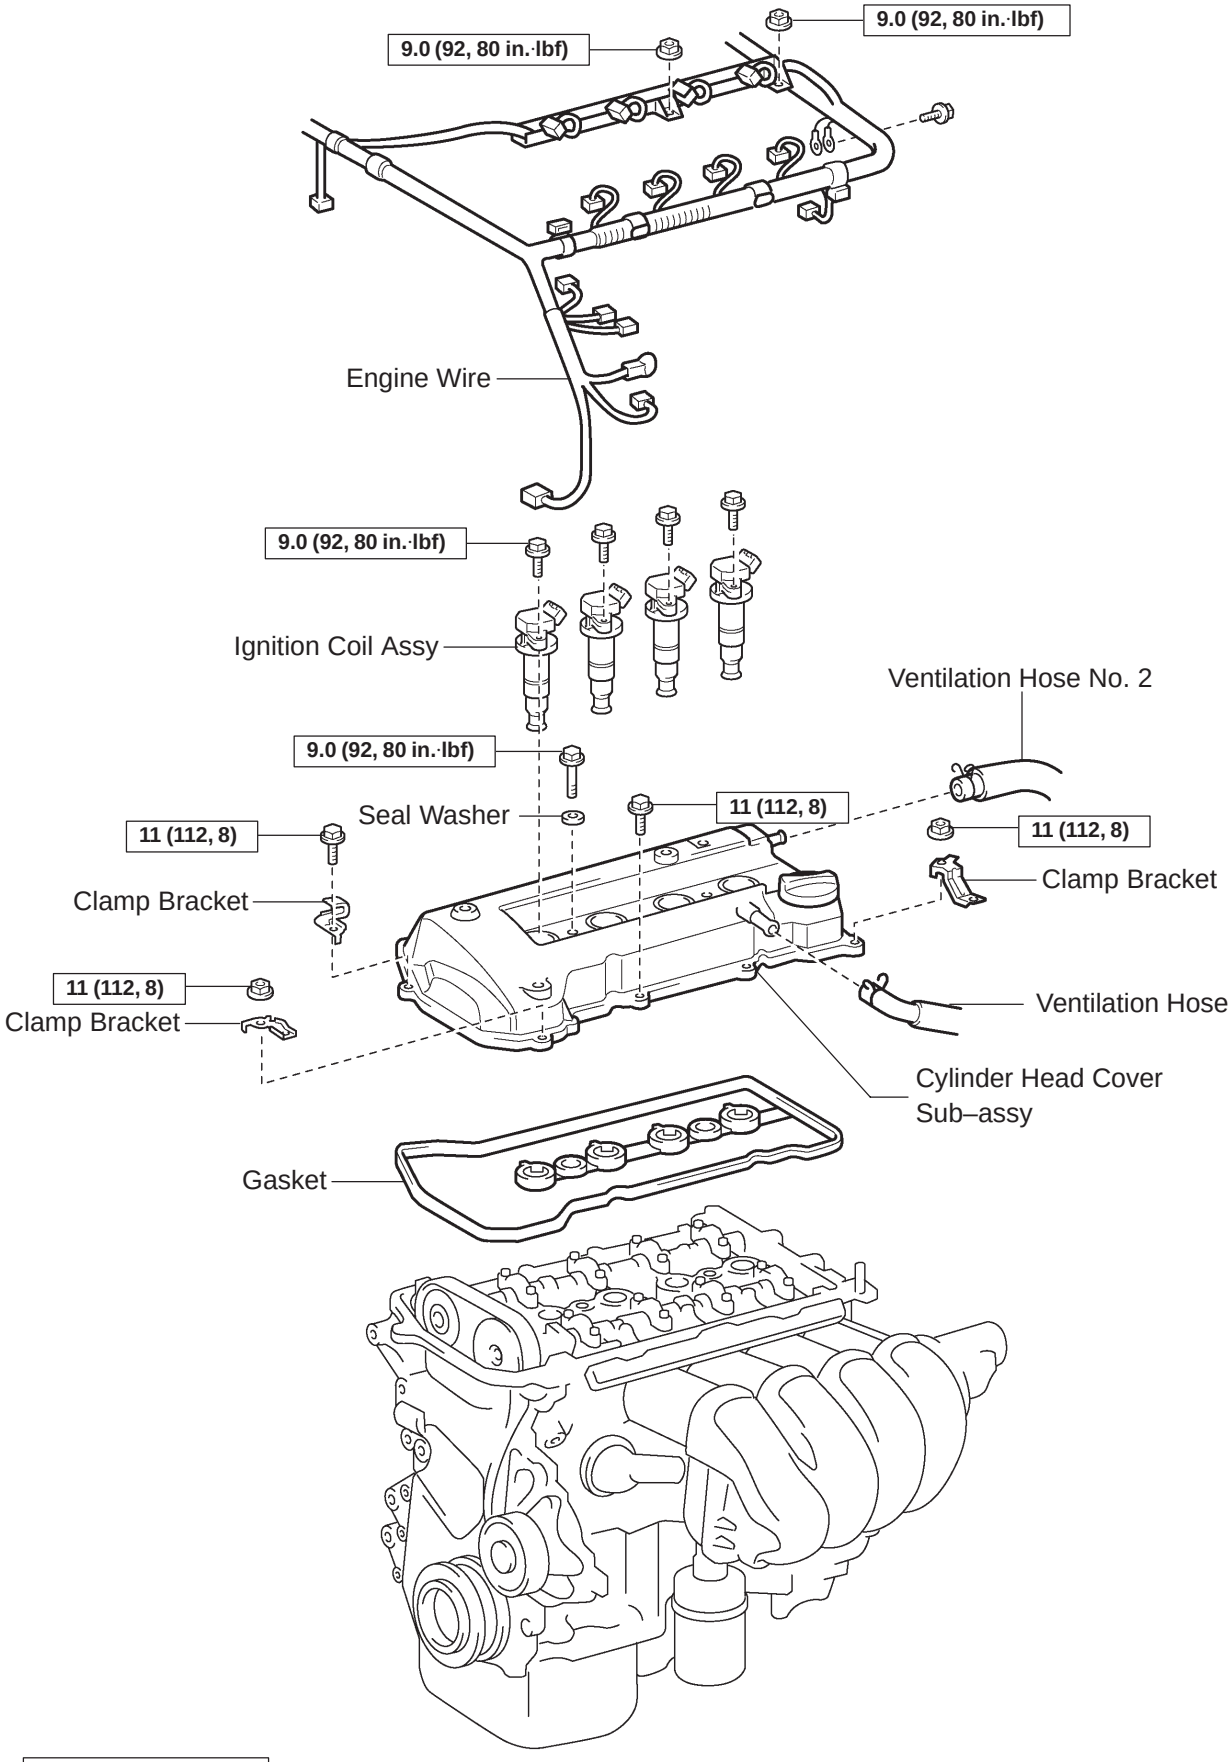
24. INSTALL CYLINDER HEAD COVER NO.2



(a) Install the cylinder head cover with the 2 nuts and 2 clips.
Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)



25. CHECK FOR ENGINE OIL LEAKS



CYLINDER HEAD GASKET (1ZZ–FE/3ZZ–FE)

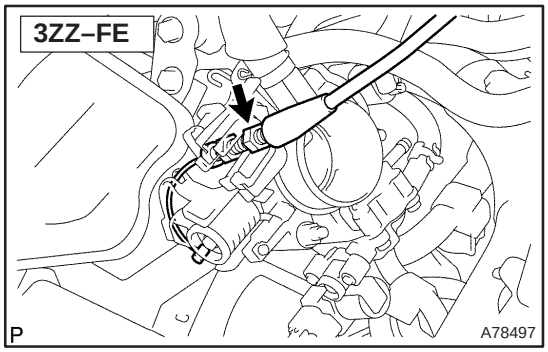
REPLACEMENT

1. **DISCHARGE FUEL SYSTEM PRESSURE (See page 11–1)**
2. **REMOVE RADIATOR SUPPORT OPENING COVER (See page 14–27)**
3. **REMOVE ENGINE ROOM COVER SIDE (See page 14–27)**
4. **REMOVE FRONT WHEEL RH**
5. **REMOVE ENGINE UNDER COVER SUB–ASSY NO.1 (See page 14–27)**
6. **REMOVE ENGINE UNDER COVER RH (See page 14–27)**
7. **DRAIN ENGINE COOLANT (See page 16–7)**



8. **REMOVE CYLINDER HEAD COVER NO.2**

(a) Remove the 2 nuts and 2 clips and detach the cylinder head cover No.2.

9. **SEPARATE ACCELERATOR CONTROL CABLE ASSY**

(a) Loosen the nut and separate the accelerator control cable.

10. **REMOVE AIR CLEANER HOSE NO.1**

(a) Disconnect the VSV connector.
(b) Disconnect the fuel vapor feed No. 1 hose from the VSV.
(c) Disconnect the fuel vapor feed hose from the VSV.
(d) Loosen the 2 air cleaner hose clamp bolts and remove the air cleaner hose.

11. **DISCONNECT WATER BY–PASS HOSE**

(a) Disconnect the water by–pass hose from the throttle body.

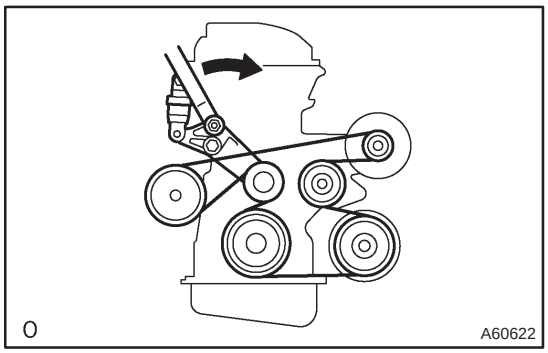
12. **DISCONNECT WATER BY–PASS HOSE NO.2**

(a) Disconnect the water by–pass hose from the throttle body.

13. **REMOVE EFI FUEL PIPE CLAMP (See page 11–11)**

14. DISCONNECT FUEL TUBE SUB–ASSY (See page 11–11)
SST 09268–21010

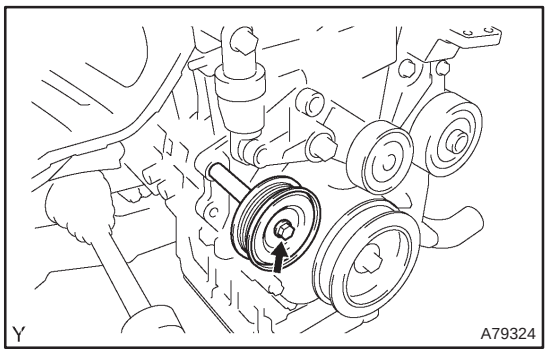
15. DISCONNECT UNION TO CONNECTOR TUBE HOSE



(a) Disconnect the union to connector tube hose from the hose to hose tube.

16. DISCONNECT RADIATOR HOSE INLET

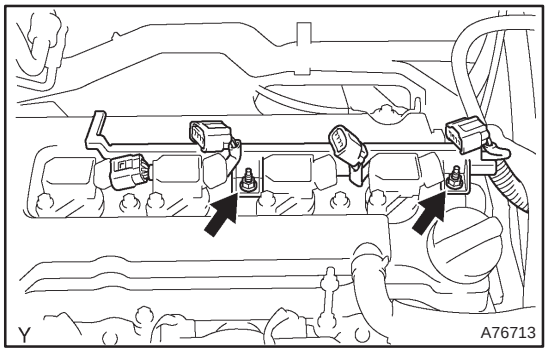
(a) Disconnect radiator hose inlet from the cylinder head.



17. DISCONNECT HEATER INLET WATER HOSE

(a) Disconnect the heater inlet water hose from the cylinder head.

18. REMOVE FAN AND GENERATOR V BELT

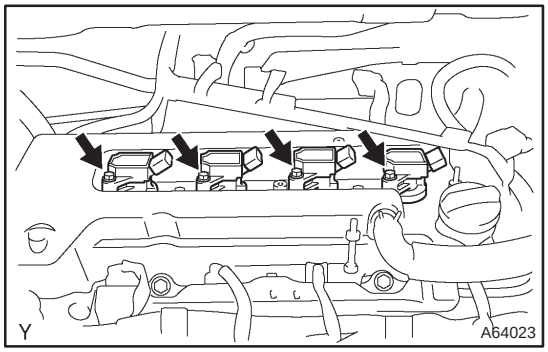


(a) Turn the V–ribbed belt tensioner clockwise slowly and loosen it. Remove the fan and generator V belt and put back the V–ribbed belt tensioner carefully.

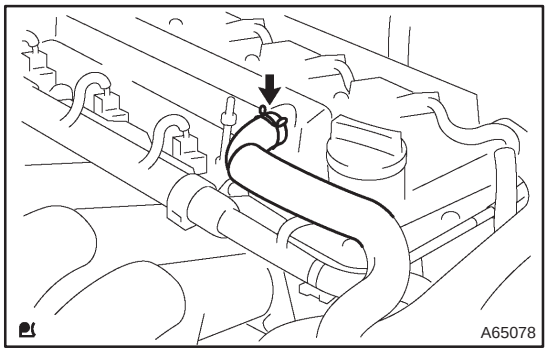
19. REMOVE V–RIBBED IDLER ASSY NO.1

(a) Remove the nut, bolt, tube and idler.

20. REMOVE GENERATOR ASSY (See page 19–7)



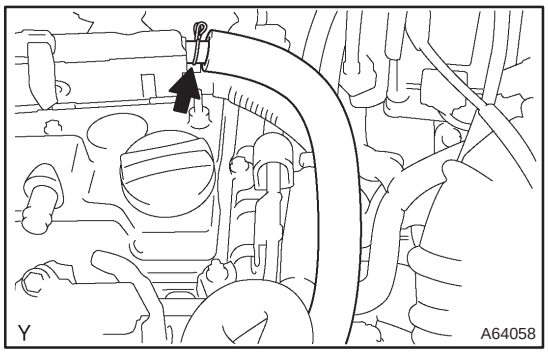
21. DISCONNECT IGNITION COIL ASSY



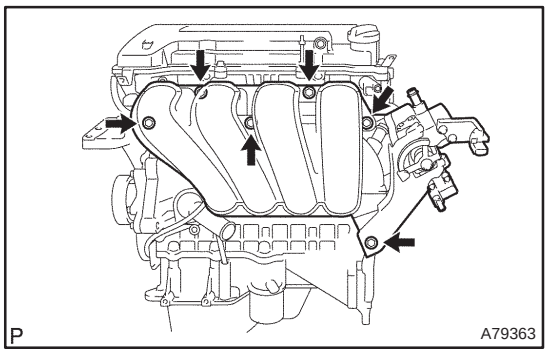
(a) Remove the 5 clamps from the 5 clamp brackets.

(b) Disconnect the 4 ignition coil connectors.

(c) Remove the 2 nuts which are used to secure the engine wire.



(d) Remove the 4 bolts and the 4 ignition coils.

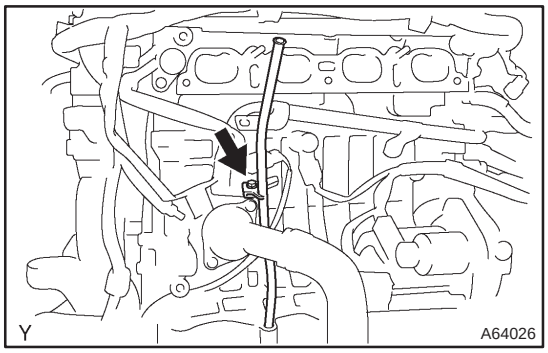


22. DISCONNECT VENTILATION HOSE

(a) Disconnect the ventilation hose from the cylinder head cover.

23. DISCONNECT VENTILATION HOSE NO.2

(a) Disconnect the ventilation hose from the cylinder head cover.

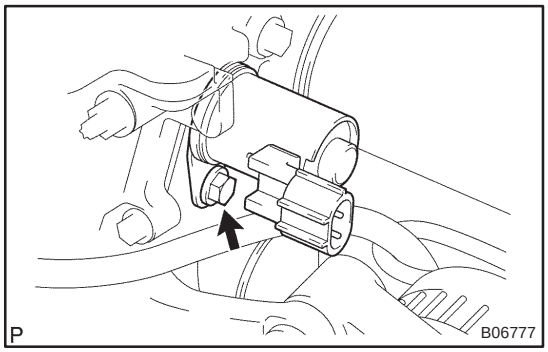


24. REMOVE INTAKE MANIFOLD

(a) Disconnect the 2 water hoses from the throttle body.
(b) Disconnect the ventilation hose and ventilation hose No. 2 from the cylinder head cover.
(c) Disconnect the vacuum hose from the water by–pass pipe No. 1.
(d) Remove the 4 bolts, 2 nuts and 2 wire brackets.
(e) Remove the intake manifold and the throttle body assembly.
(f) Remove the gasket from the intake manifold and the throttle body assembly.

25. REMOVE OIL LEVEL GAGE SUB–ASSY

(a) Remove the oil level gage from the oil level gage guide.

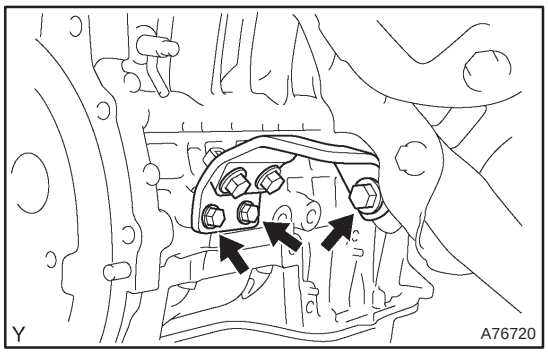


26. REMOVE OIL LEVEL GAGE GUIDE

(a) Disconnect the crankshaft position sensor cramp.
(b) Remove the bolt and the oil level gage guide.

27. SEPARATE WATER BY–PASS PIPE NO.1

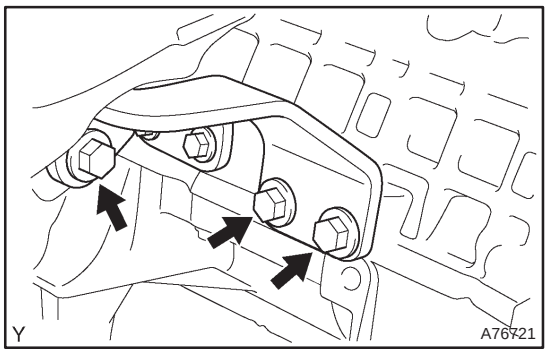
(a) Remove the 2 bolts which are used to secure the water by–pass pipe.



28. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSY

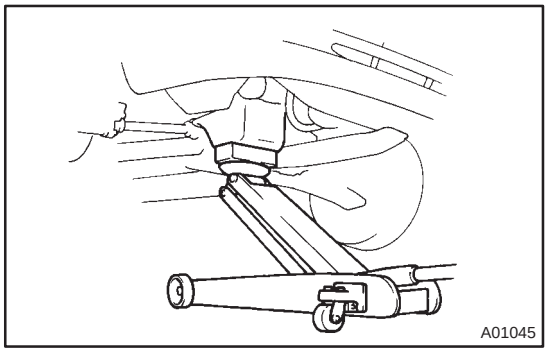
(a) Remove the bolt and the camshaft timing oil control valve.

29. SEPARATE EXHAUST PIPE ASSY FRONT



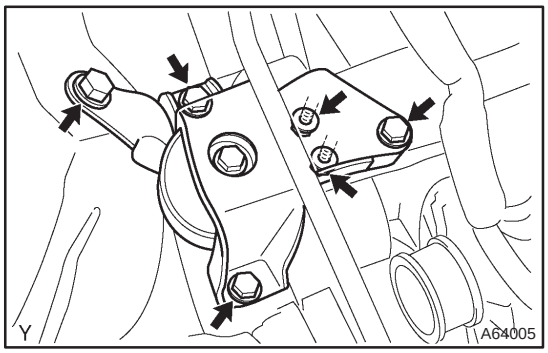
(a) Remove the 2 bolts and 2 compression springs which are used to secure the front side of exhaust pipe.

(b) Remove the gasket.

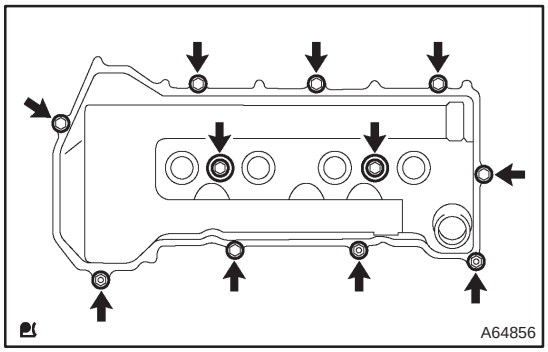


30. REMOVE MANIFOLD STAY

(a) Remove the 3 bolts and the manifold stay.



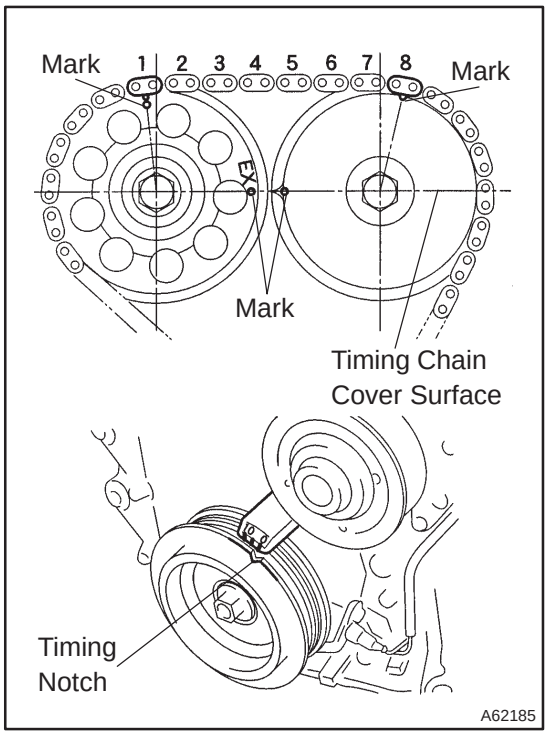
31. REMOVE MANIFOLD STAY NO.2



(a) Remove the 3 bolts and the manifold stay No. 2.

32. REMOVE ENGINE MOUNTING INSULATOR SUB–ASSY RH

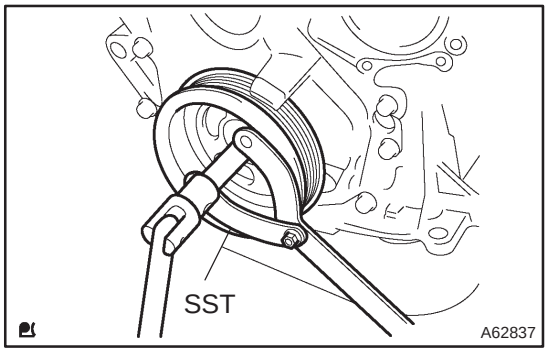
(a) Place a wooden block on a jack underneath the engine. Remove the 4 bolts and 2 nuts and detach the engine mounting insulator RH.



33. REMOVE CYLINDER HEAD COVER SUB–ASSY

(a) Remove the 9 bolts, 2 seal washers, 2 nuts and 3 clamp brackets.

(b) Remove the cylinder head cover.



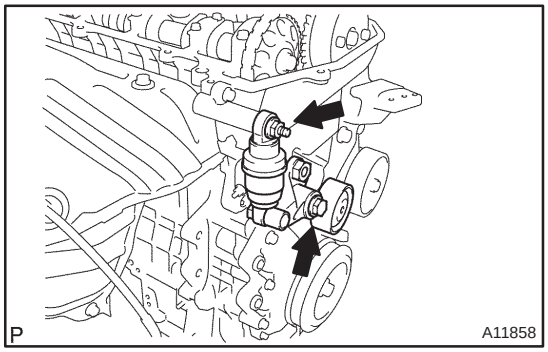
34. SET NO. 1 CYLINDER TO TDC/COMPRESSION

(a) Turn the crankshaft pulley to align the timing notch with the timing mark ”0” of the timing chain cover.

(b) Check that the point marks of the camshaft timing sprocket and VVT timing sprocket are in straight line on the timing chain cover surface as shown in the illustration.

HINT:

If not, turn the crankshaft 1 revolution (360°) and align the marks as above.

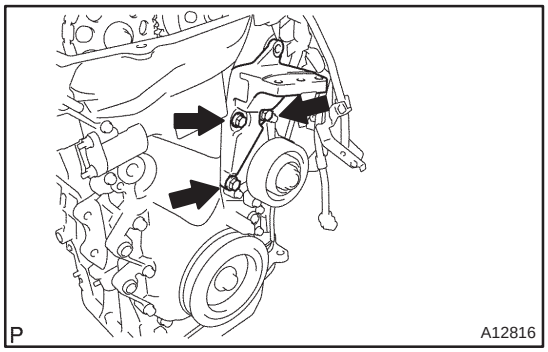


35. REMOVE CRANKSHAFT PULLEY

(a) Using SST, remove the pulley bolt.

SST 09960–10010 (09962–01000, 09963–01000)

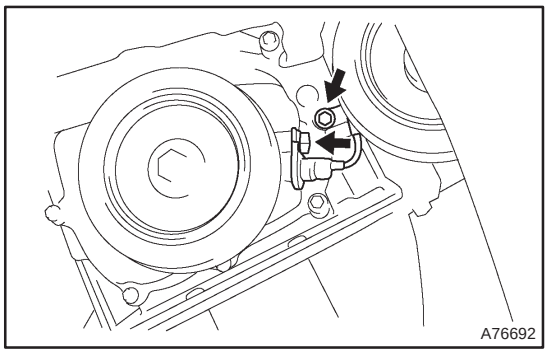
(b) Remove the crankshaft pulley from the crankshaft.



36. REMOVE V–RIBBED BELT TENSIONER ASSY

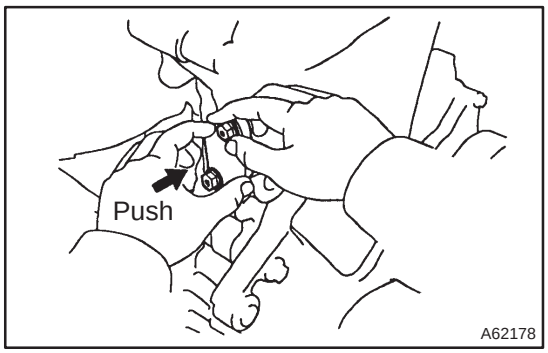
(a) Remove the bolt and nut and detach the V–ribbed belt tensioner.

HINT:



Jack up and down to remove the bolt.

37. REMOVE WATER PUMP ASSY (See page 16–9)

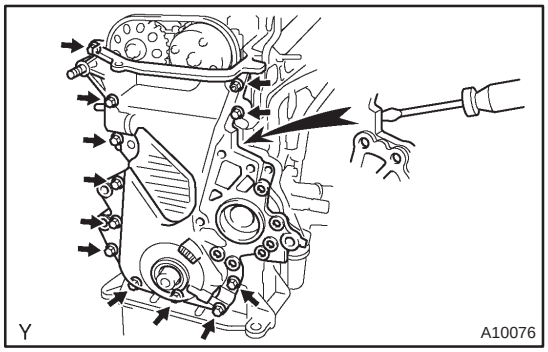


38. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Remove the 3 bolts and the transverse engine engine mounting bracket.

39. REMOVE CRANKSHAFT POSITION SENSOR

(a) Remove the 2 bolts which are used to secure the crankshaft position sensor.



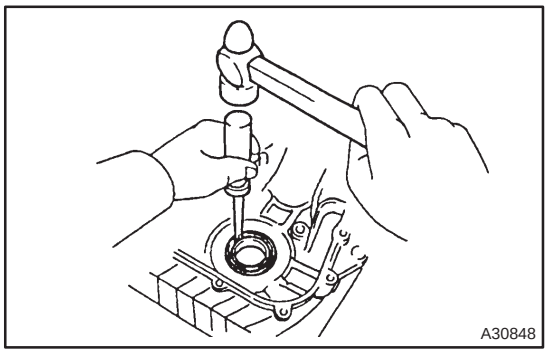
40. REMOVE CHAIN TENSIONER ASSY NO.1

(a) Remove the 2 nuts and the chain tensioner.

NOTICE:

Do not revolve the crankshaft without the chain tensioner.

41. REMOVE TIMING CHAIN OR BELT COVER SUB–ASSY



(a) Remove the 11 bolts and nuts.

(b) Using a torx wrench socket (E8), remove the stud bolt.

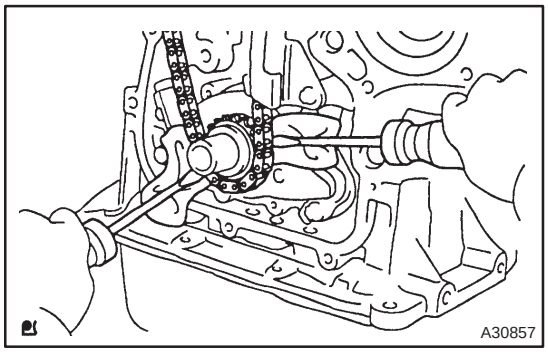
(c) Remove the timing chain cover by prying between the cylinder head and the cylinder block with a screwdriver.

NOTICE:

Be careful not to damage the timing chain cover, the cylinder head and the cylinder block.

42. REMOVE TIMING GEAR COVER OIL SEAL

(a) Using a screwdriver, remove the oil seal.



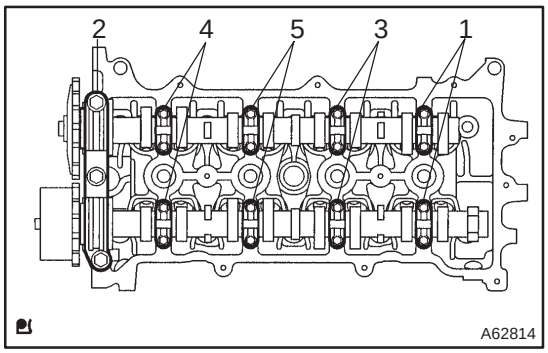
43. REMOVE CRANKSHAFT POSITION SENSOR PLATE NO.1

44. REMOVE CHAIN TENSIONER SLIPPER

(a) Remove the bolt and the chain tensioner slipper.

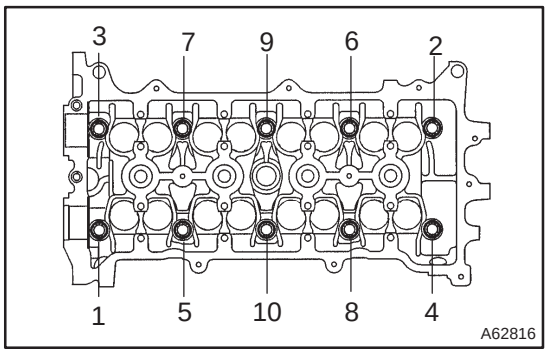
45. REMOVE CHAIN VIBRATION DAMPER NO.1

(a) Remove the 2 bolt and the chain vibration damper.



46. REMOVE CHAIN SUB–ASSY

(a) Remove the timing chain by prying the crankshaft timing gear using screwdrivers as shown in the illustration.

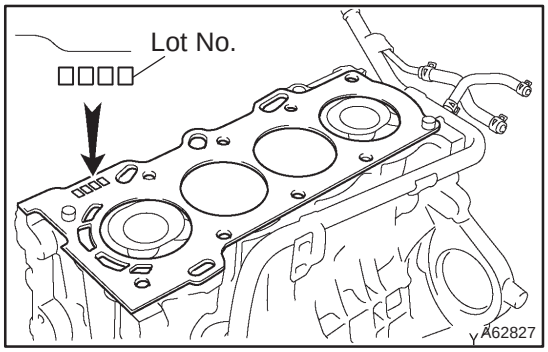


NOTICE:

- **Put shop rag to protect the engine.**
- **In case of revolving the camshafts with the chain off the sprockets, turn the crankshaft 1/4 revolution counterclockwise to prevent the valves from touching the pistons.**

47. REMOVE CAMSHAFT

(a) Using several steps, loosen and remove the 19 bearing cap bolts uniformly in the sequence shown in the illustration. Remove the 9 bearing caps, and both the intake and exhaust camshafts.

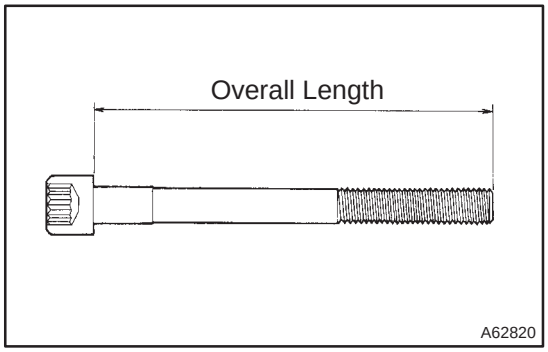


48. REMOVE CYLINDER HEAD SUB–ASSY

(a) Using several steps, loosen and remove the 10 cylinder head bolts with a 10 mm hexagon wrench uniformly in the sequence shown in the illustration. Remove the 10 cylinder head bolts and 10 plate washers.

(b) Remove the cylinder head.

49. REMOVE CYLINDER HEAD GASKET

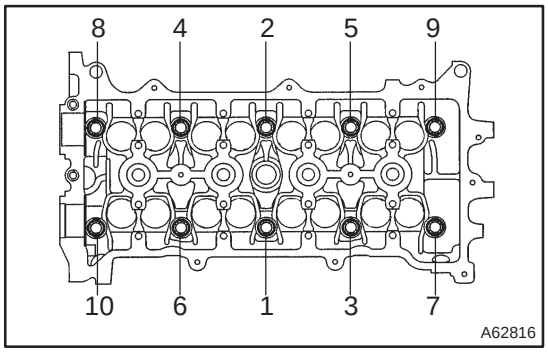


50. INSTALL CYLINDER HEAD GASKET

(a) Place a new cylinder head gasket on the cylinder block with the Lot No. stamp facing upward.

NOTICE:

- **Pay attention to the mounting orientation.**
- **Place the cylinder head on the gasket gently in order not to damage the gasket with the bottom part of the head.**



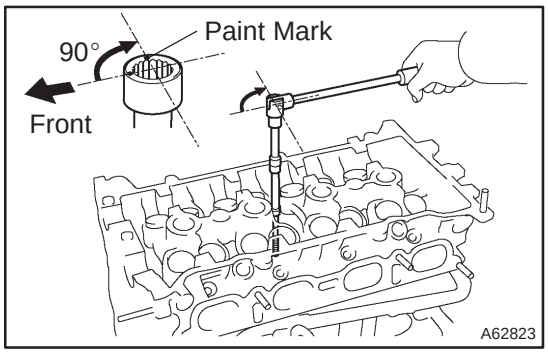
51. INSPECT CYLINDER HEAD SET BOLT

(a) Using a vernier calipers, measure the length of cylinder head bolt from the seat to the end.

Standard length: 146.8 to 148.2 mm (5.780 to 5.835 in.)
Maximum length: 148.5 mm (5.846 in.)

If the length exceeds the maximum, replace the bolt.

52. INSTALL CYLINDER HEAD SUB–ASSY

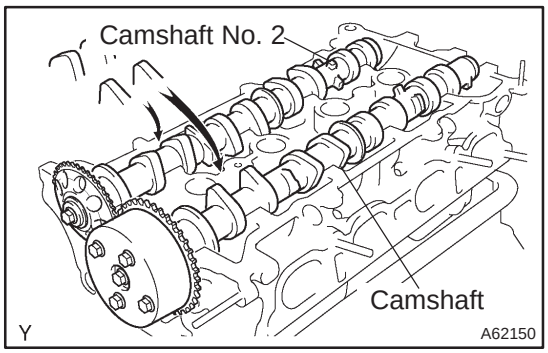


HINT:

The cylinder head bolts are tightened in 2 successive steps.

(a) Apply a light coat of engine oil on the threads of the cylinder head bolts.

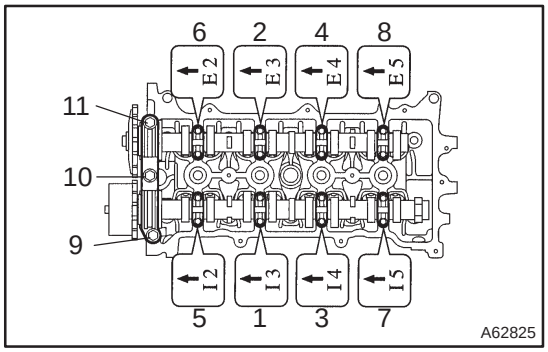
(b) Using several steps, install and tighten the 10 cylinder head bolts and plate washers with a 10 mm hexagon wrench uniformly in the sequence shown in the illustration.



Torque: 49 N·m (500 kgf·cm, 36 ft·lbf)

(c) Mark the front of the cylinder head bolt with paint.

(d) Retighten the cylinder head bolts 90° in the same sequence as step (b).

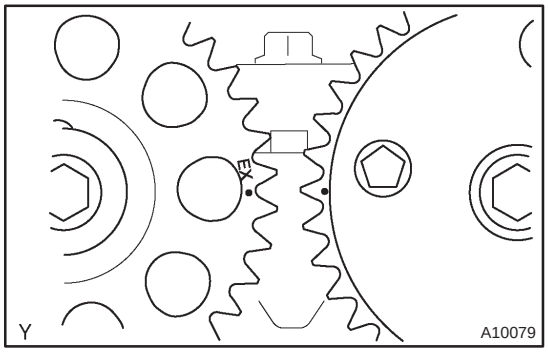


(e) Check that the paint mark of each bolt is at 90° angle to the front.

53. INSTALL CAMSHAFT

(a) Apply a light coat of engine oil on the camshaft journals.

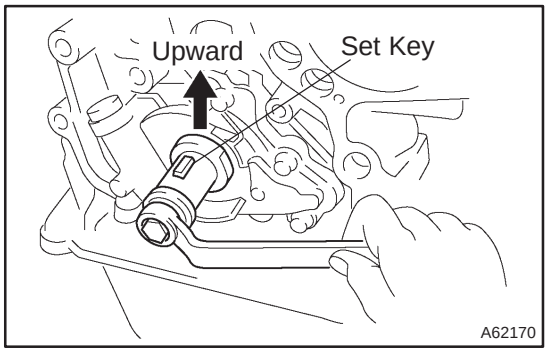
(b) Place the 2 camshafts on the cylinder head as shown in the illustration.



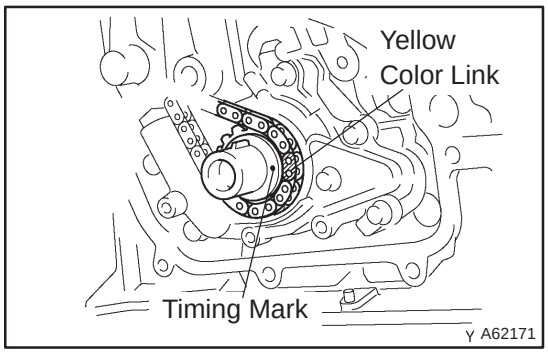
(c) Examine the front marks and numbers and tighten the bolts in the sequence shown in the illustration.

Torque:

23 N·m (235 kgf·cm, 17 ft·lbf) for Bearing cap No. 1



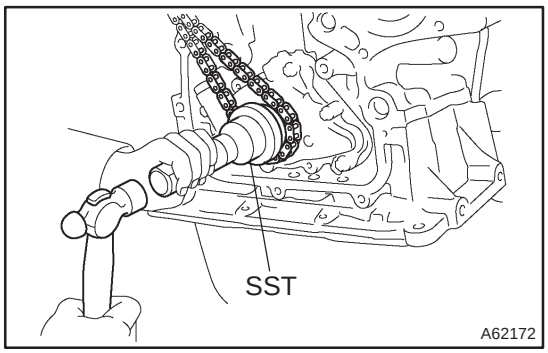
13 N·m (133 kgf·cm, 10 ft·lbf) for Bearing cap No. 3



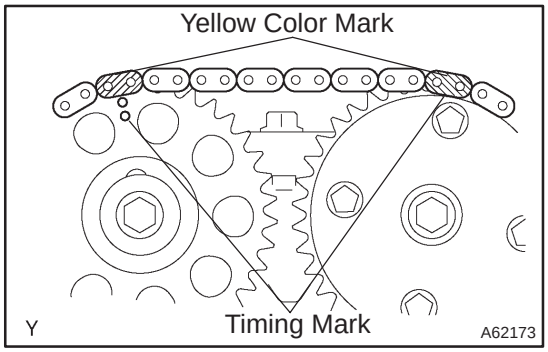
54. INSTALL CHAIN SUB–ASSY

(a) Set No. 1 cylinder to TDC/compression.

(1) Turn the camshafts using a wrench to align the timing marks of the 2 camshaft timing sprockets.



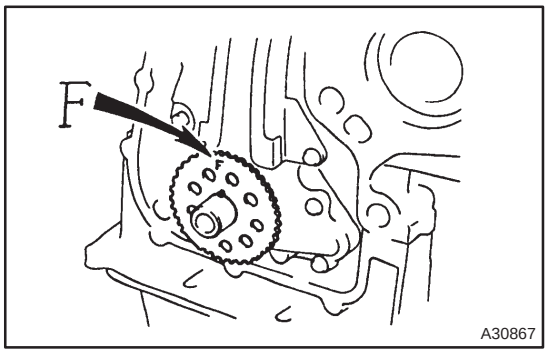
(2) Using a crankshaft pulley bolt, turn the crankshaft and set the set key on the crankshaft upward.



(b) Install the timing chain on the crankshaft timing sprocket with the yellow color link and the timing mark on the crankshaft timing sprocket aligned.

HINT:
Three yellow color links are on the chain.

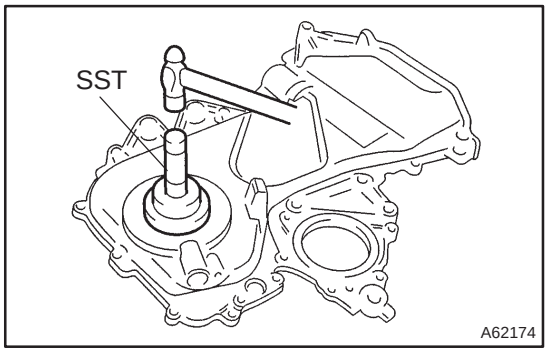
(c) Using SST, install the crankshaft timing sprocket.
SST 09223–22010



(d) Install the timing chain to the camshaft timing sprockets with the yellow color links and the timing marks on the camshaft timing sprockets aligned.

55. INSTALL CHAIN VIBRATION DAMPER NO.1

(a) Install chain vibration damper with the 2 bolts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)



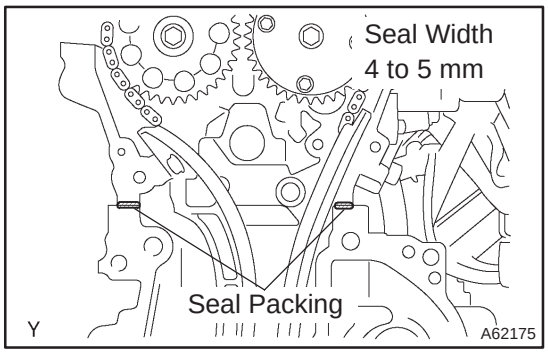
56. INSTALL CHAIN TENSIONER SLIPPER

(a) Install the chain tensioner slipper with the bolt.
Torque: 19 N·m (194 kgf·cm, 14 ft·lbf)

57. INSTALL CRANKSHAFT POSITION SENSOR PLATE NO.1

(a) Install the plate with the ”F” mark facing forward.

58. INSTALL TIMING GEAR COVER OIL SEAL



(a) Apply MP grease to a new oil seal lip.

(b) Using SST, tap in the oil seal until its surface is flush with the timing chain cover edge.

SST 09223–22010

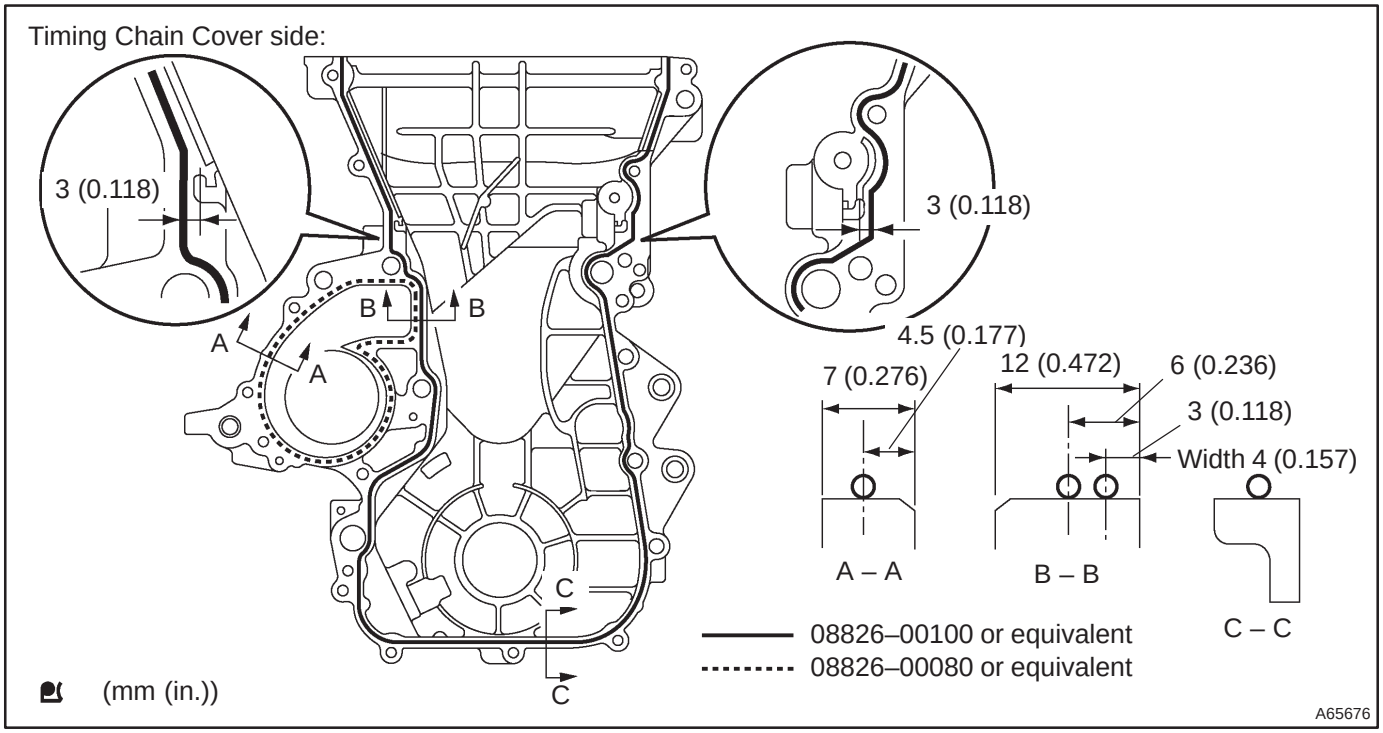
NOTICE:

Keep the lip free of foreign objects.

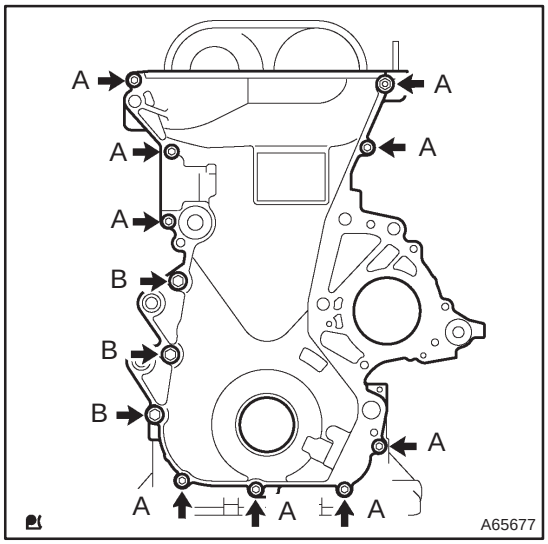
59. INSTALL TIMING CHAIN OR BELT COVER SUB–ASSY

(a) Remove any old packing material (FIPG) from the contact surface.

(b) Apply a continuous bead of seal packing (Diameter 3.5 mm to 4.5 mm (0.1379 to 0.177 in.)) as shown in the illustration.



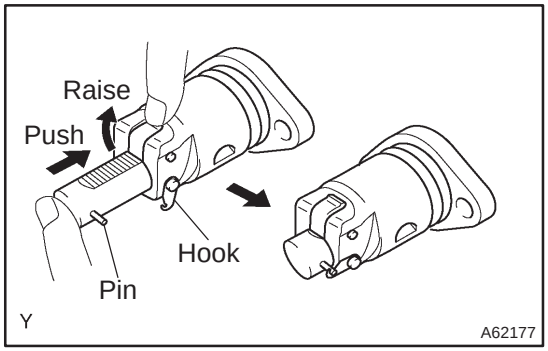
Seal packing:



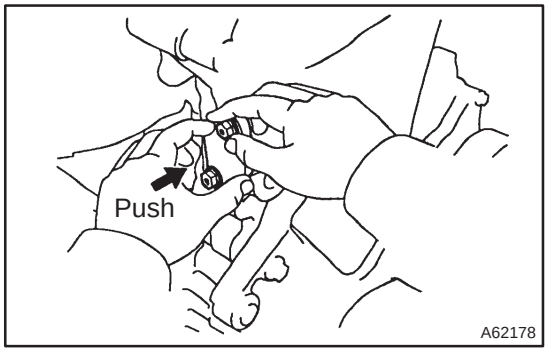
Water pump part part No. 08826–00100 or equivalent

Other part part No. 08826–00080 or equivalent.

NOTICE:

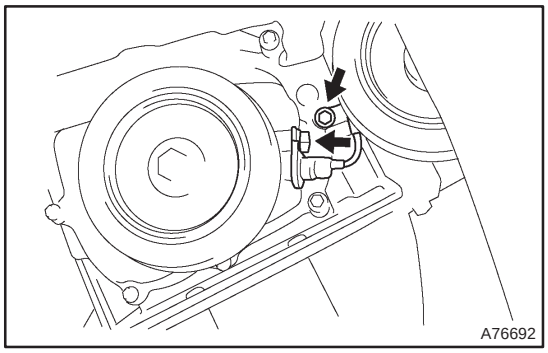


- **Remove any oil from the contact surface.**
- **Install the oil pan within 3 minutes after applying seal packing.**
- **Do not expose the seal to engine oil within 2 hours after installing.**



(c) Install the timing chain cover with the 11 bolts and nut.
Torque:
13 N·m (133 kgf·cm, 10 ft·lbf) for A
19 N·m (194 kgf·cm, 14 ft·lbf) for B

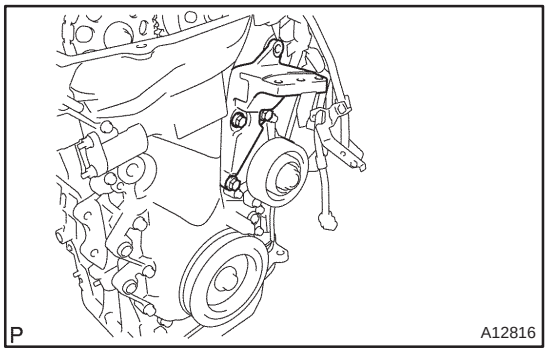
(d) Using a torx wrench socket (E8), install the stud bolt.
Torque: 9.5 N·m (97 kgf·cm, 84 in.·lbf)



60. INSTALL CHAIN TENSIONER ASSY NO.1

(a) Check that the O–ring is clean, and set the hook as shown in the illustration.

(b) Apply engine oil to the chain tensioner and install it with the 2 nuts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

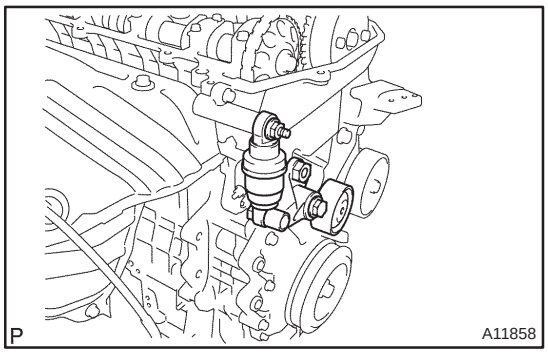


NOTICE:
If the hook released the plunger during installation, re–hook the plunger by the hook to fix it.

61. INSTALL CRANKSHAFT POSITION SENSOR

(a) Apply a light coat of the engine oil to the O–ring on the crankshaft position sensor.

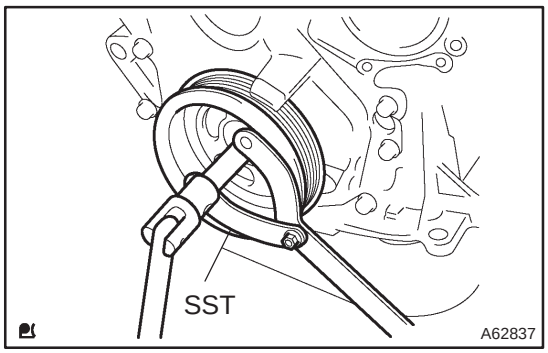
(b) Install the crankshaft position sensor with the 2 bolts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)



62. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Install the transverse engine engine mounting bracket with the 3 bolts.

Torque: 47 N·m (479 kgf·cm, 35 ft·lbf)

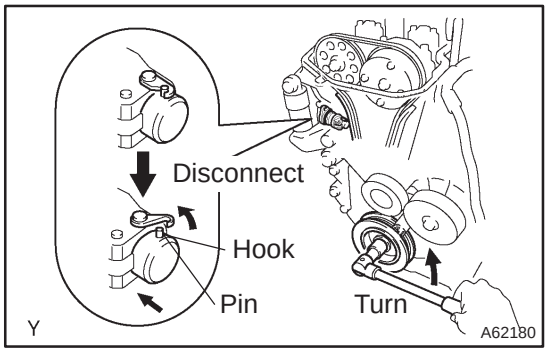


63. INSTALL WATER PUMP ASSY (See page 16–9)

64. INSTALL V–RIBBED BELT TENSIONER ASSY

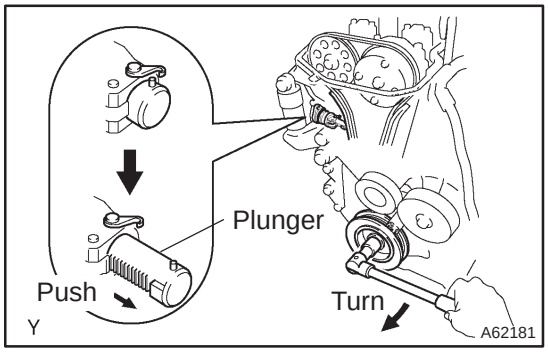
(a) Install the V–ribbed belt tensioner with the nut and bolt.

Torque:
29 N·m (296 kgf·cm, 21 ft·lbf) for Nut
69 N·m (704 kgf·cm, 51 ft·lbf) for Bolt



65. INSTALL CRANKSHAFT PULLEY

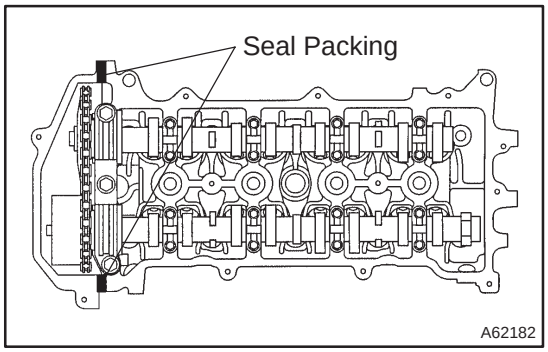
(a) Align the keyway of the pulley with the key located on the crankshaft and slide the pulley into place.



(b) Using SST, install the crankshaft pulley bolt.

SST 09960–10010 (09962–01000, 09963–01000)

Torque: 138 N·m (1,407 kgf·cm, 102 ft·lbf)



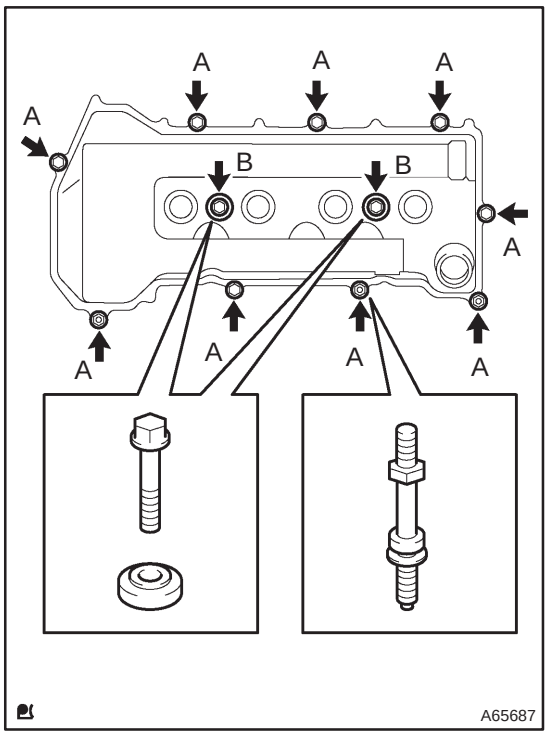
(c) Turn the crankshaft counterclockwise and take the hook off the knock pin to release the plunger.

(d) Turn the crankshaft clockwise, and check that the plunger is extended.

HINT:

If the plunger does not be extended, press the slipper into the chain tensioner using a screwdriver so that the hook is took off from the knock pin and let the plunger can be extended.

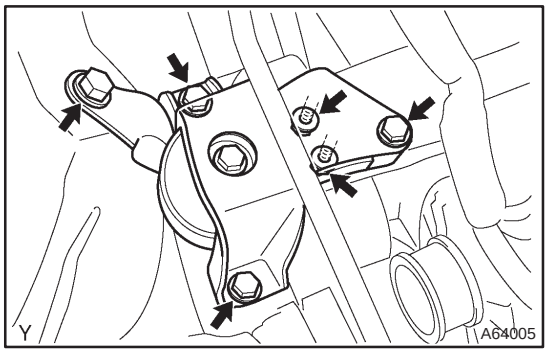
66. INSTALL CYLINDER HEAD COVER SUB–ASSY



(a) Remove any old packing (FIPG) material.

(b) Apply seal packing to the 2 locations as shown in the illustration.

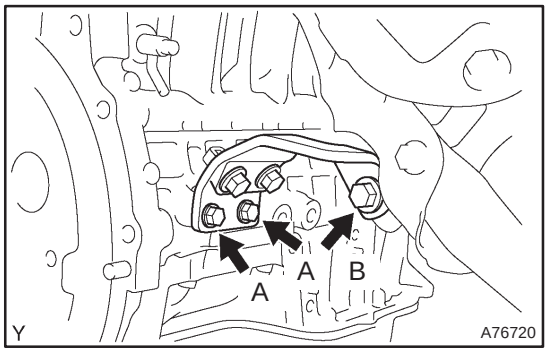
Seal packing: Part No. 08826–00080 or equivalent



NOTICE:

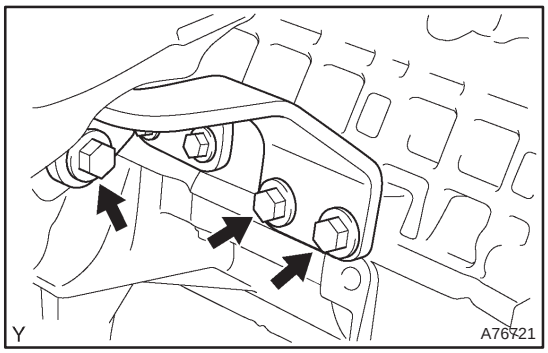
- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes after applying seal packing.**
- **Do not expose the seal to engine oil 2 hours after installing.**

(c) Install the cylinder head cover and 3 cable brackets with the 9 bolts, 2 seal washers and 2 nuts. Tighten the bolts and nuts uniformly in the several steps.



Torque:
11 N·m (112 kgf·cm, 8 ft·lbf) for A
9.0 N·m (92 kgf·cm, 80 in.·lbf) for B

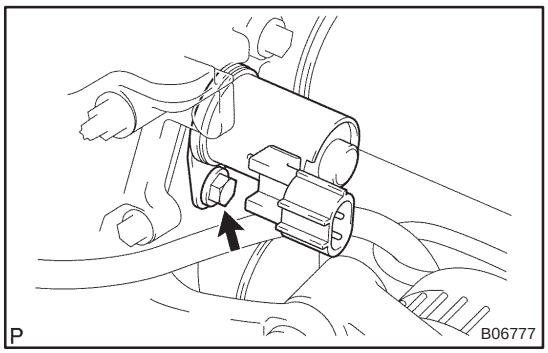
67. INSTALL ENGINE MOUNTING INSULATOR SUB–ASSY RH



(a) Install the engine mounting insulator with the 4 bolts and 2 nuts.

Torque: 52 N·m (530 kgf·cm, 38 ft·lbf)

68. INSTALL MANIFOLD STAY

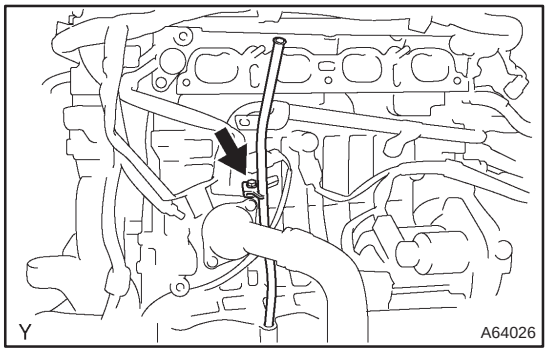


(a) Install the manifold stay with the 3 bolts.
Torque:
37 N·m (377 kgf·cm, 27 ft·lbf) for Bolt A
49 N·m (500 kgf·cm, 36 ft·lbf) for Bolt B

69. INSTALL MANIFOLD STAY NO.2

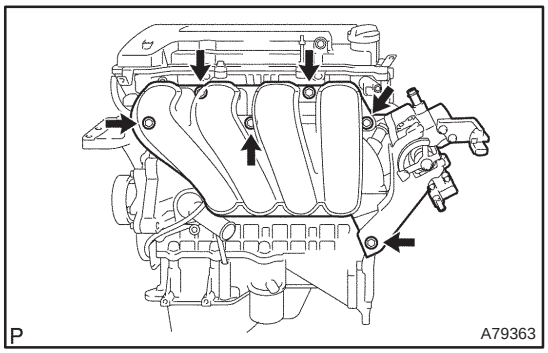
(a) Install the manifold stay with the 3 bolts.
Torque: 49 N·m (500 kgf·cm, 36 ft·lbf)

70. INSTALL EXHAUST PIPE ASSY FRONT
(See page 15–2)



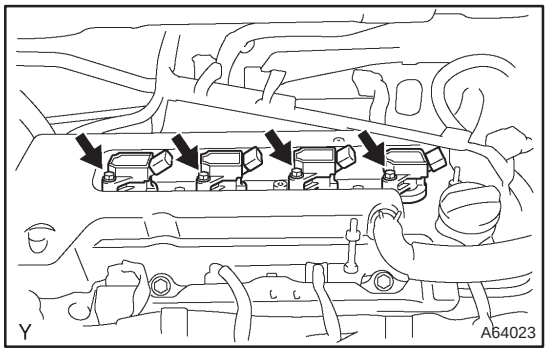
71. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSY

(a) Apply a light coat of engine oil on a new O–ring, and install it to the camshaft timing oil control valve.
(b) Install the camshaft timing oil control valve with the bolt.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)



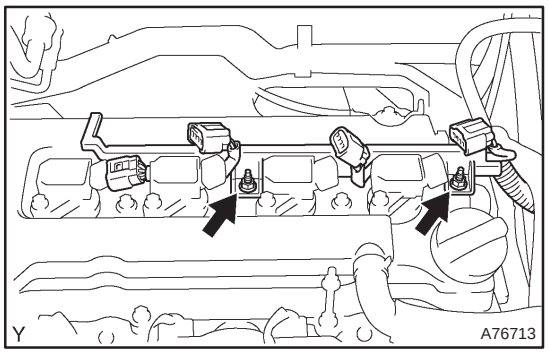
72. INSTALL WATER BY–PASS PIPE NO.1

(a) Install a new gasket and water by–pass pipe with the 2 nuts and 2 bolts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)



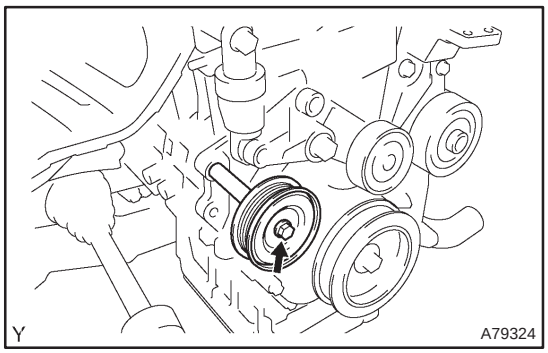
73. INSTALL OIL LEVEL GAGE GUIDE

(a) Apply a light coat of engine oil on a new O–ring, and install it to the oil level gage guide.
(b) Install the oil level gage guide with the bolt.
Torque: 13 N·m (133 kgf·cm, 10 ft·lbf)



74. INSTALL INTAKE MANIFOLD

(a) Install a new gasket to the intake manifold.
(b) Install the intake manifold and the throttle body assembly with the 2 brackets, 4 bolts and 2 nuts.
Torque: 30 N·m (306 kgf·cm, 22 ft·lbf)
(c) Connect the 2 vacuum hoses to the intake manifold.
(d) Connect the 2 water hoses to the throttle body.

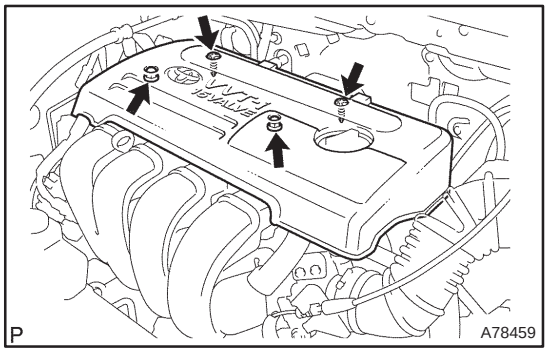


75. INSTALL IGNITION COIL ASSY

(a) Install the 4 ignition coils with the 4 bolts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

(b) Install the engine wire with the 2 nuts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

76. INSTALL GENERATOR ASSY (See page 19–7)



77. INSTALL V–RIBBED IDLER ASSY NO.1

(a) Install the tube and idler with the nut and bolt.
Torque: 39.2 N·m (400 kgf·cm, 29 ft·lbf)

78. INSTALL ACCELERATOR CONTROL CABLE ASSY (1ZZ–FE ENGINE TYPE) (See page 10–9)

79. INSTALL ACCELERATOR CONTROL CABLE ASSY (3ZZ–FE ENGINE TYPE) (See page 10–15)

80. INSTALL AIR CLEANER HOSE NO.1
Torque: 1.5 N·m (15 kgf·cm, 13 in.·lbf)

81. INSTALL CYLINDER HEAD COVER NO.2

(a) Install the cylinder head cover with the 2 nuts and 2 clips.
Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)

82. INSTALL FRONT WHEEL RH
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

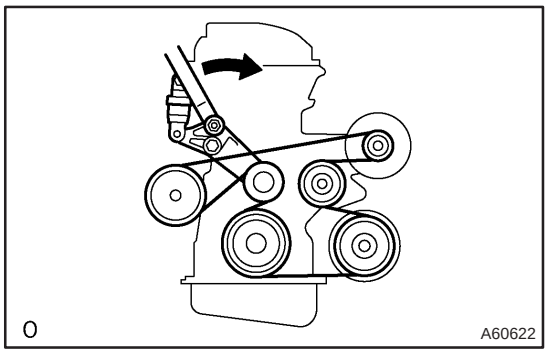
83. ADD ENGINE COOLANT (See page 16–7)

84. INSPECT COMPRESSION (See page 14–1)
SST 09992–00500

85. INSPECT CO/HC (See page 14–1)

86. INSPECT IGNITION TIMING (See page 14–1)
SST 09843–18040

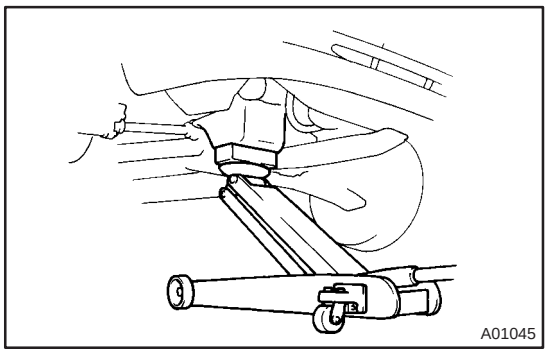
87. CHECK FOR ENGINE COOLANT LEAKS (See page 16–7)



88. CHECK FOR ENGINE OIL LEAKS

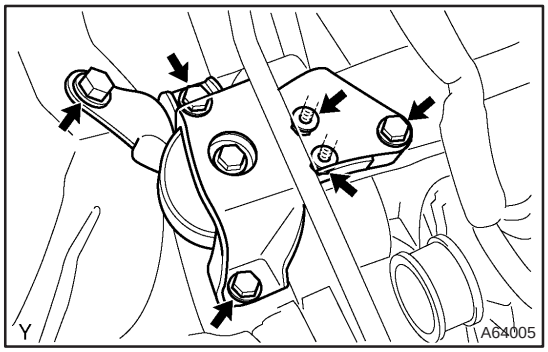
TIMING GEAR COVER OIL SEAL (1ZZ–FE/3ZZ–FE)

141CN–01

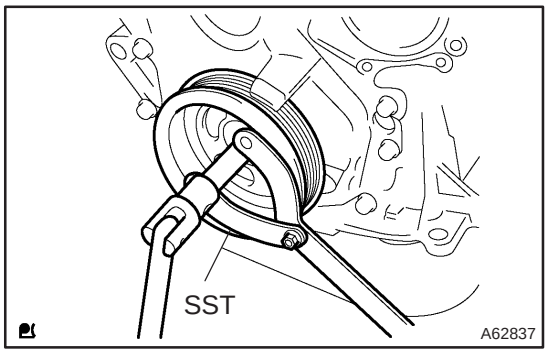


REPLACEMENT

1. REMOVE FRONT WHEEL RH (See page 14–27)
2. REMOVE ENGINE UNDER COVER SUB–ASSY NO.1 (See page 14–27)
3. REMOVE ENGINE UNDER COVER RH (See page 14–27)
4. REMOVE RADIATOR SUPPORT OPENING COVER (See page 14–27)
5. REMOVE ENGINE ROOM COVER SIDE (See page 14–27)



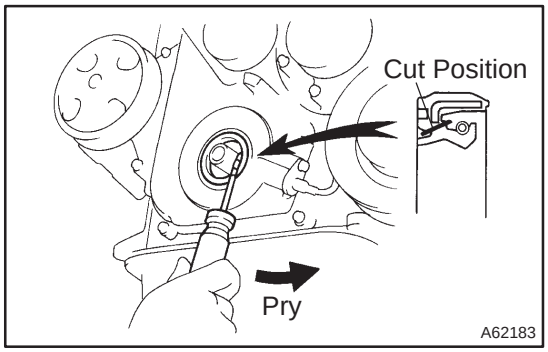
6. REMOVE FAN AND GENERATOR V BELT



(a) Turn the V–ribbed belt tensioner clockwise slowly and loosen it. Then, remove the fan and generator V belt and put back the V–ribbed belt tensioner carefully.

7. REMOVE ENGINE MOUNTING INSULATOR SUB–ASSY RH

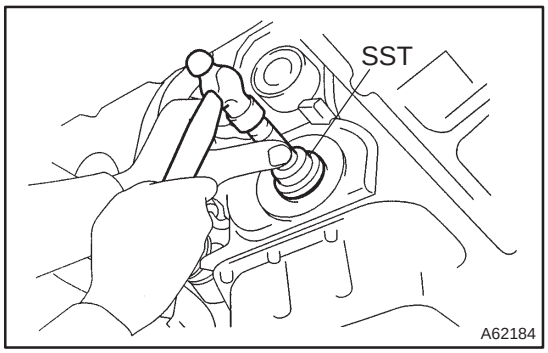
(a) Place a wooden block on a jack underneath the engine. Remove the 4 bolts and 2 nuts and detach the engine mounting insulator RH.



8. REMOVE CRANKSHAFT PULLEY

(a) Using SST, remove the crankshaft pulley bolt.
SST 09960–10010 (09962–01000, 09963–01000)

(b) Remove the crankshaft pulley from the crankshaft.



9. REMOVE TIMING GEAR COVER OIL SEAL

(a) Using a knife, cut off the oil seal lip.

(b) Using a screwdriver with the tip wrapped in tape, pry out the oil seal.

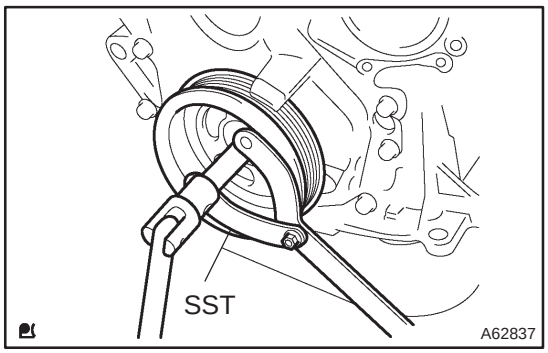
NOTICE:

After the removal, check if the crankshaft is not damaged. If it is damaged, smooth the surface with 400–grit sandpaper.

10. INSTALL TIMING GEAR COVER OIL SEAL

(a) Apply MP grease to a new oil seal lip.

NOTICE:



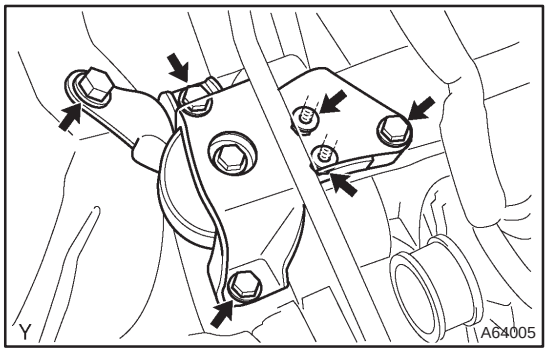
Keep the lip free of foreign objects.

(b) Using SST, tap in the oil seal until its surface is flush with the timing chain cover edge.

SST 09223–22010

NOTICE:

Wipe off extra grease on the crankshaft.



11. INSTALL CRANKSHAFT PULLEY

(a) Align the keyway of the pulley with the key located on the crankshaft and slide the pulley into place.

(b) Using SST, install the crankshaft pulley bolt.

SST 09960–10010 (09962–01000, 09963–01000)

Torque: 138 N·m (1,407 kgf·cm, 102 ft·lbf)

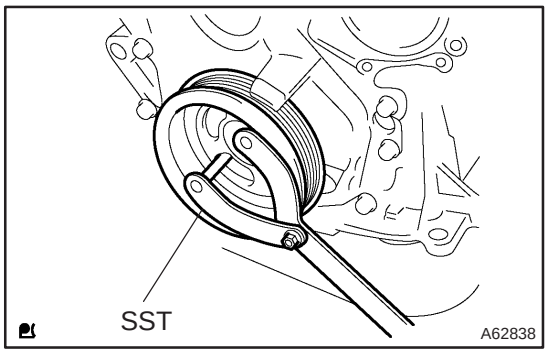
12. INSTALL ENGINE MOUNTING INSULATOR SUB–ASSY RH

(a) Install the engine mounting insulator with the 4 bolts and 2 nuts.

Torque: 52 N·m (530 kgf·cm, 38 ft·lbf)

13. INSTALL FRONT WHEEL RH

Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

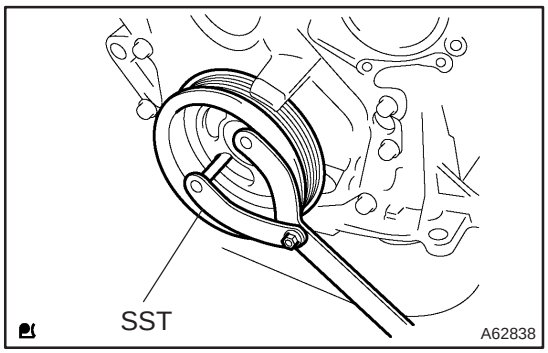


14. CHECK FOR ENGINE OIL LEAKS

ENGINE REAR OIL SEAL (1ZZ–FE/3ZZ–FE)

141CO–01

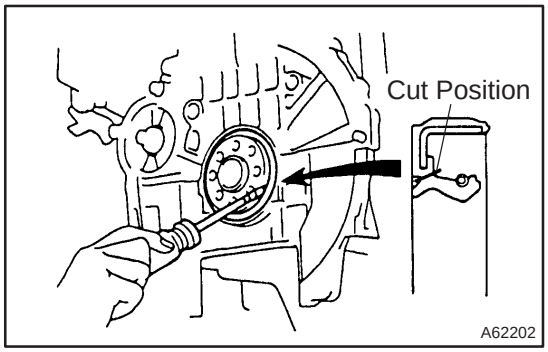
REPLACEMENT



1. REMOVE MANUAL TRANSAXLE ASSY (M/T TRANSAXLE) (See page 41–15)
2. REMOVE AUTOMATIC TRANSAXLE ASSY (A/T TRANSAXLE) (See page 40–11)
3. REMOVE CLUTCH COVER ASSY (M/T TRANSAXLE) (See page 42–26)
4. REMOVE CLUTCH DISC ASSY (M/T TRANSAXLE) (See page 42–26)

5. REMOVE FLYWHEEL SUB–ASSY (M/T TRANSAXLE)

(a) Hold the crankshaft with SST, remove the 8 bolts and the flywheel.

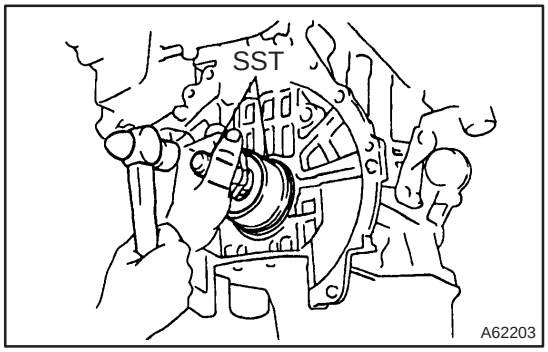


SST 09960–10010 (09962–01000, 09963–01000)

6. REMOVE DRIVE PLATE & RING GEAR SUB–ASSY (A/T TRANSAXLE)

(a) Hold the crankshaft with SST, remove the 8 bolts and the drive plate & ring gear.

SST 09960–10010 (09962–01000, 09963–01000)



7. REMOVE ENGINE REAR OIL SEAL

(a) Using a knife, cut off the oil seal lip.

(b) Using a screwdriver with the tip wrapped in tape, pry out the oil seal.

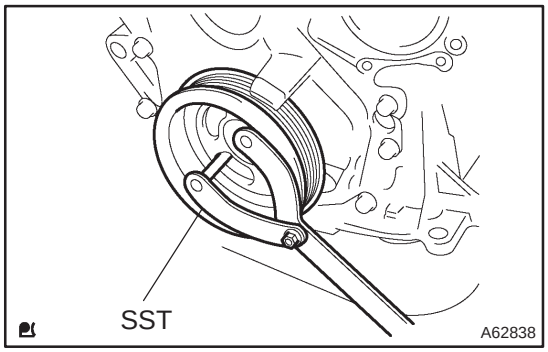
NOTICE:

After the removal, check if the crankshaft is not damaged. If it is damaged, smooth the surface with 400–grid sandpaper.

8. INSTALL ENGINE REAR OIL SEAL

(a) Apply MP grease to a new oil seal lip.

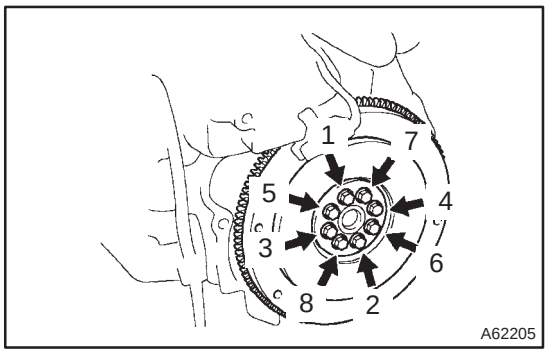
NOTICE:



Keep the lip off foreign materials.

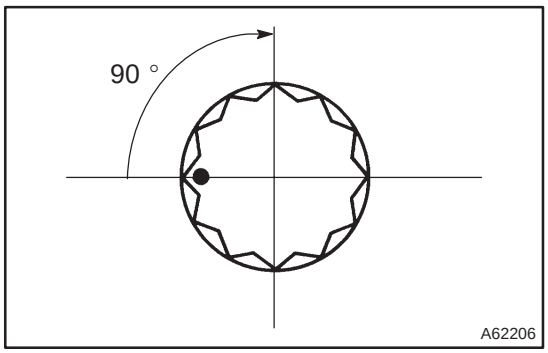
(b) Using SST, tap in the oil seal until its surface is flush with the rear oil seal retainer edge.

SST 09223–15020, 09950–70010 (09951–07100)



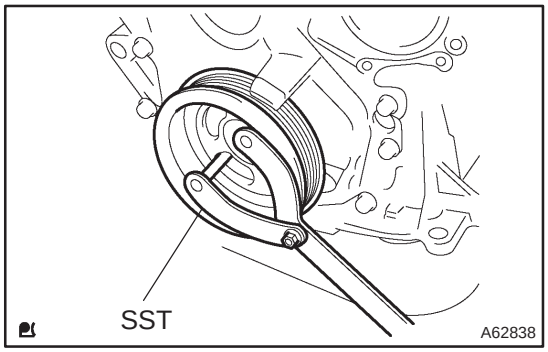
NOTICE:

Wipe off extra grease on the crankshaft.



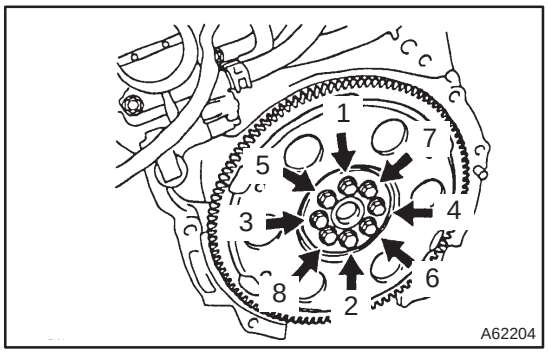
9. INSTALL FLYWHEEL SUB–ASSY (M/T TRANSAXLE)

(a) Fix the crankshaft with SST.
SST 09960–10010 (09962–01000, 09963–01000)



(b) Clean the bolt and bolt hole.
(c) Apply adhesive to the bolts.
Adhesive:
Part No. 09330–00070, THREE BOND or equivalent.
(d) Using several steps, Install and tighten the 8 bolts uniformly in the sequence shown in the illustration.
Torque: 49 N·m (500 kgf·cm, 36 ft·lbf)

(e) Mark the bolts with paint as shown in the illustration.
(f) Retighten the bolts by an additional 90° in the same sequence as step (d).
(g) Check that the paint marks of each bolt are at 90° angle from the original position.



10. INSTALL CLUTCH DISC ASSY (M/T TRANSAXLE) **(See page 42–26)**

11. INSTALL CLUTCH COVER ASSY (M/T TRANSAXLE) **(See page 42–26)**

12. INSTALL DRIVE PLATE & RING GEAR SUB–ASSY (A/T TRANSAXLE)

(a) Fix the crankshaft with SST.
SST 09960–10010 (09962–01000, 09963–01000)

(b) Clean the bolt and bolt hole.
(c) Apply adhesive to the bolts.
Adhesive:
Part No. 09330–00070, THREE BOND or equivalent.
(d) Using several steps, install and tighten the 8 bolts uniformly in the sequence shown in the illustration.
(e) Fix the crankshaft with SST.
Torque: 88 N·m (897 kgf·cm, 65 ft·lbf)

13. INSTALL MANUAL TRANSAXLE ASSY (M/T TRANSAXLE) (See page 41–15)
14. INSTALL AUTOMATIC TRANSAXLE ASSY (A/T TRANSAXLE) (See page 40–11)

ENGINE (1AZ–FE)

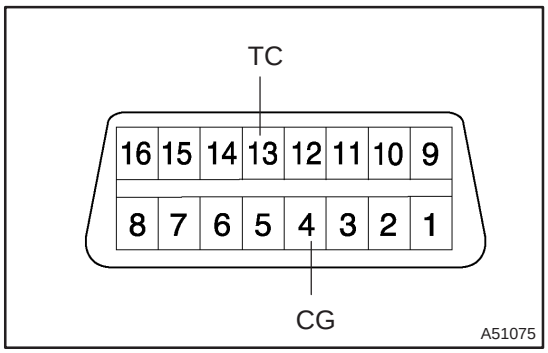
140D1–02

INSPECTION

1. **INSPECT COOLANT (See page 16–13)**
2. **INSPECT ENGINE OIL (See page 17–6)**
3. **INSPECT BATTERY**
   Standard specific gravity: 1.25 to 1.29 at 20°C (68°F)
4. **INSPECT AIR CLEANER FILTER ELEMENT SUB–ASSY**
5. **INSPECT SPARK PLUG (See page 18–9)**
6. **INSPECT V–RIBBED BELT**
7. **INSPECT IGNITION TIMING**

(a) Warm up engine.

(b) When using hand–held tester:



(1) Connect the hand–held tester to the DLC3.

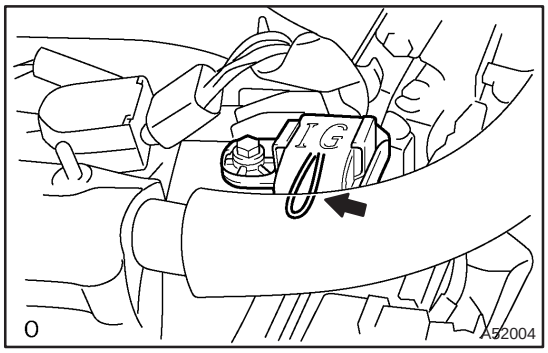
(2) Enter DATA LIST MODE on the hand–held tester.

Ignition timing: 8 to 12° BTDC

HINT:

Please refer to the hand–held tester operator's manual if you need help to select DATA LIST.

(c) When not using hand–held tester:



(1) Using SST, connect terminals 13 (TC) and 4 (CG) of DLC3.

SST 09843–18040

NOTICE:

- **Make sure of the terminal numbers before connecting them. Connection with a wrong terminal can damage the engine.**
- **Turn OFF all electrical systems before connecting the terminals.**
- **Operate the inspection after the cooling fan motor is turned OFF.**

(2) Remove the cylinder head cover No.2.

(3) Pull out the wire harness as shown in the illustration. Connect the clip of the timing light to the engine.

NOTICE:

- **Use a timing light which detects the first signal.**
- **After checking, be sure to wrap the wire harness with tape.**

(4) Inspect ignition timing at idle.

Ignition timing: 8 to 12° BTDC

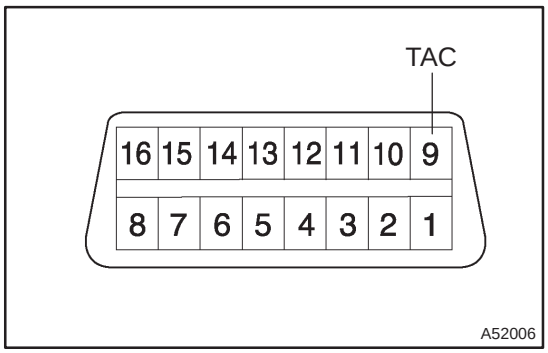
NOTICE:

When checking the ignition timing, shift the transmission to the neutral position.

HINT:

Run the engine at 1,000 to 1,300 rpm for 5 seconds, check that the engine rpm returns to the idle speed.

(5) Disconnect terminals 13 (TC) and 4 (CG) of DLC3.
(6) Inspect ignition timing at idle.
Ignition timing: 5 to 15° BTDC
(7) Confirm that ignition timing to go advanced angle side when the engine rpm is increased.
(8) Remove the timing light.

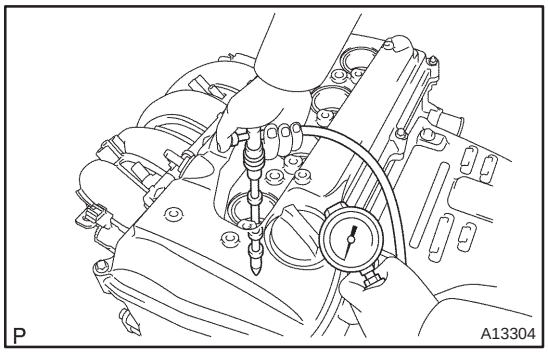


8. INSPECT ENGINE IDLE SPEED

(a) Warm up engine.
(b) When using hand–held tester:
(1) Connect the hand–held tester to the DLC3.
Idle speed: 650 to 750 rpm

NOTICE:

- **Check the idle speed with the cooling fan OFF.**
- **Switch off all accessories and air conditioning before connecting the test prove to the terminal.**



HINT:
Please refer to the hand–held tester operator's manual if you need help to select DATA LIST.

(c) When not using hand–held tester.
(1) Using SST, connect the tachometer test prove to terminal 9 (TAC) of DLC3.
SST 09843–18040
(2) Check the idle speed.
Idle speed: 650 to 750 rpm

9. INSPECT COMPRESSION

(a) Warm up and stop the engine.
(b) Disconnect the injector connectors.
(c) Remove the ignition coil.
(d) Remove the spark plugs.
(e) Inspect cylinder compression pressure.
SST 09992–00500
(1) Insert a compression gauge into the spark plug hole.
(2) Fully open the throttle.

(3) While cranking the engine, measure the compression pressure.

Compression pressure:
1,300 kPa (13.3 kgf/cm^2, 189 psi)
Minimum pressure:
1000 kPa (10.2 kgf/cm^2, 145 psi)
Difference between each cylinder:
100 kPa (1.0 kgf/cm^2, 14 psi)

NOTICE:

- **Always use a fully charged battery to obtain engine speed of 250 rpm or more.**
- **Check other cylinder's compression pressure in the same way.**
- **This measurement must be done in as short a time as possible.**

(4) If the cylinder compression is low, pour a small amount of engine oil into the cylinder through the spark plug hole and inspect again.

HINT:

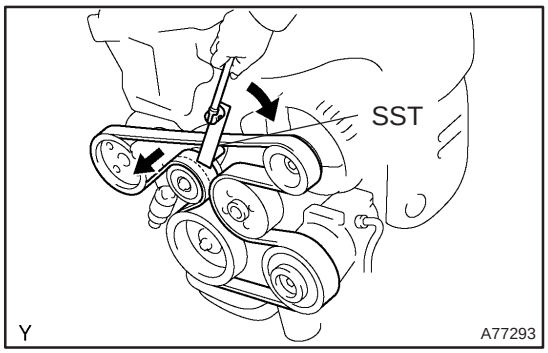
- If adding oil increases the compression, the piston rings and/or cylinder bore may be worn or damaged.
- If pressure stays low, a valve may be sticking or seating improperly, or there may be leakage past the gasket.

10. INSPECT CO/HC

(a) Start the engine.
(b) Run the engine at 2,500 rpm for approximately 180 seconds.
(c) Insert CO/HC meter testing probe at least 40 cm (1.3 ft) into the tailpipe during idling.
(d) Check CO/HC concentration at idle.
Idle CO concentration: 0 to 0.5 %
Idle HC concentration: Applicable local regulation
(e) If the CO/HC concentration does not conform to specifications, perform troubleshooting in the order given below.
(1) Check heated oxygen sensor operation. (See page 12–6)
(2) See the table below for possible causes, and then inspect and repair the applicable causes if necessary.

CO	HC	Problems	Causes
Normal	High	Rough idle	1. Faulty ignitions: • Incorrect timing • Fouled, shorted or improperly gapped plugs 2. Incorrect valve clearance 3. Leaks in intake and exhaust valves 4. Leaks in cylinders
Low	High	Rough idle (Fluctuating HC reading)	1. Vacuum leaks: • PCV hoses • Intake manifold • Throttle body • ISC valve • Brake booster line 2. Lean mixture causing misfire
High	High	Rough idle (Black smoke from exhaust)	1. Restricted air filter 2. Plugged PCV valve 3. Faulty EFI systems: • Faulty pressure regulator • Defective water temperature sensor • Defective mass air flow meter • Faulty ECM • Faulty injectors • Faulty throttle position sensor

FAN AND GENERATOR V BELT (1AZ–FE)



141B5–01

REPLACEMENT

1. REMOVE RADIATOR SUPPORT OPENING COVER

2. REMOVE ENGINE ROOM COVER SIDE

3. REMOVE ENGINE UNDER COVER RH

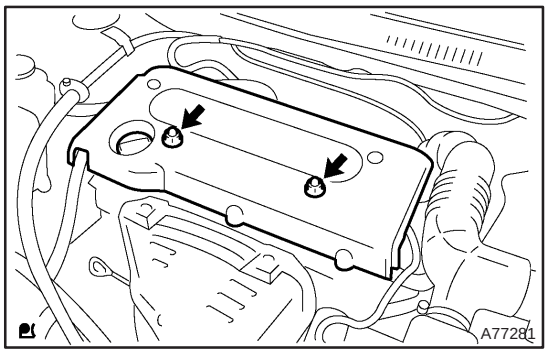
4. REMOVE FAN AND GENERATOR V BELT

(a) Using SST, loosen the V–ribbed belt tensioner arm clockwise, and remove the fan and generator V belt.
SST 09249–63010

5. INSTALL FAN AND GENERATOR V BELT

(a) Using SST, loosen the V–ribbed belt tensioner arm clockwise, and install the fan and generator V belt.
SST 09249–63010

VALVE CLEARANCE (1AZ–FE)



141B6–01

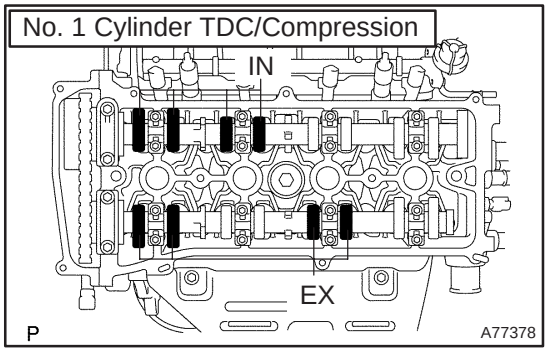
ADJUSTMENT

1. REMOVE RADIATOR SUPPORT OPENING COVER

2. REMOVE ENGINE ROOM COVER SIDE

3. REMOVE ENGINE UNDER COVER RH

4. REMOVE ENGINE COVER SUB–ASSY NO.1



(a) Remove 2 nuts and the engine cover No. 1.

5. REMOVE IGNITION COIL ASSY

(a) Remove 4 bolts and the ignition coils.

6. REMOVE CYLINDER HEAD COVER SUB–ASSY (See page 14–171)

7. SET NO. 1 CYLINDER TO TDC/COMPRESSION (See page 14–171)

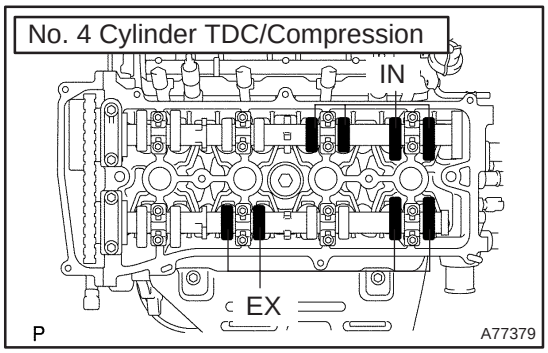
8. INSPECT VALVE CLEARANCE

HINT:

Inspect and adjust the valve clearance when the engine is cold.

(a) Check only the valve indicated in the illustration.

(1) Using a feeler gauge, measure the clearance between the valve lifter and camshaft.



(2) Record the out–of specification valve clearance measurements. They will be used later to determine the required replacement adjusting shim.

Valve clearance (Cold):

Intake 0.19 to 0.29 mm (0.0075 to 0.0114 in.)

Exhaust 0.30 to 0.40 mm (0.0118 to 0.0157 in.)

(b) Turn the crankshaft clockwise 1 revolution (360°) and set No. 4 cylinder to TDC/compression.

(c) Check only the valve indicated in the illustration.

(1) Using a feeler gauge, measure the clearance between the valve lifter and camshaft.

(2) Record the out–of specification valve clearance measurements. They will be used later to determine the required replacement adjusting shim.

Valve clearance (Cold):

Intake 0.19 to 0.29 mm (0.0075 to 0.0114 in.)

Exhaust 0.30 to 0.40 mm (0.0118 to 0.0157 in.)

9. ADJUST VALVE CLEARANCE

NOTICE:

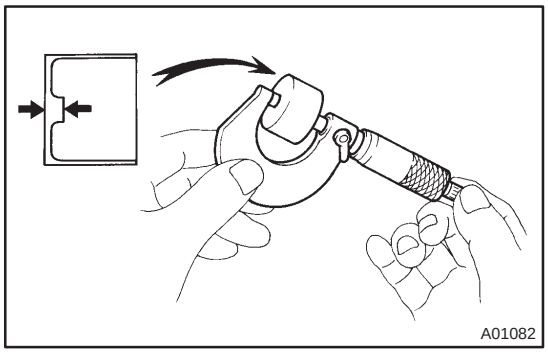
Be sure not to turn the crankshaft without the chain tensioner.

(a) Set the No. 1 cylinder to TDC/compression. (See page 14–171)

(b) Remove the chain tensioner. (See page 14–171)

(c) Remove the camshafts. (See page 14–171)

(d) Tie the timing chain with a string.



NOTICE:

Be careful not to drop anything inside the timing chain cover.

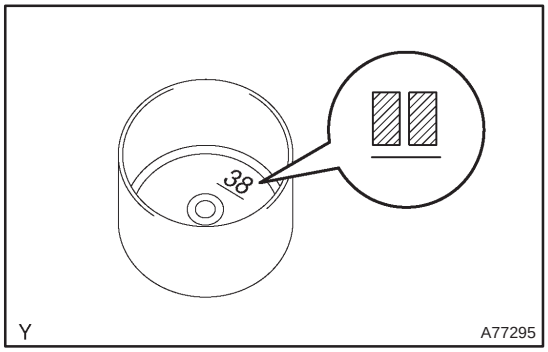
(e) Remove the valve lifters.

(f) Using a micrometer, measure the thickness of the removed lifter.

(g) Calculate the thickness of a new lifter so that the valve clearance comes within the specified valve.

A	Thickness of new lifter
B	Thickness of used lifter
C	Measured valve clearance

Valve clearance:



Intake: A = B + (C – 0.24 mm (0.0094 in.))

Exhaust: A = B + (C – 0.35 mm (0.0138 in.))

EXAMPLE: (Intake)
Measure valve clearance = 0.44 mm (0.0173 in.)
0.44 mm (0.0173 in.) – 0.24 mm (0.0094 in.) = 0.20 mm (0.0079 in.)
(Measured – Specification = Excess clearance)
Used shim measurement = 5.30 mm (0.2087 in.)
0.20 mm (0.0079 in.) + 5.30 mm (0.2087 in.) = 5.50 mm (0.2165 in.)
(Excess clearance + Used shim = Ideal new shim)
Closest new shim = 5.50 mm (0.2165 in.) = Shim No. ”50”

HINT:

- Select a new lifter with a thickness as close as possible to the calculated valves.
- Lifter are available in 35 sizes in increments of 0.020 mm (0.0008 in.), from 5.060 mm (0.1992 in.) to 5.740 mm (0.2260 in.).

- Identification number inside the valve lifter shows the value of the 2 decimal places. (The illustration shows 5.380 mm (0.2118 in.))
- Refer to the New Lifter Thickness table on the next 2 pages.

Valve Lifter Selection Chart (Intake)

Measure clearance mm (in.) \ Installed lifter thickness mm (in.)	5.060 (0.1992)	5.080 (0.2000)	5.100 (0.2008)	5.120 (0.2016)	5.140 (0.2024)	5.160 (0.2031)	5.180 (0.2039)	5.200 (0.2047)	5.210 (0.2051)	5.220 (0.2055)	5.230 (0.2059)	5.240 (0.2063)	5.250 (0.2067)	5.260 (0.2071)	5.270 (0.2075)	5.280 (0.2079)	5.290 (0.2083)	5.300 (0.2087)	5.310 (0.2091)	5.320 (0.2094)	5.330 (0.2098)	5.340 (0.2102)	5.350 (0.2106)	5.360 (0.2110)	5.370 (0.2114)	5.380 (0.2118)	5.390 (0.2122)	5.400 (0.2126)	5.410 (0.2130)	5.420 (0.2134)	5.430 (0.2138)	5.440 (0.2142)	5.450 (0.2146)	5.460 (0.2150)	5.470 (0.2154)	5.480 (0.2157)	5.490 (0.2161)	5.500 (0.2165)	5.510 (0.2169)	5.520 (0.2173)	5.530 (0.2177)	5.540 (0.2181)	5.550 (0.2185)	5.560 (0.2189)	5.570 (0.2193)	5.580 (0.2197)	5.590 (0.2201)	5.600 (0.2205)	5.620 (0.2213)	5.640 (0.2220)	5.660 (0.2228)	5.680 (0.2236)	5.700 (0.2244)	5.720 (0.2252)	5.740 (0.2260)

Intake valve clearance (Cold):
0.19 to 0.29 mm (0.008 to 0.011 in.)

EXAMPLE:

The 5.250 mm (0.2067 in.) lifter is installed, and the measured clearance is 0.400 mm (0.0157 in.).

Replace the 5.250 mm (0.2067 in.) lifter with a new No. 42 lifter.

New Lifter Thickness mm (in.)

Lifter No.	Thickness	Lifter No.	Thickness	Lifter No.	Thickness

Exhaust valve clearance (Cold):
0.30 to 0.40 mm (0.0118 to 0.0157 in.)

EXAMPLE:

The 5.340 mm (0.2102 in.) lifter is installed, and the measured clearance is 0.440 mm (0.0173 in.).

Replace the 5.340 mm (0.2102 in.) lifter with a new No. 44 lifter.

New lifter thickness mm (in.)

Lifter No.	Thickness	Lifter No.	Thickness	Lifter No.	Thickness

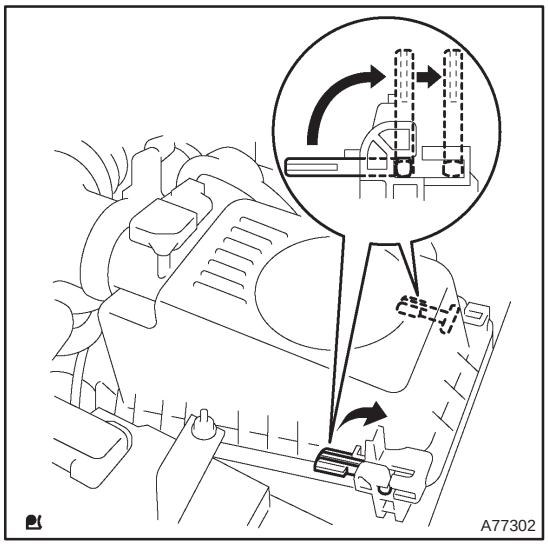
REPLACEMENT

1. DISCHARGE FUEL SYSTEM PRESSURE (See page 11–19)
2. REMOVE FRONT WHEELS
3. REMOVE RADIATOR SUPPORT OPENING COVER
4. REMOVE ENGINE ROOM COVER SIDE
5. REMOVE ENGINE UNDER COVER RH
6. REMOVE ENGINE UNDER COVER LH
7. DRAIN COOLANT (See page 16–19)
8. DRAIN ENGINE OIL
(a) Install a new gasket and the drain plug after draining engine oil.
Torque: 25 N·m (255 kgf·cm, 18 ft·lbf)
9. DRAIN MANUAL TRANSAXLE OIL (M/T TRANSAXLE)
Torque: 49 N·m (500 kgf·cm, 36 ft·lbf)
10. DRAIN AUTOMATIC TRANSAXLE FLUID (A/T TRANSAXLE) (See page 40–2)

11. REMOVE ENGINE COVER SUB–ASSY NO.1
(a) Remove 2 nuts and the cylinder head cover No. 1.

12. DISCONNECT RADIATOR HOSE INLET
13. DISCONNECT RADIATOR HOSE OUTLET

14. SEPARATE RADIATOR RELAY BLOCK
(a) Remove 2 bolts and separate the radiator relay block.

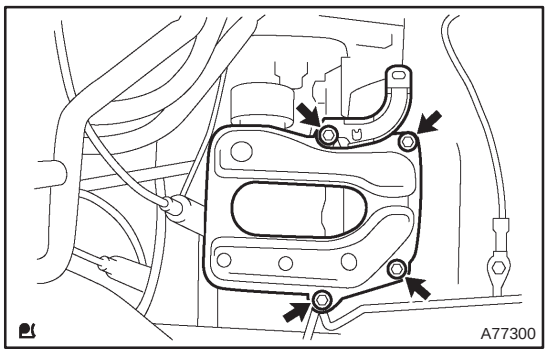


15. SEPARATE COOLER REFRIGERANT SUCTION HOSE NO.1 (RHD(W/ AIR CONDITIONER) STEERING POSITION TYPE)
(a) Remove a bolt and separate the suction hose No. 1.
16. REMOVE RADIATOR ASSY (See page 16–24)
17. REMOVE FAN AND GENERATOR V BELT (See page 14–105)
18. REMOVE GENERATOR ASSY (See page 19–20)
19. REMOVE COMPRESSOR AND MAGNETIC CLUTCH (W/ AIR CONDITIONING)
(a) Remove 4 bolts and separate the compressor and magnetic clutch.
HINT:
Secure the hoses off to the side instead of detaching.

20. REMOVE BATTERY

21. REMOVE AIR CLEANER ASSEMBLY WITH HOSE

(a) Disconnect 2 connectors.

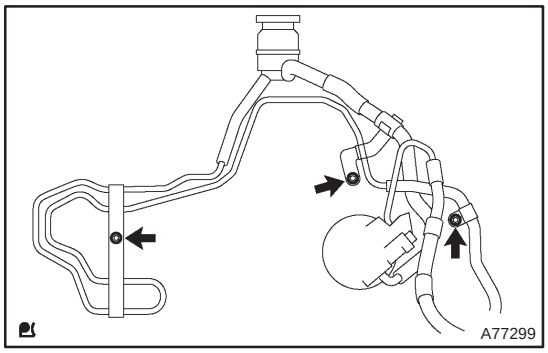


(b) Disconnect the air cleaner hose from the throttle body.

(c) Raise a clamp up, and slide it toward the air cleaner cap, then remove the air cleaner cap from its case.

(d) Remove the air cleaner element.

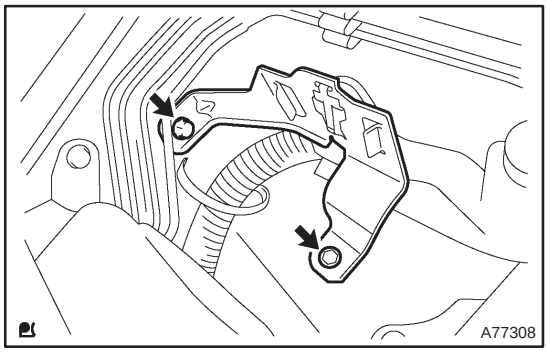
(e) Remove 4 bolts and the air cleaner case.



22. REMOVE BATTERY CARRIER

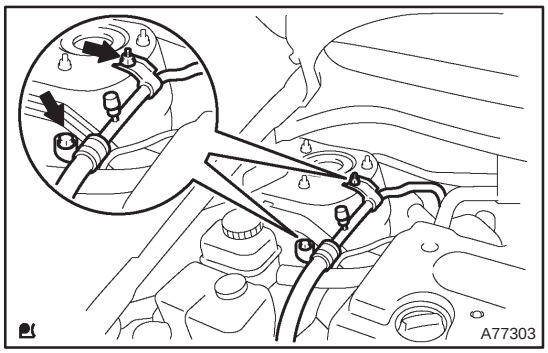
(a) Remove 4 bolts and the battery carrier.

23. REMOVE RADIATOR RESERVE TANK SUB–ASSY



(a) Remove 2 bolts and the radiator reserve tank.

24. SEPARATE RETURN TUBE SUB–ASSY

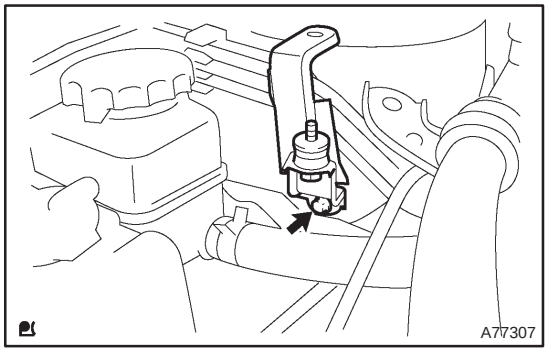


(a) Remove 3 bolts as shown in the illustration.

25. SEPARATE VANE PUMP OIL RESERVOIR ASSY

26. REMOVE OIL RESERVOIR BRACKET NO.1

(a) Remove 2 bolts and the oil reservoir bracket No. 1.



27. SEPARATE COOLER REFRIGERANT SUCTION HOSE NO.1 (LHD(W/ AIR CONDITIONER) STEERING POSITION TYPE)

(a) Remove 2 nuts and separate the suction hose.

28. REMOVE ENGINE SERVICE COVER BRACKET RH (W/O AIR CONDITIONING)

(a) Remove a bolt and the service cover bracket RH.

29. REMOVE COOLER BRACKET (LHD(W/ AIR CONDITIONER) STEERING POSITION TYPE)

(a) Remove the 2 nuts and separate the cooler bracket.

30. REMOVE ENGINE SERVICE COVER BRACKET RH (RHD(W/ AIR CONDITIONER) STEERING POSITION TYPE)

(a) Remove the bolt and the service cover bracket RH.

31. DISCONNECT HEATER INLET WATER HOSE (W/ AIR CONDITIONING)

32. DISCONNECT HEATER OUTLET WATER HOSE (W/ AIR CONDITIONING)

33. REMOVE CHARCOAL CANISTER ASSY

34. DISCONNECT FUEL TUBE SUB–ASSY (See page 11–15)

35. DISCONNECT UNION TO CONNECTOR TUBE HOSE

36. REMOVE FLOOR PANEL BRACE FRONT (See page 15–7)

37. REMOVE EXHAUST PIPE ASSY CENTER (See page 15–7)

38. REMOVE EXHAUST PIPE ASSY FRONT (See page 15–7)

39. REMOVE FRONT AXLE HUB LH NUT (See page 30–6)

SST 09330–00030

40. REMOVE FRONT AXLE HUB RH NUT

SST 09330–00030

HINT:

Perform the same procedure as above on the opposite side.

41. SEPARATE TIE ROD END SUB–ASSY LH (See page 51–36)

42. SEPARATE TIE ROD END SUB–ASSY RH

HINT:

Perform the same procedure as above on the opposite side.

43. SEPARATE FRONT STABILIZER LINK ASSY LH (See page 26–26)

44. SEPARATE FRONT STABILIZER LINK ASSY RH

HINT:

Perform the same procedure as above on the opposite side.

45. SEPARATE FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH (M/T TRANSAXLE) (See page 26–21)

46. SEPARATE FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH (A/T TRANSAXLE) (See page 26–16)

47. SEPARATE FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 RH (M/T TRANSAXLE)

HINT:

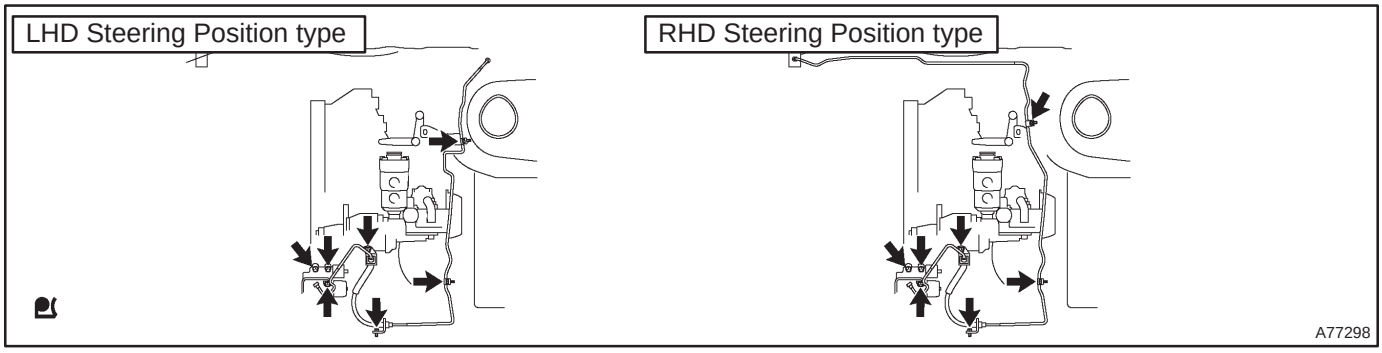
Perform the same procedure as above on the opposite side.

48. SEPARATE FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 RH (A/T TRANSAXLE)

HINT:

Perform the same procedure as above on the opposite side.

49. SEPARATE FRONT AXLE ASSY LH (See page 30–6)

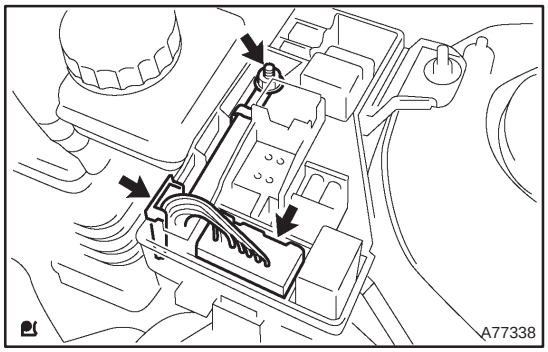


50. SEPARATE FRONT AXLE ASSY RH (See page 30–6)

HINT:

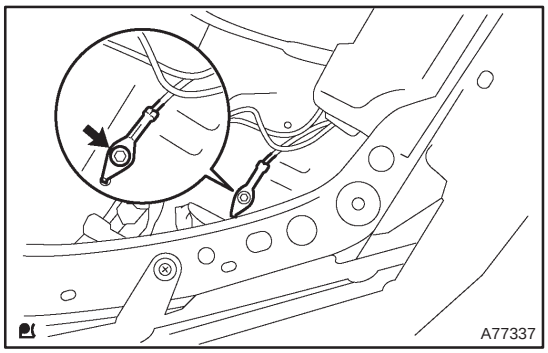
Perform the same procedure as above on the opposite side.

51. SEPARATE CLUTCH RELEASE CYLINDER ASSY (M/T TRANSAXLE)



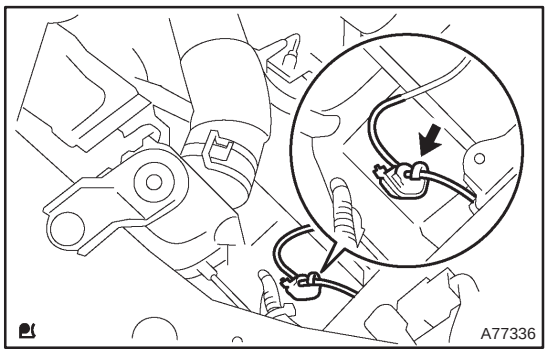
(a) Remove 7 bolts as shown in the illustration.

52. SEPARATE TRANSMISSION CONTROL CABLE ASSY (M/T TRANSAXLE) (See page 41–24)



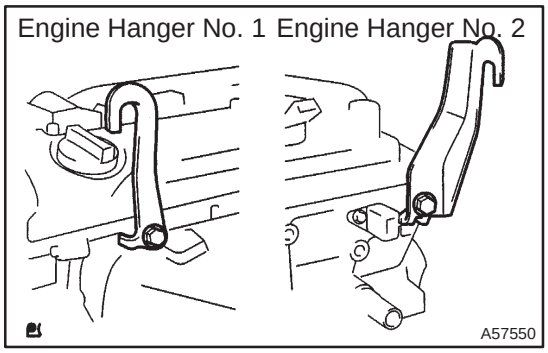
53. SEPARATE TRANSMISSION CONTROL CABLE ASSY (A/T TRANSAXLE) (See page 40–25)

54. SEPARATE ACCELERATOR CONTROL CABLE ASSY



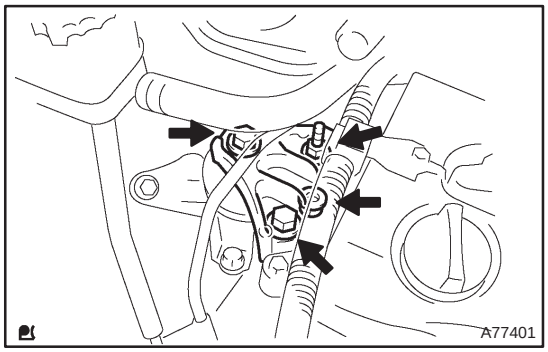
55. SEPARATE ENGINE ROOM RELAY BLOCK NO.2

(a) Remove the nut and disconnect the connector as shown in the illustration.



56. SEPARATE ENGINE WIRE

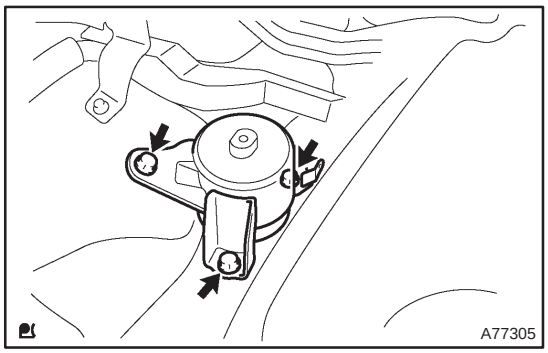
(a) Remove the bolt and separate the grand terminal.



(b) Separate the grand terminal connector.
(c) Remove the glove compartment door panel.
(d) Separate the engine wire.

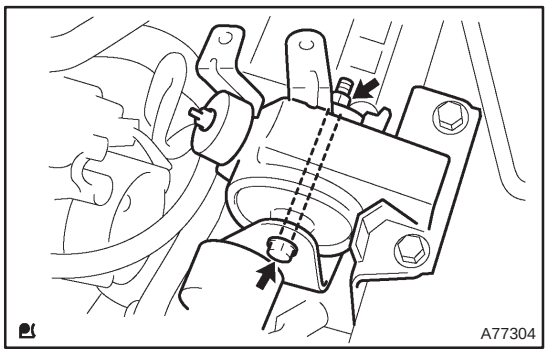
57. SEPARATE STEERING INTERMEDIATE SHAFT ASSY NO.2 (See page 50–9)

58. INSTALL ENGINE HANGERS



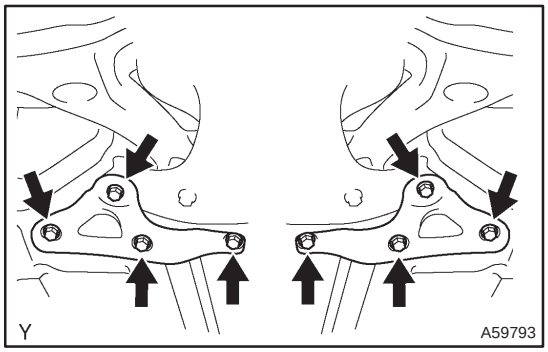
(a) Install the engine hanger No. 1 (12281–28010, 28020, 28030) with the bolt (91512–61020).
Torque: 38 N·m (387 kgf·cm, 28 ft·lbf)
(b) Install the engine hanger No. 2 (12282–28010, 28020, 28030) with the bolt (91512–61020).
Torque: 38 N·m (387 kgf·cm, 28 ft·lbf)

59. REMOVE ENGINE MOUNTING BRACKET NO.2 RH



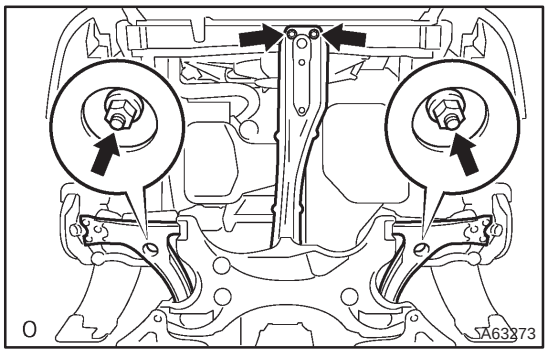
(a) Set the engine lifter.

(b) Remove 2 bolts and 2 nuts, and then remove the mounting bracket No. 2.



60. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR

(a) Remove 3 bolts and the engine mounting insulator.



61. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR

(a) Remove the through bolt and nut, and then detach the engine mounting insulator.

62. REMOVE ENGINE ASSEMBLY WITH TRANSAXLE

(a) Remove the8 bolts and the front suspension member braces.

(b) Remove the 2 bolts and 2 nuts shown in the illustration.

(c) Carefully remove the engine assembly with transaxle from the vehicle.

63. SEPARATE VANE PUMP ASSY

(a) Disconnect the PS oil pressure switch connector.

(b) Remove the 2 bolts and separate the vane pump from the engine.

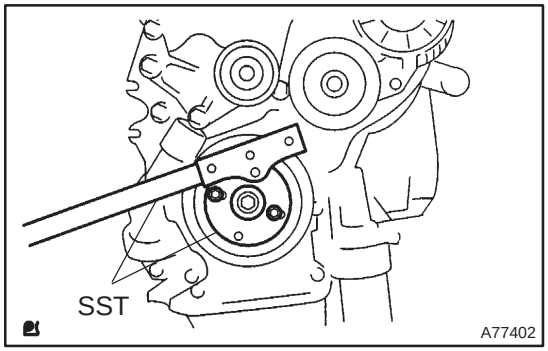
64. REMOVE STARTER ASSY (See page 19–12)

65. REMOVE FRONT SUSPENSION CROSSMEMBER W/CENTER MEMBER

(a) Remove the through bolt and nut from the engine mounting insulator FR.

(b) Remove the through bolt and nut from the engine mounting insulator RR.

66. REMOVE FRONT DRIVE SHAFT ASSY LH (See page 30–6)



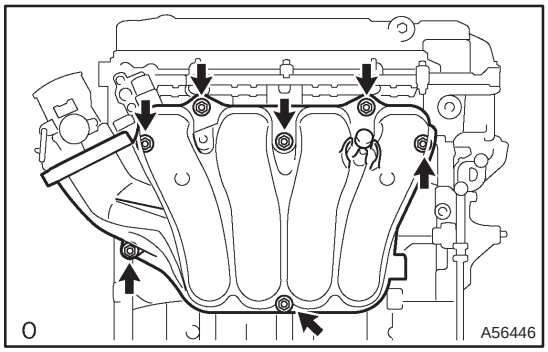
67. REMOVE FRONT DRIVE SHAFT ASSY RH (See page 30–6)

68. REMOVE MANUAL TRANSAXLE ASSY (M/T TRANSAXLE) (See page 41–24)

69. REMOVE AUTOMATIC TRANSAXLE ASSY (A/T TRANSAXLE) (See page 40–25)

70. REMOVE CLUTCH COVER ASSY (M/T TRANSAXLE) (See page 42–26)

71. REMOVE CLUTCH DISC ASSY (M/T TRANSAXLE) (See page 42–26)



72. REMOVE DRIVE PLATE AND RING GEAR OR FLYWHEEL

(a) Using SST, fix the crankshaft pulley and remove the drive plate and ring gear or flywheel.

SST 09213–54015 (91651–60855), 09330–00021

73. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSY (W/ VVT–i)

(a) Remove a bolt, O–ring and the camshaft timing oil control valve.

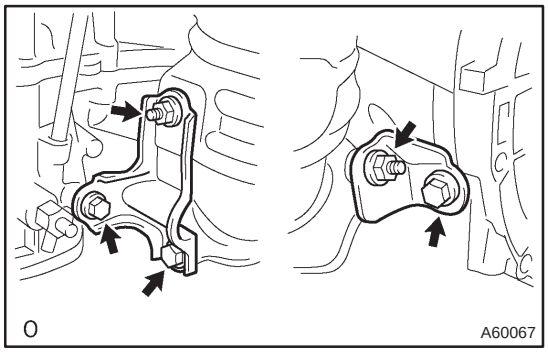
74. REMOVE INTAKE MANIFOLD

(a) Remove the 5 bolts and 2 nuts, and then remove the intake manifold.

75. REMOVE VENTILATION HOSE

76. REMOVE VENTILATION HOSE NO.2

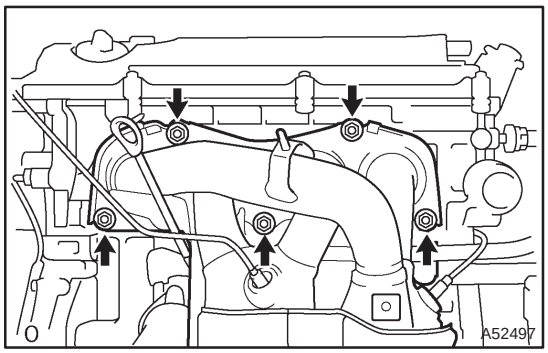
77. REMOVE ENGINE WIRE



78. REMOVE INTAKE MANIFOLD INSULATOR NO.1

79. REMOVE OIL LEVEL GAGE SUB–ASSY

80. REMOVE OIL LEVEL GAGE GUIDE



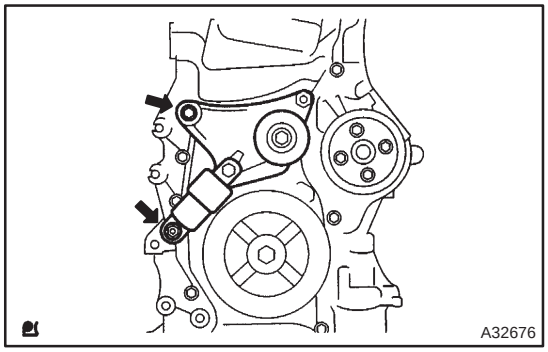
81. REMOVE MANIFOLD CONVERTER INSULATOR NO.1

(a) Remove the 4 bolts and the manifold converter insulator No. 1.

82. REMOVE EXHAUST MANIFOLD CONVERTER SUB–ASSY

(a) Remove the 3 bolts and 2 nuts, and then detach the No. 1 and No. 2 exhaust manifold stays.

(b) Remove the 5 nuts, and then remove the exhaust manifold converter and gasket.



83. REMOVE WATER INLET

(a) Remove the 2 nuts and the water inlet.

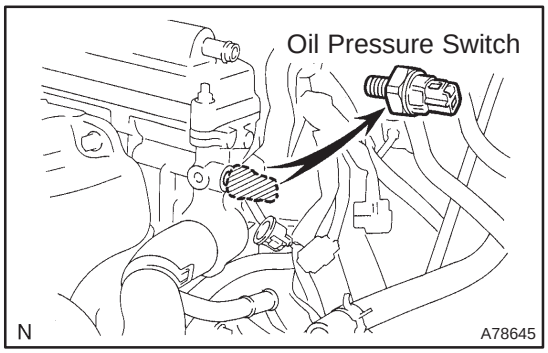
84. REMOVE THERMOSTAT

85. REMOVE IGNITION COIL ASSY

(a) Remove the 4 bolts and the 4 ignition coils.

86. REMOVE V–RIBBED BELT TENSIONER ASSY

(a) Remove the bolt and nut, and then remove the V–ribbed belt tensioner.



87. REMOVE DRIVE SHAFT BEARING BRACKET

(a) Remove the 3 bolts and the drive shaft bearing bracket.

88. REMOVE FUEL DELIVERY PIPE W/INJECTOR (See page 11–26)

89. REMOVE WATER BY–PASS PIPE NO.1

(a) Remove the bolt and 2 nuts, and then detach the water by–pass pipe No. 1.

90. REMOVE ENGINE OIL PRESSURE SWITCH ASSY

(a) Using SST, remove the engine oil pressure switch.
SST 09268–46021

91. REMOVE KNOCK SENSOR

(a) Remove the nut and the knock sensor.

92. REMOVE ENGINE COOLANT TEMPERATURE SENSOR

(a) Using SST, remove the engine coolant temperature sensor.
SST 09817–33190

93. REPLACE PARTIAL ENGINE ASSY

94. INSTALL ENGINE COOLANT TEMPERATURE SENSOR

(a) Install a new gasket to the engine coolant temperature sensor.

(b) Install the engine coolant temperature sensor.
Torque: 20 N·m (208 kgf·cm, 15 ft·lbf)
SST 09817–33190

95. INSTALL KNOCK SENSOR
Torque: 20 N·m (208 kgf·cm, 15 ft·lbf)

96. INSTALL ENGINE OIL PRESSURE SWITCH ASSY

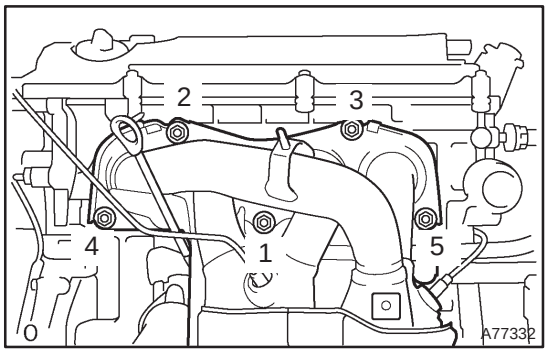
(a) Clean the threads of the oil pressure switch, apply adhesive there.
Adhesive: Part No. 08833–00080 THREE BOND 1344 or equivalent

(b) Install the oil pressure switch.
Torque: 15 N·m (153 kgf·cm, 11 ft·lbf)

97. INSTALL WATER BY–PASS PIPE NO.1

(a) Install a new gasket and the water by–pass pipe No. 1 with the bolt and 2 nuts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

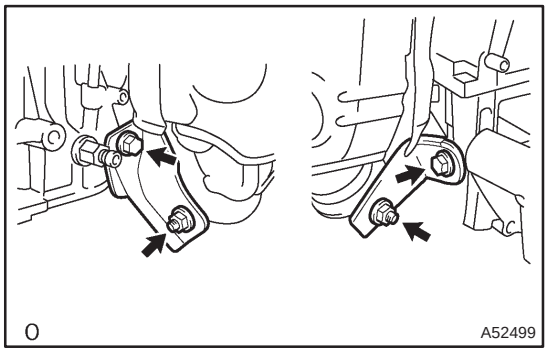
98. INSTALL FUEL DELIVERY PIPE W/INJECTOR (See page 11–26)



99. INSTALL DRIVE SHAFT BEARING BRACKET
Torque: 54 N·m (551 kgf·cm, 40 ft·lbf)

100. INSTALL V–RIBBED BELT TENSIONER ASSY
Torque: 60 N·m (607 kgf·cm, 44 ft·lbf)

101. INSTALL IGNITION COIL ASSY
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

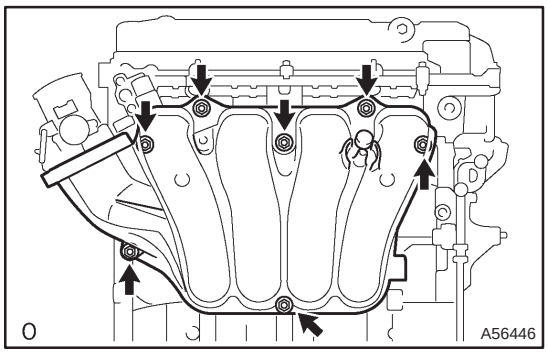


102. INSTALL THERMOSTAT (See page 16–23)

103. INSTALL WATER INLET
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

104. INSTALL EXHAUST MANIFOLD CONVERTER SUB–ASSY

(a) Install a new gasket and the exhaust manifold converter with the 5 nuts.
Torque: 37 N·m (378 kgf·cm, 27 ft·lbf)

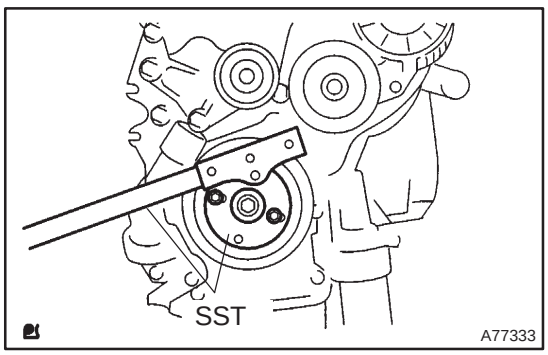


(b) Install the No. 1 and No. 2 exhaust manifold stays with the 2 bolts and 2 nuts.
Torque: 44 N·m (449 kgf·cm, 32 ft·lbf)

105. INSTALL MANIFOLD CONVERTER INSULATOR NO.1
Torque: 12 N·m (122 kgf·cm, 9.0 ft·lbf)

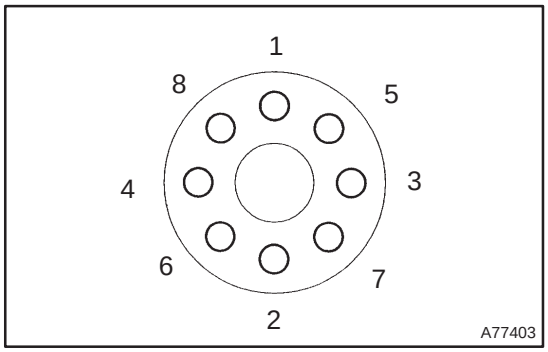
106. INSTALL OIL LEVEL GAGE GUIDE

(a) Apply a light coat of engine oil to the O–ring, install it to the oil level gauge guide.
(b) Install the oil level gauge and guide with the bolt.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)



107. INSTALL INTAKE MANIFOLD

(a) Install a new gasket and the intake manifold with the 5 bolts and 2 nuts.
Torque: 30 N·m (306 kgf·cm, 22 ft·lbf)

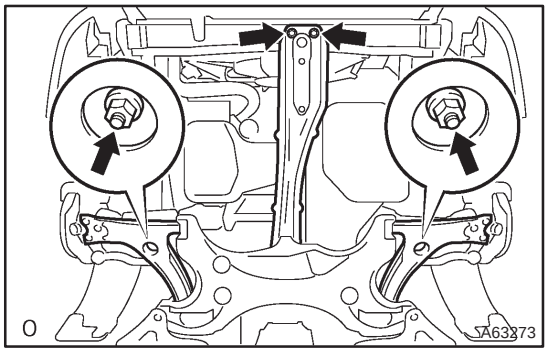


108. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSY (W/ VVT–i)

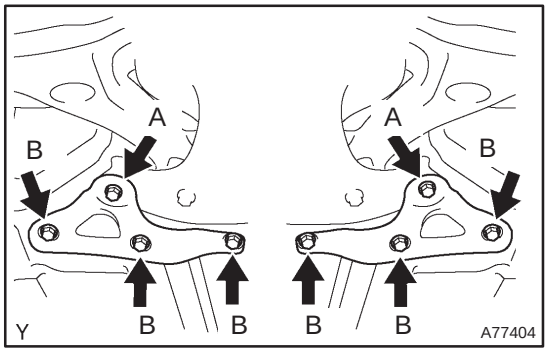
(a) Apply light coat of engine oil to the new O–ring and install it to the camshaft timing oil control valve.
(b) Install the camshaft oil control valve with the bolt.
Torque: 9.0 N·m (92 kgf·cm, 79 in.·lbf)

109. INSTALL DRIVE PLATE AND RING GEAR OR FLYWHEEL

(a) Hold the crankshaft with SST.
SST 09213–54015 (91651–60855), 09330–00021
Adhesive:
Part No. 08833–00070, THREE BOND or equivalent

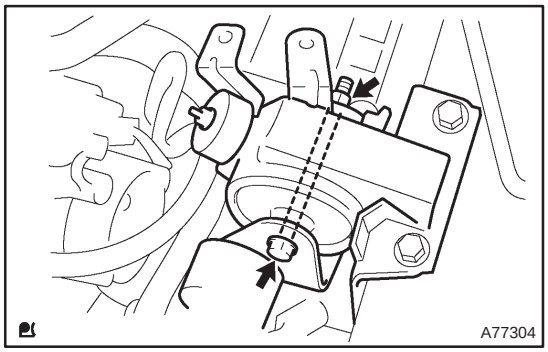


(b) Install the drive plate. (A/T)
(1) Clean the bolt and bolt hole.
(2) Apply adhesive to the bolts.
(3) Using several steps, install and tighten the 8 bolts uniformly in the sequence shown in the illustration.
Torque: 98 N·m (1,000 kgf·cm, 72 ft·lbf)

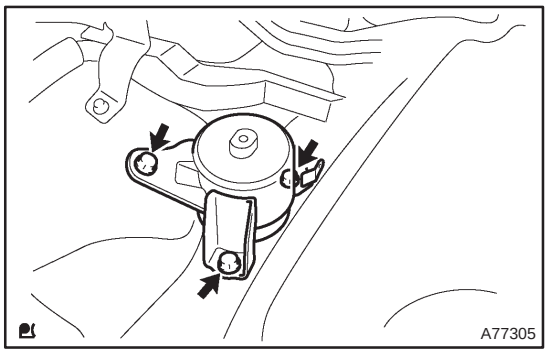


(c) Install the flywheel. (M/T)
(1) Clean the bolt hole.
(2) Using several steps, install and tighten the 8 bolts uniformly in the sequence shown in the illustration.
Torque: 130 N·m (1,327 kgf·cm, 96 ft·lbf)

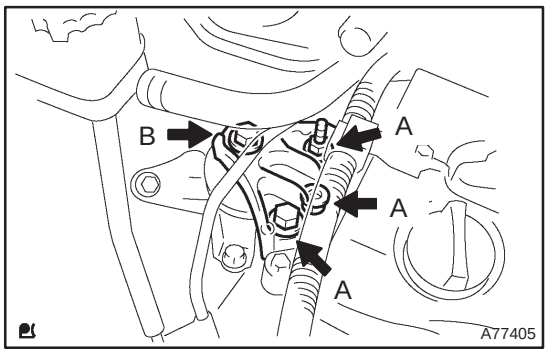
NOTICE:
Do not reuse the flywheel bolt.



110. INSTALL CLUTCH DISC ASSY (M/T TRANSAXLE) (See page 42–26)
111. INSTALL CLUTCH COVER ASSY (M/T TRANSAXLE) (See page 42–26)
112. INSTALL MANUAL TRANSAXLE ASSY (M/T TRANSAXLE) (See page 41–24)
113. INSTALL AUTOMATIC TRANSAXLE ASSY (A/T TRANSAXLE) (See page 40–25)
114. INSTALL FRONT DRIVE SHAFT ASSY LH (See page 30–6)
115. INSTALL FRONT DRIVE SHAFT ASSY RH (See page 30–6)
116. INSTALL FRONT SUSPENSION CROSSMEMBER W/CENTER MEMBER
(a) Install the engine mounting insulator FR with the through bolt and nut.
Torque: 87 N·m (887 kgf·cm, 64 ft·lbf)
(b) Install the engine mounting insulator RR with the through bolt and nut.
Torque: 87 N·m (887 kgf·cm, 64 ft·lbf)
117. INSTALL STARTER ASSY (See page 19–12)
118. INSTALL VANE PUMP ASSY
Torque: 37 N·m (370 kgf·cm, 27 ft·lbf)

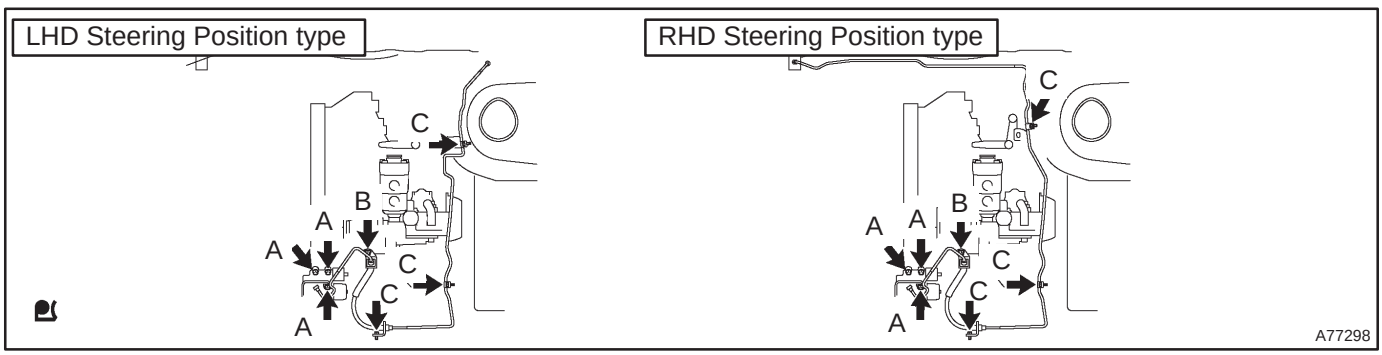


119. INSTALL ENGINE ASSEMBLY WITH TRANSAXLE
(a) Install the 2 bolts and 2 nuts as shown in the illustration.
Torque:
Bolt 45 N·m (459 kgf·cm, 33 ft·lbf)
Nut 133 N·m (1,356 kgf·cm, 98 ft·lbf)



(b) Install the front suspension member braces with the 8 bolts.
Torque:
Bolt A 133 N·m (1,356 kgf·cm, 98 ft·lbf)
Bolt B 80 N·m (816 kgf·cm, 59 ft·lbf)

120. **INSTALL TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR**
Torque: 87 N·m (887 kgf·cm, 64 ft·lbf)

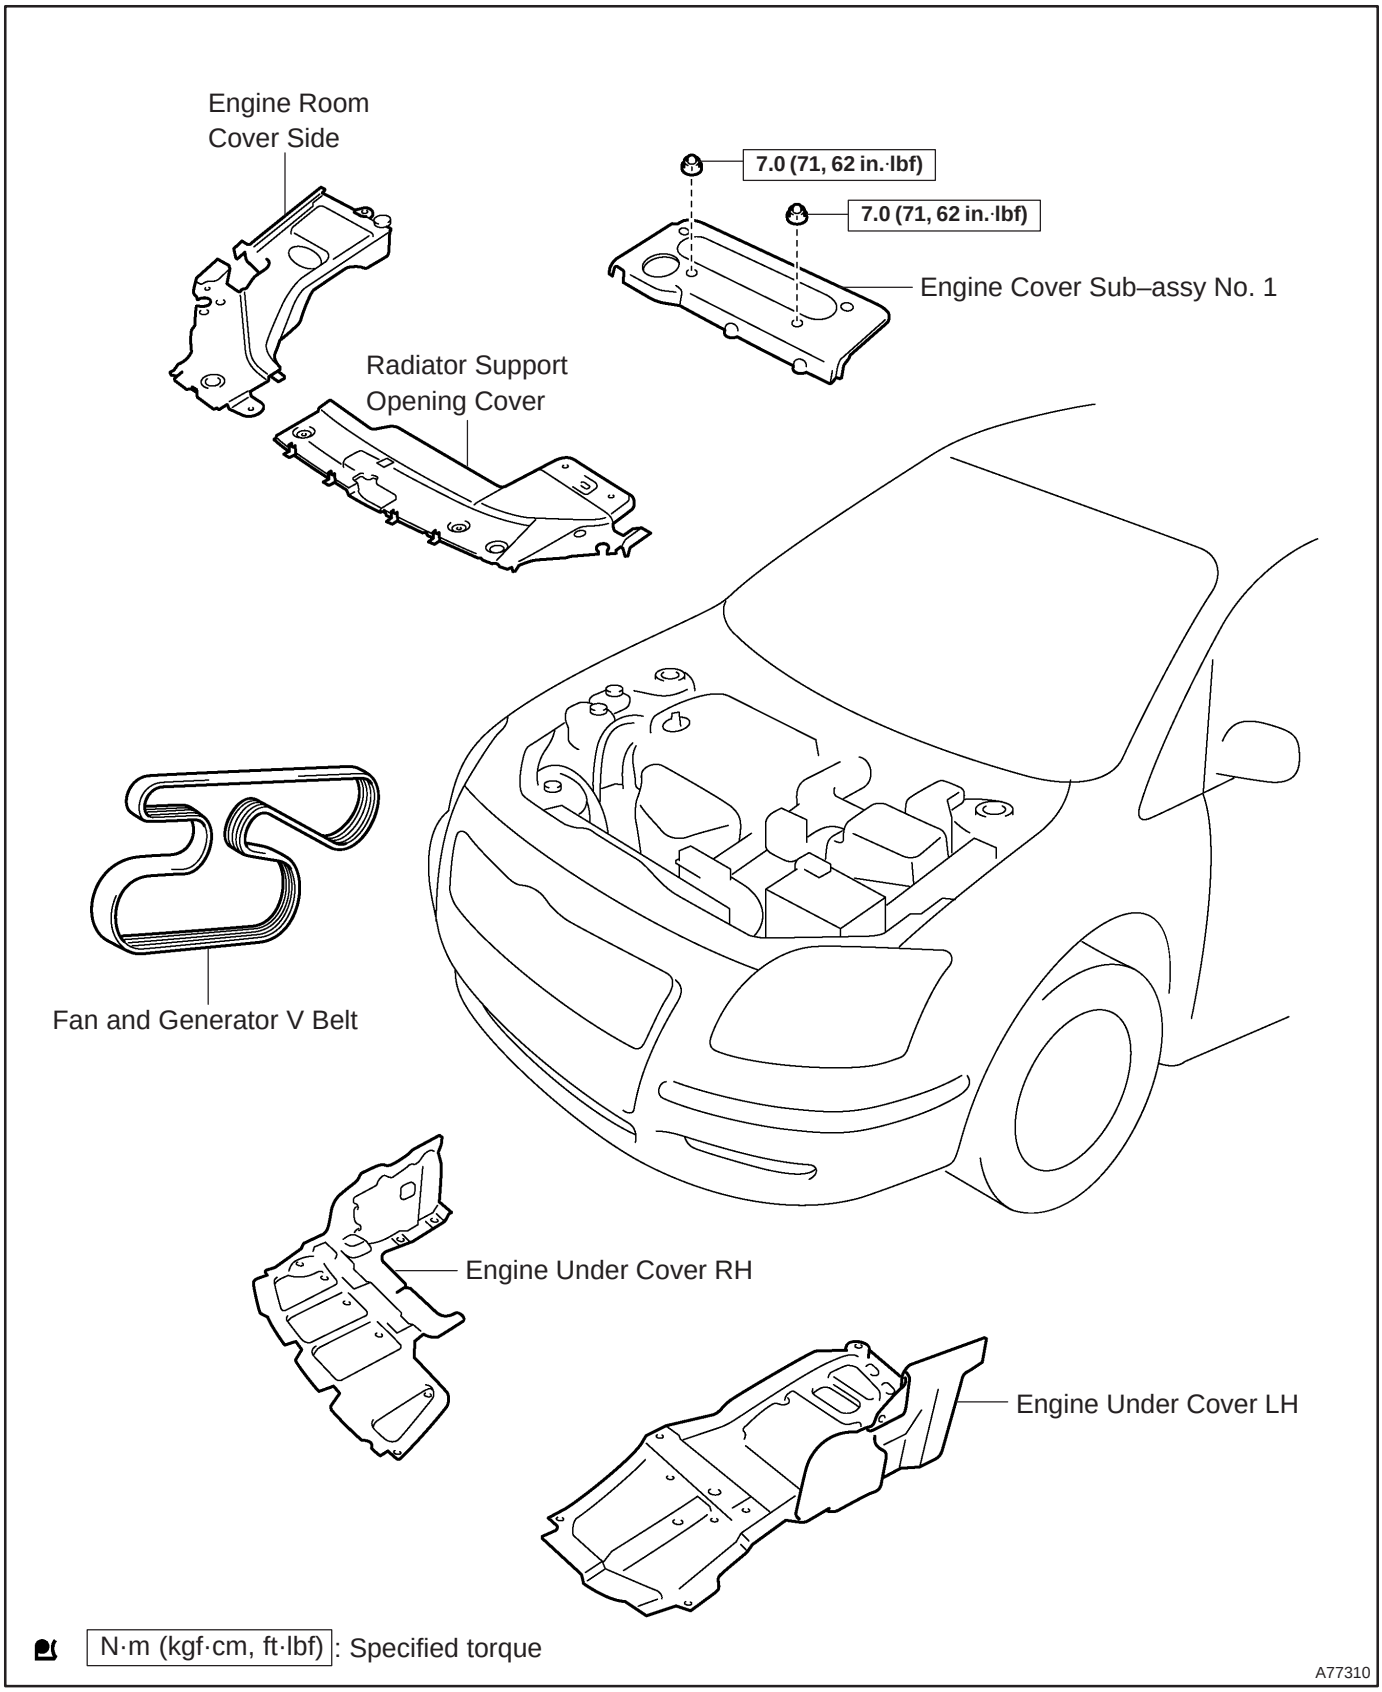


121. **INSTALL TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR**
Torque: 52 N·m (530 kgf·cm, 38 ft·lbf)

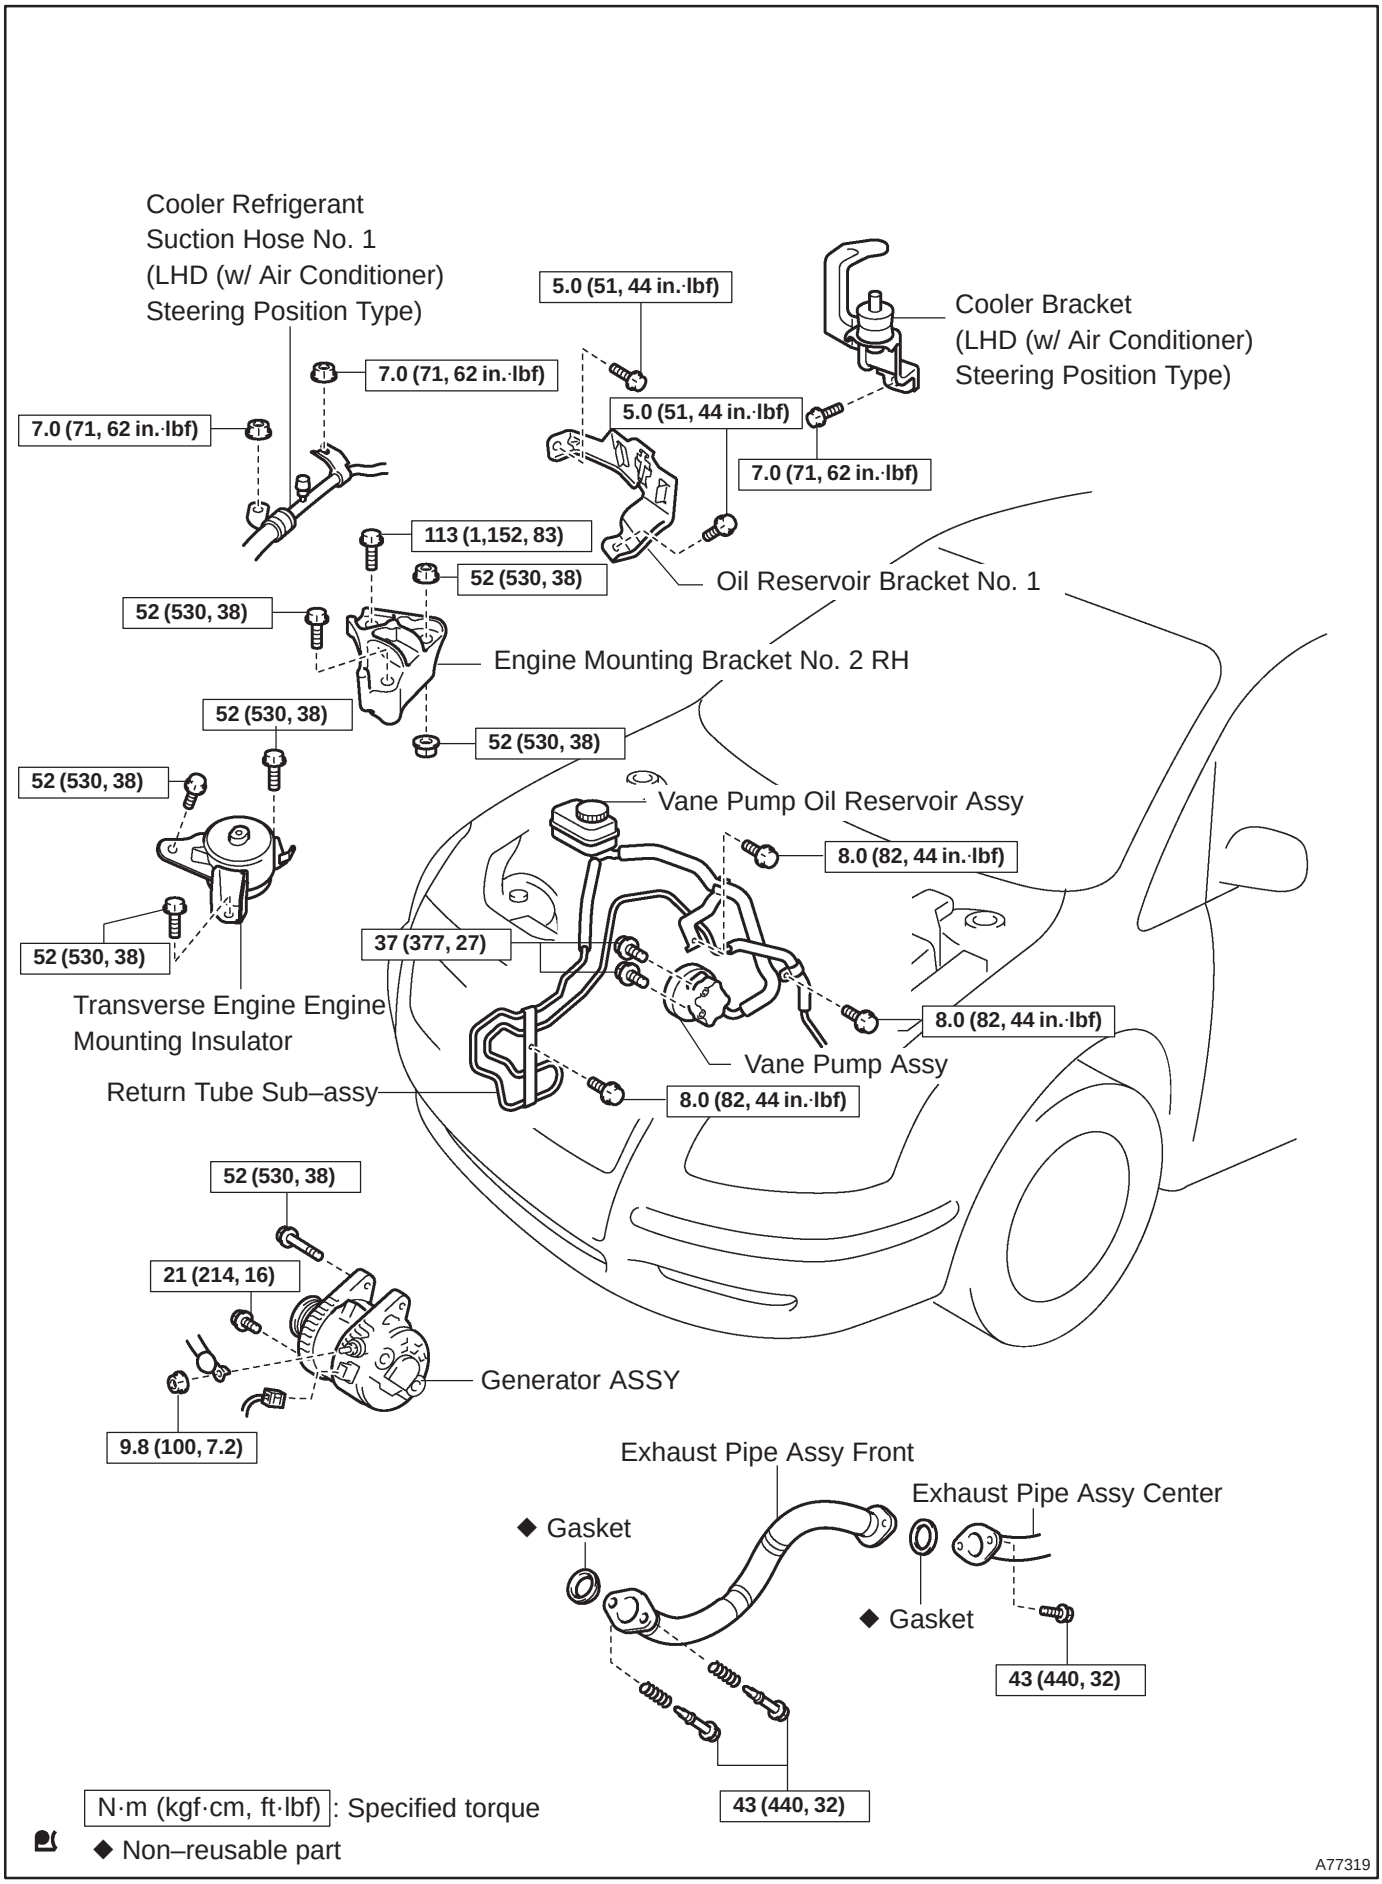
122. **INSTALL ENGINE MOUNTING BRACKET NO.2 RH**
Torque:
A 52 N·m (530 kgf·cm, 38 ft·lbf)
B 113 N·m (1,152 kgf·cm, 83 ft·lbf)

123. **REMOVE ENGINE HANGERS**
124. **INSTALL STEERING INTERMEDIATE SHAFT ASSY NO.2 (See page 50–9)**
125. **INSTALL TRANSMISSION CONTROL CABLE ASSY (M/T TRANSAXLE) (See page 41–24)**
126. **INSTALL TRANSMISSION CONTROL CABLE ASSY (A/T TRANSAXLE) (See page 40–25)**
127. **INSTALL CLUTCH RELEASE CYLINDER ASSY (M/T TRANSAXLE)**

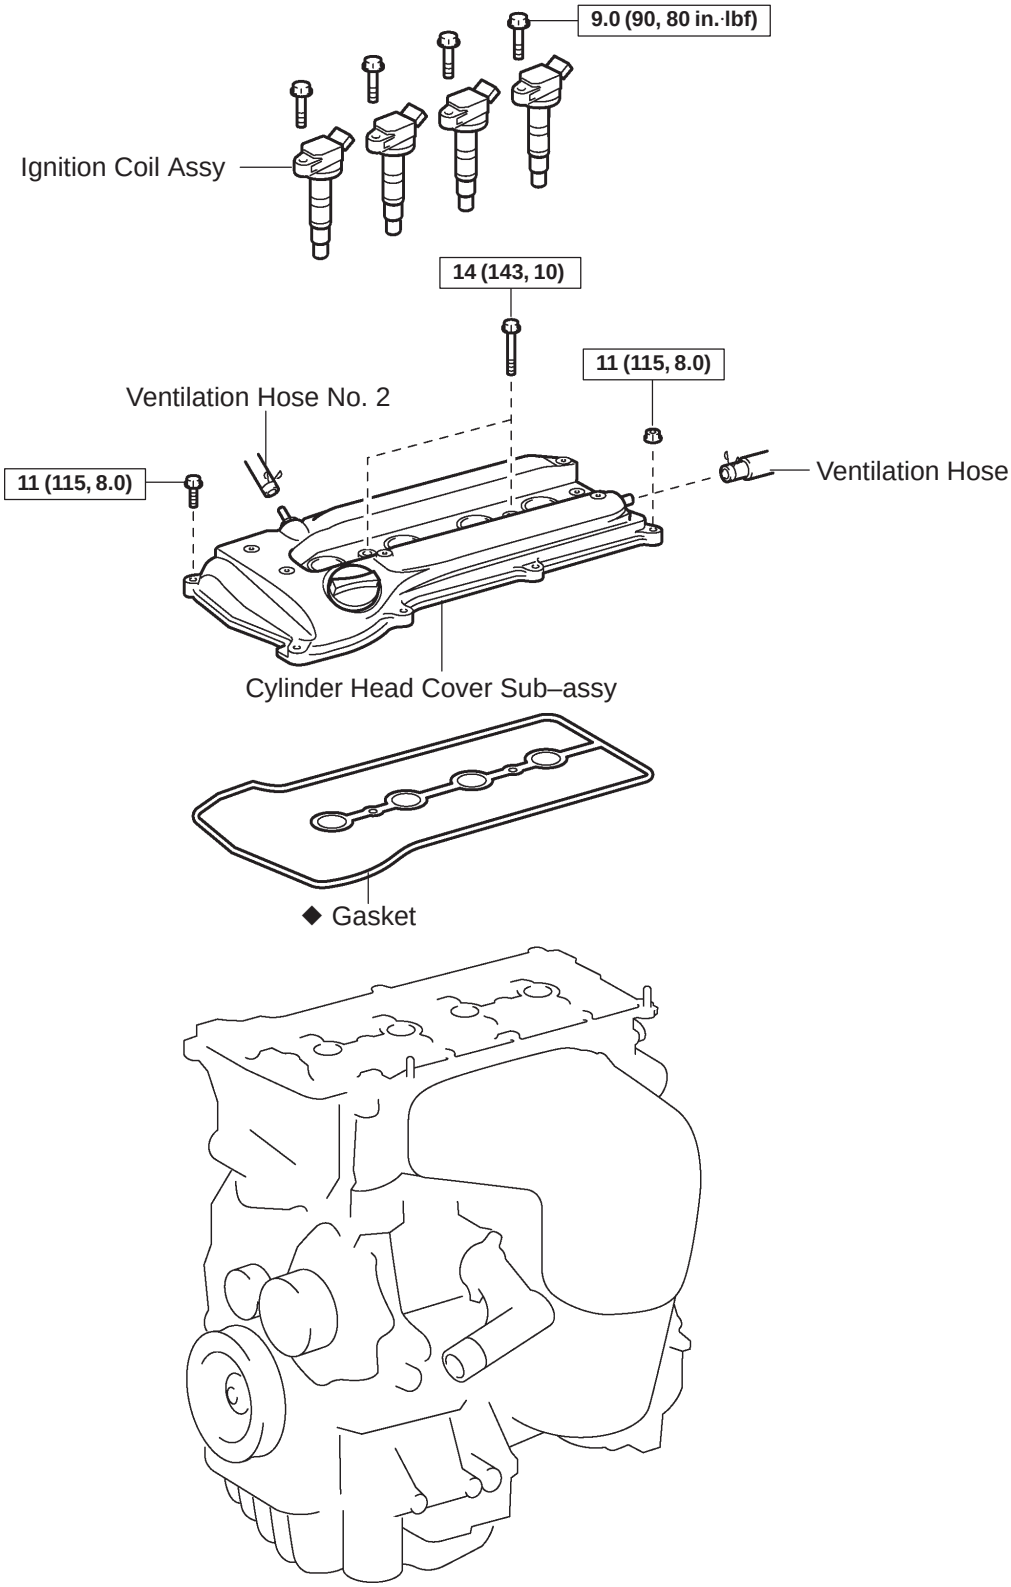
Torque:
Bolt A 12 N·m (122 kgf·cm, 89 ft·lbf)
Bolt B 9.0 N·m (92 kgf·cm, 79 in.·lbf)
Bolt C 5.0 N·m (51 kgf·cm, 44 in.·lbf)



128. INSTALL FRONT AXLE ASSY LH
Torque: 294 N·m (3,000 kgf·cm, 217 ft·lbf)
129. INSTALL FRONT AXLE ASSY RH
Torque: 294 N·m (3,000 kgf·cm, 217 ft·lbf)
130. INSTALL FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH (M/T TRANSAXLE)
Torque: 142 N·m (1,448 kgf·cm, 104 ft·lbf)
131. INSTALL FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH (A/T TRANSAXLE)
Torque: 142 N·m (1,448 kgf·cm, 104 ft·lbf)
132. INSTALL FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 RH (M/T TRANSAXLE)
Torque: 142 N·m (1,448 kgf·cm, 104 ft·lbf)
133. INSTALL FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 RH (A/T TRANSAXLE)
Torque: 142 N·m (1,448 kgf·cm, 104 ft·lbf)
134. INSTALL FRONT STABILIZER LINK ASSY LH
Torque: 74 N·m (755 kgf·cm, 55 ft·lbf)
135. INSTALL FRONT STABILIZER LINK ASSY RH
Torque: 74 N·m (755 kgf·cm, 55 ft·lbf)
136. INSTALL TIE ROD END SUB–ASSY LH (See page 51–36)
137. INSTALL TIE ROD END SUB–ASSY RH
HINT:
Perform the same procedure as above on the opposite side.
138. INSTALL FRONT AXLE HUB LH NUT (See page 30–6)
139. INSTALL FRONT AXLE HUB RH NUT
HINT:
Perform the same procedure as above on the opposite side.
140. INSTALL EXHAUST PIPE ASSY FRONT (See page 15–7)
141. INSTALL EXHAUST PIPE ASSY CENTER (See page 15–7)
142. INSTALL FLOOR PANEL BRACE FRONT
Torque: 30 N·m (306 kgf·cm, 22 ft·lbf)
143. INSTALL ENGINE SERVICE COVER BRACKET RH (W/O AIR CONDITIONING)
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
144. INSTALL COOLER BRACKET (LHD(W/ AIR CONDITIONER) STEERING POSITION TYPE)
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
145. INSTALL ENGINE SERVICE COVER BRACKET RH (RHD(W/ AIR CONDITIONER) STEERING POSITION TYPE)
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
146. INSTALL COOLER REFRIGERANT SUCTION HOSE NO.1 (LHD(W/ AIR CONDITIONER) STEERING POSITION TYPE)
147. INSTALL OIL RESERVOIR BRACKET NO.1
Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)
148. INSTALL RETURN TUBE SUB–ASSY
Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)
149. INSTALL RADIATOR RESERVE TANK SUB–ASSY
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)
150. INSTALL BATTERY CARRIER
151. INSTALL AIR CLEANER ASSEMBLY WITH HOSE
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)
152. INSTALL COMPRESSOR AND MAGNETIC CLUTCH (W/ AIR CONDITIONING)
Torque: 25 N·m (255 kgf·cm, 18 in.·lbf)
153. INSTALL GENERATOR ASSY (See page 19–20)
154. INSTALL FAN AND GENERATOR V BELT (See page 14–105)



155. INSTALL RADIATOR ASSY (See page 16–24)
156. INSTALL RADIATOR RELAY BLOCK
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)
157. INSTALL ENGINE COVER SUB–ASSY NO.1
Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)
158. ADD MANUAL TRANSAXLE OIL (M/T TRANSAXLE)
159. ADD AUTOMATIC TRANSAXLE FLUID (A/T TRANSAXLE)
160. ADD ENGINE OIL
161. ADD COOLANT (See page 16–19)
162. ADD POWER STEERING FLUID
163. BLEED POWER STEERING FLUID
164. CHECK FOR ENGINE OIL LEAKS
165. CHECK FOR ENGINE COOLANT LEAKS (See page 16–13)
166. CHECK FOR FUEL LEAKS (See page 11–15)
167. INSTALL FRONT WHEELS
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)
168. ADJUST FRONT WHEEL ALIGNMENT (See page 26–6)
169. INSPECT CHECK IDLE SPEED AND IGNITION TIMING (See page 14–101)
170. INSPECT CO/HC (See page 14–101)
171. CHECK ABS SPEED SENSOR SIGNAL



CHAIN SUB–ASSY (1AZ–FE)

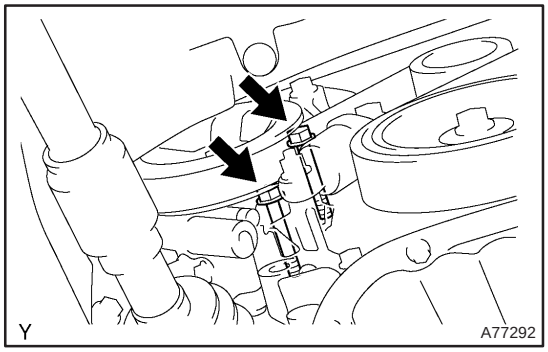
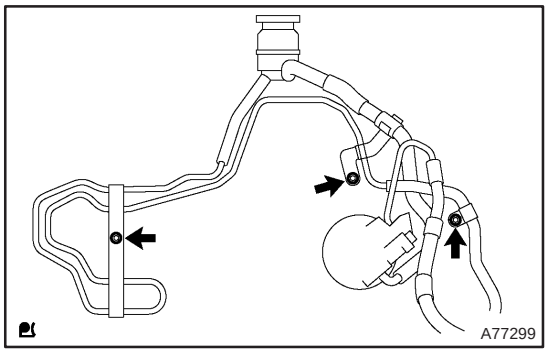
REPLACEMENT

1. **REMOVE FRONT WHEEL RH**
2. **REMOVE RADIATOR SUPPORT OPENING COVER**
3. **REMOVE ENGINE ROOM COVER SIDE**
4. **REMOVE ENGINE UNDER COVER RH**
5. **REMOVE ENGINE UNDER COVER LH**
6. **DRAIN ENGINE OIL**



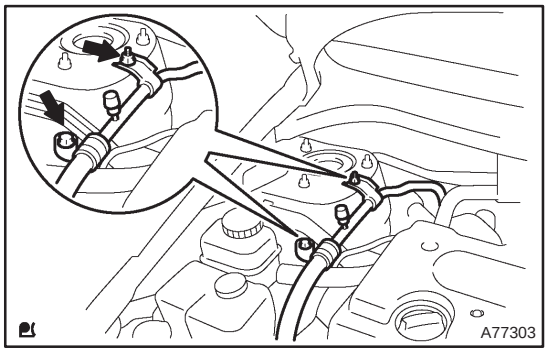
(a) Install a new gasket and the drain plug after draining the engine oil.
Torque: 25 N·m (255 kgf·cm, 18 ft·lbf)

7. **REMOVE ENGINE COVER SUB–ASSY NO.1**



(a) Remove the 2 nuts and the engine cover No. 1.

8. **REMOVE FAN AND GENERATOR V BELT (See page 14–105)**
SST 09249–63010
9. **REMOVE GENERATOR ASSY (See page 19–20)**
10. **REMOVE EXHAUST PIPE ASSY FRONT (See page 15–7)**

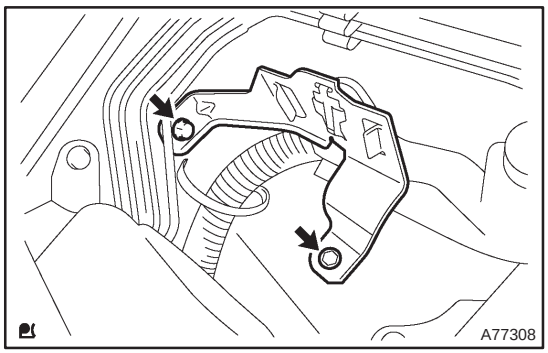


11. **SEPARATE VANE PUMP ASSY**

(a) Remove the 2 through bolts and separate the vane pump.

12. **SEPARATE RETURN TUBE SUB–ASSY**

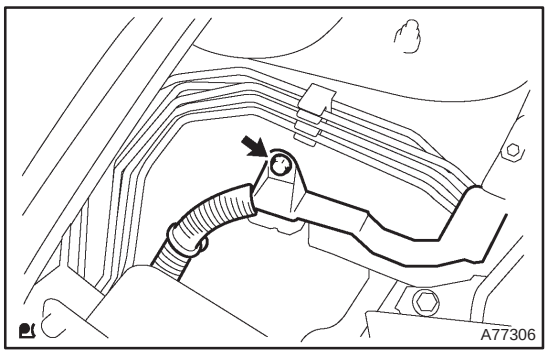
(a) Remove 3 bolts and separate the return tube as shown in the illustration.



13. SEPARATE COOLER REFRIGERANT SUCTION HOSE NO.1 (LHD(W/ AIR CONDITIONER) STEERING POSITION TYPE)

(a) Remove the 2 nuts and separate the suction hose.

14. SEPARATE VANE PUMP OIL RESERVOIR ASSY

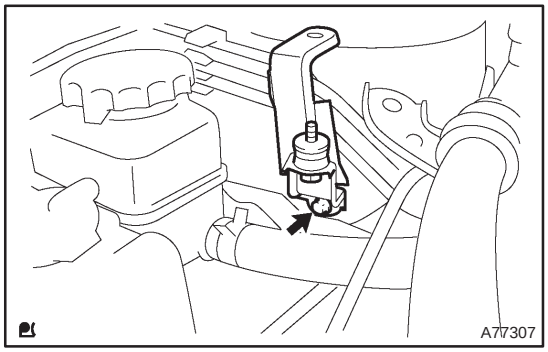


NOTICE:

Do not disconnect the 2 hoses.

15. REMOVE OIL RESERVOIR BRACKET NO.1

(a) Remove the 2 bolts and the oil pump reservoir bracket No. 1.



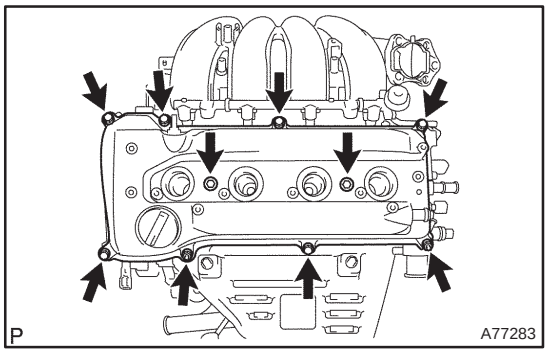
16. SEPARATE ENGINE WIRE

(a) Remove the bolt and separate the clamp and engine wire.

17. REMOVE ENGINE SERVICE COVER BRACKET RH (W/O AIR CONDITIONING)

(a) Remove the bolt and the engine service cover bracket RH.

18. REMOVE COOLER BRACKET (LHD(W/ AIR CONDITIONER) STEERING POSITION TYPE)

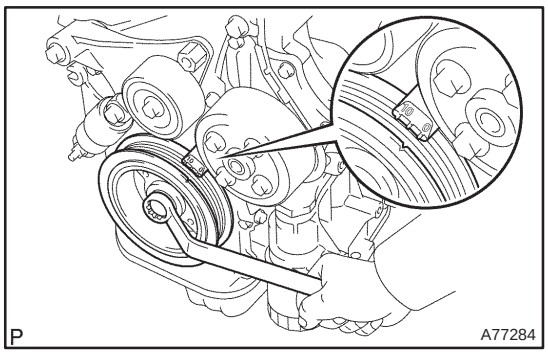


(a) Remove the bolt and cooler bracket.

19. REMOVE ENGINE SERVICE COVER BRACKET RH (RHD(W/ AIR CONDITIONER) STEERING POSITION TYPE)

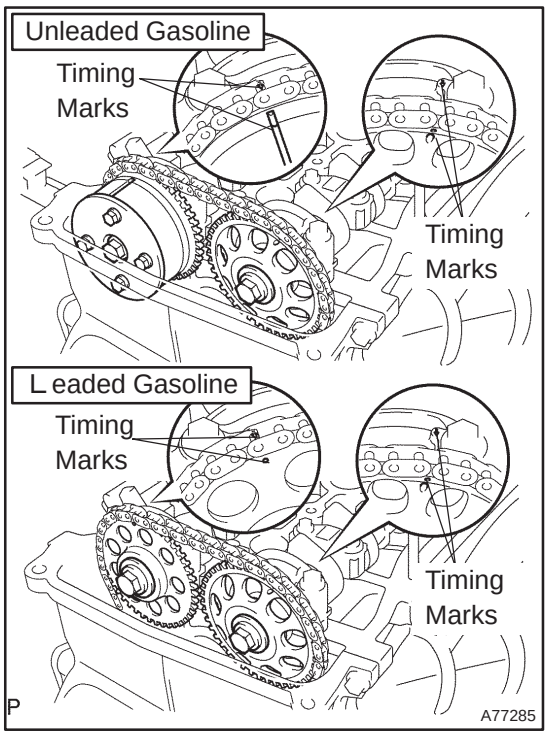
(a) Remove the bolt and the engine service cover bracket RH.

20. REMOVE IGNITION COIL ASSY



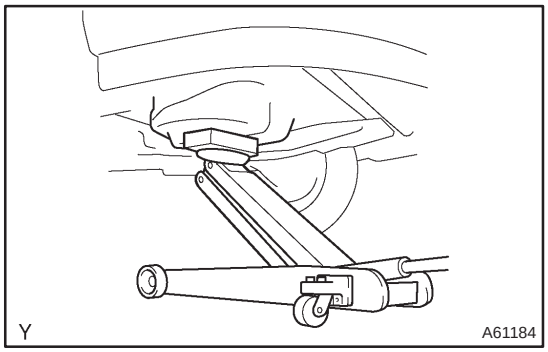
(a) Remove the 4 bolts and 4 ignition coils.

21. REMOVE CYLINDER HEAD COVER SUB–ASSY



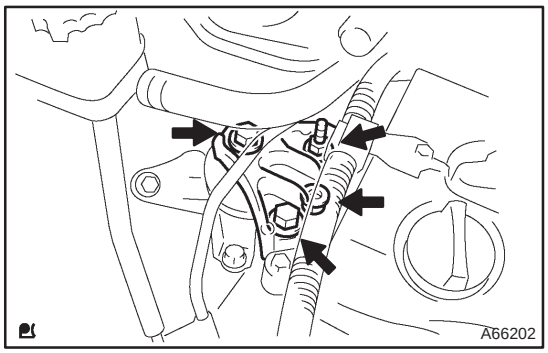
(a) Disconnect the 2 PCV hoses from the cylinder head cover.

(b) Remove the 8 bolts and 2 nuts, and then remove the cylinder head cover and gasket.



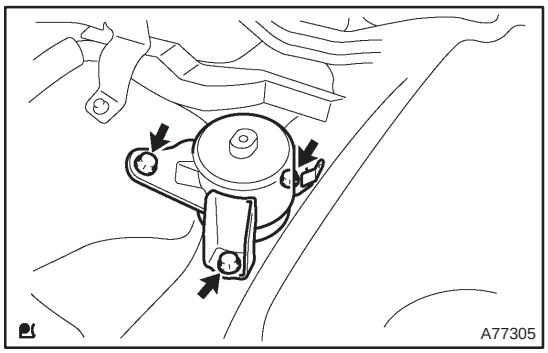
22. SET NO. 1 CYLINDER TO TDC/COMPRESSION

(a) Turn the crankshaft pulley, and align its timing notch with timing mark 0 of the timing chain cover.



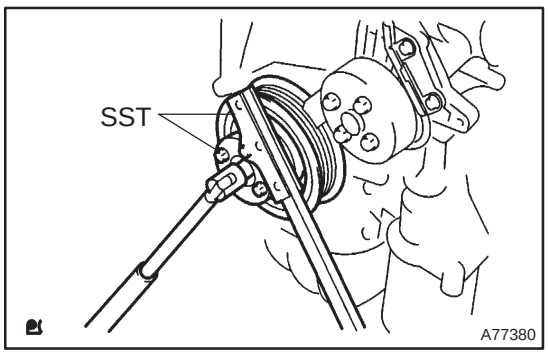
(b) Check that the timing marks of the camshaft timing gear are aligned with the timing marks located on the No. 1 and No. 2 bearing caps as shown in the illustration.

If not, turn the crankshaft 1 revolution (360°) and align the marks as above.

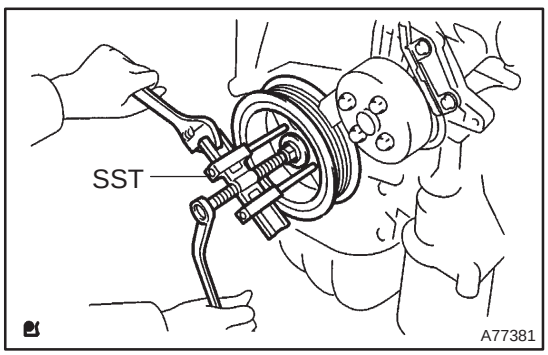


23. REMOVE ENGINE MOUNTING BRACKET NO.2 RH

(a) Place the jack underneath the engine, and put a wooden block on the jack.

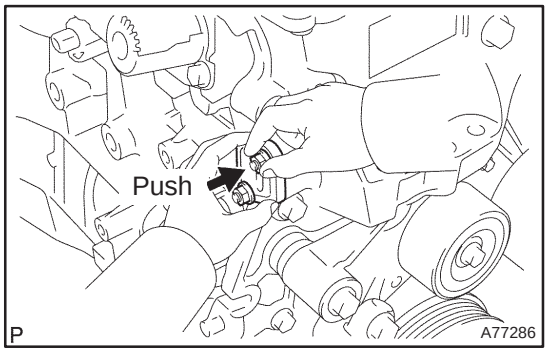


(b) Remove the 2 bolts and 2 nuts, and then detach the mounting bracket No. 2 RH.



24. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR

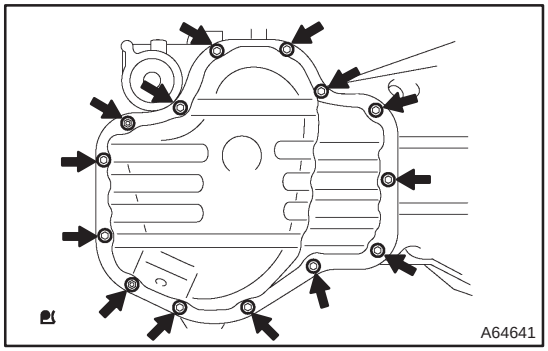
(a) Remove the 3 bolts and the engine mounting insulator.



25. REMOVE CRANKSHAFT PULLEY

(a) Using SST, fix the crankshaft pulley and loosen a crankshaft pulley bolt.
SST 09213–54015 (91651–60855), 09330–00021

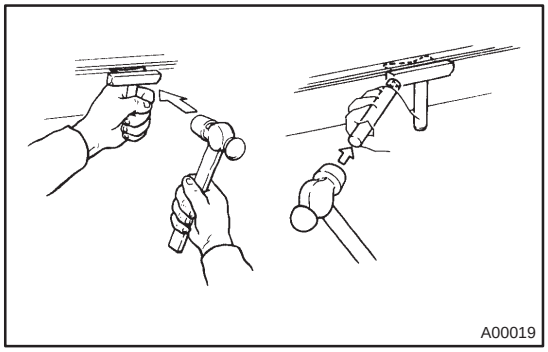
(b) Using a crankshaft pulley bolt and SST, remove the crankshaft pulley.
SST 09950–50013 (09951–05010, 09952–05010, 09953–05020, 09954–05021)



26. REMOVE CHAIN TENSIONER ASSY NO.1

(a) Remove the 2 nuts, the chain tensioner No. 1 and gasket.

NOTICE:

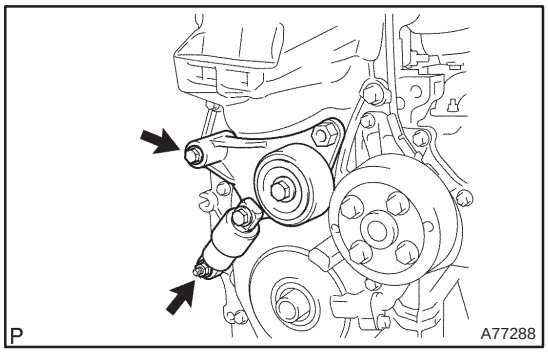


Do not turn the crankshaft.

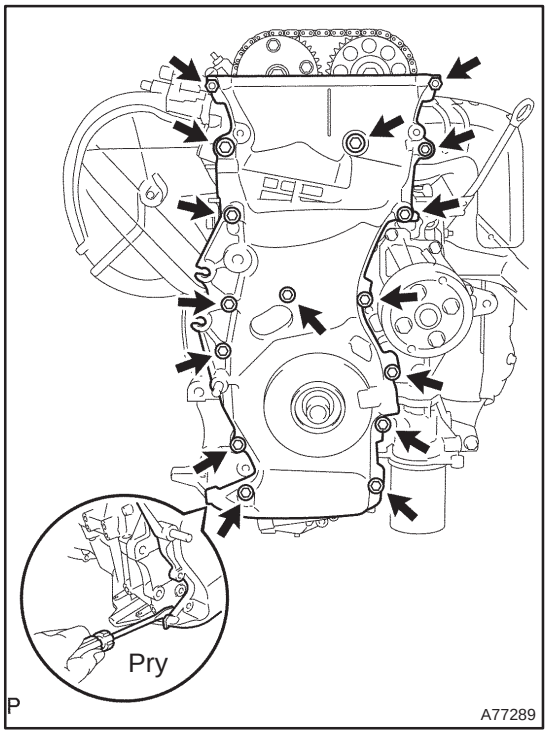
27. REMOVE CRANKSHAFT POSITION SENSOR

28. REMOVE OIL PAN SUB–ASSY

(a) Remove the 12 bolts and 2 nuts.



(b) Insert the blade of SST between the crank case, timing chain cover and oil pan, cut off applied sealer and remove the oil pan.



SST 09032–00100

NOTICE:

Be careful not to damage the contact surface of the timing chain cover, crank case and oil pan.

29. REMOVE V–RIBBED BELT TENSIONER ASSY

30. REMOVE TIMING CHAIN OR BELT COVER SUB–ASSY

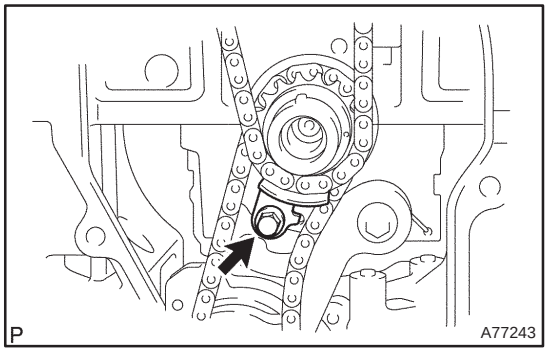
(a) Remove the 14 bolts and 2 nuts.

(b) Using a screwdriver, pry between the timing chain cover and cylinder head or cylinder block.

(c) Remove the timing chain cover.

NOTICE:

Be careful not to damage the contact surface of the timing chain cover, cylinder head and cylinder block.



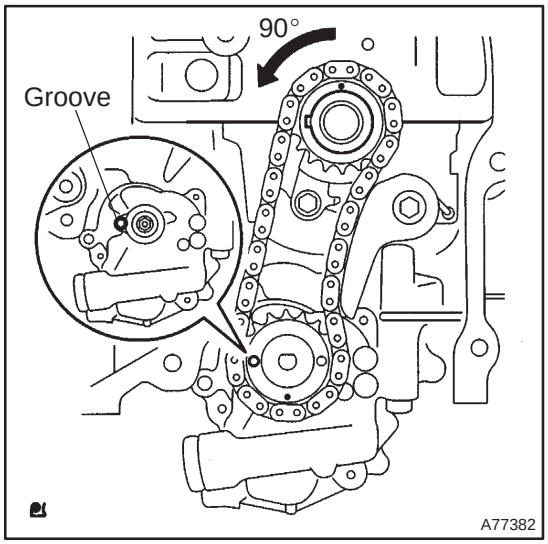
31. REMOVE CRANKSHAFT POSITION SENSOR PLATE NO.1

32. REMOVE CHAIN TENSIONER SLIPPER

(a) Remove the 2 bolts and the chain tensioner slipper.

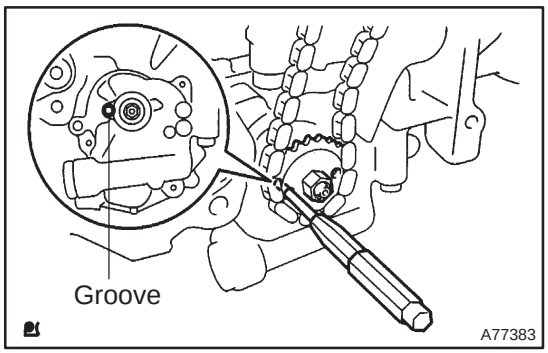
33. REMOVE CHAIN VIBRATION DAMPER NO.1

(a) Remove the bolt and the chain vibration damper No. 1



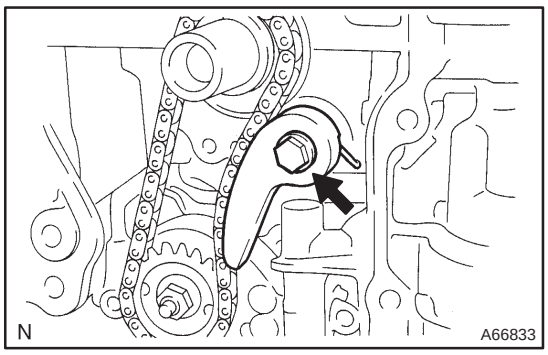
34. REMOVE TIMING CHAIN GUIDE

(a) Remove the bolt and the timing chain guide.



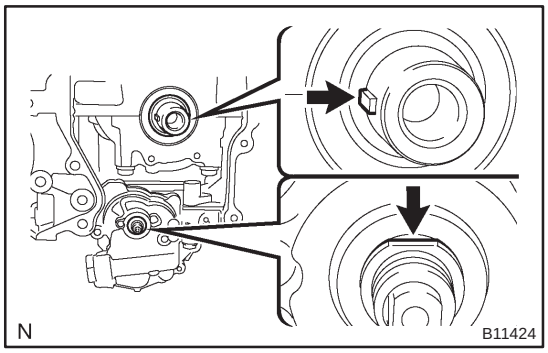
35. REMOVE CHAIN SUB–ASSY

36. REMOVE CRANKSHAFT TIMING GEAR OR SPROCKET



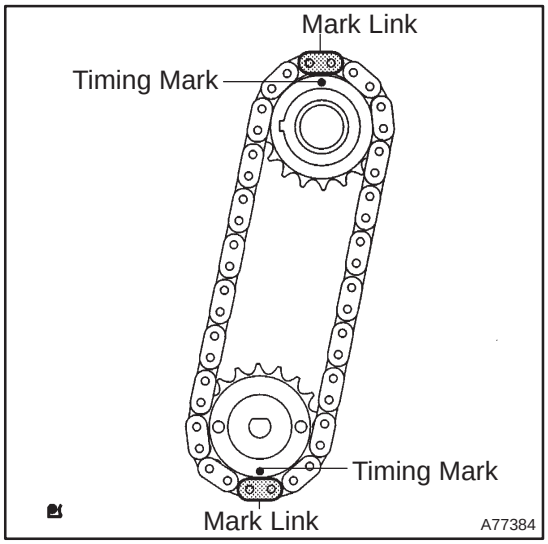
37. REMOVE NO.2 CHAIN SUB–ASSY

(a) Turn the crankshaft counterclockwise 90°, and align an adjusting hole of the oil pump drive shaft gear with the groove of the oil pump.



(b) Put a 4 mm diameter bar in the adjusting hole of the oil pump drive shaft gear to lock in position, and remove the nut.

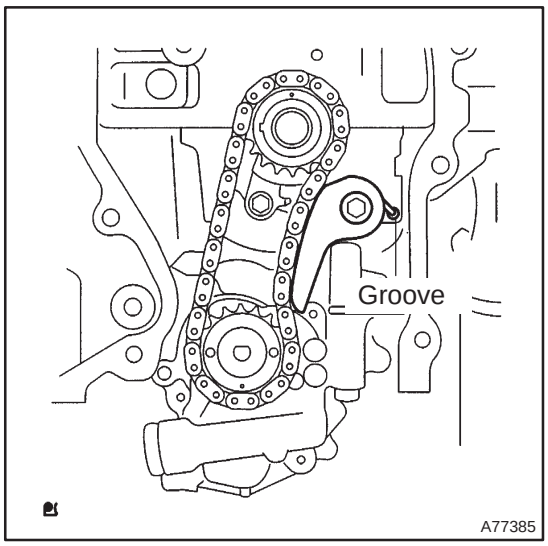
(c) Remove the bolt, and then remove the chain tensioner and spring.



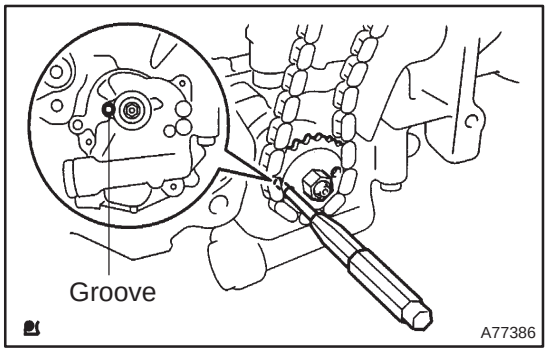
(d) Remove the oil pump drive shaft gear and chain No. 2.

38. INSTALL NO.2 CHAIN SUB–ASSY

(a) Set the crankshaft key to the left side position.



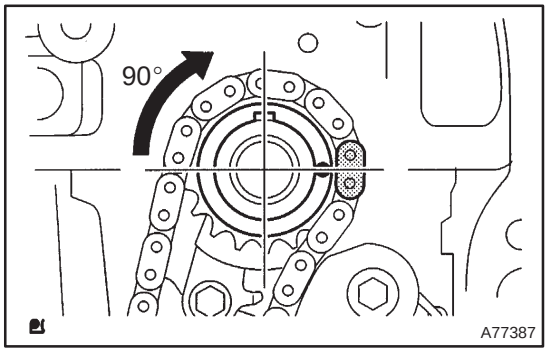
(b) Orient the flat portion of the drive shaft upward.



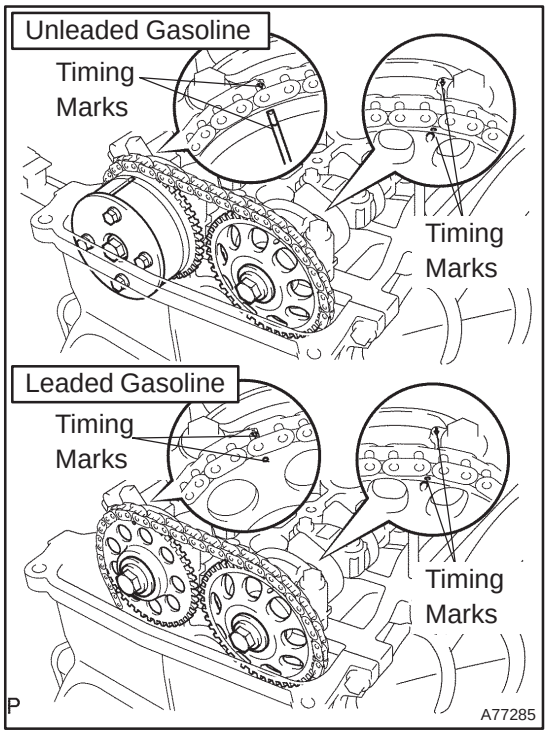
(c) Align the mark links (yellow colored links) with the timing marks of each gear as shown in the illustration.

(d) Install the gears to the crankshaft and oil pump shaft with the chain wrapped.

(e) Temporarily tighten the oil pump drive shaft gear with the nut.

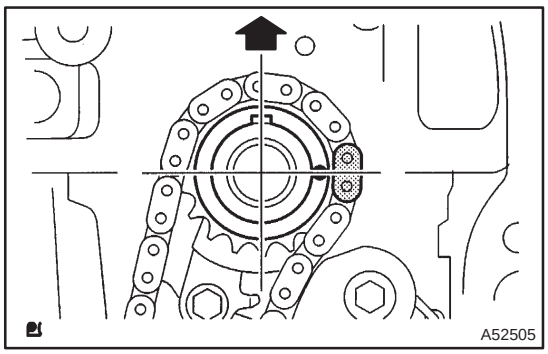


(f) Insert the damper spring into the adjusting hole, and install the chain tensioner plate with the bolt.
Torque: 12 N·m (122 kgf·cm, 9.0 ft·lbf)



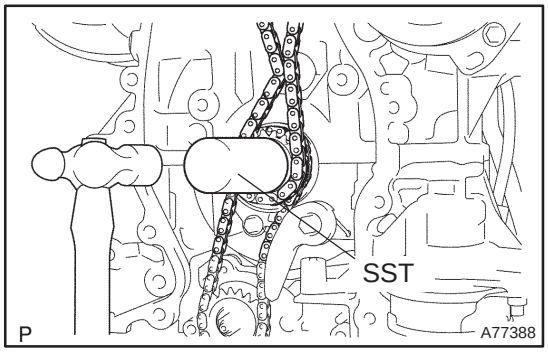
(g) Align an adjusting hole of the sprocket with the groove of the oil pump.

(h) Insert a 4 mm diameter bar into the adjusting hole of the sprocket to lock in position, and tighten the nut.
Torque: 30 N·m (301 kgf·cm, 22 ft·lbf)



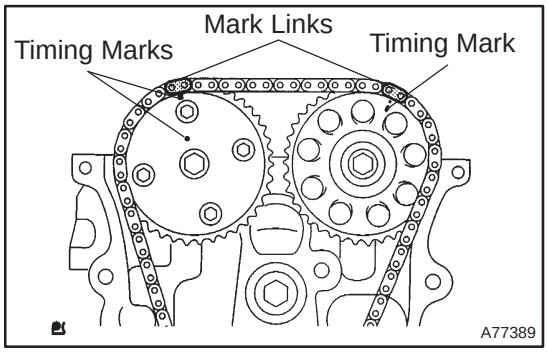
(i) Rotate the crankshaft clockwise 90°, and position the crankshaft key upward.

39. INSTALL CRANKSHAFT TIMING GEAR OR SPROCKET



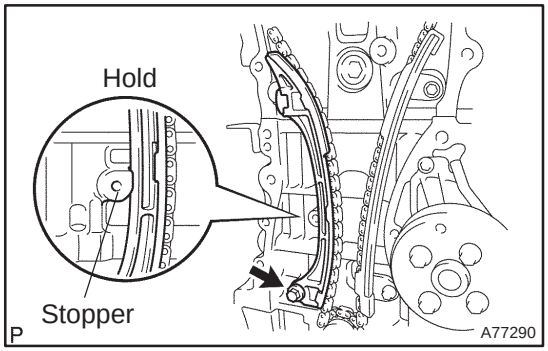
40. SET NO. 1 CYLINDER TO TDC/COMPRESSION

(a) Turn the camshafts with a wrench on the hexagonal lobe, and align the timing marks of the camshaft timing gear with each timing mark located on the No. 1 and No. 2 bearing caps as shown in the illustration.

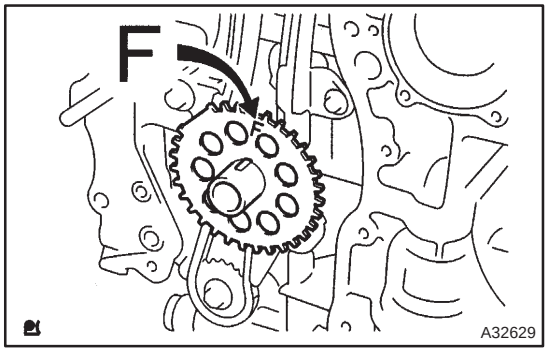


(b) Using the crankshaft pulley bolt, turn the crankshaft and position the key on the crankshaft upward.

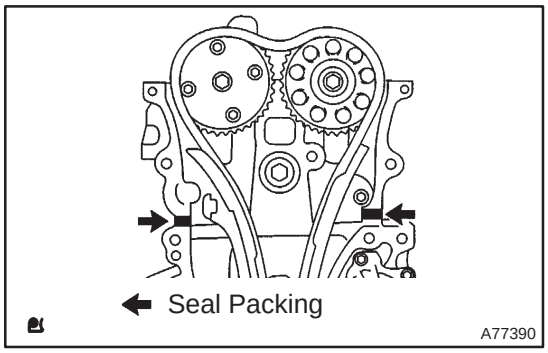
41. INSTALL CHAIN VIBRATION DAMPER NO.1



42. INSTALL CHAIN SUB–ASSY

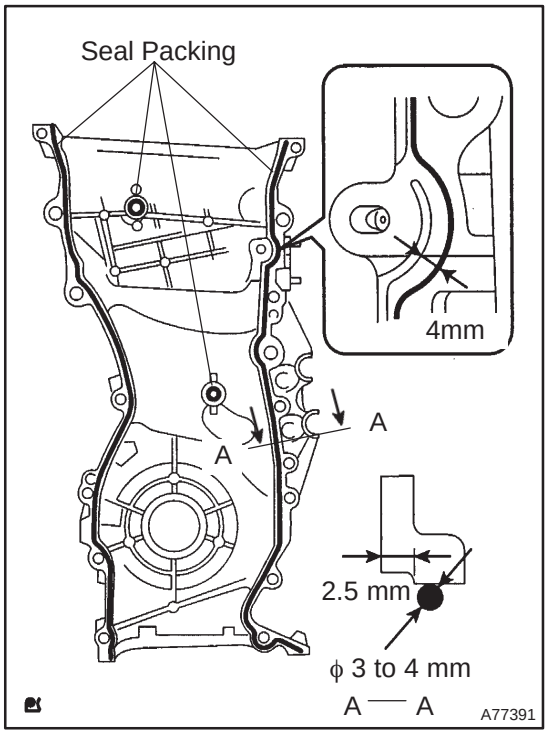


(a) Align the mark links (gold or yellow colored links) with each timing mark located on the camshaft timing gears, and install the chain.

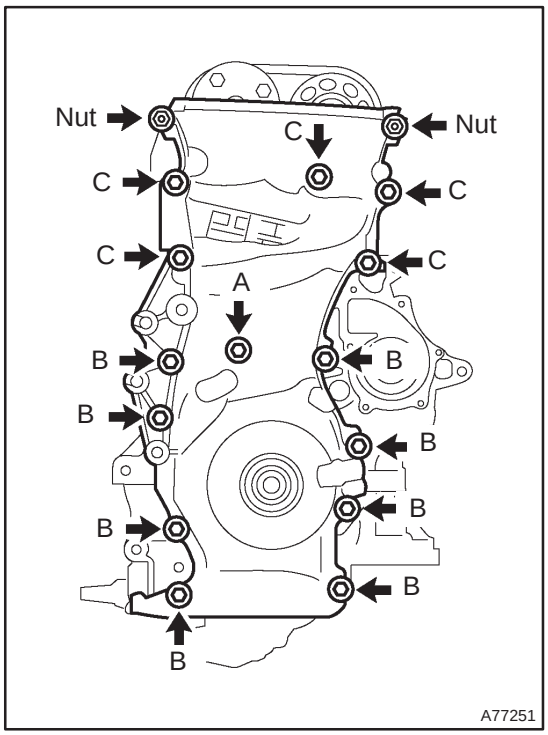


43. INSTALL TIMING CHAIN GUIDE
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

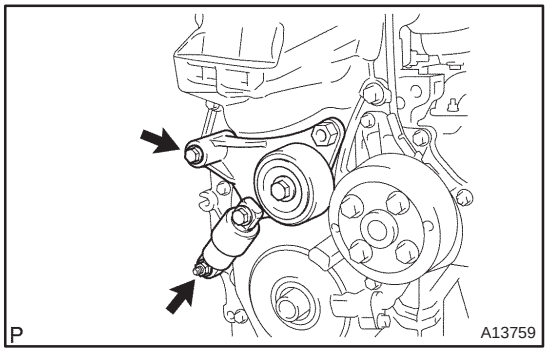
44. INSTALL CHAIN TENSIONER SLIPPER
(a) Install the chain tensioner slipper with the bolt.
Torque: 19 N·m (195 kgf·cm, 14 ft·lbf)
(b) Check that the chain tensioner slipper is hold on the cylinder block stopper.



45. INSTALL CRANKSHAFT POSITION SENSOR PLATE NO.1
(a) Install the plate with the ”F” mark facing forward.



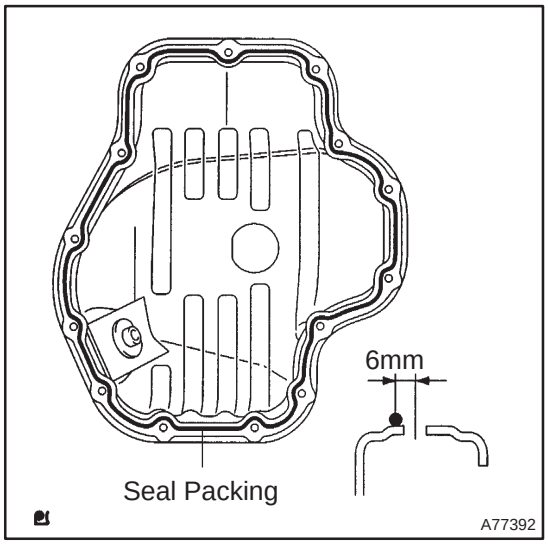
46. INSTALL TIMING CHAIN OR BELT COVER SUB–ASSY
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the chain cover within 3 minutes after applying seal packing.**
- **Do not start the engine within 2 hours after installing.**



(a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the timing chain cover.
(b) Apply a continuous bead (Diameter 2 mm (0.09 in.)) of seal packing as shown in the illustration.
Seal packing: Part No. 08826 – 00080 or equivalent.

(c) Apply a continuous bead (Diameter 3 to 4 mm (0.118 to 0.157 in.)) of seal packing as shown in the illustration.
Seal packing: Part No. 08826 – 00080 or equivalent

(d) Install the timing chain cover with the 14 bolts and 2 nuts.
Torque:
Bolt A 9.0 N·m (92 kgf·cm, 80 in.·lbf)
Bolt B 21 N·m (214 kgf·cm, 15 ft·lbf)
Bolt C 43 N·m (438 kgf·cm, 32 ft·lbf)
Nut 9.0 N·m (92 kgf·cm, 80 in.·lbf)

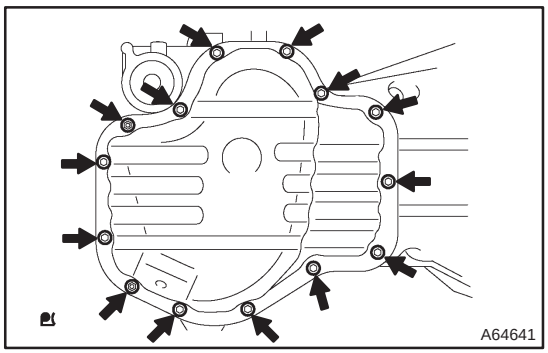


47. INSTALL V–RIBBED BELT TENSIONER ASSY

(a) Install the V–ribbed belt tensioner with the bolt and nut.
Torque: 60 N·m (610 kgf·cm, 44 ft·lbf)

NOTICE:

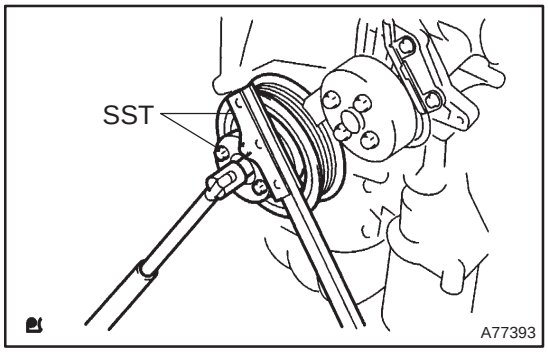
As the drive tensioner should be fastened together with the timing chain cover, so be sure install it within 15 minutes after the timing chain cover is installed.



48. INSTALL OIL PAN SUB–ASSY

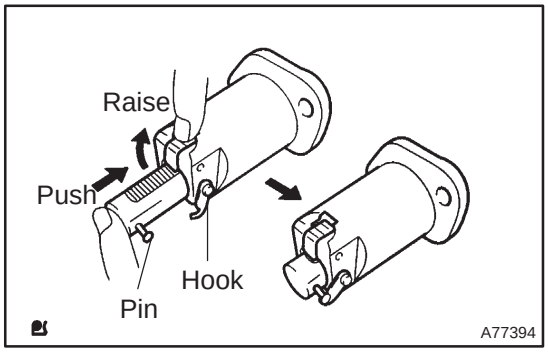
NOTICE:

- **Remove any oil from the contact surface.**
- **Install the oil pan within 3 minutes after applying seal packing.**
- **Do not start the engine within 2 hours after installing.**



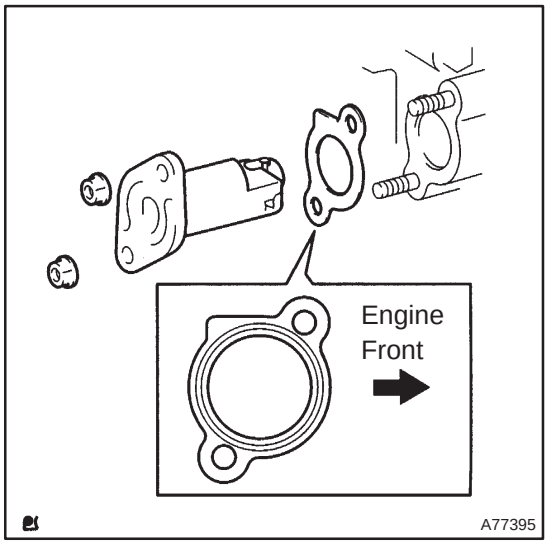
(a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surface of the cylinder block and oil pan.

(b) Apply a continuous bead (Diameter 3 mm to 4 mm (0.157 in.)) of seal packing as shown in the illustration, and install the oil pan.
Seal packing: part No. 08826 – 00080 or equivalent



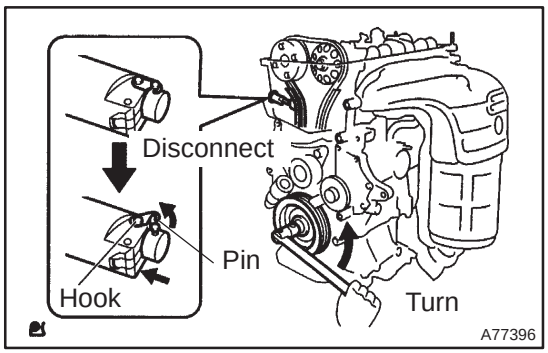
(c) Install the oil pan with the 12 bolts and 2 nuts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

49. INSTALL CRANKSHAFT POSITION SENSOR



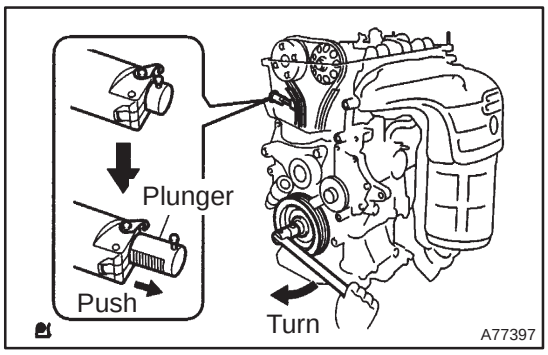
50. INSTALL CRANKSHAFT PULLEY

(a) Using SST, tighten the set bolt.
SST 09213–54015 (91651–60855), 09330–00021
Torque: 170 N·m (1,733 kgf·cm, 125 ft·lbf)



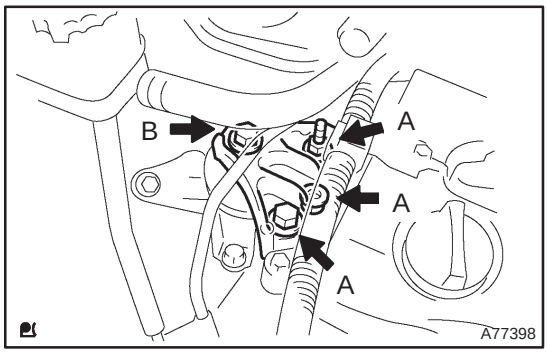
51. INSTALL CHAIN TENSIONER ASSY NO.1

(a) Release the ratchet pawl, fully push in the plunger and apply the hook to the pin so that the plunger is located in position.



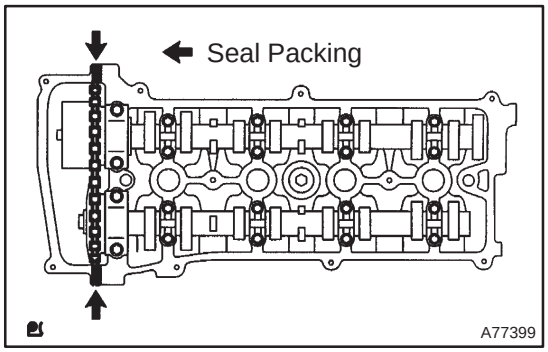
(b) Install a new gasket chain tensioner with the 2 nuts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

NOTICE:
If the hook is released wile inserting, apply the hook again, and insert the chain tensioner.



(c) Turn the crankshaft counterclockwise, and check that the hook is disengaged from the plunger knock pin.

(d) Turn the crankshaft clockwise, and check that the plunger is extended.

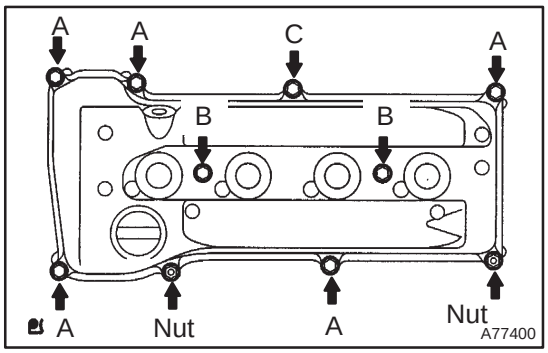


52. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR
Torque: 52 N·m (530 kgf·cm, 38 ft·lbf)

53. INSTALL ENGINE MOUNTING BRACKET NO.2 RH
Torque:
A 52 N·m (530 kgf·cm, 38 ft·lbf)
B 113 N·m (1,152 kgf·cm, 83 ft·lbf)

54. INSTALL CYLINDER HEAD COVER SUB–ASSY

(a) Remove any old seal packing (FIPG) material.



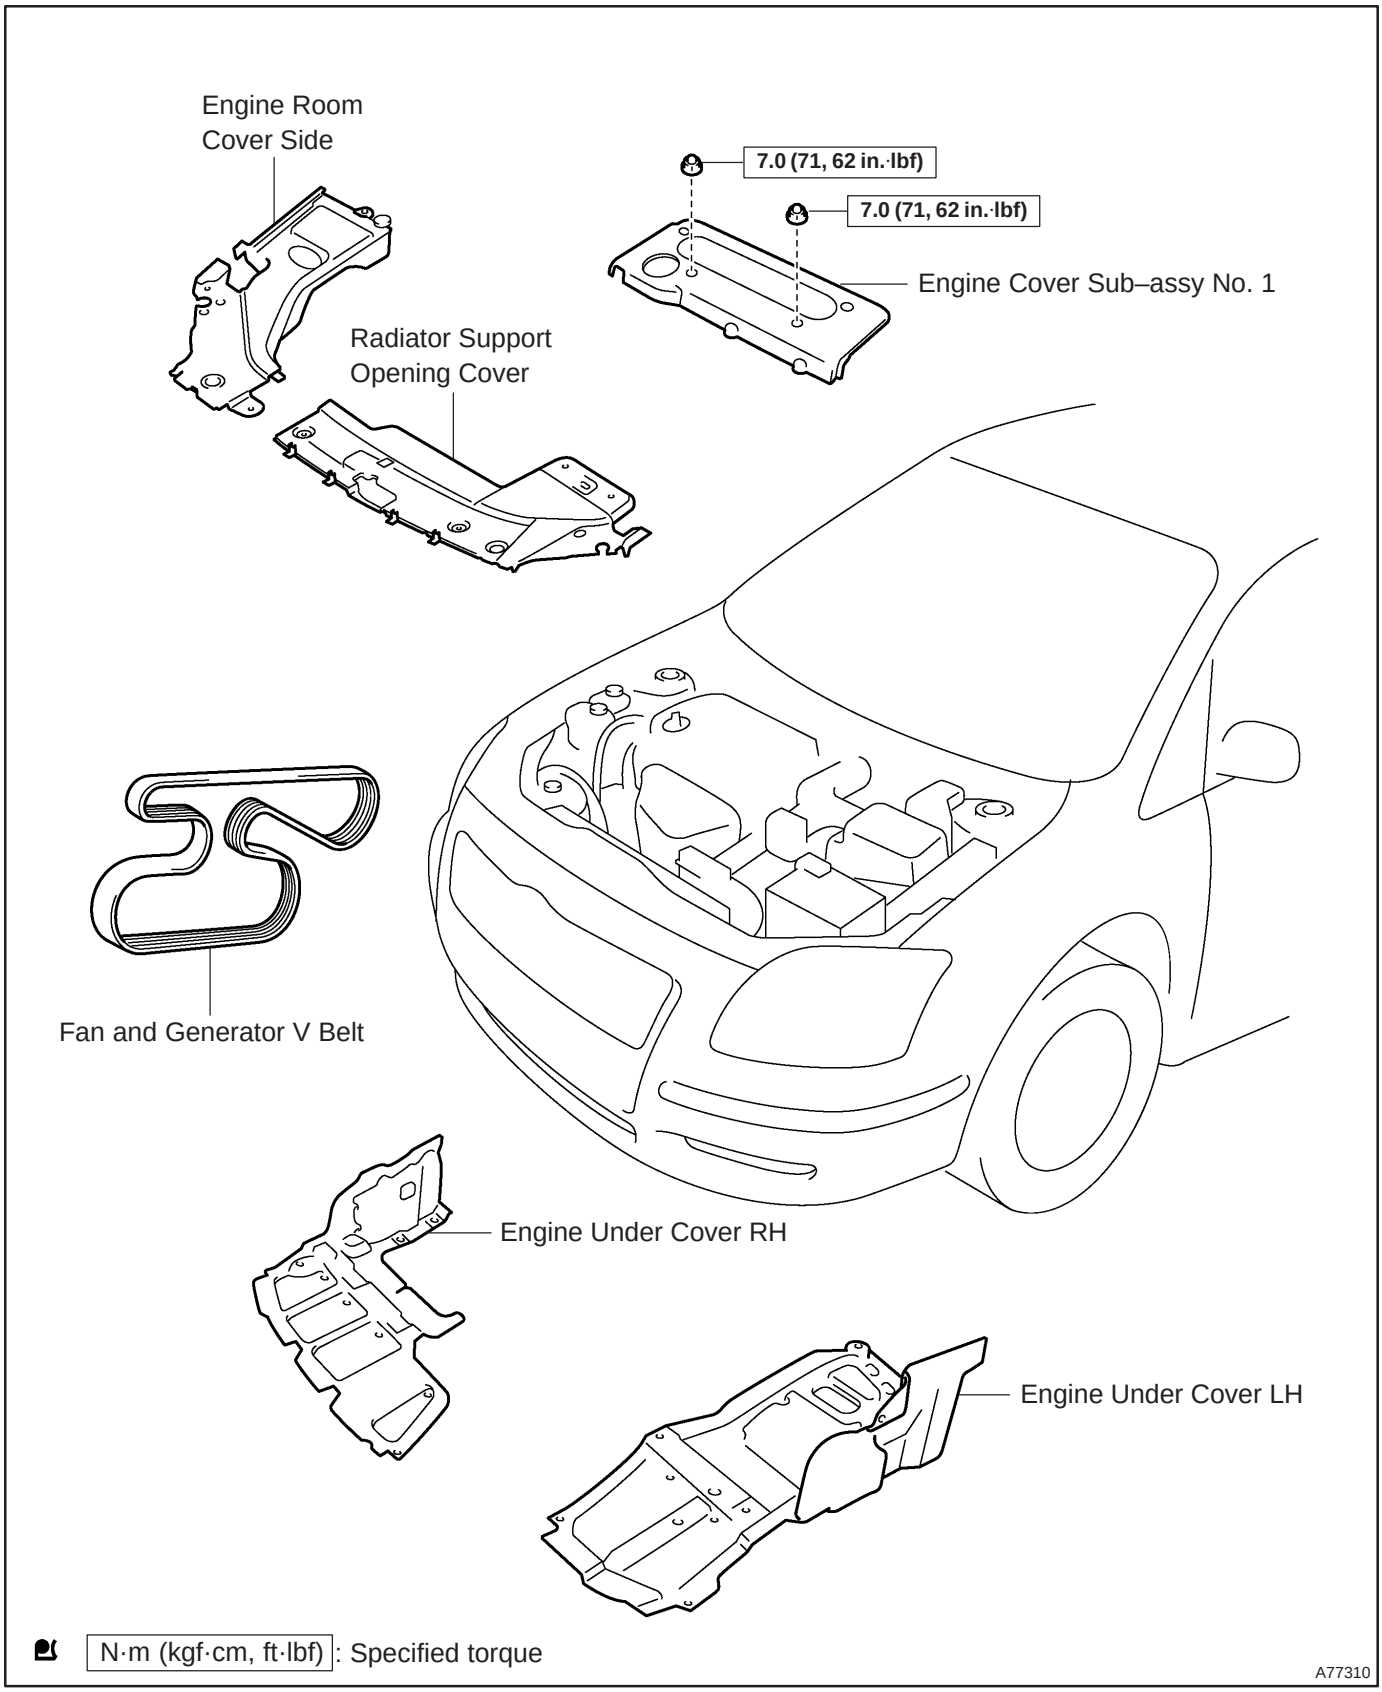
(b) Apply seal packing to the 2 locations as shown in the illustration.

Seal Packing: Part No. 08826–00080 or equivalent

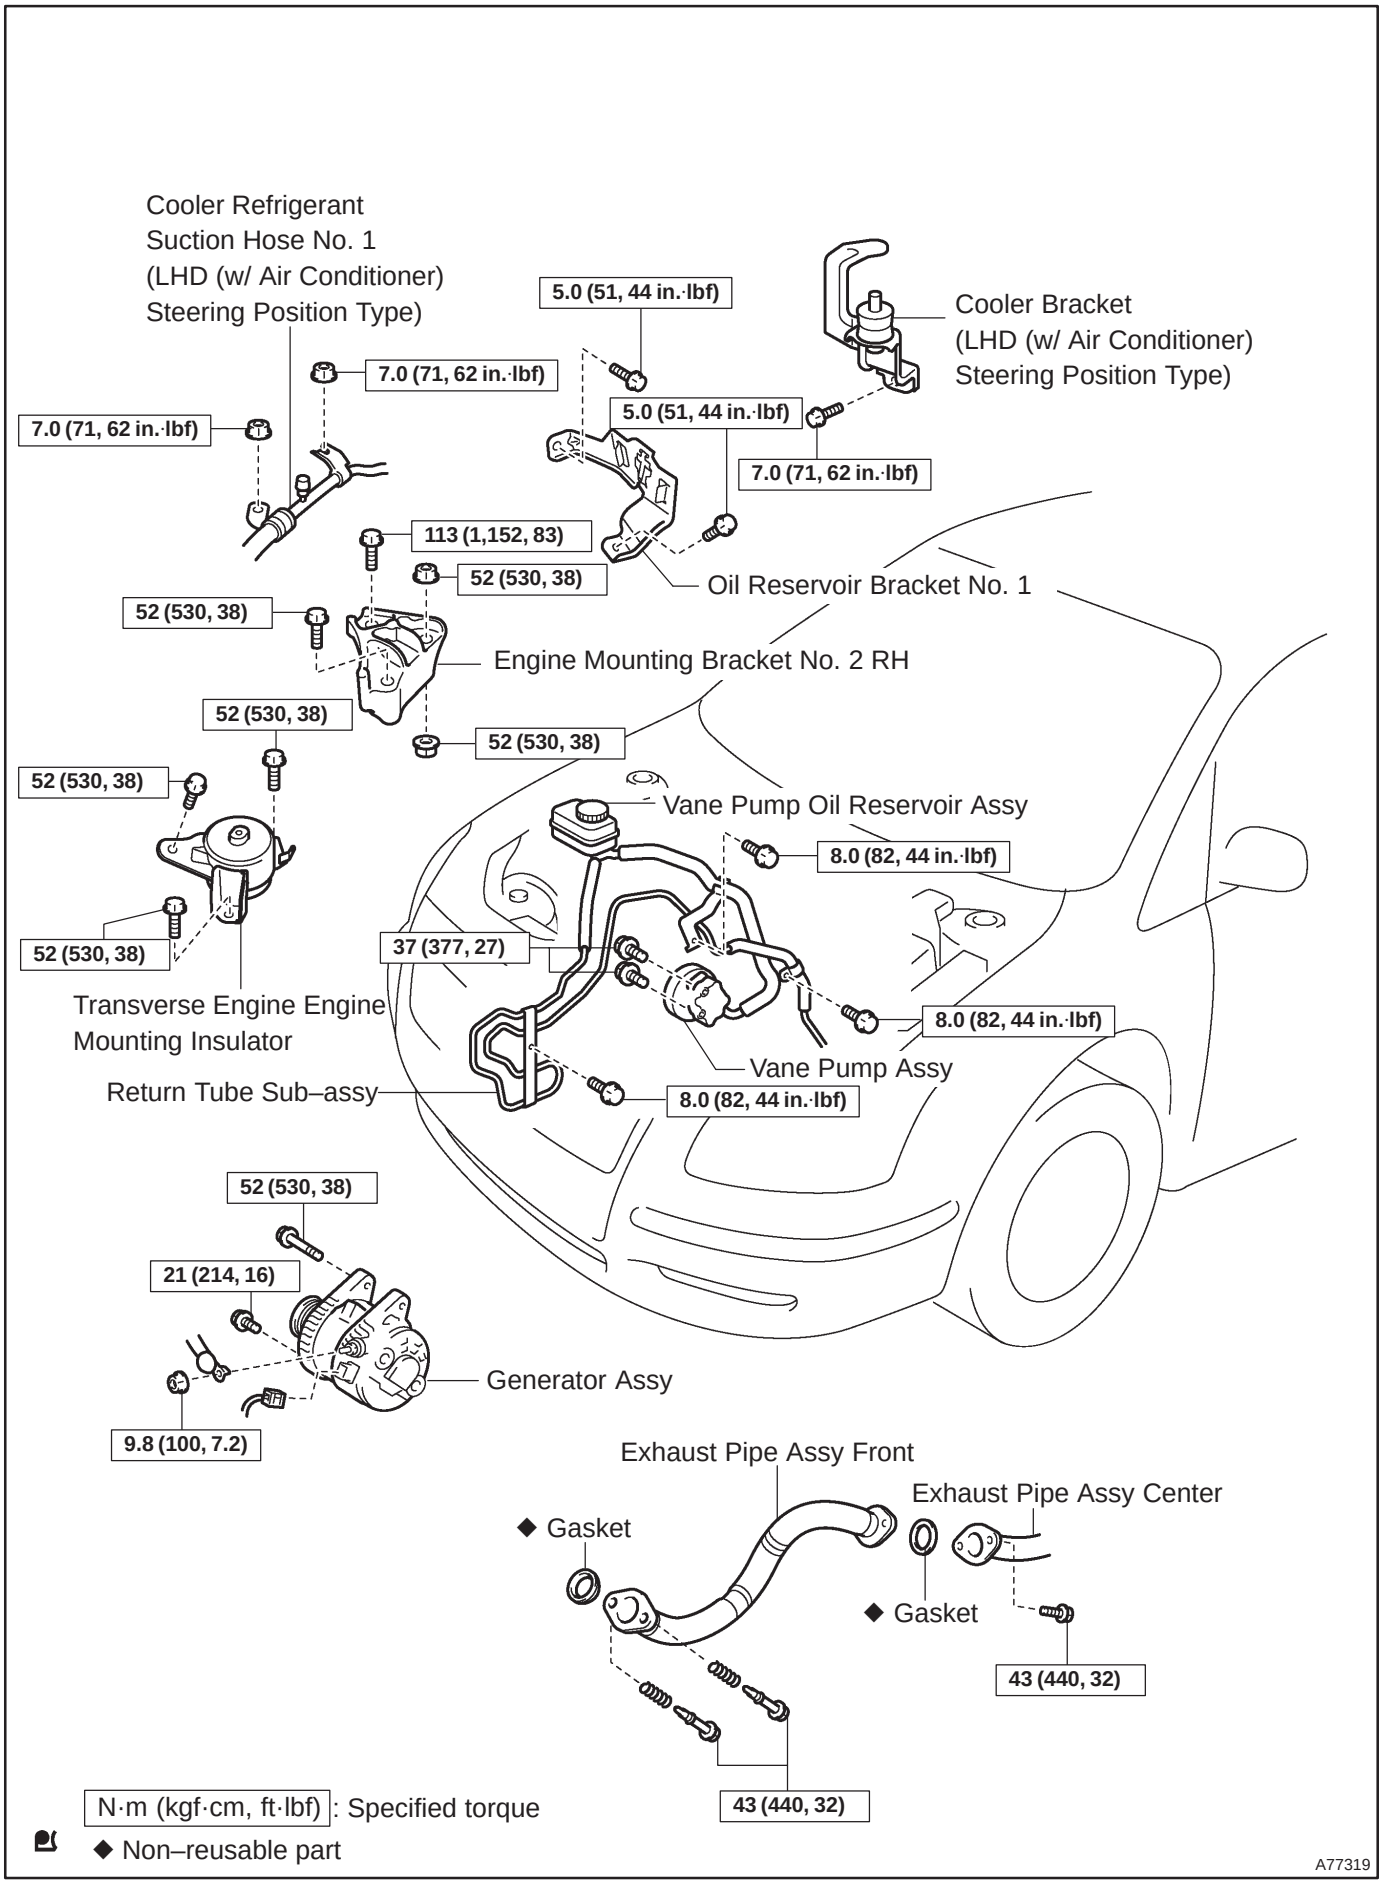
NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 5 minutes after applying seal packing.**
- **Do not expose the seal to engine oil 2 hours after installing.**

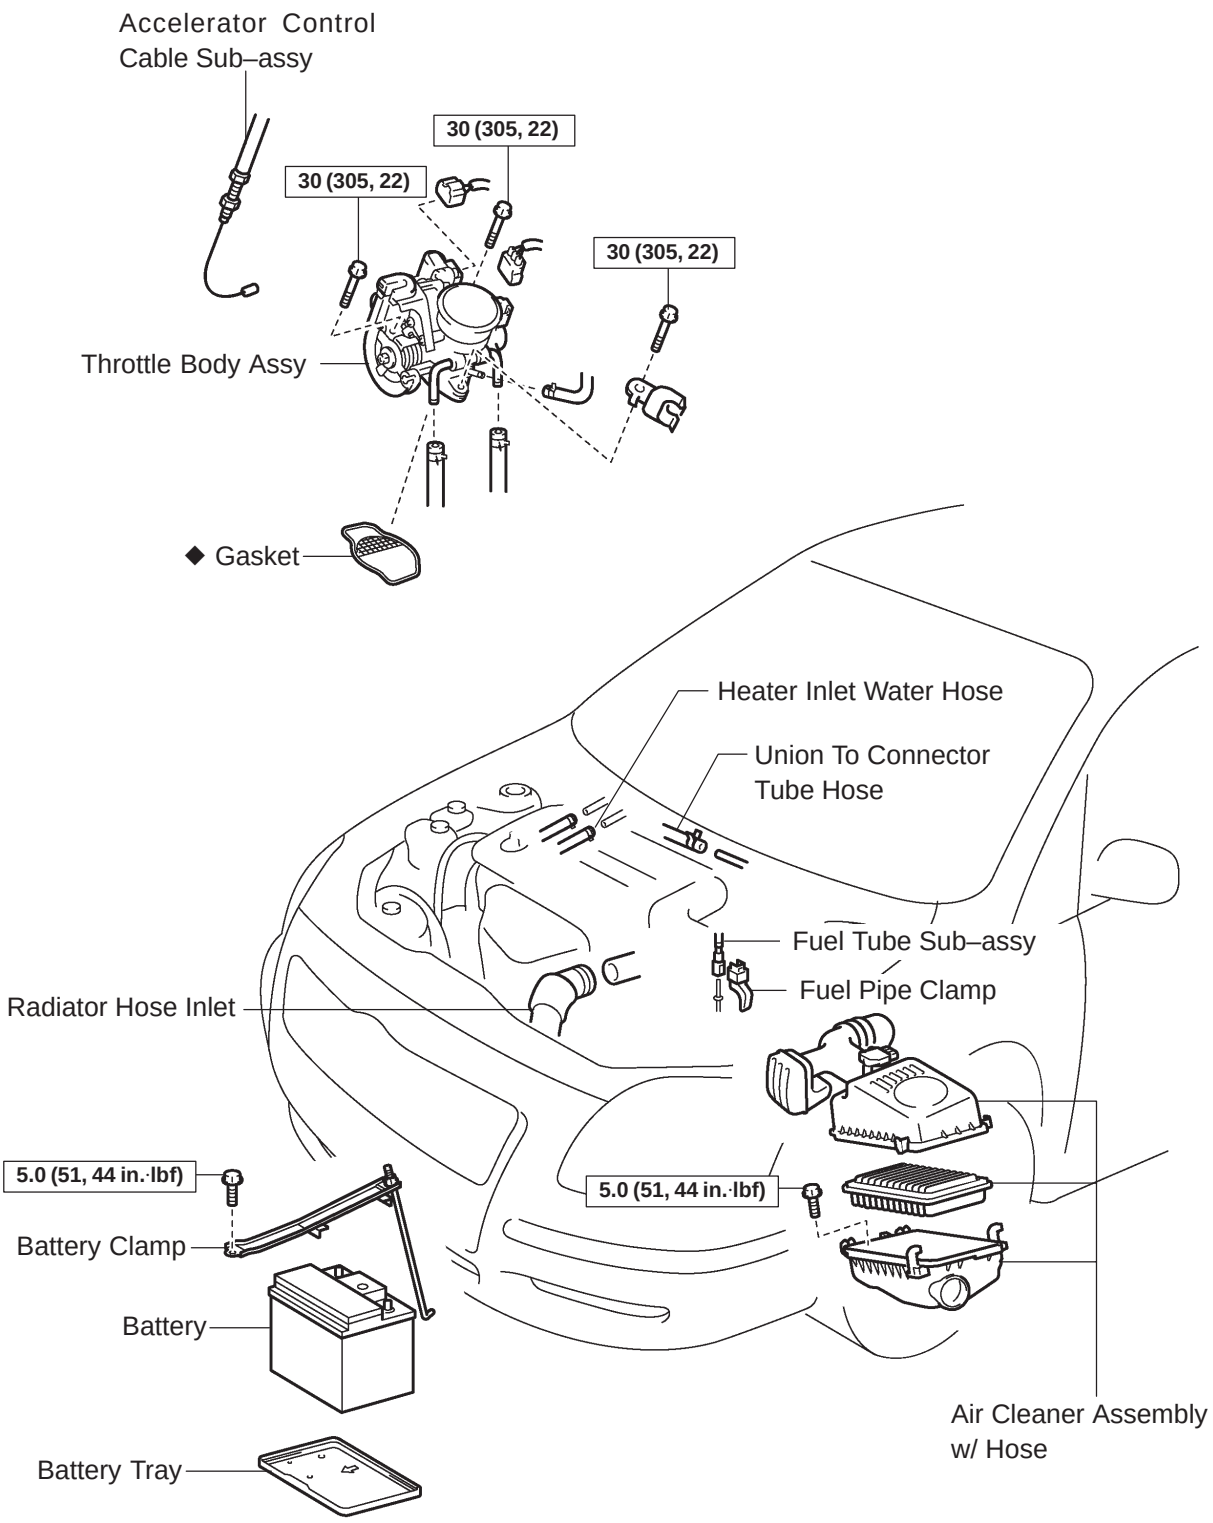
(c) install the cylinder head cover with the 8 bolts and 2 nuts.



Torque:
Bolt A 11 N·m (112 kgf·cm, 8 ft·lbf)
Bolt B 14 N·m (143 kgf·cm, 10 ft·lbf)
Bolt C 21 N·m (214 kgf·cm, 15 ft·lbf)
Nut 11 N·m (112 kgf·cm, 8 ft·lbf)



55. INSTALL ENGINE SERVICE COVER BRACKET RH (W/O AIR CONDITIONING)
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
56. INSTALL COOLER BRACKET (LHD(W/ AIR CONDITIONER) STEERING POSITION TYPE)
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
57. INSTALL ENGINE SERVICE COVER BRACKET RH (RHD(W/ AIR CONDITIONER) STEERING POSITION TYPE)
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
58. INSTALL ENGINE WIRE
Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)
59. INSTALL OIL RESERVOIR BRACKET NO.1
Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)
60. INSTALL COOLER REFRIGERANT SUCTION HOSE NO.1 (LHD(W/ AIR CONDITIONER) STEERING POSITION TYPE)
61. INSTALL RETURN TUBE SUB–ASSY
Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)
62. INSTALL IGNITION COIL ASSY
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
63. INSTALL VANE PUMP ASSY
Torque: 37 N·m (377 kgf·cm, 27 ft·lbf)
64. INSTALL EXHAUST PIPE ASSY FRONT (See page 15–7)
65. INSTALL GENERATOR ASSY (See page 19–20)
66. INSTALL FAN AND GENERATOR V BELT (See page 14–105)
SST 09249–63010
67. ADD ENGINE OIL
68. CHECK FOR ENGINE OIL LEAKS
69. INSTALL ENGINE COVER SUB–ASSY NO.1
Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)
70. INSTALL FRONT WHEEL RH
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)



CYLINDER HEAD GASKET (1AZ–FE)

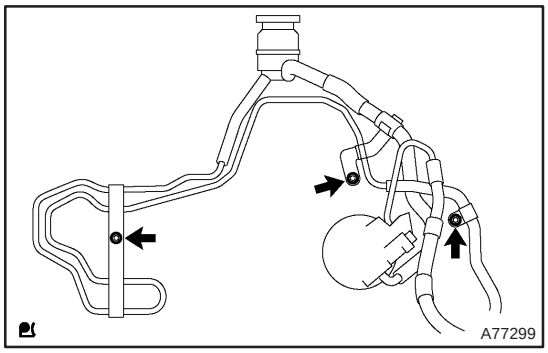
REPLACEMENT

1. **DISCHARGE FUEL SYSTEM PRESSURE (See page 11–15)**
2. **REMOVE FRONT WHEEL RH**
3. **REMOVE RADIATOR SUPPORT OPENING COVER**
4. **REMOVE ENGINE ROOM COVER SIDE**
5. **REMOVE ENGINE UNDER COVER RH**
6. **REMOVE ENGINE UNDER COVER LH**
7. **DRAIN COOLANT (See page 16–19)**
8. **DRAIN ENGINE OIL**

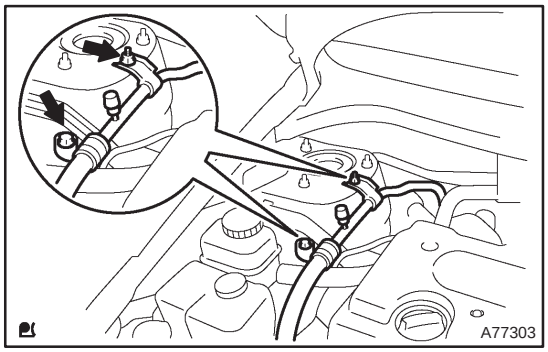
(a) Install a new gasket and the drain plug after draining engine oil.
Torque: 25 N·m (255 kgf·cm, 18 ft·lbf)

9. **REMOVE ENGINE COVER SUB–ASSY NO.1 (See page 14–121)**
10. **REMOVE FAN AND GENERATOR V BELT (See page 14–105)**
SST 09249–63010
11. **REMOVE GENERATOR ASSY (See page 19–20)**
12. **REMOVE EXHAUST PIPE ASSY FRONT (See page 15–7)**



13. **SEPARATE VANE PUMP ASSY**

(a) Remove the 2 bolts and separate the vane pump.

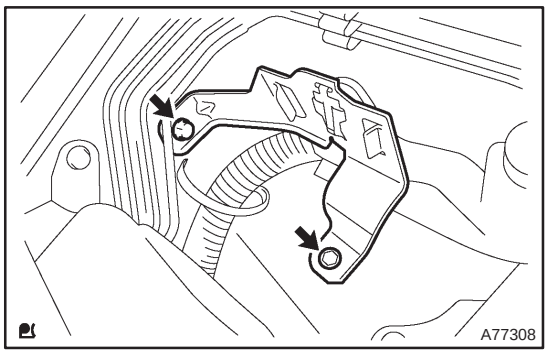


14. **REMOVE IGNITION COIL ASSY**

(a) Remove the 4 bolts and 4 ignition coils.

15. **SEPARATE RETURN TUBE SUB–ASSY**

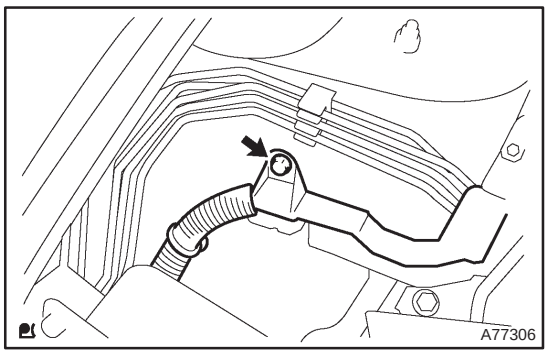
(a) Remove the 3 bolts and separate the return tube as shown in the illustration.



16. SEPARATE COOLER REFRIGERANT SUCTION HOSE NO.1 (LHD(W/ AIR CONDITIONER) STEERING POSITION TYPE)

(a) Remove the 2 nuts and separate the suction hose.

17. SEPARATE VANE PUMP OIL RESERVOIR ASSY

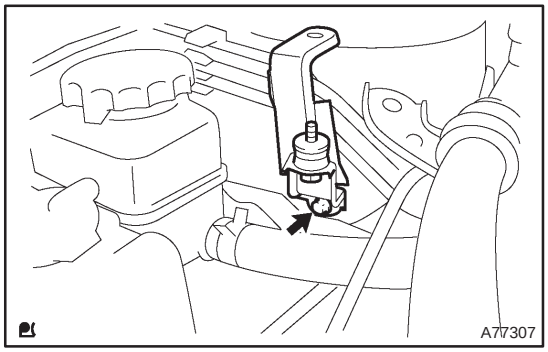


NOTICE:

Do not disconnect the 2 hoses.

18. REMOVE OIL RESERVOIR BRACKET NO.1

(a) Remove the 2 bolts and the oil reservoir bracket No. 1.



19. SEPARATE ENGINE WIRE

(a) Remove the bolt and separate the clamp and the engine wire.

20. REMOVE ENGINE SERVICE COVER BRACKET RH (W/O AIR CONDITIONING)

(a) Remove the bolt and the engine service cover bracket RH.

21. REMOVE COOLER BRACKET (LHD(W/ AIR CONDITIONER) STEERING POSITION TYPE)

(a) Remove the bolt and the cooler hose bracket.

22. REMOVE ENGINE SERVICE COVER BRACKET RH (RHD(W/ AIR CONDITIONER) STEERING POSITION TYPE)

(a) Remove the bolt and the engine service cover bracket RH.

23. REMOVE CYLINDER HEAD COVER SUB–ASSY (See page 14–139)

24. SET NO. 1 CYLINDER TO TDC/COMPRESSION (See page 14–139)

25. REMOVE ENGINE MOUNTING BRACKET NO.2 RH (See page 14–139)

26. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR (See page 14–139)

27. REMOVE CRANKSHAFT PULLEY (See page 14–139)

SST 09213–54015 (91651–60855), 09330–00021, 09950–50013 (09951–05010, 09952–05010, 09953–05020, 09954–05021)

28. REMOVE CHAIN TENSIONER ASSY NO.1 (See page 14–139)

29. REMOVE CRANKSHAFT POSITION SENSOR (See page 18–17)

30. REMOVE OIL PAN SUB–ASSY (See page 14–139)

SST 09032–00100

31. REMOVE V–RIBBED BELT TENSIONER ASSY (See page 14–139)

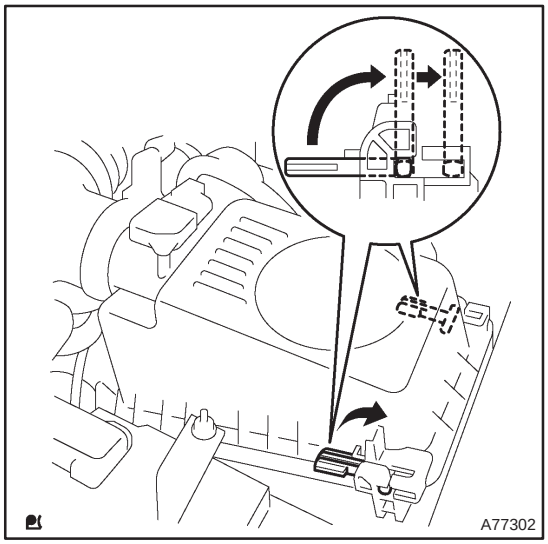
32. REMOVE TIMING CHAIN OR BELT COVER SUB–ASSY (See page 14–139)

33. REMOVE CRANKSHAFT POSITION SENSOR PLATE NO.1

34. REMOVE CHAIN TENSIONER SLIPPER

35. REMOVE CHAIN VIBRATION DAMPER NO.1

36. REMOVE TIMING CHAIN GUIDE (See page 14–139)



37. REMOVE CHAIN SUB–ASSY

38. REMOVE BATTERY

39. REMOVE AIR CLEANER ASSEMBLY WITH HOSE

(a) Disconnect the 2 connectors.

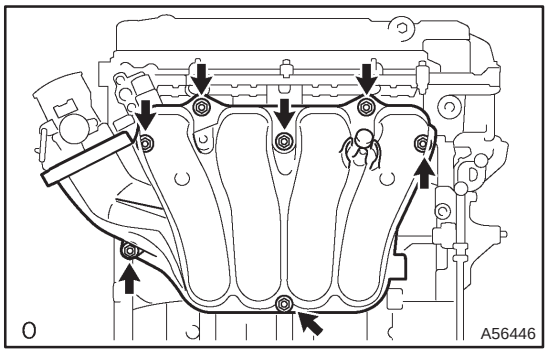
(b) Disconnect the air cleaner hose from the throttle body.

(c) Raise a clamp up, and slide it toward the air cleaner cap, then remove the air cleaner cap from its case.

(d) Remove the air cleaner element.

(e) Remove the 4 bolts and the air cleaner case.

40. DISCONNECT RADIATOR HOSE INLET



41. DISCONNECT UNION TO CONNECTOR TUBE HOSE

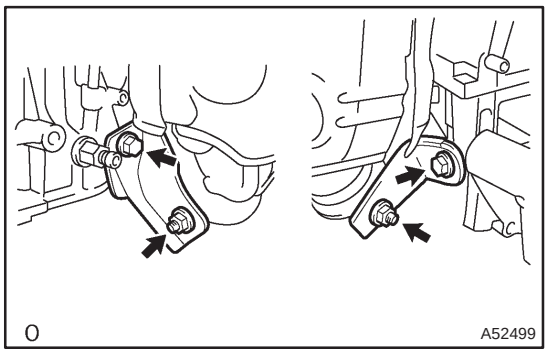
42. DISCONNECT HEATER INLET WATER HOSE (W/ AIR CONDITIONING)

43. SEPARATE FUEL TUBE SUB–ASSY (See page 11–26)

44. SEPARATE ENGINE WIRE

45. REMOVE THROTTLE BODY ASSY (See page 10–26)

46. REMOVE INTAKE MANIFOLD

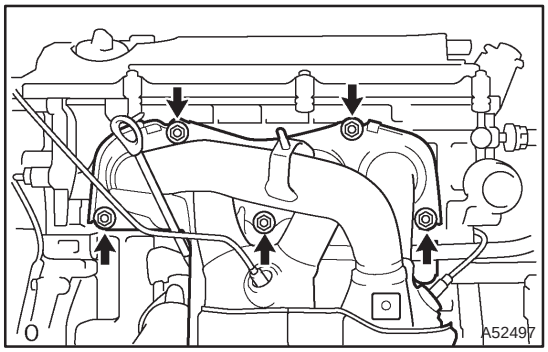


(a) Remove the 5 bolts and 2 nuts, then remove the intake manifold and gasket.

47. REMOVE INTAKE MANIFOLD INSULATOR NO.1

48. REMOVE MANIFOLD CONVERTER INSULATOR NO.1

(a) Disconnect the oxygen sensor connector.

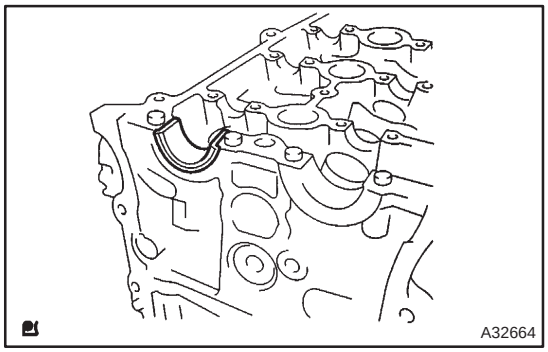


(b) Remove the 2 bolts and nut, and then remove the manifold heat insulator.

49. REMOVE EXHAUST MANIFOLD CONVERTER SUB–ASSY

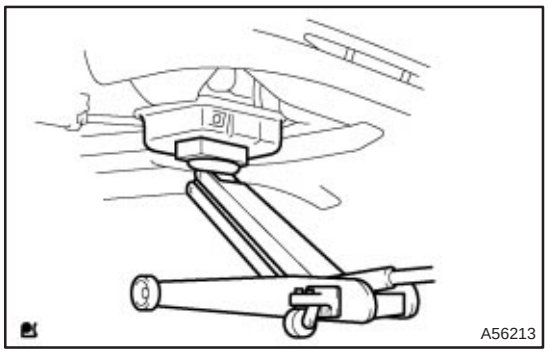
(a) Remove the 2 bolts and 2 nuts, then detach the No. 1 and No. 2 exhaust manifold stay.

(b) Disconnect the 3 oxygen sensor connectors.



(c) Remove the 5 nuts, the exhaust manifold and gasket.

50. REMOVE NO.2 CAMSHAFT (See page 14–171)

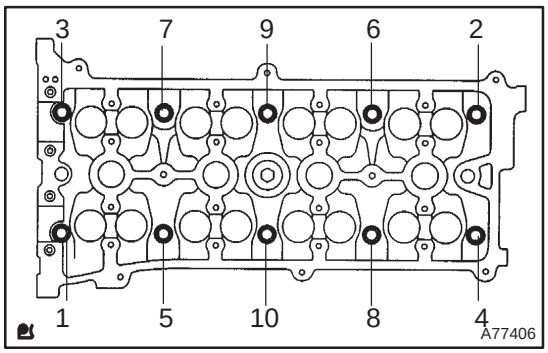


51. REMOVE CAMSHAFT (See page 14–171)

52. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSY (W/ VVT–i)

(a) Remove the bolt and the oil control valve.

53. REMOVE CAMSHAFT BEARING NO.2



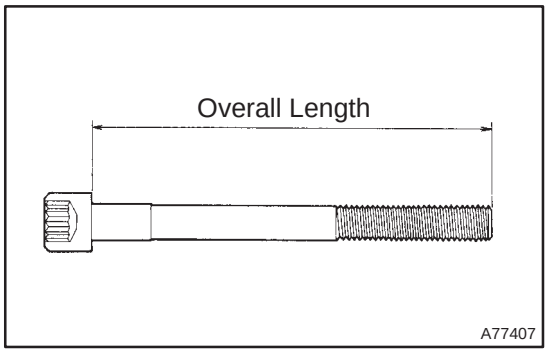
54. SUPPORT ENGINE ASSEMBLY WITH TRANSAXLE

(a) Install the oil pan sub–assy.

(b) Set the jack under the engine assembly w/ transaxle, and place a wooden block on the jack.

(c) Remove the chain block and sling devise.

55. REMOVE CYLINDER HEAD SUB–ASSY



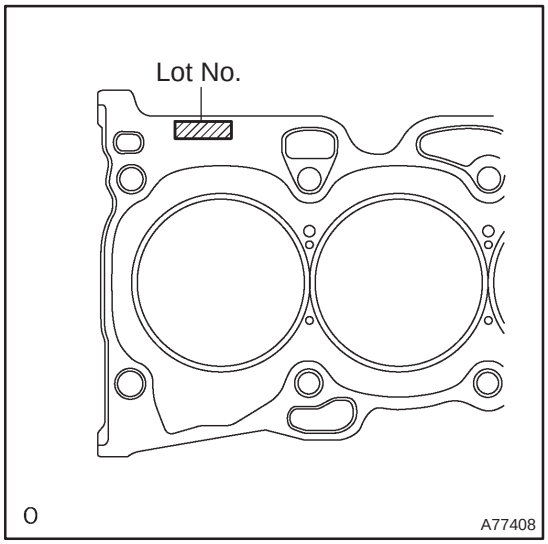
(a) Using several steps, loosen the 10 cylinder head bolts, with 10 mm bi–hexagon wrench uniformly in the sequence shown in the illustration.

(b) Remove the 10 cylinder head bolts and plate washers.

NOTICE:

- **Be careful not to drop washers into the cylinder head.**
- **Head warpage or cranking could result from removing bolts and installing in incorrect order.**

56. REMOVE CYLINDER HEAD GASKET



57. INSPECT CYLINDER HEAD SET BOLT

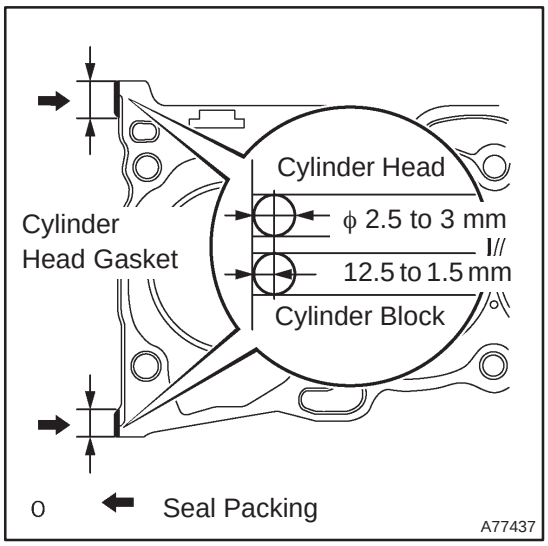
(a) Using a vernier calipers, measure the length of the cylinder head set bolts from the seat to the end.

Standard bolt length:
161.3 to 162.3 mm (6.350 to 6.390 in.)
Maximum bolt length: 164.2 mm (6.465 in.)

If the length is greater than maximum, replace the cylinder head set bolts.

58. INSTALL CYLINDER HEAD GASKET

(a) Place a new cylinder head gasket on the cylinder block surface with the Lot No. stamp upward.



NOTICE:

- **Remove any oil from contact surface.**
- **Be careful of the installation direction.**
- **Place the cylinder head gently in order not to damage the gasket with the bottom part of the head.**

59. INSTALL CYLINDER HEAD SUB–ASSY

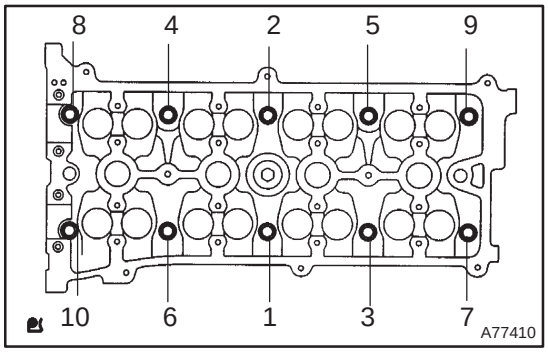
HINT:

The cylinder head set bolts are tightened in 2 successive steps.

(a) Apply a continuous bead (Diameter 2.5 to 3 mm (0.098 to 0.118 in.)) of seal packing as shown in the illustration.

Seal packing: Part No. 08826–00080 or equivalent

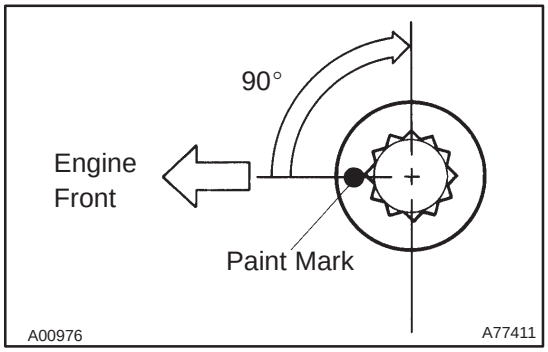
NOTICE:



- **Remove any oil from contact surface.**
- **Install the cylinder head within 3 minutes after applying seal packing.**
- **After installing the cylinder head, cylinder head bolts must be tightened within 15 minutes.**
- **Do not start the engine within 2 hours after installing.**

(b) Apply a light coat of engine oil on the threads of the cylinder head bolts.

(c) Install the bolts and plate washers to the cylinder head.



NOTICE:

Do not drop the washers into the cylinder head.

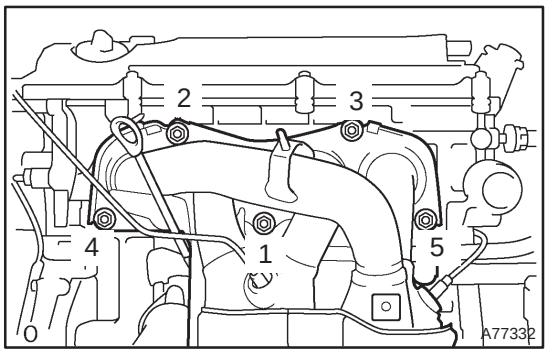
(d) Using several steps, install and tighten the 10 cylinder head bolts and plate washers with a 10 mm bi–hexagon wrench uniformly, in the sequence shown in the illustration.

Torque: 79 N·m (806 kgf·cm, 58 ft·lbf)

(e) Mark the front side of the cylinder head set bolts with paint.

(f) Retighten the cylinder head set bolts by 90° in the same sequence as step (A).

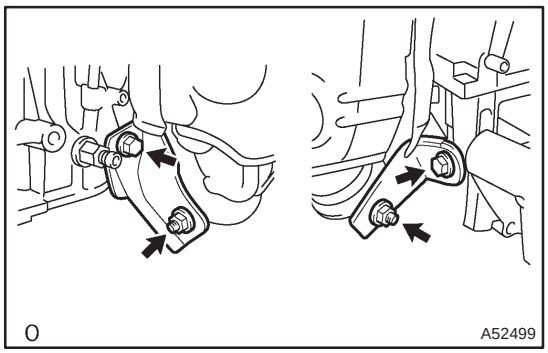
(g) Check that each paint mark is now at a 90° angle to the front.



60. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSY (W/ VVT–i)

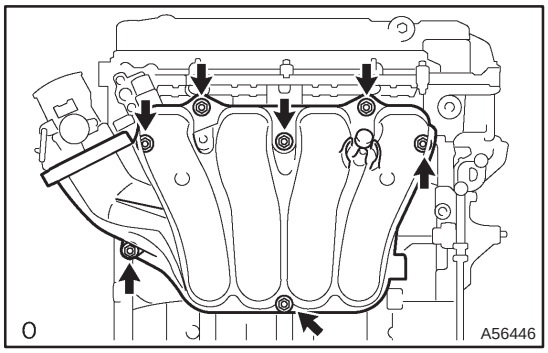
(a) Install a light coat of the engine oil to the new O–ring and install it to the oil control valve.

(b) Install the oil control valve with the bolt.
Torque: 9.0 N·m (92 kgf·cm, 79 in.·lbf)



61. INSTALL CAMSHAFT (See page 14–171)

62. INSTALL NO.2 CAMSHAFT (See page 14–171)



63. INSTALL EXHAUST MANIFOLD CONVERTER SUB–ASSY

(a) Install a new gasket and the exhaust manifold with the 5 nuts.
Torque: 37 N·m (378 kgf·cm, 27 ft·lbf)

(b) Install the No. 1 and No. 2 exhaust manifold stay with the 2 bolts and 2 nuts.
Torque: 44 N·m (449 kgf·cm, 32 ft·lbf)

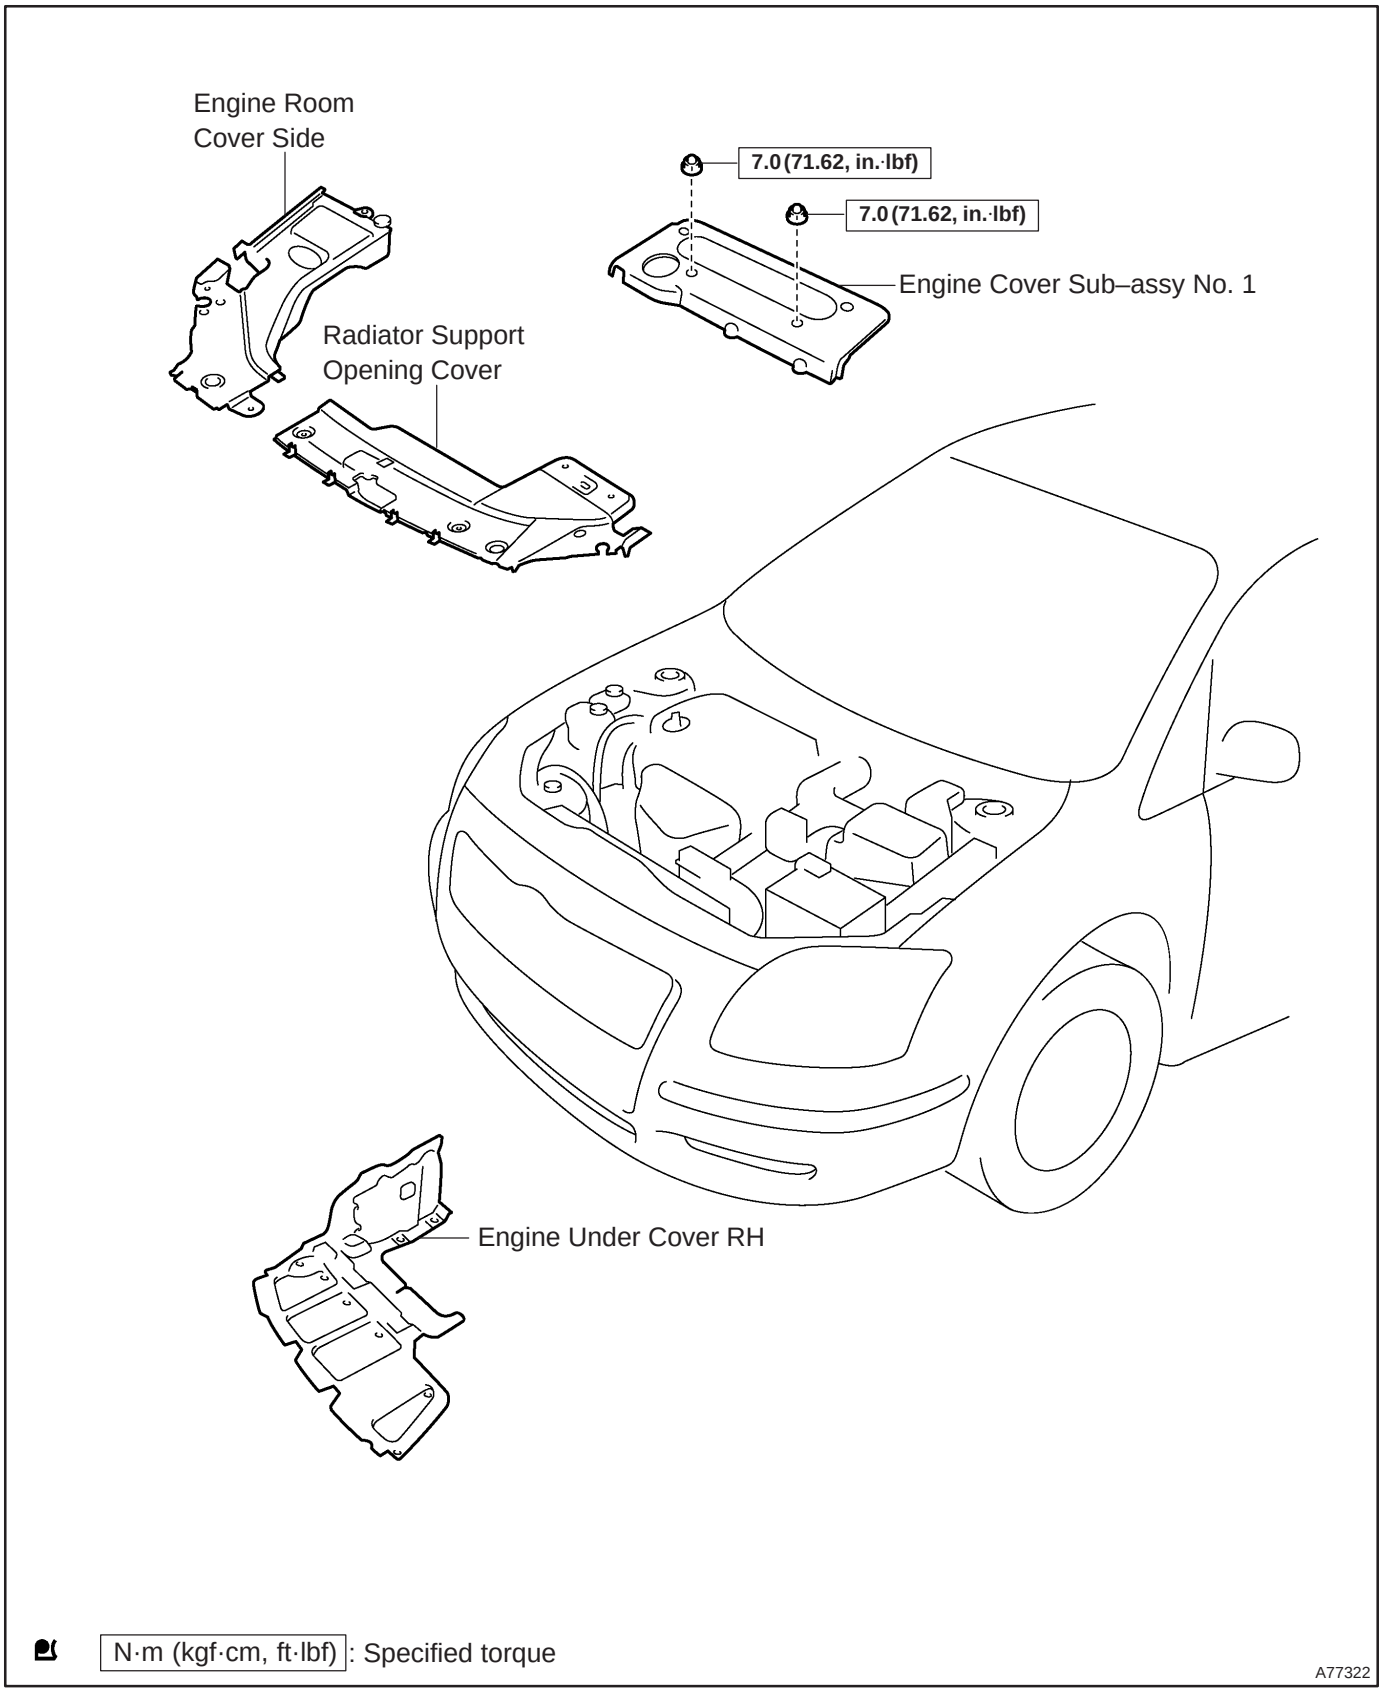
64. INSTALL EXHAUST MANIFOLD HEAT INSULATOR NO.1
Torque: 12 N·m (122 kgf·cm, 9.0 ft·lbf)

65. INSTALL INTAKE MANIFOLD

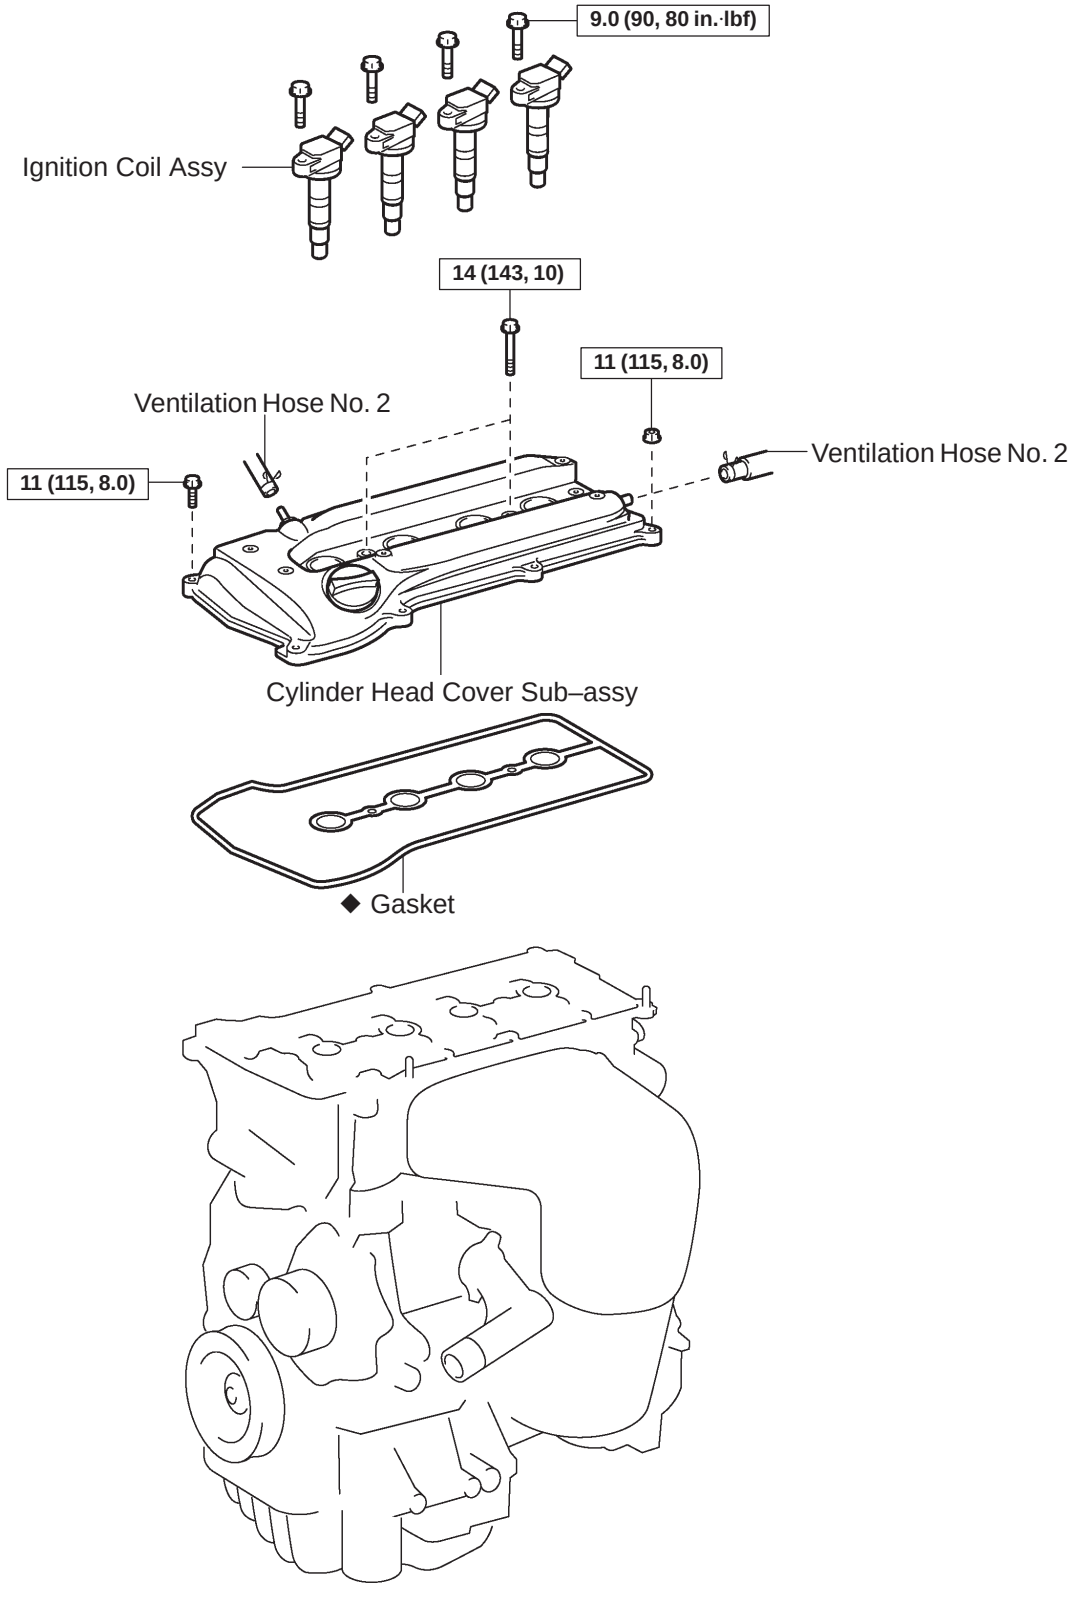
(a) Install a new gasket and the intake manifold with the 5 bolts and 2 nuts.
Torque: 30 N·m (306 kgf·cm, 22 ft·lbf)

66. INSTALL THROTTLE BODY ASSY (See page 10–26)

67. INSTALL FUEL TUBE SUB–ASSY (See page 11–19)



68. INSTALL AIR CLEANER ASSEMBLY WITH HOSE
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)



69. **INSTALL CHAIN VIBRATION DAMPER NO.1**
    Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
70. **INSTALL CHAIN SUB–ASSY (See page 14–139)**
71. **INSTALL TIMING CHAIN GUIDE**
    Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
72. **INSTALL CHAIN TENSIONER SLIPPER**
    Torque: 19 N·m (195 kgf·cm, 15 ft·lbf)
73. **INSTALL CRANKSHAFT POSITION SENSOR PLATE NO.1 (See page 14–171)**
74. **INSTALL TIMING CHAIN OR BELT COVER SUB–ASSY (See page 14–139)**
75. **INSTALL V–RIBBED BELT TENSIONER ASSY (See page 14–139)**
76. **INSTALL OIL PAN SUB–ASSY (See page 14–139)**
77. **INSTALL CRANKSHAFT POSITION SENSOR (See page 18–17)**
78. **INSTALL CRANKSHAFT PULLEY (See page 14–139)**
    SST 09213–54015 (91651–60855), 09330–00021
79. **INSTALL CHAIN TENSIONER ASSY NO.1 (See page 14–139)**
80. **INSTALL TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR**
    Torque: 52 N·m (530 kgf·cm, 38 ft·lbf)
81. **INSTALL ENGINE MOUNTING BRACKET NO.2 RH (See page 14–139)**
82. **INSTALL CYLINDER HEAD COVER SUB–ASSY (See page 14–139)**
83. **INSTALL ENGINE SERVICE COVER BRACKET RH (W/O AIR CONDITIONING)**
    Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
84. **INSTALL COOLER BRACKET (LHD(W/ AIR CONDITIONER) STEERING POSITION TYPE)**
    Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
85. **INSTALL ENGINE SERVICE COVER BRACKET RH (RHD(W/ AIR CONDITIONER) STEERING POSITION TYPE)**
    Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
86. **INSTALL ENGINE WIRE**
87. **INSTALL OIL RESERVOIR BRACKET NO.1**
    Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)
88. **INSTALL COOLER REFRIGERANT SUCTION HOSE NO.1 (LHD(W/ AIR CONDITIONER) STEERING POSITION TYPE)**
89. **INSTALL RETURN TUBE SUB–ASSY**
    Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)
90. **INSTALL IGNITION COIL ASSY**
    Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
91. **INSTALL ENGINE COVER SUB–ASSY NO.1**
    Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)
92. **INSTALL VANE PUMP ASSY**
    Torque: 37 N·m (377 kgf·cm, 27 ft·lbf)
93. **INSTALL EXHAUST PIPE ASSY FRONT (See page 15–7)**
94. **INSTALL GENERATOR ASSY (See page 19–20)**
95. **INSTALL FAN AND GENERATOR V BELT (See page 14–105)**
    SST 09249–63010
96. **ADD COOLANT (See page 16–19)**
97. **ADD ENGINE OIL**
98. **CHECK FOR ENGINE COOLANT LEAKS (See page 16–13)**
99. **CHECK FOR ENGINE OIL LEAKS**
100. **CHECK FOR FUEL LEAKS**
101. **INSTALL FRONT WHEEL RH**
     Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

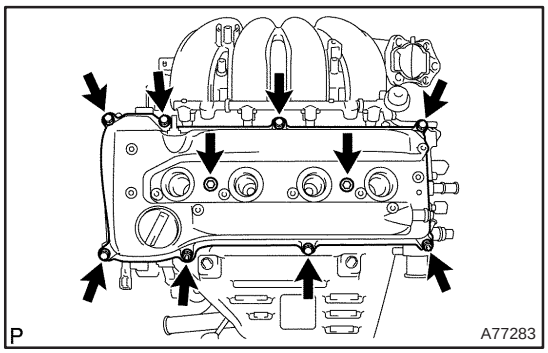
REPLACEMENT

1. REMOVE RADIATOR SUPPORT OPENING COVER

2. REMOVE ENGINE ROOM COVER SIDE

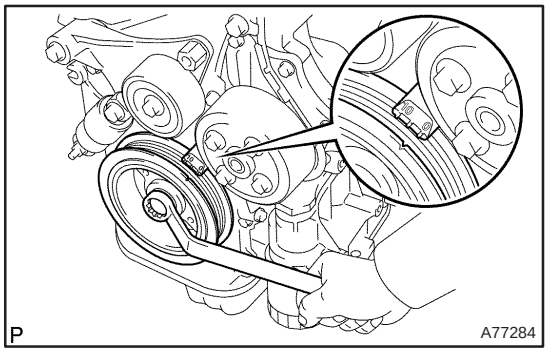
3. REMOVE ENGINE UNDER COVER RH



4. REMOVE ENGINE COVER SUB–ASSY NO.1

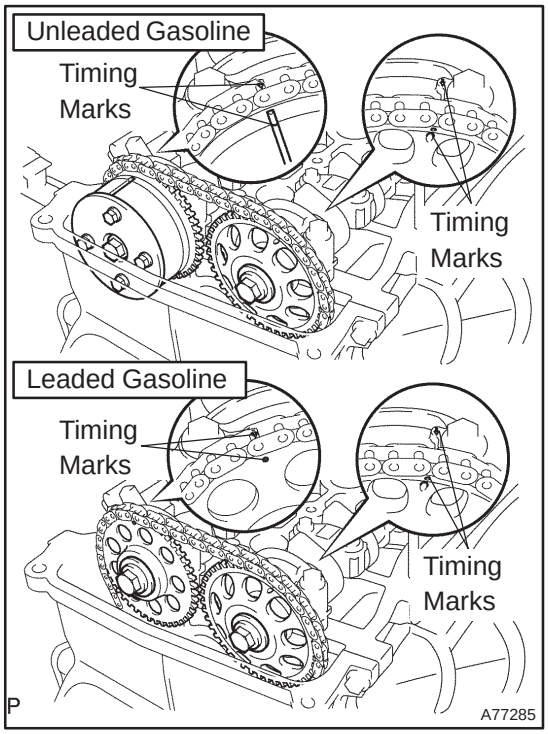
(a) Remove the 2 nuts and the engine cover No. 1.

5. REMOVE IGNITION COIL ASSY



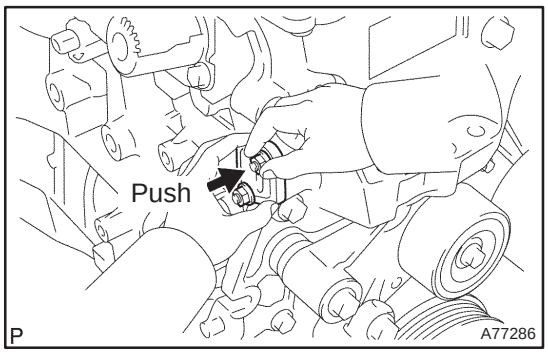
(a) Remove 4 bolts and the ignition coils.

6. REMOVE CYLINDER HEAD COVER SUB–ASSY



(a) Disconnect the 2 PCV hoses from the cylinder head cover.

(b) Remove the 8 bolts and 2 nuts, and then remove the cylinder head cover and gasket.

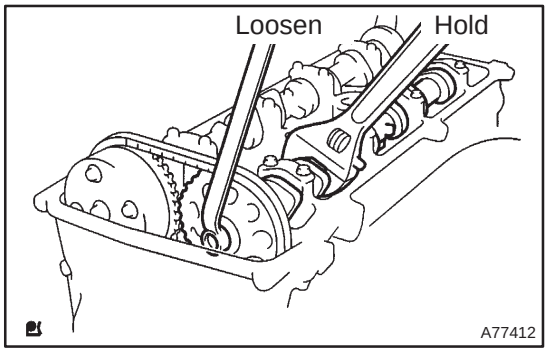


7. SET NO. 1 CYLINDER TO TDC/COMPRESSION

(a) Turn the crankshaft pulley, and align its timing notch with timing mark 0 of the timing chain cover.

(b) Check that each timing mark of the camshaft timing gears is aligned with each timing mark located on the No. 1 and No. 2 bearing caps as shown in the illustration.

If not, turn the crankshaft 1 revolution (360°) and align the marks as above.

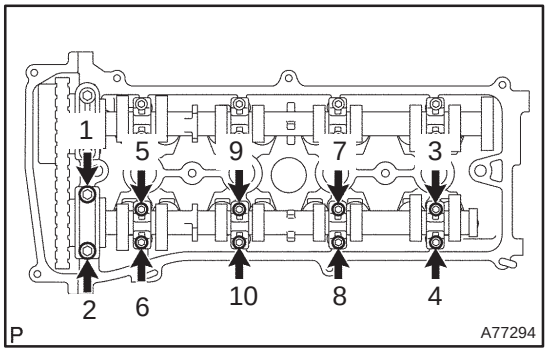


8. REMOVE CHAIN TENSIONER ASSY NO.1

(a) Remove the 2 nuts, then remove the chain tensioner and a gasket.

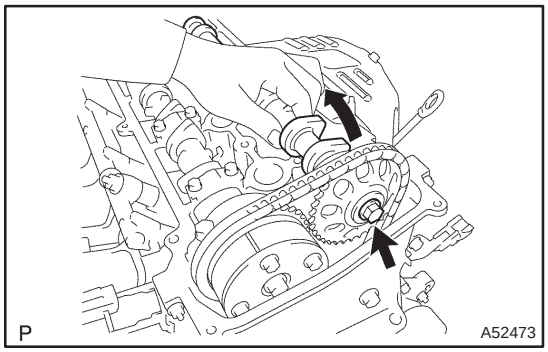
NOTICE:

Do not turn the crankshaft.



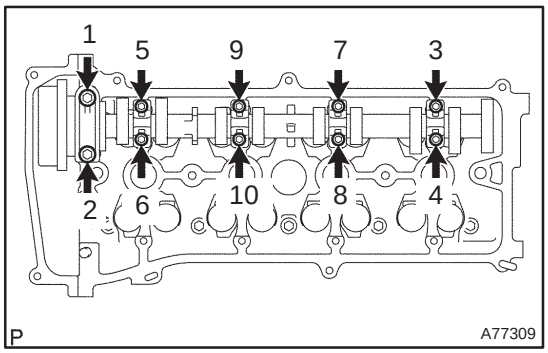
9. REMOVE NO.2 CAMSHAFT

(a) Hold the No. 2 camshaft with a wrench on the hexagonal lobe, and loosen the camshaft timing gear set bolt.



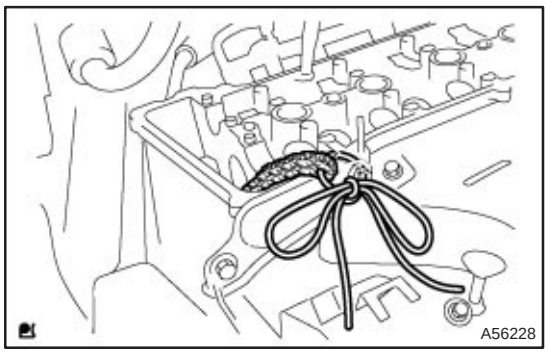
NOTICE:

Be careful not to damage the cylinder head and valve lifter with the wrench.



(b) Using several steps, loosen and remove the 10 camshaft bearing cap bolts uniformly in the sequence shown in the illustration.

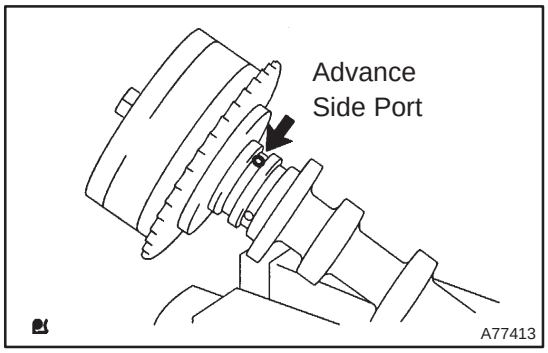
(c) Remove the 5 camshaft bearing caps.



(d) Raising the No. 2 camshaft, remove the set bolt.
(e) Remove the camshaft timing gear from the No. 2 camshaft with the timing chain wrapped.
(f) Remove the camshaft timing gear from the timing chain.

10. REMOVE CAMSHAFT

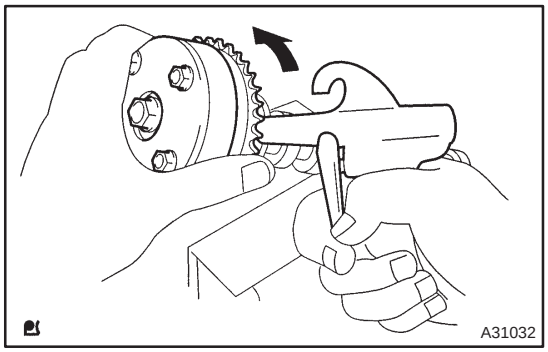
(a) Using several steps, loosen and remove the 10 camshaft bearing cap bolts uniformly in the sequence shown in the illustration.
(b) Remove the 5 camshaft bearings.
(c) Remove the camshaft.



(d) Tie the timing chain as shown in the illustration.

NOTICE:

- **Be careful not to drop anything inside the timing chain cover.**
- **Do not expose the chain to water, and prevents dust.**

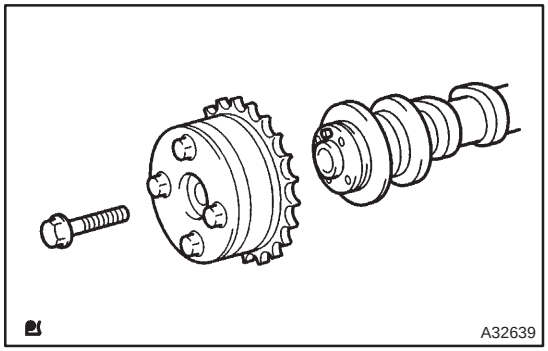


11. REMOVE CAMSHAFT TIMING GEAR OR SPROCKET (LEADED GASOLINE)

(a) Clamp the camshaft in a vise and remove the bolt and the camshaft timing gear.

12. REMOVE CAMSHAFT TIMING GEAR ASSY (UNLEADED GASOLINE)

(a) Fix the camshaft with a vise, and make sure the camshaft timing gear does not rotate.
(b) Cover all the oil ports with vinyl tape except an advance side port shown in the illustration.



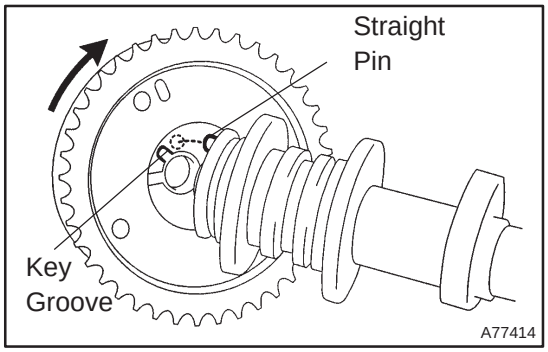
(c) Put air pressure into the oil port with 150 kpa (1.5 kgf/cm^2 21 psi), and turn the camshaft timing gear to the advance direction (counterclockwise) by hand.

CAUTION:

Cover the paths with shop rag to avoid oil splashing.

HINT:

Depending on the air pressure, the camshaft timing gear will turn to the advance angle side without applying force by hand. Also, under the condition that the pressure can be hardly applied because of the air leakage from the port, there may be the case that the lock pin could be hardly released.



(d) Remove the fringe bolt of camshaft timing gear.

NOTICE:

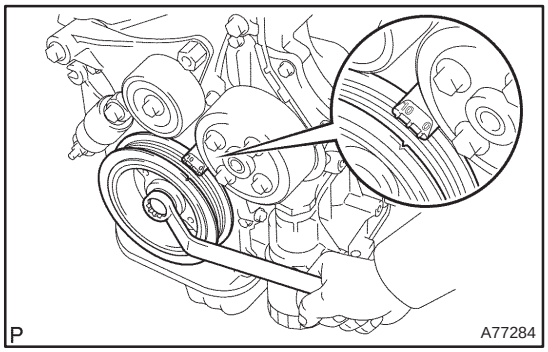
- **Be sure not to remove the other 4 bolts.**
- **If reusing the camshaft timing gear, release the straight pin lock first, and then install the gear.**

13. INSTALL CAMSHAFT TIMING GEAR OR SPROCKET (LEADED GASOLINE)
Torque: 54 N·m (551 kgf·cm, 40 ft·lbf)

14. INSTALL CAMSHAFT TIMING GEAR ASSY (UNLEADED GASOLINE)

(a) Put the camshaft timing gear and the camshaft together with the straight pin off the key groove.

(b) Turn the camshaft timing gear assembly to the left direction (as shown in the illustration) while lightly pushing it toward the camshaft. Push further at the position where the pin gets into the groove.

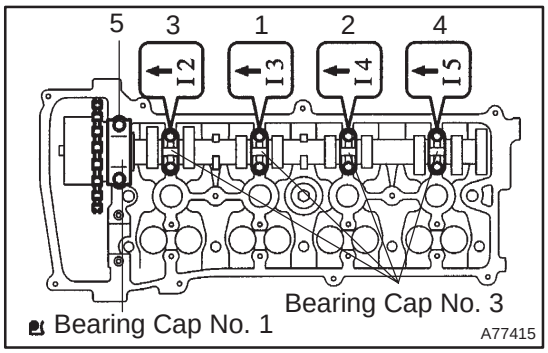


NOTICE:

Be sure not to turn the camshaft timing gear to the retard angle side (to the right direction).

(c) Check that there is no clearance between the gear's fringe and the camshaft.

(d) Tighten the fringe bolt with the camshaft timing gear fixed.
Torque: 54 N·m (551 kgf·cm, 40 ft·lbf)

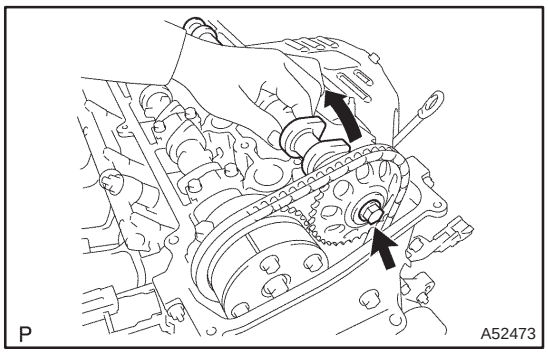


(e) Check that the camshaft timing gear can move to the retard angle side (to the right direction), and is locked at the most retarded position.

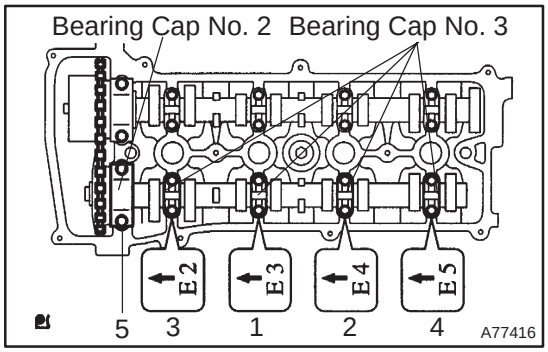
15. INSTALL CAMSHAFT

(a) Turn the crankshaft pulley, and align its groove with timing mark 0 of the timing chain cover.

(b) Install the timing chain on the camshaft timing gear, with the painted links aligned with the timing marks on the camshaft timing gear.



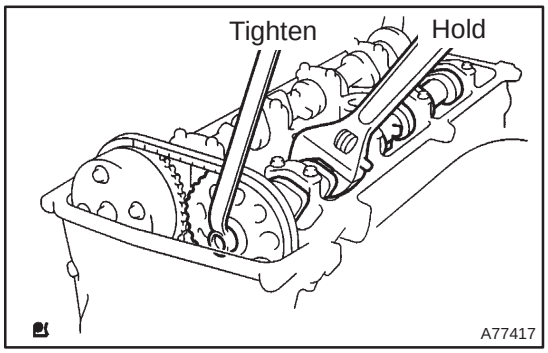
(c) Examine the front marks and numbers and tighten the bolts in the sequence shown in the illustration.



Torque:
Bearing cap No. 1 30 N·m (301 kgf·cm, 22 ft·lbf)
Bearing cap No. 3 9.0 N·m (92 kgf·cm, 80 in.·lbf)

16. INSTALL NO.2 CAMSHAFT

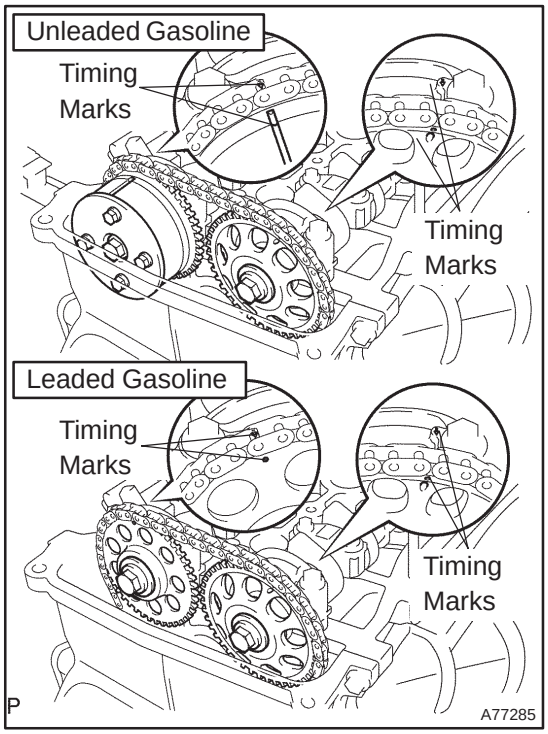
(a) Put the No. 2 camshaft on the cylinder head with the painted links of the chain aligned with the timing mark on the camshaft timing gear.



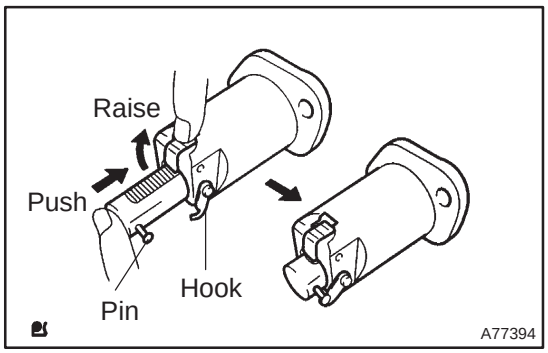
(b) Raising the No. 2 camshaft, tighten the set bolt temporarily.

(c) Examine the from marks and numbers and tighten the bolts in the sequence shown in the illustration.

Torque:
Bearing cap No. 2 30 N·m (301 kgf·cm, 22 ft·lbf)
Bearing cap No. 3 9.0 N·m (92 kgf·cm, 80 in.·lbf)



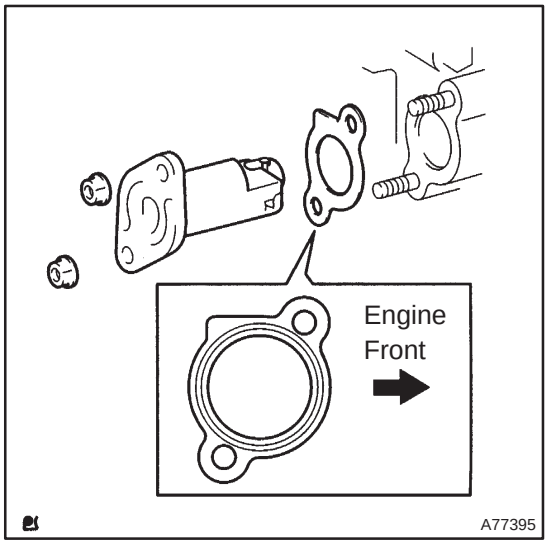
(d) Hold the camshaft with a wrench on the hexagonal lobe, and tighten the camshaft timing gear set bolt.



Torque: 54 N·m (551 kgf·cm, 40 ft·lbf)

NOTICE:

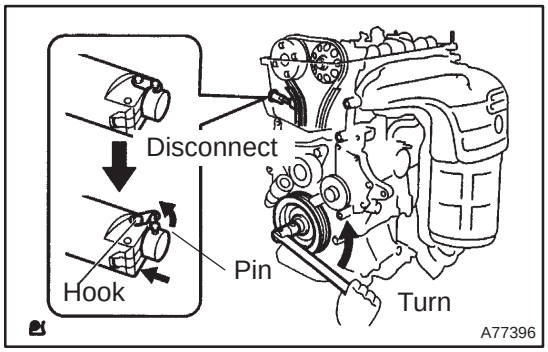
Be careful not to damage the cylinder head and valve lifter.



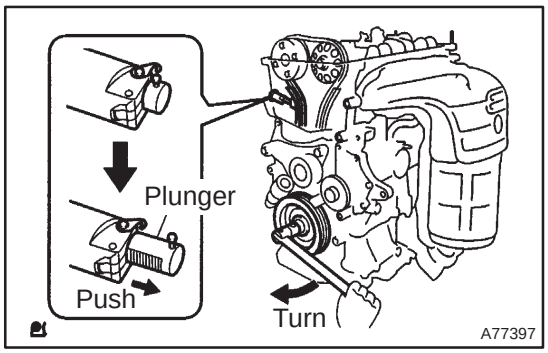
(e) Check that the match marks on the timing chain and the camshaft timing gears are positioned as shown in the illustration.

17. INSTALL CHAIN TENSIONER ASSY NO.1

(a) Release the ratchet pawl, fully push in the plunger and apply the hook to the pin so that the plunger is locked in position.



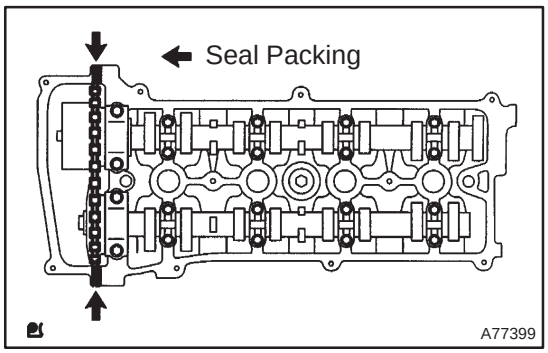
(b) Install a new gasket and the chain tensioner No. 1 with the 2 nuts.



Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

NOTICE:

If the hook is disengaged while installing, apply the hook again, and then resume the installation.

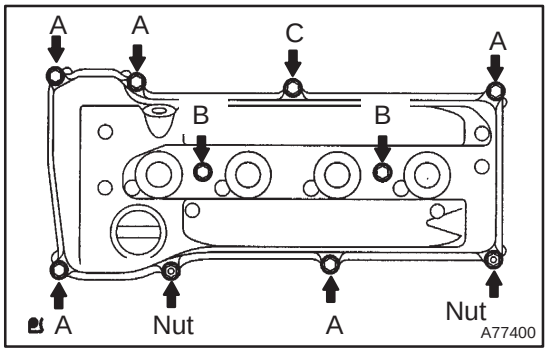


(c) Turn the crankshaft counterclockwise, and check that the pin is disengaged from the hook.

(d) Turn the crankshaft clockwise, and check the plunger is extended.

18. INSTALL CYLINDER HEAD COVER SUB–ASSY

(a) Remove any old seal packing (FIPG) material.



(b) Apply seal packing to the 2 locations as shown in the illustration.

Seal Packing: Part No. 08826–00080 or equivalent

NOTICE:

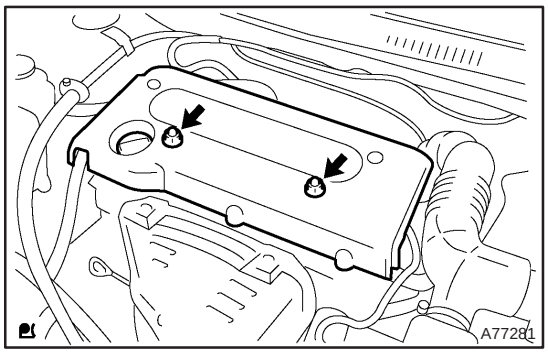
- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 5 minutes after applying seal packing.**
- **Do not expose the seal to engine oil 2 hours after installing.**

(c) Install the cylinder head cover with the 8 bolts and 2 nuts.

Torque:
Bolt A 11 N·m (112 kgf·cm, 8.0 ft·lbf)
Bolt B 14 N·m (143 kgf·cm, 10 ft·lbf)
Bolt C 21 N·m (214 kgf·cm, 15 ft·lbf)
Nut 11 N·m (112 kgf·cm, 8.0 ft·lbf)

19. INSTALL IGNITION COIL ASSY
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

20. CHECK FOR ENGINE OIL LEAKS



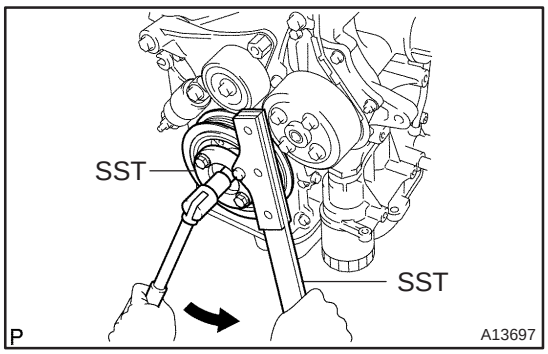
21. INSTALL ENGINE COVER SUB–ASSY NO.1
Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)

TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL (1AZ–FE)

141BH–01

REPLACEMENT

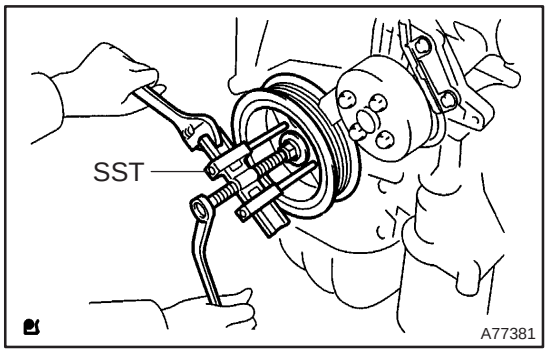
1. REMOVE FRONT WHEEL RH
2. REMOVE RADIATOR SUPPORT OPENING COVER
3. REMOVE ENGINE ROOM COVER SIDE
4. REMOVE ENGINE UNDER COVER RH



5. REMOVE ENGINE COVER SUB–ASSY NO.1

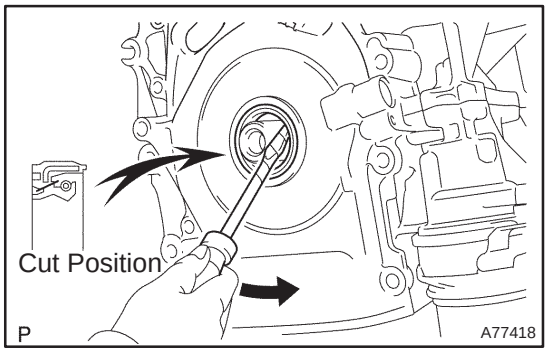
(a) Remove the 2 nuts and the engine cover No. 1.

6. REMOVE FAN AND GENERATOR V BELT (See page 14–105)



SST 09249–63010

7. REMOVE CRANKSHAFT PULLEY

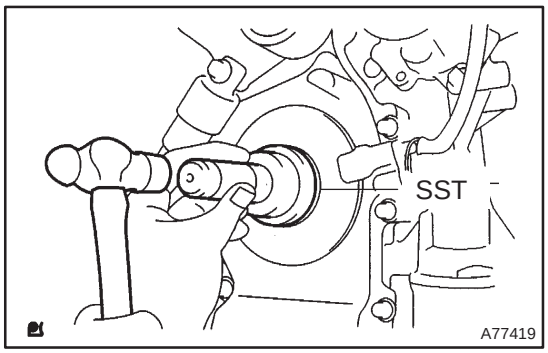


(a) Using SST, loosen the pulley bolt.

SST 09213–54015 (91651–60855), 09330–00021,

(b) Using SST, remove the crankshaft pulley.

SST 09950–50013 (09951–05010, 09952–05010, 09953–05020, 09954–05021)



8. REMOVE TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL

(a) Using a screwdriver with tip wrapped in the tape, pry out the oil seal.

HINT:

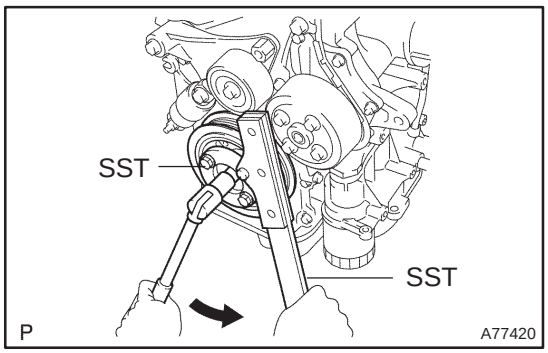
After removal, check if the crankshaft is not damaged.

If it is damaged, smooth the surface with 400–grit sandpaper.

9. INSTALL TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL

(a) Apply MP grease to a new oil seal lip.

NOTICE:



Keep the lip off foreign materials.

(b) Using SST and a hammer, tap in the oil seal until its surface is flush with the rear oil seal retainer edge.

SST 09223–22010

NOTICE:

Wipe off extra grease on the crankshaft.

10. INSTALL CRANKSHAFT PULLEY

(a) Align the pulley set key with the key groove of the pulley.

(b) Using SST, install the pulley bolt.

SST 09213–54015 (91651–60855), 09330–00021

Torque: 170 N·m (1,733 kgf·cm, 125 ft·lbf)

11. INSTALL FAN AND GENERATOR V BELT (See page 14–105)

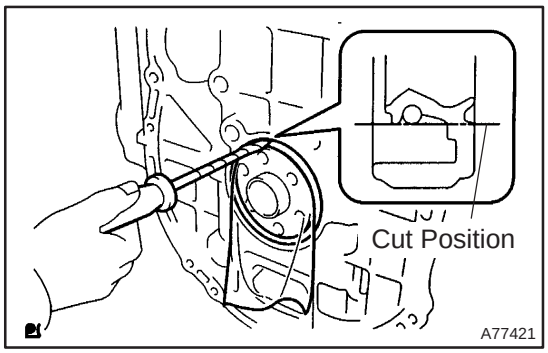
SST 09249–63010

12. INSTALL ENGINE COVER SUB–ASSY NO.1

Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)

13. INSTALL FRONT WHEEL RH

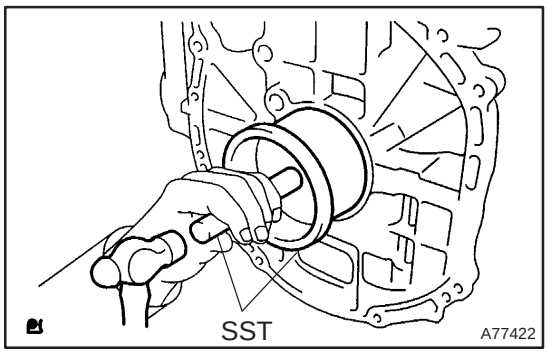
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)



14. CHECK FOR ENGINE OIL LEAKS

ENGINE REAR OIL SEAL (1AZ–FE)

141BI–01



REPLACEMENT

1. **REMOVE MANUAL TRANSAXLE ASSY (M/T TRANSAXLE) (See page 41–24)**
2. **REMOVE AUTOMATIC TRANSAXLE ASSY (A/T TRANSAXLE) (See page 40–25)**
3. **REMOVE CLUTCH COVER ASSY (M/T TRANSAXLE) (See page 42–26)**
4. **REMOVE DRIVE PLATE AND RING GEAR OR FLYWHEEL (See page 14–121)**
   SST 09213–54015 (91651–60855), 09330–00021

5. **REMOVE ENGINE REAR OIL SEAL**
   (a) Using a knife, cut off the engine rear oil seal lip.
   (b) Using a screwdriver with the tip wrapped in tape, pry out the engine rear oil seal.

HINT:
After the removal, check if the crankshaft is not damaged.
If is damaged, smooth the surface with 400–grit sandpaper.

6. **INSTALL ENGINE REAR OIL SEAL**
   (a) Apply MP grease to a new engine rear oil seal lip.

NOTICE:
Keep the lip off foreign materials.

   (b) Using SST and a hammer, tap in the engine rear oil seal until its surface is flush with the engine rear oil seal retainer edge.
   SST 09223–15030, 09950–70010 (09951–07100)

NOTICE:
Wipe off extra grease on the crankshaft.

7. **INSTALL DRIVE PLATE AND RING GEAR OR FLYWHEEL (See page 14–121)**
   SST 09213–54015 (91651–60855), 09330–00021
8. **INSTALL CLUTCH COVER ASSY (M/T TRANSAXLE) (See page 42–26)**
9. **INSTALL MANUAL TRANSAXLE ASSY (M/T TRANSAXLE) (See page 41–24)**
10. **INSTALL AUTOMATIC TRANSAXLE ASSY (A/T TRANSAXLE) (See page 40–25)**

ENGINE (1AZ–FSE)

141CP–01

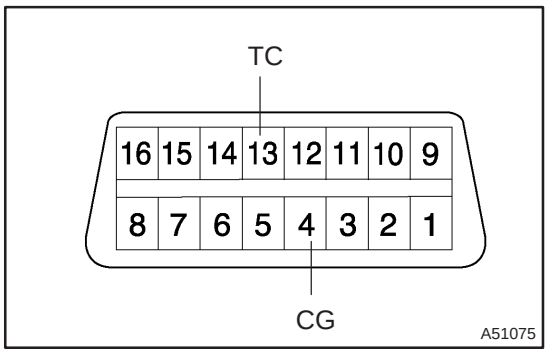
INSPECTION

1. **INSPECT COOLANT (See page 16–25)**
2. **INSPECT ENGINE OIL(See page 17–13)**
3. **INSPECT BATTERY**
   Standard specific gravity: 1.25 to 1.29 at 20°C (68°F)
4. **INSPECT AIR CLEANER FILTER ELEMENT SUB–ASSY**
5. **INSPECT SPARK PLUG (See page 18–14)**
6. **INSPECT V–RIBBED BELT**

7. INSPECT IGNITION TIMING

(a) Warm up engine.

(b) When using hand–held tester:



(1) Connect the hand–held tester to the DLC3.

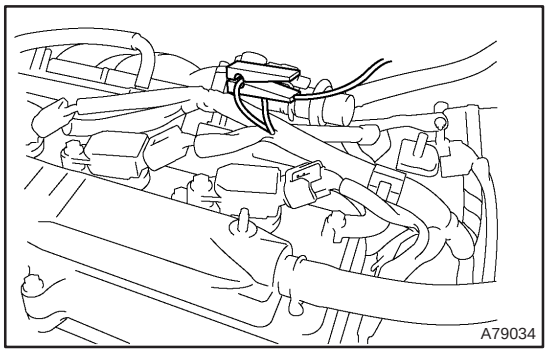
(2) Enter DATA LIST MODE on the hand–held tester.

Ignition timing: 8 to 12° BTDC

HINT:

Please refer to the hand–held tester operator's manual if you need help to select DATA LIST.

(c) When not using hand–held tester:



(1) Using SST, connect terminals 13 (TC) and 4 (CG) of DLC3.

SST 09843–18040, 09843–18020

NOTICE:

- **Make sure of the terminal numbers before connecting them. Connection with a wrong terminal can damage the engine.**
- **Turn OFF all electrical systems before connecting the terminals.**
- **Operate the inspection after the cooling fan motor is turned OFF**

(2) Remove the cylinder head cover No.2.

(3) Pull out the wire harness as shown in the illustration. Connect the clip of the timing light to the engine.

NOTICE:

- **Use a timing light which detects the first signal.**
- **After checking, be sure to wrap the wire harness with tape.**

(4) Inspect ignition timing at idle.

Ignition timing: 8 to 12° BTDC

NOTICE:

When checking the ignition timing, shift the transmission to the neutral position.

HINT:

Run the engine at 1,000 to 1,300 rpm for 5 seconds, check that the engine rpm returns to the idle speed.

(5) Disconnect terminals 13 (TC) and 4 (CG) of DLC3.

(6) Inspect ignition timing at idle.

Ignition timing: 5 to 23° BTDC

(7) Confirm that ignition timing to go advanced angle side when the engine rpm is increased.

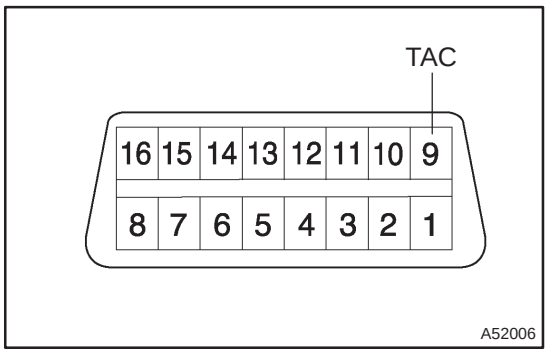
(8) Remove the timing light.

8. INSPECT ENGINE IDLE SPEED

(a) Warm up engine.

(b) When using hand–held tester:

(1) Connect the hand–held tester to the DLC3.



Idle speed: 625 to 725 rpm

NOTICE:

- **Check the idle speed with the cooling fan OFF.**
- **Switch off all accessories and air conditioning before connecting the test prove to the terminal.**

HINT:

Please refer to the hand–held tester operator's manual if you need help to select DATA LIST.

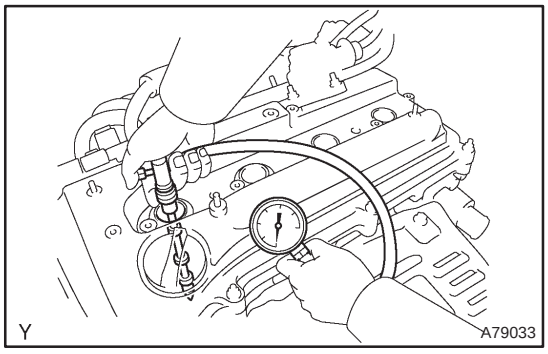
(c) When not using hand–held tester:

(1) Using SST, connect the tachometer test prove to terminal 9 (TAC) of DLC3.

SST 09843–18040

(2) Check the idle speed.

Idle speed: 625 to 725 rpm



9. INSPECT COMPRESSION

(a) Warm up and stop the engine.

(b) Disconnect the injector connectors.

(c) Remove the ignition coil.

(d) Remove the spark plugs.

(e) Inspect cylinder compression pressure.
SST 09992–00500
(1) Insert a compression gauge into the spark plug hole.
(2) Fully open the throttle.
(3) While cranking the engine, measure the compression pressure.
Compression pressure:
1,300 kPa (13.3 kgf/cm^2, 189 psi)
Minimum pressure:
1000 kPa (10.2 kgf/cm^2, 145 psi)
Difference between each cylinder:
100 kPa (1.0 kgf/cm^2, 14 psi)

NOTICE:
- **Always use a fully charged battery to obtain engine speed of 250 rpm or more.**
- **Check other cylinder's compression pressure in the same way.**
- **This measurement must be done in as short a time as possible.**

(4) If the cylinder compression is low, pour a small amount of engine oil into the cylinder through the spark plug hole and inspect again.

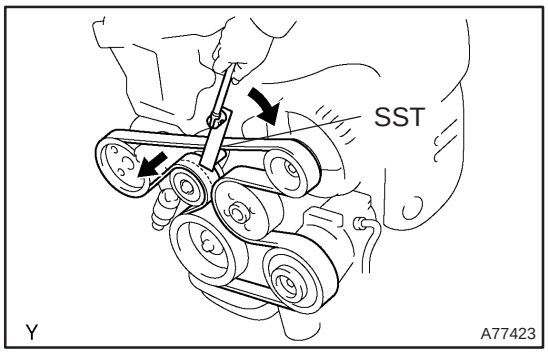
HINT:
- If adding oil increases the compression, the piston rings and/or cylinder bore may be worn or damaged.
- If pressure stays low, a valve may be sticking or seating improperly, or there may be leakage past the gasket.

10. INSPECT CO/HC

(a) Start the engine.
(b) Run the engine at 2,500 rpm for approximately 180 seconds.
(c) Insert CO/HC meter testing probe at least 40 cm (1.3 ft) into the tailpipe during idling.
(d) Check CO/HC concentration at idle.
Idle CO concentration: 0 to 0.5 %
Idle HC concentration: Applicable local regulation
(e) If the CO/HC concentration does not conform to specifications, perform troubleshooting in the order given below.
(1) Check heated oxygen sensor operation. (See page 12–6)
(2) See the table below for possible causes, and then inspect and repair the applicable causes if necessary.

CO	HC	Problems	Causes
Normal	High	Rough idle	1. Faulty ignitions: • Incorrect timing • Fouled, shorted or improperly gapped plugs 2. Incorrect valve clearance 3. Leaks in intake and exhaust valves 4. Leaks in cylinders
Low	High	Rough idle (Fluctuating HC reading)	1. Vacuum leaks: • PCV hoses • Intake manifold • Throttle body • ISC valve • Brake booster line 2. Lean mixture causing misfire
High	High	Rough idle (Black smoke from exhaust)	1. Restricted air filter 2. Plugged PCV valve 3. Faulty EFI systems: • Faulty pressure regulator • Defective water temperature sensor • Defective mass air flow meter • Faulty ECM • Faulty injectors • Faulty throttle position sensor

FAN AND GENERATOR V BELT (1AZ–FSE)



141BJ–01

REPLACEMENT

1. REMOVE RADIATOR SUPPORT OPENING COVER

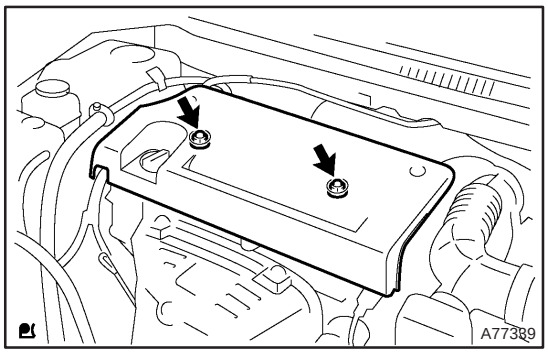
2. REMOVE ENGINE ROOM COVER SIDE

3. REMOVE ENGINE UNDER COVER RH

4. REMOVE FAN AND GENERATOR V BELT

(a) Using SST, loosen the V–ribbed belt tensioner arm clockwise, and remove the fan and generator V belt.
SST 09249–63010

5. INSTALL FAN AND GENERATOR V BELT



(a) Using SST, loosen the V–ribbed belt tensioner arm clockwise, and install the fan and generator V belt.
SST 09249–63010

VALVE CLEARANCE (1AZ–FSE)

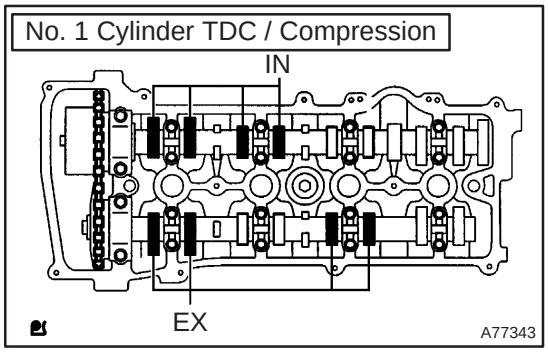
141BL–01

ADJUSTMENT

1. **DISCHARGE FUEL SYSTEM PRESSURE (See page 11–33)**
2. **REMOVE RADIATOR SUPPORT OPENING COVER**
3. **REMOVE ENGINE ROOM COVER SIDE**
4. **REMOVE ENGINE UNDER COVER RH**

5. **REMOVE ENGINE COVER SUB–ASSY NO.1**

(a) Remove the 2 nuts and the engine cover No. 1.



6. **REMOVE FUEL PRESSURE PULSATION DAMPER ASSY**
7. **REMOVE FUEL TUBE SUB–ASSY (See page 11–33)**
8. **REMOVE FUEL PIPE SUB–ASSY NO.1 (See page 11–52)**

SST 09023–12900

9. **REMOVE IGNITION COIL ASSY**

(a) Remove the 4 bolts and the ignition coils.

10. **REMOVE CYLINDER HEAD COVER SUB–ASSY (See page 14–240)**
11. **SET NO. 1 CYLINDER TO TDC/COMPRESSION (See page 14–240)**

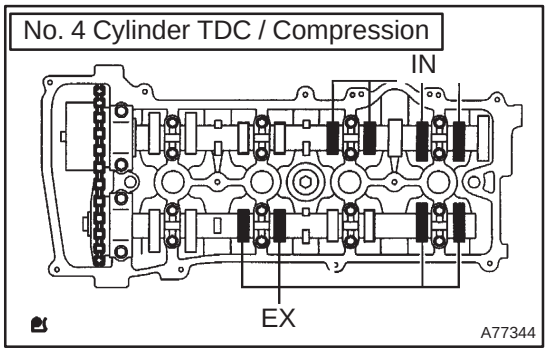
12. **INSPECT VALVE CLEARANCE**

HINT:

Inspect and adjust the valve clearance when the engine is cold.

(a) Check only the valve indicated in the illustration.

(1) Using a feeler gauge, measure the clearance between the valve lifter and the camshaft.



(2) Record the out–of specification valve clearance measurements. They will be used later to determine the required replacement adjusting shim.

Valve clearance (Cold):

Intake 0.19 to 0.29 mm (0.0075 to 0.0114 in.)

Exhaust 0.30 to 0.40 mm (0.0118 to 0.0157 in.)

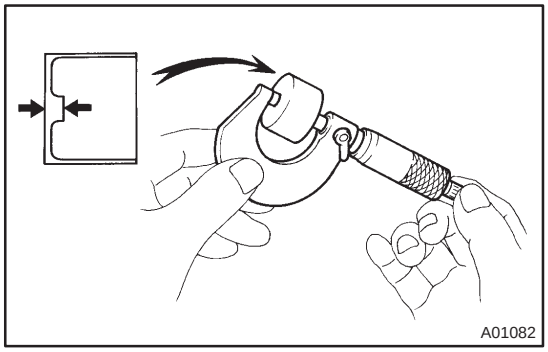
(b) Turn the crankshaft clockwise 1 revolution (360°) and set No. 4 cylinder to TDC/compression.

(c) Check only the valve indicated in the illustration.
(1) Using a feeler gauge, measure the clearance between the valve lifter and the camshaft.
(2) Record the out–of specification valve clearance measurements. They will be used later to determine the required replacement adjusting shim.

Valve clearance (Cold):
Intake 0.19 to 0.29 mm (0.0075 to 0.0114 in.)
Exhaust 0.30 to 0.40 mm (0.0118 to 0.0157 in.)

13. ADJUST VALVE CLEARANCE

NOTICE:



Be sure not to turn the crankshaft without the chain tensioner.

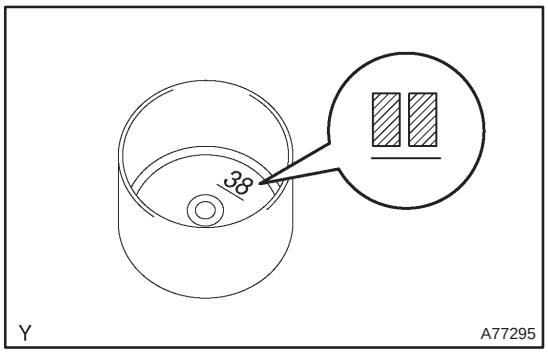
(a) Set the No. 1 cylinder to TDC/compression. (See page 14–240)
(b) Remove the chain tensioner. (See page 14–240)
(c) Remove the camshafts. (See page 14–240)
(d) Tie the timing chain with a string.

NOTICE:

Be careful not to drop anything inside the timing chain cover.

(e) Remove the valve lifters.

(f) Using a micrometer, measure the thickness of the removed lifter.
(g) Calculate the thickness of a new lifter so that the valve clearance comes within the specified valve.



A	Thickness of new lifter
B	Thickness of used lifter
C	Measured valve clearance

Valve clearance:
Intake: A = B + (C – 0.24 mm (0.0094 in.))
Exhaust: A = B + (C – 0.35 mm (0.0138 in.))

EXAMPLE: (Intake)
Measure valve clearance = 0.44 mm (0.0173 in.)
0.44 mm (0.0173 in.) – 0.24 mm (0.0094 in.) = 0.20 mm (0.0079 in.)
(Measured – Specification = Excess clearance)
Used shim measurement = 5.30 mm (0.2087 in.)
0.20 mm (0.0079 in.) + 5.30 mm (0.2087 in.) = 5.50 mm (0.2165 in.)
(Excess clearance + Used shim = Ideal new shim)
Closest new shim = 5.50 mm (0.2165 in.) = Shim No. ”50”

HINT:

- Select a new lifter with a thickness as close as possible to the calculated valves.
- Lifter are available in 35 sizes in increments of 0.020 mm (0.0008 in.), from 5.060 mm (0.1992 in.) to 5.740 mm (0.2260 in.).

- Identification number inside the valve lifter shows the value of the 2 decimal places. (The illustration shows 5.380 mm (0.2118 in.))
- Refer to the New Lifter Thickness table on the next 2 pages.

Valve Lifter Selection Chart (Intake)

Measure clearance mm (in.) \ Installed lifter thickness mm (in.)	5.060 (0.1992)	5.080 (0.2000)	5.100 (0.2008)	5.120 (0.2016)	5.140 (0.2024)	5.160 (0.2031)	5.180 (0.2039)	5.200 (0.2047)	5.210 (0.2051)	5.220 (0.2055)	5.230 (0.2059)	5.240 (0.2063)	5.250 (0.2067)	5.260 (0.2071)	5.270 (0.2075)	5.280 (0.2079)	5.290 (0.2083)	5.300 (0.2087)	5.310 (0.2091)	5.320 (0.2094)	5.330 (0.2098)	5.340 (0.2102)	5.350 (0.2106)	5.360 (0.2110)	5.370 (0.2114)	5.380 (0.2118)	5.390 (0.2122)	5.400 (0.2126)	5.410 (0.2130)	5.420 (0.2134)	5.430 (0.2138)	5.440 (0.2142)	5.450 (0.2146)	5.460 (0.2150)	5.470 (0.2154)	5.480 (0.2157)	5.490 (0.2161)	5.500 (0.2165)	5.510 (0.2169)	5.520 (0.2173)	5.530 (0.2177)	5.540 (0.2181)	5.550 (0.2185)	5.560 (0.2189)	5.570 (0.2193)	5.580 (0.2197)	5.590 (0.2201)	5.600 (0.2205)	5.620 (0.2213)	5.640 (0.2220)	5.660 (0.2228)	5.680 (0.2236)	5.700 (0.2244)	5.720 (0.2252)	5.740 (0.2260)

Intake valve clearance (Cold):
0.19 to 0.29 mm (0.008 to 0.011 in.)

EXAMPLE:

The 5.250 mm (0.2067 in.) lifter is installed, and the measured clearance is 0.400 mm (0.0157 in.).

Replace the 5.250 mm (0.2067 in.) lifter with a new No. 44 lifter.

New Lifter Thickness mm (in.)

Lifter No.	Thickness	Lifter No.	Thickness	Lifter No.	Thickness

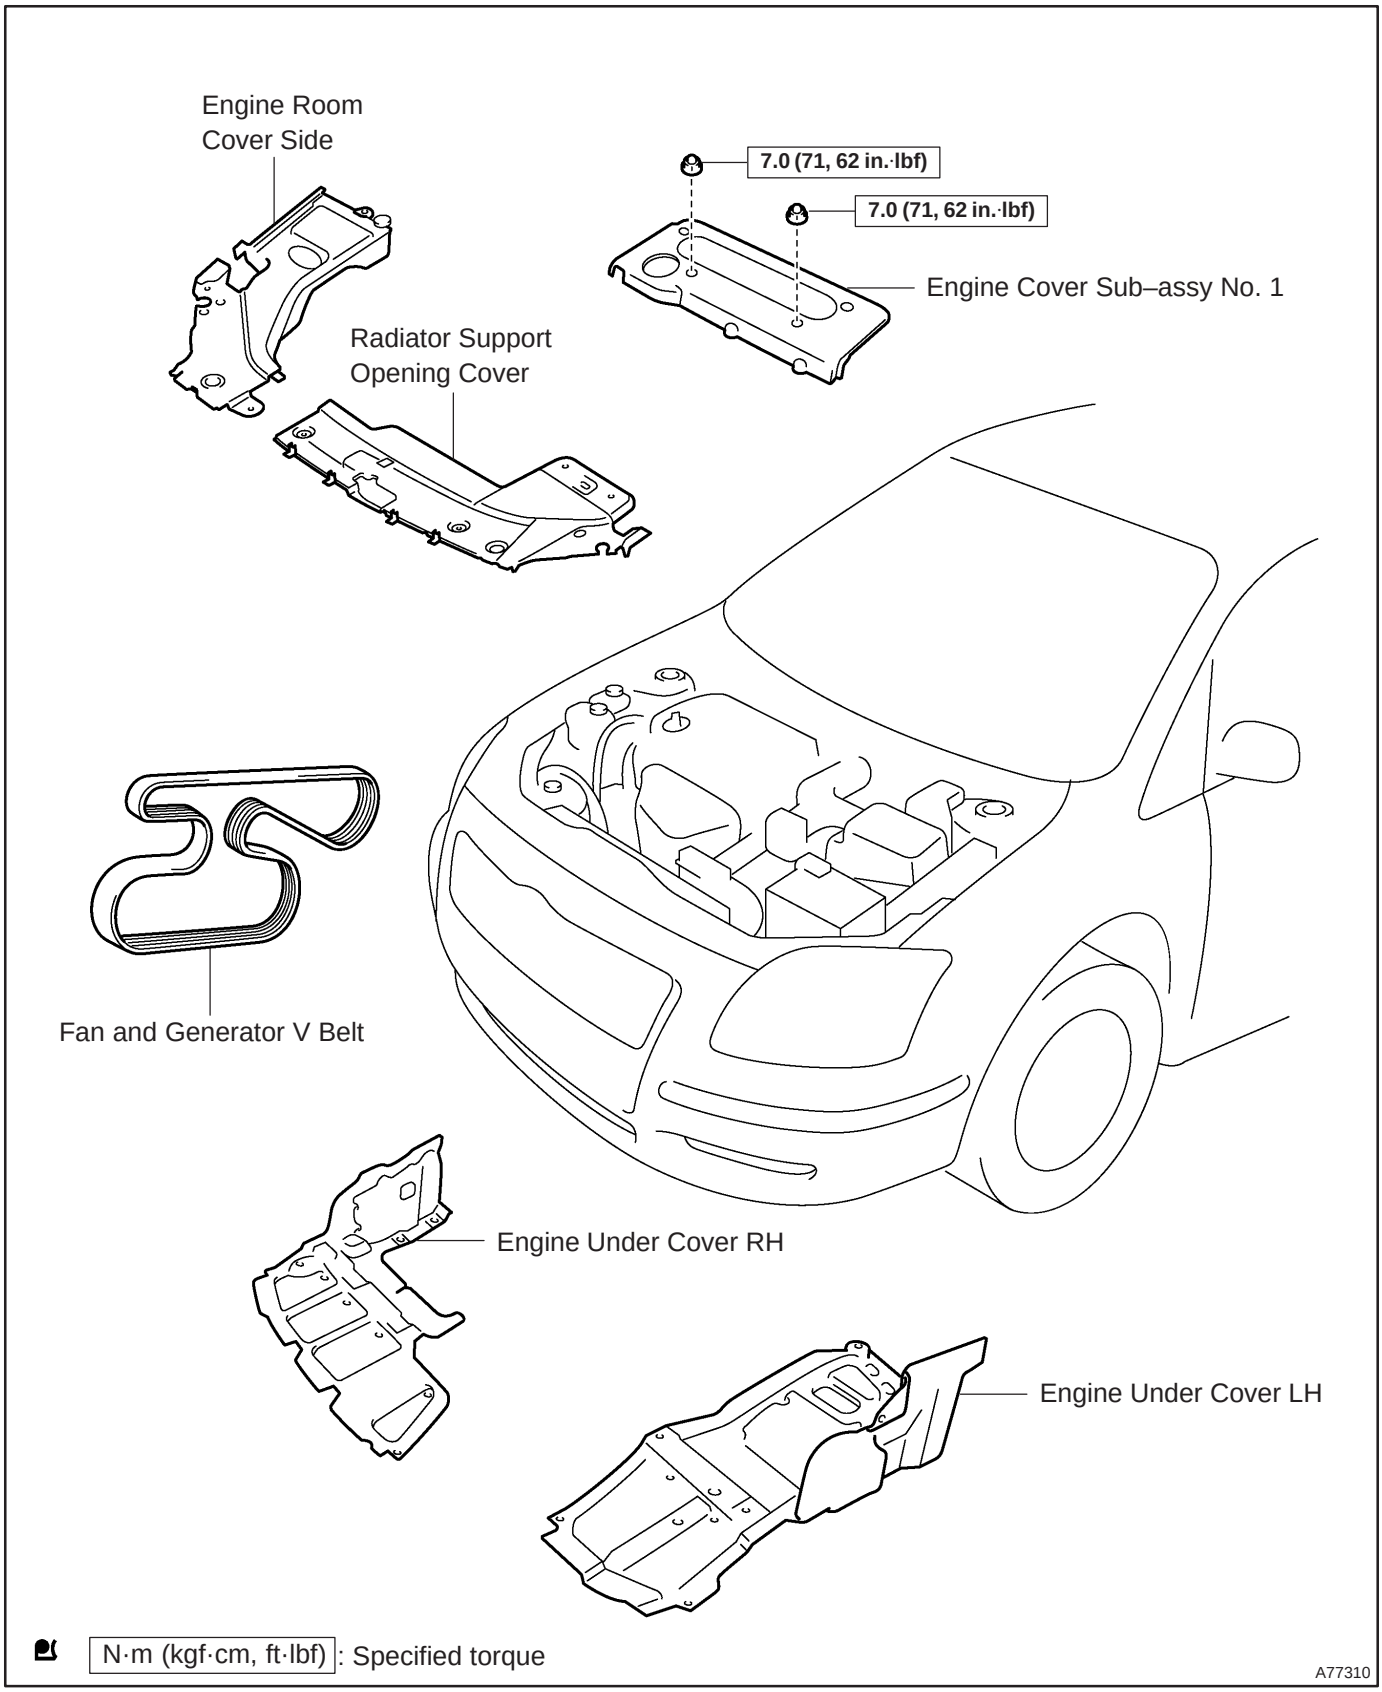
Exhaust valve clearance (Cold):
0.30 to 0.40 mm (0.0118 to 0.0157 in.)

EXAMPLE:

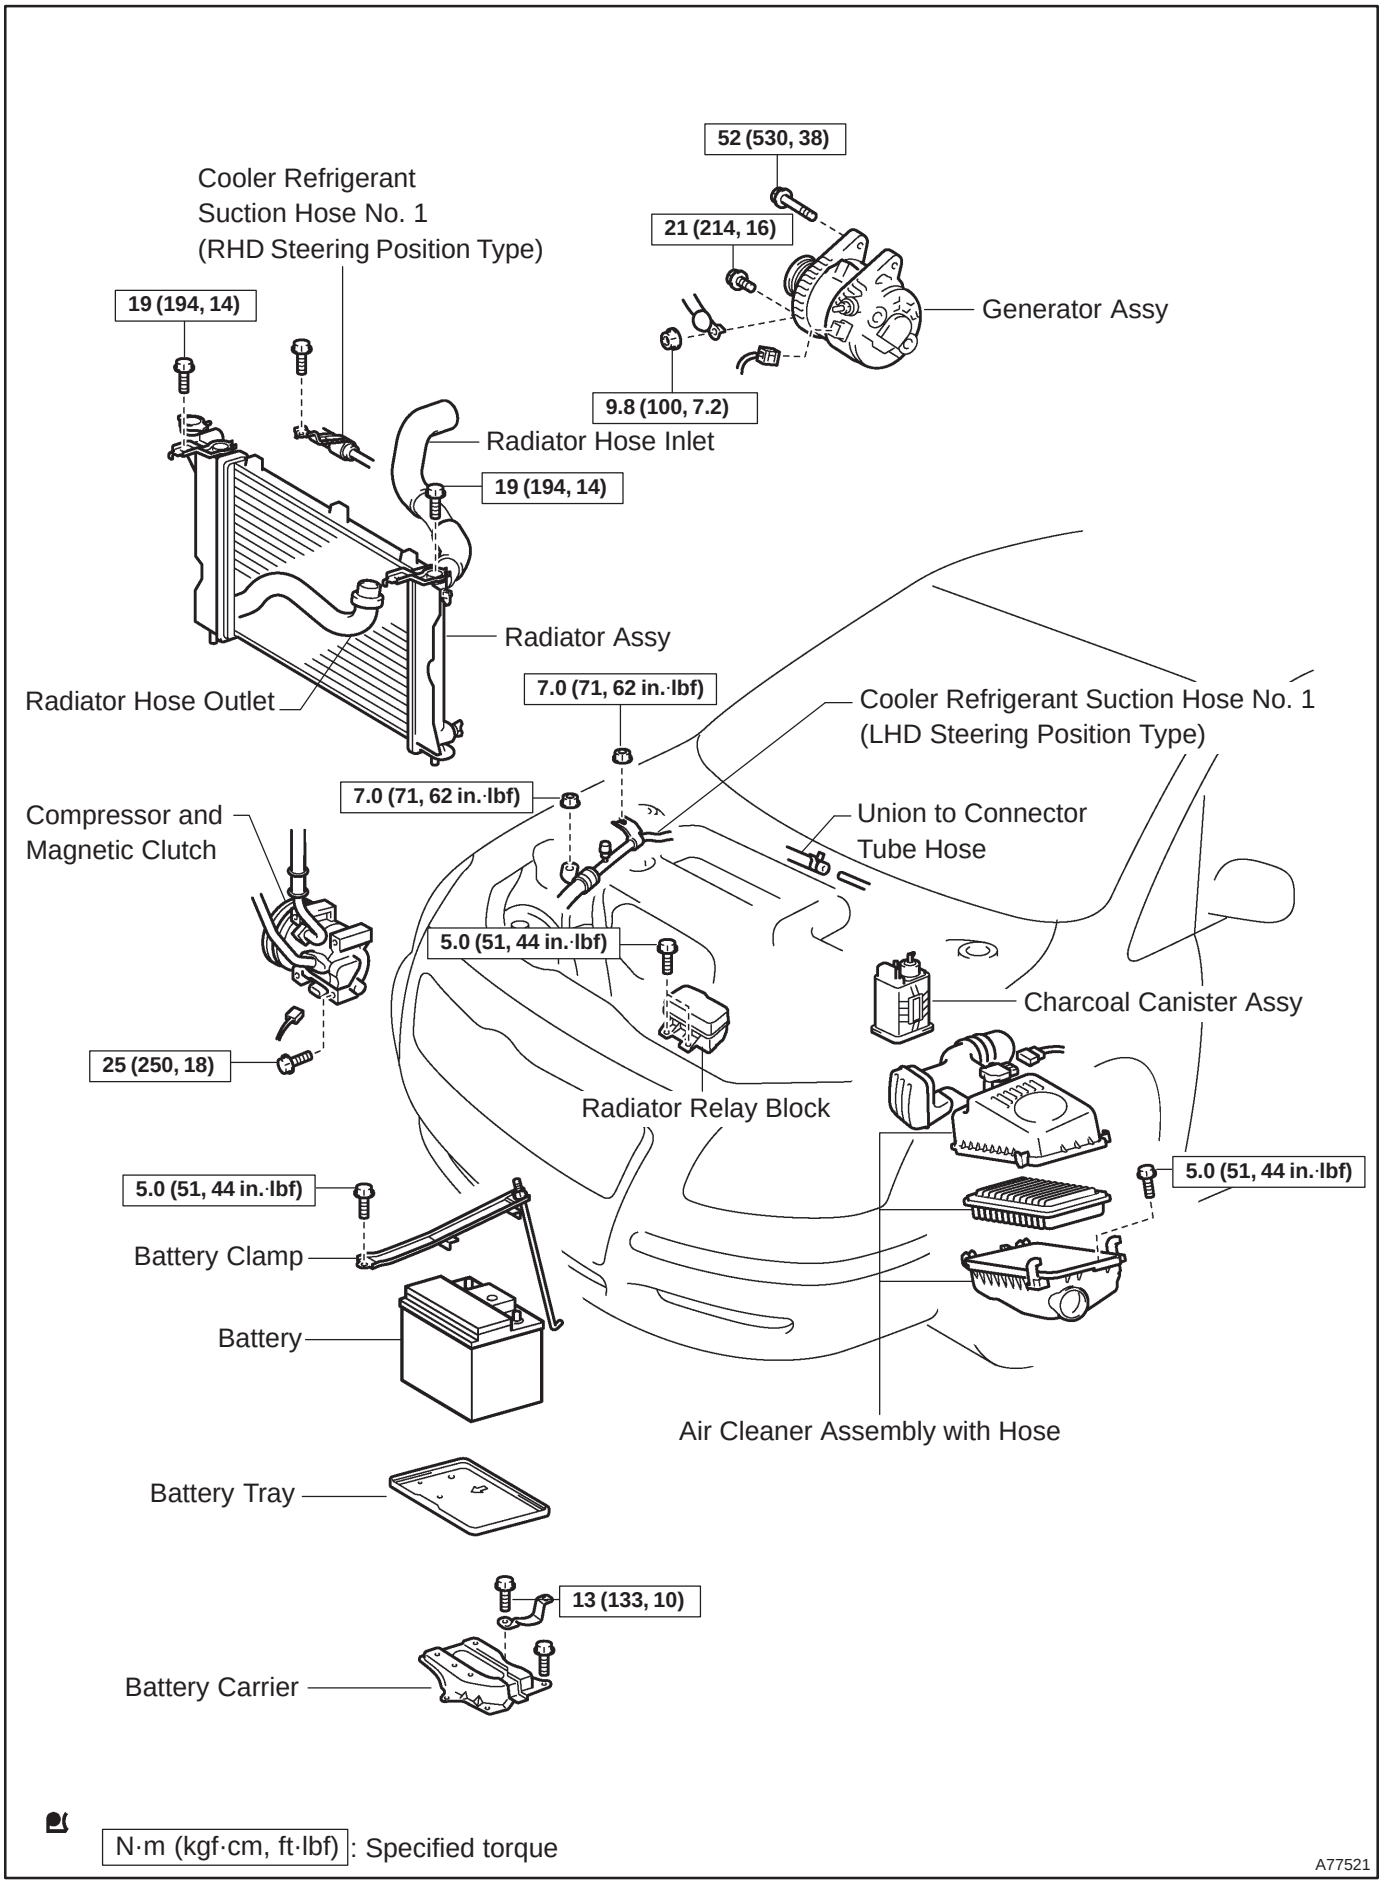
The 5.340 mm (0.2102 in.) lifter is installed, and the measured clearance is 0.440 mm (0.0173 in.).

Replace the 5.340 mm (0.2102 in.) lifter with a new No. 44 lifter.

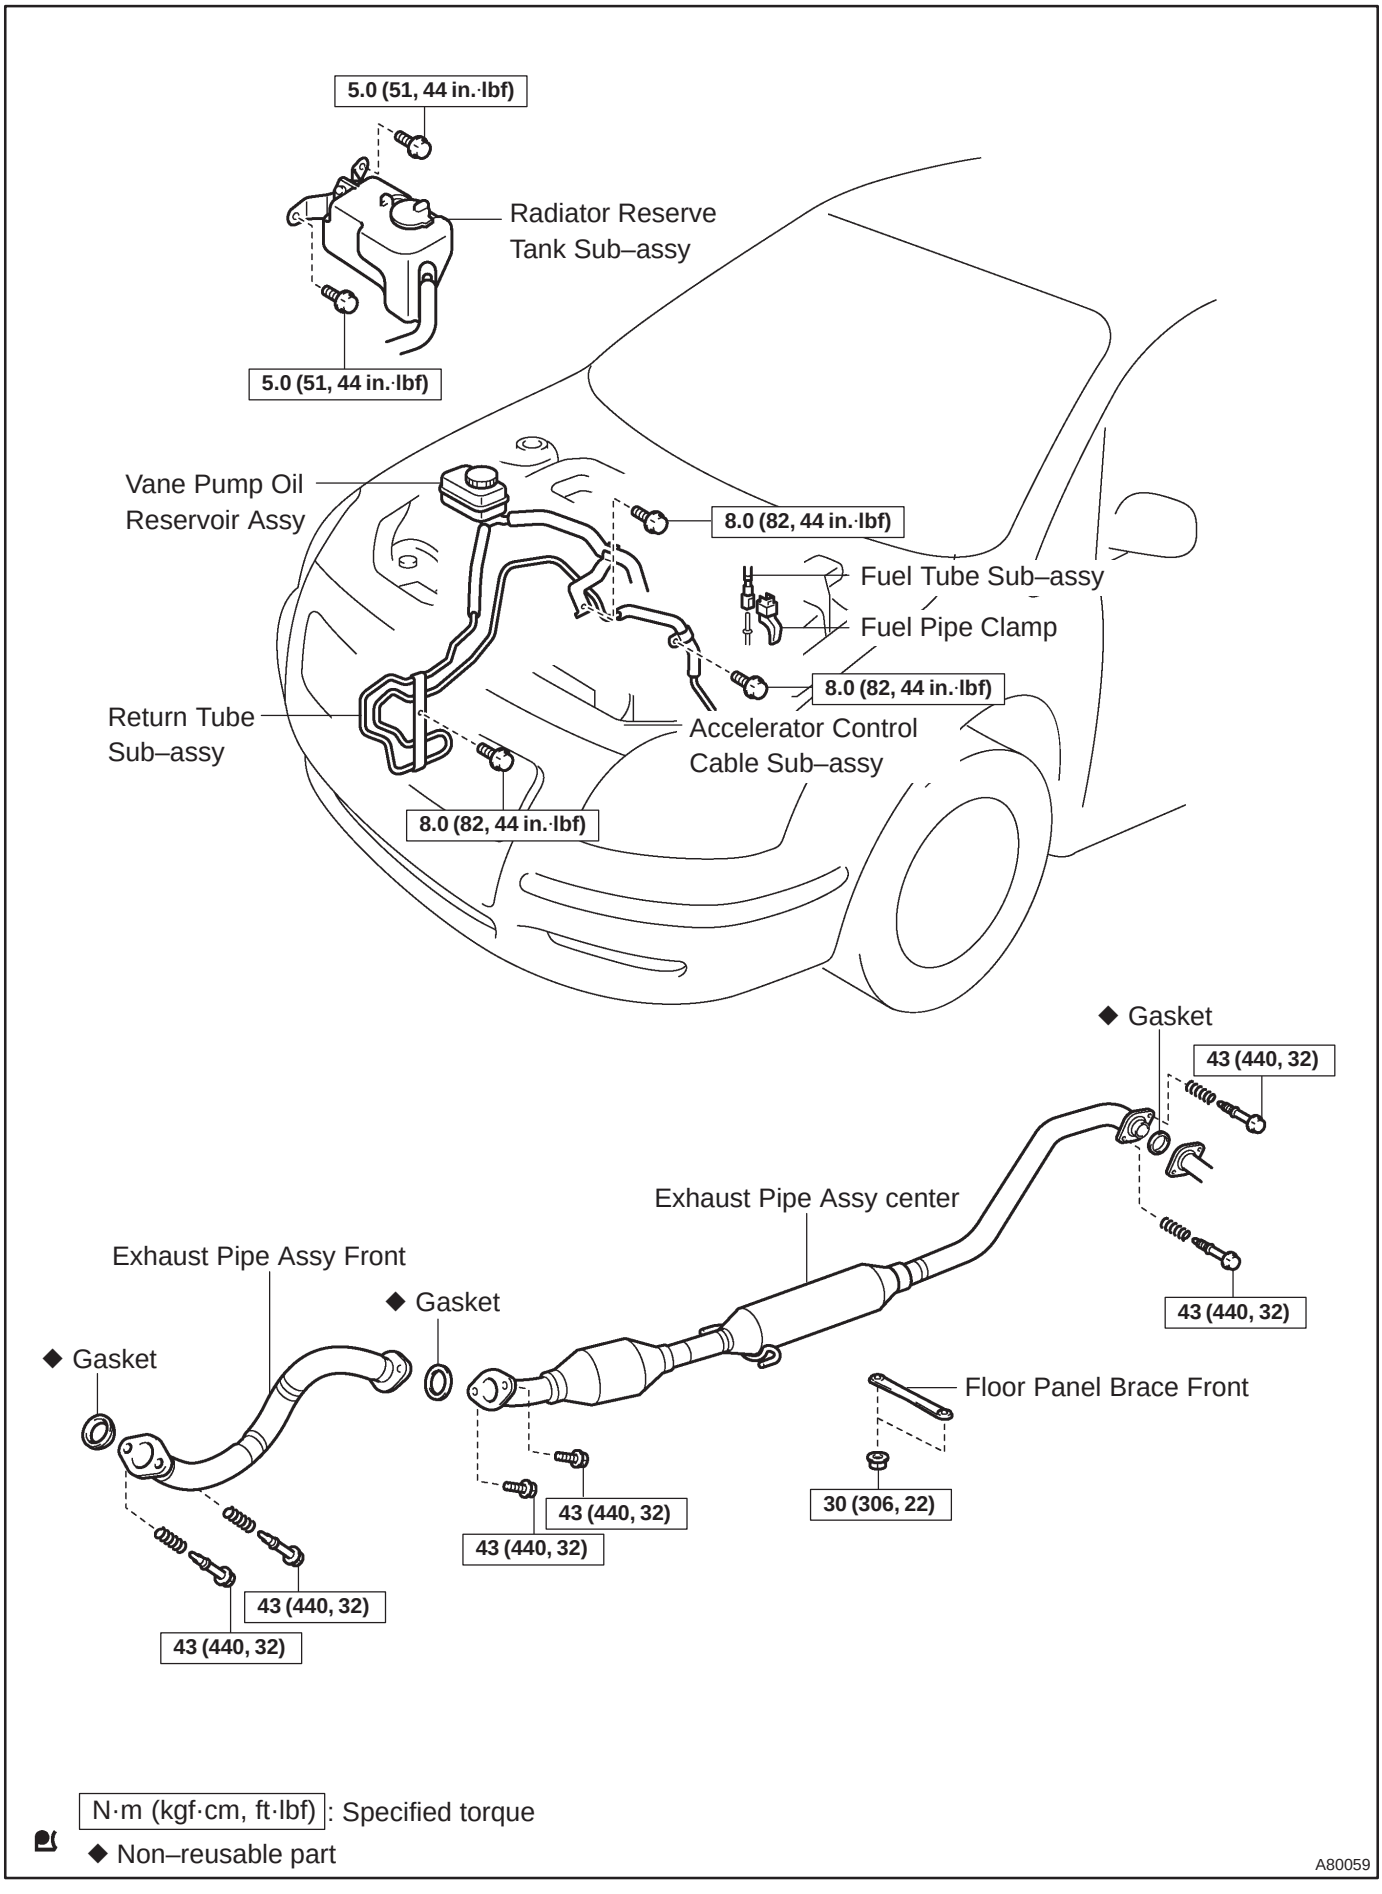
A77297



(h) Install the camshafts. (See page 14–240)
(i) Install the chain tensioner. (See page 14–240)



14. INSTALL CYLINDER HEAD COVER SUB–ASSY (See page 14–240)
15. INSTALL IGNITION COIL ASSY
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
16. INSTALL FUEL PIPE SUB–ASSY NO.1 (See page 11–52)
SST 09023–12900
17. INSTALL FUEL TUBE SUB–ASSY (See page 11–33)
18. INSTALL FUEL PRESSURE PULSATION DAMPER ASSY (See page 11–52)
19. CHECK FOR ENGINE OIL LEAKS
20. CHECK FOR FUEL LEAKS (See page 11–33)
21. INSTALL ENGINE COVER SUB–ASSY NO.1
Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)



PARTIAL ENGINE ASSY (1AZ–FSE)

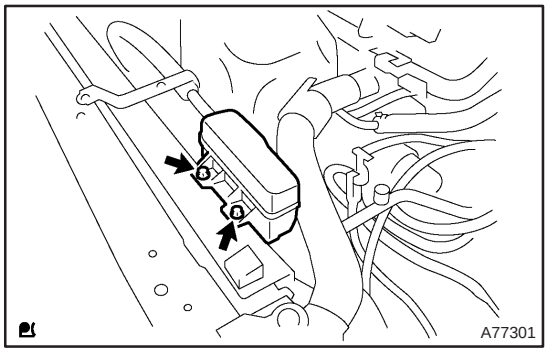
141BM–01

REPLACEMENT

1. **DISCHARGE FUEL SYSTEM PRESSURE (See page 11–33)**
2. **REMOVE FRONT WHEELS**
3. **REMOVE RADIATOR SUPPORT OPENING COVER**
4. **REMOVE ENGINE ROOM COVER SIDE**
5. **REMOVE ENGINE UNDER COVER RH**
6. **REMOVE ENGINE UNDER COVER LH**
7. **DRAIN COOLANT (See page 16–31)**
8. **DRAIN ENGINE OIL**

(a) Install a new gasket and the drain plug after draining engine oil.
Torque: 25 N·m (255 kgf·cm, 18 ft·lbf)



9. **DRAIN MANUAL TRANSAXLE OIL (M/T TRANSAXLE)**
Torque: 49 N·m (500 kgf·cm, 36 ft·lbf)
10. **DRAIN AUTOMATIC TRANSAXLE FLUID (A/T TRANSAXLE) (See page 40–2)**

11. **REMOVE ENGINE COVER SUB–ASSY NO.1**

(a) Remove the 2 nuts and the cylinder head cover No. 1.

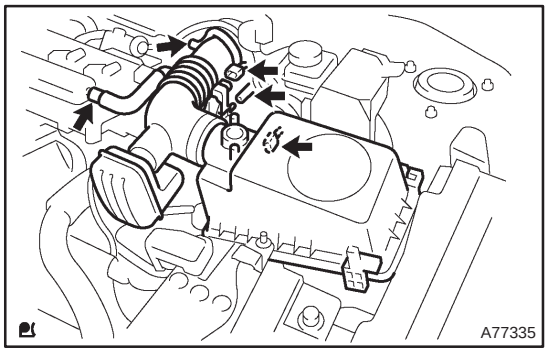
12. **DISCONNECT RADIATOR HOSE INLET**
13. **DISCONNECT RADIATOR HOSE OUTLET**

14. **SEPARATE RADIATOR RELAY BLOCK**

(a) Remove the 2 bolts and separate the radiator relay block.

15. **SEPARATE COOLER REFRIGERANT SUCTION HOSE NO.1 (RHD STEERING POSITION TYPE)**

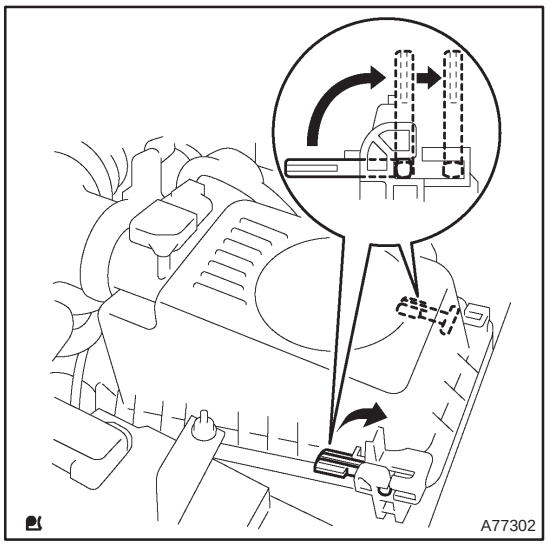
(a) Remove the bolt and separate the suction hose No. 1.



16. **REMOVE RADIATOR ASSY (See page 16–36)**
17. **REMOVE FAN AND GENERATOR V BELT (See page 14–185)**
18. **REMOVE GENERATOR ASSY (See page 19–20)**
19. **REMOVE COMPRESSOR AND MAGNETIC CLUTCH**

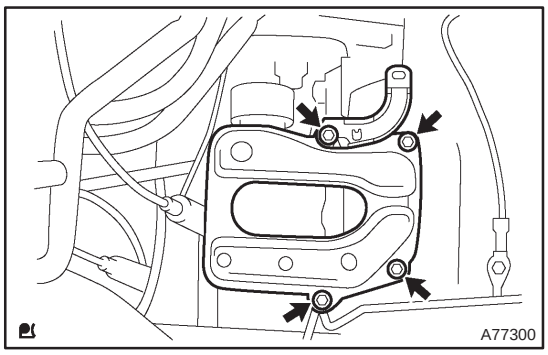
(a) Remove the 4 bolts and separate the compressor and magnetic clutch.

HINT:



Secure the hoses off to the side instead of detaching.

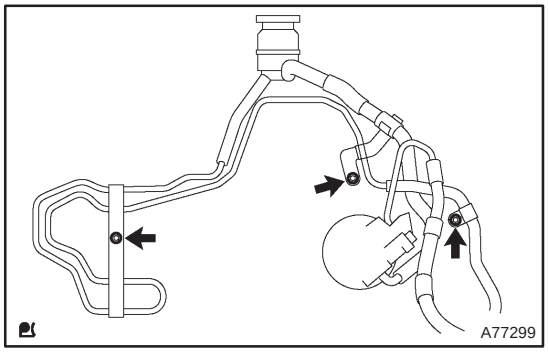
20. **REMOVE BATTERY**



21. REMOVE AIR CLEANER ASSEMBLY WITH HOSE

(a) Disconnect the 2 connectors.
(b) Disconnect the 2 vacuum hoses.
(c) Disconnect the ventilation hose.
(d) Disconnect the air cleaner hose from the throttle body.

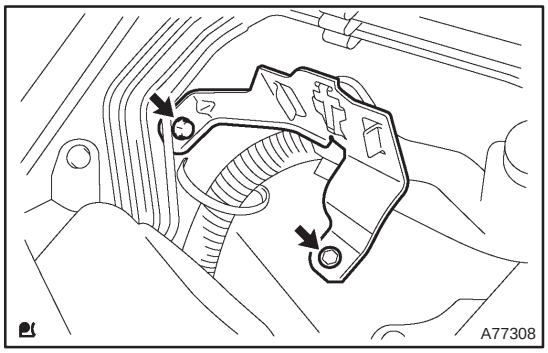
(e) Raise a clamp up, and slide it toward the air cleaner cap, then remove the air cleaner cap from its case.
(f) Remove the air cleaner element.
(g) Remove the 4 bolts and the air cleaner case.



22. REMOVE BATTERY CARRIER

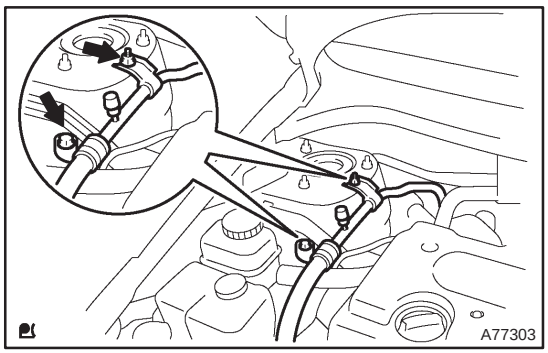
(a) Remove the 4 bolts and the battery carrier.

23. REMOVE RADIATOR RESERVE TANK SUB–ASSY



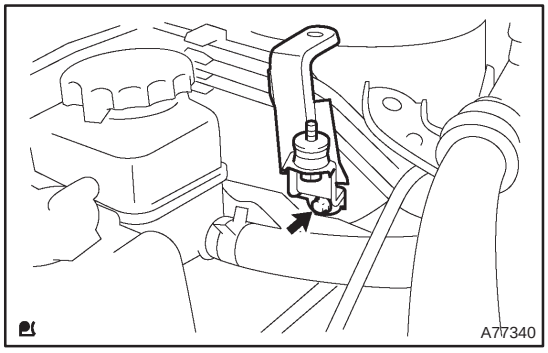
(a) Remove the 2 bolts and the radiator reserve tank.

24. SEPARATE RETURN TUBE SUB–ASSY



(a) Remove the 3 bolts shown in the illustration.

25. SEPARATE VANE PUMP OIL RESERVOIR ASSY



26. REMOVE OIL RESERVOIR BRACKET NO.1

(a) Remove the 2 bolts and the oil reservoir bracket No. 1.

27. SEPARATE COOLER REFRIGERANT SUCTION HOSE NO.1 (LHD STEERING POSITION TYPE)

(a) Remove the 2 nuts and separate the suction hose.

28. REMOVE COOLER BRACKET (LHD STEERING POSITION TYPE)

(a) Remove the nut and separate the cooler bracket.

29. REMOVE ENGINE SERVICE COVER BRACKET RH (RHD STEERING POSITION TYPE)

(a) Remove the bolt and the service cover bracket RH.

30. DISCONNECT HEATER INLET WATER HOSE

31. DISCONNECT HEATER OUTLET WATER HOSE

32. REMOVE CHARCOAL CANISTER ASSY

33. DISCONNECT FUEL TUBE SUB–ASSY (See page 11–30)

34. DISCONNECT UNION TO CONNECTOR TUBE HOSE

35. REMOVE FLOOR PANEL BRACE FRONT (See page 15–7)

36. REMOVE EXHAUST PIPE ASSY CENTER (See page 15–7)

37. REMOVE EXHAUST PIPE ASSY FRONT (See page 15–7)

38. REMOVE FRONT AXLE HUB LH NUT (See page 30–6)

SST 09330–00030

39. REMOVE FRONT AXLE HUB RH NUT

SST 09330–00030

HINT:

Perform the same procedure as above on the opposite side.

40. SEPARATE TIE ROD END SUB–ASSY LH (See page 51–36)

41. SEPARATE TIE ROD END SUB–ASSY RH

HINT:

Perform the same procedure as above on the opposite side.

42. SEPARATE FRONT STABILIZER LINK ASSY LH (See page 26–26)

43. SEPARATE FRONT STABILIZER LINK ASSY RH

HINT:

Perform the same procedure as above on the opposite side.

44. SEPARATE FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH (M/T TRANSAXLE) (See page 26–21)

45. SEPARATE FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH (A/T TRANSAXLE) (See page 26–16)

46. SEPARATE FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 RH (M/T TRANSAXLE)

HINT:

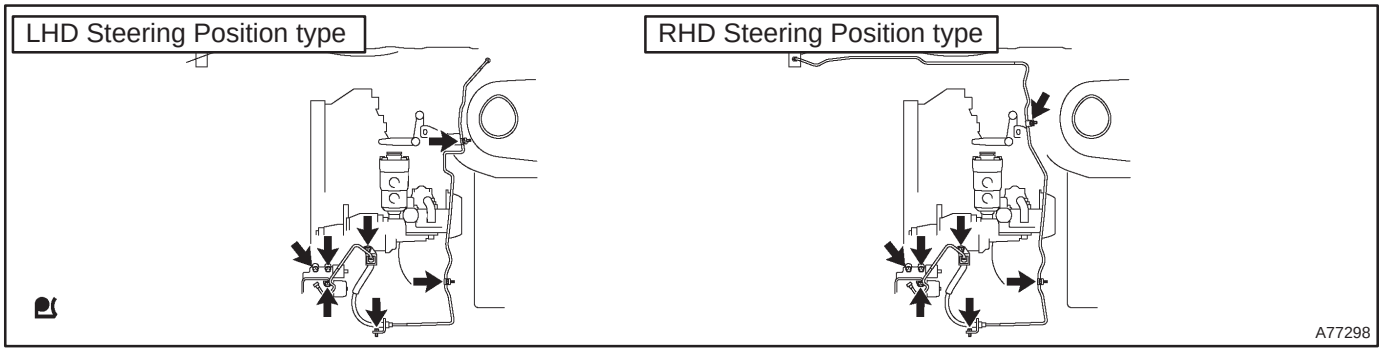
Perform the same procedure as above on the opposite side.

47. SEPARATE FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 RH (A/T TRANSAXLE)

HINT:

Perform the same procedure as above on the opposite side.

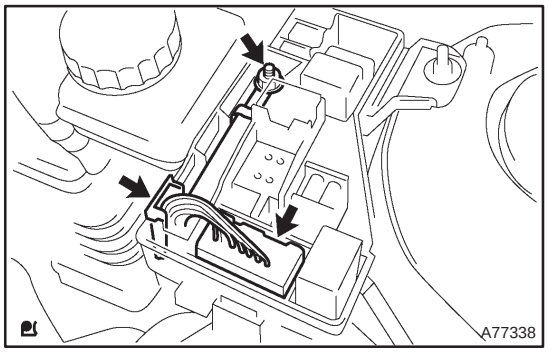
48. SEPARATE FRONT AXLE ASSY LH (See page 30–6)



49. SEPARATE FRONT AXLE ASSY RH (See page 30–6)

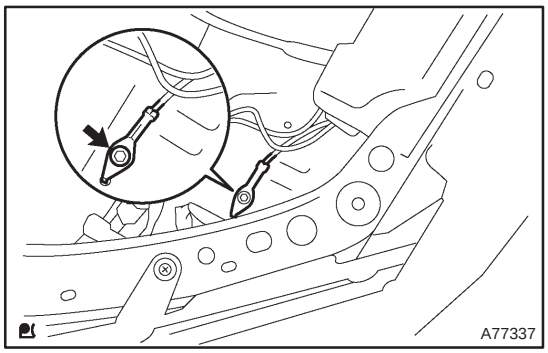
HINT:

Perform the same procedure as above on the opposite side.



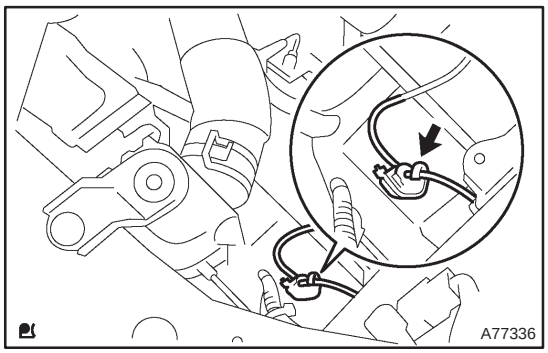
50. SEPARATE CLUTCH RELEASE CYLINDER ASSY (M/T TRANSAXLE)

(a) Remove the 7 bolts shown in the illustration.



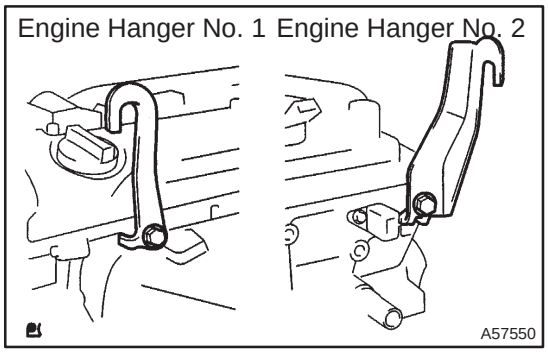
51. SEPARATE TRANSMISSION CONTROL CABLE ASSY (M/T TRANSAXLE) (See page 41–24)

52. SEPARATE TRANSMISSION CONTROL CABLE ASSY (A/T TRANSAXLE) (See page 40–25)



53. SEPARATE ENGINE ROOM RELAY BLOCK NO.2

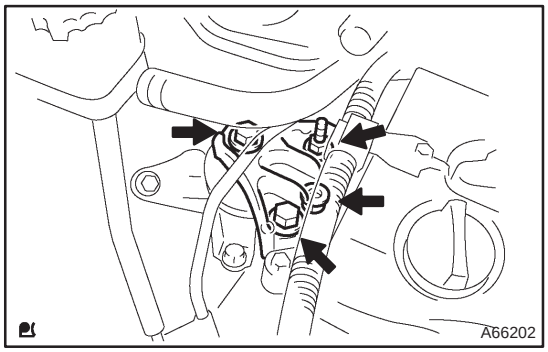
(a) Remove the nut and disconnect the connector shown in the illustration.



54. SEPARATE ENGINE WIRE

(a) Remove the bolt and separate the grand terminal.

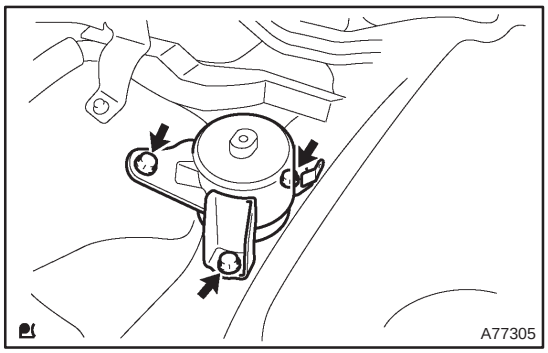
(b) Separate the grand terminal connector.
(c) Remove the glove compartment door panel.
(d) Separate the engine wire.



55. SEPARATE STEERING INTERMEDIATE SHAFT ASSY NO.2 (See page 50–9)

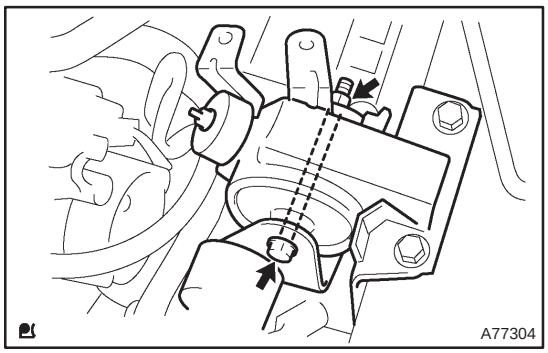
56. INSTALL ENGINE HANGERS

(a) Install the engine hanger No. 1 (12281–28010, 28020, 28030) with the bolt (91512–61020).
Torque: 38 N·m (387 kgf·cm, 28 ft·lbf)



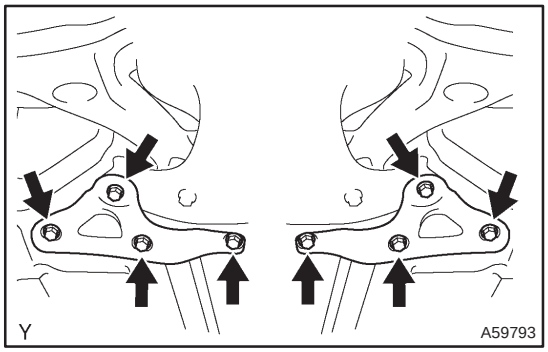
(b) Install the engine hanger No. 2 (12282–28010, 28020, 28030) with the bolt (91512–61020).
Torque: 38 N·m (387 kgf·cm, 28 ft·lbf)

57. REMOVE ENGINE MOUNTING BRACKET NO.2 RH



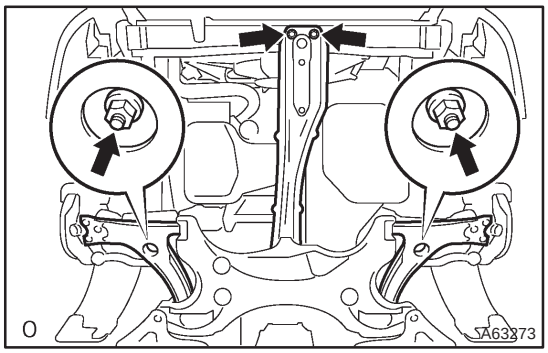
(a) Set the engine lifter.

(b) Remove the 2 bolts and 2 nuts, and then detach the mounting bracket No. 2.



58. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR

(a) Remove the 3 bolts and the engine mounting insulator.



59. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR

(a) Remove the through bolt and nut, and then detach the engine mounting insulator.

60. REMOVE ENGINE ASSEMBLY WITH TRANSAXLE

(a) Remove the 8 bolts and the front suspension member braces.

(b) Remove the 2 bolts and 2 nuts shown in the illustration.

(c) Carefully remove the engine assembly with transaxle from the vehicle.

61. SEPARATE VANE PUMP ASSY

(a) Disconnect the PS oil pressure switch connector.

(b) Remove the 2 bolts and separate the vane pump from the engine.

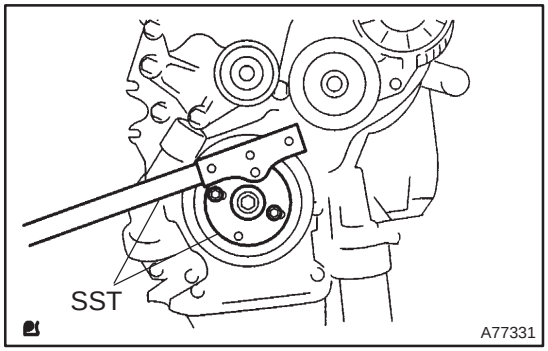
62. REMOVE STARTER ASSY (See page 19–12)

63. REMOVE FRONT SUSPENSION CROSSMEMBER W/CENTER MEMBER

(a) Remove the through bolt and nut from the engine mounting insulator FR.

(b) Remove the through bolt and nut from the engine mounting insulator RR.

64. REMOVE FRONT DRIVE SHAFT ASSY LH (See page 30–6)



65. REMOVE FRONT DRIVE SHAFT ASSY RH (See page 30–6)

66. REMOVE MANUAL TRANSAXLE ASSY (M/T TRANSAXLE) (See page 41–24)

67. REMOVE AUTOMATIC TRANSAXLE ASSY (A/T TRANSAXLE) (See page 40–25)

68. REMOVE CLUTCH COVER ASSY (M/T TRANSAXLE) (See page 42–26)

69. REMOVE CLUTCH DISC ASSY (M/T TRANSAXLE) (See page 42–26)

70. REMOVE DRIVE PLATE AND RING GEAR OR FLYWHEEL

(a) Using SST, fix the crankshaft pulley and remove the drive plate and ring gear or flywheel.

SST 09213–54015 (91651–60855), 09330–00021

71. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSY

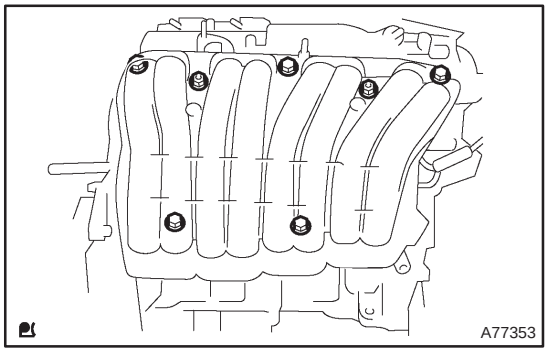
(a) Remove the bolt, O–ring and the camshaft timing oil control valve.

72. REMOVE THROTTLE BODY BRACKET

(a) Separate the engine wire.

(b) Remove the 4 bolts and the throttle body bracket.

73. REMOVE THROTTLE BODY ASSY (See page 10–44)



74. REMOVE FUEL PRESSURE PULSATION DAMPER ASSY

75. DISCONNECT FUEL TUBE SUB–ASSY

76. REMOVE FUEL PIPE SUB–ASSY NO.1 (See page 11–52)

77. REMOVE FUEL PUMP ASSY (See page 11–52)

78. REMOVE WATER BY–PASS HOSE

79. REMOVE INTAKE MANIFOLD

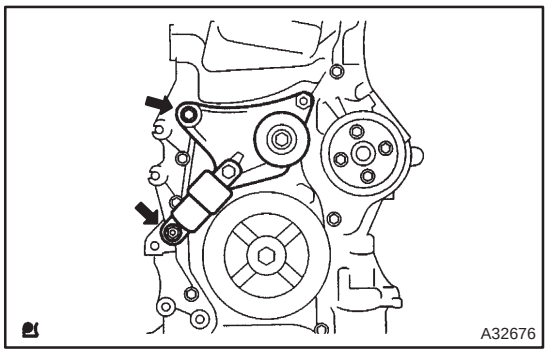
(a) Remove the 5 bolts and 2 nuts.

(b) Remove the intake manifold and the insulator.

80. REMOVE INTAKE AIR CONTROL VALVE ASSY

(a) Remove the intake air control valve and a gasket.

81. REMOVE SURGE TANK STAY NO.1



(a) Remove the 3 bolts and the surge tank stay.

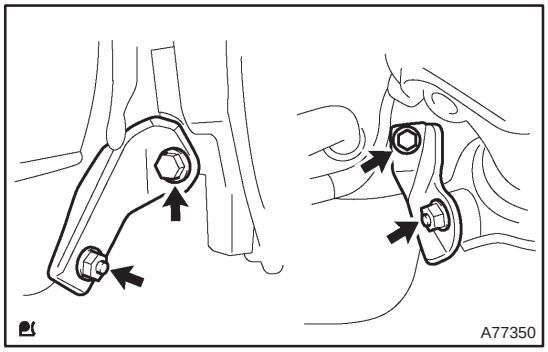
82. REMOVE INTAKE MANIFOLD INSULATOR NO.2

83. REMOVE NOZZLE HOLDER CLAMP

84. REMOVE FUEL DELIVERY PIPE SUB–ASSY (See page 11–42)

85. REMOVE FUEL INJECTOR ASSY (See page 11–42)

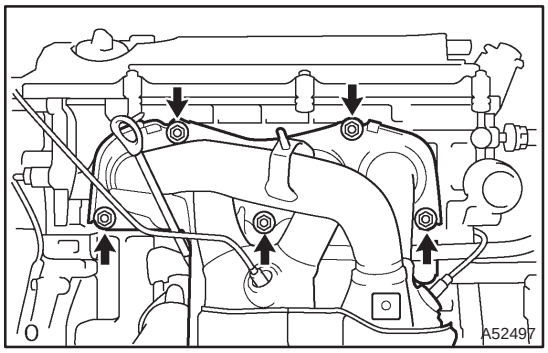
86. REMOVE V–RIBBED BELT TENSIONER ASSY



(a) Remove the bolt and nut, and then detach the V–ribbed belt tensioner.

87. REMOVE IGNITION COIL ASSY

(a) Remove the 4 bolts and the ignition coils.



88. REMOVE EXHAUST MANIFOLD HEAT INSULATOR NO.1

(a) Remove the 3 bolts and the exhaust manifold heat insulator.

89. REMOVE EXHAUST MANIFOLD CONVERTER SUB–ASSY

(a) Remove the 2 bolts and 2 nuts, then detach the No. 1 and No. 2 exhaust manifold stay.

(b) Remove the 5 nuts, the exhaust manifold converter and gasket.

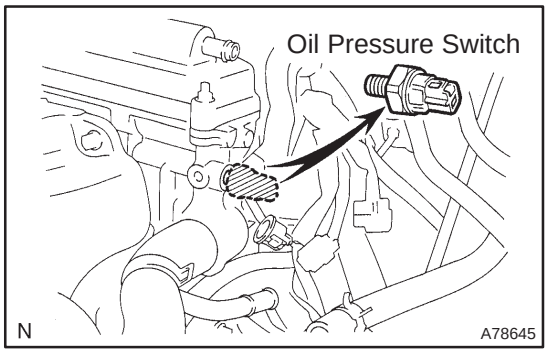
90. REMOVE OIL LEVEL GAGE SUB–ASSY

91. REMOVE OIL LEVEL GAGE GUIDE

92. REMOVE WATER INLET

(a) Remove the 2 nuts and the water inlet.

93. REMOVE THERMOSTAT



94. REMOVE WATER BY–PASS PIPE NO.1

(a) Remove the 2 bolts and 2 nuts.

(b) Remove the water by–pass pipe No. 1 and a gasket.

95. REMOVE KNOCK SENSOR

(a) Remove the nut and the knock sensor.

96. REMOVE ENGINE OIL PRESSURE SWITCH ASSY

(a) Using SST, remove the engine oil pressure switch.
SST 09268–46021

97. REMOVE E.F.I. ENGINE COOLANT TEMPERATURE SENSOR

(a) Using a SST, remove the coolant temperature sensor
SST 09817–33190

98. REPLACE PARTIAL ENGINE ASSY

99. INSTALL E.F.I. ENGINE COOLANT TEMPERATURE SENSOR

(a) Install a new gasket to the engine coolant temperature sensor.

(b) Using SST, install the engine coolant temperature sensor.
SST 09817–33190
Torque: 20 N·m (208 kgf·cm, 15 ft·lbf)

100. INSTALL ENGINE OIL PRESSURE SWITCH ASSY

(a) Clean the threads of the oil pressure switch, apply adhesive there.
Adhesive: Part No. 08833 – 00080 THREE BOND 1344 or equivalent.

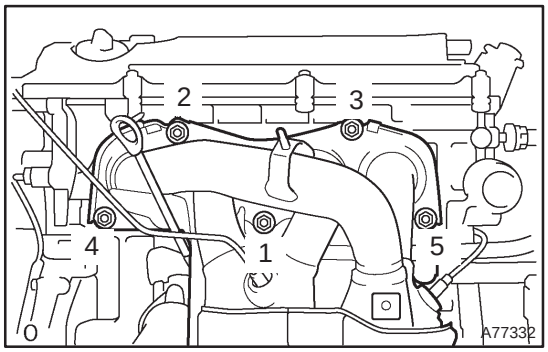
(b) Install the oil pressure switch.
Torque: 15 N·m (153 kgf·cm, 11 ft·lbf)
SST 09268–46021

101. INSTALL KNOCK SENSOR
Torque: 20 N·m (208 kgf·cm, 15 ft·lbf)

102. INSTALL WATER BY–PASS PIPE NO.1

(a) Install the water by–pass pipe No. 1 and a new gasket.

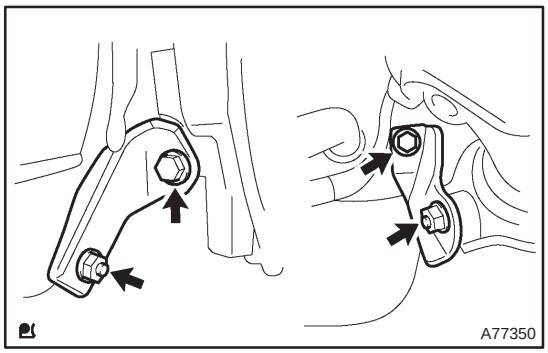
(b) Install the 2 bolts and 2 nuts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)



103. INSTALL THERMOSTAT (See page 16–35)

104. INSTALL WATER INLET
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

105. INSTALL OIL LEVEL GAGE GUIDE



(a) Apply a light coat of engine oil to the O–ring, install it to the oil level gauge guide.

(b) Install the oil level gauge and guide with the bolt.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

106. INSTALL EXHAUST MANIFOLD CONVERTER SUB–ASSY

(a) Install a new gasket and the exhaust manifold converter with the 5 nuts.
Torque: 37 N·m (378 kgf·cm, 27 ft·lbf)

(b) Install the No. 1 and No. 2 exhaust manifold stays with the 2 bolts and 2 nuts.
Torque: 44 N·m (449 kgf·cm, 32 ft·lbf)

107. INSTALL EXHAUST MANIFOLD HEAT INSULATOR NO.1
Torque: 12 N·m (122 kgf·cm, 9.0 ft·lbf)

108. INSTALL V–RIBBED BELT TENSIONER ASSY
Torque: 60 N·m (607 kgf·cm, 44 ft·lbf)

109. INSTALL IGNITION COIL ASSY
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

110. INSTALL FUEL INJECTOR ASSY (See page 11–42)

111. INSTALL FUEL DELIVERY PIPE SUB–ASSY (See page 11–42)

112. INSTALL NOZZLE HOLDER CLAMP (See page 11–42)

113. INSTALL SURGE TANK STAY NO.1

(a) Install the surge tank stay with insulator No. 2.
Torque: 21 N·m (210 kgf·cm, 15 ft·lbf)

114. INSTALL INTAKE MANIFOLD

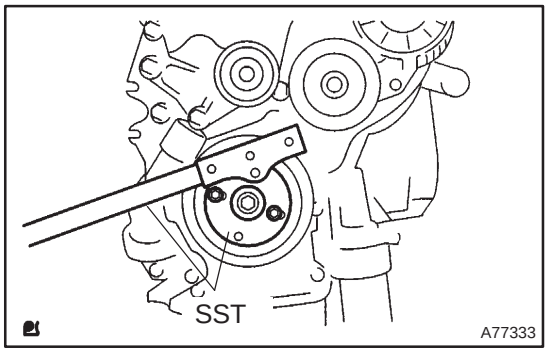
(a) Install a new gasket on the cylinder head.

(b) Install the intake manifold with the 5 bolts and 2 nuts.
Torque: 30 N·m (306 kgf·cm, 22 ft·lbf)

115. INSTALL FUEL PUMP ASSY (See page 11–52)

116. INSTALL FUEL PIPE SUB–ASSY NO.1 (See page 11–52)
SST 09023–12900

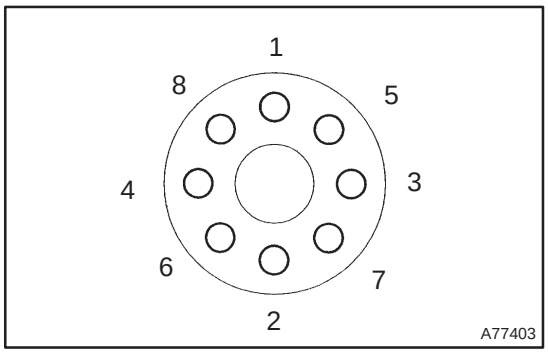
117. INSTALL FUEL PRESSURE PULSATION DAMPER ASSY (See page 11–49)



118. INSTALL THROTTLE BODY ASSY (See page 10–44)

119. INSTALL THROTTLE BODY BRACKET
Torque: 21 N·m (210 kgf·cm, 15 ft·lbf)

120. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSY

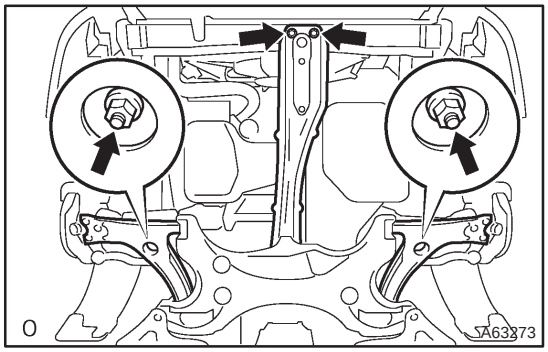


(a) Apply a light coat of engine oil to the new O–ring and install it to the camshaft timing oil control valve.

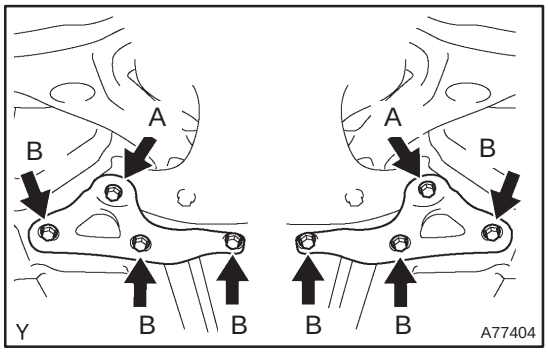
(b) Install the camshaft oil control valve with the bolt.
Torque: 9.0 N·m (92 kgf·cm, 79 in.·lbf)

121. INSTALL DRIVE PLATE AND RING GEAR OR FLYWHEEL

(a) Hold the crankshaft with SST.
SST 09213–54015 (91651–60855), 09330–00021
Adhesive:
Part No. 08833–00070, THREE BOND or equivalent



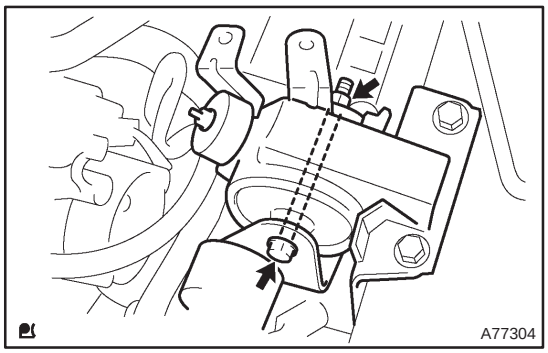
(b) Install the drive plate. (A/T)
(1) Clean the bolt and bolt hole.
(2) Apply adhesive to the bolts.
(3) Using several steps, install and tighten the 8 bolts uniformly in the sequence shown in the illustration.
Torque: 98 N·m (1,000 kgf·cm, 72 ft·lbf)



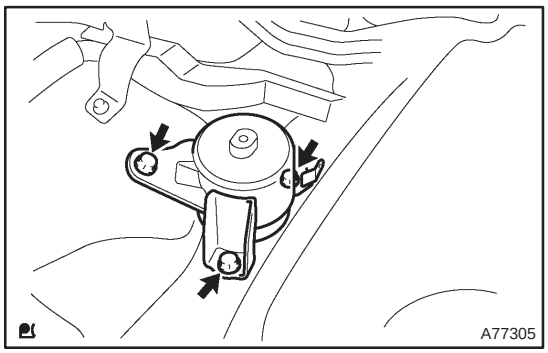
(c) Install the flywheel. (M/T)
(1) Clean the bolt hole.
(2) Using several steps, install and tighten the 8 bolts uniformly in the sequence shown in the illustration.
Torque: 130 N·m (1,327 kgf·cm, 96 ft·lbf)

NOTICE:
Do not reuse the flywheel bolt.

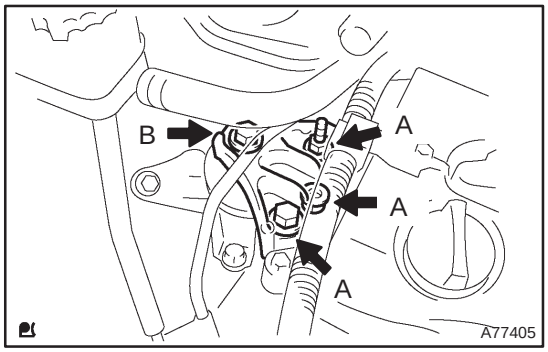
122. INSTALL CLUTCH DISC ASSY (M/T TRANSAXLE) (See page 42–26)
123. INSTALL CLUTCH COVER ASSY (M/T TRANSAXLE) (See page 42–26)
124. INSTALL MANUAL TRANSAXLE ASSY (M/T TRANSAXLE) (See page 41–24)
125. INSTALL AUTOMATIC TRANSAXLE ASSY (A/T TRANSAXLE) (See page 40–25)
126. INSTALL FRONT DRIVE SHAFT ASSY LH (See page 30–6)
127. INSTALL FRONT DRIVE SHAFT ASSY RH (See page 30–6)
128. INSTALL FRONT SUSPENSION CROSSMEMBER W/CENTER MEMBER
(a) Install the engine mounting insulator FR with the through bolt and nut.
Torque: 87 N·m (887 kgf·cm, 64 ft·lbf)
(b) Install the engine mounting insulator RR with the through bolt and nut.
Torque: 87 N·m (887 kgf·cm, 64 ft·lbf)
129. INSTALL STARTER ASSY (See page 19–12)
130. INSTALL VANE PUMP ASSY
Torque: 37 N·m (370 kgf·cm, 27 ft·lbf)



131. INSTALL ENGINE ASSEMBLY WITH TRANSAXLE
(a) Install the 2 bolts and 2 nuts as shown in the illustration.
Torque:
Bolt 45 N·m (459 kgf·cm, 33 ft·lbf)
Nut 133 N·m (1,356 kgf·cm, 98 ft·lbf)

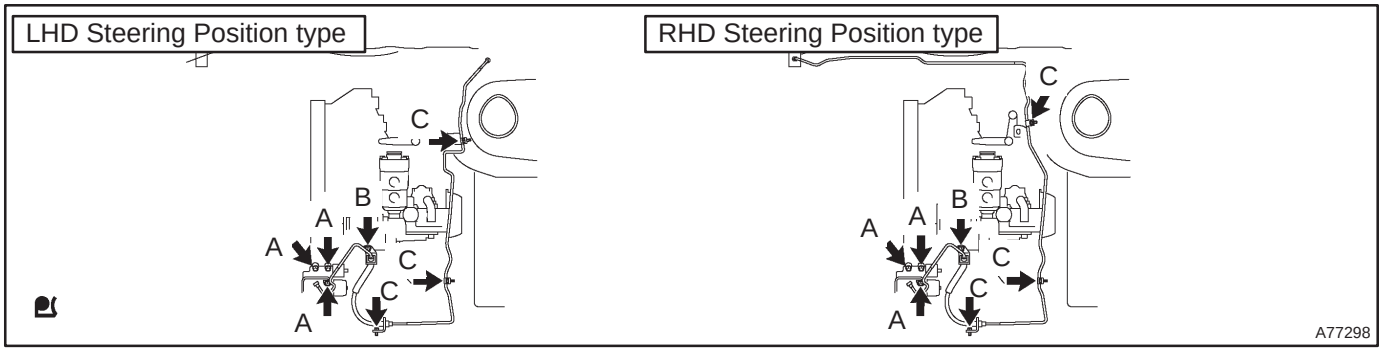


(b) Install the front suspension member braces with the 8 bolts.



Torque:
Bolt A 133 N·m (1,356 kgf·cm, 98 ft·lbf)
Bolt B 80 N·m (816 kgf·cm, 59 ft·lbf)

132. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR
Torque: 87 N·m (887 kgf·cm, 64 ft·lbf)



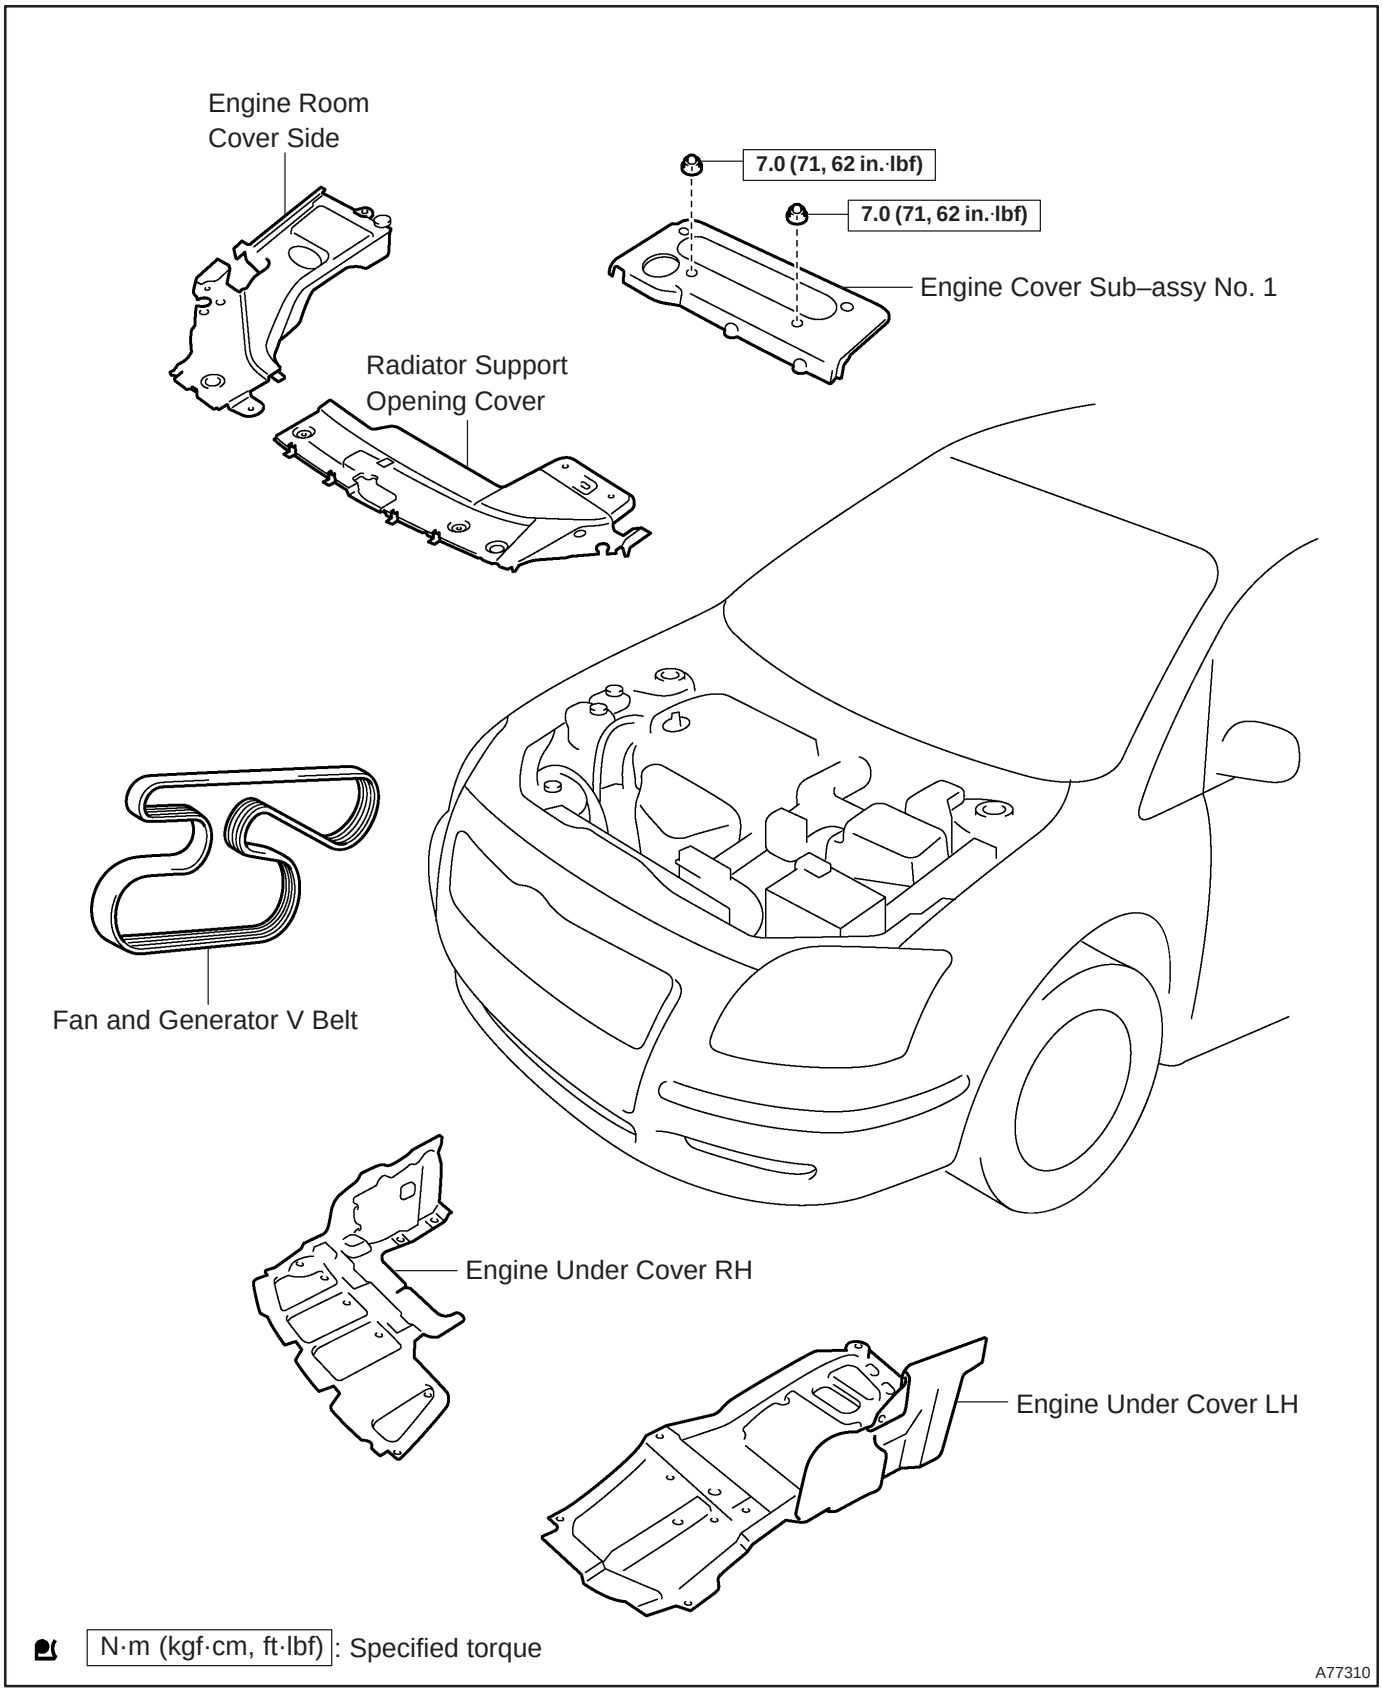
133. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR
Torque: 52 N·m (530 kgf·cm, 38 ft·lbf)

134. INSTALL ENGINE MOUNTING BRACKET NO.2 RH
Torque:
A 52 N·m (530 kgf·cm, 38 ft·lbf)
B 113 N·m (1,152 kgf·cm, 83 ft·lbf)

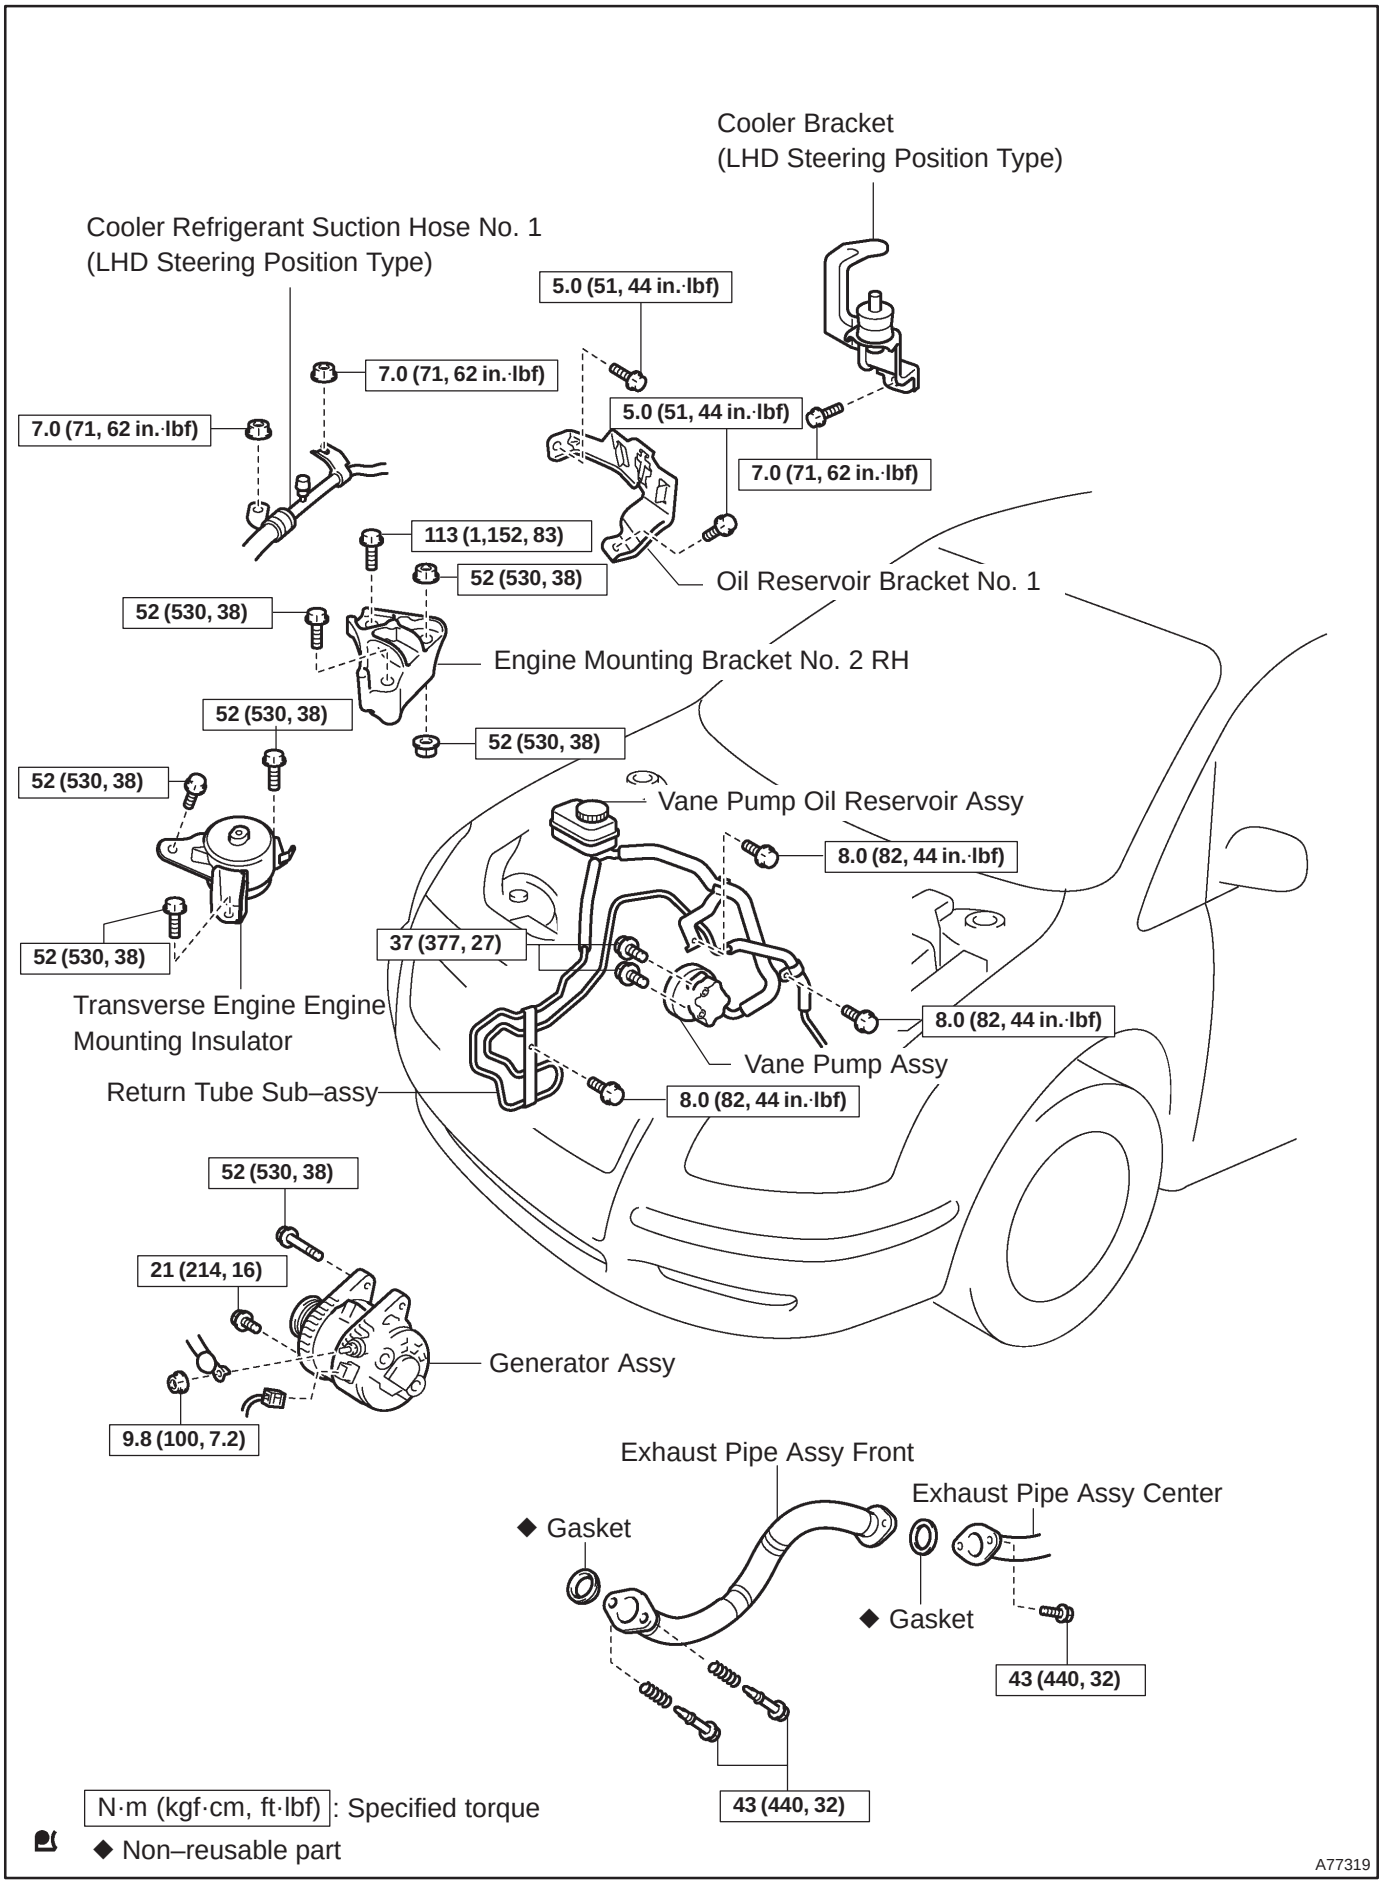
135. REMOVE ENGINE HANGERS
136. INSTALL STEERING INTERMEDIATE SHAFT ASSY NO.2 (See page 50–9)
137. INSTALL TRANSMISSION CONTROL CABLE ASSY (M/T TRANSAXLE) (See page 41–24)
138. INSTALL TRANSMISSION CONTROL CABLE ASSY (A/T TRANSAXLE) (See page 40–25)

139. INSTALL CLUTCH RELEASE CYLINDER ASSY (M/T TRANSAXLE)

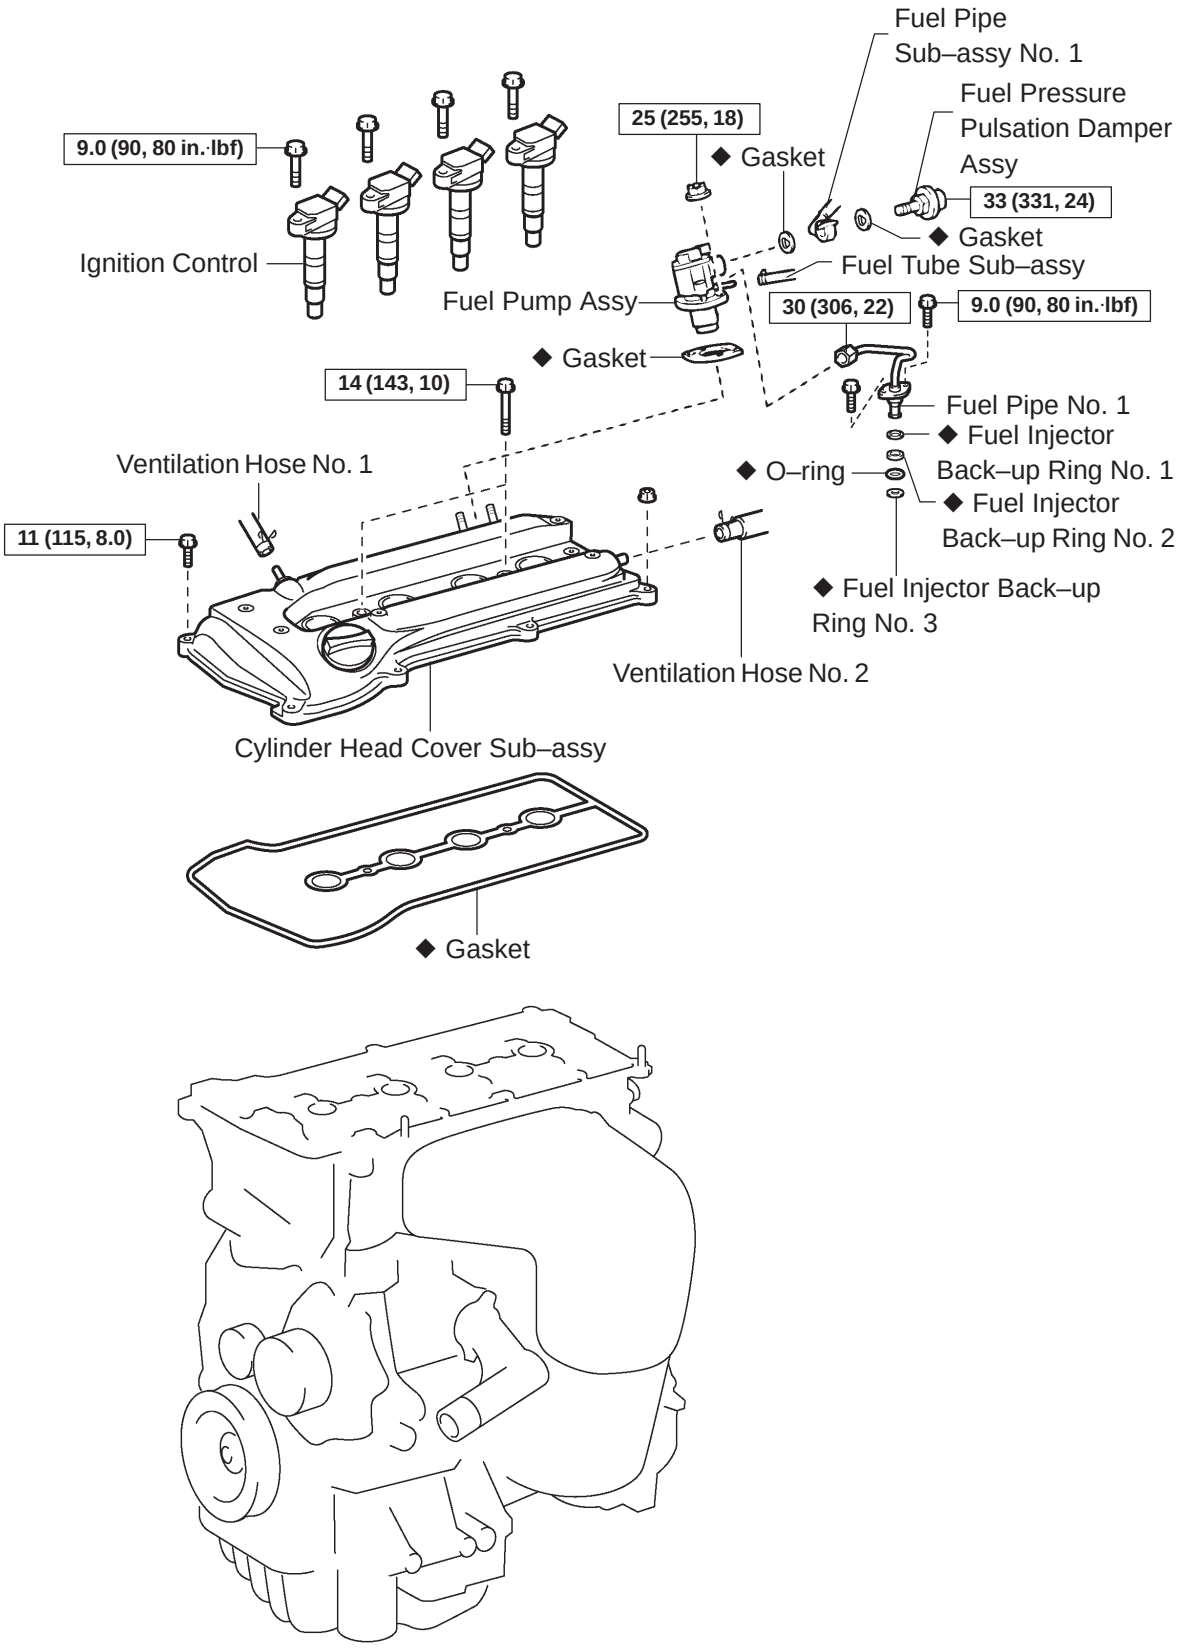
Torque:
Bolt A 12 N·m (122 kgf·cm, 89 ft·lbf)
Bolt B 9.0 N·m (92 kgf·cm, 79 in.·lbf)
Bolt C 5.0 N·m (51 kgf·cm, 44 in.·lbf)



140. INSTALL FRONT AXLE ASSY LH
Torque: 294 N·m (3,000 kgf·cm, 217 ft·lbf)
141. INSTALL FRONT AXLE ASSY RH
Torque: 294 N·m (3,000 kgf·cm, 217 ft·lbf)
142. INSTALL FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH (M/T TRANSAXLE)
Torque: 142 N·m (1,448 kgf·cm, 104 ft·lbf)
143. INSTALL FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH (A/T TRANSAXLE)
Torque: 142 N·m (1,448 kgf·cm, 104 ft·lbf)
144. INSTALL FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 RH (M/T TRANSAXLE)
Torque: 142 N·m (1,448 kgf·cm, 104 ft·lbf)
145. INSTALL FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 RH (A/T TRANSAXLE)
Torque: 142 N·m (1,448 kgf·cm, 104 ft·lbf)
146. INSTALL FRONT STABILIZER LINK ASSY LH
Torque: 74 N·m (755 kgf·cm, 55 ft·lbf)
147. INSTALL FRONT STABILIZER LINK ASSY RH
Torque: 74 N·m (755 kgf·cm, 55 ft·lbf)
148. INSTALL TIE ROD END SUB–ASSY LH (See page 51–36)
149. INSTALL TIE ROD END SUB–ASSY RH
HINT:
Perform the same procedure as above on the opposite side.
150. INSTALL FRONT AXLE HUB LH NUT (See page 30–6)
151. INSTALL FRONT AXLE HUB RH NUT
HINT:
Perform the same procedure as above on the opposite side.
152. INSTALL EXHAUST PIPE ASSY FRONT (See page 15–7)
153. INSTALL EXHAUST PIPE ASSY CENTER (See page 15–7)
154. INSTALL FLOOR PANEL BRACE FRONT
Torque: 30 N·m (306 kgf·cm, 22 ft·lbf)
155. INSTALL COOLER BRACKET (LHD STEERING POSITION TYPE)
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
156. INSTALL ENGINE SERVICE COVER BRACKET RH (RHD STEERING POSITION TYPE)
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
157. INSTALL COOLER REFRIGERANT SUCTION HOSE NO.1 (LHD STEERING POSITION TYPE)
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)



158. INSTALL OIL RESERVOIR BRACKET NO.1
Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)
159. INSTALL RETURN TUBE SUB–ASSY
Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)
160. INSTALL RADIATOR RESERVE TANK SUB–ASSY
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)
161. INSTALL BATTERY CARRIER
162. INSTALL AIR CLEANER ASSEMBLY WITH HOSE
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)
163. INSTALL COMPRESSOR AND MAGNETIC CLUTCH
Torque: 25 N·m (255 kgf·cm, 18 in.·lbf)
164. INSTALL GENERATOR ASSY (See page 19–20)
165. INSTALL FAN AND GENERATOR V BELT (See page 14–185)
166. INSTALL RADIATOR ASSY (See page 16–36)
167. INSTALL RADIATOR RELAY BLOCK
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)
168. INSTALL ENGINE COVER SUB–ASSY NO.1
Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)
169. ADD MANUAL TRANSAXLE OIL (M/T TRANSAXLE)
170. ADD AUTOMATIC TRANSAXLE FLUID (A/T TRANSAXLE)
171. ADD ENGINE OIL
172. ADD COOLANT (See page 16–31)
173. ADD POWER STEERING FLUID (See page 51–4)
174. BLEED POWER STEERING FLUID
175. CHECK FOR ENGINE OIL LEAKS
176. CHECK FOR ENGINE COOLANT LEAKS (See page 16–25)
177. CHECK FOR FUEL LEAKS (See page 11–30)
178. INSTALL FRONT WHEELS
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)
179. ADJUST FRONT WHEEL ALIGNMENT (See page 26–6)
180. INSPECT CHECK IDLE SPEED AND IGNITION TIMING (See page 14–204)
181. INSPECT CO/HC
182. CHECK ABS SPEED SENSOR SIGNAL



CHAIN SUB–ASSY (1AZ–FSE)

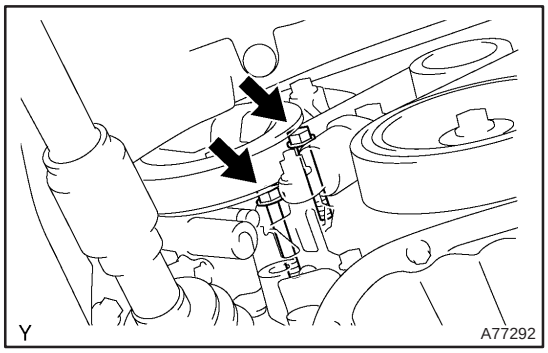
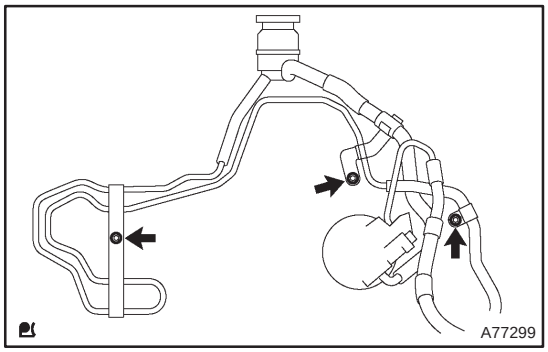
REPLACEMENT

1. **DISCHARGE FUEL SYSTEM PRESSURE (See page 11–30)**
2. **REMOVE FRONT WHEEL RH**
3. **REMOVE RADIATOR SUPPORT OPENING COVER**
4. **REMOVE ENGINE ROOM COVER SIDE**
5. **REMOVE ENGINE UNDER COVER RH**
6. **REMOVE ENGINE UNDER COVER LH**
7. **DRAIN ENGINE OIL**



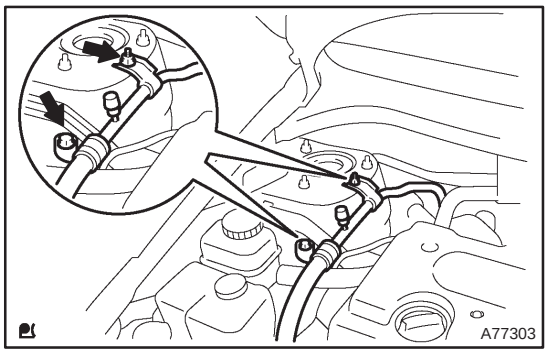
(a) Install a new gasket and the drain plug after draining engine oil.
Torque: 25 N·m (255 kgf·cm, 18 ft·lbf)

8. **REMOVE ENGINE COVER SUB–ASSY NO.1**



(a) Remove the 2 nuts and the engine cover No. 1.

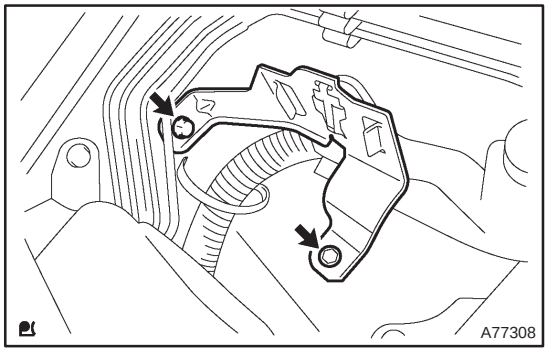
9. **REMOVE FUEL PRESSURE PULSATION DAMPER ASSY**
10. **DISCONNECT FUEL TUBE SUB–ASSY (See page 11–33)**
11. **SEPARATE FUEL PIPE SUB–ASSY NO.1 (See page 11–52)**
    SST 09023–12900
12. **REMOVE FUEL PUMP ASSY (See page 11–52)**
13. **REMOVE FAN AND GENERATOR V BELT (See page 14–185)**
    SST 09249–63010
14. **REMOVE GENERATOR ASSY (See page 19–20)**
15. **REMOVE EXHAUST PIPE ASSY FRONT (See page 15–7)**



16. **SEPARATE VANE PUMP ASSY**

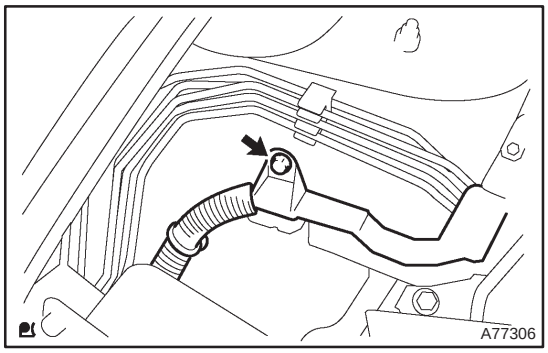
(a) Remove the 2 through bolts and separate the vane pump.

17. SEPARATE RETURN TUBE SUB–ASSY



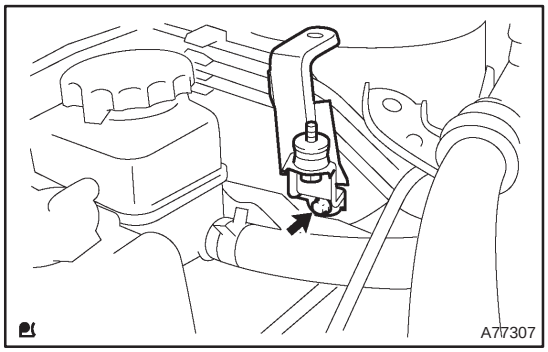
(a) Remove the 3 bolts and separate the return tube as shown in the illustration.

18. SEPARATE COOLER REFRIGERANT SUCTION HOSE NO.1 (LHD STEERING POSITION TYPE)



(a) Remove the 2 nuts and separate the Cooler refrigerant Suction hose No. 1.

19. SEPARATE VANE PUMP OIL RESERVOIR ASSY



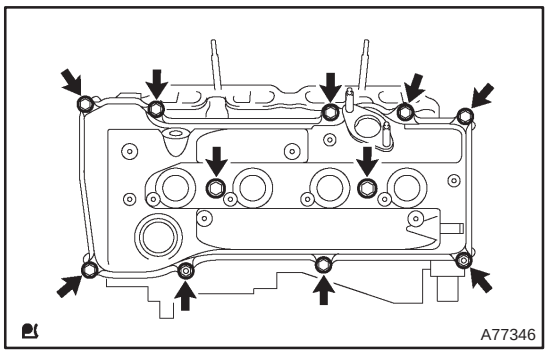
20. REMOVE OIL RESERVOIR BRACKET NO.1

(a) Remove the 2 bolts and the oil pump reservoir bracket No. 1.

21. SEPARATE ENGINE WIRE

(a) Remove the bolt and separate the clamp and engine wire.

22. REMOVE COOLER BRACKET (LHD STEERING POSITION TYPE)

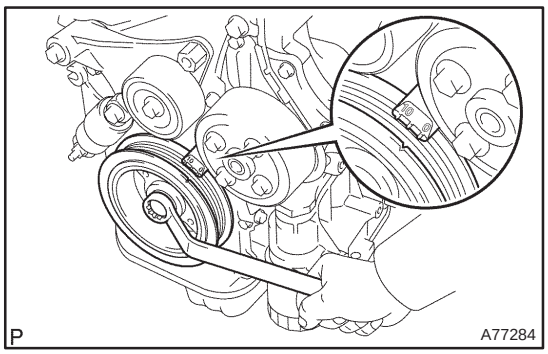


(a) Remove the bolt and cooler bracket.

23. REMOVE ENGINE SERVICE COVER BRACKET RH (RHD STEERING POSITION TYPE)

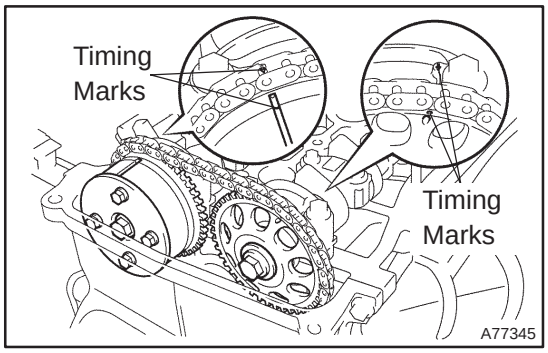
(a) Remove the bolt and the engine service cover bracket RH.

24. REMOVE IGNITION COIL ASSY



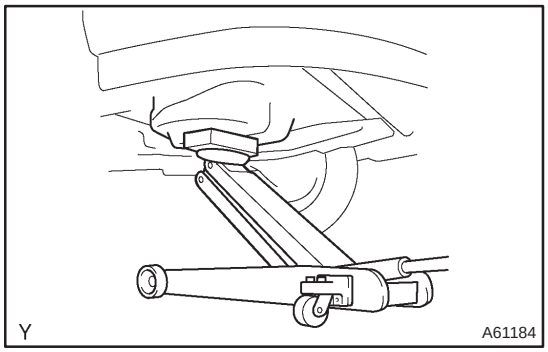
(a) Remove the 4 bolts and 4 ignition coils.

25. REMOVE CYLINDER HEAD COVER SUB–ASSY



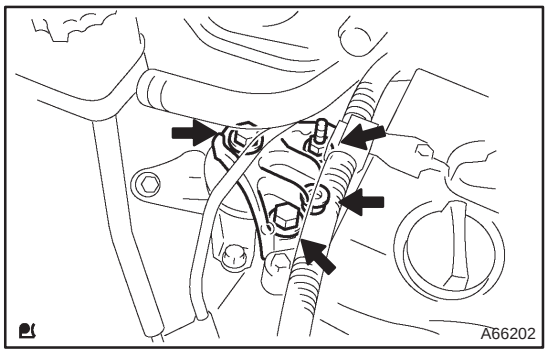
(a) Disconnect the 2 PCV hoses from the cylinder head cover.

(b) Remove the 9 bolts and 2 nuts, then remove the cylinder head cover and gasket.



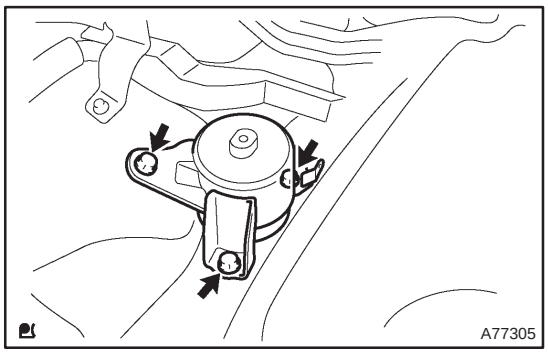
26. SET NO. 1 CYLINDER TO TDC/COMPRESSION

(a) Turn the crankshaft pulley, and align its groove with timing mark 0 of the timing chain cover.



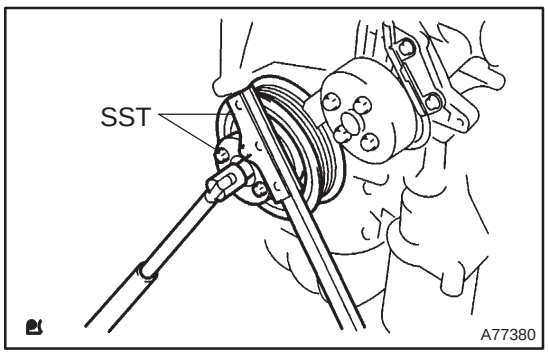
(b) Check that each timing mark of the camshaft timing gears is aligned with the timing marks of the No. 1 and No. 2 bearing caps as shown in the illustration.

If not, turn the crankshaft 1 revolution (360°) and align the marks as above.



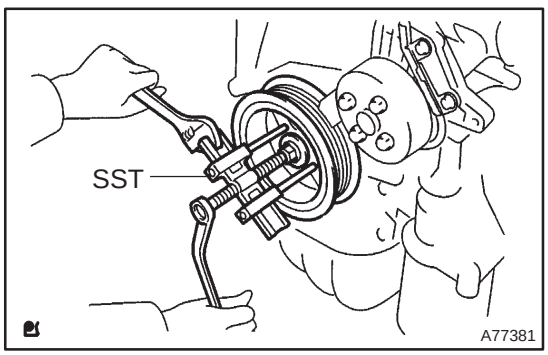
27. REMOVE ENGINE MOUNTING BRACKET NO.2 RH

(a) Set the jack underneath the engine, and place a wooden block on the jack.



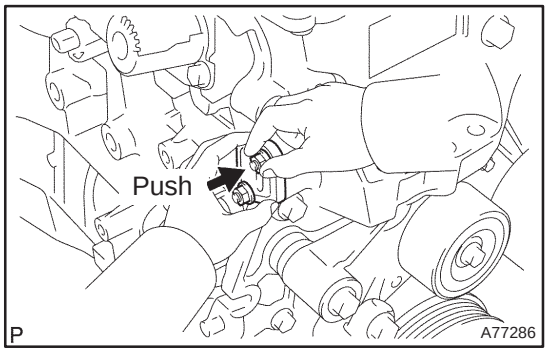
(b) Remove the 2 bolts and 2 nuts, and then detach the mounting bracket No. 2 RH.

28. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR



(a) Remove the 3 bolts and the engine mounting insulator.

29. REMOVE CRANKSHAFT PULLEY

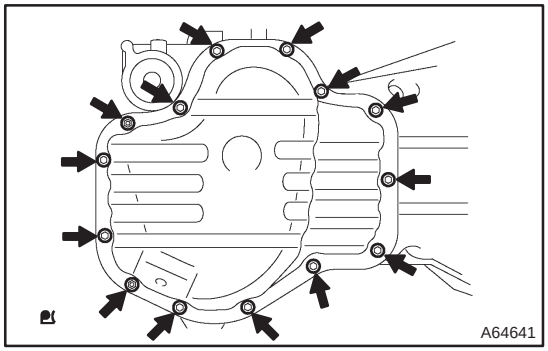


(a) Using SST, fix the crankshaft pulley and loosen a crankshaft pulley bolt.

SST 09213–54015 (91651–60855), 09330–00021

(b) Using a crankshaft pulley bolt and SST, remove the crankshaft pulley.

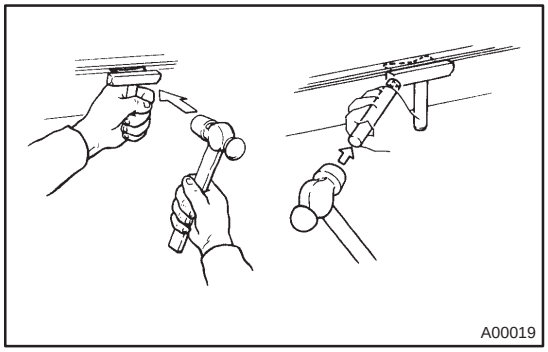
SST 09950–50013 (09951–05010, 09952–05010, 09953–05020, 09954–05021)



30. REMOVE CHAIN TENSIONER ASSY NO.1

(a) Remove the 2 nuts, the chain tensioner No. 1 and gasket.

NOTICE:

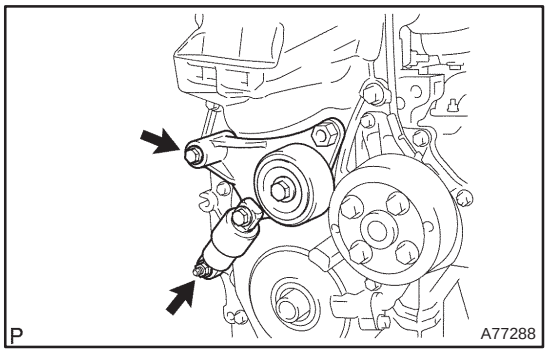


Do not turn the crankshaft.

31. REMOVE CRANKSHAFT POSITION SENSOR (See page 18–17)

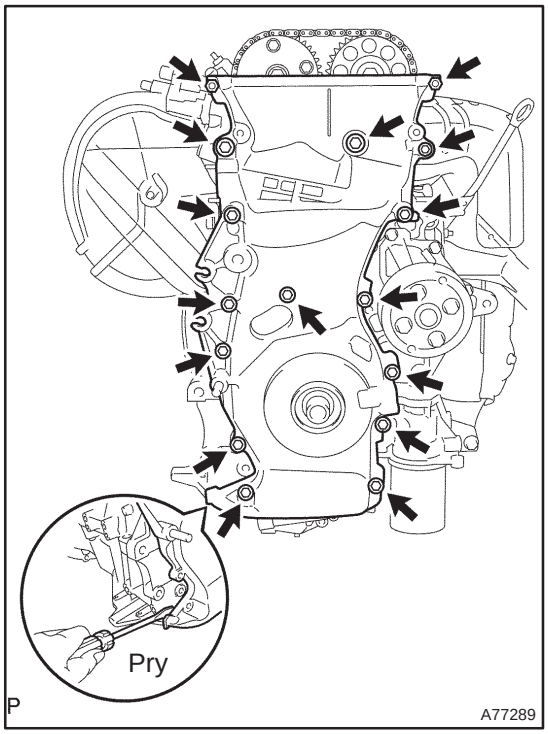
32. REMOVE OIL PAN SUB–ASSY

(a) Remove the 12 bolts and 2 nuts.



(b) Insert the blade of SST between the crank case, timing chain cover and oil pan, cut off applied sealer and remove the oil pan.

SST 09032–00100



NOTICE:

Be careful not to damage the contact surface of the timing chain cover, crank case and oil pan.

33. REMOVE V–RIBBED BELT TENSIONER ASSY

(a) Remove the bolt and nut, and then remove the V–ribbed belt tensioner.

34. REMOVE TIMING CHAIN OR BELT COVER SUB–ASSY

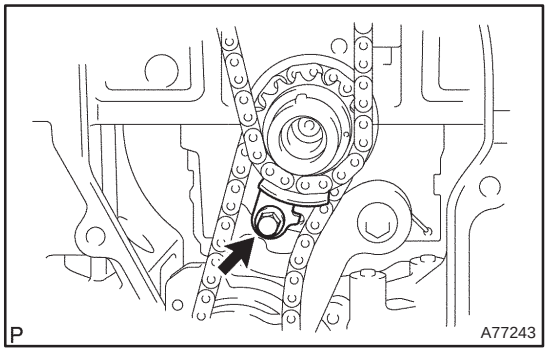
(a) Remove the 14 bolts and 2 nuts.

(b) Using a screwdriver, pry between the timing chain cover and cylinder head or cylinder block.

(c) Remove the timing chain cover.

NOTICE:

Be careful not to damage the contact surface of the timing chain cover, cylinder head and cylinder block.



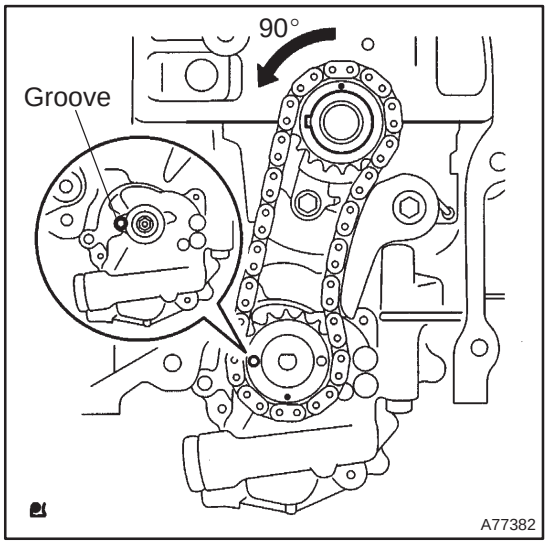
35. REMOVE CRANKSHAFT POSITION SENSOR PLATE NO.1

36. REMOVE CHAIN TENSIONER SLIPPER

(a) Remove the 2 bolts and the chain tensioner slipper.

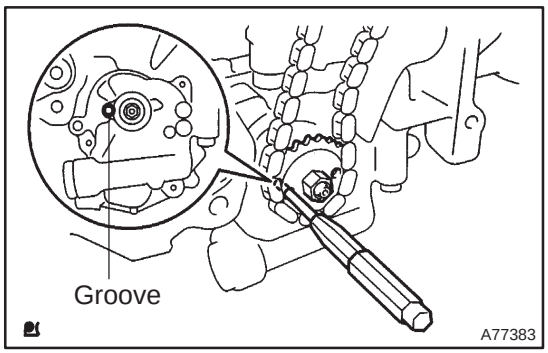
37. REMOVE CHAIN VIBRATION DAMPER NO.1

(a) Remove the bolt and the chain vibration damper No. 1



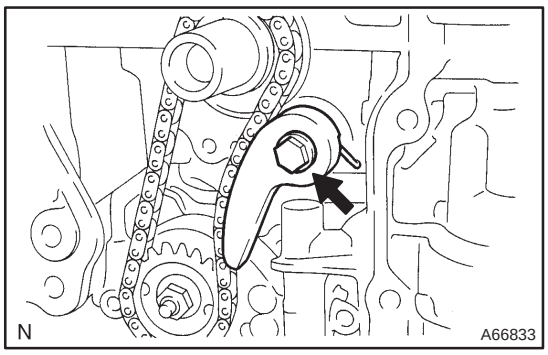
38. REMOVE TIMING CHAIN GUIDE

(a) Remove the bolt and the timing chain guide.



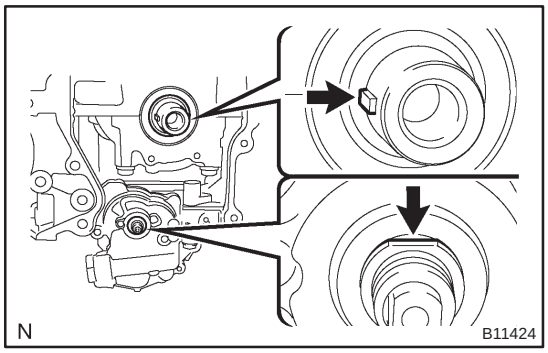
39. REMOVE CHAIN SUB–ASSY

40. REMOVE CRANKSHAFT TIMING GEAR OR SPROCKET



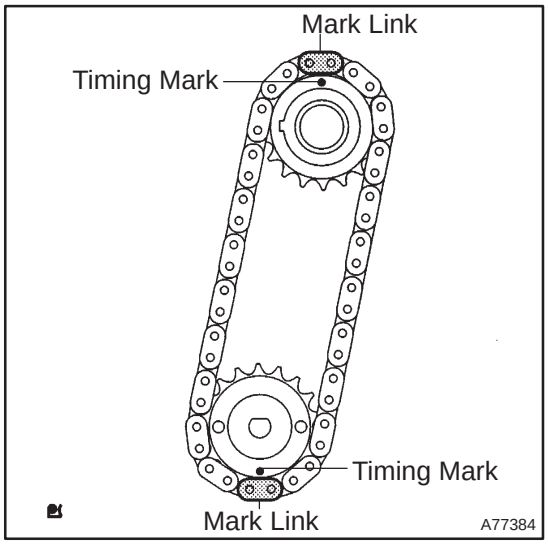
41. REMOVE NO.2 CHAIN SUB–ASSY

(a) Turn the crankshaft counterclockwise 90°, and align an adjusting hole of the oil pump drive shaft gear with the groove of the oil pump.



(b) Put a 4 mm diameter bar in the adjusting hole of the oil pump drive shaft gear to lock in position, and remove the nut.

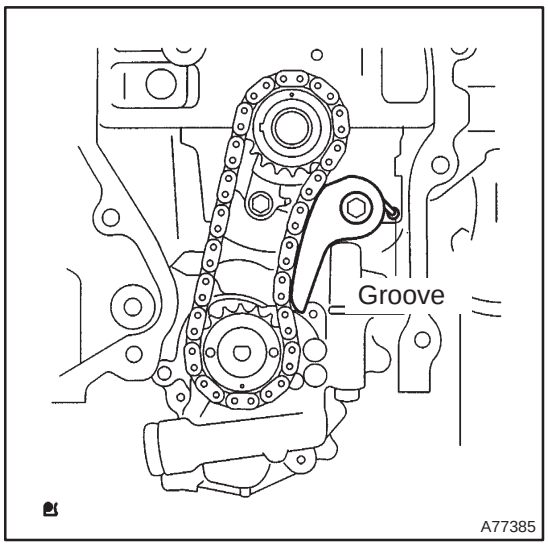
(c) Remove the bolt, and then remove the chain tensioner and spring.



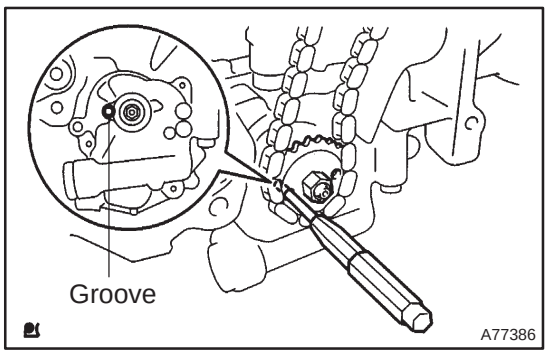
(d) Remove the oil pump drive shaft gear and chain No. 2.

42. INSTALL NO.2 CHAIN SUB–ASSY

(a) Set the crankshaft key to the left side position.



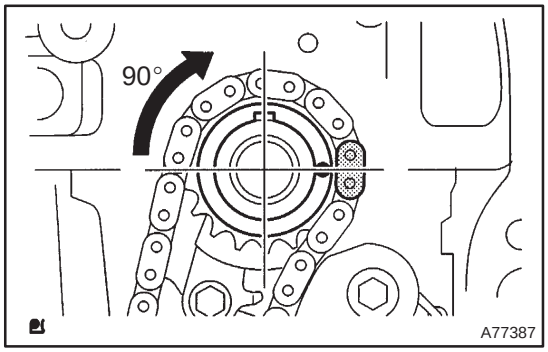
(b) Position the flat portion of the drive shaft upward.



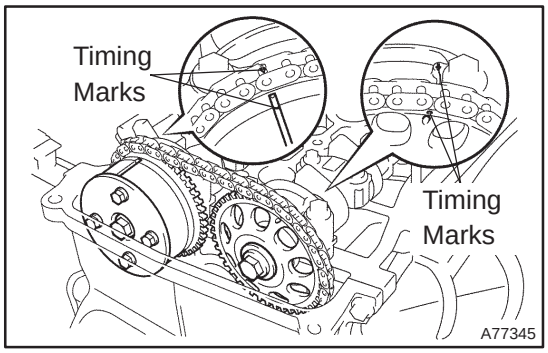
(c) Align the mark links (yellow colored links) with the timing marks of each gear as shown in the illustration.

(d) Install the gears to the crankshaft and oil pump shaft with the chain wrapped.

(e) Temporarily tighten the oil pump drive shaft gear with the nut.

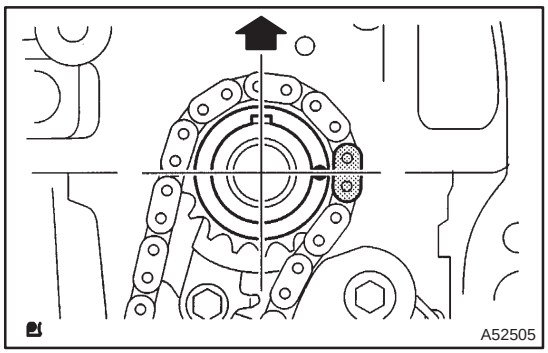


(f) Insert the damper spring into the adjusting hole, and install the chain tensioner plate by the bolt.
Torque: 12 N·m (122 kgf·cm, 9.0 ft·lbf)



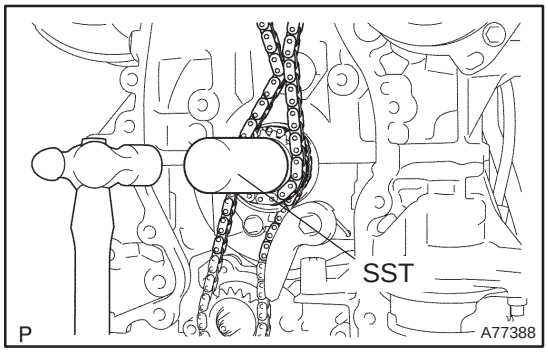
(g) Align an adjusting hole of the sprocket with the groove of the oil pump.

(h) Insert a 4 mm diameter bar into the adjusting hole of the sprocket to lock in position, and tighten the nut.
Torque: 30 N·m (301 kgf·cm, 22 ft·lbf)



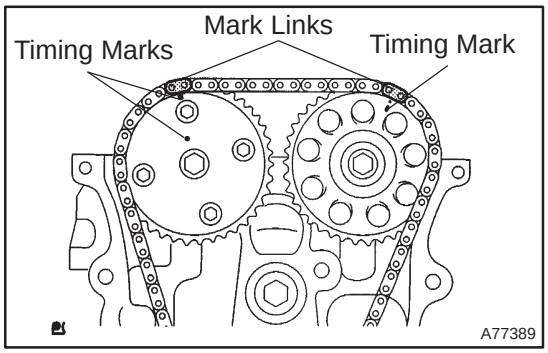
(i) Rotate the crankshaft clockwise 90°, and position the crankshaft key upward.

43. INSTALL CRANKSHAFT TIMING GEAR OR SPROCKET



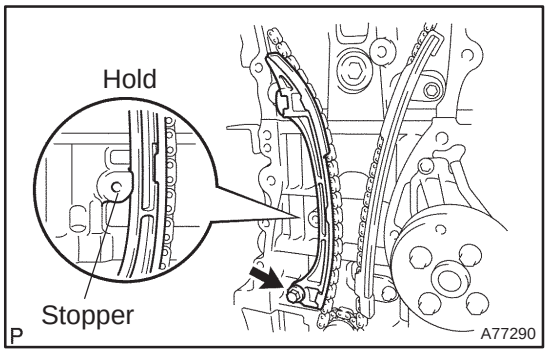
44. SET NO. 1 CYLINDER TO TDC/COMPRESSION

(a) Turn the camshafts with a wrench on the hexagonal lobe, and align the timing marks of the camshaft timing gear with each timing mark located on the No. 1 and No. 2 bearing caps as shown in the illustration.



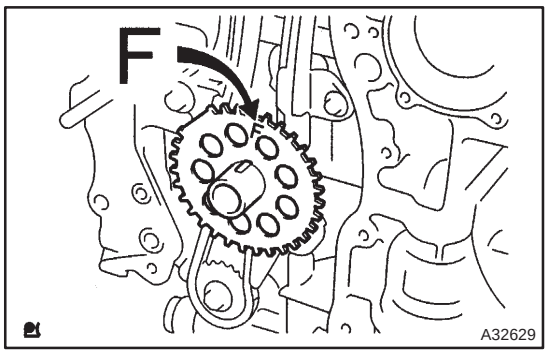
(b) Using the crankshaft pulley bolt, turn the crankshaft and position the key on the crankshaft upward.

45. INSTALL CHAIN VIBRATION DAMPER NO.1
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

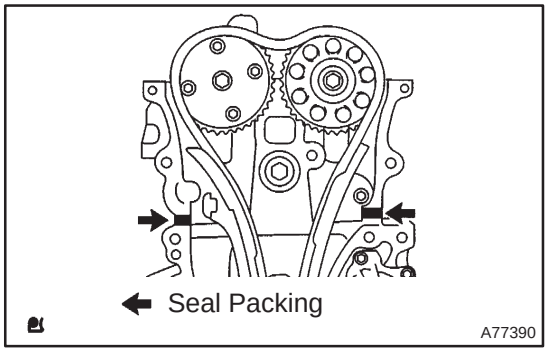


46. INSTALL CHAIN SUB–ASSY

(a) Using SST, install the sprocket.

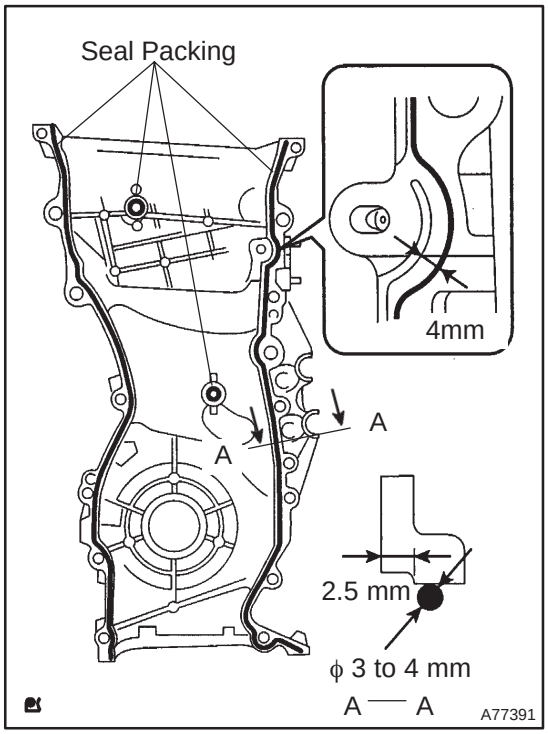


(b) Align the mark links (gold or yellow colored links) with each timing mark located on the camshaft timing gears, and install the chain.

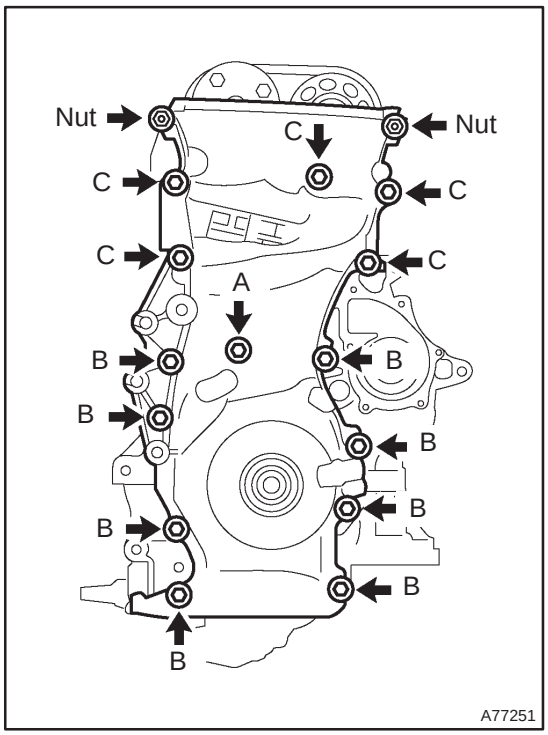


47. INSTALL TIMING CHAIN GUIDE
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

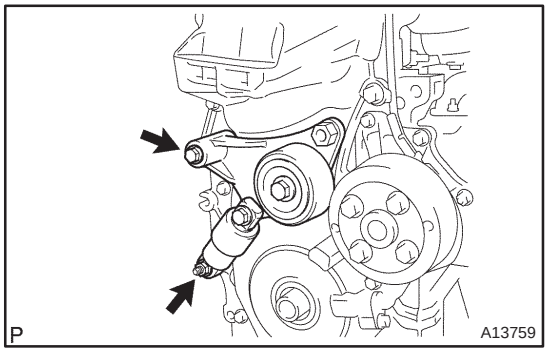
48. INSTALL CHAIN TENSIONER SLIPPER
(a) Install the chain tensioner slipper with bolt.
Torque: 19 N·m (195 kgf·cm, 14 ft·lbf)
(b) Check that the chain tensioner slipper is held on the cylinder block stopper.



49. INSTALL CRANKSHAFT POSITION SENSOR PLATE NO.1
(a) Install the plate with the ”F” mark facing forward.

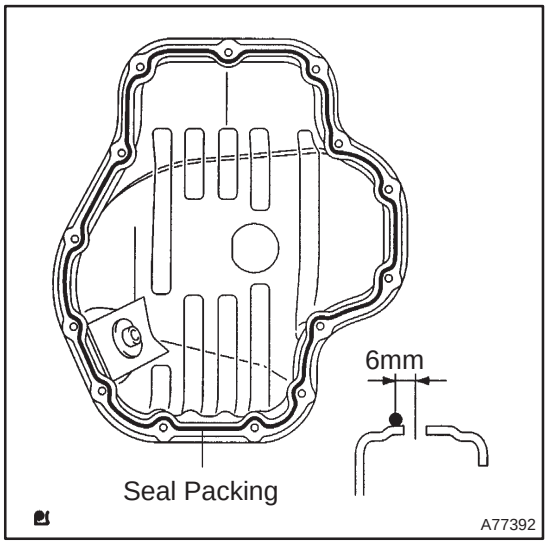


50. INSTALL TIMING CHAIN OR BELT COVER SUB–ASSY
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the chain cover within 3 minutes after applying seal packing.**
- **Do not start the engine within 2 hours after installing.**



(a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the timing chain cover.
(b) Apply a continuous bead (Diameter 2 mm (0.09 in.)) of seal packing as shown in the illustration.
Seal packing: Part No. 08826 – 00080 or equivalent.

(c) Apply a continuous bead (Diameter 3 to 4 mm (0.118 to 0.157 in.)) of seal packing as shown in the illustration.
Seal packing: Part No. 08826 – 00080 or equivalent



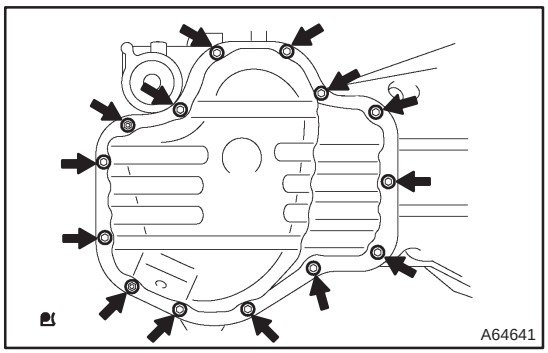
(d) Install the timing chain cover with the 14 bolts and 2 nuts.
Torque:
Bolt A 9.0 N·m (92 kgf·cm, 80 in.·lbf)
Bolt B 21 N·m (214 kgf·cm, 15 ft·lbf)
Bolt C 43 N·m (438 kgf·cm, 32 ft·lbf)
Nut 9.0 N·m (92 kgf·cm, 80 in.·lbf)

51. INSTALL V–RIBBED BELT TENSIONER ASSY

(a) Install the V–ribbed belt tensioner with the bolt and nut.
Torque: 60 N·m (610 kgf·cm, 44 ft·lbf)

NOTICE:
As the drive tensioner should be fastened together with the timing chain cover, so be sure install it within 15 minutes after the timing chain cover is installed.

52. INSTALL OIL PAN SUB–ASSY

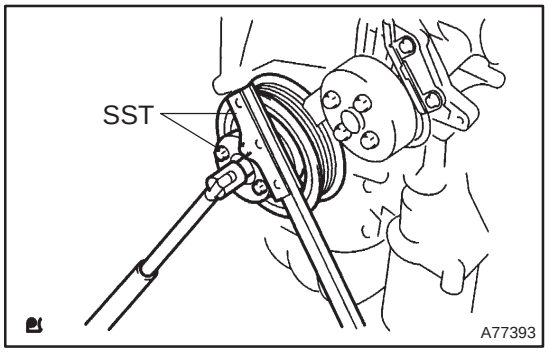


NOTICE:

- **Remove any oil from the contact surface.**
- **Install the oil pan within 3 minutes after applying seal packing.**
- **Do not start the engine within 2 hours after installing.**

(a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surface of the cylinder block and oil pan.

(b) Apply a continuous bead (Diameter 3 mm to 4 mm (0.157 in.)) of seal packing as shown in the illustration, and install the oil pan.

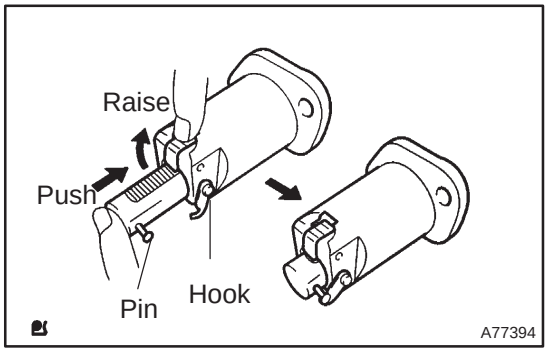


Seal packing: part No. 08826 – 00080 or equivalent

(c) Install the oil pan with the 12 bolts and 2 nuts.

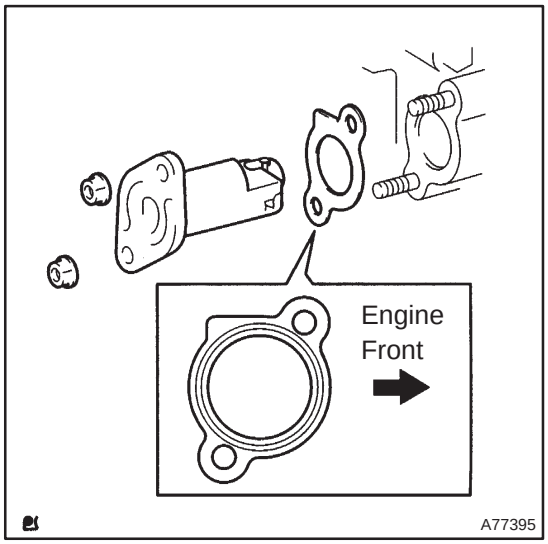
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

53. INSTALL CRANKSHAFT POSITION SENSOR (See page 18–17)



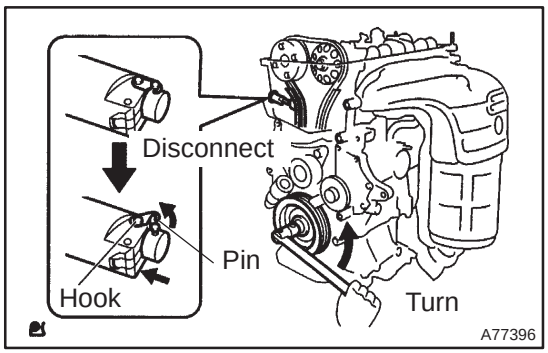
54. INSTALL CRANKSHAFT PULLEY

(a) Using SST, tighten the set bolt.



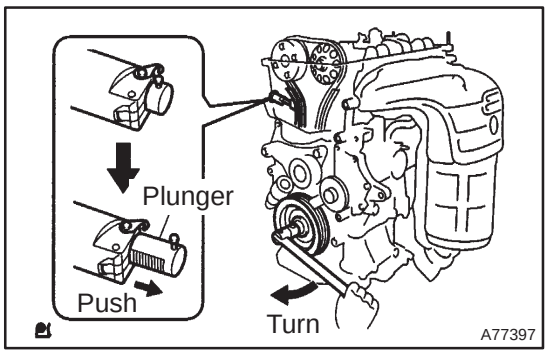
SST 09213–54015 (91651–60855), 09330–00021

Torque: 170 N·m (1,733 kgf·cm, 125 ft·lbf)



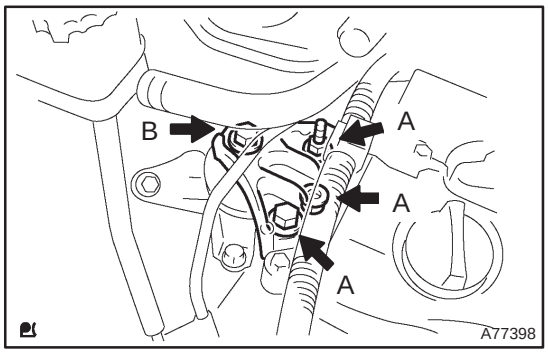
55. INSTALL CHAIN TENSIONER ASSY NO.1

(a) Release the ratchet pawl, fully push in the plunger and apply the hook to the pin so that the plunger is located in position.



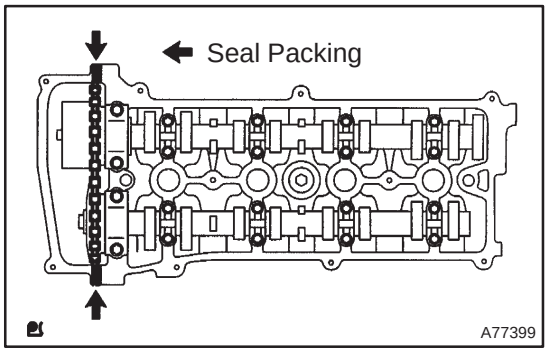
(b) Install a new gasket chain tensioner with the 2 nuts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

NOTICE:
If the hook is released wile inserting, apply the hook again, and insert the chain tensioner.



(c) Turn the crankshaft counterclockwise, and check that the hook is disengaged from the plunger knock pin.

(d) Turn the crankshaft clockwise, and check that the plunger is extended.

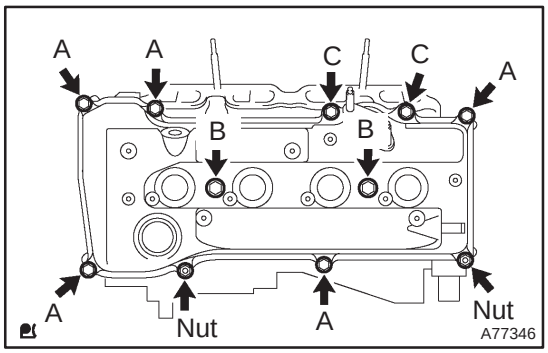


56. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR
Torque: 52 N·m (530 kgf·cm, 38 ft·lbf)

57. INSTALL ENGINE MOUNTING BRACKET NO.2 RH
Torque:
A 52 N·m (530 kgf·cm, 38 ft·lbf)
B 113 N·m (1,152 kgf·cm, 83 ft·lbf)

58. INSTALL CYLINDER HEAD COVER SUB–ASSY

(a) Remove any old seal packing (FIPG) material.



(b) Apply seal packing to the 2 locations as shown in the illustration.

Seal Packing: Part No. 08826–00080 or equivalent

NOTICE:

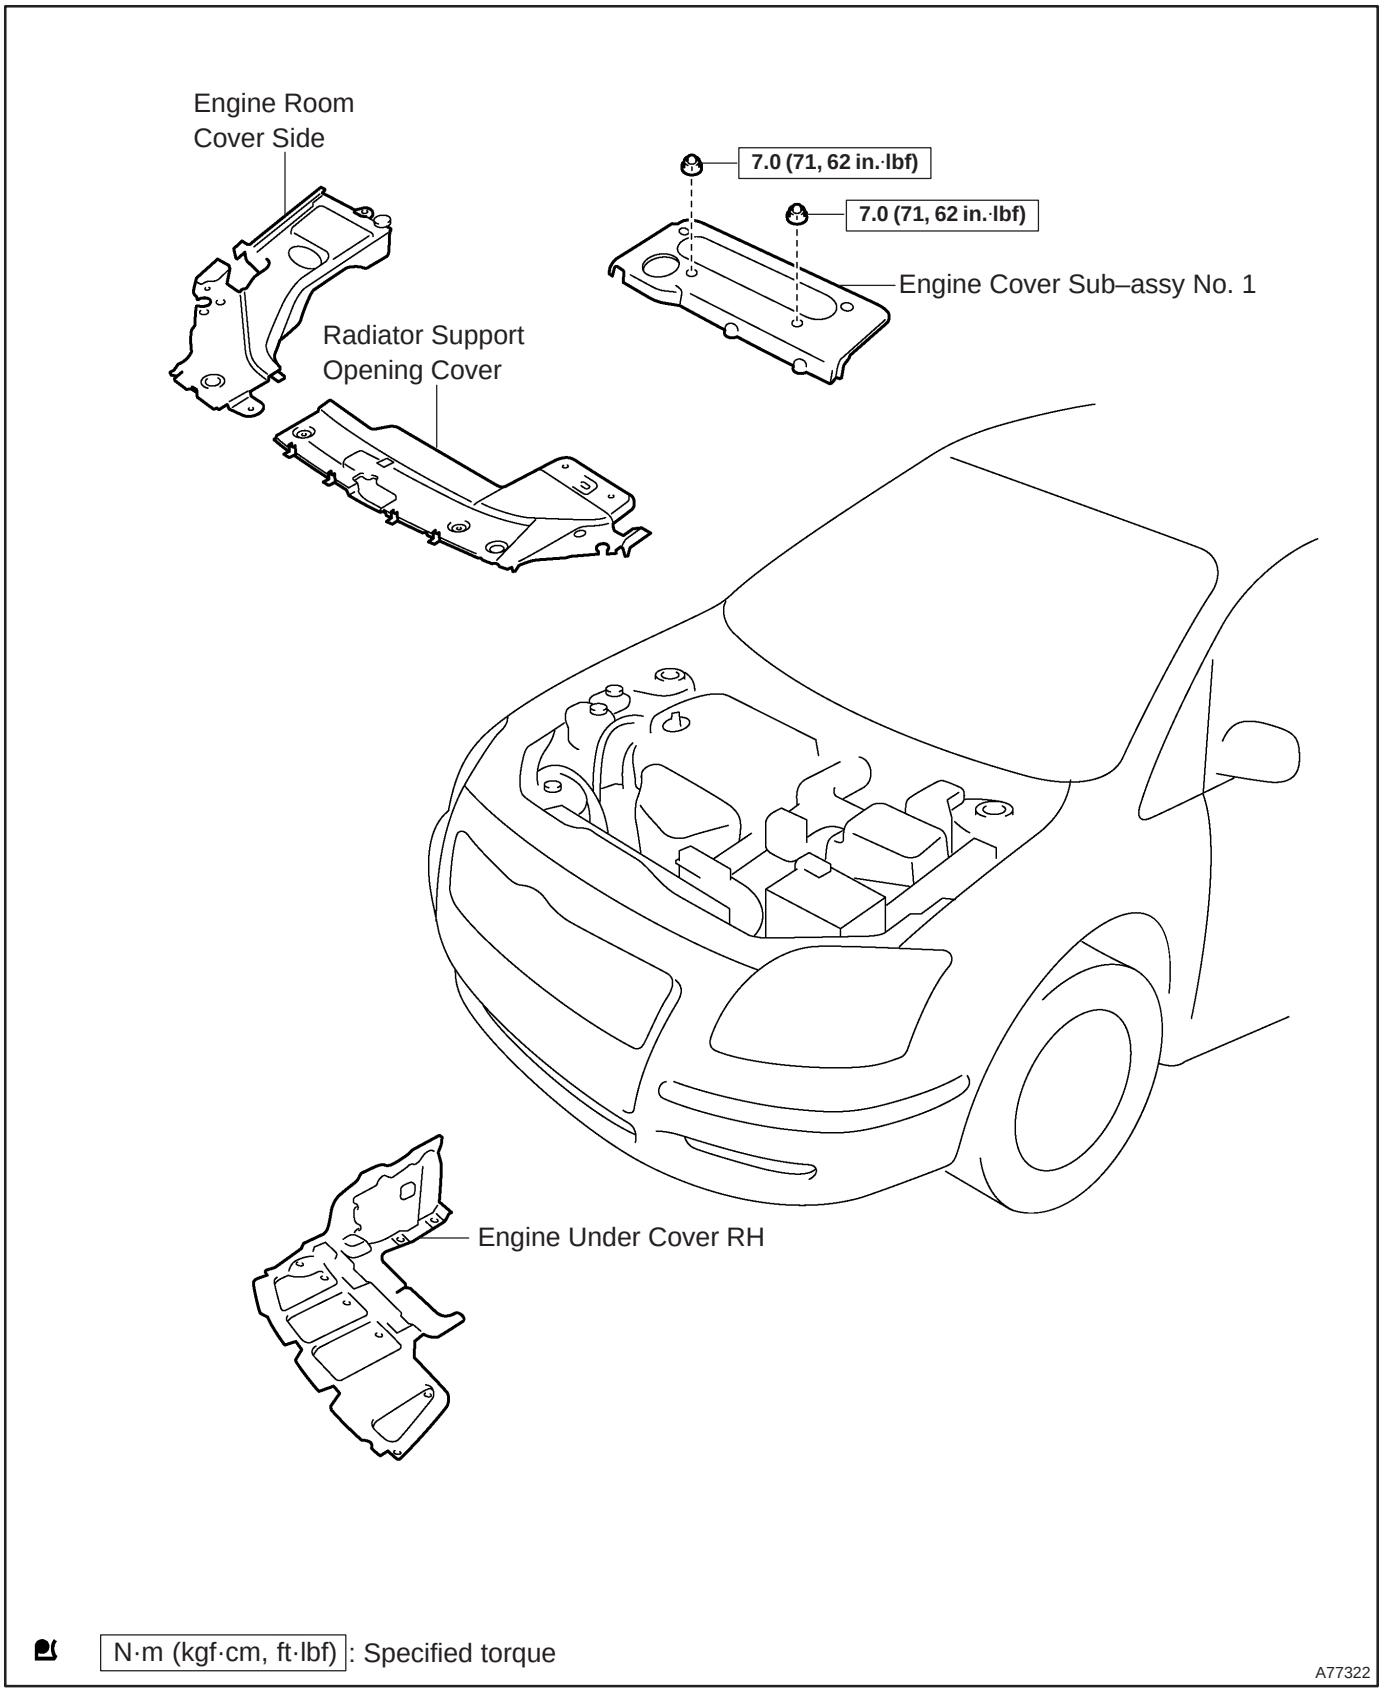
- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 5 minutes after applying seal packing.**
- **Do not expose the seal to engine oil 2 hours after installing.**

(c) install the cylinder head cover with the 9 bolts and 2 nuts.

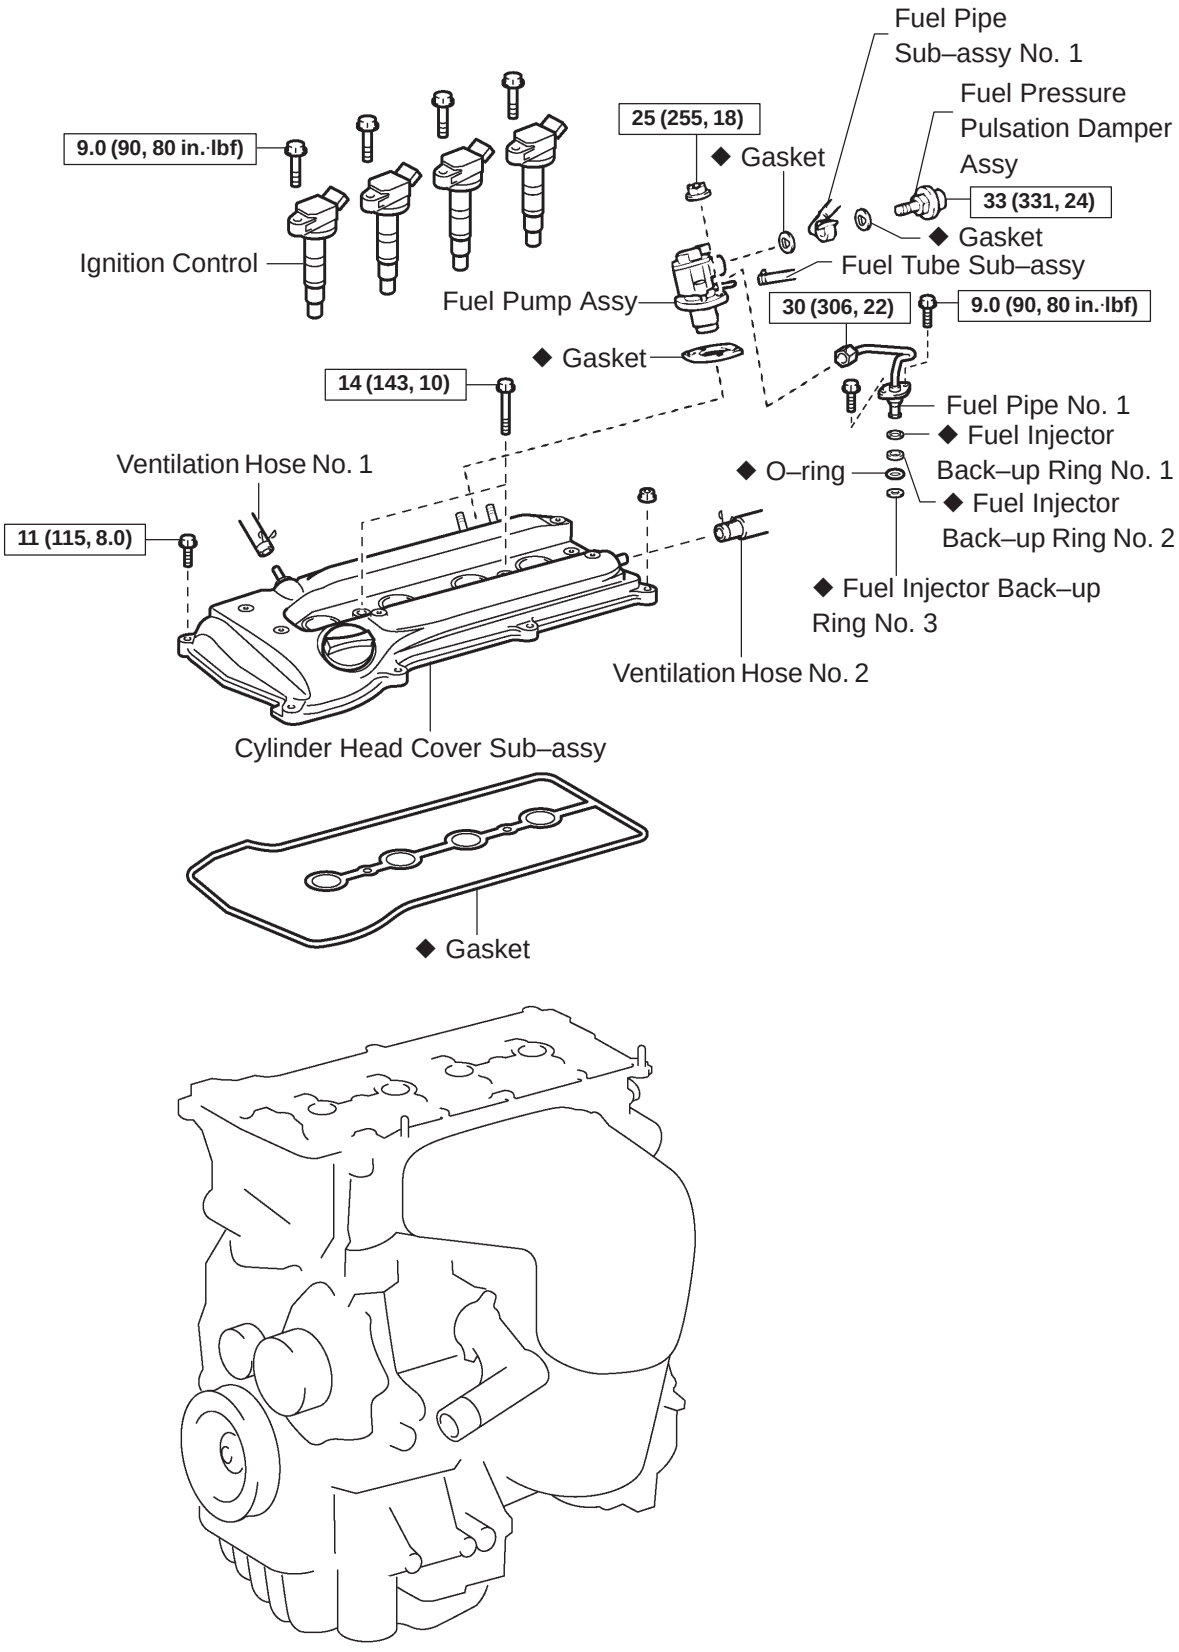
Torque:

Nut 11 N·m (112 kgf·cm, 8 ft·lbf)
Bolt A 11 N·m (112 kgf·cm, 8 ft·lbf)
Bolt B 14 N·m (143 kgf·cm, 10 ft·lbf)
Bolt C 21 N·m (214 kgf·cm, 16 ft·lbf)

59. INSTALL COOLER BRACKET (LHD STEERING POSITION TYPE)
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
60. INSTALL ENGINE SERVICE COVER BRACKET RH (RHD STEERING POSITION TYPE)
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
61. INSTALL ENGINE WIRE
Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)
62. INSTALL OIL RESERVOIR BRACKET NO.1
Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)
63. INSTALL COOLER REFRIGERANT SUCTION HOSE NO.1 (LHD STEERING POSITION TYPE)
64. INSTALL RETURN TUBE SUB–ASSY
Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)
65. INSTALL IGNITION COIL ASSY
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
66. INSTALL VANE PUMP ASSY
Torque: 37 N·m (377 kgf·cm, 27 ft·lbf)
67. INSTALL EXHAUST PIPE ASSY FRONT (See page 15–7)
68. INSTALL GENERATOR ASSY (See page 19–20)
69. INSTALL FAN AND GENERATOR V BELT (See page 14–185)
SST 09249–63010
70. INSTALL FUEL PUMP ASSY (See page 11–52)
71. INSTALL FUEL PIPE SUB–ASSY NO.1 (See page 11–52)
SST 09023–12900
72. INSTALL FUEL TUBE SUB–ASSY (See page 11–30)
73. INSTALL FUEL PRESSURE PULSATION DAMPER ASSY (See page 11–52)
74. ADD ENGINE OIL
75. CHECK FOR ENGINE OIL LEAKS
76. CHECK FOR FUEL LEAKS



77. INSTALL ENGINE COVER SUB–ASSY NO.1
Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)



78. INSTALL FRONT WHEEL RH
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

CAMSHAFT (1AZ–FSE)

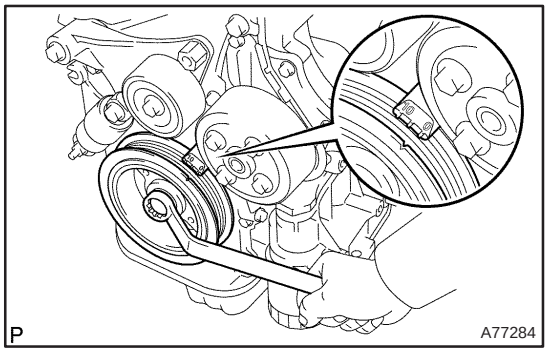
REPLACEMENT

1. **DISCHARGE FUEL SYSTEM PRESSURE (See page 11–30)**
2. **REMOVE RADIATOR SUPPORT OPENING COVER**
3. **REMOVE ENGINE ROOM COVER SIDE**
4. **REMOVE ENGINE UNDER COVER RH**

5. **REMOVE ENGINE COVER SUB–ASSY NO.1**

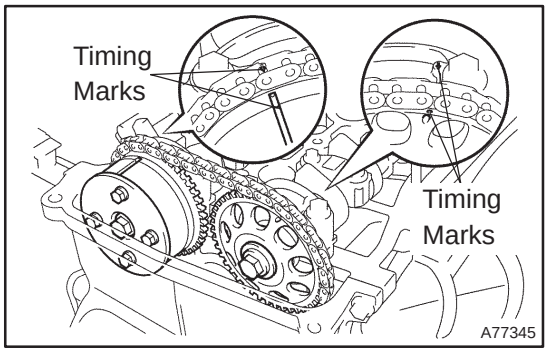
(a) Remove the 2 nuts and the engine cover No. 1.



6. **REMOVE IGNITION COIL ASSY**

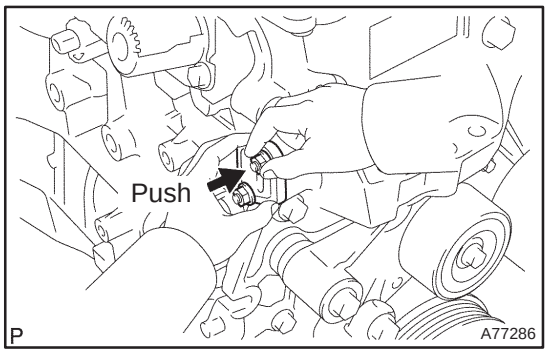
(a) Remove the 4 bolts and the ignition coils.

7. **REMOVE FUEL PRESSURE PULSATION DAMPER ASSY**
8. **REMOVE FUEL TUBE SUB–ASSY (See page 11–33)**
9. **REMOVE FUEL PIPE SUB–ASSY NO.1 (See page 11–52)**



SST 09023–12900

10. **REMOVE FUEL PUMP ASSY (See page 11–52)**
11. **REMOVE CYLINDER HEAD COVER SUB–ASSY (See page 14–222)**

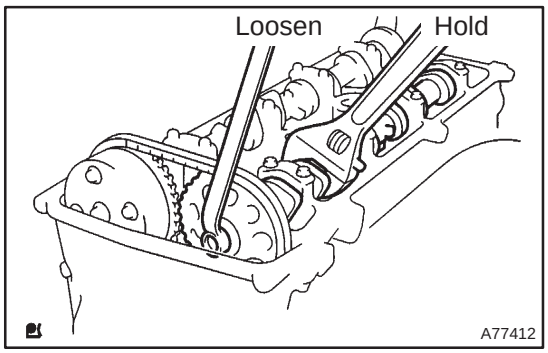


12. **SET NO. 1 CYLINDER TO TDC/COMPRESSION**

(a) Turn the crankshaft pulley, and align its groove with timing mark 0 of the timing chain cover.

(b) Check that each timing mark of the camshaft timing gears is aligned with each timing mark located on the No. 1 and No. 2 bearing caps as shown in the illustration.

If not, turn the crankshaft 1 revolution (360°) and align the marks as above.

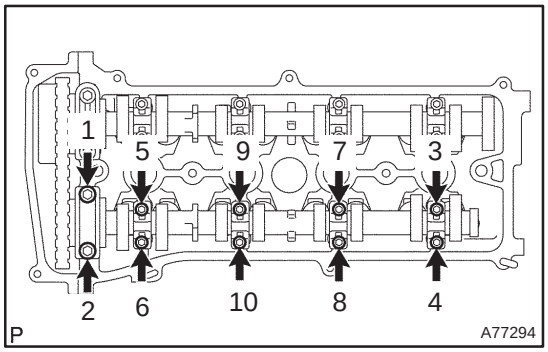


13. REMOVE CHAIN TENSIONER ASSY NO.1

(a) Remove the 2 nuts, the chain tensioner and a gasket.

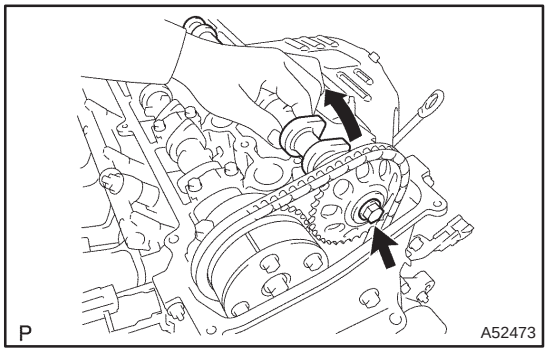
NOTICE:

Do not turn the crankshaft.



14. REMOVE NO.2 CAMSHAFT

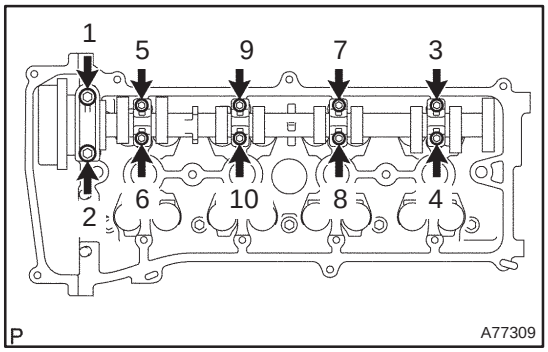
(a) Hold the No. 2 camshaft with a wrench on the hexagonal lobe, and loosen the camshaft timing gear set bolt.



NOTICE:

Be careful not to damage the cylinder head and valve lifter with the wrench.

(b) Using several steps, loosen and remove the 10 camshaft bearing cap bolts uniformly in the sequence shown in the illustration.

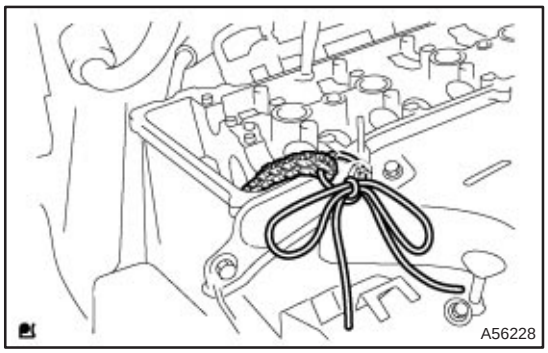


(c) Remove the 5 camshaft bearing caps.

(d) Raising the No. 2 camshaft, remove the set bolt.

(e) Remove the camshaft timing gear from the No. 2 camshaft with with the timing chain wrapped.

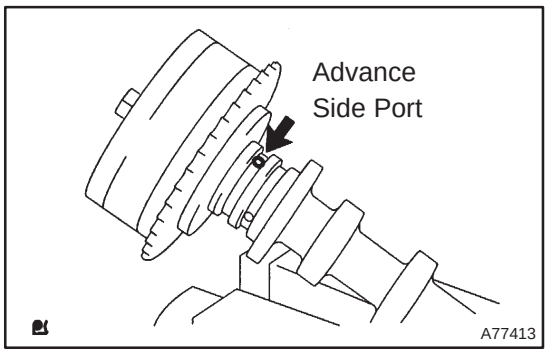
(f) Remove the camshaft timing gear from the timing chain.



15. REMOVE CAMSHAFT

(a) Using several steps, loosen and remove the 10 camshaft bearing cap bolts uniformly in the sequence shown in the illustration.

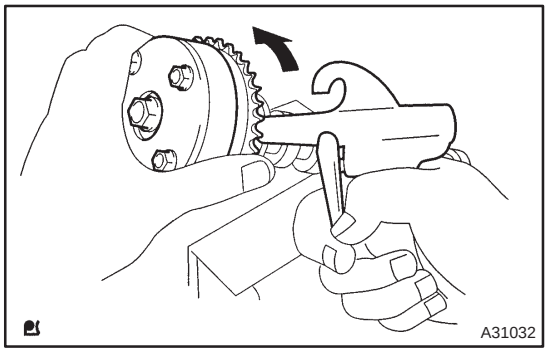
(b) Remove 5 camshaft bearings.



(c) Remove the camshaft.

(d) Tie the timing chain as shown in the illustration.

NOTICE:

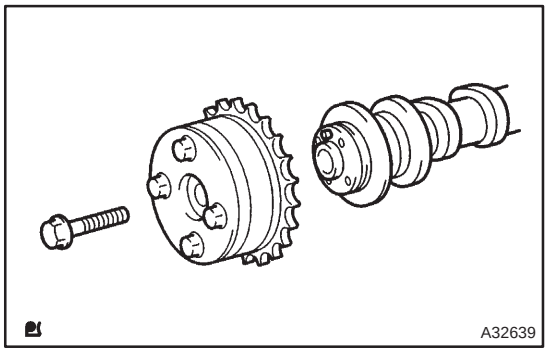


- **Be careful not to drop anything inside the timing chain cover.**
- **Do not expose the chain to water, and prevents dust.**

16. REMOVE CAMSHAFT TIMING GEAR ASSY

(a) Clamp the camshaft in a vise, and make sure the camshaft timing gear does not rotate.

(b) Cover all the oil ports with vinyl tape except an advance side port shown in the illustration.

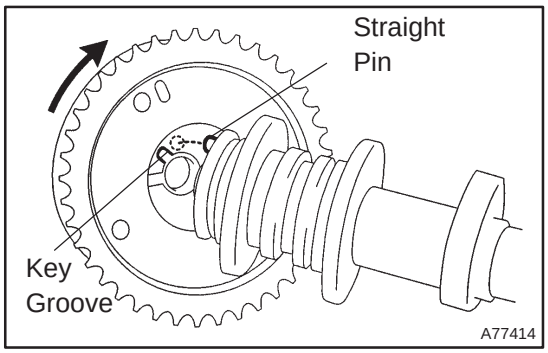


(c) Put air pressure into the oil port with 150 kpa (1.5 kgf/cm^2 21 psi), and turn the camshaft timing gear to the advance direction (counterclockwise) by hand.

CAUTION:

Cover the ports with shop rag to avoid oil splashing.

HINT:



Depending on the air pressure, the camshaft timing gear will turn to the advance angle side without applying force by hand. Also, under the condition that the pressure can be hardly applied because of the air leakage from the port, there may be the case that the lock pin could be hardly released.

(d) Remove a fringe bolt of camshaft timing gear.

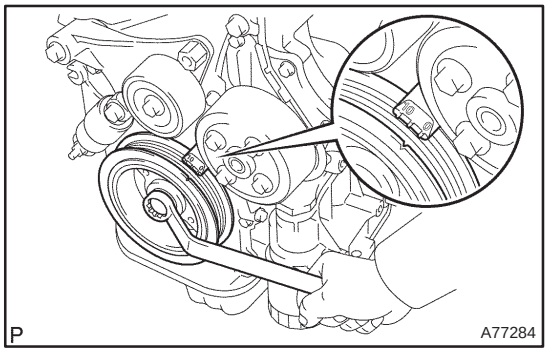
NOTICE:

- **Be sure not to remove the other 4 bolts.**
- **If reusing the camshaft timing gear, release the straight pin lock first, and then install the gear.**

17. INSTALL CAMSHAFT TIMING GEAR ASSY

(a) Put the camshaft timing gear and the camshaft together with the straight pin off the key groove.

(b) Turn the camshaft timing gear assembly to the left direction (as shown in the illustration) while lightly pushing it toward the camshaft. Push further at the position where the pin gets into the groove.

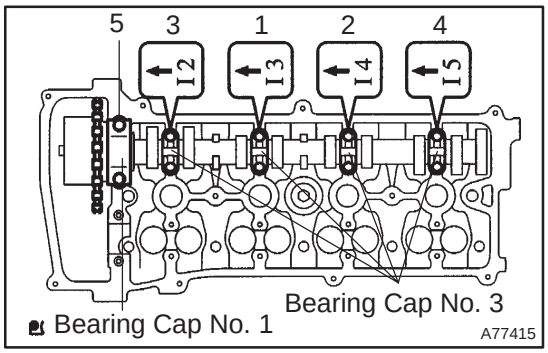


NOTICE:

Be sure not to turn the camshaft timing gear to the retard angle side (to the right direction).

(c) Check that there is no clearance between the gear's fringe and the camshaft.

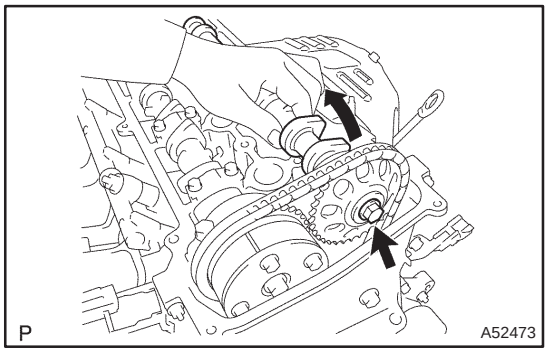
(d) Tighten the fringe bolt with the camshaft timing gear fixed.
Torque: 54 N·m (551 kgf·cm, 40 ft·lbf)



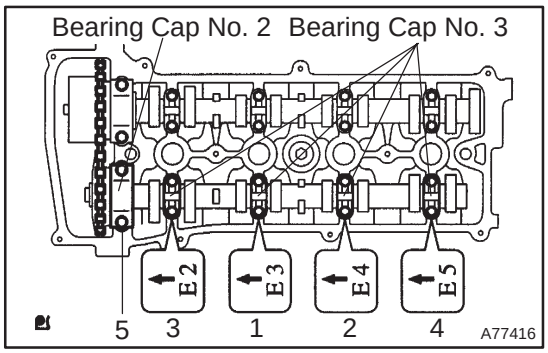
(e) Check that the camshaft timing gear can move to the retard angle side (to the right direction), and is locked at the most retarded position.

18. INSTALL CAMSHAFT

(a) Turn the crankshaft pulley, and align its groove with timing mark 0 of the timing chain cover.

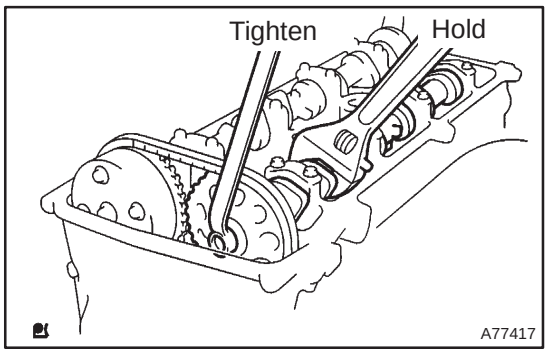


(b) Install the timing chain on the camshaft timing gear, with the painted links aligned with the timing marks on the camshaft timing gear.



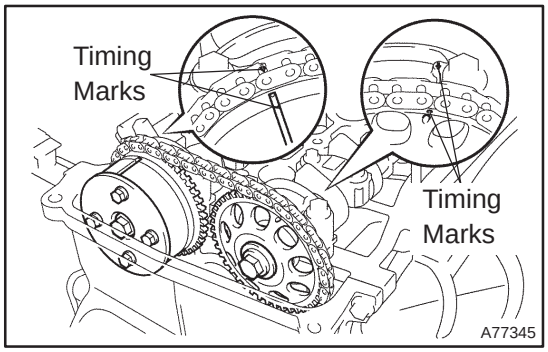
(c) Examine the front marks and numbers and tighten the bolts in the order shown in the illustration.
Torque:
Bearing cap No. 1 30 N·m (301 kgf·cm, 22 ft·lbf)
Bearing cap No. 3 9.0 N·m (92 kgf·cm, 80 in.·lbf)

19. INSTALL NO.2 CAMSHAFT

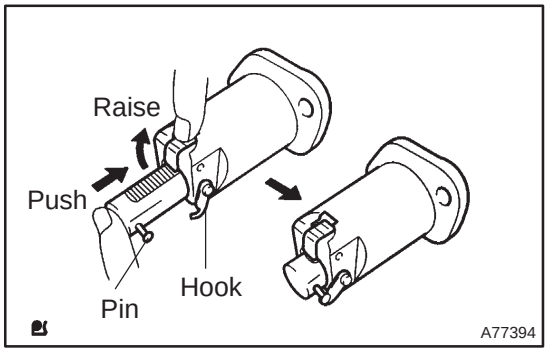


(a) Put the No. 2 camshaft on the cylinder head with the painted links of chain aligned with the timing mark on the camshaft timing gear.

(b) Raising the No. 2 camshaft, tighten the set bolt temporarily.

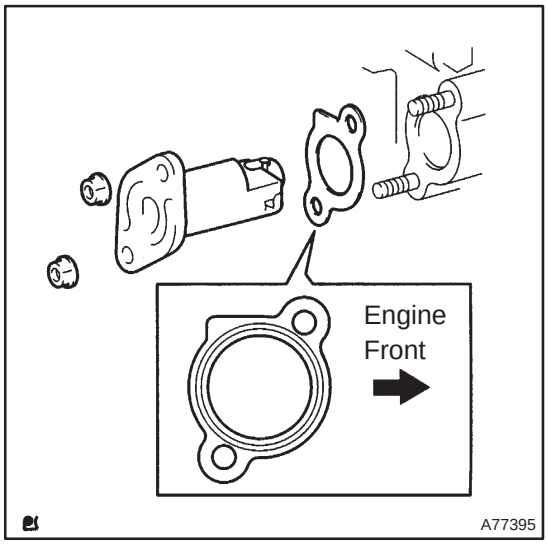


(c) Examine the from marks and numbers and tighten the bolts in the sequence shown in the illustration.
Torque:
Bearing cap No. 2 30 N·m (301 kgf·cm, 22 ft·lbf)
Bearing cap No. 3 9.0 N·m (92 kgf·cm, 80 in.·lbf)

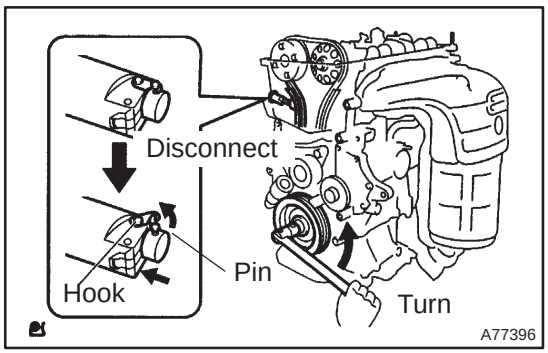


(d) Hold the camshaft with a wrench on the hexagonal lobe, and tighten the camshaft timing gear set bolt.
Torque: 54 N·m (551 kgf·cm, 40 ft·lbf)

NOTICE:
Be careful not to damage the cylinder head and valve lifter.

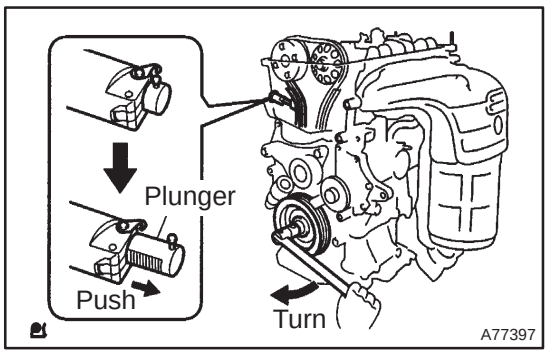


(e) Check that the match marks on the timing chain and the camshaft timing gears are positioned as shown in the illustration



20. INSTALL CHAIN TENSIONER ASSY NO.1

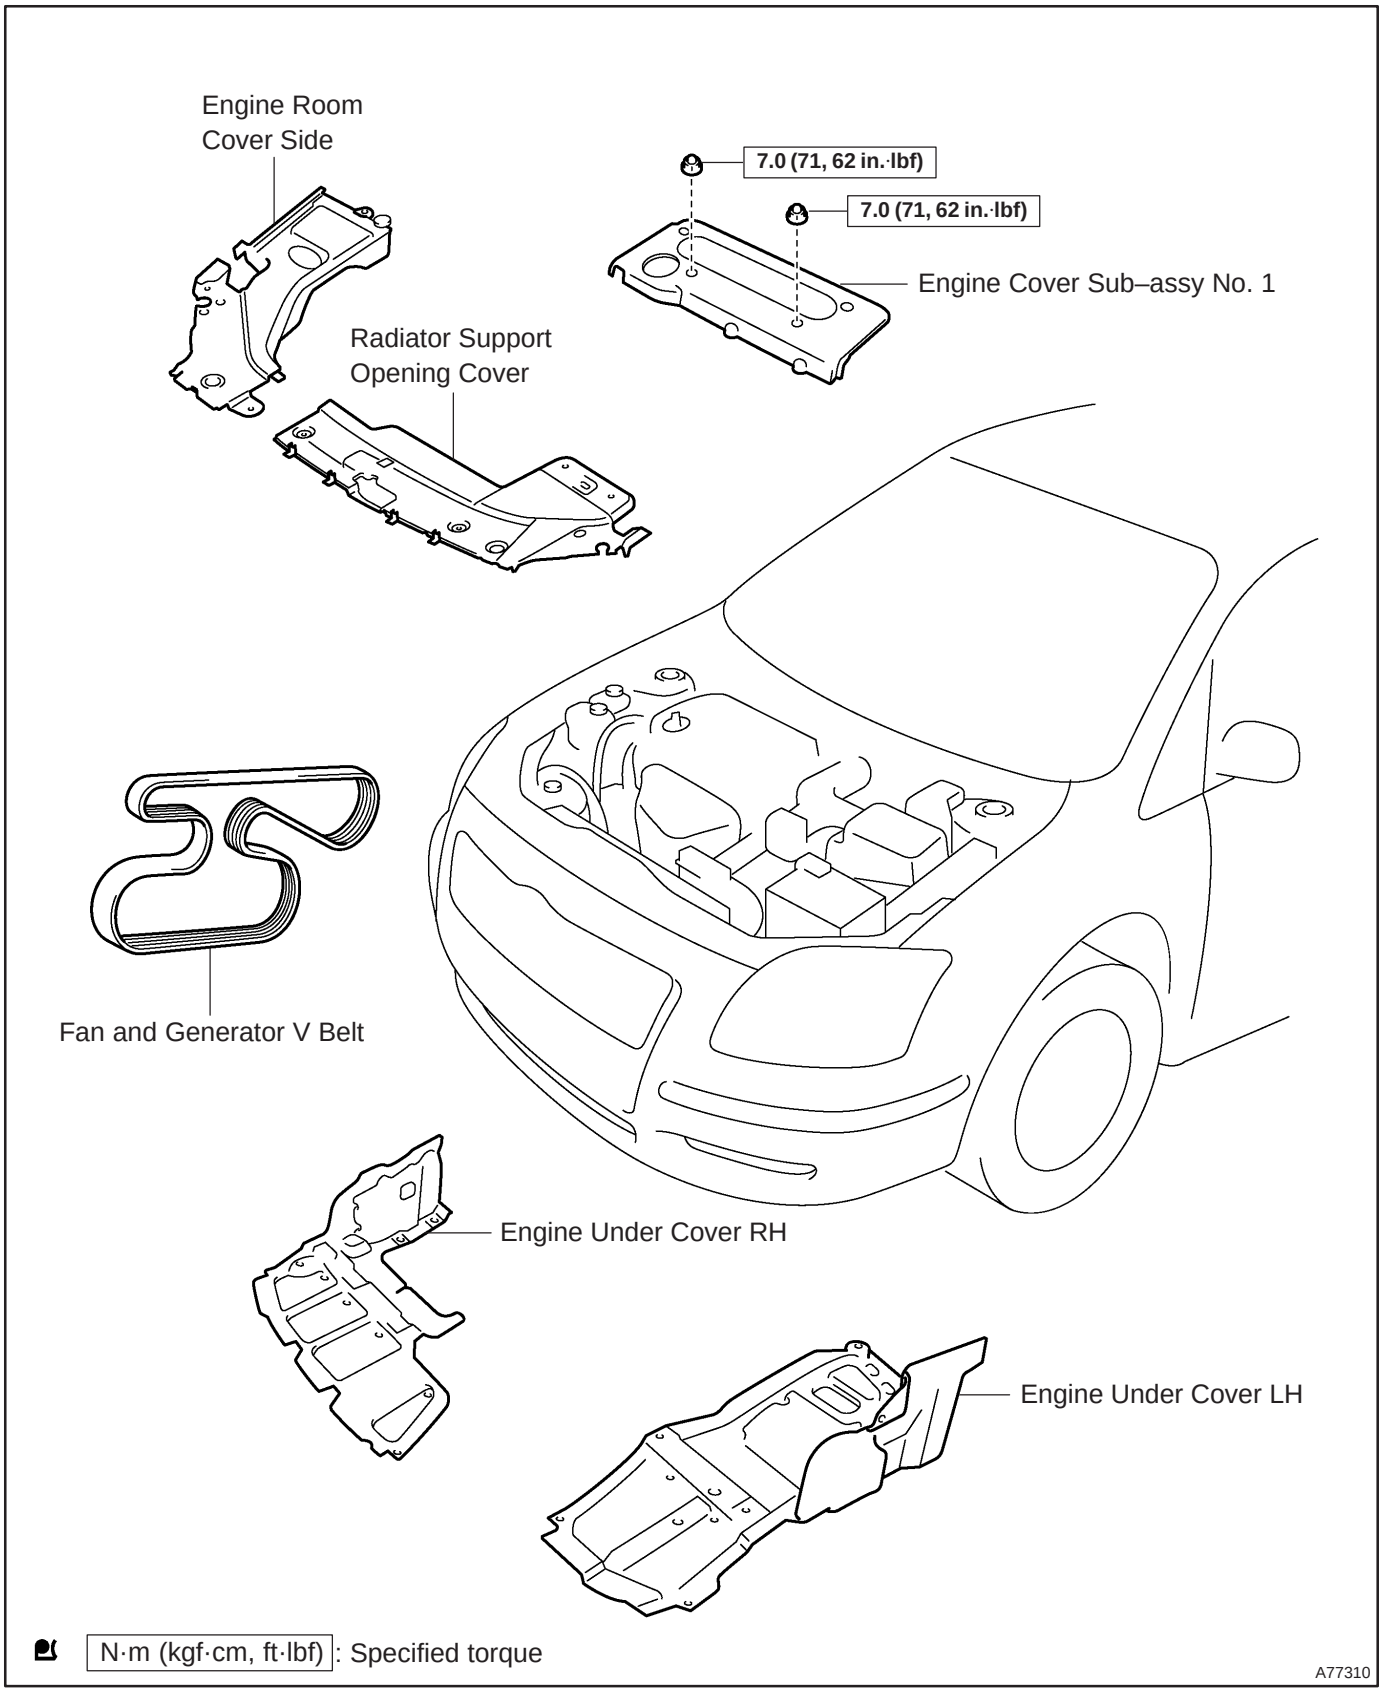
(a) Release the ratchet pawl, fully push in the plunger and apply the hook to the pin so that the plunger is locked in position.



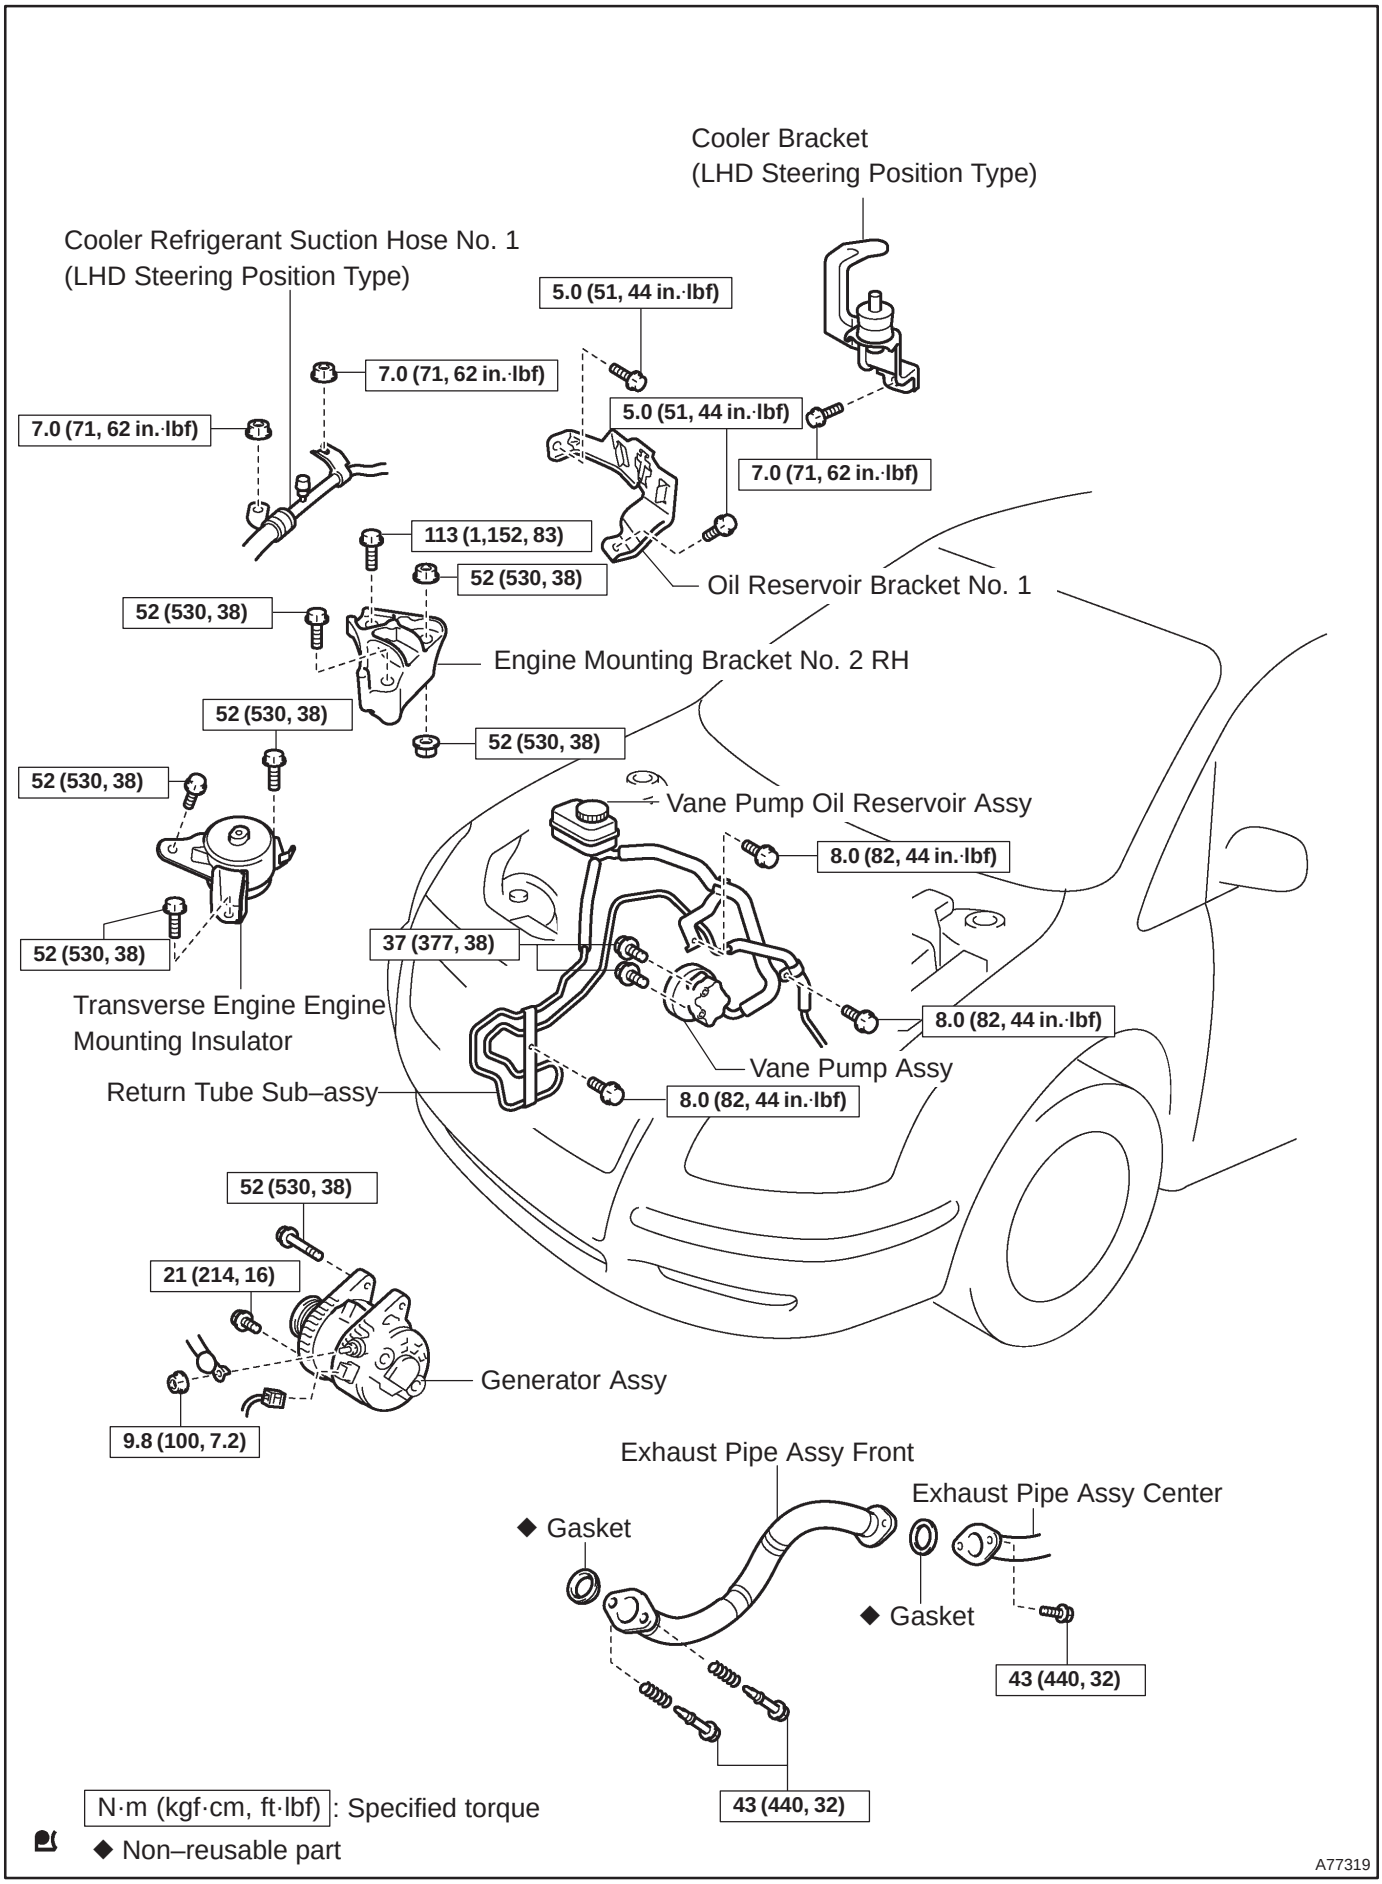
(b) Install a new gasket chain tensioner No. 1 with 2 nuts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

NOTICE:
If the hook is disengaged while installing, apply the hook again, and then resume the installation.

(c) Turn the crankshaft counterclockwise, and check that the pin is disengaged from the hook.



(d) Turn the crankshaft clockwise, and check the plunger is extended.



21. **INSTALL CYLINDER HEAD COVER SUB–ASSY (See page 14–222)**
22. **INSTALL FUEL PUMP ASSY (See page 11–52)**
23. **INSTALL FUEL PIPE SUB–ASSY NO.1 (See page 11–52)**
    SST 09023–12900
24. **INSTALL FUEL TUBE SUB–ASSY (See page 11–30)**
25. **INSTALL FUEL PRESSURE PULSATION DAMPER ASSY (See page 11–52)**
26. **INSTALL IGNITION COIL ASSY**
    Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
27. **CHECK FOR ENGINE OIL LEAKS**
28. **INSTALL ENGINE COVER SUB–ASSY NO.1**
    Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)

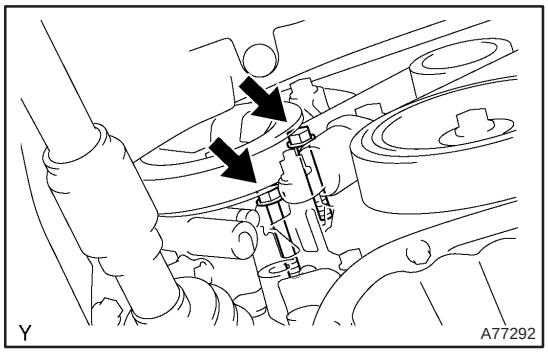
REPLACEMENT

1. **DISCHARGE FUEL SYSTEM PRESSURE (See page 11–15)**
2. **REMOVE FRONT WHEEL RH**
3. **REMOVE RADIATOR SUPPORT OPENING COVER**
4. **REMOVE ENGINE ROOM COVER SIDE**
5. **REMOVE ENGINE UNDER COVER RH**
6. **REMOVE ENGINE UNDER COVER LH**
7. **DRAIN COOLANT (See page 16–19)**
8. **DRAIN ENGINE OIL**

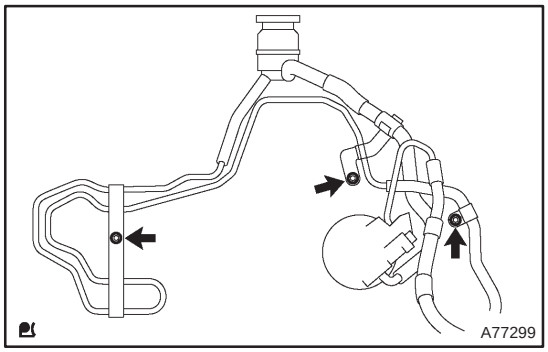


(a) Install a new gasket and the drain plug after draining engine oil.
Torque: 25 N·m (255 kgf·cm, 18 ft·lbf)

9. **REMOVE ENGINE COVER SUB–ASSY NO.1**

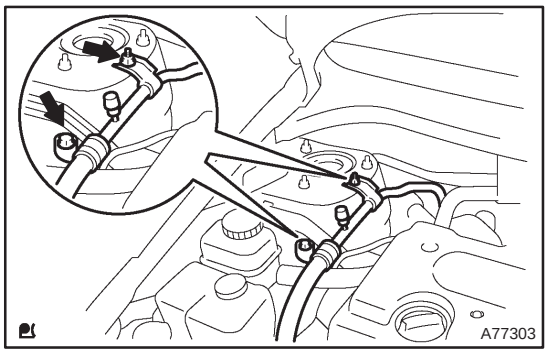
(a) Remove the 2 nuts and the engine cover No. 1.

10. **REMOVE FUEL PRESSURE PULSATION DAMPER ASSY**
11. **SEPARATE FUEL TUBE SUB–ASSY (See page 11–33)**
12. **REMOVE FUEL PIPE SUB–ASSY NO.1 (See page 11–52)**
    SST 09023–12900
13. **REMOVE FUEL PUMP ASSY (See page 11–52)**
14. **REMOVE FAN AND GENERATOR V BELT (See page 14–185)**
    SST 09249–63010
15. **REMOVE GENERATOR ASSY (See page 19–20)**
16. **REMOVE EXHAUST PIPE ASSY FRONT (See page 15–7)**



17. **SEPARATE VANE PUMP ASSY**

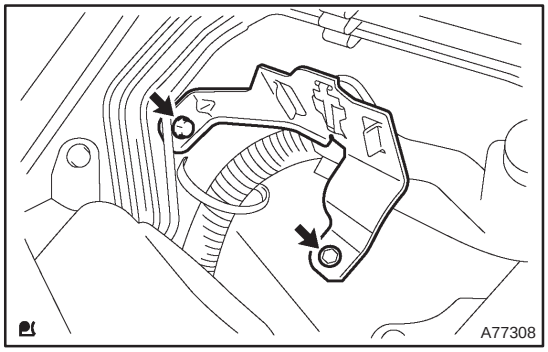
(a) Remove the 2 bolts and separate the vane pump.



18. **REMOVE IGNITION COIL ASSY**

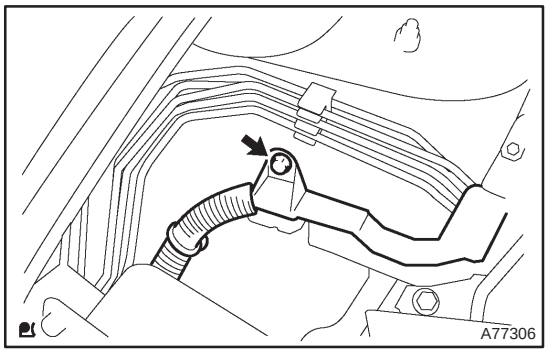
(a) Remove the 4 bolts and 4 ignition coils.

19. SEPARATE RETURN TUBE SUB–ASSY



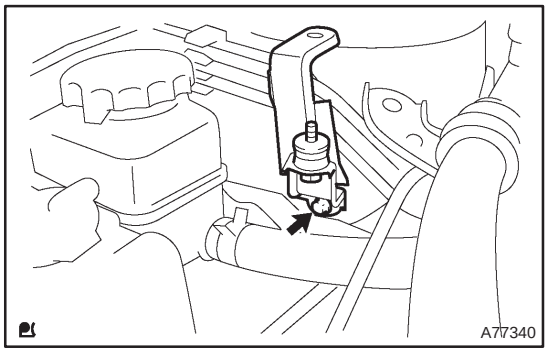
(a) Remove the 3 bolts and separate the return tube shown in the illustration.

20. SEPARATE COOLER REFRIGERANT SUCTION HOSE NO.1 (LHD STEERING POSITION TYPE)



(a) Remove the 2 nuts and separate the suction hose.

21. SEPARATE VANE PUMP OIL RESERVOIR ASSY



22. REMOVE OIL RESERVOIR BRACKET NO.1

(a) Remove the 2 bolts and the oil reservoir bracket No. 1.

23. SEPARATE ENGINE WIRE

(a) Remove the bolt and separate a clamp and the engine wire.

24. REMOVE COOLER BRACKET (LHD STEERING POSITION TYPE)

(a) Remove the bolt and the cooler bracket.

25. REMOVE ENGINE SERVICE COVER BRACKET RH (RHD STEERING POSITION TYPE)

(a) Remove the bolt and the engine service cover bracket RH.

26. REMOVE CYLINDER HEAD COVER SUB–ASSY (See page 14–222)

27. SET NO. 1 CYLINDER TO TDC/COMPRESSION (See page 14–222)

28. REMOVE ENGINE MOUNTING BRACKET NO.2 RH (See page 14–222)

29. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR (See page 14–222)

30. REMOVE CRANKSHAFT PULLEY (See page 14–222)

SST 09213–54015 (91651–60855), 09330–00021, 09950–50013 (09951–05010, 09952–05010, 09953–05020, 09954–05021)

31. REMOVE CHAIN TENSIONER ASSY NO.1 (See page 14–222)

32. REMOVE CRANKSHAFT POSITION SENSOR (See page 18–17)

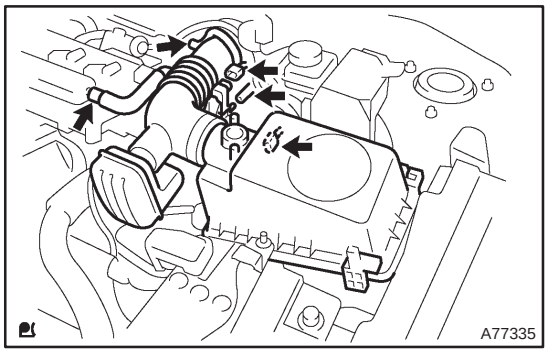
33. REMOVE OIL PAN SUB–ASSY (See page 14–222)

SST 09032–00100

34. REMOVE V–RIBBED BELT TENSIONER ASSY (See page 14–222)

35. REMOVE TIMING CHAIN OR BELT COVER SUB–ASSY (See page 14–222)

36. REMOVE CRANKSHAFT POSITION SENSOR PLATE NO.1 (See page 14–222)



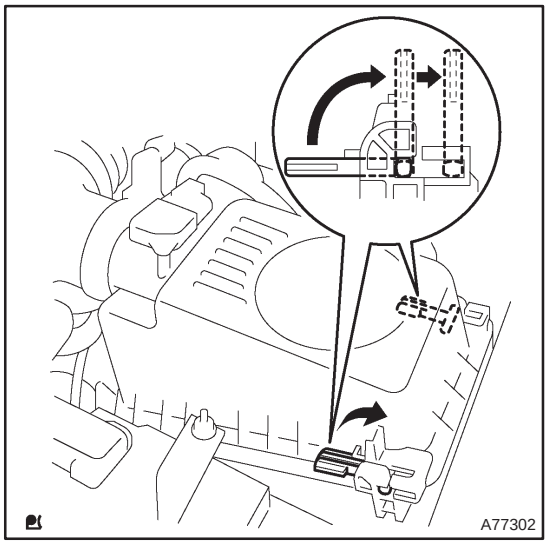
37. REMOVE CHAIN TENSIONER SLIPPER

38. REMOVE CHAIN VIBRATION DAMPER NO.1

39. REMOVE TIMING CHAIN GUIDE (See page 14–222)

40. REMOVE CHAIN SUB–ASSY

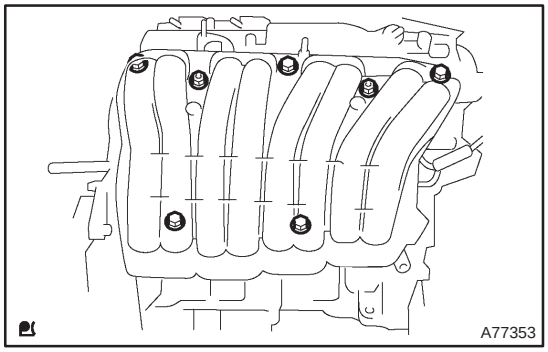
41. REMOVE BATTERY



42. REMOVE AIR CLEANER ASSEMBLY WITH HOSE

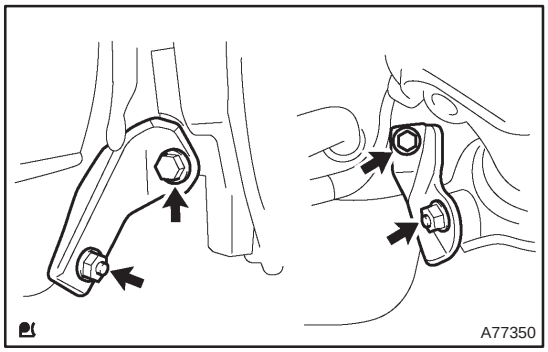
(a) Disconnect the 2 connectors.

(b) Disconnect the 2 vacuum hoses.



(c) Disconnect the ventilation hose.

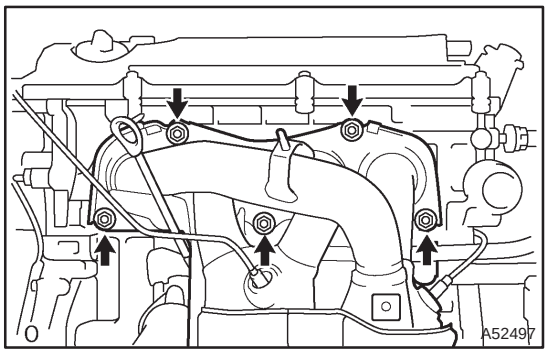
(d) Disconnect the air cleaner hose from the throttle body.



(e) Raise a clamp up, and slide it toward the air cleaner cap, then remove the air cleaner cap from its case.
(f) Remove the air cleaner element.
(g) Remove the 4 bolts and the air cleaner case.

43. DISCONNECT RADIATOR HOSE INLET
44. DISCONNECT UNION TO CONNECTOR TUBE HOSE
45. DISCONNECT HEATER INLET WATER HOSE
46. SEPARATE FUEL TUBE SUB–ASSY
47. SEPARATE ENGINE WIRE
48. REMOVE THROTTLE BODY ASSY (See page 10–44)
49. REMOVE CHARCOAL CANISTER ASSY

50. REMOVE INTAKE MANIFOLD
(a) Remove the 5 bolts and 2 nuts.
(b) Disconnect the 2 vacuum hoses.
(c) Remove the 2 stud bolts.
(d) Remove the intake manifold and insulator.

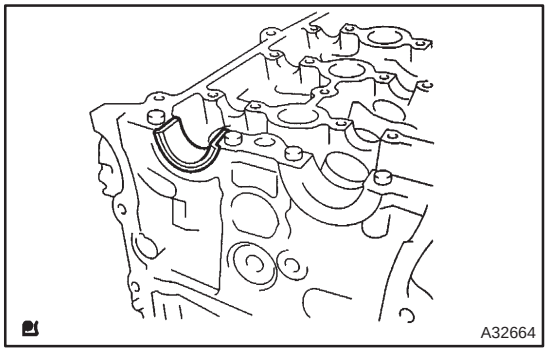


51. REMOVE INTAKE AIR CONTROL VALVE ASSY
(a) Remove the intake air control valve and gasket.
52. REMOVE MANIFOLD CONVERTER INSULATOR NO.1
(a) Disconnect the oxygen sensor connector.
(b) Remove the 2 bolts and nut, and then remove the manifold insulator.

53. REMOVE EXHAUST MANIFOLD CONVERTER SUB–ASSY

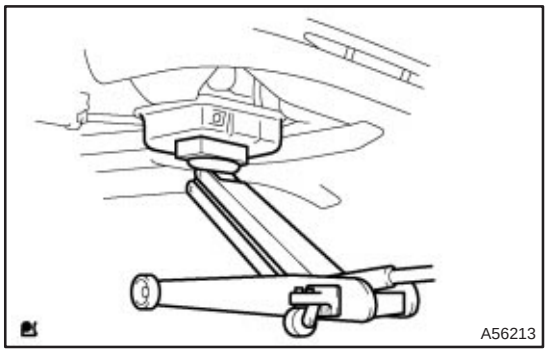
(a) Remove the 2 bolts and 2 nuts, and then detach the No. 1 and No. 2 exhaust manifold stay.

(b) Disconnect the 3 oxygen sensor connectors.



(c) Remove the 5 nuts, the exhaust manifold and gasket.

54. REMOVE NO.2 CAMSHAFT (See page 14–240)

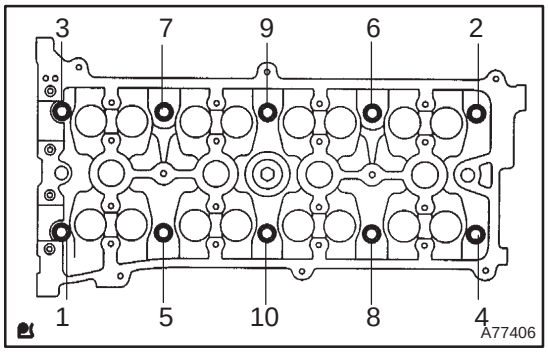


55. REMOVE CAMSHAFT (See page 14–240)

56. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSY

(a) Remove the bolt and the oil control valve.

57. REMOVE CAMSHAFT BEARING NO.2



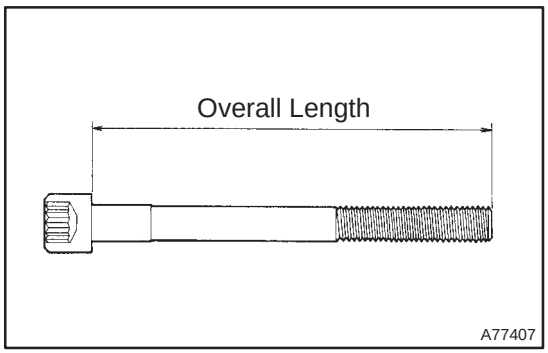
58. SUPPORT ENGINE ASSEMBLY WITH TRANSAXLE

(a) Install the oil pan sub–assy.

(b) Set the jack under the engine assembly w/ transaxle, and place a wooden block on the jack.

(c) Remove the chain block and sling devise.

59. REMOVE CYLINDER HEAD SUB–ASSY



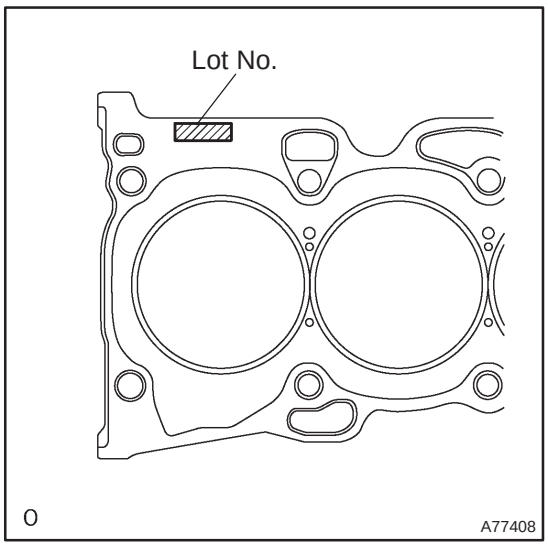
(a) Using several steps, loosen the 10 cylinder head bolts, with 10 mm bi–hexagon wrench uniformly in the sequence shown in the illustration.

(b) Remove 10 cylinder head bolts and plate washers.

NOTICE:

- **Be careful not to drop washers into the cylinder head.**
- **Head warpage or cranking could result from removing bolts and installing incorrect order.**

60. REMOVE CYLINDER HEAD GASKET



61. INSPECT CYLINDER HEAD SET BOLT

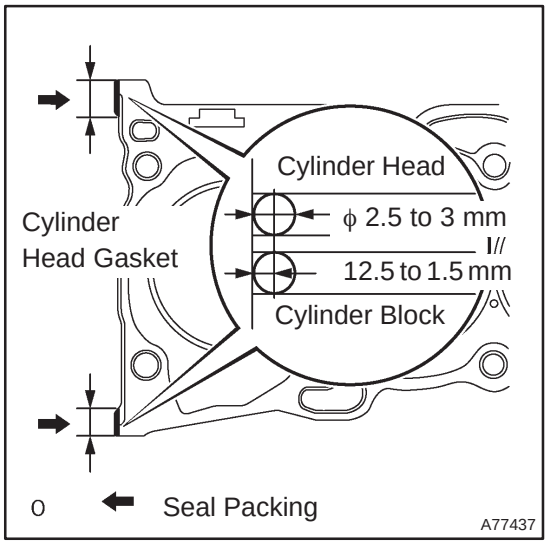
(a) Using a vernier calipers, measure the length of the cylinder head set bolts from the seat to the end.

Standard bolt length:
161.3 to 162.3 mm (6.350 to 6.390 in.)
Maximum bolt length: 164.2 mm (6.465 in.)

If the length is greater than maximum, replace the cylinder head set bolts.

62. INSTALL CYLINDER HEAD GASKET

(a) Place a new cylinder head gasket on the cylinder block surface with the Lot No. stamp upward.



NOTICE:

- **Remove any oil from contact surface.**
- **Be careful of the installation direction.**
- **Place the cylinder head gently in order not to damage the gasket with the bottom part of the head.**

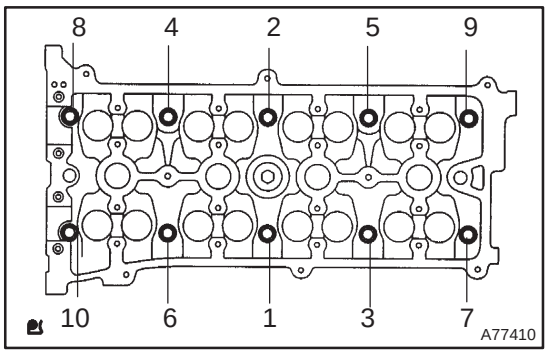
63. INSTALL CYLINDER HEAD SUB–ASSY

HINT:

The cylinder head set bolts are tightened in 2 successive steps.

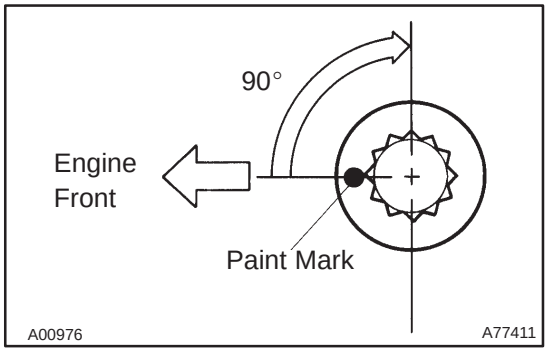
(a) Apply a continuous bead (Diameter 2.5 to 3 mm (0.098 to 0.118 in.)) of seal packing as shown in the illustration.
Seal packing: Part No. 08826–00080 or equivalent

NOTICE:



- **Remove any oil from contact surface.**
- **Install the cylinder head within 3 minutes after applying seal packing.**
- **After installing the cylinder head, cylinder head bolts must be tightened within 15 minutes.**
- **Do not start the engine within 2 hours after installing.**

(b) Apply a light coat of engine oil on the threads of the cylinder head bolts.



(c) Install bolts and plate washers to the cylinder head.

NOTICE:

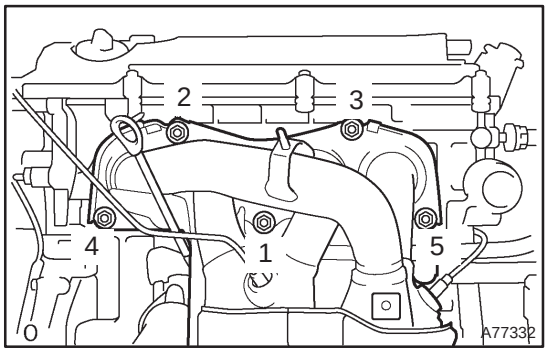
Do not drop the washers into the cylinder head.

(d) Using several steps, install and tighten the 10 cylinder head bolts and plate washers with a 10 mm bi–hexagon wrench uniformly, in the sequence shown in the illustration.
Torque: 79 N·m (806 kgf·cm, 58 ft·lbf)

(e) Mark the front side of the cylinder head set bolts with paint.

(f) Retighten the cylinder head set bolts by 90° in the same sequence as a step (d).

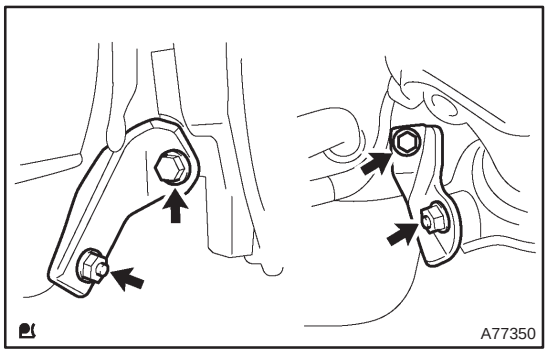
(g) Check that each paint mark is now at a 90° angle to the front.



64. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSY

(a) Install a light coat of the engine oil to the new O–ring and install it to the oil control valve.

(b) Install the oil control valve with the bolt.
Torque: 9.0 N·m (92 kgf·cm, 79 in.·lbf)



65. INSTALL CAMSHAFT (See page 14–240)

66. INSTALL NO.2 CAMSHAFT (See page 14–240)

67. INSTALL EXHAUST MANIFOLD CONVERTER SUB–ASSY

(a) Install a new gasket and the exhaust manifold with the 5 nuts.
Torque: 37 N·m (378 kgf·cm, 27 ft·lbf)

(b) Install the No. 1 and No. 2 exhaust manifold stays with the 2 bolts and 2 nuts.
Torque: 44 N·m (449 kgf·cm, 32 ft·lbf)

68. INSTALL EXHAUST MANIFOLD HEAT INSULATOR NO.1
Torque: 12 N·m (122 kgf·cm, 9.0 ft·lbf)

69. INSTALL INTAKE AIR CONTROL VALVE ASSY

(a) Install a new gasket and the intake air control valve.

70. INSTALL INTAKE MANIFOLD

(a) Install the 2 stud bolts.
Torque: 10 N·m (97 kgf·cm, 84 in.·lbf)

(b) Install the intake manifold and insulator with the 5 bolts and 2 nuts.
Torque: 30 N·m (306 kgf·cm, 22 ft·lbf)

71. INSTALL THROTTLE BODY ASSY (See page 10–44)

72. INSTALL AIR CLEANER ASSEMBLY WITH HOSE
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)

73. INSTALL CHAIN VIBRATION DAMPER NO.1
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

74. INSTALL CHAIN SUB–ASSY (See page 14–222)

75. INSTALL TIMING CHAIN GUIDE
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

76. INSTALL CHAIN TENSIONER SLIPPER
Torque: 19 N·m (195 kgf·cm, 15 ft·lbf)

77. INSTALL CRANKSHAFT POSITION SENSOR PLATE NO.1 (See page 14–240)

78. INSTALL TIMING CHAIN OR BELT COVER SUB–ASSY (See page 14–222)

79. INSTALL V–RIBBED BELT TENSIONER ASSY (See page 14–222)

80. INSTALL OIL PAN SUB–ASSY (See page 14–222)

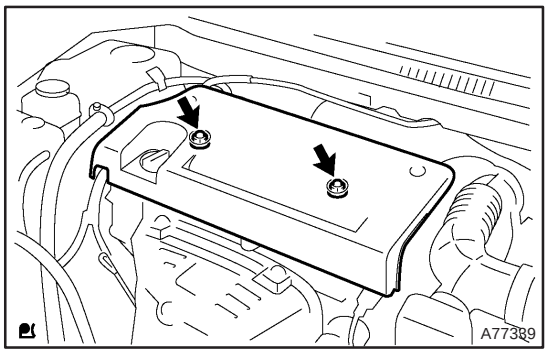
81. INSTALL CRANKSHAFT POSITION SENSOR (See page 18–17)

82. INSTALL CRANKSHAFT PULLEY (See page 14–222)
SST 09213–54015 (91651–60855), 09330–00021

83. INSTALL CHAIN TENSIONER ASSY NO.1 (See page 14–222)

84. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR
Torque: 52 N·m (530 kgf·cm, 38 ft·lbf)

85. INSTALL ENGINE MOUNTING BRACKET NO.2 RH (See page 14–222)



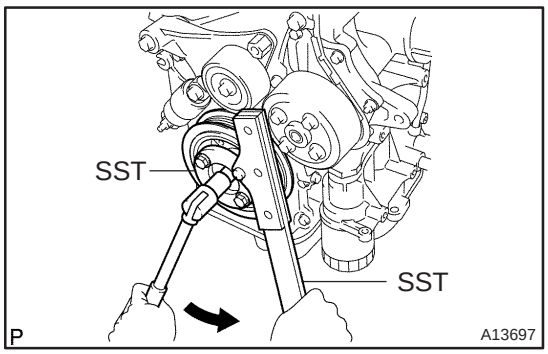
86. INSTALL CYLINDER HEAD COVER SUB–ASSY (See page 14–222)
87. INSTALL COOLER BRACKET (LHD STEERING POSITION TYPE)
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
88. INSTALL ENGINE SERVICE COVER BRACKET RH (RHD STEERING POSITION TYPE)
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
89. INSTALL OIL RESERVOIR BRACKET NO.1
Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)
90. INSTALL COOLER REFRIGERANT SUCTION HOSE NO.1 (LHD STEERING POSITION TYPE)
91. INSTALL RETURN TUBE SUB–ASSY
Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)
92. INSTALL IGNITION COIL ASSY
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
93. INSTALL FUEL PUMP ASSY (See page 11–52)
94. INSTALL FUEL PIPE SUB–ASSY NO.1 (See page 11–52)
SST 09023–12900
95. INSTALL FUEL TUBE SUB–ASSY (See page 11–33)
96. INSTALL FUEL PRESSURE PULSATION DAMPER ASSY (See page 11–52)
97. INSTALL ENGINE COVER SUB–ASSY NO.1
Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)
98. INSTALL VANE PUMP ASSY
Torque: 37 N·m (377 kgf·cm, 27 ft·lbf)
99. INSTALL EXHAUST PIPE ASSY FRONT (See page 15–7)
100. INSTALL GENERATOR ASSY (See page 19–20)
101. INSTALL FAN AND GENERATOR V BELT (See page 14–185)
SST 09249–63010
102. ADD COOLANT (See page 16–31)
103. ADD ENGINE OIL
104. CHECK FOR ENGINE COOLANT LEAKS (See page 16–25)
105. CHECK FOR ENGINE OIL LEAKS
106. CHECK FOR FUEL LEAKS
107. INSTALL FRONT WHEEL RH
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL (1AZ–FSE)

141BR–01

REPLACEMENT

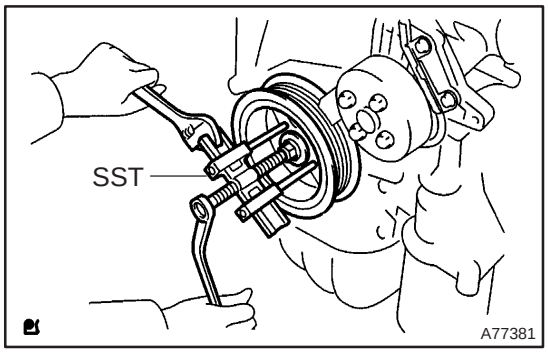
1. REMOVE FRONT WHEEL RH
2. REMOVE RADIATOR SUPPORT OPENING COVER
3. REMOVE ENGINE ROOM COVER SIDE
4. REMOVE ENGINE UNDER COVER RH



5. REMOVE ENGINE COVER SUB–ASSY NO.1

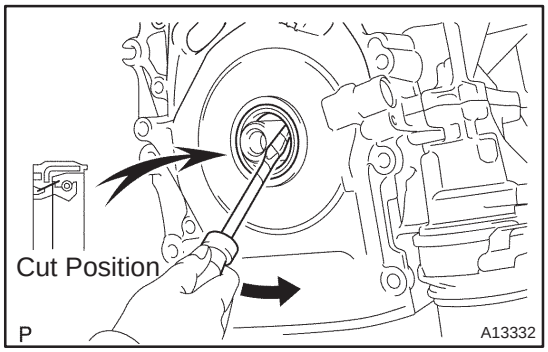
(a) Remove the 2 nuts and the engine cover No. 1.

6. REMOVE FAN AND GENERATOR V BELT (See page 14–185)



SST 09249–63010

7. REMOVE CRANKSHAFT PULLEY

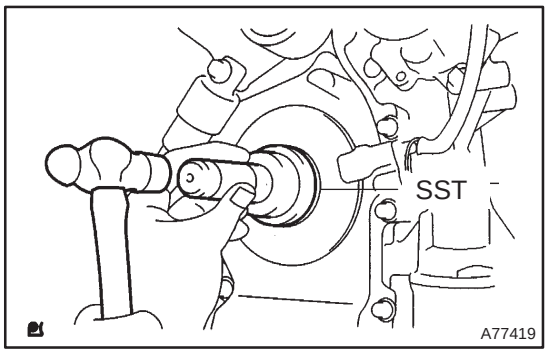


(a) Using SST, loosen the pulley bolt.

SST 09213–54015 (91651–60855), 09330–00021

(b) Using SST, remove the crankshaft pulley.

SST 09950–50013 (09951–05010, 09952–05010, 09953–05020, 09954–05021)



8. REMOVE TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL

(a) Using a screwdriver with tip wrapped in the tape, pry out the oil seal.

HINT:

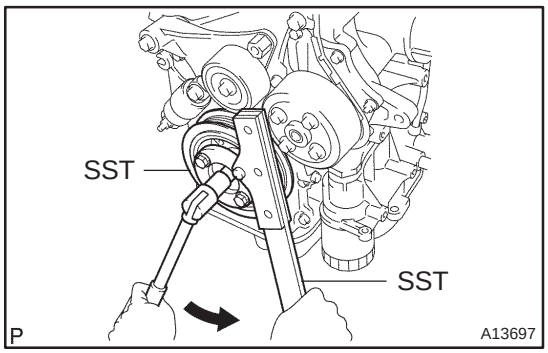
After removal, check if the crankshaft is not damaged.

If it is damaged, smooth the surface with 400–grit sandpaper.

9. INSTALL TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL

(a) Apply MP grease to a new oil seal lip.

NOTICE:



Keep the lip off foreign materials.

(b) Using SST and a hammer, tap in the oil seal until its surface is flush with the rear oil seal retainer edge.

SST 09223–22010

NOTICE:

Wipe off extra grease on the crankshaft.

10. INSTALL CRANKSHAFT PULLEY

(a) Align the pulley set key with the key groove of the pulley.

(b) Using SST, install the pulley bolt.

SST 09213–54015 (91651–60855), 09330–00021

Torque: 170 N·m (1,733 kgf·cm, 125 ft·lbf)

11. INSTALL FAN AND GENERATOR V BELT (See page 14–185)

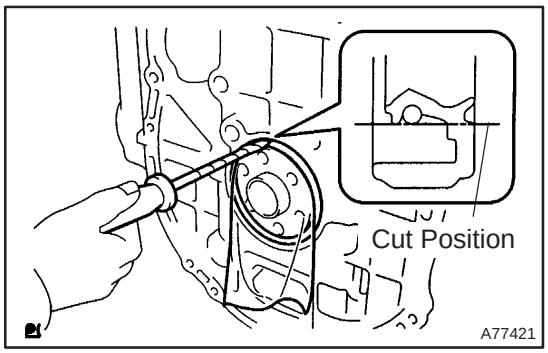
SST 09249–63010

12. INSTALL ENGINE COVER SUB–ASSY NO.1

Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)

13. INSTALL FRONT WHEEL RH

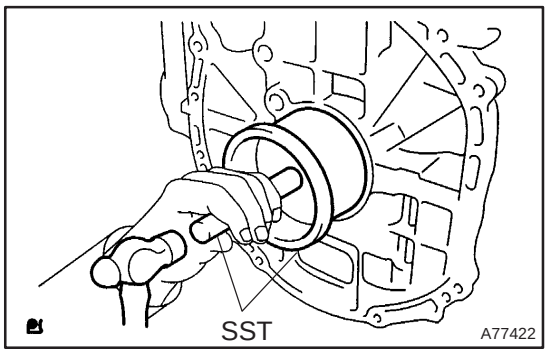
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)



14. CHECK FOR ENGINE OIL LEAKS

ENGINE REAR OIL SEAL (1AZ–FSE)

141BS–01



REPLACEMENT

1. **REMOVE MANUAL TRANSAXLE ASSY (M/T TRANSAXLE) (See page 41–24)**
2. **REMOVE AUTOMATIC TRANSAXLE ASSY (A/T TRANSAXLE) (See page 40–25)**
3. **REMOVE CLUTCH COVER ASSY (M/T TRANSAXLE) (See page 42–26)**
4. **REMOVE DRIVE PLATE AND RING GEAR OR FLYWHEEL (See page 14–204)**
   SST 09213–54015 (91651–60855), 09330–00021

5. **REMOVE ENGINE REAR OIL SEAL**
   (a) Using a knife, cut off the engine rear oil seal lip.
   (b) Using a screwdriver with the tip wrapped in tape, pry out the engine rear oil seal.

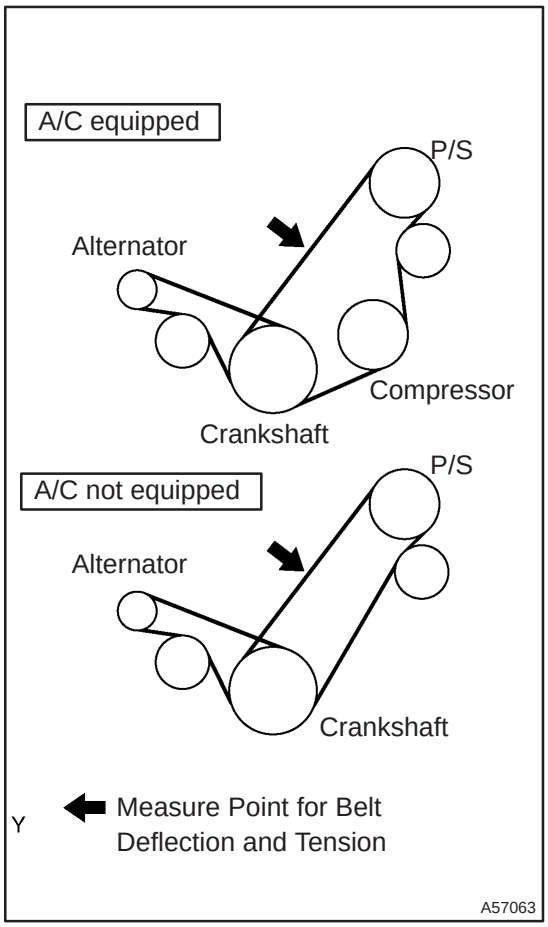
HINT:
After the removal, check if the crankshaft is not damaged.
If is damaged, smooth the surface with 400–grit sandpaper.

6. **INSTALL ENGINE REAR OIL SEAL**
   (a) Apply MP grease to a new engine rear oil seal lip.

NOTICE:
Keep the lip off foreign materials.

   (b) Using SST and a hammer, tap in the engine rear oil seal until its surface is flush with the engine rear oil seal retainer edge.
   SST 09223–15030, 09950–70010 (09951–07100)

NOTICE:
Wipe off extra grease on the crankshaft.



7. **INSTALL DRIVE PLATE AND RING GEAR OR FLYWHEEL (See page 14–204)**
   SST 09213–54015 (91651–60855), 09330–00021
8. **INSTALL CLUTCH COVER ASSY (M/T TRANSAXLE) (See page 42–26)**
9. **INSTALL MANUAL TRANSAXLE ASSY (M/T TRANSAXLE) (See page 41–24)**
10. **INSTALL AUTOMATIC TRANSAXLE ASSY (A/T TRANSAXLE) (See page 40–25)**

ENGINE (1CD–FTV)

140DD–03

INSPECTION

1. INSPECT COOLANT (See page 16–37)
2. INSPECT ENGINE OIL (See page 17–20)
3. INSPECT BATTERY (See page 19–26)
4. INSPECT AIR CLEANER FILTER ELEMENT SUB–ASSY

5. INSPECT DRIVE BELT

(a) Inspect vane pump V belt.

(1) Measure the belt deflection

Pressing force: 98 N·m (10 kgf 22 lbf)

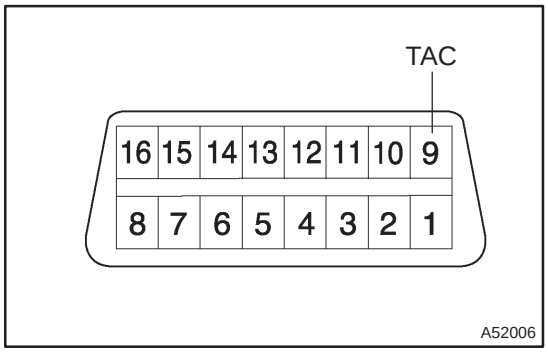
	New belt mm (in.)	Used belt mm (in.)
A/C equipped	9.5 to 11.5 (0.37 to 0.45)	12.5 to 15.5 (0.49 to 0.61)
A/C not equipped	10 to 12 (0.39 to 0.47)	14 to 17 (0.55 to 0.67)

(2) Measure the belt tension

	New belt N (kgf, lbf)	Used belt N (kgf, lbf)
A/C equipped	519 to 755 (53 to 77, 117 to 170)	196 to 392 (20 to 40, 44 to 88)
A/C not equipped	686 to 784 (70 to 80, 154 to 176)	294 to 441 (30 to 45, 66 to 99)

NOTICE:

- **Check the drive belt deflection at the specified point.**
- **When installing a new belt, set its tension value as specified.**
- **When inspecting the belt which is used over 5 minutes, apply the specifications of "Used Belt."**
- **When reinstalling the belt which is used over 5 minutes, adjust its deflection and tension to the medium value in each specification of "Used Belt."**
- **V–ribbed belt tension and deflection should be checked after 2 revolutions of engine cranking.**
- **When using a belt tension gauge, confirm the accuracy by using a master gauge first.**



(b) Inspect generator V belt.

(1) Check that the tension indicator is within range A on the auto tensioner scale.

If the tension is not within the A range, replace the belt with a new one.

HINT:

When replacing the drive belt with a new one, the belt tension should be within the B range.

6. INSPECT ENGINE IDLE SPEED

(a) Using SST, connect a tachometer test prove to terminal 9 (TAC) of DLC3.
SST 09843–18040

(b) Check the idle speed.
Idle speed: 750 to 850 rpm

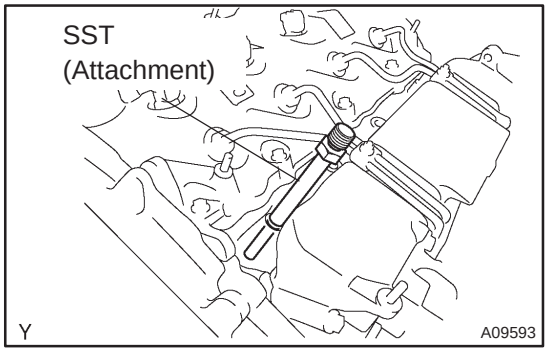
NOTICE:

- **Check the idle speed with the cooling fan OFF.**
- **Switch off all accessories and air conditioning before connecting the test prove to the terminal.**

7. INSPECT MAXIMUM SPEED

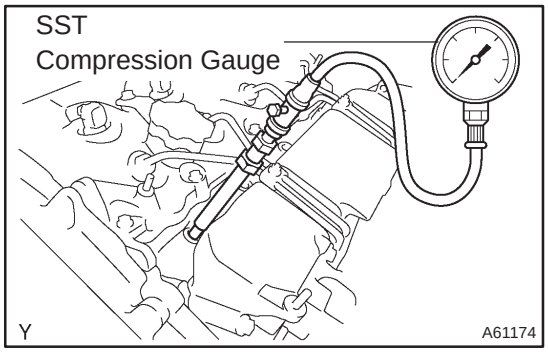
(a) Start the engine.

(b) Depress the accelerator pedal to the limit.



(c) Check the maximum speed.
Maximum speed: 5,100 to 5,250 rpm

8. INSPECT COMPRESSION



(a) Warm up the engine to normal operating temperature, and stop the engine.

(b) Remove the glow plugs. (See page 19–33)

(c) Disconnect the injector connectors.

(d) Inspect cylinder compression pressure.
(1) Install SST (attachment) to the glow plug hole.
SST 09992–00025 (09992–00121)
Torque: 12 N·m (125 kgf·cm, 95 ft·lbf)

(2) Connect SST (compression gauge) to the SST (attachment).

SST 09992–00025 (09992–00211)

(3) Fully open the throttle valve, and start the engine.

(4) While cranking the engine, measure the compression pressure.

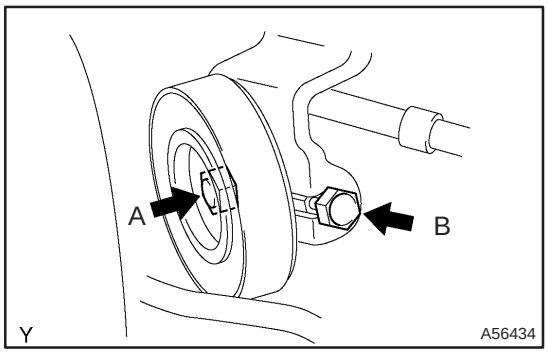
NOTICE:

- **Always use a fully charged battery to obtain engine speed of 250 rpm or more.**
- **Check other cylinder compression pressure in the same way.**
- **This measurement must be done in as short a time as possible.**

  Compression pressure:
  2,628 kPa (26.8 kgf/cm^2, 381 psi) or more
  Minimum pressure:
  2,157 kPa (22.0 kgf/cm^2, 312 psi) or more
  Difference between each cylinder:
  490 kPa (5.0 kgf/cm^2, 71 psi) or less

(5) If the cylinder compression is low, pour a small amount of engine oil into the cylinder through the glow plug hole and inspect again.

HINT:

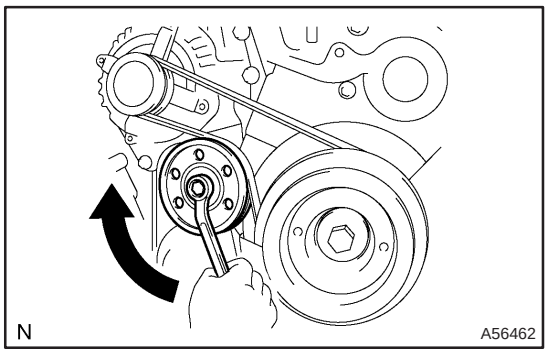


- If adding oil raises the compression, there are chances of the piston rings and/or cylinder bore wear or damage.
- If pressure stays low, a valve may be sticking or seating improperly, or there may be leakage past the gasket.

DRIVE BELT (1CD–FTV)

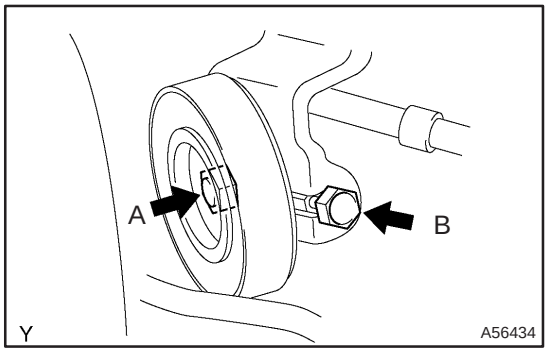
141C1–01

REPLACEMENT



1. REMOVE RADIATOR SUPPORT OPENING COVER
2. REMOVE ENGINE ROOM COVER SIDE
3. REMOVE ENGINE UNDER COVER RH

4. REMOVE V (COOLER COMPRESSOR TO CRANKSHAFT PULLEY) BELT NO.1



(a) Loosen nut A and bolt B.

(b) Remove the V–ribbed belt.

5. REMOVE GENERATOR V BELT

(a) Turn the V–ribbed belt tensioner assy clockwise slowly, and remove the V–ribbed belt.

6. ADJUST V (COOLER COMPRESSOR TO CRANKSHAFT PULLEY) BELT NO.1

(a) Install the V–ribbed belt.

(b) Tighten bolt B and adjust the drive belt tension. (See page 14–266)

(c) Tighten nut A.

Torque: 38 N·m (390 kgf·cm, 28 ft·lbf)

VALVE CLEARANCE (1CD–FTV)

141C2–01

ADJUSTMENT

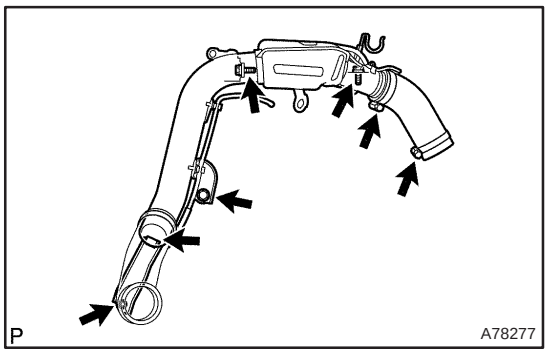
NOTICE:

- **Before removing the injection pipes, clean them up with a soft brush and compressed air.**
- **After removing the injection pipe, cover the supply pump, the common rail and the injector mounting area of the cylinder head cover with vinyl tape to prevent dust from being introduced.**
- **After removing the cylinder head cover, protect the injector inlet with a vinyl or a plastic bag to prevent foreign objects from being introduced.**

HINT:

Inspect and adjust the valve clearance when the engine is cold.

1. REMOVE RADIATOR SUPPORT OPENING COVER



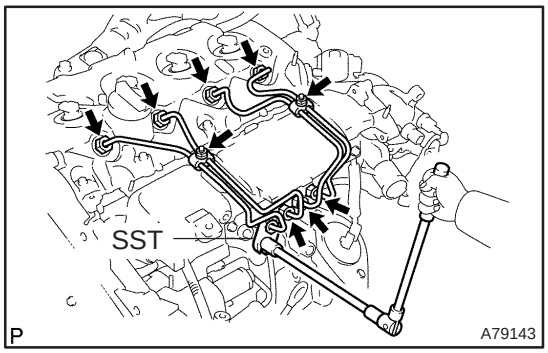
2. REMOVE FRONT WHEEL RH

3. REMOVE ENGINE UNDER COVER RH

4. DRAIN ENGINE COOLANT (See page 16–44)

5. REMOVE ENGINE COVER NO.1

(a) Remove the 5 nuts and the engine cover.



6. REMOVE AIR TUBE NO.1

(a) Disconnect the vacuum hoses and the connectors.

(b) Loosen the hose clamps.

(c) Remove the 3 bolts and nut, and then detach the air tube No. 1.

7. REMOVE TIMING BELT NO.2 COVER (See page 14–307)

8. REMOVE INJECTION PIPE SUB–ASSY NO.1

(a) Remove the 2 nuts and 2 upper infection pipe clamps from the intake manifold.

(b) Using SST, remove the injection pipe from the common rail side.

SST 09023–12700

(c) Using SST, remove the injection pipe from the injector side.

SST 09023–12700

(d) After removing the fuel pipe, to prevent dust or foreign objects from being introduced, cover the common rail with vinyl tape and protect the injector inlet with a vinyl or a plastic bag.

9. REMOVE INJECTION PIPE SUB–ASSY NO.2

SST 09023–12700

HINT:

Perform the same procedures as injection pipe No. 1.

10. REMOVE INJECTION PIPE SUB–ASSY NO.3

SST 09023–12700

HINT:

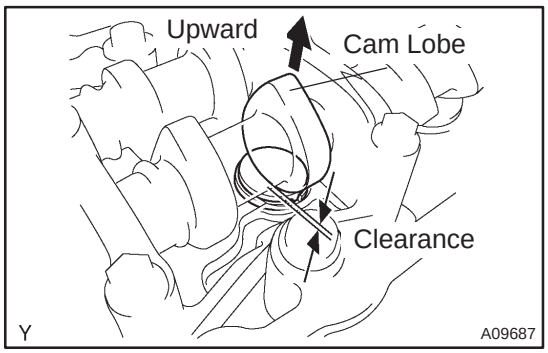
Perform the same procedures as injection pipe No. 1.

11. REMOVE INJECTION PIPE SUB–ASSY NO.4

SST 09023–12700

HINT:

Perform the same procedures as injection pipe No. 1.

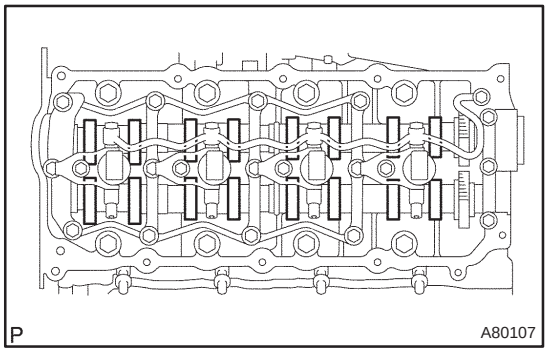


12. REMOVE CYLINDER HEAD COVER SUB–ASSY (See page 11–60)

13. REMOVE NOZZLE LEAKAGE PIPE ASSY (See page 11–60)

14. REMOVE INJECTOR ASSY (See page 11–60)

HINT:

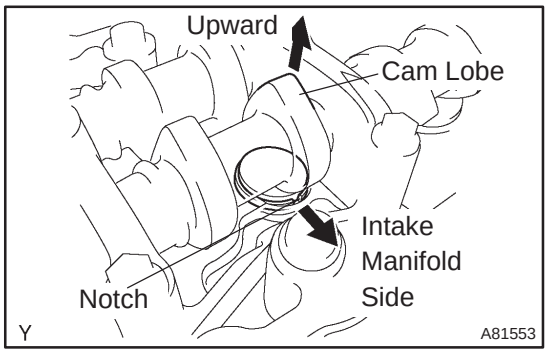


Since each injector assembly has characteristic fuel injecting behavior, store them in correct order so that they can be returned to the original locations when re–assembling.

15. INSPECT VALVE CLEARANCE

(a) Turn the crankshaft so that the cam lobe located over the inspecting valve faces upward.

(b) Using a feeler gauge, measure the clearance between the valve lifter and the camshaft.

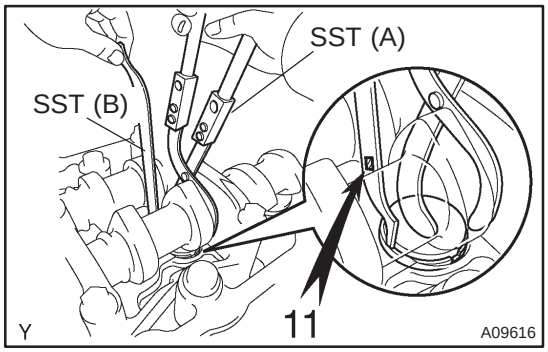


(c) Measure the clearance at 16 places.

(d) Record the out–of specification valve clearance measurements. They will be used later to determine the required replacement adjusting shim.

Valve clearance (Cold):

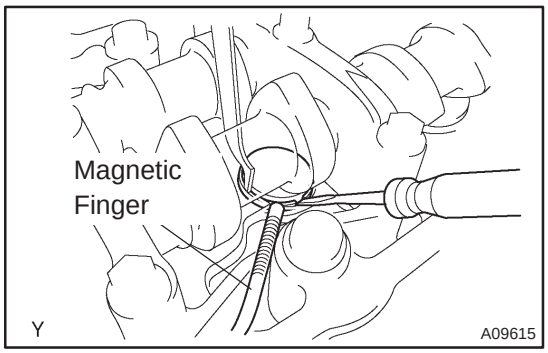
Intake	0.20 to 0.30 mm (0.008 to 0.012 in.)
Exhaust	0.35 to 0.45 mm (0.014 to 0.018 in.)



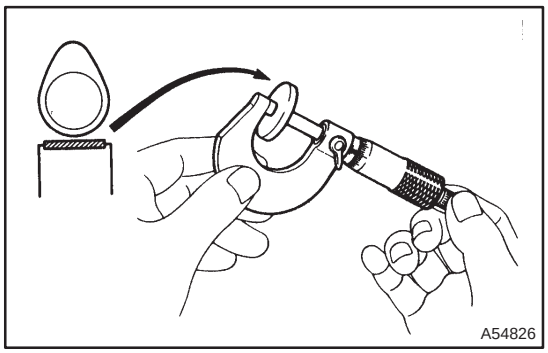
16. ADJUST VALVE CLEARANCE

(a) Remove the adjusting shim.

(1) Turn the crankshaft so that the cam lobe located over the adjusting valve faces upward.



(2) Position the notch of the valve lifter toward the intake manifold side.



(3) Using SST (A), press down the valve lifter and place SST (B) between the camshaft and valve lifter. Remove SST (A).

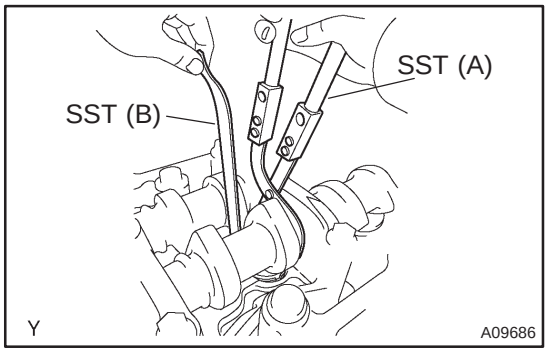
SST 09248–55050 (09248–05510, 09248–05520)

HINT:
Apply SST (B) which marked ”11”.

(4) Remove the adjusting shim with a small screwdriver and a magnetic finger.

(b) Determine the replacement adjusting shim size using the following formula or the matrix attached to the end of this section.

(1) Using a micrometer, measure the thickness of the removed shim.



(2) Calculate the thickness of a new shim so that the valve clearance comes within specified value.

HINT:
T ..... Thickness of removed adjusting shim
A ..... Measured valve clearance
N ..... Thickness of new adjusting shim
Intake: N = T + (A – 0.25 mm (0.010 in.))
Exhaust: N = T + (A – 0.40 mm (0.016 in.))

(3) Select a new shim with a thickness as close as possible to the calculated value.

EXAMPLE (Intake):
Measured valve clearance = 0.45 mm (0.0177 in.)
0.45 mm (0.0177 in.) – 0.25 mm (0.0098 in.) = 0.20 mm (0.0078 in.)
(Measured – Specification = Excess clearance)
Used shim measurement = 2.80 mm (0.1102 in.)
0.20 mm (0.0078 in.) + 2.80 mm (0.1102 in.) = 3.00 mm (0.1181 in.)
(Excess clearance + Used shim = Ideal new shim)
Closest new shim = 3.00 mm (0.1181 in.)
Select No. 21 Shim

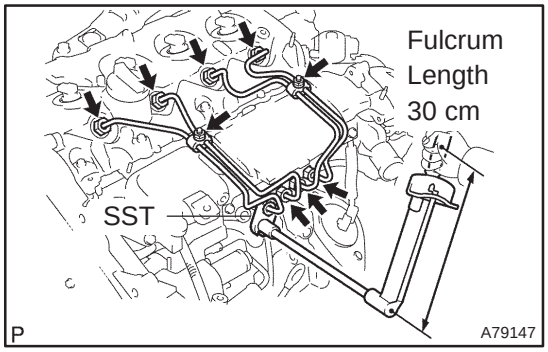
HINT:
Shims are available in 17 sizes in increments of 0.05 mm (0.0020 in.), from 2.50 mm (0.0984 in.) to 3.30 mm (0.1299 in.).

(c) Install a new adjusting shim.
(1) Place a new adjusting shim on the valve lifter.
(2) Using SST (A), press down the valve lifter and remove SST (B).
SST 09248–55050 (09248–05510, 09248–05520)

(d) Recheck the valve clearance.
SST 09248–55050 (09248–05510, 09248–05520)

17. INSTALL INJECTOR ASSY (See page 11–60)

18. INSTALL NOZZLE LEAKAGE PIPE ASSY (See page 11–60)
SST 09992–00242



19. INSTALL CYLINDER HEAD COVER SUB–ASSY (See page 11–60)

20. INSTALL INJECTION PIPE SUB–ASSY NO.1 (See page 11–60)

NOTICE:
When assembling the pipes, perform the operation with the engine cold under room temperature.

(a) Remove the vinyl or the plastic bag from the injector and vinyl tape from the common rail.

(b) Temporarily install the injection pipe.

(c) Using SST, tighten the nut of the injection pipe to the common rail side.
SST 09023–12700
Torque:
42 N·m (428 kgf·cm, 31 ft·lbf) for a used pipe using SST
46 N·m (469 kgf·cm, 34 ft·lbf) for a used pipe not using SST
31 N·m (316 kgf·cm, 23 ft·lbf) for a new pipe using SST
34 N·m (347 kgf·cm, 25 ft·lbf) for a new pipe not using SST

HINT:
- Use a torque wrench with a fulcrum length of 30 cm (11.81 in.)
- Check if the used pipe has deflection or is installed properly after injection pipe is reassembled. If there is deflection or if it can not be installed properly, replace the used pipe with a new pipe.

(d) Using SST, tighten the nut of the injection pipe to the injector side.
SST 09023–12700
Torque:
42 N·m (428 kgf·cm, 31 ft·lbf) for a used pipe using SST
46 N·m (469 kgf·cm, 34 ft·lbf) for a used pipe not using SST
31 N·m (316 kgf·cm, 23 ft·lbf) for a new pipe using SST
34 N·m (347 kgf·cm, 25 ft·lbf) for a new pipe not using SST

HINT:
- Use a torque wrench with a fulcrum length of 30 cm (11.81 in.)
- Check if the used pipe has deflection or is installed properly after injection pipe is reassembled. If there is deflection or if it can not be installed properly, replace the used pipe with a new pipe.

(e) Install the 2 upper injection pipe clamps with the 2 nuts.
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)

21. INSTALL INJECTION PIPE SUB–ASSY NO.2
SST 09023–12700

HINT:
Perform the same procedures as injection pipe No. 1.

22. INSTALL INJECTION PIPE SUB–ASSY NO.3
SST 09023–12700

HINT:
Perform the same procedures as injection pipe No. 1.

23. INSTALL INJECTION PIPE SUB–ASSY NO.4
SST 09023–12700

HINT:
Perform the same procedures as injection pipe No. 1.

24. INSTALL TIMING BELT NO.2 COVER (See page 11–60)

25. INSTALL AIR TUBE NO.1
Torque: 25 N·m (255 kgf·cm, 18 ft·lbf)

26. INSTALL ENGINE COVER NO.1
Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)

27. INSTALL FRONT WHEEL RH
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

28. ADD ENGINE COOLANT (See page 16–44)

29. CHECK FOR ENGINE COOLANT LEAKS (See page 16–44)

30. CHECK FOR FUEL LEAKS (See page 11–60)

New shim thickness mm (in.)

Shim No.	Thickness	Shim No.	Thickness
01	2.500 (0.0984)	19	2.950 (0.1161)
03	2.550 (0.1004)	21	3.000 (0.1181)
05	2.600 (0.1024)	23	3.050 (0.1201)
07	2.650 (0.1043)	25	3.100 (0.1220)
09	2.700 (0.1063)	27	3.150 (0.1240)
11	2.750 (0.1083)	29	3.200 (0.1260)
13	2.800 (0.1102)	31	3.250 (0.1280)
15	2.850 (0.1122)	33	3.300 (0.1299)
17	2.900 (0.1142)		

Exhaust valve clearance (Cold):

0.35 – 0.45 mm (0.014 – 0.018 in.)

EXAMPLE: The 2.800 mm (0.1102 in.) shim is installed, and the measured clearance is 0.590 mm (0.0232 in.). Replace the 2.800 mm (0.1102 in.) shim with a new No.21 shim.

141C4–01

REPLACEMENT

1. REMOVE FRONT WHEELS
2. REMOVE ENGINE UNDER COVER LH
3. REMOVE ENGINE UNDER COVER SUB–ASSY NO.1
4. REMOVE ENGINE UNDER COVER RH
5. REMOVE RADIATOR SUPPORT OPENING COVER
6. REMOVE ENGINE ROOM COVER SIDE
7. DRAIN ENGINE COOLANT (See page 16–44)
8. DRAIN ENGINE OIL (See page 14–342)
9. DRAIN MANUAL TRANSAXLE OIL
Torque: 49 N·m (500 kgf·cm, 36 ft·lbf)
10. REMOVE ENGINE COVER NO.1
(a) Remove the 5 nuts and the engine cover.
11. REMOVE BATTERY
12. REMOVE AIR CLEANER ASSY
(a) Disconnect the connector.
(b) Remove the air cleaner cap together with the air cleaner hose.
(c) Remove the air cleaner filter element.
(d) Remove the 3 bolts and the air cleaner case.
13. DISCONNECT UNION TO CONNECTOR TUBE HOSE
14. REMOVE FUEL FILTER ASSY
(a) Disconnect the 2 fuel hose from the fuel filter (STD).
(b) Disconnect the 3 fuel hose from the fuel filter (COLD).
(c) Disconnect the connector (STD).
(d) Disconnect the 2 connectors (COLD).
(e) Remove the 2 bolts and the fuel filter.
15. REMOVE RADIATOR HOSE INLET
16. REMOVE RADIATOR HOSE OUTLET
17. DISCONNECT WATER BY–PASS HOSE NO.2
18. REMOVE ENGINE ROOM RELAY BLOCK NO.3
(a) Remove the 2 bolts and the engine room relay block.
19. REMOVE RADIATOR ASSY (W/ AIR CONDITIONING) (See page 16–51)
20. DISCONNECT HEATER INLET WATER HOSE
21. DISCONNECT HEATER OUTLET WATER HOSE
22. DISCONNECT FUEL HOSE NO.2

23. REMOVE AIR TUBE NO.2
(a) Loosen the hose clamp and disconnect the air hose No. 3.
(b) Remove the 2 bolts and the air tube No. 2.

24. SEPARATE TRANSMISSION CONTROL CABLE ASSY

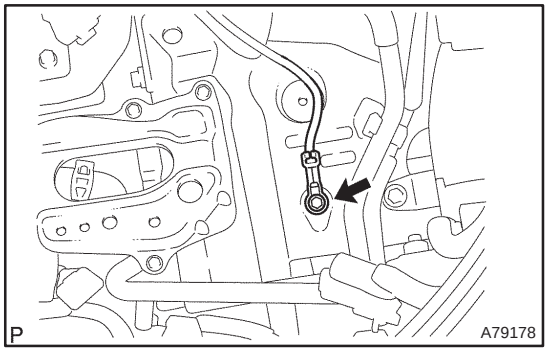
(a) Remove the 2 clips and 2 washers, separate the control cable assy.

25. REMOVE INJECTOR DRIVER

(a) Remove the 2 nuts which is used to secure the injector driver.

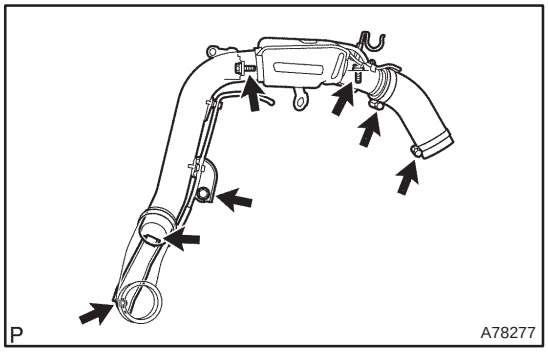
(b) Disconnect the injector driver connector and the harness clamp.

(c) Remove the injector driver.



26. DISCONNECT ENGINE WIRE

(a) Remove the glove compartment door.



(b) Disconnect the engine wire from the ECM and the junction block.

(c) Pull out the engine wire.

(d) Disconnect the engine wire from engine room junction block.

(e) Remove the bolt and disconnect the wire harness from the body.

27. REMOVE AIR TUBE NO.1

(a) Loosen the hose clamps.

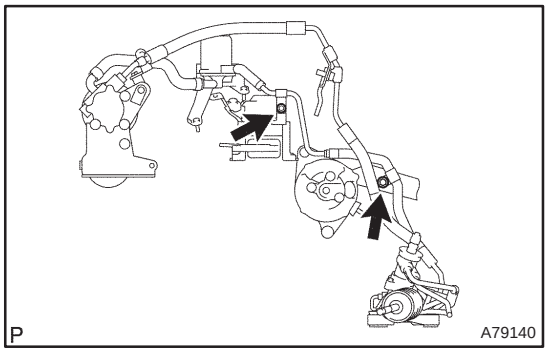
(b) Remove the 2 bolts and nut, and then detach the air tube No. 1.

28. REMOVE CLUTCH ACCUMULATOR ASSY (See page 42–17)

SST 09023–00100

29. REMOVE CLUTCH RELEASE CYLINDER ASSY (See page 42–17)

30. REMOVE V (COOLER COMPRESSOR TO CRANKSHAFT PULLEY) BELT NO.1 (See page 14–269)



31. SEPARATE COMPRESSOR AND MAGNETIC CLUTCH (W/ AIR CONDITIONING) (See page 55–86)

HINT:

Secure the hoses off to the side instead of detaching.

32. REMOVE FLOOR PANEL BRACE FRONT (See page 15–10)

33. REMOVE EXHAUST PIPE ASSY FRONT (See page 15–10)

34. SEPARATE RETURN TUBE SUB–ASSY

(a) Remove the 2 clamp bolts and separate the return tube sub–assy.

35. SEPARATE VANE PUMP OIL RESERVOIR ASSY

36. REMOVE FRONT AXLE HUB LH NUT (See page 30–6)

SST 09930–00010

HINT:

Perform the same procedure as above on the opposite side.

37. SEPARATE TIE ROD END SUB–ASSY LH (See page 30–6)

SST 09628–62011

HINT:

Perform the same procedure as above on the opposite side.

38. SEPARATE FRONT STABILIZER LINK ASSY LH (See page 26–26)

HINT:

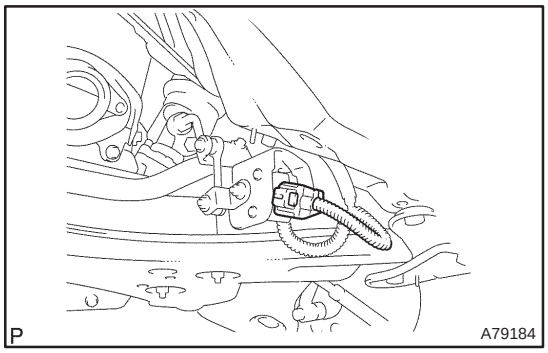
Perform the same procedure as above on the opposite side.

39. REMOVE COLUMN HOLE COVER SILENCER SHEET

(a) Remove the 2 clips and the column hole cover silencer sheet.

40. REMOVE STEERING INTERMEDIATE SHAFT ASSY NO.2 (See page 51–36)

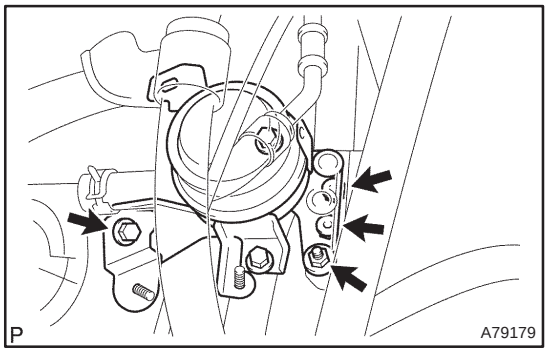
41. SEPARATE FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH (See page 26–21)



HINT:

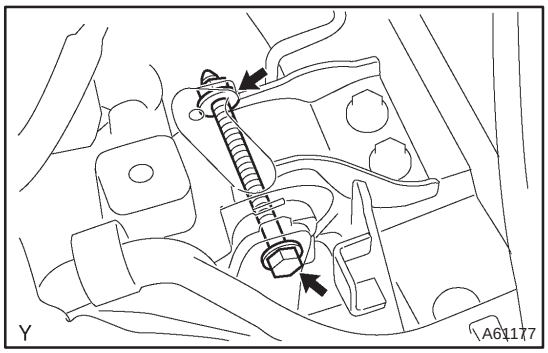
Perform the same procedure as above on the opposite side.

42. SEPARATE FRONT DRIVE SHAFT ASSY LH (See page 30–6)

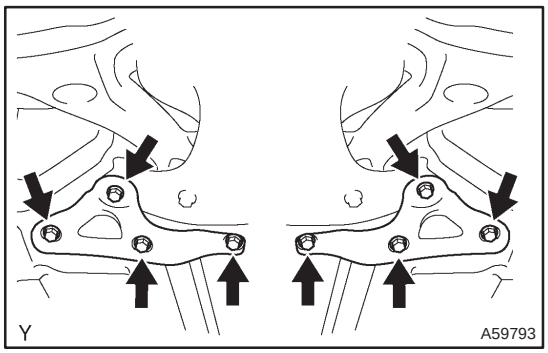


HINT:

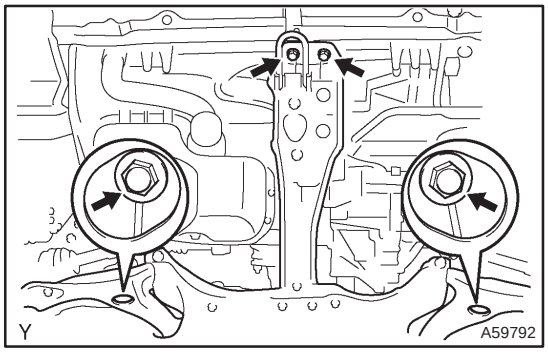
Perform the same procedure as above on the opposite side.



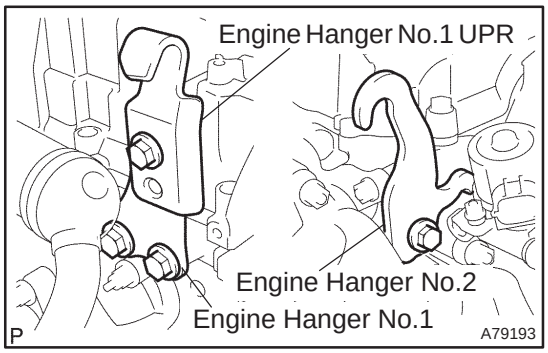
43. REMOVE ENGINE ASSEMBLY WITH TRANSAXLE



(a) Disconnect the height control sensor connector (w/ Discharge head lamp).

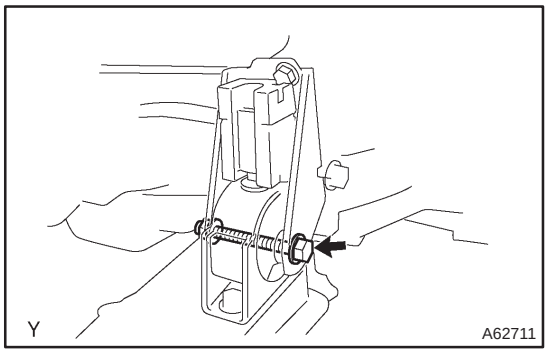


(b) Set the engine lifter.
(c) Remove the 3 bolts, 3 nuts and the engine mounting insulator sub–assy RH.

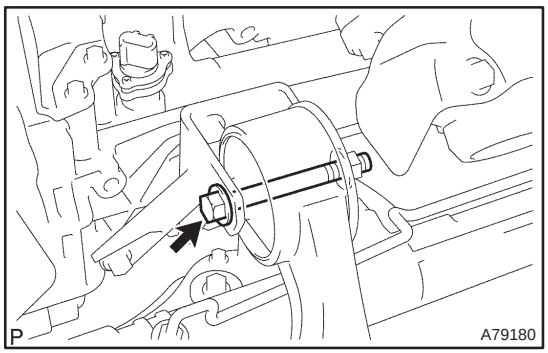


(d) Remove the through bolt and nut, detach the engine mounting insulator LH from the vehicle.

(e) Remove the 8 bolts and the front suspension member brace rear RH and LH.



(f) Remove the 2 bolts and 2 nuts.
(g) Carefully remove the engine with transaxle from the vehicle.

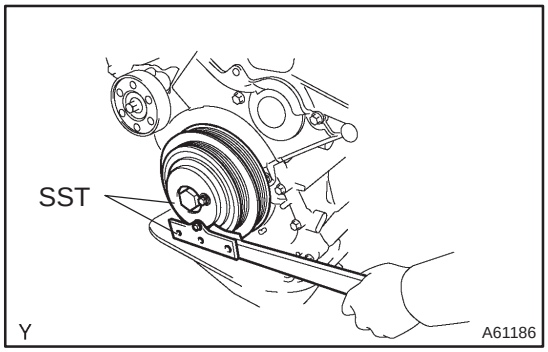


(h) Install the 2 engine hangers with the 2 bolts.
Part No.:
No. 1 engine hanger UPR (yellow) 12284–27020
No. 1 engine hanger UPR (black) 12284–27030
No. 1 engine hanger 12281–27050
No. 2 engine hanger (yellow) 12282–27060
No. 2 engine hanger (black) 12282–27070
Bolt 91642–81025
Torque: 37 N·m (377 kgf·cm, 27 ft·lbf)

(i) Attach the engine sling and hang the engine with the chain block.

44. REMOVE FRONT SUSPENSION CROSSMEMBER SUB–ASSY

(a) Remove the through bolt and nut, detach the engine mounting insulator FR from the engine mounting bracket.



(b) Remove the through bolt, detach the engine mounting insulator RR from the suspension crossmember.

(c) Separate the engine and transaxle assembly from the suspension crossmember and engine mounting member.

45. REMOVE STARTER ASSY (See page 19–24)

46. REMOVE MANUAL TRANSAXLE (See page 41–33)

47. REMOVE CLUTCH DISC ASSY (See page 42–26)

48. REMOVE FLYWHEEL SUB–ASSY

(a) Hold the crank shaft with SST.
SST 09213–54015 (90105–08076), 09330–00021

(b) Using a torx socket wrench (T55), remove the 8 torx screws and the flywheel.

49. REMOVE REAR END PLATE

(a) Remove the 2 bolts and the rear end plate.

50. REMOVE DRIVE SHAFT BEARING BRACKET

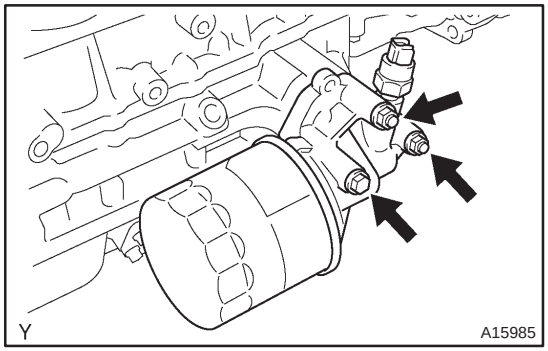
51. REMOVE ENGINE MOUNTING BRACKET FR

52. REMOVE ENGINE MOUNTING BRACKET RR

53. REMOVE GLOW PLUG ASSY (See page 19–33)

54. REMOVE GENERATOR V BELT (See page 14–269)

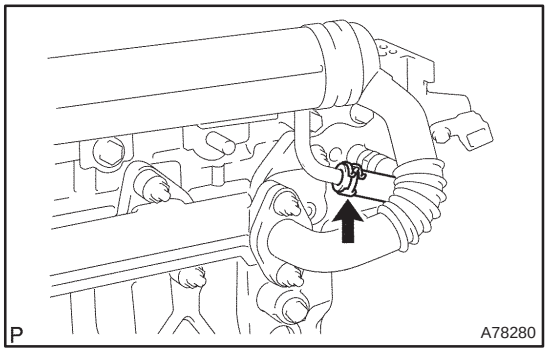
55. REMOVE CRANKSHAFT PULLEY (See page 14–307)



SST 09213–54015 (90105–08076), 09330–00021, 09950–50013 (09951–05010, 09952–05010, 09953–05020, 09954–05031)

56. REMOVE IDLER PULLEY SUB–ASSY (See page 14–307)
57. REMOVE TIMING BELT NO.2 COVER (See page 14–307)
58. REMOVE TIMING BELT NO.1 COVER (See page 14–307)
59. REMOVE TIMING BELT GUIDE
60. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET (See page 14–307)
61. SET NO. 1 CYLINDER TO TDC/COMPRESSION (See page 14–307)
62. REMOVE TIMING BELT (See page 14–307)

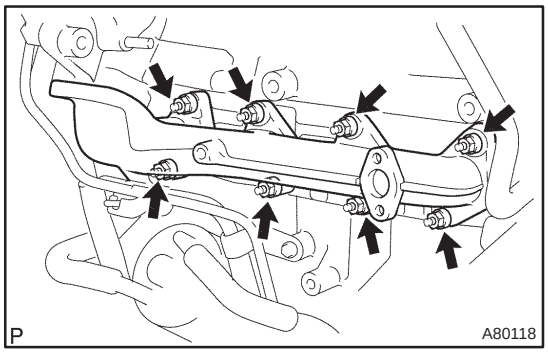
HINT:



If re–use the timing belt, draw an arrow which indicates the engine revolution direction on the belt and put match marks on the pulleys and the belt before removing. This operation will be very helpful when re–installing the timing belt.

63. REMOVE GENERATOR ASSY
64. REMOVE GENERATOR BRACKET NO.1
(a) Remove the 2 bolts and the generator bracket.
65. REMOVE V–RIBBED BELT TENSIONER ASSY

66. REMOVE OIL FILTER BRACKET SUB–ASSY
(a) Remove the bolt and 2 nuts, and then remove the oil filter bracket and the gasket.

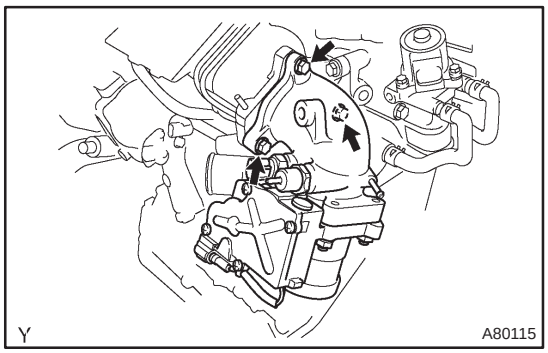


67. REMOVE TURBO INSULATOR NO.2 (See page 13–11)
68. REMOVE TURBO INSULATOR NO.1 (See page 13–11)
69. REMOVE EXHAUST MANIFOLD HEAT INSULATOR NO.2 (See page 13–11)
70. REMOVE MANIFOLD STAY NO.2 (See page 13–11)
71. REMOVE MANIFOLD STAY (See page 13–11)
72. REMOVE EXHAUST MANIFOLD CONVERTER SUB–ASSY (See page 13–11)
73. REMOVE TURBOCHARGER STAY (See page 13–11)
74. DISCONNECT TURBO WATER HOSE NO.1 (See page 13–11)
75. DISCONNECT TURBO WATER HOSE NO.2 (See page 13–11)
76. SEPARATE TURBO OIL INLET PIPE SUB–ASSY (See page 13–11)
77. REMOVE TURBO OIL OUTLET PIPE NO.2 (See page 13–11)
78. REMOVE TURBOCHARGER SUB–ASSY (See page 13–11)

79. DISCONNECT WATER BY–PASS HOSE NO.3

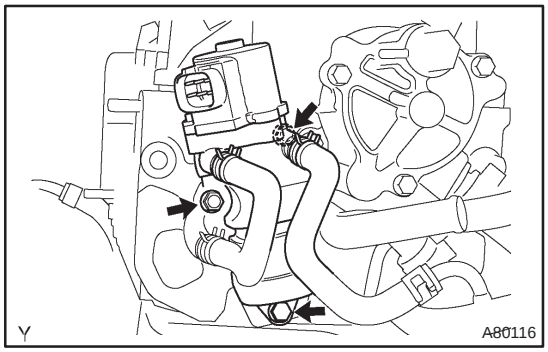
80. REMOVE EGR PIPE SUB–ASSY NO.1

(a) Remove the bolt and 4 nut, and then detach the EGR pipe and the 2 gaskets.



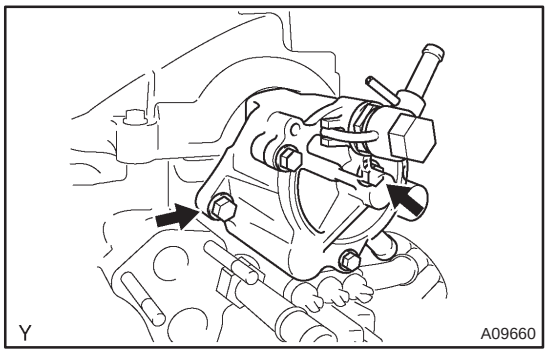
81. REMOVE EXHAUST MANIFOLD

(a) Remove the 8 nuts, the exhaust manifold and the gasket.



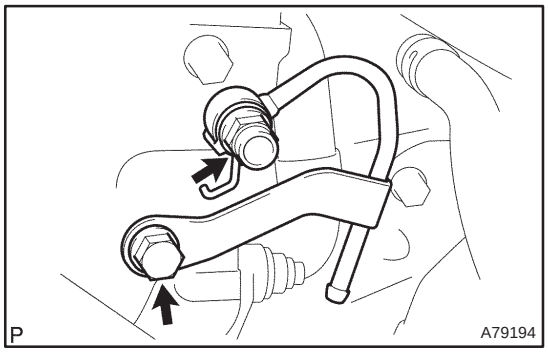
82. REMOVE OIL COOLER ASSY (See page 17–32)

83. REMOVE WATER OUTLET SUB–ASSY



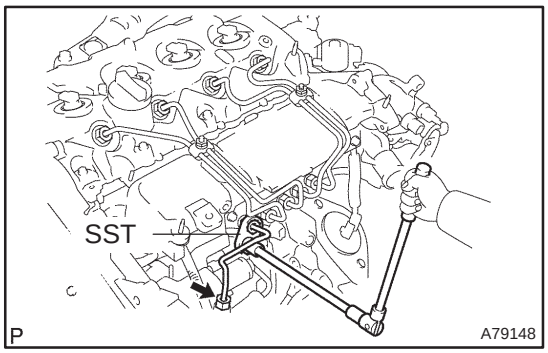
84. REMOVE INTAKE AIR CONNECTOR SUB–ASSY

(a) Remove the bolt and 2 nuts, and then remove the intake air connector and the gasket.



85. REMOVE EGR VALVE ASSY

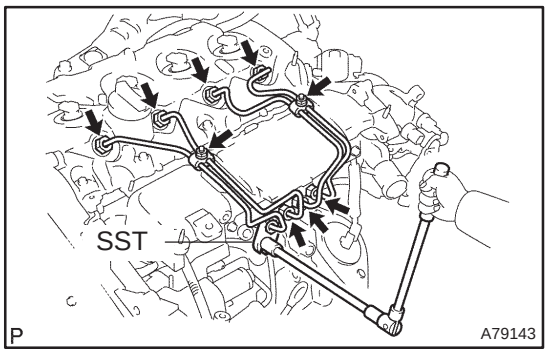
(a) Remove the bolt and 2 nuts, and then remove the EGR valve and the gasket.



86. REMOVE VACUUM PUMP ASSY

(a) Remove the 2 bolts, the vacuum pump and the 2 O–rings.

87. REMOVE NOZZLE LEAKAGE PIPE NO.2



(a) Remove the check valve and bolt, and then detach the leakage pipe and the gasket.

88. REMOVE FUEL INLET PIPE SUB–ASSY

(a) Using SST, remove the fuel inlet pipe from the common rail side.
SST 09023–12700

(b) Using SST, remove the fuel inlet pipe from the pump side.
SST 09023–12700

89. REMOVE INJECTION PIPE SUB–ASSY NO.1

(a) Remove the 2 nuts and 2 upper infection pipe clamps from the intake manifold.

(b) Using SST, remove the injection pipe from the common rail side.
SST 09023–12700

(c) Using SST, remove the injection pipe from the injector side.
SST 09023–12700

(d) After removing the fuel pipe, to prevent dust or foreign objects being introduces, cover the common rail with vinyl tape and protect the injector inlet with a vinyl or a plastic bag.

(e) Remove the 2 lower injection pipe clamps from the intake manifold.

90. REMOVE INJECTION PIPE SUB–ASSY NO.2

SST 09023–12700

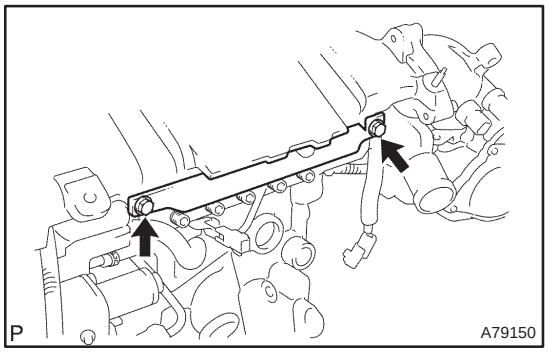
HINT:

Perform the same procedures as injection pipe No. 1.

91. REMOVE INJECTION PIPE SUB–ASSY NO.3

SST 09023–12700

HINT:

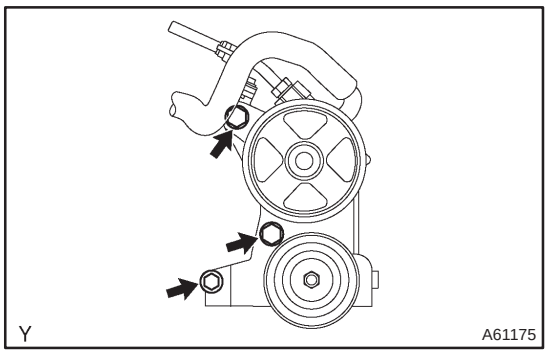


Perform the same procedures as injection pipe No. 1.

92. REMOVE INJECTION PIPE SUB–ASSY NO.4

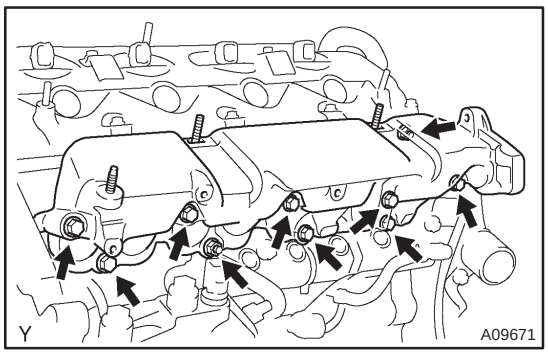
SST 09023–12700

HINT:



Perform the same procedures as injection pipe No. 1.

93. REMOVE INTAKE MANIFOLD INSULATOR NO.1



(a) Remove the 2 bolts and the intake manifold insulator.

94. REMOVE COMMON RAIL ASSY (See page 11–78)

95. REMOVE POWER STEERING IDLE PULLEY BRACKET

(a) Remove the 3 bolts and the idle pulley bracket.

96. REMOVE INTAKE MANIFOLD

(a) Remove the 2 bolts and the wiring harness clamp bracket.

(b) Remove the 8 bolts and 2 nuts, and then remove the intake manifold and the gasket.

97. REMOVE INJECTION PUMP DRIVE PULLEY (See page 11–69)

SST 09960–10010 (09962–01000, 09963–01000)

98. REMOVE TIMING BELT NO.3 COVER

(a) Remove the 2 bolts and 2 seal washers, and then remove the timing belt cover.

99. REMOVE OIL LEVEL GAGE GUIDE (See page 17–22)

100. REMOVE INJECTION OR SUPPLY PUMP ASSY (See page 11–69)

101. REMOVE COMPRESSOR MOUNTING BRACKET NO.1

(a) Remove the 4 bolts and the compressor mounting bracket.

102. REMOVE WATER INLET

(a) Remove the 2 bolts and the water inlet.

103. REMOVE THERMOSTAT

104. REMOVE OIL COOLER PIPE

(a) Remove the union bolt, the oil cooler pipe and the gasket.

105. REMOVE FUEL FILTER TO INJECTION PUMP FUEL PIPE

(a) Remove the 3 bolts and nut, and then detach the fuel pipe.

106. REMOVE CRANKSHAFT POSITION SENSOR

(a) Remove the bolt and the crankshaft position sensor.

107. REMOVE CAMSHAFT POSITION SENSOR

(a) Remove the bolt and the camshaft position sensor.

108. REMOVE ENGINE COOLANT TEMPERATURE SENSOR

109. REPLACE PARTIAL ENGINE ASSY

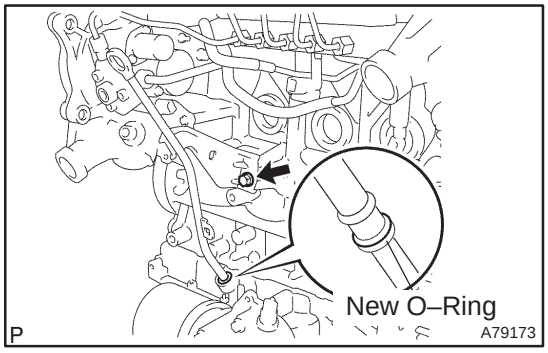
110. INSTALL ENGINE COOLANT TEMPERATURE SENSOR
Torque: 20 N·m (204 kgf·cm, 15 ft·lbf)

111. INSTALL CAMSHAFT POSITION SENSOR
Torque: 8.8 N·m (90 kgf·cm, 78 in.·lbf)

112. INSTALL CRANKSHAFT POSITION SENSOR
Torque: 8.8 N·m (90 kgf·cm, 78 in.·lbf)

113. INSTALL FUEL FILTER TO INJECTION PUMP FUEL PIPE
Torque:
8.8 N·m (90 kgf·cm, 78 ft·lbf) for M6 and Nut
21 N·m (209 kgf·cm, 15 ft·lbf) for M8

114. INSTALL OIL COOLER PIPE



(a) Install 2 new gaskets and the oil cooler pipe with the union bolt.
Torque: 59 N·m (600 kgf·cm, 43 ft·lbf)

115. INSTALL THERMOSTAT (See page 16–50)

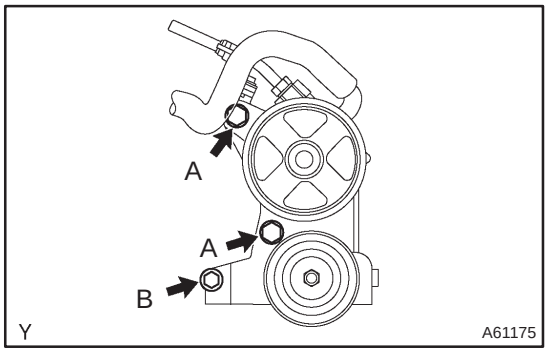
116. INSTALL WATER INLET (See page 16–50)

117. INSTALL COMPRESSOR MOUNTING BRACKET NO.1
Torque: 42 N·m (428 kgf·cm, 31 ft·lbf)

118. INSTALL INJECTION OR SUPPLY PUMP ASSY
Torque: 21 N·m (214 kgf·cm, 15 ft·lbf)

119. INSTALL OIL LEVEL GAGE GUIDE

(a) Install a new O–ring to the oil level gage guide.
(b) Apply engine oil to the O–ring.
(c) Push in the oil level gage guide end into the guide hole of the No. 1 oil pan.
(d) Install the oil level gage guide with the bolt.
Torque: 18 N·m (184 kgf·cm, 13 ft·lbf)
(e) Apply engine oil to the O–ring on the oil level gage.
(f) Install the oil level gage.



120. INSTALL TIMING BELT NO.3 COVER
Torque: 7.4 N·m (75 kgf·cm, 65 in.·lbf)

121. INSTALL INJECTION PUMP DRIVE PULLEY (See page 11–69)
SST 09960–10010 (09962–01000, 09963–01000)

122. INSTALL INTAKE MANIFOLD

(a) Install a new gasket and the intake manifold with the 8 bolts and 2 nuts.
Torque: 21 N·m (214 kgf·cm, 15 ft·lbf)

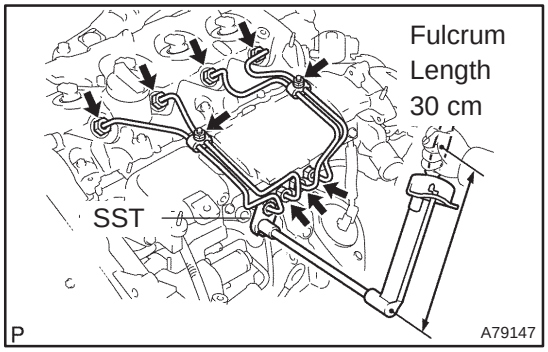
(b) Install the wiring harness clamp bracket with the 2 bolts.
Torque: 3.9 to 6.9 N·m (40 to 70 kgf·cm, 35 to 61 in.·lbf)

123. INSTALL POWER STEERING IDLE PULLEY BRACKET

(a) Install the idle w/ bracket pulley with the 3 bolts.
Torque:
72 N·m (734 kgf·cm, 53 ft·lbf) for bolt A
39 N·m (398 kgf·cm, 29 ft·lbf) for bolt B

124. INSTALL COMMON RAIL ASSY (See page 11–78)

125. INSTALL INTAKE MANIFOLD INSULATOR NO.1
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)



126. INSTALL INJECTION PIPE SUB–ASSY NO.1

NOTICE:

- **In case of having the injectors replaced, must replace the injection pipes, too.**
- **When assembling the pipes, perform the operation with the engine cold under room temperature.**

(a) Install the 2 lower injection pipe clamps to the intake manifold.

(b) Temporarily install the injection pipe.

(c) Using SST, tighten the nut of the injection pipe to the common rail side.
SST 09023–12700
Torque:
42 N·m (428 kgf·cm, 31 ft·lbf) for a used pipe using SST
46 N·m (469 kgf·cm, 34 ft·lbf) for a used pipe not using SST
31 N·m (316 kgf·cm, 23 ft·lbf) for a new pipe using SST
34 N·m (347 kgf·cm, 25 ft·lbf) for a new pipe not using SST

HINT:

- Use a torque wrench with a fulcrum length of 30 cm (11.81 in.)
- Check if the used pipe has deflection or is installed properly after injection pipe is reassembled. If there is deflection or if it can not be installed properly, replace the used pipe with a new pipe.

(d) Using SST, tighten the nut of the injection pipe to the injector side.
SST 09023–12700
Torque:
42 N·m (428 kgf·cm, 31 ft·lbf) for a used pipe using SST
46 N·m (469 kgf·cm, 34 ft·lbf) for a used pipe not using SST
31 N·m (316 kgf·cm, 23 ft·lbf) for a new pipe using SST
34 N·m (347 kgf·cm, 25 ft·lbf) for a new pipe not using SST

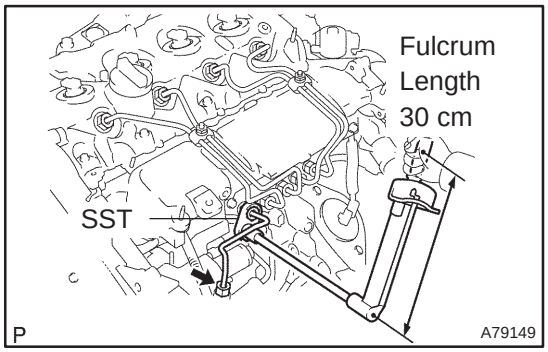
HINT:
- Use a torque wrench with a fulcrum length of 30 cm (11.81 in.)
- Check if the used pipe has deflection or is installed properly after injection pipe is reassembled. If there is deflection or if it can not be installed properly, replace the used pipe with a new pipe.

(e) Install the 2 upper injection pipe clamps with the 2 nuts.
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)

127. INSTALL INJECTION PIPE SUB–ASSY NO.2
SST 09023–12700

HINT:
Perform the same procedures as injection pipe No. 1.

128. INSTALL INJECTION PIPE SUB–ASSY NO.3
SST 09023–12700



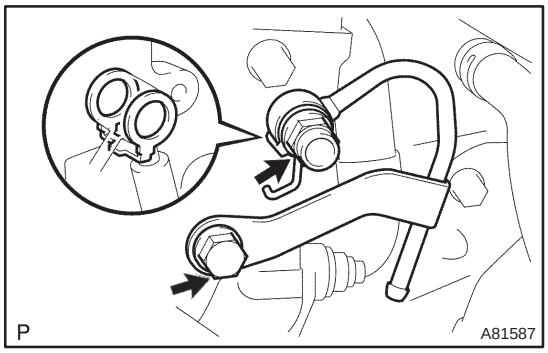
HINT:
Perform the same procedures as injection pipe No. 1.

129. INSTALL INJECTION PIPE SUB–ASSY NO.4
SST 09023–12700

HINT:
Perform the same procedures as injection pipe No. 1.

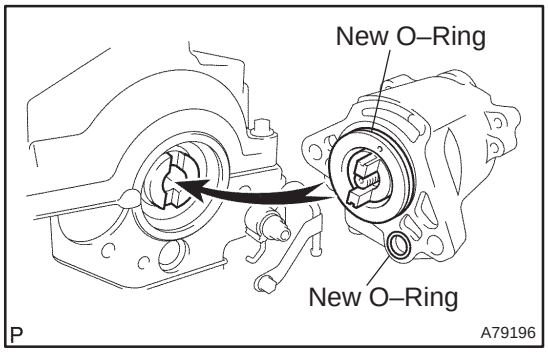
130. INSTALL FUEL INLET PIPE SUB–ASSY
NOTICE:
When assembling the pipe, perform the operation with the engine cold under room temperature.

(a) Temporarily install the inlet pipe.



(b) Using SST, tighten the nut of the fuel inlet pipe to the common rail side.
SST 09023–12700
Torque:
42 N·m (428 kgf·cm, 31 ft·lbf) for a used pipe using SST
46 N·m (469 kgf·cm, 34 ft·lbf) for a used pipe not using SST
31 N·m (316 kgf·cm, 23 ft·lbf) for a new pipe using SST
34 N·m (347 kgf·cm, 25 ft·lbf) for a new pipe not using SST

HINT:
- Use a torque wrench with a fulcrum length of 30 cm (11.81 in.)
- Check if the used pipe has deflection or is installed properly after inlet pipe is reassembled. If there is deflection or if it can not be installed properly, replace the used pipe with a new pipe.



(c) Using SST, tighten the nut of the fuel inlet pipe to the pump side.
SST 09023–12700
Torque:
42 N·m (428 kgf·cm, 31 ft·lbf) for a used pipe using SST
46 N·m (469 kgf·cm, 34 ft·lbf) for a used pipe not using SST
31 N·m (316 kgf·cm, 23 ft·lbf) for a new pipe using SST
34 N·m (347 kgf·cm, 25 ft·lbf) for a new pipe not using SST

HINT:
- Use a torque wrench with a fulcrum length of 30 cm (11.81 in.)
- Check if the used pipe has deflection or is installed properly after inlet pipe is reassembled. If there is deflection or if it can not be installed properly, replace the used pipe with a new pipe.

131. INSTALL NOZZLE LEAKAGE PIPE NO.2

(a) Install a new gasket and the leakage pipe with the check valve.
Torque:
21 N·m (214 kgf·cm, 15 ft·lbf) for check valve
8.8 N·m (90 kgf·cm, 78 in.·lbf) for bolt

132. INSTALL VACUUM PUMP ASSY

(a) Install 2 new O–rings to the vacuum pump.

(b) Align the key of the vacuum pump with the keyway of the exhaust camshaft, insert the vacuum pump into place. Secure the pump with the 2 bolts.

Torque: 21 N·m (214 kgf·cm, 15 ft·lbf)

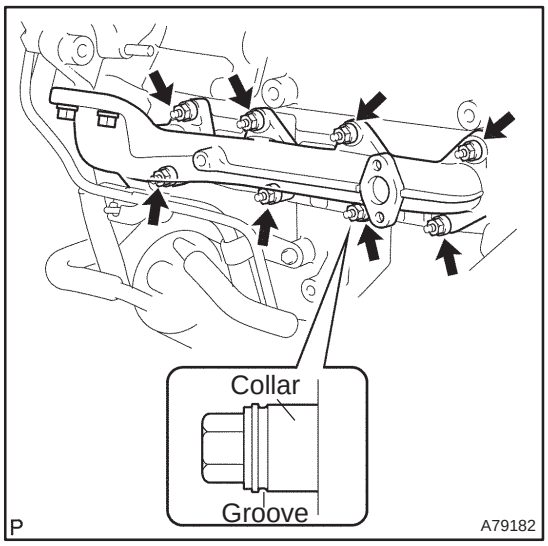
133. INSTALL EGR VALVE ASSY

(a) Install a new gasket and the EGR valve with the bolt and 2 nuts.

Torque: 18 N·m (184 kgf·cm, 13 ft·lbf)

134. INSTALL INTAKE AIR CONNECTOR SUB–ASSY

(a) Install a new gasket and the intake air connector with diesel throttle body with the bolt and 2 nuts.



Torque: 21 N·m (214 kgf·cm, 15 ft·lbf)

135. INSTALL WATER OUTLET SUB–ASSY

(a) Install a new gasket and the water outlet with the 2 bolts.

Torque: 21 N·m (214 kgf·cm, 15 ft·lbf)

136. INSTALL OIL COOLER ASSY (See page 17–32)

137. INSTALL EXHAUST MANIFOLD

(a) Install a new gasket, the exhaust manifold and the 8 collars with new 8 nuts.

Torque: 47 N·m (479 kgf·cm, 35 ft·lbf)

HINT:

When installing the collars, pay attention to the mounting orientation. Ring groove of the collar should be outside. Refer to the illustration on the left.

138. INSTALL EGR PIPE SUB–ASSY NO.1

(a) Install 2 new gaskets and the EGR pipe with the bolt and 4 new nuts.

Torque:
37 N·m (375 kgf·cm, 27 ft·lbf) for bolt
25 N·m (250 kgf·cm, 18 ft·lbf) for nut

139. INSTALL TURBOCHARGER SUB–ASSY (See page 13–11)

140. INSTALL TURBO OIL INLET PIPE SUB–ASSY (See page 13–11)

141. INSTALL TURBOCHARGER STAY (See page 13–11)

142. INSTALL EXHAUST MANIFOLD CONVERTER SUB–ASSY (See page 13–11)

143. INSTALL MANIFOLD STAY NO.2 (See page 13–11)

144. INSTALL EXHAUST MANIFOLD HEAT INSULATOR NO.2 (See page 13–11)

145. INSTALL TURBO INSULATOR NO.1 (See page 13–11)

146. INSTALL TURBO INSULATOR NO.2 (See page 13–11)

147. INSTALL OIL FILTER BRACKET SUB–ASSY

(a) Install a new gasket and oil filter bracket with the bolt and 2 nuts.
Torque: 34 N·m (347 kgf·cm, 25 ft·lbf)

148. INSTALL V–RIBBED BELT TENSIONER ASSY
Torque: 31 N·m (316 kgf·cm, 23 ft·lbf)

149. INSTALL GENERATOR BRACKET NO.1
Torque: 37 N·m (377 kgf·cm, 27 ft·lbf)

150. INSTALL GENERATOR ASSY (See page 19–29)

151. SET NO. 1 CYLINDER TO TDC/COMPRESSION (See page 14–307)
SST 09960–10010 (09962–01000, 09963–01000)

152. INSTALL TIMING BELT (See page 14–307)

153. CHECK VALVE TIMING (See page 14–307)

154. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET (See page 14–307)

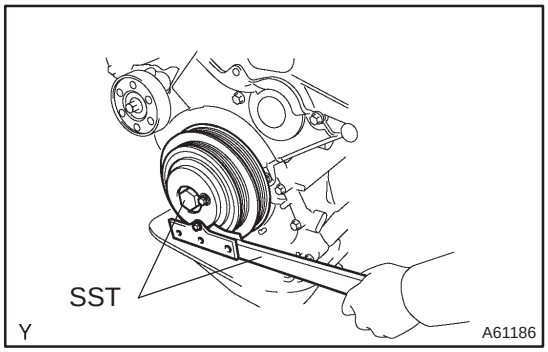
155. INSTALL TIMING BELT GUIDE (See page 14–307)

156. INSTALL TIMING BELT NO.1 COVER (See page 14–307)

157. INSTALL TIMING BELT NO.2 COVER (See page 14–307)

158. INSTALL IDLER PULLEY SUB–ASSY
Torque: 40 N·m (408 kgf·cm, 30 ft·lbf)

159. INSTALL CRANKSHAFT PULLEY (See page 14–307)
SST 09213–54015 (90105–08076), 09330–00021

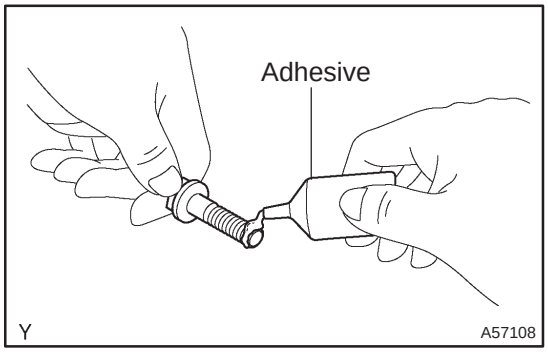


160. INSTALL GLOW PLUG ASSY (See page 19–33)

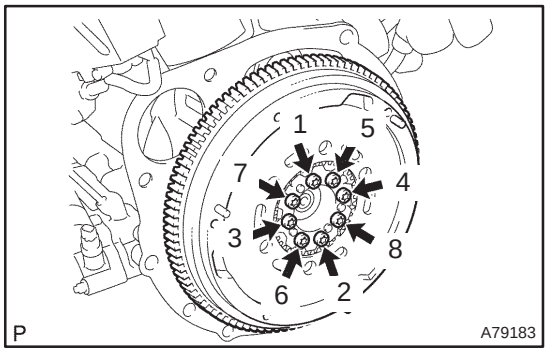
161. INSTALL ENGINE MOUNTING BRACKET RR
Torque: 64 N·m (653 kgf·cm, 47 ft·lbf)

162. INSTALL ENGINE MOUNTING BRACKET FR
Torque: 64 N·m (653 kgf·cm, 47 ft·lbf)

163. INSTALL DRIVE SHAFT BEARING BRACKET
Torque: 64 N·m (653 kgf·cm, 47 ft·lbf)



164. INSTALL REAR END PLATE
Torque: 8.4 N·m (86 kgf·cm, 74 in.·lbf)

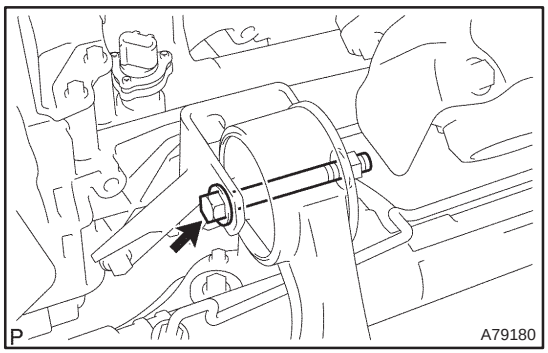


165. INSTALL FLYWHEEL SUB–ASSY

(a) Using SST, hold the crankshaft.
SST 09213–54015 (90105–08076), 09330–00021

(b) Clean the bolts and its bolt holes.

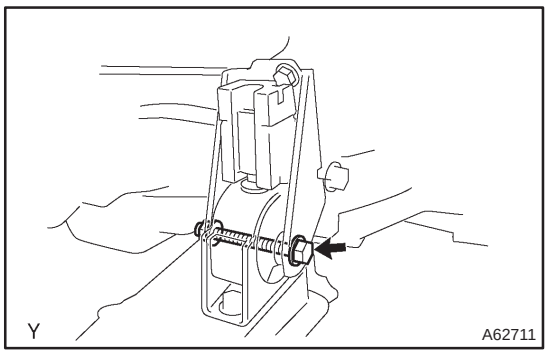
(c) Apply adhesive to 2 or 3 threads of the bolt end.
Adhesive: Part No. 08833–00070, THREE BOND 1324 or equivalent



(d) Using several steps, install and tighten the 8 screws with a torx socket wrench (T55) uniformly in the sequence shown in the illustration.
Torque: 71 N·m (720 kgf·cm, 52 ft·lbf)

166. INSTALL CLUTCH DISC ASSY (See page 42–26)
SST 09301–00210

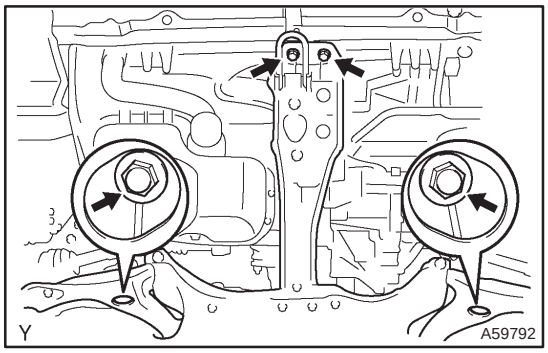
167. INSTALL MANUAL TRANSAXLE (See page 41–33)



168. INSTALL STARTER ASSY (See page 19–24)

169. INSTALL FRONT SUSPENSION CROSSMEMBER SUB–ASSY

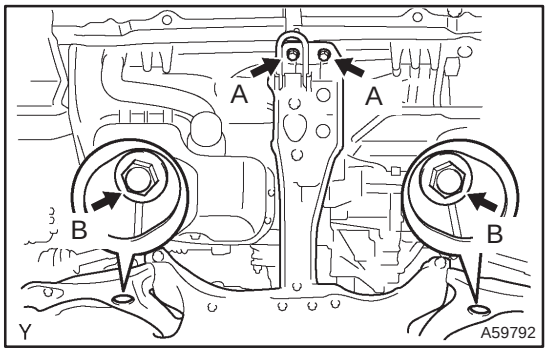
(a) Attach the engine and the transaxle assembly to the suspension crossmember and engine mounting member.



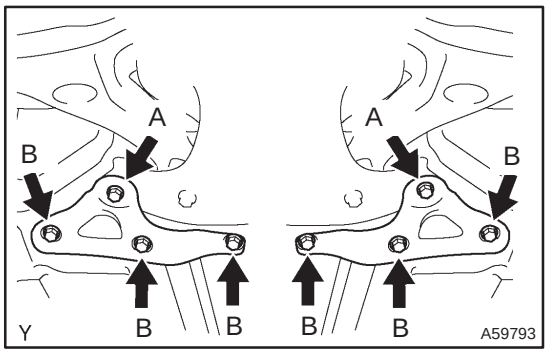
(b) Install the bolt which is used to secure the rear engine mounting bracket to the mounting insulator.
Torque: 87 N·m (887 kgf·cm, 64 ft·lbf)

(c) Install the bolt which is used to secure the front engine mounting bracket to the mounting insulator.
Torque: 52 N·m (530 kgf·cm, 38 ft·lbf)

170. INSTALL ENGINE ASSEMBLY WITH TRANSAXLE



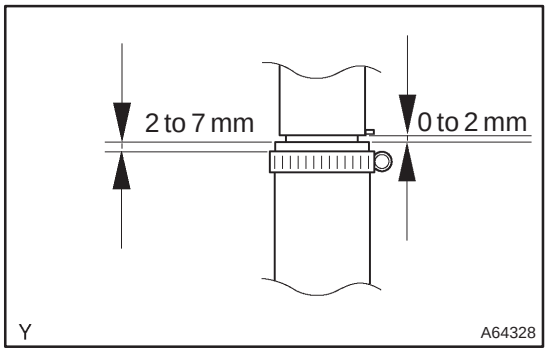
(a) Set the engine assembly with transaxle on the engine lifter.



(b) Temporarily, install the suspension crossmember with the 2 bolts and 2 nuts.

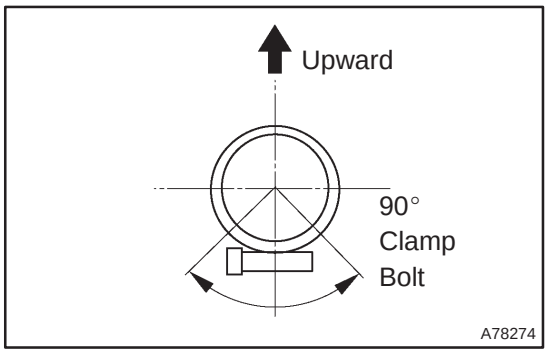
(c) Install the engine mounting insulator LH.
Torque: 80 N·m (816 kgf·cm, 59 ft·lbf)

(d) Install the engine mounting insulator RH.
Torque: 52 N·m (530 kgf·cm, 38 ft·lbf)



(e) Install the front suspension crossmember with the 2 bolts and 2 nuts.
Torque:
45 N·m (459 kgf·cm, 33 ft·lbf) for bolt A
133 N·m (1,356 kgf·cm, 98 ft·lbf) for nut B

(f) Install the front suspension member brace LH and RH with the 8 bolts.
Torque:
133 N·m (1,356 kgf·cm, 98 ft·lbf) for bolt A
80 N·m (816 kgf·cm, 59 ft·lbf) for nut B

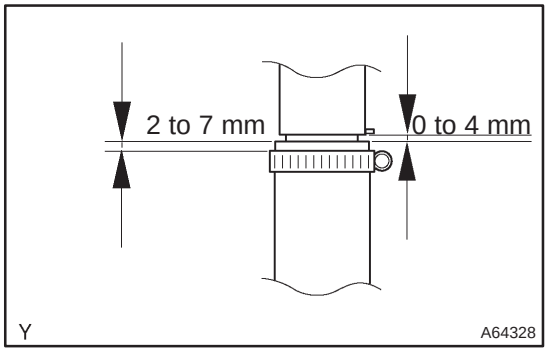


NOTICE:
After installing the crossmember, check that the positioning holes on the crossmember and the vehicle are aligned.

171. INSTALL FRONT DRIVE SHAFT ASSY LH (See page 30–6)
HINT:
Perform the same procedure as above on the opposite side.
172. INSTALL FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH (See page 26–21)
HINT:
Perform the same procedure as above on the opposite side.
173. INSTALL STEERING INTERMEDIATE SHAFT ASSY NO.2 (See page 51–36)
174. INSTALL FRONT STABILIZER LINK ASSY LH (See page 26–26)
HINT:
Perform the same procedure as above on the opposite side.
SST 99999–70037
175. INSTALL TIE ROD END SUB–ASSY LH (See page 30–6)
HINT:
Perform the same procedure as above on the opposite side.
176. INSTALL FRONT AXLE HUB LH NUT (See page 30–6)
HINT:
Perform the same procedure as above on the opposite side.
177. INSTALL RETURN TUBE SUB–ASSY
Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)
178. INSTALL EXHAUST PIPE ASSY FRONT (See page 15–10)
179. INSTALL FLOOR PANEL BRACE FRONT (See page 15–10)
180. INSTALL COMPRESSOR AND MAGNETIC CLUTCH (W/ AIR CONDITIONING) (See page 55–86)
181. ADJUST V (COOLER COMPRESSOR TO CRANKSHAFT PULLEY) BELT NO.1 (See page 14–269)
182. INSTALL CLUTCH RELEASE CYLINDER ASSY (See page 42–17)
183. INSTALL CLUTCH ACCUMULATOR ASSY (See page 42–17)
SST 09023–00100

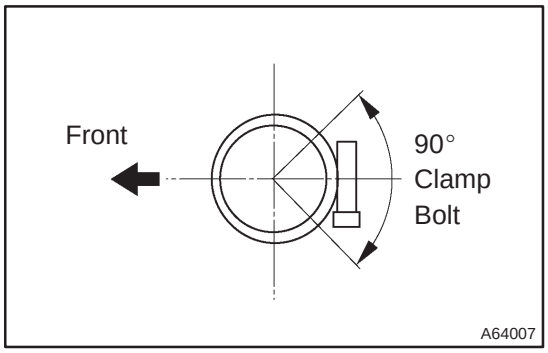
184. INSTALL AIR TUBE NO.1

(a) Install the new air hose No. 1 and new hose clamp as shown in the illustration.



(b) Tighten the hose clamp as shown in the illustration.
Torque: 6.0 N·m (61 kgf·cm, 53 in.·lbf)

(c) Install the air tube No. 1 with the 3 bolts and nut.
Torque: 25 N·m (255 kgf·cm, 18 ft·lbf)



185. INSTALL INJECTOR DRIVER
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)

186. CONNECT ENGINE WIRE
Torque: 8.4 N·m (85 kgf·cm, 74 in.·lbf)

187. INSTALL AIR TUBE NO.2

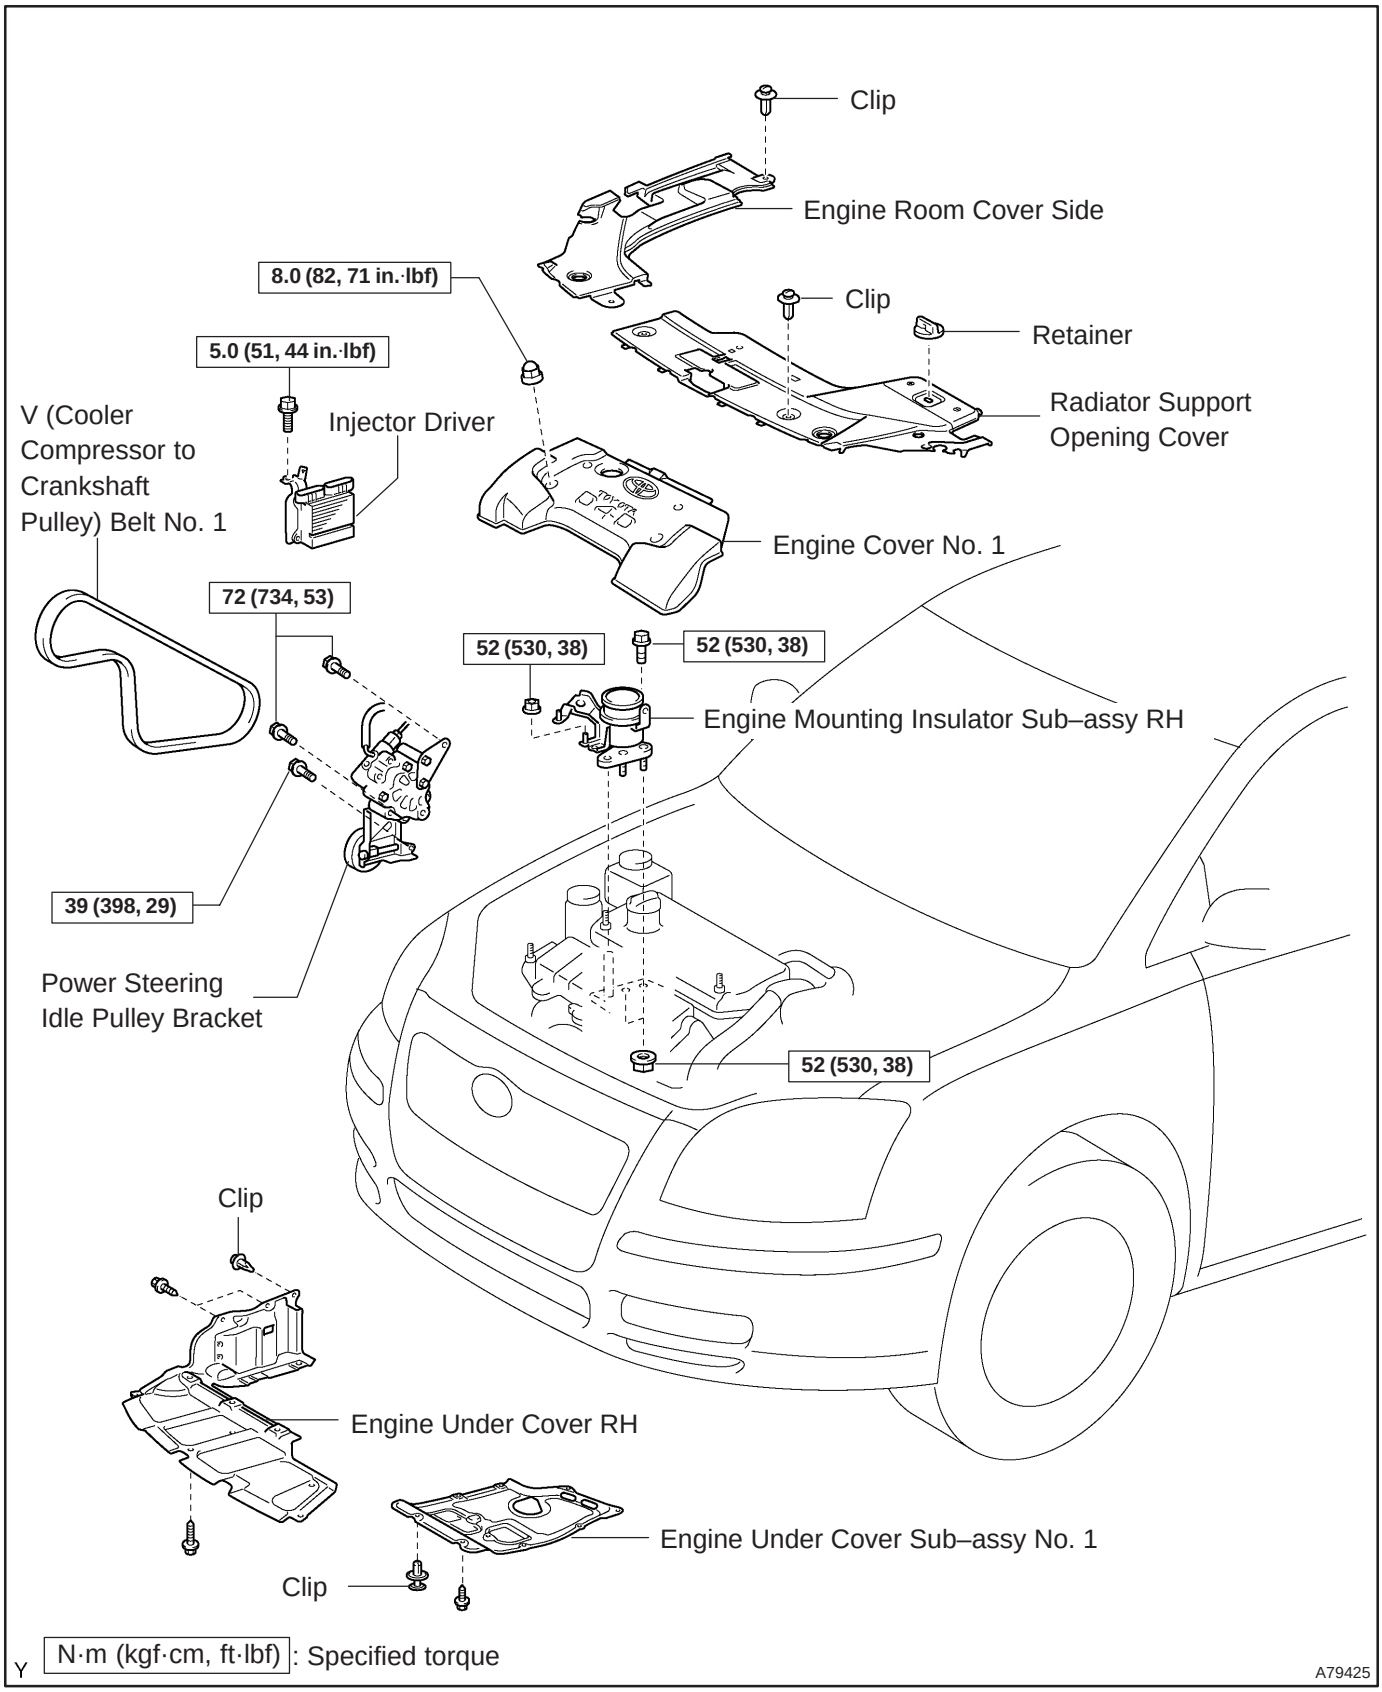
(a) Install the air hose and hose clamps as shown in the illustration.

(b) Tighten the hose clamps as shown in the illustration.
Torque: 6.0 N·m (61 kgf·cm, 53 ft·lbf)

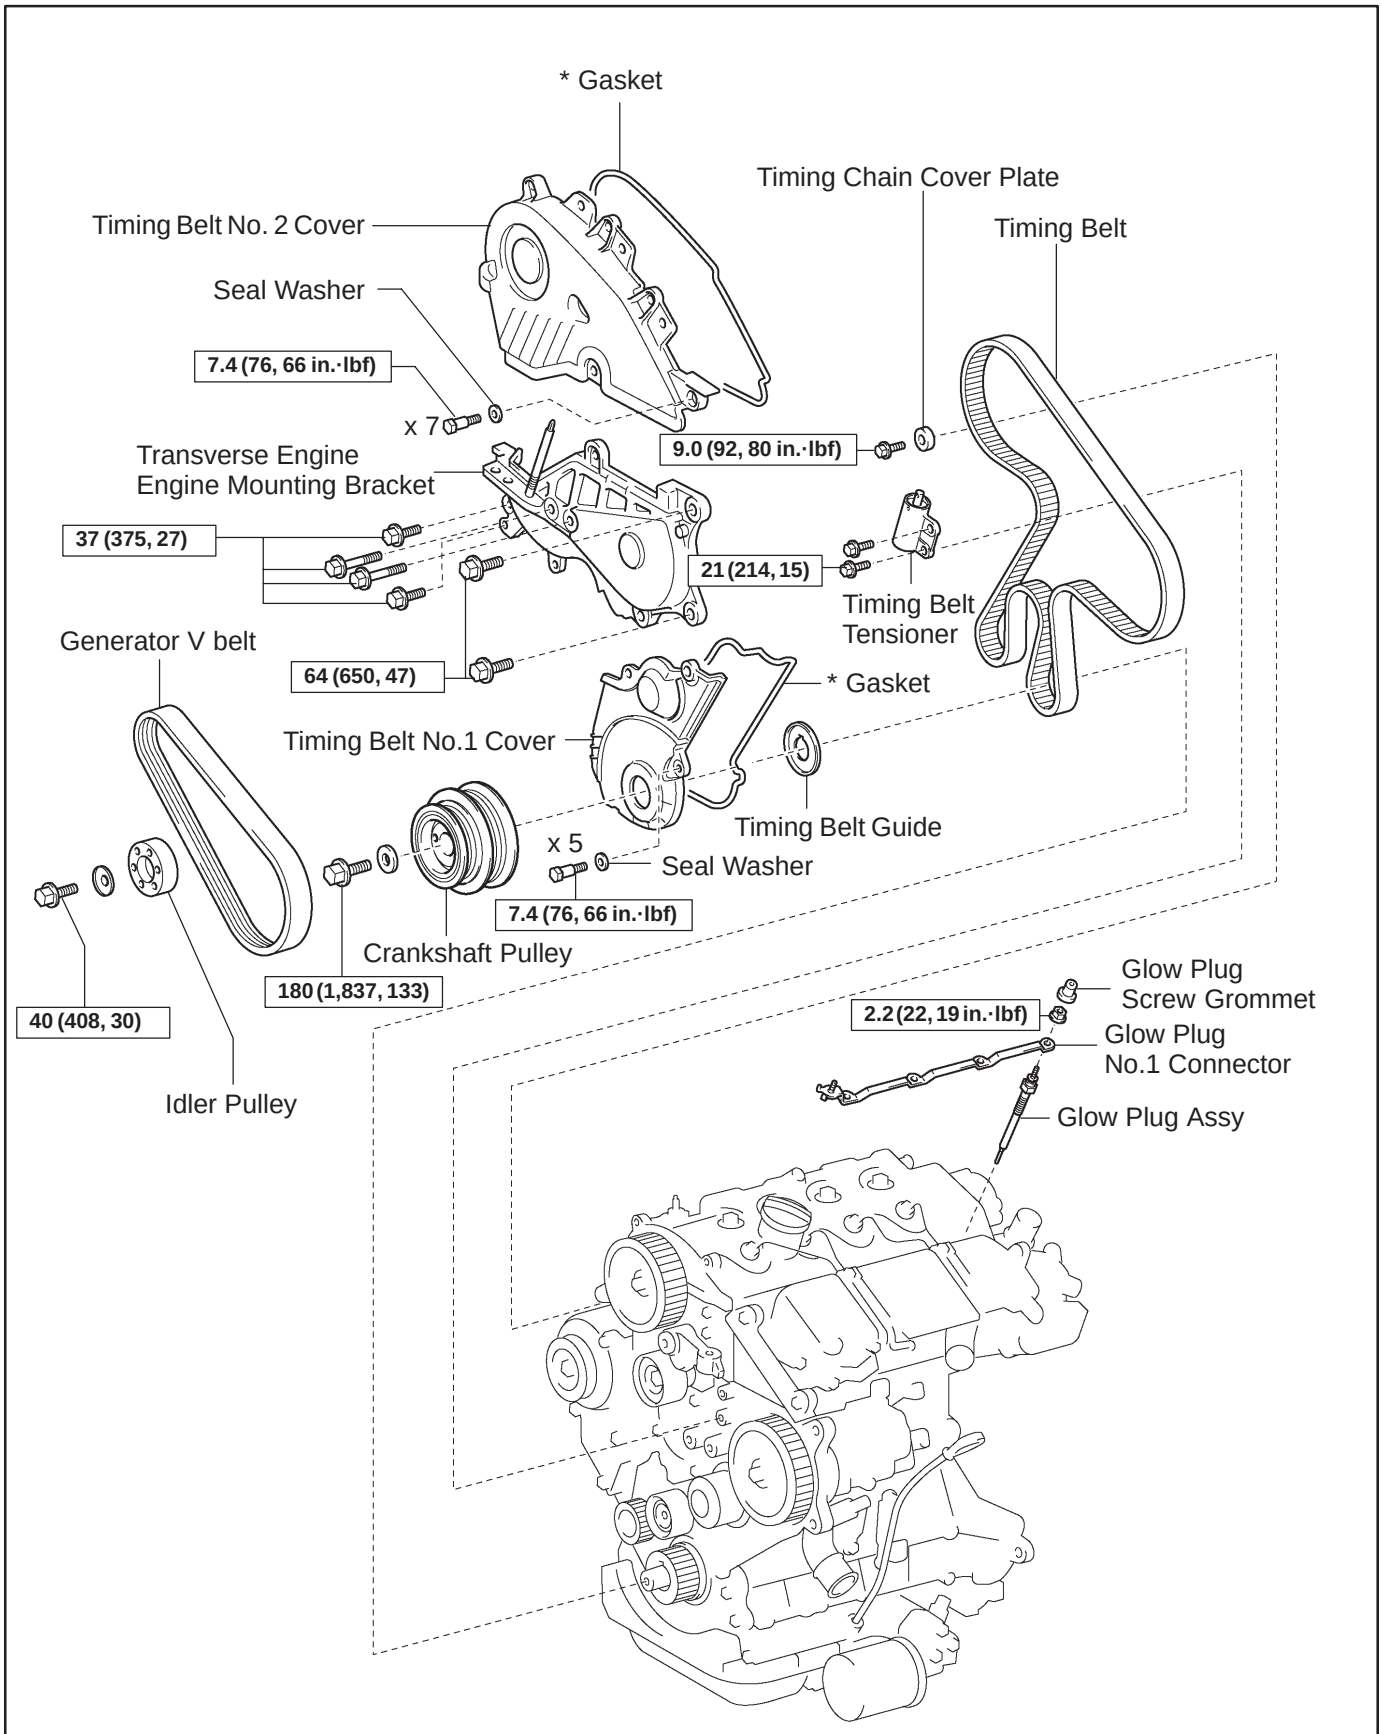
(c) Install the 2 bolts and the air tube No.2 assy.
Torque: 25 N·m (255 kgf·cm, 18 ft·lbf)

188. INSTALL RADIATOR ASSY (W/ AIR CONDITIONING) (See page 16–51)

189. INSTALL ENGINE ROOM RELAY BLOCK NO.3
Torque: 5.3 N·m (54 kgf·cm, 46 in.·lbf)



190. INSTALL FUEL FILTER ASSY
Torque: 18 N·m (178 kgf·cm, 13 ft·lbf)



191. INSTALL AIR CLEANER ASSY
     Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)
192. INSTALL ENGINE COVER NO.1
     Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)
193. BLEED CLUTCH PIPE LINE (See page 42–17)
194. INSTALL FRONT WHEELS
     Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)
195. ADD MANUAL TRANSAXLE OIL
196. ADD ENGINE OIL
197. ADD ENGINE COOLANT (See page 16–44)
198. CHECK CLUTCH FLUID LEAKAGE
199. CHECK FLUID LEVEL IN RESERVOIR
200. CHECK BRAKE FLUID LEAKAGE
201. CHECK FOR ENGINE OIL LEAKS
202. CHECK FOR FUEL LEAKS (See page 11–60)
203. CHECK FOR ENGINE COOLANT LEAKS (See page 16–44)
204. CHECK FOR EXHAUST GAS LEAKS
205. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT (See page 26–6)
206. INSPECT ENGINE IDLE SPEED (See page 14–266)
207. CHECK ABS SPEED SENSOR SIGNAL (See page 05–756)

TIMING BELT (1CD–FTV)

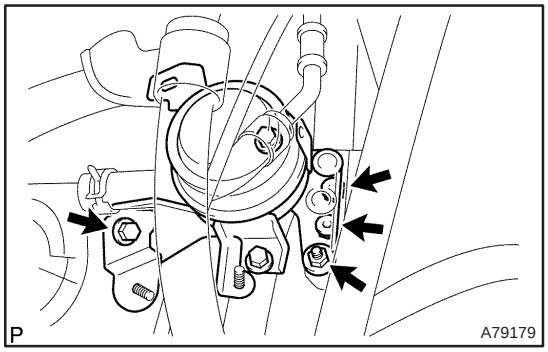
141C6–01

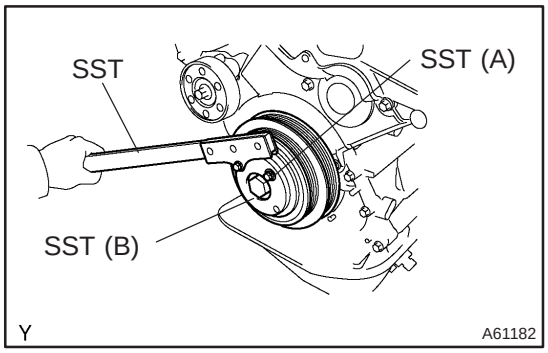
REPLACEMENT

1. **REMOVE FRONT WHEEL RH**
2. **REMOVE ENGINE UNDER COVER SUB–ASSY NO.1**
3. **REMOVE ENGINE UNDER COVER RH**
4. **REMOVE RADIATOR SUPPORT OPENING COVER**
5. **REMOVE ENGINE ROOM COVER SIDE**
6. **REMOVE ENGINE COVER NO.1**



(a) Remove the 5 nuts and the engine cover.

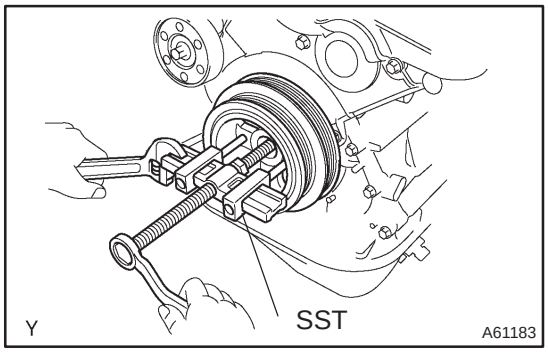
7. **REMOVE INJECTOR DRIVER (See page 14–286)**
8. **REMOVE V (COOLER COMPRESSOR TO CRANKSHAFT PULLEY) BELT NO.1 (See page 14–269)**
9. **REMOVE GENERATOR V BELT (See page 14–269)**
10. **SEPARATE POWER STEERING IDLE PULLEY BRACKET (See page 14–286)**



11. REMOVE ENGINE MOUNTING INSULATOR SUB–ASSY RH

(a) Place a wooden block on a jack underneath the engine.

(b) Remove the 3 bolts and 3 nuts, and then detach the engine mounting insulator sub assy RH.



12. REMOVE CRANKSHAFT PULLEY

(a) Using SSTs, remove the pulley bolt.

SST 09213–54015 (90105–08076), 09330–00021

HINT:

When using SST (A) (90105–08076), a plate washer (5 mm or 0.20 in.) must be inserted between SST (A) and SST (B).

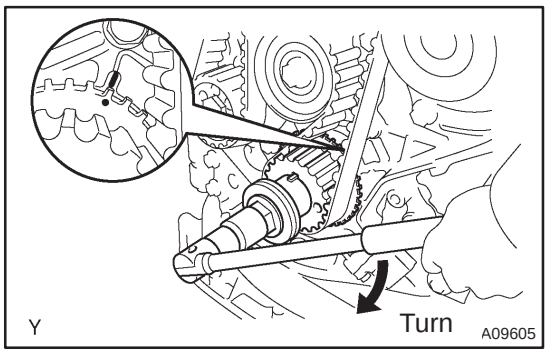
(b) Using SST, remove the pulley.
SST 09950–50013 (09951–05010, 09952–05010, 09953–05020, 09954–05031)

13. REMOVE IDLER PULLEY SUB–ASSY

(a) Remove the bolt and washer, and then remove the pulley.

14. REMOVE TIMING BELT NO.2 COVER

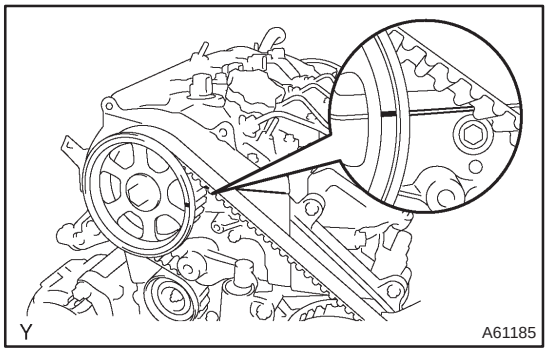
(a) Remove the 7 bolts and 7 seal washers, and then remove the timing belt cover.



15. REMOVE TIMING BELT NO.1 COVER

(a) Remove the 5 bolts and 5 seal washers, and then remove the timing belt cover.

16. REMOVE TIMING BELT GUIDE

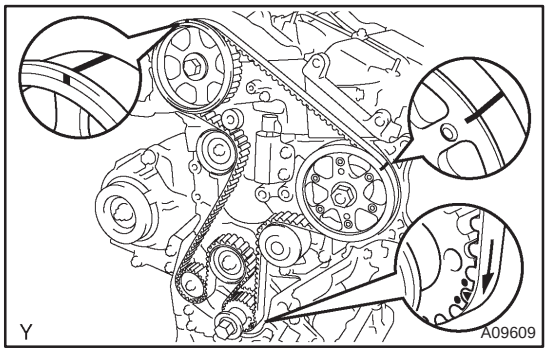


17. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Remove the 6 bolts and the engine mounting bracket.

18. SET NO. 1 CYLINDER TO TDC/COMPRESSION

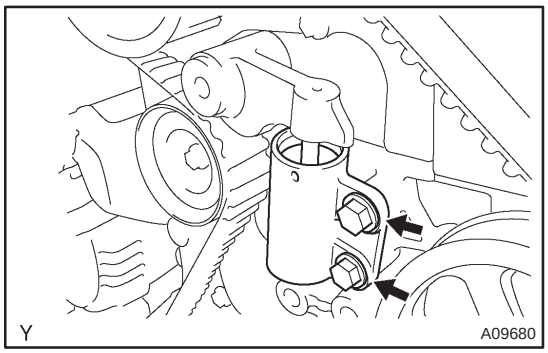
(a) Using the crankshaft pulley bolt, align the dot mark of the crankshaft timing pulley with the TDC mark of the oil pump by turning the crankshaft.



(b) Check that the timing mark of the camshaft timing pulley is aligned with a joint of the cylinder head and the cylinder head cover.

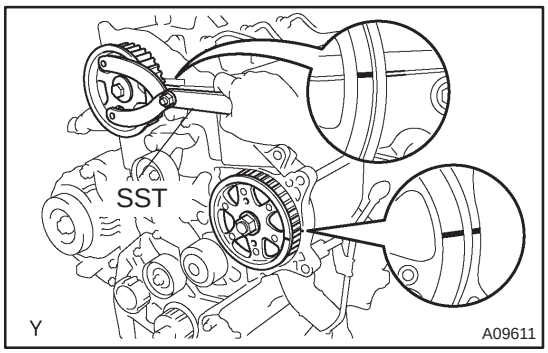
If not, revolve the crankshaft 1 revolution (360˚) to align the mark.

19. REMOVE TIMING CHAIN COVER PLATE



(a) Remove the bolt and the timing chain cover plate.

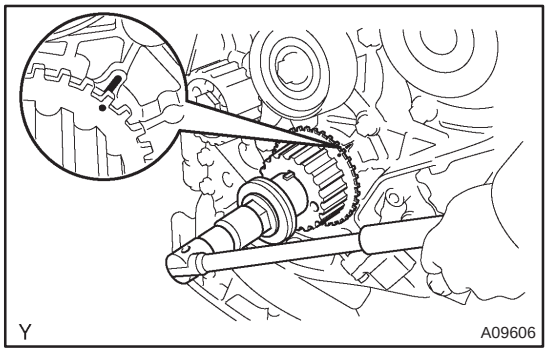
20. REMOVE TIMING BELT



HINT:

If re–use the timing belt, draw an arrow on the belt which indicates the engine revolution direction and put match marks on the pulleys and the belt before removing. This operation will be very helpful when re–installing the timing belt.

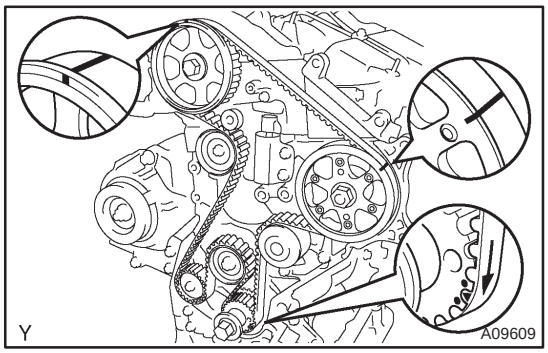
(a) Alternately loosen the 2 bolts to remove the timing belt tensioner.



(b) Remove the timing belt.

21. SET NO. 1 CYLINDER TO TDC/COMPRESSION

(a) Using SST, set the pulleys of the camshaft and the injection pump so that each timing mark of the pulleys is aligned with its timing mark on the cylinder head assembly and the water pump assembly.



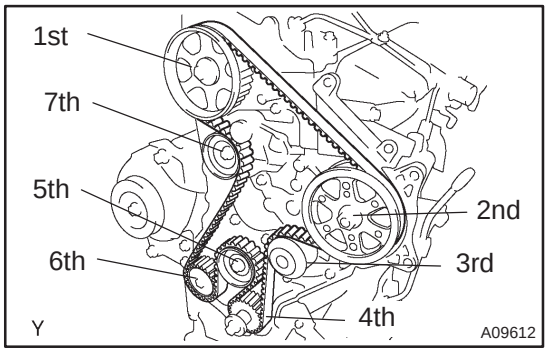
SST 09960–10010 (09962–01000, 09963–01000)

(b) Using the crankshaft pulley bolt, align the dot mark of the crankshaft timing pulley with the TDC mark of the oil pump by turning the crankshaft.

NOTICE:

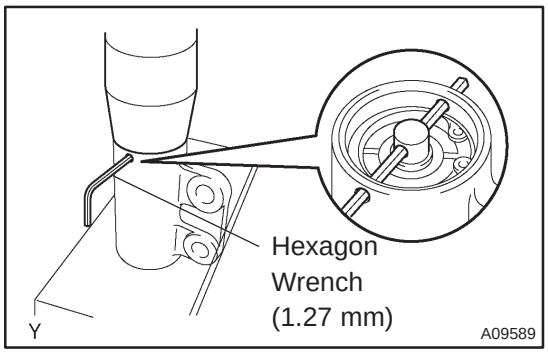
Take great care, when turning the camshaft and crankshaft. Since the valve head and the piston head are sensitive, damage to them may result when the piston head contacts with the valve heads.

22. INSTALL TIMING BELT



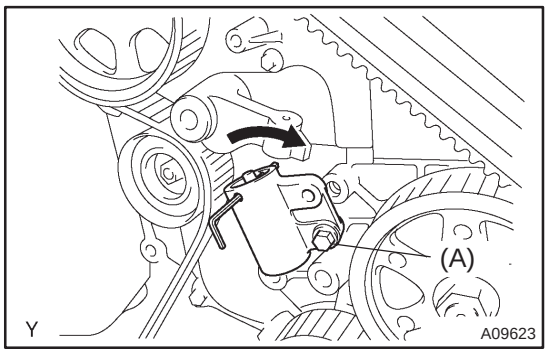
NOTICE:

The engine should be cold.

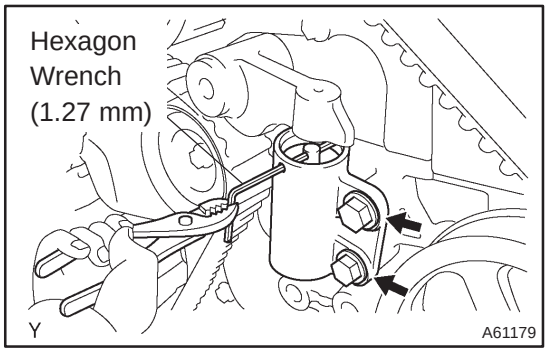


(a) Remove any oil or water on each pulley and keep them clean.

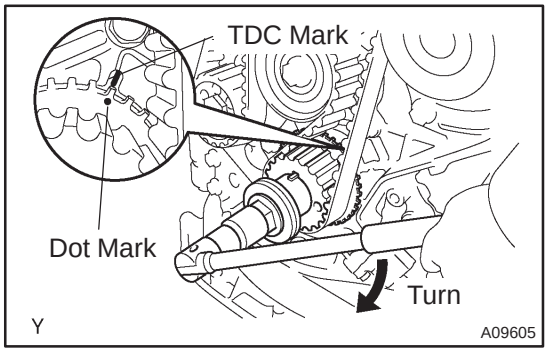
NOTICE:



Do not use any cleaning agent.



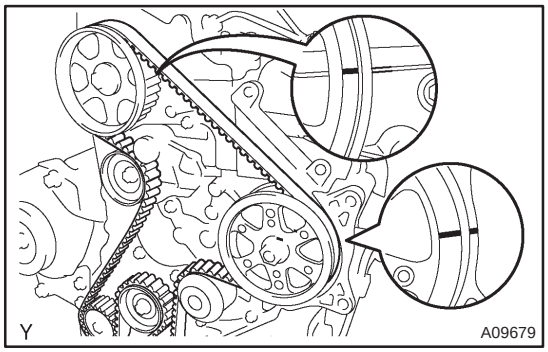
(b) Install the timing belt in the following order:
1. Camshaft timing pulley
2. Supply pump drive pulley
3. Water pump pulley
4. Crankshaft timing pulley
5. No. 2 idler pulley
6. Oil pump pulley
7. No. 1 idler pulley



(c) Install the timing belt tensioner.
(1) Using a press, slowly press in the push rod with pressure 981 to 9,807 N (100 to 1,000 kgf, 200 to 2,205 lbf).
(2) Align the holes of the push rod and the housing, insert hexagon wrench (1.27 mm) through the holes to keep the setting position of the push rod.
(3) Release the press.

(4) Temporarily install the tensioner with bolt (A).
(5) Turn the tensioner clockwise and temporarily install the other bolt.

(6) Alternately tighten the 2 bolts.
Torque: 21 N·m (214 kgf·cm, 15 ft·lbf)
(7) Remove the hexagon wrench from the tensioner.

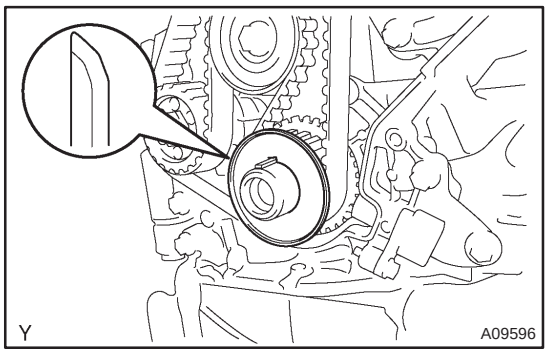


23. CHECK VALVE TIMING

(a) Slowly turn the crankshaft 2 complete revolutions (720°) from TDC to TDC.

NOTICE:

Always turn the crankshaft clockwise.



(b) Check that each timing mark of the pulleys is aligning with the timing marks of the engine assembly as shown in the illustration.

If the timing marks are not aligned, remove the timing belt and reinstall it.

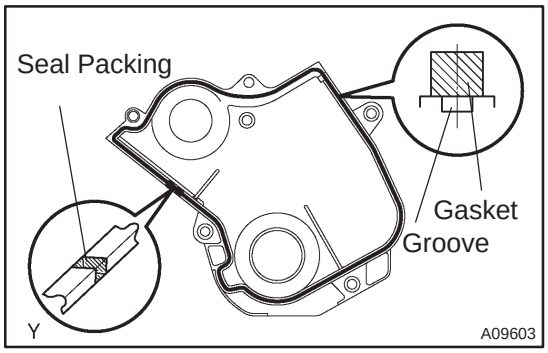
(c) Remove the crankshaft pulley bolt.

24. INSTALL TIMING CHAIN COVER PLATE
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

25. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET
Torque:
37 N·m (375 kgf·cm, 27 ft·lbf) for 14 mm head bolt
64 N·m (650 kgf·cm, 47 ft·lbf) for 17 mm head bolt

26. INSTALL TIMING BELT GUIDE

(a) Install the belt guide, facing the cap side outward.



27. INSTALL TIMING BELT NO.1 COVER

(a) Check the timing belt cover gasket for cracks or deteriorations etc.

If the gasket has cracks or has deteriorated, replace it by the following steps:

(1) Using a screwdriver and gasket scraper, remove all the old gaskets.

(2) Thoroughly clean all components to remove all the loose material.

(3) Remove the backing paper from a new gasket and affix the gasket to the timing belt cover as shown in the illustration.

NOTICE:

- **Affix the gasket at the center of the groove.**
- **At the corners, try to keep the gasket thickness uniform.**

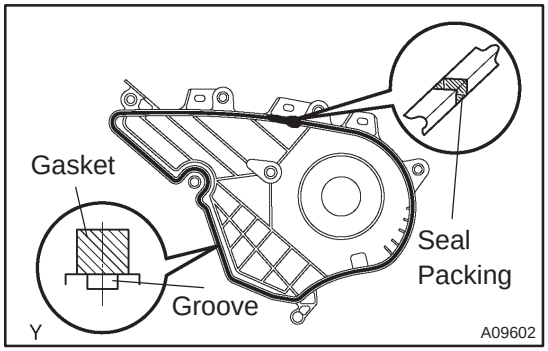
(4) After installing the gasket, press it down so that the adhesive firmly sticks to the timing belt cover.

(5) If there is a gap where the end of the gasket meets, use seal packing to close the gap.

Seal packing: Part No. 08826–00080 or equivalent

(b) Install the No. 1 timing belt cover and the gasket with the 5 bolts and 5 seal washers.
Torque: 7.4 N·m (75 kgf·cm, 65 in.·lbf)

(c) After installing the belt cover, check that there is no peelings of the gasket.



28. INSTALL TIMING BELT NO.2 COVER

(a) Check the timing belt cover gasket for cracks or deteriorations etc.

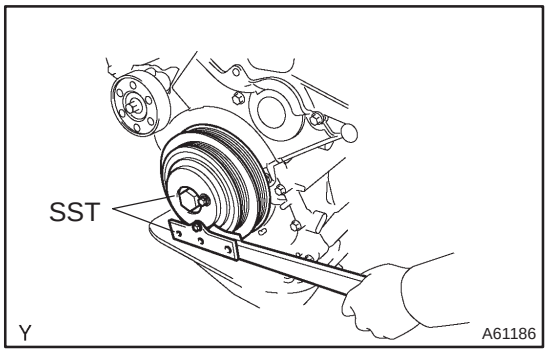
If the gasket has cracks or has deteriorated, replace it by the following steps:

(1) Using a screwdriver and gasket scraper, remove all the old gasket.

(2) Thoroughly clean all components to remove all the loose material.

(3) Remove the backing paper from a new gasket and affix the gasket to the timing belt cover as shown in the illustration.

NOTICE:



- **Affix the gasket at the center of the groove.**
- **At the corners, try to keep the gasket thickness uniform.**

(4) After installing the gasket, press it down so that the adhesive firmly sticks to the timing belt cover.

(5) If there is a gap where the end of the gasket meets, use a seal packing to close the gap.
Seal packing: Part No. 08826–00080 or equivalent

(b) Install the No. 2 timing belt cover and the gasket with the 7 bolts and 7 seal washers.
Torque: 7.4 N·m (75 kgf·cm, 65 in.·lbf)

29. INSTALL IDLER PULLEY SUB–ASSY
Torque: 40 N·m (408 kgf·cm, 30 ft·lbf)

30. INSTALL CRANKSHAFT PULLEY

(a) Align the keyway of the pulley with the key located on the crankshaft, slide the pulley into place.

(b) Using SST, install the pulley bolt.
SST 09213–54015 (90105–08076), 09330–00021
Torque: 180 N·m (1,835 kgf·cm, 133 ft·lbf)

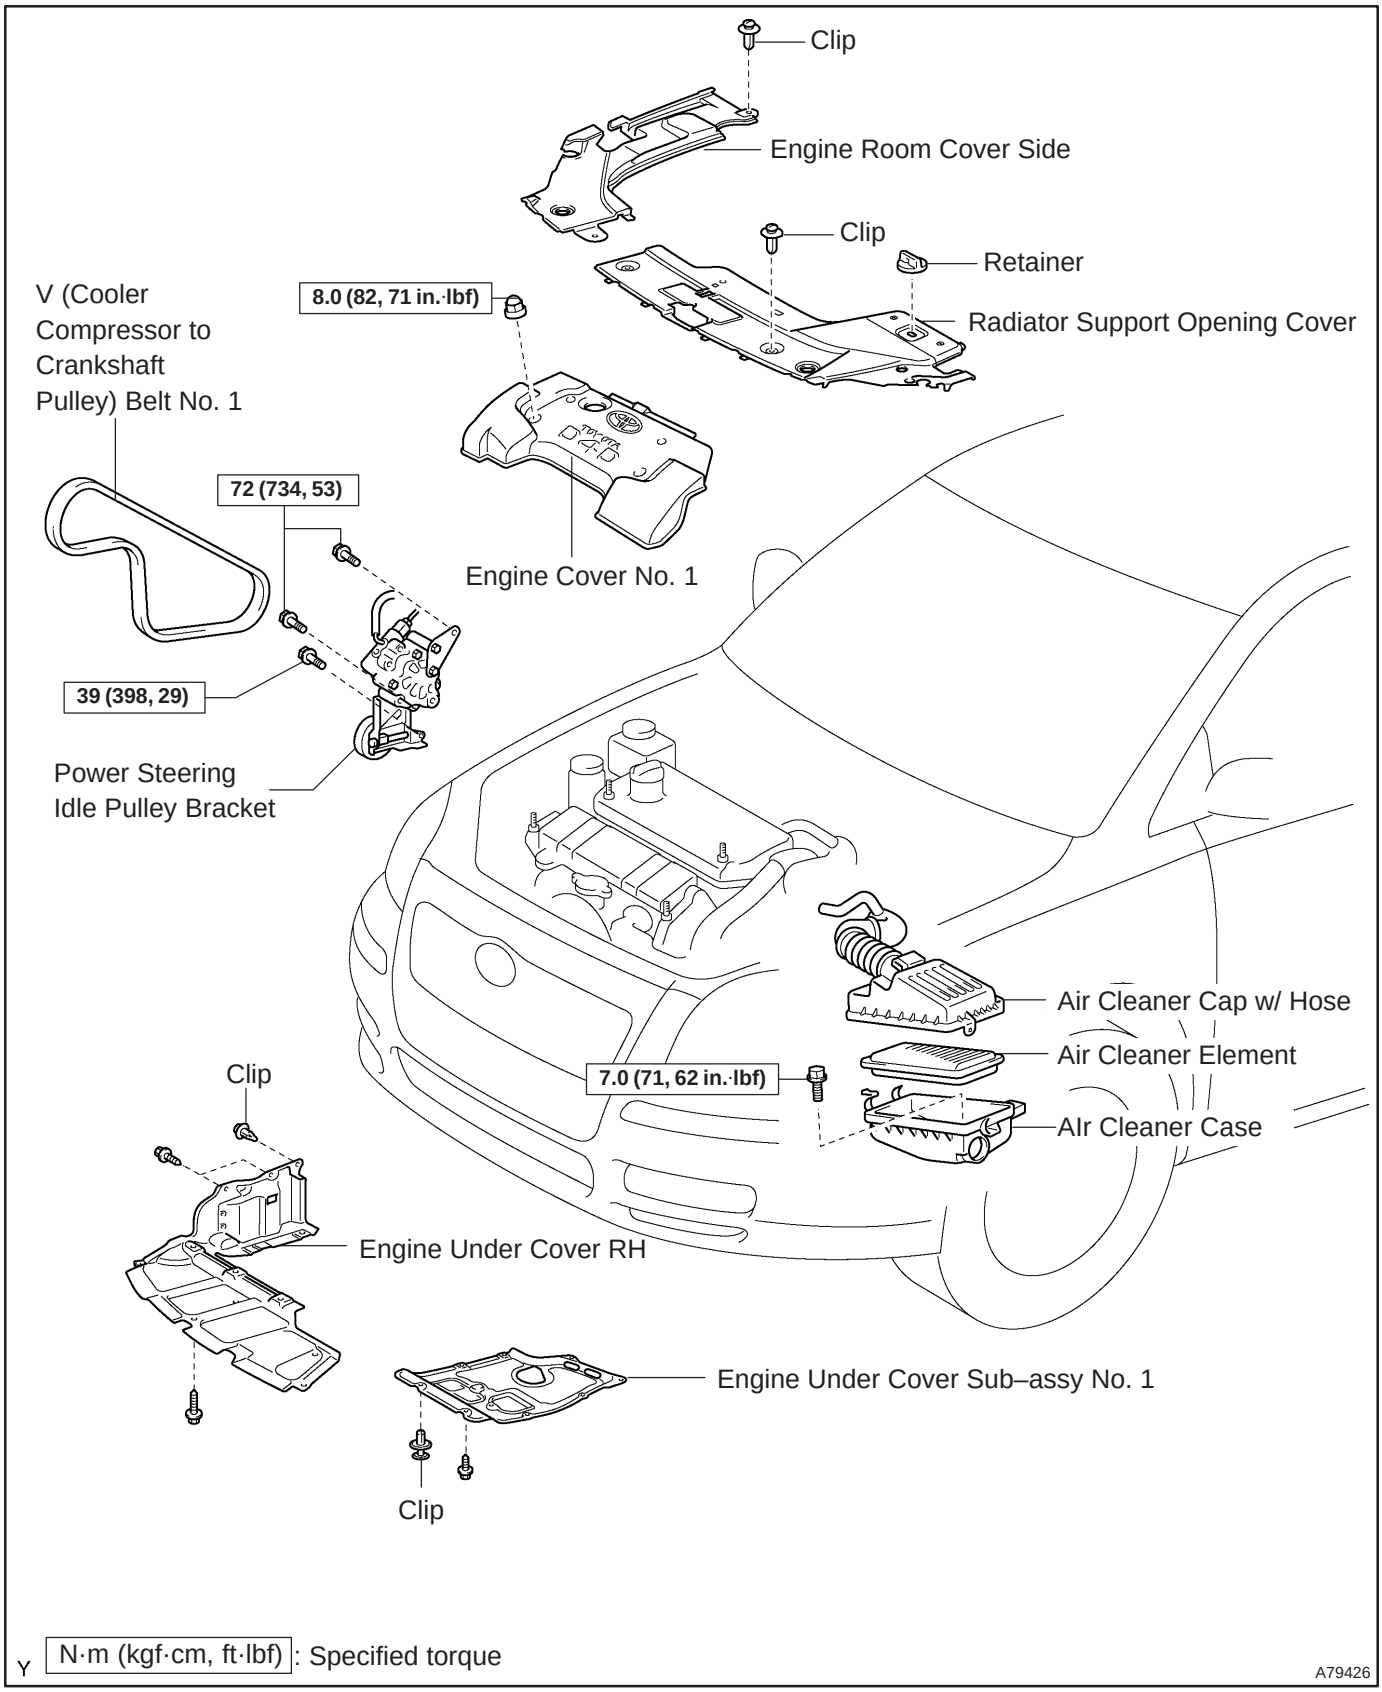
HINT:
When using a bolt (91651–60855), a plate washer (5 mm or 0.20 in.) must be inserted between the pulley bolt and SST.

31. INSTALL ENGINE MOUNTING INSULATOR SUB–ASSY RH
Torque:52 N·m (530 kgf·cm, 38 ft·lbf)

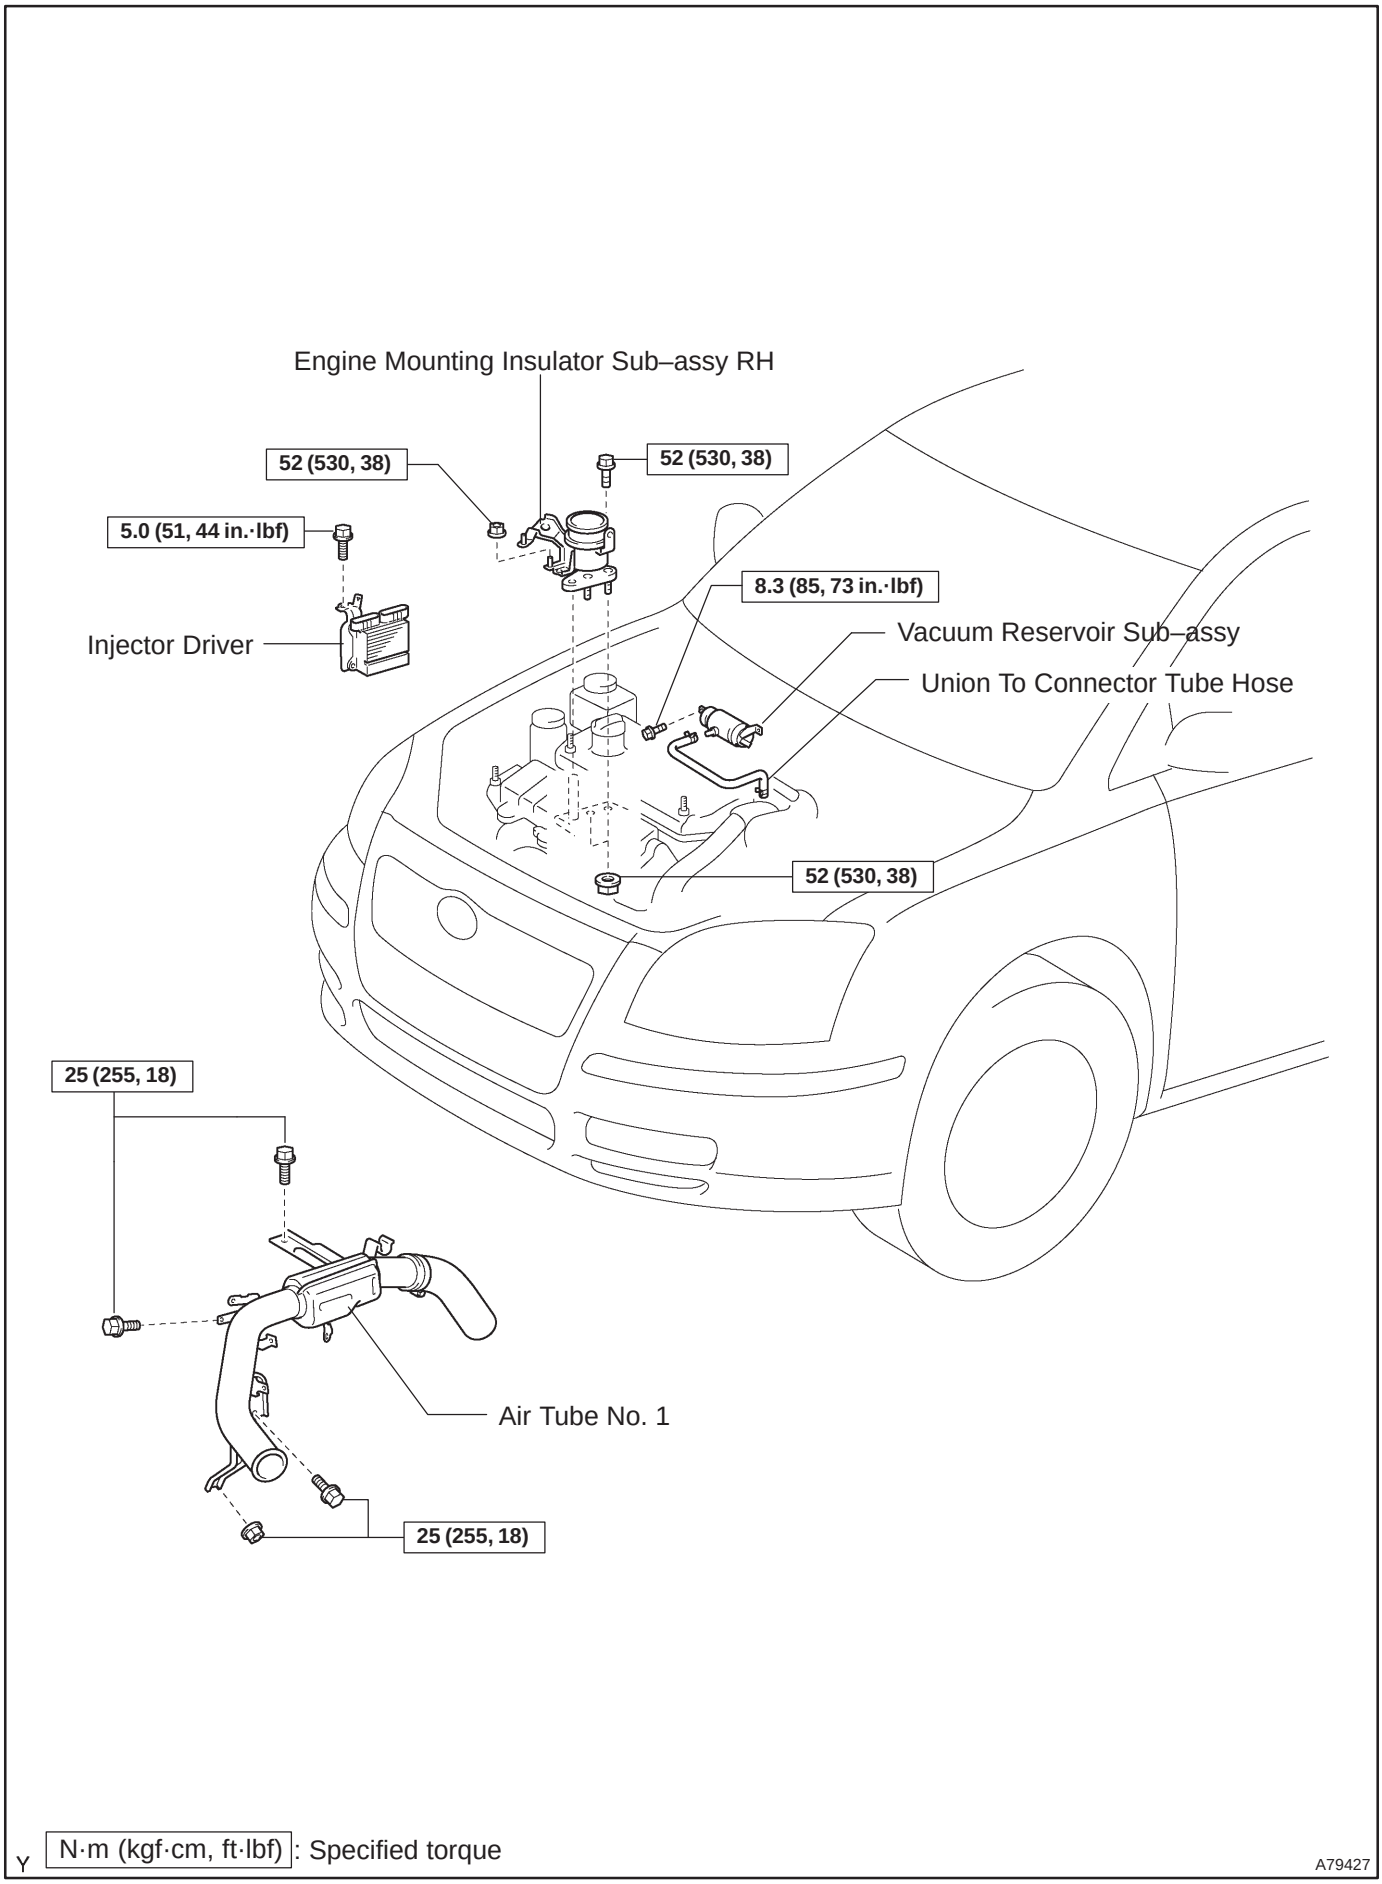
32. INSTALL POWER STEERING IDLE PULLEY BRACKET (See page 14–286)

33. ADJUST V (COOLER COMPRESSOR TO CRANKSHAFT PULLEY) BELT NO.1 (See page 14–269)

34. INSTALL INJECTOR DRIVER (See page 14–286)



35. INSTALL ENGINE COVER NO.1
Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)



36. INSTALL FRONT WHEEL RH
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

REPLACEMENT

1. REMOVE FRONT WHEEL RH
2. REMOVE ENGINE UNDER COVER SUB–ASSY NO.1
3. ENGINE UNDER COVER RH
4. REMOVE RADIATOR SUPPORT OPENING COVER
5. REMOVE ENGINE ROOM COVER SIDE
6. REMOVE ENGINE COVER NO.1
(a) Remove the 5 nuts and the engine cover.
7. REMOVE AIR CLEANER ASSY (See page 11–60)
8. REMOVE VACUUM RESERVOIR SUB–ASSY
(a) Disconnect the 2 vacuum hoses and the connector.
(b) Remove the 2 bolts and the vacuum reservoir.
9. REMOVE AIR TUBE NO.1 (See page 14–270)
10. REMOVE INJECTOR DRIVER (See page 14–286)
11. REMOVE V (COOLER COMPRESSOR TO CRANKSHAFT PULLEY) BELT NO.1 (See page 14–269)
12. REMOVE GENERATOR V BELT (See page 14–269)
13. SEPARATE POWER STEERING IDLE PULLEY BRACKET (See page 14–286)
14. REMOVE ENGINE MOUNTING INSULATOR SUB–ASSY RH (See page 14–307)
15. REMOVE CRANKSHAFT PULLEY (See page 14–307)
SST 09213–54015 (90105–08076), 09330–00021, 09950–50013 (09951–05010, 09952–05010, 09953–05020, 09954–05031)
16. REMOVE IDLER PULLEY SUB–ASSY (See page 14–307)
17. REMOVE TIMING BELT NO.2 COVER (See page 14–307)
18. REMOVE TIMING BELT NO.1 COVER (See page 14–307)
19. REMOVE TIMING BELT GUIDE
20. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET (See page 14–307)
21. SET NO. 1 CYLINDER TO TDC/COMPRESSION (See page 14–307)
22. REMOVE TIMING CHAIN COVER PLATE (See page 14–307)
23. REMOVE TIMING BELT (See page 14–307)
24. REMOVE CAMSHAFT POSITION SENSOR (See page 10–63)

25. REMOVE CAMSHAFT TIMING PULLEY
(a) Using SST, remove the pulley bolt.
SST 09960–10010 (09962–01000, 09963–01000)
(b) Remove the timing pulley.
HINT:
Using a plastic–faced hammer, tap out the pulley.
(c) Remove the set key.

26. REMOVE INJECTION PIPE SUB–ASSY NO.1 (See page 11–60)

(a) Remove the 2 nuts and 2 upper infection pipe clamps from the intake manifold.

(b) Using SST, remove the injection pipe from the common rail side.
SST 09023–12700

(c) Using SST, remove the injection pipe from the injector side.
SST 09023–12700

(d) After removing the fuel pipe, to prevent dust or foreign objects from being introduced, cover the common rail with vinyl tape and protect the injector inlet with a vinyl or a plastic bag.

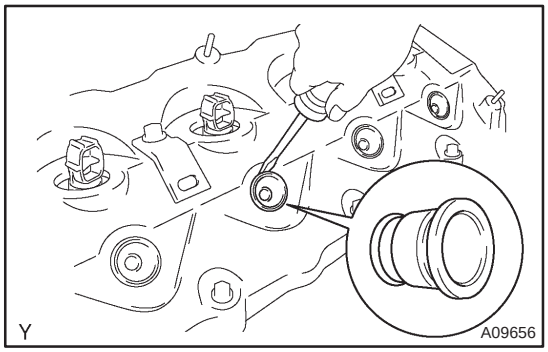
27. REMOVE INJECTION PIPE SUB–ASSY NO.2 (See page 11–60)
SST 09023–12700

HINT:
Perform the same procedures as injection pipe No. 1.

28. REMOVE INJECTION PIPE SUB–ASSY NO.3 (See page 11–60)
SST 09023–12700

HINT:
Perform the same procedures as injection pipe No. 1.

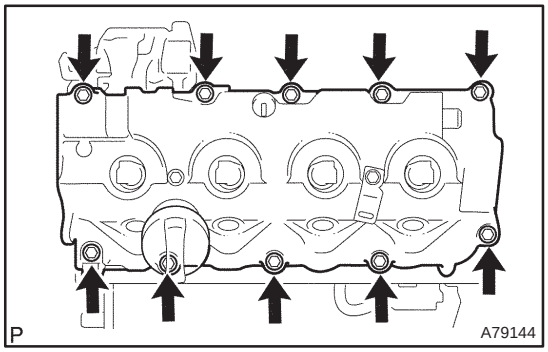
29. REMOVE INJECTION PIPE SUB–ASSY NO.4 (See page 11–60)
SST 09023–12700



HINT:
Perform the same procedures as injection pipe No. 1.

30. REMOVE VACUUM PUMP ASSY

(a) Remove vacuum hose.



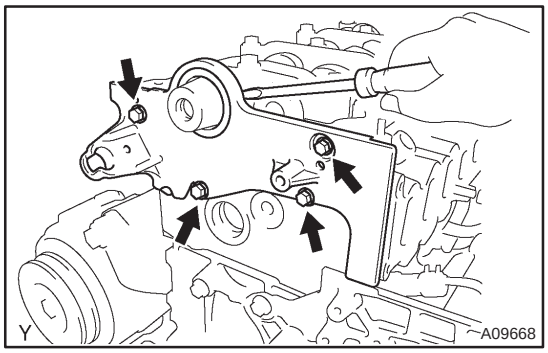
(b) Remove vacuum pump oil hose.

(c) Remove the 2 bolts and the vacuum pump assembly.

31. REMOVE NOZZLE HOLDER SEAL

(a) Using a screwdriver, pry out the 4 nozzle holder seals.

32. REMOVE CYLINDER HEAD COVER SUB–ASSY

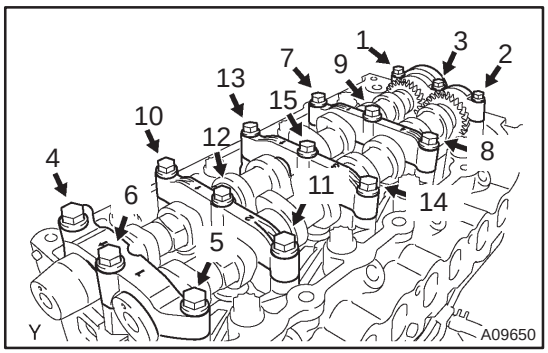


(a) Remove the 10 bolts, the cylinder head cover and the gasket.

33. REMOVE NOZZLE LEAKAGE PIPE ASSY (See page 11–60)

34. REMOVE INJECTOR ASSY (See page 11–60)

HINT:

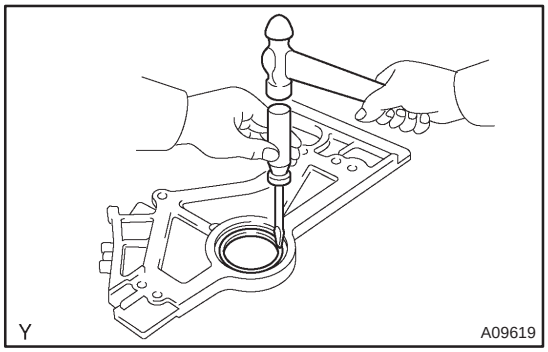


Since each injector assembly has a characteristic fuel injecting behavior, store them in correct order so that they can be returned to the original locations when re–assembling.

35. REMOVE CAMSHAFT OIL SEAL RETAINER

(a) Remove the 4 bolts.

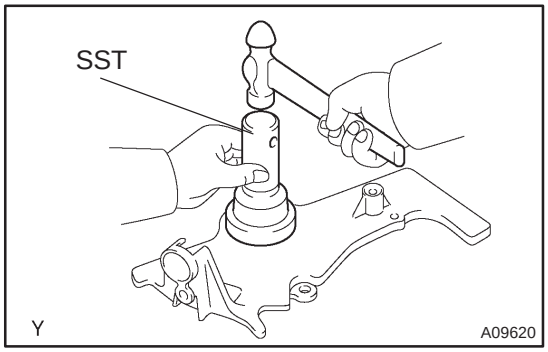
(b) Using a screwdriver, remove the oil seal retainer by prying between the oil seal retainer and the camshaft bearing cap.



36. REMOVE CAMSHAFT

(a) Using several steps, loosen and remove the 15 bearing cap bolts uniformly in the sequence shown in the illustration.

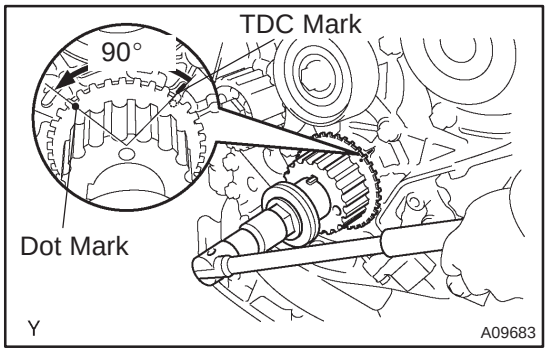
(b) Remove the 5 bearing caps and the camshaft sub–assy.



37. REMOVE NO.2 CAMSHAFT

(a) Remove the camshaft sub–assy and the camshaft carrier.

38. REMOVE CAMSHAFT OIL SEAL



(a) Using a screwdriver and a hammer, tap out the oil seal.

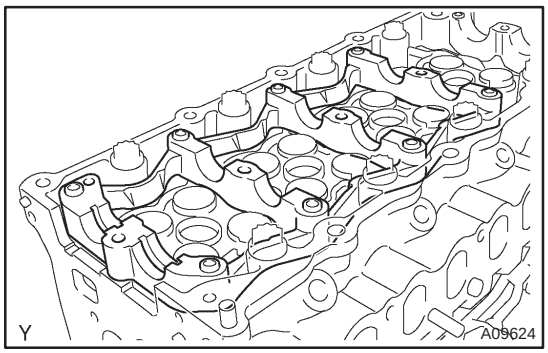
39. INSTALL CAMSHAFT OIL SEAL

(a) Using SST and a hammer, tap in a new oil seal until its surface is flush with the camshaft oil seal retainer edge.

SST 09223–46011

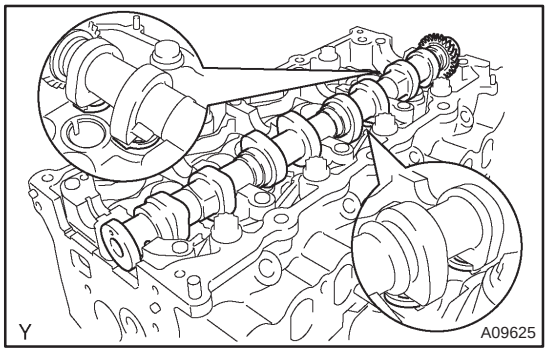
40. SET NO. 1 CYLINDER TO TDC/COMPRESSION

(a) Using the crankshaft pulley bolt, turn the crankshaft to set the dot mark of the crankshaft timing pulley at the position of 90° BTDC.



NOTICE:

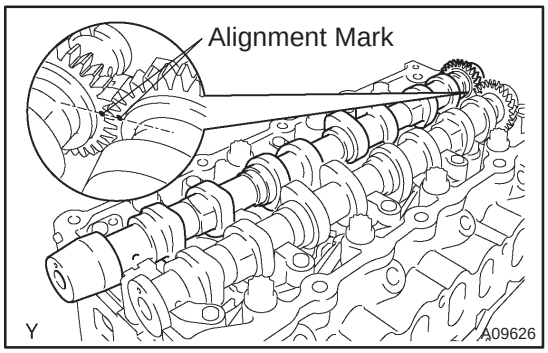
If the timing belt is disengaged, having the crankshaft timing pulley at wrong angle can cause the piston head and valve head to come into contact with each other.



41. INSTALL CAMSHAFT

NOTICE:

Since the thrust clearance of the camshaft is small, the camshaft must be kept level while it is being installed. If the camshaft is not kept level, damage to the cylinder head or the camshaft may result. To avoid this, the following procedures should be carried out.

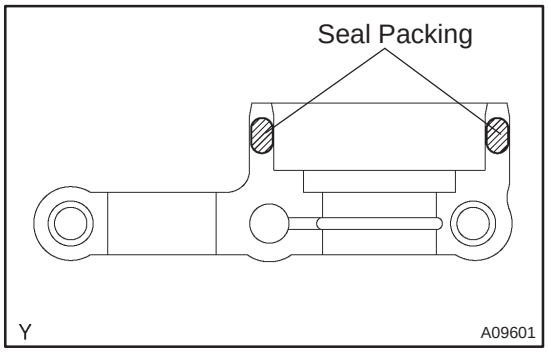


(a) Place the camshaft carrier on the cylinder head.

(b) Install the camshaft sub–assy No. 1.

(c) Apply engine oil to the cam and gear of the camshaft, and the journal of the camshaft carrier.

(d) Place the intake camshaft on the camshaft carrier as shown in the illustration so that the No. 3 and No. 4 of cylinder cam lobes face downward.



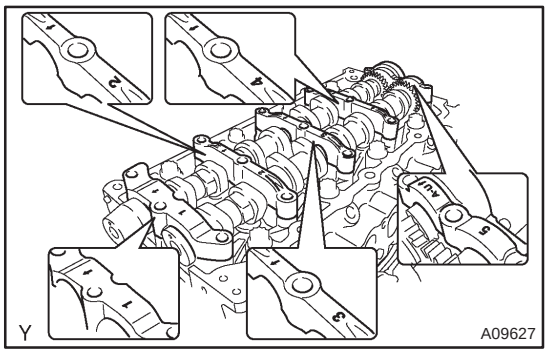
42. INSTALL NO.2 CAMSHAFT

(a) Install the camshaft sub–assy No. 2.

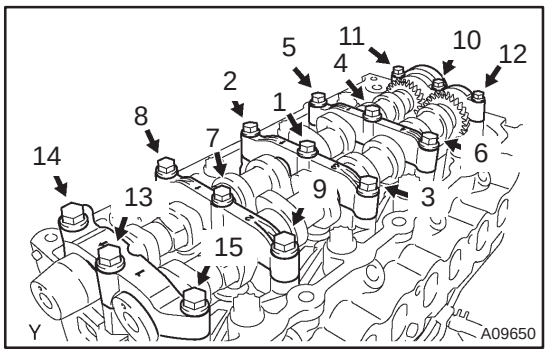
(b) Apply engine oil to the cam and gear of the camshaft, and the journal of the camshaft carrier.

(c) Engage the exhaust camshaft gear and the intake camshaft gear by aligning the alignment marks on each gear.

(d) Roll down the exhaust camshaft onto the bearing journals while engaging gears with each other.



(e) Install the camshaft bearing caps.



(1) Remove any oil packing (FIPG) material from the No. 5 camshaft bearing cap.

(2) Apply seal packing to the No. 5 camshaft bearing cap as shown in the illustration.

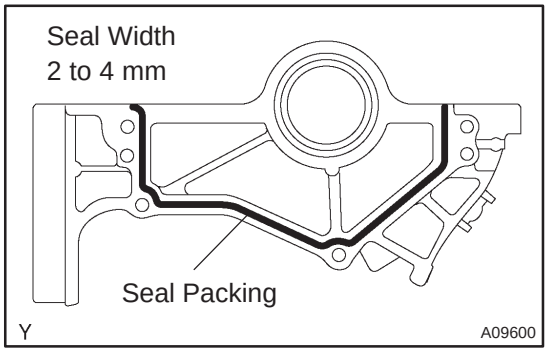
Seal packing: Part No. 08826–00080 or equivalent

(3) Place the 5 bearing caps in their proper locations.

(4) Using several steps, install and tighten the 15 bearing cap bolts uniformly in the sequence shown in the illustration.

Torque: 20 N·m (204 kgf·cm, 15 ft·lbf)

43. INSPECT VALVE CLEARANCE (See page 14–270)



44. ADJUST VALVE CLEARANCE (See page 14–270)

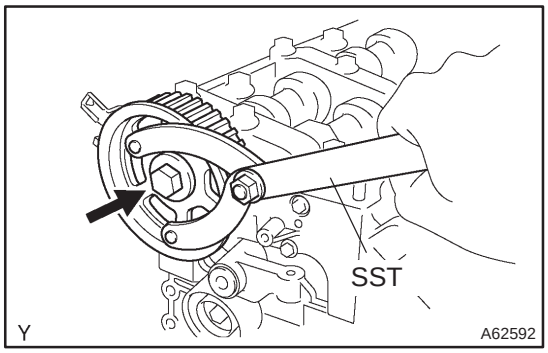
45. INSTALL CAMSHAFT OIL SEAL RETAINER

(a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the oil seal retainer and the cylinder block.

(1) Thoroughly clean all components to remove all the loose material.

(2) Using non–residue solvent, clean both sealing surfaces.

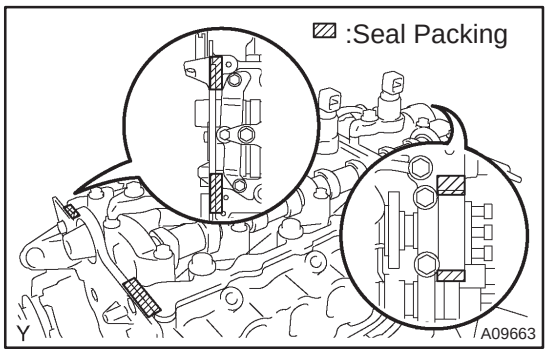
(b) Apply seal packing to the oil seal retainer as shown in the illustration.



Seal packing: Part No. 08826–00080 or equivalent

(1) Install a nozzle that has been cut to a 2 to 4 mm (0.08 to 0.16 in.) opening.

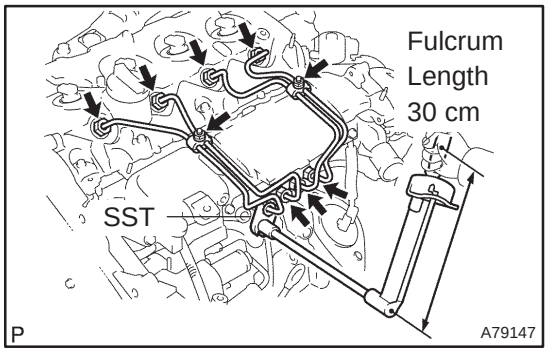
(2) Parts must be assembled within 15 minutes of application. Otherwise the material must be removed and reapplied.



(3) Immediately remove nozzle from the tube and reinstall the cap.

(c) Install the oil seal retainer with the 4 bolts. Tighten the 4 bolts uniformly in several steps.
Torque: 8.8 N·m (90 kgf·cm, 78 in.·lbf)

46. INSTALL CAMSHAFT TIMING PULLEY
(a) Install the pulley set key to the groove of the camshaft.
(b) Align the keyway of the timing pulley with the key located on the camshaft, slide the pulley into place.
(c) Using SST, install the pulley bolt.
SST 09960–10010 (09962–01000, 09963–01000)
Torque: 88 N·m (899 kgf·cm, 65 ft·lbf)



47. INSTALL CAMSHAFT POSITION SENSOR (See page 10–63)
48. INSTALL INJECTOR ASSY (See page 11–60)
49. INSTALL NOZZLE LEAKAGE PIPE ASSY (See page 11–60)
SST 09992–00242

50. INSTALL CYLINDER HEAD COVER SUB–ASSY
(a) Remove any old packing (FIPG) material.
(b) Apply seal packing to the cylinder head.
Seal packing: Part No. 08826–00080 or equivalent
(c) Install the gasket to the cylinder head cover.
(d) Install the cylinder head cover with the 10 bolts.
Torque: 13 N·m (135 kgf·cm, 9.7 ft·lbf)

51. INSTALL NOZZLE HOLDER SEAL
(a) Install 4 new nozzle holder seals.
52. INSTALL VACUUM PUMP ASSY
Torque: 21 N·m (214 kgf·cm, 15 ft·lbf)

53. INSTALL INJECTION PIPE SUB–ASSY NO.1 (See page 11–60)
NOTICE:
When assembling the pipes, perform the operation with the engine cold under room temperature.
(a) Remove the vinyl or the plastic bag from the injector and vinyl tape from the common rail.
(b) Temporarily install the injection pipe.

(c) Using SST, tighten the nut of the injection pipe to the common rail side.
SST 09023–12700
Torque:
42 N·m (428 kgf·cm, 31 ft·lbf) for a used pipe using SST
46 N·m (469 kgf·cm, 34 ft·lbf) for a used pipe not using SST
31 N·m (316 kgf·cm, 23 ft·lbf) for a new pipe using SST
34 N·m (347 kgf·cm, 25 ft·lbf) for a new pipe not using SST

HINT:
- Use a torque wrench with a fulcrum length of 30 cm (11.81 in.)
- Check if the used pipe has deflection or is installed properly after injection pipe is reassembled. If there is deflection or if it can not be installed properly, replace the used pipe with a new pipe.

(d) Using SST, tighten the nut of the injection pipe to the injector side.
SST 09023–12700
Torque:
42 N·m (428 kgf·cm, 31 ft·lbf) for a used pipe using SST
46 N·m (469 kgf·cm, 34 ft·lbf) for a used pipe not using SST
31 N·m (316 kgf·cm, 23 ft·lbf) for a new pipe using SST
34 N·m (347 kgf·cm, 25 ft·lbf) for a new pipe not using SST

HINT:
- Use a torque wrench with a fulcrum length of 30 cm (11.81 in.)
- Check if the used pipe has deflection or is installed properly after injection pipe is reassembled. If there is deflection or if it can not be installed properly, replace the used pipe with a new pipe.

(e) Install the 2 upper injection pipe clamps with the 2 nuts.
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)

54. INSTALL INJECTION PIPE SUB–ASSY NO.2
SST 09023–12700

HINT:
Perform the same procedures as injection pipe No. 1.

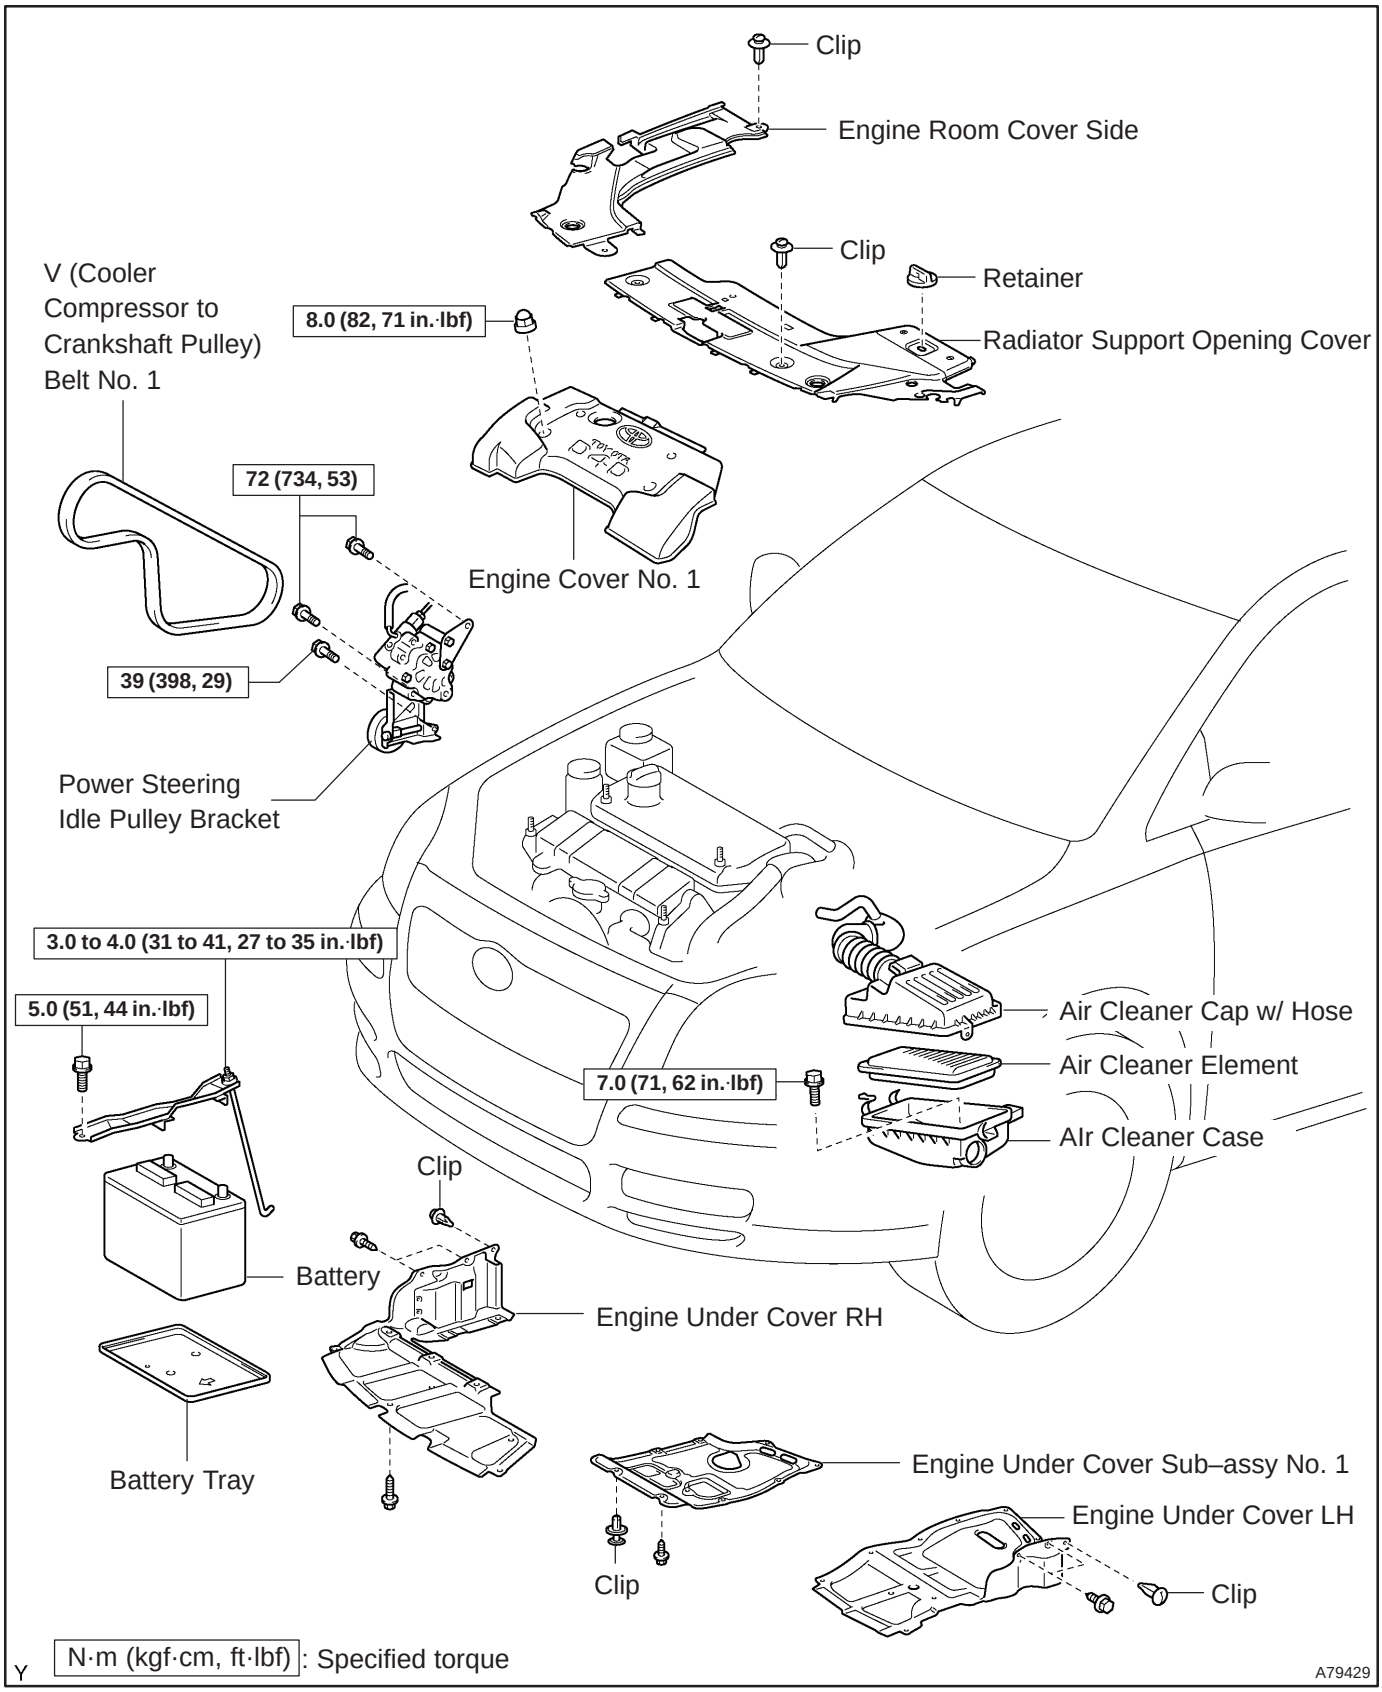
55. INSTALL INJECTION PIPE SUB–ASSY NO.3
SST 09023–12700

HINT:
Perform the same procedures as injection pipe No. 1.

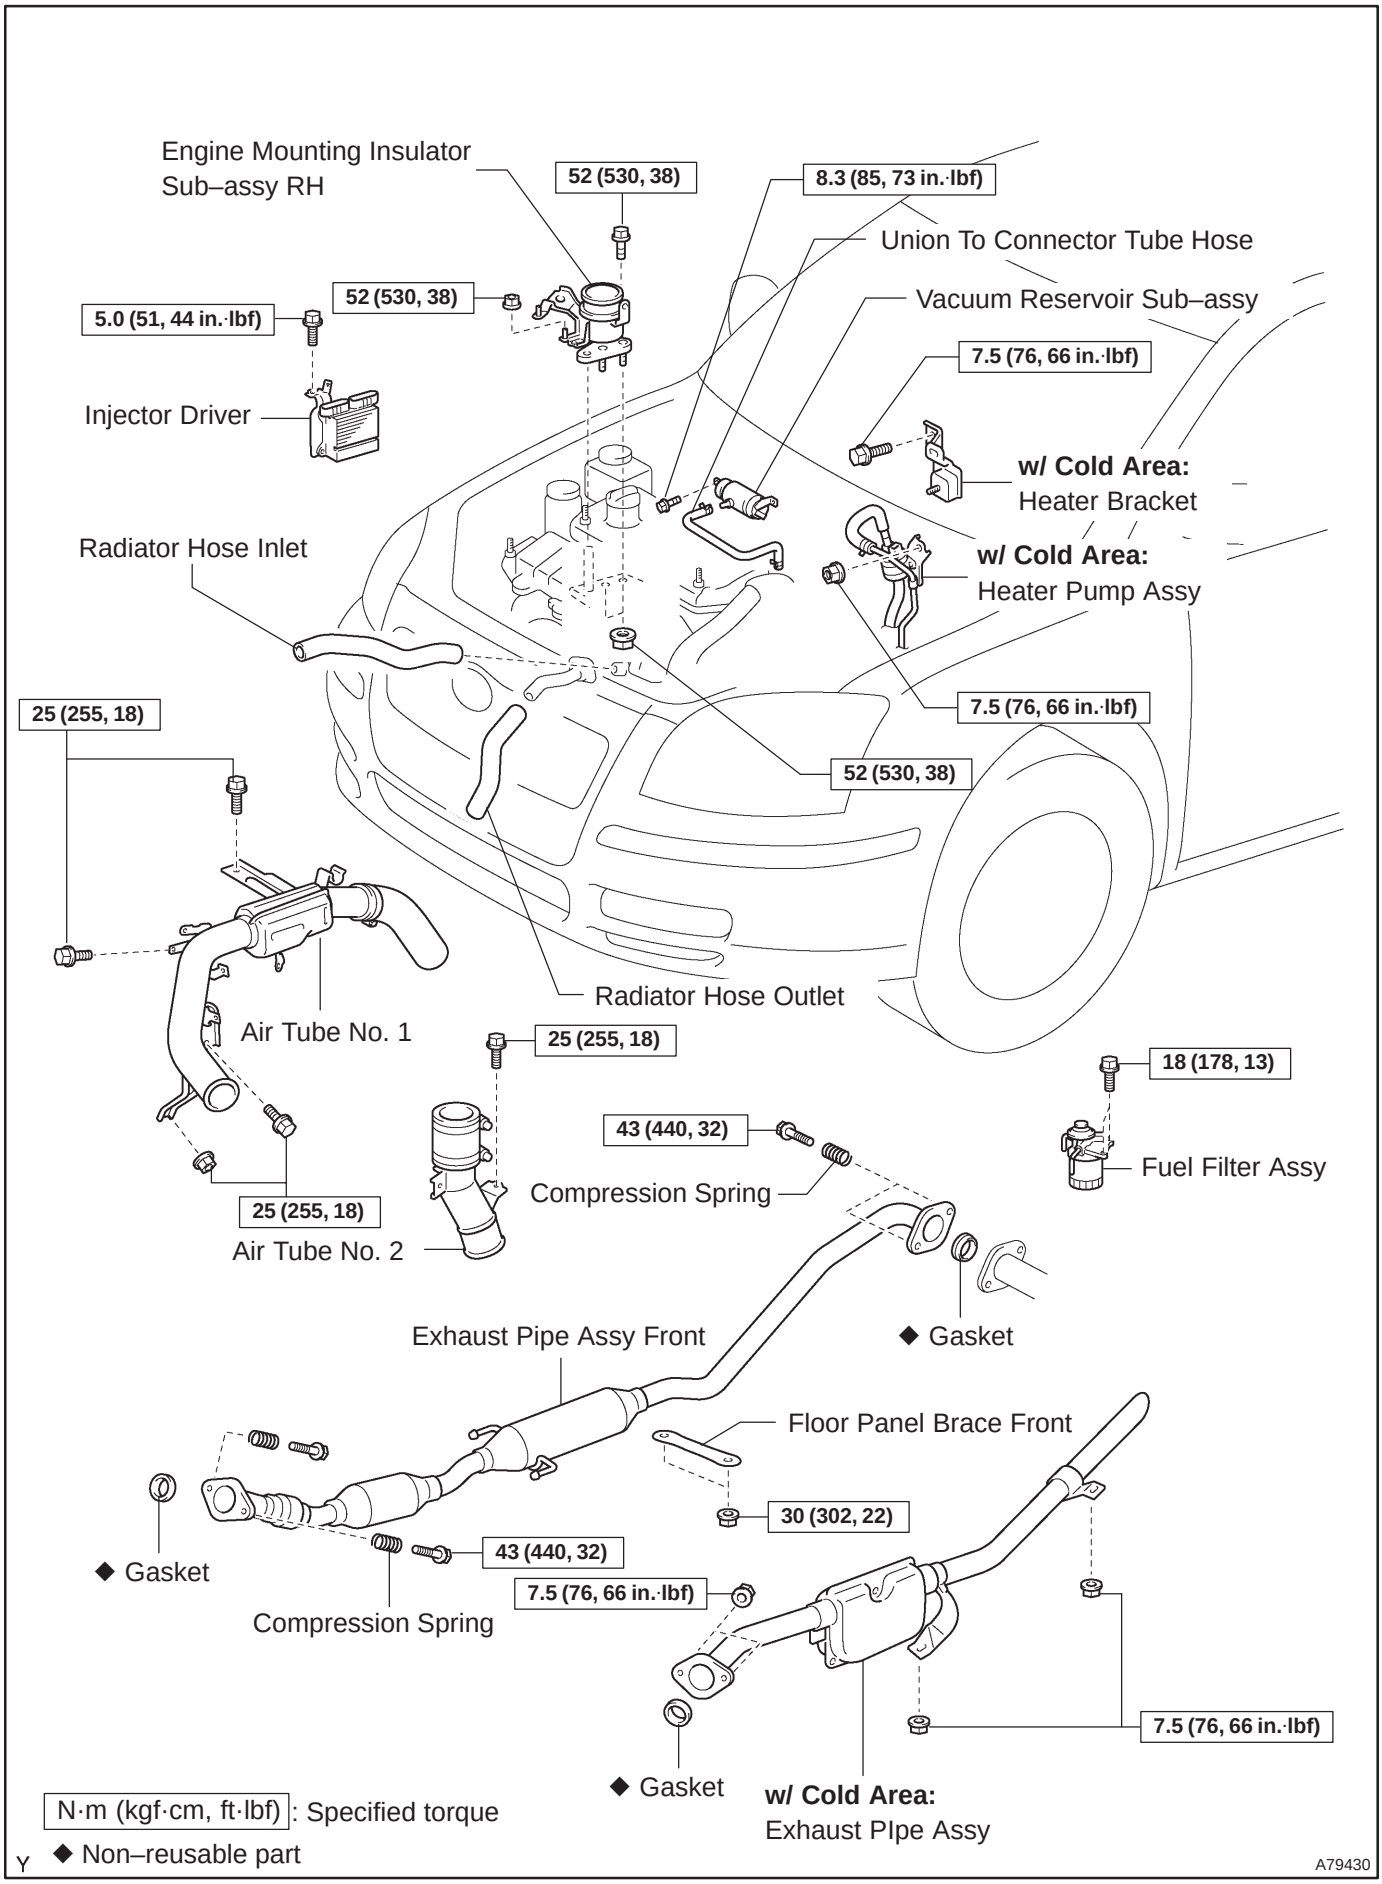
56. INSTALL INJECTION PIPE SUB–ASSY NO.4
SST 09023–12700

HINT:
Perform the same procedures as injection pipe No. 1.

57. INSTALL TIMING BELT (See page 14–307)



58. CHECK VALVE TIMING (See page 14–307)



59. **INSTALL TIMING CHAIN COVER PLATE (See page 14–307)**

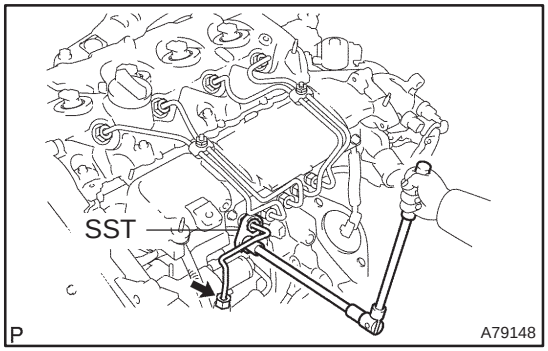
REPLACEMENT

1. **REMOVE FRONT WHEEL RH**
2. **REMOVE ENGINE UNDER COVER LH**
3. **REMOVE ENGINE UNDER COVER SUB–ASSY NO.1**
4. **REMOVE ENGINE UNDER COVER RH**
5. **DRAIN ENGINE COOLANT (See page 16–44)**
6. **DRAIN ENGINE OIL (See page 14–342)**
7. **REMOVE RADIATOR SUPPORT OPENING COVER**
8. **REMOVE ENGINE ROOM COVER SIDE**
9. **REMOVE ENGINE COVER NO.1**

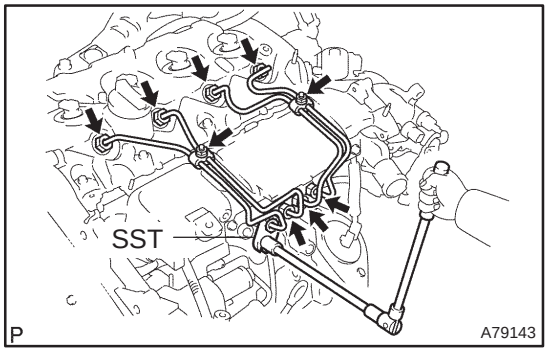
(a) Remove the 5 nuts and the engine cover.

10. **REMOVE VACUUM RESERVOIR SUB–ASSY (See page 13–11)**
11. **REMOVE AIR CLEANER ASSY (See page 14–286)**
12. **REMOVE BATTERY**
13. **REMOVE AIR TUBE NO.2 (See page 14–286)**
14. **REMOVE AIR TUBE NO.1 (See page 14–270)**
15. **REMOVE INJECTOR DRIVER (See page 14–286)**
16. **REMOVE V (COOLER COMPRESSOR TO CRANKSHAFT PULLEY) BELT NO.1 (See page 14–269)**
17. **REMOVE GENERATOR V BELT (See page 14–269)**
18. **SEPARATE POWER STEERING IDLE PULLEY BRACKET (See page 14–286)**
19. **REMOVE ENGINE MOUNTING INSULATOR SUB–ASSY RH (See page 14–307)**
20. **REMOVE CRANKSHAFT PULLEY (See page 14–307)**

    SST 09213–54015 (90105–08076), 09330–00021, 09950–50013 (09951–05010, 09952–05010, 09953–05020, 09954–05031)



21. **REMOVE IDLER PULLEY SUB–ASSY (See page 14–307)**
22. **REMOVE TIMING BELT NO.2 COVER (See page 14–307)**
23. **REMOVE TIMING BELT NO.1 COVER (See page 14–307)**
24. **REMOVE TIMING BELT GUIDE**
25. **REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET (See page 14–307)**
26. **SET NO. 1 CYLINDER TO TDC/COMPRESSION (See page 14–307)**
27. **REMOVE TIMING CHAIN COVER PLATE (See page 14–307)**
28. **REMOVE TIMING BELT (See page 14–307)**



HINT:

If re–using the timing belt, draw a direction arrow on the timing belt (in direction of engine revolution), and place matchmarks on the pulleys and the timing belt.

29. **REMOVE FUEL FILTER ASSY (See page 11–82)**
30. **REMOVE HEATER PUMP ASSY (W/ COLD AREA) (See page 13–11)**
31. **REMOVE HEATER BRACKET (W/ COLD AREA) (See page 13–11)**
32. **REMOVE FLOOR PANEL BRACE FRONT (See page 15–10)**
33. **REMOVE EXHAUST PIPE ASSY FRONT (See page 15–10)**
34. **REMOVE EXHAUST PIPE ASSY (W/ COLD AREA) (See page 13–11)**
35. **DISCONNECT RADIATOR HOSE INLET**
36. **DISCONNECT HEATER INLET WATER HOSE**
37. **DISCONNECT HEATER OUTLET WATER HOSE**
38. **DISCONNECT FUEL PIPE TO FUEL TUBE FUEL HOSE**
39. **DISCONNECT OIL COOLER HOSE**
40. **REMOVE TURBO INSULATOR NO.2 (See page 13–11)**
41. **REMOVE TURBO INSULATOR NO.1 (See page 13–11)**

42. REMOVE EXHAUST MANIFOLD HEAT INSULATOR NO.2 (See page 13–11)
43. REMOVE MANIFOLD STAY NO.2 (See page 13–11)
44. REMOVE MANIFOLD STAY (See page 13–11)
45. REMOVE EXHAUST MANIFOLD CONVERTER SUB–ASSY (See page 13–11)
46. REMOVE TURBOCHARGER STAY (See page 13–11)
47. REMOVE TURBO WATER HOSE NO.1 (See page 13–11)
48. REMOVE TURBO WATER HOSE NO.2 (See page 13–11)
49. SEPARATE TURBO OIL INLET PIPE SUB–ASSY (See page 13–11)
50. REMOVE TURBOCHARGER SUB–ASSY (See page 13–11)
51. REMOVE CAMSHAFT POSITION SENSOR (See page 10–63)
52. REMOVE CAMSHAFT TIMING PULLEY (See page 14–318)
SST 09960–10010 (09962–01000, 09963–01000)

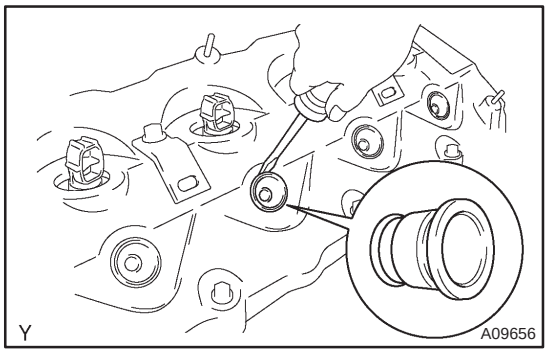
53. REMOVE FUEL INLET PIPE SUB–ASSY
(a) Using SST, remove the fuel inlet pipe from the common rail side.
SST 09023–12700
(b) Using SST, remove the fuel inlet pipe from the pump side.
SST 09023–12700

NOTICE:
After removing the fuel pipe, cover the common rail and the injector mounting holes with vinyl tape to prevent dust from being introduced.

54. REMOVE INJECTION PIPE SUB–ASSY NO.1 (See page 11–60)
SST 09023–12700
(a) Remove the 2 nuts and 2 upper infection pipe clamps from the intake manifold.
(b) Using SST, remove the injection pipe from the common rail side.
SST 09023–12700
(c) Using SST, remove the injection pipe from the injector side.
SST 09023–12700
(d) After removing the fuel pipe, to prevent dust or foreign objects from being introduced, cover the common rail with vinyl tape and protect the injector inlet with a vinyl or a plastic bag.

55. REMOVE INJECTION PIPE SUB–ASSY NO.2
SST 09023–12700
HINT:
Perform the same procedures as injection pipe No. 1.

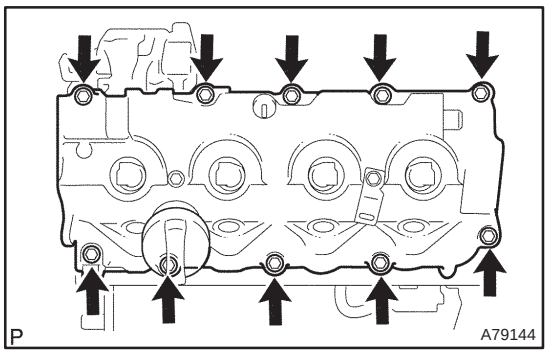
56. REMOVE INJECTION PIPE SUB–ASSY NO.3
SST 09023–12700
HINT:
Perform the same procedures as injection pipe No. 1.



57. REMOVE INJECTION PIPE SUB–ASSY NO.4

SST 09023–12700

HINT:



Perform the same procedures as injection pipe No. 1.

58. REMOVE VACUUM PUMP ASSY (See page 14–318)

59. REMOVE NOZZLE HOLDER SEAL

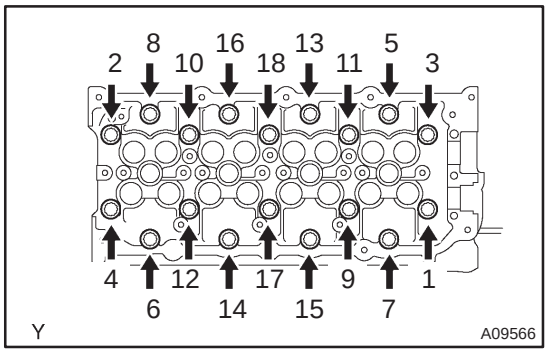
(a) Using a screwdriver, pry out the 4 nozzle holder seals.

60. REMOVE CYLINDER HEAD COVER SUB–ASSY

(a) Remove the 10 bolts, the cylinder head cover and the gasket.

61. REMOVE NOZZLE LEAKAGE PIPE ASSY (See page 11–60)

62. REMOVE INJECTOR ASSY (See page 11–60)



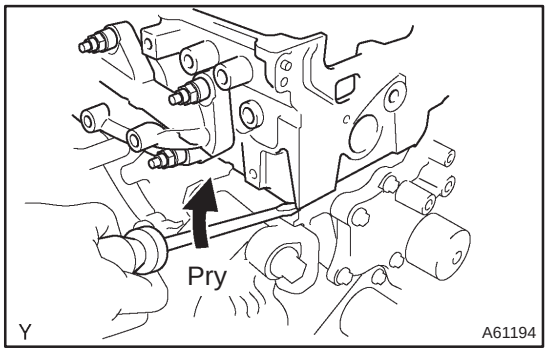
HINT:

Since each injector assembly has a characteristic fuel injecting behavior, store them in correct order so that they can be returned to the original locations when re–assembling.

63. REMOVE CAMSHAFT OIL SEAL RETAINER (See page 14–318)

64. REMOVE NO.2 CAMSHAFT (See page 14–318)

65. REMOVE CAMSHAFT (See page 14–318)



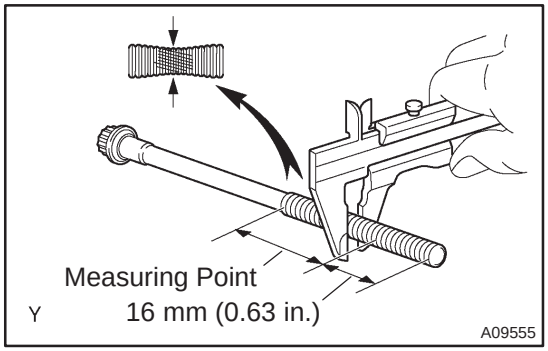
66. REMOVE CYLINDER HEAD SUB–ASSY

(a) Using several steps, loosen the 18 cylinder head bolts uniformly in the sequence shown in the illustration. Remove the 18 cylinder head bolts and the plate washers.

NOTICE:

Cylinder head warpage or cracking could result from removing bolts in incorrect order.

(b) Lift the cylinder head from the dowels on the cylinder block, and place the cylinder head on wooden blocks on a work bench.



NOTICE:

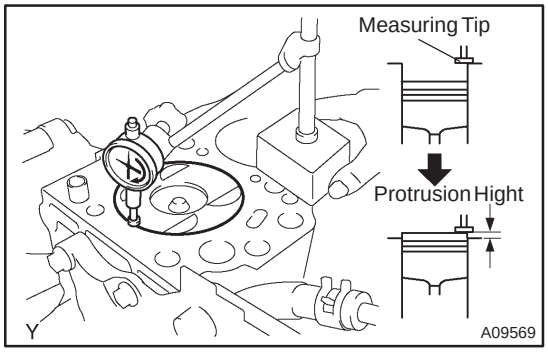
Be careful not to damage the contact surfaces of the cylinder head and cylinder block.

HINT:

If the cylinder head is lift off, pry between the cylinder head and cylinder block with a screwdriver.

67. REMOVE CYLINDER HEAD GASKET

68. INSPECT CYLINDER HEAD SET BOLT



(a) Using vernier calipers, measure the tension portion diameter of the bolts.

Standard outside diameter:

10.75 to 11.00 mm (0.4232 to 0.4331 in.)

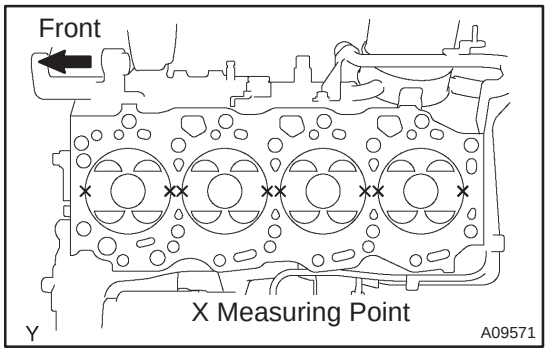
Minimum outside diameter: 10.40 mm (0.4094 in.)

If the diameter is less than minimum, replace the bolt.

69. INSTALL CYLINDER HEAD GASKET

(a) Measure protrusion height of the piston heads.

(1) Clean the cylinder block with solvent.



(2) Set the piston to be measured to slightly before TDC.

(3) Place a dial indicator on the cylinder block, and calibrate the dial indicator at 0 mm (0 in.).

HINT:

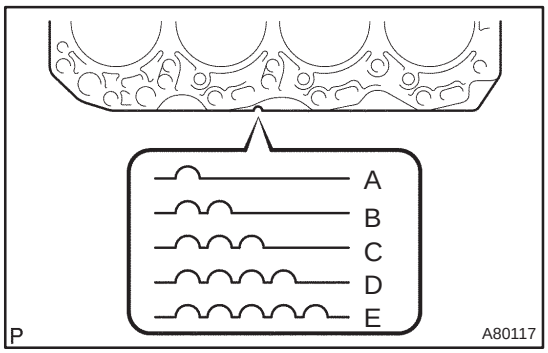
- Place measuring tip of the dial indicator as shown in the illustration.
- Make sure that the measuring tip is square to the cylinder block gasket and the piston head when measuring.

(4) Find the most overhung position of the piston head by slowly turning the crankshaft clockwise and counterclockwise.

(5) Measure a protrusion height of the piston head for each cylinder at 2 places as shown in the illustration. (Total of 8 measurements.)

(6) Record the highest protrusion height from the 2 measurements at each cylinder.

(b) Select new cylinder head gasket.

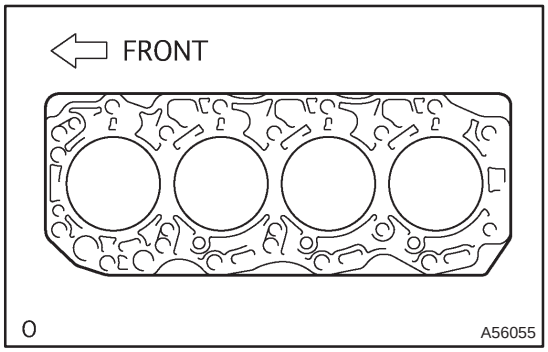


HINT:

There are 5 sizes of new cylinder head gaskets, marked ”A”, ”B”, ”C”, ”D”, or ”E”.

New cylinder head gasket thickness:

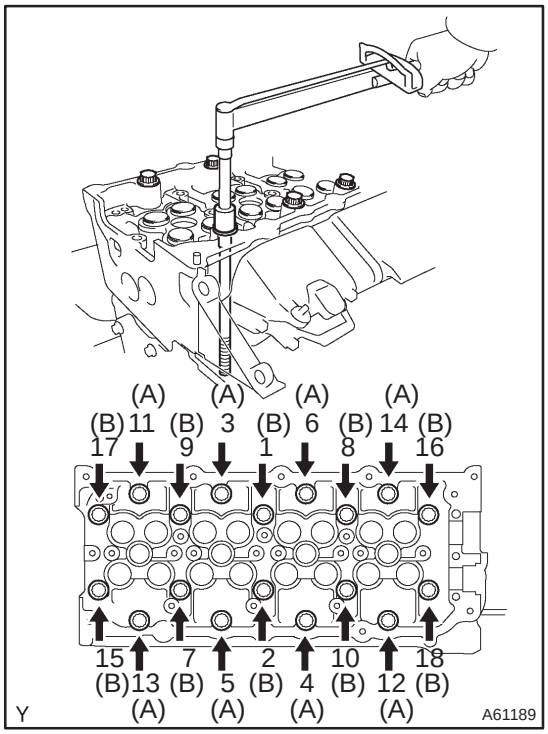
A	0.85 to 0.95 mm (0.0335 to 0.0374 in.)
B	0.90 to 1.00 mm (0.0354 to 0.0394 in.)
C	0.95 to 1.05 mm (0.0374 to 0.0413 in.)
D	1.00 to 1.10 mm (0.0394 to 0.0433 in.)
E	1.05 to 1.15 mm (0.0413 to 0.0453 in.)



(1) Find the highest protrusion height among the 4 measurement records. It is used to select a new cylinder head gasket.

(2) Select the new gasket among A to E using the matrix below.

New gasket matrix:



Piston protrusion mm (in.)	Gasket size
0.165 to 0.220 (0.0065 to 0.0087)	A
0.220 to 0.270 (0.0087 to 0.0106)	B
0.270 to 0.320 (0.0106 to 0.0126)	C
0.320 to 0.370 (0.0126 to 0.0146)	D
0.370 to 0.425 (0.0146 to 0.0167)	E

(c) Place new cylinder head gasket on the cylinder block.

NOTICE:

Pay attention to mounting orientation.

70. INSTALL CYLINDER HEAD SUB–ASSY

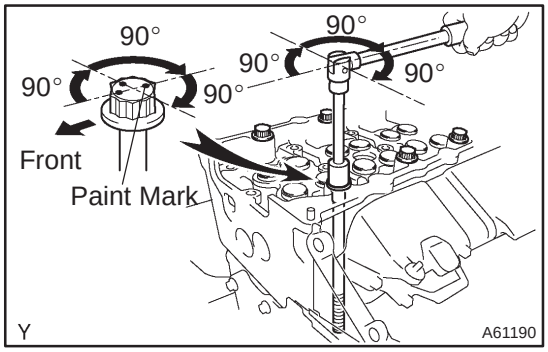
HINT:

- The cylinder head bolts are tightened in 4 successive steps (steps (c), (e), (f) and (g)).
- If the cylinder head bolt is broken or deformed, replace it with a new bolt.

(a) Apply a light coat of engine oil on the threads of the cylinder head bolts and the plate washers.

(b) Install the plate washer to the cylinder head bolt.

(c) Using several steps, install and tighten the 18 cylinder head bolts uniformly in the sequence shown in the illustration.



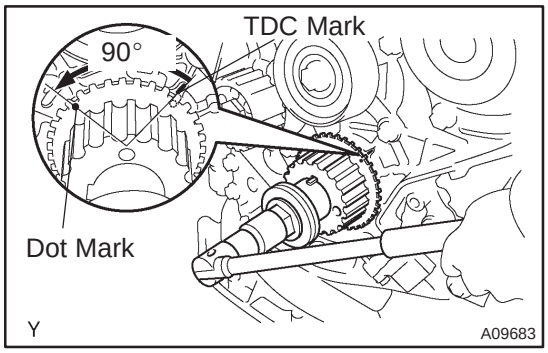
Torque: 45 N·m (459 kgf·cm, 33 ft·lbf)

HINT:

See the table below for the bolt length.

Bolt Type	Bolt Length
(A)	160mm (6.30 in.)
(B)	104mm (4.09 in.)

If the cylinder head bolt does not meet the torque specification, replace the cylinder head bolt with a new bolt.



(d) Mark the front of the cylinder head bolt with paint.

(e) Retighten the cylinder head bolts by 90° in the same sequence as step (c).

(f) Retighten the cylinder head bolts by additional 90° in the same sequence as step (c).

(g) Retighten the cylinder head bolts by one more additional 90° in the same sequence as step (c).

(h) Check that each painted mark is now at the intake manifold side.

71. SET NO. 1 CYLINDER TO TDC/COMPRESSION

(a) Using the crankshaft pulley bolt, turn the crankshaft to set the dot mark of the crankshaft timing pulley at the position of 90 ° BTDC.

NOTICE:

If the timing belt is disengaged, having the crankshaft timing pulley at wrong angle can cause the piston head and valve head to come into contact with each other.

72. INSTALL CAMSHAFT (See page 14–318)

73. INSTALL NO.2 CAMSHAFT (See page 14–318)

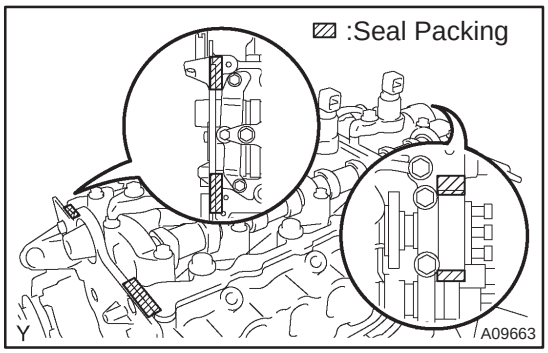
74. REMOVE CAMSHAFT OIL SEAL (See page 14–318)

75. INSTALL CAMSHAFT OIL SEAL (See page 14–318)

SST 09223–46011

76. INSTALL CAMSHAFT OIL SEAL RETAINER (See page 14–318)

77. INSTALL CAMSHAFT TIMING PULLEY (See page 14–318)



SST 09960–10010 (09962–01000, 09963–01000)

78. INSTALL CAMSHAFT POSITION SENSOR (See page 10–64)

79. INSTALL INJECTOR ASSY (See page 11–60)

80. INSTALL NOZZLE LEAKAGE PIPE ASSY (See page 11–60)

SST 09992–00242

81. INSTALL CYLINDER HEAD COVER SUB–ASSY

(a) Remove any old packing (FIPG) material.

(b) Apply seal packing to the cylinder head.

Seal packing: Part No. 08826–00080 or equivalent

(c) Install the gasket to the head cover.

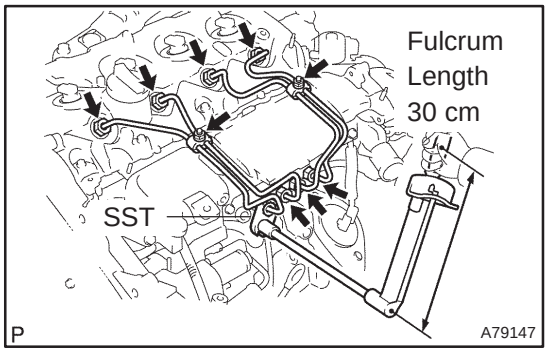
(d) Install the cylinder head cover with the 10 bolts.

Torque: 13 N·m (135 kgf·cm, 9.7 ft·lbf)

82. INSTALL NOZZLE HOLDER SEAL

(a) Install 4 new nozzle holder seals.

83. INSTALL VACUUM PUMP ASSY (See page 14–318)



84. INSTALL INJECTION PIPE SUB–ASSY NO.1 (See page 11–60)

NOTICE:

When assembling the pipes, perform the operation with the engine cold under room temperature.

(a) Remove the vinyl or the plastic bag from the injector and vinyl tape from the common rail.

(b) Temporarily install the injection pipe.

(c) Using SST, tighten the nut of the injection pipe to the common rail side.
SST 09023–12700
Torque:
42 N·m (428 kgf·cm, 31 ft·lbf) for a used pipe using SST
46 N·m (469 kgf·cm, 34 ft·lbf) for a used pipe not using SST
31 N·m (316 kgf·cm, 23 ft·lbf) for a new pipe using SST
34 N·m (347 kgf·cm, 25 ft·lbf) for a new pipe not using SST

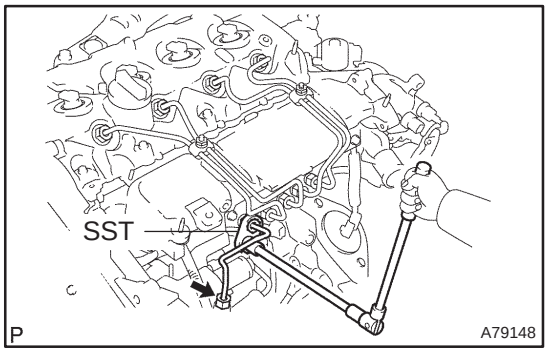
HINT:
- Use a torque wrench with a fulcrum length of 30 cm (11.81 in.)
- Check if the used pipe has deflection or is installed properly after injection pipe is reassembled. If there is deflection or if it can not be installed properly, replace the used pipe with a new pipe.

(d) Using SST, tighten the nut of the injection pipe to the injector side.
SST 09023–12700
Torque:
42 N·m (428 kgf·cm, 31 ft·lbf) for a used pipe using SST
46 N·m (469 kgf·cm, 34 ft·lbf) for a used pipe not using SST
31 N·m (316 kgf·cm, 23 ft·lbf) for a new pipe using SST
34 N·m (347 kgf·cm, 25 ft·lbf) for a new pipe not using SST

HINT:
- Use a torque wrench with a fulcrum length of 30 cm (11.81 in.)
- Check if the used pipe has deflection or is installed properly after injection pipe is reassembled. If there is deflection or if it can not be installed properly, replace the used pipe with a new pipe.

(e) Install the 2 upper injection pipe clamps with the 2 nuts.
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)

85. INSTALL INJECTION PIPE SUB–ASSY NO.2
SST 09023–12700



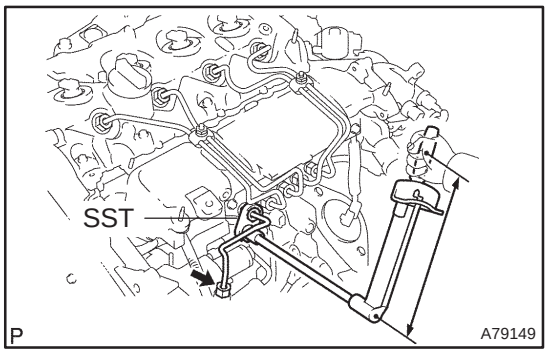
HINT:
Perform the same procedures as injection pipe No. 1.

86. INSTALL INJECTION PIPE SUB–ASSY NO.3
SST 09023–12700

HINT:
Perform the same procedures as injection pipe No. 1.

87. INSTALL INJECTION PIPE SUB–ASSY NO.4
SST 09023–12700

HINT:
Perform the same procedures as injection pipe No. 1.



88. INSTALL FUEL INLET PIPE SUB–ASSY

NOTICE:

- **In case of having the cylinder head gasket replaced, must replace fuel inlet pipe, too.**
- **When assembling the pipe, perform the operation with the engine cold under room temperature.**

(a) Temporarily install the new fuel inlet pipe.

(b) Using SST, tighten the nut of the fuel inlet pipe to the common rail side.

SST 09023–12700

Torque:

42 N·m (428 kgf·cm, 31 ft·lbf) for a used pipe using SST
46 N·m (469 kgf·cm, 34 ft·lbf) for a used pipe not using SST
31 N·m (316 kgf·cm, 23 ft·lbf) for a new pipe using SST
34 N·m (347 kgf·cm, 25 ft·lbf) for a new pipe not using SST

HINT:

- Use a torque wrench with a fulcrum length of 30 cm (11.81 in.)
- Check if the used pipe has deflection or is installed properly after inlet pipe is reassembled. If there is deflection or if it can not be installed properly, replace the used pipe with a new pipe.

(c) Using SST, tighten the nut of the fuel inlet pipe to the pump side.

SST 09023–12700

Torque:

42 N·m (428 kgf·cm, 31 ft·lbf) for a used pipe using SST
46 N·m (469 kgf·cm, 34 ft·lbf) for a used pipe not using SST
31 N·m (316 kgf·cm, 23 ft·lbf) for a new pipe using SST
34 N·m (347 kgf·cm, 25 ft·lbf) for a new pipe not using SST

HINT:

- Use a torque wrench with a fulcrum length of 30 cm (11.81 in.)
- Check if the used pipe has deflection or is installed properly after inlet pipe is reassembled. If there is deflection or if it can not be installed properly, replace the used pipe with a new pipe.

89. INSTALL TURBOCHARGER SUB–ASSY (See page 13–11)
90. INSTALL TURBO OIL INLET PIPE SUB–ASSY (See page 13–11)
91. INSTALL TURBOCHARGER STAY (See page 13–11)
92. INSTALL EXHAUST MANIFOLD CONVERTER SUB–ASSY (See page 13–11)
93. INSTALL MANIFOLD STAY NO.2 (See page 13–11)
94. INSTALL EXHAUST MANIFOLD HEAT INSULATOR NO.2 (See page 13–11)

95. **INSTALL TURBO INSULATOR NO.1 (See page 13–11)**
96. **INSTALL TURBO INSULATOR NO.2 (See page 13–11)**
97. **INSTALL EXHAUST PIPE ASSY (W/ COLD AREA) (See page 13–11)**
98. **INSTALL EXHAUST PIPE ASSY FRONT (See page 15–10)**
99. **INSTALL FLOOR PANEL BRACE FRONT (See page 15–10)**
100. **INSTALL HEATER BRACKET (W/ COLD AREA) (See page 13–11)**
101. **INSTALL HEATER PUMP ASSY (W/ COLD AREA) (See page 13–11)**
102. **INSTALL FUEL FILTER ASSY (See page 11–82)**
103. **SET NO. 1 CYLINDER TO TDC/COMPRESSION (See page 14–307)**
    SST 09960–10010 (09962–01000, 09963–01000)
104. **INSTALL TIMING BELT (See page 14–307)**
105. **CHECK VALVE TIMING (See page 14–307)**
106. **TIMING CHAIN COVER PLATE (See page 14–307)**
107. **INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET (See page 14–307)**
108. **INSTALL TIMING BELT GUIDE (See page 14–307)**
109. **INSTALL TIMING BELT NO.1 COVER (See page 14–307)**
110. **INSTALL TIMING BELT NO.2 COVER (See page 14–307)**
111. **INSTALL IDLER PULLEY SUB–ASSY (See page 14–307)**
112. **INSTALL CRANKSHAFT PULLEY (See page 14–307)**
    SST 09213–54015 (90105–08076), 09330–00021
113. **INSTALL ENGINE MOUNTING INSULATOR SUB–ASSY RH (See page 14–307)**
114. **INSTALL POWER STEERING IDLE PULLEY BRACKET (See page 14–307)**
115. **ADJUST V (COOLER COMPRESSOR TO CRANKSHAFT PULLEY) BELT NO.1 (See page 14–269)**
116. **INSTALL INJECTOR DRIVER (See page 14–286)**
117. **INSTALL AIR TUBE NO.1 (See page 14–270)**
118. **INSTALL AIR TUBE NO.2 (See page 14–286)**
119. **INSTALL AIR CLEANER ASSY (See page 14–286)**
120. **INSTALL VACUUM RESERVOIR SUB–ASSY (See page 13–11)**
121. **INSTALL ENGINE COVER NO.1**
    Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)
122. **INSTALL FRONT WHEEL RH**
    Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)
123. **ADD ENGINE OIL**
124. **ADD ENGINE COOLANT (See page 16–44)**
125. **CHECK FOR FUEL LEAKS (See page 11–60)**
126. **CHECK FOR ENGINE OIL LEAKS**

128. **CHECK FOR EXHAUST GAS LEAKS**

CRANKSHAFT SEAL (1CD–FTV)

141CB–01

REPLACEMENT

1. DRAIN ENGINE OIL

(a) Install a new gasket and the drain plug after draining engine oil.
Torque: 34 N·m (350 kgf·cm, 25 ft·lbf)

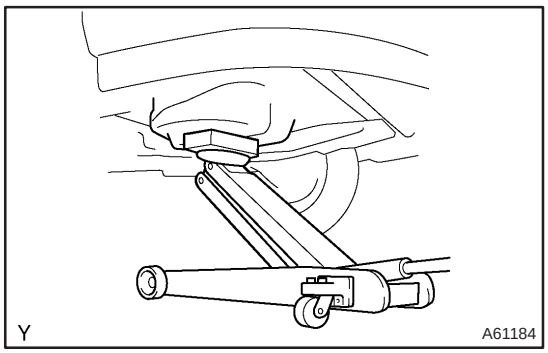
2. REMOVE FRONT WHEEL RH

3. REMOVE ENGINE UNDER COVER RH

4. REMOVE RADIATOR SUPPORT OPENING COVER

5. REMOVE ENGINE ROOM COVER SIDE

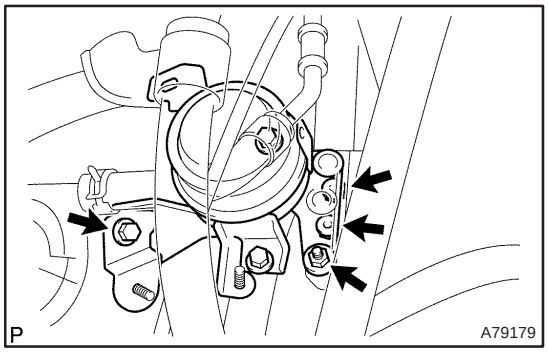
6. REMOVE ENGINE COVER NO.1



(a) Remove the 5 nuts and the engine cover.

7. REMOVE INJECTOR DRIVER (See page 14–286)

8. REMOVE V (COOLER COMPRESSOR TO CRANKSHAFT PULLEY) BELT NO.1 (See page 14–269)



9. REMOVE GENERATOR V BELT (See page 14–269)

10. REMOVE POWER STEERING IDLE PULLEY BRACKET (See page 14–286)

11. REMOVE ENGINE MOUNTING INSULATOR SUB–ASSY RH

(a) Place a wooden block on a jack underneath the engine.

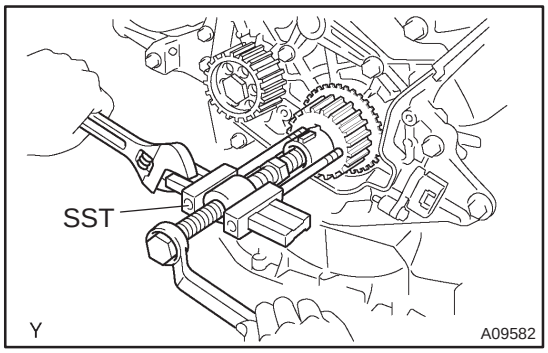
(b) Remove the 3 bolts and 3 nuts, and then detach the engine mounting insulator sub assy.

12. REMOVE CRANKSHAFT PULLEY (See page 14–307)
SST 09213–54015 (90105–08076), 09330–00021, 09950–50013 (09951–05010, 09952–05010, 09953–05020, 09954–05031)

13. REMOVE IDLER PULLEY SUB–ASSY (See page 14–307)

14. REMOVE TIMING BELT NO.2 COVER (See page 14–307)

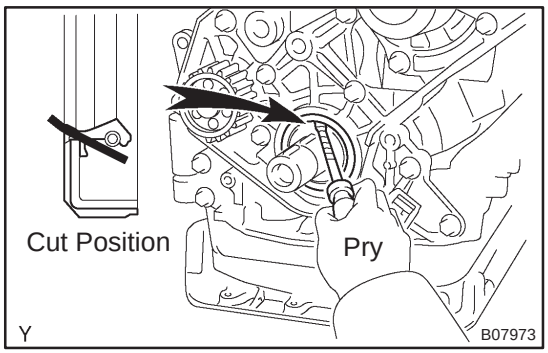
15. REMOVE TIMING BELT NO.1 COVER (See page 14–307)



16. REMOVE TIMING BELT GUIDE

17. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET (See page 14–307)

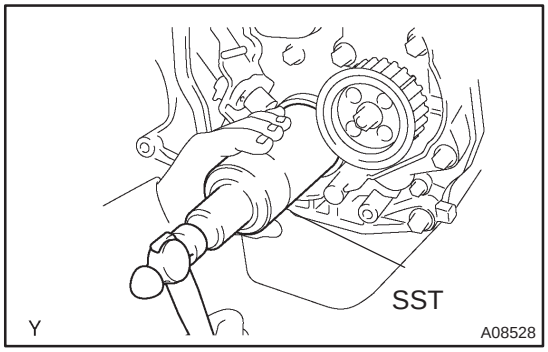
18. SET NO. 1 CYLINDER TO TDC/COMPRESSION (See page 14–307)



19. REMOVE TIMING CHAIN COVER PLATE (See page 14–307)

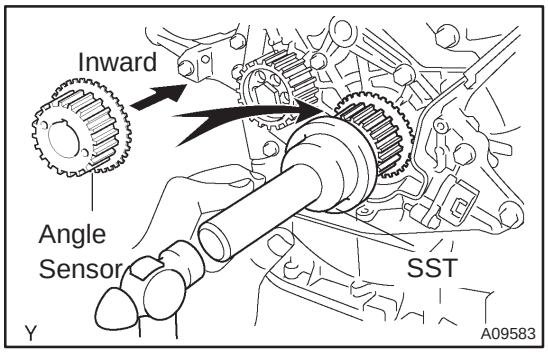
20. REMOVE TIMING BELT (See page 14–307)

21. REMOVE CRANKSHAFT TIMING PULLEY



(a) If the timing pulley cannot be removed by hand, use SST to remove the pulley.
SST 09950–50013 (09951–05010, 09952–05010, 09953–05010, 09953–05020, 09954–05021)

22. REMOVE CRANKSHAFT SEAL



(a) Using a knife, cut off the oil seal lip.
(b) Using a screwdriver, pry out the oil seal.

NOTICE:
Be careful not to damage the crankshaft. Warp tip of the screwdriver with tape.

23. INSTALL CRANKSHAFT SEAL

(a) Using SST and a hammer, tap in the oil seal until its surface is flush with the oil pump edge.
SST 09316–60011 (09316–00011)

24. INSTALL CRANKSHAFT TIMING PULLEY

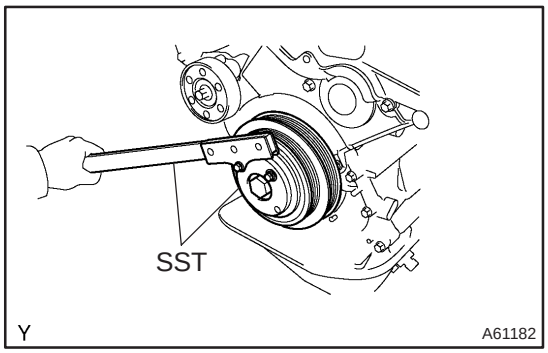
(a) Align the keyway of the timing pulley with the key located on the crankshaft, slide the pulley into place.
(b) Using SST and a hammer, tap in the timing pulley with the angle sensor facing inward.
SST 09223–46011

25. SET NO. 1 CYLINDER TO TDC/COMPRESSION (See page 14–307)
SST 09960–10010 (09962–01000, 09963–01000)

26. INSTALL TIMING BELT (See page 14–307)

27. CHECK VALVE TIMING (See page 14–307)

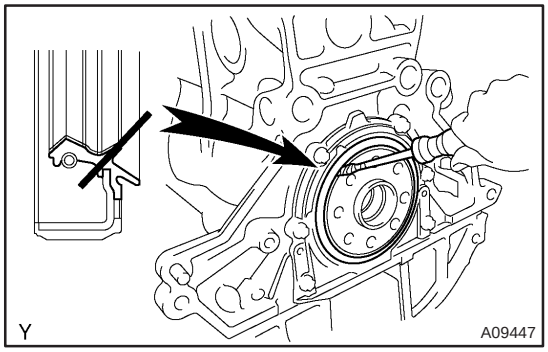
28. INSTALL TIMING CHAIN COVER PLATE (See page 14–307)



29. **INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET (See page 14–307)**
30. **INSTALL TIMING BELT GUIDE (See page 14–307)**
31. **INSTALL TIMING BELT NO.1 COVER (See page 14–307)**
32. **INSTALL TIMING BELT NO.2 COVER (See page 14–307)**
33. **INSTALL IDLER PULLEY SUB–ASSY (See page 14–307)**
34. **INSTALL CRANKSHAFT PULLEY (See page 14–307)**
    SST 09213–54015 (90105–08076), 09330–00021
35. **INSTALL ENGINE MOUNTING INSULATOR SUB–ASSY RH (See page 14–307)**
36. **INSTALL POWER STEERING IDLE PULLEY BRACKET (See page 14–286)**
37. **ADJUST V (COOLER COMPRESSOR TO CRANKSHAFT PULLEY) BELT NO.1 (See page 14–269)**
38. **INSTALL INJECTOR DRIVER (See page 14–286)**
39. **INSTALL ENGINE COVER NO.1**
    Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)
40. **INSTALL FRONT WHEEL RH**
    Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)
41. **ADD ENGINE OIL**
42. **CHECK FOR ENGINE OIL LEAKS**

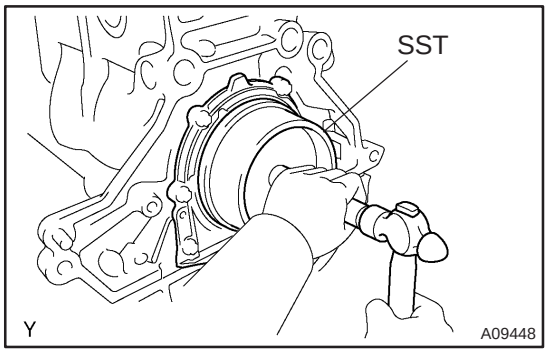
ENGINE REAR OIL SEAL (1CD–FTV)

141CC–01



REPLACEMENT

1. **REMOVE MANUAL TRANSAXLE ASSY (See page 41–33)**
   SST 09930–00010, 09628–62011, 09520–01010, 09520–24010 (09520–32040)
2. **REMOVE CLUTCH COVER ASSY (See page 42–26)**
3. **REMOVE CLUTCH DISC ASSY (See page 42–26)**

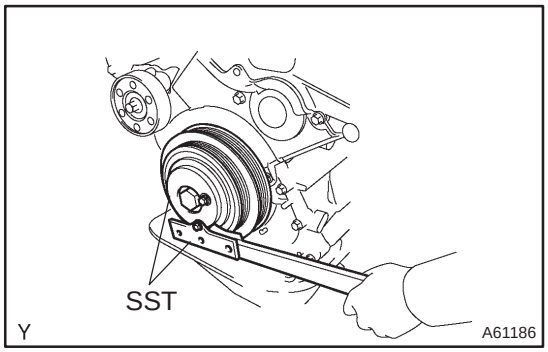


4. **REMOVE FLYWHEEL SUB–ASSY**
(a) Hold the crankshaft with SST.
SST 09213–54015 (90105–08076), 09330–00021
(b) Using a torx socket wrench (T55), remove the 8 torx screws and the flywheel.

5. **REMOVE REAR END PLATE**
(a) Remove the 2 bolts and the rear end plate.

6. **REMOVE ENGINE REAR OIL SEAL**
(a) Using a knife, cut off the oil seal lip.
(b) Using a screwdriver, pry out the oil seal.

NOTICE:
After the removal, check if the crankshaft is not damaged. If it is damaged, smooth the surface with 400–grit sandpaper.



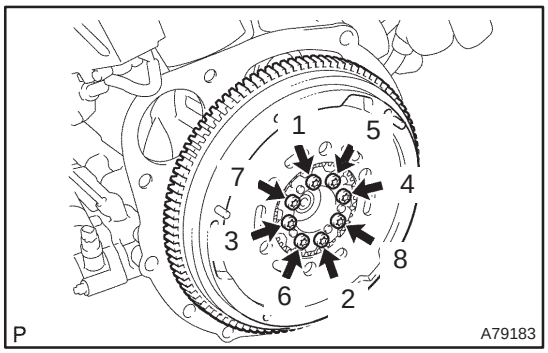
7. **INSTALL ENGINE REAR OIL SEAL**
(a) Apply MP grease to a new oil seal lip.

NOTICE:
Keep the lip free of foreign objects.

(b) Using SST and a hammer, tap in the oil seal until its surface is flush with the rear oil seal retainer edge.
SST 09223–15030, 09950–70010 (09951–07100)

NOTICE:
Wipe off extra grease on the crankshaft.

8. **INSTALL REAR END PLATE**
Torque: 8.4 N·m (86 kgf·cm, 74 in.·lbf)



9. INSTALL FLYWHEEL SUB–ASSY

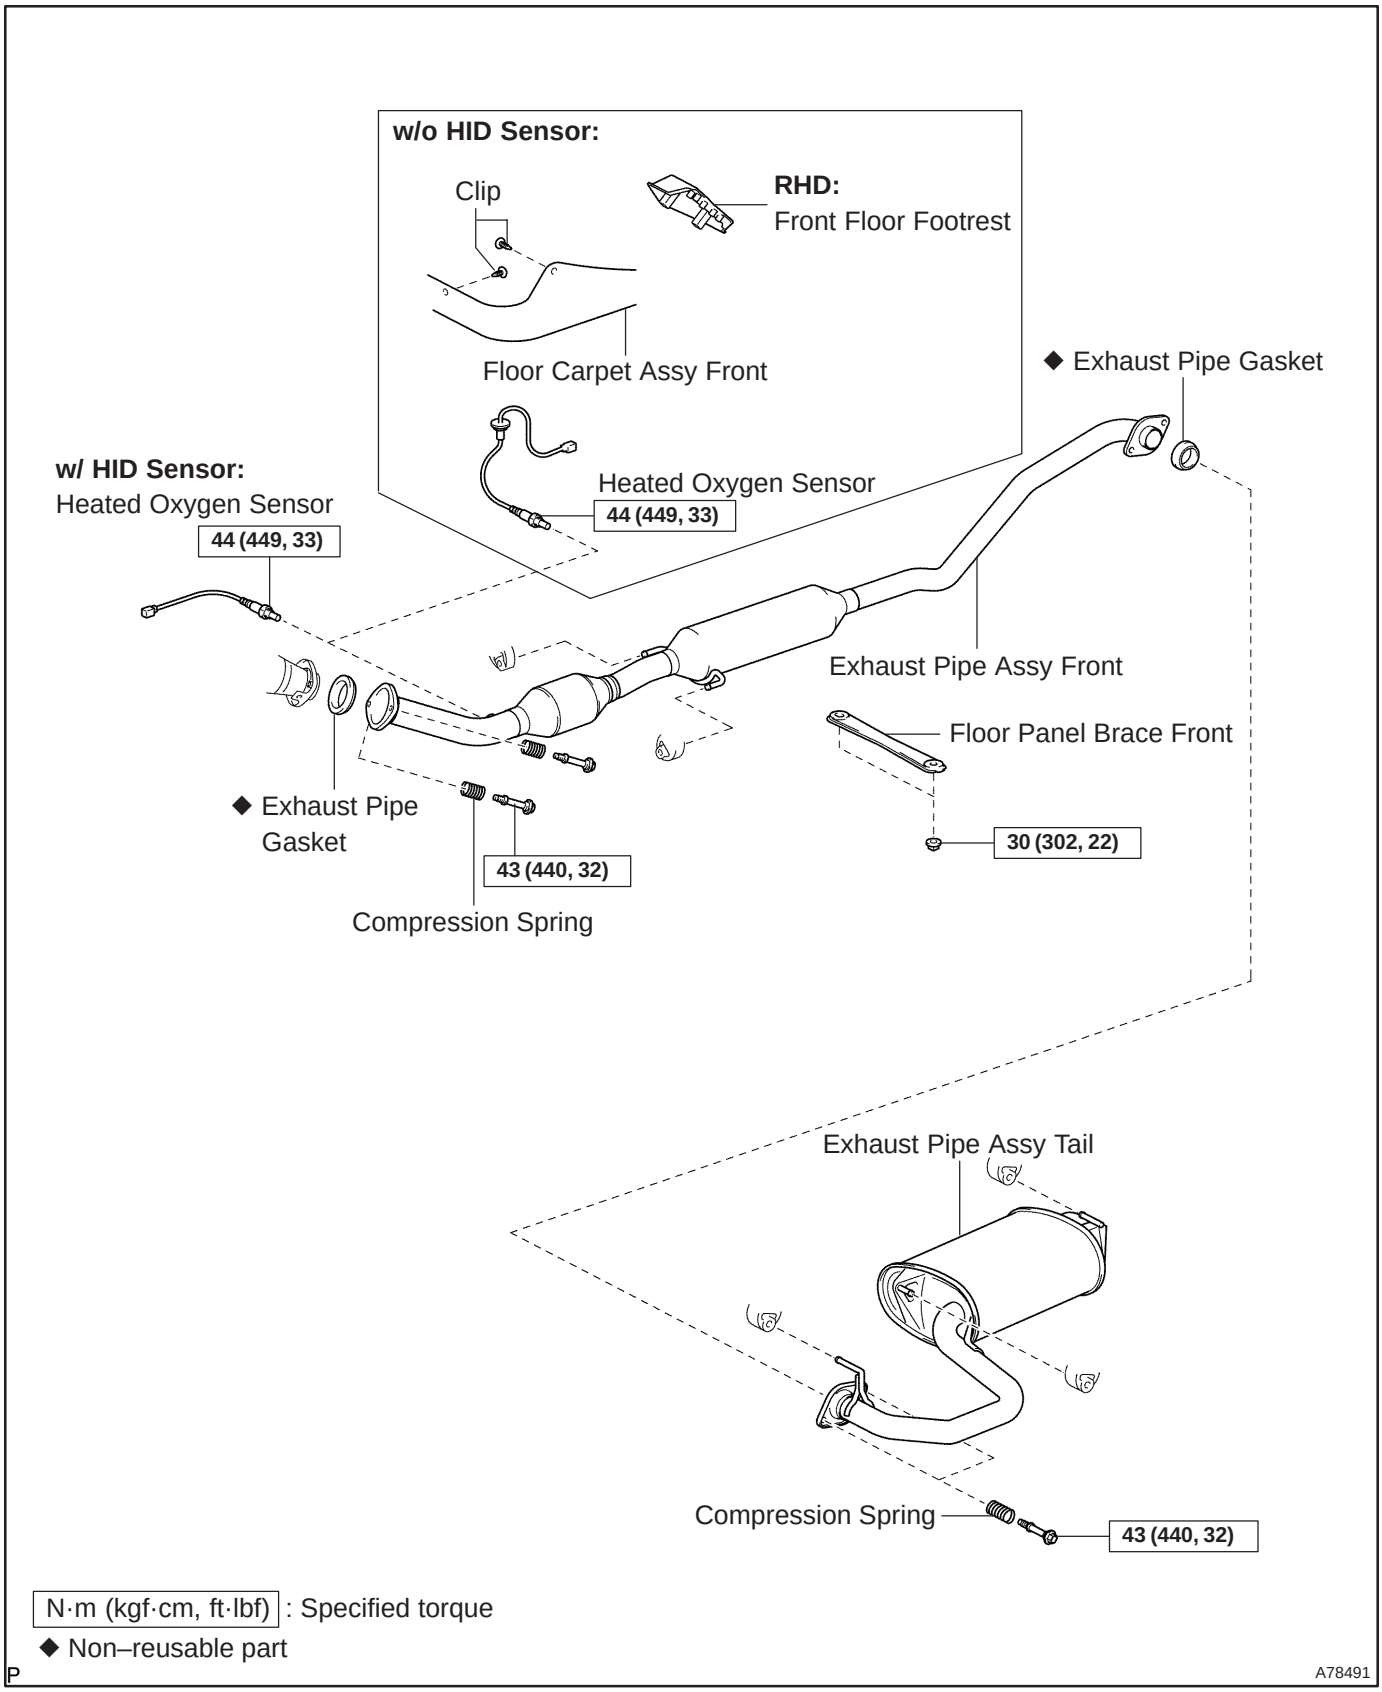
(a) Hold the crankshaft with SST.
SST 09213–54015 (90105–08076), 09330–00021

(b) Clean the bolt and the bolt hole.

(c) Apply Adhesive to the bolts.
Adhesive:
Part No. 08833–00070, THREE BOND or equivalent

(d) Using several steps, install and tighten the 8 screws with a torx socket wrench (T55) uniformly in the sequence shown in the illustration.
Torque: 71 N·m (720 kgf·cm, 52 ft·lbf)

10. INSTALL CLUTCH DISC ASSY (See page 42–26)
SST 09301–00220



11. INSTALL CLUTCH COVER ASSY (See page 42–26)

12. INSTALL MANUAL TRANSAXLE ASSY (See page 41–33)
SST 09670–00010

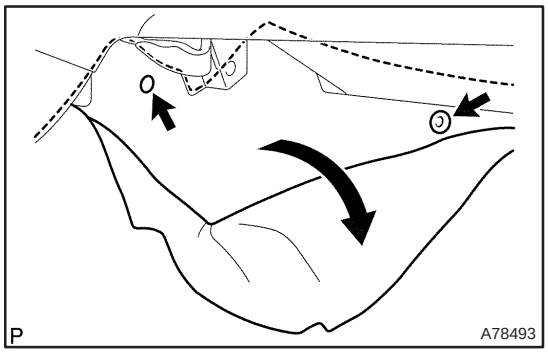
EXHAUST PIPE ASSY (1ZZ–FE/3ZZ–FE)

1509S–01

COMPONENTS

N·m (kgf·cm, ft·lbf) : Specified torque

◆ Non–reusable part

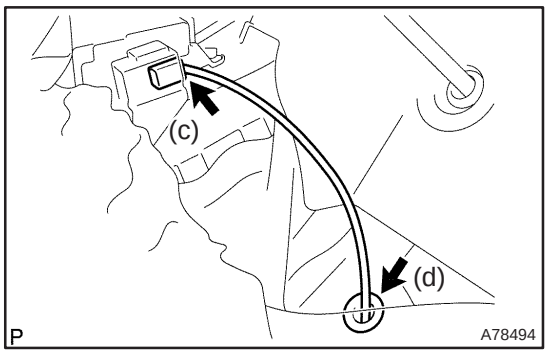


P

A78491

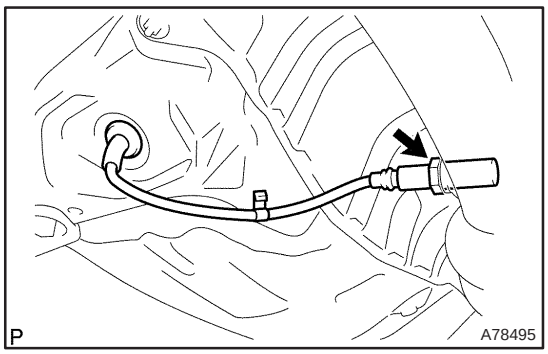
1509T–01

Removal & Installation and Disassembly & Reassembly



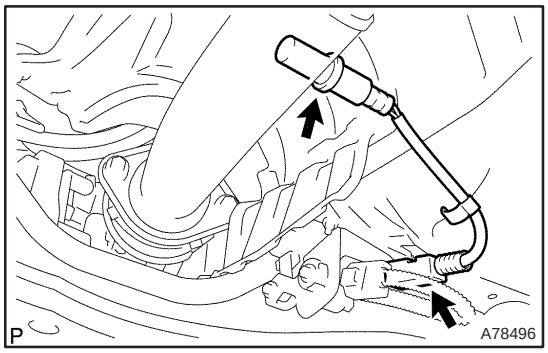
1. REMOVE FRONT FLOOR FOOTREST (W/O HID SENSOR) (See page 76–32)

2. REMOVE HEATED OXYGEN SENSOR (W/O HID SENSOR)



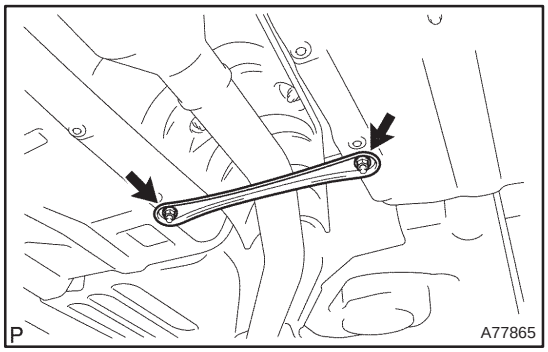
(a) Using a clip remover, remove the 2 clips.

(b) Open the floor carpet.



(c) Disconnect the heated oxygen sensor connector.

(d) Remove the grommet.



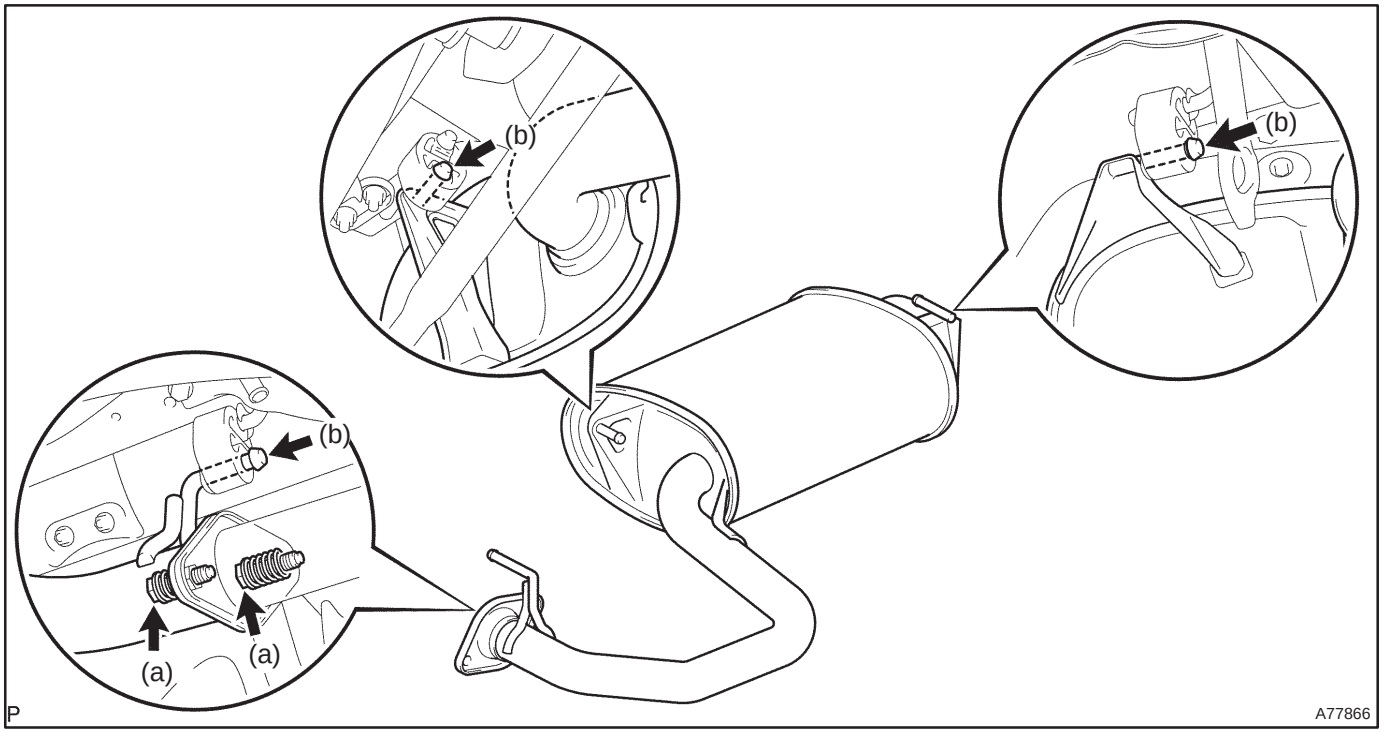
(e) Remove the heated oxygen sensor.

3. REMOVE HEATED OXYGEN SENSOR (W/ HID SENSOR)

(a) Disconnect the heated oxygen sensor connector.

(b) Remove the heated oxygen sensor.

4. REMOVE FLOOR PANEL BRACE FRONT



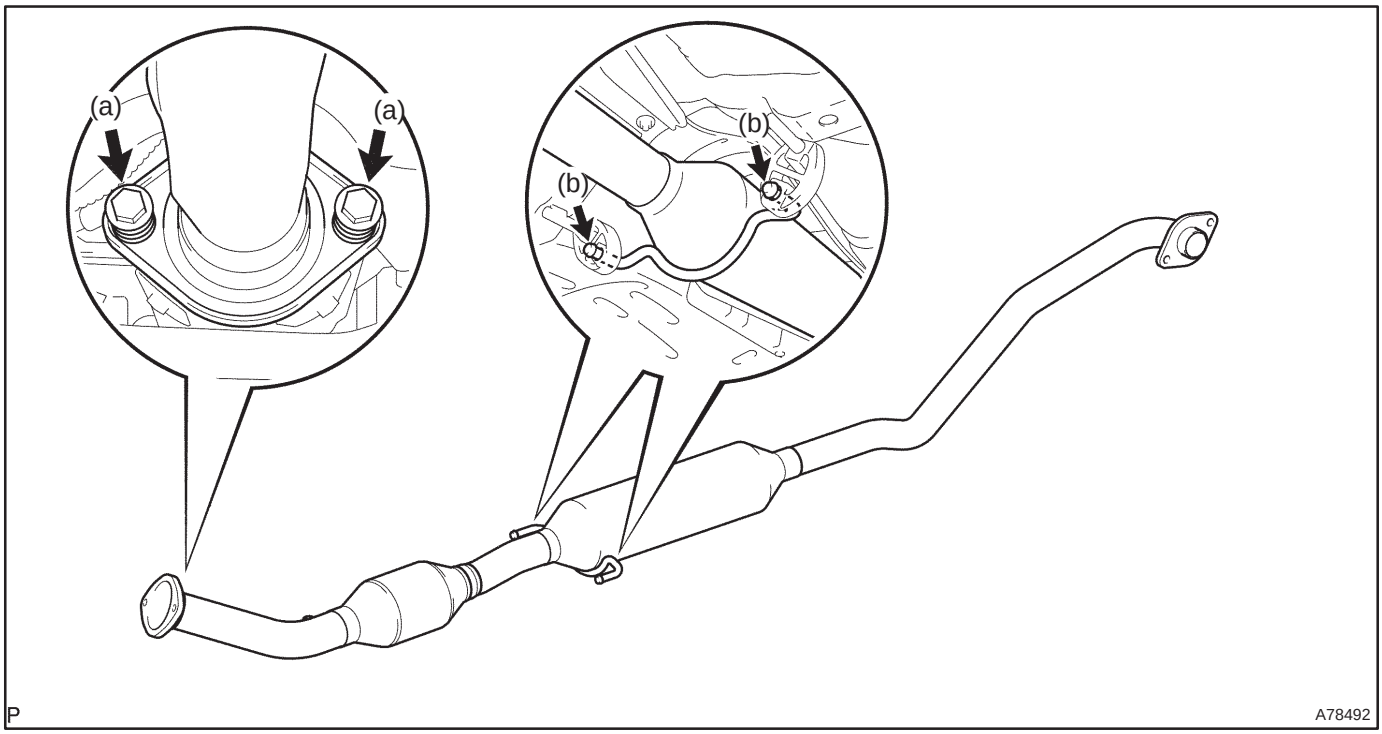
(a) Remove the 2 nuts, and then remove the floor panel brace front.

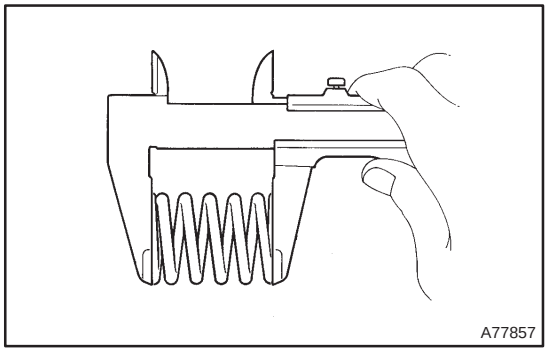
5. REMOVE EXHAUST PIPE ASSY TAIL

(a) Remove the 2 bolts and 2 compression springs.

(b) Remove the exhaust pipe tail from the 3 exhaust pipe supports.

(c) Remove the gasket from the exhaust pipe front.



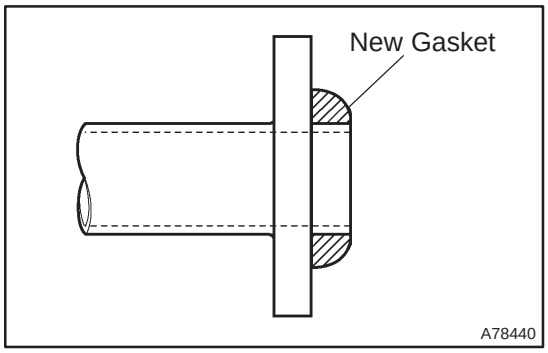


6. REMOVE EXHAUST PIPE ASSY FRONT

(a) Remove the 2 bolts and 2 compression springs.

(b) Remove the exhaust pipe front from the 2 exhaust pipe supports.

(c) Remove the gasket from the exhaust manifold.



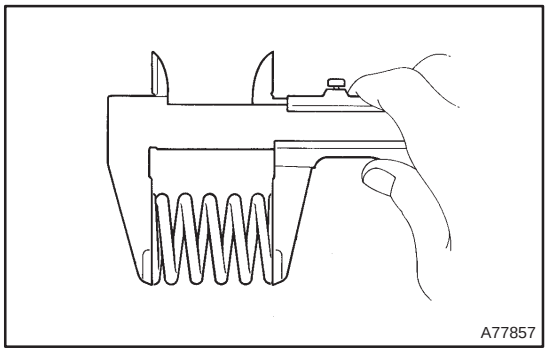
7. INSTALL EXHAUST PIPE ASSY FRONT

(a) Compression spring inspection

(1) Using vernier calipers, measure the free length of the compression spring.

Minimum length: 41.5 mm (1.634 in.)

If the free length is less than minimum, replace the compression spring.

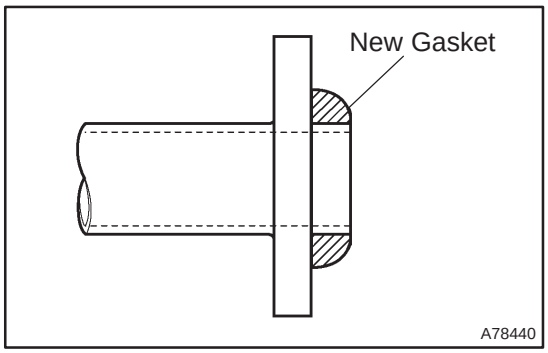


(b) Install a new gasket to the exhaust manifold as shown in the illustration.

(c) Install the exhaust pipe front to the 2 exhaust pipe supports.

(d) Tighten the 2 compression springs and 2 bolts.

Torque: 43 N·m (440 kgf·cm, 32 ft·lbf)



8. INSTALL EXHAUST PIPE ASSY TAIL

(a) Compression spring inspection

(1) Using vernier calipers, measure the free length of the compression spring.

Minimum length: 38.5 mm (1.516 in.)

If the free length is less than minimum, replace the compression spring.

(b) Install a new gasket to the exhaust pipe front as shown in the illustration.

(c) Install the exhaust pipe tail to the 3 exhaust pipe supports.

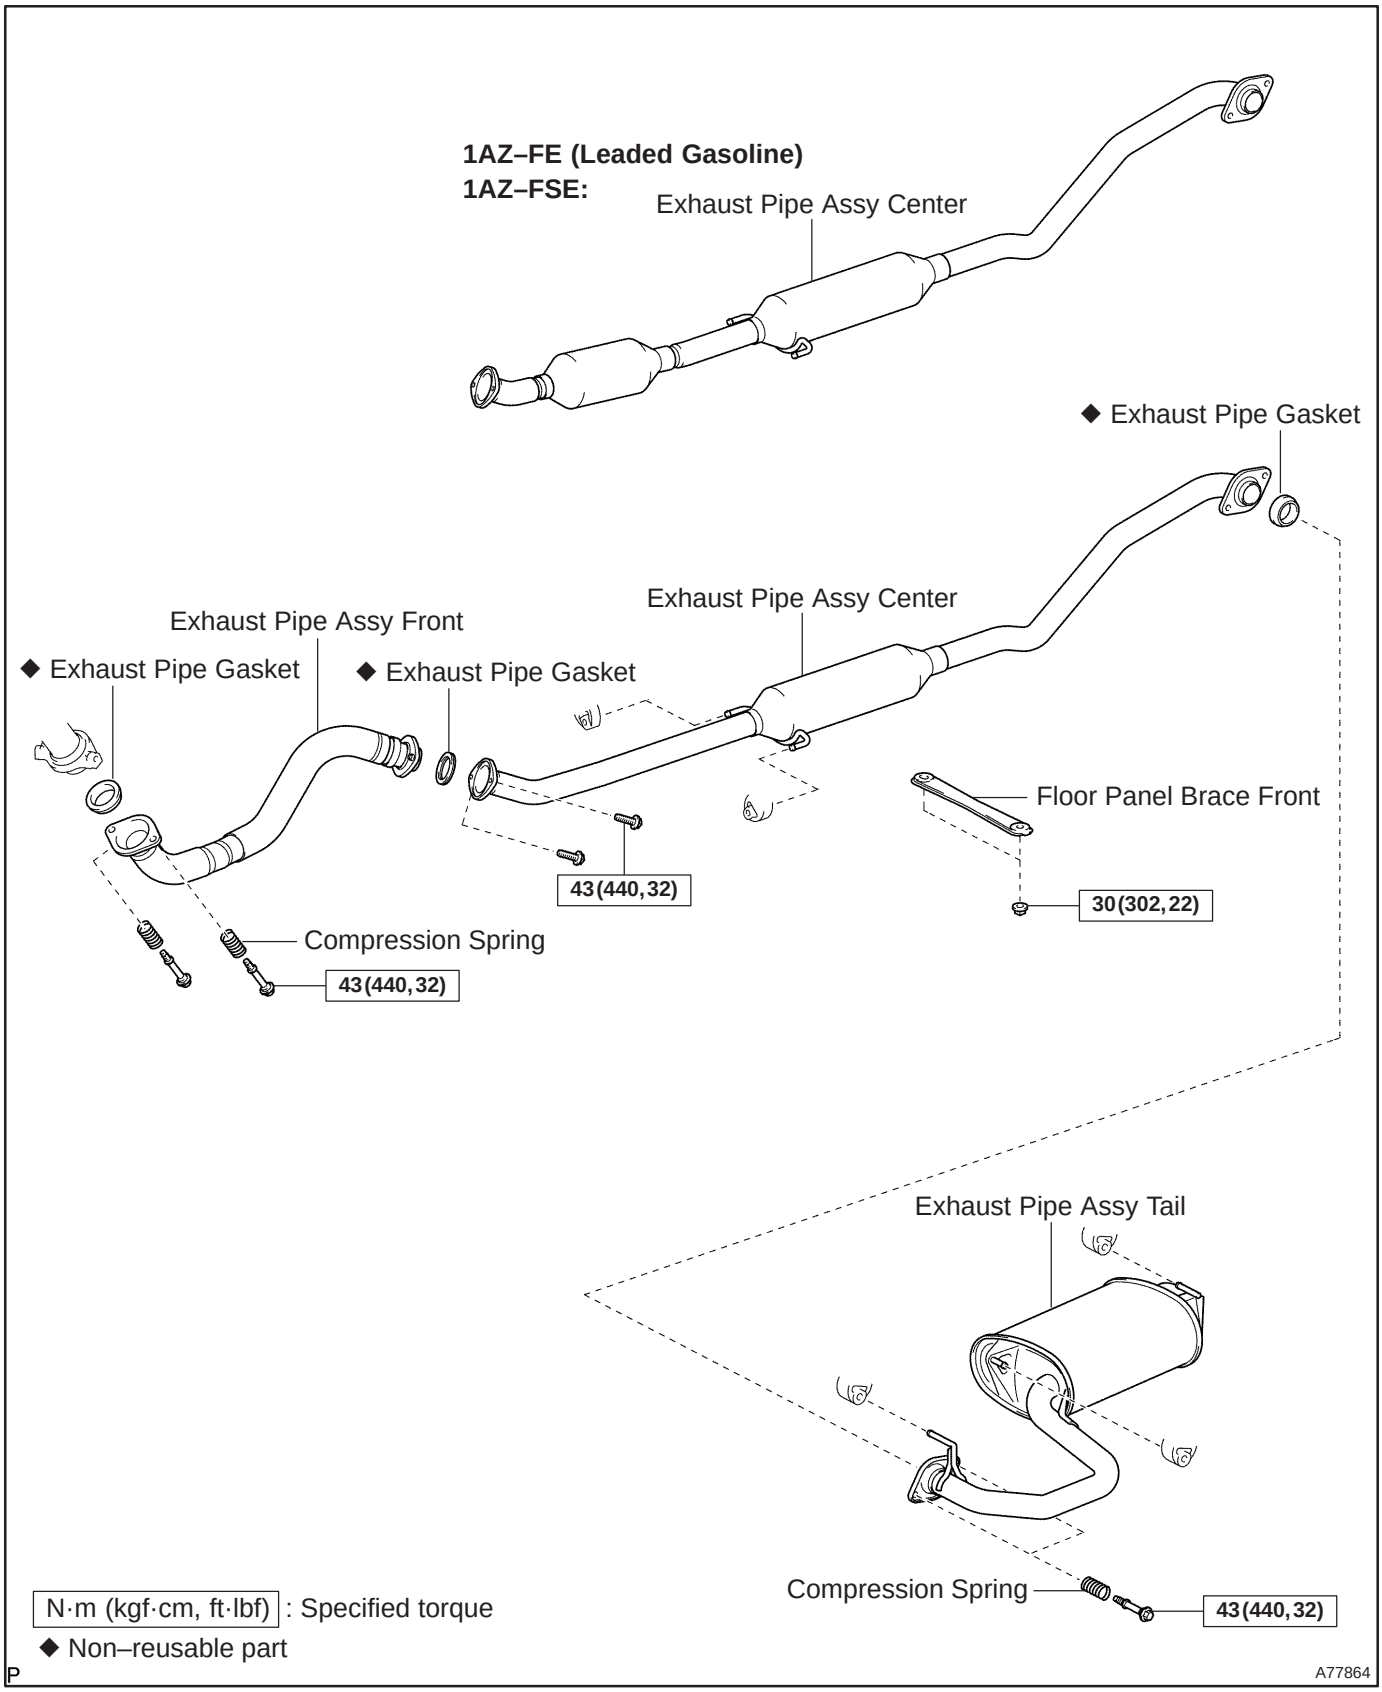
(d) Tighten the 2 compression springs and 2 bolts.

Torque: 43 N·m (440 kgf·cm, 32 ft·lbf)

9. INSTALL HEATED OXYGEN SENSOR (W/O HID SENSOR)
Torque: 44 N·m (449 kgf·cm, 33 ft·lbf)

10. INSTALL HEATED OXYGEN SENSOR (W/ HID SENSOR)
Torque: 44 N·m (449 kgf·cm, 33 ft·lbf)

11. CHECK FOR EXHAUST GAS LEAKS



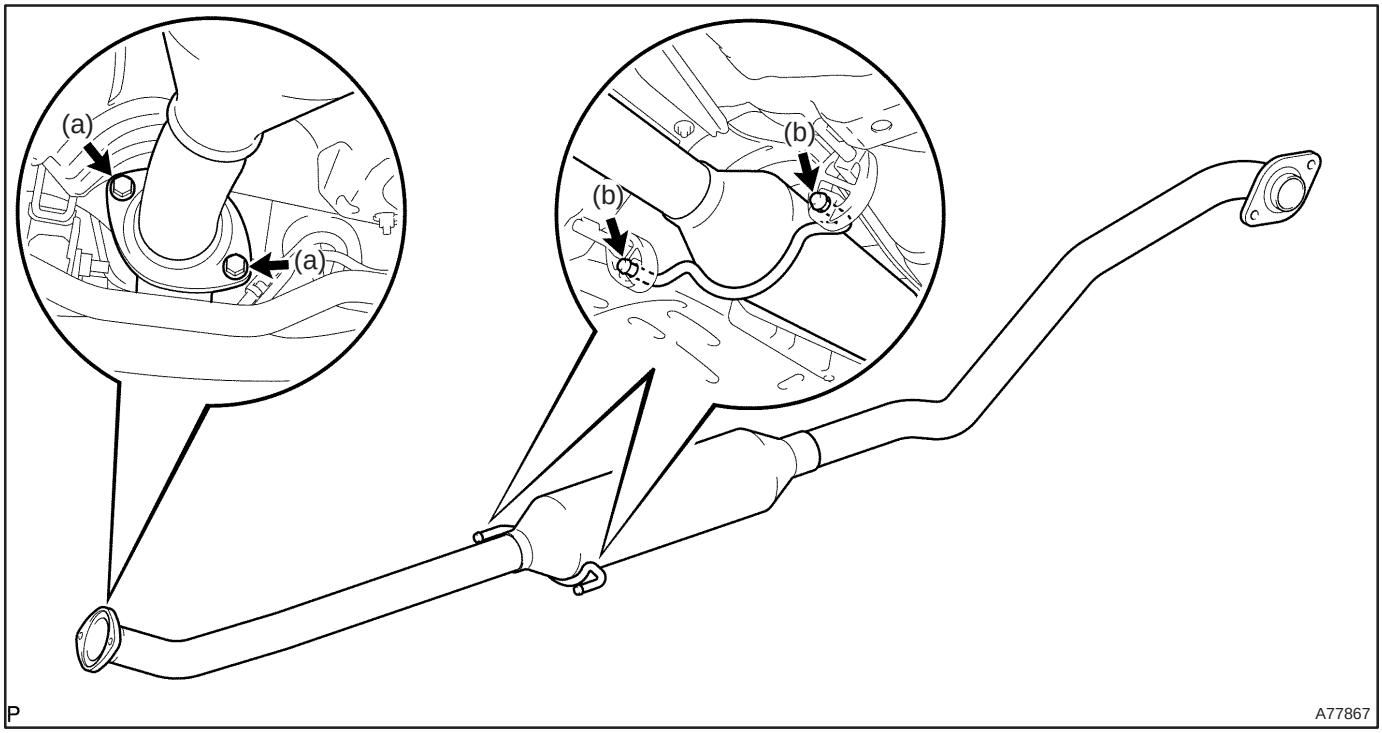
12. INSTALL FLOOR PANEL BRACE FRONT
Torque: 30 N·m (302 kgf·cm, 22 ft·lbf)

13. INSTALL FRONT FLOOR FOOTREST (W/O HID SENSOR)

EXHAUST PIPE ASSY (1AZ–FE/1AZ–FSE)

COMPONENTS

1509U–01

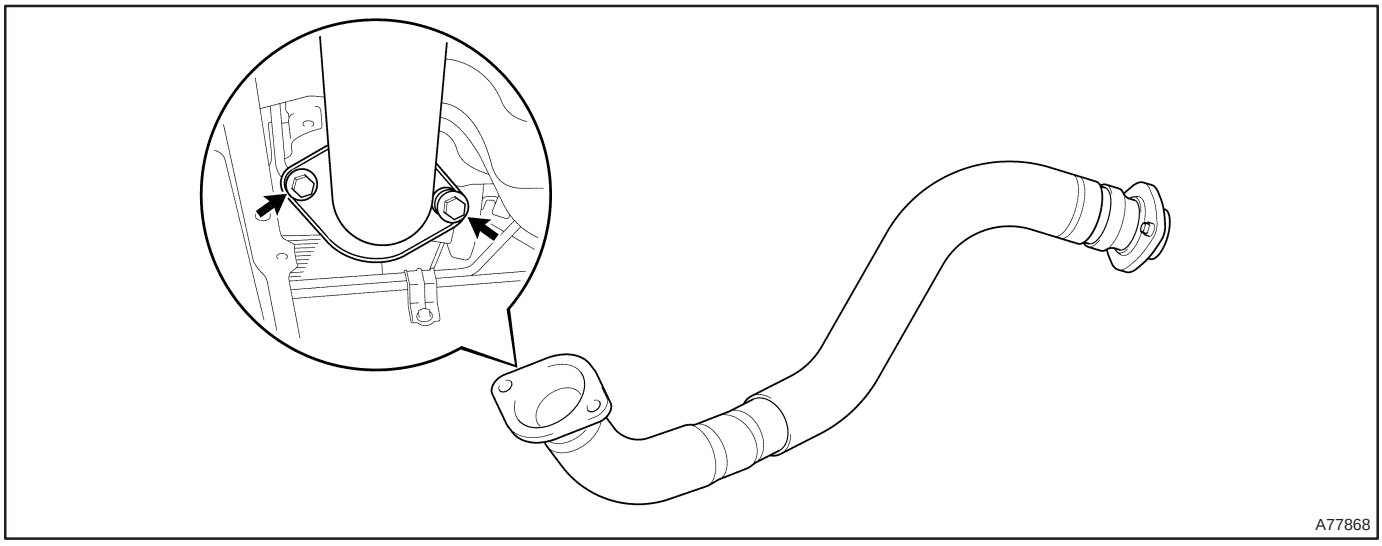


1509V–01

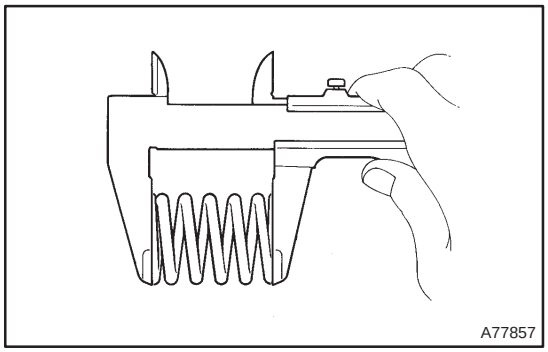
Removal & Installation and Disassembly & Reassembly

1. REMOVE FLOOR PANEL BRACE FRONT (See page 15–2)
2. REMOVE EXHAUST PIPE ASSY TAIL (See page 15–2)
3. REMOVE EXHAUST PIPE ASSY CENTER

(a) Remove the 2 bolts.



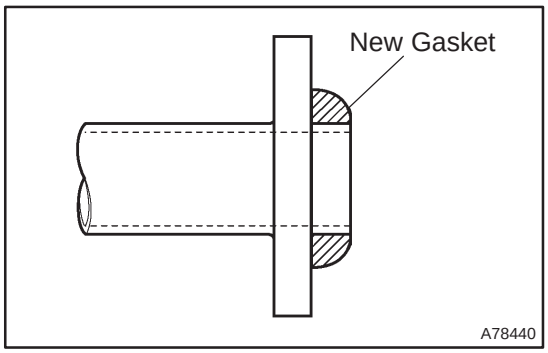
(b) Remove the exhaust pipe center and the gasket from the 2 exhaust pipe supports.



4. REMOVE EXHAUST PIPE ASSY FRONT

(a) Remove the 2 bolts and 2 compression springs, and then remove the exhaust pipe front.

(b) Remove the gasket from the exhaust manifold.



5. INSTALL EXHAUST PIPE ASSY FRONT

(a) Compression spring inspection

(1) Using vernier calipers, measure the free length of the compression spring.

Minimum length: 41.5 mm (1.634 in.)

If the free length is less than minimum, replace the compression spring.

(b) Install a new gasket to the exhaust manifold as shown in the illustration.

(c) Install the exhaust pipe front with the 2 compression springs and 2 bolts.

Torque: 43 N·m (440 kgf·cm, 32 ft·lbf)

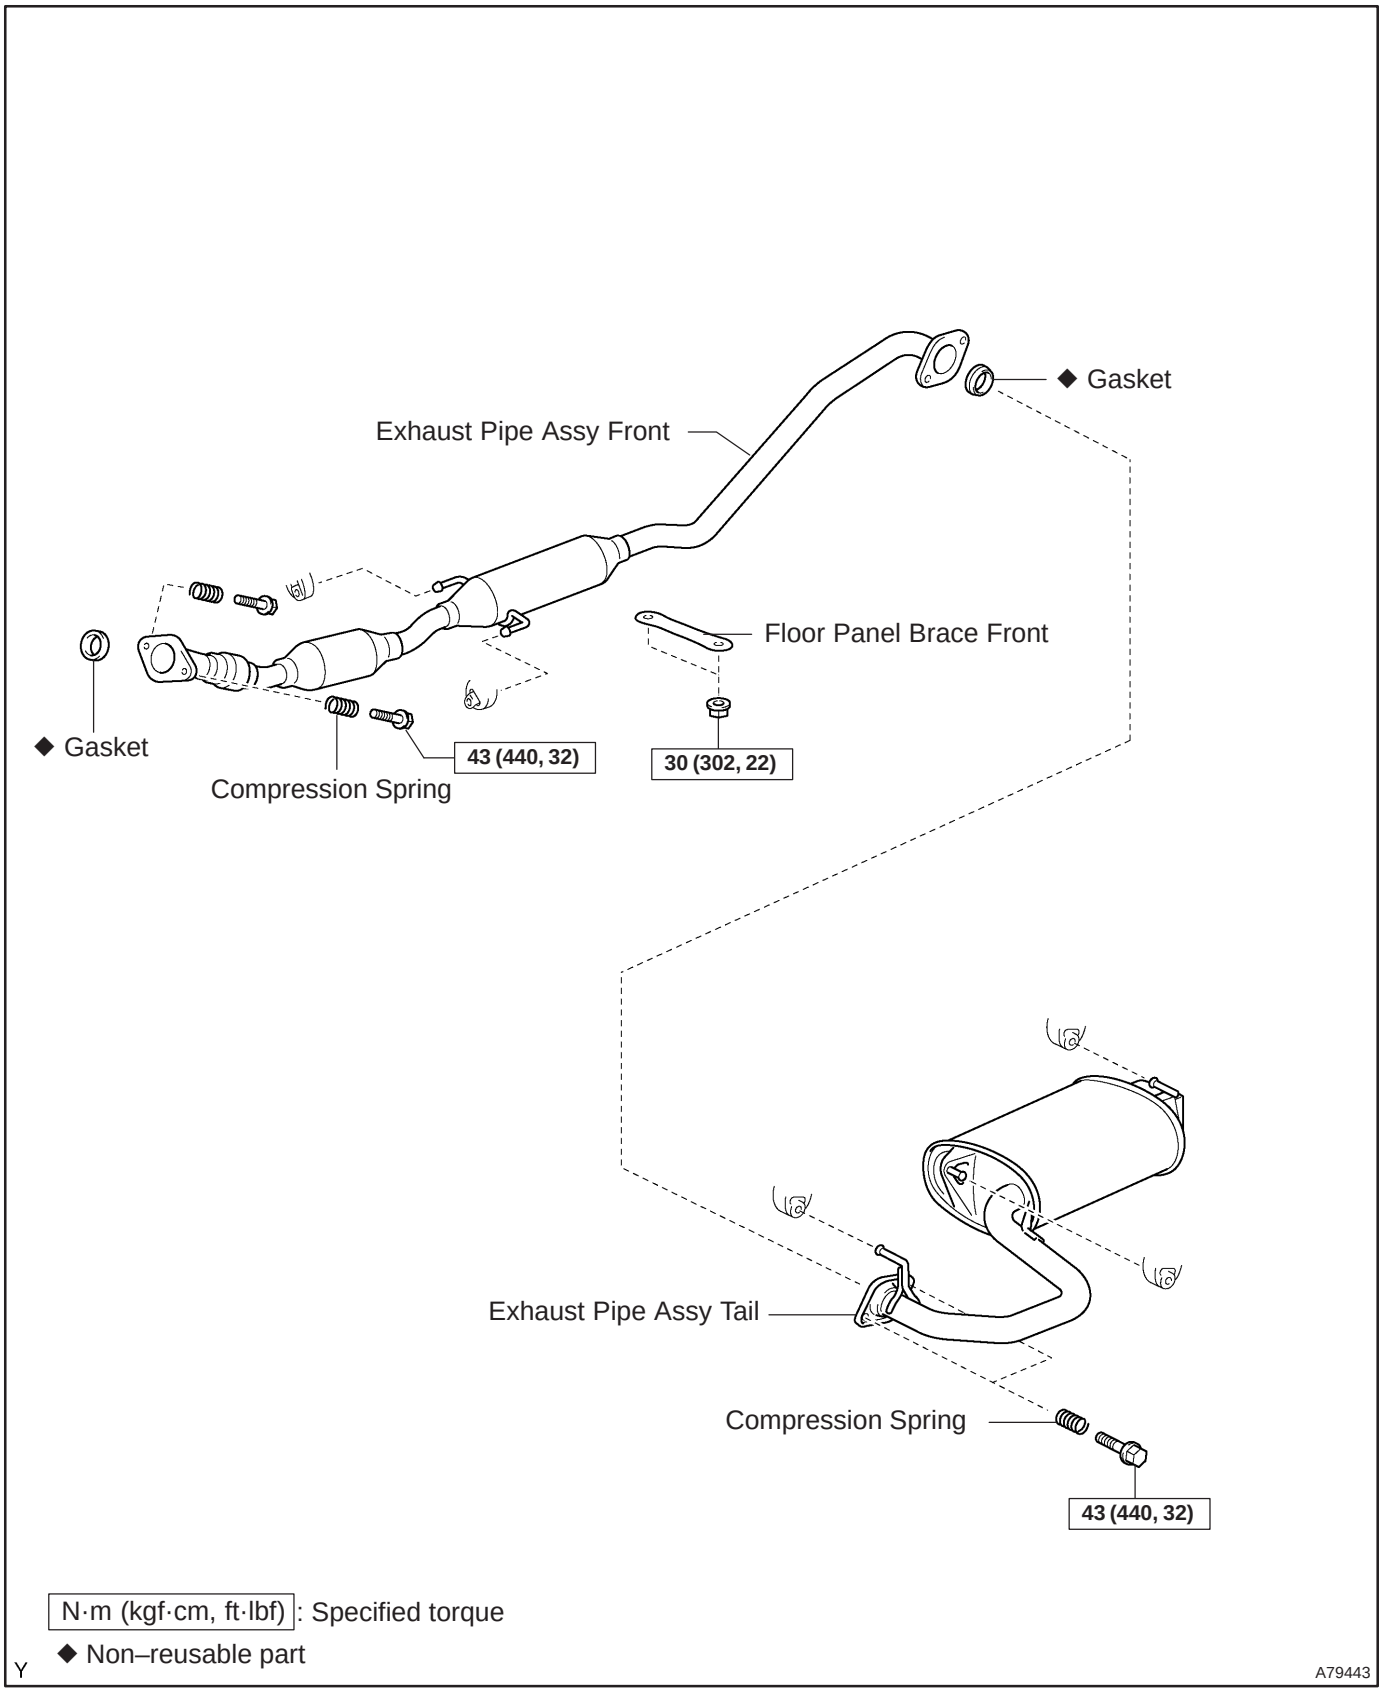
6. INSTALL EXHAUST PIPE ASSY CENTER

(a) Install a new gasket and the exhaust pipe center to the 2 exhaust pipe supports.

(b) Tighten the 2 bolts.

Torque: 43 N·m (440 kgf·cm, 32 ft·lbf)

7. INSTALL EXHAUST PIPE ASSY TAIL (See page 15–2)



8. CHECK FOR EXHAUST GAS LEAKS

9. INSTALL FLOOR PANEL BRACE FRONT (See page 15–2)

EXHAUST PIPE ASSY (1CD–FTV)

1509W–01

COMPONENTS

N·m (kgf·cm, ft·lbf): Specified torque

◆ Non–reusable part

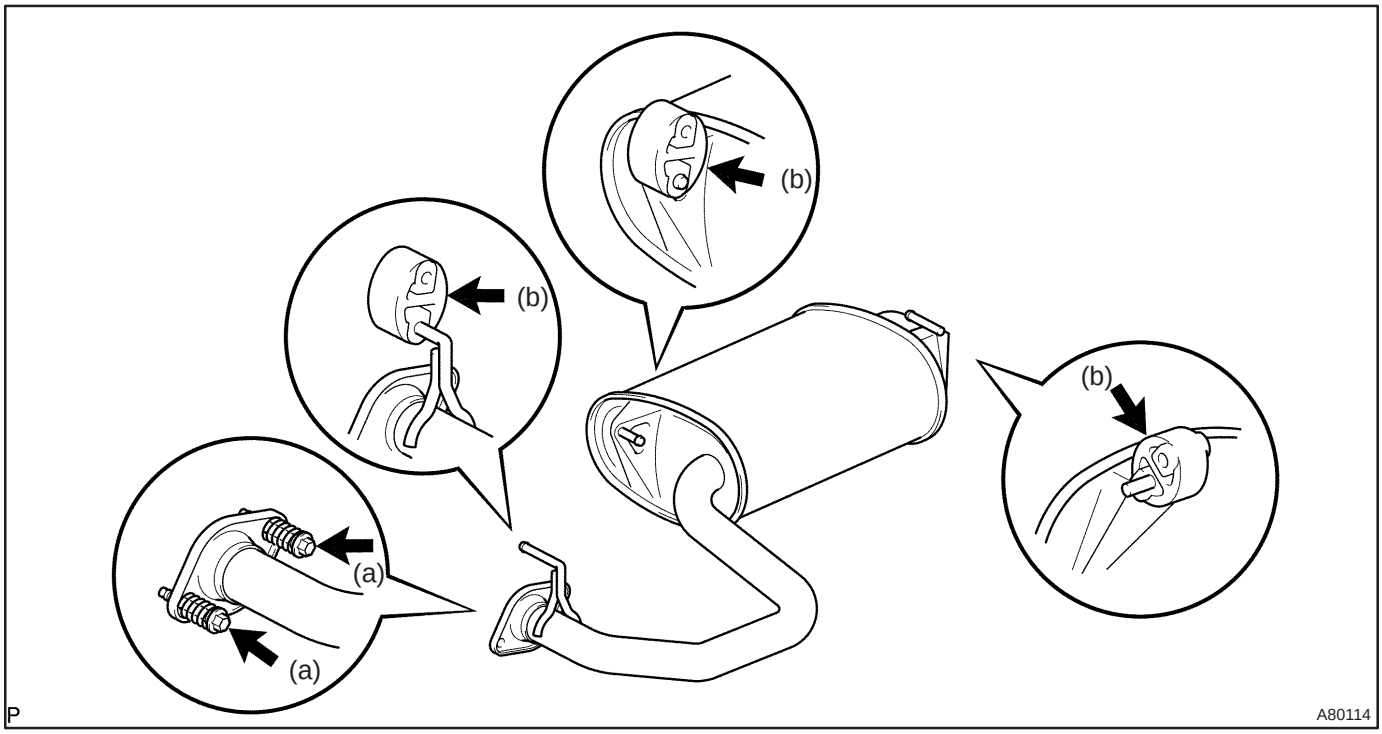
Y

A79443

1509X–01

Removal & Installation and Disassembly & Reassembly

1. REMOVE FLOOR PANEL BRACE FRONT



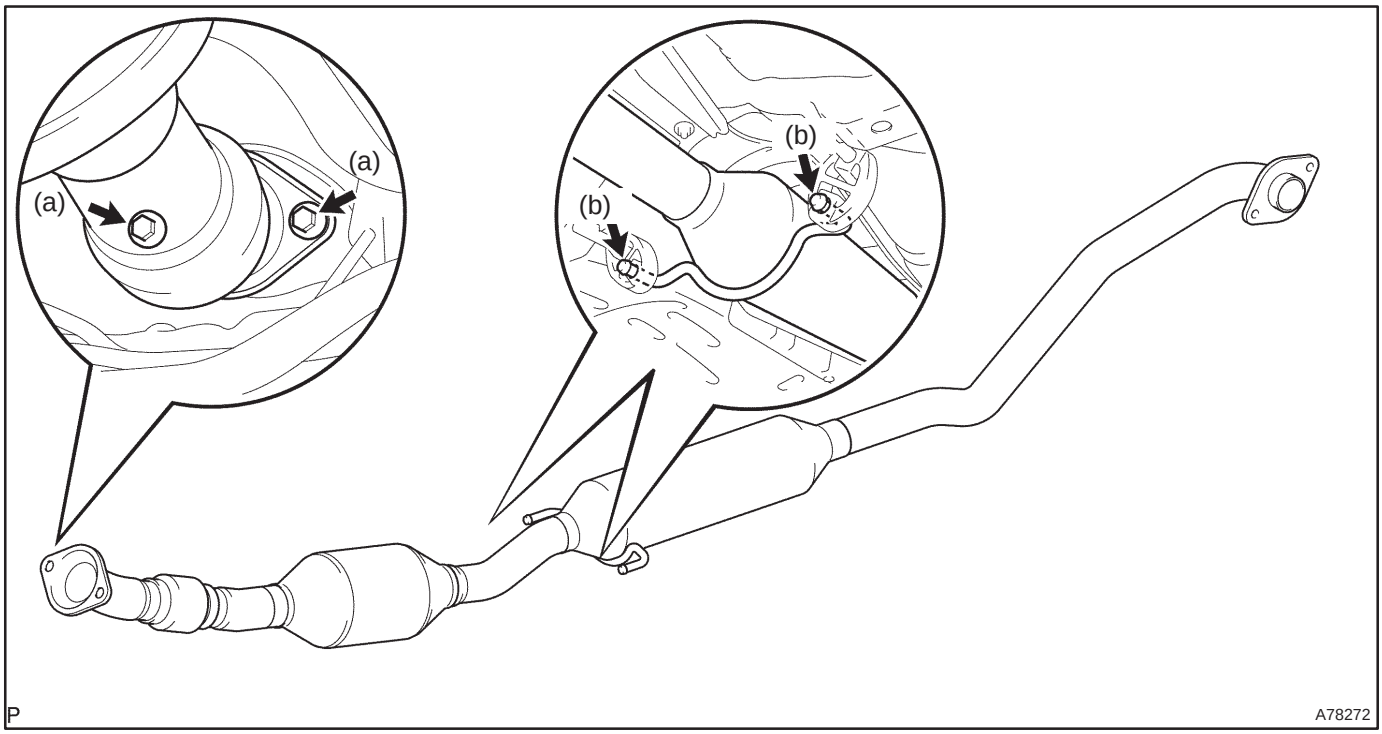
(a) Remove the 2 nuts and the floor panel brace front.

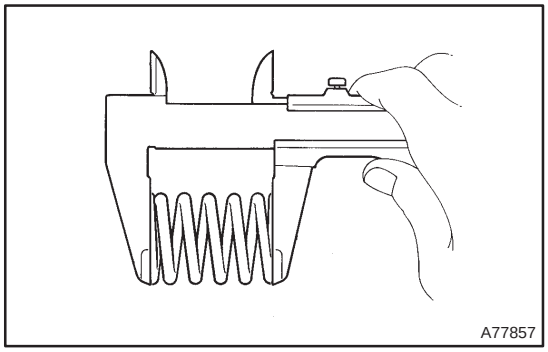
2. REMOVE EXHAUST PIPE ASSY TAIL

(a) Remove the 2 bolts and 2 compression springs.

(b) Disconnect the 3 exhaust pipe supports and remove the exhaust pipe tail.

(c) Remove the gasket from the exhaust pipe tail.



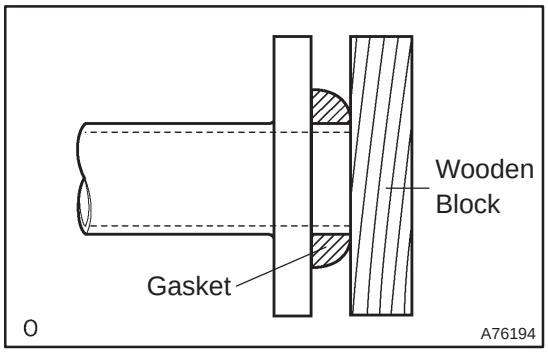


3. REMOVE EXHAUST PIPE ASSY FRONT

(a) Remove the 2 bolts and 2 compression springs.

(b) Disconnect the 2 exhaust pipe supports and remove the exhaust pipe front.

(c) Remove the gasket from the manifold converter.

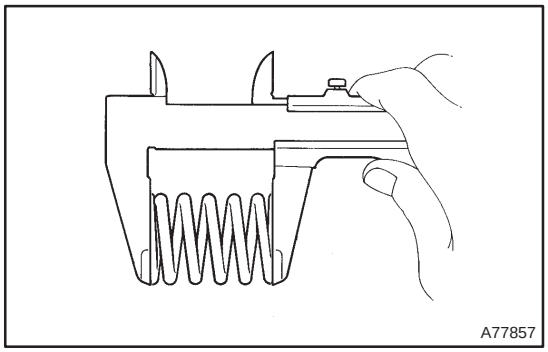


4. INSTALL EXHAUST PIPE ASSY FRONT

(a) Using vernier calipers, measure the free length of the compression spring.

Minimum Length: 41.5 mm (1.634 in.)

If the minimum length is less than minimum, replace the compression spring.



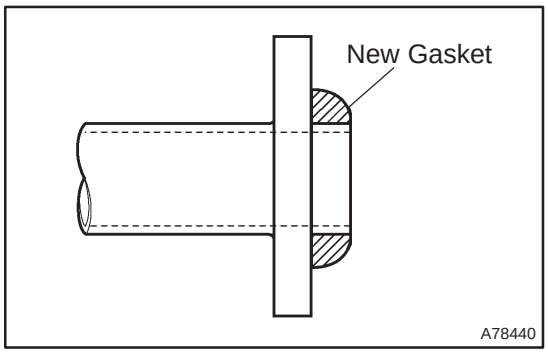
(b) Using a plastic hammer and a wooden block, tap in a new gasket until its surface is flush with the exhaust manifold.

NOTICE:

- **Tap in the gasket in the correct direction.**
- **Do not reuse the removed gasket.**
- **Be sure not to push in the gasket when installing the exhaust pipe.**

(c) Connect the 2 exhaust pipe supports and install the exhaust pipe front with the 2 compression springs and 2 bolts.

Torque: 43 N·m (440 kgf·cm, 32 ft·lbf)



5. INSTALL EXHAUST PIPE ASSY TAIL

(a) Using vernier calipers, measure the free length of the compression spring.

Minimum Length: 38.5 mm (1.515 in.)

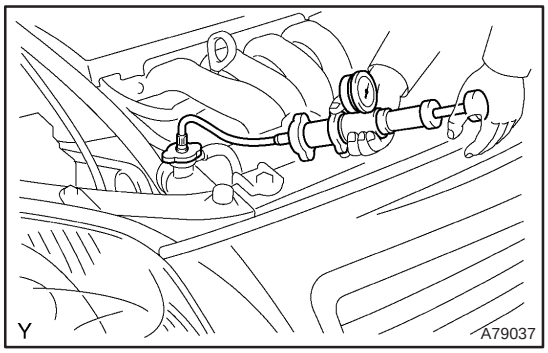
If the minimum length is less than minimum, replace the compression spring.

(b) Install a new gasket to the pipe front converter as shown in the illustration.

(c) Connect the 3 exhaust pipe supports and install the exhaust pipe tail with the 2 compression springs and 2 bolts.

Torque: 43 N·m (440 kgf·cm, 32 ft·lbf)

6. CHECK FOR EXHAUST GAS LEAKS



7. INSTALL FLOOR PANEL BRACE FRONT

Torque: 30 N·m (302 kgf·cm, 22 ft·lbf)

COOLING SYSTEM (1ZZ–FE/3ZZ–FE)

160N4–01

ON–VEHICLE INSPECTION

1. INSPECT COOLING SYSTEM FOR LEAKS

CAUTION:

To avoid the danger of being burned, do not remove the radiator cap while the engine and radiator are still hot. Thermal expansion will cause hot engine coolant and steam to blow out from the radiator.

(a) Remove the radiator support opening cover.
(b) Remove the engine room cover side.
(c) Fill the radiator with coolant and attach a radiator cap tester.
(d) Warm up the engine.
(e) Pump it to 118 kPa (1.2 kgf/cm^2, 17.1 psi), and check that the pressure does not drop.

If the pressure drops, check the hoses, radiator and water pump for leaks. If there are no signs or traces of external coolant leaks, check the heater core, cylinder block and head.

(f) Reinstall the engine room cover side.
(g) Reinstall the radiator support opening cover.

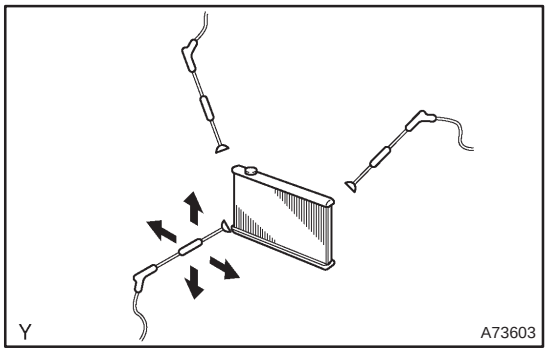
2. CHECK ENGINE COOLANT LEVEL AT RESERVOIR

(a) The engine coolant level should be between the ”LOW” and ”FULL” lines, when the engine is cold.

If low, check for leaks and add ”Toyota Long Life Coolant” or equivalent up to the ”FULL” line.

3. CHECK ENGINE COOLANT QUALITY

(a) Remove the radiator cap.



CAUTION:

To avoid the danger of being burned, do not remove the radiator cap while the engine and radiator are still hot. Thermal expansion will cause hot engine coolant and steam to blow out from the radiator.

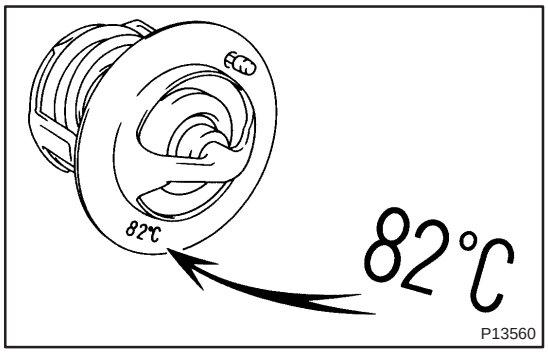
(b) Check if there is any excessive deposits of rust or scale around the radiator cap and radiator filler hole; the coolant should be free from oil.

If excessively dirty, replace the coolant.

(c) Reinstall the radiator cap.

4. INSPECT FINS BLOCKAGE

(a) If fins are clogged, wash them with water or a steam cleaner and dry with compressed air.



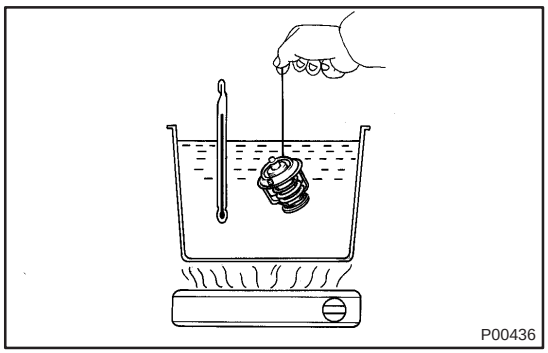
NOTICE:

- **If the distance between the steam cleaner and the core is too close, there is a possibility of damaging the fins, so keep the following injection distance.**

Injection Pressures kPa (kgf/cm^2, psi)	Injection Distance mm (in.)
2,942 to 4,903 (30 to 50, 427 to 711)	300 (11.811)
4,903 to 7,845 (50 to 80, 711 to 1,138)	500 (19.685)

- **If the fins are bent, straighten them with a screwdriver or pliers.**
- **Be careful not pour water directly onto electronic components.**

INSPECTION

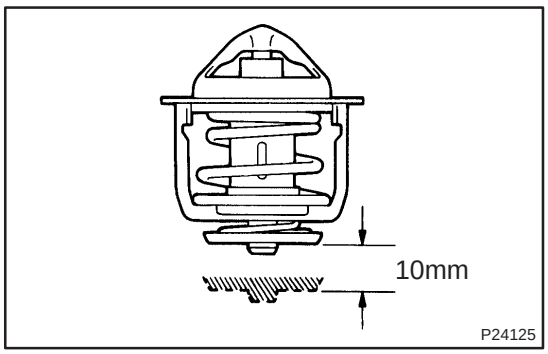


P13560

1. INSPECT THERMOSTAT

HINT:

The valve opening temperature is inscribed on the thermostat.



P00436

(a) Immerse the thermostat in water and gradually heat the water.

(b) Check the valve opening temperature.

Valve opening temperature:
80 to 84°C (176 to 183°F)

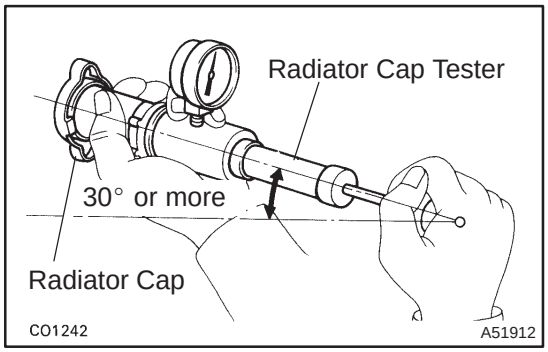
If the valve opening temperature is not as specified, replace the thermostat.

P24125

(c) Check the valve lift.

Valve lift: 10 mm (0.39 in.) or more at 95°C (203°F)

If the valve lift is not as specified, replace the thermostat.



(d) Check that the valve is fully closed when the thermostat is at low temperatures (below 77°C (171°F)).

If not closed, replace the thermostat.

2. INSPECT RADIATOR CAP SUB–ASSY

NOTICE:

- **If the radiator cap is contaminatied, rinse it with water.**
- **Before using a radiator cap tester, wet the relief valve and the pressure valve with engine coolant or water.**
- **When performing following steps (a) and (b), keep the tester at an angle of over 30° above horizontal.**

(a) Using a radiator cap tester, slowly pump the tester and check that air is coming from the vacuum valve.

Pump speed: 1 push / 3 seconds or more

NOTICE:

Push the pump at a constant speed.

If air is not coming from the vacuum valve, replace the radiator cap.

(b) Pump the tester and measure the relief valve opening pressure.

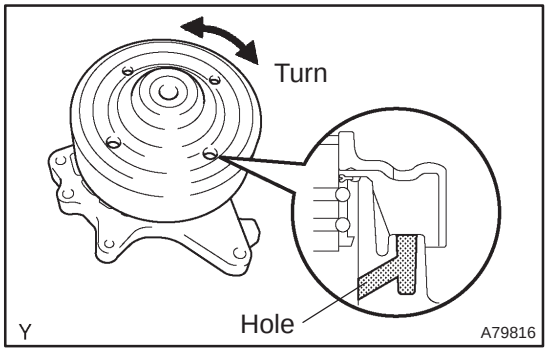
NOTICE:

The following pump speed is for the first pump only (in order to close the vacuum valve). After the first pump, the pump speed can be reduced.

Pump speed: 1 push within 1 second

Standard opening pressure:

74 to 103 kPa (0.75 to 1.05 kgf/cm^2, 10.7 to 14.9 psi)



Minimum opening pressure:

59 kPa (0.6 kgf/cm^2, 8.6 psi)

If the opening pressure is less than minimum, replace the radiator cap.

HINT:

Use the tester's maximum reading as the opening pressure.

3. INSPECT WATER PUMP ASSY

(a) Visually check the drain hole for coolant leakage.

If leakage is found, replace the water pump.

(b) Turn the pulley, and check that the water pump bearing moves smoothly and does not make noise.

If necessary, replace the water pump.

COOLING FAN SYSTEM (1ZZ–FE/3ZZ–FE)

1600R–14

ON–VEHICLE INSPECTION

HINT:

It is normal that the cooling fan sometime rotates when the ignition switch is turned from ACC to ON.

1. CHECK COOLING FAN OPERATION WITH LOW TEMPERATURE (Below 94.5°C (202°F))

(a) Turn the ignition switch ON.

(b) Check that the cooling fan stops.

If not, check the cooling fan relay and engine coolant temperature sensor, and check if there is its connector disconnection or circuit open between them.

(c) Disconnect the engine coolant temperature sensor connector.

(d) Check that the cooling fan rotates.

If not, check the fuses, cooling fan relay, ECM and cooling fan, and check for short in a circuit between the cooling fan relay and the engine coolant temperature sensor.

(e) Reconnect the engine coolant temperature sensor connector.

2. CHECK COOLING FAN OPERATION WITH HIGH TEMPERATURE (Above 96°C (205°F))

(a) Start the engine, and raise coolant temperature to above 96°C (205°F).

HINT:

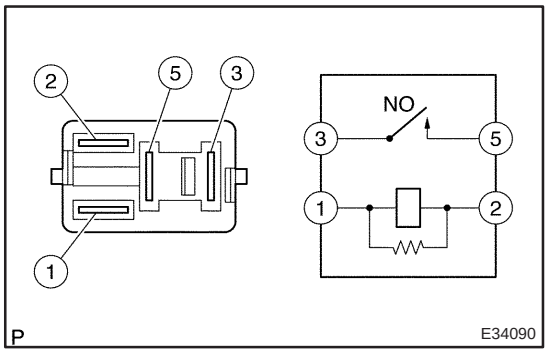
Coolant temperature is detected by the engine coolant temperature sensor on the water outlet.

(b) Check that the cooling fan rotates.

If not, replace the engine coolant temperature sensor.

3. INSPECT COOLING FAN

(a) Disconnect the cooling fan connector.



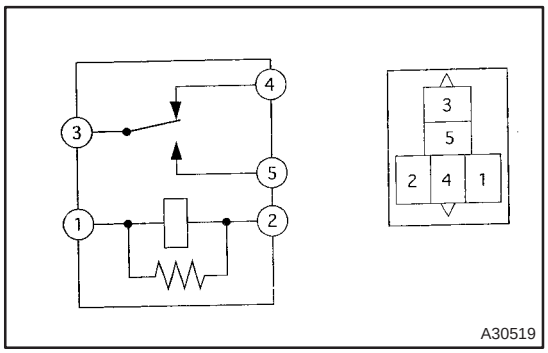
(b) Connect battery and ammeter to the connector.

(c) Check that the cooling fan rotates smoothly, and check the reading on the ammeter.

Standard amperage: Approximately. 8 to 12 A at 20°C (68°F)

(d) Reconnect the cooling fan connector.

INSPECTION



1. INSPECT COOLING FAN RELAY

(a) Continuity inspection.

(1) Using an ohmmeter, check for continuity between each terminal.

Specified condition:

Terminal No.	Specified condition
1 – 2	Continuity
3 – 5	No continuity
	Continuity (Apply battery voltage terminals 1 and 2)

2. INSPECT COOLING FAN RELAY NO.2

(a) Continuity inspection.

(1) Using an ohmmeter, check for continuity between each terminal.

Specified condition:

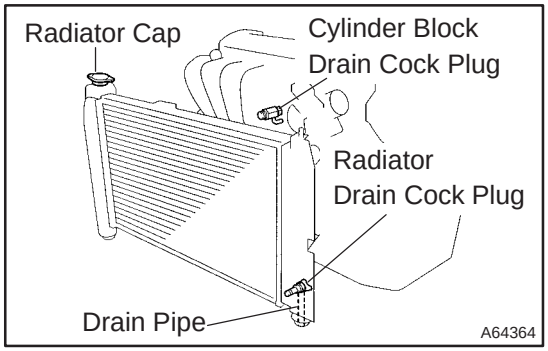
Terminal No.	Specified condition
1 – 2 3 – 4	Continuity
3 – 5	No continuity
	Continuity (Apply battery boltage terminals 1 and 2)

3. INSPECT COOLING FAN RESISTOR

(a) Using an ohmmeter, measure the resistance between the terminals.

Resistance: 1.17 to 1.43 Ω at 20 °C (68 °F)

ENGINE COOLANT (1ZZ–FE/3ZZ–FE)



160MH–01

REPLACEMENT

1. DRAIN ENGINE COOLANT

CAUTION:
To avoid the danger of being burned, do not remove the radiator cap while the engine and radiator are still hot.
Thermal expansion will cause hot engine coolant and steam to blow out from the radiator.

(a) Remove the radiator cap.

(b) Loosen the radiator drain cock plug and the cylinder block drain cock plug, and drain engine coolant.
(c) Close the radiator drain cock plug.
(d) Close the cylinder block drain plug.
Torque: 13 N·m (130 kgf·cm, 9 ft·lbf) for engine

2. ADD ENGINE COOLANT

(a) Tighten the radiator drain plug, and pour coolant into radiator until it overflows.
Capacity:

Transmission type	Steering	Coolant Capacity [liters (US gts, lmp. gts)]
M/T	LHD	5.8 (6.1, 5.1)
M/T	RHD	5.9 (6.2, 5.2)
A/T	LHD	5.7 (6.0, 5.0)
A/T	RHD	5.8 (6.1, 5.1)

NOTICE:
- **Do not use an alcohol type coolant or plain water alone.**
- **The coolant should be mixed with plain water (preferably demineralized water or distilled water).**

HINT:
- Use of improper coolants may damage engine cooling system.
- Use ”Toyota Long Life Coolant” or equivalent and mix it with plain water according to the manufacturer’s instruction.
- Using of coolant with includes more than 50 % (freezing protection down to –35°C (–31°F)) or 60 % (freezing protection down to –50°C (–58°F)) of ethylene–glycol is recommended but not more than 70 %.
- Press the radiator inlet and outlet hose several times by hand.
- If the coolant level gets lower, pour coolant.

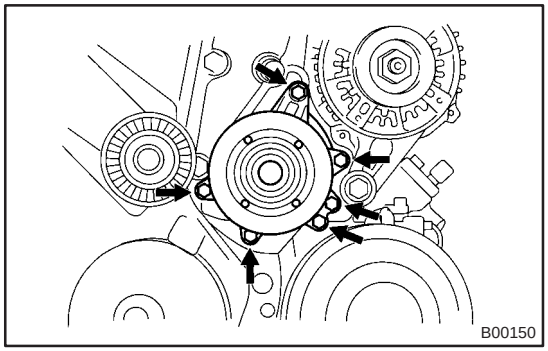
(b) Reinstall the radiator cap.
(c) Pour engine coolant into the reservoir tank until it reaches full line.

(d) Warm up the engine until the thermostat valve begins to open.

HINT:

Press the radiator inlet and outlet hose several times by hand during the warming up.

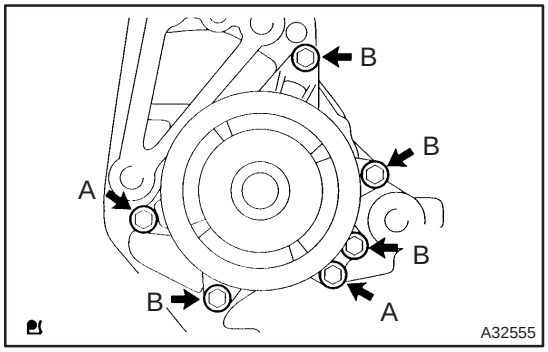
(e) Stop the engine and wait until the coolant temperature gets cold. Then remove the radiator cap to check the coolant level.
- If the level gets lower, perform the procedures from (a) through (e) again.
- If the level does not gets lower, fill the reservoir tank with engine coolant.



3. CHECK FOR ENGINE COOLANT LEAKS (See page 16–1)

WATER PUMP ASSY (1ZZ–FE/3ZZ–FE)

160MI–01



REPLACEMENT

1. REMOVE RADIATOR SUPPORT OPENING COVER (See page 14–27)
2. REMOVE ENGINE ROOM COVER SIDE (See page 14–27)
3. REMOVE ENGINE UNDER COVER SUB–ASSY NO.1 (See page 14–27)
4. REMOVE ENGINE UNDER COVER RH (See page 14–27)
5. DRAIN ENGINE COOLANT (See page 16–1)
6. REMOVE FAN AND GENERATOR V BELT (See page 14–5)
7. REMOVE GENERATOR ASSY (See page 19–7)

8. **REMOVE WATER PUMP ASSY**

(a) Remove the 6 bolts, the water pump and the O–ring.

9. **INSTALL WATER PUMP ASSY**

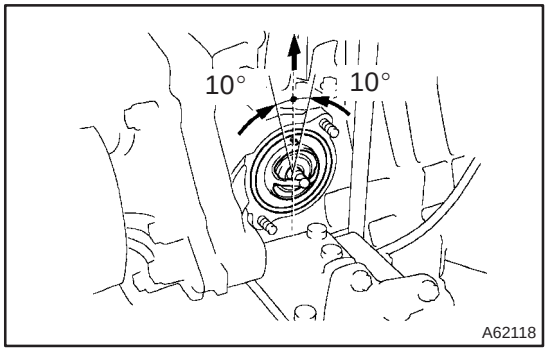
(a) Place a new O–ring on the timing chain cover.

(b) Install the water pump with the 6 bolts.

Torque:
9.0 N·m (92 kgf·cm, 80 in·lbf) for Bolt A
11 N·m (113 kgf·cm, 8 ft·lbf) for Bolt B

10. INSTALL GENERATOR ASSY (See page 19–7)
11. ADD ENGINE COOLANT (See page 16–7)
12. CHECK FOR ENGINE COOLANT LEAKS (See page 16–1)

THERMOSTAT (1ZZ–FE/3ZZ–FE)



160MJ–01

REPLACEMENT

1. **REMOVE RADIATOR SUPPORT OPENING COVER (See page 14–27)**
2. **ENGINE ROOM COVER SIDE (See page 14–27)**
3. **REMOVE ENGINE UNDER COVER SUB–ASSY NO.1 (See page 14–27)**
4. **DRAIN ENGINE COOLANT (See page 16–1)**
5. **REMOVE FAN AND GENERATOR V BELT (See page 14–5)**
6. **REMOVE GENERATOR ASSY (See page 19–7)**
7. **REMOVE WATER INLET**

(a) Remove the 2 nuts and the water inlet.

8. **REMOVE THERMOSTAT**

9. **INSTALL THERMOSTAT**

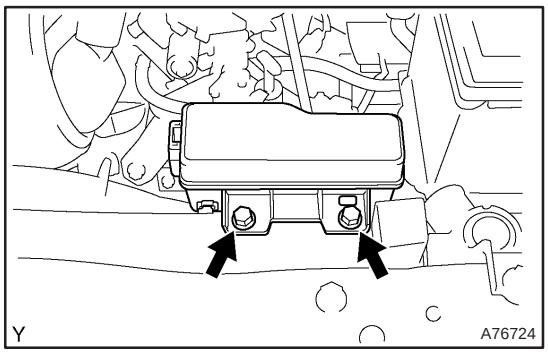
(a) Install a new gasket to the thermostat.

(b) Install the thermostat with the jiggle valve upward as shown in the illustration.

10. **INSTALL WATER INLET**

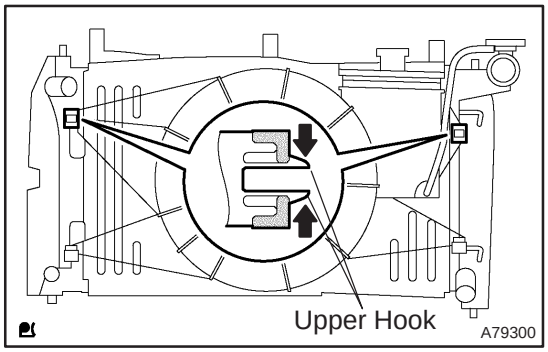
(a) Install the water inlet with the 2 nuts.

Torque: 11 N·m (112 kgf·cm, 8 ft·lbf)



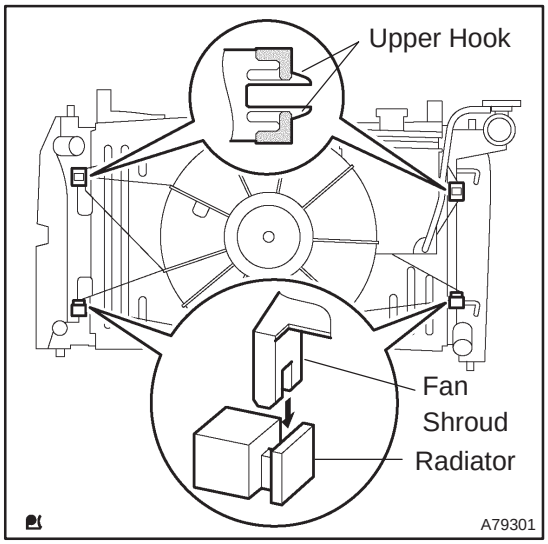
11. **INSTALL GENERATOR ASSY (See page 19–7)**
12. **ADD ENGINE COOLANT (See page 16–7)**
13. **CHECK FOR ENGINE COOLANT LEAKS (See page 16–1)**

RADIATOR ASSY (1ZZ–FE/3ZZ–FE)



160MK–01

REPLACEMENT



1. REMOVE RADIATOR SUPPORT OPENING COVER (See page 14–27)
2. REMOVE ENGINE ROOM COVER SIDE (See page 14–27)
3. ENGINE UNDER COVER SUB–ASSY NO.1 (See page 14–27)
4. DRAIN ENGINE COOLANT (See page 16–1)
5. DISCONNECT RADIATOR HOSE INLET
(a) Disconnect the radiator hose inlet from the radiator.
6. DISCONNECT RADIATOR HOSE OUTLET
(a) Disconnect the radiator hose outlet from the radiator.
7. DISCONNECT OIL COOLER INLET TUBE NO.1 (A/T TRANSAXLE)
(a) Disconnect the oil cooler inlet tube from the radiator.
8. DISCONNECT OIL COOLER OUTLET TUBE NO.1 (A/T TRANSAXLE)
(a) Disconnect the oil cooler outlet tube from the radiator.

9. REMOVE RADIATOR ASSY
(a) Disconnect the fan connector and the 2 harness clamps.
(b) Remove the 2 bolts and the relay block.
(c) Remove the 2 bolts, the 2 radiator support upper and the radiator.
(d) Remove the 2 support radiator LWRs from the radiator.

(e) Pinch and push each upper hook on the fan shroud to release and remove the fan shroud from the radiator.

10. INSTALL RADIATOR ASSY

(a) Align the 2 keyways of the fan shroud with the 2 keys located on the lower bottom of the radiator and fit them.

(b) Install the fan should to the radiator with the 2 upper hooks. You can hear ”click” sounds when the hooks are securely fitted.

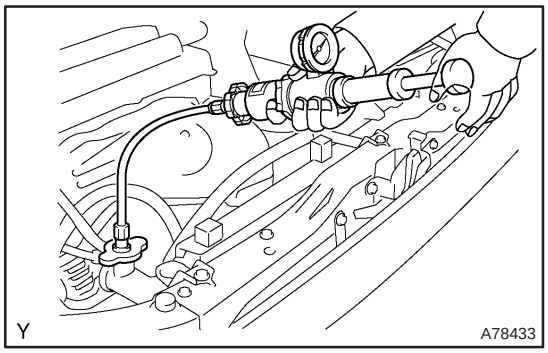
(c) Install the 2 support radiator LWRs to the radiator.

(d) Install the radiator with the 2 bolts and 2 radiator support uppers.

Torque: 19 N·m (194 kgf·cm, 14 ft·lbf)

(e) Install the relay block with the 2 bolts.

(f) Connect the fan connector and 2 harness clamps.



11. ADD ENGINE COOLANT (See page 16–7)

12. CHECK FOR ENGINE COOLANT LEAKS (See page 16–1)

COOLING SYSTEM (1AZ–FE)

ON–VEHICLE INSPECTION

160N1–01

1. INSPECT COOLING SYSTEM FOR LEAKS

CAUTION:

To avoid the danger of being burned, do not remove the radiator cap while the engine and radiator are still hot. Thermal expansion will cause hot engine coolant and steam to blow out from the radiator.

(a) Remove the radiator support opening cover.
(b) Remove the engine room cover side.
(c) Fill the radiator with coolant and attach a radiator cap tester.
(d) Warm up the engine.
(e) Pump it to 137 kPa (1.4 kgf/cm^2, 19.9 psi), and check that the pressure does not drop.

If the pressure drops, check the hoses, radiator and water pump for leaks. If there are no signs or traces of external coolant leaks, check the heater core, cylinder block and head.

(f) Reinstall the engine room cover side.
(g) Reinstall the radiator support opening cover.

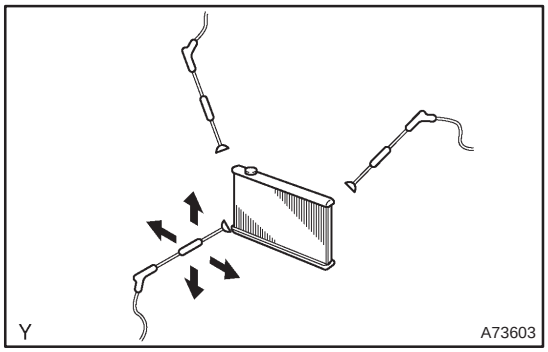
2. CHECK ENGINE COOLANT LEVEL AT RESERVOIR

(a) The engine coolant should be between the ”LOW” and ”FULL” lines, when the engine is cold.

If low, check for leaks and add ”Toyota Long Life Coolant” or equivalent up to the ”FULL” line.

3. CHECK ENGINE COOLANT QUALITY

(a) Remove the radiator cap.



CAUTION:

To avoid the danger of being burned, do not remove the radiator cap while the engine and radiator are still hot. Thermal expansion will cause hot engine coolant and steam to blow out from the radiator.

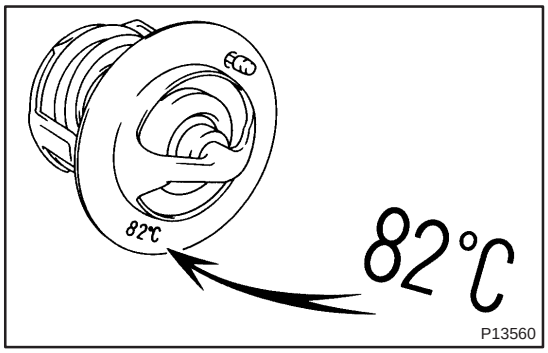
(b) Check if there is any excessive deposits of rust or scale around the radiator cap and radiator filler hole; the coolant should be free from oil.

If excessively dirty, replace the coolant.

(c) Reinstall the radiator cap.

4. INSPECT FINS BLOCKAGE

(a) If fins are clogged, wash them with water or a steam cleaner and dry with compressed air.

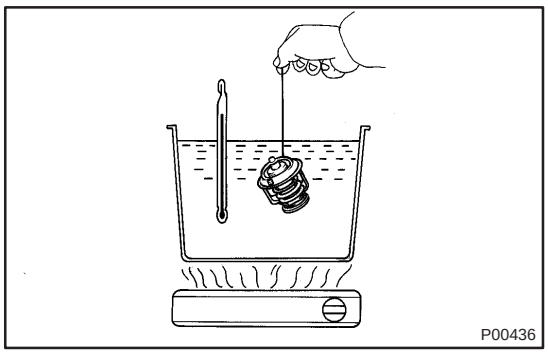


NOTICE:

- **If the distance between the steam cleaner and the core is too close, there is a possibility of damaging the fins, so keep the following injection distance.**

Injection Pressures kPa (kgf/cm^2, psi)	Injection Distance mm (in.)
2,942 to 4,903 (30 to 50, 427 to 711)	300 (11.811)
4,903 to 7,845 (50 to 80, 711 to 1,138)	500 (19.685)

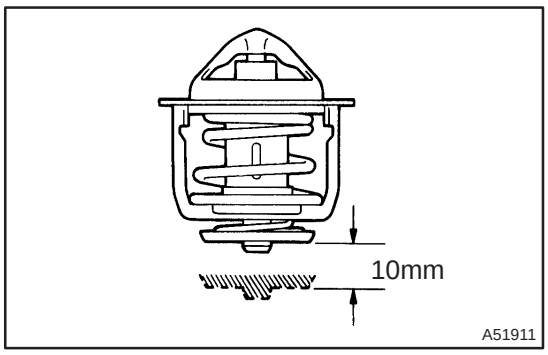
- **If the fins are bent, straighten them with a screwdriver or pliers.**
- **Be careful not pour water directly onto electronic components.**



INSPECTION

1. INSPECT THERMOSTAT

HINT:



The thermostat is numbered with the valve opening temperature.

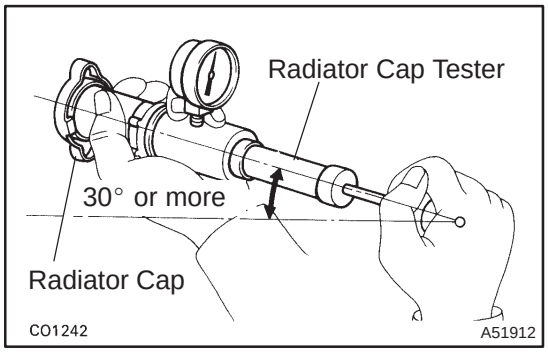
(a) Immerse the thermostat in water and gradually heat the water.

(b) Check the valve opening temperature of the thermostat.
Valve opening temperature:
80 to 84°C (176 to 183°F)

If the valve opening temperature is not as specified, replace the thermostat.

(c) Check the valve lift.
Valve lift: 10 mm (0.394 in.) or more at 95°C (203°F)

If the valve lift is not as specified, replace the thermostat.



(d) Check that the valve is fully closed when the thermostat is at low temperatures (below 77°C (171°F)).

If not closed, replace the thermostat.

2. INSPECT RADIATOR CAP SUB–ASSY

NOTICE:

- **If the radiator cap is contaminatied, rinse it with water.**
- **Before using a radiator cap tester, wet the relief valve and the pressure valve with engine coolant or water.**
- **When performing following steps (a) and (b), keep the tester at an angle of over 30° above horizontal.**

(a) Using a radiator cap tester, slowly pump the tester and check that air is coming from the vacuum valve.

Pump speed: 1 push / 3 seconds or more

NOTICE:

Push the pump at a constant speed.

If air is not coming from the vacuum valve, replace the radiator cap.

(b) Pump the tester and measure the relief valve opening pressure.

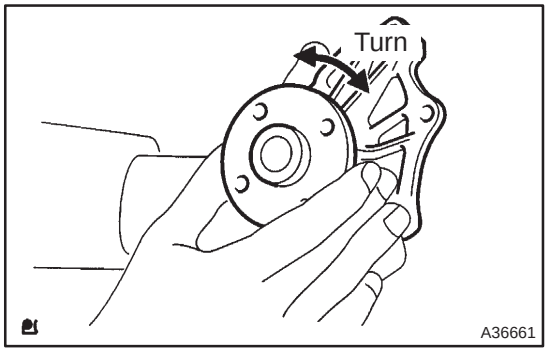
NOTICE:

The following pump speed is for the first pump only (in order to close the vacuum valve). After the first pump, the pump speed can be reduced.

Pump speed: 1 push within 1 second

Standard opening pressure:

93 to 122 kPa (0.95 to 1.25 kgf/cm^2, 13.4 to 17.6 psi)



Minimum opening pressure:

78 kPa (0.8 kgf/cm^2, 11.2 psi)

If the opening pressure is less than minimum, replace the radiator cap.

HINT:

Use the tester's maximum reading as the opening pressure.

3. INSPECT WATER PUMP ASSY

(a) Visually check the drain hole for coolant leakage.

If leakage is found, replace the water pump.

(b) Turn the pulley, and check that the water pump bearing moves smoothly and does not make noise.

If necessary, replace the water pump.

COOLING FAN SYSTEM (1AZ–FE)

1600R–13

ON–VEHICLE INSPECTION

HINT:

It is normal that the cooling fan sometime rotates when the ignition switch is turned from ACC to ON.

1. CHECK COOLING FAN OPERATION WITH LOW TEMPERATURE (Below 77°C (171°F))

(a) Turn the ignition switch ON.

(b) Check that the cooling fan stops.

If not, check the cooling fan relay and engine coolant temperature sensor, and check for disconnection of connectors or wire break between the cooling fan relay and engine coolant temperature sensor.

(c) Disconnect the engine coolant temperature sensor connector.

(d) Check that the cooling fan rotates.

If not, check the fuses, cooling fan relay, ECM and cooling fan, and check for a short circuit between the cooling fan relay and engine coolant temperature sensor.

(e) Reconnect the engine coolant temperature sensor connector.

2. CHECK COOLING FAN OPERATION WITH HIGH TEMPERATURE (Above 95.5°C (204°F))

(a) Start the engine, and raise coolant temperature to above 95.5°C (204°F).

HINT:

Coolant temperature is the detected value by the engine coolant temperature sensor on the water outlet.

(b) Check that the cooling fan rotates.

If not, replace the engine coolant temperature sensor.

3. INSPECT COOLING FAN

(a) Disconnect the cooling fan connector.

(b) Connect battery and ammeter to the cooling fan connector.

(c) Check that the cooling fan rotates smoothly, and check the reading on the ammeter.

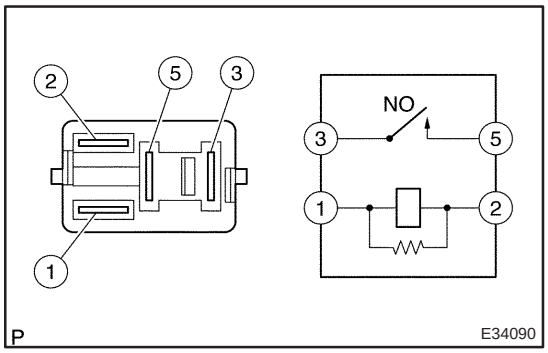
Standard amperage:
5.2 to 8.2 A at 20°C (68°F) (M/T)
8.3 to 11.3 A at 20°C (68°F) (A/T)

(d) Reconnect the cooling fan connector.

4. INSPECT COOLING FAN No.2 (With Air Conditioner)

(a) Disconnect the cooling fan connector.

(b) Connect battery and ammeter to the cooling fan connector.



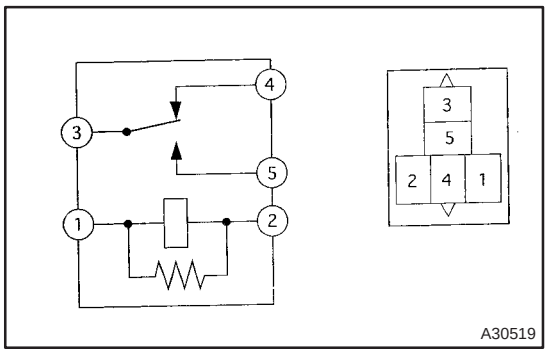
(c) Check that the cooling fan rotates smoothly, and check the reading on the ammeter.

Standard amperage:
5.2 to 8.2 A at 20°C (68°F) (M/T)
8.3 to 11.3 A at 20°C (68°F) (A/T)

(d) Reconnect the cooling fan connector.

160N3–01

INSPECTION



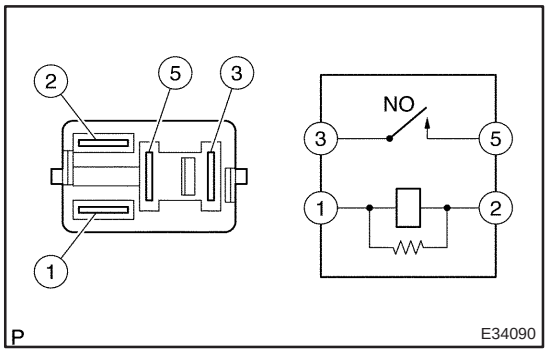
1. INSPECT COOLING FAN RELAY

(a) Continuity inspection.

(1) Using an ohmmeter, check for continuity between each terminal.

Specified condition:

Terminal No.	Specified condition
1 – 2	Continuity
3 – 5	No continuity
	Continuity (Apply battery voltage terminals 1 and 2)



2. INSPECT COOLING FAN RELAY NO.2

(a) Continuity inspection.

(1) Using an ohmmeter, check for continuity between each terminal.

Specified condition:

Terminal No.	Specified condition
1 – 2 3 – 4	Continuity
3 – 5	No continuity
	Continuity (Apply battery voltage terminals 1 and 2)

3. INSPECT COOLING FAN RELAY NO.3

(a) Continuity inspection.

(1) Using an ohmmeter, check for continuity between each terminal.

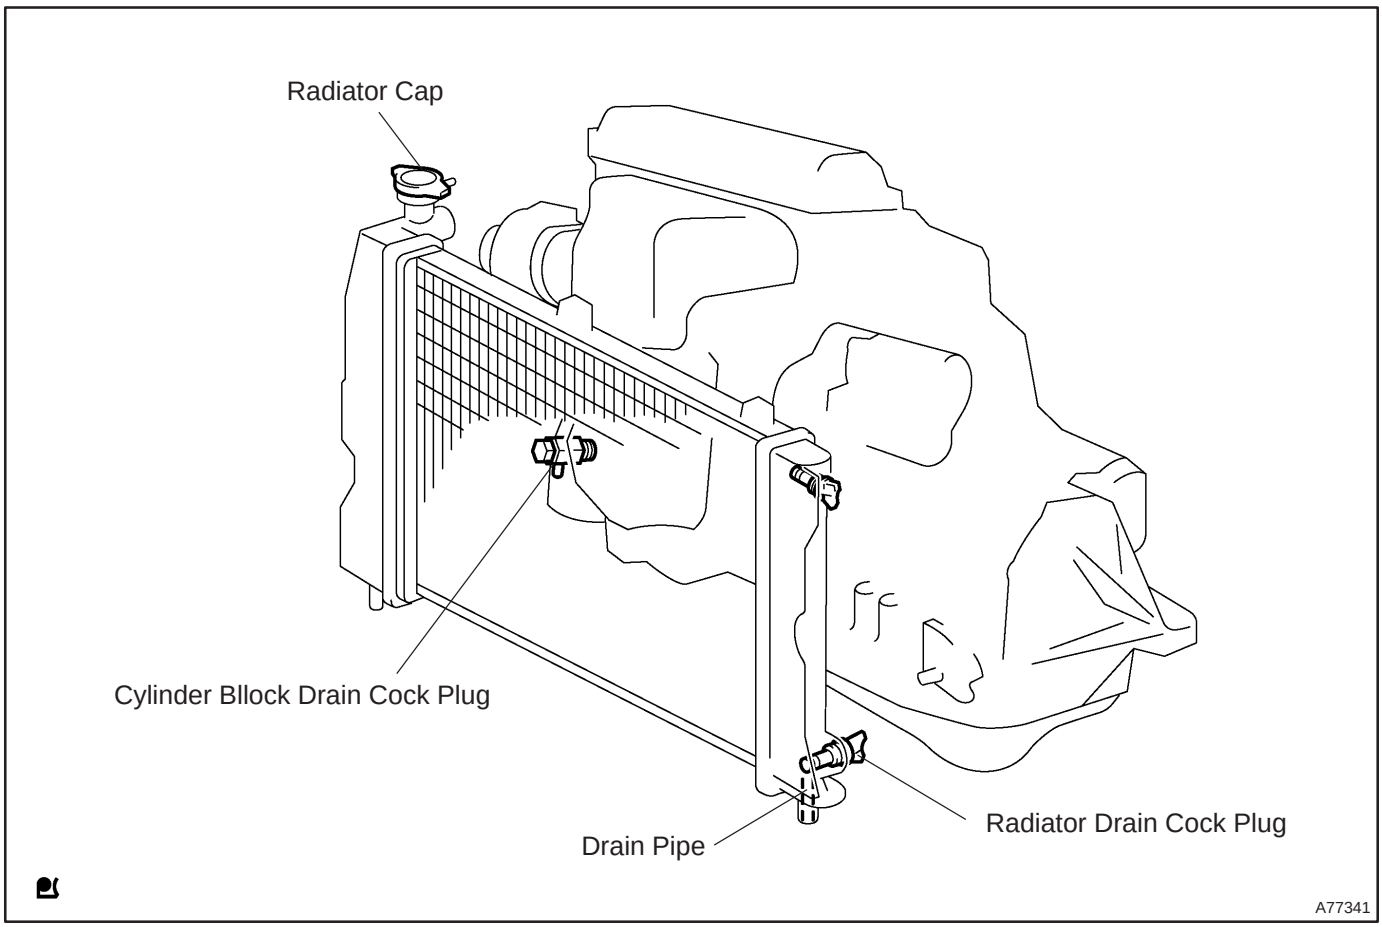
Specified condition:

Terminal No.	Specified condition
1 – 2	Continuity
3 – 5	No continuity
	Continuity (Apply battery voltage terminals 1 and 2)

ENGINE COOLANT (1AZ–FE)

160MV–01

REPLACEMENT



1. DRAIN ENGINE COOLANT

CAUTION:

To avoid the danger of being burned, do not remove the radiator cap while the engine and radiator are still hot, as fluid and steam can be blown out under pressure.

(a) Remove the radiator cap.

(b) Loosen the radiator plug and drain the coolant.

2. ADD ENGINE COOLANT

(a) Tighten the radiator drain plug, and pour coolant into radiator until it overflows.
Capacity:

Transmission type	Steering	Coolant Capacity [liters (US gts, lmp. gts)]
M/T	LHD	6.0 (6.3, 5.3)
M/T	RHD	6.1 (6.4, 5.4)
A/T	LHD	6.3 (6.7, 5.5)
A/T	RHD	6.4 (6.8, 5.6)

NOTICE:

- **Do not use an alcohol type coolant or plain water alone.**
- **The coolant should be mixed with plain water (preferably demineralized water or distilled water).**

HINT:

- Use of improper coolants may damage engine cooling system.
- Use ”Toyota Long Life Coolant” or equivalent and mix it with plain water according to the manufacturer’s directions.
- Using of coolant with includes more than 50 % (freezing protection down to –35°C (–31°F)) or 60 % (freezing protection down to –50°C (–58°F)) of ethylene–glycol is recommended but not more than 70 %.
- Press the radiator inlet and outlet hose several times with hard.
- If the coolant level gets lower, pour coolant.

(b) Reinstall the radiator cap.

(c) Pour engine coolant into the reservoir tank until it reaches full line.

(d) Warm up the engine until the thermostat valve begins to open.

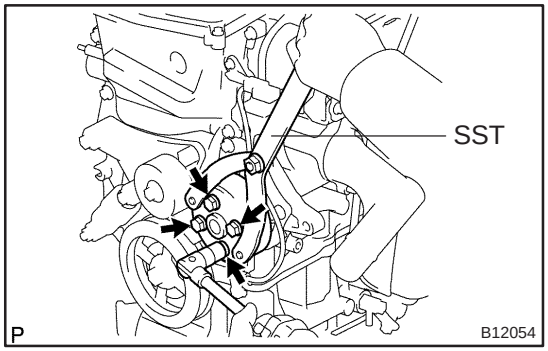
HINT:

Press the radiator inlet and outlet hose several times with hard during the warming up.

(e) Stop the engine and wait until the coolant temp. Gets cold. Then remove the radiator cap to check the coolant level.

HINT:

- If the level gets lower, perform the procedures above again.
- If the level does not gets lower, adjust the reservoir tank coolant level.



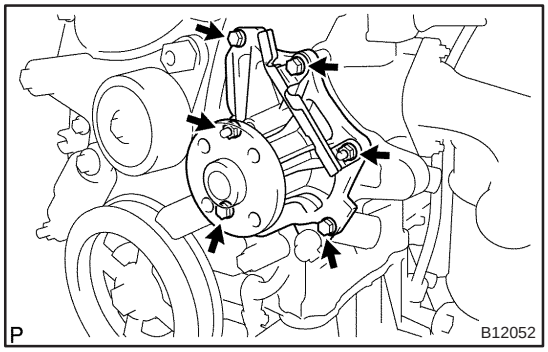
3. CHECK FOR ENGINE COOLANT LEAKS **(See page 16–13)**

WATER PUMP ASSY (1AZ–FE)

160MW–01

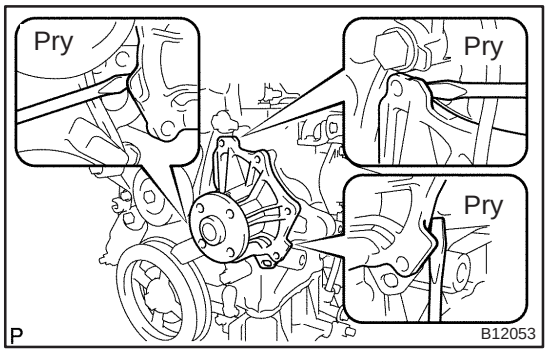
REPLACEMENT

1. **DRAIN COOLANT (See page 16–19)**
2. **REMOVE RADIATOR SUPPORT OPENING COVER**
3. **REMOVE ENGINE ROOM COVER SIDE**
4. **REMOVE ENGINE UNDER COVER RH**
5. **REMOVE FAN AND GENERATOR V BELT (See page 14–105)**
   SST 09249–63010
6. **REMOVE GENERATOR ASSY (See page 19–20)**



7. REMOVE WATER PUMP PULLEY

(a) Using SST, remove 4 bolts and pump pulley.
SST 09960–10010 (09962–01000, 09963–00700)

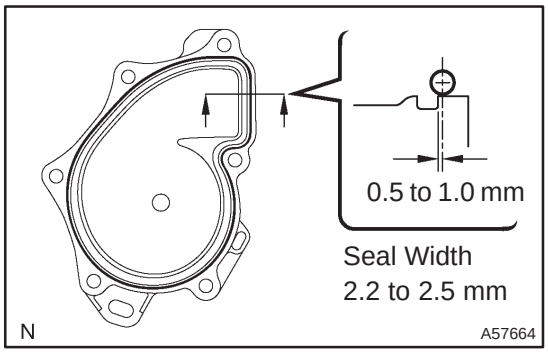


(b) Disconnect the crankshaft position sensor wire clamp from the water pump.

(c) Disconnect the crankshaft position sensor wire from the clamp on the water pump.

8. REMOVE WATER PUMP ASSY

(a) Remove 4 bolts, 2 nuts, wire clamp and water pump.

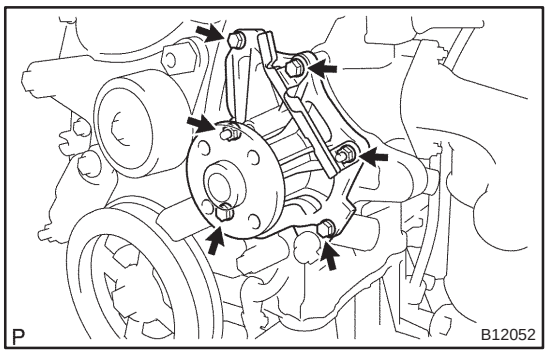


(b) Using a screwdriver, pry between the water pump and cylinder block, and remove the water pump.

NOTICE:

Be careful not to damage the contact surface of the water pump and cylinder block.

9. INSTALL WATER PUMP ASSY

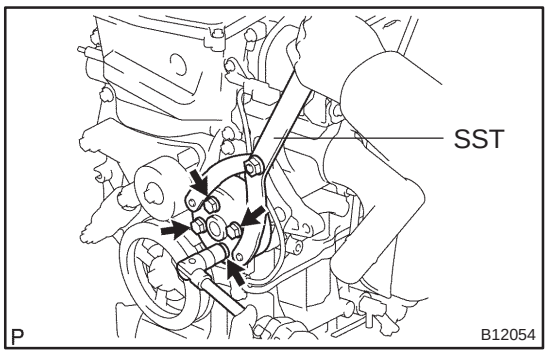


(a) Remove any old packing (FIPG) material from the contact surface.

(b) Apply seal packing to the water pump as shown in the illustration.

Seal packing: Part No. 08826 – 00100 or equivalent

- Install a nozzle that has been cut to a 2.2 to 2.5 mm (0.09 to 0.10 in.) opening.
- Parts must be assembled within 5 minutes of application. Otherwise the material must be removed and reapplied.
- Immediately remove nozzle from the tube and reinstall cap.



(c) Install the water pump and wire clamp with 4 bolts and 2 nuts.

Torque: 9.0 N·m (90 kgf·cm, 80 in.·lbf)

(d) Install the crankshaft position sensor wire harness clamp to the water pump.

(e) Install the crankshaft position sensor wire to the wire clamp on the water pump.

10. INSTALL WATER PUMP PULLEY

(a) Using SST, install the pump pulley with 4 bolts.

SST 09960–10010 (09962–01000, 09963–00700)

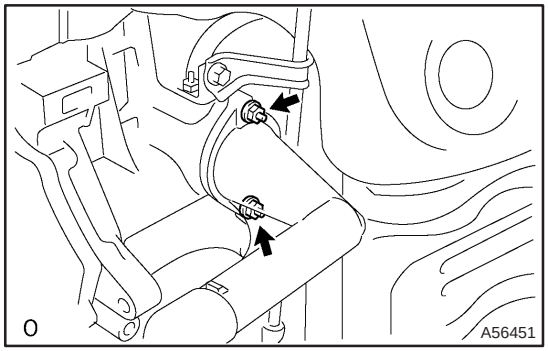
Torque: 26 N·m (265 kgf·cm, 19 ft·lbf)

11. INSTALL GENERATOR ASSY (See page 19–20)

12. INSTALL FAN AND GENERATOR V BELT (See page 14–105)

SST 09249–63010

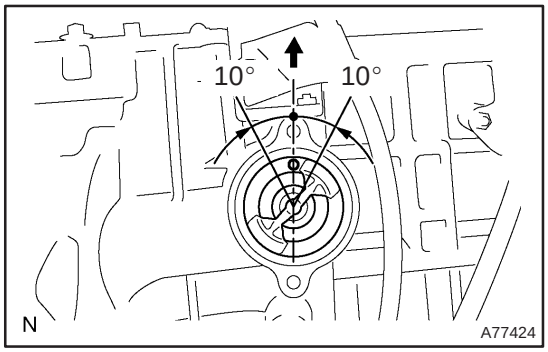
13. ADD COOLANT (See page 16–19)



14. INSPECT CHECK FOR ENGINE COOLANT LEAKS (See page 16–17)

THERMOSTAT (1AZ–FE)

160MT–01



REPLACEMENT

1. **DRAIN COOLANT(See page 16–19)**
2. **REMOVE RADIATOR SUPPORT OPENING COVER**
3. **REMOVE ENGINE ROOM COVER SIDE**
4. **REMOVE ENGINE UNDER COVER RH**
5. **REMOVE FAN AND GENERATOR V BELT (See page 14–105)**
   SST 09249–63010
6. **REMOVE GENERATOR ASSY (See page 19–20)**

7. **REMOVE WATER INLET**
(a) Remove 2 nuts, and disconnect the water inlet from the cylinder block.

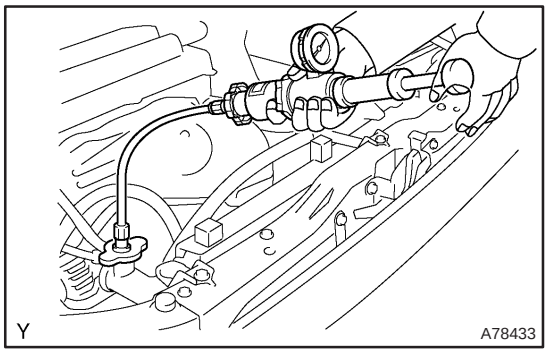
8. **REMOVE THERMOSTAT**

9. **INSTALL THERMOSTAT**
(a) Install a new gasket to the thermostat.
(b) Install the thermostat with the jiggle valve upward.
HINT:
The jiggle valve may be set within 10° on either side of the prescribed position.

10. **INSTALL WATER INLET**
(a) Install the water inlet with 2 nuts.
Torque: 9.0 N·m (92 kgf·cm, 7 in.·lbf)
11. **INSTALL GENERATOR ASSY (See page 19–20)**
12. **INSTALL FAN AND GENERATOR V BELT (See page 14–105)**
SST 09249–63010
13. **ADD COOLANT (See page 16–19)**
14. **INSPECT CHECK FOR ENGINE COOLANT LEAKS (See page 16–13)**

RADIATOR ASSY (1AZ–FE)

160MX–01



REPLACEMENT

1. DRAIN COOLANT (See page 16–19)
2. REMOVE RADIATOR SUPPORT OPENING COVER
3. REMOVE ENGINE ROOM COVER SIDE
4. REMOVE ENGINE UNDER COVER RH
5. DISCONNECT RADIATOR HOSE INLET
6. DISCONNECT RADIATOR HOSE OUTLET
7. REMOVE RADIATOR SUPPORT UPPER
(a) Disconnect the fan w/ motor wire harness, connector and the horn connector.
(b) Remove 4 bolts, the nut and the radiator support.
8. REMOVE RADIATOR ASSY
(a) Remove 2 upper support, and radiator assembly
9. REMOVE RADIATOR SUPPORT LOWER
10. REMOVE FAN ASSY W/MOTOR
(a) Remove 6 bolts and fan w/motor.
11. INSTALL FAN ASSY W/MOTOR
12. INSTALL RADIATOR SUPPORT LOWER
13. INSTALL RADIATOR ASSY
14. INSTALL RADIATOR SUPPORT UPPER
(a) Install radiator support with 2 bolts.
Torque: 19 N·m (194 kgf·cm, 14 ft·lbf)
15. ADD COOLANT (See page 16–19)
16. INSPECT CHECK FOR ENGINE COOLANT LEAKS (See page 16–13)

COOLING SYSTEM (1AZ–FSE)

160MY–01

ON–VEHICLE INSPECTION

1. INSPECT COOLING SYSTEM FOR LEAKS

CAUTION:

To avoid the danger of being burned, do not remove the radiator cap while the engine and radiator are still hot. Thermal expansion will cause hot engine coolant and steam to blow out from the radiator.

(a) Remove the radiator support opening cover.
(b) Remove the engine room cover side.
(c) Fill the radiator with coolant and attach a radiator cap tester.
(d) Warm up the engine.
(e) Pump it to 118 kPa (1.2 kgf/cm^2, 17.1 psi), and check that the pressure does not drop.

If the pressure drops, check the hoses, radiator and water pump for leaks. If there are no signs or traces of external coolant leaks, check the heater core, cylinder block and head.

(f) Reinstall the engine room cover side.
(g) Reinstall the radiator support opening cover.

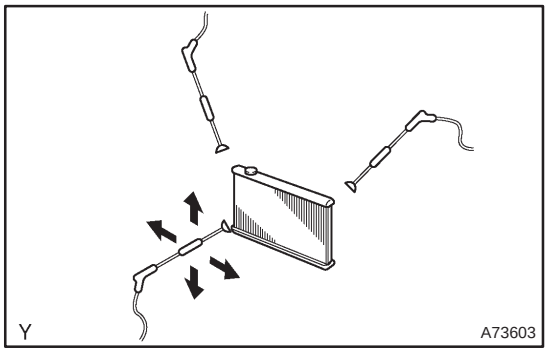
2. CHECK ENGINE COOLANT LEVEL AT RESERVOIR

(a) The engine coolant should be between the ”LOW” and ”FULL” lines, when the engine is cold.

If low, check for leaks and add ”Toyota Long Life Coolant” or equivalent up to the ”FULL” line.

3. CHECK ENGINE COOLANT QUALITY

(a) Remove the radiator cap.



CAUTION:

To avoid the danger of being burned, do not remove the radiator cap while the engine and radiator are still hot. Thermal expansion will cause hot engine coolant and steam to blow out from the radiator.

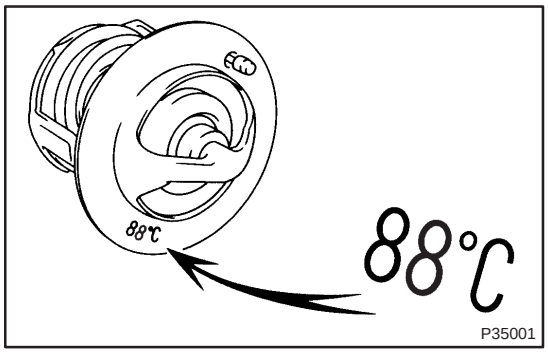
(b) Check if there is any excessive deposits of rust or scale around the radiator cap and radiator filler hole; the coolant should be free from oil.

If excessively dirty, replace the coolant.

(c) Reinstall the radiator cap.

4. INSPECT FINS BLOCKAGE

(a) If fins are clogged, wash them with water or a steam cleaner and dry with compressed air.



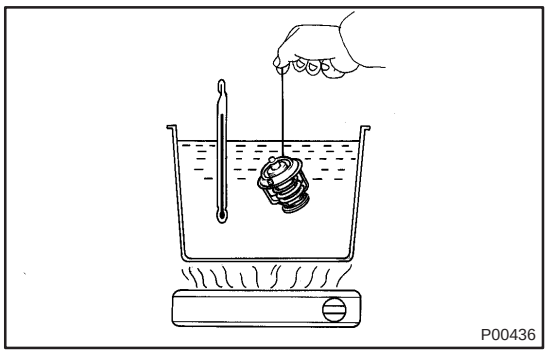
NOTICE:

- **If the distance between the steam cleaner and the core is too close, there is a possibility of damaging the fins, so keep the following injection distance.**

Injection Pressures kPa (kgf/cm^2, psi)	Injection Distance mm (in.)
2,942 to 4,903 (30 to 50, 427 to 711)	300 (11.811)
4,903 to 7,845 (50 to 80, 711 to 1,138)	500 (19.685)

- **If the fins are bent, straighten them with a screwdriver or pliers.**
- **Be careful not pour water directly onto electronic components.**

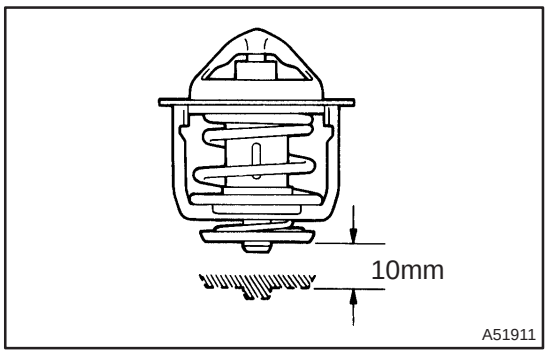
INSPECTION



P35001

1. INSPECT THERMOSTAT

HINT:



The thermostat is numbered with the valve opening temperature.

P00436

(a) Immerse the thermostat in water an gradually heat the water.

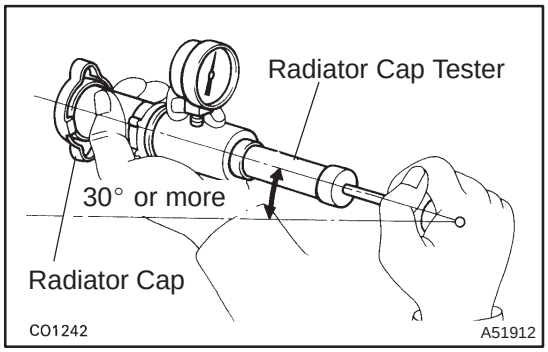
(b) Check the valve opening temperature of the thermostat.
Valve opening temperature:
86 to 90°C (187 to 198°F)

If the valve opening temperature is not as specified, replace the thermostat.

A51911

(c) Check the valve lift.
Valve lift: 10 mm (0.394 in.) or more at 100°C (212°F)

If the valve lift is not as specified, replace the thermostat.



(d) Check that the valve is fully closed when the thermostat is at low temperatures (below 83°C (181°F)).

If not closed, replace the thermostat.

2. INSPECT RADIATOR CAP SUB–ASSY

NOTICE:

- **If the radiator cap is contaminatied, rinse it with water.**
- **Before using a radiator cap tester, wet the relief valve and the pressure valve with engine coolant or water.**
- **When performing following steps (a) and (b), keep the tester at an angle of over 30° above horizontal.**

(a) Using a radiator cap tester, slowly pump the tester and check that air is coming from the vacuum valve.

Pump speed: 1 push / 3 seconds or more

NOTICE:

Push the pump at a constant speed.

If air is not coming from the vacuum valve, replace the radiator cap.

(b) Pump the tester and measure the relief valve opening pressure.

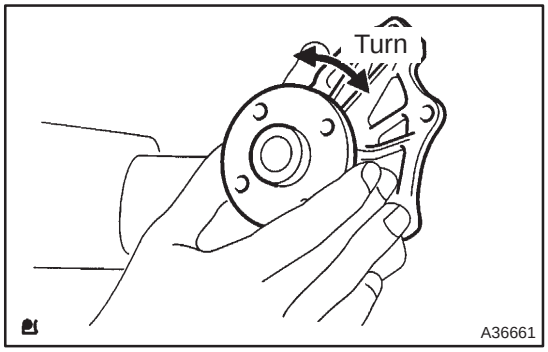
NOTICE:

The following pump speed is for the first pump only (in order to close the vacuum valve). After the first pump, the pump speed can be reduced.

Pump speed: 1 push within 1 second

Standard opening pressure:

74 to 103 kPa (0.75 to 1.05 kgf/cm^2, 10.7 to 14.9 psi)



Minimum opening pressure:

59 kPa (0.6 kgf/cm^2, 8.6 psi)

If the opening pressure is less than minimum, replace the radiator cap.

HINT:

Use the tester's maximum reading as the opening pressure.

3. INSPECT WATER PUMP ASSY

(a) Visually check the drain hole for coolant leakage.

If leakage is found, replace the water pump.

(b) Turn the pulley, and check that the water pump bearing moves smoothly and does not make noise.

If necessary, replace the water pump.

COOLING FAN SYSTEM (1AZ–FSE)

1600R–12

ON–VEHICLE INSPECTION

HINT:

It is normal that the cooling fan sometime rotates when the ignition switch is turned from ACC to ON.

1. CHECK COOLING FAN OPERATION WITH LOW TEMPERATURE (Below 83°C (181°F))

(a) Turn the ignition switch ON.

(b) Check that the cooling fan stops.

If not, check the cooling fan relay and engine coolant temperature sensor, and check for disconnection of connectors or wire break between the cooling fan relay and engine coolant temperature sensor.

(c) Disconnect the engine coolant temperature sensor connector.

(d) Check that the cooling fan rotates.

If not, check the fuses, cooling fan relay, ECM and cooling fan, and check for a short circuit between the cooling fan relay and engine coolant temperature sensor.

(e) Reconnect the engine coolant temperature sensor connector.

2. CHECK COOLING FAN OPERATION WITH HIGH TEMPERATURE (Above 100°C (212°F))

(a) Start the engine, and raise coolant temperature to above 100°C (212°F).

HINT:

Coolant temperature is the detected value by the engine coolant temperature sensor on the water outlet.

(b) Check that the cooling fan rotates.

If not, replace the engine coolant temperature sensor.

3. INSPECT COOLING FAN

(a) Disconnect the cooling fan connector.

(b) Connect battery and ammeter to the cooling fan connector.

(c) Check that the cooling fan rotates smoothly, and check the reading on the ammeter.

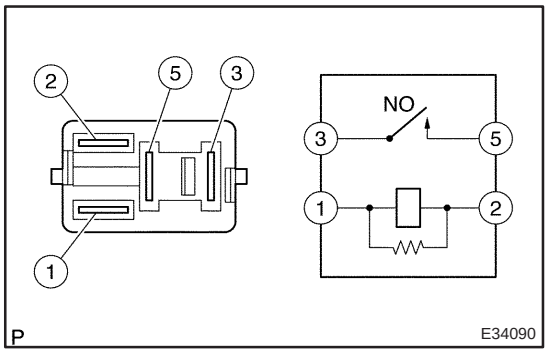
Standard amperage:
5.2 to 8.2 A at 20°C (68°F) (M/T)
8.3 to 11.3 A at 20°C (68°F) (A/T)

(d) Reconnect the cooling fan connector.

4. INSPECT COOLING FAN No.2 (With Air Conditioner)

(a) Disconnect the cooling fan connector.

(b) Connect battery and ammeter to the cooling fan connector.



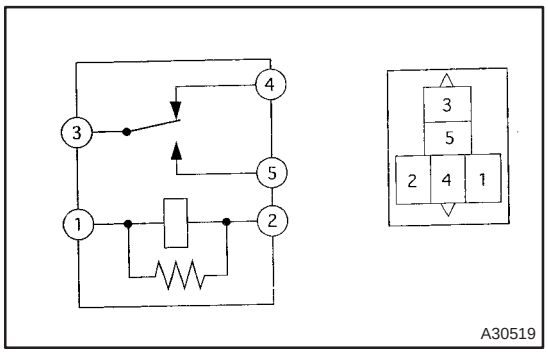
(c) Check that the cooling fan rotates smoothly, and check the reading on the ammeter.

Standard amperage:
5.2 to 8.2 A at 20°C (68°F) (M/T)
8.3 to 11.3 A at 20°C (68°F) (A/T)

(d) Reconnect the cooling fan connector.

160N0–01

INSPECTION



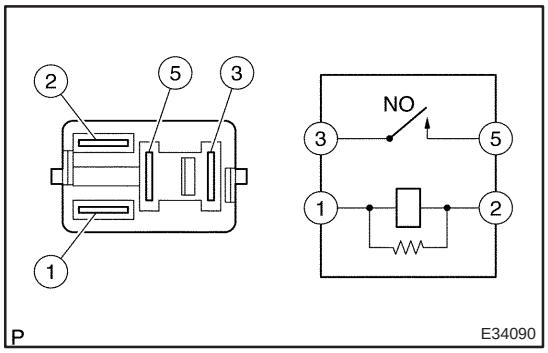
1. INSPECT COOLING FAN RELAY

(a) Continuity inspection.

(1) Using an ohmmeter, check for continuity between each terminal.

Specified condition:

Terminal No.	Specified condition
1 – 2	Continuity
3 – 5	No continuity
	Continuity (Apply battery boltage terminals 1 and 2)



2. INSPECT COOLING FAN RELAY NO.2

(a) Continuity inspection.

(1) Using an ohmmeter, check for continuity between each terminal.

Specified condition:

Terminal No.	Specified condition
1 – 2 3 – 4	Continuity
3 – 5	No continuity
	Continuity (Apply battery boltage terminals 1 and 2)

3. INSPECT COOLING FAN RELAY NO.3

(a) Continuity inspection.

(1) Using an ohmmeter, check for continuity between each terminal.

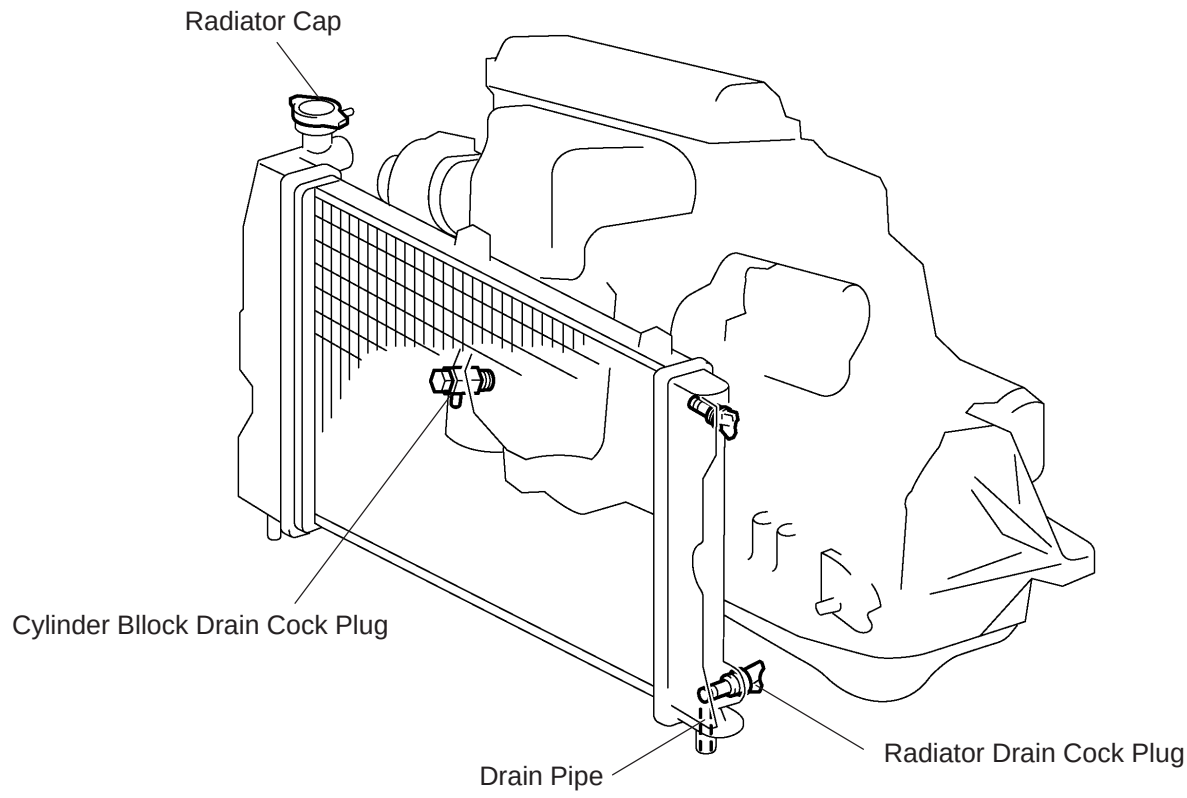
Specified condition:

Terminal No.	Specified condition
1 – 2	Continuity
3 – 5	No continuity
	Continuity (Apply battery boltage terminals 1 and 2)

ENGINE COOLANT (1AZ–FSE)

160MU–01

REPLACEMENT



1. DRAIN ENGINE COOLANT

CAUTION:

To avoid the danger of being burned, do not remove the radiator cap while the engine and radiator are still hot, as fluid and steam can be blown out under pressure.

(a) Remove the radiator cap.

(b) Loosen the radiator plug and drain the coolant.

2. ADD ENGINE COOLANT

(a) Tighten the radiator drain plug, and pour coolant into radiator until it overflows.
Capacity:

Transmission type	Steering	Coolant Capacity [liters (US gts, lmp. gts)]
M/T	LHD	6.0 (6.3, 5.3)
M/T	RHD	6.1 (6.4, 5.4)
A/T	LHD	6.3 (6.7, 5.5)
A/T	RHD	6.4 (6.8, 5.6)

NOTICE:

- **Do not use an alcohol type coolant or plain water alone.**
- **The coolant should be mixed with plain water (preferably demineralized water or distilled water).**

HINT:

- Use of improper coolants may damage engine cooling system.
- Use ”Toyota Long Life Coolant” or equivalent and mix it with plain water according to the manufacturer’s directions.
- Using of coolant with includes more than 50 % (freezing protection down to –35°C (–31°F)) or 60 % (freezing protection down to –50°C (–58°F)) of ethylene–glycol is recommended but not more than 70 %.
- Press the radiator inlet and outlet hose several times with hard.
- If the coolant level gets lower, pour coolant.

(b) Reinstall the radiator cap.

(c) Pour engine coolant into the reservoir tank until it reaches full line.

(d) Warm up the engine until the thermostat valve begins to open.

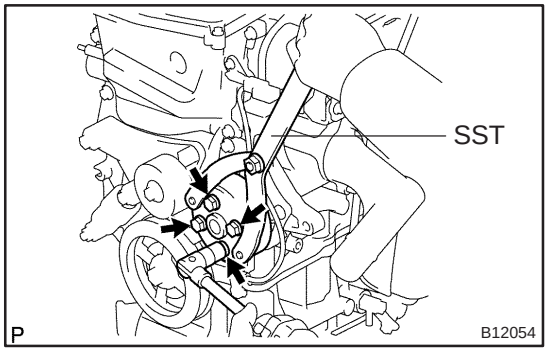
HINT:

Press the radiator inlet and outlet hose several times with hard during the warming up.

(e) Stop the engine and wait until the coolant temp. Gets cold. Then remove the radiator cap to check the coolant level.

HINT:

- If the level gets lower, perform the procedures above again.
- If the level does not gets lower, adjust the reservoir tank coolant level.



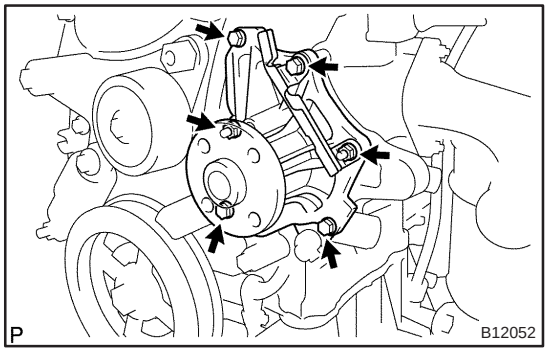
3. CHECK FOR ENGINE COOLANT LEAKS (See page 16–25)

WATER PUMP ASSY (1AZ–FSE)

160MR–01

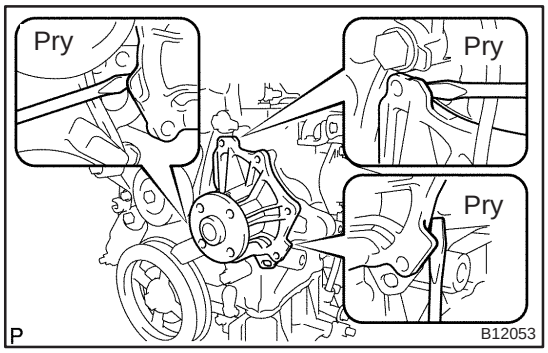
REPLACEMENT

1. **DRAIN COOLANT (See page 16–31)**
2. **REMOVE RADIATOR SUPPORT OPENING COVER**
3. **REMOVE ENGINE ROOM COVER SIDE**
4. **REMOVE ENGINE UNDER COVER RH**
5. **REMOVE FAN AND GENERATOR V BELT (See page 14–185)**
   SST 09249–63010
6. **REMOVE GENERATOR ASSY (See page 19–20)**



7. REMOVE WATER PUMP PULLEY

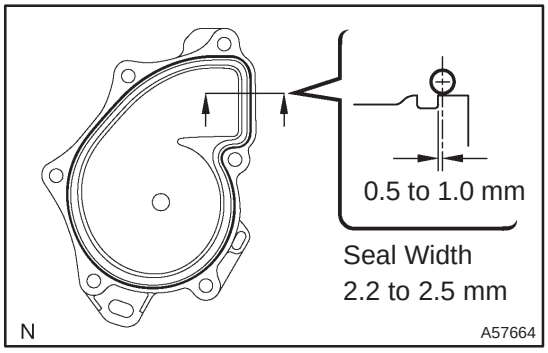
(a) Using SST, remove 4 bolts and pump pulley.
SST 09960–10010 (09962–01000, 09963–00700)



(b) Disconnect the crankshaft position sensor wire clamp from the water pump.

(c) Disconnect the crankshaft position sensor wire from the clamp on the water pump.

8. REMOVE WATER PUMP ASSY

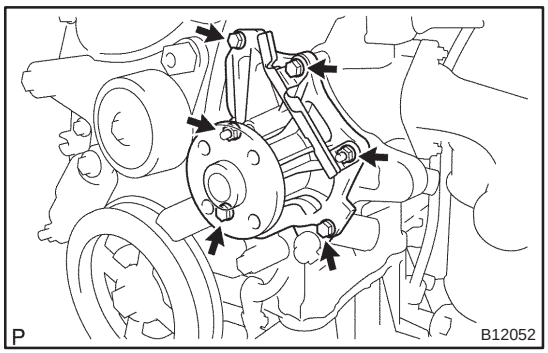


(a) Remove 4 bolts, 2 nuts, wire clamp and water pump.

(b) Using a screwdriver, pry between the water pump and cylinder block, and remove the water pump.

NOTICE:

Be careful not to damage the contact surface of the water pump and cylinder block.



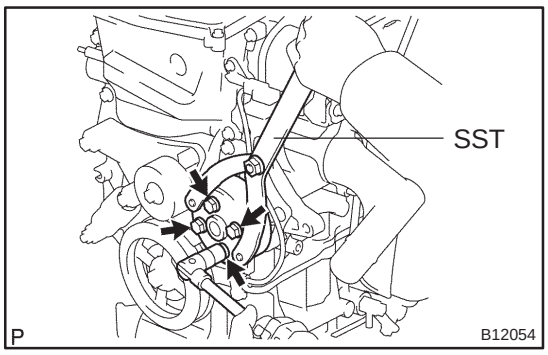
9. INSTALL WATER PUMP ASSY

(a) Remove any old packing (FIPG) material from the contact surface.

(b) Apply seal packing to the water pump as shown in the illustration.

Seal packing: Part No. 08826 – 00100 or equivalent

- Install a nozzle that has been cut to a 2.2 to 2.5 mm (0.09 to 0.10 in.) opening.
- Parts must be assembled within 5 minutes of application. Otherwise the material must be removed and reapplied.
- Immediately remove nozzle from the tube and reinstall cap.



(c) Install the water pump and wire clamp with 4 bolts and 2 nuts.

Torque: 9.0 N·m (90 kgf·cm, 80 in.·lbf)

(d) Install the crankshaft position sensor wire harness clamp to the water pump.

(e) Install the crankshaft position sensor wire to the wire clamp on the water pump.

10. INSTALL WATER PUMP PULLEY

(a) Using SST, install the pump pulley with 4 bolts.

SST 09960–10010 (09962–01000, 09963–00700)

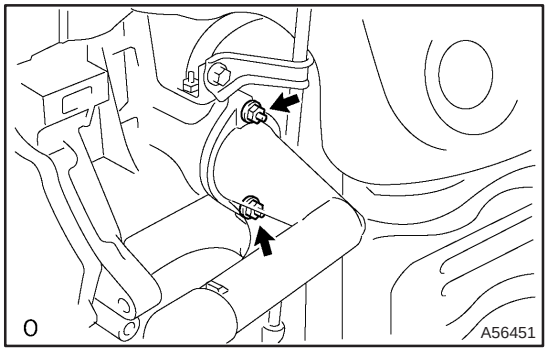
Torque: 26 N·m (265 kgf·cm, 19 ft·lbf)

11. INSTALL GENERATOR ASSY (See page 19–20)

12. INSTALL FAN AND GENERATOR V BELT (See page 14–185)

SST 09249–63010

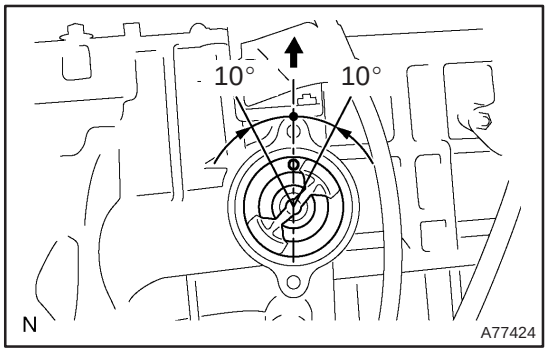
13. ADD COOLANT (See page 16–31)



14. INSPECT CHECK FOR ENGINE COOLANT LEAKS (See page 16–25)

THERMOSTAT (1AZ–FSE)

160MQ–01



REPLACEMENT

1. **DRAIN COOLANT (See page 16–31)**
2. **REMOVE RADIATOR SUPPORT OPENING COVER**
3. **REMOVE ENGINE ROOM COVER SIDE**
4. **REMOVE ENGINE UNDER COVER RH**
5. **REMOVE FAN AND GENERATOR V BELT (See page 14–185)**
   SST 09249–63010
6. **REMOVE GENERATOR ASSY (See page 19–20)**

7. **REMOVE WATER INLET**
(a) Remove 2 nuts, and disconnect the water inlet from the cylinder block.

8. **REMOVE THERMOSTAT**

9. **INSTALL THERMOSTAT**
(a) Install a new gasket to the thermostat.
(b) Install the thermostat with the jiggle valve upward.
HINT:
The jiggle valve may be set within 10° on either side of the prescribed position.

10. **INSTALL WATER INLET**
(a) Install the water inlet with 2 nuts.
Torque: 9.0 N·m (92 kgf·cm, 7 in.·lbf)
11. **INSTALL GENERATOR ASSY (See page 19–20)**
12. **INSTALL FAN AND GENERATOR V BELT (See page 14–185)**
SST 09249–63010

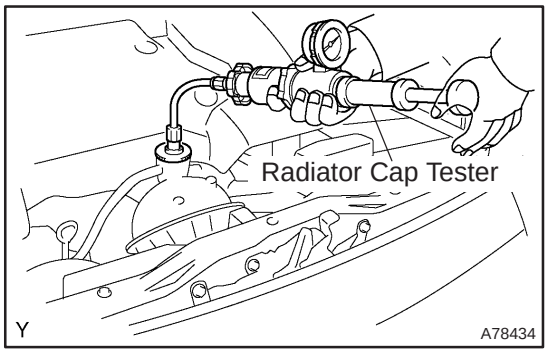
14. **INSPECT CHECK FOR ENGINE COOLANT LEAKS (See page 16–25)**

RADIATOR ASSY (1AZ–FSE)

160MS–01



REPLACEMENT

1. DRAIN COOLANT (See page 16–31)
2. REMOVE RADIATOR SUPPORT OPENING COVER
3. REMOVE ENGINE ROOM COVER SIDE
4. REMOVE ENGINE UNDER COVER RH
5. DISCONNECT RADIATOR HOSE INLET
6. DISCONNECT RADIATOR HOSE OUTLET
7. REMOVE RADIATOR SUPPORT UPPER
(a) Disconnect the fan w/ motor wire harness, connector and the horn connector.
(b) Remove 4 bolts, the nut and the radiator support.
8. REMOVE RADIATOR ASSY
(a) Remove 2 upper support, and radiator assembly
9. REMOVE RADIATOR SUPPORT LOWER
10. REMOVE FAN ASSY W/MOTOR
(a) Remove 6 bolts and fan w/motor.
11. INSTALL FAN ASSY W/MOTOR
12. INSTALL RADIATOR SUPPORT LOWER
13. INSTALL RADIATOR ASSY
14. INSTALL RADIATOR SUPPORT UPPER
(a) Install radiator support with 2 bolts.
Torque: 19 N·m (194 kgf·cm, 14 ft·lbf)
15. ADD COOLANT (See page 16–31)
16. INSPECT CHECK FOR ENGINE COOLANT LEAKS (See page 16–25)

COOLING SYSTEM (1CD–FTV)

ON–VEHICLE INSPECTION

160N6–01

1. INSPECT COOLING SYSTEM FOR LEAKS

CAUTION:

To avoid the danger of being burned, do not remove the radiator cap while the engine and radiator are still hot. Thermal expansion will cause hot engine coolant and steam to blow out from the radiator.

(a) Remove the radiator support opening cover.
(b) Remove the engine room cover side.
(c) Fill the radiator with coolant and attach a radiator cap tester.
(d) Warm up the engine.
(e) Pump it to 137 kPa (1.4 kgf/cm^2, 19.9 psi), and check that the pressure does not drop.

If the pressure drops, check the hoses, radiator and water pump for leaks. If there are no signs or traces of external coolant leaks, check the heater core, cylinder block and head.

(f) Reinstall the engine room cover side.
(g) Reinstall the radiator support opening cover.

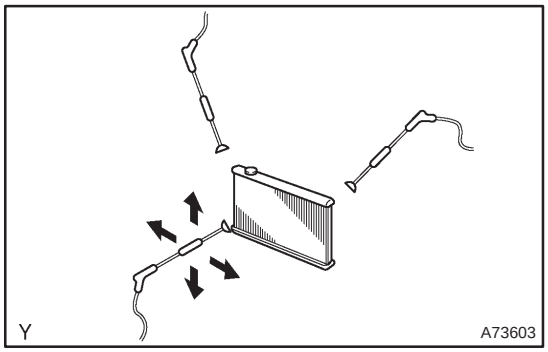
2. CHECK ENGINE COOLANT LEVEL AT RESERVOIR

(a) The engine coolant should be between the ”LOW” and ”FULL” lines, when the engine is cold.

If low, check for leaks and add ”Toyota Long Life Coolant” or equivalent up to the ”FULL” line.

3. CHECK ENGINE COOLANT QUALITY

(a) Remove the radiator cap.



CAUTION:

To avoid the danger of being burned, do not remove the radiator cap while the engine and radiator are still hot. Thermal expansion will cause hot engine coolant and steam to blow out from the radiator.

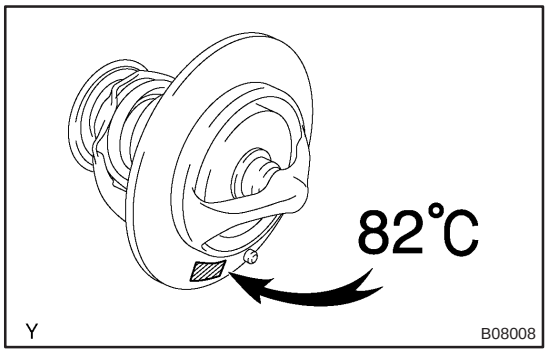
(b) Check if there is any excessive deposits of rust or scale around the radiator cap and radiator filler hole; the coolant should be free from oil.

If excessively dirty, replace the coolant.

(c) Reinstall the radiator cap.

4. INSPECT FINS BLOCKAGE

(a) If fins are clogged, wash them with water or a steam cleaner and dry with compressed air.

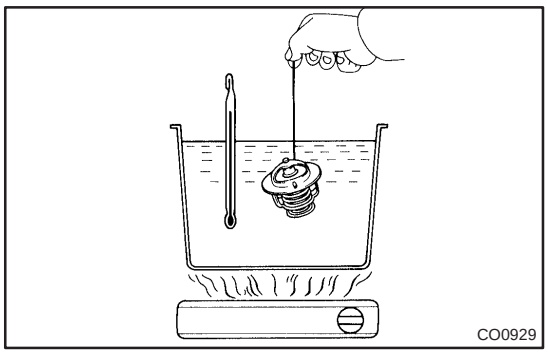


NOTICE:

- **If the distance between the steam cleaner and the core is too close, there is a possibility of damaging the fins, so keep the following injection distance.**

Injection Pressures kPa (kgf/cm^2, psi)	Injection Distance mm (in.)
2,942 to 4,903 (30 to 50, 427 to 711)	300 (11.811)
4,903 to 7,845 (50 to 80, 711 to 1,138)	500 (19.685)

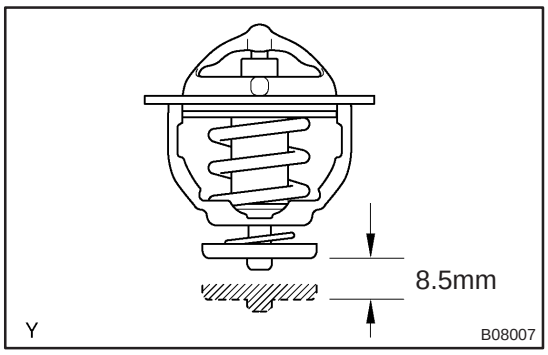
- **If the fins are bent, straighten them with a screwdriver or pliers.**
- **Be careful not pour water directly onto electronic components.**



INSPECTION

1. INSPECT THERMOSTAT

HINT:



The thermostat is numbered with the valve opening temperature.

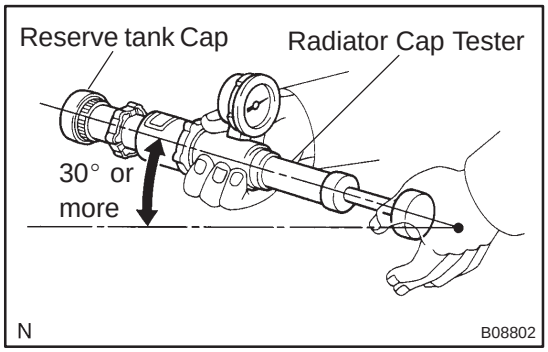
(a) Immerse the thermostat in water and gradually heat the water.

(b) Check the valve opening temperature of the thermostat.
Valve opening temperature:
80 to 84°C (176 to 183°F)

If the valve opening temperature is not as specified, replace the thermostat.

(c) Check the valve lift.
Valve lift: 8.5 mm (0.33 in.) or more at 95°C (203°F)

If the valve lift is not as specified, replace the thermostat.



(d) Check that the valve is fully closed when the thermostat is at low temperatures (below 77°C (171°F)).

If not closed, replace the thermostat.

2. INSPECT RESERVE TANK CAP SUB–ASSY

NOTICE:

- **If the radiator cap is contaminatied, rinse it with water.**
- **Before using a radiator cap tester, wet the relief valve and the pressure valve with engine coolant or water.**
- **When performing following steps (a) and (b), keep the tester at an angle of over 30° above horizontal.**

(a) Using a radiator cap tester, slowly pump the tester and check that air is coming from the vacuum valve.

Pump speed: 1 push / 3 seconds or more

NOTICE:

Push the pump at a constant speed.

If air is not coming from the vacuum valve, replace the reserve tank cap.

(b) Pump the tester and measure the relief valve opening pressure.

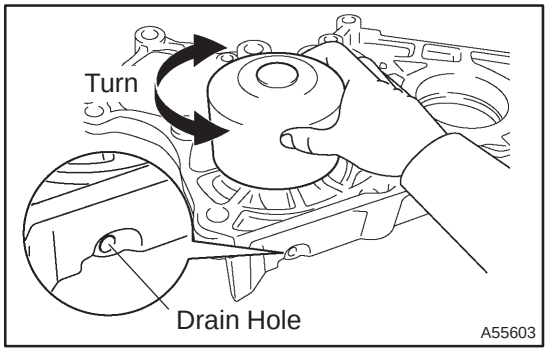
NOTICE:

The following pump speed is for the first pump only (in order to close the vacuum valve). After the first pump, the pump speed can be reduced.

Pump speed: 1 push within 1 second

Standard opening pressure:

93 to 122 kPa (0.95 to 1.25 kgf/cm^2, 13.4 to 17.6 psi)



Minimum opening pressure:

78 kPa (0.8 kgf/cm^2, 11.4 psi)

If the opening pressure is less than minimum, replace the reserve tank cap.

HINT:

Use the tester's maximum reading as the opening pressure.

3. INSPECT WATER PUMP ASSY

(a) Visually check the drain hole for coolant leakage.

If leakage is found, replace the water pump.

(b) Turn the pulley, and check that the water pump bearing moves smoothly and does not make noise.

If necessary, replace the water pump.

COOLING FAN SYSTEM (1CD–FTV)

1606N–03

ON–VEHICLE INSPECTION

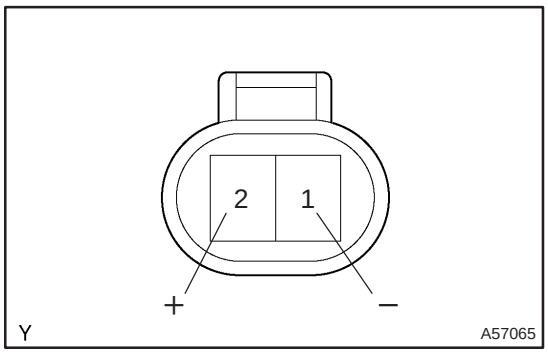
1. CHECK COOLING FAN OPERATION WITH LOW TEMPERATURE (Below 83°C (181°F))

(a) Turn the ignition switch ON.
(b) Check that the cooling fan stops.
(c) Disconnect the temperature detect switch connector.
(d) Connect the terminals on the temperature detect switch connector.
(e) Check that the cooling fan rotates.

If not, check the fuses, cooling fan relay and cooling fan, and check for a open circuit between the cooling fan relay and temperature detect switch.

(f) Reconnect the temperature detect switch connector.

2. CHECK COOLING FAN OPERATION WITH HIGH TEMPERATURE (Above 93°C (199°F))

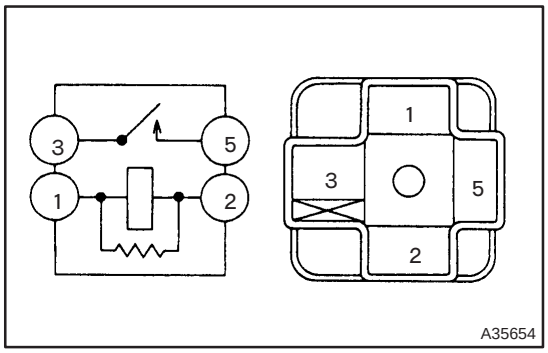


(a) Start the engine, and raise coolant temperature to above 93°C (199°F)

HINT:

Coolant temperature is the detected value by the temperature detect switch on the radiator lower tank.

(b) Check that the cooling fan rotates.

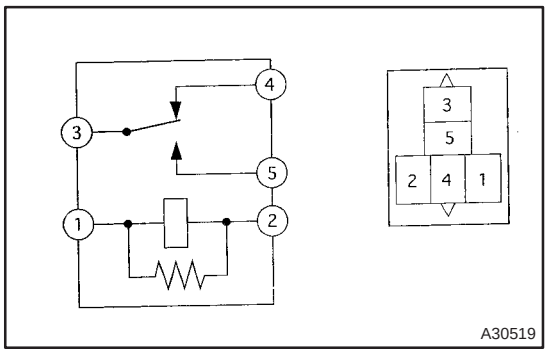


If not, replace the temperature detect switch.

3. INSPECT COOLING FANS

(a) Disconnect the cooling fan connector.
(b) Connect battery and ammeter to the cooling fan connector.
(c) Check that the cooling fan rotates smoothly, and check the reading on the ammeter.
Standard amperage:
Approx. 13.2 A at 20°C (68°F)
(d) Reconnect the cooling fan connector.

INSPECTION



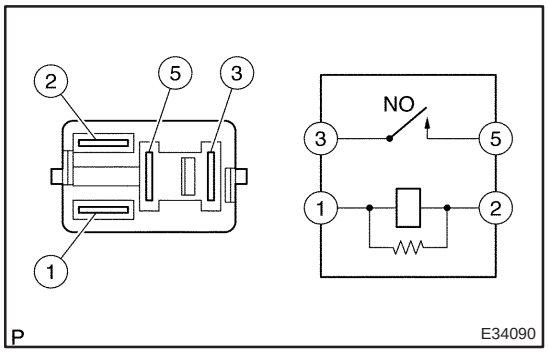
1. INSPECT COOLING FAN RELAY

(a) Continuity inspection.

(1) Using an ohmmeter, check for continuity between each terminal.

Specified condition:

Terminal No.	Specified condition
1 – 2	Continuity
3 – 5	No continuity
	Continuity (Apply battery voltage terminals 1 and 2)



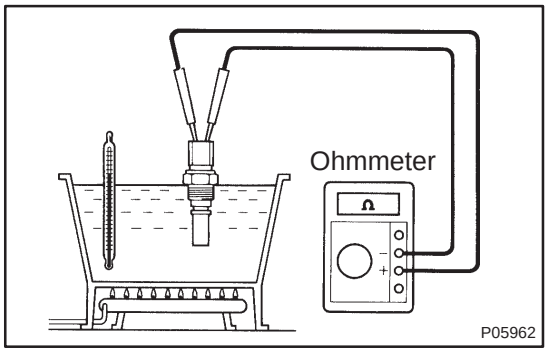
2. INSPECT COOLING FAN RELAY NO.2

(a) Continuity inspection.

(1) Using an ohmmeter, check for continuity between each terminal.

Specified condition:

Terminal No.	Specified condition
1 – 2 3 – 4	Continuity
3 – 5	No continuity
	Continuity (Apply battery boltage terminals 1 and 2)



3. INSPECT COOLING FAN RELAY NO.3

(a) Continuity inspection.

(1) Using an ohmmeter, check for continuity between each terminal.

Specified condition:

Terminal No.	Specified condition
1 – 2	Continuity
3 – 5	No continuity
	Continuity (Apply battery voltage terminals 1 and 2)

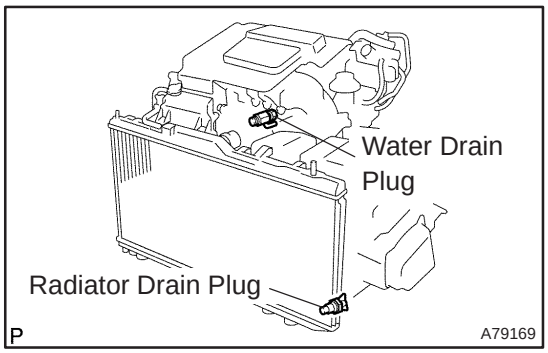
4. INSPECT TEMPERATURE DETECT SWITCH NO.2

(a) Using an ohmmeter, check that there is continuity between the terminals when the coolant temperature is above 93°C (199°F).

Specified condition: Continuity

(b) Using an ohmmeter, check that there is no continuity between the terminals when the coolant temperature is below 83°C (181°F).

Specified condition: No continuity

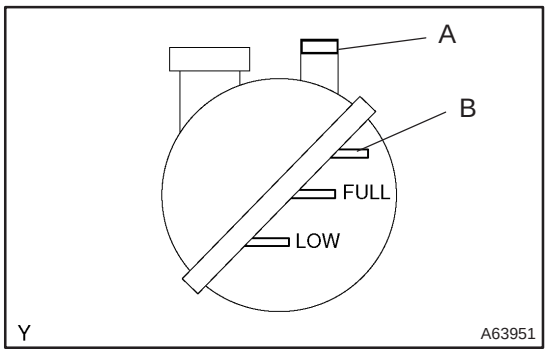


ENGINE COOLANT (1CD–FTV)

160MD–01

REPLACEMENT

1. DRAIN ENGINE COOLANT



(a) Remove the radiator cap.

(b) Loosen the radiator and engine drain plugs, drain the coolant.

(c) Close the drain plugs.

Torque: 13 N·m (133 kgf·cm, 10 ft·lbf) for engine

2. ADD ENGINE COOLANT

(a) Loosen air bleed valve A.

(b) Fill the cooling system with coolant up to line B.

Capacity:
With heater: 7.6 liters (8.0 US qts, 6.7 lmp. qts)
Without heater: 7.4 liters (7.8 US qts, 6.5 lmp. qts)

HINT:

- Use of improper coolants may damage engine cooling system.
- Use ”Toyota Long Life Coolant” or equivalent and mix it with plain water according to the manufacturer’s instruction.
- Using of coolant which includes more than 50 % (freezing protection down to –35°C (–31°F)) or 60 % (freezing protection down to –50°C (–58°F)) of ethylene–glycol is recommended but not more than 70 %.

(c) Tighten the air bleed valve securely.

(d) Install the radiator cap securely.

(e) Warm up the engine.

HINT:

Warm up the engine with the speed of 2,000 rpm or more and keep the warm–up until the thermostat has open and the radiator reservoir has become hot.

(f) Run the engine intermittently for 5 seconds at 3,000 rpm and for 45 seconds at idle.

(g) Do the above operation for 7 minutes or more.

(h) After the engine has become cold, check that the coolant level is between LOW and FULL lines.

3. CHECK FOR ENGINE COOLANT LEAKS

(a) Fill the radiator with coolant and attach a radiator cap tester.

(b) Pump it to 137 kPa (1.4 kgf/cm^{2,} 19.9 psi), and check that the pressure does not drop.

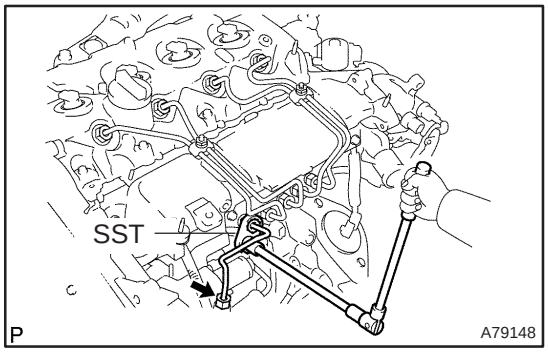
WATER PUMP ASSY (1CD–FTV)

160ME–01

REPLACEMENT

1. REMOVE RADIATOR SUPPORT OPENING COVER
2. REMOVE ENGINE ROOM COVER SIDE
3. DRAIN ENGINE COOLANT (See page 16–44)
4. REMOVE FRONT WHEEL RH
5. REMOVE ENGINE UNDER COVER SUB–ASSY NO.1
6. REMOVE ENGINE UNDER COVER RH
7. REMOVE ENGINE COVER NO.1

(a) Remove the 5 nuts and the engine cover.



8. REMOVE INJECTOR DRIVER (See page 14–286)
9. REMOVE V (COOLER COMPRESSOR TO CRANKSHAFT PULLEY) BELT NO.1 (See page 14–269)
10. REMOVE GENERATOR V BELT (See page 14–269)
11. SEPARATE POWER STEERING IDLE PULLEY BRACKET (See page 14–286)
12. SEPARATE ENGINE MOUNTING INSULATOR SUB–ASSY RH (See page 14–307)
13. REMOVE CRANKSHAFT PULLEY (See page 14–307)

SST 09213–54015 (90105–08076), 09330–00021, 09950–50013 (09951–05010, 09952–05010, 09953–05020, 09954–05031)

14. REMOVE IDLER PULLEY SUB–ASSY

(a) Remove the bolt, the washer and the pulley.

15. REMOVE TIMING BELT NO.2 COVER (See page 14–307)
16. REMOVE TIMING BELT NO.1 COVER (See page 14–307)
17. REMOVE TIMING BELT GUIDE
18. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET (See page 14–307)
19. SET NO. 1 CYLINDER TO TDC/COMPRESSION (See page 14–307)
20. REMOVE TIMING CHAIN COVER PLATE (See page 14–307)
21. REMOVE TIMING BELT (See page 14–307)

22. REMOVE FUEL INLET PIPE SUB–ASSY (See page 11–69)

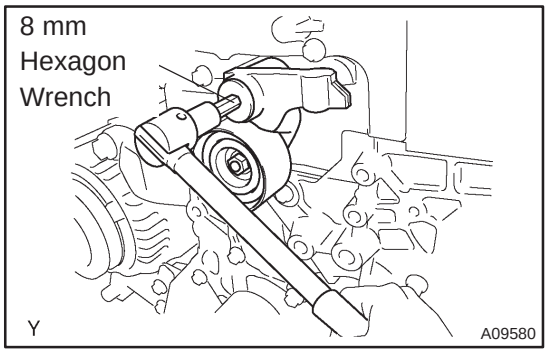
NOTICE:

After removing the fuel inlet pipe, cover the common rail and injection pump with vinyl tape to prevent dust from being introduced.

(a) Remove the wire bracket and slide the engine wire.

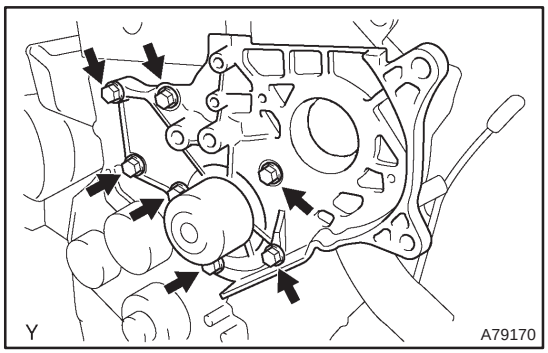
(b) Using SST, remove the fuel inlet pipe from the common rail.

SST 09023–12700



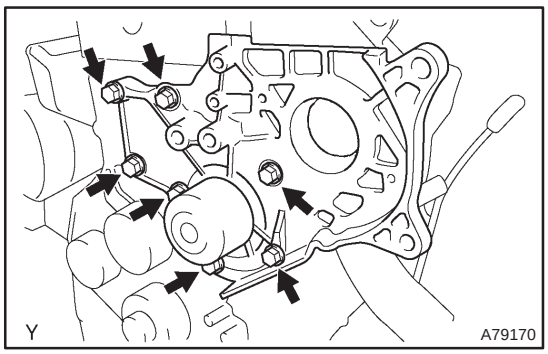
(c) Using SST, remove the fuel inlet pipe from the injection pump.

SST 09023–12700

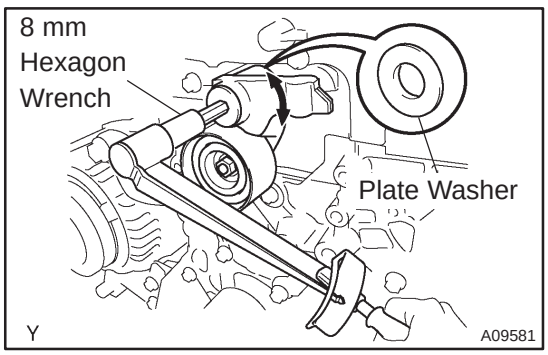


23. REMOVE INTAKE MANIFOLD INSULATOR NO.1 (See page 11–69)
24. REMOVE OIL LEVEL GAGE SUB–ASSY
25. REMOVE OIL LEVEL GAGE GUIDE (See page 17–22)
26. REMOVE WATER INLET (See page 16–50)
27. DISCONNECT INJECTION PUMP TO FUEL PIPE FUEL HOSE (See page 11–69)
28. DISCONNECT INJECTION PUMP TO FUEL FILTER FUEL HOSE OR PIPE (See page 11–69)

29. REMOVE INJECTION PUMP DRIVE PULLEY (See page 11–69)
SST 09960–10010 (09962–01000, 09963–01000), 09950–50013 (09951–05010, 09952–05010, 09953–05020, 09954–05021)

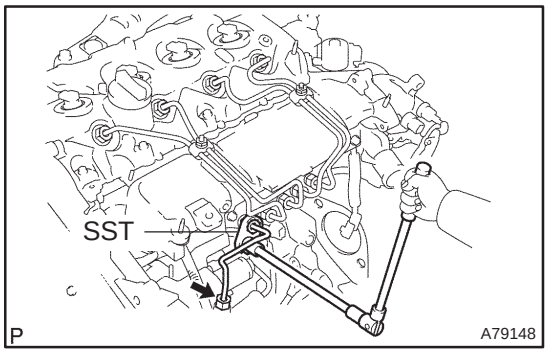


30. REMOVE INJECTION OR SUPPLY PUMP ASSY (See page 11–69)



31. REMOVE TIMING BELT IDLER SUB–ASSY NO.1
(a) Using an 8 mm hexagon wrench, remove the idler pulley shaft, the idler pulley and the plate washer.

32. REMOVE WATER PUMP ASSY
(a) Remove the 7 bolts, then remove the water pump and the gasket.

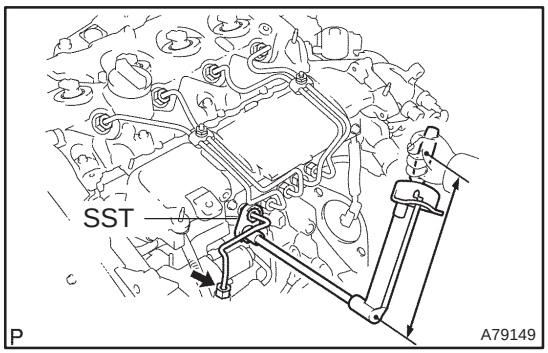


33. INSTALL WATER PUMP ASSY
(a) Install a new gasket and the water pump with the 7 bolts.
Torque: 31 N·m (320 kgf·cm, 23 ft.·lbf)

34. INSTALL TIMING BELT IDLER SUB–ASSY NO.1
(a) Using an 8 mm hexagon wrench, install the plate washer and the idler pulley with the idler pulley shaft.
Torque: 35 N·m (357 kgf·cm, 26 ft·lbf)
(b) Check that the pulley bracket moves smoothly.

35. INSTALL INJECTION OR SUPPLY PUMP ASSY (See page 11–69)
36. INSTALL INJECTION PUMP DRIVE PULLEY (See page 11–69)
SST 09960–10010 (09962–01000, 09963–01000)
37. INSTALL WATER INLET (See page 16–50)
38. INSTALL OIL LEVEL GAGE GUIDE (See page 17–22)

39. INSTALL INTAKE MANIFOLD INSULATOR NO.1 (See page 11–69)



40. INSTALL FUEL INLET PIPE SUB–ASSY

NOTICE:

- **In case of having the water pump replaced, must replace fuel inlet pipe, too.**
- **When assembling the pipe, perform the operation with the engine cold under room temperature.**

(a) Temporarily install the new fuel inlet pipe.

(b) Using SST, tighten the nut of the fuel inlet pipe to the common rail side.

SST 09023–12700

Torque:

42 N·m (428 kgf·cm, 31 ft·lbf) for a used pipe using SST

46 N·m (469 kgf·cm, 34 ft·lbf) for a used pipe not using SST

31 N·m (316 kgf·cm, 23 ft·lbf) for a new pipe using SST

34 N·m (347 kgf·cm, 25 ft·lbf) for a new pipe not using SST

HINT:

- Use a torque wrench with a fulcrum length of 30 cm (11.81 in.)
- Check if the used pipe has deflection or is installed properly after inlet pipe is reassembled. If there is deflection or if it can not be installed properly, replace the used pipe with a new pipe.

(c) Using SST, tighten the nut of the fuel inlet pipe to the injection pump side.

SST 09023–12700

Torque:

42 N·m (428 kgf·cm, 31 ft·lbf) for a used pipe using SST

46 N·m (469 kgf·cm, 34 ft·lbf) for a used pipe not using SST

31 N·m (316 kgf·cm, 23 ft·lbf) for a new pipe using SST

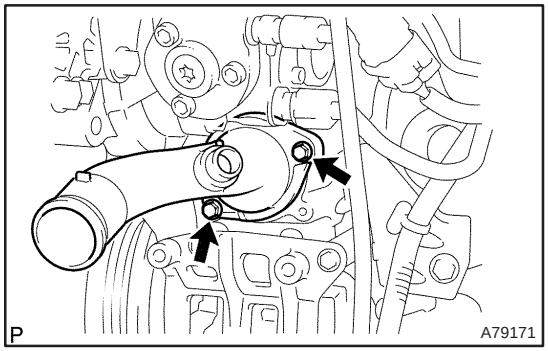
34 N·m (347 kgf·cm, 25 ft·lbf) for a new pipe not using SST

HINT:

- Use a torque wrench with a fulcrum length of 30 cm (11.81 in.)
- Check if the used pipe has deflection or is installed properly after inlet pipe is reassembled. If there is deflection or if it can not be installed properly, replace the used pipe with a new pipe.

41. **SET NO. 1 CYLINDER TO TDC/COMPRESSION**
    SST 09960–10010 (09962–01000, 09963–01000)
42. **INSTALL TIMING BELT (See page 14–307)**
43. **CHECK VALVE TIMING (See page 14–307)**
44. **INSTALL TIMING CHAIN COVER PLATE (See page 14–307)**
45. **INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET (See page 14–307)**
46. **INSTALL TIMING BELT GUIDE (See page 14–307)**
47. **INSTALL TIMING BELT NO.1 COVER (See page 14–307)**
48. **INSTALL TIMING BELT NO.2 COVER (See page 14–307)**
49. **INSTALL IDLER PULLEY SUB–ASSY (See page 11–69)**
50. **INSTALL CRANKSHAFT PULLEY (See page 14–307)**
    SST 09213–54015 (90105–08076), 09330–00021
51. **INSTALL ENGINE MOUNTING INSULATOR SUB–ASSY RH (See page 14–307)**
52. **INSTALL POWER STEERING IDLE PULLEY BRACKET (See page 14–286)**
53. **ADJUST V (COOLER COMPRESSOR TO CRANKSHAFT PULLEY) BELT NO.1 (See page 14–269)**
54. **INSTALL INJECTOR DRIVER (See page 11–69)**
55. **INSTALL FRONT WHEEL RH**
    Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)
56. **INSTALL ENGINE COVER NO.1**
    Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)
57. **ADD ENGINE COOLANT (See page 16–44)**
58. **CHECK FOR ENGINE COOLANT LEAKS (See page 16–44)**
59. **CHECK FOR FUEL LEAKS (See page 11–60)**

THERMOSTAT (1CD–FTV)

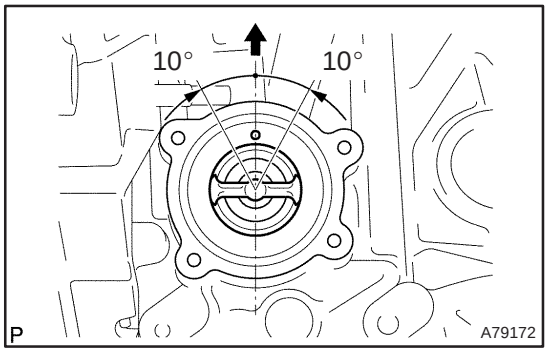


160MF–01

REPLACEMENT

1. **REMOVE RADIATOR SUPPORT OPENING COVER**
2. **REMOVE ENGINE ROOM COVER SIDE**
3. **DRAIN ENGINE COOLANT (See page 16–44)**
4. **REMOVE RADIATOR RESERVE TANK ASSY**

(a) Disconnect the water by–pass hose No. 1 and water by–pass hose No. 2.
(b) Remove the 2 bolts and the reserve tank assembly.



5. **REMOVE RADIATOR HOSE OUTLET**

6. **REMOVE WATER INLET**

(a) Remove the 2 bolts and the water inlet.

7. **REMOVE THERMOSTAT**

8. **INSTALL THERMOSTAT**

(a) Install a new gasket to the thermostat.
(b) Install the thermostat with the jiggle valve facing upward.

HINT:
The jiggle valve may be set within 10° on either side as shown in the illustration.

9. **INSTALL WATER INLET**
   Torque: 8.8 N·m (90 kgf·cm, 78 in.·lbf)
10. **INSTALL RADIATOR RESERVE TANK ASSY**
    Torque: 6.0 N·m (61 kgf·cm, 53 in.·lbf)
11. **ADD ENGINE COOLANT (See page 16–44)**
12. **CHECK FOR ENGINE COOLANT LEAKS (See page 16–44)**

RADIATOR ASSY (1CD–FTV)

160MG–01

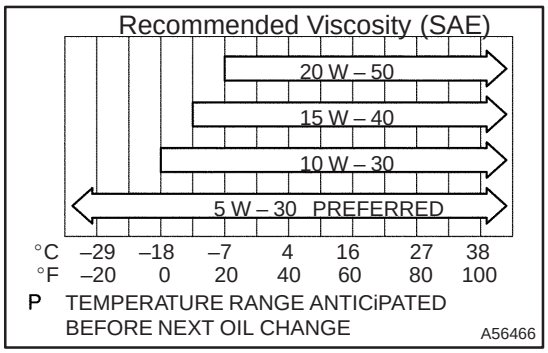
REPLACEMENT

1. DRAIN ENGINE COOLANT (See page 16–44)
2. REMOVE RADIATOR SUPPORT OPENING COVER
3. REMOVE ENGINE ROOM COVER SIDE
4. REMOVE RADIATOR RESERVE TANK ASSY (See page 16–50)
5. DISCONNECT RADIATOR HOSE INLET
6. DISCONNECT RADIATOR HOSE OUTLET
7. REMOVE RADIATOR ASSY
(a) Remove the 2 bolts and separate the relay box.
(b) Remove the 2 upper support and radiator assy.
8. REMOVE RADIATOR SUPPORT LOWER
9. REMOVE FAN ASSY W/MOTOR
(a) Remove the 2 bolts and the fan w/motor.
10. INSTALL FAN ASSY W/MOTOR
Torque: 7.5 N·m (76 kgf·cm, 66 in.·lbf)
11. INSTALL RADIATOR ASSY
(a) Install the 2 upper support and the radiator assembly to the vehicle.
Torque: 19 N·m (194 kgf·cm, 14 ft·lbf)
(b) Install the 2 bolts and the relay box.
Torque: 5.3 N·m (54 kgf·cm, 47 in.·lbf)
12. INSTALL RADIATOR RESERVE TANK ASSY (See page 16–50)
13. ADD ENGINE COOLANT (See page 16–44)
14. CHECK FOR ENGINE COOLANT LEAKS (See page 16–44)

LUBRICATION SYSTEM (1ZZ–FE/3ZZ–FE)

1700F–10

ON–VEHICLE INSPECTION



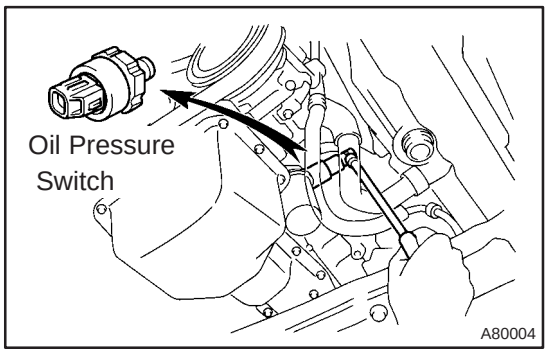
1. CHECK ENGINE OIL LEVEL

(a) After warm up the engine and then 5 minutes after the engine stop, oil level should be between the low level and full level marks of the dipstick.

If low, check for leakage and add oil up to the full level mark.

NOTICE:

Do not fill with engine oil above the full level mark.

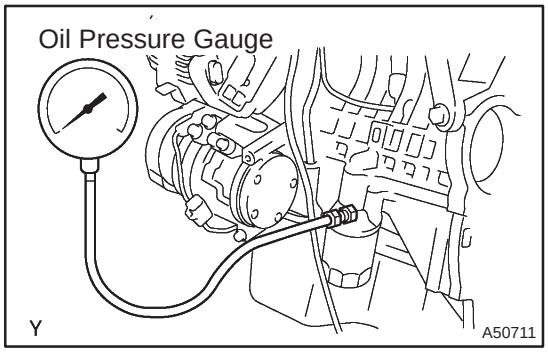


2. CHECK ENGINE OIL QUALITY

(a) Check the oil for deterioration, entry of water, discoloring or thinning.

If the quality is visibly poor, replace the oil.

Oil grade:



API grade ”SJ” Energy–Conserving, ”SL” Energy–Conserving or ILSAC multi grade engine oil. Recommended viscosity is as shown in the illustration.

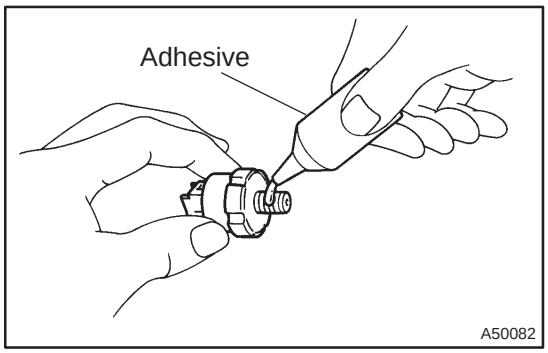
3. REMOVE OIL PRESSURE SWITCH ASSY

(a) Disconnect the oil pressure switch connector.

(b) Using a 24mm deep socket wrench, remove the oil pressure switch.

4. INSTALL OIL PRESSURE GAUGE

(a) Install the oil pressure gauge.



5. WARM UP ENGINE

6. CHECK OIL PRESSURE

Oil pressure:

At idle	29 kPa (0.3 kgf/cm^2, 4.3 psi) or more
At 3,000 rpm	294 to 539 kPa (3.0 to 5.5 kgf/cm^2, 43 to 78 psi) or more

7. REMOVE OIL PRESSURE GAUGE

8. INSTALL OIL PRESSURE SWITCH ASSY

(a) Apply adhesive to 2 or 3 threads of the oil pressure switch.

Adhesive:

Part No. 08833–00080, THREE BOND 1344, LOCTITE 242 or equivalent

(b) Using a 24mm deep socket wrench, install the oil pressure switch.

Torque: 15 N·m (153 kgf·cm, 11 ft·lbf)

NOTICE:

Do not start the engine within 1 hour of installation.

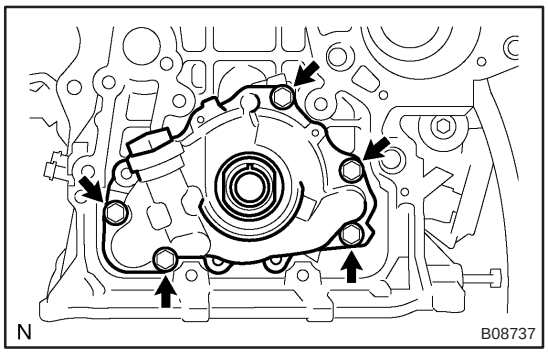
(c) Connect the oil pressure switch connector.

9. START ENGINE AND CHECK FOR LEAKS

OIL PUMP ASSY (1ZZ–FE/3ZZ–FE)

170FR–01

REPLACEMENT

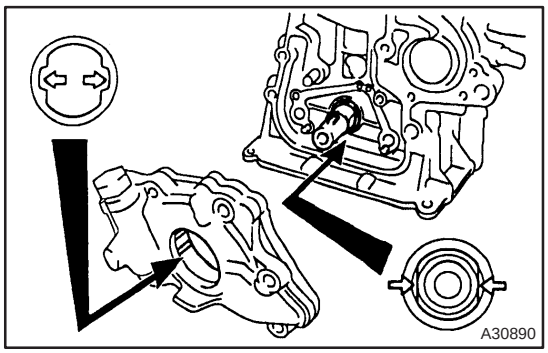


1. DRAIN ENGINE OIL

(a) Remove the oil pan drain plug and drain engine oil.

2. REMOVAL & INSTALLATION CHAIN SUB–ASSY (See page 14–49)

3. REMOVE CHAIN VIBRATION DAMPER NO.1



(a) Remove the 2 bolts and the chain vibration damper No. 1.

4. REMOVE OIL PUMP ASSY

(a) Remove the 5 bolts.

(b) Remove the oil pump assy and the gasket.

5. INSTALL OIL PUMP ASSY

(a) Place a new gasket on the cylinder block.

(b) Align the keyway of the oil pump drive rotor with the rectangular portion of the crankshaft and slide the oil pump into place.

(c) Install the oil pump with the 5 bolts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

6. INSTALL CHAIN VIBRATION DAMPER NO.1

(a) Install the chain vibration damper No. 1 with 2 bolts.
Torque: 9.0 N·m (92 kgf·cm, 8.0 in.·lbf)

7. INSTALL OIL PAN DRAIN PLUG

(a) Clean and install the oil pan drain plug with a new gasket.
Torque: 37 N·m (377 kgf·cm, 27 ft·lbf)

8. ADD ENGINE OIL (See page 17–4)

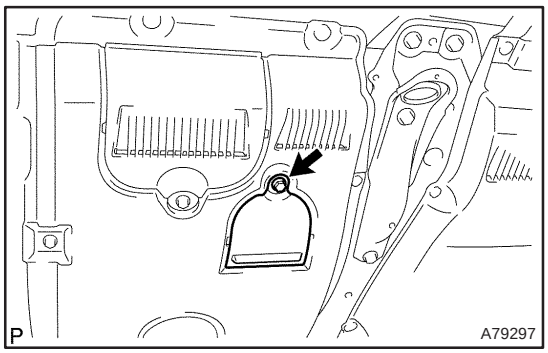
9. ADD ENGINE COOLANT (See page 16–7)

10. CHECK FOR ENGINE OIL LEAKS

11. CHECK FOR ENGINE COOLANT LEAKS (See page 16–1)

OIL FILTER SUB–ASSY (1ZZ–FE/3ZZ–FE)

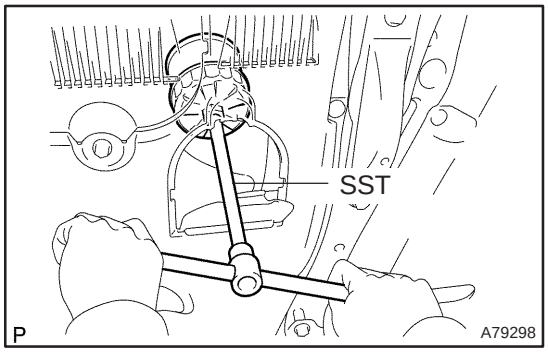
170FS–01



REPLACEMENT

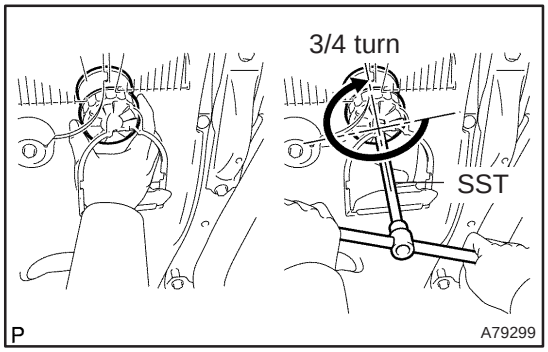
CAUTION:

- **Prolonged and repeated contact with engine oil will result in the removal of natural oils from the skin, leading to dryness, irritation and dermatitis. In addition, used engine oil contains potentially harmful contaminants which may cause skin cancer.**
- **Precautions should be taken when replacing engine oil to minimize the risk of your skin making contact with used engine oil. Wear protective clothes and gloves. Wash your skin thoroughly with soap and water, or use water–less hand cleaner to remove any used engine oil. Do not use gasoline, thinners, or solvents.**
- **In order to preserve the environment, used oil and used oil filter must be disposed of only at designated disposal sites.**



1. DRAIN ENGINE OIL

(a) Remove the oil pan drain plug and drain engine oil.



2. REMOVE OIL FILTER SUB–ASSY

(a) Remove the screw and open the under cover.

(b) Using SST, remove the oil filter
SST 09228–06501

3. INSTALL OIL FILTER SUB–ASSY

(a) Check and clean the oil filter mounting surface.
(b) Apply clean engine oil to the gasket of a new oil filter.
(c) Lightly screw the oil filter into place, and tighten it until the gasket contacts the seat.
(d) Using SST, tighten it an additional 3/4 turn as shown in the illustration.
SST 09228–06501

4. INSTALL OIL PAN DRAIN PLUG

(a) Clean and install the oil pan drain plug with a new gasket.
Torque: 37 N·m (377 kgf·cm, 27 in.·lbf)

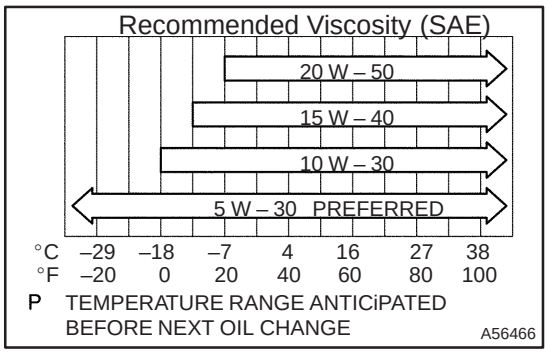
5. ADD ENGINE OIL
Capacity:
With oil filler replacement: 3.7 liters (3.9 US qts, 3.3 lmp. qts)
Without oil filler replacement: 3.5 liters (3.7 US qts, 3.1 lmp. qts)
Dry fill: 4.2 liters (4.4 US qts, 3.7 lmp. qts)

6. CHECK FOR ENGINE OIL LEAKS

LUBRICATION SYSTEM (1AZ–FE)

1700F–09

ON–VEHICLE INSPECTION



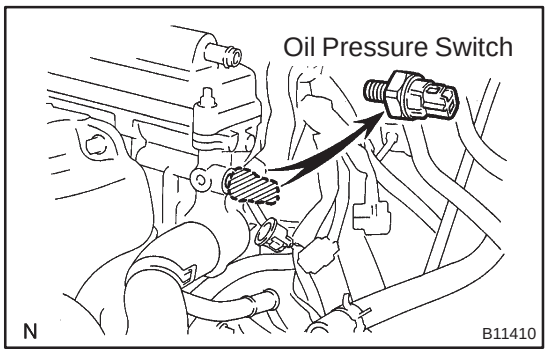
1. CHECK ENGINE OIL LEVEL

(a) After warm up the engine and then 5 minutes after the engine stop, oil level should be between the low level and full level marks of the dipstick.

If low, check for leakage and add oil up to the full level mark.

NOTICE:

Do not fill with engine oil above the full level mark.

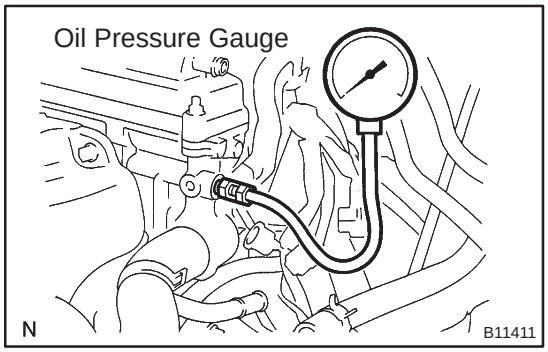


2. CHECK ENGINE OIL QUALITY

(a) Check the oil for deterioration, entry of water, discoloring or thinning.

If the quality is visibly poor, replace the oil.

Oil grade:



API grade ”SJ” Energy–Conserving, ”SL” Energy–Conserving or ILSAC multi grade engine oil. Recommended viscosity is as shown in the illustration.

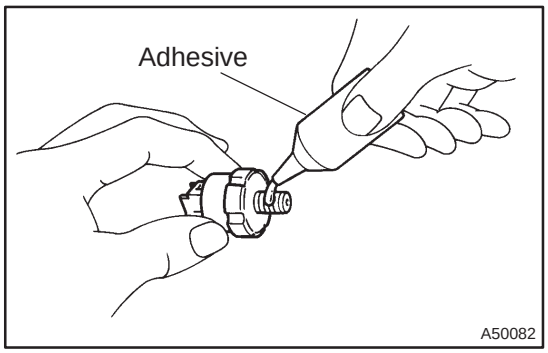
3. REMOVE OIL PRESSURE SWITCH ASSY

(a) Disconnect the oil pressure switch connector.

(b) Using a deep socket wrench 24mm, remove the oil pressure switch.

4. INSTALL OIL PRESSURE GAUGE

(a) Install the oil pressure gauge.



5. WARM UP ENGINE

6. CHECK OIL PRESSURE

Oil pressure:

At idle	29 kPa (0.3 kgf/cm^2, 4.3 psi) or more
At 3,000 rpm	245 to 539 kPa (2.5 to 5.5 kgf/cm^2, 36 to 78 psi) or more

7. REMOVE OIL PRESSURE GAUGE

8. INSTALL OIL PRESSURE SWITCH ASSY

(a) Apply adhesive to 2 or 3 threads of the oil pressure switch.

Adhesive:
Part No. 08833–00080, THREE BOND 1344, LOCTITE 242 or equivalent

(b) Using a deep socket wrench 24mm, install the oil pressure switch.

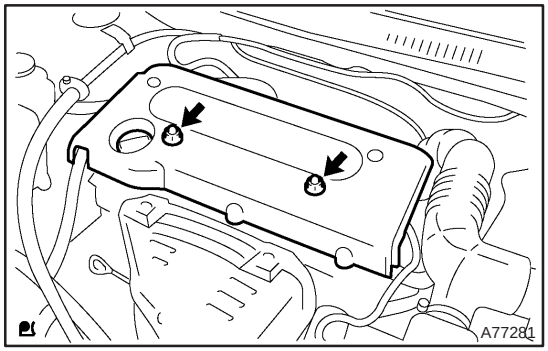
Torque: 15 N·m (153 kgf·cm, 11 ft·lbf)

NOTICE:

Do not start the engine within 1 hour after the installation.

(c) Connect the oil pressure switch connector.

9. START ENGINE AND CHECK FOR LEAKS



OIL PUMP ASSY (1AZ–FE)

170FU–01

REPLACEMENT

1. **DISCHARGE FUEL SYSTEM PRESSURE (See page 11–15)**
2. **REMOVE FRONT WHEEL RH**
3. **REMOVE RADIATOR SUPPORT OPENING COVER**
4. **REMOVE ENGINE ROOM COVER SIDE**
5. **REMOVE ENGINE UNDER COVER RH**
6. **REMOVE ENGINE UNDER COVER LH**
7. **DRAIN ENGINE OIL**

(a) Install a new gasket and drain plug after draining engine oil.
Torque: 25 N·m (250 kgf·cm, 18 ft·lbf)

8. **REMOVE ENGINE COVER SUB–ASSY NO.1**

(a) Remove 2 nuts and the engine cover No. 1.

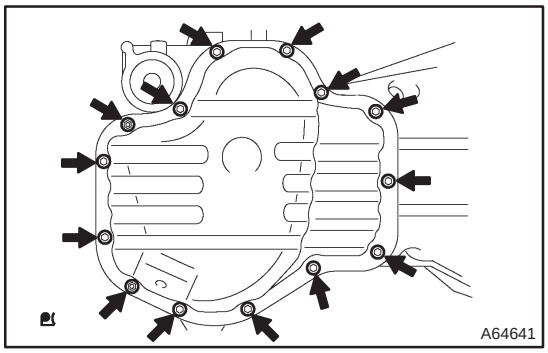
9. **REMOVE FAN AND GENERATOR V BELT (See page 14–105)**
SST 09249–63010
10. **REMOVE GENERATOR ASSY (See page 19–20)**
11. **REMOVE EXHAUST PIPE ASSY FRONT (See page 15–7)**
12. **SEPARATE VANE PUMP ASSY (See page 14–139)**
13. **SEPARATE RETURN TUBE SUB–ASSY (See page 14–139)**
14. **SEPARATE COOLER REFRIGERANT SUCTION HOSE NO.1 (LHD(W/ AIR CONDITIONER) STEERING POSITION TYPE) (See page 14–139)**
15. **SEPARATE VANE PUMP OIL RESERVOIR ASSY**
16. **REMOVE OIL RESERVOIR BRACKET NO.1 (See page 14–139)**
17. **SEPARATE ENGINE WIRE**
18. **REMOVE ENGINE SERVICE COVER BRACKET RH (W/O AIR CONDITIONING)**

(a) Remove a bolt and the engine service cover bracket RH.

19. **REMOVE COOLER BRACKET (LHD(W/ AIR CONDITIONER) STEERING POSITION TYPE) (See page 14–139)**
20. **REMOVE ENGINE SERVICE COVER BRACKET RH (RHD(W/ AIR CONDITIONER) STEERING POSITION TYPE)**

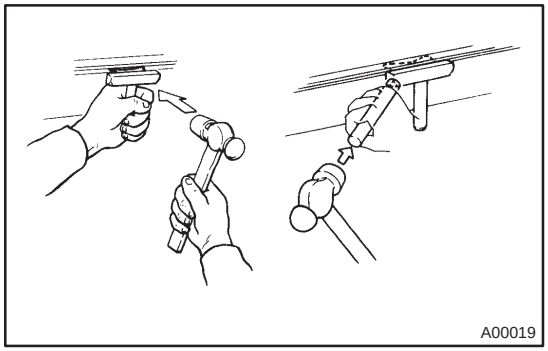
(a) Remove a bolt and the engine service cover bracket RH.

21. **REMOVE IGNITION COIL ASSY**



(a) Remove 4 bolts and the ignition coils.

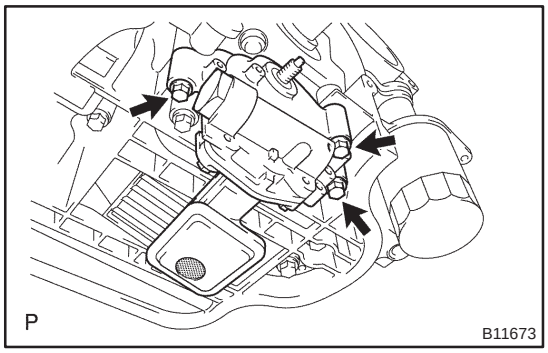
22. **REMOVE CYLINDER HEAD COVER SUB–ASSY (See page 14–139)**
23. **SET NO. 1 CYLINDER TO TDC/COMPRESSION (See page 14–139)**
24. **REMOVE ENGINE MOUNTING BRACKET NO.2 RH (See page 14–139)**
25. **REMOVE TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR (See page 14–139)**



26. REMOVE CRANKSHAFT PULLEY (See page 14–139)
SST 09213–54015 (91651–60855), 09330–00021, 09950–50013 (09951–05010, 09952–05010, 09953–05020, 09954–05021)

27. REMOVE CHAIN TENSIONER ASSY NO.1 (See page 14–139)

28. REMOVE CRANKSHAFT POSITION SENSOR (See page 18–16)

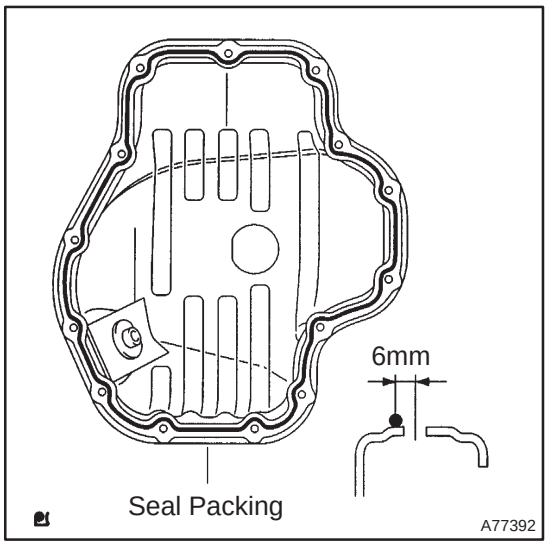


29. REMOVE OIL PAN SUB–ASSY
(a) Remove 12 bolts and 2 nuts.

(b) Insert the blade of SST between the crank case, timing chain cover and oil pan, cut off applied sealer and remove the oil pan.
SST 09032–00100

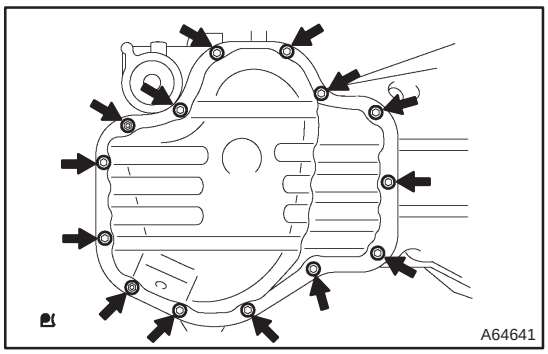
NOTICE:
Be careful not to damage the contact surface of timing chain cover, crank case and oil pan.

30. REMOVE V–RIBBED BELT TENSIONER ASSY (See page 14–139)
31. REMOVE TIMING CHAIN OR BELT COVER SUB–ASSY (See page 14–139)
32. REMOVE CRANKSHAFT POSITION SENSOR PLATE NO.1
33. REMOVE CHAIN TENSIONER SLIPPER
34. REMOVE CHAIN VIBRATION DAMPER NO.1
35. REMOVE TIMING CHAIN GUIDE (See page 14–139)
36. REMOVE CHAIN SUB–ASSY
37. REMOVE CRANKSHAFT TIMING GEAR OR SPROCKET
38. REMOVE NO.2 CHAIN SUB–ASSY (See page 14–139)



39. REMOVE OIL PUMP ASSY
(a) Remove 3 bolts, the oil pump and gasket.

40. INSTALL OIL PUMP ASSY
(a) Install a new gasket and oil pump with 3 bolts.
Torque: 19 N·m (195 kgf·cm, 15 ft·lbf)



41. INSTALL NO.2 CHAIN SUB–ASSY (See page 14–139)
42. INSTALL CRANKSHAFT TIMING GEAR OR SPROCKET

43. SET NO. 1 CYLINDER TO TDC/COMPRESSION (See page 14–139)
44. INSTALL CHAIN VIBRATION DAMPER NO.1
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
45. INSTALL CHAIN SUB–ASSY (See page 14–139)
46. INSTALL TIMING CHAIN GUIDE
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
47. INSTALL CHAIN TENSIONER SLIPPER (See page 14–139)
48. INSTALL CRANKSHAFT POSITION SENSOR PLATE NO.1 (See page 14–139)
49. INSTALL TIMING CHAIN OR BELT COVER SUB–ASSY (See page 14–139)
50. INSTALL V–RIBBED BELT TENSIONER ASSY (See page 14–139)

51. INSTALL OIL PAN SUB–ASSY
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the oil pan within 3 minutes after applying seal packing.**
- **Do not start the engine within 2 hours after installing.**

(a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surface of the cylinder block and oil pan.
(b) Apply seal packing in the shape of bead (Diameter 3 to 4 mm (0.157 in.)) as shown in the illustration, and install the oil pan.
Seal Packing: Part No. 08826 – 00080 or equivalent

(c) Insert the oil pan with 12 bolts and 2 nuts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

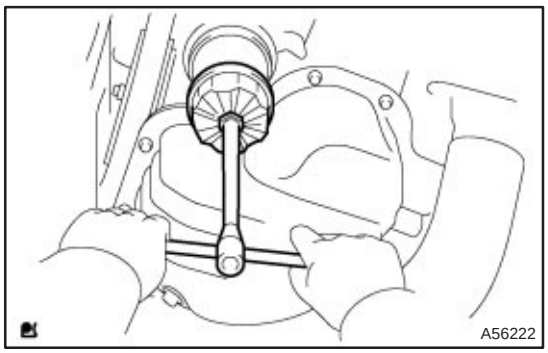
52. INSTALL CRANKSHAFT POSITION SENSOR (See page 14–139)
53. INSTALL CRANKSHAFT PULLEY (See page 14–139)
SST 09213–54015 (91651–60855), 09330–00021
54. INSTALL CHAIN TENSIONER ASSY NO.1 (See page 14–139)
55. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR
Torque: 52 N·m (530 kgf·cm, 38 ft·lbf)
56. INSTALL ENGINE MOUNTING BRACKET NO.2 RH (See page 14–139)
57. INSTALL CYLINDER HEAD COVER SUB–ASSY (See page 14–139)
58. INSTALL ENGINE SERVICE COVER BRACKET RH (W/O AIR CONDITIONING)
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
59. INSTALL COOLER BRACKET (LHD(W/ AIR CONDITIONER) STEERING POSITION TYPE)
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
60. INSTALL ENGINE SERVICE COVER BRACKET RH (RHD(W/ AIR CONDITIONER) STEERING POSITION TYPE)
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

61. INSTALL ENGINE WIRE
Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)
62. INSTALL OIL RESERVOIR BRACKET NO.1
Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)
63. INSTALL COOLER REFRIGERANT SUCTION HOSE NO.1 (LHD(W/ AIR CONDITIONER) STEERING POSITION TYPE)
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
64. INSTALL RETURN TUBE SUB–ASSY
Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)
65. INSTALL IGNITION COIL ASSY
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
66. INSTALL VANE PUMP ASSY
Torque: 37 N·m (377 kgf·cm, 27 ft·lbf)
67. INSTALL EXHAUST PIPE ASSY FRONT (See page 15–7)
68. INSTALL GENERATOR ASSY (See page 19–20)
69. INSTALL FAN AND GENERATOR V BELT (See page 14–105)
SST 09249–63010
70. ADD ENGINE OIL
71. CHECK FOR ENGINE OIL LEAKS
72. INSTALL ENGINE COVER SUB–ASSY NO.1
Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)
73. INSTALL FRONT WHEEL RH
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

OIL FILTER SUB–ASSY (1AZ–FE)

170FW–01

REPLACEMENT



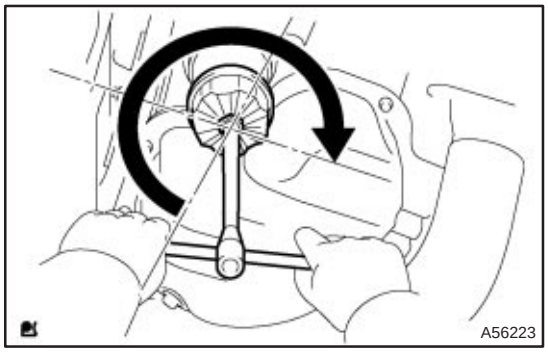
CAUTION:

- **Prolonged and repeated contact with mineral oil will result in the removal of natural fats from the skin, leading to dryness, irritation and dermatitis. In addition, used engine oil contains potentially harmful contaminants which may cause skin cancer.**
- **Exercise caution in order to minimize the length and frequency of contact of your skin to used oil. Wear protective clothing and gloves. Wash your skin thoroughly with soap and water, or use water–less hand cleaner to remove any used engine oil. Do not use gasoline, thinners, or solvents.**
- **In order to preserve the environment, used oil and used oil filter must be disposed of only at designated disposal sites.**

1. REMOVE ENGINE UNDER COVER RH

2. DRAIN ENGINE OIL

(a) Install a new gasket and drain plug after draining engine oil.
Torque: 25 N·m (250 kgf·cm, 18 ft·lbf)



3. REMOVE OIL FILTER SUB–ASSY

(a) Using SST, remove the oil filter.
SST 09228–06501

4. INSTALL OIL FILTER SUB–ASSY

(a) Check and clean the oil filter installation surface.

(b) Apply clean engine oil to the gasket of a new oil filter.

(c) Lightly screw the oil filter into place, and tighten it until the gasket contacts the seat.

(d) Using SST, tighten it an additional 3/4 turn.
SST 09228–06501

5. ADD ENGINE OIL

(a) Fill with fresh engine oil.
Capacity:
Drain and refill w/ Oil filter change 4.2 liters (4.4 US qts, 3.7 lmp. qts)
Drain and refill w/o Oil filter change 4.0 liters (4.2 US qts, 3.5 lmp. qts)
Dry fill 4.9 liters (5.2 US qts, 4.3 lmp. qts)

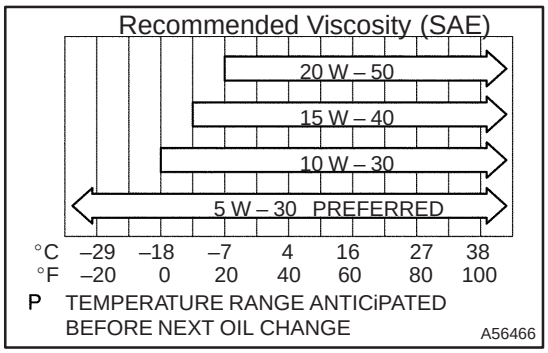
(b) Install the oil filler cap.

6. INSPECT OIL LEAK

LUBRICATION SYSTEM (1AZ–FSE)

1700E–07

ON–VEHICLE INSPECTION



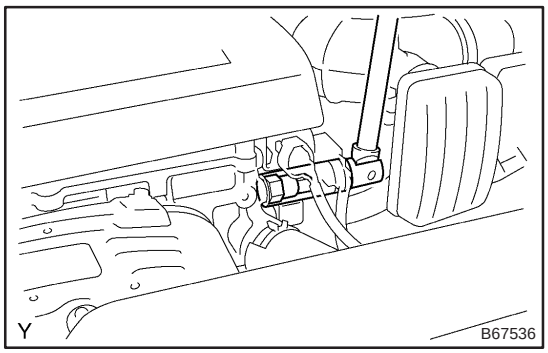
1. CHECK ENGINE OIL LEVEL

(a) After warm up the engine and then 5 minutes after the engine stop, oil level should be between the low level and full level marks of the dipstick.

If low, check for leakage and add oil up to the full level mark.

NOTICE:

Do not fill with engine oil above the full level mark.

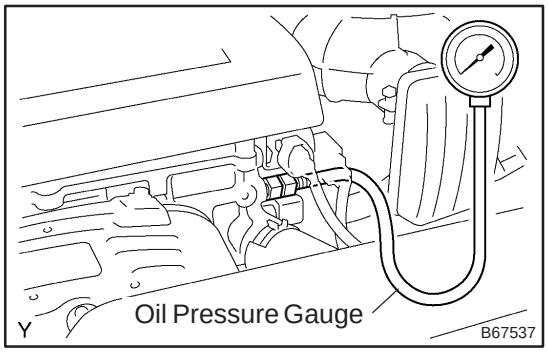


2. CHECK ENGINE OIL QUALITY

(a) Check the oil for deterioration, entry of water, discoloring or thinning.

If the quality is visibly poor, replace the oil.

Oil grade:



API grade ”SJ” Energy–Conserving, ”SL” Energy–Conserving or ILSAC multi grade engine oil. Recommended viscosity is as shown in the illustration.

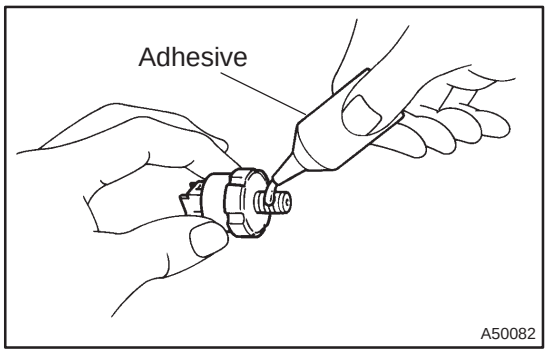
3. REMOVE OIL PRESSURE SWITCH ASSY

(a) Disconnect the oil pressure switch connector.

(b) Using a deep socket wrench 24mm, remove the oil pressure switch.

4. INSTALL OIL PRESSURE GAUGE

(a) Install the oil pressure gauge.



5. WARM UP ENGINE

6. CHECK OIL PRESSURE

Oil pressure:

At idle	29 kPa (0.3 kgf/cm^2, 4.3 psi) or more
At 3,000 rpm	245 to 539 kPa (2.5 to 5.5 kgf/cm^2, 36 to 78 psi) or more

7. REMOVE OIL PRESSURE GAUGE

8. INSTALL OIL PRESSURE SWITCH ASSY

(a) Apply adhesive to 2 or 3 threads of the oil pressure switch.

Adhesive:
Part No. 08833–00080, THREE BOND 1344, LOCTITE 242 or equivalent

(b) Using a deep socket wrench 24mm, install the oil pressure switch.

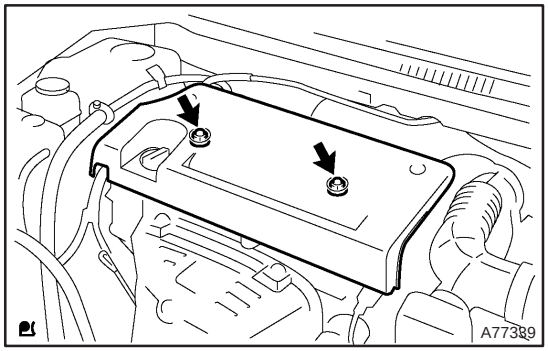
Torque: 15 N·m (153 kgf·cm, 11 ft·lbf)

NOTICE:

Do not start the engine within 1 hour after the installation.

(c) Connect the oil pressure switch connector.

9. START ENGINE AND CHECK FOR LEAKS



OIL PUMP ASSY (1AZ–FSE)

170FX–01

REPLACEMENT

1. **DISCHARGE FUEL SYSTEM PRESSURE (See page 11–30)**
2. **REMOVE FRONT WHEEL RH**
3. **REMOVE RADIATOR SUPPORT OPENING COVER**
4. **REMOVE ENGINE ROOM COVER SIDE**
5. **REMOVE ENGINE UNDER COVER RH**
6. **REMOVE ENGINE UNDER COVER LH**
7. **DRAIN ENGINE OIL**

(a) Install a new gasket and drain plug after draining engine oil.
Torque: 25 N·m (250 kgf·cm, 18 ft·lbf)

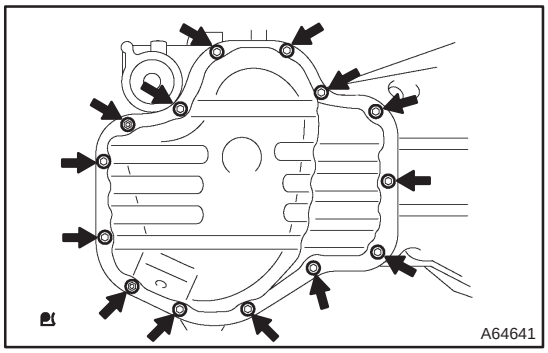
8. **REMOVE ENGINE COVER SUB–ASSY NO.1**

(a) Remove 2 nuts and the engine cover No. 1.

9. **REMOVE FUEL PRESSURE PULSATION DAMPER ASSY**
10. **DISCONNECT FUEL TUBE SUB–ASSY (See page 11–33)**
11. **SEPARATE FUEL PIPE SUB–ASSY NO.1 (See page 11–52)**
    SST 09023–12900
12. **REMOVE FUEL PUMP ASSY (See page 11–52)**
13. **REMOVE FAN AND GENERATOR V BELT (See page 14–185)**
    SST 09249–63010
14. **REMOVE GENERATOR ASSY (See page 19–20)**
15. **REMOVE EXHAUST PIPE ASSY FRONT (See page 15–7)**
16. **SEPARATE VANE PUMP ASSY (See page 14–222)**
17. **SEPARATE RETURN TUBE SUB–ASSY (See page 14–222)**
18. **SEPARATE COOLER REFRIGERANT SUCTION HOSE NO.1 (LHD STEERING POSITION TYPE) (See page 14–222)**
19. **SEPARATE VANE PUMP OIL RESERVOIR ASSY**
20. **REMOVE OIL RESERVOIR BRACKET NO.1 (See page 14–222)**
21. **SEPARATE ENGINE WIRE**
22. **REMOVE COOLER BRACKET (LHD STEERING POSITION TYPE) (See page 14–222)**
23. **REMOVE ENGINE SERVICE COVER BRACKET RH (RHD STEERING POSITION TYPE)**

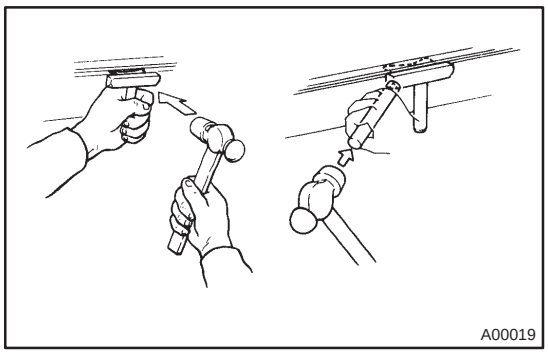
(a) Remove a bolt and the engine service cover bracket RH.

24. **REMOVE IGNITION COIL ASSY**



(a) Remove 4 bolts and the ignition coils.

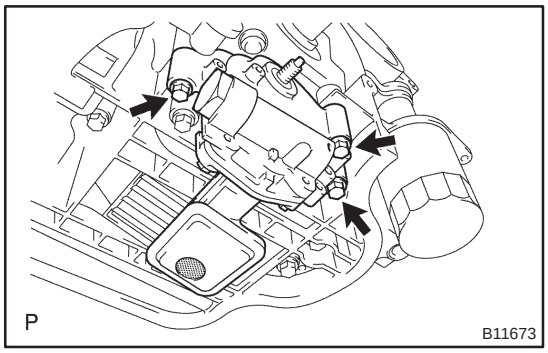
25. **REMOVE CYLINDER HEAD COVER SUB–ASSY (See page 14–222)**
26. **SET NO. 1 CYLINDER TO TDC/COMPRESSION (See page 14–222)**
27. **REMOVE ENGINE MOUNTING BRACKET NO.2 RH (See page 14–222)**
28. **REMOVE TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR (See page 14–222)**



29. REMOVE CRANKSHAFT PULLEY (See page 14–222)
SST 09213–54015 (91651–60855), 09330–00021, 09950–50013 (09951–05010, 09952–05010, 09953–05020, 09954–05021)

30. REMOVE CHAIN TENSIONER ASSY NO.1 (See page 14–139)

31. REMOVE CRANKSHAFT POSITION SENSOR (See page 18–17)

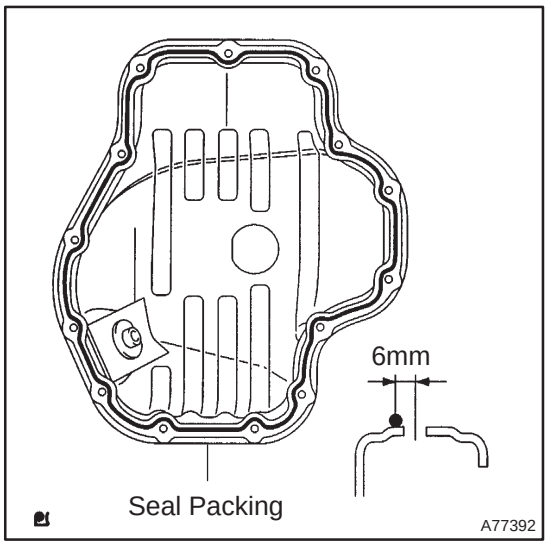


32. REMOVE OIL PAN SUB–ASSY
(a) Remove 12 bolts and 2 nuts.

(b) Insert the blade of SST between the crank case, timing chain cover and oil pan, cut off applied sealer and remove the oil pan.
SST 09032–00100

NOTICE:
Be careful not to damage the contact surface of timing chain cover, crank case and oil pan.

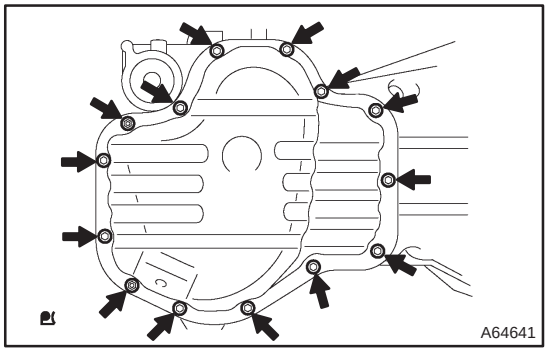
33. REMOVE V–RIBBED BELT TENSIONER ASSY (See page 14–139)
34. REMOVE TIMING CHAIN OR BELT COVER SUB–ASSY (See page 14–139)
35. REMOVE CRANKSHAFT POSITION SENSOR PLATE NO.1
36. REMOVE CHAIN TENSIONER SLIPPER
37. REMOVE CHAIN VIBRATION DAMPER NO.1
38. REMOVE TIMING CHAIN GUIDE (See page 14–139)
39. REMOVE CHAIN SUB–ASSY
40. REMOVE CRANKSHAFT TIMING GEAR OR SPROCKET
41. REMOVE NO.2 CHAIN SUB–ASSY (See page 14–139)



42. REMOVE OIL PUMP ASSY
(a) Remove 3 bolts, the oil pump and gasket.

43. INSTALL OIL PUMP ASSY
(a) Install a new gasket and oil pump with 3 bolts.
Torque: 19 N·m (195 kgf·cm, 15 ft·lbf)

44. INSTALL NO.2 CHAIN SUB–ASSY (See page 14–139)
45. INSTALL CRANKSHAFT TIMING GEAR OR SPROCKET



46. SET NO. 1 CYLINDER TO TDC/COMPRESSION (See page 14–139)
47. INSTALL CHAIN VIBRATION DAMPER NO.1
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
48. INSTALL CHAIN SUB–ASSY (See page 14–139)
49. INSTALL TIMING CHAIN GUIDE
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
50. INSTALL CHAIN TENSIONER SLIPPER (See page 14–139)
51. INSTALL CRANKSHAFT POSITION SENSOR PLATE NO.1 (See page 14–139)
52. INSTALL TIMING CHAIN OR BELT COVER SUB–ASSY (See page 14–139)
53. INSTALL V–RIBBED BELT TENSIONER ASSY (See page 14–139)

54. INSTALL OIL PAN SUB–ASSY
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the oil pan within 3 minutes after applying seal packing.**
- **Do not start the engine within 2 hours after installing.**

(a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surface of the cylinder block and oil pan.

(b) Apply seal packing in the shape of bead (Diameter 3 to 4 mm (0.157 in.)) as shown in the illustration, and install the oil pan.
Seal Packing: Part No. 08826 – 00080 or equivalent

(c) Insert the oil pan with 12 bolts and 2 nuts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

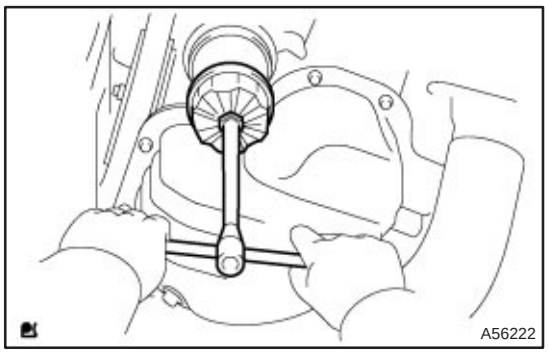
55. INSTALL CRANKSHAFT POSITION SENSOR (See page 18–17)
56. INSTALL CRANKSHAFT PULLEY (See page 14–139)
SST 09213–54015 (91651–60855), 09330–00021
57. INSTALL CHAIN TENSIONER ASSY NO.1
58. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR
Torque: 52 N·m (530 kgf·cm, 38 ft·lbf)
59. INSTALL ENGINE MOUNTING BRACKET NO.2 RH (See page 14–139)
60. INSTALL CYLINDER HEAD COVER SUB–ASSY (See page 14–139)
61. INSTALL COOLER BRACKET (LHD STEERING POSITION TYPE)
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
62. INSTALL ENGINE SERVICE COVER BRACKET RH (RHD STEERING POSITION TYPE)
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
63. INSTALL ENGINE WIRE
Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)

64. INSTALL OIL RESERVOIR BRACKET NO.1
Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)
65. INSTALL COOLER REFRIGERANT SUCTION HOSE NO.1 (LHD STEERING POSITION TYPE)
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
66. INSTALL RETURN TUBE SUB–ASSY
Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)
67. INSTALL IGNITION COIL ASSY
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
68. INSTALL VANE PUMP ASSY
Torque: 37 N·m (377 kgf·cm, 27 ft·lbf)
69. INSTALL EXHAUST PIPE ASSY FRONT (See page 15–7)
70. INSTALL GENERATOR ASSY (See page 19–20)
71. INSTALL FAN AND GENERATOR V BELT (See page 14–185)
SST 09249–63010
72. INSTALL FUEL PUMP ASSY (See page 11–52)
73. INSTALL FUEL PIPE SUB–ASSY NO.1 (See page 11–52)
SST 09023–12900
74. INSTALL FUEL TUBE SUB–ASSY (See page 11–33)
75. INSTALL FUEL PRESSURE PULSATION DAMPER ASSY (See page 11–52)
76. ADD ENGINE OIL
77. CHECK FOR ENGINE OIL LEAKS
78. CHECK FUEL LEAK
79. INSTALL ENGINE COVER SUB–ASSY NO.1
Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)
80. INSTALL FRONT WHEEL RH
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

OIL FILTER SUB–ASSY (1AZ–FSE)

170FV–01

REPLACEMENT



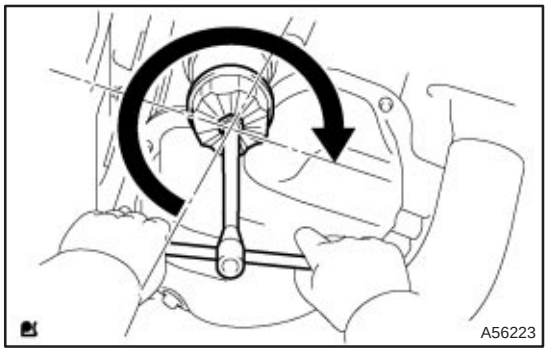
CAUTION:

- **Prolonged and repeated contact with mineral oil will result in the removal of natural fats from the skin, leading to dryness, irritation and dermatitis. In addition, used engine oil contains potentially harmful contaminants which may cause skin cancer.**
- **Exercise caution in order to minimize the length and frequency of contact of your skin to used oil. Wear protective clothing and gloves. Wash your skin thoroughly with soap and water, or use water–less hand cleaner to remove any used engine oil. Do not use gasoline, thinners, or solvents.**
- **In order to preserve the environment, used oil and used oil filter must be disposed of only at designated disposal sites.**

1. REMOVE ENGINE UNDER COVER RH

2. DRAIN ENGINE OIL

(a) Install a new gasket and drain plug after draining engine oil.
Torque: 25 N·m (250 kgf·cm, 18 ft·lbf)



3. REMOVE OIL FILTER SUB–ASSY

(a) Using SST, remove the oil filter.
SST 09228–06501

4. INSTALL OIL FILTER SUB–ASSY

(a) Check and clean the oil filter installation surface.

(b) Apply clean engine oil to the gasket of a new oil filter.

(c) Lightly screw the oil filter into place, and tighten it until the gasket contacts the seat.

(d) Using SST, tighten it an additional 3/4 turn.
SST 09228–06501

5. ADD ENGINE OIL

(a) Fill with fresh engine oil.
Capacity:
Drain and refill w/ Oil filter change 4.2 liters (4.4 US qts, 3.7 lmp. qts)
Drain and refill w/o Oil filter change 4.0 liters (4.2 US qts, 3.5 lmp. qts)
Dry fill 4.9 liters (5.2 US qts, 4.3 lmp. qts)

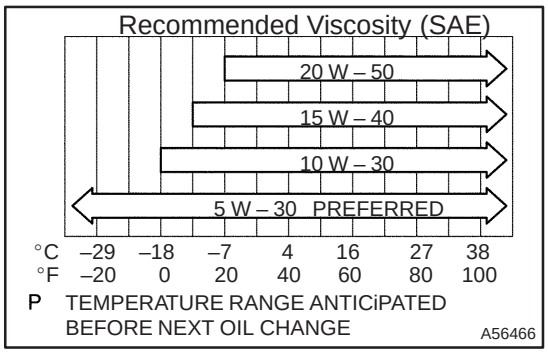
(b) Install the oil filler cap.

6. INSPECT OIL LEAK

LUBRICATION SYSTEM (1CD–FTV)

17045–03

ON–VEHICLE INSPECTION



1. CHECK ENGINE OIL LEVEL

(a) After warm up the engine and then 5 minutes after the engine stop, oil level should be between the low level and full level marks of the dipstick.

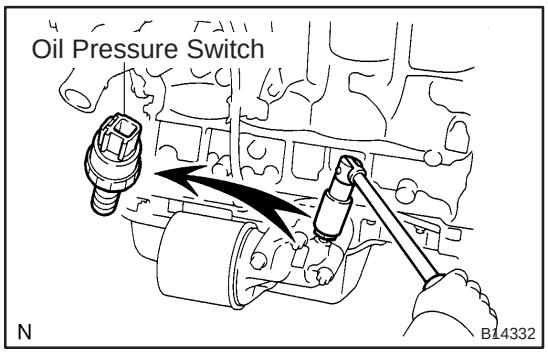
If low, check for leakage and add oil up to the full level mark.

NOTICE:

Do not fill with engine oil above the full level mark.

2. CHECK ENGINE OIL QUALITY

(a) Check the oil for deterioration, entry of water, discoloring or thinning.

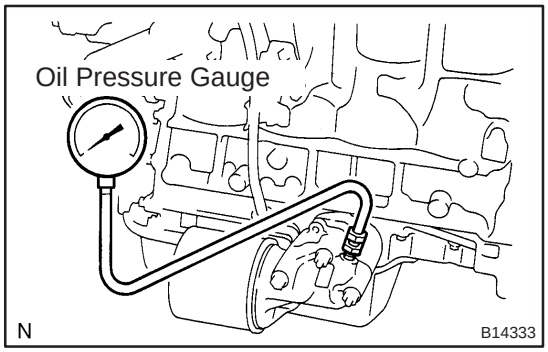


If the quality is visibly poor, replace the oil.

Oil grade:

Use ACEA B1, API grade CF – 4 or CF

(You may also use API CE or CD)



SAE 5W – 30 is the best choice for your vehicle, for good fuel economy, and good starting in cold weather.

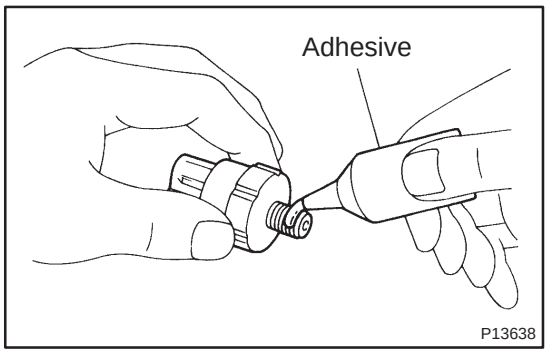
3. REMOVE OIL PRESSURE SWITCH ASSY

(a) Disconnect the oil pressure switch connector.

(b) Using a deep socket wrench 24mm, remove the oil pressure switch.

4. INSTALL OIL PRESSURE GAUGE

(a) Install the oil pressure gauge.



5. WARM UP ENGINE

6. CHECK OIL PRESSURE

Oil pressure:

At idle	29 kPa (0.3 kgf/cm^2, 4.3 psi) or more
At 4,500 rpm	245 to 588 kPa (2.5 to 6.0 kgf/cm^2, 36 to 85 psi) or more

7. REMOVE OIL PRESSURE GAUGE

8. INSTALL OIL PRESSURE SWITCH ASSY

(a) Apply adhesive to 2 or 3 threads of the oil pressure switch.

Adhesive:

Part No. 08833 – 00080, THREE BOND 1344, LOCTITE 242 or equivalent

(b) Using a deep socket wrench 24mm, install the oil pressure switch.

Torque: 15 N·m (153 kgf·cm, 11 ft·lbf)

NOTICE:

Do not start the engine within 1 hour after the installation.

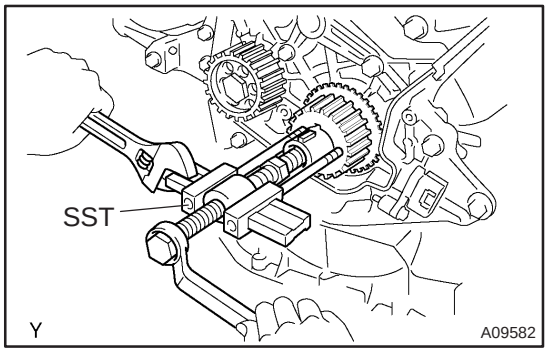
(c) Connect the oil pressure switch connector.

9. START ENGINE AND CHECK FOR LEAKS

OIL PUMP ASSY (1CD–FTV)

170FP–01

REPLACEMENT



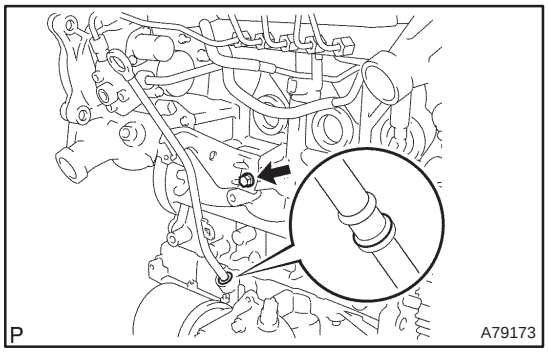
1. **DRAIN ENGINE OIL (See page 17–30)**
2. **REMOVE RADIATOR SUPPORT OPENING COVER**
3. **REMOVE ENGINE ROOM COVER SIDE**
4. **REMOVE FRONT WHEEL RH**
5. **REMOVE ENGINE UNDER COVER RH**
6. **REMOVE ENGINE UNDER COVER SUB–ASSY NO.1**
7. **REMOVE ENGINE COVER NO.1**

(a) Remove the 5 nuts and the engine cover.

8. **REMOVE INJECTOR DRIVER (See page 14–307)**
9. **REMOVE V (COOLER COMPRESSOR TO CRANKSHAFT PULLEY) BELT NO.1 (See page 14–269)**
10. **REMOVE GENERATOR V BELT (See page 14–269)**
11. **SEPARATE POWER STEERING IDLE PULLEY BRACKET (See page 14–286)**
12. **REMOVE ENGINE MOUNTING INSULATOR SUB–ASSY RH (See page 14–307)**
13. **REMOVE CRANKSHAFT PULLEY (See page 14–307)**

SST 09213–54015 (90105–08076), 09330–00021, 09950–50013 (09951–05010, 09952–05010, 09953–05020, 09954–05031)

14. **REMOVE IDLER PULLEY SUB–ASSY (See page 14–307)**
15. **REMOVE TIMING BELT NO.2 COVER (See page 14–307)**
16. **REMOVE TIMING BELT NO.1 COVER (See page 14–307)**
17. **REMOVE TIMING BELT GUIDE**
18. **REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET (See page 14–307)**
19. **SET NO. 1 CYLINDER TO TDC/COMPRESSION (See page 14–307)**
20. **REMOVE TIMING CHAIN COVER PLATE (See page 14–307)**
21. **REMOVE TIMING BELT (See page 14–307)**
22. **REMOVE TIMING BELT IDLER SUB–ASSY NO.2 (See page 14–307)**



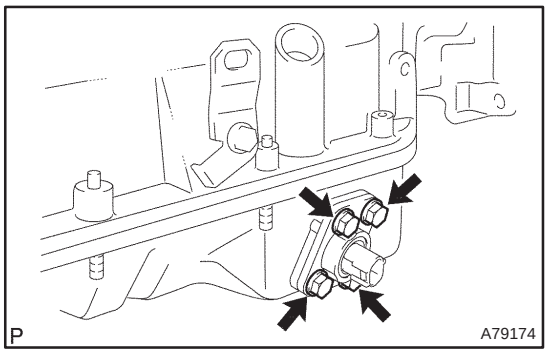
23. **REMOVE CRANKSHAFT TIMING PULLEY**

(a) If the timing pulley can not be removed by hand, use SST to remove the pulley.

SST 09950–50013 (09951–05010, 09952–05010, 09953–05010, 09953–05020, 09954–05021)

24. **REMOVE GENERATOR ASSY (See page 19–29)**
25. **REMOVE TIMING BELT IDLER SUB–ASSY NO.1**
26. **REMOVE V–RIBBED BELT TENSIONER ASSY**

(a) Remove the 2 bolts and the V–ribbed belt tensioner.

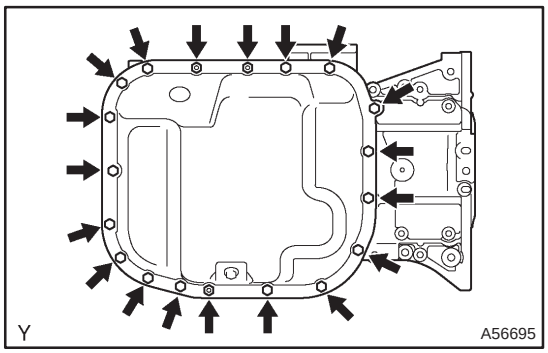


27. REMOVE OIL LEVEL GAGE GUIDE

(a) Remove the bolt which is used to secure the oil level gage guide to the cylinder block.

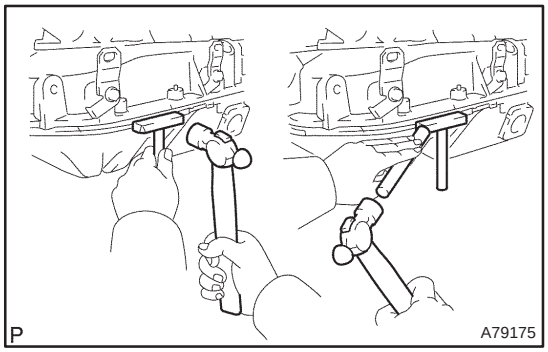
(b) Pull out the oil level gage guide together with the oil level gage from the No. 1 oil pan.

(c) Remove the O–ring from the oil level gage guide.



28. REMOVE ENGINE OIL LEVEL SENSOR

(a) Remove the 4 bolts and the level sensor.

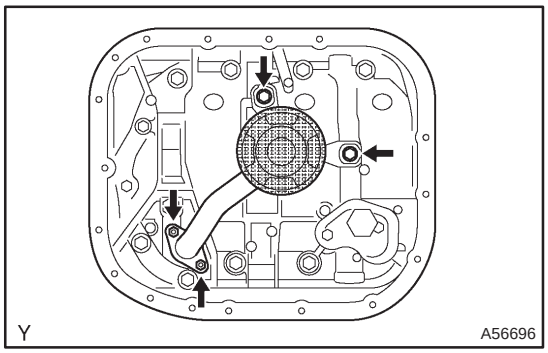


NOTICE:

Be careful not to drop the oil level sensor when removing.

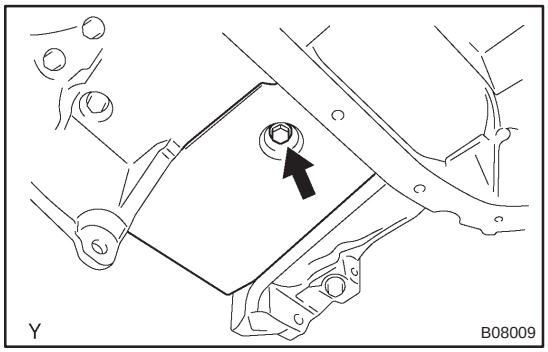
29. REMOVE OIL PAN SUB–ASSY NO.2

(a) Remove the 17 bolts and 2 nuts.



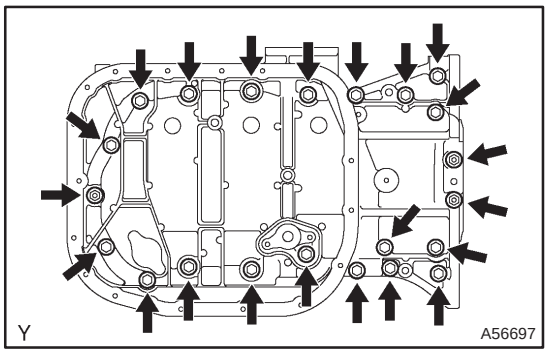
(b) Insert the blade of SST between the No. 1 and No. 2 oil pans, and cut off applied sealer and remove the No. 2 oil pan.

SST 09032–00100



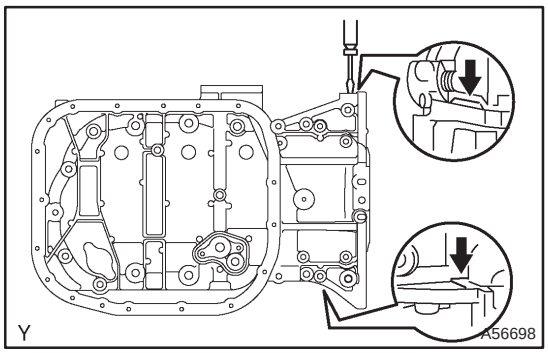
NOTICE:

Be careful not to damage the No. 1 and No. 2 oil pans.



30. REMOVE OIL STRAINER SUB–ASSY

(a) Remove the 2 bolts and 2 nuts, then remove the oil strainer and the gasket.

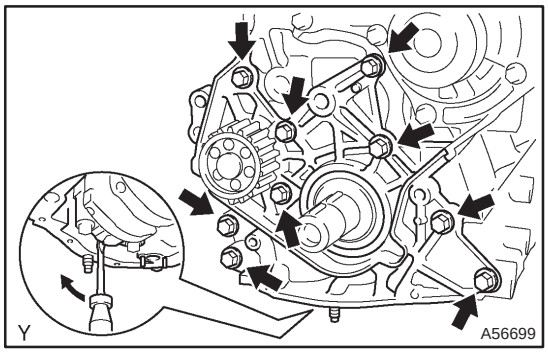


31. REMOVE OIL PAN INSULATOR

(a) Remove the bolt and the oil pan insulator.

32. REMOVE OIL PAN SUB–ASSY

(a) Remove the 19 bolts and 3 nuts.

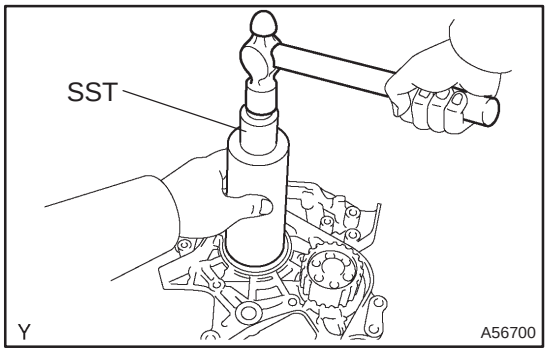


(b) Using a screwdriver, remove the oil pan by prying between the cylinder block and the No. 1 oil pan.

NOTICE:

Be careful not to damage the cylinder block and No. 1 oil pan.

33. REMOVE CRANKSHAFT POSITION SENSOR

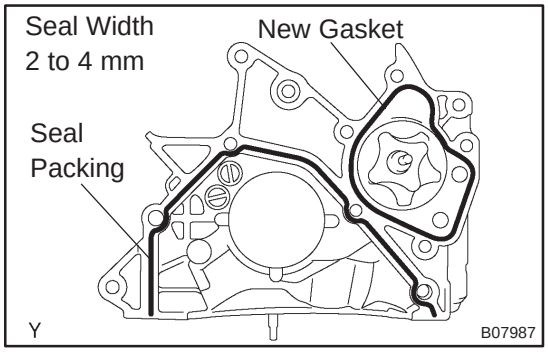


34. REMOVE OIL PUMP ASSY

(a) Remove the 9 bolts.

(b) Remove the oil pump by prying between the oil pump and the main bearing cap with a screwdriver.

(c) Remove the gasket.

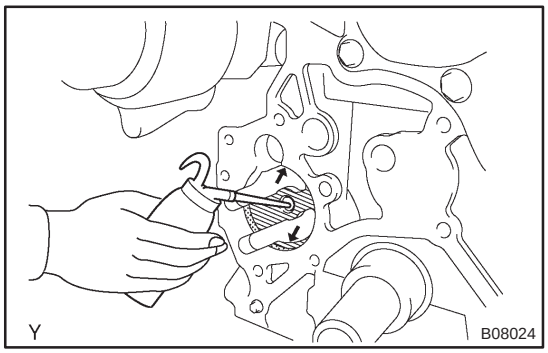


35. INSTALL CRANKSHAFT SEAL

(a) Using SST and a hammer, tap in a new oil seal until its surface is flush with the oil pump edge.
SST 09316–60011 (09316–00011, 09316–00021)

36. INSTALL OIL PUMP ASSY

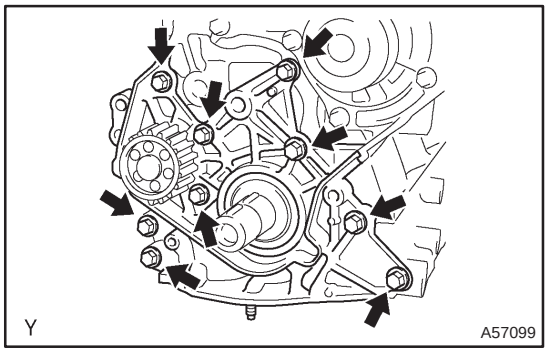
(a) Remove any old packing (FIPG) and be careful not to drop any oil on the contact surfaces of the oil pump and the cylinder block.
(1) Using a razor blade and a gasket scraper, remove all the old packing from the gasket surfaces and the sealing groove.
(2) Thoroughly clean all components to remove all the loose material.
(3) Using a non–residue solvent, clean both the sealing surfaces.



(b) Apply seal packing to the oil pump as shown in the illustration.
Seal packing: Part No. 08826–00080 or equivalent

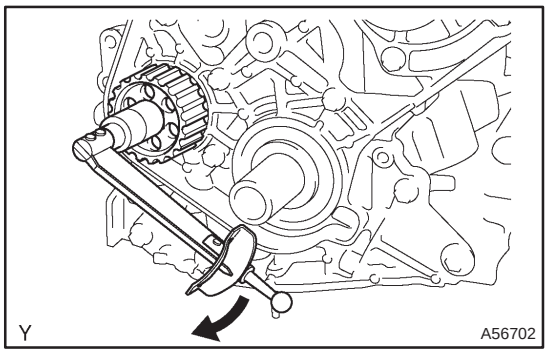
NOTICE:

Avoid applying an excessive amount to the surface.



(1) Install a nozzle that has been cut to a 2 to 4 mm (0.08 to 0.16 in.) opening.
(2) Parts must be set within 3 minutes and assembled within 15 minutes of application. Otherwise the material must be removed and reapplied.
(3) Immediately remove nozzle from the tube and reinstall the cap.

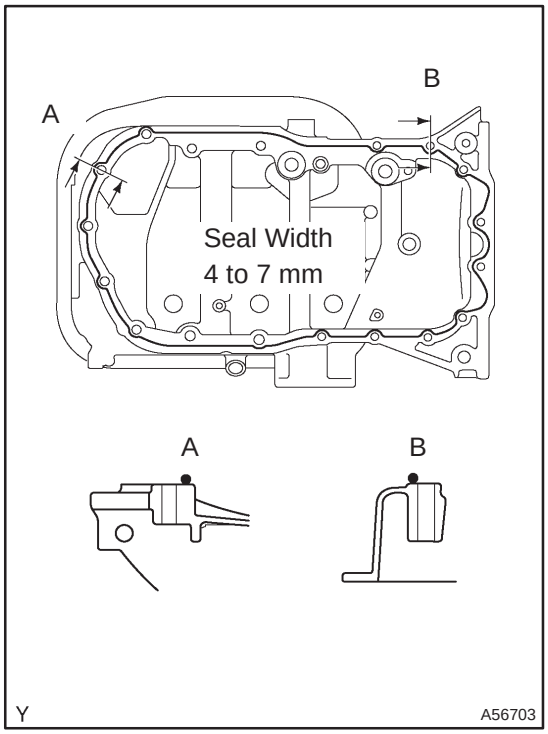
(c) Install a new gasket to the oil pump.



(d) Pour in 0.5 cm^3 (0.03 cu in.) or more of engine oil into the bushing of the cylinder block.

(e) Apply engine oil to the cylinder block side where it contacts with the oil pump driven rotor.

(f) Install the oil pump with the 9 bolts.
Torque: 31 N·m (320 kgf·cm, 23 ft·lbf)

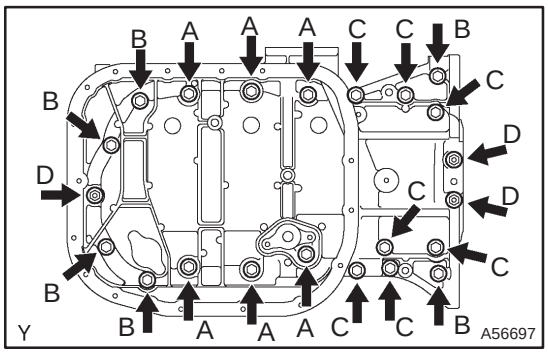


(g) Measure the oil pump rotating torque.
(1) Check that the pump rotates smoothly without noise.
(2) Using a torque wrench, check the pump rotating torque.
Rotating torque: 3.0 N·m (31 kgf·cm, 27 in.·lbf) or less

37. INSTALL CRANKSHAFT POSITION SENSOR
Torque: 8.8 N·m (90 kgf·cm, 78 in.·lbf)

38. INSTALL OIL PAN SUB–ASSY

(a) Remove any old packing (FIPG) and be careful not to drop any oil on the contact surfaces of the No. 1 oil pan, the cylinder block and the oil pump and the rear oil seal retainer.
(1) Using a razor blade and gasket scraper, remove all the old packing from the gasket surfaces.
(2) Thoroughly clean all components to remove all the loose material.
(3) Using a non–residue solvent, clean both the sealing surfaces.



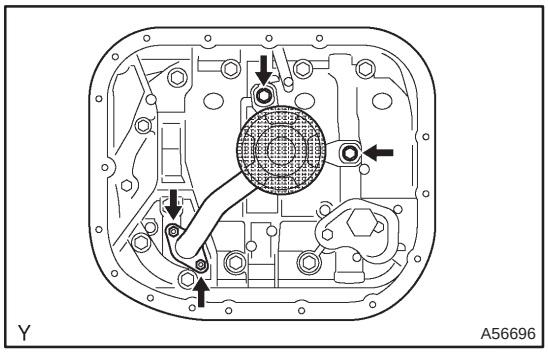
(b) Apply a seal packing to the No. 1 oil pan as shown in the illustration.

Seal packing: Part No. 08826–00080 or equivalent

(1) Install a nozzle that has been cut to a 4 to 7 mm (0.16 to 0.28 in.) opening.

(2) Parts must be set within 3 minutes and assembled within 15 minutes of application. Otherwise the material must be removed and reapplied.

(3) Immediately remove nozzle from the tube and reinstall the cap.



(c) Install the oil pan with the 19 bolts and 3 nuts.

Torque:
42 N·m (428 kgf·cm, 31 ft·lbf) for bolt A
21 N·m (214 kgf·cm, 15 ft·lbf) for bolt B
11 N·m (112 kgf·cm, 8 ft·lbf) for bolt C
12 N·m (122 kgf·cm, 9 ft·lbf) for nut D

39. INSTALL OIL PAN INSULATOR

(a) Install the oil pan insulator with the bolt.

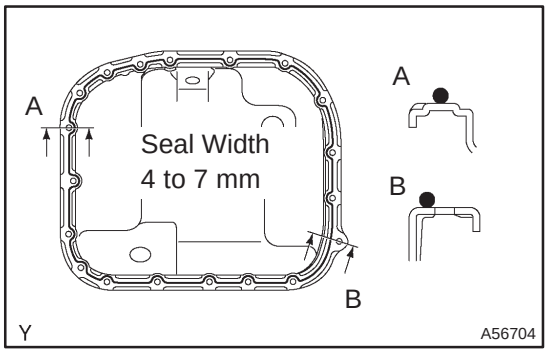
Torque: 7.5 N·m (76 kgf·cm, 66 in.·lbf)

40. INSTALL OIL STRAINER SUB–ASSY

(a) Install a new gasket and the oil strainer with the 2 bolts and 2 nuts.

Torque:
21 N·m (209 kgf·cm, 15 ft·lbf) for bolt
13 N·m (135 kgf·cm, 10 ft·lbf) for nut

41. INSTALL OIL PAN SUB–ASSY NO.2

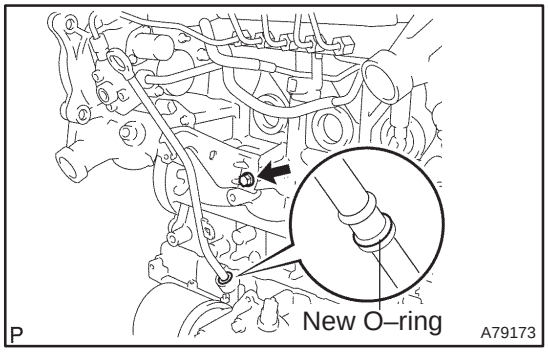


(a) Remove any old packing and be careful not to drop any oil on the contact surfaces of the No. 1 and No. 2 oil pans.

(1) Using a razor blade and gasket scraper, remove all the old packing from the gasket surfaces.

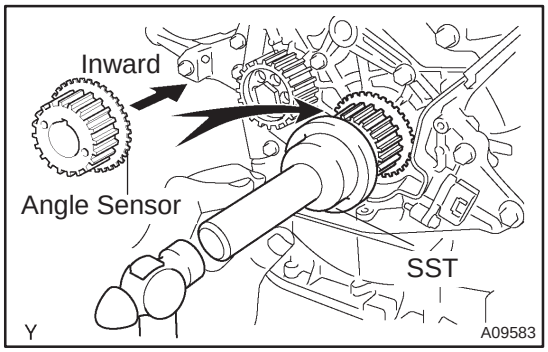
(2) Thoroughly clean all components to remove all the loose material.

(3) Using a non–residue solvent, clean both the sealing surfaces.



NOTICE:
Do not use a solvent, which will affect the painted surfaces.

(b) Apply a seal packing to the oil pan as shown in the illustration.
Seal packing: Part No. 08826–00080 or equivalent
(1) Install a nozzle that has been cut to a 4 to 7 mm (0.16 to 0.28 in.) opening.
(2) Parts must be set within 3 minutes and assembled within 15 minutes of application. Otherwise the material must be removed and reapplied.
(3) Immediately remove nozzle from the tube and reinstall the cap.



(c) Install the oil pan with the 17 bolts and 2 nuts. Tighten the bolts and nuts uniformly in several steps.
Torque: 12 N·m (119 kgf·cm, 9 ft·lbf)

42. INSTALL ENGINE OIL LEVEL SENSOR
Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)

43. INSTALL OIL LEVEL GAGE GUIDE
(a) Install a new O–ring to the oil level gage guide.
(b) Apply engine oil to the O–ring.
(c) Push in the oil level gage guide end into the guide hole of the No. 1 oil pan.
(d) Install the oil level gage guide with the bolt.
Torque: 18 N·m (184 kgf·cm, 13 ft·lbf)
(e) Apply engine oil to the O–ring on the oil level gage.
(f) Install the oil level gage.

44. INSTALL V–RIBBED BELT TENSIONER ASSY
Torque: 31 N·m (320 kgf·cm, 23 ft·lbf)
45. INSTALL TIMING BELT IDLER SUB–ASSY NO.1
Torque: 35 N·m (357 kgf·cm, 26 ft·lbf)
46. INSTALL GENERATOR ASSY (See page 19–29)

47. INSTALL CRANKSHAFT TIMING PULLEY

(a) Align the keyway of the timing pulley with the key located on the camshaft, slide the pulley into place.

(b) Using SST and a hammer, tap in the timing pulley with the angle sensor facing inward.
SST 09223–46011

48. INSTALL TIMING BELT IDLER SUB–ASSY NO.2
Torque: 47 N·m (479 kgf·cm, 35 ft·lbf)

49. SET NO. 1 CYLINDER TO TDC/COMPRESSION (See page 14–307)
SST 09960–10010 (09962–01000, 09963–01000)

50. INSTALL TIMING BELT (See page 14–307)

51. CHECK VALVE TIMING (See page 14–307)

52. INSTALL TIMING CHAIN COVER PLATE (See page 14–307)

53. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET (See page 14–307)

54. INSTALL TIMING BELT GUIDE (See page 14–307)

55. INSTALL TIMING BELT NO.1 COVER (See page 14–307)

56. INSTALL TIMING BELT NO.2 COVER (See page 14–307)

57. INSTALL CRANKSHAFT PULLEY (See page 14–307)
SST 09213–54015 (90105–08076), 09330–00021

58. INSTALL ENGINE MOUNTING INSULATOR SUB–ASSY RH
Torque: 52 N·m (530 kgf·cm, 38 ft·lbf)

59. INSTALL IDLER PULLEY SUB–ASSY

60. INSTALL POWER STEERING IDLE PULLEY BRACKET (See page 14–286)

61. ADJUST V (COOLER COMPRESSOR TO CRANKSHAFT PULLEY) BELT NO.1 (See page 14–269)

62. INSTALL INJECTOR DRIVER (See page 14–307)

63. INSTALL ENGINE COVER NO.1
Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)

64. INSTALL FRONT WHEEL RH
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

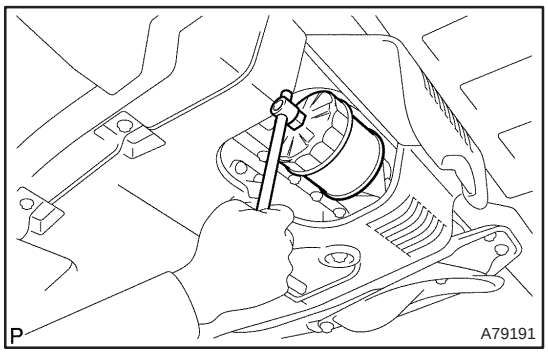
65. ADD ENGINE OIL (See page 17–30)

66. CHECK FOR ENGINE OIL LEAKS

OIL FILTER SUB–ASSY (1CD–FTV)

170FO–01

REPLACEMENT



NOTICE:

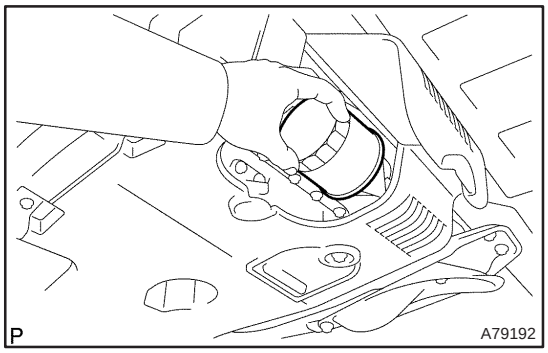
- **Prolonged and repeated contact with engine oil will result in the removal of natural oils from the skin, leading to dryness, irritation and dermatitis. In addition, used engine oil contains potentially harmful contaminants which may cause skin cancer.**
- **Precautions should be taken when replacing engine oil to minimize the risk of your skin making contact with used engine oil. Wear protective clothing and gloves. Wash your skin thoroughly with soap and water, or use water–less hand cleaner to remove any used engine oil. Do not use gasoline, thinners, or solvents.**
- **In order to preserve the environment, used oil and oil filter must be disposed of at designated disposal sites.**

1. DRAIN ENGINE OIL

(a) Remove the oil filler cap.

(b) Remove the oil drain plug and drain the oil into a container.

2. REMOVE OIL FILTER SUB–ASSY



(a) Remove the clip and open the engine under cover.

(b) Using SST, remove the oil filter.
SST 09228–10002

3. INSTALL OIL FILTER SUB–ASSY

(a) Check and clean the oil filter installation surface.

(b) Apply clean engine oil to the gasket of a new oil filter.

(c) Lightly screw the oil filter into place, and tighten it until the gasket contacts the seat.

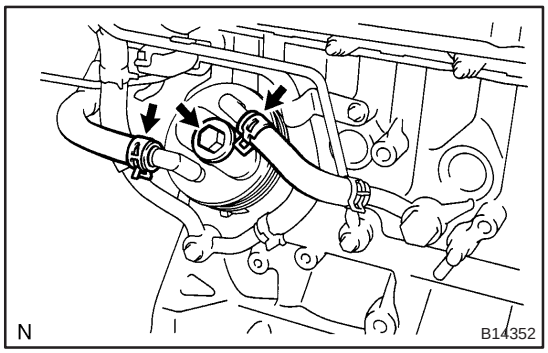
(d) Using SST, tighten it an additional 3/4 turn.
SST 09228–10002

4. ADD ENGINE OIL

(a) Clean and install the oil drain plug with a new gasket.
Torque: 34 N·m (350 kgf·cm, 25 ft·lbf)

(b) Fill with fresh engine oil.
Capacity:
With the oil filter replacement: 5.9 liters (6.2 US qts, 5.2 lmp. qts)
Without the oil filter replacement: 5.3 liters (5.6 US qts, 4.7 lmp. qts)
Dry fill: 6.7 liters (7.1 US qts, 5.9 lmp. qts)

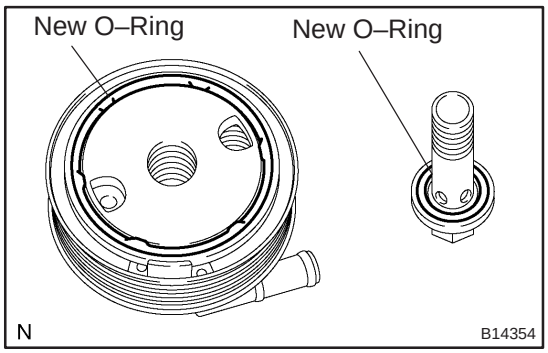
(c) Install the oil filler cap.



5. CHECK FOR ENGINE OIL LEAKS

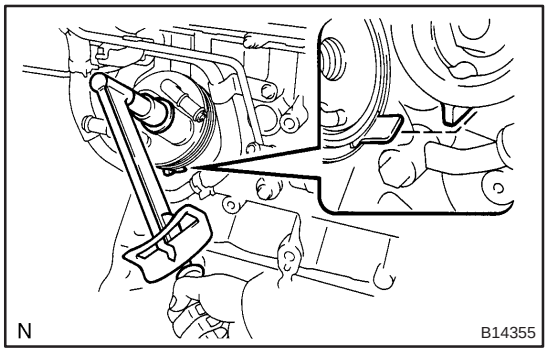
OIL COOLER ASSY (1CD–FTV)

170FQ–01



REPLACEMENT

1. DRAIN ENGINE COOLANT (See page 16–44)
2. DRAIN ENGINE OIL (See page 17–30)
3. REMOVE ENGINE UNDER COVER LH



4. REMOVE OIL COOLER ASSY

(a) Disconnect the 2 cooler hoses from the oil cooler.
(b) Remove the union bolt and the oil cooler.
(c) Remove the O–ring from the oil cooler.
(d) Remove the O–ring from the union bolt.

5. INSTALL OIL COOLER ASSY

(a) Clean the oil cooler mounting surface.
(b) Install a new O–ring to the union bolt.
(c) Install a new O–ring to the oil cooler.

(d) Apply a light coat of engine oil on the threads of the union bolt.
(e) Align the tab of the oil cooler with the tab located on the cylinder block.
(f) Install the oil cooler with the union bolt.
Torque: 45 N·m (454 kgf·cm, 33 ft·lbf)
(g) Connect the 2 cooler hoses to the oil cooler.

6. ADD ENGINE OIL (See page 17–30)
7. ADD ENGINE COOLANT (See page 16–44)
8. CHECK FOR ENGINE OIL LEAKS (See page 16–44)
9. CHECK FOR ENGINE COOLANT LEAKS

IGNITION SYSTEM (1ZZ–FE/3ZZ–FE)

1807O–01

ON–VEHICLE INSPECTION

NOTICE:

"Cold" and "Hot" in this section mean the temperature of the coils themselves."Cold" is from –10°C (14°F) to 50 °C (122 °F) and "Hot" is from 50 °C (122 °F) to 100 °C (212 °F).

1. INSPECT IGNITION COIL (WITH IGNITER) AND SPARK TEST

(a) Check for DTCs.

NOTICE:

If DTC is present, perform a troubleshooting in accordance with a procedure for that DTC.

(b) Check that spark occurs.

(1) Remove the cylinder head cover No. 2. (See page 14–6)

(2) Remove the ignition coils (with igniter).

(3) Using a 16mm (0.63 in) plug wrench, remove the spark plugs.

(4) Install the spark plugs to each ignition coil (with igniter) and connect the ignition coil connectors.

(5) Disconnect the 4 injector connectors.

(6) Ground the spark plugs.

(7) Check if spark occurs at each spark plug while engine is being cranked.

NOTICE:

- **Be sure to ground the spark plug when checking.**
- **Replace the ignition coil it is given physical impact.**
- **Do not crank the engine for more than 2 seconds.**

If the sparks do not occur, do the following test:

SPARK TEST

↓ NG

CHECK CONNECTION OF IGNITION COIL WITH IGNITER CONNECTOR → NG → Connect securely.

↓ OK

CHANGE IT TO NORMAL IGNITION COIL WITH IGNITER AND PERFORM SPARK TEST AGAIN → OK → Replace ignition coil with igniter.

↓ NG

CHECK POWER SUPPLY TO IGNITION COIL WITH IGNITER
1. Turn ignition switch ON.
2. Check that there is battery voltage at ignition coil positive (+) terminal.

→ NG → Check wiring between ignition switch to ignition coil with igniter.

↓ OK

CHECK RESISTANCE OF CAMSHAFT POSITION SENSOR (See page 18–3)

	Cold	Hot
Resistance:	**835 to 1,400 Ω**	**1,060 to 1,645 Ω**

→ NG → Replace camshaft position sensor.

↓ OK

CHECK RESISTANCE OF CRANKSHAFT POSITION SENSOR (See page 18–3)

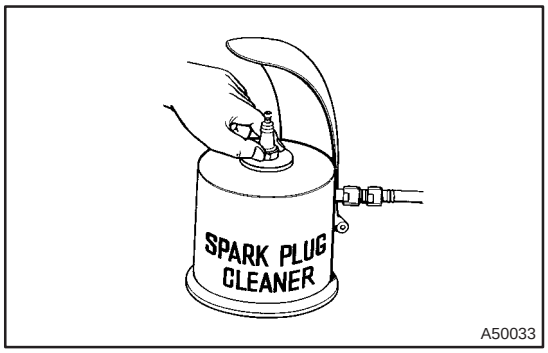
	Cold	Hot
Resistance:	**1,630 to 2,740 Ω**	**2,065 to 3,225 Ω**

→ NG → Replace crankshaft position sensor.

↓ OK

CHECK IGT SIGNAL FROM ECM (See page 05–103) → NG → Check ECM (See page 01–32)

↓ OK



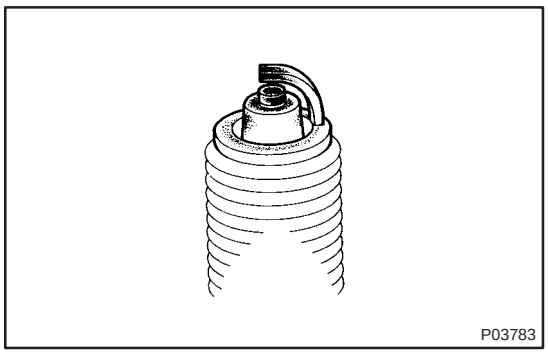
REPAIR WIRING BETWEEN IGNITION COIL AND ECM

(c) Using a 16 mm (0.63 in.) plug wrench, install the spark plugs.
Torque: 18 N·m (184 kgf·cm, 13 ft·lbf)

(d) Install the ignition coil with igniter.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

(e) Install the cylinder head cover No. 2. (See page 14–6)

INSPECTION

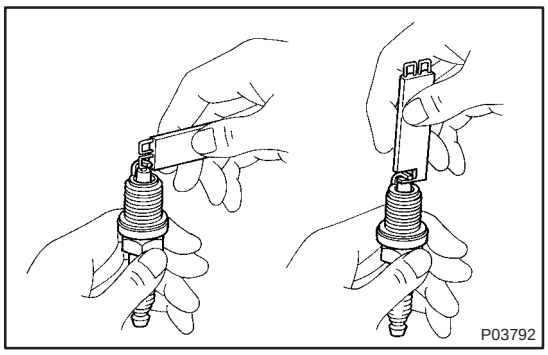


1. INSPECT SPARK PLUG

(a) Clean the spark plugs.

If the electrode has traces of wet carbon, clean the electrode with a spark plug cleaner then dry it.

Air pressure: Below 588 kPa (6kg/cm^2, 85 psi)
Duration: 20 seconds or less



(b) Check the spark plug for any damage on its thread and insulator damage.

If there is damage, replace the spark plug.

Recommended spark plug:

DENSO made	K16R–U11
NGK made	BKR5EYA11

(c) Adjust electrode gap.

Electrode gap: 1.0 to 1.1 mm (0.039 to 0.043 in.)

2. INSPECT CAMSHAFT POSITION SENSOR

(a) Using an ohmmeter, measure the resistance between the terminals.

RESISTANCE:
835 to 1,400 Ω at cold
1,060 to 1,645 Ω at hot

NOTICE:

"Cold" and "Hot" mean the temperature of the coils themselves."Cold" is from – 10°C (14°F) to 50 °C (122 °F) and "Hot" is from 50 °C (122 °F) to 100 °C (212 °F).

3. INSPECT CRANKSHAFT POSITION SENSOR

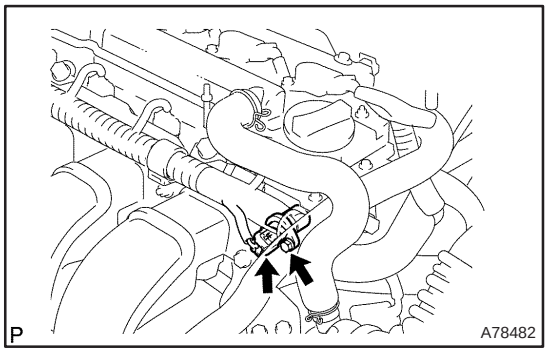
(a) Using an ohmmeter, measure the resistance between the terminals.

RESISTANCE:

1,630 to 2,740 Ω at cold

2,065 to 3,225 Ω at hot

NOTICE:



"Cold" and "Hot" mean the temperature of the coils themselves."Cold" is from – 10°C (14°F) to 50 °C (122 °F) and "Hot" is from 50 °C (122 °F) to 100 °C (212 °F).

CAMSHAFT POSITION SENSOR (1ZZ–FE/3ZZ–FE)

1807I–01

REPLACEMENT

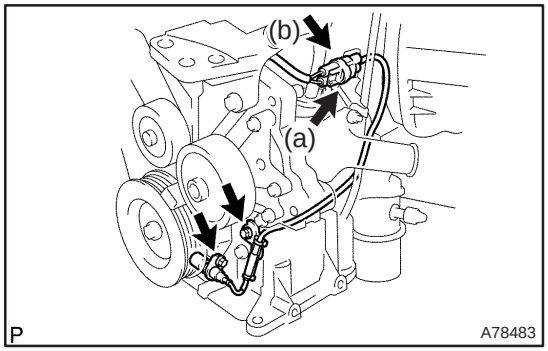
1. **REMOVE RADIATOR SUPPORT OPENING COVER (See page 10–9)**
2. **REMOVE CYLINDER HEAD COVER NO.2 (See page 10–9)**

3. **REMOVE CAMSHAFT POSITION SENSOR**

(a) Disconnect the camshaft position sensor connector.
(b) Remove the bolt, and then remove the camshaft position sensor.

4. **INSTALL CAMSHAFT POSITION SENSOR**

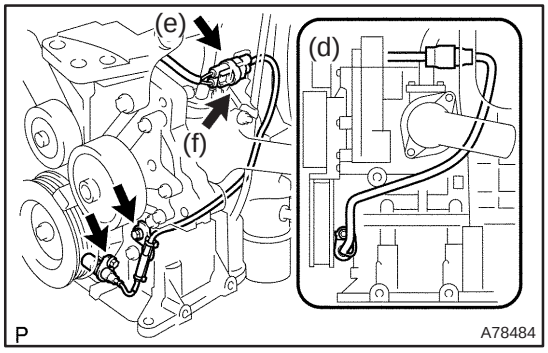
(a) Apply a light coat of engine oil to the O–ring on the camshaft position sensor.
(b) Install the camshaft position sensor with the bolt.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
(c) Connect the camshaft position sensor connector.



5. **INSTALL CYLINDER HEAD COVER NO.2 (See page 10–9)**
6. **INSTALL RADIATOR SUPPORT OPENING COVER**

CRANKSHAFT POSITION SENSOR (1ZZ–FE/3ZZ–FE)

1807J–01



REPLACEMENT

1. REMOVE ENGINE UNDER COVER LH (See page 19–20)
2. REMOVE ENGINE UNDER COVER SUB–ASSY NO.1 (See page 10–17)
3. REMOVE ENGINE UNDER COVER RH (See page 19–20)
4. REMOVE RADIATOR SUPPORT OPENING COVER (See page 10–9)
5. REMOVE ENGINE ROOM COVER SIDE (See page 10–9)
6. REMOVE FAN AND GENERATOR V BELT (See page 14–5)
7. REMOVE GENERATOR ASSY (See page 19–7)

8. REMOVE CRANKSHAFT POSITION SENSOR

(a) Disconnect the crankshaft position sensor connector.
(b) Remove the connector clamp.
(c) Remove the 2 bolts, and then remove the crankshaft position sensor.
(d) Remove the cord clamp from the crankshaft position sensor.

9. INSTALL CRANKSHAFT POSITION SENSOR

(a) Install the cord clamp to the crankshaft position sensor.
(b) Apply a light coat of engine oil on the O–ring of the crankshaft position sensor.
(c) Install the crankshaft position sensor with the 2 bolts.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
(d) Install the wire harness as shown in the illustration.
(e) Install the connector clamp.
(f) Connect the crankshaft position sensor connector.

10. INSTALL GENERATOR ASSY (See page 19–7)
11. INSTALL FAN AND GENERATOR V BELT (See page 14–5)
12. INSTALL ENGINE ROOM COVER SIDE
13. INSTALL RADIATOR SUPPORT OPENING COVER
14. INSTALL ENGINE UNDER COVER RH
15. INSTALL ENGINE UNDER COVER SUB–ASSY NO.1
16. INSTALL ENGINE UNDER COVER LH

IGNITION SYSTEM (1AZ–FE)

1. INSPECT IGNITION COIL (WITH IGNITER) AND SPARK TEST

(a) Check for DTCs.

NOTICE:

If DTC is present, perform a troubleshooting in accordance with a procedure for that DTC.

(b) Check that spark occurs.

(1) Remove the cylinder head cover No. 1. (See page 14–106)

(2) Remove the ignition coils (with igniter).

(3) Using a 16mm (0.63 in) plug wrench, remove the spark plugs.

(4) Install the spark plugs to each ignition coil (with igniter) and connect the ignition coil connectors.

(5) Disconnect the 4 injector connectors.

(6) Ground the spark plugs.

(7) Check if spark occurs at each spark plug while engine is being cranked.

NOTICE:

- **Be sure to ground the spark plug when checking.**
- **Replace the ignition coil if it is given physical impact.**
- **Do not crank the engine for more than 2 seconds.**

If the sparks do not occur, do the following test:

SPARK TEST

↓ NG

CHECK CONNECTION OF IGNITION COIL WITH IGNITER CONNECTOR → NG → Connect securely.

↓ OK

CHANGE IT TO NORMAL IGNITION COIL WITH IGNITER AND PERFORM SPARK TEST AGAIN → OK → Replace ignition coil with igniter.

↓ NG

CHECK POWER SUPPLY TO IGNITION COIL WITH IGNITER
1. Turn ignition switch ON.
2. Check that there is battery voltage at ignition coil positive (+) terminal.

→ NG → Check wiring between ignition switch to ignition coil with igniter.

↓ OK

CHECK RESISTANCE OF CAMSHAFT POSITION SENSOR (See page 18–9)

	Cold	Hot
Resistance:	**835 to 1,400 Ω**	**1,060 to 1,645 Ω**

→ NG → Replace camshaft position sensor.

↓ OK

CHECK RESISTANCE OF CRANKSHAFT POSITION SENSOR (See page 18–9)

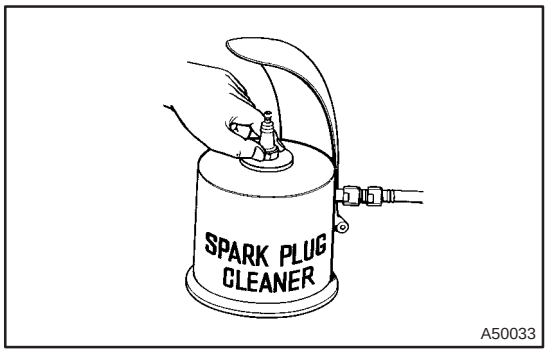
	Cold	Hot
Resistance:	**985 to 1,600 Ω**	**1,265 to 1,890 Ω**

→ NG → Replace crankshaft position sensor.

↓ OK

CHECK IGT SIGNAL FROM ECM (See page 05–232) → NG → Check ECM (See page 01–32)

↓ OK



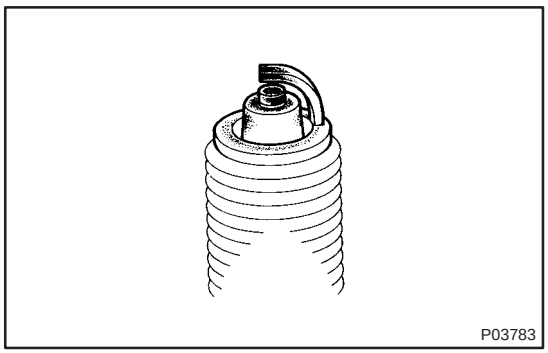
REPAIR WIRING BETWEEN IGNITION COIL AND ECM

(c) Using a 16 mm (0.63 in.) plug wrench, install the spark plugs.
Torque: 19 N·m (194 kgf·cm, 14 ft·lbf)

(d) Install the ignition coil with igniter.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

(e) Install the cylinder head cover No. 1. (See page 14–106)

INSPECTION

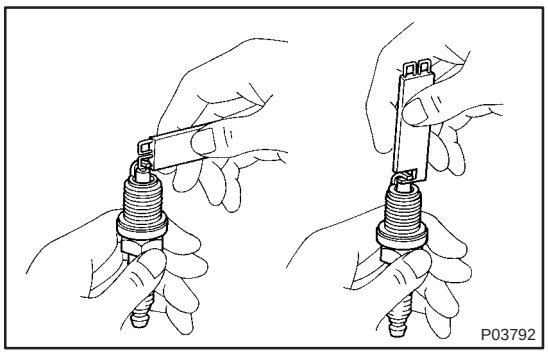


1. INSPECT SPARK PLUG (EXCEPT EUROPE)

(a) Clean the spark plugs.

If the electrode has traces of wet carbon, clean the electrode with a spark plug cleaner then dry it.

Air pressure: Below 588 kPa (6kg/cm^2, 85 psi)
Duration: 20 seconds or less

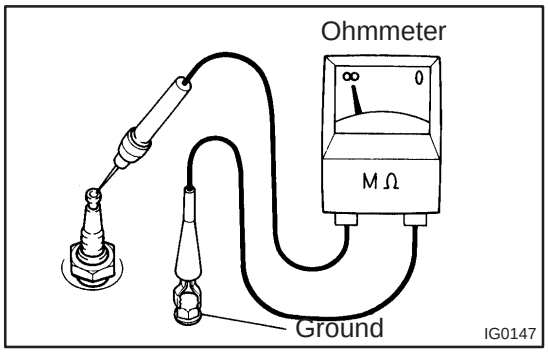


(b) Check the spark plug for any damage on its thread and insulator damage.

If there is damage, replace the spark plug.

Recommended spark plug:

DENSO made	K20R–U11
NGK made	BKR6EYA11



(c) Adjust electrode gap.

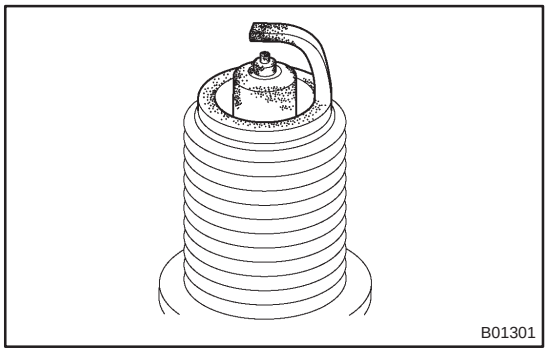
Electrode gap: 1.0 to 1.1 mm (0.039 to 0.043 in.)

2. INSPECT SPARK PLUG (FOR EUROPE)

NOTICE:

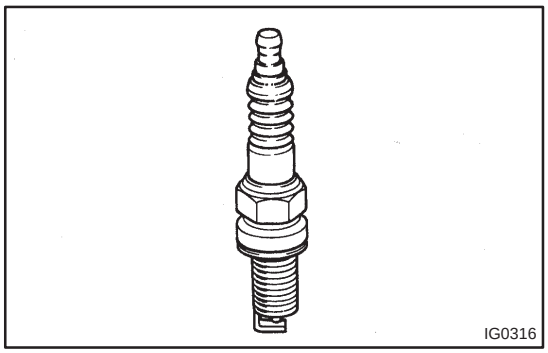
- **Do not use a wire brush for cleaning.**
- **Do not attempt to adjust the electrode gap of a used spark plug.**
- **Spark plug should be replaced every 100,000 km (60,000 miles).**

(a) Check the electrode.



(1) Using an ohmmeter, measure the insulation resistance.

Correct insulation resistance: 10 MΩ or more



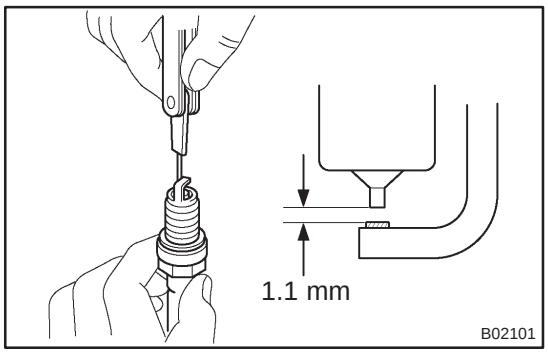
If the resistance is less then the specified valve, proceed to step (d).

HINT:

If the ohmmeter is not available, perform the following alternative inspection. This provides also fairly accurate results.

B01301

(b) Alternative inspection:
(1) Quickly accelerate the engine to 4,000 rpm 5 times.
(2) Remove the spark plug.
(3) Visually check the spark plug.
(4) If the electrode is dry...OK.
(5) If the electrode is wet...Proceed to step (C).
(6) Reinstall the spark plug.



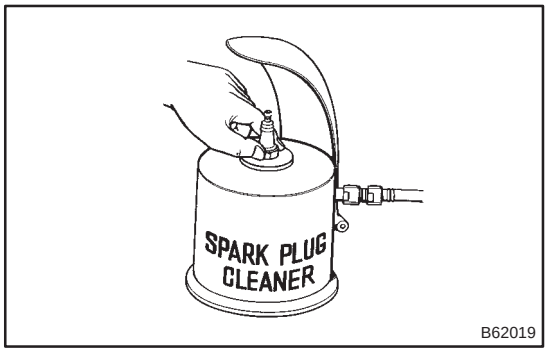
IG0316

(c) Check the spark plug for any damage on its thread and insulator.

If there is damage, replace the spark plug.

Recommended spark plug:

DENSO made	SK20R11
NGK made	IFR6A11



B02101

(d) Check the spark plug electrode gap.

Maximum electrode gap for used spark plug:
1.3 mm (0.051 in.)

If the gap is greater than maximum, replace the spark plug.

Correct electrode gap for new spark plug:
1.0 to 1.1 mm (0.039 to 0.043 in.)

B62019

(e) Clean the spark plugs.

If the electrode has traces of wet carbon, clean the electrode with a spark plug cleaner then dry it.

Air pressure: Blow 588 kPa (6 kgf/cm^2, 85 psi)
Duration: 20 seconds or less

HINT:

If there are traces of oil, remove it with gasoline before using the spark plug cleaner.

3. INSPECT CAMSHAFT POSITION SENSOR

(a) Using an ohmmeter, measure the resistance between the terminals.

RESISTANCE:
835 to 1,400 Ω at cold
1,060 to 1,645 Ω at hot

NOTICE:

"Cold" and "Hot" mean the temperature of the coils themselves."Cold" is from – 10°C (14°F) to 50 °C (122 °F) and "Hot" is from 50 °C (122 °F) to 100 °C (212 °F).

4. INSPECT CRANKSHAFT POSITION SENSOR

(a) Using an ohmmeter, measure the resistance between the terminals.

RESISTANCE:

985 to 1,600 Ω at cold

1,265 to 1,890 Ω at hot

NOTICE:

"Cold" and "Hot" mean the temperature of the coils themselves."Cold" is from – 10°C (14°F) to 50 °C (122 °F) and "Hot" is from 50 °C (122 °F) to 100 °C (212 °F).

IGNITION SYSTEM (1AZ–FSE)

1807Q–01

ON–VEHICLE INSPECTION

NOTICE:

"Cold" and "Hot" in this section mean the temperature of the coils themselves."Cold" is from –10°C (14°F) to 50 °C (122 °F) and "Hot" is from 50 °C (122 °F) to 100 °C (212 °F).

1. INSPECT IGNITION COIL (WITH IGNITER) AND SPARK TEST

(a) Check for DTCs.

NOTICE:

If DTC is present, perform a troubleshooting in accordance with a procedure for that DTC.

(b) Check that spark occurs.

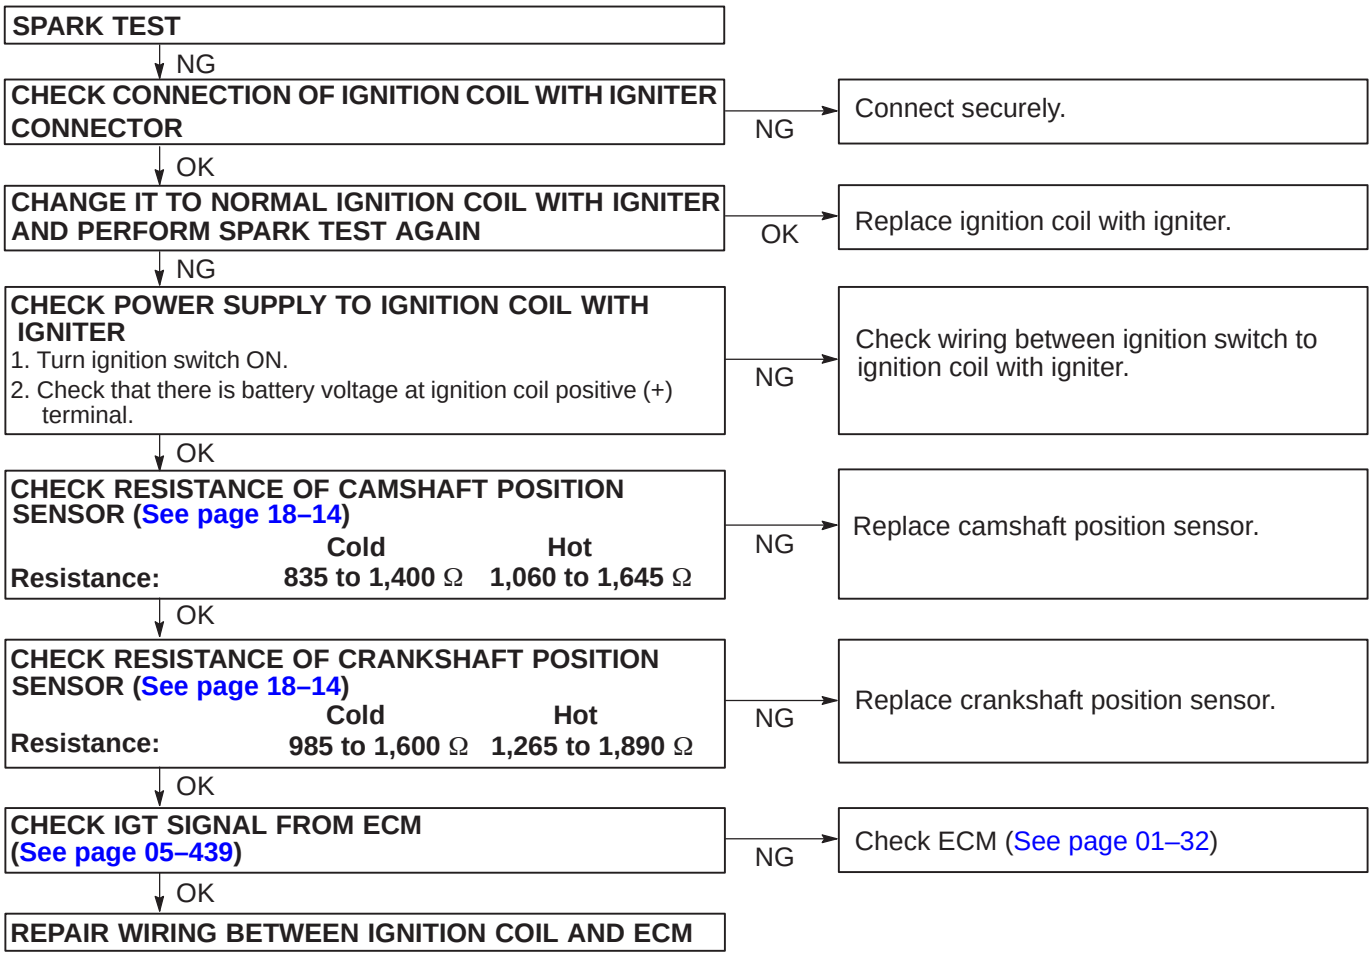
(1) Remove the cylinder head cover No. 1. (See page 14–186)

(2) Remove the ignition coils (with igniter).

(3) Using a 16mm (0.63 in) plug wrench, remove the spark plugs.

(4) Install the spark plugs to each ignition coil (with igniter) and connect the ignition coil connectors.

(5) Disconnect the 4 injector connectors.



(6) Ground the spark plugs.

(7) Check if spark occurs at each spark plug while engine is being cranked.

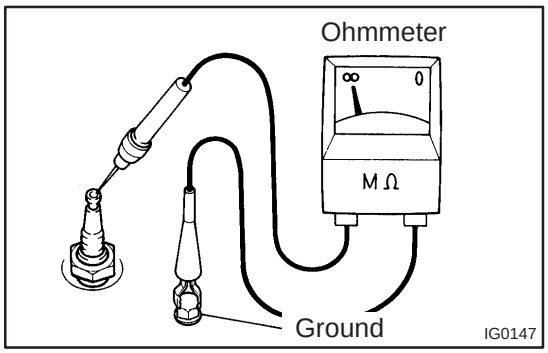
NOTICE:

- **Be sure to ground the spark plug when checking.**
- **Replace the ignition coil it is given physical impact.**
- **Do not crank the engine for more than 2 seconds.**

If the sparks do not occur, do the following test:

(c) Using a 16 mm (0.63 in.) plug wrench, install the spark plugs.
Torque: 19 N·m (194 kgf·cm, 14 ft·lbf)

(d) Install the ignition coil with igniter.
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)



(e) Install the cylinder head cover No. 1. (See page 14–186)

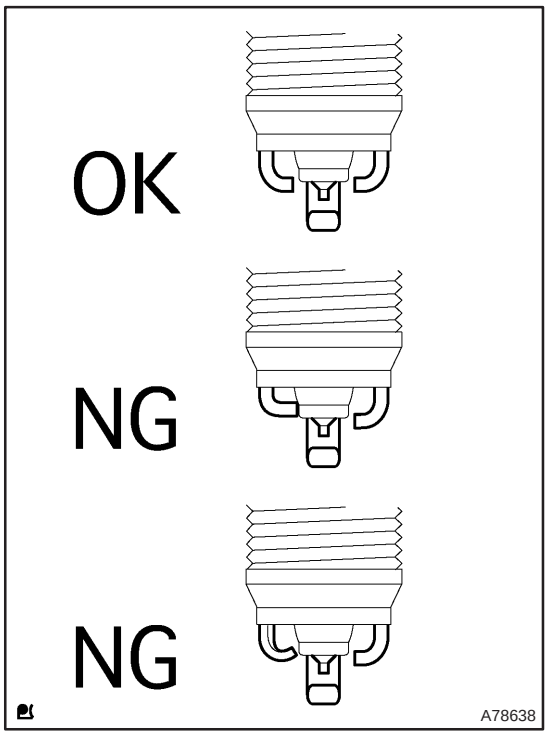
INSPECTION

1. INSPECT SPARK PLUG

NOTICE:

- **Do not use a wire brush for cleaning.**
- **Do not attempt to adjust the electrode gap of a used spark plug.**
- **Spark plug should be replaced every 100,000 km (60,000 miles).**

(a) Check the electrode.



(1) Using an ohmmeter, measure the insulation resistance.

Correct insulation resistance: 10 MΩ or more

If the resistance is less then the specified value, proceed to step (d).

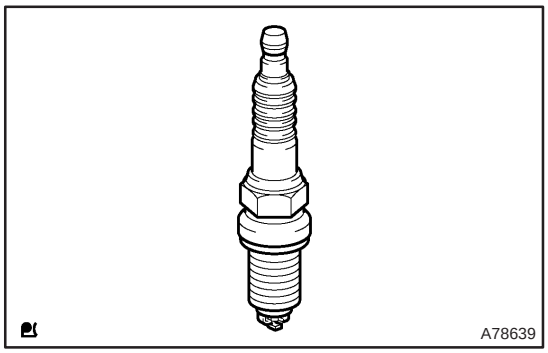
HINT:

If the ohmmeter is not available, do the following inspection instead.

(b) Alternative inspection:

(1) Quickly accelerate the engine to 4,000 rpm 5 times.

(2) Remove the spark plug.



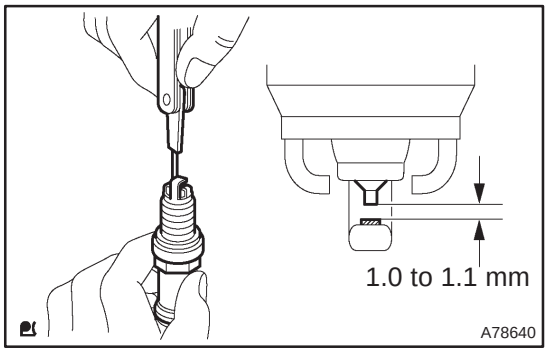
(3) Visually check the spark plug.

If a kink or twist as shown in the illustration on the left is found on the spark plug, replace it with a new one.

(4) If the electrode is dry...OK.

(5) If the electrode is wet...Proceed to step (e).

(6) Reinstall the spark plug.

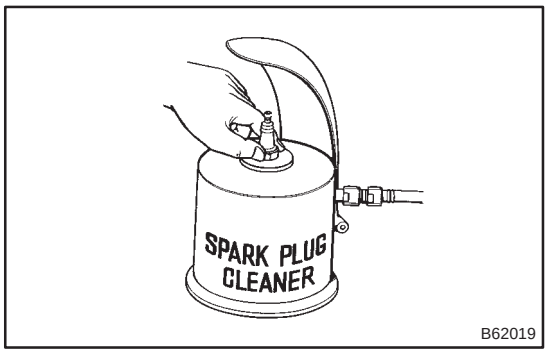


(c) Check the spark plug for any damage on its thread and insulator.

If there is damage, replace the spark plug.

Recommended spark plug:

DENSO made	SK20BR11



(d) Check the spark plug electrode gap.

Maximum electrode gap for used spark plug:
1.3 mm (0.051 in.)

If the gap is greater than maximum, replace the spark plug.

Correct electrode gap for new spark plug:
1.0 to 1.1 mm (0.039 to 0.043 in.)

(e) Clean the spark plugs.

If the electrode has traces of wet carbon, clean the electrode with a spark plug cleaner then dry it.

Air pressure: Blow 588 kPa (6 kgf/cm^2, 85 psi)
Duration: 20 seconds or less

HINT:

If there are traces of oil, remove them with gasoline before using the spark plug cleaner.

2. INSPECT CAMSHAFT POSITION SENSOR

(a) Using an ohmmeter, measure the resistance between the terminals.

RESISTANCE:
835 to 1,400 Ω at cold
1,060 to 1,645 Ω at hot

NOTICE:

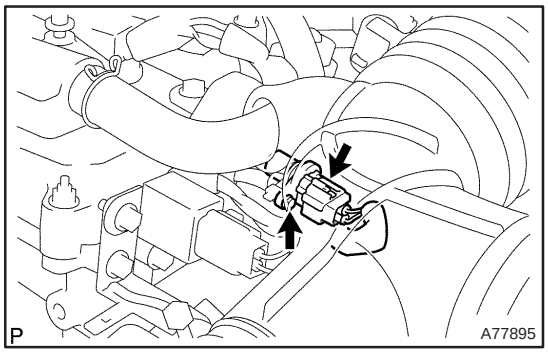
"Cold" and "Hot" mean the temperature of the coils themselves."Cold" is from –10°C (14°F) to 50 °C (122 °F) and "Hot" is from 50 °C (122 °F) to 100 °C (212 °F).

3. INSPECT CRANKSHAFT POSITION SENSOR

(a) Using an ohmmeter, measure the resistance between the terminals.

RESISTANCE:
985 to 1,600 Ω at cold
1,265 to 1,890 Ω at hot

NOTICE:



"Cold" and "Hot" mean the temperature of the coils themselves."Cold" is from –10°C (14°F) to 50 °C (122 °F) and "Hot" is from 50 °C (122 °F) to 100 °C (212 °F).

CAMSHAFT POSITION SENSOR (1AZ–FE/1AZ–FSE)

1807K–01

REPLACEMENT

1. REMOVE RADIATOR SUPPORT OPENING COVER (See page 10–26)

2. REMOVE CAMSHAFT POSITION SENSOR

(a) Disconnect the camshaft position sensor connector.

(b) Remove the bolt, and then remove the camshaft position sensor.

3. INSTALL CAMSHAFT POSITION SENSOR

(a) Apply a light coat of engine oil to the O–ring on the camshaft position sensor.

(b) Install the camshaft position sensor with the bolt.

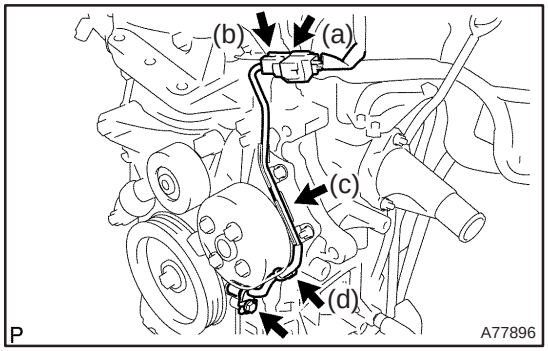
Torque: 9.0 N·m (92 kgf·cm, 79 in.·lbf)

(c) Connect the camshaft position sensor connector.

4. INSTALL RADIATOR SUPPORT OPENING COVER

CRANKSHAFT POSITION SENSOR (1AZ–FE/1AZ–FSE)

1807L–01



REPLACEMENT

1. **REMOVE ENGINE UNDER COVER LH (See page 19–20)**
2. **REMOVE ENGINE UNDER COVER RH (See page 19–20)**
3. **REMOVE RADIATOR SUPPORT OPENING COVER (See page 10–26)**
4. **REMOVE ENGINE ROOM COVER SIDE (See page 10–26)**
5. **REMOVE FAN AND GENERATOR V BELT**
6. **REMOVE GENERATOR ASSY (See page 19–20)**

   SST 09249–63010

HINT:

- 1AZ–FE: 14–105
- 1AZ–FSE: 14–185

7. **REMOVE CRANKSHAFT POSITION SENSOR**

(a) Disconnect the crankshaft position sensor connector.
(b) Remove the wire harness of the crankshaft position sensor from the wire harness clamp bracket.
(c) Remove the connector clamp.
(d) Remove the wire harness clamp.
(e) Remove the bolt, and then remove the crankshaft position sensor.

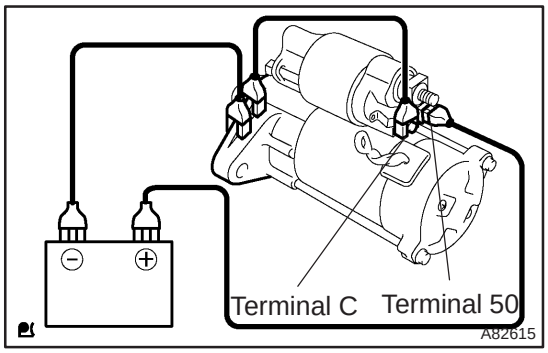
8. **INSTALL CRANKSHAFT POSITION SENSOR**

(a) Apply a light coat of engine oil to the O–ring on the crankshaft position sensor.
(b) Install the crankshaft position sensor with the bolt.
Torque: 9.0 N·m (92 kgf·cm, 79 in.·lbf)
(c) Install the wire harness clamp.
(d) Install the connector clamp.
(e) Install the wire harness of the crankshaft position sensor to the the wire harness clamp bracket.
(f) Connect the crankshaft position sensor connector.

9. **INSTALL GENERATOR ASSY (See page 19–20)**
10. **INSTALL FAN AND GENERATOR V BELT**

    SST 09249–63010

HINT:



- 1AZ–FE: 14–105
- 1AZ–FSE: 14–185

11. **INSTALL ENGINE ROOM COVER SIDE**
12. **INSTALL RADIATOR SUPPORT OPENING COVER**
13. **INSTALL ENGINE UNDER COVER RH**
14. **INSTALL ENGINE UNDER COVER LH**

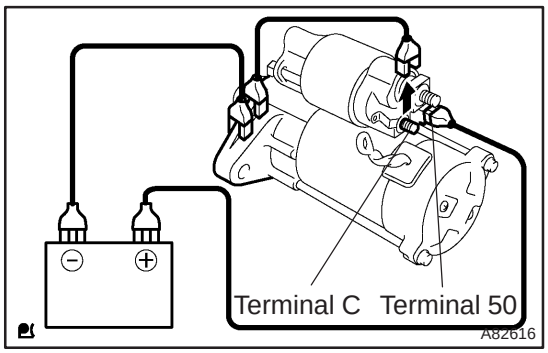
STARTING SYSTEM (1ZZ–FE/3ZZ–FE)

190NO–01

INSPECTION

1. INSPECT STARTER ASSY

NOTICE:

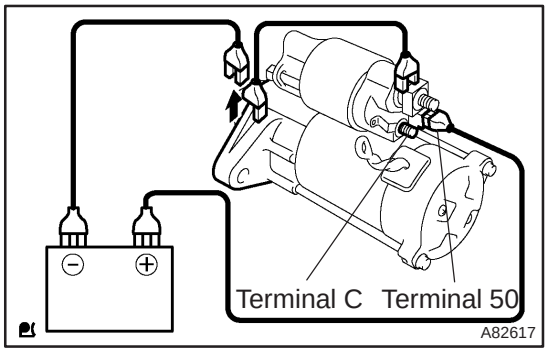


These tests must be performed within 3 to 5 seconds to avoid burning out the coil.

(a) Do pull–in test

(1) Disconnect the field coil lead wire from terminal C.

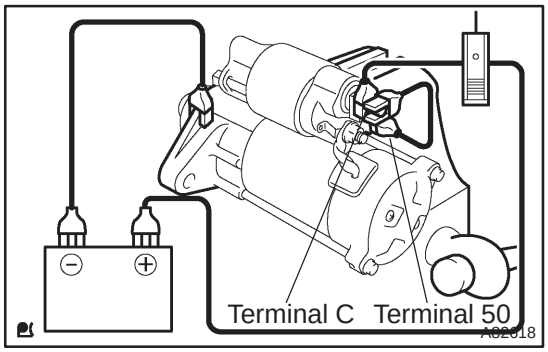
(2) Connect the battery to the magnetic switch as shown in the illustration on the left. Check that the clutch pinion gear is extended.



If the clutch pinion gear is not extended, replace the magnetic switch.

(b) Do hold–in test

(1) Disconnect the negative (–) lead from terminal C with the above condition (a) is being maintained. Check that the pinion gear remains extended.



If the clutch pinion gear returns, replace the magnetic switch.

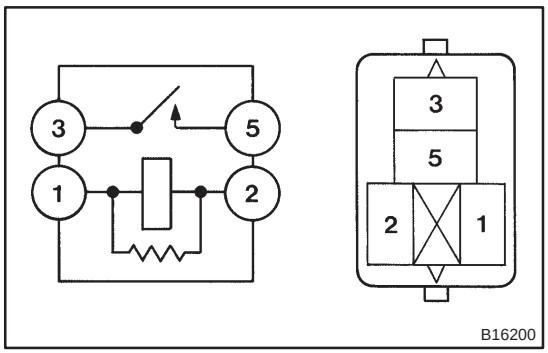
(c) Inspect clutch pinion gear return

(1) Disconnect the negative (–) lead from the switch body. Check that the clutch pinion gear returns.

If the clutch pinion gear does not return, replace the magnetic switch.

(d) Do no–load performance test

(1) Connect the field coil lead wire to terminal C. Make sure that the lead is not grounded.



Torque: 5.9 N·m (60 kgf·cm, 52 in·lbf)

(2) Clamp the starter in a vise.

(3) Connect the battery and an ammeter to the starter as shown in the illustration.

(4) Check that the starter rotates smoothly and steadily with the clutch pinion gear extended. Check that the ammeter reads the specified current.

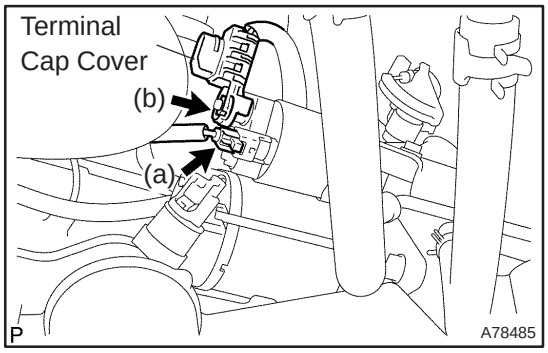
Specified current: 85 A or less at 11.5 V

2. INSPECT STARTER RELAY ASSY

(a) Continuity inspection.

(1) Using an ohmmeter, check for continuity between each terminal.

Specified condition:



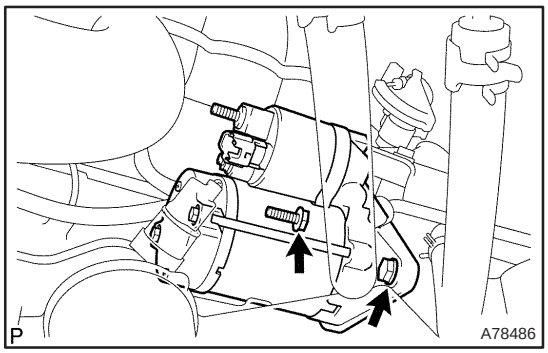
Terminal No.	Specified condition
1 – 2	Continuity
3 – 5	No continuity
	Continuity (Apply battery voltage terminals 1 and 2)

STARTER ASSY (1ZZ–FE/3ZZ–FE)

190NH–01

REPLACEMENT

1. REMOVE ENGINE UNDER COVER SUB–ASSY NO.1 (See page 10–17)



2. REMOVE STARTER ASSY

(a) Disconnect the starter connector.

(b) Open the terminal cap cover.

(c) Remove the nut and disconnect the starter wire.

(d) Remove the 2 bolts, and then remove the starter.

3. INSTALL STARTER ASSY

Torque:
37 N·m (378 kgf·cm, 28 ft·lbf) for bolt
9.8 N·m (100 kgf·cm, 7 ft·lbf) for nut

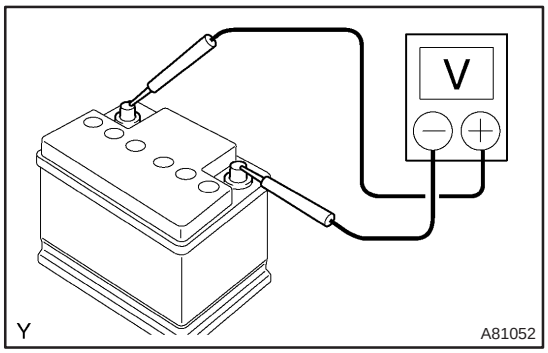
4. INSTALL ENGINE UNDER COVER SUB–ASSY NO.1

CHARGING SYSTEM (1ZZ–FE/3ZZ–FE)

190NP–01

PRECAUTION

1. **Check that the battery cables are connected to the correct terminals.**
2. **Disconnect the battery cables when the battery is given a quick charge.**
3. **Do not perform tests with a high voltage insulation resistance tester.**
4. **Never disconnect the battery while the engine is running.**
5. **Check that the charging cable is tightened on terminal B of the generator and the fuse box.**



190NQ–01

ON–VEHICLE INSPECTION

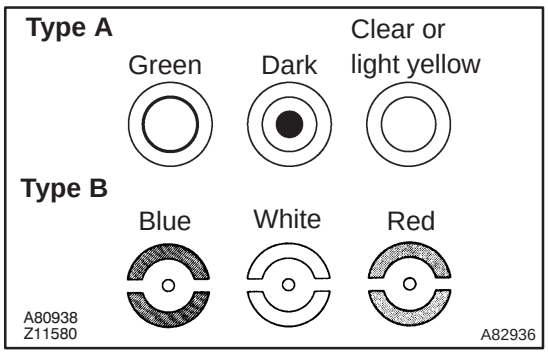
1. CHECK BATTERY ELECTROLYTE LEVEL

(a) Check the electrolyte quantity of each cell.

(1) If the electrolyte is under the low level, replace the battery (or add distilled water if possible) and check the charging system.

2. CHECK BATTERY VOLTAGE

(a) If it has not been 20 minutes since you drove the vehicle or since the engine was stopped, turn the ignition switch and the electrical system (headlight, blower motor, rear defogger etc.) to the on position for 60 seconds. This will remove the surface charge on the battery.



(b) Turn off the ignition switch and the electrical systems.

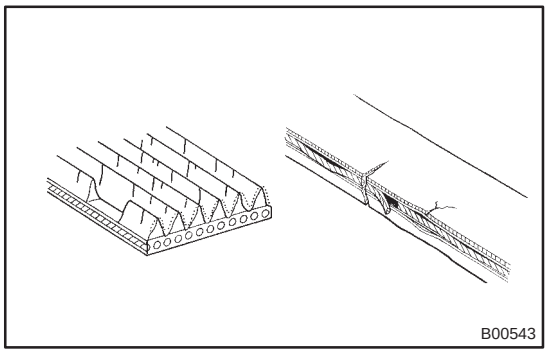
(c) Measure the battery voltage between the negative (–) and positive (+) terminals of the battery.

Standard voltage: 12.5 to 12.9 V at 20°C (68°F)

HINT:

If the voltage is less than specification, charge the battery.

(d) Check the indicator as shown in the illustration.



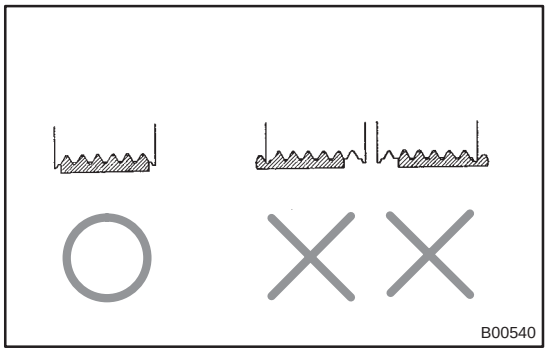
HINT:

Indicator color		Condition
Type A	Type B	
Green	Blue	OK
Dark	White	Charging necessary
Clear or light yellow	Red	Replace

3. CHECK BATTERY TERMINALS, FUSIBLE LINK AND FUSES

(a) Check that the battery terminals are not loosened or corroded.

(b) Check the fusible links, high–current fuses and regular fuses.



4. INSPECT DRIVE BELT

(a) Visually check the belt for excessive wear, frayed cords etc.

HINT:

- If any defect found, replace the drive belt.
- Cracks on the rib side of a belt are considered acceptable. If the belt has chunks missing from the ribs, it should be replaced.

(b) Check that it fits properly in the ribbed grooves.

HINT:

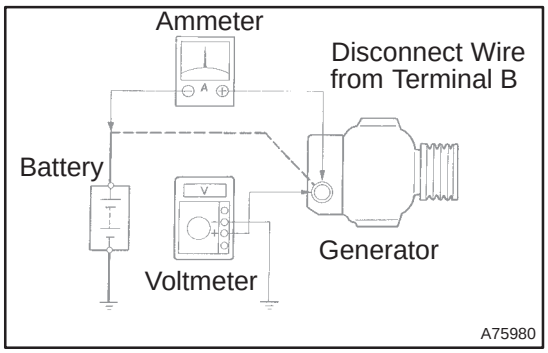
Check with your hand to confirm that the belt has not slipped out of the groove on the bottom of the pulley.

5. VISUALLY CHECK GENERATOR WIRING

(a) Check that the wiring is in good condition.

6. LISTEN FOR ABNORMAL NOISES FROM GENERATOR

(a) Check that there is no abnormal noise from the generator while the engine is running.



7. INSPECT CHARGE WARNING LIGHT CIRCUIT

(a) Turn the ignition switch ON. Check that the charge warning light comes on.

(b) Start the engine and check that the light goes off.

HINT:

If the light does not operate as specified, troubleshoot the charge warning light circuit.

8. INSPECT CHARGING CIRCUIT WITHOUT LOAD

(a) According to the following procedure, connect an ammeter and voltmeter as shown in the illustration.

(1) Disconnect the wire from terminal B of the generator and connect it to the negative (–) lead of the ammeter.

(2) Connect the positive (+) lead of the ammeter to terminal B of the generator

(3) Connect the positive (+) lead of the voltmeter to terminal B of the generator.

(4) Ground the negative (–) lead of the voltmeter.

(b) Check the charging circuit.

(1) Keep the engine speed at 2,000 rpm, check the reading on the ammeter and voltmeter.

Standard amperage: 10 A or less

Standard voltage: 12.9 to 14.9 V

HINT:

- If the voltmeter reading is more than standard voltage, replace the voltage regulator.
- If the voltmeter reading is less than the standard voltage, check the voltage regulator and generator as follows:

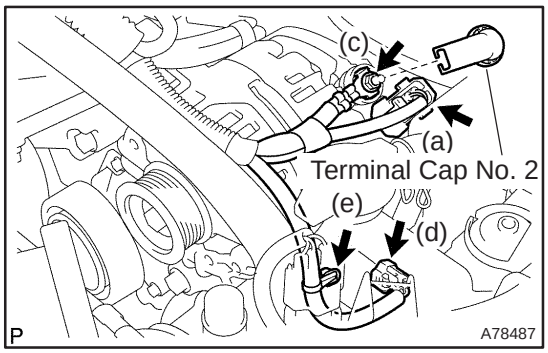
9. INSPECT CHARGING CIRCUIT WITH LOAD

(a) Keep the engine speed at 2,000 rpm, turn on the high beam headlights and turn the heater blower switch to the ”HI” position.

(b) Check the reading on the ammeter.

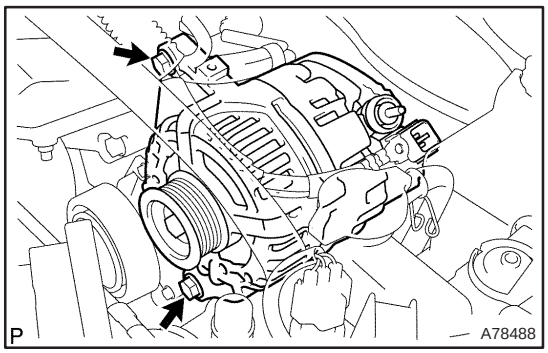
Standard amperage: 30 A or more

HINT:



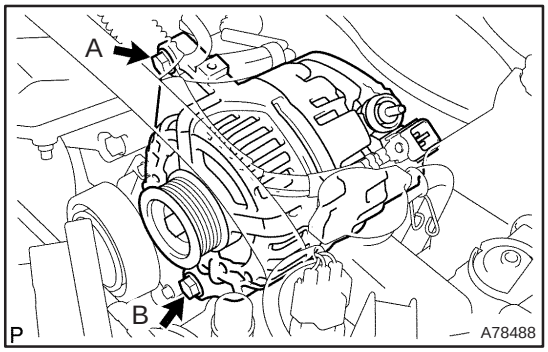
- If the ammeter reading is less than standard amperage, repair the generator.
- If the battery is fully charged, the indication will sometimes be less than standard amperage.

GENERATOR ASSY (1ZZ–FE/3ZZ–FE)



190NI–01

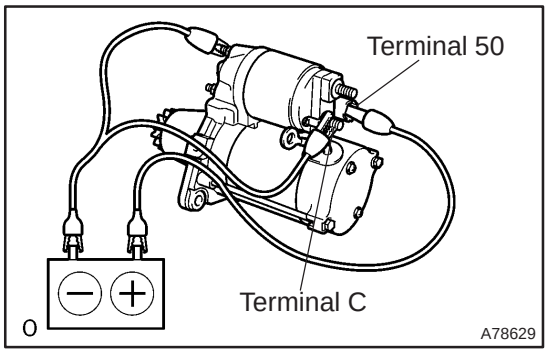
REPLACEMENT



1. REMOVE ENGINE UNDER COVER SUB–ASSY NO.1 (See page 10–17)
2. REMOVE RADIATOR SUPPORT OPENING COVER (See page 10–9)
3. REMOVE ENGINE ROOM COVER SIDE (See page 10–9)
4. REMOVE FAN AND GENERATOR V BELT (See page 14–5)

5. REMOVE GENERATOR ASSY
(a) Disconnect the generator connector.
(b) Remove the terminal cap No. 2.
(c) Remove the nut and disconnect the generator wire.
(d) Disconnect the A/C connector.
(w/ Air Conditioning)
(e) Remove the wire harness clamp. (w/ Air Conditioning)

(f) Remove the 2 bolts, and then remove the generator.



6. INSTALL GENERATOR ASSY
(a) Install the generator with the 2 bolts.
Torque:
25 N·m (255 kgf·cm, 18 ft·lbf) for bolt A
54 N·m (551 kgf·cm, 40 ft·lbf) for bolt B
(b) Install the wire harness clamp. (w/ Air Conditioning)
(c) Connect the A/C connector.
(w/ Air Conditioning)
(d) Install the generator wire with the nut.
Torque: 9.8 N·m (100 kgf·cm, 7 ft·lbf)
(e) Install the terminal cap No. 2.
(f) Connect the generator connector.

7. INSTALL FAN AND GENERATOR V BELT (See page 14–5)
8. INSTALL ENGINE ROOM COVER SIDE
9. INSTALL RADIATOR SUPPORT OPENING COVER
10. INSTALL ENGINE UNDER COVER SUB–ASSY NO.1

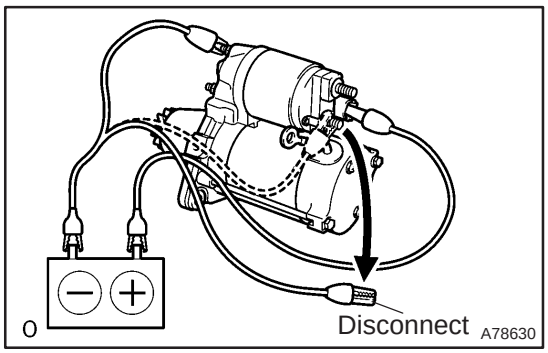
STARTING SYSTEM (1AZ–FE)

190NU–01

INSPECTION

1. INSPECT STARTER ASSY

NOTICE:

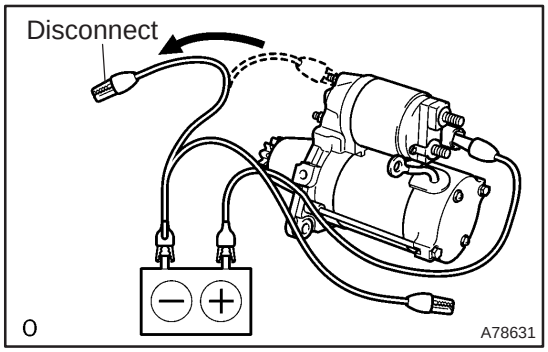


These tests must be performed within 3 to 5 seconds to avoid burning out the coil.

(a) Do pull–in test

(1) Disconnect the field coil lead wire from terminal C.

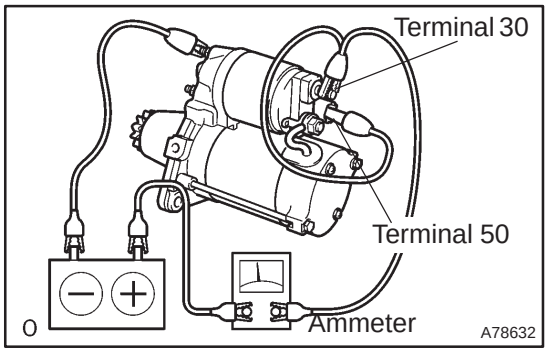
(2) Connect the battery to the magnetic switch as shown in the illustration on the left. Check that the clutch pinion gear is extended.



If the clutch pinion gear is not extended, replace the magnetic switch.

(b) Do hold–in test

(1) Disconnect the negative (–) lead from terminal C with the above condition (a) is being maintained. Check that the pinion gear remains extended.



If the clutch pinion gear returns, replace the magnetic switch.

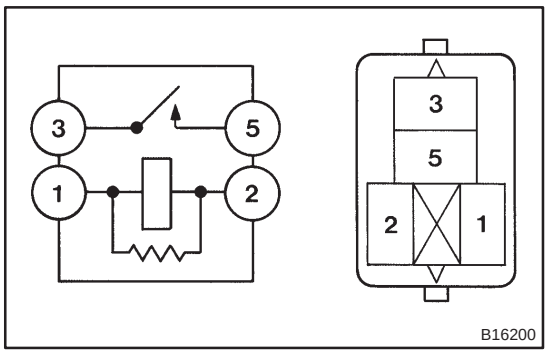
(c) Inspect clutch pinion gear return

(1) Disconnect the negative (–) lead from the switch body. Check that the clutch pinion gear returns.

If the clutch pinion gear does not return, replace the magnetic switch.

(d) Do no–load performance test

(1) Connect the field coil lead wire to terminal C. Make sure that the lead is not grounded.



Torque: 5.9 N·m (60 kgf·cm, 52 in·lbf)

(2) Clamp the starter in a vise.

(3) Connect the battery and an ammeter to the starter as shown in the illustration.

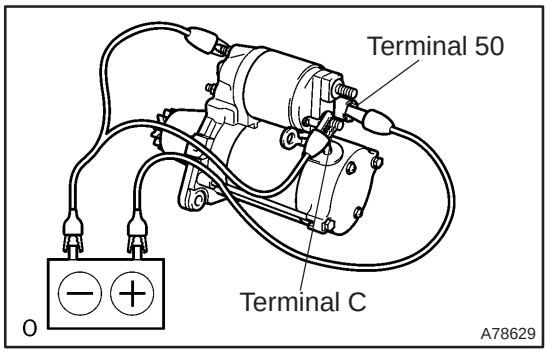
(4) Check that the starter rotates smoothly and steadily with the clutch pinion gear extended. Check that the ammeter reads the specified current.

Specified current: 85 A or less at 11.5 V

2. INSPECT STARTER RELAY ASSY

(a) Continuity inspection.

(1) Using an ohmmeter, check for continuity between each terminal.



Specified condition:

Terminal No.	Specified condition
1 – 2	Continuity
3 – 5	No continuity
	Continuity (Apply battery voltage terminals 1 and 2)

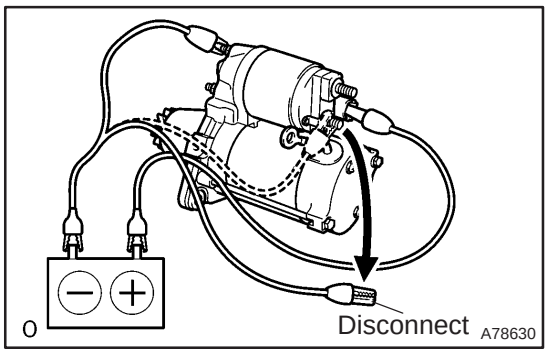
STARTING SYSTEM (1AZ–FSE)

190NR–01

INSPECTION

1. INSPECT STARTER ASSY

NOTICE:

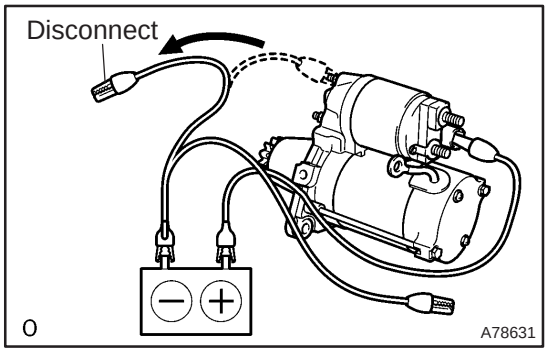


These tests must be performed within 3 to 5 seconds to avoid burning out the coil.

(a) Do pull–in test

(1) Disconnect the field coil lead wire from terminal C.

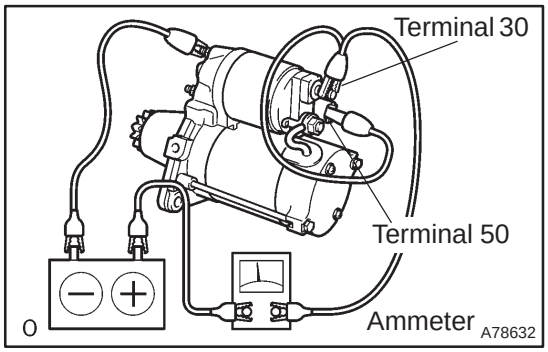
(2) Connect the battery to the magnetic switch as shown in the illustration on the left. Check that the clutch pinion gear is extended.



If the clutch pinion gear is not extended, replace the magnetic switch.

(b) Do hold–in test

(1) Disconnect the negative (–) lead from terminal C with the above condition (a) is being maintained. Check that the pinion gear remains extended.



If the clutch pinion gear returns, replace the magnetic switch.

(c) Inspect clutch pinion gear return

(1) Disconnect the negative (–) lead from the switch body. Check that the clutch pinion gear returns.

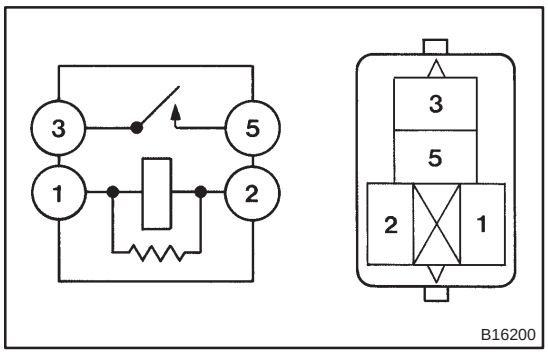
If the clutch pinion gear does not return, replace the magnetic switch.

(d) Do no–load performance test

(1) Connect the field coil lead wire to terminal C. Make sure that the lead is not grounded.

Torque: 5.9 N·m (60 kgf·cm, 52 in·lbf)

(2) Clamp the starter in a vise.



(3) Connect the battery and an ammeter to the starter as shown in the illustration.

(4) Check that the starter rotates smoothly and steadily with the clutch pinion gear extended. Check that the ammeter reads the specified current.

Specified current:

1.3kw 85 A or less at 11.5 V

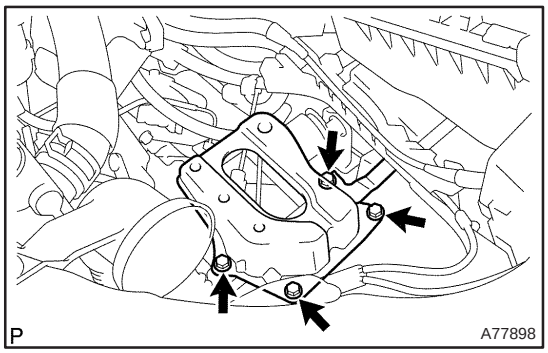
1.6kw 75 A or less at 11.5 V

2. INSPECT STARTER RELAY ASSY

(a) Continuity inspection.

(1) Using an ohmmeter, check for continuity between each terminal.

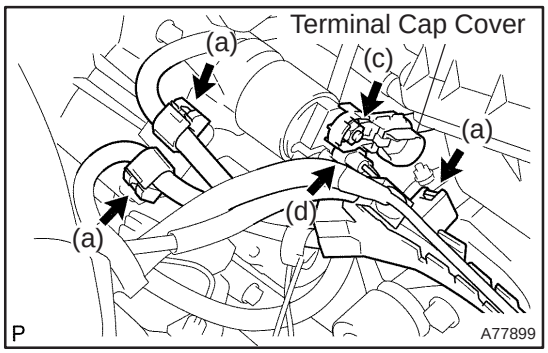
Specified condition:



Terminal No.	Specified condition
1 – 2	Continuity
3 – 5	No continuity
	Continuity (Applying battery voltage terminals 1 and 2)

STARTER ASSY (1AZ–FE/1AZ–FSE)

190NJ–01

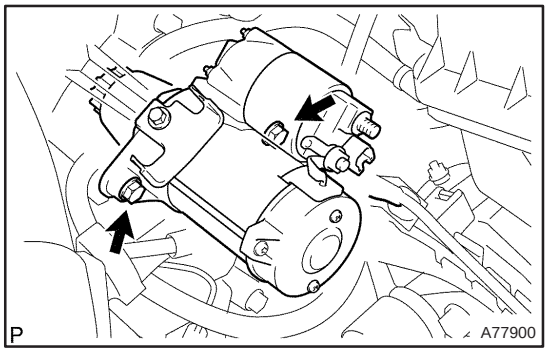


REPLACEMENT

1. REMOVE RADIATOR SUPPORT OPENING COVER (See page 10–26)
2. REMOVE BATTERY CLAMP SUB–ASSY
3. REMOVE BATTERY
4. REMOVE BATTERY TRAY

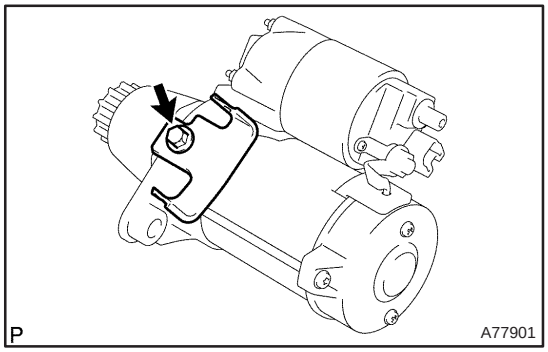
5. REMOVE BATTERY CARRIER

(a) Remove the 4 bolts, and then remove the battery carrier.



6. REMOVE STARTER ASSY

(a) Remove the 3 wire harness clamps.



(b) Open the terminal cap cover.

(c) Remove the nut and disconnect the starter wire.

(d) Disconnect the starter connector.

(e) Remove the 2 bolts, and then remove the starter.

(f) Remove the bolt, and then remove the wire harness clamp bracket.

7. INSTALL STARTER ASSY

(a) Install the wire harness clamp bracket with the bolt.
Torque: 8.4 N·m (86 kgf·cm, 74 in.·lbf)

(b) Install the starter with the 2 bolts.
Torque: 37 N·m (380 kgf·cm, 28 ft·lbf)

(c) Connect the starter connector.

(d) Connect the starter wire with the nut.
Torque: 9.8 N·m (100 kgf·cm, 7 ft·lbf)

(e) Close the terminal cap cover.

(f) Install the 3 wire harness clamps.

8. INSTALL BATTERY CARRIER
Torque: 13 N·m (131 kgf·cm, 9 ft·lbf)

9. INSTALL BATTERY TRAY

10. INSTALL BATTERY

11. INSTALL BATTERY CLAMP SUB–ASSY
Torque:
5.0 N·m (51 kgf·cm, 44 in.·lbf) for bolt
3.6 N·m (36 kgf·cm, 31 in.·lbf) for nut
5.4 N·m (55 kgf·cm, 48 in.·lbf) for terminal

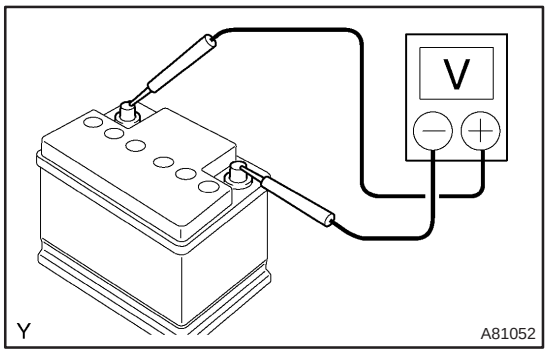
12. INSTALL RADIATOR SUPPORT OPENING COVER

CHARGING SYSTEM (1AZ–FE)

190NV–01

PRECAUTION

1. **Check that the battery cables are connected to the correct terminals.**
2. **Disconnect the battery cables when the battery is given a quick charge.**
3. **Do not perform tests with a high voltage insulation resistance tester.**
4. **Never disconnect the battery while the engine is running.**
5. **Check that the charging cable is tightened on terminal B of the generator and the fuse box.**



190NW–01

ON–VEHICLE INSPECTION

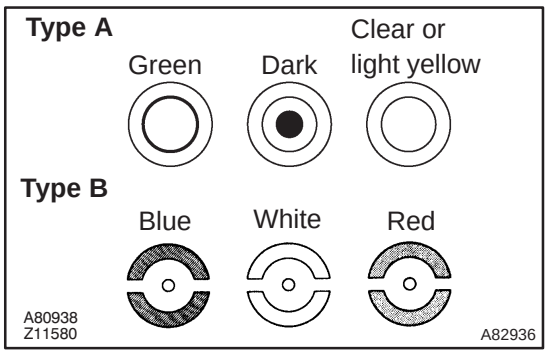
1. CHECK BATTERY ELECTROLYTE LEVEL

(a) Check the electrolyte quantity of each cell.

(1) If the electrolyte is under the low level, replace the battery (or add distilled water if possible) and check the charging system.

2. CHECK BATTERY VOLTAGE

(a) If it has not been 20 minutes since you drove the vehicle or since the engine was stopped, turn the ignition switch and the electrical system (headlight, blower motor, rear defogger etc.) to the on position for 60 seconds. This will remove the surface charge on the battery.



(b) Turn off the ignition switch and the electrical systems.

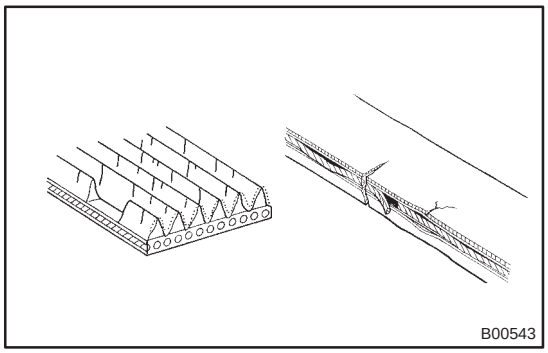
(c) Measure the battery voltage between the negative (–) and positive (+) terminals of the battery.

Standard voltage: 12.5 to 12.9 V at 20°C (68°F)

HINT:

If the voltage is less than specification, charge the battery.

(d) Check the indicator as shown in the illustration.



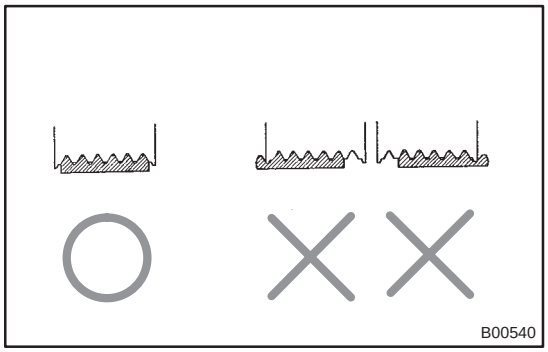
HINT:

Indicator color		Condition
Type A	Type B	
Green	Blue	OK
Dark	White	Charging necessary
Clear or light yellow	Red	Replace

3. CHECK BATTERY TERMINALS, FUSIBLE LINK AND FUSES

(a) Check that the battery terminals are not loosened or corroded.

(b) Check the fusible links, high–current fuses and regular fuses.



4. INSPECT DRIVE BELT

(a) Visually check the belt for excessive wear, frayed cords etc.

HINT:

- If any defect found, replace the drive belt.
- Cracks on the rib side of a belt are considered acceptable. If the belt has chunks missing from the ribs, it should be replaced.

(b) Check that it fits properly in the ribbed grooves.

HINT:

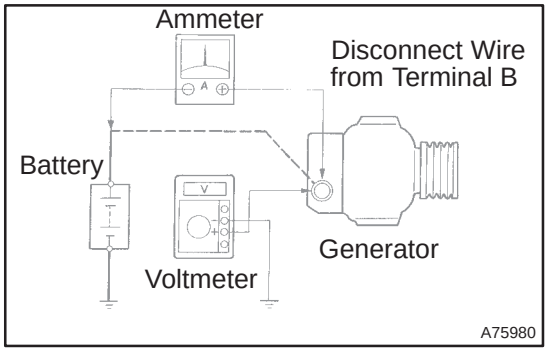
Check with your hand to confirm that the belt has not slipped out of the groove on the bottom of the pulley.

5. VISUALLY CHECK GENERATOR WIRING

(a) Check that the wiring is in good condition.

6. LISTEN FOR ABNORMAL NOISES FROM GENERATOR

(a) Check that there is no abnormal noise from the generator while the engine is running.



7. INSPECT CHARGE WARNING LIGHT CIRCUIT

(a) Turn the ignition switch ON. Check that the charge warning light comes on.

(b) Start the engine and check that the light goes off.

HINT:

If the light does not operate as specified, troubleshoot the charge warning light circuit.

8. INSPECT CHARGING CIRCUIT WITHOUT LOAD

(a) According to the following procedure, connect an ammeter and voltmeter as shown in the illustration.

(1) Disconnect the wire from terminal B of the generator and connect it to the negative (–) lead of the ammeter.

(2) Connect the positive (+) lead of the ammeter to terminal B of the generator

(3) Connect the positive (+) lead of the voltmeter to terminal B of the generator.

(4) Ground the negative (–) lead of the voltmeter.

(b) Check the charging circuit.

(1) Keep the engine speed at 2,000 rpm, check the reading on the ammeter and voltmeter.

Standard amperage: 10 A or less

Standard voltage: 12.9 to 14.9 V

HINT:

- If the voltmeter reading is more than standard voltage, replace the voltage regulator.
- If the voltmeter reading is less than the standard voltage, check the voltage regulator and generator as follows:

9. INSPECT CHARGING CIRCUIT WITH LOAD

(a) Keep the engine speed at 2,000 rpm, turn on the high beam headlights and turn the heater blower switch to the ”HI” position.

(b) Check the reading on the ammeter.

Standard amperage: 30 A or more

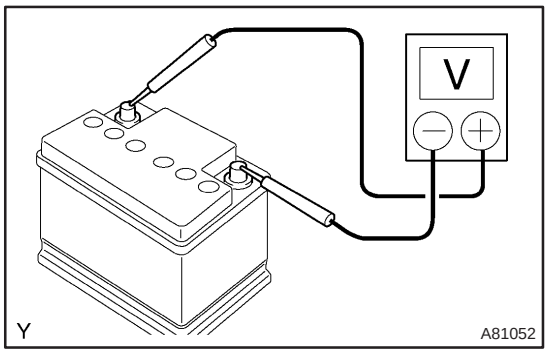
HINT:

- If the ammeter reading is less than standard amperage, repair the generator.
- If the battery is fully charged, the indication will sometimes be less than standard amperage.

CHARGING SYSTEM (1AZ–FSE)

190NS–01

PRECAUTION



1. **Check that the battery cables are connected to the correct terminals.**

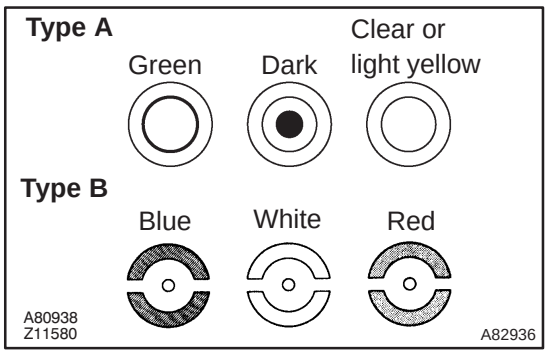
3. **Do not perform tests with a high voltage insulation resistance tester.**
4. **Never disconnect the battery while the engine is running.**
5. **Check that the charging cable is tightened on terminal B of the generator and the fuse box.**

190NT–01

ON–VEHICLE INSPECTION

1. CHECK BATTERY ELECTROLYTE LEVEL

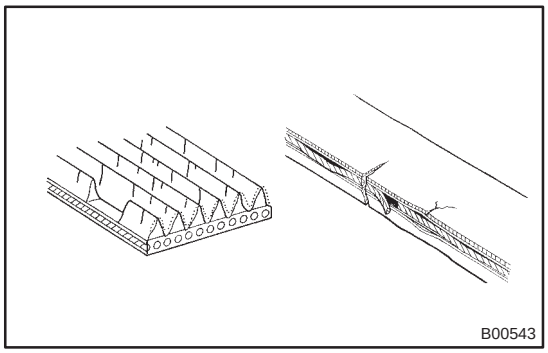


(a) Check the electrolyte quantity of each cell.
  (1) If the electrolyte is under the low level, replace the battery (or add distilled water if possible) and check the charging system.

2. CHECK BATTERY VOLTAGE

(a) If it has not been 20 minutes since you drove the vehicle or since the engine was stopped, turn the ignition switch and the electrical system (headlight, blower motor, rear defogger etc.) to the on position for 60 seconds. This will remove the surface charge on the battery.
(b) Turn off the ignition switch and the electrical systems.
(c) Measure the battery voltage between the negative (–) and positive (+) terminals of the battery.
  Standard voltage: 12.5 to 12.9 V at 20°C (68°F)

HINT:
If the voltage is less than specification, charge the battery.



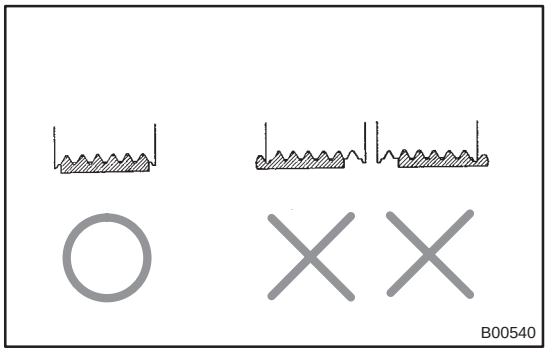
(d) Check the indicator as shown in the illustration.

HINT:

Indicator color		Condition
Type A	Type B	
Green	Blue	OK
Dark	White	Charging necessary
Clear or light yellow	Red	Replace

3. CHECK BATTERY TERMINALS, FUSIBLE LINK AND FUSES

(a) Check that the battery terminals are not loosened or corroded.
(b) Check the fusible links, high–current fuses and regular fuses.



4. INSPECT DRIVE BELT

(a) Visually check the belt for excessive wear, frayed cords etc.

HINT:

- If any defect found, replace the drive belt.
- Cracks on the rib side of a belt are considered acceptable. If the belt has chunks missing from the ribs, it should be replaced.

(b) Check that it fits properly in the ribbed grooves.

HINT:

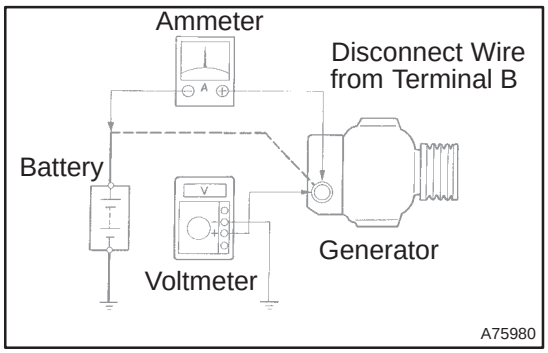
Check with your hand to confirm that the belt has not slipped out of the groove on the bottom of the pulley.

5. VISUALLY CHECK GENERATOR WIRING

(a) Check that the wiring is in good condition.

6. LISTEN FOR ABNORMAL NOISES FROM GENERATOR

(a) Check that there is no abnormal noise from the generator while the engine is running.



7. INSPECT CHARGE WARNING LIGHT CIRCUIT

(a) Turn the ignition switch ON. Check that the charge warning light comes on.

(b) Start the engine and check that the light goes off.

HINT:

If the light does not operate as specified, troubleshoot the charge warning light circuit.

8. INSPECT CHARGING CIRCUIT WITHOUT LOAD

(a) According to the following procedure, connect an ammeter and voltmeter as shown in the illustration.

(1) Disconnect the wire from terminal B of the generator and connect it to the negative (–) lead of the ammeter.

(2) Connect the positive (+) lead of the ammeter to terminal B of the generator

(3) Connect the positive (+) lead of the voltmeter to terminal B of the generator.

(4) Ground the negative (–) lead of the voltmeter.

(b) Check the charging circuit.

(1) Keep the engine speed at 2,000 rpm, check the reading on the ammeter and voltmeter.

Standard amperage: 10 A or less

Standard voltage: 12.9 to 14.9 V

HINT:

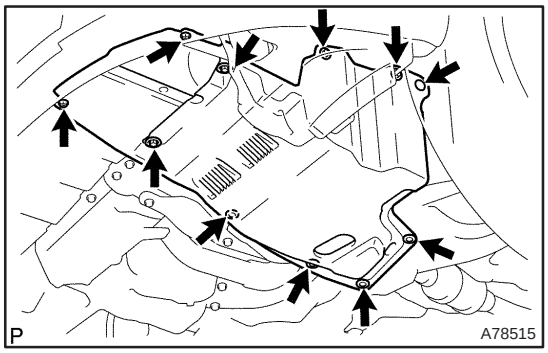
- If the voltmeter reading is more than standard voltage, replace the voltage regulator.
- If the voltmeter reading is less than the standard voltage, check the voltage regulator and generator as follows:

9. INSPECT CHARGING CIRCUIT WITH LOAD

(a) Keep the engine speed at 2,000 rpm, turn on the high beam headlights and turn the heater blower switch to the ”HI” position.

(b) Check the reading on the ammeter.

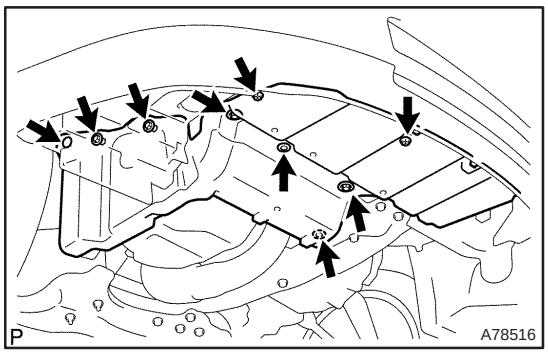
Standard amperage: 30 A or more



HINT:

- If the ammeter reading is less than standard amperage, repair the generator.
- If the battery is fully charged, the indication will sometimes be less than standard amperage.

GENERATOR ASSY (1AZ–FE/1AZ–FSE)



190NK–01

REPLACEMENT

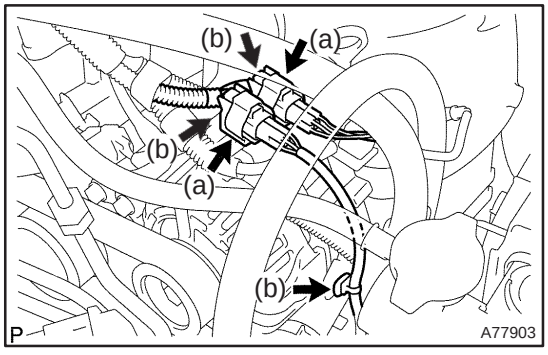
1. REMOVE ENGINE UNDER COVER LH

(a) Remove the 6 screws and 5 clips, and then remove the engine under cover.

2. REMOVE ENGINE UNDER COVER RH

(a) Remove the 6 screws and the 3 clips, and then remove the engine under cover.

3. REMOVE RADIATOR SUPPORT OPENING COVER (See page 10–26)

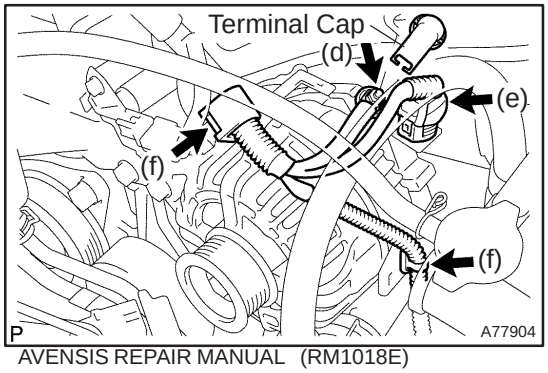


4. REMOVE ENGINE ROOM COVER SIDE (See page 10–26)

5. REMOVE FAN AND GENERATOR V BELT

SST 09249–63010

HINT:

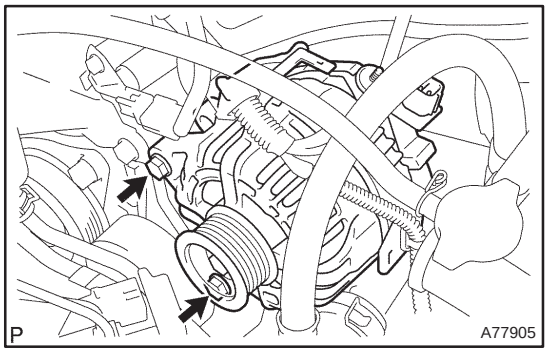


- 1AZ–FE: 14–105
- 1AZ–FSE: 14–185

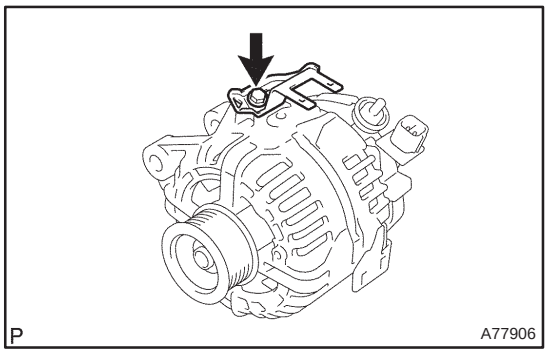
6. REMOVE GENERATOR ASSY

(a) Disconnect the 2 heated oxygen sensor connectors. (1AZ–FE (Unleaded Gasoline) or 1AZ–FSE)

(b) Remove the 2 connector clamps of the heated oxygen sensor and the wire harness clamp. (1AZ–FE (Unleaded Gasoline) or 1AZ–FSE)

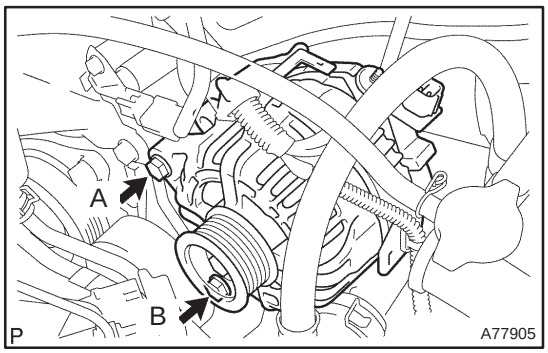


(c) Remove the terminal cap.



(d) Remove the nut and disconnect the generator wire.

(e) Disconnect the generator connector.



(f) Remove the 2 wire harness clamps.

(g) Remove the 2 bolts, and then remove the generator.

(h) Remove the bolt, and then remove the wire harness clamp bracket.

7. INSTALL GENERATOR ASSY

(a) Install the wire harness clamp bracket wire the bolt.
Torque: 8.4 N·m (86 kgf·cm, 74 in.·lbf)

(b) Install the generator the 2 bolts.
Torque:
52 N·m (530 kgf·cm, 38 ft·lbf) for bolt A
21 N·m (214 kgf·cm, 16 ft·lbf) for bolt B

(c) Install the 2 wire harness clamps.

(d) Connect the generator connector.

(e) Install the generator wire with the nut.
Torque: 9.8 N·m (100 kgf·cm, 7 ft·lbf)

(f) Install the terminal cap.

(g) Install the 2 connector clamps of the heated oxygen sensor and the wire harness clamp.
(1AZ–FE (Unleaded Gasoline) or 1AZ–FSE)

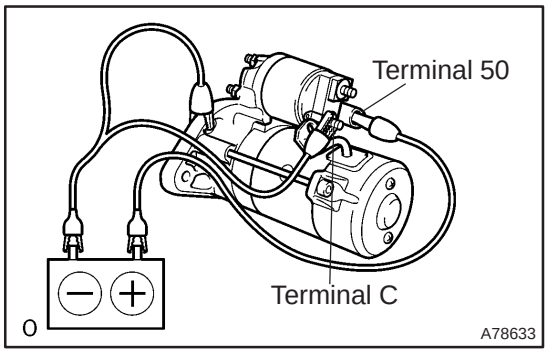
(h) Connect the 2 heated oxygen sensor connectors.
(1AZ–FE (Unleaded Gasoline) or 1AZ–FSE)

8. INSTALL FAN AND GENERATOR V BELT
SST 09249–63010

HINT:
- 1AZ–FE: 14–105
- 1AZ–FSE: 14–185

9. INSTALL ENGINE ROOM COVER SIDE

10. INSTALL RADIATOR SUPPORT OPENING COVER



11. INSTALL ENGINE UNDER COVER RH

12. INSTALL ENGINE UNDER COVER LH

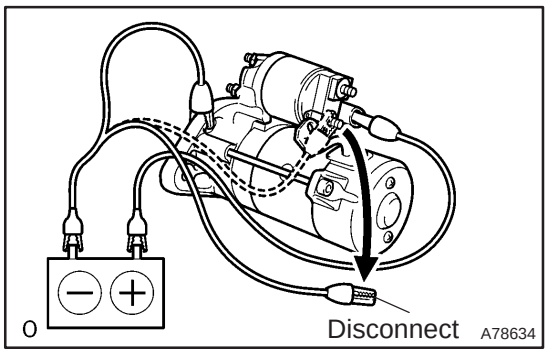
STARTING SYSTEM (1CD–FTV)

190NL–01

INSPECTION

1. INSPECT STARTER ASSY

NOTICE:

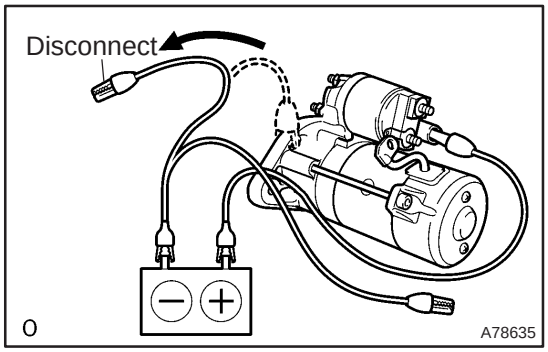


These tests must be performed within 3 to 5 seconds to avoid burning out the coil.

(a) Do pull–in test

(1) Disconnect the field coil lead wire from terminal C.

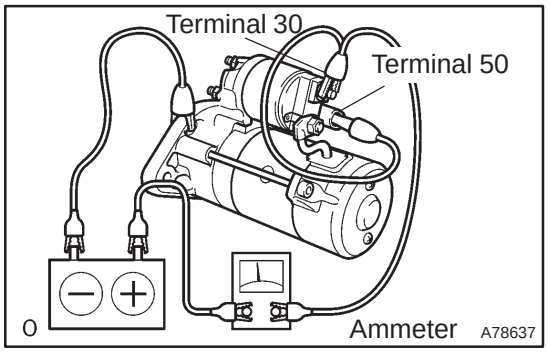
(2) Connect the battery to the magnetic switch as shown in the illustration on the left. Check that the clutch pinion gear is extended.



If the clutch pinion gear is not extended, replace the magnetic switch.

(b) Do hold–in test

(1) Disconnect the negative (–) lead from the terminal C with the above condition (a) is being maintained. Check that the pinion gear remains extended.



If the clutch pinion gear returns, replace the magnetic switch.

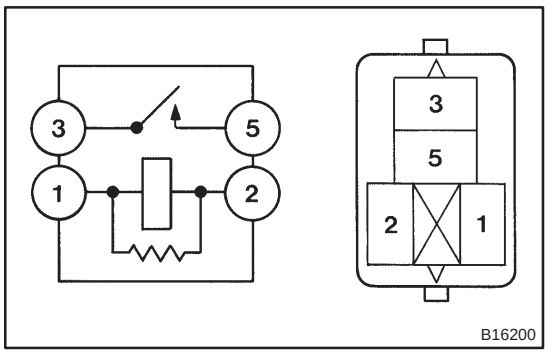
(c) Inspect clutch pinion gear return

(1) Disconnect the negative (–) lead from the switch body. Check that the clutch pinion gear returns.

If the clutch pinion gear does not return, replace the magnetic switch.

(d) Do no–load performance test

(1) Connect the field coil lead wire to terminal C. Make sure that the lead is not grounded.



Torque: 5.9 N·m (60 kgf·cm, 52 in·lbf)

(2) Clamp the starter in a vise.

(3) Connect the battery and an ammeter to the starter as shown in the illustration.

(4) Check that the starter rotates smoothly and steadily with the clutch pinion gear extended. Check that the ammeter reads the specified current.

Specified current: 190 A or less at 11.5 V

2. INSPECT STARTER RELAY ASSY

(a) Continuity inspection.

(1) Using an ohmmeter, check for continuity between each terminal.

Specified condition:

Terminal No.	Specified condition
1 – 2	Continuity
3 – 5	No continuity
	Continuity (Apply battery voltage terminals 1 and 2)

STARTER ASSY (1CD–FTV)

190O0–01

REPLACEMENT

1. **DRAIN ENGINE COOLANT (See page 16–44)**
2. **REMOVE RADIATOR SUPPORT OPENING COVER**
3. **REMOVE RADIATOR RESERVE TANK ASSY (See page 16–50)**
4. **REMOVE AIR CLEANER ASSY (See page 14–286)**
5. **REMOVE BATTERY**
6. **REMOVE STARTER ASSY**

(a) Remove the nut and disconnect terminal 30.
(b) Disconnect the starter connector.
(c) Remove the 2 bolts and the starter.

7. **INSTALL STARTER ASSY**

   Torque:
   37 N·m (377 kgf·cm, 27 ft·lbf) for bolt
   9.8 N·m (100 kgf·cm, 7.2 ft·lbf) for terminal 30

8. **INSTALL AIR CLEANER ASSY (See page 14–286)**
9. **INSTALL RADIATOR RESERVE TANK ASSY (See page 16–50)**
10. **ADD ENGINE COOLANT (See page 16–44)**
11. **CHECK FOR ENGINE COOLANT LEAKS (See page 16–44)**

CHARGING SYSTEM (1CD–FTV)

190NM–01

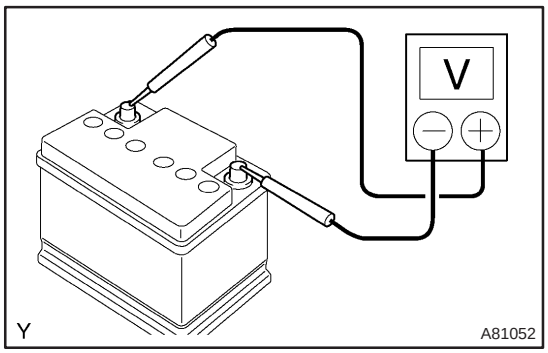
3. **Do not perform tests with a high voltage insulation resistance tester.**
4. **Never disconnect the battery while the engine is running.**
5. **Check that the charging cable is tightened on terminal B of the generator and the fuse box.**

190NN–01

ON–VEHICLE INSPECTION

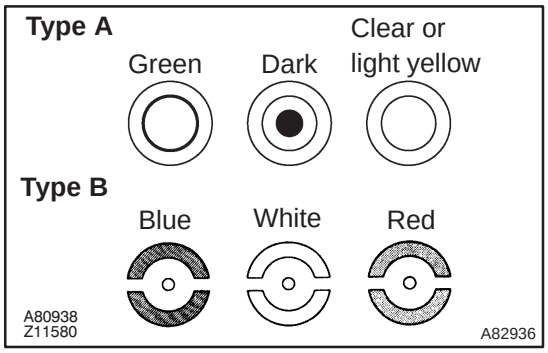
1. CHECK BATTERY ELECTROLYTE LEVEL



(a) Check the electrolyte quantity of each cell.
  (1) If the electrolyte is under the low level, replace the battery (or add distilled water if possible) and check the charging system.

2. CHECK BATTERY SPECIFIC GRAVITY (MAINTENANCE TYPE BATTERY)

(a) Check the specific gravity of each cell.
  Standard specific gravity: 1.25 to 1.29 at 20°C (68°F)

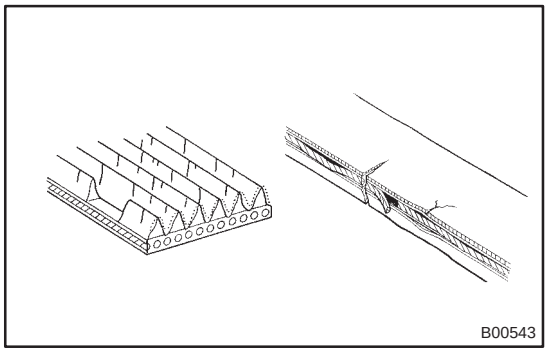


HINT:
If the specific gravity is less than specification, charge the battery.

3. CHECK BATTERY VOLTAGE

(a) If it has not been 20 minutes since you drove the vehicle or since the engine was stopped, turn the ignition switch and the electrical system (headlight, blower motor, rear defogger etc.) to the on position for 60 seconds. This will remove the surface charge on the battery.
(b) Turn off the ignition switch and the electrical systems.
(c) Measure the battery voltage between the negative (–) and positive (+) terminals of the battery.
  Standard voltage: 12.5 to 12.9 V at 20°C (68°F)

HINT:
If the voltage is less than specification, charge the battery.



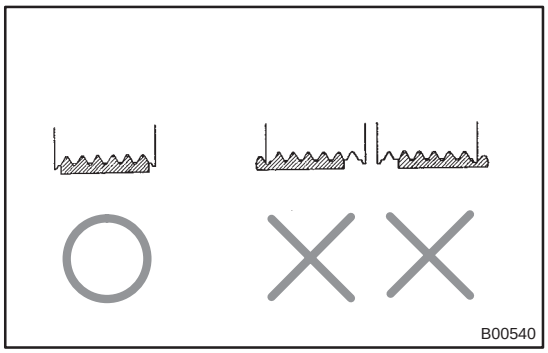
(d) Check the indicator as shown in the illustration. (Non maintenance type battery)

HINT:

Indicator color		Condition
Type A	Type B	
Green	Blue	Good
Dark	White	Charging necessary
Clear or light yellow	Red	Replace

4. CHECK BATTERY TERMINALS, FUSIBLE LINK AND FUSES

(a) Check that the battery terminals are not loosened or corroded.
(b) Check the fusible links, high–current fuses and regular fuses.



5. INSPECT DRIVE BELT

(a) Visually check the belt for excessive wear, frayed cords etc.

HINT:

- If any defect found, replace the drive belt.
- Cracks on the rib side of a belt are considered acceptable. If the belt has chunks missing from the ribs, it should be replaced.

(b) Check that it fits properly in the ribbed grooves.

HINT:

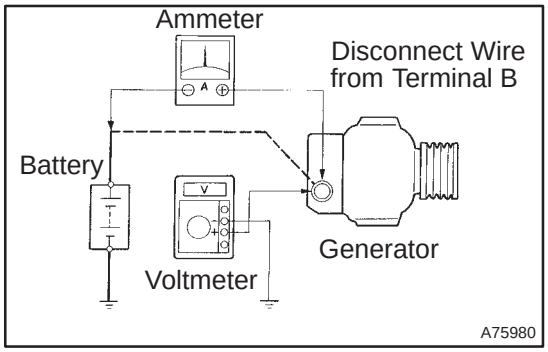
Check with your hand to confirm that the belt has not slipped out of the groove on the bottom of the pulley.

6. VISUALLY CHECK GENERATOR WIRING

(a) Check that the wiring is in good condition.

7. LISTEN FOR ABNORMAL NOISES FROM GENERATOR

(a) Check that there is no abnormal noise from the generator while the engine is running.



8. INSPECT CHARGE WARNING LIGHT CIRCUIT

(a) Turn the ignition switch ON. Check that the charge warning light comes on.

(b) Start the engine and check that the light goes off.

HINT:

If the light does not operate as specified, troubleshoot the charge warning light circuit.

9. INSPECT CHARGING CIRCUIT WITHOUT LOAD

(a) According to the following procedure, connect an ammeter and voltmeter as shown in the illustration.

(1) Disconnect to the wire from terminal B of the generator and connect it to the negative (–) lead of the ammeter.

(2) Connect the positive (+) lead of the ammeter to terminal B of the generator

(3) Connect the positive (+) lead of the voltmeter to terminal B of the generator.

(4) Ground the negative (–) lead of the voltmeter.

(b) Check the charging circuit.

(1) Keep the engine speed at 2,000 rpm, check the reading on the ammeter and voltmeter.

Standard amperage: 10 A or less

Standard voltage: 13.2 to 14.8 V

HINT:

- If the voltmeter reading is more than standard voltage, replace the voltage regulator.
- If the voltmeter reading is less than the standard voltage, check the voltage regulator and generator as follows:

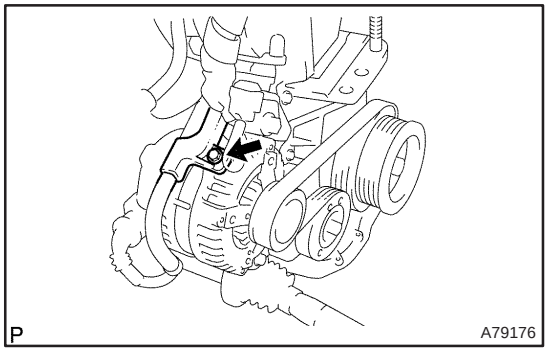
10. INSPECT CHARGING CIRCUIT WITH LOAD

(a) Keep the engine speed at 2,000 rpm, turn on the high beam headlights and turn the heater blower switch to the ”HI” position.

(b) Check the reading on the ammeter.

Standard amperage: 30 A or more

HINT:



- If the ammeter reading is less than standard amperage, repair the generator.
- If the battery is fully charged, the indication will sometimes be less than standard amperage.

GENERATOR ASSY (1CD–FTV)

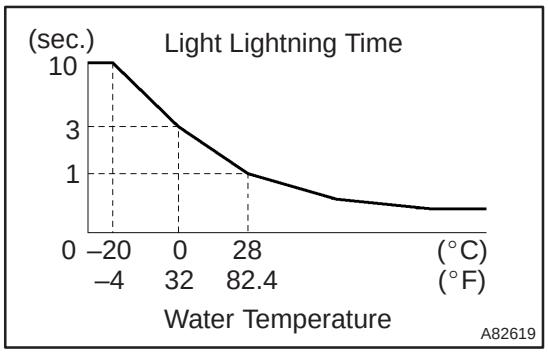
190O1–01

REPLACEMENT

1. REMOVE FRONT WHEEL RH
2. REMOVE RADIATOR SUPPORT OPENING COVER
3. REMOVE ENGINE ROOM COVER SIDE
4. REMOVE ENGINE UNDER COVER SUB–ASSY NO.1
5. REMOVE ENGINE UNDER COVER RH
6. REMOVE V (COOLER COMPRESSOR TO CRANKSHAFT PULLEY) BELT NO.1 (See page 14–269)
7. REMOVE GENERATOR V BELT (See page 14–269)
8. REMOVE FLOOR PANEL BRACE FRONT (See page 15–10)
9. REMOVE EXHAUST PIPE ASSY FRONT (See page 15–10)
10. REMOVE EXHAUST PIPE ASSY (W/ COLD AREA) (See page 13–11)

11. REMOVE GENERATOR ASSY
(a) Remove the bolt and disconnect the wire harness.
(b) Remove the cap and nut, disconnect the generator wire.
(c) Disconnect the generator connector.
(d) Remove the 2 bolts and the generator.

12. INSTALL GENERATOR ASSY
Torque:
31 N·m (320 kgf·cm, 23 ft·lbf) for M8
47 N·m (475 kgf·cm, 34 ft·lbf) for M10
9.8 N·m (100 kgf·cm, 7 ft·lbf) for Generator wire
5.0 N·m (51 kgf·cm, 44 ft·lbf) for Wire harness
13. INSTALL EXHAUST PIPE ASSY (W/ COLD AREA) (See page 13–11)
14. INSTALL EXHAUST PIPE ASSY FRONT (See page 15–10)
15. INSTALL FLOOR PANEL BRACE FRONT (See page 15–10)
16. ADJUST V (COOLER COMPRESSOR TO CRANKSHAFT PULLEY) BELT NO.1 (See page 14–286)
17. INSTALL FRONT WHEEL RH
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)
18. CHECK FOR EXHAUST GAS LEAKS

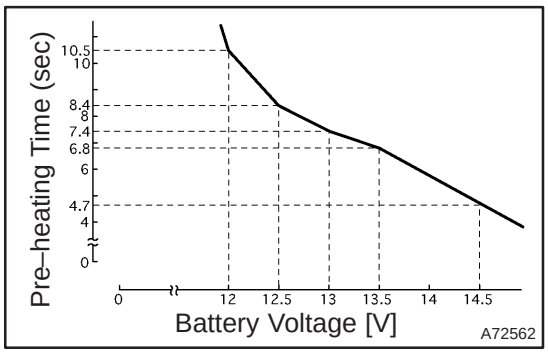


PRE–HEATING SYSTEM (1CD–FTV)

190JE–02

ON–VEHICLE INSPECTION

NOTICE:



Turn the ignition switch OFF for 60 seconds before performing the following inspections.

1. INSPECT LIGHTING DURATION OF GLOW INDICATOR LIGHT

(a) Turn the ignition switch ON, and measure the lighting duration.

Light lighting duration: Refer to the chart graph

2. INSPECT PRE–HEATING

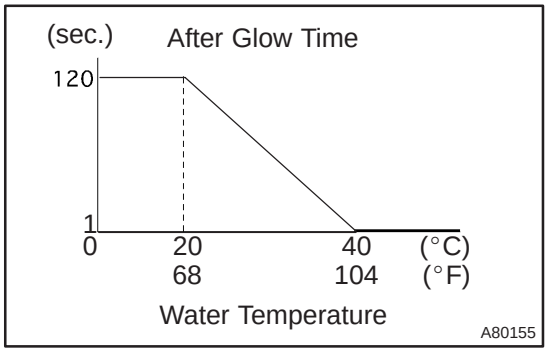
(a) Turn the ignition switch ON, measure how long it takes to the battery voltage is applied to the glow plugs.

SST 09082–00030, 09083–00150

Pre–Heating time:

Engine coolant temperature	Pre–Heating time
40 °C or more	1 sec
40 °C or less	Refer to the chart graph (15 sec at the longest)

(b) Turn the ignition switch STA, check that the battery voltage applied to the glow plugs.

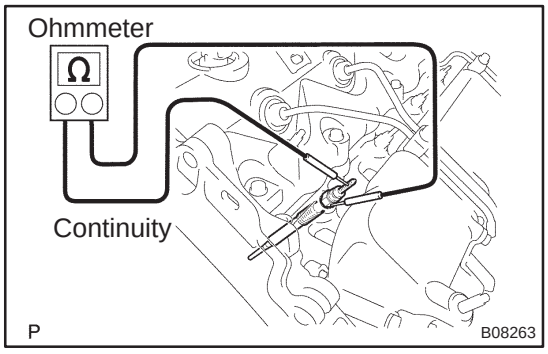


SST 09082–00030, 09083–00150

(c) While cranking the engine, measure how long it takes to the battery voltage is applied to the glow plugs.

SST 09082–00030, 09083–00150

Pre–Heating time:



Engine coolant temperature	Pre–Heating time
40 °C or more	1 sec
40 °C or less	Refer to the chart graph (15 sec at the longest)

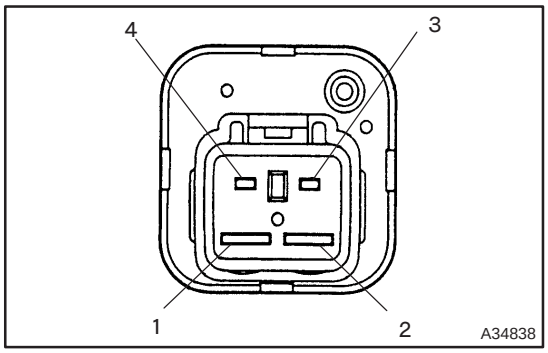
3. INSPECT AFTER GLOW TIME

(a) After the engine starting, measure how long it takes to the battery voltage is applied to the terminal SREL of the ECM.

After glow time: Refer to the chart graph

4. INSPECT GLOW PLUGS

(a) Using an ohmmeter, check that there is continuity between the glow plug terminal and ground.



Standard resistance: Approx. 0.72 Ω at 20°C (68°F)

NOTICE:

- **Be careful not to damage the glow plug pipes as it could cause an open circuit or shorten life of the glow plugs.**
- **Avoid getting oil and gasoline on the glow plug when cleaning.**
- **Wipe up any oil on the terminal and Bakelite washer with a dry cloth if they are stained with oil during inspection.**
- **Be careful not to apply more than 11 V to the glow plug as it could cause an open circuit.**

190JF–02

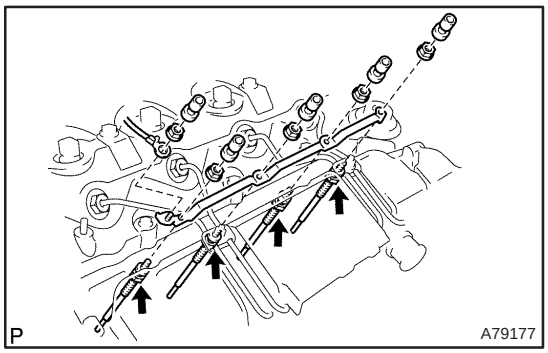
INSPECTION

1. INSPECT GLOW PLUG RELAY ASSY

(a) Using an ohmmeter, check for continuity between each terminal.

Specified condition:

1 – 2	No continuity
	Continuity (Apply battery voltage terminals 3 and 4)



GLOW PLUG ASSY (1CD–FTV)

190O2–01

REPLACEMENT

1. REMOVE ENGINE COVER NO.1

(a) Remove the 5 nuts and the engine cover.

2. REMOVE GLOW PLUG ASSY

(a) Remove the 5 grommets.

(b) Remove the 5 nuts and the glow plug connector.

(c) Remove the 4 glow plugs.

3. INSTALL GLOW PLUG ASSY

Torque:
12.3 N·m (125 kgf·cm, 9 ft·lbf) for glow plug
2.2 N·m (22 kgf·cm, 19 in.·lbf) for nut

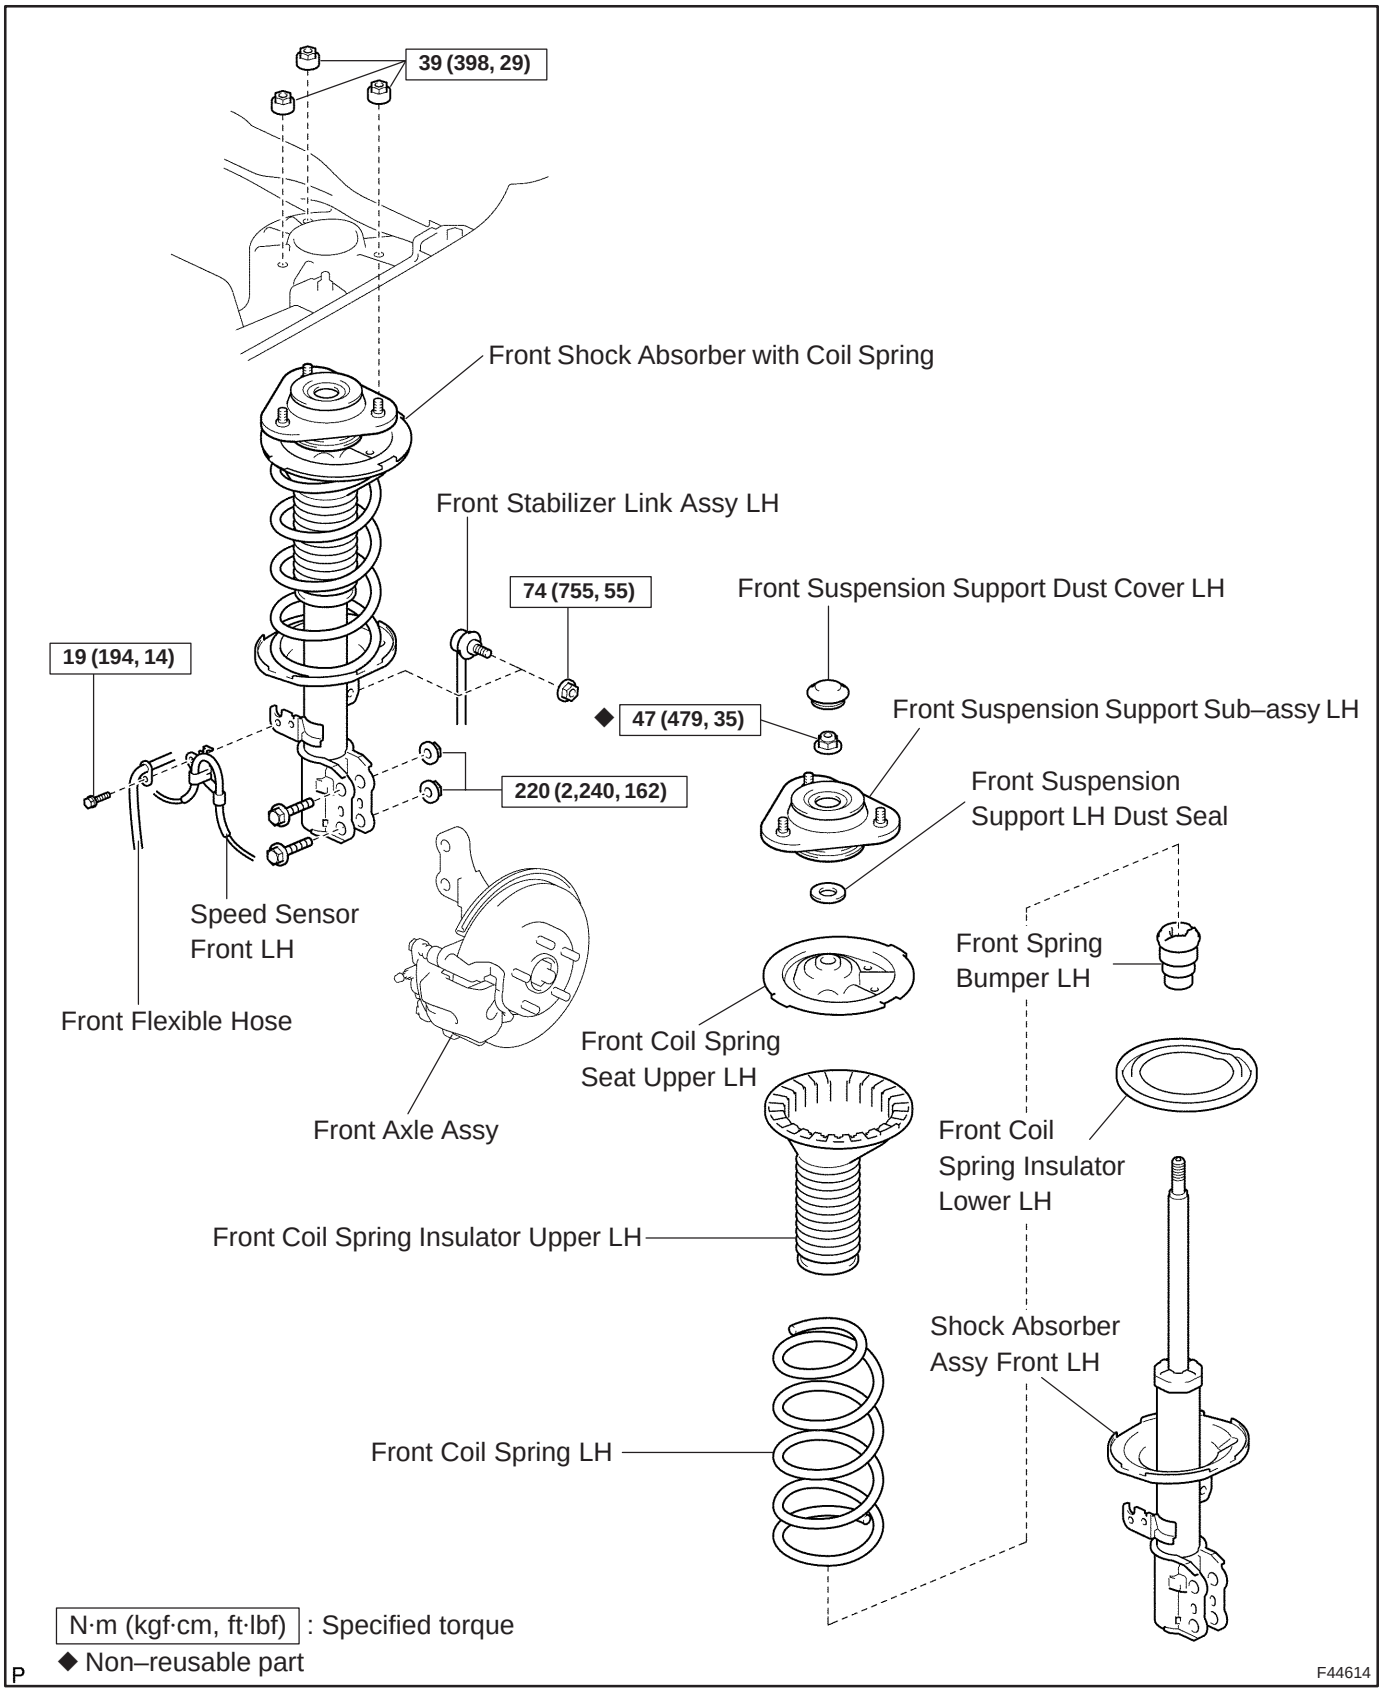
4. INSTALL ENGINE COVER NO.1

Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)

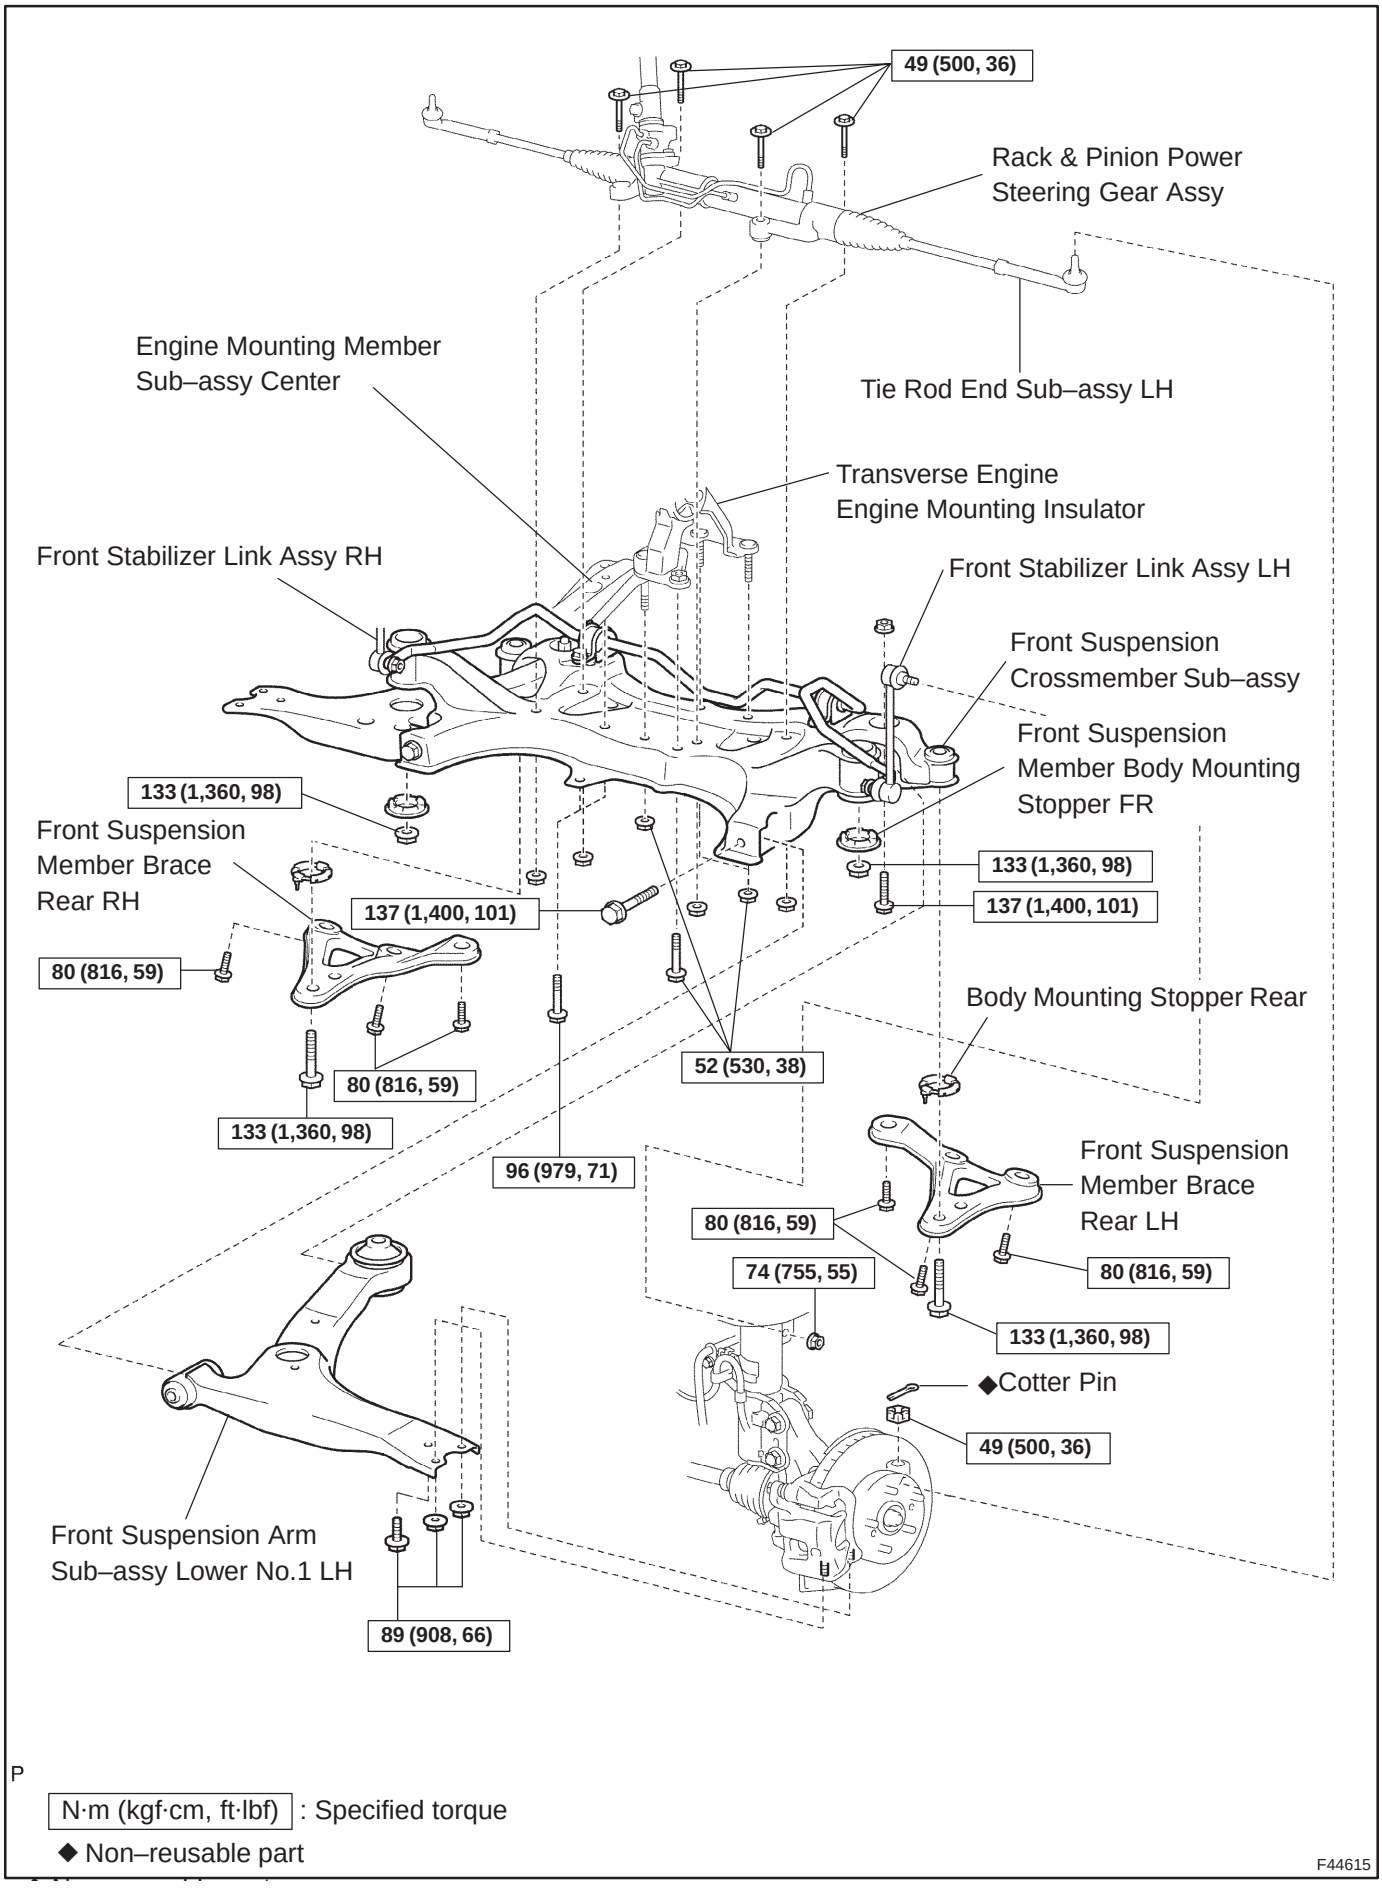
FRONT SUSPENSION SYSTEM

2600K–06

PROBLEM SYMPTOMS TABLE



Use the table below to help you find the cause of the problem. The numbers indicate the priority of the likely cause of the problem. Check each part in order. If necessary, replace these parts.



Symptom	Suspect Area	See page
Wander/pulls	4. Tire (Worn or improperly inflated)	28–1
	5. Wheel alignment (Incorrect)	26–6
	6. Steering linkage (Loose or worn)	–
	7. Hub bearing (Worn)	30–2
	8. Steering gear (Out of adjustment or broken)	51–28 51–36
	9. Suspension parts (Worn)	–
Bottoming	1. Vehicle (Overloaded)	–
	2. Spring (Weak)	26–10
	3. Shock absorber (Worn)	26–10
Sways/pitches	1. Tire (Worn or improperly inflated)	28–1
	2. Stabilizer bar (Bent or broken)	26–26
	3. Shock absorber (Worn)	26–10
Front wheel shimmy	1. Tire (Worn or improperly inflated)	28–1
	2. Wheel (Out of balance)	28–1
	3. Shock absorber (Worn)	26–10
	4. Wheel alignment (Incorrect)	26–6
	5. Ball joint (Worn)	26–24
	6. Hub bearing (Worn)	30–2
	7. Steering linkage (Loose or worn)	–
	8. Steering gear (Out of adjustment or broken)	51–28 51–36
Abnormal tire wear	1. Tire (Worn or improperly inflated)	28–1
	2. Wheel alignment (Incorrect)	26–6
	3. Shock absorber (Worn)	26–10
	4. Suspension parts (Worn)	–

FRONT WHEEL ALIGNMENT

2600L–02

ADJUSTMENT

1. INSPECT TIRE (See page 28–1)

2. MEASURE VEHICLE HEIGHT

Vehicle height:

(Normal package)

Front	A – B: 92 mm (3.62 in.)
Rear	D – C: 61 mm (2.40 in.)

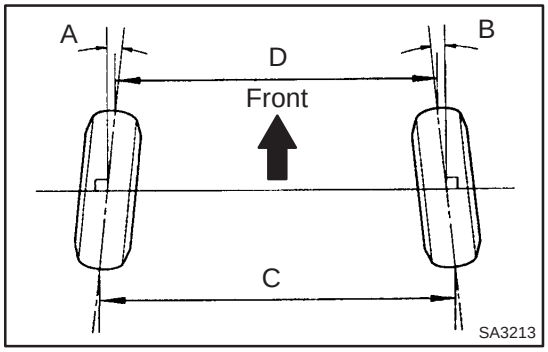
(Rough road package)

Front	A – B: 72 mm (2.83 in.)
Rear	D – C: 41 mm (1.61 in.)

Measuring points:

A: Ground clearance of front wheel center

B: Ground clearance of lower suspension arm front bolt center



C: Ground clearance of toe control arm inner bolt center

D: Ground clearance of rear wheel center

NOTICE:

Before inspecting the wheel alignment, adjust the vehicle height to the specified value.

If the vehicle height is not the specified value, adjust it by pushing down or lifting the body.

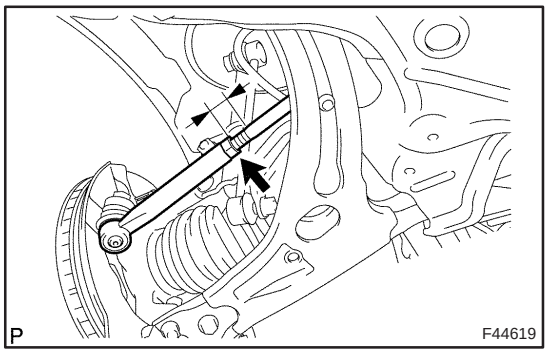
3. INSPECT TOE–IN

Toe–in:

Toe–in (total)	A + B: 0°06' ± 12' (0.1° ± 0.2°) C – D: 1 ± 2 mm (0.04 ± 0.08 in.)

If the toe–in is not within the specified value, adjust it at the rack ends.

4. ADJUST TOE–IN



(a) Remove the rack boot set clips.

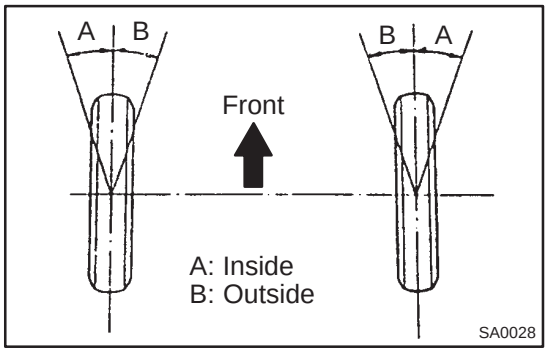
(b) Loosen the tie rod end lock nuts.

(c) Turn the right and left rack ends by an equal amount to adjust the toe–in.

HINT:

Adjust the toe–in to the center of the specified value as much as possible.

(d) Make sure that the lengths of the right and left rack ends are the same.



(e) Torque the tie rod end lock nuts.

Torque: 74 N·m (755 kgf·cm, 55 ft·lbf)

(f) Place the boots on the seats and install the clips.

HINT:

Make sure that the boots are not twisted.

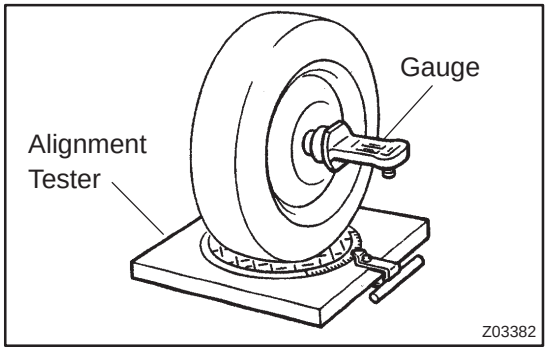
5. INSPECT WHEEL ANGLE

(a) Turn the steering wheel fully and measure the turning angle.

Wheel turning angle:

(Normal package)

Inside wheel	38°17' ± 2° (38.28° ± 2°) *1 35°47' ± 2° (35.78° ± 2°) *2
Outside wheel: Reference	32°52' (32.87°) *1 31°15' (31.25°) *2



(Rough road package)

Inside wheel	38°42' ± 2° (38.70° ± 2°) *1 36°09' ± 2° (36.15° ± 2°) *2
Outside wheel: Reference	33°16' (33.27°) *1 31°38' (31.63°) *2

***1: Electric motor power steering models**

***2: Oil pressure power steering models**

If the right and left inside wheel angles differ from the specified value, check the right and left rack end lengths.

6. INSPECT CAMBER, CASTER AND STEERING AXIS INCLINATION

(a) Install the camber–caster–kingpin gauge or position the vehicle on the wheel alignment tester.

(b) Inspect the camber, caster and steering axis inclination.

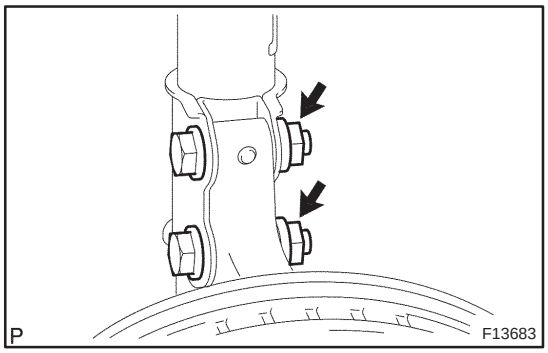
Camber, caster and steering axis inclination:

(Normal package)

Camber	–0°34' ± 45' (–0.57° ± 0.75°)
Right–left error	45' (0.75°) or less
Caster	2°54' ± 45' (2.90° ± 0.75°)
Right–left error	45' (0.75°) or less
Steering axis inclination	12°27' ± 45' (12.45° ± 0.75°)
Right–left error	45' (0.75°) or less

(Rough road package)

Camber	–0°19' ± 45' (–0.32° ± 0.75°)
Right–left error	45' (0.75°) or less
Caster	2°40' ± 45' (2.67° ± 0.75°)
Right–left error	45' (0.75°) or less
Steering axis inclination	11°56' ± 45' (11.93° ± 0.75°)
Right–left error	45' (0.75°) or less



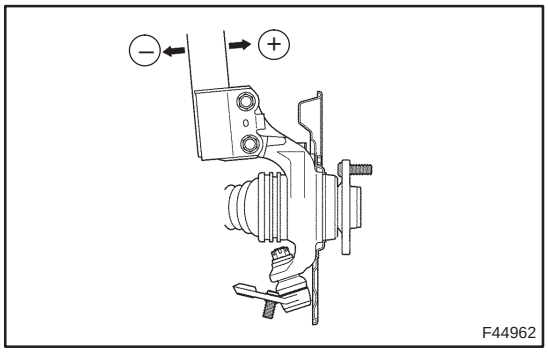
If the caster and steering axis inclination are not within the specified values, after the camber has been correctly adjusted, recheck the suspension parts for damaged and/or worn out parts.

7. ADJUST CAMBER

NOTICE:

After the camber has been adjusted, inspect the toe–in.

(a) Remove the front wheel.

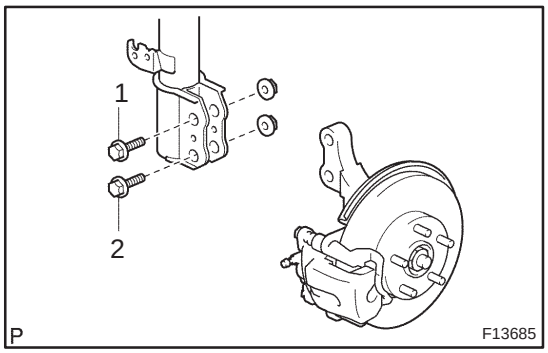


(b) Remove the 2 bolts and nuts on the lower side of the shock absorber.

If reusing the bolts and/or nuts, coat the threads of nuts with engine oil.

(c) Clean the installation surfaces of the shock absorber and the steering knuckle.

(d) Temporarily install the 2 bolts and nuts.



(e) Adjust the camber by pushing or pulling the lower side of the shock absorber in the direction in which the camber adjustment is required.

(f) Tighten the nuts.
Torque: 220 N·m (2,240 kgf·cm, 162 ft·lbf)

(g) Install the front wheel.
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

(h) Check the camber.

HINT:

- Adjust the camber to the center of the specified value as much as possible.
- Adjusting value for the set bolts is 6' – 30' (0.1° – 0.5°).

If the camber is not within the specified value, using the following table, estimate how much additional camber adjustment will be required, and select the camber adjusting bolt.

NOTICE:
Tighten the adjusting bolt with a washer and a new nut.

Bolt / Adjusting Value	Set Bolt		Adjusting Bolt					
	90105–17008		90105–17009		90105–17010		90105–17011	
			1 Dot		2 Dots		3 Dots	
	1	2	1	2	1	2	1	2
–1°30'––1°15'							●	●
–1°15'––1°00'					●			●
–1°00'––45'			●					●
–45'––30'	●							●

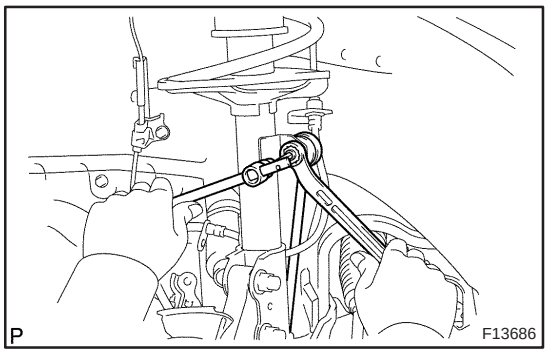
1°00'–1°15'					●			●
1°15'–1°30'							●	●

N
F12938

(i) Perform the procedure mentioned above again. At step (b), replace 1 or 2 selected bolts.

HINT:
When replacing the 2 bolts, replace 1 bolt for each time.

FRONT SHOCK ABSORBER WITH COIL SPRING



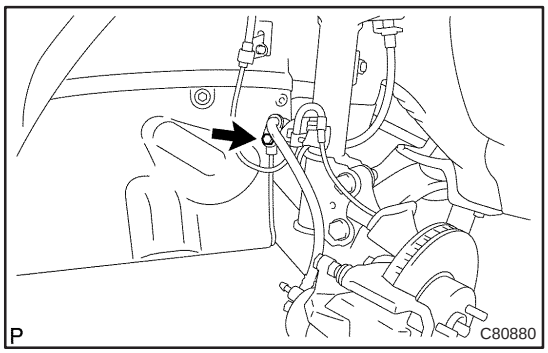
OVERHAUL

2600M–04

HINT:

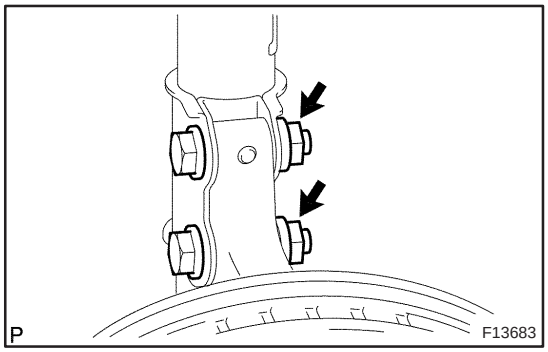
- COMPONENTS: See page 26–2
- This procedure is provided for the overhaul on the LH side. Overhaul the other side by the same procedure as the LH side.

1. REMOVE FRONT WHEEL



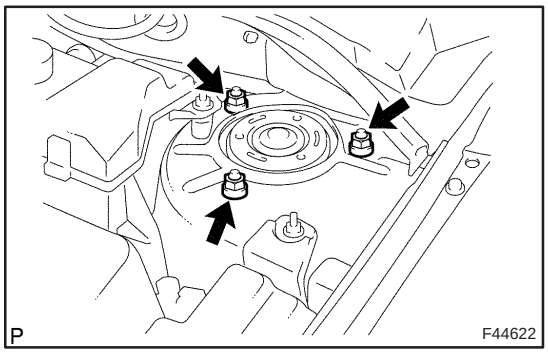
2. SEPARATE FRONT STABILIZER LINK ASSY LH

(a) Remove the nut and disconnect the stabilizer bar link from the shock absorber.



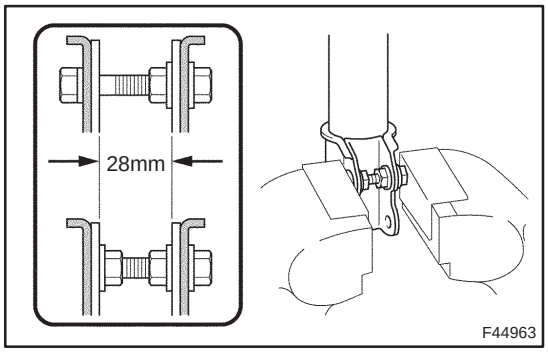
HINT:

If the ball joint turns together with the nut, use a hexagon (6 mm) wrench to hold the stud.



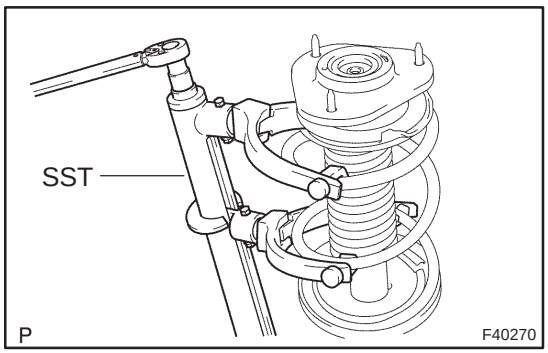
3. REMOVE FRONT SHOCK ABSORBER WITH COIL SPRING

(a) Remove the bolt, disconnect the front flexible hose and speed sensor front LH.



(b) Remove the 2 nuts and bolts on the lower side of the shock absorber.

(c) Remove the 3 nuts on the upper side of the shock absorber.

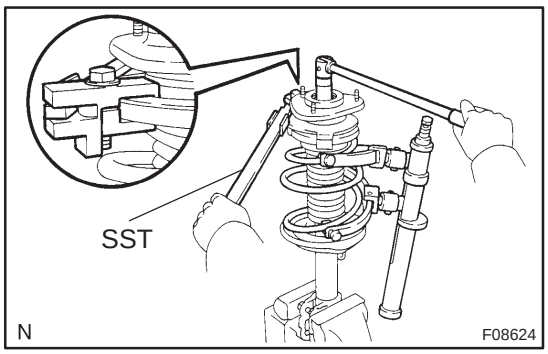


(d) Remove the shock absorber with the coil spring.

4. FIX FRONT SHOCK ABSORBER WITH COIL SPRING

(a) Install 2 nuts and a bolt to the bracket at the lower side of the shock absorber and secure it in a vise.

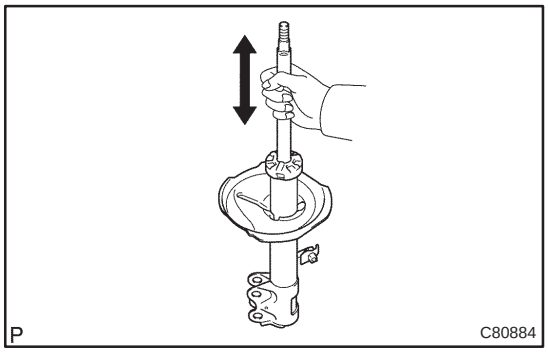
5. REMOVE FRONT SUSPENSION SUPPORT DUST COVER LH



6. REMOVE FRONT SUPPORT TO FRONT SHOCK ABSORBER LH NUT

(a) Using SST, compress the coil spring.
SST 09727–30021

NOTICE:



Do not use an impact wrench. It will damage the SST.

(b) Remove the front suspension support dust cover from the suspension support.

(c) Using SST to hold the spring seat, remove the nut.
SST 09729–22031

7. REMOVE FRONT SUSPENSION SUPPORT SUB–ASSY LH
8. REMOVE FRONT SUSPENSION SUPPORT LH DUST SEAL
9. REMOVE FRONT COIL SPRING SEAT UPPER LH
10. REMOVE FRONT COIL SPRING INSULATOR UPPER LH
11. REMOVE FRONT COIL SPRING LH
12. REMOVE FRONT SPRING BUMPER LH
13. REMOVE FRONT COIL SPRING INSULATOR LOWER LH

14. INSPECT SHOCK ABSORBER ASSY FRONT LH

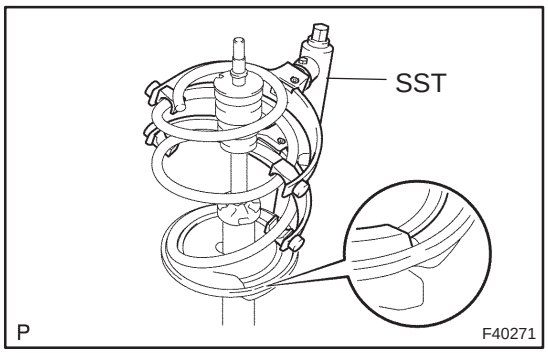
(a) Compress and extend the shock absorber rod and check that there is no abnormal resistance or unusual sound during operation.

If there is any abnormality, replace the shock absorber with a new one.

NOTICE:

When disposing of the shock absorber, see DISPOSAL on page 26–15.

15. INSTALL FRONT COIL SPRING INSULATOR LOWER LH



HINT:

Fit the front coil spring insulator lower into the gap of the shock absorber.

(a) Install the front coil spring insulator lower onto the shock absorber.

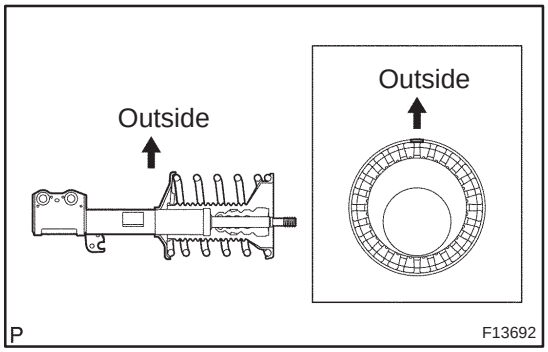
16. INSTALL FRONT SPRING BUMPER LH

(a) Install the spring bumper to the piston rod.

17. INSTALL FRONT COIL SPRING LH

(a) Using SST, compress the coil spring.

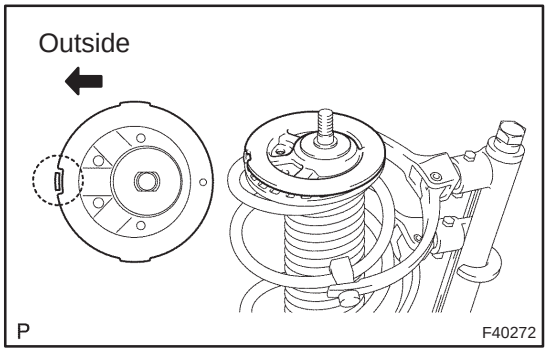
SST 09727–30021



NOTICE:

Do not use an impact wrench. It will damage the SST.

(b) Install the coil spring to the shock absorber.

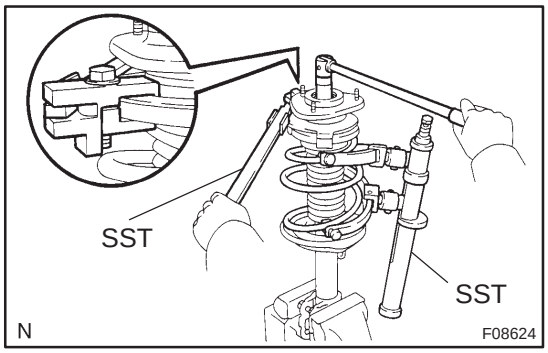


HINT:

Fit the lower end of the coil spring into the gap of the front coil spring insulator lower LH.

18. INSTALL FRONT COIL SPRING INSULATOR UPPER LH

(a) Install the upper insulator as shown in the illustration.

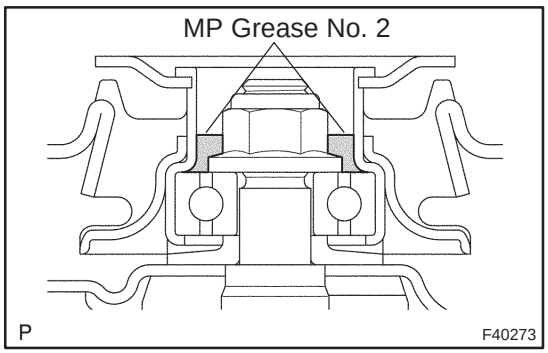


19. INSTALL FRONT COIL SPRING SEAT UPPER LH

(a) Install the spring seat to the shock absorber with the mark facing to the outside of the vehicle.

20. INSTALL FRONT SUSPENSION SUPPORT LH DUST SEAL

(a) Install a new dust seal.

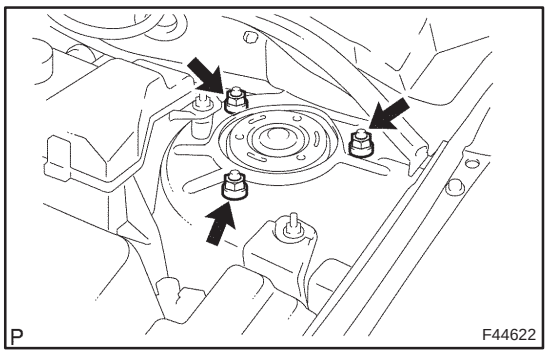


21. INSTALL FRONT SUSPENSION SUPPORT SUB–ASSY LH

22. INSTALL FRONT SUPPORT TO FRONT SHOCK ABSORBER LH NUT

(a) Using SST to hold the suspension support, install a new nut.
SST 09729–22031
Torque: 47 N·m (479 kgf·cm, 35 ft·lbf)

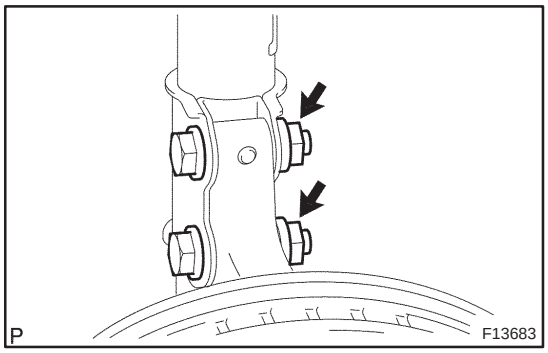
(b) Remove the SST.
SST 09727–30021,09729–22031



23. INSTALL FRONT SUSPENSION SUPPORT DUST COVER LH

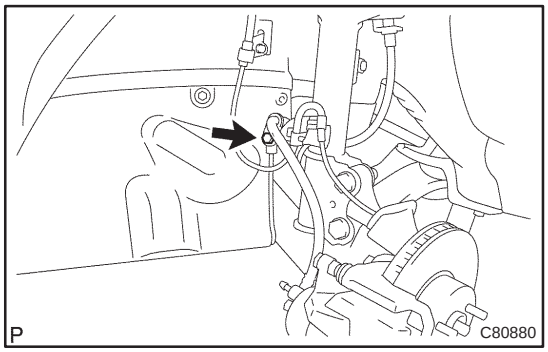
(a) Apply MP grease No. 2 into the suspension support.

CAUTION:
Do not touch grease on rubber surface of the suspension support.



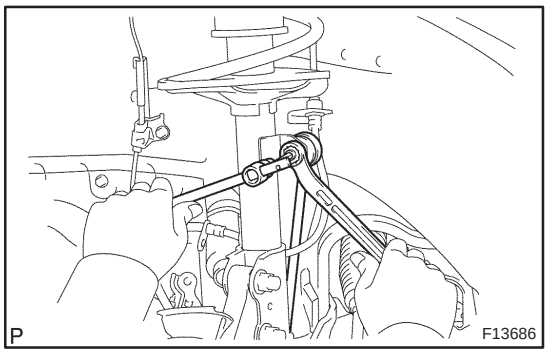
(b) Install the dust cover.

24. INSTALL FRONT SHOCK ABSORBER WITH COIL SPRING



(a) Install the shock absorber with the 2 bolts.

(b) Install the 3 nuts on the upper side of shock absorber.
Torque: 39 N·m (398 kgf·cm, 29 ft·lbf)



(c) Install the 2 nuts to the lower side of shock absorber.
Torque: 220 N·m (2,240 kgf·cm, 162 ft·lbf)

HINT:
Coat the threads of the nuts with engine oil.

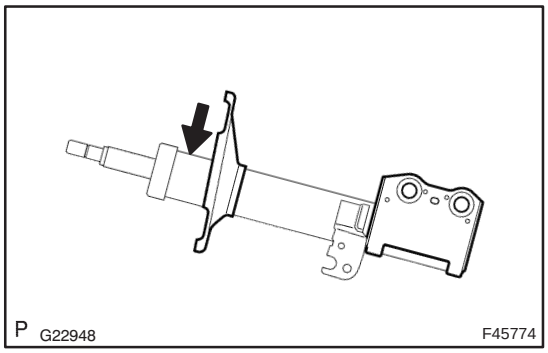
(d) Install the flexible hose and ABS speed sensor wire harness bracket with the bolt.
Torque: 19 N·m (192 kgf·cm, 14 ft·lbf)

25. INSTALL FRONT STABILIZER LINK ASSY LH

(a) Install the stabilizer bar link with the nut.
Torque: 74 N·m (755 kgf·cm, 55 ft·lbf)

HINT:
If the ball joint turns together with the nut, use a hexagon (6 mm) wrench to hold the stud.

26. INSTALL FRONT WHEEL
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)



27. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT **(See page 26–6)**

2600N–04

DISPOSAL

HINT:

Dispose the RH side by the same procedures as the LH side.

1. DISPOSE OF SHOCK ABSORBER ASSY FRONT LH

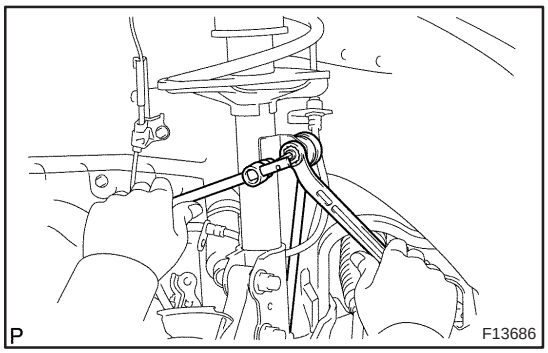
(a) Fully extend the shock absorber rod.

(b) Using a drill, make a hole in the cylinder as shown in the illustration to discharge the gas inside.

CAUTION:

- **When drilling, chips may fly out. Work carefully.**
- **The gas is colorless, odorless and non–poisonous.**

FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH (ATM)



260DQ–01

REPLACEMENT

HINT:

- COMPONENTS: See page 26–2
- Replace the RH side (Engine: 1AZ) by the same procedures as the LH (ATM) side.
- Replace the RH side (Engine: 1ZZ) by the same procedures as the LH (MTM) side.

1. REMOVE FRONT WHEELS

2. SEPARATE FRONT STABILIZER LINK ASSY LH

(a) Remove the nut and disconnect the stabilizer bar link from the shock absorber.

HINT:

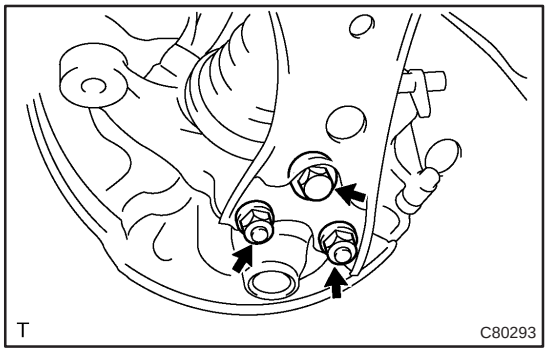
If the ball joint turns together with the nut, use a hexagon (6 mm) wrench to hold the stud.

3. SEPARATE FRONT STABILIZER LINK ASSY RH

HINT:

Separate the RH side by the same procedures as the LH side.

4. SEPARATE TIE ROD END SUB–ASSY LH (See page 30–6)



SST 09628–62011

5. SEPARATE TIE ROD END SUB–ASSY RH

SST 09628–62011

HINT:

Separate the RH side by the same procedures as the LH side.

6. SEPARATE FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH

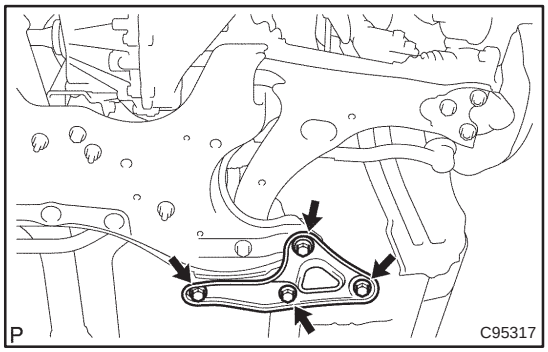
(a) Remove the bolt and 2 nuts, and separate the front suspension arm sub–assy lower No.1 from the lower ball joint.

7. SEPARATE FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 RH

HINT:

Separate the RH side by the same procedures as the LH side.

8. SEPARATE RACK & PINION POWER STEERING GEAR ASSY



(a) Electric power steering model: See page 51–28

(b) Oil pressure power steering model: See page 51–36

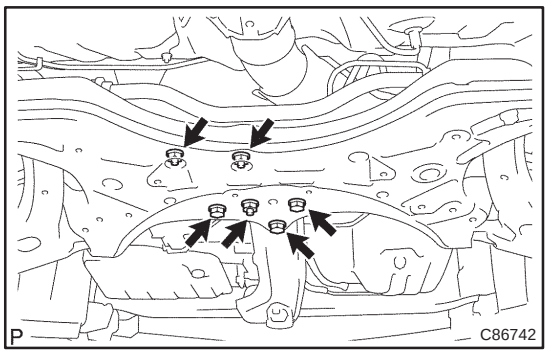
9. SUSPEND ENGINE ASSY

(a) U341E: See page 40–11

(b) U241E: See page 40–25

10. REMOVE FRONT SUSPENSION MEMBER BRACE REAR LH

(a) Support the front suspension crossmember sub–assy with a transmission jack.



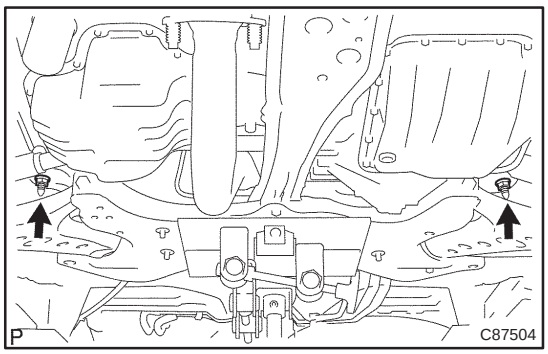
(b) Remove the 4 bolts and front suspension member brace rear LH.

(c) Remove the front suspension member body mounting stopper rear from the front suspension member brace rear LH.

11. REMOVE FRONT SUSPENSION MEMBER BRACE REAR RH

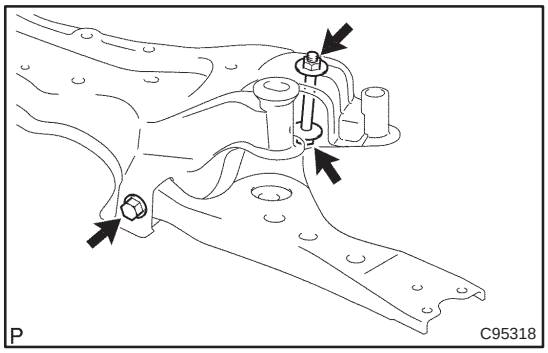
HINT:

Remove the RH side by the same procedures as the LH side.



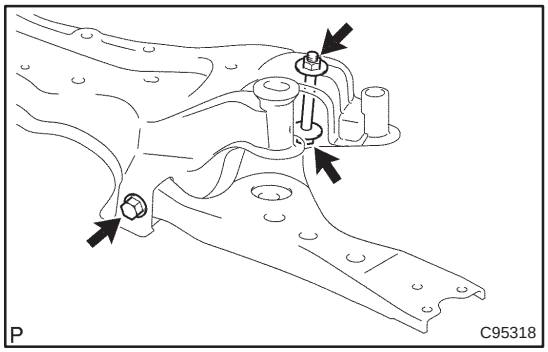
12. SEPARATE FRONT SUSPENSION CROSSMEMBER SUB–ASSY

(a) w/ HID:



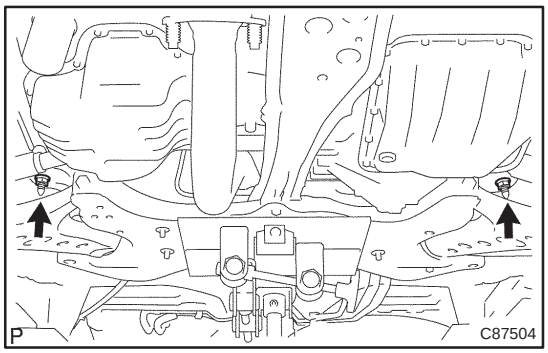
Disconnect the height control sensor (Front) connector.

(b) Remove the 3 bolts and 3 nuts, disconnect the transverse engine engine mounting insulator and engine mounting member sub–assy center from the front suspension crossmember sub–assy.



(c) Remove the 2 nuts and 2 front suspension member body mounting stoppers front.

(d) Lower the transmission jack, remove the front suspension crossmember sub–assy.

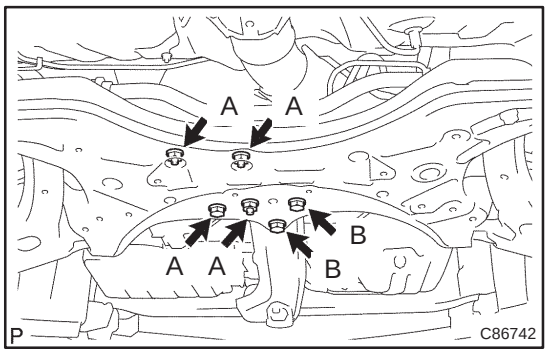


13. REMOVE FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH

(a) Remove the 2 bolts, nut and lower suspension arm sub–assy lower No.1 LH from the front suspension crossmember sub–assy.

14. TEMPORARILY TIGHTEN FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH

(a) Install the lower suspension arm sub–assy lower No.1 LH, and temporarily tighten the 2 bolts and nut.

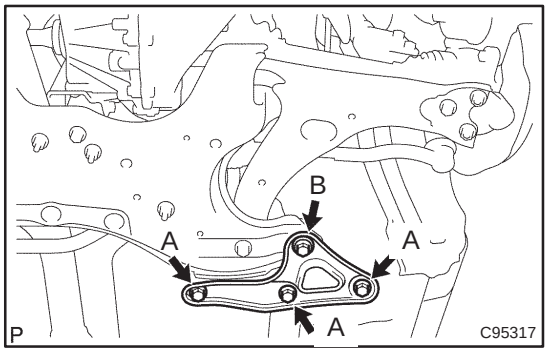


15. INSTALL FRONT SUSPENSION CROSSMEMBER SUB–ASSY

(a) Support the front suspension crossmember sub–assy with a transmission jack.

(b) Install the 2 front suspension member body mounting stoppers front and 2 nuts.

Torque: 133 N·m (1,360 kgf·cm, 98 ft·lbf)



(c) Connect the transverse engine engine mounting insulator and engine mounting member sub–assy center to the front suspension crossmember sub–assy.

(d) Install the 3 bolts and 3 nuts.

Torque:
Bolt A: 52 N·m (530 kgf·cm, 38 ft·lbf)
Bolt B: 96 N·m (979 kgf·cm, 71 ft·lbf)

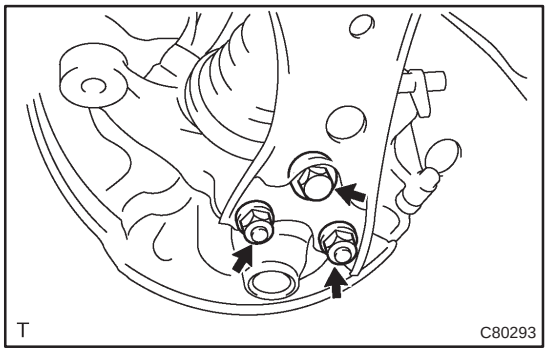
(e) w/ HID:
Connect the height control sensor (Front) connector.

16. INSTALL FRONT SUSPENSION MEMBER BRACE REAR LH

(a) Install the front suspension member body mounting stopper rear to the front suspension member brace rear LH.

(b) Install the 4 bolts and front suspension member brace rear LH.

Torque:
Bolt A: 80 N·m (816 kgf·cm, 59 ft·lbf)
Bolt B: 133 N·m (1,360 kgf·cm, 98 ft·lbf)



17. INSTALL FRONT SUSPENSION MEMBER BRACE REAR RH

HINT:
Install the RH side by the same procedures as the LH side.

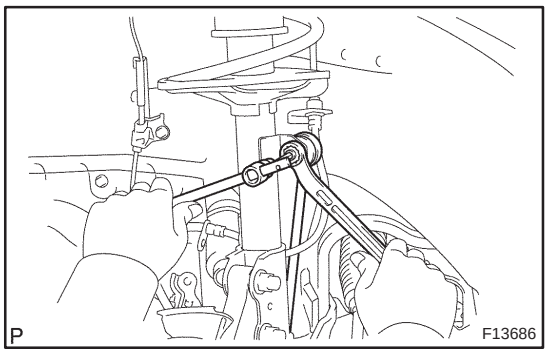
18. CONNECT RACK & PINION POWER STEERING GEAR ASSY

(a) Electric power steering model: See page 51–28

(b) Oil pressure power steering model: See page 51–36

19. CONNECT FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH

(a) Connect the lower suspension arm to the lower ball joint with the 2 nuts and bolt.
Torque: 89 N·m (908 kgf·cm, 66 ft·lbf)



20. CONNECT FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 RH

HINT:
Connect the RH side by the same procedures as the LH side.

21. INSTALL TIE ROD END SUB–ASSY LH (See page 30–6)

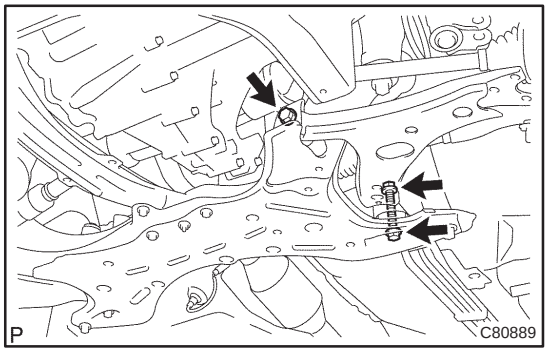
22. INSTALL TIE ROD END SUB–ASSY RH

HINT:
Connect the RH side by the same procedures as the LH side.

23. CONNECT FRONT STABILIZER LINK ASSY LH

(a) Install the stabilizer bar link with the nut.
Torque: 74 N·m (755 kgf·cm, 55 ft·lbf)

HINT:
If the ball joint turns together with the nut, use a hexagon (6 mm) wrench to hold the stud.



24. CONNECT FRONT STABILIZER LINK ASSY RH

HINT:
Install the RH side by the same procedures as the LH side.

25. STABILIZE SUSPENSION

(a) Install the front wheel and jack down the vehicle.
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

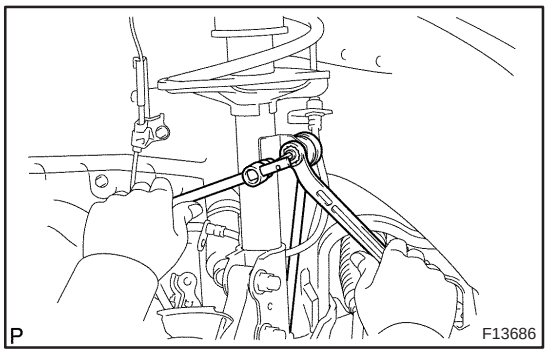
(b) Bounce the vehicle up and down several times to stabilize the suspension.

26. FULLY TIGHTEN FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH

(a) Fully tighten the 2 bolts and nut.
Torque: 137 N·m (1,400 kgf·cm, 101 ft·lbf)

27. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT (See page 26–6)

FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH (MTM)



260DR–01

REPLACEMENT

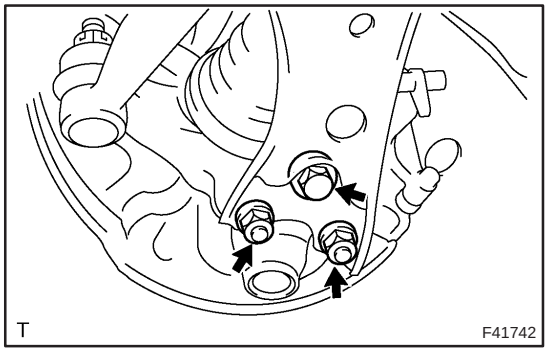
HINT:

- COMPONENTS: See page 26–2
- Replace the RH side (Engine: 1AZ) by the same procedures as the LH (ATM) side.
- Replace the RH side (Engine: 1ZZ, 3ZZ, 1CD) by the same procedures as the LH (MTM) side.

1. REMOVE FRONT WHEELS

2. SEPARATE FRONT STABILIZER LINK ASSY LH

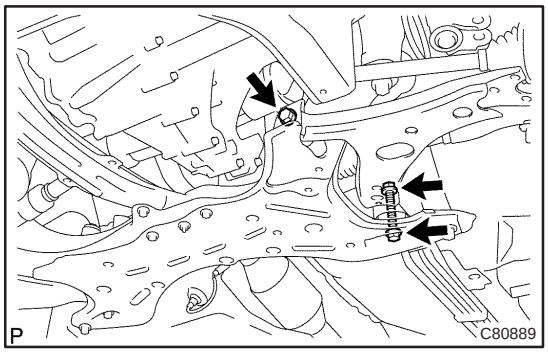
(a) Remove the nut and disconnect the stabilizer bar link from the shock absorber.



HINT:

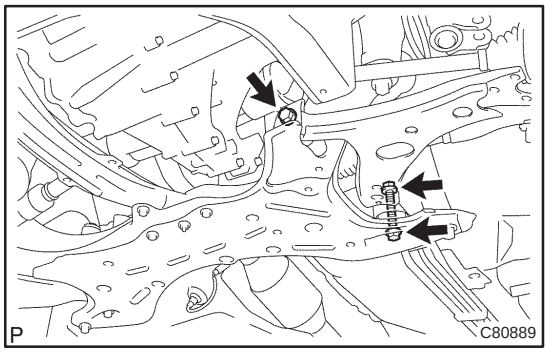
If the ball joint turns together with the nut, use a hexagon (6 mm) wrench to hold the stud.

3. SEPARATE FRONT STABILIZER LINK ASSY RH



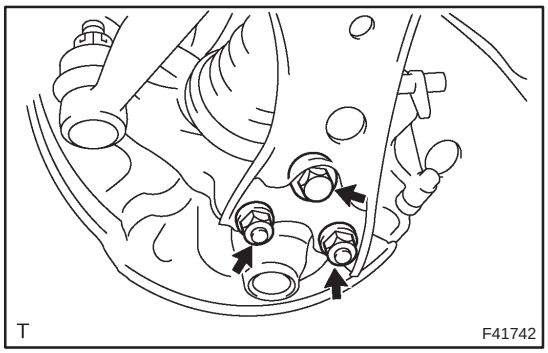
HINT:

Separate the RH side by the same procedures as the LH side.



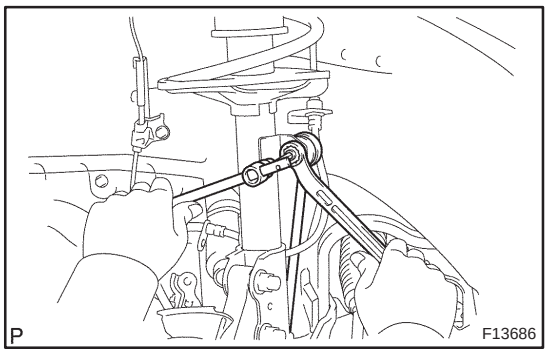
4. SEPARATE FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH

(a) Remove the bolt and 2 nuts, and separate the lower suspension arm from the lower ball joint.



5. REMOVE FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH

(a) Remove the 2 bolts, nut and lower suspension arm sub–assy lower No.1 LH from the front suspension crossmember sub–assy.



6. TEMPORARILY TIGHTEN FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH

(a) Install the lower suspension arm, temporary tighten the 2 bolts and nut.

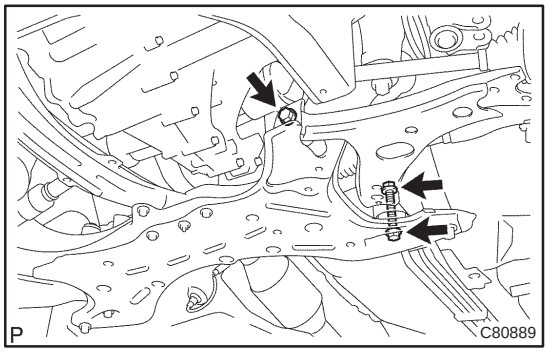
7. CONNECT FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH

(a) Connect the lower suspension arm to the lower ball joint with the 2 nuts and bolt.
Torque: 89 N·m (908 kgf·cm, 66 ft·lbf)

8. CONNECT FRONT STABILIZER LINK ASSY LH

(a) Install the stabilizer bar link with the nut.
Torque: 74 N·m (755 kgf·cm, 55 ft·lbf)

HINT:
If the ball joint turns together with the nut, use a hexagon (6 mm) wrench to hold the stud.



9. CONNECT FRONT STABILIZER LINK ASSY RH

HINT:
Install the RH side by the same procedures as the LH side.

10. STABILIZE SUSPENSION

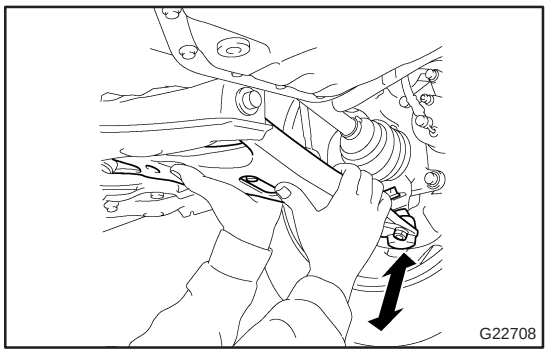
(a) Install the front wheel and jack down the vehicle.
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

(b) Bounce the vehicle up and down several times to stabilize the suspension.

11. FULLY TIGHTEN FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH

(a) Fully tighten the 2 bolts and nut.
Torque: 137 N·m (1,400 kgf·cm, 101 ft·lbf)

12. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT (See page 26–6)



LOWER BALL JOINT ASSY FRONT LH

260DS–01

REPLACEMENT

HINT:

- COMPONENTS: See page 26–2
- Replace the RH side by the same procedures as the LH side.

1. INSPECT LOWER BALL JOINT ASSY FRONT LH

(a) Jack up front side of the vehicle.

(b) Check that there is no looseness on the ball joint by shaking the lower arm up and down with a force of 294 N (30 kgf, 66 lbf).

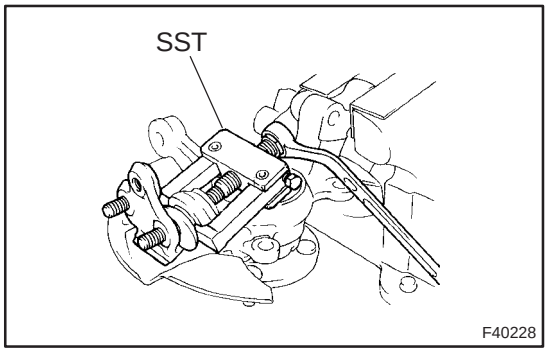
2. REMOVE FRONT WHEEL

3. SEPARATE FRONT AXLE HUB LH NUT (See page 30–6)

SST 09930–00010

4. DISCONNECT SPEED SENSOR FRONT LH (See page 30–6)

5. SEPARATE FRONT DISC BRAKE CALIPER ASSY LH (See page 30–22)

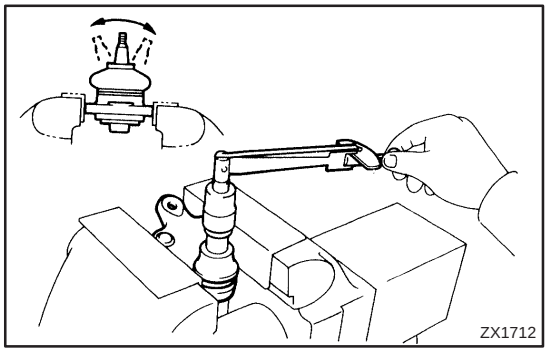


6. REMOVE FRONT DISC

7. SEPARATE TIE ROD END SUB–ASSY LH (See page 30–22)

SST 09628–62011

8. SEPARATE FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH (See page 30–22)



9. REMOVE FRONT AXLE ASSY LH (See page 30–22)

10. REMOVE LOWER BALL JOINT ASSY FRONT LH

(a) Remove the cotter pin and nut.

(b) Using SST, remove the lower ball joint assy front LH.

11. INSPECT LOWER BALL JOINT ASSY FRONT LH

(a) As shown in the illustration, flip the ball joint stud back and forth 5 times, before installing the nut.

(b) Using a torque wrench, turn the nut continuously at a rate of 3 – 5 seconds per 1 turn and take the torque reading on the 5th turn.

Turning torque:

0.98 – 4.9 N·m (10 – 50 kgf·cm, 9 – 43 in.·lbf)

12. INSTALL LOWER BALL JOINT ASSY FRONT LH

(a) Install the lower ball joint assy front LH, and torque the nut.

Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

(b) Install a new cotter pin.

NOTICE:

If the holes for the cotter pin are not aligned, tighten the nut further up to 60°.

13. INSTALL FRONT AXLE ASSY LH (See page 30–22)

14. INSTALL FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH (See page 30–22)

15. INSTALL TIE ROD END SUB–ASSY LH (See page 30–22)

16. INSTALL FRONT DISC

17. INSTALL FRONT DISC BRAKE CALIPER ASSY LH (See page 30–22)

18. CONNECT SPEED SENSOR FRONT LH (See page 30–6)

19. INSTALL FRONT AXLE HUB LH NUT (See page 30–6)

20. INSTALL FRONT WHEEL

Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

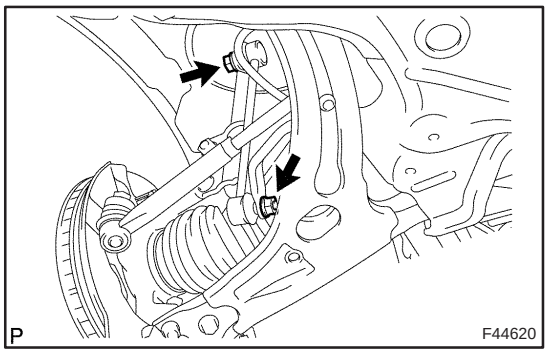
21. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT (See page 26–6)

22. CHECK ABS SPEED SENSOR SIGNAL

(a) w/o VSC: See page 05–699

(b) w/ VSC: See page 05–756

STABILIZER BAR FRONT



REPLACEMENT

2600P–03

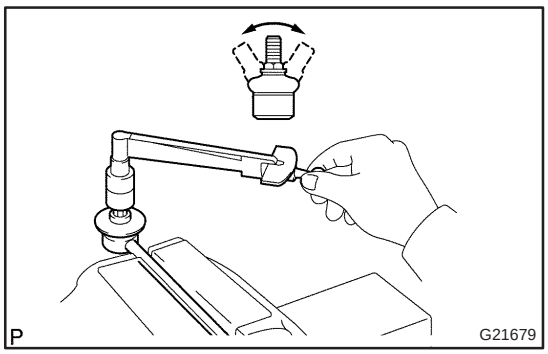
HINT:

COMPONENTS: See page 26–2

1. REMOVE FRONT WHEEL

2. REMOVE FRONT STABILIZER LINK ASSY LH

(a) Remove the 2 nuts and front stabilizer link assy LH.



HINT:

If the ball joint turns together with the nut,use a hexagon wrench (6 mm) to hold the stud.

3. REMOVE FRONT STABILIZER LINK ASSY RH

HINT:

Remove the RH side by the same procedures as the LH side.

4. INSPECT FRONT STABILIZER LINK ASSY LH

(a) As shown in the illustration, flip the ball joint stud back and forth 5 times, before installing the nut.

(b) Using a torque wrench, turn the nut continuously at a rate of 3 – 5 seconds per 1 turn and take the torque reading on the 5th turn.

Turning torque:

0.05 – 1.96 N·m (0.5 – 20 kgf·cm, 0.4 – 17 in.·lbf)

5. SEPARATE TIE ROD END SUB–ASSY LH (See page 30–6)

SST 09628–62011

6. SEPARATE TIE ROD END SUB–ASSY RH

SST 09628–62011

HINT:

Separate the RH side by the same procedures as the LH side.

7. SEPARATE FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH (See page 30–6)

8. SEPARATE FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 RH

HINT:

Separate the RH side by the same procedures as the LH side.

9. SEPARATE RACK & PINION POWER STEERING GEAR ASSY

(a) Electric power steering model: See page 51–28

(b) Oil pressure power steering model: See page 51–36

10. SUSPEND ENGINE ASSY

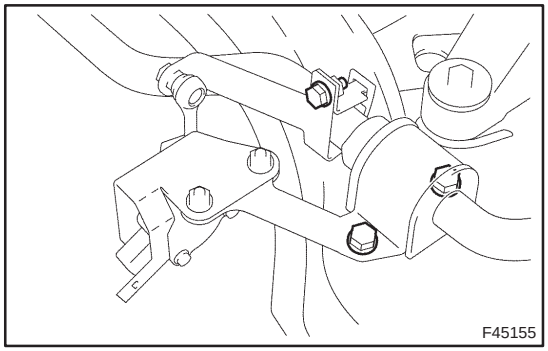
(a) 1ZZ, 3ZZ Engine: See page 41–15

(b) 1AZ Engine: See page 41–24

(c) 1CD Engine: See page 41–33

11. REMOVE FRONT SUSPENSION MEMBER BRACE REAR LH (See page 26–16)

12. REMOVE FRONT SUSPENSION MEMBER BRACE REAR RH



HINT:

Remove the RH side by the same procedures as the LH side.

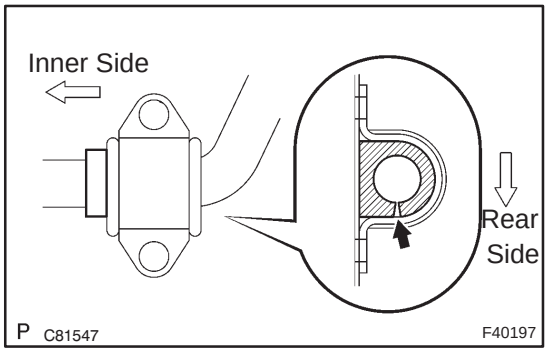
13. SEPARATE FRONT SUSPENSION CROSSMEMBER SUB–ASSY (See page 26–16)

14. REMOVE FRONT STABILIZER BRACKET NO.1 LH

(a) Remove the 2 bolts and the front stabilizer bracket No.1 LH.

15. REMOVE FRONT STABILIZER BRACKET NO.1 RH

(a) w/ HID:
Remove the 3 bolts, the front stabilizer bracket No.1 RH and the height control sensor (Front).



(b) w/o HID:
Remove the 2 bolts and the front stabilizer bracket No.1 RH.

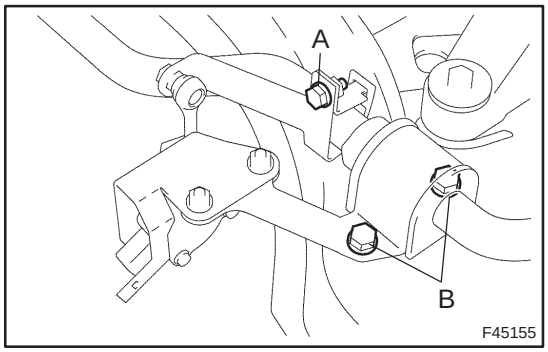
16. REMOVE FRONT STABILIZER BAR BUSH NO.1

(a) Remove the 2 bushings from the stabilizer bar.

17. REMOVE STABILIZER BAR FRONT

18. INSTALL STABILIZER BAR FRONT

19. INSTALL FRONT STABILIZER BAR BUSH NO.1



(a) Install the 2 front stabilizer bar bush No.1 to the stabilizer bar front as shown in the illustration.

HINT:

Install the bushing to the outer side of the bushing stopper on the stabilizer bar.

20. INSTALL FRONT STABILIZER BRACKET NO.1 LH

(a) Install the front stabilizer bracket No.1 LH with the 2 bolts.
Torque: 19 N·m (194 kgf·cm, 14 ft·lbf)

21. INSTALL FRONT STABILIZER BRACKET NO.1 RH

(a) w/ HID:
Install the front stabilizer bracket No.1 RH and the height control sensor (Front) with the 3 bolts.
Torque:
Bolt A: 5.4 N·m (55 kgf·cm, 48 in.·lbf)
Bolt B: 19 N·m (194 kgf·cm, 14 ft·lbf)

(b) w/o HID:
Install the front stabilizer bracket No.1 RH with the 2 bolts.
Torque: 19 N·m (194 kgf·cm, 14 ft·lbf)

22. INSTALL FRONT SUSPENSION CROSSMEMBER SUB–ASSY (See page 26–16)

23. INSTALL FRONT SUSPENSION MEMBER BRACE REAR LH (See page 26–16)

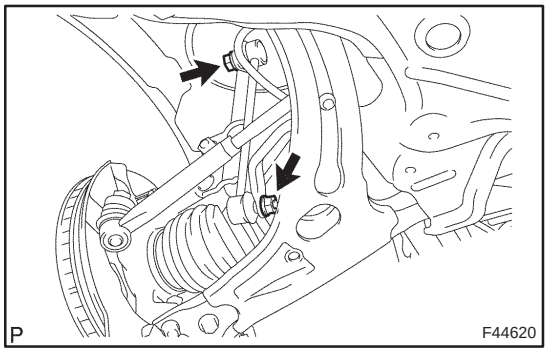
24. INSTALL FRONT SUSPENSION MEMBER BRACE REAR RH

HINT:
Install the RH side by the same procedures as the LH side.

25. INSTALL RACK & PINION POWER STEERING GEAR ASSY

(a) Electric power steering model: See page 51–28
(b) Oil pressure power steering model: See page 51–36

26. INSTALL FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH (See page 30–6)



27. INSTALL FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 RH

HINT:
Connect the RH side by the same procedures as the LH side.

28. INSTALL TIE ROD END SUB–ASSY LH (See page 30–6)

29. INSTALL TIE ROD END SUB–ASSY RH

HINT:
Connect the RH side by the same procedures as the LH side.

30. INSTALL FRONT STABILIZER LINK ASSY LH

(a) Install the front stabilizer link assy LH with the 2 nuts.
Torque: 74 N·m (755 kgf·cm, 55 ft·lbf)

HINT:
If the ball joint turns together with the nut, use a hexagon wrench (6 mm) to hold the stud.

31. INSTALL FRONT STABILIZER LINK ASSY RH

HINT:
Install the RH side by the same procedures as the LH side.

32. INSTALL FRONT WHEEL
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

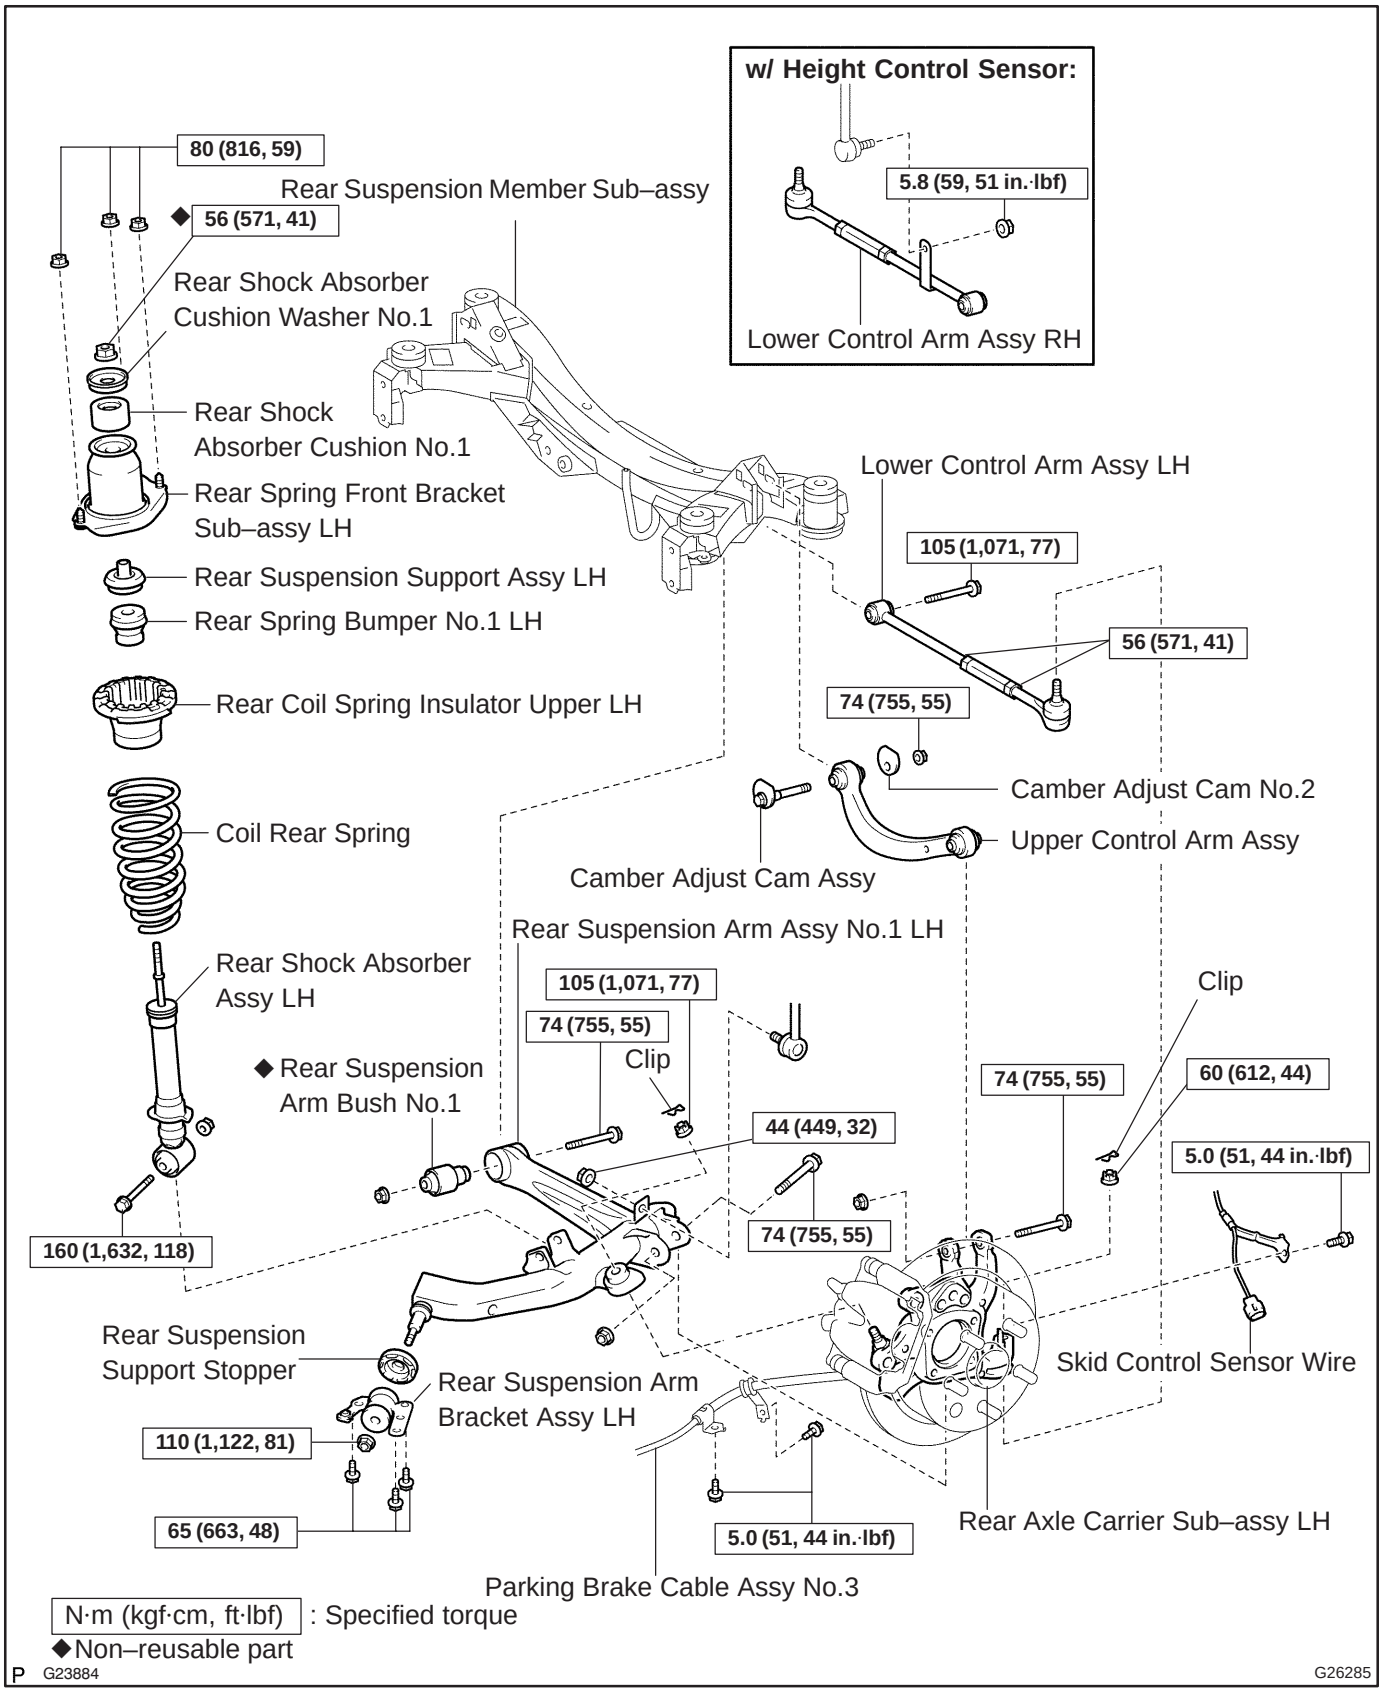
33. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT (See page 26–6)

34. HEADLIGHT AIM ONLY (W/ DISCHARGE HEAD LAMP) (See page 65–19)

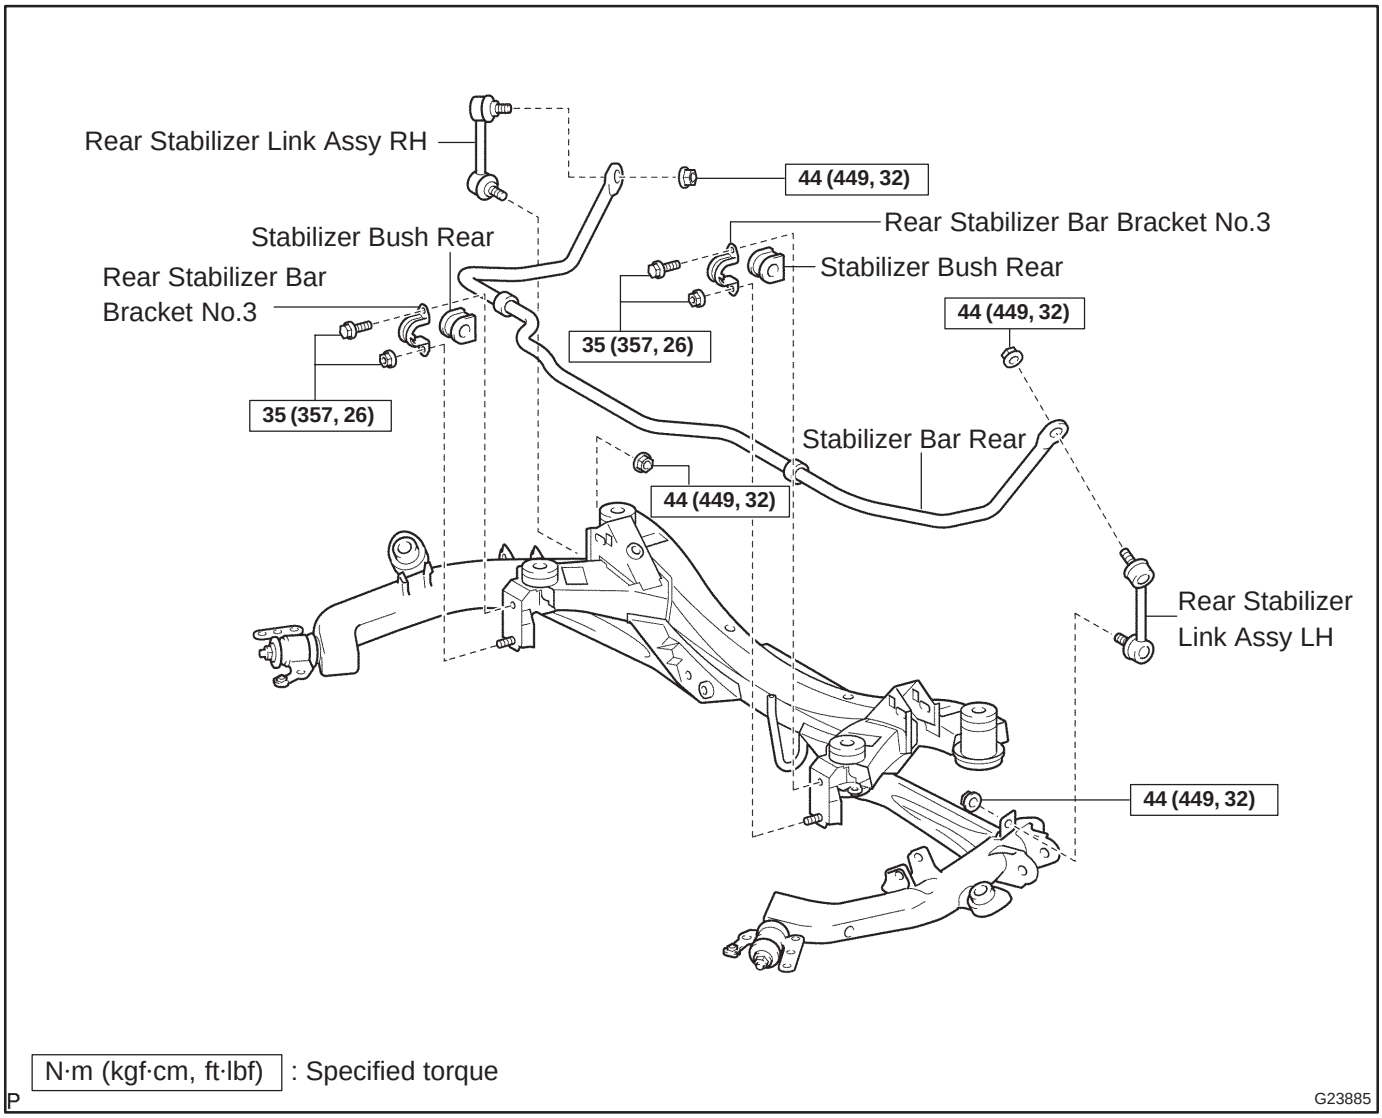
REAR SUSPENSION SYSTEM

PROBLEM SYMPTOMS TABLE

270E7–01



Use the table below to help you find the cause of the problem. The numbers indicate the probability of the likely cause of the problem. Check each part in order. If necessary, replace these parts.



Symptom	Suspect Area	See page
Wander/pulls	1. Tire (Worn or improperly inflated) 2. Wheel alignment (Incorrect) 3. Steering linkage (Loose or worn) 4. Hub bearing (Worn) 5. Suspension parts (Worn)	28–1 27–4 – 30–2 –
Bottoming	1. Vehicle (Overloaded) 2. Spring (Weak) 3. Shock absorber (Worn)	– 27–8 27–8
Sways/pitches	1. Tire (Worn or improperly inflated) 2. Stabilizer bar (Bent or broken) 3. Shock absorber (Worn)	28–1 27–29 27–8
Rear wheel shimmy	1. Tire (Worn or improperly inflated) 2. Wheel (Out of balance) 3. Shock absorber (Worn) 4. Wheel alignment (Incorrect) 5. Hub bearing (Worn)	28–1 28–1 27–8 27–4 30–2
Abnormal tire wear	1. Tire (Worn or improperly inflated) 2. Wheel alignment (Incorrect) 3. Shock absorber (Worn) 4. Suspension parts (Worn)	28–1 27–4 27–8 –

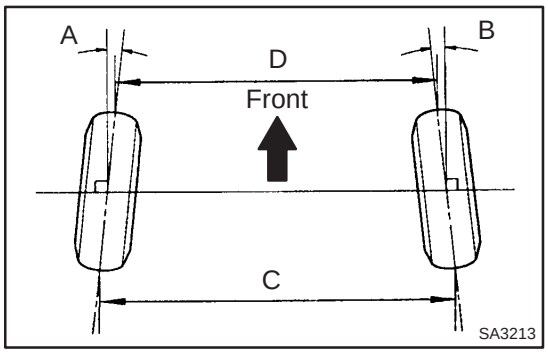
REAR WHEEL ALIGNMENT

270E1–01



ADJUSTMENT

1. INSPECT TIRE (See page 28–1)

2. MEASURE VEHICLE HEIGHT (See page 26–6)

NOTICE:

Before inspecting the wheel alignment, adjust the vehicle height to the specified value.

3. INSPECT TOE–IN

Toe–in:

(Normal package)

Toe–in (total)	A + B: 0°18' ± 12' (0.3° ± 0.2°) C – D: 3.0 ± 2.0 mm (0.12 ± 0.08 in.)

(Rough road package)

Toe–in (total)	A + B: 0°18' ± 12' (0.3° ± 0.2°) C – D: 3.0 ± 2.0 mm (0.12 ± 0.08 in.)

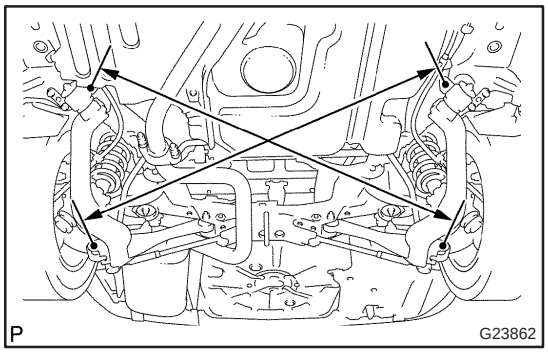
If the toe–in is not within the specified value, inspect the suspension parts and replace them if necessary.

4. INSPECT CAMBER

(a) Install the camber–caster–kingpin gauge or position the vehicle on the wheel alignment tester.

(b) Inspect the camber.

Camber:



(Normal package)

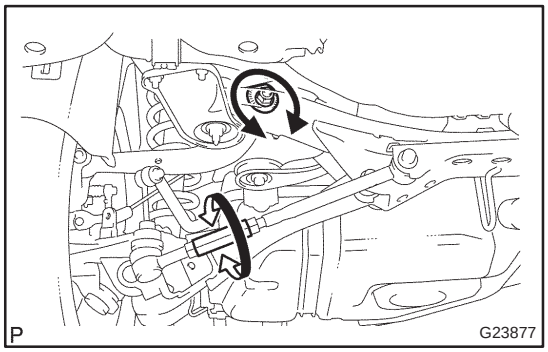
Camber	–0°54' ± 30' (–0.9° ± 0.5°)
Right–left error	30' (0.5°) or less

(Rough road package)

Camber	–0°30' ± 30' (–0.5° ± 0.5°)
Right–left error	30' (0.5°) or less

If the measured value is not within the specified value, inspect the suspension parts for damage and/or wear and replace them if necessary because camber is not adjustable.

5. ADJUST CAMBER AND TOE–IN



(a) Measure the distance from the LH rear suspension arm bracket assy set bolt to the RH rear axle carrier rear side set bolt as shown in the illustration.

(b) Measure the distance from the RH rear suspension arm bracket assy set bolt to the LH rear axle carrier rear side set bolt as shown in the illustration.

(c) Employ the same manner to the LH–RH.

Length difference: 6.0 mm (0.236 in.) or less

If the difference exceeds the specified value, adjust it by turning the camber adjusting cam assy and tie rod adjusting tube.

(d) Loosen the camber adjusting cam assy set nut.
(e) Loosen the tie rod adjusting tube set nut.
(f) Adjust the camber and toe–in by turning the adjusting cam and adjusting tube.

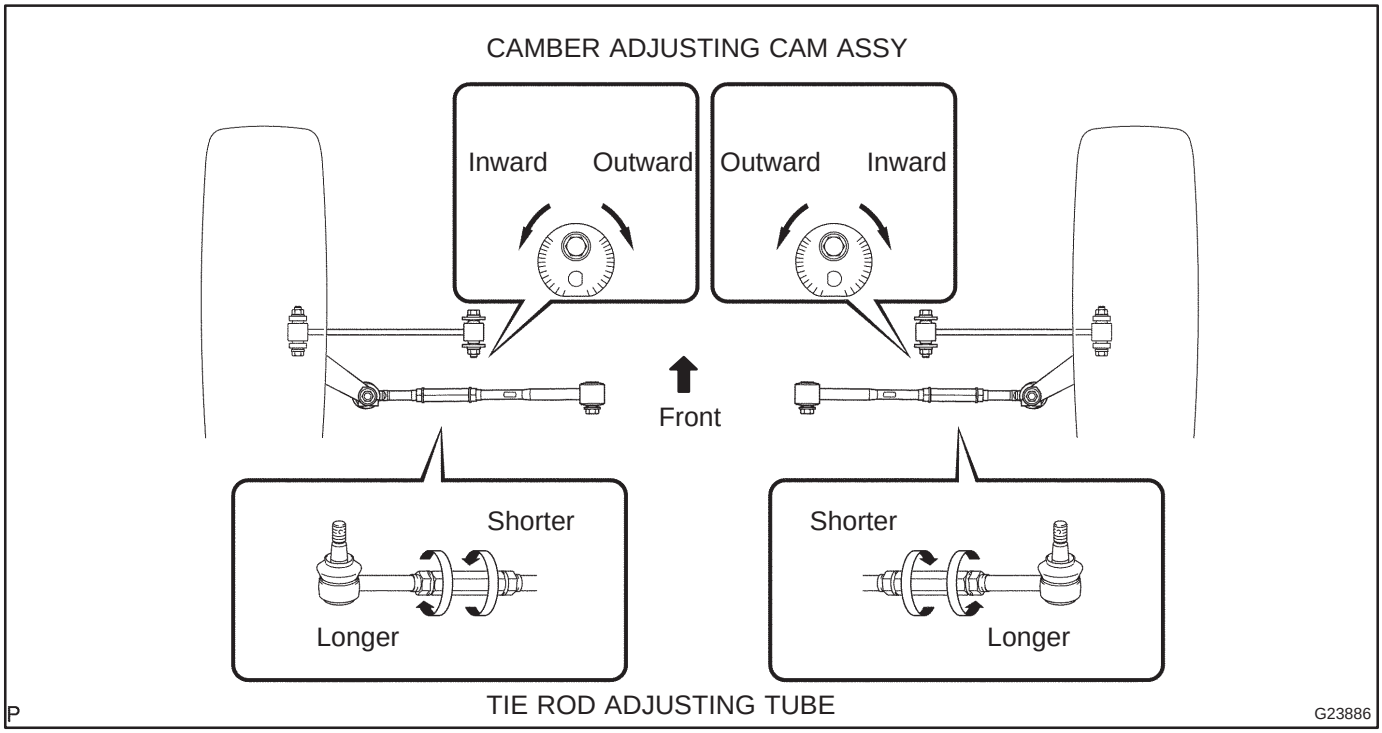
HINT:
Adjust the camber and toe–in to the center of the specified values as much as possible.

Toe–in:
(Normal package)

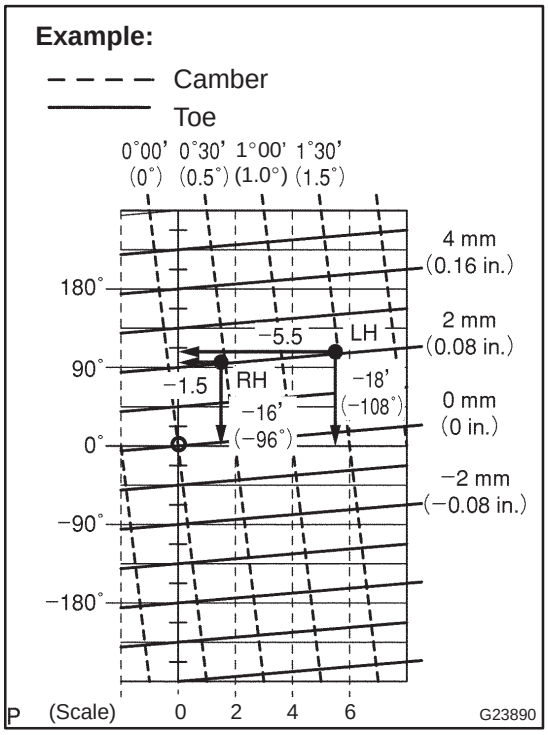
Toe–in (total)	A + B: 0°18' ± 6' (0.3° ± 0.1°) C – D: 3.0 ± 1.0 mm (0.12 ± 0.04 in.)

(Rough road package)

Toe–in (total)	A + B: 0°18' ± 6' (0.3° ± 0.1°) C – D: 3.0 ± 1.0 mm (0.12 ± 0.04 in.)



Camber:
(Normal package)



Camber	–0°54' ± 20' (–0.9° ± 0.3°)
Right–left error	30' (0.5°) or less

(Rough road package)

Camber	–0°30' ± 20' (–0.5° ± 0.3°)
Right–left error	30' (0.5°) or less

(g) Tighten the camber adjusting cam assy set nut.
Torque: 74 N·m (755 kgf·cm, 55 ft·lbf)
(h) Tighten the tie rod adjusting tube set nut.
Torque: 56 N·m (571 kgf·cm, 41 ft·lbf)

(i) How to read an adjustment chart (using examples).

(1) Measure the present alignment.

Example:

Camber (RH) : –1°24' (–1.4°)

Camber (LH) : –2°24' (–2.4°)

Toe–in (total) : IN 7.0 mm (0.276 in.)

(2) Mark the difference between the standard value (A) and the measured value (B) on the adjustment chart.

Standard value:

Camber: –0°54' (–0.9°)

Toe–in (total) : IN 3.0 mm (0.12 in.)

Formula: A – B = C

Camber: (RH) : –0°54' – (–1°24') = 0°30'

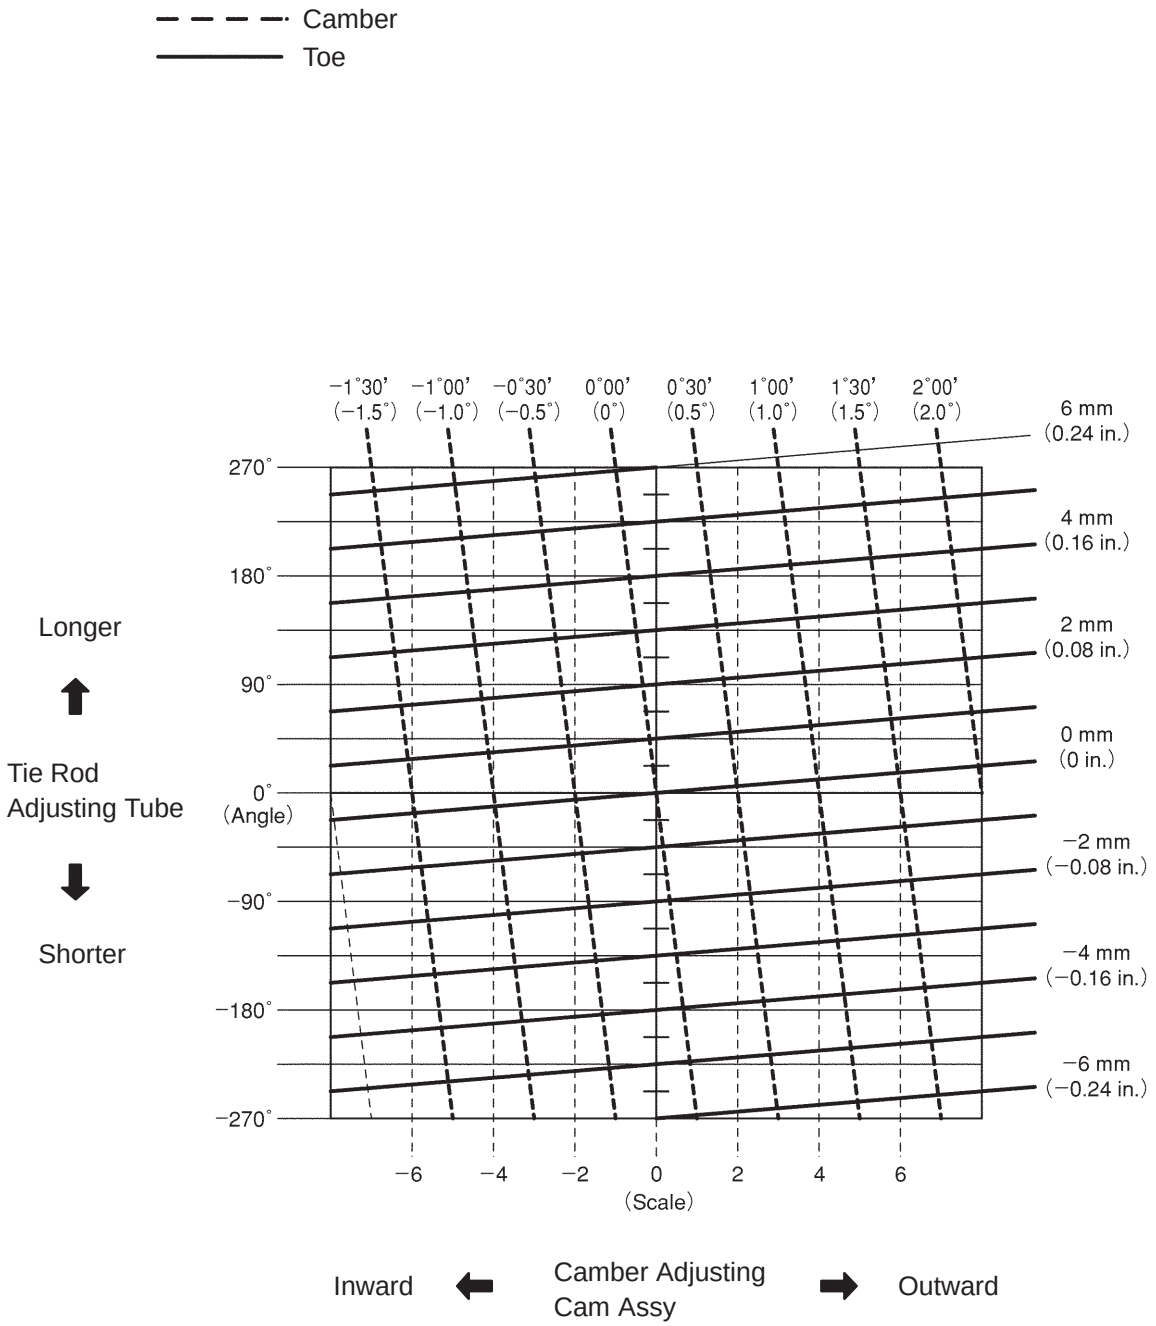
Camber: (LH) : –0°54' – (–2°24') = 1°30'

Toe–in (total) : IN 3.0 – IN 7.0 = OUT 4.0

Toe–in (each side) : OUT 2.0

(3) As shown in the example chart, read the distance from the marked point to the center of the chart, and adjust the upper and/or lower arm adjusting cams accordingly.

Amount to turn camber adjusting cam assy (by graduation) :



Scale (RH) : – (Inward) 1.5

Scale (LH) : – (Inward) 5.5

REAR SHOCK ABSORBER WITH COIL SPRING

OVERHAUL

270E8–01

HINT:

COMPONENTS: See page 27–2.

1. REMOVE REAR DOOR SCUFF PLATE LH

2. REMOVE REAR SEAT CUSHION ASSEMBLY

(a) 40/60 FOLDING FLIP–UP CUSHION (See page 72–21)

(b) 40/60 FOLDING (See page 72–27)

(c) UNITED FIXED (See page 72–32)

3. REMOVE REAR SEATBACK ASSY

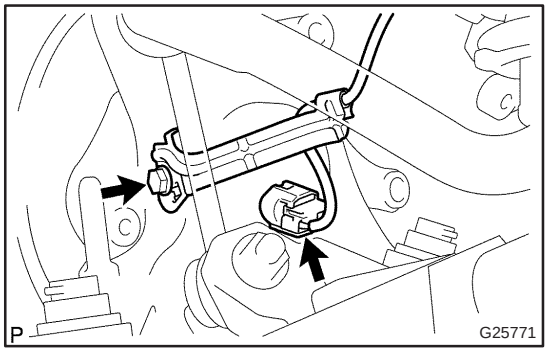
(a) 40/60 FOLDING FLIP–UP CUSHION (See page 72–21)

(b) 40/60 FOLDING (See page 72–27)

(c) UNITED FIXED (See page 72–32)

4. REMOVE REAR FLOOR FINISH PLATE (SEDAN MODELS)

5. REMOVE LUGGAGE COMPARTMENT TRIM COVER INNER LH (SEDAN MODELS)

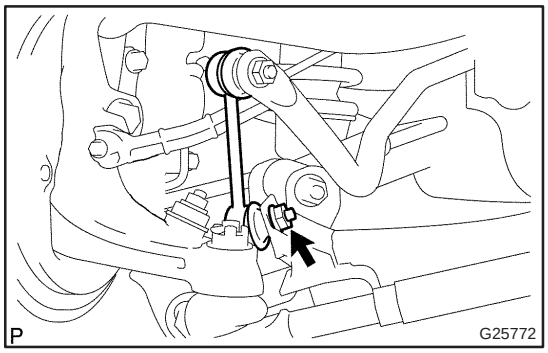


6. REMOVE REAR FLOOR FINISH PLATE (LIFTBACK MODELS)

7. REMOVE DECK TRIM SIDE BOARD LH (LIFTBACK MODELS) (See page 76–45)

8. REMOVE REAR FLOOR FINISH PLATE (WAGON MODELS)

9. REMOVE DECK TRIM SIDE PANEL ASSY LH (WAGON MODELS) (See page 76–54)



10. REMOVE REAR WHEEL

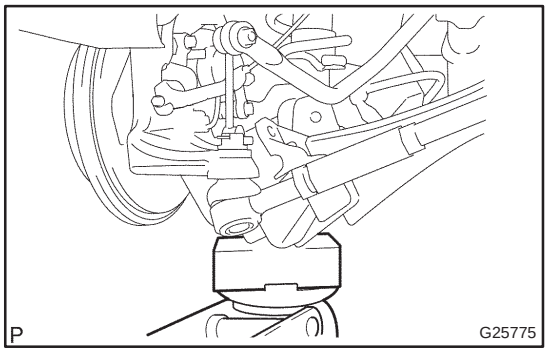
11. DISCONNECT SKID CONTROL SENSOR WIRE

(a) Disconnect the skid control sensor connector.

(b) Remove the bolt and wire bracket.

12. SEPARATE REAR STABILIZER LINK ASSY LH

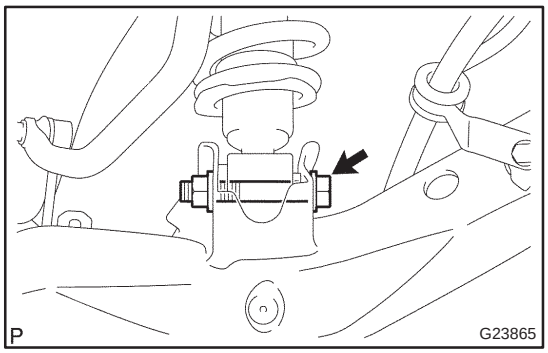
(a) Remove the nut, and separate the rear stabilizer link assy LH.



HINT:

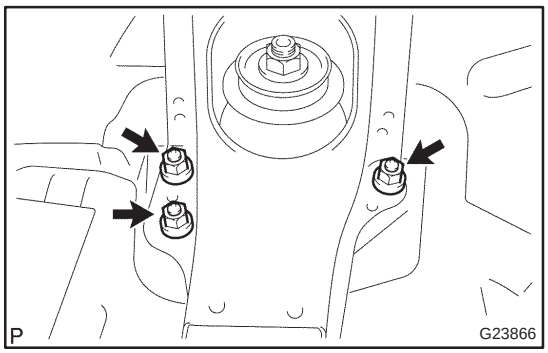
If the ball joint turns together with the nut, use a hexagon (5 mm) wrench to hold the stud.

13. SEPARATE REAR STABILIZER LINK ASSY RH



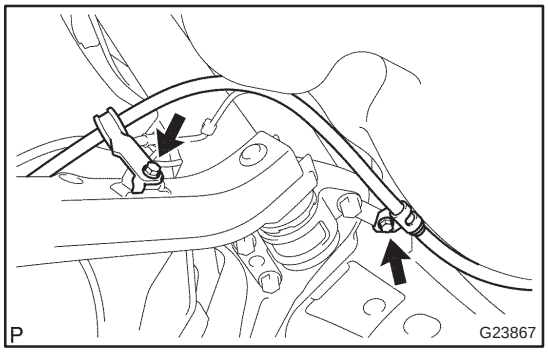
HINT:

Separate the RH side by the same procedures as the LH side.

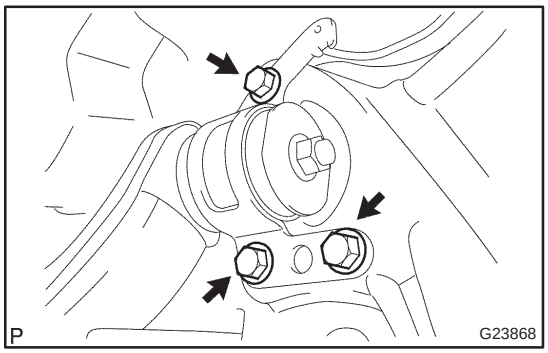


14. REMOVE REAR SHOCK ABSORBER WITH COIL SPRING

(a) Support the rear suspension arm assy No.1 LH.

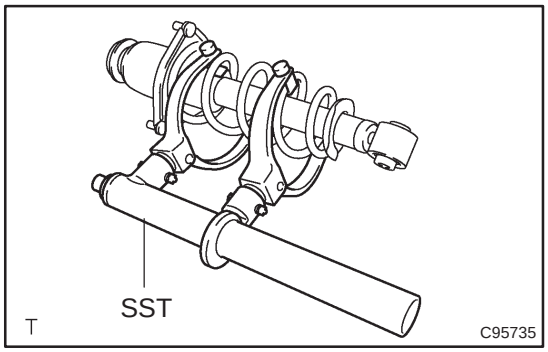


(b) Remove the bolt and nut from the rear suspension arm assy No.1 LH.



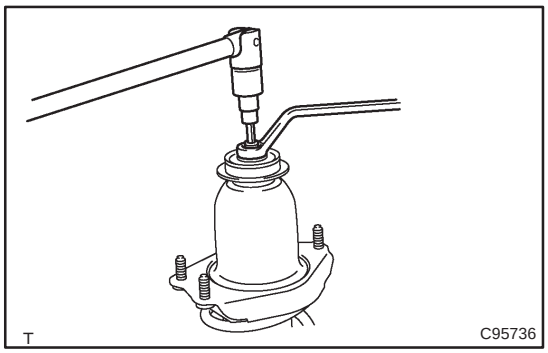
NOTICE:
When removing the bolt, hold the nut not to rotate.

(c) Remove the 3 nuts.

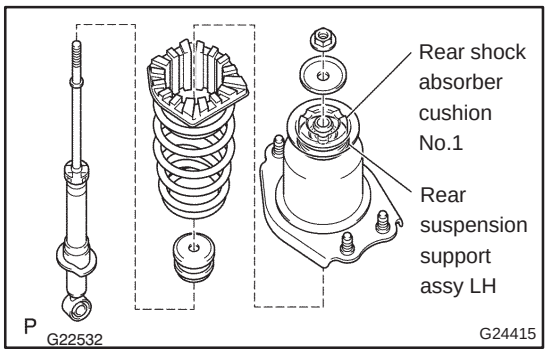


(d) Remove the 2 bolts, and separate the parking brake cable assy No.3.

(e) Remove the 3 bolts from the rear suspension arm assy No.1 LH.

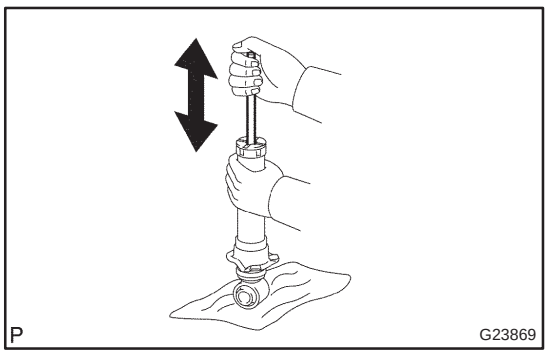


(f) Press the rear suspension arm assy No.1 LH down to the outside of the vehicle and remove the rear shock absorber with coil spring.



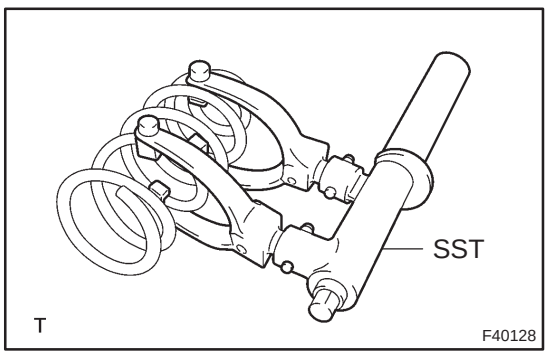
15. REMOVE SHOCK ABSORBER ASSY REAR LH

(a) Using SST, compress the coil rear spring.
SST 09727–30021 (09727–00010, 09727–00021, 09727–00031)



NOTICE:
Do not use an impact wrench. It will damage the SST.

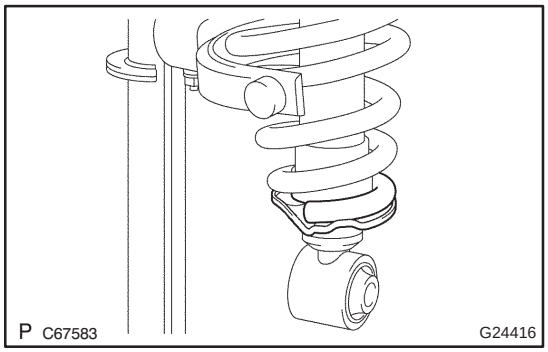
(b) Using a 6 mm hexagon wrench to hold the piston rod, remove the nut.



(c) Remove the rear shock absorber cushion washer No.1.
(d) Remove the rear suspension support assy LH.
(e) Remove the rear spring front bracket sub–assy LH.
(f) Remove the rear shock absorber cushion No.1.
(g) Remove the rear spring bumper No.1 LH.
(h) Remove the rear coil spring insulator upper LH.
(i) Remove the coil rear spring.

16. INSPECT SHOCK ABSORBER ASSY REAR LH

(a) Compress and extend the shock absorber rod and check for unusual resistance or unusual sound during the operation.

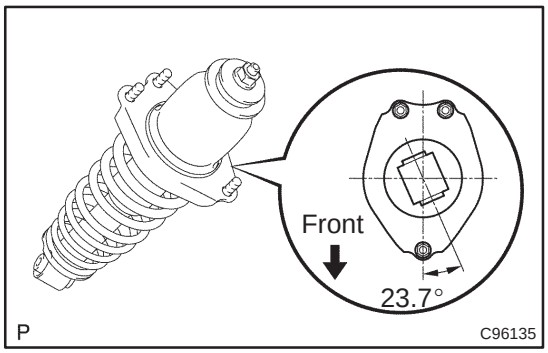


If there is any malfunction, replace the shock absorber assy rear LH with a new one.

17. INSTALL SHOCK ABSORBER ASSY REAR LH

(a) Using SST, compress the coil rear spring.
SST 09727–30021 (09727–00010, 09727–00021, 09727–00031)

NOTICE:
Do not use an impact wrench. It will damage the SST.



(b) Install the coil rear spring to the shock absorber assy rear LH.

NOTICE:

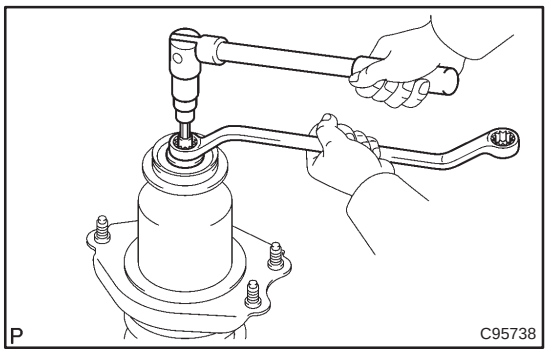
Fit the lower end of the coil rear spring into the gap of the spring lower seat.

(c) Install the rear spring bumper No.1 LH and rear suspension support assy LH.

(d) Set the rear coil spring insulator upper LH to the rear spring front bracket sub–assy LH.

(e) Position the rear spring front bracket sub–assy LH with rear coil spring insulator upper LH as shown in the illustration.

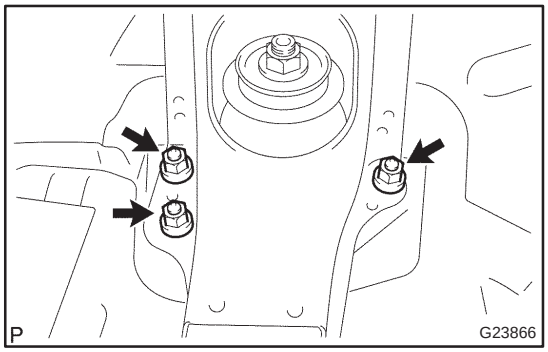
HINT:



Place the RH side on the symmetric position to the illustration.

(f) Install the rear suspension support assy LH and rear shock absorber cushion washer No.1.

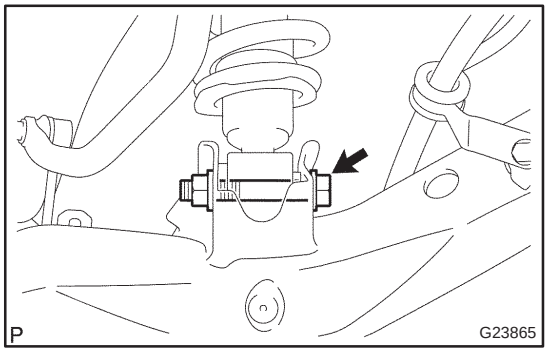
(g) Temporarily tighten a new center nut.



(h) Remove the SST.

(i) Recheck the direction of the spring bracket.

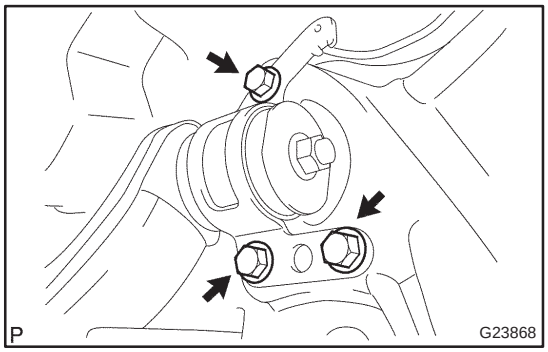
(j) Using a 6 mm hexagon wrench to hold the piston rod, tighten a new nut.



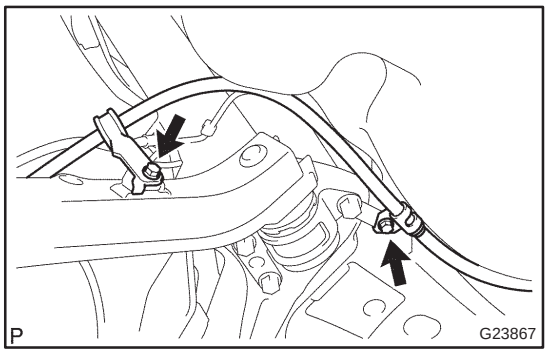
Torque: 56 N·m (571 kgf·cm, 41 ft·lbf)

18. INSTALL REAR SHOCK ABSORBER WITH COIL SPRING

(a) Install the 3 nuts.

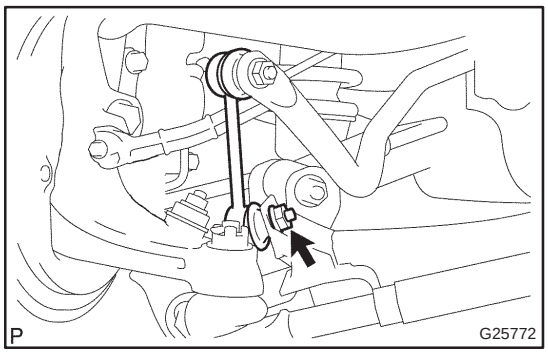


Torque: 80 N·m (816 kgf·cm, 59 ft·lbf)



(b) Install the rear shock absorber with coil spring, and temporarily tighten the bolt and nut.

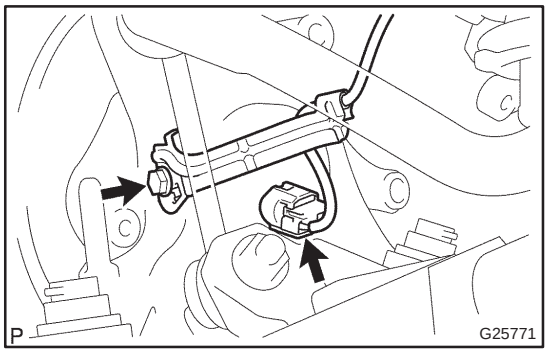
NOTICE:



When installing the bolt, tighten the bolt temporarily with the nut fixed.

(c) Install the rear suspension arm assy No.1 LH with the 3 bolts.
Torque: 65 N·m (663 kgf·cm, 48 ft·lbf)

(d) Connect the parking brake cable assy No.3 with the 2 bolts.
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)



19. INSTALL REAR STABILIZER LINK ASSY LH

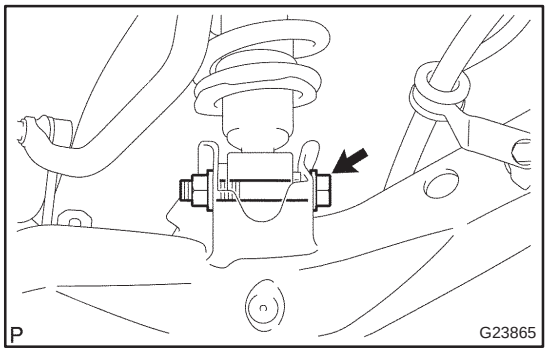
(a) Install the rear stabilizer link assy LH with the nut.
Torque: 44 N·m (449 kgf·cm, 32 ft·lbf)

HINT:
If the ball joint turns together with the nut, use a hexagon (5 mm) wrench to hold the stud.

20. INSTALL REAR STABILIZER LINK ASSY RH

HINT:
Install the RH side by the same procedures as the LH side.

21. CONNECT SKID CONTROL SENSOR WIRE



(a) Install the wire bracket and bolt.
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)

(b) Connect the skid control sensor connector.

22. INSTALL REAR WHEEL
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

23. STABILIZE SUSPENSION

(a) Bounce the vehicle up and down several times to stabilize the suspension.

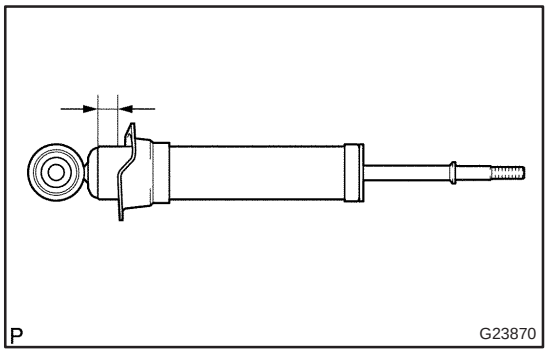
24. FULLY TIGHTEN REAR SHOCK ABSORBER WITH COIL SPRING

(a) Fully tighten the bolt and nut.

Torque: 160 N·m (1,632 kgf·cm, 118 ft·lbf)

NOTICE:

- **When installing the bolt, hold the nut not to rotate.**
- **Be sure to empty the vehicle when fully tightening the bolt and nut.**



25. INSPECT AND ADJUST REAR WHEEL ALIGNMENT (See page 27–4)

26. CHECK ABS SPEED SENSOR SIGNAL

(a) ABD WITH EBD SYSTEM (See page 05–699)

(b) ABD WITH EBD & BA & TRC & VSC SYSTEM (See page 05–756)

DISPOSAL

1. DISPOSE OF SHOCK ABSORBER ASSY REAR LH

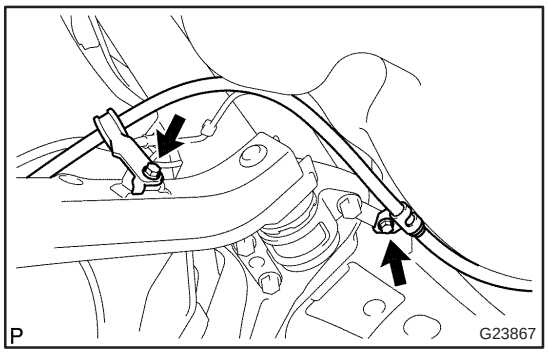
(a) Fully extend the shock absorber rod.

(b) Using a drill, make a hole in the cylinder as shown in the illustration to discharge the gas inside the cylinder.

CAUTION:

- **When drilling, since the fragments may fly out, work carefully.**
- **The discharged gas is colorless, odorless and non–poisonous.**

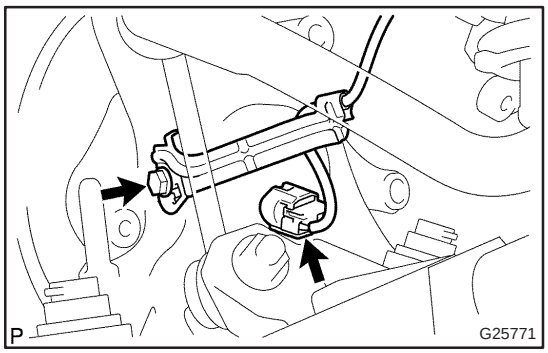
REAR SUSPENSION ARM ASSY NO.1 LH



270E3–01

OVERHAUL

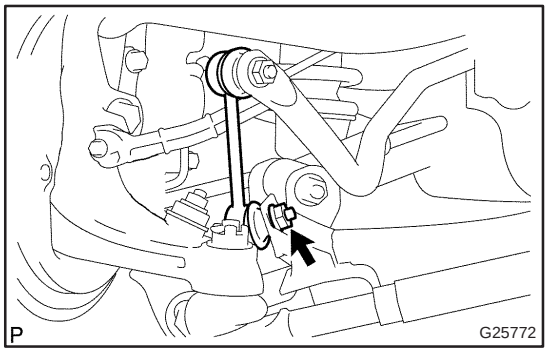
HINT:



COMPONENTS: See page 27–2.

1. REMOVE REAR WHEEL

2. SEPARATE PARKING BRAKE CABLE ASSY NO.3

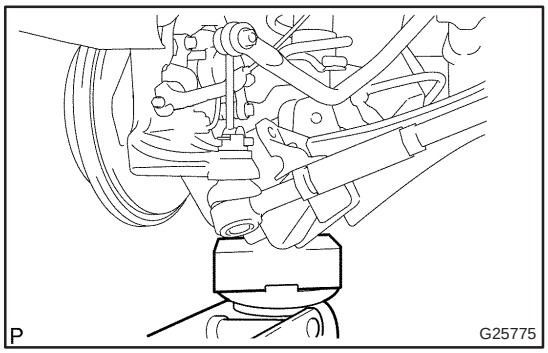


(a) Remove the 2 bolts, and separate the parking brake cable assy No.3.

3. DISCONNECT SKID CONTROL SENSOR WIRE

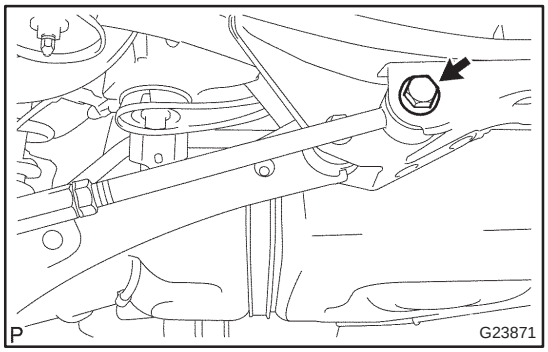
(a) Disconnect the skid control sensor connector.

(b) Remove the bolt and wire bracket.



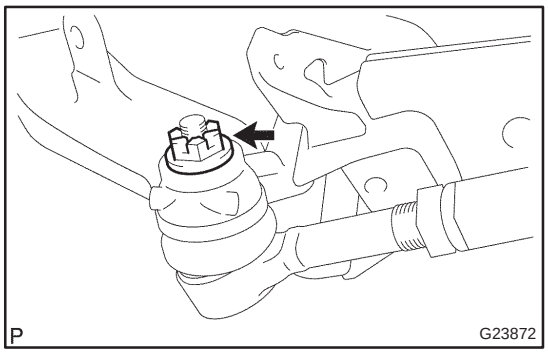
4. SEPARATE REAR STABILIZER LINK ASSY LH

(a) Remove the nut, and separate the rear stabilizer link assy LH.

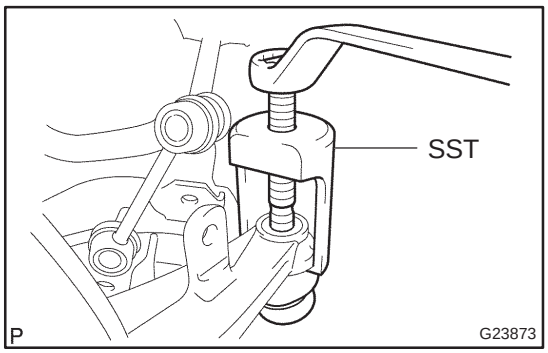


HINT:

If the ball joint turns together with the nut, use a hexagon (5 mm) wrench to hold the stud.

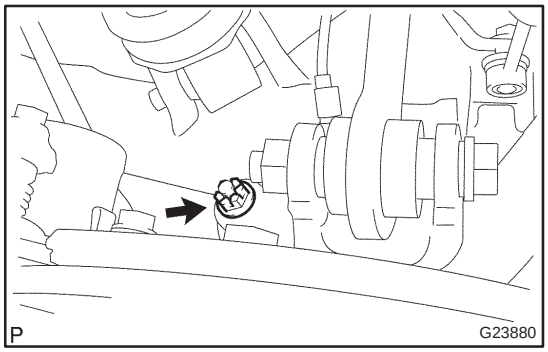


5. REMOVE LOWER CONTROL ARM ASSY LH

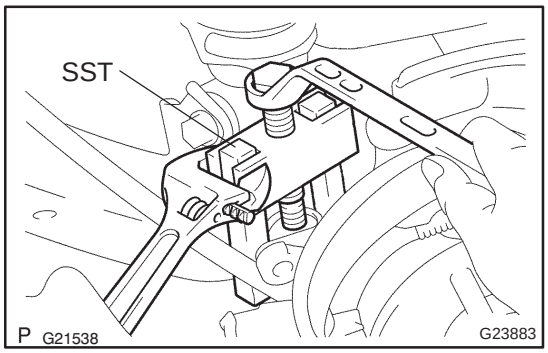


(a) Support the rear suspension arm assy No.1 LH.

(b) Remove the bolt, and remove the member side lower control arm assy LH.

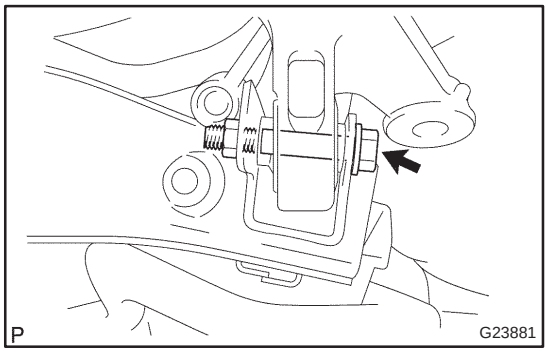


(c) Remove the clip and nut.



(d) Using SST, remove the lower control arm assy LH from the rear axle carrier sub–assy LH.
SST 09610–20012

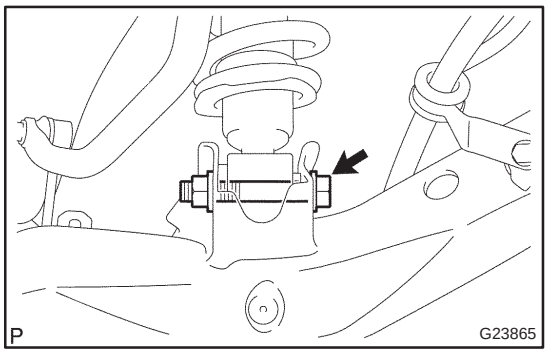
NOTICE:
Do not damage the dust cover.



6. REMOVE REAR SUSPENSION ARM ASSY NO.1 LH

(a) Remove the clip and nut.

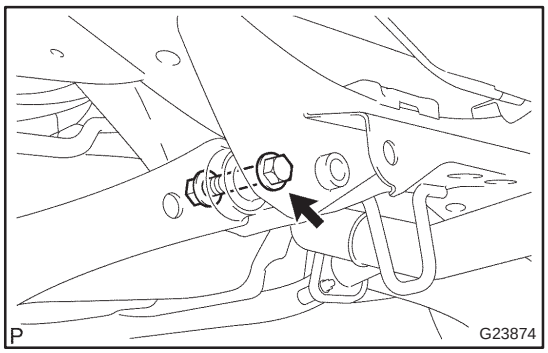
(b) Using SST, separate the rear axle carrier sub–assy LH front side from the rear suspension arm assy No.1 LH.
SST 09628–62011



NOTICE:
- **Do not damage the dust cover.**
- **Hang the upper control arm assy on the rear axle carrier sub–assy LH side with a wire substitute thing.**

(c) Remove the bolt and nut, and separate the rear axle carrier sub–assy LH rear side from rear suspension arm assy No.1 LH.

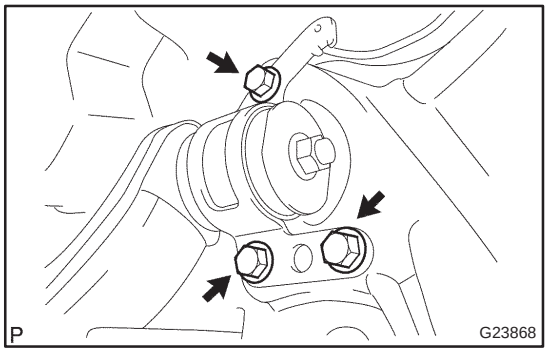
NOTICE:



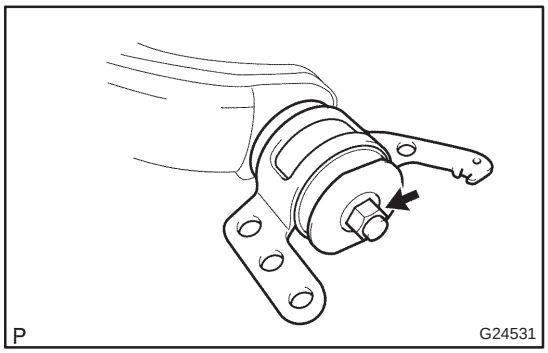
When removing the bolt, hold the nut not to rotate.

(d) Remove the bolt and nut, and remove the rear shock absorber with coil spring.

NOTICE:

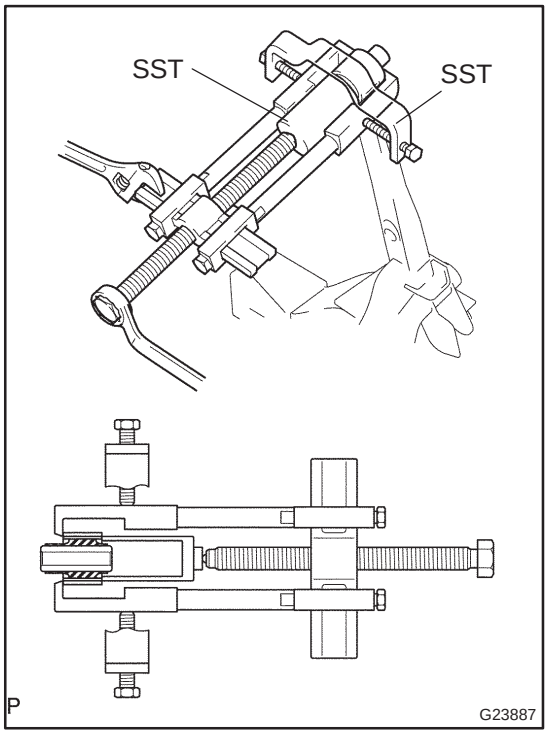


When removing the bolt, hold the nut not to rotate.



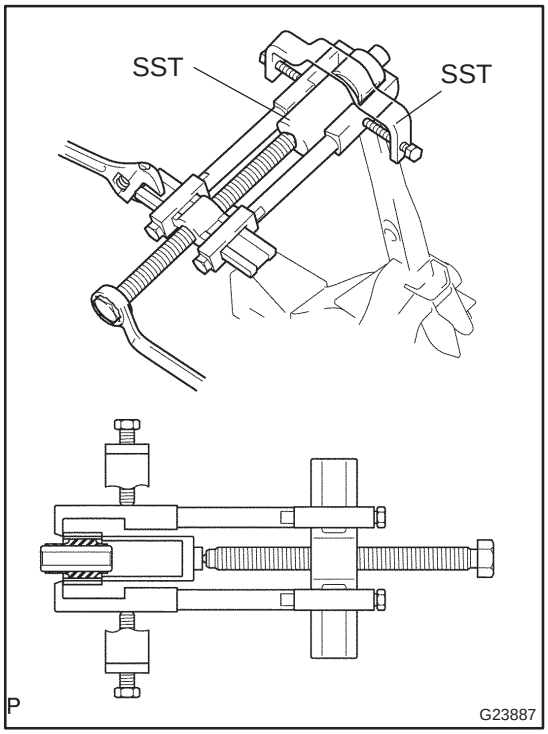
(e) Remove the bolt and nut, and separate the rear side rear suspension arm assy No.1 LH.

NOTICE:



When removing the bolt, hold the nut not to rotate.

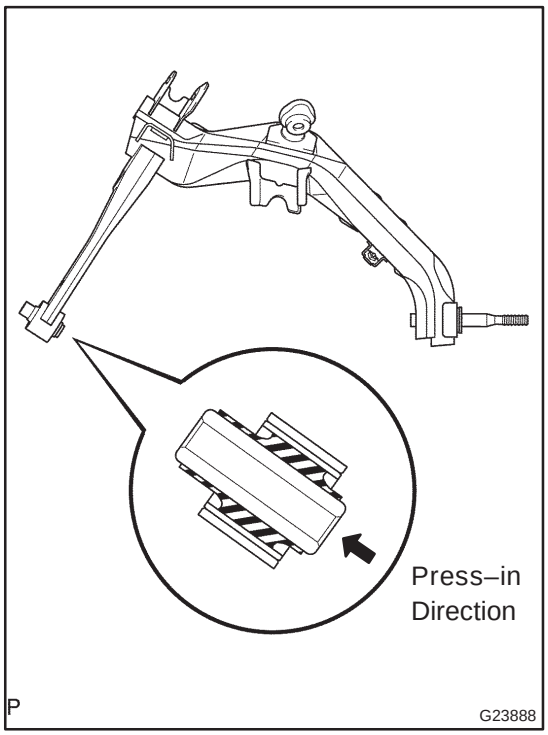
(f) Remove the 3 bolts on the front side and rear suspension arm assy No.1 LH.

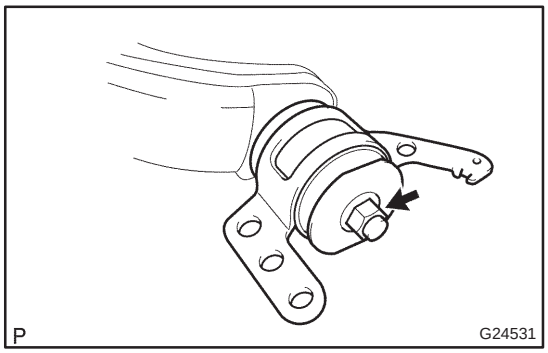


(g) Remove the nut, rear suspension arm bracket assy LH and rear suspension support stopper.

7. REMOVE REAR SUSPENSION ARM BUSH NO.1

(a) Using SST, remove the rear suspension arm bush No.1.
SST 09632–36010, 09950–40011 (09951–04010, 09952–04010, 09953–04030, 09954–04020, 09955–04051, 09957–04010, 09958–04011)

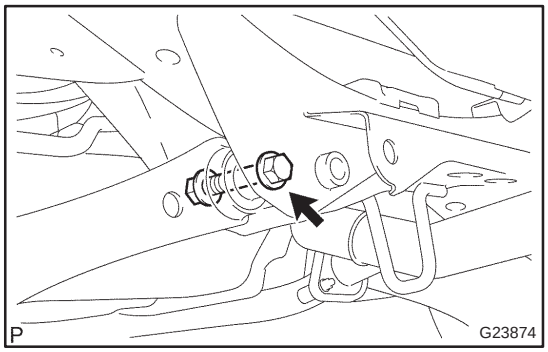




8. INSTALL REAR SUSPENSION ARM BUSH NO.1

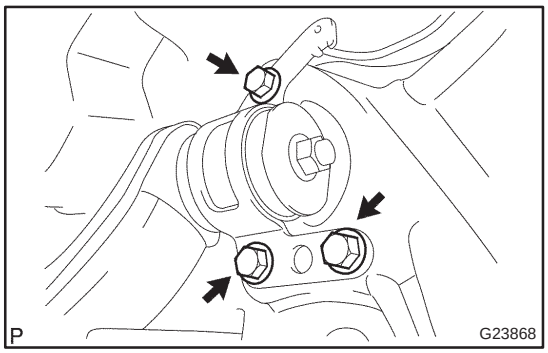
(a) Using SST, install a new rear suspension arm bush No.1.
SST 09632–36010, 09950–40011 (09951–04010, 09952–04010, 09953–04030, 09954–04020, 09955–04051, 09957–04010, 09958–04011)

NOTICE:



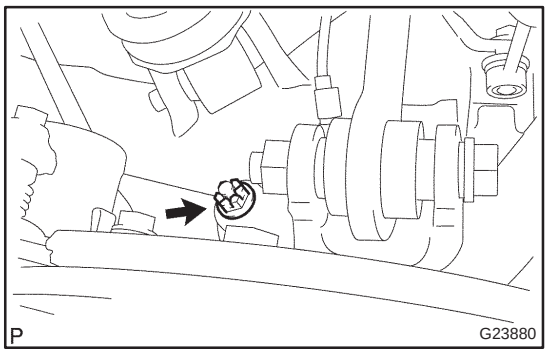
- **Install the rear suspension arm bush No.1 in the correct direction.**
- **Place the rear suspension arm bush No.1 at the position in the illustration.**

9. INSTALL REAR SUSPENSION ARM ASSY NO.1 LH



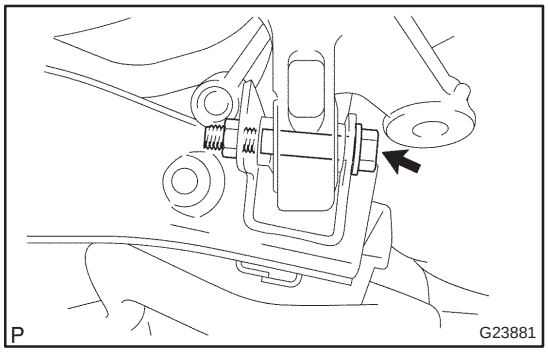
(a) Install the rear suspension support stopper and rear suspension arm bracket assy LH, and temporarily tighten the nut.

(b) Install the rear side rear suspension arm assy No.1 LH, and temporarily tighten bolt and nut.

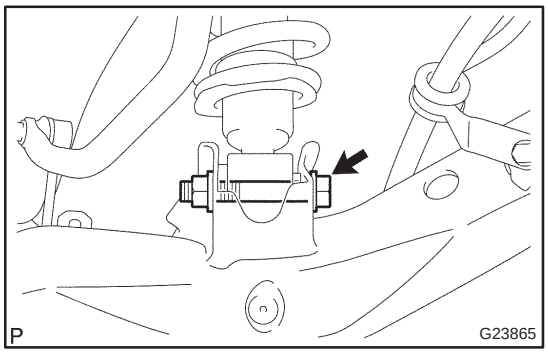


NOTICE:

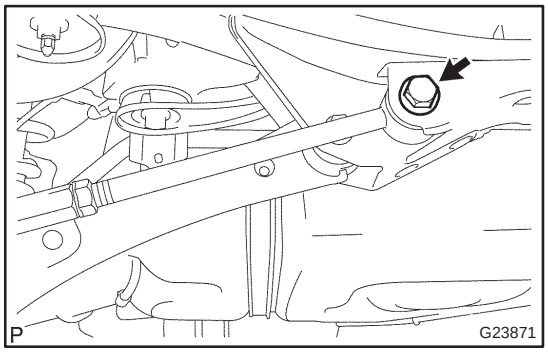
When installing the bolt, hold the nut not to rotate.



(c) Install the 3 bolts.

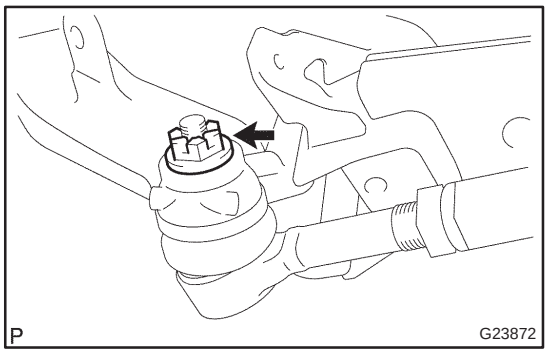


Torque: 65 N·m (663 kgf·cm, 48 ft·lbf)

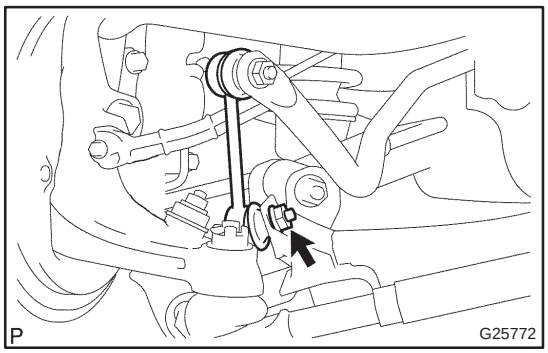


(d) Install the front side rear axle carrier sub–assy LH to the rear suspension arm assy No.1 LH, and temporarily tighten the nut.

(e) Install the axle carrier sub–assy LH to the rear suspension arm assy No.1 LH, and temporarily tighten the bolt and nut.

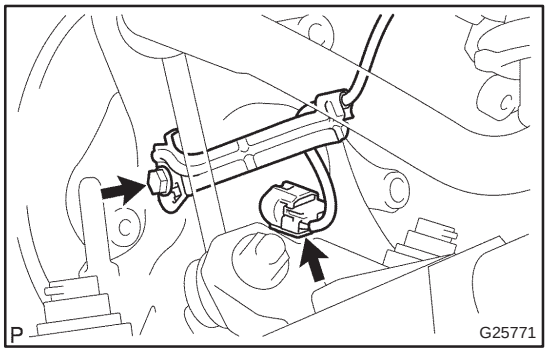


(f) Install the rear shock absorber with coil spring to the rear suspension arm assy No.1 LH, and temporarily tighten the bolt and nut.



10. INSTALL LOWER CONTROL ARM ASSY LH

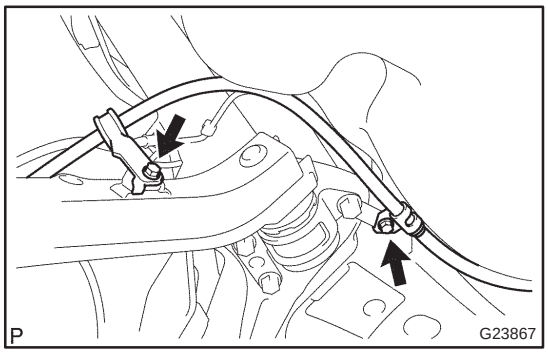
(a) Install the lower control arm assy LH, and temporarily tighten the bolt.



(b) Install the lower control arm assy LH to the rear axle carrier LH, and temporarily tighten the nut.

11. INSTALL REAR STABILIZER LINK ASSY LH

(a) Install the rear stabilizer link assy LH with the nut.
Torque: 44 N·m (449 kgf·cm, 32 ft·lbf)

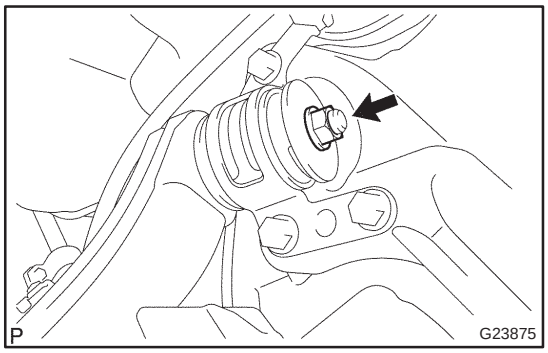


HINT:
If the ball joint turns together with the nut, use a hexagon (5 mm) wrench to hold the stud.

12. CONNECT SKID CONTROL SENSOR WIRE

(a) Install the wire bracket and bolt.
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)

(b) Connect the skid control sensor connector.



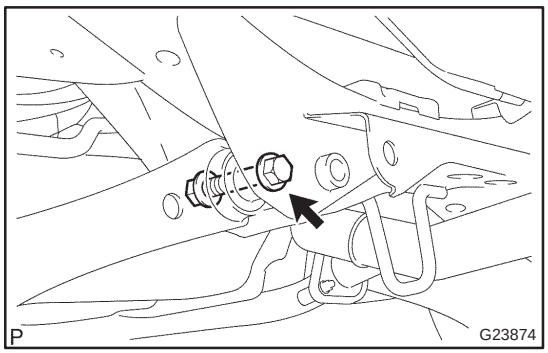
13. INSTALL PARKING BRAKE CABLE ASSY NO.3

(a) Connect the parking brake cable assy No.3 with the 2 bolts.
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)

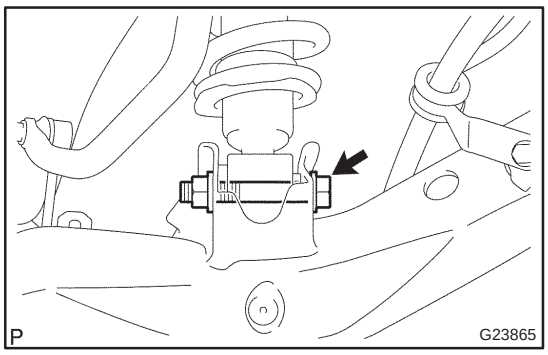
14. INSTALL REAR WHEEL
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

15. STABILIZE SUSPENSION

(a) Bounce the vehicle up and down several times to stabilize the suspension.



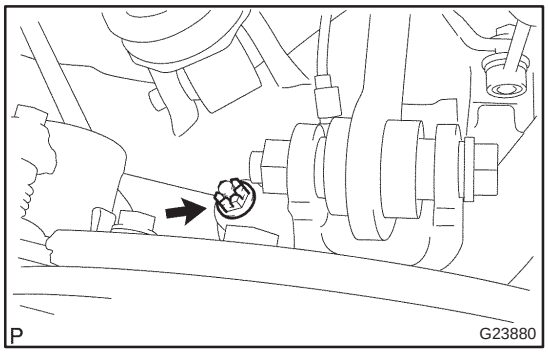
16. FULLY TIGHTEN REAR SUSPENSION ARM ASSY NO.1 LH



NOTICE:

Be sure to empty the vehicle when fully tightening the bolt and nut.

(a) Fully tighten the nut.
Torque: 110 N·m (1,122 kgf·cm, 81 ft·lbf)

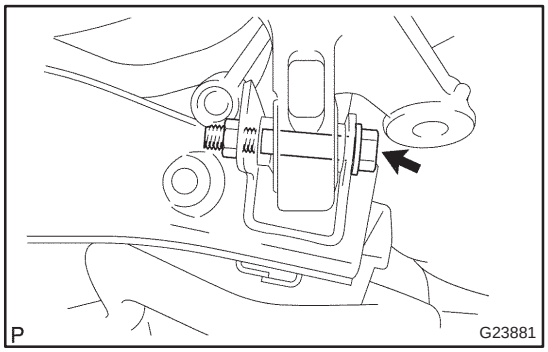


(b) Fully tighten the bolt.
Torque: 74 N·m (755 kgf·cm, 55 ft·lbf)

(c) Fully tighten the bolt and nut.
Torque: 160 N·m (1,632 kgf·cm, 118 ft·lbf)

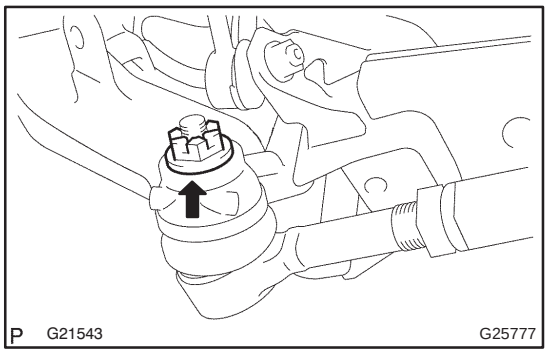
NOTICE:

When installing the bolt, hold the nut not to rotate.



(d) Fully tighten the nut.
Torque: 105 N·m (1,071 kgf·cm, 77 ft·lbf)

(e) Install the clip.

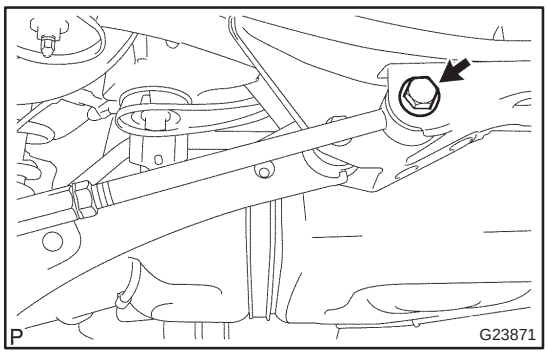


NOTICE:

- **When the holes for the clip are not aligned, adjust them by tightening the nut. The tightening angle for the adjustment must be less than 60°.**
- **Insert the clip from the front side of a vehicle.**

(f) Fully tighten the bolt and nut.
Torque: 74 N·m (755 kgf·cm, 55 ft·lbf)

NOTICE:
When installing the bolt, hold the nut not to rotate.



17. FULLY TIGHTEN LOWER CONTROL ARM ASSY LH

NOTICE:
Be sure to empty the vehicle when fully tightening the bolt and nut.

(a) Fully tighten the nut.
Torque: 60 N·m (612 kgf·cm, 44 ft·lbf)

(b) Install the clip.

NOTICE:
- **When the holes for the clip are not aligned, adjust them by tightening the nut. The tightening angle for the adjustment must be less than 60°.**
- **Insert the clip from the rear side of a vehicle.**

(c) Fully tighten the bolt.
Torque: 105 N·m (1,071 kgf·cm, 77 ft·lbf)

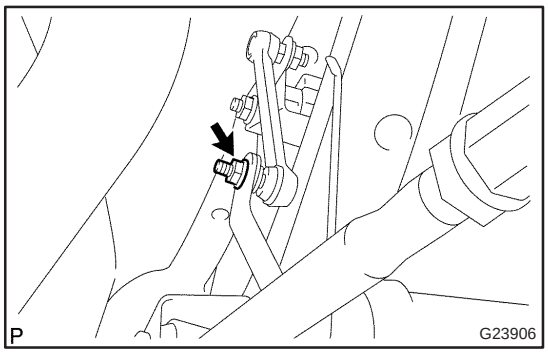
18. INSPECT AND ADJUST REAR WHEEL ALIGNMENT (See page 27–4)

19. CHECK ABS SPEED SENSOR SIGNAL

(a) ABD WITH EBD SYSTEM (See page 05–699)

(b) ABD WITH EBD & BA & TRC & VSC SYSTEM (See page 05–756)

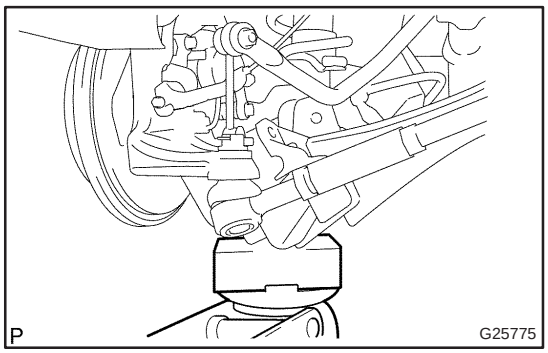
LOWER CONTROL ARM ASSY LH



270E4–01

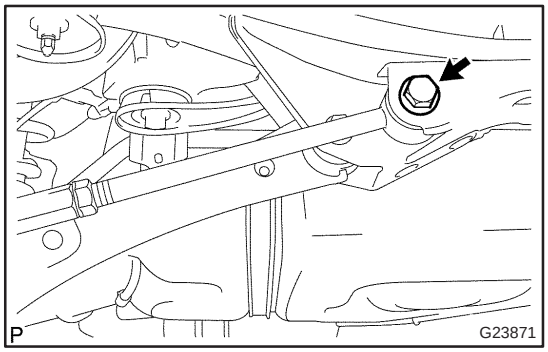
REPLACEMENT

HINT:

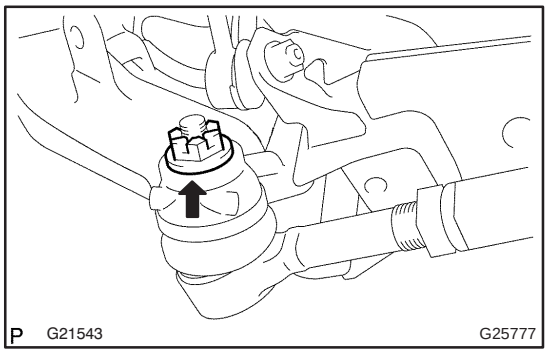


COMPONENTS: See page 27–2.

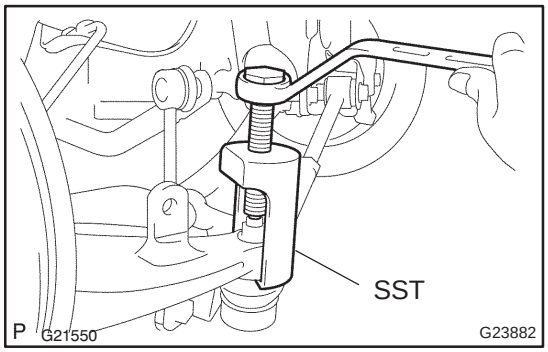
1. REMOVE REAR WHEEL



2. REMOVE LOWER CONTROL ARM ASSY LH

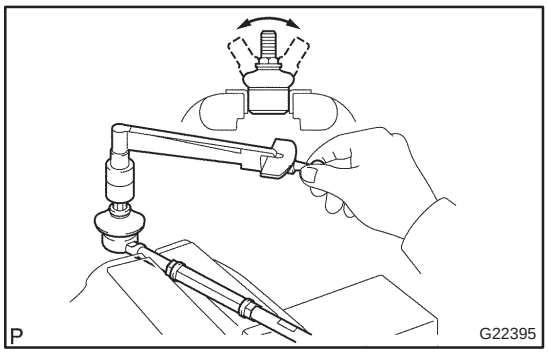


(a) RH side (w/ Height control sensor):
Remove the nut, and separate the height control sensor sub–assy from the lower control arm assy RH.



(b) Support the rear suspension arm assy No.1 LH.

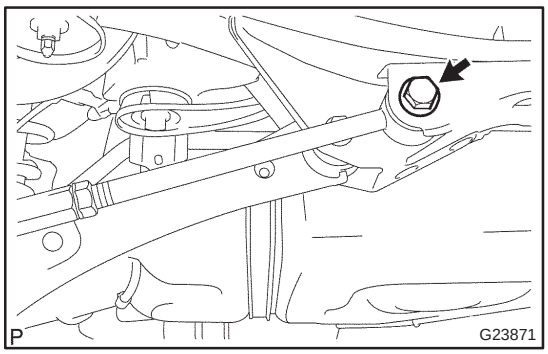
(c) Remove the bolt, and separate the member side lower control arm assy LH.



(d) Remove the clip and nut.

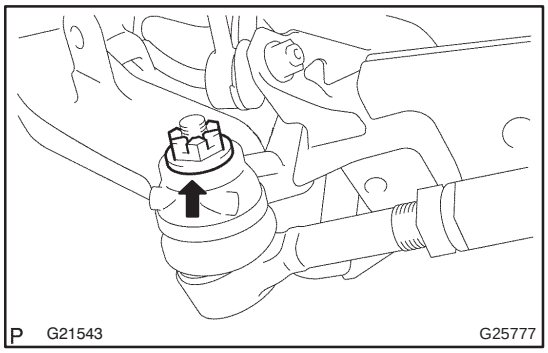
(e) Using SST, remove the lower control arm assy LH from the rear axle carrier sub–assy LH.
SST 09610–20012

NOTICE:
Do not damage the dust cover.



3. INSPECT LOWER CONTROL ARM ASSY LH

(a) Before installing the nut, flip the ball joint stud back and forth 5 times as shown in the illustration.

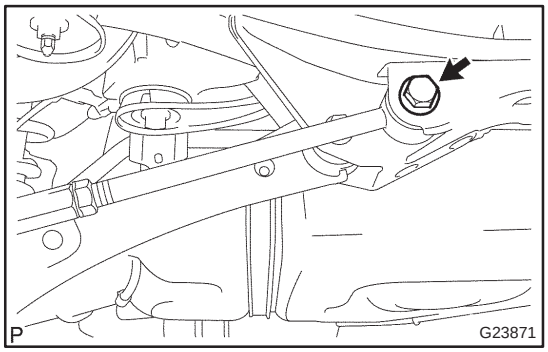


(b) Using a torque wrench, continuously turn the nut for 2 to 4 seconds per 1 turn, and take the torque reading at the 5th turn.
Turning torque:
3.0 N·m (31 kgf·cm, 27 in.·lbf) or less

NOTICE:
- **Neither unusual drag nor rattle occurs during the rotation.**
- **Neither crack nor grease leakage exists on the dust cover.**
- **Make sure that lower control arm assy LH is not deformed.**

4. INSTALL LOWER CONTROL ARM ASSY LH

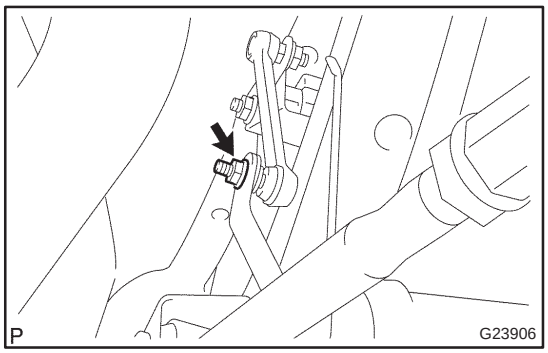
(a) Install the member side lower control arm assy LH, and temporarily tighten bolt.



(b) Install the nut.
Torque: 60 N·m (612 kgf·cm, 44 ft·lbf)

(c) Install the clip.

NOTICE:
- **When the holes for the clip are not aligned, adjust them by tightening the nut. The tightening angle for the adjustment must be less than 60°.**
- **Insert the clip from the rear side of a vehicle.**



5. INSTALL REAR WHEEL
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

6. STABILIZE SUSPENSION (See page 27–8)

7. FULLY TIGHTEN LOWER CONTROL ARM ASSY LH

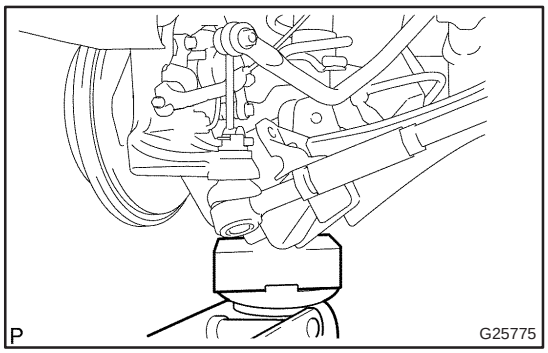
(a) Fully tighten the bolt.
Torque: 105 N·m (1,071 kgf·cm, 77 ft·lbf)

(b) RH side (w/ Height control sensor):
Install the height control sensor sub–assy and nut to the lower control arm assy RH.
Torque: 5.8 N·m (59 kgf·cm, 51 in.·lbf)

(c) RH side (w/ Height control sensor):
Headlight aim only (See page 65–19).

8. INSPECT AND ADJUST REAR WHEEL ALIGNMENT (See page 27–4)

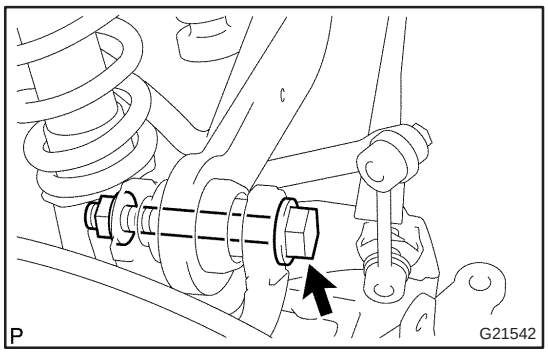
UPPER CONTROL ARM ASSY



REPLACEMENT

270E5–01

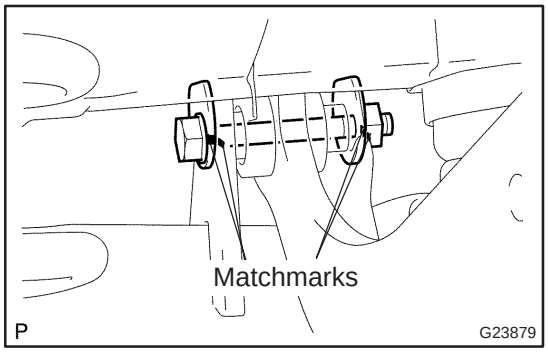
HINT:



COMPONENTS: See page 27–2.

1. REMOVE REAR WHEEL

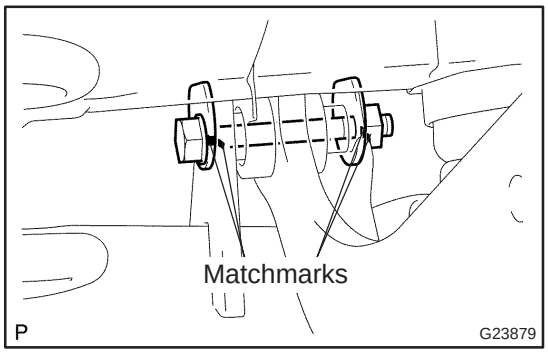
2. REMOVE UPPER CONTROL ARM ASSY



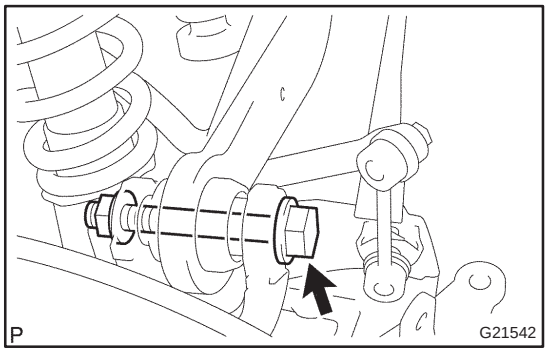
(a) Support the rear suspension arm assy No.1 LH.

(b) Remove the bolt and nut, separate the upper control arm assy.

NOTICE:



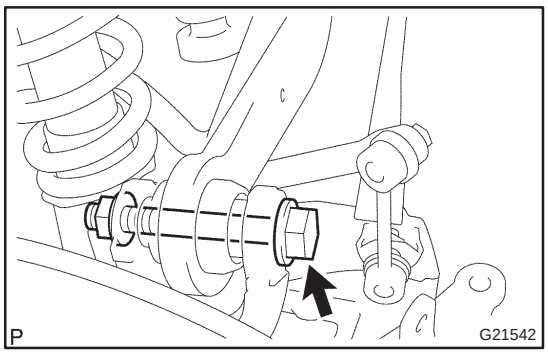
When removing the bolt, hold the nut not to rotate.



(c) Place matchmarks on the camber adjust cam assy, camber adjust cam No.2 and rear suspension member sub–assy.

(d) Remove the nut, camber adjust cam assy and camber adjust cam No.2.

3. INSTALL UPPER CONTROL ARM ASSY



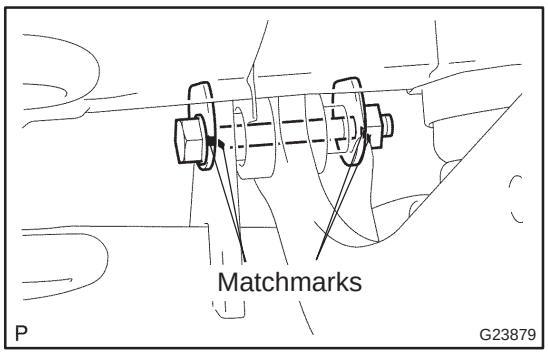
(a) Install the camber adjust cam assy from the front side of the vehicle, and temporarily fix it with the nut and the camber adjust cam No.2.

(b) Install the upper control arm assy, and temporarily tighten the bolt and nut.

4. INSTALL REAR WHEEL
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

5. STABILIZE SUSPENSION (See page 27–8)

6. FULLY TIGHTEN UPPER CONTROL ARM ASSY



NOTICE:

Be sure to empty the vehicle when fully tightening the bolt and nut.

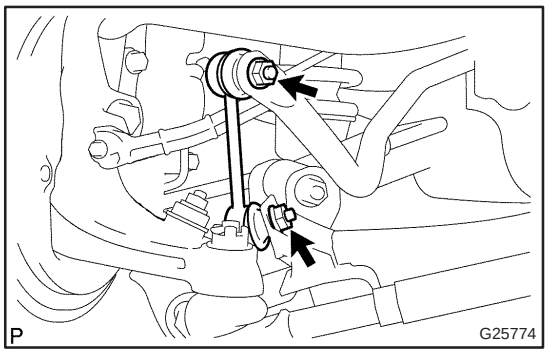
(a) Fully tighten the bolt and nut.
Torque: 74 N·m (755 kgf·cm, 55 ft·lbf)

NOTICE:

When instaling the bolt, hold the nut not to rotate.

(b) Align the matchmarks, and fully tighten the nut.
Torque: 74 N·m (755 kgf·cm, 55 ft·lbf)

7. INSPECT AND ADJUST REAR WHEEL ALIGNMENT (See page 27–4)



STABILIZER BAR REAR

REPLACEMENT

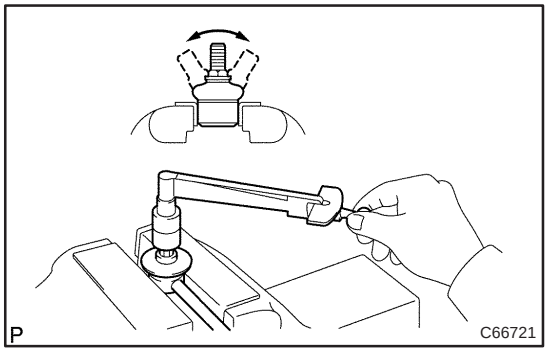
270E6–01

HINT:

COMPONENTS: See page 27–2.

1. REMOVE REAR STABILIZER LINK ASSY LH

(a) Remove the 2 nuts and rear stabilizer link assy LH.



HINT:

If the ball joint turns together with the nut, use a hexagon (5 mm) wrench to hold the stud.

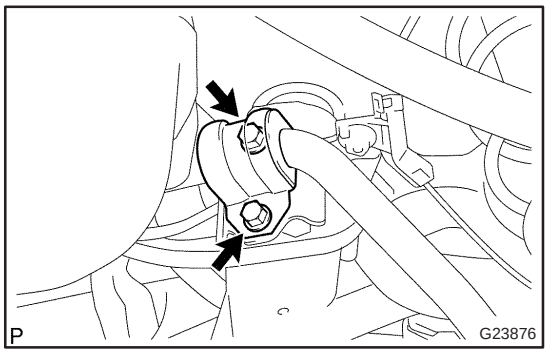
2. REMOVE REAR STABILIZER LINK ASSY RH

HINT:

Remove the RH side by the same procedures as the LH side.

3. INSPECT REAR STABILIZER LINK ASSY LH

(a) Before installing the nut, flip the ball joint stud back and forth 5 times as shown in the illustration.

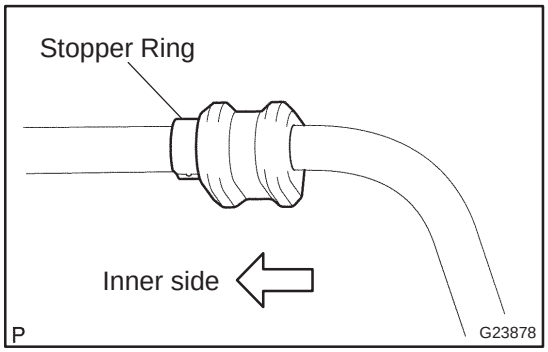


(b) Using a torque wrench, continuously turn the nut for 2 to 4 seconds per 1 turn, and take the torque reading on the 5th turn.

Turning torque:

1.0 N·m (10 kgf·cm, 8.7 in.·lbf) or less

NOTICE:

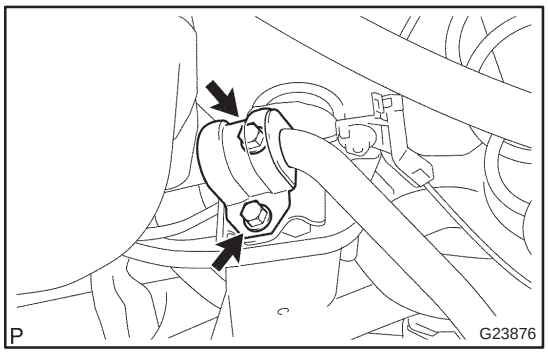


- **Neither unusual drag nor rattle occurs during the rotation.**
- **Neither crack nor grease leakage exists on the dust cover.**
- **Make sure that rear stabilizer link assy LH is not deformed.**

4. REMOVE STABILIZER BAR REAR

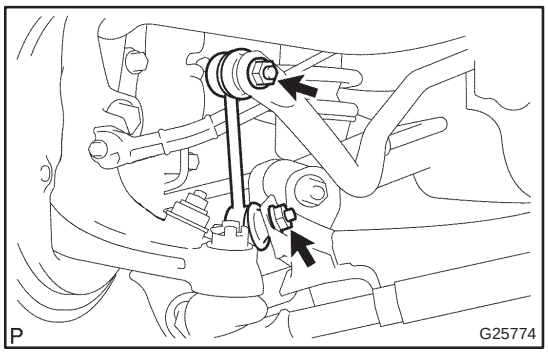
(a) Remove the 2 bolts, 2 nuts and 2 rear stabilizer bar bracket No.3 from the rear suspension member sub–assy.

(b) Remove the 2 stabilizer bush rear from each stabilizer bar rear.



5. INSTALL STABILIZER BAR REAR

(a) Install the 2 stabilizer bush rear to each stabilizer bar rear.



HINT:

Install the stabilizer bush rear to the outer side of the stopper ring on the stabilizer bar.

(b) Install the stabilizer bar rear and 2 rear stabilizer bar bracket No.3 with 2 bolts and 2 nuts.

Torque: 35 N·m (357 kgf·cm, 26 ft·lbf)

6. INSTALL REAR STABILIZER LINK ASSY LH

(a) Install the rear stabilizer link assy LH with the 2 nuts.

Torque: 44 N·m (449 kgf·cm, 32 ft·lbf)

HINT:

If the ball joint turns together with the nut, use a hexagon (5 mm) wrench to hold the stud.

7. INSTALL REAR STABILIZER LINK ASSY RH

HINT:

Install the RH side by the same procedures as the LH side.

8. INSPECT AND ADJUST REAR WHEEL ALIGNMENT (See page 27–4)

WHEEL AND TIRE SYSTEM

2801F–02

INSPECTION

1. INSPECT TIRE

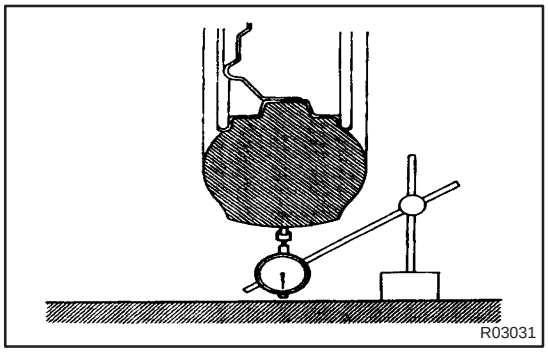
(a) Check the tires for wear and proper inflation pressure.

Cold tire inflation pressure:

3ZZ – FE, 1ZZ – FE, 1AZ – FE engine models:

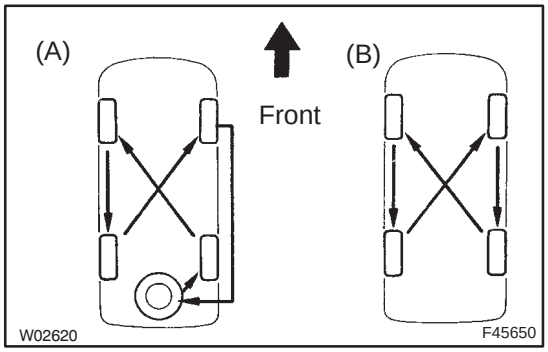
Tire size	Front kPa (kgf·cm^2, psi)	Rear kPa (kgf·cm^2, psi)
195/65R16 91V, 205/55R16 91V:		
with 4 or less occupants	220 (2.2, 32) *1 240 (2.4, 35) *2	220 (2.2, 32) *1 240 (2.4, 35) *2
with 5 or more occupants	220 (2.2, 32) *1 250 (2.5, 36) *2	220 (2.2, 32) *1 280 (2.8, 41) *2

1CD – FTV engine models:



Tire size	Front kPa (kgf·cm^2, psi)	Rear kPa (kgf·cm^2, psi)
205/55R16 91V:		
with 4 or less occupants	240 (2.4, 35) *1 270 (2.7, 39) *2	240 (2.4, 35) *1 270 (2.7, 39) *2
with 5 or more occupants	240 (2.4, 35) *1 280 (2.8, 41) *2	240 (2.4, 35) *1 290 (2.9, 42) *2

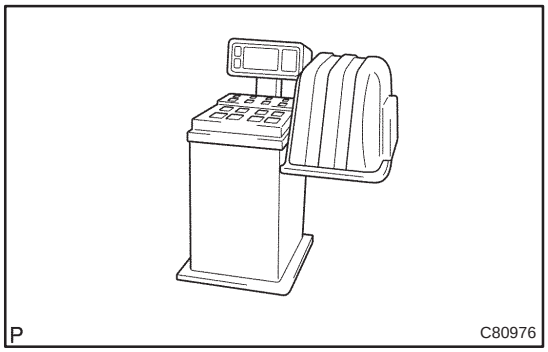
1AZ – FSE engine models:



Tire size	Front kPa (kgf·cm^2, psi)	Rear kPa (kgf·cm^2, psi)
205/55R16 91V:		
with 4 or less occupants	220 (2.2, 32) *1 250 (2.5, 36) *2	220 (2.2, 32) *1 250 (2.5, 36) *2
with 5 or more occupants	220 (2.2, 32) *1 270 (2.7, 39) *2	220 (2.2, 32) *1 280 (2.8, 41)*2
215/45R17 87W:		
with 4 or less occupants	240 (2.4, 35) *1 290 (2.9, 42) *2	240 (2.4, 35) *1 290 (2.9, 42) *2
with 5 or more occupants	240 (2.4, 35) *1 310 (3.1, 45) *2	240 (2.4, 35) *1 330 (3.3, 48) *2

***1: For driving under 160 km/h (100 mph)**

***2: For driving at 160 km/h (100 mph) or over**



(b) Using a dial indicator, check the runout of tires.
Tire runout: 1.4 mm (0.055 in.) or less

2. ROTATE TIRE

HINT:

If the spare tire is the same as ground tire, perform as ”A” in the illustration, and if the spare tire is compact tire, perform as ”B” in the illustration.

3. INSPECT WHEEL BALANCE

(a) Check and adjust the Off–the–car balance.

(b) If required, check and adjust the On–the–car balance.

Imbalance after adjustment: 8.0 g (0.018 lb) or less

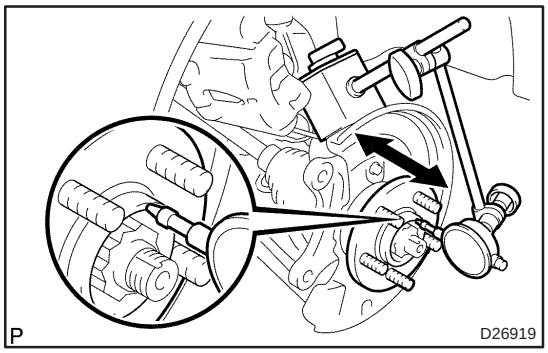
4. INSPECT BEARING BACKLASH (See page 30–2)

5. INSPECT AXLE HUB DEVIATION (See page 30–2)

6. INSPECT BEARING BACKLASH (See page 30–2)

7. INSPECT AXLE HUB DEVIATION (See page 30–2)

DRIVE SHAFT, PROPELLER SHAFT, AXLE



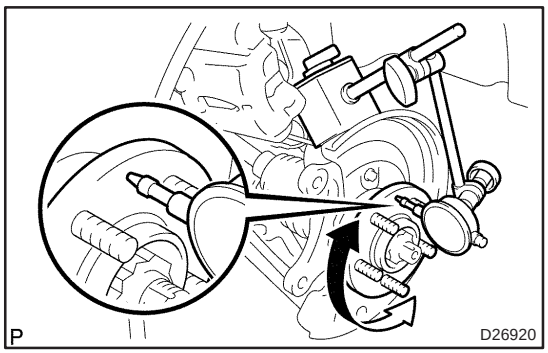
3005C–02

PROBLEM SYMPTOMS TABLE

Use the table below to help you find the cause of the problem. The numbers indicate the priority of the likely cause of the problem. Check each part in order. If necessary, replace these parts.

Symptom	Suspect Area	See page
Wander	5. Wheel	28–1
	6. Front wheel alignment	26–6
	7. Rear wheel alignment	27–4
	8. Hub bearing (Worn)	30–2
	9. Front shock absorber	26–10
	10. Rear shock absorber	27–8
Front wheel shimmy	1. Wheel (Imbalance)	28–1
	2. Hub bearing (Worn)	30–2
	3. Lower suspension arm ATM:	26–16
	4. Lower suspension arm MTM:	26–21
	5. Lower ball joint (Worm)	26–24
	6. Front shock absorber	26–10
Noise (Front)	1. Front drive shaft	30–6
	2. Front shock absorber	26–10
	3. Hub bearing (Worn)	30–2
	4. Lower ball joint (Worm)	26–24
Noise (Rear)	1. Hub bearing (Worn)	30–2
	2. Rear shock absorber	27–8

ON–VEHICLE INSPECTION

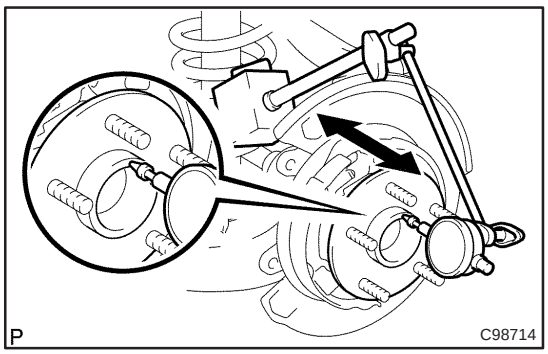


1. INSPECT FRONT AXLE HUB BEARING BACKLASH

(a) Using a dial indicator, check the backlash near the center of the axle hub.

Maximum: 0.05 mm (0.0020 in.)

If the backlash exceeds the maximum, replace the bearing.

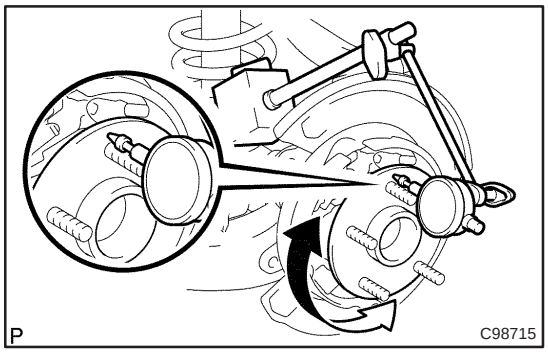


2. INSPECT FRONT AXLE HUB DEVIATION

(a) Using a dial indicator, check the deviation at the surface of the axle hub outside the hub bolt.

Maximum: 0.05 mm (0.0020 in.)

If the backlash exceeds the maximum, replace the axle hub.



3. INSPECT REAR AXLE HUB BEARING BACKLASH

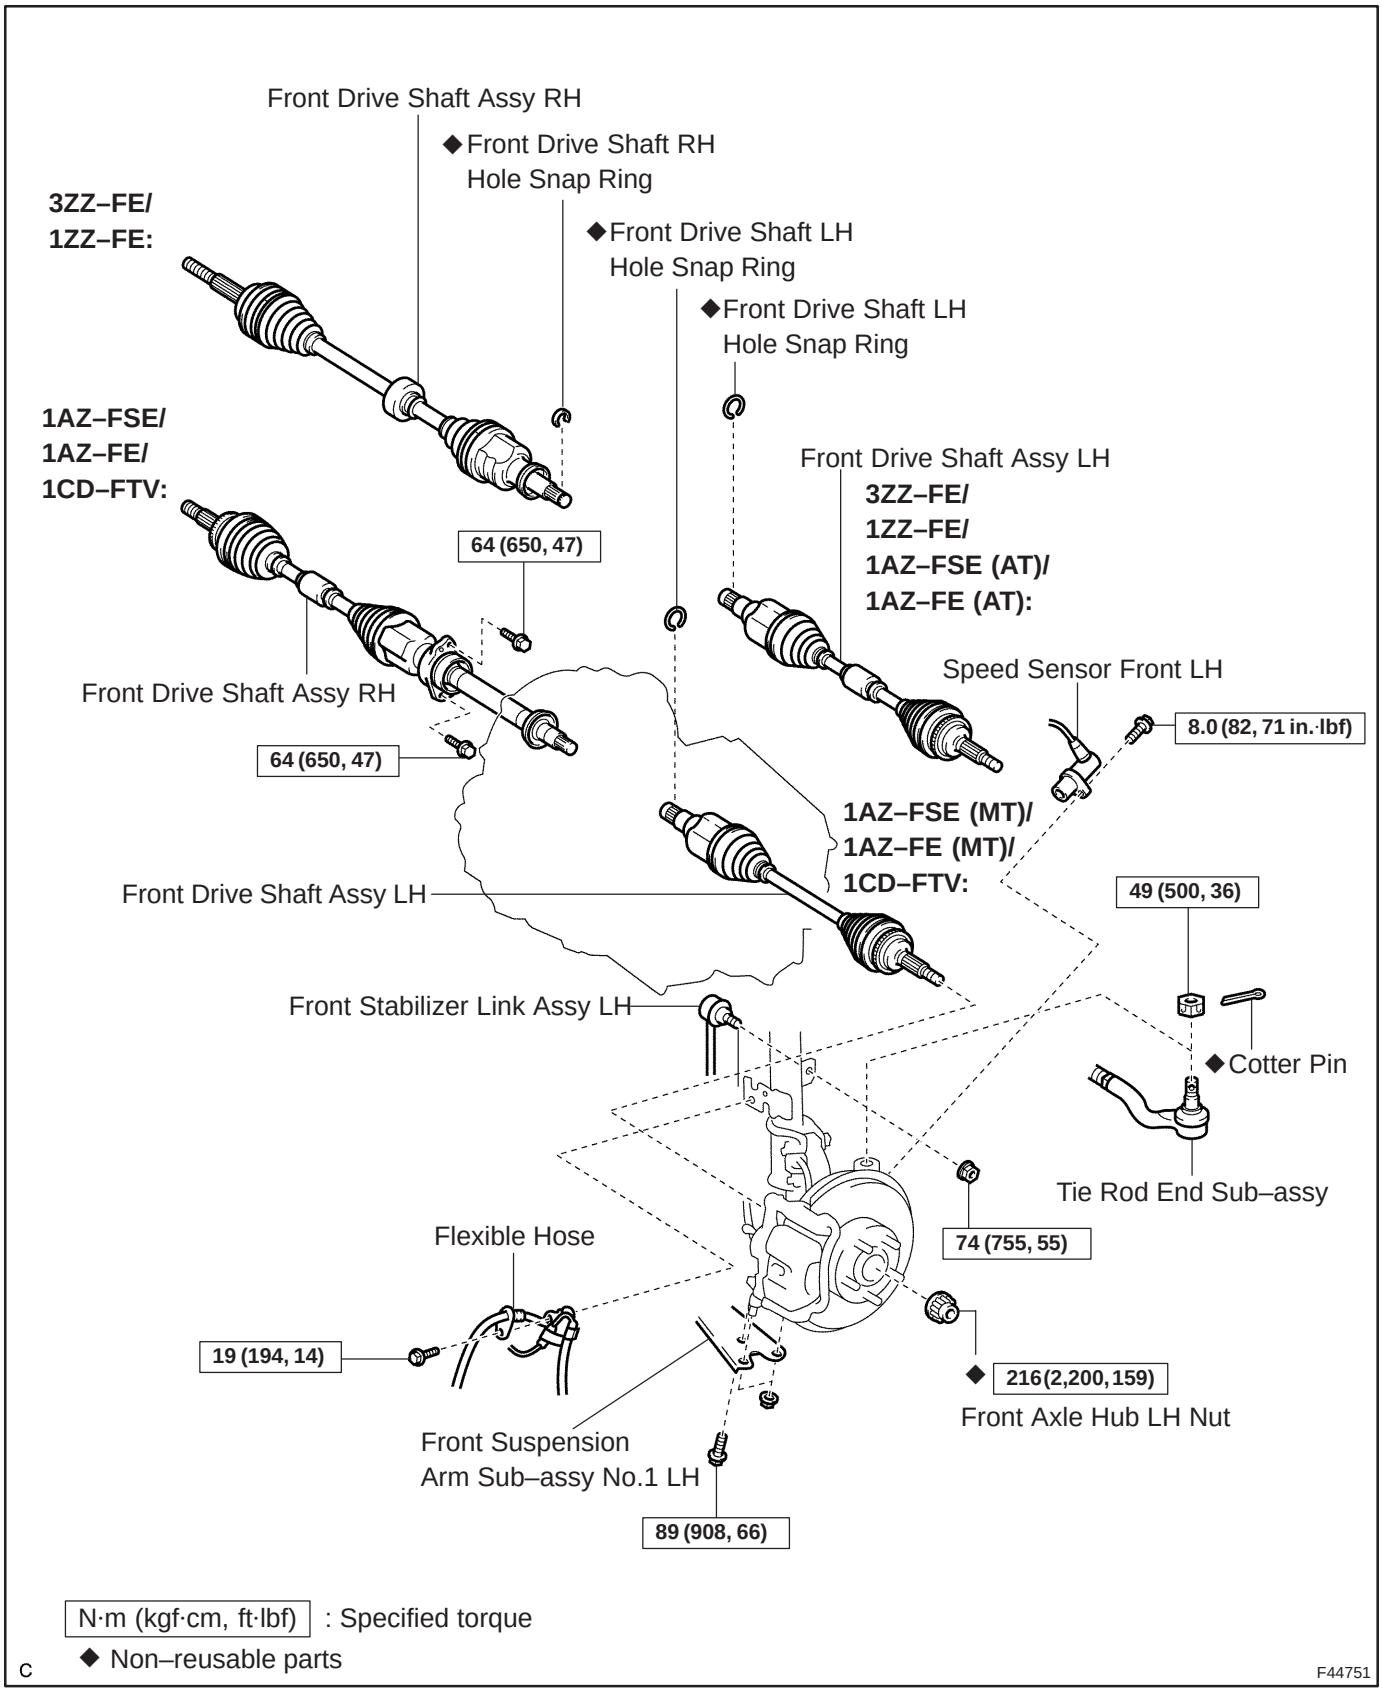
(a) Using a dial indicator, check the backlash near the center of the axle hub.

Maximum: 0.05 mm (0.0020 in.)

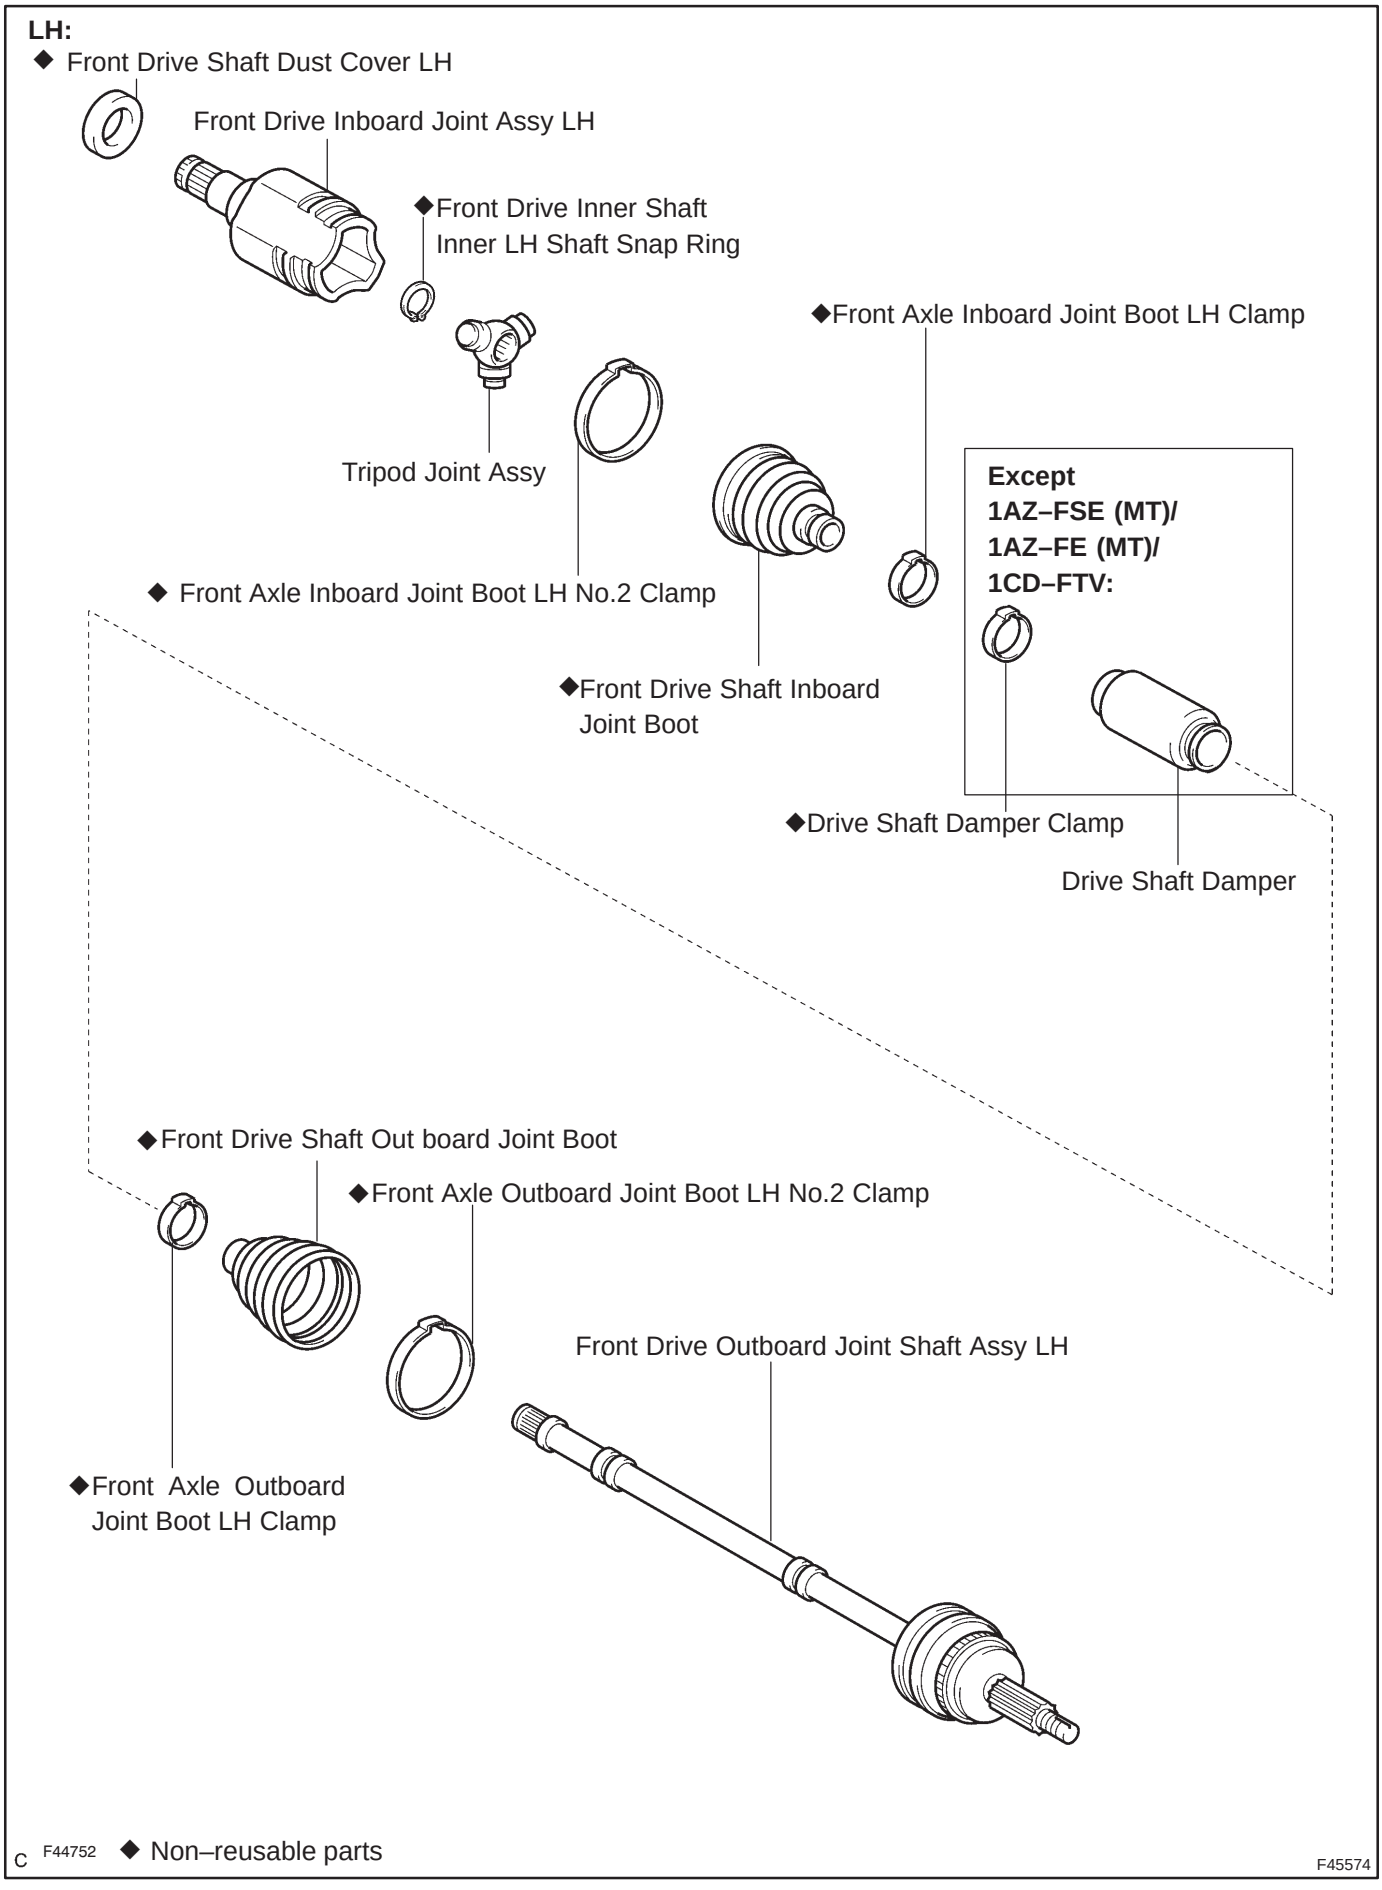
If the backlash exceeds the maximum, replace the axle hub assembly.

4. INSPECT REAR AXLE HUB DEVIATION

(a) Using a dial indicator, check the deviation at the surface of the axle hub outside the hub bolt.

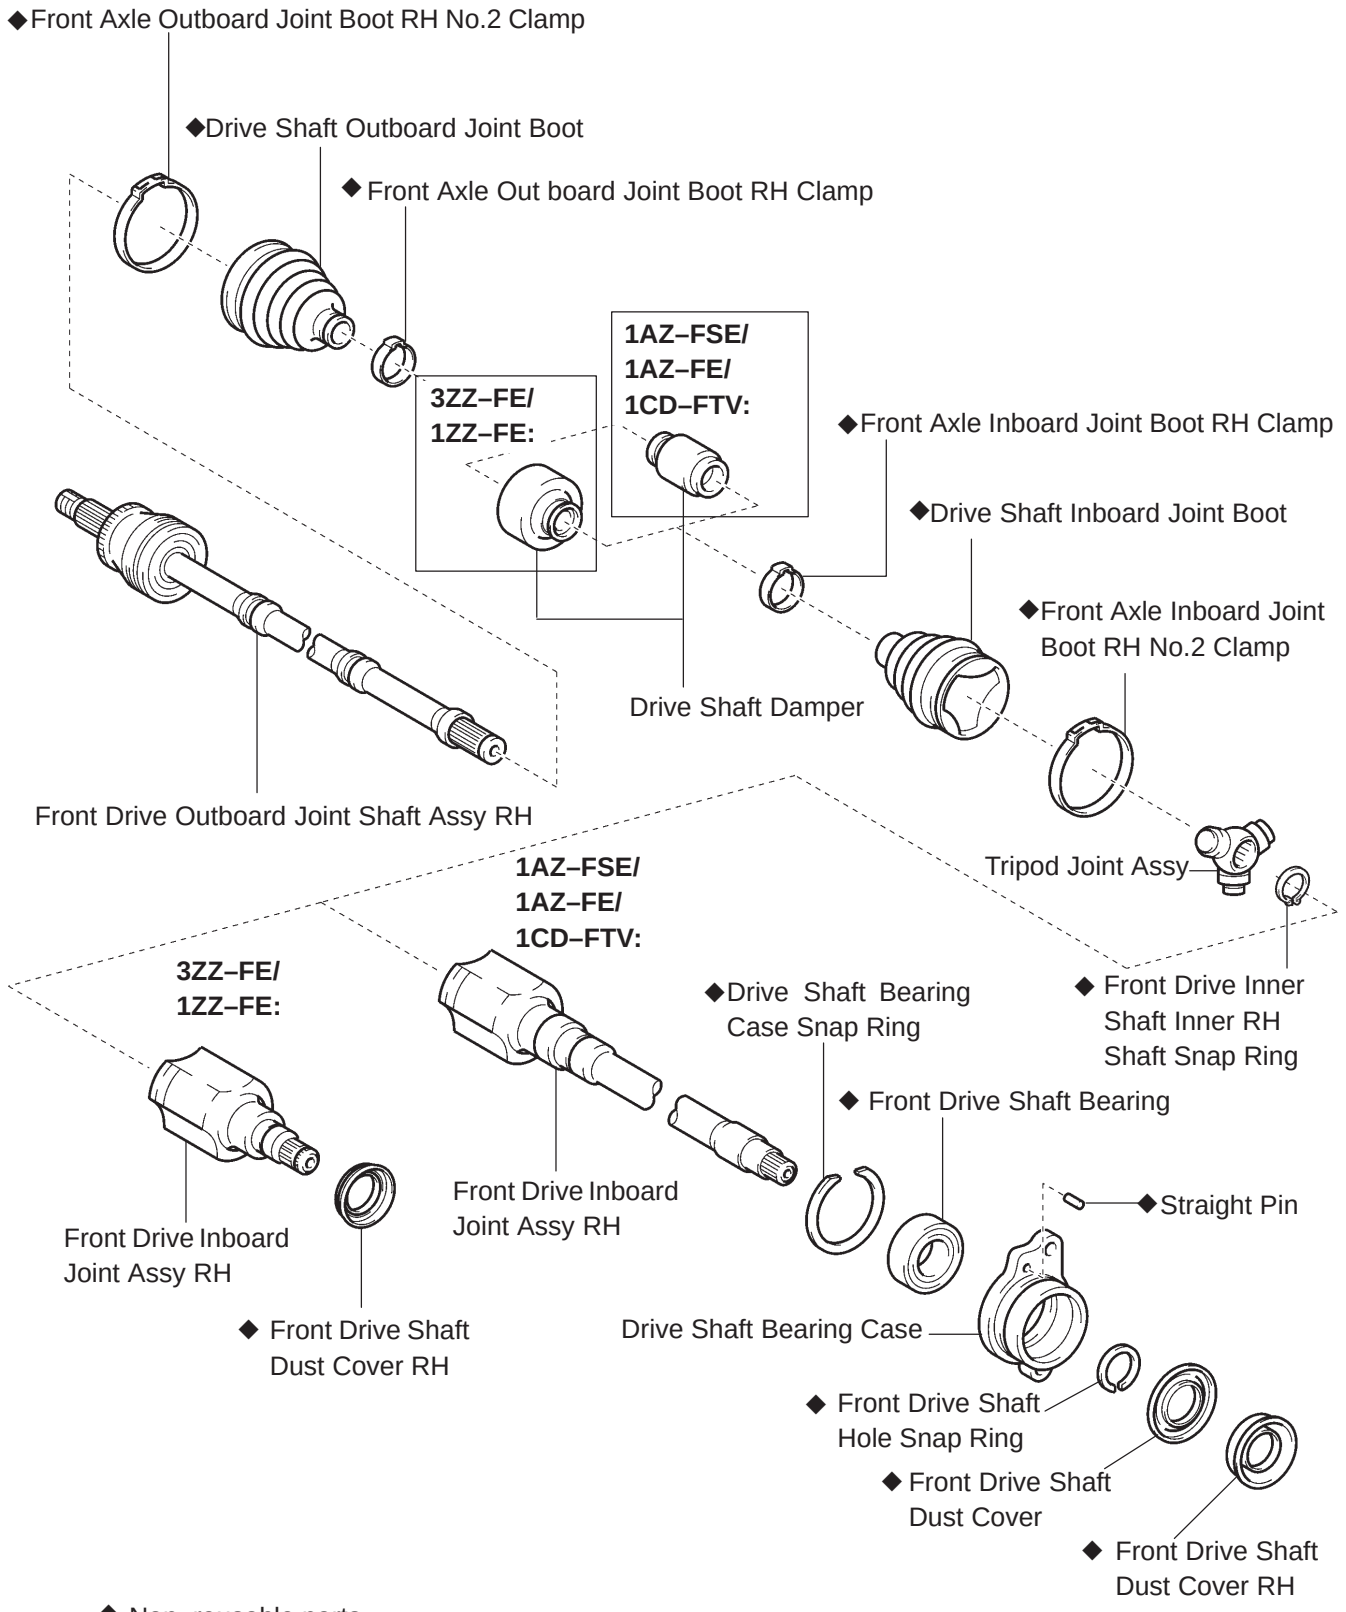


Maximum: 0.07 mm (0.0028 in.)



If the backlash exceeds the maximum, replace the axle hub assembly.

FRONT DRIVE SHAFT



COMPONENTS

300JW–01

LH:
◆ Front Drive Shaft Dust Cover LH
Front Drive Inboard Joint Assy LH
◆Front Drive Inner Shaft
Inner LH Shaft Snap Ring
◆Front Axle Inboard Joint Boot LH Clamp
Tripod Joint Assy
◆ Front Axle Inboard Joint Boot LH No.2 Clamp
◆Front Drive Shaft Inboard
Joint Boot
Except
1AZ–FSE (MT)/
1AZ–FE (MT)/
1CD–FTV:
◆Drive Shaft Damper Clamp
Drive Shaft Damper
◆Front Drive Shaft Out board Joint Boot
◆Front Axle Outboard Joint Boot LH No.2 Clamp
Front Drive Outboard Joint Shaft Assy LH
◆Front Axle Outboard
Joint Boot LH Clamp
C F44752 ◆ Non–reusable parts
F45574

RH:

C F44753 ◆ Non–reusable parts

F45575

300JX–01

OVERHAUL

HINT:

Overhaul the RH side by the same procedures as the LH side.

1. DRAIN AUTOMATIC TRANSAXLE FLUID (A/T TRANSAXLE)

(a) Remove the drain plug and gasket, and then drain the ATF.

(b) Install a new gasket and drain plug.

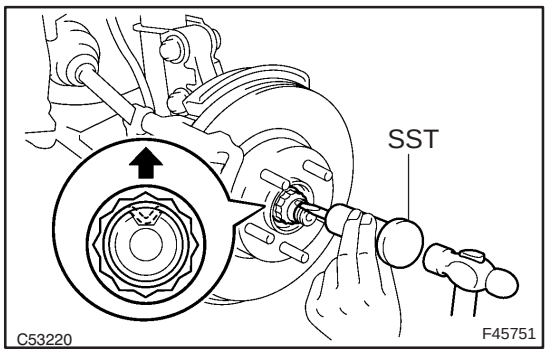
Torque: 49 N·m (500 kgf·cm, 36 ft·lbf)

2. DRAIN MANUAL TRANSAXLE OIL (M/T TRANSAXLE)

(a) Remove the filler plug and gasket.

(b) Remove the drain plug and gasket.

(c) Install 2 new gaskets, drain plug and filler plug.



Torque:

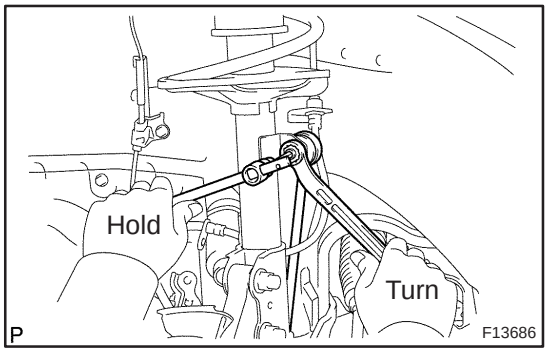
C50/C250: 39 N·m (400 kgf·cm, 29 ft·lbf)

E354/E357: 49 N·m (500 kgf·cm, 36 ft·lbf)

3. REMOVE FRONT WHEEL

4. REMOVE ENGINE UNDER COVER LH

5. SEPARATE FRONT AXLE HUB LH NUT



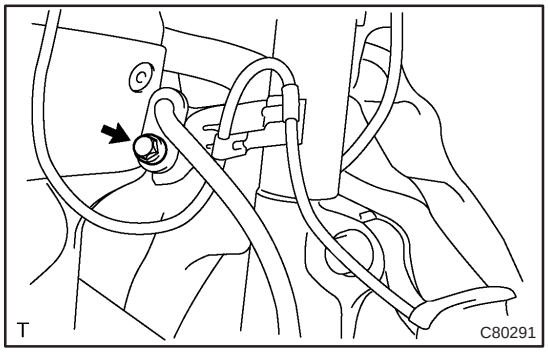
(a) Using SST and a hammer, unstake the staked part of the nut.

SST 09930–00010

(b) While applying the brakes, remove the axle hub LH nut.

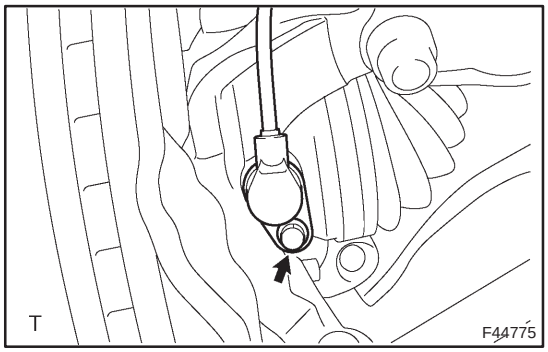
NOTICE:

Loosen the staked part of the lock nut completely, otherwise the screw of the drive shaft may be damaged.



6. SEPARATE FRONT STABILIZER LINK ASSY LH

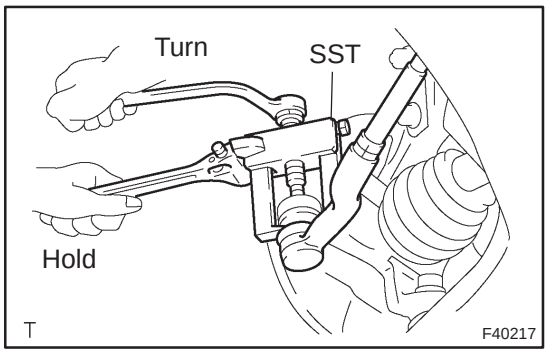
(a) Remove the nut and separate the front stabilizer link assy LH from the shock absorber assy LH.



HINT:

If the ball joint turns together with the nut, use a hexagon wrench (6 mm) to hold the stud.

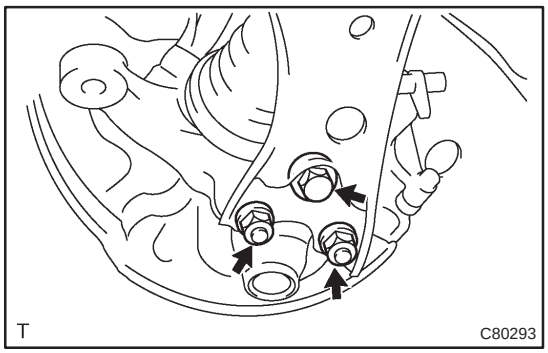
7. DISCONNECT SPEED SENSOR FRONT LH



(a) Remove the bolt, disconnect the speed sensor wire and flexible hose from the shock absorber.

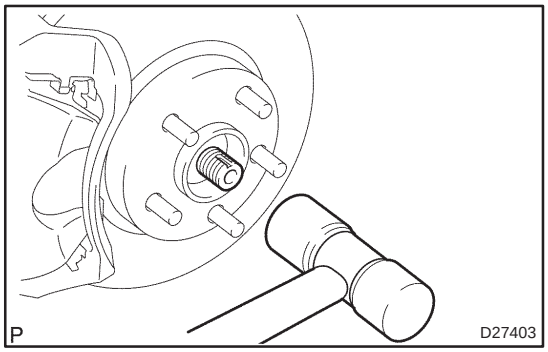
(b) Remove the bolt, and disconnect the speed sensor from the steering knuckle.

NOTICE:



- **Be careful not to damage the speed sensor.**
- **Prevent foreign matter from attaching to the speed sensor.**

8. SEPARATE TIE ROD END SUB–ASSY LH

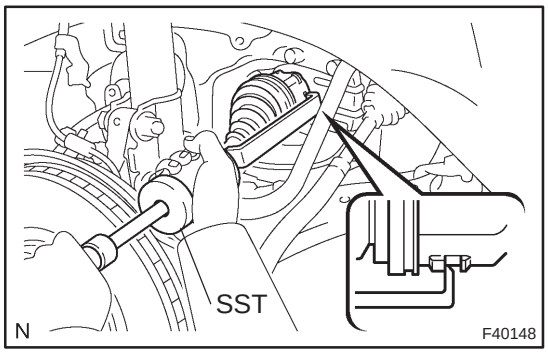


(a) Remove the cotter pin and nut.

(b) Using SST, separate the tie rod end sub–assy LH from the steering knuckle.
SST 09628–62011

9. SEPARATE FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH

(a) Remove the bolt and 2 nuts, and separate the front suspension arm sub–assy lower No.1 LH from the lower ball joint.

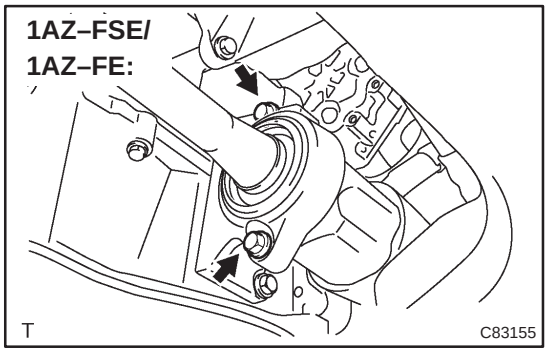


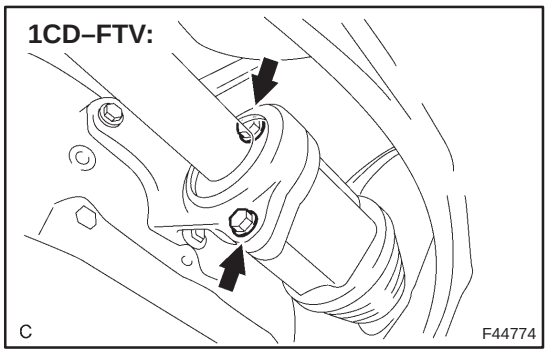
10. SEPARATE FRONT AXLE ASSY LH

(a) Using a plastic hammer, separate the front drive shaft assy LH from the axle hub.

NOTICE:

Be careful not to damage the boot and speed sensor rotor.





11. REMOVE FRONT DRIVE SHAFT ASSY LH

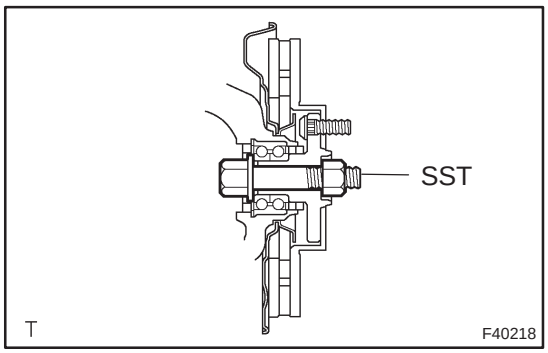
(a) Using SST, remove the front drive shaft assy LH.
SST 09520–01010, 09520–24010 (09520–32040)

NOTICE:

- **Be careful not to damage the oil seal, boot and dust cover.**
- **Be careful not to drop the drive shaft assy.**

12. REMOVE FRONT DRIVE SHAFT ASSY RH

HINT:



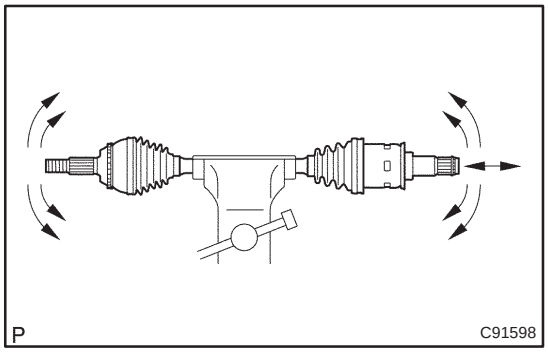
1AZ–FSE, 1AZ–FE, 1CD–FTV only

(a) Remove the 2 bolts and pull out the drive shaft together with the center bearing bracket.

(b) Remove the drive shaft from the transaxle.

NOTICE:

- **Be careful not to damage the oil seal, boot and dust cover.**
- **Be careful not to drop the drive shaft assy.**



13. FIX FRONT AXLE ASSY LH

NOTICE:

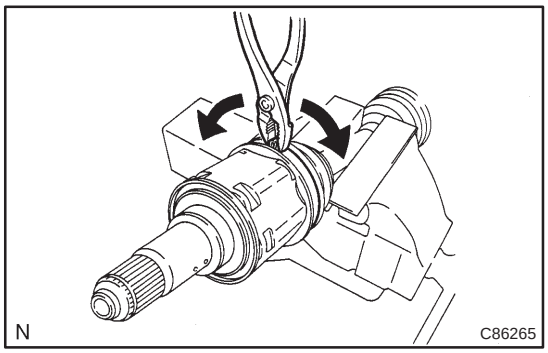
The hub bearing could be damaged if it is subjected to the vehicle weight, such as when moving the vehicle with the drive shaft removed.

Therefore, if it is absolutely necessary to place the vehicle weight on the hub bearing, first support it with SST.

SST 09608–16042 (09608–02021, 09608–02041)

14. INSPECT FRONT DRIVE SHAFT ASSY LH

(a) Check that there is no remarkable play in the radial direction of the outboard joint.



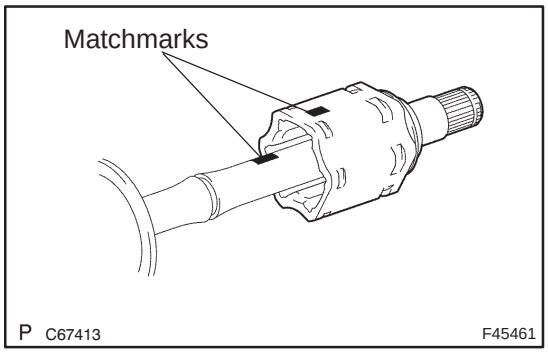
(b) Check that the inboard joint slides smoothly in the thrust direction.

(c) Check that there is no remarkable play in the radial direction of the inboard joint.

(d) Check the boots for damage.

NOTICE:

Keep the drive shaft assy level during inspection.



15. REMOVE FRONT AXLE INBOARD JOINT BOOT CLAMP

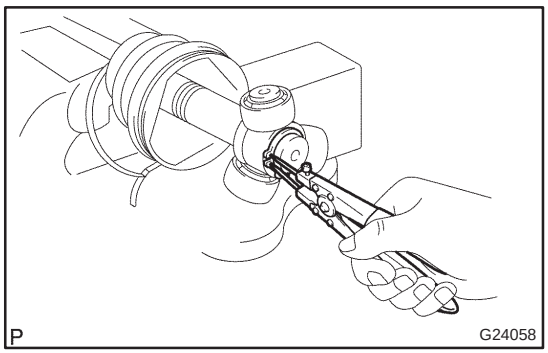
(a) Using pliers, remove the inboard joint boot LH No.2 clamp, as shown in the illustration.

(b) Remove the inboard joint boot LH clamp by the same procedures as the inboard joint boot LH No.2 clamp.

16. REMOVE FR AXLE INBOARD JOINT BOOT

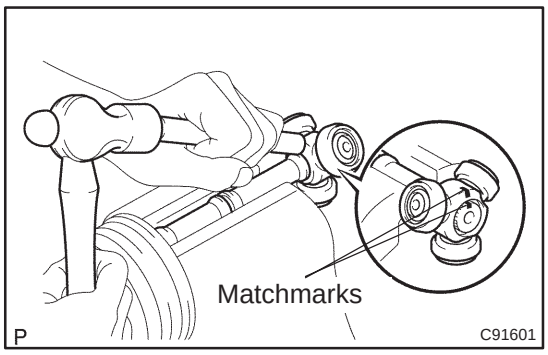
(a) Remove the inboard joint boot from the inboard joint assy LH.

17. REMOVE FRONT DRIVE INBOARD JOINT ASSY LH



(a) Remove the old grease from the inboard joint.

(b) Place matchmarks on the inboard joint assy LH and outboard joint shaft assy LH.



NOTICE:

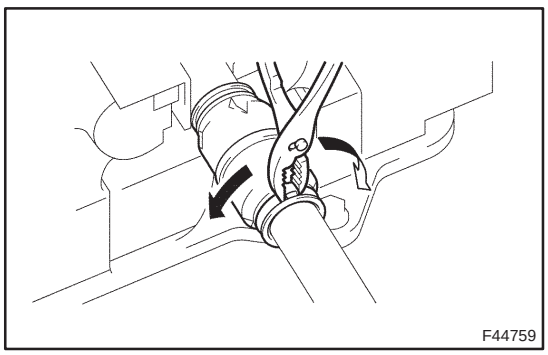
Do not punch the marks.

(c) Remove the inboard joint assy LH from the outboard joint shaft assy LH.

(d) Using a snap ring expander, remove the shaft snap ring.

(e) Place matchmarks on the outboard joint shaft assy LH and tripod joint assy.

NOTICE:



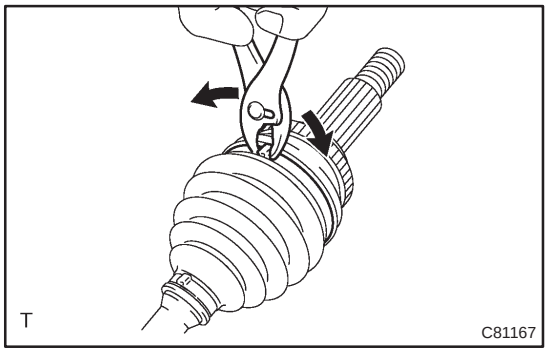
Do not punch the marks.

(f) Using a brass bar and hammer, remove the tripod joint assy from the outboard joint shaft assy LH.

NOTICE:

Do not tap the roller.

(g) Remove the inboard joint boot and 2 clamps.



18. REMOVE DAMPER, DRIVE SHAFT

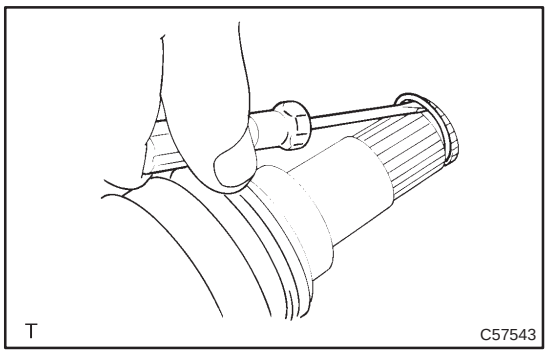
HINT:

- Except 1AZ–FSE, FE (MT)/ 1CD–FTV
- Perform the procedure only when reassembling the RH side.

(a) Using pliers, remove the damper clamp, as shown in the illustration.

(b) Remove the drive shaft damper.

19. REMOVE FRONT AXLE OUTBOARD JOINT BOOT CLAMP



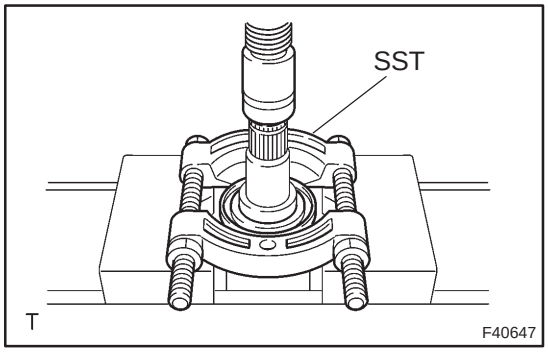
(a) Using pliers and remove the outboard joint boot LH No.2 clamp, as shown in the illustration.

(b) Remove the outboard joint boot LH clamp by the same procedures as outboard joint boot LH No.2 clamp.

20. REMOVE OUTBOARD JOINT BOOT

(a) Remove the outboard joint boot from the outboard joint shaft assy LH.

(b) Remove the old grease from the outboard joint.

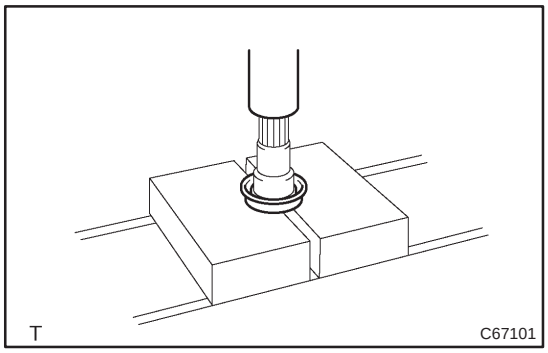


21. REMOVE FRONT DRIVE SHAFT LH HOLE SNAP RING

(a) Using a screwdriver, remove the hole snap ring.

HINT:

Except RH (1AZ–FSE, 1AZ–FE, 1CD–FTV)

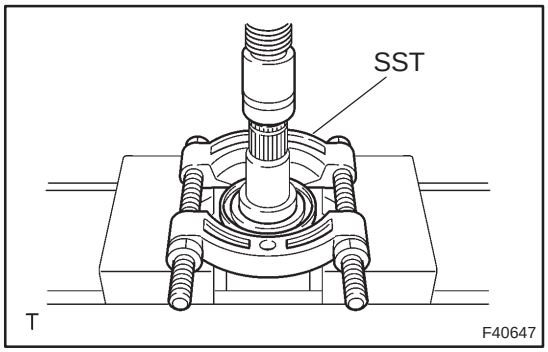


22. REMOVE FRONT DRIVE SHAFT DUST COVER LH

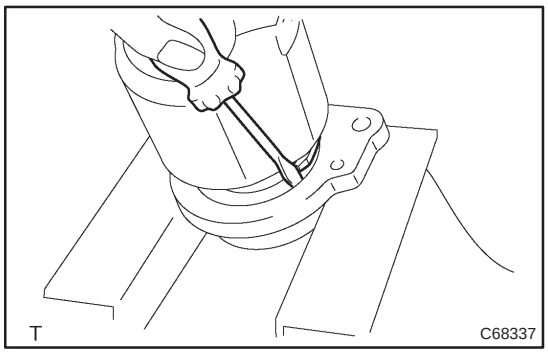
(a) Using SST and a press, remove the front drive shaft dust cover LH.

SST 09950–00020

NOTICE:



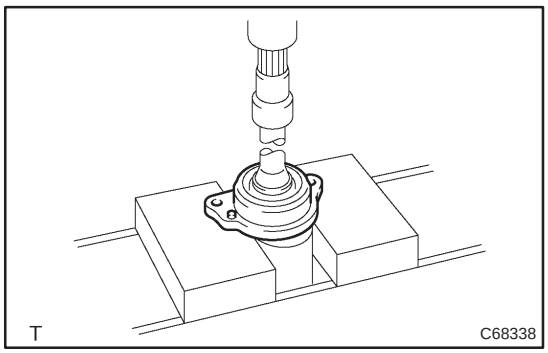
Be careful not to drop the inboard joint assy.



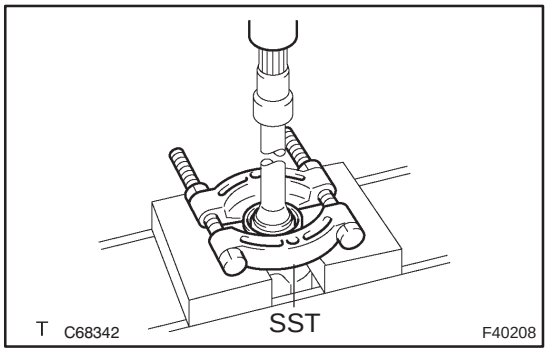
23. REMOVE FRONT DRIVE SHAFT DUST COVER RH

(a) 1AZ–FSE, 1AZ–FE, 1CD–FTV:

(1) Using a press, remove the drive shaft dust cover RH.

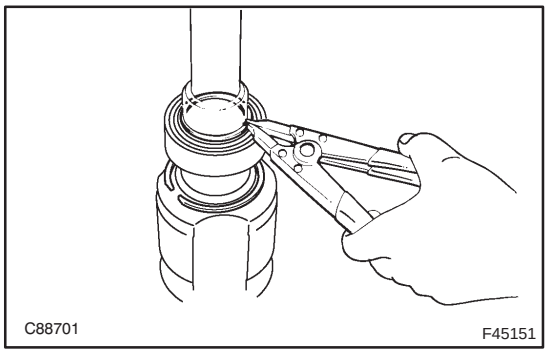


(b) 3ZZ–FE, 1ZZ–FE:
(1) Using SST and a press, remove the drive shaft dust cover RH.
SST 09950–00020



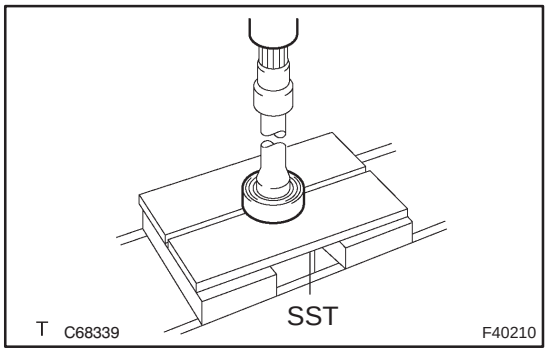
24. REMOVE CASE SUB ASSY, DRIVE SHAFT BEARING SNAP RING

HINT:
1AZ–FSE, 1AZ–FE, 1CD–FTV only.
(a) Using a screwdriver, remove the bearing case snap ring.



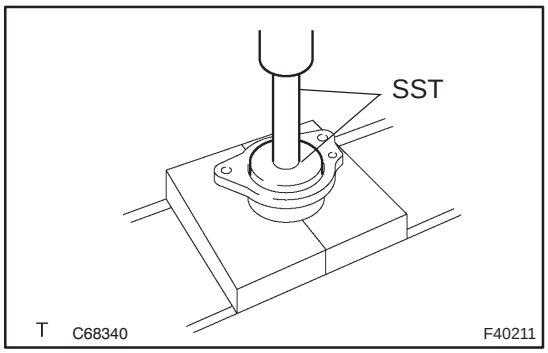
25. REMOVE DRIVE SHAFT BEARING CASE SUB ASSY

HINT:
1AZ–FSE, 1AZ–FE, 1CD–FTV only.
(a) Using a press, remove the drive shaft bearing case.
NOTICE:
Be careful not to drop the inboard joint assy.



26. REMOVE FRONT DRIVE SHAFT DUST COVER

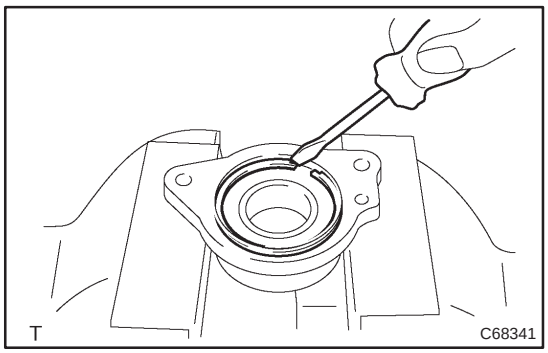
HINT:
1AZ–FSE, 1AZ–FE, 1CD–FTV only.
(a) Using SST and a press, remove the drive shaft dust cover.
SST 09950–00020
NOTICE:
Be careful not to drop the inboard joint assy.



27. REMOVE FRONT DRIVE SHAFT BEARING

HINT:
1AZ–FSE, 1AZ–FE, 1CD–FTV only.
(a) Using a snap ring expander, remove the drive shaft hole snap ring.

(b) Using SST and a press, remove the drive shaft bearing.
SST 09527–10011
(c) Remove the snap ring.

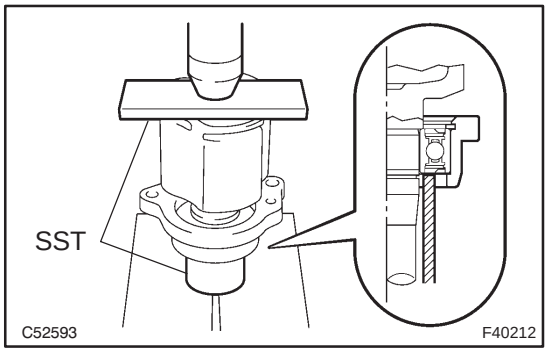


28. INSTALL FRONT DRIVE SHAFT BEARING

HINT:

1AZ–FSE, 1AZ–FE, 1CD–FTV only.

(a) Using SST and a press, install a new drive shaft bearing.
SST 09950–60020 (09951–00710), 09950–70010 (09951–07100)



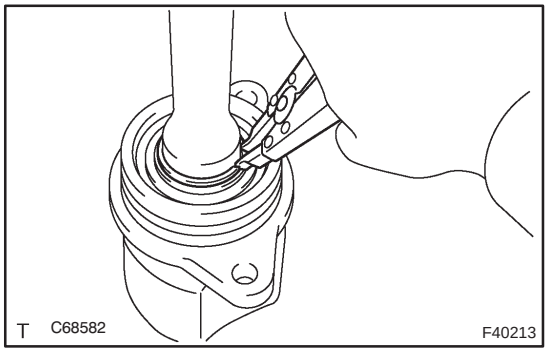
29. INSTALL CASE SUB ASSY, DRIVE SHAFT BEARING SNAP RING

HINT:

1AZ–FSE, 1AZ–FE, 1CD–FTV only.

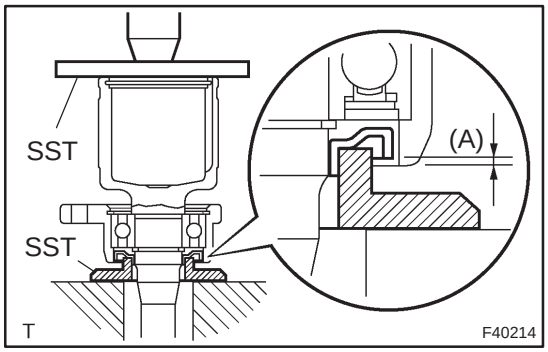
(a) Using a screwdriver, install a new bearing case snap ring.

30. INSTALL DRIVE SHAFT BEARING CASE SUB ASSY



HINT:

1AZ–FSE, 1AZ–FE, 1CD–FTV only.



(a) Using SST and a press, install the drive shaft bearing case to the inboard joint assy RH.
SST 09527–10011, 09710–04081

NOTICE:

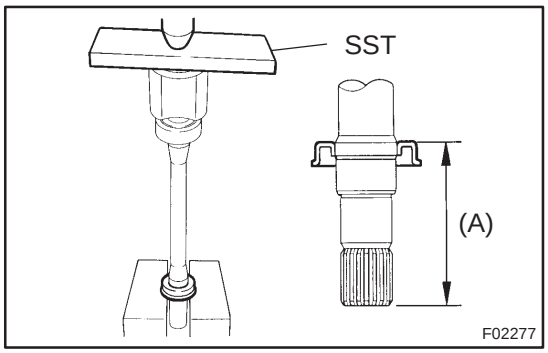
Bearing should be installed completely.

(b) Using a snap ring expander, install a new drive shaft hole snap ring.

31. INSTALL FRONT DRIVE SHAFT DUST COVER

HINT:

1AZ–FSE, 1AZ–FE, 1CD–FTV only.



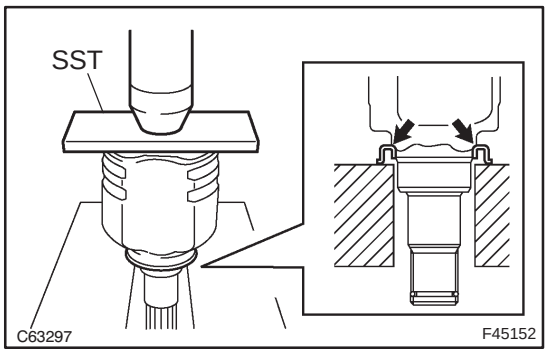
(a) Using SST and a press, install a new drive shaft dust cover.

SST 09726–40010, 09527–10011

Distance (A): 0.5 ± 0.5 mm (0.020 ± 0.020 in.)

NOTICE:

Be careful not to damage the dust cover.



32. INSTALL FRONT DRIVE SHAFT DUST COVER RH

(a) 1AZ–FSE, 1AZ–FE, 1CD–FTV:

(1) Using SST and a press, install a new drive shaft dust cover RH until the distance from the tip of center drive shaft to the drive shaft dust cover RH reaches the specification, as shown in the illustration.

SST 09527–10011

Distance (A): 91.5 ± 0.5 mm (3.602 ± 0.020 in.)

(b) 3ZZ–FE, 1ZZ–FE:

(1) Using SST and a press, install a new drive shaft dust cover RH.

SST 09527–10011

NOTICE:

- **Dust cover should be installed completely.**
- **Be careful not to damage the dust cover.**

33. INSTALL FRONT DRIVE SHAFT DUST COVER LH

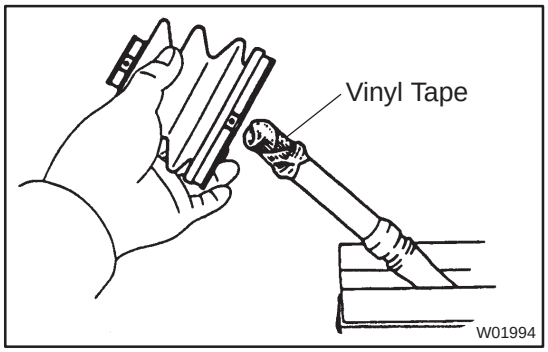
(a) Using SST and a press, install a new drive shaft dust cover LH.

SST 09527–10011

NOTICE:

- **Dust cover should be installed completely.**
- **Be careful not to damage the dust cover.**

HINT:



Install the LH side by the same procedures as the RH (3ZZ–FE, 1ZZ–FE) side.

34. INSTALL FRONT DRIVE SHAFT LH HOLE SNAP RING

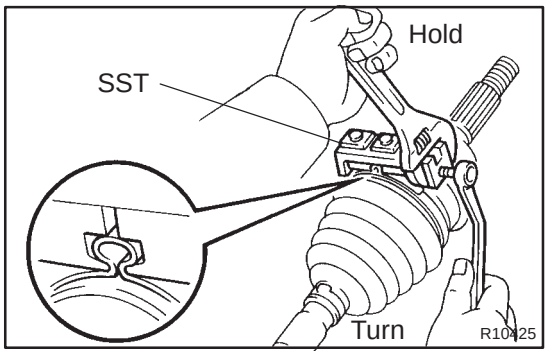
(a) Install a new hole snap ring.

HINT:

Except RH (1AZ–FSE, 1AZ–FE, 1CD–FTV)

35. INSTALL OUTBOARD JOINT BOOT

HINT:



Before installing the boots, wrap the spline of the drive shaft with vinyl tape to prevent the boots from being damaged.

(a) Install new parts to the outboard joint shaft assy in the following order.
  (1) Outboard joint boot LH No.2 clamp
  (2) Outboard joint boot
  (3) Outboard joint boot LH clamp

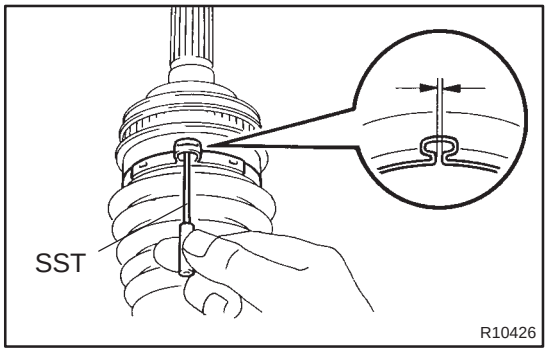
(b) Pack the outboard joint shaft and boot with grease in the boot kit.

Grease capacity:

Engine type	Grease capacity g (oz.)
1AZ–FSE, 1AZ–FE, 1CD–FTV	152 – 162 g (5.4 – 5.7 oz.)
3ZZ–FE, 1ZZ–FE	85 – 105 g (3.0 – 3.7 oz.)

36. INSTALL FRONT AXLE OUTBOARD JOINT BOOT CLAMP

(a) Hold the front drive shaft in a soft vise.



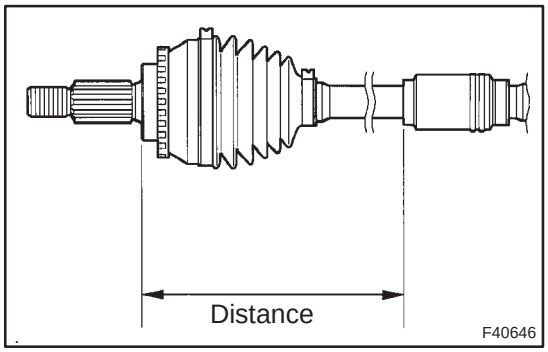
(b) Secure the 2 outboard joint boot clamps onto the boot.

(c) Place SST onto the outboard joint large boot clamp.
  SST 09521–24010

(d) Tighten the SST so that the large clamp is pinched.

NOTICE:

Do not overtighten the SST.



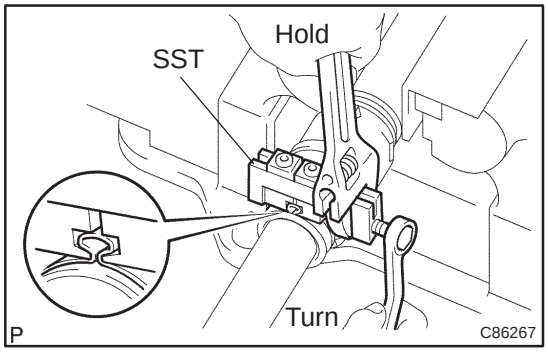
(e) Using SST, adjust the clearance of the large clamp.
  SST 09240–00020
  Clearance: 0.8 mm (0.031 in.) or less

(f) Install the outboard joint boot LH clamp by the same procedures as the outboard joint boot LH No.2 clamp.

NOTICE:

When the measured value exceeds the specified value, retighten the clamp.

37. INSTALL DAMPER, DRIVE SHAFT



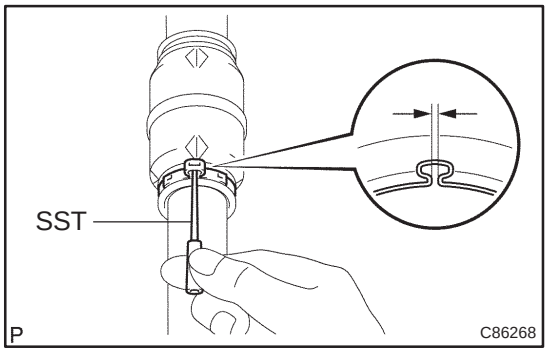
HINT:

- Except 1AZ–FSE, FE (MT)/ 1CD–FTV
- Perform the above procedure only when reassembling the RH side

(a) Temporarily install a new damper clamp.

(b) Set the distance, as described below.

Engine type		Distance mm (in.)
3ZZ–FE	RH	422.0 ± 2.0 (16.61 ± 0.08)
	LH	176.0 ± 2.0 (6.93 ± 0.08)
1ZZ–FE	RH	416.0 ± 2.0 (16.38 ± 0.08)
	LH	176.0 ± 2.0 (6.93 ± 0.08)
1AZ–FSE, FE	RH	212.0 ± 2.0 (8.35 ± 0.08)
	LH (AT)	183.0 ± 2.0 (7.20 ± 0.08)
1CD–FTV	RH	192.0 ± 2.0 (7.56 ± 0.08)
	LH	–



(c) Install the damper clamp.

HINT:

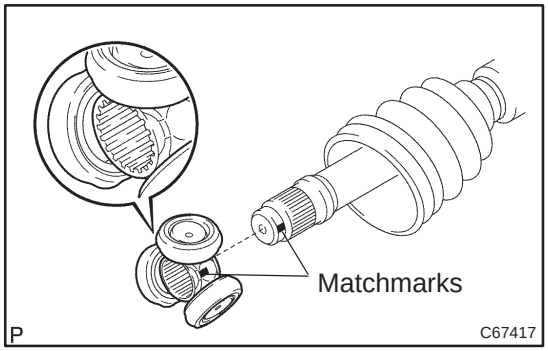
- Install the damper clamp to inboard joint side.
  (1) Hold the front drive shaft in a soft vise.
  (2) Secure the damper clamp onto the damper.
  (3) Place SST onto the damper clamp.
  SST 09521–24010
  (4) Tighten the SST so that the damper clamp is pinched.

NOTICE:

Do not overtighten the SST.

(5) Using SST, adjust the clearance of the damper clamp.

SST 09240–00020



Clearance: 0.8 mm (0.031 in.) or less

NOTICE:

When the measured value exceeds the specified value, re-tighten the clamp.

HINT:

- Install the damper clamp to inboard joint side.
- Except 1AZ–FSE, FE (MT)/ 1CD–FTV
- Perform the above procedure only when reassembling the RH side

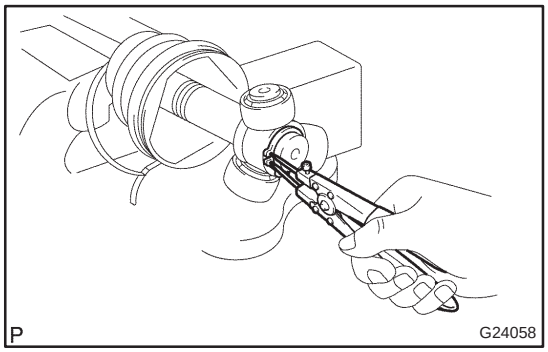
38. INSTALL FRONT DRIVE INBOARD JOINT ASSY LH

(a) Wrap the spline of the outboard joint shaft assy LH with vinyl tape to prevent them from being damaged.

(b) Install new parts to the outboard joint shaft assy LH in the following order.
  (1) Inboard joint boot LH clamp
  (2) Inboard joint boot
  (3) Inboard joint boot LH No.2 clamp

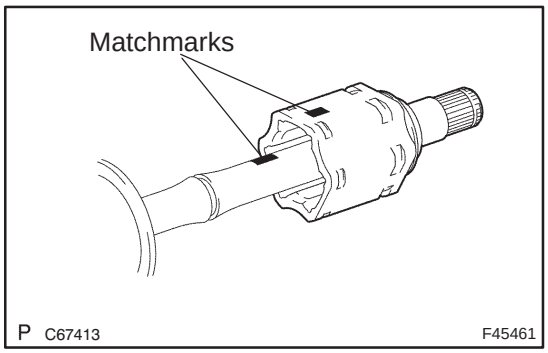
(c) Place the beveled side of the tripod axial spline toward the outboard joint.

(d) Align the matchmarks placed before removal.



(e) Using a brass bar and hammer, tap in the tripod joint assy to the drive shaft assy LH.

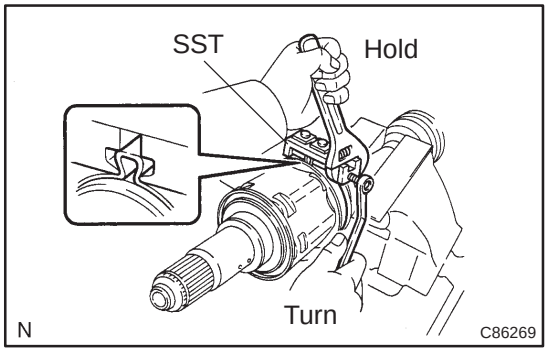
NOTICE:



- **Do not tap the roller.**
- **Be sure to install the tripod joint assy in the correct direction.**

(f) Pack the inboard joint shaft and boot with grease in the boot kit.

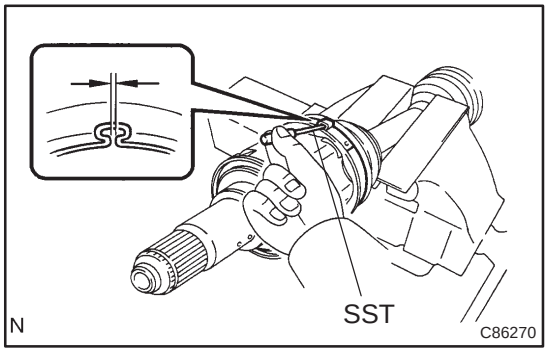
Engine type	Grease capacity g (oz.)
1AZ–FSE, 1AZ–FE, 1CD–FTV	170 – 190 g (6.0 – 6.7 oz.)
3ZZ–FE, 1ZZ–FE	125.5 – 135.5 g (4.4 – 4.8 oz.)



(g) Using a snap ring expander, install a new shaft snap ring.

(h) Aligning the matchmarks, install the inboard joint assy LH to the outboard joint shaft assy LH.

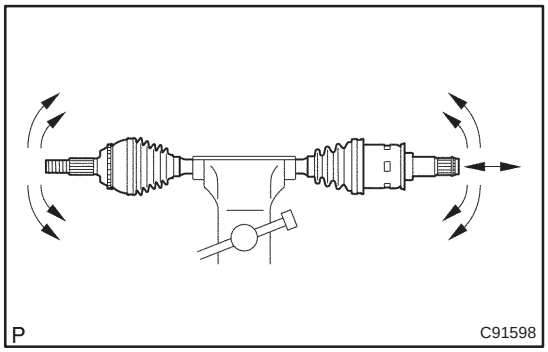
39. INSTALL FR AXLE INBOARD JOINT BOOT



(a) Install the inboard joint boot to the inboard joint assy LH and outboard joint shaft assy LH.

40. INSTALL FRONT AXLE INBOARD JOINT BOOT CLAMP

(a) Install the inboard joint boot clamp.
   (1) Hold the drive shaft in a soft vise.
   (2) Secure the 2 inboard joint boot clamps onto the boot.
   (3) Place SST onto the inboard joint large boot clamp.
   SST 09521–24010
   (4) Tighten the SST so that the large clamp is pinched.



NOTICE:
Do not overtighten the SST.

   (5) Using SST, adjust the clearance of the large clamp.
   SST 09240–00020
   Clearance: 0.8 mm (0.031 in.) or less

NOTICE:
When the measured value exceeds the specified value, re-tighten the clamp.

(b) Install the inboard joint boot LH clamp by the same procedures as the inboard joint boot LH No.2 clamp.

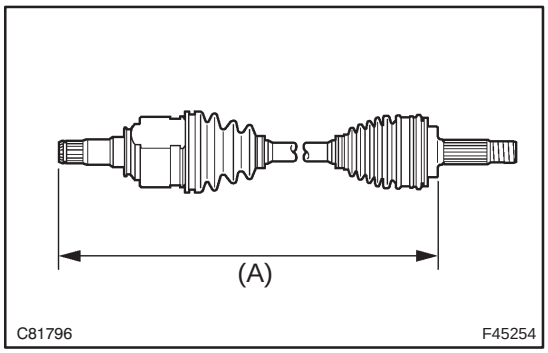
41. INSPECT FRONT DRIVE SHAFT

(a) Check that there is no remarkable play in the radial direction of the outboard joint.

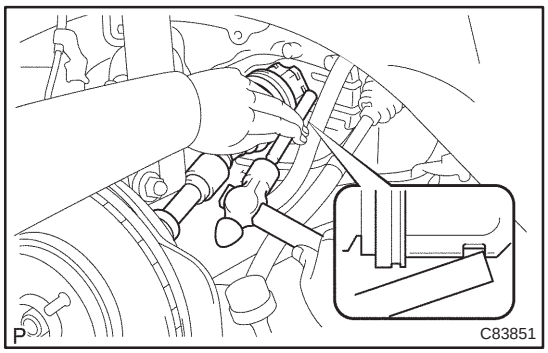
(b) Check that the inboard joint slides smoothly in the thrust direction.

(c) Check that there is no remarkable play in the radial direction of the inboard joint.

(d) Check the boots for damage.



NOTICE:

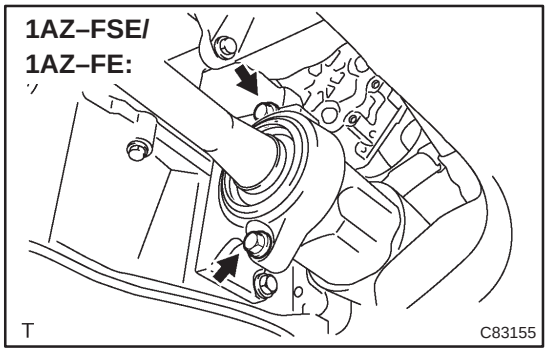


Keep the drive shaft assy level during inspection.

HINT:

For dimension (A), refer to the following table.

Engine type	LH mm (in.)	RH mm (in.)
3ZZ–FE	583.8 (22.98) ± 5.0 (0.20)	856.3 (33.71) ± 5.0 (0.20)
1ZZ–FE	582.9 (22.94) ± 5.0 (0.20)	855.4 (33.68) ± 5.0 (0.20)
1AZ–FSE, 1AZ–FE	559.8 (22.03) ± 5.0 (0.20)	876.0 (34.49) ± 5.0 (0.20)
1CD–FTV	546.8 (21.53) ± 5.0 (0.20)	889.0 (35.00) ± 5.0 (0.20)



42. INSTALL FRONT DRIVE SHAFT ASSY LH

(a) Coat the spline of the inboard joint shaft assy LH with gear oil.

(b) Aligh the shaft splines and install the drive shaft assy LH with a brass bar and hammer.

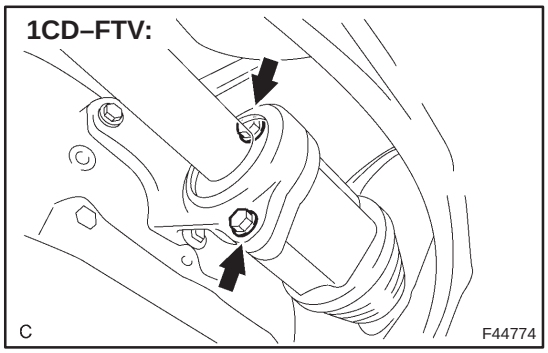
NOTICE:

- **Set the snap ring with the opening side facing downwards.**
- **Be careful not to damage the oil seal, boot and dust cover.**

43. INSTALL FRONT DRIVE SHAFT ASSY RH

HINT:

1AZ–FSE, 1AZ–FE, 1CD–FTV only.



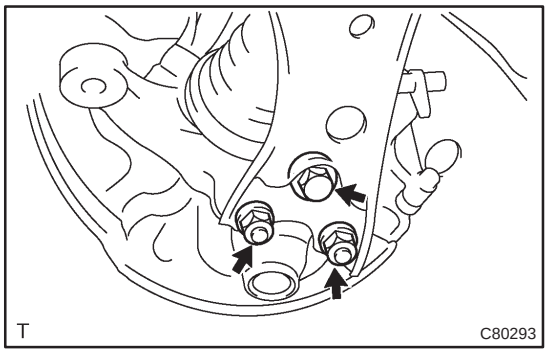
(a) Coat the spline of the inboard joint shaft assy RH with gear oil.

(b) Aline the shaft splines and install the drive shaft assy RH with the 2 bolts.

Torque: 64 N·m (650 kgf·cm, 47 ft·lbf)

NOTICE:

Do not damage the oil seal, boot and dust cover.



44. INSTALL FRONT AXLE ASSY LH

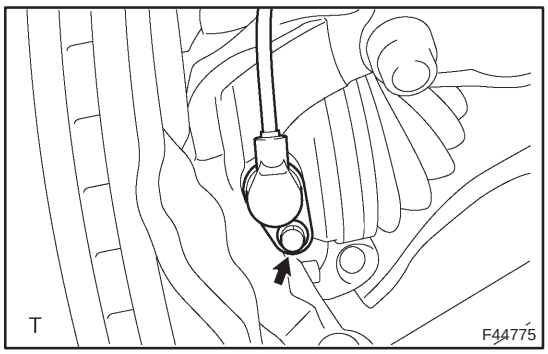
(a) Install the drive shaft assy LH to the front axle assy LH.

NOTICE:

- **Be careful not to damage the outboard joint boot.**
- **Be careful not to damage the speed sensor rotor.**

45. INSTALL FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH

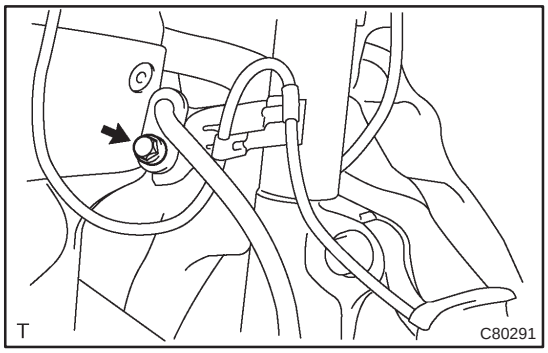
(a) Install the lower ball joint to the front suspension arm sub–assy lower No.1 LH with the bolt and 2 nuts.
Torque: 89 N·m (908 kgf·cm, 66 ft·lbf)



46. INSTALL TIE ROD END SUB–ASSY LH

(a) Install the tie rod end sub–assy LH to the steering knuckle with the nut.
Torque: 49 N·m (500 kgf·cm, 36 ft·lbf)

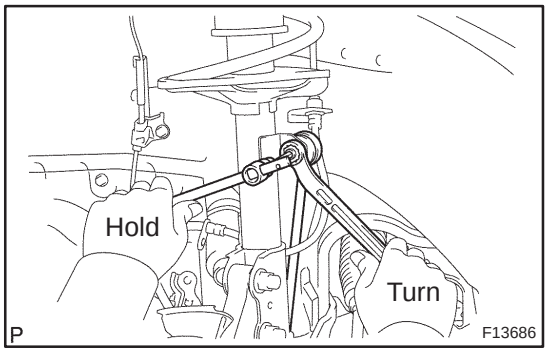
(b) Install a new cotter pin.



NOTICE:

If the holes for the cotter pin are not aligned, tighten the nut up to 60° further.

47. CONNECT SPEED SENSOR FRONT LH

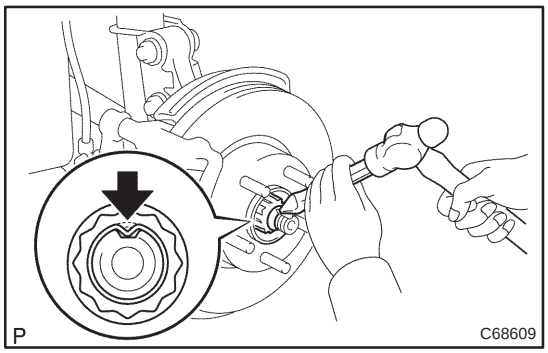


(a) Install the speed sensor front LH to the steering knuckle with the bolt.
Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)

(b) Connect the speed sensor wire and flexible hose to the shock absorber with the bolt.
Torque: 19 N·m (194 kgf·cm, 14 ft·lbf)

NOTICE:

- **Be careful not to damage the speed sensor.**
- **Keep the speed sensor clean.**
- **Do not twist the sensor wire when installing the sensor.**



48. INSTALL FRONT STABILIZER LINK ASSY LH

(a) Install the front stabilizer link assy LH with the nut.
Torque: 74 N·m (755 kgf·cm, 55 ft·lbf)

HINT:

If the ball joint turns together with the nut, use a hexagon wrench (6 mm) to hold the stud.

49. INSTALL FRONT AXLE HUB LH NUT

(a) Install a new axle hub LH nut.
Torque: 216 N·m (2,200 kgf·cm, 159 ft·lbf)

(b) Using a chisel and hammer, stake the axle hub LH nut.

50. INSTALL ENGINE UNDER COVER LH

51. INSTALL FRONT WHEEL
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

52. ADD AUTOMATIC TRANSAXLE FLUID (A/T TRANSAXLE)

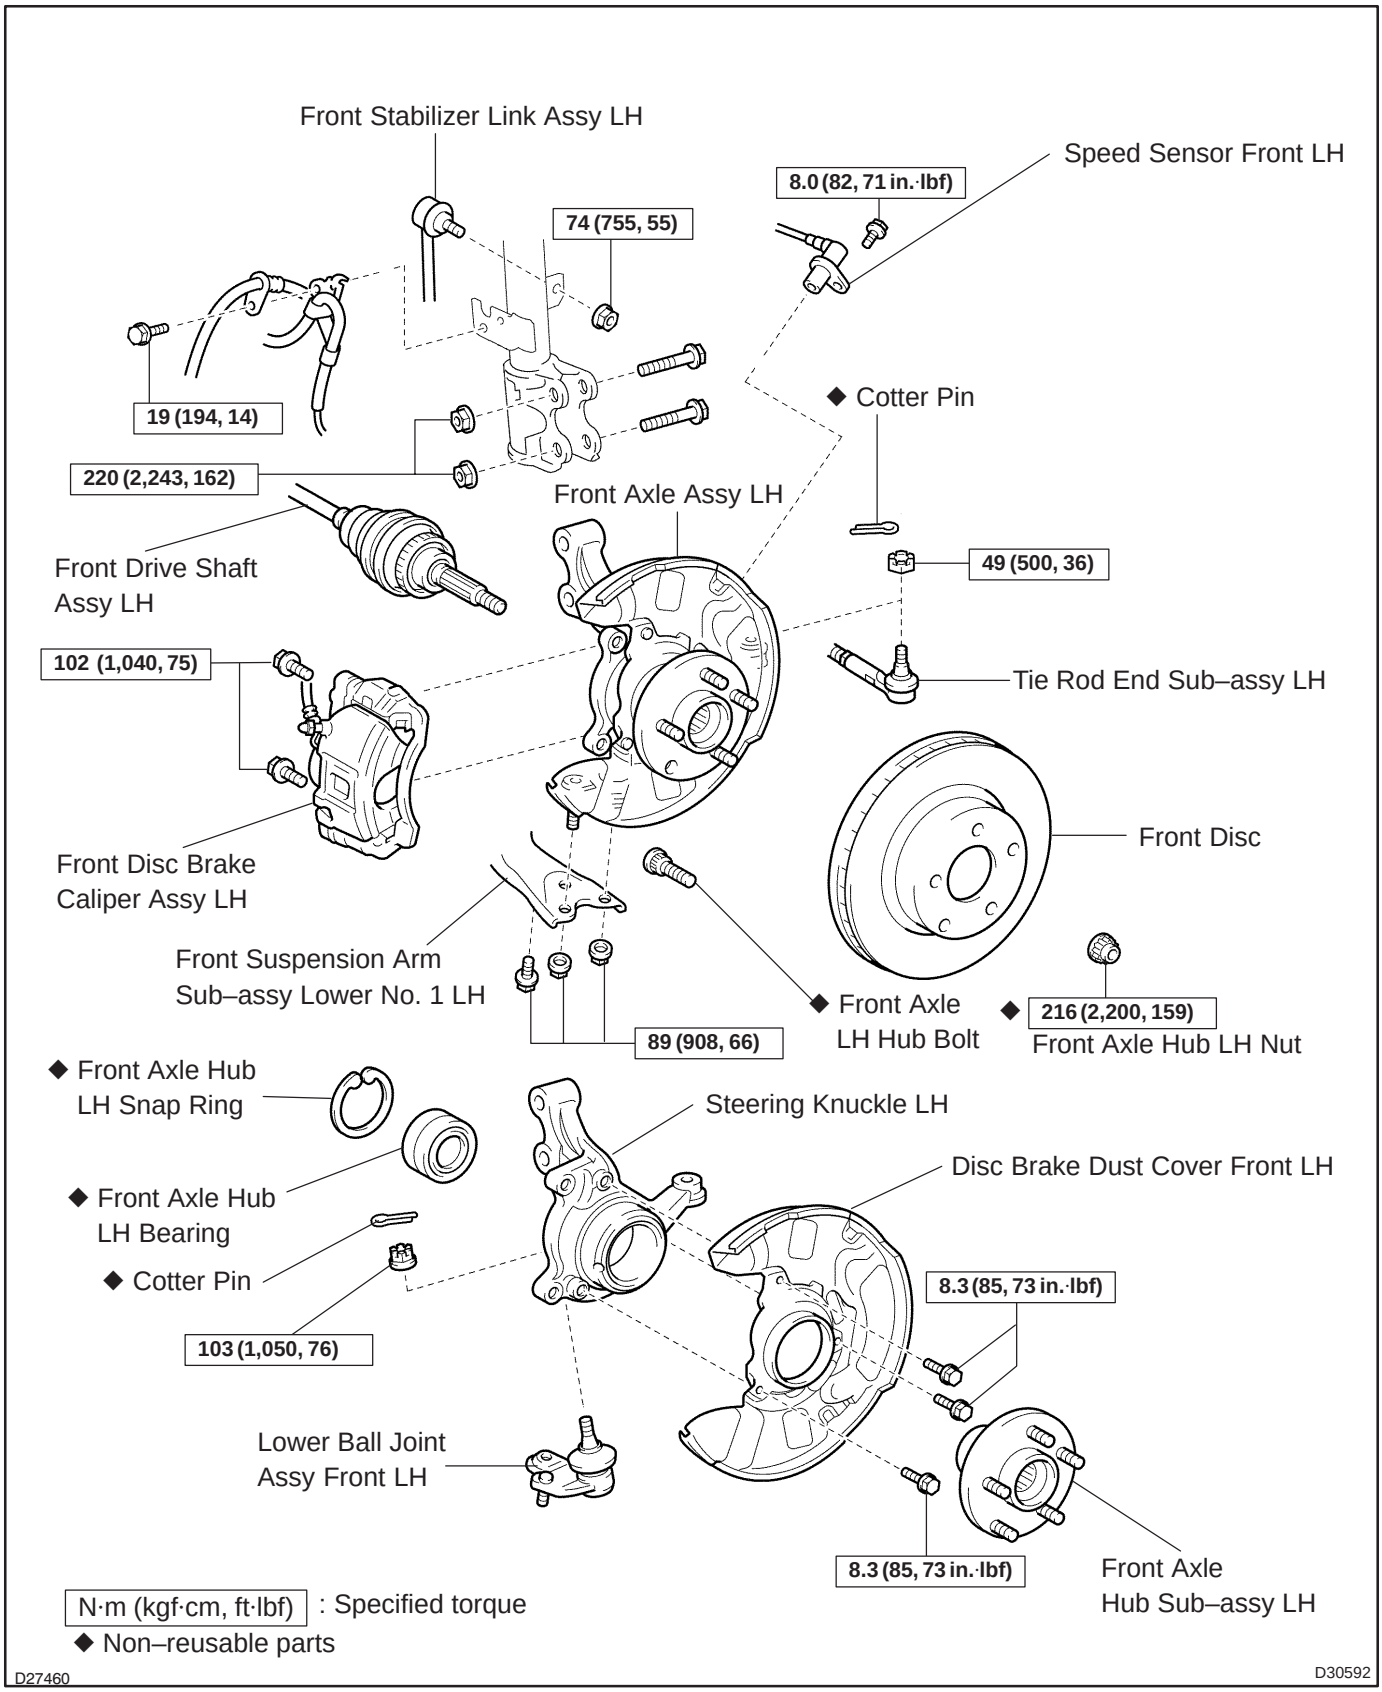
53. INSPECT AND ADJUST AUTOMATIC TRANSAXLE FLUID (A/T TRANSAXLE) (See page 40–2)

54. ADD MANUAL TRANSAXLE OIL (M/T TRANSAXLE)

55. INSPECT MANUAL TRANSAXLE OIL (M/T TRANSAXLE) (See page 41–2)

56. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT (See page 26–6)

57. CHECK ABS SPEED SENSOR SIGNAL



(a) ABD WITH EBD SYSTEM (See page 05–699)

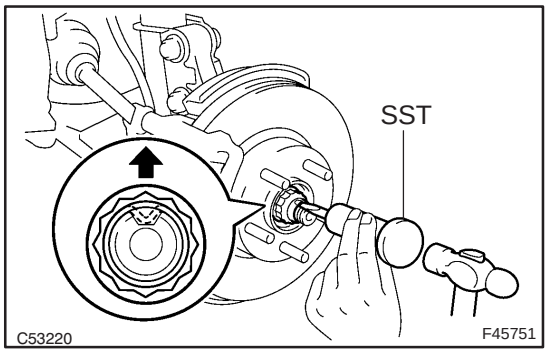
(b) ABD WITH EBD & BA & TRC & VSC SYSTEM (See page 05–756)

FRONT AXLE HUB SUB–ASSY LH

COMPONENTS

30091–02

300JY–01



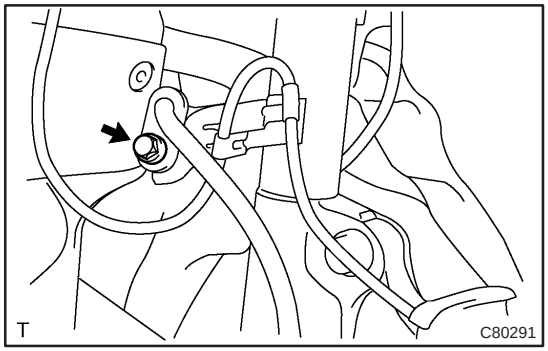
REPLACEMENT

HINT:

Replace the RH side by the same procedures as the LH side.

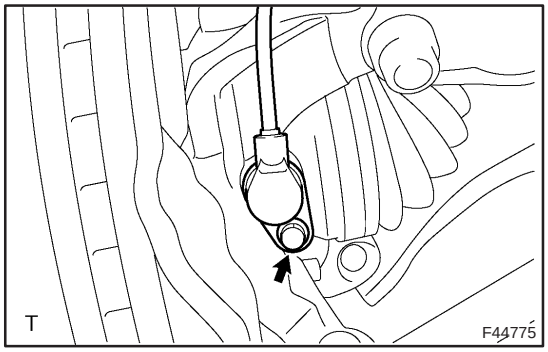
1. REMOVE FRONT WHEEL

2. SEPARATE FRONT STABILIZER LINK ASSY LH (See page 30–6)



3. REMOVE FRONT AXLE HUB LH NUT

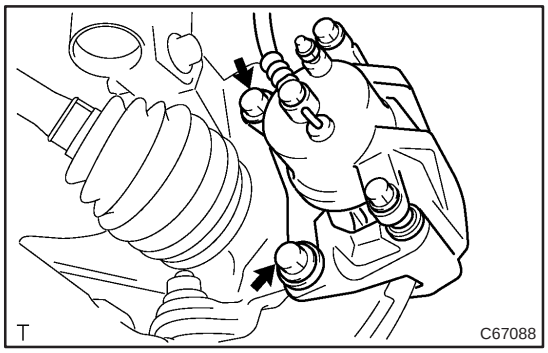
(a) Using SST and a hammer, unstake the staked part of the axle hub LH nut.



SST 09930–00010

(b) While applying the brakes, remove the axle hub LH nut.

4. DISCONNECT SPEED SENSOR FRONT LH

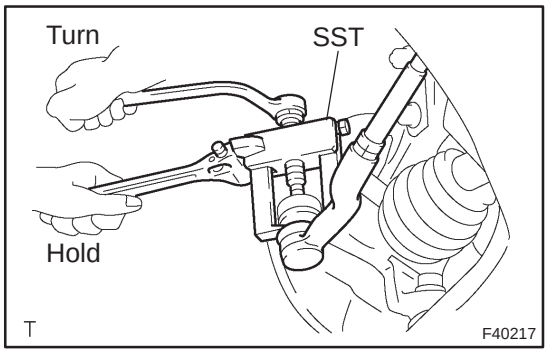


(a) Remove the bolt, and disconnect the speed sensor wire and flexible hose from the shock absorber.

(b) Remove the bolt, separate the speed sensor front LH from the steering knuckle.

NOTICE:

- **Be careful not to damage the speed sensor.**
- **Prevent foreign matter from attaching to the speed sensor.**

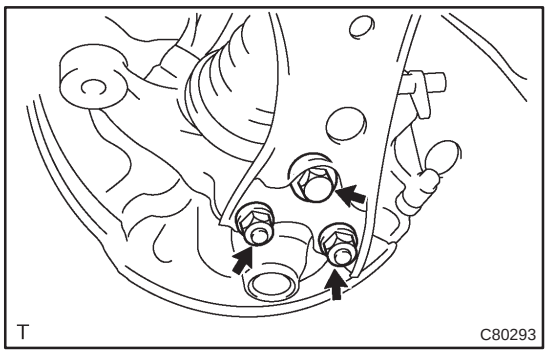


5. SEPARATE FRONT DISC BRAKE CALIPER ASSY LH

(a) Removing the 2 bolts, separate the disc brake caliper assy LH from the steering knuckle.

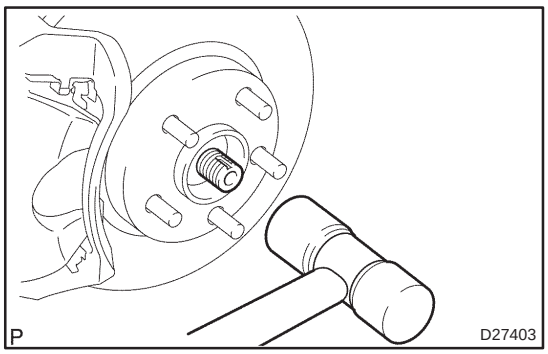
NOTICE:

Use a string or other device to keep the brake caliper from hanging down.



6. REMOVE FRONT DISC

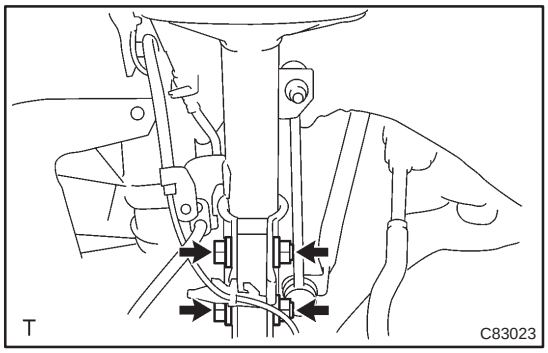
7. SEPARATE TIE ROD END SUB–ASSY LH



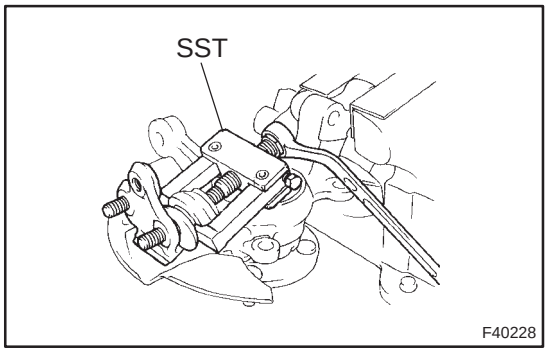
(a) Remove the cotter pin and nut.

(b) Using SST, separate the tie rod end sub–assy LH from the steering knuckle.
SST 09628–62011

8. SEPARATE FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH



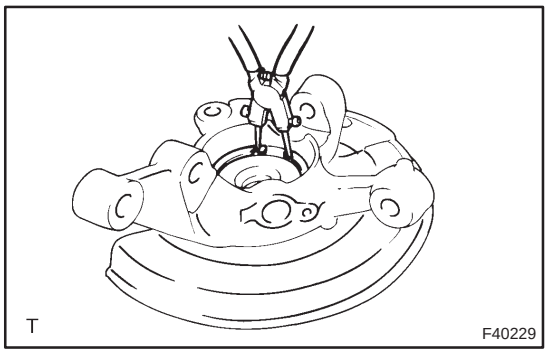
(a) Remove the bolt and 2 nuts, and separate the suspension arm sub–assy lower No.1 LH from the lower ball joint.



9. REMOVE FRONT AXLE ASSY LH

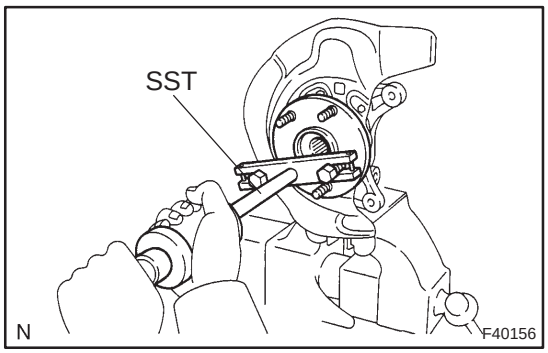
(a) Using a plastic hammer, separate the drive shaft assy LH from the axle hub.

NOTICE:
Be careful not to damage the boot and ABS speed sensor rotor.



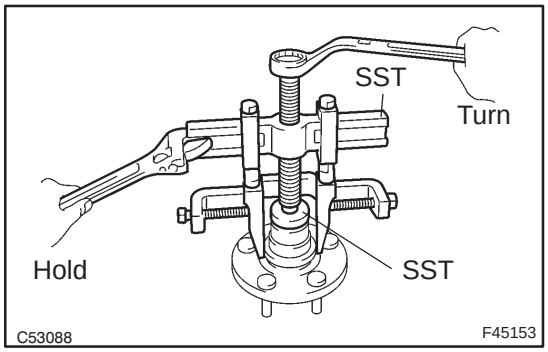
(b) Remove the 2 bolts, nuts and steering knuckle with the shock absorber.

10. REMOVE LOWER BALL JOINT ASSY FRONT LH



(a) Remove the cotter pin and nut.

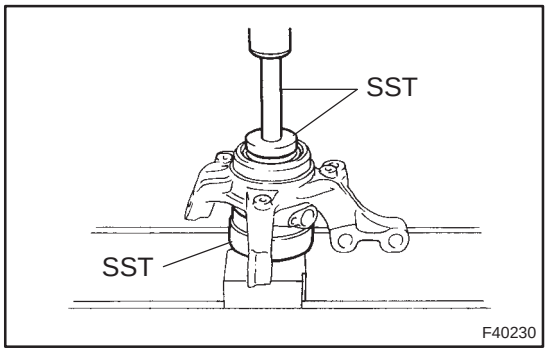
(b) Using SST, remove the ball joint.
SST 09628–62011



11. REMOVE FRONT AXLE HUB LH HOLE SNAP RING

(a) Using snap ring pliers, remove the hole snap ring.

12. REMOVE FRONT AXLE HUB SUB–ASSY LH

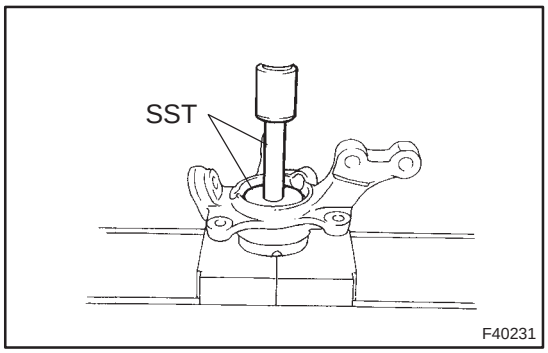


(a) Using SST, remove the axle hub sub–assy.
SST 09520–00031

(b) Using SST, remove the bearing inner race (outside) from the axle hub sub–assy.
SST 09950–40011 (09951–04020, 09952–04010, 09953–04030, 09954–04010, 09955–04061, 09957–04010, 09958–04010), 09950–60010 (09951–00370)

13. REMOVE DISC BRAKE DUST COVER FRONT LH

(a) Remove the 3 bolts and disc brake dust cover front LH.



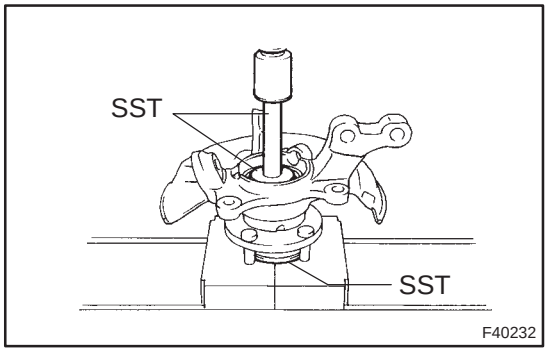
14. REMOVE FRONT AXLE HUB LH BEARING

(a) Place the bearing inner race (outside) on the axle hub LH bearing.

(b) Using SST and a press, remove the axle hub LH bearing from the steering knuckle.

SST 09527–17011, 09950–60010 (09951–00640), 09950–70010 (09951–07100)

15. INSTALL FRONT AXLE HUB LH BEARING

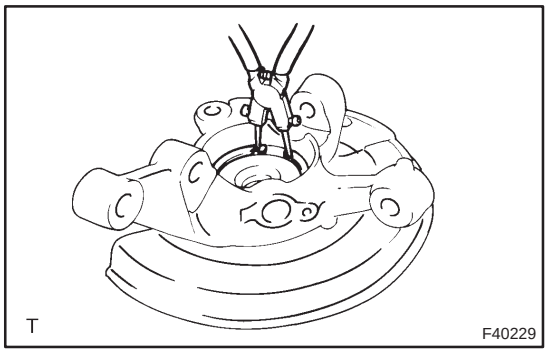


(a) Using SST and a press, install a new axle hub LH bearing to the steering knuckle.

SST 09950–60020 (09951–00720), 09950–70010 (09951–07100)

16. INSTALL DISC BRAKE DUST COVER FRONT LH

(a) Install the disc brake dust cover with the 3 bolts.



Torque: 8.3 N·m (85 kgf·cm, 73 in.·lbf)

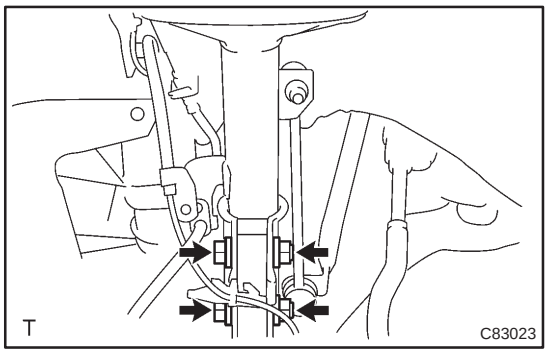
17. INSTALL FRONT AXLE HUB SUB–ASSY LH

(a) Using SST and a press, install the axle hub sub–assy.

SST 09608–32010, 09950–60010 (09951–00600), 09950–70010 (09951–07100)

18. INSTALL FRONT AXLE HUB LH HOLE SNAP RING

(a) Using snap ring pliers, install the hole snap ring.



19. INSTALL LOWER BALL JOINT ASSY FRONT LH

(a) Install the lower ball joint and torque the nut.
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

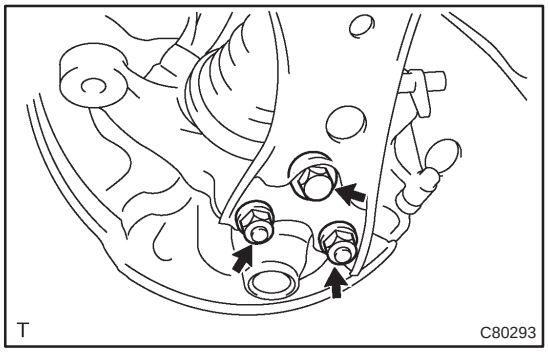
(b) Install a new cotter pin.

NOTICE:

If the holes for the cotter pin are not aligned, tighten the nut up to 60° further.

20. INSTALL FRONT AXLE ASSY LH

(a) Install the 2 bolts, nuts and steering knuckle with 2 bolts and nuts to the shock absorber.
Torque: 220 N·m (2,243 kgf·cm, 162 ft·lbf)



NOTICE:

Only when reusing the bolts and nuts, apply engine oil to the screw part of the nuts.

(b) Push the front axle assy toward the outside of the vehicle, fit the splined part of the drive shaft assy to that of the front axle assy and insert the drive shaft assy into the front axle assy.

NOTICE:

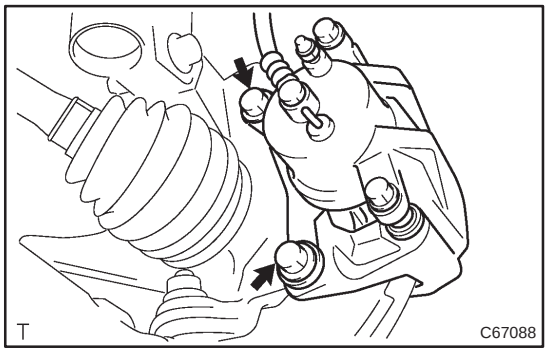
- **Do not push out the front axle assy excessively.**
- **Be careful not to damage the drive shaft outboard joint boot.**
- **Be careful not to damage the speed sensor rotor.**

21. INSTALL FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH

(a) Install the front suspension arm sub–assy lower No.1 LH and lower ball joint with the 2 nuts and bolt.
Torque: 89 N·m (908 kgf·cm, 66 ft·lbf)

22. INSTALL TIE ROD END SUB–ASSY LH

(a) Install the tie rod end sub–assy LH to the steering knuckle.



(b) Install the nut and a new cotter pin.
Torque: 49 N·m (500 kgf·cm, 36 ft·lbf)

NOTICE:

If the holes for the cotter pin are not aligned, tighten the nut up to 60° further.

23. INSTALL FRONT STABILIZER LINK ASSY LH (See page 30–6)

24. INSTALL FRONT DISC

25. INSTALL FRONT DISC BRAKE CALIPER ASSY LH

(a) Install the disc brake caliper assy with the 2 bolts to the steering knuckle.
Torque: 104 N·m (1,040 kgf·cm, 75 ft·lbf)

26. INSTALL FRONT AXLE HUB LH NUT

(a) Using a socket wrench (30 mm), install a new axle hub LH nut.
Torque: 216 N·m (2,200 kgf·cm, 159 ft·lbf)

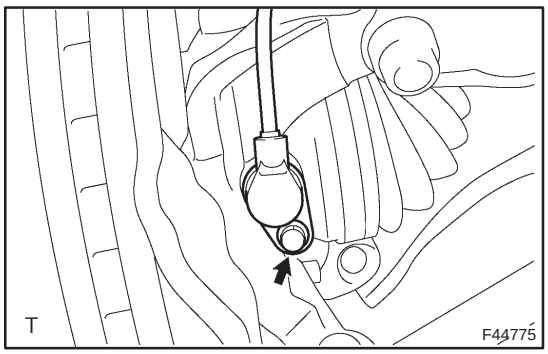
27. SEPARATE FRONT DISC BRAKE CALIPER ASSY LH

(a) Removing the 2 bolts, separate the disc brake caliper assy from the steering knuckle.

NOTICE:

Use a string or other device to keep the brake caliper from hanging down.

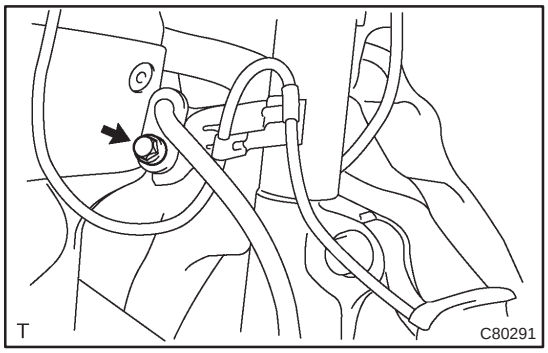
28. REMOVE FRONT DISC



29. INSPECT BEARING BACKLASH (See page 30–2)

30. INSPECT AXLE HUB DEVIATION (See page 30–2)

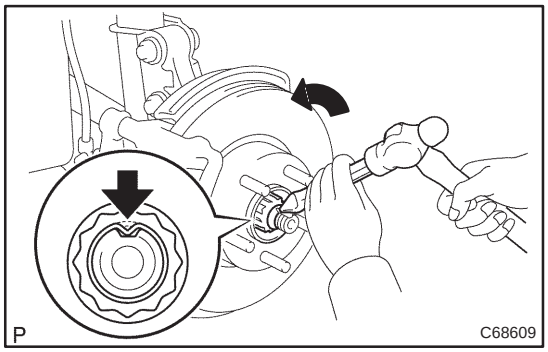
31. INSTALL FRONT DISC



32. INSTALL FRONT DISC BRAKE CALIPER ASSY LH

(a) Install the disc brake caliper assy with the 2 bolts to the steering knuckle.
Torque: 104 N·m (1,040 kgf·cm, 75 ft·lbf)

33. CONNECT SPEED SENSOR FRONT LH



(a) Install the speed sensor front LH to the steering knuckle with the bolt.
Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)

(b) Connect the speed sensor wire and flexible hose to the shock absorber with the bolt.
Torque: 19 N·m (194 kgf·cm, 14 ft·lbf)

NOTICE:

- **Be careful not to damage the speed sensor.**
- **Keep the speed sensor clean.**
- **Do not twist the sensor wire when installing the sensor.**

34. INSTALL FRONT AXLE HUB LH NUT

(a) While applying the brakes, install a new axle hub LH nut.
Torque: 216 N·m (2,200 kgf·cm, 159 ft·lbf)

(b) Using a chisel and hammer, stake the axle hub LH nut.

35. INSTALL FRONT WHEEL
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

36. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT (See page 26–6)

37. CHECK ABS SPEED SENSOR SIGNAL

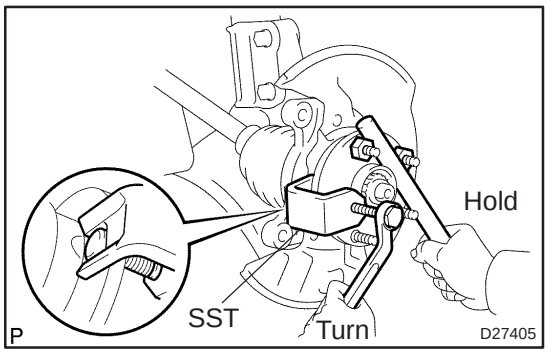
(a) ABD WITH EBD SYSTEM (See page 05–699)

(b) ABD WITH EBD & BA & TRC & VSC SYSTEM (See page 05–756)

FRONT AXLE LH HUB BOLT

30092–02

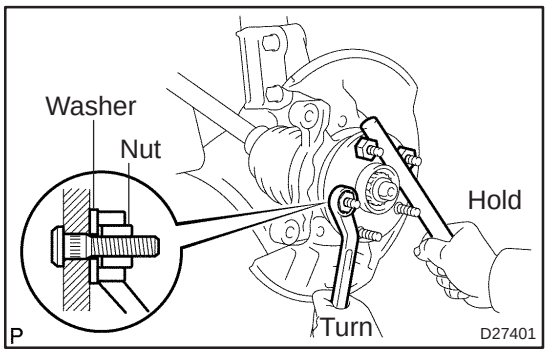
REPLACEMENT



HINT:

- COMPONENTS: See page 30–21
- Replace the RH side by the same procedures as the LH side.

1. REMOVE FRONT WHEEL



2. SEPARATE FRONT DISC BRAKE CALIPER ASSY LH (See page 30–22)

3. REMOVE FRONT DISC

4. REMOVE FRONT AXLE LH HUB BOLT

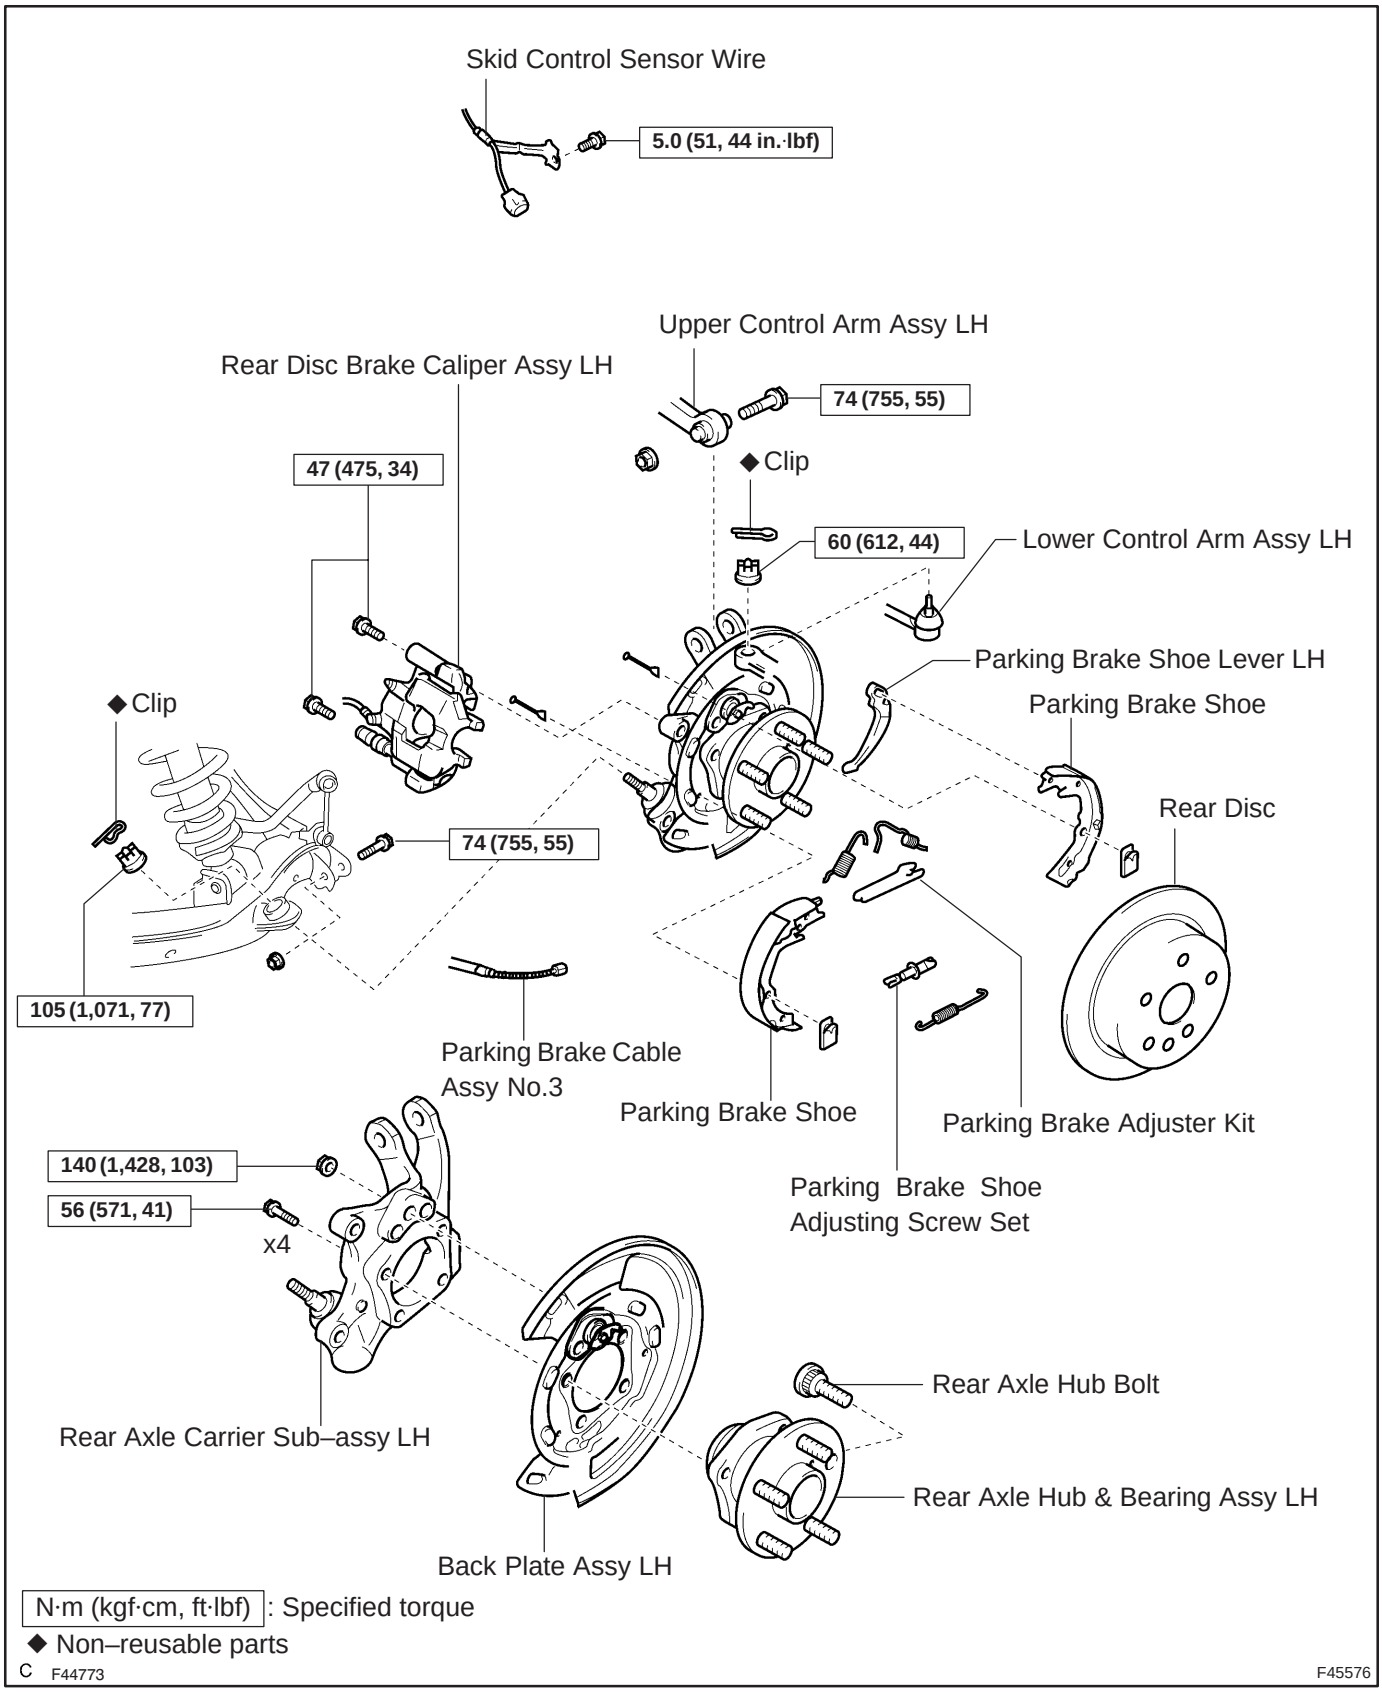
(a) Using SST and a hammer handle or an equivalent to hold the axle hub sub–assy LH, remove the LH hub bolt.
SST 09628–10011

5. INSTALL FRONT AXLE LH HUB BOLT

(a) Install a washer and nut to a new LH hub bolt as shown in the illustration.

(b) Using a hammer handle or an equivalent to hold the axle hub sub–assy LH, install the LH hub bolt by tightening the nut.

6. INSTALL FRONT DISC



7. INSTALL FRONT DISC BRAKE CALIPER ASSY LH (See page 30–22)

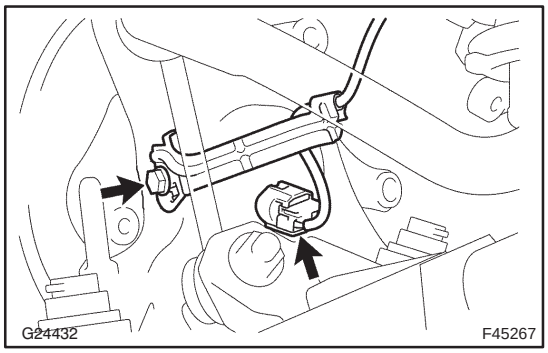
8. INSTALL FRONT WHEEL
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

REAR AXLE CARRIER SUB–ASSY LH

30093–02

COMPONENTS

REPLACEMENT



HINT:

Replace the RH side by the same procedures as the LH side.

1. INSPECT REAR AXLE CARRIER SUB–ASSY LH

(a) Check that there is no looseness on the ball joint by shaking the lower arm up and down with a force of 294 N (30kgf, 66 lbf).

2. REMOVE REAR WHEEL

3. DISCONNECT SKID CONTROL SENSOR WIRE

(a) Remove the bolt, disconnect the skid control sensor wire.

(b) Disconnect the connector.

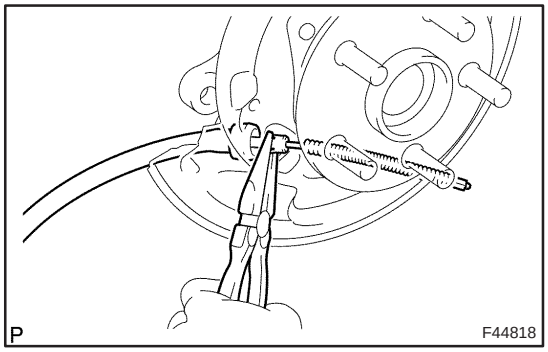
4. SEPARATE REAR DISC BRAKE CALIPER ASSY LH

(a) Removing the 2 bolts and rear disc brake caliper assy.

NOTICE:

Use a string or other device to keep the brake caliper from hanging down.

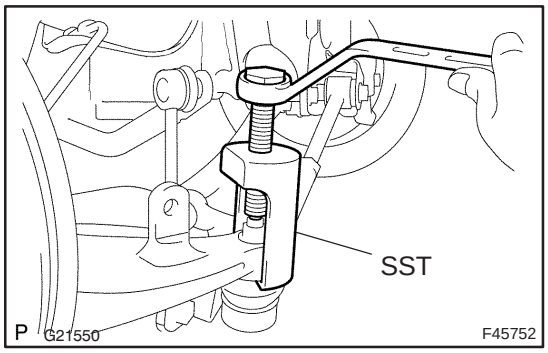
5. REMOVE REAR DISC



6. REMOVE PARKING BRAKE ADJUSTER KIT (See page 33–14)

7. REMOVE PARKING BRAKE SHOE ADJUSTING SCREW SET (See page 33–14)

8. REMOVE PARKING BRAKE SHOE KIT (See page 33–14)

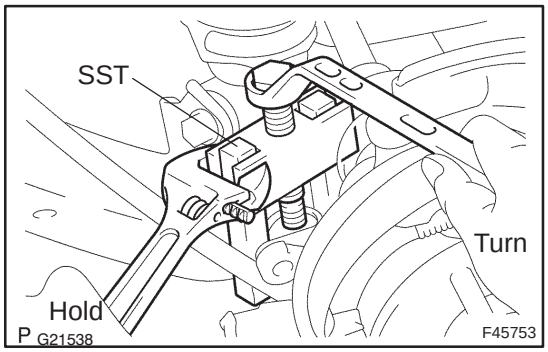


SST 09718–00010

9. REMOVE PARKING BRAKE SHOE LEVER LH (See page 33–14)

10. DISCONNECT PARKING BRAKE CABLE ASSY NO.3

(a) Using needle–nose pliers, and disconnect the parking brake cable assy No.3 from the backing plate.

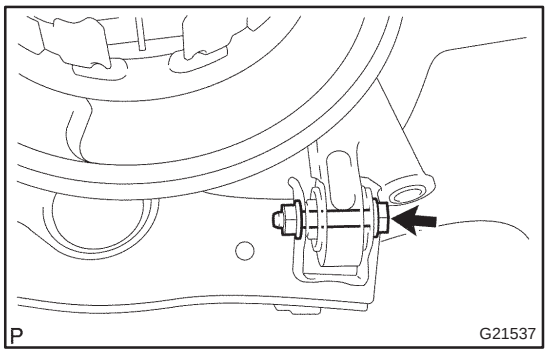


11. SEPARATE LOWER CONTROL ARM ASSY LH

(a) Loosen the lower control arm assy bolt (member side).

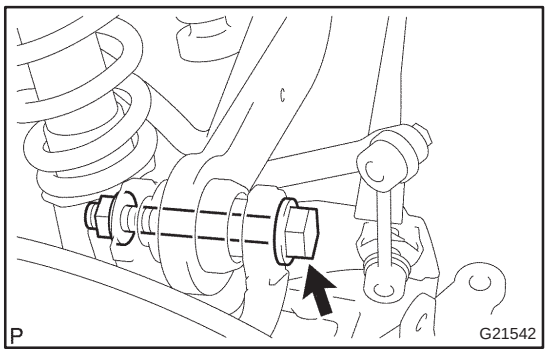
(b) Remove the clip and nut.

(c) Using SST, separate the lower control arm assy from the axle carrier.



SST 09610–20012

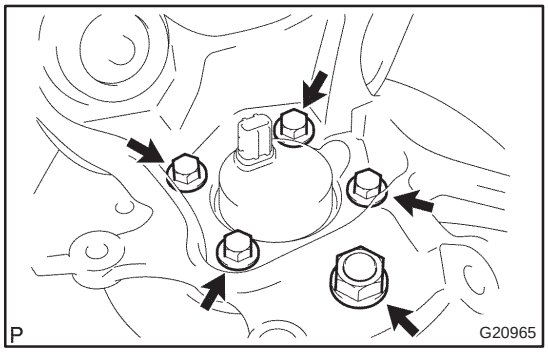
12. SEPARATE REAR SUSPENSION ARM ASSY NO.1 LH



(a) Remove the clip and nut.

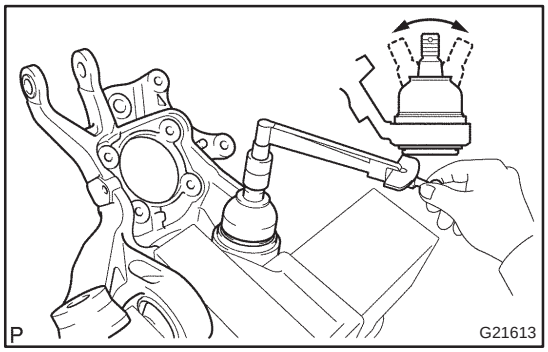
(b) Using SST, separate the rear suspension arm assy No.1 (ball joint side).
SST 09628–62011

(c) Remove the bolt and nut, separate the rear suspension arm assy No.1.



NOTICE:
When removing the bolt, hold the nut not to rotate.

13. SEPARATE UPPER CONTROL ARM ASSY



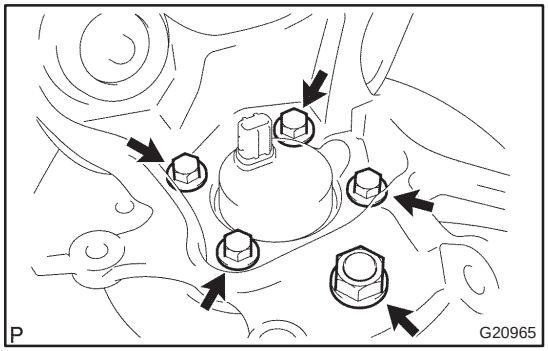
(a) Remove the bolt and nut, separate the upper control arm assy from the axle carrier.

NOTICE:
When removing the bolt, hold the nut not to rotate.

14. REMOVE REAR AXLE CARRIER SUB–ASSY LH

(a) Remove the 4 bolts and nut, hub & bearing assy and axle carrier sub–assy.

15. INSPECT REAR AXLE CARRIER SUB–ASSY LH

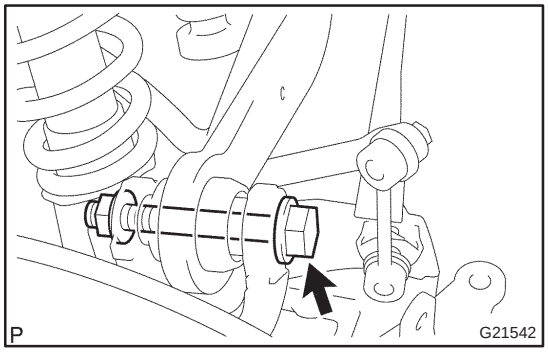


(a) As shown in the illustration, flip the ball joint stud back and forth 5 times, before installing the nut.

(b) Using a torque wrench, turn the nut continuously at a rate of 3 – 5 seconds per turn and take the torque reading on the 5th turn.

Turning torque (Maximum):
3.0 N·m (30 kgf·cm, 27 in.·lbf)

NOTICE:

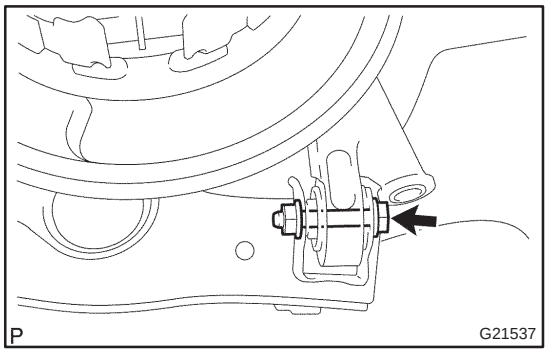


- **Neither abnormal drag nor rattle exists during the rotation.**
- **Neither crack nor grease leakage exists and deformation on the dust cover.**

16. INSTALL REAR AXLE CARRIER SUB–ASSY LH

(a) Install the hub & bearing assy and rear axle carrier sub–assy with the 4 bolts and nut.

Torque:
Bolt: 56 N·m (571 kgf·cm, 41 ft·lbf)
Nut: 140 N·m (1,428 kgf·cm, 103 ft·lbf)

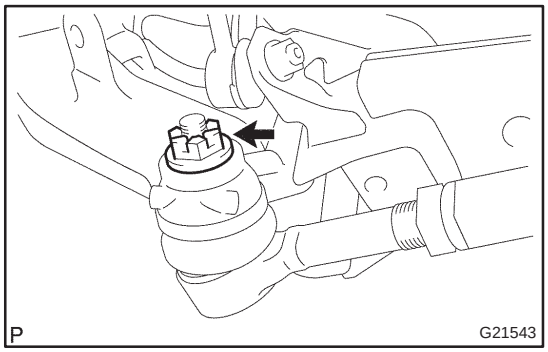


17. TEMPORARILY TIGHTEN UPPER CONTROL ARM ASSY

(a) Temporarily tighten the upper control arm assy with the bolt and nut.

Temporarily tighten torque:
7 – 13 N·m (71 – 133 kgf·cm, 5.1 – 9.6 ft·lbf)

HINT:
Insert the bolt from the rear side of the vehicle and temporarily install the bolt.

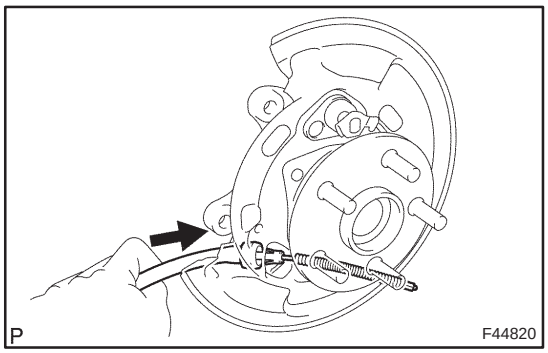


18. TEMPORARILY TIGHTEN REAR SUSPENSION ARM ASSY NO.1 LH

(a) Temporarily tighten the rear suspension arm assy (ball joint side) with the nut.

(b) Temporarily tighten the bolt and nut.

Temporarily tighten torque:
7 – 13 N·m (71 – 133 kgf·cm, 5.1 – 9.6 ft·lbf)

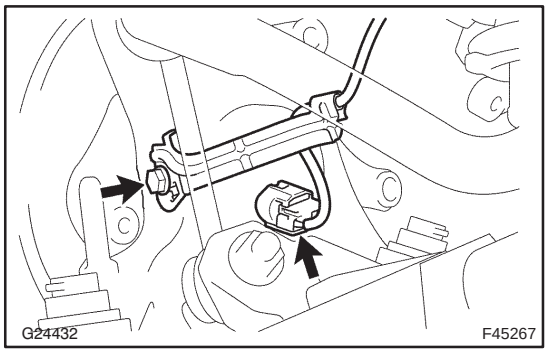


HINT:
Insert the bolt from the rear side of the vehicle and temporarily install the bolt.

19. TEMPORARILY TIGHTEN LOWER CONTROL ARM ASSY LH

(a) Temporarily tighten the lower control arm assy with the nut.

Temporarily tighten Torque:
7 – 13 N·m (71 – 133 kgf·cm, 5.1 – 9.6 ft·lbf)



20. CONNECT PARKING BRAKE CABLE ASSY NO.3

(a) Connect the parking brake cable assy No.3 to the backing plate.

21. INSTALL PARKING BRAKE SHOE LEVER LH (See page 33–14)
22. INSTALL PARKING BRAKE SHOE KIT (See page 33–14)
SST 09718–00010
23. INSTALL PARKING BRAKE SHOE ADJUSTING SCREW SET (See page 33–14)
24. INSTALL PARKING BRAKE ADJUSTER KIT (See page 33–14)
25. CHECK PARKING BRAKE INSTALLATION (See page 33–14)
26. INSPECT BEARING BACKLASH (See page 30–2)
27. INSPECT AXLE HUB DEVIATION (See page 30–2)
28. INSTALL REAR DISC
29. ADJUST PARKING BRAKE SHOE CLEARANCE (See page 33–14)
30. INSTALL REAR DISC BRAKE CALIPER ASSY LH

(a) Install the rear disc brake caliper with the 2 bolts.
Torque: 47 N·m (475 kgf·cm, 34 ft·lbf)

31. CONNECT SKID CONTROL SENSOR WIRE

(a) Connect the skid control sensor wire with the bolt.
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)

(b) Connect the connector.

HINT:
Do not twist the sensor wire when installing the sensor.

32. INSTALL REAR WHEEL
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)
33. STABILIZE SUSPENSION (See page 27–8)

34. FULLY TIGHTEN UPPER CONTROL ARM ASSY

(a) Fully tighten the bolt.

Torque: 74 N·m (755 kgf·cm, 55 ft·lbf)

NOTICE:

When installing the bolt, hold the nut not to rotate.

35. FULLY TIGHTEN REAR SUSPENSION ARM ASSY NO.1 LH

(a) Fully tighten the nut (ball joint side).

Torque: 105 N·m (1,071 kgf·cm, 77 ft·lbf)

(b) Install the clip.

NOTICE:

If the holes for the clip are not aligned, tighten the nut up to 60° further.

(c) Fully tighten the bolt and nut.

Torque: 74 N·m (755 kgf·cm, 55 ft·lbf)

NOTICE:

When installing the bolt, hold the nut not to rotate.

36. FULLY TIGHTEN LOWER CONTROL ARM ASSY LH

(a) Fully tighten the nut.

Torque: 60 N·m (612 kgf·cm, 44 ft·lbf)

(b) Install the clip.

NOTICE:

If the holes for the clip are not aligned, tighten the nut up to 60° further.

(c) Fully tighten the bolt (member side).

Torque: 105 N·m (1,071 kgf·cm, 77 ft·lbf)

NOTICE:

When installing the bolt, hold the nut not to rotate.

37. INSPECT AND ADJUST PARKING BRAKE LEVER TRAVEL (See page 33–2)

38. INSPECT AND ADJUST REAR WHEEL ALIGNMENT (See page 27–4)

39. CHECK ABS SPEED SENSOR SIGNAL

(a) ABD WITH EBD SYSTEM (See page 05–699)

(b) ABD WITH EBD & BA & TRC & VSC SYSTEM (See page 05–756)

REAR AXLE LH HUB BOLT

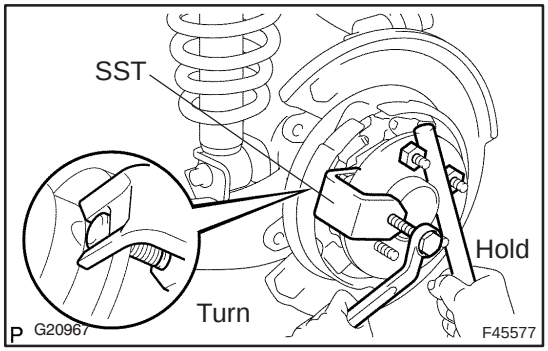
300K0–01

REPLACEMENT

HINT:

- COMPONENTS: See page 30–30
- Replace the RH side by the same procedures as the LH side.

1. REMOVE REAR WHEEL



2. SEPARATE REAR DISC BRAKE CALIPER ASSY LH

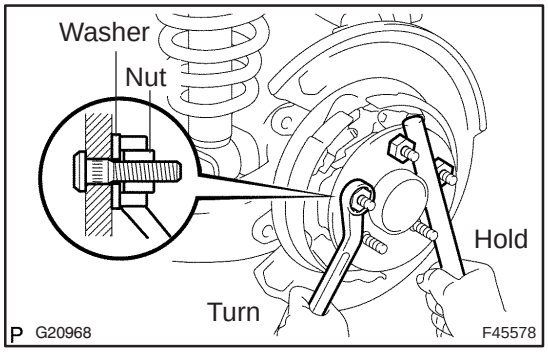
(a) Removing the 2 bolts and rear disc brake caliper assy.

NOTICE:

Use a string or other device to keep the brake caliper from hanging down.

3. REMOVE REAR DISC

4. REMOVE REAR AXLE LH HUB BOLT



(a) Turn the axle hub to move the LH hub bolt and SST, that are to be removed, to the place shown in the illustration.

NOTICE:

Do not replace the hub bolt in any places other than that in the illustration.

(b) Using SST and a hammer handle or an equivalent to hold the axle hub, remove the LH hub bolt.

SST 09628–10011

5. INSTALL REAR AXLE LH HUB BOLT

(a) Install a washer and nut to a new LH hub bolt as shown in the illustration.

(b) Using a hammer handle or an equivalent to hold the axle hub, install the LH hub bolt by torquing the nut.

6. INSTALL REAR DISC

7. INSTALL REAR DISC BRAKE CALIPER ASSY LH

(a) Install the rear disc brake caliper assy with the 2 bolts.

Torque: 47 N·m (475 kgf·cm, 34 ft·lbf)

8. INSTALL REAR WHEEL

Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

BRAKE SYSTEM

3201A–12

PRECAUTION

- **Care must be taken to replace each part properly as it could affect the performance of the brake system and result in a driving hazard. Replace the ones with parts having the same part number or equivalent.**
- **It is very important to keep the parts and the area clean when repairing the brake system.**
- **If the vehicle is equipped with a mobile communication system, refer to the precaution in the INTRODUCTION.**

3201B–12

PROBLEM SYMPTOMS TABLE

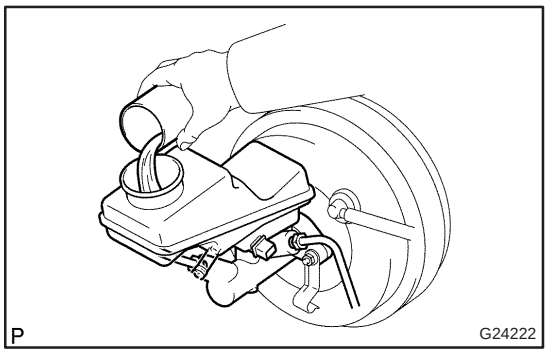
Use the table below to help you find the cause of the problem. The numbers indicate the probability of the problems in descending order. Check each part in order. If necessary, replace these parts.

Symptom	Suspect Area	See page
Low pedal or spongy pedal	3. Fluid leaks in brake system	–
	4. Air in brake system	32–4
	5. Piston seals (Worn or damaged)	32–41 32–47
	6. Brake master cylinder (faulty)	32–13
	7. Brake booster push rod (Out of adjustment)	32–13
Brake drag	1. Brake pedal free play (Minimal)	32–6
	2. Parking brake lever travel (Out of adjustment)	33–2
	3. Parking brake wire (Sticking)	33–2
	4. Disk brake pad (Cracked or distorted)	32–41 32–47
	5. Piston (Stuck or Frozen)	32–41 32–47
	6. Brake booster push rod (Out adjustment)	32–13
	7. Vacuum leaks in brake booster system	32–17 32–21
	8. Brake master cylinder (Faulty)	32–13
Brake pull	1. Piston (Stuck or Frozen)	32–41 32–47
	2. Pad or lining (Oily)	32–41 32–47
	3. Disc (Scored)	32–41 32–47
	4. Pad (Cracked or distorted)	32–41 32–47
Hard pedal but brake inefficient	1. Fluid leaks in brake system	–
	2. Air in brake system	32–4
	3. Pad (Worn)	32–41 32–47
	4. Pad (Cracked or distorted)	32–41 32–47
	5. Pad (Oily)	32–41 32–47
	6. Pad (Glazed)	32–41 32–47
	7. Disc (Scored)	32–41 32–47
	8. Booster push rod (Out of adjustment)	32–13
	9. Vacuum leaks for booster system	32–17 32–21

Noise from brakes	1. Pad (Cracked or distorted)	32–41 32–47
	2. Installation bolt (Loose)	32–41 32–47
	3. Disc (Scored)	32–41 32–47
	4. Pad support plate (Loose)	32–41 32–47
	5. Sliding pin (Worn)	32–41 32–47
	6. Pad (dirty)	32–41 32–47
	7. Pad(Glazed)	32–41 32–47

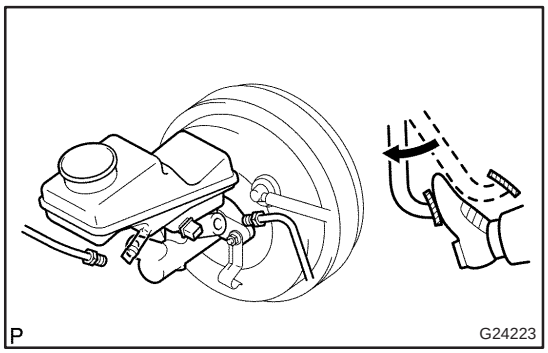
BRAKE FLUID

3201C–08



BLEEDING

NOTICE:



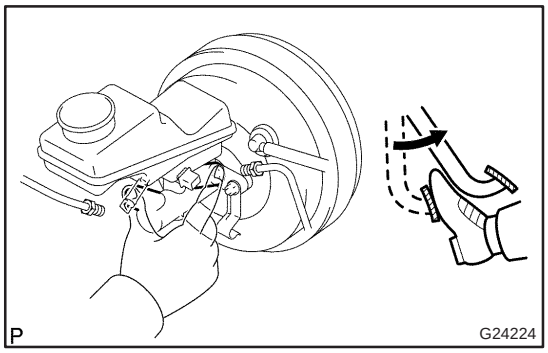
Wash the brake fluid off immediately if it adheres to any painted surfaces.

HINT:

When working on the brake system or when air in the brake lines is suspected, bleed the air from the system.

1. FILL RESERVOIR WITH BRAKE FLUID
Fluid: SAE J1704 or FMVSS No. 116 DOT4

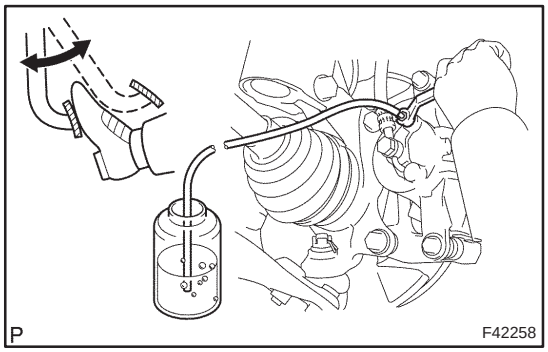
2. BLEED MASTER CYLINDER



HINT:

After disassembling the master cylinder or when the reservoir becomes empty, bleed the air out of the brake master cylinder.

(a) w/o VSC:
Using SST, Disconnect the brake lines from the brake master cylinder.
SST 09023–00100



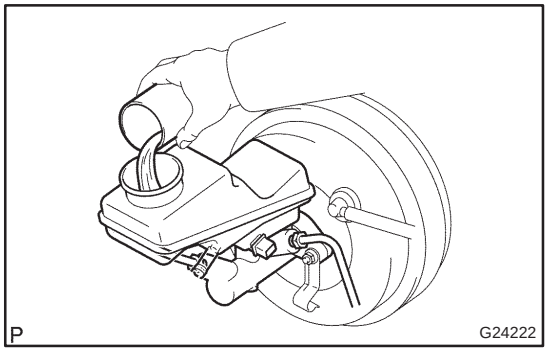
(b) w/ VSC:
Using SST, Disconnect the brake lines from the brake master cylinder.
SST 09023–38400

(c) Slowly depress and hold the brake pedal it.

(d) Cover off the outer holes with your fingers, and release the brake pedal.

(e) Repeat (b) and (c) 3 or 4 times.

3. BLEED BRAKE LINE



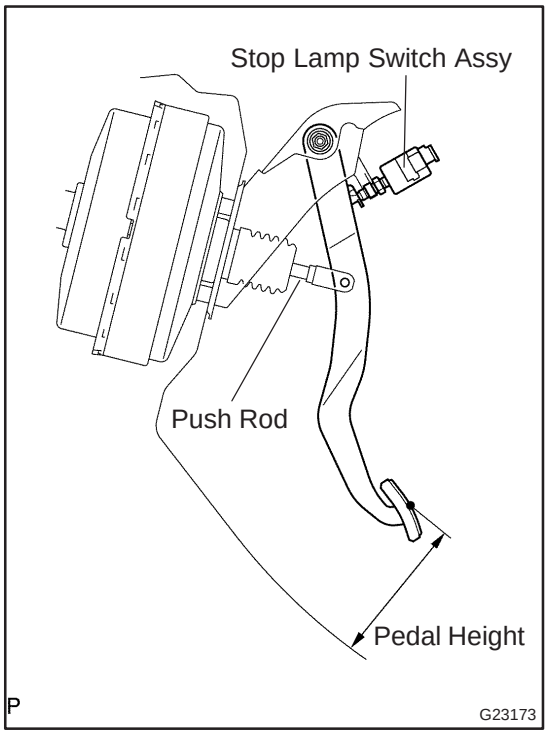
(a) Connect the vinyl tube to the brake caliper.

(b) Depress the brake pedal several times, then loosen the bleeder plug with the pedal depressed.

(c) At the point when the fluid stops, coming out tighten the bleeder plug, then release the brake pedal.

(d) Repeat (b) and (c) until all the air in the fluid has been bled out.

(e) Repeat the above procedure to bleed the air out of the brake line for each wheel.
Torque: 10 N·m (102 kgf·cm, 7 ft.·lbf)



4. CHECK FLUID LEVEL IN RESERVOIR

(a) Check the fluid level and add fluid if necessary.
Fluid: SAE J1704 or FMVSS No. 116 DOT4

BRAKE PEDAL SUB–ASSY

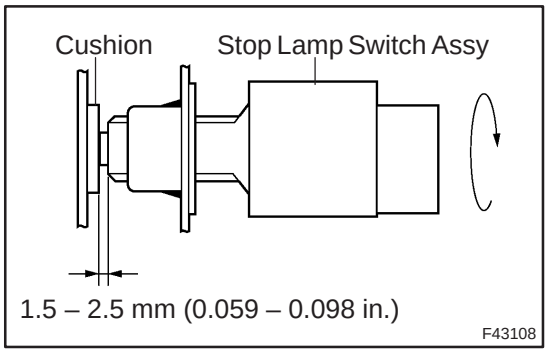
ADJUSTMENT

320VI–01

1. CHECK AND ADJUST BRAKE PEDAL HEIGHT

(a) Inspect brake pedal height.

Pedal height from dash panel:
RHD: 142.5 to 152.5 mm (5.610 to 6.004 in.)
LHD:
M/T: 148.1 to 158.1 mm (5.831 to 6.224 in.)
A/T: 149.9 to 159.9 mm (5.902 to 6.295 in.)



(b) Adjust brake pedal height.

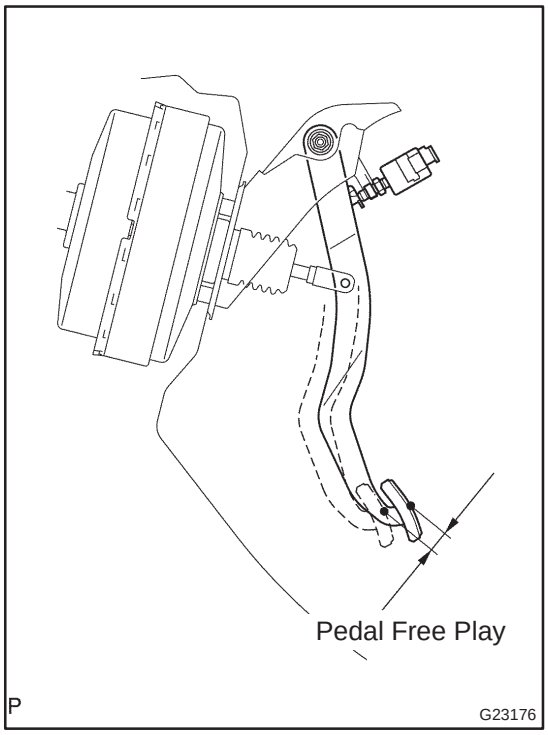
(1) Remove the instrument finish panel lower.
(2) Disconnect the connector from the stop lamp switch assy.
(3) Turn the stop lamp switch assy counterclokwise and remove the stop lamp switch assy.
(4) Loosen the brake master cylinder push rod clevis lock nut.
(5) Adjust the pedal height by turning the pedal push rod.
(6) Tighten the push rod lock nut.

Torque: 19 N·m (194 kgf·cm, 14 ft·lbf)

HINT:
If the pedal height is incorrect, check and adjust the stop lamp switch clearance.

(c) Disconnect the stop lamp switch assy connector from the stop lamp switch assy.
(d) Turn the stop lamp switch assy counterclockwise and remove the stop lamp switch assy.

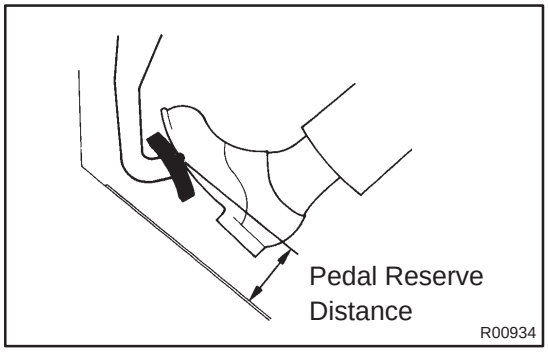
(e) Insert the stop lamp switch assy until the body hits the cushion.



NOTICE:
When inserting the stop lamp switch assy, support the pedal from behind so that the pedal is not pushed in.

(f) Make a quarter turn clockwise to install the stop lamp switch assy.

NOTICE:
The turning torque for installing the stop lamp switch assy.
Torque: 1.5 N·m (15 kgf·cm, 13 in.·lbf) or less

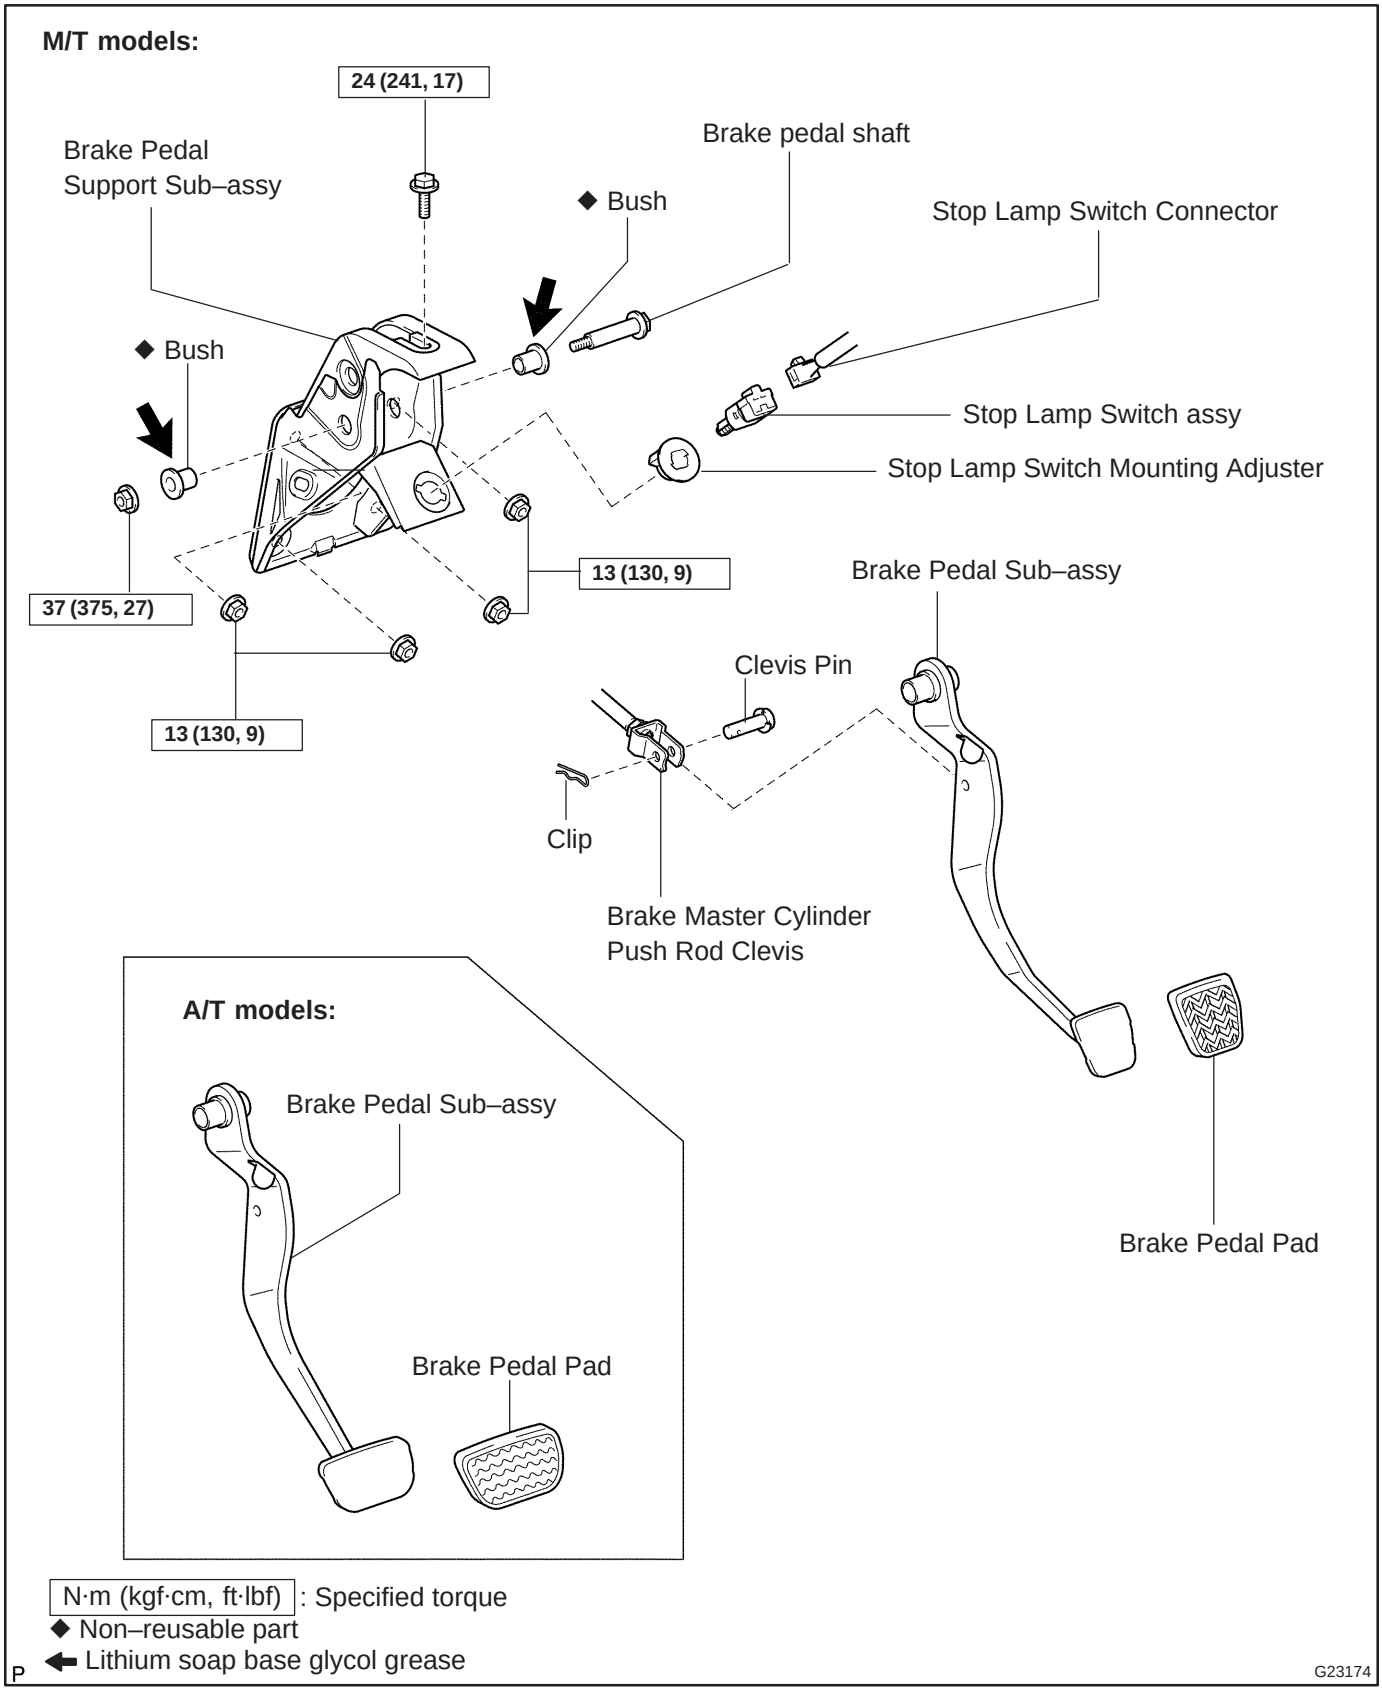


(g) Connect the stop lamp switch connector to the stop lamp switch assy.

(h) Check the protrusion of the rod.
Protrusion of the rod: 0.5 to 2.6 mm (0.020 to 0.102 in.)
(i) Install the clevis pin and clip.
(j) After adjusting the pedal height, check the pedal free play.

2. CHECK PEDAL FREE PLAY

(a) Stop the engine and depress the brake pedal several times until there is no more vacuum left in the booster.
(b) Push in the pedal until the beginning of the resistance is felt. Measure the distance, as shown.
Pedal free play: 1 to 6 mm (0.04 to 0.24 in.)



3. CHECK PEDAL RESERVE DISTANCE

(a) Release the parking brake lever.
With the engine running, depress the pedal and measure the pedal reserve distance, as shown.
Pedal reserve distance from asphalt sheet at 490 N (50 kgf, 110.2 lbf): More than 50 mm (1.97 in.)

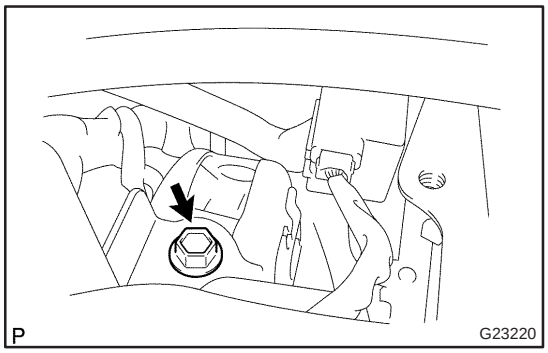
If the distance is out of the specification , troubleshoot the brake system.

320G0–02

COMPONENTS

N·m (kgf·cm, ft·lbf) : Specified torque

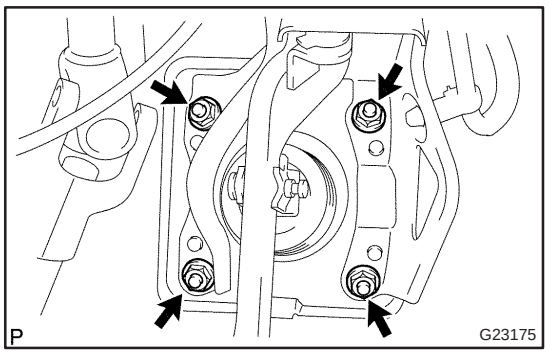
◆ Non–reusable part



⬅ Lithium soap base glycol grease

P

G23174



REPLACEMENT

1. REMOVE COMBINATION METER ASSEMBLY (See page 71–21)

2. REMOVE BRAKE PEDAL SUPPORT SUB–ASSY

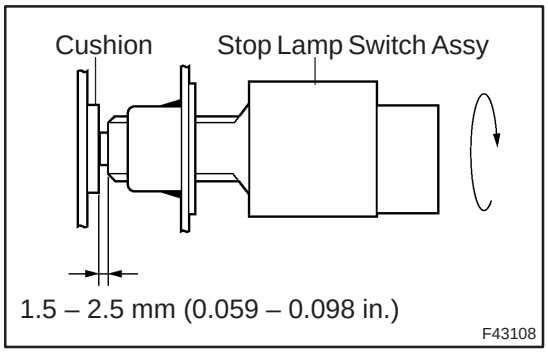
(a) Remove the bolt from the brake pedal support sub–assy.
(b) Disconnect the stop lamp switch connector.
(c) Remove the clip and clevis pin, and disconnect the brake master cylinder push rod clevis from the brake pedal sub–assy.

(d) Remove the 4 nuts and brake pedal support sub–assy.

3. REMOVE BRAKE PEDAL SUB–ASSY

(a) Remove the brake pedal shaft and nut from the brake pedal support sub–assy.
(b) Remove the brake pedal sub–assy and 2 bushes.

4. REMOVE STOP LAMP SWITCH ASSY



(a) Turn the stop lamp switch assy counterclockwise and remove the stop lamp switch assy.
(b) Remove the stop lamp switch mounting adjuster from the brake pedal support sub–assy.

5. REMOVE BRAKE PEDAL PAD

(a) Remove the brake pedal pad from the brake pedal sub–assy.

6. INSTALL BRAKE PEDAL PAD

(a) Install the brake pedal pad to the brake pedal sub–assy.

7. INSTALL STOP LAMP SWITCH ASSY

(a) Install the stop lamp switch mounting adjuster to the brake pedal support sub–assy.
(b) Install the stop lamp switch assy until the body hits the cushion.

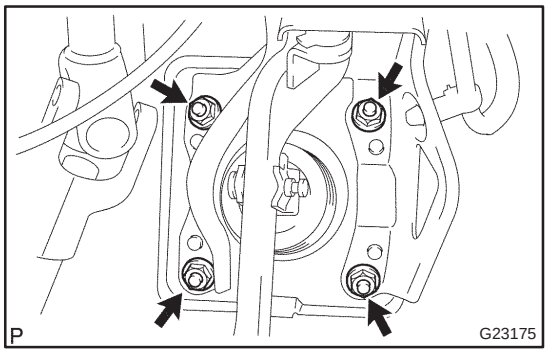
NOTICE:

When inserting the stop lamp switch assy, support the pedal from behind so that the pedal is not pushed in.

(c) Make a quarter turn clockwise to install the stop lamp switch assy.

NOTICE:

The turning torque for installing the stop lamp switch assy.



Torque: 1.5 N·m (15 kgf·cm, 13 in.·lbf) or less

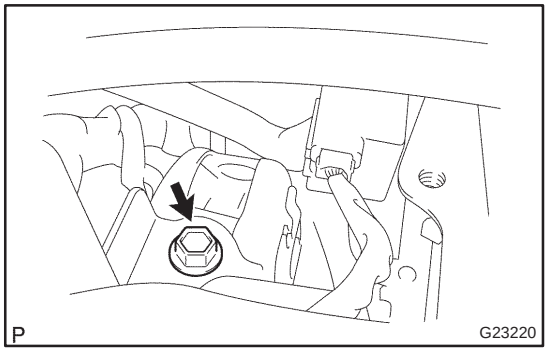
8. INSTALL BRAKE PEDAL SUB–ASSY

(a) Apply lithium soap base glycol grease to the inside surface of 2 new bushes.

(b) Install the brake pedal sub–assy and 2 bushes to the brake pedal support sub–assy with the brake pedal shaft and nut.

Torque: 37 N·m (375 kgf·cm, 27 ft·lbf)

9. INSTALL BRAKE PEDAL SUPPORT SUB–ASSY



(a) Install the brake pedal support sub–assy with the 4 nuts.

Torque: 13 N·m (130 kgf·cm, 9 ft·lbf)

(b) Connect the stop lamp switch connector to the stop lamp switch assy.

(c) Apply lithium soap base glycol grease to the clevis pin.

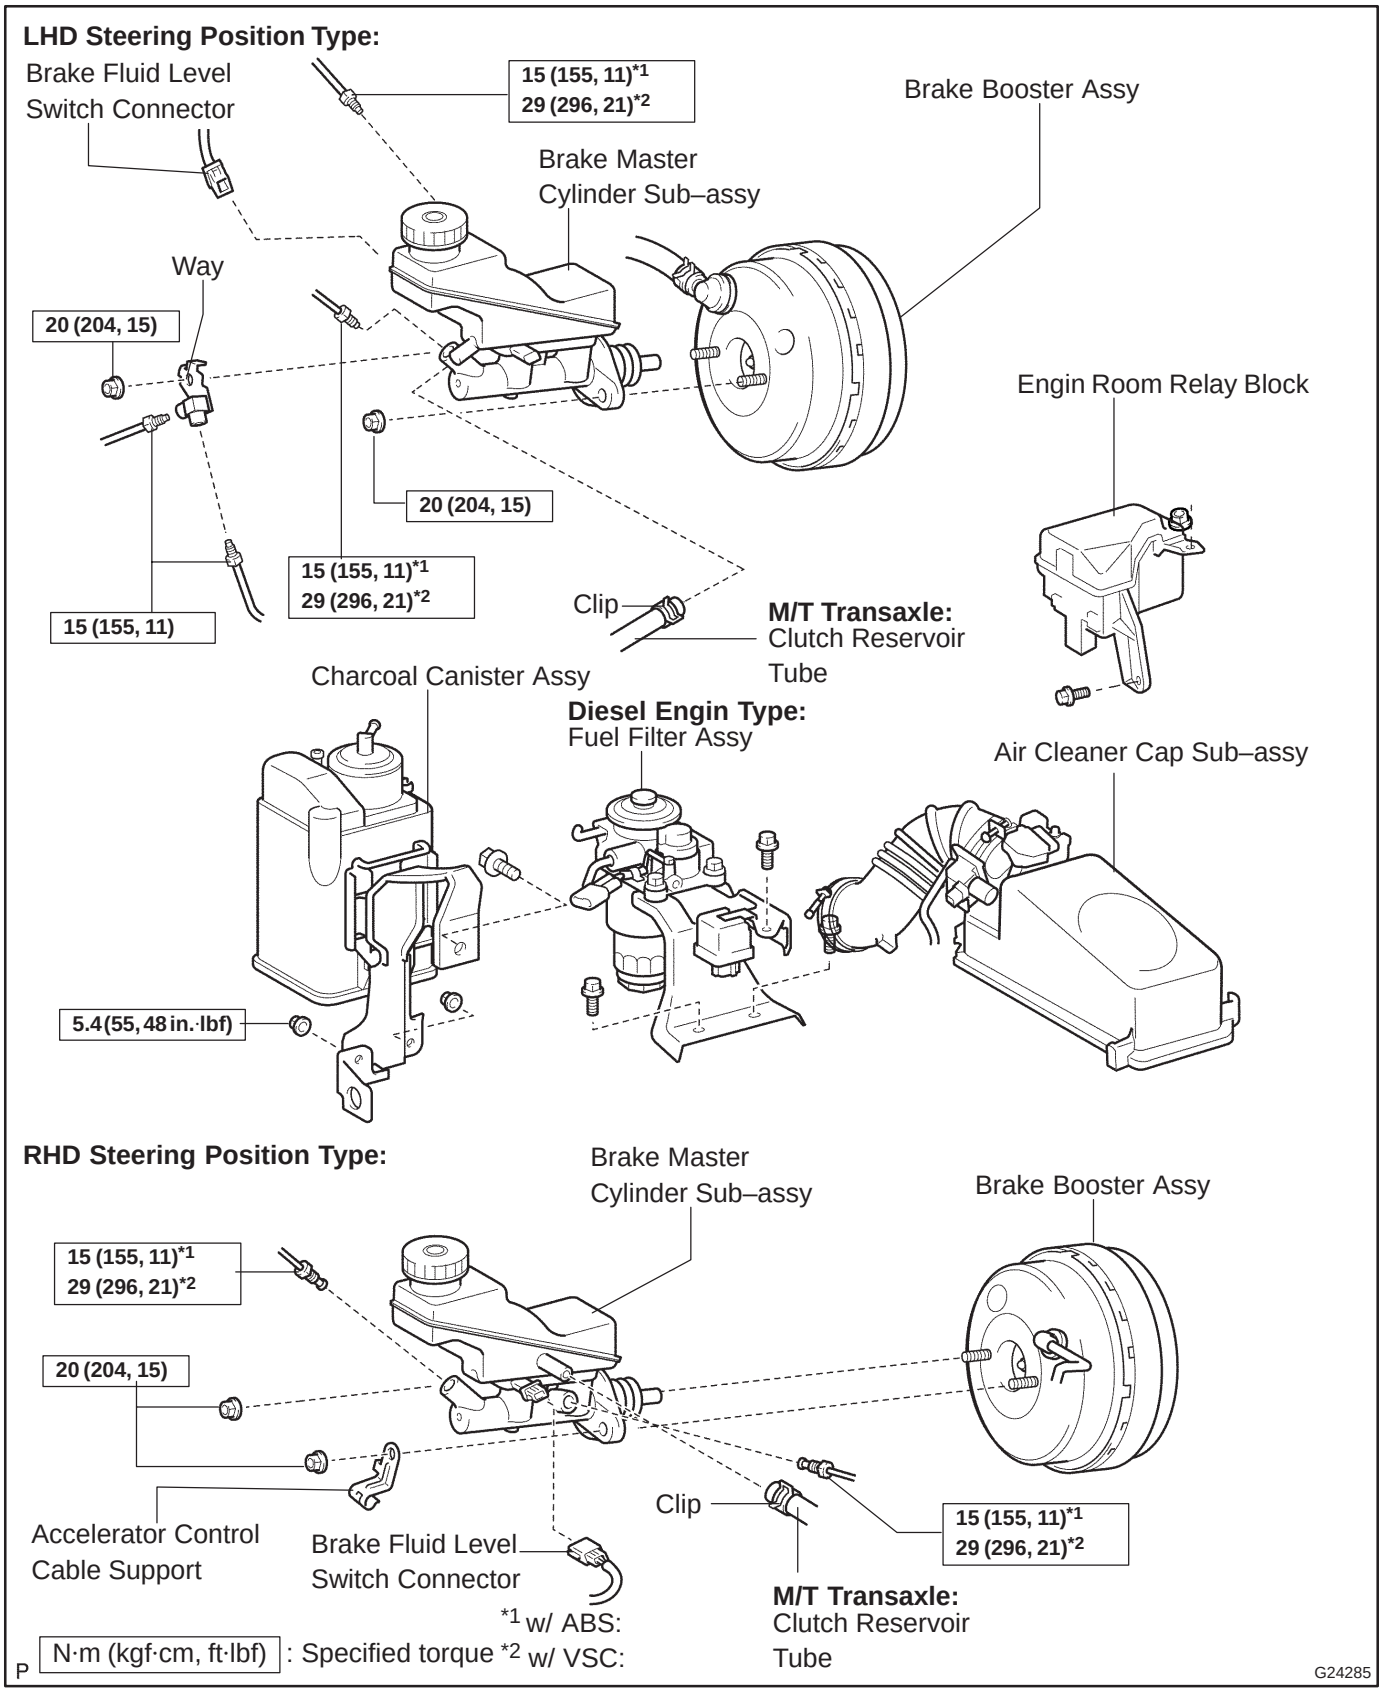
(d) Install the clip and clevis pin, and connect the brake master cylinder push rod clevis with the clevis pin and clip.

(e) Install the bolt to the brake pedal support assy.

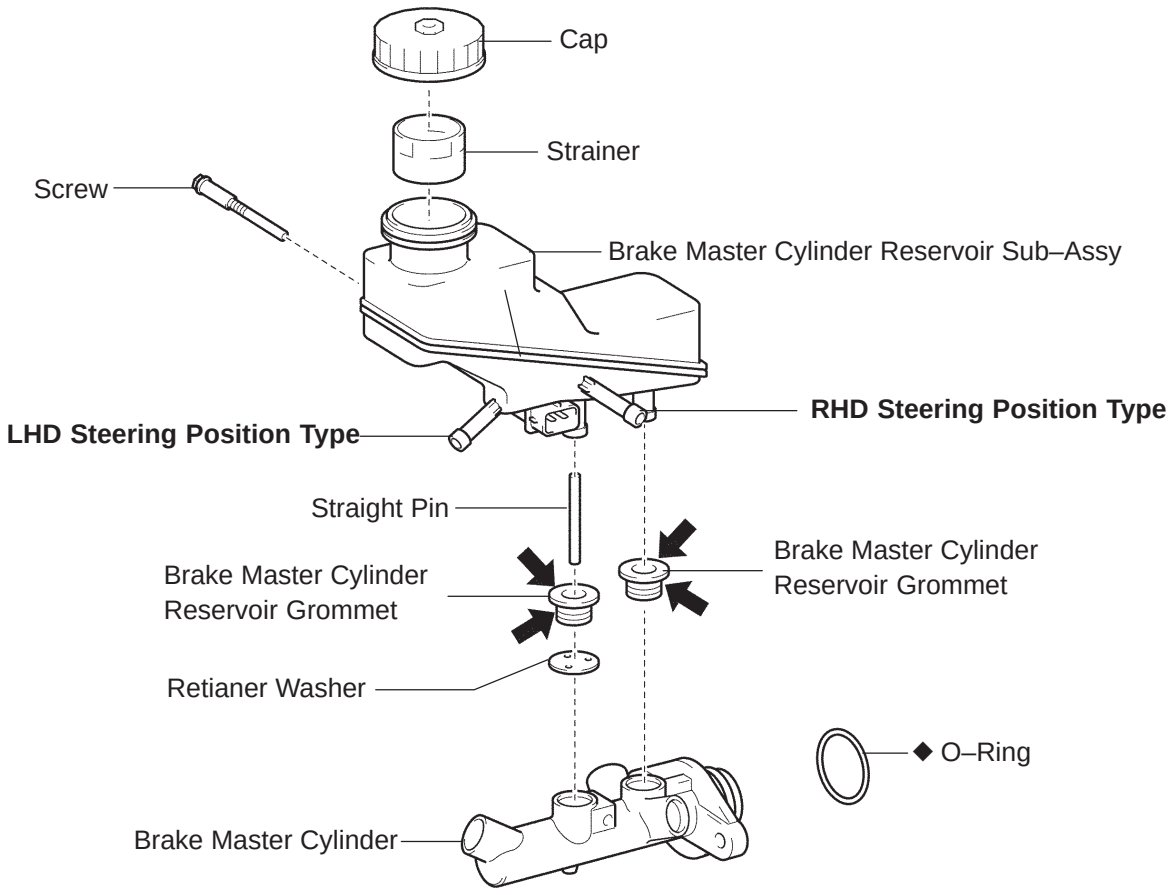
Torque: 24 N·m (241 kgf·cm, 17 ft·lbf)

10. INSTALL COMBINATION METER ASSEMBLY (See page 71–21)

11. CHECK AND ADJUST BRAKE PEDAL HEIGHT (See page 32–6)



12. CHECK PEDAL FREE PLAY (See page 32–6)



13. CHECK PEDAL RESERVE DISTANCE (See page 32–6)

320W6–01

REPLACEMENT

NOTICE:

Do not adjust the brake booster push rod.

1. DRAIN BRAKE FLUID

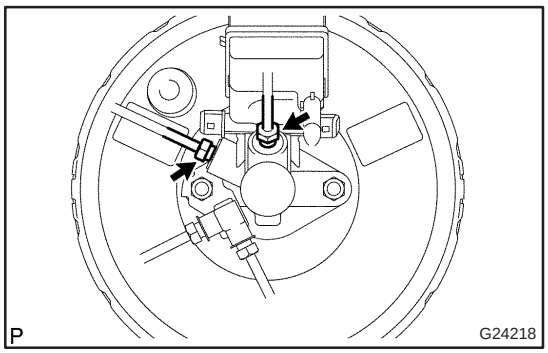
NOTICE:

Wash the brake fluid off immediately if it adheres to any painted surface.

2. REMOVE ENGINE ROOM RELAY BLOCK (LHD STEERING POSITION TYPE)

3. REMOVE AIR CLEANER CAP SUB–ASSY (LHD STEERING POSITION TYPE)

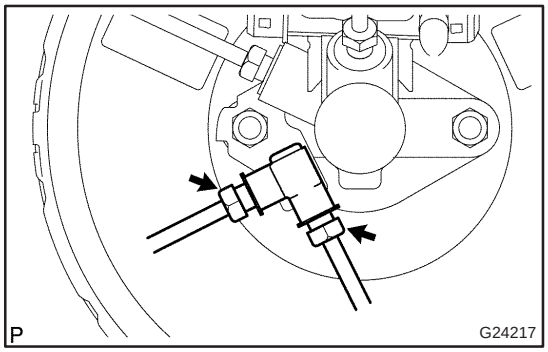
4. REMOVE CHARCOAL CANISTER ASSY (LHD STEERING POSITION TYPE)



5. REMOVE FUEL FILTER ASSY (LHD STEERING POSITION TYPE)

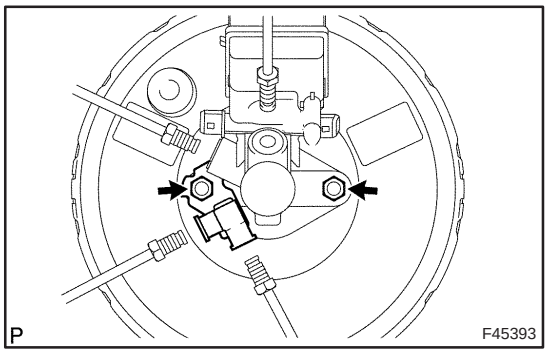
(a) Diesal engine type:
Remove the fuel filter assy with the 3 bolts.

6. REMOVE BRAKE MASTER CYLINDER SUB–ASSY (LHD STEERING POSITION TYPE)



(a) Disconnect the brake fluid level switch connector.

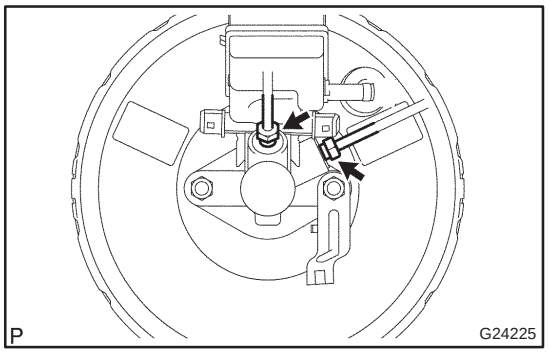
(b) M/T transaxle:
Slide the clip and disconnect the clutch reservoir tube.



(c) w/o VSC:
Using SST, disconnect the 2 brake lines from the brake master cylinder sub–assy.
SST 09023–00100

(d) w/ VSC:
Using SST, disconnect the 2 brake lines from the brake master cylinder sub–assy.
SST 09023–38400

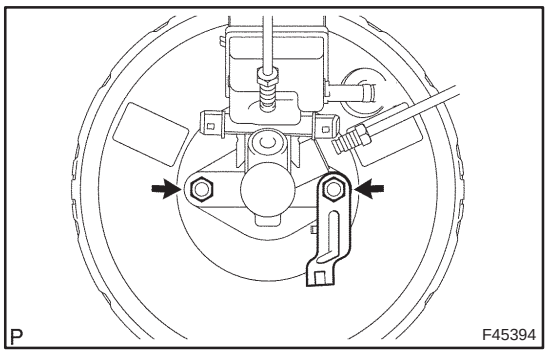
(e) Using SST, disconnect the 2 brake lines from the way.
SST 09023–00100



(f) Remove the 2 nuts, and pull out the way and brake master cylinder sub–assy.

(g) Remove the O–ring from the brake master cylinder sub–assy.

7. REMOVE BRAKE MASTER CYLINDER SUB–ASSY (RHD STEERING POSITION TYPE)



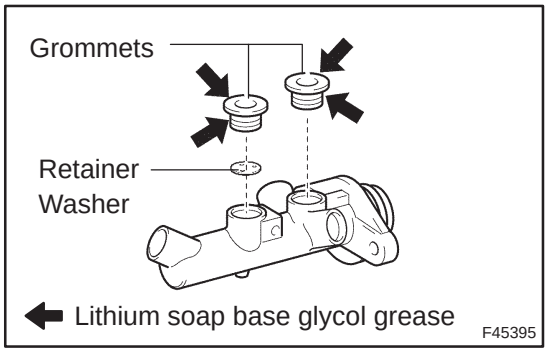
(a) Disconnect the brake fluid level switch connector.

(b) M/T transaxle:
Slide the clip and disconnect the clutch reservoir tube.

(c) w/o VSC:
Using SST, disconnect the 2 brake lines from the brake master cylinder sub–assy.
SST 09023–00100

(d) w/ VSC:
Using SST, disconnect the 2 brake lines from the brake master cylinder sub–assy.
SST 09023–38400

(e) Remove the 2 nuts and pull out the accelerator control cable support and brake master cylinder sub–assy.



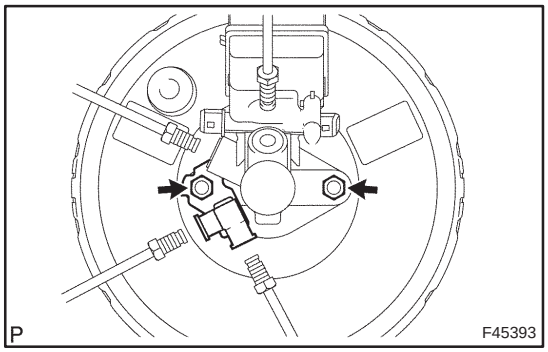
(f) Remove the O–ring from the brake master cylinder sub–assy.

8. REMOVE BRAKE MASTER CYLINDER RESERVOIR SUB–ASSY

(a) Using a screwdriver, remove the screw from the brake master cylinder.

(b) Remove the brake master cylinder reservoir sub–assy and 2 brake master cylinder reservoir grommets from the brake master cylinder.

(c) Remove the cap and strainer from the master cylinder reservoir.

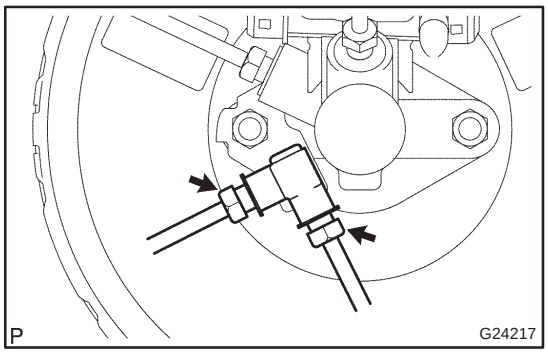


9. INSTALL BRAKE MASTER CYLINDER RESERVOIR SUB–ASSY

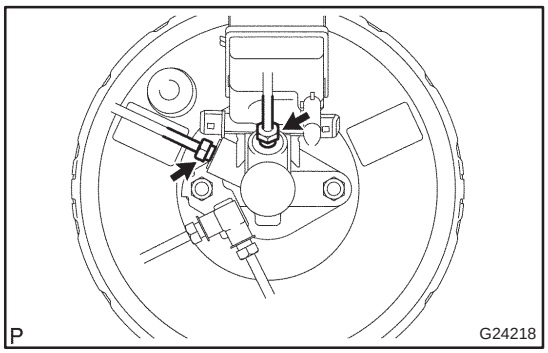
(a) Apply lithium soap base grycol grease to the 2 brake master cylinder reservoir grommets.

(b) Install the retainer washer to the brake master cylinder.

(c) Install the 2 brake master cylinder reservoir grommets to the brake master cylinder.



(d) Using a screwdriver, install the brake master cylinder resevoir sub–assy with the screw.

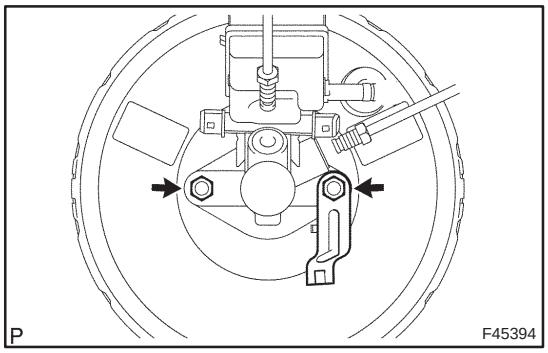


10. INSTALL BRAKE MASTER CYLINDER SUB–ASSY (LHD STEERING POSITION TYPE)

(a) Install the new O–ring from the brake master cylinder sub–assy.

(b) Install the brake master cylinder sub–assy and way bracket with the 2 nuts.
Torque: 20 N·m (204 kgf·cm, 15 ft·lbf)

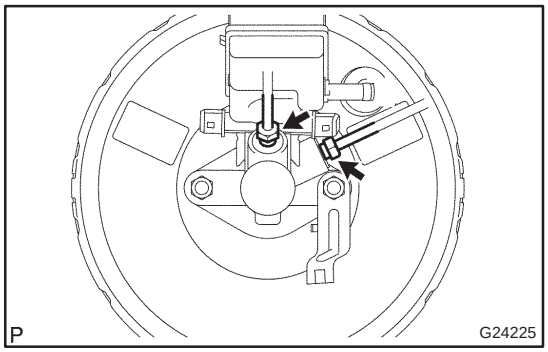
(c) Using SST, connect the 2 brake lines to the way.
SST 09023–00100
Torque: 15 N·m (155 kgf·cm, 11 ft·lbf)



(d) w/o VSC:
Using SST, connect the 2 brake lines to the brake master cylinder sub–assy.
SST 09023–00100
Torque: 15 N·m (155 kgf·cm, 11 ft·lbf)

(e) w/ VSC:
Using SST, connect the 2 brake lines to the brake master cylinder sub–assy.
SST 09023–38400
Torque: 29 N·m (296 kgf·cm, 21 ft·lbf)

(f) M/T transaxle:
Slide the clip and connect the clutch reservoir tube.



(g) Connect the brake fluid level switch connector.

11. INSTALL BRAKE MASTER CYLINDER SUB–ASSY (RHD STEERING POSITION TYPE)

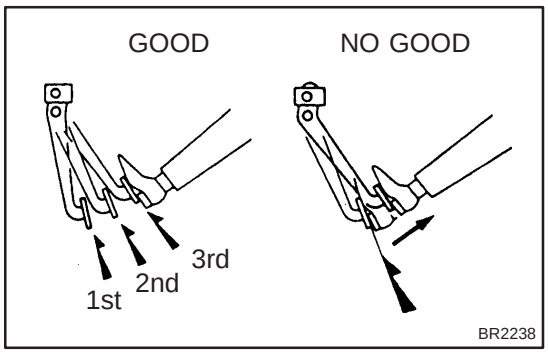
(a) Install the new O–ring from the brake master cylinder sub–assy.

(b) Install the brake master cylinder sub–assy and accelerator control cable support with the 2 nuts.
Torque: 20 N·m (204 kgf·cm, 15 ft·lbf)

(c) w/o VSC:
Using SST, connect the 2 brake lines to the brake master cylinder sub–assy.
SST 09023–00100
Torque: 15 N·m (155 kgf·cm, 11 ft·lbf)

(d) w/ VSC:
Using SST, connect the 2 brake lines to the brake master cylinder sub–assy.
SST 09023–38400
Torque: 29 N·m (296 kgf·cm, 21 ft·lbf)

(e) M/T transaxle:
Slide the clip and connect the clutch reservoir tube.



(f) Connect the brake fluid level switch connector.

12. INSTALL CHARCOAL CANISTER ASSY (LHD STEERING POSITION TYPE)
13. INSTALL ENGINE ROOM RELAY BLOCK (LHD STEERING POSITION TYPE)
14. INSTALL AIR CLEANER CAP SUB–ASSY (LHD STEERING POSITION TYPE)
15. INSTALL FUEL FILTER ASSY (LHD STEERING POSITION TYPE)
16. FILL RESERVOIR WITH BRAKE FLUID (See page 32–4)
17. BLEED MASTER CYLINDER (See page 32–4)
(a) w/o VSC:
SST 09023–00100
(b) w/ VSC:
SST 09023–38400
18. BLEED BRAKE LINE (See page 32–4)
19. BLEED CLUTCH PIPE LINE (M/T TRANSAXLE) (See page 42–13)
20. CHECK FLUID LEVEL IN RESERVOIR (See page 32–4)
21. CHECK BRAKE FLUID LEAKAGE

BRAKE BOOSTER ASSY (LHD)

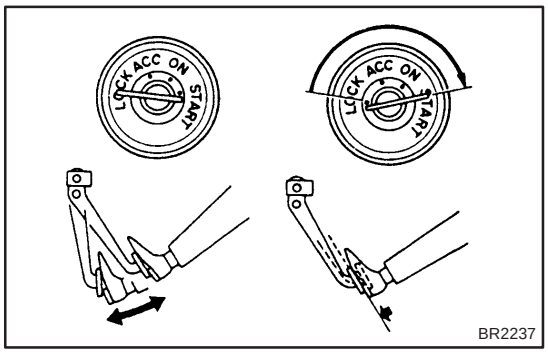
3201G–07

ON–VEHICLE INSPECTION

1. INSPECT BRAKE BOOSTER

(a) Airtightness check.

(1) Start the engine and stop it after 1 or 2 minutes. Depress the brake pedal several times slowly.



HINT:

If the pedal can be depressed to the f;oor the first time, but on the 2nd or 3rd time cannot be depreesed as far, the booster is airtight.

(2) Depress the brake pedal while the engine is running, and stop the engine with the pedal depressed.

HINT:

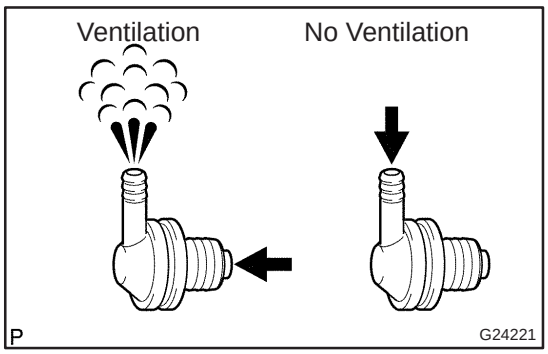
If there is no change in the pedal reserve distance after holding the pedal for 30 seconds, the booster is airtight.

(b) Operating check.

(1) Depress the brake pedal several times with the ignition switch off and check that there is no change in the pedal reserve distance.

(2) Depress the brake pedal and start the engine.

HINT:



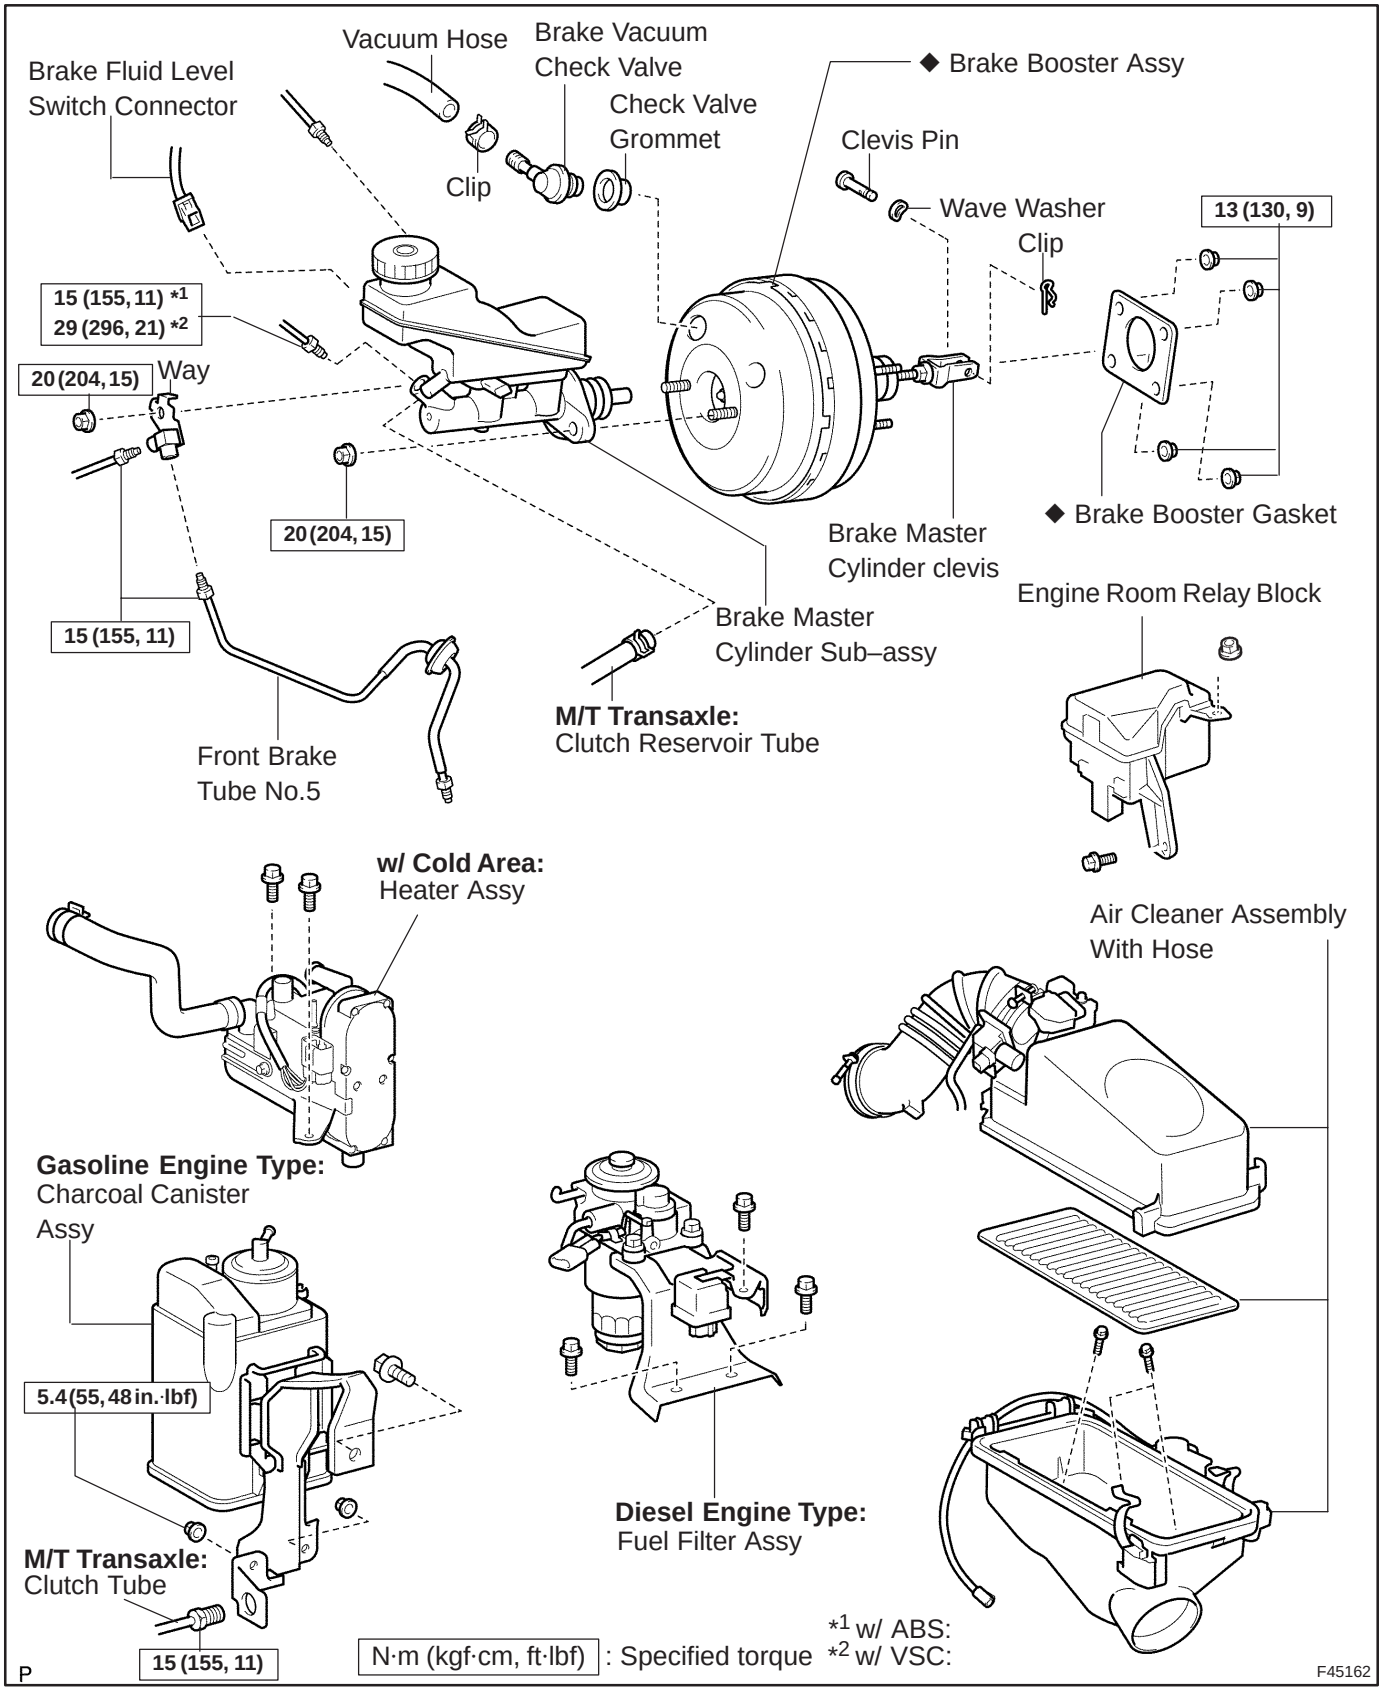
If the pedal goes down slightly, operation is normal.

2. INSPECT VACUUM CHECK VALVE

(a) Inspect vacuum check valve.

(1) Slide the clip and disconnect the vacuum hose.

(2) Remove the vacuum check valve.



(3) Check that there is ventilation from the booster to the engine, and no ventilation from the engine to the booster.

(4) If any fault is found, replace the vacuum check valve.

320VU–01

COMPONENTS

320W7–01

REPLACEMENT

NOTICE:

Do not adjust the brake booster push rod.

1. DRAIN BRAKE FLUID

NOTICE:

Wash the brake fluid off immediately if it adheres to any painted surface.

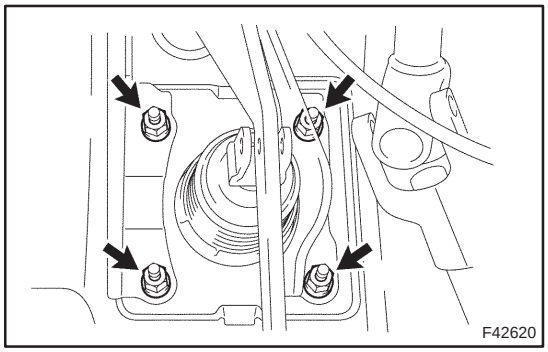
SST 09023–38400



7. REMOVE HEATER ASSY (W/ COLD AREA) **(See page 55–100)**

8. REMOVE FRONT WHEEL LH

9. DISCONNECT FRONT BRAKE TUBE NO.5

(a) Using SST and spanner, disconnect the brake line from the flexible hose of the front brake LH.
SST 09023–00100

10. REMOVE BRAKE BOOSTER ASSY

(a) Disconnect the vacuum hose from the brake booster assy.

(b) Remove the clip and clevis pin.

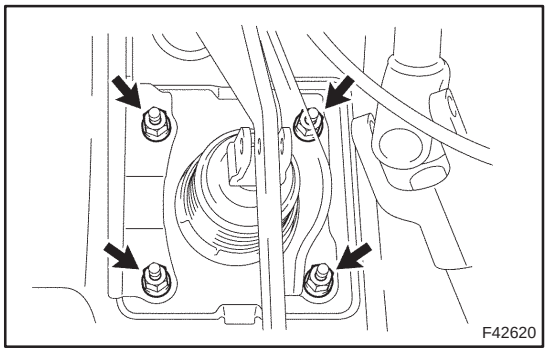
(c) Remove the 4 nuts.

(d) Pull out the brake booster assy.

11. REMOVE BRAKE BOOSTER GASKET

(a) Pull out the brake booster gasket from the brake booster assy.

12. REMOVE CHECK VALVE



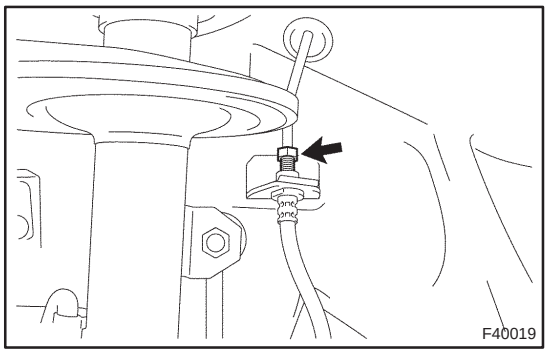
(a) Remove the check valve and grommet from the brake booster assy.

13. INSTALL CHECK VALVE

(a) Install the check valve and grommet to the brake booster assy.

14. INSTALL BRAKE BOOSTER GASKET

(a) Install a new brake booster gasket to the brake booster assy.



15. INSTALL BRAKE BOOSTER ASSY

(a) Install the brake booster assy with the 4 nuts.
Torque: 13 N·m (130 kgf·cm, 9 ft·lbf)

(b) Install the clevis pin and clip to the brake master cylinder clevis.

(c) Connect the vacuum hose to the brake booster assy.

16. CONNECT FRONT BRAKE TUBE NO.5

(a) Using SST and spanner, connect the brake tube to the flexible hose.
SST 09023–00100
Torque: 15 N·m (155 kgf·cm, 11 ft·lbf)

17. INSTALL FRONT WHEEL LH
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

18. INSTALL HEATER ASSY (W/ COLD AREA) (See page 55–100)

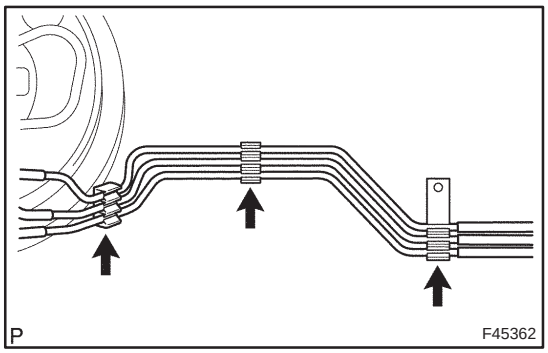
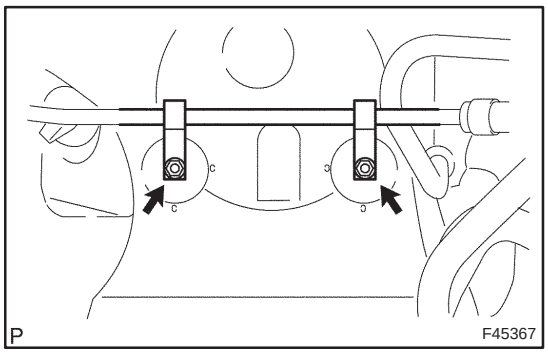
(d) Using SST and a spanner, disconnect the brake tube from the flexible hose of the front brake RH.
SST 09023–00100

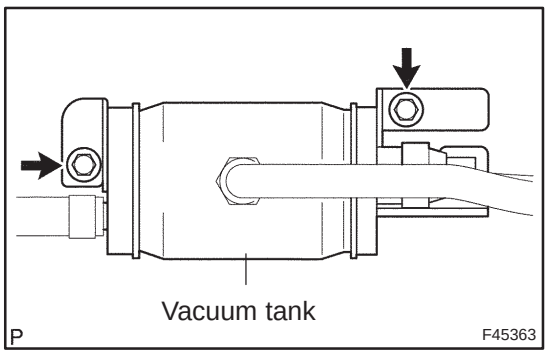


(e) Remove the 2 bolts and disconnect the 2 brake tube clamps.

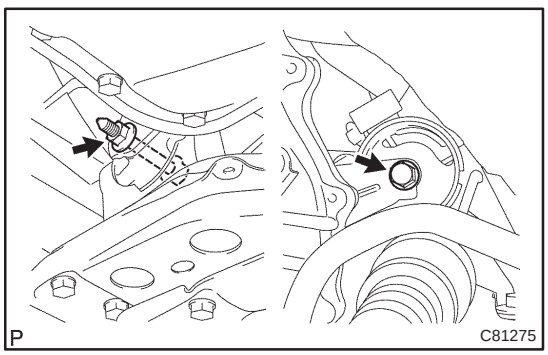


(f) Using SST, disconnect the 3 brake tubes from the ways.
SST 09023–00100

(g) Disconnect the brake tube from the clamp and remove the brake tubes.



(h) Disconnect the 3 brake tubes from the clamp and remove the brake tubes.

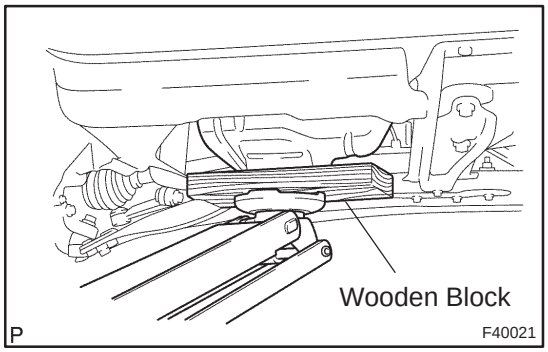


13. REMOVE BRAKE BOOSTER ASSY

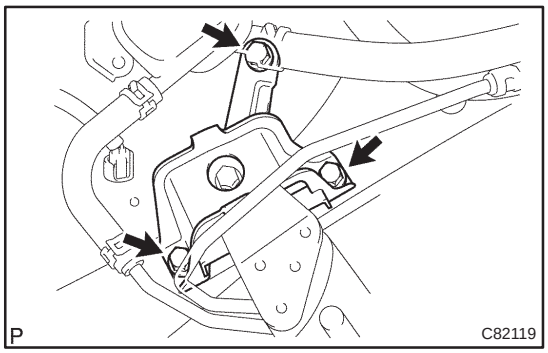
(a) Gasoline engine type:
Remove the 2 bolts and separate the vacuum pipe from the body.

(b) Diesel engine type:
Remove the 2 bolts and remove the vacuum tank from the body.

(c) Disconnect the vacuum hose from the brake booster assy.

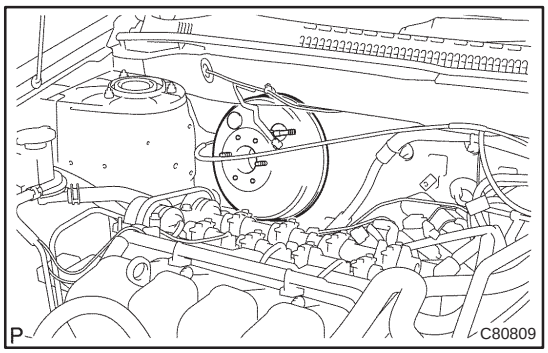


(d) Remove the engine under cover.

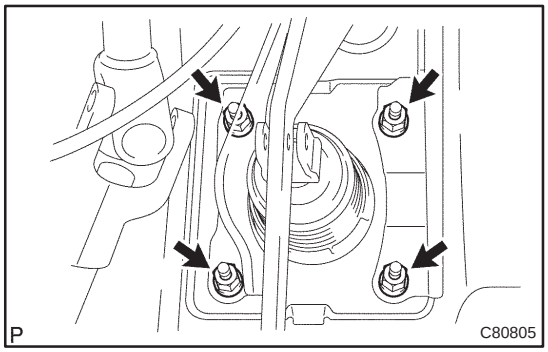


(e) Remove the 2 nuts from the engine mounting bracket RH.

(f) Remove the bolt from the rear engine mounting bracket.



(g) Remove the bolt and nut from the front engine mounting bracket.



(h) Hold the engine with a jack, putting a wooden block between them.

(i) Remove the 3 bolts and separate the engine mounting bracket RH from the body.

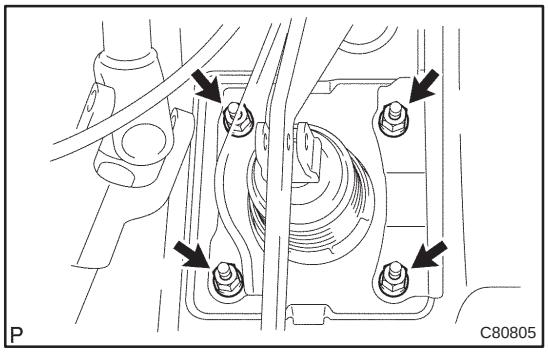
(j) Gradually tilt the engine by lowering the jack to remove the brake booster assy.

(k) Remove the 4 nuts and clevis.
(l) Pull out the brake booster assy.

14. REMOVE BRAKE BOOSTER GASKET

(a) Pull out the brake booster gasket.

15. REMOVE CHECK VALVE



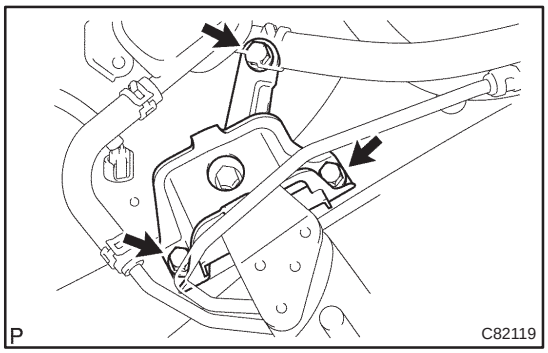
(a) Remove the check valve from the brake booster assy.

16. INSTALL CHECK VALVE

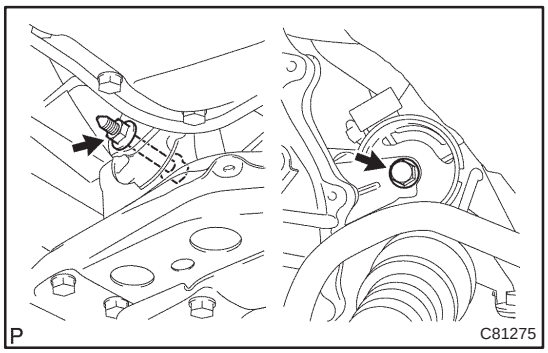
(a) Install the check valve and grommet to the brake booster assy.

17. INSTALL BRAKE BOOSTER GASKET

(a) Install a new brake booster gasket to the brake booster assy.



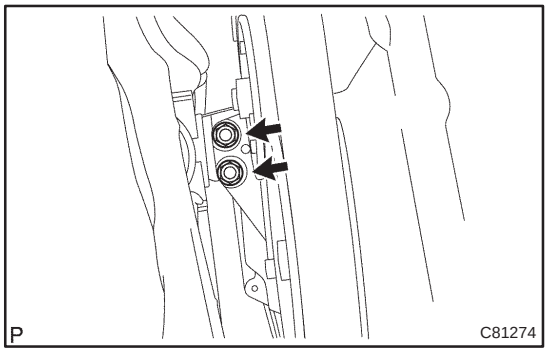
18. INSTALL BRAKE BOOSTER ASSY



(a) Install the clevis to the booster push rod.

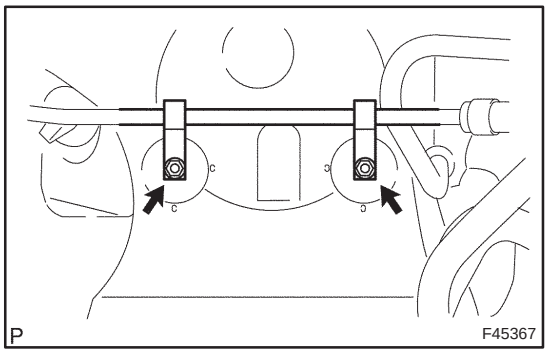
(b) Install the brake booster assy with the 4 nuts.
Torque: 13 N·m (130 kgf·cm, 9 ft·lbf)

(c) Connect the vacuum hose to the check valve.

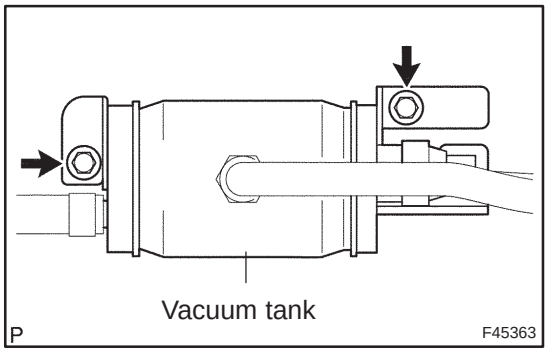


(d) Install the engine mounting bracket RH to the body with the 3 bolts.
Torque: 52 N·m (530 kgf·cm, 39 ft·lbf)

(e) Install the bolt to the rear engine mounting bracket.
Torque: 87 N·m (887 kgf·cm, 64 ft·lbf)

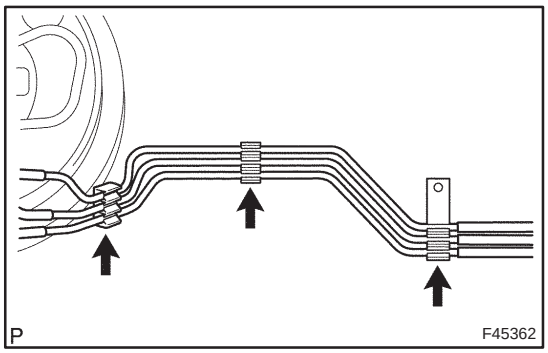


(f) Install the bolt and nut to the front engine mounting bracket.
Torque: 52 N·m (530 kgf·cm, 39 ft·lbf)



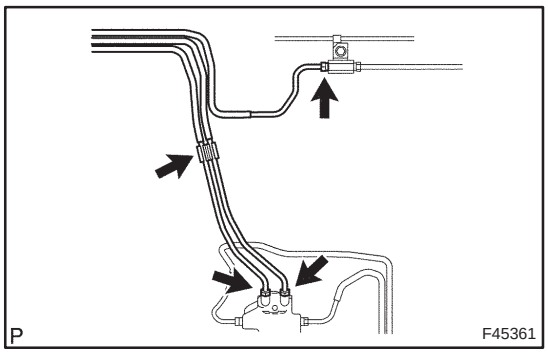
(g) Install the 2 nuts to the engine mounting bracket RH.
Torque: 52 N·m (530 kgf·cm, 39 ft·lbf)

(h) Install the engine under cover.

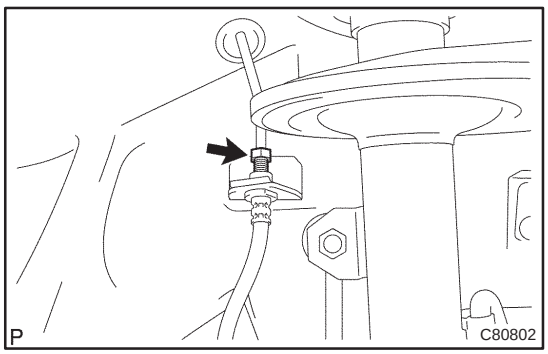


(i) Connect the vacuum hose to the brake booster assy.

(j) Gasoline engine type:
Install the vacuum pipe with 2 bolts to the body.
Torque: 5.4 N·m (55 kgf·cm, 48 in.·lbf)

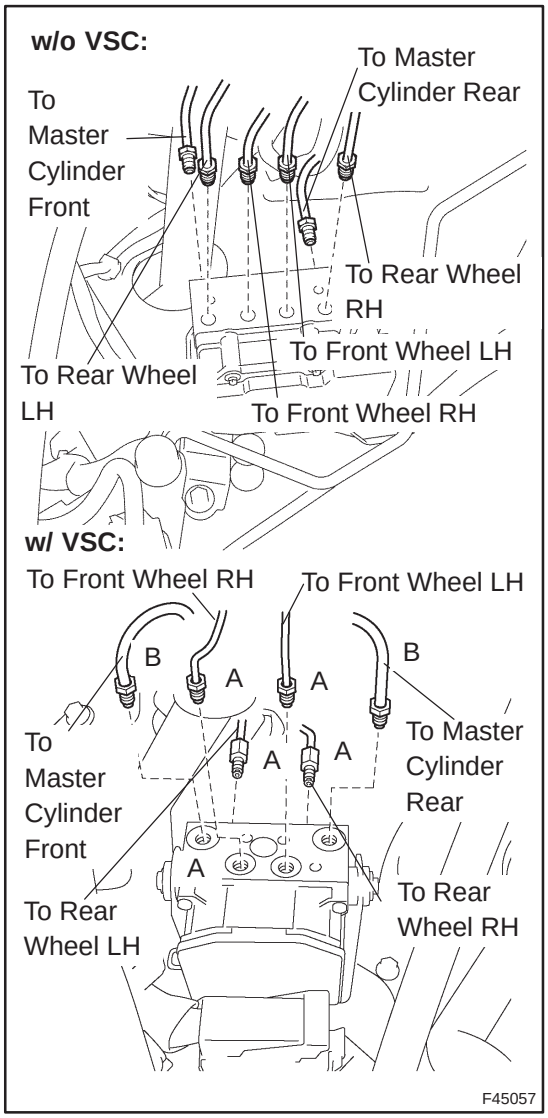


(k) Diesel engine type:
Install the vacuum tank with 2 bolts.
Torque: 8.3 N·m (85 kgf·cm, 73 in.·lbf)



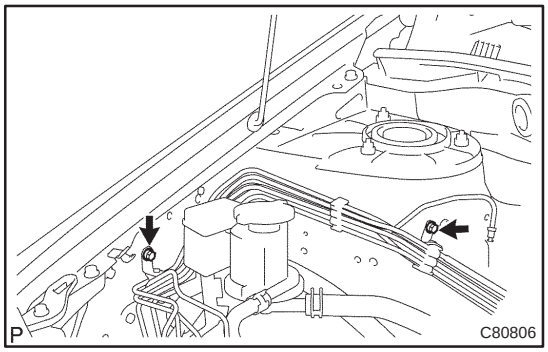
19. INSTALL BRAKE TUBE

(a) Disconnect the 3 brake tubes from the clamp and remove the brake tubes.



(b) Using SST, connect the 3 brake tubes to the ways.
SST 09023–00100
Torque: 15 N·m (155 kgf·cm, 11 ft·lbf)

(c) Connect the brake tube to the clamp.

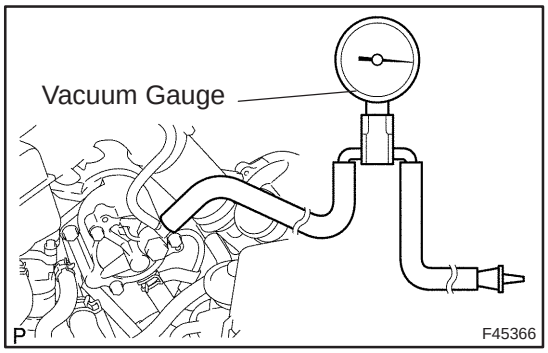


(d) Using SST and a spanner, connect the brake tube to the flexible hose of front brake RH.
SST 09023–00100
Torque: 15 N·m (155 kgf·cm, 11 ft·lbf)

(e) w/o VSC:
Using SST, connect the 6 brake tubes to the brake actuator, as shown in the illustration.
SST 09023–00100
Torque: 15 N·m (155 kgf·cm, 11 ft·lbf)

(f) w/ VSC:
Using SST, connect the 6 brake tubes to the brake actuator as shown in the illustration.
SST 09023–00100, 09023–38400
Torque:
A: 15 N·m (155 kgf·cm, 11 ft·lbf)
B: 29 N·m (296 kgf·cm, 21 ft·lbf)

(g) Install the brake tube clamps with the 2 bolts.
Torque: 5.4 N·m (55 kgf·cm, 48 in.·lbf)



20. INSTALL FRONT WHEEL RH
21. INSTALL CYLINDER HEAD COVER SUB–ASSY (GASOLINE ENGINE TYPE) (See page 14–81)
22. INSTALL IGNITION COIL ASSY (GASOLINE ENGINE TYPE) (See page 14–81)
23. INSTALL INJECTOR ASSY (DIESEL ENGINE TYPE) (See page 14–318)
24. INSTALL CYLINDER HEAD COVER SUB–ASSY (DIESEL ENGINE TYPE) (See page 14–318)
25. INSTALL TIMING BELT NO.2 COVER (DIESEL ENGINE TYPE) (See page 14–307)

26. INSTALL ENGINE COVER NO.1
27. INSTALL ENGINE ASSEMBLY WITH TRANSAXLE (1AZ–FSE ENGINE TYPE) (See page 14–204)
28. INSTALL CLUTCH MASTER CYLINDER ASSY (M/T TRANSAXLE) (See page 42–13)
SST 09023–00100
29. INSTALL BRAKE MASTER CYLINDER SUB–ASSY (See page 32–13)
(a) w/o VSC:
SST 09023–00100
(b) w/ VSC:
SST 09023–38400
30. FILL RESERVOIR WITH BRAKE FLUID (See page 32–4)
31. BLEED MASTER CYLINDER (See page 32–4)
(a) w/o VSC:
SST 09023–00100, 09023–00100
(b) w/ VSC:
SST 09023–00100, 09023–00100
32. BLEED BRAKE LINE (See page 32–4)
33. CHECK AND ADJUST BRAKE PEDAL HEIGHT (See page 32–6)
34. CHECK PEDAL FREE PLAY (See page 32–6)
35. CHECK PEDAL RESERVE DISTANCE (See page 32–6)
36. BLEED CLUTCH PIPE LINE (M/T TRANSAXLE) (See page 42–13)
37. INSPECT AND ADJUST CLUTCH PEDAL SUB–ASSY (M/T TRANSAXLE) (See page 42–2)
38. CHECK FLUID LEVEL IN RESERVOIR (See page 32–4)
39. CHECK BRAKE FLUID LEAKAGE
40. CHECK CLUTCH FLUID LEAKAGE (M/T TRANSAXLE)

VACUUM PUMP ASSY (1CD–FTV)

32091–05

ON–VEHICLE INSPECTION

1. OPERATIONING CHECK

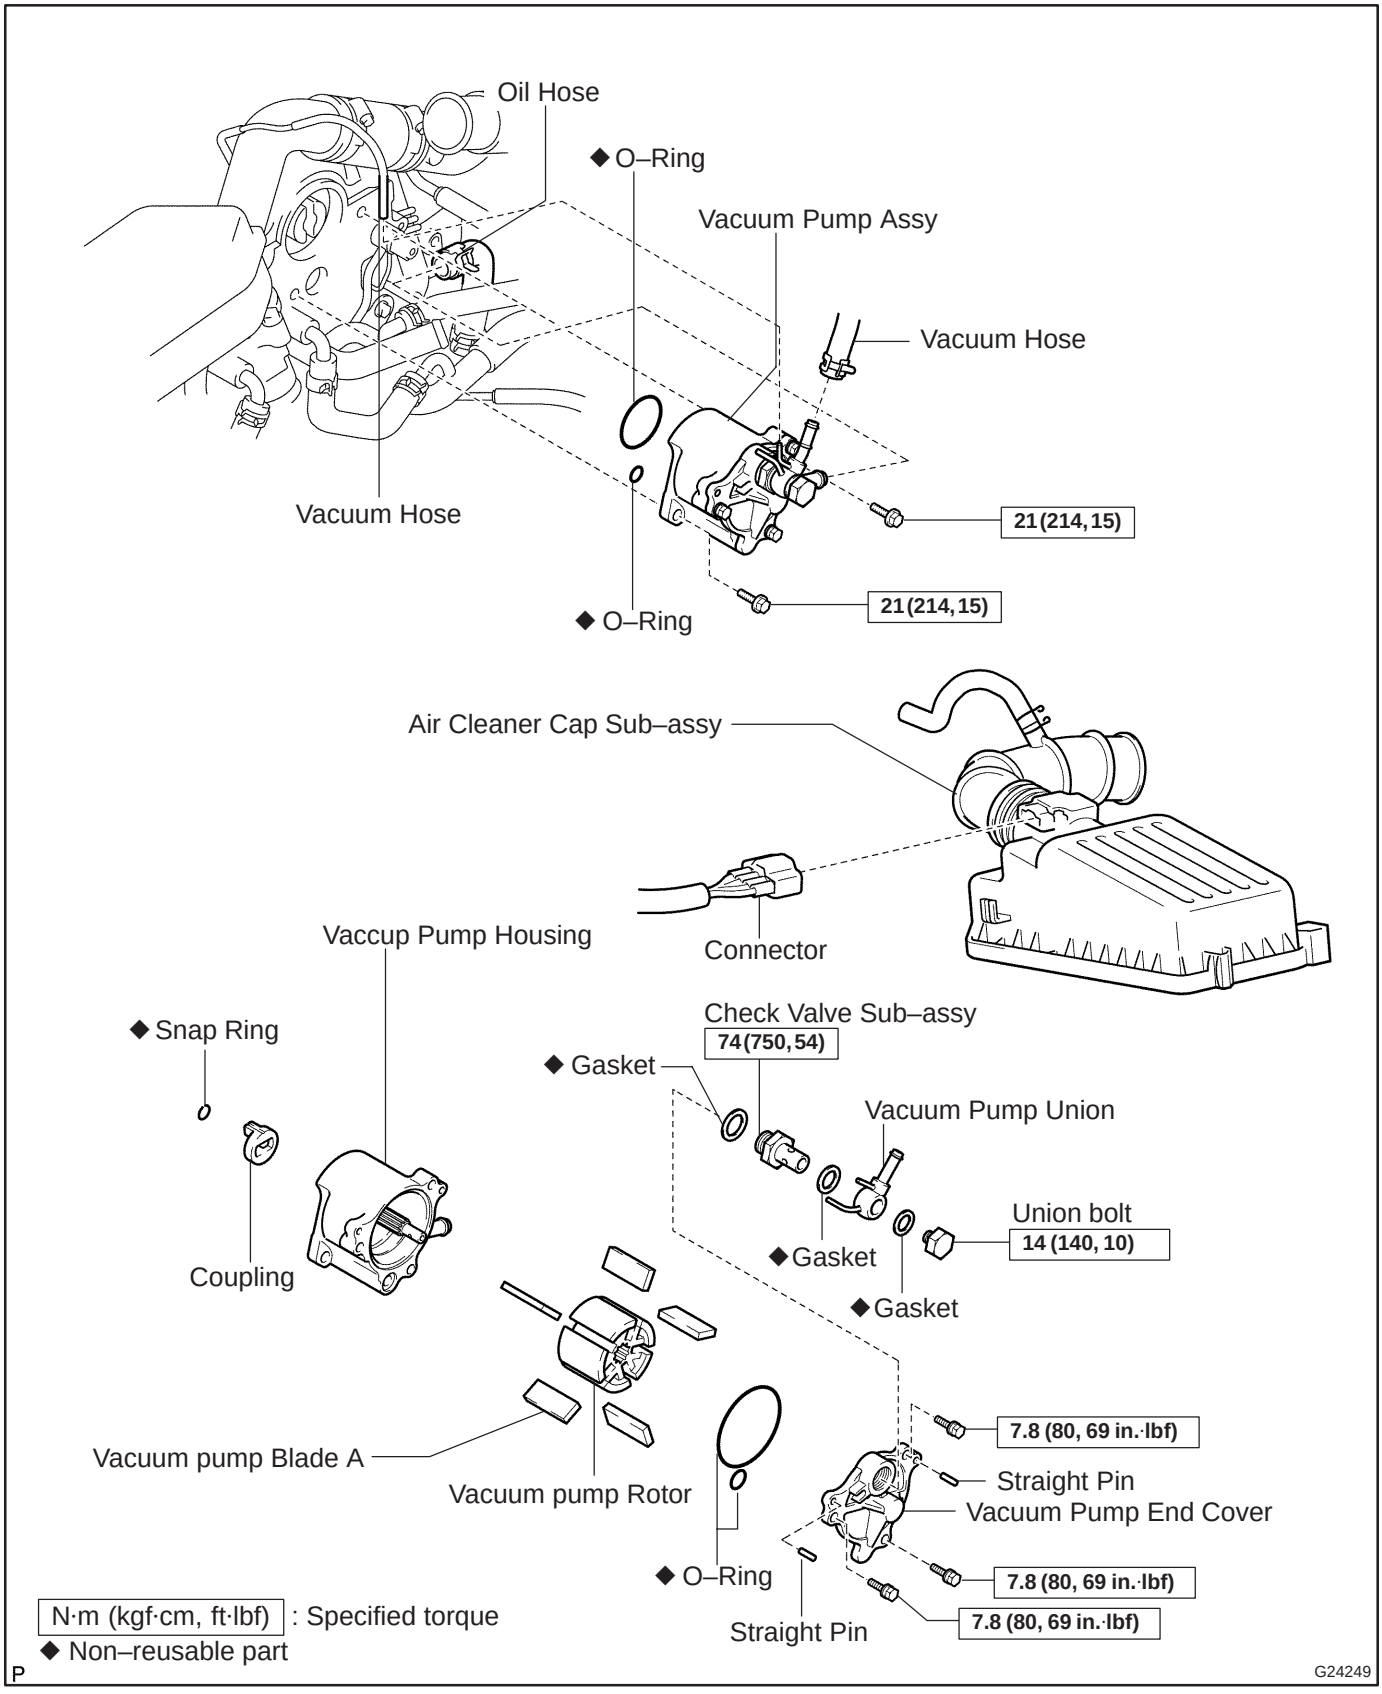
(a) Slide the clip, then disconnect the vacuum hose from vacuum pump assy.

(b) Connect the hose of the vacuum gauge to the vacuum pump assy.

(c) Block off another hose of the vacuum gauge with the hose clamp No.2.

(d) Start the engine and warm it up for more than 2 minutes.

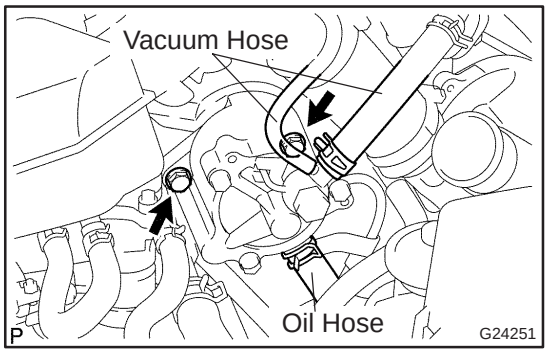
(e) With the engine idle, check the negative pressure of the vacuum pump assy.



Standard: More than 650 mmHg (86.7 kPa).

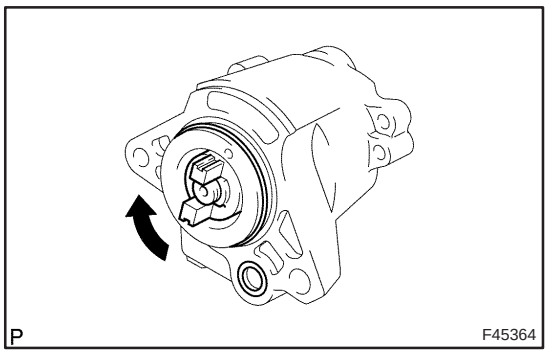
(f) Remove the vacuum gauge from the vacuum pump assy.

(g) Connect the vacuum hose with the clip to the vacuum pump assy.



32092–05

COMPONENTS

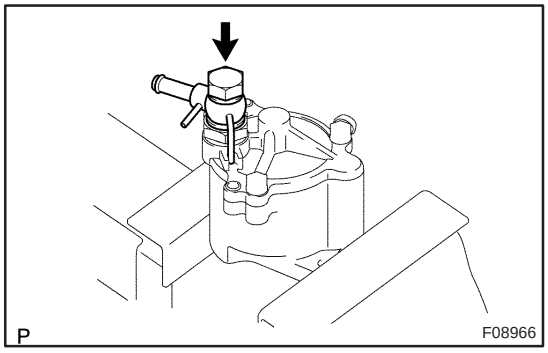


OVERHAUL

1. REMOVE AIR CLEANER CAP SUB–ASSY

2. REMOVE VACUUM PUMP ASSY

(a) Disconnect the 2 vacuum hoses and oil hose from the vacuum pump assy.
(b) Remove the 2 bolts and vacuum pump assy.
(c) Remove the 2 O–rings from the vacuum pump assy.

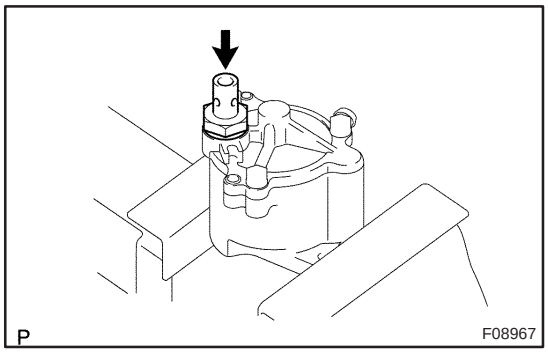


3. INSPECT VACUUM PUMP ASSY

(a) Turn the coupling counterclockwise direction by hand when seeing from the coupling direction and check for any abnormality such as dragging or torque fluctuation.

NOTICE:

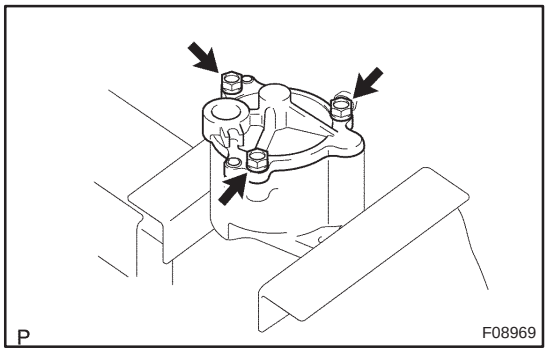
Pay coupling attention, because the engine oil remained in the pump escapes while coupling is turning.



4. REMOVE VACUUM PUMP UNION

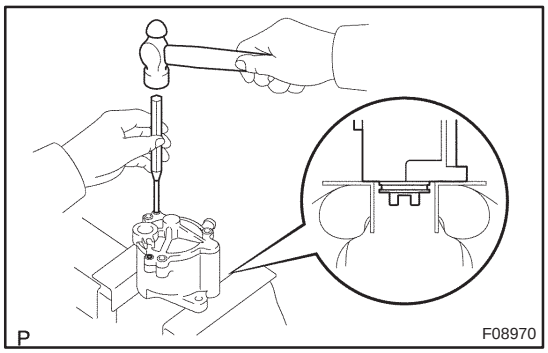
(a) Using soft jaws on a vise, hold the vacuum pump assy in a vise.

NOTICE:



Do not tighten the vise excessively and perform the work while holding the vacuum pump assy by hand.

(b) Remove the union bolt, vacuum pump union and 2 gaskets.

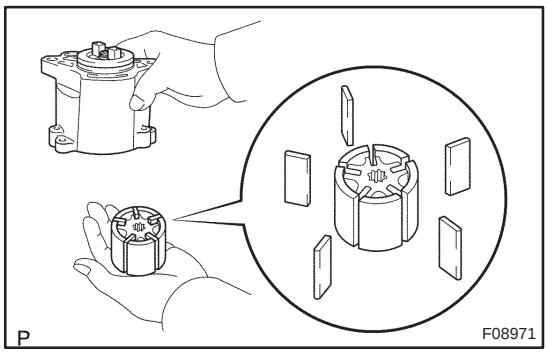


5. REMOVE CHECK VALVE SUB–ASSY

(a) Remove the check valve sub–assy and gasket.

6. REMOVE VACUUM PUMP ROTOR SUB–ASSY

(a) Remove the 3 bolts.

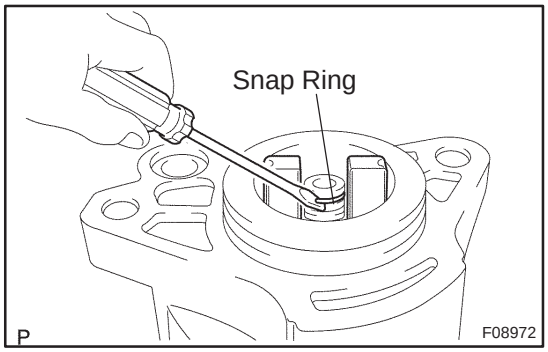


(b) Using soft jaws on the vise, place the vacuum pump assy on the vise, as shown in the illustration.

NOTICE:

Only place the vacuum pump assy, never hold the in–low of the housing with a vise.

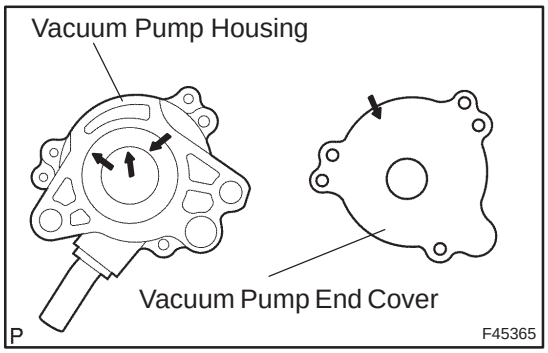
(c) Using a pin punch and hammer, drive out the 2 straight pins.



(d) Remove the end cover and 2 O–rings.

(e) Remove the vacuum pump rotor and 5 blades.

NOTICE:



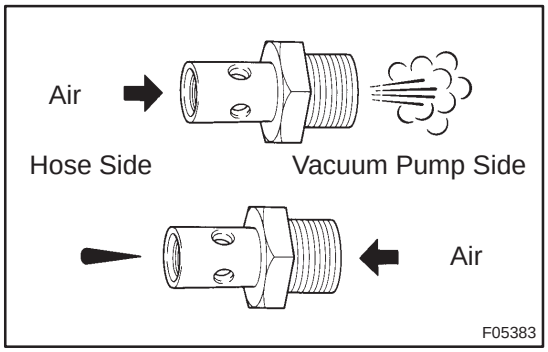
Do not damage the housing with the rotor.

7. REMOVE VACUUM PUMP COUPLING

(a) Using a screwdriver, remove the snap ring.

(b) Remove the coupling.

8. INSPECT VACUUM PUMP HOUSING



(a) Inspect the inside surface on the housing for scoring.

If necessary, replace the vacuum pump assy.

9. INSPECT VACUUM PUMP END COVER

(a) Inspect the inside surface on the vacuum pump end cover for scoring.

If necessary, replace the vacuum pump assy.

10. INSPECT CHECK VALVE SUB–ASSY

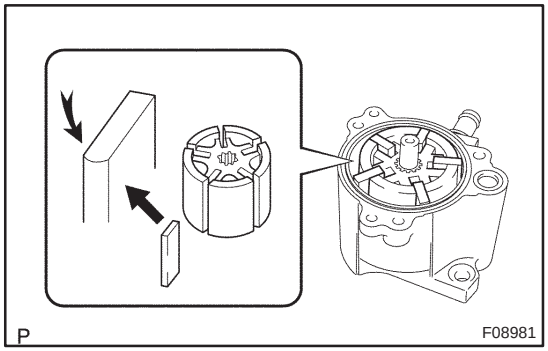
(a) Check that air flows from the hose side to the pump side.

(b) Check that air does not flow from the pump side to the hose side.

NOTICE:

Block off the 4 holes on the side surface of the check valve when checking.

If necessary, replace the check valve.



11. INSTALL VACUUM PUMP COUPLING

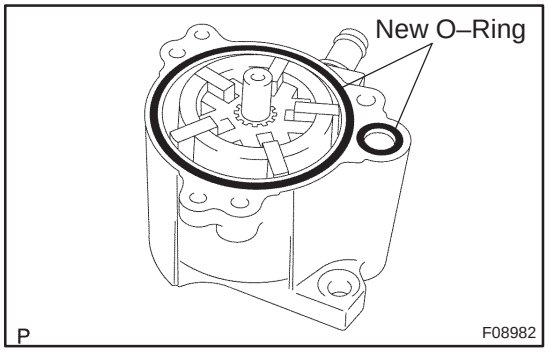
(a) Place the vacuum pump coupling to the rotor shaft.

(b) Install a new snap ring to the rotor shaft.

12. INSTALL VACUUM PUMP ROTOR SUB–ASSY

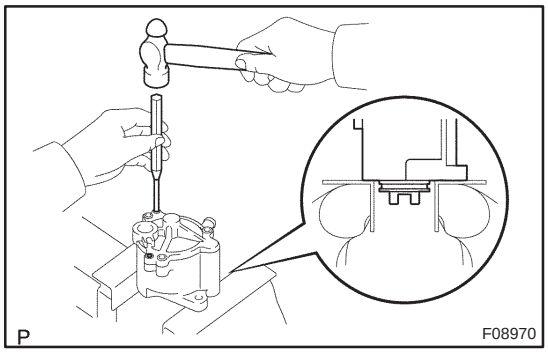
(a) Coat the rotor with engine oil, and install it to the rotor shaft.

13. INSTALL VACUUM PUMP BLADE A



(a) Apply the engine oil to the rotor, and install the rotor in the housing.

(b) Apply the engine oil to the 5 new blades.



(c) Install the 5 blades with the round end facing outward.

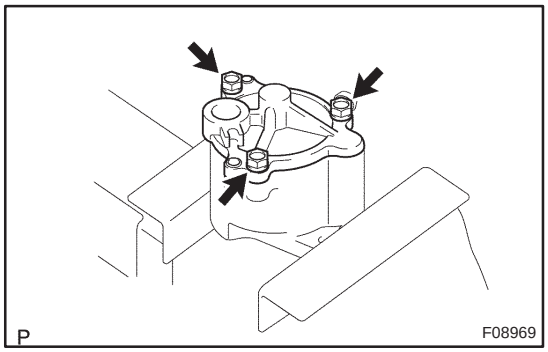
NOTICE:

Install so that the blade attaches on the housing.

(d) Coat 2 new O–rings with engine oil, and install them on the housing.

(e) Using soft jaws on the vise, place the vacuum pump on the vise, as shown in the illustration.

NOTICE:



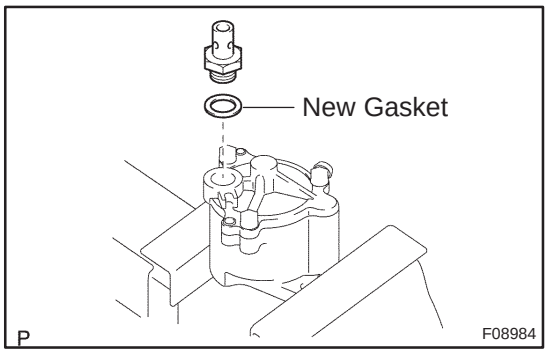
Only place the vacuum pump assy, never hold the in–low of the housing with a vise.

(f) Place the end cover, and temporarily install the 3 bolts.

(g) Using a pin punch and hammer, drive in the 2 straight pins.

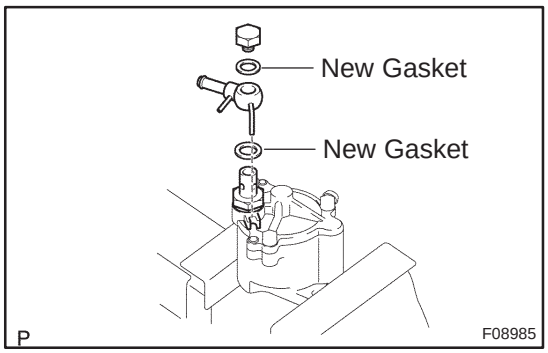
NOTICE:

Install so that the blade and end cover of the eccentric ring does not interfere with each other.



(h) Using soft jaws on the vise, hold the vacuum pump in the vise.

NOTICE:

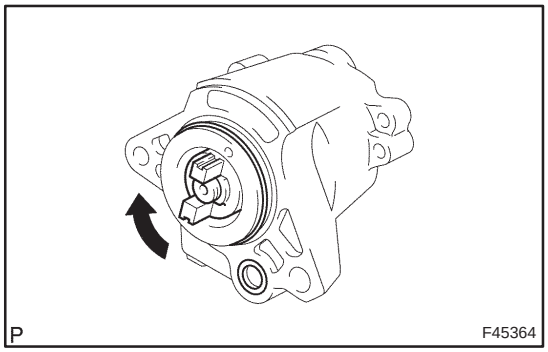


Do not tighten the vise to tightly.

(i) Tighten the 3 bolts.
Torque: 7.8 N·m (80 kgf·cm, 69 in.·lbf)

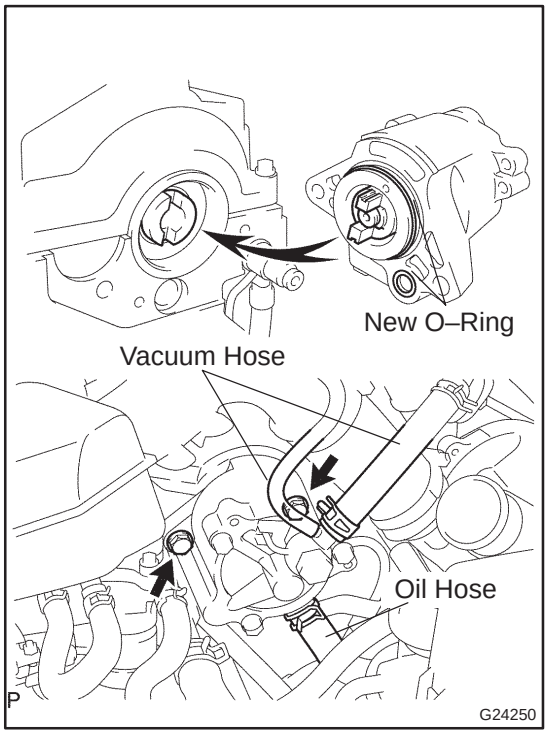
14. INSTALL CHECK VALVE SUB–ASSY

(a) Install the check valve sub–assy and a new gasket.
Torque: 74 N·m (750 kgf·cm, 54 ft·lbf)



15. INSTALL VACUUM PUMP UNION

(a) Install the vacuum pump union and 2 new gaskets with the union bolt.
Torque: 14 N·m (140 kgf·cm, 10 ft·lbf)



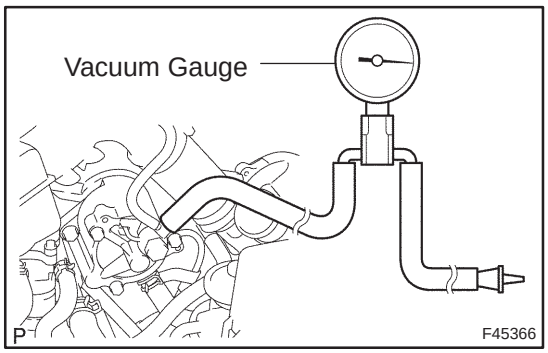
HINT:

Align and insert the pin of the union into the matching hole of the casing.

16. INSPECT VACUUM PUMP ASSY

(a) Turn the gear counterclockwise direction by hand when seeing from the vacuum pump gear direction and check for any abnormality such as dragging or torque fluctuation.

17. INSTALL VACUUM PUMP ASSY



(a) Coat 2 new O–rings with engine oil, and install them to the vacuum pump assy.

(b) Install the vacuum pump assy aligning the coupling with the slit of the camshaft.

(c) Install the 2 bolts.

Torque: 21 N·m (214 kgf·cm, 15 ft·lbf)

(d) Connect 2 vacuum hoses and oil hose.

18. INSPECT CHECK VACUUM PUMP OPERATION

(a) Slide the clip, then disconnect the vacuum hose from vacuum pump assy.

(b) Connect the hose of the vacuum gauge to the vacuum pump assy.

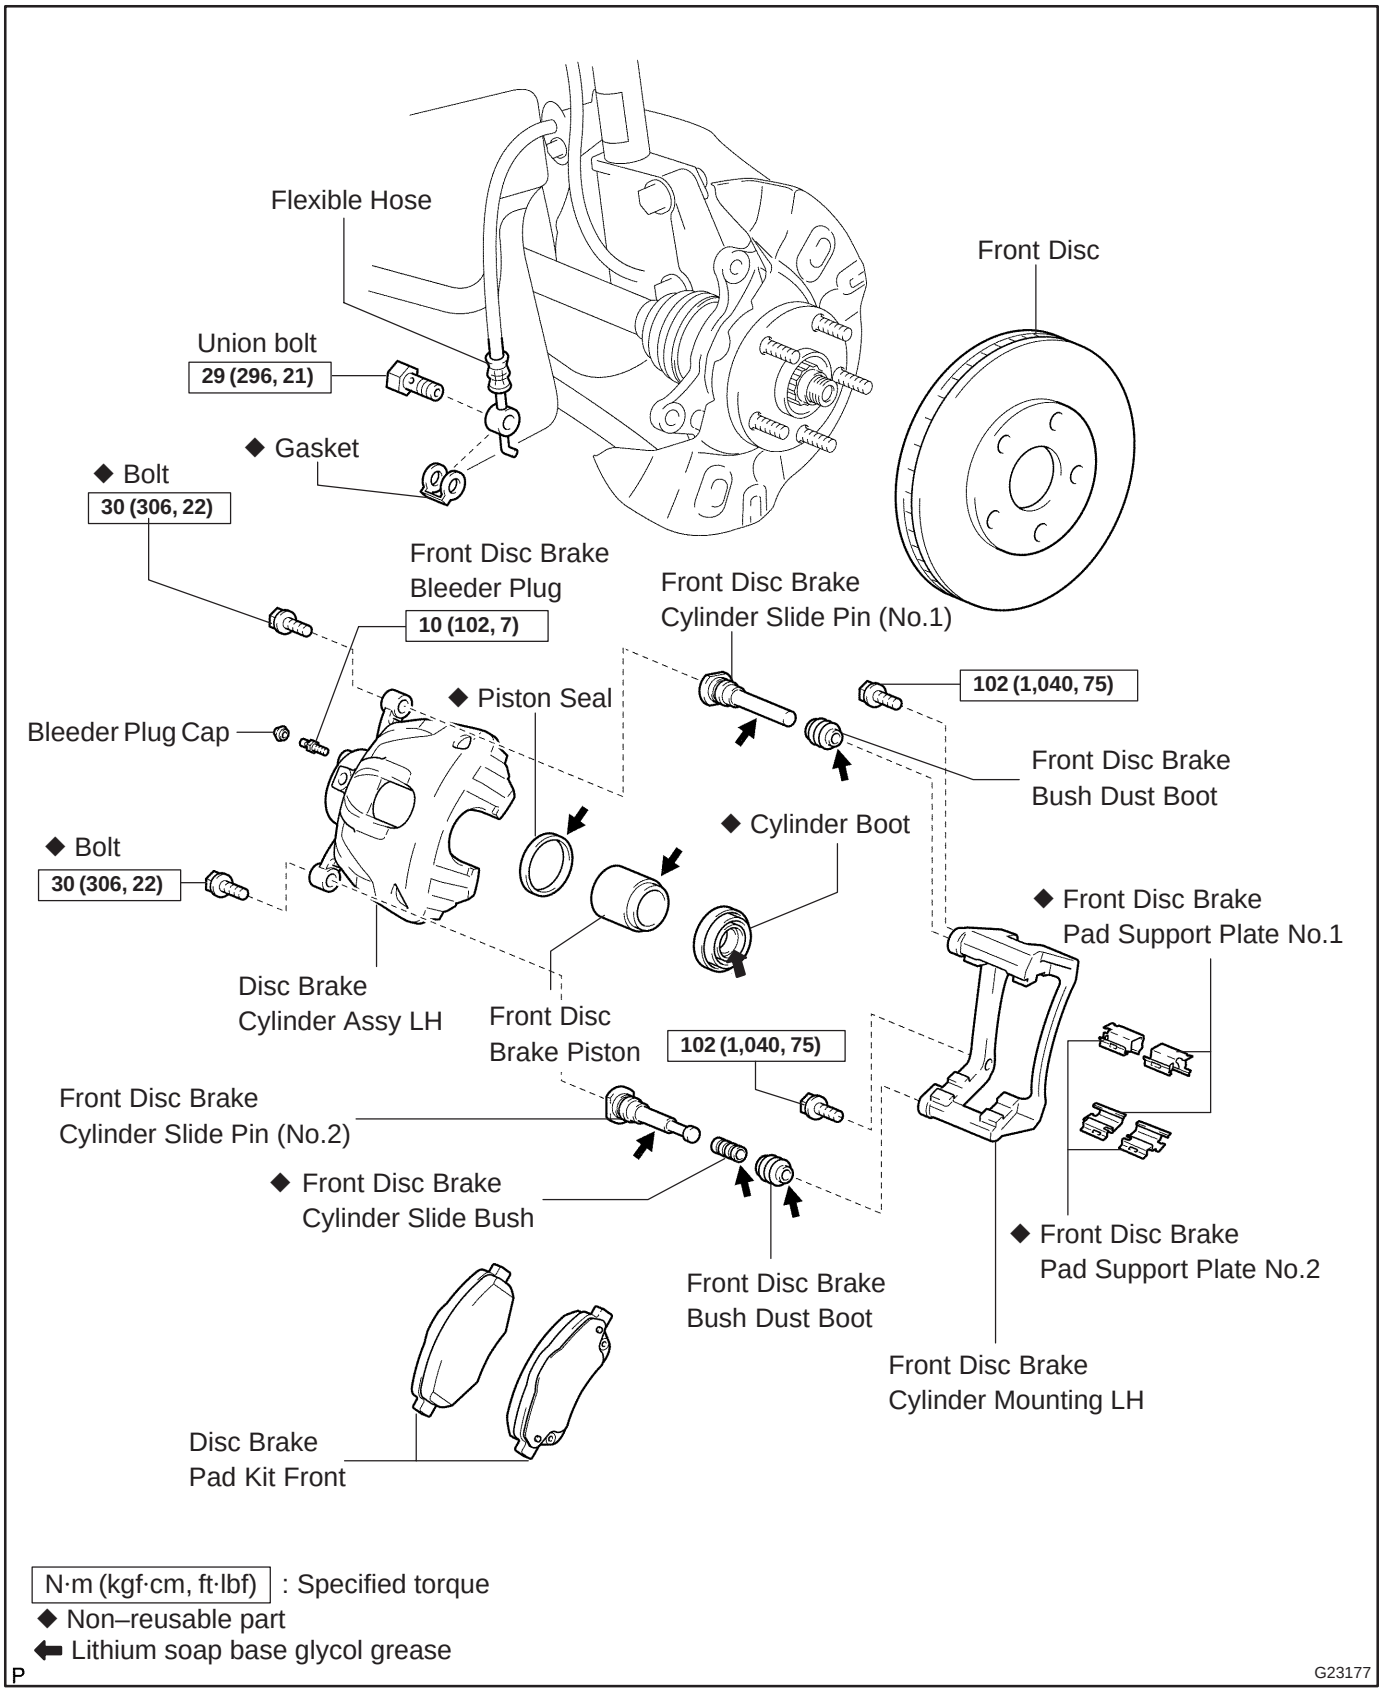
(c) Block off another hose of the vacuum gauge with the hose clamp No.2.

(d) Start the engine and warm it up for more than 2 minutes.

(e) With the engine idle, check the negative pressure of the vacuum pump assy.

Standard: More than 650 mmHg (86.7 kPa).

(f) Remove the vacuum gauge from the vacuum pump assy.



(g) Connect the vacuum hose with the clip to the vacuum pump assy.

19. INSTALL AIR CLEANER CAP SUB–ASSY

FRONT BRAKE

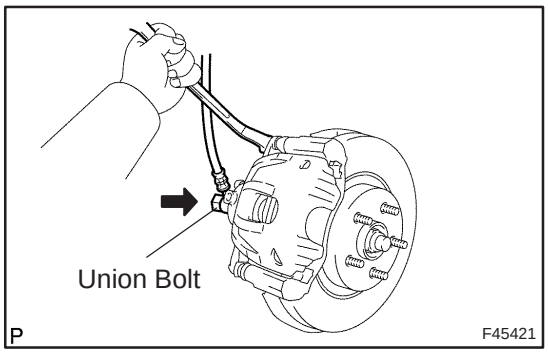
COMPONENTS

320GA–03

320W1–01

OVERHAUL

HINT:

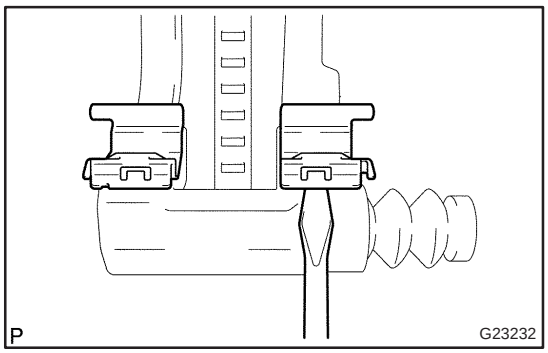


Overhaul the RH side by using the same procedures as those for the LH side.

1. REMOVE FRONT WHEEL

2. DRAIN BRAKE FLUID

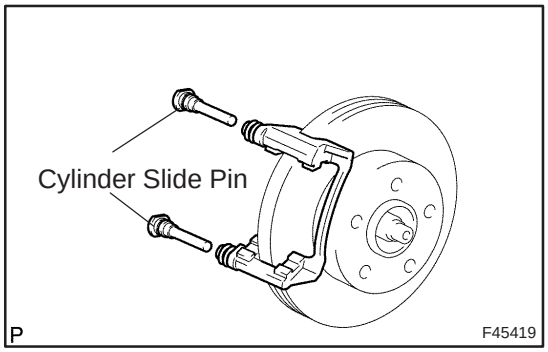
NOTICE:



Wash the brake fluid off immediately if it adheres to any painted surface.

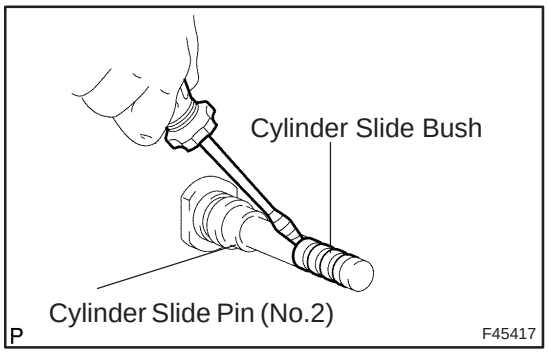
3. REMOVE DISC BRAKE CYLINDER ASSY LH

(a) Remove the union bolt and gasket from the disc brake cylinder assy LH, then disconnect the flexible hose.



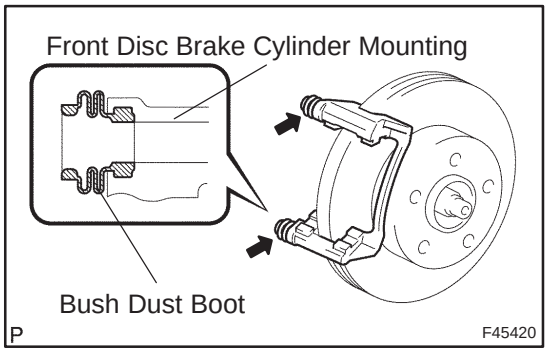
(b) Hold the front disc brake cylinder slide pin and remove the 2 bolts.

4. REMOVE FRONT DISC BRAKE PAD KIT



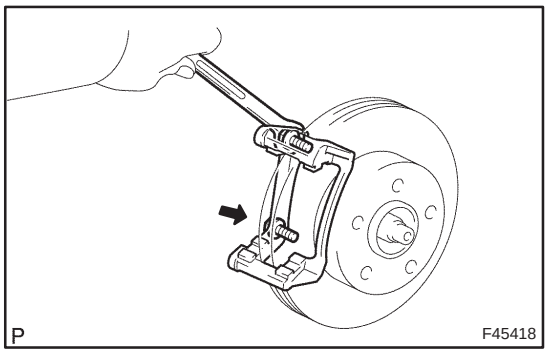
(a) Remove the disc brake pad kit front from the front disc brake cylinder mounting LH.

(b) Remove the 2 front disc brake pad support plates No.2 and 2 front disc brake pad support plates No.1.

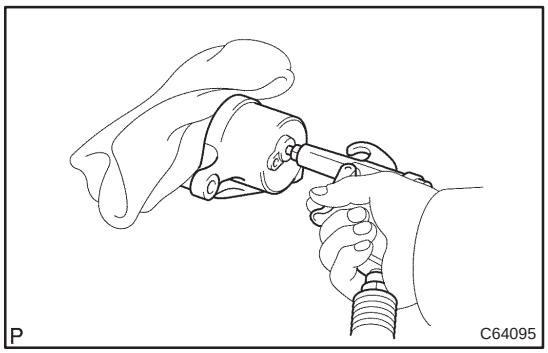


5. REMOVE FRONT DISC BRAKE CYLINDER SLIDE PIN KIT

(a) Remove the front disc brake cylinder slide pin (No.1) and front disc brake cylinder slide pin (No.2) from the front disc brake cylinder mounting LH.



(b) Remove the front disc brake cylinder slide bush from the bottom side of the front disk brake cylinder slide pin (No.2).



6. REMOVE FRONT DISC BRAKE BUSH DUST BOOT

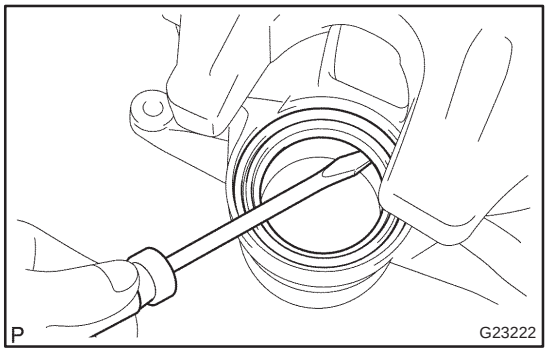
(a) Remove the 2 front disc brake bush dust boots from the front disc brake cylinder mounting LH.

7. REMOVE FRONT DISC BRAKE CYLINDER MOUNTING LH

(a) Remove the 2 bolts and front disc brake cylinder mounting LH.

8. REMOVE FRONT DISC BRAKE PISTON

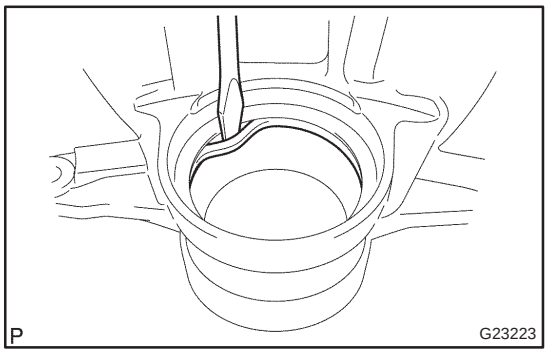
(a) Place a shop rug between the front disc brake piston and the disc brake cylinder assy LH.



(b) Use compressed air to remove the front disc brake piston from the disc brake cylinder assy LH.

CAUTION:

Do not place your fingers in front of the piston when using compressed air.



NOTICE:

Do not spatter the brake fluid.

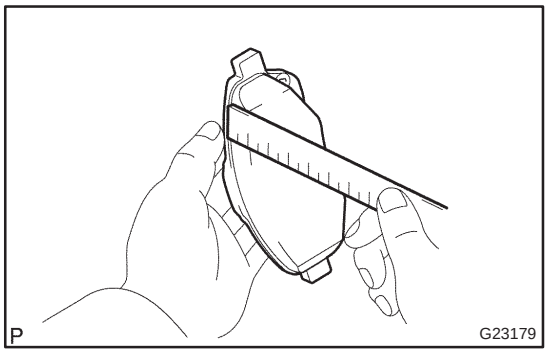
9. REMOVE CYLINDER BOOT

(a) Using a screwdriver, remove the cylinder boot.

10. REMOVE PISTON SEAL

(a) Using a screwdriver, remove the piston seal.

NOTICE:



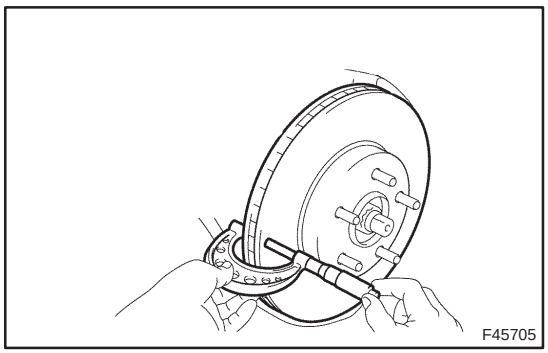
Do not damage the inner cylinder and cylinder groove.

11. REMOVE FRONT DISC BRAKE BLEEDER PLUG

(a) Remove the bleeder plug cap and front disc brake bleeder plug from the disc brake cylinder assy LH.

12. INSPECT BRAKE CYLINDER AND PISTON

(a) Check the cylinder bore and piston for rust or scoring.

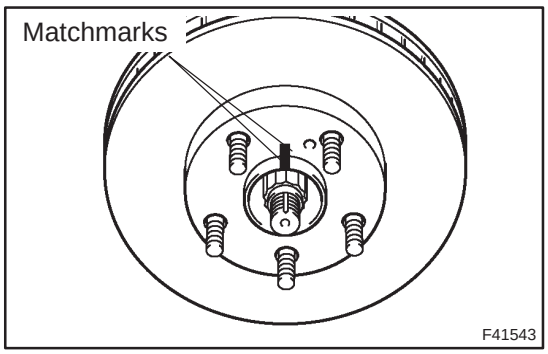


13. INSPECT FRONT DISC BRAKE PAD KIT

(a) Using a ruler, measure the disc brake pad lining thickness.

Standard thickness: 12.5 mm (0.492 in.)
Minimum thickness: 2.0 mm (0.079 in.)

(b) Inspect the 2 front disc brake pad support plates No.2 and front disc brake pad support plates No.1.



Make sure that they have sufficient rebound, no deformation, cracks nor wear, and have had all rust, dirt and foreign particles cleaned off.

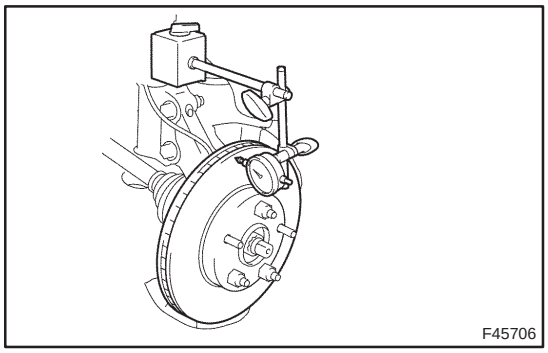
14. INSPECT DISC THICKNESS

(a) Using a micrometer, measure the front disc thickness.

Standard thickness: 26.0 mm (1.024 in.)
Minimum thickness: 24.0 mm (0.945 in.)

15. REMOVE FRONT DISC

(a) Place matchmarks on the front disc and the axle hub.



(b) Remove the front disc.

16. INSTALL FRONT DISC

(a) Aligning the matchmarks, install the front disc.

HINT:

Select the installation position where the disc has the minimum runout.

17. INSPECT DISC RUNOUT

(a) Temporarily fasten the front disc together with the hub nuts.

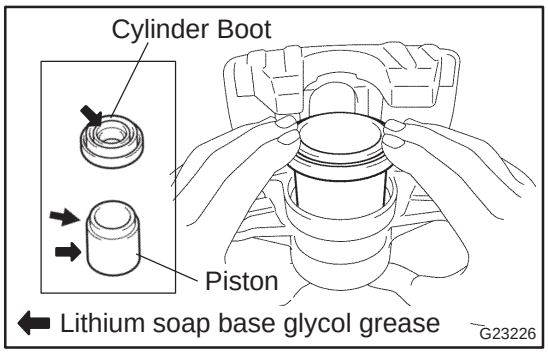
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

(b) Using a dial indicator, measure the front disc runout 10 mm (0.39 in.) away from the outer edge of the front disc.

Maximum disc runout: 0.05 mm (0.0020 in.)

(c) If the disc's runout is maximum value or greater, check the bearing play in the axial direction and check for the axle hub runout (See page 30–2). If the bearing play and axle hub runout are normal, adjust the disc runout or grind it on a "On–car" brake lathe.

18. TEMPORARILY TIGHTEN FRONT DISC BRAKE BLEEDER PLUG



(a) Temporarily install the front disc brake bleeder plug to the disc brake cylinder assy LH.

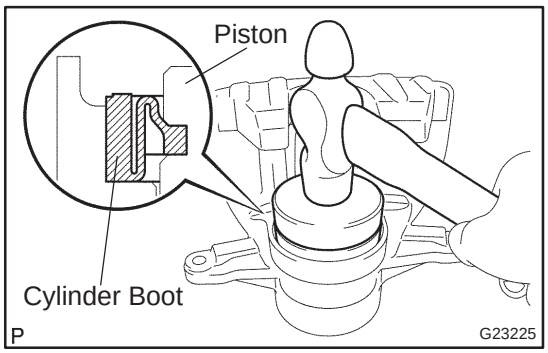
(b) Install the bleeder plug cap to the bleeder plug.

19. INSTALL PISTON SEAL

(a) Apply lithium soap base glycol grease to a new piston seal.

(b) Install the piston seal to the disc brake cylinder assy LH.

20. INSTALL FRONT DISC BRAKE PISTON



(a) Apply lithium soap base glycol grease to the front disc brake piston and a new cylinder boot.

(b) Install the cylinder boot to the front disc brake piston.

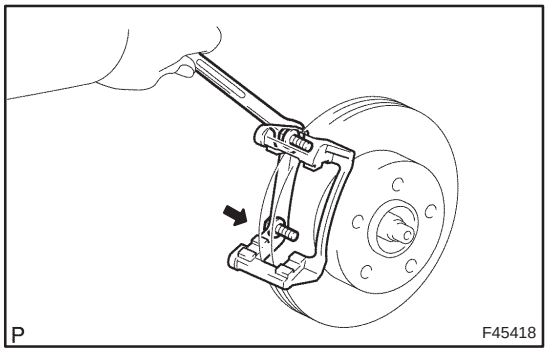
(c) Install the piston to the disc brake cylinder assy LH.

NOTICE:

Do not install the piston forcibly in the disc brake cylinder.

21. INSTALL CYLINDER BOOT

(a) Using SST and a hammer, install the cylinder boot to the disc brake cylinder assy LH.

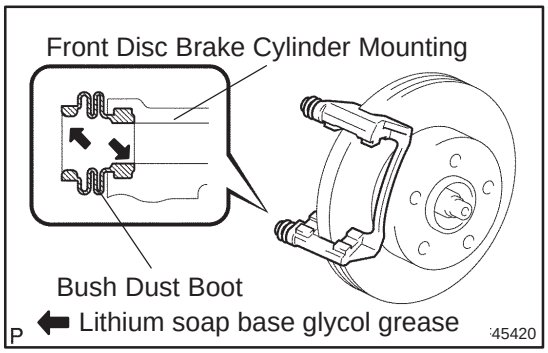


SST 09550–60010

NOTICE:

Do not damage the cylinder boot.

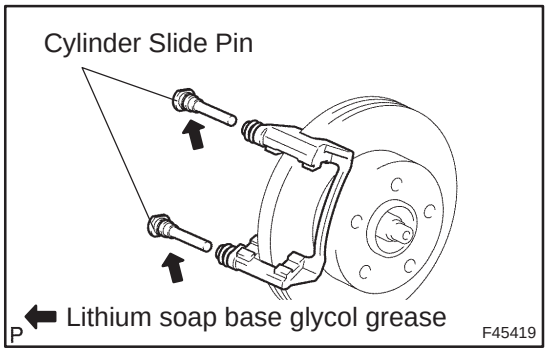
HINT:



Install the boot securely to the disc brake cylinder assy LH.

22. INSTALL FRONT DISC BRAKE CYLINDER MOUNTING LH

(a) Install the front disc brake cylinder mounting LH with the 2 bolts.



Torque: 102 N·m (1,040 kgf·cm, 75 ft·lbf)

23. INSTALL FRONT DISC BRAKE BUSH DUST BOOT

(a) Apply lithium soap base glycol grease to the sealing surface of 2 new front disc brake bush dust boots.

(b) Install the 2 front disc brake bush dust boots to the front disc brake cylinder mounting LH.

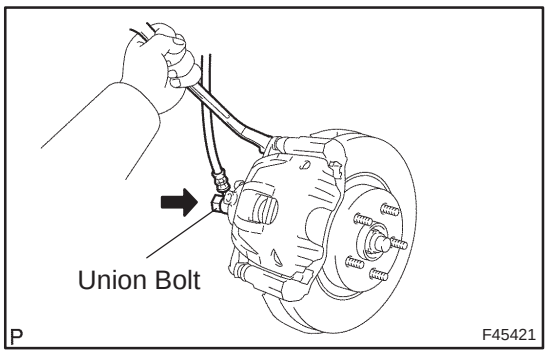
24. INSTALL FRONT DISC BRAKE CYLINDER SLIDE PIN KIT

(a) Apply lithium soap base glycol grease to the a new front disc brake cylinder slide bush.

(b) Install the front disc brake cylinder slide bush to the bottom side of the front disc brake cylinder slide pin (No.2).

(c) Apply lithium soap base glycol grease to the sliding part and the sealing surface of the 2 cylinder slide pins.

(d) Install the 2 front disc brake cylinder slide pins to the front disc brake cylinder mounting LH.



25. INSTALL FRONT DISC BRAKE PAD KIT

(a) Install the 2 front disc brake pad support plates (No.1) and 2 front disc brake pad support plates (No.2) to the front disc brake cylinder mounting LH.

(b) Install the disc brake pad kit front to the front disc brake cylinder mounting LH.

NOTICE:

There should be no oil or grease on the friction surfaces of the pads and the disc.

26. INSTALL DISC BRAKE CYLINDER ASSY LH

(a) Install the disc brake cylinder assy LH with the 2 bolts.
Torque: 30 N·m (306 kgf·cm, 22 ft·lbf)

(b) Install a new gasket and flexible hose with the union bolt.
Torque: 29 N·m (296 kgf·cm, 21 ft·lbf)

HINT:

Install the flexible hose lock securely in the lock hole in the disc brake cylinder assy LH.

27. FILL RESERVOIR WITH BRAKE FLUID (See page 32–4)

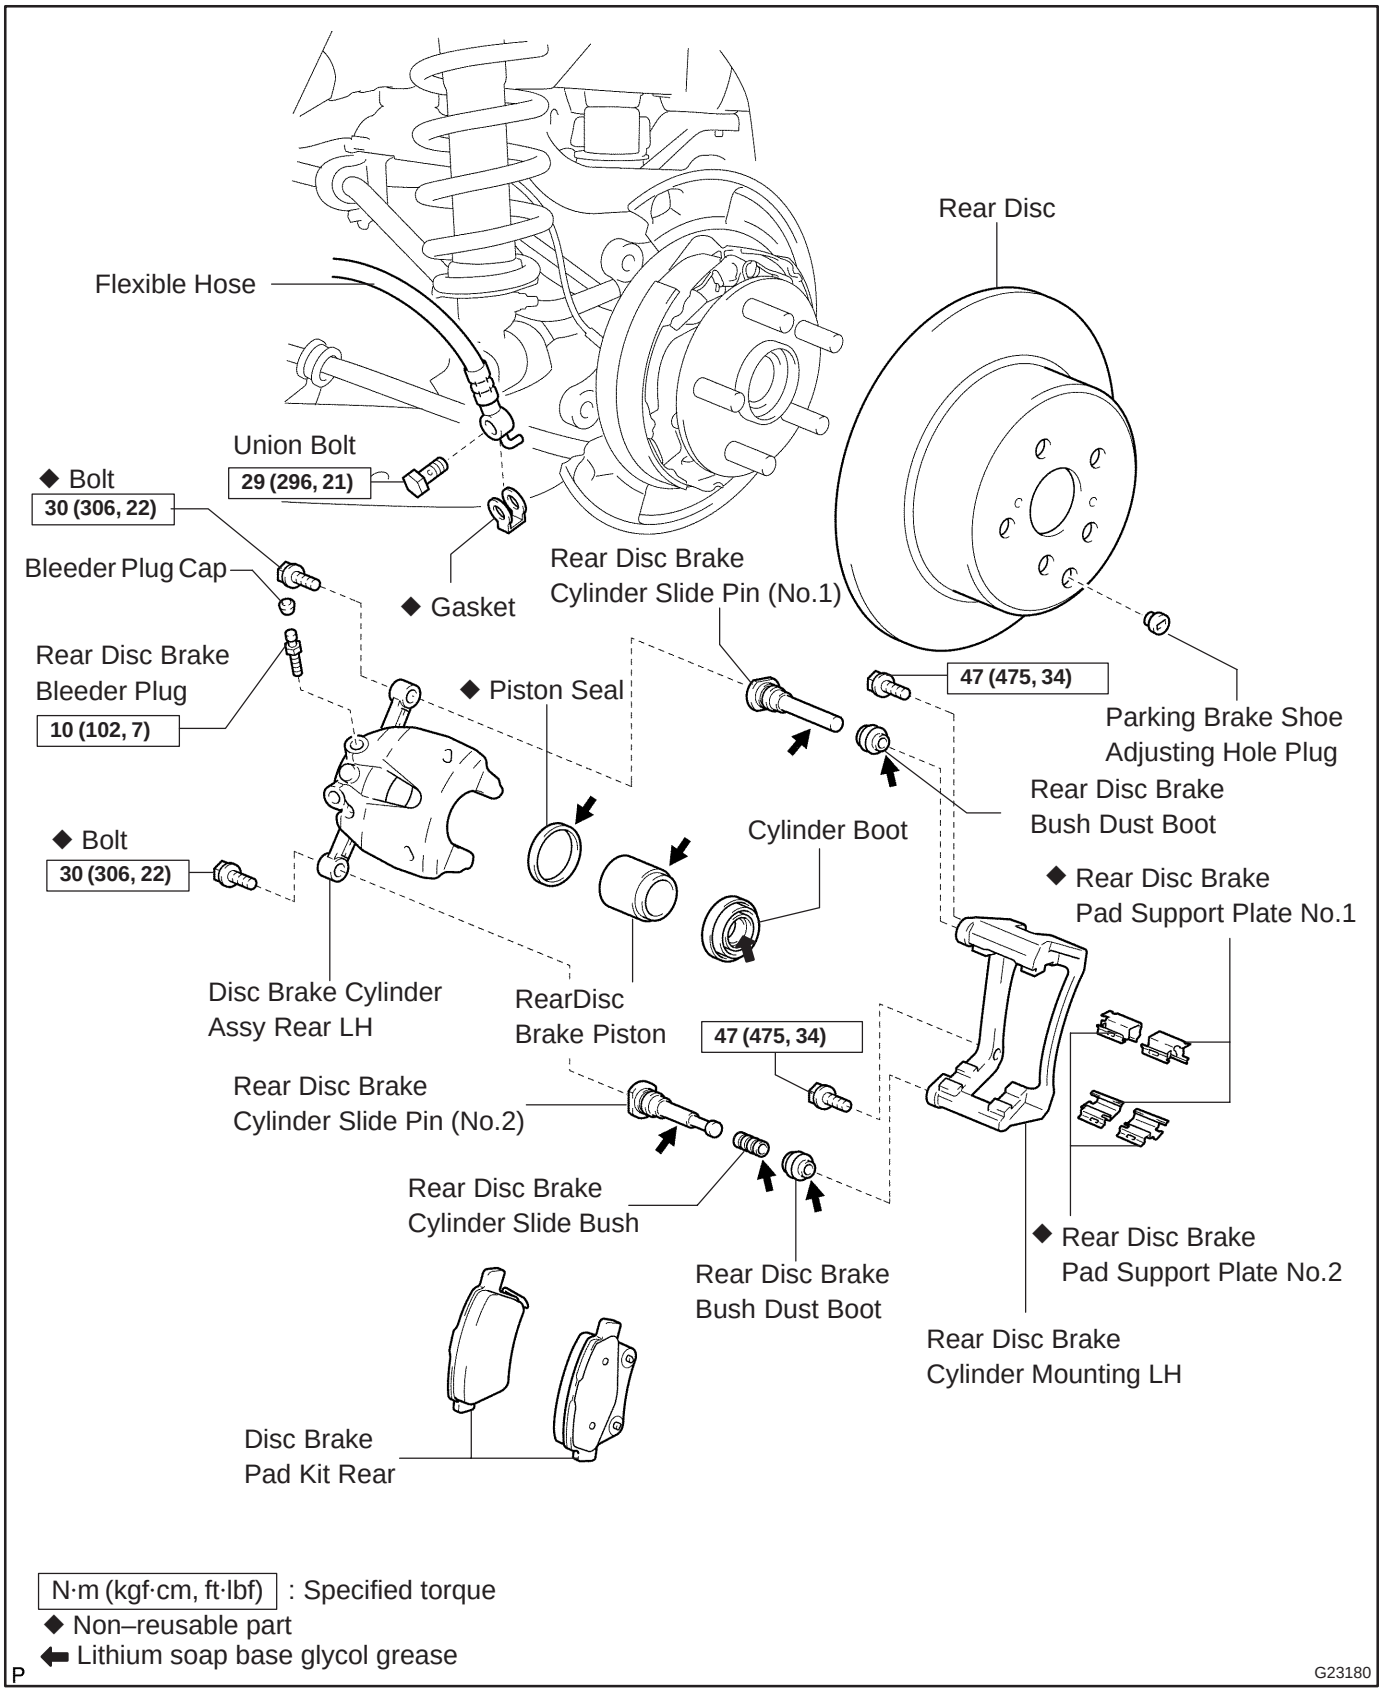
28. BLEED MASTER CYLINDER (See page 32–4)

(a) w/o VSC:
SST 09023–00100

(b) w/ VSC:
SST 09023–38400

29. BLEED BRAKE LINE (See page 32–4)

30. CHECK FLUID LEVEL IN RESERVOIR (See page 32–4)



31. CHECK BRAKE FLUID LEAKAGE

32. INSTALL FRONT WHEEL
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

REAR DISC BRAKE

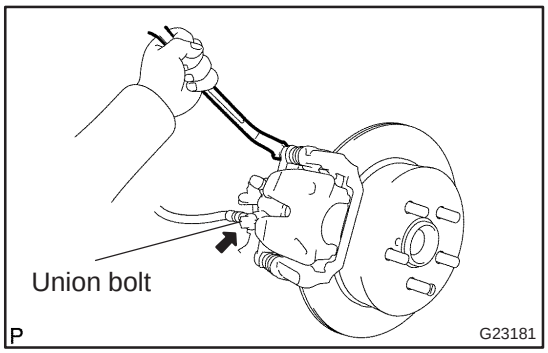
COMPONENTS

320GE–03

320W0–01

OVERHAUL

HINT:

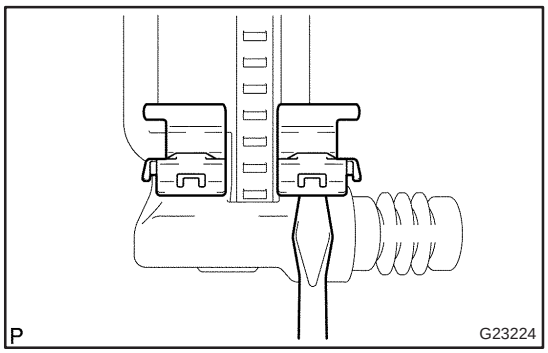


Overhaul the RH side by using the same procedures as those for the LH side.

1. REMOVE REAR WHEEL

2. DRAIN BRAKE FLUID

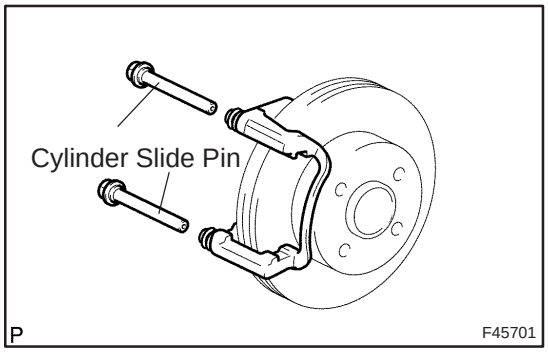
NOTICE:



Wash the brake fluid off immediately if it adheres to any painted surface.

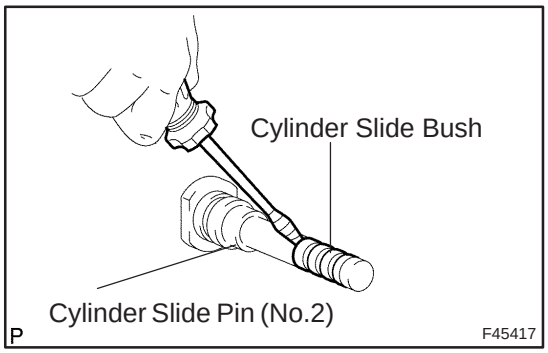
3. REMOVE DISC BRAKE CYLINDER ASSY REAR LH

(a) Remove the union bolt and gasket from the brake cylinder assy rear LH, then disconnect the flexible hose from the disc brake cylinder assy rear LH.



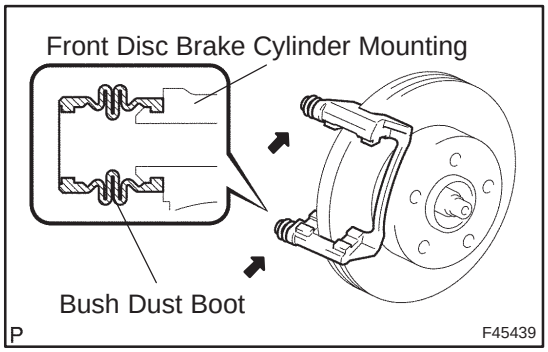
(b) Hold the rear disc brake cylinder slide pin and remove the 2 bolts.

4. REMOVE REAR DISC BRAKE PAD KIT



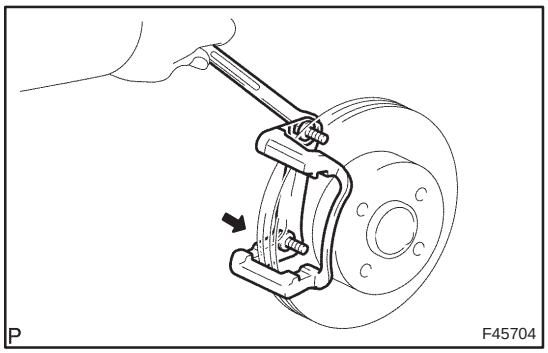
(a) Remove the disc brake pad kit rear.

(b) Remove the 2 rear disc brake pad support plates No.1 and 2 rear disc brake pad support plates No.2 from the rear disc brake cylinder mounting LH.

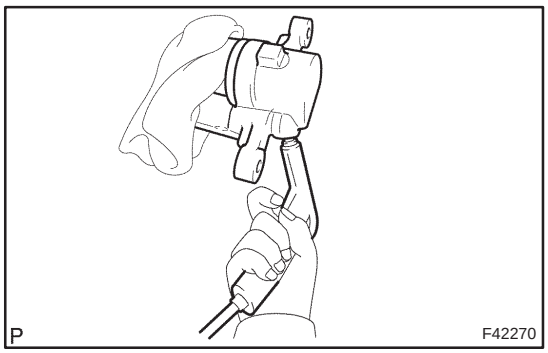


5. REMOVE REAR DISC BRAKE CYLINDER SLIDE PIN KIT

(a) Remove the rear disc brake cylinder slide pin (No.1) and rear disc brake cylinder slide pin (No.2) from the disc brake cylinder mounting LH.



(b) Remove the rear disc brake cylinder slide bush from the bottom side of the rear disc brake cylinder slide pin (No.2).



6. REMOVE REAR DISC BRAKE BUSH DUST BOOT

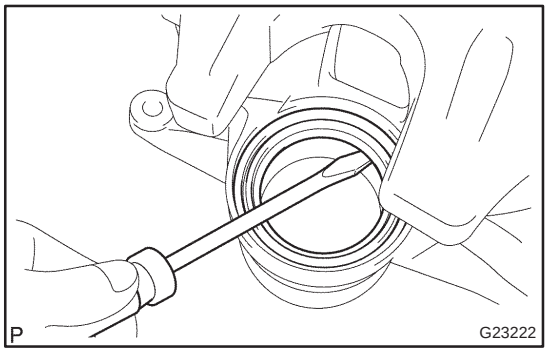
(a) Remove the 2 rear disc brake bush dust boots from the rear disc brake cylinder mounting LH.

7. REMOVE REAR DISC BRAKE CYLINDER MOUNTING LH

(a) Remove the 2 bolts and rear disc brake cylinder mounting LH.

8. REMOVE REAR DISC BRAKE PISTON

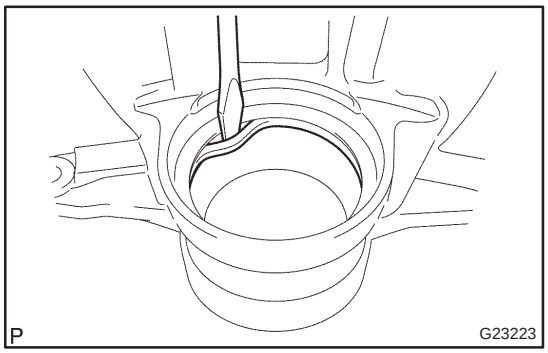
(a) Place a shop rug between the rear disc brake piston and the disc brake cylinder assy rear LH.



(b) Use compressed air to remove the rear disc brake piston from the disc brake cylinder assy rear LH.

CAUTION:

Do not place your fingers in front of the piston when using compressed air.



NOTICE:

Do not spatter the brake fluid.

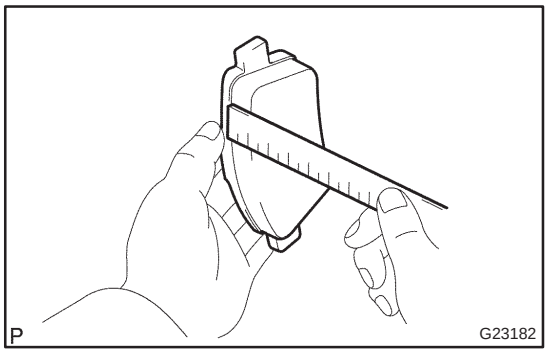
9. REMOVE CYLINDER BOOT

(a) Using a screwdriver, remove the cylinder boot.

10. REMOVE PISTON SEAL

(a) Using a screwdriver, remove the piston seal.

NOTICE:



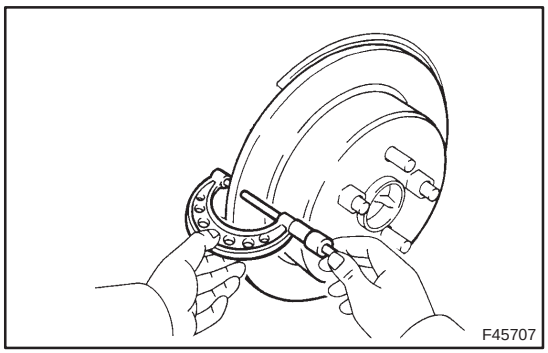
Do not damage the inner cylinder and cylinder groove.

11. REMOVE REAR DISC BRAKE BLEEDER PLUG

(a) Remove the bleeder plug cap and rear disc brake bleeder plug from the disc brake cylinder assy raer LH.

12. INSPECT BRAKE CYLINDER AND PISTON

(a) Check the cylinder bore and piston for rust or scoring.

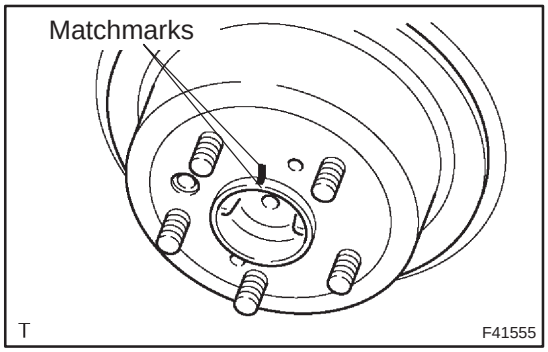


13. INSPECT REAR DISC BRAKE PAD KIT

(a) Using a ruler, measure the disc brake pad lining thickness.

Standard thickness: 10.0 mm (0.394 in.)
Minimum thickness: 2.0 mm (0.079 in.)

(b) Inspect the 2 rear disc brake pad support plates No.1 and 2 rear disc brake pad support plates No.2. Make sure that they have sufficient rebound, no deformation cracks or wear, and have had all rust, dirt and foreign particles cleaned off.



14. INSPECT DISC THICKNESS

(a) Using a micrometer, measure the rear disc thickness.

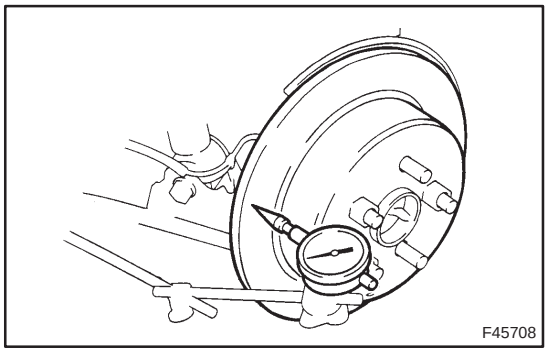
Standard thickness: 10.0 mm (0.394 in.)
Minimum thickness: 9.0 mm (0.354 in.)

15. REMOVE PARKING BRAKE SHOE ADJUSTING HOLE PLUG

16. REMOVE REAR DISC

(a) Place matchmarks on the rear disc and the axle hub.

(b) Remove the rear disc.



17. INSTALL REAR DISC

(a) Aligning the matchmarks, install the rear disc.

HINT:

Select the installation position where the rear disc has the minimum runout.

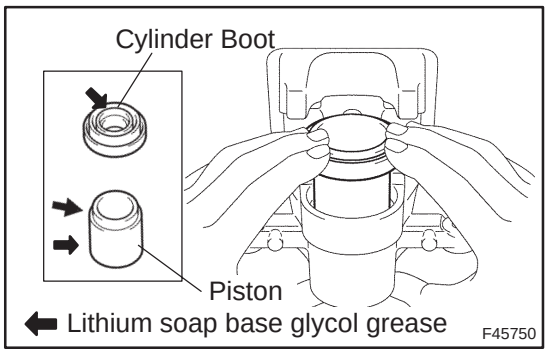
18. INSTALL PARKING BRAKE SHOE ADJUSTING HOLE PLUG

19. INSPECT DISC RUNOUT

(a) Temporarily fasten the rear disc with the hub nuts.
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

(b) Using a dial indicator, measure the disc runout 10 mm (0.39 in.) away from the outer edge of the rear disc.
Maximum disc runout: 0.15 mm (0.0059 in.)

(c) If the disc runout is maximum value or greater, check the bearing play in the axial direction and check for the axle hub runout (See page 30–2). If the bearing play and axle hub runout are normal, adjust the disc runout or grind it on a ”On–car” brake lathe.



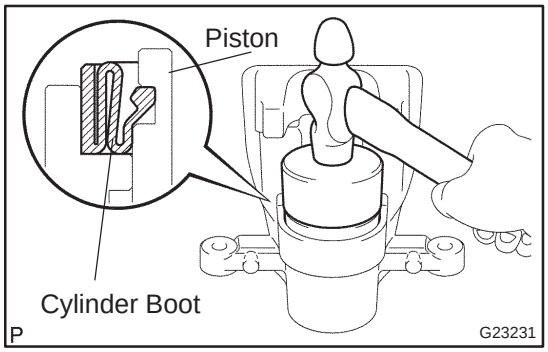
20. TEMPORARILY TIGHTEN REAR DISC BRAKE BLEEDER PLUG

(a) Temporarily install the rear disc brake bleeder plug to the disc brake cylinder assy rear LH.

21. INSTALL PISTON SEAL

(a) Apply the lithium soap base glycol grease to a new piston seal.

(b) Install the piston seal to the disc brake cylinder assy rear LH.

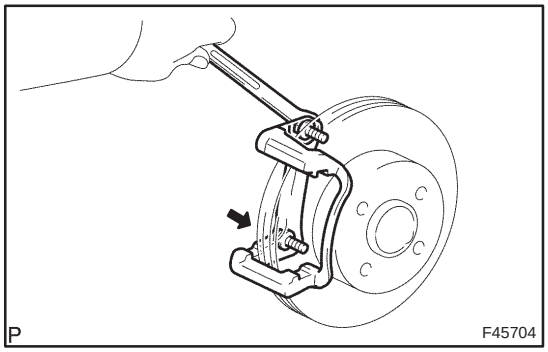


22. INSTALL REAR DISC BRAKE PISTON

(a) Apply lithium soap base glycol grease to the rear disc brake piston and a new cylinder boot.

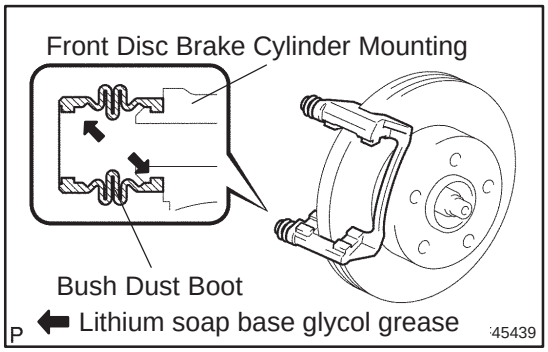
(b) Install the cylinder boot to the rear disc brake piston.

(c) Install the piston to the disc brake cylinder assy LH.



NOTICE:
Do not install the piston forcibly in the disc brake cylinder.

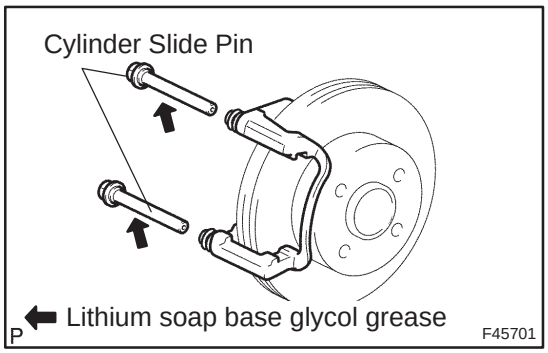
23. INSTALL CYLINDER BOOT



(a) Using SST and a hammer, install the cylinder boot to the disc brake cylinder assy rear LH.
SST 09710–06051

NOTICE:
Do not damage the cylinder boot.
HINT:
Install the boot securely to the disc brake cylinder rear LH.

24. INSTALL REAR DISC BRAKE CYLINDER MOUNTING LH



(a) Install the rear disc brake cylinder mounting LH with the 2 bolts.
Torque: 47 N·m (475 kgf·cm, 34 ft·lbf)

25. INSTALL REAR DISC BRAKE BUSH DUST BOOT

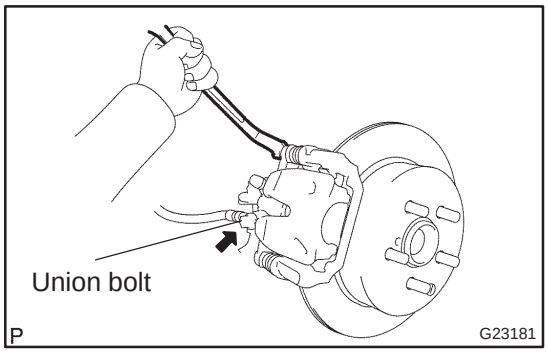
(a) Apply lithium soap base glycol grease to the sealing surface of 2 new bush dust boots.

(b) Install the 2 bush dust boots to the rear disc brake cylinder mounting LH.

26. INSTALL REAR DISC BRAKE CYLINDER SLIDE PIN KIT

(a) Apply lithium soap base glycol grease to sealing surface of a new cylinder slide bush.

(b) Install the rear disc brake cylinder slide bush to the bottom side of the rear disc brake cylinder slide pin (No.2).



(c) Apply lithium soap base glycol grease to the sliding part and the sealing surface of the 2 rear disc brake cylinder slide pins.

(d) Install the rear disc brake cylinder slide pin (No.1) and rear disc brake cylinder slide pin (No.2) to the rear disc brake cylinder mounting LH.

27. INSTALL REAR DISC BRAKE PAD KIT

(a) Install the 2 rear disc brake pad support plates No.1 and 2 rear disc brake pad support plate No.2 to the rear disc brake cylinder mounting LH.

(b) Install the disc brake pad kit rear to the disc brake cylinder mounting LH.

28. INSTALL DISC BRAKE CYLINDER ASSY REAR LH

(a) Install the disc brake cylinder assy rear LH with the 2 bolts.
Torque: 30 N·m (306 kgf·cm, 22 ft·lbf)

(b) Install a new gasket and flexible hose with the union bolt.
Torque: 29 N·m (296 kgf·cm, 21 ft·lbf)

HINT:
Install the flexible hose lock securely in to the lock hole in the disc brake cylinder assy rear LH.

29. FILL RESERVOIR WITH BRAKE FLUID (See page 32–4)

30. BLEED MASTER CYLINDER (See page 32–4)

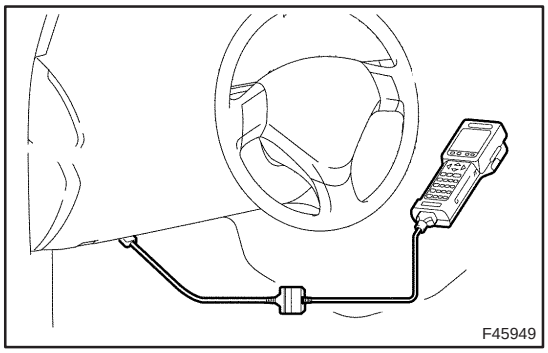
(a) w/o VSC:
SST 09023–00100

(b) w/ VSC:
SST 09023–38400

31. BLEED BRAKE LINE (See page 32–4)

32. CHECK FLUID LEVEL IN RESERVOIR (See page 32–4)

33. CHECK BRAKE FLUID LEAKAGE



34. INSTALL REAR WHEEL

Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

BRAKE ACTUATOR ASSY (W/O VSC)

320VY–01

ON–VEHICLE INSPECTION

1. CONNECT HAND–HELD TESTER:

(a) Connect the hand–held tester to the DLC3.

(b) Start the engine and run at idle.

(c) Select the ACTIVE TEST mode on the hand–held tester.

HINT:

Please refer to the hand–held tester operator's manual for further details.

2. INSPECT ACTUATOR MOTOR OPERATION

(a) With the motor relay on, check the actuator motor operation noise.

(b) Turn the motor relay off.

(c) Depress the brake pedal and hold it for about 15 seconds. Check that the brake pedal cannot be depressed.

(d) With the motor relay on, check that the pedal does not pulsate.

NOTICE:

Do not keep a motor relay tvrned on for more than 5 seconds continuously. When operating it continuously, set an interval more than 20 seconds.

(e) Turn the motor relay off and release the brake pedal.

3. INSPECT RIGHT FRONT WHEEL OPERATION

NOTICE:

Never turn on a solenoid in a manner described below.

(a) With the brake pedal depressed, perform the following operations.

(b) Turn the SFRH and SFRR solenoid on simultaneously, and check that the pedal cannot be depressed.

NOTICE:

Do not keep a solenoids tvrned on for more than 5 seconds continuously. When operating it continuously, set an interval more than 20 seconds.

(c) Turn the SFRH and SFRR solenoid off simultaneously, and check that the pedal can be depressed.

(d) Turn the motor relay on, and check that the pedal returns.

NOTICE:

Do not keep a motor relay tvrned on for more than 5 seconds continuously. When operating it continuously, set an interval more than 20 seconds.

(e) Turn the motor relay off and release the brake pedal.

4. INSPECT OTHER WHEEL OPERATION

(a) Using the same procedure, check the solenoids of the other wheels.

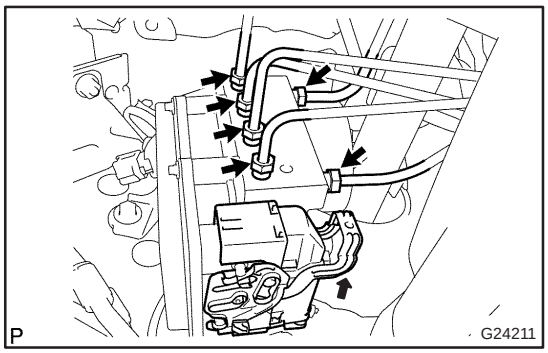
HINT:

Left front wheel: SFLH, SFLR

Right rear wheel: SRRH, SRRR

Left rear wheel: SRLH, SRLR

REPLACEMENT



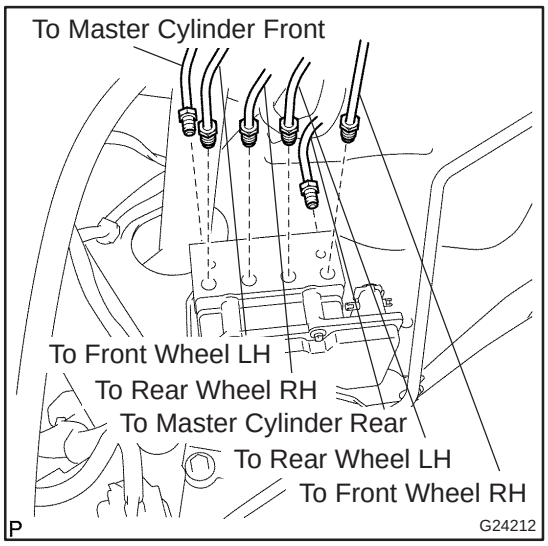
1. DRAIN BRAKE FLUID

NOTICE:

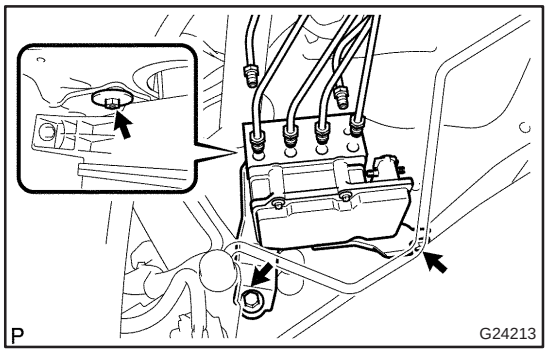
Wash the brake fluid off immediately if it adheres to any painted surfaces.

2. REMOVE FRONT WHEEL RH

3. REMOVE FRONT FENDER LINER RH



4. REMOVE BRAKE ACTUATOR WITH BRACKET



(a) Release the latch of the brake actuator connector to disconnect the connector.

(b) Using SST, disconnect the brake tubes from the brake actuator.

SST 09023–00100

(c) Use tags or make a memo to identify the place to reconnect.

(d) Remove the nut, 2 bolts and brake actuator with bracket.

5. REMOVE BRAKE ACTUATOR ASSY

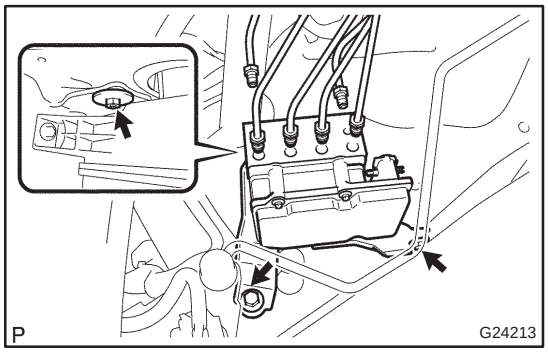
(a) Remove the 2 nuts and brake actuator from the brake acutuator bracket.

6. REMOVE SKID CONTROL ECU

(a) Disconnect the connector from the skid control ECU.

(b) Using a torx driver (T20), remove the 4 screws and the skid control ECU from the brake actuator.

7. INSTALL SKID CONTROL ECU

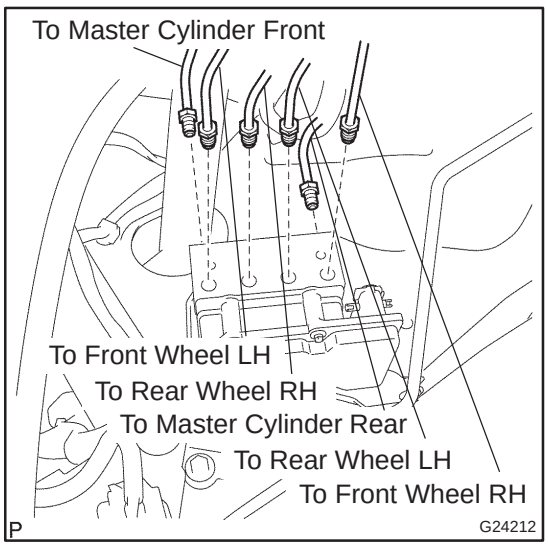


(a) Install the skid control ECU and 4 screws with a torx driver (T20).

(b) Connect the connector to the skid control ECU.

8. INSTALL BRAKE ACTUATOR ASSY

(a) Install the brake actuator with the 2 nuts to the brake actuator bracket.



Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)

9. INSTALL BRAKE ACTUATOR WITH BRACKET

(a) Install the brake actuator with bracket with the nut and 2 bolts.

Torque: 19 N·m (194 kgf·cm, 14 ft·lbf)

(b) Using SST, connect each brake line to the correct position of the brake actuator, as shown in the illustration.

SST 09023–00100

Torque:

A: 15 N·m (155 kgf·cm, 11 ft·lbf)

(c) Connect the brake actuator connector.

10. INSTALL FRONT FENDER LINER RH

11. INSTALL FRONT WHEEL RH

Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

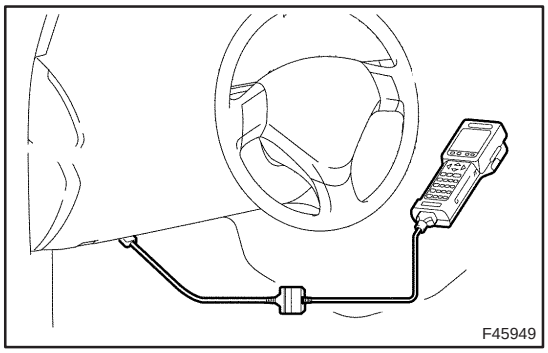
12. FILL RESERVOIR WITH BRAKE FLUID (See page 32–4)

13. BLEED MASTER CYLINDER (See page 32–4)

SST 09023–00100

14. BLEED BRAKE LINE (See page 32–4)

15. CHECK FLUID LEVEL IN RESERVOIR (See page 32–4)



16. CHECK BRAKE FLUID LEAKAGE

17. CHECK BRAKE ACTUATOR WITH HAND–HELD TESTER (See page 05–699)

BRAKE ACTUATOR ASSY (W/ VSC)

320VW–01

ON–VEHICLE INSPECTION

1. CONNECT HAND–HELD TESTER:

(a) Connect the hand–held tester to the DLC3.

(b) Start the engine and run at idle.

(c) Select the ACTIVE TEST mode on the hand–held tester.

HINT:

Please refer to the hand–held tester operator's manual for further details.

2. INSPECT ACTUATOR MOTOR OPERATION

(a) With the motor relay on, check the actuator motor operation noise.

(b) Turn the motor relay off.

(c) Depress the brake pedal and hold it for about 15 seconds. Check that the brake pedal cannot be depressed.

(d) With the motor relay on, check that the pedal does not pulsate.

NOTICE:

Do not keep a motor relay tvrned on for more than 5 seconds continuously. When operating it continuously, set an interval more than 20 seconds.

(e) Turn the motor relay off and release the brake pedal.

3. INSPECT RIGHT FRONT WHEEL OPERATION

NOTICE:

Never turn on a solenoid in a manner described below.

(a) With the brake pedal depressed, perform the following operations.

(b) Turn the SFRH and SFRR solenoid on simultaneously, and check that the pedal cannot be depressed.

NOTICE:

Do not keep a solenoids tvrned on for more than 5 seconds continuously. When operating it continuously, set an interval more than 20 seconds.

(c) Turn the SFRH and SFRR solenoid off simultaneously, and check that the pedal can be depressed.

(d) Turn the motor relay on, and check that the pedal returns.

NOTICE:

Do not keep a motor relay tvrned on for more than 5 seconds continuously. When operating it continuously, set an interval more than 20 seconds.

(e) Turn the motor relay off and release the brake pedal.

4. INSPECT OTHER WHEEL OPERATION

(a) Using the same procedure, check the solenoids of the other wheels.

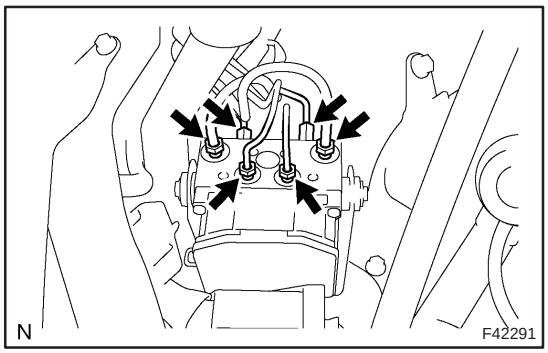
HINT:

Left front wheel: SFLH, SFLR

Right rear wheel: SRRH, SRRR

Left rear wheel: SRLH, SRLR

REPLACEMENT



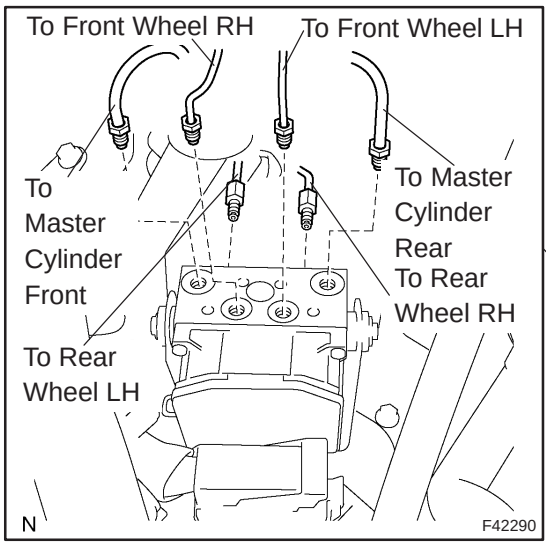
1. DRAIN BRAKE FLUID

NOTICE:

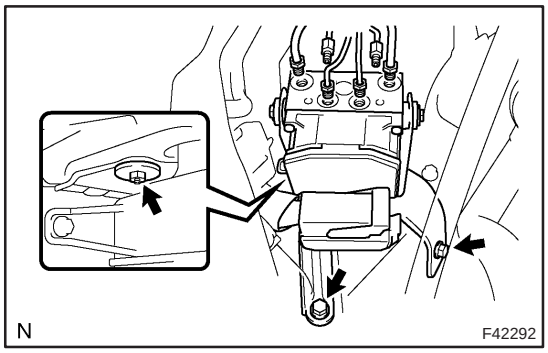
Wash the brake fluid off immediately if it adheres to any painted surfaces.

2. REMOVE FRONT WHEEL RH

3. REMOVE FRONT FENDER LINER RH



4. REMOVE BRAKE ACTUATOR WITH BRACKET



(a) Release the latch of the brake actuator connector to disconnect the connector.

(b) Disconnect oil presser sensor connector.

(c) Using SST, disconnect the brake tubes from the brake actuator.
SST 09023–00100, 09023–38400

(d) Use tags or make a memo to identify the place to reconnect.

(e) Remove the nut, 2 bolts and brake actuator with bracket.

5. REMOVE BRAKE ACTUATOR ASSY

(a) Remove the 3 bolts and brake actuator from the brake acutuator bracket.

6. REMOVE OIL PRESSURE SENSOR

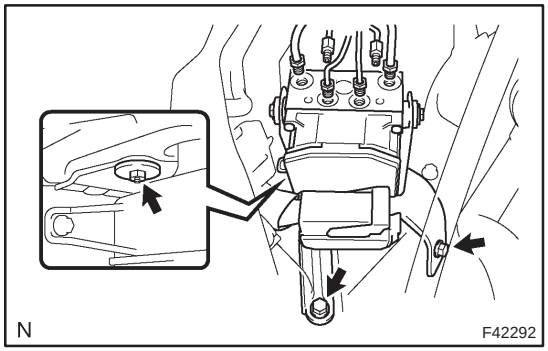
7. REMOVE SKID CONTROL ECU

(a) Disconnect the connector from the skid control ECU.

(b) Using a torx driver (T20), remove the 6 screws and the skid control ECU from the brake actuator.

8. INSTALL SKID CONTROL ECU

(a) Install the skid control ECU and 6 screws with a torx driver (T20).

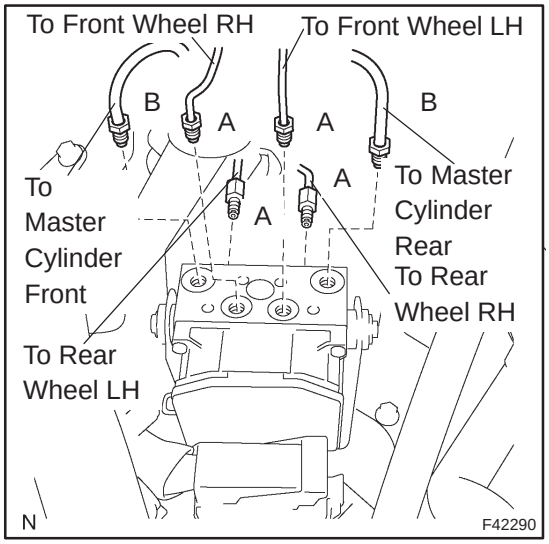


(b) Connect the connector to the skid control ECU.

9. INSTALL OIL PRESSURE SENSOR

10. INSTALL BRAKE ACTUATOR ASSY

(a) Install the brake actuator with 3 the bolts to the brake actuator bracket.



Torque: 4.7 N·m (48 kgf·cm, 42 in.·lbf)

11. INSTALL BRAKE ACTUATOR WITH BRACKET

(a) Install the brake actuator with bracket with the nut and 2 bolts.

Torque: 19 N·m (194 kgf·cm, 14 ft·lbf)

(b) Using SST, connect each brake line to the correct position of the brake actuator, as shown in the illustration.

SST 09023–00100, 09023–38400

Torque:

A: 15 N·m (155 kgf·cm, 11 ft·lbf)

B: 29 N·m (296 kgf·cm, 21 ft·lbf)

(c) Connect the oil presser sensor connector.

(d) Connect the brake actuator connector.

12. INSTALL FRONT FENDER LINER RH

13. INSTALL FRONT WHEEL RH

Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

14. FILL RESERVOIR WITH BRAKE FLUID (See page 32–4)

15. BLEED MASTER CYLINDER (See page 32–4)

SST 09023–38400

16. BLEED BRAKE LINE (See page 32–4)

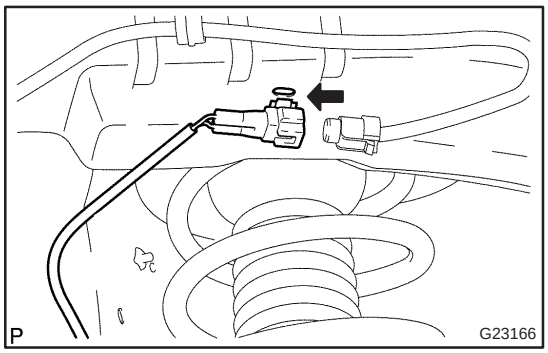
17. CHECK FLUID LEVEL IN RESERVOIR (See page 32–4)

18. CHECK BRAKE FLUID LEAKAGE

19. CHECK BRAKE ACTUATOR WITH HAND–HELD TESTER (See page 05–756)

SPEED SENSOR FRONT LH

3201P–05

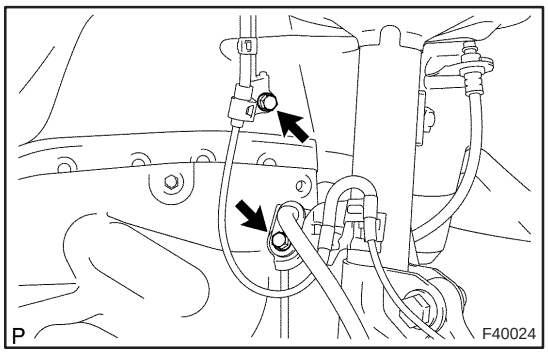


REPLACEMENT

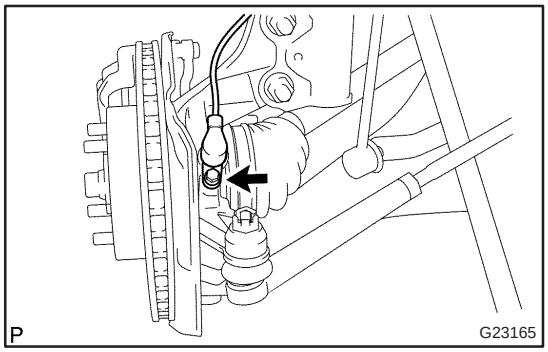
HINT:

Replace the RH side by using the same procedures as those for the LH side.

1. REMOVE FRONT WHEEL



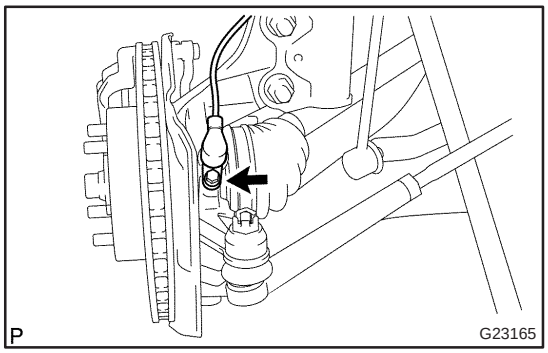
2. REMOVE FRONT FENDER LINER LH



3. REMOVE SPEED SENSOR FRONT LH

(a) Disconnect the resin clip and speed sensor wire harness from the body and clamp.

(b) Disconnect the speed sensor connector.

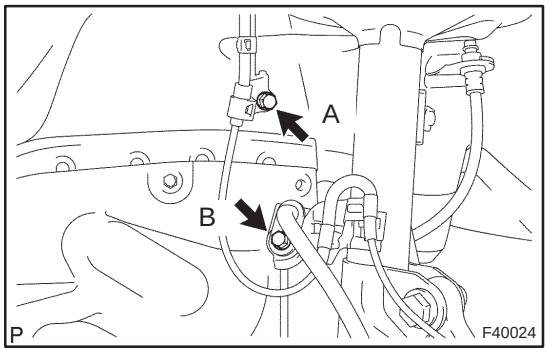


(c) Remove the 2 clamp bolts holding the sensor harness from the body and shock absorber.

(d) Remove the bolt and separate the speed sensor front LH.

NOTICE:

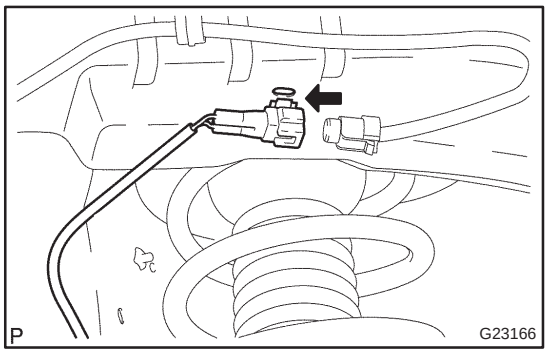
Prevent foeingn matter from attaching to the sensor tip.



4. INSTALL SPEED SENSOR FRONT LH

(a) Install the speed sensor front LH with the bolt.

Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)



NOTICE:

Prevent foeingn matter from attaching to the sensor tip.

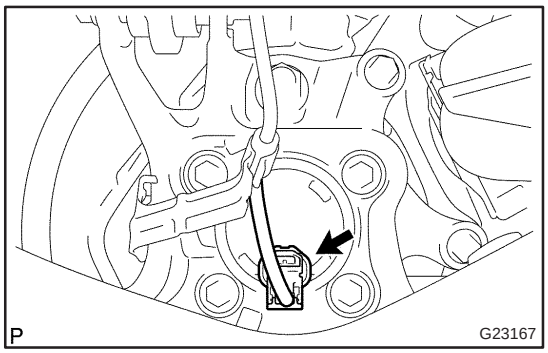
(b) Install the sensor harness clamp with the 2 bolts ”A” and ”B” to the body and shock absorber.
Torque:
Bolt A: 8.0 N·m (82 kgf·cm, 71 in.·lbf)
Bolt B: 29 N·m (296 kgf·cm, 21 ft·lbf)

NOTICE:
Do not twist the sensor wire when installing the sensor.

(c) Connect the speed sensor connector.
(d) Connect the resin clip and speed sensor wire harness to the body and clamp.

5. INSTALL FRONT FENDER LINER LH
6. INSTALL FRONT WHEEL
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)
7. CHECK ABS SPEED SENSOR SIGNAL (See page 05–699)

SKID CONTROL SENSOR



320VV–01

REPLACEMENT

HINT:

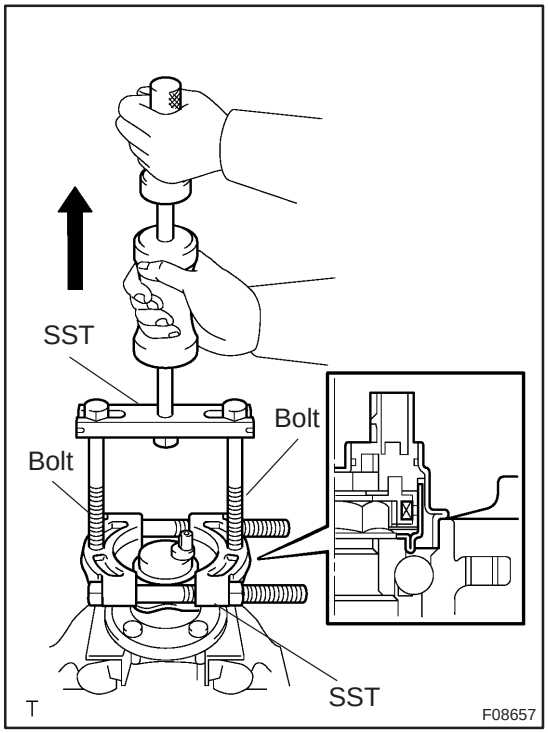
Replace the RH side by using the same procedures as those for the LH side.

1. REMOVE REAR WHEEL

2. DISCONNECT SKID CONTROL SENSOR WIRE

(a) Disconnect the connector from the skid control sensor.

3. REMOVE REAR DISC BRAKE CALIPER ASSY LH



(a) Remove the 2 bolts and rear brake caliper assy LH.

4. REMOVE REAR DISC

(a) place matchmarks on the rear disc and the axle hub.

(b) Remove the rear disc.

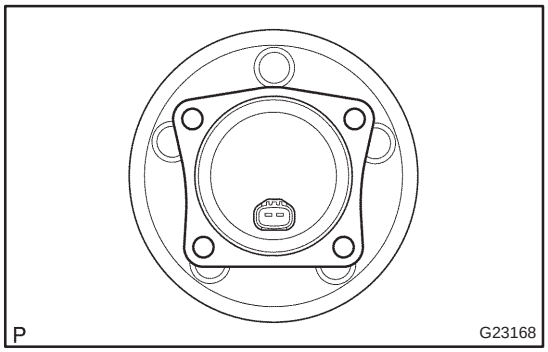
5. REMOVE REAR AXLE HUB & BEARING ASSY LH (See page 30–31)

6. REMOVE SKID CONTROL SENSOR

(a) Mount the rear axle hub in a soft jaw vise.

NOTICE:

Replace the axle hub assembly if it is dropped or receives a strong shock.



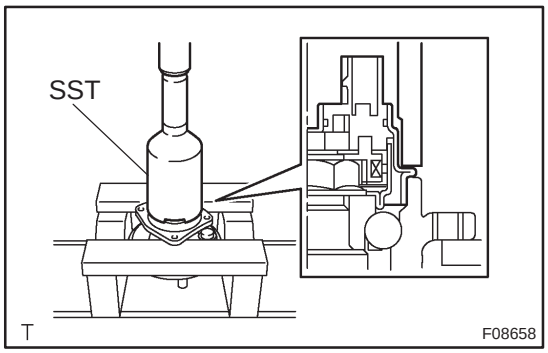
(b) Using a pin punch and hammer, drive out the 2 pins and remove the 2 attachments from SST.

(c) Using SST and 2 bolts (Diameter: 12 mm, pitch: 1.5 mm), remove the skid control sensor from the rear axle hub.

SST 09520–00031 (09520–00040), 09521–00020, 09950–00020

NOTICE:

- **If the sensor rotor is damaged, replace the axle hub assembly.**
- **Do not scratch the contacting surface of the axle hub and speed sensor.**



7. INSTALL SKID CONTROL SENSOR

(a) Clean the contacting surface of the axle hub and that of a new skid control sensor.

NOTICE:

Make sure the sensor rotor is clean.

(b) Place the skid control sensor on the axle hub so that the connector comes into the most downward position under the on vehicle condition.

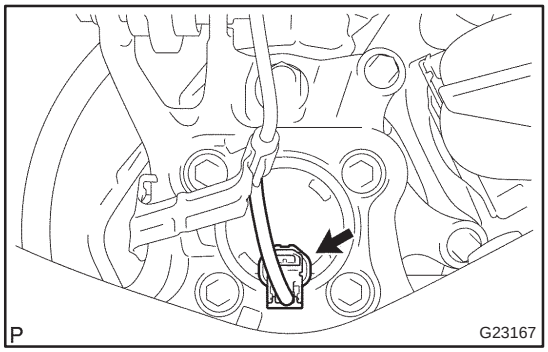
(c) Using SST and a press, install the skid control sensor to the axle hub.

NOTICE:

- **Do not tap the skid control sensor directly with a hammer.**
- **Check that there is no foreign matter on the skid control sensor detection portion.**
- **Press in the skid control sensor straight and slowly.**

SST 09830–36010, 09950–60010 (09951–00650), 09950–70010 (09951–07100)

8. INSTALL REAR AXLE HUB & BEARING ASSY LH (See page 30–31)



9. INSTALL REAR BRAKE DRUM SUB–ASSY

(a) Aligning the matchmarks, install the rear disc.

10. INSTALL REAR DISC BRAKE CALIPER ASSY LH

(a) Install the rear disc brake caliper assy LH with the 2 bolts.

Torque: 47 N·m (475 kgf·cm, 34 ft·lbf)

11. CONNECT SKID CONTROL SENSOR WIRE

(a) Connect the connector from the skid control sensor.

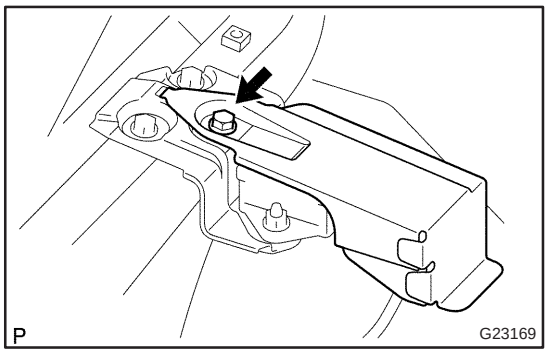
12. INSTALL REAR WHEEL

Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

13. INSPECT AND ADJUST REAR WHEEL ALIGNMENT (See page 27–4)

14. CHECK ABS SPEED SENSOR SIGNAL (See page 05–699)

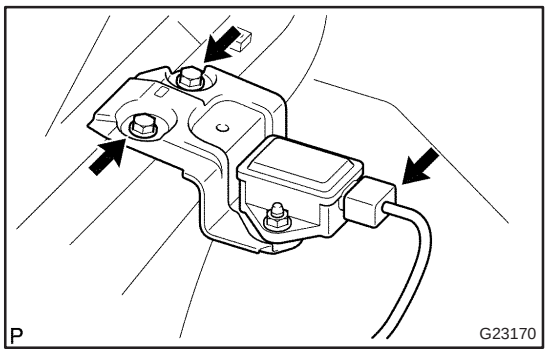
YAWRATE SENSOR



320GM–02

REPLACEMENT

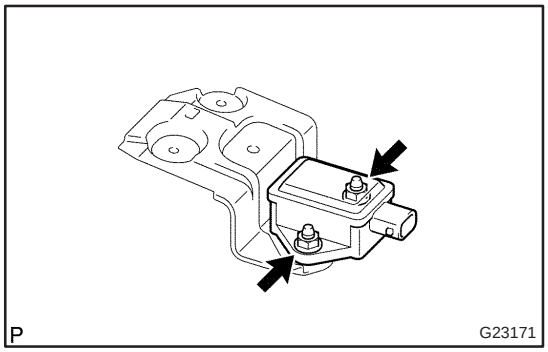
NOTICE:



- **Don’t use the dropped or damaged yawrate sensor.**
- **Free from the foreing matters between yawrate sensor braket and body.**
- **Make sure the sensor direction.**

1. REMOVE FRONT SEAT ASSEMBLY LH (See page 72–11 or 72–16)

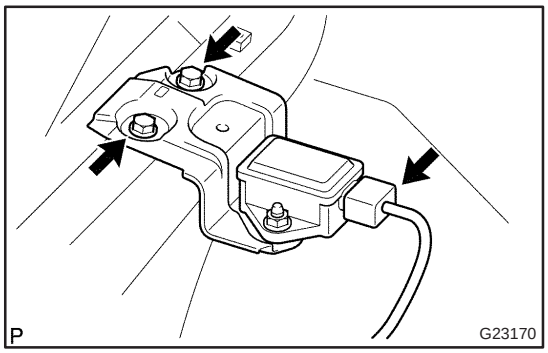
2. REMOVE YAWRATE SENSOR BRACKET



(a) Remove the bolt and upper part of the yawrate sensor bracket.

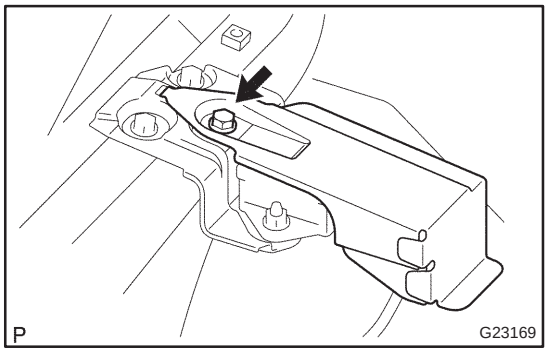
3. REMOVE YAWRATE SENSOR

(a) Disconnect the yawrate sensor connector from the yawrate sensor.



(b) Remove the 2 bolts and the yawrate sensor with the yawrate sensor bracket from the body.

(c) Remove the 2 nuts and yawrate sensor from the yawrate sensor bracket.



4. INSTALL YAWRATE SENSOR

(a) Install the 2 nuts and yawrate sensor to the yawrate sensor bracket.
Torque: 6 N·m (61 ft·lbf, 53 in.·lbf)

(b) Install the 2 bolts and the yawrate sensor with the yawrate sensor bracket to the body.
Torque: 21 N·m (214 ft·lbf, 15 ft·lbf)

(c) Connect the yawrate sensor connector to the yawrate sensor.

5. INSTALL YAWRATE SENSOR BRACKET

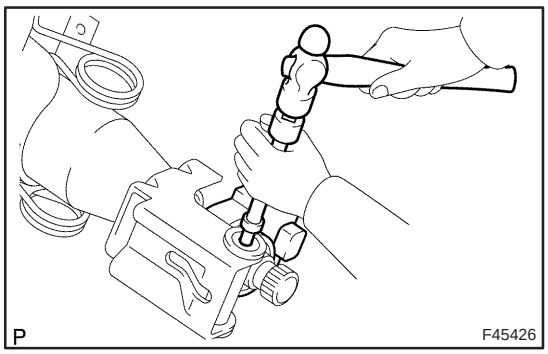
(a) Install the bolt and upper part og the yawrate sensor bracket.

Torque: 21 N·m (214 ft·lbf, 15 ft·lbf)

6. INSTALL FRONT SEAT ASSEMBLY LH (See page 72–11 or 72–16)

7. PERFORM YAWRATE SENSOR ZERO POINT CALIBRATION (See page 05–756)

STEERING SENSOR

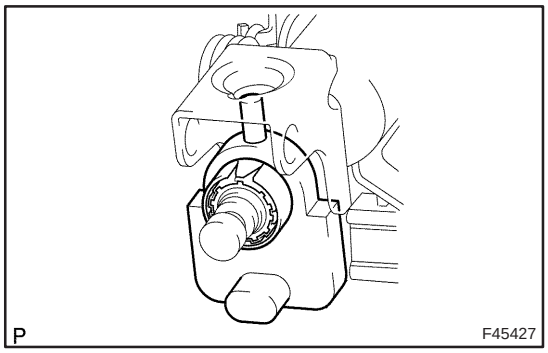


320G5–02

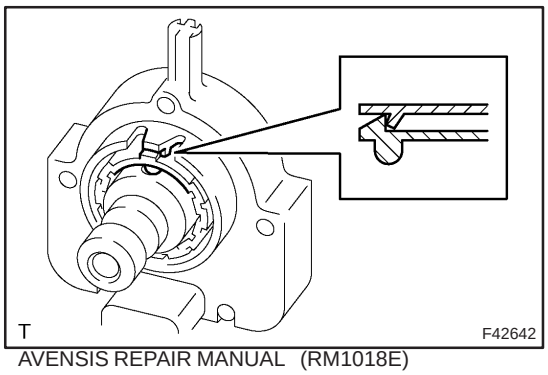
REPLACEMENT

1. PRECAUTION (See page 60–1)
2. REMOVE PLACE FRONT WHEELS FACING STRAIGHT AHEAD
3. DISCONNECT BATTERY NEGATIVE TERMINAL (See page 60–1)
4. REMOVE HORN BUTTON ASSY (See page 60–17)
5. REMOVE STEERING WHEEL ASSY (See page 50–9)
6. REMOVE STEERING COLUMN COVER LWR (See page 50–9)
7. REMOVE STEERING COLUMN COVER W/INSTRUMENT CLUSTER FINISH PANEL ASSY (See page 50–9)
8. REMOVE STEERING COLUMN ASSY(See page 50–9)
9. REMOVE STEERING INTERMEDIATE SHAFT ASSY NO.2 (See page 50–9)

10. REMOVE STEERING SENSOR



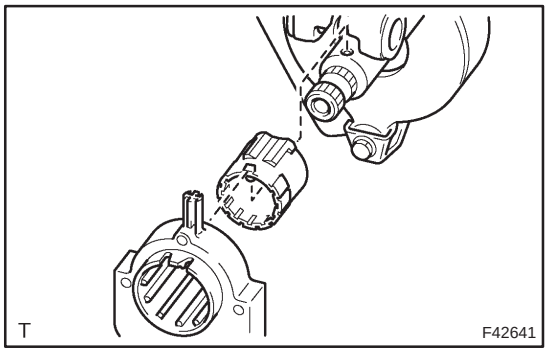
(a) Place the steering column assy on the V–blocks and rubber stick.



(b) Using a extension bar and hammer, remove the steering column bracket spacer and 2 tilt steering support collar No.1 from the steering column assy.

NOTICE:

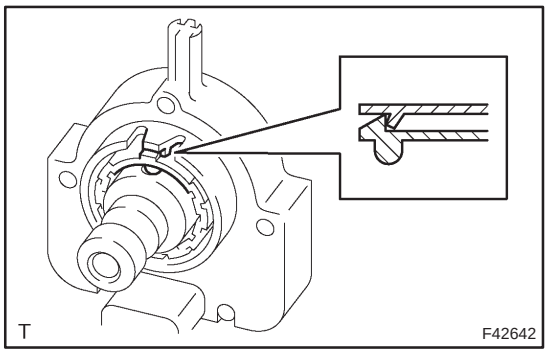
- **During this procedure, do not apply the strong shock to the steering sensor.**
- **Do not apply any oil or grease on the pin.**



(c) Using a screwdriver, remove the bush from the steering column assy.

(d) Disconnect the pick on the steering sensor and steering sensor adapter, then remove the steering sensor from the column shaft.

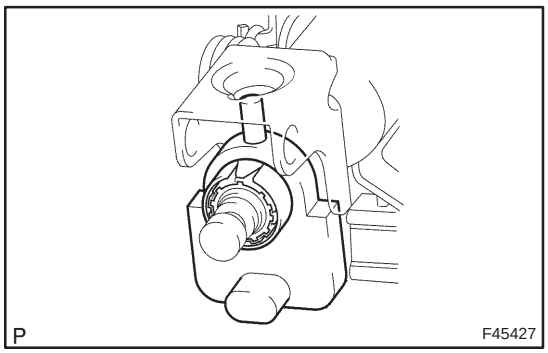
(e) Remove the steering sensor adapter.



11. INSTALL STEERING SENSOR

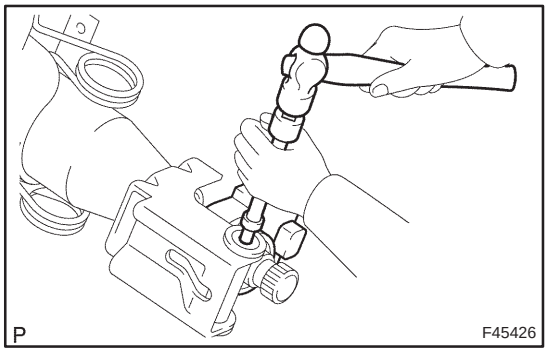
(a) Install the steering sensor adapter to the column shaft.

HINT:



At that time, the projection of the steering sensor adapter should be fit in the hole on the steering column shaft.

(b) Install the steering sensor to the column shaft.



HINT:

- At that time, the pick of the steering sensor should be fit to the pick of the steering sensor adapter.
- After installation, make sure the steering sensor is fixed securely in the steering sensor adapter.

(c) Place the steering column assy on the V–blocks and rubber stick.

(d) Install the 2 new tilt steering support collar No.1 to the steering column assy.

(e) Using a extension bar and hammer, install the steering column bracket spacer to the steering column assy.

NOTICE:

- **During this procedure, do not apply the strong shock to the steering sensor.**
- **Do not apply any grease or oil on the pin.**

12. INSTALL STEERING INTERMEDIATE SHAFT ASSY NO.2 (See page 50–9)
13. INSTALL STEERING COLUMN ASSY (See page 50–9)
14. INSTALL SPIRAL CABLE SUB–ASSY (See page 60–26)
15. INSTALL STEERING COLUMN COVER W/INSTRUMENT CLUSTER FINISH PANEL ASSY (See page 50–9)
16. INSTALL STEERING COLUMN COVER LWR (See page 50–9)
17. INSTALL STEERING WHEEL ASSY (See page 50–9)
18. INSPECT STEERING WHEEL CENTER POINT
19. INSTALL HORN BUTTON ASSY (See page 60–17)

20. **CONNECT BATTERY NEGATIVE TERMINAL (See page 60–1)**
21. **INSPECT SRS WARNING LIGHT (See page 05–1184)**
22. **INSPECT ABS WARNING LIGHT AND VSC WARNING LIGHT (See page 05–756)**

PARKING BRAKE SYSTEM

3300E–07

PROBLEM SYMPTOMS TABLE

Use the table below to help you find the cause of the problem. The numbers indicate the likelihood of the cause in the descending order. Check each parts in the order shown. Replace these parts as necessary.

Symptom	Suspect Area	See page
Brake drag	1. Parking brake lever travel (Out of adjustment)	33–2
	2. Parking brake wire (Sticking)	33–7 33–10
	3. Parking brake shoe clearance (Out of adjustment)	33–14
	4. Parking brake shoe lining (Cracked or distorted)	33–14
	5. Tension or return spring (Damaged)	33–14

3300F–07

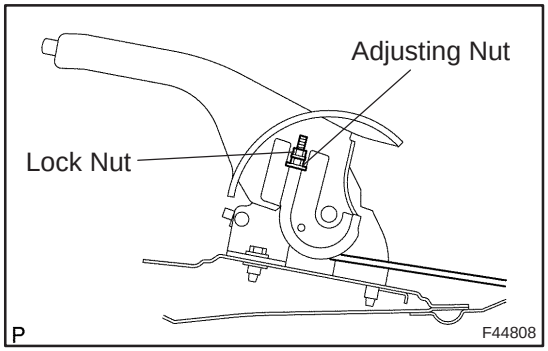
ADJUSTMENT

1. REMOVE REAR WHEEL

2. ADJUST PARKING BRAKE SHOE CLEARANCE (See page 33–14)

3. INSTALL REAR WHEEL

Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)



4. INSPECT PARKING BRAKE LEVER TRAVEL

(a) Pull the parking brake lever all the way up, and count the number of clicks.

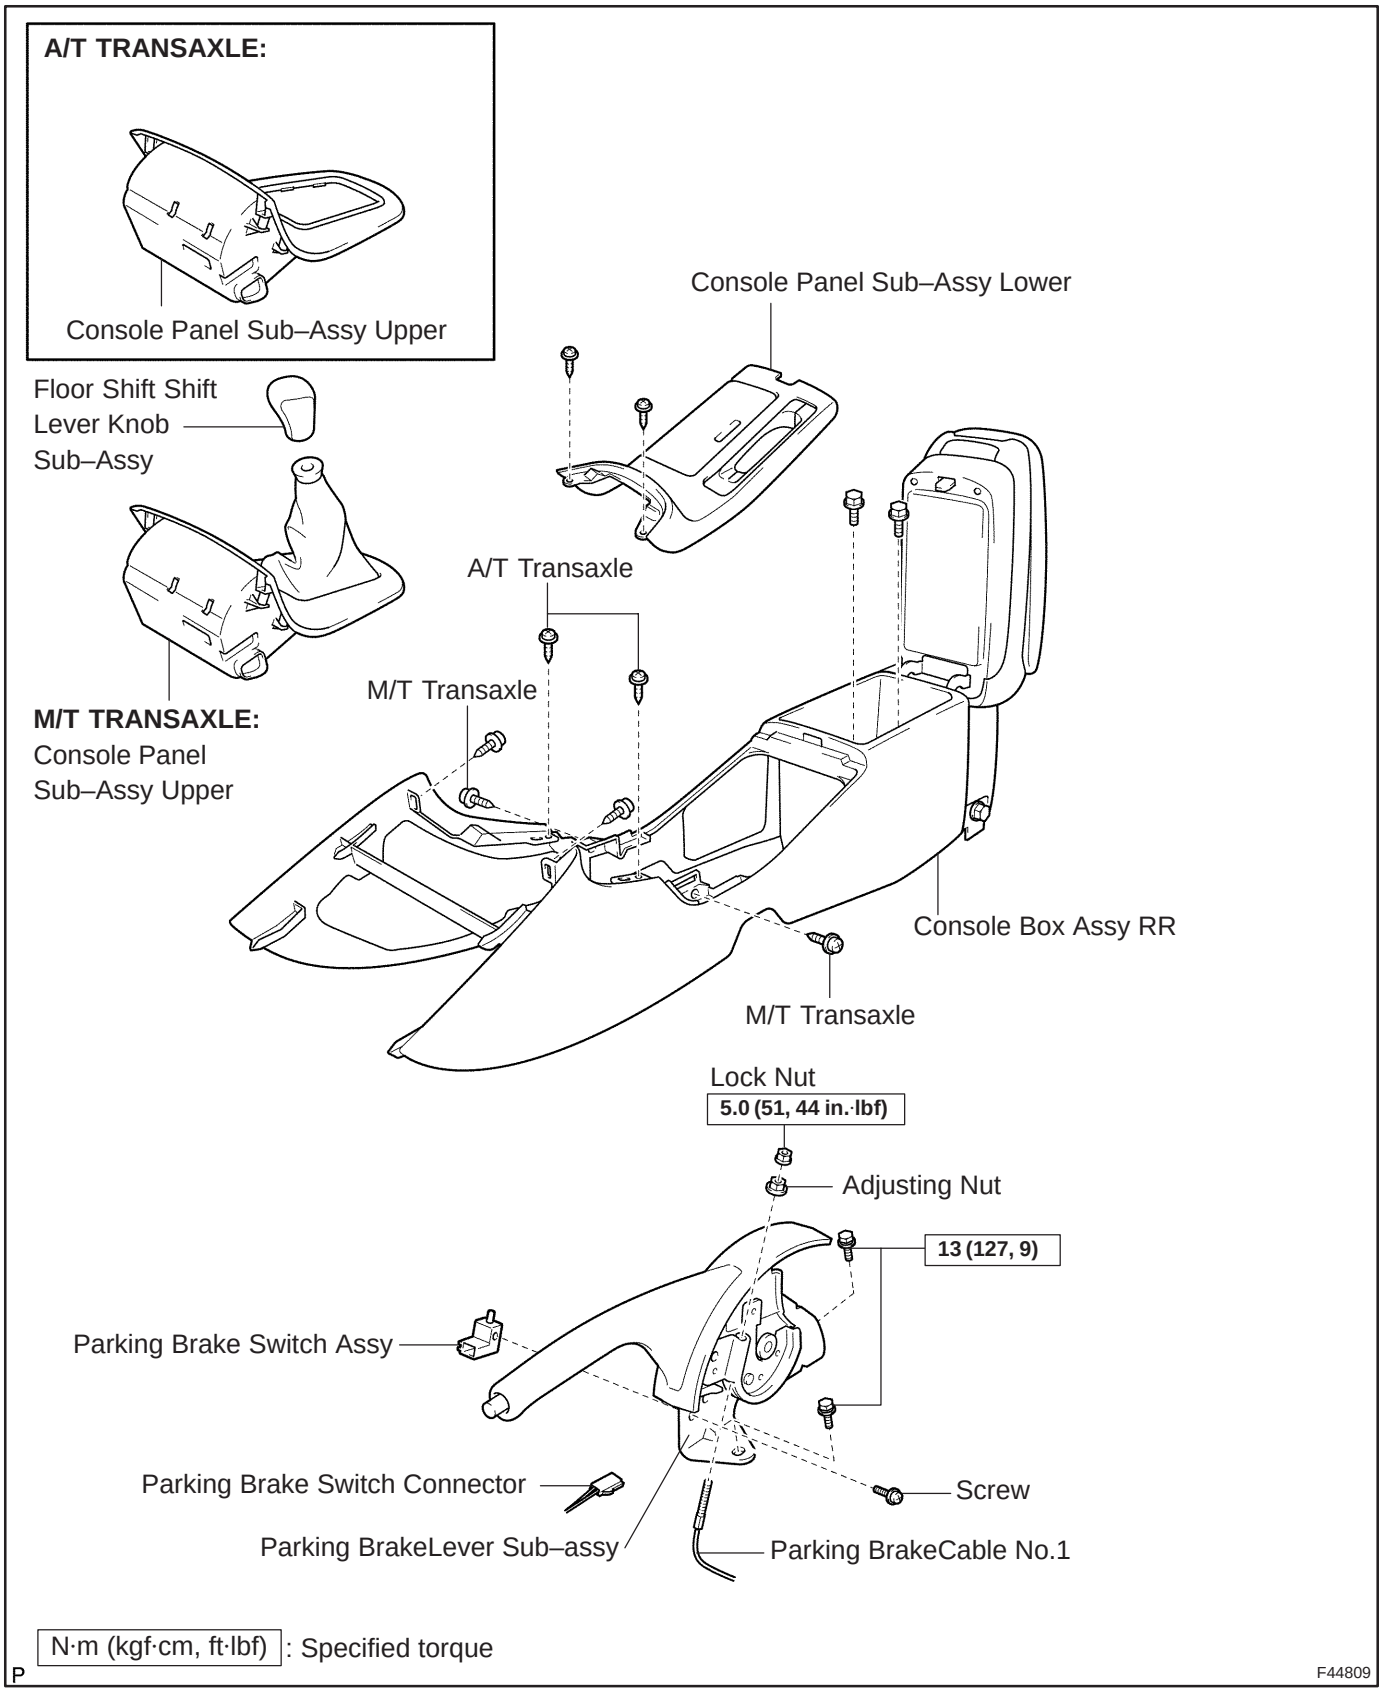
Parking brake lever travel: 6 – 9 clicks at 196 N (20 kgf, 44.1 lbf)

5. ADJUST PARKING BRAKE LEVER TRAVEL

(a) Remove the console box assy RR.
(See page 71–11)

(b) Loosen the lock nut and turn the adjusting nut until the lever travel turns correct.

(c) Tighten the lock nut.

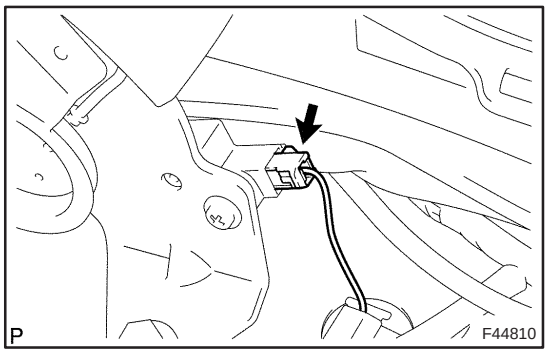


Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)

(d) Install the console box assy RR.
(See page 71–11)

PARKING BRAKE LEVER SUB–ASSY

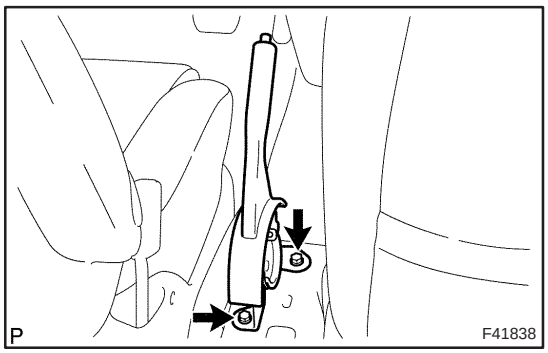
33068–03



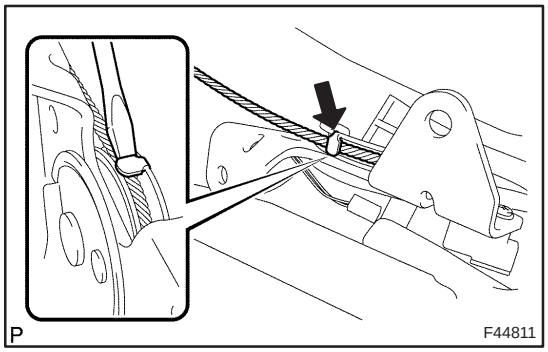
COMPONENTS

330C6–01

REPLACEMENT



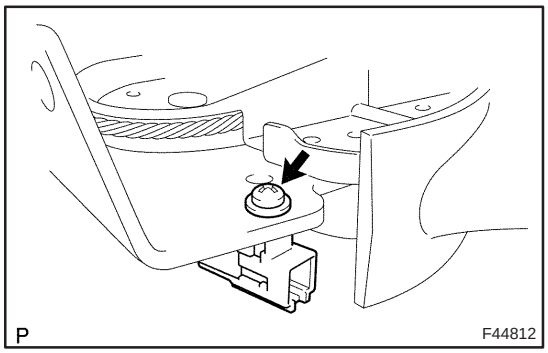
1. REMOVE FLOOR SHIFT SHIFT LEVER KNOB SUB–ASSY (M/T TRANSAXLE) (See page 41–11)
2. REMOVE CONSOLE PANEL SUB–ASSY UPPER (See page 71–11)
3. REMOVE CONSOLE PANEL SUB–ASSY LOWER (See page 71–11)
4. REMOVE CONSOLE BOX ASSY RR (See page 71–11)



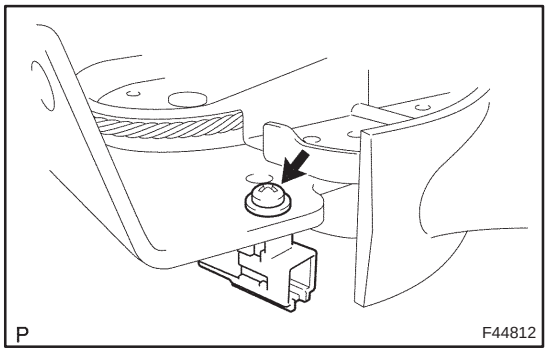
5. REMOVE PARKING BRAKE LEVER SUB–ASSY

(a) Disconnect the parking brake switch connector from the parking brake switch.

(b) Remove the lock nut and adjusting nut from the parking brake cable assy No.1.

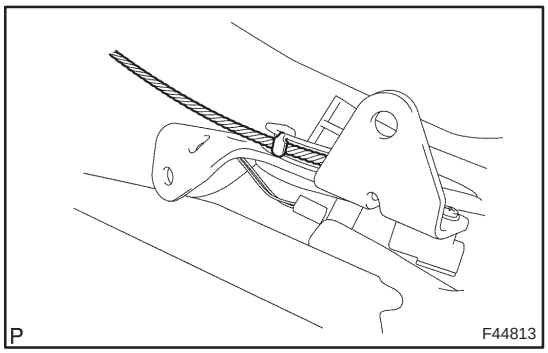


(c) Remove the 2 bolts.



(d) Using a screwdriver, raise the pick on the parking brake lever, and remove the parking brake cable assy No.1 from the parking brake lever.

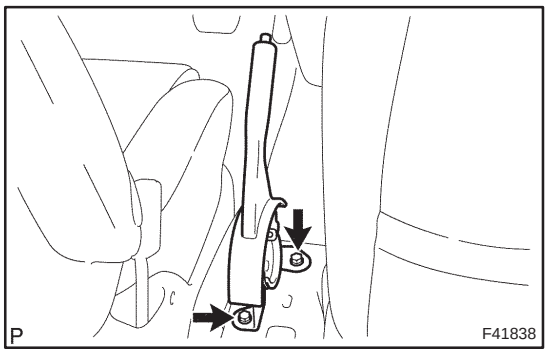
(e) Remove the parking brake lever from the body.



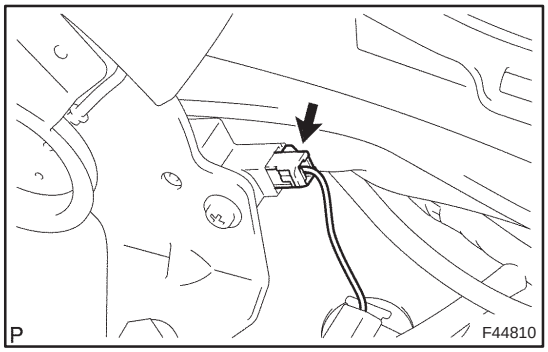
6. REMOVE PARKING BRAKE SWITCH ASSY

(a) Remove the screw and parking brake switch.

7. INSTALL PARKING BRAKE SWITCH ASSY



(a) Install the parking brake switch to the parking brake lever with the screw.



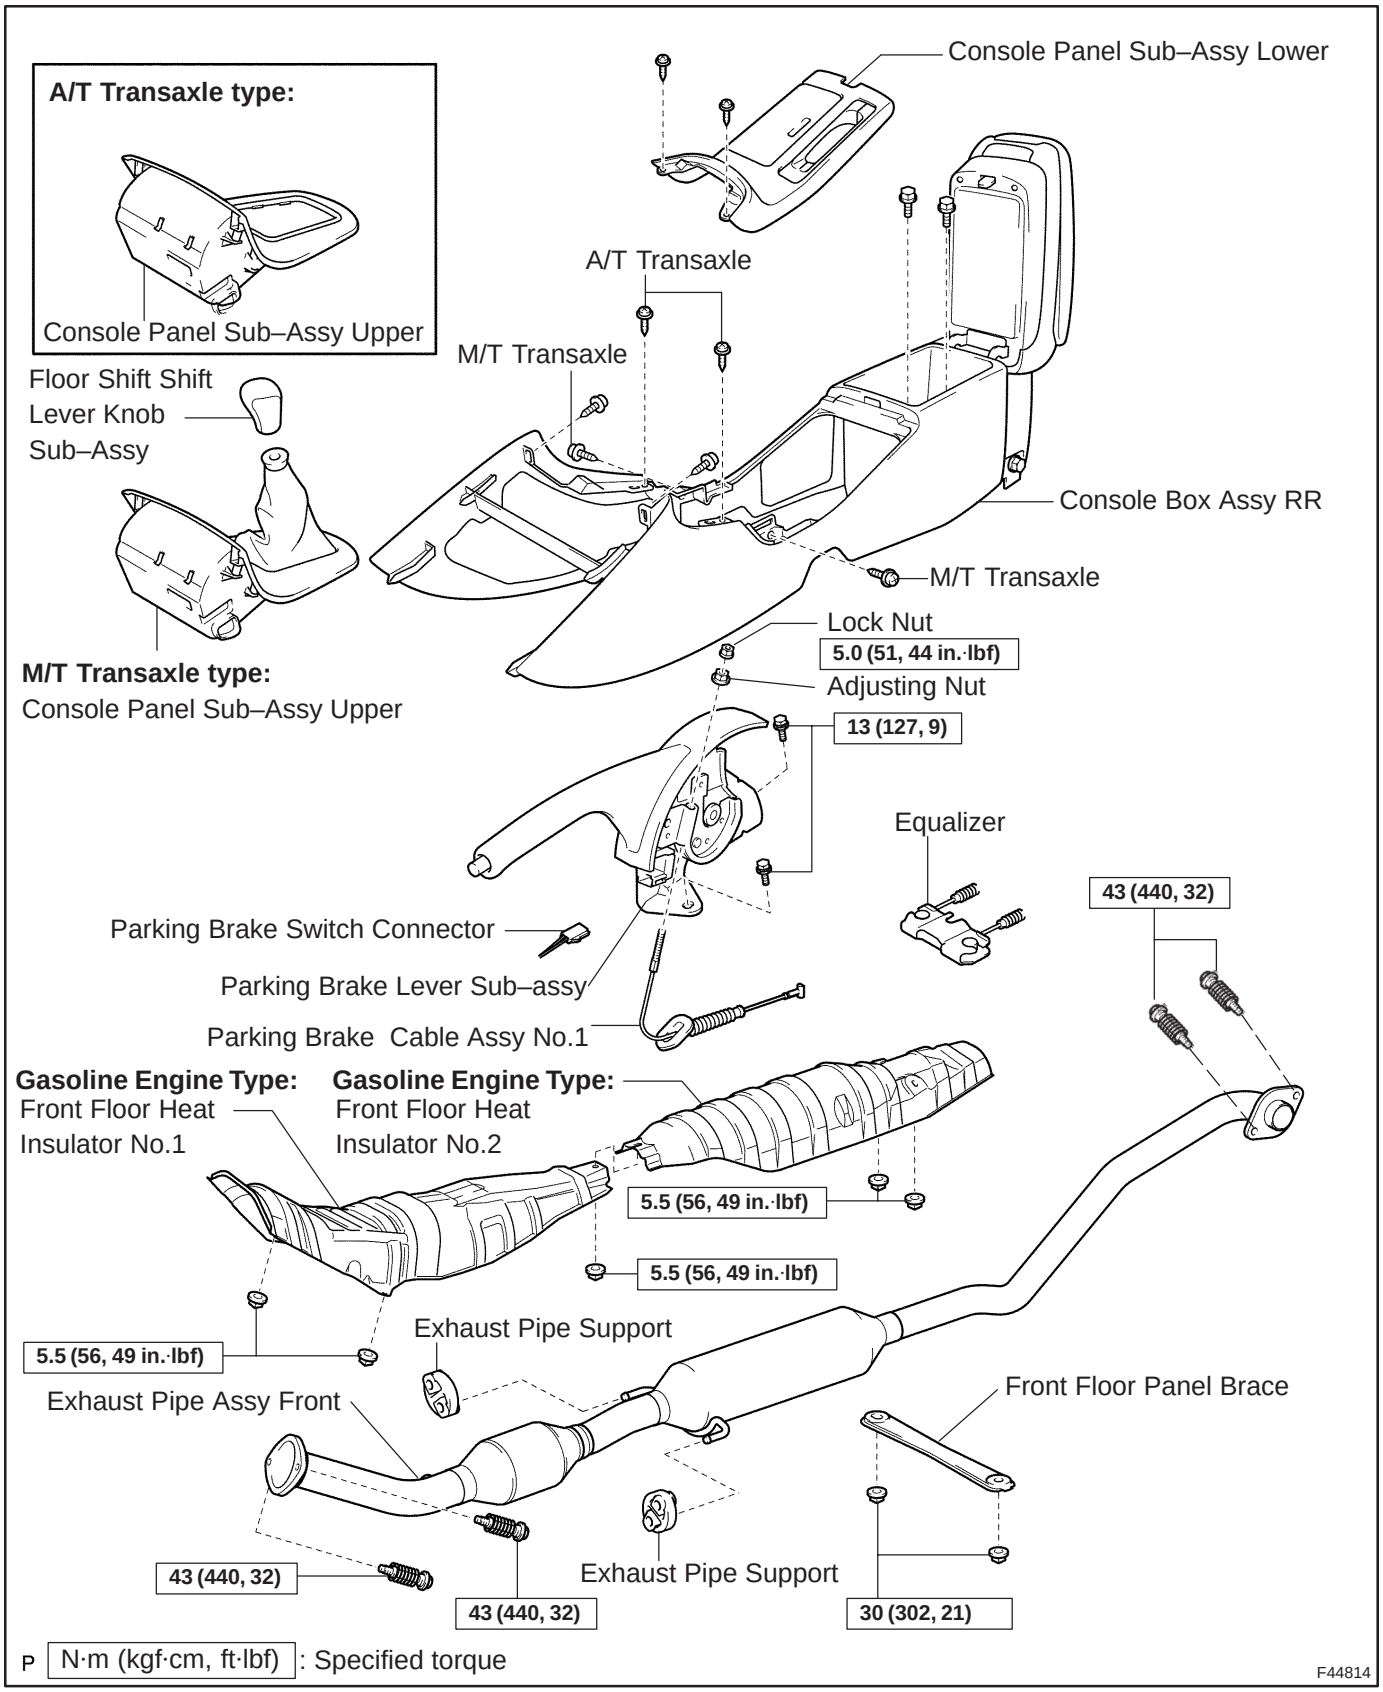
8. INSTALL PARKING BRAKE LEVER SUB–ASSY

(a) Install the parking brake cable assy No.1 to the parking brake lever, temporally tighten the adjusting nut and lock nut.

(b) Using a screwdriver, fix the parking brake cable No.1 to the pick.

(c) Install the parking brake lever with the 2 bolts.
Torque: 13 N·m (127 kgf·cm, 9 ft·lbf)

(d) Install the parking brake switch connector to the parking brake switch.

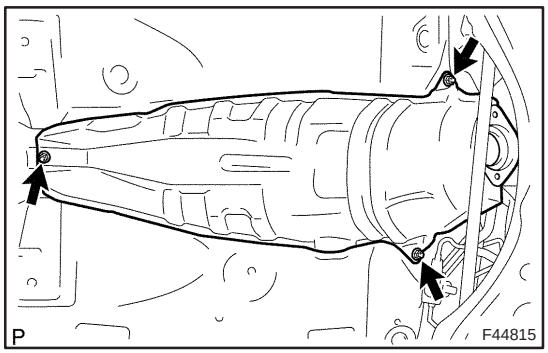


9. INSPECT PARKING BRAKE LEVER TRAVEL (See page 33–2)

10. ADJUST PARKING BRAKE LEVER TRAVEL (See page 33–2)

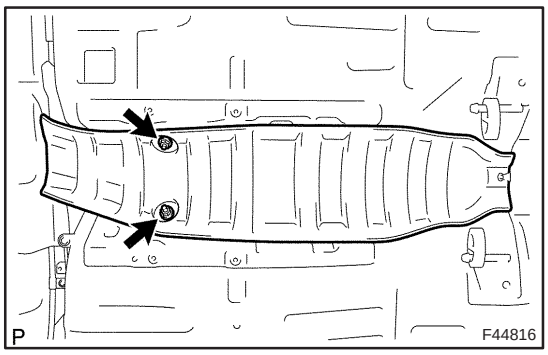
PARKING BRAKE CABLE ASSY NO.1

COMPONENTS



3306A–03

3306B–03



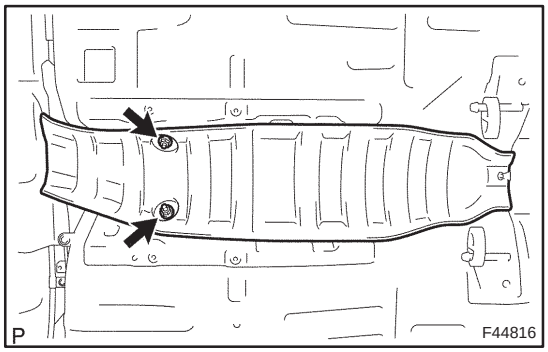
REPLACEMENT

1. REMOVE SHIFT LEVER KNOB SUB–ASSY (M/T TRANSAXLE) (See page 41–11)
2. REMOVE CONSOLE PANEL SUB–ASSY UPPER (See page 71–11)
3. REMOVE CONSOLE PANEL SUB–ASSY LOWER (See page 71–11)
4. REMOVE CONSOLE BOX ASSY RR (See page 71–11)
5. REMOVE PARKING BRAKE LEVER SUB–ASSY (See page 33–4)
6. REMOVE EXHAUST PIPE ASSY FRONT
   1ZZ–FE/3ZZ–FE ENGINE TYPE: See page 15–2
   1AZ–FE/1AZ–FSE ENGINE TYPE: See page 15–7

7. REMOVE FRONT FLOOR HEAT INSULATOR NO.1 (GASOLINE ENGINE TYPE)

(a) Remove the 3 nuts and front floor insulator No.1.

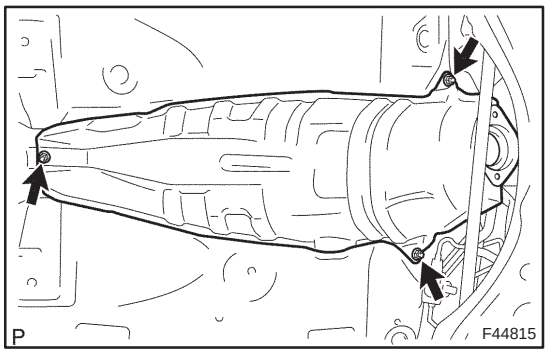
8. REMOVE FRONT FLOOR HEAT INSULATOR NO.2 (GASOLINE ENGINE TYPE)



(a) Remove the 2 nuts and front floor insulator No.2.

9. REMOVE PARKING BRAKE CABLE ASSY NO.1

(a) Disconnect the parking brake cable assy No.1 from the equalizer and remove the parking brake cable assy No.1.



10. INSTALL PARKING BRAKE CABLE ASSY NO.1

(a) Connect the parking brake cable assy No.1 to the equalizer and install the parking brake cable assy No.1.

11. INSTALL FRONT FLOOR HEAT INSULATOR NO.2 (GASOLINE ENGINE TYPE)

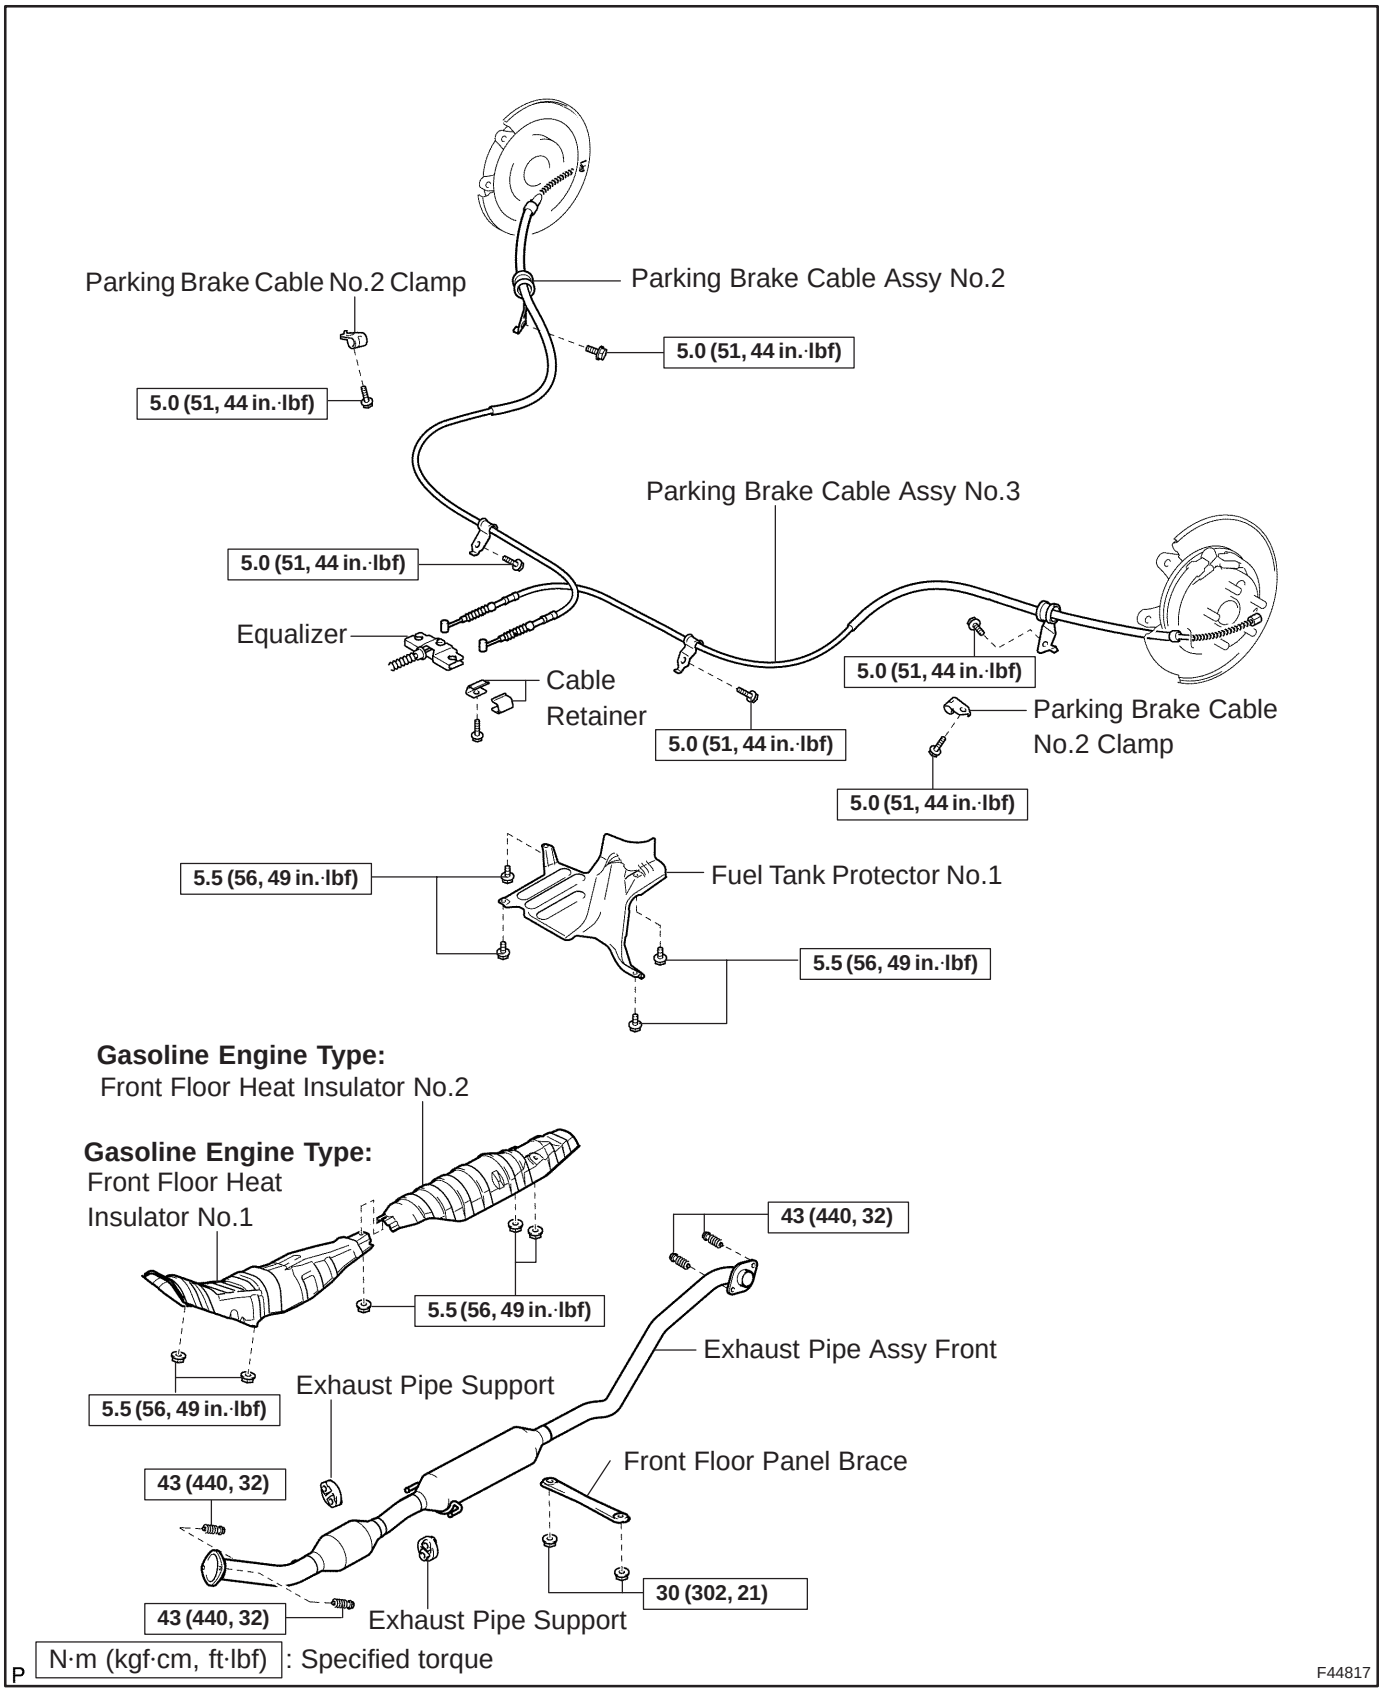
(a) Install the front floor insulator No.2 with the 2 nuts.
Torque: 5.5 N·m (56 kgf·cm, 49 in.·lbf)

12. .INSTALL FRONT FLOOR HEAT INSULATOR NO.1 (GASOLINE ENGINE TYPE)

(a) Install the front floor insulator No.1 with the 3 nuts.
Torque: 5.5 N·m (56 kgf·cm, 49 in.·lbf)

13. INSTALL EXHAUST PIPE ASSY FRONT
1ZZ–FE/3ZZ–FE ENGINE TYPE: See page 15–2
1AZ–FE/1AZ–FSE ENGINE TYPE: See page 15–7

14. INSTALL PARKING BRAKE LEVER SUB–ASSY (See page 33–4)



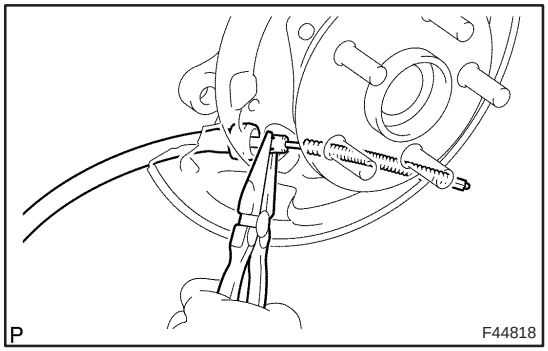
15. INSPECT PARKING BRAKE LEVER TRAVEL (See page 33–2)

16. ADJUST PARKING BRAKE LEVER TRAVEL (See page 33–2)

PARKING BRAKE CABLE ASSY NO.3

3306C–05

COMPONENTS



330C7–01

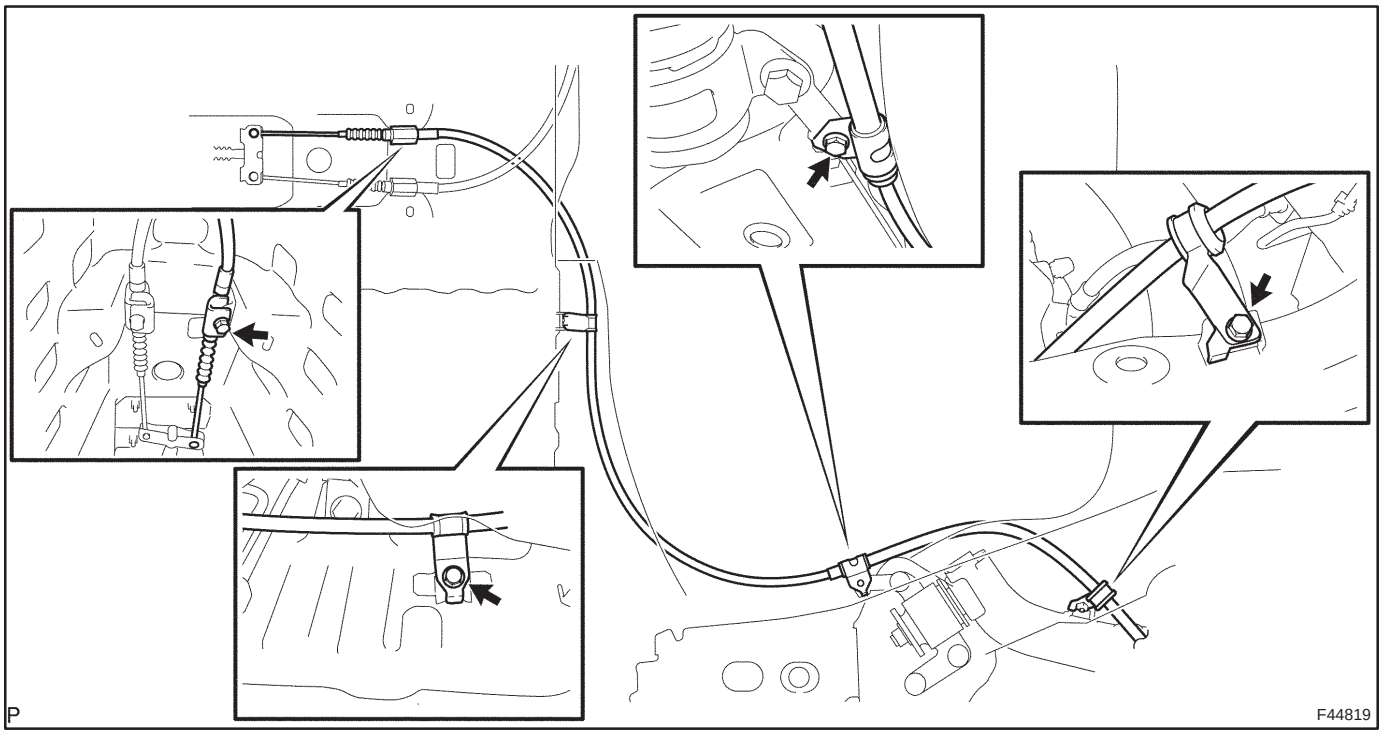
REPLACEMENT

HINT:

For parking brake cable assy No.2, perform the same procedure to the RH side.

1. **REMOVE REAR WHEEL**
2. **DISCONNECT REAR DISC BRAKE CALIPER ASSY LH (See page 30–31)**
3. **REMOVE REAR DISC(See page 33–14)**
4. **REMOVE PARKING BRAKE ADJUSTER KIT (See page 33–14)**
5. **REMOVE PARKING BRAKE SHOE ADJUSTING SCREW SET(See page 33–14)**
6. **REMOVE PARKING BRAKE SHOE KIT (See page 33–14)**
   SST 09718–00010

7. **DISCONNECT PARKING BRAKE CABLE ASSY NO.3**
   (a) Using needle–nose pliers, and disconnect the parking brake cable assy No.3 from the backing plate.



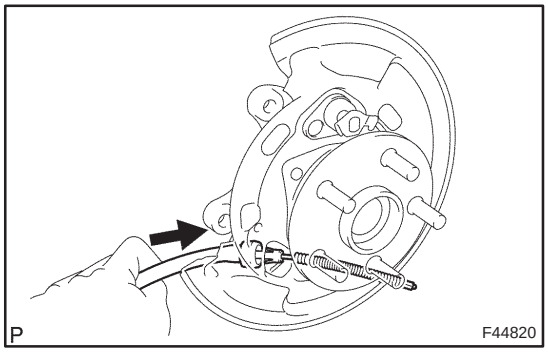
8. **REMOVE EXHAUST PIPE ASSY FRONT**
   1ZZ–FE/3ZZ–FE ENGINE TYPE: See page 15–2
   1AZ–FE/1AZ–FSE ENGINE TYPE: See page 15–7
9. **REMOVE FRONT FLOOR HEAT INSULATOR NO.1 (GASOLINE ENGINE TYPE) (See page 33–7)**
10. **REMOVE FRONT FLOOR HEAT INSULATOR NO.2 (GASOLINE ENGINE TYPE) (See page 33–7)**

11. **REMOVE PARKING BRAKE CABLE ASSY NO.3**
    (a) Remove the 3 nuts and fuel tank protector No.1 (When replacing parking brake cable assy No.2).
    (b) Remove the 4 bolts and cable retainer from the body.
    (c) Disconnect the parking brake cable assy No.3 from the equalizer, and remove the parking brake cable assy No.3.

12. INSTALL PARKING BRAKE CABLE ASSY NO.3

(a) Connect the parking brake cable assy No.3 to the equalizer.

(b) Install the parking brake cable assy No.3 with the 4 bolts.
Torque: 5.0 N·m (55 kgf·cm, 48 in.·lbf)



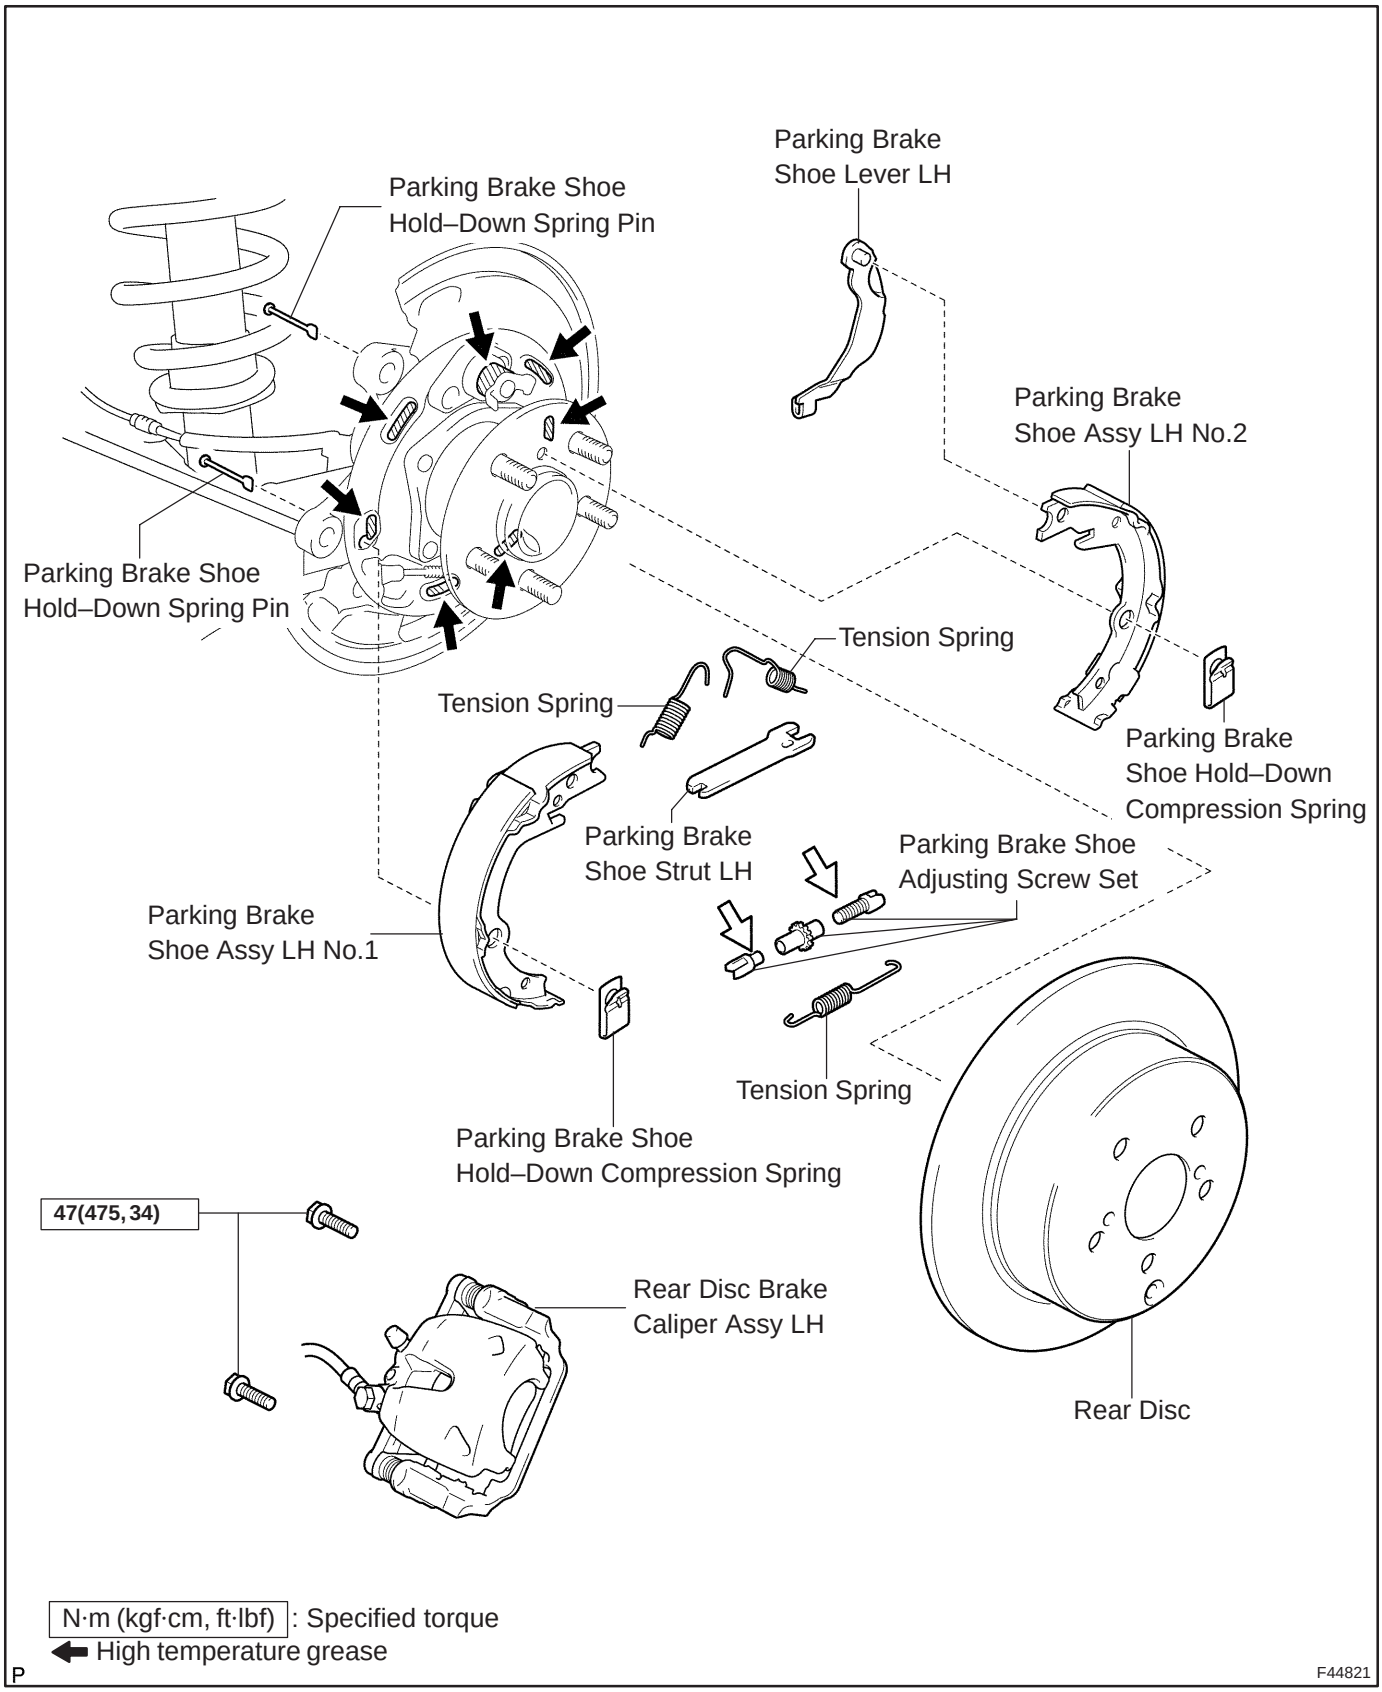
(c) Install the fuel tank protector No.1 and 3 nuts (When replacing parking brake cable assy No.2).
Torque: 5.5 N·m (56 kgf·cm, 49 in.·lbf)

13. INSTALL FRONT FLOOR HEAT INSULATOR NO.2 (GASOLINE ENGINE TYPE)
(See page 33–7)

14. INSTALL FRONT FLOOR HEAT INSULATOR NO.1 (GASOLINE ENGINE TYPE)
(See page 33–7)

15. INSTALL EXHAUST PIPE ASSY FRONT
1ZZ–FE/3ZZ–FE ENGINE TYPE: See page 15–2
1AZ–FE/1AZ–FSE ENGINE TYPE: See page 15–7

16. CONNECT PARKING BRAKE CABLE ASSY NO.3



(a) Connect the parking brake cable assy No.3 to the backing plate.

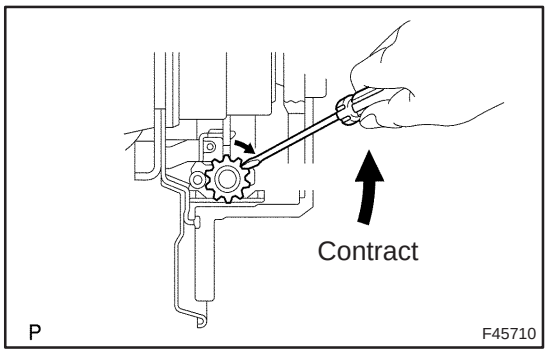
17. **APPLY HIGH TEMPERATURE GREASE (See page 33–14)**
18. **INSTALL PARKING BRAKE SHOE LEVER LH (See page 33–14)**
19. **INSTALL PARKING BRAKE SHOE KIT (See page 33–14)**
    SST 09718–00010
20. **INSTALL PARKING BRAKE SHOE ADJUSTING SCREW SET (See page 33–14)**
21. **INSTALL PARKING BRAKE ADJUSTER KIT (See page 33–14)**
22. **INSTALL REAR DISC**
23. **CONNECT REAR DISC BRAKE CALIPER ASSY LH(See page 30–31)**
24. **ADJUST PARKING BRAKE SHOE CLEARANCE(See page 33–14)**
25. **INSTALL REAR WHEEL**
    Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)
26. **SETTLING PARKING BRAKE SHOES AND DISC (See page 33–14)**
27. **INSPECT PARKING BRAKE LEVER TRAVEL (See page 33–2)**
28. **ADJUST PARKING BRAKE LEVER TRAVEL (See page 33–2)**
29. **CHECK EXHAUST LEAKAGE**

PARKING BRAKE ASSY

COMPONENTS

3306E–05

330C8–01



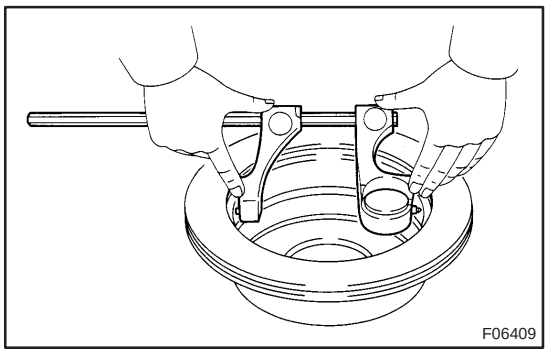
OVERHAUL

HINT:

Overhaul the RH side by the same procedures as those of the LH side.

1. REMOVE REAR WHEEL

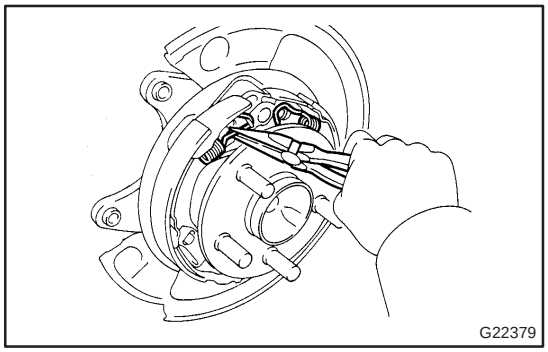
2. DISCONNECT REAR DISC BRAKE CALIPER ASSY LH (See page 30–31)



3. REMOVE REAR DISC

(a) Release the parking brake, and remove the rear disc.

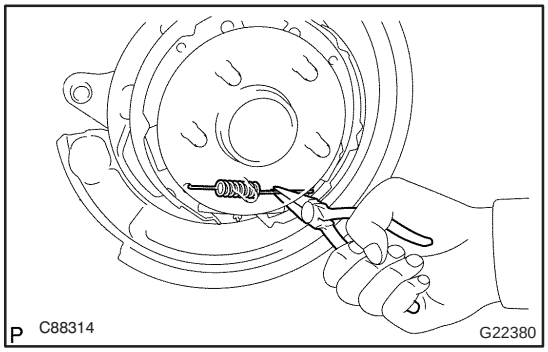
HINT:



- Put matchmarks on the disc and the axle hub.
- If the disc cannot be removed easily, turn the shoe adjuster until the wheel turns freely.

4. INSPECT BRAKE DISC INSIDE DIAMETER

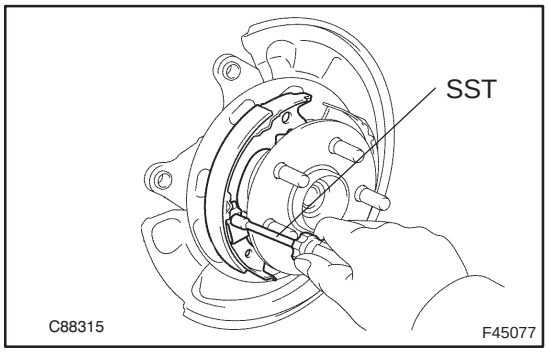
(a) Using a brake drum gauge or equivalent, measure the inside diameter of the disc.



Standard inside diameter: 173 mm (6.81 in.)
Maximum inside diameter: 174 mm (6.85 in.)

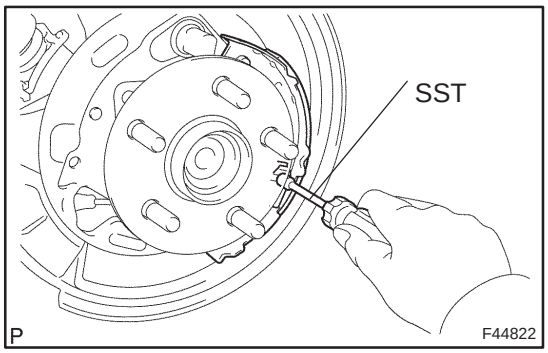
5. REMOVE PARKING BRAKE ADJUSTER KIT

(a) Using needle–nose pliers, remove the shoe upper side 2 tension springs.



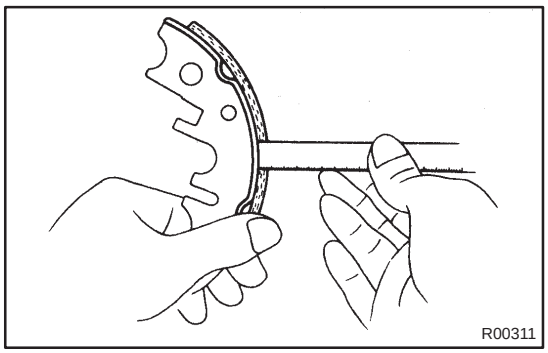
(b) Remove the parking brake shoe strut LH.

6. REMOVE PARKING BRAKE SHOE ADJUSTING SCREW SET



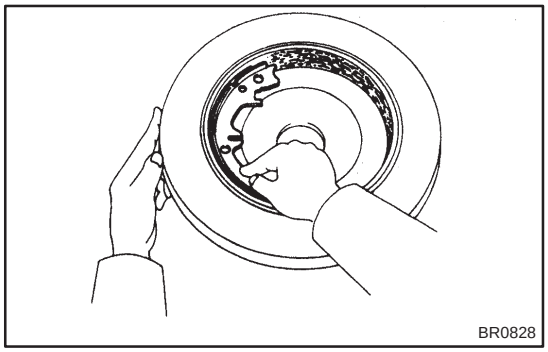
(a) Using needle–nose pliers, remove the anchor side tension spring.

(b) Remove the shoe adjusting screw set.



7. REMOVE PARKING BRAKE SHOE KIT

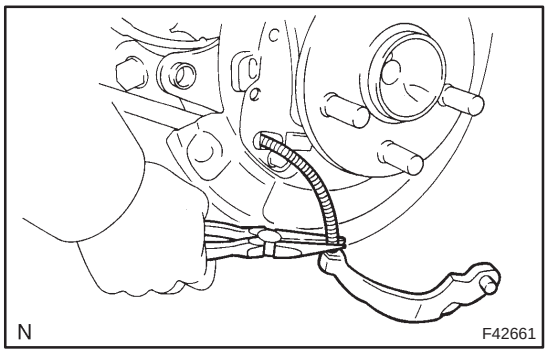
(a) Using SST, remove the parking brake shoe hold–down compression spring, parking brake shoe hold–down spring pin and parking brake shoe assy LH No.1.
SST 09718–00010



(b) Using SST, remove the parking brake shoe hold–down compression spring and parking brake shoe hold–down spring pin.
SST 09718–00010

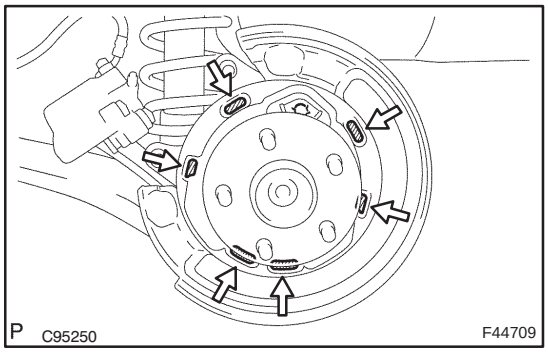
(c) Disconnect the parking brake shoe assy LH No.2 from the parking brake shoe lever LH, and remove the parking brake shoe LH No.2.

8. INSPECT PARKING BRAKE SHOE LINING THICKNESS



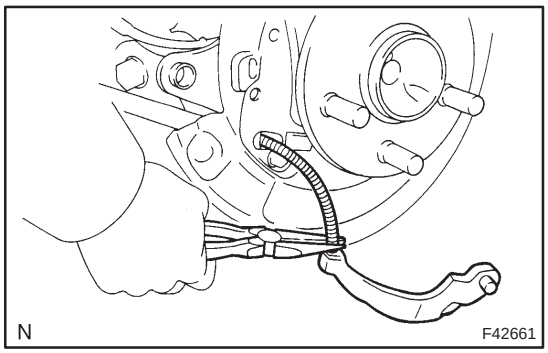
(a) Using a ruler, measure the thickness of the shoe lining.
Standard thickness: 3.5 mm (0.138 in.)
Minimum thickness: 1.0 mm (0.039 in.)

9. INSPECT BRAKE DISC AND PARKING BRAKE SHOE LINING FOR PROPER CONTACT



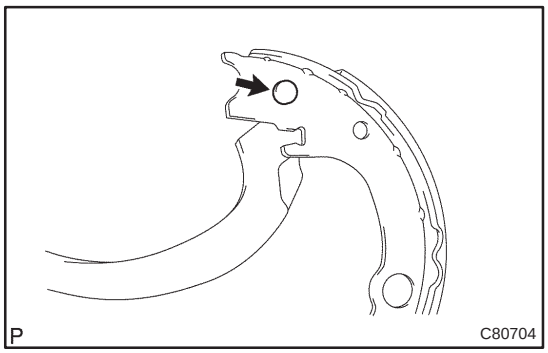
(a) Apply chalk to the inside surface of the disc, then grind down the brake shoe lining to fit.

If the contact between the brake disc and the shoe lining is improper, repair it using a brake shoe grinder or replace the brake shoe assembly.



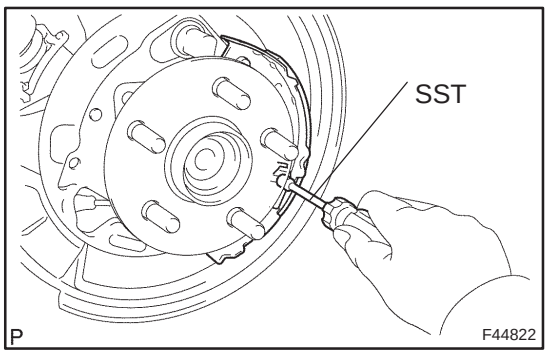
10. REMOVE PARKING BRAKE SHOE LEVER LH

(a) Using needle–nose pliers, disconnect the parking brake cable assy No.3 and remove the parking brake shoe lever LH.



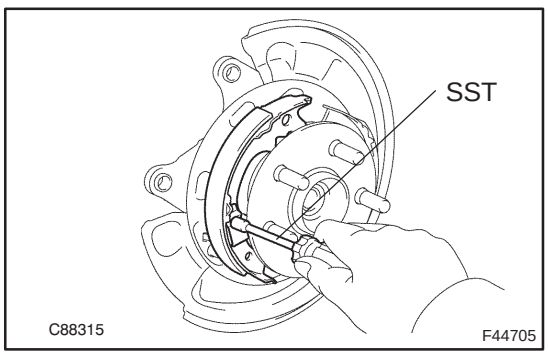
11. APPLY HIGH TEMPERATURE GREASE

(a) Apply the high temperature grease to the shoe attached surface of backing plate.

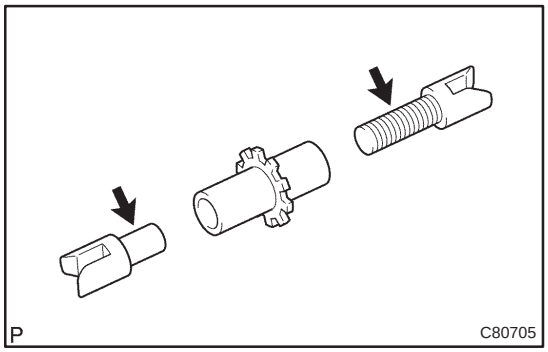


12. INSTALL PARKING BRAKE SHOE LEVER LH

(a) Using needle–nose pliers, connect the parking brake cable assy No.3 to the parking brake shoe lever LH.

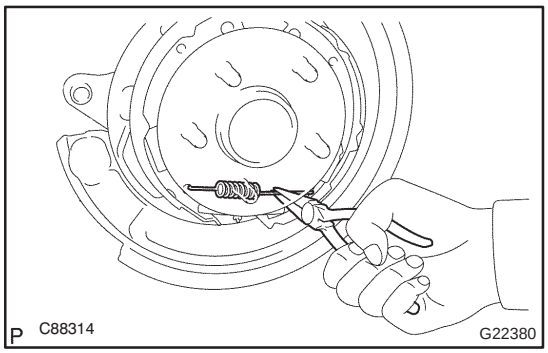


13. INSTALL PARKING BRAKE SHOE KIT

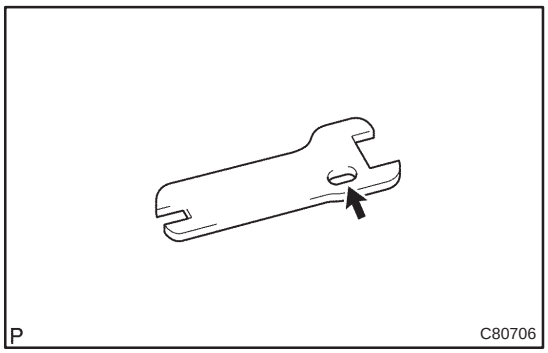


(a) Apply the high temperature grease to the contact part of the parking brake shoe and parking brake shoe lever.

(b) Using SST, install the parking brake shoe LH No.2 with the parking brake shoe hold–down compression spring and parking brake shoe hold–down spring pin.
SST 09718–00010



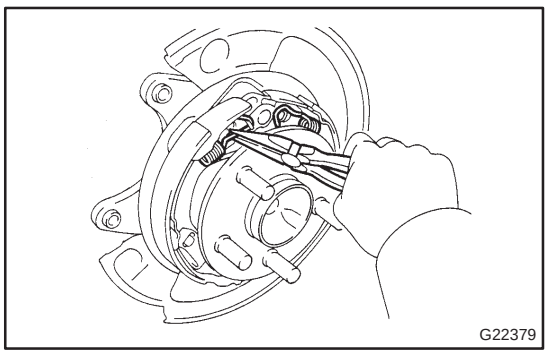
(c) Using SST, install the parking brake shoe LH No.1 with the parking brake shoe hold–down compression spring and parking brake shoe hold–down spring pin.
SST 09718–00010



14. INSTALL PARKING BRAKE SHOE ADJUSTING SCREW SET

(a) Apply the high temperature grease to the adjusting bolt and support piece.

(b) Install the parking brake shoe adjusting screw set LH.



(c) Using needle–nose pliers, install the tension spring.

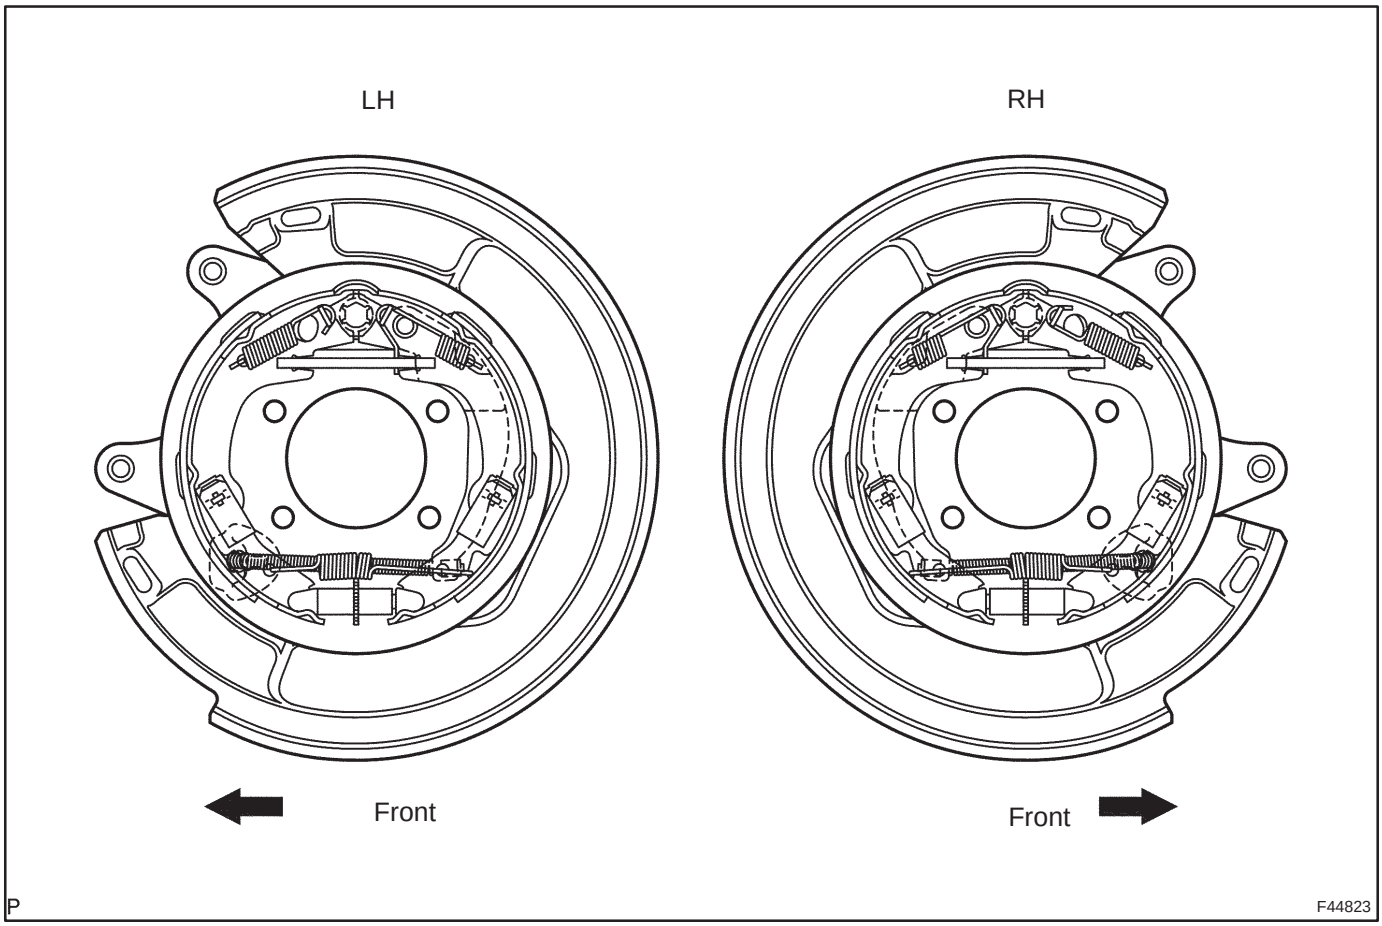
15. INSTALL PARKING BRAKE ADJUSTER KIT

(a) Apply the high temperature grease to the contact part of the shoe strut and tension spring.

(b) Install the parking brake shoe strut LH.

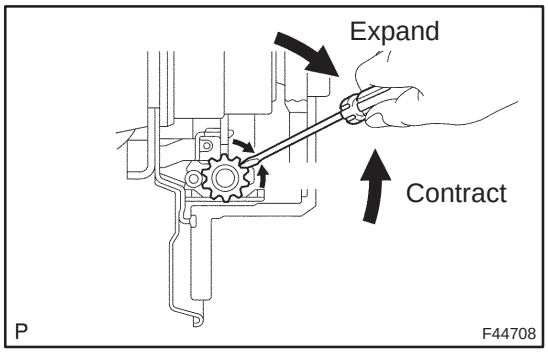
(c) Using needle–nose pliers, install the upper side 2 tension springs.

HINT:



Install the 2 tension spring securely to the grooves of the shoe strut.

16. CHECK PARKING BRAKE INSTALLATION



(a) Check that each part is installed properly.

NOTICE:

There should be no oil or grease on the friction surface of the shoe lining and disc.

17. INSTALL REAR DISC

18. ADJUST PARKING BRAKE SHOE CLEARANCE

(a) Temporarily install the hub nuts.

(b) Remove the hole plug, and turn the adjuster and expand the shoes until the disc locks.

(c) Contract the shoe adjuster until the disc can rotate smoothly.

Standard : Return 8 notches

(d) Check that there is no brake drag.

(e) Install the hole plug.

19. CONNECT REAR DISC BRAKE CALIPER ASSY LH

(a) Install the rear disc brake caliper with the 2 bolts.

Torque: 47 N·m (475 kgf·cm, 34 ft·lbf)

20. INSTALL REAR WHEEL

Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

21. SETTLING PARKING BRAKE SHOES AND DISC

(a) Drive the vehicle at about 50km/h (31 mph) on a safe,level and dry road.

(b) With the parking brake release button pushed in, pull on the lever with 98 N (10kgf, 19.8 lbf) of force.

(c) Drive the vehicle for about 400 meters (0.25 mile) in this condition.

(d) Repeat this procedure 2 or 3 times.

22. INSPECT PARKING BRAKE LEVER TRAVEL (See page 33–2)

23. ADJUST PARKING BRAKE LEVER TRAVEL (See page 33–2)

AUTOMATIC TRANSAXLE ASSY (ATM)

400D8–02

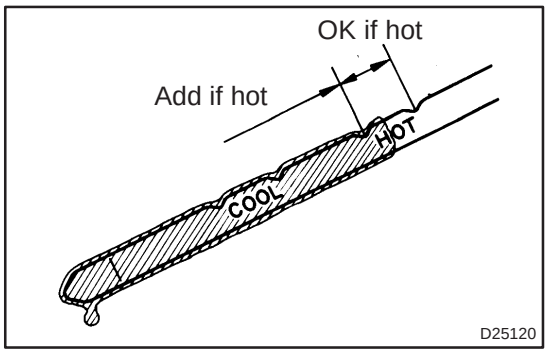
PRECAUTION

1. The automatic transaxle is composed of highly precision–finished parts which need careful inspection before reassembly because even a small nick could cause fluid leakage or affect the performance. The instructions here are organized in order to work on only one component group at a time. This will help avoid confusion comes from the similar–looking part of the different sub–assemblies being on your workbench at the same time. Inspect and repair the component groups from the converter housing side. Complete the inspection, repair and reassembly before proceeding to the next component group. If a defect is found in a certain component group during reassembly, inspect and repair this group immediately. If a component group cannot be assembled because the necessary parts are being ordered, be sure to keep all the parts of the group in a separate container while proceeding with disassembly, inspection, repair and reassembly of the other component groups.
   Recommended ATF: T–IV
2. All the disassembled parts should be washed clean and any fluid passages and holes should be blown through with compressed air.
3. Dry all parts with compressed air. Never use shop rags to dry them.
4. Be careful of ATF or kerosene not to be squirted over your face when using compressed air.
5. The recommended automatic transaxle fluid or kerosene should be used for cleaning.
6. After cleaning, the parts should be arranged in the correct order for efficient inspection, repairs, and reassembly.
7. When disassembling the valve body, be sure to match each valve together with the corresponding spring.
8. New discs for the replacement of the brakes and clutches must be soaked in ATF for at least 15 minutes before reassembly.
9. All the oil seal rings, clutch discs, clutch plates, rotating parts, and sliding surfaces should be coated with ATF prior to reassembly.
10. Replace all the gaskets and rubber O–rings.
11. Do not apply adhesive cements to the gaskets and similar parts.
12. Make sure that the ends of the snap ring are not aligned with one of the cutouts and are installed in the groove correctly.
13. If a worn bushing is to be replaced, the sub–assembly containing the bushing must also be replaced.
14. Check the thrust bearings and races for wear or damage. Replace them as necessary.
15. Use petroleum jelly to keep the parts in place.
16. When working with FIPG material, you must follow the procedure below.

- Remove all the old packing (FIPG) material from the gasket surface using a razor blade and a gasket scraper.
- Thoroughly clean all the components to remove all the loose material.
- Clean both the sealing surfaces with non–residue solvent.
- Parts must be reassembled within 10 minutes of application. Otherwise, the packing (FIPG) material must be removed and reapplied.

AUTOMATIC TRANSAXLE FLUID (ATM)

400D7–02



ON–VEHICLE INSPECTION

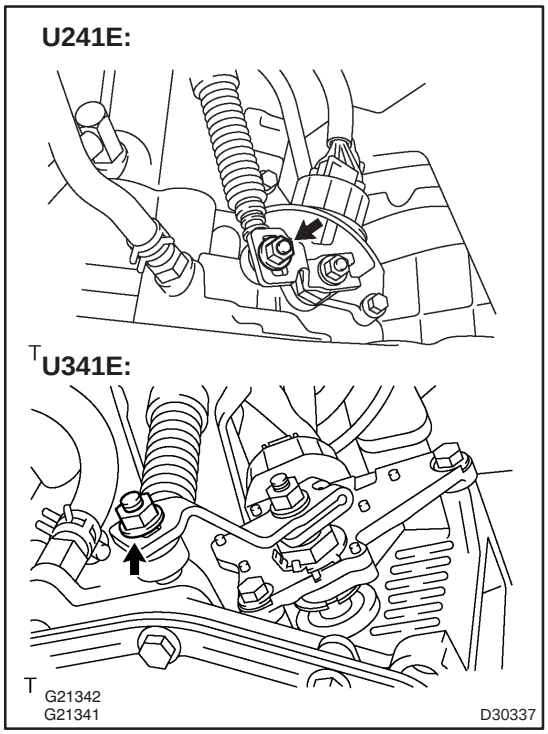
1. CHECK THE FLUID LEVEL

HINT:

Drive the vehicle so that the engine and transaxle are at the normal operating temperature.

Fluid temperature: 70 – 80 °C (158 – 176 °F)

(a) Park the vehicle on a level surface and set the parking brake.
(b) With the engine idling and the brake pedal depressed, shift the shift lever into all position from P to L position and return to P position.
(c) Pull out the dipstick and wipe it clean.
(d) Push it back fully into the pipe.
(e) Pull it out and check that the fluid level is in the HOT position.

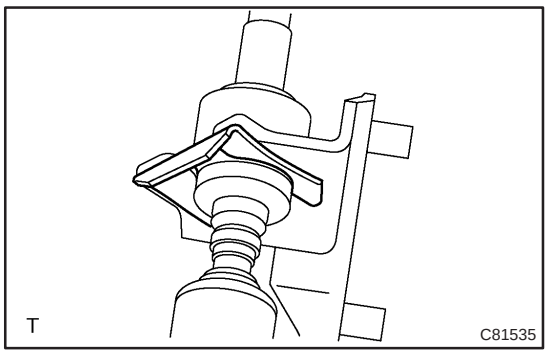


If there are leaks, it is necessary to repair or replace O–rings, FIPGs, oil seals, plugs or other parts.

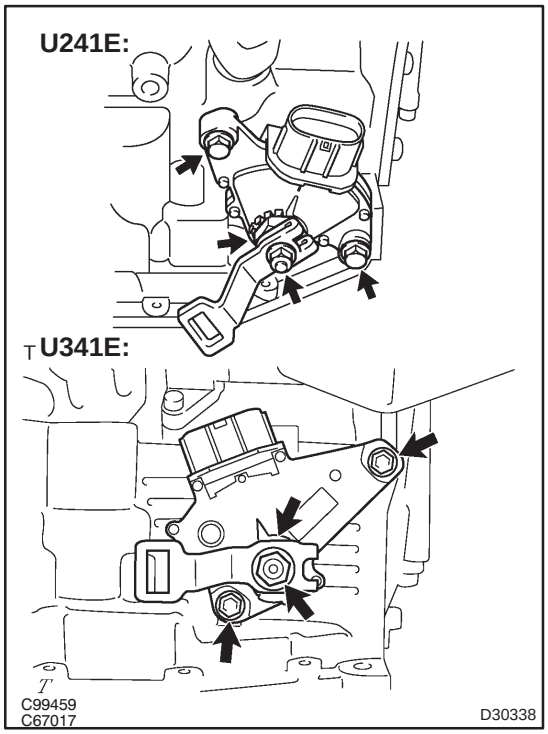
PARK/NEUTRAL POSITION SWITCH ASSY (ATM)

4011W–01

REPLACEMENT



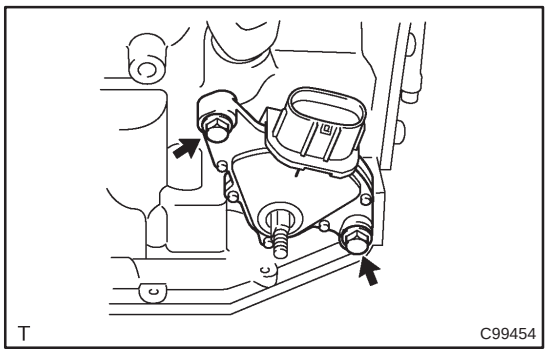
1. REMOVE ENGINE UNDER COVER LH



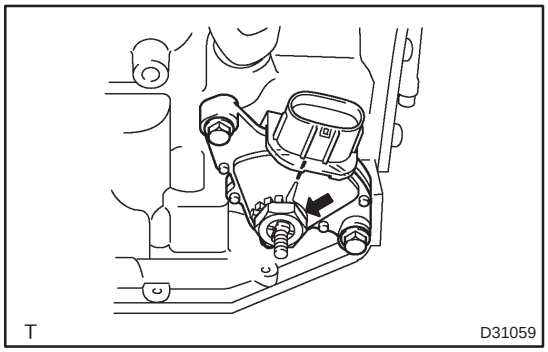
2. SEPARATE TRANSMISSION CONTROL CABLE ASSY

(a) Remove the nut from the control shaft lever.

(b) Separate the control cable from the control shaft lever.

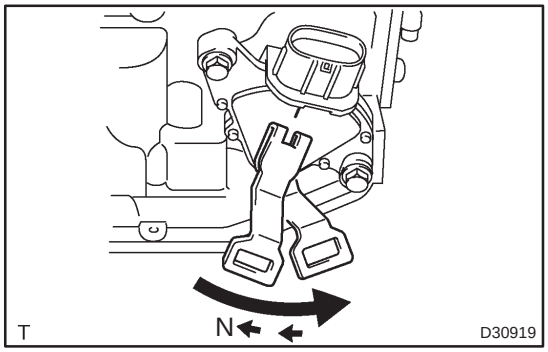


(c) Remove the clip and separate the control cable from the control cable bracket.

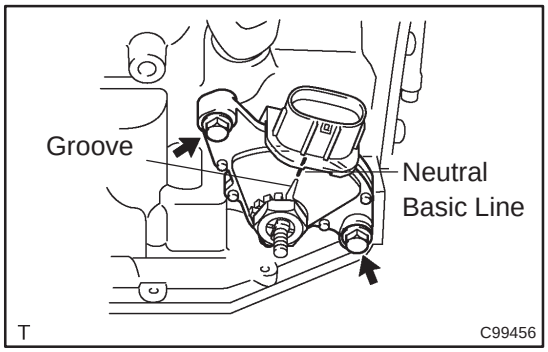


3. REMOVE PARK/NEUTRAL POSITION SWITCH ASSY

(a) Disconnect the park/neutral position switch connector.
(b) Remove the nut, washer and control shaft lever.
(c) Pry out the lock plate and remove the manual valve shaft nut and lock plate.
(d) Remove the 2 bolts and pull out the park/neutral position switch.



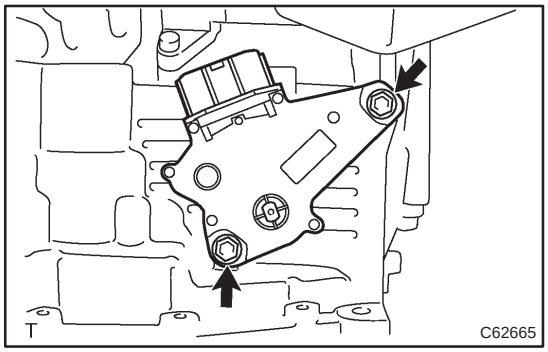
4. INSTALL PARK/NEUTRAL POSITION SWITCH ASSY



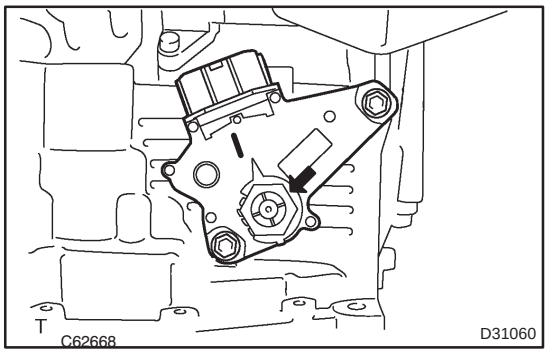
(a) U241E:
  (1) Install the park/neutral position switch to the manual valve shaft.
  (2) Temporarily install the 2 bolts.

  (3) Place a new lock plate and tighten the nut.
Torque: 6.9 N·m (70 kgf·cm, 61 in.·lbf)
  (4) Temporarily install the control shaft lever.

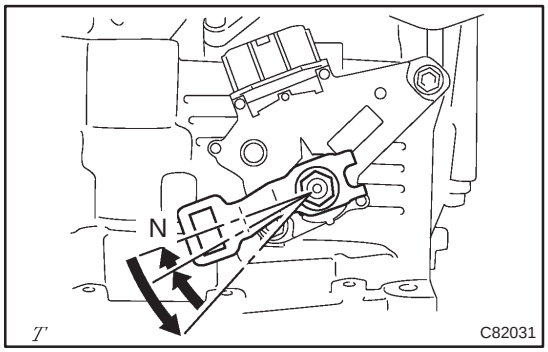
  (5) Turn the lever counterclockwise until it stops, then turn it clockwise 2 notches.
  (6) Remove the control shaft lever.



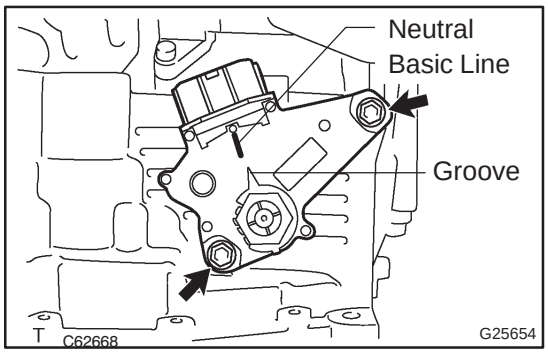
(7) Align the groove with the neutral basic line.
(8) Hold the switch in position and tighten the 2 bolts.
Torque: 5.4 N·m (55 kgf·cm, 48 in.·lbf)



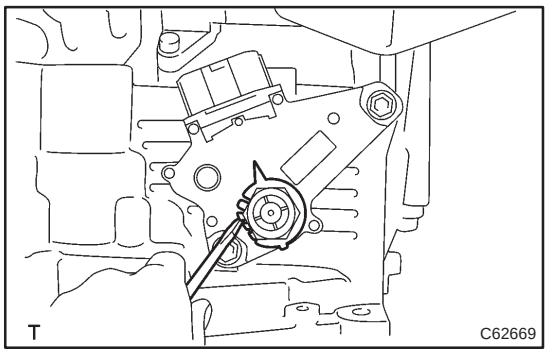
(9) Using a screwdriver, stake the nut with the lock plate.



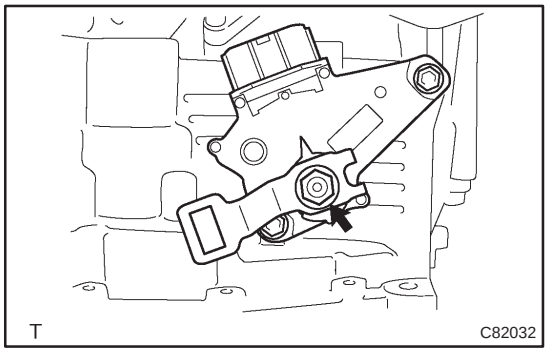
(10) Install the control shaft lever, washer and nut.
Torque: 13 N·m (130 kgf·cm, 9 ft·lbf)
(11) Connect the park/neutral position switch connector.



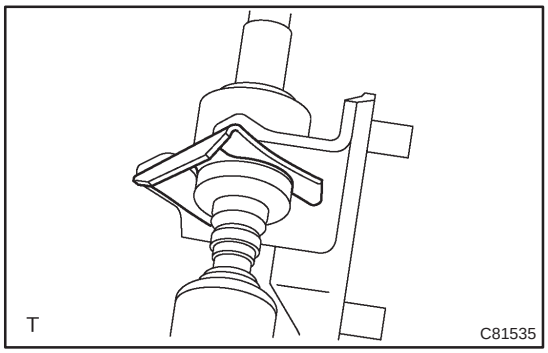
(b) U341E:
(1) Install the park/neutral position switch to the manual valve shaft.
(2) Temporarily install the 2 bolts.



(3) Place a new lock plate and tighten the nut.
Torque: 6.9 N·m (70 kgf·cm, 61 in.·lbf)
(4) Temporarily install the control shaft lever.

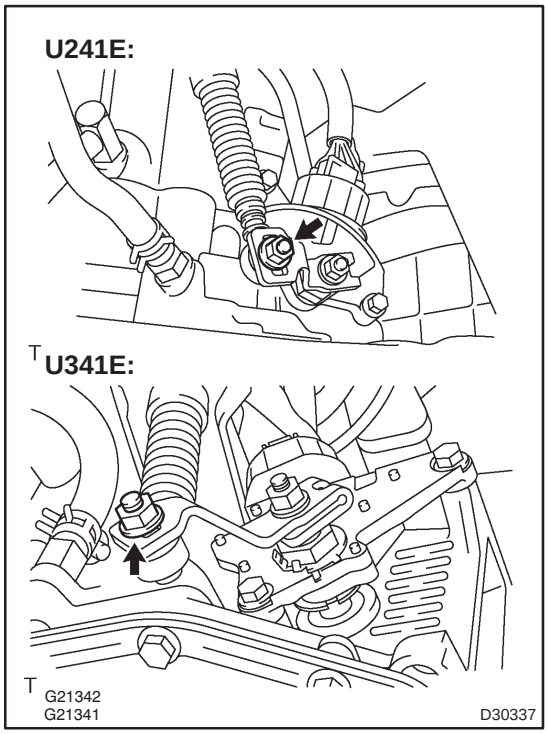


(5) Turn the lever counterclockwise until it stops, then turn it clockwise 2 notches.
(6) Remove the control shaft lever.



(7) Align the groove with the Gneutral basic line.
(8) Hold the switch in position and tighten the 2 bolts.
Torque: 5.4 N·m (55 kgf·cm, 48 in. lbf)

(9) Using a screwdriver, stake the nut with the lock plate.



(10) Install the control shaft lever, washer and nut.
Torque: 13 N·m (130 kgf·cm, 9 ft·lbf)
(11) Connect the park/neutral position switch connector.

5. INSTALL TRANSMISSION CONTROL CABLE ASSY

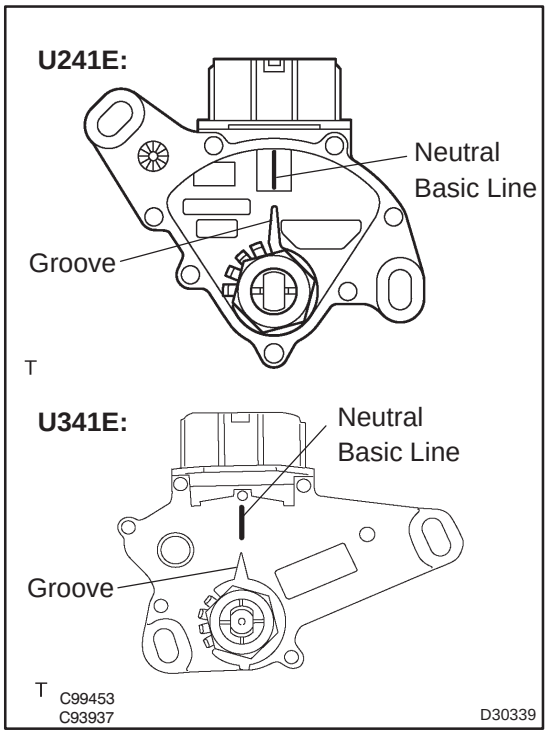
(a) Install the control cable and clip to the control cable bracket.

(b) Temporarily install the control cable to the control shaft lever with the nut.

6. **ADJUST SHIFT LEVER POSITION (See page 40–69)**
7. **INSPECT SHIFT LEVER POSITION (See page 40–69)**
8. **INSPECT PARK/NEUTRAL POSITION SWITCH ASSY (See page 40–8)**

400DA–02

ADJUSTMENT



1. INSPECT PARK/NEUTRAL POSITION SWITCH ASSY

(a) Apply the parking brake and turn the ignition switch ON.

(b) Depress the brake pedal and check that the engine starts only when the shift lever is set in N or P position and it does not start in other position.

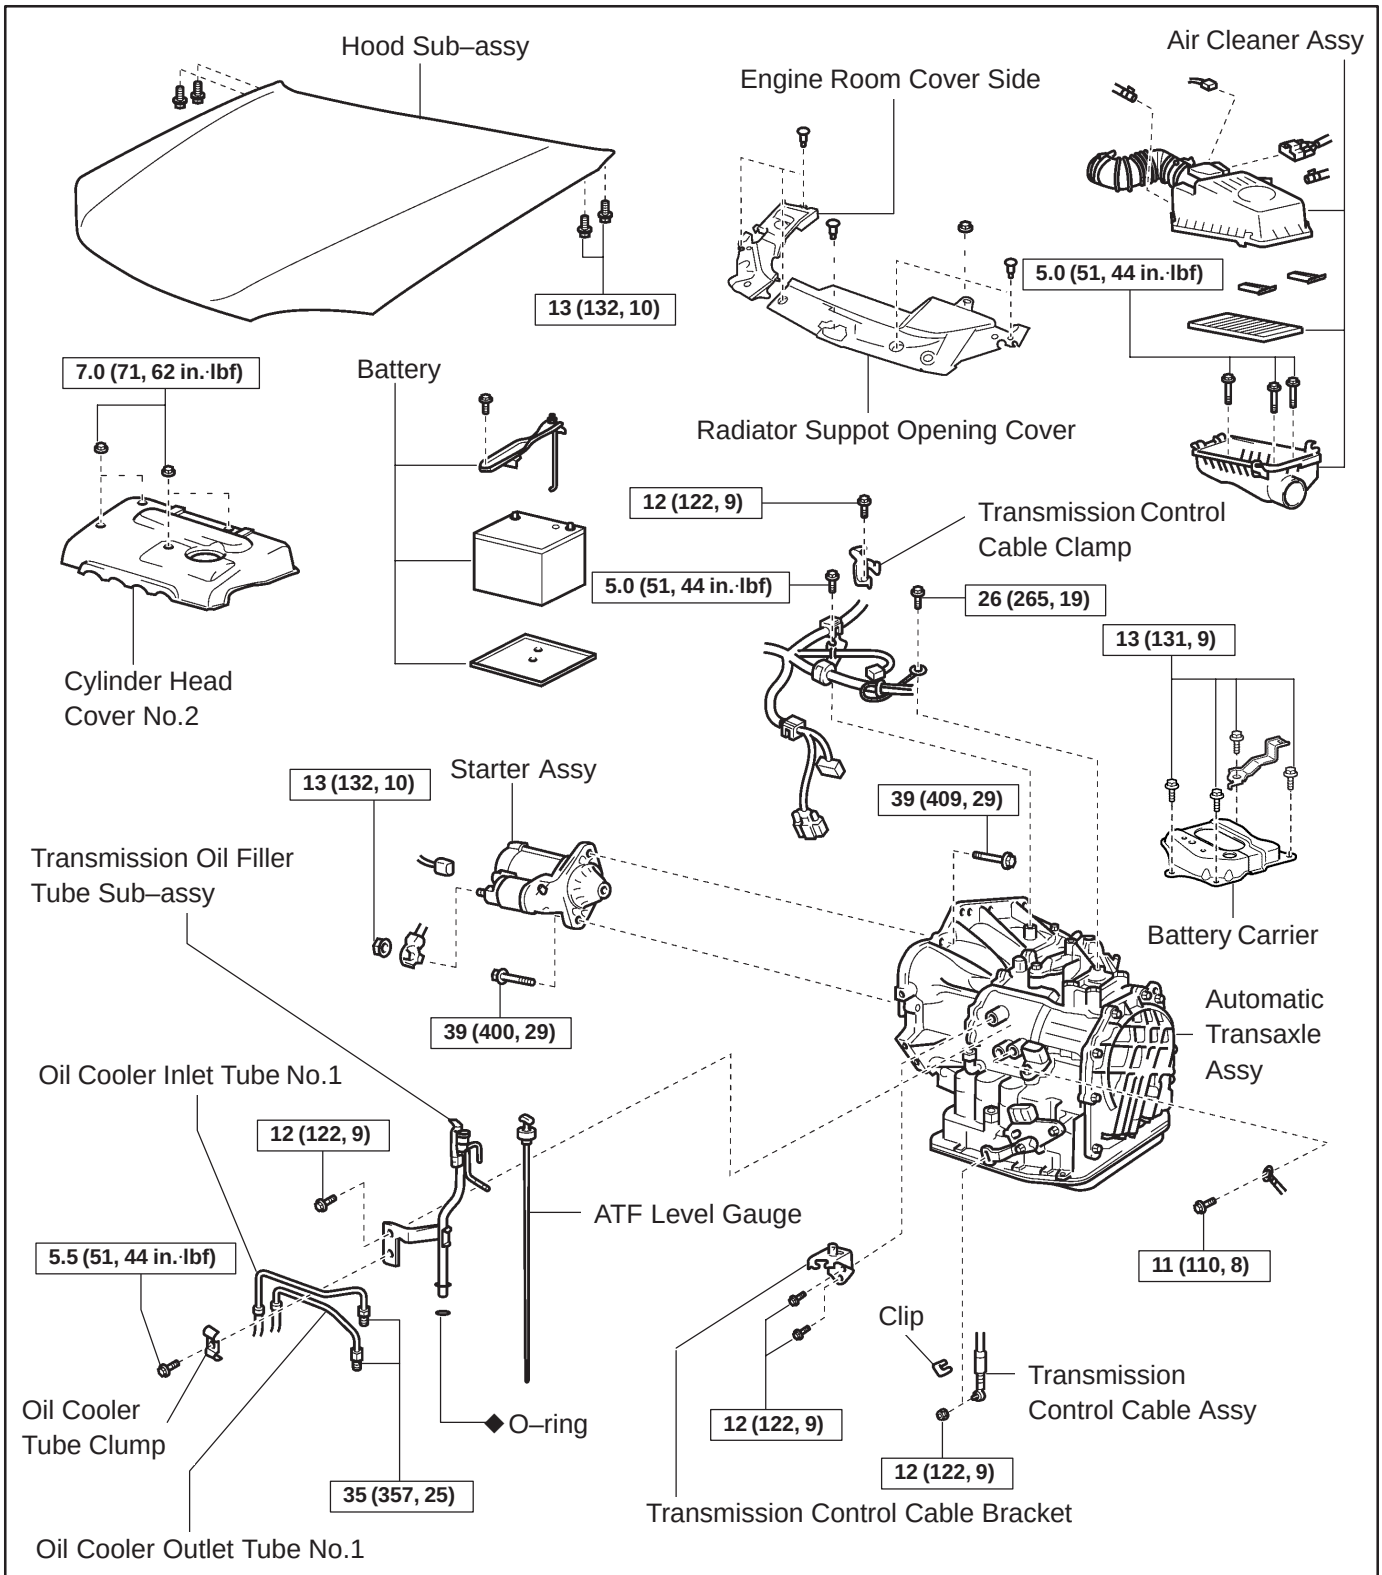
(c) Check that the back–up light is on and the reverse warning buzzer sounds only when the shift lever is set in R position and these do not function in other position.

If a failure is found, check the park/neutral position switch for continuity.

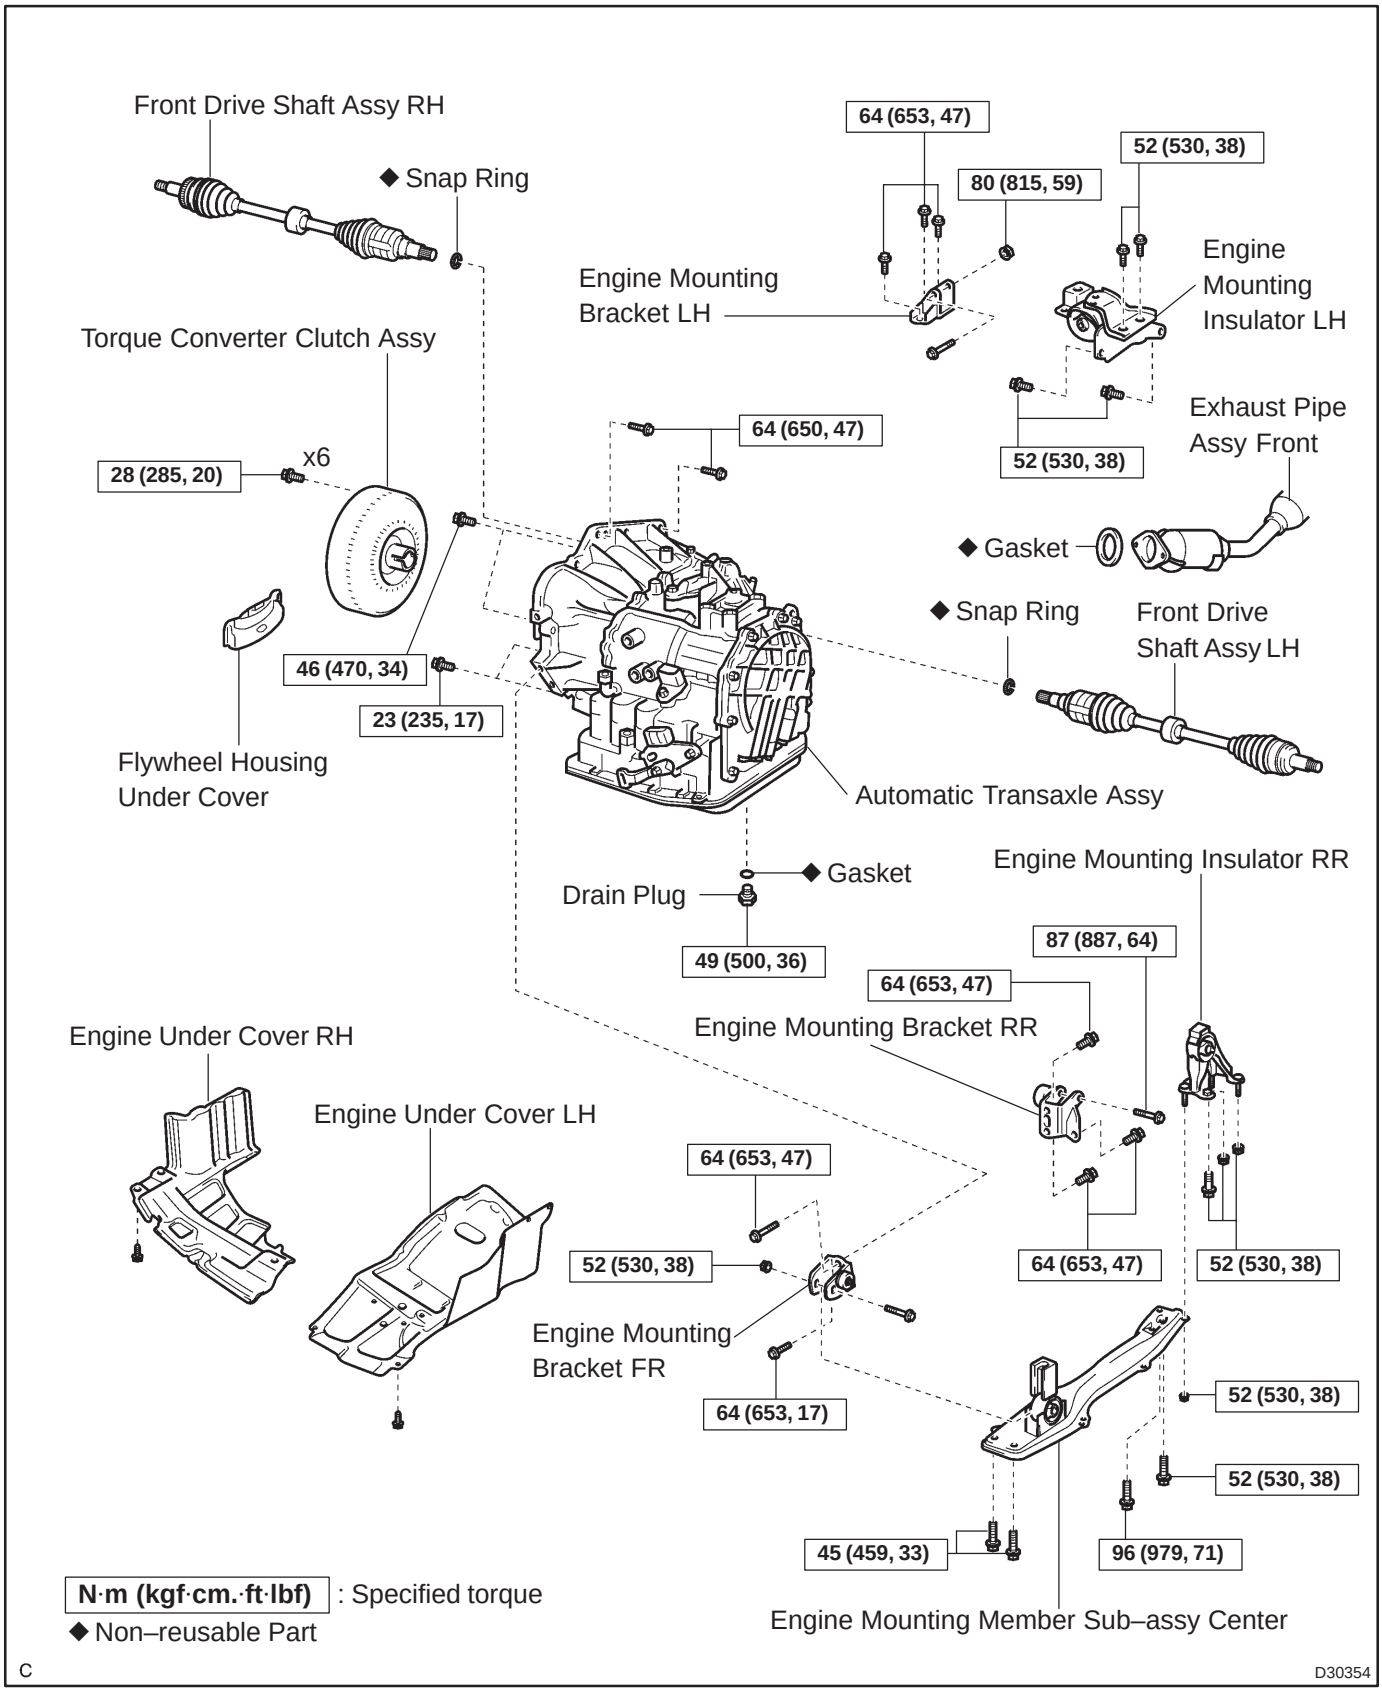
2. ADJUST PARK/NEUTRAL POSITION SWITCH ASSY

(a) Loosen the 2 bolts of park/neutral position switch and set the shift lever to the N position.

(b) Align the groove and neutral basic line.



(c) Hold the switch in position and tighten the 2 bolts.
Torque: 5.4 N·m (55 kgf·cm, 48 in.·lbf)



(d) After adjustment, perform the inspection described in step 1.

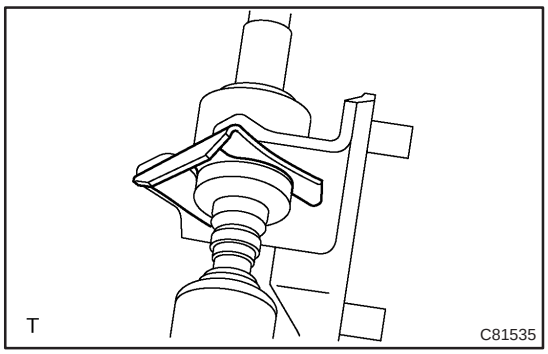
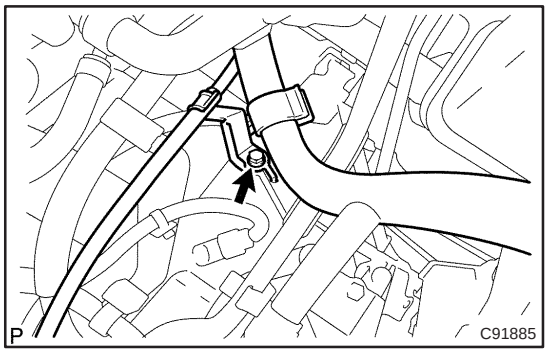
REPLACEMENT



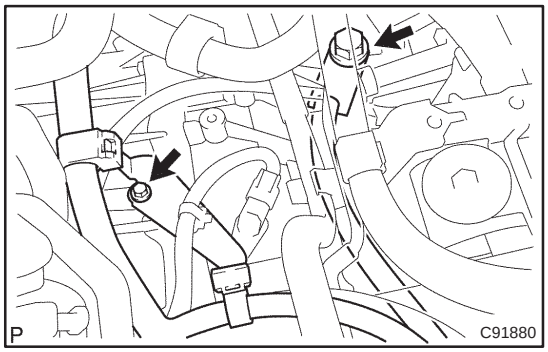
1. **REMOVE HOOD SUB–ASSY**
2. **REMOVE CYLINDER HEAD COVER NO.2**
3. **REMOVE RADIATOR SUPPORT OPENING COVER**
4. **REMOVE ENGINE ROOM COVER SIDE**
5. **REMOVE BATTERY**

6. **REMOVE BATTERY CARRIER**



(a) Remove the 4 bolts and battery carrier and clamp.

7. **REMOVE AIR CLEANER ASSY**



8. **SEPARATE TRANSMISSION CONTROL CABLE ASSY**

(a) Remove the nut from the control shaft lever.
(b) Separate the control cable from the control shaft lever.
(c) Remove the clip and disconnect the control cable from the control cable bracket.

9. **REMOVE TRANSMISSION CONTROL CABLE CLAMP**

(a) Disconnect the wire harness clamp and control cable from the control cable clamp.
(b) Remove the bolt and control cable clamp.

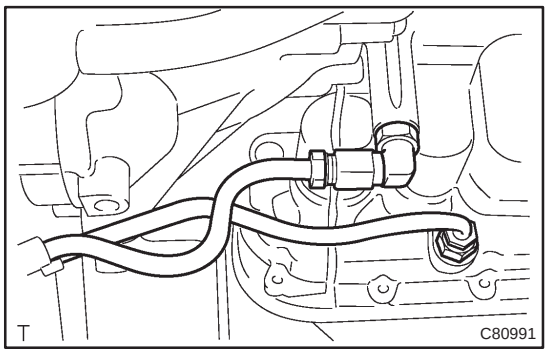
10. SEPARATE WIRE HARNESS

(a) Remove the bolt and disconnect the wire harness.

(b) Remove the bolt and disconnect the wire harness clamp bracket.

11. SEPARATE CONNECTOR

(a) Disconnect the transmission wire connector.



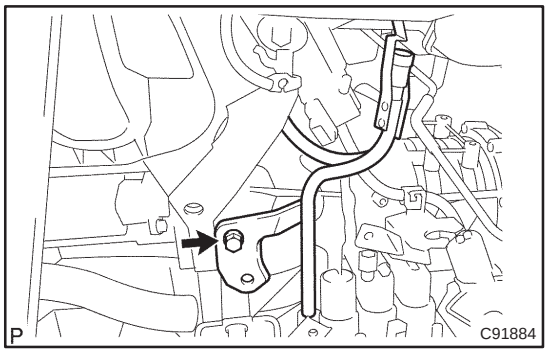
(b) Disconnect the park/neutral position switch connector.

(c) Disconnect the speed sensor connector.

12. REMOVE ENGINE UNDER COVER RH

13. REMOVE ENGINE UNDER COVER LH

14. DRAIN COOLANT (See page 16–7)

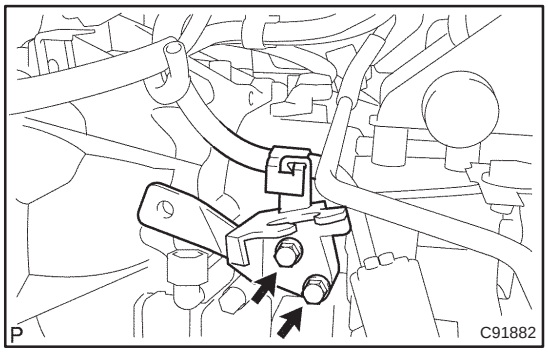


15. DISCONNECT OIL COOLER INLET TUBE NO.1

(a) Using SST, disconnect the oil cooler inlet tube No.1.
SST 09023–12700

16. DISCONNECT OIL COOLER OUTLET TUBE NO.1

(a) Using SST, disconnect the oil cooler outlet tube No.1.
SST 09023–12700

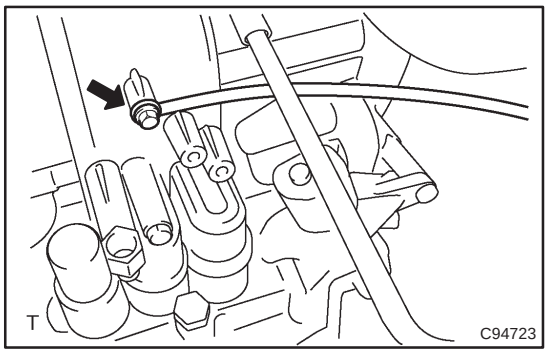


17. REMOVE TRANSMISSION OIL FILLER TUBE SUB–ASSY

(a) Remove the ATF level gauge.

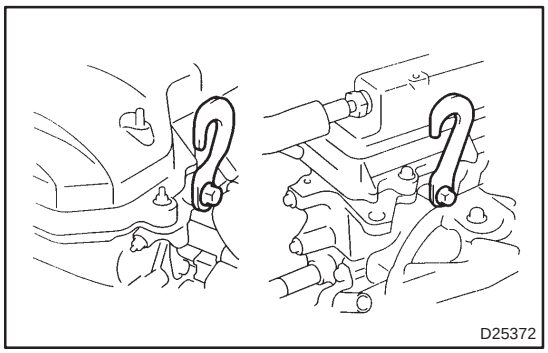
(b) Remove the 2 bolts, oil cooler tube clamp and oil filler tube.

(c) Remove the breather hose from the oil filler tube.



(d) Remove the O–ring from the oil filler tube.

18. REMOVE TRANSMISSION CONTROL CABLE BRACKET NO.1



(a) Disconnect the wire harness clamp.

(b) Remove the 2 bolts and control cable bracket.

19. SEPARATE WIRE HARNESS

(a) Remove the bolt and wire harness.

20. SUSPEND ENGINE ASSY

(a) Install the No.1 and No.2 engine hangers in the correct direction.

Parts No.:
No.1 engine hanger: 12281–22021
No.2 engine hanger: 12281–15040
Bolt: 91512–B1016
Torque: 38 N·m (387 kgf·cm, 28 ft·lbf)

(b) Attach the engine chain hoist to the engine hangers.

CAUTION:
Do not attempt to hang the engine by hooking the chain to any other parts.

21. REMOVE FRONT WHEELS

22. DRAIN AUTOMATIC TRANSAXLE FLUID

(a) Remove the drain plug, gasket and drain ATF.

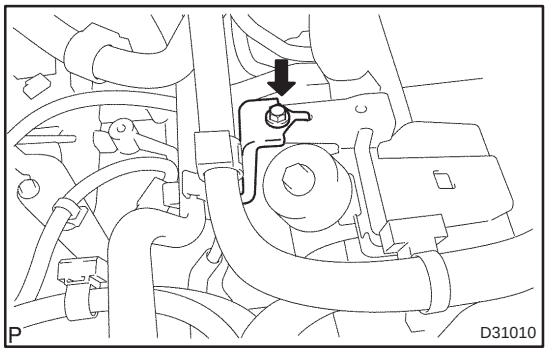
(b) Install a new gasket and the drain plug.
Torque: 49 N·m (500 kgf·cm, 36 ft·lbf)

23. REMOVE EXHAUST PIPE ASSY FRONT (See page 15–2)

24. REMOVE FRONT DRIVE SHAFT ASSY LH (See page 30–6)
SST 09520–01010, 09520–24010 (09520–32040)

25. REMOVE FRONT DRIVE SHAFT ASSY RH (See page 30–6)
SST 09520–01010, 09520–24010 (09520–32040)

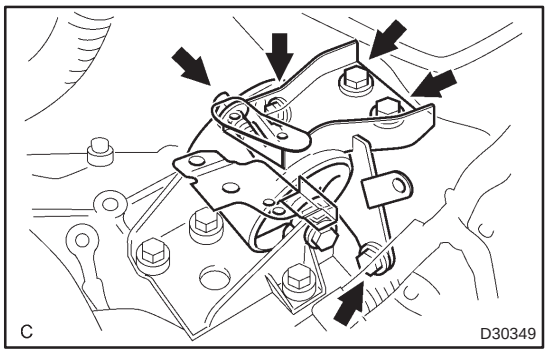
26. REMOVE STARTER ASSY



(a) Remove the nut and disconnect the starter wire.

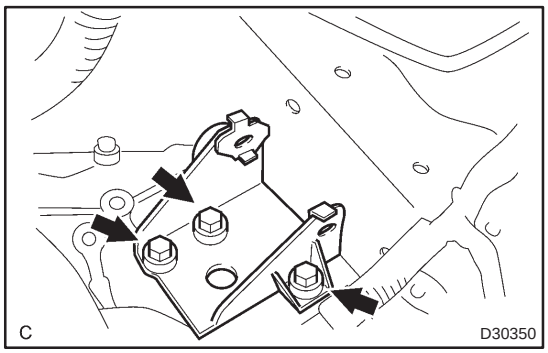
(b) Disconnect the connector.

(c) Remove the 2 bolts and starter.



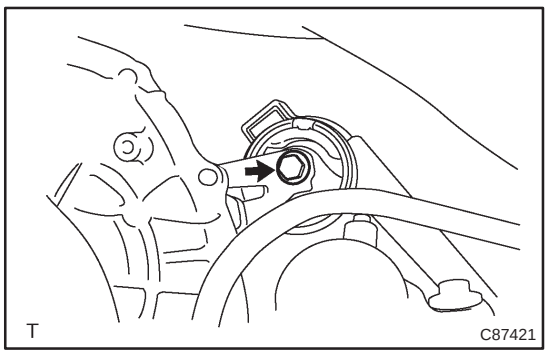
27. SUPPORT AUTOMATIC TRANSAXLE ASSY

(a) Support the automatic transaxle with a transmission jack.

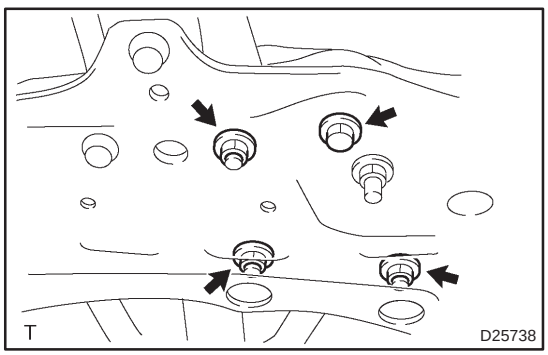


28. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR

(a) Remove the bolt and disconnect the wire harness clamp bracket.

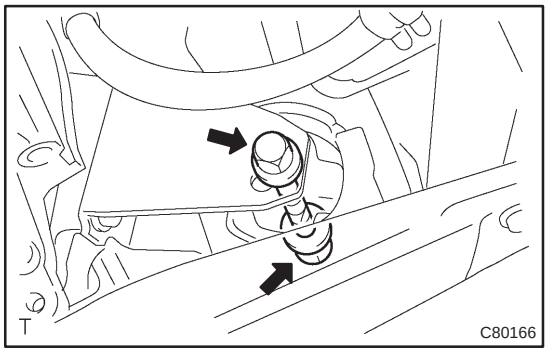


(b) Remove the 4 bolts, nut and engine mounting insulator LH.



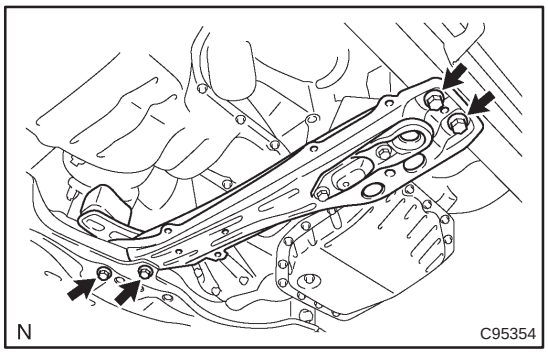
29. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Remove the 3 bolts and engine mounting bracket LH.

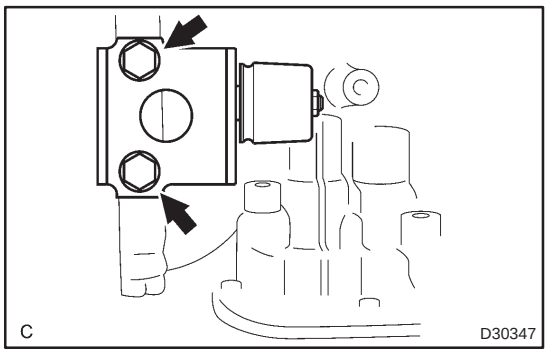


30. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR

(a) Remove the bolt from the engine mounting bracket RR.

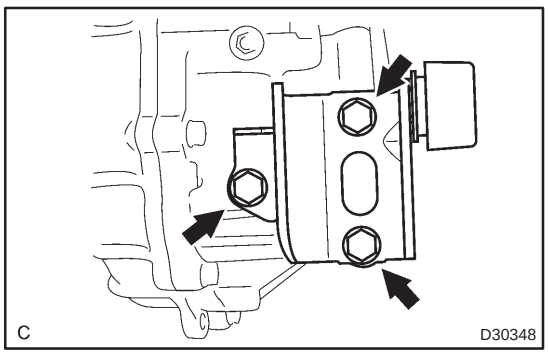


(b) Remove the 3 nuts, bolt and engine mounting insulator RR from the suspension member.



31. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR

(a) Remove the bolt and nut from the engine mounting bracket FR.

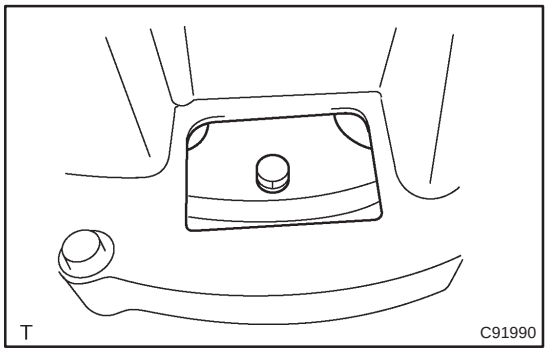


32. REMOVE ENGINE MOUNTING MEMBER SUB–ASSY CENTER

(a) Remove the 4 bolts and center member with engine mounting insulator FR.

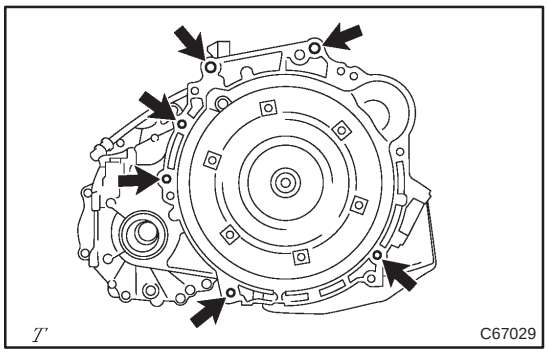
33. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Remove the 2 bolts and engine mounting bracket FR.



34. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Remove the 3 bolts and engine mounting bracket RR.



35. REMOVE FLYWHEEL HOUSING UNDER COVER

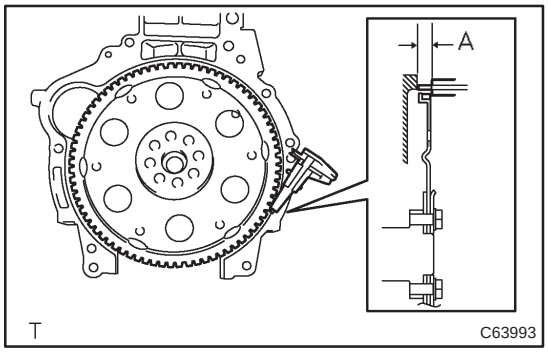
(a) Remove the flywheel housing under cover from the automatic transaxle.

36. REMOVE AUTOMATIC TRANSAXLE ASSY

(a) Turn the crankshaft to remove the 6 bolts while holding the crankshaft pulley bolt with a wrench.

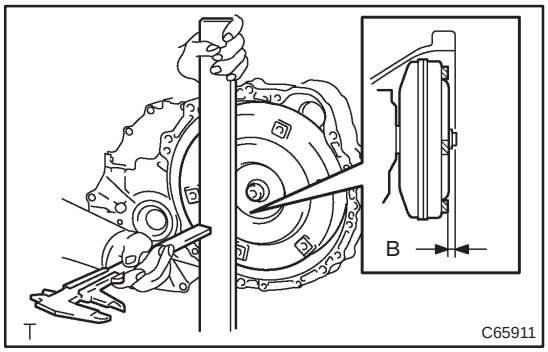
(b) Remove the 6 bolts.

(c) Separate and remove the automatic transaxle.



37. REMOVE TORQUE CONVERTER CLUTCH ASSY

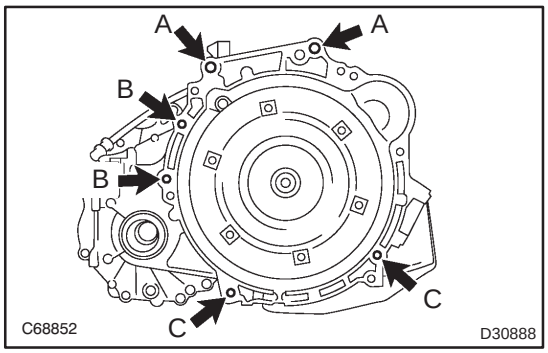
38. INSPECT TORQUE CONVERTER CLUTCH ASSY (See page 40–37)



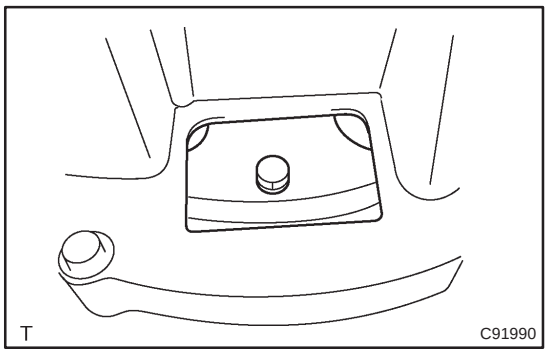
SST 09350–32014 (09351–32010, 09351–32020)

39. INSTALL TORQUE CONVERTER CLUTCH ASSY

(a) Install the torque converter clutch to the automatic transaxle.



(b) Using vernier calipers, measure the dimension ”A” between the trasaxle fitting part and the converter fitting part of the drive plate.

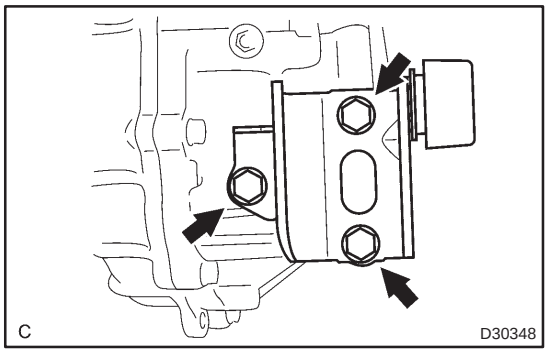


(c) Using vernier calipers and a straight edge, measure the dimension ”B” shown in the illustration and check that ”B” is greater than ”A” measured in (b).
Standard: A + 1 mm or more

NOTICE:
Do not add the thickness of the straight edge.

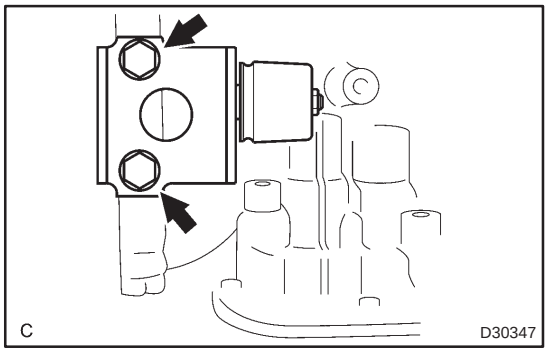
40. INSTALL AUTOMATIC TRANSAXLE ASSY

(a) Install the automatic transaxle and 6 bolts to the engine.
Torque:
Bolt A: 64 N·m (650 kgf·cm, 47 ft·lbf)
Bolt B: 46 N·m (470 kgf·cm, 34 ft·lbf)
Bolt C: 23 N·m (235 kgf·cm, 17 ft·lbf)



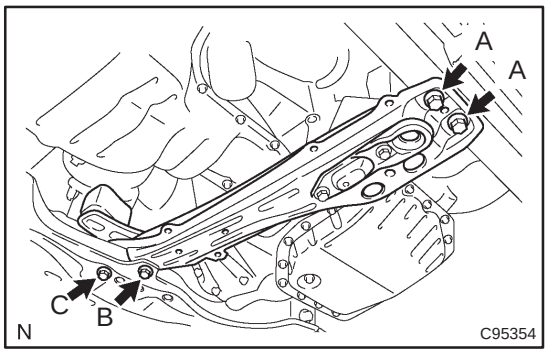
(b) Install the 6 torque converter mounting bolts.
Torque: 28 N·m (285 kgf·cm, 20 ft·lbf)

HINT:
First install yellowish green colored bolt, and then the the 5 bolts.



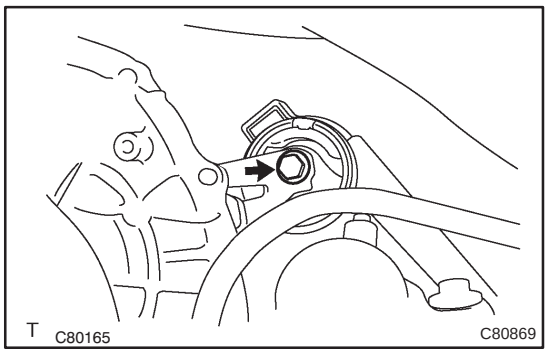
41. INSTALL FLYWHEEL HOUSING UNDER COVER

(a) Install the flywheel housing under cover to the automatic transaxle.



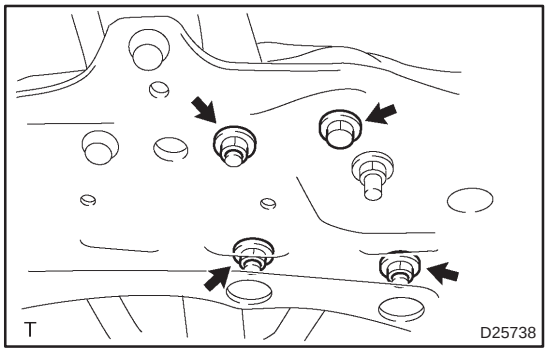
42. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Install the engine mounting bracket RR and 3 bolts to the automatic trasaxle.
Torque: 64 N·m (653 kgf·cm, 47 ft·lbf)



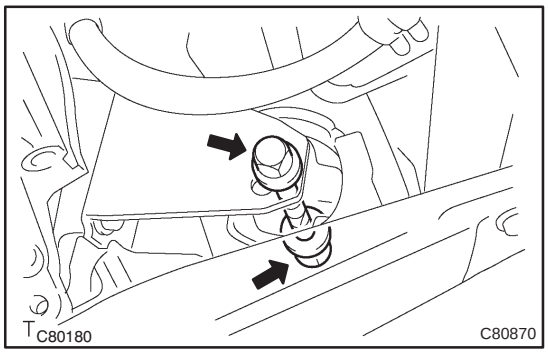
43. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Install the engine mounting bracket FR and 2 bolts to the automatic trasaxle.
Torque: 64 N·m (653 kgf·cm, 47 ft·lbf)



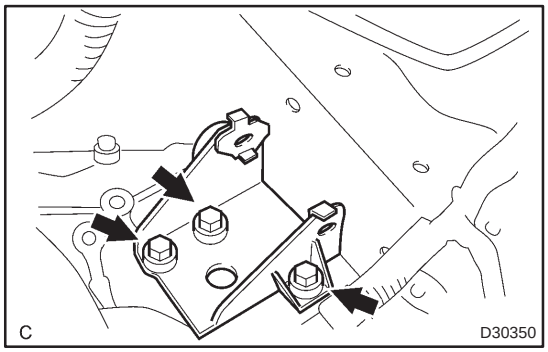
44. INSTALL ENGINE MOUNTING MEMBER SUB–ASSY CENTER

(a) Install the dynamic damper, member sub–assy center with the engine mounting insulator FR and 4 bolts.
Torque:
Bolt A: 45 N·m (459 kgf·cm, 33 ft·lbf)
Bolt B: 96 N·m (979 kgf·cm, 71 ft·lbf)
Bolt C: 52 N·m (530 kgf·cm, 38 ft·lbf)

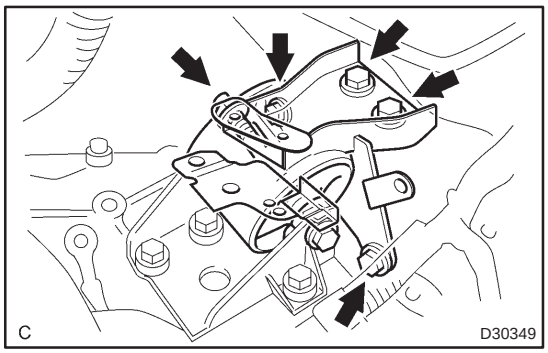


45. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR

(a) Install the engine mounting insulator RR and bolt to the engine mounting bracket RR.
Torque: 87 N·m (887 kgf·cm, 64 ft·lbf)

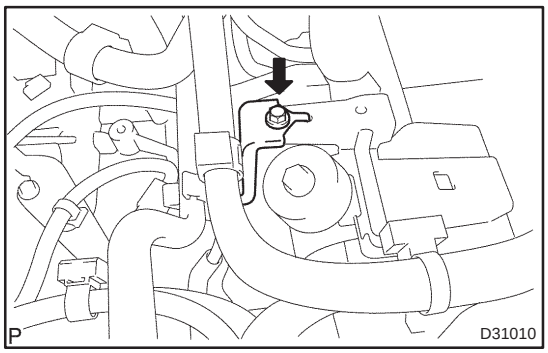


(b) Tighten the 3 nuts and bolt.
Torque: 52 N·m (530 kgf·cm, 38 ft·lbf)



46. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR

(a) Install the bolt and nut to the engine mounting bracket FR.
Torque: 52 N·m (530 kgf·cm, 38 ft·lbf)



47. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Install the engine mounting bracket LH and 3 bolts to the automatic transaxle.
Torque: 64 N·m (653 kgf·cm, 47 ft·lbf)

48. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR

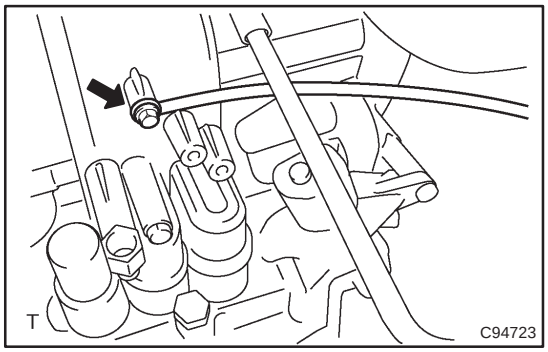
(a) Install the engine mounting insulator LH, 4 bolts and nut.
Torque:
Bolt : 52 N·m (530 kgf·cm, 38 ft·lbf)
Nut : 80 N·m (815 kgf·cm, 59 ft·lbf)

(b) Install the wire harness clamp bracket and bolt.

49. INSTALL STARTER ASSY

(a) Install the starter and 2 bolts.
Torque: 39 N·m (400 kgf·cm, 29 ft·lbf)

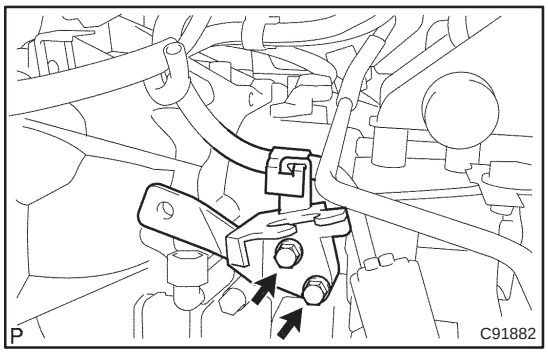
(b) Connect the connector.



(c) Install the starter wire and nut.
Torque: 13 N·m (132 kgf·cm, 10 ft·lbf)

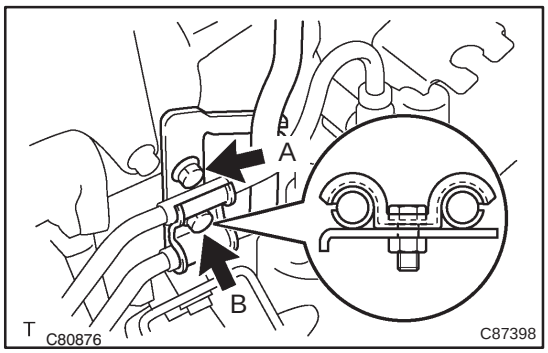
50. INSTALL FRONT DRIVE SHAFT ASSY LH (See page 30–6)

51. INSTALL FRONT DRIVE SHAFT ASSY RH (See page 30–6)



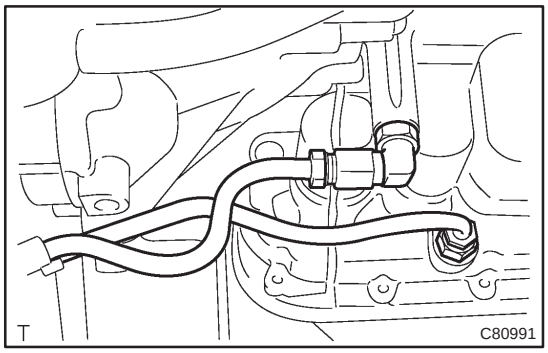
52. INSTALL EXHAUST PIPE ASSY FRONT (See page 15–2)

53. INSTALL FRONT WHEELS



54. INSTALL WIRE HARNESS

(a) Install the wire harness clamp bracket and bolt.
Torque: 11 N·m (110 kgf·cm, 8 ft·lbf)

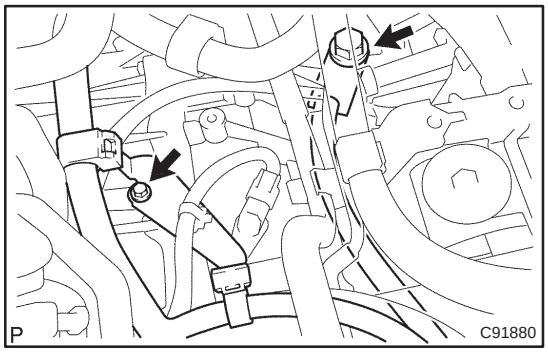


55. INSTALL TRANSMISSION CONTROL CABLE BRACKET NO.1

(a) Install the control cable bracket and 2 bolts.
Torque: 12 N·m (122 kgf·cm, 9 ft·lbf)

56. INSTALL TRANSMISSION OIL FILLER TUBE SUB–ASSY

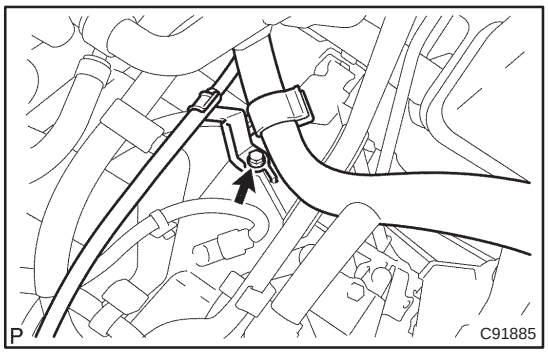
(a) Temporarily install the oil cooler outlet tube No.1.
(b) Temporarily install the oil cooler inlet tube No.1.
(c) Coat a new O–ring with ATF, and install it to the oil filler tube.
(d) Install the oil filler tube to the automatic transaxle.
(e) Install the oil cooler tube clamp and 2 bolts.
Torque:
Bolt A: 12 N·m (122 kgf·cm, 9 ft·lbf)
Bolt B: 5.5 N·m (56 kgf·cm, 49 in.·lbf)
(f) Install the ATF level gauge.



57. CONNECT OIL COOLER OUTLET TUBE NO.1

(a) Using SST, tighten oil cooler outlet tube No.1.
Torque: 35 N·m (357 kgf·cm, 25 ft·lbf)
SST 09023–12700

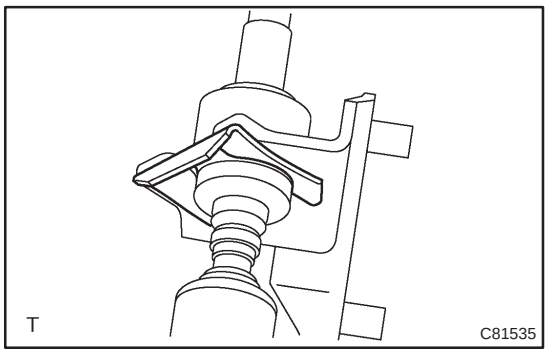
58. CONNECT OIL COOLER INLET TUBE NO.1



(a) Using SST tighten the oil cooler inlet tube No.1.
SST 09023–12700
Torque: 35 N·m (357 kgf·cm, 25 ft·lbf)

59. INSTALL WIRE HARNESS

(a) Install the wire harness and bolt.
Torque: 26 N·m (265 kgf·cm, 19 ft·lbf)



(b) Install the wire harness clamp bracket and bolt.
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbff)

60. INSTALL TRANSMISSION CONTROL CABLE CLAMP

(a) Install the control cable support and bolt.
Torque: 12 N·m (122 kgf·cm, 9 ft·lbf)

(b) Connect the control cable and wire harness to the control cable support.

61. INSTALL TRANSMISSION CONTROL CABLE ASSY

(a) Temporarily install the control cable to the control shaft lever with the nut.

(b) Install the control cable and clip to the bracket.

62. INSTALL AIR CLEANER ASSY
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)

63. INSTALL BATTERY CARRIER
Torque: 13 N·m (131 kgf·cm, 9 ft·lbf)

64. INSTALL BATTERY

65. INSTALL ENGINE ROOM COVER SIDE

66. INSTALL RADIATOR SUPPORT OPENING COVER

67. INSTALL CYLINDER HEAD COVER NO.2
Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)

68. INSTALL HOOD SUB–ASSY
Torque: 13 N·m (133 kgf·cm, 10 ft·lbf)

69. INSPECT HOOD SUB–ASSY (See page 75–2)

70. ADJUST HOOD SUB–ASSY (See page 75–2)

71. ADD AUTOMATIC TRANSAXLE FLUID

72. ADD COOLANT (See page 16–1)

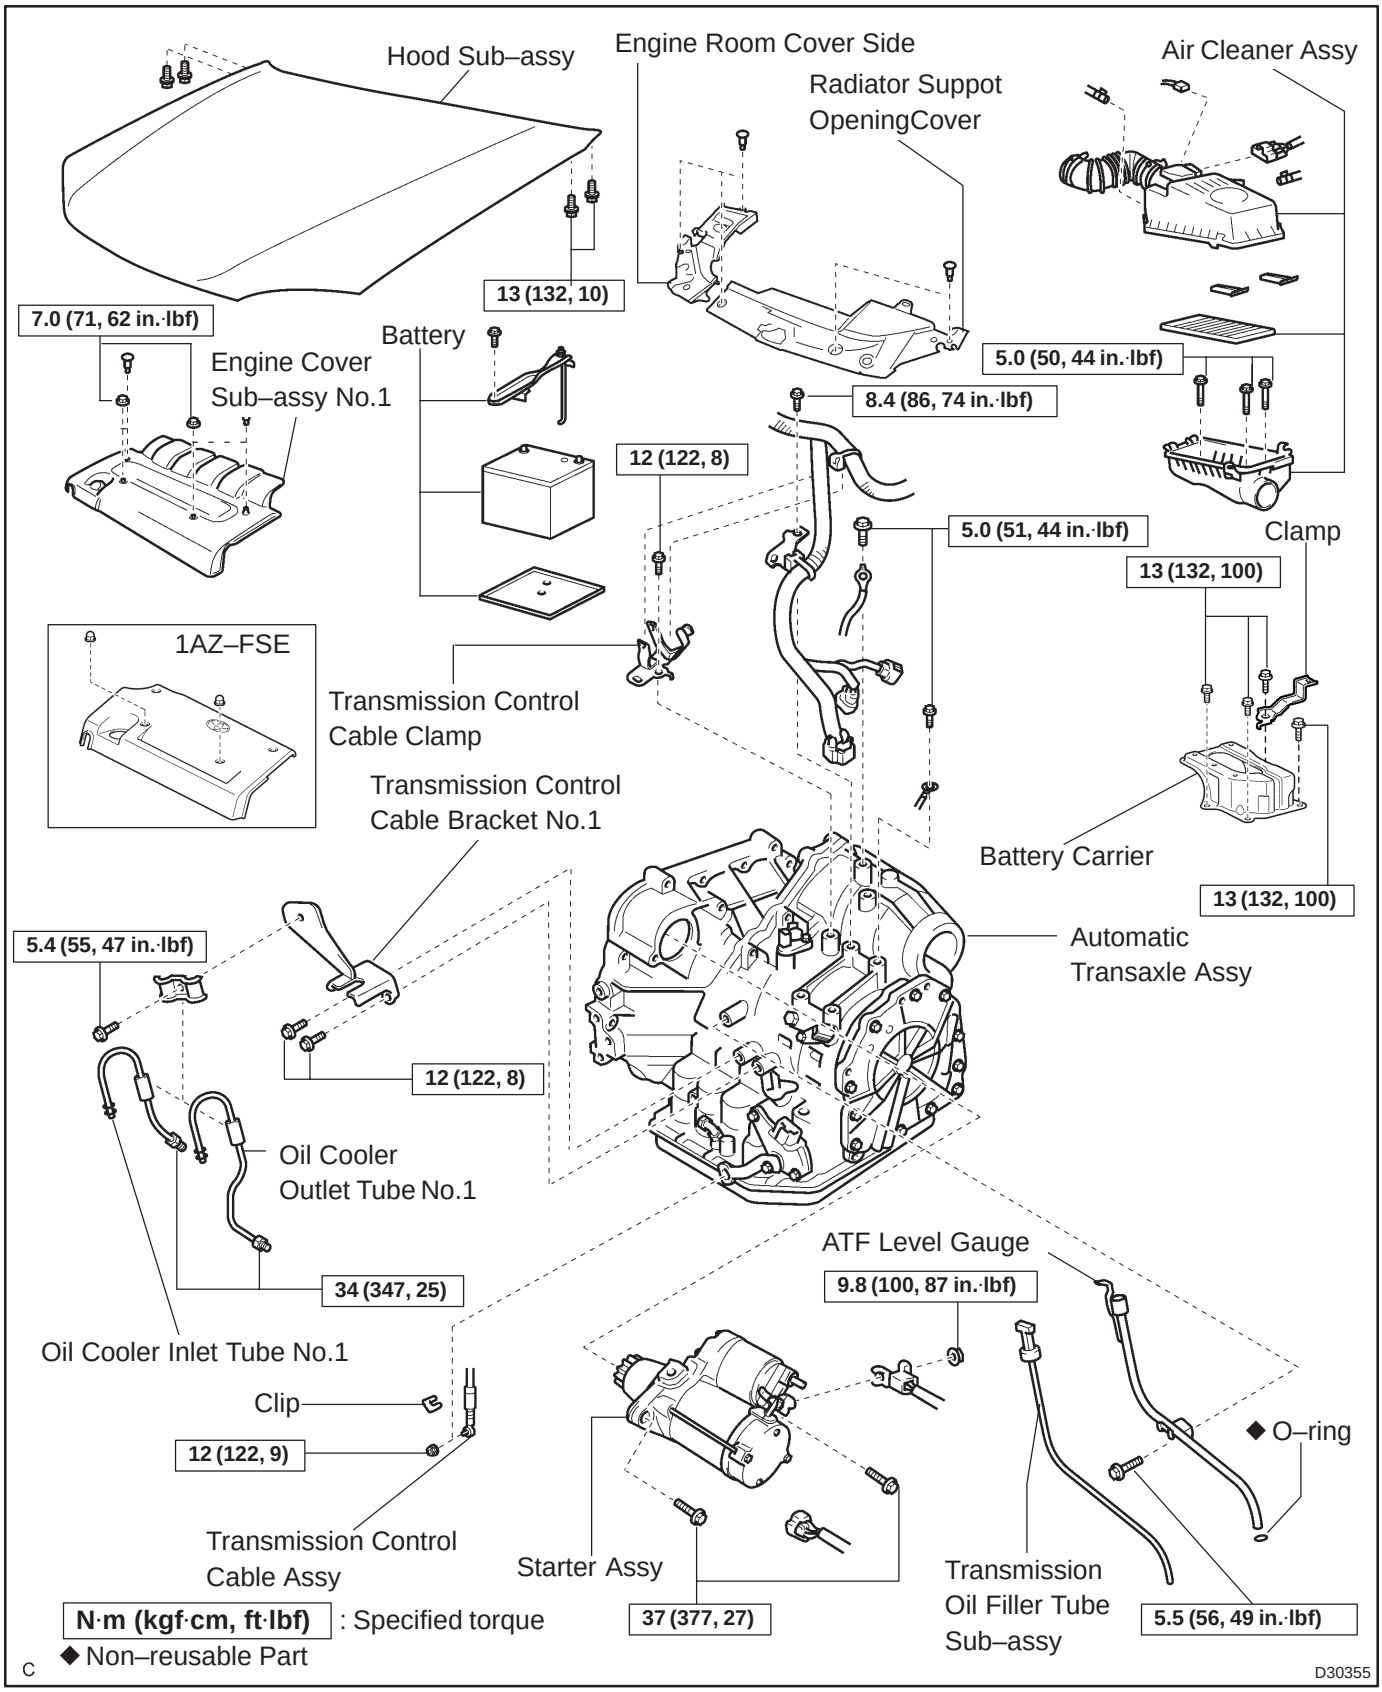
73. CHECK FOR ENGINE COOLANT LEAKS (See page 16–1)

74. INSPECT AUTOMATIC TRANSAXLE FLUID (See page 40–2)

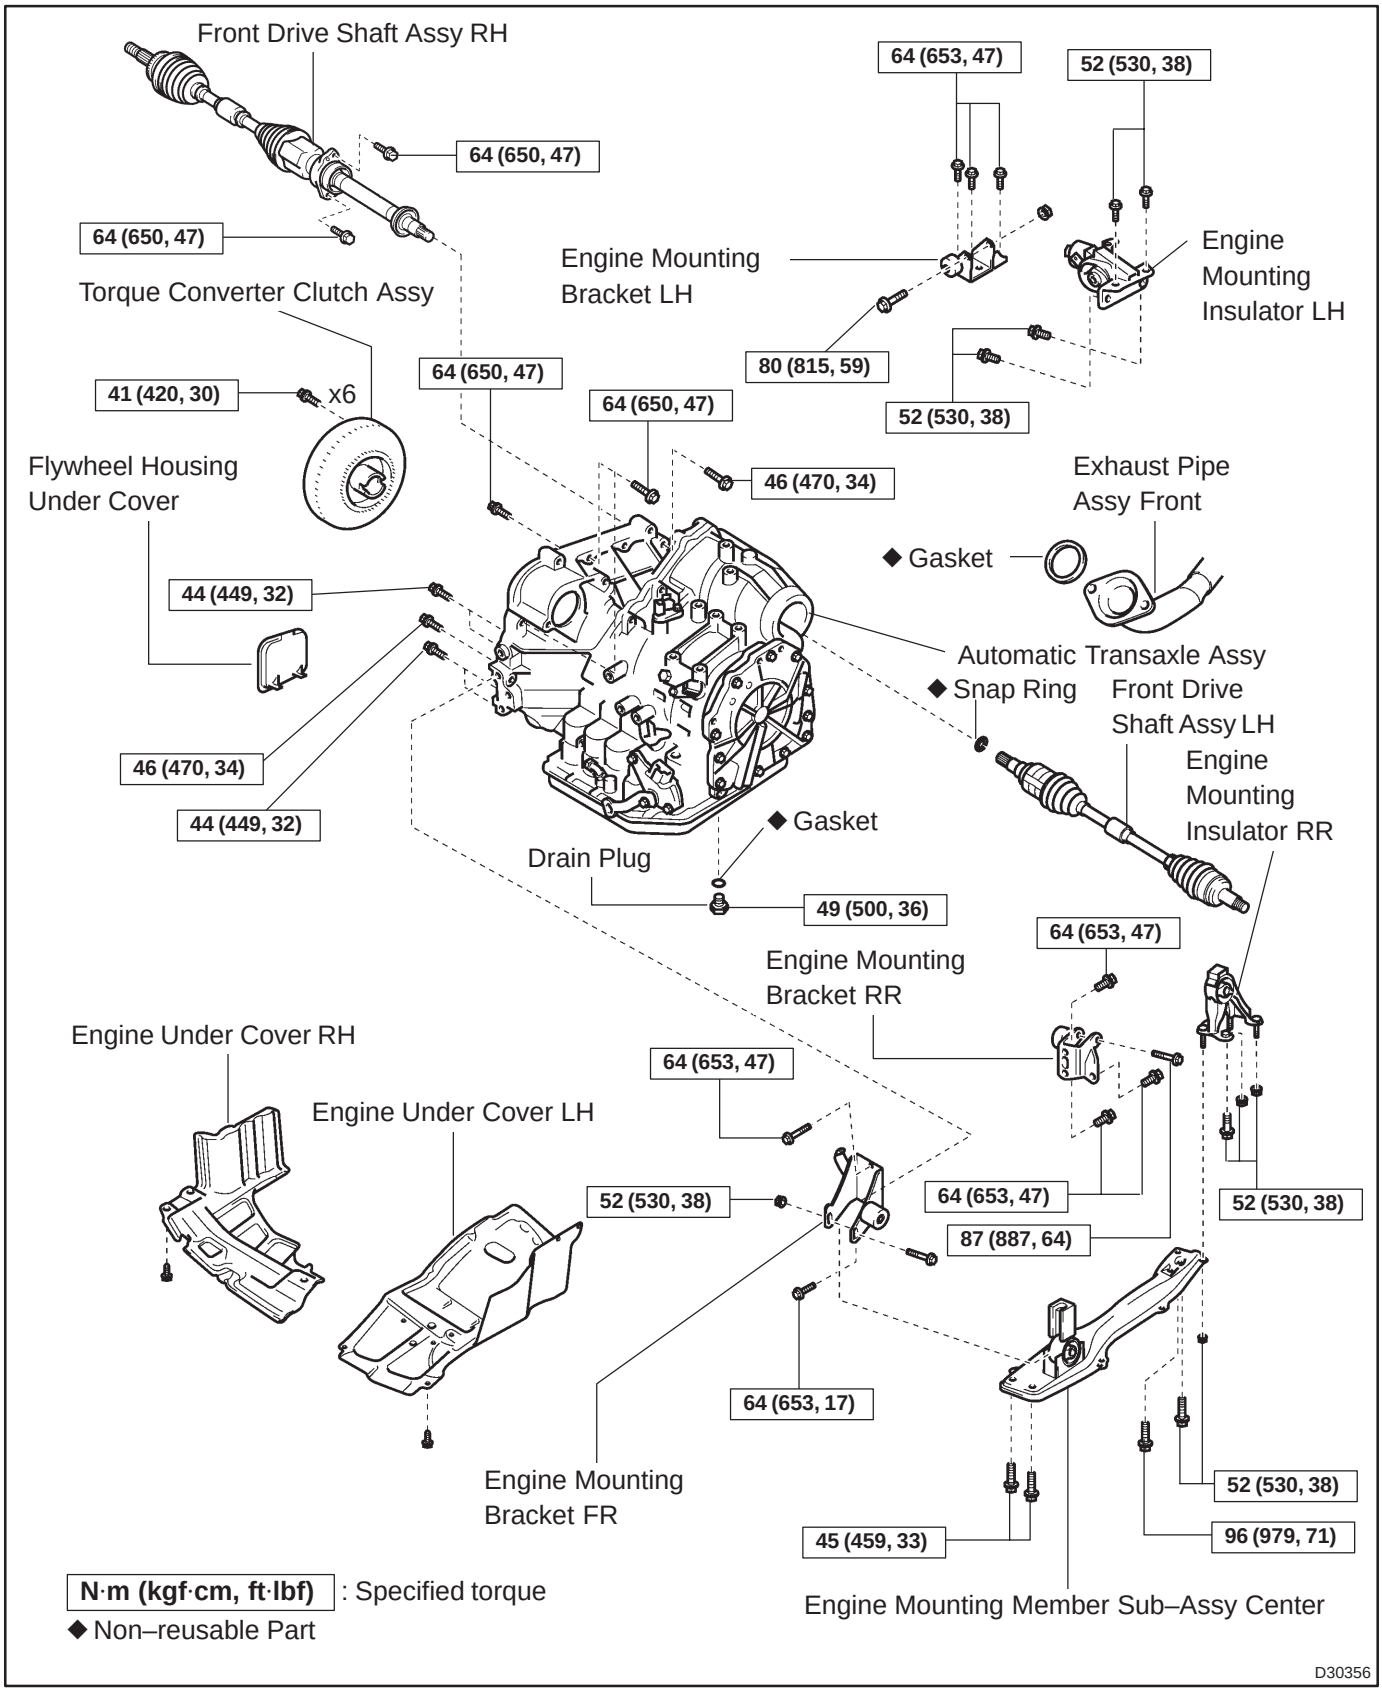
75. ADJUST SHIFT LEVER POSITION (See page 40–69)

76. INSPECT SHIFT LEVER POSITION (See page 40–69)

77. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT (See page 26–6)



78. CHECK ABS SPEED SENSOR SIGNAL (See page 05–699)



79. RESET MEMORY (See page 05–985)

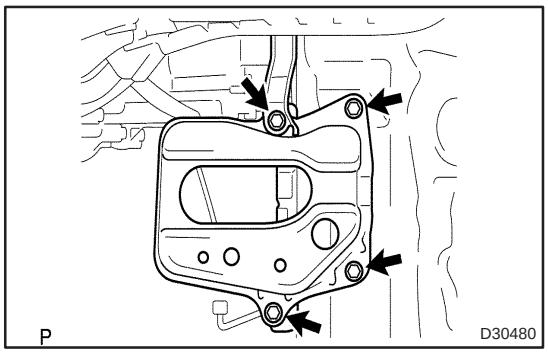
REPLACEMENT

1. REMOVE HOOD SUB–ASSY



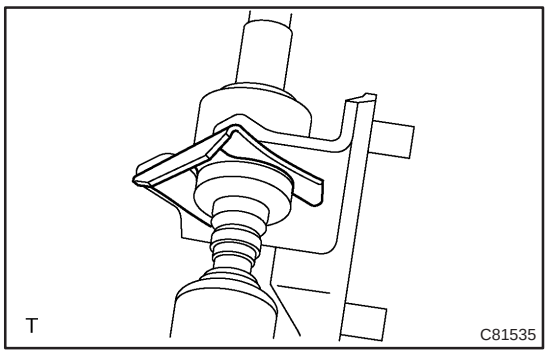
2. REMOVE ENGINE COVER SUB–ASSY NO.1

(a) Remove the 2 nuts and engine cover.

3. REMOVE RADIATOR SUPPORT OPENING COVER

4. REMOVE ENGINE ROOM COVER SIDE

5. REMOVE BATTERY

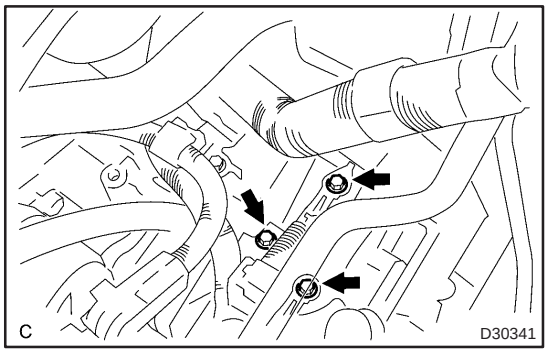


6. REMOVE BATTERY CARRIER

(a) Remove the 4 bolts and battery carrier.

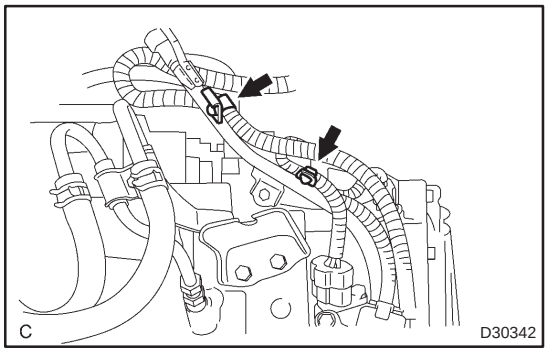
7. REMOVE AIR CLEANER ASSY

8. REMOVE AIR CLEANER HOSE NO.1



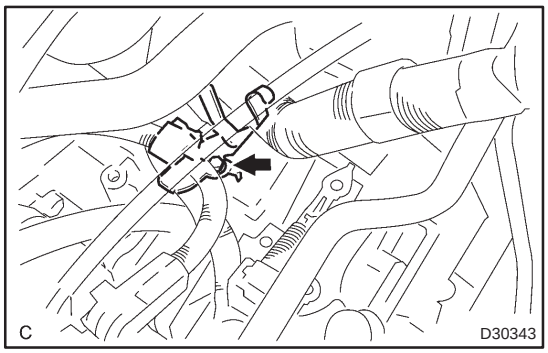
9. SEPARATE TRANSMISSION CONTROL CABLE ASSY

(a) Remove the nut from the control shaft lever.



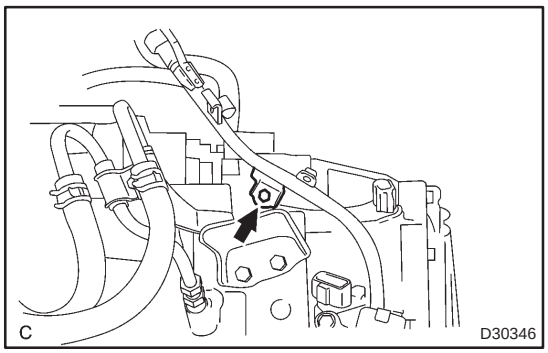
(b) Separate the control cable from the control shaft lever.

(c) Remove the clip and separate the control cable from the control cable bracket.



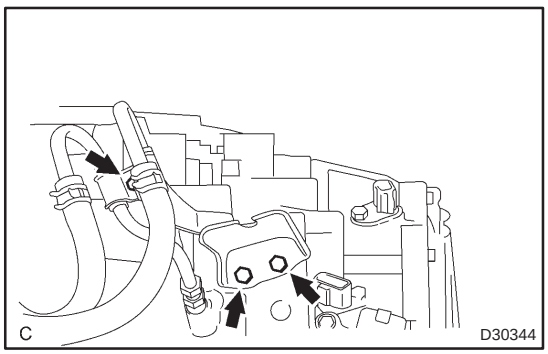
10. SEPARATE WIRE HARNESS

(a) Remove the 3 bolts and 2 wire harnesses and wire harness bracket.



11. SEPARATE CONNECTOR

(a) Separate the 2 wire harnesse clamps from the oil filler tube.
(b) Separate the transmission wire connector.
(c) Separate the park/neutral position switch connector.
(d) Separate the 2 speed sensor connectors.



12. REMOVE TRANSMISSION CONTROL CABLE CLAMP

(a) Remove the bolt and transmission control cable clamp from the automatic transaxle.

13. REMOVE TRANSMISSION OIL FILLER TUBE SUB–ASSY

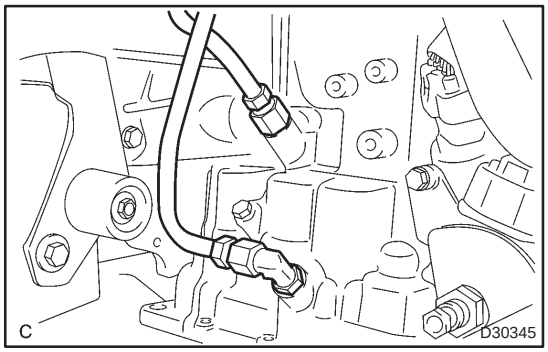
(a) Remove the ATF level gauge.
(b) Remove the bolt and oil filler tube.
(c) Remove the O–ring from the oil filler tube.

14. REMOVE TRANSMISSION CONTROL CABLE BRACKET NO.1

(a) Remove the 3 bolts and control cable bracket No.1.

15. REMOVE FRONT WHEELS

16. REMOVE ENGINE UNDER COVER RH



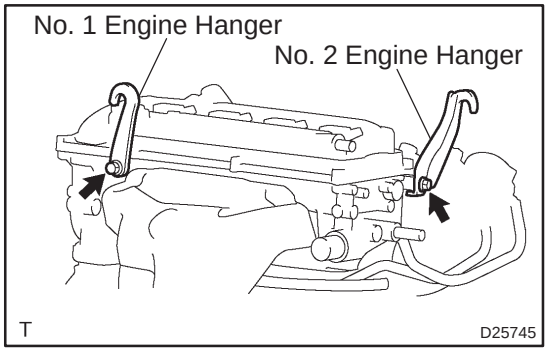
17. REMOVE ENGINE UNDER COVER LH

18. DRAIN AUTOMATIC TRANSAXLE FLUID

(a) Remove the drain plug gasket and drain ATF.
(b) Install a new gasket and drain plug.
Torque: 49 N·m (500 kgf·cm, 36 ft·lbf)

19. DRAIN COOLANT

(a) 1AZ–FE (See pege 16–19)
(b) 1AZ–FSE (See pege 16–31)



20. SEPARATE OIL COOLER INLET TUBE NO.1

(a) Using SST, disconnect the oil cooler inlet tube No.1.
SST 09023–12700

21. SEPARATE OIL COOLER OUTLET TUBE NO.1

(a) Using SST, disconnect the oil cooler outlet tube No.1.
SST 09023–12700

22. SUSPEND ENGINE ASSY

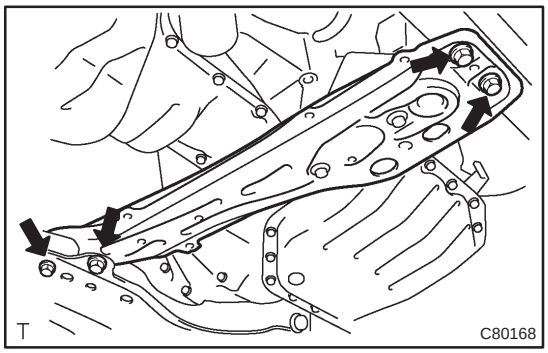
(a) Install the No.1 and No.2 engine hangers in the correct direction.
Parts No.:
No. 1 engine hanger: 12281–28010
No. 2 engine hanger: 12282–28010
Bolt: 91512–61020
Torque: 38 N·m (387 kgf·cm, 28 ft·lbf)

(b) Attach the engine chain hoist to the engine hanger.

CAUTION:
Do not attempt to hang the engine by hooking the chain to any other part.

23. REMOVE EXHAUST PIPE ASSY FRONT (See page 15–7)

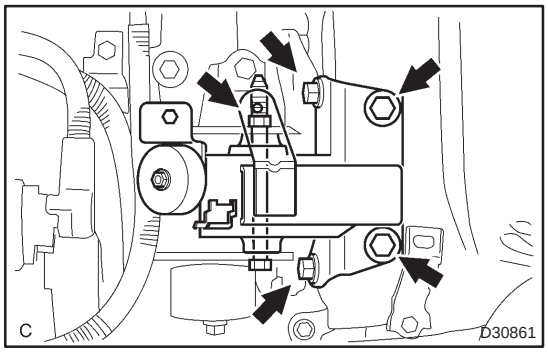
24. REMOVE FRONT DRIVE SHAFT ASSY RH (See page 30–6)



25. REMOVE FRONT DRIVE SHAFT ASSY LH (See page 30–6)
SST 09520–01010, 09520–24010 (09520–32040)

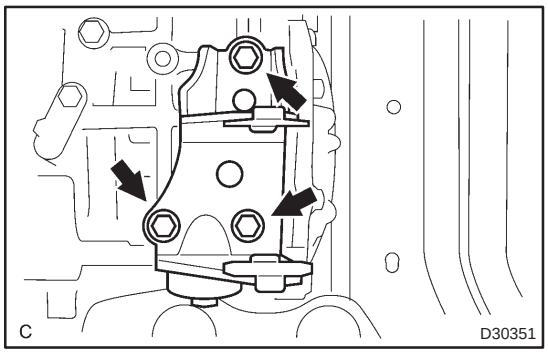
26. REMOVE STARTER ASSY

(a) Remove the nut and disconnect the starter wire.
(b) Disconnect the connector.
(c) Remove the 2 bolts and starter.



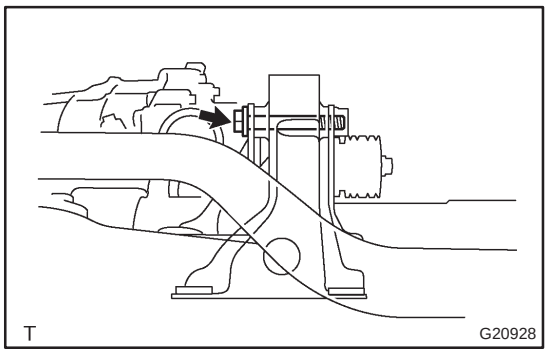
27. SUPPORT AUTOMATIC TRANSAXLE ASSY

(a) Support the automatic transaxle with a transmission jack.



28. REMOVE ENGINE MOUNTING MEMBER SUB–ASSY CENTER

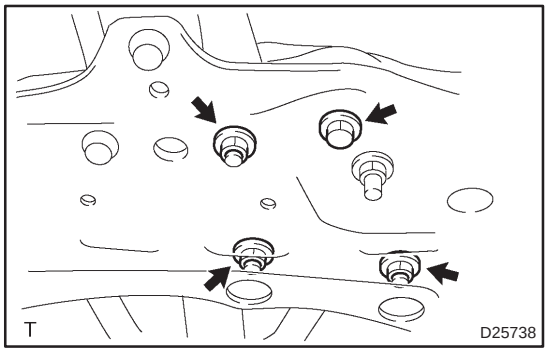
(a) Remove the 4 bolts and center member with engine mounting insulator FR.



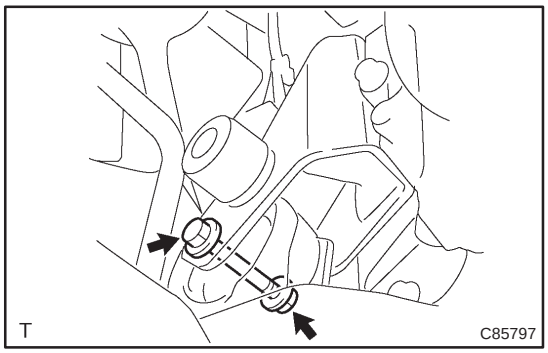
29. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR

(a) Remove the 4 bolts, nut and engine mounting insulator LH.

30. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET



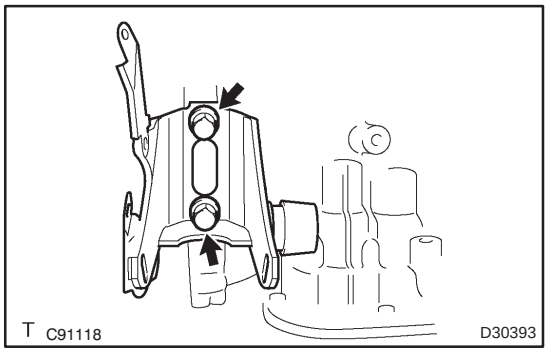
(a) Remove the 3 bolts and engine mounting bracket LH from the automatic transaxle.



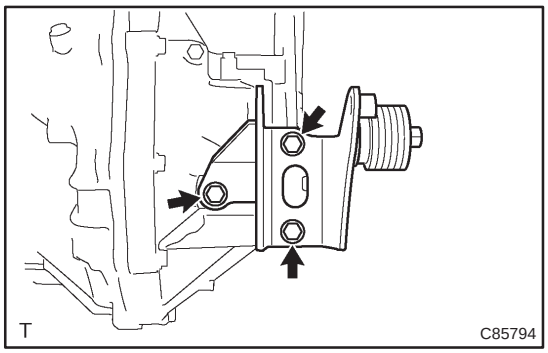
31. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR

(a) Remove the bolt and separate the hose clamp from the engine mounting insulator RR.

(b) Remove the bolt from the engine mounting bracket RR.

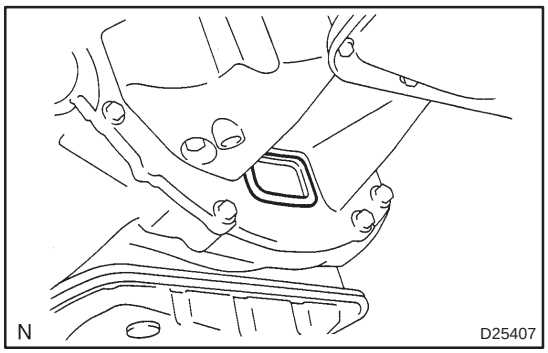


(c) Remove the 3 nuts, bolt and engine mounting insulator RR from suspension member.



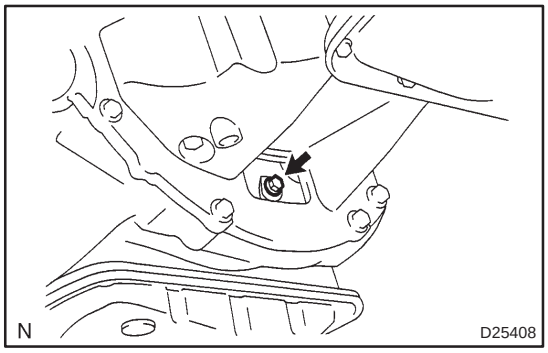
32. SEPARATE TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR

(a) Remove the bolt and nut from the engine mounting bracket FR.



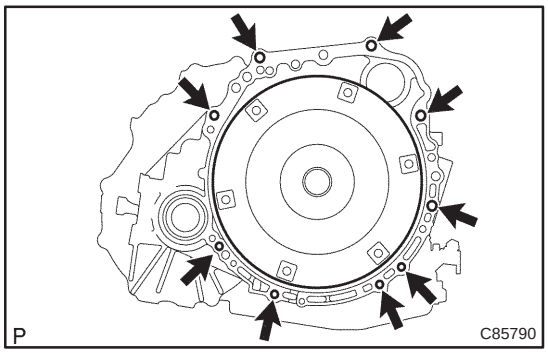
33. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Remove the 2 bolts and engine mounting bracket FR from the automatic transaxle.



34. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Remove the 3 bolts and engine mounting bracket RR from the automatic transaxle.



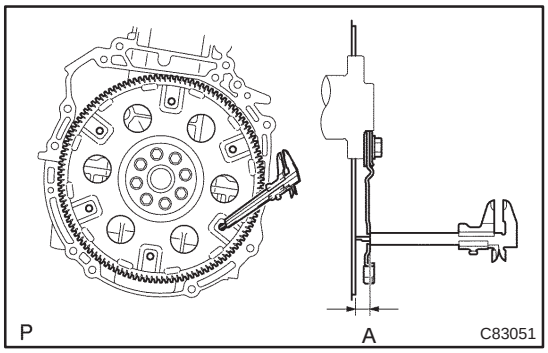
35. REMOVE FLYWHEEL HOUSING UNDER COVER

(a) Remove the flywheel housing under cover from the automatic transaxle.

36. REMOVE AUTOMATIC TRANSAXLE ASSY

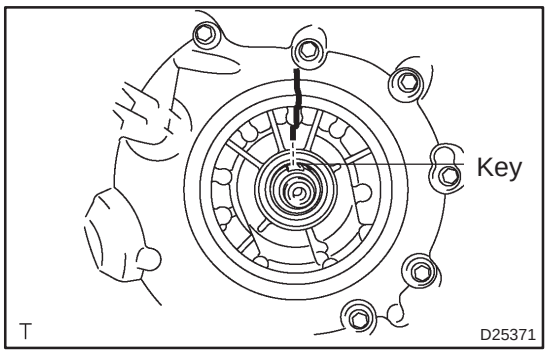
(a) Turn the crankshaft to remove the 6 bolts while holding the crankshaft pulley bolt with a wrench.

(b) Remove the 9 bolts.



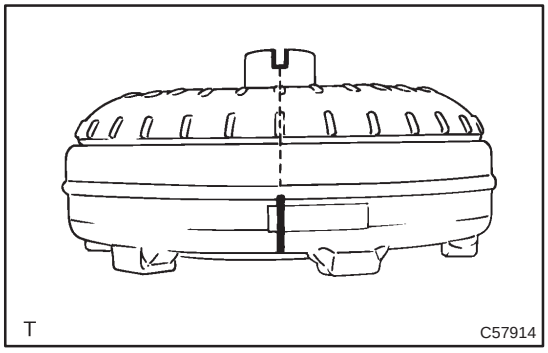
(c) Separate and remove the automatic transaxle.

37. REMOVE TORQUE CONVERTER CLUTCH ASSY

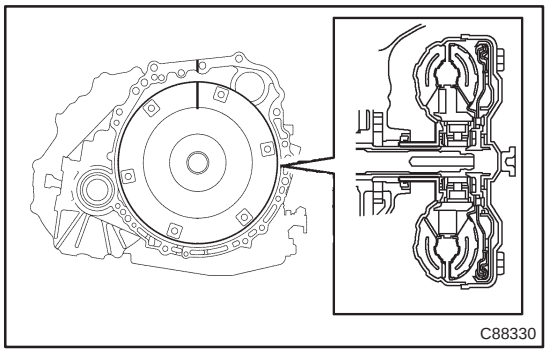


38. INSPECT TORQUE CONVERTER CLUTCH ASSY (See page 40–37)

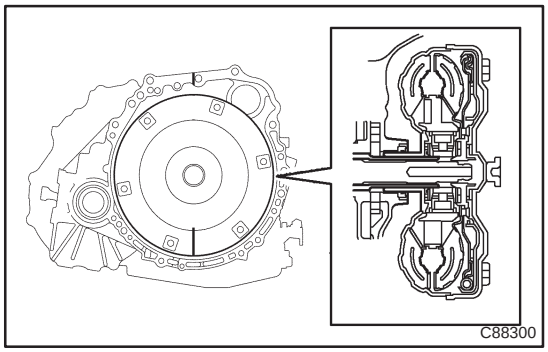
SST 09350–32014 (09351–32010, 09351–32020)



39. INSTALL TORQUE CONVERTER CLUTCH ASSY

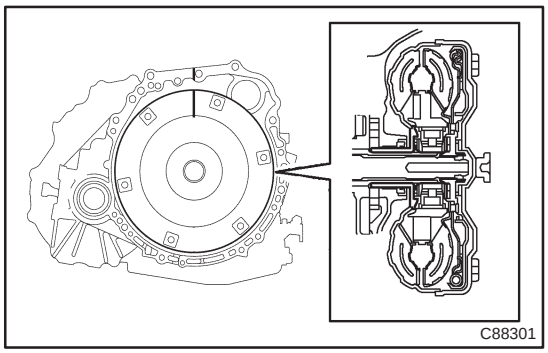


(a) Using vernier calipers, measure the dimension A between the transaxle and the end surface of the drive plate.



(b) Set the key of the front oil pump drive gear at the top and put a mark on the housing.

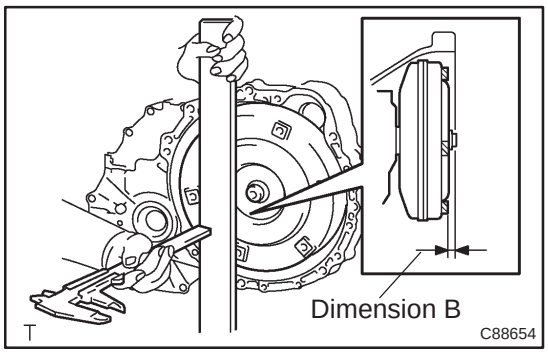
(c) Put a mark on the torque converter clutch so that its groove can be clearly indicated.



(d) Match the 2 marks on the transaxle case and the torque converter clutch and fit the splined part of the input shaft to the spline part of the turbine runner.

(e) Rotating the torque converter clutch, fit the spline part of the stator shaft with the spline part of the stator.

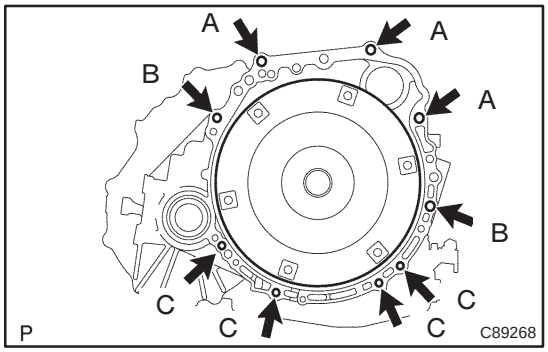
HINT:



Rotate it about 180 degrees.

(f) Rotating the torque converter clutch, match the 2 marks on the case and the torque converter clutch again and fit the key of the oil pump drive gear into the key way of the torque converter clutch.

NOTICE:

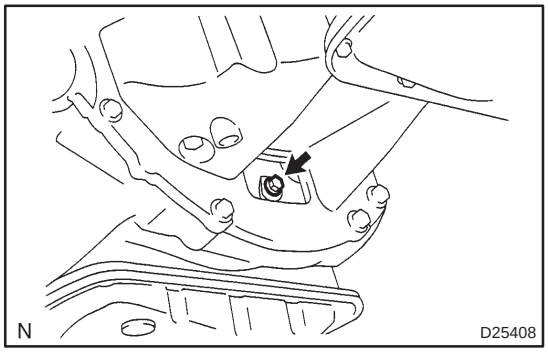


When rotating the torque converter clutch, do not push it by excessive force.

(g) Using calipers and a straight edge, measure the dimension B shown in the illustration and check that B is greater than A measured in (a).

Standard: A + 1 mm or more

40. INSTALL AUTOMATIC TRANSAXLE ASSY



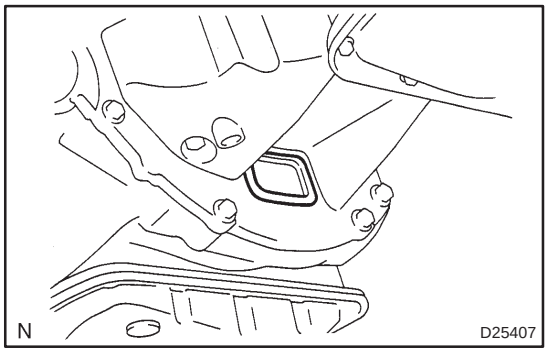
(a) Install the automatic transaxle and 9 bolts to the engine.

Torque:

Bolt A: 64 N·m (650 kgf·cm, 47 ft·lbf)

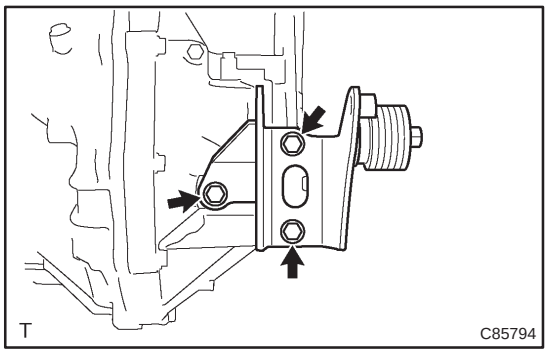
Bolt B: 46 N·m (470 kgf·cm, 34 ft·lbf)

Bolt C: 44 N·m (449 kgf·cm, 32 ft·lbf)



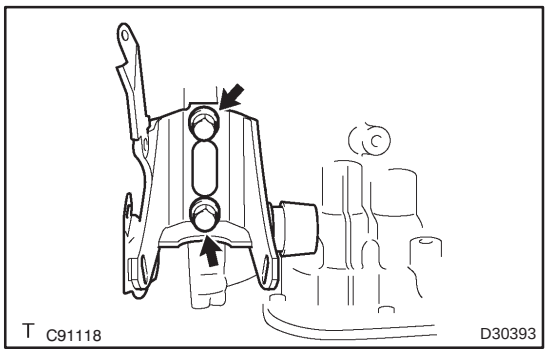
(b) Install the 6 torque converter clutch mounting bolts.

Torque: 41 N·m (420 kgf·cm, 30 ft·lbf)



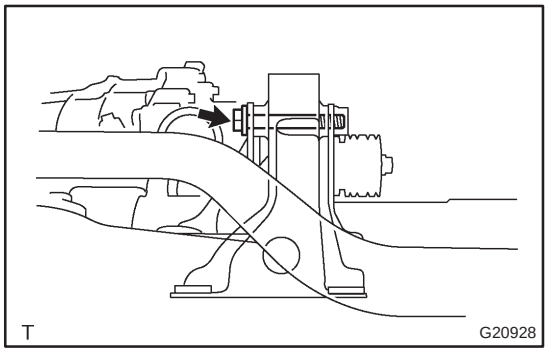
HINT:

First install green colored bolt, and then the 5 bolts.



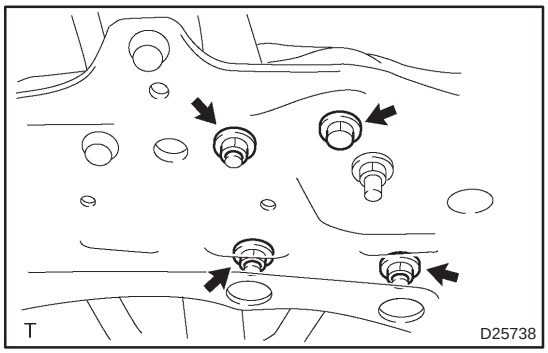
41. INSTALL FLYWHEEL HOUSING UNDER COVER

(a) Install the flywheel housing under cover to the automatic transaxle.



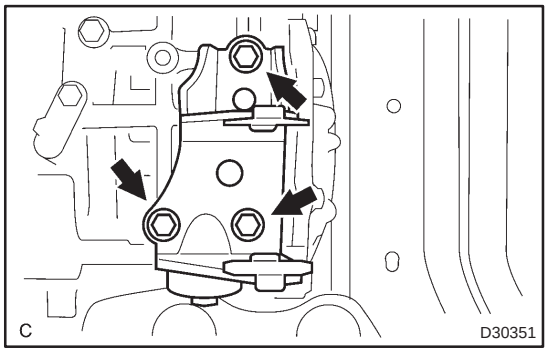
42. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Install the engine mounting bracket RR and 3 bolts to the automatic transaxle.
Torque: 64 N·m (652 kgf·cm, 47 ft·lbf)



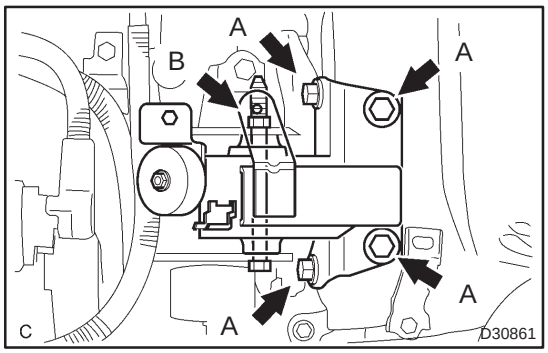
43. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Install the engine mounting bracket FR and 2 bolts to the automatic transaxle.
Torque: 64 N·m (652 kgf·cm, 47 ft·lbf)

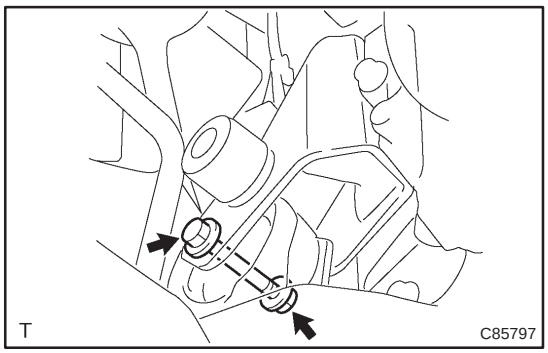


44. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR

(a) Install the engine mounting insulator RR and bolt to the engine mounting bracket RR.
Torque: 87 N·m (887 kgf·cm, 64 ft·lbf)

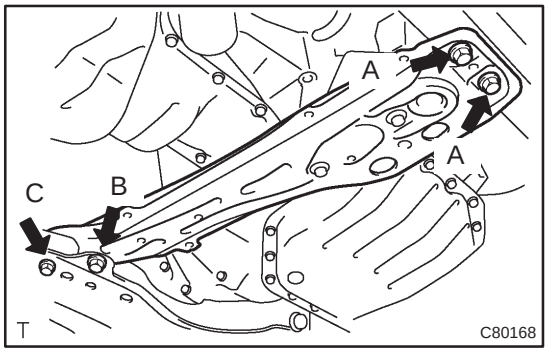


(b) Tighten the 3 nuts and bolt.
Torque: 52 N·m (530 kgf·cm, 38 ft·lbf)



45. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Install the engine mounting bracket LH and 3 bolts to the automatic transaxle.
Torque: 64 N·m (653 kgf·cm, 47 ft·lbf)



46. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR

(a) Install the engine mounting insulator LH, 5 bolts and nut.
Torque:
Bolt A: 52 N·m (530 kgf·cm, 38 ft·lbf)
Nut B: 80 N·m (816 kgf·cm, 59 ft·lbf)

47. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR

(a) Install the bolt and nut to the engine mounting bracket FR.
Torque: 52 N·m (530 kgf·cm, 38 ft·lbf)

48. INSTALL ENGINE MOUNTING MEMBER SUB–ASSY CENTER

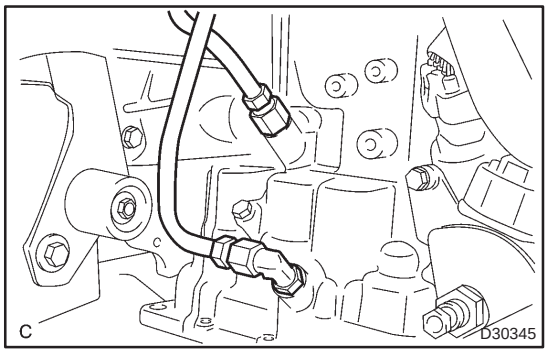
(a) Install the center member and 4 bolts.
Torque:
Bolt A: 45 N·m (459 kgf·cm, 33 ft·lbf)
Bolt B: 96 N·m (979 kgf·cm, 71 ft·lbf)
Bolt C: 52 N·m (530 kgf·cm, 38 ft·lbf)

49. INSTALL STARTER ASSY

(a) Install the starter with the 2 bolts.
Torque: 37 N·m (377 kgf·cm, 27 ft·lbf)

(b) Connect the connecter.

(c) Install the starter wire with the nut.
Torque: 9.8 N·m (100 kgf·cm, 87 in.·lbf)



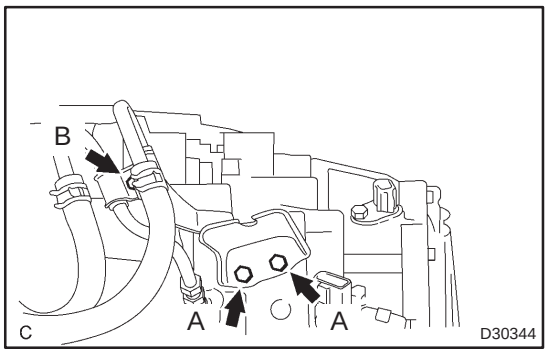
50. INSTALL FRONT DRIVE SHAFT ASSY LH (See page 30–6)

51. INSTALL FRONT DRIVE SHAFT ASSY RH (See page 30–6)

52. INSTALL EXHAUST PIPE ASSY FRONT (See page 15–7)

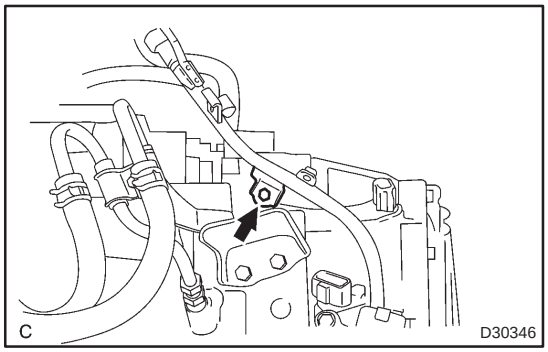
53. INSTALL FRONT WHEELS

Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)



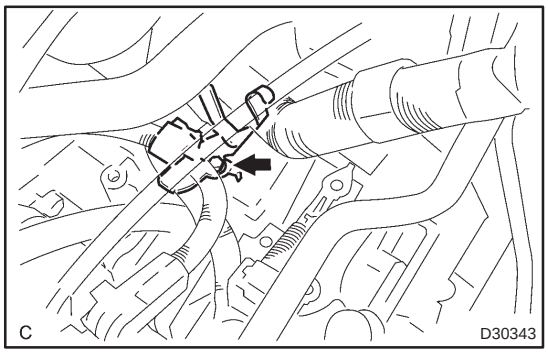
54. INSTALL OIL COOLER OUTLET TUBE NO.1

(a) Using SST, tighten the oil cooler outlet tube No.1.
Torque: 34 N·m (347 kgf·cm, 25 ft·lbf)
SST 09023–12700



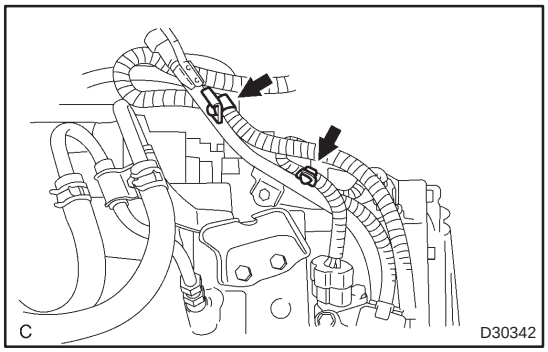
55. INSTALL OIL COOLER INLET TUBE NO.1

(a) Using SST, tighten the oil cooler inlet tube No.1.
Torque: 34 N·m (347 kgf·cm, 25 ft·lbf)
SST 09023–12700



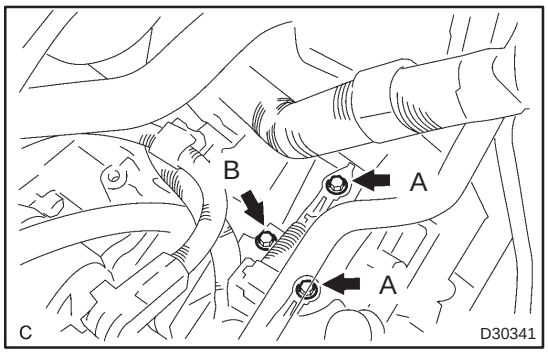
56. INSTALL TRANSMISSION CONTROL CABLE BRACKET NO.1

(a) Install the transmission control cable bracket No.1 and clamp and 3 bolts to the automatic trasaxle.
Torque:
Bolt A: 12 N·m (122 kgf·cm, 8 ft·lbf)
Bolt B: 5.4 N·m (55 kgf·cm, 47 ft·lbf)



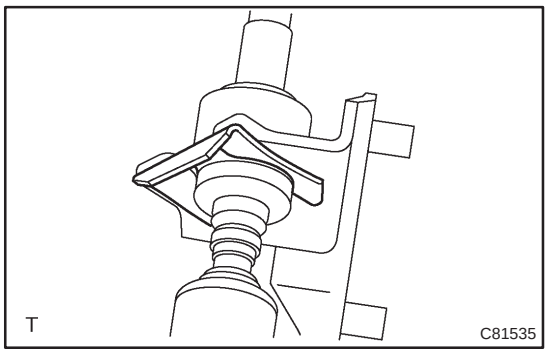
57. INSTALL TRANSMISSION OIL FILLER TUBE SUB–ASSY

(a) Coat a new O–ring with ATF, and install it to the oil filler tube.
(b) Install the oil filler tube and bolt to the automatic transaxle.
Torque: 5.5 N·m (56 kgf·cm, 49 in.·lbf)
(c) Install the ATF level gauge.



58. INSTALL TRANSMISSION CONTROL CABLE CLAMP

(a) Install the transmission control cable clamp and bolt to the automatic transaxle.
Torque: 12 N·m (122 kgf·cm, 8 ft·lbf)



59. CONNECT CONNECTOR

(a) Connect the 2 clamps to the oil filler tube.
(b) Connect the transmission wire connector.
(c) Connect the park/neutral position switch connector.
(d) Connect the 2 speed sensor connectors.

60. INSTALL WIRE HARNESS

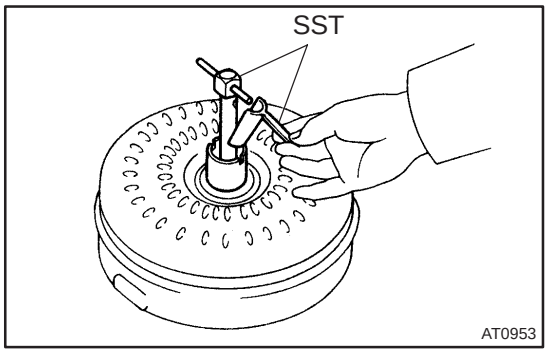
(a) Install the 2 wire harnesses and wire harness bracket with the 3 bolts.
Torque:
Bolt A: 5.0 N·m (51 kgf·cm, 44 in.·lbf)
Bolt B: 8.4 N·m (86 kgf·cm, 74 in.·lbf)

61. INSTALL TRANSMISSION CONTROL CABLE ASSY

(a) Temporarily install the control cable to the control shaft lever with nuts.
(b) Install the control cable and clip to the bracket.

62. INSTALL AIR CLEANER ASSY
Torque: 5.0 N·m (50 kgf·cm, 44 in.·lbf)
63. INSTALL BATTERY CARRIER
Torque: 13 N·m (132 kgf·cm, 10 ft·lbf)
64. INSTALL BATTERY
65. INSTALL ENGINE COVER SUB–ASSY NO.1
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
66. INSTALL HOOD SUB–ASSY
Torque: 13 N·m (132 kgf·cm, 10 ft·lbf)
67. INSPECT HOOD SUB–ASSY (See page 75–2)
68. ADJUST HOOD SUB–ASSY (See page 75–2)
69. ADD COOLANT
(a) 1AZ–FE (See pege 16–13)
(b) 1AZ–FSE (See pege 16–25)
70. ADD AUTOMATIC TRANSAXLE FLUID
71. INSPECT AUTOMATIC TRANSAXLE FLUID (See page 40–2)
72. ADJUST SHIFT LEVER POSITION (See page 40–69)
73. INSPECT SHIFT LEVER POSITION (See page 40–69)
74. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT (See page 26–6)
75. CHECK ABS SPEED SENSOR SIGNAL

(a) ABS WITH EBD SYSTEM (See pege 05–699)
(b) ABS WITH EBD & BA &TRAC & VSC SYSTEM (See pege 05–756)



76. RESET MEMORY

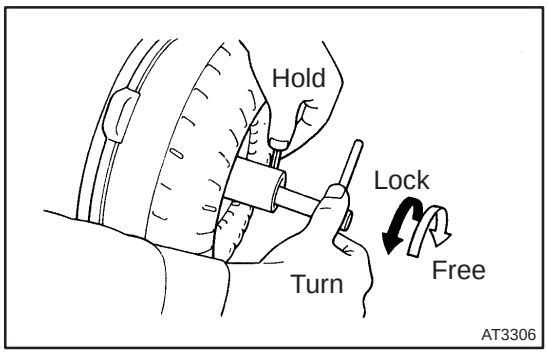
(a) 1AZ–FE (See pege 05–863)
(b) 1AZ–FSE (See pege 05–920)

TORQUE CONVERTER CLUTCH AND DRIVE PLATE (ATM)

400DN–02

INSPECTION

1. INSPECT TORQUE CONVERTER CLUTCH ASSY

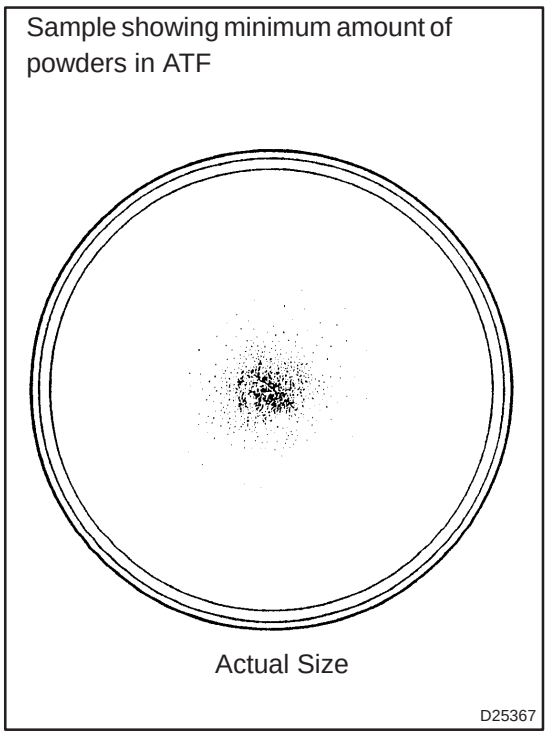


(a) Inspect the one–way clutch.

(1) Install SST into the inner race of the one–way clutch.

SST 09350–32014 (09351–32010)

(2) Install SST so that it fits in the notch of the converter hub and outer race of the one–way clutch.



SST 09350–32014 (09351–32020)

(3) Check that the one–way clutch locks when it is turned counterclockwise, and rotates smoothly clockwise.

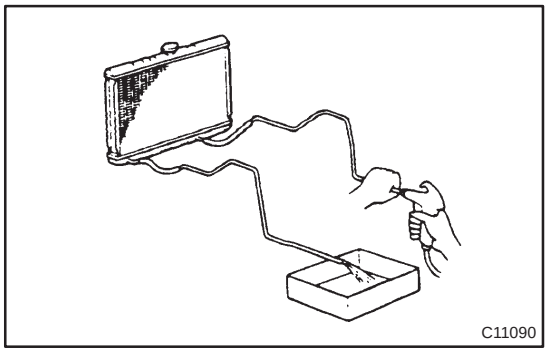
Clean the torque converter clutch and retest the one–way clutch as necessary.

Replace the torque converter clutch if the one–way clutch still fails the test.

(b) Determine the condition of the torque converter clutch assy.

(1) If the inspection result of the torque converter clutch assy meets the following conditions, replace the torque converter clutch.

Malfunction item:

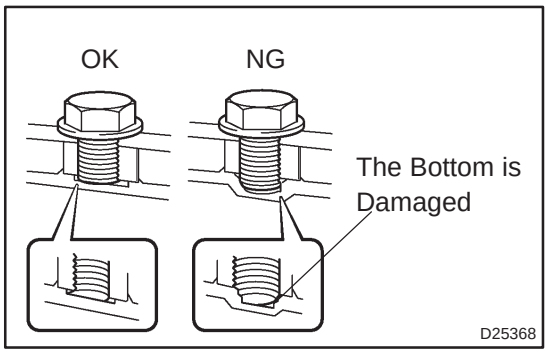


- **Any metallic sound is heard from the torque converter clutch during stall test or when the shift lever is in neutral position.**
- **One–way clutch is free or locked in both directions. Fine powders exceeding the sample limit is identified in ATF. (See the sample.)**

HINT:

The sample shows the auto fluid of approx. 0.25 liters (0.26 US qts, 0.22 Imp. qts) that is taken out from the removed torque converter clutch.

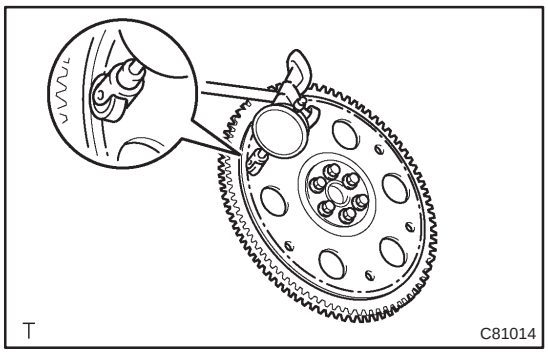
(c) Replace the ATF in the torque converter clutch.



(1) If the ATF is discolored and/or has a foul odor, stir the ATF in the torque converter clutch completely and drain it with the face for installation facing up.

C11090

(d) Clean and check the oil cooler and oil pipe line.
(1) If the torque converter clutch is inspected or the ATF is exchanged, clean the oil cooler and oil pipe line.



HINT:
- Spray compressed air of 196 kPa (2 kgf/cm^2, 28 psi) from the inlet hose.
- If plenty of fine powders are identified in the ATF, add new ATF using a bucket pump and clean it again.

(2) If the ATF is cloudy, inspect the oil cooler.

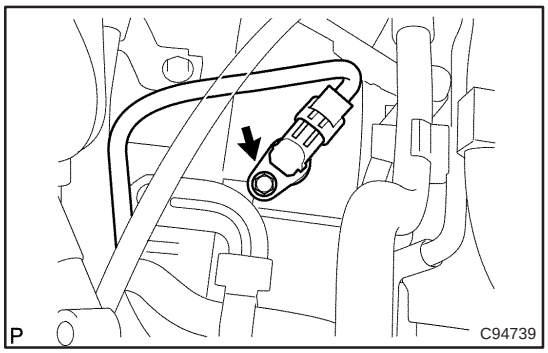
D25368

(e) Prevent deformation of the torque converter clutch and damage to the oil pump gear.
(1) When any marks due to interference are found on the end of the bolt for the torque converter clutch and on the bottom of the bolt hole, replace the bolt and the torque converter clutch.
(2) All of the bolts shall have the same length.
(3) Do not lose the spring washer.

C81014

2. INSPECT DRIVE PLATE & RING GEAR SUB–ASSY

(a) Set up a dial indicator and measure the drive plate runout.
(b) Check the damage of the ring gear.
Maximum runout: 0.20 mm (0.0079 in.)

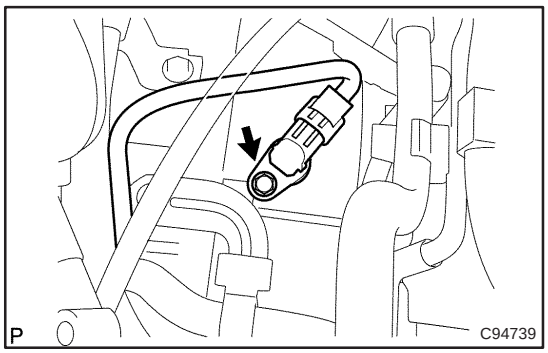


If the runout is not within the specification or ring gear is damaged, replace the drive plate.

SPEED SENSOR (U341E)

4011X–01

REPLACEMENT



1. **REMOVE BATTERY**
2. **REMOVE BATTERY CARRIER**
3. **REMOVE AIR CLEANER ASSY**
4. **REMOVE AIR CLEANER HOSE NO.1**

5. **REMOVE SPEED SENSOR**

(a) Disconnect the speed sensor connector.

(b) Remove the bolt and speed sensor.

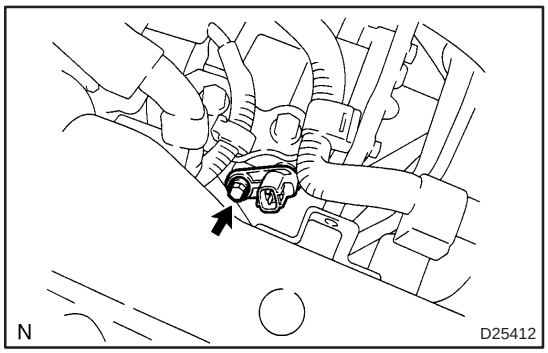
6. **INSTALL SPEED SENSOR**

(a) Coat an O–ring with ATF.

(b) Install the speed sensor with the bolt.

Torque: 5.4 N·m (55 kgf·cm, 48 ft·lbf)

(c) Connect the speed sensor connector.

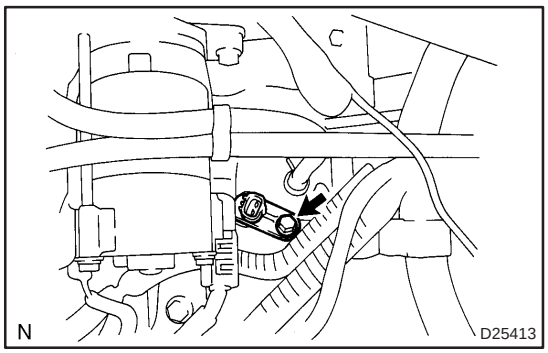


7. **INSTALL AIR CLEANER HOSE NO.1**
8. **INSTALL AIR CLEANER ASSY**
   Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)
9. **INSTALL BATTERY CARRIER**
   Torque: 13 N·m (131 kgf·cm, 9 ft·lbf)
10. **INSTALL BATTERY**

SPEED SENSOR (U241E)

400DB–02

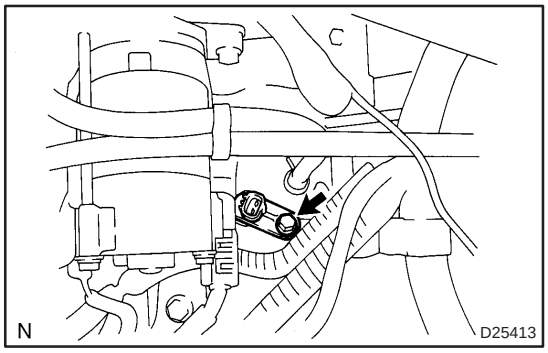
REPLACEMENT



1. **REMOVE BATTERY**
2. **REMOVE BATTERY CARRIER**
3. **REMOVE AIR CLEANER ASSY**
4. **REMOVE AIR CLEANER HOSE NO.1**

5. REMOVE SPEED SENSOR (NT SENSOR)

(a) Disconnect the speed sensor connector.



(b) Remove the bolt and speed sensor.

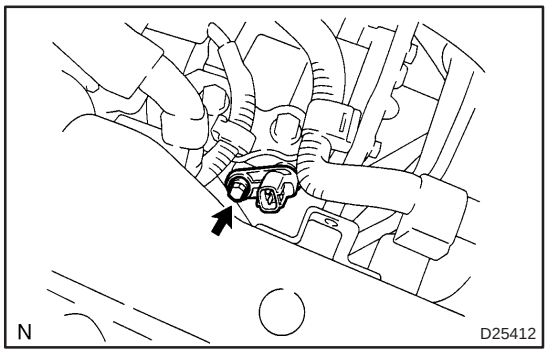
6. REMOVE SPEED SENSOR (NC SENSOR)

(a) Disconnect the speed sensor connector.

(b) Remove the bolt and speed sensor.

7. INSTALL SPEED SENSOR (NC SENSOR)

(a) Coat an O–ring with ATF.



(b) Install the speed sensor with the bolt.

Torque: 12 N·m (120 kgf·cm, 8 ft·lbf)

HINT:

Make sure of the manufacturer’s name.

(c) Connect the speed sensor connector.

8. INSTALL SPEED SENSOR (NT SENSOR)

(a) Coat an O–ring with ATF.

(b) Install the speed sensor with the bolt.

Torque: 12 N·m (120 kgf·cm, 8 ft·lbf)

HINT:

Make sure of the manufacturer’s name.

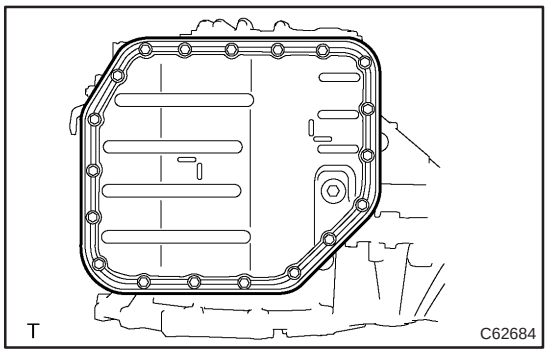
(c) Connect the speed sensor connector.

9. INSTALL AIR CLEANER ASSY
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)
10. INSTALL BATTERY CARRIER
Torque: 13 N·m (131 kgf·cm, 9 ft·lbf)
11. INSTALL BATTERY

TRANSMISSION VALVE BODY ASSY (U341E)

40123–01

REPLACEMENT



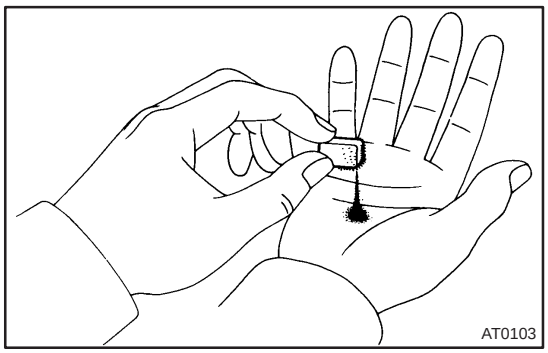
1. REMOVE ENGINE UNDER COVER LH

2. DRAIN AUTOMATIC TRANSAXLE FLUID

(a) Remove the drain plug, gasket, and drain ATF.

(b) Install a new gasket and the drain plug.

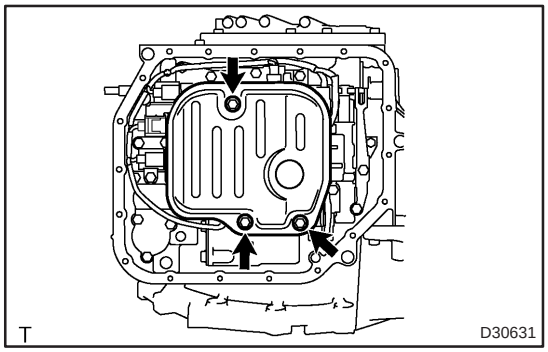
Torque: 49 N·m (500 kgf·cm, 36 ft·lbf)



3. REMOVE AUTOMATIC TRANSAXLE OIL PAN SUB–ASSY

(a) Remove the 19 bolts, oil pan and gasket.

NOTICE:

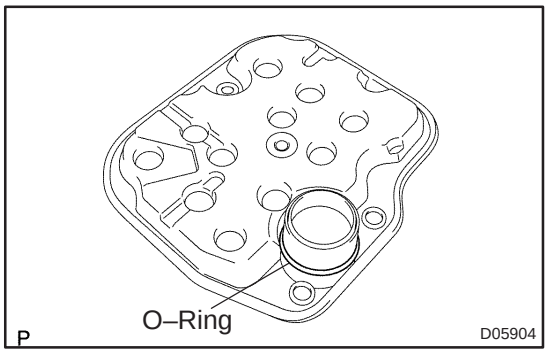


Some fluid will remain in the oil pan. Remove all of the pan bolts, and carefully remove the oil pan assembly. Discard the gasket.

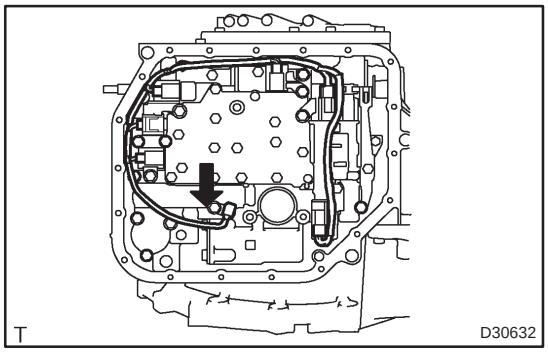
(b) Remove the 2 magnets from the oil pan.

(c) Examine the particles in the oil pan.

(1) Remove the magnets and use them to collect any steel chips. Look at the chips and particles in the oil pan and on the magnet carefully to see the type of wear which might be found in the tranaxle.
Steel (magnetic): bearing, gear and plate wear
Brass (non–magnetic): bearing wear



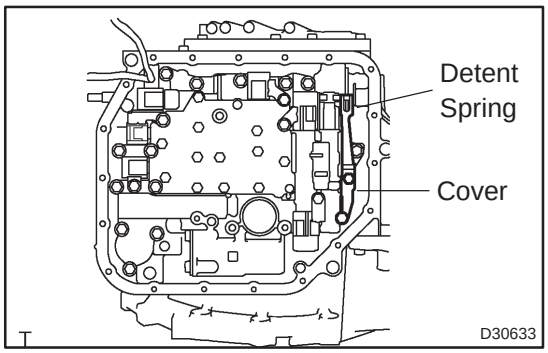
4. REMOVE VALVE BODY OIL STRAINER ASSY



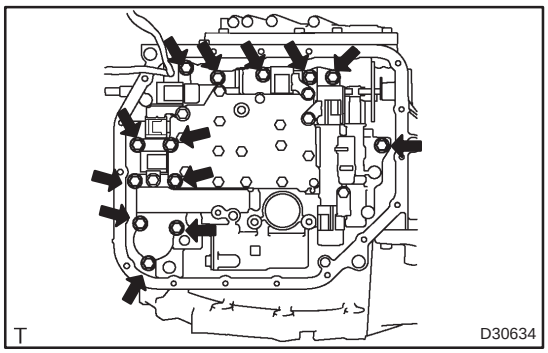
(a) Remove the 3 bolts and oil strainer.

NOTICE:

Be careful as some fluid will come out with the oil strainer.



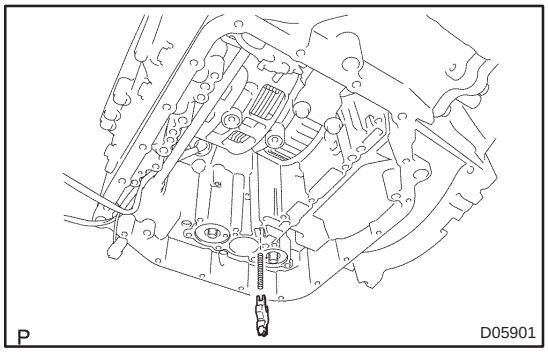
(b) Remove the O–ring from the oil strainer.



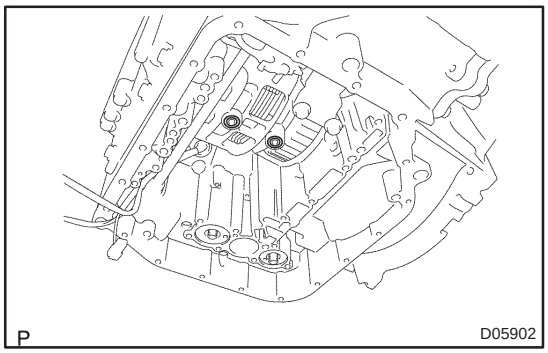
5. REMOVE TRANSMISSION VALVE BODY ASSY

(a) Disconnect the 5 connectors.

(b) Remove the bolt and lock plate, and remove the ATF temperature sensor.

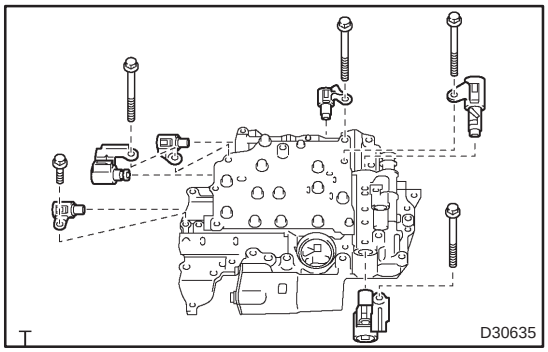


(c) Remove the 2 bolts, cover and detent spring.

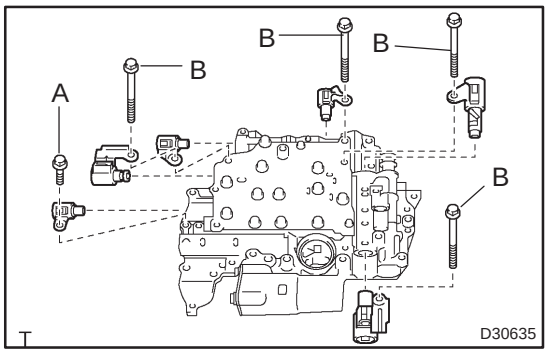


(d) Remove the 13 bolts and valve body.

NOTICE:

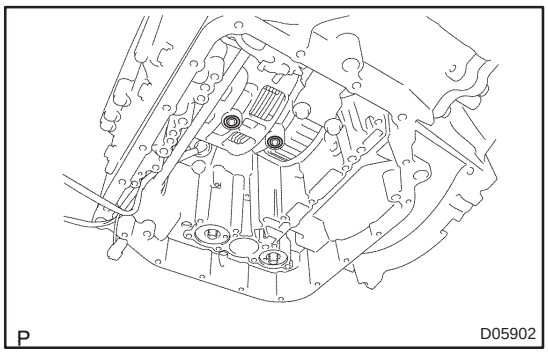


Be careful not to drop the check valve body, spring and accumulator piston.



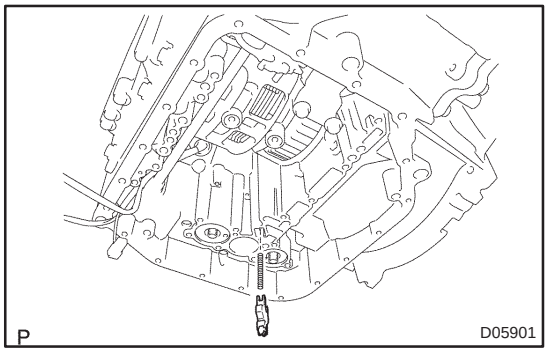
(e) Remove the check ball body and spring.

(f) Remove the 2 apply gaskets.



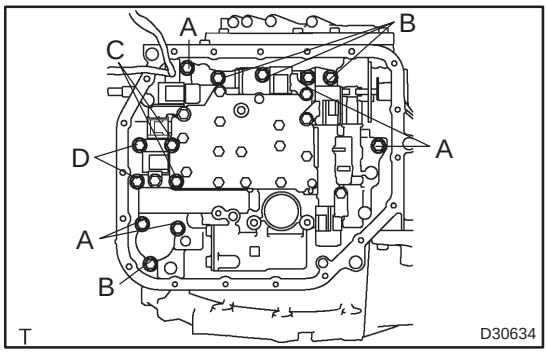
(g) Remove the 5 bolts and 6 shift solenoid valves.

6. INSTALL TRANSMISSION VALVE BODY ASSY



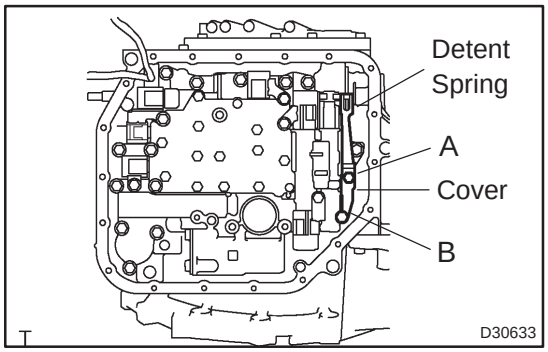
(a) Install the 6 shift solenoid valves with the 5 bolts.

Torque:
Bolt A: 11 N·m (110 kgf·cm, 8 ft ·lbf)
Bolt B: 11 N·m (110 kgf·cm, 8 ft ·lbf)
Bolt length:
Bolt A: 14 mm (0.55 in.)
Bolt B: 55 mm (2.17 in.)



(b) Coat 2 new apply gaskets with ATF.

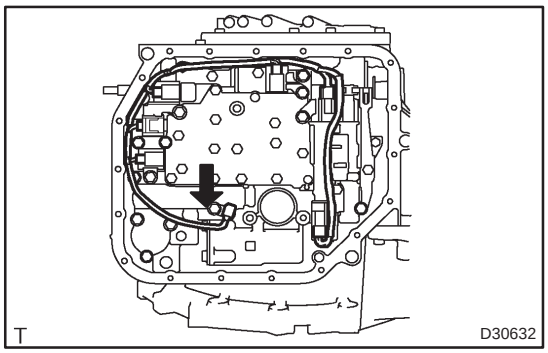
(c) Install the gaskets to the transaxle case.



(d) Install the spring and check ball body.

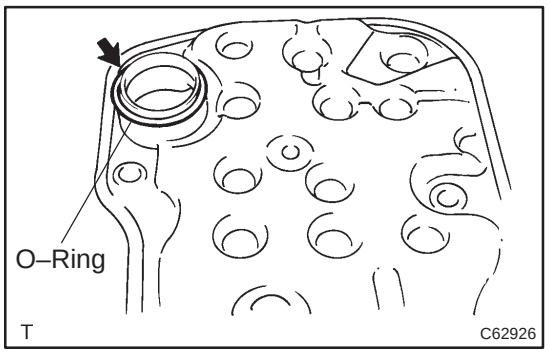
(e) Align the groove of the manual valve with the pin of the manual valve lever.

(f) Temporarily install the valve body with the 13 bolts.



Bolt length:
Bolt A: 32 mm (1.26 in.)
Bolt B: 22 mm (0.87 in.)
Bolt C: 55 mm (2.17 in.)
Bolt D: 45 mm (1.77 in.)

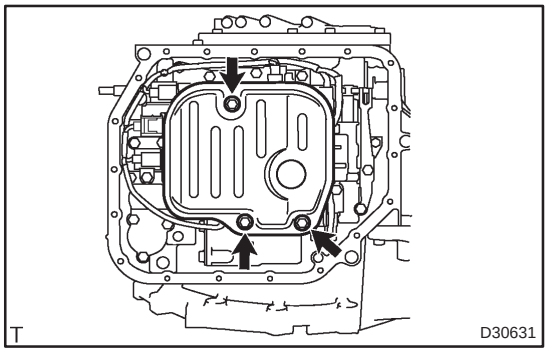
(g) Temporarily install the detent spring and cover with the 2 bolts.
Bolt length:
Bolt A: 14 mm (0.55 in.)
Bolt B: 45 mm (1.77 in.)



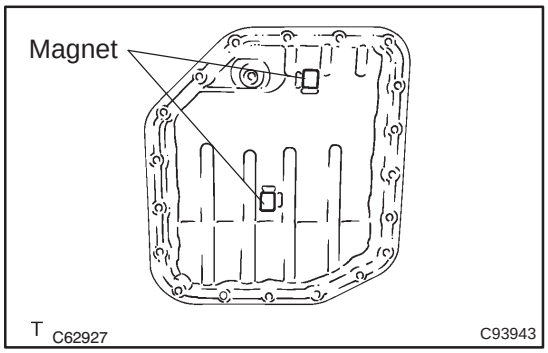
(h) Check that the manual valve lever contacts the center of the roller at the tip of the detent spring.

(i) Tighten the 15 bolts.
Torque: 11 N·m (110 kgf·cm, 8 ft·lbf)

(j) Install the ATF temperature sensor with the lock plate and bolt.
Torque: 11 N·m (110 kgf·cm, 8 ft·lbf)



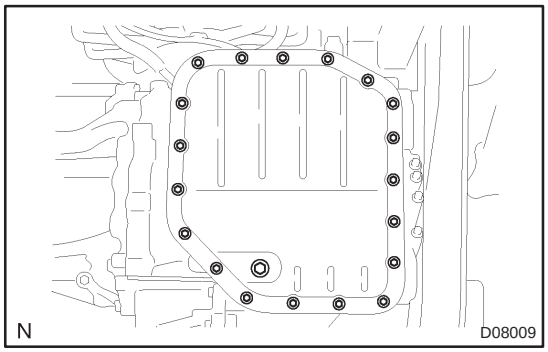
(k) Connect the 5 shift solenoid valve connectors.



7. INSTALL VALVE BODY OIL STRAINER ASSY

(a) Coat a new O–ring with ATF.

(b) Install the O–ring to the oil strainer.



(c) Install the oil strainer with the 3 bolts.
Torque: 11 N·m (110 kgf·cm, 8 ft·lbf)

8. INSTALL AUTOMATIC TRANSAXLE OIL PAN SUB–ASSY

(a) Install the 2 magnets in the oil pan, as shown in the illustration.

(b) Install a new gasket to the oil pan.

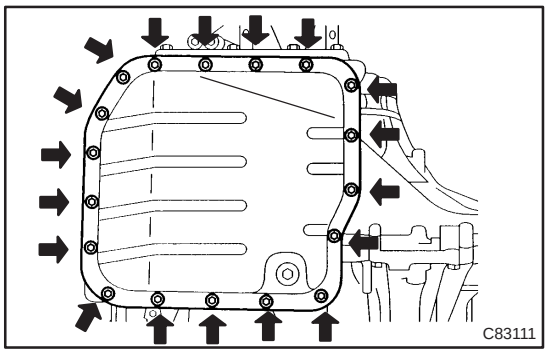
(c) Install the oil pan and a new gasket with the 19 bolts.
Torque: 7.8 N·m (80 kgf·cm, 69 in.·lbf)

9. ADD AUTOMATIC TRANSAXLE FLUID
10. INSPECT AUTOMATIC TRANSAXLE FLUID (See page 40–2)
11. RESET MEMORY (See page 05–985)

TRANSMISSION VALVE BODY ASSY (U241E)

400DC–02

REPLACEMENT



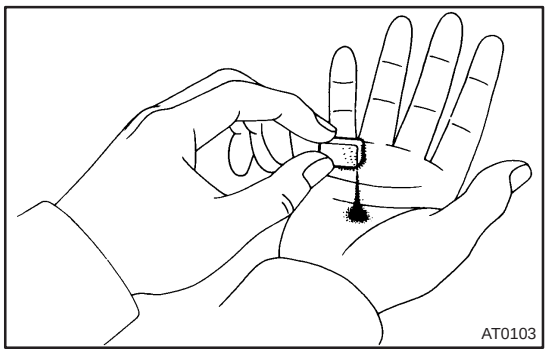
1. REMOVE ENGINE UNDER COVER LH

2. DRAIN AUTOMATIC TRANSAXLE FLUID

(a) Remove the drain plug, gasket and drain ATF.

(b) Install a new gasket and the drain plug.

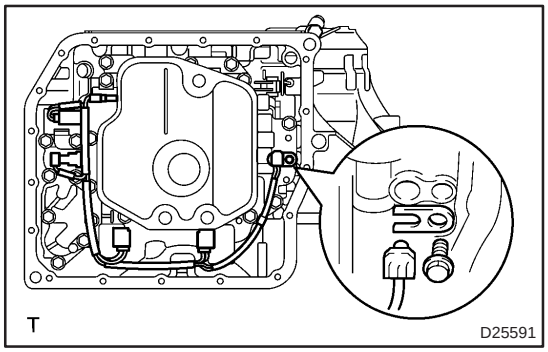
Torque: 49 N·m (500 kgf·cm, 36 ft·lbf)



3. REMOVE AUTOMATIC TRANSAXLE OIL PAN SUB–ASSY

(a) Remove the 18 bolts, oil pan and gasket.

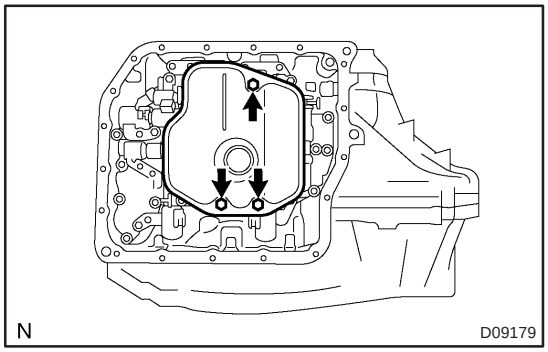
NOTICE:



Some fluid will remain in the oil pan. Remove all of the oil pan bolts, and carefully remove the oil pan assembly. Discard the gasket.

(b) Remove the 2 magnets from the oil pan.

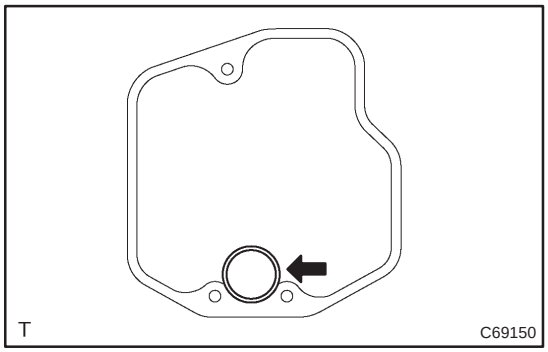
(c) Examine the particles in the oil pan.



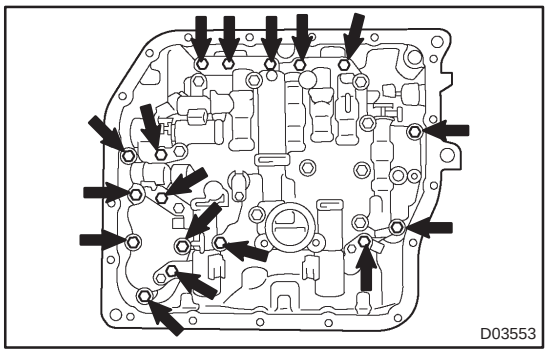
(1) Remove the magnets and use them to collect any steel chips. Look at the chips and particles in the oil pan and on the magnet carefully to see the type of wear which might be found in the tranaxle.
Steel (magnetic): bearing, gear and plate wear
Brass (non–magnetic): bearing wear

4. SEPARATE TRANSMISSION WIRE

(a) Disconnect the 5 solenoid valve connectors.



(b) Remove the bolt and lock plate, and separate the ATF temperature sensor.

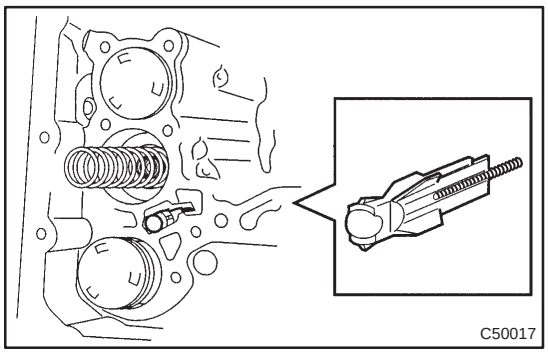


5. REMOVE VALVE BODY OIL STRAINER ASSY

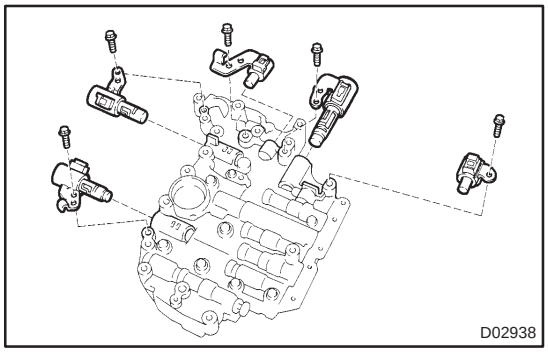
(a) Remove the 3 bolts and oil strainer.

Be careful as some fluid will come out with the oil strainer.

(b) Remove the O–ring from the oil strainer.

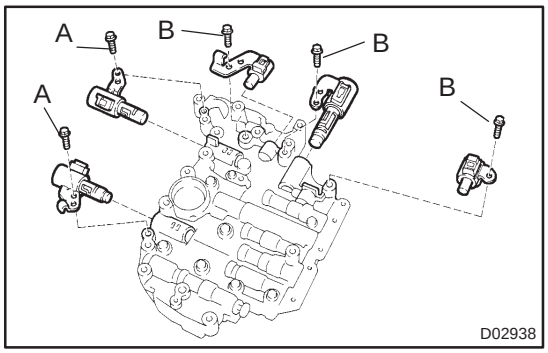


6. REMOVE TRANSMISSION VALVE BODY ASSY



(a) Support the valve body assy, and remove the 17 bolts and the valve body assy.

NOTICE:



Be careful not to drop the check ball body and spring.

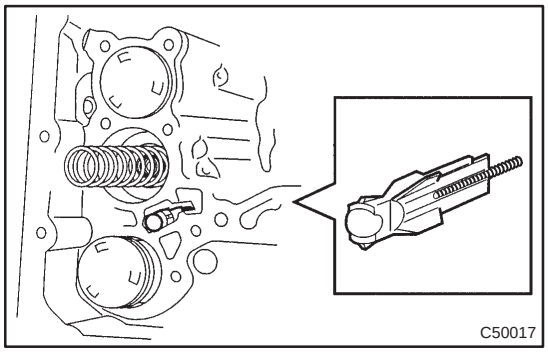
(b) Remove the check ball body and spring.

(c) Remove the 5 bolts and 5 solenoid valves.

7. INSTALL TRANSMISSION VALVE BODY ASSY

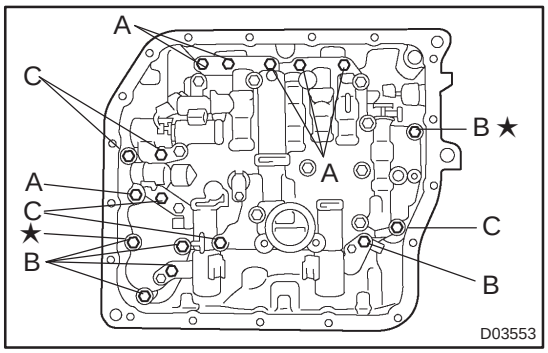
(a) Install the 5 solenoid valves with the 5 bolts.

Torque:



Bolt A: 6.6 N·m (67 kgf·cm, 58 in.·lbf)

Bolt B: 11 N·m (112 kgf·cm, 8 ft ·lbf)

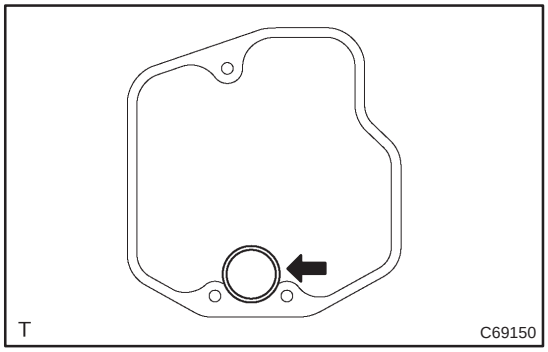


Bolt length:

Bolt A: 12 mm (0.47 in.)

Bolt B: 45 mm (1.77 in.)

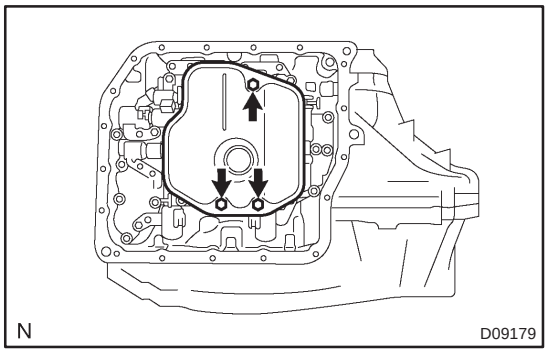
(b) Install the spring and check ball body.



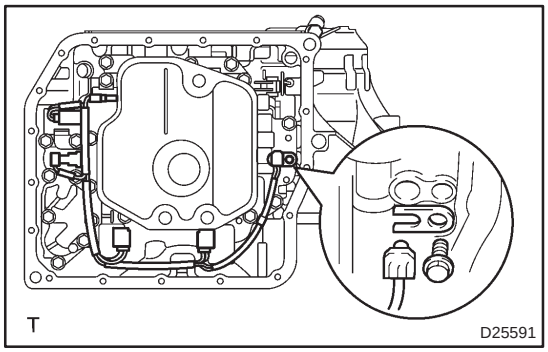
(c) Align the groove of the manual valve with the pin of the lever.

(d) Install the valve body assy with the 17 bolts.
Torque: 11 N·m (112 kgf·cm, 8 ft·lbf)

NOTICE:



- **Push the valve body against the accumulator piston spring and the check ball body to install it.**
- **Tighten those bolts marked by ★ in the illustration first temporarily because they are positioning bolts.**
  Bolt length:
  Bolt A: 25 mm (0.984 in.)
  Bolt B: 41 mm (1.614 in.)
  Bolt C: 45 mm (1.771 in.)

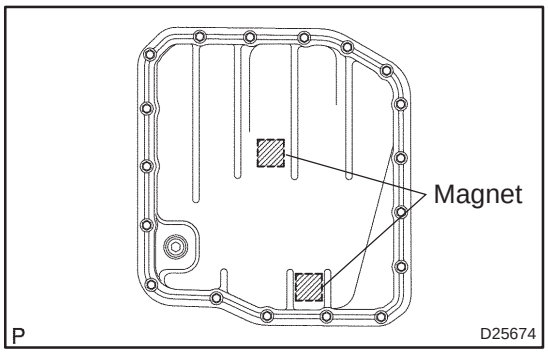


8. INSTALL VALVE BODY OIL STRAINER ASSY

(a) Coat a new O–ring with ATF.

(b) Install the O–ring to the oil strainer.

(c) Install the oil strainer with the 3 bolts.
Torque: 11 N·m (112 kgf·cm, 8 ft·lbf)



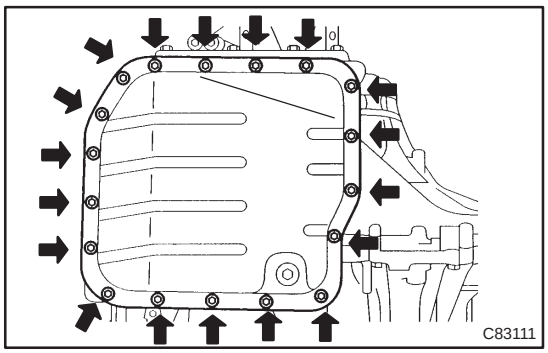
9. INSTALL TRANSMISSION WIRE

(a) Coat an O–ring with ATF.

(b) Install the ATF temperature sensor with the lock plate and bolt.

Torque: 6.6 N·m (67 kgf·cm, 58 in.·lbf)

(c) Connect the 5 solenoid valve connectors.



10. INSTALL AUTOMATIC TRANSAXLE OIL PAN SUB–ASSY

(a) Install the 2 magnets in the oil pan.

(b) Apply the seal packing or equivalent to the 18 bolts.

Seal packing:
THREE BOND 1344 or equivalent

(c) Install a new gasket and the oil pan to the transaxle case with the 18 bolts.

Torque: 7.8 N·m (80 kgf·cm, 69 in.·lbf)

NOTICE:

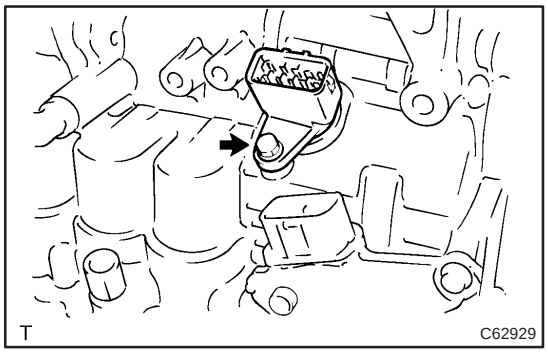
Apply the seal packing or equivalent to the bolts and tighten them within 10 minutes after application because the bolts should be seal bolts.

11. ADD AUTOMATIC TRANSAXLE FLUID

12. INSPECT AUTOMATIC TRANSAXLE FLUID (See page 40–2)

13. RESET MEMORY

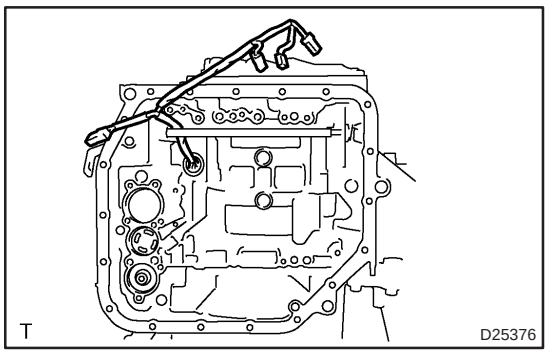
(a) 1AZ–FE (See pege 05–863)



(b) 1AZ–FSE (See pege 05–920)

TRANSMISSION WIRE (U341E)

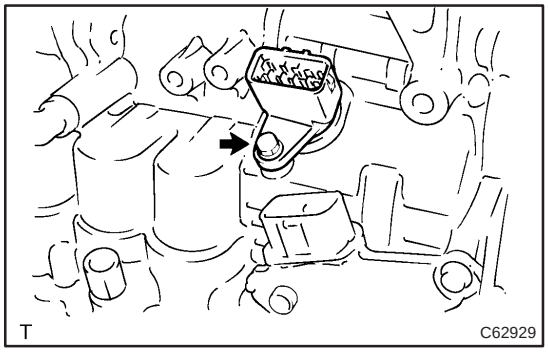
40122–01



REPLACEMENT

1. REMOVE TRANSMISSION VALVE BODY ASSY (See page 40–42)

2. REMOVE TRANSMISSION WIRE



(a) Removal the bolt and transmission wire.

3. INSTALL TRANSMISSION WIRE

(a) Coat an O–ring with ATF.

(b) Install the transmission wire.

(c) Install the bolt.

Torque: 5.4 N·m (55 kgf·cm, 48 in.·lbf)

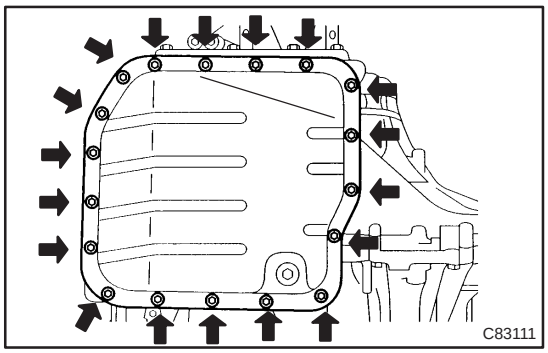
4. INSTALL TRANSMISSION VALVE BODY ASSY (See page 40–42)

5. RESET MEMORY (See page 05–985)

TRANSMISSION WIRE (U241E)

400DD–02

REPLACEMENT



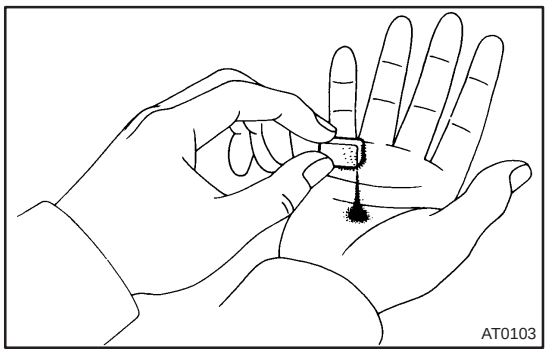
1. REMOVE ENGINE UNDER COVER LH

2. DRAIN AUTOMATIC TRANSAXLE FLUID

(a) Remove the drain plug, gasket and drain ATF.

(b) Install a new gasket and the drain plug.

Torque: 49 N·m (500 kgf·cm, 36 ft·lbf)



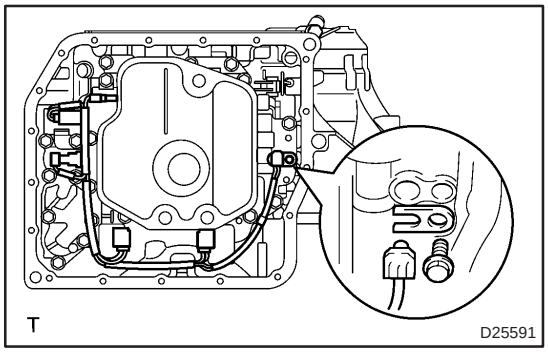
3. REMOVE AUTOMATIC TRANSAXLE OIL PAN SUB–ASSY

(a) Remove the 18 bolts, oil pan and gasket.

NOTICE:

Some fluid will remain in the oil pan. Remove all of the oil pan bolts, and carefully remove the oil pan assembly. Discard the gasket.

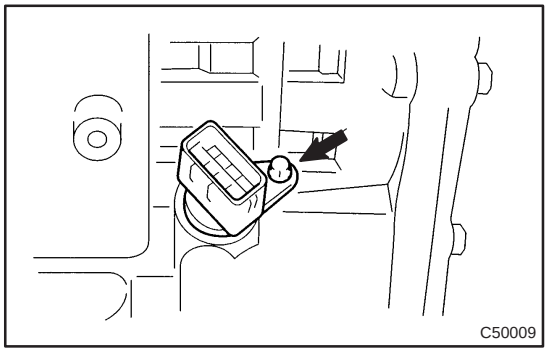
(b) Remove the 2 magnets from the oil pan.



(c) Examine the particles in the oil pan.

(1) Remove the magnets and use them to collect any steel chips. Look at the chips and particles in the oil pan and on the magnet carefully to see the type of wear which might be found in the tranaxle.

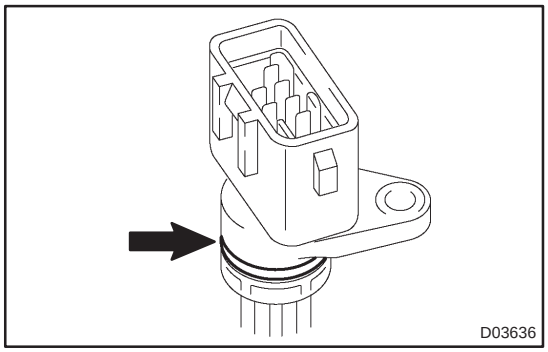
Steel (magnetic): bearing, gear and plate wear



Brass (non–magnetic): bearing wear

4. SEPARATE TRANSMISSION WIRE

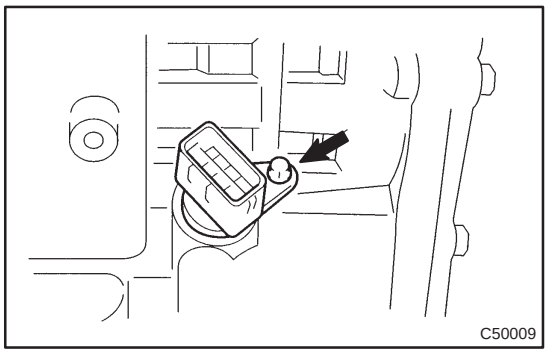
(a) Disconnect the 5 solenoid valve connectors.



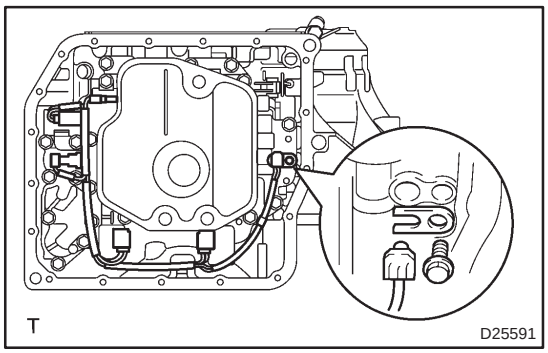
(b) Remove the bolt and lock plate, and separate the ATF temperature sensor.

5. REMOVE TRANSMISSION WIRE

(a) Disconnect the transmission wire connector.



(b) Remove the bolt and transmission wire.

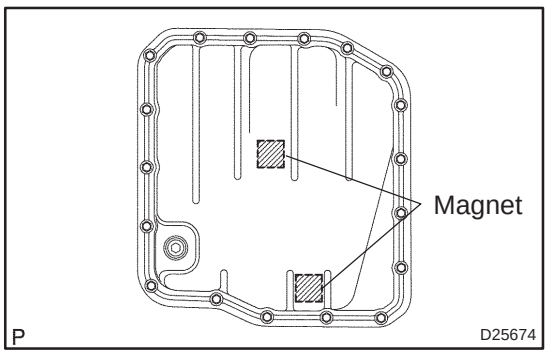


6. INSTALL TRANSMISSION WIRE

(a) Coat an O–ring of the transmission wire connector with ATF.

(b) Install the transmission wire.

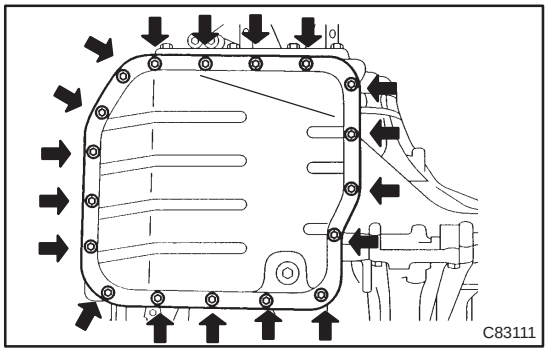
(c) Install the bolt.
Torque: 5.4 N·m (55 kgf·cm, 48 in.·lbf)



7. CONNECT TRANSMISSION WIRE

(a) Coat an O–ring of the ATF temperature sensor with ATF.

(b) Install the ATF temperature sensor with the lock plate and bolt.
Torque: 6.6 N·m (67 kgf·cm, 58 in.·lbf)



(c) Connect the 5 solenoid valve connectors.

8. INSTALL AUTOMATIC TRANSAXLE OIL PAN SUB–ASSY

(a) Install the 2 magnets in the oil pan.

(b) Apply the seal packing or equivalent to the 18 bolts.
Seal packing:
THREE BOND 1344 or equivalent

(c) Install a new gasket and the oil pan to the transaxle case with the 18 bolts.
Torque: 7.8 N·m (80 kgf·cm, 69 in.·lbf)

NOTICE:

Apply the seal packing or equivalent to the bolts and tighter them within 10 minutes after application because the bolts should be seal bolts.

9. ADD AUTOMATIC TRANSAXLE FLUID

10. INSPECT AUTOMATIC TRANSAXLE FLUID (See page 40–2)

11. RESET MEMORY

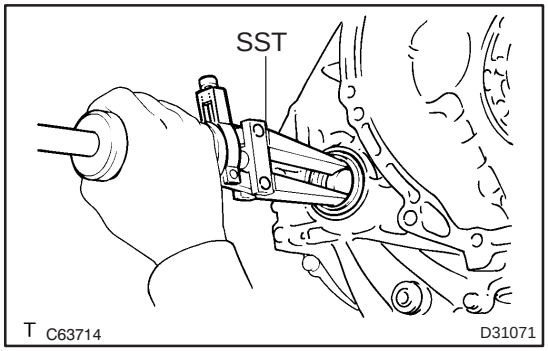
(a) 1AZ–FE (See pege 05–863)

(b) 1AZ–FSE (See pege 05–920)

FRONT DIFFERENTIAL OIL SEAL (U341E)

40124–01

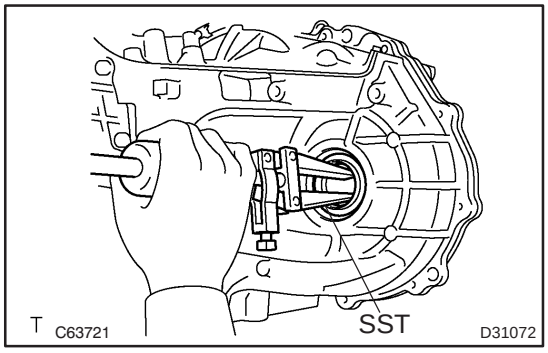
REPLACEMENT



1. **REMOVE FRONT WHEELS**
2. **REMOVE FRONT FENDER APRON SUB–ASSY LH**
3. **REMOVE ENGINE UNDER COVER RH**
4. **REMOVE ENGINE UNDER COVER LH**
5. **DRAIN AUTOMATIC TRANSAXLE FLUID**

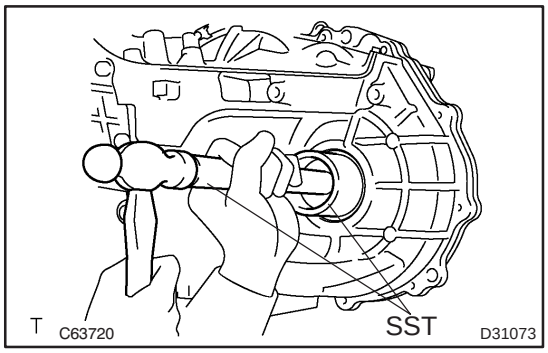
(a) Remove the drain plug, gasket and drain ATF.

(b) Install a new gasket and the drain plug.



Torque: 49 N·m (500 kgf·cm, 36 ft·lbf)

6. **REMOVE FRONT DRIVE SHAFT ASSY LH (See page 30–6)**
7. **REMOVE FRONT DRIVE SHAFT ASSY RH (See page 30–6)**



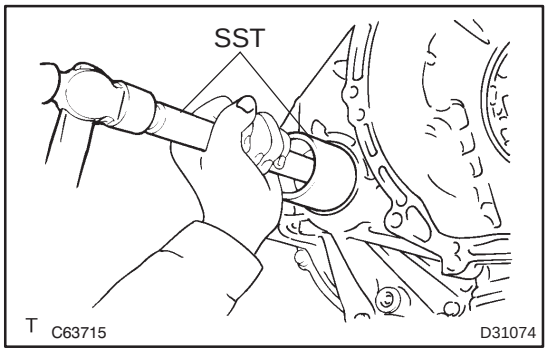
8. **REMOVE FRONT TRANSAXLE CASE OIL SEAL**

(a) Using SST, pull out the oil seal.

9. **REMOVE TRANSAXLE CASE OIL SEAL**

(a) Using SST, pull out the oil seal.

10. **INSTALL TRANSAXLE CASE OIL SEAL**



(a) Using SST and a hammer, drive in a new oil seal.

SST 09726–27012 (09726–02041), 09950–70010 (09951–07200)

Oil seal drive in depth:

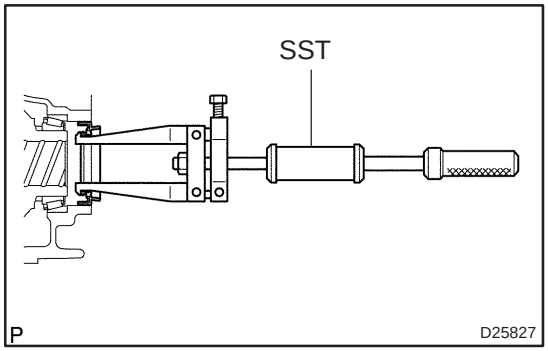
2.7 ± 0.5 mm (0 ± 0.020 in.)

(b) Coat the lip of the oil seal with MP grease.

11. INSTALL FRONT TRANSAXLE CASE OIL SEAL

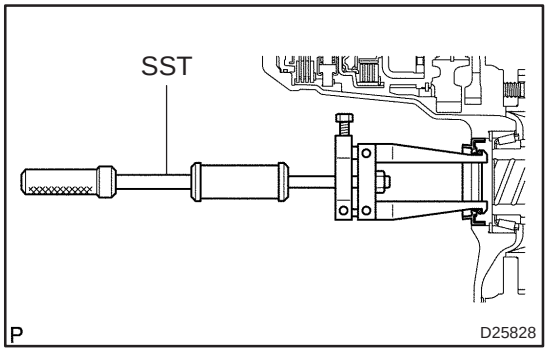
(a) Using SST and a hammer, drive in a new oil seal.
SST 09554–14010, 09950–70010 (09951–07200)
Oil seal drive in depth:
0 ± 0.5 mm (0 ± 0.020 in.)

(b) Coat the lip of the oil seal with MP grease.



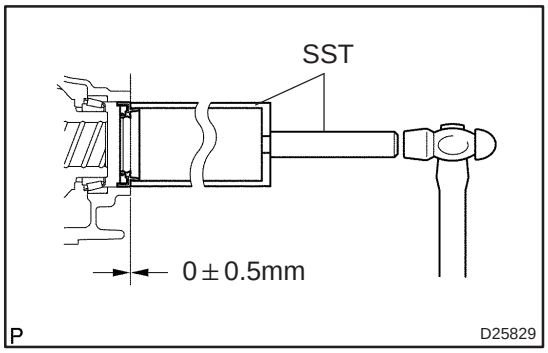
12. INSTALL FRONT DRIVE SHAFT ASSY LH (See page 30–6)
13. INSTALL FRONT DRIVE SHAFT ASSY RH (See page 30–6)
14. INSTALL FRONT WHEELS
15. ADD AUTOMATIC TRANSAXLE FLUID
16. INSPECT AUTOMATIC TRANSAXLE FLUID (See page 40–2)
17. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT (See Page 26–6)
18. CHECK ABS SPEED SENSOR SIGNAL (See page 05–699)

FRONT DIFFERENTIAL OIL SEAL (U241E)

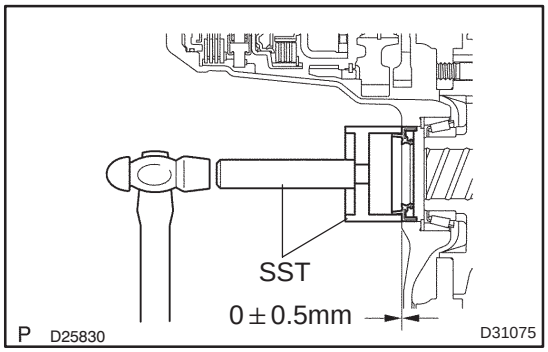


400DE–02

REPLACEMENT



1. REMOVE FRONT WHEELS
2. REMOVE ENGINE UNDER COVER RH
3. REMOVE ENGINE UNDER COVER LH
4. DRAIN AUTOMATIC TRANSAXLE FLUID
(a) Remove the drain plug, gasket and drain ATF.
(b) Install a new gasket and the drain plug.
Torque: 49 N·m (500 kgf·cm, 36 ft·lbf)
5. REMOVE FRONT DRIVE SHAFT ASSY RH (See page 30–6)
6. REMOVE FRONT DRIVE SHAFT ASSY LH (See page 30–6)



7. REMOVE TRANSAXLE HOUSING OIL SEAL
(a) Using SST, pull out the oil seal.
SST 09308–00010

8. REMOVE DIFFERENTIAL SIDE BEARING RETAINER OIL SEAL
(a) Using SST, pull out the oil seal.
SST 09308–00010

9. INSTALL DIFFERENTIAL SIDE BEARING RETAINER OIL SEAL
(a) Using SST and a hammer, drive in a new oil seal.
SST 09316–60011 (09316–00011)
Oil seal drive in depth:
0 ± 0.5 mm (0 ± 0.020 in.)
(b) Coat the lip of the oil seal with MP grease.

10. INSTALL TRANSAXLE HOUSING OIL SEAL

(a) Using SST and a hammer, drive in a new oil seal.
SST 09649–17010, 09950–70010 (09951–07150)
Oil seal drive in depth:
0 ± 0.5 mm (0 ± 0.020 in.)

(b) Coat the lip of the oil seal with MP grease.

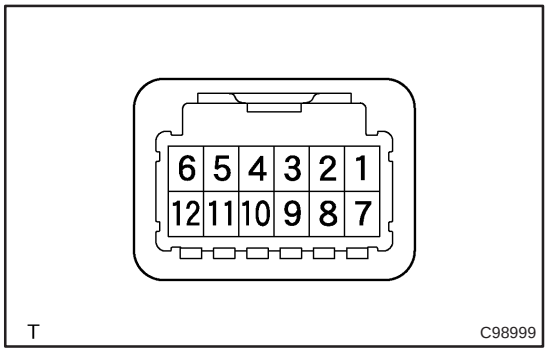
11. INSTALL FRONT DRIVE SHAFT ASSY LH (See page 30–6)
12. INSTALL FRONT DRIVE SHAFT ASSY RH (See page 30–6)
13. INSTALL FRONT WHEELS
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)
14. ADD AUTOMATIC TRANSAXLE FLUID
15. INSPECT AUTOMATIC TRANSAXLE FLUID (See page 40–2)
16. CHECK ABS SPEED SENSOR SIGNAL
(a) ABS WITH EBD SYSTEM (See pege 05–699)
(b) ABS WITH EBD & BA &TRAC & VSC SYSTEM (See pege 05–756)

SHIFT LOCK SYSTEM

4011J–01

ON–VEHICLE INSPECTION

1. CHECK SHIFT LOCK OPERATION



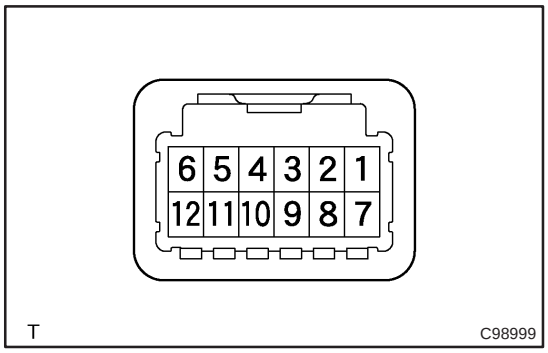
(a) Shift the shift lever to P position.
(b) Turn the ignition switch to LOCK.
(c) Check that the shift lever cannot be shifted to any other positions other than P.
(d) Turn the ignition switch to ON, depress the brake pedal and check that the shift lever can be shifted to any other positions.

2. CHECK SHIFT LOCK RELEASE BUTTON OPERATION

(a) Using a screwdriver, remove the shift lock release button cover.
(b) When operating the shift lever with the shift lock release button pressed and turn the ignition switch to ACC or ON, check that the lever can be shifted to any other position.

3. CHECK KEY INTERLOCK OPERATION

(a) Turn the ignition switch to ON.
(b) Depress the brake pedal and shift the shift lever to any other positions other than P.
(c) Check that the ignition key cannot be turned to LOCK.
(d) Shift the shift lever to P position, turn the ignition key to LOCK and check that the ignition key can be removed.



4. INSPECT SHIFT LOCK CONTROL ECU

(a) Using a voltmeter, measure the voltage at each terminal.

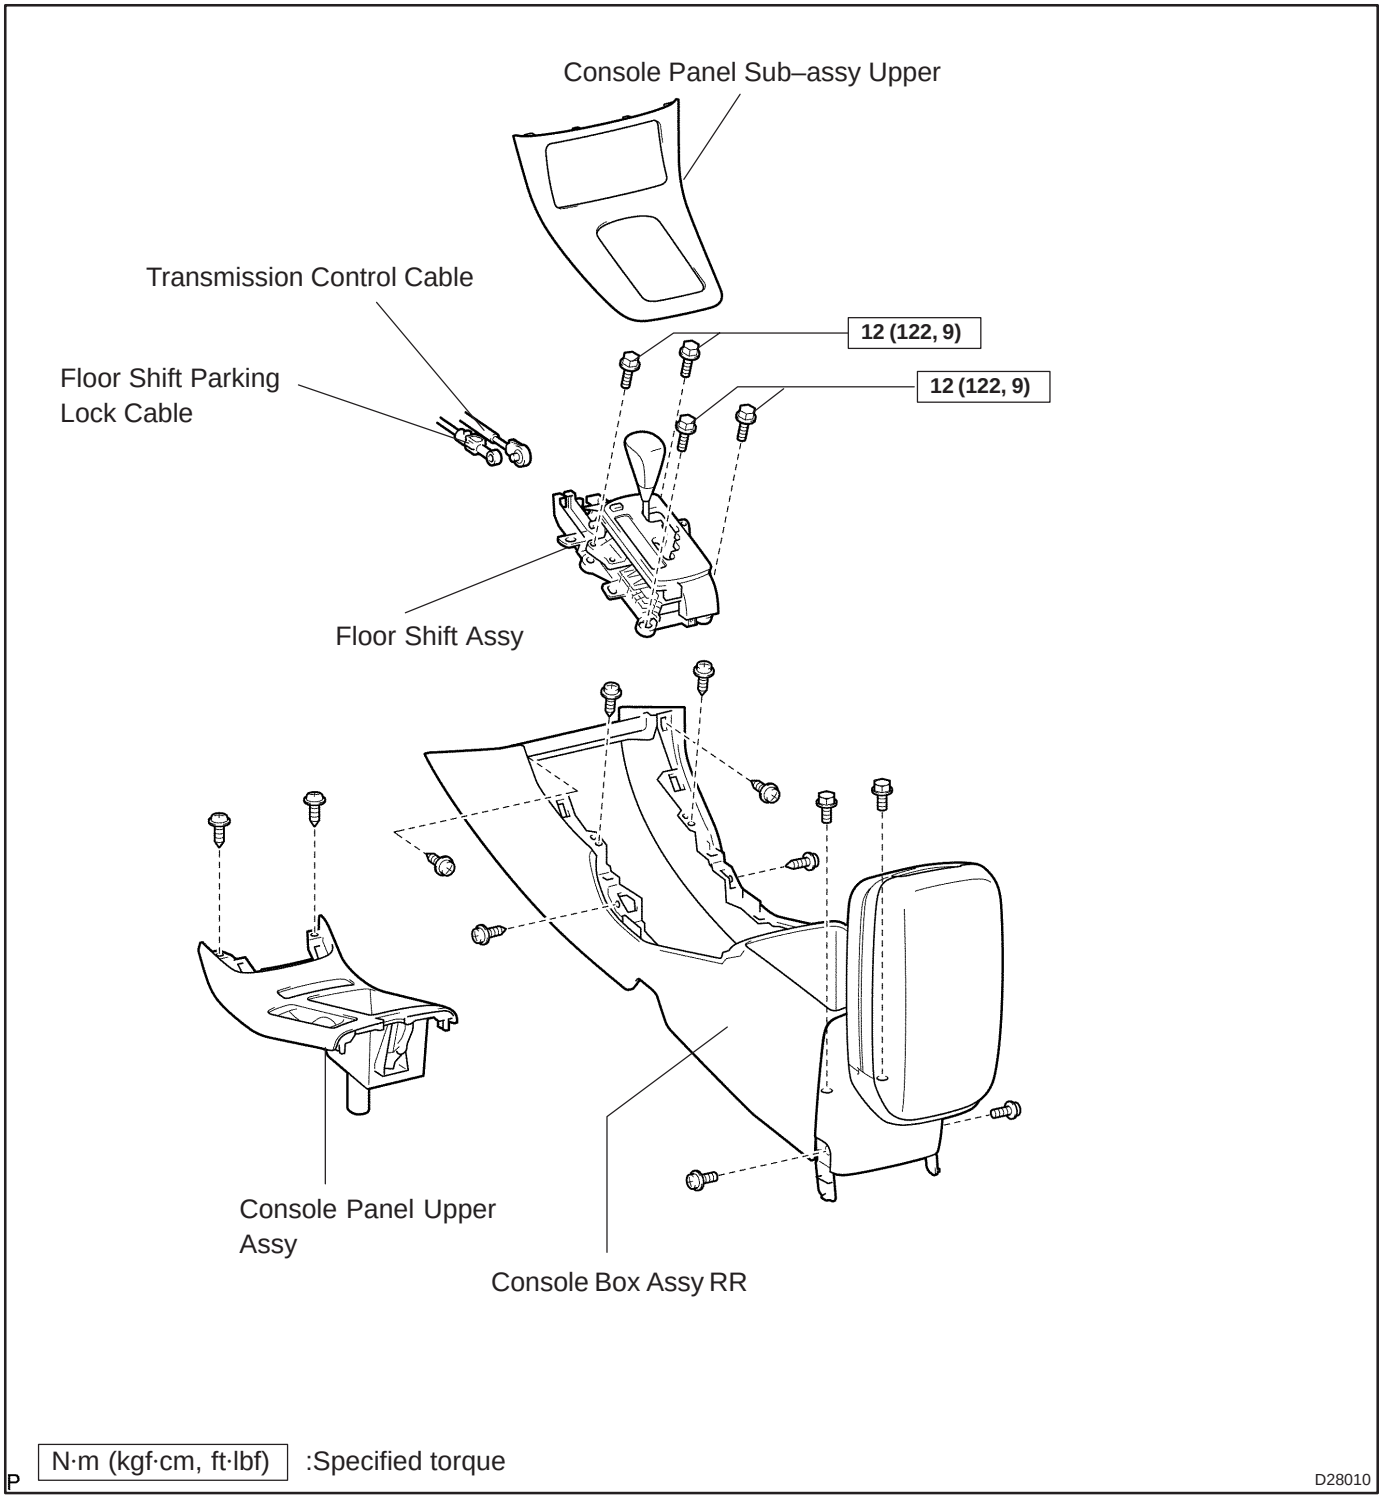
HINT:

Do not disconnect the shift lock control ECU connector.

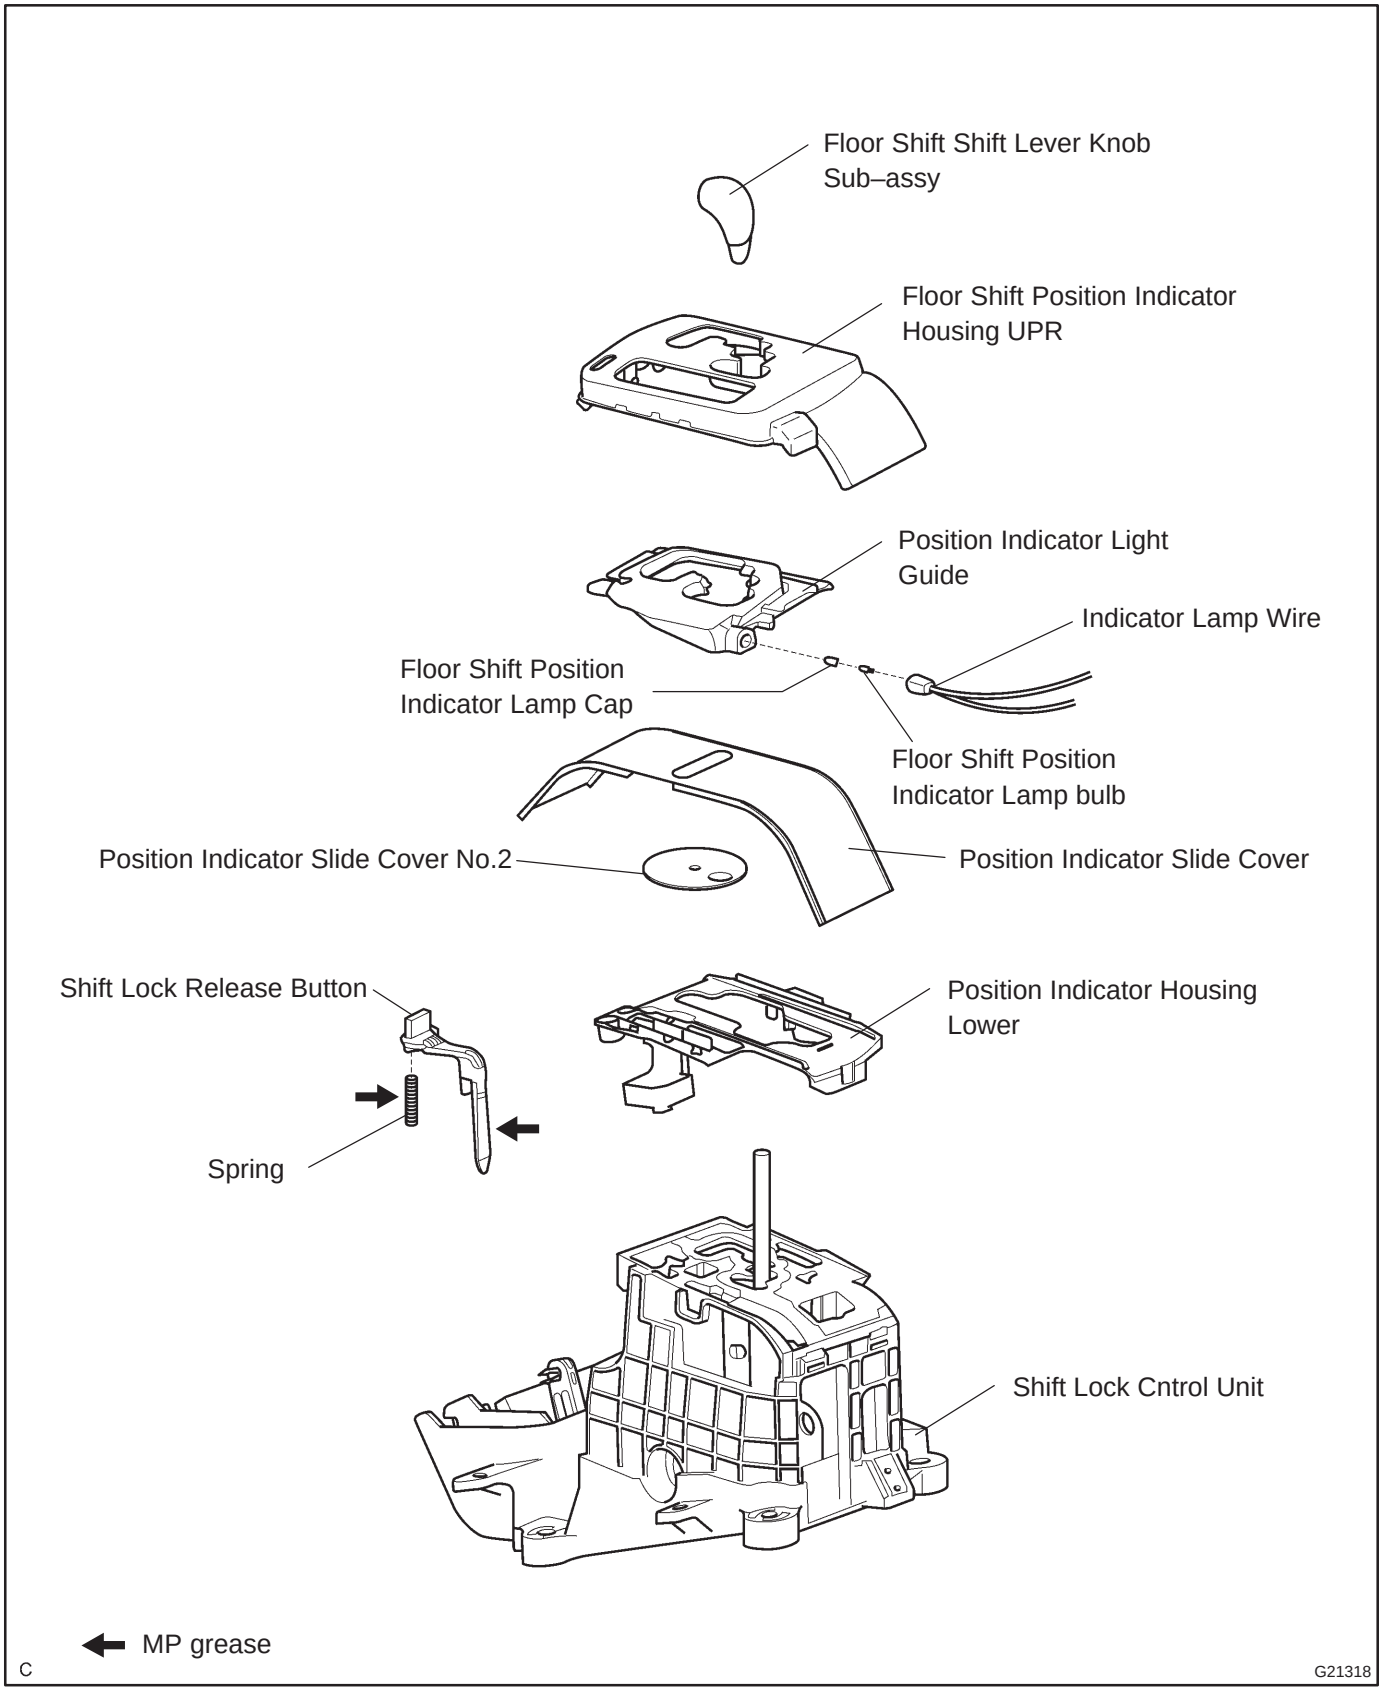
Terminal	Measuring Condition	Voltage (V)
7 (STP) – 8 (E)	Depress brake pedal	10 to 14
7 (STP) – 8 (E)	Release brake pedal	Below 1
1 (IG) – 8 (E)	Ignition switch ON	10 to 14
1 (IG) – 8 (E)	Ignition switch OFF	Below 1

(b) Using an ohmmeter, measure the resistance at the terminal E (8) and body ground.

HINT:



Do not disconnect the shift lock control unit assembly connector.

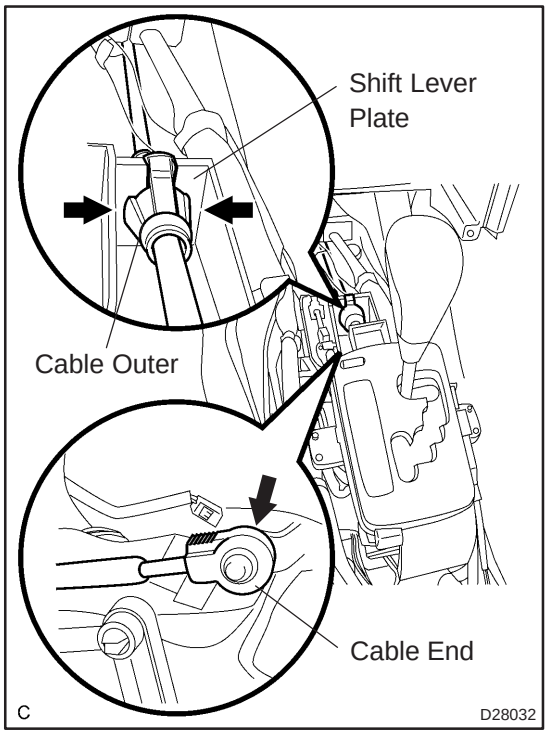


Terminal	Measuring Condition	Specified Value
8 (E) – Body ground	Always	Continuity

FLOOR SHIFT ASSY

COMPONENTS

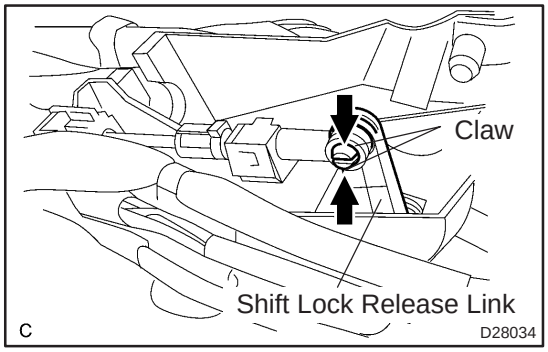
4011K–01



Floor Shift Shift Lever Knob Sub–assy
Floor Shift Position Indicator Housing UPR
Position Indicator Light Guide
Indicator Lamp Wire
Floor Shift Position Indicator Lamp Cap
Floor Shift Position Indicator Lamp bulb
Position Indicator Slide Cover No.2
Position Indicator Slide Cover
Shift Lock Release Button
Position Indicator Housing Lower
Spring
Shift Lock Cntrol Unit
MP grease
C
G21318

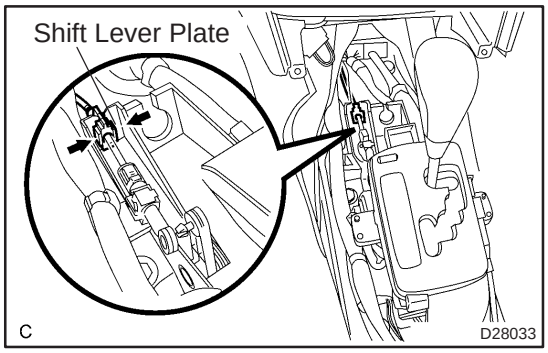
4011L–01

OVERHAUL



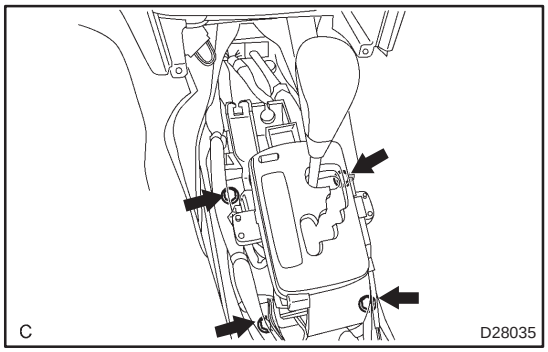
1. **REMOVE CONSOLE PANEL SUB–ASSY UPPER (See page 71–11)**
2. **REMOVE CONSOLE PANEL UPPER ASSY (See page 71–11)**
3. **REMOVE CONSOLE BOX ASSY RR (See page 71–11)**

4. **DISCONNECT TRANSMISSION CONTROL CABLE ASSY**



(a) Using a fine screwdriver, separate the cable outer of the transmission control cable assy from the shift lever plate.

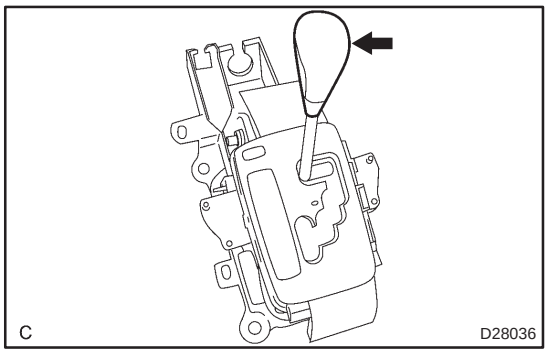
(b) Using a screw driver, disconnect the cable end from the floor shift assy.



5. **DISCONNECT FLOOR SHIFT PARKING LOCK CABLE ASSY**

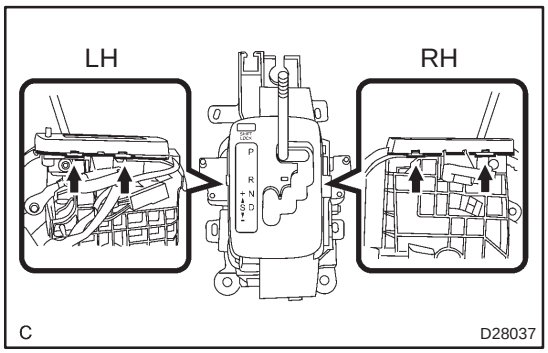
(a) Push the claw and disconnect the parking lock cable assy from the shift lock release link.

(b) Using a screw driver, disconnect the parking lock cable assy from the shift lever plate.



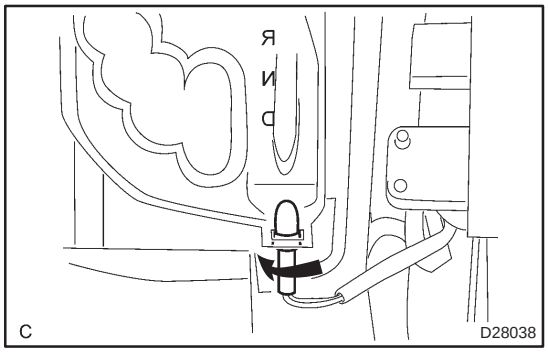
6. REMOVE FLOOR SHIFT ASSY

(a) Disconnect the shift lock control ECU connector and indicator lamp wire connector.



(b) Disconnect the wire harness clamp.

(c) Remove the 4 bolts and floor shift assy.

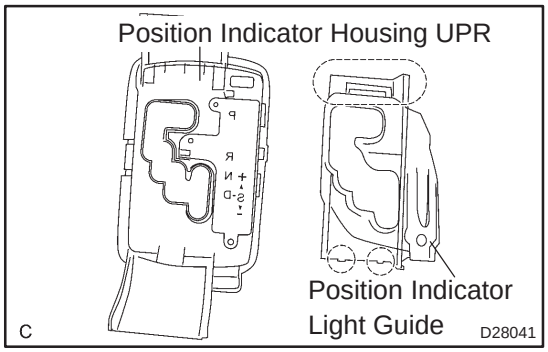


7. REMOVE SHIFT LEVER KNOB SUB–ASSY

(a) Remove the floor shift shift lever knob sub–assy.

8. REMOVE FLOOR SHIFT POSITION INDICATOR HOUSING SUB–ASSY

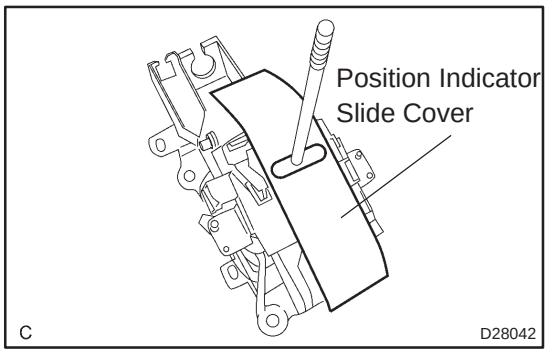
(a) Remove the floor shift position indicator housing sub–assy from the floor shift assy.



9. REMOVE POSITION INDICATOR LAMP CAP

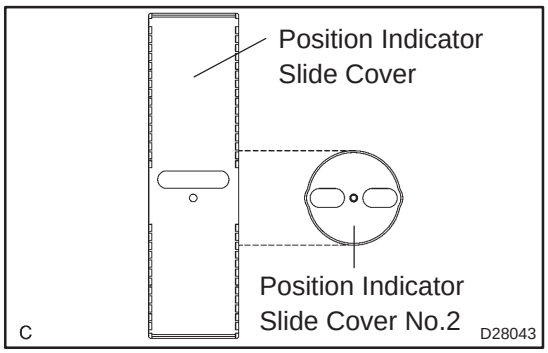
(a) Separate the indicator lamp wire sub–assy from the position indicator light guide.

(b) Remove the floor shift position indicator lamp cap from the indicator lamp wire.



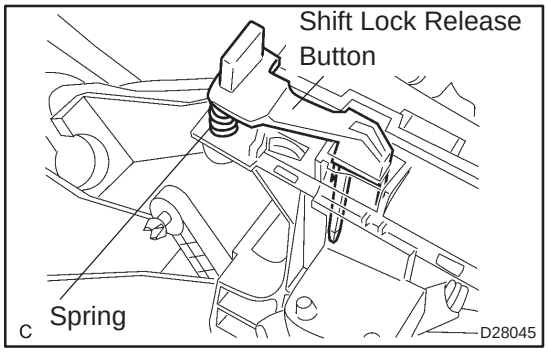
10. REMOVE POSITION INDICATOR LAMP BULB

(a) Remove the floor shift position indicator lamp bulb from the indicator lamp wire.



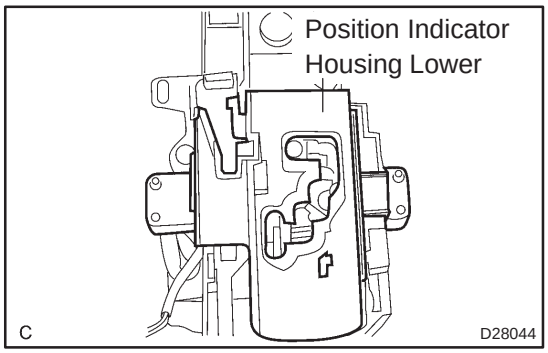
11. REMOVE POSITION INDICATOR LIGHT GUIDE

(a) Using a small screw driver, remove the position indicator light guide from the position indicator housing UPR.

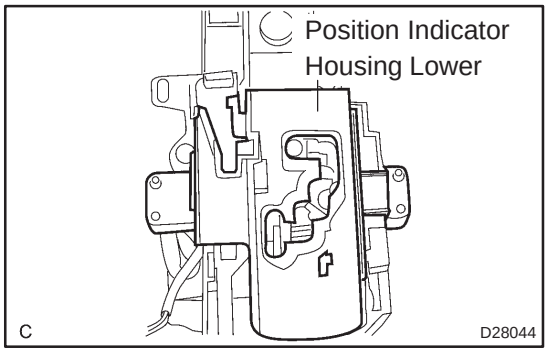


12. REMOVE POSITION INDICATOR SLIDE COVER

(a) Remove the position indicator slide cover from the position indicator housing lower.

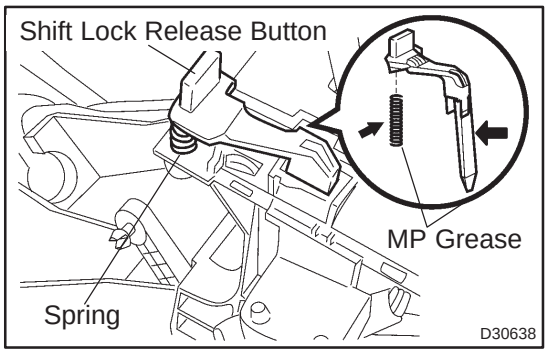


(b) Remove the position indicator slide cover No.2 from the position indicator slide cover.



13. REMOVE SHIFT LOCK RELEASE BUTTON

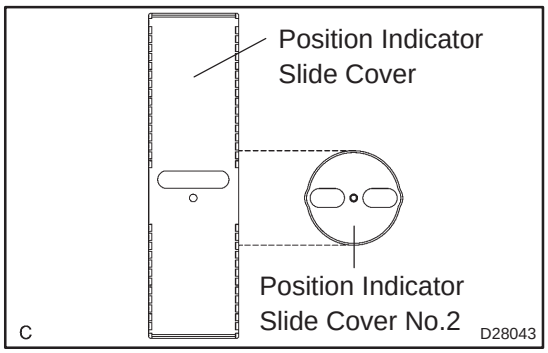
(a) Remove the shift lock release button and spring from the position indicator housing lower.



14. REMOVE POSITION INDICATOR HOUSING LOWER

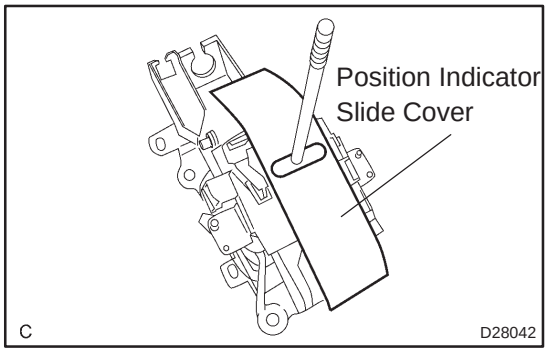
(a) Remove the position indicator housing lower from the floor shift assy.

15. INSTALL POSITION INDICATOR HOUSING LOWER



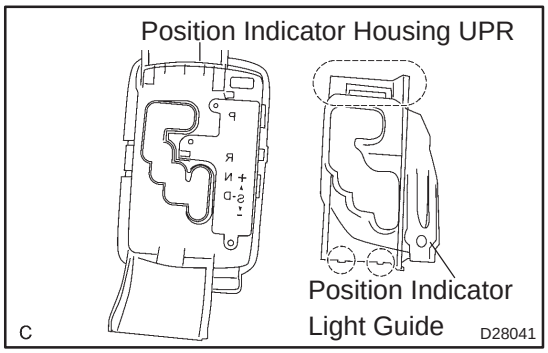
(a) Install the position indicator housing lower to the floor shift assy.

16. INSTALL SHIFT LOCK RELEASE BUTTON



(a) Apply MP grease to the spring.

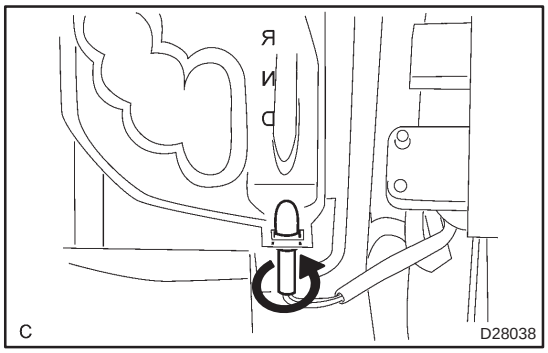
(b) Install the shift lock release button and spring.



17. INSTALL POSITION INDICATOR SLIDE COVER

(a) Install the position indicator slide cover No.2 to the position indicator slide cover.

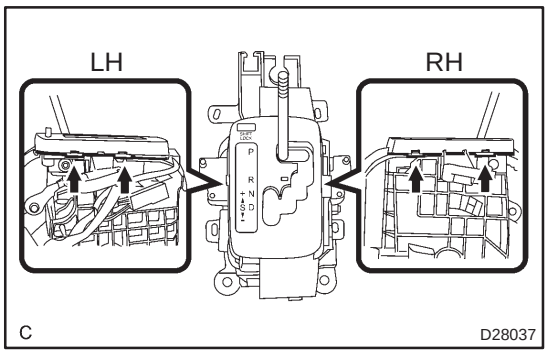
(b) Install the position indicator slide cover to the position indicator housing lower.



18. INSTALL POSITION INDICATOR LIGHT GUIDE

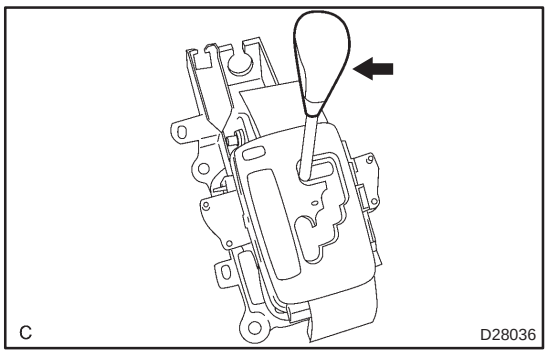
(a) Install the position indicator light guide to the position indicator housing UPR.

19. INSTALL POSITION INDICATOR LAMP BULB



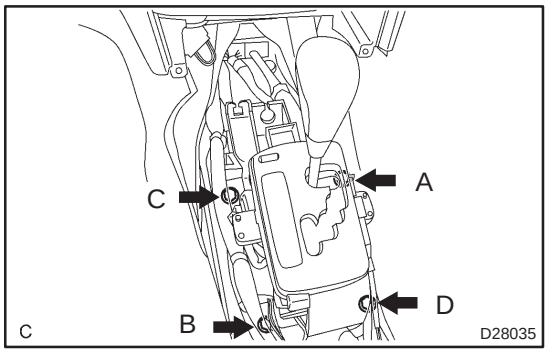
(a) Install the floor shift position indicator lamp bulb to the indicator lamp wire.

20. INSTALL POSITION INDICATOR LAMP CAP



(a) Install the floor shift position indicator lamp cap to the indicator lamp wire.

(b) Install the indicator lamp wire sub–assy to the position indicator light guide.



21. INSTALL FLOOR SHIFT POSITION INDICATOR HOUSING SUB–ASSY

(a) Install the floor shift position indicator housing sub–assy to the floor shift assy.

22. INSTALL SHIFT LEVER KNOB SUB–ASSY

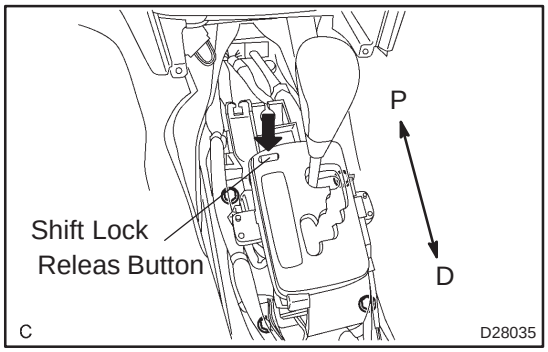
(a) Install the floor shift shift lever knob sub–assy.

23. INSTALL FLOOR SHIFT ASSY

(a) Install the floor shift assy with the 4 nuts.

Torque: 12.0 N·m (122 kgf·cm. 9 ft·lbf)

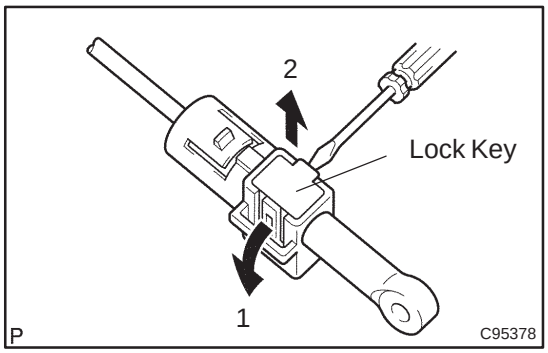
HINT:



Tighten them in the order, A, B, C and D.

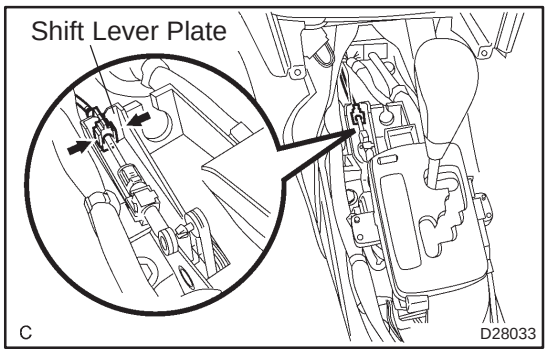
(b) Connect the shift lock control ECU connector and indicator lamp wire connector.

(c) Connect the wire harness clamp.



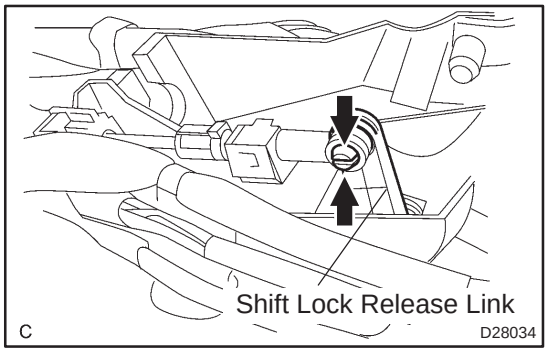
NOTICE:

Be careful not to put the wirings of the indicator lamp or the shift lock system between the assy and the floor while installing the floor shift assy.



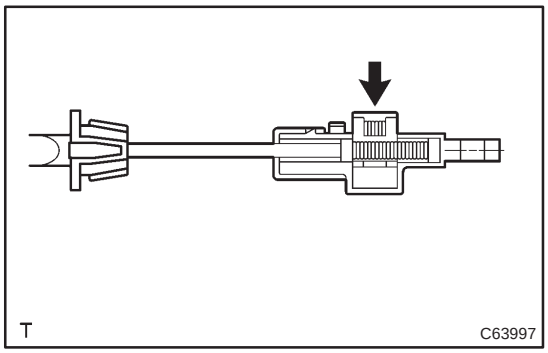
(d) After installing the shift lever assy, perform the shift lever operation as following to check its proper function.

(e) Shift into the P position and back to the D position 5 times with the shift lock releasa button depressed.



24. CONNECT FLOOR SHIFT PARKING LOCK CABLE ASSY

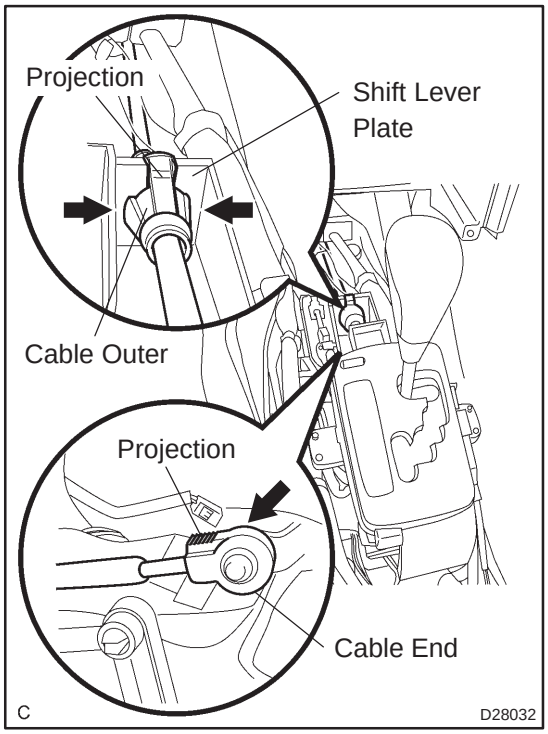
(a) Using a small screwdriver, unlock the claw of the lock key of the automatic adjustment part.



(b) Pass the parking lock cable through the hole of the shift lever plate.

(c) Insert the slide cap into the shift lever plate.

(d) Apply MP grease to the shift lock release link.



(e) Insert the lever pin into the hole in the cable end.

(f) Lock the lock key.

NOTICE:

At this time, the shift lever should be in the P position and the ignition key should be set to Lock.

25. CONNECT TRANSMISSION CONTROL CABLE ASSY

(a) Install the control cable to the shift lever plate.

(b) Connect the control cable end to the floor shift assy.

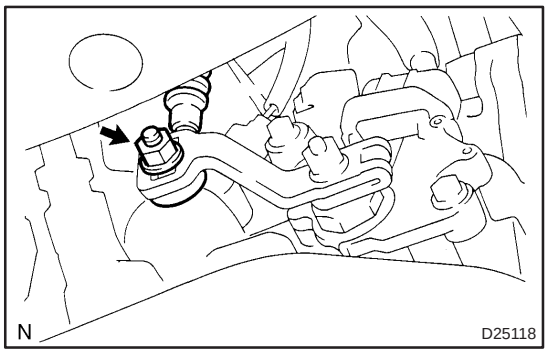
HINT:

Install it with the uneven surface facing up.

NOTICE:

- **Be sure to face up the projection on the cable end to prevent torsion on the inner cable.**
- **Be sure to face up the projection on the outer cable while installing the outer cable to the shift lever plate.**
- **Make sure that the ends of the hooks are open while installing the outer cable to the shift lever plate.**

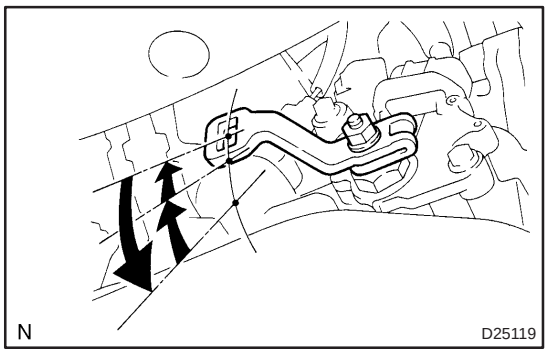
26. INSPECT SHIFT LEVER POSITION (See page 40–69)



27. ADJUST SHIFT LEVER POSITION (See page 40–69)

ADJUSTMENT

1. INSPECT SHIFT LEVER POSITION



(a) When the shift lever from P to R position with the ignition switch is ON and the brake pedal is depressed, make sure that the shifting lever moves smoothly and can be moderately operated.

(b) When starting engine, make sure that the vehicle moves forward when shifting from N to D position and moves rearward when shifting to R position.

2. ADJUST SHIFT LEVER POSITION

(a) Loosen the nut on the control shaft lever.

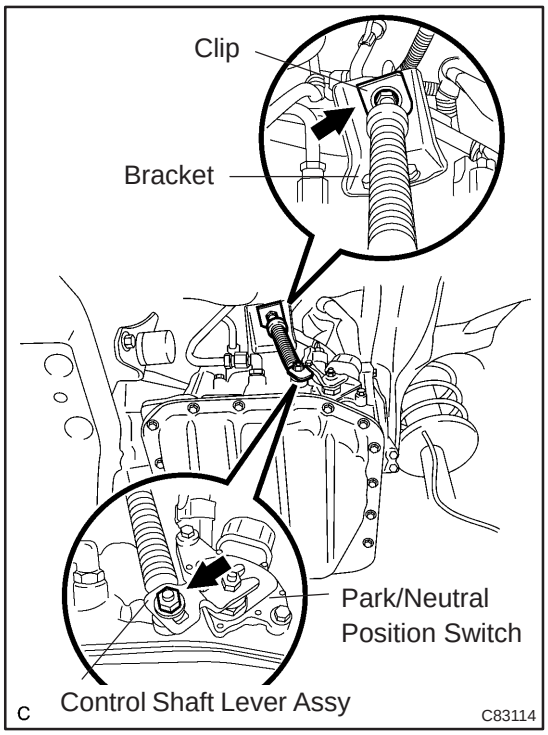
(b) Push the control shaft fully downward.

(c) Return the control shaft lever 2 notches to N position.

(d) Set the shift lever to N position.

(e) While holding the shift lever lightly toward the R position side, tighten the shift lever nut.

Torque: 12 N·m (122 kgf·cm, 9 ft·lbf)



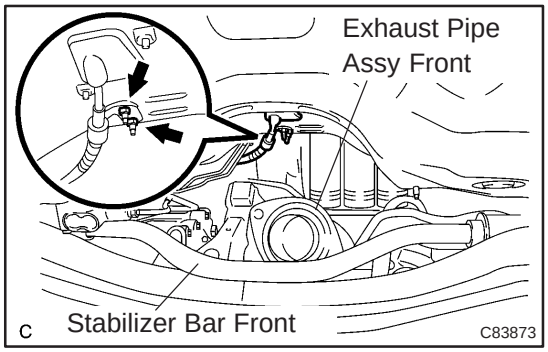
(f) Start the engine and make sure that the vehicle moves forward when shifting the lever from N to D position and moves rearward when shifting it to R position.

TRANSMISSION CONTROL CABLE ASSY

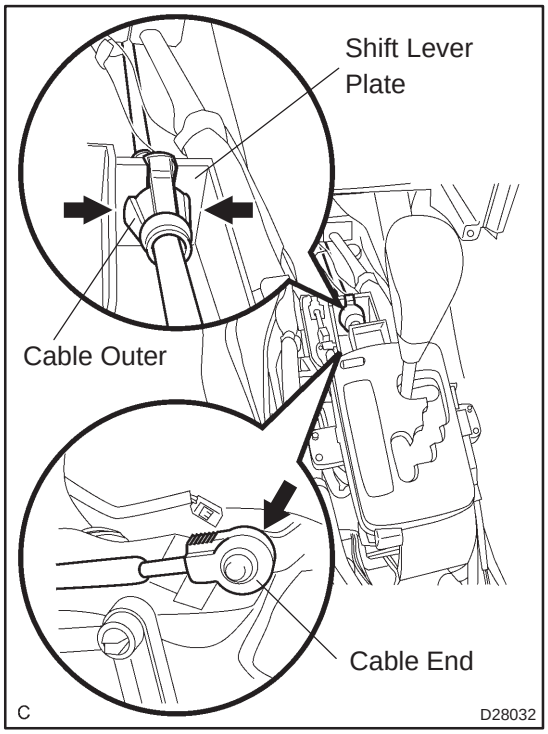
4011M–01

REPLACEMENT

1. REMOVE INSTRUMENT PANEL LOWER ASSY (See page 71–11)
2. REMOVE AIR CONDITIONING RADIATOR ASSY (See page 55–55)
3. REMOVE EXHAUST PIPE ASSY FRONT (1ZZ–FE ENGINE TYPE) (See page 15–2)
4. REMOVE EXHAUST PIPE ASSY FRONT (1AZ–FE/1AZ–FSE ENGINE TYPE) (See page 15–7)



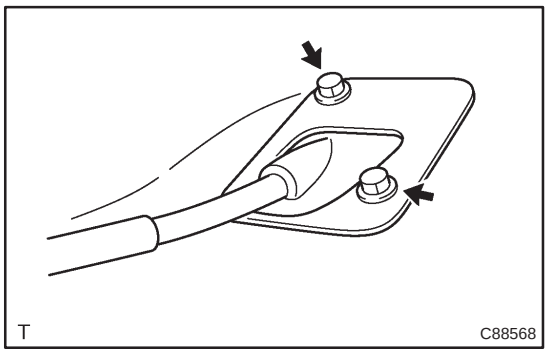
5. REMOVE TRANSMISSION CONTROL CABLE ASSY



(a) Remove the nut and disconnect the transmission control cable assy from the control shaft lever assy.

(b) Remove the clip and disconnect the transmission control cable assy from the bracket.

(c) Disconnect the control cable from the control cable support.

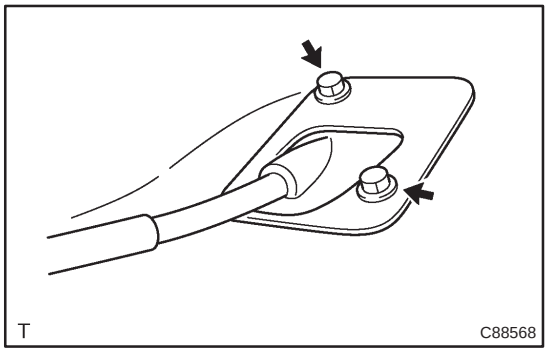


(d) Remove the 2 nuts and separate the transmission control cable assy from the body.

(e) Using a fine screw driver, separate the cable outer of the transmission control cable assy from the shift lever plate.

(f) Using a screw driver, disconnect the transmission control cable end from the floor shift assy.

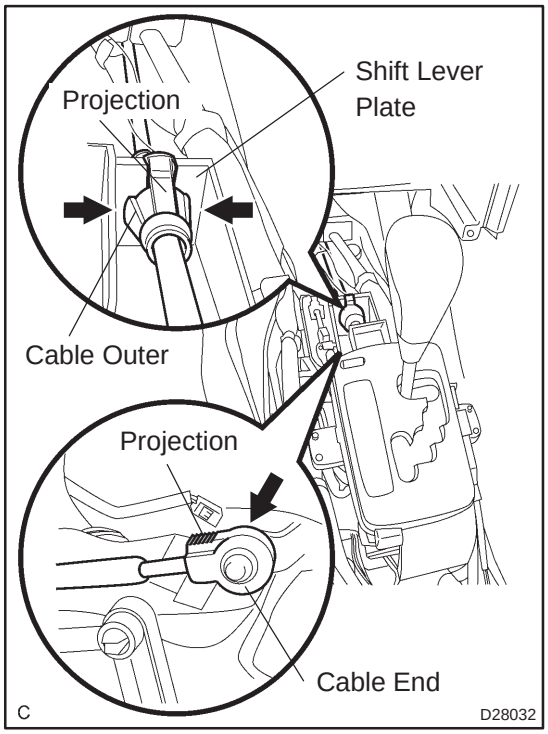
(g) Remove the 2 bolts.



(h) Pull out the transmission control cable assy from the body.

(i) Remove the retainer from the transmission control cable assy.

6. INSTALL TRANSMISSION CONTROL CABLE ASSY



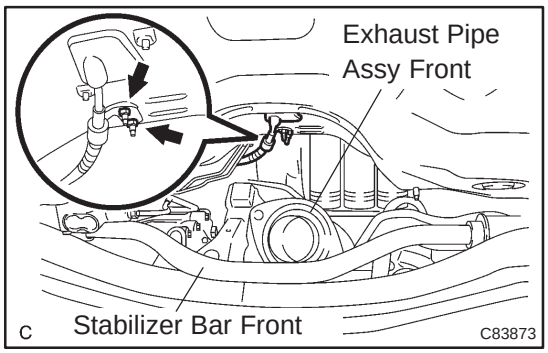
(a) Install the retainer to the transmission control cable assy.

(b) Pull the transmission control cable assy into the body.

(c) Install the 2 bolts.
Torque: 5.0 N·m (50 kgf·cm, 43 in.·lbf)

(d) Shift the shift lever to the N position.

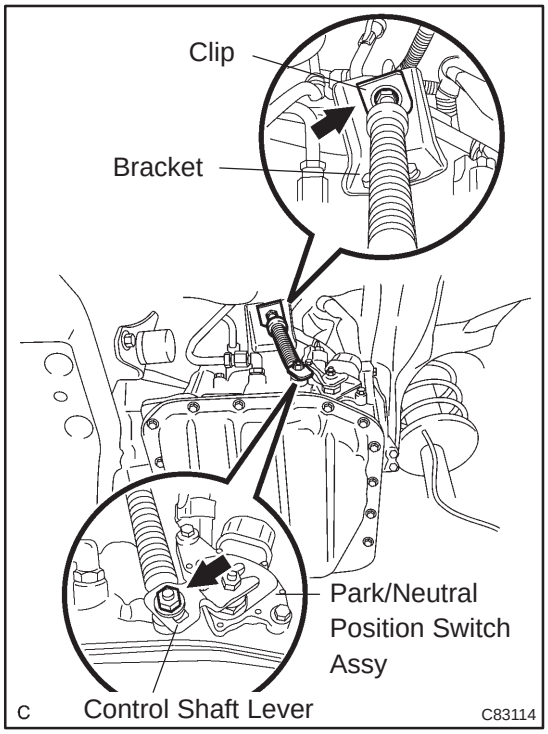
(e) Install the control cable to the shift lever plate.



(f) Connect the control cable end to the floor shift assy.

HINT:

Install it with the uneven surface facing up.



NOTICE:

- **Be sure to face up the projection on the cable end to prevent torsion on the inner cable.**
- **Be sure to face up the projection on the outer cable while installing the outer cable to the shift lever plate.**
- **Make sure that the ends of the hooks are open while installing the outer cable to the shift lever plate.**

(g) Install the control cable with the 2 nuts to the body.
Torque: 5 N·m (50 kgf·cm, 43 in.·lbf)

(h) Connect the control cable to the control cable support.

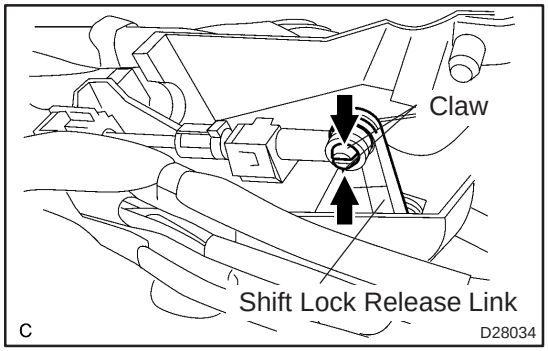
(i) Temporarily install the control cable to the control shaft lever with the nut.

(j) Install the control cable with the clip to the bracket.

NOTICE:

Set the shift position to N. Connect the transmission control cable to the control shaft lever on the transmission assy.

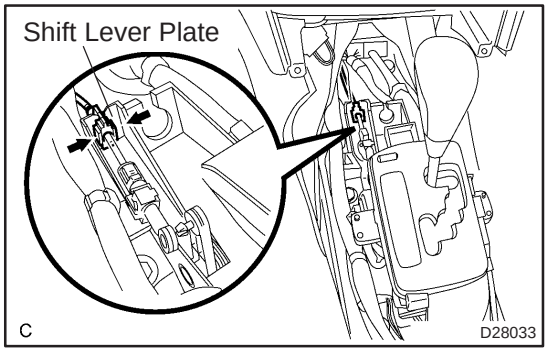
At that time, pull the end of the control cable and release it until back–lash (looseness) in the cable is removed. Then tighten the nut.



7. **INSTALL INSTRUMENT PANEL SUB–ASSY UPPER W/INSTR PNL PASS L/DOOR AIR BAG ASSY (See page 71–11)**
8. **ADJUST SPIRAL CABLE SUB–ASSY (See page 60–26)**
9. **INSTALL STEERING WHEEL ASSY (See page 50–9)**
10. **INSTALL HORN BUTTON ASSY (See page 60–17)**
11. **INSTALL EXHAUST PIPE ASSY FRONT (1ZZ–FE ENGINE TYPE) (See page 15–2)**
12. **INSTALL EXHAUST PIPE ASSY FRONT (1AZ–FE/1AZ–FSE ENGINE TYPE) (See page 15–7)**
13. **INSPECT HORN BUTTON ASSY (See page 60–17)**
14. **INSPECT SRS WARNING LIGHT (See page 05–1184)**
15. **CHECK FOR EXHAUST GAS LEAKS**
16. **ADJUST SHIFT LEVER POSITION (See page 40–69)**
17. **INSPECT SHIFT LEVER POSITION (See page 40–69)**
18. **CHARGE REFRIGERANT (See page 55–38)**
    SST 07110–58060 (07117–58060, 07117–58070, 07117–58080, 07117–58090, 07117–78050, 07117–88060, 07117–88070, 07117–88080)
19. **INSPECT LEAKAGE OF REFRIGERANT (See page 55–38)**

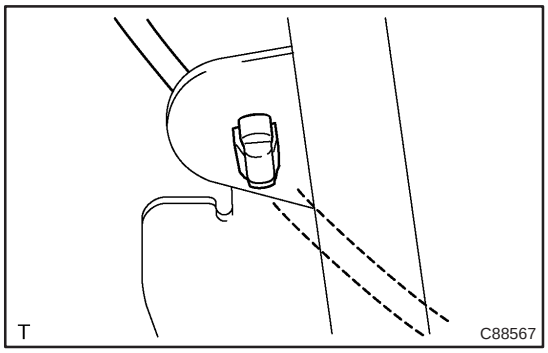
FLOOR SHIFT PARKING LOCK CABLE ASSY

4011N–01



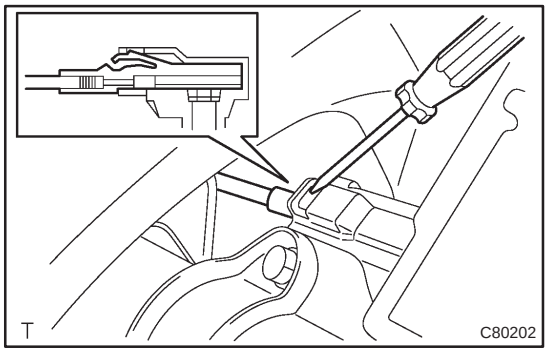
REPLACEMENT

1. PRECAUTION (See page 60–29)
2. DISCONNECT BATTERY NEGATIVE TERMINAL
3. REMOVE INSTRUMENT PANEL HOLE COVER (See page 71–11)
4. REMOVE INSTRUMENT PANEL AIR BAG ASSY (See page 60–29)
5. REMOVE INSTRUMENT PANEL UNDER COVER SUB–ASSY NO.1 (See page 71–11)
6. REMOVE STEERING COLUMN COVER LWR (See page 50–9)
7. REMOVE STEERING COLUMN COVER (See page 50–9)
8. REMOVE CONSOLE PANEL SUB–ASSY UPPER (See page 71–11)
9. REMOVE CONSOLE PANEL UPPER ASSY (See page 71–11)
10. REMOVE CONSOLE REAR END PANEL (See page 71–11)
11. REMOVE CONSOLE BOX ASSY RR (See page 71–11)

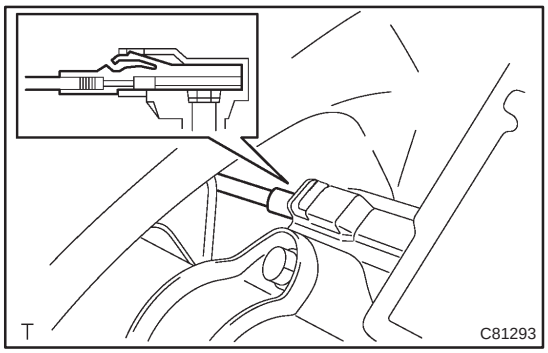


12. REMOVE FLOOR SHIFT PARKING LOCK CABLE ASSY

(a) Push the claw and disconnect the parking lock cable assy from the shift lock release link.

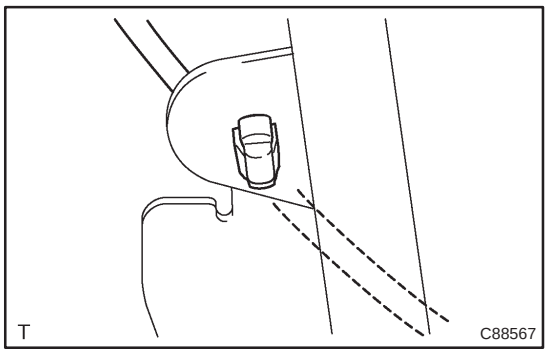


(b) Using a screw driver, disconnect the parking lock cable assy from the shift lever plate.



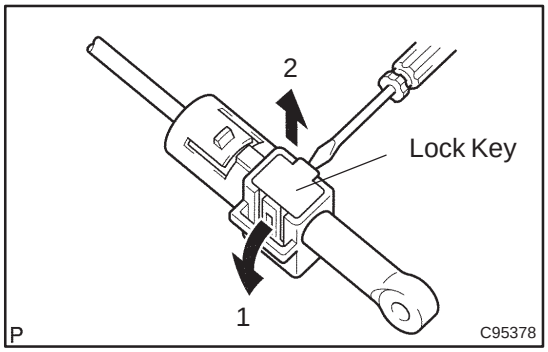
(c) Disconnect the cable clamp.

(d) Turn the ignition switch to ACC or ON.



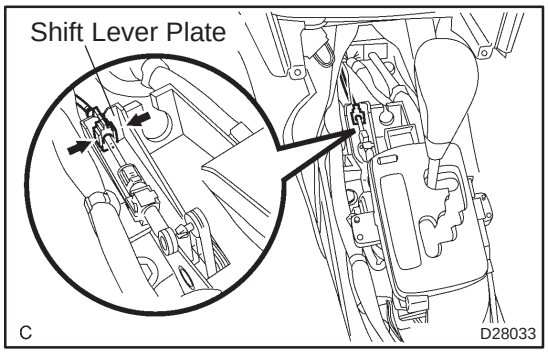
(e) Using a screwdriver, disconnect the cable from the upper bracket.

13. INSTALL FLOOR SHIFT PARKING LOCK CABLE ASSY



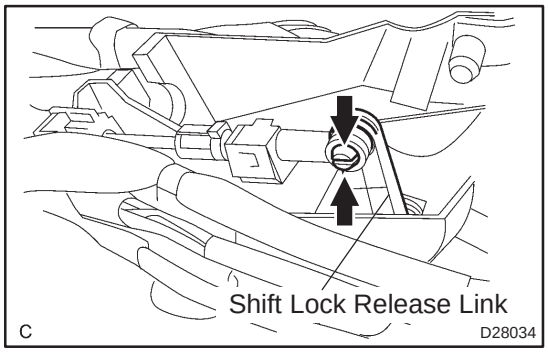
(a) Turn the ignition switch to ACC or ON.

(b) Connect the cable to the upper bracket.

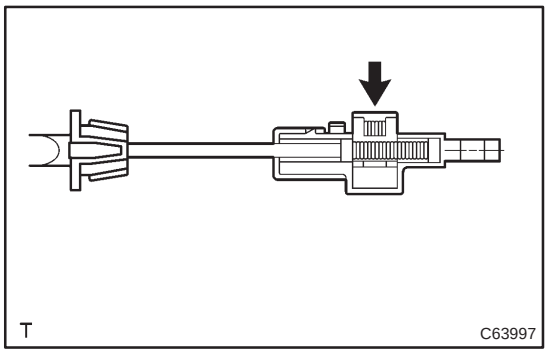


(c) Connect the cable clamp.

(d) Shift the shift lever to the P position.



(e) Using a small screwdriver, unlock the claw of the lock key of the automatic adjustment part.



(f) Pass the parking lock cable through the hole of the shift lever plate.

(g) Insert the slide cap into the shift lever plate.

(h) Apply MP grease to the shift lock release link.
(i) Insert the lever pin into the hole in the cable end.

(j) Lock the lock key.

HINT:

At this time, the shift lever should be in the P position and the ignition key should be set to Lock.

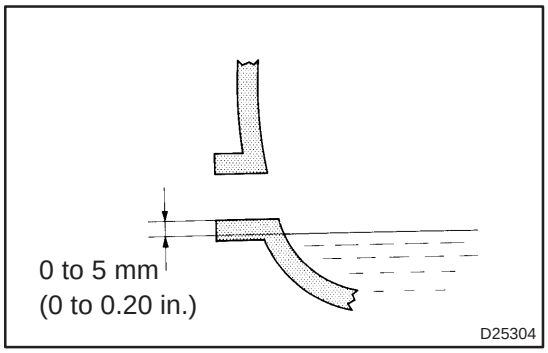
14. **INSTALL INSTRUMENT PANEL AIR BAG ASSY (See page 60–29)**
15. **INSPECT INSTRUMENT PANEL AIR BAG ASSY (See page 60–29)**
16. **INSPECT SRS WARNING LIGHT (See page 05–1184)**
17. **CHECK KEY INTERLOCK OPERATION (See page 40–59)**

MANUAL TRANSAXLE SYSTEM (MTM)

4100Y–05

PROBLEM SYMPTOMS TABLE

Use the table below to help find the cause of the problem. The numbers indicate the likelihood of the possible cause in descending order. Check each part in the order shown. Replace these parts as necessary.



★: (C50 MANUAL TRANSAXLE Repair Manual Pub. No. 826E or C250 MANUAL TRANSAXLE Repair Manual Pub. No. RM1020E or E354 MANUAL TRANSAXLE Repair Manual Pub. No. RM944E)

Symptom	Suspect Area		See page
Noise	6. Oil (Level low)		41–2
	7. Oil (Wrong)	C50/C250	41–3
		E354/E357	41–5
	8. Gear (Worn or damaged)		★
	9. Bearing (Worn or damaged)		★
Oil leakage	1. Oil (Level too high)		41–2
	2. Gasket (Damaged)		★
	3. Oil seal (Worn or damaged)	C50/ C250	41–3
		E354/E357	41–5
	4. O–Ring (Worn or damaged)		★
Hard to shift or will not shift	1. Control cable (Faulty)		41–7
	2. Synchronizer ring (Worn or damaged)		★
	3. Shift key spring (Damaged)		★
Jumps out of gear	1. Locking ball spring (Damaged)		★
	2. Shift fork (Worn)		★
	3. Gear (Worn or damaged)		★
	4. Bearing (Worn or damaged)		★

MANUAL TRANSAXLE OIL (MTM)

ON–VEHICLE INSPECTION

4100Z–05

1. INSPECT TRANSAXLE OIL

(a) Stop the vehicle on the level place.

(b) Remove the transmission filler plug and gasket.

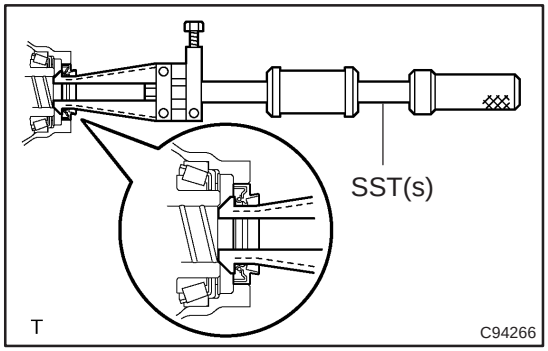
(c) Check that the oil surface is within 5 mm (0.20 in.) from the lowest position of the inner surface of the transmission filler plug opening.

NOTICE:

- **Excessively large or small amount of oil may cause troubles.**
- **After replacing oil, drive the vehicle and check the oil level.**

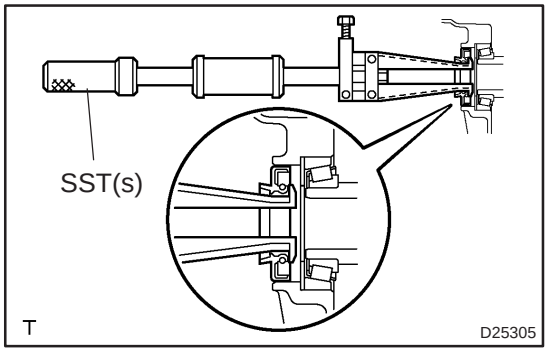
(d) Check for oil leakage when the oil level is low.

(e) Install the transmission filler plug and new gasket.



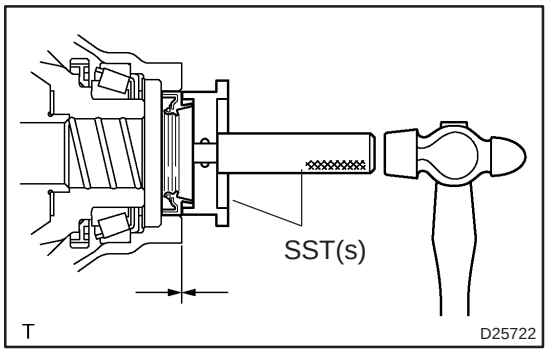
Torque:
C50, C250: 39 N·m (400 kgf·cm, 29 ft·lbf)
E354, E357: 49 N·m (500 kgf·cm, 36 ft·lbf)

FRONT DIFFERENTIAL OIL SEAL (C50/C250)



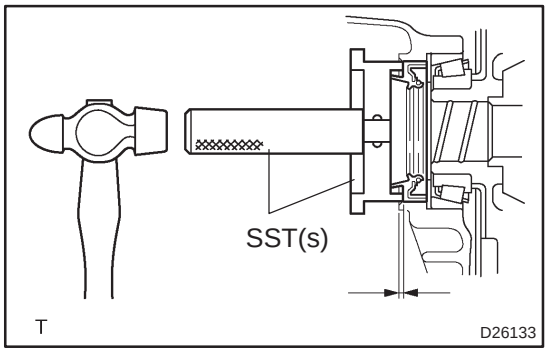
41046–11

REPLACEMENT



1. **DRAIN MANUAL TRANSAXLE OIL**
   Torque: 39 N·m (400 kgf·cm, 29 ft·lbf)
2. **REMOVE FRONT WHEELS**
3. **REMOVE ENGINE UNDER COVER LH**
4. **REMOVE ENGINE UNDER COVER RH**
5. **REMOVE FRONT DRIVE SHAFT ASSY LH (See page 30–6)**
   SST 09520–01010, 09520–24010 (09520–32040)
6. **REMOVE FRONT DRIVE SHAFT ASSY RH (See page 30–6)**
   SST 09520–01010, 09520–24010 (09520–32040)

7. **REMOVE TRANSAXLE CASE OIL SEAL**
(a) Using SST(s), remove the oil seal.
SST 09308–00010



8. **REMOVE TRANSMISSION CASE OIL SEAL**
(a) Using SST(s), remove the oil seal.
SST 09308–00010

9. **INSTALL TRANSAXLE CASE OIL SEAL**
(a) Coat a new oil seal lip with MP grease.
(b) Using SST(s) and a hammer, install the oil seal.
SST 09554–14010, 09950–70010 (09951–07200)
Drive in depth: 1.9 ± 0.3 mm (0.075 ± 0.012 in.)

NOTICE:
Be careful not to damage the oil seal lip.

10. INSTALL TRANSMISSION CASE OIL SEAL

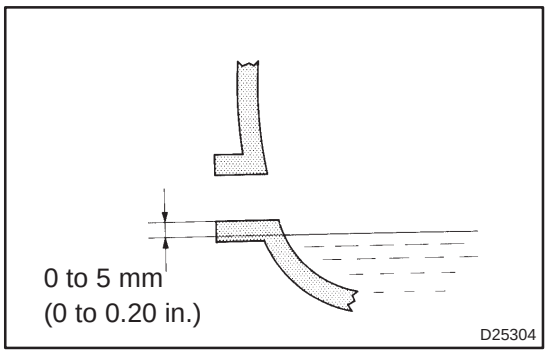
(a) Coat a new oil seal lip with MP grease.

(b) Using SST(s) and a hammer, install the oil seal.

SST 09554–14010, 09950–70010 (09951–07200)

Drive in depth: 9.9 ± 0.3 mm (0.390 ± 0.012 in.)

NOTICE:



Be careful not to damage the oil seal lip.

11. INSTALL FRONT DRIVE SHAFT ASSY LH (See page 30–6)

12. INSTALL FRONT DRIVE SHAFT ASSY RH (See page 30–6)

13. INSTALL FRONT WHEELS

Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

14. ADD MANUAL TRANSAXLE OIL

Oil grade: API GL–4 or GL–5

Viscosity: SAE 75 W–90

Capacity: 1.9 liters (2.0 US qts, 1.7 lmp. qts)

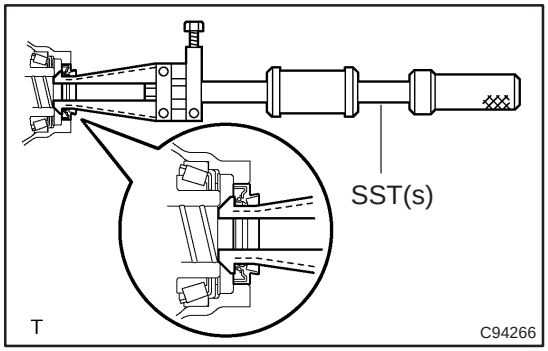
Torque: 39 N·m (400 kgf·cm, 29 ft·lbf)

15. INSPECT MANUAL TRANSAXLE OIL (See page 41–2)

16. INSPECT FRONT WHEEL ALIGNMENT (See page 26–6)

17. CHECK ABS SPEED SENSOR SIGNAL

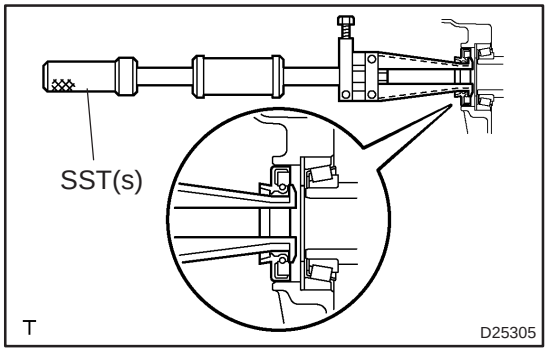
(a) w/ VSC (See page 05–756)



(b) w/o VSC (See page 05–699)

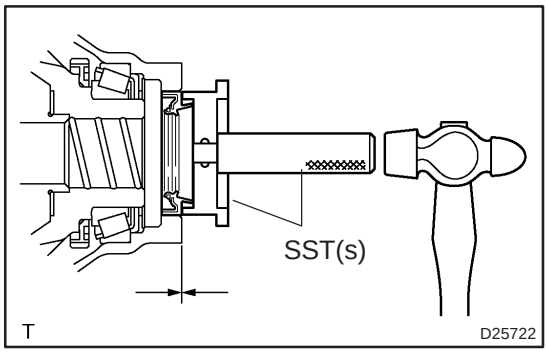
FRONT DIFFERENTIAL OIL SEAL (E354/E357)

41046–12



REPLACEMENT

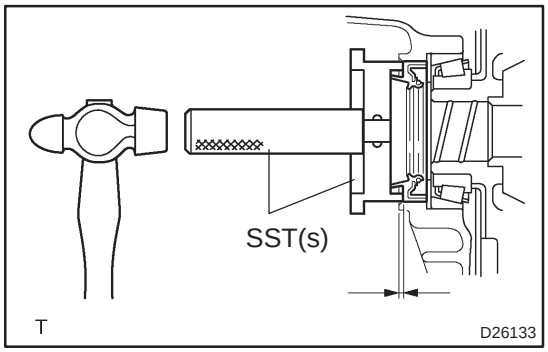
1. **DRAIN MANUAL TRANSAXLE OIL**
   Torque: 49 N·m (500 kgf·cm, 36 ft·lbf)
2. **REMOVE FRONT WHEELS**
3. **REMOVE ENGINE UNDER COVER LH**
4. **REMOVE ENGINE UNDER COVER RH**
5. **REMOVE FRONT DRIVE SHAFT ASSY LH (See page 30–6)**
   SST 09520–01010, 09520–24010 (09520–32040)
6. **REMOVE FRONT DRIVE SHAFT ASSY RH (See page 30–6)**
   SST 09520–01010, 09520–24010 (09520–32040)



7. **REMOVE FRONT TRANSAXLE CASE COVER OIL SEAL**

(a) Using SST(s), remove the oil seal.
SST 09308–00010

8. **REMOVE TRANSMISSION CASE OIL SEAL**



(a) Using SST(s), remove the oil seal.
SST 09308–00010

9. **INSTALL FRONT TRANSAXLE CASE COVER OIL SEAL**

(a) Coat a new oil seal lip with MP grease.
(b) Using SST(s) and a hammer, install the oil seal.
SST 09608–10010, 09950–70010 (09951–07200)
Drive in depth: 0 ± 0.5 mm (0 ± 0.020 in.)

NOTICE:
Be careful not to damage the oil seal lip.

10. INSTALL TRANSMISSION CASE OIL SEAL

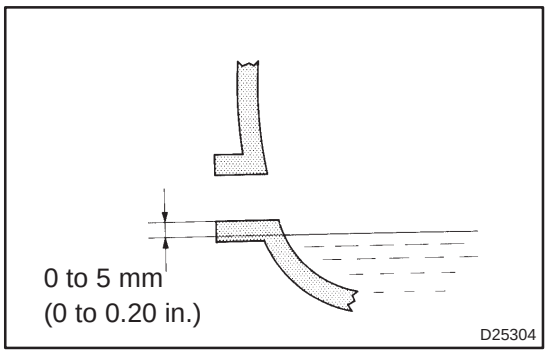
(a) Coat a new oil seal lip with MP grease.

(b) Using SST(s) and a hammer, install the oil seal.

SST 09608–32010, 09950–70010 (09951–07200)

Drive in depth: 3.5 ± 0.5 mm (0.138 ± 0.020 in.)

NOTICE:



Be careful not to damage the oil seal lip.

11. INSTALL FRONT DRIVE SHAFT ASSY LH (See page 30–6)

12. INSTALL FRONT DRIVE SHAFT ASSY RH (See page 30–6)

13. INSTALL FRONT WHEELS

Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

14. ADD MANUAL TRANSAXLE OIL

Oil grade: API GL–4 or GL–5

Viscosity: SAE 75 W–90

Capacity: 2.5 liters (2.6 US qts, 2.2 Imp. qts)

Torque: 49 N·m (500 kgf·cm, 36 ft·lbf)

15. INSPECT MANUAL TRANSAXLE OIL (See page 41–2)

16. INSPECT FRONT WHEEL ALIGNMENT (See page 26–6)

17. CHECK ABS SPEED SENSOR SIGNAL

(a) w/ VSC (See page 05–756)

(b) w/o VSC (See page 05–699)

TRANSMISSION CONTROL CABLE ASSY (MTM)

4105R–02

REPLACEMENT

HINT:

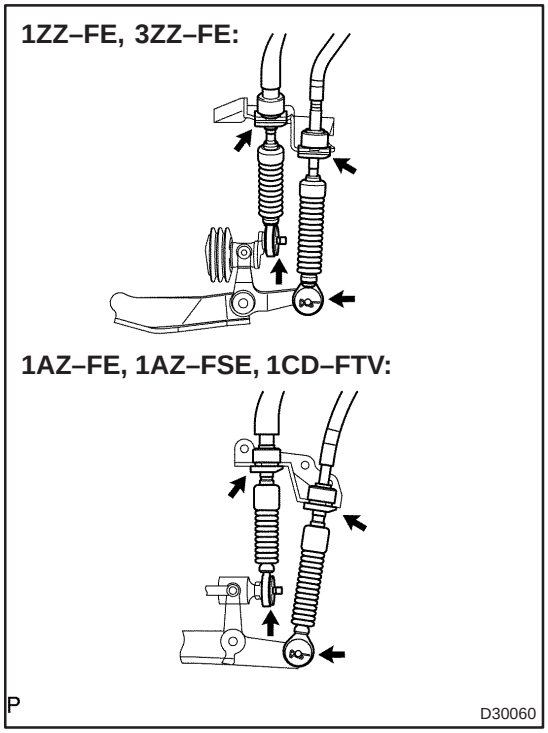
COMPONENTS: See page 41–10

1. REMOVE AIR CONDITIONER UNIT ASSY (See page 55–55)

HINT:

Refer to the instructions for removal of the instrument panel sub–assy lower.

2. REMOVE EXHAUST PIPE ASSY

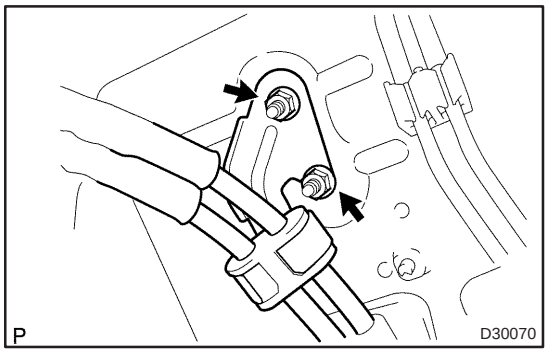


(a) 1ZZ–FE, 3ZZ–FE Engine (See page 15–2)

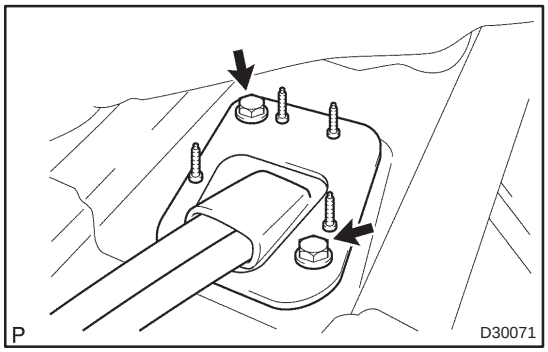
(b) 1AZ–FE, 1AZ–FSE Engine (See page 15–7)

(c) 1CD–FTV Engine (See page 15–10)

3. REMOVE FRONT FLOOR HEAT INSULATOR NO.1 (GASOLINE ENGINE TYPE)

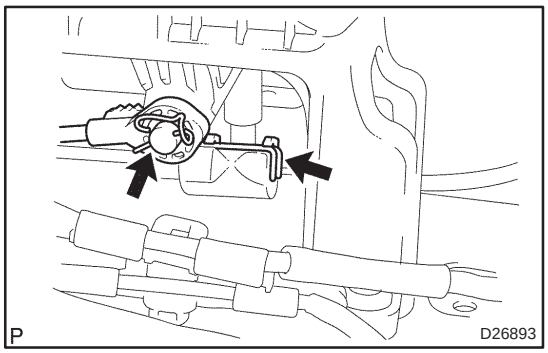


(a) Remove the 3 nuts and heat insulator No.1.

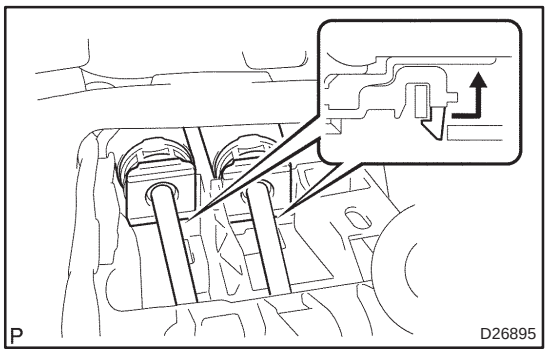


4. REMOVE TRANSMISSION CONTROL CABLE ASSY

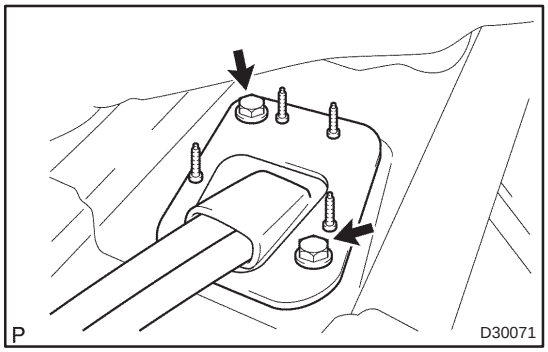
(a) Remove the 2 clips, separate the 2 cables from the transaxle.



(b) Remove the 2 clips, separate the 2 cables from the bracket.



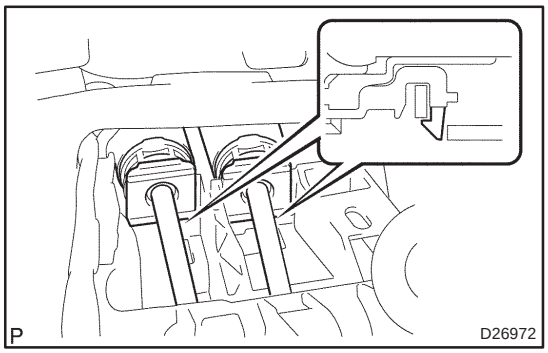
(c) Remove the 2 nuts, separate the control cable assy.



(d) Remove the 2 bolts, separate the control cable assy.

(e) Remove the 2 clips, separate the cable ends of the control cable assy.

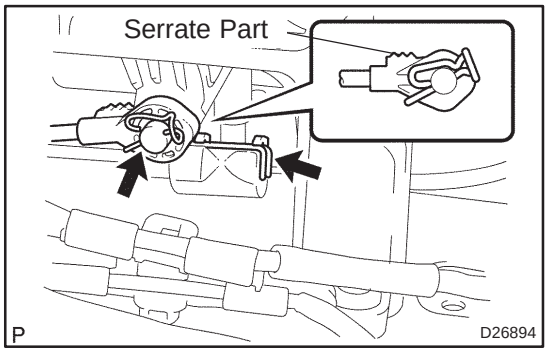
(f) Release the claws, remove the control cable assy.



5. INSTALL TRANSMISSION CONTROL CABLE ASSY

(a) Put the control cable assy through the floor hole.

(b) Install the control cable assy with the 2 bolts.

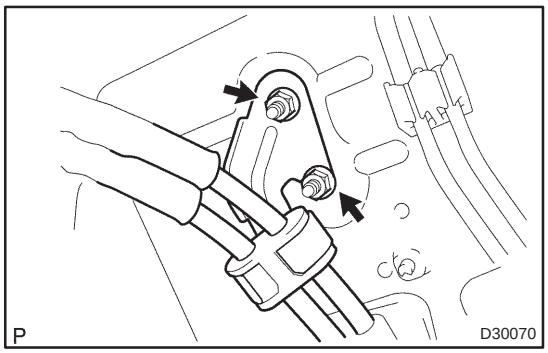


Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)

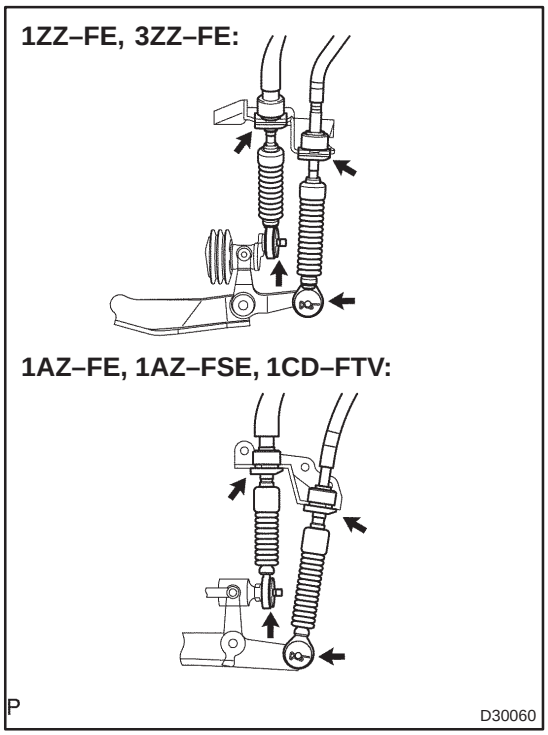
(c) Connect the control cable assy to the shift lever assy.

NOTICE:

Make sure that the claws are firmly engaged.



(d) Connect the end of the select cable to the shift lever assy and install the clip.



NOTICE:

- **The serrate part of the select cable point should face upward when the select cable point is connected.**
- **The clip should be inserted to the direction as shown in the illustration.**

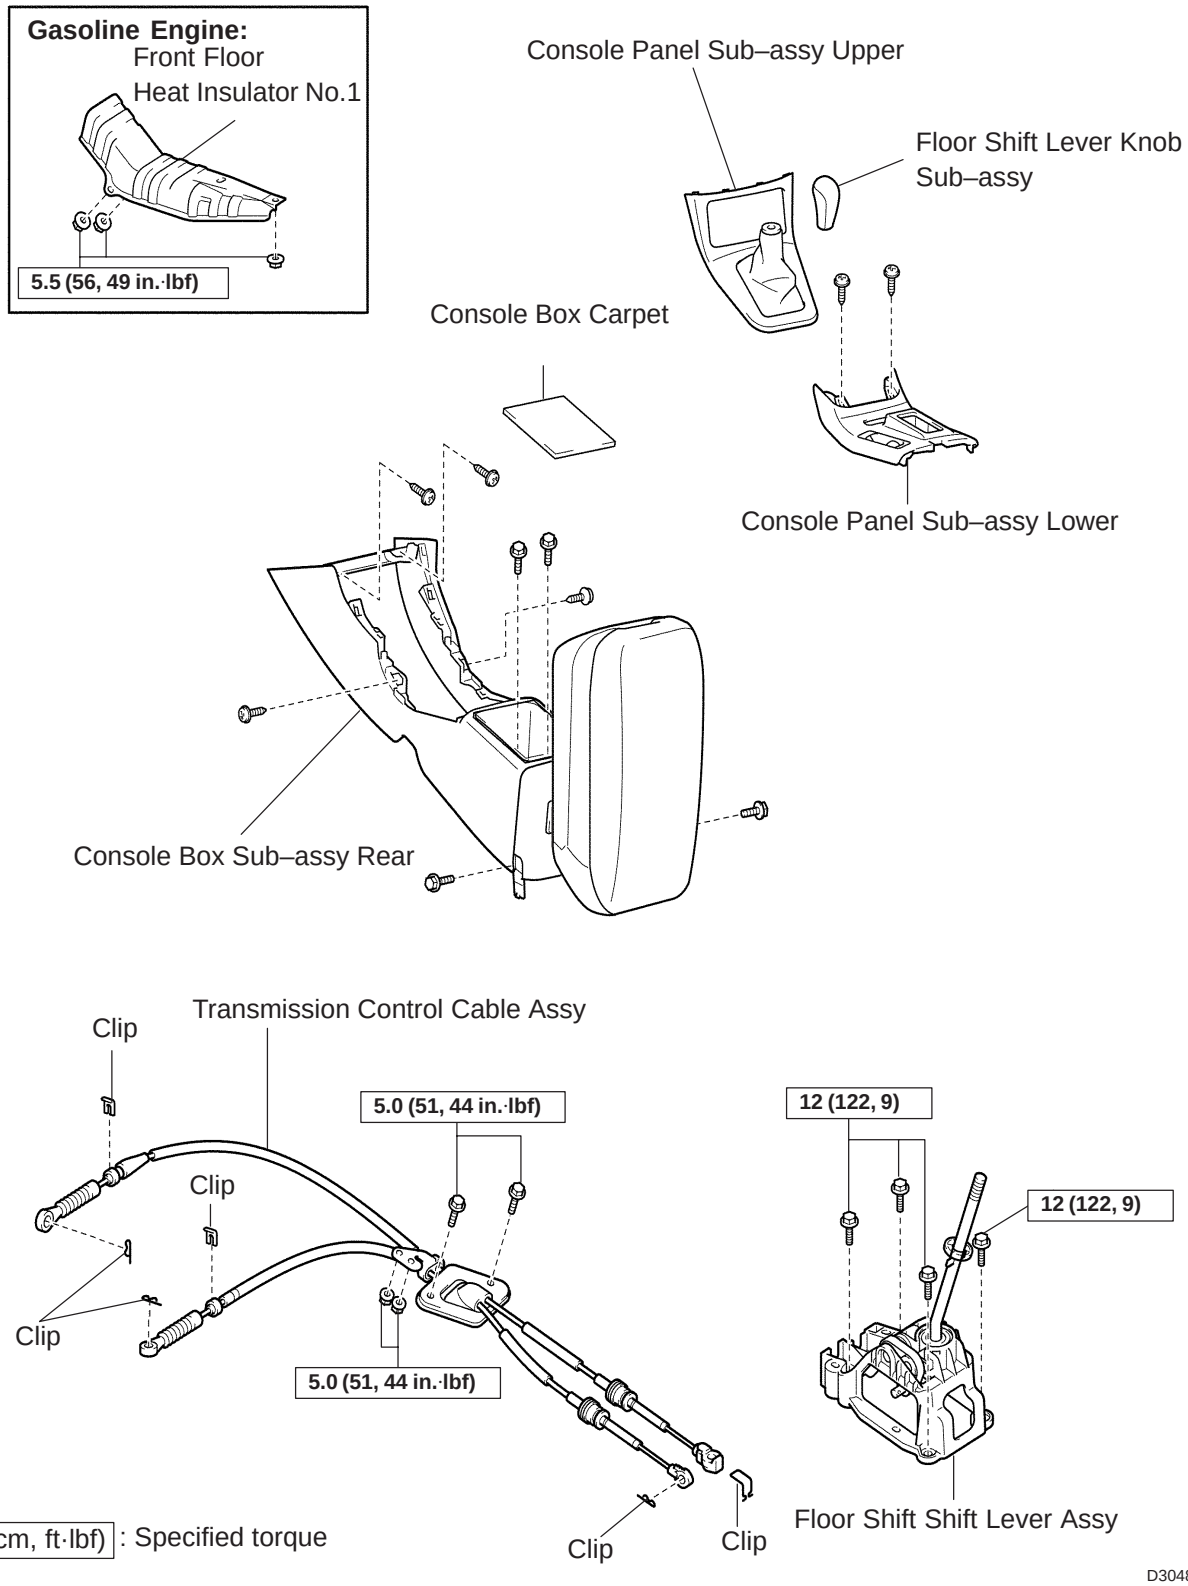
(e) Connect the end of the shift cable to the shift lever assy.

(f) Connect the control cable assy with the 2 nuts.
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)

(g) Connect the 2 cable ends, install the 2 clips.
(h) Install the 2 clips to the control cable bracket.

6. INSTALL FRONT FLOOR HEAT INSULATOR NO.1 (GASOLINE ENGINE TYPE)

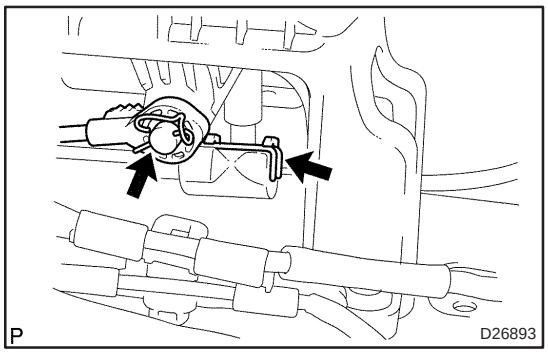
(a) Install the heat insulator No.1 with the 3 nuts.
Torque: 5.5 N·m (56 kgf·cm, 49 in.·lbf)



7. INSTALL EXHAUST PIPE ASSY

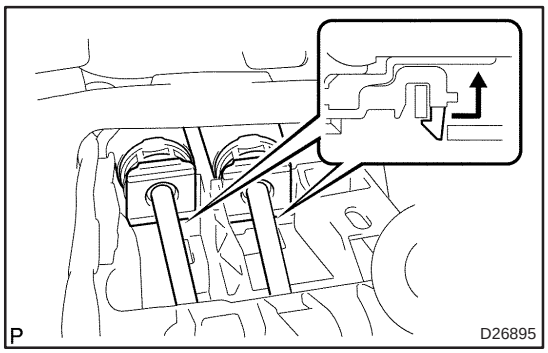
(a) 1ZZ–FE, 3ZZ–FE Engine (See page 15–2)
(b) 1AZ–FE, 1AZ–FSE Engine (See page 15–7)
(c) 1CD–FTV Engine (See page 15–10)

FLOOR SHIFT SHIFT LEVER ASSY (MTM)



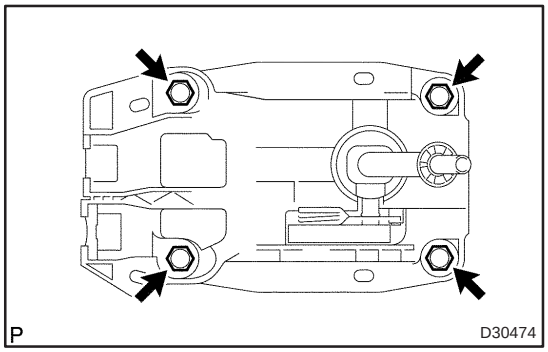
4105U–03

COMPONENTS



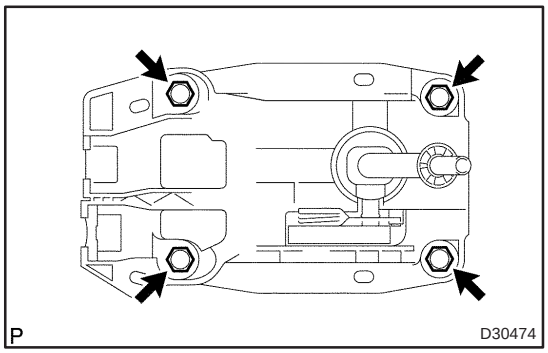
REPLACEMENT

1. REMOVE FLOOR SHIFT SHIFT LEVER KNOB SUB–ASSY (See page 71–11)
2. REMOVE CONSOLE PANEL UPPER (See page 71–11)
3. REMOVE CONSOLE PANEL SUB–ASSY LOWER (See page 71–11)
4. REMOVE CONSOLE BOX ASSY REAR (See page 71–11)

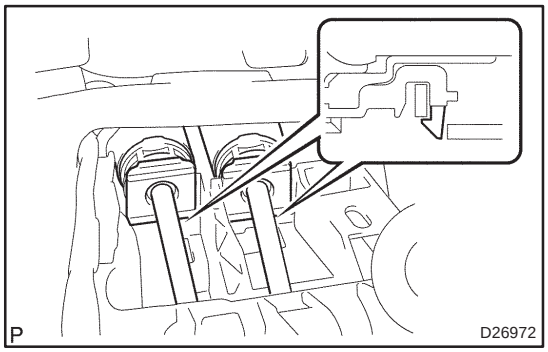


5. SEPARATE TRANSMISSION CONTROL CABLE ASSY

(a) Remove the 2 clips, separate the cable ends of the control cable assy.



(b) Release the claws, separate the control cable assy.

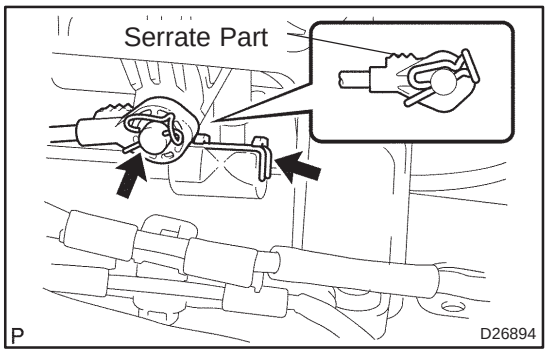


6. REMOVE FLOOR SHIFT SHIFT LEVER ASSY

(a) Remove the 4 bolts and shift lever assy.

7. INSTALL FLOOR SHIFT SHIFT LEVER ASSY

(a) Install the shift lever assy with the 4 bolts.
Torque: 12 N·m (122 kgf·cm, 9 ft·lbf)



8. CONNECT TRANSMISSION CONTROL CABLE ASSY

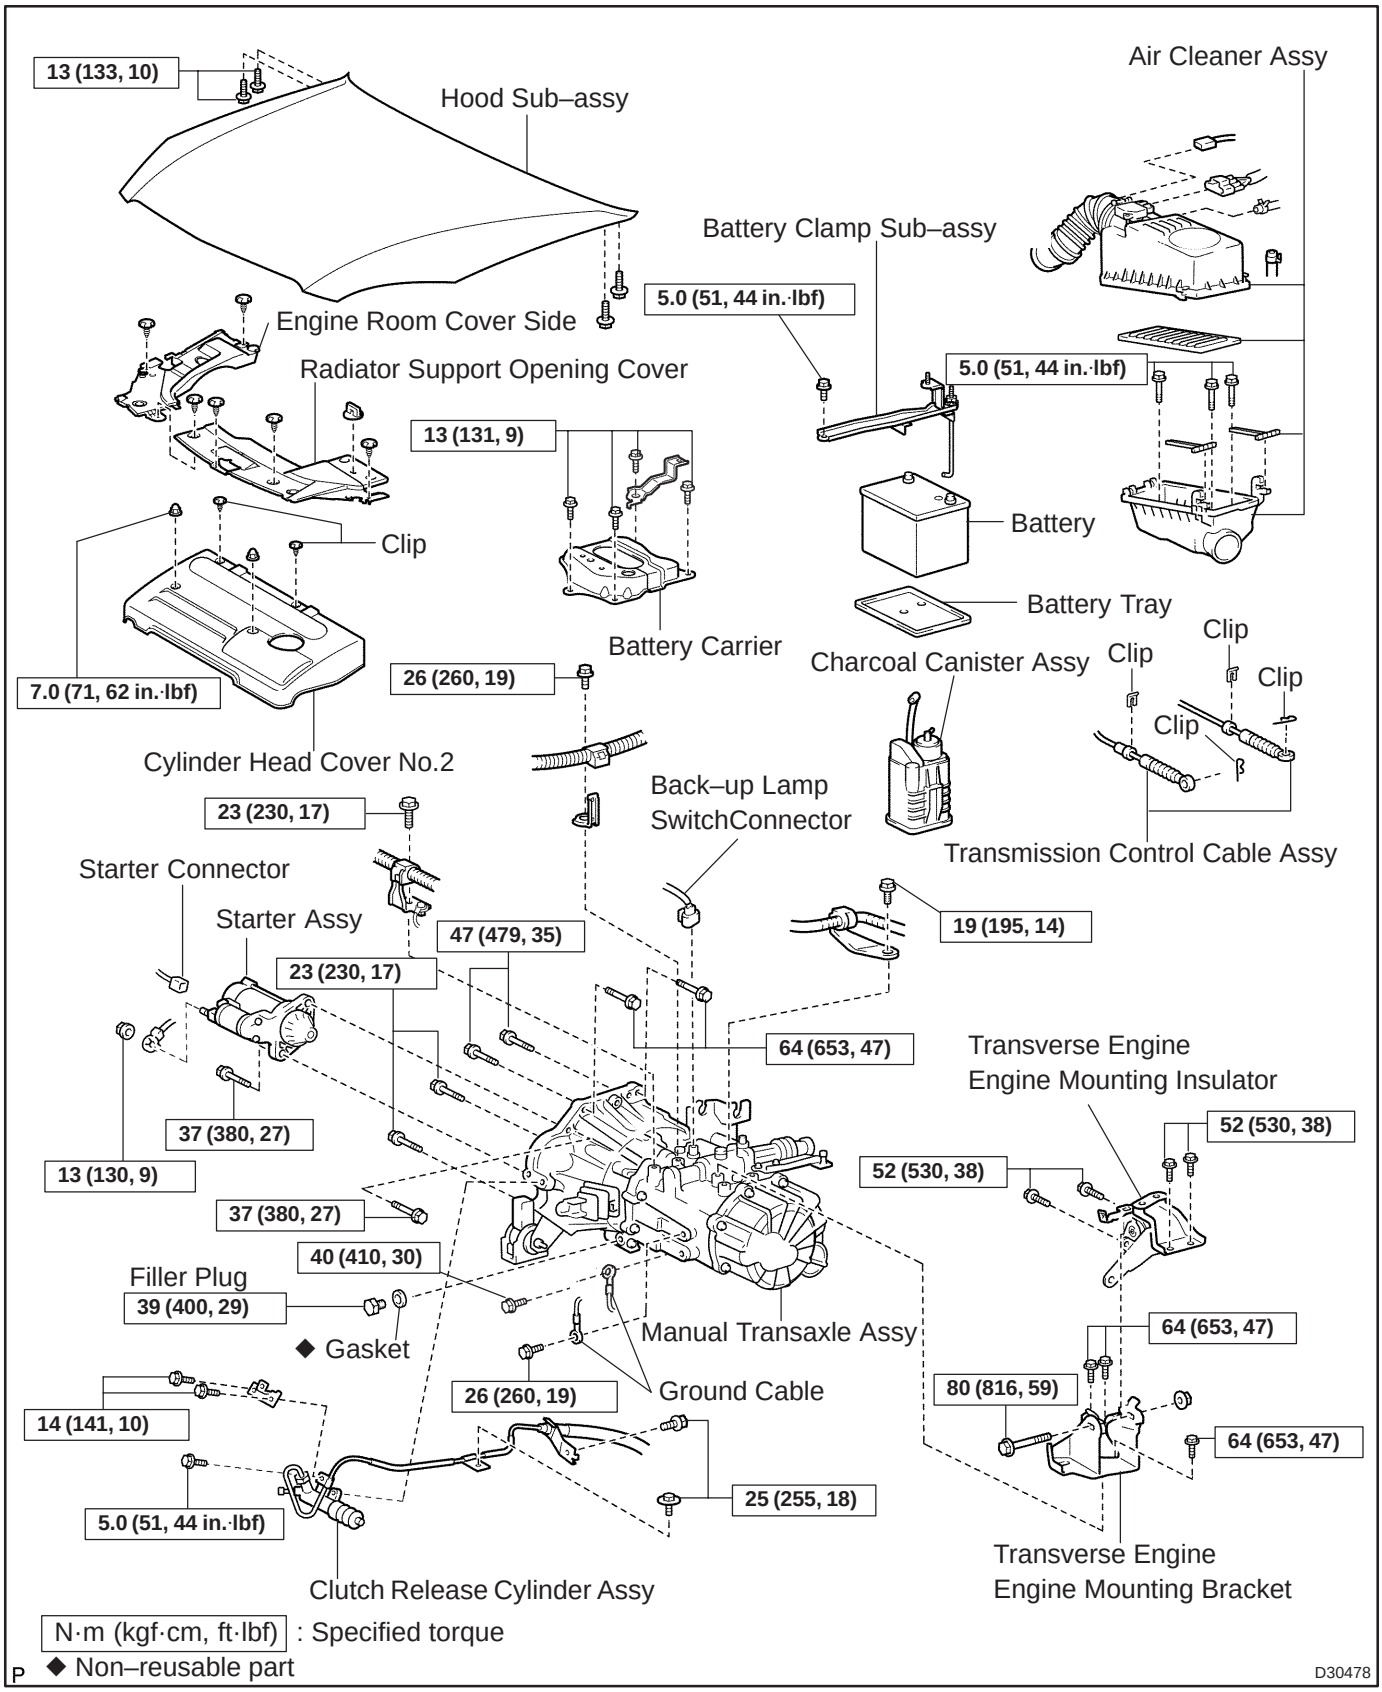
(a) Connect the control cable assy to the shift lever assy.

NOTICE:

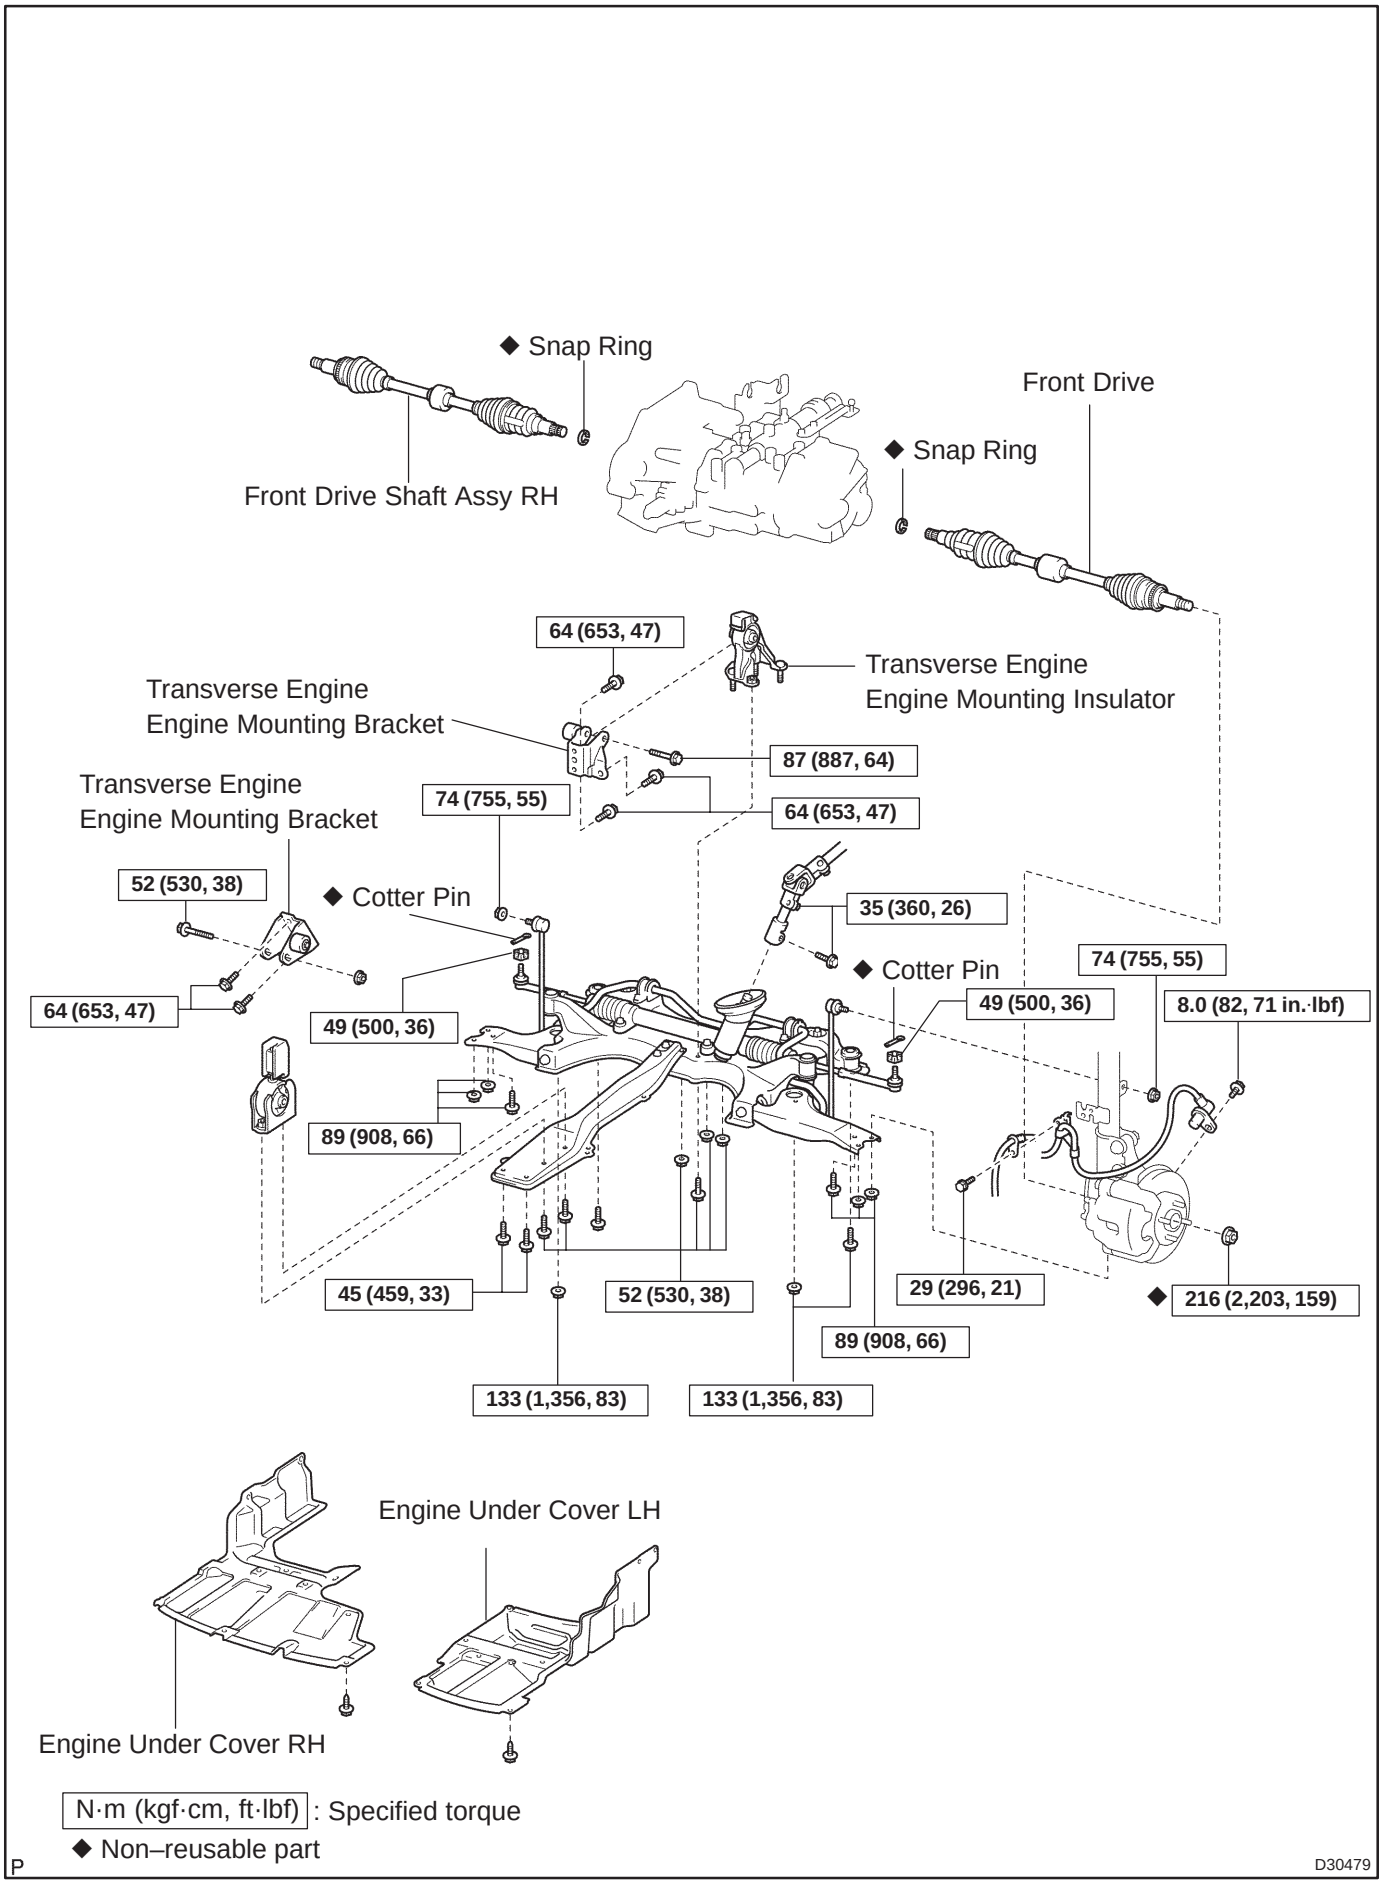
Make sure that the claws are firmly engaged.

(b) Connect the end of the select cable to the shift lever assy, install the clip.

NOTICE:



- **The serrate part of the select cable point should face upward when the select cable point is connected.**
- **The clip should be inserted to the direction as shown in the illustration.**



(c) Connect the end of the shift cable to the shift lever assy.

MANUAL TRANSAXLE ASSY (1ZZ–FE/3ZZ–FE)

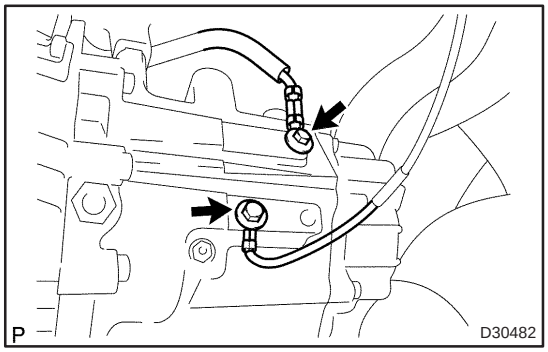
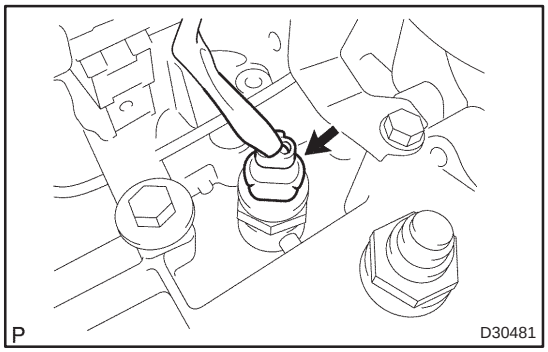
REPLACEMENT

1. INSPECT CENTER FRONT WHEEL
2. REMOVE COLUMN HOLE COVER SILENCER SHEET (See page 50–9)
3. SEPARATE STEERING INTERMEDIATE SHAFT ASSY NO.2 (See page 50–9)
4. REMOVE STEERING COLUMN HOLE COVER SUB–ASSY NO.1 (See page 50–9)
5. REMOVE STEERING INTERMEDIATE SHAFT (See page 50–9)
6. REMOVE FRONT WHEELS
7. REMOVE ENGINE UNDER COVER LH
8. REMOVE ENGINE UNDER COVER RH
9. DRAIN TRANSAXLE OIL
   Torque: 39 N·m (400 kgf·cm, 29 ft·lbf)
10. REMOVE HOOD SUB–ASSY
11. REMOVE RADIATOR SUPPORT OPENING COVER
12. REMOVE ENGINE ROOM COVER SIDE
13. REMOVE CYLINDER HEAD COVER NO.2
14. REMOVE AIR CLEANER ASSY
15. REMOVE BATTERY CLAMP SUB–ASSY
16. REMOVE BATTERY
17. REMOVE BATTERY TRAY



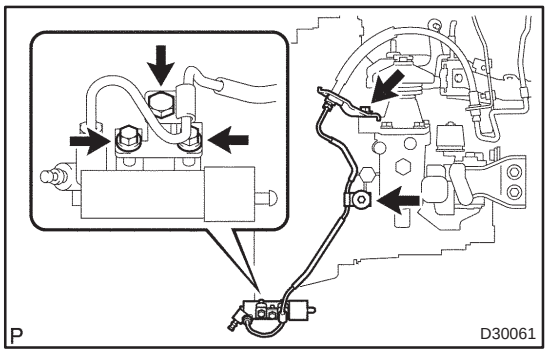
18. REMOVE BATTERY CARRIER

(a) Remove the 4 bolts and battery carrier.



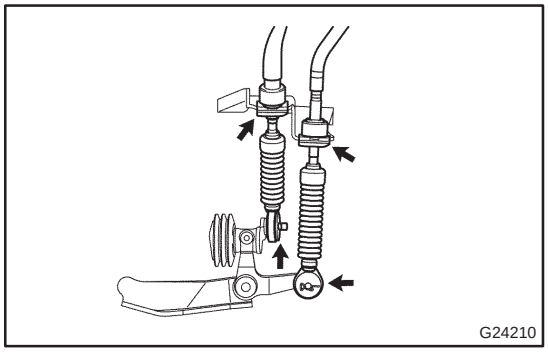
19. DISCONNECT WIRE HARNESS

(a) Remove the 3 bolts, disconnect the wire harness clamps.



(b) Remove the bolt, disconnect the ground cable.

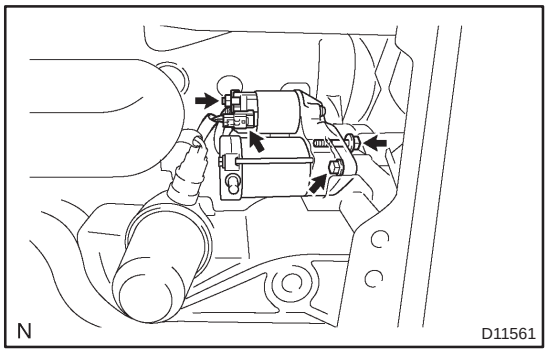
20. DISCONNECT CONNECTOR



(a) Disconnect the back–up lamp switch connector.

21. SEPARATE CLUTCH RELEASE CYLINDER ASSY

(a) Remove the 5 bolts, separate the release cylinder assy with clutch piping from the transaxle.



22. SEPARATE CHARCOAL CANISTER ASSY

23. SEPARATE TRANSMISSION CONTROL CABLE ASSY

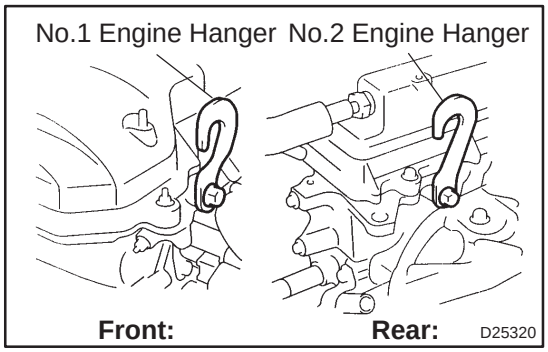
(a) Remove the 2 clips, disconnect the 2 cables from the transaxle.

(b) Remove the 2 clips, disconnect the 2 cables from the control cable bracket.

24. REMOVE STARTER ASSY

(a) Remove the nut and disconnect the starter wire.

(b) Disconnect the connector.



(c) Remove the 2 bolts and starter assy.

25. REMOVE FRONT DRIVE SHAFT ASSY LH(See page 30–6)

SST 09520–01010, 09520–24010 (09520–32040)

26. REMOVE FRONT DRIVE SHAFT ASSY RH (See page 30–6)

SST 09520–01010, 09520–24010 (09520–32040)

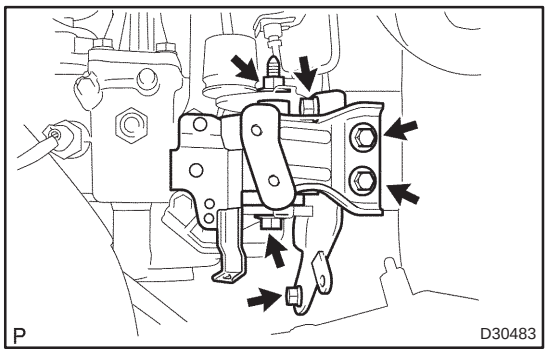
27. SUSPEND ENGINE ASSY

(a) Remove the 2 PCV hoses.

(b) Install the 2 hangers in the correct direction.

No.1 engine hanger: 12281–22021
No.2 engine hanger: 12281–15040
Bolt: 91512–B1016
Torque: 38 N·m (387 kgf·cm, 28 ft·lbf)

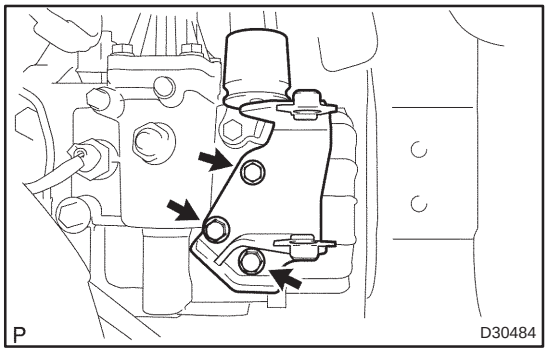
(c) Attach the engine chain hoist to the hangers.



CAUTION:
Do not attempt to hang the engine by hooking the chain to any other part.

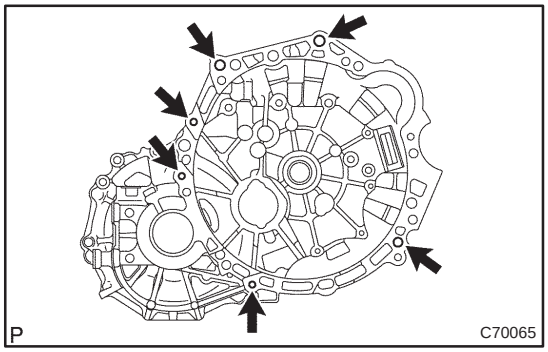
28. REMOVE HEIGHT CONTROL SENSOR SUB–ASSY FR RH (W/ DISCHARGE HEAD LAMP) (See page 65–28)

29. REMOVE FRONT SUSPENSION CROSSMEMBER SUB–ASSY(See page 26–26)



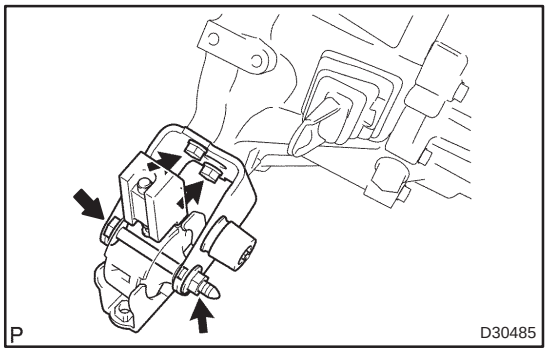
30. SUPPORT MANUAL TRANSAXLE ASSY

(a) Support the transaxle with a transmission jack.



31. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR

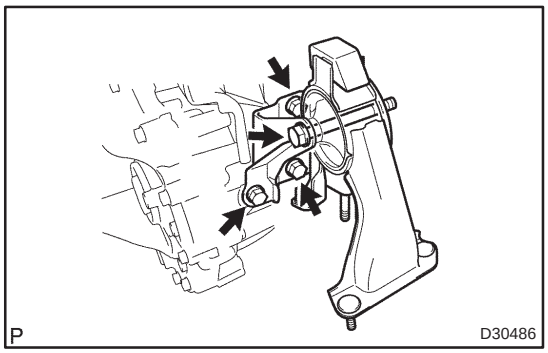
(a) Remove the 5 bolts, nut and engine mounting insulator LH from the body.



32. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Remove the 3 bolts and engine mounting bracket LH from the transaxle.

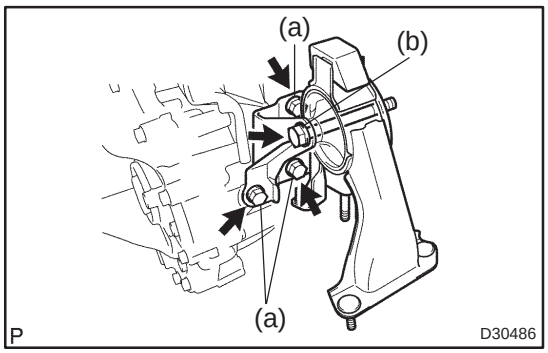
33. REMOVE MANUAL TRANSAXLE ASSY



(a) Remove the 6 bolts and transaxle from the engine.

34. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

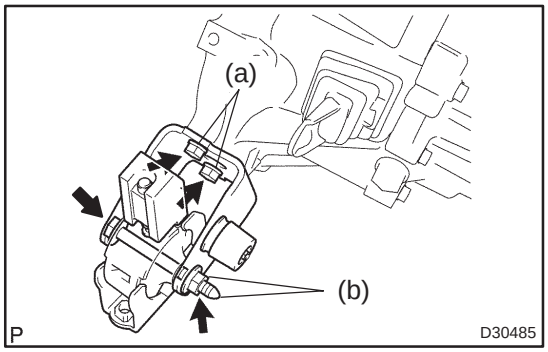
(a) Remove the bolt, nut and engine mounting insulator FR from the engine mounting bracket FR.



(b) Remove the 2 bolts and engine mounting bracket FR from the transaxle.

35. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

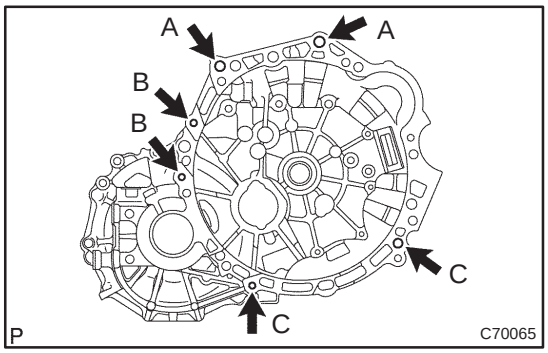
(a) Remove the bolt and engine mounting insulator RR from the engine mounting bracket RR.



(b) Remove the 3 bolts and engine mounting bracket RR from the transaxle.

36. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

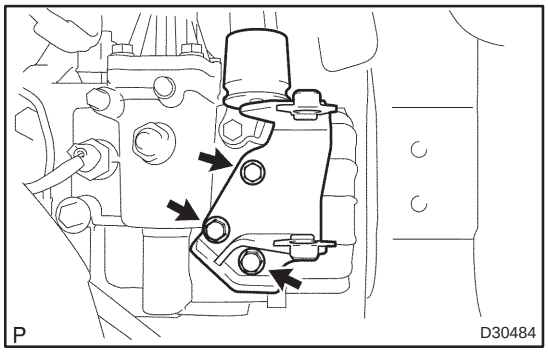
(a) Install the engine mounting bracket RR and 3 bolts to the transaxle.
Torque: 64 N·m (653 kgf·cm, 47 ft·lbf)



(b) Install the engine mounting insulator RR and bolt to the engine mounting bracket RR.
Torque: 87 N·m (887 kgf·cm, 64 ft·lbf)

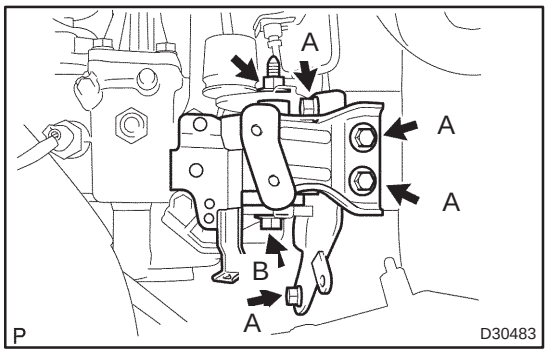
37. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Install the engine mounting bracket FR and 2 bolts to the transaxle.
Torque: 64 N·m (653 kgf·cm, 47 ft·lbf)



(b) Install the engine mounting insulator FR, bolt and nut to the engine mounting bracket FR.
Torque: 52 N·m (530 kgf·cm, 38 ft·lbf)

38. INSTALL MANUAL TRANSAXLE ASSY



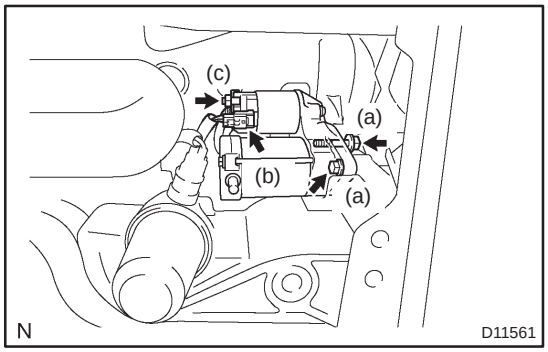
(a) Align the input shaft with the clutch disc and install the transaxle to the engine.

(b) Install the 6 bolts.
Torque:
Bolt A: 64 N·m (653 kgf·cm, 47 ft·lbf)
Bolt B: 47 N·m (479 kgf·cm, 35 ft·lbf)
Bolt C: 23 N·m (230 kgf·cm, 17 ft·lbf)

39. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Install the engine mounting bracket LH to the transaxle with the 3 bolts.
Torque: 64 N·m (653 kgf·cm, 47 ft·lbf)

40. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR



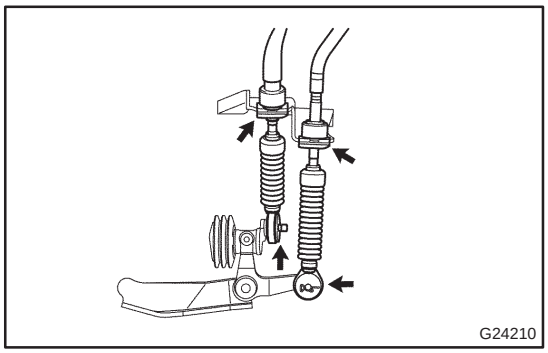
(a) Install the engine mounting insulator LH with the 5 bolts and nut.
Torque:
Bolt A: 52 N·m (530 kgf·cm, 38 ft·lbf)
Bolt B: 80 N·m (816 kgf·cm, 59 ft·lbf)

41. INSTALL FRONT SUSPENSION CROSSMEMBER SUB–ASSY (See page 26–26)
SST 09670–00010

42. INSTALL HEIGHT CONTROL SENSOR SUB–ASSY FR RH (W/ DISCHARGE HEAD LAMP) (See page 65–28)

43. INSTALL FRONT DRIVE SHAFT ASSY LH (See page 30–6)

44. INSTALL FRONT DRIVE SHAFT ASSY RH (See page 30–6)

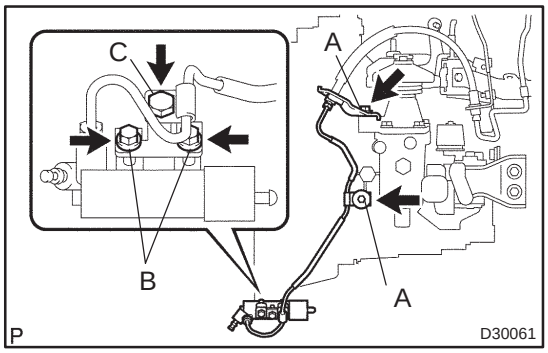


45. INSTALL STARTER ASSY

(a) Install the starter assy and 2 bolts to the transaxle.
Torque: 37 N·m (380 kgf·cm, 27 ft·lbf)

(b) Connect the starter connector.

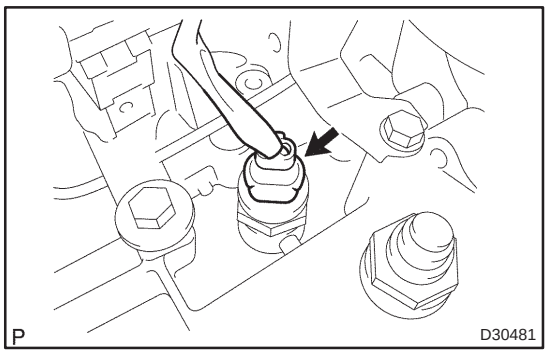
(c) Install the wire and nut to the starter assy.
Torque: 13 N·m (130 kgf·cm, 9 ft·lbf)



46. CONNECT TRANSMISSION CONTROL CABLE ASSY

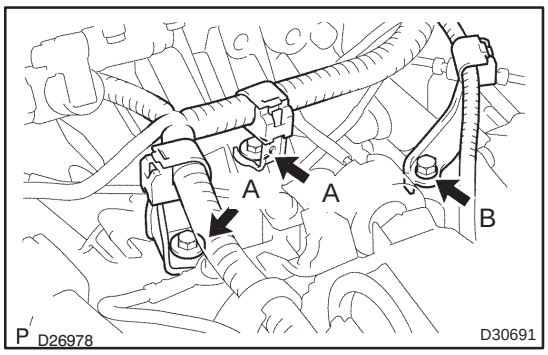
(a) Connect the 2 cable ends, install the 2 clips.

(b) Install the 2 clips to the control cable bracket.



47. CONNECT CHARCOAL CANISTER ASSY

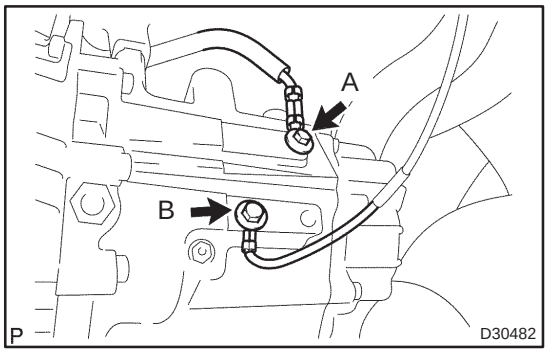
48. CONNECT CLUTCH RELEASE CYLINDER ASSY



(a) Install the release cylinder with the 5 bolts.

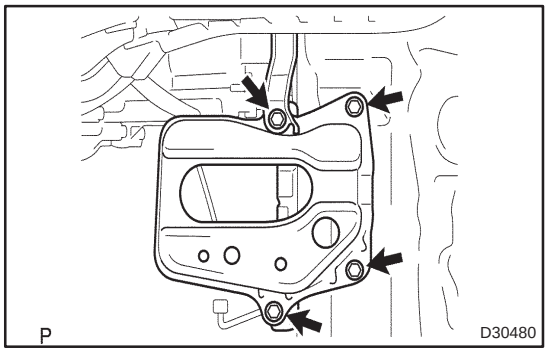
Torque:
Bolt A: 25 N·m (255 kgf·cm, 18 ft·lbf)
Bolt B: 14 N·m (141 kgf·cm, 10 ft·lbf)
Bolt C: 5.0 N·m (51 kgf·cm, 44 in.·lbf)

49. CONNECT CONNECTOR



(a) Connect the back–up lamp switch connector.

50. CONNECT WIRE HARNESS



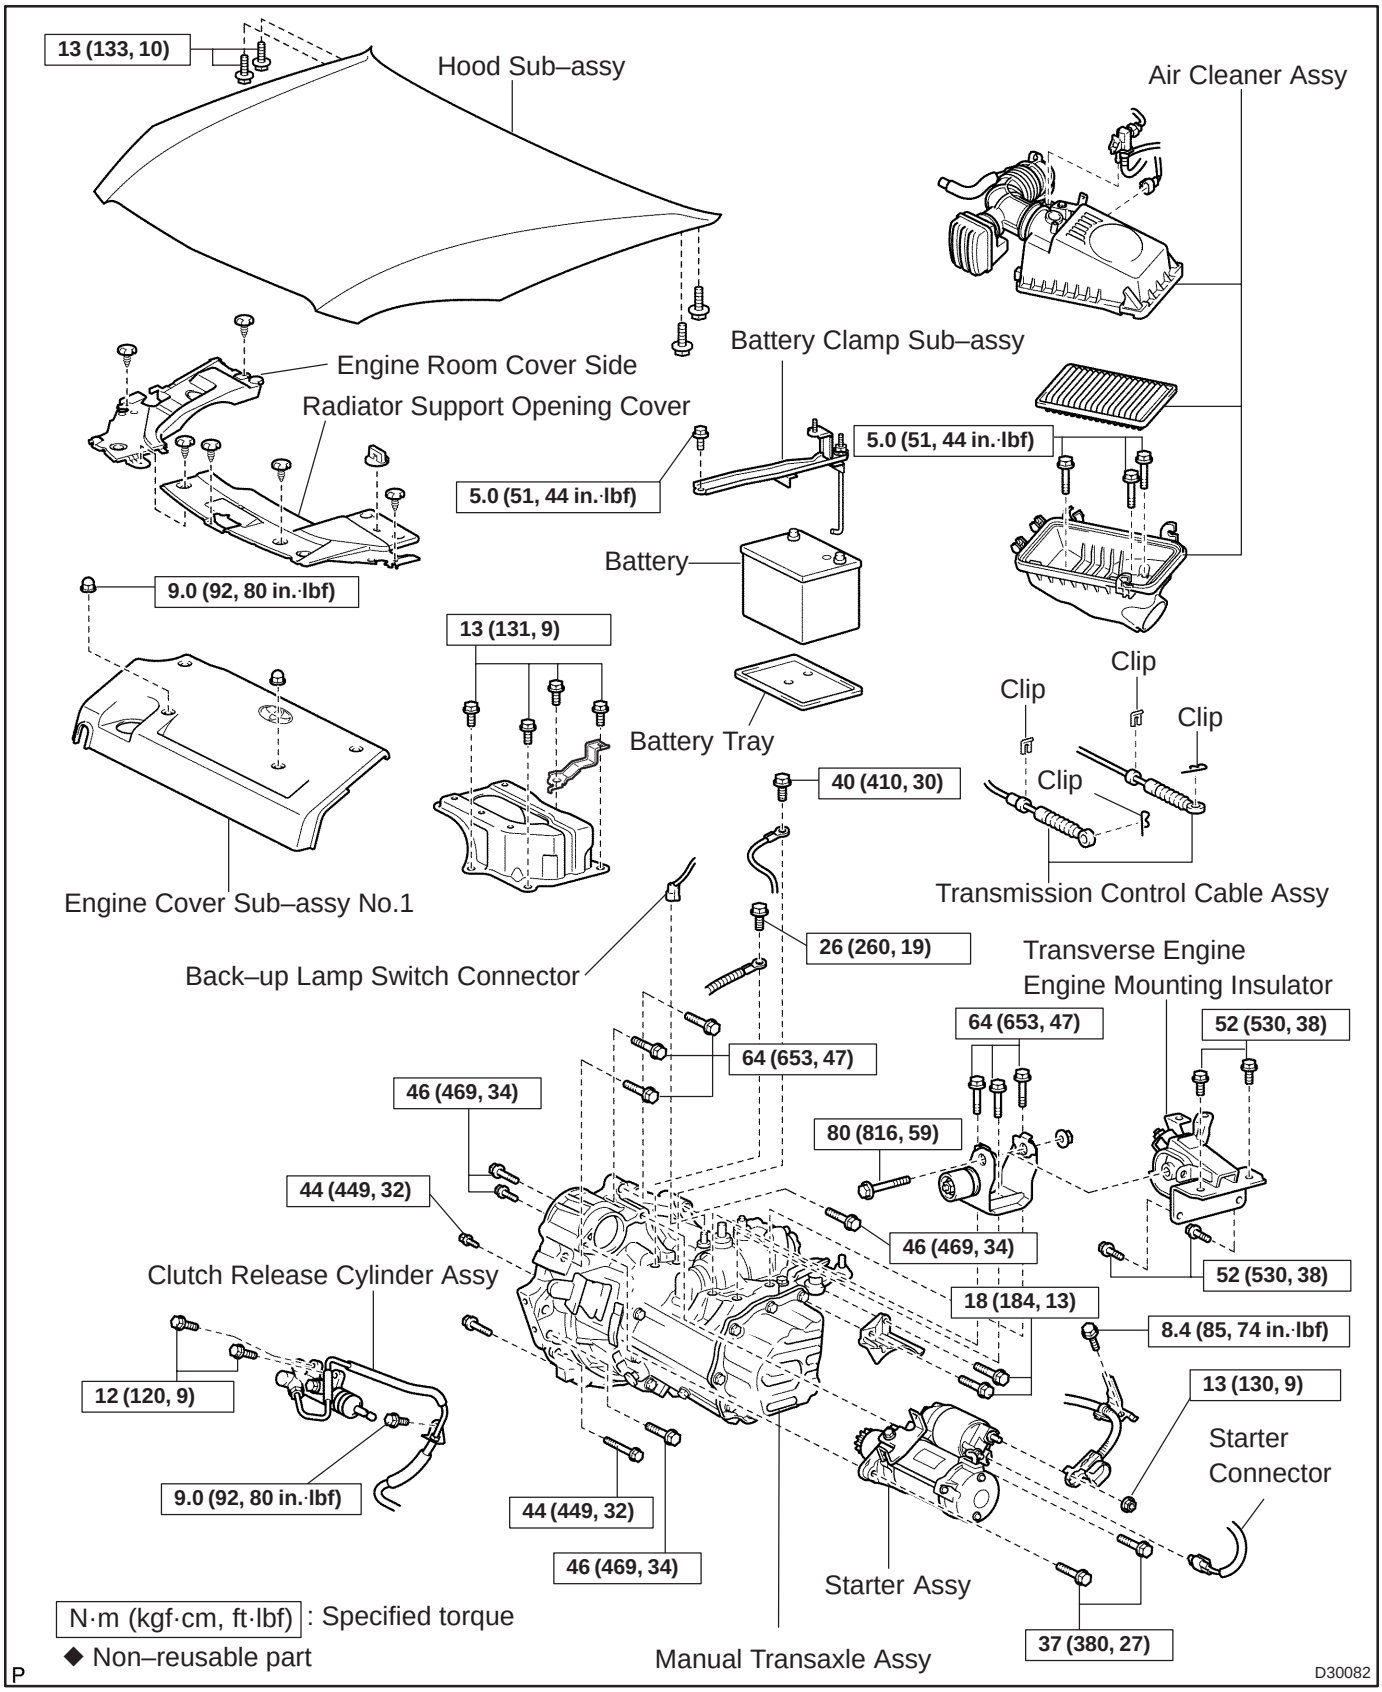
(a) Install the 3 wire harness clamps to the transaxle with the 3 bolts.

Torque:
Bolt A: 26 N·m (260 kgf·cm, 19 ft·lbf)
Bolt B: 19 N·m (195 kgf·cm, 14 ft·lbf)

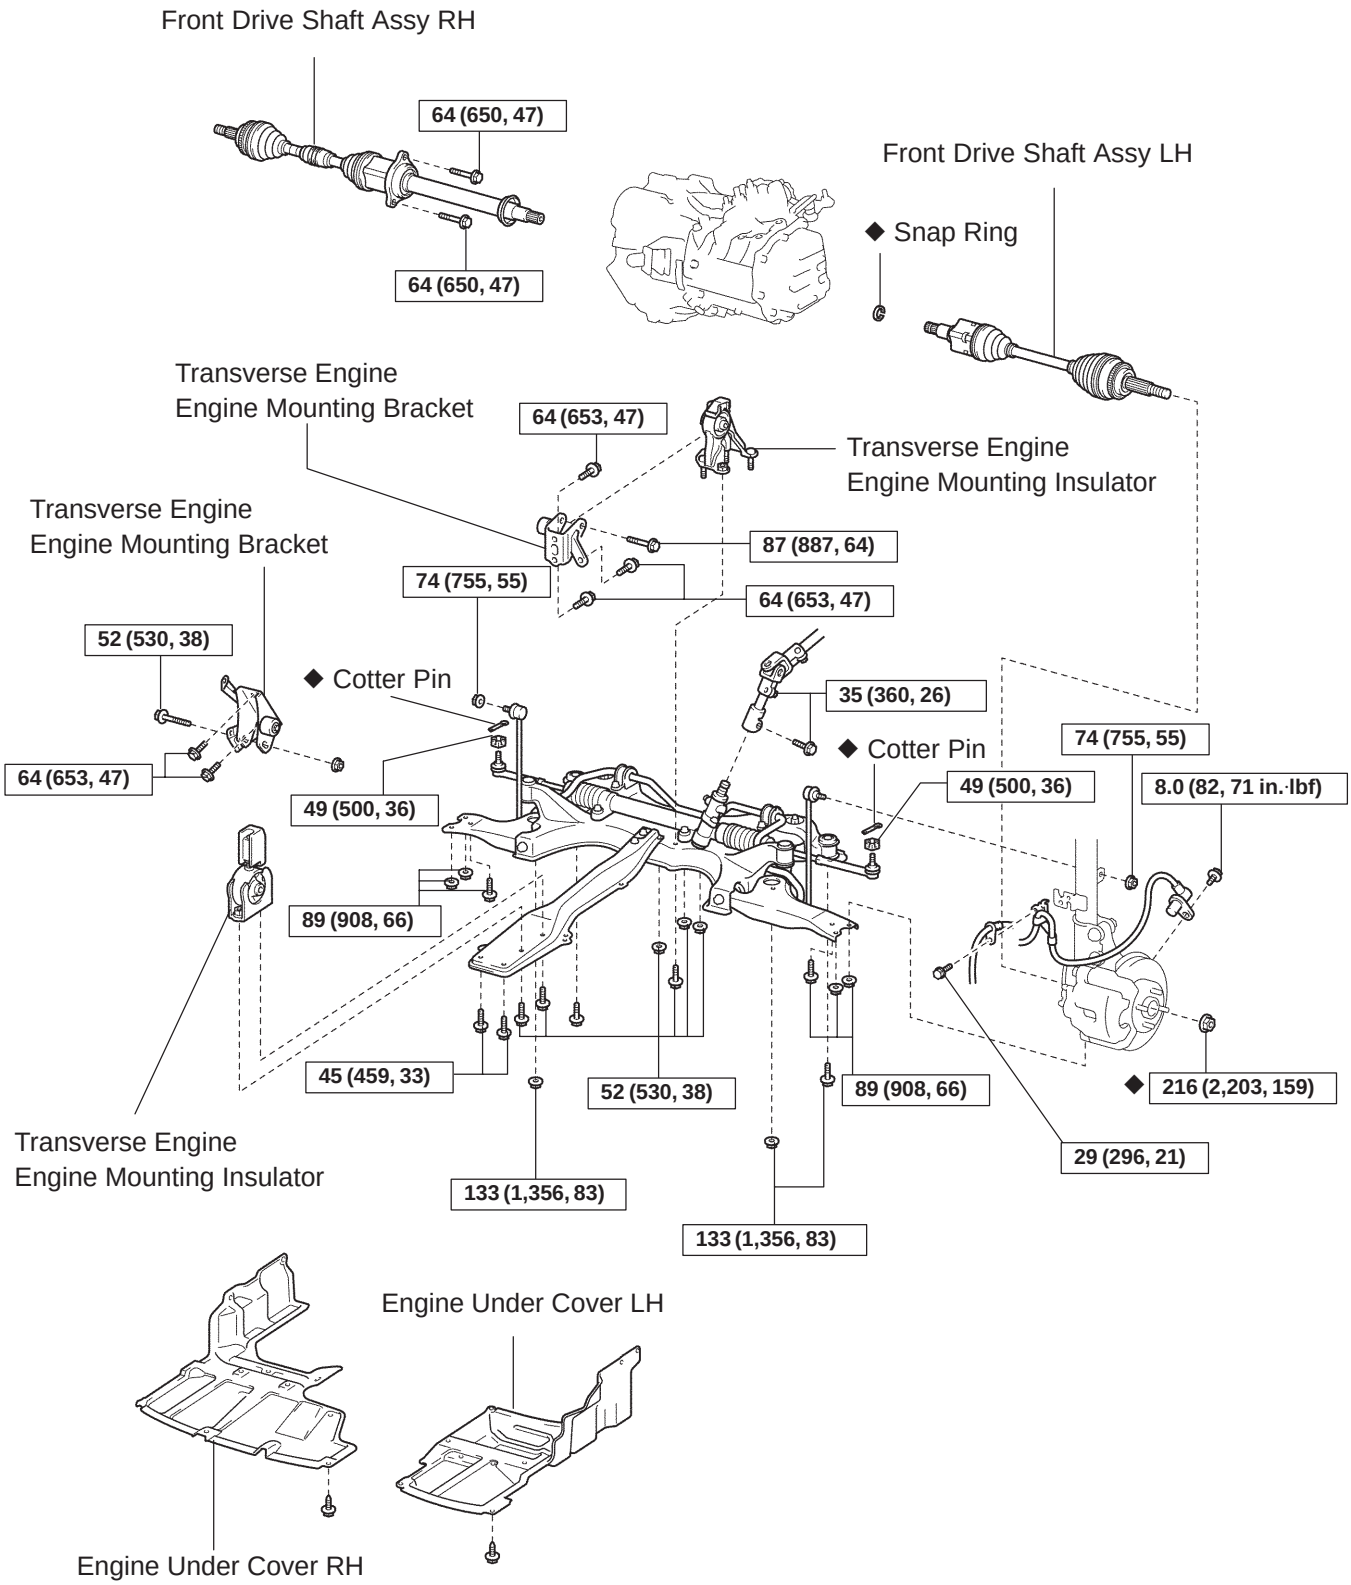
(b) Install the bolt and ground cable as shown in the illustration.

Torque:
Bolt A: 26 N·m (260 kgf·cm, 19 ft·lbf)
Bolt B: 40 N·m (410 kgf·cm, 30 ft·lbf)

51. INSTALL BATTERY CARRIER



(a) Install the battery carrier and 4 bolts.
Torque: 13 N·m (131 kgf·cm, 9 ft·lbf)



52. INSTALL BATTERY TRAY
53. INSTALL BATTERY
54. INSTALL BATTERY CLAMP SUB–ASSY
Torque:
Bolt: 5.0 N·m (51 kgf·cm, 44 in.·lbf)
Nut: 3.5 N·m (36 kgf·cm, 31 in.·lbf)
55. INSTALL AIR CLEANER ASSY
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)
56. INSTALL CYLINDER HEAD COVER NO.2
Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)
57. INSTALL ENGINE ROOM COVER SIDE
58. INSTALL RADIATOR SUPPORT OPENING COVER
59. INSTALL HOOD SUB–ASSY
Torque: 13 N·m (133 kgf·cm, 10 ft·lbf)
60. INSPECT HOOD SUB–ASSY (See page 75–2)
61. ADJUST HOOD SUB–ASSY (See page 75–2)
62. ADD TRANSAXLE OIL (See page 41–3)
63. INSPECT TRANSAXLE OIL (See page 41–2)
64. INSTALL FRONT WHEELS
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)
65. INSTALL STEERING INTERMEDIATE SHAFT (See page 50–9)
66. INSTALL STEERING COLUMN HOLE COVER SUB–ASSY NO.1 (See page 50–9)
67. INSTALL STEERING INTERMEDIATE SHAFT ASSY NO.2 (See page 50–9)
68. INSTALL COLUMN HOLE COVER SILENCER SHEET (See page 50–9)
69. PLACE FRONT WHEELS FACING STRAIGHT AHEAD
70. STEERING WHEEL CENTER POINT
71. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT (See page 26–6)
72. INSTALL ENGINE UNDER COVER LH
73. INSTALL ENGINE UNDER COVER RH
74. CHECK ABS SPEED SENSOR SIGNAL
(a) w/ VSC (See page 05–756)
(b) w/o VSC (See page 05–699)
75. HEADLIGHT AIM ONLY (W/ DISCHARGE HEAD LAMP) (See page 65–19)

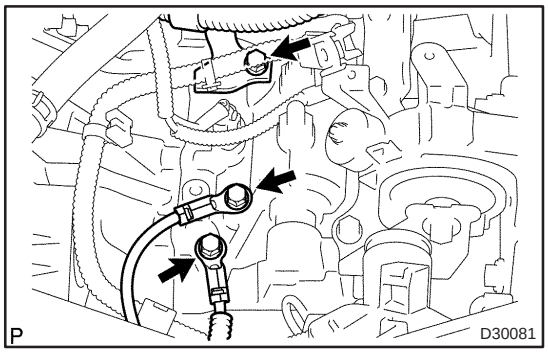
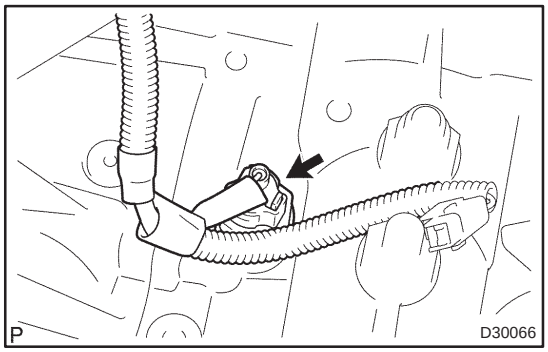
410DU–01



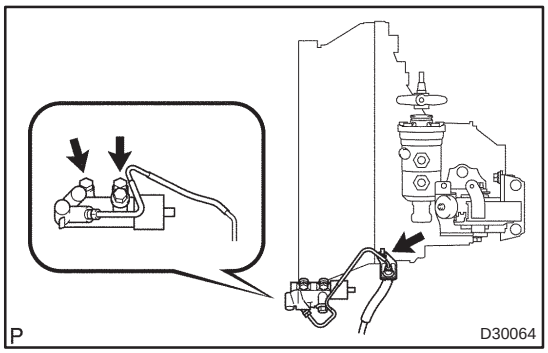
REPLACEMENT

1. INSPECT CENTER FRONT WHEEL
2. REMOVE COLUMN HOLE COVER SILENCER SHEET (See page 50–9)
3. SEPARATE STEERING INTERMEDIATE SHAFT ASSY NO.2 (See page 50–9)
4. REMOVE STEERING COLUMN HOLE COVER SUB–ASSY NO.1 (See page 50–9)
5. REMOVE STEERING INTERMEDIATE SHAFT (See page 50–9)
6. REMOVE FRONT WHEELS
7. REMOVE ENGINE UNDER COVER LH
8. REMOVE ENGINE UNDER COVER RH
9. DRAIN TRANSAXLE OIL
   Torque: 49 N·m (500 kgf·cm, 36 ft·lbf)
10. REMOVE HOOD SUB–ASSY
11. REMOVE RADIATOR SUPPORT OPENING COVER
12. REMOVE ENGINE ROOM COVER SIDE
13. REMOVE ENGINE COVER SUB–ASSY NO.1
14. REMOVE AIR CLEANER ASSY
15. REMOVE BATTERY CLAMP SUB–ASSY
16. REMOVE BATTERY
17. REMOVE BATTERY TRAY

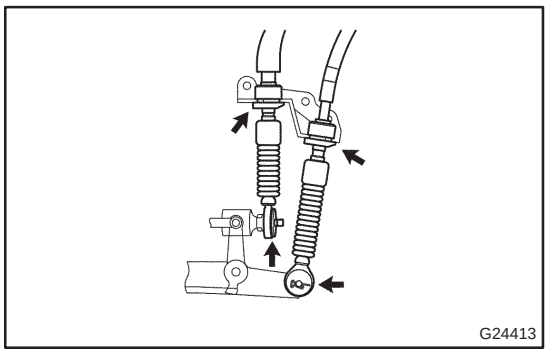


18. REMOVE BATTERY CARRIER
(a) Remove the 4 bolts and battery carrier.

19. REMOVE STARTER ASSY (See page 19–12)



20. SEPARATE WIRE HARNESS
(a) Remove the 3 bolts, and separate the 3 wire harnesses.



21. SEPARATE CONNECTOR

(a) Separate the back–up lamp switch connector.

22. SEPARATE CLUTCH RELEASE CYLINDER ASSY

(a) Remove the 3 bolts and separate the release cylinder.

23. SEPARATE TRANSMISSION CONTROL CABLE ASSY

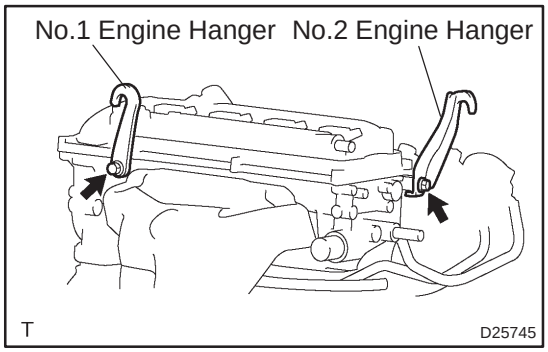
(a) Remove the 2 clips, separate the 2 cables from the transaxle.

(b) Remove the 2 clips, separate the 2 cables from the bracket.

24. REMOVE FRONT DRIVE SHAFT ASSY LH (See page 30–6)

SST 09520–01010, 09520–24010 (09520–32040)

25. REMOVE FRONT DRIVE SHAFT ASSY RH (See page 30–6)



26. REMOVE HEIGHT CONTROL SENSOR SUB–ASSY FR RH (W/ DISCHARGE HEAD LAMP) (See page 65–28)

27. DISCONNECT STEERING GEAR OUTLET RETURN TUBE (See page 51–36)

SST 09023–12700

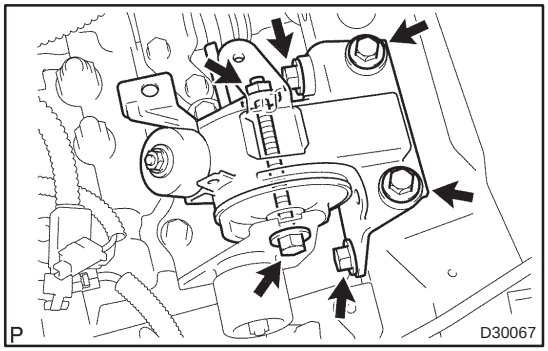
28. DISCONNECT PRESSURE FEED TUBE ASSY (See page 51–36)

SST 09023–12700

29. SUSPEND ENGINE ASSY

(a) Install the No.1 and No.2 engine hangers in the correct direction.

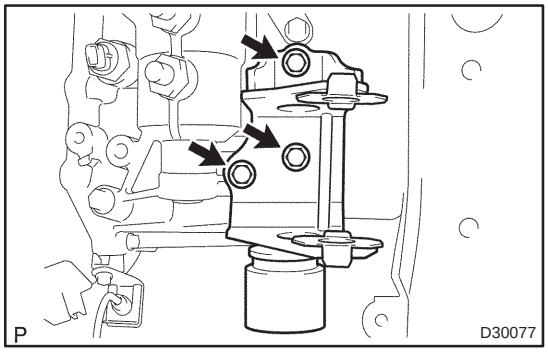
Parts No.:
No. 1 engine hanger: 12281–28010
No. 2 engine hanger: 12282–28010
Bolt: 91512–61020
Torque: 38 N·m (387 kgf·cm, 28 ft·lbf)



(b) Attach the engine chain hoist to the engine hanger.

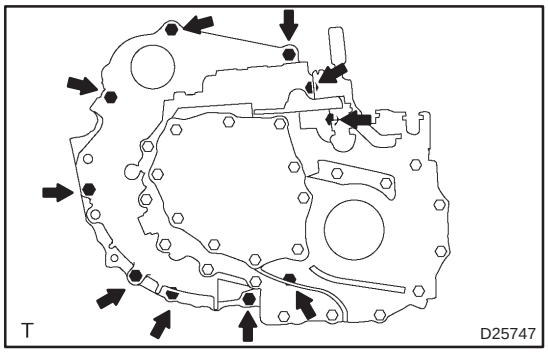
CAUTION:
Do not attempt to hang the engine by hooking the chain to any other part.

30. REMOVE FRONT SUSPENSION CROSSMEMBER SUB–ASSY (See page 26–26)



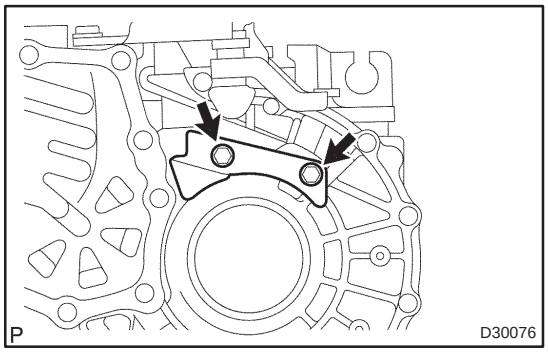
31. SUPPORT MANUAL TRANSAXLE ASSY

(a) Support the manual transaxle with a transmission jack.



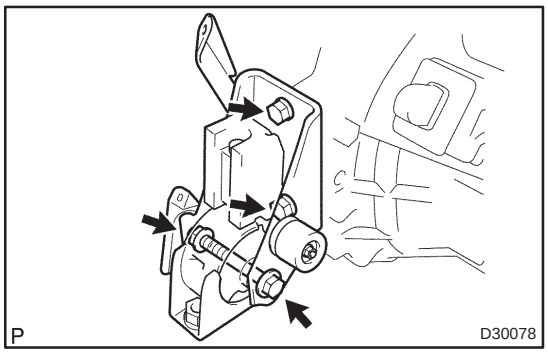
32. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR

(a) Remove the 5 bolts, nut and engine mounting insulator LH.



33. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

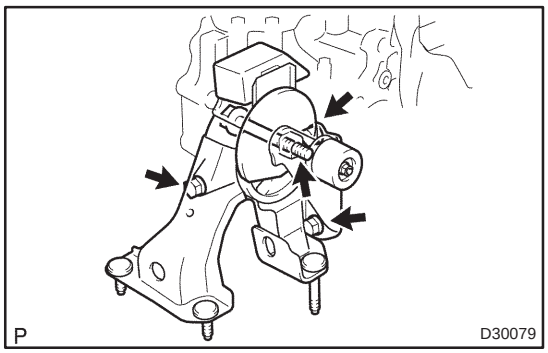
(a) Remove the 3 bolts and engine mounting bracket.



34. REMOVE MANUAL TRANSAXLE ASSY

(a) Separate the wire harness clamp.
(b) Remove the 10 bolts.
(c) Separate and remove the transaxle from the engine.

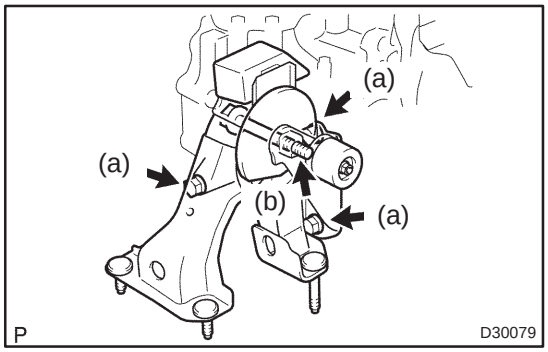
35. REMOVE MANUAL TRANSMISSION CASE PROTECTOR



(a) Remove the 2 bolts and case protector.

36. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Remove the bolt, nut and engine mounting insulator FR from the engine mounting bracket.

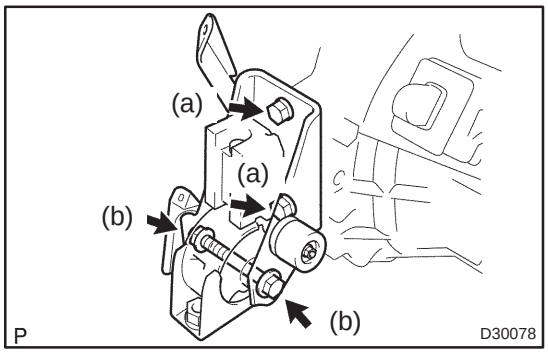


(b) Remove the 2 bolts and engine mounting bracket FR from the transaxle.

37. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Remove the bolt and engine mounting insulator RR from the engine mounting bracket.

(b) Remove the 3 bolts and engine mounting bracket RR from the transaxle.



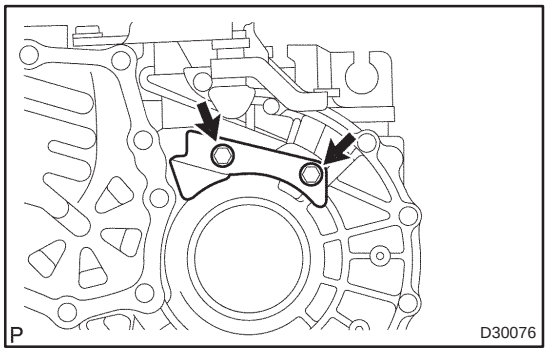
38. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Install the engine mounting bracket RR and 3 bolts to the transaxle.

Torque: 64 N·m (653 kgf·cm, 47 ft·lbf)

(b) Install the engine mounting insulator RR and bolt to the engine mounting bracket RR.

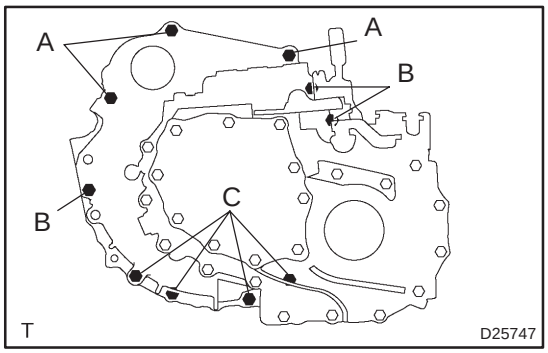
Torque: 87 N·m (887 kgf·cm, 64 ft·lbf)



39. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Install the engine mounting bracket FR and 2 bolts to the transaxle.

Torque: 64 N·m (653 kgf·cm, 47 ft·lbf)

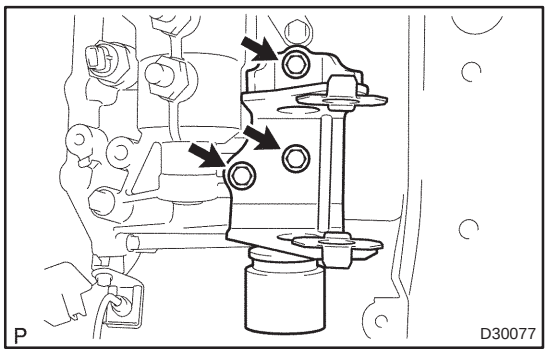


(b) Install the engine mounting insulator FR, bolt and nut to the engine mounting bracket FR.

Torque: 52 N·m (530 kgf·cm, 38 ft·lbf)

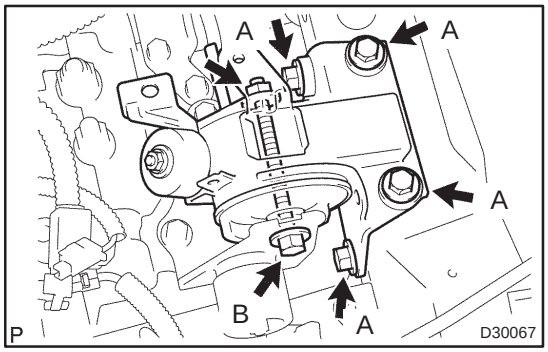
40. INSTALL MANUAL TRANSMISSION CASE PROTECTOR

(a) Install the case protector with the 2 bolts.
Torque: 18 N·m (184 kgf·cm, 13 ft·lbf)



41. INSTALL MANUAL TRANSAXLE ASSY

(a) Align the input shaft with the clutch disc and install the transaxle to the engine.



(b) Install the 10 bolts.
Torque:
Bolt A: 64 N·m (653 kgf·cm, 47 ft·lbf)
Bolt B: 46 N·m (469 kgf·cm, 34 ft·lbf)
Bolt C: 44 N·m (449 kgf·cm, 32 ft·lbf)

(c) Connect the wire harness clamp.

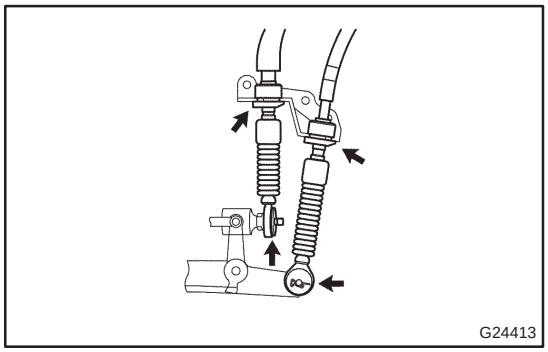
42. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Install the engine mounting bracket LH to the transaxle with the 3 bolt.
Torque: 64 N·m (653 kgf·cm, 47 ft·lbf)

43. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR

(a) Install the engine mounting insulator LH with the 5 bolts and nut.
Torque:
Bolt A: 52 N·m (530 kgf·cm, 38 ft·lbf)
Bolt B: 80 N·m (816 kgf·cm, 59 ft·lbf)

44. INSTALL FRONT SUSPENSION CROSSMEMBER SUB–ASSY (See page 26–26)
SST 09670–00010

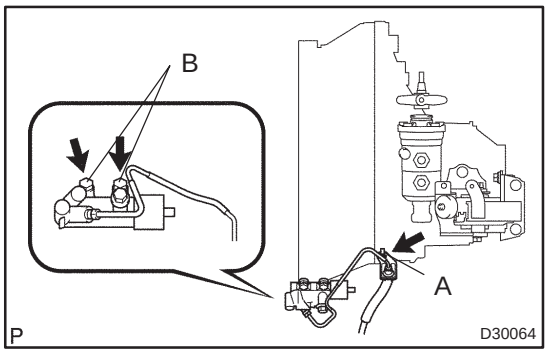


45. CONNECT PRESSURE FEED TUBE ASSY (See page 51–36)
SST 09023–12700

46. CONNECT STEERING GEAR OUTLET RETURN TUBE (See page 51–36)
SST 09023–12700

47. INSTALL HEIGHT CONTROL SENSOR SUB–ASSY FR RH (W/ DISCHARGE HEAD LAMP) (See page 65–28)

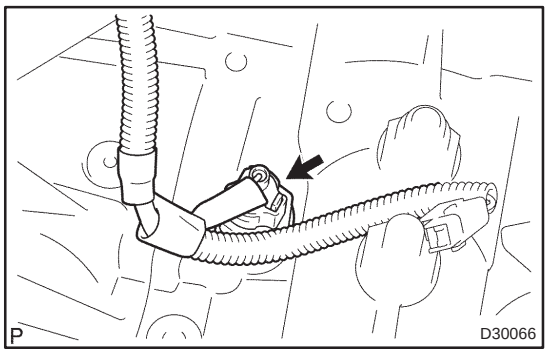
48. INSTALL FRONT DRIVE SHAFT ASSY LH (See page 30–6)



49. INSTALL FRONT DRIVE SHAFT ASSY RH (See page 30–6)

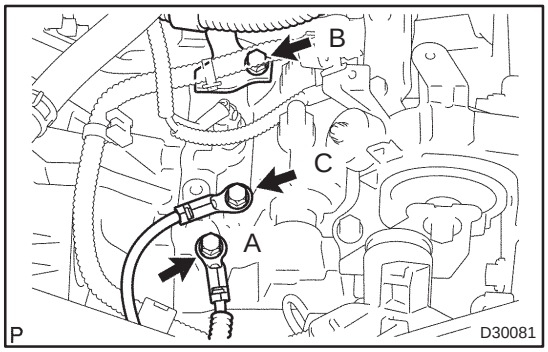
50. INSTALL TRANSMISSION CONTROL CABLE ASSY

(a) Connect the 2 cable ends, install the 2 clips.



(b) Install the 2 clips to the control cable bracket.

51. INSTALL CLUTCH RELEASE CYLINDER ASSY

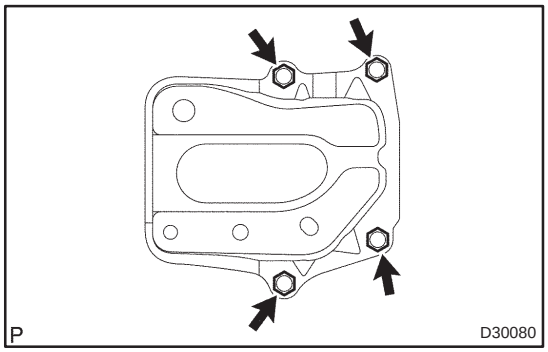


(a) Install the release cylinder with the 3 bolts.

Torque:
Bolt A: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
Bolt B: 12 N·m (120 kgf·cm, 9 ft·lbf)

52. CONNECT CONNECTOR

(a) Connect the back–up lamp switch connector.



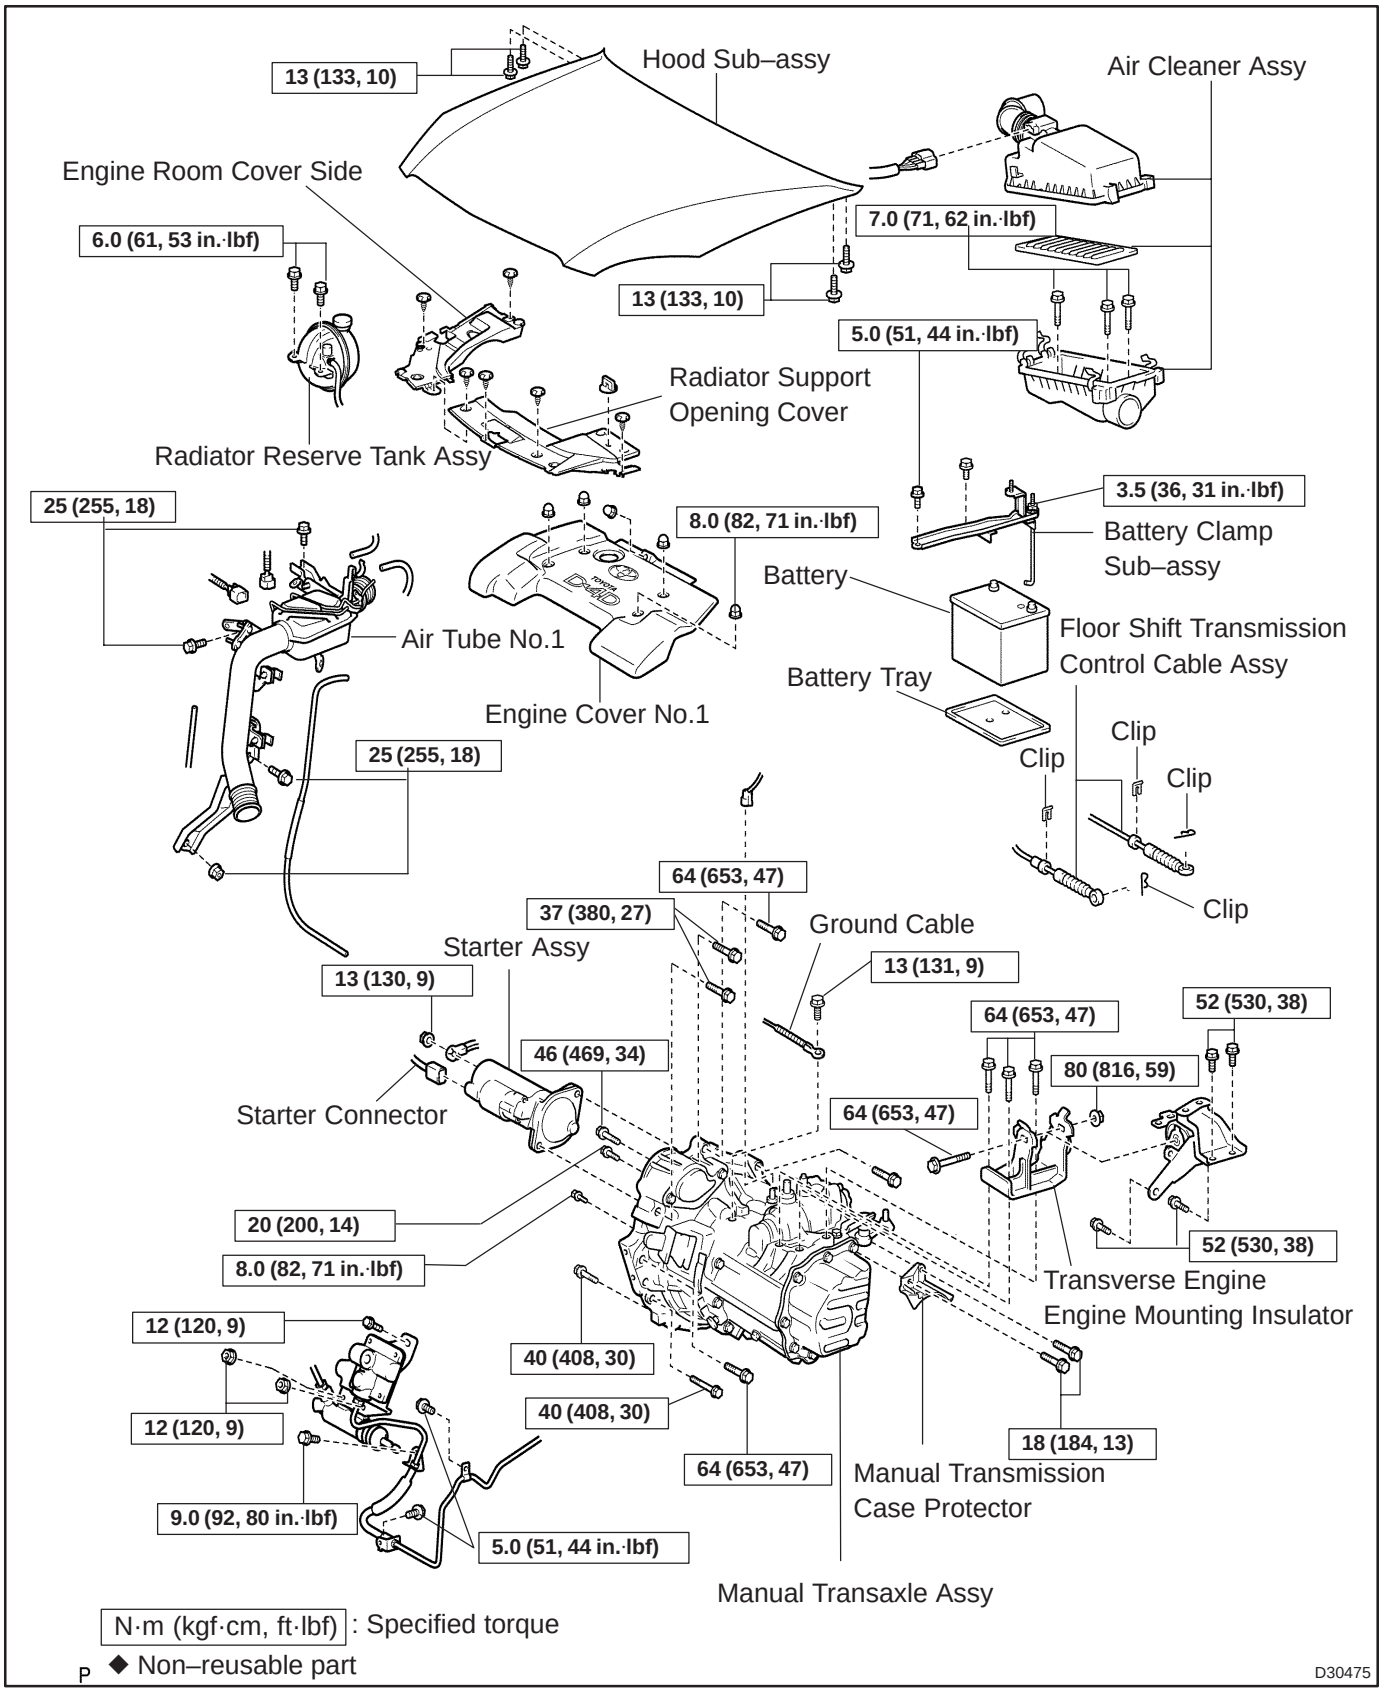
53. CONNECT WIRE HARNESS

(a) Install the 3 wire harnesses with the 3 bolts.

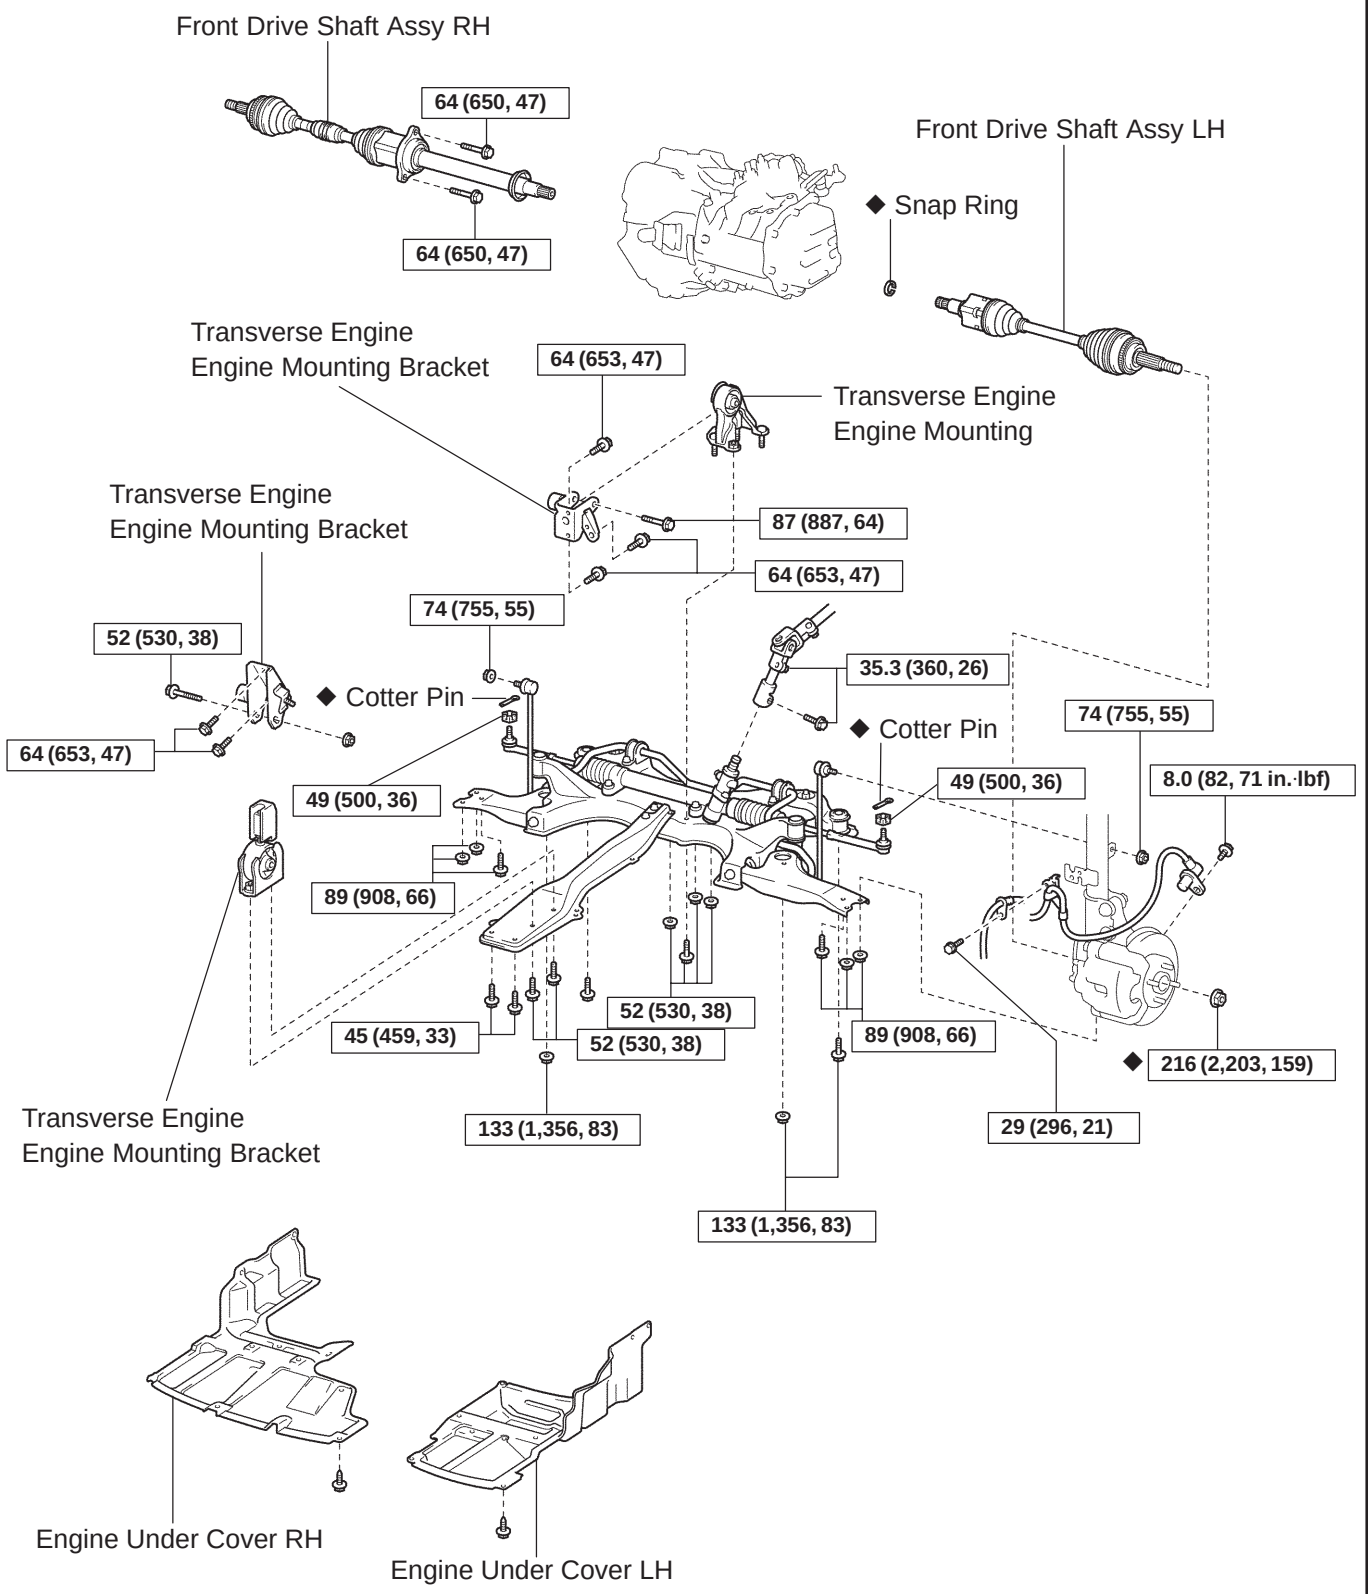
Torque:
Bolt A: 26 N·m (260 kgf·cm, 19 ft·lbf)
Bolt B: 8.4 N·m (85 kgf·cm, 74 in.·lbf)
Bolt C: 40 N·m (410 kgf·cm, 30 ft·lbf)

54. INSTALL STARTER ASSY (See page 19–12)

55. INSTALL BATTERY CARRIER



(a) Install the battery carrier and 4 bolts.
Torque: 13 N·m (131 kgf·cm, 9 ft·lbf)



56. INSTALL BATTERY TRAY
57. INSTALL BATTERY
58. INSTALL BATTERY CLAMP SUB–ASSY
Torque:
Bolt: 5.0 N·m (51 kgf·cm, 44 in.·lbf)
Nut: 3.5 N·m (36 kgf·cm, 31 in.·lbf)
59. INSTALL AIR CLEANER ASSY
Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)
60. INSTALL ENGINE COVER SUB–ASSY NO.1
Torque: 9.0 N·m (92 kgf·cm, 80 in.·lbf)
61. INSTALL ENGINE ROOM COVER SIDE
62. INSTALL RADIATOR SUPPORT OPENING COVER
63. INSTALL HOOD SUB–ASSY
Torque: 13 N·m (132 kgf·cm, 10 ft·lbf)
64. INSPECT HOOD SUB–ASSY (See page 75–2)
65. ADJUST HOOD SUB–ASSY (See page 75–2)
66. ADD TRANSAXLE OIL (See page 41–5)
67. INSPECT TRANSAXLE OIL (See page 41–2)
68. INSTALL FRONT WHEELS
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)
69. INSTALL STEERING INTERMEDIATE SHAFT (See page 50–9)
70. INSTALL STEERING COLUMN HOLE COVER SUB–ASSY NO.1 (See page)See page 50–9)
71. INSTALL STEERING INTERMEDIATE SHAFT ASSY NO.2 (See page 50–9)
72. INSTALL COLUMN HOLE COVER SILENCER SHEET (See page 50–9)
73. PLACE FRONT WHEELS FACING STRAIGHT AHEAD
74. STEERING WHEEL CENTER POINT
75. ADD POWER STEERING FLUID
76. BLEED POWER STEERING FLUID (See page 51–4)
77. CHECK POWER STEERING FULUID LEVEL IN RESERVER (See page 51–4)
78. INSPECT FLUID LEAK (See page 51–4)
79. INSPECT FRONT WHEEL ALIGNMENT (See page 26–6)
80. INSTALL ENGINE UNDER COVER LH
81. INSTALL ENGINE UNDER COVER RH
82. CHECK ABS SPEED SENSOR SIGNAL
(a) w/ VSC (See page 05–756)
(b) w/o VSC (See page 05–699)
83. HEADLIGHT AIM ONLY (W/ DISCHARGE HEAD LAMP) (See page 65–19)

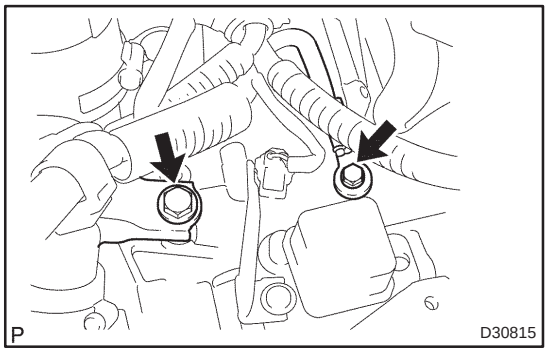
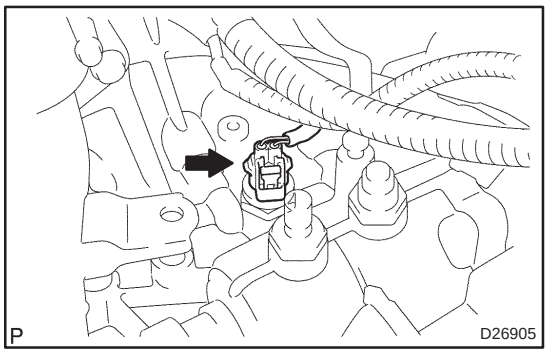
REPLACEMENT



1. INSPECT CENTER FRONT WHEEL
2. REMOVE COLUMN HOLE COVER SILENCER SHEET (See page 50–9)
3. SEPARATE STEERING INTERMEDIATE SHAFT ASSY NO.2 (See page 50–9)
4. REMOVE STEERING COLUMN HOLE COVER SUB–ASSY NO.1 (See page 50–9)
5. REMOVE STEERING INTERMEDIATE SHAFT (See page 50–9)
6. REMOVE FRONT WHEELS
7. REMOVE ENGINE UNDER COVER RH
8. REMOVE ENGINE UNDER COVER LH
9. DRAIN TRANSAXLE OIL
   Torque: 49 N·m (500 kgf·cm, 36 ft·lbf)
10. REMOVE HOOD SUB–ASSY
11. REMOVE RADIATOR SUPPORT OPENING COVER
12. REMOVE ENGINE ROOM COVER SIDE
13. REMOVE ENGINE COVER NO.1
14. REMOVE AIR CLEANER ASSY
15. REMOVE BATTERY CLAMP SUB–ASSY
16. REMOVE BATTERY
17. REMOVE BATTERY TRAY
18. REMOVE AIR TUBE NO.1 (See page 14–286)

19. SEPARATE RADIATOR RESERVE TANK ASSY
(a) Remove the 2 bolts, separate the radiator reserve tank assy.



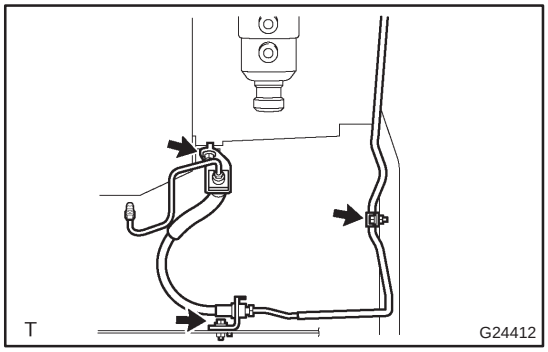
20. REMOVE STARTER ASSY
(a) Remove the nut, disconnect the starter wire.
(b) Disconnect the connector.
(c) Remove the 2 bolts and starter assy.

21. DISCONNECT WIRE HARNESS

(a) Remove the bolt, disconnect the ground cable.

(b) Remove the bolt, separate the air tube.

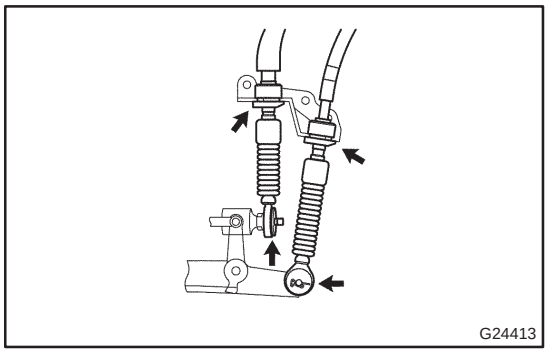
22. DISCONNECT CONNECTOR



(a) Disconnect the back–up lamp switch connector.

23. REMOVE CLUTCH ACCUMULATOR ASSY (See page 42–22)

SST 09023–00100



24. REMOVE CLUTCH RELEASE CYLINDER ASSY (See page 42–17)

SST 09023–00100

25. SEPARATE ACCUMULATOR TO FLEXIBLE HOSE TUBE

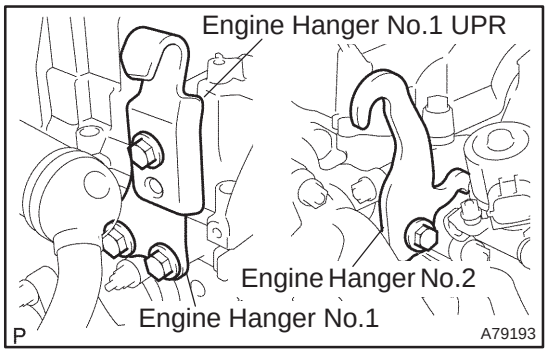
(a) Remove the 3 bolts, separate the flexible hose tube with brackets from the transaxle.

26. SEPARATE TRANSMISSION CONTROL CABLE ASSY

(a) Remove the 2 clips, separate the 2 cables from the transaxle.

(b) Remove the 2 clips, separate the 2 cables from the bracket.

27. REMOVE FRONT DRIVE SHAFT ASSY LH (See page 30–6)



SST 09520–01010, 09520–24010 (09520–32040)

28. REMOVE FRONT DRIVE SHAFT ASSY RH (See page 30–6)

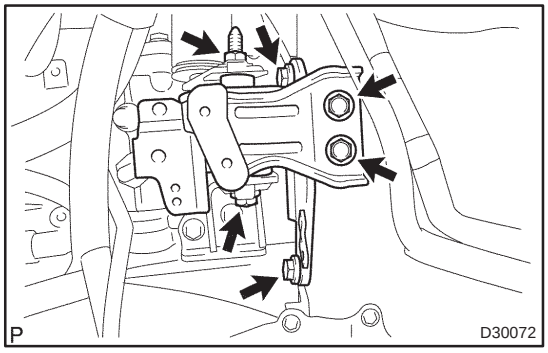
29. REMOVE HEIGHT CONTROL SENSOR SUB–ASSY FR RH (W/ DISCHARGE HEAD LAMP) (See page 65–28)

30. DISCONNECT STEERING GEAR OUTLET RETURN TUBE (See page 51–36)
SST 09023–12700

31. DISCONNECT PRESSURE FEED TUBE ASSY (See page 51–36)
SST 09023–12700

32. SUSPEND ENGINE ASSY

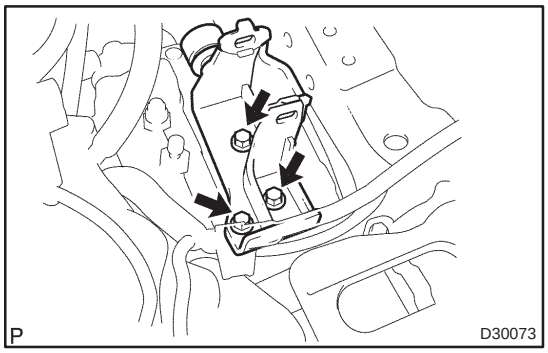
(a) Install the 2 engine hangers with the 2 bolts.
Parts No.:
No.1 engine hanger UPR (yellow) 12284–27020
No.1 engine hanger UPR (black) 12284–27030
No.1 engine hanger 12281–27050
No.2 engine hanger (yellow) 12282–27060
No.2 engine hanger (black) 12282–27070
Bolt: 91642–81025
Torque: 37 N·m (377 kgf·cm, 27 ft·lbf)



(b) Attach the engine chain hoist to the hanger.

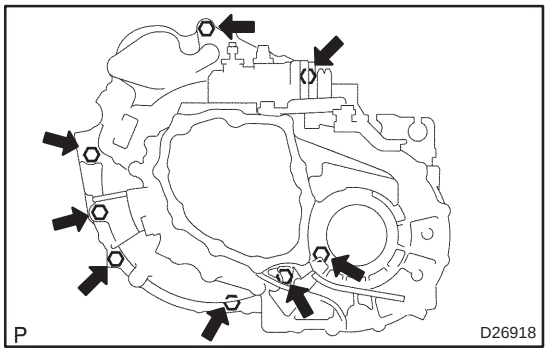
CAUTION:
Do not attempt to hang the engine by hooking the chain to any other part.

33. REMOVE FRONT SUSPENSION CROSSMEMBER SUB–ASSY (See page 26–26)



34. SUPPORT MANUAL TRANSAXLE ASSY

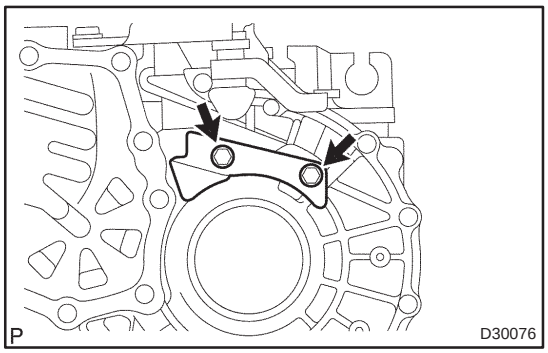
(a) Support the transaxle with a transmission jack.



35. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR

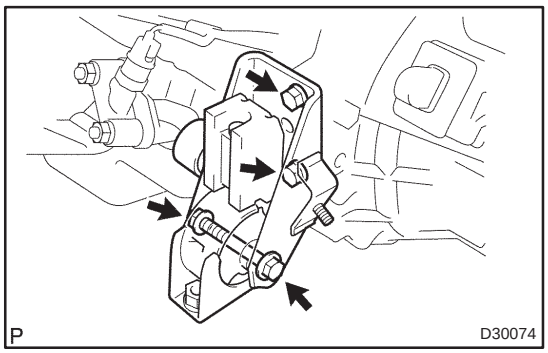
(a) Remove the 5 bolts, nut and engine mounting insulator LH from the body.

36. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET



(a) Remove the 3 bolts and engine mounting bracket LH from the transaxle.

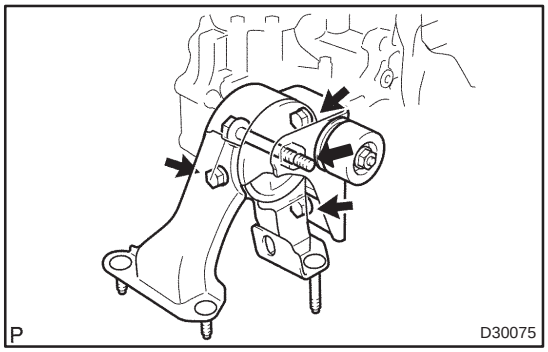
37. REMOVE MANUAL TRANSAXLE ASSY



(a) Remove the 8 bolts.

(b) Remove the transaxle from the engine.

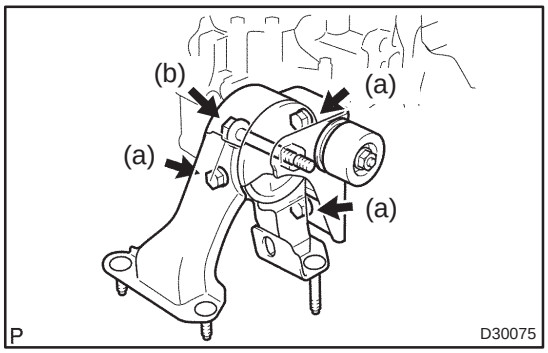
38. REMOVE MANUAL TRANSMISSION CASE PROTECTOR



(a) Remove the 2 bolts and case protector.

39. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Remove the bolt, nut and engine mounting insulator FR from the engine mounting bracket.

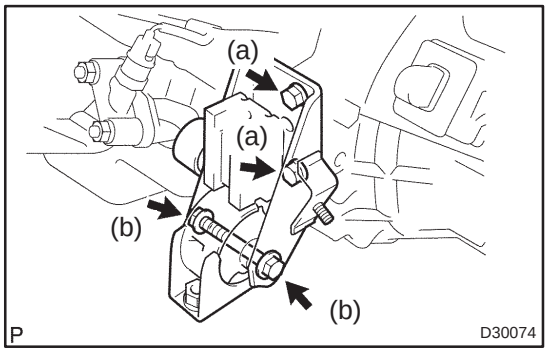


(b) Remove the 2 bolts and engine mounting bracket FR from the transaxle.

40. REMOVE TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Remove the bolt and engine mounting insulator RR from the engine mounting bracket.

(b) Remove the 3 bolts and engine mounting bracket RR from the transaxle.

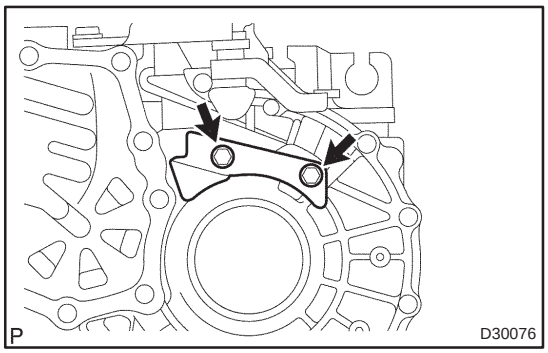


41. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Install the engine mounting bracket RR and 3 bolts to the transaxle.

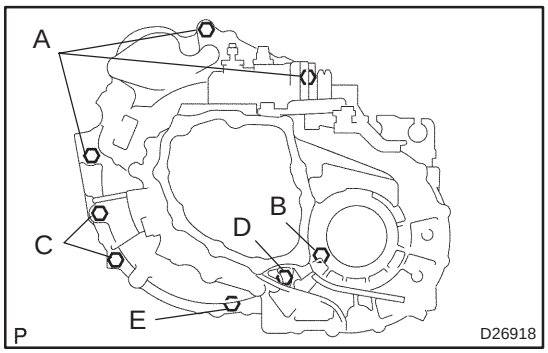
Torque: 64 N·m (653 kgf·cm, 47 ft·lbf)

(b) Install the engine mounting insulator RR and bolt to the engine mounting bracket.



Torque: 87 N·m (887 kgf·cm, 64 ft·lbf)

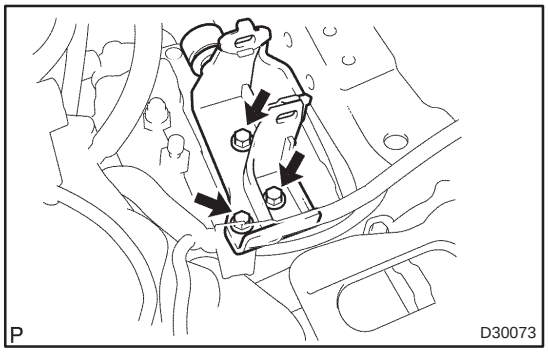
42. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET



(a) Install the engine mounting bracket FR and 2 bolts to the transaxle.
Torque: 64 N·m (653 kgf·cm, 47 ft·lbf)

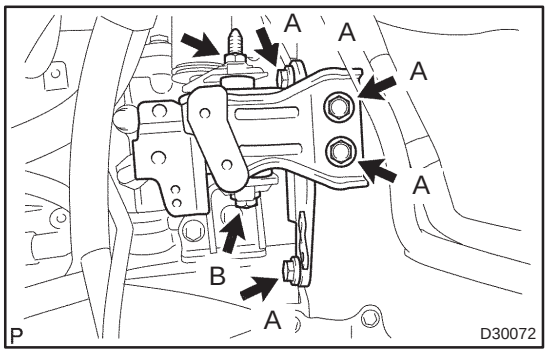
(b) Install the engine mounting insulator FR, bolt and nut to the engine mounting bracket.
Torque: 52 N·m (530 kgf·cm, 38 ft·lbf)

43. INSTALL MANUAL TRANSMISSION CASE PROTECTOR



(a) Install the case protector with the 2 bolts.
Torque: 18 N·m (184 kgf·cm, 13 ft·lbf)

44. INSTALL MANUAL TRANSAXLE ASSY



(a) Align the input shaft with the clutch disc and install the transaxle to the engine.

(b) Install the 8 bolts.
Torque:
Bolt A: 64 N·m (653 kgf·cm, 47 ft·lbf)
Bolt B: 46 N·m (469 kgf·cm, 34 ft·lbf)
Bolt C: 40 N·m (408 kgf·cm, 30 ft·lbf)
Bolt D: 20 N·m (200 kgf·cm, 14 ft·lbf)
Bolt E: 8.0 N·m (82 kgf·cm, 71 in.·lbf)

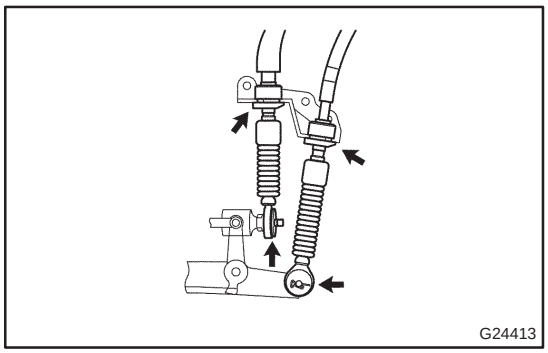
45. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING BRACKET

(a) Install the engine mounting bracket LH to the transaxle with the 3 bolts.
Torque: 64 N·m (653 kgf·cm, 47 ft·lbf)

46. INSTALL TRANSVERSE ENGINE ENGINE MOUNTING INSULATOR

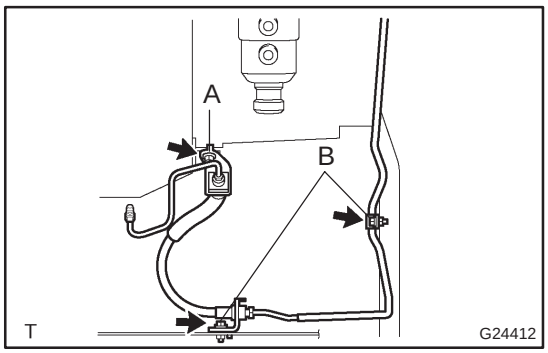
(a) Install the engine mounting insulator LH with the 5 bolts and nut.
Torque:
Bolt A: 52 N·m (530 kgf·cm, 38 ft·lbf)
Bolt B: 80 N·m (816 kgf·cm, 59 ft·lbf)

47. INSTALL FRONT SUSPENSION CROSSMEMBER SUB–ASSY (See page 26–26)
SST 09670–00010



48. CONNECT PRESSURE FEED TUBE ASSY (See page 51–36)
SST 09023–12700

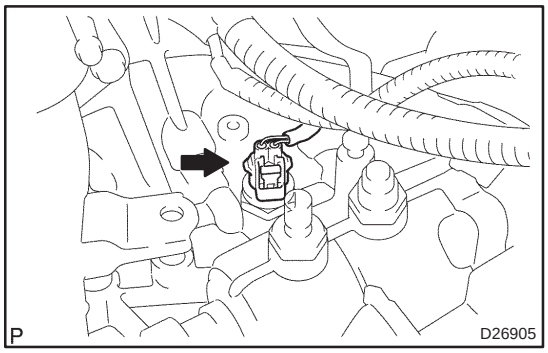
49. CONNECT STEERING GEAR OUTLET RETURN TUBE (See page 51–36)
SST 09023–12700



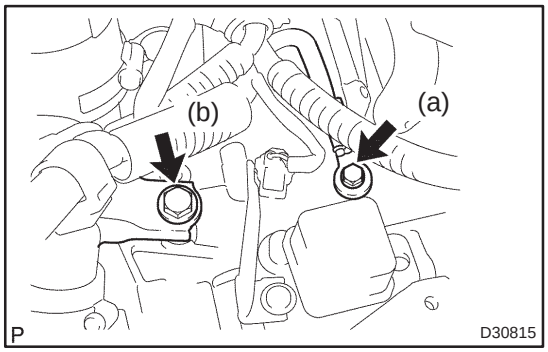
50. INSTALL HEIGHT CONTROL SENSOR SUB–ASSY FR RH (W/ DISCHARGE HEAD LAMP) (See page 65–28)

51. INSTALL FRONT DRIVE SHAFT ASSY LH (See page 30–6)

52. INSTALL FRONT DRIVE SHAFT ASSY RH (See page 30–6)



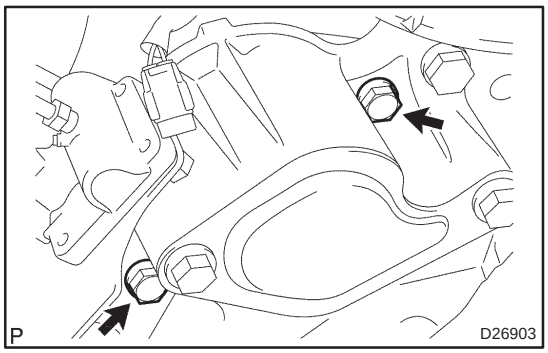
53. CONNECT TRANSMISSION CONTROL CABLE ASSY
(a) Connect the 2 cable ends, install the 2 clips.
(b) Install the 2 clips to the control cable bracket.



54. INSTALL ACCUMULATOR TO FLEXIBLE HOSE TUBE
(a) Install the flexible hose tube with the 3 bolts.
Torque:
Bolt A: 12 N·m (120 kgf·cm, 9 ft·lbf)
Bolt B: 5.0 N·m (51 kgf·cm, 44 in.·lbf)
Bolt C: 9.0 N·m (92 kgf·cm, 80 in.·lbf)

55. INSTALL CLUTCH RELEASE CYLINDER ASSY (See page 42–17)
SST 09023–00100

56. INSTALL CLUTCH ACCUMULATOR ASSY (See page 42–22)
SST 09023–00100

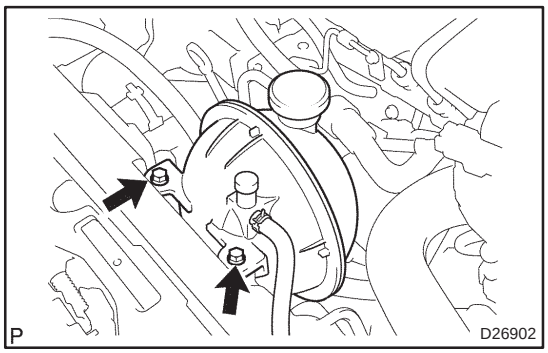


57. CONNECT CONNECTOR
(a) Connect the back–up lamp switch connector.

58. CONNECT WIRE HARNESS

(a) Install the ground cable with bolt.
Torque: 13 N·m (131 kgf·cm, 9 ft·lbf)

(b) Install the air tube with bolt.
Torque: 25 N·m (255 kgf·cm, 18 ft·lbf)



59. INSTALL STARTER ASSY

(a) Connect the starter connector.

(b) Install the starter assy to the transaxle with the 2 bolts.
Torque: 37 N·m (380 kgf·cm, 27 ft·lbf)

(c) Install the starter wire to starter assy with the nut.
Torque: 13 N·m (130 kgf·cm, 9 ft·lbf)

60. CONNECT RADIATOR RESERVE TANK ASSY

(a) Install the radiator reserve tank assy with the 2 bolts.
Torque: 6.0 N·m (61 kgf·cm, 53 in.·lbf)

61. INSTALL AIR TUBE NO.1 (See page 14–286)
62. INSTALL BATTERY TRAY
63. INSTALL BATTERY
64. INSTALL BATTERY CLAMP SUB–ASSY
Torque:
Bolt: 5.0 N·m (51 kgf·cm, 44 in.·lbf)
Nut: 3.5 N·m (36 kgf·cm, 31 in.·lbf)
65. INSTALL AIR CLEANER ASSY
Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)
66. INSTALL ENGINE COVER NO.1
Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)
67. INSTALL STEERING INTERMEDIATE SHAFT (See page 50–9)
68. INSTALL STEERING COLUMN HOLE COVER SUB–ASSY NO.1 (See page 50–9)
69. INSTALL STEERING INTERMEDIATE SHAFT ASSY NO.2 (See page 50–9)
70. INSTALL COLUMN HOLE COVER SILENCER SHEET (See page 50–9)
71. PLACE FRONT WHEELS FACING STRAIGHT AHEAD
72. STEERING WHEEL CENTER POINT
73. INSTALL ENGINE ROOM COVER SIDE
74. INSTALL RADIATOR SUPPORT OPENING COVER

75. INSTALL HOOD SUB–ASSY
Torque: 13 N·m (133 kgf·cm, 10 ft·lbf)
76. INSPECT HOOD SUB–ASSY (See page 75–2)
77. ADJUST HOOD SUB–ASSY (See page 75–2)
78. ADD TRANSAXLE OIL (See page 41–5)
79. INSPECT TRANSAXLE OIL (See page 41–2)
80. ADD POWER STEERING FLUID
81. BLEED POWER STEERING FLUID (See page 51–4)
82. CHECK POWER STEERING FULUID LEVEL IN RESERVER (See page 51–4)
83. INSPECT FLUID LEAK (See page 51–4)
84. INSTALL FRONT WHEELS
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)
85. INSPECT FRONT WHEEL ALIGNMENT (See page 26–6)
86. INSTALL ENGINE UNDER COVER RH
87. INSTALL ENGINE UNDER COVER LH
88. CHECK ABS SPEED SENSOR SIGNAL
(a) w/ VSC (See page 05–756)
(b) w/o VSC (See page 05–699)
89. HEADLIGHT AIM ONLY (W/ DISCHARGE HEAD LAMP) (See page 65–19)

CLUTCH SYSTEM (MTM)

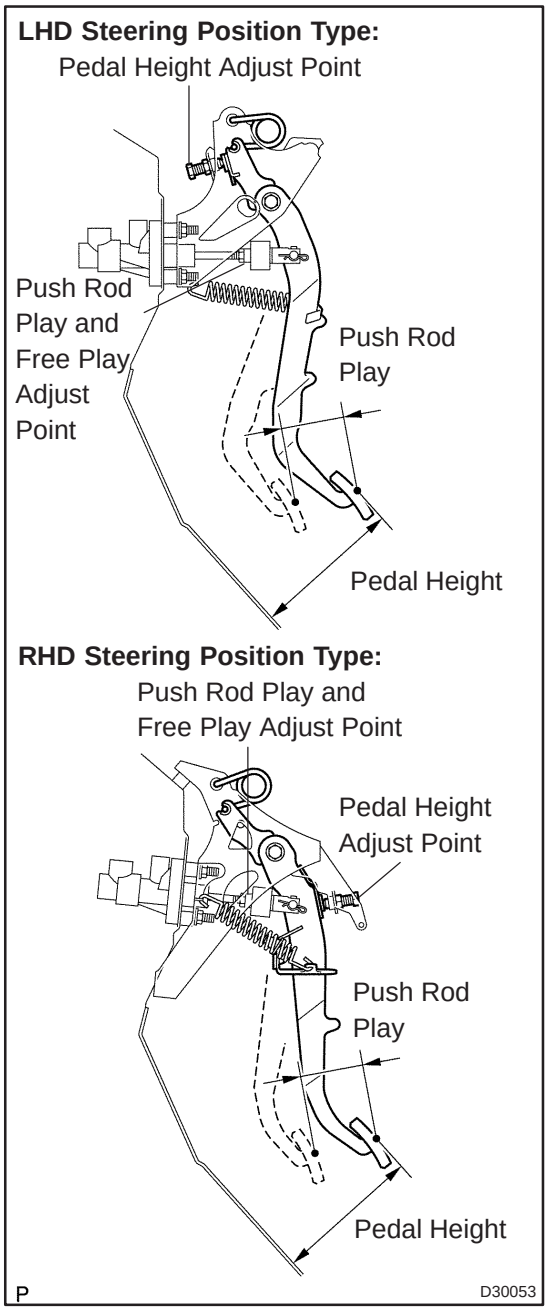
PROBLEM SYMPTOMS TABLE

4200B–04

HINT:

Use the table below to help find the cause of the problem. The numbers indicate the likelihood of the possible cause in descending order. Check each part in the order shown. Replace these parts as necessary.

Symptom	Suspect Area	See page
Clutch grabs/chatters	1. Engine mounting (Loosen)	–
	2. Clutch disc assy (Runout is excessive)	42–26
	3. Clutch disc assy (Oily)	42–26
	4. Clutch disc assy (Worn out)	42–26
	5. Clutch disc torsion rubber (Damaged)	42–26
	6. Clutch disc assy (Glazed)	42–26
	7. Diaphragm spring (Out of tip alignment)	42–26
Clutch pedal spongy	1. Clutch Line (Air in line)	–
	2. Master cylinder (Damaged)	42–13
	3. Release cylinder rubber (Damaged)	42–17
Clutch noisy	1. Clutch release bearing assy (Worn, dirty, or damaged)	42–26
	2. Clutch disc torsion rubber (Damaged)	42–26
Clutch slips	1. Clutch pedal (Free play out of adjustment)	42–2
	2. Clutch disc assy (Oily)	42–26
	3. Clutch disc assy (Worn out)	42–26
	4. Diaphragm spring (Damaged)	42–26
	5. Pressure plate (Distortion)	42–26
	6. Flywheel sub–assy (Distortion)	–
Clutch does not disengage	1. Clutch pedal (Free play out of adjustment)	42–2
	2. Clutch line (Air in line)	–
	3. Master cylinder (Damaged)	42–13
	4. Release cylinder cup (Damaged)	42–17
	5. Clutch disc assy (Out of true)	42–26
	6. Clutch disc assy (Runout of excessive)	42–26
	7. Clutch disc assy (Lining broken)	42–26
	8. Clutch disc assy (Dirty or burned)	42–26
	9. Clutch disc assy (Oily)	42–26
	10.Clutch disc assy (Lack of spline grease)	42–26



CLUTCH PEDAL SUB–ASSY (MTM)

ADJUSTMENT

4200D–04

1. INSPECT AND ADJUST CLUTCH PEDAL SUB–ASSY

(a) Turn over the floor carpet.

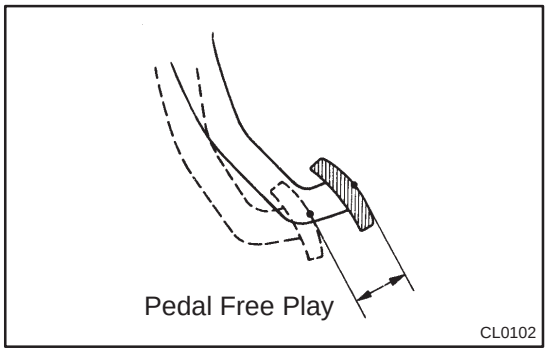
(b) Check that the pedal height is correct.

Pedal height from asphalt sheet:
LHD Steering Position Type:
1CD–FTV Engine Type
154.0 to 164.0 mm (6.063 to 6.457 in.)
Others:
139.6 to 149.6 mm (5.496 to 5.890 in.)
RHD Steering Position Type:
1CD–FTV Engine Type
158.4 to 168.4 mm (6.236 to 6.630 in.)
Others:
148.4 to 158.4 mm (5.843 to 6.236 in.)

(c) Adjust the pedal height.

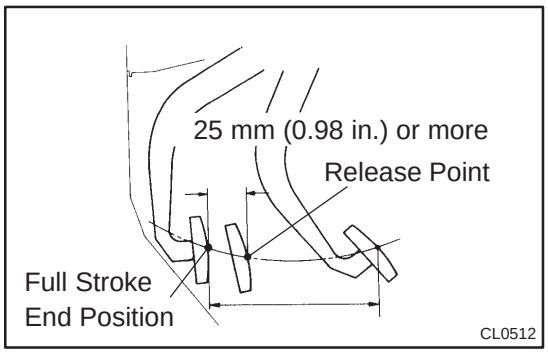
(1) Loosen the lock nut and turn the stopper bolt until the height is correct. Tighten the lock nut.

Torque: 25 N·m (250 kgf·cm, 18 ft·lbf)



(d) Check that the pedal free play and push rod play are correct.

(1) Depress the pedal until clutch resistance is felt.



Pedal free play: 5.0 to 15.0 mm (0.197 to 0591 in.)

(2) Gently depress the pedal until the resistance begins to increase a little.

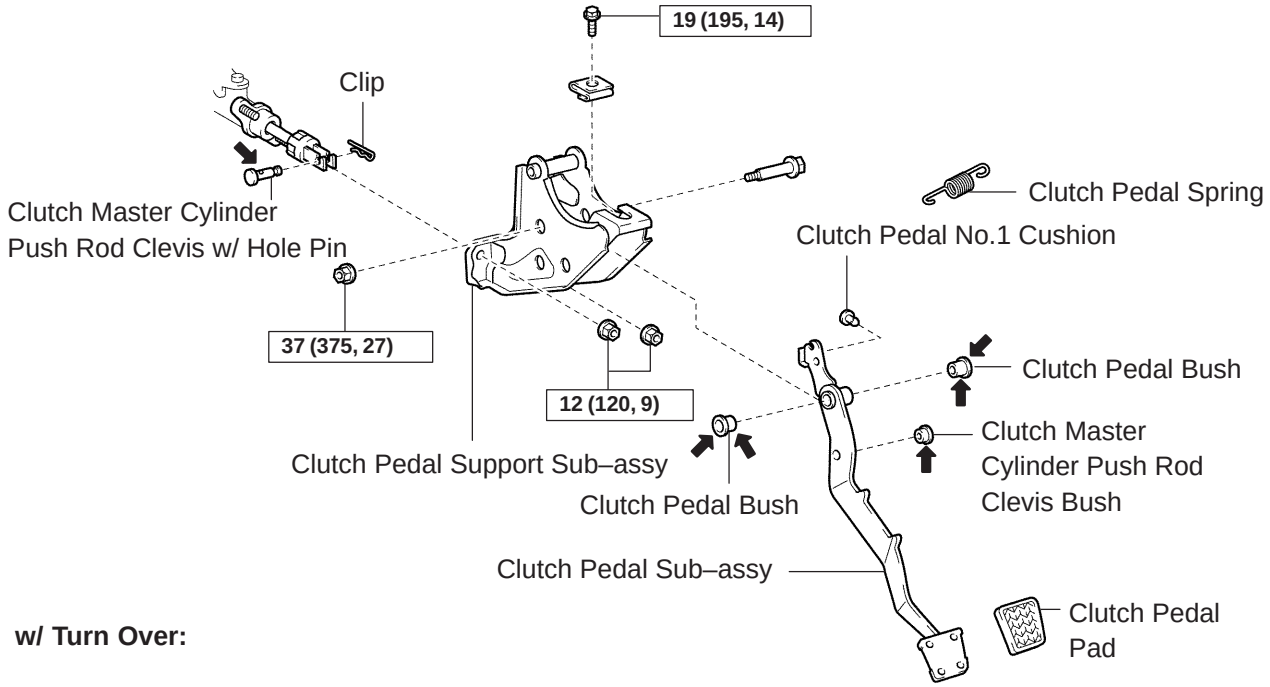
Push rod play at pedal top:
1.0 to 5.0 mm (0.039 to 0.197 in.)

(e) Adjust the pedal free play and push rod play.
(1) Loosen the lock nut and turn the push rod until the free play and push rod play are correct.
(2) Tighten the lock nut.
(3) After adjusting the pedal free play, check the pedal height.
(4) Connect the air duct and install the lower finish panel.

(f) Check the clutch release point.
(1) Pull the parking brake lever and install wheel stopper.
(2) Start the engine and idle.
(3) Without depressing the clutch pedal, slowly adjust the shift lever to the reverse position until the gears contact.
(4) Gradually depress the clutch pedal and measure the stroke distance from the point that the gear noise stops (release point) up to the full stroke end position.

Standard distance: 25 mm (0.98 in.) or more
(From pedal stroke end position to release point)

If the distance is not as specified, perform the following operations.



- Check pedal height.
- Check push rod play and pedal free play.
- Bleed the clutch line.
- Check the clutch cover assy and disc assy.

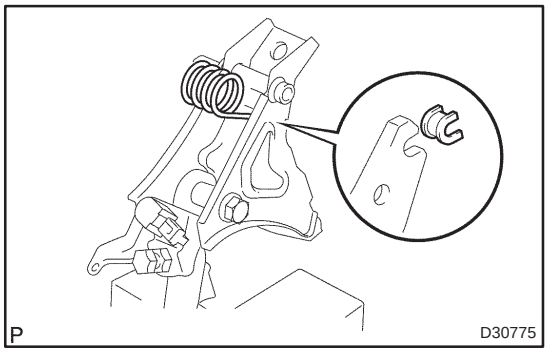
REPLACEMENT

1. REMOVE INSTRUMENT PANEL SUB–ASSY LOWER (LHD STEERING POSITION TYPE) (See page 71–11)
2. REMOVE COMBINATION METER ASSY (RHD STEERING POSITION TYPE) (See page 71–21)
3. REMOVE CLUTCH PEDAL SPRING

4. REMOVE CLUTCH MASTER CYLINDER PUSH ROD CLEVIS W/HOLE PIN

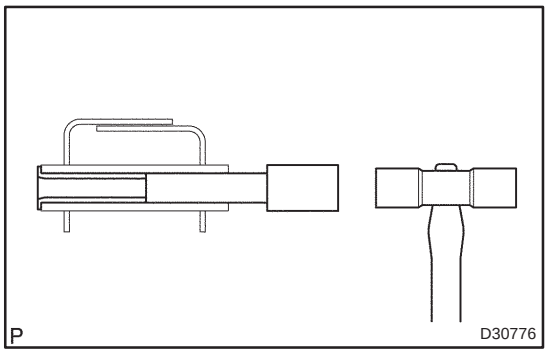


(a) Remove the clip and hole pin.

5. REMOVE CLUTCH PEDAL SUPPORT SUB–ASSY

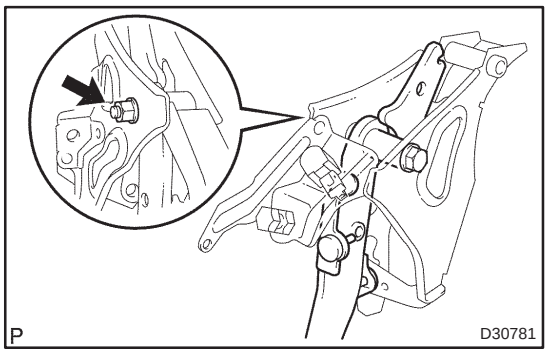
(a) LHD steering position type:
Remove the 2 nuts, bolt and clutch pedal support assy.

(b) RHD steering position type:
Remove the 2 bolts, 2 nuts and clutch pedal support assy.



6. REMOVE TURN OVER SPRING SEAT COMPRESSION SPRING (W/ TURN OVER)

(a) Mount the clutch pedal in a soft jaw vise.

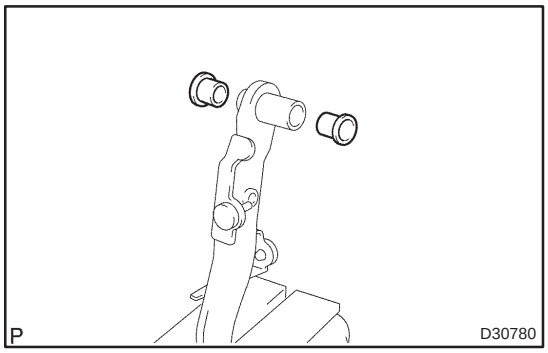


(b) Using a screwdriver, remove the spring.

7. REMOVE CLUTCH PEDAL TURNOVER BUSH (W/ TURN OVER)

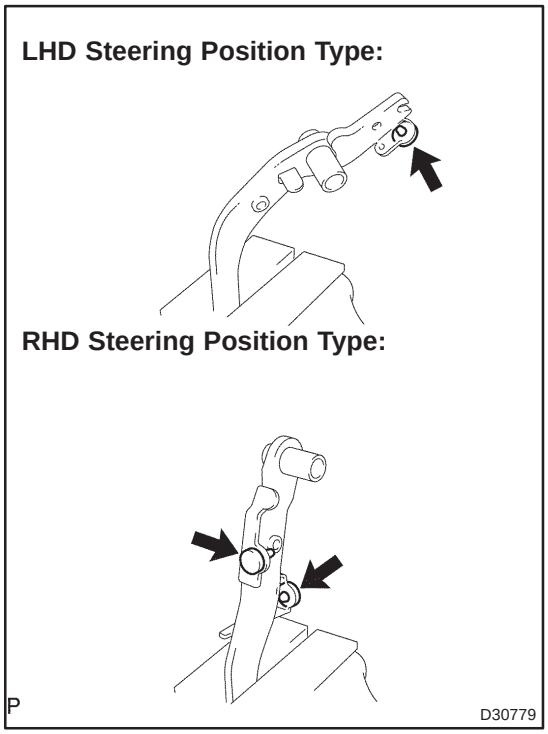
8. REMOVE CLUTCH PEDAL TURNOVER BUSH (W/ TURN OVER)

(a) Using a 8 mm hexagon wrench and a hammer, remove the turn over bush.



9. REMOVE CLUTCH PEDAL SUB–ASSY

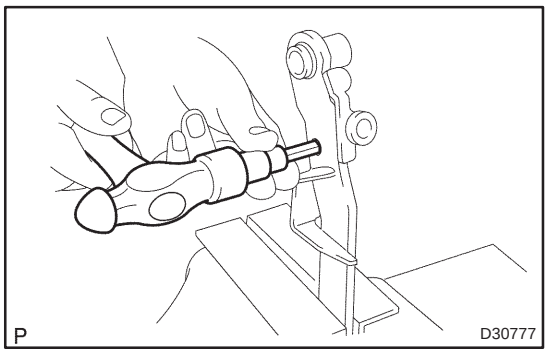
(a) Remove the bolt and nut.



(b) Remove the clutch pedal from the clutch pedal support.

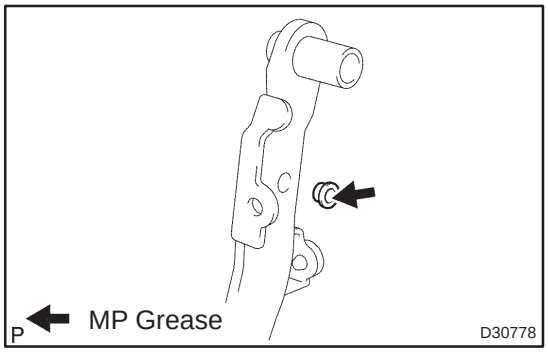
10. REMOVE CLUTCH PEDAL PAD

11. REMOVE CLUTCH PEDAL BUSH



(a) Remove the 2 bushes from the clutch pedal.

12. REMOVE CLUTCH PEDAL NO.1 CUSHION

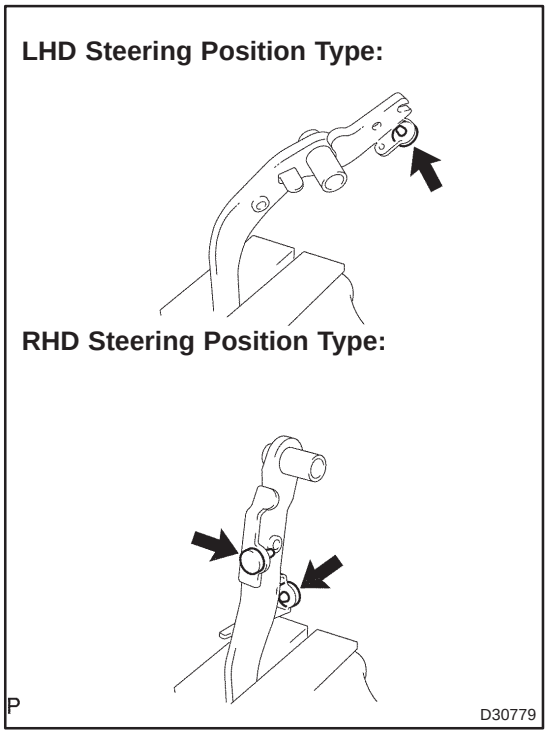


(a) LHD steering position type:
Using needle–nose pliers, remove the No.1 cushion from the clutch pedal.

(b) RHD steering position type:
Using needle–nose pliers, remove the 2 No.1 cushions from the clutch pedal.

13. REMOVE CLUTCH MASTER CYLINDER PUSH ROD CLEVIS BUSH

(a) Using a 8 mm hexagon wrench and a hammer, remove the clevis bush from the clutch pedal.

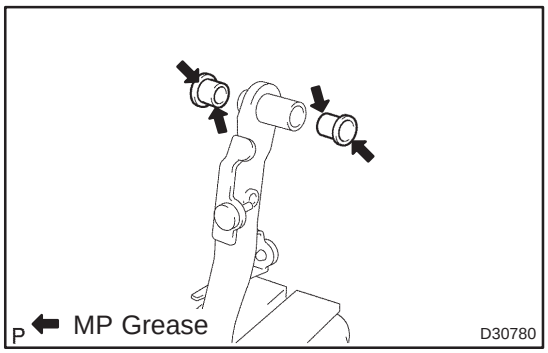


14. INSTALL CLUTCH MASTER CYLINDER PUSH ROD CLEVIS BUSH

(a) Apply MP grease to the inside of a new clevis bush.

(b) Install the clevis bush to the clutch pedal.

HINT:

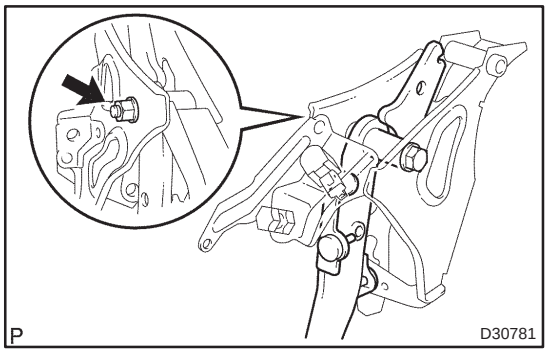


Install the clevis bush from the right side of the vehicle.

15. INSTALL CLUTCH PEDAL NO.1 CUSHION

(a) LHD steering position type:
Using needle–nose pliers, install the No.1 cushion to the clutch pedal.

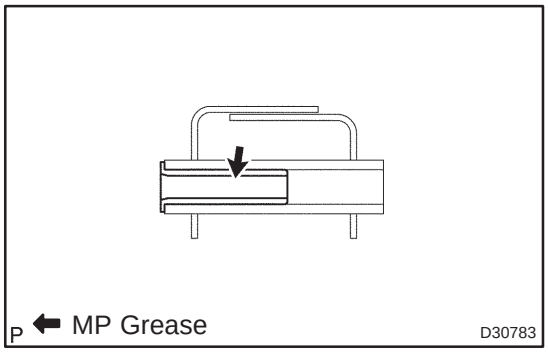
(b) RHD steering position type:
Using needle–nose pliers, install the 2 No.1 cushions to the clutch pedal.



16. INSTALL CLUTCH PEDAL BUSH

(a) Apply MP grease to the inner, outer and end surface of 2 new bushes.

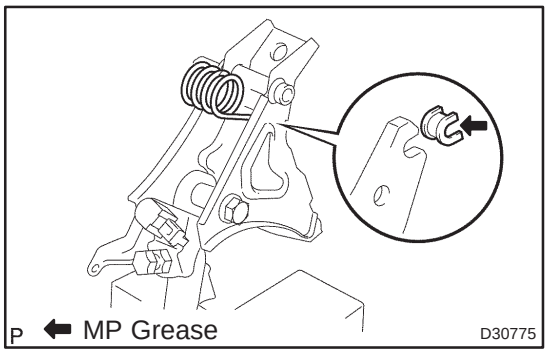
(b) Install the 2 bushes to the clutch pedal.



17. INSTALL CLUTCH PEDAL PAD

18. INSTALL CLUTCH PEDAL SUB–ASSY

(a) Install the clutch pedal to the clutch pedal support with the bolt and nut.
Torque: 37 N·m (375 kgf·cm, 27 ft·lbf)



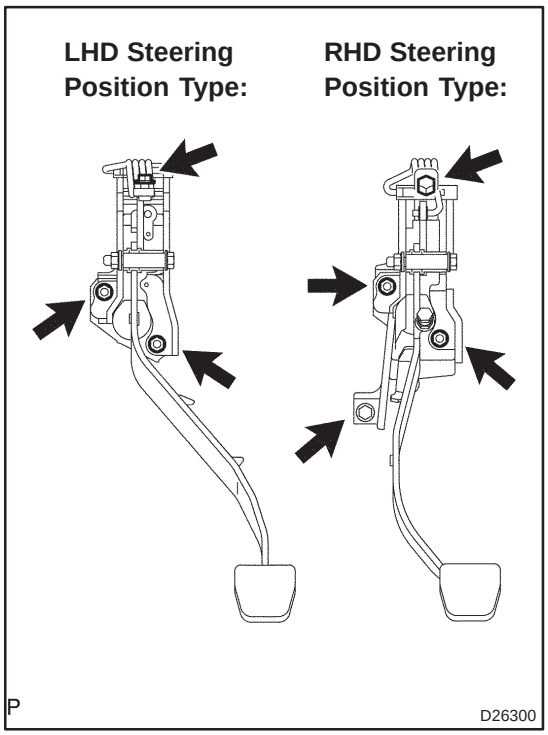
HINT:
Install the bolt from the right side of the vehicle.

19. INSTALL CLUTCH PEDAL TURNOVER BUSH (W/ TURN OVER)

(a) Apply MP grease to the inside of the turn over bush.

(b) Install the turn over bush to the clutch pedal support.

20. INSTALL CLUTCH PEDAL TURNOVER BUSH (W/ TURN OVER)

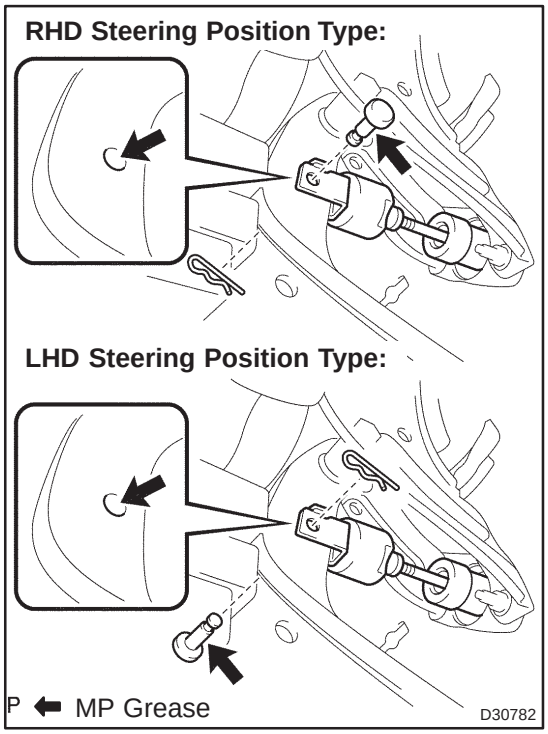


(a) Apply MP grease to the inside of the turn over bush.

(b) Install the turn over bush to the clutch pedal.

21. INSTALL TURN OVER SPRING SEAT COMPRESSION SPRING (W/ TURN OVER)

(a) Apply MP grease to the contact surface of the bush and spring.



(b) Install the spring to the clutch pedal and clutch pedal support.

22. INSTALL CLUTCH PEDAL SUPPORT SUB–ASSY

(a) LHD steering position type:
Install the clutch pedal support to the vehicle with the 2 nuts and bolt.
Torque:
Bolt: 19 N·m (195 kgf·cm, 14 ft·lbf)
Nut: 12 N·m (120 kgf·cm, 9 ft·lbf)

(b) RHD steering position type:
Install the clutch pedal support to the vehicle with the 2 bolts and 2 nuts.
Torque:
Bolt: 19 N·m (195 kgf·cm, 14 ft·lbf)
Nut: 12 N·m (120 kgf·cm, 9 ft·lbf)

23. INSTALL CLUTCH MASTER CYLINDER PUSH ROD CLEVIS W/HOLE PIN

(a) Apply MP grease to the contact surface of the hole pin and clevis bush.

(b) Connect the clevis to the clutch pedal with the hole pin.

HINT:

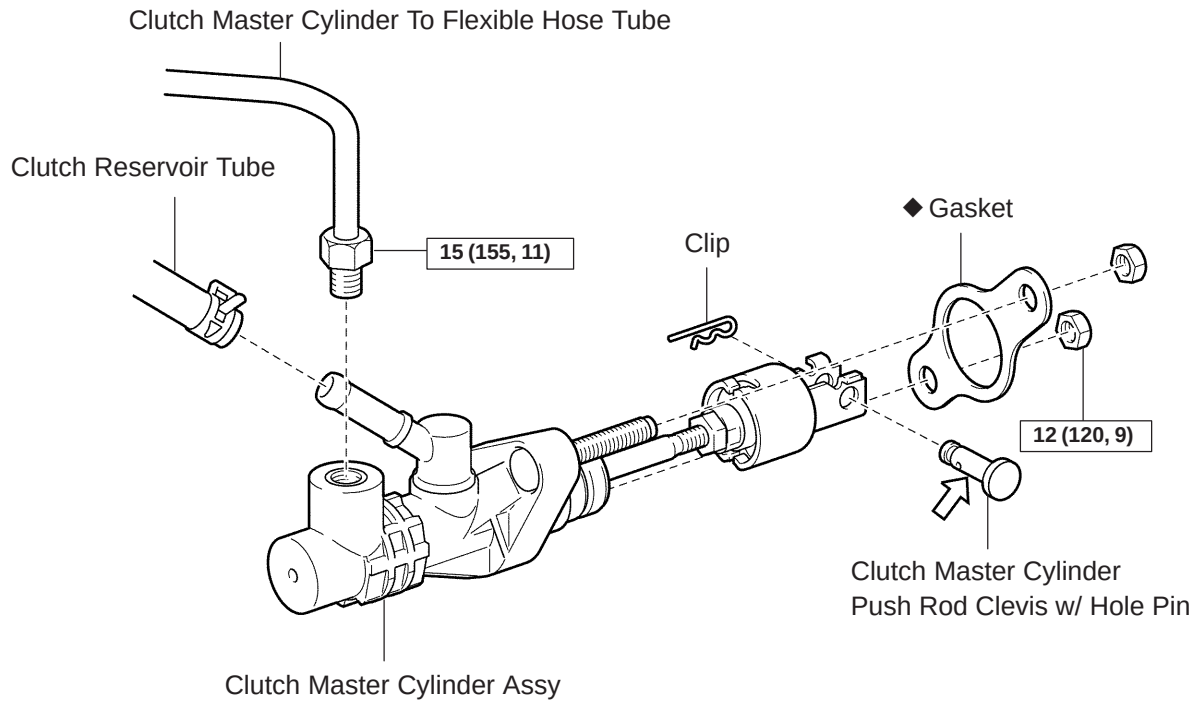
- RHD steering position type:
  Install the hole pin from the right side of the vehicle.
- LHD steering position type:
  Install the hole pin from the left side of the vehicle.

(c) Install the clip to the hole pin.

24. INSTALL CLUTCH PEDAL SPRING

25. INSTALL COMBINATION METER ASSY (RHD STEERING POSITION TYPE) (See page 71–21)

26. INSTALL INSTRUMENT PANEL SUB–ASSY LOWER (LHD STEERING POSITION TYPE) (See page 71–11)



27. INSPECT AND ADJUST CLUTCH PEDAL SUB–ASSY (See page 42–2)

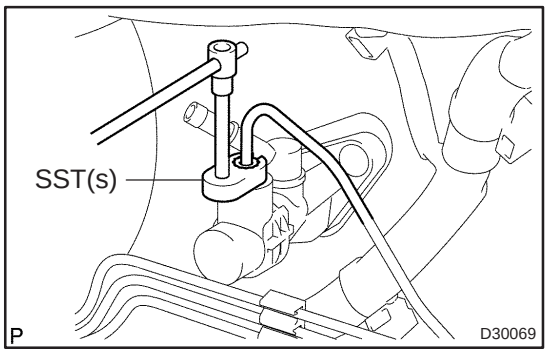
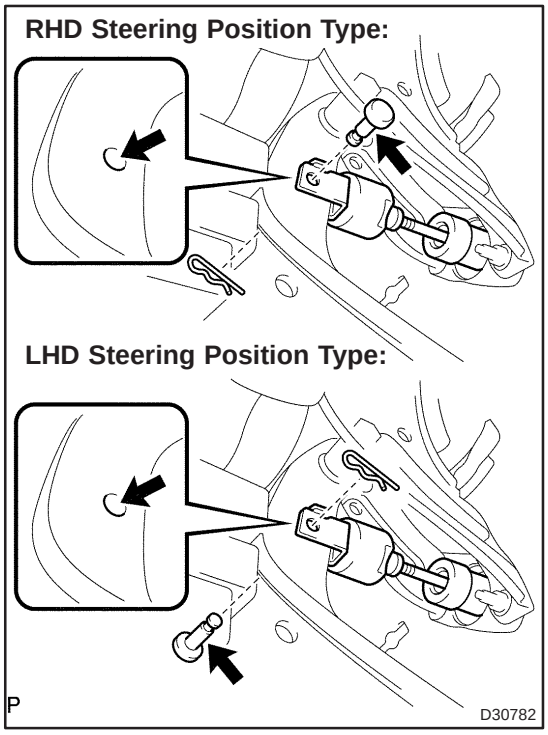
REPLACEMENT



1. DRAIN CLUTCH FLUID
2. REMOVE BRAKE MASTER CYLINDER SUB–ASSY (LHD STEERING POSITION TYPE) (See page 32–13)
3. REMOVE BRAKE BOOSTER ASSY (LHD STEERING POSITION TYPE) (See page 32–19)

4. DISCONNECT CLUTCH RESERVOIR TUBE

(a) Loosen the clip and disconnect the clutch reservoir tube from the clutch master cylinder assy.



HINT:
Use a container to catch the fluid.

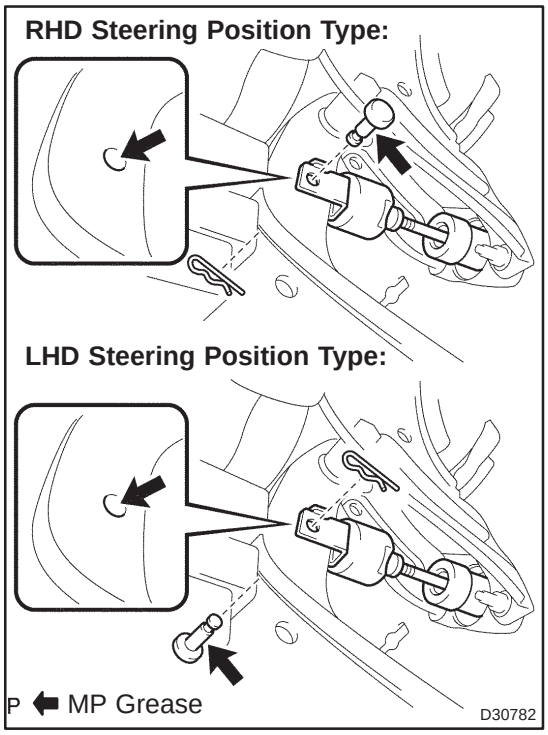
5. DISCONNECT CLUTCH MASTER CYLINDER TO FLEXIBLE HOSE TUBE

(a) Using SST(s), disconnect the flexible hose tube.
SST 09023–00100

HINT:
Use a container to catch the fluid.

6. REMOVE CLUTCH MASTER CYLINDER PUSH ROD CLEVIS W/HOLE PIN

(a) Remove the clip and hole pin.



7. REMOVE CLUTCH MASTER CYLINDER ASSY

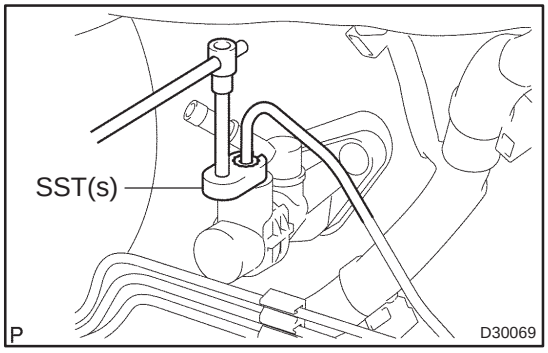
(a) Remove the 2 nuts clutch master cylinder assy and gasket.

8. INSTALL CLUTCH MASTER CYLINDER ASSY

(a) Install the clutch master cylinder assy and gasket with the 2 nuts.

Torque: 12 N·m (120 kgf·cm, 9 ft·lbf)

9. INSTALL CLUTCH MASTER CYLINDER PUSH ROD CLEVIS W/HOLE PIN



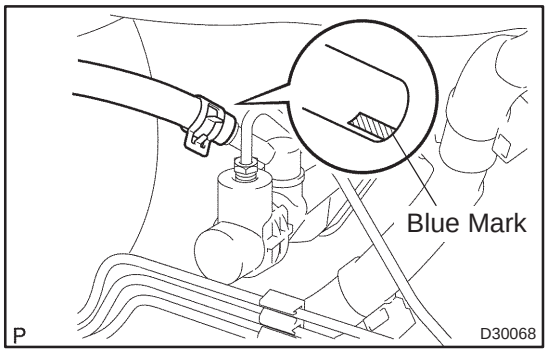
(a) Apply MP grease to the contact surface of the hole pin and clevis bush.

(b) Connect the clevis to the clutch pedal assy with the hole pin.

HINT:

- RHD steering position type:
  Install the hole pin from the right side of the vehicle.
- LHD steering position type:
  Install the hole pin from the left side of the vehicle.

(c) Install the clip to the hole pin.



10. CONNECT CLUTCH MASTER CYLINDER TO FLEXIBLE HOSE TUBE

(a) Using SST(s), connect the flexible hose tube.

SST 09023–00100

Torque: 15 N·m (155 kgf·cm, 11 ft·lbf)

11. CONNECT CLUTCH RESERVOIR TUBE

(a) Connect the clutch reservoir tube with the clip to the clutch master cylinder assy.

NOTICE:

Connect the clutch reservoir tube so as not be twisted.

12. INSTALL BRAKE BOOSTER ASSY (LHD STEERING POSITION TYPE) (See page 32–19)

13. INSTALL BRAKE MASTER CYLINDER SUB–ASSY (LHD STEERING POSITION TYPE) (See page 32–13)

14. BLEED BRAKE LINE (LHD STEERING POSITION TYPE) (See page 32–4)

15. BLEED CLUTCH PIPE LINE

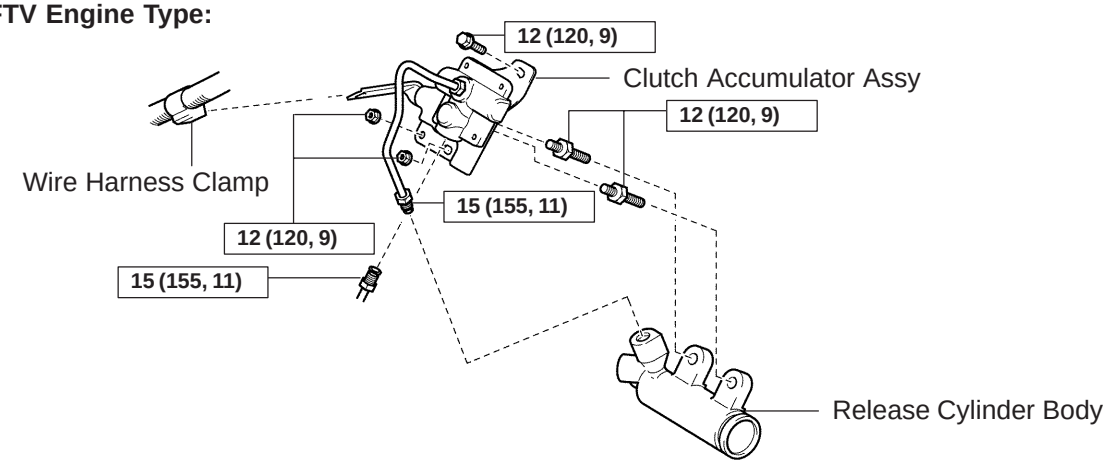
(a) Fill the brake reservoir tank with the clutch fluid and bleed clutch system.
Torque: 8.4 N·m (85 kgf·cm, 73 in.·lbf)

16. CHECK AND ADJUST BRAKE PEDAL HEIGHT (LHD STEERING POSITION TYPE) (See page 32–6)

17. INSPECT AND ADJUST CLUTCH PEDAL SUB–ASSY (See page 42–2)

18. CHECK BRAKE FLUID LEAKAGE (LHD STEERING POSITION TYPE)

19. CHECK CLUTCH FLUID LEAKAGE



20. CHECK FLUID LEVEL IN RESERVOIR

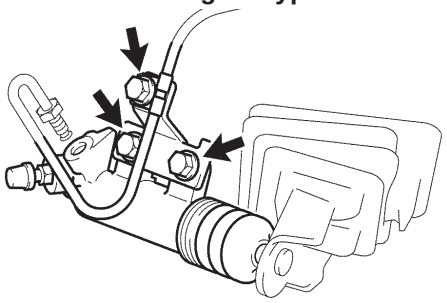
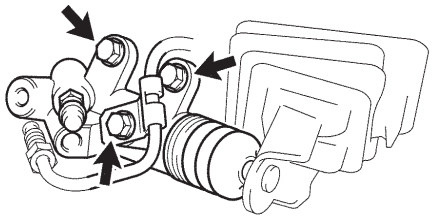
(a) Using SST(s), disconnect the flexible hose tube.
SST 09023–00100

HINT:
Use a container to catch the fluid.



4. REMOVE CLUTCH ACCUMULATOR ASSY (1CD–FTV ENGINE TYPE)

(a) Disconnect the wire harness clamp.
(b) Using SST(s), disconnect the 2 flexible hose tubes.
SST 09023–00100

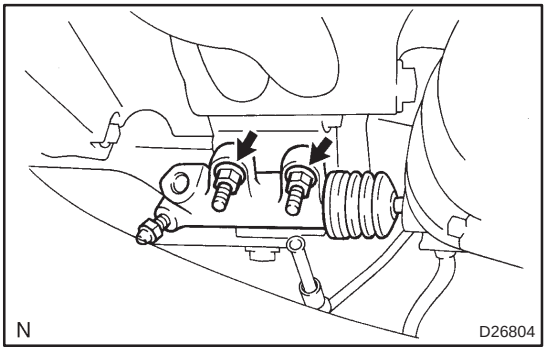


HINT:
Use a container to catch the fluid.

(c) Remove the 2 nuts, bolt and clutch accumulator assy.

1ZZ–FE/3ZZ–FE Engine Type:

1AZ–FE/1AZ–FSE Engine Type:



P D30488

5. REMOVE CLUTCH RELEASE CYLINDER ASSY (EXCEPT 1CD–FTV ENGINE TYPE)

(a) 1ZZ–FE/3ZZ–FE Engine Type:
Remove the 3 bolts, clutch release cylinder assy, and clutch line bracket.

(b) 1AZ–FE/1AZ–FSE Engine Type:
Remove the 3 bolts and clutch release cylinder assy.

N D26804

6. REMOVE CLUTCH RELEASE CYLINDER ASSY (1CD–FTV ENGINE TYPE)

(a) Using a 12 mm deep socket wrench, remove the 2 bolts and clutch release cylinder assy.

7. REMOVE CLUTCH RELEASE CYLINDER KIT

(a) Remove the boot from the cylinder body.

(b) Remove the push rod from the cylinder body.

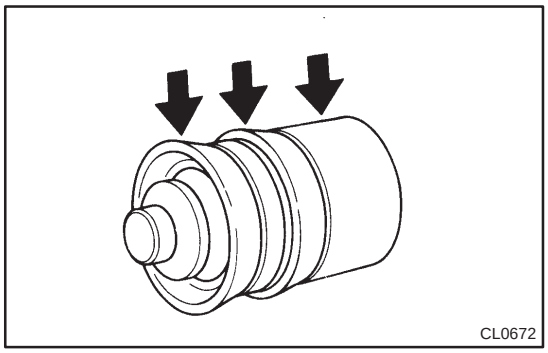
(c) Remove the piston from the cylinder body.

NOTICE:

Be careful not to damage the inside of the cylinder body.

(d) Remove the spring from the cylinder body.

(e) Remove the bleeder plug cap from the bleeder plug.



8. REMOVE RELEASE CYLINDER BLEEDER PLUG

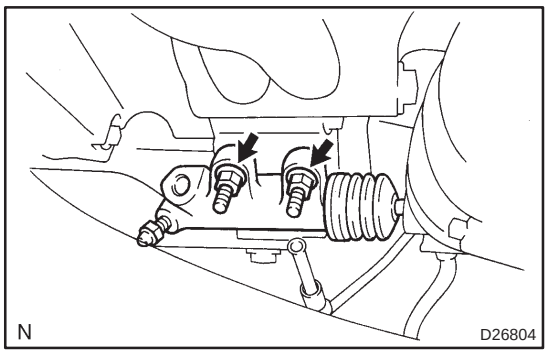
9. INSTALL RELEASE CYLINDER BLEEDER PLUG
Torque: 8.3 N·m (85 kgf·cm, 73 in.·lbf)

10. INSTALL CLUTCH RELEASE CYLINDER KIT

(a) Install the bleeder plug cap to the bleeder plug.

(b) Install a new spring to the cylinder body.

(c) Coat the parts with lithium soap base glycol grease, as shown in the illustration.

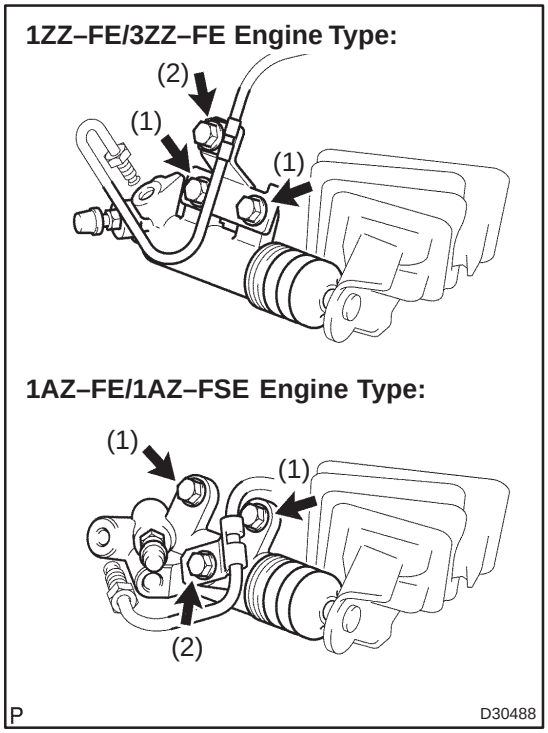


(d) Install the piston to the cylinder body.

NOTICE:

Be careful not to damage the inside of the cylinder body.

(e) Install the push rod to the cylinder body.



(f) Install the boot to the cylinder body.

11. INSTALL CLUTCH RELEASE CYLINDER ASSY (1CD–FTV ENGINE TYPE)

(a) Using a 12 mm deep socket wrench, install the clutch release cylinder assy with the 2 bolts.

Torque: 12 N·m (120 kgf·cm, 9 ft·lbf)

12. INSTALL CLUTCH RELEASE CYLINDER ASSY (EXCEPT 1CD–FTV ENGINE TYPE)

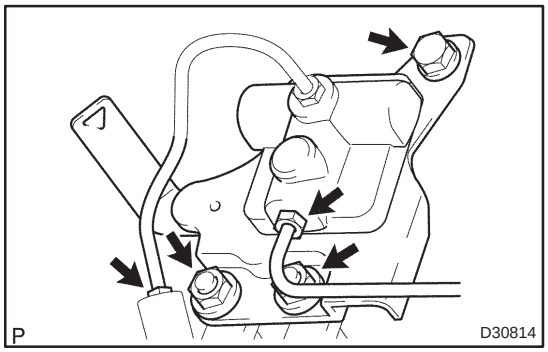
(a) 1ZZ–FE/3ZZ–FE Engine Type:

(1) Install the clutch release cylinder and clutch line bracket with the 2 bolts.

Torque: 14 N·m (141 kgf·cm, 10 ft·lbf)

(2) Install the flexible hose tube with the bolt.

Torque: 5.0 N·m (51 kgf·cm, 44 in.·lbf)



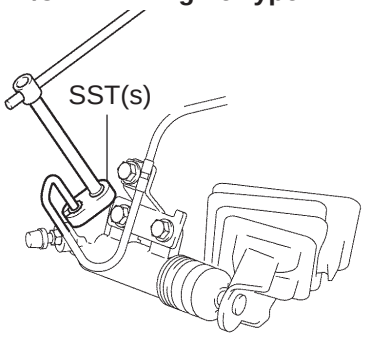
(b) 1AZ–FE/1AZ–FSE Engine Type:

(1) Install the clutch release cylinder with the 2 bolts.

Torque: 12 N·m (120 kgf·cm, 9 ft·lbf)

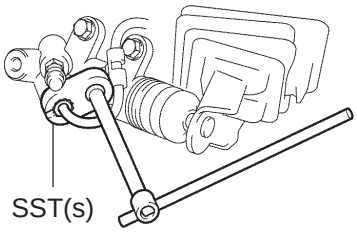
(2) Install the flexible hose tube with the bolt.

Torque: 12 N·m (122 kgf·cm, 9 ft·lbf)



13. INSTALL CLUTCH ACCUMULATOR ASSY (1CD–FTV ENGINE TYPE)

(a) Install the clutch accumulator assy with the 2 nuts and bolt.
Torque: 12 N·m (120 kgf·cm, 9 ft·lbf)



(b) Using SST(s), connect the 2 flexible hose tubes.
SST 09023–00100
Torque: 15 N·m (155 kgf·cm, 11 ft·lbf)

(c) Connect the wire harness clamp.

(a) Remove the clutch release bearing assy from the clutch release fork.

4. REMOVE RELEASE FORK SUPPORT

(a) Remove the release fork support from the transaxle assy.

5. REMOVE RELEASE BEARING HUB CLIP

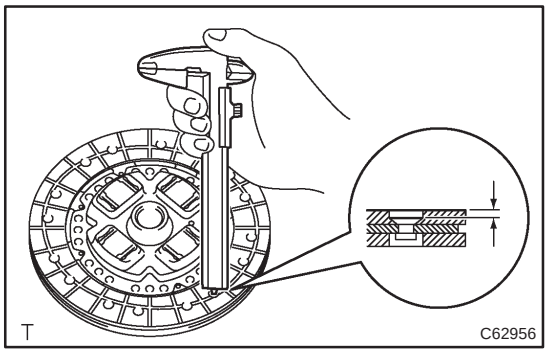
6. REMOVE CLUTCH RELEASE FORK BOOT

7. REMOVE CLUTCH COVER ASSY

(a) Align matchmarks on the clutch cover assy with the one on the flywheel sub–assy.

(b) Loosen each set bolt one turn at a time until the spring tension is released.

(c) Remove the set bolts, and pull off the clutch cover assy.



NOTICE:

Do not drop the clutch disc assy.

8. REMOVE CLUTCH DISC ASSY

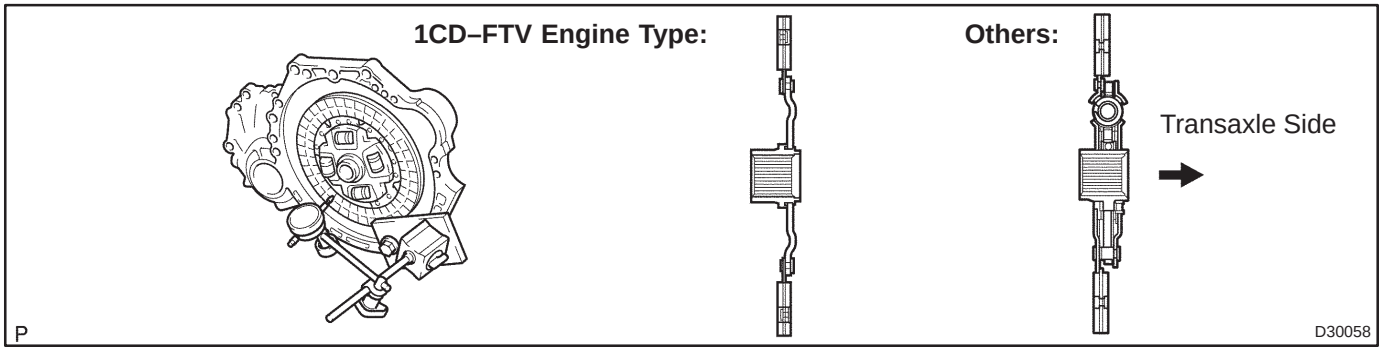
NOTICE:

Keep the lining part of the clutch disc assy, the pressure plate and surface of the flywheel sub–assy away from oil and foreign attachment.

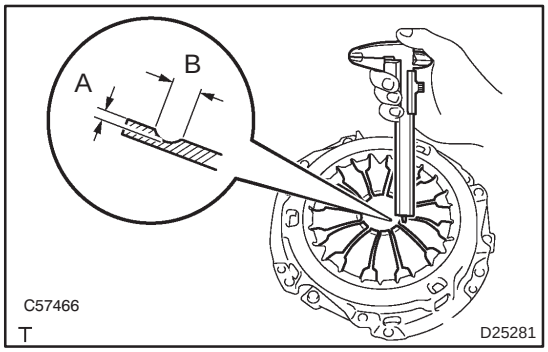
9. INSPECT CLUTCH DISC ASSY

(a) Using vernier calipers, measure the rivet head depth.
Maximum rivet depth: 0.3 mm (0.012 in.)

Replace the clutch disc assy as necessary.



(b) Install the clutch disc assy to the transaxle assy.

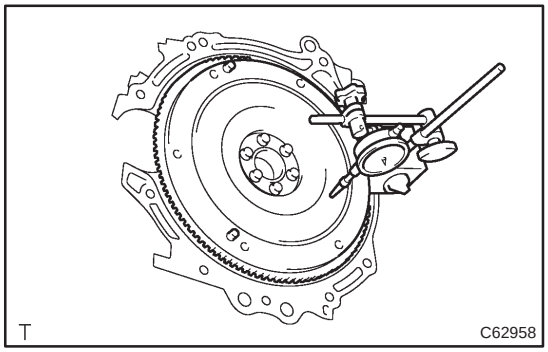


NOTICE:

Take care not to insert the clutch disc assy in the wrong direction.

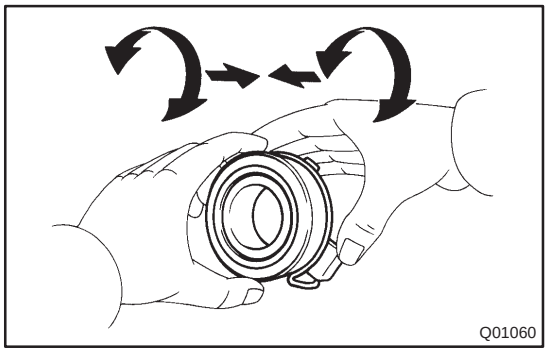
(c) Using a dial gage, check the clutch disc assy runout.
Minimum runout: 0.8 mm (0.031 in.)

Replace the clutch disc assy as necessary.



10. INSPECT CLUTCH COVER ASSY

(a) Using vernier calipers, inspect the diaphragm spring for the depth and width of wear.
Maximum:
A (Depth): 0.5 mm (0.020 in.)
B (Width): 6.0 mm (0.236 in.)



Replace the clutch cover assy as necessary.

11. INSPECT FLYWHEEL SUB–ASSY

(a) Using a dial gage, inspect the flywheel sub–assy runout.
Maximum runout: 0.1 mm (0.004 in.)

Replace the flywheel sub–assy as necessary.

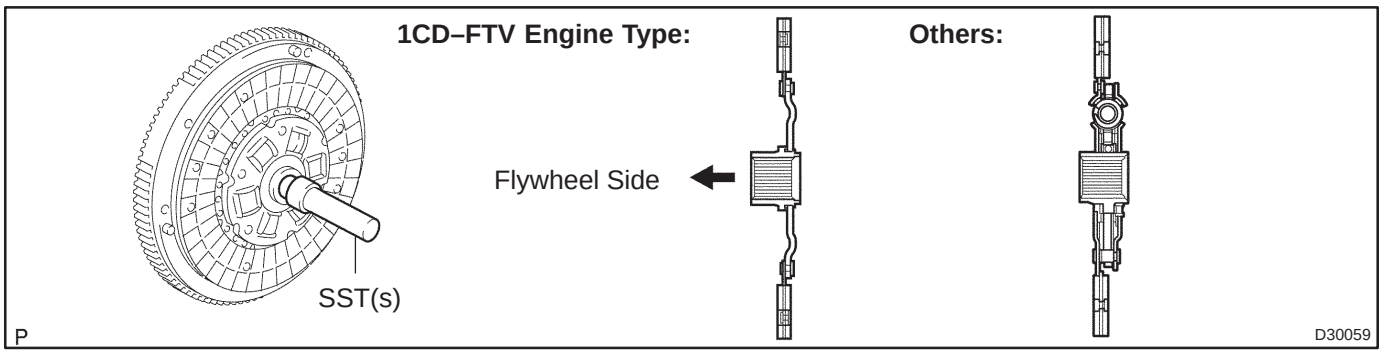
12. INSPECT CLUTCH RELEASE BEARING ASSY

(a) Turn the release bearing by hand while applying force in the axial direction.

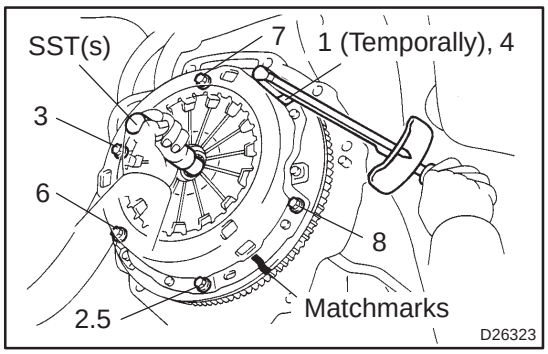
HINT:

The bearing is permanently lubricated and requires no cleaning or lubrication.

Replace the release bearing assy as necessary.



13. INSTALL CLUTCH DISC ASSY



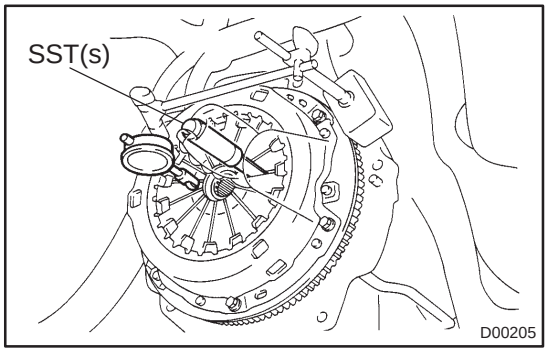
(a) Insert SST(s) in the clutch disc assy, then insert them in the flywheel sub–assy.

SST 09301–00220

NOTICE:

Take care not to insert the clutch disc assy in the wrong direction.

14. INSTALL CLUTCH COVER ASSY



(a) Align matchmarks on the clutch cover assy and flywheel sub–assy.

(b) Following the procedures shown in the illustration, tighten the 6 bolts, in the order starting from the bolt located near the knock pin on the top.

Torque: 19 N·m (195 kgf·cm, 14 ft·lbf)

HINT:

- Following the order in the illustration, tighten the bolts at a time evenly.
- Move SST(s) up and down, right and left lightly, after checking that the disc is in the center, and then tighten the bolts.

15. INSPECT AND ADJUST CLUTCH COVER ASSY

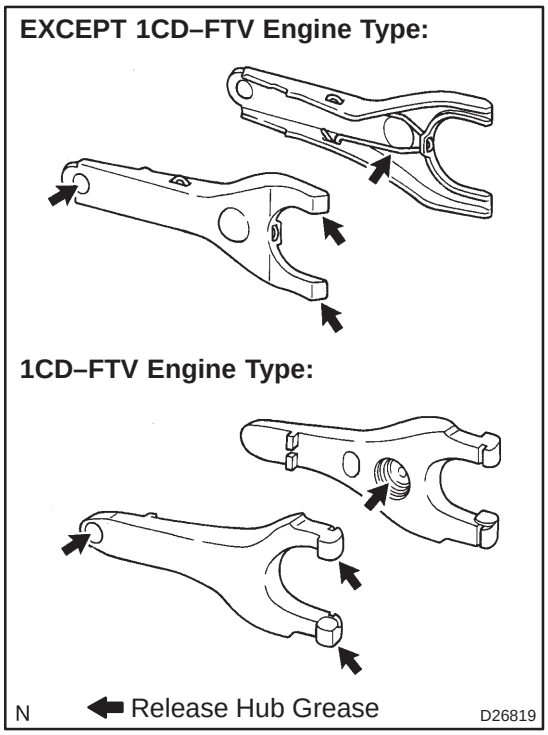
(a) Using a dial indicator with roller instrument, check the diaphragm spring tip alignment.

Maximum non–alignment: 0.5 mm (0.020 in.)

If the alignment is not as specified, adjust the diaphragm spring tip alignment using SST(s).

SST 09333–00013

16. INSTALL RELEASE FORK SUPPORT



(a) Install the release fork support to the transaxle assy.

Torque:

1ZZ–FE/3ZZ–FE/1CD–FTV Engine Type: 37 N·m (375 kgf·cm, 27 ft·lbf)

1AZ–FSE/1AZ–FE Engine Type: 47 N·m (480 kgf·cm, 35 ft·lbf)

17. INSTALL RELEASE BEARING HUB CLIP

18. INSTALL CLUTCH RELEASE FORK SUB–ASSY

(a) Apply the release hub grease to the release fork and release bearing assy contact, release fork and push rod contact, and release fork pivot points.

Sealant:

Part No. 08887–01806, RELEASE HUB GREASE or equivalent

(b) Install the release fork to the release bearing assy.

19. INSTALL CLUTCH RELEASE BEARING ASSY

(a) Apply the clutch spline grease to the input shaft spline.

Sealant:

Part No. 08887–01706, CLUTCH SPLINE GREASE or equivalent

(b) Install the bearing to the release fork, and then install them to the transaxle assy.

NOTICE:

After the installation, move the folk forward and backward to check that the release bearing slides smoothly.

20. INSTALL CLUTCH RELEASE FORK BOOT

21. INSTALL MANUAL TRANSAXLE ASSY

(a) 1ZZ–FE, 3ZZ–FE Engine (See page 41–15)

(b) 1AZ–FE, 1AZ–FSE Engine (See page 41–24)

(c) 1CD–FTV Engine (See page 41–33)

STEERING SYSTEM

5000C–14

PRECAUTION

1. HANDLING PRECAUTIONS ON STEERING SYSTEM

(a) Be careful to replace the parts properly because they could affect the performance of the steering system and result in a driving hazard.

2. HANDLING PRECAUTIONS ON SRS AIRBAG SYSTEM

(a) The vehicle is equipped with SRS (Supplemental Restraint System) such as the driver airbag and front passenger airbag. Failure to carry out service operation in the correct sequence could cause the SRS to unexpectedly deploy during servicing, possibly leading to a serious accident. Before servicing (including removal or installation of parts, inspection or replacement), be sure to read the precautionary notices in the supplemental restraint system (See page 60–1).

3. HANDLING PRECAUTIONS ON STEERING COLUMN

(a) Do not give an impact to the steering column assy, especially the motor and the torque sensor. If a great impact is given (dropping it to the floor, etc.), replace it with a new one.

(b) When removing the steering column assy, do not pull the harness.

(c) When having replaced the steering column assy and/or the ECU, calibrate the zero point of the steering torque sensor.

(d) In the case of disconnecting a connector related to the power steering system, turn the ignition switch ON, set the steering wheel in the straight–ahead position and turn the ignition switch OFF before disconnecting the connector.

(e) In the case of connecting a connector related to the power steering system, make sure that the ignition switch is OFF at first. After connecting the connector, set the steering wheel assy in the straight–ahead position, and then turn the ignition switch ON.

NOTICE:

Never turn on the ignition switch when the steering wheel assy is set in order than the straight–ahead position.

(f) If the above operation is not done, the zero point of the steering torque sensor is shifted away from the proper position, making difference in the steering effort between right and left. If this happens, perform the zero point calibration of the steering torque sensor (See page 05–1042).

5000D–14

PROBLEM SYMPTOMS TABLE

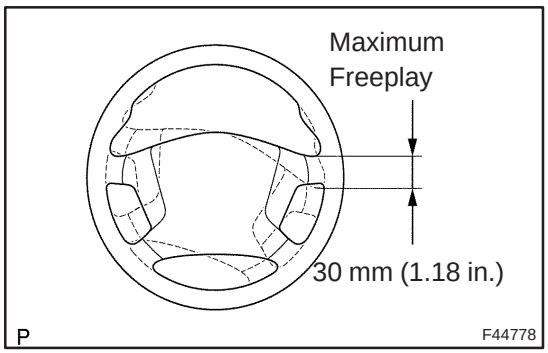
HINT:

Use the table below to help you find the cause of the problem. The numbers indicate the likelihood of the cause in the descending order. Check each part in the order shown. Repair or replace these parts as necessary.

Oil pressure power steering:

Symptom	Suspect Area	See page
Hard steering	11. Tires (Improperly inflated)	28–1
	12. Power steering fluid level (Low)	51–4
	13. Drive belt (Loose)	51–4
	14. Front wheel alignment (Incorrect)	26–6
	15. Steering system joints (Worn)	–
	16. Suspension arm ball joints (Worn)	26–24
	17. Steering column (Binding)	–
	18. Power steering vane pump	51–9 51–19
	19. Power steering gear	51–36
Poor return	1. Tires (Improperly inflated)	28–1
	2. Front wheel alignment (Incorrect)	26–6
	3. Steering column (Binding)	–
	4. Power steering gear	51–36
Excessive play	1. Steering system joints (Worn)	–
	2. Suspension arm ball joints (Worn)	26–24
	3. Intermediate shaft, Sliding yoke (Worn)	–
	4. Front wheel bearing (Worn)	30–22
	5. Power steering gear	51–36
Abnormal noise	1. Power steering fluid level (Low)	51–4
	2. Steering system joints (Worn)	–
	3. Power steering vane pump	51–9 51–19
	4. Power steering gear	51–36

Electric power steering:



Symptom	Suspect Area	See page
Hard steering	1. Tires (Improperly inflated) 2. Front wheel alignment (Incorrect) 3. Steering system joints (Worn) 4. Suspension arm ball joints (Worn) 5. Steering column (Binding) 6. Steering column (Electric power steering)	28–1 26–6 – 26–24 – 50–9
Poor return	1. Tires (Improperly inflated) 2. Front wheel alignment (Incorrect) 3. Steering column (Binding) 4. Steering column (Electric power steering)	28–1 26–6 – 50–9
Excessive play	1. Steering system joints (Worn) 2. Suspension arm ball joints (Worn) 3. Intermediate shaft, Sliding yoke (Worn) 4. Front wheel bearing (Worn) 5. Steering column (Electric power steering)	– 26–24 – 30–22 50–9
Abnormal noise	1. Steering system joints (Worn) 2. Steering column (Electric power steering)	– 50–9

HINT:

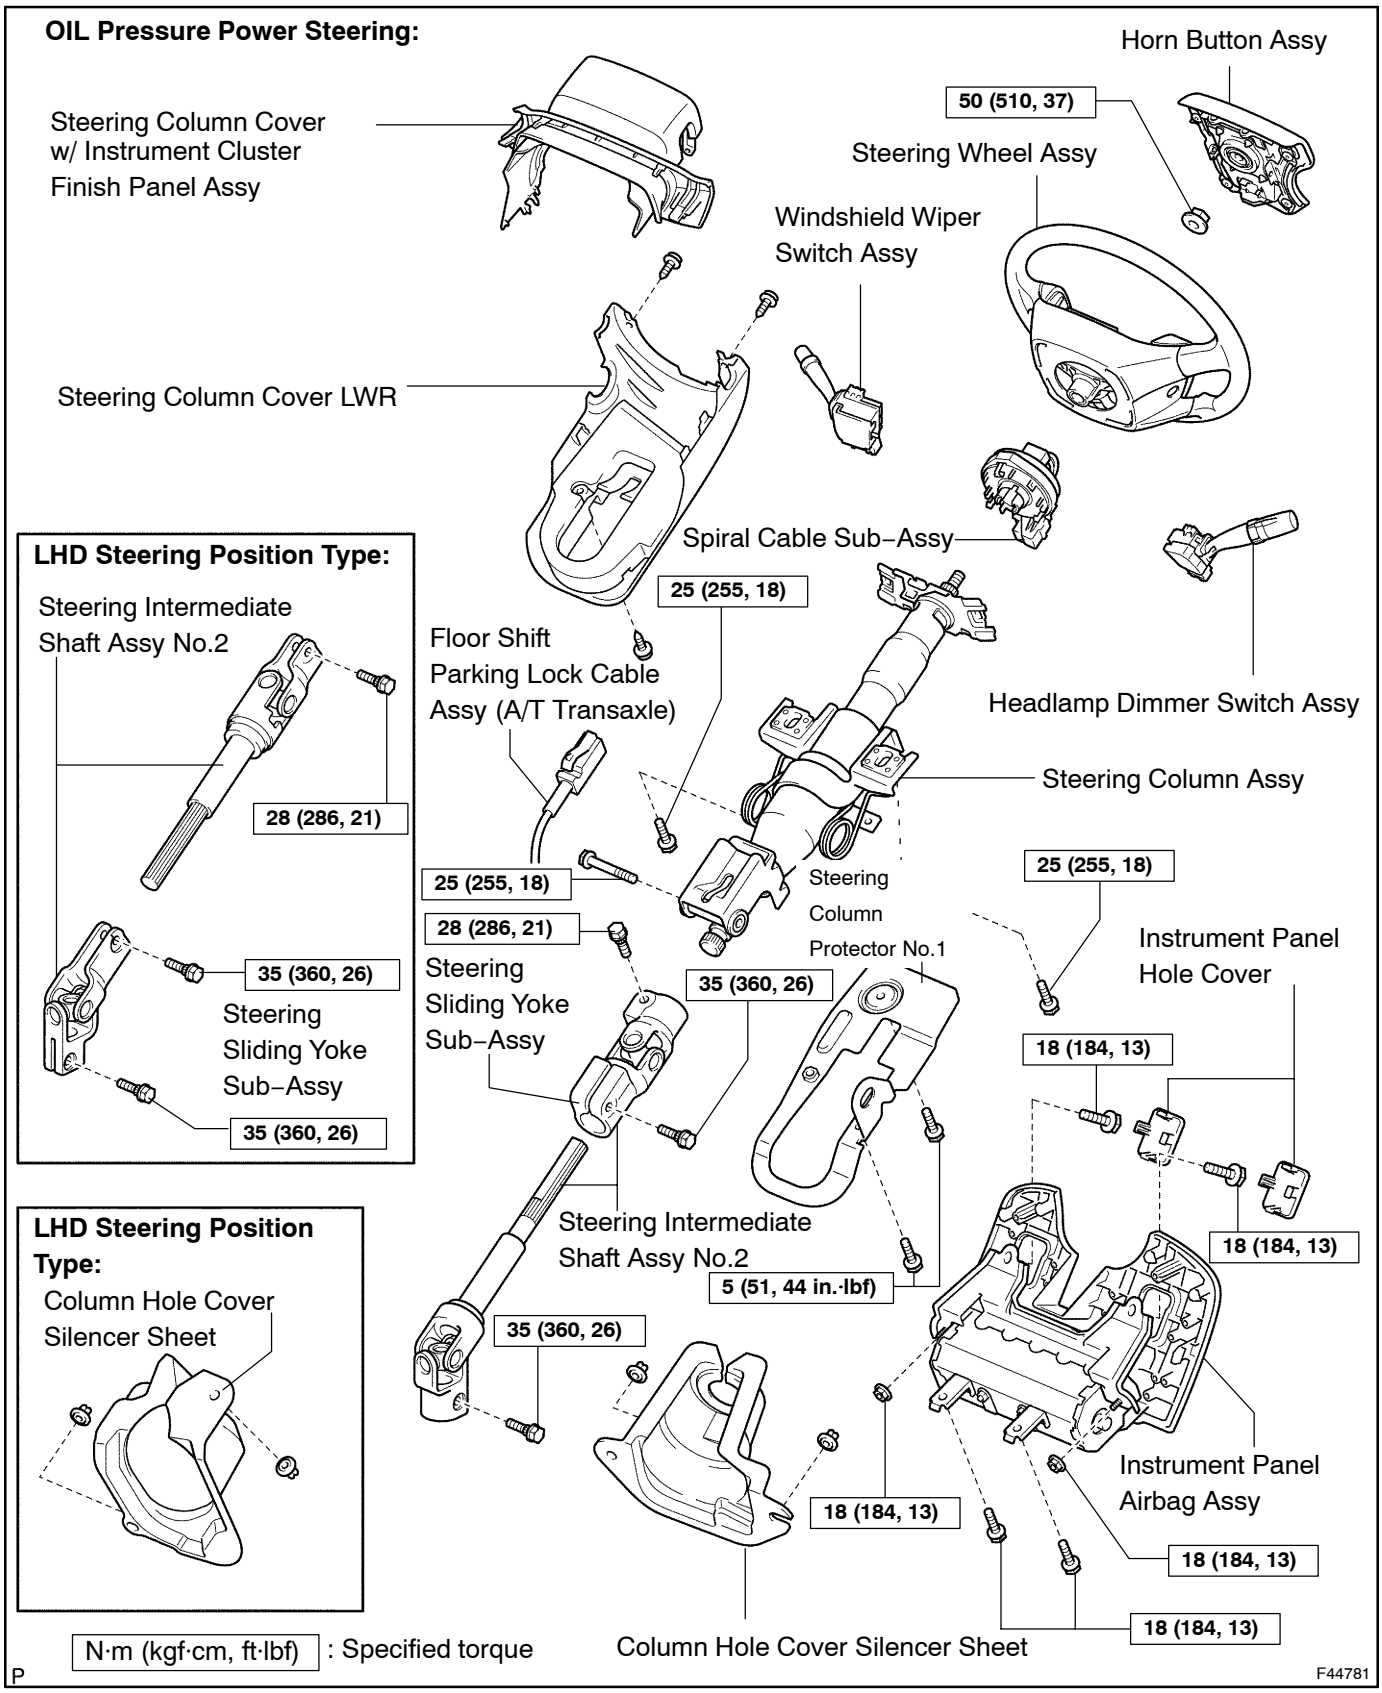
When the problem occurs on the Electric Power Steering system, refer to the DI section (See page 05–1042).

5000E–04

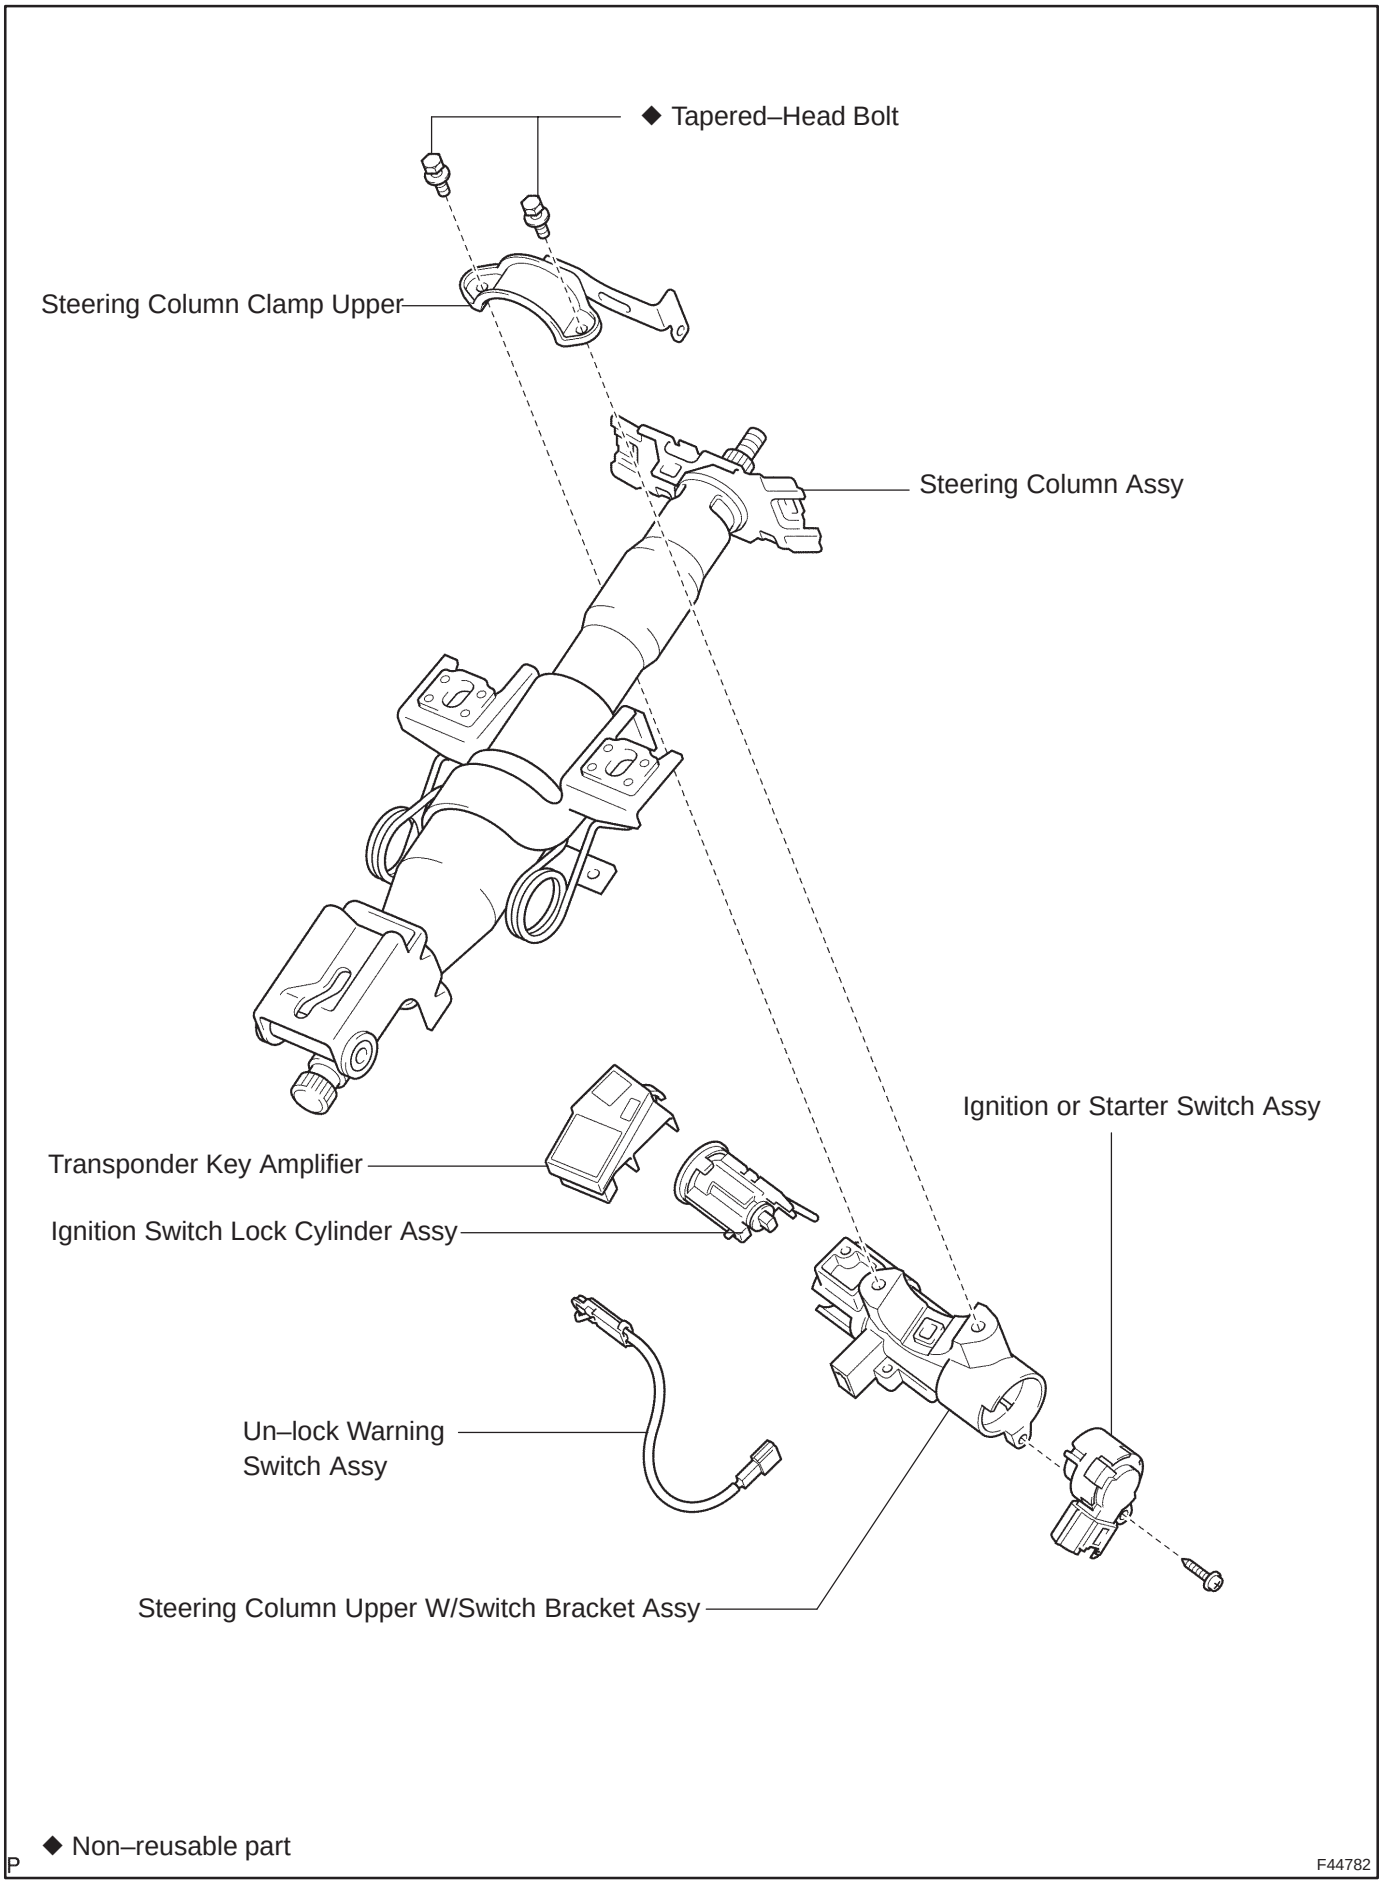
ON–VEHICLE INSPECTION

1. CHECK STEERING WHEEL FREEPLAY

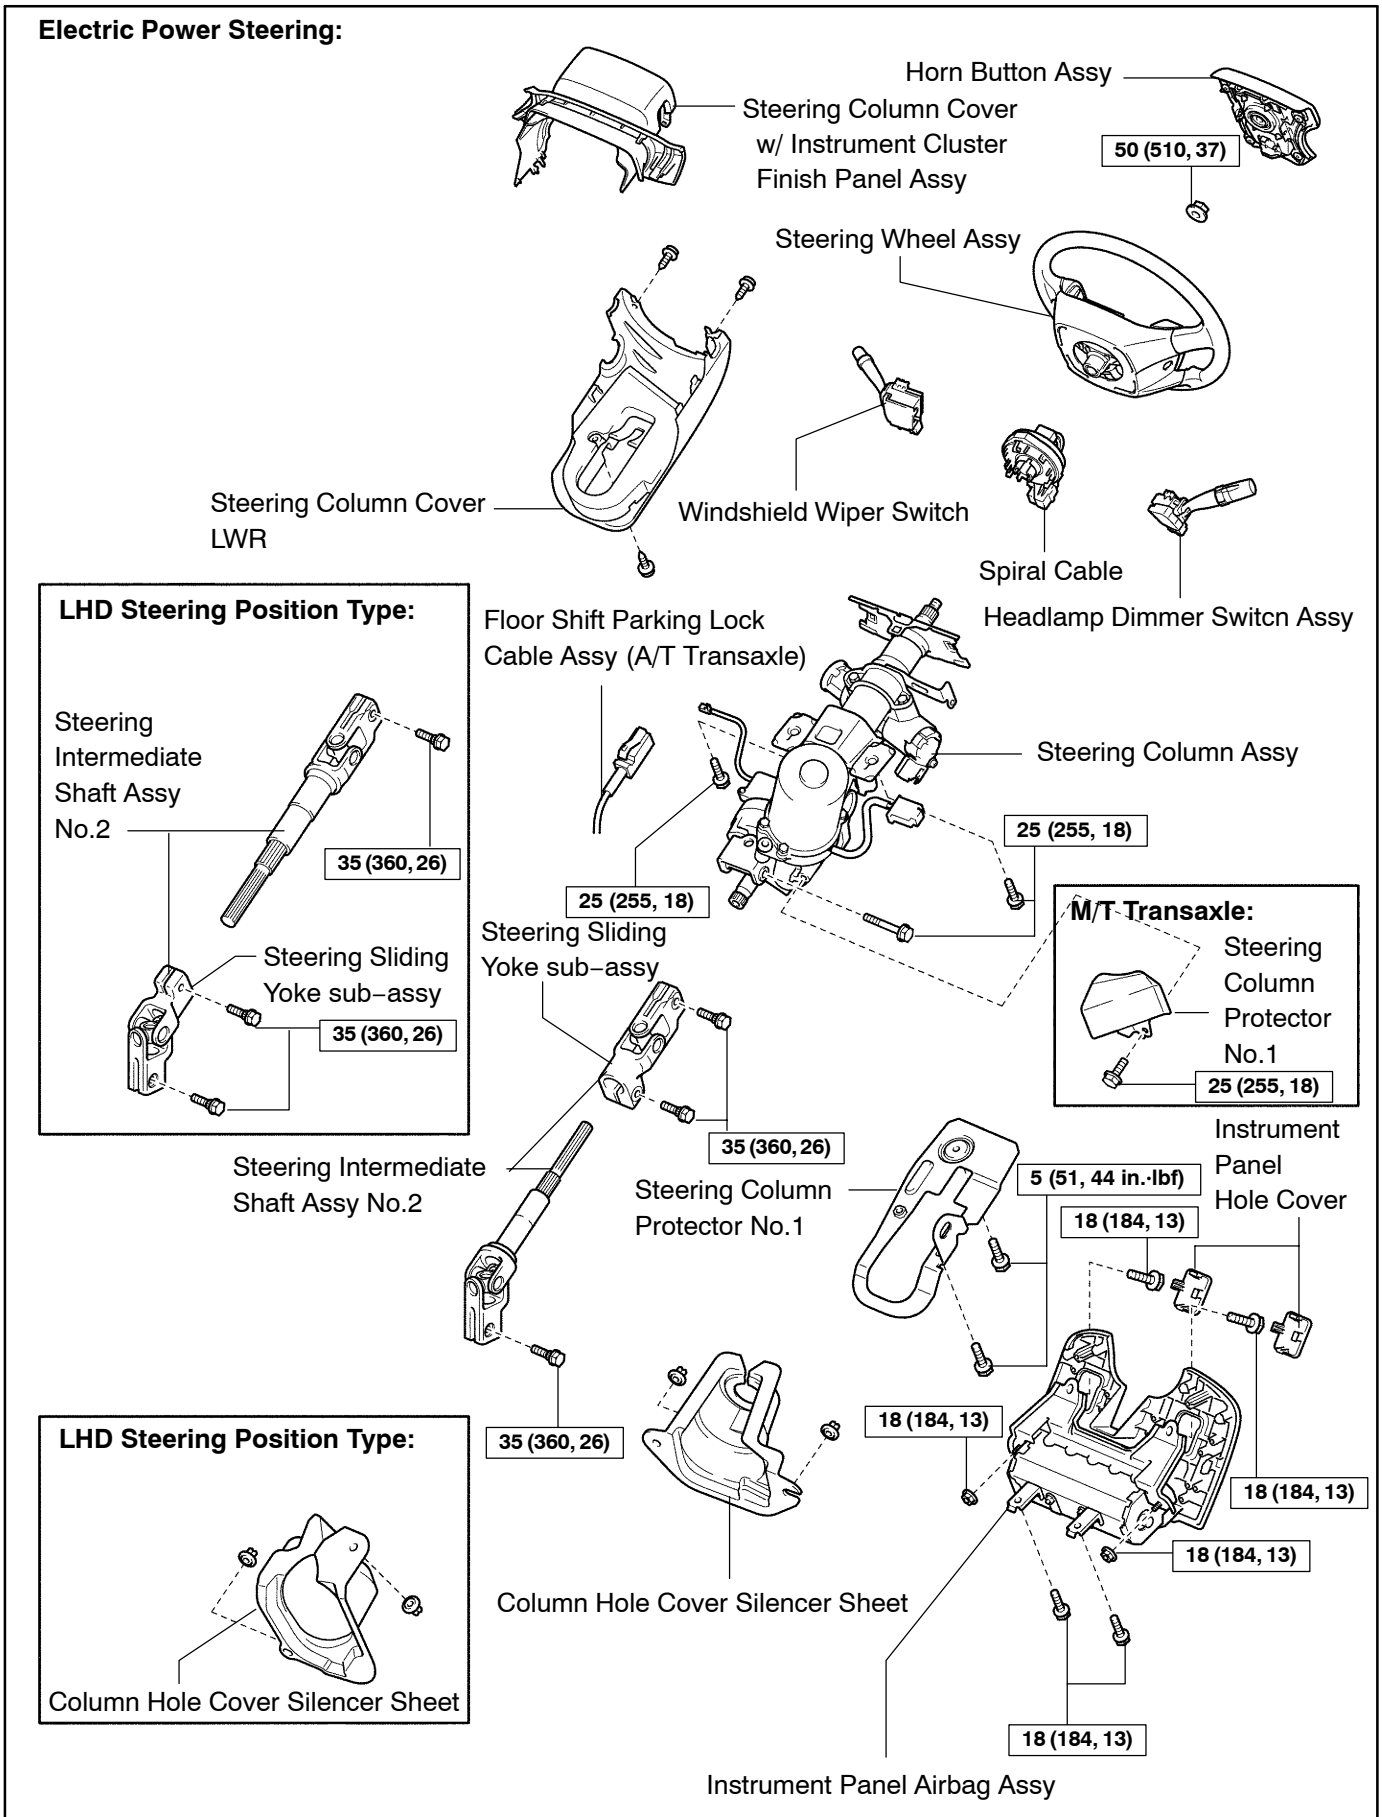
(a) Stop the vehicle and face the tires straight ahead.



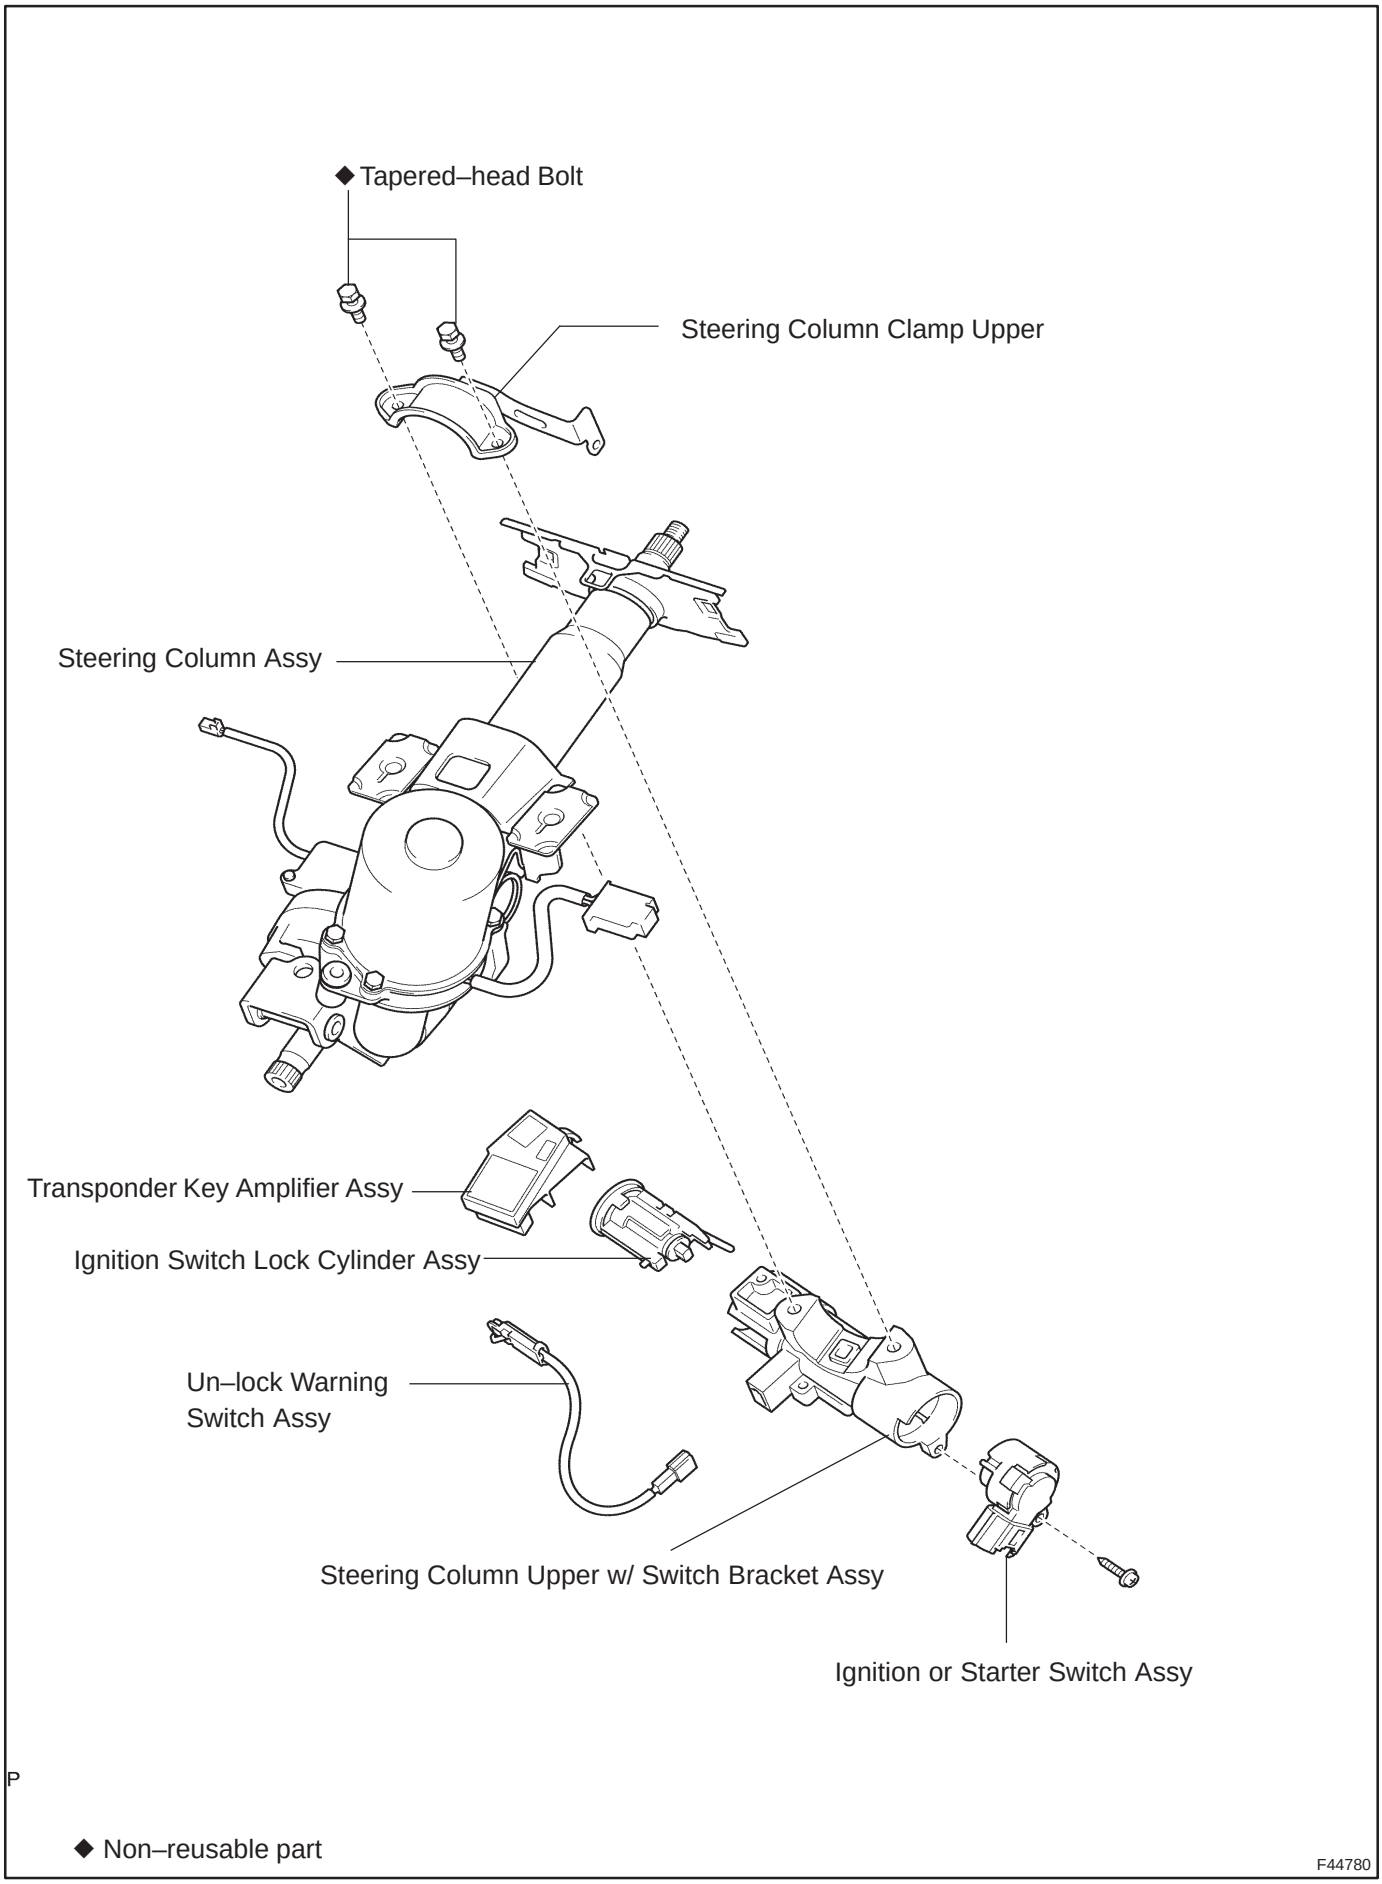
(b) Rock the steering wheel gently up and down with a finger lightly, check the steering wheel freeplay.



Maximum freeplay: 30 mm (1.18 in.)



STEERING COLUMN ASSY



COMPONENTS

5006X–01

◆ Tapered–Head Bolt
Steering Column Clamp Upper

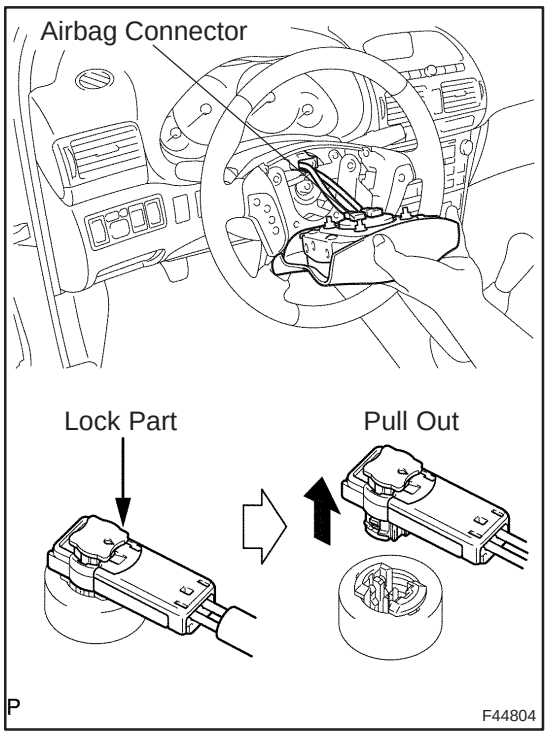
5006Y–01

OVERHAUL

1. PRECAUTION (See page 60–1)
2. INSPECT PLACE FRONT WHEELS FACING STRAIGHT AHEAD
3. DISCONNECT BATTERY NEGATIVE TERMINAL (See page 60–1)

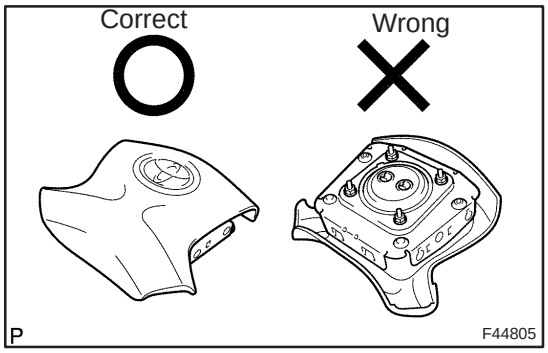


4. REMOVE HORN BUTTON ASSY

NOTICE:

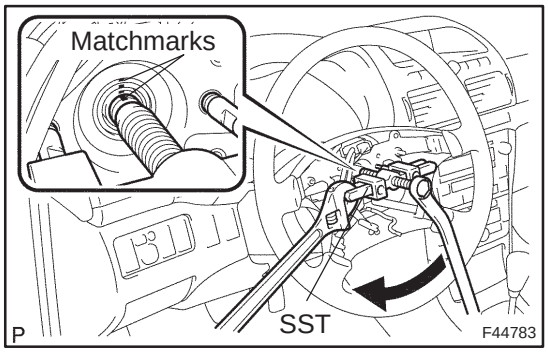
If the airbag connector is disconnected with the ignition switch at ON, DTCs is recorded.

(a) Using a torx socket wrench, loosen the 2 torx screws until the groove along the screw circumference catches on the screw case.



(b) Pull out the horn button assy from the steering wheel and disconnect the airbag connector.

(c) Disconnect the terminal.



NOTICE:

When removing the horn button assy, take care not to pull the airbag wire harness.

CAUTION:

- **When storing the horn button assy, keep the upper surface of the horn button assy facing upward.**
- **Never disassemble the horn button assy.**

5. REMOVE STEERING WHEEL ASSY

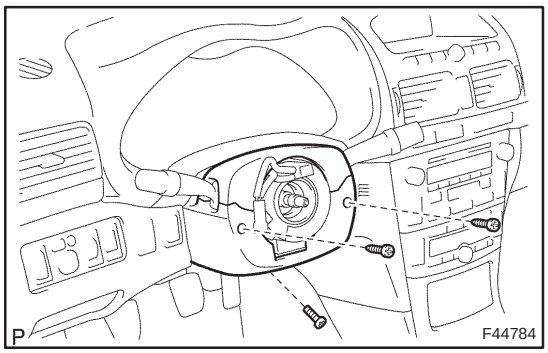
(a) Remove the steering wheel assy set nut.

(b) Place matchmarks on the steering wheel assy and steering main shaft assy.

(c) Using SST, remove the steering wheel assy.

SST 09950–50013 (09951–05010, 09952–05010, 09953–05020, 09954–05021)

6. REMOVE INSTRUMENT PANEL UNDER COVER SUB–ASSY NO.1 (See page 71–11)



7. REMOVE INSTRUMENT PANEL HOLE COVER (See page 60–54)

8. REMOVE INSTRUMENT PANEL AIR BAG ASSY (See page 60–54)

9. REMOVE INSTRUMENT CLUSTER FINISH PANEL GARNISH NO.1 (ELECTRIC POWER STEERING) (See page 71–11)

10. REMOVE INSTRUMENT CLUSTER FINISH PANEL GARNISH NO.2 (ELECTRIC POWER STEERING) (See page 71–11)

11. REMOVE INSTRUMENT PANEL REGISTER ASSY CTR (ELECTRIC POWER STEERING) (See page 71–11)

12. REMOVE STEERING COLUMN COVER LWR

(a) Remove the 3 screws and steering column cover LWR.

13. REMOVE STEERING COLUMN COVER W/INSTRUMENT CLUSTER FINISH PANEL ASSY

(a) Disengage the 2 clips and remove the steering column cover w/instrument cluster finish panel assy.

14. REMOVE COMBINATION METER ASSY (ELECTRIC POWER STEERING) (See page 71–11)

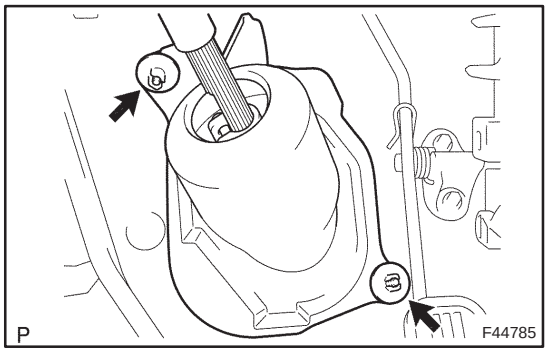
15. REMOVE INSTRUMENT PANEL REGISTER ASSY NO.1 (ELECTRIC POWER STEERING) (See page 71–11)

16. REMOVE INSTRUMENT PANEL REGISTER ASSY NO.2 (ELECTRIC POWER STEERING) (See page 71–11)

17. REMOVE GLOVE COMPARTMENT DOOR ASSY (ELECTRIC POWER STEERING) (See page 71–11)

18. REMOVE FRONT PILLAR GARNISH LH (ELECTRIC POWER STEERING) (See page 71–11)

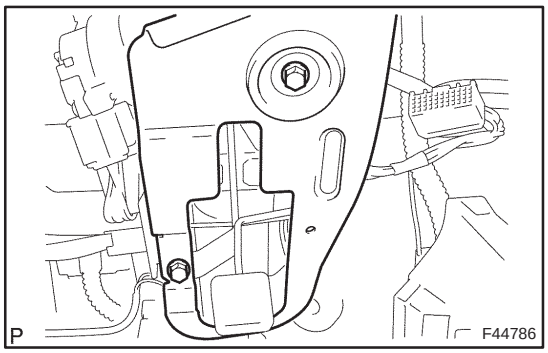
19. REMOVE FRONT PILLAR GARNISH RH (ELECTRIC POWER STEERING) (See page 71–11)



20. DISCONNECT PASSENGER AIRBAG CONNECTOR (ELECTRIC POWER STEERING) (See page 71–11)

21. REMOVE INSTRUMENT PANEL SUB–ASSY UPPER W/INSTR PNL PASS L/DOOR AIR BAG ASSY (ELECTRIC POWER STEERING) (See page 71–11)

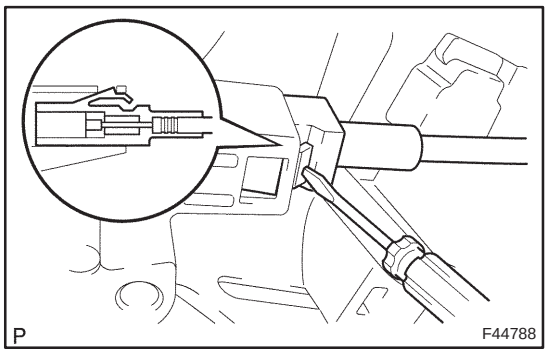
22. REMOVE HEADLAMP DIMMER SWITCH ASSY (See page 65–27)



23. REMOVE WINDSHIELD WIPER SWITCH ASSY (See page 66–24)

24. REMOVE SPIRAL CABLE SUB–ASSY (See page 60–26)

25. REMOVE COLUMN HOLE COVER SILENCER SHEET



(a) Remove the 2 nuts and column hole cover silencer sheet.

26. REMOVE STEERING COLUMN PROTECTOR NO.1

(a) Separate the wire harness clamp from the steering column protector No.1.

(b) Remove the 2 bolts and steering column protector No.1.

27. DISCONNECT FLOOR SHIFT PARKING LOCK CABLE ASSY (A/T TRANSAXLE)

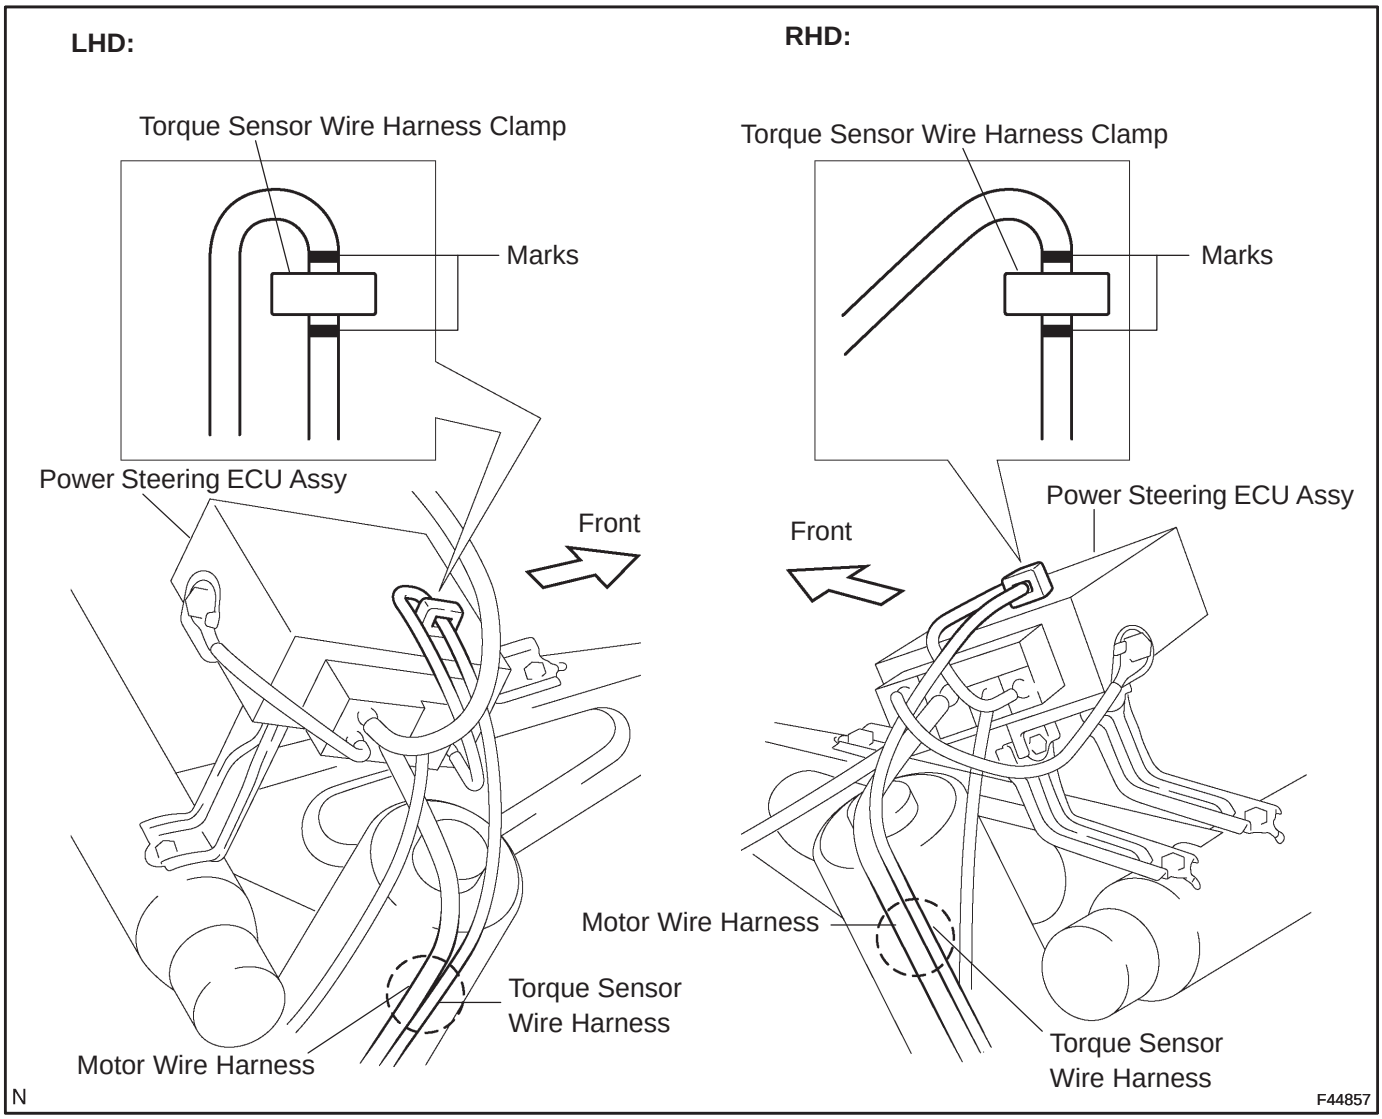
(a) Turn the ignition switch to ON.

(b) Using a screwdriver, disengage the claw and separate the floor shift parking lock cable.

28. DISCONNECT POWER STEERING ECU ASSY (ELECTRIC POWER STEERING)

NOTICE:

Thoroughly check the procedures for removing and installing the power steering ECU assy when replacing it. Do the same for the removing and installing the steering column assy.

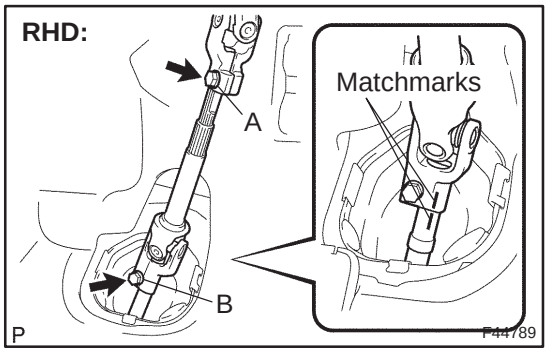


(a) Mark the clamp position on the torque sensor wire harness in order to reinstall the wire harness as shown in the illustration.

(b) Disconnect the torque sensor wire harness from the clamp.

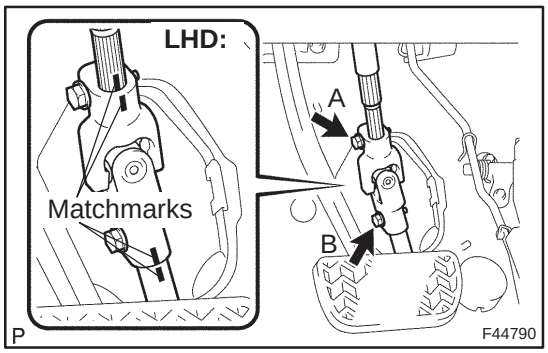
NOTICE:

In case the clamp will be reused, pay attention so as not to damage it.



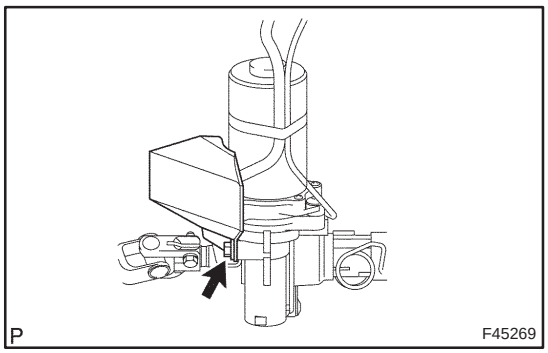
(c) Disconnect the 2 connectors.

29. REMOVE STEERING COLUMN ASSY



(a) Disconnect the wire harness and wire harness clamps.

(b) Loosen the 3 steering column assy set bolts.



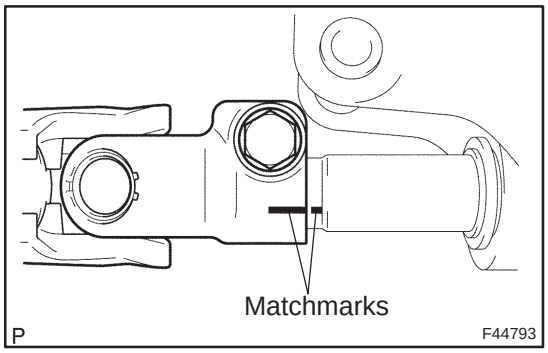
(c) RHD:
Place matchmarks on the intermediate shaft assy No. 2 and steering intermediate shaft.

(d) RHD:
Loosen the bolt A and remove the bolt B, then disconnect the intermediate shaft assy No.2.

(e) LHD:
Place matchmarks on the steering sliding yoke sub–assy and steering intermediate shaft.

(f) LHD:
Loosen the bolt A and remove the bolt B, then disconnect the steering sliding yoke sub–assy.

(g) RHD, M/T:
Remove the bolt and protector.



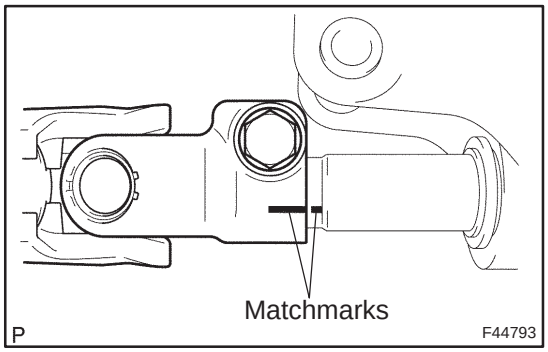
(h) Remove the 3 bolts and steering column assembly.

30. REMOVE STEERING INTERMEDIATE SHAFT ASSY NO.2 (RHD STEERING POSITION TYPE)

(a) Remove the bolt A and steering intermediate shaft assy No. 2.

31. REMOVE STEERING SLIDING YOKE SUB–ASSY (LHD STEERING POSITION TYPE)

(a) Remove the bolt A and steering sliding yoke sub–assy.

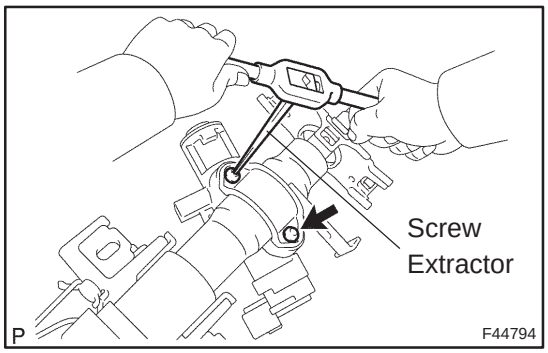


32. REMOVE STEERING SLIDING YOKE SUB–ASSY (RHD STEERING POSITION TYPE)

(a) Place matchmarks on the steering sliding yoke sub–assy and steering main shaft.

(b) Remove the bolt and steering sliding yoke sub–assy.

(c) W/VSC:
Remove the steering sensor (See page 32–65).

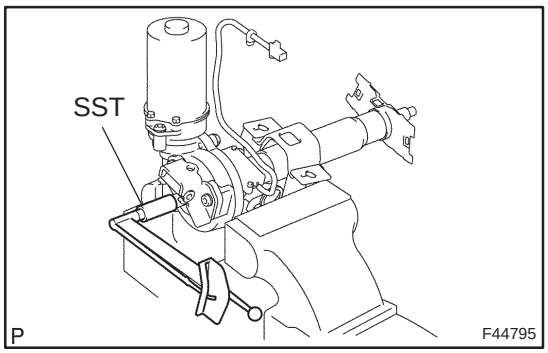


33. REMOVE STEERING INTERMEDIATE SHAFT ASSY NO.2 (LHD STEERING POSITION TYPE)

(a) Place matchmarks on the steering intermediate shaft assy No. 2 and steering main shaft.

(b) Remove the bolt and steering intermediate shaft assy No. 2.

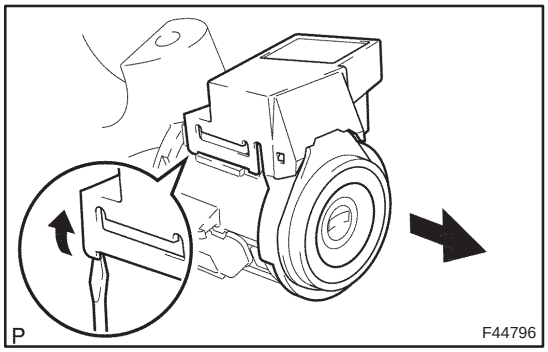
(c) W/VSC:
Remove the steering sensor (See page 32–65).



34. REMOVE STEERING COLUMN UPPER W/SWITCH BRACKET ASSY

(a) Using a centering punch, mark the center of the 2 tapered–head bolts.

(b) Using a 3 – 4 mm (0.12 – 0.16 in.)drill, drill into the 2 bolts.

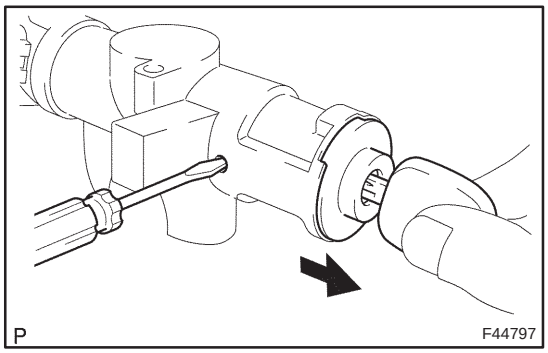


(c) Using a screw extractor, remove the 2 bolts and steering column upper with switch bracket assy.

NOTICE:
Do not give the strong force to the motor part.

35. INSPECT STEERING COLUMN ASSY (ELECTRIC POWER STEERING)

(a) Using SST and a torque wrench, check the rotating torque.
SST 09616–00011
Rotating torque (1 turn for 2 sec.):
0.4 – 1.1 N·m (4 – 11 kgf·cm, 3.5 – 9.5 in.·lbf)



36. REMOVE TRANSPONDER KEY AMPLIFIER

(a) Widen the claw hung on the upper bracket by approx. 1.0 mm (0.039 in.) using a screwdriver.

(b) Pull the transponder key amplifier toward the rear of the vehicle with the claw open.

NOTICE:
Take care not to use excessive force to prevent the case from being damaged.

37. REMOVE IGNITION SWITCH LOCK CYLINDER ASSY

(a) Place the ignition switch lock cylinder assy at the ACC position.

(b) Push down the stop pin with a screwdriver, and pull out the cylinder assy.

38. REMOVE UN–LOCK WARNING SWITCH ASSY

(a) Slide the unlock warning switch assy out of the steering column upper bracket.

39. REMOVE IGNITION OR STARTER SWITCH ASSY

(a) Remove the 2 screws and ignition or starter switch assy.

40. INSTALL IGNITION OR STARTER SWITCH ASSY

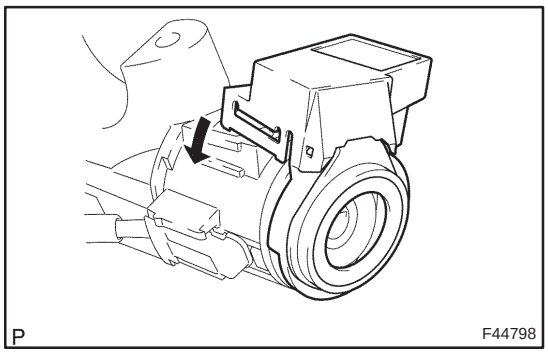
(a) Install the ignition or starter switch assy to the steering column upper w/switch bracket assy with the 2 screws.

41. INSTALL UN–LOCK WARNING SWITCH ASSY

(a) Install the un–lock warning switch assy.

(b) Connect the un–lock warning switch assy connector to the ignition or starter switch assy.

42. INSTALL IGNITION SWITCH LOCK CYLINDER ASSY



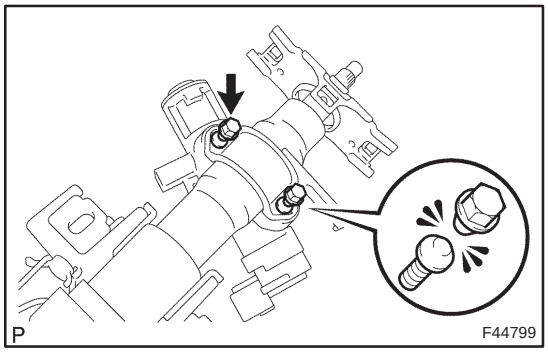
(a) Make sure of the ignition switch lock cylinder assy at the ACC position.

(b) Install the ignition switch lock cylinder assy.

43. INSPECT STEERING LOCK OPERATION

(a) Check that the steering lock mechanism is activated when removing the key.

(b) Check that the steering lock mechanism is deactivated when inserting the key and turning it to ACC position.

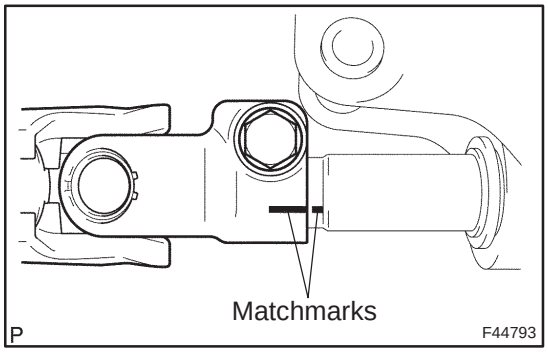


44. INSTALL TRANSPONDER KEY AMPLIFIER

(a) Align the transponder key amplifier with the installation position of the upper bracket with the amplifier inclined.

(b) Push the transponder key amplifier up and connect it to the upper bracket.

NOTICE:



Take care not to push the amplifier up with excessive force to prevent it from being damaged.

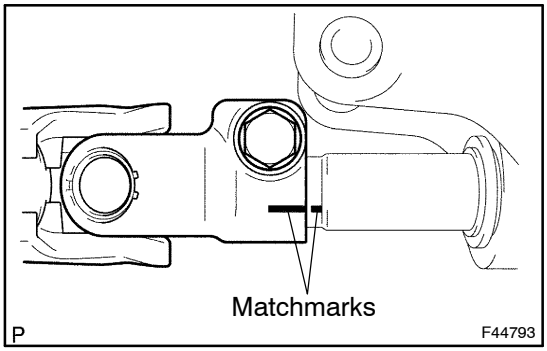
45. INSTALL STEERING COLUMN UPPER W/SWITCH BRACKET ASSY

(a) Temporarily install the steering column upper with switch bracket assy and steering column upper clamp with 2 new tapered–head bolts.

(b) Tighten the 2 tapared–head bolts until the bolt heads break off.

46. INSTALL STEERING SLIDING YOKE SUB–ASSY (RHD STEERING POSITION TYPE)

(a) W/VSC:
Install the steering sensor (See page 32–65).



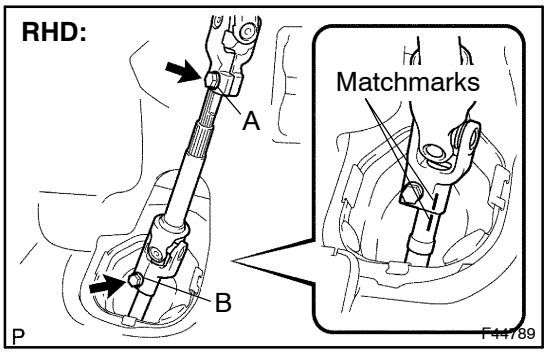
(b) Align matchmarks on the steering sliding yoke and steering main shaft.

(c) Oil Pressure Power Steering

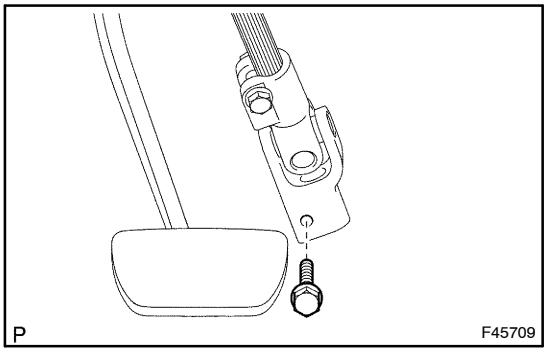
(1) Install the steering sliding yoke with the bolt.

Torque: 28 N·m (286 kgf·cm, 21 ft·lbf)

(d) Electric Pressure Power Steering
(1) Install the steering sliding yoke with the bolt.
Torque: 35 N·m (360 kgf·cm, 26 ft·lbf)

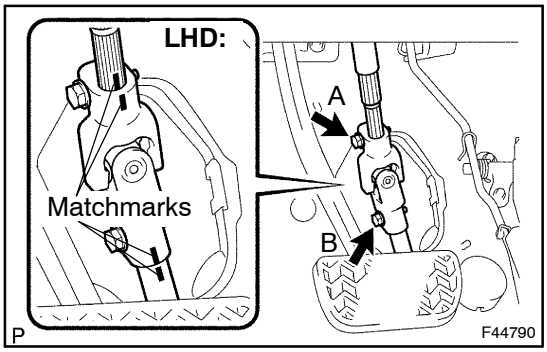


47. INSTALL STEERING INTERMEDIATE SHAFT ASSY NO.2 (LHD STEERING POSITION TYPE)
(a) W/VSC:
Install the steering sensor (See page 32–65).
(b) Align matchmarks on the steering intermediate shaft assy No. 2 and steering main shaft.
(c) Oil Pressure Power Steering
(1) Install the steering intermediate shaft assy No. 2 with the bolt.
Torque: 28 N·m (286 kgf·cm, 21 ft·lbf)
(d) Electric Pressure Power Steering
(1) Install the steering intermediate shaft assy No. 2 with the bolt.
Torque: 35 N·m (360 kgf·cm, 26 ft·lbf)



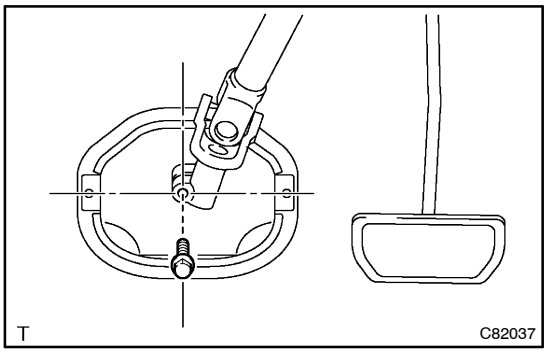
48. INSTALL STEERING INTERMEDIATE SHAFT ASSY NO.2 (RHD STEERING POSITION TYPE)
(a) Temporarily install the steering intermediate shaft assy No. 2 with the bolt A.

49. INSTALL STEERING SLIDING YOKE SUB–ASSY (LHD STEERING POSITION TYPE)
(a) Temporarily install the steering sliding yoke with the bolt A.

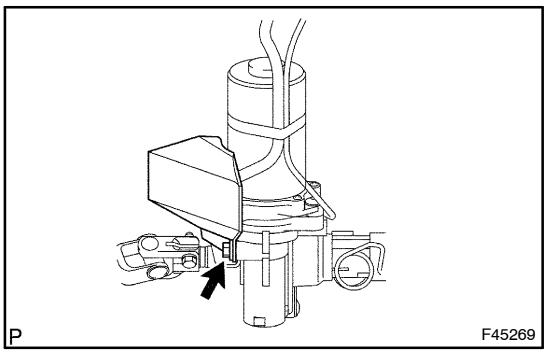


50. INSTALL STEERING COLUMN ASSY
(a) Install the steering column assembly with the 3 bolts.
Torque: 25 N·m (255 kgf·cm, 18 ft·lbf)

(b) RHD:
Align the matchmarks on the intermediate shaft assy No. 2 and steering intermediate shaft.
(c) RHD:
Install the bolt B and tighten the bolt A.
Torque: 35 N·m (360 kgf·cm, 26 ft·lbf)



HINT:
When replacing the intermediate shaft assy No. 2 with a new one, set the front tires in the straight ahead position and make the bolt hole for the intermediate shaft assy No. 2 and extension face straight rearward as illustrated, and install the bolt.



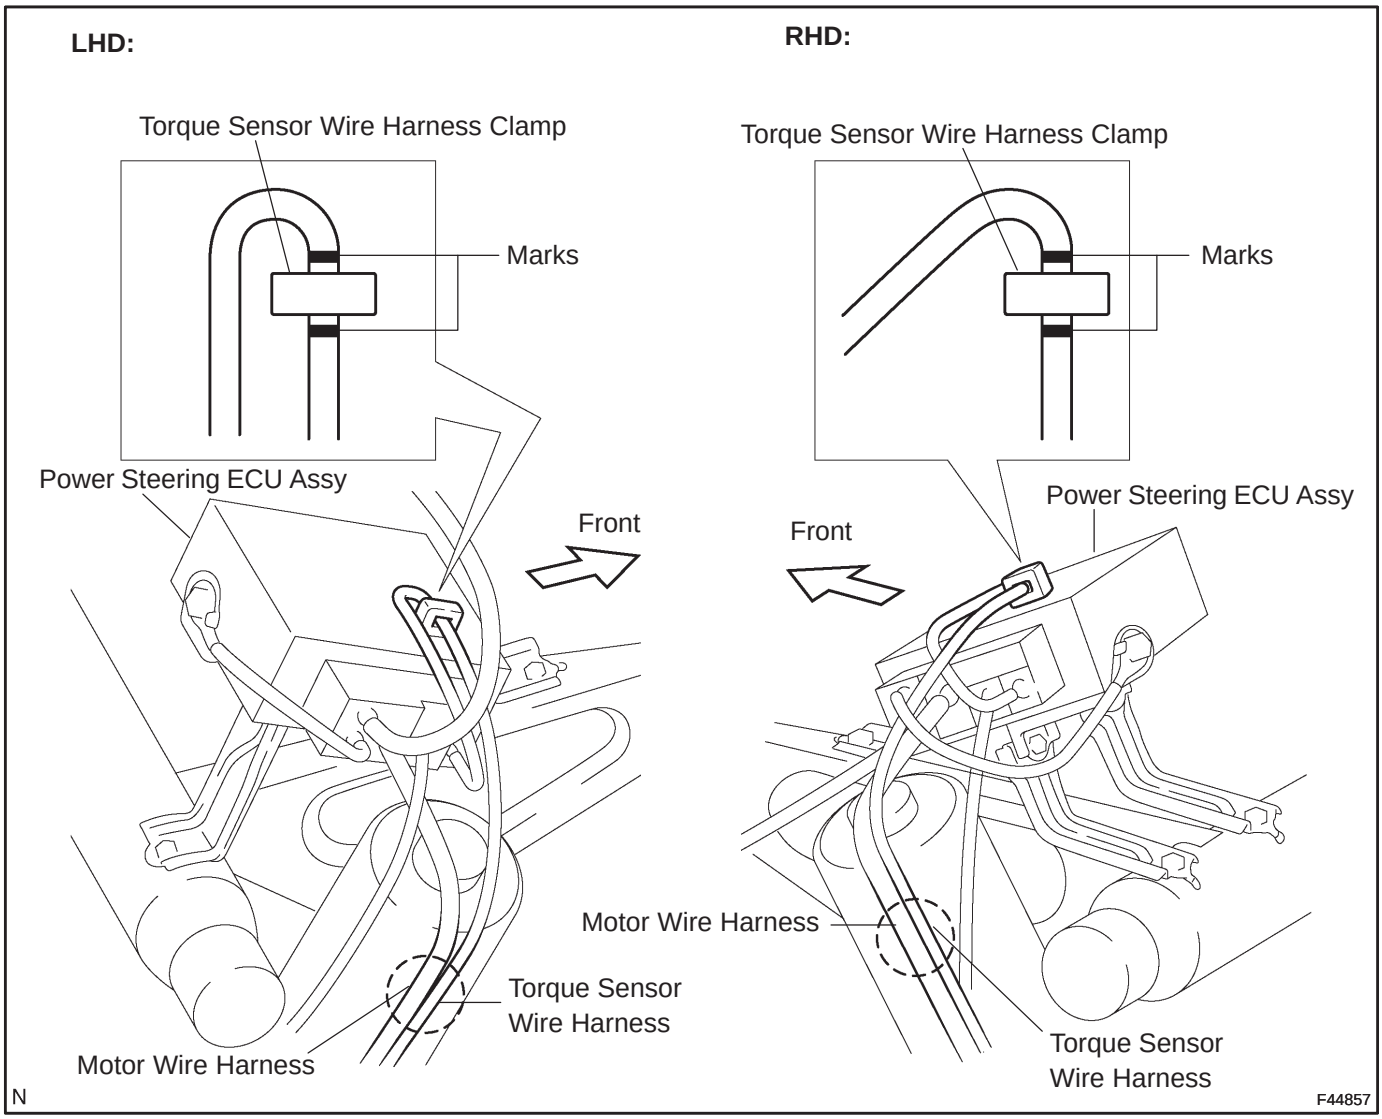
(d) LHD:
Align matchmarks on the sliding yoke and steering intermediate shaft.

(e) LHD:
Install the bolt B and tighten the bolt A.
Torque: 35 N·m (360 kgf·cm, 26 ft·lbf)

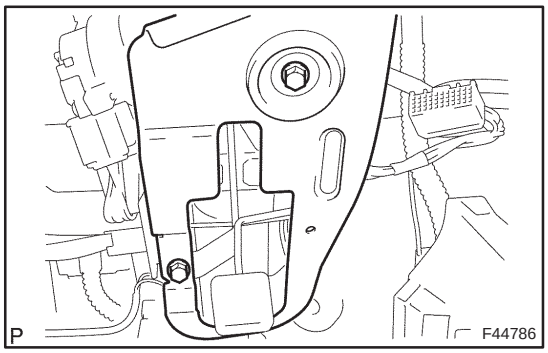
HINT:
When replacing the sliding yoke with a new one, set the front tires in the straight ahead position and make the bolt hole for the yoke and extension face straight rearward as illustrated, and install the bolt.

(f) RHD, M/T:
Install the protector with the bolt.
Torque: 25 N·m (255 kgf·cm, 18 ft·lbf)

51. INSTALL FLOOR SHIFT PARKING LOCK CABLE ASSY (A/T TRANSAXLE) (See page 40–74)



52. CONNECT POWER STEERING ECU ASSY (ELECTRIC POWER STEERING)

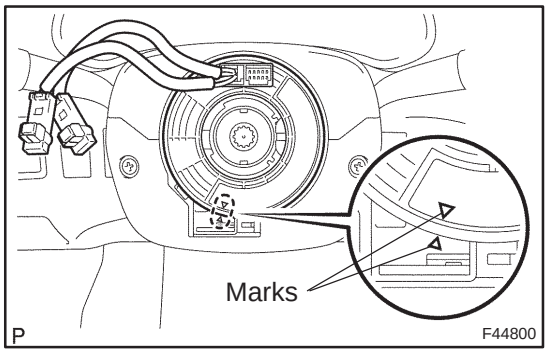


(a) Connect the 2 connectors.

(b) Align the marks on the torque sensor wire harness with the clamp, as shown in the illustration.

NOTICE:

- **When reusing the clamp, check that there is no damage on it.**
- **When reinstalling the wire harness, make sure there is no twist in the harness or with other wire harness.**

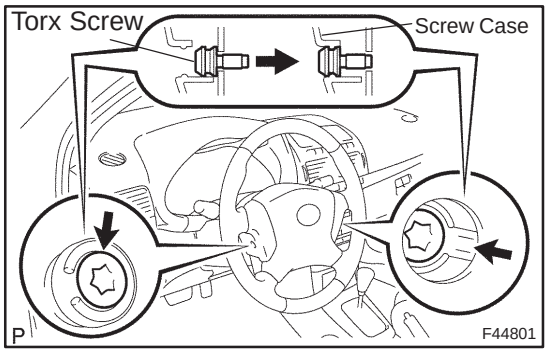


53. INSTALL STEERING COLUMN PROTECTOR NO.1

(a) Install the steering column protector with the 2 bolts.
Torque: 5 N·m (51 kgf·cm, 44 ft·lbf)

(b) Connect the wire harness clamp to the steering colum protector No.1.

54. INSTALL INSTRUMENT PANEL AIR BAG ASSY (See page 60–54)
55. INSTALL COLUMN HOLE COVER SILENCER SHEET
56. PLACE FRONT WHEELS FACING STRAIGHT AHEAD
57. INSTALL SPIRAL CABLE SUB–ASSY (See page 60–26)



58. CENTER SPIRAL CABLE
(a) Check that the front wheels are facing straight ahead.
(b) Turn the cable counterclockwise by hand until it becomes harder to turn.
(c) Then rotate the cable clockwise about 2.5 turns to align the marks.

HINT:
The cable will rotate about 2.5 turns to either left or right of the center.

59. INSTALL STEERING WHEEL ASSY
(a) Align matchmarks on the steering wheel and main shaft assembly.
(b) Install the steering wheel set nut.
Torque: 50 N·m (510 kgf·cm, 37 ft·lbf)
(c) Connect the connector.

60. INSTALL HORN BUTTON ASSY
NOTICE:
- **Never use airbag parts from another vehicle. When replacing parts, replace with new ones.**
- **Make sure the horn button assy is installed with the specified torque.**
- **If the horn button assy has been dropped, or there are cracks, dents or other defects in the case or connector, replace the horn button assy with a new one.**
- **When installing the horn button assy, take care that the wirings do not interfere with other parts and that they are not pinched between other parts.**

(a) Connect the terminal.
(b) Connect the airbag connector.

(c) Install the steering horn button assy after confirming that the circumference groove of the torx screws is caught on the screw case.
(d) Using a torx socket wrench, torque the 2 screws.
Torque: 8.8 N·m (90 kgf·cm, 78 in.·lbf)

61. STEERING WHEEL CENTER POINT
62. CONNECT BATTERY NEGATIVE TERMINAL
63. INSPECT SRS WARNING LIGHT(See page 05–1184)
64. PERFORM CALIBRATION OF TORQUE SENSOR ZERO POINT (ELECTRIC POWER STEERING) (See page 05–1045)

POWER STEERING ECU ASSY

5006Z–01

REPLACEMENT

1. PRECAUTION (See page 60–1)
2. DISCONNECT BATTERY NEGATIVE TERMINAL (See page 60–1)
3. REMOVE INSTRUMENT CLUSTER FINISH PANEL GARNISH NO.1 (See page 71–11)
4. REMOVE INSTRUMENT CLUSTER FINISH PANEL GARNISH NO.2 (See page 71–11)
5. REMOVE INSTRUMENT PANEL REGISTER ASSY CTR (See page 71–11)
6. REMOVE STEERING COLUMN COVER LWR (See page 50–9)
7. REMOVE STEERING COLUMN COVER W/INSTRUMENT CLUSTER FINISH PANEL ASSY (See page 50–9)
8. REMOVE COMBINATION METER ASSY (See page 71–11)
9. REMOVE INSTRUMENT PANEL REGISTER ASSY NO.1 (See page 71–11)
10. REMOVE INSTRUMENT PANEL REGISTER ASSY NO.2(See page 71–11)
11. REMOVE GLOVE COMPARTMENT DOOR ASSY (See page 71–11)
12. REMOVE FRONT PILLAR GARNISH LH (See page 71–11)
13. REMOVE FRONT PILLAR GARNISH RH (See page 71–11)
14. DISCONNECT PASSENGER AIRBAG CONNECTOR(See page 71–11)
15. REMOVE INSTRUMENT PANEL SUB–ASSY UPPER W/INSTR PNL PASS L/DOOR AIR BAG ASSY (See page 71–11)

16. REMOVE POWER STEERING ECU ASSY

NOTICE:

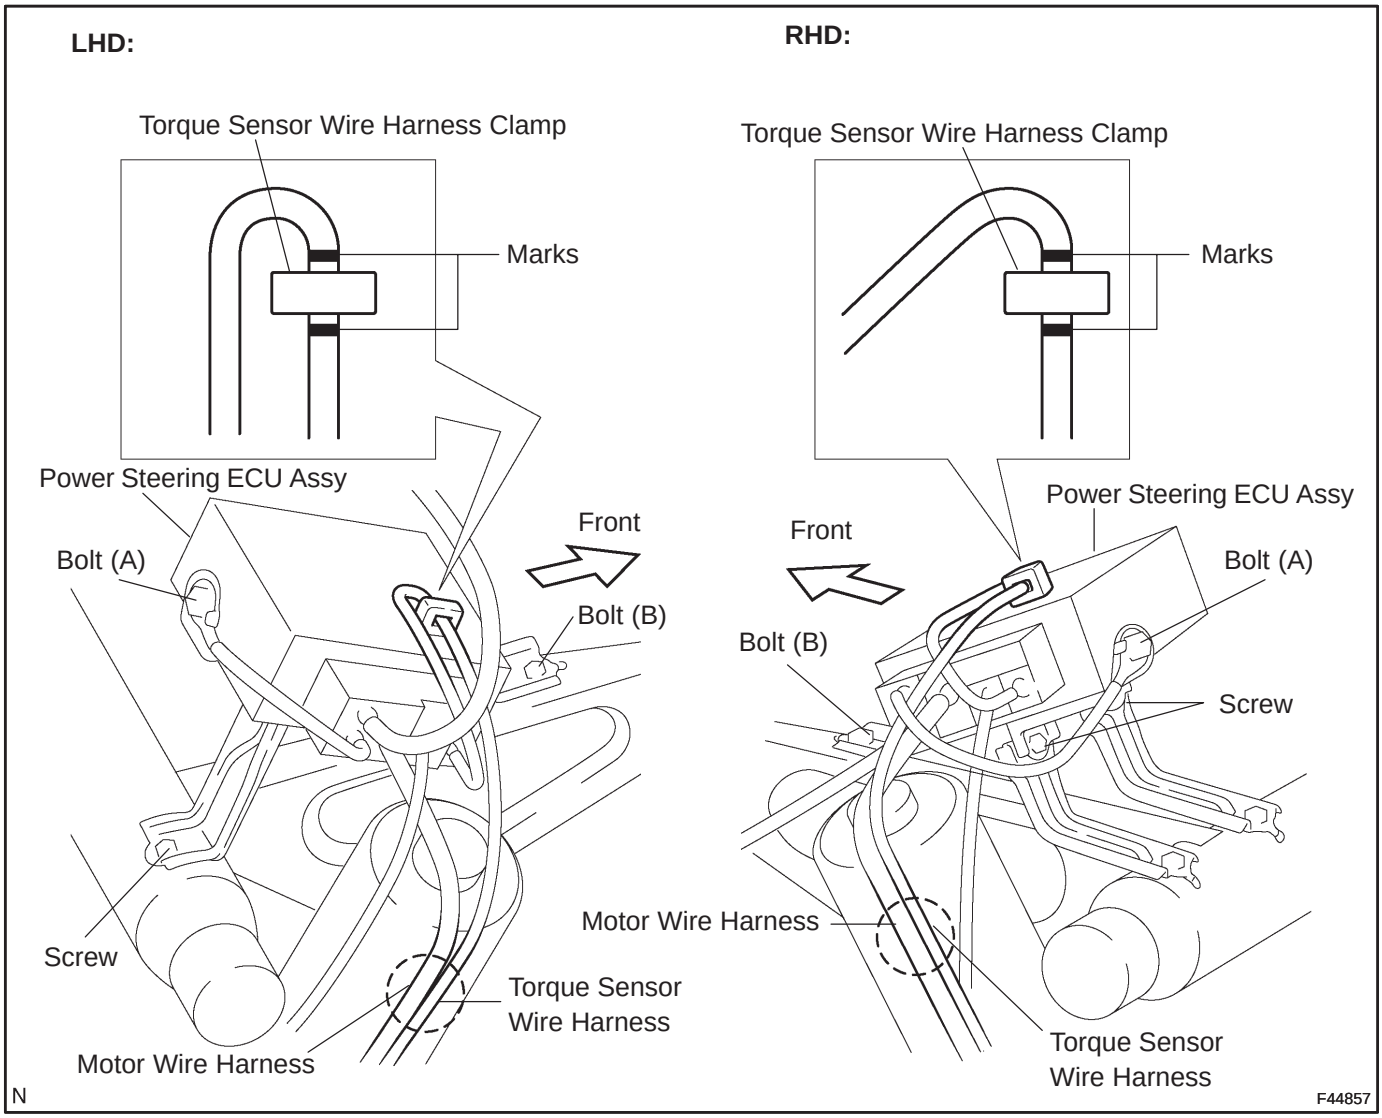
Thoroughly check the procedures for removing and installing the power steering ECU assy when replacing it. Do the same for the removing and installing the steering column assy.

(a) Mark the clamp position on the torque sensor wire harness in order to reinstall the wire harness as shown in the illustration.

(b) Disconnect the torque sensor wire harness from the clamp.

NOTICE:

In case the clamp will be reused, pay attention so as not to damage it.



(c) Disconnect the 4 connectors.

(d) LHD:

(1) Remove the 2 bolts,screw and power steering ECU assy.

(e) RHD:

(1) Remove the 2 bolts,2 screw and power steering ECU assy.

17. INSTALL POWER STEERING ECU ASSY

(a) LHD:
Install the power steering ECU assy with the 2 bolts and screw.
Torque:
BOLT (A): 8.0 N·m (82 kgf·cm, 71 in.·lbf)
BOLT (B): 15.5 N·m (158 kgf·cm, 11 ft·lbf)

(b) RHD:
Install the power steering ECU assy with the 2 bolts and 2 screws.
Torque:
BOLT (A): 8.0 N·m (82 kgf·cm, 71 in.·lbf)
BOLT (B): 15.5 N·m (158 kgf·cm, 11 ft·lbf)

(c) Connect the 4 connectors.

(d) Align the marks on the torque sensor wire harness with the clamp, as shown in the illustration.

NOTICE:

- **When reusing the clamp, check that there is no damage on it.**
- **When reinstalling the wire harness, make sure there is no twist in the harness or with other wire harness.**

18. CONNECT BATTERY NEGATIVE TERMINAL

19. INSPECT SRS WARNING LIGHT (See page 05–1184)

20. PERFORM CALIBRATION OF TORQUE SENSOR ZERO POINT (See page 05–1045)

POWER STEERING SYSTEM

5100F–06

PRECAUTION

1. HANDLING PRECAUTIONS ON STEERING SYSTEM

(a) Care must be taken to replace parts properly because they could affect the performance of the steering system and result in a driving hazard.

2. HANDLING PRECAUTIONS ON SRS AIRBAG SYSTEM

(a) The vehicle is equipped with SRS (Supplemental Restraint System) such as the driver airbag and front passenger airbag. Failure to carry out service operation in the correct sequence could cause the SRS to unexpectedly deploy during servicing, possibly leading to a serious accident. Before servicing (including removal or installation of parts, inspection or replacement), be sure to read the precautionary notices in the supplemental restraint system (See page 60–1).

5100G–06

PROBLEM SYMPTOMS TABLE

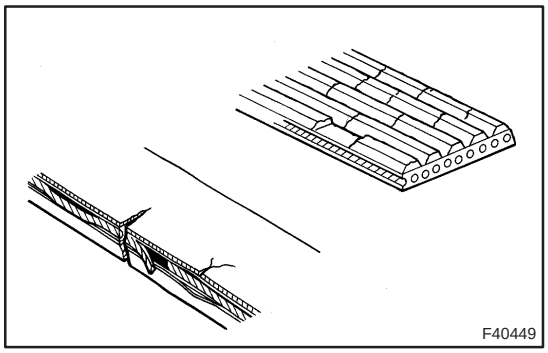
HINT:

Use the table below to help you find the cause of the problem. The numbers indicate the likelihood of the cause in the descending order. Check each part in the order shown. Replace parts if necessary.

Hydraulic Power Steering System:

Symptom	Suspect Area		See page
Hard steering	3. Tires (Improperly inflated)		28–1
	4. Power steering fluid level (Low)		51–4
	5. Drive belt (Loose)		
	6. Front wheel alignment (Incorrect)		26–6
	7. Steering system joints (Worn)		–
	8. Suspension arm ball joints (Worn)		26–24
	9. Steering column (Binding)		–
	10. Power steering vane pump	AZ Series:	51–9
		1CD–FTV:	51–19
	11. Power steering gear		51–4
			51–36
Poor return	1. Tires (Improperly inflated)		28–1
	2. Front wheel alignment (Incorrect)		26–6
	3. Steering column (Binding)		–
	4. Power steering gear		51–4
			51–36
Excessive play	1. Steering system joints (Worn)		–
	2. Suspension arm ball joints (Worn)		26–24
	3. Intermediate shaft, Sliding yoke (Worn)		–
	4. Front wheel bearing (Worn)		30–2
	5. Power steering gear		51–4
			51–36
Abnormal noise	1. Power steering fluid level (Low)		51–4
	2. Steering system joints (Worn)		–
	3. Power steering vane pump	AZ Series:	51–9
		1CD–FTV:	51–19
	4. Power steering gear		51–4
			51–36

Electronic Power Steering System:



Symptom	Suspect Area	See page
Hard steering	1. Tires (Improperly inflated)	28–1
	2. Front wheel alignment (Incorrect)	26–6
	3. Steering system joints (Worn)	–
	4. Suspension arm ball joints (Worn)	26–24
	5. Steering column (Binding)	–
	6. Steering column (Electric power steering system)	50–9
	7. Steering gear (torque)	51–28
Poor return	1. Tires (Improperly inflated)	28–1
	2. Front wheel alignment (Incorrect)	26–6
	3. Steering column (Binding)	–
	4. Steering column (Electric power steering system)	50–9
	5. Steering gear (torque)	51–28
Excessive play	1. Steering system joints (Worn)	–
	2. Suspension arm ball joints (Worn)	26–24
	3. Intermediate shaft, Sliding yoke (Worn)	–
	4. Front wheel bearing (Worn)	30–2
	5. Steering column (Electric power steering system)	50–9
	6. Steering gear (torque)	51–28
Abnormal noise	1. Steering system joints (Worn)	–
	2. Steering column (Electric power steering system)	50–9
	3. Steering gear (torque)	51–28

HINT:

When the problem occurs on the Electric Power Steering system, refer to the DI section (See page 05–1042).

510DE–02

ON–VEHICLE INSPECTION

F40449

1. INSPECT DRIVE BELT

(a) Visually check the belt for excessive wear, frayed cords, etc.

If any defect is found, replace the drive belt.

HINT:

Cracks on the rib side of a belt are considered acceptable. If the missing chunks from the ribs are found on the belt, it should be replaced.

2. BLEED POWER STEERING SYSTEM

(a) Check the fluid level.

(b) Jack up the front of the vehicle and support it with the stands.

(c) Turn the steering wheel.

(1) With the engine stopped, turn the wheel slowly from lock to lock several times.

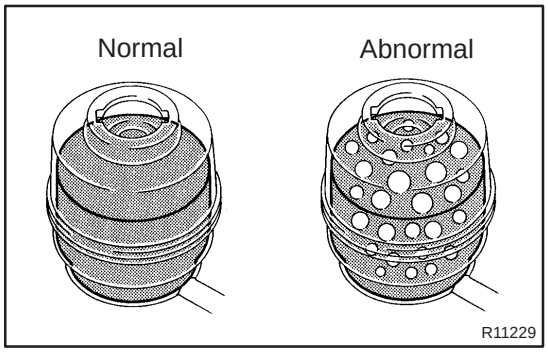
(d) Lower the vehicle.

(e) Start the engine.

(1) Run the engine at idle for a few minutes.

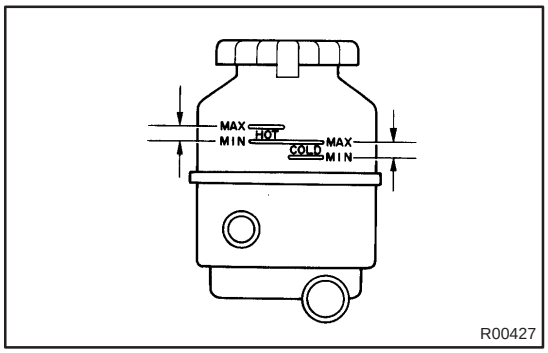
(f) Turn the steering wheel.

(1) With the engine idling, turn the wheel to right full lock position and keep it there for 2 to 3 seconds, then turn the wheel to left full lock position and keep it there for 2 to 3 seconds.



(2) Repeat (1) several times.

(g) Stop the engine.



(h) Check for foaming or emulsification.

If the system has to be bled twice specifically because of foaming or emulsification, check for fluid leaks in the system.

(i) Recheck the fluid level.

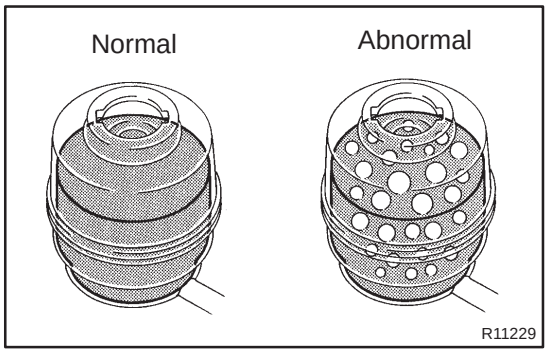
R11229

R00427

3. CHECK FLUID LEVEL

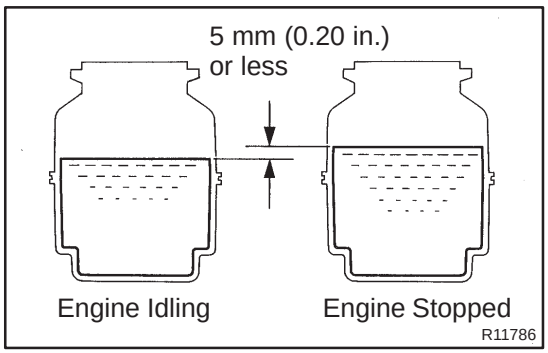
(a) Keep the vehicle level.

(b) With the engine stopped, check the fluid level in the oil reservoir.



If necessary, add fluid.

Fluid: ATF DEXRON® II or III



HINT:

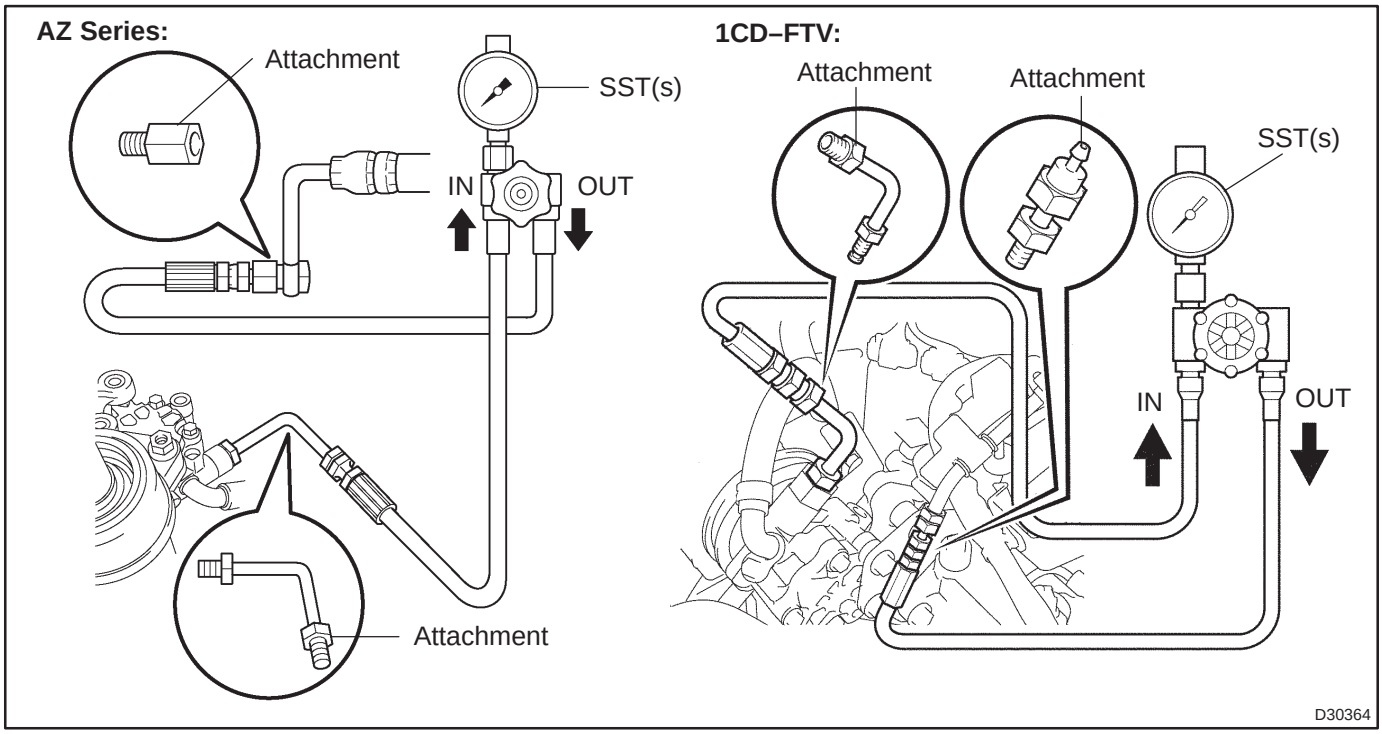
If the fluidis hot, check that the fluid level is within the HOT LEVEL range on the oil reservoir. If the fluid is cold, check that it is within the COLD LEVEL range.

(c) Start the engine and run it at idle.
(d) Turn the steering wheel from lock to lock several times to boost fluid temperature.
Fluid temperature: 80˚C (176˚F)

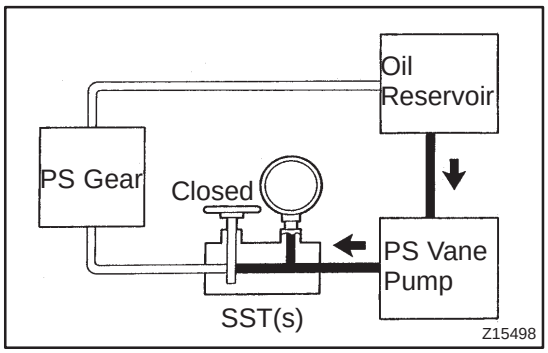
(e) Check for foaming or emulsification.
If there is foaming or emulsification, bleed the power steering system.

(f) With the engine idling, measure the fluid level in the oil reservoir.
(g) Stop the engine.
(h) Wait a few minutes and remeasure the fluid level in the oil reservoir.
Maximum fluid level rise: 5 mm (0.20 in.)
If a problem is found, bleed power steering system.
(i) Check the fluid level.

4. CHECK STEERING FLUID PRESSURE



(a) AZ Series:
Disconnect the pressure feed tube assy from the vane pump assy (See page 51–9).
(b) 1CD–FTV:
Disconnect the pressure feed tube assy from the vane pump assy (See page 51–19).
(c) AZ Series:
Connect SST(s), as shown in the illustration on the next page.
SST 09640–10010 (09641–01010, 09641–01030, 09641–01060)



NOTICE:
Check that the valve of SST(s) is in the open position.

(d) 1CD–FTV:
Connect SST(s), as shown in the illustration on the next page.
SST 09640–10010 (09641–01010, 09641–01020, 09641–01030)

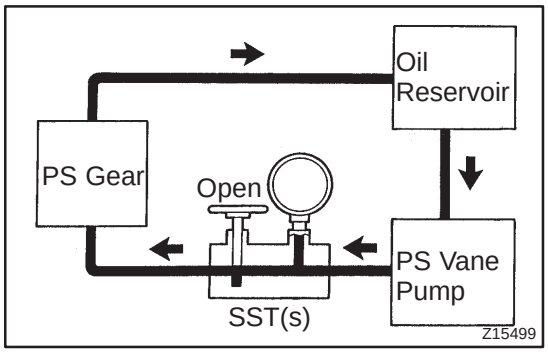
NOTICE:
Check that the valve of SST(s) is in the open position.

(e) Bleed the power steering system.
(f) Start the engine and run it at idle.
(g) Turn the steering wheel from lock to lock several times to boost fluid temperature.
Fluid temperature: 80 ˚C (176 ˚F)

(h) With the engine idling, close the valve of SST(s) and observe the reading on SST(s).

Minimum fluid pressure:

AZ Series:



8,300 to 9,000 kPa (85 to 92 kgf/cm^2, 1,204 to 1,305 psi)

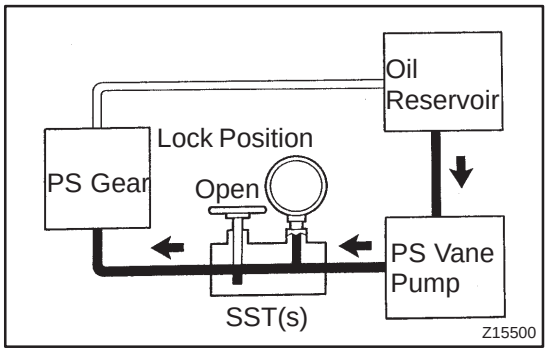
1CD–FTV:

8,800 to 9,500 kPa (90 to 97 kgf/cm^2, 1,276 to 1,378 psi)

NOTICE:

- **Do not keep the valve closed for more than 10 seconds.**
- **Do not let the fluid temperature become too high.**

(i) With the engine idling, open the valve fully.



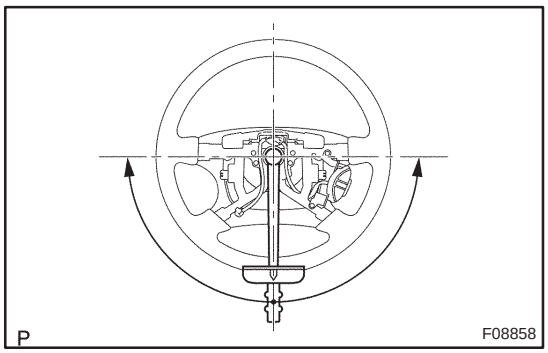
(j) Measure the fluid pressure at engine speeds of 1,000 rpm and 3,000 rpm.

Fluid pressure difference:

490 kPa (5 kgf/cm^2, 71 psi) or less

NOTICE:

Do not turn the steering wheel.



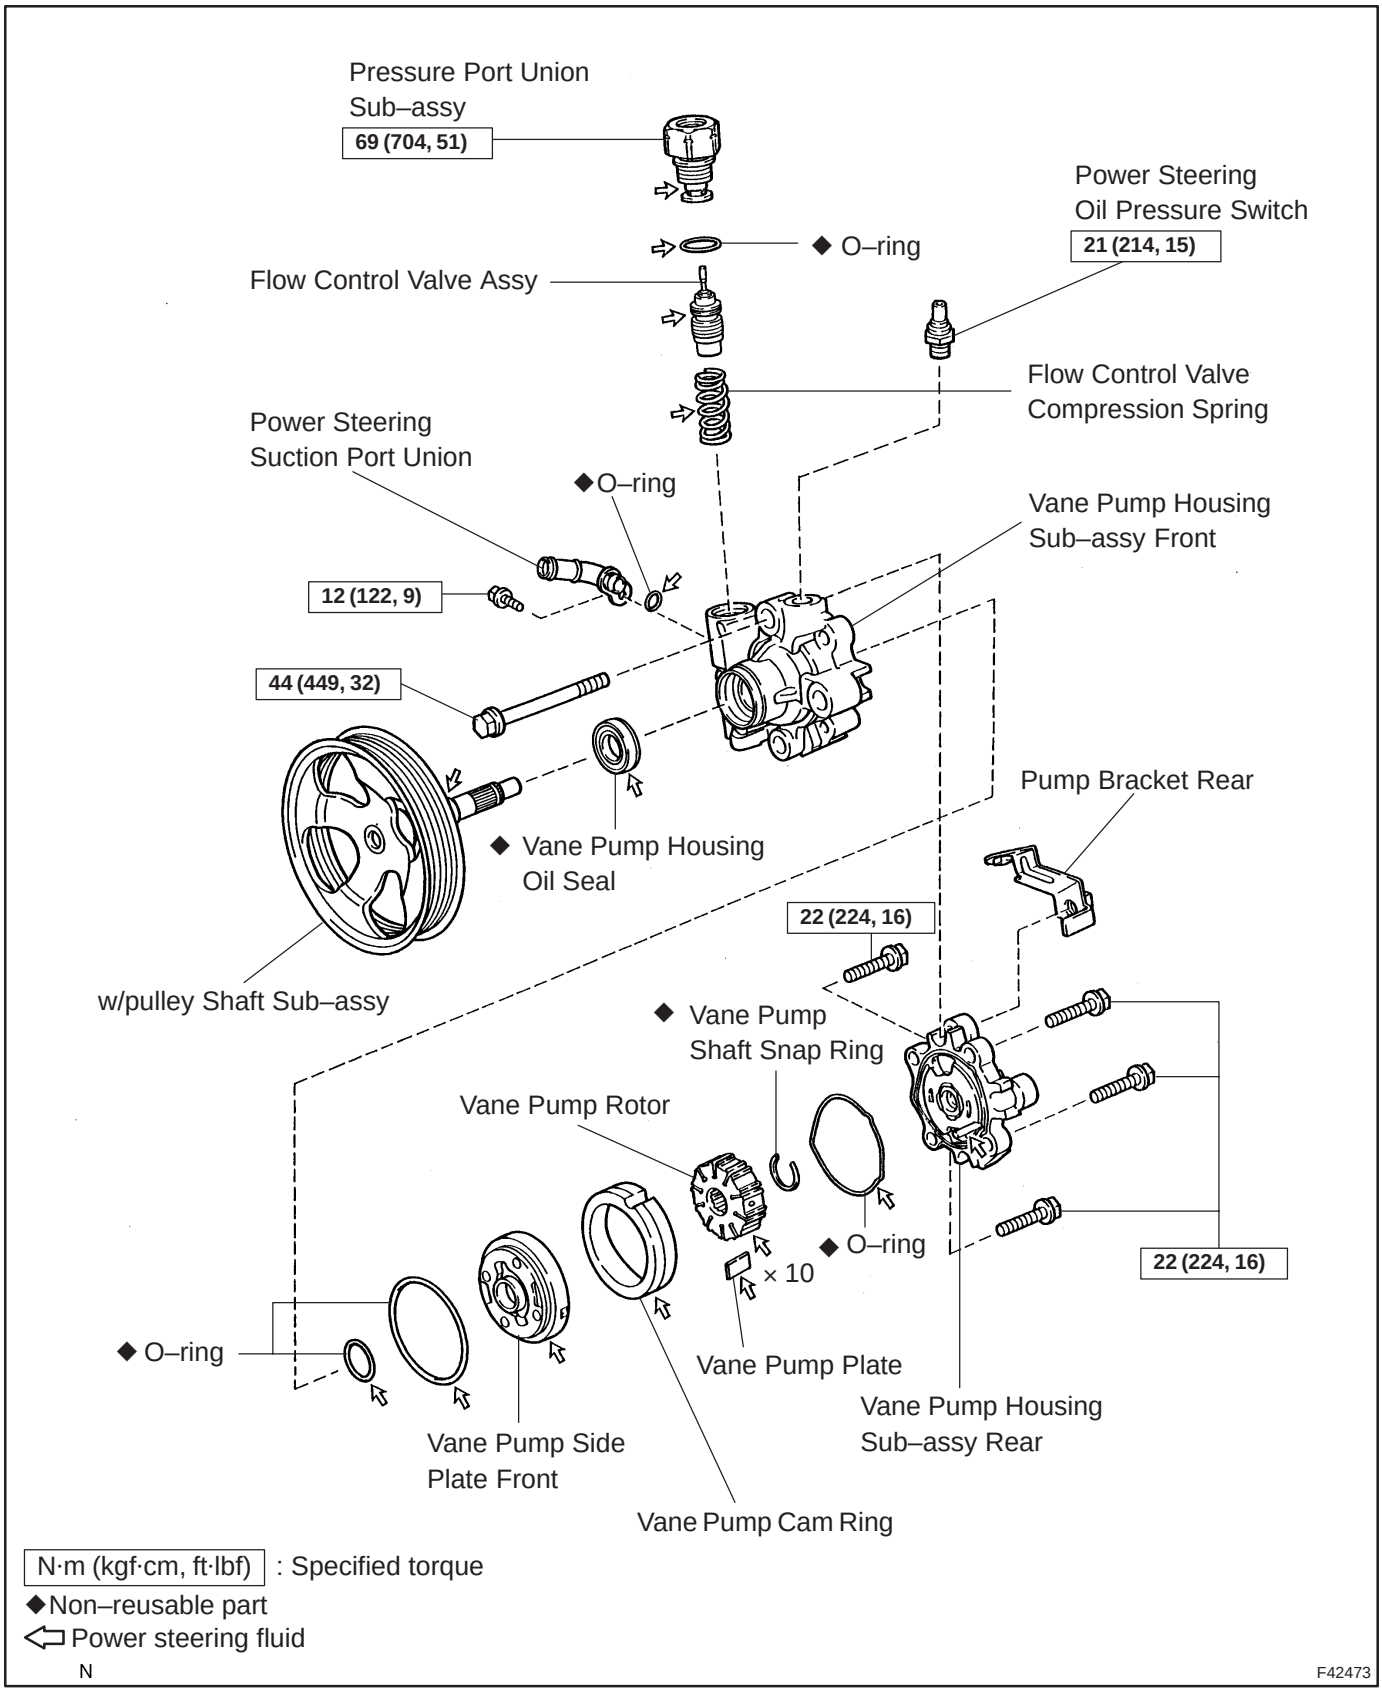
(k) With the engine idling and valve fully opened, turn the steering wheel to full lock position.
Minimum fluid pressure:
AZ Series:
8,300 to 9,000 kPa (85 to 92 kgf/cm^2, 1,204 to 1,305 psi)
1CD–FTV:
8,800 to 9,500 kPa (90 to 97 kgf/cm^2, 1,276 to 1,378 psi)

NOTICE:

- **Do not maintain lock position for more than 10 seconds.**
- **Do not let the fluid temperature become too high.**

(l) Remove SST(s).
(m) AZ Series:
Connect the pressure feed tube assy to the vane pump assy (See page 51–9).
(n) 1CD–FTV:
Connect the pressure feed tube assy to the vane pump assy (See page 51–19).
(o) Bleed the power steering system.

5. CHECK STEERING EFFORT
(a) Center the steering wheel.
(b) Remove the steering wheel pad (See page 60–17).
(c) Start the engine and run it at idle.
(d) Measure the steering effort in both directions.
Steering effort (Reference):
5.5 N·m (56 kgf·cm, 49 in.·lbf)



HINT:
Take the tire type, pressure and contact surface into consideration before making your diagnosis.

(e) Torque the steering wheel set nut.
Torque: 50 N·m (510 kgf·cm, 37 ft·lbf)
(f) Install the steering wheel pad (See page 60–17).

VANE PUMP ASSY (AZ Series)

COMPONENTS

510DF–02

N·m (kgf·cm, ft·lbf) : Specified torque
◆Non–reusable part
⇦ Power steering fluid

N

F42473

510DG–02

OVERHAUL

NOTICE:

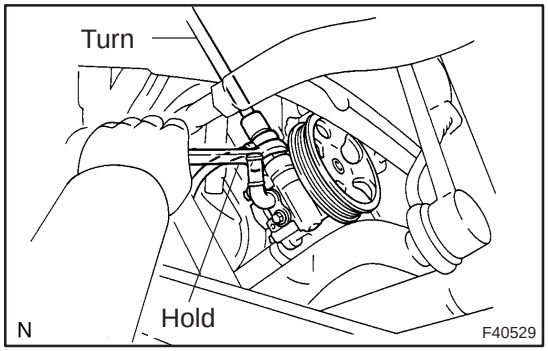
- **When using a vise, do not over tighten.**
- **When installing, coat the parts indicated by the arrows with power steering fluid (See page 51–8).**

1. REMOVE FRONT WHEEL RH

2. REMOVE ENGINE UNDER COVER RH

3. REMOVE FAN AND GENERATOR V BELT

1AZ–FE: (See page 14–105)

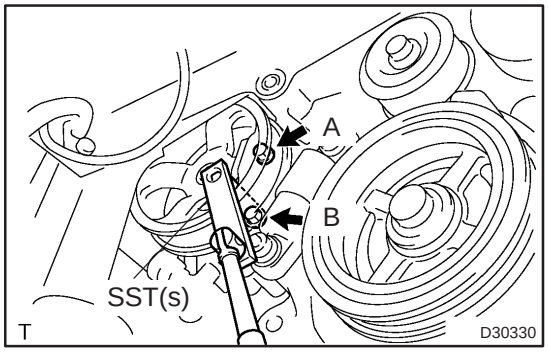


1AZ–FSE: (See page 14–185)

4. DISCONNECT OIL RESERVOIR TO PUMP HOSE NO.1

(a) Remove the clip and disconnect the oil reservoir to pump hose No.1.

NOTICE:

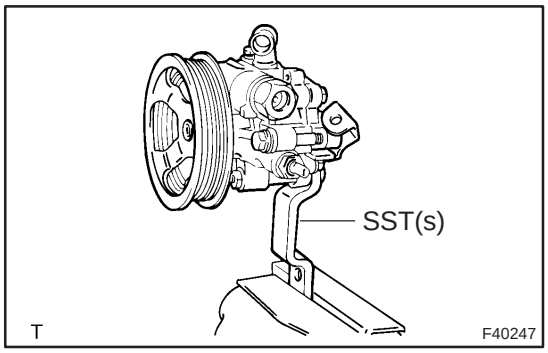


Take care not to spill fluid on the V belt.

5. DISCONNECT PRESSURE FEED TUBE ASSY

(a) Remove the bolt and separate the pressure feed tube assy from the pump bracket rear.

(b) Using a spanner (27 mm) to hold the pressure port union, remove the union bolt and gasket.



6. REMOVE VANE PUMP ASSY

(a) Disconnect the connector from the oil pressure switch.

(b) Using SST(s) and a deep socket (14 mm), loosen the bolt A.

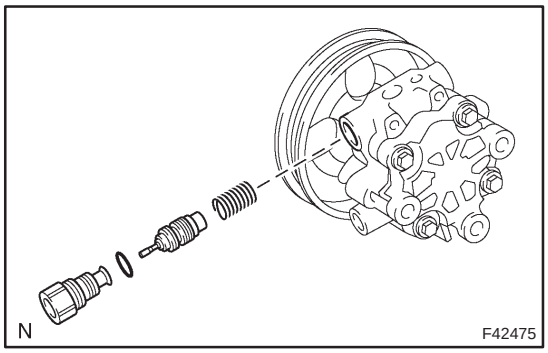
SST 09249–63010

(c) Remove the bolt B and vane pump assy.

7. FIX VANE PUMP ASSY

(a) Using SST(s), hold the vane pump assy in a vise.

SST 09630–00014 (09631–00132)



8. REMOVE PUMP BRACKET REAR

(a) Remove the bolt and vane pump bracket rear.

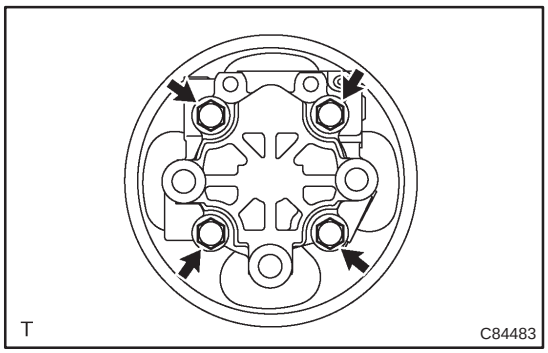
9. REMOVE POWER STEERING SUCTION PORT UNION

(a) Remove the bolt and the suction port union.

(b) Remove the O–ring from the suction port union.

10. REMOVE FLOW CONTROL VALVE ASSY

(a) Remove the pressure port union sub–assy.

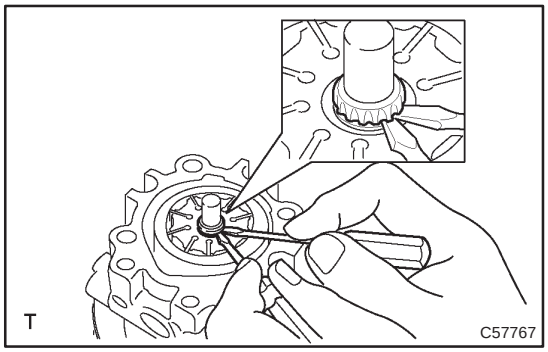


(b) Remove the O–ring from the pressure port union sub–assy.

(c) Remove the flow control valve assy and the compression spring.

11. REMOVE POWER STEERING OIL PRESSURE SWITCH

NOTICE:



If the oil pressure switch is dropped or damaged, replace it with a new one.

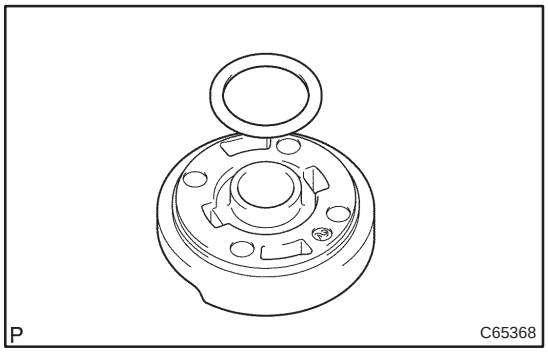
12. REMOVE VANE PUMP HOUSING SUB–ASSY REAR

(a) Remove the 4 bolts and housing sub–assy rear from the housing sub–assy front.

(b) Remove the O–ring from the housing sub–assy rear.

13. REMOVE W/PULLEY SHAFT SUB–ASSY

(a) Using 2 screwdrivers, remove the snap ring from the w/ pulley shaft sub–assy.

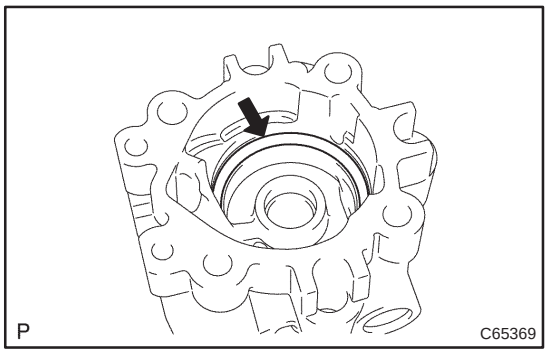


(b) Remove the w/pulley shaft sub–assy.

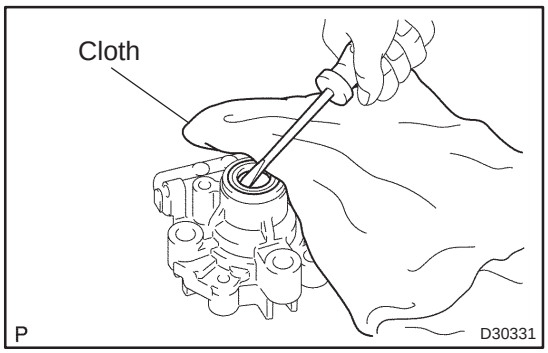
14. REMOVE VANE PUMP ROTOR

(a) Remove the 10 vane pump plates.

(b) Remove the vane pump rotor.



15. REMOVE VANE PUMP CAM RING

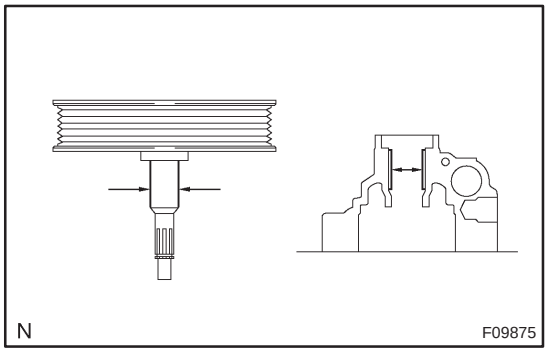


16. REMOVE VANE PUMP SIDE PLATE FRONT

(a) Remove the side plate front from the housing sub–assy front.

(b) Remove the O–ring from the side plate front.

(c) Remove the O–ring from the housing sub–assy front.

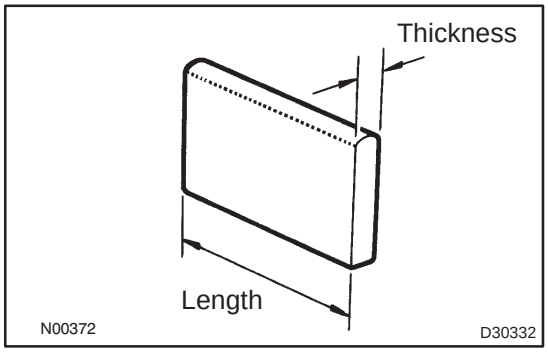


17. REMOVE VANE PUMP HOUSING OIL SEAL

(a) Using a screwdriver, remove the housing oil seal.

NOTICE:

Be careful not to damage the pump housing.

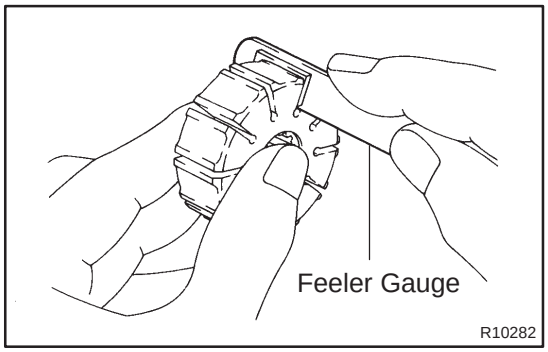


18. INSPECT VANE PUMP SHAFT AND BUSH IN HOUSING FRONT

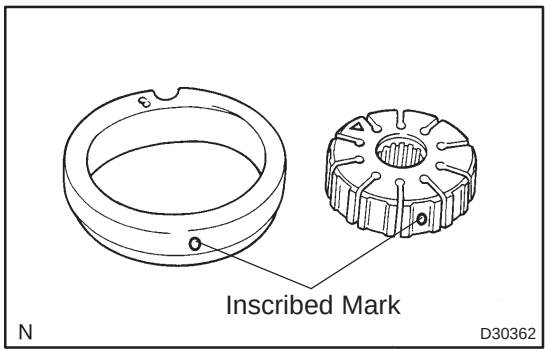
(a) Using a micrometer and a caliper gauge, measure the oil clearance.

Maximum clearance: 0.07 mm (0.0028 in.)

If it is more than the maximum, replace the vane pump assy.



19. INSPECT VANE PUMP ROTOR AND VANE PUMP PLATES

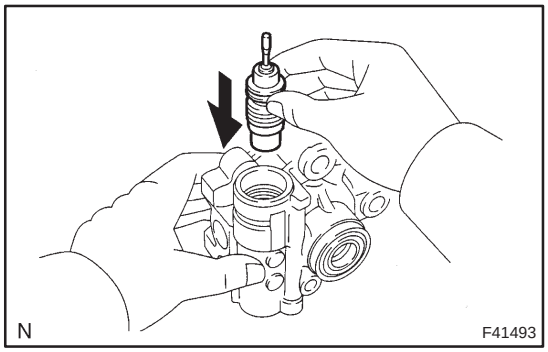


(a) Using a micrometer, measure the thickness of the vane pump plates.

Minimum thickness:

1.405 to 1.411 mm (0.05531 to 0.05555 in.)

(b) Using a feeler gauge, measure the clearance between a side face of the vane pump rotor groove and vane plate.
Maximum clearance: 0.03 mm (0.0012 in.)

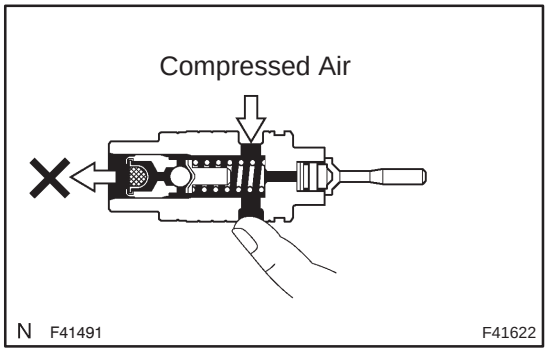


If it is more than the maximum, replace the vane pump plate and/or vane pump rotor with the one having the same mark as stamped on the cam ring.

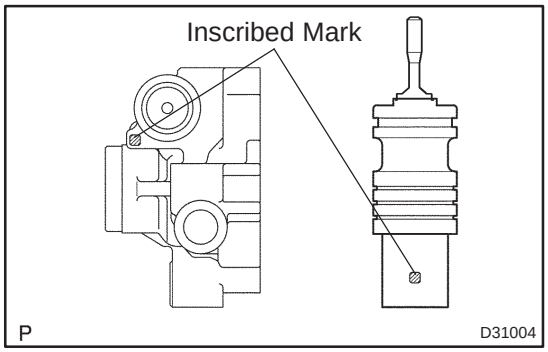
Inscribed mark: 0, 1, 2, 3 or 4

HINT:

There are 5 different marks for vane pump plate.



Mark	Part number	Length mm (in.)
0	44345–02110	12.001 to 12.003 (0.47247 to 0.47255)
1	44345–02120	11.999 to 12.000 (0.47240 to 0.47244)
2	44345–02130	11.997 to 11.998 (0.47232 to 0.47236)
3	44345–02140	11.995 to 11.996 (0.47224 to 0.47228)
4	44345–02150	11.993 to 11.994 (0.47216 to 0.47220)

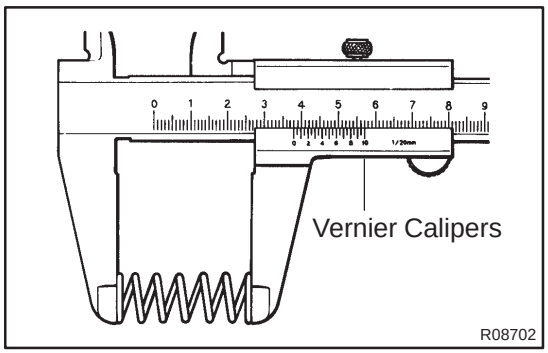


20. INSPECT FLOW CONTROL VALVE ASSY

(a) Coat the flow control valve assy with power steering fluid and check that it falls smoothly into the flow control valve hole by its own weight.

If necessary, replace the vane pump assy.

(b) Check the flow control valve assy for leakage. Close one of the holes and apply compressed air of 392 to 490 kPa (4 to 5 kgf·cm^2, 57 to 71 psi) into the opposite side hole, and confirm that air does not come out from the end holes.



If necessary, replace the flow control valve assy with the one having the same letter as inscribed on the housing sub–assy front.

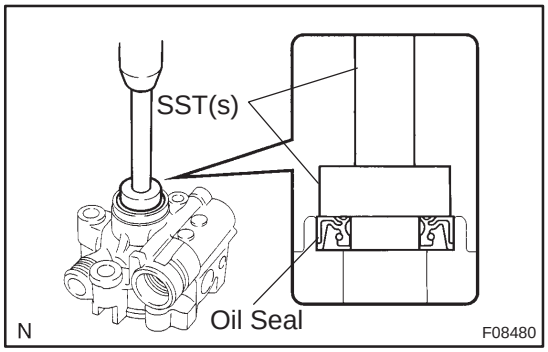
Inscribed mark: A, B, C, D, E or F

HINT:

There are 6 different marks for flow control valve assy.

Mark	Part number
A	44330–05130
B	44330–05140
C	44330–05150
D	44330–05160
E	44330–05170
F	44330–05180

21. INSPECT FLOW CONTROL VALVE COMPRESSION SPRING



(a) Using vernier calipers, measure the free length of the compression spring.

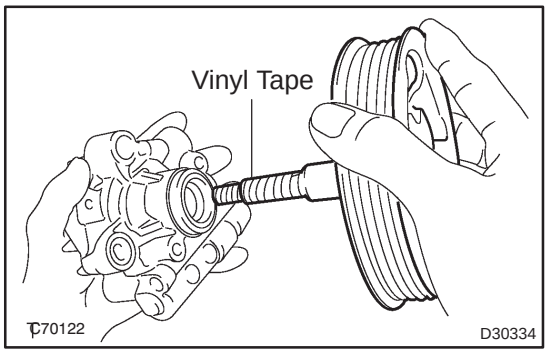
Minimum free length: 36.9 mm (1.453 in.)

If it is less than the minimum, replace the compression spring.

22. INSPECT PRESSURE PORT UNION SUB–ASSY

(a) If the union seat in the pressure port union sub–assy is remarkably damaged, it may cause fluid leakage. Replace the pressure port union sub–assy.

23. INSTALL VANE PUMP HOUSING OIL SEAL



(a) Coat a new housing oil seal lip with power steering fluid.

(b) Using SST(s) and a press, install a new housing oil seal.

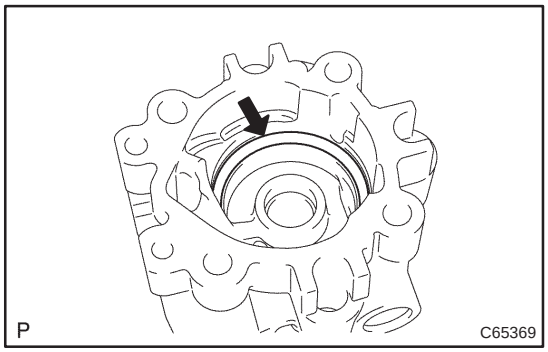
SST 09950–60010 (09951–00280), 09950–70010 (09951–07100)

NOTICE:

Make sure that the oil seal is installed facing in the correct direction.

24. INSTALL W/PULLEY SHAFT SUB–ASSY

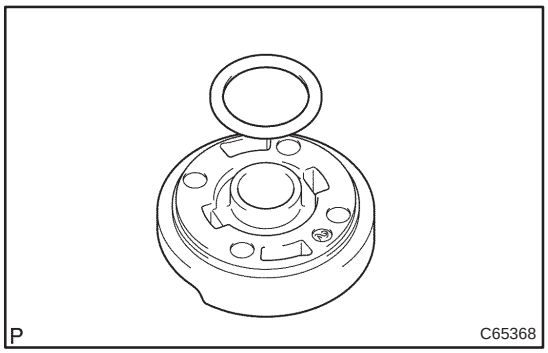
(a) Coat inside bushing surface of the housing sub–assy front with power steering fluid.



(b) Gradually insert the w/pulley shaft sub–assy.

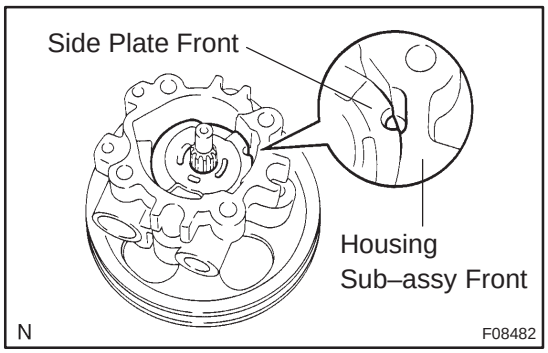
NOTICE:

Do not damage the oil seal lip.



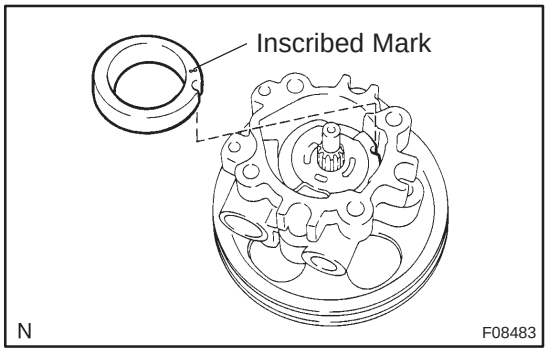
HINT:

Tape the shaft before inserting.



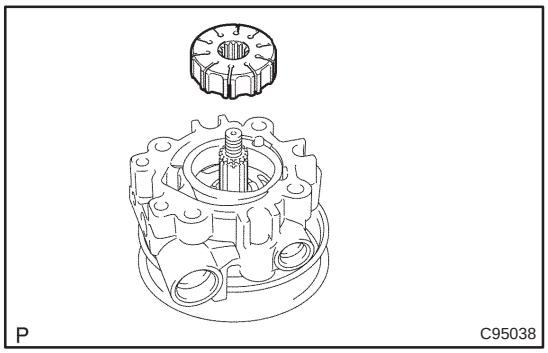
25. INSTALL VANE PUMP SIDE PLATE FRONT

(a) Coat a new O–ring with power steering fluid and install it into the housing sub–assy front.



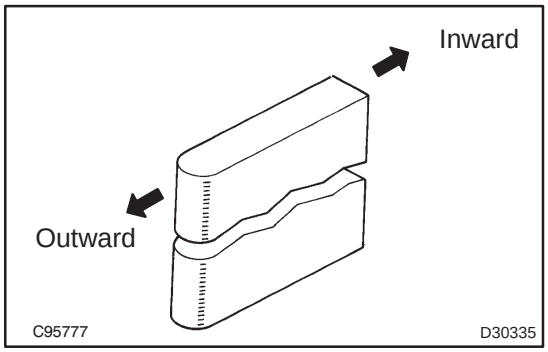
(b) Coat a new O–ring with power steering fluid and install it onto the side plate front.

(c) Align the dent of the side plate front with that of the housing sub–assy front, and install the side plate front.



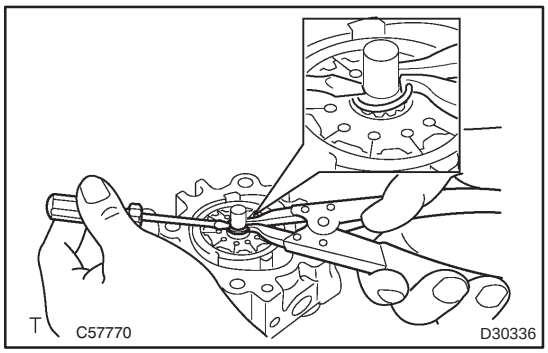
NOTICE:

Make sure that the side plate front is installed facing in the correct direction.



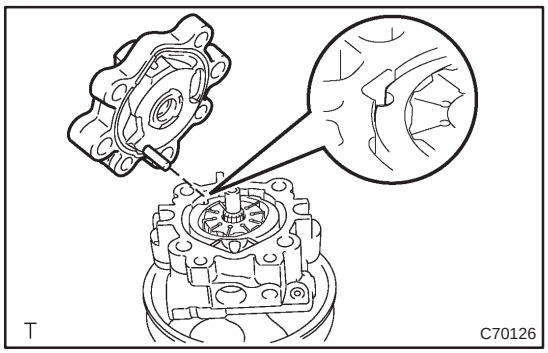
26. INSTALL VANE PUMP CAM RING

(a) Align the dent of the cam ring with that of the side plate front, and install the cam ring with the inscribed mark facing upward.

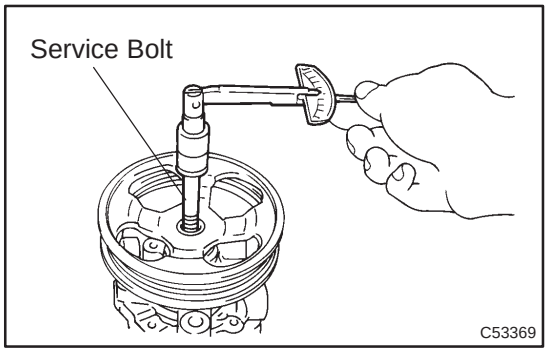


27. INSTALL VANE PUMP ROTOR

(a) Install the vane pump rotor.



(b) Coat 10 vane pump plates with power steering fluid.
(c) Install the vane pump plates with the round end facing outward.

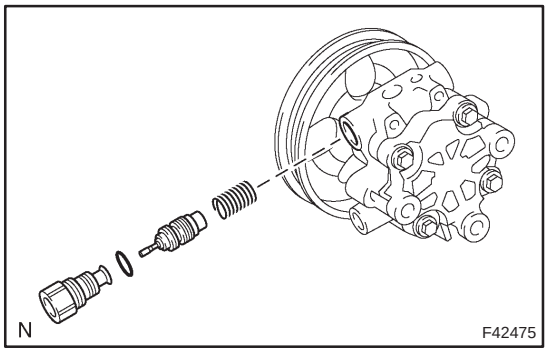


28. INSTALL VANE PUMP SHAFT SNAP RING

(a) Using a screwdriver and a snap ring expander, install a new snap ring to the w/pulley shaft sub–assy.

29. INSTALL VANE PUMP HOUSING SUB–ASSY REAR

(a) Coat a new O–ring with power steering fluid and install it onto the housing sub–assy rear.
(b) Align the straight pin of the housing sub–assy rear with the dents of the cam ring, side plate front and housing sub–assy front, and install the vane pump housing sub–assy rear with the 4 bolts.
Torque: 22 N·m (224 kgf·cm, 16 ft·lbf)



30. INSPECT PRELOAD

(a) Check that the pump rotates smoothly without abnormal noise.
(b) Temporarily install the service bolt.
Recommended service bolt:
Thread diameter: 10 mm (0.39 in.)
Thread pitch: 1.25 mm (0.0492 in.)
Bolt length: 50 mm (1.97 in.)
(c) Using a torque wrench, check the pump rotating torque.
Rotating torque:
0.27 N·m (2.8 kgf·cm, 2.4 ft·lbf) or less

If the rotating torque is not as specified, check the housing oil seal.

31. INSTALL POWER STEERING OIL PRESSURE SWITCH

(a) Coat a new O–ring with power steering fluid and install it to the oil pressure switch.
(b) Install the oil pressure switch onto the vane pump assy.
Torque: 21 N·m (214 kgf·cm, 15 ft·lbf)

32. INSTALL FLOW CONTROL VALVE ASSY

(a) Coat the compression spring and the flow control valve assy with power steering fluid.

(b) Install the compression spring and the flow control valve assy.

(c) Coat a new O–ring with power steering fluid and install it onto the pressure port union sub–assy.

(d) Install the pressure port union sub–assy.

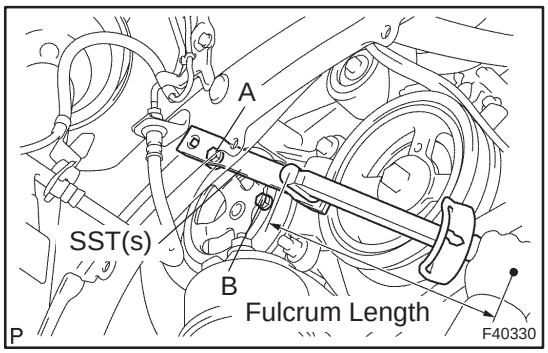
Torque: 69 N·m (704 kgf·cm, 51 ft·lbf)

33. INSTALL POWER STEERING SUCTION PORT UNION

(a) Coat a new O–ring with power steering fluid, and install it to the suction port union.

(b) Install the suction port union with the bolt.

Torque: 12 N·m (122 kgf·cm, 9 ft·lbf)



34. INSTALL PUMP BRACKET REAR

(a) Install the vane pump bracket rear with the bolt.

Torque: 44 N·m (449 kgf·cm, 32 ft·lbf)

HINT:

Make sure that the stopper of the bracket touches the vane pump body, then torque the bolt.

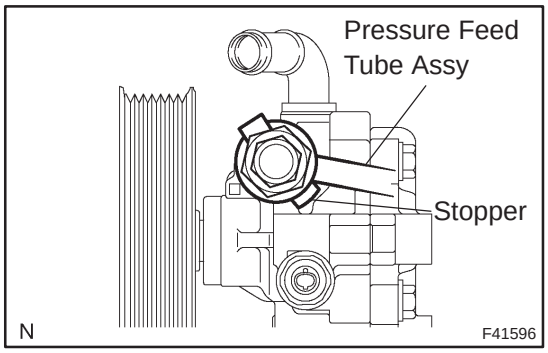
35. INSTALL VANE PUMP ASSY

(a) Temporarily tighten the bolt A to the vane pump assy.

(b) Install the vane pump assy and the bolt B.

Torque: 37 N·m (377 kgf·cm, 27 ft·lbf)

(c) Using SST(s) and a deep socket (14 mm), tighten the bolt A.



SST 09249–63010

Torque: 26 N·m (264 kgf·cm, 19 ft·lbf)

HINT:

- Use a torque wrench with a fulcrum length of 345 mm (13.58 in.).
- This torque value is effective when SST(s) is parallel to a torque wrench.

(d) Connect the connector to the oil pressure switch.

36. CONNECT PRESSURE FEED TUBE ASSY

(a) Install the pressure feed tube assy and gasket to the vane pump assy with the union bolt.

HINT:

Make sure the stopper of the pressure feed tube assy touches the pump housing front as shown in the illustration.

(b) Using a spanner (27 mm) to hold the pressure port union, torque the union bolt.

Torque: 52 N·m (525 kgf·cm, 38 ft·lbf)

(c) Install the pressure feed tube assy with bolt to the pump bracket rear.

Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)

37. CONNECT OIL RESERVOIR TO PUMP HOSE NO.1

(a) Connect the oil reservoir to pump hose No.1 with the clip.

NOTICE:

Take care not to spill fluid on the V belt.

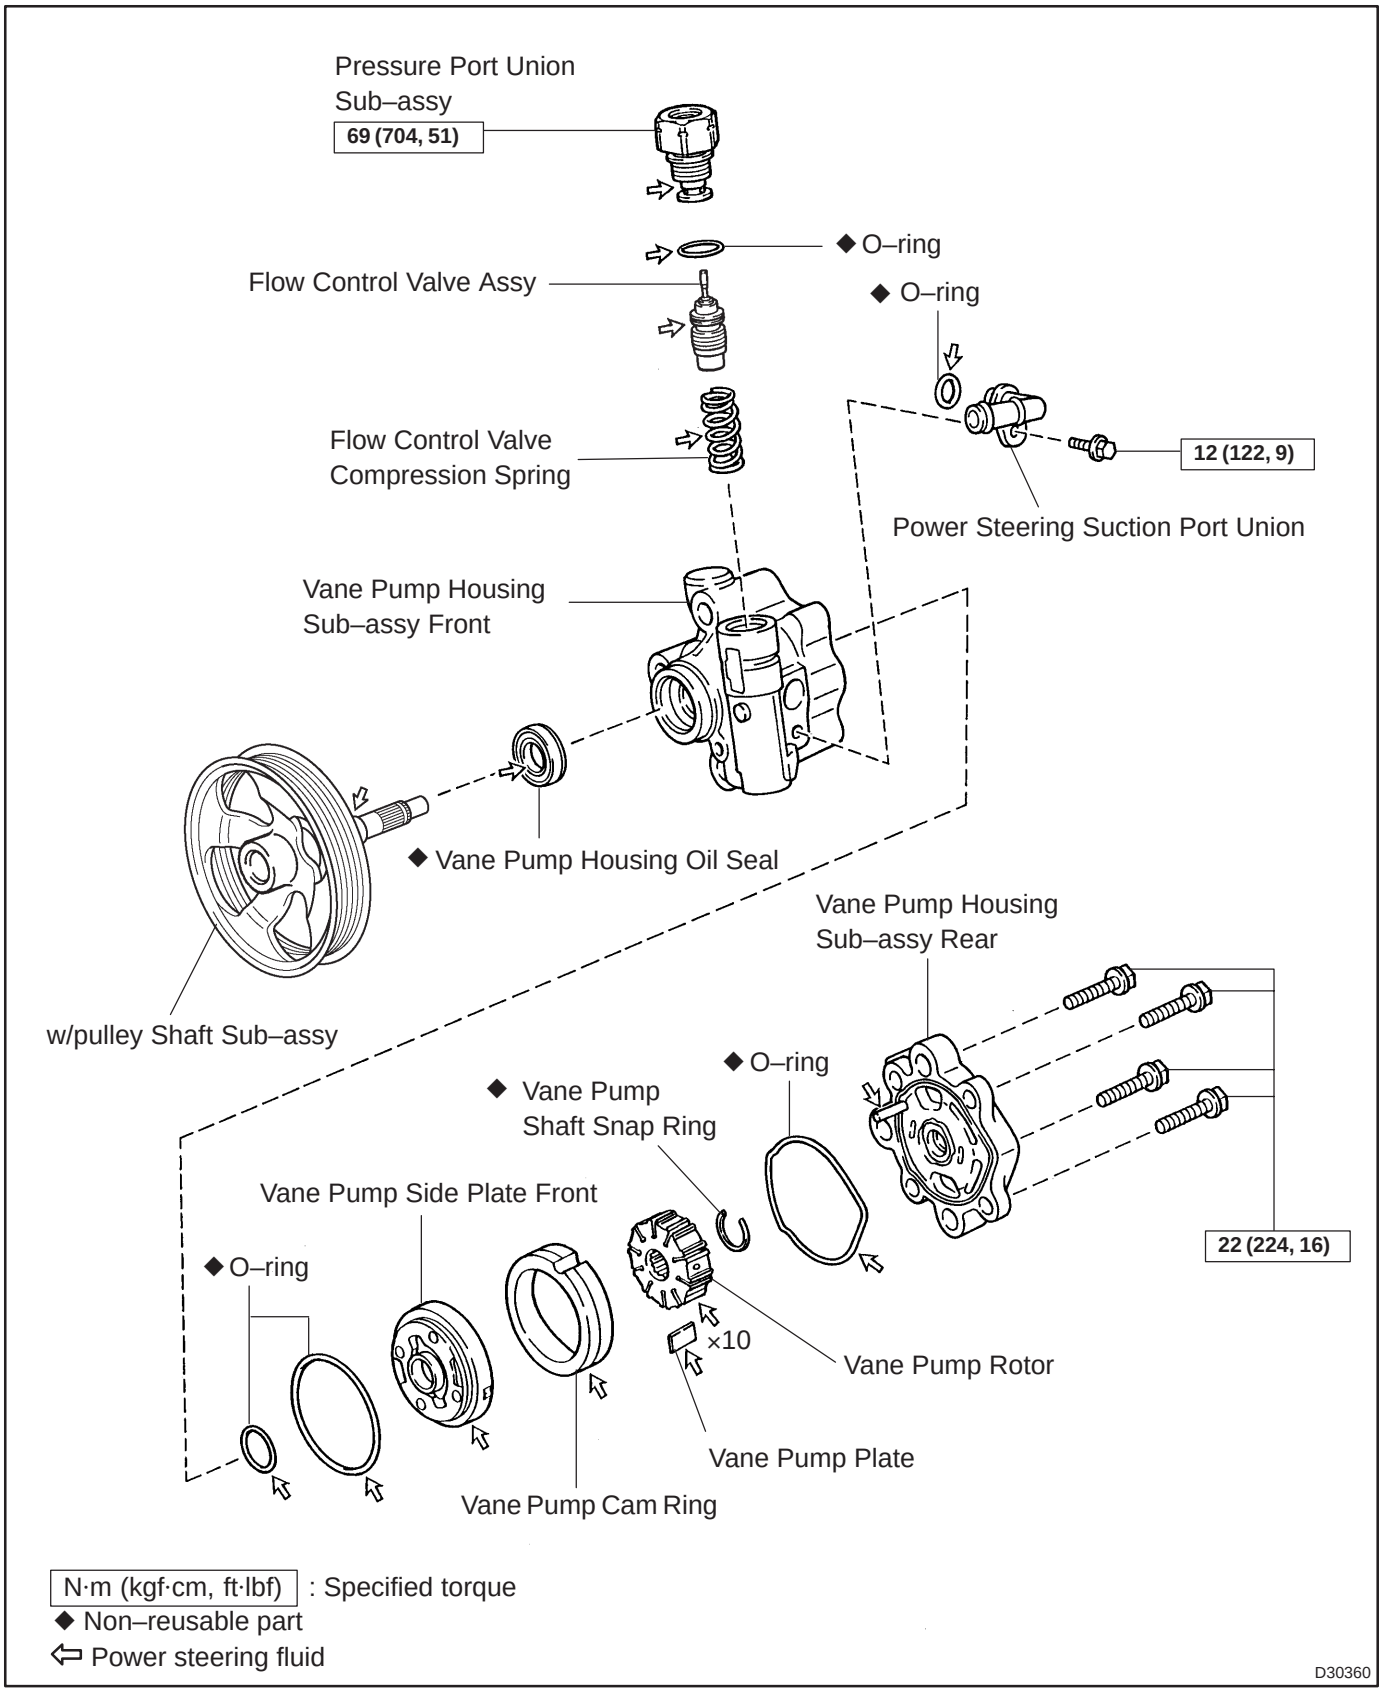
38. INSTALL FAN AND GENERATOR V BELT
1AZ–FE: (See page 14–105)
1AZ–FSE: (See page 14–185)

39. INSTALL ENGINE UNDER COVER RH

40. INSTALL FRONT WHEEL RH
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

41. ADD POWER STEERING FLUID (See page 51–4)

42. BLEED POWER STEERING FLUID (See page 51–4)



43. CHECK POWER STEERING FULUID LEVEL IN RESERVER (See page 51–4)

44. INSPECT FLUID LEAK

VANE PUMP ASSY (1CD–FTV)

COMPONENTS

5106Z–04

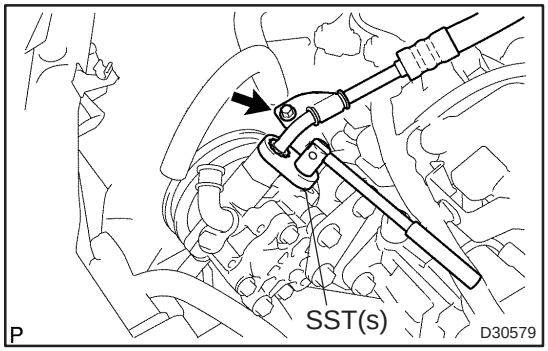
OVERHAUL

NOTICE:

- **When using a vise, do not overtighten.**
- **When installing, coat the parts indicated by the arrows with power steering fluid (See page 51–18).**

1. REMOVE V (COOLER COMPRESSOR TO CRANKSHAFT PULLEY) BELT NO.1 (See page 55–46)

2. REMOVE ENGINE COVER NO.1

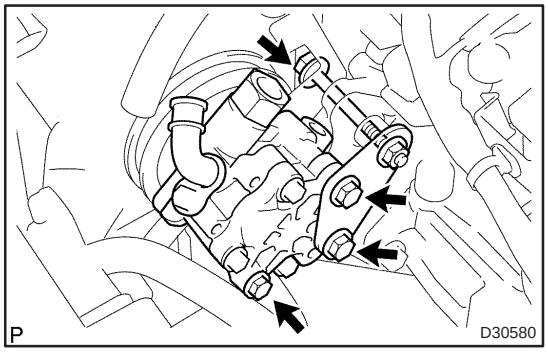


(a) Remove the bolt, 4 nuts and the engine cover No. 1.

3. DISCONNECT OIL RESERVOIR TO PUMP HOSE NO.1

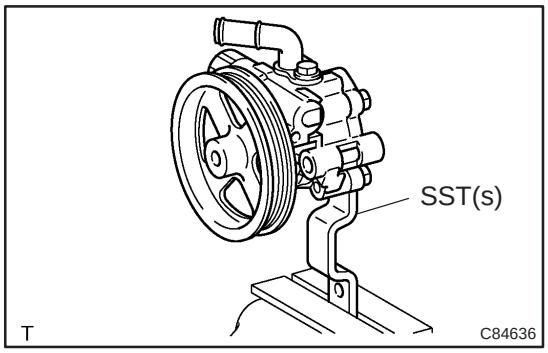
(a) Remove the clip and disconnect the oil reservoir to pump hose No. 1.

NOTICE:



Take care not to spill fluid on the V belt.

4. DISCONNECT PRESSURE FEED TUBE ASSY

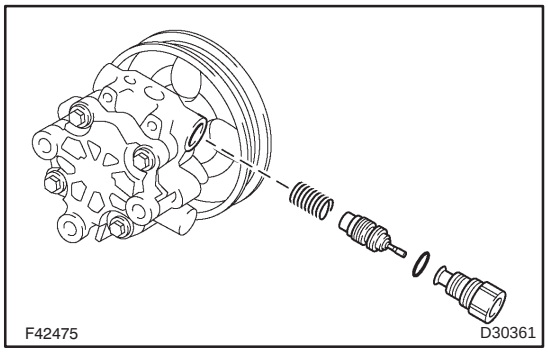


(a) Remove the bolt and sepatate the tube clamp.

(b) Using SST(s), disconnect the pressure feed tube assy from the vane pump assy.
SST 09023–12700

5. REMOVE VANE PUMP ASSY

(a) Remove the 4 bolts, the vane pump assy and the vane pump bracket rear.



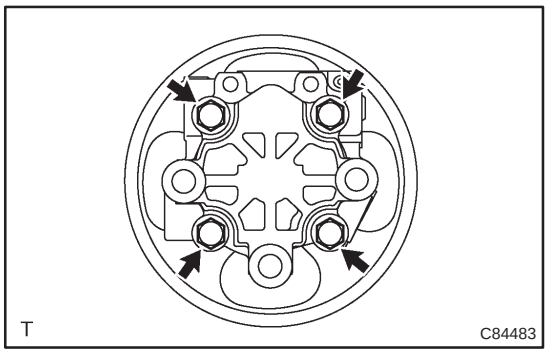
6. FIX VANE PUMP ASSY

(a) Using SST(s), hold the vane pump assy in a vise.
SST 09630–00014 (09631–00132)

7. REMOVE POWER STEERING SUCTION PORT UNION

(a) Remove the bolt and the suction port union.

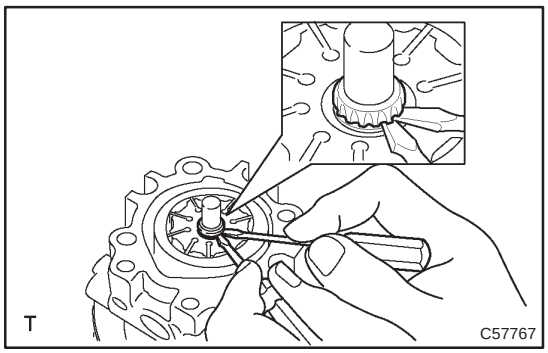
(b) Remove the O–ring from the suction port union.



8. REMOVE FLOW CONTROL VALVE ASSY

(a) Remove the pressure port union sub–assy.

(b) Remove the O–ring from the pressure port union sub–assy.



(c) Remove the flow control valve assy and the compression spring.

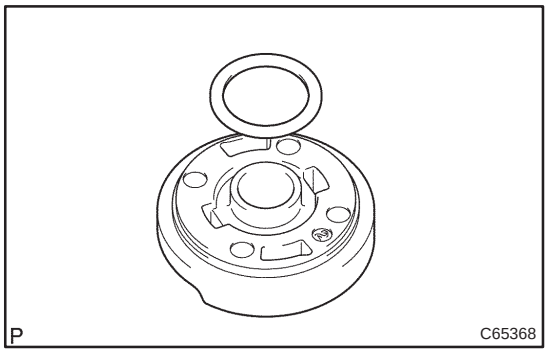
9. REMOVE VANE PUMP HOUSING SUB–ASSY REAR

(a) Remove the 4 bolts and housing sub–assy rear from the housing sub–assy front.

(b) Remove the O–ring from the housing sub–assy rear.

10. REMOVE W/PULLEY SHAFT SUB–ASSY

(a) Using 2 screwdrivers, remove the snap ring from the w/pulley shaft sub–assy.

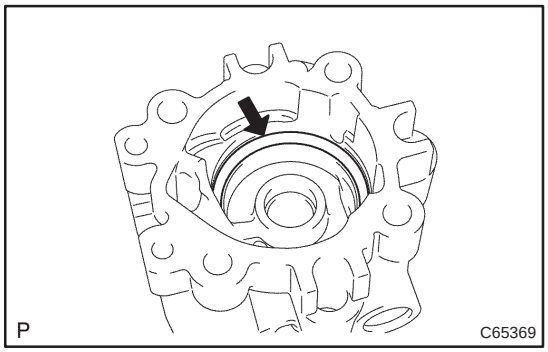


(b) Remove the w/pulley shaft sub–assy.

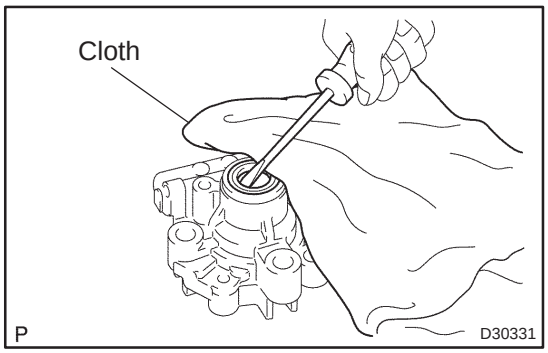
11. REMOVE VANE PUMP ROTOR

(a) Remove the 10 vane pump plates.

(b) Remove the vane pump rotor.



12. REMOVE VANE PUMP CAM RING

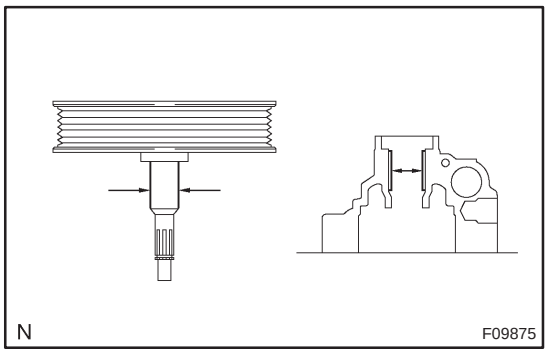


13. REMOVE VANE PUMP SIDE PLATE FRONT

(a) Remove the side plate front from the housing sub–assy front.

(b) Remove the O–ring from the side plate front.

(c) Remove the O–ring from the housing sub–assy front.

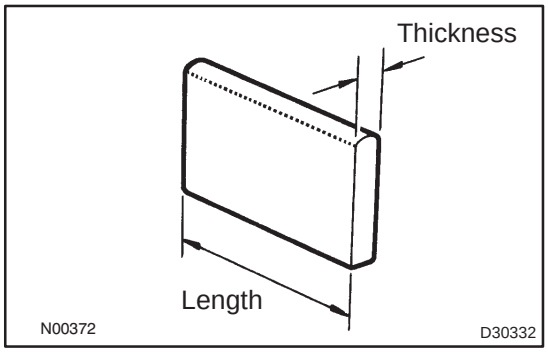


14. REMOVE VANE PUMP HOUSING OIL SEAL

(a) Using a screwdriver, remove the housing oil seal.

NOTICE:

Be careful not to damage the pump housing.

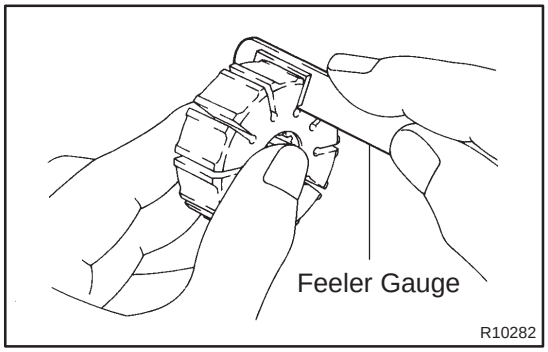


15. INSPECT VANE PUMP SHAFT AND BUSH IN HOUSING FRONT

(a) Using a micrometer and a caliper gauge, measure the oil clearance.

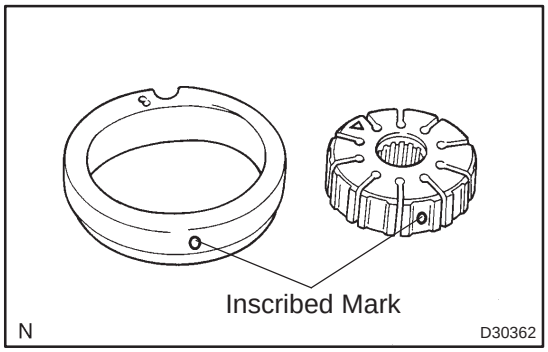
Maximum clearance: 0.07 mm (0.0028 in.)

If it is more than the maximum, replace the vane pump assy.



16. INSPECT VANE PUMP ROTOR AND VANE PUMP PLATES

(a) Using a micrometer, measure the thickness of the vane pump plates.

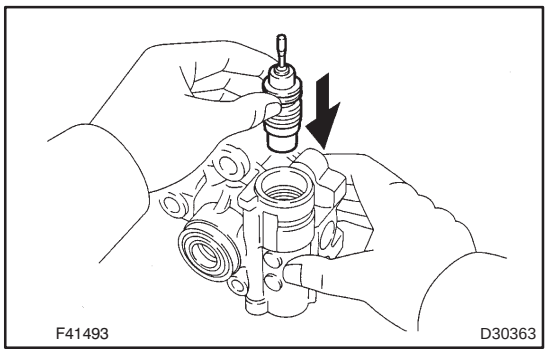


Minimum thickness:

1.405 to 1.411 mm (0.05531 to 0.05555 in.)

(b) Using a feeler gauge, measure the clearance between a side face of the vane pump rotor groove and vane plate.

Maximum clearance: 0.03 mm (0.0012 in.)

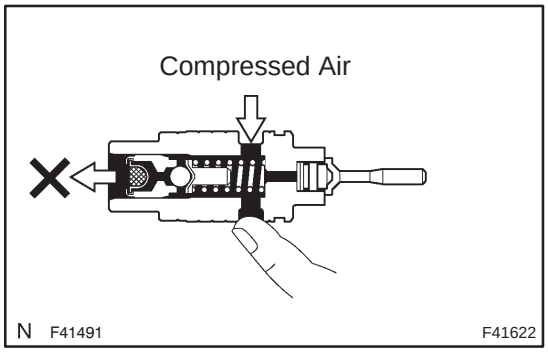


If it is more than the maximum, replace the vane pump plate and/or vane pump rotor with the one having the same mark as stamped on the cam ring.

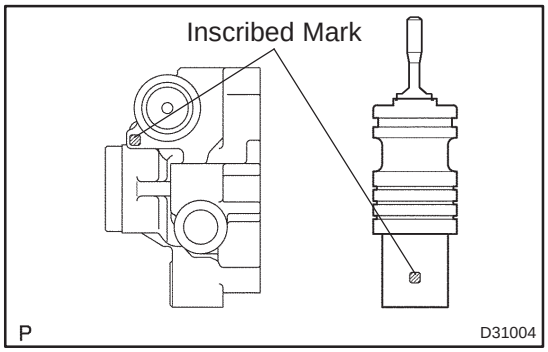
Inscribed mark: 0, 1, 2, 3 or 4

HINT:

There are 5 different marks for vane pump plate.



Mark	Part number	Length mm (in.)
0	44345–02110	12.001 to 12.003 (0.47247 to 0.47255)
1	44345–02120	11.999 to 12.000 (0.47240 to 0.47244)
2	44345–02130	11.997 to 11.998 (0.47232 to 0.47236)
3	44345–02140	11.995 to 11.996 (0.47224 to 0.47228)
4	44345–02150	11.993 to 11.994 (0.47216 to 0.47220)

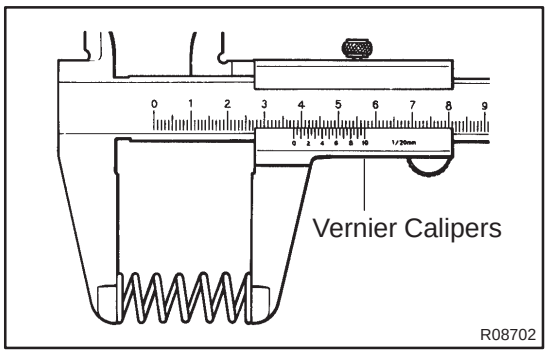


17. INSPECT FLOW CONTROL VALVE ASSY

(a) Coat the flow control valve assy with power steering fluid and check that it falls smoothly into the flow control valve hole by its own weight.

If necessary, replace the vane pump assy.

(b) Check the flow control valve assy for leakage. Close one of the holes and apply compressed air of 392 to 490 kPa (4 to 5 kgf·cm^2, 57 to 71 psi) into the opposite side hole, and confirm that air does not come out from the end holes.



If necessary, replace the flow control valve assy with the one having the same letter as inscribed on the housing sub–assy front

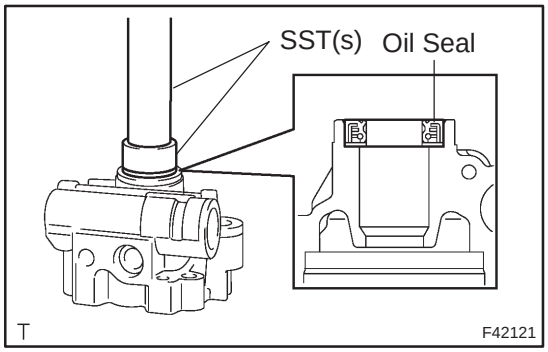
Inscribed mark: A, B, C, D, E or F

HINT:

There are 6 different marks for flow control valve assy.

Mark	Part number
A	44330–05190
B	44330–05200
C	44330–05210
D	44330–05220
E	44330–05230
F	44330–05240

18. INSPECT FLOW CONTROL VALVE COMPRESSION SPRING



(a) Using vernier calipers, measure the free length of the compression spring.

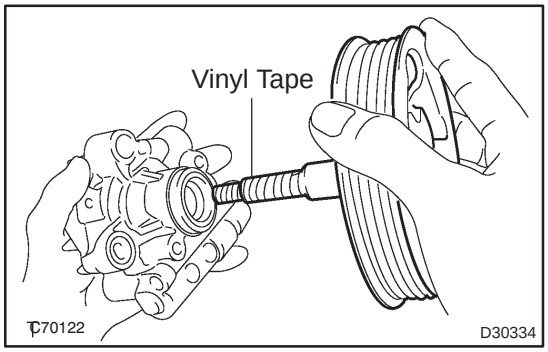
Minimum free length: 36.9 mm (1.453 in.)

If it is less than the minimum, replace the compression spring.

19. INSPECT PRESSURE PORT UNION SUB–ASSY

(a) If the union seat in the pressure port union sub–assy is remarkably damaged, it may cause fluid leakage. Replace the pressure port union sub–assy.

20. INSTALL VANE PUMP HOUSING OIL SEAL



(a) Coat a new housing oil seal lip with power steering fluid.

(b) Using SST(s) and a press, install a new housing oil seal.

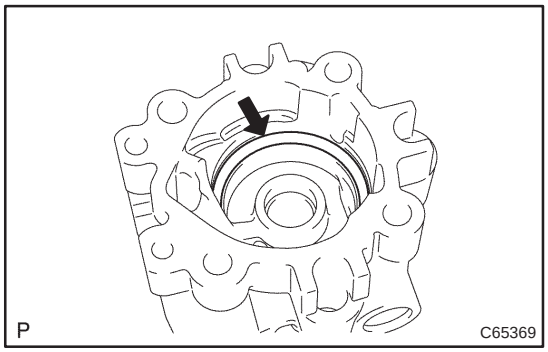
SST 09950–60010 (09951–00280), 09950–70010 (09951–07100)

NOTICE:

Make sure that the oil seal is installed facing in the correct direction.

21. INSTALL W/PULLEY SHAFT SUB–ASSY

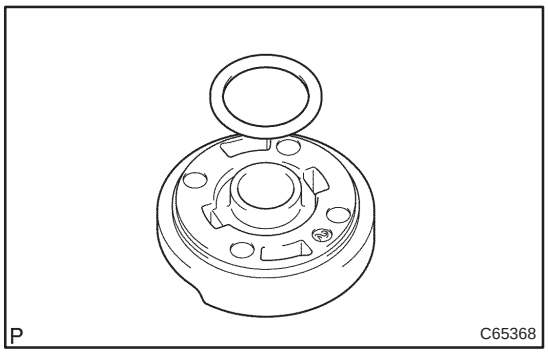
(a) Coat inside bushing surface of the housing sub–assy front with power steering fluid.



(b) Gradually insert the w/pulley shaft sub–assy.

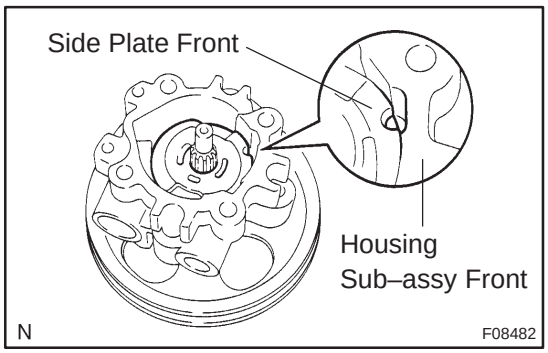
NOTICE:

Do not damage the oil seal lip.



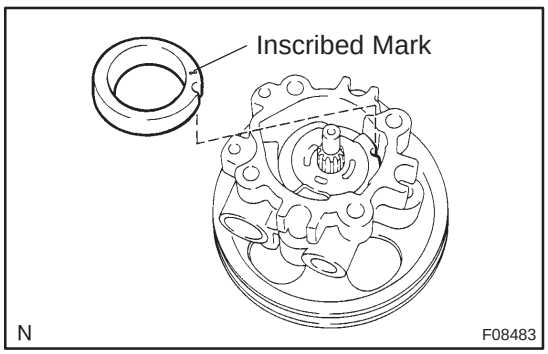
HINT:

Tape the shaft before inserting.



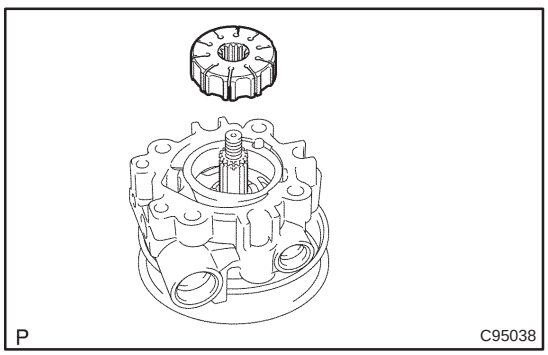
22. INSTALL VANE PUMP SIDE PLATE FRONT

(a) Coat a new O–ring with power steering fluid and install it inSto the housing sub–assy front.



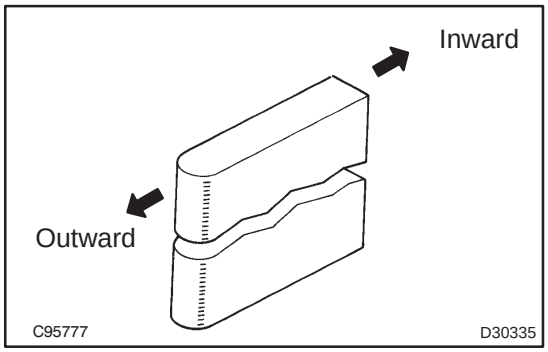
(b) Coat a new O–ring with power steering fluid and install it onto the side plate front.

(c) Align the dent of the side plate front with that of the housing sub–assy front, and install the side plate front.



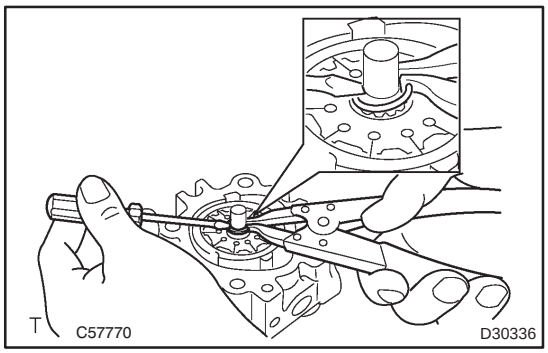
NOTICE:

Make sure that the side plate front is installed facing in the correct direction.



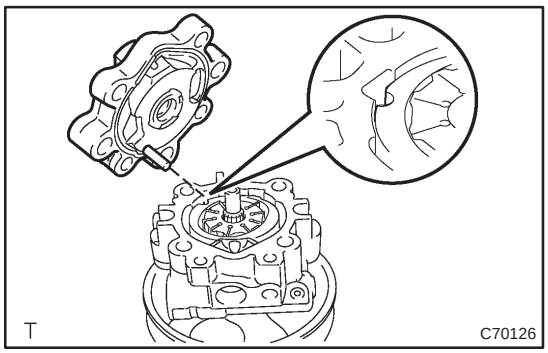
23. INSTALL VANE PUMP CAM RING

(a) Align the dent of the cam ring with that of the side plate front, and install the cam ring with the inscribed mark facing upward.

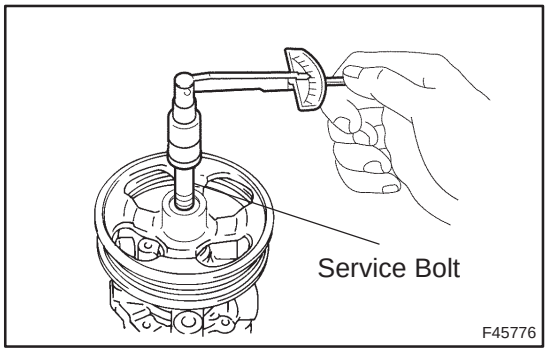


24. INSTALL VANE PUMP ROTOR

(a) Install the vane pump rotor.



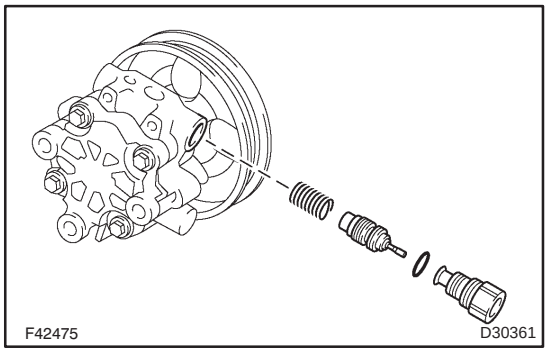
(b) Coat 10 vane pump plates with power steering fluid.
(c) Install the vane pump plates with the round end facing outward.



25. INSTALL VANE PUMP SHAFT SNAP RING

(a) Using a screwdriver and a snap ring expander, install a new snap ring to the w/pulley shaft sub–assy.

26. INSTALL VANE PUMP HOUSING SUB–ASSY REAR



(a) Coat a new O–ring with power steering fluid and install it onto the housing sub–assy rear.
(b) Align the straight pin of the housing sub–assy rear with the dents of the cam ring, side plate front and housing sub–assy front, and install the vane pump housing sub–assy rear with the 4 bolts.
Torque: 22 N·m (224 kgf·cm, 16 ft·lbf)

27. INSPECT PRELOAD

(a) Check that the pump rotates smoothly without abnormal noise.
(b) Temporarily install the service bolt.
Recommended service bolt:
Thread diameter: 10 mm (0.39 in.)
Thread pitch: 1.25 mm (0.0492 in.)
Bolt length: 50 mm (1.97 in.)
(c) Using a torque wrench, check the pump rotating torque.
Rotating torque:
0.27 N·m (2.8 kgf·cm, 2.4 ft·lbf) or less

If the rotating torque is not as specified, check the housing oil seal.

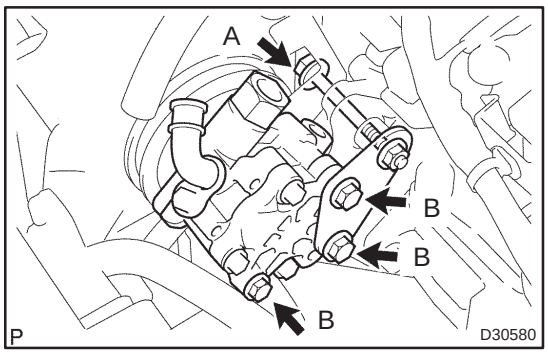
28. INSTALL FLOW CONTROL VALVE ASSY

(a) Coat the compression spring and the flow control valve assy with power steering fluid.

(b) Install the compression spring and the flow control valve assy.

(c) Coat a new O–ring with power steering fluid and install it onto the pressure port union sub–assy.

(d) Install the pressure port union sub–assy.

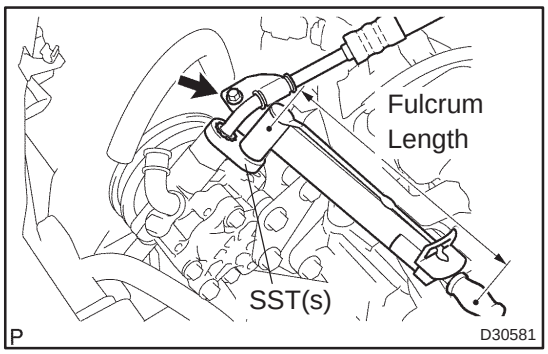


Torque: 69 N·m (704 kgf·cm, 51 ft·lbf)

29. INSTALL POWER STEERING SUCTION PORT UNION

(a) Coat a new O–ring with power steering fluid, and install it to the suction port union.

(b) Install the suction port union with the bolt.



Torque: 12 N·m (122 kgf·cm, 9 ft·lbf)

30. INSTALL VANE PUMP ASSY

(a) Install the vane pump assy and vane pump bracket rear with the 4 bolts.

Torque:
Bolt A: 72 N·m (734 kgf·cm, 53 ft·lbf)
Bolt B: 39 N·m (398 kgf·cm, 29 ft·lbf)

31. CONNECT PRESSURE FEED TUBE ASSY

(a) Using SST(s), connect the pressure feed tube assy.

SST 09023–12700

Torque: 41 N·m (414 kgf·cm, 30 ft·lbf)

HINT:

- Use a torque wrench with a fulcrum length of 345 mm (13.58 in.).
- This torque value is effective when SST(s) is parallel to a torque wrench.

(b) Install the tube clamp with the bolt.

Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)

32. CONNECT OIL RESERVOIR TO PUMP HOSE NO.1

(a) Connect the oil reservoir to pump hose No. 1 with the clip.

NOTICE:

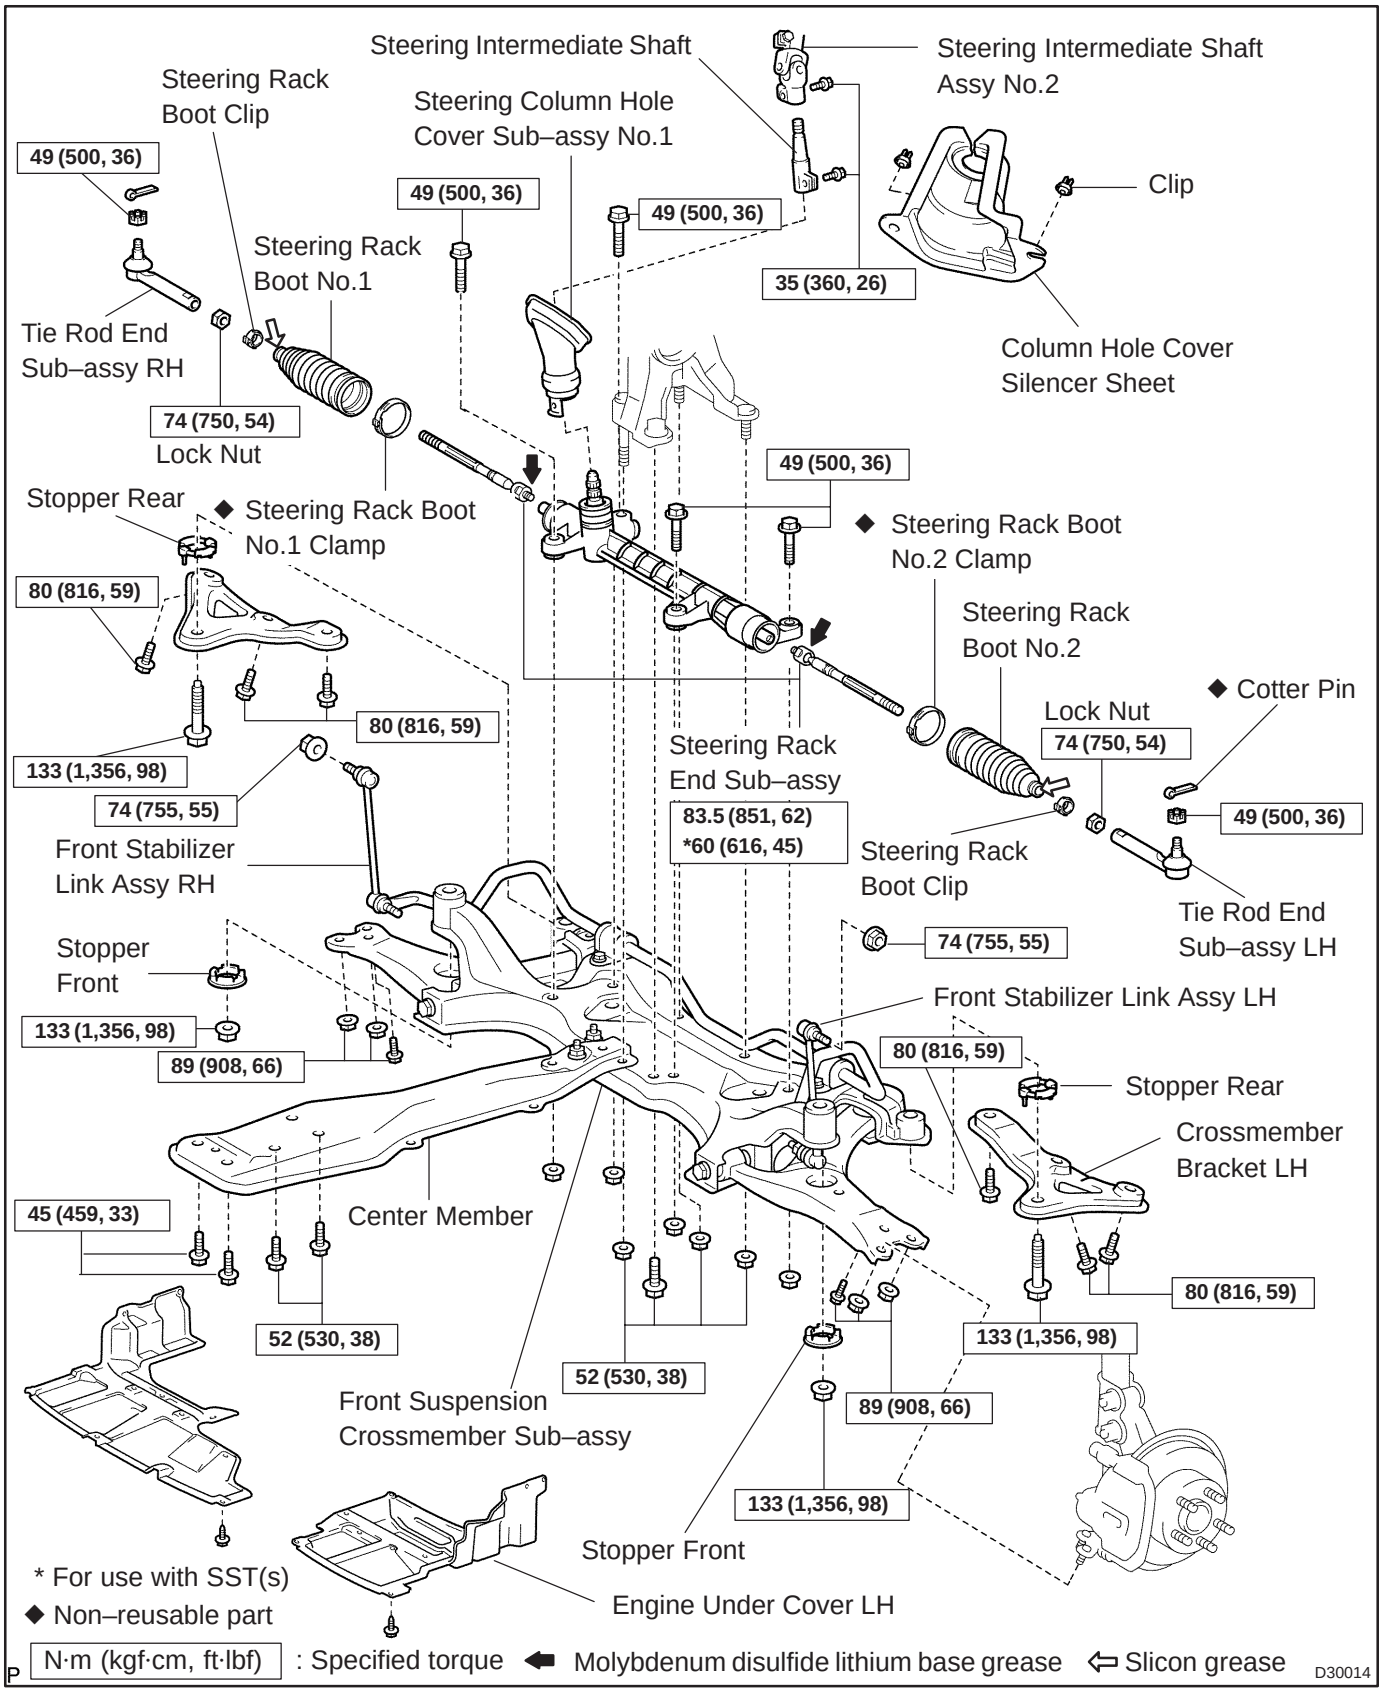
Take care not to spill fluid on the V belt.

33. INSTALL V (COOLER COMPRESSOR TO CRANKSHAFT PULLEY) BELT NO.1 (See page 55–46)

34. ADJUST V (COOLER COMPRESSOR TO CRANKSHAFT PULLEY) BELT NO.1 (See page 55–46)

35. ADD POWER STEERING FLUID (See page 51–4)

36. BLEED POWER STEERING FLUID (See page 51–4)



37. CHECK POWER STEERING FULUID LEVEL IN RESERVER (See page 51–4)

38. INSPECT FLUID LEAK

STEERING GEAR ASSY

COMPONENTS

510DI–02

510DJ–02

OVERHAUL

NOTICE:

When installing, coat the parts indicated by the arrows with power steering fluid or molybdenum disulfide lithium base grease (See page 51–27).

1. INSPECT CENTER FRONT WHEEL

2. REMOVE COLUMN HOLE COVER SILENCER SHEET (See page 50–9)

3. SEPARATE STEERING INTERMEDIATE SHAFT ASSY NO.2 (See page 51–36)

4. SEPARATE STEERING COLUMN HOLE COVER SUB–ASSY NO.1

5. REMOVE FRONT WHEELS

6. REMOVE ENGINE UNDER COVER LH

7. REMOVE ENGINE UNDER COVER RH

8. SEPARATE TIE ROD END SUB–ASSY LH (See page 30–6)

SST 09628–62011

9. SEPARATE TIE ROD END SUB–ASSY RH

SST 09628–62011

HINT:

Perform the same procedure on the other side.

10. REMOVE HEIGHT CONTROL SENSOR SUB–ASSY FR RH (W/ DISCHARGE HEAD LAMP) (See page 65–28)

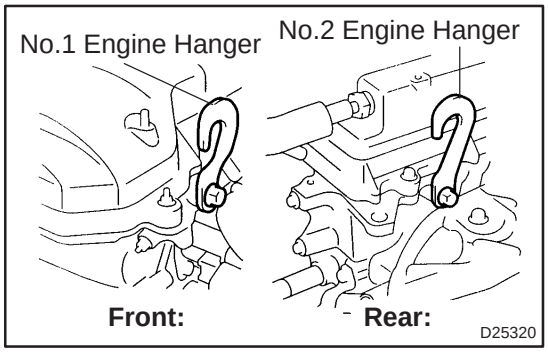
11. SEPARATE FRONT STABILIZER LINK ASSY LH (See page 30–6)

12. SEPARATE FRONT STABILIZER LINK ASSY RH

HINT:

Perform the same procedure on the other side.

13. SEPARATE FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH (See page 30–6)



14. SEPARATE FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 RH

HINT:

Perform the same procedure on the other side.

15. REMOVE HOOD SUB–ASSY

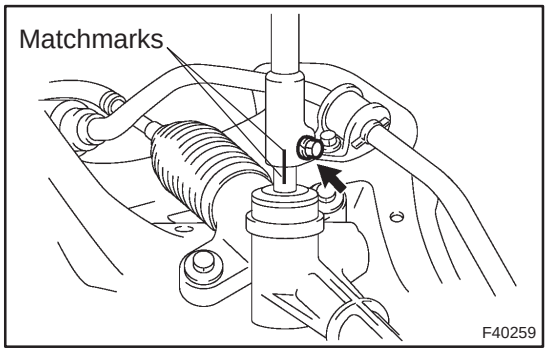
16. REMOVE CYLINDER HEAD COVER SUB–ASSY

17. SUSPEND ENGINE ASSEMBLY

(a) Remove the 2 PCV hoses.

(b) Install the 2 engine hangers in the correct direction.

No.1 engine hanger: 12281–22021
No.2 engine hanger: 12281–15040
Bolt: 90512–B1016
Torque: 38 N·m (387 kgf·cm, 28 ft·lbf)

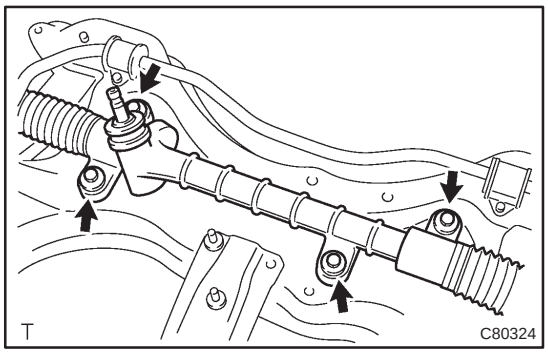


(c) Attach the engine chain hoist to the hangers.

CAUTION:

Do not attempt t hang the ingine by hooking the chain to any other part.

18. REMOVE FRONT SUSPENSION CROSSMEMBER SUB–ASSY (See page 51–36)

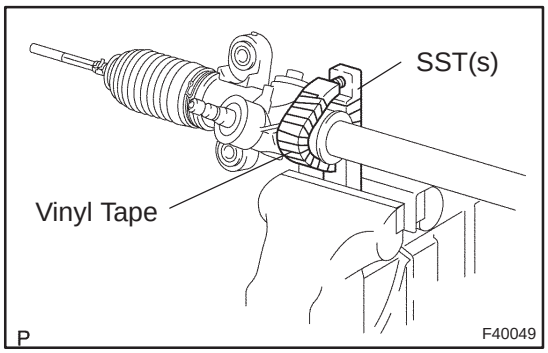


19. REMOVE STEERING COLUMN HOLE COVER SUB–ASSY NO.1

20. REMOVE STEERING INTERMEDIATE SHAFT

(a) Place matchmarks on the intermediate shaft and the pinion shaft.

(b) Remove the bolt and the steering intermediate shaft.

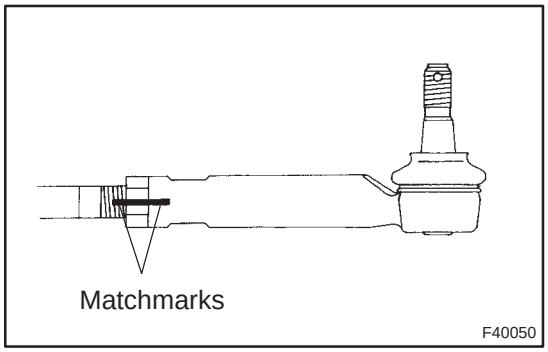


21. REMOVE STEERING GEAR ASSY

(a) Remove the 4 bolts, the 4 nuts and the steering gear assy from the crossmember sub–assy.

NOTICE:

Because the nut has its own stopper, do not turn the nut and torque the bolt with the nut fixed.



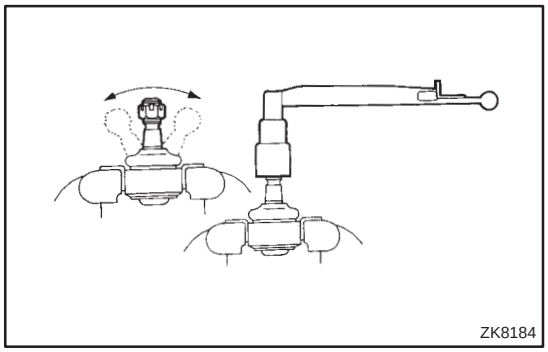
22. FIX STEERING GEAR ASSY

(a) Using SST(s), secure the steering gear assy in a vise.
SST 09612–00012

HINT:

Tape the SST(s) before use.

23. REMOVE TIE ROD END SUB–ASSY LH



(a) Place matchmarks on the tie rod end sub–assy and the rack end sub–assy.

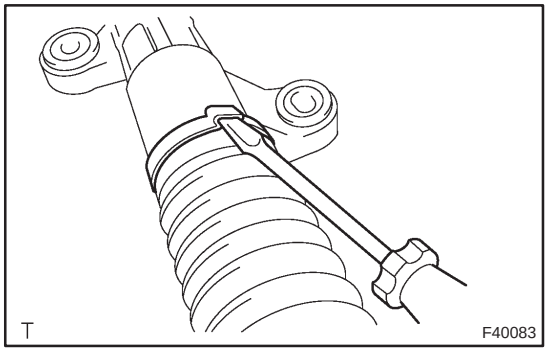
(b) Loosen the lock nut and remove the tie rod end sub–assy and the lock nut.

24. REMOVE TIE ROD END SUB–ASSY RH

HINT:

Perform the same procedure on the other side.

25. INSPECT TIE ROD END SUB–ASSY LH



(a) Secure the tie rod end sub–assy in a vise.
(b) Install the nut to the stud bolt.
(c) Flip the ball joint stud back and forth 5 times.
(d) Using a torx wrench, turn the nut continuously at a rate of 2 to 4 seconds per turn and take the torque reading on the 5th turn.
Turning torque:
0.29 to 1.96 N·m (3 to 20 kgf·cm, 2.57 to 17.35 in.·lbf)

26. INSPECT TIE ROD END SUB–ASSY RH

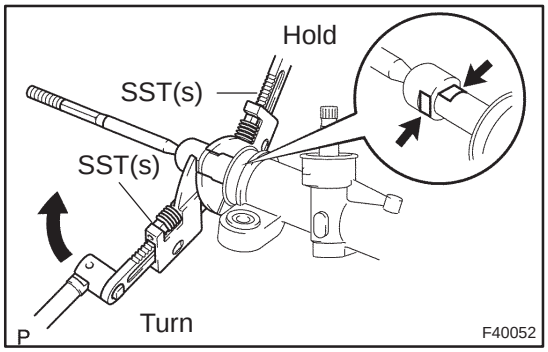
HINT:
Perform the same procedure on the other side.

27. REMOVE STEERING RACK BOOT CLIP

(a) Using a pliers, remove the 2 boot clips from each rack boots.

28. REMOVE STEERING RACK BOOT NO.2 CLAMP

(a) Using a screwdriver, unstake the rack boot No.2 clamp.



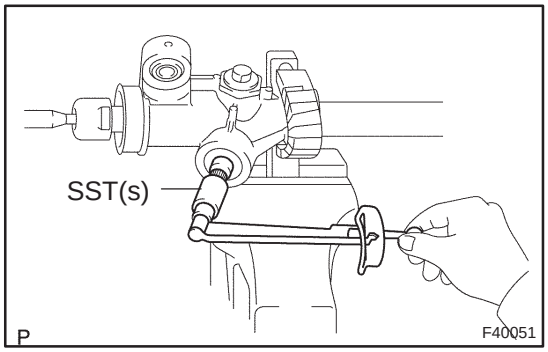
NOTICE:
Be careful not to damage the boot.

29. REMOVE STEERING RACK BOOT NO.1 CLAMP

HINT:
Perform the same procedure on the other side.

30. REMOVE STEERING RACK BOOT NO.2

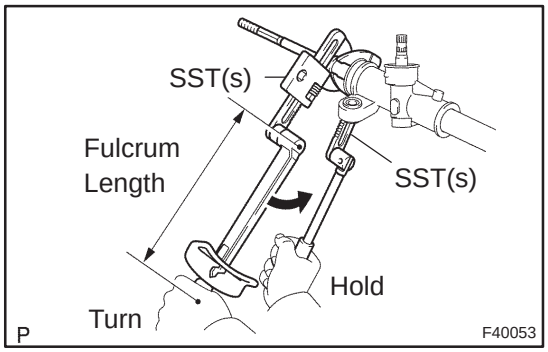
31. REMOVE STEERING RACK BOOT NO.1



32. REMOVE STEERING RACK END SUB–ASSY

(a) Using SST(s), hold the steering rack steadily and using another SST(s), remove the rack end sub–assy.
SST 09922–10010

NOTICE:
Use SST(s) 09922–10010 in the direction shown in the illustration.

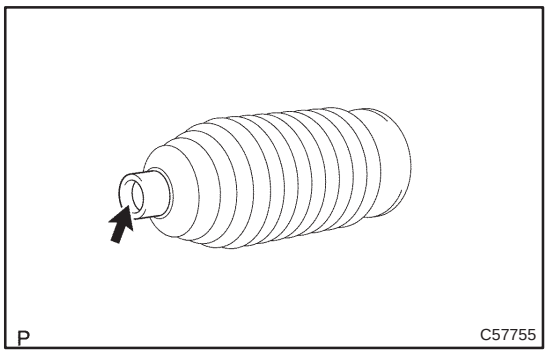


HINT:
Perform the same procedure on the other side.

33. INSPECT TOTAL PRELOAD

(a) Temporarily install the RH and LH rack end sub–assy.
(b) Using SST(s) and a torque wrench, check the preload.
SST 09616–00011
Preload (turning):
0.6 to 1.1 N·m (6 to 11 kgf·cm, 5.3 to 9.7 in.·lbf)

If it is not within specification, replace the steering gear assy.

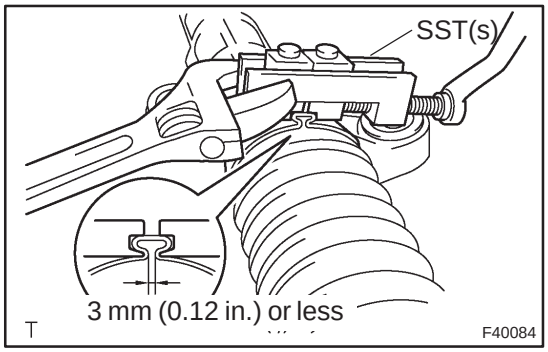


34. INSTALL STEERING RACK END SUB–ASSY

(a) Using SST(s), hold the steering rack steadily and using another SST(s), torque the rack end sub–assy.
SST 09922–10010
Torque: 60 N·m (616 kgf·cm, 45 ft·lbf)

NOTICE:
Use SST(s) 09922–10010 in the direction shown in the illustration.

HINT:
- Use a torque wrench with a fulcrum length of 345 mm (13.58 in.)
- Perform the same procedure on the other side.



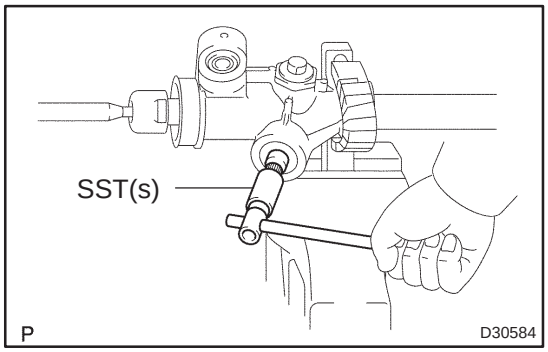
35. INSTALL STEERING RACK BOOT NO.2

(a) Apply silicon grease to the inside small caliber of rack boot No.2.
(b) Install the rack boot No.2 to the groove on the rack housing.

NOTICE:
Be careful not to damage or twist the boot.

36. INSTALL STEERING RACK BOOT NO.1

HINT:
Perform the same procedure on the other side.

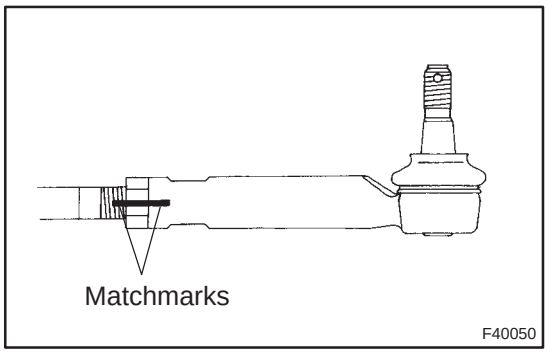


37. INSTALL STEERING RACK BOOT NO.2 CLAMP

(a) Install a new rack boot No.2 clamp to the rack boot No.2.
(b) Using SST(s), stake the rack boot No.2 clamp as shown in the illustration.
SST 09521–24010

38. INSTALL STEERING RACK BOOT NO.1 CLAMP

SST 09521–24010

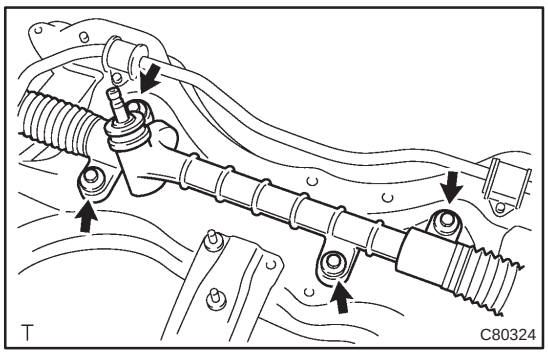


HINT:
Perform the same procedure on the other side.

39. INSTALL STEERING RACK BOOT CLIP

(a) Using a pliers, install the 2 rack boot clips to each rack boots.

(b) Using SST(s), check that the rack boot No.2 is strechy.
SST 09616–00011

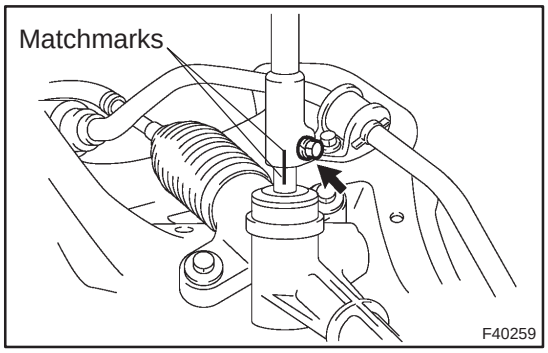


40. INSTALL TIE ROD END SUB–ASSY LH

(a) Screw the lock nut and the tie rod end sub–assy to the rack end sub–assy until the matchmarks are aligned.
Torque: 74 N·m (750 kgf·cm, 54 ft·lbf)

HINT:
After adjusting toe–in, torque the lock nut
(See page 26–6).

41. INSTALL TIE ROD END SUB–ASSY RH



HINT:
Perform the same procedure on the other side.

42. INSTALL STEERING GEAR ASSY

(a) Install the steering gear assy onto the crossmember sub–assy with the 4 bolts and the nuts.
Torque: 49 N·m (500 kgf·cm, 36 ft·lbf)

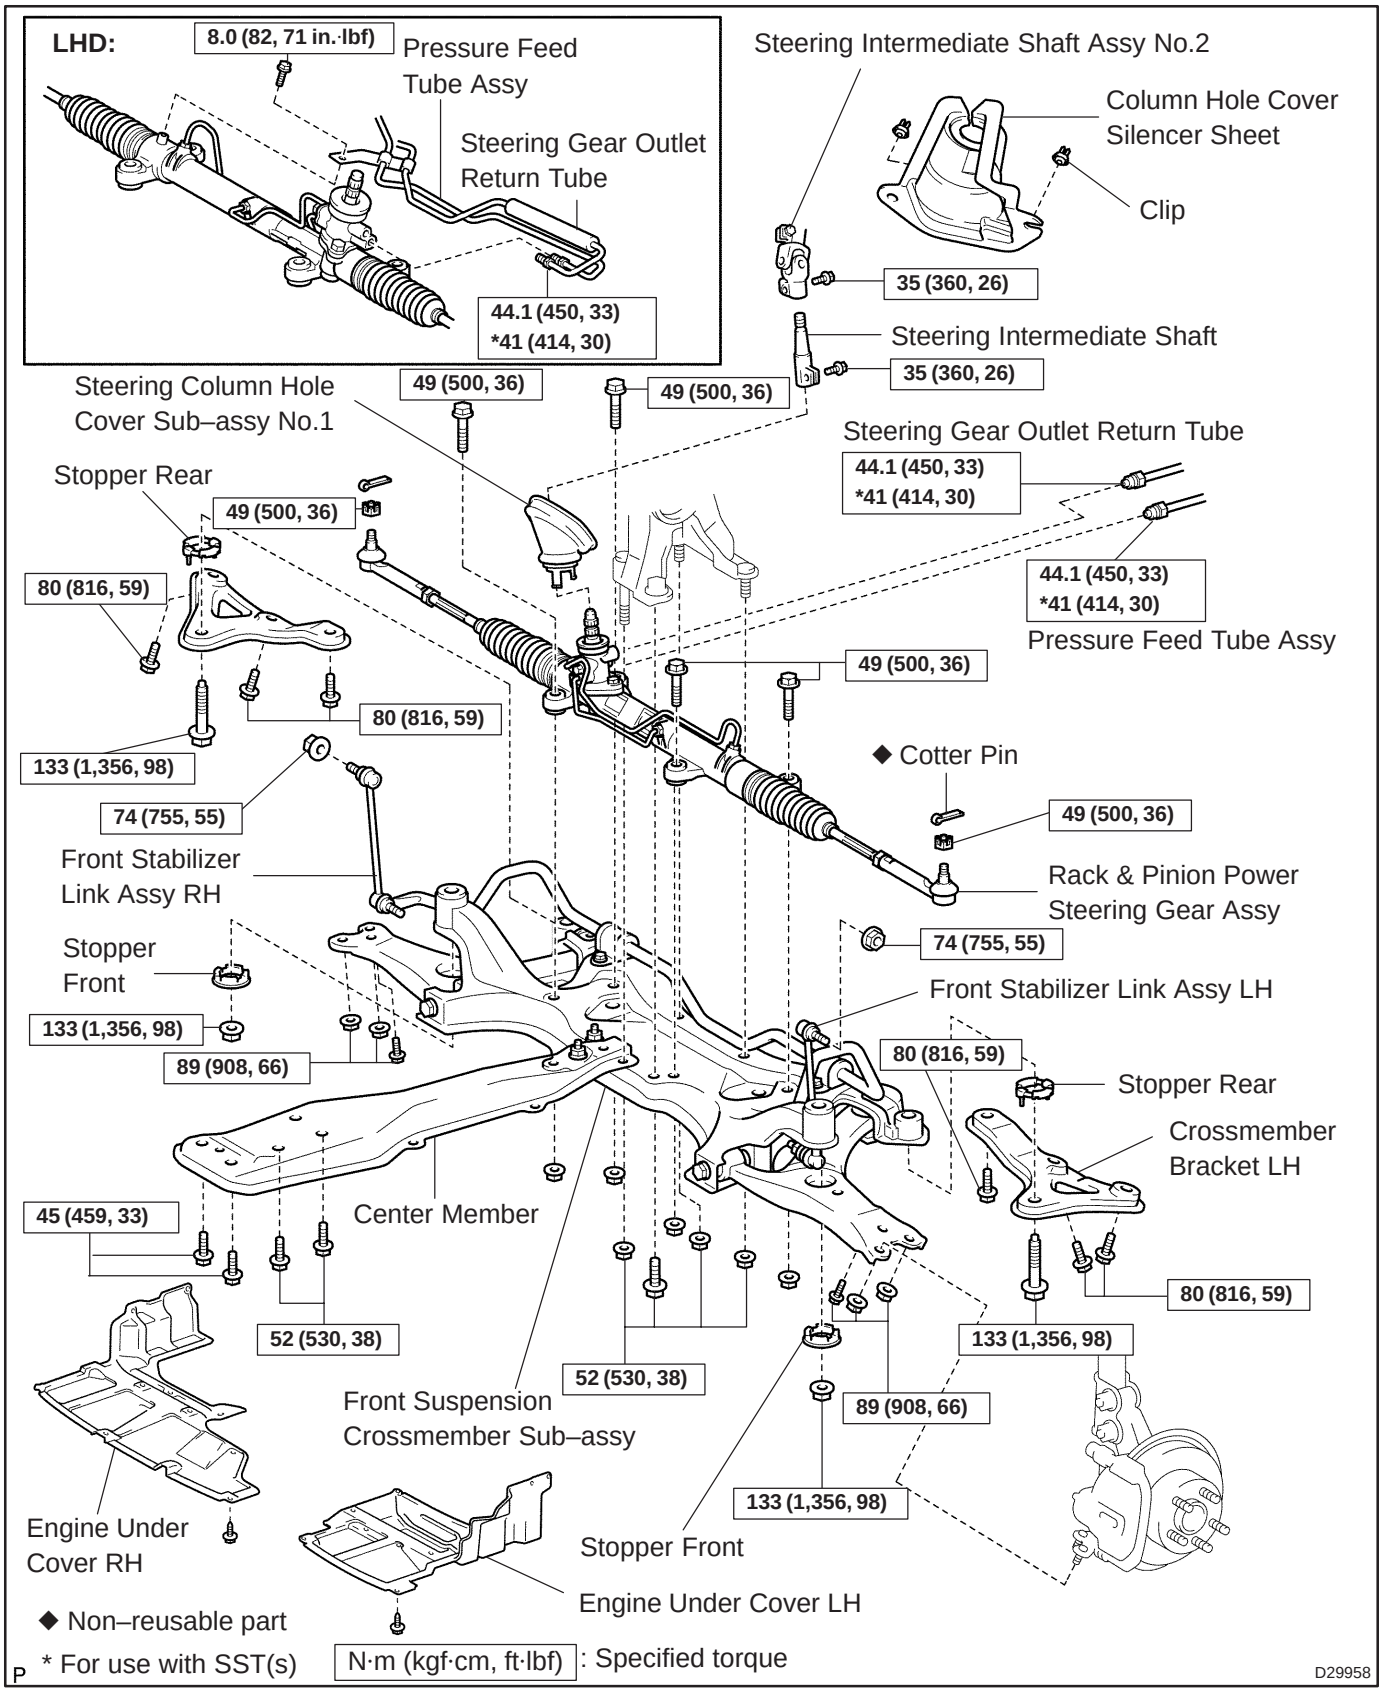
NOTICE:
Because the nut has its own stopper, do not turn the nut and torque the bolt with the nut fixed.

43. INSTALL STEERING INTERMEDIATE SHAFT

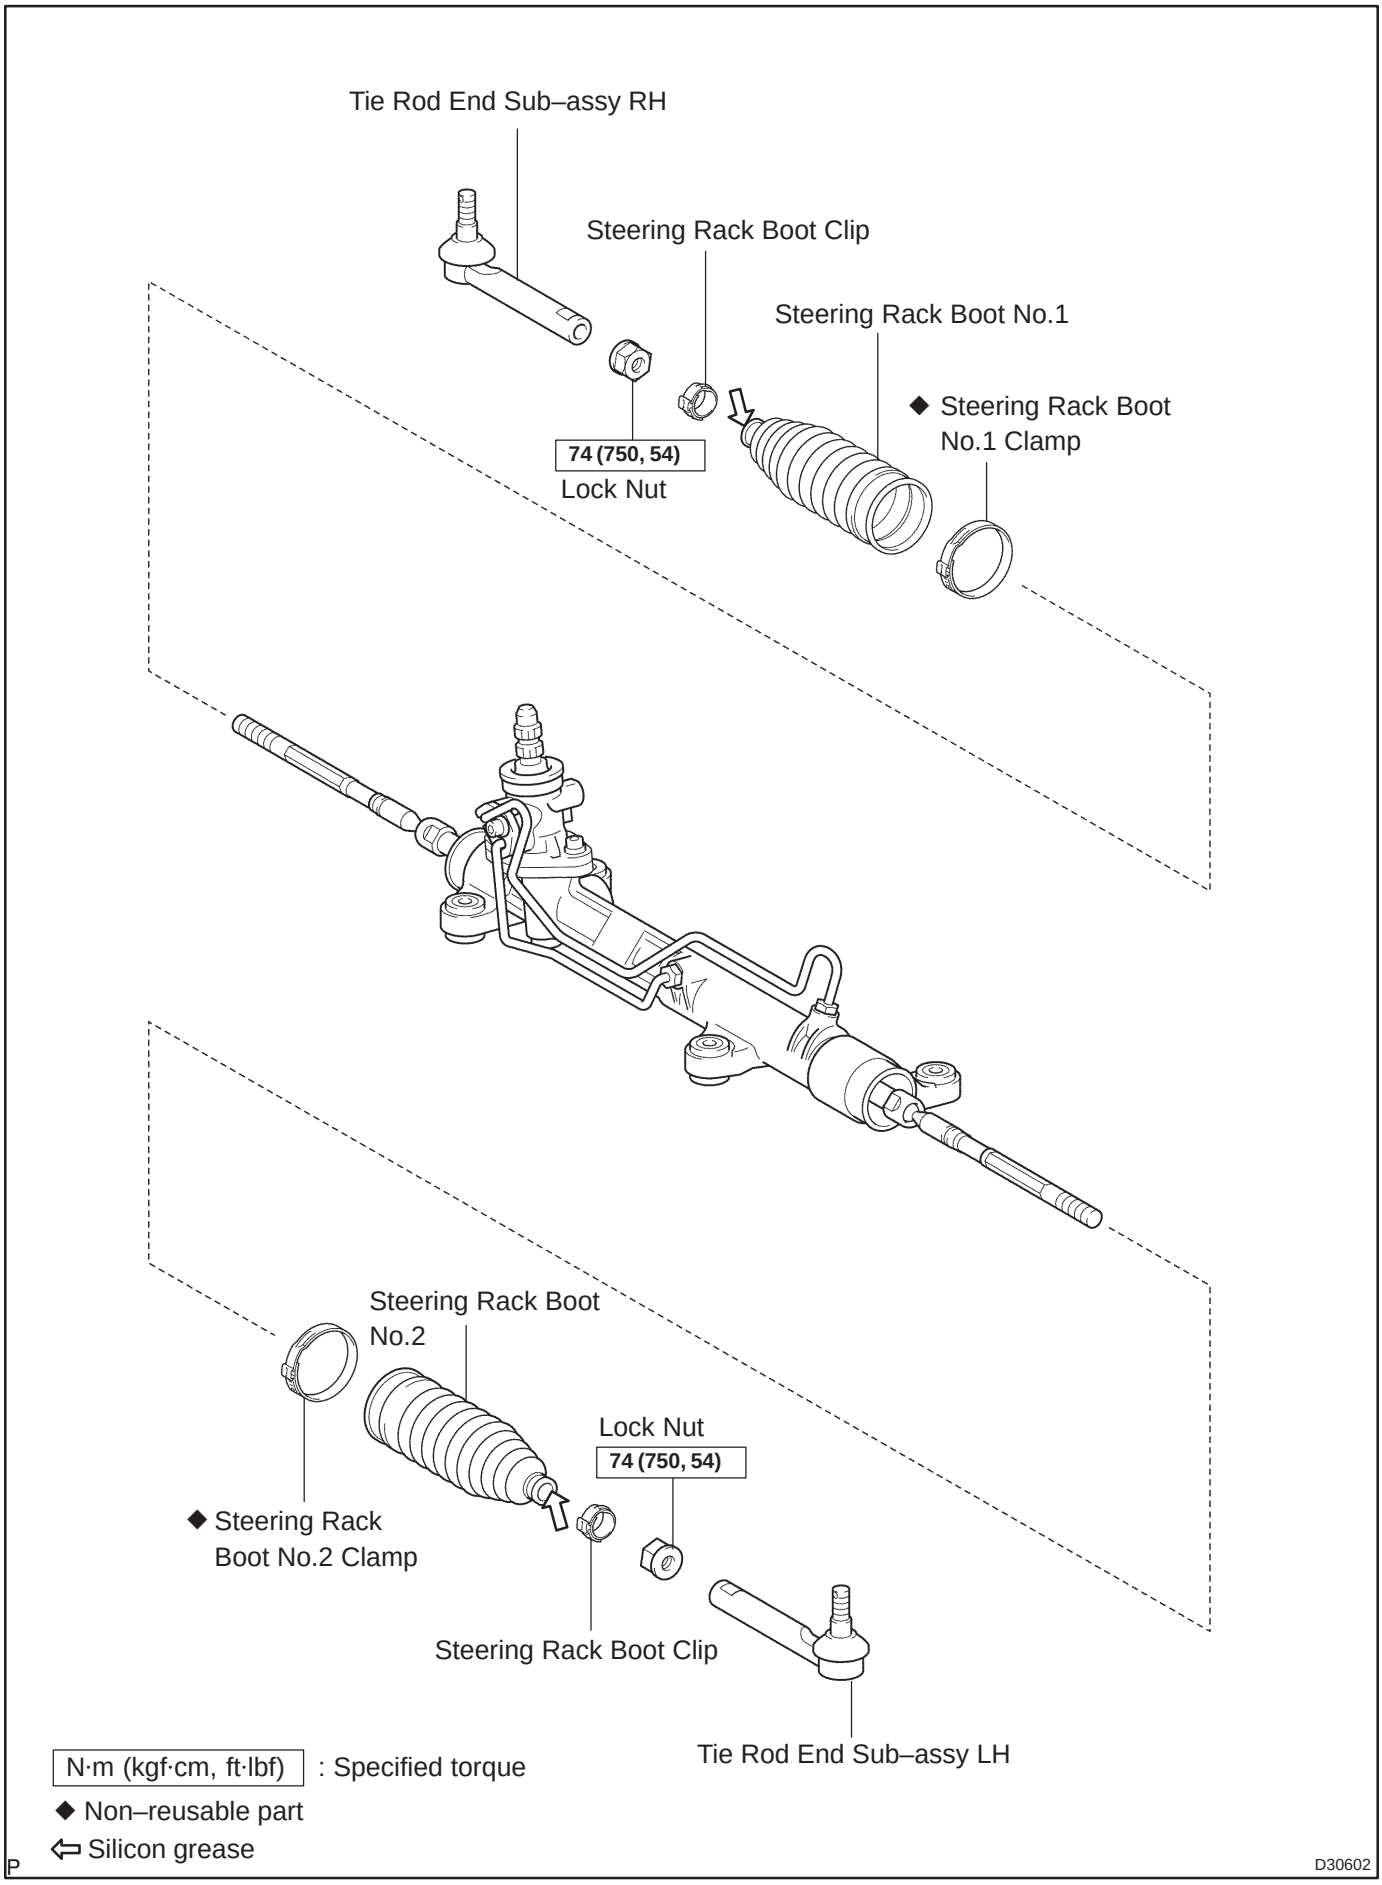
(a) Align the matchmarks on the steering intermediate shaft and the steering pinion shaft.

(b) Install the bolt.
Torque: 35 N·m (360 kgf·cm, 26 ft·lbf)

44. INSTALL STEERING COLUMN HOLE COVER SUB–ASSY NO.1



45. INSTALL FRONT SUSPENSION CROSSMEMBER SUB–ASSY (See page 51–36)



46. INSTALL FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH (See page 30–6)
47. INSTALL FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 RH
HINT:
Perform the same procedure on the other side.
48. INSTALL FRONT STABILIZER LINK ASSY LH (See page 30–6)
49. INSTALL FRONT STABILIZER LINK ASSY RH
HINT:
Perform the same procedure on the other side.
50. INSTALL HEIGHT CONTROL SENSOR SUB–ASSY FR RH (W/ DISCHARGE HEAD LAMP) (See page 65–28)
51. INSTALL TIE ROD END SUB–ASSY LH (See page 30–6)
52. INSTALL TIE ROD END SUB–ASSY RH
HINT:
Perform the same procedure on the other side.
53. INSTALL FRONT WHEELS
Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)
54. INSTALL STEERING COLUMN HOLE COVER SUB–ASSY NO.1
55. INSTALL STEERING INTERMEDIATE SHAFT ASSY NO.2 (See page 51–36)
56. INSTALL COLUMN HOLE COVER SILENCER SHEET (See page 50–9)
57. INSTALL CYLINDER HEAD COVER SUB–ASSY
58. INSPECT HOOD SUB–ASSY (See page 75–2)
59. ADJUST HOOD SUB–ASSY (See page 75–2)
60. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT (See page 26–6)
61. INSTALL ENGINE UNDER COVER LH
62. INSTALL ENGINE UNDER COVER RH
63. HEADLIGHT AIM ONLY (W/ DISCHARGE HEAD LAMP) (See page 65–19)

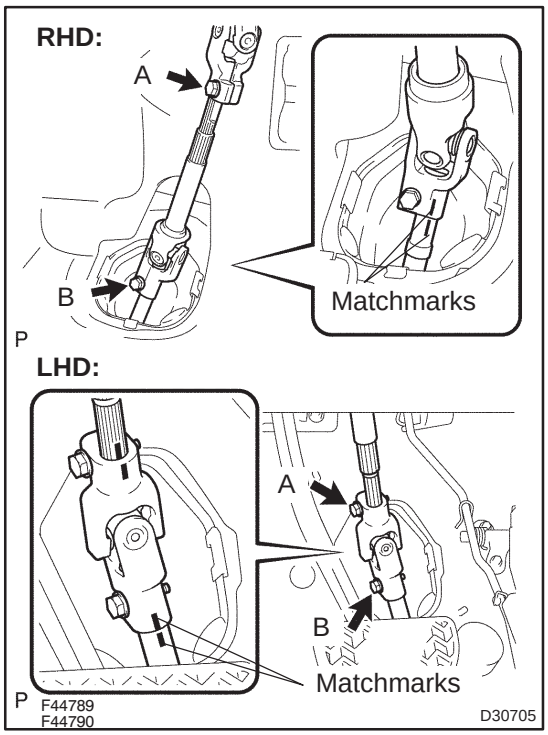
OVERHAUL

NOTICE:

When installing, coat the parts indicated by the arrows with power steering fluid or molybdenum disulfide lithium base grease (See page 51–34).

1. INSPECT CENTER FRONT WHEEL

2. REMOVE COLUMN HOLE COVER SILENCER SHEET (See page 50–9)



3. SEPARATE STEERING INTERMEDIATE SHAFT ASSY NO.2

(a) To prevent form rotating the steering wheel, fix the wheel with the seat belt.

HINT:

The operation is useful to prevent the damage of the spiral cable.

(b) Place matchmarks on the intermediate shaft assy No.2 and the intermediate shaft.

(c) Loosen the bolt A and remove the bolt B, then separate the intermediate shaft assy No.2.

4. SEPARATE STEERING COLUMN HOLE COVER SUB–ASSY NO.1

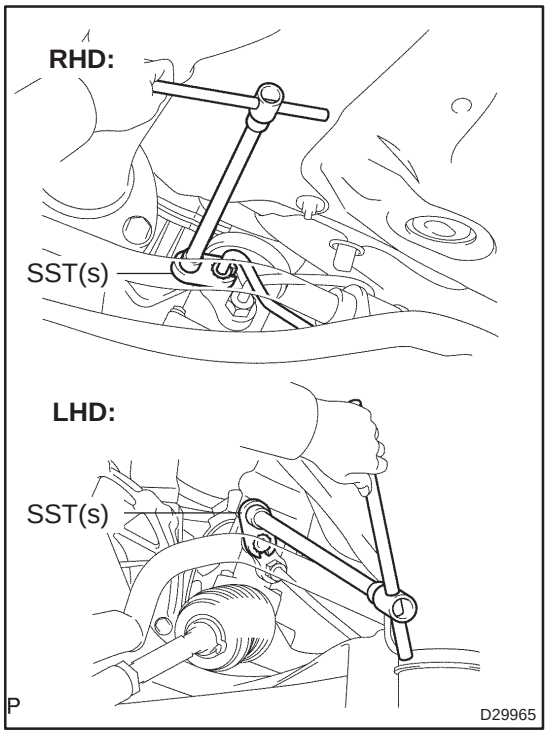
5. REMOVE FRONT WHEELS

6. REMOVE ENGINE UNDER COVER LH

7. REMOVE ENGINE UNDER COVER RH

8. SEPARATE TIE ROD END SUB–ASSY LH (See page 30–6)

SST 09628–62011

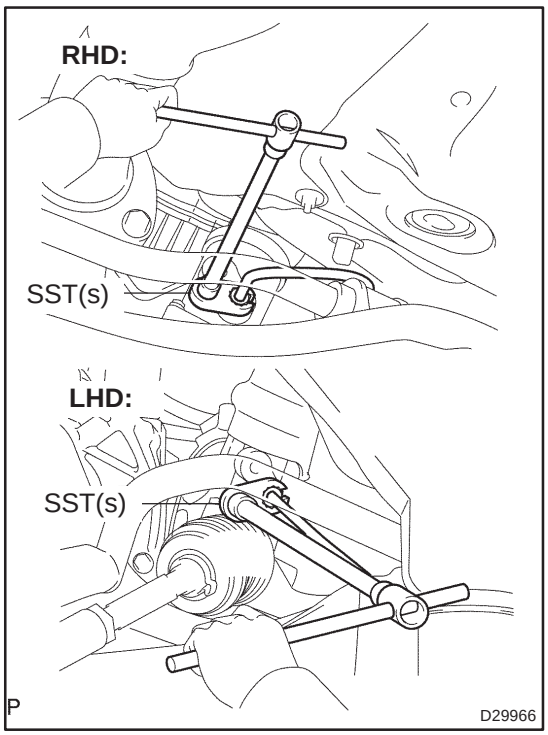


9. SEPARATE TIE ROD END SUB–ASSY RH

SST 09628–62011

HINT:

Perform the same procedure on the other side.



10. REMOVE HEIGHT CONTROL SENSOR SUB–ASSY FR RH (W/ DISCHARGE HEAD LAMP) (See page 65–28)

11. DISCONNECT STEERING GEAR OUTLET RETURN TUBE

(a) Using SST(s), disconnect the outlet return tube.
SST 09023–12700

(b) LHD:
Remove the bolt and separate the tube clamp from the power steering gear assy.

12. DISCONNECT PRESSURE FEED TUBE ASSY

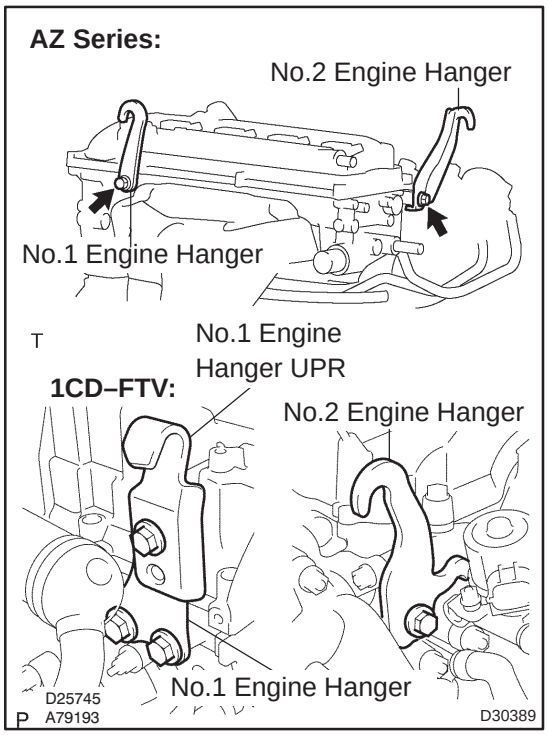
(a) Using SST(s), disconnect the pressure feed tube assy.
SST 09023–12700

13. SEPARATE FRONT STABILIZER LINK ASSY LH (See page 30–6)

14. SEPARATE FRONT STABILIZER LINK ASSY RH

HINT:
Perform the same procedure on the other side.

15. SEPARATE FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH (See page 30–6)



16. SEPARATE FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 RH

HINT:

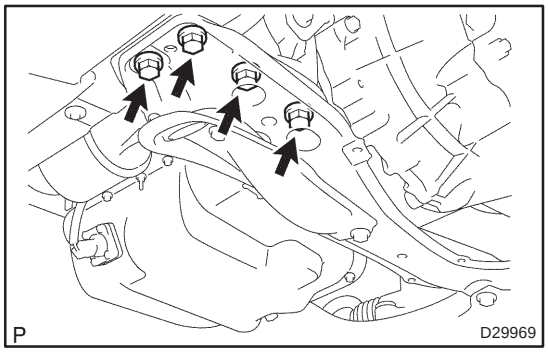
Perform the same procedure on the other side.

17. REMOVE HOOD SUB–ASSY

18. REMOVE CYLINDER HEAD COVER SUB–ASSY

19. SUSPEND ENGINE ASSEMBLY

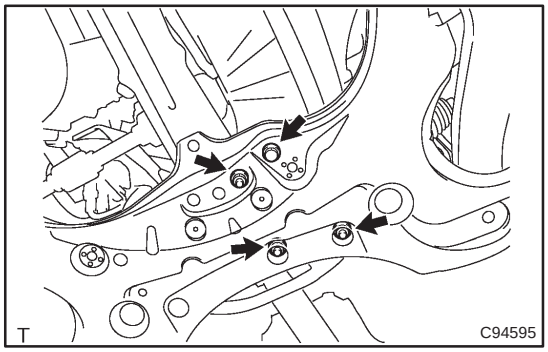
(a) Install the 2 or 3 engine hangers with the bolts in the correct direction.



Parts No. :

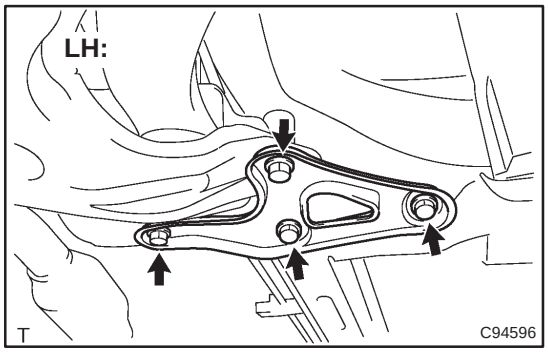
	AZ Series:	1CD–FTV:
No.1 Engine Hanger	12281–28010	12281–27050
No.1 Engine Hanger UPR	–	Yellow:12284–27020 Black:12284–27030
No.2 Engine Hanger	12282–28010	Yellow:12282–27060 Black:12282–27070
Bolt	91512–61020	91642–81025

Torque:
AZ Series:
38 N·m (390 kgf·cm, 28 ft·lbf)
1CD–FTV:
37 N·m (375 kgf·cm, 27 ft·lbf)



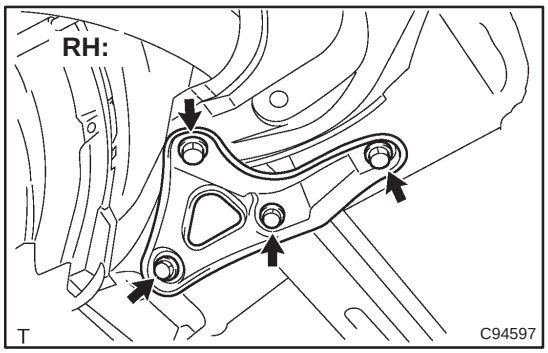
(b) Attach the engine chain hoist to the engine hangers.

CAUTION:
Do not attempt to hang the engine by hooking the chain to any other parts.

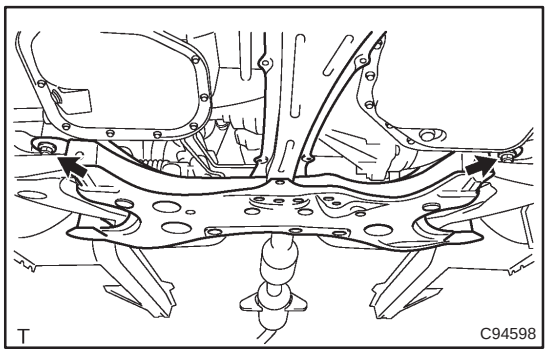


20. REMOVE FRONT SUSPENSION CROSSMEMBER SUB–ASSY

(a) Remove the 4 bolts and separate the center member.

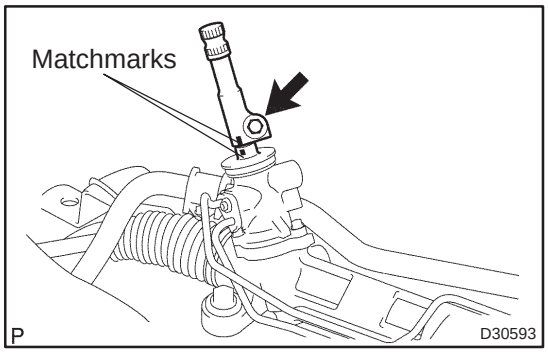


(b) Remove the bolt and the 3 nuts, separate the engine mounting insulator RR from the crossmember sub–assy.

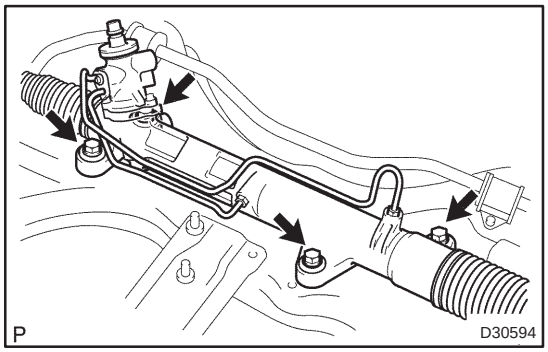


(c) Using a transmission jack, support the crossmember sub–assy.

(d) Remove the 4 bolts and the crossmember bracket LH.
(e) Remove the stopper rear from the crossmember bracket LH.



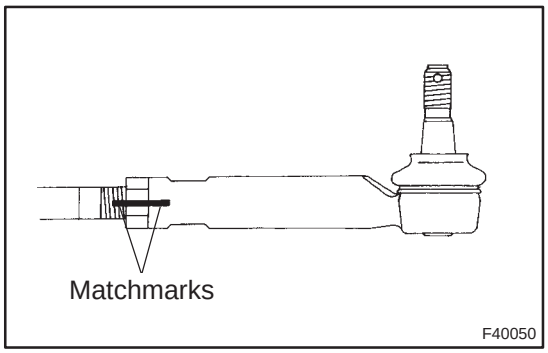
(f) Remove the 4 bolts and the crossmember bracket RH.
(g) Remove the stopper rear from the crossmember bracket RH.



(h) Remove the 2 nuts and the crossmember sub–assy w/ power steering gear assy.
(i) Remove the 2 stopper front from the crossmember sub–assy.

21. REMOVE STEERING COLUMN HOLE COVER SUB–ASSY NO.1

22. REMOVE STEERING INTERMEDIATE SHAFT
(a) Place matchmarks on the intermediate shaft and the pinion shaft.
(b) Remove the bolt and the intermediate shaft.



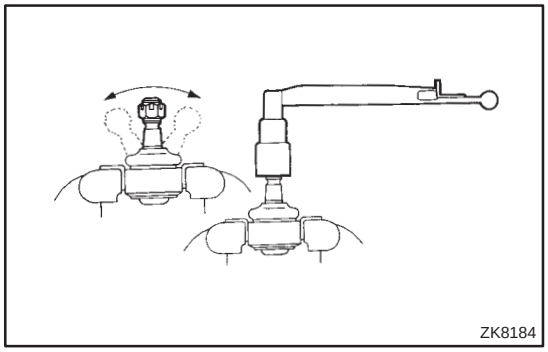
23. REMOVE RACK & PINION POWER STEERING GEAR ASSY

(a) Remove the 4 bolts, the nuts and the power steering gear assy from the crossmember sub–assy.

NOTICE:

Because the nut has its own stopper, do not turn the nut and torque the bolt with the nut fixed.

24. REMOVE TIE ROD END SUB–ASSY LH



(a) Place matchmarks on the tie rod end sub–assy and the rack end.

(b) Loosen the lock nut, and remove the tie rod end sub–assy and the lock nut.

25. REMOVE TIE ROD END SUB–ASSY RH

HINT:

Perform the same procedure on the other side.

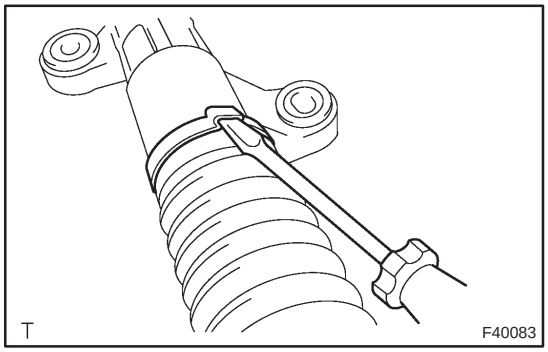
26. INSPECT TIE ROD END SUB–ASSY LH

(a) Secure the tie rod end sub–assy in a vise.

(b) Install the nut to the stud bolt.

(c) Flip the ball joint stud back and forth 5 times.

(d) Using a torx wrench, turn the nut continuously at a rate of 2 to 4 seconds per turn and take the torque reading on the 5th turn.



Turning torque:

0.49 to 3.43 N·m (5.0 to 35 kgf·cm, 4.34 to 30.38 in. lbf)

27. INSPECT TIE ROD END SUB–ASSY RH

HINT:

Perform the same procedure on the other side.

28. REMOVE STEERING RACK BOOT NO.2 CLAMP

(a) Using a screwdriver, remove the rack boot No.2 clamp.

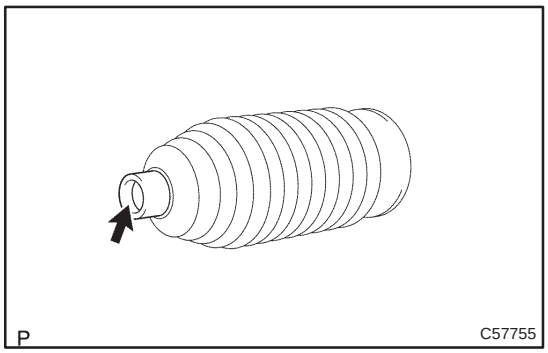
NOTICE:

Be careful not to damage the boot.

29. REMOVE STEERING RACK BOOT NO.1 CLAMP

HINT:

Perform the same procedure on the other side.



30. REMOVE STEERING RACK BOOT CLIP

HINT:

Perform the same procedure on the rack boot clamps.

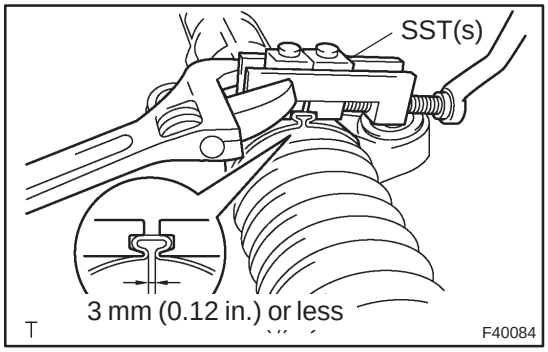
31. REMOVE STEERING RACK BOOT NO.2

32. REMOVE STEERING RACK BOOT NO.1

33. INSTALL STEERING RACK BOOT NO.2

(a) Apply silicon grease to the inside small caliber of rack boot No.2.

(b) Install the rack boot No.2 to the groove on the rack housing.



NOTICE:

Be careful not to damage or twist the boot.

34. INSTALL STEERING RACK BOOT NO.1

HINT:

Perform the same procedure on the other side.

35. INSTALL STEERING RACK BOOT NO.2 CLAMP

(a) Install a new rack boot No.2 clamp.

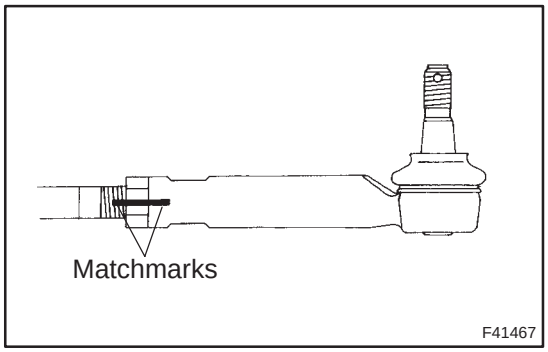
(b) Using SST(s), stake the rack boot No.2 clamp as shown in the illustration.

SST 09521–24010

36. INSTALL STEERING RACK BOOT NO.1 CLAMP

SST 09521–24010

HINT:



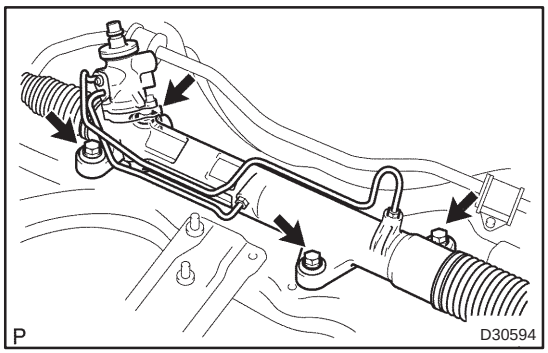
Perform the same procedure on the other side.

37. INSTALL STEERING RACK BOOT CLIP

SST 09521–24010

HINT:

Perform the same procedure on the rack boot clamps.



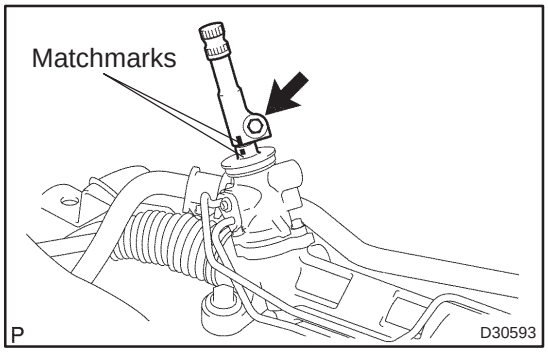
38. INSTALL TIE ROD END SUB–ASSY LH

(a) Screw the lock nut and the tie rod end sub–assy to the rack end until the matchmarks are aligned.
Torque: 74 N·m (750 kgf·cm, 54 ft·lbf)

HINT:
After adjusting toe–in, torque the lock nut
(See page 26–6).

39. INSTALL TIE ROD END SUB–ASSY RH

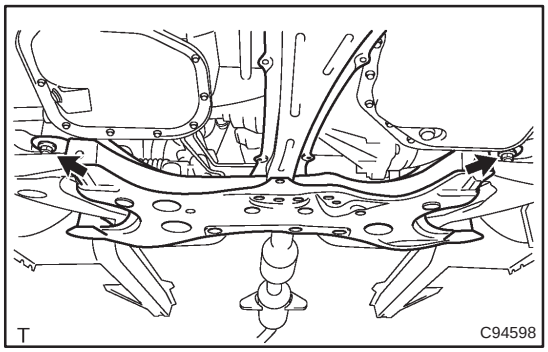
HINT:
Perform the same procedure on the other side.



40. INSTALL RACK & PINION POWER STEERING GEAR ASSY

(a) Install the power steering gear assy with the 4 bolts and the nuts.
Torque: 49 N·m (500 kgf·cm, 36 ft·lbf)

NOTICE:

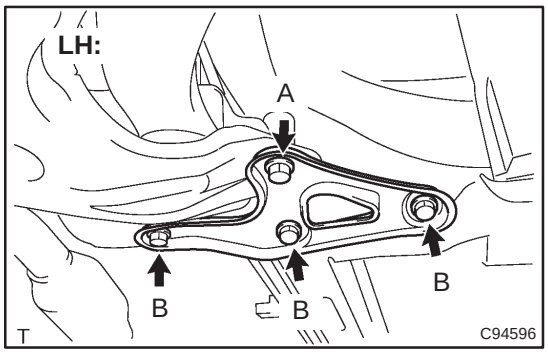


- **The 4 bushings must be securely installed to the power steering gear assy.**
- **When tightening the bolts for power steering gear, the bushings should not be bitten in.**
- **Because the nut has its own stopper, do not turn the nut and torque the bolt with the nut fixed.**

41. INSTALL STEERING INTERMEDIATE SHAFT

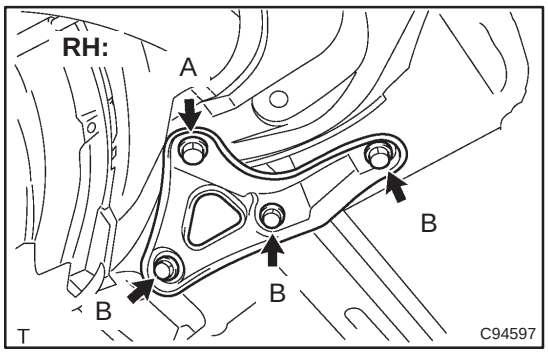
(a) Align the matchmarks on the intermediate shaft with the pinion shaft.
(b) Install the bolt.
Torque: 35 N·m (360 kgf·cm, 26 ft·lbf)

42. INSTALL STEERING COLUMN HOLE COVER SUB–ASSY NO.1



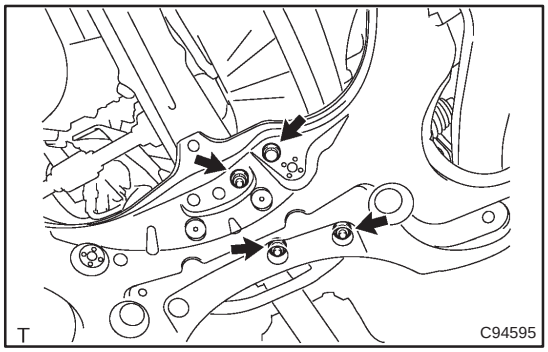
43. INSTALL FRONT SUSPENSION CROSSMEMBER SUB–ASSY

(a) Using a transmission jack, support the crossmember sub–assy w/power steering gear assy.



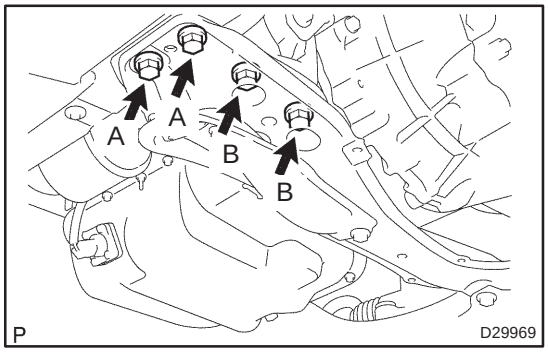
(b) Install the 2 stopper front onto the crossmember sub–assy.

(c) Install the crossmember sub–assy with the 2 nuts.
Torque: 133 N·m (1,356 kgf·cm, 98 ft·lbf)



(d) Install the stopper rear onto the crossmember bracket LH.

(e) Install the crossmember bracket LH with the 4 bolts.
Torque:
Bolt A: 133 N·m (1,356 kgf·cm, 98 ft·lbf)
Bolt B: 80 N·m (816 kgf·cm, 59 ft·lbf)



(f) Install the stopper rear onto the crossmember bracket RH.

(g) Install the crossmember bracket RH with the 4 bolts.
Torque:
Bolt A: 133 N·m (1,356 kgf·cm, 98 ft·lbf)
Bolt B: 80 N·m (816 kgf·cm, 59 ft·lbf)

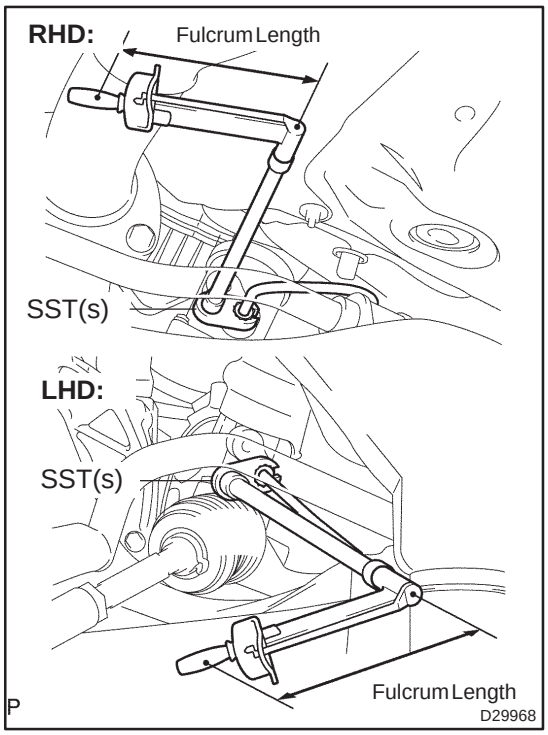
(h) Install the engine mounting insulator RR to the crossmember sub–assy with the bolt and the 3 nuts.
Torque: 52 N·m (530 kgf·cm, 38 ft·lbf)

(i) Install the center member with the 4 bolts.
Torque:
Bolt A: 45 N·m (459 kgf·cm, 33 ft·lbf)
Bolt B: 52 N·m (530 kgf·cm, 38 ft·lbf)

44. INSTALL FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 LH (See page 30–6)

45. INSTALL FRONT SUSPENSION ARM SUB–ASSY LOWER NO.1 RH

HINT:



Perform the same procedure on the other side.

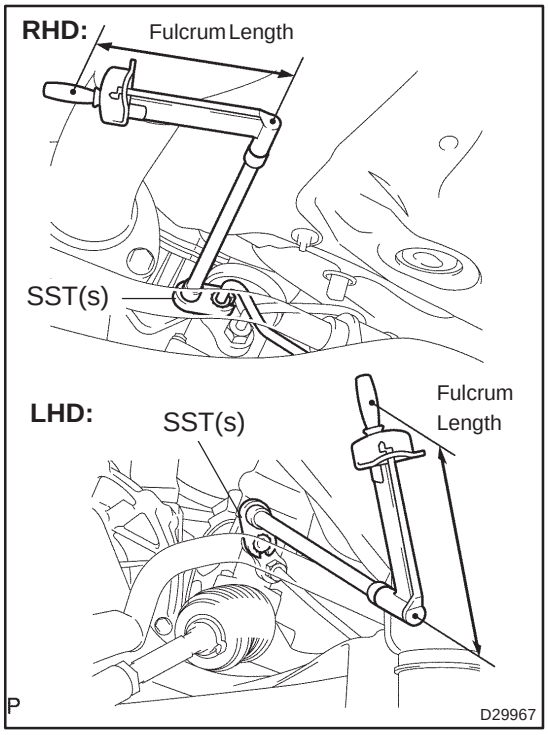
46. INSTALL FRONT STABILIZER LINK ASSY LH (See page 30–6)

47. INSTALL FRONT STABILIZER LINK ASSY RH

HINT:

Perform the same procedure on the other side.

48. CONNECT PRESSURE FEED TUBE ASSY



(a) Using SST(s), connect the pressure feed tube assy.

SST 09023–12700

Torque: 41 N·m (414 kgf·cm, 30 ft·lbf)

HINT:

- Use a torque wrench with a fulcrum length of 345 mm (13.58 in.).
- This torque value is effective when SST(s) is parallel to a torque wrench.

49. CONNECT STEERING GEAR OUTLET RETURN TUBE

(a) Using SST(s), connect the outlet return tube.

SST 09023–12700

Torque: 41 N·m (414 kgf·cm, 30 ft·lbf)

HINT:

- Use a torque wrench with a fulcrum length of 345 mm (13.58 in.).
- This torque value is effective when SST(s) is parallel to a torque wrench.

(b) LHD:

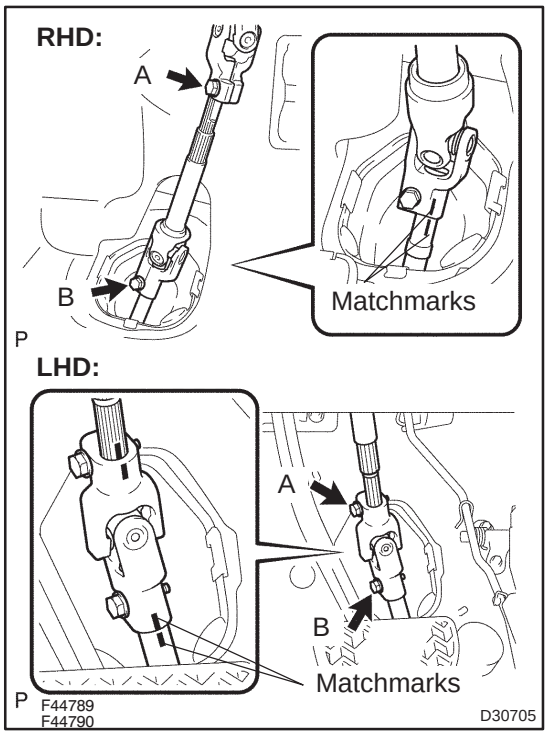
Install the tube clamp with bolt to the power steering gear assy.

Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)

50. INSTALL HEIGHT CONTROL SENSOR SUB–ASSY FR RH (W/ DISCHARGE HEAD LAMP) (See page 65–28)

51. INSTALL TIE ROD END SUB–ASSY LH (See page 30–6)

52. INSTALL TIE ROD END SUB–ASSY RH



HINT:

Perform the same procedure on the other side.

53. INSTALL FRONT WHEELS

Torque: 103 N·m (1,050 kgf·cm, 76 ft·lbf)

54. INSTALL STEERING COLUMN HOLE COVER SUB–ASSY NO.1

55. INSTALL STEERING INTERMEDIATE SHAFT ASSY NO.2

(a) Align the matchmarks on the intermediate shaft assy No.2 and the intermediate shaft.

(b) Install the bolt B and tighten the bolt A.

Torque: 35 N·m (360 kgf·cm, 26 ft·lbf)

56. INSTALL COLUMN HOLE COVER SILENCER SHEET (See page 50–9)

57. INSTALL CYLINDER HEAD COVER SUB–ASSY

58. ADD POWER STEERING FLUID (See page 51–4)

59. BLEED POWER STEERING FLUID (See page 51–4)

60. CHECK POWER STEERING FULUID LEVEL IN RESERVER (See page 51–4)

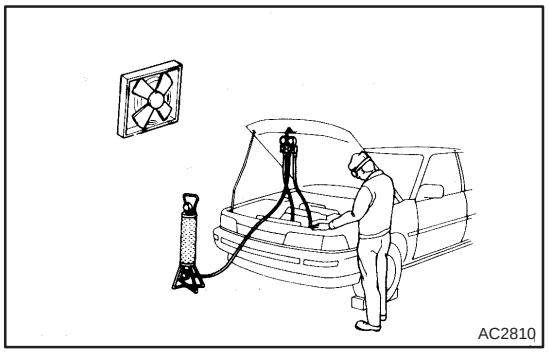
61. INSPECT FLUID LEAK

62. INSPECT HOOD SUB–ASSY (See page 75–2)

63. ADJUST HOOD SUB–ASSY (See page 75–2)

64. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT (See page 26–6)

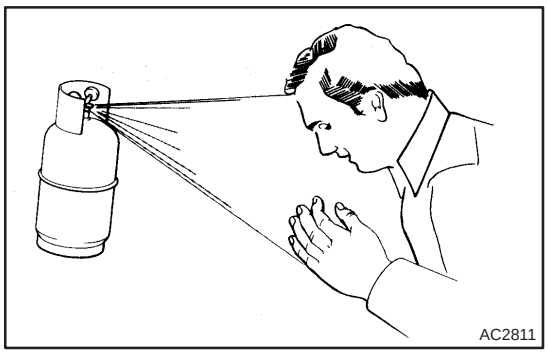
65. INSTALL ENGINE UNDER COVER LH



66. INSTALL ENGINE UNDER COVER RH

67. HEADLIGHT AIM ONLY (W/ DISCHARGE HEAD LAMP) (See page 65–19)

AIR CONDITIONING SYSTEM



PRECAUTION

5507E–03

1. DO NOT HANDLE REFRIGERANT IN AN ENCLOSED AREA OR NEAR AN OPEN FLAME

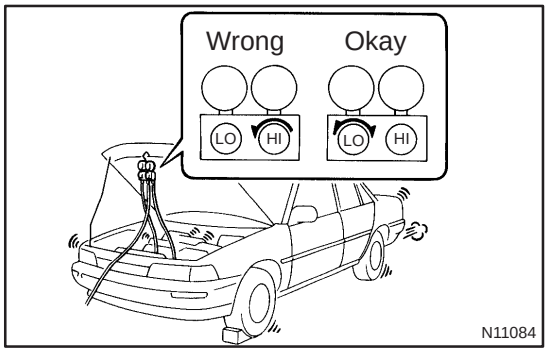
2. ALWAYS WEAR EYE PROTECTION

3. BE CAREFUL NOT TO GET LIQUID REFRIGERANT IN YOUR EYES OR ON YOUR SKIN

If liquid refrigerant gets in your eyes or on your skin.

(a) Wash the area with lots of cold water.

CAUTION:



Do not rub your eyes or skin.

(b) Apply clean petroleum jelly to the skin.

(c) Go immediately to a hospital or see a physician for professional treatment.

4. NEVER HEAT CONTAINER OR EXPOSE IT TO NAKED FLAME

5. BE CAREFUL NOT TO DROP CONTAINER AND NOT TO APPLY PHYSICAL SHOCKS TO IT

6. DO NOT OPERATE COMPRESSOR WITHOUT ENOUGH REFRIGERANT IN REFRIGERANT SYSTEM

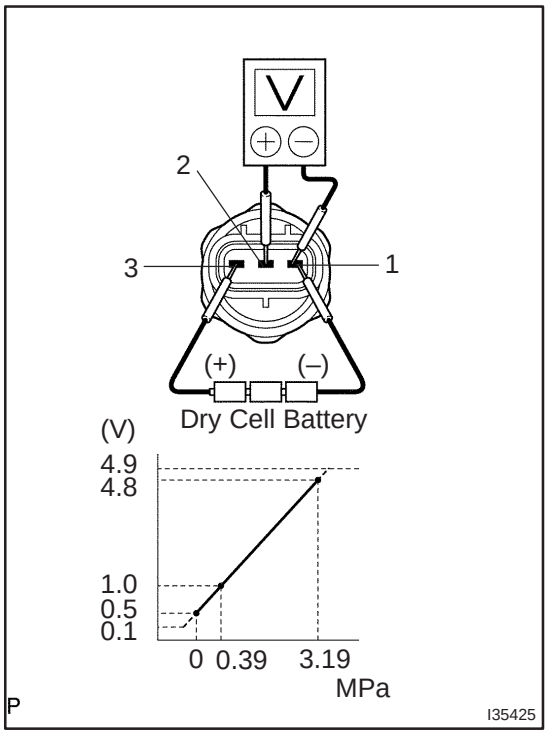
If there is not enough refrigerant in the refrigerant system, oil lubrication will be insufficient and compressor may burnout may occur, so take care to avoid this, necessary care should be taken.

7. DO NOT OPEN HIGH PRESSURE MANIFOLD VALVE WHILE COMPRESSOR IS OPERATING

Open and close the only low pressure valve. If the high pressure valves are opened, refrigerant flows in the reverse direction and cause the charging cylinder to rupture.

8. BE CAREFUL NOT TO OVERCHARGE SYSTEM WITH REFRIGERANT

If refrigerant is overcharged, it causes problems such as insufficient cooling, poor fuel economy, engine overheating, etc.



9. DO NOT OPERATE ENGINE AND COMPRESSOR WITH NO REFRIGERANT IS FILLED

CAUTION:

This may damage the inside of the compressor because the compressor parts always moves regardless of whether the A/C system is turned on or off.

550ZC–01

ON–VEHICLE INSPECTION

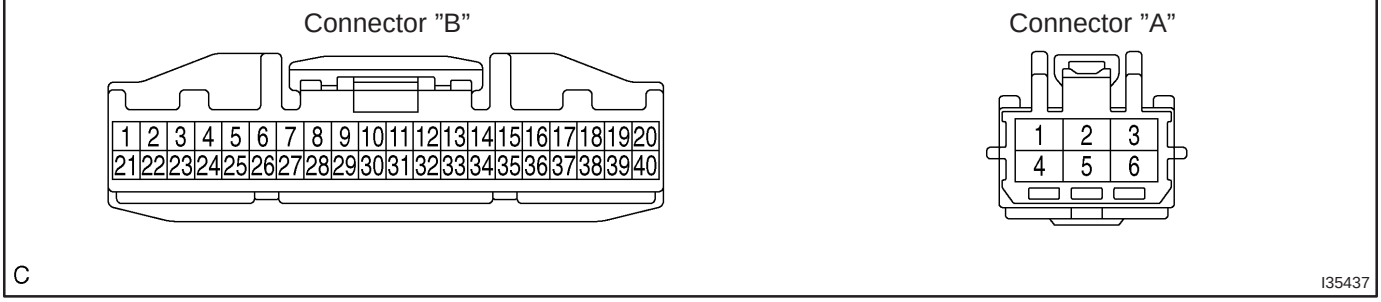
1. INSPECT AIR CONDITIONER PRESSURE SENSOR

(a) Disconnect the pressure SW connector.

(b) Install the manifold gauge set (See page 55–38).

(c) Connect the positive (+) lead from the three 1.5 V dry cell batteries to terminal 3 and negative (–) lead to terminal 1.

(d) Check the voltage between terminals 2 and 1 of pressure sensor.



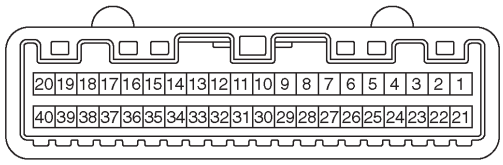
Standard:

The voltage varies with on the refrigerant pressure as shown in the chart.

2. INSPECT AIR CONDITIONING CONTROL ASSY

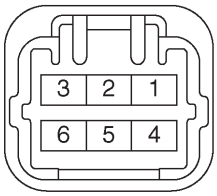
(a) Disconnect the connector from air conditioning control assy and inspect the connector on wire harness side, as shown in the table.

Wire Harness Side:



Symbols (Terminal No.)	Condition	Specified condition
IG (B1) – GND (B40)	Ignition switch: LOCK → ON	0 → 10 to 14 V
+B (B2) – GND (B40)	Always	10 to 14 V
GND (B40) – Body ground	Always	Continuity

If circuit is not as specified, try replacing the air conditioning control assy with a new one. If the circuit is not as specified, inspect the circuits connected to the other parts.



(b) Connect the connector to air conditioning control assy and inspect wire harness side connector from the back side, as shown in the table.

From Back Side:

Connector "B"

Connector "A"

C

I36091

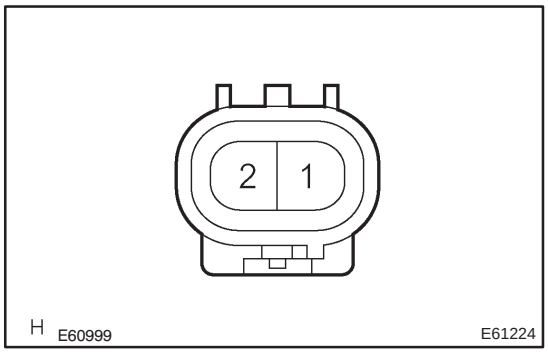
Symbols (Terminal No.)	Condition	Specified condition
HI (A4) – GND (A1)	Ignition switch ON Turn blower dial: OFF → HI	No continuity → Continuity
M2 (A5) – GND (A1)	Ignition switch: ON Turn blower dial: OFF → M2	No continuity → Continuity
M1 (A6) – GND (A1)	Ignition switch: ON Turn blower dial: OFF → M1	No continuity → Continuity
GND (A1) – Body ground	Ignition switch: ON Turn blower dial: OFF → LO	No continuity → Continuity
RDEFIN (B4) – GND (B40) (*1)	Ignition switch : ON Rear DEF switch: ON	10 to 14 V
S5–2 (B5) – GND (B40)	Ignition switch: ON	5.0 V
S5–3 (B6) – GND (B40)	Ignition switch: ON	5.0 V
S5 (B7) – GND (B40)	Ignition switch: ON	5.0 V
MPX+ (B9) – GND (B40)	Communication circuit	–
FRS (B10) – GND (B40)	Ignition switch: ON R/F switch: RECIRCURATION → FRESH	10 to 14 → 0 V
REC (B11) – GND (B40)	Ignition switch: ON R/F switch: FRESH → RECIRCURATION	10 to 14 → 0 V
AOD (B12) – GND (B40)	Ignition switch: ON Mode control dial: DEF	10 to 14 V
AOF (B13) – GND (B40)	Ignition switch: ON Mode control dial: FACE	10 to 14 V
MGV (B14) – GND (B40) (*2)	Start engine Hot gas heater: Operate	10 to 14 → 0 V
AMH (B15) – GND (B40)	Ignition switch: ON Temperature control dial: MAX HOT	10 to 14 V
AMC (B16) – GND (B40)	Ignition switch: ON Temperature control dial: MAX COOL	10 to 14 V
SOL+ (B17) – GND (B40)	Start engine Compressor: Operate	Pulse generation
ILL+ (B21) – GND (B40)	Ignition switch: ON Turn light control switch: OFF → ON	0 → 10 to 14 V
HOTGASIN (B22) – GND (B40) (*2)	Ignition switch: ON Heater switch: ON	10 to 14 V
CFAN (B23) – GND (B40)	Start engine Condenser fan: operate	10 to 14 → 0 V
RPTC1 (B28) – GND (B40)	PTC heater: Operate	Above 7.5 V
MPX– (B29) – GND (B40)	Communication circuit	–
TE (B31) – GND (B40)	Evaporator temperature: 0°C (32°F) → 15°C (59°F)	2.0 to 2.4 → 1.4 to 1.8 V

Symbols (Terminal No.)	Condition	Specified condition
PRE (B32) – GND (B40)	Start engine Refrigerant pressure: 0 Pa (0 kgf/cm^2, 0 psi) → 3,138 MPa (32.0 kgf/cm^2, 455 psi)	0.5 to 4.8 V
TPM (B33) – GND (B40)	Ignition switch: ON Mode control dial: DEF → FACE	1 → 4 V
TP (B34) – GND (B40)	Ignition switch: ON Temperature control dial: MAX HOT → MAX COOL	1 → 4 V
HRIN (B35) – GND (B40)	Ignition switch: ON Front blower: Operate	Below 1.0 V
SG–2 (B36) – Body ground	Always	Continuity
SG–3 (B37) – Body ground	Always	Continuity
SG (B38) – Body ground	Always	Continuity
SG–4 (B39) – Body ground	Always	Continuity
GND (B40) – Body ground	Always	Continuity
PBLT (B24) – GND (B40)	Ignition switch: ON Seat belt signal: OFF → ON	10 to 14 → Below 1.0 V
PBKIG (B25) – GND (B40)	Ignition switch: ON Parking brake switch: OFF → ON	10 to 14 → Below 1.0 V
ALT (B26) – GND (B40)	Start engine	Pulse generation

(*1) Petrol only

(*2) Diesel (standard) only

If circuit is not as specified, try replacing the air conditioning control assy with a new one. If circuit is not as specified, inspect the circuits connected to other parts.

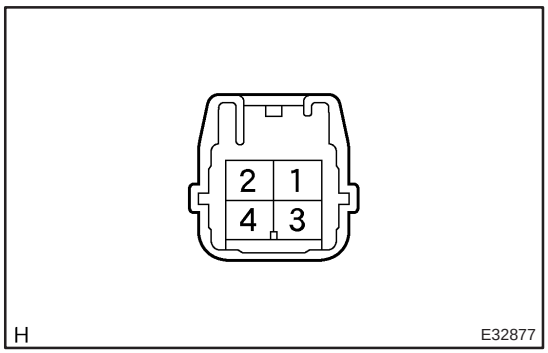


550RQ–02

PROBLEM SYMPTOMS TABLE

Use the table below to help you find the cause of the problem. The numbers indicate the priority of the likely cause of the problem. Check each part in order. If necessary, replace these parts.

Symptom	Suspect Area	See page
Whole functions of the A/C system does not operate.	4. ECU–B fuse 5. A/C amplifier assy 6. Wire harness or connector	– 55–3 –
Air Flow Control : No blower operation	1. Blower resistor 2. Heater relay 3. Blower w/ fan motor sub–assy 4. A/C amplifier assy 5. Wire harness or connector	55–7 55–7 55–7 55–3 –
Air Flow Control : No blower control	1. Blower w/fan motor sub–assy 2. Blower resistor 3. A/C amplifier assy 4. Wire harness or connector	55–7 55–7 55–3 –
Air Flow Control : Insufficient air out	1. Blower w/fan motor sub–assy 2. Blower resistor 3. A/C amplifier assy 4. Wire harness or connector	55–7 55–7 55–3 –
Temperature Control : No cool air comes out	1. Volume of refrigerant 2. Drive belt tension 3. Refrigerant pressure 4. Cooler compressor assy 5. Pressure sensor 6. Condenser fan 7. Air mix damper servo sub–assy 8. A/C amplifier assy 9. Wire harness or connector	55–24 55–46 55–24 55–7 55–3 – 55–7 55–3 –
Temperature Control : No warm air comes out	1. Engine coolant volume 2. Cooler thermistor No.1 3. Air mix damper servo sub–assy 4. A/C amplifier assy 5. Heater radiator unit sub–assy 6. Wire harness or connector	55–7 55–3 55–7 55–3 – –
Temperature Control : Output air is warmer or cooler than the set temperature or response is slow.	1. A/C amplifier assy 2. Air mix damper servo sub–assy 3. Air mix level	55–3 55–7 –
Temperature Control : No temperature control	1. A/C amplifier assy 2. Air mix damper servo sub–assy 3. Air mix level	55–3 55–7 –
No air inlet control	1. Recirculation damper servo sub–assy 2. A/C amplifier assy 3. Wire harness or connector	55–7 55–3 –
No air outlet control	1. A/C amplifier assy 2. Mode damper servo sub–assy 3. Mode lever	55–3 55–7 –
Engine idle up does not occur, or is continuous	1. Idle up switch 2. Cooler compressor assy 3. A/C amplifier assy 4. Wire harness or connector	55–7 55–7 55–3 –
Brightness does not changes when rheostat volume or light control switch it turned.	1. Illumination light system 2. A/C amplifier assy 3. Wire harness or connector	– 55–3 –

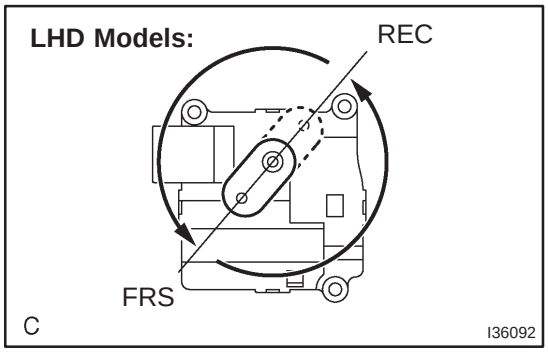


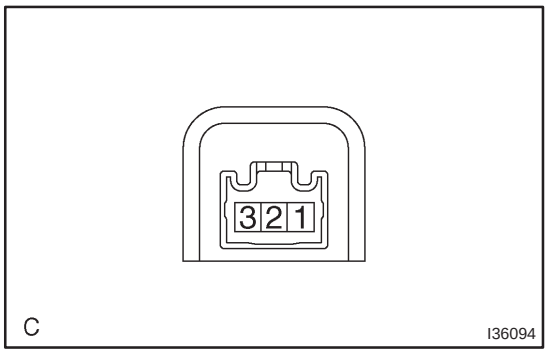
INSPECTION

1. INSPECT COMPRESSOR (MANUAL AIR CONDITIONING)

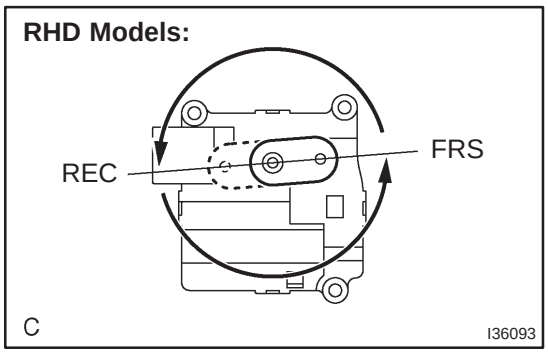
(a) Measure the resistance between terminals 1 and 2.
Resistance: 10 to 11 Ω at 25°C (77°F)

If the resistance is not as specified, replace the compressor assy.

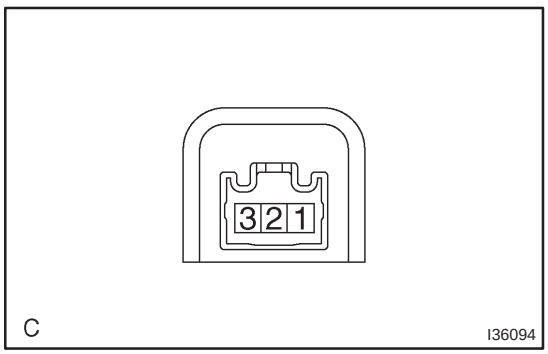




2. INSPECT BLOWER RESISTOR (MANUAL AIR CONDITIONING)

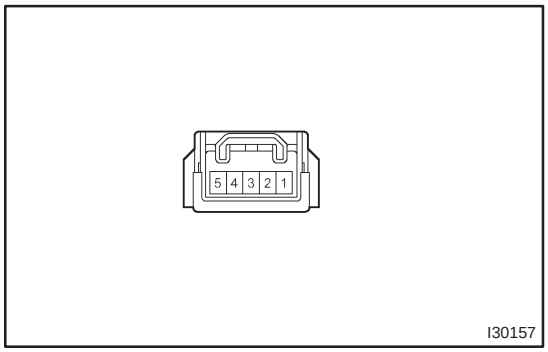


(a) Measure resistance between terminals, as shown in the table.

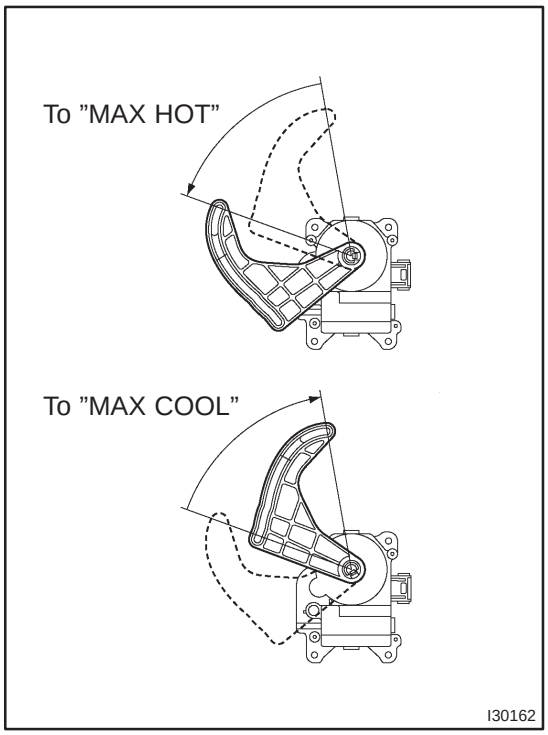


Tester connection	Specified condition
1 – 2	1.404 to 1.716 Ω
1 – 3	0.504 to 0.616 Ω
1 – 4	3.024 to 3.696 Ω

If resistance is not as specified, replace the blower resistor.



3. INSPECT RECIRCULATION DAMPER SERVO SUB–ASSY (MANUAL AIR CONDITIONING)

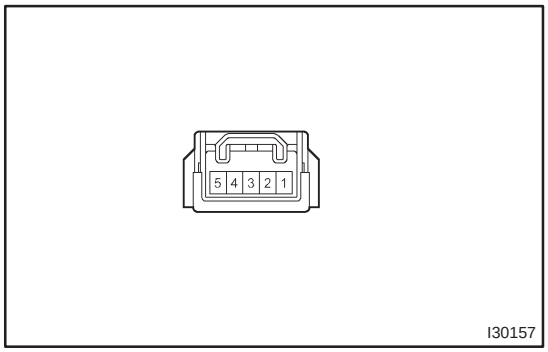


(a) Inspect servomotor operation.

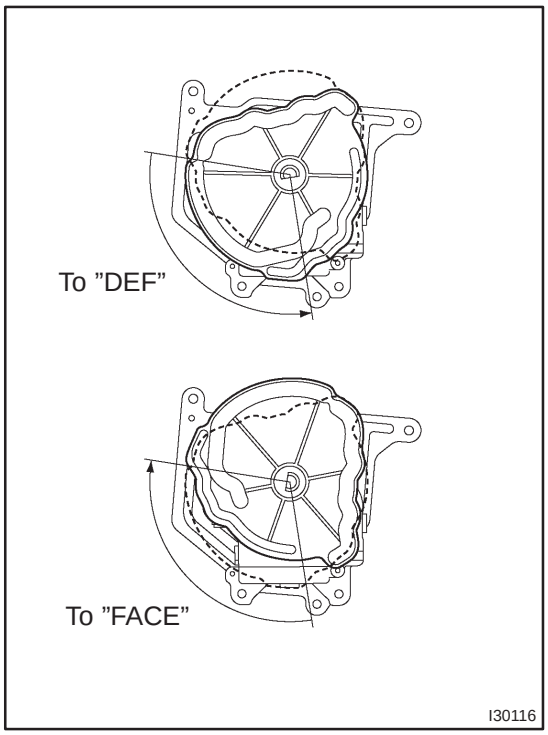
(1) Connect the positive (+) lead from the battery to terminal 3 and negative (–) lead to terminal 2, then check that the arm turns to ”FRS” side smoothly.

(2) Connect the positive (+) lead from the battery to terminal 3 and negative (–) lead to terminal 1, then check that the arm turns to ”REC” side smoothly.

If operations are not as specified, replace the mode damper servomotor.



4. INSPECT AIRMIX DAMPER SERVO SUB–ASSY (MANUAL AIR CONDITIONING)

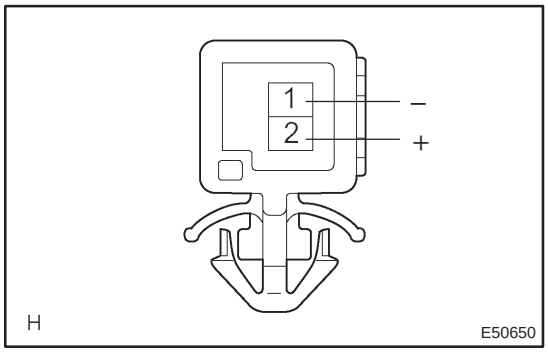


(a) Inspect servomotor operation.

(1) Connect the positive (+) lead from the battery to terminal 4 and negative (–) lead to terminal 5, then check that the arm turns to ”MAX COOL” side smoothly.

(2) Connect the positive (+) lead from the battery to terminal 5 and negative (–) lead to terminal 4, then check that the arm turns to ”MAX HOT” side smoothly.

If operations are not as specified, replace the servomotor.



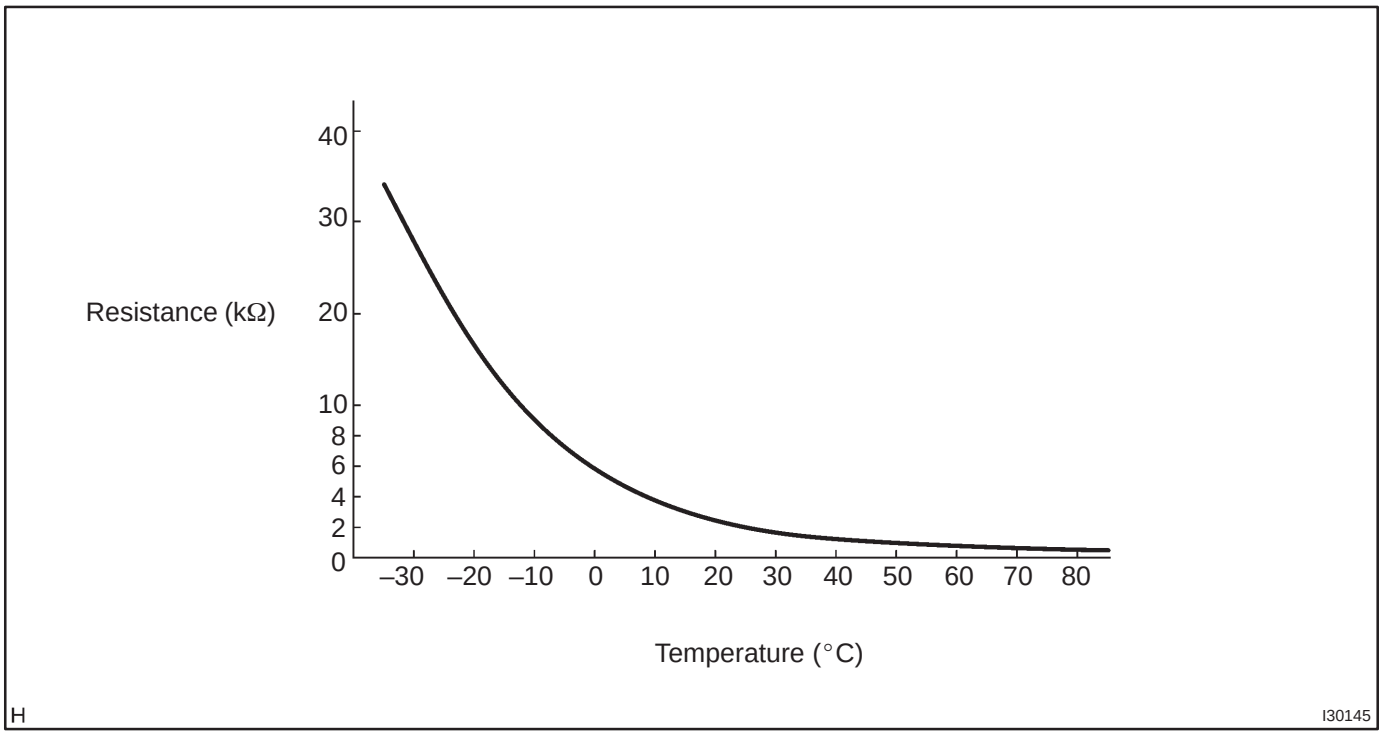
5. INSPECT MODE DAMPER SERVO SUB–ASSY (MANUAL AIR CONDITIONING)

(a) Inspect servomotor operation.

(1) Connect the positive (+) lead from the battery to terminal 4 and negative (–) lead to terminal 5, then check that the arm turns to ”DEF” side smoothly.

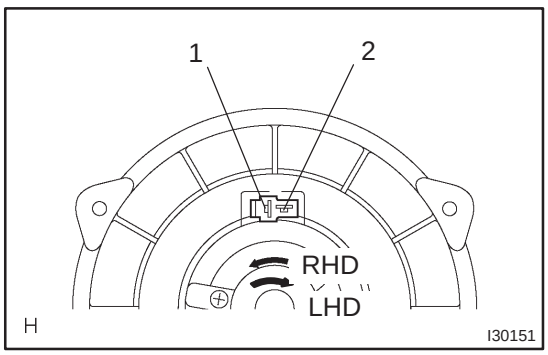
(2) Connect the positive (+) lead from the battery to terminal 5 and negative (–) lead to terminal 4, then check that the arm turns to ”FACE” side smoothly.

If operations are not as specified, replace the servomotor.



6. INSPECT COOLER THERMISTOR NO.1 (MANUAL AIR CONDITIONING)

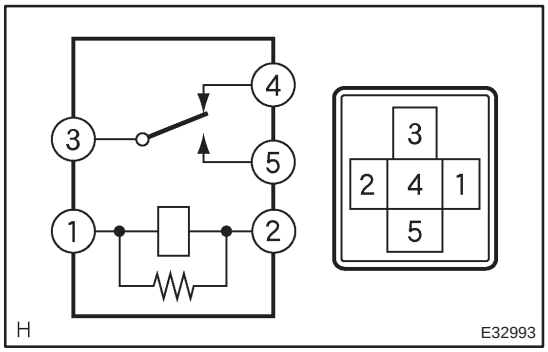
(a) Check the resistance between terminal 1 and 2 of cooler thermistor No. 1 at each temperature, as shown in the graph.



Standard: 1,500 Ω at 25°C (77°F)

HINT:

As the temperature increases, the resistance decreases.



If resistance value is not as specified, replace the sensor.

7. INSPECT BLOWER W/FAN MOTOR SUB–ASSY (MANUAL AIR CONDITIONING)

(a) Connect the positive (+) lead from the battery to terminal 1 and negative (–) to terminal 2, then check that the motor operation smoothly.

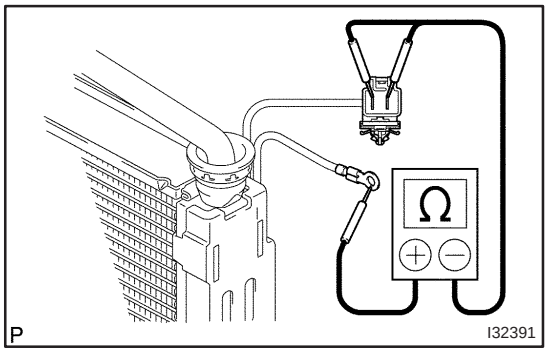
If operation is not as specified, replace the blower motor.

8. INSPECT HEATER RELAY (MANUAL AIR CONDITIONING)

Terminal No.	Specified condition
3–5	No continuity
	Less than 1 Ω (When battery voltage applied to terminals 1 and 2.)
3–4	Less than 1 Ω
	No continuity (When battery voltage applied to terminals 1 and 2.)
1–2	Constant continuity

If continuity is not as specified, replace the rear cooler relay.

ELECTRICAL TYPE POWER HEATER SYSTEM



PROBLEM SYMPTOMS TABLE

550ZE–01

Use the table below to help you find the cause of the problem. The numbers indicate the priority of the likely cause of the problem. Check each part in order. If necessary, replace these parts.

Symptom	Suspect Area	See page
PTC heater does not operate, when perform in these conditions: • Engine coolant temp.: 70°C (158°F) or below • Engine speed: 650 rpm or above • Temperature control selector: MAX. HOT • Ambient temperature: Below 10°C (50°F)	1. HTR1 Fuse 2. HTR2 Fuse 3. HTR1 relay 4. HTR2 relay 5. PTC heater 6. ECM 7. Wire harness	– – – – 55–14 – –

550ZF–01

INSPECTION

1. INSPECT HEATER ASSY

(a) Check continuity.

(1) Using an ohmmeter, check for continuity between each terminal of connector and earth wire.

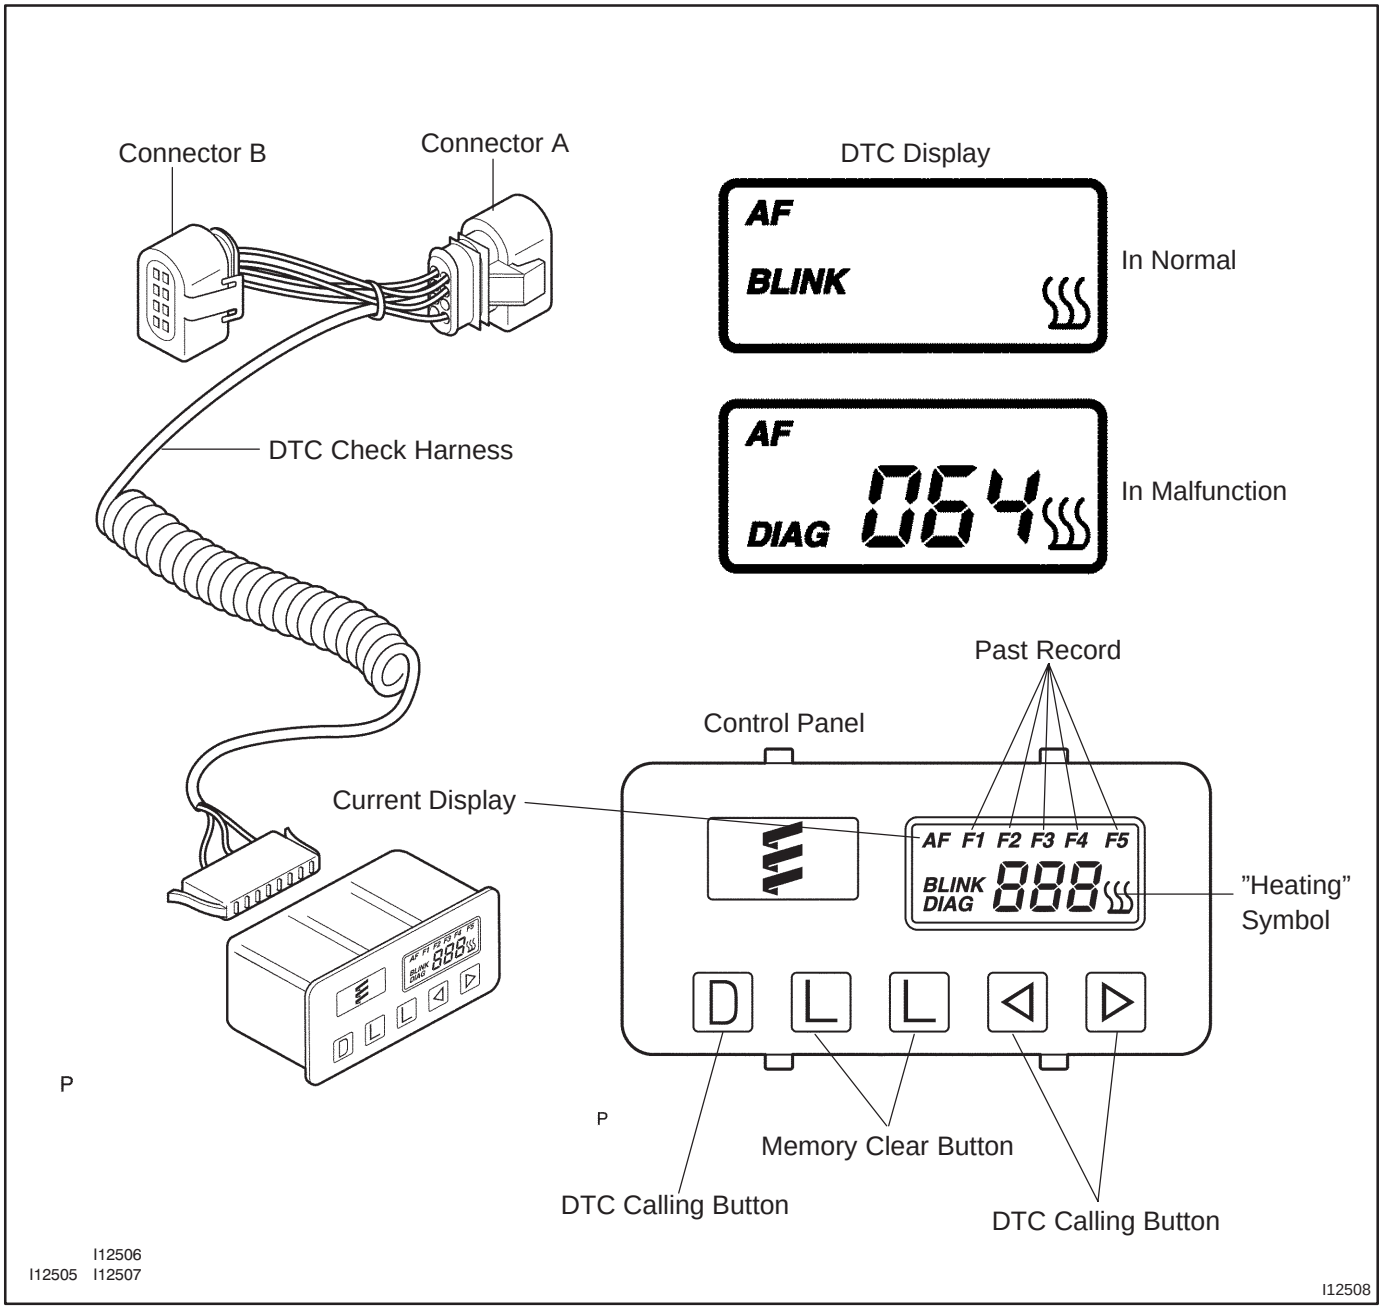
If no continuity, replace the heater radiator.

COMBUSTION TYPE POWER HEATER SYSTEM

550ZG–01

ON–VEHICLE INSPECTION

NOTICE:



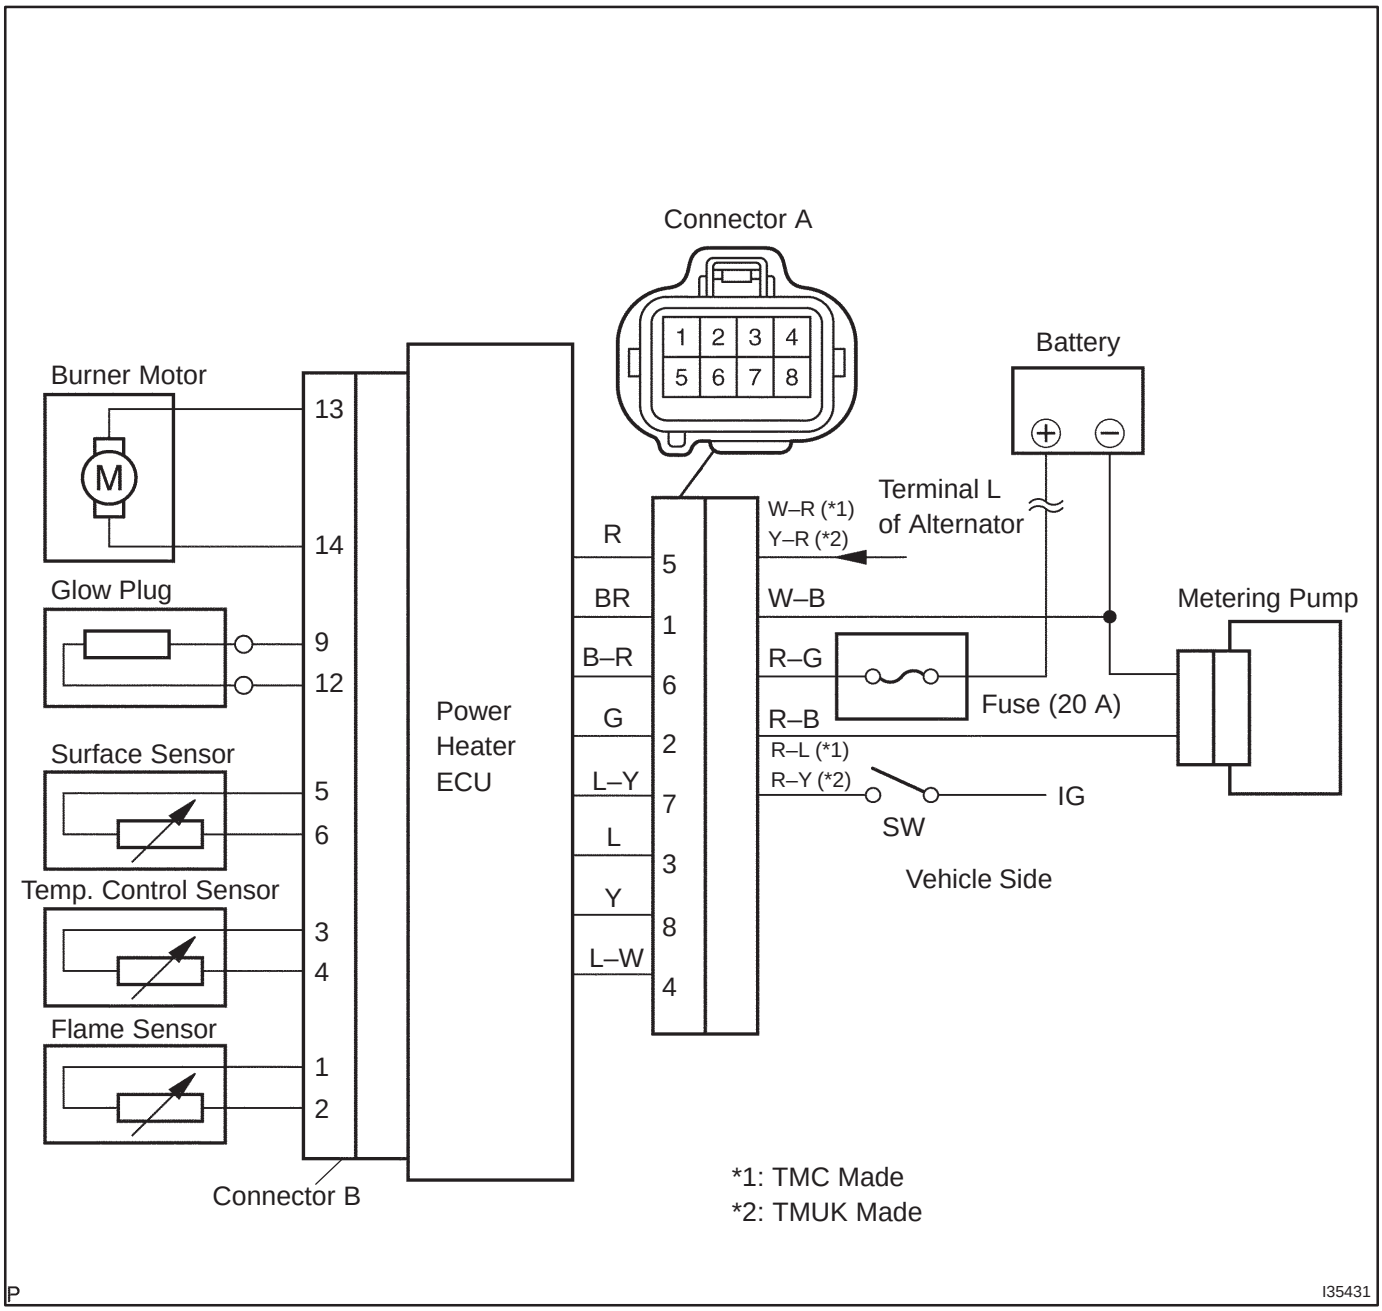
- **If the glow plug breaks, the ECU detects the breakage and stops the automatic operation, so the burner heater does not activate. (For other failures, similarly activated.)**
- **The cause of failures (such as voltage malfunction, overheating malfunction, short–circuit or breakage of functional components, etc.) and repair methods are shown by connecting the DTC tester and reading the DTC.**

1. DIAGNOSTICS FUNCTION

(a) Connect the DTC tester between the connector A (Vehicle harness) of DTC check harness and connector B (Power heater harness).

(b) Start the engine.

(c) Pressing the DTC calling button displays a 3–digit number DTC.



2. DESCRIPTION OF DISPLAY AND BUTTONS

(a) AF: Current Value Malfunction (Blinking at current failure)
Diag: DTC (Example: 064 Flame sensor break)
Memory Clear button: Deletion of faulty memory (Press both buttons together for longer than 2 seconds)
> Button: Scroll up of faulty memory (The past 5 codes can be stored.)
< Button: Scroll down of faulty memory (The past 5 codes can be stored.)

3. FAULTY MEMORY

(a) The ECU is able to store up to 5 pieces of faulty memory. If it is full, the new data is written over F5.

4. WIRING DIAGRAM

5. DIAGNOSTIC TROUBLE CODE CHART

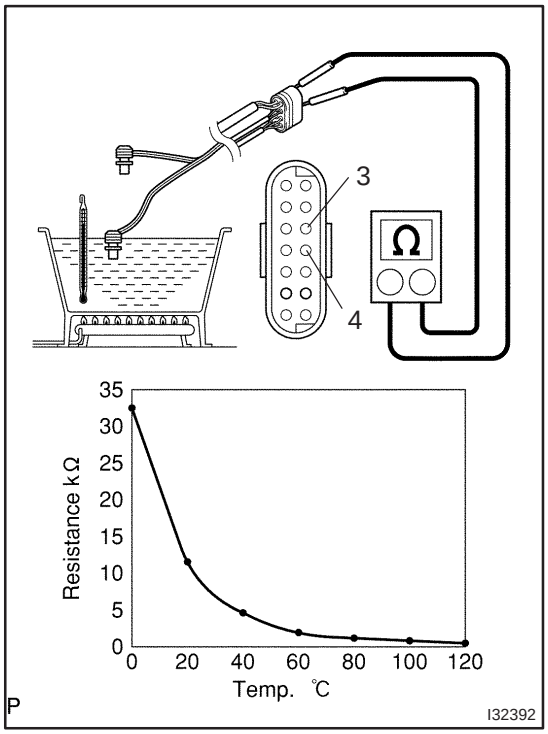
If a malfunction code is displayed during the DTC check, check the circuit listed for the code in the table below and proceed to the appropriate page.

DTC No.	Description of fault	Comment / Remedy
000	No malfunction	–
010 011	Overvoltage shutoff Undervoltage shutoff	Voltage between 1 and 5 at connector A > 16 V Voltage between 1 and 5 at connector A < 10.2 V (Voltage values must be present > 20 seconds) Check battery, regulator and electrical leads.
012	Overheating	Check temperature at temperature or overheating sensor > 125 °C Check water circuit.
014	Possible overheating detected (Hardware threshold value)	Difference of measured values at temperature sensor > 15 °C (min. 70 °C water temperature and metering pump in operation); Check temperature sensor and overheating sensor, replace if necessary.
017	Overheating detected (Hardware threshold value)	Temperature at temperature or overheating sensor > 130 °C, emergency OFF if DTC No. 012 or 014s not applicable; Check water circuit, temperature sensor and overheating sensor, replace if necessary.
020	Glow plug break	Check glow plug, replace if necessary.
021	Glow plug output overload	Check glow plug, replace if necessary.
030	Combustion air blower motor EMF outside perm. range.	Blower impeller or burner motor fammed (frozen solid, dirty, etc.) Remedy jam, replace burner motor if necessary.
031	Combustion air blower motor break	Check the lead to combustion air motor (burner motor) for continuity, replace if necessary.
032	Combustion air blower motor short–circuit	Check combustion air blower motor (burner motor), replace if necessary. Check supply lead (chafed, etc.).
047	Metering pump short–circuit	Check the supply lead to metering pump for short–circuit, check metering pump, replace if necessary.
048	Metering pump break	Check the supply lead to metering pump for continuity, remedy break, replace metering pump if necessary.
051	Cold blow time exceeded	At start, if flame sensor above 70 °C, > 240 sec.; Check exhaust gas combustion air supply, check flame sensor, replace if necessary.
052	Safety time exceeded	When all perm. start attempts used up; Check the fuel delivery and fuel supply. Check exhaust gas and combustion air ducts.
054	Flame cutout, High setting	Check the fuel delivery and fuel supply. Check exhaust gas combustion air ducts. If combustion OK → Check the flame sensor, replace if necessary.
056	Flame cutout, LOW setting	
060	Temperature control sensor break	Check connecting leads. Resistance value between 2 and 10 connector B > 2 MΩ (if break)
061	Temperature control sensor short–circuit	Check connecting leads. Resistance value between 2 and 10 at connector B < 2 MΩ (If short– circuit)
064	Flame sensor break	Check connecting leads. Resistance value between 7 and 14 at connector B > 3,040 Ω (If break)
065	Flame sensor short–circuit	Check connecting leads. Resistance value between 7 and 14 at connector B > 780 Ω (If short–circuit)

DTC No.	Description of fault	Comment / Remedy
071	Surface sensor break	Check connecting leads. Resistance value between 4 and 11 at connector B > 2 MΩ (If break)
072	Surface sensor short–circuit	Check connecting leads. Resistance value between 4 and 11 at connector B > 50 Ω (If short–circuit)
090 092 093	Control unit detective (Internal fault / Reset) Control unit detective (ROM error) Control unit detective (RAM error)	Control unit malfunction due to interference voltage from vehicle electrical system; possible causes low batteries, chargers, other sources of interference; eliminate interference voltages. Internal faults detected in microprocessor / memory detected. Replace control unit.
097	Internal control unit faults	Other faults which cannot lead to DTC No. 90, 92 and 93, replace control unit.

550ZH–01

INSPECTION



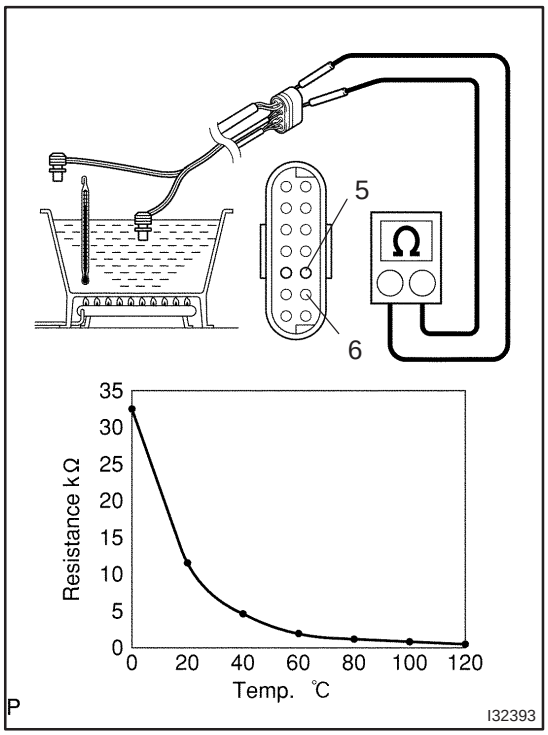
1. INSPECT HEATER ASSY

(a) Inspect the water temperature sensor.

(1) Using an ohmmeter, measure the resistance between the terminals 3 and 4 of heater wire.

Resistance: Refer to the graph

If the resistance is not as specified, replace the heater wire.

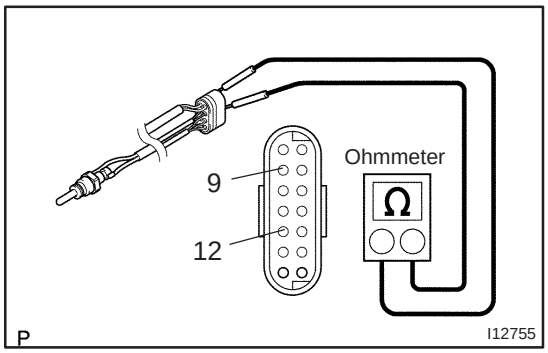


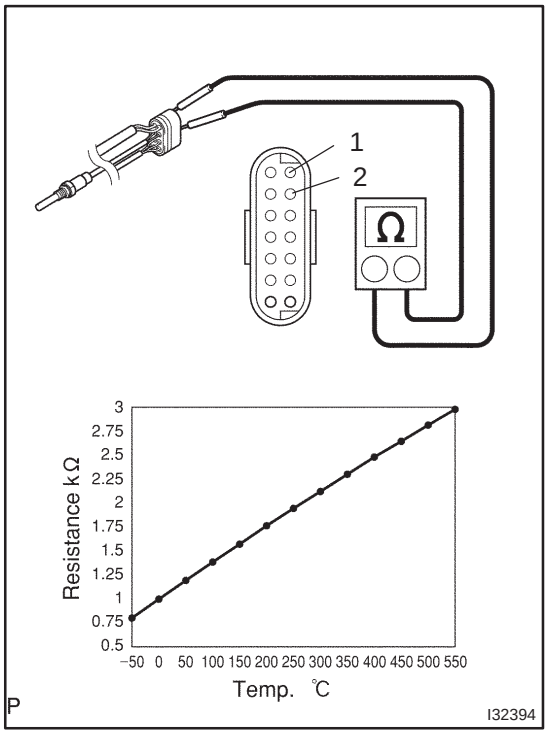
(b) Inspect the overheat sensor.

(1) Using an ohmmeter, measure the resistance between the terminals 5 and 6 of heater wire.

Resistance: Refer to the graph

If the resistance is not as specified, replace the heater wire.



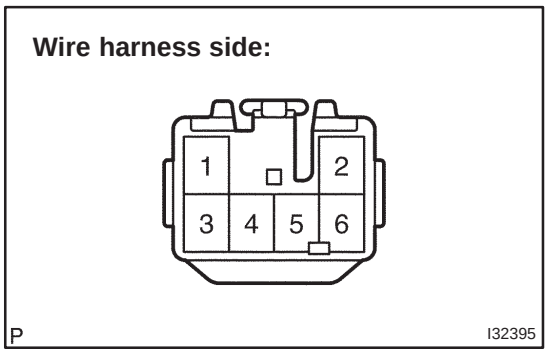


(c) Inspect the glow plug.

(1) Using an ohmmeter, check the continuity by measure the resistance between terminals 9 and 12 of heater wire.

Standard resistance: about 0.5 Ω (20°C, reference value)

If the resistance is over 1 Ω, replace the heater wire.

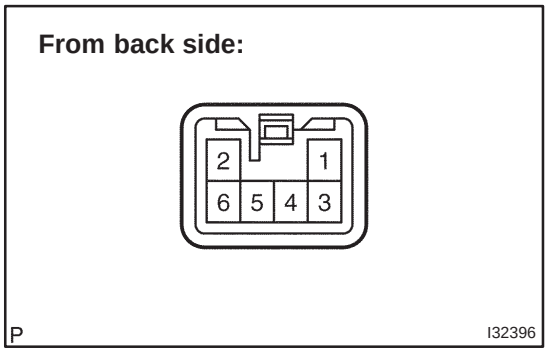


(d) Inspect the flame sensor.

(1) Using an ohmmeter, measure the resistance between terminals 1 and 2 of heater wire.

Resistance: Refer to the graph

If the resistance is not as specified, replace the heater wire.



2. INSPECT HETER SWITCH ASSY

(a) Disconnect the connector from the power heater switch and inspect the connector on the wire harness side, as shown in the chart.

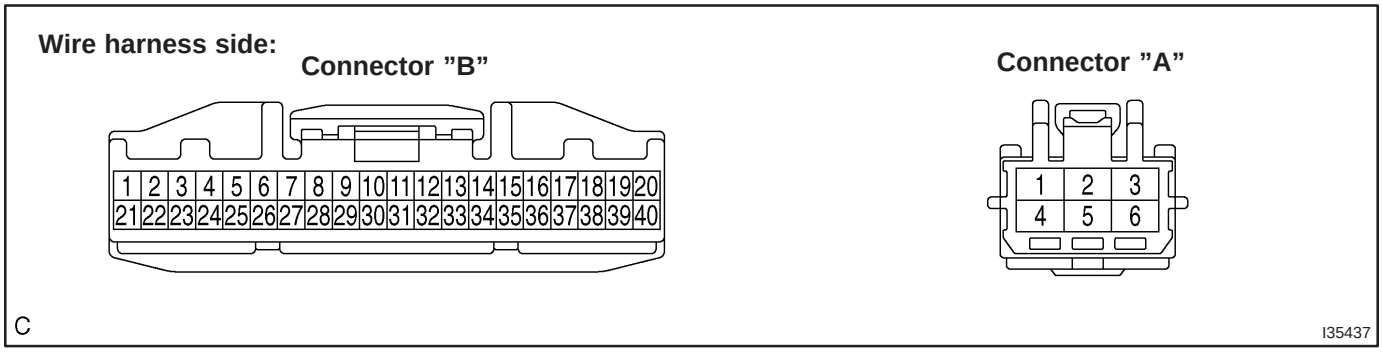
Tester connection	Condition	Specified condition
2 – Ground	Constant	Continuity
4 – Ground	Constant	Continuity
3 – Ground	Turn ignition switch ON	Battery voltage
3 – Ground	Turn ignition switch OFF	No voltage
1 – Ground	Turn light control switch TAIL or HEAD	Battery voltage
1 – Ground	Turn light control switch OFF	No voltage

- If the circuit is as specified, replace the power heater switch.
- If the circuit is not as specified, inspect the circuits connected to other parts.

(b) Connect the connector to the power heater switch and inspect the connector from the back side, as shown in the chart.

Tester connection	Condition	Specified condition
6 – Ground	Turn the ignition switch ON and power heater switch ON	Battery voltage
6 – Ground	Turn the ignition switch ON and power heater switch OFF	No voltage

- If the circuit is not as specified, replace the power heater switch.

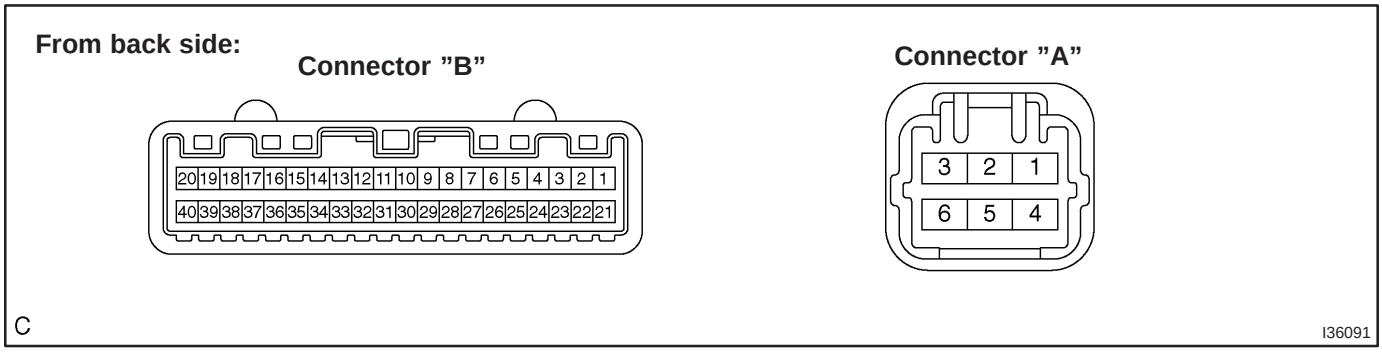


HOT GAS TYPE POWER HEATER SYSTEM

550ZI–01

ON–VEHICLE INSPECTION

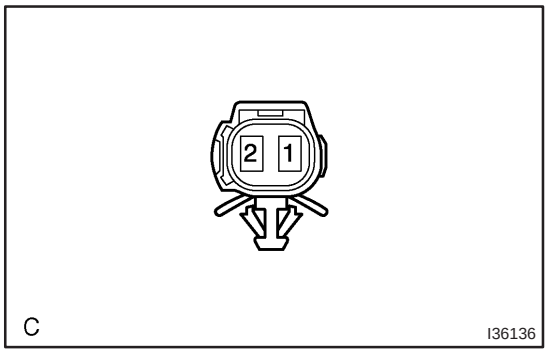
1. INSPECT AIR CONDITIONING CONTROL ASSY



(a) Disconnect the connector from air conditioning control assy and inspect the connector on wire harness side, as shown in the table.

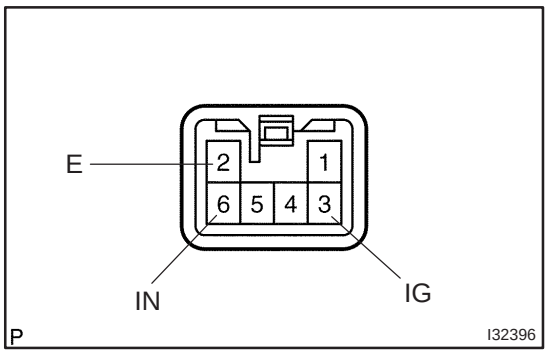
Symbols (Terminal No.)	Wiring Color	Condition	STD Voltage (V)
SOL+ (B17) – GND (B40)	R – W–B	Start engine Compressor: Operate	Pulse generation
MGV (B14) – GND (B40) (*1)	R–Y – W–B	Start engine Compressor: Operate	Pulse generation
HOT GAS IN (B22) – GND (B40) (*1)	R–Y – W–B	IG SW: ON Hot Gas SW: ON	Battery positive voltage

If circuit is not as specified, try replacing the air conditioning control assy with a new one. If the circuit is not as specified, inspect the circuits connected to the other parts.



(b) Connect the connector to air conditioning control assy and inspect wire harness side connector from the back side, as shown in the table.

Symbols (Terminal No.)	Condition	Specified condition
HI (A4) – GND (A1)	Ignition switch ON Turn blower dial: OFF → HI	No continuity →Continuity
M2 (A5) – GND (A1)	Ignition switch ON Turn blower dial: OFF → M2	No continuity →Continuity
M1 (A6) – GND (A1)	Ignition switch ON Turn blower dial: OFF → M1	No continuity →Continuity
GND (A1) – Body ground	Ignition switch ON Turn blower dial: OFF → LO	No continuity →Continuity



550ZJ–01

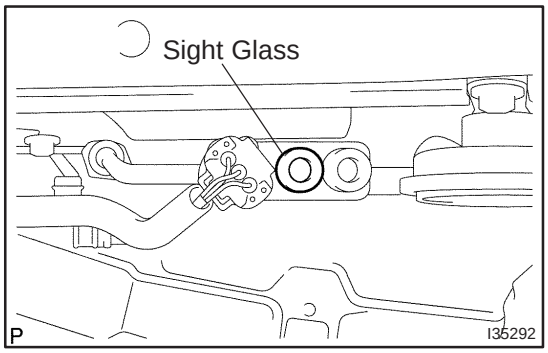
INSPECTION

1. INSPECT W/RECEIVER CONDENSER ASSY

(a) Apply voltage between terminals and check that the refrigerant passages switch.

2. INSPECT HETER SWITCH ASSY

(a) Check that the continuity to the follwing terminals.



Standard:

Heater switch condition	Connecting terminals	Standard value
ON	IG – IN	Continuity
OFF	IG – IN	No continuity
ON	IG – E	Continuity
OFF	IG – E	No continuity

REFRIGERANT

ON–VEHICLE INSPECTION

550Z7–01

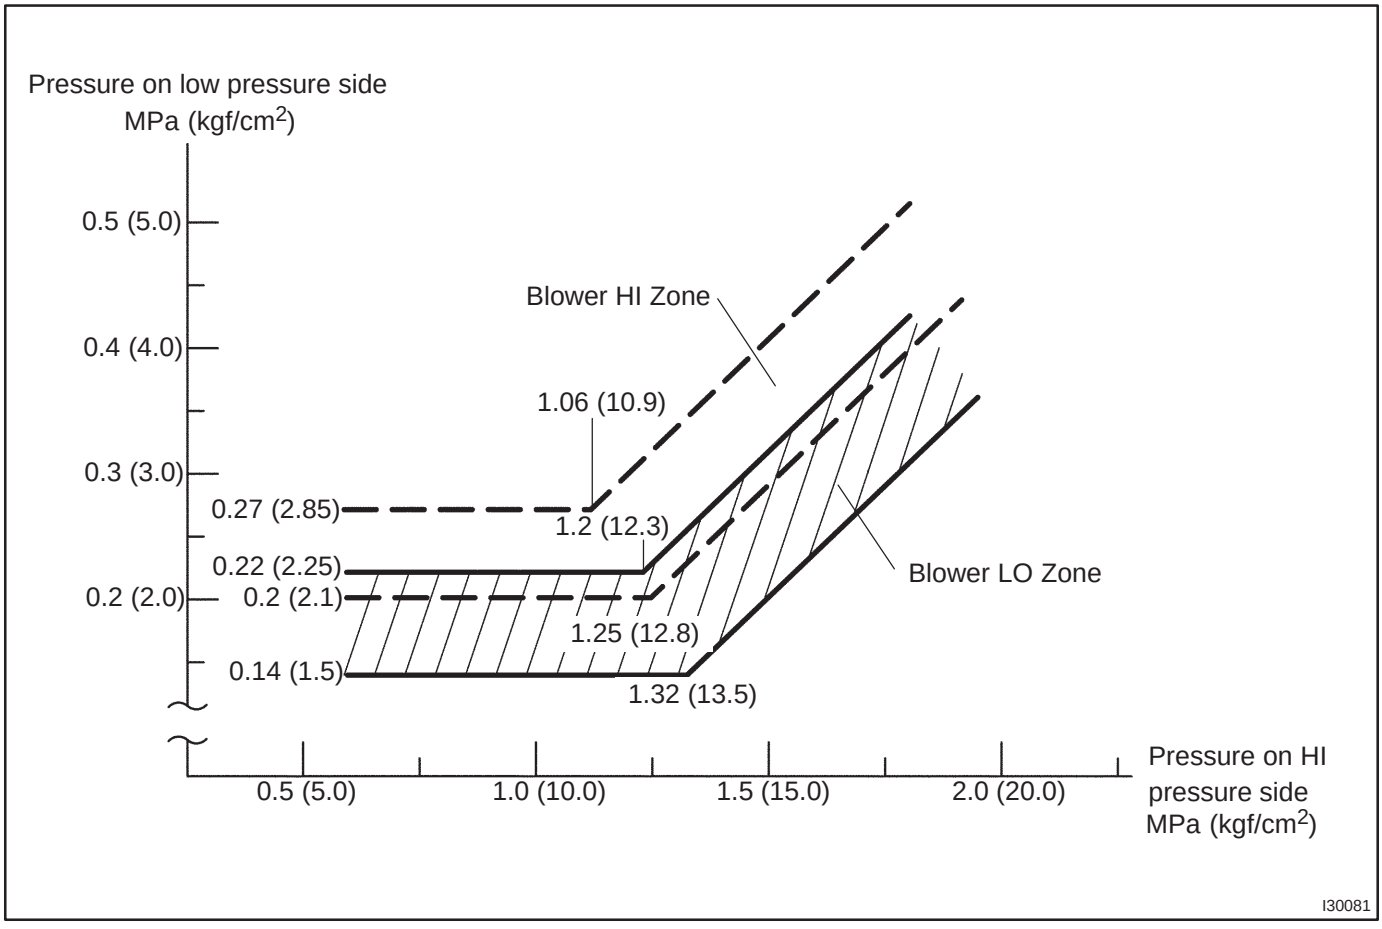
1. RHD AZ Engine series:
INSPECT REFRIGERANT VOLUME

(a) Observe the sight glass on the cooler refrigerant liquid pipe A.

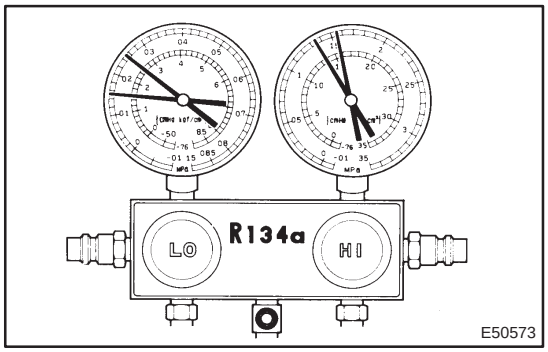
Test conditions:

- All doors are fully open.
- Temperature control dial is at ”MAX. COOL”.
- Engine is running at 1,500 rpm.
- Blower speed control switch is at ”HI”.
- A/C switch is ON.

Item	Symptom	Amount of refrigerant	Corrective Actions
1	Bubbles exist	Insufficient*	(1) Check for gas leakage and repair if necessary (2) Add refrigerant until bubbles disappear
2	No bubbles exist	Empty, insufficient or excessive	Refer to 3 and 4
3	No temperature difference between compressor inlet and outlet	Empty or nearly empty	(1) Check for gas leakage and repair if necessary (2) Add refrigerant until bubbles disappear
4	Considerable temperature difference between compressor inlet and outlet	Proper or excessive	Refer to 5 and 6
5	Immediately after air conditioning is turned off, refrigerant remains clear	Excessive	(1) Discharge refrigerant (2) Vacuum and supply proper amount of new refrigerant
6	Immediately after air conditioning is turned off, refrigerant foams and then becomes clear	Proper	–



*: Bubbles in the sight glass with ambient temperatures higher than usual can be considered normal if cooling is sufficient.

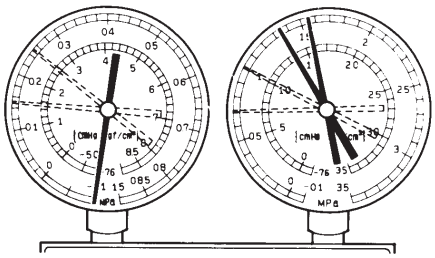


2. w/o Hot gas heater:
INSPECT REFRIGERANT PRESSURE WITH MANIFOLD GAUGE SET

(a) This is a method to specify the trouble area by using a manifold gauge set. Read the manifold gauge pressure when the following conditions are fullfilled.
Test conditions:

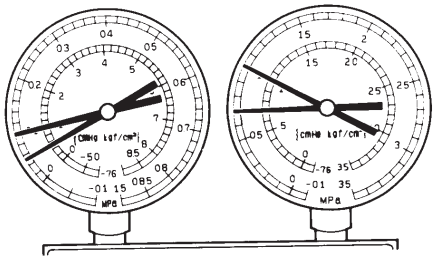
- Engine has been warmed up.
- All doors are fully open.
- A/C switch is ON.
- Engine is running at 1,500 rpm.
- Air inlet mode selector switch is at RECIRE.
- Temperature control dial is at ”MAX. COOL”.
- Blower speed control switch is at ”HI”.
- Temperature at the air inlet is 30 – 35 ˚C (86 – 95 ˚F).

Gauge readings (Reference)



(1) When the refrigerant volume is proper:
Gauge reading:
Low pressure side:
0.15 – 0.25 MPa (1.5 – 2.5 kgf/cm^2)
High pressure side:
1.37 – 1.57 MPa (14 – 16 kgf/cm^2)

(2) When there is moisture in the refrigeration system:

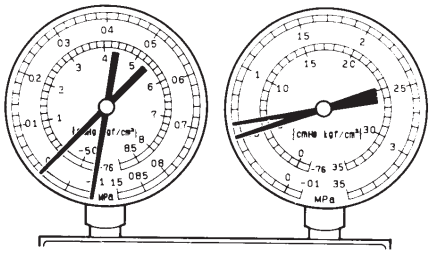


Condition : Air conditioning system periodically repeats proper and improper function.

Symptom	Probable cause	Diagnosis	Remedy
During operation, pressure on low pressure side cycles between normal and vacuum	Moisture in refrigeration system freezes at expansion valve orifice, causing a temporary stop of cycle. However, when it melts, normal state is restored	• Drier is overly saturated • Moisture in refrigeration system freezes at expansion valve orifice and blocks circulation of refrigerant	(1) Replace cooler drier (2) Remove moisture in cycle by repeatedly vacuuming (3) Supply proper amount of new refrigerant

(3) When cooling is insufficient:

Condition: Air conditioning system does not function effectively.

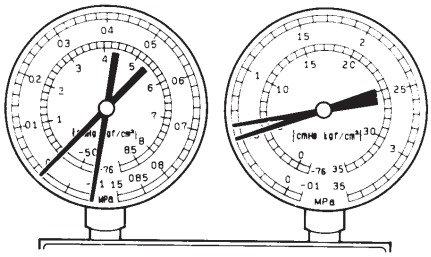


I22118

Symptom	Probable cause	Diagnosis	Corrective Actions
• Pressure is low on both low and high pressure sides • RHD AZ engine series: Bubbles are seen through sight glass continuously • Cooling performance is insufficient	Gas leakage in refrigeration system	• Insufficient refrigerant • Refrigerant leakage	(1) Check for gas leakage and repair if necessary (2) Supply proper amount of new refrigerant (3) If indicated pressure value is close to 0 when connected to the gauge, vacuum after inspecting and repairing the location of leakage.

(4) When the circulation of the refrigerant is poor:

Condition: Air conditioning system does not function effectively.

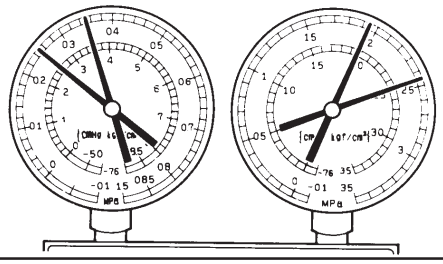


I22119

Symptom	Probable cause	Diagnosis	Corrective Action
• Pressure is low on both low and high pressure sides • Frost exists on piping from condenser to A/C unit	Refrigerant flow is obstructed by dirt in condenser	Condenser is clogged	Replace condenser

(5) When the refrigerant does not circulate:

Condition: Air conditioning system does not function. (Sometimes it may function)

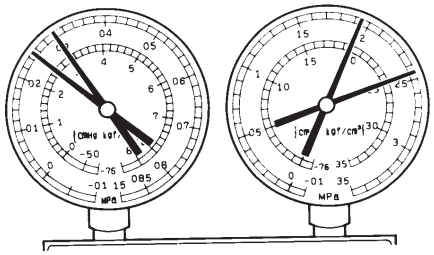


I22120

Symptom	Probable cause	Diagnosis	Corrective Actions
• Vacuum is indicated on low pressure side, and extreamly low pressure is indicated on high pressure side • Frost or dew is seen on piping on both sides of condenser or expansion valve	• Refrigerant flow is obstructed by moisture or dirt in refrigeration system • Refrigerant flow is obstructed by gas leak from expansion valve	Refrigerant does not circulate	(1) Check the expansion valve (2) Clean out dirt on expansion valve by blowing air (3) Replace condenser (4) Vacuum and supply proper amount of new refrigerant (5) For gas leakage from expansion valve, replace expansion valve

(6) When the refrigerant is overcharged or cooling of condenser is insufficient:

Condition : Air conditioning system does not function effectively.

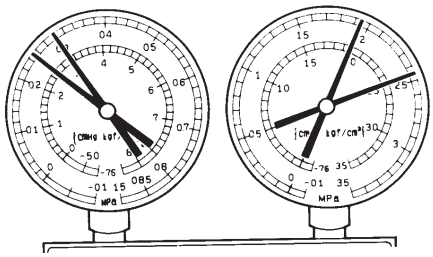


I22121

Symptom	Probable cause	Diagnosis	Remedy
• Pressure is extreamly high on both low and high pressure sides • RHD AZ engine series: No air bubbles are seen through sight glass even when engine rpm lowers	• Excessive refrigerant • Cooling performance of condenser is insufficient	• Excessive refrigerant • Cooling performance of condenser is insufficient	(1) Clean condenser (2) Check condenser fan motor operation (3) If (1) and (2) are in normal state, check the amount of refrigerant and supply proper amount of refrigerant

(7) When there is air in the refrigeration system:

Condition: Air conditioning system does not function.



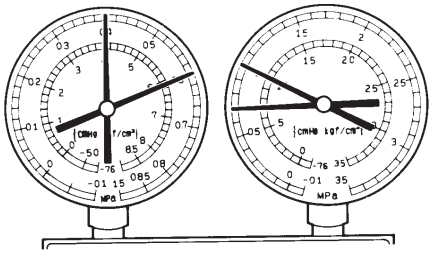
NOTE : These gauge indications occur when the refrigeration system opens and the refrigerant is charged without vacuuming.

I22122

Symptom	Probable cause	Diagnosis	Corrective Actions
• Pressure is extreamly high on both low and the high pressure sides • The low pressure piping is too hot to touch • RHD AZ engine series: Bubbles can be seen through sight glass	Air in refrigeration system	• There is air in refrigeration system • Vacuuming is insufficient	(1) Check it compressor oil is dirty or insufficient (2) Vacuum and supply new refrigerant

(8) When the expansion valve malfunctions:

Condition : Air conditioning system does not function effectively.



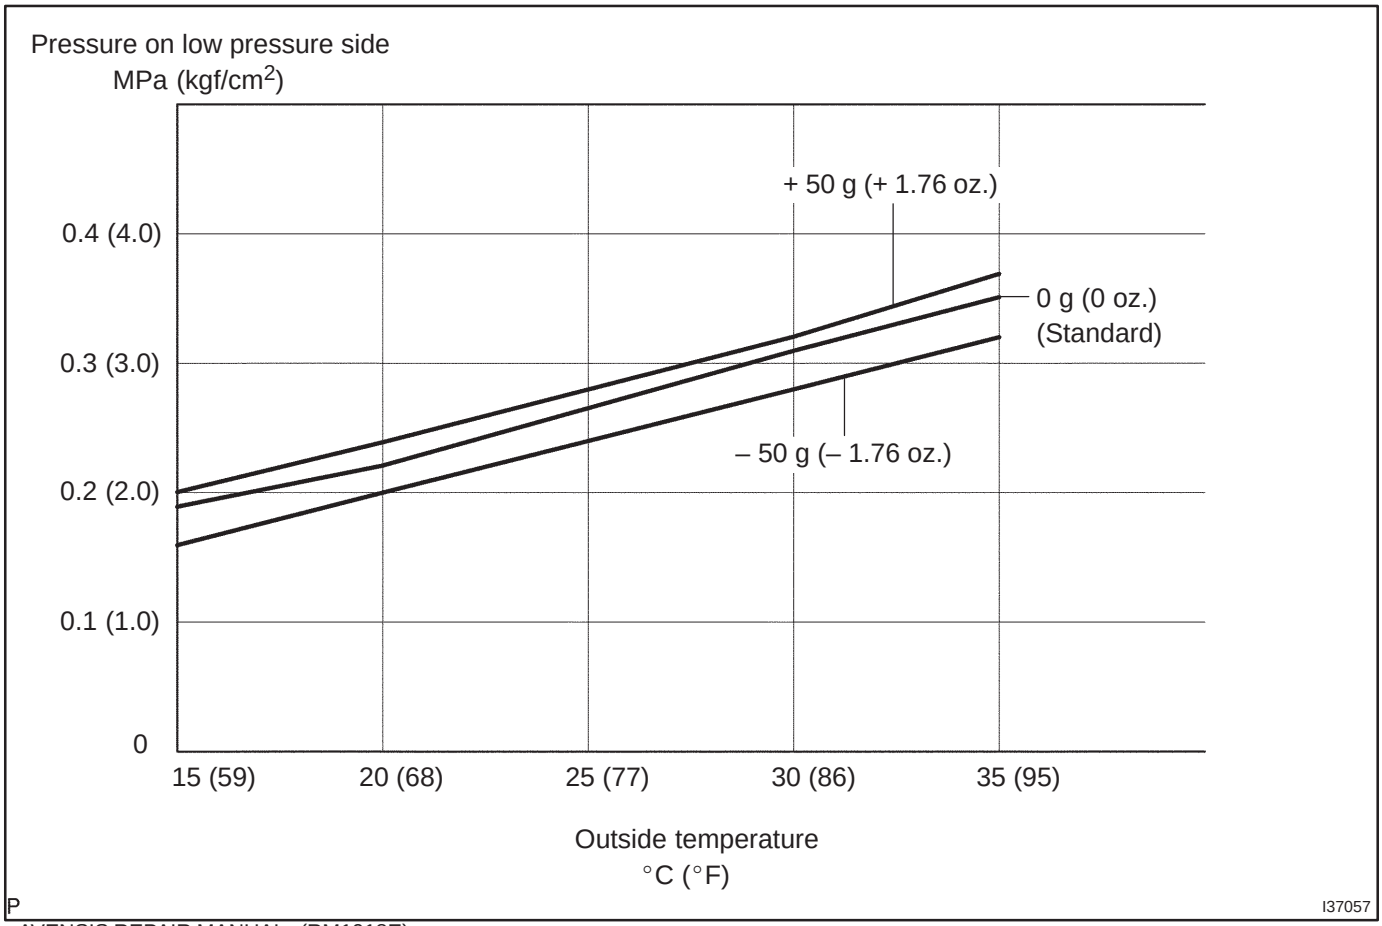
I22123

Symptom	Probable cause	Diagnosis	Corrective Actions
• Pressure is extreamly high on both low and high pressure sides • Frost or dew is on piping on low pressure side	Trouble with expansion valve	• Excessive refrigerant in low pressure piping • Expansion valve opened too wide	Replace expansion valve

(9) When the compressor is defective:

Condition : Air conditioning system does not function.

I22124



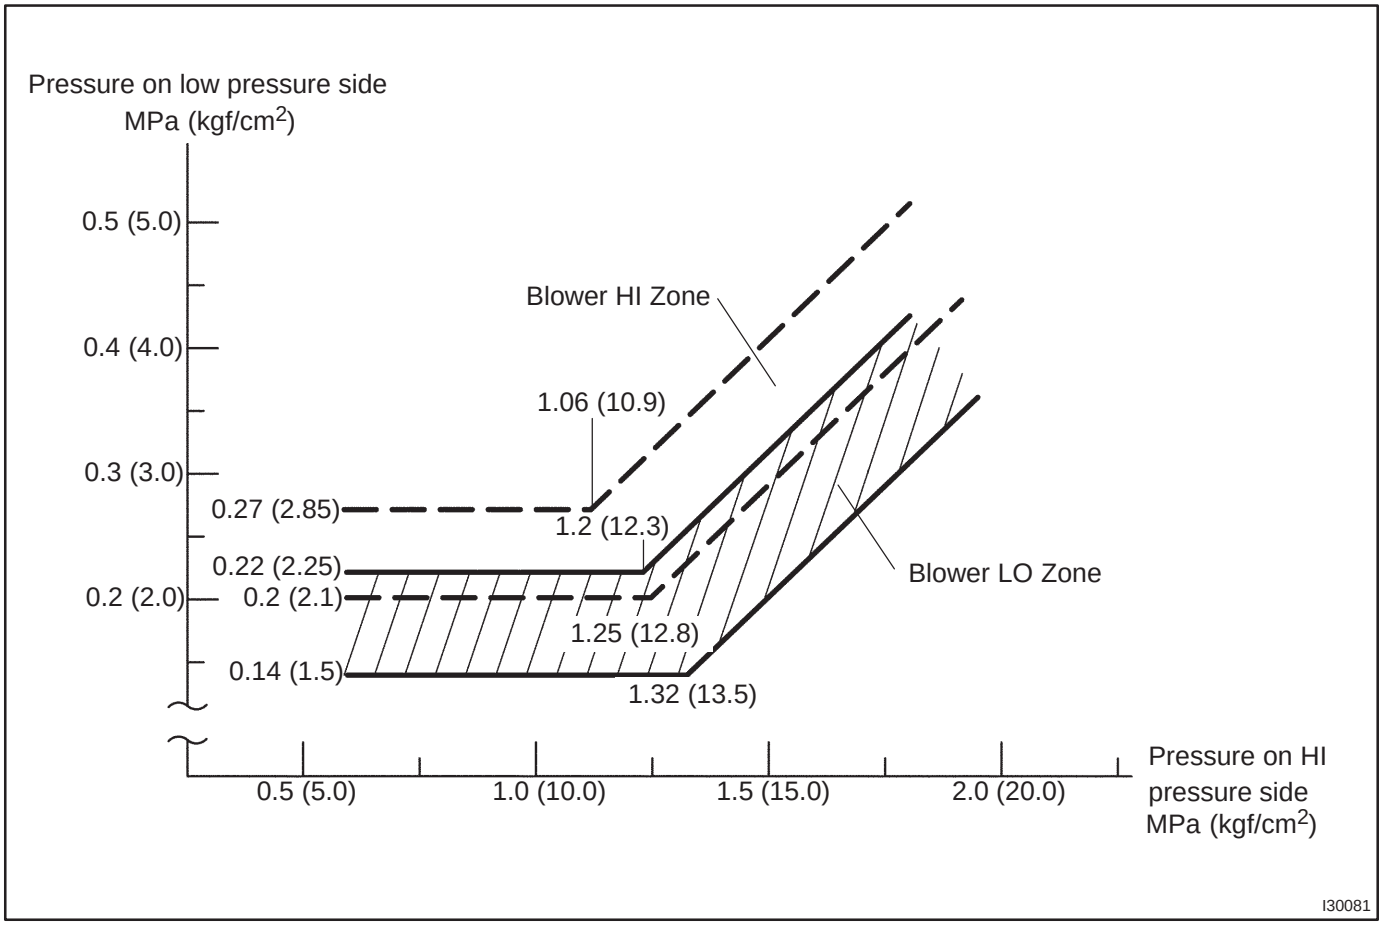
Symptom	Probable cause	Diagnosis	Corrective Actions
• Pressure is extreamly high on both low and high pressure sides • Pressure is extreamly low on high pressure side	Internal leak from compressor	• Compression failure • Leakage from damaged valve or broken sliding parts	Repair or replace compressor

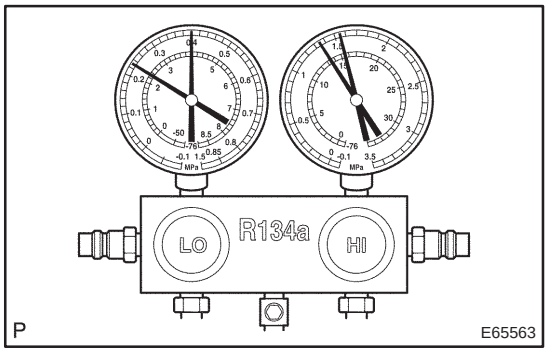
3. w/ Hot gas heater:
INSPECT REFRIGERANT VOLUME

(a) This is a method to specify the trouble area by using a manifold gauge set. Read the the manifold gauge pressure when these conditions are established.
Test conditions:
- Engine is at idle.
- Blower speed control switch is at ”HI”.
- Temperature control dial is at ”MAX. COOL”.
- Engine has been warmed up.
- All doors are fully open.
- Hood is fully open.
- Air inlet mode selector damper is at RECIRE.
- Air outlet damper is at FACE.
- Outside temperature is 15 – 35 ˚C (59– 95 ˚F).

(b) Check refrigerant volume according to the graph below.

Range	Amount of refrigerant	Corrective actions
Except range below	Insufficient or excessive	Supply refrigerant until low pressure become within the standard ±50 g (±1.76 oz.), or remove refrigerant and then supply proper amount of refrigerant
Standard ±50 g (±1.76 oz.)	Proper	–



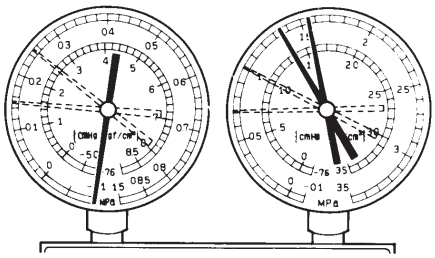


4. w/ Hot gas heater:
INSPECT REFRIGERANT PRESSURE WITH MANIFOLD GAUGE SET

(a) This is a method to specify the trouble area by using a manifold gauge set. Read the manifold gauge pressure when the following conditions are fullfilled.
Test conditions:

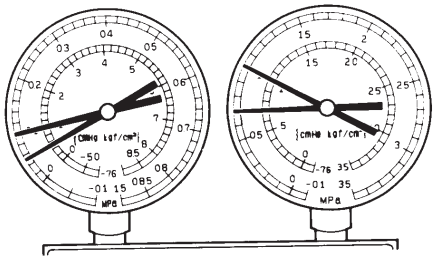
- Engine has been warmed up.
- All doors are fully open.
- A/C switch is ON.
- Engine is at idle.
- Air inlet mode selector damper is at RECIRE.
- Temperature control dial is at ”MAX. COOL”.
- Blower speed control switch is at ”HI”.
- Air outlet damper is at FACE.
- Temperature at the air inlet is 30 – 35 ˚C (86 – 95 ˚F).
- Sunshine is shut off.

Gauge readings (Reference)



(1) When the refrigerant volume is proper:
Gauge reading:
Low pressure side:
0.28 – 0.4 MPa (2.8 – 4.0 kgf/cm^2)
High pressure side:
1.3 – 1.6 MPa (13 – 16 kgf/cm$^{2)}$

(2) When there is moisture in the refrigeration system:

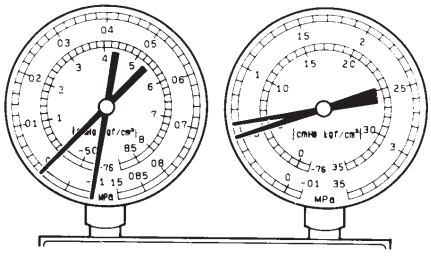


Condition : Air conditioning system periodically repeats proper and improper function.

Symptom	Probable cause	Diagnosis	Remedy
During operation, pressure on low pressure side cycles between normal and vacuum	Moisture in refrigeration system freezes at refrigerant filter orifice, causing a temporary stop of cycle. However, when it melts, normal state is restored	• Drier is overly saturated • Moisture in refrigeration system freezes at refrigerant filter orifice and blocks circulation of refrigerant	(1) Replace cooler drier (2) Remove moisture in cycle by repeatedly vacuuming (3) Supply proper amount of new refrigerant

(3) When cooling is insufficient:

Condition : Air conditioning system does not function effectively.

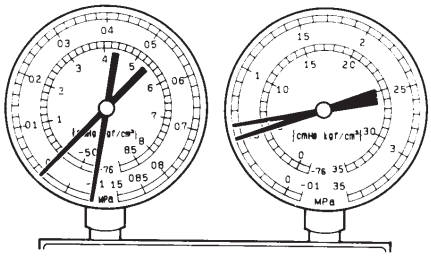


I22118

Symptom	Probable cause	Diagnosis	Corrective Actions
• Pressure is low on both low and high pressure sides • Cooling performance is insufficient	Gas leakage in refrigeration system	• Insufficient refrigerant • Refrigerant leakage	(1) Check for gas leakage and repair if necessary (2) Supply proper amount of new refrigerant (3) If indicated pressure value is close to 0 when connected to the gauge, vacuum after inspecting and repairing the location of leakage.

(4) When the circulation of the refrigerant is poor:

Condition : Air conditioning system does not function effectively.

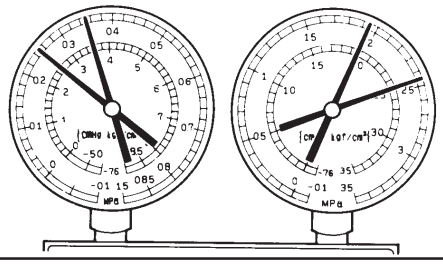


I22119

Symptom	Probable cause	Diagnosis	Corrective Action
• Pressure is low on both low and high pressure sides • Frost exists on piping from condenser to unit	Refrigerant flow is obstructed by dirt in condenser	Condenser is clogged	Replace condenser

(5) When the refrigerant does not circulate:

Condition : Air conditioning system does not function. (Sometimes it may function)

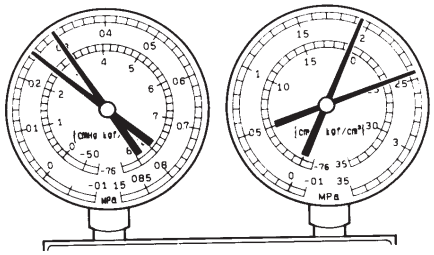


I22120

Symptom	Probable cause	Diagnosis	Corrective Actions
• Vacuum is indicated on low pressure side, and extreamly low pressure is indicated on high pressure side • Frost or dew is seen on piping on both sides of condenser or refrigerant filter	• Refrigerant flow is obstructed by moisture or dirt in refrigeration system • Refrigerant filter is clogged	Refrigerant does not circulate	(1) Check the refrigerant filter (2) Clean out dirt on refrigerant filter by blowing air (3) Replace condenser (4) Vacuum air and supply proper amount of new refrigerant (5) If refrigerant filter is damaged, replace it

(6) When the refrigerant is overcharged or cooling of condenser is insufficient:

Condition : Air conditioning system does not function effectively.

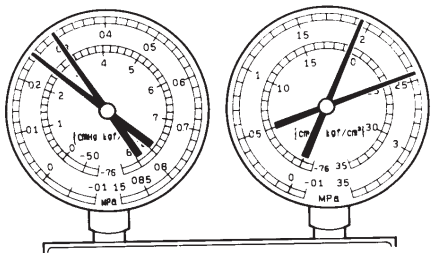


I22121

Symptom	Probable cause	Diagnosis	Remedy
• Pressure is extreamly high on both low and high pressure sides	• Excessive refrigerant • Cooling performance of condenser is insufficient	• Excessive refrigerant • Cooling performance of condenser is insufficient • Magnet valve assy is defective	(1) Clean condenser fins (2) Check condenser fan motor operation (3) If (1) and (2) are in normal state, vacuum and supply proper amount of refrigerant (4) If pressure is still high even after supplying refrigerant, replace the magnet valve assy

(7) When there is air in the refrigeration system:

Condition : Air conditioning system does not function.



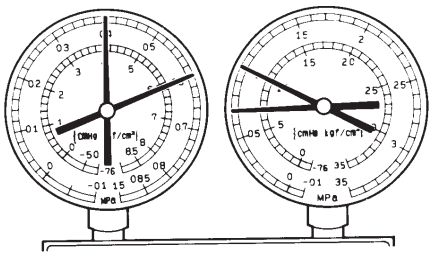
NOTE : These gauge indications occur when the refrigeration system opens and the refrigerant is charged without vacuuming.

I22122

Symptom	Probable cause	Diagnosis	Corrective Actions
Pressure is extreamly high on both low and the high pressure sides	Air in refrigeration system	• There is air in refrigeration system • Vacuuming is insufficient	(1) Check if compressor oil is dirty or insufficient (2) Vacuum air and supply new refrigerant

(8) When the refrigerant filter is defective:

Condition : Air conditioning system does not function effectively.

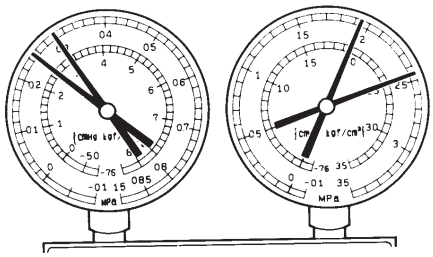


I22123

Symptom	Probable cause	Diagnosis	Corrective Actions
• Pressure is extreamly high on low pressure side • Pressure is extreamly high on high pressure side	Trouble with refrigerant filter	Excessive refrigerant	Replace refrigerant filter

(9) When the compressor is defective:

Condition : Air conditioning system does not function.



I22124

Symptom	Probable cause	Diagnosis	Corrective Actions
• Pressure is extreamly high on low pressure side • Pressure is extreamly low on high pressure side	Internal leak from compressor	• Compression failure • Leakage from damaged valve or broken sliding parts	Replace or replace compressor

(10) When the magnet valve assy is defective:

Condition : Air conditioning system does not function effectively.

I22123

Symptom	Probable cause	Diagnosis	Corrective Actions
• Pressure is extreamly high on low pressure side	Internal leak from magnet valve assy	Magnet valve assy failure	Replace magnet valve assy

550Z8–01

REPLACEMENT

1. DISCHARGE REFRIGERANT FROM REFRIGERATION SYSTEM

(a) Turn the A/C switch ON.

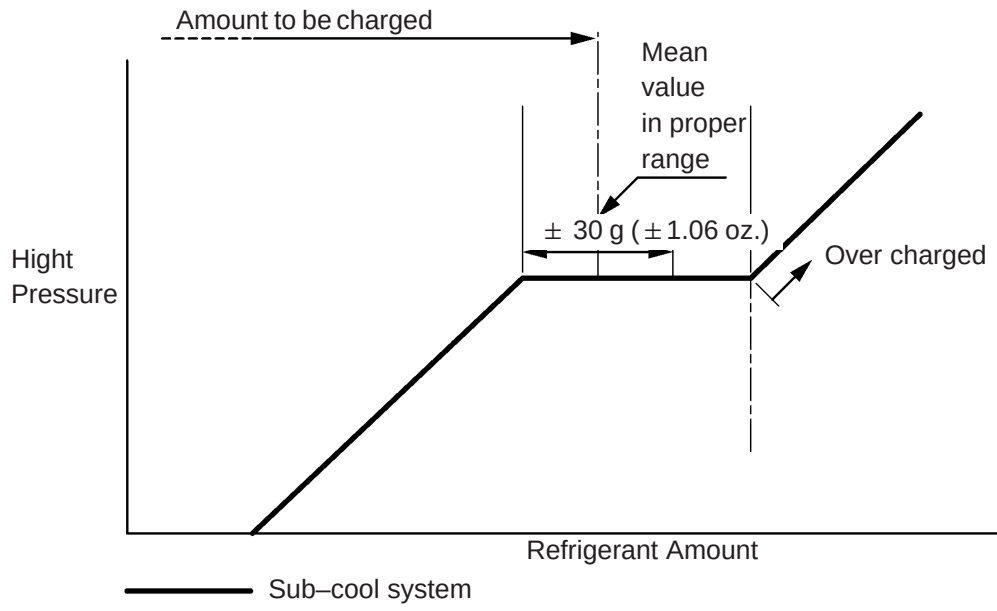
(b) Operate the cooler compressor at the engine rpm of approx. 1,000 for 5 to 6 minuites to circulate the refrigerant and collect the compressor oil remaining in each component into the cooler compressor as much as possible.

(c) Shut off the engine.

(d) Let the refrigerant gas out.

SST 07110–58060 (07117–58080, 07117–58090, 07117–78050, 07117–88060, 07117–88070, 07117–88080)

2. CHARGE REFRIGERANT



(a) Using a vacuum pump, perform vacuuming.

(b) Charge refrigerant, HFC–134a (R134a).

Standard: 440 ± 30 g (15.51 ± 1.06 oz.)

SST 07110–58060 (07117–58060, 07117–58070, 07117–58080, 07117–58090, 07117–78050, 07117–88060, 07117–88070, 07117–88080)

RHD AZ Engine series:

P I30082 I37091

3. WARM UP ENGINE

4. INSPECT LEAKAGE OF REFRIGERANT

(a) Using a gas leak detector, check for leakage of the refrigerant.

NOTICE:

1CD–FTV Hot gas heater:

Since the system uses a refrigerant filter (fixed valve), sound of the refrigerant circulation (hissing sound) can be heard for approx. 30 seconds after turning the A/C off. This is merely a sound of balancing the low pressure with the high pressure, not a sound of abnormality.

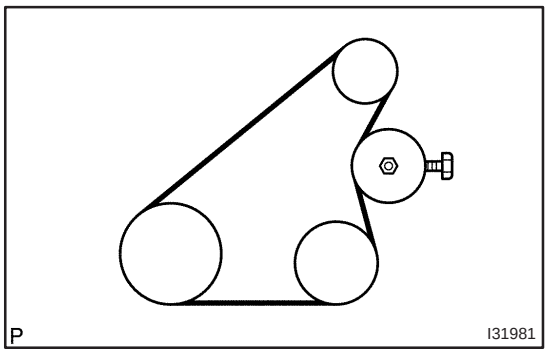
V (COOLER COMPRESSOR TO CRANKSHAFT PULLEY) BELT NO.1

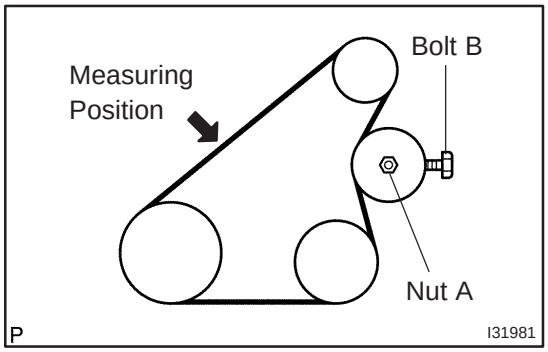
550YP–01

REPLACEMENT



1. **REMOVE RADIATOR SUPPORT OPENING COVER**
2. **REMOVE ENGINE ROOM COVER SIDE**
3. **REMOVE ENGINE UNDER COVER RH**

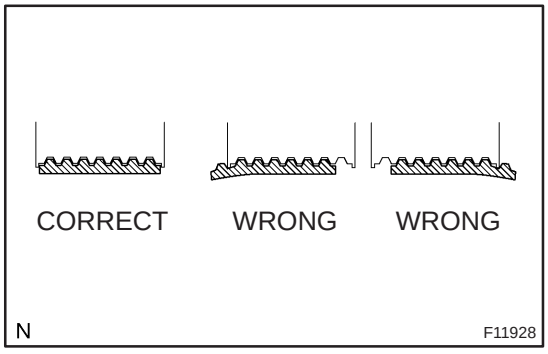
4. REMOVE V (COOLER COMPRESSOR TO CRANKSHAFT PULLEY) BELT NO.1



(a) Loosen the nut A.

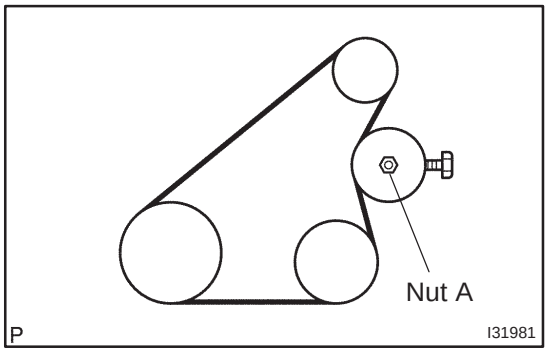
(b) Loosen the bolt B and remove the V (cooler compressor to crankshaft pulley) belt No. 1.

5. INSTALL V (COOLER COMPRESSOR TO CRANKSHAFT PULLEY) BELT NO.1



(a) Temporarily install a new V (cooler compressor to crankshaft pulley) belt No. 1 as shown in the illustration.

6. ADJUST V (COOLER COMPRESSOR TO CRANKSHAFT PULLEY) BELT NO.1



(a) Tighten the nut A.
Torque: 2.5 N·m (25 kgf·cm, 22 ft·lbf)

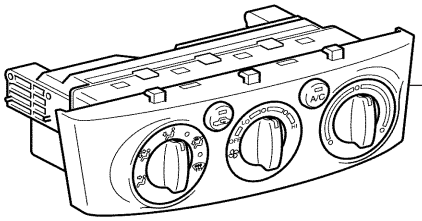
(b) Apply drive belt tension by turning bolt B.
Belt deflection:
New belt: 11 – 13 mm (0.43 – 0.51 in.)
Used belt: 13.5 – 16.5 mm (0.53 – 0.64 in.)

HINT:

- The new belt refers to a belt which is used for less than 5 minutes on the running engine.
- The used belt refers to a belt which is used for 5 minutes, or more on the running engine.
- After installing the drive belt, check that the belt fits properly in the ribbed grooves.
- Check that the drive belt does not slip off the groove at the end of the pulley by hand.

7. FULLY TIGHTEN V (COOLER COMPRESSOR TO CRANKSHAFT PULLEY) BELT NO.1

(a) Tighten the nut A.



Torque: 39 N·m (390 kgf·cm, 29 ft·lbf)

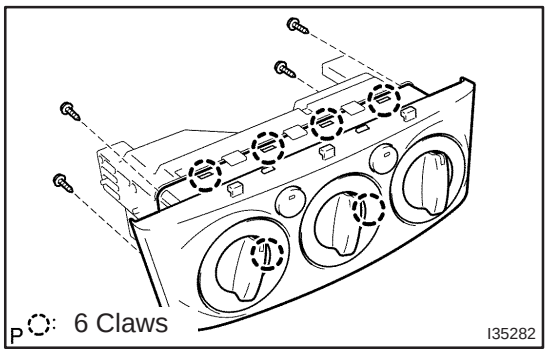
HINT:

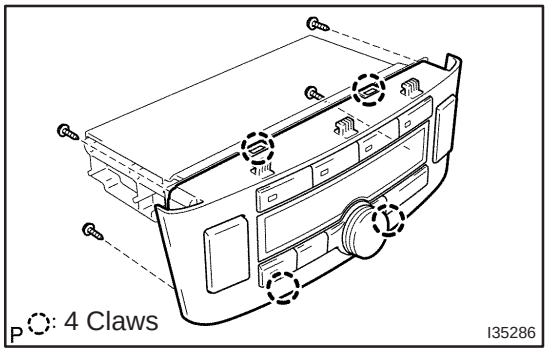


COMPONENTS: See page 55–48

1. **REMOVE INSTRUMENT CLUSTER FINISH PANEL GARNISH NO.2 (See page 71–11)**
2. **REMOVE INSTRUMENT PANEL REGISTER ASSY CTR (See page 71–11)**
3. **REMOVE CONSOLE PANEL SUB–ASSY UPPER (See page 71–11)**
4. **REMOVE RADIO RECEIVER ASSEMBLY W/BRACKET (See page 67–5)**
5. **REMOVE RADIO BRACKET NO.1 (See page 67–5)**
6. **REMOVE RADIO BRACKET NO.2 (See page 67–5)**

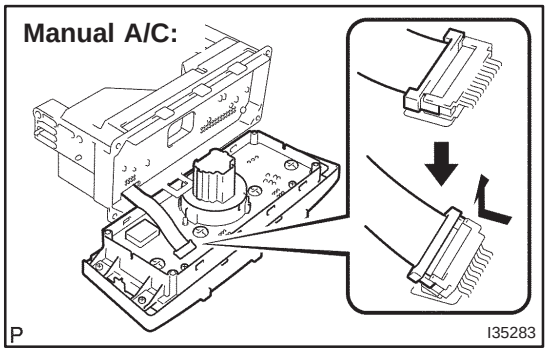
7. REMOVE AIR CONDITIONING CONTROL ASSY

(a) Remove the air conditioning control assy as shown in the illustration.



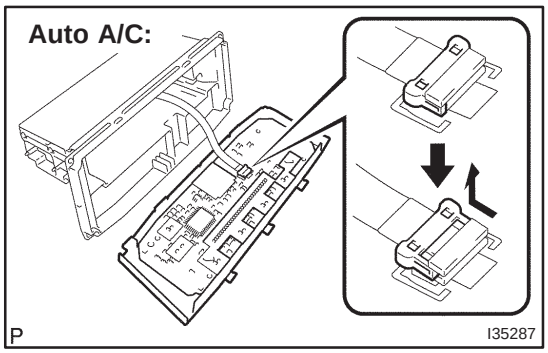
8. REMOVE AIR CONDITIONING PANEL SUB–ASSY

(a) Remove the 4 screws.

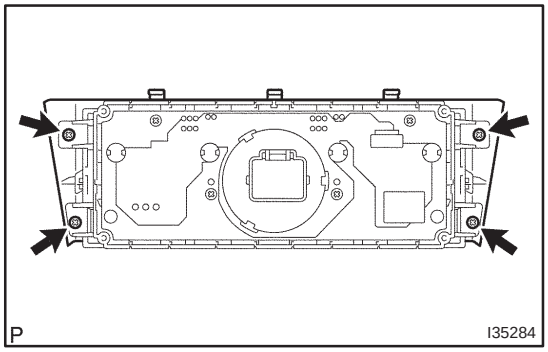


(b) Manual A/C:

Release the 6 claw fittings and disconnect the air conditioning panel sub–assy.

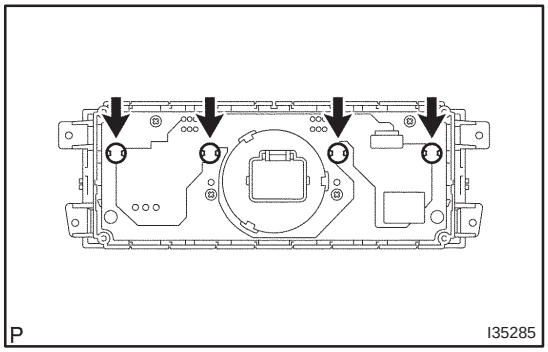


(c) Auto A/C:



Release the 4 claw fittings and disconnect the air conditioning panel sub–assy.

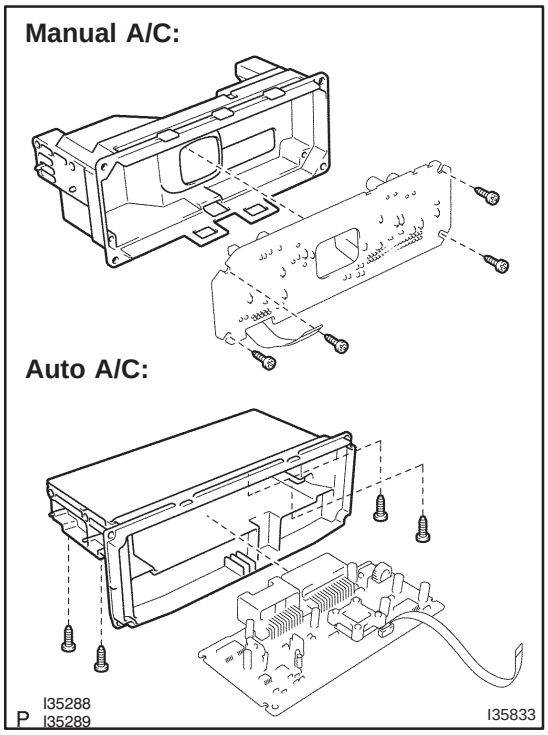
(d) Disconnect the cooler wire No.1 as shown in the illustration.



9. REMOVE HEATER CONTROL KNOB NO.3 (MANUAL AIR CONDITIONING)
10. REMOVE CONTROL KNOB SUB–ASSY (AUTO AIR CONDITIONING)
11. REMOVE HEATER CONTROL KNOB (MANUAL AIR CONDITIONING)
12. REMOVE HEATER CONTROL KNOB NO.2 (MANUAL AIR CONDITIONING)

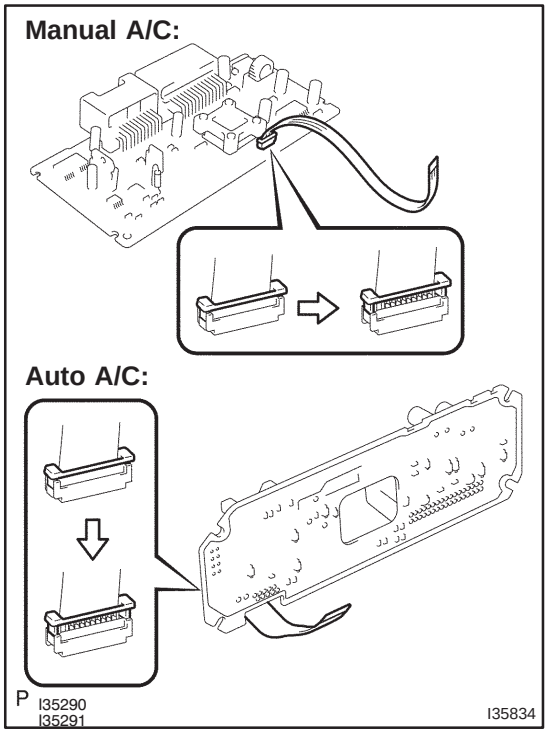
13. REMOVE HEATER CONTROL HOUSING (MANUAL AIR CONDITIONING)

(a) Release the 4 claw fittings and remove the 4 screws and the heater control housing.



14. REMOVE HEATER CONTROL LENS ASSY (MANUAL AIR CONDITIONING)
15. REMOVE HEATER CONTROL LENS ASSY (MANUAL AIR CONDITIONING)
16. REMOVE HEATER CONTROL LENS ASSY (MANUAL AIR CONDITIONING)

17. REMOVE AIR CONDITIONING CONTROL BULB (MANUAL AIR CONDITIONING)

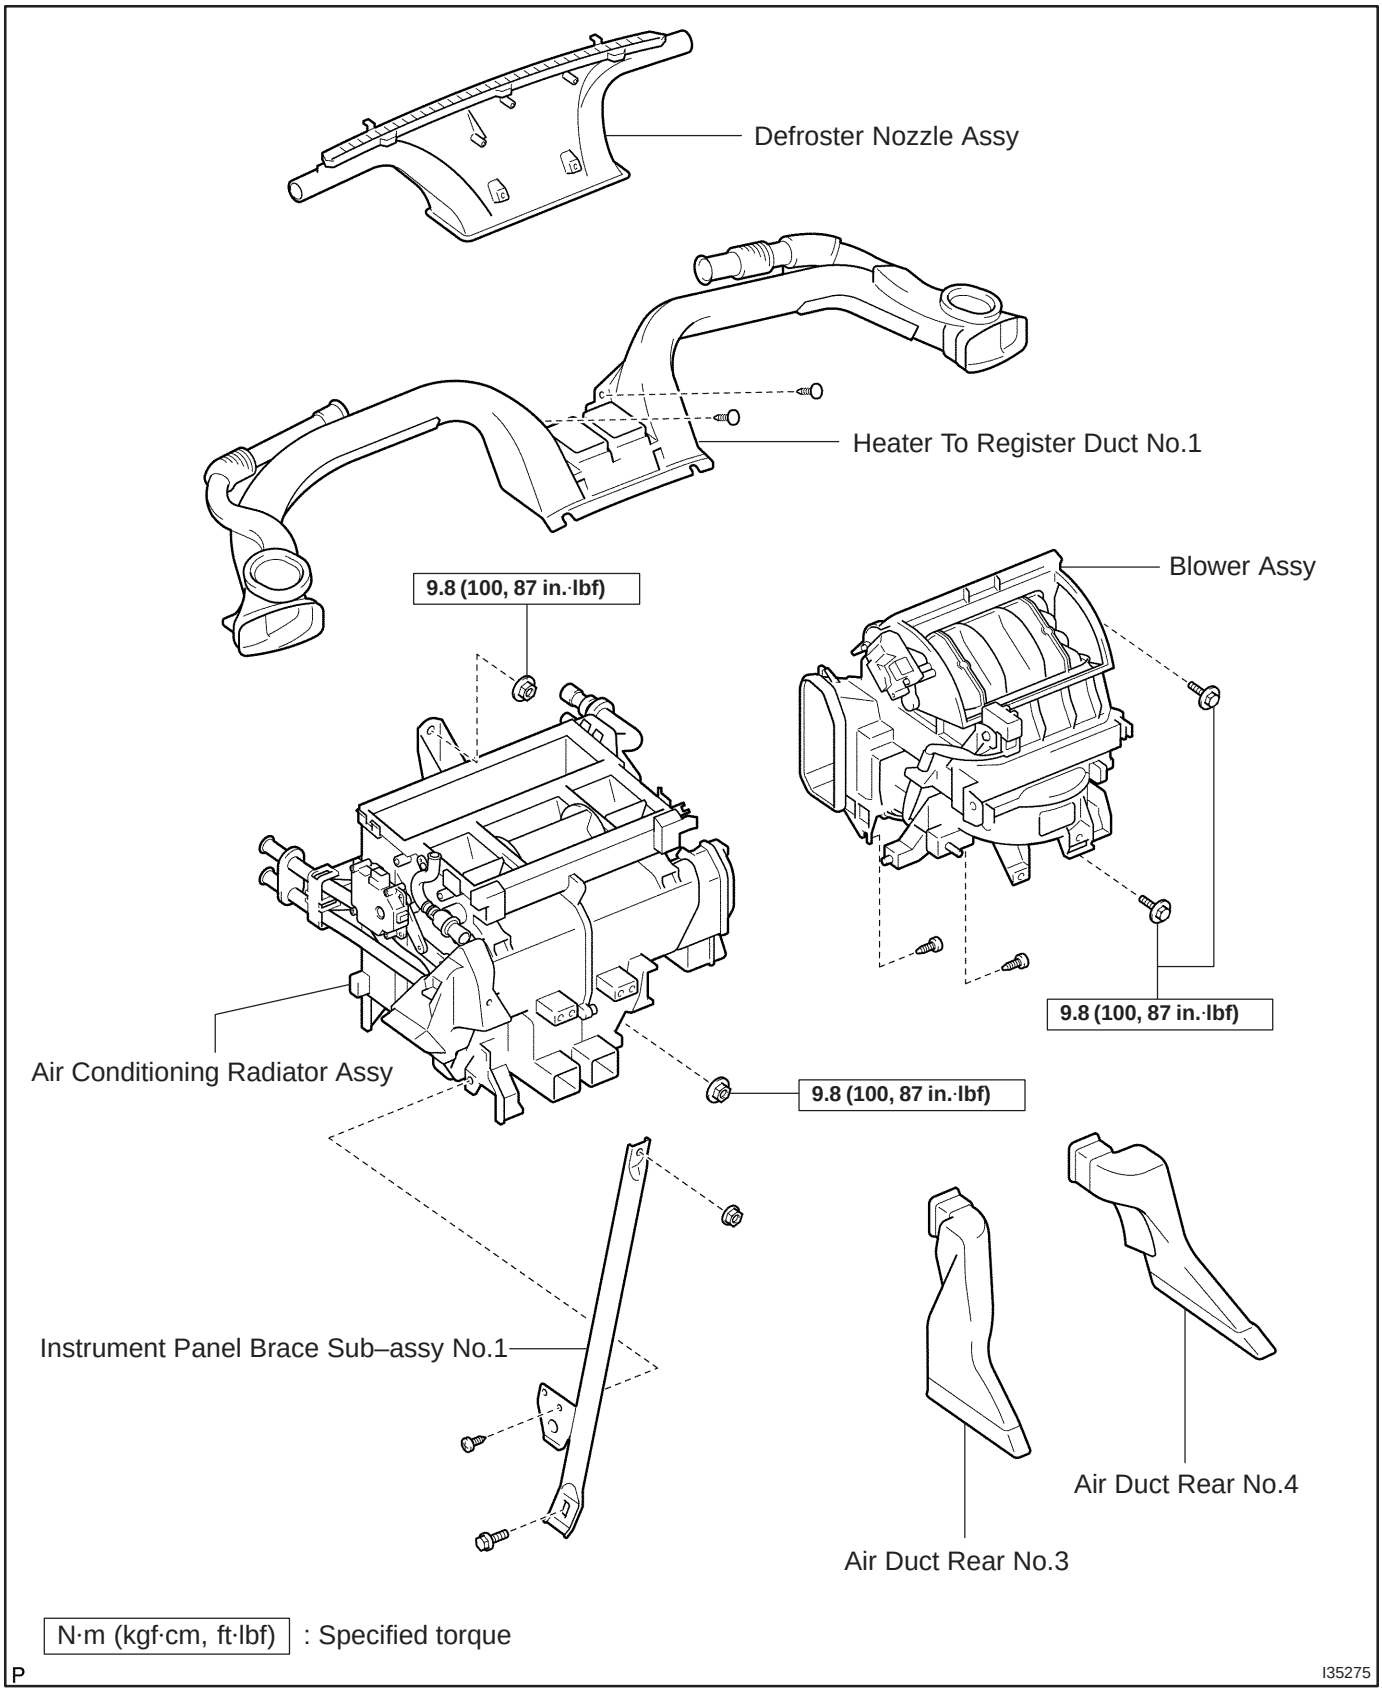


(a) Remove the 4 air conditioning control bulbs.

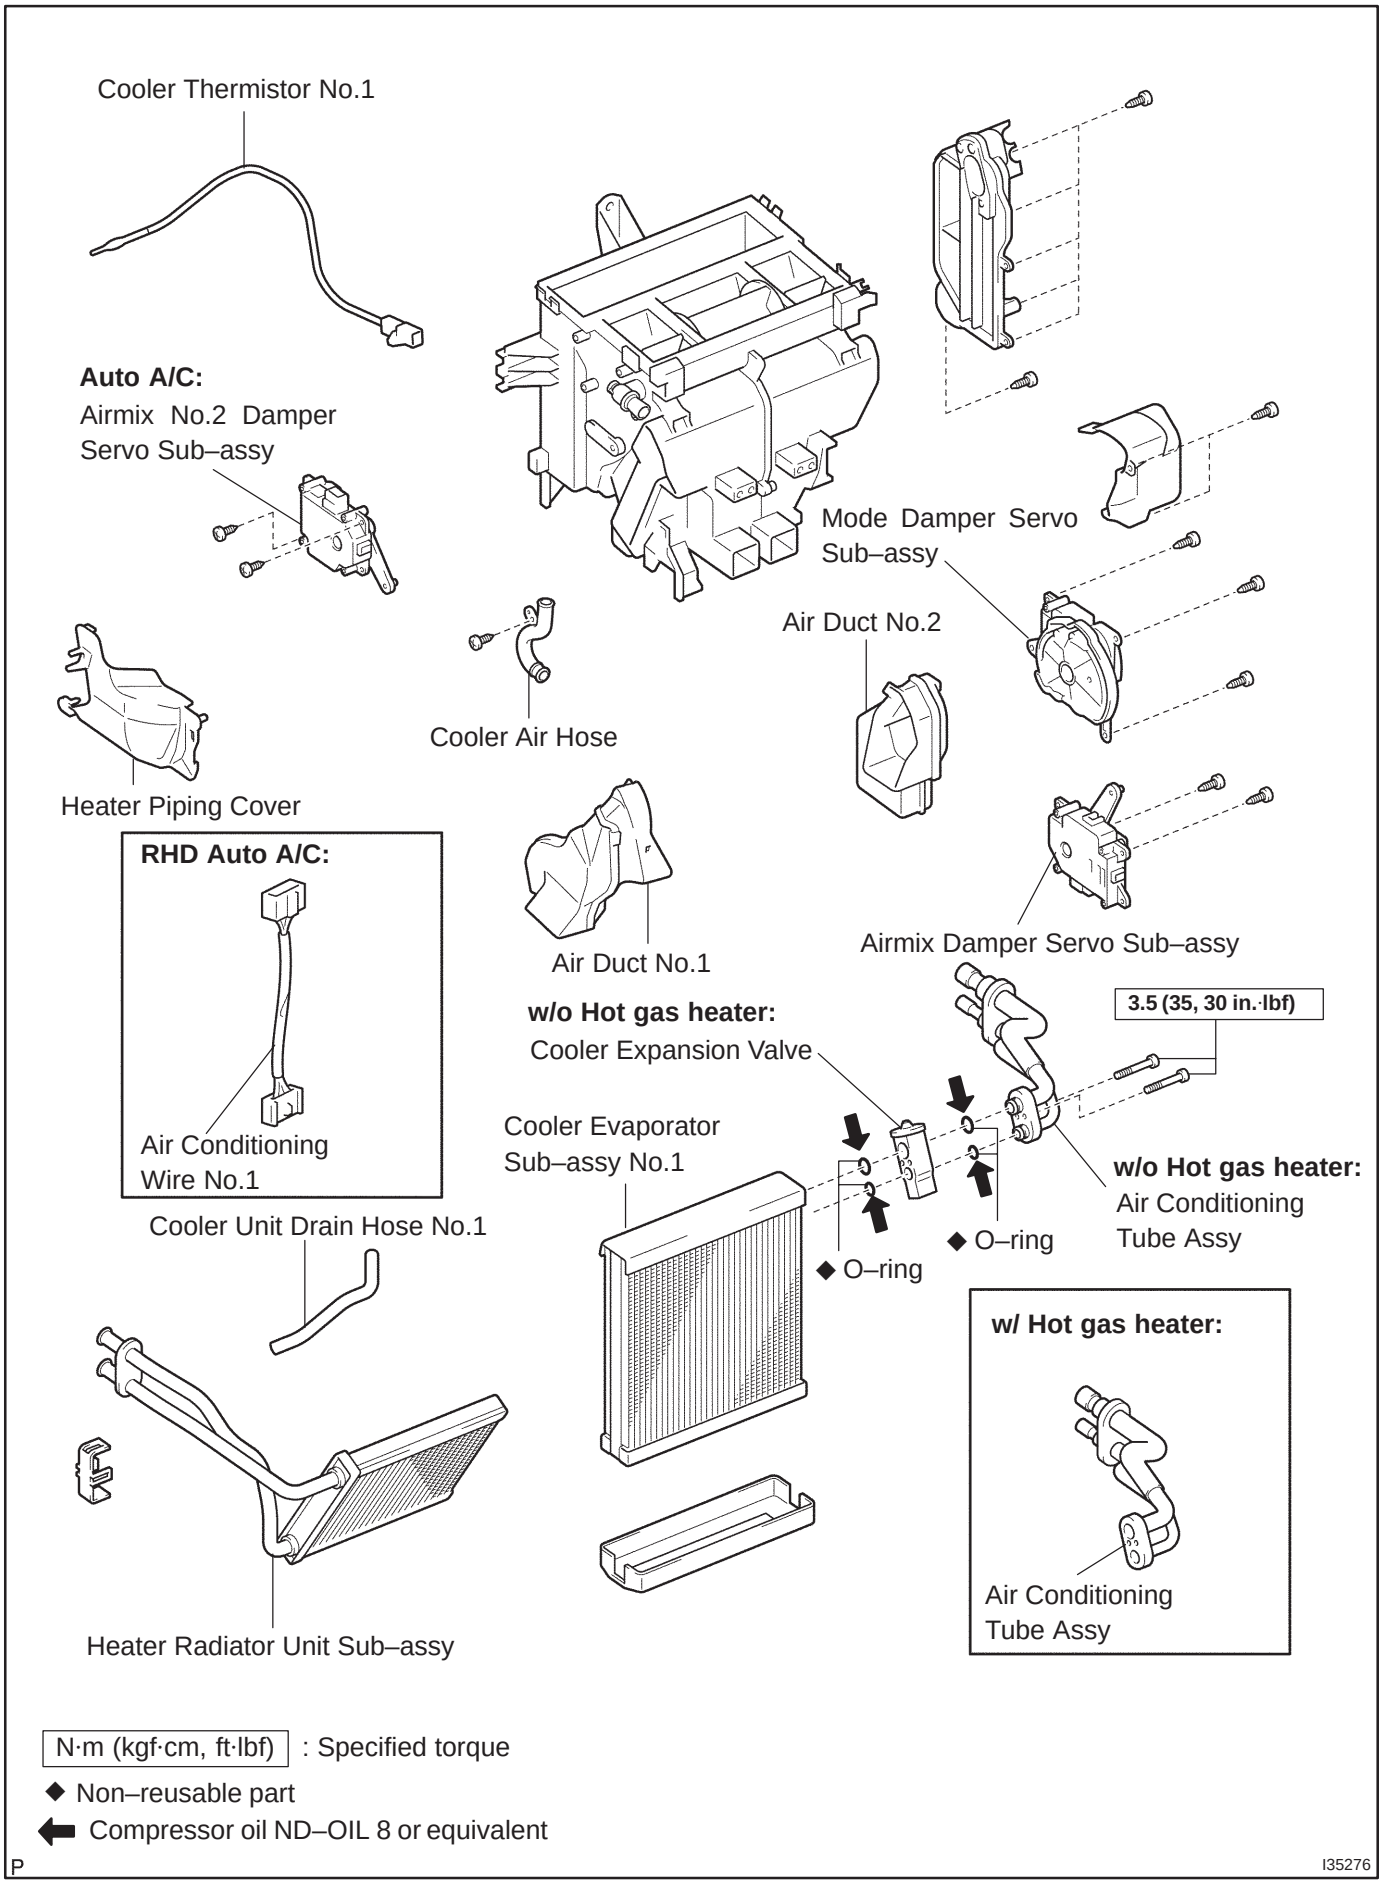
18. REMOVE HEATER CONTROL HOUSING SUB–ASSY (MANUAL AIR CONDITIONING)

19. REMOVE HEATER CONTROL HOUSING

(a) Remove the 4 screws and the heater control housing.



20. REMOVE COOLER WIRE NO.1



(a) Remove the cooler wire No.1 as shown in the illustration.

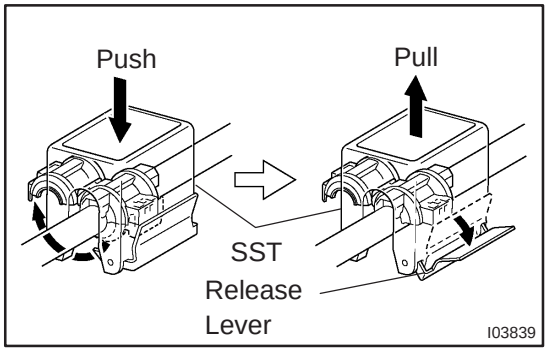
OVERHAUL

HINT:

COMPONENTS: See page 55–53

1. DISCHARGE REFRIGERANT FROM REFRIGERATION SYSTEM (See page 55–38)

SST 07110–58060 (07117–58080, 07117–58090, 07117–78050, 07117–88060, 07117–88070, 07117–88080)



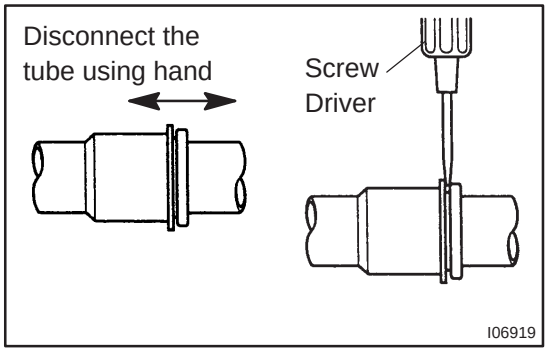
2. DISCONNECT COOLER REFRIGERANT SUCTION HOSE NO.1

(a) Install SST on the piping clamp.

SST 09870–00025

HINT:

Make sure the direction of the piping clamp claw and SST by checking the illustration shown on the caution label.



(b) Push down SST and release the clamp lock.

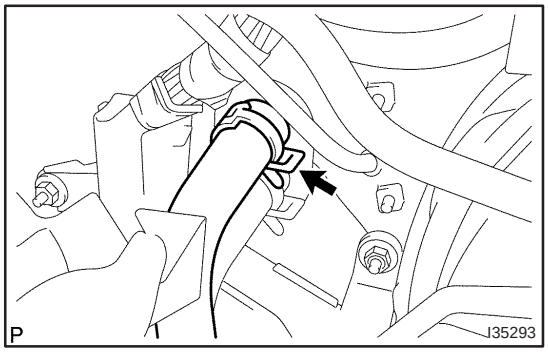
NOTICE:

Be careful not to deform the tube when pushing SST.

(c) Pull SST slightly and push the release lever, and then remove the piping clamp with SST.

(d) Disconnect the cooler refrigerant suction hose No.1.

NOTICE:



- **Do not use a screwdriver or similar tool to disconnect the tube.**
- **Seal the opening of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering.**

3. DISCONNECT LIQUID TUBE SUB–ASSY A

SST 09870–00015

HINT:

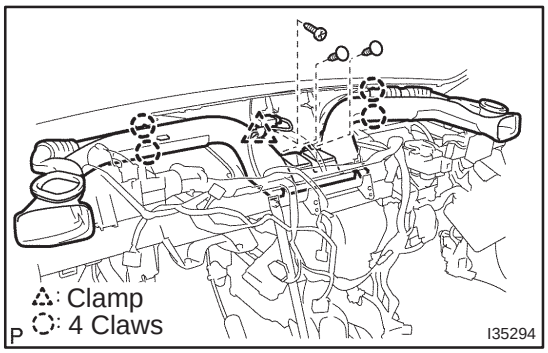
Disconnection of the liquid tube sub–assy A is the same as the cooler refrigerant suction hose No.1.

4. DISCONNECT HEATER INLET WATER HOSE

(a) Using pliers, grip the claws of the clip and slide the clip to disconnect the heater inlet water hose.

5. DISCONNECT HEATER OUTLET WATER HOSE

HINT:

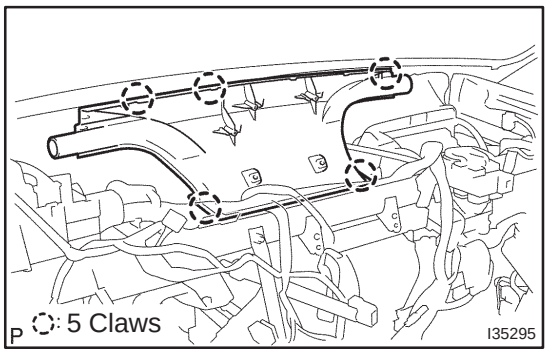


Disconnection of the heater outlet water hose is the same way as the heater inlet water hose.

6. REMOVE INSTRUMENT PANEL LOWER ASSY (See page 71–11)

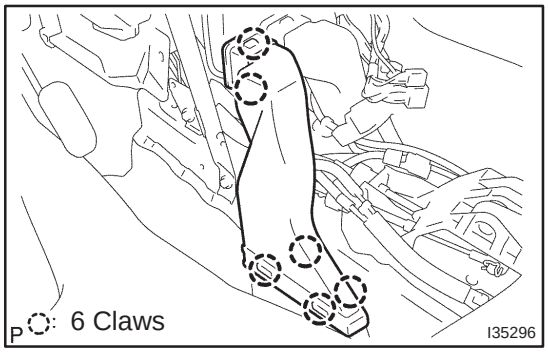
HINT:

Refer to the instructions for removal of the instrument panel lower assy.



7. REMOVE ECM (See page 10–65)

8. REMOVE HEATER TO REGISTER DUCT NO.1

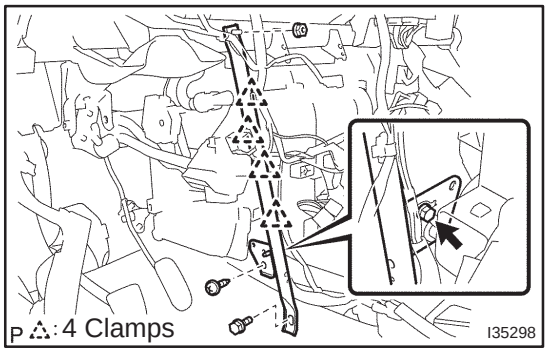


(a) Remove the 2 clips and screw.

(b) Release the 4 claw fittings and the clip and remove the heater to register duct No.1.

9. REMOVE DEFROSTER NOZZLE ASSY

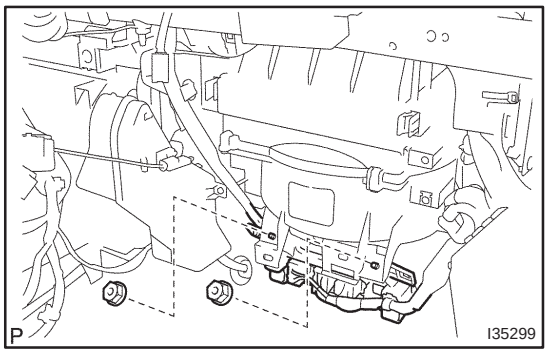
(a) Release the 5 claw fittings and remove the defroster nozzle assy.



10. REMOVE AIR DUCT REAR NO.3

(a) Release the 6 claw fittings and remove the air duct rear No.3.

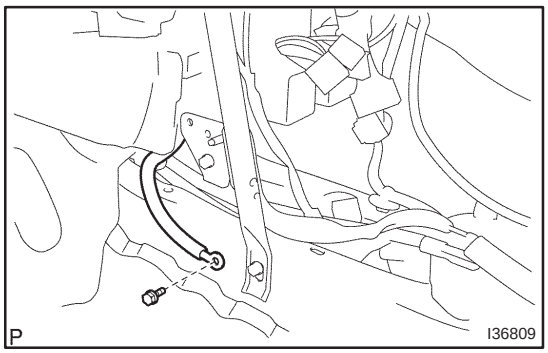
11. REMOVE AIR DUCT REAR NO.4



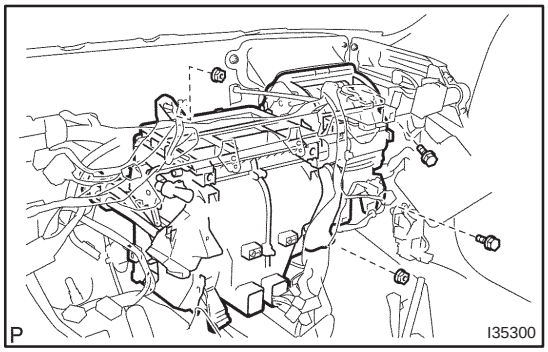
(a) Release the 6 claw fittings and remove the air duct rear No.4.

12. REMOVE INSTRUMENT PANEL BRACE SUB–ASSY NO.1

(a) Disconnect the 4 clamps.

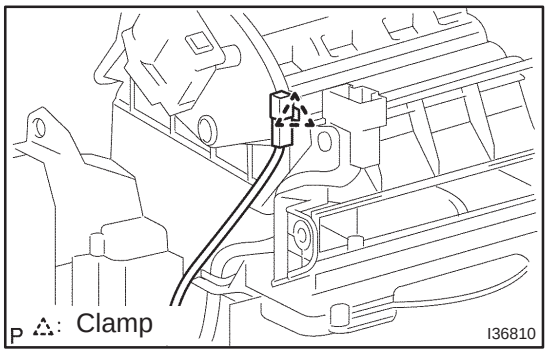


(b) Remove the 2 bolts, the screw, the nut and the instrument panel brace sub–assy No.1.



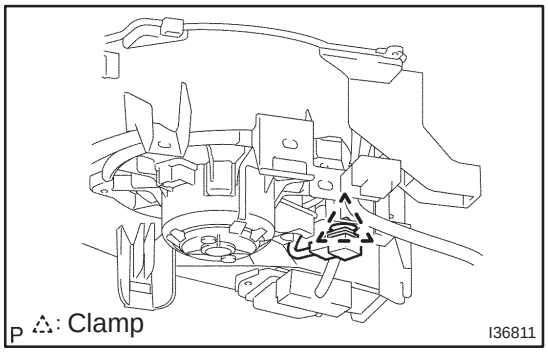
13. REMOVE AIR CONDITIONER UNIT ASSY

(a) Disconnect the connectors and the clip.

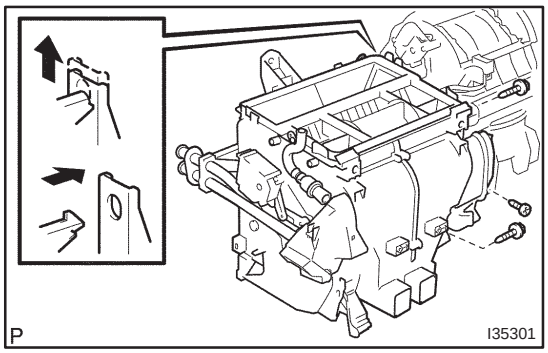


(b) Remove the 2 nuts.

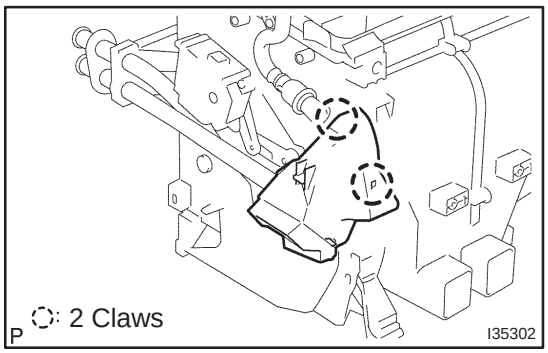
(c) PTC Heater model:
Remove the bolt.



(d) Remove the 2 bolts, the 2 nuts and the air conditioner unit assy.

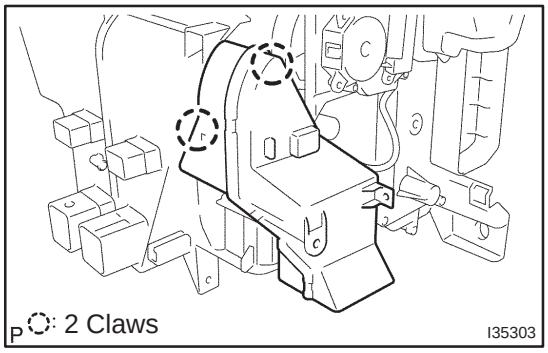


14. REMOVE AIR CONDITIONING RADIATOR ASSY

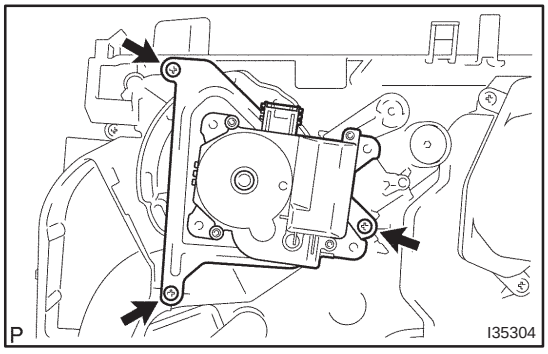


(a) Disconnect the clamp.

(b) RHD Auto A/C:
Disconnect the clamp.

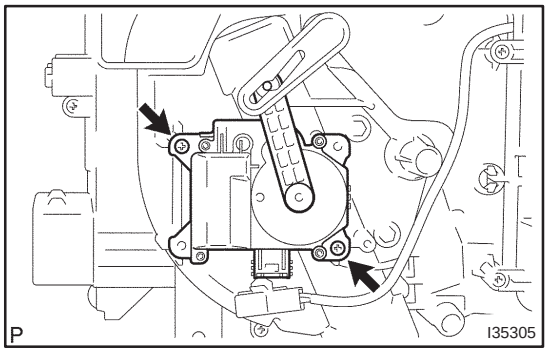


(c) Remove the 3 screws and air conditioning radiator assy.



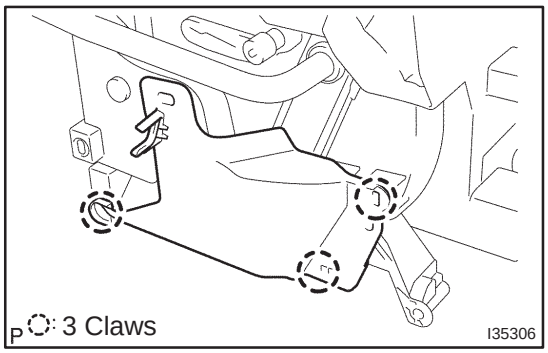
15. REMOVE AIR DUCT NO.1

(a) Release the 2 claw fittings and remove the air duct No.1.



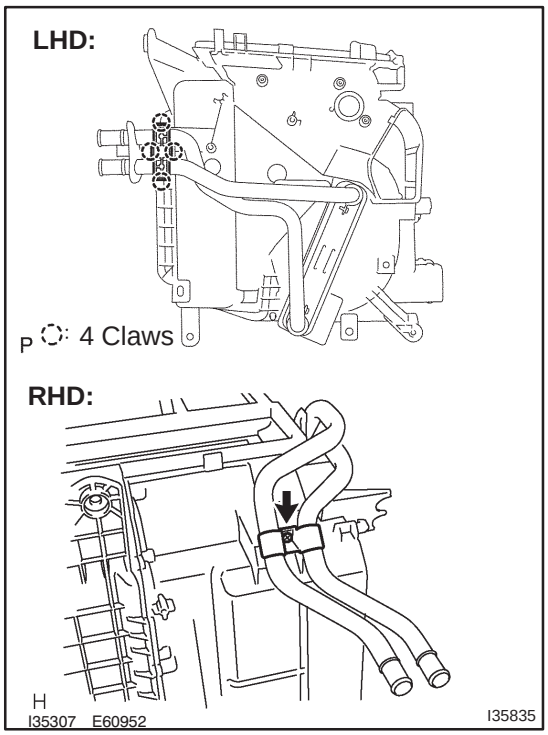
16. REMOVE AIR DUCT NO.2

(a) Release the 2 claw fittings and remove the air duct No.2.



17. REMOVE MODE DAMPER SERVO SUB–ASSY

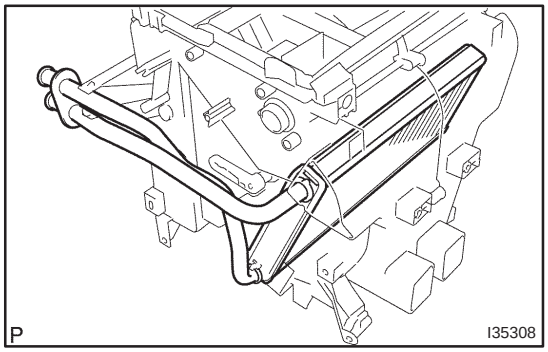
(a) Remove the 3 screws and the mode damper servo sub–assy.



18. REMOVE AIRMIX DAMPER SERVO SUB–ASSY

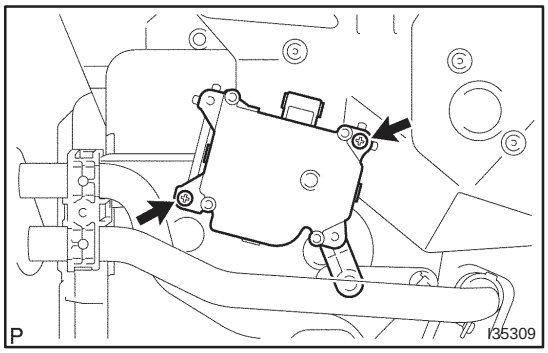
(a) Remove the 2 screws and the airmix damper servo sub–assy.

19. REMOVE HEATER PIPING COVER



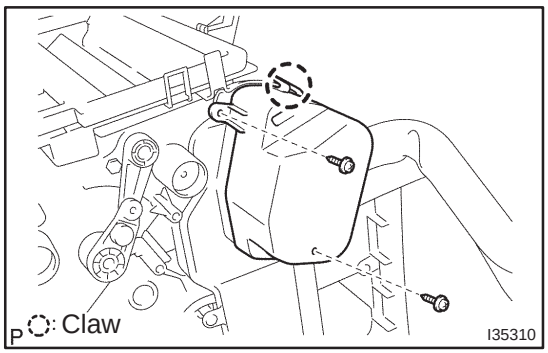
(a) Release the 3 claw fittings and remove the heater piping cover.

20. REMOVE HEATER RADIATOR UNIT SUB–ASSY



(a) LHD:
Release the 4 claw fittings and remove the clamp.

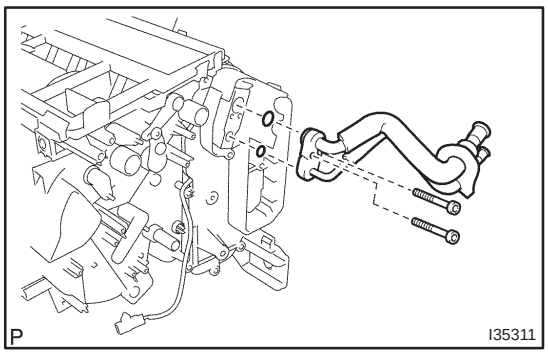
(b) RHD:
Remove the screw and the clamp.



(c) Remove the heater radiator unit sub–assy.

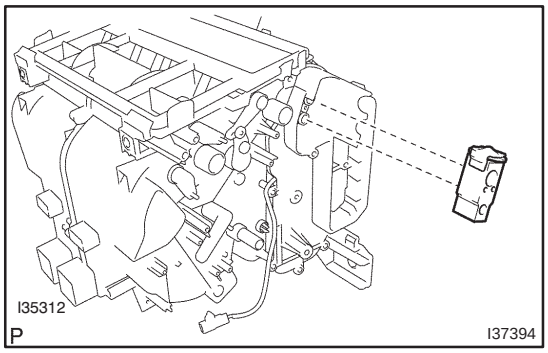
21. REMOVE AIR CONDITIONING WIRENO1 (AUTO AIR CONDITIONING)

22. REMOVE AIRMIX NO.2 DAMPER SERVO SUB–ASSY (AUTO AIR CONDITIONING)



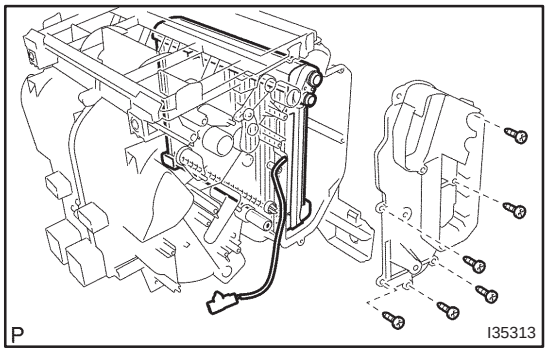
(a) Remove the 2 screws and the airmix No.2 damper servo sub–assy.

23. REMOVE AIR CONDITIONING TUBE ASSY



(a) Remove the 2 screws.

(b) Release the claw fitting and remove the cover.

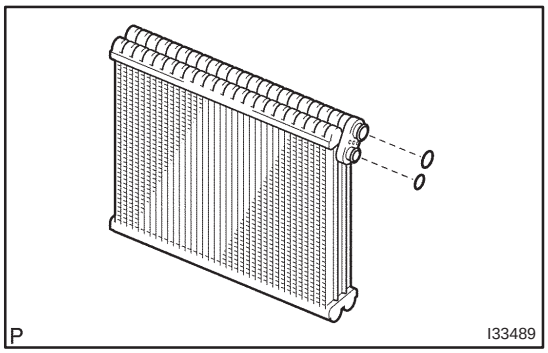


(c) Using a hexagon wrench 4.0 mm (0.15 in.), remove the 2 hexagon bolts and the air conditioning tube assy.

(d) w/o Hot gas heater:
Remove the 2 O–rings from the air conditioning tube assy.

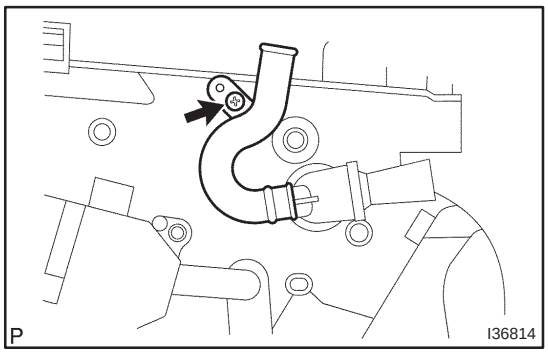
24. REMOVE COOLER EXPANSION VALVE (W/O HOT GAS HEATER)

(a) Remove the cooler expansion valve from the cooler evaporator sub–assy No.1.



25. REMOVE COOLER THERMISTOR NO.1

(a) Remove the 6 screws and the cover.

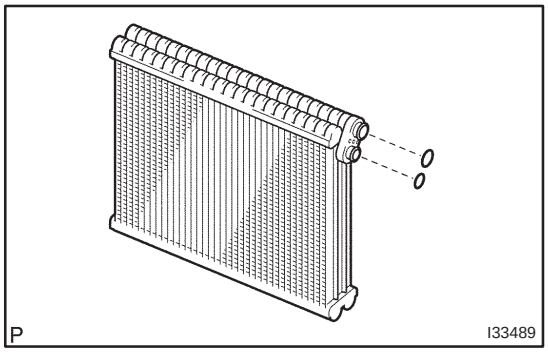


(b) Remove the cooler thermistor No.1 and the cooler evaporator sub–assy No.1 from the case.

(c) Remove the cooler thermistor No.1 from the cooler evaporator sub–assy No.1.

26. REMOVE COOLER EVAPORATOR SUB–ASSY NO.1

(a) Remove the 2 O–rings from the cooler evaporator sub–assy No.1.

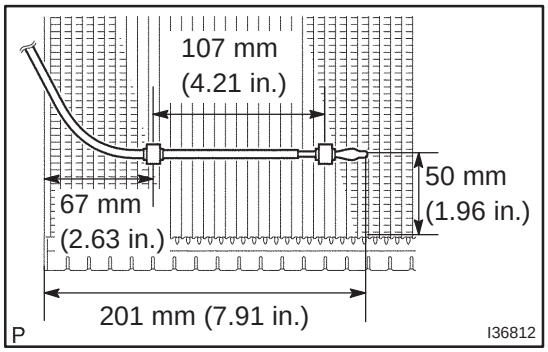


27. REMOVE COOLER AIR HOSE

(a) Remove the screw and the cooler air hose.

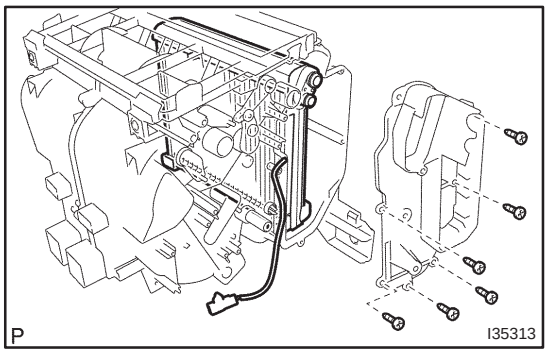
28. REMOVE AIR DUCT ASSY HEATER

29. REMOVE COOLER AIR HOSE (AUTO AIR CONDITIONING)



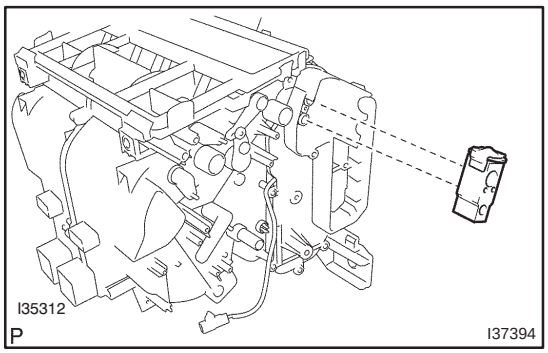
30. REMOVE COOLER UNIT DRAIN HOSE NO.1

31. INSTALL COOLER EVAPORATOR SUB–ASSY NO.1



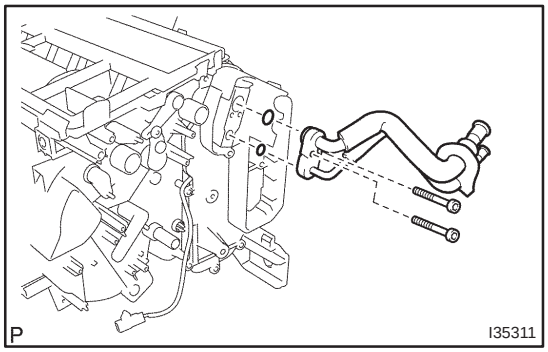
(a) Sufficiently apply compressor oil to 2 new O–rings and the fitting surface of the cooler expansion valve.
Compressor oil: ND–OIL 8 or equivalent

(b) Install the 2 O–rings on the cooler evaporator sub–assy No.1.



32. INSTALL COOLER THERMISTOR NO.1

(a) Install the cooler thermistor No.1 as shown in the illustration.

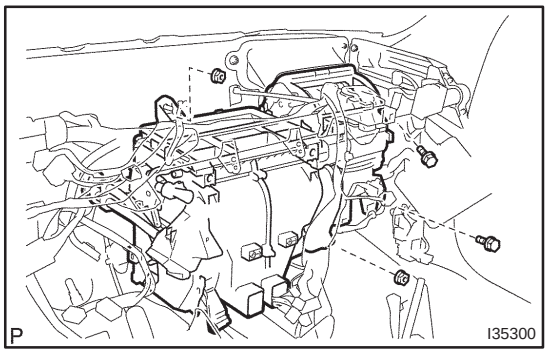


(b) Install the cooler evaporator sub–assy No.1 on the case.

(c) Install the cover with the 6 screws.

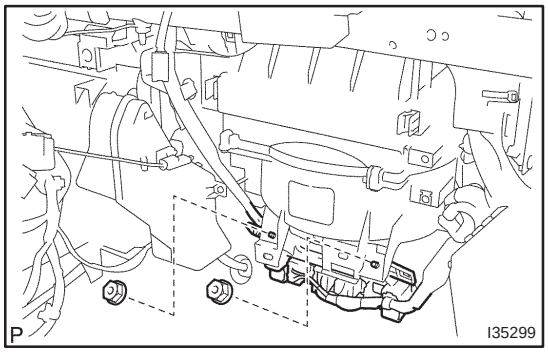
33. INSTALL COOLER EXPANSION VALVE (W/O HOT GAS HEATER)

(a) Install the cooler expansion valve.



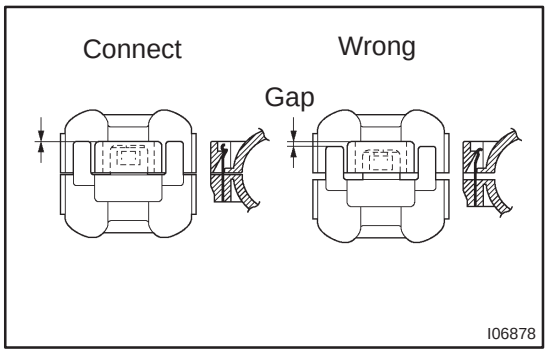
34. INSTALL AIR CONDITIONING TUBE ASSY

(a) w/o Hot gas heater:
Sufficiently apply compressor oil to 2 new O–rings and the fitting surface of the air conditioning tube assy.
Compressor oil: ND–OIL 8 equivalent



(b) w/o Hot gas heater:
Install the 2 O–rings on the air conditioning tube assy.

(c) Using a hexagon wrench 4.0 mm (0.15 in.), install the air conditioning tube assy with the 2 hexagon bolts.
Torque: 3.5 N·m (35 kgf·cm, 30 in.·lbf)



35. INSTALL AIR CONDITIONER UNIT ASSY

(a) Install the air conditioner unit assy with the 2 bolts and 2 nuts.
Torque: 9.8 N·m (100 kgf·cm, 87 in.·lbf)

(b) Install the 2 nuts.
(c) Connect the connectors and the clip.

36. INSTALL COOLER REFRIGERANT SUCTION HOSE NO.1

(a) Remove the attached vinyl tape from the hose.
(b) Sufficiently apply compressor oil to a new O–ring and the fitting surface of the cooler refrigerant suction hose No.1.
Compressor oil: ND–OIL 8 or equivalent
(c) Install the 2 O–rings on the cooler refrigerant suction hose No.1.
(d) Install the cooler refrigerant suction hose No.1 and piping clamp.

HINT:
After the connection, check the claw fitting of the piping clamp.

37. INSTALL LIQUID TUBE SUB–ASSY A

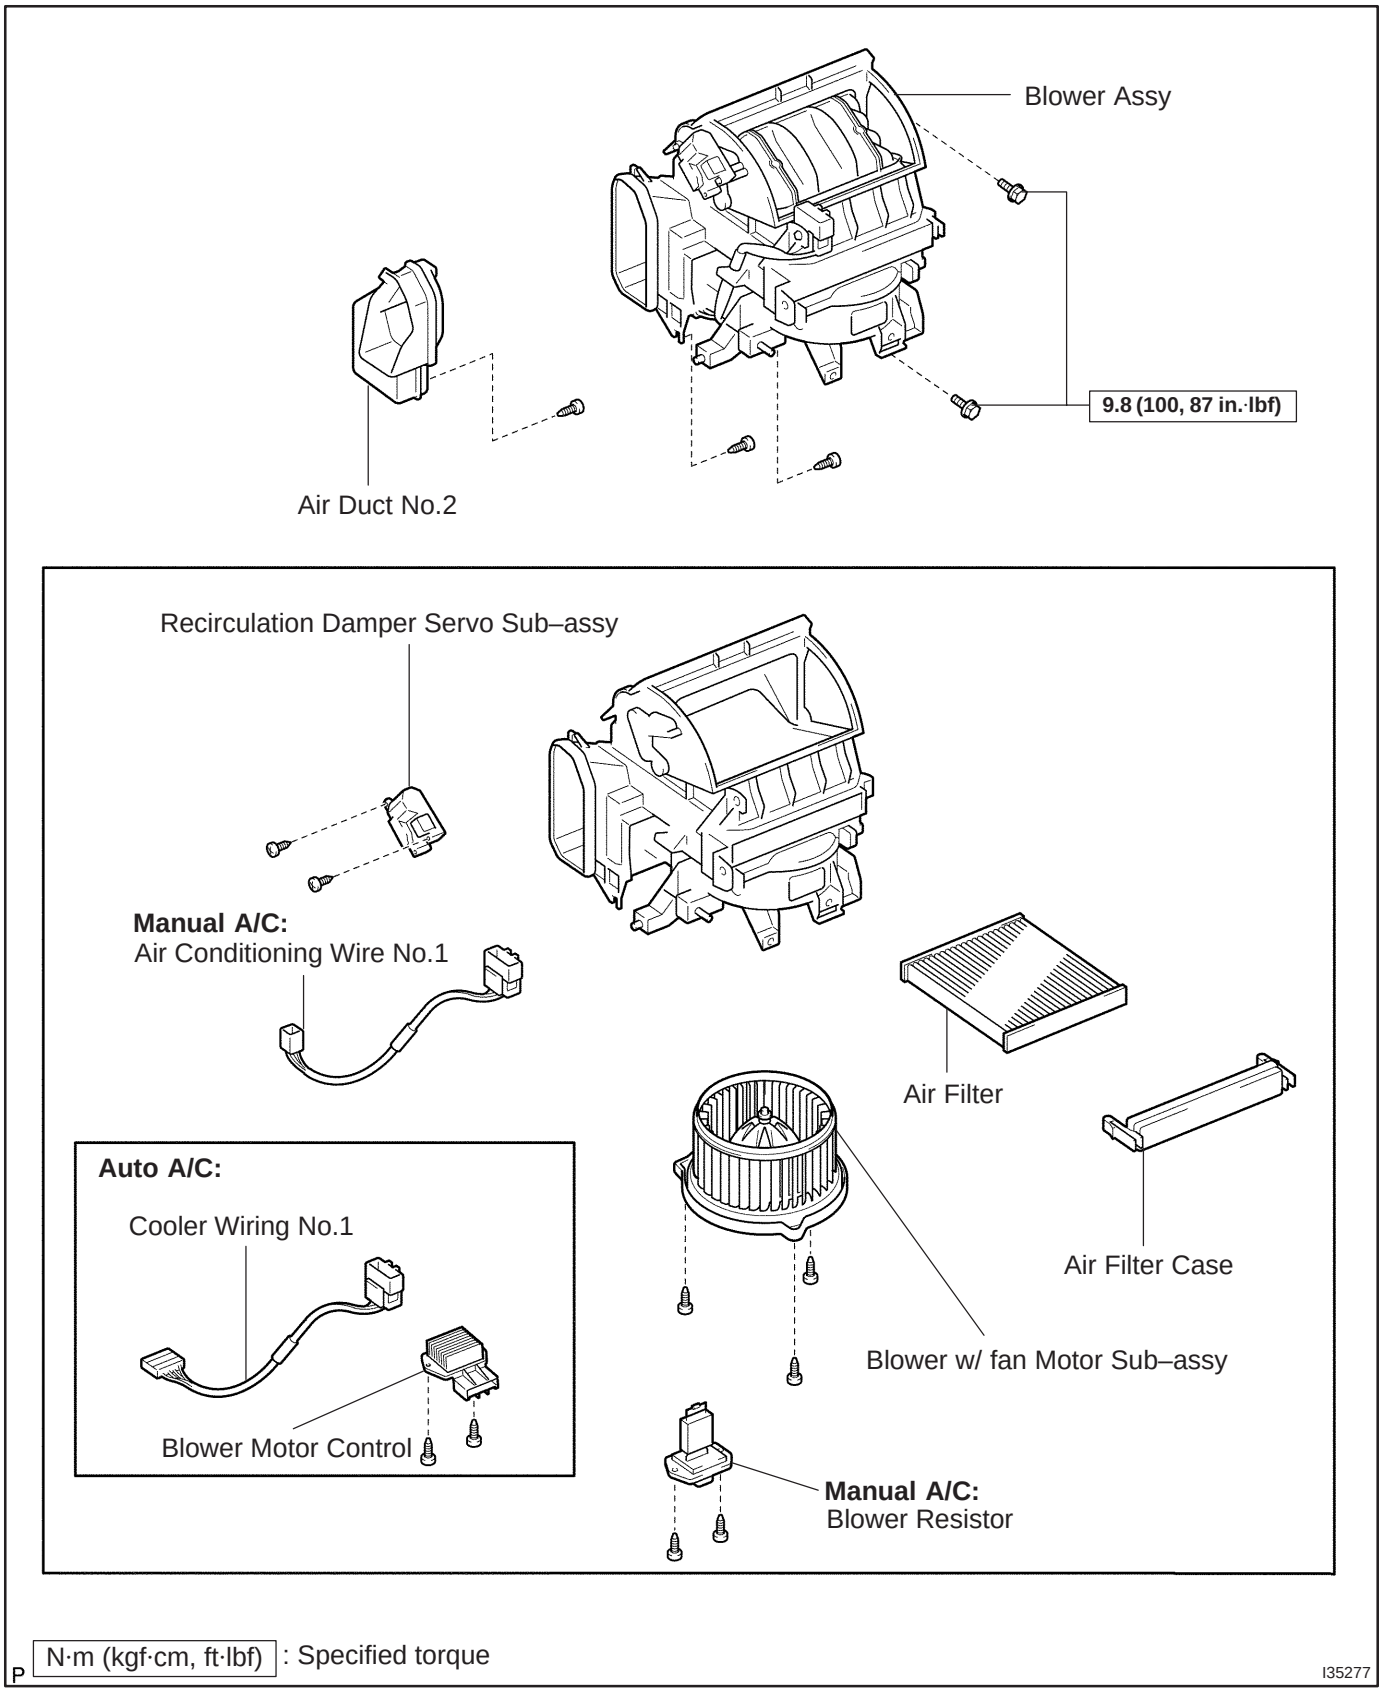
(a) Remove the attached vinyl tape from the tube.
(b) Sufficiently apply compressor oil to a new O–ring and the fitting surface of the liquid tube sub–assy A.
Compressor oil: ND–OIL 8 or equivalent
(c) Install the 2 O–rings on the liquid tube sub–assy A.
(d) Install the liquid tube sub–assy A and the piping clamp.

HINT:
After the connection, check the claw fittings of the piping clamp.

38. ADD ENGINE COOLANT
3ZZ–FE/1ZZ–FE: (See page 16–7)
1AZ–FSE: (See page 16–31)
1AZ–FE: (See page 16–19)
1CD–FTV: (See page 16–44)

39. CHECK FOR ENGINE COOLANT LEAKS
3ZZ–FE/1ZZ–FE: (See page 16–1)
1AZ–FSE: (See page 16–25)
1AZ–FE: (See page 16–13)
1CD–FTV: (See page 16–37)

40. CHARGE REFRIGERANT (See page 55–38)
SST 07110–58060 (07117–58060, 07117–58070, 07117–58080, 07117–58090, 07117–78050, 07117–88060, 07117–88070, 07117–88080)
Specified amount: 440 ± 30 g (15.51 ± 1.06 oz.)



41. WARM UP ENGINE (See page 55–38)

42. INSPECT LEAKAGE OF REFRIGERANT (See page 55–38)

BLOWER ASSY

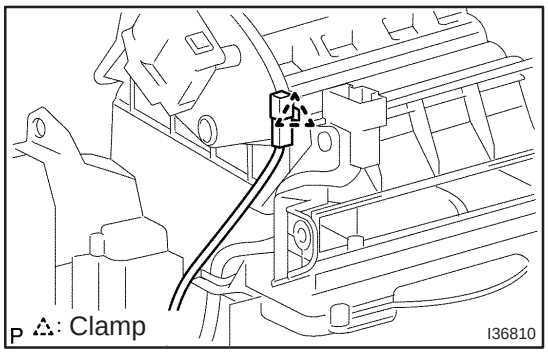
COMPONENTS

550YQ–01

OVERHAUL

HINT:

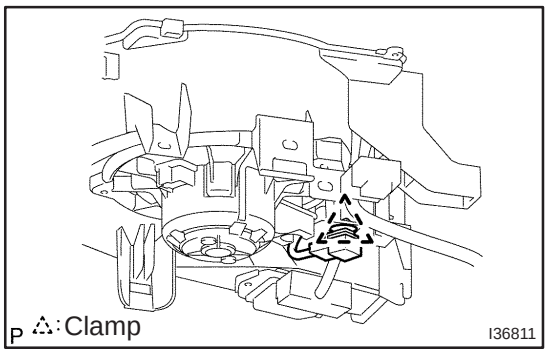
COMPONENTS: See page 55–64



1. REMOVE INSTRUMENT PANEL LOWER ASSY (See page 71–11)

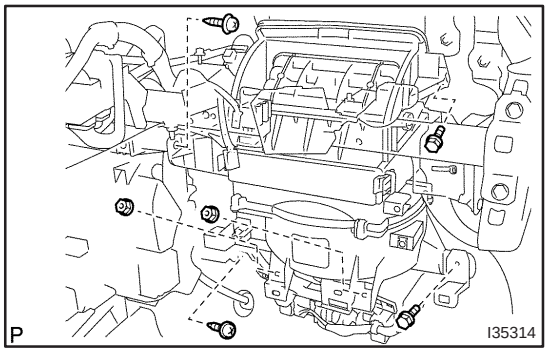
HINT:

Refer to the instructions for removal of the instrument panel lower assy.



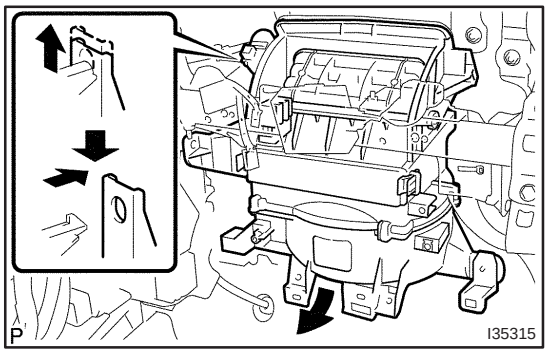
2. REMOVE ECM (See page 10–65)

3. REMOVE AIR DUCT NO.2 (See page 55–55)

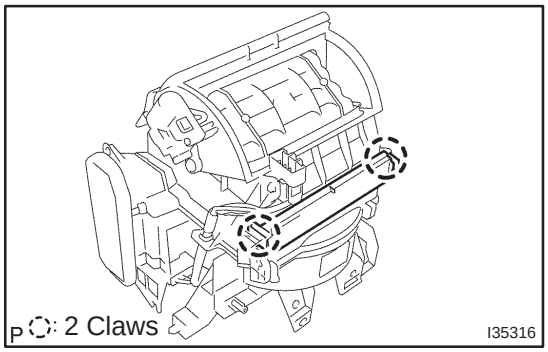


4. REMOVE BLOWER ASSY

(a) Disconnect the connector and the clamp.



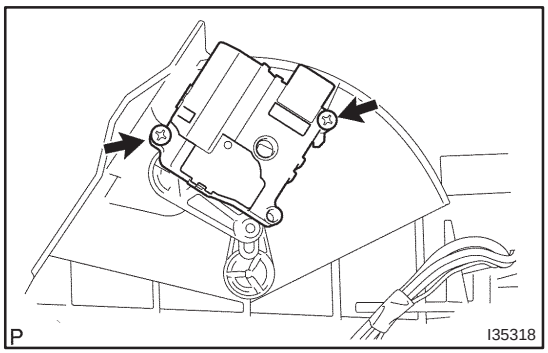
(b) RHD Auto A/C:
Disconnect the connector and the clamp.



(c) Disconnect the connectors.

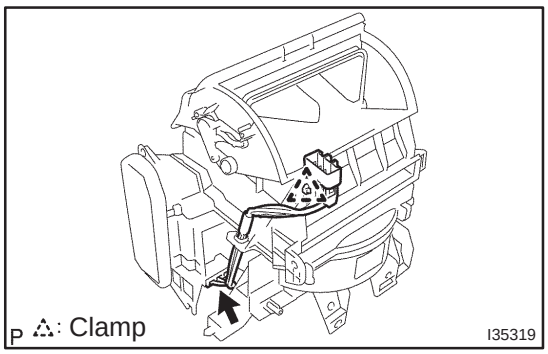
(d) Remove the 2 nuts.

(e) Remove the 2 bolts and the 2 screws.



(f) Release the claw fitting and remove the blower assy.

5. REMOVE AIR FILTER CASE



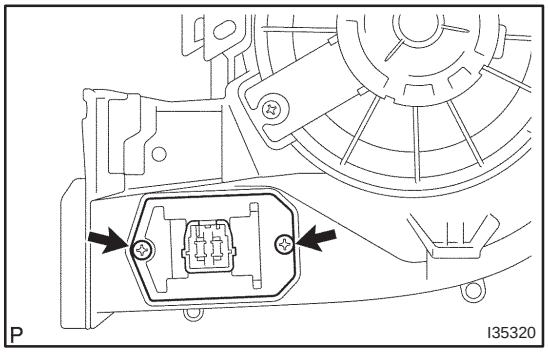
(a) Release the 2 claw fittings and remove the air filter case.

6. REMOVE AIR FILTER

7. REMOVE RECIRCULATION DAMPER SERVO SUB–ASSY

(a) Remove the 2 screws and the recirculation damper servo sub–assy.

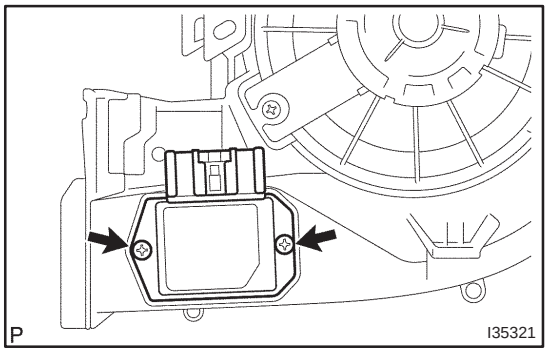
8. REMOVE AIR CONDITIONING WIRENO1 (MANUAL AIR CONDITIONING)



(a) Disconnect the connector.

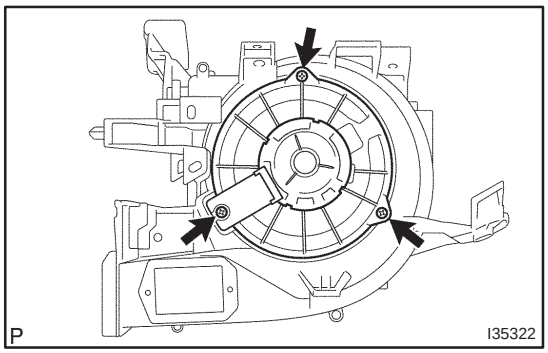
(b) Release the clump and remove the air conditioning wire No.1.

9. REMOVE COOLER WIRING NO.1 (AUTO AIR CONDITIONING)



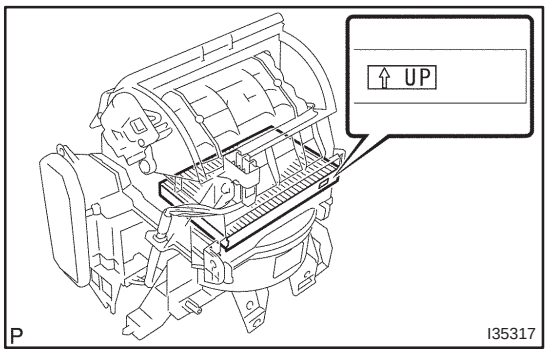
HINT:

Disconnection of the cooler wiring No.1 is the same as the air conditioning wire No.1.



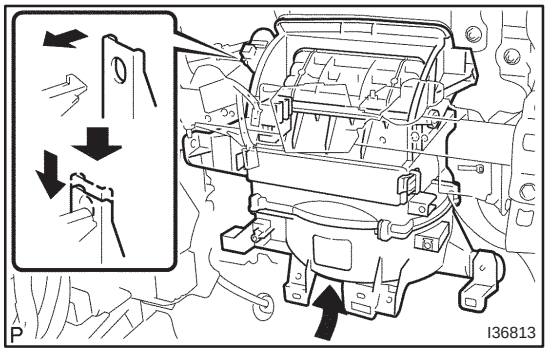
10. REMOVE BLOWER RESISTOR (MANUAL AIR CONDITIONING)

(a) Remove the 2 screws and the blower resistor.



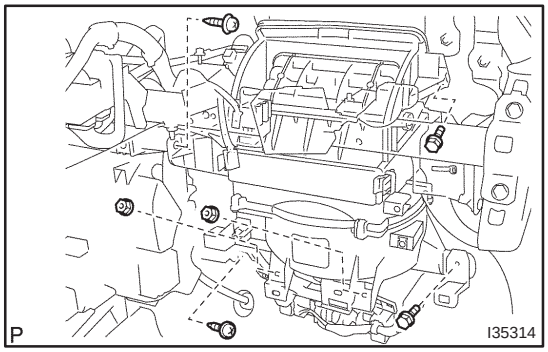
11. REMOVE BLOWER MOTOR CONTROL (AUTO AIR CONDITIONING)

(a) Remove the 2 screws and the blower motor control.



12. REMOVE BLOWER W/FAN MOTOR SUB–ASSY

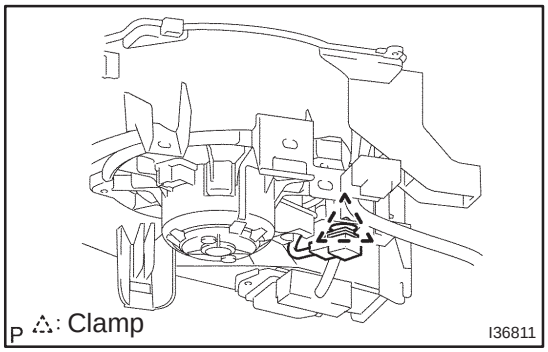
(a) Remove the 3 screws and the blower w/ fun motor sub–assy.



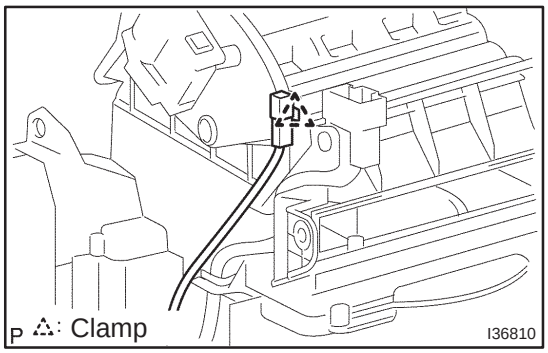
13. INSTALL AIR FILTER

(a) Install the air filter as shown in the illustration.

14. INSTALL BLOWER ASSY



(a) Install the blower assy with the claw fitting.



(b) Install the blower assy with the 2 bolts and the 2 screws.
Torque: 9.8 N·m (100 kgf·cm, 87 in.·lbf) (Bolt)

(c) Install the 2 nuts.

(d) Connect the connectors.

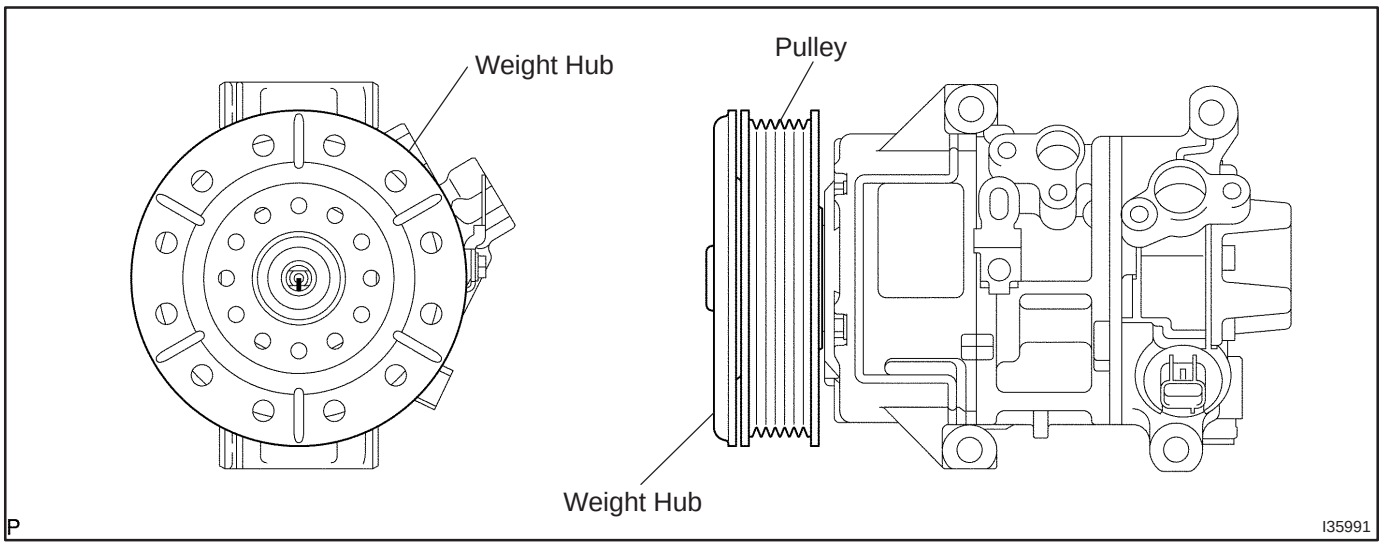
(e) RHD Auto A/C:
Connect the connector and the clamp.

(f) Connect the connector and the clamp.

W/PULLEY COMPRESSOR ASSY (3ZZ–FE)

550YX–01

ON–VEHICLE INSPECTION



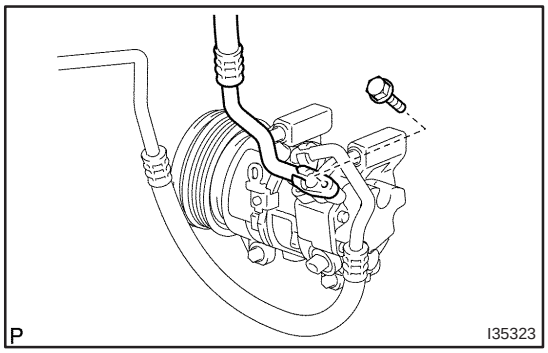
1. INSPECT W/PULLEY COMPRESSOR ASSY

(a) Check the operation.

(1) Start the engine.

(2) Inspect the weight hub.

Standard: The weight hub rotates along with the pulley

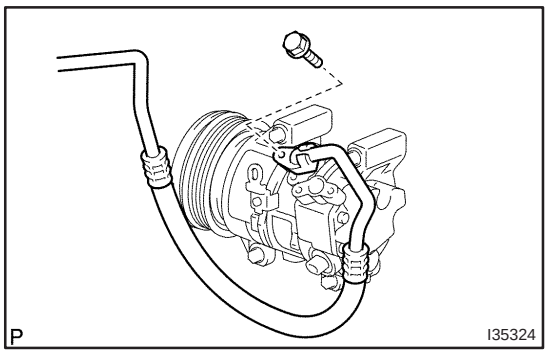


550YY–01

REPLACEMENT

1. DISCHARGE REFRIGERANT FROM REFRIGERATION SYSTEM (See page 55–38)

SST 07110–58060 (07117–58080, 07117–58090, 07117–78050, 07117–88060, 07117–88070, 07117–88080)



2. DISCONNECT COOLER REFRIGERANT SUCTION HOSE NO.1

(a) Remove the bolt and disconnect the cooler refrigerant suction hose No.1 from the w/pulley compressor assy.

(b) Remove the O–ring from the cooler refrigerant suction hose No.1.

NOTICE:

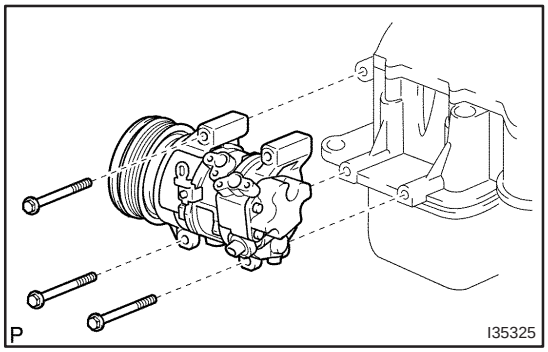
Seal the opening of the disconnected parts using vinyl tape to prevent moisture and foreign matters from entering.

3. DISCONNECT COOLER REFRIGERANT DISCHARGE HOSE NO.1

(a) Remove the bolt and disconnect the cooler refrigerant discharge hose No.1 from the w/pulley compressor assy.

(b) Remove the O–ring from the cooler refrigerant discharge hose No.1.

NOTICE:



Seal the opening of the disconnected parts using vinyl tape to prevent moisture and foreign matters from entering.

4. REMOVE RADIATOR SUPPORT OPENING COVER (See page 14–5)

5. REMOVE ENGINE ROOM COVER SIDE (See page 14–5)

6. REMOVE ENGINE UNDER COVER SUB–ASSY NO.1 (See page 14–5)

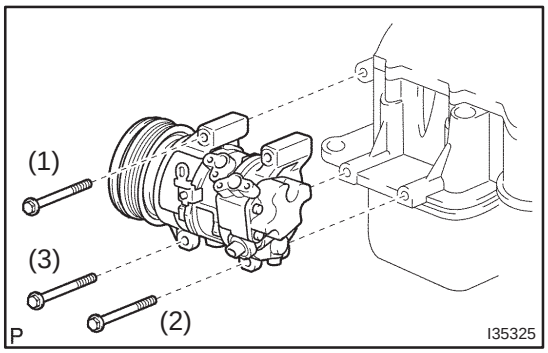
7. REMOVE FAN AND GENERATOR V BELT (See page 14–5)

8. REMOVE W/PULLEY COMPRESSOR ASSY

(a) Disconnect the connector.

(b) Remove the 3 bolts and the w/pulley compressor assy.

9. INSPECT COMPRESSOR OIL



(a) When replacing the w/pulley compressor assy with a new one, after gradually removing the refrigerant gas from the service valve, drain the following amount of oil from the new w/pulley compressor assy before installation.

Standard:

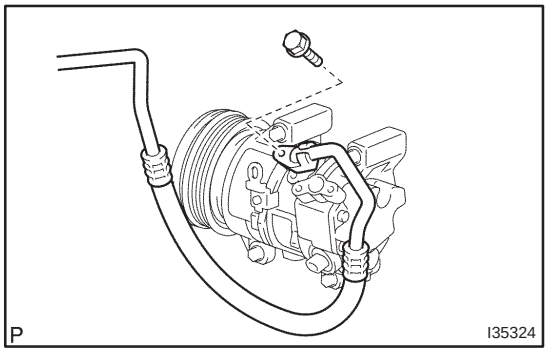
(Oil capacity inside new w/pulley compressor assy: 90 + 15 cc (3.0 + 0.5 fl. oz.)) – (Remaining oil amount in the removed w/pulley compressor assy) = (Oil amount to be removed when replacing)

NOTICE:

- **When checking the compressor oil level, observe the precautions on the cooler removal/installation.**
- **Since compressor oil remains in the pipes of the vehicle, if a new w/pulley compressor assy is installed without removing some oil inside, the oil amount becomes excessive, preventing heat exchange in the refrigerant cycle and causing refrigerant failure.**
- **If the remaining oil in the removed w/pulley compressor assy is too small in volume, check for oil leakage.**
- **Be sure to use ND–OIL 8 for compressor oil.**

10. INSTALL W/PULLEY COMPRESSOR ASSY

(a) Install the w/pulley compressor assy with the 3 bolts.
Torque: 29 N·m (300 kgf·cm, 21 ft·lbf)

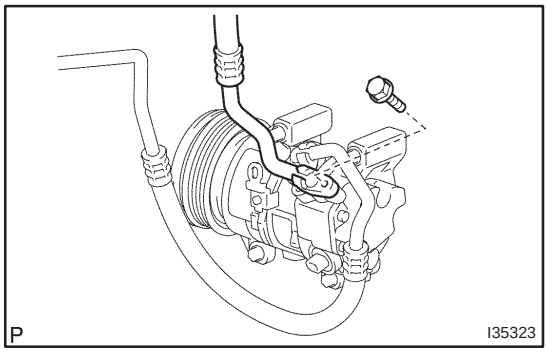


NOTICE:

Tighten the bolts in the order shown in the illustration to install the w/pulley compressor assy.

(b) Connect the connector.

11. INSTALL COOLER REFRIGERANT DISCHARGE HOSE NO.1



(a) Remove the attached vinyl tape from the hose.
(b) Sufficiently apply compressor oil to a new O–ring and the fitting surface of the w/pulley compressor assy.
Compressor oil: ND–OIL 8 or equivalent
(c) Install the O–ring on the cooler refrigerant discharge hose No.1.

(d) Install the cooler refrigerant discharge hose No.1 on the w/pulley compressor assy with the bolt.
Torque: 9.8 N·m (100 kgf·cm, 87 in.·lbf)

12. INSTALL COOLER REFRIGERANT SUCTION HOSE NO.1

(a) Remove the attached vinyl tape from the hose.
(b) Sufficiently apply compressor oil to a new O–ring and the fitting surface of the w/pulley compressor assy.
Compressor oil: ND–OIL 8 or equivalent
(c) Install the O–ring on the cooler refrigerant suction hose No.1.

(d) Install the cooler refrigerant suction hose No.1 on the w/ pulley compressor assy with the bolt.
Torque: 9.8 N·m (100 kgf·cm, 87 in.·lbf)

13. CHARGE REFRIGERANT (See page 55–38)
SST 07110–58060 (07117–58060, 07117–58070, 07117–58080, 07117–58090, 07117–78050, 07117–88060, 07117–88070, 07117–88080)
Specified amount: 440 ± 30 g (15.51 ± 1.06 oz.)

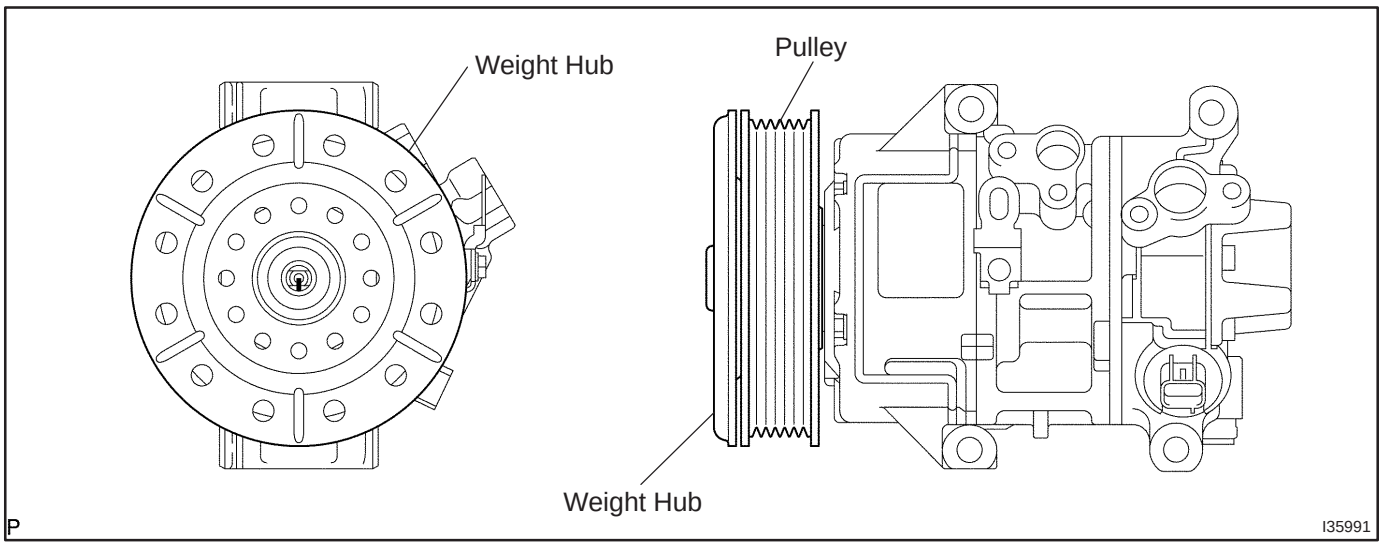
14. WARM UP ENGINE (See page 55–38)

15. INSPECT LEAKAGE OF REFRIGERANT (See page 55–38)

W/PULLEY COMPRESSOR ASSY (1ZZ–FE)

550YZ–01

ON–VEHICLE INSPECTION



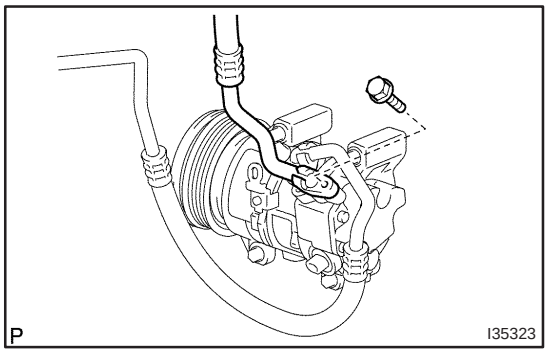
1. INSPECT W/PULLEY COMPRESSOR ASSY

(a) Check the operation.

(1) Start the engine.

(2) Inspect the weight hub.

Standard: The weight hub rotates along with the pulley

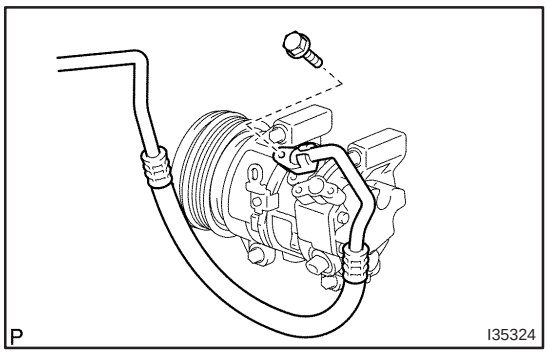


550Z0–01

REPLACEMENT

1. DISCHARGE REFRIGERANT FROM REFRIGERATION SYSTEM (See page 55–38)

SST 07110–58060 (07117–58080, 07117–58090, 07117–78050, 07117–88060, 07117–88070, 07117–88080)



2. DISCONNECT COOLER REFRIGERANT SUCTION HOSE NO.1

(a) Remove the bolt and disconnect the cooler refrigerant suction hose No.1 from the w/pulley compressor assy.

(b) Remove the O–ring from the cooler refrigerant suction hose No.1.

NOTICE:

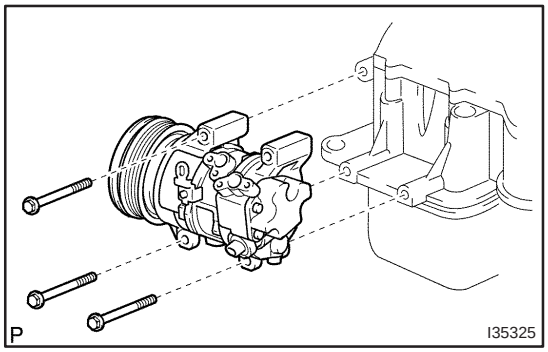
Seal the opening of the disconnected parts using vinyl tape to prevent moisture and foreign matters from entering.

3. DISCONNECT COOLER REFRIGERANT DISCHARGE HOSE NO.1

(a) Remove the bolt and disconnect the cooler refrigerant discharge hose No.1 from the w/pulley compressor assy.

(b) Remove the O–ring from the cooler refrigerant discharge hose No.1.

NOTICE:



Seal the opening of the disconnected parts using vinyl tape to prevent moisture and foreign matters from entering.

4. REMOVE RADIATOR SUPPORT OPENING COVER (See page 14–5)

5. REMOVE ENGINE ROOM COVER SIDE (See page 14–5)

6. REMOVE ENGINE UNDER COVER SUB–ASSY NO.1 (See page 14–5)

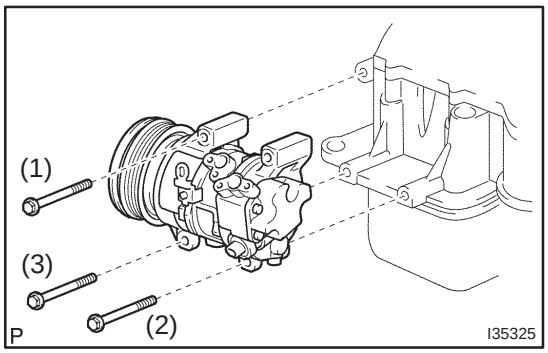
7. REMOVE FAN AND GENERATOR V BELT (See page 14–5)

8. REMOVE W/PULLEY COMPRESSOR ASSY

(a) Disconnect the connector.

(b) Remove the 3 bolts and the w/pulley compressor assy.

9. INSPECT COMPRESSOR OIL



(a) When replacing the w/pulley compressor assy with a new one, after gradually removing the refrigerant gas from the service valve, drain the following amount of oil from the new w/pulley compressor assy before installation.

Standard:

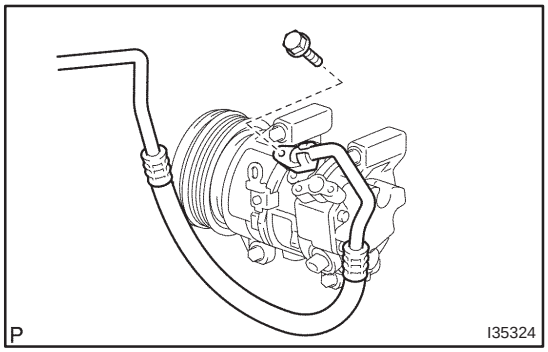
(Oil capacity inside new w/pulley compressor assy: 90 + 15 cc (3.0 + 0.5 fl. oz.)) – (Remaining oil amount in the removed w/pulley compressor assy) = (Oil amount to be removed when replacing)

NOTICE:

- **When checking the compressor oil level, observe the precautions on the cooler removal/installation.**
- **Since compressor oil remains in the pipes of the vehicle, if a new w/pulley compressor assy is installed without removing some oil inside, the oil amount becomes excessive, preventing heat exchange in the refrigerant cycle and causing refrigerant failure.**
- **If the remaining oil in the removed w/pulley compressor assy is too small in volume, check for oil leakage.**
- **Be sure to use ND–OIL 8 for compressor oil.**

10. INSTALL W/PULLEY COMPRESSOR ASSY

(a) Install the w/pulley compressor assy with the 3 bolts.
Torque: 29 N·m (300 kgf·cm, 21 ft·lbf)

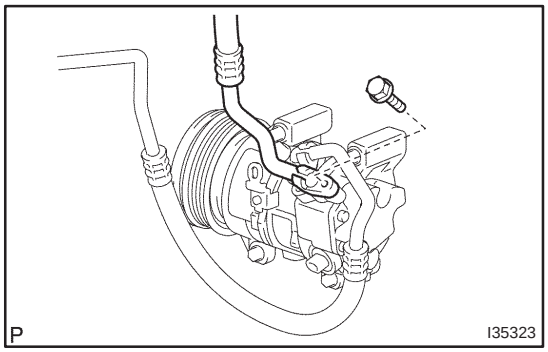


NOTICE:

Tighten the bolts in the order shown in the illustration to install the w/pulley compressor assy.

(b) Connect the connector.

11. INSTALL COOLER REFRIGERANT DISCHARGE HOSE NO.1



(a) Remove the attached vinyl tape from the hose.
(b) Sufficiently apply compressor oil to a new O–ring and the fitting surface of the w/pulley compressor assy.
Compressor oil: ND–OIL 8 or equivalent
(c) Install the O–ring on the cooler refrigerant discharge hose No.1.

(d) Install the cooler refrigerant discharge hose No.1 on the w/pulley compressor assy with the bolt.
Torque: 9.8 N·m (100 kgf·cm, 87 in.·lbf)

12. INSTALL COOLER REFRIGERANT SUCTION HOSE NO.1

(a) Remove the attached vinyl tape from the hose.
(b) Sufficiently apply compressor oil to a new O–ring and the fitting surface of the w/pulley compressor assy.
Compressor oil: ND–OIL 8 or equivalent
(c) Install the O–ring on the cooler refrigerant suction hose No.1.

(d) Install the cooler refrigerant suction hose No.1 on the w/ pulley compressor assy with the bolt.
Torque: 9.8 N·m (100 kgf·cm, 87 in.·lbf)

13. CHARGE REFRIGERANT (See page 55–38)
SST 07110–58060 (07117–58060, 07117–58070, 07117–58080, 07117–58090, 07117–78050, 07117–88060, 07117–88070, 07117–88080)
Specified amount: 440 ± 30 g (15.51 ± 1.06 oz.)

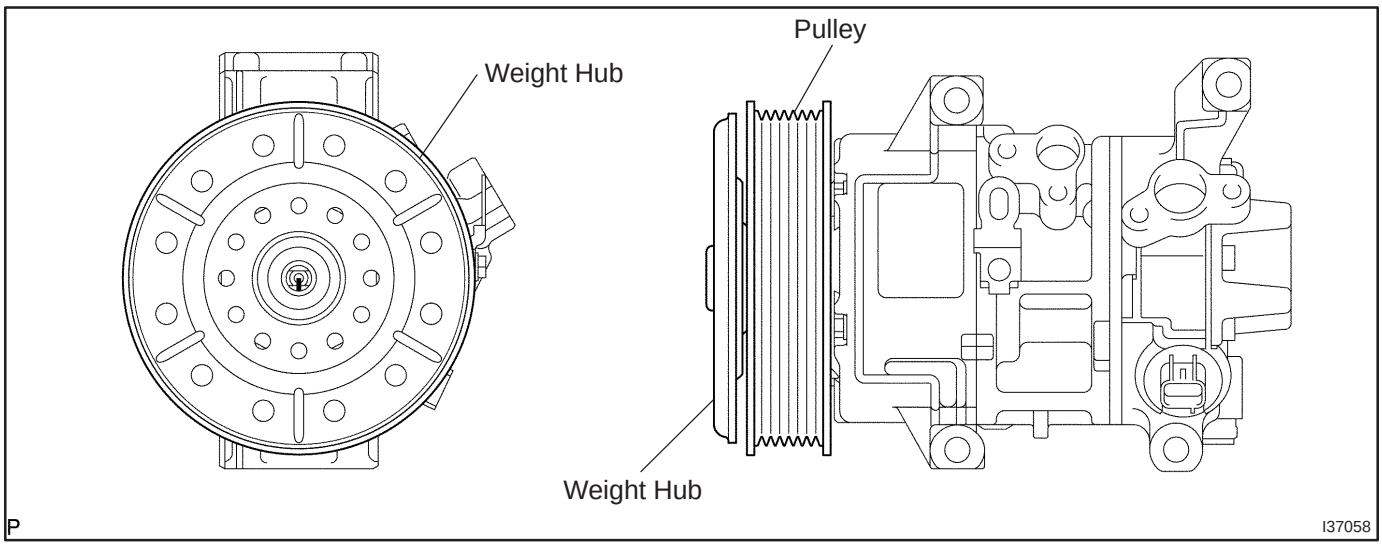
14. WARM UP ENGINE (See page 55–38)

15. INSPECT LEAKAGE OF REFRIGERANT (See page 55–38)

W/PULLEY COMPRESSOR ASSY (1AZ–FSE)

550Z1–01

ON–VEHICLE INSPECTION



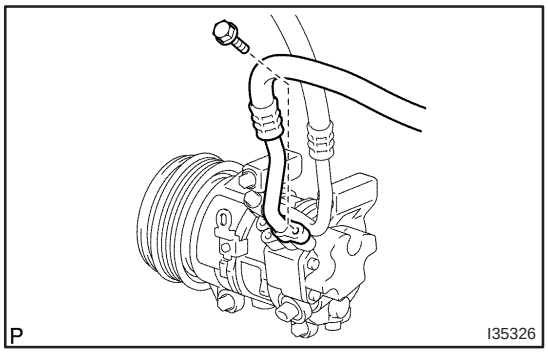
1. INSPECT W/PULLEY COMPRESSOR ASSY

(a) Check the operation.

(1) Start the engine.

(2) Inspect the weight hub.

Standard: The weight hub rotates along with the pulley

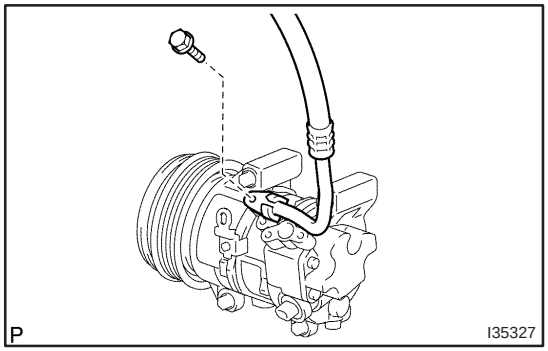


550Z2–01

REPLACEMENT

1. DISCHARGE REFRIGERANT FROM REFRIGERATION SYSTEM (See page 55–38)

SST 07110–58060 (07117–58080, 07117–58090, 07117–78050, 07117–88060, 07117–88070, 07117–88080)



2. DISCONNECT COOLER REFRIGERANT SUCTION HOSE NO.1

(a) Remove the bolt and disconnect the cooler refrigerant suction hose No.1 from the w/pulley compressor assy.

(b) Remove the O–ring from the cooler refrigerant suction hose No.1.

NOTICE:

Seal the opening of the disconnected parts using vinyl tape to prevent moisture and foreign matters from entering.

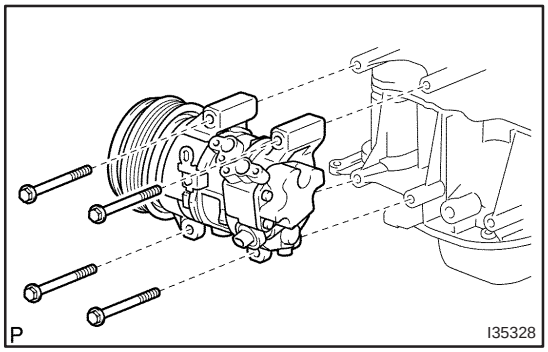
3. DISCONNECT COOLER REFRIGERANT DISCHARGE HOSE NO.1

(a) Remove the bolt and disconnect the cooler refrigerant discharge hose No.1 from the w/pulley compressor assy.

(b) Remove the O–ring from the cooler refrigerant discharge hose No.1.

NOTICE:

Seal the opening of the disconnected parts using vinyl tape to prevent moisture and foreign matters from entering.



4. REMOVE RADIATOR SUPPORT OPENING COVER (See page 14–185)

5. REMOVE ENGINE ROOM COVER SIDE (See page 14–185)

6. REMOVE ENGINE UNDER COVER RH (See page 14–185)

7. REMOVE FAN AND GENERATOR V BELT (See page 14–185)

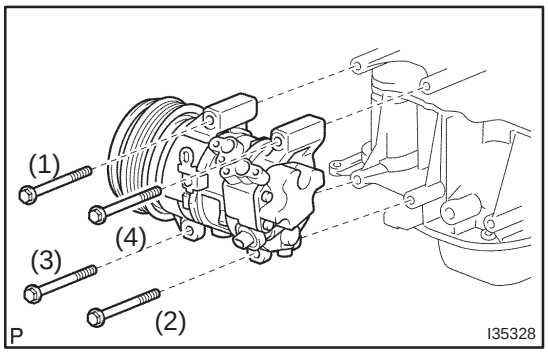
SST 09249–63010

8. REMOVE W/PULLEY COMPRESSOR ASSY

(a) Disconnect the connector.

(b) Remove the 4 bolts and the w/pulley compressor assy.

9. INSPECT COMPRESSOR OIL



(a) When replacing the w/pulley compressor assy with a new one, after gradually removing the refrigerant gas from the service valve, drain the following amount of oil from the new w/pulley compressor assy before installation.

Standard:

(Oil capacity inside new w/pulley compressor assy: 90 + 15 cc (3.0 + 0.5 fl. oz.)) – (Remaining oil amount in the removed w/pulley compressor assy) = (Oil amount to be removed when replacing)

NOTICE:

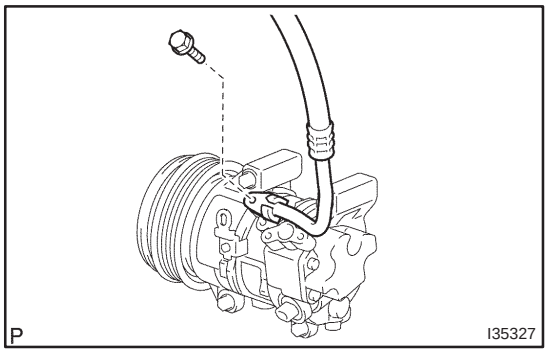
- **When checking the compressor oil level, observe the precautions on the cooler removal/installation.**
- **Since compressor oil remains in the pipes of the vehicle, if a new w/pulley compressor assy is installed without removing some oil inside, the oil amount becomes excessive, preventing heat exchange in the refrigerant cycle and causing refrigerant failure.**
- **If the remaining oil in the removed w/pulley compressor assy is too small in volume, check for oil leakage.**
- **Be sure to use ND–OIL 8 for compressor oil.**

10. INSTALL W/PULLEY COMPRESSOR ASSY

(a) Install the w/pulley compressor assy with the 4 bolts.
Torque: 29 N·m (300 kgf·cm, 21 ft·lbf)

NOTICE:

Tighten the bolts in the order shown in the illustration to install the w/pulley compressor assy.

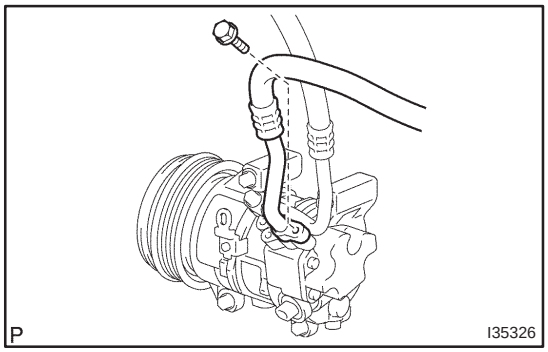


(b) Connect the connector.

11. INSTALL FAN AND GENERATOR V BELT (See page 14–185)

SST 09249–63010

12. INSTALL COOLER REFRIGERANT DISCHARGE HOSE NO.1



(a) Remove the attached vinyl tape from the hose.
(b) Sufficiently apply compressor oil to a new O–ring and the fitting surface of the w/pulley compressor assy.
Compressor oil: ND–OIL 8 or equivalent
(c) Install the O–ring on the cooler refrigerant discharge hose No.1.

(d) Install the cooler refrigerant discharge hose No.1 on the w/pulley compressor assy with the bolt.
Torque: 9.8 N·m (100 kgf·cm, 87 in.·lbf)

13. INSTALL COOLER REFRIGERANT SUCTION HOSE NO.1

(a) Remove the attached vinyl tape from the hose.
(b) Sufficiently apply compressor oil to a new O–ring and the fitting surface of the w/pulley compressor assy.
Compressor oil: ND–OIL 8 or equivalent
(c) Install the O–ring on the cooler refrigerant suction hose No.1.

(d) Install the cooler refrigerant suction hose No.1 on the w/ pulley compressor assy with the bolt.
Torque: 9.8 N·m (100 kgf·cm, 87 in.·lbf)

14. CHARGE REFRIGERANT (See page 55–38)
SST 07110–58060 (07117–58060, 07117–58070, 07117–58080, 07117–58090, 07117–78050, 07117–88060, 07117–88070, 07117–88080)
Specified amount: 440 ± 30 g (15.51 ± 1.06 oz.)

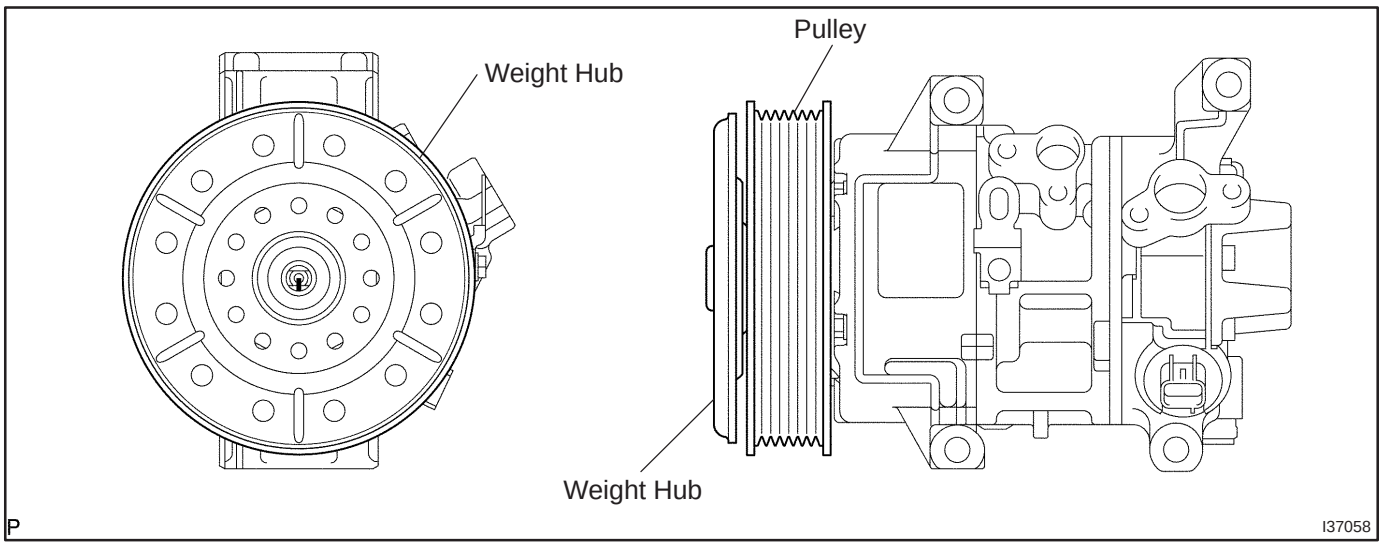
15. WARM UP ENGINE (See page 55–38)

16. INSPECT LEAKAGE OF REFRIGERANT (See page 55–38)

W/PULLEY COMPRESSOR ASSY (1AZ–FE)

550Z3–01

ON–VEHICLE INSPECTION



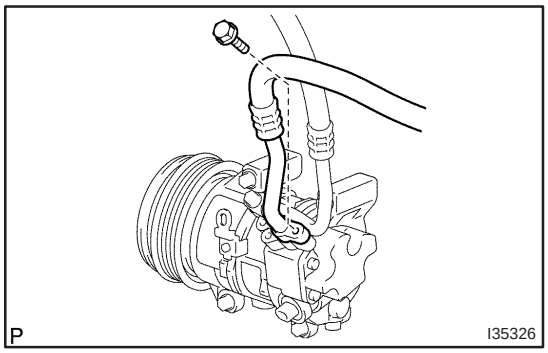
1. INSPECT W/PULLEY COMPRESSOR ASSY

(a) Check the operation.

(1) Start the engine.

(2) Inspect the weight hub.

Standard: The weight hub rotates along with the pulley

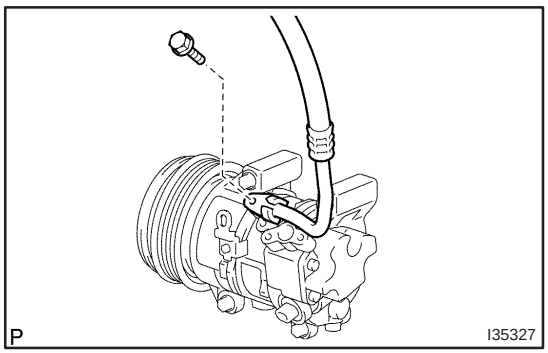


550Z4–01

REPLACEMENT

1. DISCHARGE REFRIGERANT FROM REFRIGERATION SYSTEM (See page 55–38)

SST 07110–58060 (07117–58080, 07117–58090, 07117–78050, 07117–88060, 07117–88070, 07117–88080)



2. DISCONNECT COOLER REFRIGERANT SUCTION HOSE NO.1

(a) Remove the bolt and disconnect the cooler refrigerant suction hose No.1 from the w/pulley compressor assy.

(b) Remove the O–ring from the cooler refrigerant suction hose No.1.

NOTICE:

Seal the opening of the disconnected parts using vinyl tape to prevent moisture and foreign matters from entering.

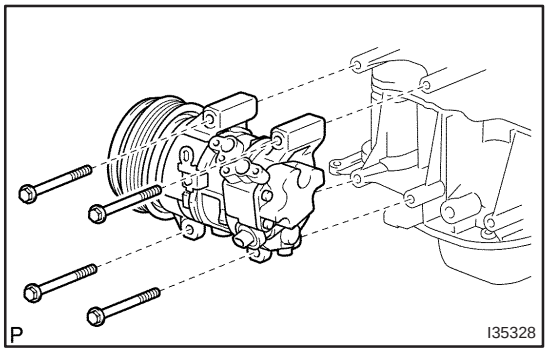
3. DISCONNECT COOLER REFRIGERANT DISCHARGE HOSE NO.1

(a) Remove the bolt and disconnect the cooler refrigerant discharge hose No.1 from the w/pulley compressor assy.

(b) Remove the O–ring from the cooler refrigerant discharge hose No.1.

NOTICE:

Seal the opening of the disconnected parts using vinyl tape to prevent moisture and foreign matters from entering.



4. REMOVE RADIATOR SUPPORT OPENING COVER (See page 14–105)

5. REMOVE ENGINE ROOM COVER SIDE (See page 14–105)

6. REMOVE ENGINE UNDER COVER RH (See page 14–105)

7. REMOVE FAN AND GENERATOR V BELT (See page 14–105)

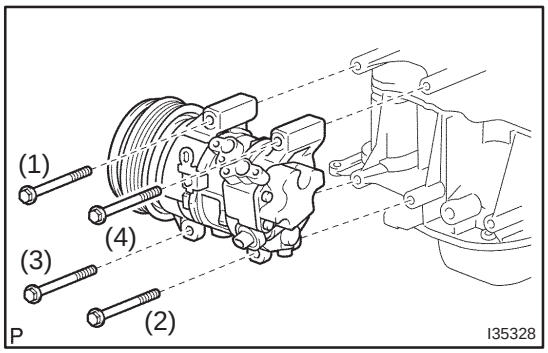
SST 09249–63010

8. REMOVE W/PULLEY COMPRESSOR ASSY

(a) Disconnect the connector.

(b) Remove the 4 bolts and the w/pulley compressor assy.

9. INSPECT COMPRESSOR OIL



(a) When replacing the w/pulley compressor assy with a new one, after gradually removing the refrigerant gas from the service valve, drain the following amount of oil from the new w/pulley compressor assy before installation.

Standard:

(Oil capacity inside new w/pulley compressor assy: 90 + 15 cc (3.0 + 0.5 fl. oz.)) – (Remaining oil amount in the removed w/pulley compressor assy) = (Oil amount to be removed when replacing)

NOTICE:

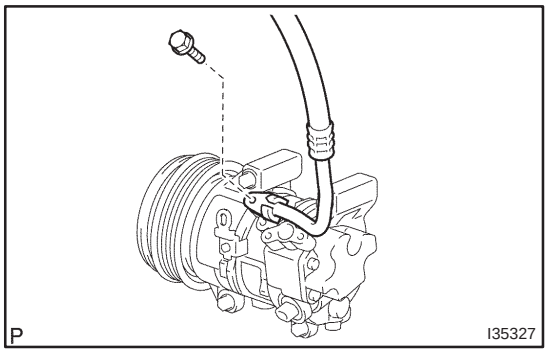
- **When checking the compressor oil level, observe the precautions on the cooler removal/installation.**
- **Since compressor oil remains in the pipes of the vehicle, if a new w/pulley compressor assy is installed without removing some oil inside, the oil amount becomes excessive, preventing heat exchange in the refrigerant cycle and causing refrigerant failure.**
- **If the remaining oil in the removed w/pulley compressor assy is too small in volume, check for oil leakage.**
- **Be sure to use ND–OIL 8 for compressor oil.**

10. INSTALL W/PULLEY COMPRESSOR ASSY

(a) Install the w/pulley compressor assy with the 4 bolts.
Torque: 29 N·m (300 kgf·cm, 21 ft·lbf)

NOTICE:

Tighten the bolts in the order shown in the illustration to install the w/pulley compressor assy.

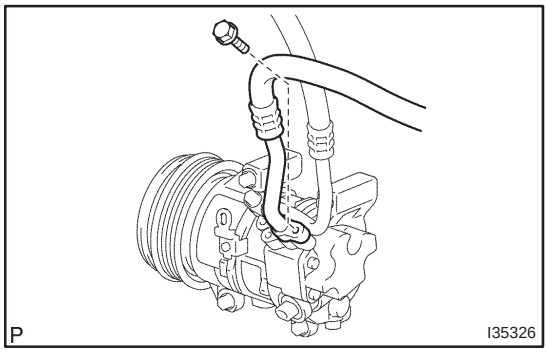


(b) Connect the connector.

11. INSTALL FAN AND GENERATOR V BELT (See page 14–105)

SST 09249–63010

12. INSTALL COOLER REFRIGERANT DISCHARGE HOSE NO.1



(a) Remove the attached vinyl tape from the hose.
(b) Sufficiently apply compressor oil to a new O–ring and the fitting surface of the w/pulley compressor assy.
Compressor oil: ND–OIL 8 or equivalent
(c) Install the O–ring on the cooler refrigerant discharge hose No.1.

(d) Install the cooler refrigerant discharge hose No.1 on the w/pulley compressor assy with the bolt.
Torque: 9.8 N·m (100 kgf·cm, 87 in.·lbf)

13. INSTALL COOLER REFRIGERANT SUCTION HOSE NO.1

(a) Remove the attached vinyl tape from the hose.
(b) Sufficiently apply compressor oil to a new O–ring and the fitting surface of the w/pulley compressor assy.
Compressor oil: ND–OIL 8 or equivalent
(c) Install the O–ring on the cooler refrigerant suction hose No.1.

(d) Install the cooler refrigerant suction hose No.1 on the w/ pulley compressor assy with the bolt.
Torque: 9.8 N·m (100 kgf·cm, 87 in.·lbf)

14. CHARGE REFRIGERANT (See page 55–38)
SST 07110–58060 (07117–58060, 07117–58070, 07117–58080, 07117–58090, 07117–78050, 07117–88060, 07117–88070, 07117–88080)

15. WARM UP ENGINE (See page 55–38)

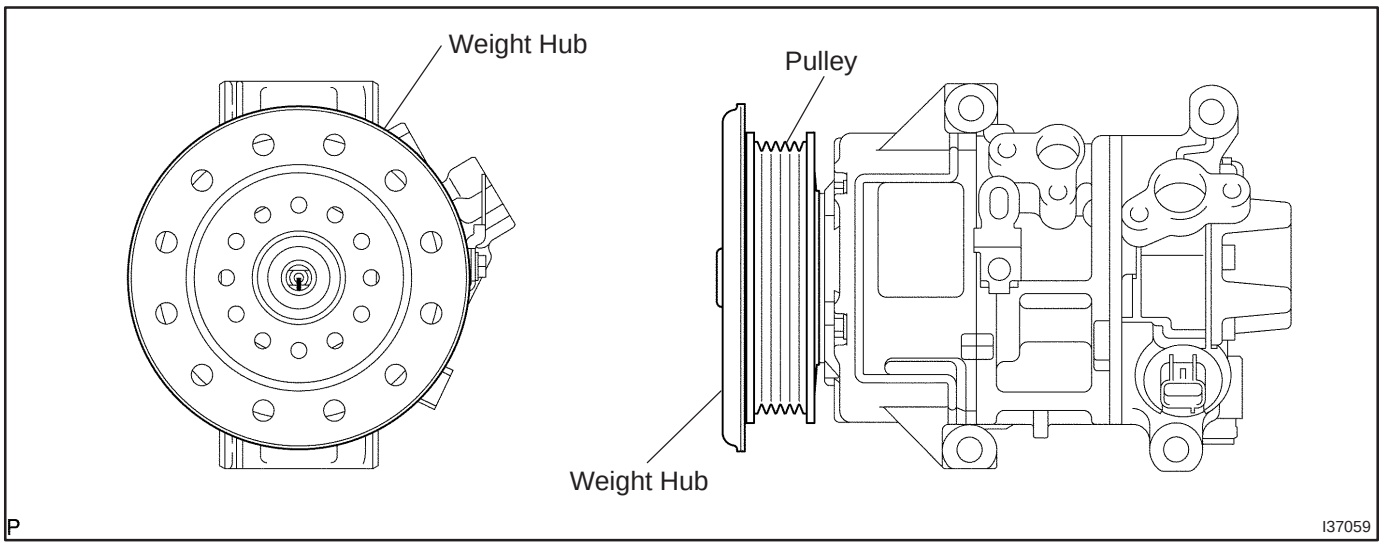
W/PULLEY COMPRESSOR ASSY (1CD–FTV)

550Z5–01

ON–VEHICLE INSPECTION



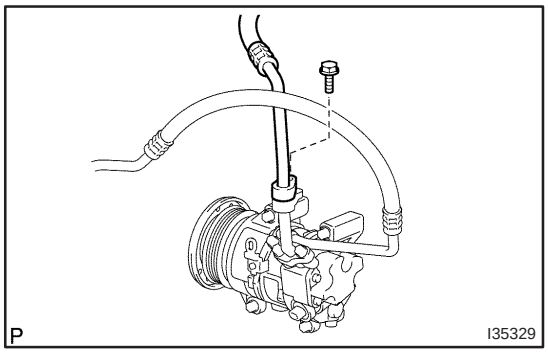
1. INSPECT W/PULLEY COMPRESSOR ASSY

(a) Check the operation.

(1) Start the engine.

(2) Inspect the weight hub.

Standard: The weight hub rotates along with the pulley

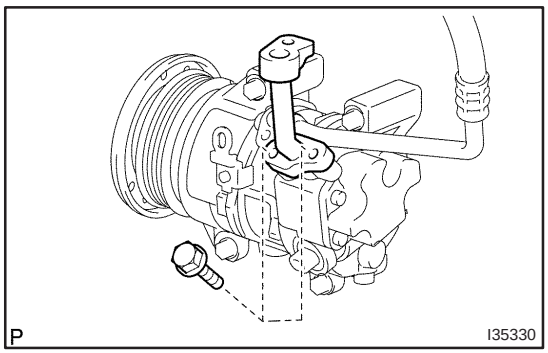


550Z6–01

REPLACEMENT

1. DISCHARGE REFRIGERANT FROM REFRIGERATION SYSTEM (See page 55–38)

SST 07110–58060 (07117–58080, 07117–58090, 07117–78050, 07117–88060, 07117–88070, 07117–88080)



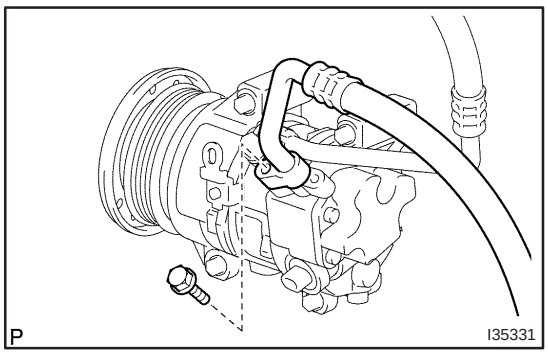
2. DISCONNECT COOLER REFRIGERANT SUCTION HOSE NO.1 (LHD STEERING POSITION TYPE)

(a) Remove the bolt and disconnect the cooler refrigerant suction hose No.1 from the suction servic valve.

(b) Remove the O–ring from the cooler refrigerant suction hose No.1.

NOTICE:

Seal the opening of the disconnected parts using vinyl tape to prevent moisture and foreign matters from entering.



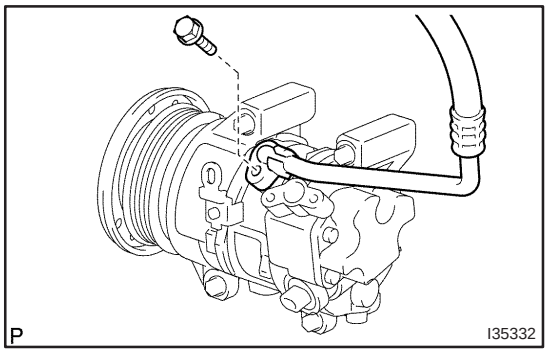
3. REMOVE SUCTION SERVIC VALVE (LHD STEERING POSITION TYPE)

(a) Remove the 2 bolts and disconnect the suction service valve from the w/pulley compressor assy.

(b) Remove the O–ring from the suction service valve.

NOTICE:

Seal the opening of the disconnected parts using vinyl tape to prevent moisture and foreign matters from entering.



4. DISCONNECT COOLER REFRIGERANT SUCTION HOSE NO.1 (RHD STEERING POSITION TYPE)

(a) Remove the bolt and disconnect the cooler refrigerant suction hose No.1 from the w/pulley compressor assy.

(b) Remove the O–ring from the cooler refrigerant suction hose No.1.

NOTICE:

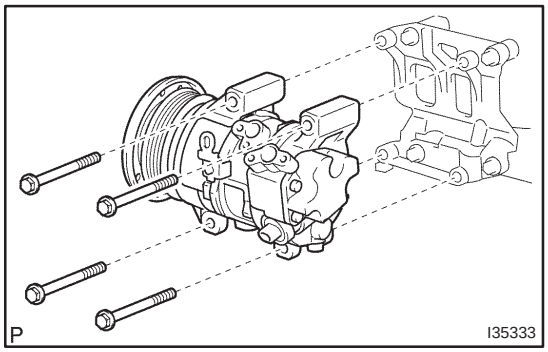
Seal the opening of the disconnected parts using vinyl tape to prevent moisture and foreign matters from entering.

5. DISCONNECT COOLER REFRIGERANT DISCHARGE HOSE NO.1

(a) Remove the bolt and disconnect the cooler refrigerant discharge hose No.1 from the w/pulley compressor assy.

(b) Remove the O–ring from the cooler refrigerant discharge hose No.1.

NOTICE:



Seal the opening of the disconnected parts using vinyl tape to prevent moisture and foreign matters from entering.

6. REMOVE RADIATOR SUPPORT OPENING COVER

7. REMOVE ENGINE ROOM COVER SIDE

8. REMOVE ENGINE UNDER COVER RH

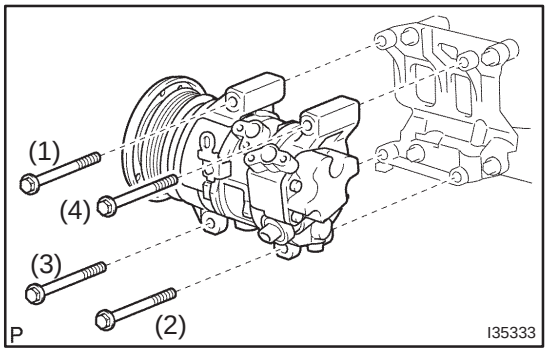
9. REMOVE V (COOLER COMPRESSOR TO CRANKSHAFT PULLEY) BELT NO.1 (See page 55–46)

10. REMOVE W/PULLEY COMPRESSOR ASSY

(a) Disconnect the connector.

(b) Remove the 4 bolts and the w/pulley compressor assy.

11. INSPECT COMPRESSOR OIL



(a) When replacing the w/pulley compressor assy with a new one, after gradually removing the refrigerant gas from the service valve, drain the following amount of oil from the new w/pulley compressor assy before installation.

Standard:

(Oil capacity inside new w/pulley compressor assy: 90 + 15 cc (3.0 + 0.5 fl. oz.)) – (Remaining oil amount in the removed w/pulley compressor assy) = (Oil amount to be removed when replacing)

NOTICE:

- **When checking the compressor oil level, observe the precautions on the cooler removal/installation.**
- **Since compressor oil remains in the pipes of the vehicle, if a new w/pulley compressor assy is installed without removing some oil inside, the oil amount becomes excessive, preventing heat exchange in the refrigerant cycle and causing refrigerant failure.**
- **If the remaining oil in the removed w/pulley compressor assy is too small in volume, check for oil leakage.**
- **Be sure to use ND–OIL 8 for compressor oil.**

12. INSTALL W/PULLEY COMPRESSOR ASSY

(a) Install the w/pulley compressor assy with the 4 bolts.

Torque: 29 N·m (300 kgf·cm, 21 ft·lbf)

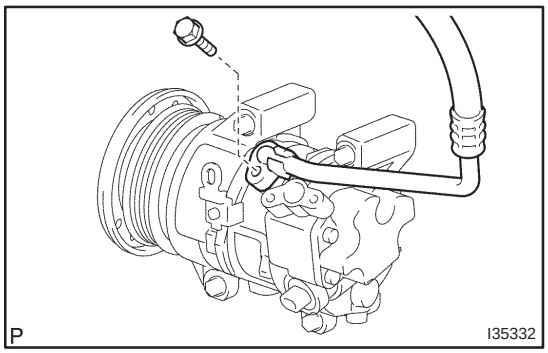
NOTICE:

Tighten the bolts in the order shown in the illustration to install the w/pulley compressor assy.

(b) Connect the connector.

13. INSTALL V (COOLER COMPRESSOR TO CRANKSHAFT PULLEY) BELT NO.1
(See page 55–46)

14. ADJUST V (COOLER COMPRESSOR TO CRANKSHAFT PULLEY) BELT NO.1
(See page 55–46)



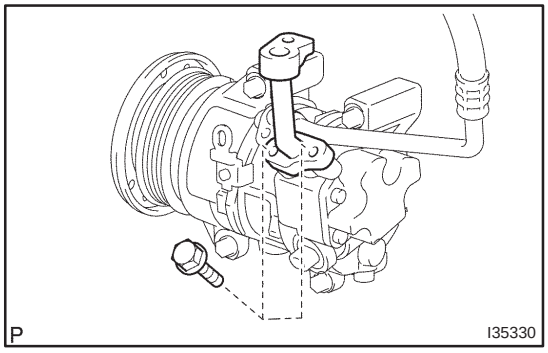
15. FULLY TIGHTEN V (COOLER COMPRESSOR TO CRANKSHAFT PULLEY) BELT NO.1
(See page 55–46)

16. INSTALL COOLER REFRIGERANT DISCHARGE HOSE NO.1

(a) Remove the attached vinyl tape from the hose.

(b) Sufficiently apply compressor oil to a new O–ring and the fitting surface of the w/pulley compressor assy.
Compressor oil: ND–OIL 8 or equivalent

(c) Install the O–ring on the cooler refrigerant discharge hose No.1.



(d) Install the cooler refrigerant discharge hose No.1 on the w/pulley compressor assy with the bolt.
Torque: 9.8 N·m (100 kgf·cm, 87 in.·lbf)

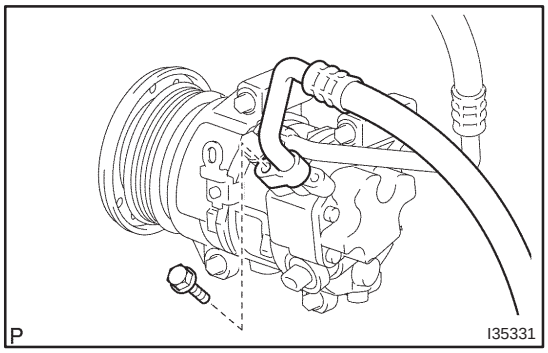
17. INSTALL COOLER REFRIGERANT SUCTION HOSE NO.1 (RHD STEERING POSITION TYPE)

(a) Remove the attached vinyl tape from the hose.

(b) Sufficiently apply compressor oil to a new O–ring and the fitting surface of the w/pulley compressor assy.
Compressor oil: ND–OIL 8 or equivalent

(c) Install the O–ring on the cooler refrigerant suction hose No.1.

(d) Install the cooler refrigerant suction hose No.1 on the w/pulley compressor assy with the bolt.
Torque: 9.8 N·m (100 kgf·cm, 87 in.·lbf)



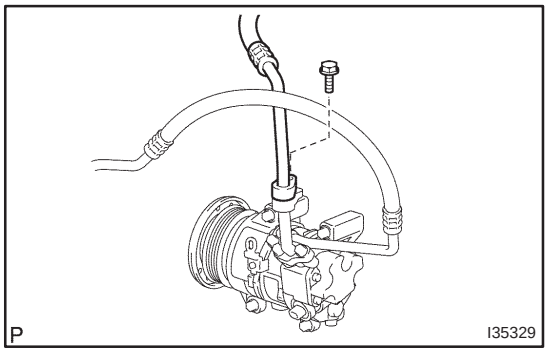
18. INSTALL SUCTION SERVIC VALVE (LHD STEERING POSITION TYPE)

(a) Remove the attached vinyl tape from the hose.

(b) Sufficiently apply compressor oil to a new O–ring and the fitting surface of the w/pulley compressor assy.
Compressor oil: ND–OIL 8 or equivalent

(c) Install the O–ring on the suction service valve.

(d) Install the suction servic valve on the w/pulley compressor assy with the 2 bolts.
Torque: 9.8 N·m (100 kgf·cm, 87 in.·lbf)



19. INSTALL COOLER REFRIGERANT SUCTION HOSE NO.1 (LHD STEERING POSITION TYPE)

(a) Remove the attached vinyl tape from the hose.

(b) Sufficiently apply compressor oil to a new O–ring and the fitting surface of the w/pulley compressor assy.
Compressor oil: ND–OIL 8 or equivalent

(c) Install the O–ring on the cooler refrigerant suction hose No.1.

(d) Install the cooler refrigerant suction hose No.1 on the suction servic valve with the 2 bolts.
Torque: 9.8 N·m (100 kgf·cm, 87 in.·lbf)

20. CHARGE REFRIGERANT (See page 55–38)
SST 07110–58060 (07117–58060, 07117–58070, 07117–58080, 07117–58090, 07117–78050, 07117–88060, 07117–88070, 07117–88080)
Specified amount: 440 ± 30 g (15.51 ± 1.06 oz.)
21. WARM UP ENGINE (See page 55–38)
22. INSPECT LEAKAGE OF REFRIGERANT (See page 55–38)

W/RECEIVER CONDENSER ASSY

550Z9–01

ON–VEHICLE INSPECTION

1. INSPECT W/RECEIVER CONDENSER ASSY

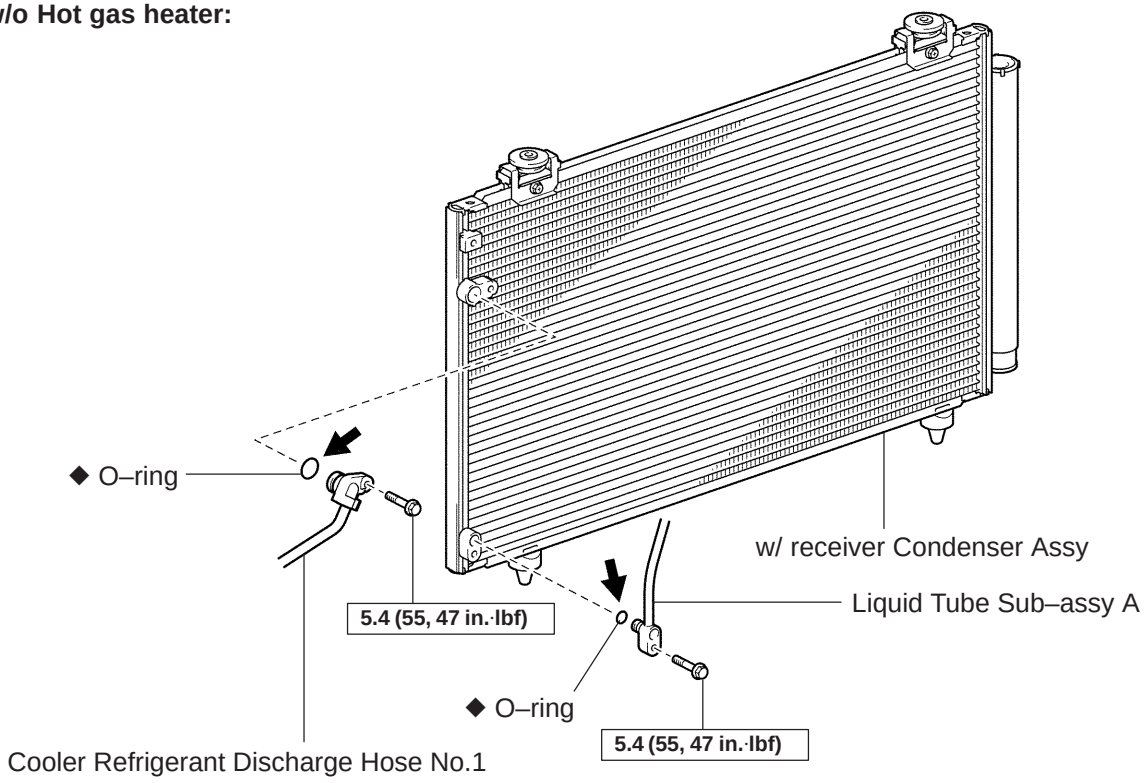
(a) If the fin of the w/receiver condenser assy is dirty, clean it with water and dry it with compressed air.

NOTICE:

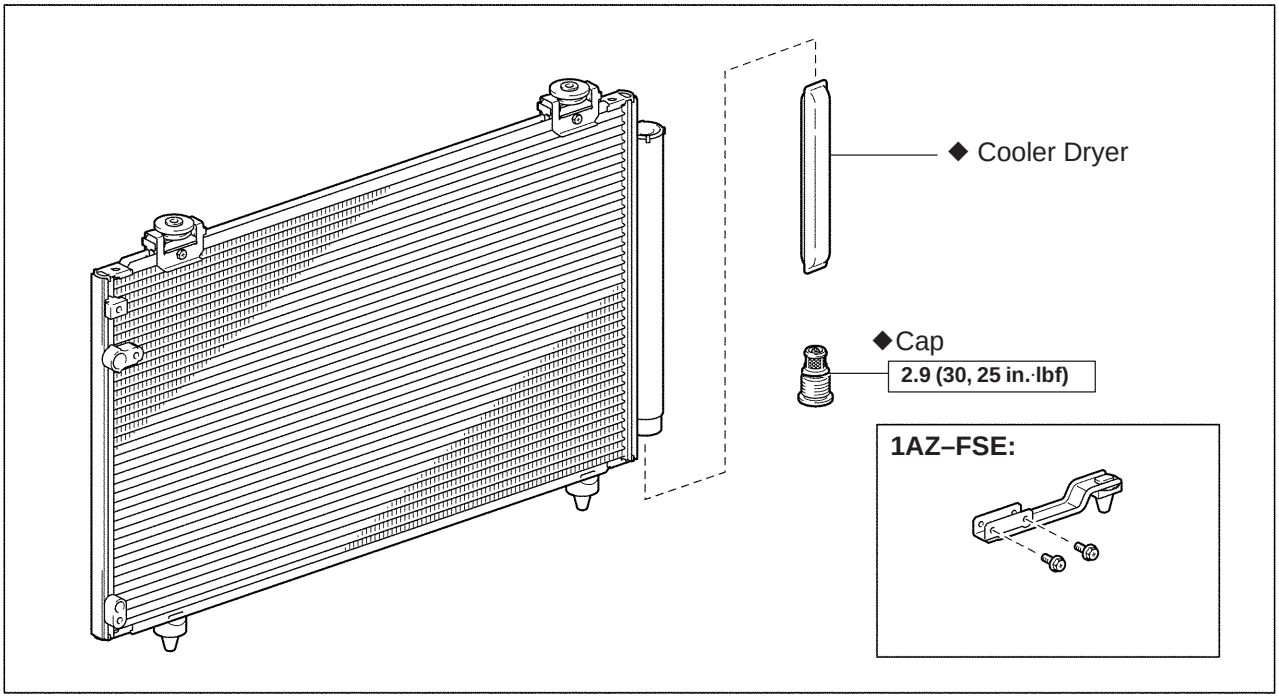
Do not damage the fin of the condenser assy.

(b) If the fin of the w/receiver condenser assy is bent, straighten it using a screwdriver or pliers.

2. INSPECT CONDENSER FOR LEAKAGE OF REFRIGERANT



(a) Using a halogen leak detector, check pipe joints for gas leakage.



(b) If gas leakage is detected in a joint, check the torque of the joint.

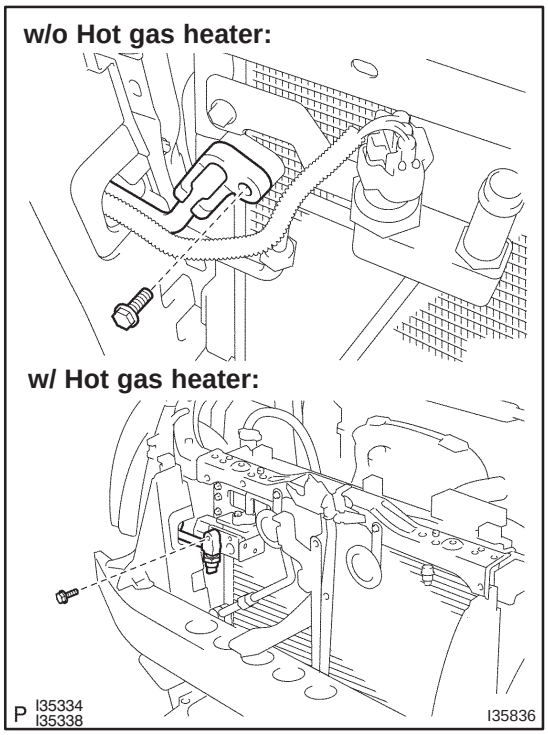
OVERHAUL



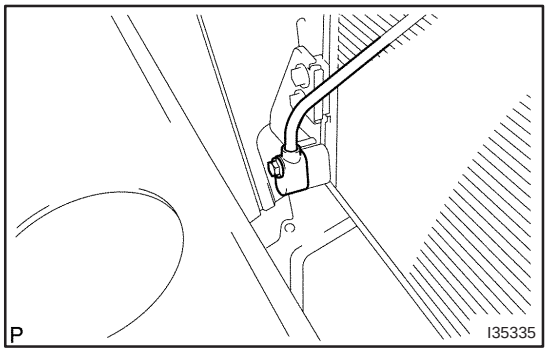
HINT:

COMPONENTS: See page 55–91

1. DISCHARGE REFRIGERANT FROM REFRIGERATION SYSTEM (See page 55–38)

SST 07110–58060 (07117–58080, 07117–58090, 07117–78050, 07117–88060, 07117–88070, 07117–88080)

2. REMOVE FRONT BUMPER COVER (See page 76–3)



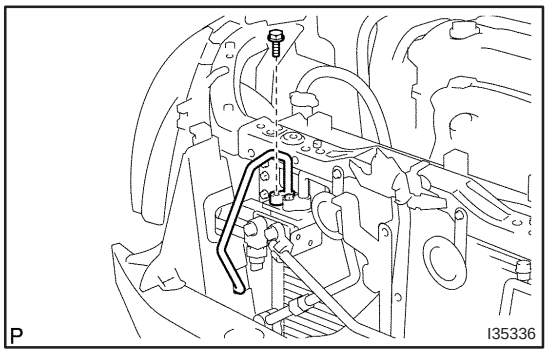
3. DISCONNECT COOLER REFRIGERANT DISCHARGE HOSE NO.1

(a) Remove the bolt and disconnect the cooler refrigerant discharge hose No.1 from the w/ receiver condenser assy.

(b) Remove the O–ring from the cooler refrigerant discharge hose No.1.

NOTICE:

Seal the opening of the disconnected parts using vinyl tape to prevent moisture and foreign matters from entering.



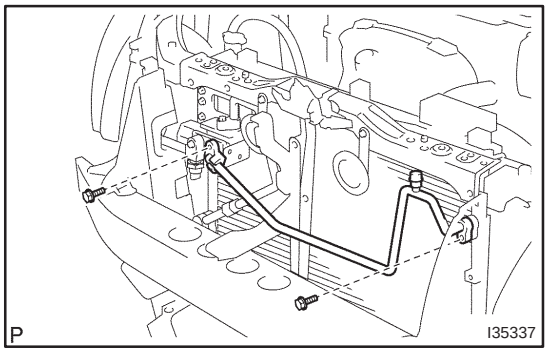
4. DISCONNECT LIQUID TUBE SUB–ASSY A

(a) w/o Hot gas heater:
Remove the bolt and disconnect the liquid tube sub–assy A from the w/ receiver condenser assy.

(b) w/o Hot gas heater:
Remove the O–ring from the liquid tube sub–assy A.

NOTICE:

Seal the opening of the disconnected parts using vinyl tape to prevent moisture and foreign matters from entering.

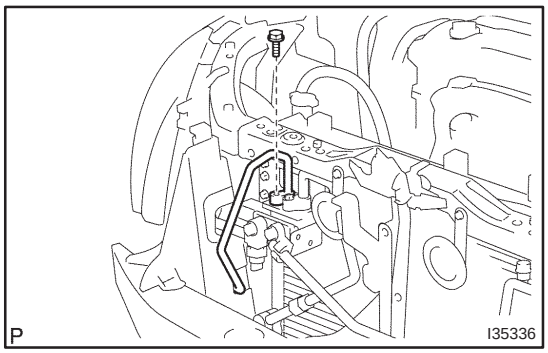


(c) w/ LHD Hot gas heater:
Disconnect the liquid tube sub–assy A assy from the liquid tube sub–assy B.

(d) w/ LHD Hot gas heater:
Remove the O–ring from the liquid tube sub–assy A.

NOTICE:

Seal the opening of the disconnected parts using vinyl tape to prevent moisture and foreign matters from entering.



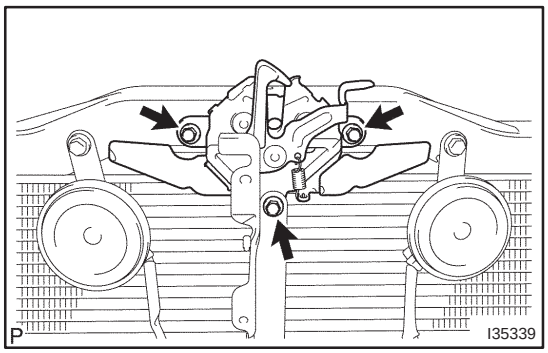
5. REMOVE DISCHARGE TUBE SUB–ASSY (W/ HOT GAS HEATER)

(a) Remove the 2 bolts and disconnect the discharge tube sub–assy from the w/ receiver condenser assy.

(b) Remove 2 O–rings from the discharge tube sub–assy.

NOTICE:

Seal the opening of the disconnected parts using vinyl tape to prevent moisture and foreign matters from entering.



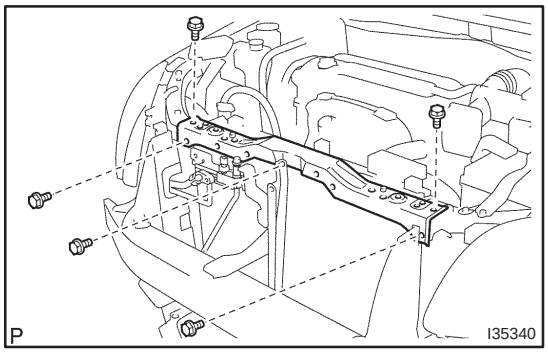
6. REMOVE LIQUID TUBE SUB–ASSY B (RHD(1CD–FTV) STEERING POSITION TYPE)

(a) Remove the bolt and disconnect the liquid tube sub–assy B from w/ receiver condenser assy.

(b) Remove the O–ring from the liquid tube sub–assy B.

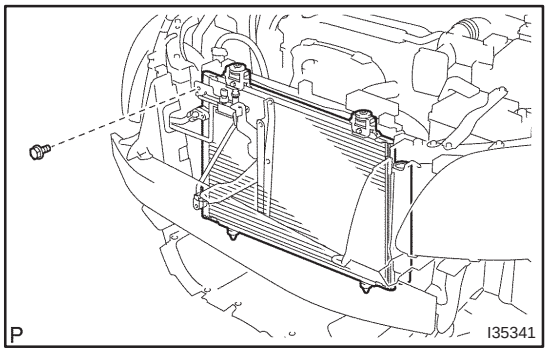
NOTICE:

Seal the opening of the disconnected parts using vinyl tape to prevent moisture and foreign matters from entering.



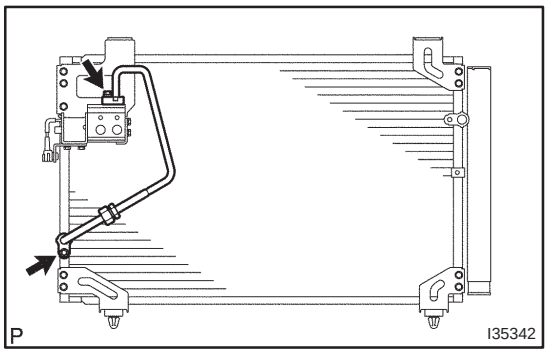
7. REMOVE HOOD LOCK ASSY

(a) Remove the 3 bolts and the hood lock assy.



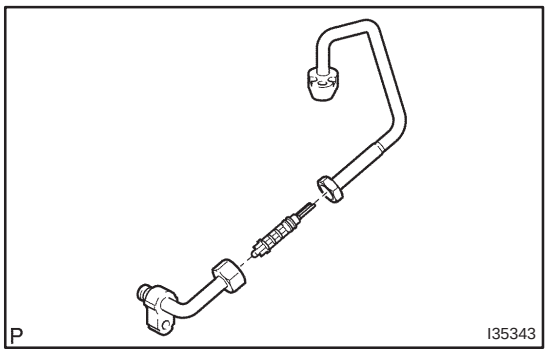
8. REMOVE HIGH PITCHED HORN ASSY (See page 69–5)

9. REMOVE LOW PITCHED HORN ASSY (See page 69–4)



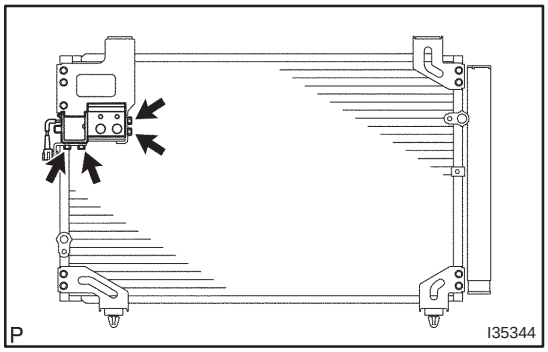
10. REMOVE HOOD LOCK SUPPORT BRACE

(a) Remove the 5 bolts and the hood lock support brace.



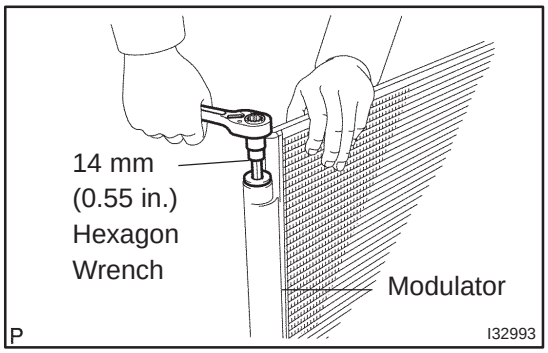
11. REMOVE W/RECEIVER CONDENSER ASSY

(a) Remove the bolt and the w/ receiver condenser assy.



12. REMOVE DISCHARGE TUBE (W/ HOT GAS HEATER)

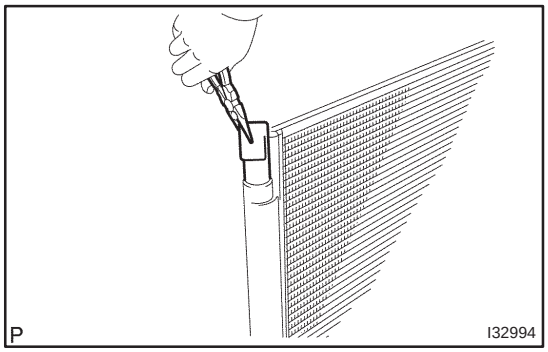
(a) Remove the 2 bolts and the discharge tube.



13. REMOVE REFRIGERANT FILTER (W/ HOT GAS HEATER)

(a) Disconnect the discharge tube and remove the refrigerant filter.

14. REMOVE MAGNET VALVE ASSY (W/ HOT GAS HEATER)

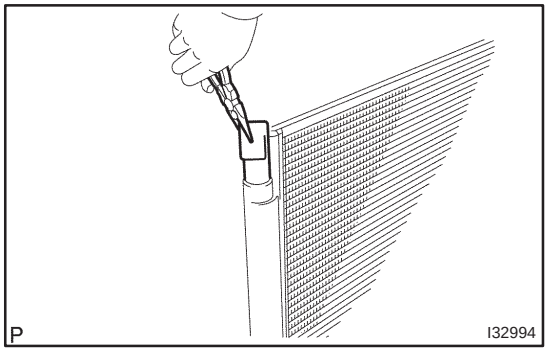


(a) Remove the 4 bolts and the magnet valve assy.

15. REMOVE COOLER DRYER (W/O HOT GAS HEATER)

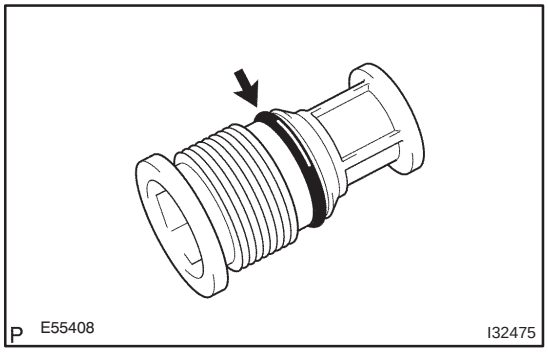
(a) 1AZ–FSE:
Remove the 2 bolts and bracket.

(b) Using a hexagon wrench 14 mm (0.55 in.), remove the cap from the modulator.



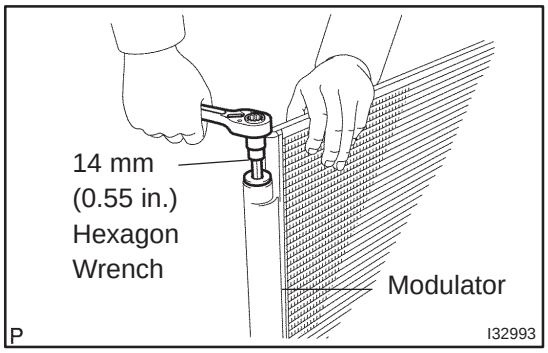
(c) Using needle nose pliers, remove the cooler dryer.

16. REMOVE COOLER CONDENSER CUSHION NO.1



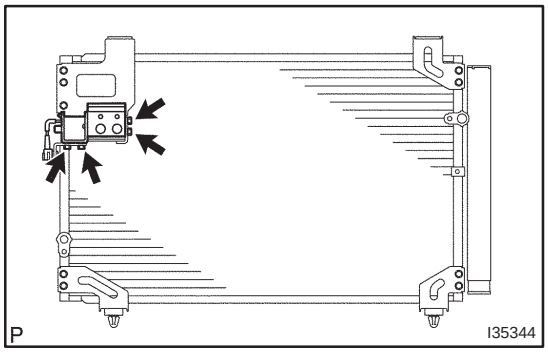
17. REMOVE COOLER CONDENSER CUSHION NO.2

18. REMOVE CONDENSER BRACKET COLLAR NO.1

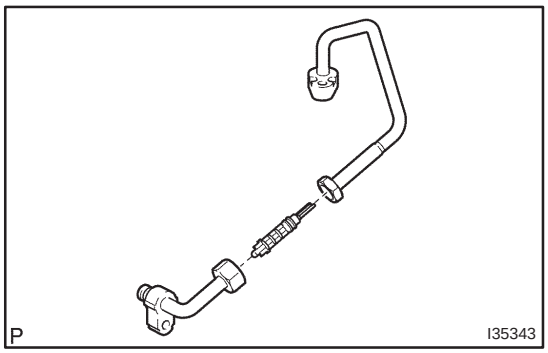


19. INSTALL COOLER DRYER (W/O HOT GAS HEATER)

(a) Using needle nose pliers, install the new cooler dryer.

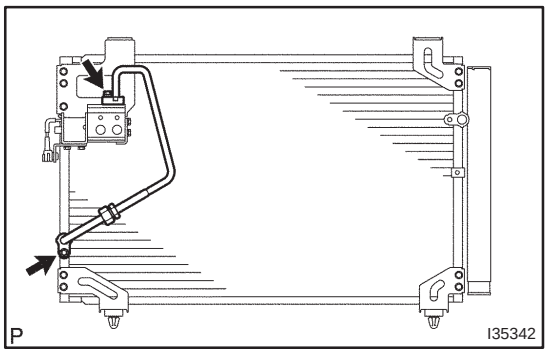


(b) Sufficiently apply compressor oil to the fitting surfaces of the O–ring.
Compressor oil: ND–OIL 8 or equivalent



(c) Using a hexagon wrench 14 mm (0.55 in.), install the new cap on the modulator.
Torque: 2.9 N·m (30 kgf·cm, 25 in.·lbf)

(d) 1AZ–FSE:
Install the bracket with the 2 bolts.

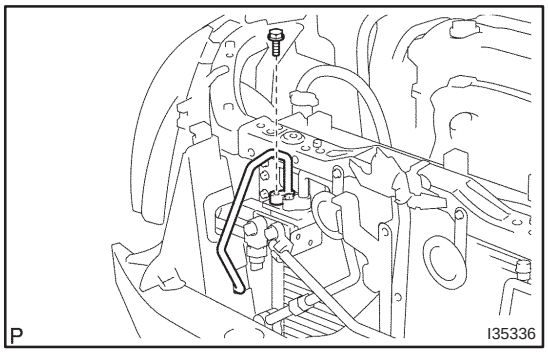


20. INSTALL MAGNET VALVE ASSY (W/ HOT GAS HEATER)

(a) Install the magnet valve assy with the 4 bolts.
Torque: 3.4 N·m (35 kgf·cm, 30 in.·lbf)

21. INSTALL REFRIGERANT FILTER (W/ HOT GAS HEATER)

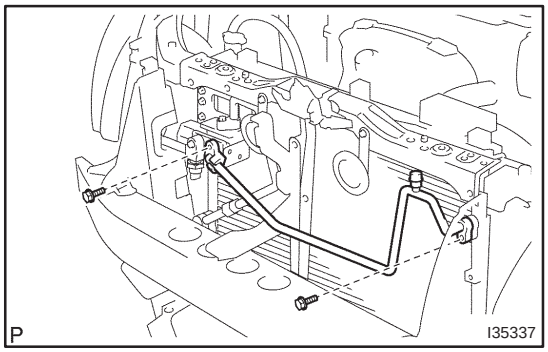
(a) Install the refrigerant filter to the discharge tube.



22. INSTALL DISCHARGE TUBE (W/ HOT GAS HEATER)

(a) Install the discharge tube with the 2 bolts.
Torque: 5.4 N·m (55 kgf·cm, 47 in.·lbf)

23. INSTALL LIQUID TUBE SUB–ASSY B (RHD(1CD–FTV) STEERING POSITION TYPE)



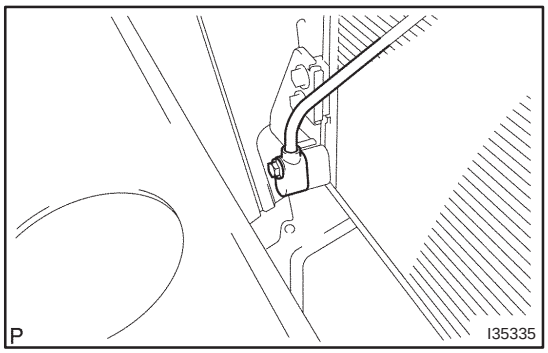
(a) Remove the attached vinyl tape from the tube and the connecting part of the w/ receiver condenser assy.
(b) Sufficiently apply compressor oil to a new O–ring and the fitting surface of the pipe joint.
Compressor oil: ND–OIL 8 or equivalent
(c) Install the O–ring on the liquid tube sub–assy B.

(d) Install the liquid tube sub–assy B on the w/ receiver condenser assy with the bolt.
Torque: 5.4 N·m (55 kgf·cm, 47 in.·lbf)

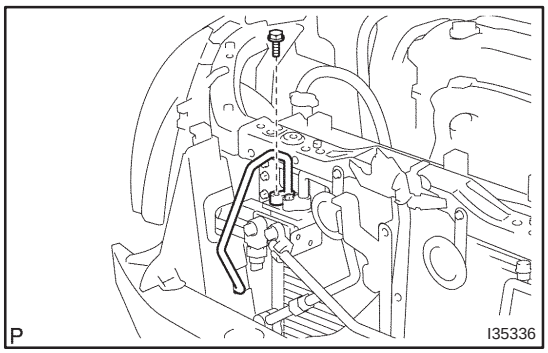
24. INSTALL DISCHARGE TUBE SUB–ASSY (W/ HOT GAS HEATER)

(a) Remove the attached vinyl tape from the tube and the connecting part of the w/ receiver condenser assy.
(b) Sufficiently apply compressor oil to a new 2 O–rings and the fitting surface of the pipe joint.
Compressor oil: ND–OIL 8 or equivalent
(c) Install the O–ring on the discharge tube sub–assy.

(d) Install the discharge tube sub–assy on the w/ receiver condenser assy with the bolt.
Torque: 5.4 N·m (55 kgf·cm, 47 in.·lbf)



25. INSTALL LIQUID TUBE SUB–ASSY A

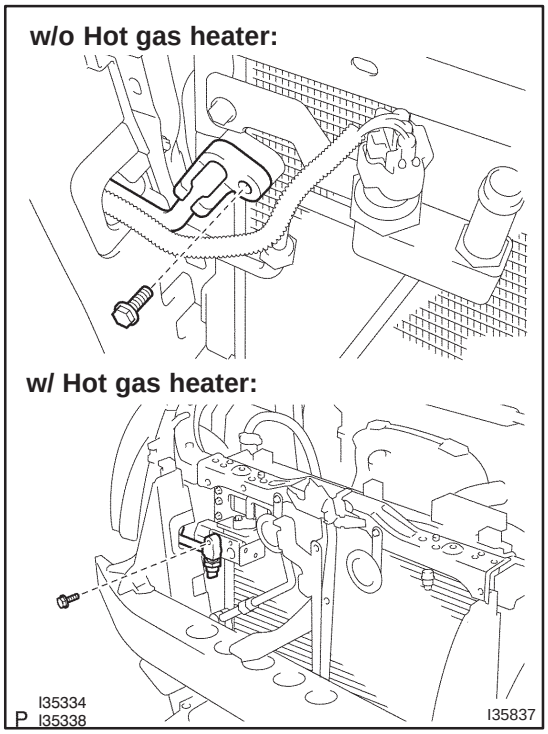


(a) Remove the attached vinyl tape from the tube and the connecting part of the w/ receiver condenser assy.

(b) Sufficiently apply compressor oil to a new O–ring and the fitting surface of the pipe joint.
Compressor oil: ND–OIL 8 or equivalent

(c) Install the O–ring on the liquid tube sub–assy A.

(d) w/o Hot gas heater:
Install the liquid tube sub–assy A on the w/ receiver condenser assy core with the bolt.
Torque: 5.4 N·m (55 kgf·cm, 47 in.·lbf)



(e) w/ LHD Hot gas heater:
Install the liquid tube sub–assy A on the w/ receiver condenser assy with the bolt.
Torque: 5.4 N·m (55 kgf·cm, 47 in.·lbf)

26. INSTALL COOLER REFRIGERANT DISCHARGE HOSE NO.1

(a) Remove the attached vinyl tape from the tube and the connecting part of the w/ receiver condenser assy.

(b) Sufficiently apply compressor oil to the O–ring and the fitting surface of the hose joint.
Compressor oil: ND–OIL 8 or equivalent

(c) Install the O–ring on the cooler refrigerant discharge hose No.1.

(d) Install the cooler refrigerant discharge hose No.1 on the w/ receiver condenser assy with the bolt.
Torque: 5.4 N·m (55 kgf·cm, 47 in.·lbf)

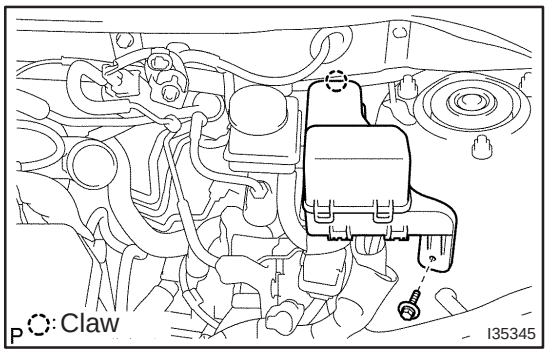
27. INSTALL FRONT BUMPER COVER (See page 76–3)

28. CHARGE REFRIGERANT (See page 55–38)

SST 07110–58060 (07117–58060, 07117–58070, 07117–58080, 07117–58090, 07117–78050, 07117–88060, 07117–88070, 07117–88080), 07117–48130, 07117–48140

Specified amount: 440 ± 30 g (15.51 ± 1.06 oz.)

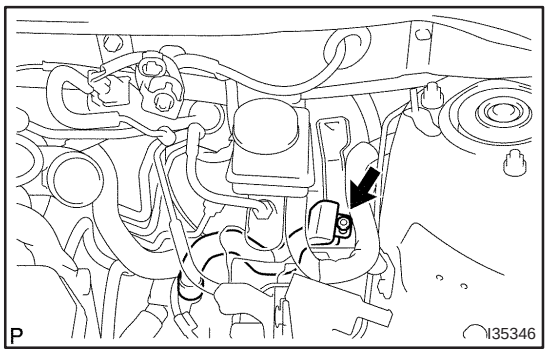
29. WARM UP ENGINE (See page 55–38)



30. INSPECT LEAKAGE OF REFRIGERANT (See page 55–38)

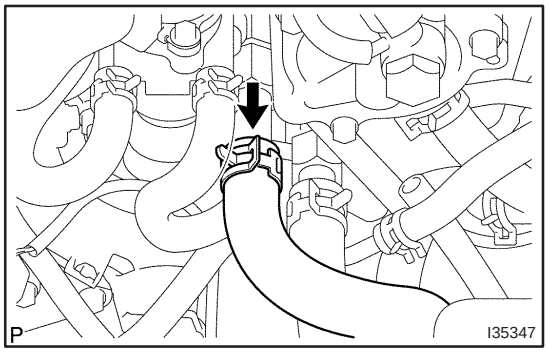
HEATER ASSY

REPLACEMENT



550YS–01

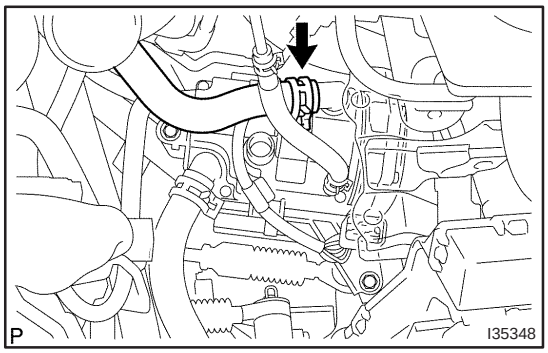
1. REMOVE AIR CLEANER ASSY (See page 11–82)
2. REMOVE FUEL FILTER ASSY (See page 11–82)



3. REMOVE AIR DUCT NO.3

(a) Release the claw fitting and remove the bolt and the engine room relay No.2 block.

(b) Remove the clip and the air duct No.3.

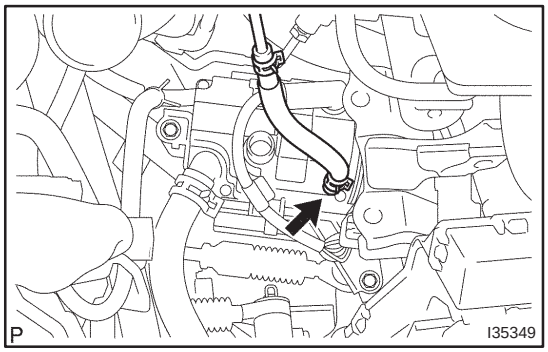


4. DISCONNECT HEATER INLET WATER HOSE

(a) Using pliers, grip the claws of the clip and slide the clip to disconnect the heater inlet water hose.

HINT:

Prepare a support plate and waste to catch the leaked coolant.

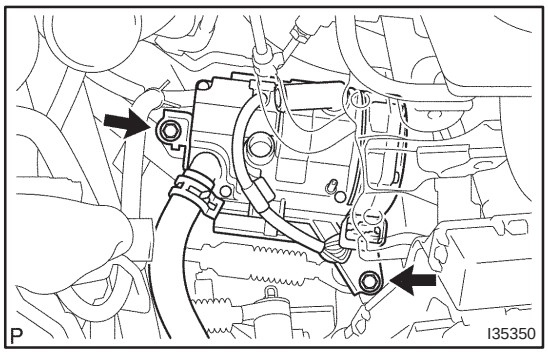


5. DISCONNECT HEATER WATER INLET HOSE A

(a) Using pliers, grip the claws of the clip and slide the clip to disconnect the heater inlet water hose A.

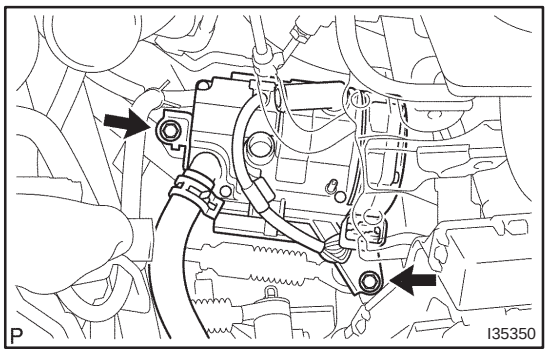
HINT:

Prepare a support plate and waste to catch the leaked coolant.



6. REMOVE HEATER ASSY

(a) Using pliers, grip the claws of the clip and slide the clip to disconnect the heater fuel hose.

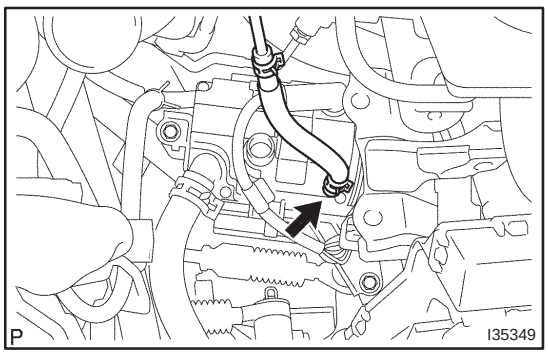


HINT:

Prepare a support plate and waste to catch the leaked fuel.

(b) Disconnect the connector.

(c) Remove the 2 bolts and the heater assy.



7. INSTALL HEATER ASSY

(a) Install the heater assy with the 2 bolts.

Torque: 7.5 N·m (76 kgf·cm, 66 in.·lbf)

(b) Connect the connector.

(c) Install the heater fuel hose.

HINT:

Prepare a support plate and waste to catch the leaked fuel.

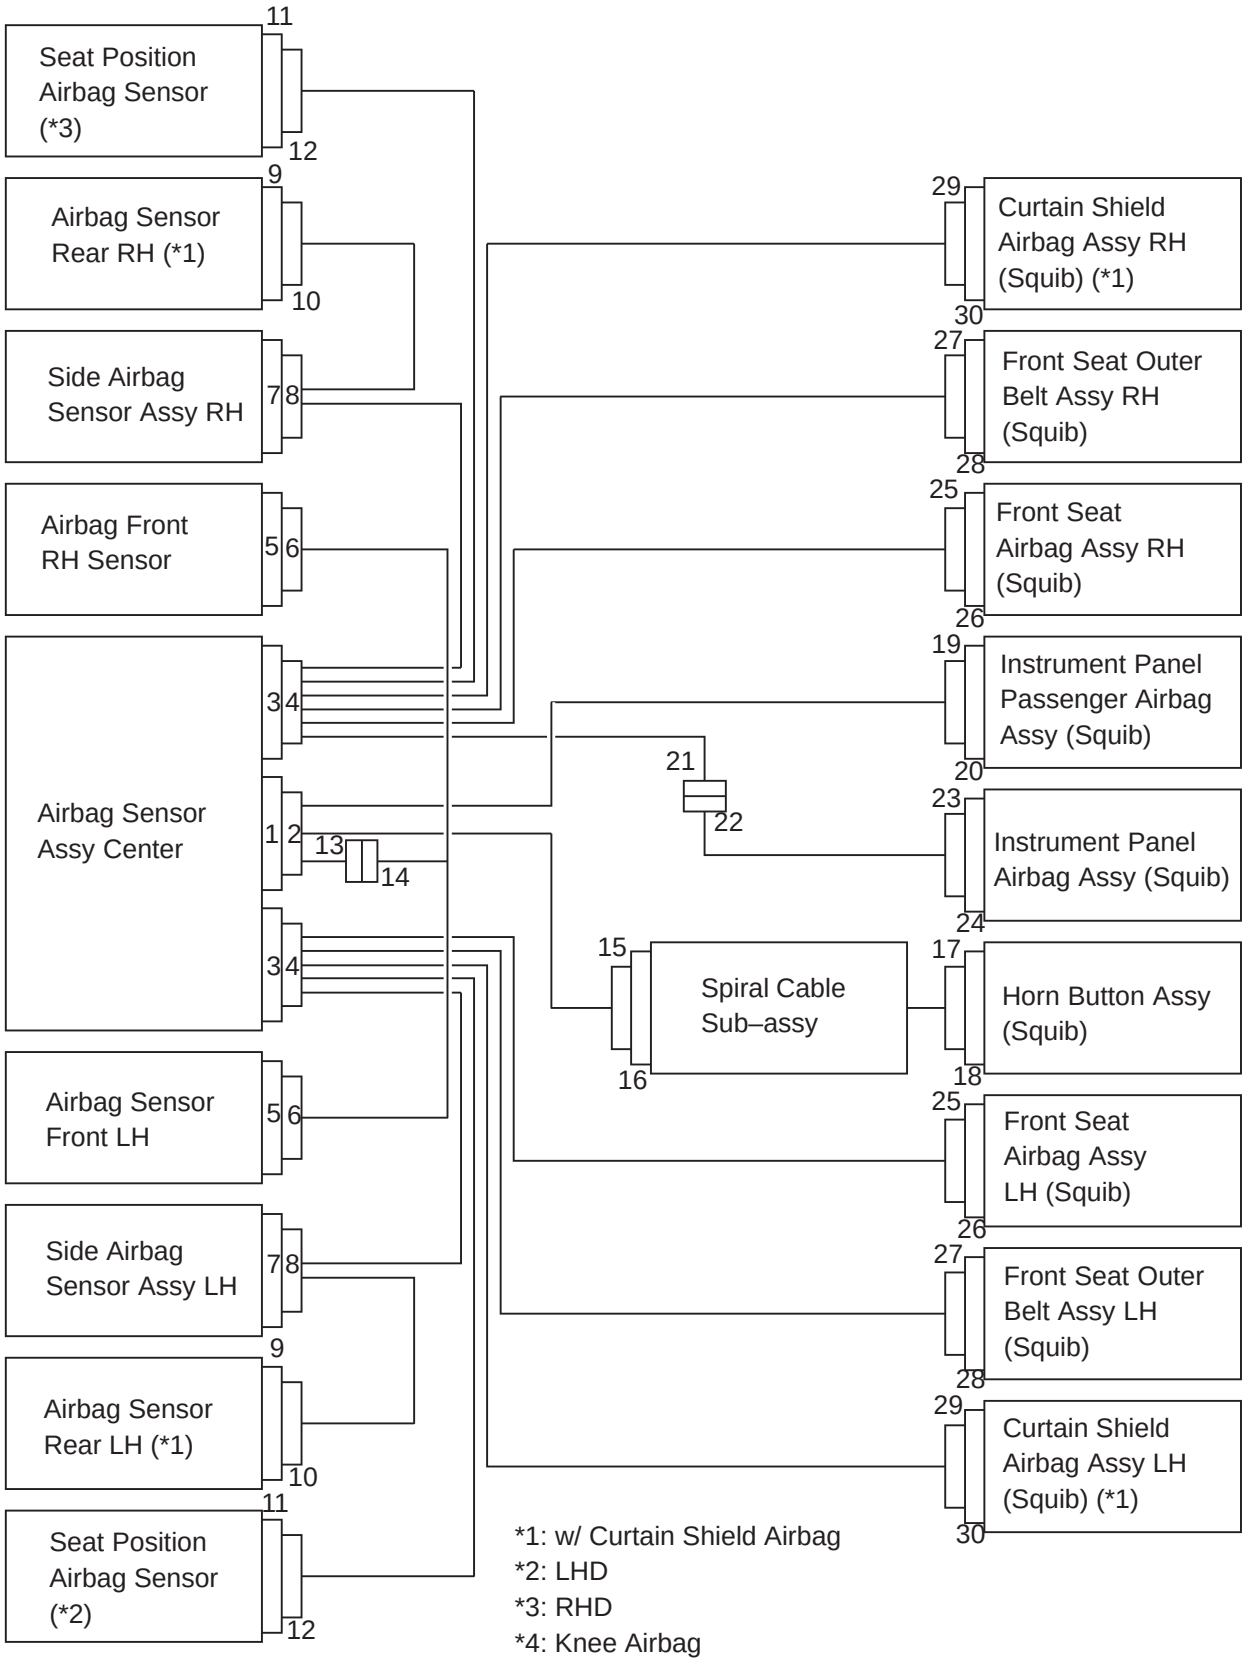
8. INSTALL FUEL FILTER ASSY (See page 11–82)
9. INSTALL AIR CLEANER ASSY (See page 11–82)
10. ADD ENGINE COOLANT (See page 16–44)
11. CHECK FOR ENGINE COOLANT LEAKS (See page 16–37)
12. CHECK FUEL LEAK (See page 11–56)

SUPPLEMENTAL RESTRAINT SYSTEM

600JU–01

PRECAUTION

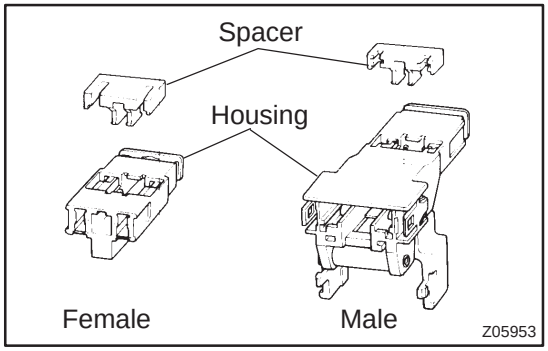
CAUTION:



- **AVENSIS is equipped with SRS, which comprises of a driver airbag, front passenger airbag, side airbag, curtain shield airbag and driver knee airbag. Failure to carry out service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing, possibly leading to serious accident. Further, if a mistake is made in servicing the SRS, it is possible that the SRS may fail to operate when required. Before performing servicing (including removal or installation of parts, inspection or replacement), be sure to read the following items carefully, then follow the correct procedures indicated in the repair manual.**
- **Work must be started 90 seconds after the ignition switch is turned to the ”LOCK” position and the negative (–) terminal cable is disconnected from the battery.**
  (The SRS is equipped with a back–up power source so that if work is started within 90 seconds after disconnecting the negative (–) terminal cable of the battery, the SRS may be deployed.)
- **Do not expose the horn button assy, instrument panel passenger airbag assy, instrument panel airbag assy, airbag sensor assy center, airbag front sensor, front seat airbag assy, side airbag sensor assy, curtain shield airbag assy, airbag sensor rear or seat position airbag sensor directly to hot air or flames.**

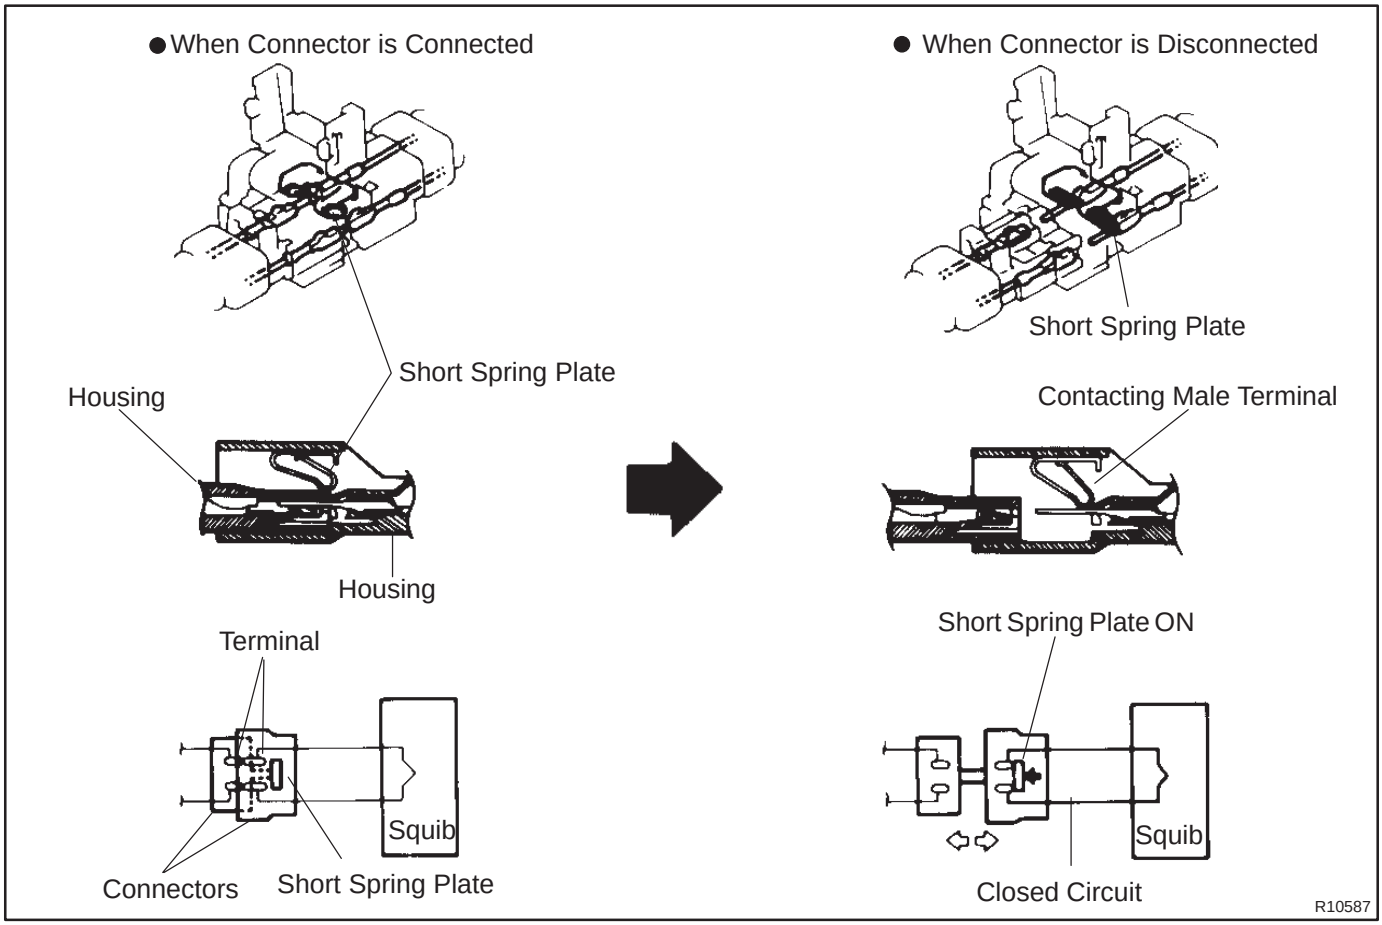
NOTICE:

- **Malfunction symptoms of the SRS are difficult to confirm, so DTCs are the most important information source of information when troubleshooting. When troubleshooting the SRS, always inspect DTCs before disconnecting the battery.**
- **Even in the case of a minor collision when the SRS does not deploy, the horn button assy, instrument panel passenger airbag assy, instrument panel airbag assy, airbag sensor assy center, airbag front sensor, front seat airbag assy, side airbag sensor assy, curtain shield airbag assy, airbag sensor rear and seat position sensor must be inspected (See page 60–11).**
- **Before repairs work, remove the airbag sensor if any kind of shock is likely to occur to the sensor during operation.**
- **Never use SRS parts from another vehicle. When replacing the parts, replace them with new ones.**
- **Never disassemble nor repair the horn button assy, instrument panel passenger airbag assy, instrument panel airbag assy, airbag sensor assy center, airbag front sensor, front seat airbag assy, side airbag sensor assy, curtain shield airbag assy, airbag sensor rear or seat position airbag sensor in order to reuse it.**
- **If the horn button assy, instrument panel passenger airbag assy, instrument panel airbag assy, airbag sensor assy center, airbag front sensor, front seat airbag assy, side airbag sensor assy, curtain shield airbag assy, airbag sensor rear or seat position airbag sensor has been dropped, or if there are any cracks, dents or other defects in the case, bracket or connector, replace it with a new one.**
- **Use a volt/ohmmeter with high impedance (10 kΩ/V minimum) for troubleshooting the electrical circuits circuits.**
- **Information labels are attached to the periphery of the SRS components. Follow the instructions the notice.**
- **After work on the SRS is completed, perform the SRS warning light check (See page 05–1184).**



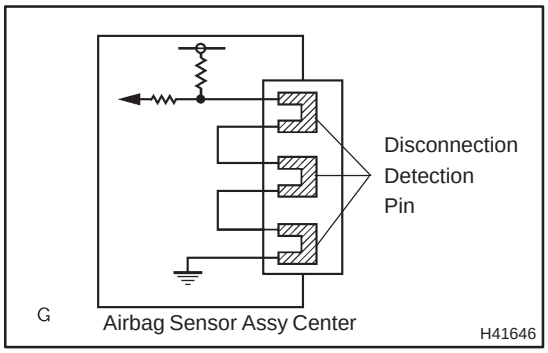
- **When the negative (–) terminal cable is disconnected from the battery, the memory of the clock and audio system will be canceled. So before starting work, make a record of the contents memorized in the audio memory system. When work is finished, reset the audio systems as they were before and adjust the clock. To avoid erasing the memory in each memory system, never use a back–up power supply from outside the vehicle.**
- **If the vehicle is equipped with a mobile communication system, refer to the precaution in the INTRODUCTION section.**

1. SRS CONNECTORS

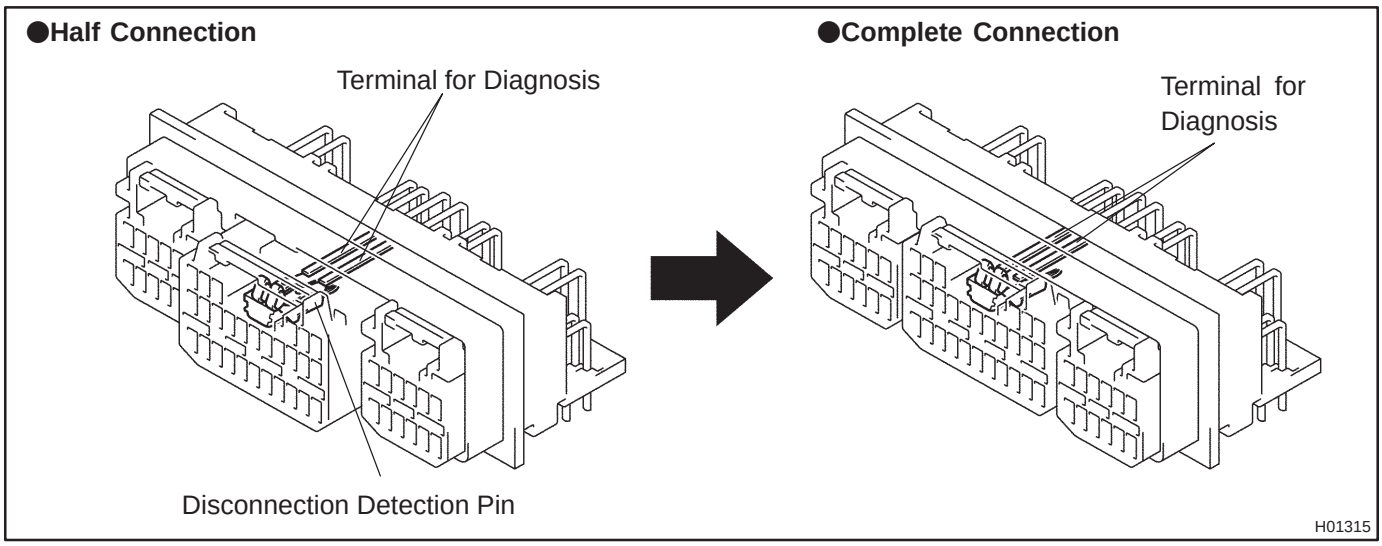


No.	Item	Application
(1)	Terminal Twin–Lock Mechanism	Connectors 2, 4, 6, 8, 10, 12, 13, 14, 15, 19, 21, 22, 25
(2)	Activation Prevention Mechanism	Connectors 2, 4, 16, 18, 20, 22, 24, 26, 28, 30
(3)	Electrical Connection Check Mechanism	Connectors 1, 2, 3, 4
(4)	Half Connection Prevention Mechanism	Connectors 6, 8, 10, 14, 15, 19, 21, 25
(5)	Connector Lock Mechanism	Connectors 17, 23, 27, 29

(a) All connectors for the SRS are colored in yellow to distinguish them from other connectors. The connectors having special functions and specifically designed for the SRS are used in the locations shown on the previous page to ensure high reliability. These connectors use durable gold–plated terminals.

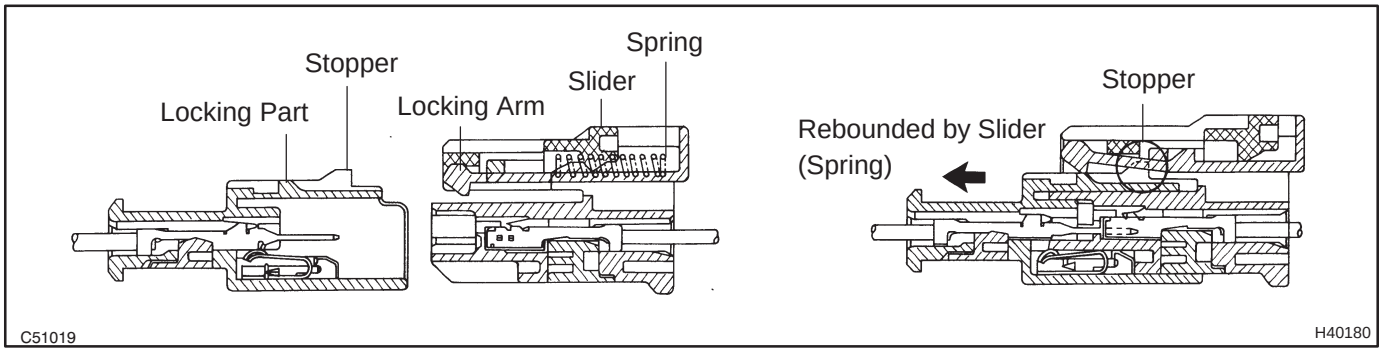


(1) Terminal twin–lock mechanism:
Each connector has a two–piece component consisting of a housing and a spacer. This design enables the terminal to be locked securely by two locking devices (the retainer and the lance) to prevent terminals from coming out.



(2) Activation prevention mechanism:
Each connector contains a short spring plate. When the connector is disconnected, the short spring plate automatically connects positive (+) terminal and negative (–) terminal of the squib.

HINT:
The type of connector is shown in the diagram on the previous page.



(3) Electrical connection check mechanism:
This mechanism electrically checks that the connectors are connected correctly and completely. The electrical connection check mechanism is designed so that the disconnection detection pin connects with the diagnosis terminals when the connector housing lock is locked.

HINT:
The connectors shown in this illustration are connectors, ”1”, ”2”, ”3” and ”4” in the step 1.

(4) Half connection prevention mechanism:
If the connector is not completely connected, the connector is disconnected due to the spring operation to the extent that no continuity exists.

(5) Connector lock mechanism:
Locking the connector lock button connects the connector securely.

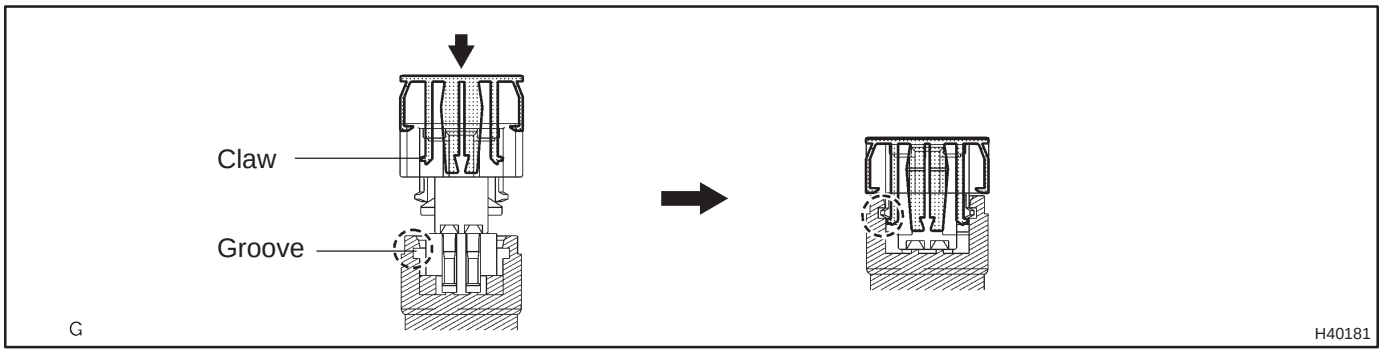


Fig.1

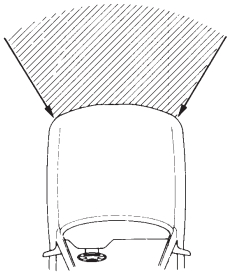

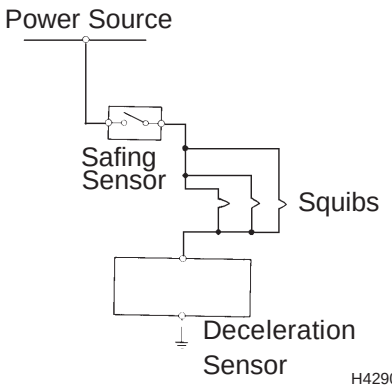

Fig.2

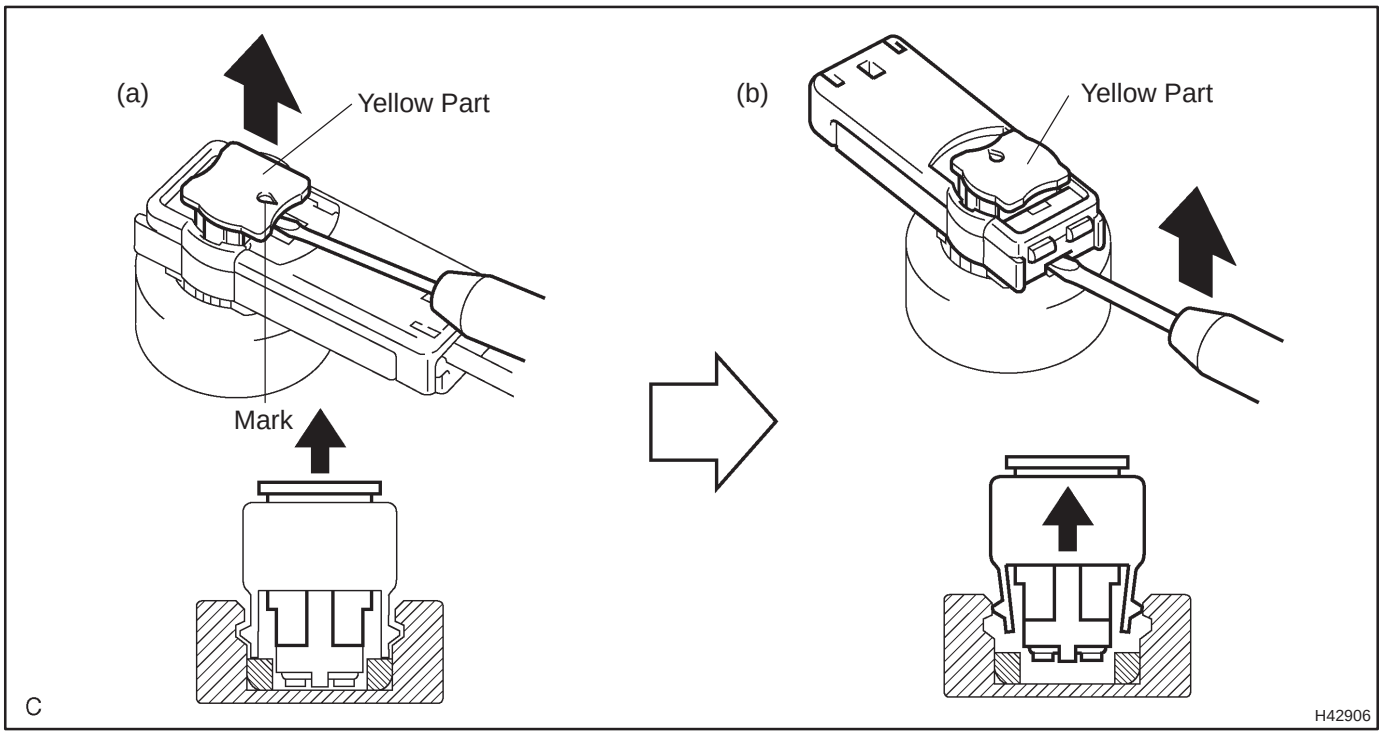
(b) When the vehicle is involved in a frontal collision in the hatched area (Fig. 1) and the shock is larger than the predetermined level, the SRS is activated automatically. The safing sensor is designed to go on at a smaller deceleration rate than the airbag sensor. As illustrated in the Fig. 2, ignition is caused when current flows to the squib, which happens when the safing sensor and the deceleration sensor go on simultaneously. When a deceleration force acts on the sensors, 3 squibs in the driver airbag, front passenger airbag and knee airbag ignite and generate gas. The gas discharging into the driver airbag, front passenger airbag and knee airbag rapidly increases the pressure inside the bags, breaking the horn button assy and instrument panel. The inflation of the bag then ends, and the bags deflate as the gas is discharged through discharge holes at the bag's rear or side.

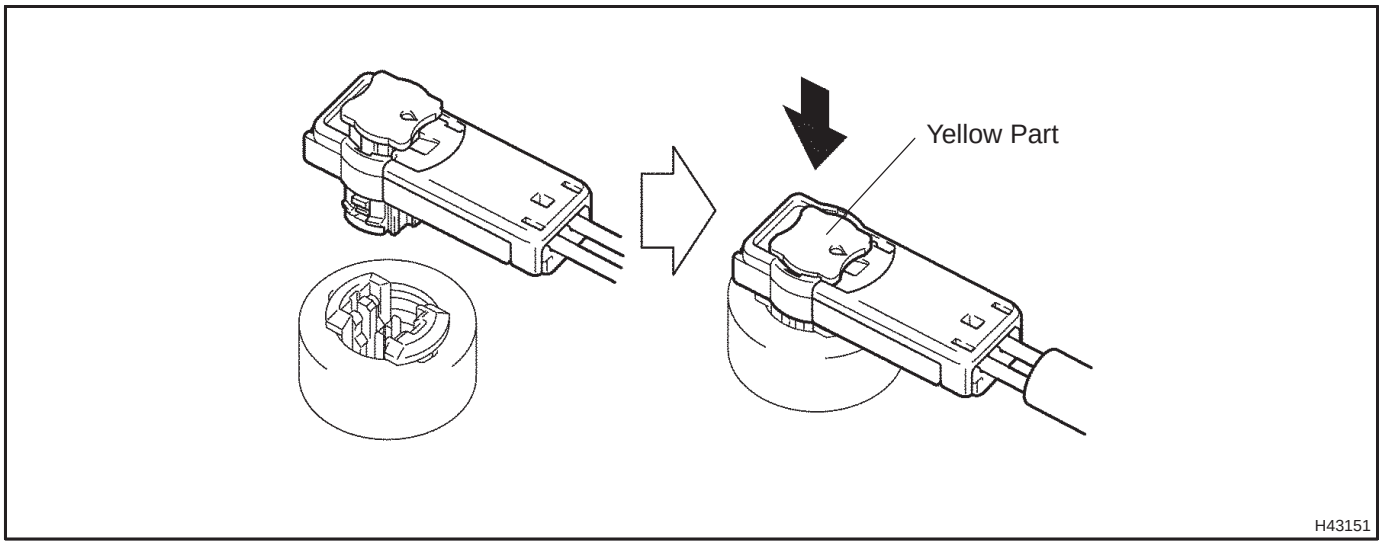


2. DISCONNECTION OF CONNECTORS FOR HORN BUTTON ASSY AND CURTAIN SHIELD AIR-BAG ASSY

HINT:

Tape up the screwdriver tip before use.

(a) Release the yellow part of the connector using a screwdriver.

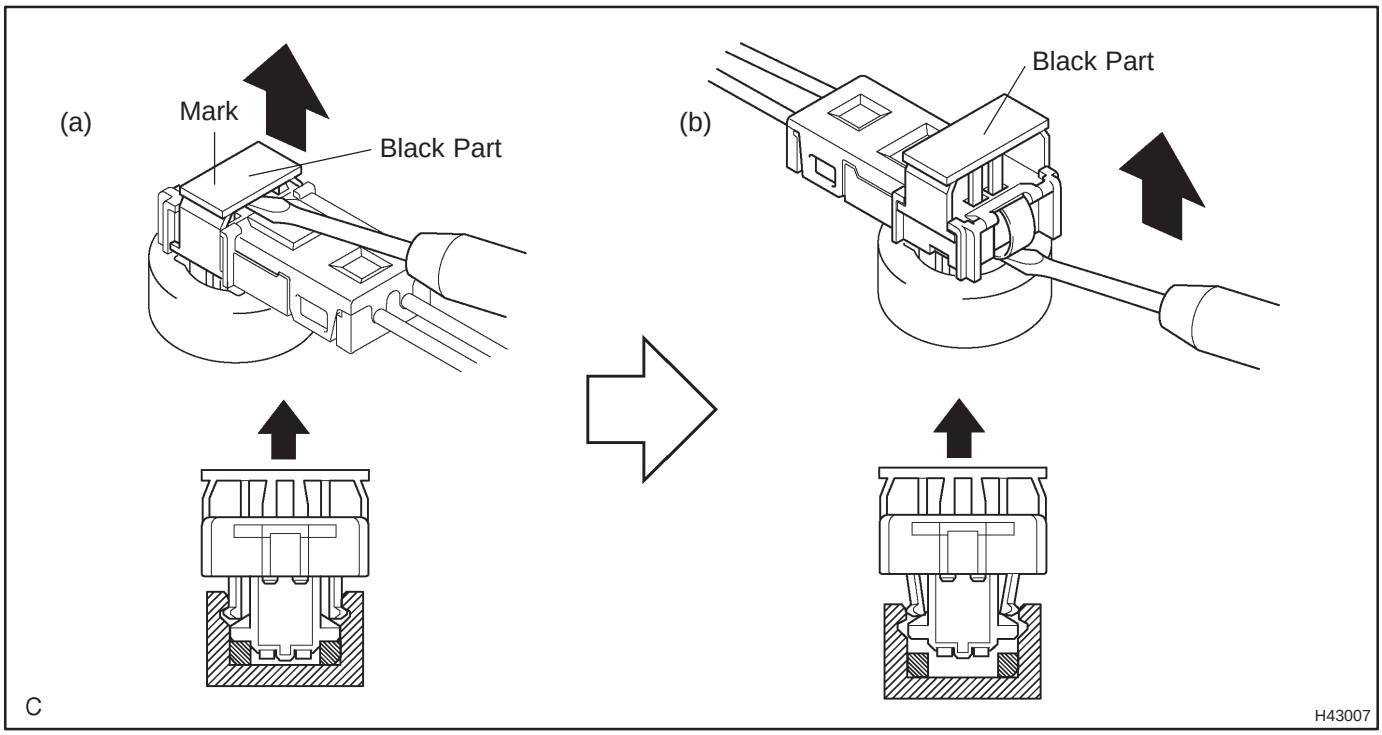


(b) Insert a screwdriver tip between the connector and the base, and then lever up connector.

3. DISCONNECTION OF CONNECTORS FOR HORN BUTTON ASSY AND CURTAIN SHIELD AIR-BAG ASSY

(a) Connect the connector.

(b) Push down securely on the yellow part of the connector.

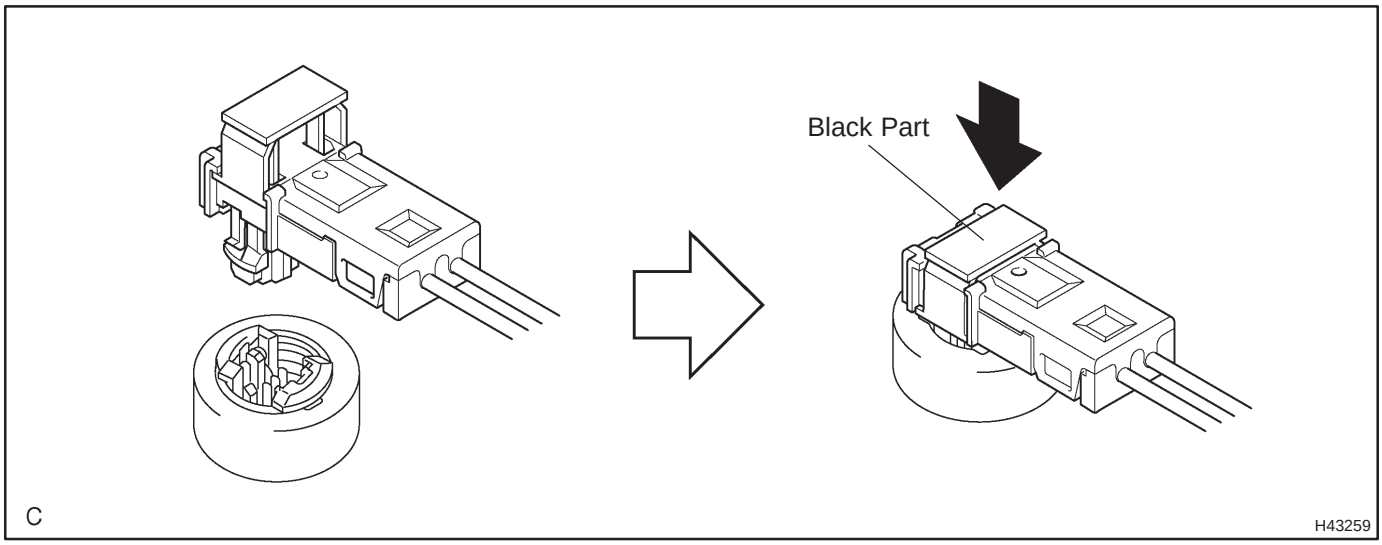


4. DISCONNECTION OF CONNECTORS FOR INSTRUMENT PANEL AIRBAG ASSY

HINT:

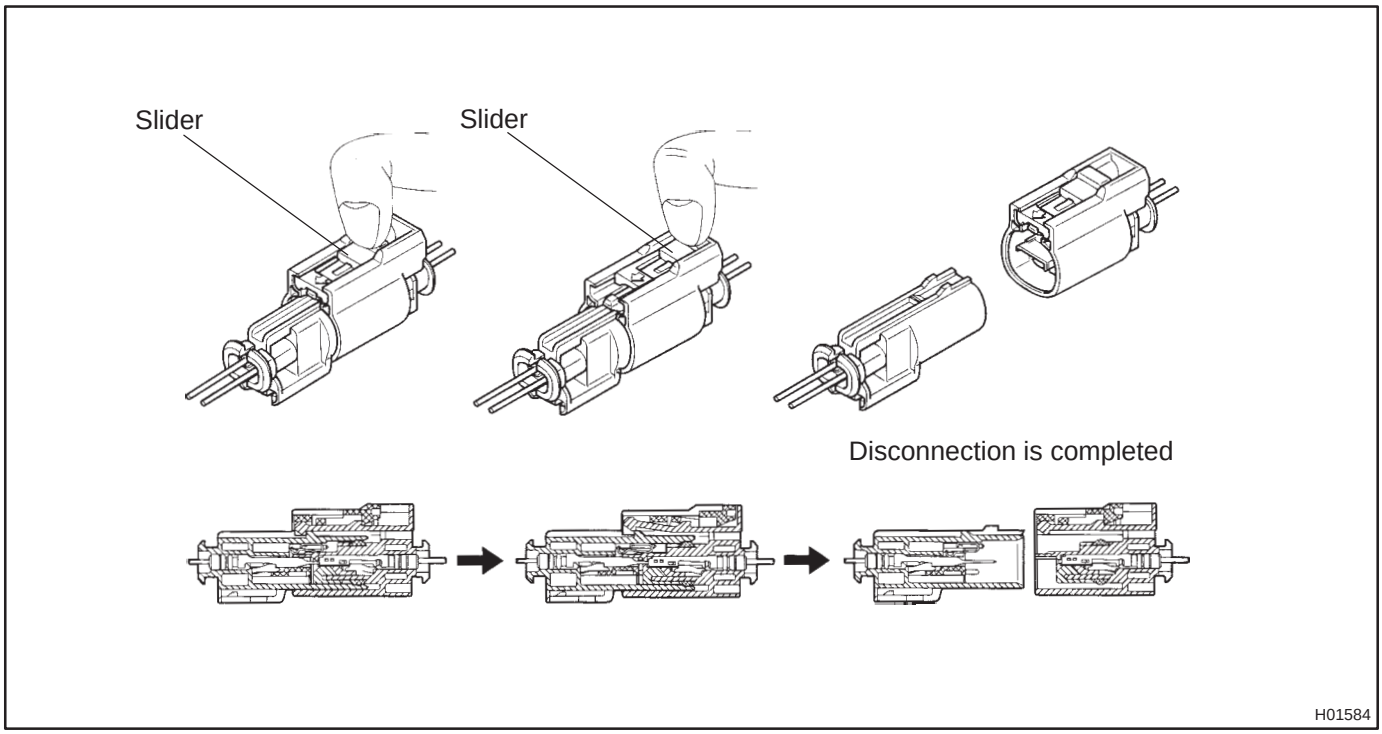
Tape up the screwdriver tip before use.

(a) Release the black part of the connector using a screwdriver.



(b) Insert a screwdriver tip between the connector and the base, and then lever up connector.

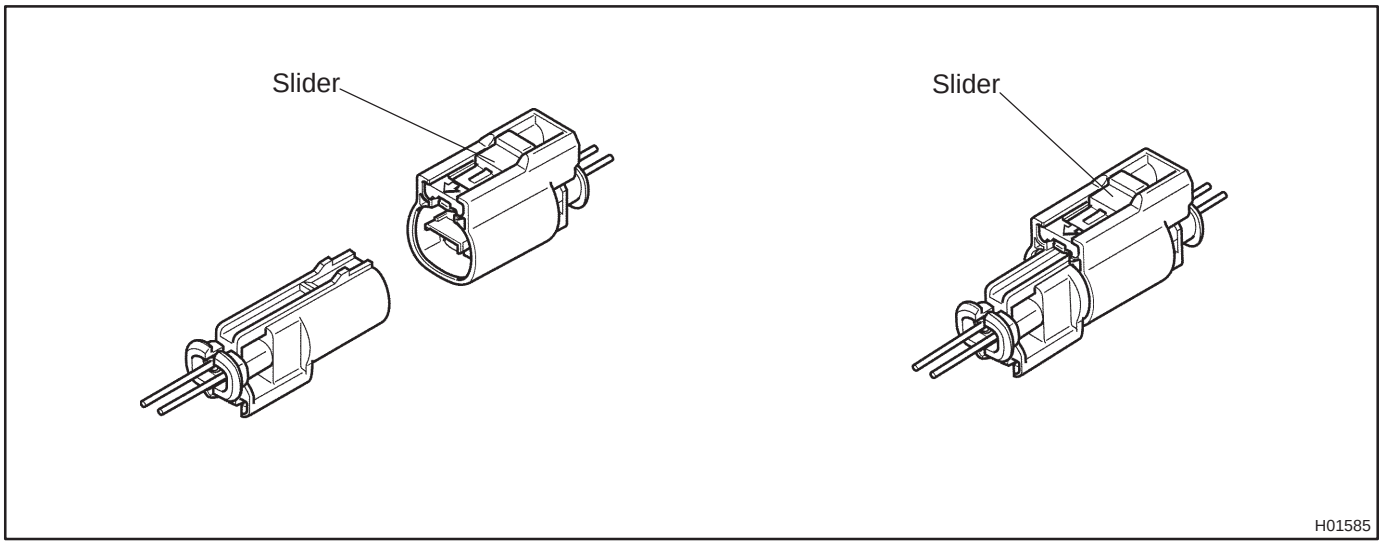
5. DISCONNECTION OF CONNECTORS FOR INSTRUMENT PANEL AIRBAG ASSY



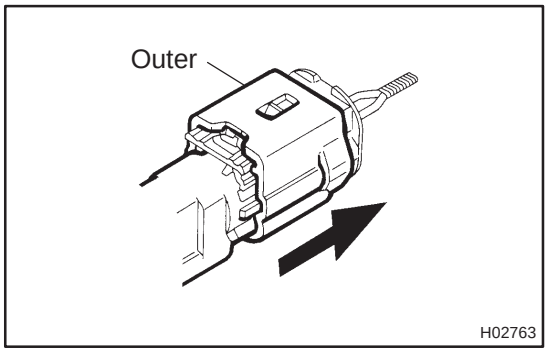
(a) Connect the connector.

(b) Push down securely on the yellow part of the connector.

6. DISCONNECTION OF CONNECTOR FRONT SEAT AIRBAG ASSY



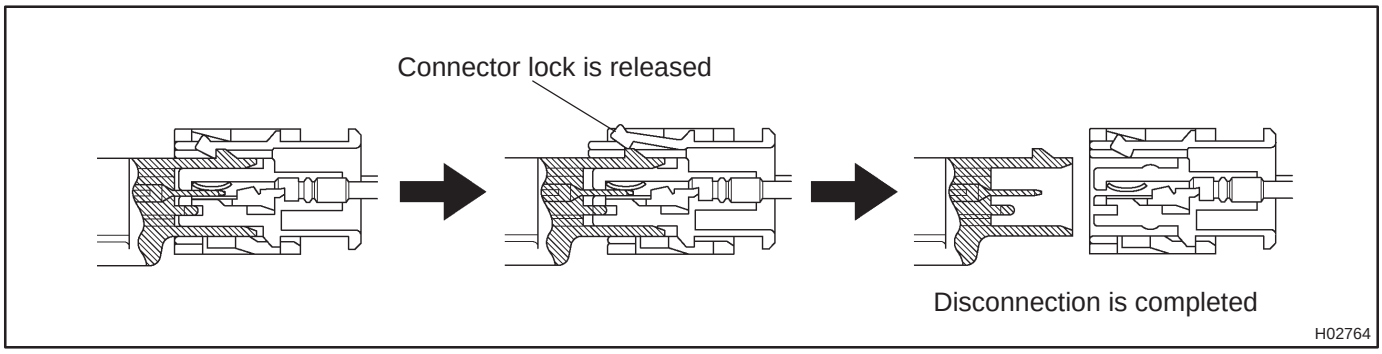
(a) Place a finger on the slider.
(b) Slide the slider to release lock.
(c) Disconnect the connector.



7. CONNECTION OF CONNECTOR FOR FRONT SEAT AIRBAG ASSY

(a) Align the lock part of the male connector and the slider of the female connector in the same direction as shown in the illustration, connect them without rubbing together.
(b) Be sure to insert the connectors until they are locked. After connecting them, pull them slightly to check that they are locked. (When locking, make sure that the slider returns to its original position and a click sound can be heard.)

HINT:
When connecting them, the slider slides. Be sure not to touch the slider while connecting, as it may result in an insecure fit.



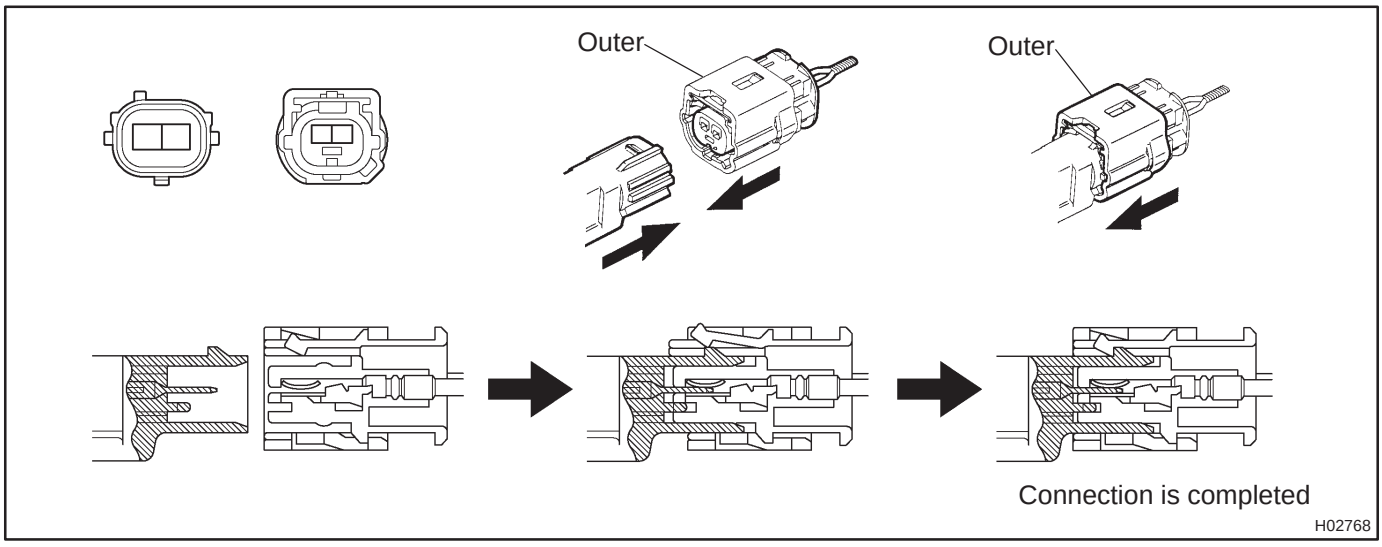
8. DISCONNECTION OF AIRBAG FRONT SENSOR, SIDE AIRBAG SENSOR AND AIRBAG SENSOR REAR CONNECTOR

(a) While holding both outer flank sides of the outer, slide the outer to the direction shown by the arrow.

(b) When the connector lock is released, the connectors are disconnected.

HINT:

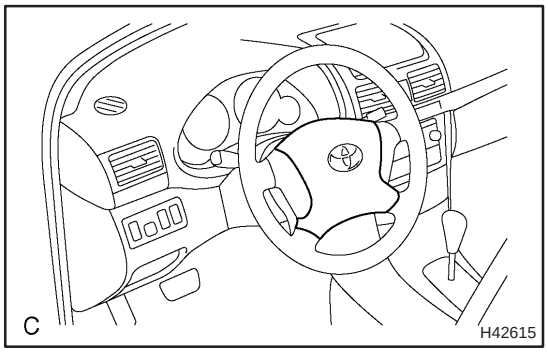
Be sure to hold both outer flank sides. If the top and bottom sides are held, it will obstruct disconnection.



9. CONNECTION OF CONNECTORS FOR AIRBAG FRONT SENSOR, SIDE AIRBAG SENSOR AND AIRBAG SENSOR REAR

(a) Align the male connector (on the side of sensor) and female connector in the same direction as shown in the illustration and connect them without rubbing together.

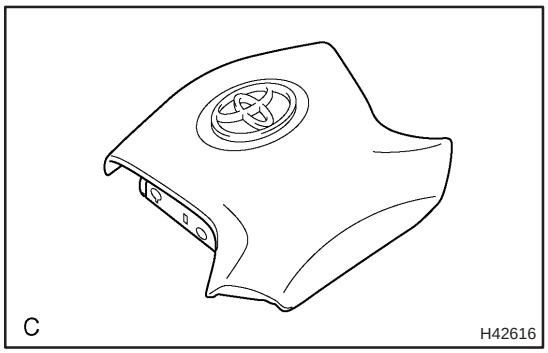
(b) Be sure to insert the connectors until they are locked. After connecting them, pull them slightly to check that they are locked. (When locking, make sure that the outer returns to its original position and a click sound can be heard.)



HINT:

When connecting them, the outer slides. Be sure not to hold the outer while connecting, as it may result in an insecure fit.

600JV–01

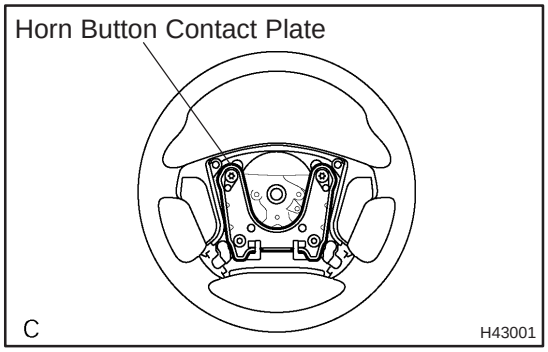


ON–VEHICLE INSPECTION

1. HORN BUTTON ASSY (VEHICLES NOT INVOLVED IN COLLISION)

(a) Do a diagnostic system check (See page 05–1184).

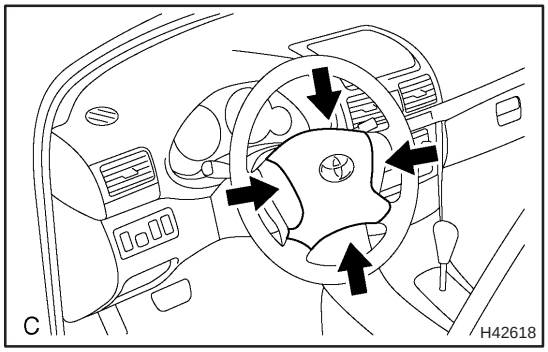
(b) Do a visual check which includes the following items with the horn button assy installed in the vehicle:
Cuts, minute cracks or marked discoloration on the horn button assy top surface and in the grooved portion.



2. HORN BUTTON ASSY (VEHICLE INVOLVED IN COLLISION AND AIRBAG IS NOT DEPLOYED)

(a) Do a diagnostic system check (See page 05–1184).

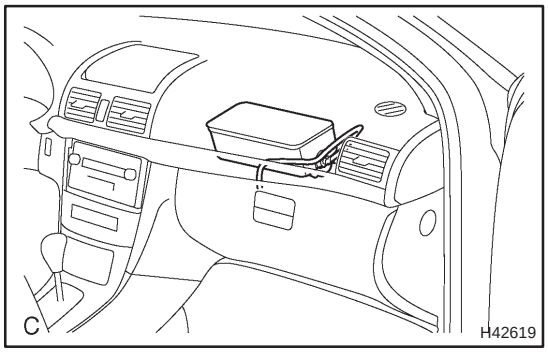
(b) Do a visual check of the horn button assy removed from the vehicle:



- Cuts, minute cracks or marked discoloration on the horn button assy top surface and in the grooved portion.
- Cuts and cracks in wire harness, and chipping in connectors.
- Deformation of the horn button assy.

- The deformation of the horn button contact plate of the steering wheel assy.

HINT:

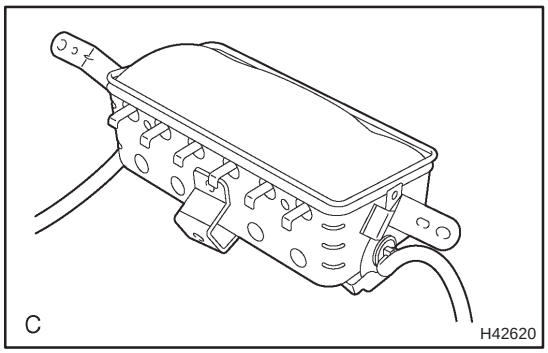


- If the horn button contact plate of the steering wheel assy is deformed, replace it with a new one. Always replace the steering wheel assy with a new one.
- Never repair it in order for reuse or replacement.

- There should be no interference between the horn button assy and steering wheel assy, and the clearance should be uniform all the way around when the new horn button assy is installed on the steering wheel assy.

CAUTION:

For removal and installation procedures of the horn button assy, see "Replacement" on page 60–17, and be sure to follow the correct procedure.

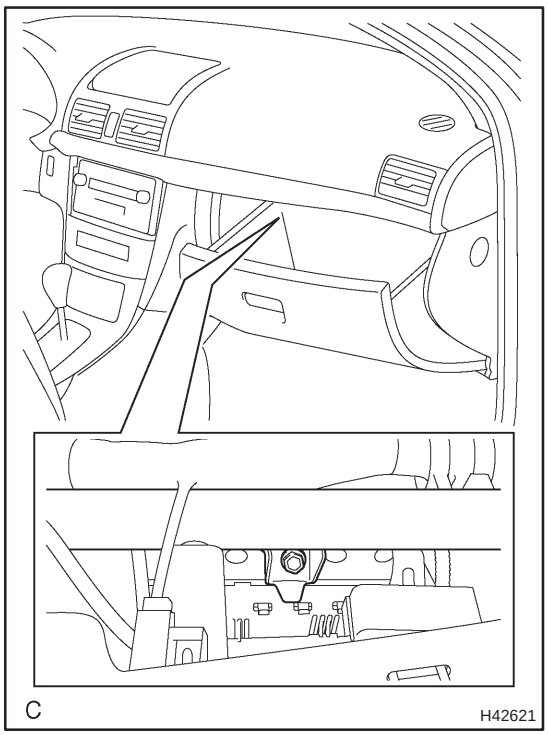


3. INSTRUMENT PANEL PASSENGER AIRBAG ASSY (VEHICLE NOT INVOLVED IN COLLISION)

(a) Do a diagnostic system check (See page 05–1184).

(b) Do a visual check which includes the following items with the instrument panel passenger airbag assy installed in the vehicle:

Cuts, minute cracks or marked discoloration on the instrument panel around the instrument panel passenger airbag assy.

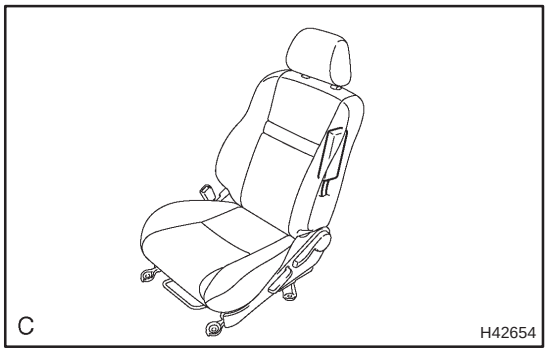


4. INSTRUMENT PANEL PASSENGER AIRBAG ASSY (VEHICLE INVOLVED IN COLLISION AND AIRBAG IS NOT DEPLOYED)

(a) Do a diagnostic system check (See page 05–1184).

(b) Do a visual check of the instrument panel passenger airbag assy removed from the vehicle:

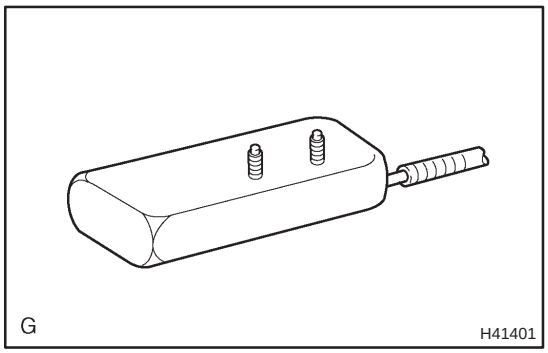
- Cuts, minute cracks or marked discoloration on the instrument panel passenger airbag assy.
- Cuts and cracks in wire harness, and chipping in connectors.
- Deformation or cracks on the instrument panel and instrument panel reinforcement.



HINT:

- If the instrument panel or instrument panel reinforcement is deformed or cracked, never repair it. Always replace it with a new one.
- Never repair it in order for reuse.

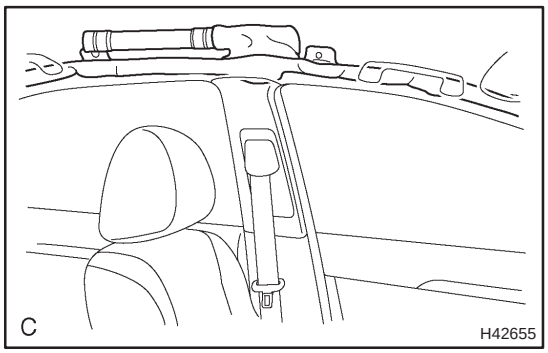
CAUTION:



For removal and installation of procedures the instrument panel passenger airbag assy, see "Replacement" on page 60–29, and be sure to follow the correct procedure.

5. FRONT SEAT AIRBAG ASSY (VEHICLE NOT INVOLVED IN COLLISION)

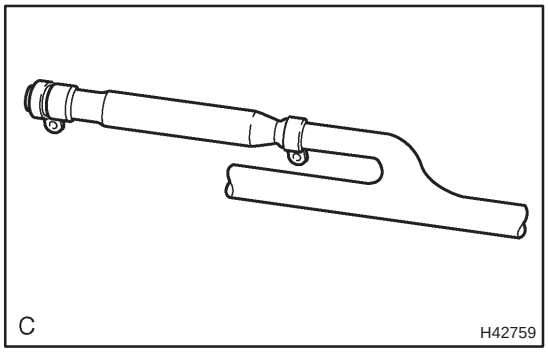
(a) Do a diagnostic system check (See page 05–1184).



(b) Do a visual check which includes the following items with the front seat airbag assy installed in the vehicle:
Cuts, minute cracks or marked discoloration on the front seat back assy around the front seat airbag assy.

6. FRONT SEAT AIRBAG ASSY (VEHICLE INVOLVED IN COLLISION AND AIRBAG IS NOT DEPLOYED)

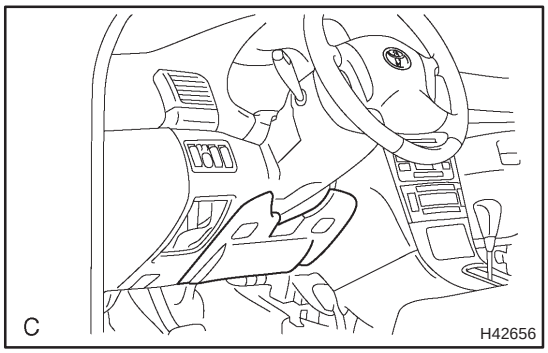
(a) Do a diagnostic system check (See page 05–1184).



(b) Do a visual check which includes the following items with the front seat airbag assy removed from the vehicle:
- Cuts, minute cracks or marked discoloration on the front seat airbag assy.
- Cuts and cracks in wire harness, and chipping in connectors.

7. CURTAIN SHIELD AIRBAG ASSY (VEHICLE NOT INVOLVED IN COLLISION)

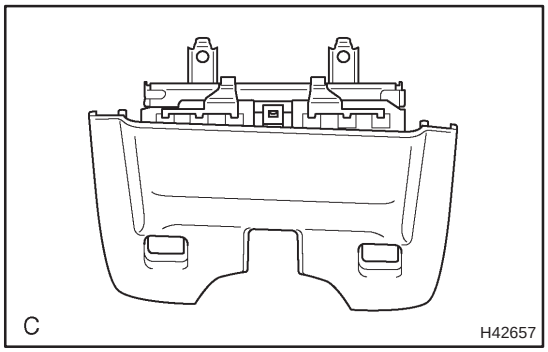
(a) Do a diagnostic system check (See page 05–1184).



(b) Do a visual check of the curtain shield airbag assy installed in the vehicle:
Cuts, minute cracks or marked discoloration on the front pillar garnish and roof headlining assy around the curtain shield airbag assy.

8. CURTAIN SHIELD AIRBAG ASSY (VEHICLE INVOLVED IN COLLISION AND AIRBAG IS NOT DEPLOYED)

(a) Do a diagnostic system check (See page 05–1184).

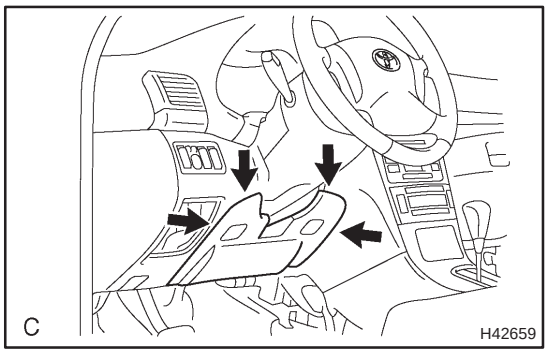


(b) Do a visual check which includes the following items with the curtain shield airbag assy removed from the vehicle:
- Cuts, minute cracks or marked discoloration on the curtain shield airbag assy.
- Cuts and cracks in wire harness, and chipping in the connectors.

9. INSTRUMENT PANEL AIRBAG ASSY (VEHICLE INVOLVED IN COLLISION)

(a) Do a diagnostic system check (See page 05–1184).

(b) Do a visual check of the instrument panel airbag assy installed in the vehicle:
Cuts, minute cracks of marked discoloration on the instrument panel airbag assy.



10. INSTRUMENT PANEL AIRBAG ASSY (VEHICLE INVOLVED IN COLLISION AND AIRBAG IS NOT DEPLOYED)

(a) Do a diagnostic system check (See page 05–1184).

(b) Do a visual check of the instrument panel airbag assy removed from the vehicle:

- Cuts, minute cracks or marked discoloration on the instrument panel airbag assy.

HINT:

- Never repair it in order for reuse or replacement.
- There should be no interference between the horn button assy and steering wheel assy, and the clearance should be uniform all the around when the new horn button assy is installed on the steering wheel assy.

CAUTION:

For removal and installation procedures of the horn button assy, see "Replacement" on page 60–54, and be sure to follow the correct procedure.

11. AIRBAG SENSOR ASSY CENTER (VEHICLE NOT INVOLVED IN COLLISION)

(a) Do a diagnostic system check (See page 05–1184).

12. AIRBAG SENSOR ASSY CENTER (VEHICLE INVOLVED IN COLLISION AND AIRBAG IS NOT DEPLOYED)

(a) Do a diagnostic system check (See page 05–1184).

13. AIRBAG SENSOR ASSY CENTER (VEHICLE INVOLVED IN COLLISION AND AIRBAG IS DEPLOYED)

(a) Replace the airbag sensor assy center (See page 60–62).

14. AIRBAG FRONT SENSOR (VEHICLE NOT INVOLVED IN COLLISION)

(a) Do a diagnostic system check (See page 05–1184).

15. AIRBAG FRONT SENSOR (VEHICLE INVOLVED IN COLLISION)

(a) Do a diagnostic system check (See page 05–1184).

(b) When the headlamp of the vehicle or its periphery is damaged, check if there is any damage to the airbag front sensor. If there are any defects as mentioned below, replace the airbag front sensor with a new one:

If there are any defects as mentioned below, replace the airbag front sensor with a new one:

- Cracks, dents or chips in the case.
- Cracks, dents, chips and scratches in the connector.
- Peeling off of the label or damage to the serial number.

16. AIRBAG FRONT SENSOR (VEHICLE INVOLVED IN COLLISION AND AIRBAG IS DEPLOYED)

(a) Replace the airbag front sensor assy (See page 60–64).

17. SIDE AIRBAG SENSOR ASSY (VEHICLES NOT INVOLVED IN COLLISION)

(a) Do a diagnostic system check (See page 05–1184).

18. SIDE AIRBAG SENSOR ASSY (VEHICLE INVOLVED IN COLLISION AND AIRBAG IS NOT DEPLOYED)

(a) Do a diagnostic system check (See page 05–1184).

(b) When the center pillar of the vehicle or its periphery is damaged, check if there is any damage to the side airbag sensor. If there are any defects as mentioned below, replace the side airbag sensor with a new one:

If there are any defects as mentioned below, replace the side airbag sensor with a new one:

- Cracks, dents or chips in the case.
- Cracks, dents, chips and scratches in the connector.
- Peeling off of the label or damage to the serial number.

19. SIDE AIRBAG SENSOR ASSY (VEHICLE INVOLVED IN COLLISION AND AIRBAG IS DEPLOYED)

(a) Replace the front seat airbag assy and side airbag sensor assy (See page 60–66).

20. AIRBAG SENSOR REAR (VEHICLE NOT INVOLVED IN COLLISION)

(a) Do a diagnostic system check (See page 05–1184).

21. AIRBAG SENSOR REAR (VEHICLE INVOLVED IN COLLISION AND AIRBAG IS NOT DEPLOYED)

(a) Do a diagnostic system check (See page 05–1184).

(b) When the quarter panel of the vehicle or its periphery is damaged, check if there is any damage to the airbag sensor rear. If there are any defects as mentioned below, replace the airbag sensor rear with a new one:

If there are any defects as mentioned below, replace the airbag sensor rear with a new one:

- Cracks, dents or chips in the case.
- Cracks, dents, chips and scratches in the connector.
- Peeling off of the label or damage to the serial number.

22. AIRBAG SENSOR REAR (VEHICLE INVOLVED IN COLLISION AND AIRBAG IS DEPLOYED)

(a) Replace the curtain shield airbag assy and airbag sensor rear (See page 60–68).

23. SEAT POSITION AIRBAG SENSOR (VEHICLES NOT INVOLVED IN COLLISION)

(a) Do a diagnostic system check (See page 05–1184).

24. SEAT POSITION AIRBAG SENSOR (VEHICLE INVOLVED IN COLLISION)

(a) Do a diagnostic system check (See page 05–1184).

(b) Do a visual check for damage to the seat position airbag sensor even if the airbag was not deployed:

- Cracks, dents or chips in the case.
- Cracks, dents, chips and scratches in the connector.

25. WIRE HARNESS AND CONNECTOR (VEHICLE NOT INVOLVED IN COLLISION)

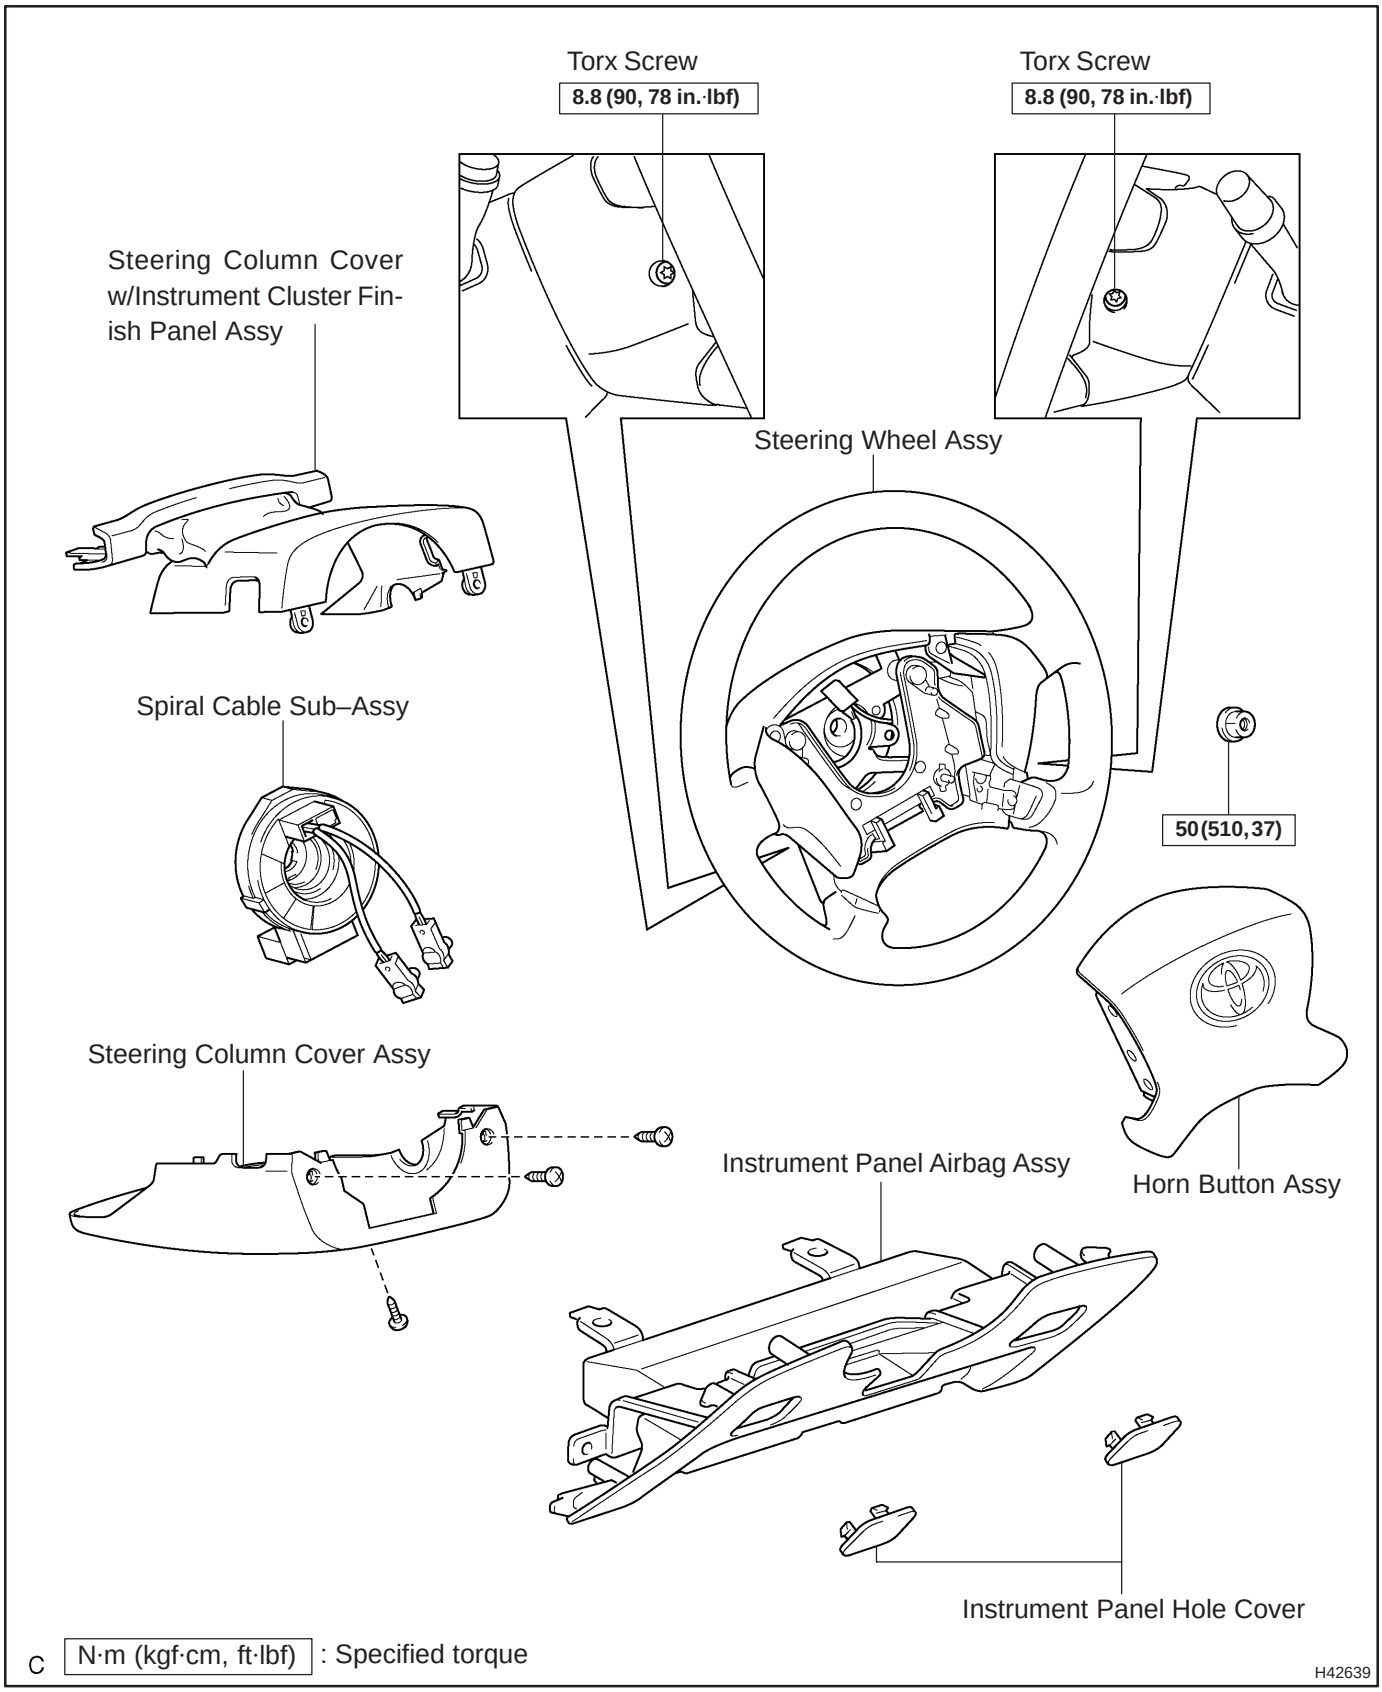
(a) Do a diagnostic system check (See page 05–1184).

26. WIRE HARNESS AND CONNECTOR (VEHICLE INVOLVED IN COLLISION)

(a) Do a diagnostic system check (See page 05–1184).

(b) Check for breaks in all wires of the SRS wire harness, and exposed conductors.

(c) Check to see if the SRS wire harness connectors are cracked or chipped.

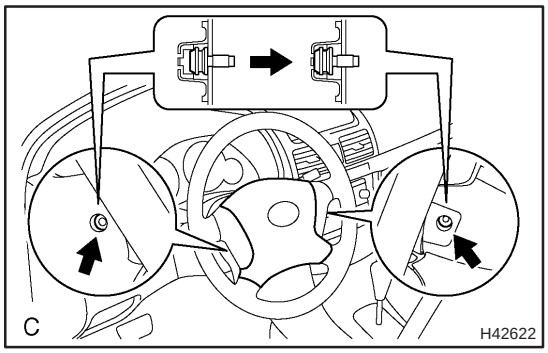


HINT:

The SRS wire harness is integrated with the engine room main wire, instrument panel wire floor wire, floor wire No.2 harness assembly.

STEERING WHEEL ASSY

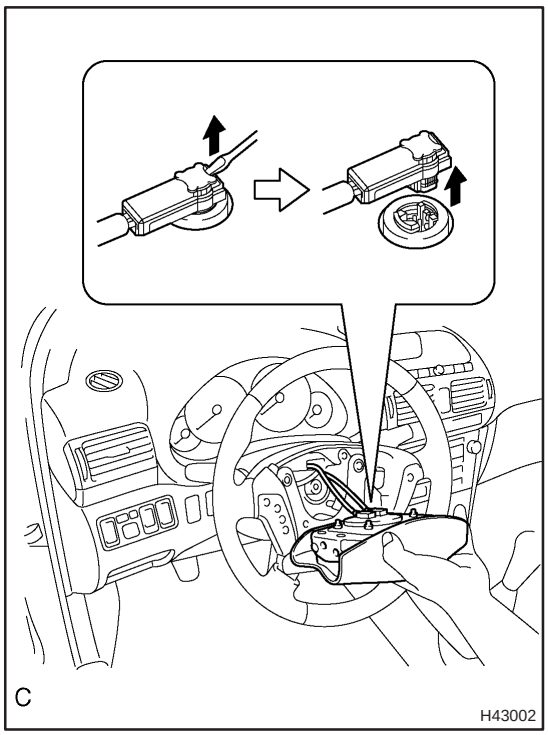
COMPONENTS



6009O–06

6009P–04

REPLACEMENT



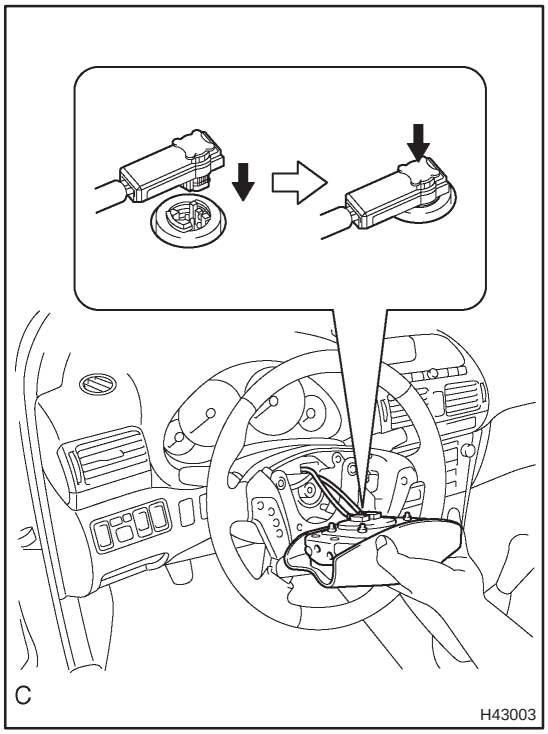
1. PRECAUTION (See page 60–1)
2. DISCONNECT BATTERY NEGATIVE TERMINAL (See page 60–1)

3. REMOVE HORN BUTTON ASSY

(a) Place the front wheels facing straight ahead.

(b) Using a torx socket wrench (T30), loosen the 2 torx screws until the groove along the screw circumference catches on the screw case.

(c) Pull out the horn button assy from the steering wheel assy and support the horn button assy with one hand as shown in the illustration.



NOTICE:

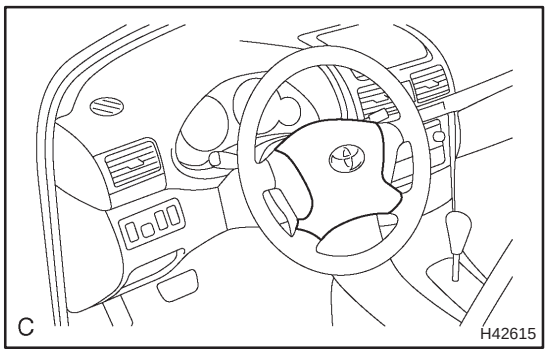
When removing the horn button assy, do not pull the airbag wire harness.

(d) Using a screwdriver, disconnect the airbag connectors.

(e) Disconnect the horn connector.

(f) Remove the horn button assy.

4. INSTALL HORN BUTTON ASSY



(a) Support the horn button assy with the hand as shown in the illustration.

(b) Connect the airbag connectors.

(c) Connect the horn connector.

(d) Confirm that the circumference groove of the torx screw fits in the screw case, and place the horn button assy onto the steering wheel assy.

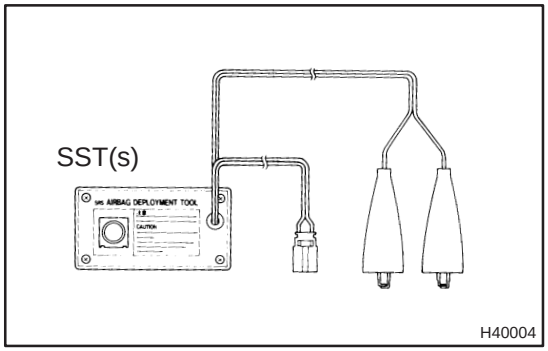
(e) Using a torx socket wrench (T 30), install the 2 screws.
Torque: 8.8 N·m (90 kgf·cm, 78 in.·lbf)

5. INSPECT HORN BUTTON ASSY (See page 60–11)

(a) Do a visual check which includes the following items with the horn button assy installed in the vehicle:
Cuts, minute cracks or marked discoloration on the horn button assy top surface and in the grooved portion.

6. INSPECT SRS WARNING LIGHT (See page 05–1184)

600JW–01



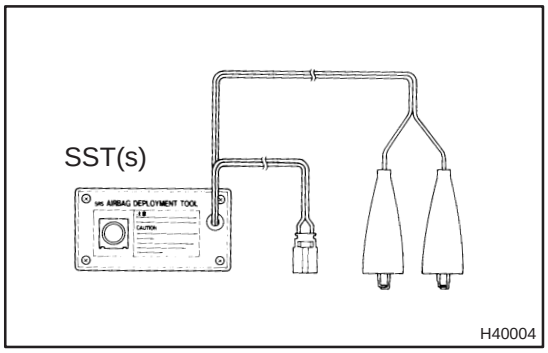
DISPOSAL

HINT:

When scrapping a vehicle equipped with the SRS or disposing of a horn button assy, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of TOYOTA MOTOR SALES, U.S.A., INC.

CAUTION:

- **Never dispose of the horn button assy that has an undeployed airbag.**
- **The airbag produces an extremely exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.**

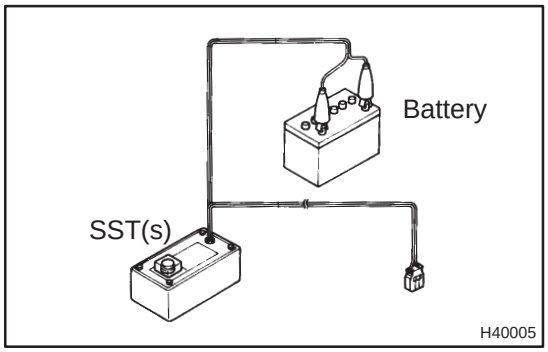


- **When deploying the airbag, always use the specified SST(s) (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (33 ft) away from the horn button assy.**
- **The horn button assy is extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling the horn button assy with the deployed airbag.**
- **Do not apply water, etc. to the horn button assy with the deployed airbag.**
- **Always wash your hands with water after completing the operation.**

1. DISPOSE OF HORN BUTTON ASSY (WHEN SCRAPPING VEHICLE DEPLOYMENT METHOD)

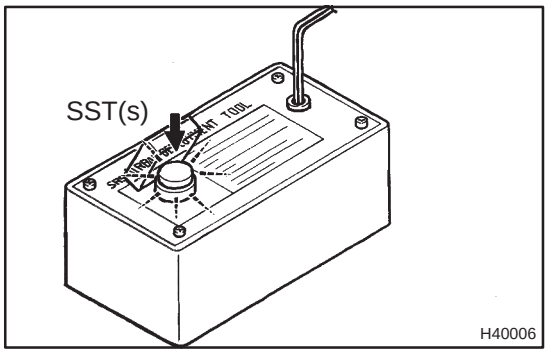
HINT:

Prepare a battery as the power source to deploy the airbag.



(a) Check the function of the SST(s).

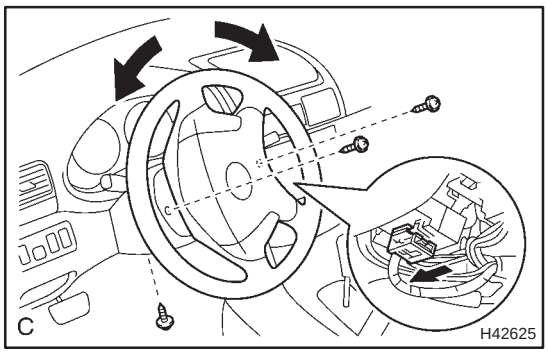
CAUTION:



When deploying the airbag, always use the specified SST(s): SRS Airbag Deployment Tool.

SST 09082–00700

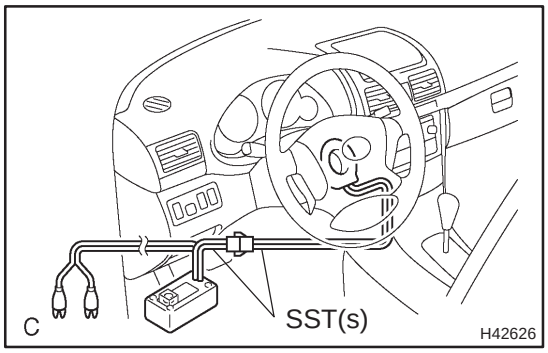
(1) Connect the SST(s) to the battery.
Connect the red clip of the SST(s) to the battery positive (+) terminal and the black clip of the SST(s) to the battery negative (–) terminal.



HINT:
Do not connect the yellow connector of the SST(s) which is to be connected with the supplemental restraint system.

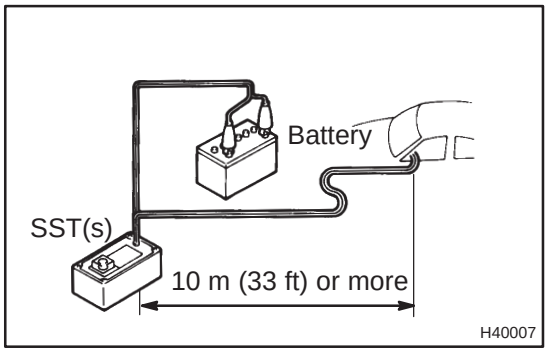
(2) Check the function of the SST(s).
Press the SST(s) activation switch, and check that the LED of the SST(s) activation switch comes on.

CAUTION:
If the LED comes on when the activation switch is not being pressed, SST(s) malfunction is posible, so be sure not to use the SST(s).



(3) Disconnect the SST(s) from the battery.

(b) Install the SST(s).



CAUTION:
Check that there is no looseness in the steering wheel assy and horn button assy.

(1) Remove the instrument panel hole (See page 60–54).
(2) Remove the instrument panel airbag assy (See page 60–54).
(3) While turning the steering wheel right and left, remove the 3 screws and steering column cover.
(4) Disconnect the airbag connector of the spiral cable sub–assy.

(5) Connect the connector of the SST(s) to the airbag connector of the spiral cable sub–assy.
SST 09082–00700, 09082–00780

NOTICE:
To avoid damaging the SST(s) connector and wire harness, do not lock the secondary lock of the twin lock.

(6) Move the SST(s) at least 10 m (33 ft) away from the front of the vehicle.

(7) Close all the doors and windows in the vehicle.

NOTICE:

Take care not to damage the SST(s) wire harness.

(8) Connect the red clip of the SST(s) to the battery positive (+) terminal and the black clip of the SST(s) to the negative (–) terminal.

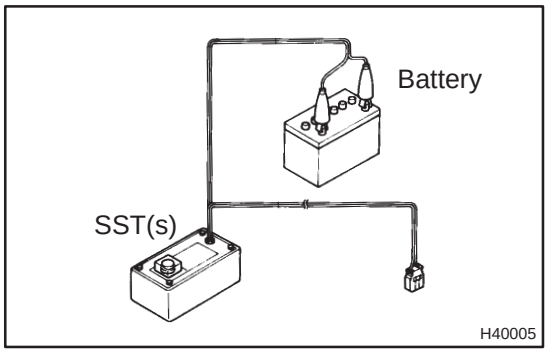
(c) Deploy the airbag.

(1) Check that no one is inside the vehicle or within a 10 m (33 ft) radius of the vehicle.

(2) Press the activation switch of the SST(s) and deploy the airbag.

HINT:

The airbag is deployed as the LED of the SST(s) activation switch comes on.



(d) Dispose of the horn button assy.

CAUTION:

- **The horn button assy is extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **When moving the vehicle which has the horn button assy with the deployed airbag for scrapping, use gloves and safety glasses.**
- **Use gloves and safety glasses when handling the horn button assy with the deployed airbag.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water, etc. to the horn button assy with the deployed airbag.**

HINT:

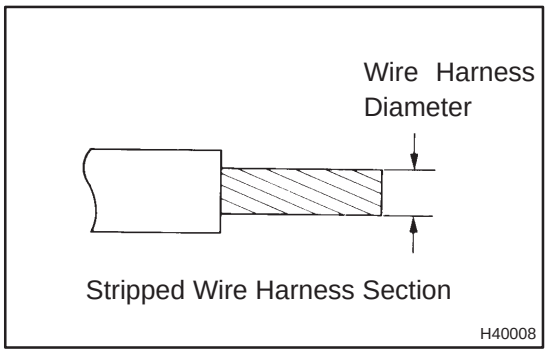
When scrapping a vehicle, deploy the airbag and scrap the vehicle with the horn button assy still installed.

2. DISPOSE OF HORN BUTTON ASSY (WHEN DISPOSING OF AIRBAG ASSEMBLY DEPLOYMENT METHOD)

NOTICE:

- **When disposing of the horn button assy only, never use the customer's vehicle to deploy the airbag.**
- **Be sure to follow the procedure detailed below when deploying the airbag.**

HINT:



Have a battery as the power source to deploy the airbag.

(a) Check the function of the SST(s) (See step 1–(a)).

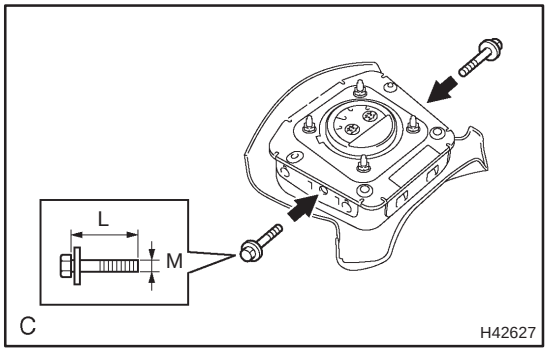
(b) Remove the horn button assy (See page 60–17).

CAUTION:

- **When removing the horn button assy, work must be started 90 seconds after the ignition switch is turned to the "LOCK" position and the negative (–) terminal cable is disconnected from the battery.**
- **When storing the horn button assy, keep the upper surface of the airbag deployment side facing upward.**

(c) Using a service–purpose wire harness for the vehicle, tie down the horn button assy to the disc wheel.

Wire harness: Stripped wire harness section 1.25 mm^2 or more (0.0019 in^2. or more)



CAUTION:

If a wire harness which is too thin or an alternative object is used to tie down the horn button assy, it may be snapped by the shock when the airbag is deployed. This is highly dangerous. Always use a wire harness for vehicle use which has a diameter of at least 1.25 mm^2 (0.0019 in^2).

HINT:

To calculate the square of the stripped wire harness section:

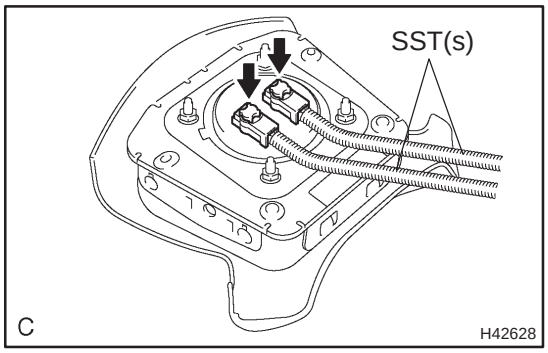
Square = 3.14 x (Diameter)^2 divided by 4

(1) Install the 2 bolts with washers in the 2 bolts holes of the horn button assy.

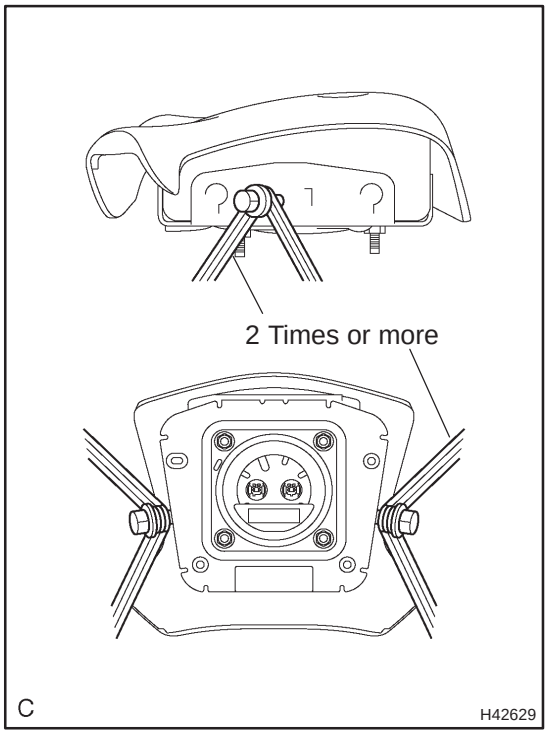
Bolt:

L: 35.0 mm (1.378 in.)

M: 6.0 mm (0.236 in.)



Pitch: 1.0 mm (0.039 in.)

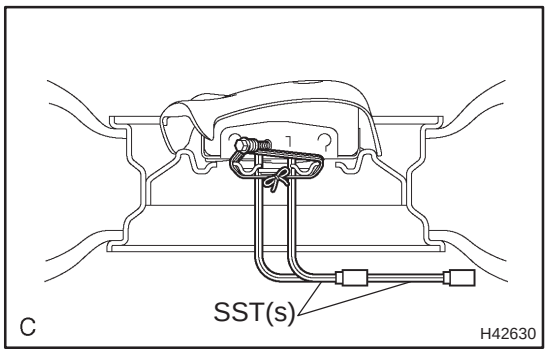


NOTICE:

- **Tighten the bolts by hand until the bolts become difficult to turn.**
- **Do not tighten the bolts too much.**

(2) After connecting the SST(s) below to each other, connect them to the horn button assy.

SST 09082–00802 (09082–10801, 09082–30801)



(3) Using 3 wire harnesses, wind each wire harness at least 2 times each around the bolts installed on the left and right sides of the horn button assy.

CAUTION:

- **Tightly wind the wire harness around the bolts so that there is no slack.**
- **If there is slack in the wire harness, the horn button assy may become loose due to the shock when the airbag is deployed. This is highly dangerous.**

(4) Face the upper surface of the horn button assy upward. Separately tie the left and right sides of the horn button assy to the disc wheel through the hub nut holes. Position the SST(s) connector so that it hangs downward through a hub hole in the disc wheel.

CAUTION:

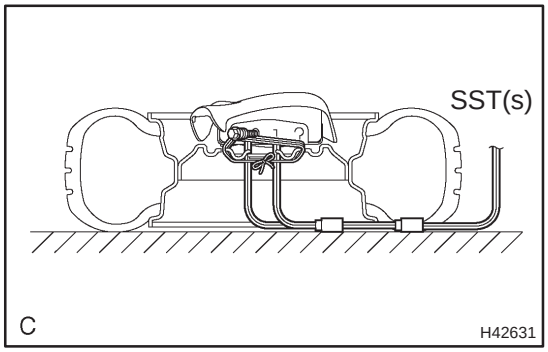
- **Make sure that the wire harness is tight. It is highly dangerous when looseness in the wire harness results in the horn button assy coming free due to the shock from the airbag deployment.**
- **Always tie down the horn button assy with the pad side facing upward. It is highly dangerous if the horn button assy is tied down with the metal surface facing upward as the wire harness will be cut by the shock caused by the airbag deployment and the horn button assy will be thrown into the air.**

NOTICE:

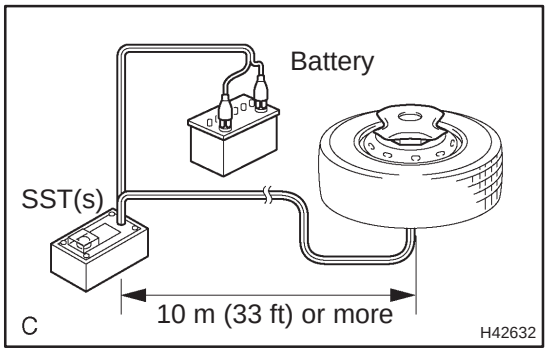
The disc wheel will be marked by the airbag deployment, so use a redundant disc wheel.

(d) Install the SST(s).

CAUTION:

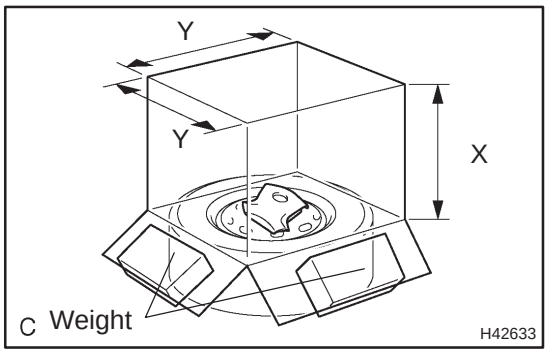


Place the disc wheel on the level ground.



(1) Connect the connector of the SST(s).

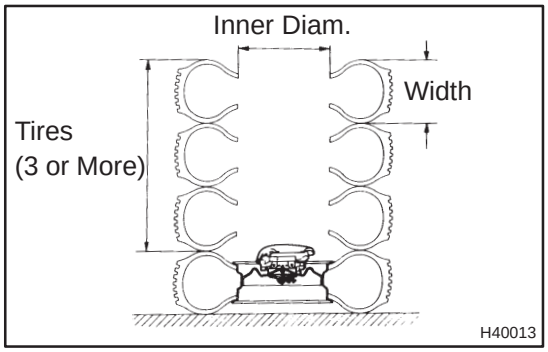
SST 09082–00700



NOTICE:

To avoid damaging the SST(s) connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST(s) wire harness inside the disc wheel.

(2) Move the SST(s) to at least 10 m (33 ft) away from the horn button assy tied down to the disc wheel.



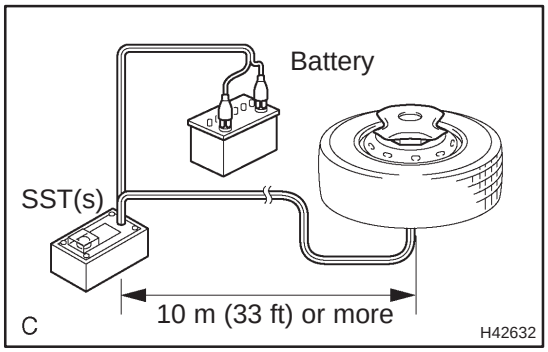
(e) Cover the horn button assy with a cardboard box or tires.

- Covering method using a cardboard box:
  Cover the horn button assy with the cardboard box and weigh the cardboard box down in 4 places with at least 190 N (20 kg, 44 lb).

Size of cardboard box:
Must exceed the following dimensions:
X = 460 mm (18.11 in.)
Y = 650 mm (25.59 in.)

NOTICE:

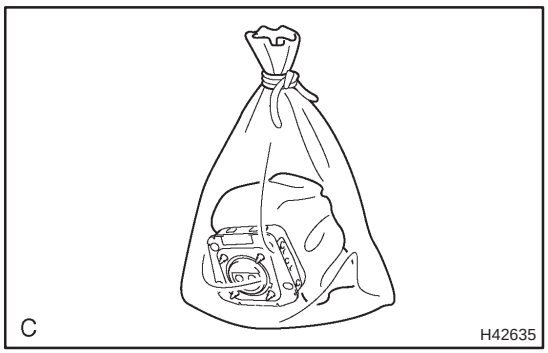
- **When the dimension Y of the cardboard box exceeds the diameter of the disc wheel with tire to which the horn button assy is tied, X should be the following size.**
  X = 460 mm (18.11 in.) + width of tire
- **If a cardboard box smaller than the specified size is used, the cardboard box will be broken by the shock from the airbag deployment.**



- Covering method using tires:
  Place at least 3 tires with no disc wheels on top of the tire with disc wheel to which the horn button assy is tied.

Tire size: Must exceed the following dimensions
Width: 185 mm (7.28 in.)
Inner diameter: 360 mm (14.17 in.)

CAUTION:
Do not use tires with disc wheels.



NOTICE:

- **The tires may be marked by the airbag deployment, so use a redundant tires.**
- **Do not place the SST(s) connector under the tire because the SST(s) connector could be damaged.**

(f) Deploy the airbag.
(1) Connect the red clip of the SST(s) to the battery positive (+) terminal and the black clip of the SST(s) to the battery negative (–) terminal.
(2) Check that no one is within a 10 m (33 ft) radius of the disc wheel which the horn button assy is tied to.
(3) Press the activation switch of the SST(s) and deploy the airbag.

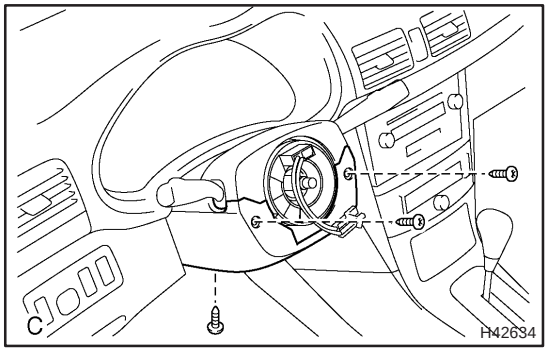
HINT:
The airbag is deployed as the LED of the SST(s) activation switch comes on.

(g) Dispose of the horn button assy.

CAUTION:
- **The horn button assy is extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling the horn button assy with the deployed airbag.**
- **Do not apply water, etc. to the horn button assy with the deployed airbag.**
- **Always wash your hands with water after completing the operation.**

(1) Remove the horn button assy from the disc wheel.
(2) Place the horn button assy in a plastic bag, tie the end tightly and dispose of it as other general parts disposal.

SPIRAL CABLE SUB–ASSY



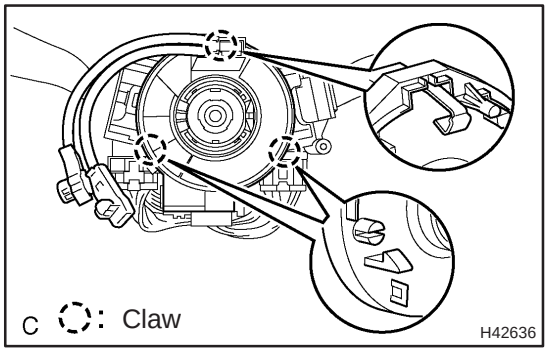
6009S–04

REPLACEMENT

HINT:

COMPONENTS: See page 60–16

1. **PRECAUTION (See page 60–1)**
2. **DISCONNECT BATTERY NEGATIVE TERMINAL (See page 60–1)**
3. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**
4. **REMOVE HORN BUTTON ASSY (See page 60–17)**
5. **REMOVE STEERING WHEEL ASSY (See page 50–9)**
   SST 09950–50013 (09951–05010, 09952–05010, 09953–05020, 09954–05021)
6. **REMOVE INSTRUMENT PANEL HOLE COVER (See page 60–54)**
7. **REMOVE INSTRUMENT PANEL AIR BAG ASSY (See page 60–54)**



8. **REMOVE STEERING COLUMN COVER SUB–ASSY LOWER**

(a) Remove the 3 screws and the steering column cover sub–assy lower.

9. **REMOVE STEERING COLUMN COVER W/INSTRUMENT CLUSTER FINISH PANEL ASSY**

(a) Remove the steering column cover w/instrument cluster finish panel assy.

10. **REMOVE SPIRAL CABLE SUB–ASSY**

(a) Disconnect the airbag connector and the connector from the spiral cable sub–assy.

(b) Disengage the 3 claws and remove the spiral cable sub–assy.

11. **INSPECT SPIRAL CABLE SUB–ASSY (See page 60–11)**

(a) If the following condition is identified, replace the spiral cable sub–assy with a new one.
Condition:
Scratches or cracks on the connector
Cracks, dents or chips in the spiral cable sub–assy

12. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**

(a) Check that the front wheels are facing straight ahead.

13. INSTALL SPIRAL CABLE SUB–ASSY

(a) Set the turn signal switch to the neutral position.

NOTICE:

Make sure of the neutral position since the pin of the turn signal switch may be snapped.

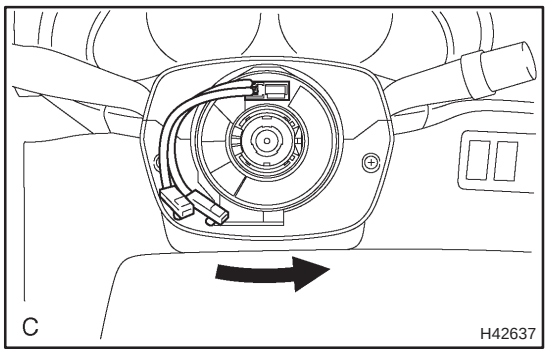
(b) Install the spiral cable sub–assy.

NOTICE:

When replacing the spiral cable sub–assy with a new one, remove the lock pin before installing the steering wheel assy.

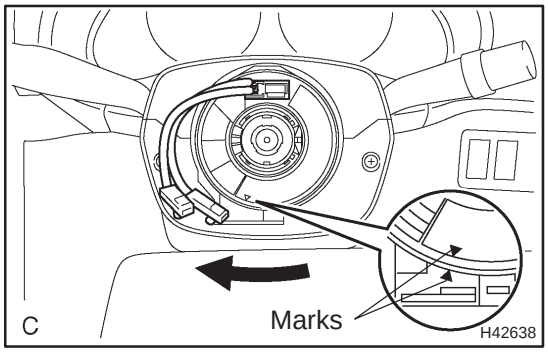
(c) Connect the airbag connector and the connector.

(d) Install the steering column cover with the 3 screws.



14. ADJUST SPIRAL CABLE SUB–ASSY

(a) Check that the ignition switch is off.



(b) Check that the battery negative terminal is disconnected.

NOTICE:

Do not start the operation for 90 seconds after removing the terminal.

(c) Turn the spiral cable sub–assy counterclockwise slowly by hand until it feels firm.

(d) Then rotate the spiral cable sub–assy clockwise about 2.5 turns to align the marks.

HINT:

The spiral cable sub–assy will rotate about 2.5 turns to both left and right of the center.

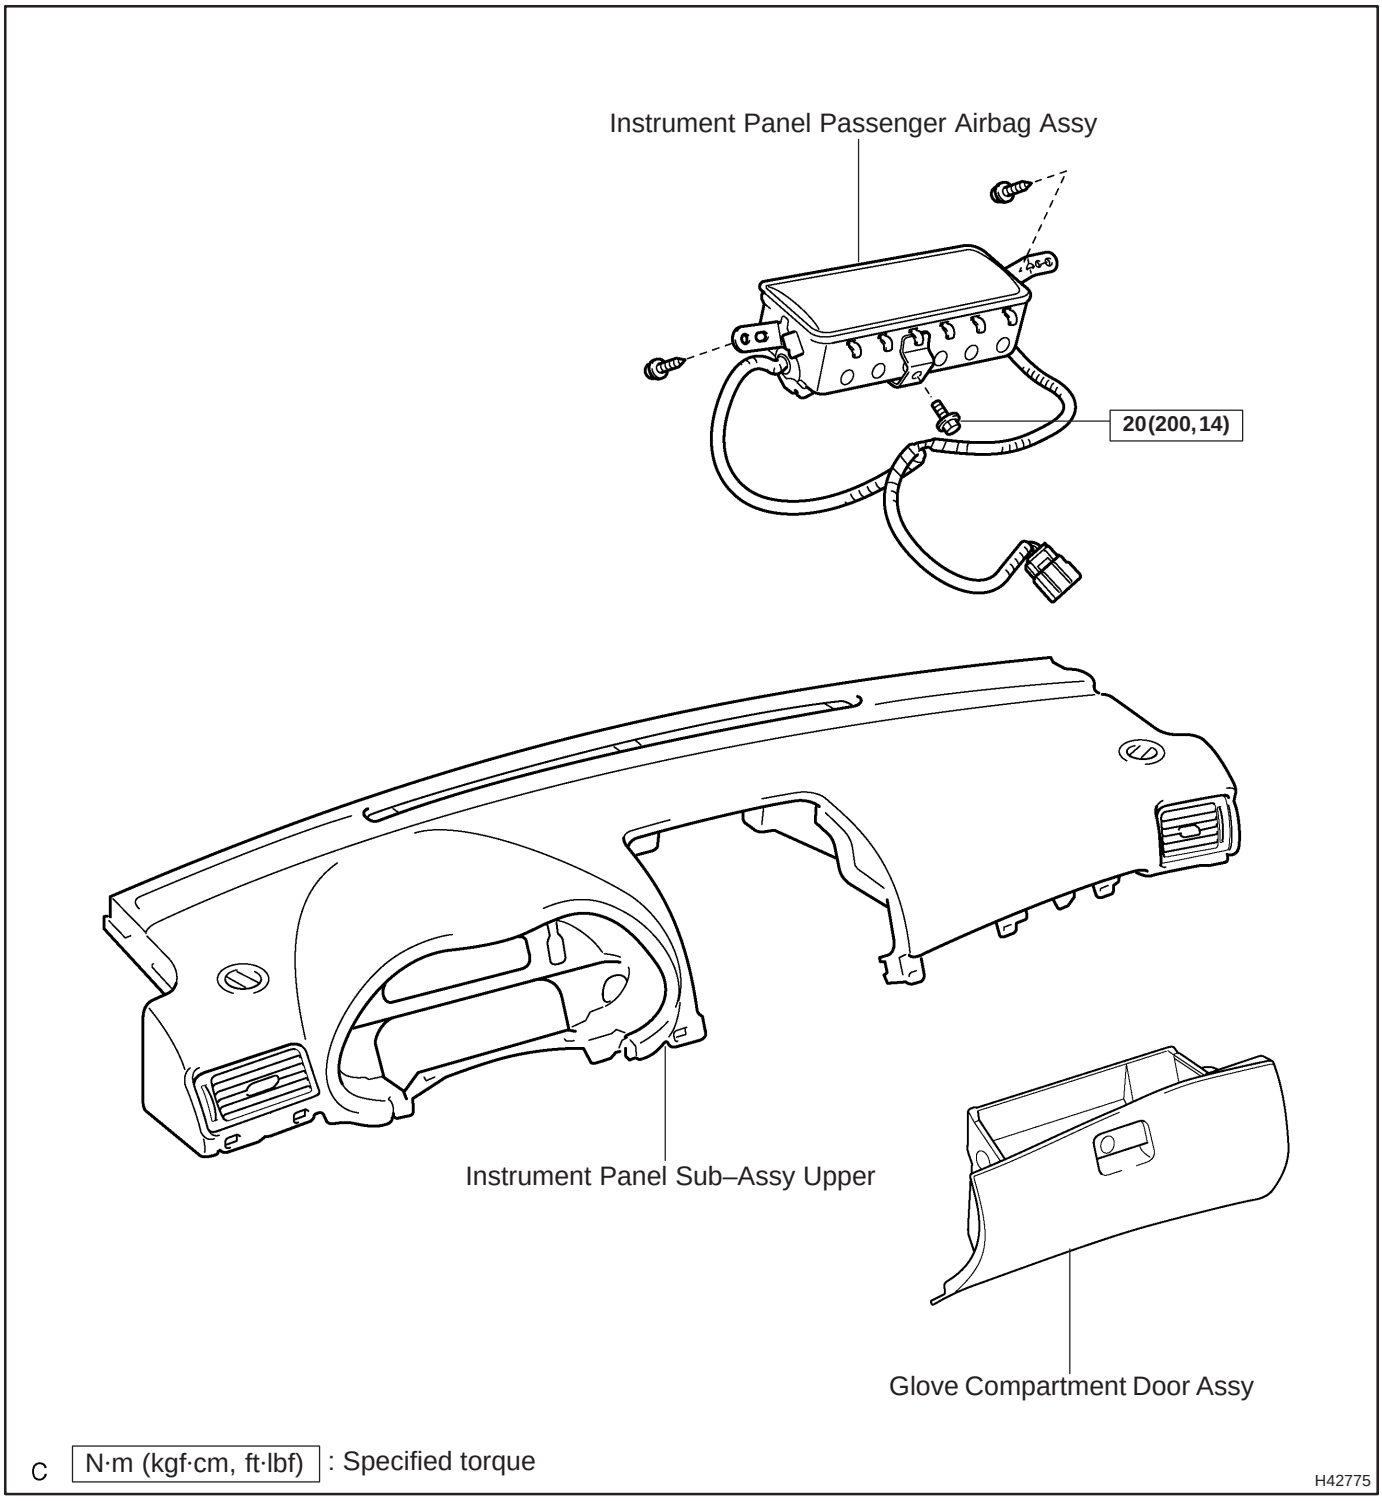
15. INSTALL STEERING COLUMN COVER SUB–ASSY LOWER (See page 50–9)

16. INSTALL INSTRUMENT PANEL AIR BAG ASSY (See page 60–54)

17. INSTALL STEERING WHEEL ASSY (See page 50–9)

18. INSPECT STEERING WHEEL CENTER POINT

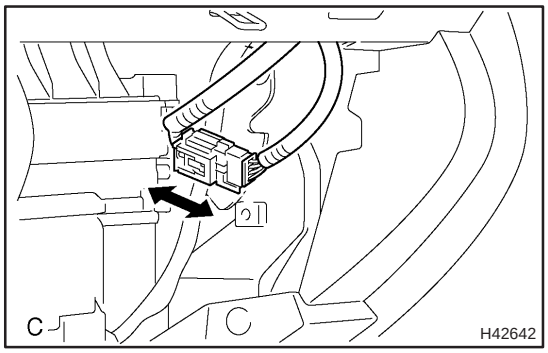
19. INSTALL HORN BUTTON ASSY (See page 60–17)



20. INSPECT HORN BUTTON ASSY (See page 60–11)

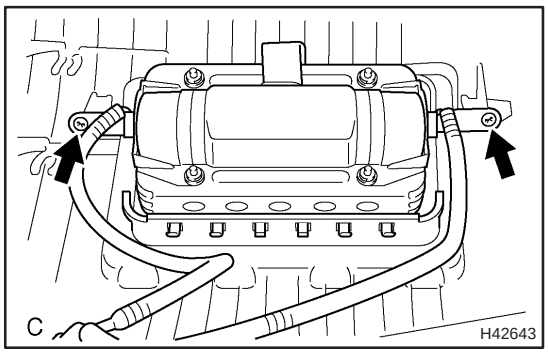
21. INSPECT SRS WARNING LIGHT (See page 05–1184)

INSTRUMENT PANEL PASSENGER AIR BAG ASSY



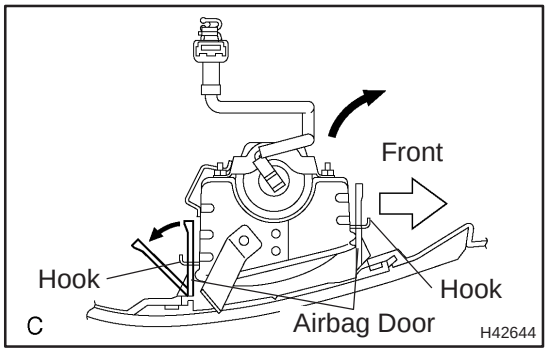
600JX–01

COMPONENTS



REPLACEMENT

1. PRECAUTION (See page 60–1)
2. DISCONNECT BATTERY NEGATIVE TERMINAL (See page 60–1)
3. REMOVE GLOVE COMPARTMENT DOOR ASSY (See page 71–11)



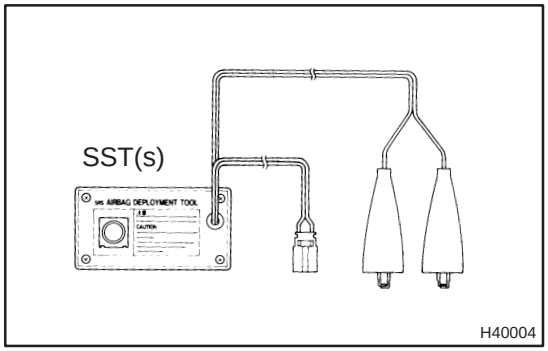
4. DISCONNECT PASSENGER AIRBAG CONNECTOR
(a) Remove the passenger airbag connector clip.
(b) Disconnect the passenger airbag connector.

5. REMOVE INSTRUMENT PANEL SUB–ASSY UPPER W/INSTR PNL PASS L/DOOR AIR BAG ASSY (See page 71–11)

6. REMOVE INSTRUMENT PANEL PASSENGER AIR BAG ASSY
(a) Remove the 2 screws.

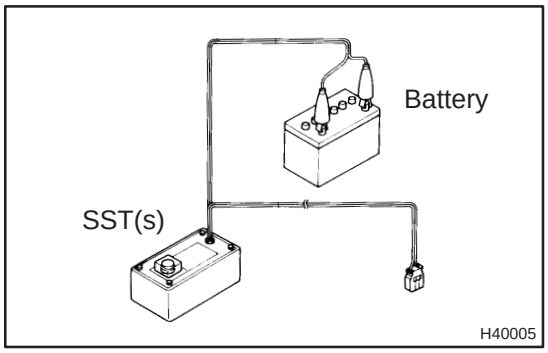
(b) Release the rear side wall of the airbag door from the hook by slightly deflecting it and roll the instrument panel passenger airbag assy forward.
(c) Release the front side wall of the airbag door from the other hook and remove the instrument panel passenger airbag assy.

7. INSTALL INSTRUMENT PANEL PASSENGER AIR BAG ASSY
8. INSPECT INSTRUMENT PANEL PASSENGER AIR BAG ASSY (See page 60–11)
9. INSTALL INSTRUMENT PANEL SUB–ASSY UPPER W/INSTR PNL PASS L/DOOR AIR BAG ASSY (See page 71–11)
10. INSPECT SRS WARNING LIGHT (See page 05–1184)



DISPOSAL

HINT:

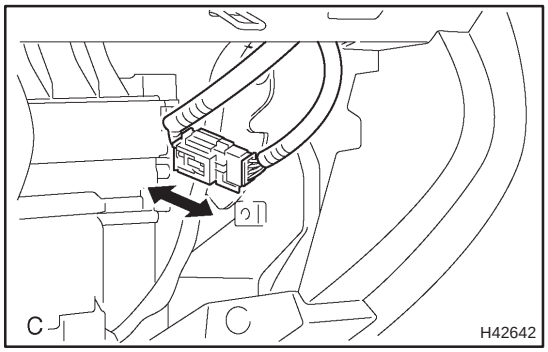


When scrapping a vehicle equipped with SRS or disposing of an instrument panel passenger airbag assy, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of TOYOTA MOTOR SALES, U.S.A., INC.

CAUTION:

- **Never dispose of the instrument panel passenger assy that has an undeployed airbag.**
- **The airbag produces an extremely exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.**

- **When deploying the airbag, always use the specified SST(s) (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (33 ft) away from the instrument panel passenger airbag assy.**
- **The instrument panel passenger airbag assy is extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling the instrument panel passenger airbag assy with the deployed airbag.**
- **Do not apply water, etc. to the instrument panel passenger airbag assy with the deployed airbag.**
- **Always wash your hands with water after completing the operation.**

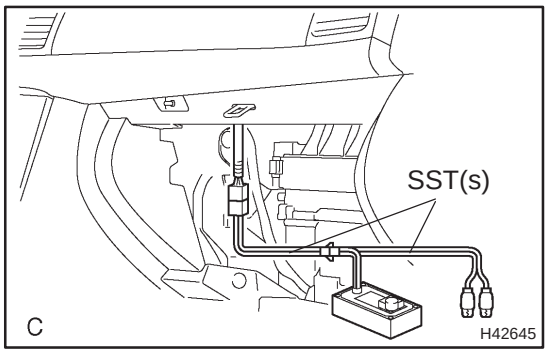


1. DISPOSE OF INSTRUMENT PANEL PASSENGER AIR BAG ASSY (WHEN SCRAPPING VEHICLE DEPLOYMENT METHOD)

HINT:

Prepare a battery as the power source to deploy the airbag.

(a) Check functioning of the SST(s) (See step 1–(a) on page 60–19).



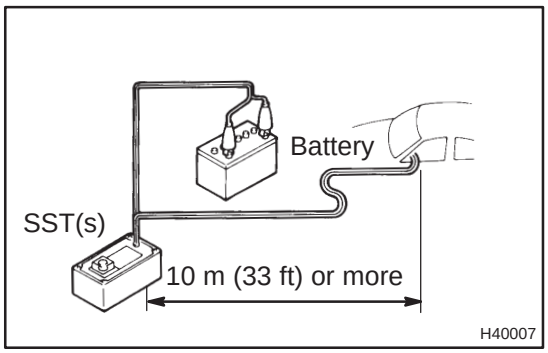
(b) Disconnect the airbag connector.

(1) Remove the glove compartment door assy (See step 71–11).

NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

(2) Disconnect the airbag connector.



(c) Install the SST(s).

(1) Connect the connector of the SST(s) to the instrument panel passenger airbag assy connector.

SST 09082–00700, 09082–00780

NOTICE:

To avoid damaging the SST(s) connector and wire harness, do not lock the secondary lock of the twin lock.

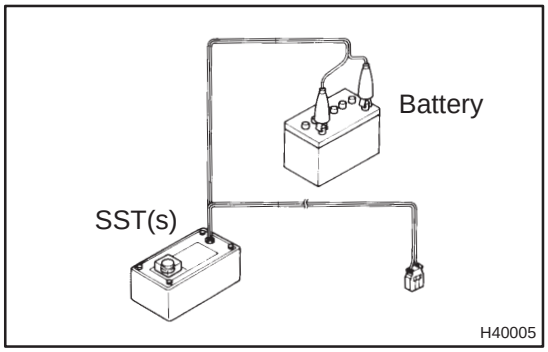
(2) Move the SST(s) to at least 10 m (33 ft) away from the front of the vehicle.

(3) Close all the doors and windows in the vehicle.

NOTICE:

Take care not to damage the SST(s) wire harness.

(4) Connect the red clip of the SST(s) to the battery positive (+) terminal and the black clip of the SST(s) to the negative (–) terminal.



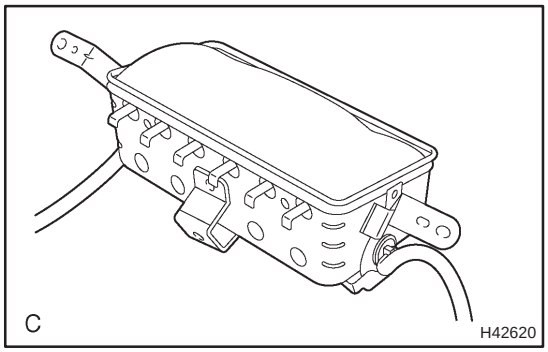
(d) Deploy the airbag.
(1) Check that no one is inside the vehicle or within a 10 m (33 ft) radius of the vehicle.
(2) Press the activation switch of the SST(s) and deploy the airbag.

HINT:
The airbag is deployed as the LED of the SST(s) activation switch comes on.

(e) Dispose of the instrument panel passenger airbag assy.

CAUTION:
- **The instrument panel passenger airbag assy is extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling the instrument panel passenger airbag assy with the deployed airbag.**
- **When moving the vehicle for scrapping which has the instrument panel passenger airbag assy with the deployed airbag, use gloves and safety glasses.**
- **Do not apply water, etc. to the instrument panel passenger airbag assy with the deployed airbag.**
- **Always wash your hands with water after completing the operation.**

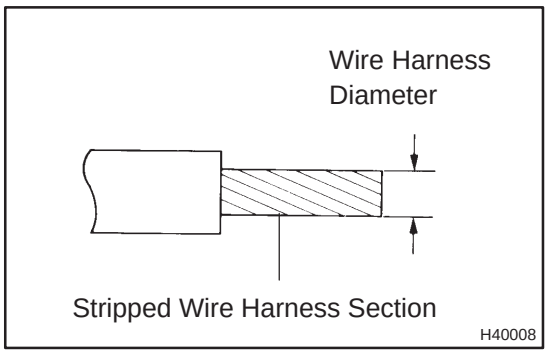
HINT:
When scrapping a vehicle, deploy the airbag and scrap the vehicle with the instrument panel passenger airbag assy still installed.



2. DISPOSE OF INSTRUMENT PANEL PASSENGER AIR BAG ASSY (WHEN DISPOSING OF AIRBAG ASSEMBLY DEPLOYMENT METHOD)

NOTICE:
- **When disposing of the instrument panel passenger airbag assy only, never use the customer's vehicle to deploy the airbag.**
- **Be sure to follow the procedure detailed below when deploying the airbag.**

HINT:
Prepare a battery as the power source to deploy the airbag.



(a) Check the function of the SST(s) (See step 1–(a) on page 60–19).

(b) Remove the instrument panel passenger airbag assy (See page 60–29).

CAUTION:

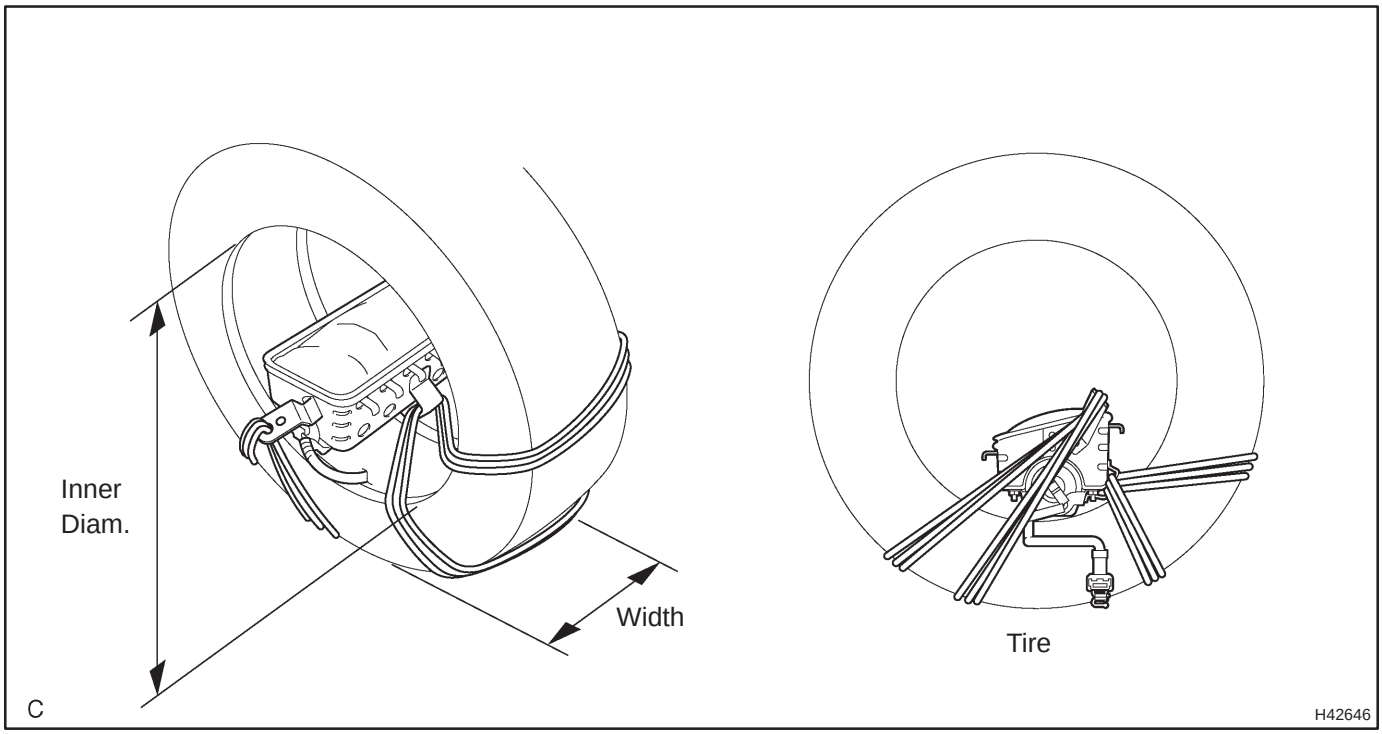
- **When removing the instrument panel passenger airbag assy, work must be started 90 seconds after the ignition switch is turned to the "LOCK" position and the negative (–) terminal cable is disconnected from the battery.**
- **When storing the instrument panel passenger airbag assy, keep the upper surface of the airbag deployment side facing upward.**

(c) Using a service–purpose wire harness for the vehicle, tie down the instrument panel passenger airbag assy to the tire.

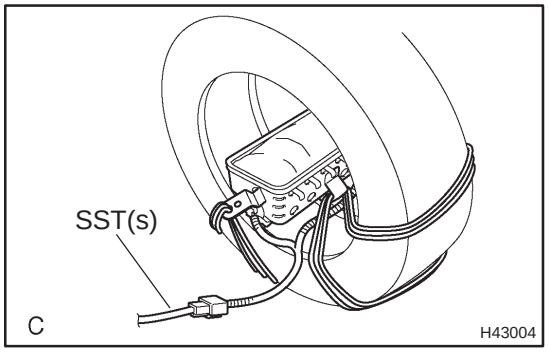
Wire harness: Stripped wire harness section 1.25 mm^2 or more (0.0019 $in.^2$ or more)

CAUTION:

If a wire harness which is too thin or an alternative object is used to tie down the instrument panel passenger airbag assy, it may be snapped by the shock when the airbag is deployed. This is highly dangerous. Always use a wire harness for vehicle use which has a diameter of at least 1.25 mm^2 (0.0019 $in.^2$).

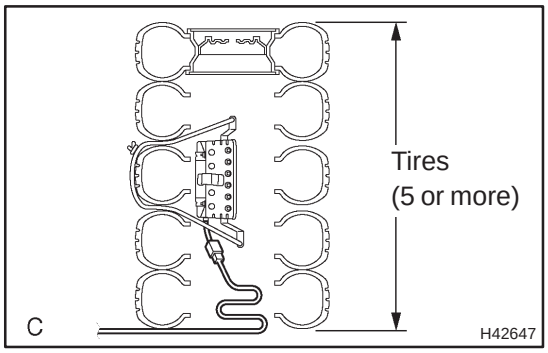


HINT:



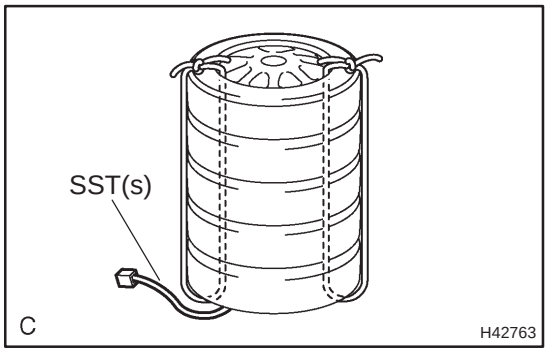
- To calculate the square of the stripped wire harness section:
  Square = 3.14 x $(Diameter)^2$ divided by 4
- Position the instrument panel passenger airbag assy inside the tire with the airbag deployment side facing inside.
  Tire size: Must exceed the following dimensions
  Width: 185 mm (7.28 in.)
  Inner diameter: 360 mm (14.17 in.)

CAUTION:



- **Make sure that the wire harness is tight. It is highly dangerous when looseness in the wire harness results in the instrument panel passenger airbag assy coming free due to the shock from the airbag deployment.**
- **Always tie down the instrument panel passenger airbag assy with the airbag deployment side facing inside the tire.**

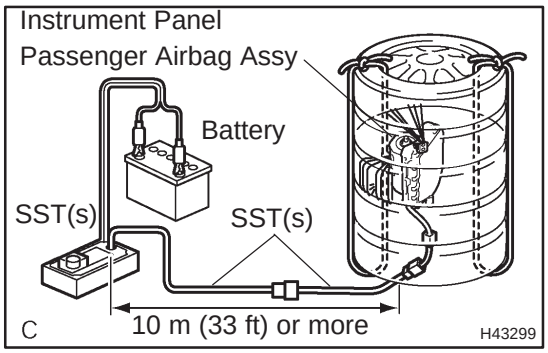
NOTICE:
The tire will be marked by the airbag deployment, so use a redundant tire.



(d) Install the SST(s).
Connect the connector of the SST(s) to the instrument panel passenger airbag assy.
SST 09082–00780

(e) Place tires.
(1) Place at least 2 tires under the tire to which the instrument panel passenger airbag assy is tied.
(2) Place at least 2 tires over the tire to which the instrument panel passenger airbag assy is tied. The top tire should have the disc wheel installed.

NOTICE:
Do not place the SST(s) connector under the fire because the SST connector could be damaged.



(3) Tie the tires together with 2 wire harnesses.

CAUTION:

Make sure that the wire harness is tight. It is very dangerous when looseness in the wire harness result in the tires coming free due to the shock from the airbag deployment.

HINT:

Place the SST(s) connector and the wire harness inside tires. Secure at least 1 m (3 ft) of slack for the wire harness.

(f) Install the SST(s).

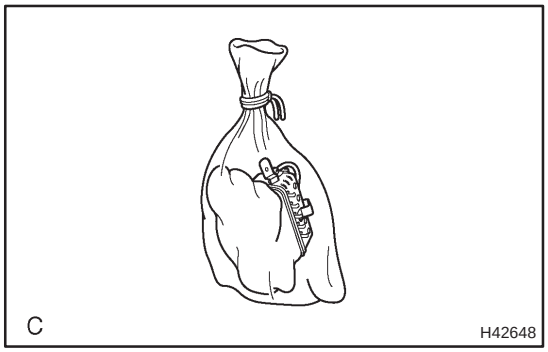
Connect the connector of the SST(s).

SST 09082–00700

NOTICE:

To avoid damaging the SST(s) connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST(s) wire harness inside the tire.

(g) Deploy the airbag.



(1) Connect the red clip of the SST(s) to the battery positive (+) terminal and the black clip of the SST to the battery negative (–) terminal.

(2) Check that no one is within a 10 m (33 ft) radius of the tire to which the instrument panel passenger airbag assy is tied.

(3) Press the activation switch of the SST(s) and deploy the airbag.

HINT:

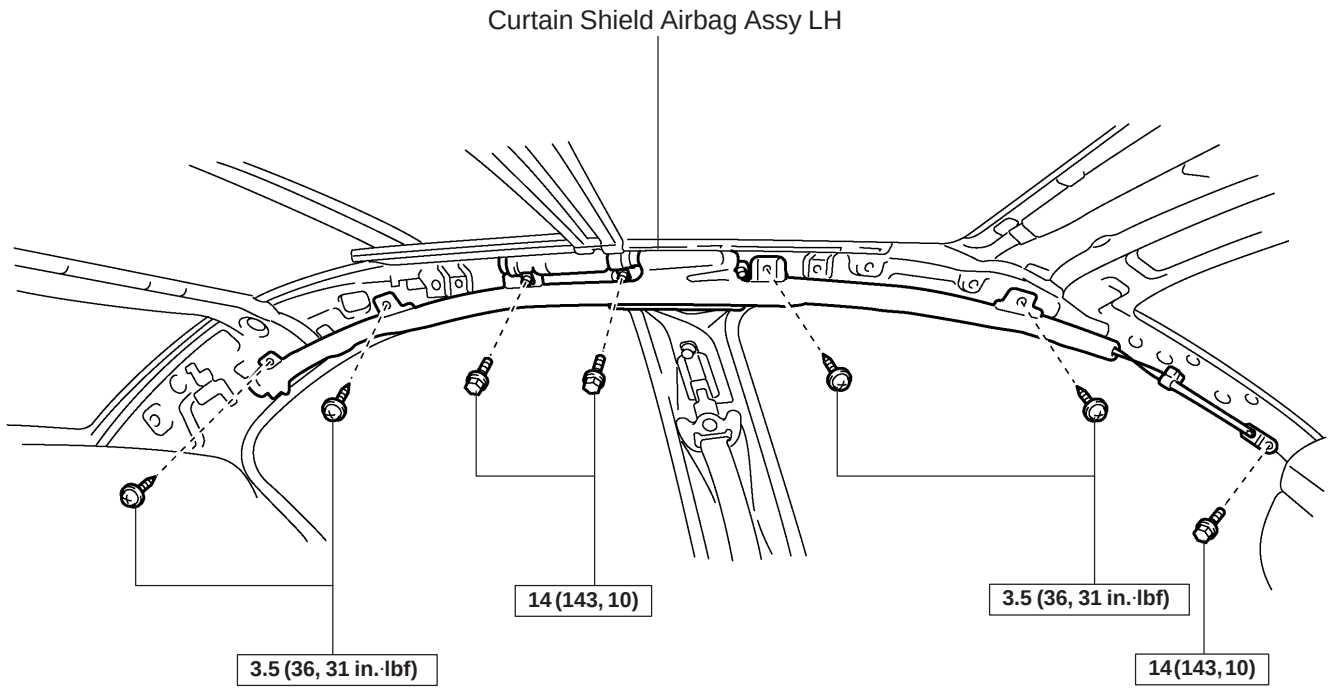
The airbag is deploys as the LED of the SST(s) activation switch comes on.

(h) Dispose of the instrument panel passenger airbag assy.

CAUTION:

- **The instrument panel passenger airbag assy is very hot when the airbag is deployed, so leave it alone for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling the instrument panel passenger airbag assy with the deployed airbag.**
- **Do not apply water, etc. to the instrument panel passenger airbag assy with the deployed airbag.**
- **Always wash your hands with water after completing the operation.**

(1) Remove the instrument panel passenger airbag assy from the tire.

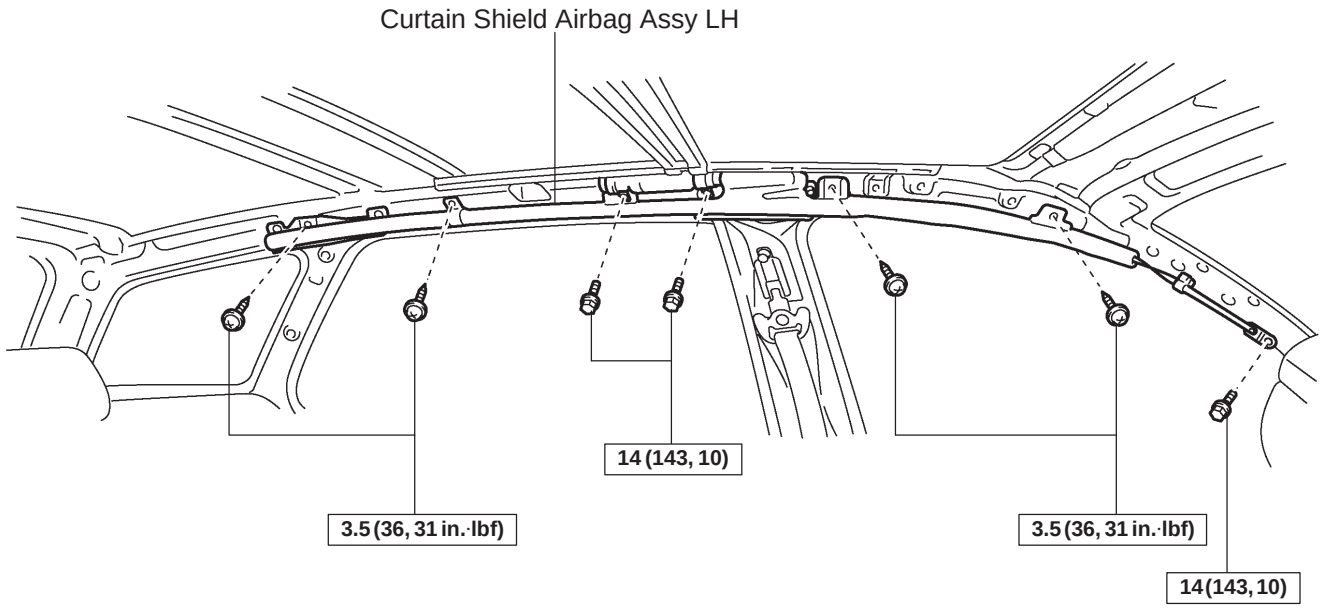


(2) Place the instrument panel passenger airbag assy in a plastic bag, tie the end tightly and dispose of it in the same way as other general parts disposal.

CURTAIN SHIELD AIR BAG ASSY LH

600K0–01

COMPONENTS



Sedan/Liftback Models:

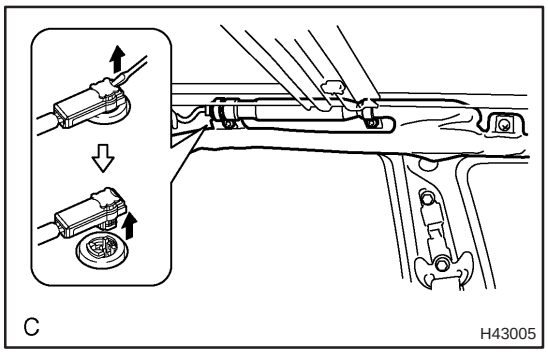
C N·m (kgf·cm, ft·lbf) : Specified torque

H42754

Wagon Models:

C N·m (kgf·cm, ft·lbf) : Specified torque

H42756



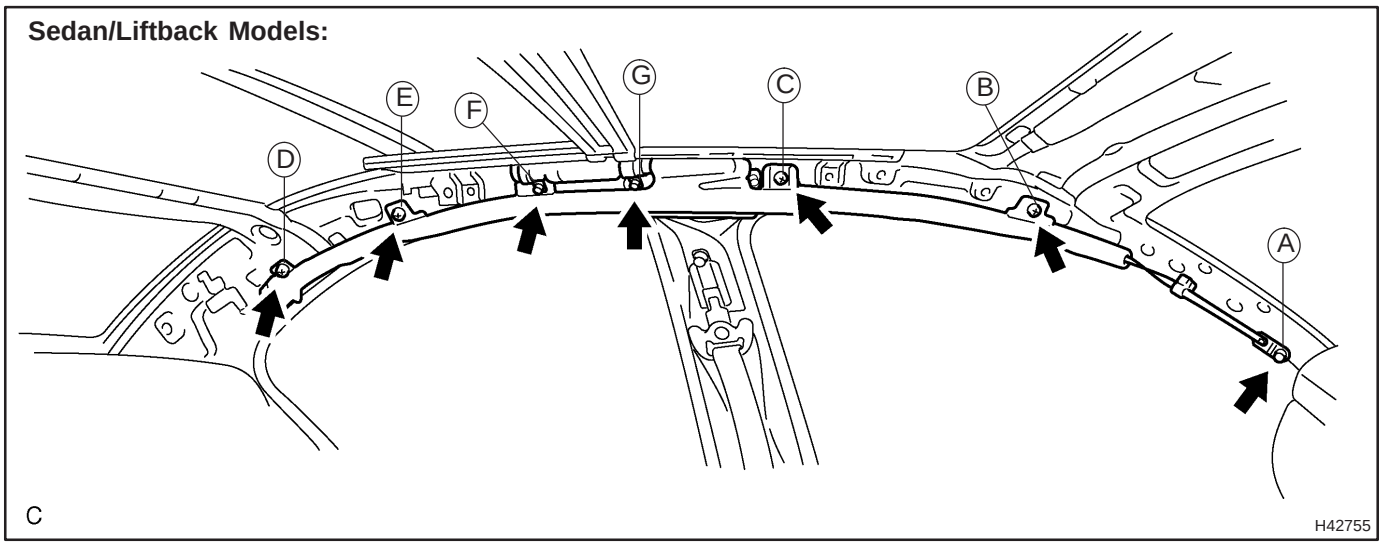
600K1–01

REPLACEMENT

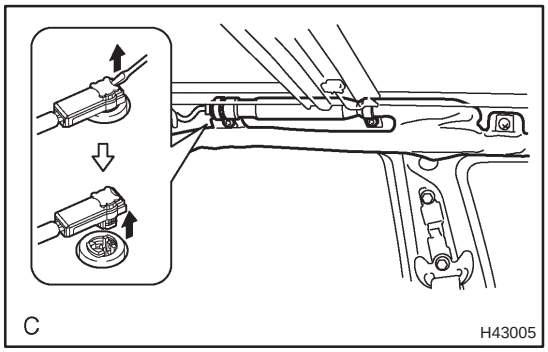
HINT:

Replacement procedure of the RH side is the same as that for with LH side.

1. **PRECAUTION (See page 60–1)**
2. **DISCONNECT BATTERY NEGATIVE TERMINAL (See page 60–1)**
3. **REMOVE ROOF HEADLINING ASSY (SEDAN MODELS) (See page 76–36)**
4. **REMOVE ROOF HEADLINING ASSY (LIFTBACK MODELS) (See page 76–45)**
5. **REMOVE ROOF HEADLINING ASSY (WAGON MODELS) (See page 76–54)**



6. **REMOVE CURTAIN SHIELD AIR BAG ASSY LH (SEDAN/LIFTBACK MODELS)**

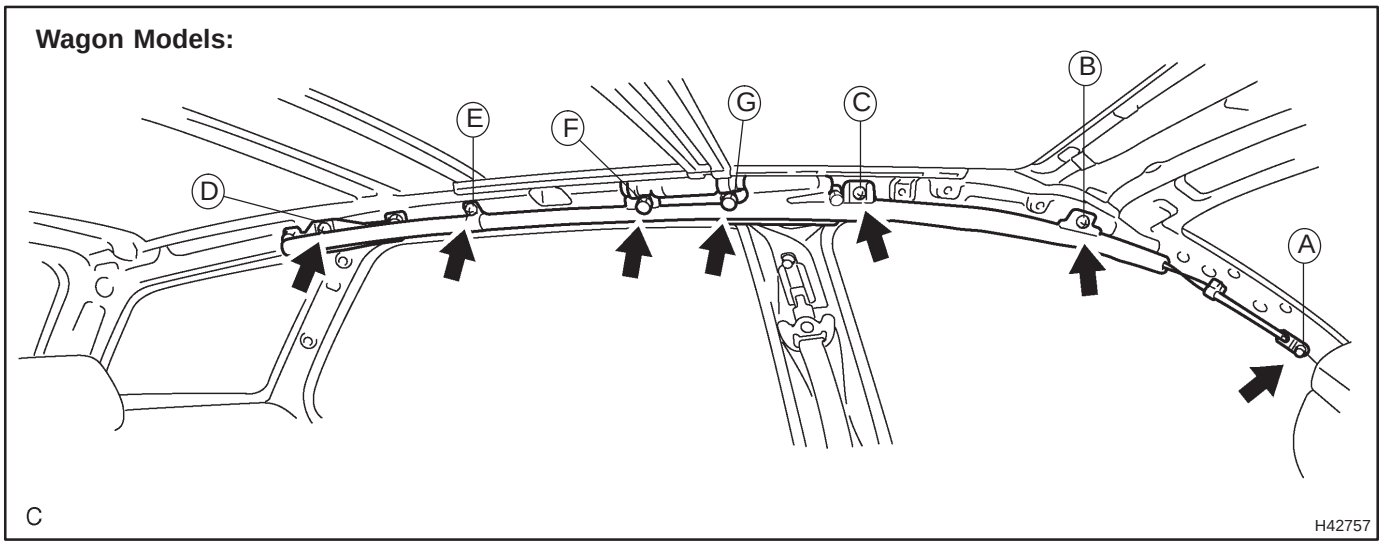


(a) Using a screwdriver, disconnect the connector of the curtain shield airbag assy LH.

(b) After removing the 4 screws and the 3 bolts in order as follows, remove the curtain shield airbag assy LH.

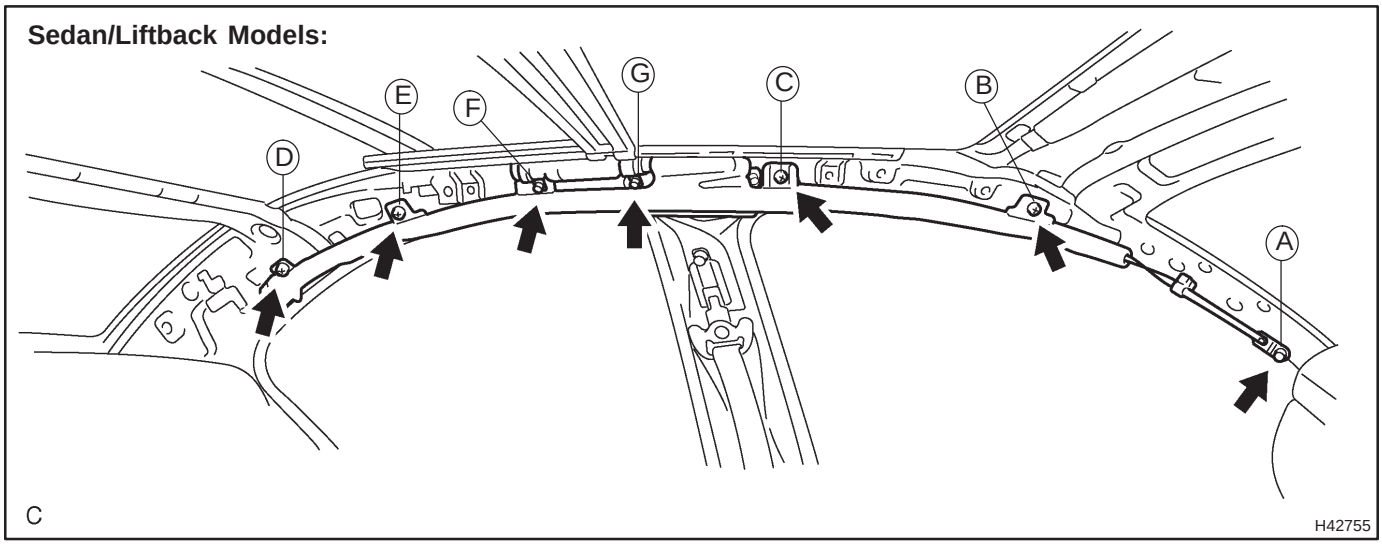
A → B → C → D → E → F → G

Sedan/Liftback Models:



7. REMOVE CURTAIN SHIELD AIR BAG ASSY LH (WAGON MODELS)

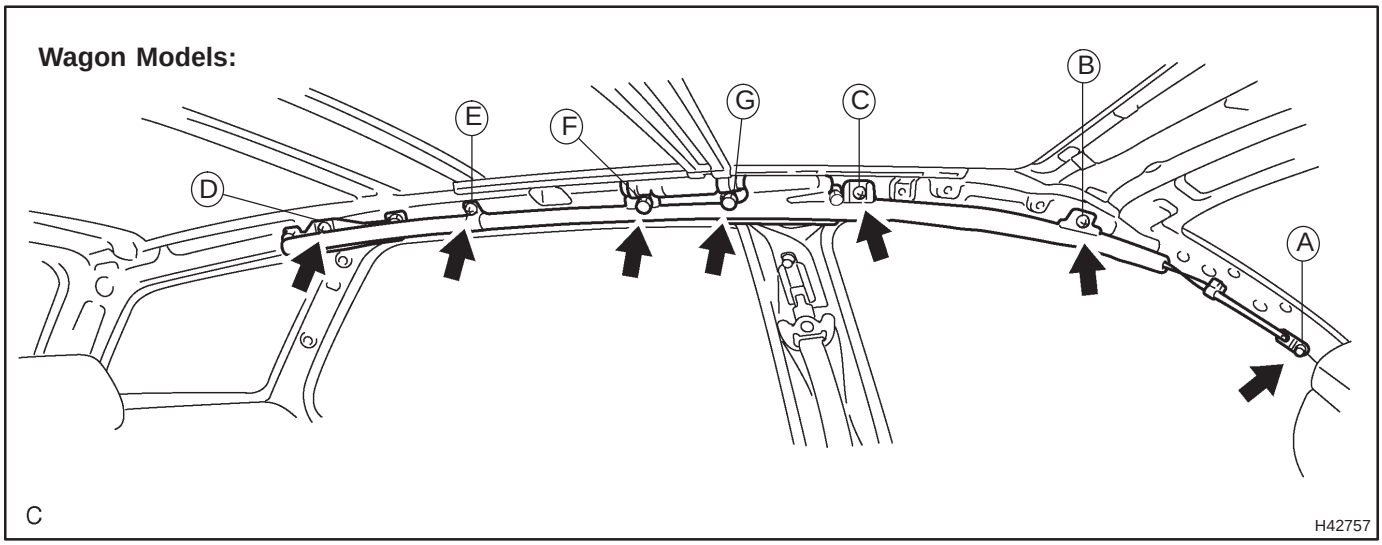
(a) Using a screwdriver, disconnect the connector of the curtain shield airbag assy LH.



(b) After removing the 4 screws and the 3 bolts in order as follows, remove the curtain shield airbag assy LH.
A → B → C → D → E → F → G

8. INSTALL CURTAIN SHIELD AIR BAG ASSY LH (SEDAN/LIFTBACK MODELS)

(a) Install the curtain shield airbag assy LH with the 3 bolts and 4 screws in order as follows.
G → F → E → D → C → B → A
Torque:
Bolt A, G, F: 14 N·m (143 kgf·cm, 10 ft·lbf)
Bolt B, C, E, D: 3.5 N·m (36 kgf·cm, 31 in.·lbf)



(b) Connect the curtain shield airbag assy LH connector.

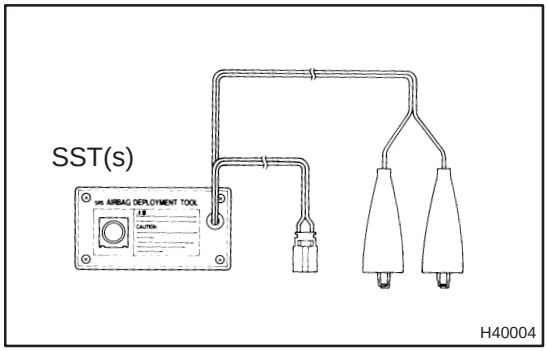
9. INSTALL CURTAIN SHIELD AIR BAG ASSY LH (WAGON MODELS)

(a) Install the curtain shield airbag assy LH with the 3 bolts and 4 screws in order as follows.
G → F → E → D → C → B → A
Torque:
Bolt A, G, F: 14 N·m (143 kgf·cm, 10 ft·lbf)
Bolt B, C, E, D: 3.5 N·m (36 kgf·cm, 31 in.·lbf)

(b) Connect the curtain shield airbag assy LH connector.

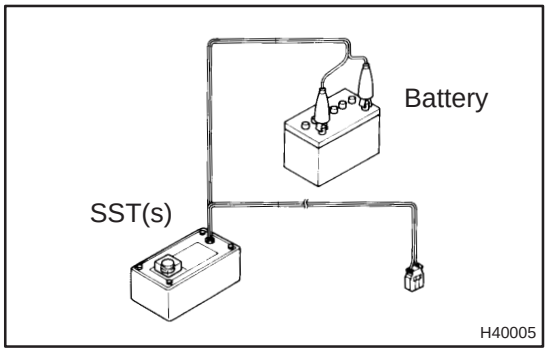
10. INSPECT CURTAIN SHIELD AIR BAG ASSY LH (See page 60–11)
11. INSTALL ROOF HEADLINING ASSY (SEDAN MODELS) (See page 76–36)
12. INSTALL ROOF HEADLINING ASSY (LIFTBACK MODELS) (See page 76–45)
13. INSTALL ROOF HEADLINING ASSY (WAGON MODELS) (See page 76–54)
14. INSPECT SRS WARNING LIGHT (See page 05–1184)

6009Y–02



DISPOSAL

HINT:



- Disposal procedure of the RH side is the same as that for the LH side.
- When scrapping a vehicle equipped with SRS or disposing of the curtain shield airbag assy LH, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of TOYOTA MOTOR SALES, U.S.A., INC.

CAUTION:

- **Never dispose of the curtain shield airbag assy LH that has an undeployed airbag.**
- **The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.**

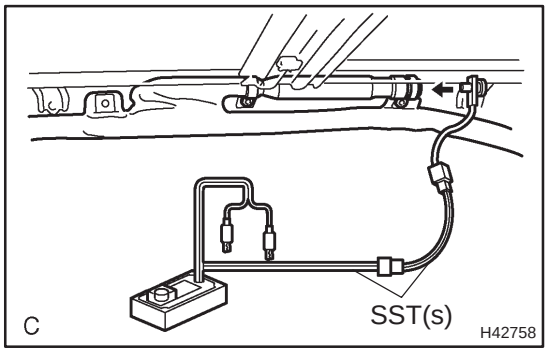
- **When deploying the airbag, always use the specified SST(s) (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (33 ft) away from the curtain shield airbag assy LH.**
- **The curtain shield airbag assy LH is extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling the curtain shield airbag assy LH with the deployed airbag.**
- **Do not apply water, etc. to the curtain shield airbag assy LH with the deployed airbag.**
- **Always wash your hands with water after completing the operation.**

1. DISPOSE OF CURTAIN SHIELD AIR BAG ASSY LH (WHEN SCRAPPING VEHICLE DEPLOYMENT METHOD)

HINT:

Prepare a battery as the power source to deploy the airbag.

(a) Check the function of the SST(s) (See step 1–(a) on page 60–17).



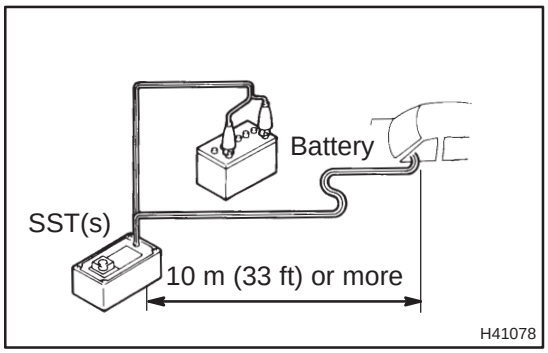
(b) Disconnect the airbag connector.

(1) Sedan Models:
Remove the roof headlining assy (See page 76–36).

(2) Liftback Models:
Remove the roof headlining assy (See page 76–45).

(3) Wagon Models:
Remove the roof headlining assy (See page 76–54).

(4) Using a screwdriver, disconnect the curtain shield airbag LH connector.



(c) Install the SST(s).

(1) Connect the connectors of the SST(s) to the curtain shield airbag assy LH connector.

SST 09082–00700, 09082–00802 (09082–10801, 09082–20801)

NOTICE:

To avoid damaging the SST(s) connector and wire harness, do not lock the secondary lock of the twin lock.

(2) Move the SST(s) to at least 10 m (33 ft) away from the rear of the vehicle.

(3) Close all the doors and windows in the vehicle.

NOTICE:

Take care not to damage the SST(s) wire harness.

(4) Connect the red clip of the SST(s) to the battery positive (+) terminal and the black of the SST(s) clip to the negative (–) terminal.

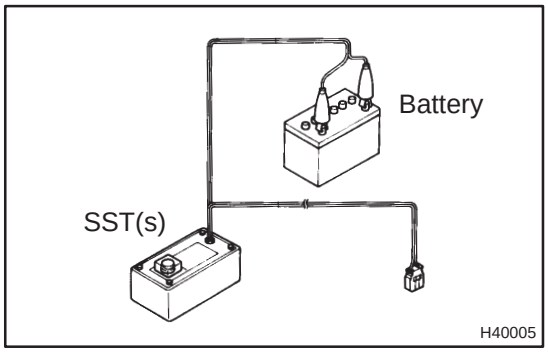
(d) Deploy the airbag.

(1) Check that no one is inside the vehicle or within a 10 m (33 ft) radius of the vehicle.

(2) Press the activation switch of the SST(s) and deploy the airbag.

HINT:

The airbag is deploys as the LED of the SST(s) activation switch comes on.



(e) Dispose of the curtain shield airbag assy LH.

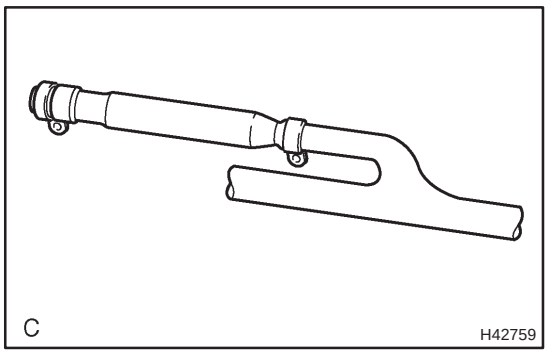
CAUTION:

- **The curtain shield airbag assy LH is extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling the curtain shield airbag assy LH with the deployed airbag.**
- **When moving the vehicle for scrapping which has the curtain shield airbag assy LH with the deployed airbag, use gloves and safety glasses.**
- **Do not apply water, etc. to the curtain shield airbag assy LH with the deployed airbag.**
- **Always wash your hands with water after completing the operation.**

HINT:

When scrapping a vehicle, deploy the airbag and scrap the vehicle with the curtain shield airbag assy LH being installed.

2. DISPOSE OF CURTAIN SHIELD AIR BAG ASSY LH (WHEN DISPOSING OF AIRBAG ASSEMBLY DEPLOYMENT METHOD)

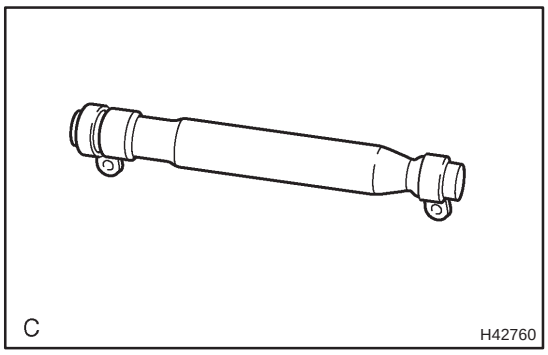


NOTICE:

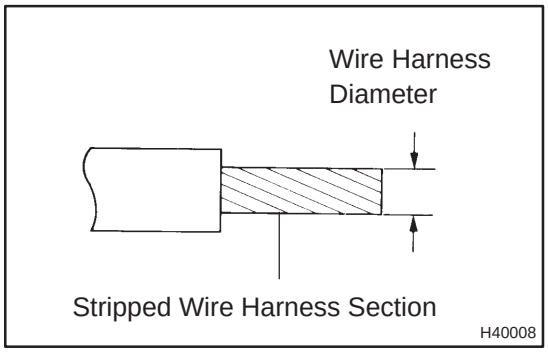
- **When disposing of the curtain shield airbag assy LH, never use the customer's vehicle to deploy the airbag.**
- **Be sure to follow the procedure detailed below when deploying the airbag.**

HINT:

Prepare a battery as the power source to deploy the airbag.



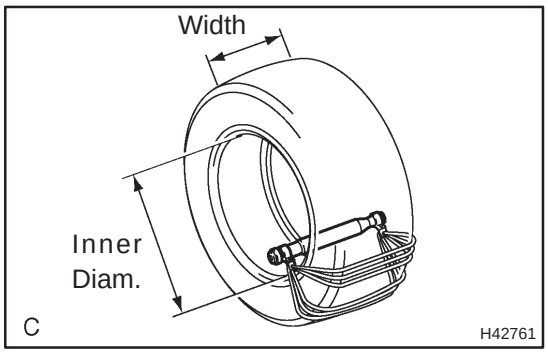
(a) Check the performance of the SST(s) (See step 1–(a) on page 60–19).



(b) Remove the curtain shield airbag assy LH (See page 60–38).

CAUTION:

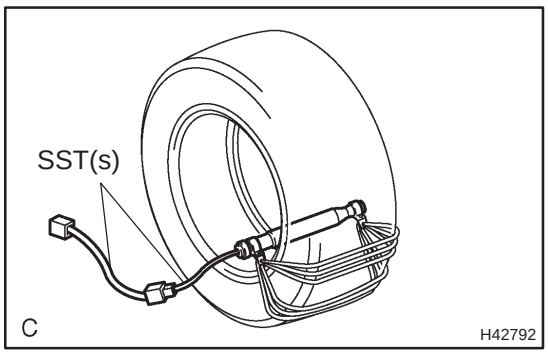
When removing the curtain shield airbag assy LH, work must be started 90 seconds after the ignition switch is turned to the "LOCK" position and the negative (–) terminal cable is disconnected from the battery.



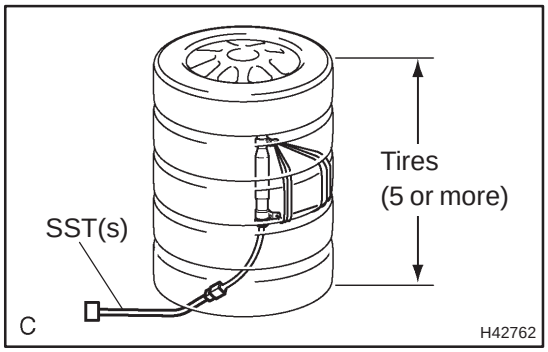
(c) Cut off the deployment section of the curtain shield airbag assy LH.

(d) Using a service–purpose wire harness for the vehicle, tie down the curtain shield airbag assy LH to the tire.
Wire harness: Stripped wire harness section 1.25 mm^2 or more (0.0019 in.^{2} or more)

CAUTION:
If a wire harness which is too thin or an alternative object is used to tie down the curtain shield airbag assy LH, it may be snapped by the shock when the airbag is deployed. Always use a wire harness for vehicle use which has a diameter of at least 1.25 mm^2 (0.0019 in.^{2}).



HINT:
- To calculate the square of the stripped wire harness section:
  Square = 3.14 x (Diameter)^2 divided by 4
- Position the curtain shield airbag assy LH inside the tire as shown in the illustration.
  Tire size: Must exceed the following dimensions
  Width: 185 mm (7.28 in.)
  Inner diameter: 360 mm (14.17 in.)



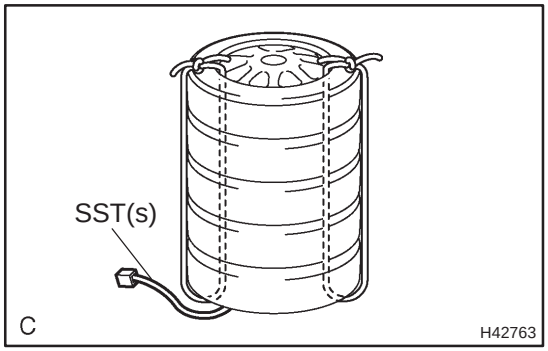
CAUTION:
- **Make sure that the wire harness is tight. It is highly dangerous when looseness in the wire harness results in the curtain shield airbag assy LH coming free due to the shock from the airbag deployment.**

NOTICE:
The tire will be marked by the airbag deployment, so use a redundant tire.

(e) Install the SST(s).
Connect the connectors of the SST(s) to the curtain shield airbag assy LH.
SST 09082–00802 (09082–10801, 09082–20801)

(f) Place the tires.

CAUTION:



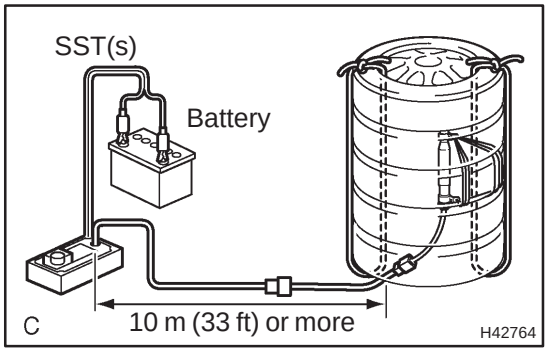
Do not place the deployment direction of the curtain shield airbag assy LH facing toward the ground.

(1) Place at least 2 tires under the tire to which the curtain shield airbag assy LH is tied.

(2) Place at least 2 tires over the tire to which the curtain shield airbag assy is tied. The top tire should have the wheel installed.

NOTICE:

Do not place the SST(s) connector under the tire because the SST connector could be damaged.



(3) Tie the tires together with 2 wire harnesses.

CAUTION:

Make sure that the wire harness is tight. It is highly dangerous when looseness in the wire harness results in the tires coming free due to the shock from the airbag deployment.

HINT:

Place the SST(s) connector and the wire harness inside tires. Secure at least 1 m (3 ft) of slack for the wire harness.

(g) Install the SST(s).

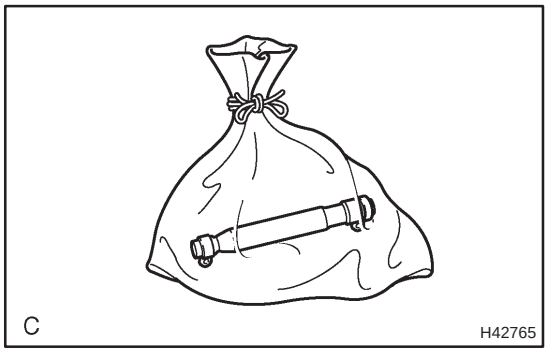
Connect one SST(s) connector to the SST(s) connector connected to the curtain shield airbag.

SST 09082–00700

NOTICE:

To avoid damaging the SST(s) connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST(s) wire harness inside the tire.

(h) Deploy the airbag.



(1) Connect the red clip of the SST(s) to the battery positive (+) terminal and the black clip of the SST(s) to the battery negative (–) terminal.

(2) Check that no one is within a 10 m (33 ft) radius of the tire to which the curtain shield airbag assy LH is tied.

(3) Press the activation switch of the SST(s) and deploy the airbag.

HINT:

The airbag deploys as the LED of the SST(s) activation switch comes on.

(i) Dispose of the curtain shield airbag assy LH.

CAUTION:

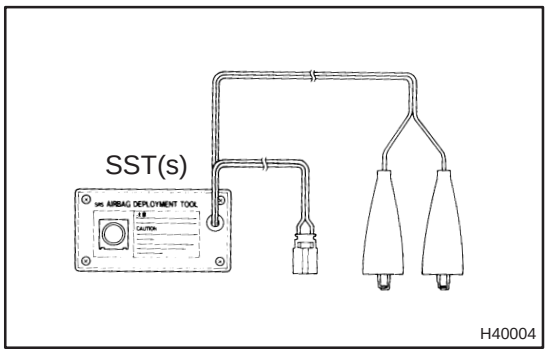
- **The curtain shield airbag assy LH is extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling the curtain shield airbag assy LH with the deployed airbag.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water, etc. to the curtain shield airbag assy LH with the deployed airbag.**

(1) Remove the curtain shield airbag assy LH from the tire.

(2) Place the curtain shield airbag assy LH in a plastic bag, tie the end tightly and dispose of it in the same way as for other general parts disposal.

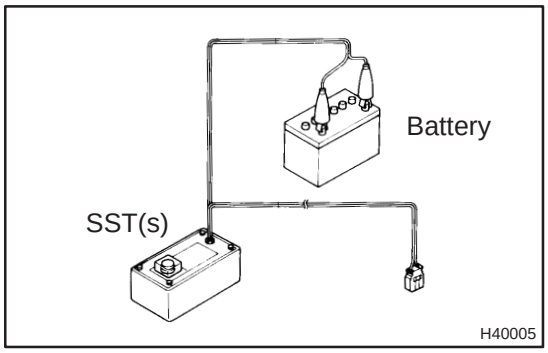
FRONT SEAT AIRBAG ASSY LH

600K2–01



DISPOSAL

HINT:

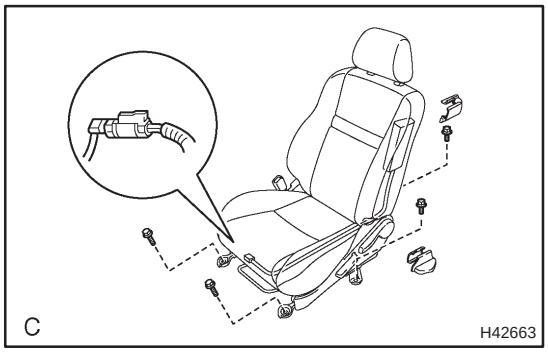


- Disposal procedure of the RH side is the same as that for the LH side.
- When scrapping a vehicle equipped with SRS or disposing of the front seat airbag assy LH, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of TOYOTA MOTOR SALES, U.S.A., INC.

CAUTION:

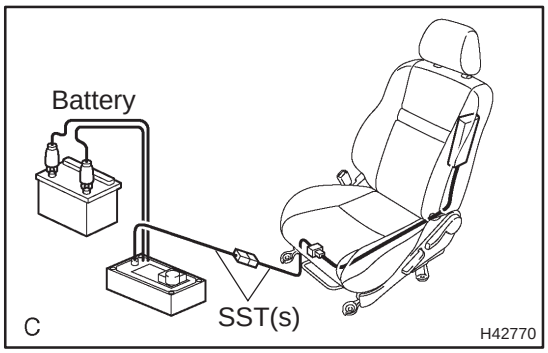
- **Never dispose of the front seat airbag assy LH that has undeployed airbag.**
- **The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.**

- **When deploying the airbag, always use the specified SST(s) (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (33 ft) away from the airbag assy.**
- **The front seat airbag assy LH is extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling the front seat airbag assy LH with the deployed airbag.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water, etc. to the front seat airbag assy LH with the deployed airbag.**



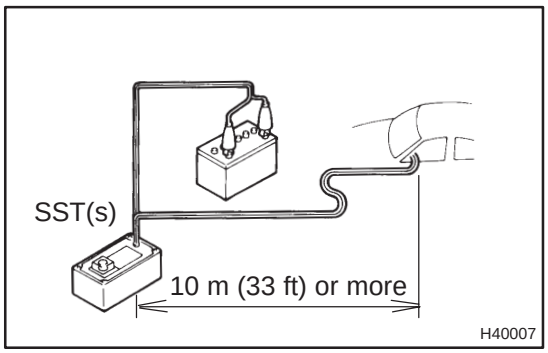
1. DISPOSE OF FRONT SEAT AIRBAG ASSY LH (WHEN SCRAPPING VEHICLE DEPLOYMENT METHOD)

HINT:



Prepare a battery as the power source to deploy the airbag.

(a) Check the function of the SST(s) (See step 1– (a) on page 60–19).



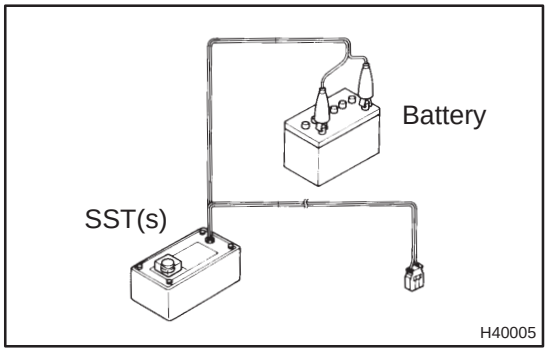
(b) Remove the front seat assy LH (See page 72–16).
(c) Disconnect the front seat airbag connector.

NOTICE:
When handling the airbag connector, take care not to damage the airbag wire harness.

(d) Install the SST(s).
(1) Connect the connectors of the SST(s) to the front seat airbag connector.
SST 09082–00700, 09082–00750

NOTICE:
To avoid damaging the SST(s) connector and wire harness, do not lock the secondary lock of the twin lock.

(2) Move the SST(s) at least 10 m (33 ft) away from the front of the vehicle.
(3) Close all the doors and windows of the vehicle.



NOTICE:
Take care not to damage the SST(s) wire harness.
(4) Connect the red clip of the SST(s) to the battery positive (+) terminal and the black clip of the SST(s) to the battery negative (–) terminal.

(e) Deploy the airbag.
(1) Check that no one is inside the vehicle or within a 10 m (33 ft) radius of the vehicle.
(2) Press the activation switch in the SST(s) and deploy the airbag.

HINT:
The airbag is deploys as the LED of the SST(s) activation switch comes on.

(f) Dispose the front seat airbag assy LH.

CAUTION:
- **The front seat airbag assy LH is extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling the front seat airbag assy LH with the deployed airbag.**
- **When moving the vehicle for scrapping which has the front seat airbag assy LH with the deployed airbag, use gloves and safety glasses.**
- **Do not apply water, etc. to the front seat airbag assy LH with the deployed airbag.**
- **Always wash your hands with water after completing the operation.**

HINT:
When scrapping a vehicle, deploy the airbag and scrap the vehicle with the front seat airbag assy LH being installed.

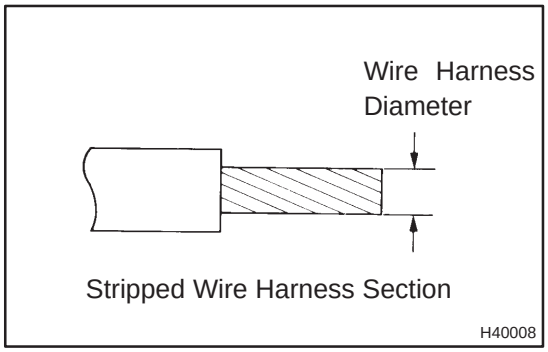
2. DISPOSE OF FRONT SEAT AIRBAG ASSY LH (WHEN DISPOSING OF AIRBAG ASSEMBLY DEPLOYMENT METHOD)

NOTICE:

- **When disposing of the front seat airbag assy LH only, never use the customer's vehicle to deploy the airbag.**
- **Be sure to follow the procedure detailed below when deploying the airbag.**

HINT:
Prepare a battery as the power source to deploy the airbag.

(a) Check the function of the SST(s) (See step 1– (a) on page 60–19).

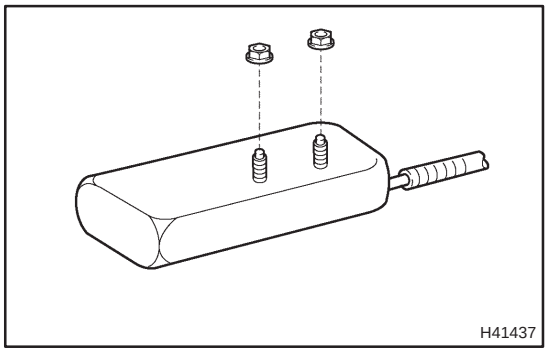


(b) Remove the front seat airbag assy LH.

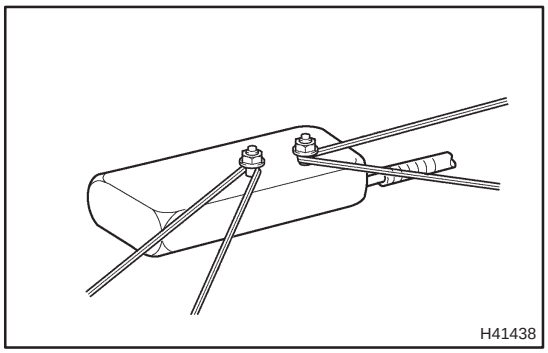
(1) Remove the front seat assy LH (See page 72–16).

(2) Remove the 2 nuts and the front seat airbag assy LH from the seatback assembly.

CAUTION:

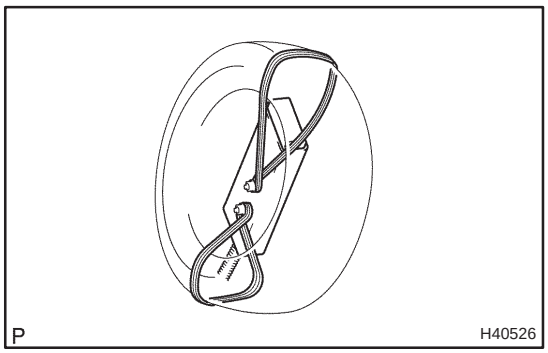


- **When removing the front seat airbag assy LH, work must be started 90 seconds after the ignition switch is turned to the "LOCK" position and the negative (–) terminal cable is disconnected from the battery.**
- **When storing the front seat airbag assy LH, keep the upper surface of the airbag deployment side facing upward.**



(c) Using a service–purpose wire harness for the vehicle, tie down the front seat airbag assy LH to the tire.
Wire harness: Stripped wire harness section 1.25 mm^2 or more (0.0019 in^2 or more)

HINT:
To calculate the square of the stripped wire harness section:
Square = 3.14 x $(Diameter)^2$ divided by 4

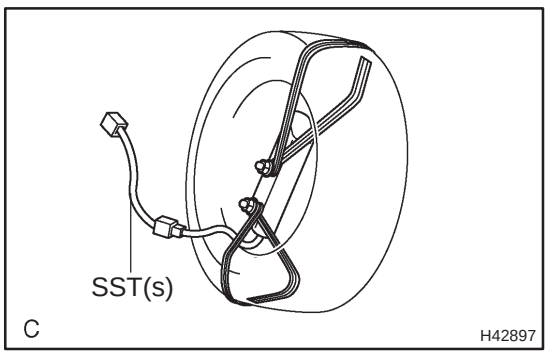


CAUTION:
If a wire harness which is too thin or an alternative object is used to tie down the front seat airbag assy LH, it may be snapped by the shock when the airbag is deployed. This is highly dangerous. Always use a wire harness for vehicle use which has a diameter at least 1.25 mm^2 (0.0019 in^2).

(1) Install the 2 nuts in the front seat airbag assy LH.

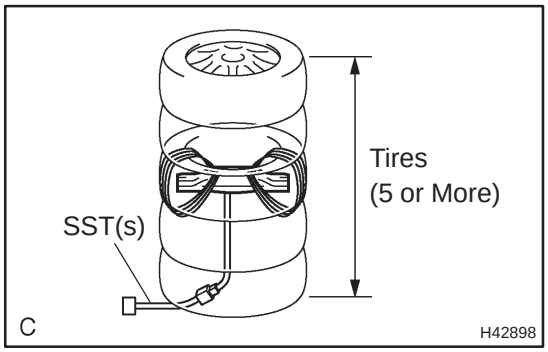
(2) Wind the wire harness around the stud bolts of the front seat airbag assy LH as shown in the illustration.

(3) Position the front seat airbag assy LH inside the tire with the airbag deployment direction facing inside.



Tire size: Must exceed the following dimensions
Width: 185 mm (7.28 in.)
Inner diameter: 360 mm (14.17 in.)

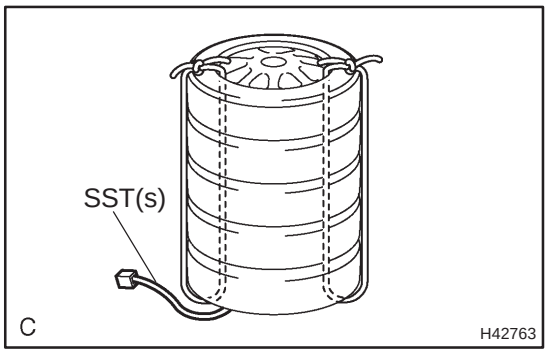
CAUTION:



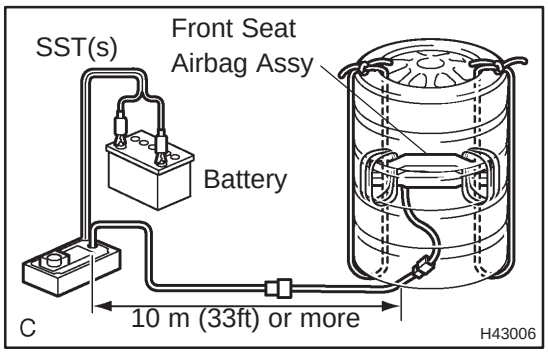
- **Make sure the wire harness is tight. It is highly dangerous when looseness in the wire harness results in the front seat airbag assy LH coming free due to the shock from the airbag deployment.**
- **Always tie down the front seat airbag assy LH with the airbag deployment direction facing inside the tire.**

NOTICE:

The tire will be marked by the airbag deployment, so use a redundant tire.



(d) Install the SST(s).
Connect the connector of SST(s) to the front seat airbag assy LH connect.
SST 09082–00750

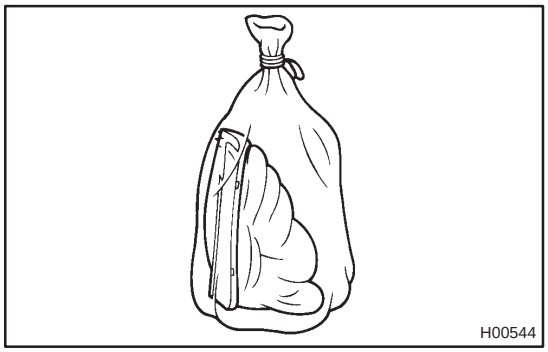


(e) Place the tires.
(1) Place at least 2 tires under the tire to which the front seat airbag assy LH is tied.
(2) Place at least 2 tires over the tire to which the front seat airbag assy LH is tied. The top tire should have the disc wheel installed.

NOTICE:
Do not place the SST(s) connector under the tire because the SST(s) connector could be damaged.

(3) Tie the tires together with 2 wire harnesses.

CAUTION:
Make sure that the wire harness is tight. It is highly dangerous when looseness in the wire harness results in the tires coming free due to the shock from the airbag deployment.
HINT:
Place the SST(s) connector and the wire harness inside tires. Secure at least 1 m (3 ft) of slack for the wire harness.



(f) Install the SST(s).
Connect the connector of the SST(s).
SST 09082–00700

NOTICE:
To avoid damaging the SST(s) connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST(s) wire harness inside the tire.

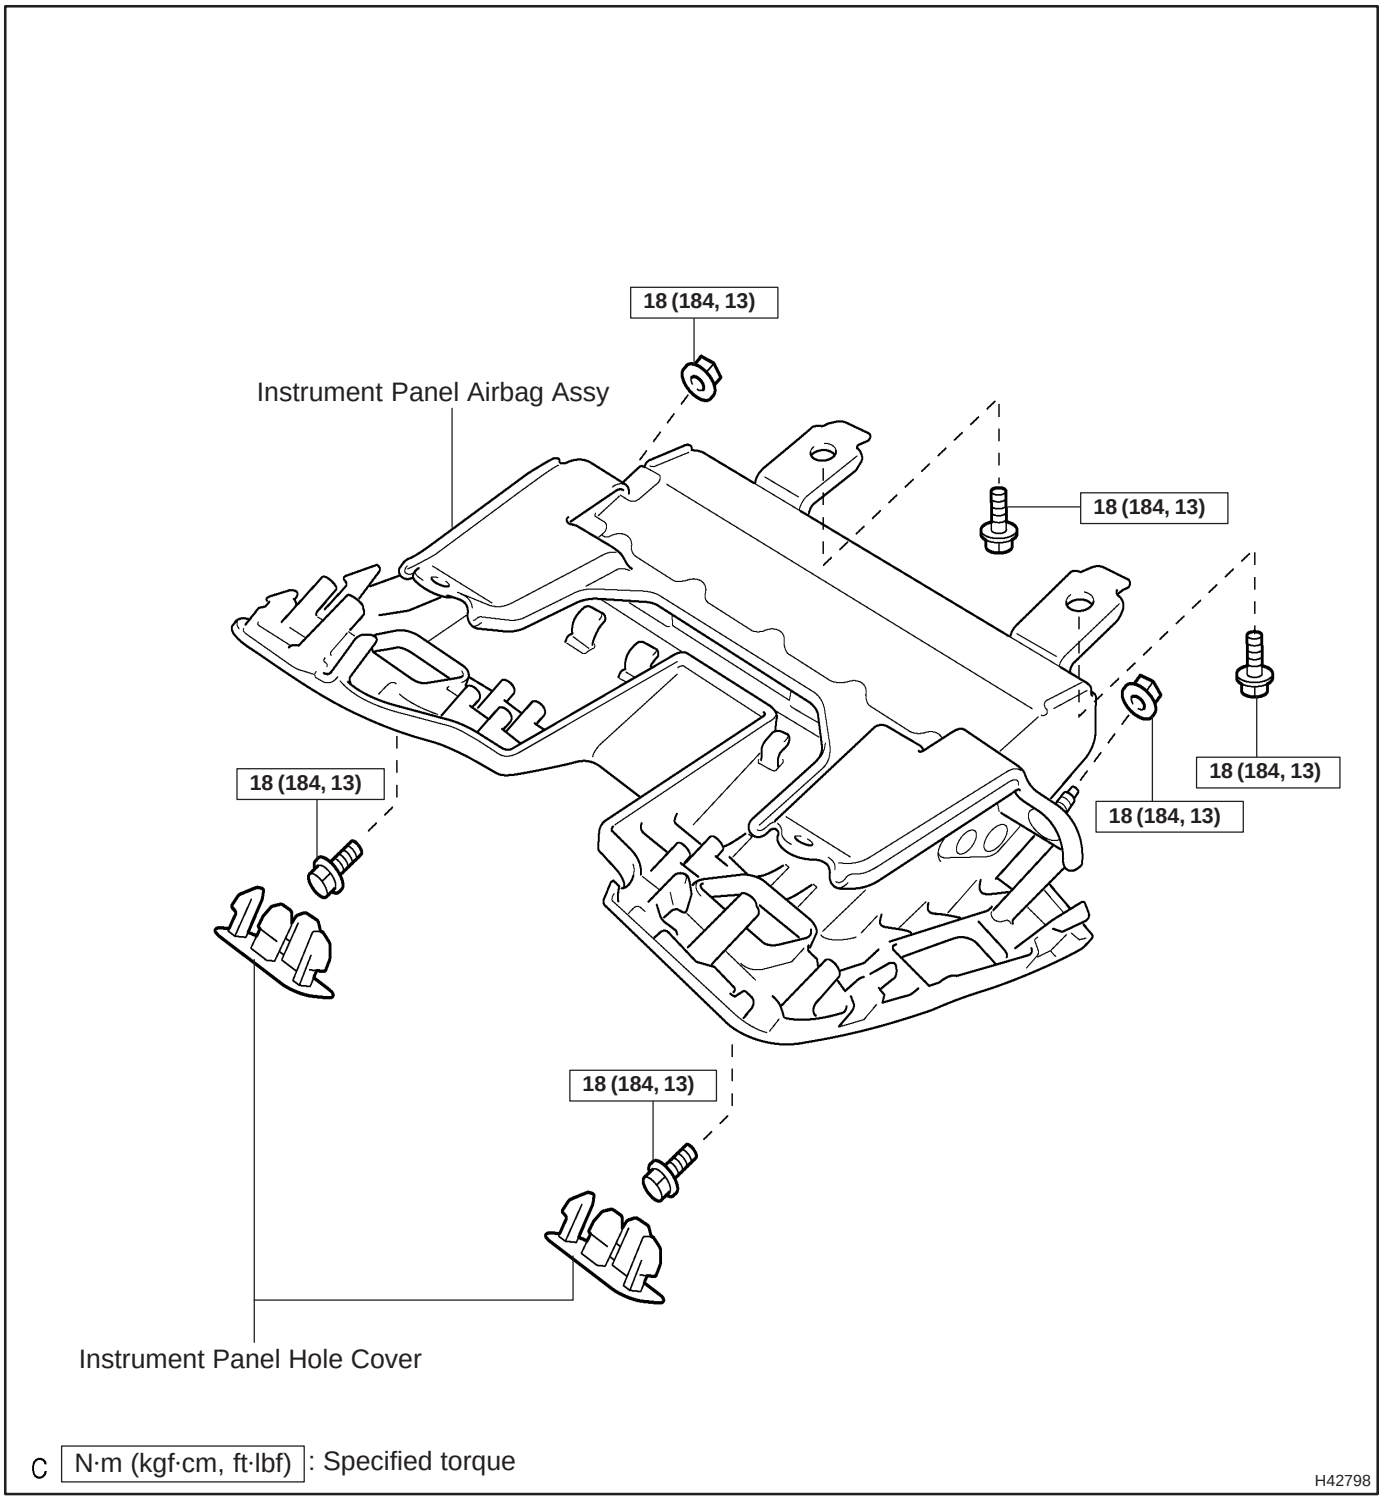
(g) Deploy the airbag.
(1) Connect the red clip of the SST(s) to the battery positive (+) terminal and the black clip of the SST(s) to the battery negative (–) terminal.
(2) Check that no one is within a 10 m (33 ft) radius of the tire to which the front seat airbag assy LH is tied.
(3) Press the activation switch of the SST(s) and deploy the airbag.

HINT:
The airbag is deployed as the LED of the SST(s) activation switch comes on.

(h) Dispose of the front seat airbag assy LH.

CAUTION:

- **The front seat airbag assy LH is extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling the front seat airbag assy LH with the deployed airbag.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water etc. to the front seat airbag assy LH with the deployed airbag.**



(1) Remove the front seat airbag assy LH from the tire.

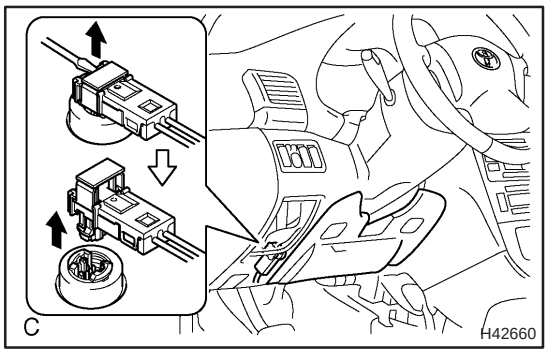
(2) Place the front seat airbag assy LH in a plastic bag, tie the end tightly and dispose of it in the same way as other general parts disposal.

INSTRUMENT PANEL AIR BAG ASSY

600K3–01

COMPONENTS

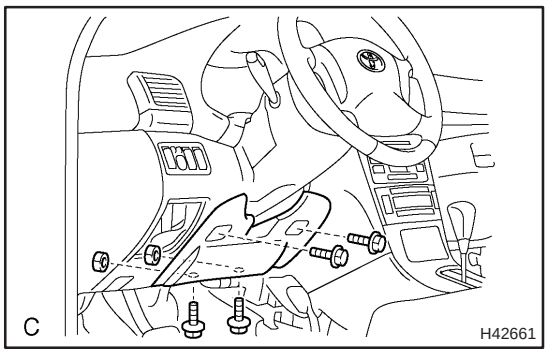
600K4–01



REPLACEMENT

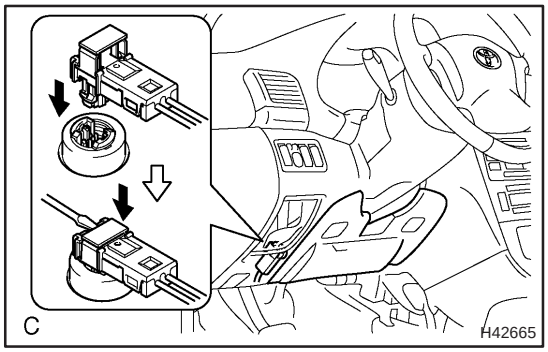
1. PRECAUTION (See page 60–1)

2. DISCONNECT BATTERY NEGATIVE TERMINAL (See page 60–1)



3. REMOVE INSTRUMENT PANEL HOLE COVER

(a) Using a screwdriver, remove the 2 instrument panel hole cover.



4. REMOVE INSTRUMENT PANEL AIR BAG ASSY

(a) Using a screwdriver disconnect the airbag connector.

(b) Remove the 4 bolts, 2 nuts and the instrument panel airbag assy.

5. INSTALL INSTRUMENT PANEL AIR BAG ASSY

(a) Install the instrument panel airbag assy.

(b) Connect the airbag connector.

(c) Install the 4 bolts and the 2 nuts.

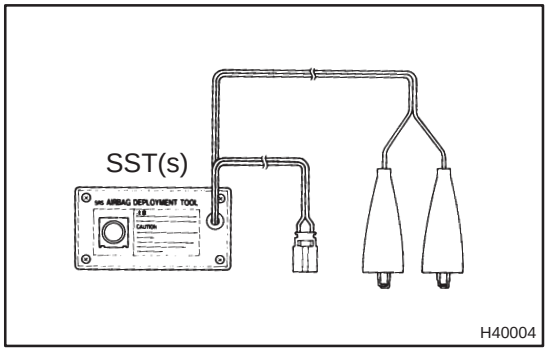
Torque: 18.0 N·m (184 kgf·cm, 13 ft·lbf)

(d) Install the instrument panel hole cover.

6. INSPECT INSTRUMENT PANEL AIR BAG ASSY (See page 60–11)

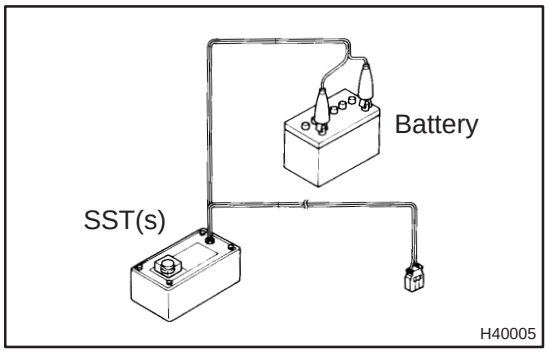
7. INSPECT SRS WARNING LIGHT (See page 05–1184)

600K5–01



DISPOSAL

HINT:

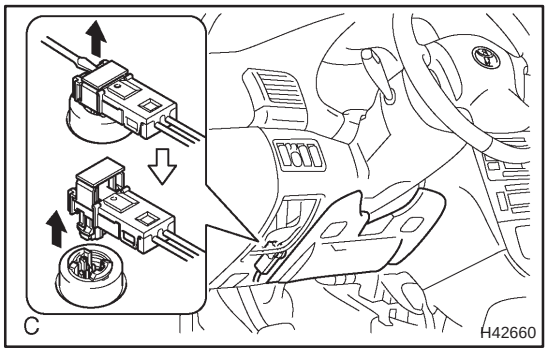


When scrapping a vehicle equipped with the SRS or disposing of the instrument panel airbag assy, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of TOYOTA MOTOR SALES, U.S.A., INC.

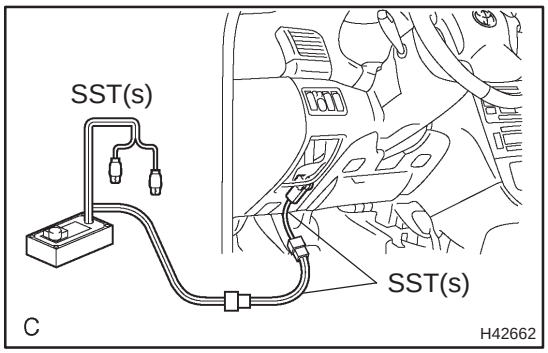
CAUTION:

- **Never dispose of the instrument panel airbag assy that has an undeployed airbag.**
- **The airbag produces an extremely loud exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.**

- **When deploying the airbag, always use the specified SST(s) (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (33 ft) away from the instrument panel airbag assy.**
- **The instrument panel airbag assy is extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling the instrument panel airbag assy with the deployed airbag.**
- **Do not apply water, etc. to the instrument panel airbag assy with the deployed airbag.**
- **Always wash your hands with water after completing the operation.**



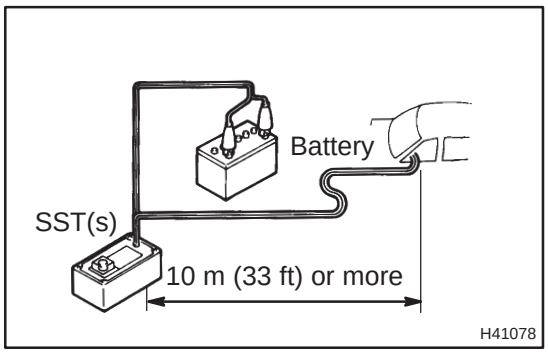
1. DISPOSE OF INSTRUMENT PANEL AIR BAG ASSY (WHEN SCRAPPING VEHICLE DEPLOYMENT METHOD)



HINT:

Prepare a battery as the power source to deploy the airbag.

(a) Check performance of the SST(s) (See step 1–(a) on page 60–17).



(b) Disconnect the airbag connector.
(1) Using a screwdriver, disconnect the instrument panel airbag connector.

(c) Install the SST(s).
(1) Connect the connectors of the SST(s) to the instrument panel airbag assy.
SST 09082–00700, 09082–00802 (09082–10801, 09082–20801)

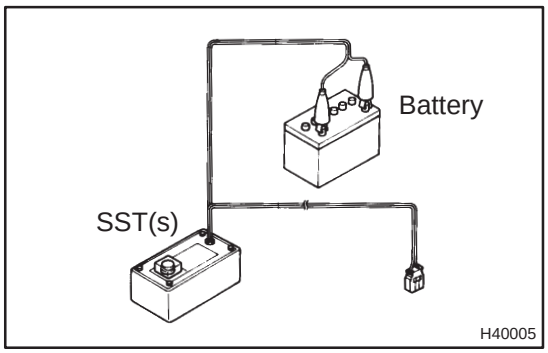
NOTICE:
Take care not to damage the SST(s) wire harness.

(2) Move the SST(s) to at least 10 m (33 ft) away from the rear of the vehicle.
(3) Close all the doors and windows in the vehicle.

NOTICE:
Take care not to damage the SST(s) wire harness.
(4) Connect the red clip of the SST(s) to the battery positive (+) terminal and the black clip of the SST(s) to the negative (–) terminal.

(d) Deploy the airbag.
(1) Check that no one is inside the vehicle or within a 10 m (33 ft) radius of the vehicle.
(2) Press the activation switch of the SST(s) and deploy the airbag.

HINT:
The airbag deploys as the LED of the SST(s) activation switch comes on.



(e) Dispose of the instrument panel airbag assy.

CAUTION:

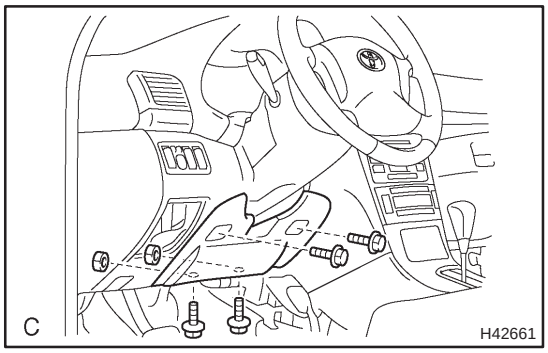
- **The instrument panel airbag assy is extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling the instrument panel airbag assy with the deployed airbag.**
- **When moving the vehicle for scrapping which has the instrument panel airbag assy with the deployed airbag, use gloves and safety glasses.**
- **Do not apply water, etc. to the instrument panel airbag assy with the deployed airbag.**
- **Always wash your hands with water after completing the operation.**

HINT:

When scrapping a vehicle, deploy the airbag and scrap the vehicle with the instrument panel airbag assy still installed.

2. DISPOSE OF INSTRUMENT PANEL AIR BAG ASSY (WHEN DISPOSING OF AIRBAG ASSEMBLY DEPLOYMENT METHOD)

NOTICE:

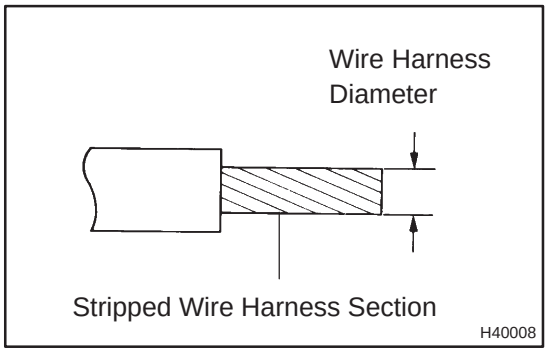


- **When disposing of the instrument panel airbag assy only, never use the customer's vehicle to deploy the airbag.**
- **Be sure to follow the procedure detailed below when deploying the airbag.**

HINT:

Prepare a battery as the power source to deploy the airbag.

(a) Check the performance of the SST(s) (See step 1–(a) on page 60–19).



(b) Using a screwdriver, remove the 2 instrument panel hole cover.

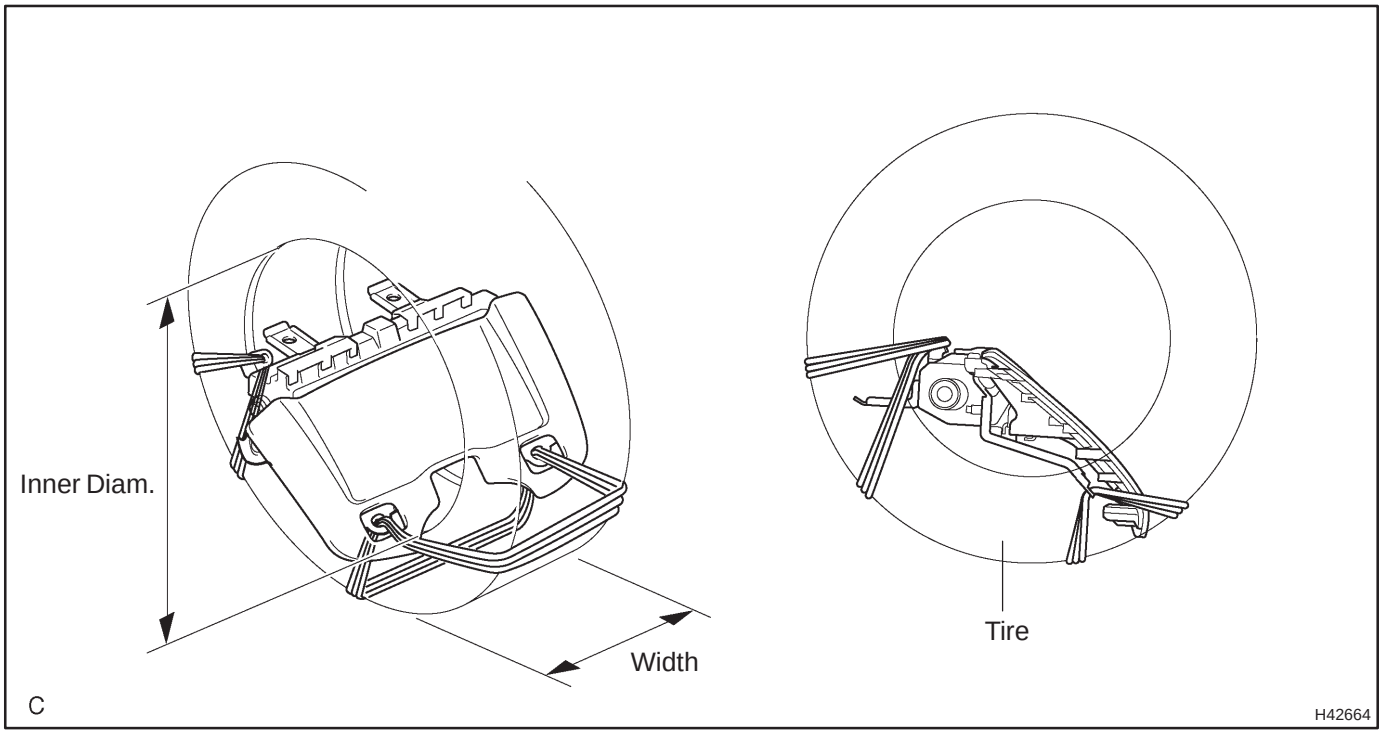
(c) Remove the instrument panel airbag assy (See page 60–54).

CAUTION:

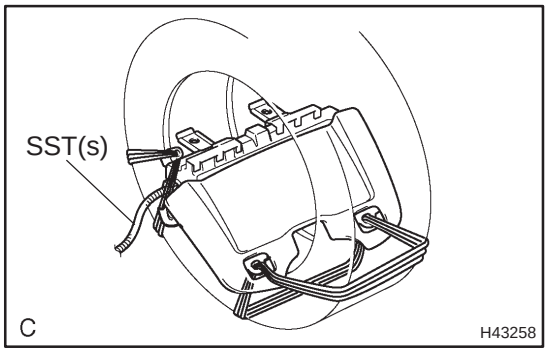
- **When removing the instrument panel airbag assy, work must be started 90 seconds after the ignition switch is turned to the "LOCK" position and the negative (–) terminal cable is disconnected from the battery.**
- **When storing the instrument panel airbag assy, keep the upper surface of the airbag deployment side facing upward.**

(d) Using a service–purpose wire harness for the vehicle, tie down the instrument panel airbag assy to the tire.
Wire harness: Stripped wire harness section 1.25 mm^2 or more (0.0019 $in.^2$ or more)

CAUTION:
If the wire harness which is too thin or an alternative object is used to tie down the instrument panel airbag assy, it may be snapped by the shock when the airbag is deployed. Always use a wire harness for vehicle use which has a diameter of at least 1.25 mm^2 (0.0019 $in.^2$).

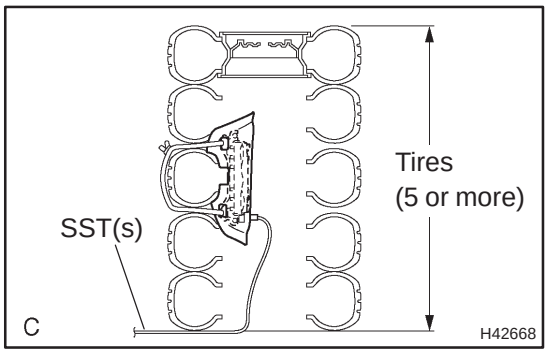


HINT:



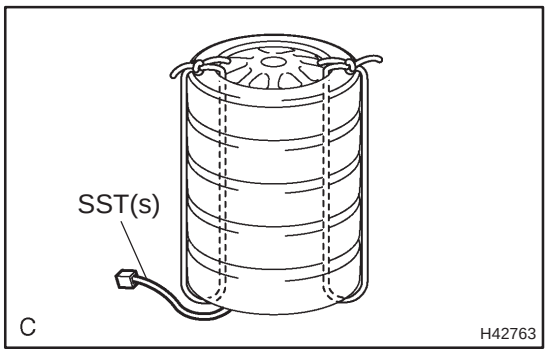
- To calculate the square of the stripped wire harness section:
  Square = 3.14 x $(Diameter)^2$ divided by 4
- Position the instrument panel airbag assy inside the tire with the airbag deployment side facing inside.
  Tire size: Must exceed the following dimensions
  Width: 185 mm (7.28 in.)
  Inner diameter: 360 mm (14.17 in.)

CAUTION:

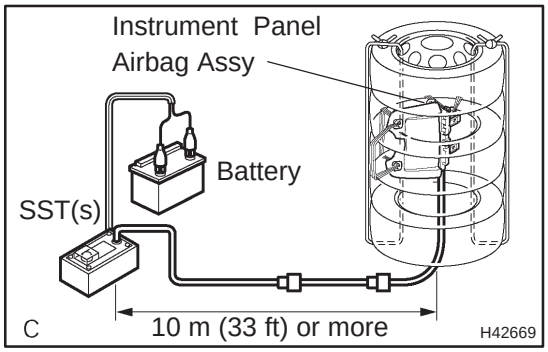


- **Make sure that the wire harness is tight. It is highly dangerous when looseness in the wire harness results in the instrument panel airbag assy coming free due to the shock from the airbag deployment.**
- **Always tie down the instrument panel airbag assy with the airbag deployment side facing inside the tire.**

NOTICE:
The tire will be marked by the airbag deployment, so use a redundant tire.



(e) Install the SST(s).
Connect the connector of the SST(s) to the instrument panel airbag assy.
SST 09082–00770

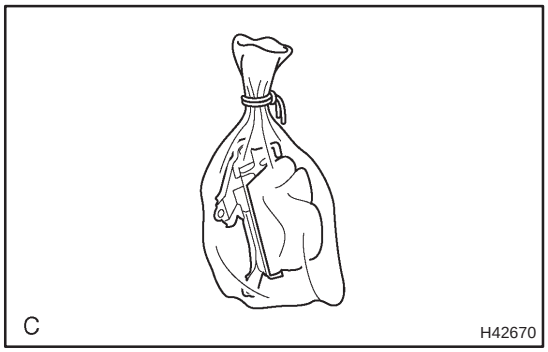


(f) Place the tires.
(1) Place at least 2 tires under the tire to which the instrument panel airbag assy is tied.
(2) Place at least 2 tires over the tire to which the instrument panel airbag assy is tied. The top tire should have the disc wheel installed.

NOTICE:
Do not place the SST(s) connector under the tire because the SST(s) connector could be damaged.

(3) Tie the tires together with 2 wire harnesses.

CAUTION:
Make sure that the wire harness is tight. It is highly dangerous when looseness in the wire harness results in the tires coming free due to the shock from the airbag deployment.



(g) Install the SST(s).
Connect the connectors of the SST(s).
SST 09082–00700, 09082–00802 (09082–10801, 09082–20801)

NOTICE:
To avoid damaging the SST(s) connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST(s) wire harness inside the tire.

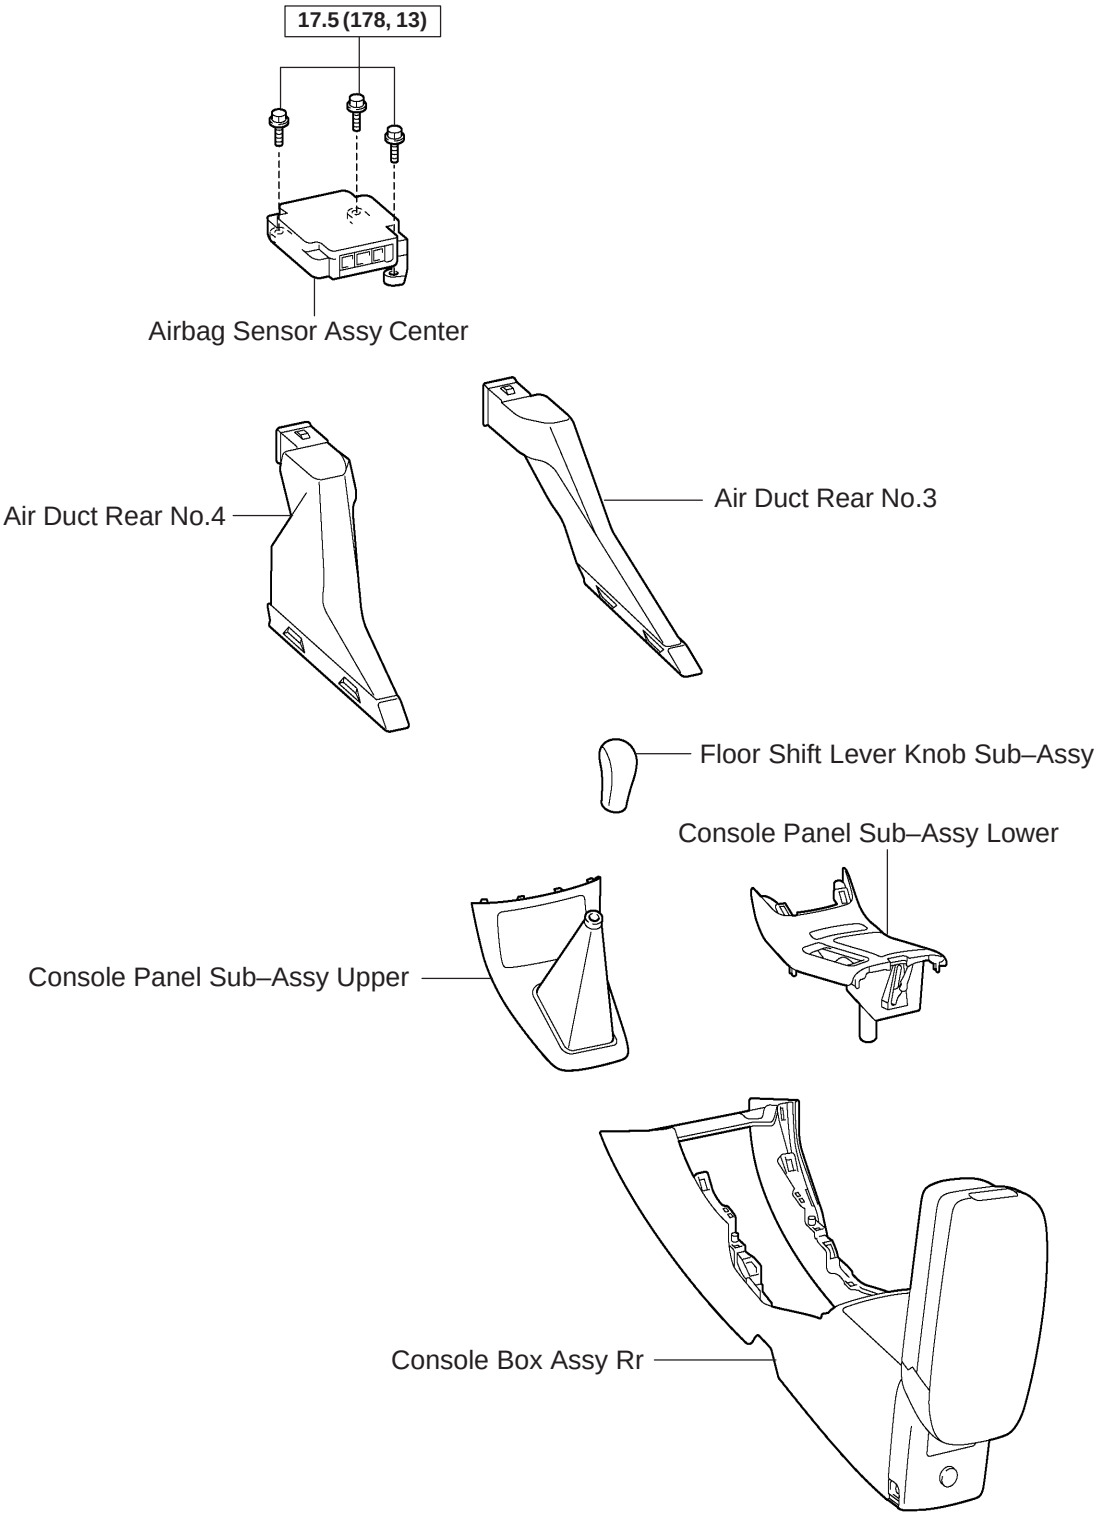
(h) Deploy the airbag.
(1) Connect the red clip of the SST(s) to the battery positive (+) terminal and the black clip of the SST(s) to the battery negative (–) terminal.
(2) Check that no one is within a 10 m (33 ft) radius of the tire to which the instrument panel airbag assy lower No.1 is tied.
(3) Press the activation switch of the SST(s) and deploy the airbag.

HINT:
The airbag is deployed as the LED of the SST(s) activation switch comes on.

(i) Dispose of the instrument panel airbag assy.

CAUTION:

- **The instrument panel airbag assy is extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling the instrument panel airbag assy with the deployed airbag.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water etc. to the instrument panel airbag assy with the deployed airbag.**



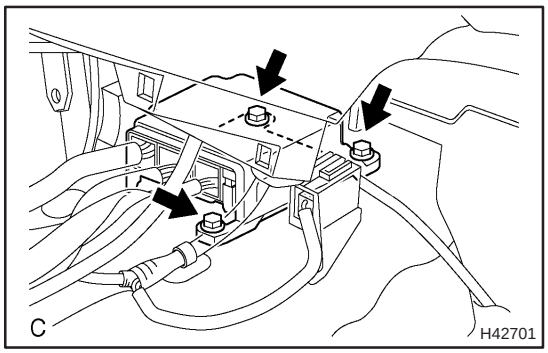
(1) Remove the instrument panel airbag assy from the tire.

(2) Place the instrument panel airbag assy in a plastic bag, tie the end tightly and dispose of it in the same way as for other general parts disposal.

AIR BAG SENSOR ASSY CENTER

600A0–04

COMPONENTS



C N·m (kgf·cm, ft·lbf) : Specified torque

H42700

600A1–04

REPLACEMENT

1. **PRECAUTION (See page 60–1)**
2. **DISCONNECT BATTERY NEGATIVE TERMINAL (See page 60–1)**
3. **REMOVE SHIFT LEVER KNOB SUB–ASSY (M/T TRANSAXLE) (See page 71–11)**
4. **REMOVE CONSOLE PANEL SUB–ASSY UPPER (See page 71–11)**
5. **REMOVE CONSOLE PANEL SUB–ASSY LOWER (See page 71–11)**
6. **REMOVE CONSOLE BOX ASSY RR (See page 71–11)**
7. **REMOVE AIR DUCT REAR NO.3 (See page 71–11)**
8. **REMOVE AIR DUCT REAR NO.4 (See page 71–11)**

9. **REMOVE AIR BAG SENSOR ASSY CENTER**

(a) Disconnect the 3 connectors from the airbag sensor assy center.

(b) Remove the 3 bolts and airbag sensor assy center.

10. **INSTALL AIR BAG SENSOR ASSY CENTER**

(a) Check that the ignition switch is off.

(b) Check that the battery negative (–) terminal is disconnected.

NOTICE:

Do not start the operation for 90 seconds after removing the terminal.

(c) Temporarily install the airbag sensor assy center with the 3 bolts.

NOTICE:

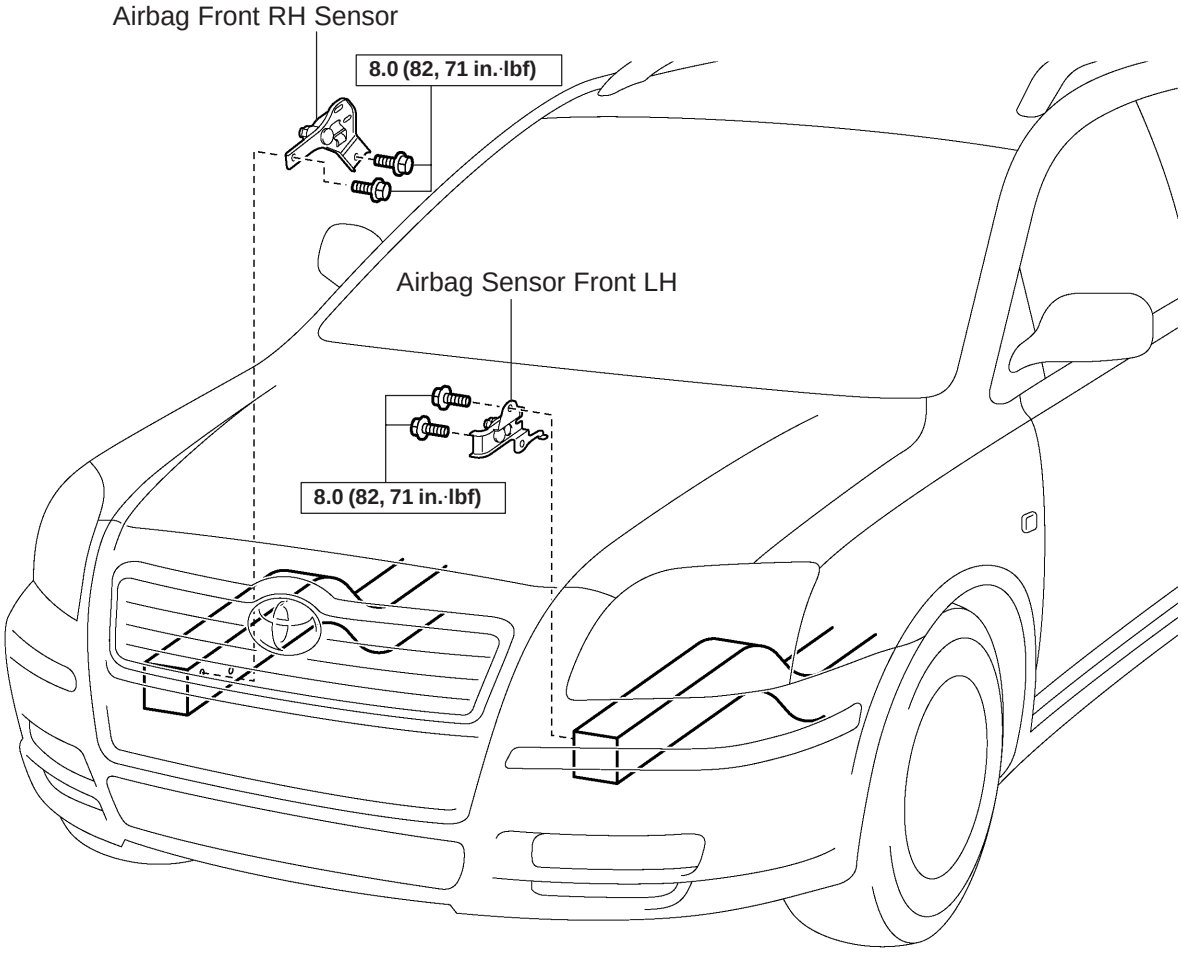
- **If the airbag sensor assy center has been dropped, or there are any cracks, dents or other defects in the case, bracket or connector, replace the airbag sensor assy center with a new one.**
- **When installing the airbag sensor assy center, take care that the SRS wiring does not interfere with other parts and is not pinched between other parts.**

(d) Tighten the 3 bolts to the specified torque.

Torque: 17.5 N·m (178 kgf·cm, 13 ft·lbf)

(e) Connect the connectors to the airbag sensor assy center.

(f) Check that no play is identified.



(g) Check that the water–proof sheet is properly set.

11. **INSPECT SRS WARNING LIGHT (See page 05–1184)**

AIR BAG SENSOR FRONT LH

COMPONENTS

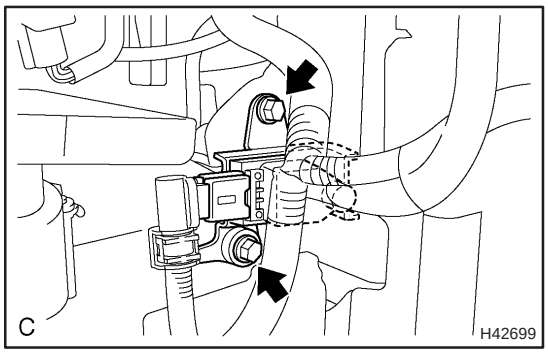
600A2–06

N·m (kgf·cm, ft·lbf) : Specified torque

C

H42698

600K6–01



REPLACEMENT

HINT:

Replacement procedure of the RH side is the same as that for with LH side.

1. PRECAUTION (See page 60–1)

2. DISCONNECT BATTERY NEGATIVE TERMINAL (See page 60–1)

3. REMOVE AIR BAG SENSOR FRONT LH

(a) Remove the 2 bolts and airbag sensor front LH.

(b) Disconnect the connector from the airbag sensor front LH.

4. INSTALL AIR BAG SENSOR FRONT LH

(a) Check that the ignition switch is off.

(b) Check that the battery negative (–) is terminal is disconnected.

NOTICE:

Do not start the operation for 90 seconds after removing the terminal.

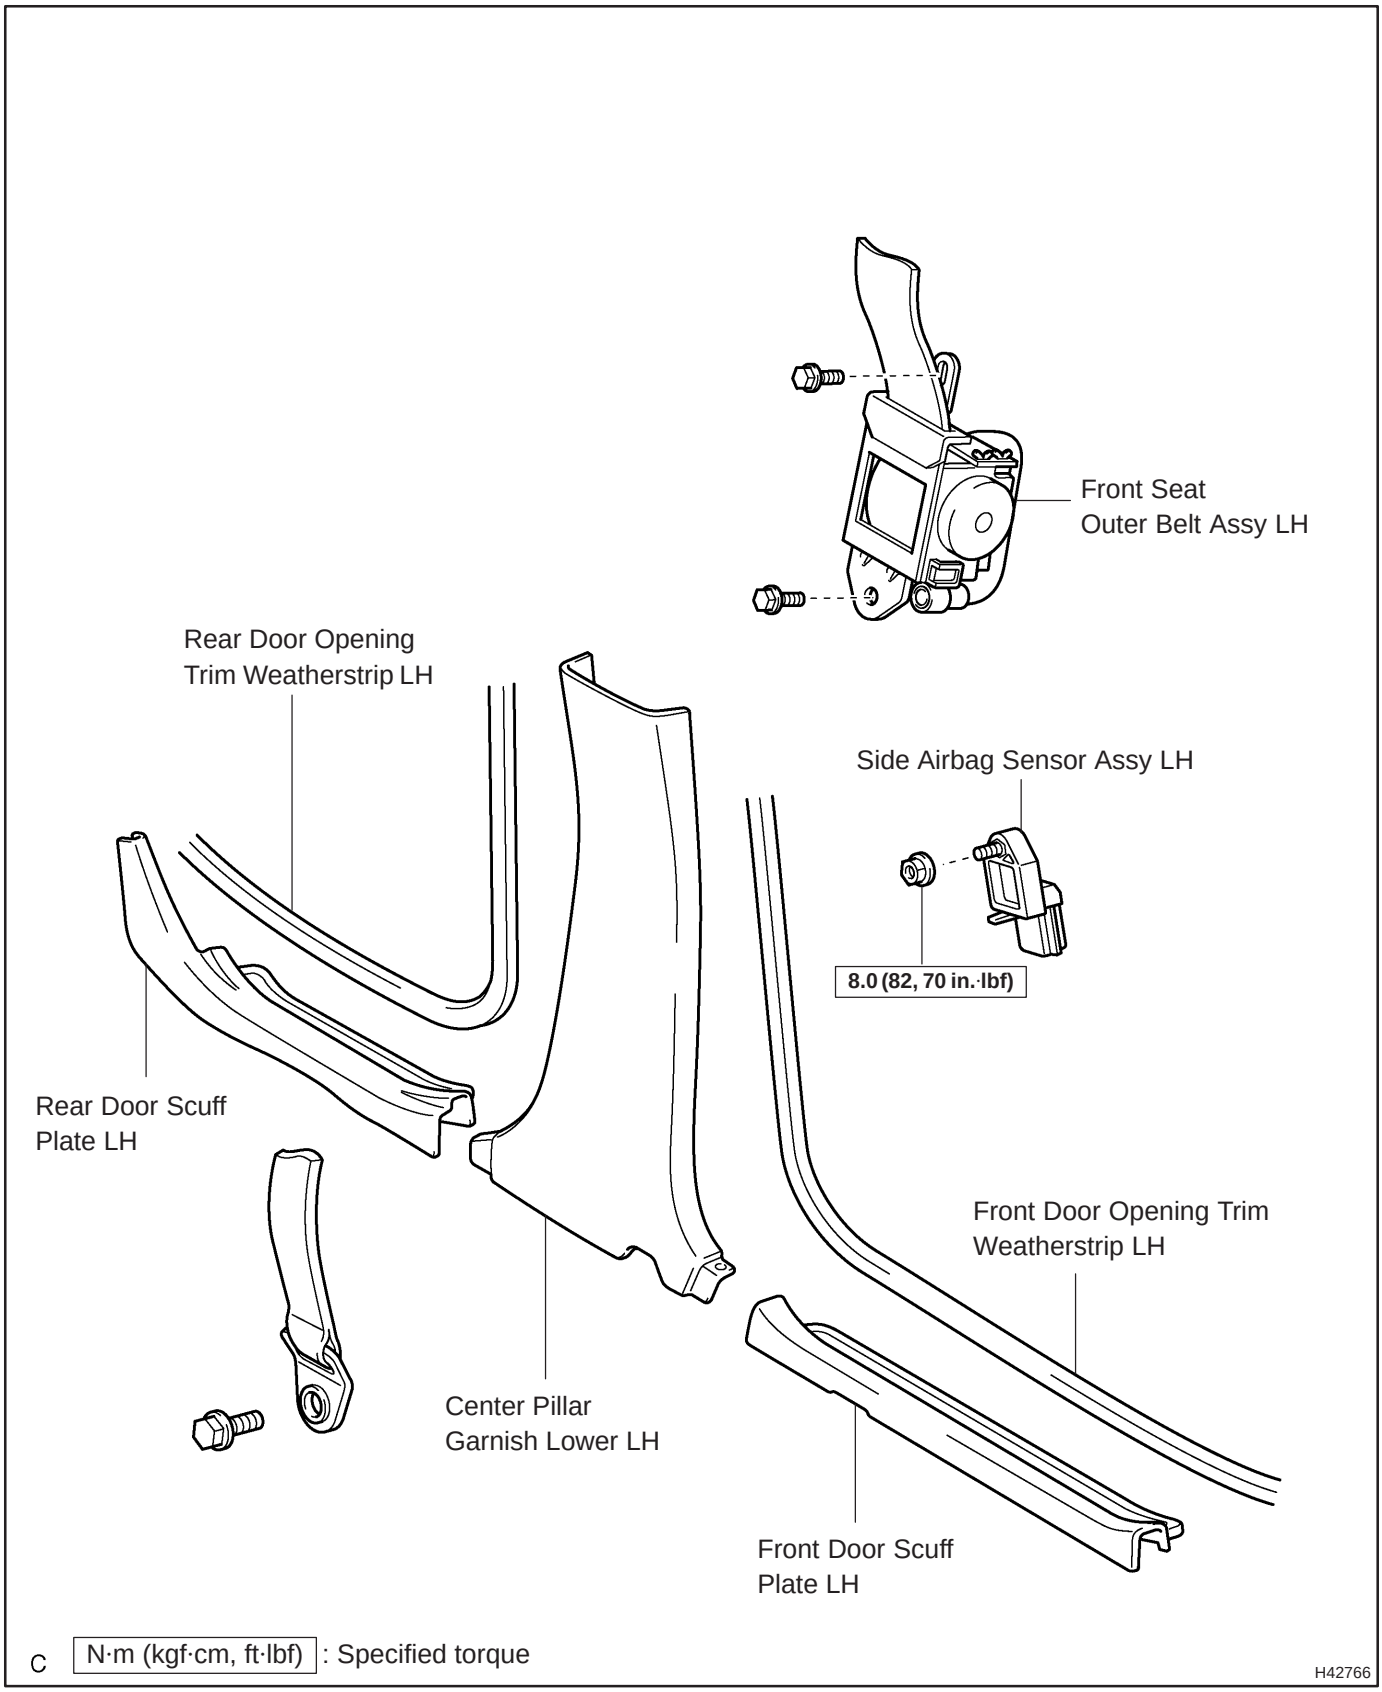
(c) Install the airbag sensor front LH with the 2 bolts.

Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)

NOTICE:

- **If the airbag sensor front LH has been dropped, or there are any cracks, dents or other defects in the case, bracket or connector, replace the airbag sensor front LH with a new one.**
- **When installing the airbag sensor front LH, take care that the SRS wiring does not interfere with other parts and is not pinched between other parts.**

(d) Connect the connector to the airbag sensor front LH.



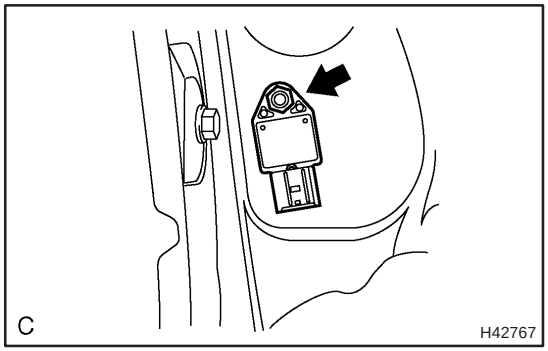
(e) Check that no play is identified.

5. INSPECT SRS WARNING LIGHT (See page 05–1184)

SIDE AIR BAG SENSOR ASSY LH

COMPONENTS

600A6–03



600A7–03

REPLACEMENT

HINT:

Replacement procedure of the RH side is the same as that for with LH side.

1. **PRECAUTION (See page 60–1)**
2. **DISCONNECT BATTERY NEGATIVE TERMINAL (See page 60–1)**
3. **REMOVE FRONT DOOR SCUFF PLATE LH (See page 76–36)**
4. **REMOVE REAR DOOR SCUFF PLATE LH (See page 76–36)**
5. **REMOVE FRONT DOOR WEATHERSTRIP LH (See page 76–36)**
6. **REMOVE REAR DOOR WEATHERSTRIP LH (See page 76–36)**
7. **REMOVE CENTER PILLAR GARNISH LOWER LH (See page 76–36)**
8. **REMOVE FRONT SEAT OUTER BELT ASSY LH (See page 61–7)**

9. REMOVE SIDE AIR BAG SENSOR ASSY LH

(a) Remove the bolt and the side airbag sensor assy LH.

(b) Disconnect the connector from the side airbag sensor assy LH.

10. INSTALL SIDE AIR BAG SENSOR ASSY LH

(a) Check that the ignition switch is off.

(b) Check that the battery negative (–) terminal is disconnected.

NOTICE:

Do not start the operation for 90 seconds after removing the terminal.

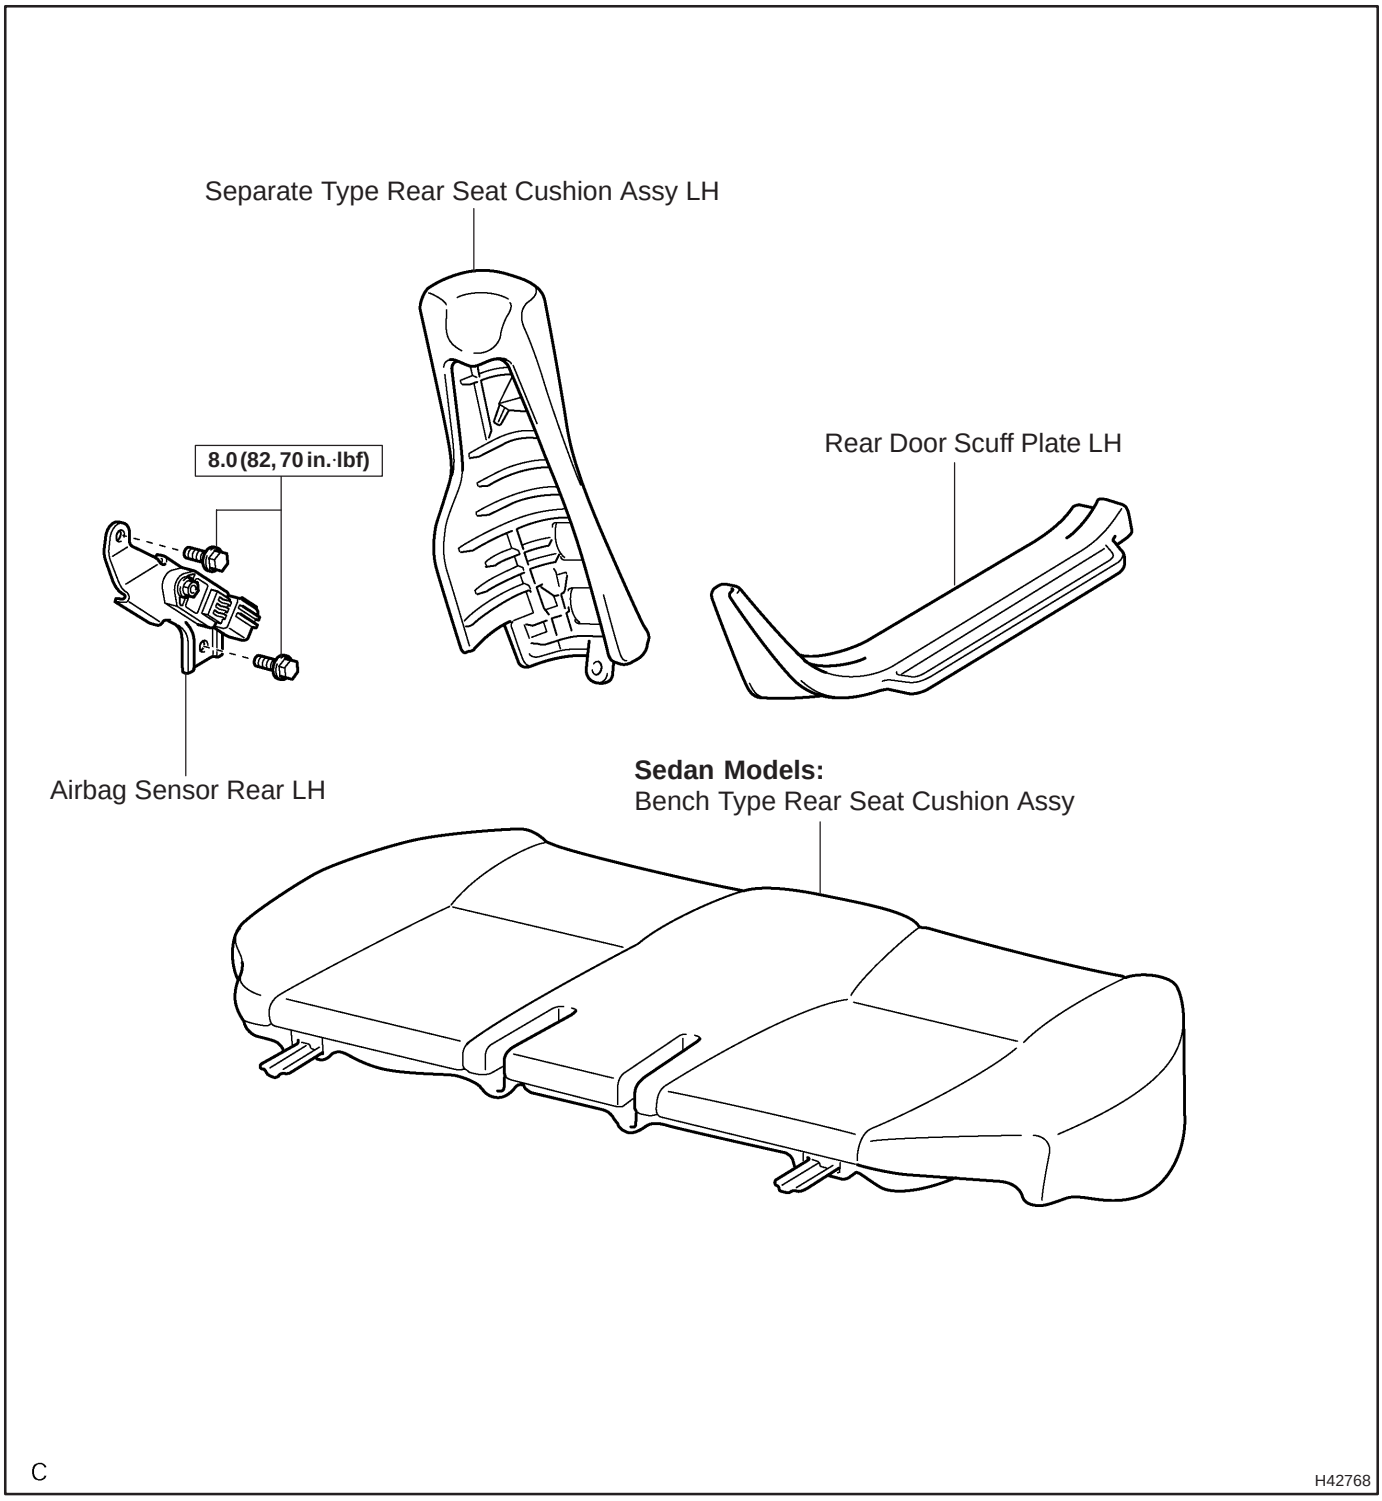
(c) Install the side airbag sensor assy LH with the nut.

Torque: 8.0 N·m (82 kgf·cm, 70 in.·lbf)

NOTICE:

- **If the side airbag sensor assy LH has been dropped, or there are any cracks, dents or other defects in the case, bracket or connector, replace the side airbag sensor assy LH with a new one.**
- **When installing the side airbag sensor assy LH, take care that the SRS wiring does not interfere with other parts and is not pinched between other parts.**

(d) Connect the connector of the side airbag sensor assy LH.



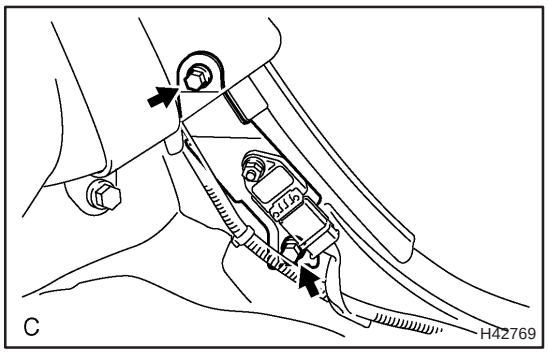
(e) Check that no play is identified.

11. **INSTALL FRONT SEAT OUTER BELT ASSY LH (See page 61–7)**
12. **INSPECT SRS WARNING LIGHT (See page 05–1184)**

AIR BAG SENSOR REAR LH

COMPONENTS

600K7–01



600K8–01

REPLACEMENT

HINT:

Replacement procedure of the RH side is the same as that for the LH side.

1. **PRECAUTION (See page 60–1)**
2. **DISCONNECT BATTERY NEGATIVE TERMINAL (See page 60–1)**
3. **REMOVE REAR DOOR SCUFF PLATE LH (See page 76–36)**
4. **REMOVE REAR SEAT CUSHION ASSEMBLY (SEDAN MODELS) (See page 76–36)**
5. **REMOVE REAR SIDE SEAT BACK ASSY LH (See page 76–36)**

6. **REMOVE AIR BAG SENSOR REAR LH**

(a) Disconnect the connector of the airbag sensor rear LH.

(b) Remove the 2 bolts and the airbag sensor rear LH.

7. **INSTALL AIR BAG SENSOR REAR LH (See page 60–11)**

(a) Check that the ignition switch is off.

(b) Check that the battery negative (–) terminal is disconnected.

NOTICE:

Do not start the operation for 90 seconds after removing the terminal.

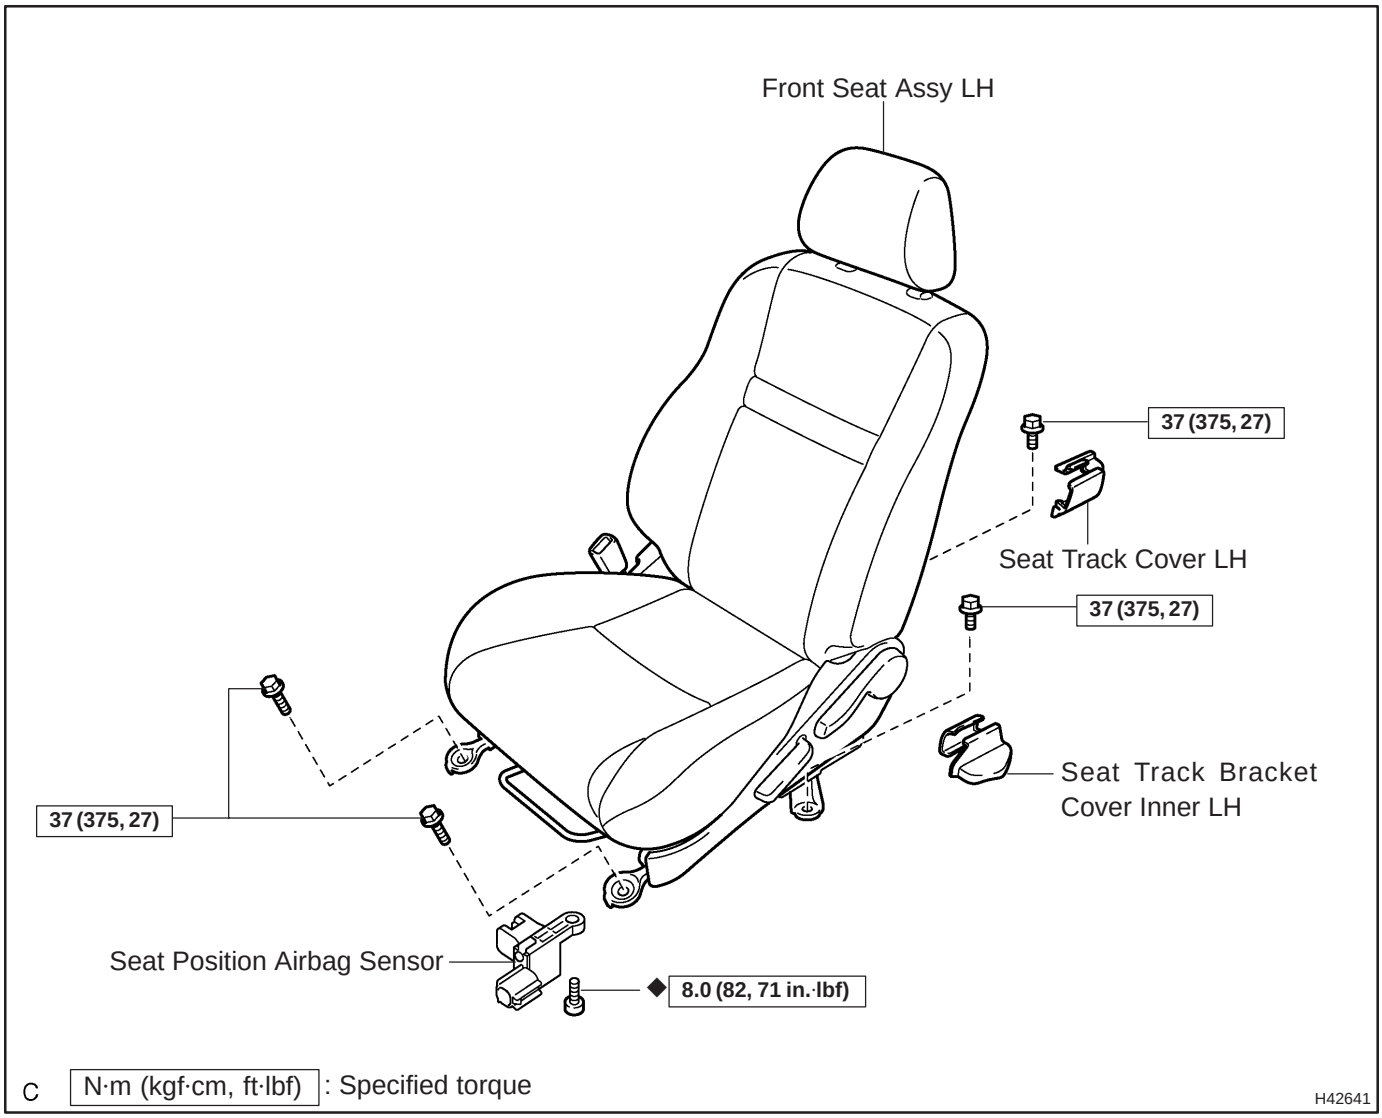
(c) Install the airbag sensor rear LH with the 2 bolts.

Torque: 8.0 N·m (82 kgf·cm, 70 ft·lbf)

NOTICE:

- **If the airbag sensor rear LH has been dropped, or there are any cracks, dents or other defects in the case, bracket or connector, replace the airbag sensor rear LH with a new one.**
- **When installing the airbag sensor rear LH, take care that the SRS wiring does not interfere with other parts and is not pinched between other parts.**

(d) Connect the connector of the airbag sensor rear LH.



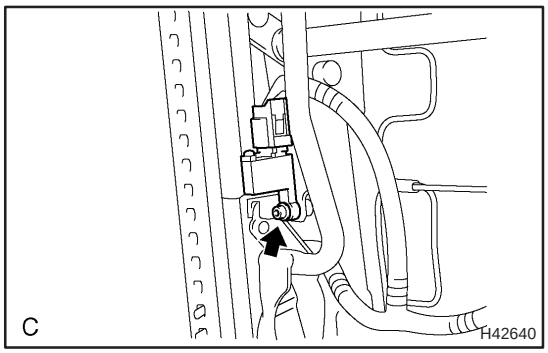
(e) Check that no play is identified.

8. **INSPECT SRS WARNING LIGHT (See page 05–1184)**

SEAT POSITION AIR BAG SENSOR

600AA–04

COMPONENTS



REPLACEMENT

HINT:

Replacement procedure of the RH side is the same as that of the LH side.

1. **PRECAUTION (See page 60–1)**
2. **DISCONNECT BATTERY NEGATIVE TERMINAL (See page 60–1)**
3. **REMOVE SEAT TRACK COVER LH (See page 72–16)**
4. **REMOVE SEAT TRACK BRACKET COVER INNER LH (See page 72–16)**
5. **REMOVE FRONT SEAT ASSY LH (See page 72–16)**

6. **REMOVE SEAT POSITION AIR BAG SENSOR**

(a) Disconnect the connector of the seat position airbag sensor.

(b) Using a torx socket wrench (T30), remove the torx screw and seat position airbag sensor.

7. **INSTALL SEAT POSITION AIR BAG SENSOR**

(a) Check that the ignition switch is off.

(b) Check that the battery negative (–) terminal is disconnected.

NOTICE:

Do not start the operation for 90 seconds after removing the terminal.

(c) Using a torx socket wrench (T30), install the seat position airbag sensor with the torx screw.

Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)

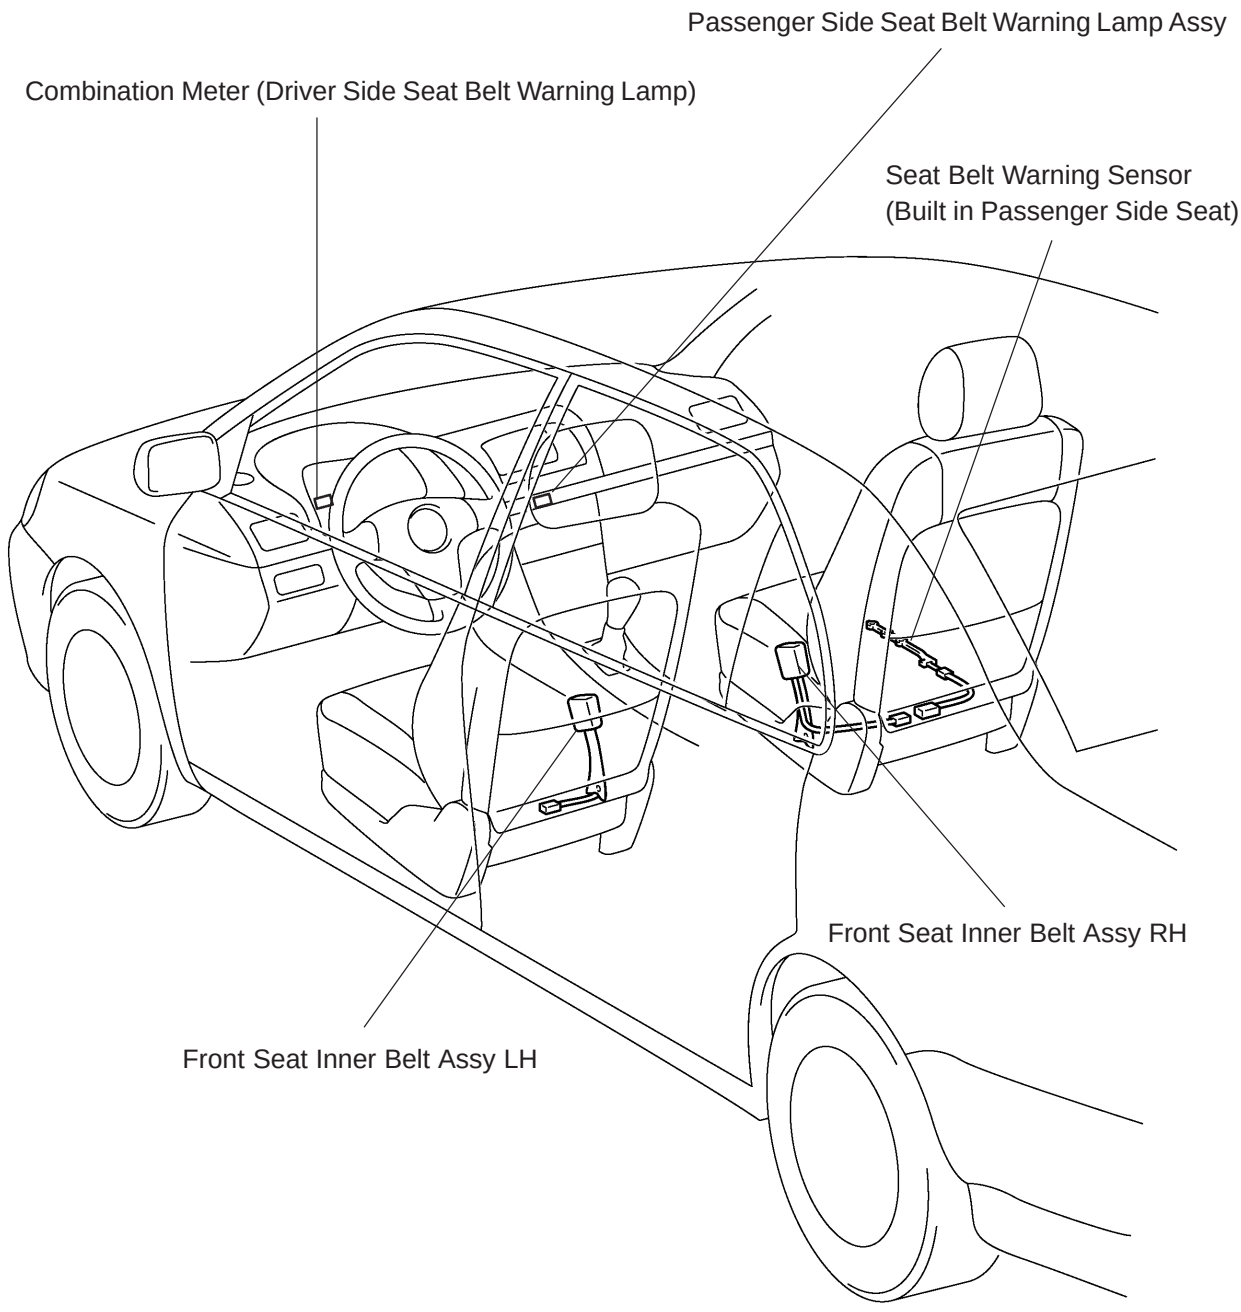
NOTICE:

- **If the seat position airbag sensor has been dropped, or there are any cracks, dents or other defects in the case, bracket or connector, replace the seat position airbag sensor with a new one.**
- **When installing the seat position airbag sensor, take care that the SRS wiring does not interfere with other parts and is not pinched between other parts.**

(d) Connect the connector of the seat position airbag sensor.

(e) Check that no play is identified.

8. **INSTALL FRONT SEAT ASSY LH (See page 72–16)**



Torque: 37 N·m (375 kgf·cm, 27 ft·lbf)

9. **SRS WARNING LIGHT (See page 05–1184)**

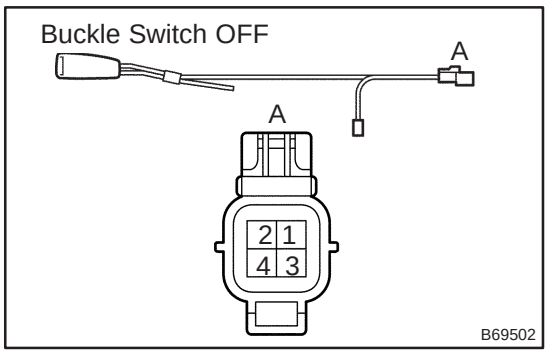
610CL–02

INSPECTION

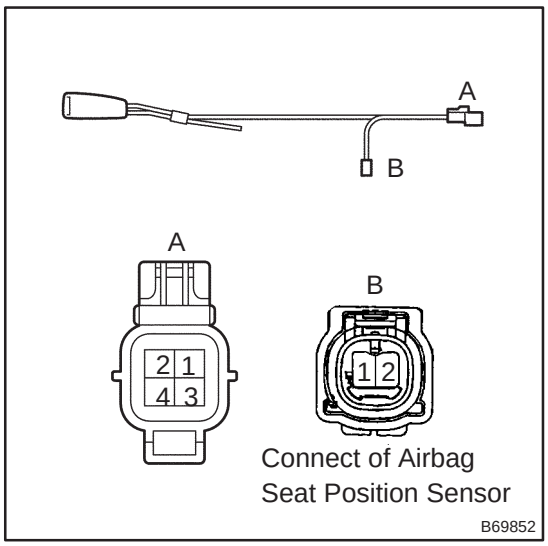


1. Driver side:
INSPECT FRONT SEAT INNER BELT ASSY

(a) Inspect the buckle switch.
(1) Fasten the seat belt (Buckle switch is ON).
(2) Check the resistance between the terminals.

Standard:

Tester Connection	Specified Condition
A–1 – A–3	1,330 Ω

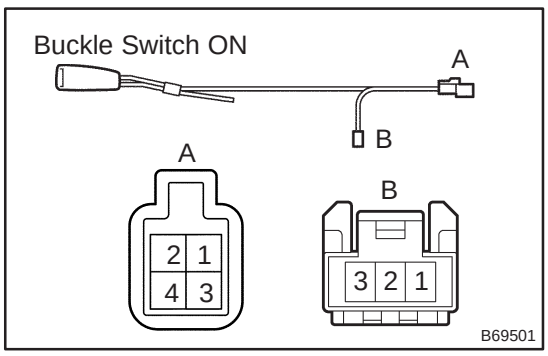


(3) Release the seat belt (Buckle switch is OFF).
(4) Check the resistance between the terminals.

Standard:

Tester Connection	Specified Condition
A–1 – A–3	330 Ω

If the result is not as specified, replace the inner belt assy.

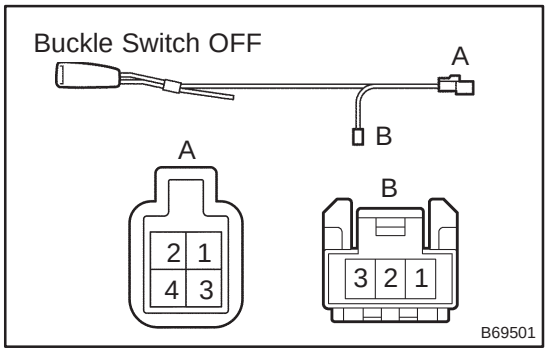


(b) Inspect the circuit for the airbag seat position sensor.
(1) Check the resistance between the terminals of connector A and the connector of the airbag seat position sensor.

Standard:

Tester Connection	Specified Condition
A–2 – B–1 (Connector for airbag seat position sensor)	Below 1 Ω
A–4 – B–2 (Connector for airbag seat position sensor)	

If the result is not as specified, replace the inner belt assy.



2. Passenger side:
INSPECT FRONT SEAT INNER BELT ASSY

(a) Inspect the buckle switch.
(1) Fasten the seat belt (Buckle switch is ON).
(2) Check the resistance between the terminals.

Standard:

Tester Connection	Specified Condition
A–1 – B–3	Below 1 Ω
A–3 – B–1	Below 1 Ω

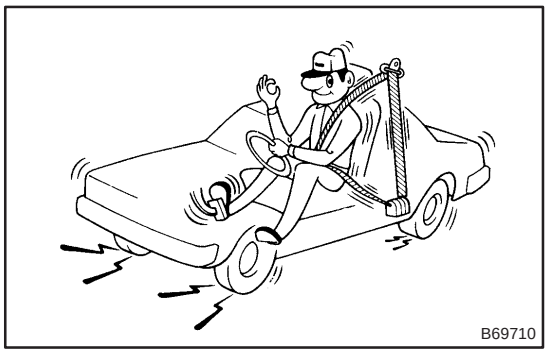
(3) Release the seat belt (Buckle switch is OFF).
(4) Check the resistance between the terminals.

Standard:

Tester Connection	Specified Condition
A–1 – B–3	10 kΩ or higher
A–3 – B–1	Below 1 Ω

If the result is not as specified, replace the inner belt assy.

FRONT SEAT BELT



610E8–01

PRECAUTION

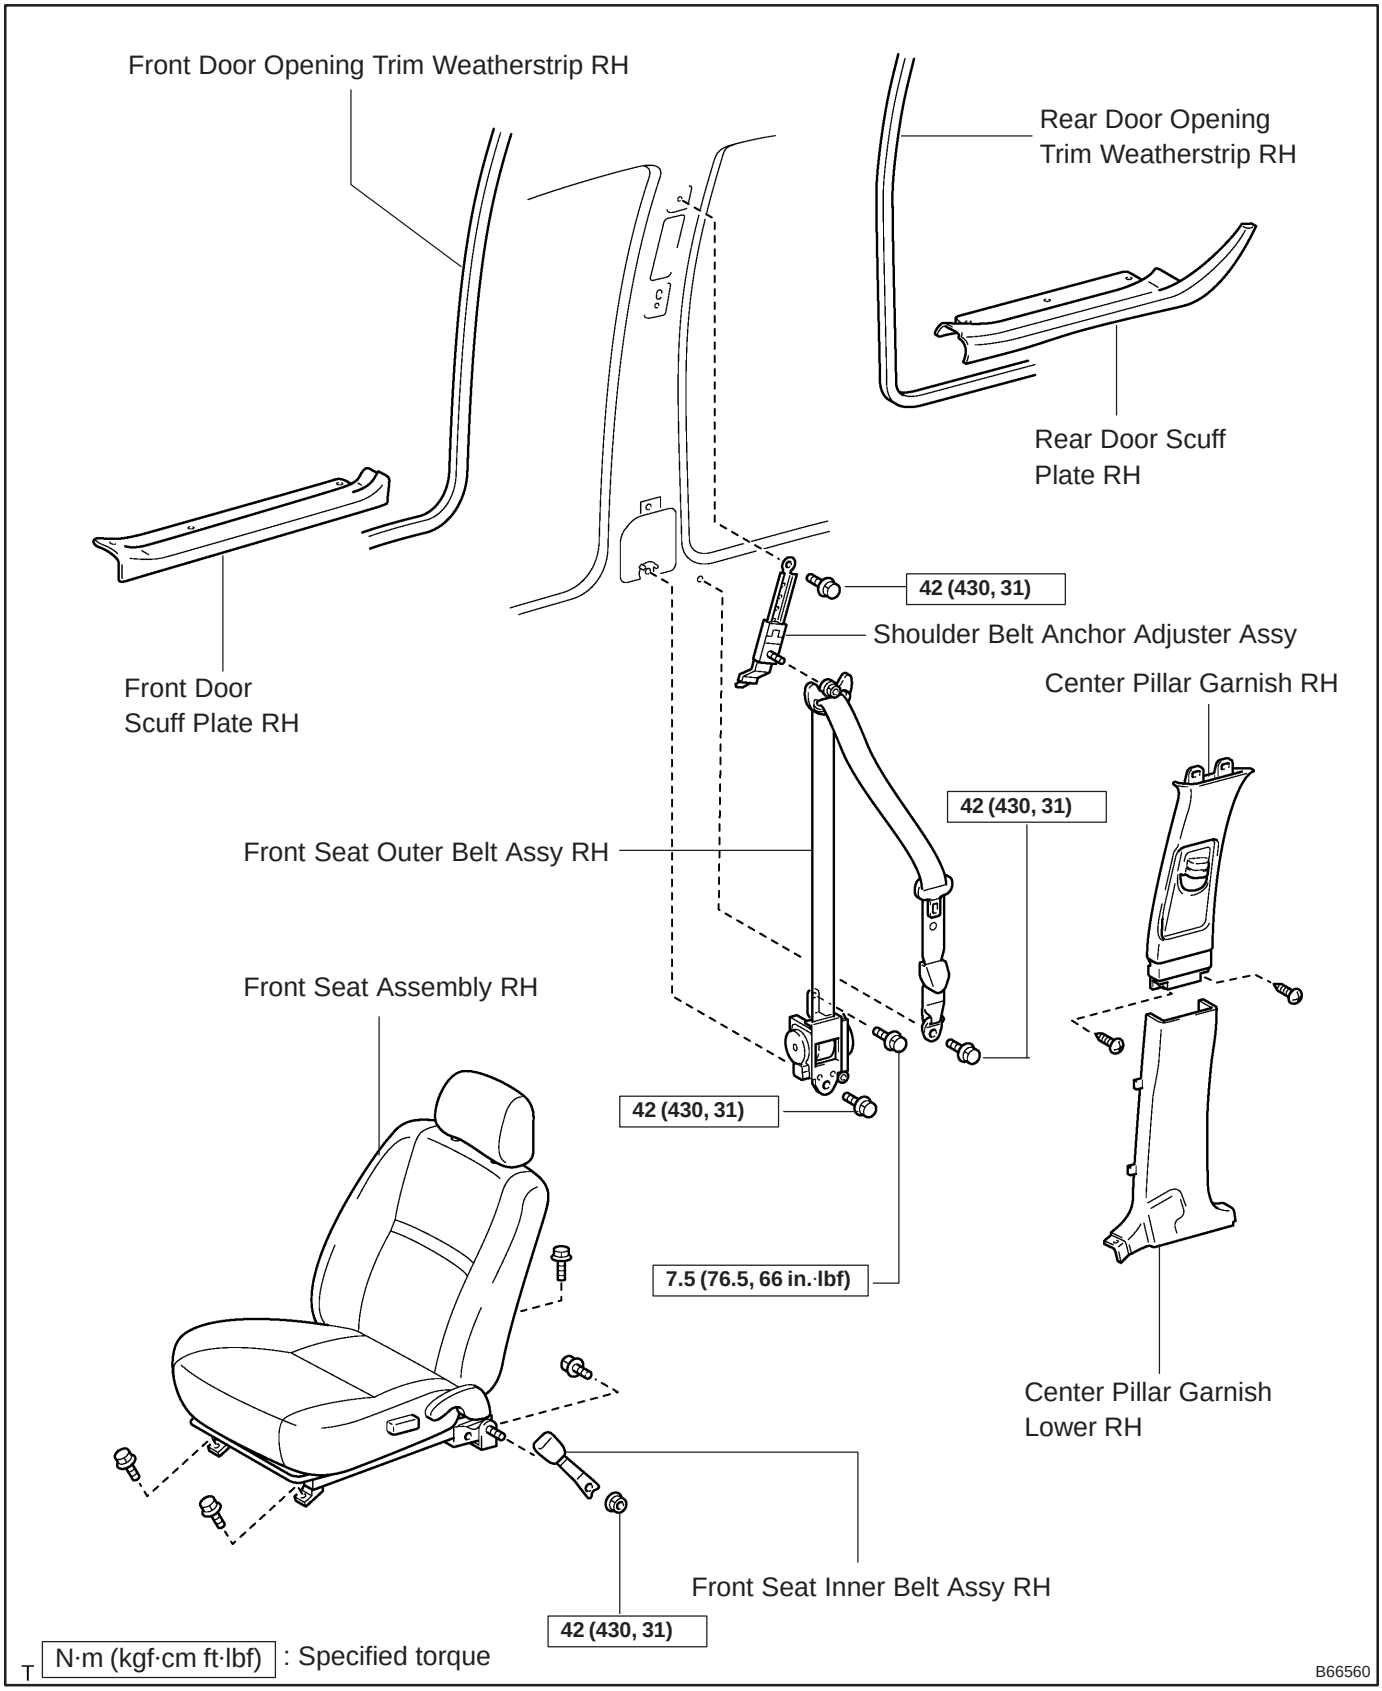
CAUTION:

Replace the faulty parts of the seat belt systems (outer belt, inner belt, bolts, nuts, adjustable shoulder anchor, tether anchor hardware, sill–bar, etc.)

Seat belt systems not in use at the time of a collision should also be inspected and replaced if found to be damaged or working improperly.

1. RUNNING TEST (IN SAFE AREA)

(a) Fasten the front seat belts.



(b) Drive the car at 16 km/h (10 mph) and slam on the brakes. Check the belt locks and cannot be extended at this time.

HINT:

Conduct this test in a safe area. If the belt does not lock, remove the belt assembly and perform the following static check. Also whenever installing a new belt assembly, verify the proper operation before installation.

610CM–02

COMPONENTS

REPLACEMENT

HINT:

- The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.
- Use the same procedures on the LH side as on the RH side.

1. DISCONNECT BATTERY NEGATIVE TERMINAL

2. REMOVE FRONT SEAT ASSEMBLY RH

3. REMOVE FRONT SEAT INNER BELT ASSY RH

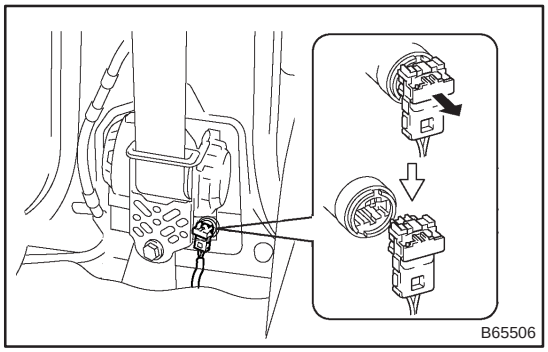
4. REMOVE FRONT DOOR SCUFF PLATE RH (See page 76–36, 76–45, 76–54)

5. REMOVE REAR DOOR SCUFF PLATE RH (See page 76–36, 76–45, 76–54)

6. REMOVE FRONT DOOR WEATHERSTRIP RH

7. REMOVE REAR DOOR WEATHERSTRIP RH

8. REMOVE CENTER PILLAR GARNISH LOWER RH (See page 76–36, 76–45, 76–54)



9. REMOVE CENTER PILLAR GARNISH UPPER RH (See page 76–36, 76–45, 76–54)

10. REMOVE FRONT SEAT OUTER BELT ASSY RH

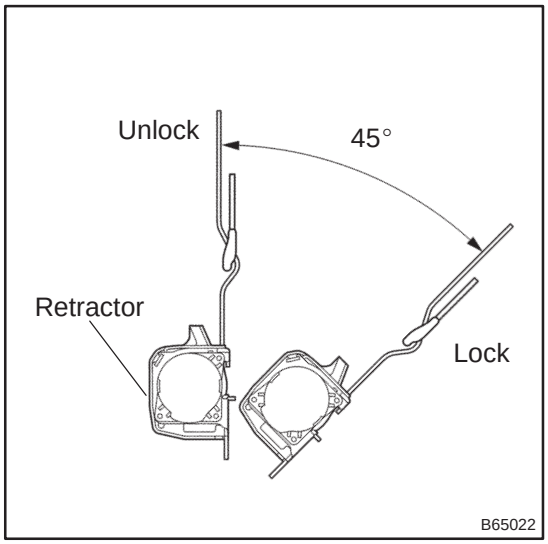
NOTICE:

- **Removal operation concerning the seat belt with the pretensioner must be started when 90 seconds or more time has passed after the ignition switch is turned OFF and the battery negative terminal is disconnected.**
- **Carefully read the notices for the ”pretensioner” in the SRS airbag system section and the front seat outer belt assy section.**

(a) Remove the nut and the outer belt on the shoulder anchor side.

(b) Disconnect the pretensioner connector, as shown in the illustration.

(c) Remove the 2 bolts on the retractor side and throughly remove the outer belt.



11. REMOVE FRONT SHOULDER BELT ANCHOR ADJUSTER ASSY

(a) Remove the bolt and anchor adjuster.

12. INSTALL FRONT SHOULDER BELT ANCHOR ADJUSTER ASSY

(a) Install the adjuster with the bolt.

Torque: 42 N·m (430 kgf·cm, 31 ft·lbf)

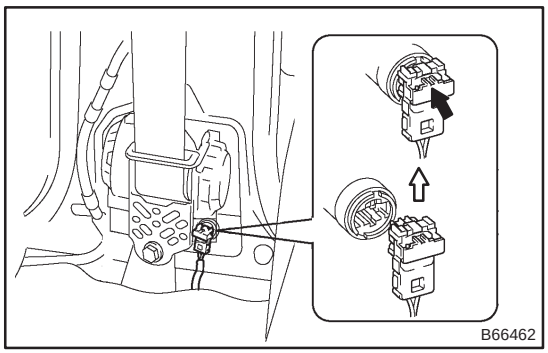
13. INSTALL FRONT SEAT OUTER BELT ASSY RH

NOTICE:

Do not disassemble the retractor.

(a) Check the degree of tilt when beginning to lock the ELR.

(1) Check that the belt does not lock within 15° of tilt in all directions but locks with over 45° of tilt when gently moving the retractor.



If operation is not as specified, replace the outer belt assy.

(b) Install the outer belt with the 2 bolts on the retractor side.

Torque:

7.5 N·m (76.5 kgf·cm, 66 in.·lbf) for upper bolt

42 N·m (430 kgf·cm, 31 ft·lbf) for lower bolt

(c) Connect the pretensioner connector, as shown in the illustration.

(d) Install the outer belt with the nut on the shoulder anchor side.

Torque: 42 N·m (430 kgf·cm, 31 ft·lbf)

(e) Install the outer belt with the bolt on the floor anchor side.

Torque: 42 N·m (430 kgf·cm, 31 ft·lbf)

(f) Install the floor anchor cover.

(g) Check the ELR lock.

NOTICE:

The check should be performed with the assembly installed.

(1) Check that the belt locks by pulling it out quickly after installation.

If operation is not as specified, replace the outer belt assy.

(h) Check the fastening function of the child restraint system.

NOTICE:

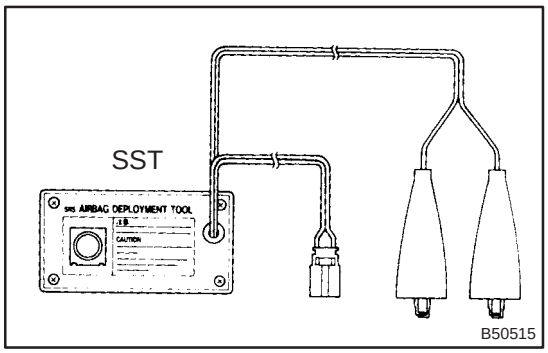
The check should be performed with the assembly installed.

(1) Check that the belt cannot be pulled out any more but rewinds after being pulled out fully.

(2) Check that the belt can be pulled out and rewound after the belt has been fully rewound.

If operation is not as specified, replace the outer belt assy.

14. INSTALL FRONT SEAT INNER BELT ASSY RH

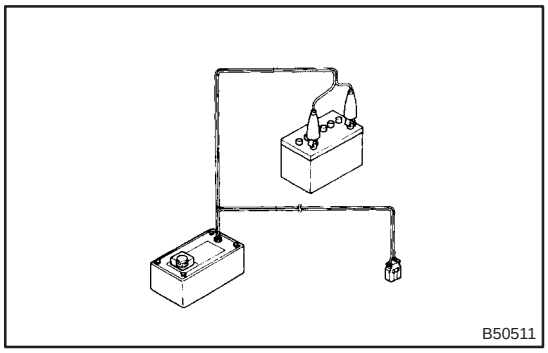


(a) Install the inner belt with the nut.

Torque: 42 N·m (430 kgf·cm, 31 ft·lbf)

DISPOSAL

HINT:



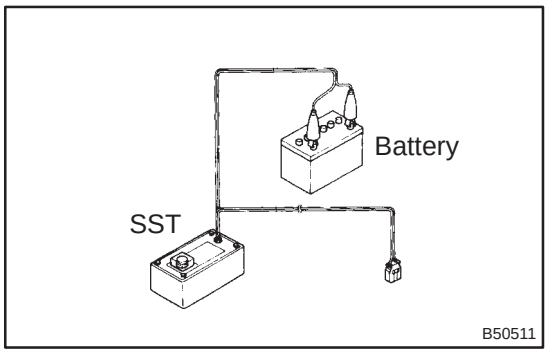
When scrapping vehicles equipped with a seat belt pretensioner or disposing of a front seat outer belt (with seat belt pretensioner), always first activate the seat belt pretensioner in accordance with the procedures described below. If any abnormality occurs in activation of the seat belt pretensioner, contact the SERVICE DEPT. of the DISTRIBUTOR. When disposing of a front seat outer belt assy (with seat belt pretensioner) that was activated in a collision, follow the same procedure listed in step 1–(e) in ”DISPOSAL”.

CAUTION:

- **Never dispose of a front seat outer belt assy with an inactivated pretensioner.**
- **The seat belt pretensioner produces a sizeable exploding sound when it activates, so perform the operation outdoors so as not to disturb nearby residents.**
- **When activating a front seat outer belt (with seat belt pretensioner), control operation at least 10 m (33 ft) away from the front seat outer belt.**
- **Use gloves and safety glasses when handling a front seat belt with an activated pretensioner.**
- **Always wash your hands with water after completing activation.**
- **Do not apply water, etc. to a front seat outer belt with an activated pretensioner.**
- **When activating the seat belt pretensioner, always use the specified SST (SRS airbag deployment tool). Perform operation in a place away from electrical interference.**

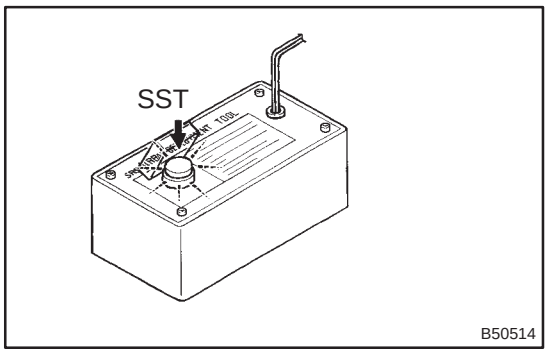
  SST 09082–00700

1. DISPOSE OF FRONT SEAT OUTER BELT ASSY RH (WHEN INSTALLED IN VEHICLE)



HINT:

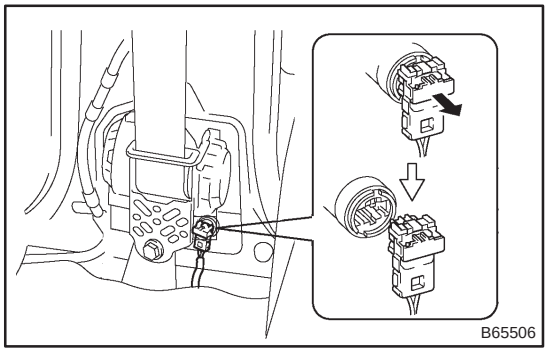
Check that the battery positive voltage is above 12 V.



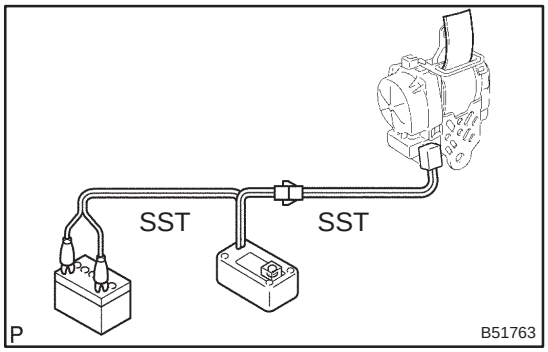
(a) Check the functioning of SST.
SST 09082–00700, 09082–00770

CAUTION:
When activating the seat belt pretensioner, always use the specified SST.

(1) Connect the SST red clip to the battery positive (+) terminal and the black clip to the battery negative (–) terminal.



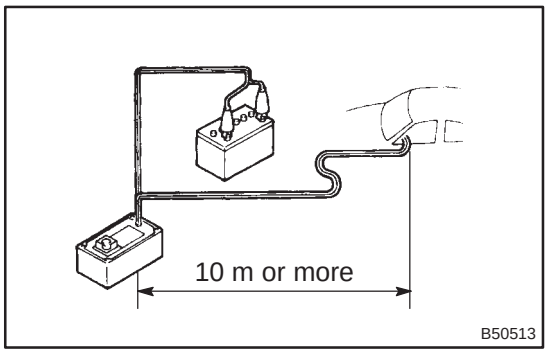
HINT:
Do not connect the yellow connector which should be connected to the seat belt pretensioner.



(2) Press the SST activation switch and check that the LED of the SST activation switch lights up.

CAUTION:
If the LED lights up when the activation switch is not pressed, the SST may have a malfunction, in which case that SST should be used.

(b) Disconnect the SST from the battery.
(c) Disconnect the pretensioner connector.
(1) Disconnect the battery negative (–) terminal.
(2) Check the SRS airbag system (See page 60–1).
(3) Remove the front door scuff plate RH (See page 76–36, 76–45, 76–54).
(4) Remove the rear door scuff plate RH (See page 76–36, 76–45, 76–54).
(5) Remove the front door weatherstrip RH.
(6) Remove the rear door weatherstrip RH.
(7) Remove the center pillar garnish lower RH (See page 76–36, 76–45, 76–54).



(8) Disconnect the pretensioner connector, as shown in the illustration.
(d) Connect SST.
SST 09082–00700, 09082–00770
(1) Install the floor anchor of the seat belt.

(2) Connect SST, then connect them to the seat belt pretensioner.

NOTICE:

To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock.

(3) Move the SST at least 10 m (33 ft) away from the front of the vehicle.

(4) Close all the doors and windows of the vehicle.

NOTICE:

Take care not to damage the SST wire harness.

(5) Connect the SST red clip to the battery positive (+) terminal and the black clip to the negative (–) terminal.

(e) Activate the seat belt pretensioner.

(1) Confirm that no one is inside the vehicle or within 10 m (33 ft) of the vehicle.

(2) Press the SST activation switch and activate the seat belt pretensioner.

HINT:

The seat belt pretensioner operates simultaneously with the LED light for the SST activation switch.

(f) Dispose of the outer belt (with the seat belt pretensioner).

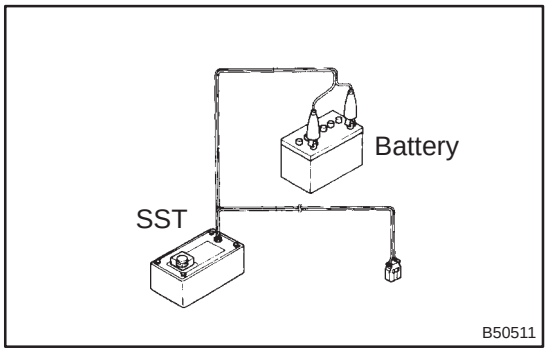
CAUTION:

- **The outer belt is very hot when the seat belt pretensioner is activated, so leave it untouched for at least 30 minutes after it has been activated.**
- **Use gloves and safety glasses when handling the outer belt with a pretensioner that has been activated.**
- **Always wash your hands with water after completing operation.**
- **Do not apply water, etc. to an outer belt with a pretensioner that has been activated.**

HINT:

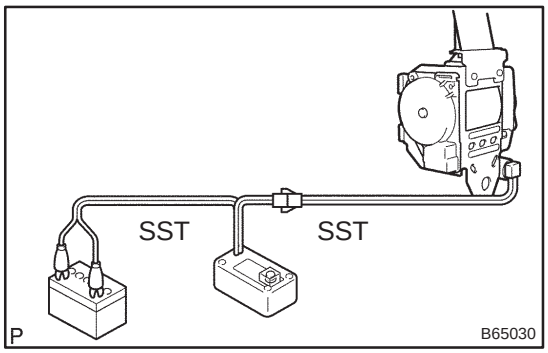
When scrapping a vehicle, activate the seat belt pretensioner, and then scrap the vehicle with the activated outer belt being installed.

2. DISPOSE OF FRONT SEAT OUTER BELT ASSY RH (WHEN NOT INSTALLED IN VEHICLE)



NOTICE:

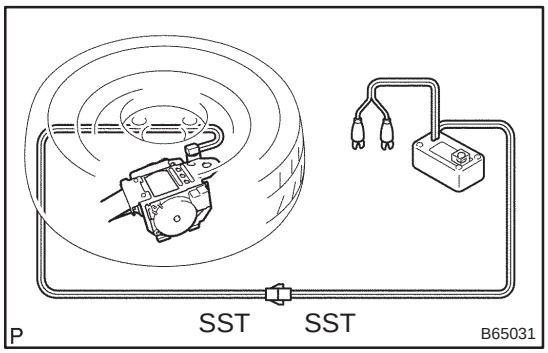
- **When disposing of the front seat outer belt (with the seat belt pretensioner) only, never use the customer's vehicle to activate the seat belt pretensioner.**
- **Be sure to follow the procedures listed below when activating the seat belt pretensioner.**



(a) Remove the outer belt (See page 61–7).

HINT:

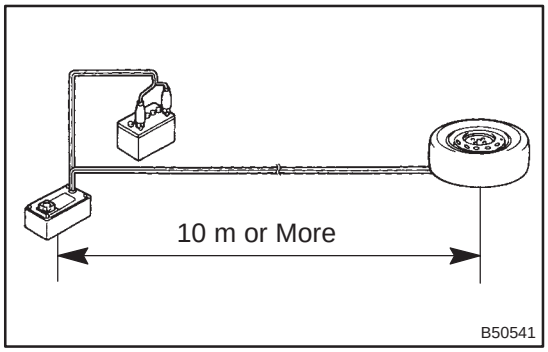
Cut the belt near the seat belt retractor.



(b) Check the functioning of SST (See step 1–(a)).
SST 09082–00700, 09082–00770

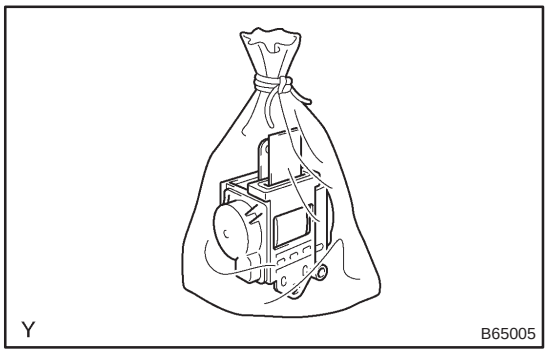
(c) Connect SST.
SST 09082–00700, 09082–00770
(1) Connect SST, then connect them to the seat belt pretensioner.

NOTICE:
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock.



(2) Place the outer belt on the ground and cover it with a wheel and tire.

NOTICE:
Set up the front seat outer belt assy as shown in the illustration.



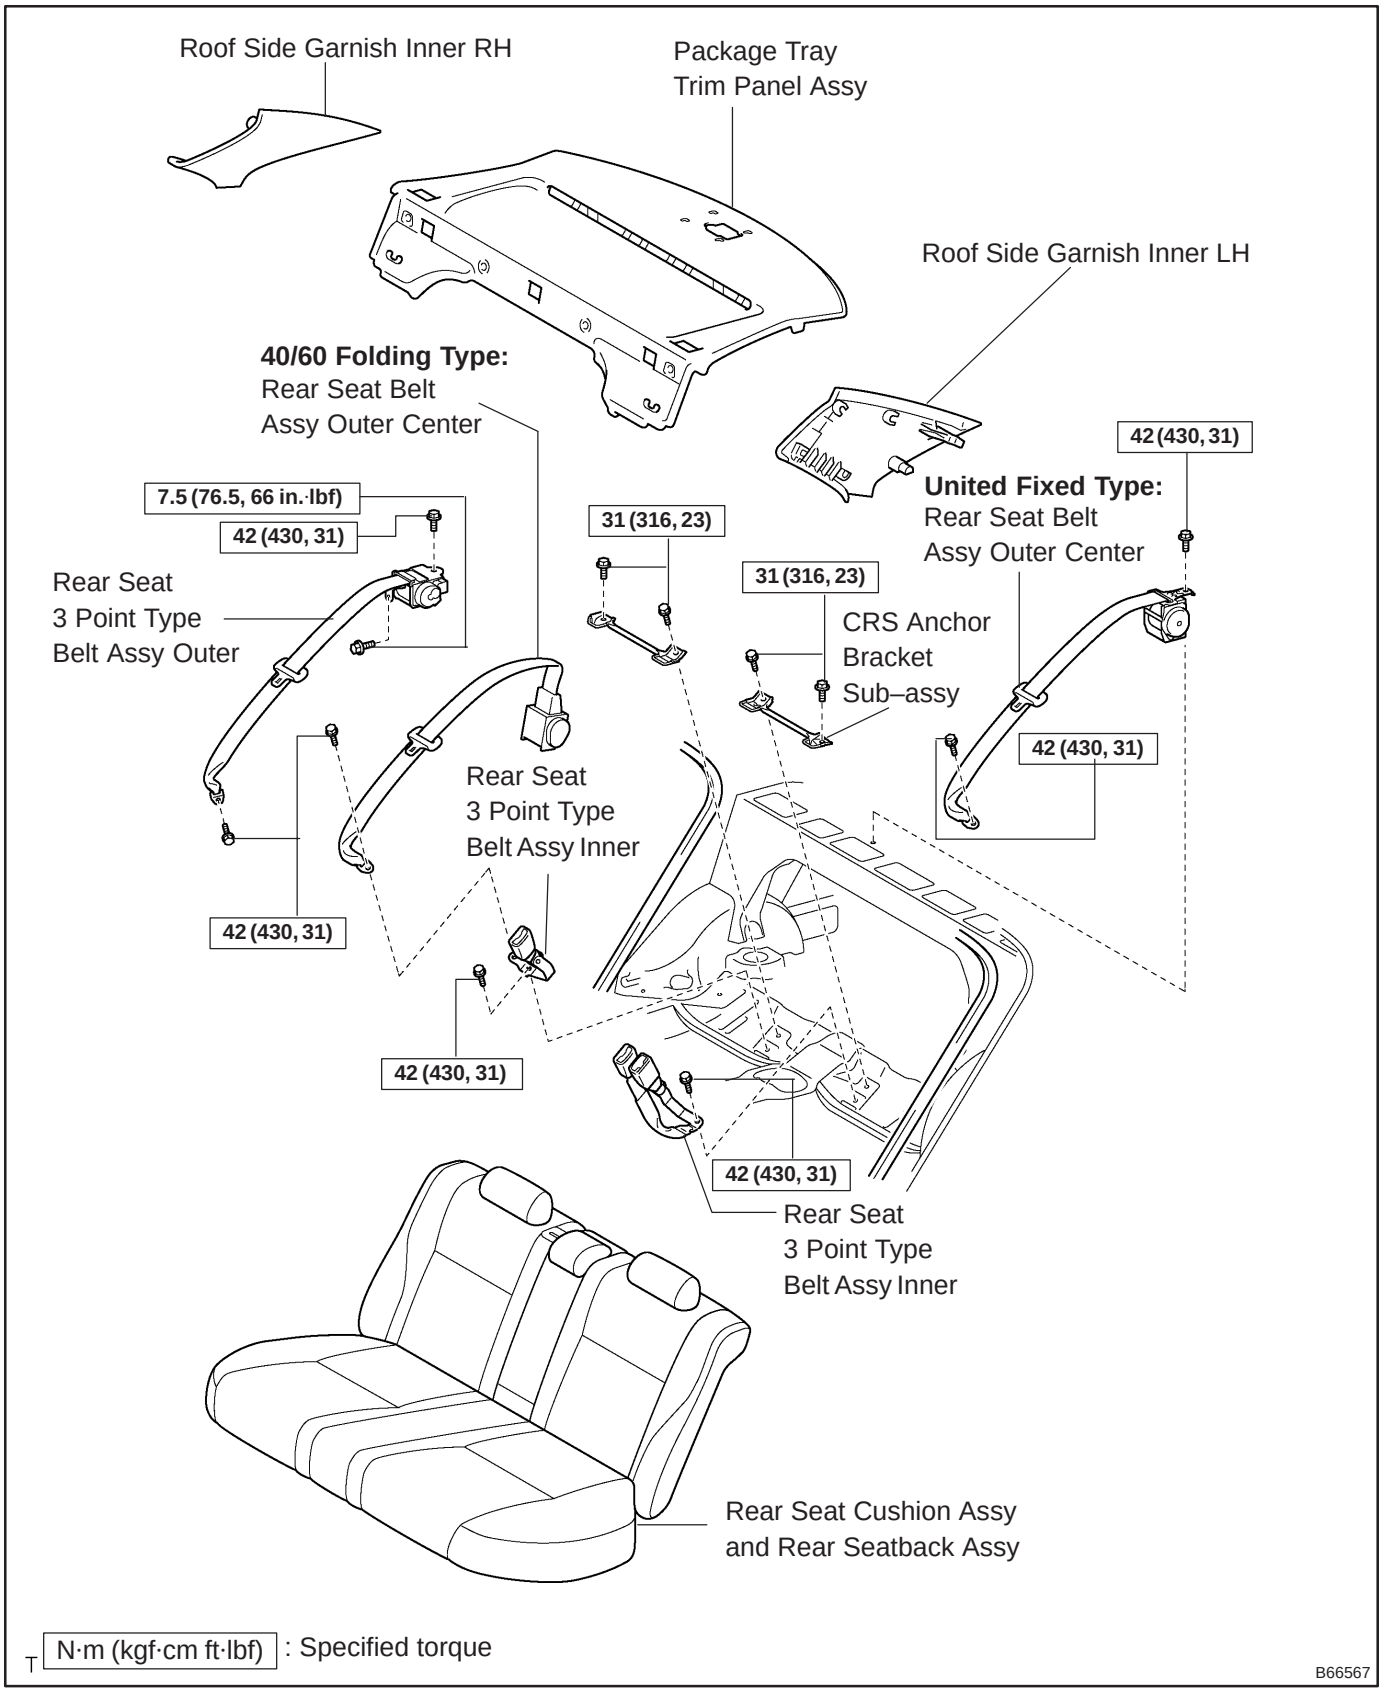
(3) Move the SST at least 10 m (33 ft) away from the wheel.

NOTICE:
Take care not to damage the SST wire harness.

(d) Activate the seat belt pretensioner.
(1) Connect the SST red clip to the battery positive (+) terminal and the black clip to the battery negative (–) terminal.
(2) Check that no one is within 10 m (33 ft) of the wheel.
(3) Press the SST activation switch and activate the seat belt pretensioner.

HINT:
The seat belt pretensioner operates simultaneously with the LED light for the SST activation switch.

(e) Dispose of the outer belt (with the seat belt pretensioner).



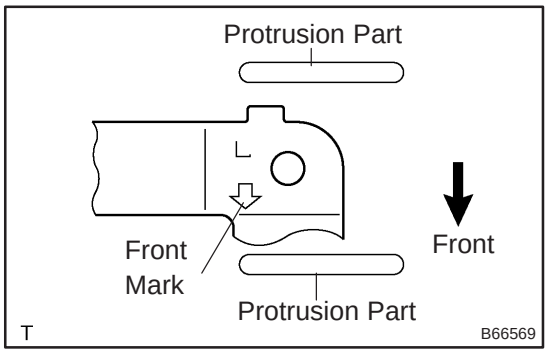
CAUTION:
- **The outer belt assy is very hot when the seat belt pretensioner is activated, so leave it untouched for at least 30 minutes after it has been activated.**
- **Use gloves and safety glasses when handling the outer belt with the pretensioner that has been activated.**
- **Always wash your hands with water after completing operation.**

- **Do not apply water, etc. to an outer belt with the pretensioner that has been activated.**
  (1) Remove the wheel and SST.
  (2) Place the outer belt in a plastic bag, tie the end tightly and dispose of it in the same way as other general parts.

REAR SEAT BELT (SEDAN MODELS)

610CP–02

COMPONENTS

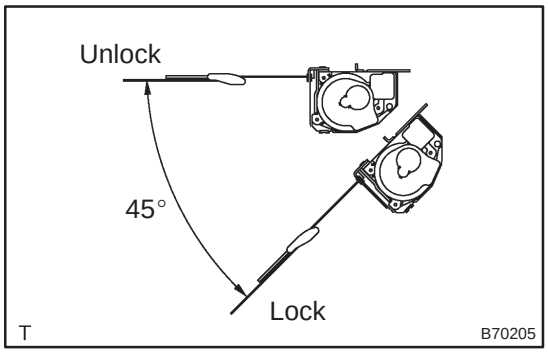


REPLACEMENT

HINT:

- The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.
- Use the same procedures on the LH side as on the RH side.

1. REMOVE REAR DOOR SCUFF PLATE RH (See page 76–36)
2. REMOVE REAR DOOR SCUFF PLATE LH (See page 76–36)
3. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH
4. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH
5. REMOVE REAR SEAT ASSY (See page 72–27, 72–32)
6. REMOVE ROOF SIDE GARNISH INNER RH (See page 76–36)
7. REMOVE ROOF SIDE GARNISH INNER LH (See page 76–36)
8. REMOVE PACKAGE TRAY TRIM PANEL ASSY (See page 76–36)
9. REMOVE REAR SEAT 3 POINT TYPE BELT ASSY OUTER
(a) Remove the bolt and belt on the floor anchor side.
(b) Remove the 2 bolts and belt on the retractor side.
10. REMOVE REAR SEAT BELT ASSY OUTER CENTER
(a) United fixed type:
Remove the bolt and belt on the floor anchor side.
(b) United fixed type:
Remove the bolt and belt on the retractor side.
(c) 40/60 folding type:
Remove the rear seatback board RH (See page 72–27).
(d) 40/60 folding type:
Remove the rear seat shoulder belt cover (See page 72–27).
(e) 40/60 folding type:
Remove the bolt on the retractor side and remove the belt completely.
(f) Remove the bolt and belt outer center on the floor anchor side.
11. REMOVE REAR SEAT 3 POINT TYPE BELT ASSY INNER
(a) Remove the bolt and belt.
12. REMOVE REAR SEAT 3 POINT TYPE BELT ASSY INNER
(a) Remove the bolt and belt.
13. REMOVE CHILD RESTRAINT SEAT ANCHOR BRACKET SUB–ASSY RH
(a) Remove the 2 bolts and anchor bracket.
14. INSTALL CHILD RESTRAINT SEAT ANCHOR BRACKET SUB–ASSY RH
(a) Install the child restraint seat anchor bracket with the 2 bolts.
Torque: 31 N·m (316 kgf·cm, 23 ft·lbf)



15. INSTALL REAR SEAT 3 POINT TYPE BELT ASSY INNER
(a) Install the belt assy with the bolt as shown in the illustration.
Torque: 42 N·m (430 kgf·cm, 31 ft·lbf)

NOTICE:
Make sure that the anchor part does not run onto the protrusion part of the floor panel.

16. INSTALL REAR SEAT BELT ASSY OUTER CENTER (UNITED FIXED TYPE REAR SEAT)

(a) Install the belt with the bolt on the retractor side.
Torque: 42 N·m (430 kgf·cm, 31 ft·lbf)

(b) Check the degree of tilt when the belt begins to lock the ELR.

NOTICE:

Do not disassemble the retractor.

(1) Check that the belt does not lock within 15° of tilt in all directions but locks with over 45° of tilt when gently moving the retractor.

If operation is not as specified, replace the seat belt assy.

(c) Install the belt with the bolt on the floor anchor side.
Torque: 42 N·m (430 kgf·cm, 31 ft·lbf)

(d) Check the ELR lock.

NOTICE:

The check should be performed with the assembly installed.

(1) Check that the belt locks by pulling it out quickly after installation.

HINT:

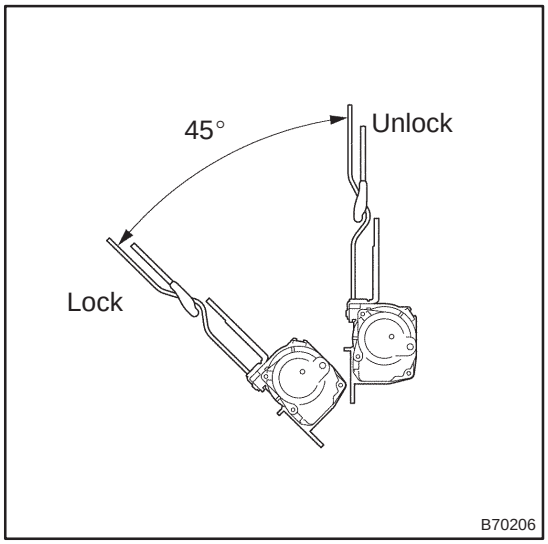
The seat belt does not lock when it is pulled out to a length of 955 mm (37.60 in.) or less.

If operation is not as specified, replace the belt assy.

(e) Check the fastening function of the child restraint system.

NOTICE:

The check should be performed with the assembly installed.



(1) Check that the belt cannot be pulled out any more but rewinds after being pulled out fully.

(2) Check that the belt can be pulled out and rewound after the belt has been fully rewound.

If operation is not as specified, replace the belt assy.

17. INSTALL REAR SEAT BELT ASSY OUTER CENTER (40/60 FOLDING TYPE REAR SEAT)

(a) Install the belt assy with the bolt on the retractor side.
Torque: 42 N·m (430 kgf·cm, 31 ft·lbf)

(b) Check the degree of tilt when the belt begins to lock the ELR.

NOTICE:

Do not disassemble the retractor.

(1) Check that the belt does not lock within 15° of tilt in all directions but locks with over 45° of tilt when gently moving the retractor.

If operation is not as specified, replace the belt assy.

(c) Install the belt with the bolt on the floor anchor side.

Torque: 42 N·m (430 kgf·cm, 31 ft·lbf)

(d) Check the ELR lock.

NOTICE:

The check should be performed with the assembly installed.

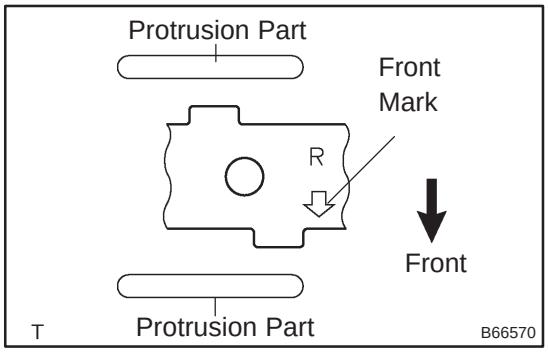
(1) Check that the belt locks by pulling it out quickly after installation.

HINT:

The seat belt does not lock when it is pulled out to a length of 955 mm (37.60 in.) or less.

If operation is not as specified, replace the belt assy.

(e) Check the fastening function of the child restraint system.



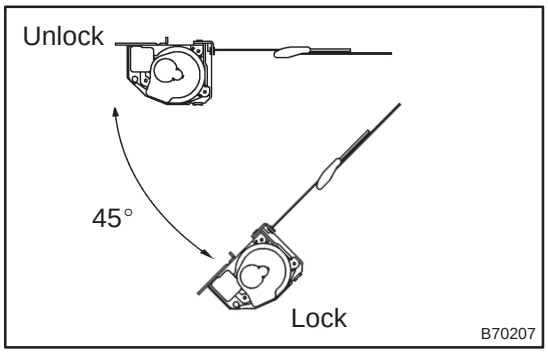
NOTICE:

The check should be performed with the assembly installed.

(1) Check that the belt cannot be pulled out any more but rewinds after being pulled out fully.

(2) Check that the belt can be pulled out and rewound after the belt has been fully rewound.

If operation is not as specified, replace the belt assy.



18. INSTALL REAR SEAT 3 POINT TYPE BELT ASSY INNER

(a) Install the floor anchor and belt with the bolt as shown in the illustration.

Torque: 42 N·m (430 kgf·cm, 31 ft·lbf)

NOTICE:

Make sure that the anchor part does not run onto the protrusion part of the floor panel.

19. INSTALL REAR SEAT 3 POINT TYPE BELT ASSY OUTER

(a) Install the belt with the bolt on the retractor side.

Torque:

7.5 N·m (76.5 kgf·cm, 66 in.·lbf) for front bolt

42 N·m (430 kgf·cm, 31 ft·lbf) for upper bolt

(b) Check the degree of tilt when the belt begins to lock the ELR.

NOTICE:

Do not disassemble the retractor.

(1) Check that the belt does not lock within 15° of tilt in all directions but locks with over 45° of tilt when gently moving the retractor.

If operation is not as specified, replace the belt assy.

(c) Install the belt with the bolt on the floor anchor side.

Torque: 42 N·m (430 kgf·cm, 31 ft·lbf)

NOTICE:

Make sure that the anchor part does not run onto the protrusion part of the floor panel.

(1) Check that the belt locks by pulling it out quickly after installation.

If operation is not as specified, replace the belt assy.

(d) Check the ELR lock.

NOTICE:

The check should be performed with the assembly installed.

(1) Check that the belt locks by pulling it out quickly after installation.

If operation is not as specified, replace the belt assy.

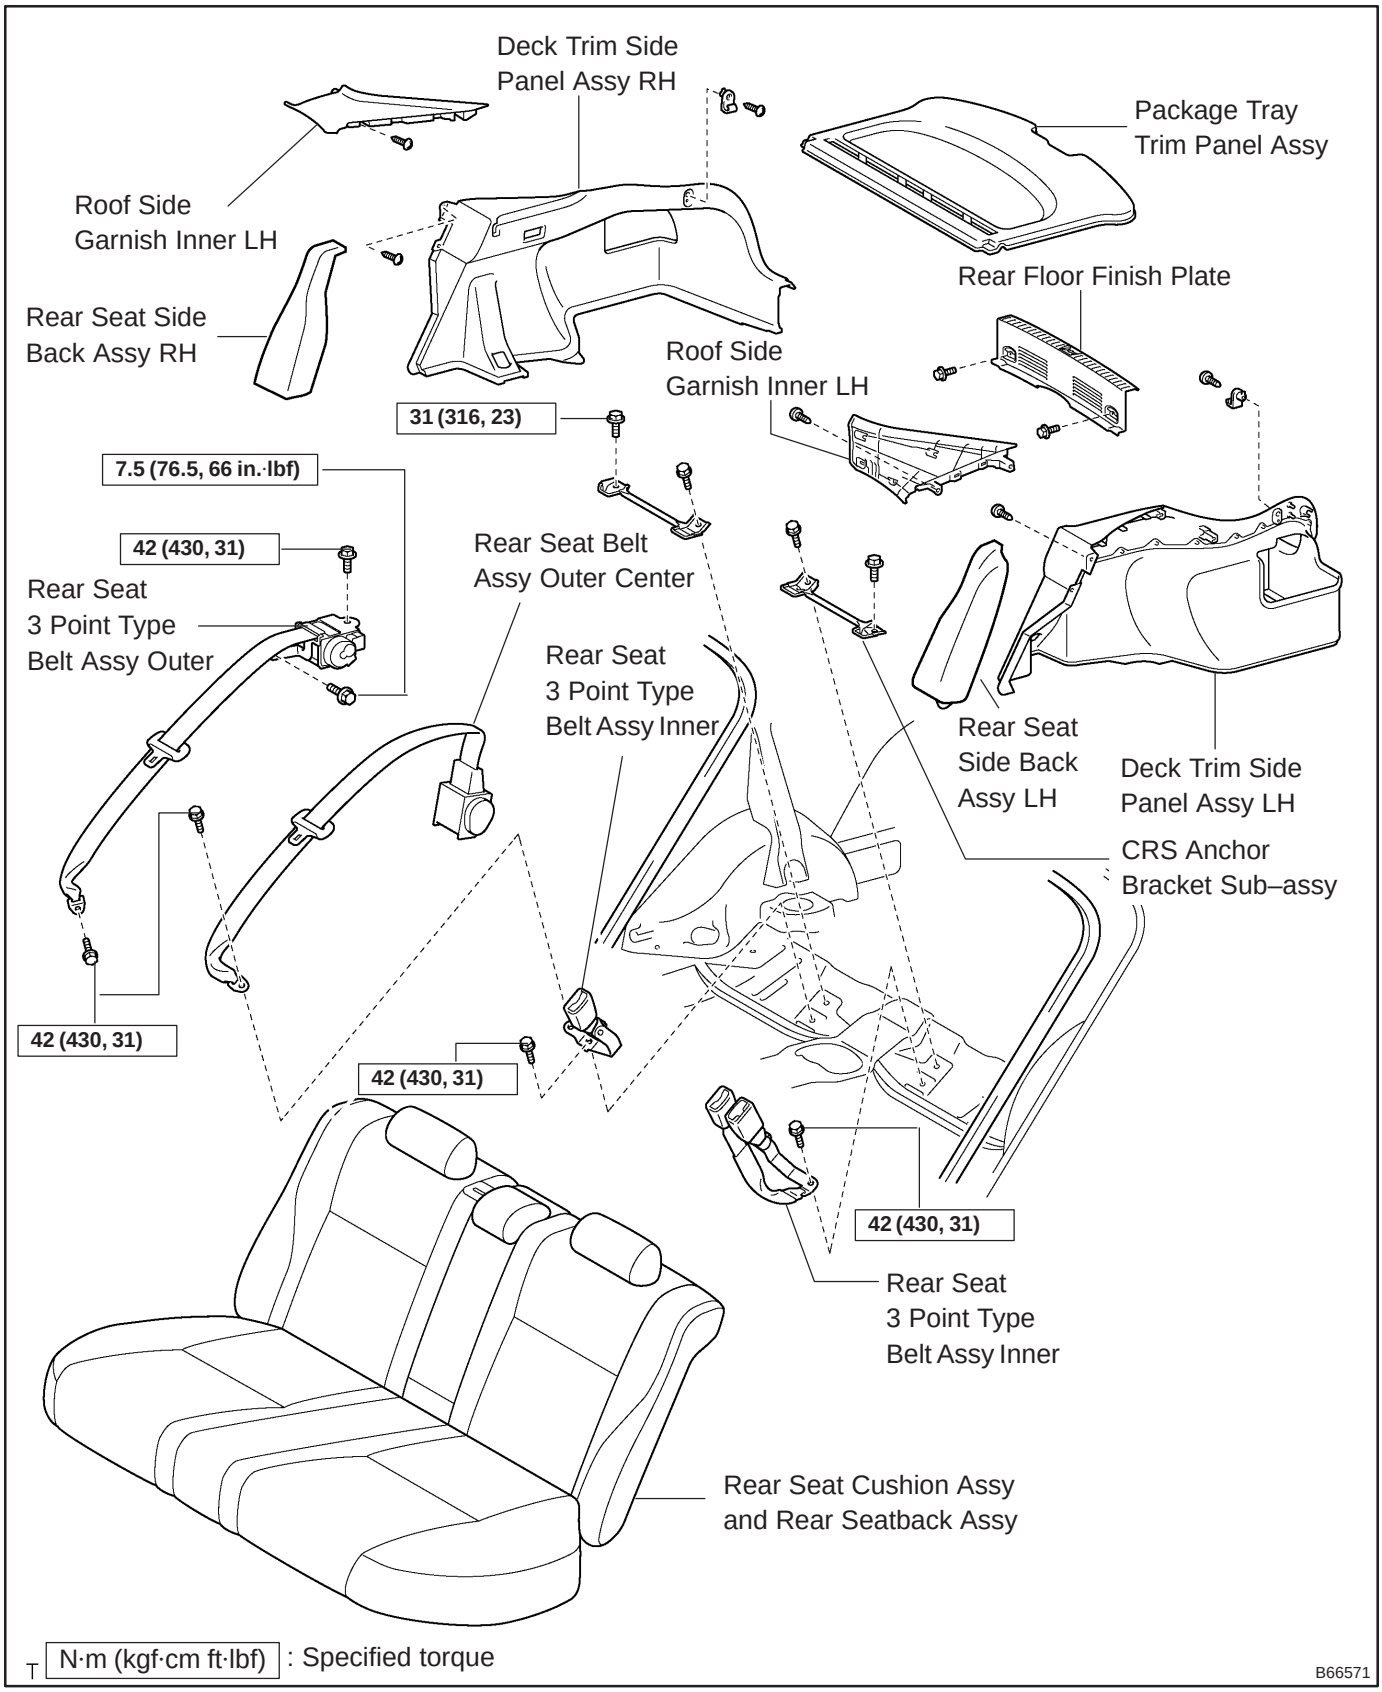
(e) Check the fastening function of the child restraint system.

NOTICE:

The check should be performed with the assembly installed.

(1) Check that the belt cannot be pulled out any more but rewinds after being pulled out fully.

(2) Check that the belt can be pulled out and rewound after the belt has been fully rewound.



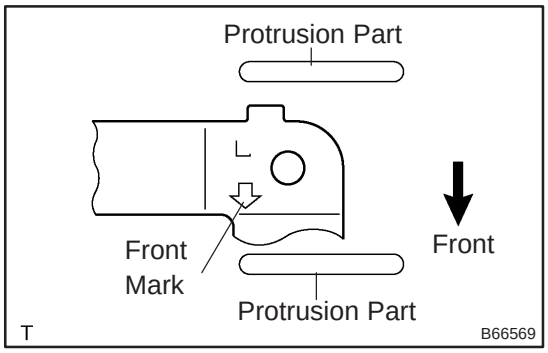
If operation is not as specified, replace the belt assy.

20. INSTALL REAR SEAT ASSY (See page 72–27, 72–32)

REAR SEAT BELT (LIFTBACK MODELS)

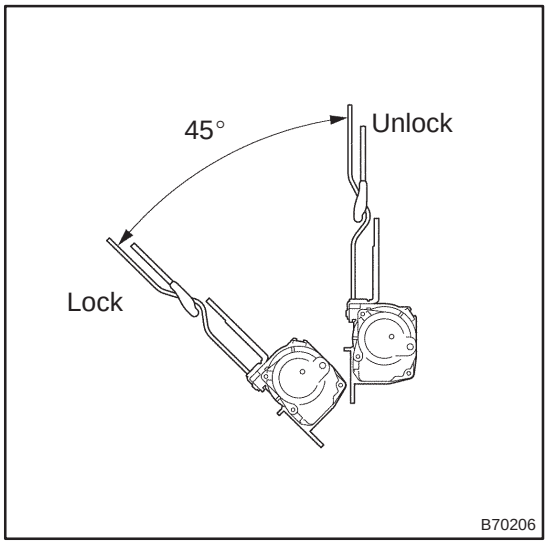
COMPONENTS

610E9–01



610EA–01

REPLACEMENT



HINT:

- The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.
- Use the same procedures on the LH side as on the RH side.

1. REMOVE REAR DOOR SCUFF PLATE RH (See page 76–45)
2. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH
3. REMOVE REAR SEAT ASSY (See page 72–21)
4. REMOVE PACKAGE TRAY TRIM PANEL ASSY (See page 76–45)
5. REMOVE BACK DOOR WEATHERSTRIP
6. REMOVE REAR FLOOR FINISH PLATE (See page 76–45)
7. REMOVE ROOF SIDE GARNISH INNER RH (See page 76–45)
8. REMOVE DECK TRIM SIDE PANEL ASSY RH (See page 76–45)
9. REMOVE REAR SEAT 3 POINT TYPE BELT ASSY OUTER
(a) Remove the bolt and belt on the floor anchor side.
(b) Remove the 2 bolts and belt on the retractor side.
10. REMOVE REAR SEAT BELT ASSY OUTER CENTER
(a) Remove the rear seatback board RH (See page 72–21).
(b) Remove the rear seat shoulder belt cover (See page 72–21).
(c) Remove the bolt on the retractor side and remove the belt completely.
(d) Remove the bolt and belt assy outer center on the floor anchor side.
11. REMOVE REAR SEAT 3 POINT TYPE BELT ASSY INNER
(a) Remove the bolt and belt.
12. REMOVE REAR SEAT 3 POINT TYPE BELT ASSY INNER
(a) Remove the bolt and belt.
13. REMOVE CHILD RESTRAINT SEAT ANCHOR BRACKET SUB–ASSY RH
(a) Remove the 2 bolts and anchor bracket.
14. INSTALL CHILD RESTRAINT SEAT ANCHOR BRACKET SUB–ASSY RH
(a) Install the child restraint seat anchor bracket with the 2 bolts.
Torque: 31 N·m (316 kgf·cm, 23 ft·lbf)

15. INSTALL REAR SEAT 3 POINT TYPE BELT ASSY INNER
(a) Install the belt with the bolt as shown in the illustration.
Torque: 42 N·m (430 kgf·cm, 31 ft·lbf)
NOTICE:
Make sure that the anchor part does not run onto the protrusion part of the floor panel.
16. INSTALL REAR SEAT BELT ASSY OUTER CENTER
(a) Install the belt with the bolt on the retractor side.
Torque: 42 N·m (430 kgf·cm, 31 ft·lbf)

(b) Check the degree of tilt when the belt begins to lock the ELR.

NOTICE:

Do not disassemble the retractor.

(1) Check that the belt does not lock within 15° of tilt in all directions but locks with over 45° of tilt when gently moving the retractor.

If operation is not as specified, replace the belt assy.

(c) Install the belt with the bolt on the floor anchor side.

Torque: 42 N·m (430 kgf·cm, 31 ft·lbf)

(d) Check the ELR lock.

NOTICE:

The check should be performed with the assembly installed.

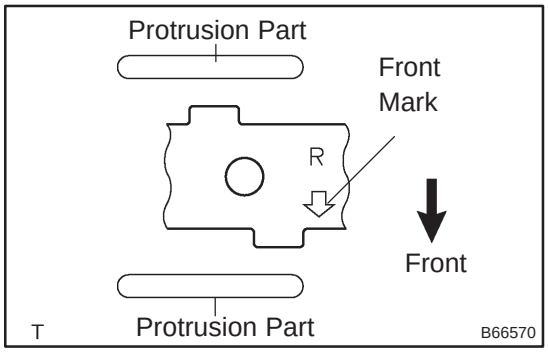
(1) Check that the belt locks by pulling it out quickly after installation.

HINT:

The seat belt does not lock when it is pulled out to a length of 955 mm (37.60 in.) or less.

If operation is not as specified, replace the belt assy.

(e) Check the fastening function of the child restraint system.



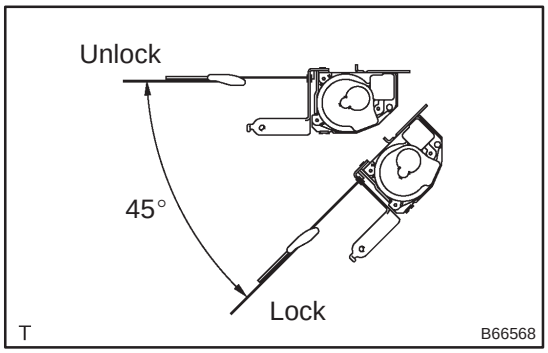
NOTICE:

The check should be performed with the assembly installed.

(1) Check that the belt cannot be pulled out any more but rewinds after being pulled out fully.

(2) Check that the belt can be pulled out and rewound after the belt has been fully rewound.

If operation is not as specified, replace the belt assy.



17. INSTALL REAR SEAT 3 POINT TYPE BELT ASSY INNER

(a) Install the floor anchor and belt with the bolt as shown in the illustration.

Torque: 42 N·m (430 kgf·cm, 31 ft·lbf)

NOTICE:

Makesure that the anchor part does not run onto the protrusion part of the floor panel.

18. INSTALL REAR SEAT 3 POINT TYPE BELT ASSY OUTER

(a) Install the belt with the bolt on the retractor side.

Torque:

7.5 N·m (76.5 kgf·cm, 66 in.·lbf) for front bolt

42 N·m (430 kgf·cm, 31 ft·lbf) for upper bolt

(b) Check the degree of tilt when the belt begins to lock the ELR.

NOTICE:

Do not disassemble the retractor.

(1) Check that the belt does not lock within 15° of tilt in all directions but locks with over 45° of tilt when gently moving the retractor.

If operation is not as specified, replace the belt assy.

(c) Install the belt with the bolt on the floor anchor side.

Torque: 42 N·m (430 kgf·cm, 31 ft·lbf)

NOTICE:

Make sure that the anchor part does not run onto the protrusion part of the floor panel.

(1) Check that the belt locks by pulling it out quickly after installation.

If operation is not as specified, replace the belt assy.

(d) Check the ELR lock.

NOTICE:

The check should be performed with the assembly installed.

(1) Check that the belt locks by pulling it out quickly after installation.

If operation is not as specified, replace the belt assy.

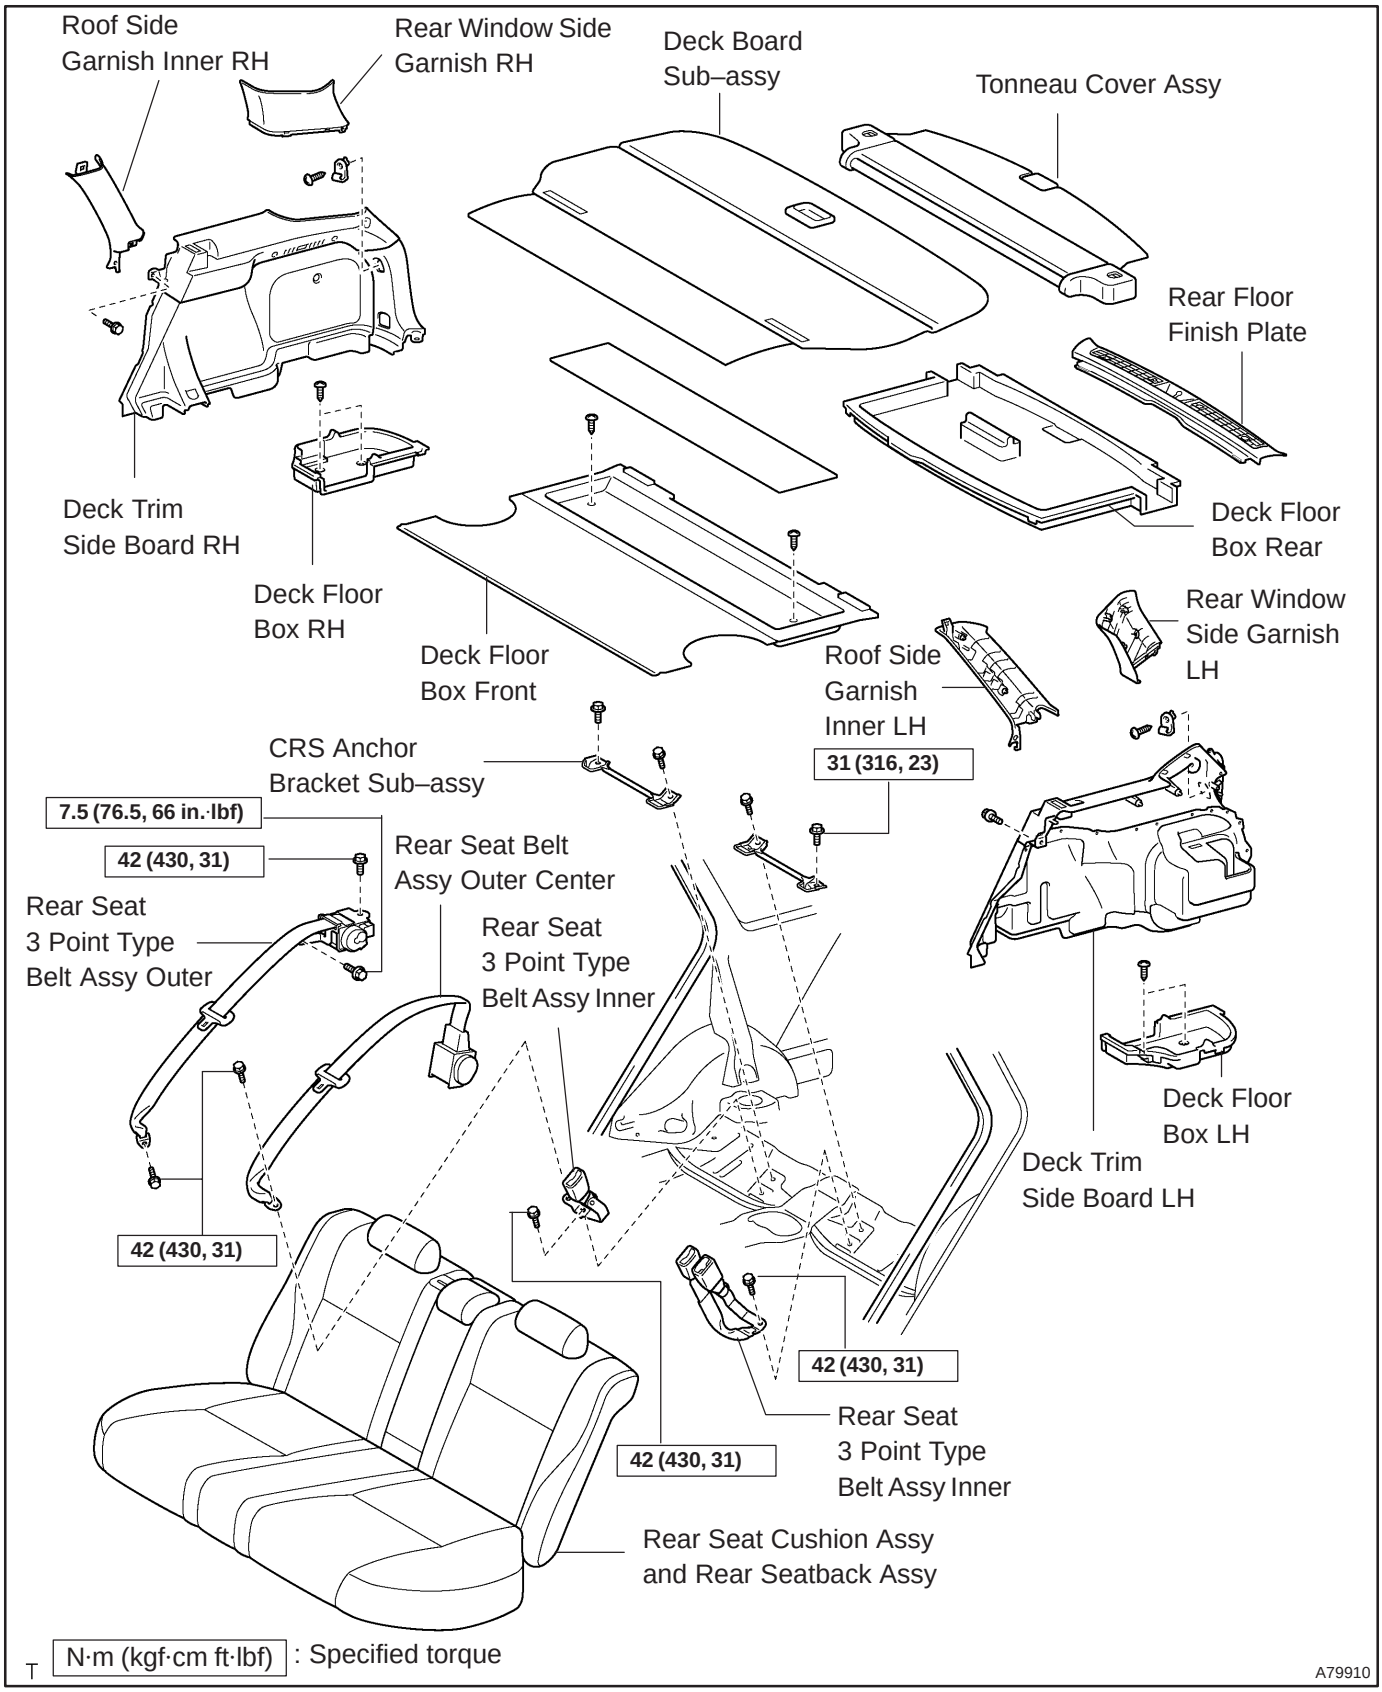
(e) Check the fastening function of the child restraint system.

NOTICE:

The check should be performed with the assembly installed.

(1) Check that the belt cannot be pulled out any more but rewinds after being pulled out fully.

(2) Check that the belt can be pulled out and rewound after the belt has been fully rewound.



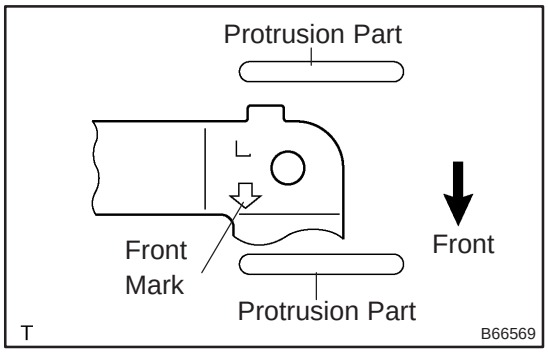
If operation is not as specified, replace the belt assy.

19. INSTALL REAR SEAT ASSY (See page 72–21)

REAR SEAT BELT (WAGON MODELS)

COMPONENTS

610EB–01



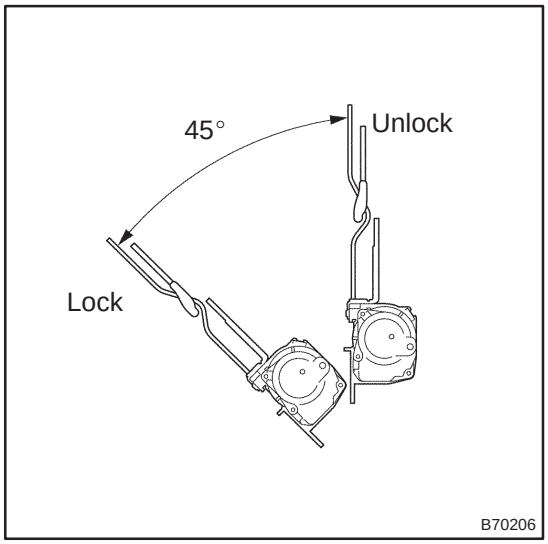
610EC–01

REPLACEMENT

HINT:

- The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.
- Use the same procedures on the LH side as on the RH side.

1. REMOVE REAR DOOR SCUFF PLATE RH (See page 76–54)
2. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH
3. REMOVE REAR SEAT ASSY (See page 72–21)
4. REMOVE TONNEAU COVER ASSY
5. REMOVE BACK DOOR WEATHERSTRIP
6. REMOVE DECK BOARD SUB–ASSY (See page 76–54)
7. REMOVE DECK FLOOR BOX REAR (See page 76–54)
8. REMOVE DECK FLOOR BOX FRONT (See page 76–54)
9. REMOVE DECK FLOOR BOX RH (See page 76–54)
10. REMOVE REAR FLOOR FINISH PLATE (See page 76–54)
11. REMOVE DECK TRIM SIDE BOARD RH (See page 76–54)
12. REMOVE REAR SEAT 3 POINT TYPE BELT ASSY OUTER
(a) Remove the bolt and belt on the floor anchor side.
(b) Remove the 2 bolts and belt on the retractor side.
13. REMOVE REAR SEAT BELT ASSY OUTER CENTER
(a) Remove the rear seatback board RH (See page 72–21).
(b) Remove the rear seat shoulder belt cover (See page 72–21).
(c) Remove the bolt on the retractor side and remove the belt outer center completely.
(d) Remove the bolt and belt outer center on the floor anchor side.
14. REMOVE REAR SEAT 3 POINT TYPE BELT ASSY INNER
(a) Remove the bolt and belt.
15. REMOVE REAR SEAT 3 POINT TYPE BELT ASSY INNER
(a) Remove the bolt and belt.
16. REMOVE CHILD RESTRAINT SEAT ANCHOR BRACKET SUB–ASSY RH
(a) Remove the 2 bolts and anchor bracket.
17. INSTALL CHILD RESTRAINT SEAT ANCHOR BRACKET SUB–ASSY RH
(a) Install the child restraint seat anchor bracket with the 2 bolts.
Torque: 31 N·m (316 kgf·cm, 23 ft·lbf)



18. INSTALL REAR SEAT 3 POINT TYPE BELT ASSY INNER
(a) Install the belt with the bolt as shown in the illustration.
Torque: 42 N·m (430 kgf·cm, 31 ft·lbf)

NOTICE:

- **Makesure that the anchor part does not run onto the protrusion part of the floor panel.**
- **Do not disassemble the retractor.**

19. INSTALL REAR SEAT BELT ASSY OUTER CENTER
(a) Install the belt with the bolt on the retractor side.
Torque: 42 N·m (430 kgf·cm, 31 ft·lbf)

(b) Check the degree of tilt when the belt begins to lock the ELR.

NOTICE:

Do not disassemble the retractor.

(1) Check that the belt does not lock within 15° of tilt in all directions but locks with over 45° of tilt when gently moving the retractor.

If operation is not as specified, replace the belt assy.

(c) Install the belt with the bolt on the floor anchor side.

Torque: 42 N·m (430 kgf·cm, 31 ft·lbf)

(d) Check the ELR lock.

NOTICE:

The check should be performed with the assembly installed.

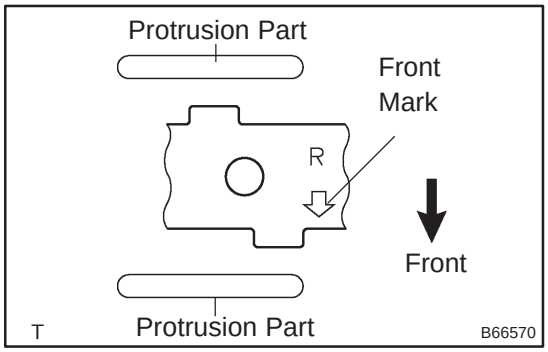
(1) Check that the belt locks by pulling it out quickly after installation.

HINT:

The seat belt does not lock when it is pulled out to a length of 955 mm (37.60 in.) or less.

If operation is not as specified, replace the belt assy.

(e) Check the fastening function of the child restraint system.



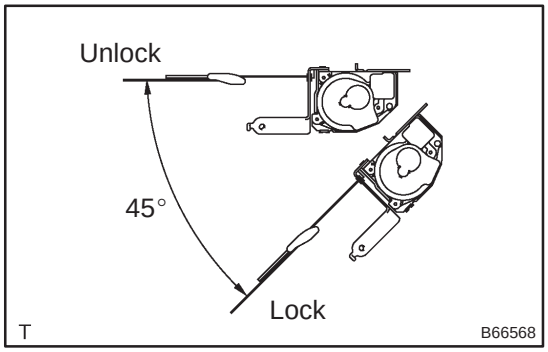
NOTICE:

The check should be performed with the assembly installed.

(1) Check that the belt cannot be pulled out any more but rewinds after being pulled out fully.

(2) Check that the belt can be pulled out and rewound after the belt has been fully rewound.

If operation is not as specified, replace the belt assy.



20. INSTALL REAR SEAT 3 POINT TYPE BELT ASSY INNER

(a) Install the floor anchor and belt with the bolt as shown in the illustration.

Torque: 42 N·m (430 kgf·cm, 31 ft·lbf)

NOTICE:

Make sure that the anchor part does not run onto the protrusion part of the floor panel.

21. INSTALL REAR SEAT 3 POINT TYPE BELT ASSY OUTER

(a) Install the belt with the bolt on the retractor side.

Torque:

7.5 N·m (76.5 kgf·cm, 66 in.·lbf) for front bolt

42 N·m (430 kgf·cm, 31 ft·lbf) for upper bolt

(b) Check the degree of tilt when the belt begins to lock the ELR.

NOTICE:

Do not disassemble the retractor.

(1) Check that the belt does not lock within 15° of tilt in all directions but locks with over 45° of tilt when gently moving the retractor.

If operation is not as specified, replace the belt assy.

(c) Install the belt outer with the bolt on the floor anchor side.
Torque: 42 N·m (430 kgf·cm, 31 ft·lbf)

NOTICE:
The check should be performed with the assembly installed.

(1) Check that the belt locks by pulling it out quickly after installation.

If operation is not as specified, replace the belt assy.

(d) Check the ELR lock.

NOTICE:
The check should be performed with the assembly installed.

(1) Check that the belt locks by pulling it out quickly after installation.

If operation is not as specified, replace the belt assy.

(e) Check the fastening function of the child restraint system.

NOTICE:
The check should be performed with the assembly installed.

(1) Check that the belt cannot be pulled out any more but rewinds after being pulled out fully.

(2) Check that the belt can be pulled out and rewound after the belt has been fully rewound.

If operation is not as specified, replace the belt assy.

22. INSTALL REAR SEAT ASSY (See page 72–21)

LIGHTING SYSTEM

650NC–02

PRECAUTION

1. PRECAUTION OF HEADLIGHT BULB REPLACEMENT

(a) When any defects such as deformation, crack, dent, chipping, etc. are identified on the discharge headlight (especially, on the light control ECU), replace it with a new one.

(b) Even if the operation seems to be normal, the fail–safe function may be defective.

(c) Be careful not to scratch on drop bulbs of the discharge headlamp and halogen bulbs (for headlamp and fog lamp), as they have pressurized gas inside and can be easily broken.

(d) Touching the HV socket of the discharge headlight with the headlight dimmer switch ON could generate momentary high voltage of 20,000 V and lead to a serious injury.

(e) Never connect a tester to the high voltage socket of the discharge headlight for measurement, as this leads to a serious injury because of high voltage.

(f) When performing operation related to the discharge headlight, keep it away from water including rain, turn off the light control switch, and disconnect the battery terminal and the connector of the light control ECU in advance to avoid electric shock.

(g) When performing operation related to the discharge headlight, start it after assembling is completed and never turn the lights on without a bulb installed.

(h) Do not turn the discharge headlight on using another power source except vehicle's.

650SQ–01

PROBLEM SYMPTOMS TABLE

1. HEADLIGHT SYSTEM

Symptom	Suspect Area	See page
Only one headlamp comes on.	1. Bulb 2. H–LP LL, H–LP RL fuse 3. Light control computer (w/ HID) 4. Harness or connector	– – – –
Headlamp does not come on (All).	1. H–LP LL, H–LP RL fuse 2. H–HP relay 3. Headlamp dimmer switch assy 4. Harness or connector 5. Integration relay (w/ Daytime running light system)	– – 65–9 – –
”HI–Beam” does not come on (All).	1. Bulb 2. H–LP HI LH, H–LP HI RH fuse 3. DIM relay (w/ Daytime running light system) 4. Headlamp dimmer switch assy 5. Harness or connector 6. Integration relay (w/ Daytime running light system)	– – – 65–9 – –
”HI–Beam” does not come on (One side).	1. Bulb 2. Harness or connector	– –
”Flash” does not come on. (Headlamp and Hi–Beam is normal)	1. Headlamp dimmer switch assy 2. Harness or connector 3. Integration relay (w/ Daytime running light system)	65–9 – –
Headlamp is dark.	1. Bulb 2. Harness or connector	– –
Tail lamp does not come on (All).	1. TAIL fuse 2. TAIL relay 3. Headlamp dimmer switch assy 4. Harness or connector 5. Integration relay (w/ Daytime running light system)	– – 65–9 – –
Only one tail lamp comes on.	1. Bulb 2. Harness or connector	– –
Rear combination light does not come on.	1. Bulb 2. Harness or connector	– –
Daytime running light system does not operate.	1. Headlamp dimmer switch assy 2. Ignition switch 3. Harness or connector 4. Integration relay	65–9 – – –

2. FOG LAMP SYSTEM

Symptom	Suspect Area	See page
Front fog lamp does not come on with light control switch in TAIL or HEAD position.	1. FR FOG fuse 2. FR FOG relay 3. Headlamp dimmer switch assy 4. Harness or connector	– – 65–9 –
Only one front fog lamp does not come on.	1. Bulb 2. Harness or connector	– –
Rear fog lamp does not come on with light control switch in HEAD position.	1. RR FOG fuse 2. RR FOG relay 3. Headlamp dimmer switch assy 4. Harness or connector	– – 65–9 –
Only one rear fog lamp does not come on.	1. Bulb 2. Harness or connector	– –

3. TURN SIGNAL AND HAZARD WARNING SYSTEM

Symptom	Suspect Area	See page
”Hazard” and ”Turn” do not come on.	1. HAZARD fuse 2. GAUGE2 fuse 3. IG1 relay 4. Ignition switch 5. Turn signal flasher relay 6. Harness or connector	– – – – 65–5 –
Hazard warning light does not come on. (Turn is normal)	1. Hazard warning switch 2. Harness or connector	65–9 –
Turn signal does not come on. (Hazard is normal)	1. Headlamp dimmer switch (turn signal switch) 2. Harness or connector	65–9 –
Turn signal does not come on in one direction.	1. Headlamp dimmer switch (turn signal switch) 2. Harness or connector	65–9 –
Only one bulb does not come on.	1. Bulb 2. Harness or connector	– –

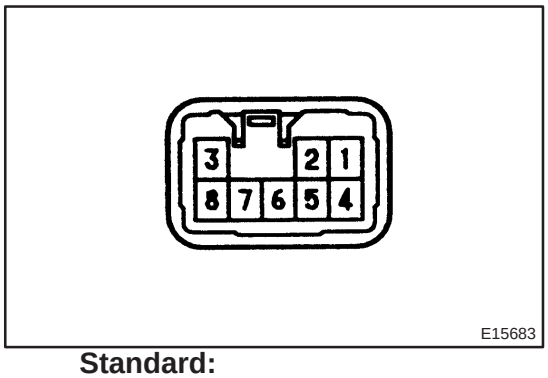
4. ILLUMINATED ENTRY SYSTEM

Symptom	Suspect Area	See page
Illumination lamp of Multiplex body ECU control does not come on.	1. Ignition switch 2. Door courtesy switch 3. Door lock position switch 4. Harness or connector 5. Integration relay	– 65–9 05–1534 – –
Illumination lamp of Multiplex body ECU control does not go off.	1. Ignition switch 2. Door courtesy switch 3. Door lock position switch 4. Harness or connector 5. Integration relay	– 65–9 05–1534 – –

5. HEADLIGHT BEAM LEVEL CONTROL SYSTEM (W/O HID)

Symptom	Suspect Area	See page
Headlight beam level control system does not operate (All).	1. TAIL relay 2. Headlamp leveling switch 3. Harness or connector	– 65–9 –
Headlight beam level control system does not operate (One side).	1. Headlamp leveling switch 2. Headlight beam level control actuator 3. Harness or connector	65–9 65–5 –

6. HEADLIGHT BEAM LEVEL CONTROL SYSTEM (W/ HID)



Symptom	Suspect Area	See page
Headlight beam level control system does not operate (All).	1. GAUGE2 fuse 2. Ignition switch 3. Speed sensor signal circuit 4. Height control sensor sub–assy 5. Headlamp leveling ECU assy 6. Harness or connector	– – – 65–9 65–5 –
Headlight beam level control system does not operate (One side).	1. Headlamp leveling ECU assy 2. Headlight beam level control actuator 3. Harness or connector	65–5 65–5 –
Beam level warning light comes on.	1. Height control sensor sub–assy 2. Headlamp leveling ECU assy 3. Harness or connector	65–9 65–5 –

7. OTHERS

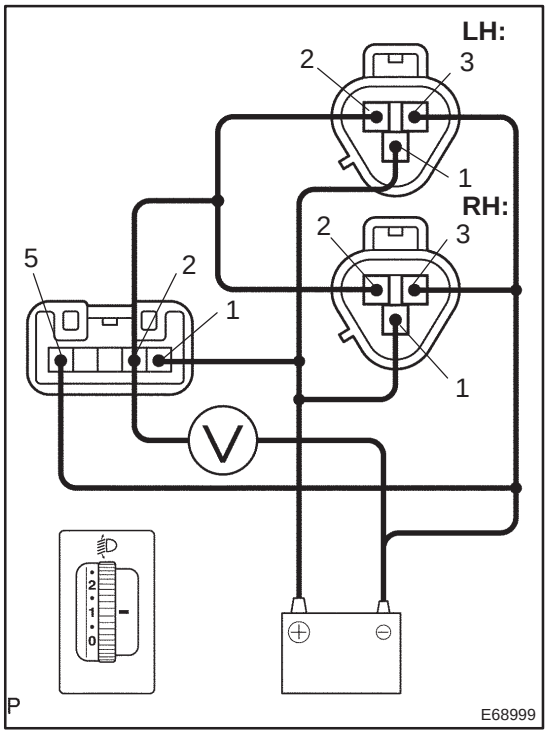
Symptom	Suspect Area	See page
Vanity light does not operate.	1. Bulb 2. Harness s or connector	– –
Instrument panel illumination does not operate (All).	1. TAIL relay 2. PANEL fuse 3. Harness or connector 4. Integration relay (w/ DRL)	– – – –
Stop light does not operate (All).	1. STOP fuse 2. Stop light switch 3. Harness or connector	– – –
Back up lamp does not come on (All).	1. GAUGE fuse 2. IG1 relay 3. Back up lamp switch assy (M/T) 4. Park/neutral position switch (A/T) 5. Harness or connector	– – – – –

650ND–02

ON–VEHICLE INSPECTION

1. INSPECT TURN SIGNAL FLASHER CIRCUIT

(a) Measure voltage between the terminal as shown in the chart below.



Standard:

Tester connection	Condition	Specified condition
1 – body ground	Turn ignition switch ON	10 to 14 V
1 – body ground	Turn ignition switch OFF	No voltage
4 – body ground	Always	10 to 14 V
7 – body ground	Always	Continuity

(b) Connect the connector to turn the signal flasher and the ignition switch ON, and inspect the wire harness side connector from the back side as shown in the chart.

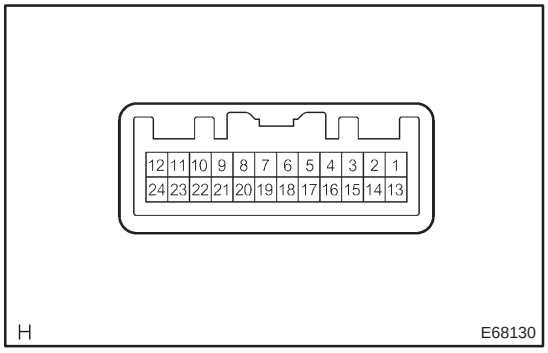
Standard:

Tester connection	Condition	Specified condition
2 – body ground	Hazard switch OFF → ON	0V → 10 to 14 V (60 to 120 time per minutes)
2 – body ground	Turn signal switch (right turn) OFF → ON	0V → 10 to 14 V (60 to 120 time per minutes)
3 – body ground	Hazard switch OFF → ON	0V → 10 to 14 V (60 to 120 time per minutes)
3 – body ground	Turn signal switch (left turn) OFF → ON	0V → 10 to 14 V (60 to 120 time per minutes)
5 – body ground	Turn signal switch (left turn) OFF → ON	10 to 14 V → 0 V
6 – body ground	Turn signal switch (right turn) OFF → ON	10 to 14 V → 0 V
8 – body ground	Hazard switch OFF → ON	10 to 14 V → 0 V

2. INSPECT HEADLAMP ASSEMBLY (HEADLIGHT BEAM LEVEL CONTROL ACTUATOR OPERATION)

(a) Disconnect the connector from the headlamp assy.

(b) Connect the positive (+) lead from the battery to the terminal 3 of each of the headlight beam level control actuator and negative (–) lead from the battery to the terminal 1 of the each of the headlight beam level control actuator.



(c) Connect the positive (+) lead from the battery to the terminal 1 of headlamp levering switch and negative (–) lead from the battery to the terminal 5 of the headlamp levering switch.

(d) Connect the terminal 2 of the headlamp leveling switch and the terminal 2 of the each of headlight beam level control actuator.

(e) Measure voltage between the terminal 2 of the headlamp leveling switch and the battery negative (–) terminal when headlamp levering switch is operated.

Standard:

Switch position	Specified condition (V)
0	8.5 to 11.8
1	7.4 to 10.3
2	6.3 to 8.8
3	5.2 to 7.3
4	4.1 to 5.8
5	3.0 to 4.3

3. HEADLAMP LEVELING ECU ASSY

(a) Measure voltage between the terminal as shown in the chart below.

Standard:

Tester connection	Condition	Specified condition
1 – body ground	Turn ignition switch ON	10 to 14 V
1 – body ground	Turn ignition switch OFF	No voltage
10 – body ground	Headlamp switch is HEAD	Below 1 V
24 – body ground	Always	Continuity

(b) Connect the connector to the headlamp leveling ECU assy, then turn the ignition switch ON and light control switch into HEAD position. Inspect the wire harness side connector from the back side as shown in the chart.

Standard:

Tester connection	Condition	Specified condition
2 – body ground	Always	5 V
3 – body ground	3 secs. after vehicle height change for 10 secs.	1.0 to 13 V
4 – body ground	3 secs. after vehicle height change for 10 secs.	1.0 to 13 V
5 – body ground	Always	0 to 5 V
6 – body ground	Always	0 to 5 V
10 – body ground	Headlamp Switch is OFF → ON	10 to 14 V → Below 1 V
11 – body ground	Beam level warning light OFF → ON	10 to 14 V → Below 1 V
12 – body ground	Turn the vehicle wheel	Puls generation
13 – body ground	Always	10 to 14 V
14 – body ground	Always	10 to 14 V
15 – body ground	Always	5 V
20 – body ground	Always	Below 1 V
21 – body ground	Always	Below 1 V
22 – body ground	Always	Below 1 V
23 – body ground	Always	Below 1 V

4. HEADLAMP AUTO LEVERING OPERATION CHECK

(a) Check that the initialization (determination of the initial position) for the leveling motor is performed at the engine–start.

(b) Check that the warning indicator in the combination meter assy illuminates for approximately 3 seconds at the engine–start and then goes off.

(c) Check that the reflector works when:
Keeping the rear of the vehicle up or down while the engine is running with the vehicle stopped and the headlamp dimmer switch in the HEAD position.

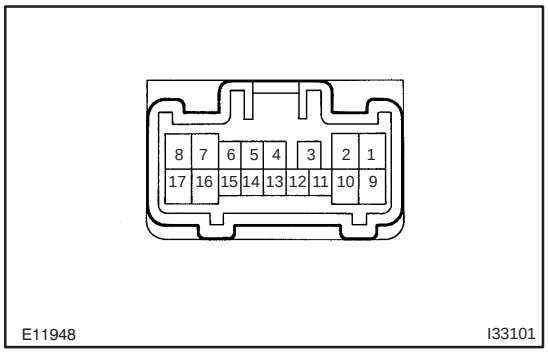
NOTICE:

Make sure to change the vehicle's height slowly.

5. FAIL–SAFE FUNCTION

(a) Headlamp Leveling Control ECU

HINT:



The Headlamp Leveling Control ECU performs the fail–safe when detecting following troubles. At this the warning indicator light on the combination meter lights up.

Trouble Area	Condition	Headlight levering motor
1. Height control sensor	• Signal level error • Out of voltage	Stop leveling operation
2. Headlamp leveling control ECU	• Watchdock detection • High voltage	Stop leveling operation

(b) Light control computer

Condition	Content
Output open	Lighting of the headlamp stops, the condition is maintained until switch is turned ON again (headlamp dimmer switch OFF → ON).
Short between output terminals	Lighting of the headlamp stops, the condition is maintained until switch is turned ON again (headlamp dimmer switch OFF → ON).
Leakage between output terminal and body ground	Lighting of the headlamp stops, the condition is maintained until switch is turned ON again (headlamp dimmer switch OFF → ON).
Low lamp voltage	Lighting of the headlamp stops, the condition is maintained until switch is turned ON again (headlamp dimmer switch OFF → ON).
High lamp voltage	Lighting of the headlamp stops, the condition is maintained until switch is turned ON again (headlamp dimmer switch OFF → ON).
Bulb flushing	• The condition is maintained more than 60 seconds. • Lighting of the headlamp stops, the condition is maintained until switch is turned ON again (headlamp dimmer switch OFF → ON).
High input voltage	Lighting of the headlamp stops. As soon as the voltage comes within the range of operation voltage (9 – 16 V), it lights up again.
Low input voltage	When voltage become 9.0 V → 7.5 V, lighting condition is maintained until possible voltage (Below 6 V) to keep lighting and lighting of the headlamp stops. As soon as the voltage becomes within the range of operation voltage (more than 9 V), it lights up again.

INSPECTION

1. HEADLAMP DIMMER SWITCH ASSY

(a) Inspect light control switch continuity.

(1) Check that there is continuity between the terminals at each switch position as shown in the chart.

Standard:

Switch operation	Tester connection	Specified condition
OFF	–	No continuity
TAIL	14 – 16	Continuity
HEAD	13 – 16 – 14	Continuity

(b) Inspect headlight dimmer switch continuity.

(1) Check that there is continuity between the terminals at each switch position as shown in the chart.

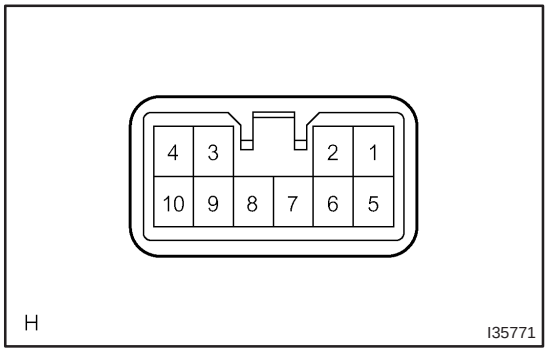
Standard:

Switch operation	Tester connection	Specified condition
FLASH	7 – 8 – 16	Continuity
LOW BEAM	16 – 17	Continuity
HI BEAM	7 – 16	Continuity

(c) Inspect turn signal switch continuity.

(1) Check that there is continuity between the terminals at each switch position as shown in the chart.

Standard:



Switch operation	Tester connection	Specified condition
Right turn	2 – 3	Continuity
Neutral	–	No continuity
Left turn	1 – 2	Continuity

(d) Inspect front fog light switch continuity.

(1) Check that there is continuity between the terminals at each switch position as shown in the chart.

Standard:

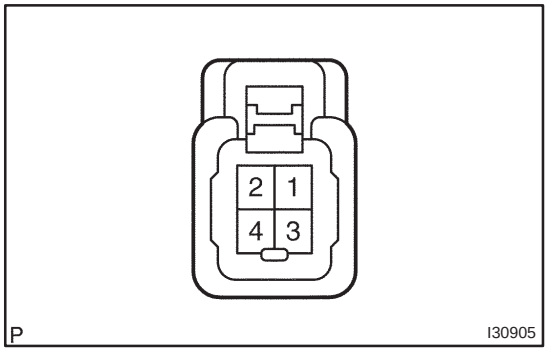
Switch operation	Tester connection	Specified condition
OFF	–	No continuity
Front fog switch ON	10 – 11	Continuity
Rear fog switch ON	10 – 12	Continuity

2. HAZARD WARNING SIGNAL SWITCH ASSY

(a) Check that there is continuity between the terminals at each switch position as shown in the chart.

Standard:

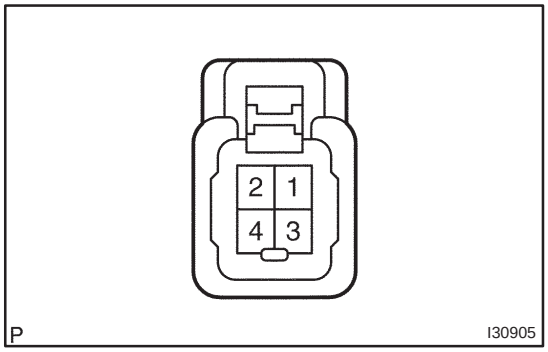
Switch operation	Tester connection	Specified condition
OFF	1 – 4	No continuity
ON	1 – 4	Continuity
Illumination circuit	8 – 9	Continuity



(b) Inspect illumination operation.
(1) Connect the positive (+) lead from the battery to the terminal 8 and negative (–) lead to the terminal 9, then check that the illumination comes on.

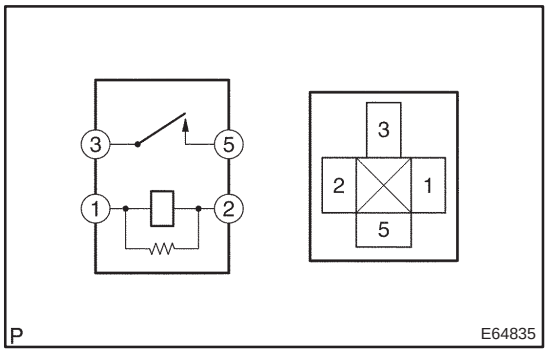
3. FRONT DOOR COURTESY LAMP SWITCH ASSY

(a) Check that there is continuity between the terminal and the switch body when the switch is operated.
Standard:
ON (When shaft is pressed): No continuity
OFF (When shaft is not pressed): Continuity



4. REAR DOOR COURTESY LAMP SWITCH ASSY

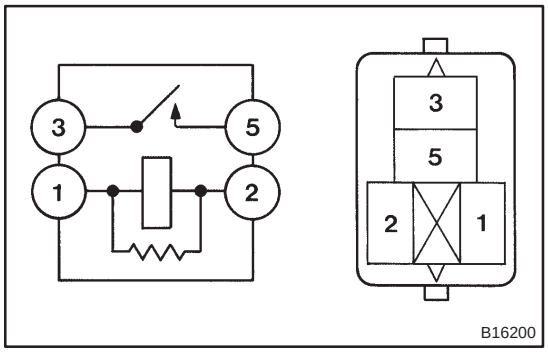
(a) Check that there is continuity between the terminal and the switch body when the switch is operated.
Standard:
ON (When shaft is pressed): No continuity
OFF (When shaft is not pressed): Continuity



5. BACK DOOR LOCK ASSY (WAGON MODELS)

(a) Inspect back door courtesy lamp switch operation.
(1) Check that there is continuity between the terminal 1 and the terminal 2 when the back door is open and closed.
Standard:
Back door is open: No continuity
Back door is closed: Continuity

6. BACK DOOR LOCK ASSY (LIFTBACK MODELS)

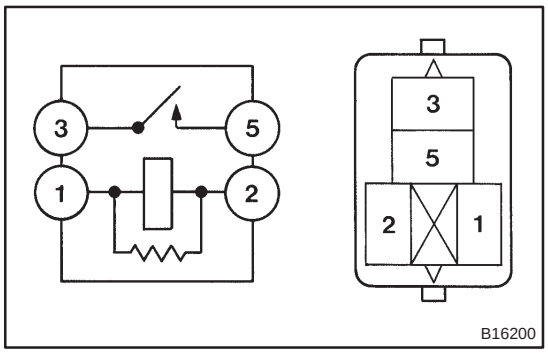


(a) Inspect back door courtesy lamp switch operation.
(1) Check that there is continuity between the terminal 1 and the terminal 2 when the back door is open and closed.
Standard:
Back door is open: No continuity
Back door is closed: Continuity

7. HEADLAMP RELAY

(a) Inspect relay continuity.
Standard:

Condition	Tester connection	Specified condition
Always	1 – 2	Continuity
Always	3 – 5	No continuity
Apply B+ between the terminal 1 and 2	3 – 5	Continuity

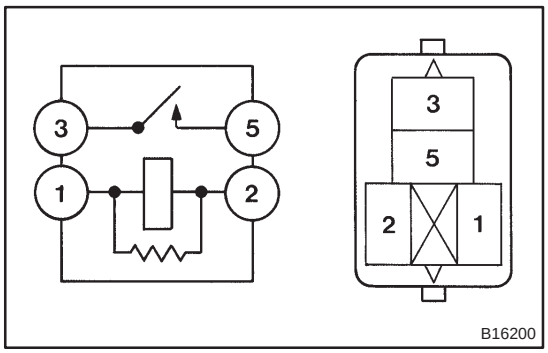


8. TAIL LAMP RELAY

(a) Inspect relay continuity.

Standard:

Condition	Tester connection	Specified condition
Always	1 – 2	Continuity
Always	3 – 5	No continuity
Apply B+ between the terminal 1 and 2	3 – 5	Continuity

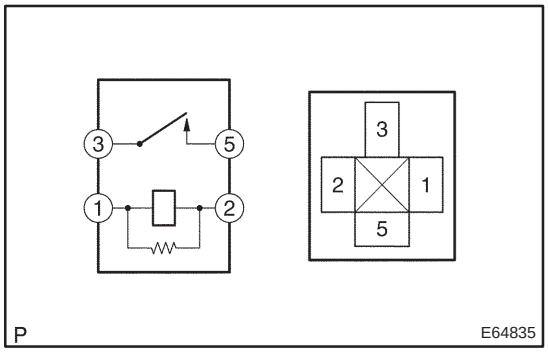


9. FOG LAMP RELAY

(a) Inspect relay continuity.

Standard:

Condition	Tester connection	Specified condition
Always	1 – 2	Continuity
Always	3 – 5	No continuity
Apply B+ between the terminal 1 and 2	3 – 5	Continuity

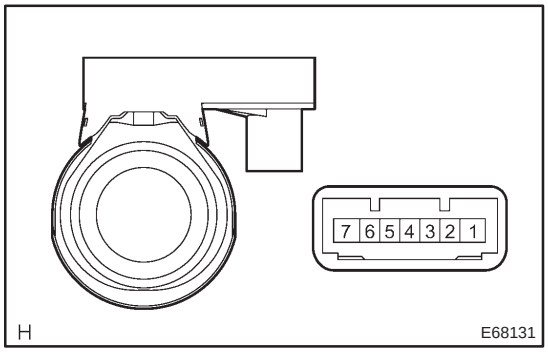


10. REAR FOG LAMP RELAY

(a) Inspect relay continuity.

Standard:

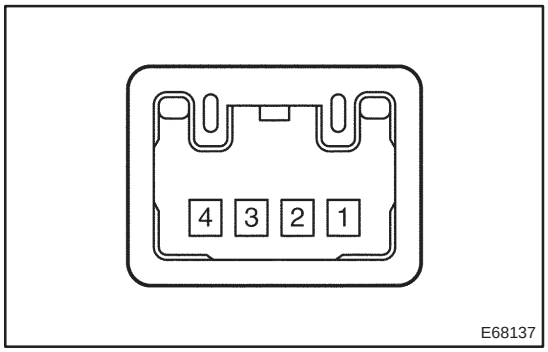
Condition	Tester connection	Specified condition
Always	1 – 2	Continuity
Always	3 – 5	No continuity
Apply B+ between the terminal 1 and 2	3 – 5	Continuity



11. RUNNING LIGHT RELAY

(a) Inspect relay continuity.

Standard:

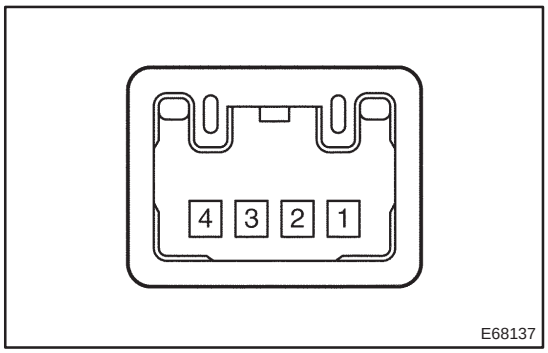


Condition	Tester connection	Specified condition
Always	1 – 2	Continuity
Always	3 – 5	No continuity
Apply B+ between the terminal 1 and 2	3 – 5	Continuity

12. TRANSPONDER KEY AMPLIFIER

(a) Inspect key cylinder operation.

(1) Connect the battery positive (+) lead to the terminal 2 and the battery negative (–) lead to the terminal 6, and check that the indicator light comes on.



13. MAP LAMP ASSY

(a) Check the continuity between the terminals at each switch position as shown in the chart.

Standard:

Switch operation	Tester connection	Specified condition
OFF	–	No continuity
DOOR	2 – 4	Continuity
ON	3 – 4	Continuity

14. ROOM LAMP ASSY NO.2

(a) Check the continuity between the terminals at each switch position as shown in the chart.

Standard:

Switch operation	Tester connection	Specified condition
OFF	–	No continuity
DOOR	2 – 4	Continuity
ON	3 – 4	Continuity

15. COURTESY LAMP ASSY

(a) Check that the continuity exists between the terminals.

Standard: There is continuity

16. LUGGAGE COMPARTMENT LAMP ASSY NO.1

(a) Check that the continuity exists between the terminals.

Standard: There is continuity

17. GLOVE BOX LAMP ASSY

(a) Check that the continuity exists between the terminals when switch is operated.

Standard:

ON (When shaft is pressed): No continuity

OFF (When shaft is not pressed): Continuity

18. LH VISOR ASSY

(a) Inspect vanity light continuity.

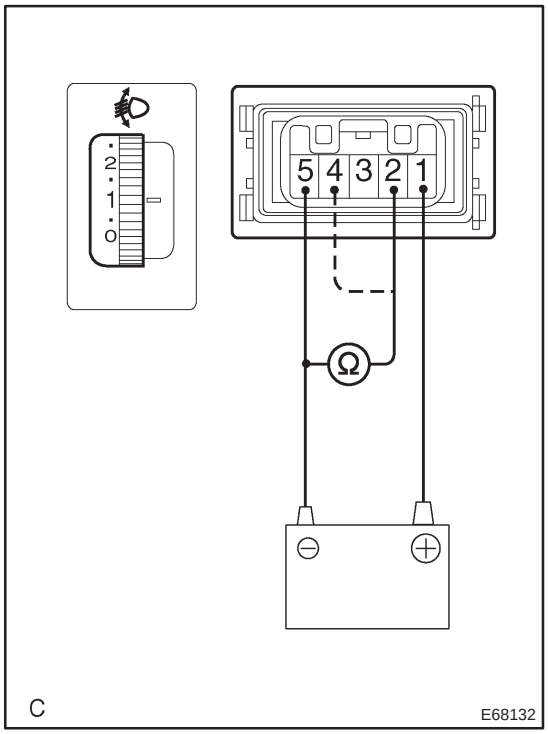
(1) Check that the continuity exists between the terminal 1 and the terminal 2 when the light is operated.

Standard:

OFF (closed): No continuity

ON (opened): Continuity

19. RH VISOR ASSY



(a) Inspect vanity light continuity.

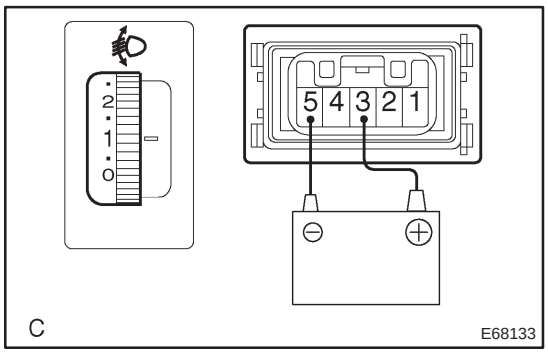
(1) Check that the continuity exists between the terminal 1 and the terminal 2 when the light is operated.

Standard:

OFF (closed): No continuity

ON (opened): Continuity

20. HEADLAMP LEVELING SWITCH



(a) Connect the battery positive (+) lead to the terminal 1 and the battery negative (–) lead to the terminal 5.

(b) Measure the resistance between the terminal 2 and the battery negative (–) lead when headlamp leveling switch is operated.

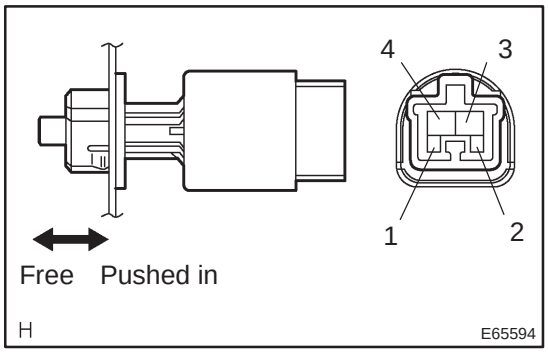
(c) Measure the resistance between the terminal 4 and the battery negative (–) lead when headlamp leveling switch is operated.

Standard:

Switch position	Resistance (Ω)
0	1.0 – 1.2
1	1.6 – 1.9
2	2.3 – 2.6
3	2.9 – 3.3
4	3.5 – 3.9
5	4.1 – 4.6

(d) Inspect switch illumination.

(1) Connect the battery positive (+) lead to the terminal 3 and the battery negative (–) lead to the terminal 5, and check that the illumination comes on.



21. STOP LAMP SWITCH ASSY (W/O CRUISE CONTROL)

(a) Check the continuity between each of the terminals when switch is operated.

Standard:

ON (When shaft is pushed): No continuity

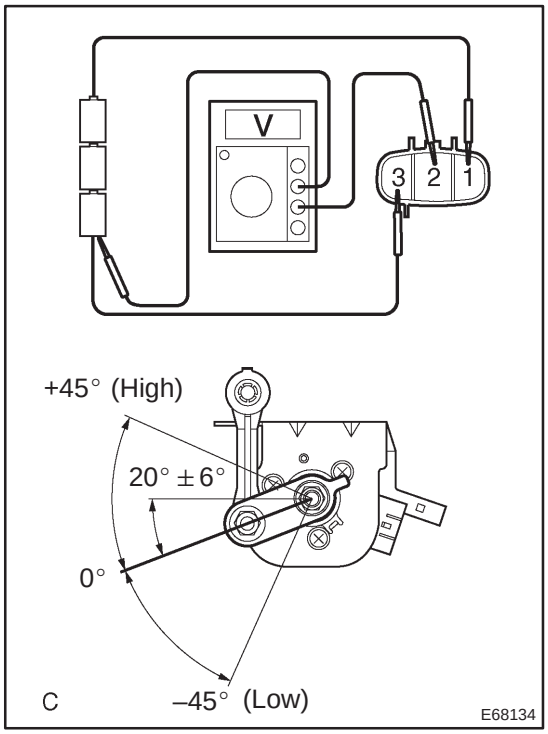
OFF (When shaft is not pushed): Continuity

22. STOP LAMP SWITCH ASSY (W/ CRUISE CONTROL)

(a) Check the continuity between the terminals at each switch position as shown in the chart.

Standard:

Switch position	Tester connection	Specified condition
Switch pin free	1 – 2	No continuity
Switch pin free	3 – 4	Continuity
Switch pin pushed in	1 – 2	Continuity
Switch pin pushed in	3 – 4	No continuity



23. BACK UP LAMP SWITCH ASSY

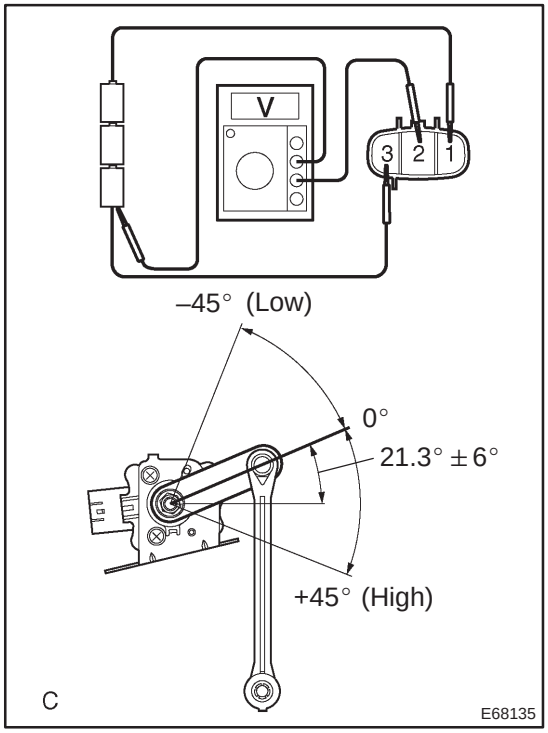
(a) Check the continuity between each of the terminals when switch is operated.

Standard:

ON (When shaft is pushed): Continuity

OFF (When shaft is not pushed): No continuity

24. HEIGHT CONTROL SENSOR SUB–ASSY FR RH



(a) Connect the 3 dry cell batteries (1.5 V) in series.

(b) Connect the positive (+) lead from the battery to the terminal 1 and negative (–) lead from the battery to the terminal 3.

(c) Measure voltage between the terminal 2 and the terminal 3 when slowly move the link up and down.

Standard:

Link angle	Standard voltage
+45° (High)	4.5 V
0° (Normal)	2.5 V
–45° (Low)	0.5 V

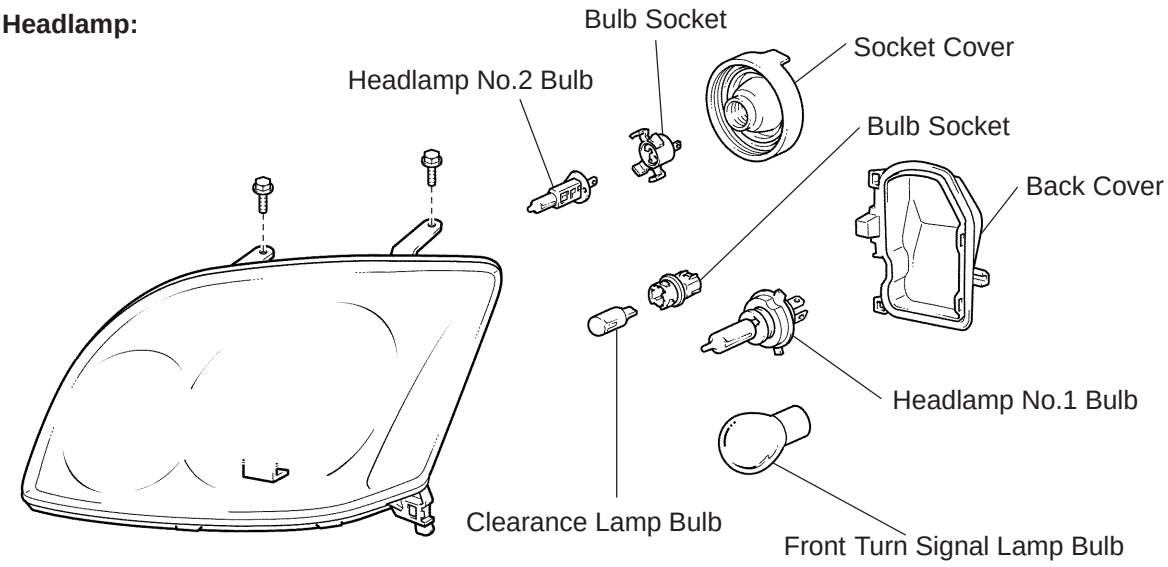
25. HEIGHT CONTROL SENSOR SUB–ASSY REAR RH

(a) Connect the 3 dry cell batteries (1.5 V) in series.

(b) Connect the positive (+) lead from the battery to the terminal 1 and negative (–) lead from the battery to the terminal 3.

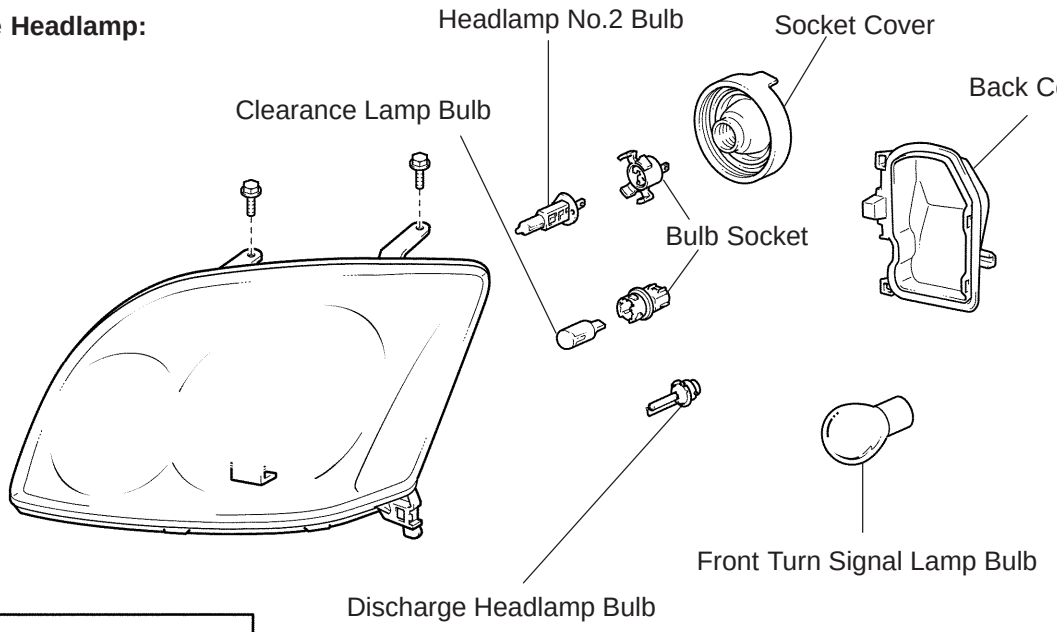
(c) Measure voltage between the terminal 2 and the terminal 3 when slowly move the link up and down.

Standard:

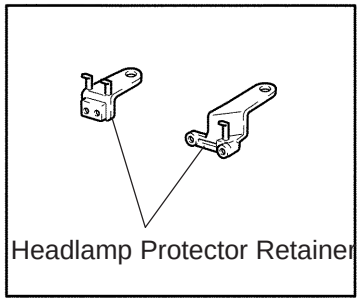


Link angle	Standard voltage
+45° (High)	4.5 V
0° (Normal)	2.5 V
–45° (Low)	0.5 V

HEADLAMP UNIT LH



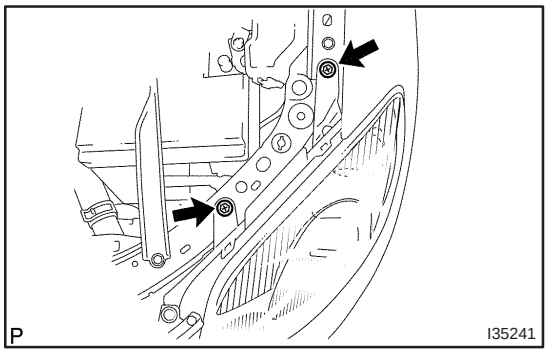
COMPONENTS



650ST–01

Halogen Headlamp:

Discharge Headlamp:

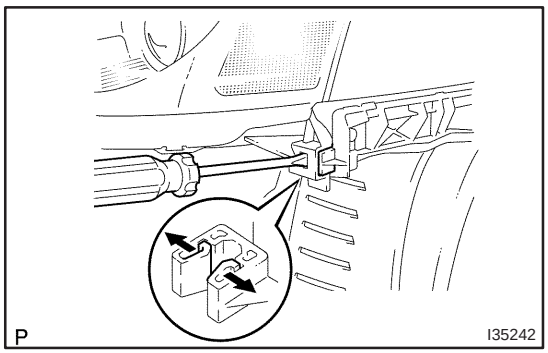


P

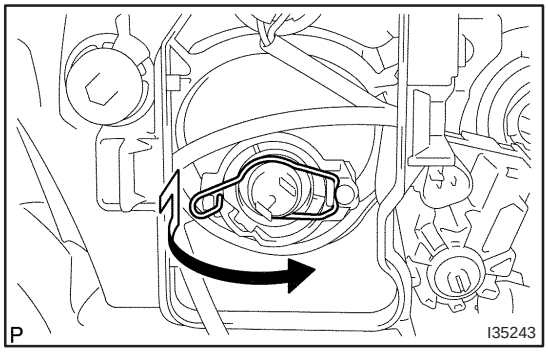
I35226

650SU–01

REPLACEMENT



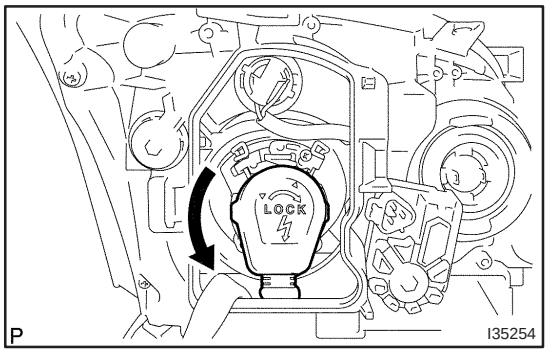
1. REMOVE FRONT SPOILER COVER LH (See page 76–3)
2. REMOVE FRONT SPOILER COVER RH (See page 76–3)
3. REMOVE FRONT BUMPER COVER (See page 76–3)



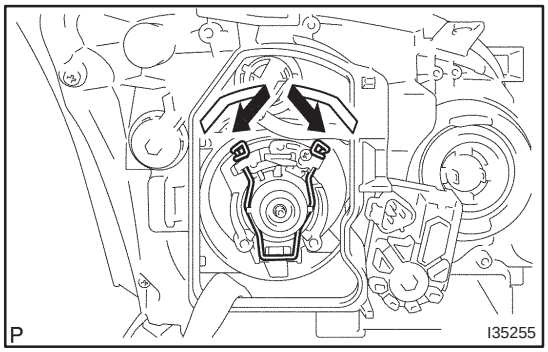
4. REMOVE HEAD LIGHT ASSY

(a) Disconnect the connector.

(b) Remove the 2 screws.

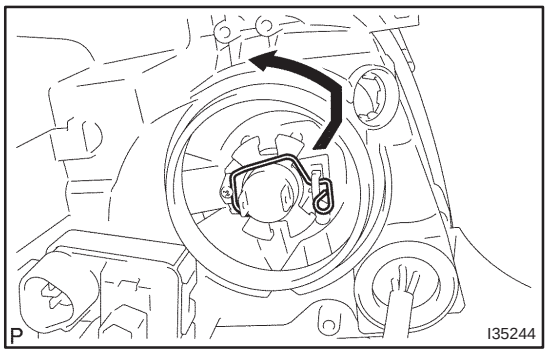


(c) Remove the headlamp assy and disengage the claw as shown in the illustration.



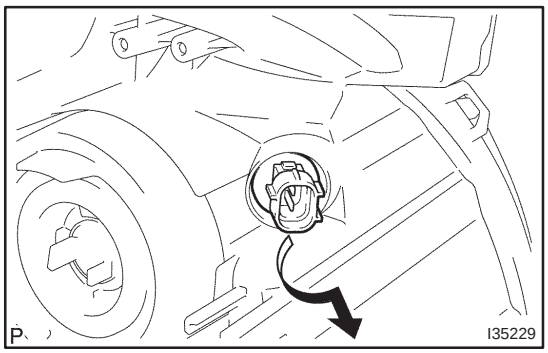
5. REMOVE HEADLAMP, NO.1 BULB (HALOGEN HEAD LAMP)

(a) Release the lock of the set spring and remove the headlamp bulb No.1.



6. REMOVE DISCHARGE HEADLAMP BULB (DISCHARGE HEAD LAMP)

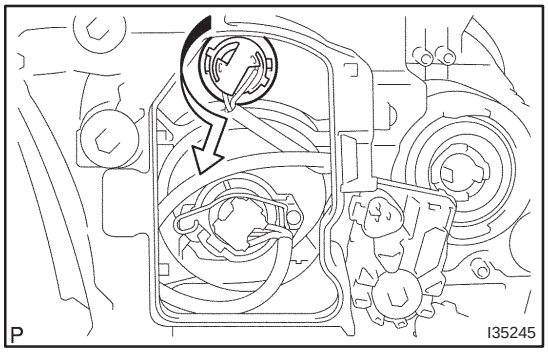
(a) Rotate the bulb socket cover in the direction of the arrow and pull it of backward of the vehicle.



(b) Release the lock of the set spring and remove the discharge headlamp bulb.

7. REMOVE HEADLAMP, NO.2 BULB

(a) Remove the headlamp socket cover.

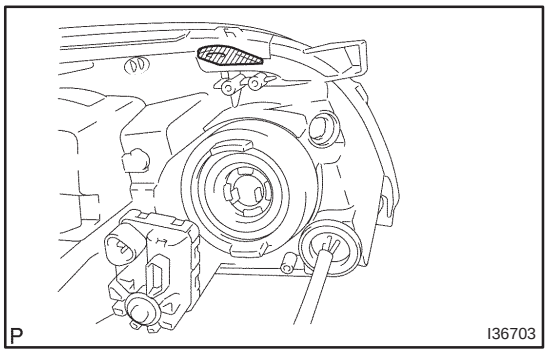


(b) Release the lock of the set spring and remove the headlamp bulb No.2.

8. REMOVE CLEARANCE LAMP BULB

(a) Remove the clearance lamp socket and the clearance lamp bulb as shown in the illustration.

(b) Remove the clearance lamp bulb from the clearance lamp socket.

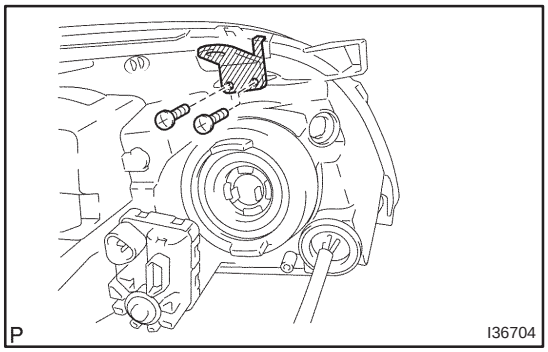


9. REMOVE FRONT TURN SIGNAL LAMP BULB

(a) Remove the front turn signal lamp socket and the front turn signal lamp bulb as shown in the illustration.

10. REMOVE HEADLAMP PROTECTOR RETAINER

HINT:



When only the installation part of the headlamp unit assy LH is damaged, it can be repaired inexpensively by using a headlamp protector retainer. In this case, however, the headlamp unit assy LH itself should not be damaged.

(a) Cut off the part shaded in the illustration and file it smooth.

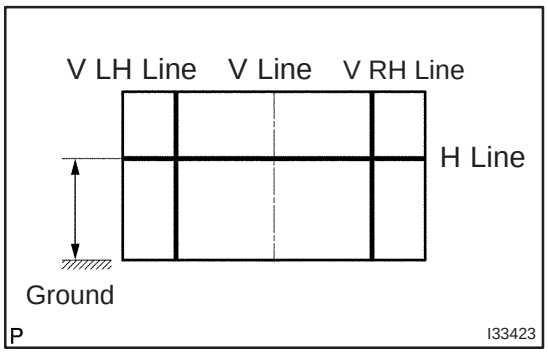
NOTICE:

After cutting off the part roughly, place the headlamp protector retainer against the bosses, and gradually file any interfering part until the proper condition for installation is made.

(b) Install the headlamp protector retainer with the 2 screws.

11. HEADLIGHT AIM ONLY (See page 65–19)

ADJUSTMENT



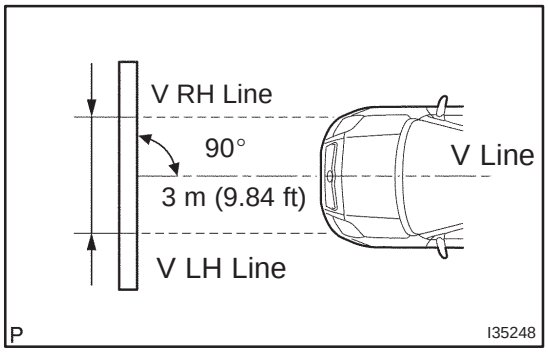
1. HEADLIGHT AIM ONLY

HINT:

- Perform aiming adjustment with Low–beam.
- Since the Low–beam light and the High–beam light is a unit, if aiming on either side is connect, the other side should also be connect.
  However, check both beams just to make sure.

(a) Prepare vehicle in the following conditions.

- Check that any damage or deformation does not exist on the body around the headlights.
- Fuel tank is full.
- The tire inflation pressure is at the specified level.
- Vehicle is parked at a level surface.
- A person having an average weight sits in the driver's seat.
- Vehicle is bounced up and down to stabilize the suspension to the normal position.

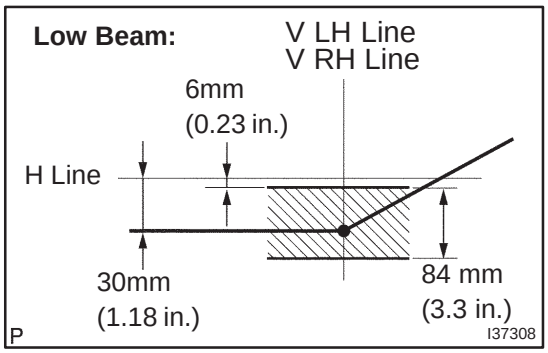


(b) Prepare a thick white paper (Draw base lines).

HINT:

- Stand the paper perpendicular as against a wall.
- The base lines differ for "Low–beam inspection" and "High–beam inspection".
  (1) V line (Vehicle Center position)
  Draw a vertical line down the center of the paper in order to align it with the center of the vehicle.
  (2) H line (Headlight height)
  Draw horizontal line across the paper at the same height from the ground as the center mark for the Low–beam lights.
  (3) V LH line, V RH line (Center mark position of right and left headlights)
  Draw vertical lines, for left & right, at the same position as the center mark for the Low–beam lights.

HINT:



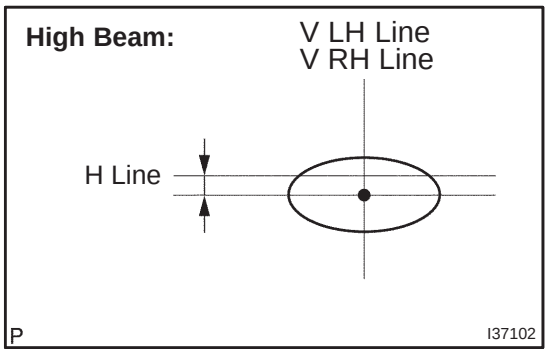
Follow the same procedures when adjusting the High–beam lights.

(c) Check the headlight aiming.

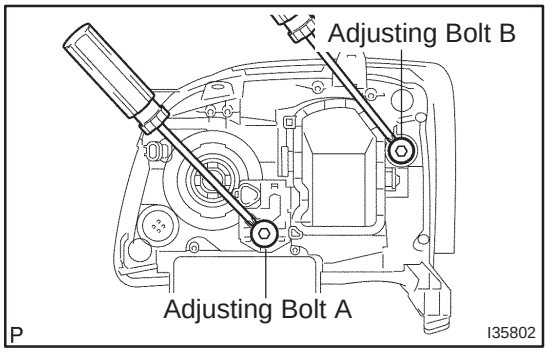
(1) Align the paper with the center of the vehicle.

- Make a distance of 3 m (9.84 ft) between the headlights and the paper, and put the paper against a wall with the H line being at the same height as the center mark.
- Align the center of the vehicle with the V line on the paper, and ensure that the paper is at a 90° angle in accordance to the V line.

(2) Start the engine.



(3) Turn on the headlights and check that the aim is with in the specified valves shown in the illustration.



NOTICE:

- **When covering the headlights, finish it within 3 minuites.**
- **The headlight lens is made of synthetic resin, so it is easily.**

HINT:

When checking the aiming of the High–beam, shut off the Low–beam or disconnect the Low–beam headlight connector.

(d) Adjust the aim in the vertical direction:

Using a screwdriver, adjust the headlight aim within the specified range by turning the aiming screw A.

NOTICE:

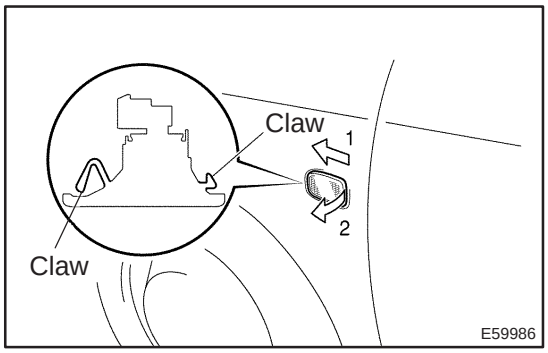
- **Adjust the headlight aim by turning the screw in the tightening direction.**
- **When the screw is tightened excessively, loosen it once and re–tighten it to adjust the headlight aim.**

HINT:

The optical axis aim moves downward when turning the screwdriver clockwise, and it moves upward when turning the screwdriver counterclockwise.

(e) Adjust the aim in the horizontal direction:

Using a screwdriver, adjust the headlight aim within the specified range by turning the aiming screw B.



NOTICE:

- **Adjust the headlight aim by turning the screw in the tightening direction.**
- **When the screw is tightened excessively, loosen it once and re–tighten it to adjust the headlight aim.**

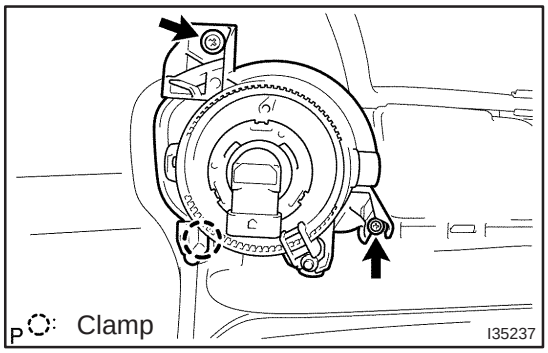
SIDE TURN SIGNAL LAMP ASSY LH

650SW–01

REPLACEMENT

1. REMOVE SIDE TURN SIGNAL LAMP ASSY LH

(a) Disengage the claw by pulling it forward.



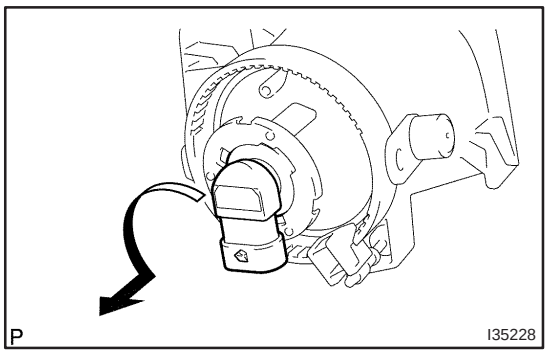
(b) Take the socket off and remove the side turn signal lamp assy LH.

FOG LAMP ASSY LH

650SX–01

REPLACEMENT

1. REMOVE FRONT BUMPER COVER (See page 76–3)



2. REMOVE FOG LAMP ASSY LH

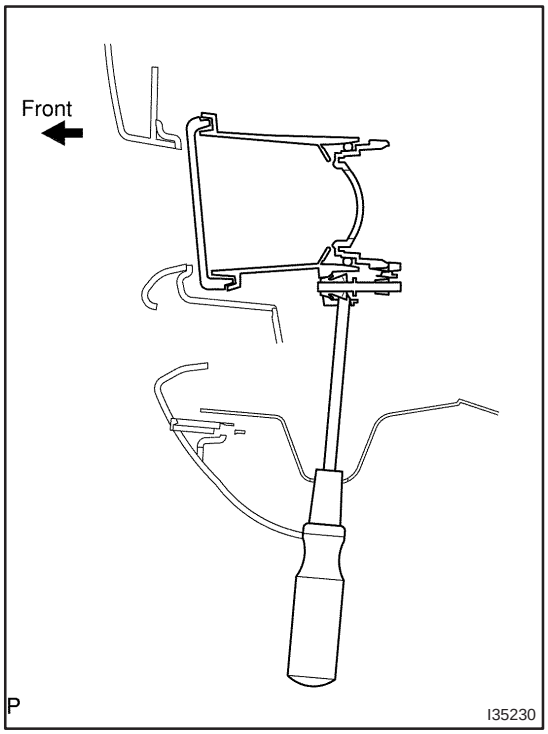
(a) Disconnect the connector.

(b) Remove the 2 screws.

(c) Release the claw fitting, then remove the fog lamp assy LH.

(d) Remove the fog lamp bulb as shown in the illustration.

3. ADJUST FOG LIGHT AIM (See page 65–23)



4. CHECK FOG LIGHT AIM

ADJUSTMENT

1. PUT VEHICLE THESE CONDITIONS

(a) Tire inflation pressure is within the specified value. (See page 28–1)

(b) Start the engine.

2. ADJUST FOG LIGHT AIM

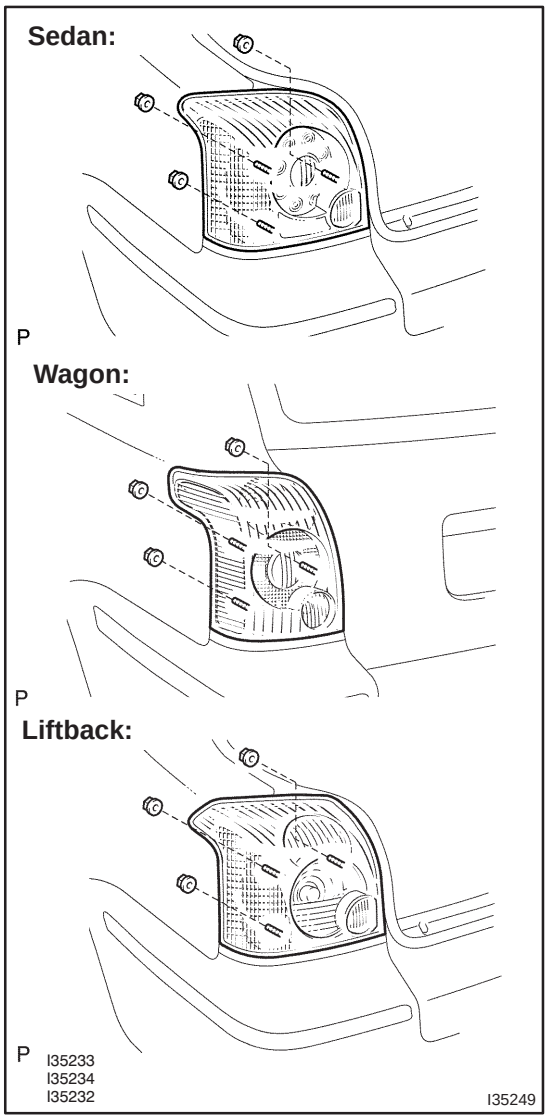
(a) The fog light aim can be adjusted by turning the aiming screw in the vertical direction.

HINT:

The optical aim moves upward when turning the screwdriver clockwise and moves downward when turning the screwdriver center clockwise.

3. CHECK FOG LIGHT AIM

REAR COMBINATION LAMP ASSY LH



650SZ–01

REPLACEMENT

1. REMOVE REAR COMBINATION LAMP ASSY LH

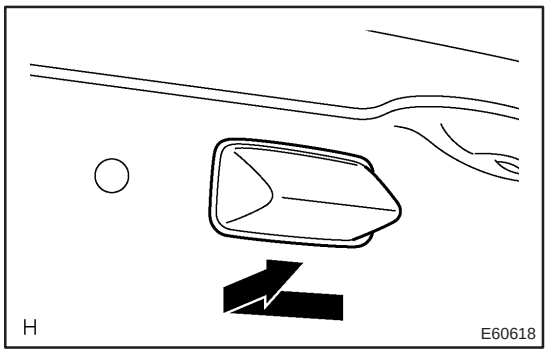
(a) Remove the service hole cover LH.

(b) Disconnect the connector.

(c) Remove the 3 nuts and the rear combination lamp assy LH.

(d) SEDAN:
Remove the combination lamp socket and the 6 lamp bulbs.

(e) WAGON:
Remove the combination lamp socket and the 3 lamp bulbs.



(f) LIFTBACK:
Remove the combination lamp socket and the 4 lamp bulbs.

LICENSE PLATE LAMP ASSY

650T0–02

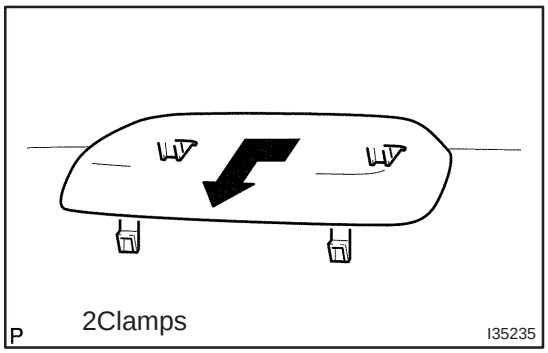
REPLACEMENT

1. REMOVE BACK DOOR TRIM BOARD ASSY (See page LIFTBACK 75–40, WAGON 75–45)
2. REMOVE LUGGAGE COMPARTMENT DOOR GARNISH SUB–ASSY OUTSIDE (SEDAN MODELS) (See page 76–27)
3. REMOVE BACK DOOR GARNISH SUB–ASSY OUTSIDE (LIFTBACK MODELS) (See page 76–28)
4. REMOVE BACK DOOR GARNISH SUB–ASSY OUTSIDE (WAGON MODELS) (See page 76–29)

5. REMOVE LICENSE PLATE LAMP ASSY

(a) Pull the license plate lamp assy to the side of vehicle as shown in the illustration and release the claw.

(b) Disconnect the connector and remove the license plate lamp assy.

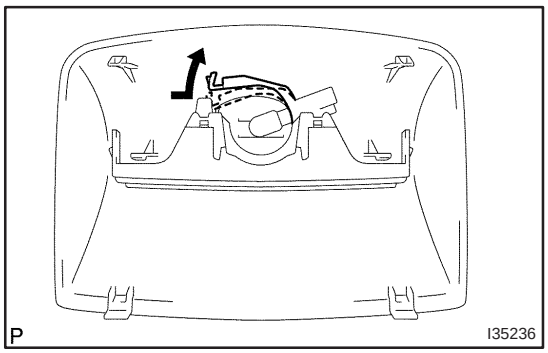


(c) Remove the license plate lamp bulb.

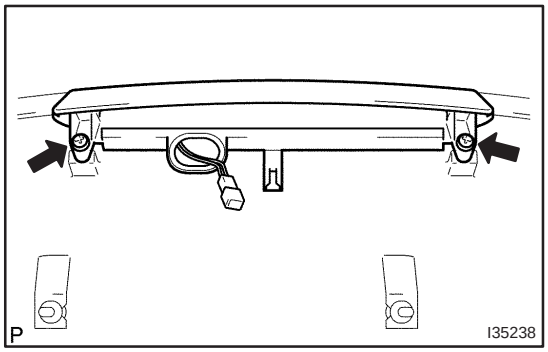
CENTER STOP LAMP ASSY

650T1–01

REPLACEMENT



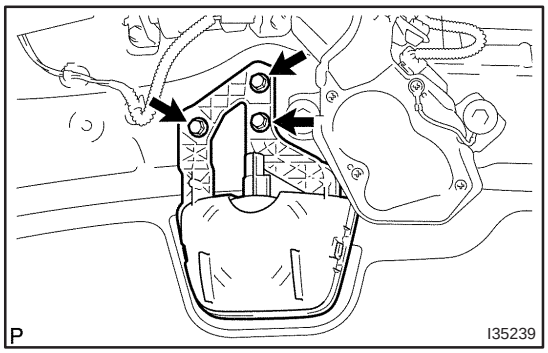
1. REMOVE REAR SPOILER (WAGON MODELS) (See page 76–30)
2. REMOVE BACK DOOR TRIM BOARD ASSY (LIFTBACK MODELS) (See page 75–40)



3. REMOVE CENTER STOP LAMP ASSY (SEDAN MODELS)

(a) Remove the center stop lamp assy as shown in the illustration.

(b) Disconnect the connector.



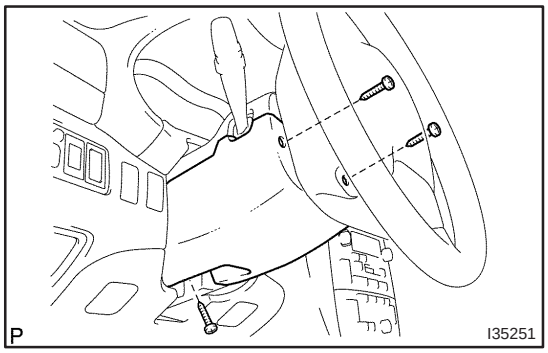
(c) Remove the center stop lamp bulb as shown in the illustration.

4. REMOVE CENTER STOP LAMP ASSY (WAGON MODELS)

(a) Remove the 2 screws and center stop lamp assy.

5. REMOVE CENTER STOP LAMP ASSY (LIFTBACK MODELS)

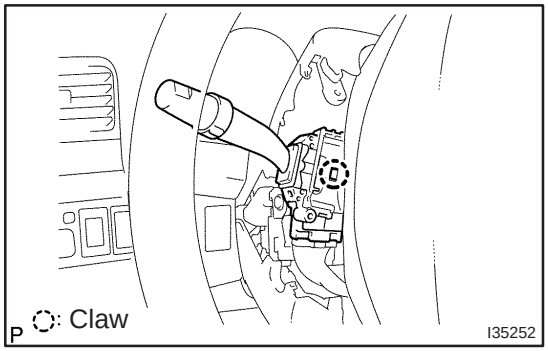
(a) Disconnect the connector.



(b) Remove the 3 screws and center stop lamp assy.

(c) Remove the center stop lamp socket and the bulb.

HEADLAMP DIMMER SWITCH ASSY



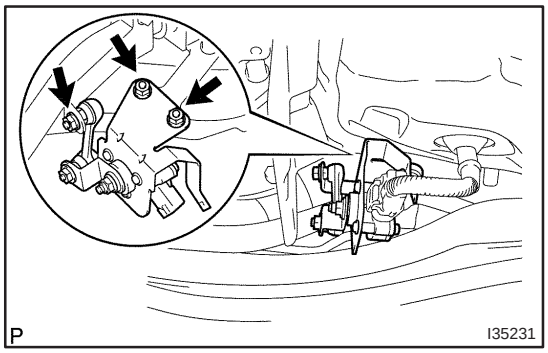
650T2–01

REPLACEMENT

1. SEPARATE STEERING COLUMN COVER LWR

(a) Remove the 3 screws and steering column cover LWR.

2. REMOVE HEADLAMP DIMMER SWITCH ASSY

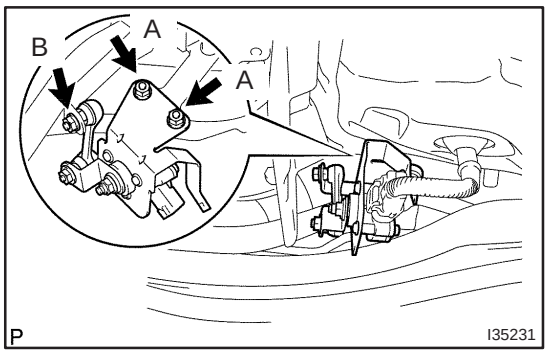


(a) Disconnect the connector.

(b) Release the claw and pull out the headlamp dimmer switch assy.

HEIGHT CONTROL SENSOR SUB–ASSY FR RH

650T3–01



REPLACEMENT

1. REMOVE HEIGHT CONTROL SENSOR SUB–ASSY FR RH

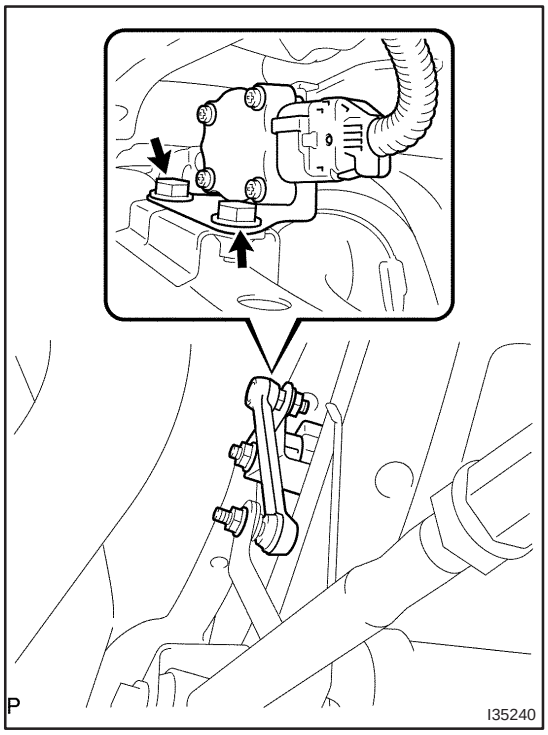
(a) Disconnect the connector.

(b) Remove the 3 nuts and height control sensor sub–assy front RH.

2. INSTALL HEIGHT CONTROL SENSOR SUB–ASSY FR RH

(a) Install the height control sensor sub–assy front RH with the 3 nuts.

Torque:
A: 7.9 N·m (81 kgf·cm, 70 in.·lbf)
B: 5.8 N·m (59 kgf·cm, 51 in.·lbf)

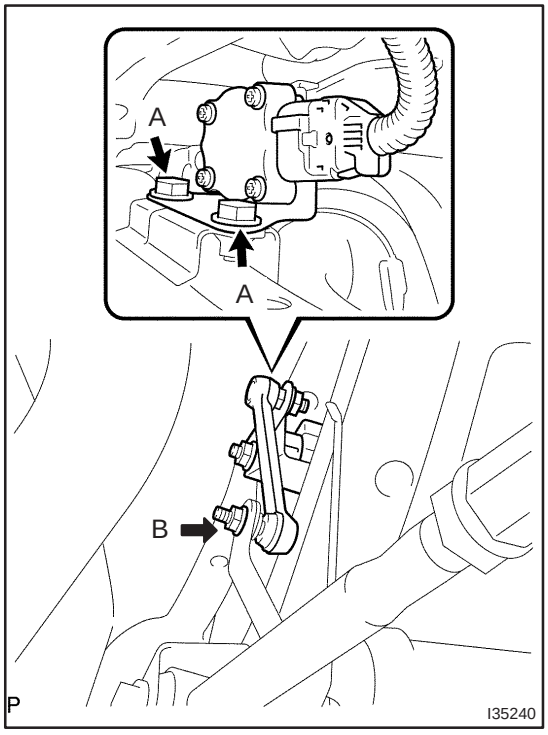


(b) Connect the connector.

3. HEADLIGHT AIM ONLY (See page 65–19)

HEIGHT CONTROL SENSOR SUB–ASSY REAR RH

650T4–01



REPLACEMENT

1. REMOVE HEIGHT CONTROL SENSOR SUB–ASSY REAR RH

(a) Disconnect the connector.

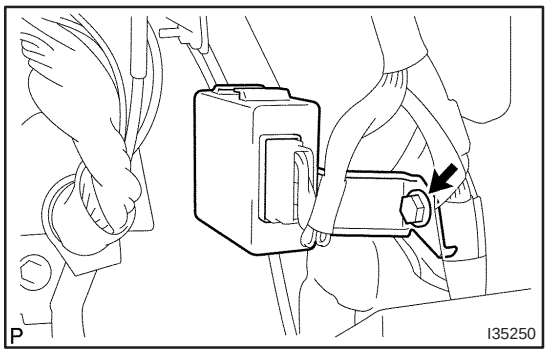
(b) Remove the 2 bolts, the nut and height control sensor sub–assy rear RH.

2. INSTALL HEIGHT CONTROL SENSOR SUB–ASSY REAR RH

(a) Install the height control sensor sub–assy rear RH with the 2 bolts and the nut.

Torque:
Bolt (A): 7.9 N·m (81 kgf·cm, 70 in.·lbf)
Nut (B): 5.8 N·m (59 kgf·cm, 51 in.·lbf)

(b) Connect the connector.



3. HEADLIGHT AIM ONLY (See page 65–19)

HEADLAMP LEVELING ECU ASSY

650T5–01

REPLACEMENT

1. **REMOVE GLOVE COMPARTMENT DOOR ASSY (LHD STEERING POSITION TYPE) (See page 71–11)**
2. **REMOVE FUSE BOX OPENING COVER (RHD STEERING POSITION TYPE) (See page 71–11)**

3. **REMOVE LIGHT CONTROL ECU**

(a) Disconnect the connector.

(b) Remove the bolt and headlamp leveling ECU assy.

4. **INSTALL LIGHT CONTROL ECU**

(a) Install the headlamp leveling ECU assy with the bolt.

(b) Connect the connector.

WIPER AND WASHER SYSTEM

6605E–03

PRECAUTION

1. PRECAUTION OF WASHER NOZZLE ADJUSTMENT

(a) Do not clean or adjust the washer nozzle with a safety pin, etc. because;
  (1) the washer nozzle tip is made of resin and could be damaged.
  (2) adjustment is not necessary because the washer nozzle is a jet type.

(b) If the washer nozzle is clogged with wax etc., remove the objects and clean the nozzle hole with a soft resin brush, etc.

660CK–01

PROBLEM SYMPTOMS TABLE

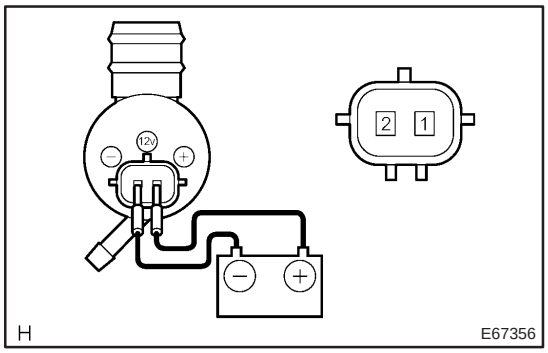
1. FRONT WIPER AND WASHER SYSTEM (W/O AUTO WIPER SYSTEM)

Symptom	Suspect Area	See page
Front wipers and washers do not operate.	1. IG relay 2. WIP fuse 3. Windshield wiper switch assy 4. Wire harness or connector	– – 66–6 –
Front wipers do not operate in LO or HI.	1. Windshield wiper switch assy 2. Windshield wiper motor assy 3. Wire harness or connector	66–6 66–6 –
Front wipers do not operate in INT.	1. Windshield wiper switch assy 2. Windshield wiper motor assy 3. Wire harness or connector	66–6 66–6 –
Front washer motor does not operate.	1 Windshield washer switch assy 2. Windshield washer motor assy 3. Wire harness or connector	66–6 66–6 –
Front wipers does not operate when washer switch in ON.	1. Windshield wiper switch assy 2. Windshield wiper motor assy 3. Wire harness or connector	66–6 66–6 –
Washer fluid does not operate.	Washer hose and nozzle	–
● When front wiper switch is in HI position, the wiper blade is in contact with the body. ● When the front wiper switch is OFF, the wiper blade does not retract or the retract position is wrong.	1. Windshield wiper motor assy 2. Front wiper arm installation position	66–6 66–13

2. FRONT WIPER AND WASHER SYSTEM (W/ AUTO WIPER SYSTEM)

Symptom	Suspect Area	See page
Front wipers and washer do not operate.	1. IG1 relay 2. WIP fuse 3. Windshield wiper switch assy 4. Windshield wiper relay assy 5. Wire harness or connector	– – 66–6 66–6 –
Front wipers does not operate in LO (Auto wiper system is normal).	Windshield wiper switch assy	66–6
Front wipers does not operate in HI (Auto wiper system is normal).	1. Windshield wiper switch assy 2. Wire harness or connector	66–6 –
Front washer motor does not operate.	1. Windshield wiper switch assy 2. Windshield washer motor assy 3. Wire harness or connector	66–6 66–6 –
Auto wiper system does not operate.	1. Windshield wiper switch assy 2. Windshield wiper relay assy 3. Rain sensor 4. Wire harness or connector	66–6 66–6 66–4 –

3. REAR WIPER AND WASHER SYSTEM



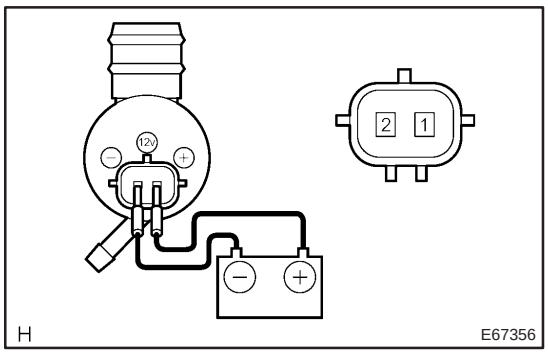
Symptom	Suspect Area	See page
Rear wiper and washers do not operate.	1. AMI fuse 2. RR WIP fuse 3. Windshield wiper switch assy 4. Wire harness or connector	– – 66–6 –
Rear wiper does not operate in INT.	1. Windshield wiper switch assy 2. Rear wiper motor assy 3. Wire harness or connector	66–6 66–6 –
Rear washer motor does not operate.	1. Windshield washer switch assy 2. Rear washer motor assy 3. Wire harness or connector	66–6 66–6 –
Rear wiper does not operate when washer switch is in ON.	1. Windshield wiper switch assy 2. Rear wiper motor assy 3. Wire harness or connector	66–6 66–6 –
Rear washer fluid does not operate.	Washer hose and nozzle	–
• When rear wiper switch is in ON position, the wiper blade is in contact with the body. • When the wiper switch is OFF, the wiper blade does not retract or the retract position is wrong.	1. Rear wiper motor assy 2. Rear wiper blade installation position	66–6 66–17

4. HEADLAMP CLEANER SYSTEM

Symptom	Suspect Area	See page
Headlamp cleaner system does not operate.	1. H/CLN fuse 2. Headlamp cleaner switch assy 3. Windshield wiper switch assy (w/ HID) 4. Headlamp cleaner control relay 5. Intergeneration Relay 6. Wire harness or connector	– 66–6 66–6 66–6 – –

660CL–01

ON–VEHICLE INSPECTION

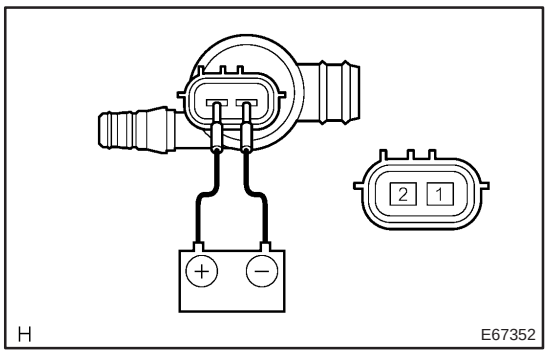


1. WINDSHIELD WASHER MOTOR AND PUMP ASSY

(a) Operation Check

(1) Pour the washer fluid into the washer jar with the washer motor and the pump installed to the washer jar assy.

(2) Connect the battery (+) to the terminal 1 of the windshield washer motor and pump assy, the battery (–) to the terminal 2 of the windshield washer motor and pump assy. Check that the washer fluid comes out from the washer jar.

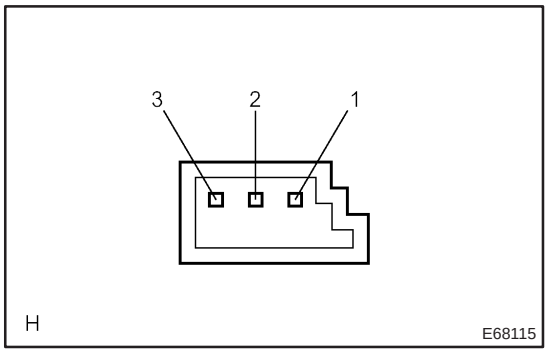


2. REAR WASHER MOTOR ASSY

(a) Operation Check

(1) Pour the washer fluid into the washer jar with the washer motor and the pump installed to the washer jar assy.

(2) Connect the battery (+) to the terminal 1 of the rear washer motor assy, the battery (–) to the terminal 2 of the rear washer motor assy. Check that the washer fluid comes out from the washer jar.

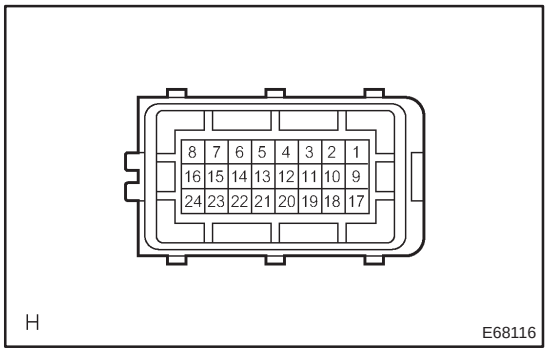


3. HEADLAMP CLEANER MOTOR AND PUMP ASSY

(a) Operation Check

(1) Pour the washer fluid into the washer jar with the washer motor and the pump installed to the washer jar assy.

(2) Connect the battery (+) to the terminal 2 of the headlamp cleaner motor and pump assy, the battery (–) to the terminal 1 of the headlamp cleaner motor and pump assy. Check that the washer fluid comes out from the washer jar.



4. RAIN SENSOR

(a) Check voltage of each terminal of the connector

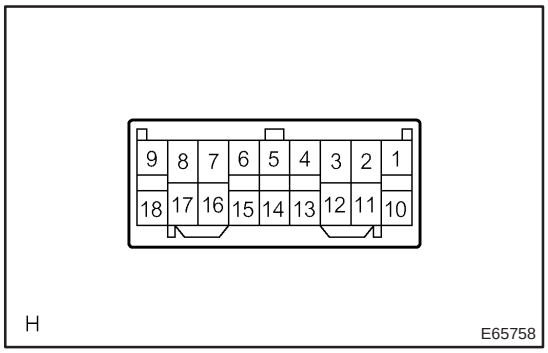
Standard:

Tester connection	Condition	Specified voltage
2 – 3	Rain sensor is covered by hand	Signal waveform

5. WINDSHIELD WIPER RELAY ASSY

(a) Check voltage of each terminal of the connector

Standard:



Tester connection	Condition	Specified voltage
1 (+B) – Body ground	Ignition switch OFF → ON	0 → 10 to 14 V
2 (RSI) – Body ground	Rain sensor is covered by hand	Signal waveform
4 (WF) – Body ground	Front washer switch OFF → ON	10 to 14 V → 0 V
8 (+2) – Body ground	Front wiper is in high speed operation (When front wiper switch is in AUTO position)	10 to 14 V
9 (F1) – Body ground	Front wiper switch OFF → AUTO	10 to 14 V → 0 V
11 (F2) – Body ground	Front wiper switch OFF → AUTO	0 → 10 to 14 V
12 (WF) – Body ground	Front washer switch OFF→ ON	10 to 14 V → 0 V
16 (+1) – Body ground	Front wiper is in 10 speed operation (when front wiper switch is in AUTO position)	10 to 14 V
17 (+S) – Body ground	Always	Below 1 V
19 (SP) – Body ground	Ignition switch OFF → ON	0 V → 10 to 14 V
20 (VR1) – Body ground	Ignition switch OFF → ON	0 V → 10 to 14 V
22 (E) – Body ground	Always	Below 1 V
23 (SG) – Body ground	Always	Below 1 V
24 (VP2) – Body ground	Ignition switch is ON and rain sensor adjust switch is in (+) position → (–) position	Signal waveform

6. AUTO WIPER SYSTEM OPERATION CHECK

(a) Spray once at the area where the rain sensor is placed, then the wiper blades immediately will carry out a wiping cycle. If the water is continuos sprayed to the rain sensor area of the windscreen, the wiper blades first should carry out interval mode, then change to low speed and finally reach high speed after a few seconds.

By stopping spraying water to the screen the wiper blade changing back their speed until they stop wiping.

INSPECTION

1. WINDSHIELD WIPER SWITCH ASSY (W/O RAIN SENSING WIPER)

(a) Continuity Check

(1) Check the continuity between each of the terminals of the connector.

Standard:

Front Wiper Switch

Switch position	Tester connection	Specified condition
MIST	7 (+1) – 17 (+B)	Continuity
OFF	7 (+1) – 16 (+S)	Continuity
INTO	7 (+1) – 16 (+S)	Continuity
LO	7 (+1) – 17 (+B)	Continuity
HI	8 (+2) – 17 (+B)	Continuity

Rear Wiper Switch (w/ Rear Wiper)

Switch position	Tester connection	Specified condition
OFF	–	No Continuity
INTO	2 (EW) – 4 (C1R)	Continuity
ON	2 (EW) – 10 (+1R)	Continuity

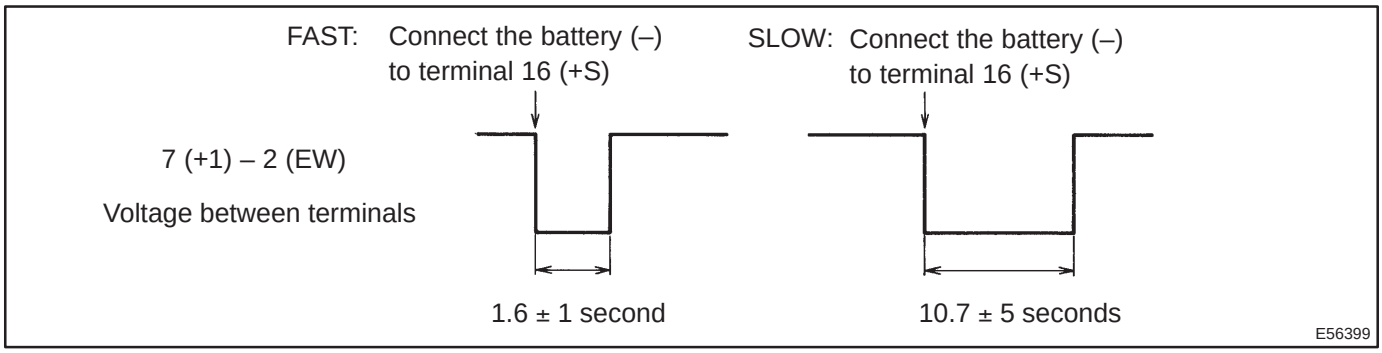
Front Washer Switch

Switch position	Tester connection	Specified condition
OFF	–	No continuity
ON	2 (EW) – 11 (WF)	Continuity

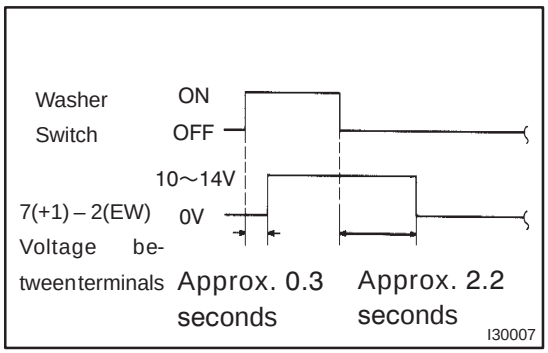
Rear Washer Switch (w/ Rear Wiper)

Switch position	Tester connection	Specified condition
OFF	–	No continuity
ON (Rear wiper switch OFF position side)	2 (EW) – 3 (WR)	Continuity
ON (Rear wiper switch ON position side)	2 (EW) – 3 (WR), 2 (EW) – 10 (+1R)	Continuity

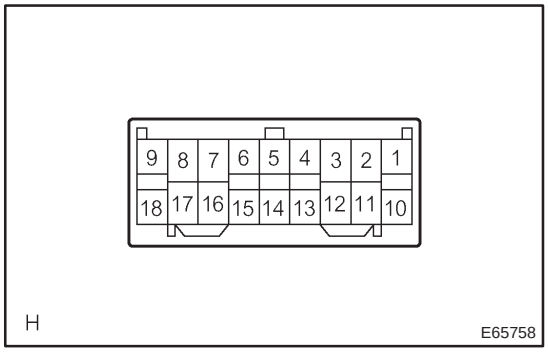
(b) Intermittent Operation Check



(1) Connect the voltmeter (+) terminal to the terminal 7 (+1) of the connector and the voltmeter (–) terminal to the terminal 2 (EW) of the connector.



(2) Connect the battery (+) to the terminal 17 (+B) of the connector and the battery (–) to the terminal 2 (EW) and the terminal 16 (+S) of the connector.



(3) Turn the wiper switch into INT position.

(4) Connect the battery (+) to the terminal 16 (+S) of the connector for 5 seconds.

(5) Connect the battery (–) to the terminal 16 (+S) of the connector. Operate the intermittent wiper relay and check voltage between terminal 7 (+1) and terminal 2 (EW).

(c) Operation Check (Front Wiper)

(1) Turn the wiper switch into OFF position.

(2) Connect the battery (+) to the terminal 17 (+B) of the connector, the battery (–) to the terminal 16 (+S) and the terminal 2 (EW) of the connecter.

(3) Connect the voltmeter (+) terminal to the terminal 7 (+1) of the connector and the voltmeter (–) terminal to the terminal 2 (EW) of the connector. Turn the washer switch ON and OFF, and check voltage between terminal 7 (+1) and terminal 2 (EW).

2. WINDSHIELD WIPER SWITCH ASSY (W/ RAIN SENSING WIPER)

(a) Continuity Check

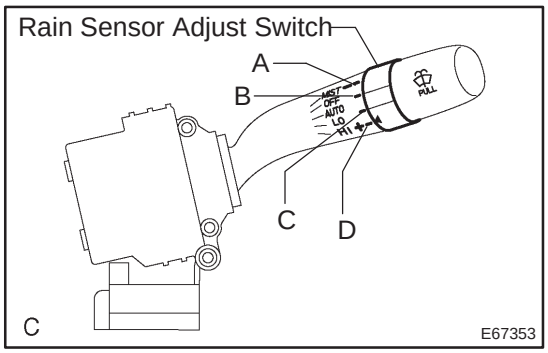
(1) Check continuity of each terminal of the connector.

Standard:

Front Wiper Switch

Switch position	Tester condition	Specified condition
MIST	7 (+1) – 17 (+B)	Continuity
OFF	7 (+1) – 16 (+S)	Continuity
AUTO	7 (+1) – 16 (+S), 13 (AUTO) – 15 (E)	Continuity
LO	7 (+1) – (17+B)	Continuity
HI	8 (+2) – 17 (+B)	Continuity

Rear Wiper Switch (w/ Rear Wiper)

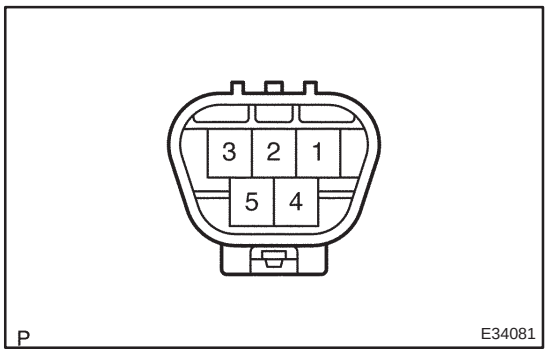


Switch position	Tester condition	Specified condition
OFF	–	No continuity
INT	2 (EW) – 4 (CIR)	Continuity
ON	2 (EW) – 10 (+1R)	Continuity

Front Washer Switch

Switch position	Tester condition	Specified condition
OFF	–	No continuity
ON	2 (EW) – 11 (WF)	Continuity

Rear Washer Switch (w/ Rear Wiper)



Switch position	Tester condition	Specified condition
OFF	–	No continuity
ON (Rear wiper switch OFF position side)	2 (EW) – 3 (WR)	Continuity
ON (Rear wiper switch ON position side)	2 (EW) – 10 (+1R)	Continuity

(b) Rain Sensor Adjust Switch Operation Check

(1) Check resistance between terminal of the terminal 12 (VR1) and the terminal 14 (VR2) when rain sensor adjust switch is operated.

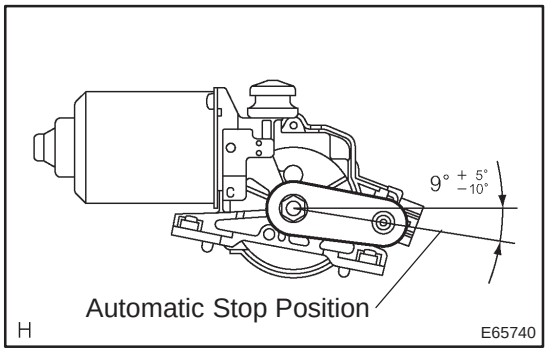
Switch position	Resistance (Ω)
A position	∞
B position	432 to 528
C position	216 to 264
D position	0

3. WINDSHIELD WIPER MOTOR ASSY (LHD STEERING POSITION TYPE)

(a) LO Operation Check

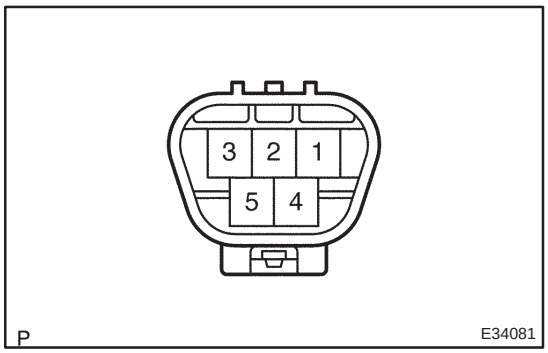
(1) Connect the battery (+) to the terminal 1 (+1) of the connector and the battery (–) to the terminal 5 (E) of the connector, and check that the motor operates with low speed (LO).

(b) HI Operation Check



(1) Connect the battery (+) to the terminal 4 (+2) of the connector and the battery (–) to the terminal 5 (E) of the connector, and check that the motor operates with high speed (HI).

(c) Automatic Stop Operation Check

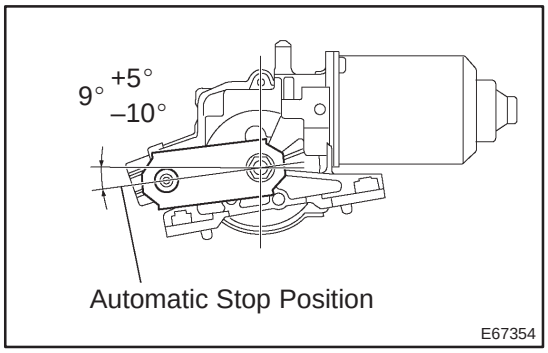


(1) Connect the battery (+) to the terminal 1 (+1) of the connector and the battery (–) to the terminal 5 (E) of the connector. With the motor being rotated at low speed (LO), disconnect the terminal 1 (+1) to stop the wiper motor operation at any position except the automatic stop position.

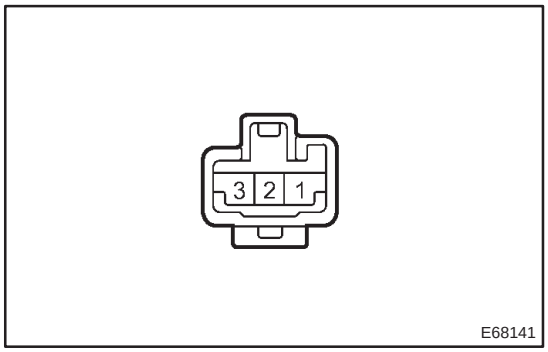
(2) Using SST, connect the terminal 1 (+1) and the terminal 3 (S), and the battery (+) to the terminal 2 (B) to restart the motor operation at low speed.

SST 09843–18040

(3) Check the automatic stop position.
Standard: See the illustration.



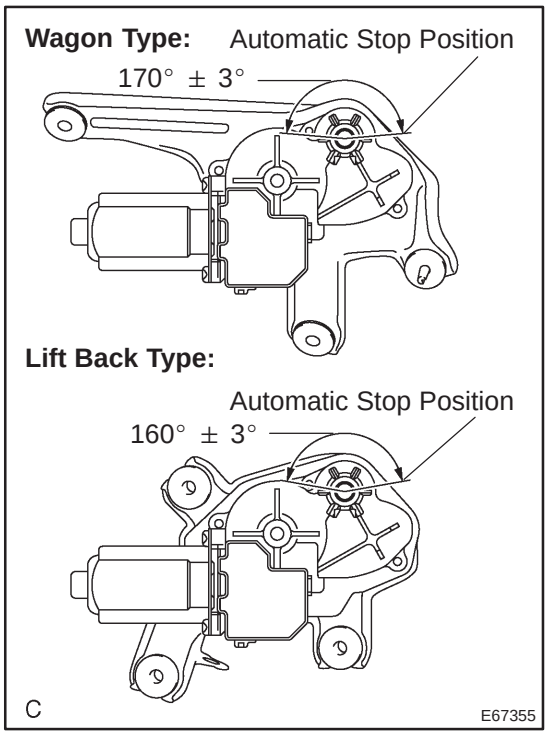
4. WINDSHIELD WIPER MOTOR ASSY (RHD STEERING POSITION TYPE)



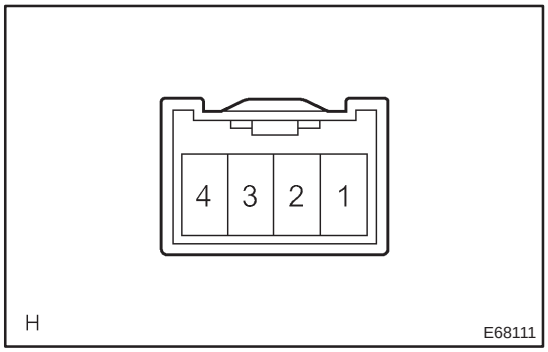
(a) LO Operation Check
(1) Connect the battery (+) to the terminal 5 (+1) of the connector and the battery (–) to the terminal 4 (E) of the connector, and check that the motor operates with low speed (LO).

(b) HI Operation Check
(1) Connect the battery (+) to the terminal 3 (+2) of the connector and the battery (–) to the terminal 4 (E) of the connector, and check that the motor operates with high speed (HI).

(c) Automatic Stop Operation Check
(1) Connect the battery (+) to the terminal 5 (+1) of the connector and the battery (–) to the terminal 4 (E) of the connector. With the motor being rotated at low speed (LO), disconnect the terminal 5 (+1) to stop the wiper motor operation at any position except the automatic stop position.
(2) Using SST, connect the terminal 5 (+1) and the terminal 1 (S), and the battery (+) to the terminal 2 (B) to restart the motor operation at low speed.
SST 09843–18040



(3) Check the automatic stop position.
Standard: See the illustration.

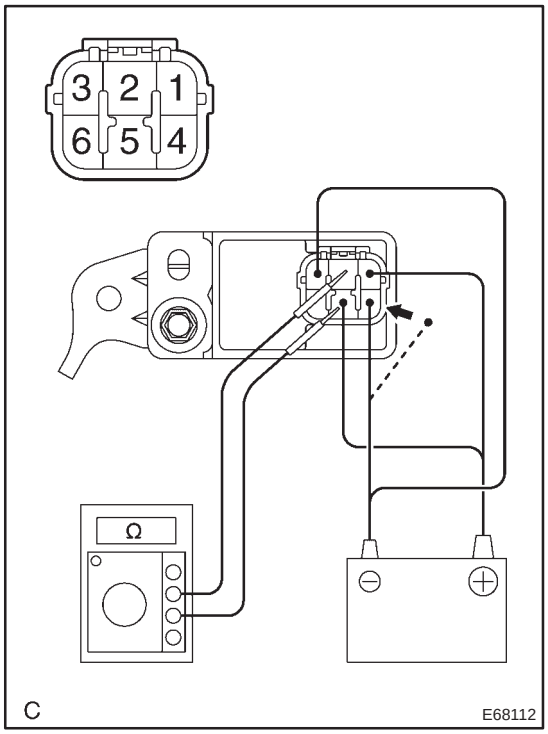


5. REAR WIPER MOTOR ASSY

(a) Connect the battery (+) to the terminal 1 (+B) of the connector, the battery (–) to the terminal 3 (LS) of the connector and rear wiper motor assy body, and check that the rear wiper motor assy operate.

(b) Automatic Stop Position Operation Check

(1) Connect the battery (+) to the terminal 1 (+B) of the connector, the battery (–) to the terminal 3 (LS) of the connector and rear wiper motor assy body. With the motor being rotated disconnect the terminal 3 (LS) from the battery (–), then check that the wiper motor stops automatically at the automatic stop position.



6. HEADLAMP CLEANER SWITCH ASSY

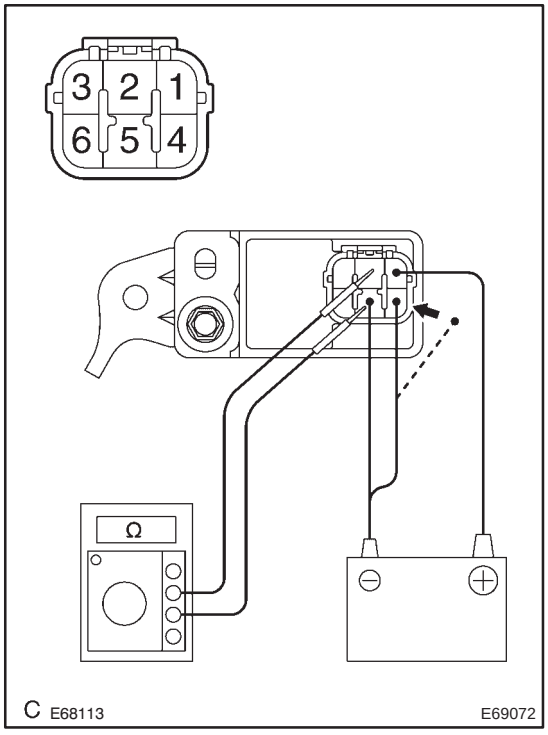
(a) Check that there is continuity between terminal at each switch position as shown in the chart.

Switch operation	Tester connection	Specified condition
OFF	1 (E) – 4 (R)	No continuity
ON	1 (E) – 4 (R)	Continuity
Illumination circuit	2 (ILL) – 3 (ILL+)	Continuity

(b) Inspect illumination operation.

(1) Connect the positive (+) lead from the battery to the terminal 3 and negative (–) lead to the terminal 2, then check that the illumination comes on.

7. HEADLAMP CLEANER CONTROL RELAY



(a) w/o HID:

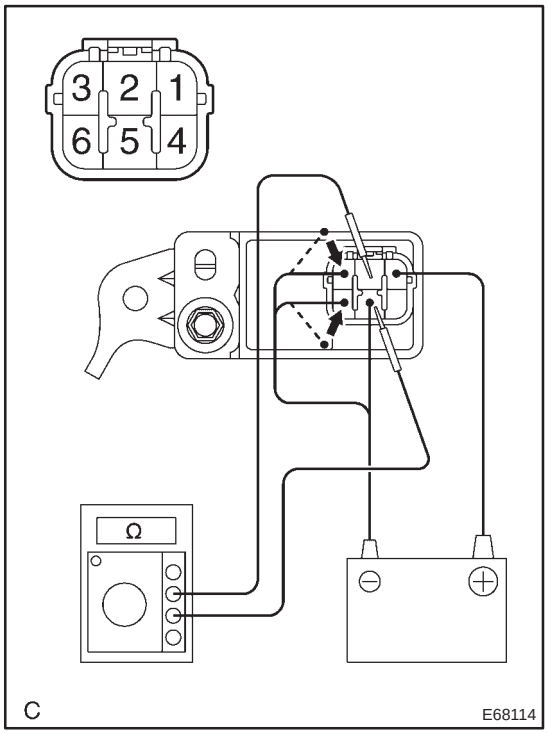
Inspect headlamp cleaner control relay operation

(1) Check that no continuity exists between the terminals 2 and the terminal 3.

(2) Connect the positive (+) lead from the battery to the terminal 1 and the terminal 5, and the negative (–) lead from the battery to the terminal 3.

(3) Connect the negative (–) lead from the battery to the terminal 4, and check that continuity exists between the terminal 2 and the terminal 5 for 0.8 to 0.9 seconds, then no continuity exists.

(b) w/ HID:



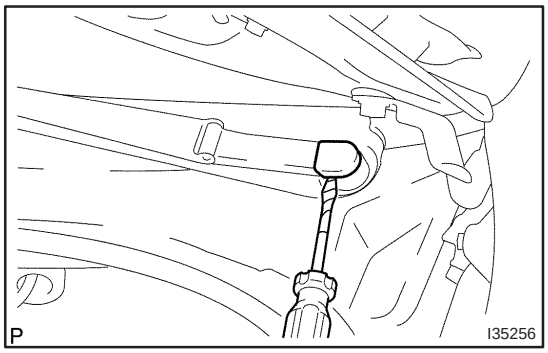
Inspect headlamp cleaner control relay operation

(1) Check that no continuity exists between the terminal 2 and the terminal 5.

(2) Connect the positive (+) lead from the battery to the terminal 1, and the negative (–) lead from the battery to the terminal 5.

(3) Connect the negative (–) lead from the battery to the terminal 4, and check that continuity exists between the terminal 2 and the terminal 5 for 0.7 to 0.9 seconds, then no continuity exists.

(4) Disconnect the positive (+) lead from the battery from the terminal 1, and connect the positive (+) lead from the battery to the terminal 1 again.



(5) Connect the negative (–) lead from the battery to the terminal 3.

(6) Connect the negative (–) lead from the battery to the terminal 6, and check that continuity exists between the terminal 2 and the terminal 5 for 0.7 to 0.9 seconds, then no continuity exists.

WINDSHIELD WIPER MOTOR ASSY

660CN–01

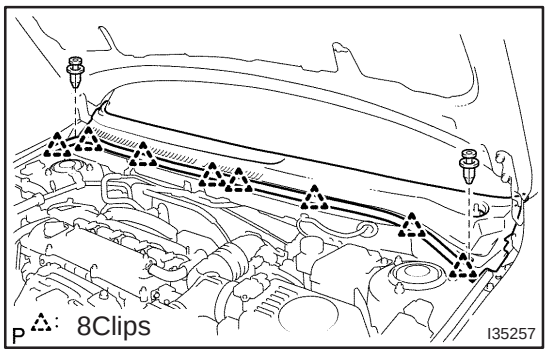
REPLACEMENT

1. REMOVE FRONT WIPER ARM HEAD CAP

(a) Using a small screwdriver, remove the 2 front wiper arm head cap.

HINT:

Tape up the screwdriver tip before use.

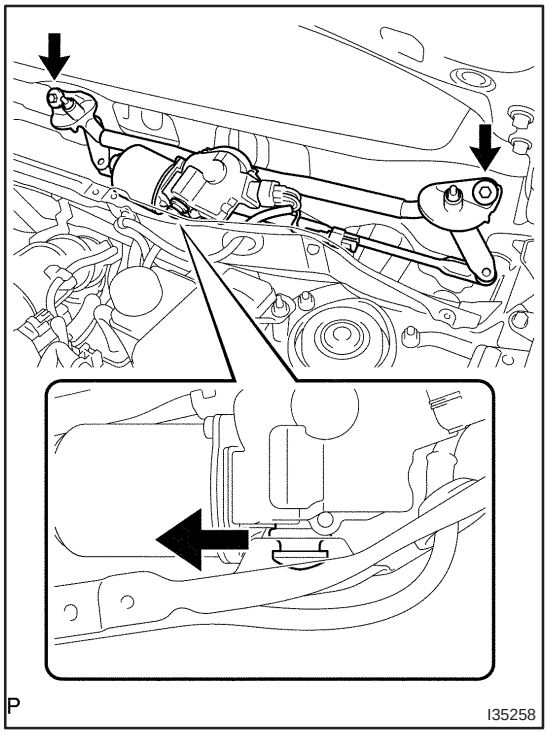


2. REMOVE FR WIPER ARM RH

(a) Operate the wiper, and stop the windshield wiper motor assy to the automatic stop position.

(b) Remove the nut and the FR wiper arm RH.

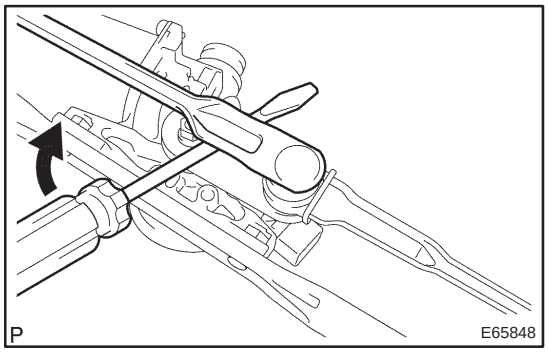
3. REMOVE FR WIPER ARM LH



(a) Remove the nut and the FR wiper arm LH.

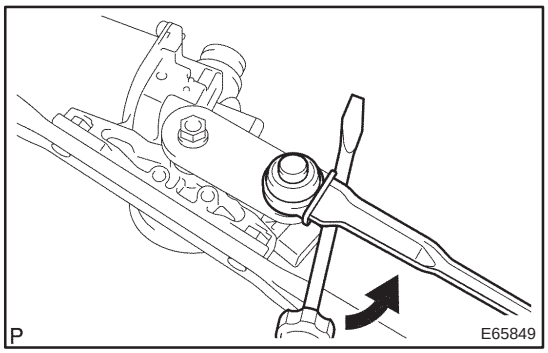
4. REMOVE COWL TOP VENTILATOR LOUVER

(a) Disengage the 8 clips, and remove the hood cowl top seal.

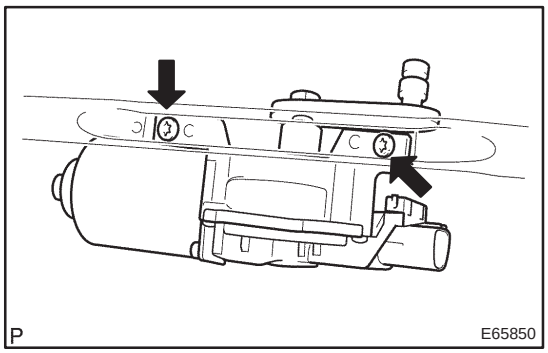


(b) Remove the 2 clips, and the cowl top ventilator louver.

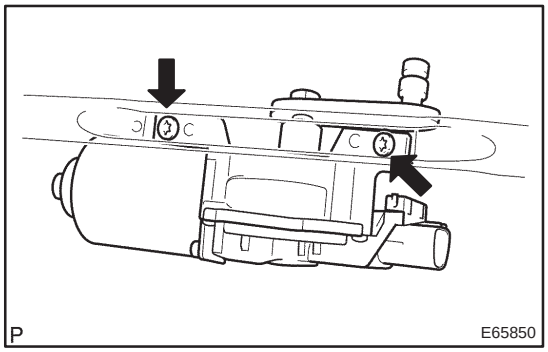
5. REMOVE WINDSHIELD WIPER MOTOR & LINK ASSY



(a) Disconnect the connector, and remove the 2 bolts.



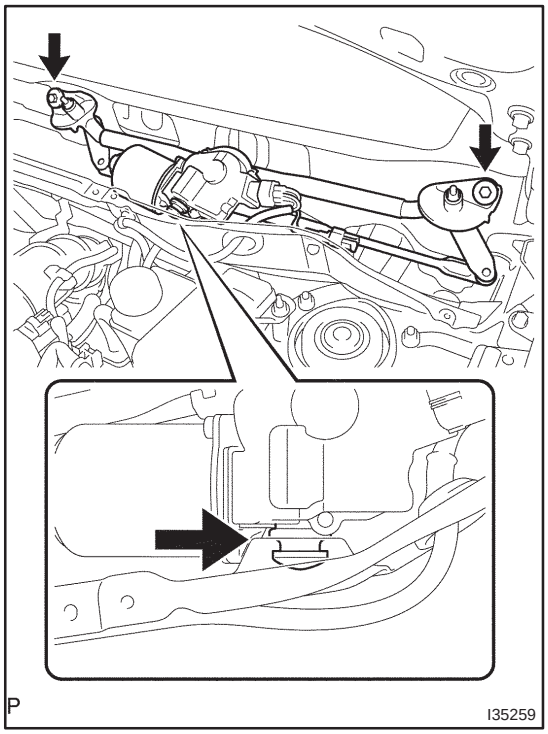
(b) Slide the wiper link assy to vehicle's passengers side. Disengage the meshing of the rubber pin, and remove the wiper motor & link assy.



6. REMOVE WINDSHIELD WIPER MOTOR ASSY

(a) Using a screwdriver, disengage the meshing of 2 rods at the crank arm pivot of the windshield wiper motor assy.

(b) Remove the 2 torx bolts and the windshield wiper motor assy.



7. INSTALL WINDSHIELD WIPER MOTOR ASSY

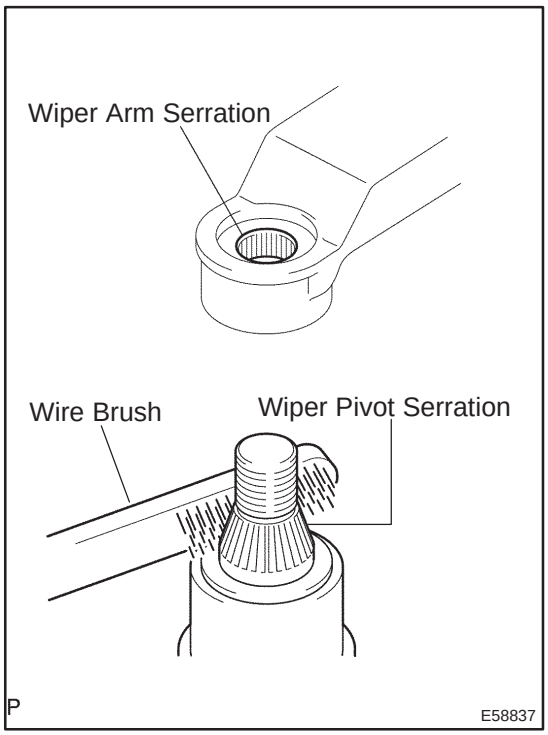
(a) Apply MP grease to the crank arm pivot of the windshield wiper motor assy.

(b) Install the windshield wiper motor assy to the windshield wiper link assy with the 2 torx bolts.

Torque: 7.5 N·m (76 kgf·cm, 66 in.·lbf)

8. INSTALL WINDSHIELD WIPER MOTOR & LINK ASSY

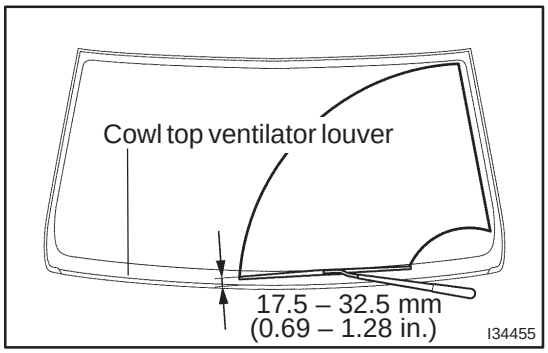
(a) Install the meshing of the rubber pin.



(b) Install the windshield wiper motor & link assy with the 2 bolts.

Torque: 5.5 N·m (56 kgf·cm, 49 in.·lbf)

(c) Connect the connector.



9. INSTALL FR WIPER ARM LH

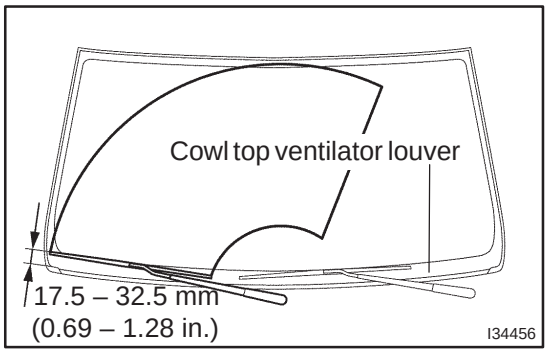
(a) Operate the wiper, and stop the windshield wiper motor assy to the automatic stop position.

(b) Scrape off the serration part of the wiper arm with a round file or equivalent.

(c) Clean the wiper pivot serration with a wire brush.

(d) Install the front wiper arm LH with the nut to the position shown in the illustration.

Torque: 21 N·m (210 kgf·cm, 15 ft·lbf)



HINT:

Hold down the arm hinge by hand to fasten the nut.

10. INSTALL FR WIPER ARM RH

(a) Scrape off the serration part of the wiper arm with a round file or equivalent.

(b) Clean the wiper pivot serration with a wire brush.

(c) Install the front wiper arm RH with the nut to the position shown in the illustration.

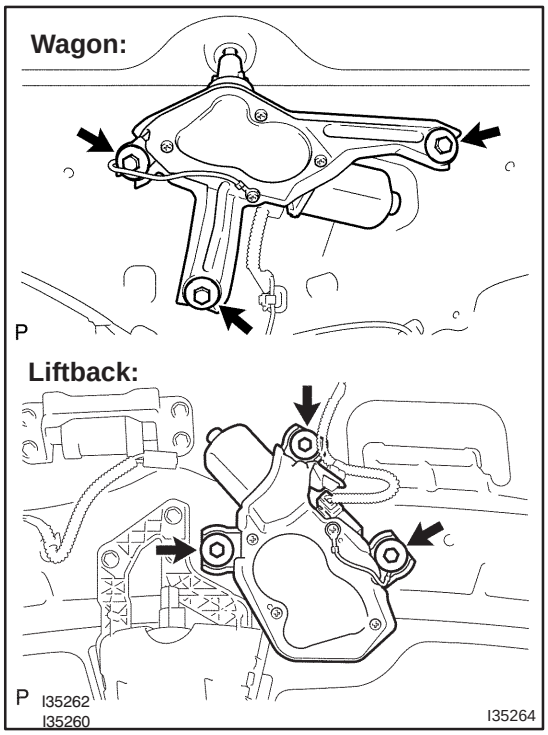
Torque: 21 N·m (210 kgf·cm, 15 ft·lbf)

HINT:

Hold down the arm hinge by hand to fasten the nut.

(d) Operate the wiper while running the water or the washer fluid over the window, and check the wiping condition and that the front wiper does not hit against the vehicle body.

REAR WIPER MOTOR ASSY



660CO–02

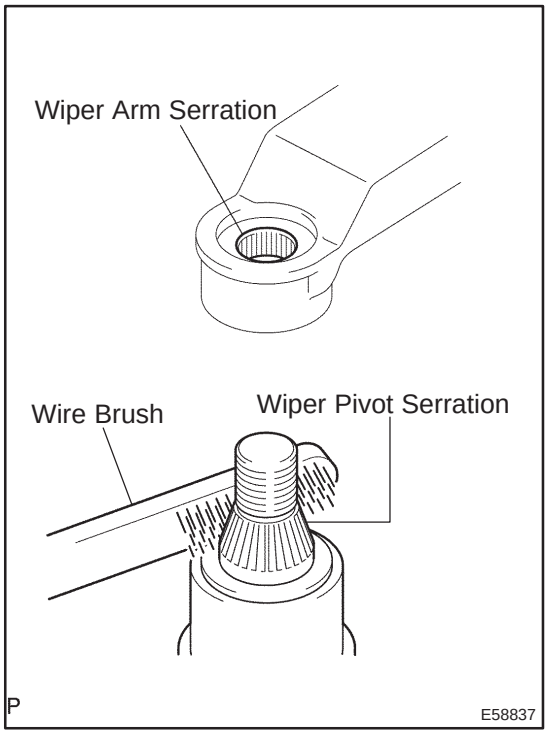
REPLACEMENT

1. REMOVE REAR WIPER ARM ASSY

(a) Remove the nut and the rear wiper arm.

2. REMOVE BACK DOOR TRIM BOARD ASSY (See page LIFTBACK 75–40, WAGON 75–45)

3. REMOVE REAR WIPER MOTOR ASSY

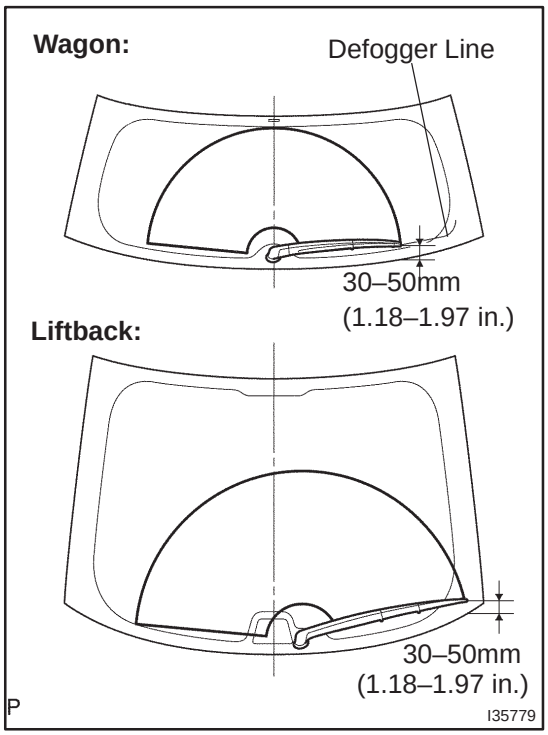


(a) Remove the 3 bolts.

(b) Disconnect the connector, and remove the rear wiper motor assy.

4. INSTALL REAR WIPER MOTOR ASSY

(a) Install the rear wiper motor assy with the 3 bolts.
Torque: 5.5 N·m (56 kgf·cm, 49 in.·lbf)



(b) Connect the connector.

5. INSTALL REAR WIPER ARM ASSY

(a) Scrape off the serration part of the wiper arm with a round file or equivalent.

(b) Clean the rear wiper pivot serration with a brush.

(c) Stop the rear wiper motor assy to the automatic stop position. Install the rear wiper arm to the position as shown in the illustration.

Torque: 5.5 N·m (56 kgf·cm, 49 in.·lbf)

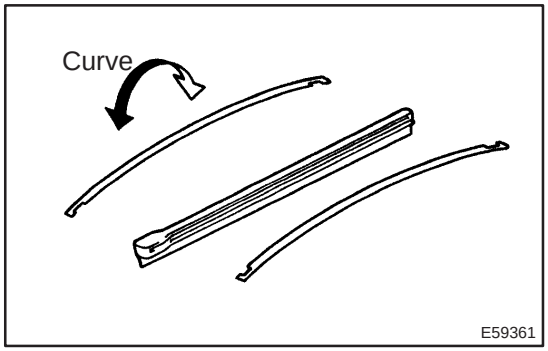
WIPER RUBBER LH

660CP–01

REPLACEMENT

1. REMOVE FR WIPER BLADE LH

(a) Remove the front wiper blade LH from the front wiper arm LH.



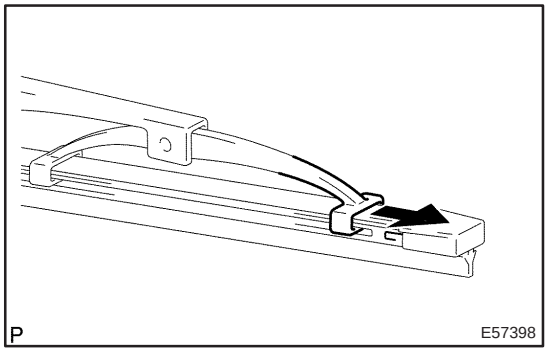
NOTICE:

Do not fold down the front wiper arm with the front wiper blade being removed from it.

2. REMOVE WIPER RUBBER LH

(a) Remove the front wiper rubber LH from the front wiper blade.

(b) Remove the 2 wiper rubber backing plates from the wiper rubber LH.



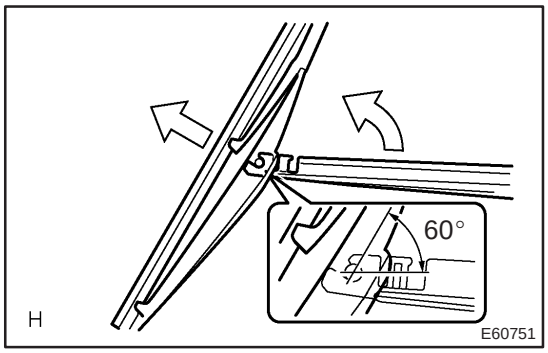
3. INSTALL WIPER RUBBER LH

(a) Install the 2 wiper rubber backing plates to the wiper rubber LH.

NOTICE:

Be careful about the right side and the wrong side of the backing plates.

(b) Install the wiper rubber LH so that the head part (Larger side) of the wiper rubber faces the arm axle side.



NOTICE:

Push the front wiper blade into the grooves of the wiper rubber to engage them completely.

REAR WIPER RUBBER

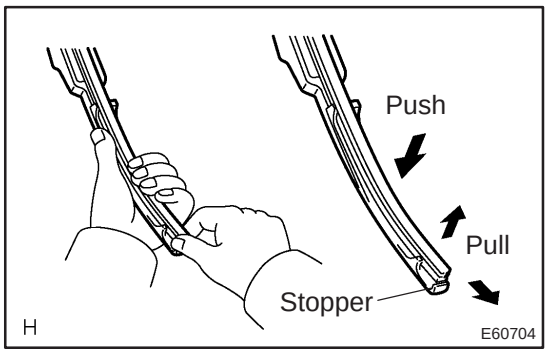
660CQ–01

REPLACEMENT

1. REMOVE REAR WIPER BLADE ASSY

(a) Remove the rear wiper arm head cap.

(b) Raise the rear wiper blade to the position as shown in the illustration where the meshing of the claw is disengaged with the click sound.



NOTICE:

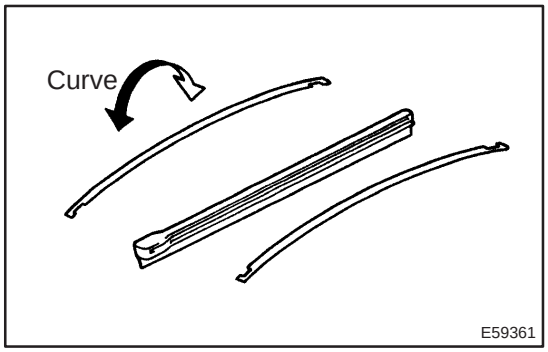
Be careful not to break the claw.

(c) Pull the rear wiper blade straight from the wiper arm toward the left side of the vehicle.

NOTICE:

Do not fold the rear wiper arm with the rear wiper blade being removed from it.

2. REMOVE REAR WIPER RUBBER



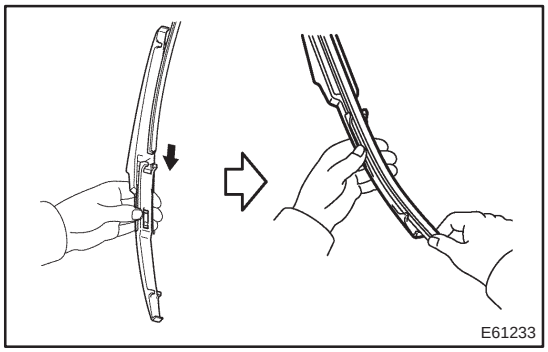
(a) Pull the end of the rubber protruded from the blade stopper as shown in the illustration.

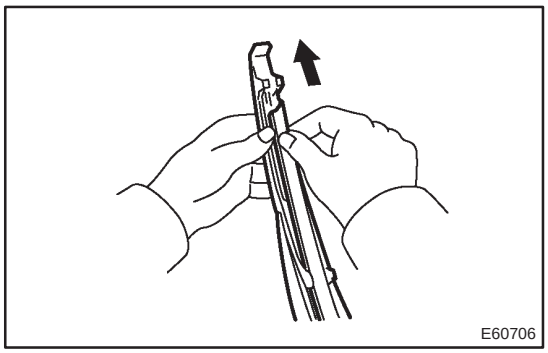
NOTICE:

Do not pull out the wiper rubber forcibly. Otherwise, the backing plates are deformed or blade claw is damaged.

HINT:

Pushing the position close to the middle of the blade raises the rubber, making easier to pull the rubber out.





3. INSTALL REAR WIPER RUBBER

(a) Install the 2 wiper rubber backing plates to the rear wiper rubber.

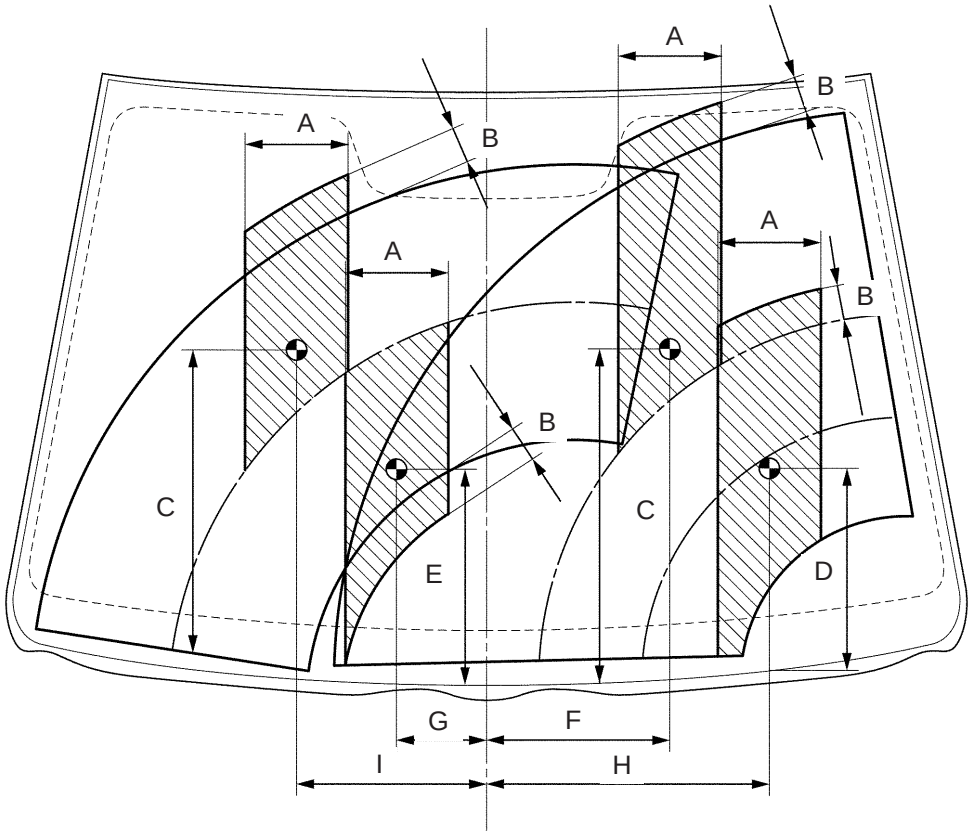
NOTICE:

Be sure to install the wiper rubber backing plates in the right direction.

(b) Insert the rear wiper rubber from the claw position of the middle of the rear wiper blade into the end position.

(c) After passing the rear wiper rubber through the rear end side claw, protrude it from the rear end stopper and pass it through the front tip side claw.

WASHER NOZZLE SUB–ASSY



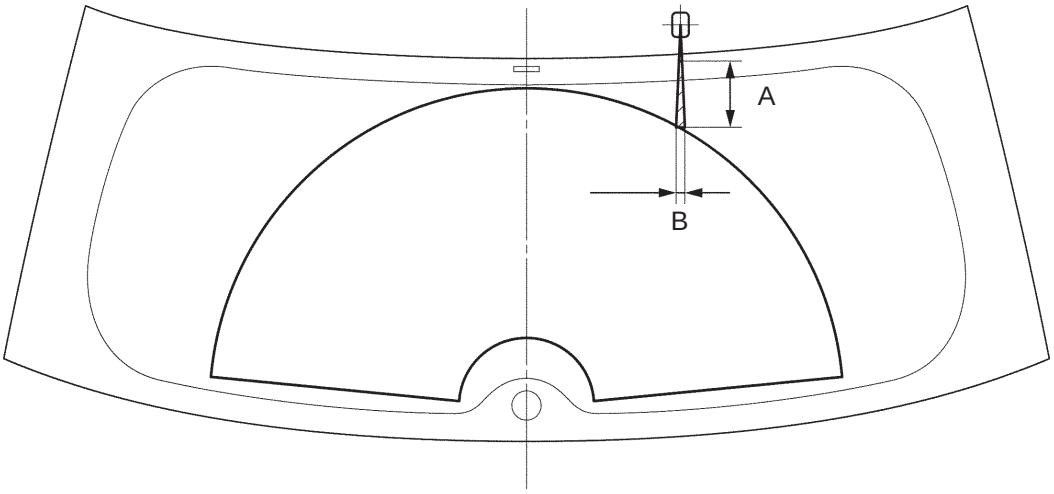
660CU–01

ADJUSTMENT

1. REMOVE WASHER NOZZLE SUB–ASSY

(a) With the engine running, check that the point where the washer fluid hits the windshield and the rear window is within the range indicated by the hatched line.

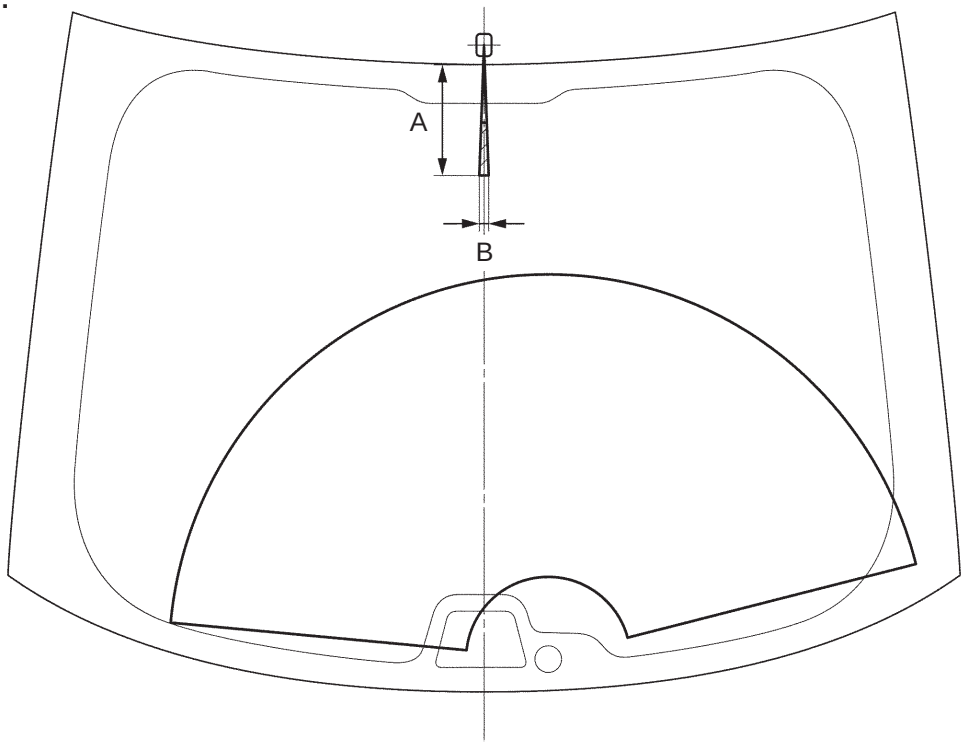
Front:



A: 150 mm (5.91 in.)
B: 50 mm (1.97 in.)
C: 480 mm (18.90 in.)
D: 295 mm (11.61 in.)
E: 310 mm (12.21 in.)
F: 275 mm (10.83 in.)
G: 130 mm (5.12 in.)
H: 420 mm (16.54 in.)
I: 280 mm (11.02 in.)

P

I35778



Rear (Wagon):

A: 80.3 mm (3.16 in.)
B: 8.3 mm (0.33 in.)

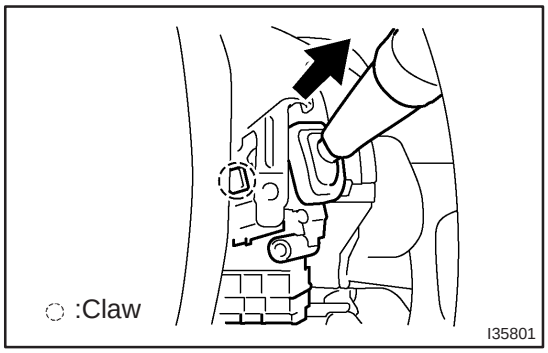
P

Rear (Liftback):

A: 66.5 mm (2.62 in.)
B: 9.8 mm (0.39 in.)

P

I35780
I35781



I35926

WINDSHIELD WIPER SWITCH ASSY

660CR–01

REPLACEMENT

1. REMOVE STEERING COLUMN COVER LWR (See page 65–27)

2. REMOVE WINDSHIELD WIPER SWITCH ASSY

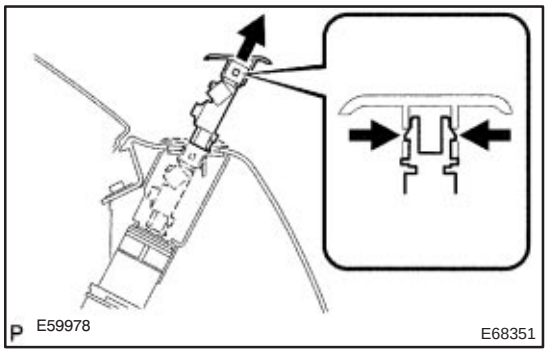
(a) Disconnect the connector.

(b) Using a screwdriver, disengage the claw and pull out the windshield wiper switch assy.

NOTICE:

The claw will be broken if pressed hard.

HINT:



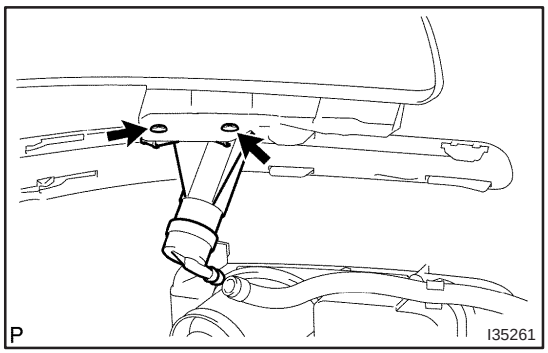
Tape up the screwdriver tip before use.

HEADLAMP WASHER ACTUATOR SUB–ASSY LH

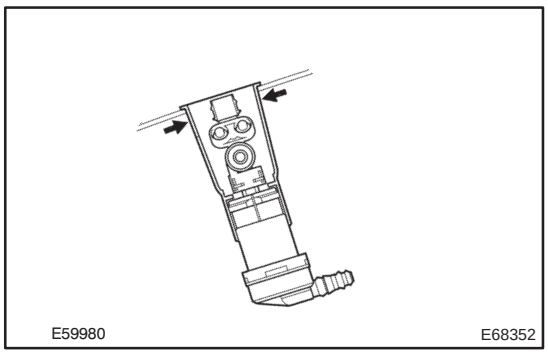
660CS–01

REPLACEMENT

1. REMOVE FRONT BUMPER COVER (See page 76–3)



2. REMOVE HEADLAMP WASHER ACTUATOR SUB–ASSY LH

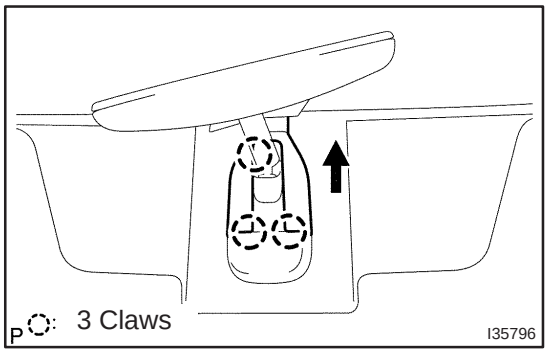


(a) Separate the headlamp cleaner hose from the headlamp washer actuator sub–assy.

(b) Pull out the headlamp cleaner washer nozzle.

(c) Disengage the 2 claws, remove the headlamp cleaner washer nozzle.

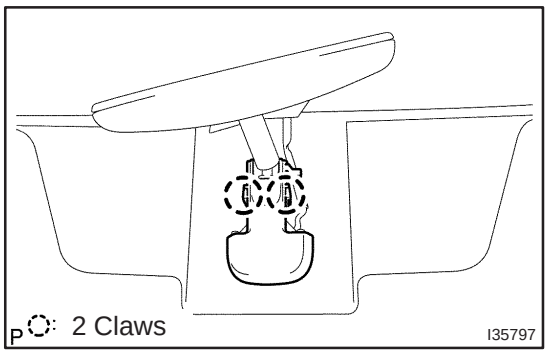
(d) Remove the 2 bolts.



(e) Deform the upper part of the headlamp washer actuator sub–assy LH, to remove it.

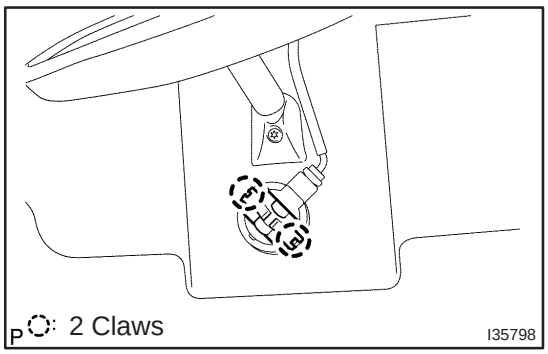
RAIN SENSOR

660CT–02

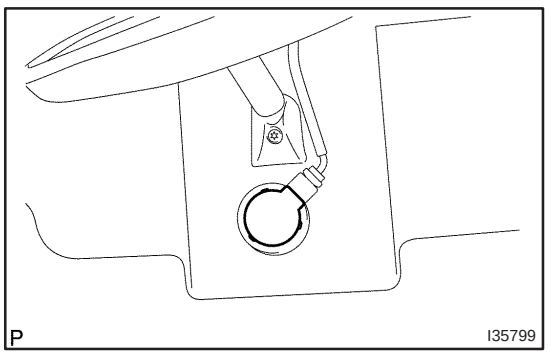


REPLACEMENT

1. REMOVE INNER REAR VIEW MIRROR STAY HOLDER COVER



2. REMOVE RAIN SENSOR



(a) Disengage the 3 claws and remove the mirror stay holder cover.

(b) Disengage the 2 claws and remove the rain sensor cover.
(c) Disconnect the connector.

(d) Disengage the 2 claws and remove the rain sensor spring cover.

(e) Remove the rain sensor.

3. INSTALL RAIN SENSOR

(a) Install the rain sensor and rain sensor spring cover.
(b) Connect the connector and install the rain sensor cover and the mirror stay holder cover.

NOTICE:

- **Check if there is any SilGel, which of the rain sensor that has been removed, left on the windshield glass and remove it if there is any.**
- **Clean the dirt on the glass with a cloth etc.**
- **When installing a new rain sensor, peel the transparent protective cap off the SilGel first.**
- **Be careful not to let any air bubble in the rain sensor when installing it.**

AUDIO & VISUAL SYSTEM

670S4–01

PRECAUTION

1. OBSERVE HANDLING AND OPERATIONAL PRECAUTIONS

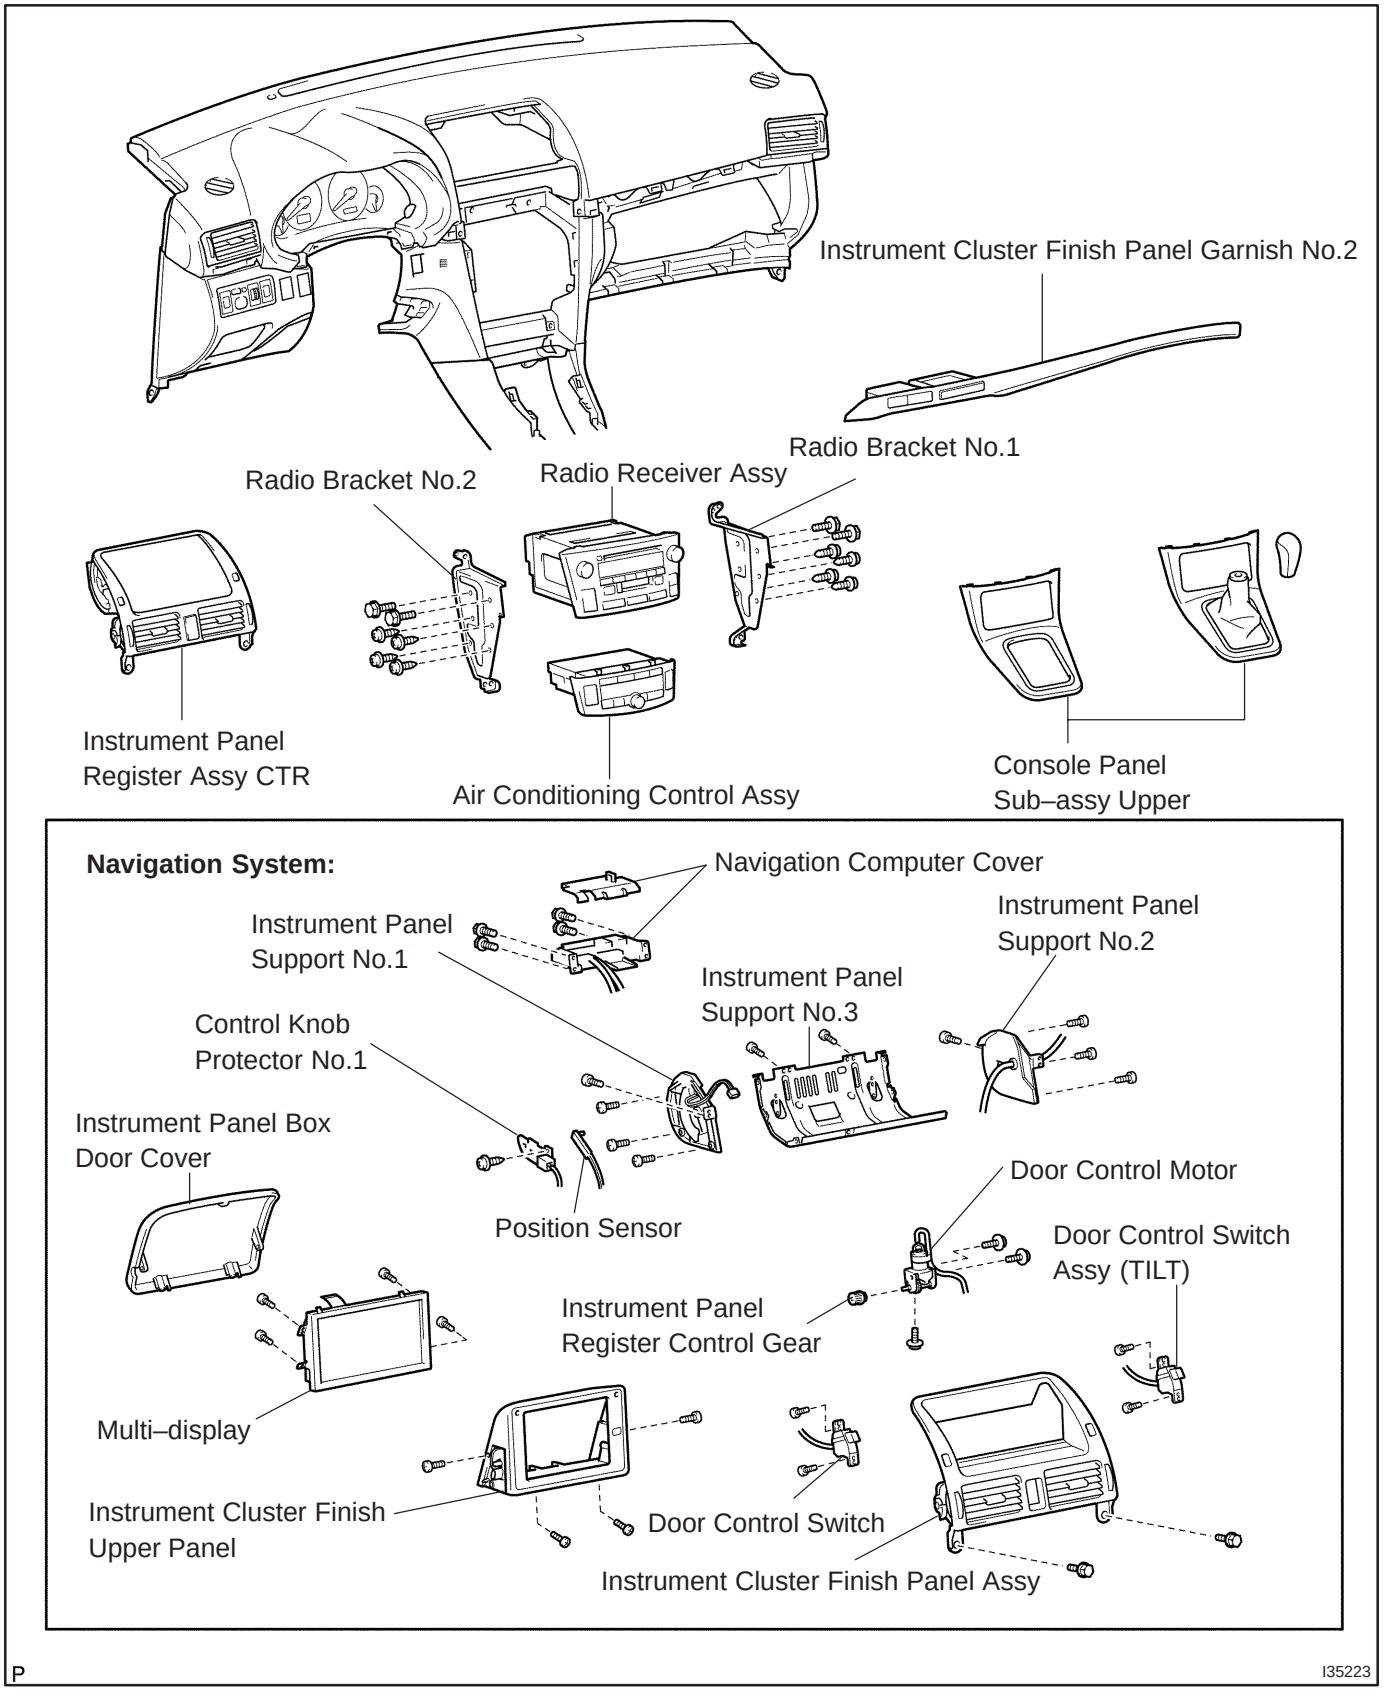
(a) Please explain to the customer that when the negative terminal is disconnected from the battery, the channel information memory of the AM/FM broadcast stations in the radio receiver is cleared. If necessary, make a note of the recorded channel information before the negative terminal is disconnected, then reset the information after the negative terminal is reconnected.

(b) The removal/installation of the radio receiver should be performed after all the cassette tapes and audio CDs are ejected from the radio receiver.

HINT:

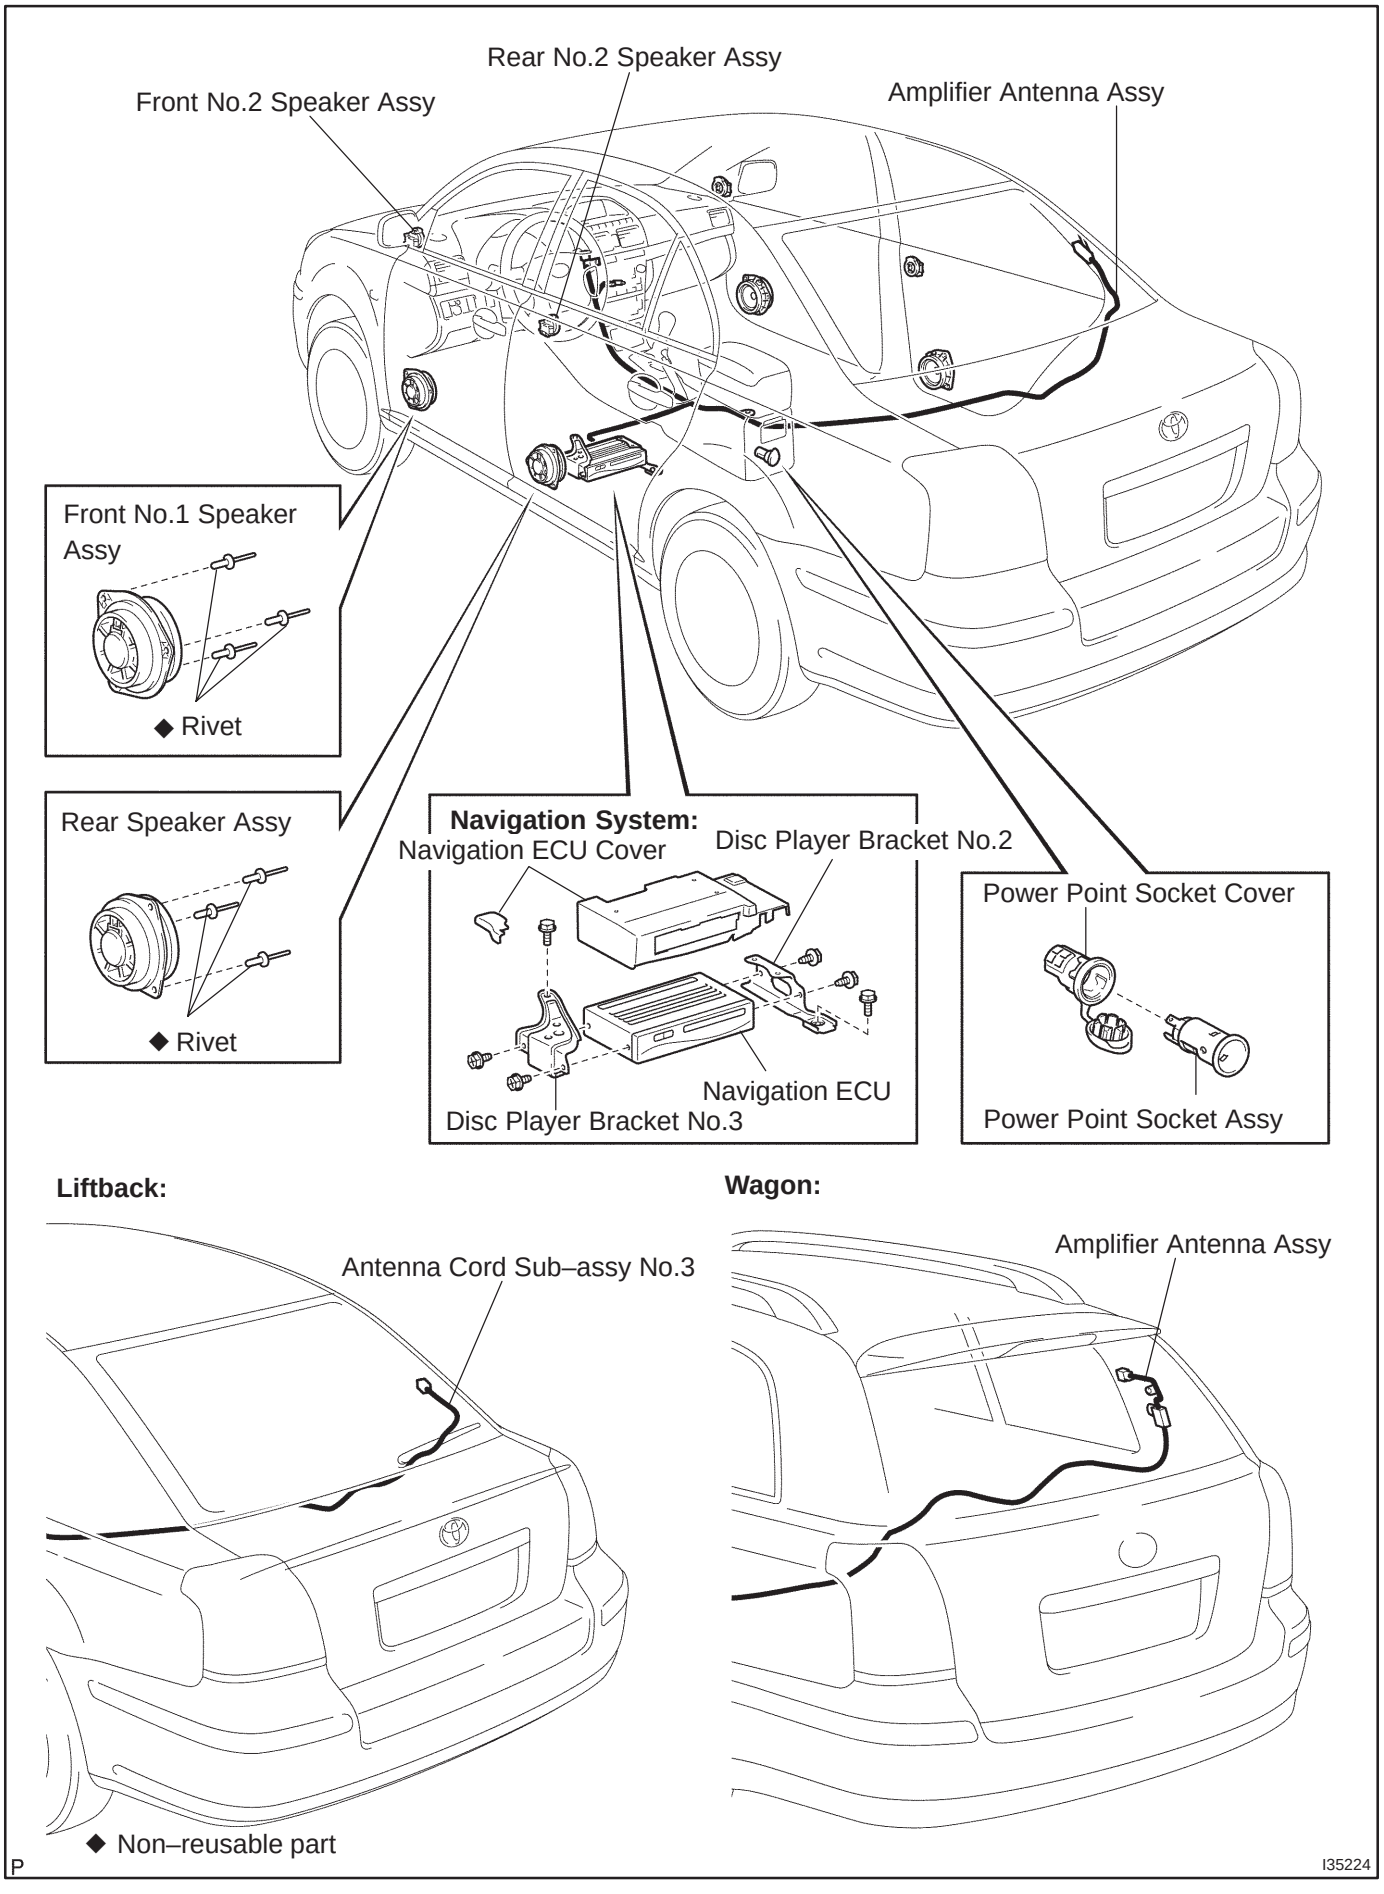
If the cassette tapes and the audio CDs cannot be ejected due to the malfunction of the radio receiver, do not try to drag them out by force. Bring the vehicle to the repair plant.

(c) Fasten the earth bolt securely when the antenna cord is removed or installed.



HINT:

Failing to fasten the earth bolt securely causes noise at the time of radio wave reception.



(d) Do not touch the cone paper of the speaker.

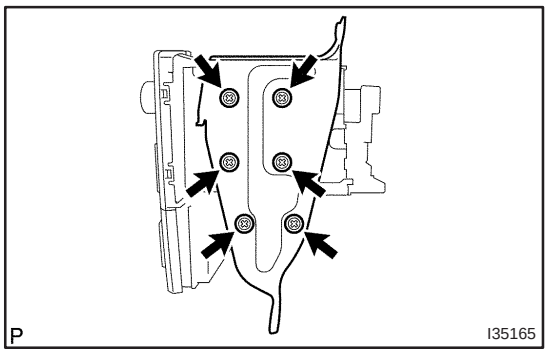
RADIO RECEIVER ASSY

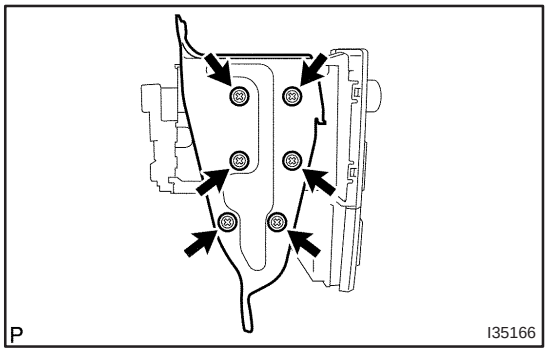
670S6–02

REPLACEMENT



1. DISCONNECT BATTERY NEGATIVE TERMINAL (See page 60–1)
2. REMOVE INSTRUMENT CLUSTER FINISH PANEL GARNISH NO.2 (See page 71–11)
3. REMOVE INSTRUMENT PANEL REGISTER ASSY CTR (See page 71–11)
4. REMOVE CONSOLE PANEL SUB–ASSY UPPER (See page 71–11)

5. REMOVE RADIO RECEIVER ASSEMBLY W/BRACKET



(a) Remove the 4 bolts.

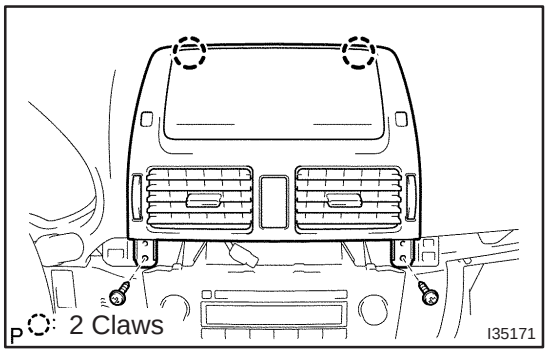
(b) Disconnect the connector and remove the radio receiver assy w/ bracket.

6. REMOVE RADIO BRACKET NO.1

(a) Remove the 6 screws and radio bracket No.1.

7. REMOVE RADIO BRACKET NO.2

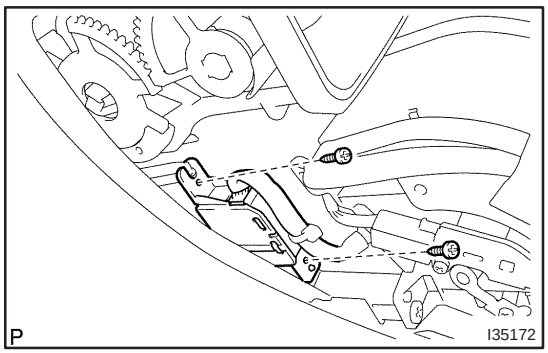
(a) Remove the 6 screws and radio bracket No.2.



8. REMOVE AIR CONDITIONING CONTROL ASSY (See page 55–50)
9. REMOVE RADIO RECEIVER ASSY

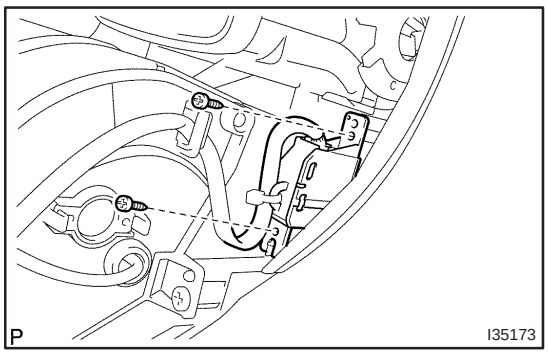
MULTI–DISPLAY (CRT DISPLAY) DISPLAY

670S7–01



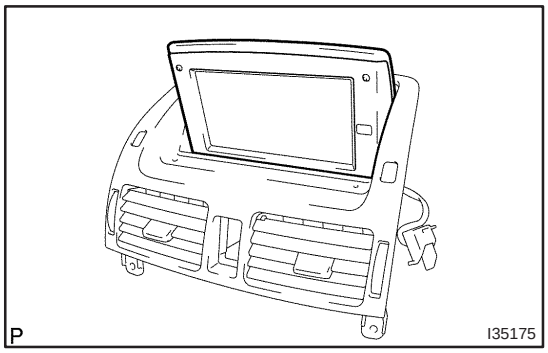
REPLACEMENT

1. REMOVE INSTRUMENT CLUSTER FINISH PANEL GARNISH NO.2 (See page 71–11)



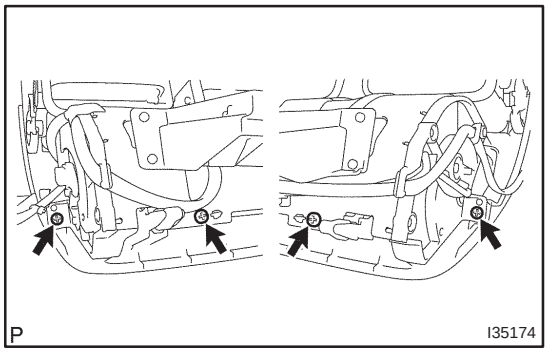
2. REMOVE INSTRUMENT PANEL REGISTER ASSY CTR

(a) Remove the 2 screws.
(b) Disengage the 2 claws and remove the instrument panel register assy CTR.
(c) Disconnect the connectors.



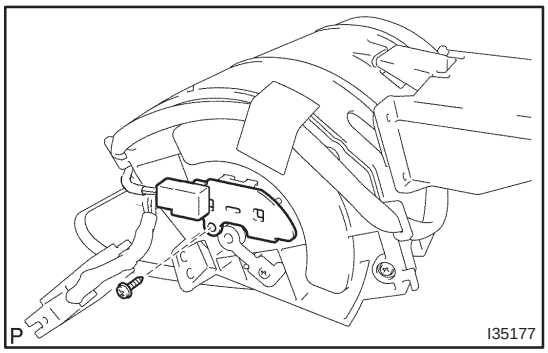
3. REMOVE DOOR CONTROL SWITCH

(a) Remove the 2 screws and separate the door control switch.



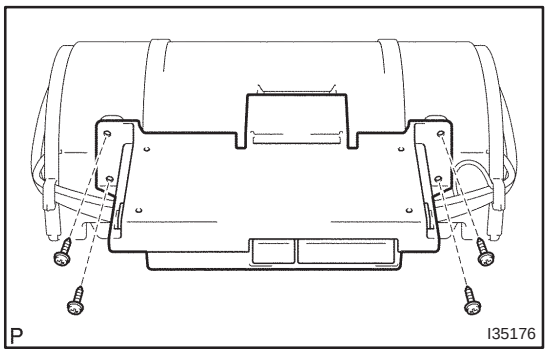
4. REMOVE DOOR CONTROL SWITCH ASSY

(a) Remove the 2 screws and separate the door control switch assy (TILT).



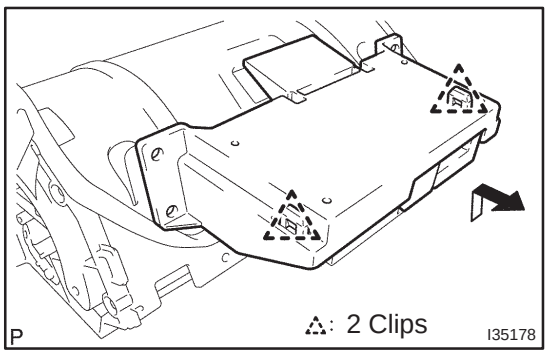
5. REMOVE INSTRUMENT CLUSTER FINISH PANEL ASSY

(a) Make the multi–display upright.



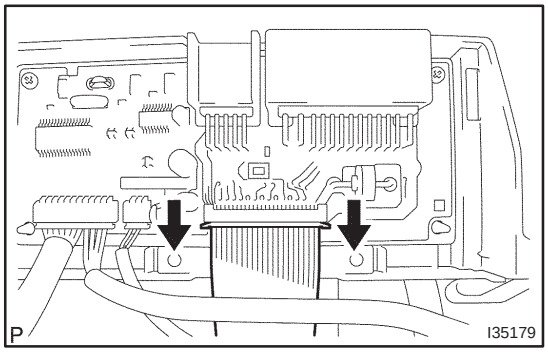
(b) Remove the 4 screws and the instrument cluster finish panel assy.

6. REMOVE CONTROL KNOB PROTECTOR NO.1

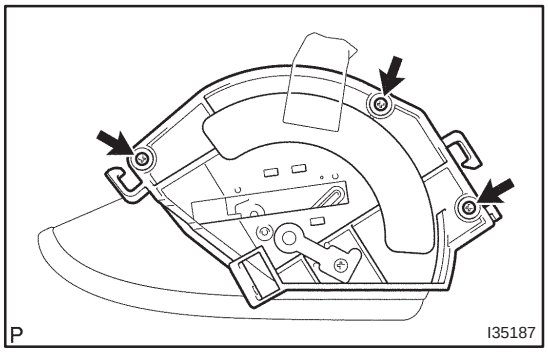


(a) Remove the screw and control knob protector No.1.

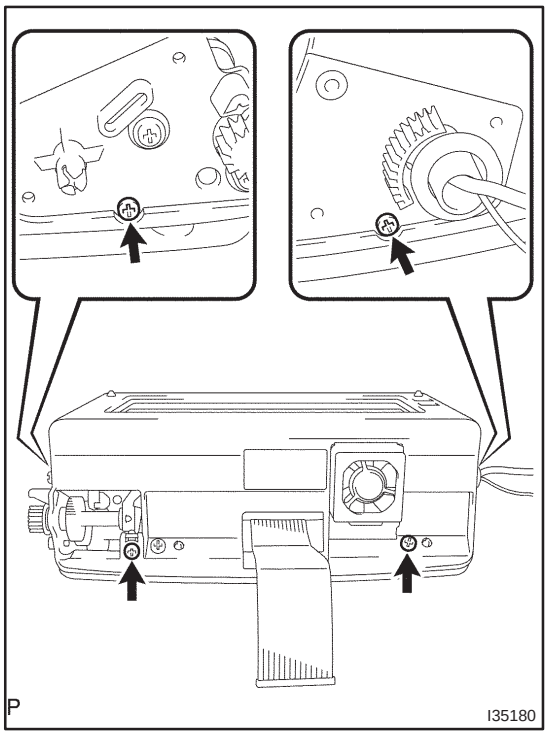
(b) Separate the position sensor.



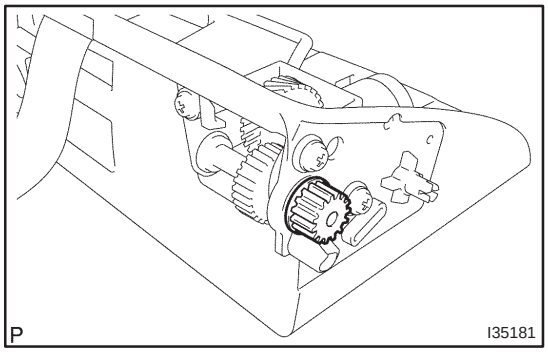
7. REMOVE MULTI–DISPLAY (CRT DISPLAY) DISPLAY



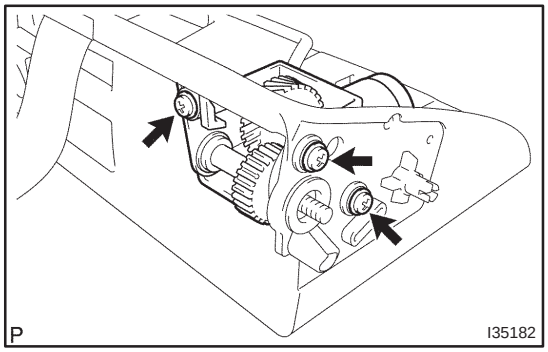
(a) Remove the 4 screws and separate the navigation computer cover.



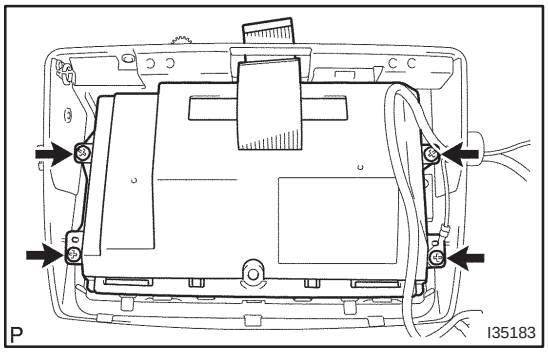
(b) Disengage the 2 clips, slide them in the arrow direction shown in the illustration to remove the navigation computer cover.



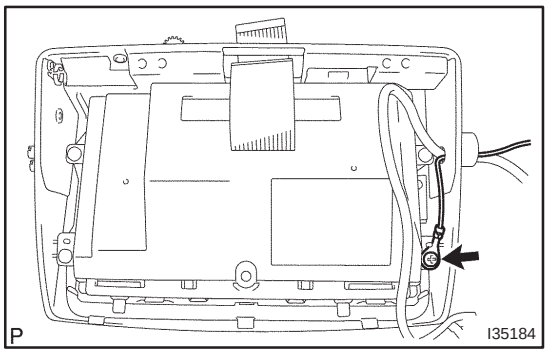
(c) Slide the lock of the connector in the arrow direction shown in the illustration to disconnect the flexible flat cable.



(d) Remove the 3 screws and instrument panel support No.1.
(e) Remove the 3 screws and instrument panel support No.2.
(f) Remove the instrument panel support No.3.



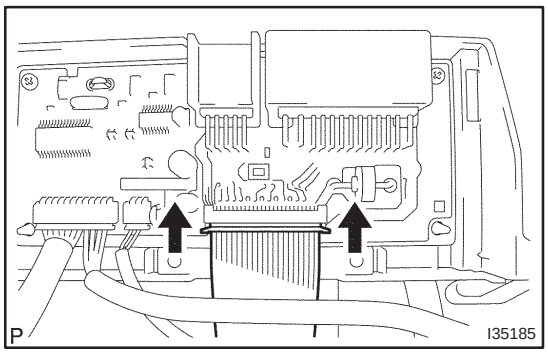
(g) Remove the 4 screws and slide the instrument panel box door cover upward of the screen to remove it.



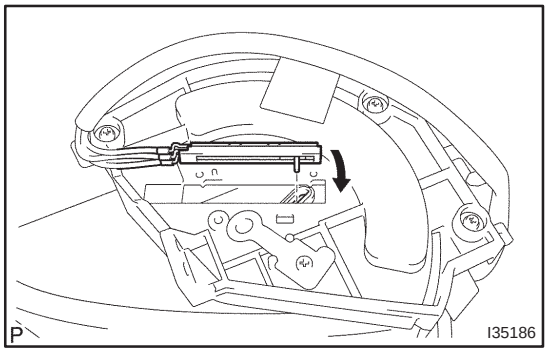
(h) Remove the instrument panel register control gear.

(i) Remove the 3 screws and door control motor.

(j) Remove the 4 screws and the multi–display.



8. INSTALL MULTI–DISPLAY (CRT DISPLAY) DISPLAY



(a) Install the multi–display with the 4 screws.

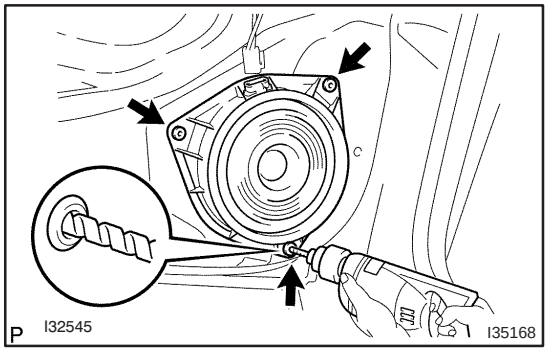
NOTICE:

Tighten each screw together with the earth wire.

(b) Insert the flexible flat cable as deep as possible and install it by sliding the lock of the connector in the arrow direction shown in the illustration.

9. INSTALL CONTROL KNOB PROTECTOR NO.1

(a) Fit the protrusion of the position sensor into the groove shown in the illustration to fix.



(b) Install the control knob protector No.1.

FRONT NO.1 SPEAKER ASSY

670S8–01

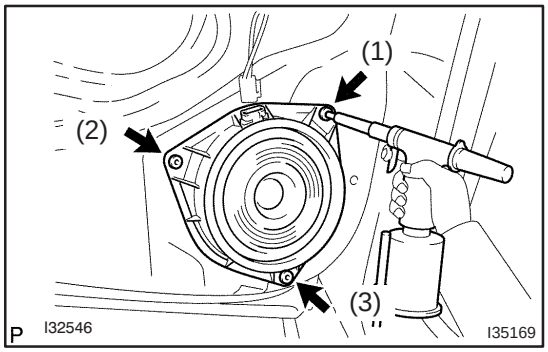
REPLACEMENT

1. REMOVE REAR DOOR WINDOW REGULATOR HANDLE ASSY (W/O POWER WINDOW) (See page 75–8)
2. REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH LH (See page 75–8)
3. REMOVE FRONT DOOR TRIM BASE LH (See page 75–8)
4. REMOVE FUEL LID OPENER SWITCH (See page 75–8)
5. REMOVE POWER WINDOW REGULATOR SWITCH ASSY (W/ POWER WINDOW) (See page 75–8)
6. REMOVE FRONT DOOR TRIM BOARD SUB–ASSY LH (See page 75–8)

7. REMOVE FRONT NO.1 SPEAKER ASSY

(a) Disconnect the connector.

(b) Using a drill of less then ϕ 4 mm (0.16 in.), drill out the 3 rivet heads and remove the front No.1 speaker assy from the front door panel.



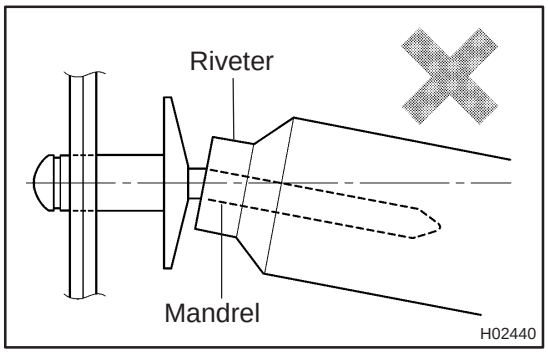
(c) Gently and vertically put the drill to the rivet, and cut the rivet flanges.

NOTICE:

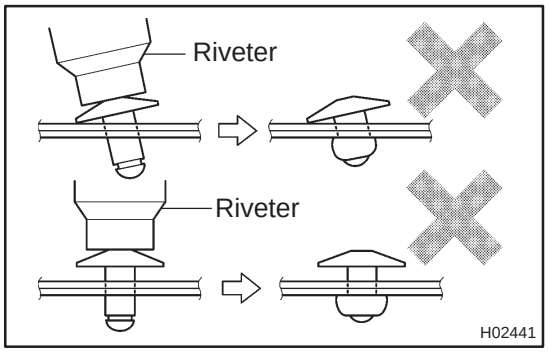
- **Prizing the hole with a drill can lead to damage to the rivet hole or breaking the drill.**
- **Take care as the cut rivet is hot.**

(d) Even if flange is taken off, continue drilling and push out remaining fragments with the drill.

(e) Using a vacuum cleaner, remove the drilled rivet and their dust from the inside of the front door panel.

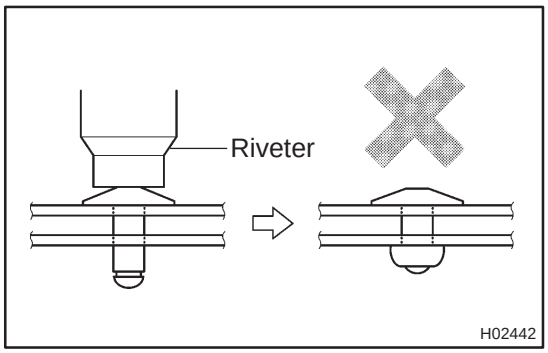


8. INSTALL FRONT NO.1 SPEAKER ASSY



(a) Using an air riveter or a hand riveter, install 3 new strike rivets to install the front No.1 speaker assy on the front door panel.

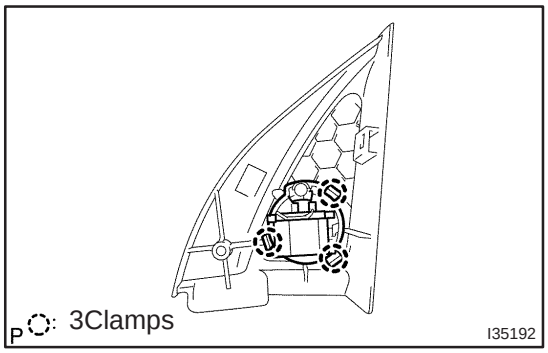
NOTICE:



- **Install the new strike rivet in order shown in the illustration to install the front No.1 speaker assy.**

- **Do not prize a riveter, as the riveter could be damaged, loosened and the mandrel could be bent.**

- **Do not tilt the riveter or disconnect the rivet from the materials while handling the riveter, as the materials are not tightened firmly.**



- **Install the rivet while there is no clearance between the materials to tighten the materials firmly.**

(b) Connect the connector.

FRONT NO.2 SPEAKER ASSY

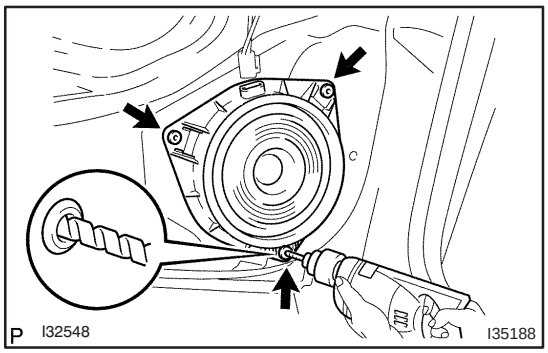
REPLACEMENT

670S9–01

1. REMOVE FRONT NO.2 SPEAKER ASSY

(a) Remove the front door lower frame bracket garnish.

(b) Disconnect the connector.



(c) Disengage the 3 claws and remove the front No.2 speaker assy.

REAR SPEAKER ASSY

670SA–01

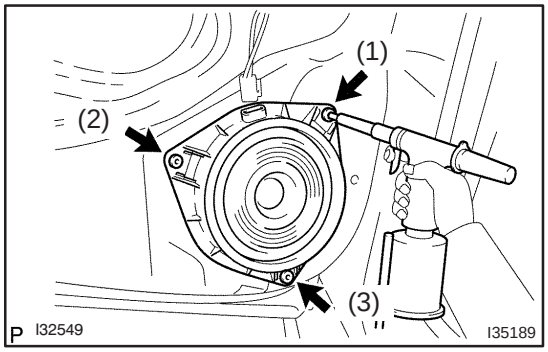
REPLACEMENT

1. REMOVE REAR DOOR WINDOW REGULATOR HANDLE ASSY (See page 75–22)
2. REMOVE REAR DOOR TRIM BASE LH (See page 75–22)
3. REMOVE POWER WINDOW REGULATOR SWITCH ASSY REAR (W/ POWER WINDOW) (See page 75–22)
4. REMOVE REAR DOOR TRIM BOARD SUB–ASSY LH (See page 75–22)

5. REMOVE REAR SPEAKER ASSY

(a) Disconnect the connector.

(b) Using a drill of less then ϕ 4 mm (0.16 in.), drill out the 3 rivet heads and remove the rear speaker assy from the rear door panel.



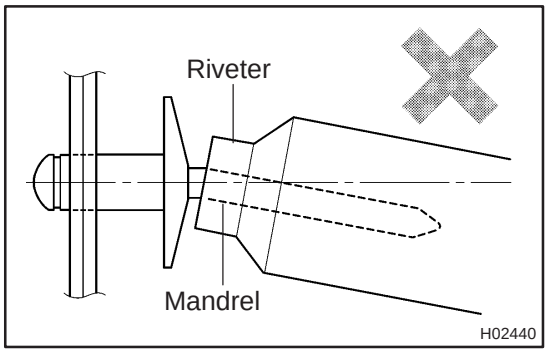
(c) Gently and vertically put the drill to the rivet, and cut the rivet flanges.

NOTICE:

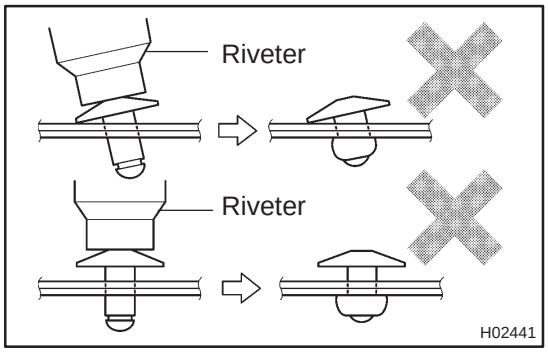
- **Prizing the hole with a drill can lead to damage to the rivet hole or breaking the drill.**
- **Take care as the cut rivet is hot.**

(d) Even if flange is taken off, continue drilling and push out remaining fragments with the drill.

(e) Using a vacuum cleaner, remove the drilled rivets and their dust from the inside of the rear door panel.

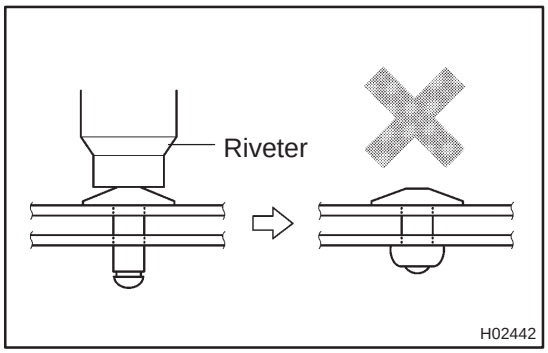


6. INSTALL REAR SPEAKER ASSY



(a) Using an air riveter or a hand riveter, install 3 new strike rivets to install the rear speaker assy on the rear door panel.

NOTICE:

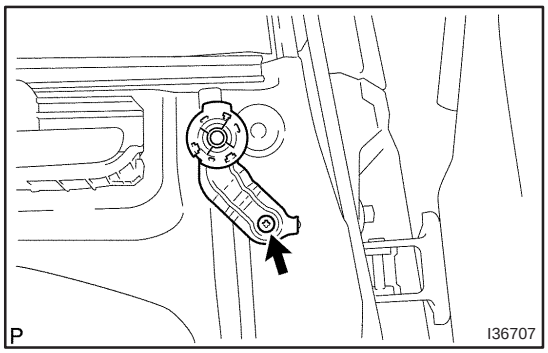


- **Install the new strike rivet in order shown in the illustration to install the rear speaker assy.**

- **Do not prize a riveter, as the riveter could be damaged, loosened and the mandrel could be bent.**

- **Do not tilt the riveter or disconnect the rivet from the materials while handling the riveter, as the materials are not tightened firmly.**

- **Install the rivet while there is no clearance between the materials to tighten the materials firmly.**



(b) Connect the connector.

REAR SPEAKER ASSY NO.2

670SB–01

REPLACEMENT

1. **REMOVE REAR DOOR WINDOW REGULATOR HANDLE ASSY (W/O POWER WINDOW) (See page 75–22)**
2. **REMOVE POWER WINDOW REGULATOR SWITCH ASSY REAR (W/ POWER WINDOW) (See page 75–22)**
3. **REMOVE REAR DOOR TRIM BASE LH (See page 75–22)**
4. **REMOVE REAR DOOR TRIM BOARD SUB–ASSY LH (See page 75–22)**

5. **REMOVE REAR SPEAKER ASSY NO.2**

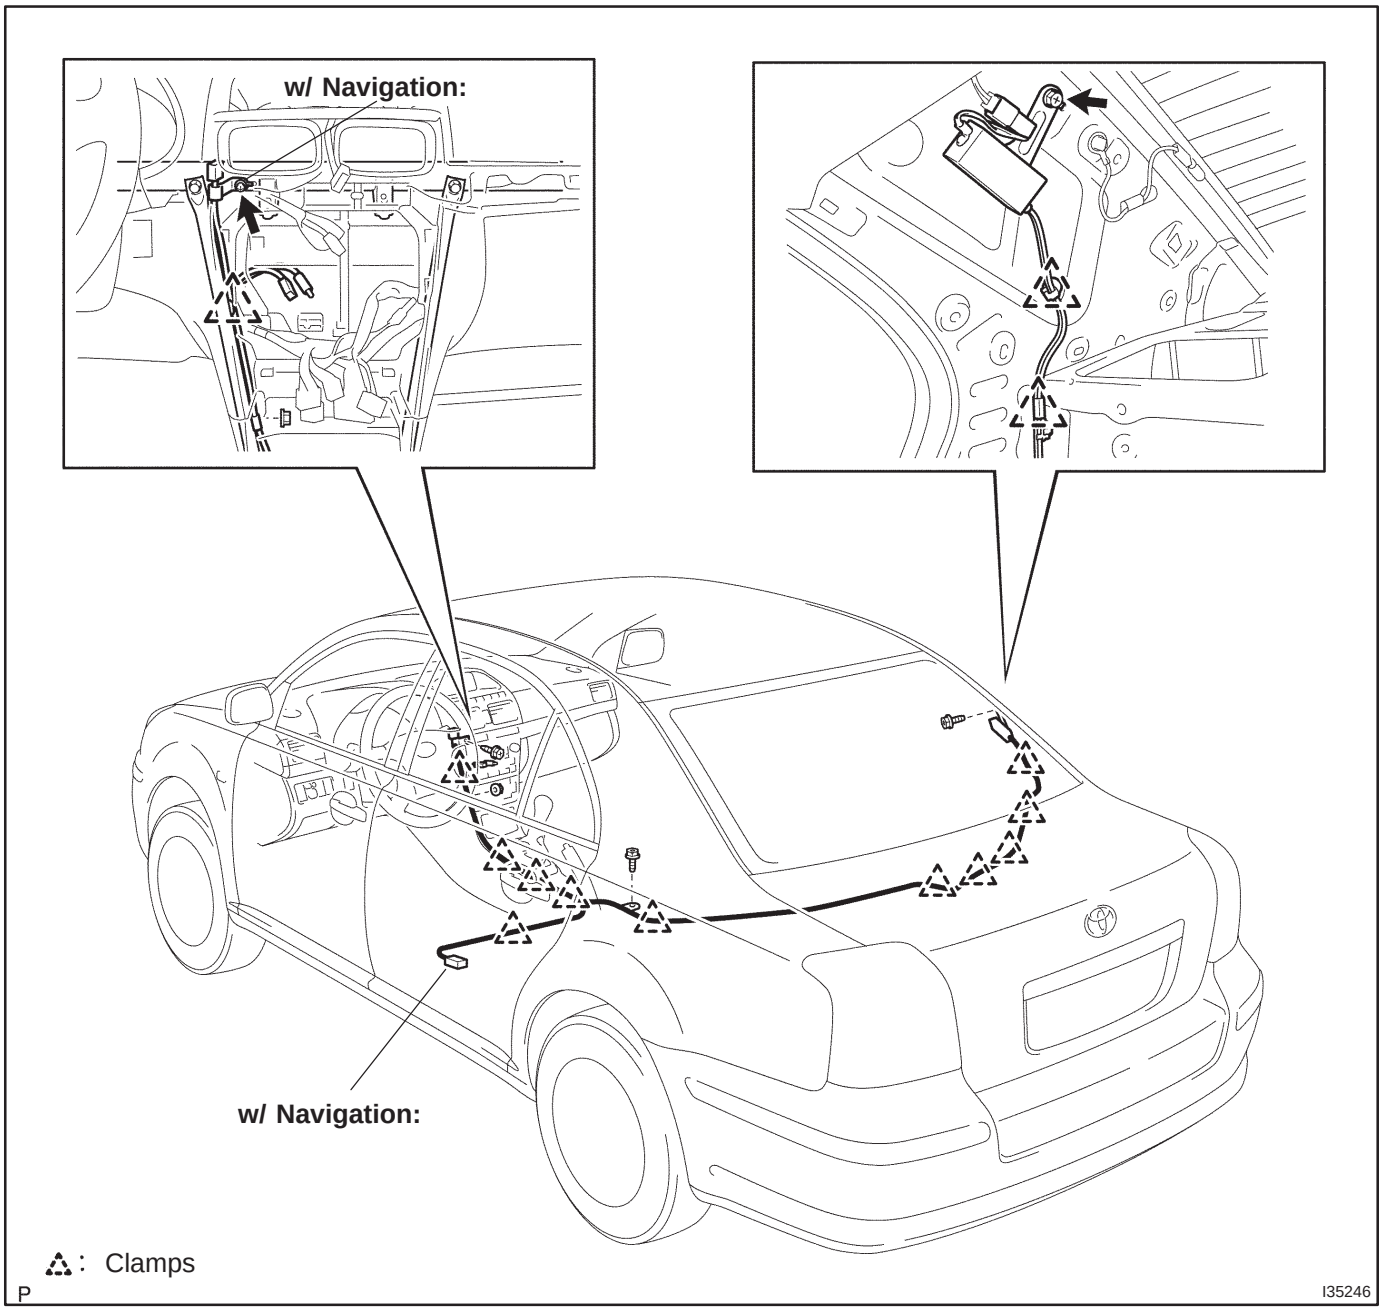
(a) Disconnect the connector.

(b) Remove the screw and the rear No.2 speaker assy.

AMPLIFIER ANTENNA ASSY (SEDAN MODELS)

670SC–03

REPLACEMENT



1. DISCONNECT BATTERY NEGATIVE TERMINAL (See page 60–1)
2. REMOVE INSTRUMENT CLUSTER FINISH PANEL GARNISH NO.2 (See page 71–11)
3. REMOVE INSTRUMENT PANEL REGISTER ASSY CTR (W/ NAVIGATION SYSTEM) (See page 67–6)
4. REMOVE SHIFT LEVER KNOB SUB–ASSY (M/T TRANSAXLE) (See page 41–11)
5. REMOVE CONSOLE PANEL SUB–ASSY UPPER (See page 71–11)
6. REMOVE RADIO RECEIVER ASSEMBLY W/BRACKET (See page 67–5)
7. REMOVE CONSOLE BOX ASSY RR (See page 71–11)
8. REMOVE HEATER TO REGISTER DUCT NO.2 (See page 71–11)
9. REMOVE FRONT SEAT ASSY RH (See page POWER SEAT 72–11, MANUAL SEAT 72–16)
10. REMOVE FRONT DOOR SCUFF PLATE RH (See page 76–36)
11. REMOVE REAR DOOR SCUFF PLATE RH (See page 76–36)
12. REMOVE COWL SIDE TRIM BOARD RH (See page 76–36)
13. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page 76–36)
14. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page 76–36)
15. REMOVE REAR SEAT CUSHION ASSEMBLY (See page 72–32)
16. REMOVE REAR SEATBACK ASSY (See page 40/60 FOLDING 72–27, UNITED FIXED 72–32)
17. REMOVE ROOF SIDE GARNISH INNER RH (See page 76–36)
18. REMOVE FLOOR CARPET ASSY FRONT

19. REMOVE AMPLIFIER ANTENNA ASSY

(a) Disconnect the connectors.

(b) w/ Navigation:
Remove the 2 bolts, nut and screw.
w/o Navigation:
Remove the 2 bolts and nut.

(c) w/ Navigation:
Remove the 11 clamps and amplifier antenna assy.
w/o Navigation:
Remove the 10 clamps and amplifier antenna assy.

20. INSTALL AMPLIFIER ANTENNA ASSY

(a) Install the 2 bolts.
Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)

(b) w/ Navigation:
Install the nut and screw.
w/o Navigation:
Install the nut.

(c) w/ Navigation:
Install the 11 clamps and the amplifier antenna assy.
w/o Navigation:
Install the 10 clamps and the amplifier antenna assy.

(d) Connect the connectors.

21. REMOVE REAR SEAT CUSHION ASSEMBLY (See page 72–32)

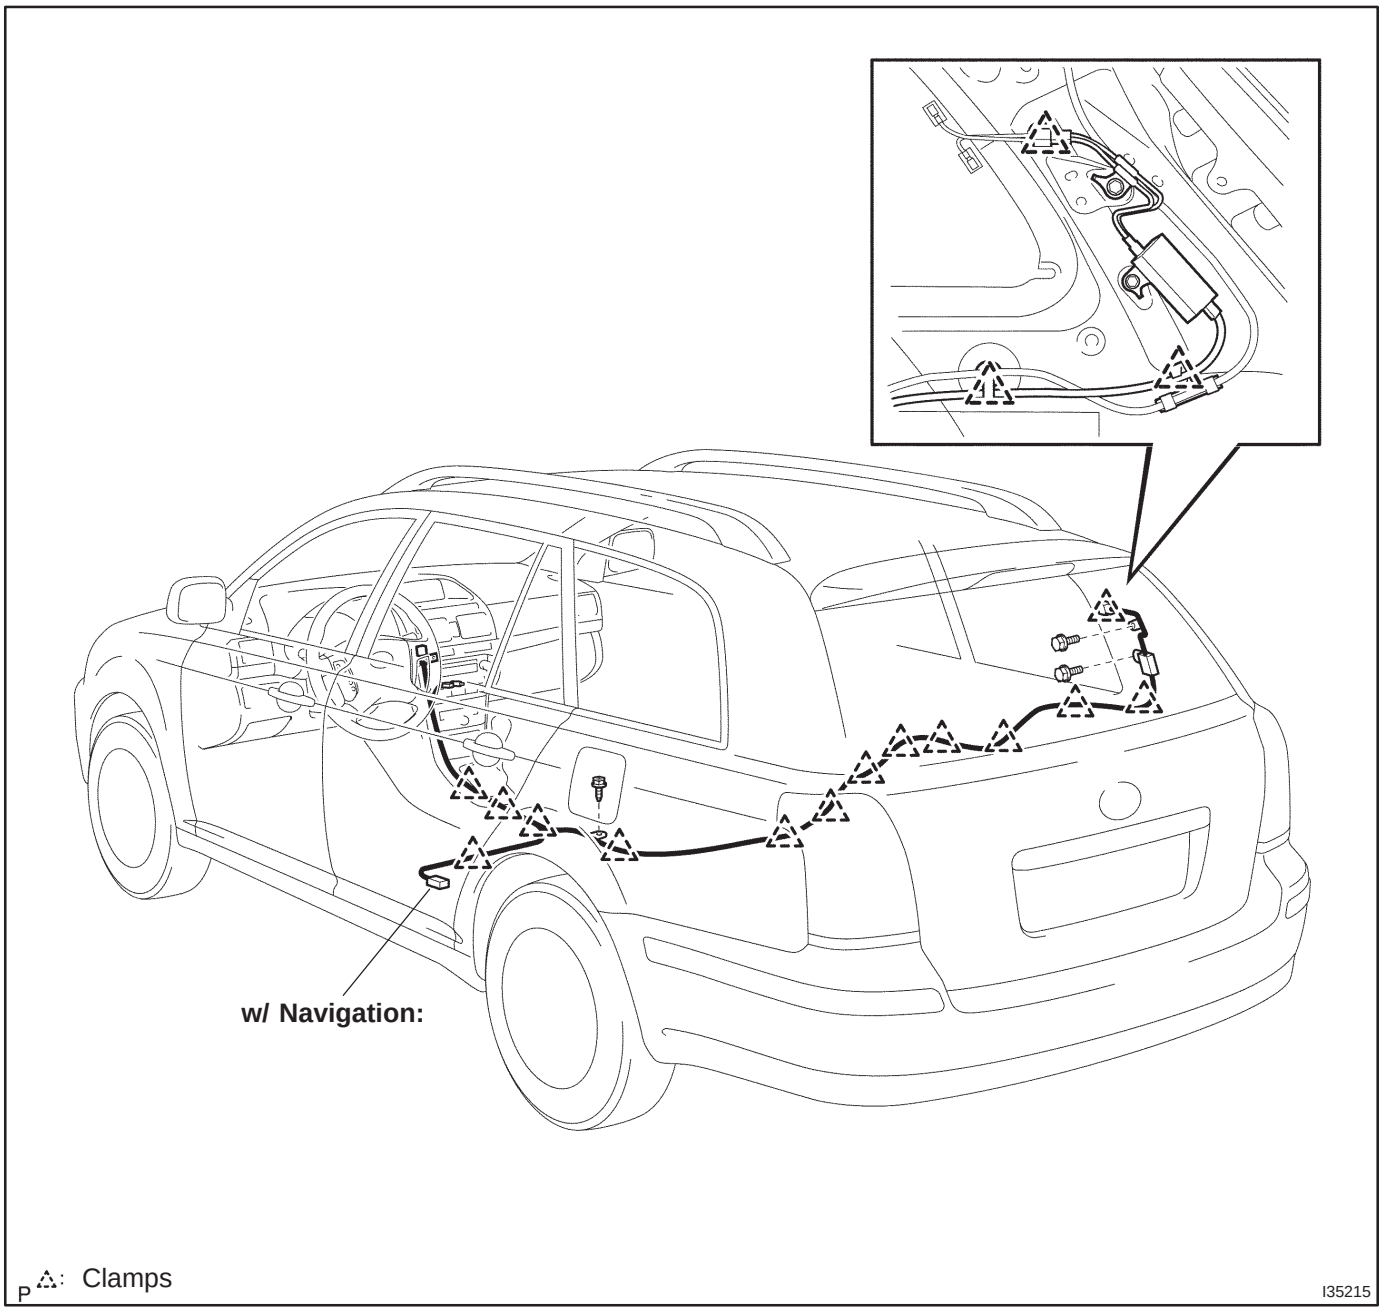
22. REMOVE REAR SEATBACK ASSY (See page 40/60 FOLDING 72–27, UNITED FIXED 72–32)

23. REMOVE FRONT SEAT ASSY RH (See page POWER SEAT 72–11, MANUAL SEAT 72–16)

AMPLIFIER ANTENNA ASSY (WAGON MODELS)

670SD–02

REPLACEMENT



1. DISCONNECT BATTERY NEGATIVE TERMINAL (See page 60–1)
2. REMOVE INSTRUMENT CLUSTER FINISH PANEL GARNISH NO.2 (See page 71–11)
3. REMOVE INSTRUMENT PANEL REGISTER ASSY CTR (W/ NAVIGATION SYSTEM) (See page 67–6)
4. REMOVE SHIFT LEVER KNOB SUB–ASSY (M/T TRANSAXLE) (See page 41–11)
5. REMOVE CONSOLE PANEL SUB–ASSY UPPER (See page 71–11)
6. REMOVE RADIO RECEIVER ASSEMBLY W/BRACKET (See page 67–5)
7. REMOVE CONSOLE BOX ASSY RR (See page 71–11)
8. REMOVE HEATER TO REGISTER DUCT NO.2 (See page 71–11)
9. REMOVE FRONT SEAT ASSY RH (See page POWER SEAT 72–11, MANUAL SEAT 72–16)
10. REMOVE FRONT DOOR SCUFF PLATE RH (See page 76–36)
11. REMOVE REAR DOOR SCUFF PLATE RH (See page 76–36)
12. REMOVE COWL SIDE TRIM BOARD RH (See page 76–36)
13. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page 76–36)
14. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page 76–36)
15. REMOVE REAR SEAT CUSHION ASSEMBLY (See page 40/60 FOLDING FLIP–UP CUSHION72–21, 40/60 FOLDING 72–27)
16. REMOVE REAR SEATBACK ASSY (See page 40/60 FOLDING FLIP–UP CUSHION72–21, 40/60 FOLDING 72–27)
17. REMOVE REAR SIDE SEAT BACK ASSY RH (See page 40/60 FOLDING FLIP–UP CUSHION72–21, 40/60 FOLDING 72–27)
18. REMOVE TONNEAU COVER ASSY
19. REMOVE BACK DOOR WEATHERSTRIP (See page 76–54)
20. REMOVE DECK BOARD SUB–ASSY (See page 76–54)
21. REMOVE DECK FLOOR BOX REAR (See page 76–54)
22. REMOVE DECK FLOOR BOX FRONT (See page 76–54)
23. REMOVE DECK FLOOR BOX RH (See page 76–54)
24. REMOVE REAR FLOOR FINISH PLATE (See page 76–54)
25. REMOVE DECK TRIM SIDE BOARD RH (See page 76–54)
26. REMOVE ROOF SIDE GARNISH INNER RH (See page 76–54)
27. REMOVE FLOOR CARPET ASSY FRONT

28. REMOVE AMPLIFIER ANTENNA ASSY

(a) Disconnect the connectors.

(b) w/ Navigation:
Remove the 3 bolts, nut and screw.
w/o Navigation:
Remove the 3 bolts and nut.

(c) w/ Navigation:
Remove the 15 clamps and the amplifier antenna assy.
w/o Navigation:
Remove the 14 clamps and the amplifier antenna assy.

29. INSTALL AMPLIFIER ANTENNA ASSY

(a) Install the 3 bolts.
Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)

(b) w/ Navigation:
Install the nut and screw.
w/o Navigation:
Install the nut.

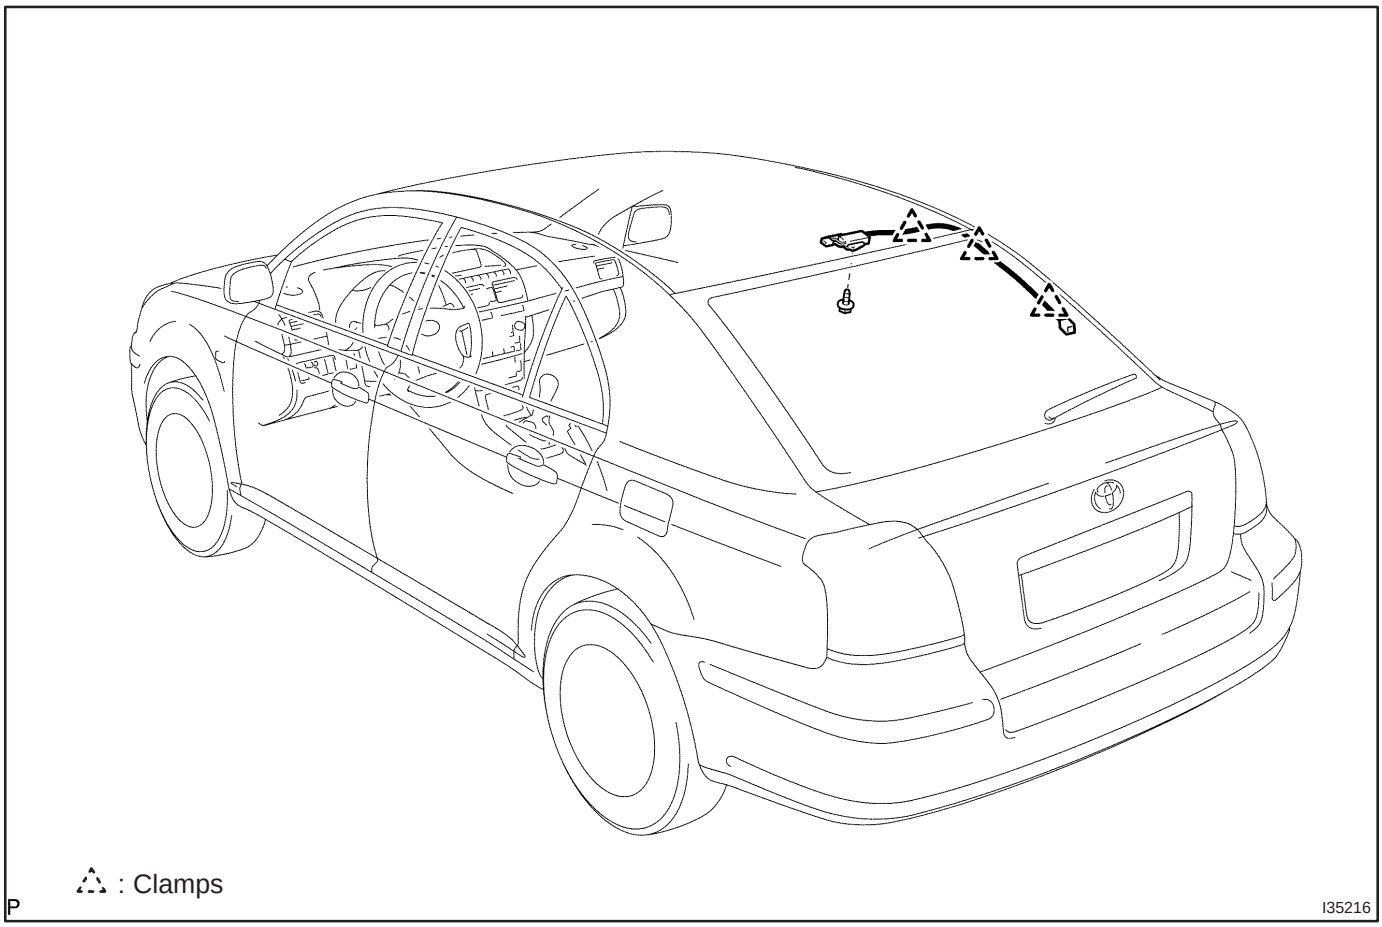
(c) w/ Navigation:
Install the 15 clamps and the amplifier antenna assy.
w/o Navigation:
Install the 14 clamps and the amplifier antenna assy.

(d) Connect the connectors.

30. INSTALL REAR SEATBACK ASSY
(See page 40/60 FOLDING FLIP–UP CUSHION72–21, 40/60 FOLDING 72–27)

31. REMOVE FRONT SEAT ASSY RH (See page POWER SEAT 72–11, MANUAL SEAT 72–16)

AMPLIFIER ANTENNA ASSY (LIFTBACK MODELS)



670SE–01

REPLACEMENT

1. REMOVE ROOF HEADLINING ASSY (See page 76–45)

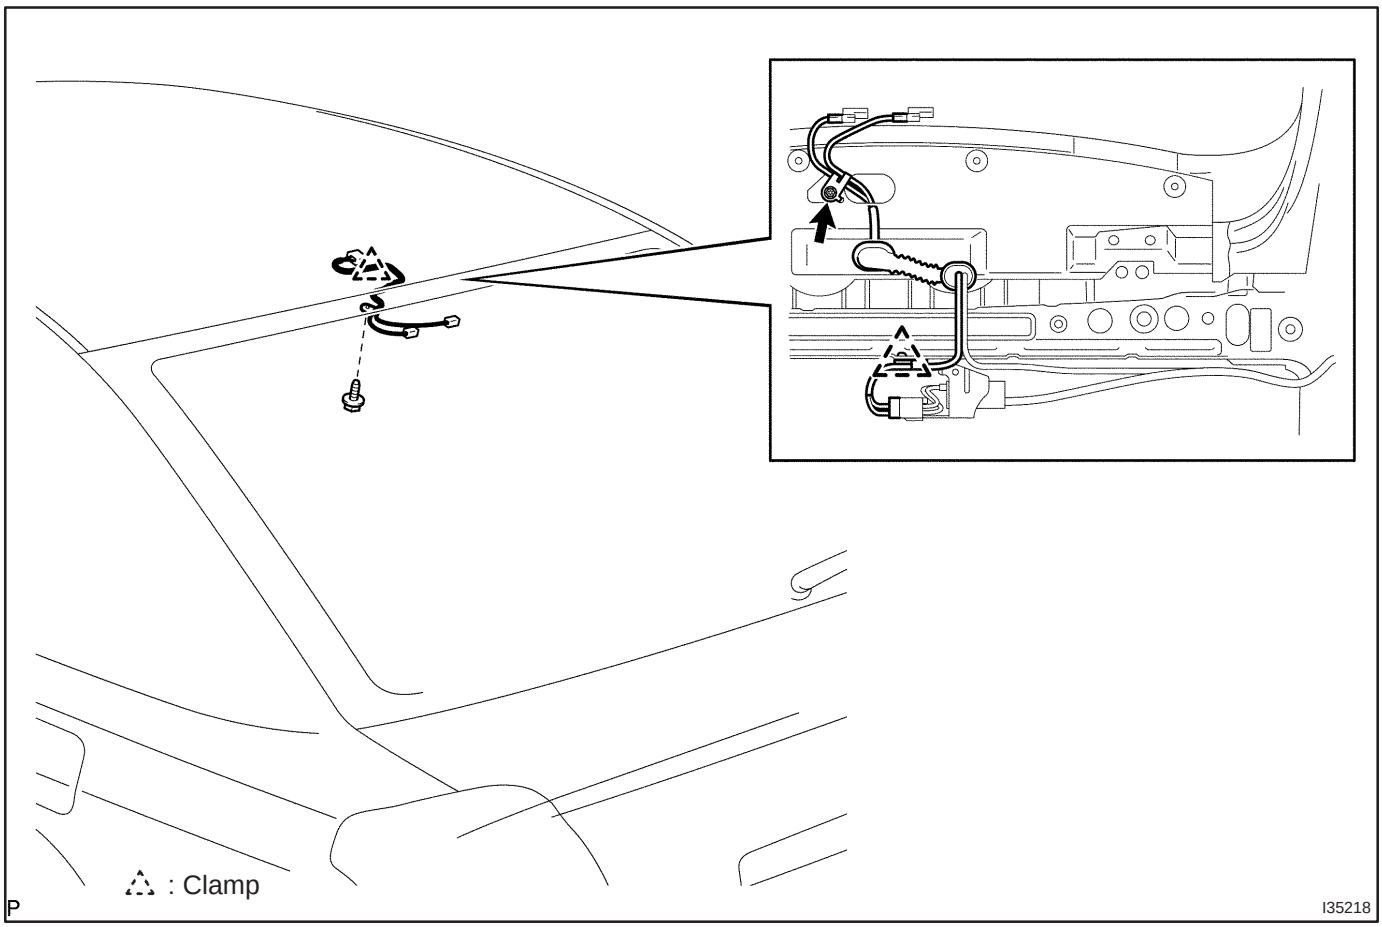
2. REMOVE AMPLIFIER ANTENNA ASSY

(a) Disconnect the connectors.
(b) Remove the bolt.
(c) Remove the 3 clamps and the amplifier antenna assy.

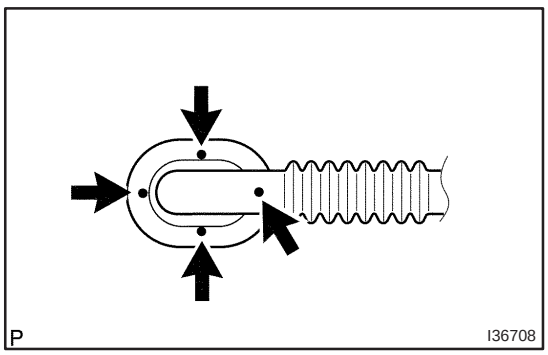
3. INSTALL AMPLIFIER ANTENNA ASSY

(a) Install the bolt.
Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)
(b) Install the 3 clamps and the amplifier antenna assy.
(c) Disconnect the connectors.

4. INSTALL ROOF HEADLINING ASSY (See page 76–45)



ANTENNA CORD SUB–ASSY



670SF–01

REPLACEMENT

1. **REMOVE ROOF HEADLINING ASSY (See page 76–45)**
2. **REMOVE BACK DOOR TRIM PANEL ASSY UPPER (See page 75–40)**
3. **REMOVE ANTENNA CORD SUB–ASSY**

(a) Disconnect the connectors.
(b) Remove the bolt.
(c) Remove the clamp and draw out the antenna cord sub–assy from the interior and the back door.

4. **INSTALL ANTENNA CORD SUB–ASSY**

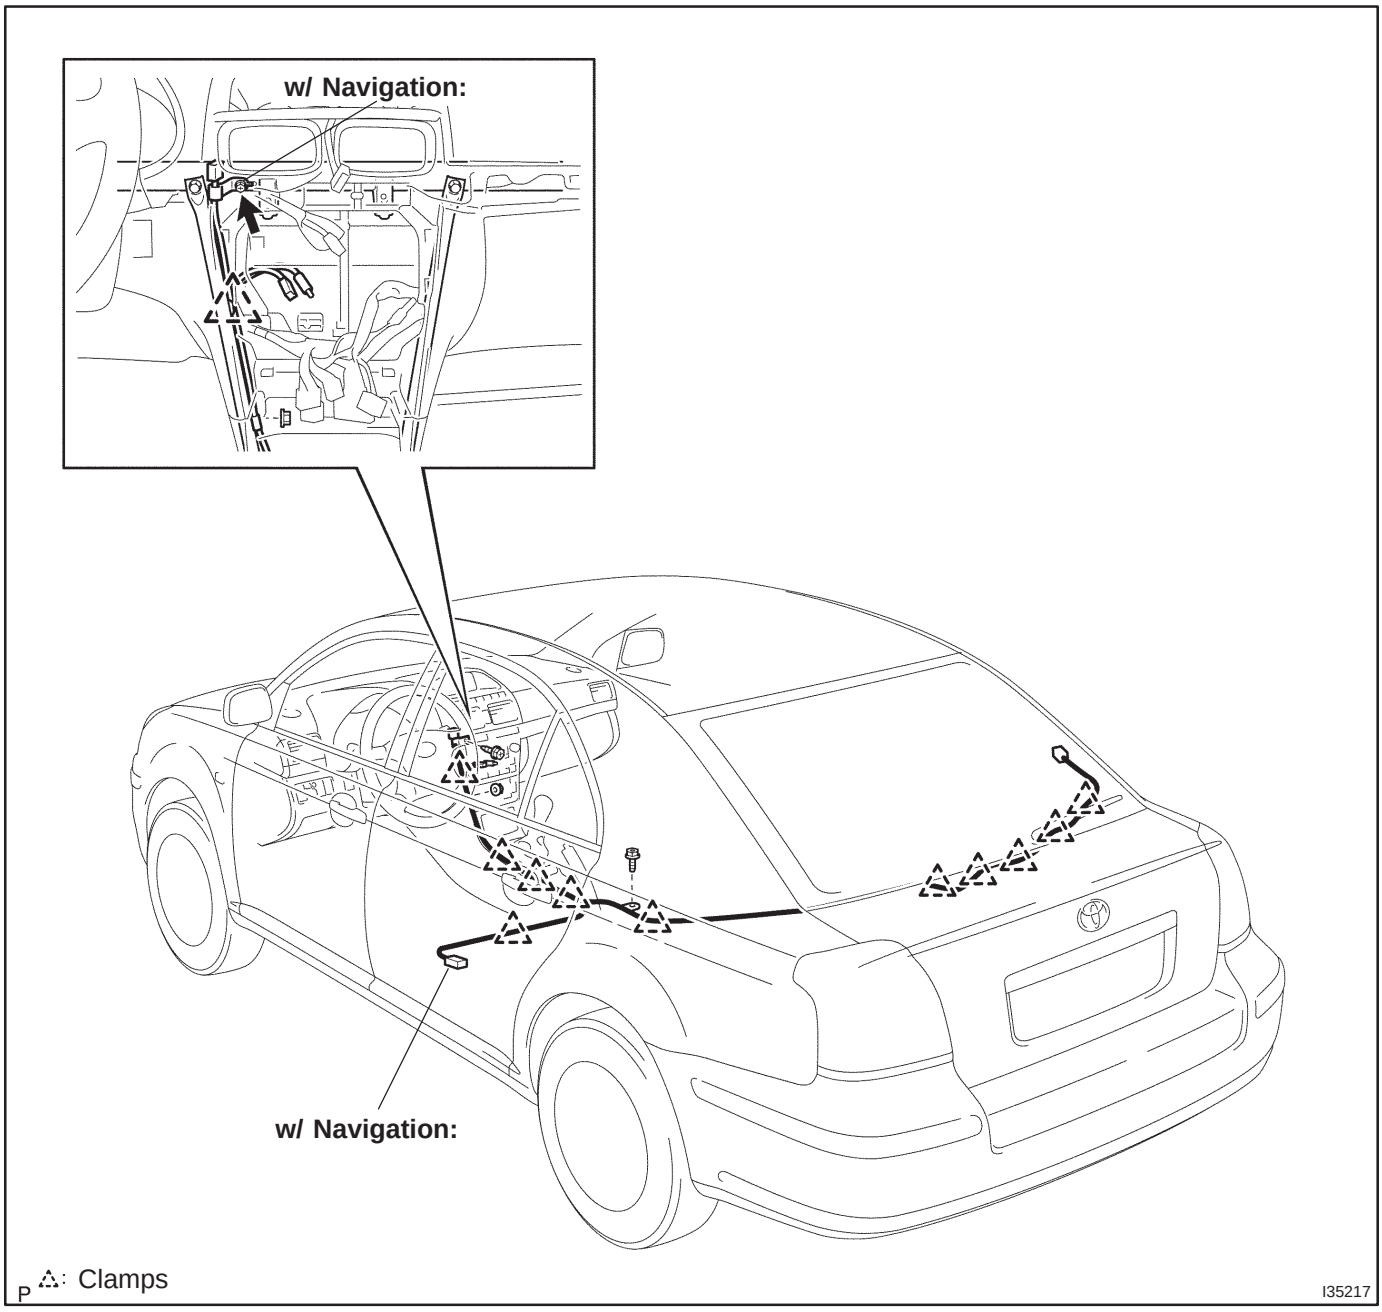
(a) Press the 4 points of the grommet shown in the illustration, and install the antenna cord sub–assy.
(b) Install the bolt.
Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)
(c) Connect the connectors.

5. **INSTALL ROOF HEADLINING ASSY (See page 76–45)**

ANTENNA CORD SUB–ASSY NO.3

670SG–02

REPLACEMENT



1. DISCONNECT BATTERY NEGATIVE TERMINAL (See page 60–1)
2. REMOVE INSTRUMENT CLUSTER FINISH PANEL GARNISH NO.2 (See page 71–11)
3. REMOVE INSTRUMENT PANEL REGISTER ASSY CTR (W/ NAVIGATION SYSTEM) (See page 67–6)
4. REMOVE SHIFT LEVER KNOB SUB–ASSY (M/T TRANSAXLE) (See page 41–11)
5. REMOVE CONSOLE PANEL SUB–ASSY UPPER (See page 71–11)
6. REMOVE RADIO RECEIVER ASSEMBLY W/BRACKET (See page 67–5)
7. REMOVE CONSOLE BOX ASSY RR (See page 71–11)
8. REMOVE HEATER TO REGISTER DUCT NO.2 (See page 71–11)
9. REMOVE FRONT DOOR SCUFF PLATE RH (See page 76–36)
10. REMOVE REAR DOOR SCUFF PLATE RH (See page 76–36)
11. REMOVE COWL SIDE TRIM BOARD RH (See page 76–36)
12. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page 76–36)
13. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page 76–36)
14. REMOVE REAR SEAT CUSHION ASSEMBLY
    (See page 40/60 FOLDING FLIP–UP CUSHION 72–21, 40/60 FOLDING 72–27)
15. REMOVE REAR SEATBACK ASSY
    (See page 40/60 FOLDING FLIP–UP CUSHION 72–21, 40/60 FOLDING 72–27)
16. REMOVE REAR SIDE SEAT BACK ASSY RH
    (See page 40/60 FOLDING FLIP–UP CUSHION 72–21, 40/60 FOLDING 72–27)
17. REMOVE PACKAGE TRAY TRIM PANEL ASSY (See page 76–45)
18. REMOVE REAR FLOOR FINISH PLATE (See page 76–45)
19. REMOVE DECK TRIM SIDE PANEL ASSY RH (See page 76–45)
20. REMOVE ROOF SIDE GARNISH INNER RH (See page 76–45)
21. REMOVE FRONT SEAT ASSY RH (See page POWER SEAT 72–11, MANUAL SEAT 72–16)
22. REMOVE FLOOR CARPET ASSY FRONT

23. REMOVE ANTENNA CORD SUB–ASSY NO.3

(a) Disconnect the connectors.

(b) w/ Navigation:
Remove the bolt, nut and screw.
w/o Navigation:
Remove the bolt and nut.

(c) w/ Navigation:
Remove the 11 clamps and the antenna cord sub–assy No.3.
w/o Navigation:
Remove the 10 clamps and the antenna cord sub–assy No.3.

24. INSTALL ANTENNA CORD SUB–ASSY NO.3

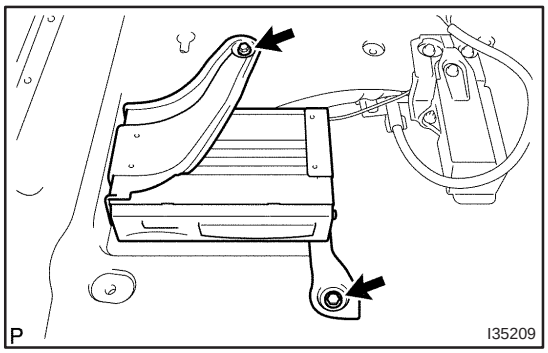
(a) Install the bolt.
Torque: 7.0 N·m (71 kgf·cm, 62 in.·lbf)

(b) w/ Navigation:
Install the nut and screw.
w/o Navigation:
Install the nut.

(c) w/ Navigation:
Install the 11 clamps and the antenna cord sub–assy No.3.
w/o Navigation:
Install the 10 clamps and the antenna cord sub–assy No.3.

25. INSTALL REAR SEATBACK ASSY
(See page 40/60 FOLDING FLIP–UP CUSHION 72–21, 40/60 FOLDING 72–27)

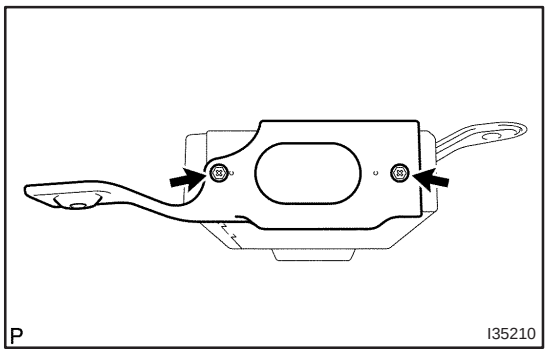
26. INSTALL FRONT SEAT ASSY RH (See page POWER SEAT 72–11, MANUAL SEAT 72–16)



NAVIGATION ECU

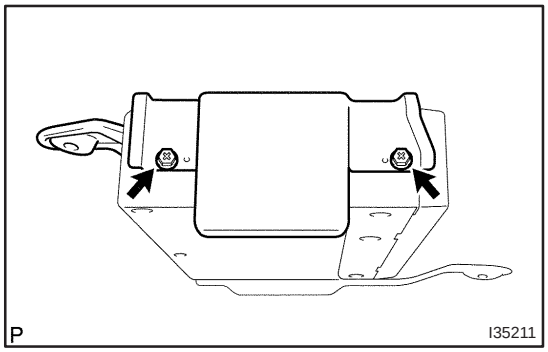
670SH–02

REPLACEMENT



1. **DISCONNECT BATTERY NEGATIVE TERMINAL (See page 60–1)**
2. **REMOVE FRONT SEAT ASSY LH (See page POWER SEAT 72–11, MANUAL SEAT 72–16)**
3. **REMOVE NAVIGATION ECU COVER**

(a) Remove the navigation ECU cover (Front side).
(b) Remove the 3 clips and the navigation ECU cover.



4. **REMOVE NAVIGATION COMPUTER W/BRACKET**

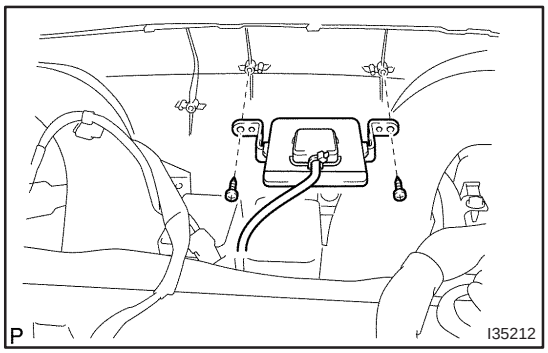
(a) Remove the 2 bolts.
(b) Disconnect the connectors and remove the navigation computer w/ bracket.

5. **REMOVE DISC PLAYER BRACKET NO.2**

(a) Remove the 2 screws and disc player bracket No.2.

6. **REMOVE DISC PLAYER BRACKET NO.3**

(a) Remove the 2 screws and disc player bracket No.3.



7. **REMOVE NAVIGATION ECU**
8. **INSTALL FRONT SEAT ASSY LH (See page POWER SEAT 72–11, MANUAL SEAT 72–16)**

NAVIGATION ANTENNA ASSY

670SI–02

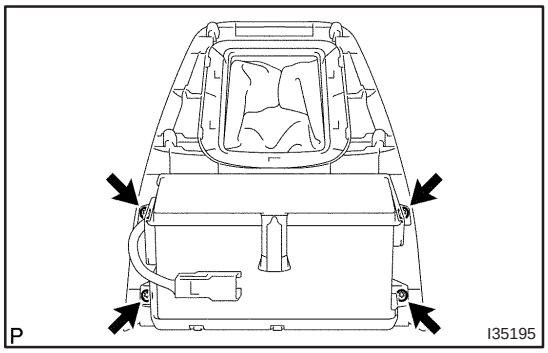
REPLACEMENT

1. **DISCONNECT BATTERY NEGATIVE TERMINAL (See page 60–1)**
2. **REMOVE INSTRUMENT PANEL SUB–ASSY UPPER W/INSTR PNL PASS L/DOOR AIR BAG ASSY (See page 71–11)**

3. **REMOVE NAVIGATION ANTENNA ASSY**

(a) Disconnect the connector.

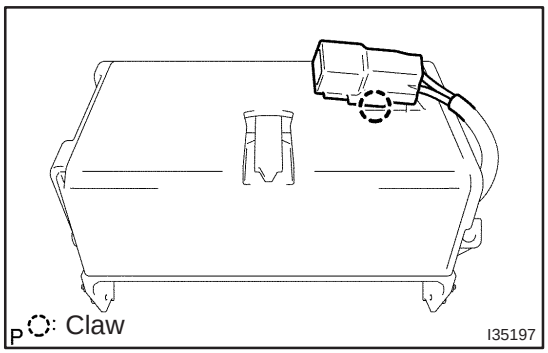
(b) Remove the 2 screws and navigation antenna assy.



4. **INSTALL INSTRUMENT PANEL SUB–ASSY UPPER W/INSTR PNL PASS L/DOOR AIR BAG ASSY (See page 71–11)**

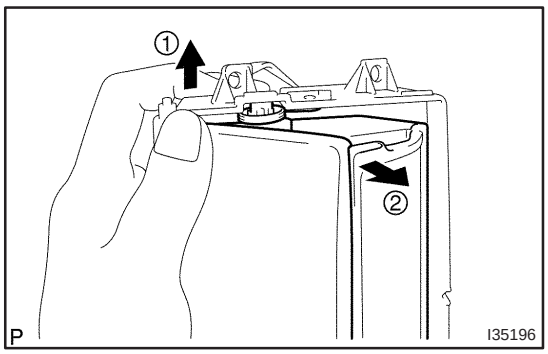
CIGARETTE LIGHTER ASSY

670SJ–01



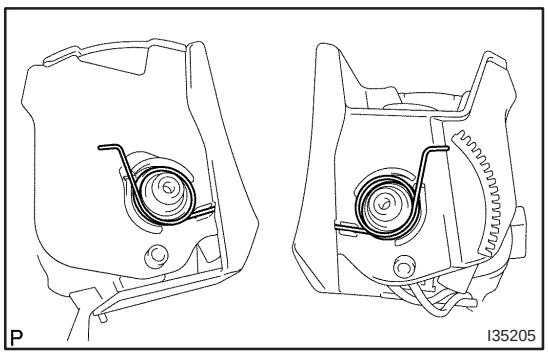
REPLACEMENT

1. REMOVE CONSOLE PANEL SUB–ASSY UPPER (See page 71–11)



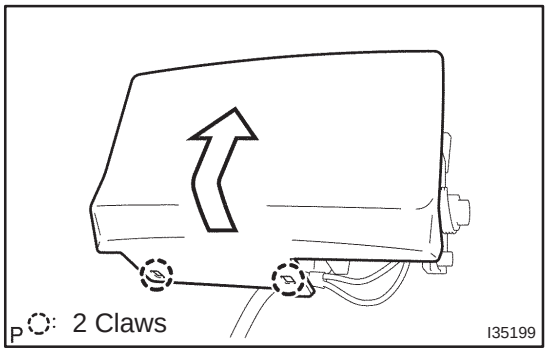
2. REMOVE FRONT ASH RECEPTACLE ASSY

(a) Using a torx socket wrench (T20), remove the 4 screws and front ash receptacle assy.

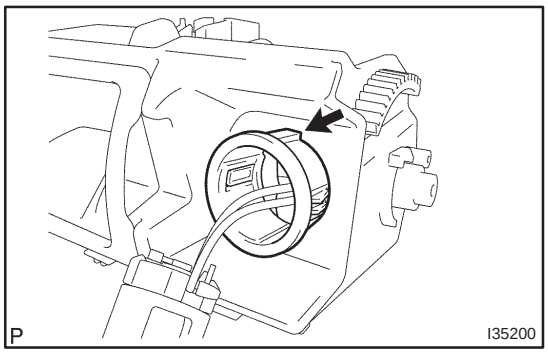


3. REMOVE FRONT ASH RECEPTACLE RETAINER SUB–ASSY

(a) Disengage the claw and disconnect the connector.

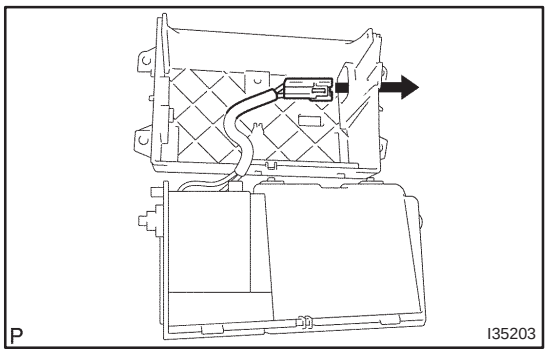


(b) Push up the corner of the outer case open and remove the retainer assy as shown in the illustration.

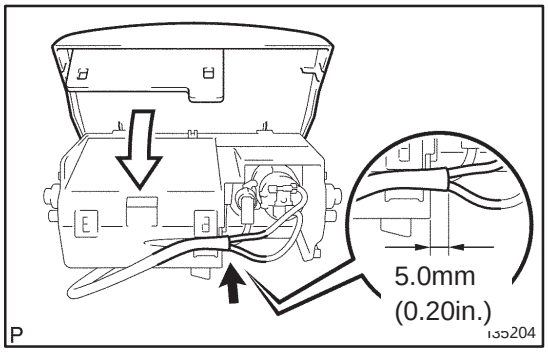


4. REMOVE CIGARETTE LIGHTER ASSY

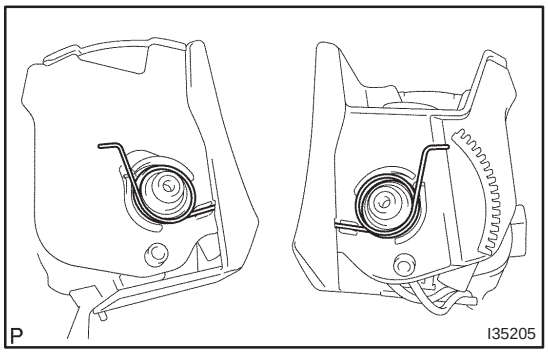
(a) Remove the 2 springs.



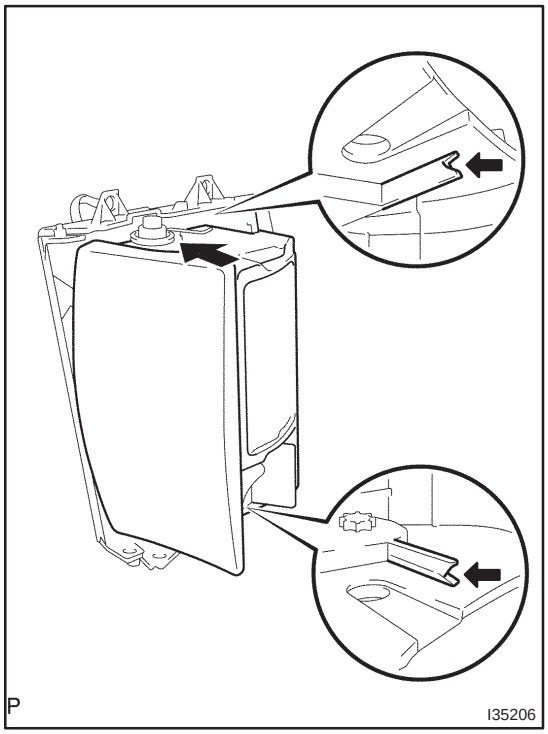
(b) Disengage the 2 claws and remove the door.
(c) Push out the cigarette lighter housing to the room side.
(d) Push out the cigarette lighter ring w/ wire harness to the room side.



5. INSTALL CIGARETTE LIGHTER ASSY

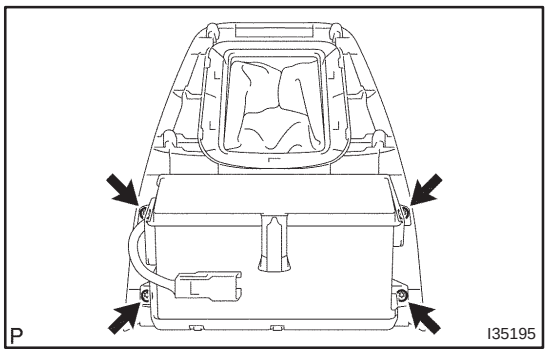


(a) Align the claws of the cigarette lighter ring with the notches of the cigarette lighter box to fix the cigarette lighter w/ wire harness.
(b) Push the cigarette lighter housing to the out side.



(c) Install the wire harness as shown in the illustration.

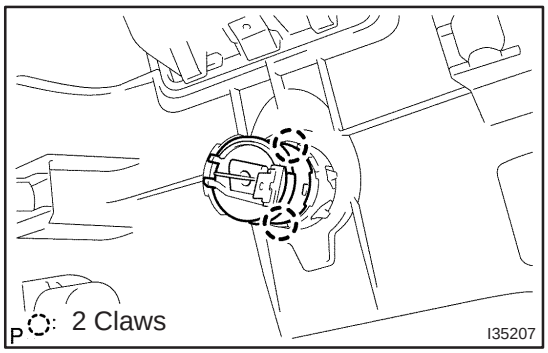
(d) Place the wire harness in the position shown in the illustration and install the door cover.



(e) Install the 2 springs.

(f) Make sure that the 2 springs are hooked on the claws and install the retainer assy.

(g) Connect the connecter.

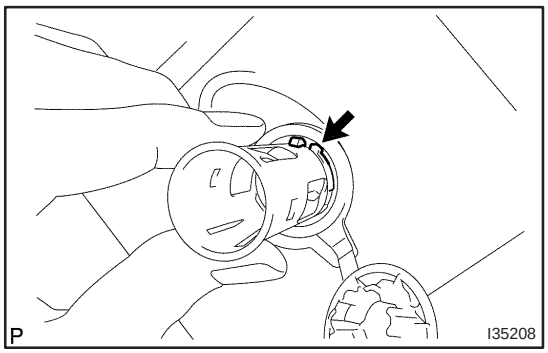


(h) Using a torx socket wrench (T20), install the 4 screws and front ash receptacle.

POWER POINT SOCKET ASSY

670SK–01

REPLACEMENT



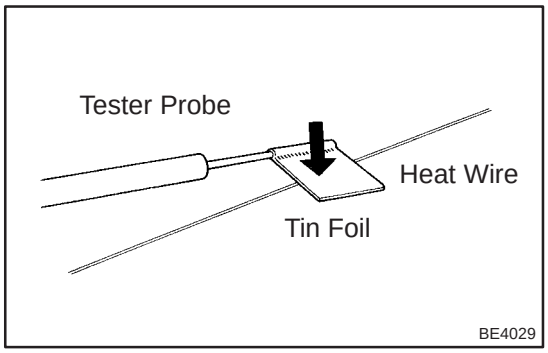
1. REMOVE FLOOR SHIFT SHIFT LEVER KNOB SUB–ASSY (M/T TRANSAXLE) (See page 41–11)
2. REMOVE CONSOLE PANEL SUB–ASSY UPPER (See page 71–11)
3. REMOVE CONSOLE PANEL SUB–ASSY LOWER (See page 71–11)
4. REMOVE CONSOLE BOX ASSY RR (See page 71–11)
5. REMOVE CONSOLE REAR END PANEL (See page 71–11)

6. REMOVE POWER POINT SOCKET ASSY

(a) Disengage the 2 claws and push out the power point socket to the room side.

(b) Remove the power point socket cover from the rear consol panel.

7. INSTALL POWER POINT SOCKET ASSY

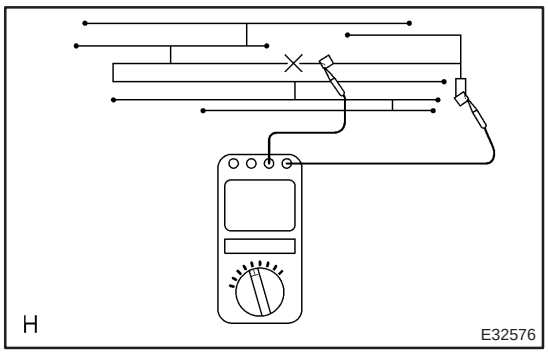


(a) Install the power point socket cover to the rear consol panel.

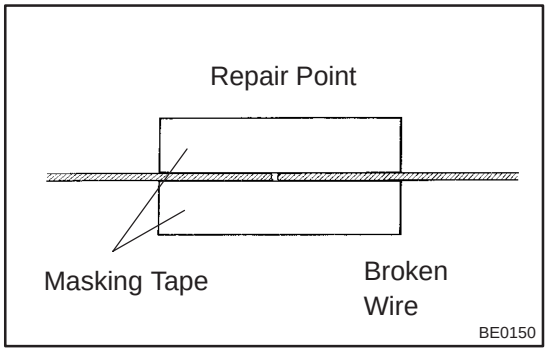
(b) Align the claw of power point socket with the one of the socket cover, and push in the power point socket.

WINDOW GLASS (ANTENNA WIRE)

670SL–01



REPAIR

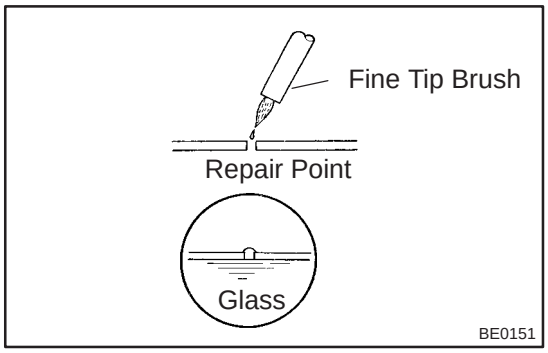


1. INSPECT WINDOW GLASS (ANTENNA WIRE)

NOTICE:

When cleaning the glass, wipe it in the direction of the wire with a soft and dry cloth. Take care not to damage the wire. Do not use detergents or glass cleaners with abrasive ingredients. When measuring voltage, wind a piece of tin foil around the tip of the tester probe and press the foil against the wire with your finger, as shown in the illustration.

(a) Check the continuity, at the center of each antenna wire, as shown in the illustration.



2. REPAIR WINDOW GLASS (ANTENNA WIRE)

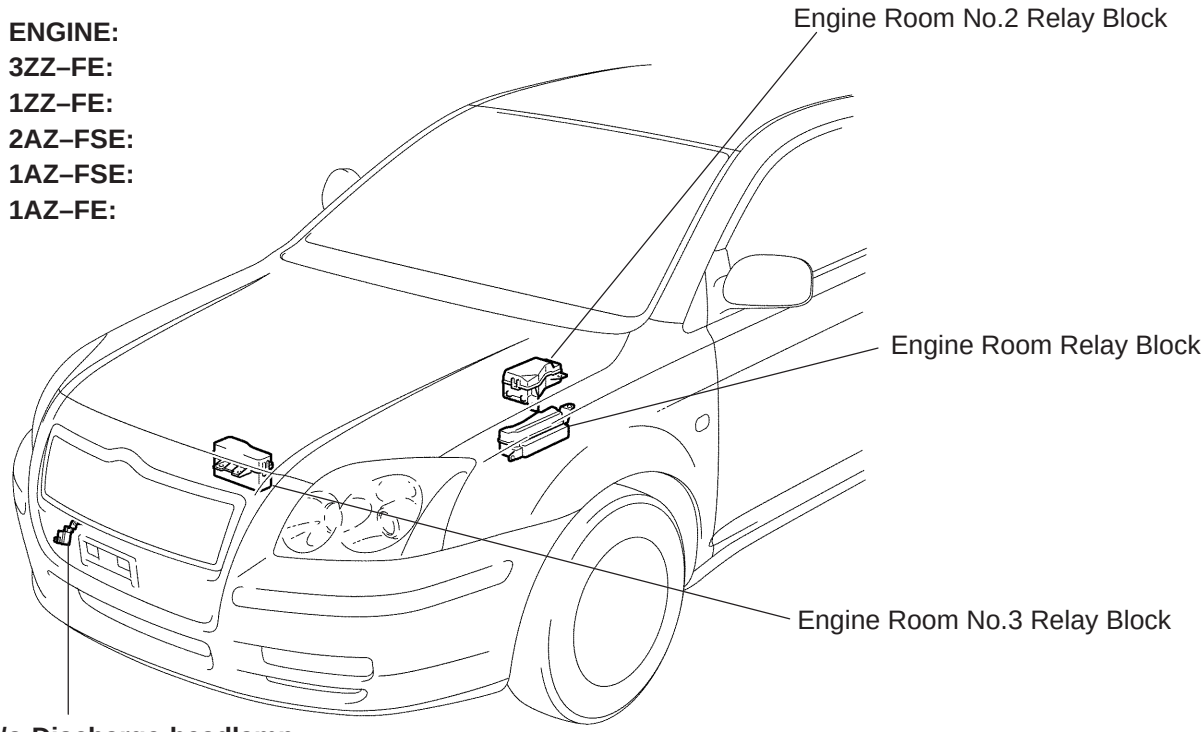
(a) Clean the broken wire tips with a grease, wax and silicone remover.

(b) Place the masking tape along both sides of the wire to be repaired.

(c) Thoroughly mix the repair agent (Dupont paste No.4817).

(d) Using a fine tip brush, apply a small amount of the mixture to the wire.

(e) After a few minutes, remove the masking tape.



(f) Do not repair the defogger wire for at least 24 hours afterwards.

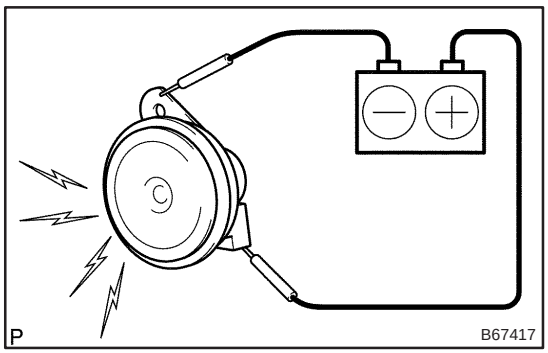
PROBLEM SYMPTOMS TABLE

Symptom	Suspected Area	See Page
Horn does not sound	1. Horn button switch	–
	2. High pitched horn	69–3
	3. Low pitched horn	69–3
	4. HORN fuse	
	5. HORN relay	69–3
	6. Wire harness	–

69066–02

INSPECTION



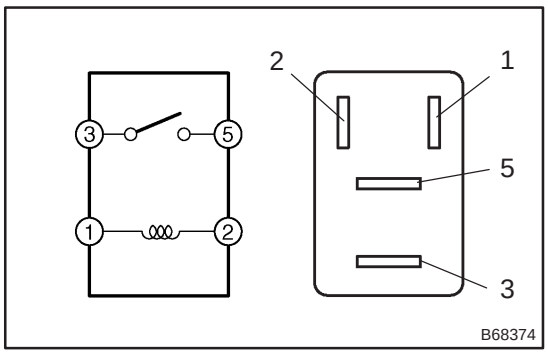
1. INSPECT LOW PITCHED HORN ASSY

(a) Check operation of the horn.

Standard:

MeasurementCondition	SpecifiedCondition
Battery positive (+) → Terminal 1 Battery positive (–) → Horn body	Horn sounds

If the result is not as specified, replace the horn assy.



2. INSPECT HIGH PITCHED HORN ASSY

(a) Check operation of the horn.

Standard:

MeasurementCondition	SpecifiedCondition
Battery positive (+) → Terminal 1 Battery positive (–) → Horn body	Horn sounds

If the result is not as specified, replace the horn assy.

3. INSPECT HORN RELAY ASSY

(a) Remove the HORN relay from the engine room R/B No. 2.

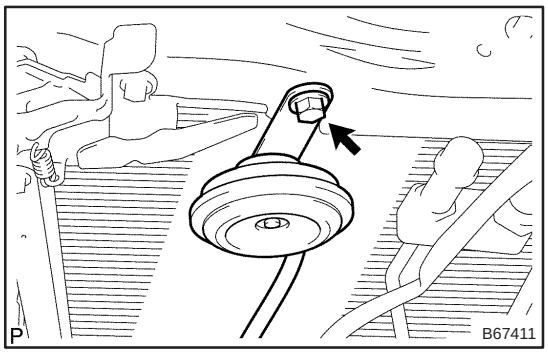
(b) Check the horn relay resistance.

Standard:

TesterConnection	SpecifiedCondition
3 – 5	10 kΩ or higher
	Below 1 Ω (When battery voltage is applied to terminals 1 and 2)

If the result is not as specified, replace the relay assy.

LOW PITCHED HORN ASSY



69068–02

REPLACEMENT

1. REMOVE LOW PITCHED HORN ASSY

(a) Disconnect the connector.

(b) Remove the bolt and horn.

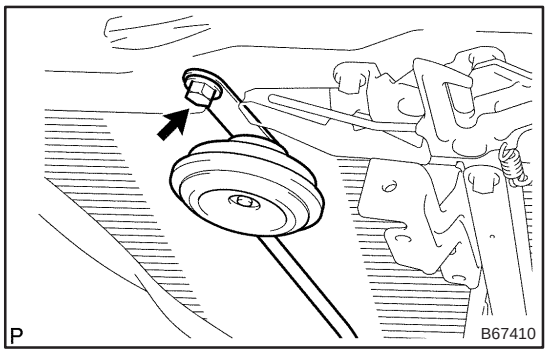
2. INSTALL LOW PITCHED HORN ASSY

(a) Place the stay onto the baffle part in the radiator support upper, and then install the horn with the bolt.

Torque: 20 N·m (204 kgf·cm, 15 ft·lbf)

(b) Connect the connector.

HIGH PITCHED HORN ASSY



69067–02

REPLACEMENT

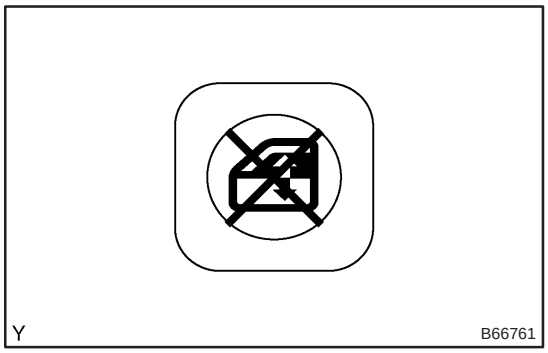
1. REMOVE HIGH PITCHED HORN ASSY

(a) Disconnect the connector.

(b) Remove the bolt and horn.

2. INSTALL HIGH PITCHED HORN ASSY

(a) Place the stay onto the baffle part in the radiator support upper, and then install the horn with the bolt.



Torque: 20 N·m (204 kgf·cm, 15 ft·lbf)

(b) Connect the connector.

POWER WINDOW CONTROL SYSTEM

700S7–01

ON–VEHICLE INSPECTION

1. CHECK WINDOW LOCK SWITCH

(a) Check that the power windows except the driver side power window operation is disabled when the window lock switch of the power window master switch is pressed.

(b) Check that the power windows can be operated when the window lock switch is pressed again.

2. CHECK MANUAL UP/DOWN FUNCTION

(a) Check that the driver side window switch of the power window master switch can operate the driver side power window as follows:

Standard:

Condition	Master Switch	Switch Operation	Power Window
Ignition switch ON	Driver side	Halfway pulled UP	UP (Closed)
		Halfway pushed DOWN	DOWN (Open)

(b) Check that each power window regulator switch can operate each power window as follows.

Standard:

Condition	Regulator Switch	Switch Operation	Power Window
• Ignition switch ON • Window lock switch OFF	Passenger side	Halfway pulled UP	UP (Closed)
		Halfway pushed DOWN	DOWN (Open)
	Rear LH	Halfway pulled UP	UP (Closed)
		Halfway pushed DOWN	DOWN (Open)
	Rear RH	Halfway pulled UP	UP (Closed)
		Halfway pushed DOWN	DOWN (Open)

3. CHECK AUTO UP/DOWN FUNCTION

(a) Check that the driver side window switch of the power window master switch can operate the driver side power window as follows:

Standard:

Condition	Master Switch	Switch Operation	Power Window
Ignition switch ON	Driver side	Fully pulled UP	AUTO UP (Fully closed)
		Fully pushed DOWN	AUTO DOWN (Fully open)

(b) Check that each power window regulator switch can operate each power window as follows:

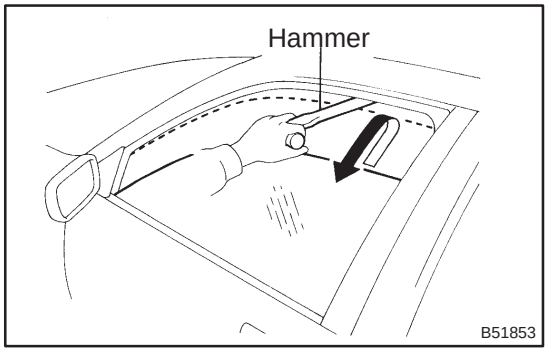
Standard:

Condition	Regulator Switch	Switch Operation	Power Window
• Ignition switch ON • Window lock switch OFF	Passenger side	Fully pulled UP	AUTO UP (Fully closed)
		Fully pushed DOWN	AUTO DOWN (Fully open)
	Rear LH	Fully pulled UP	AUTO UP (Fully closed)
		Fully pushed DOWN	AUTO DOWN (Fully open)
	Rear RH	Fully pulled UP	AUTO UP (Fully closed)
		Fully pushed DOWN	AUTO DOWN (Fully open)

4. CHECK REMOTE UP/DOWN FUNCTION

(a) Check that each switch of the power window master switch can operate each power window as follows:
Standard:

Condition	Master Switch	Switch Operation	Power Window
• Ignition switch ON • Window lock switch OFF	Passenger side	Halfway pulled UP	UP (Closed)
		Halfway pushed DOWN	DOWN (Open)
	Rear LH	Halfway pulled UP	UP (Closed)
		Halfway pushed DOWN	DOWN (Open)
	Rear RH	Halfway pulled UP	UP (Closed)
		Halfway pushed DOWN	DOWN (Open)



5. CHECK REMOTE AUTO UP/DOWN FUNCTION

(a) Check that each switch of the power window master switch can operate each power window as follows:
Standard:

Condition	Master Switch	Switch Operation	Power Window
• Ignition switch ON • Window lock switch OFF	Passenger side	Fully pulled UP	AUTO UP (Fully closed)
		Fully pushed DOWN	AUTO DOWN (Fully open)
	Rear LH	Fully pulled UP	AUTO UP (Fully closed)
		Fully pushed DOWN	AUTO DOWN (Fully open)
	Rear RH	Fully pulled UP	AUTO UP (Fully closed)
		Fully pushed DOWN	AUTO DOWN (Fully open)

6. CHECK POWER WINDOW OPERATION FUNCTION AFTER IGNITION SWITCH IS TURNED OFF

(a) When both of the following conditions are fulfilled, check that the power windows can be operated even after the ignition switch is turned OFF.
- Within 45 seconds after the ignition switch is turned OFF
- The front doors are closed

7. CHECK JAM PROTECTION

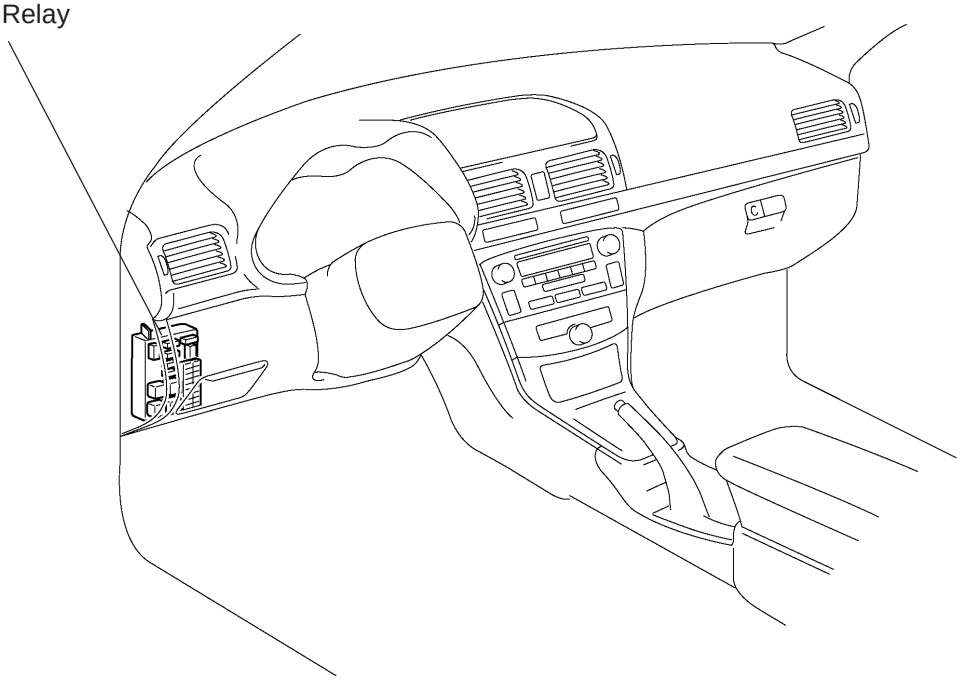
HINT:

The jam protection function prevents any part of your body from getting caught by accident between the door frame and the door glass during power window operation.

NOTICE:

If the power window motor has just been reset, raise and lower the door glass several times using MANUAL function before performing the check.

(a) Check that the door glass goes down by approx. 50 mm (1.97 in.) right when something gets caught between the door frame and the door glass during power window operation. However, when the opening between the door frame and the door glass is less than 200 mm (7.87 in.), the door glass keeps going down until the opening reaches 200 mm (7.87 in.) and stops there.



Operative conditions:
- AUTO UP
- AUTO UP function after the ignition switch is turned OFF
- MANUAL UP function after the ignition switch is turned OFF

PROBLEM SYMPTOMS TABLE

Symptom	Suspected Area	See Page
All power windows do not operate	1. Ignition switch assy 2. IG1 relay 3. Power window regulator master switch assy 4. Instrument panel J/B assy (Integration relay) 5. Wire harness	80–2 70–6 70–6 70–6 –
Only one power window does not operate	1. D–FR P/W fuse 2. P–FR P/W fuse 3. D–RR P/W fuse 4. P–RR P/W fuse 5. Power window regulator master switch assy 6. Power window regulator switch assy 7. Door window regulator sub–assy (Power window motor) 8. Wire harness	– – – – 70–6 70–6 70–6 –
AUTO UP/DOWN function does not operate	1. Power window regulator master switch assy 2. Power window regulator switch assy 3. Door window regulator sub–assy (Power window motor)	70–6 70–6 70–6
Window lock system does not operate	1. Power window master switch assy	70–6
Window cannot be operated after ignition switch is turned OFF	1. Front door courtesy lamp switch assy 2. Instrument panel J/B assy (Integration relay)	70–6 70–6

700SA–01

INSPECTION

1. INSPECT POWER WINDOW REGULATOR MASTER SWITCH ASSY

(a) Inspect the resistance between the terminals of the switch, as shown in the table below.

Standard:

Power window lock switch

Tester Connection	Switch Position	Specified Condition
3 (PW) – 23 (WL)	Unlock	Below 1 Ω
	Lock	10 kΩ or higher

Driver side switch (LHD models)

Tester Connection	Switch Position	Specified Condition
2 (FLU) – 3 (PW)	AUTO UP	Below 1 Ω
3 (PW) – 14 (FLA)		
2 (FLU) – 3 (PW)	MANUAL UP	Below 1 Ω
–	OFF	–
3 (PW) – 4 (FLD)	MANUAL DOWN	Below 1 Ω
3 (PW) – 4 (FLD)	AUTO DOWN	Below 1 Ω
3 (PW) – 14 (FLA)		

Driver side switch (RHD models)

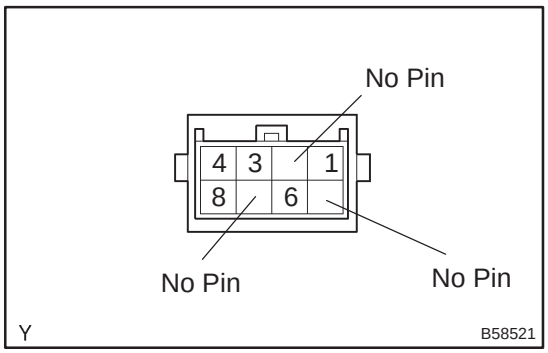
Tester Connection	Switch Position	Specified Condition
2 (FRU) – 3 (PW)	AUTO UP	Below 1 Ω
3 (PW) – 14 (FRA)		
2 (FRU) – 3 (PW)	MANUAL UP	Below 1 Ω
–	OFF	–
3 (PW) – 4 (FRD)	MANUAL DOWN	Below 1 Ω
3 (PW) – 4 (FRD)	AUTO DOWN	Below 1 Ω
3 (PW) – 14 (FRA)		

Passenger side switch (LHD models)

Tester Connection	Switch Position	Specified Condition
3 (PW) – 10 (FRU)	AUTO UP	Below 1 Ω
3 (PW) – 11 (FRA)		
3 (PW) – 10 (FRU)	MANUAL UP	Below 1 Ω
–	OFF	–
3 (PW) – 9 (FRD)	MANUAL DOWN	Below 1 Ω
3 (PW) – 9 (FRD)	AUTO DOWN	Below 1 Ω
3 (PW) – 11 (FRA)		

Passenger side switch (RHD models)

Tester Connection	Switch Position	Specified Condition
3 (PW) – 10 (FLU)	AUTO UP	Below 1 Ω
3 (PW) – 11 (FLA)		
3 (PW) – 10 (FLU)	MANUAL UP	Below 1 Ω
–	OFF	–
3 (PW) – 9 (FLD)	MANUAL DOWN	Below 1 Ω
3 (PW) – 9 (FLD)	AUTO DOWN	Below 1 Ω
3 (PW) – 11 (FLA)		



Rear LH switch

Tester Connection	Switch Position	Specified Condition
3 (PW) – 17 (RLU)	AUTO UP	Below 1 Ω
3 (PW) – 16 (RLA)		
3 (PW) – 17 (RLU)	MANUAL UP	Below 1 Ω
–	OFF	–
3 (PW) – 15 (RLD)	MANUAL DOWN	Below 1 Ω
3 (PW) – 15 (RLD)	AUTO DOWN	Below 1 Ω
3 (PW) – 16 (RLA)		

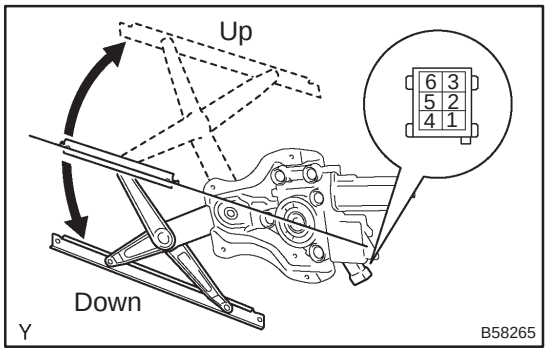
Rear RH switch

Tester Connection	Switch Position	Specified Condition
3 (PW) – 18 (RRU)	AUTO UP	Below 1 Ω
3 (PW) – 22 (RRA)		
3 (PW) – 18 (RRU)	MANUAL UP	Below 1 Ω
–	OFF	–
3 (PW) – 19 (RRD)	MANUAL DOWN	Below 1 Ω
3 (PW) – 19 (RRD)	AUTO DOWN	Below 1 Ω
3 (PW) – 22 (RRA)		

If the result is not as specified, replace the switch assy.

2. INSPECT POWER WINDOW REGULATOR SWITCH ASSY

HINT:



The passenger, rear LH and rear RH regulator switches are all the same.

(a) Check the resistance between the terminals of the switch connector, as shown in the table below.

Standard:

Tester Connection	Switch Position	Specified Condition
1 (UP) – 8 (WL)	AUTO UP	Below 1 Ω
3 (AUTO) – 8 (WL)		
1 (UP) – 8 (WL)	MANUAL UP	Below 1 Ω
–	OFF	–
6 (DOWN) – 8 (WL)	MANUAL DOWN	Below 1 Ω
3 (AUTO) – 8 (WL)	AUTO DOWN	Below 1 Ω
6 (DOWN) – 8 (WL)		

If the result is not as specified, replace the switch assy.

3. INSPECT FRONT DOOR WINDOW REGULATOR SUB–ASSY LH

(a) Inspect operation of the power window regulator.

(1) Apply battery voltage to the connector terminals.

(2) Check that the regulator smoothly operates.

Standard:

Measurement Condition		Specified Condition
Battery positive (+) → 6 Battery negative (–) → 4	Battery positive (+) → 2	Regulator moves upward
Battery positive (+) → 6 Battery negative (–) → 4	Battery positive (+) → 1	Regulator moves downward

(b) Inspect operation of the PTC inside the power window regulator motor.

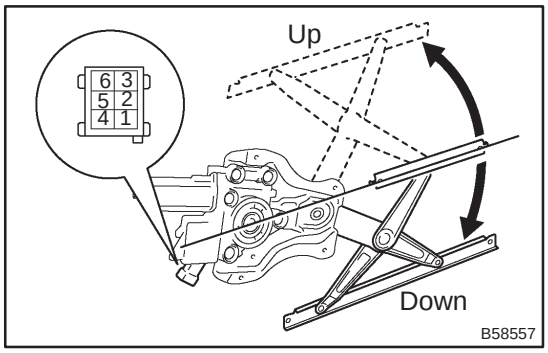
NOTICE:

The work must be performed with the power window regulator and door glass installed in the vehicle.

(1) Set an electrical tester DC 400 A probe to the wire harness of terminal 4 or 6.

NOTICE:

Match the arrow mark of the probe with the current direction.



(2) Fully close the door glass by operating the power window switch and keep the door glass there for approximately 60 seconds.

(3) Try to operate the power window past the fully closed position using the power window switch and measure the time until the electrical current changes into 1 A from 16 to 34 A (Inspection of current shut–off).

Standard: Less than 1 second

(4) Check that the door glass goes down when the power window regulator switch is pushed DOWN.

If the result is not as specified, replace the regulator sub–assy.

4. INSPECT FRONT DOOR WINDOW REGULATOR SUB–ASSY RH

(a) Inspect operation of the power window regulator.

(1) Apply battery voltage to the connector terminals.

(2) Check that the regulator smoothly operates.

Standard:

Measurement Condition		Specified Condition
Battery positive (+) → 6 Battery negative (–) → 4	Battery positive (+) → 2	Regulator moves upward
Battery positive (+) → 6 Battery negative (–) → 4	Battery positive (+) → 1	Regulator moves downward

(b) Inspect operation of the PTC inside the power window regulator motor.

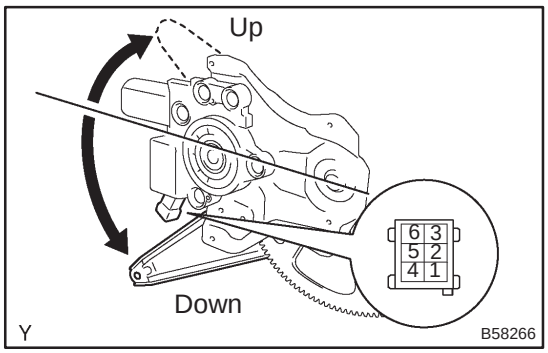
NOTICE:

The work must be performed with the power window regulator and door glass installed in the vehicle.

(1) Set an electrical tester DC 400 A probe to the wire harness of terminal 4 or 6.

NOTICE:

Match the arrow mark of the probe with the current direction.



(2) Fully close the door glass by operating the power window switch and keep the door glass there for approximately 60 seconds.

(3) Try to operate the power window past the fully closed position using the power window switch and measure the time until the electrical current changes into 1 A from 16 to 34 A (Inspection of current shut–off).

Standard: Less than 1 second

(4) Check that the door glass goes down when the power window regulator switch is pushed DOWN.

If the result is not as specified, replace the regulator sub–assy.

5. INSPECT REAR DOOR WINDOW REGULATOR SUB–ASSY LH

(a) Inspect operation of the power window regulator motor.

(1) Apply battery voltage to the connector terminals.

(2) Check that the regulator smoothly operates.

Standard:

Measurement Condition		Specified Condition
Battery positive (+) → 6 Battery negative (–) → 4	Battery positive (+) → 2	Regulator moves upward
Battery positive (+) → 6 Battery negative (–) → 4	Battery positive (+) → 1	Regulator moves downward

(b) Inspect operation of the PTC inside the power window regulator motor.

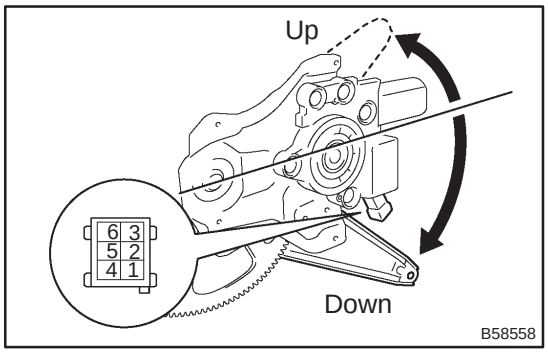
NOTICE:

The work must be performed with the power window regulator and door glass installed in the vehicle.

(1) Set an electrical tester DC 400 A probe to the wire harness of terminal 4 or 6.

NOTICE:

Match the arrow mark of the probe with the current direction.



(2) Fully close the door glass by operating the power window switch and keep the door glass there for approximately 60 seconds.

(3) Try to operate the power window past the fully closed position using the power window switch and measure the time until the electrical current changes into 1 A from 16 to 34 A (Inspection of current shut–off).

Standard: Less than 1 second

(4) Check that the door glass goes down when the power window regulator switch is pushed DOWN.

If the result is not as specified, replace the regulator sub–assy.

6. INSPECT REAR DOOR WINDOW REGULATOR SUB–ASSY RH

(a) Inspect operation of the power window regulator.

(1) Apply battery voltage to the connector terminals.

(2) Check that the regulator smoothly operates.

Standard:

Measurement Condition		Specified Condition
Battery positive (+) → 6 Battery negative (–) → 4	Battery positive (+) → 2	Regulator moves upward
Battery positive (+) → 6 Battery negative (–) → 4	Battery positive (+) → 1	Regulator moves downward

(b) Inspect operation of the PTC inside the power window regulator motor.

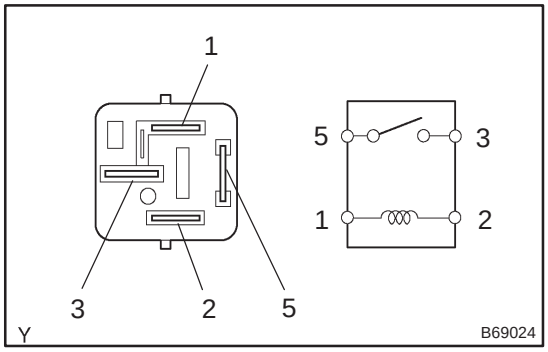
NOTICE:

The work must be performed with the power window regulator and door glass installed in the vehicle.

(1) Set a electrical tester DC 400 A probe to the wire harness of terminal 4 or 6.

NOTICE:

Match the arrow mark of the probe with the current direction.



(2) Fully close the door glass by operating the power window switch and keep the door glass there for approximately 60 seconds.

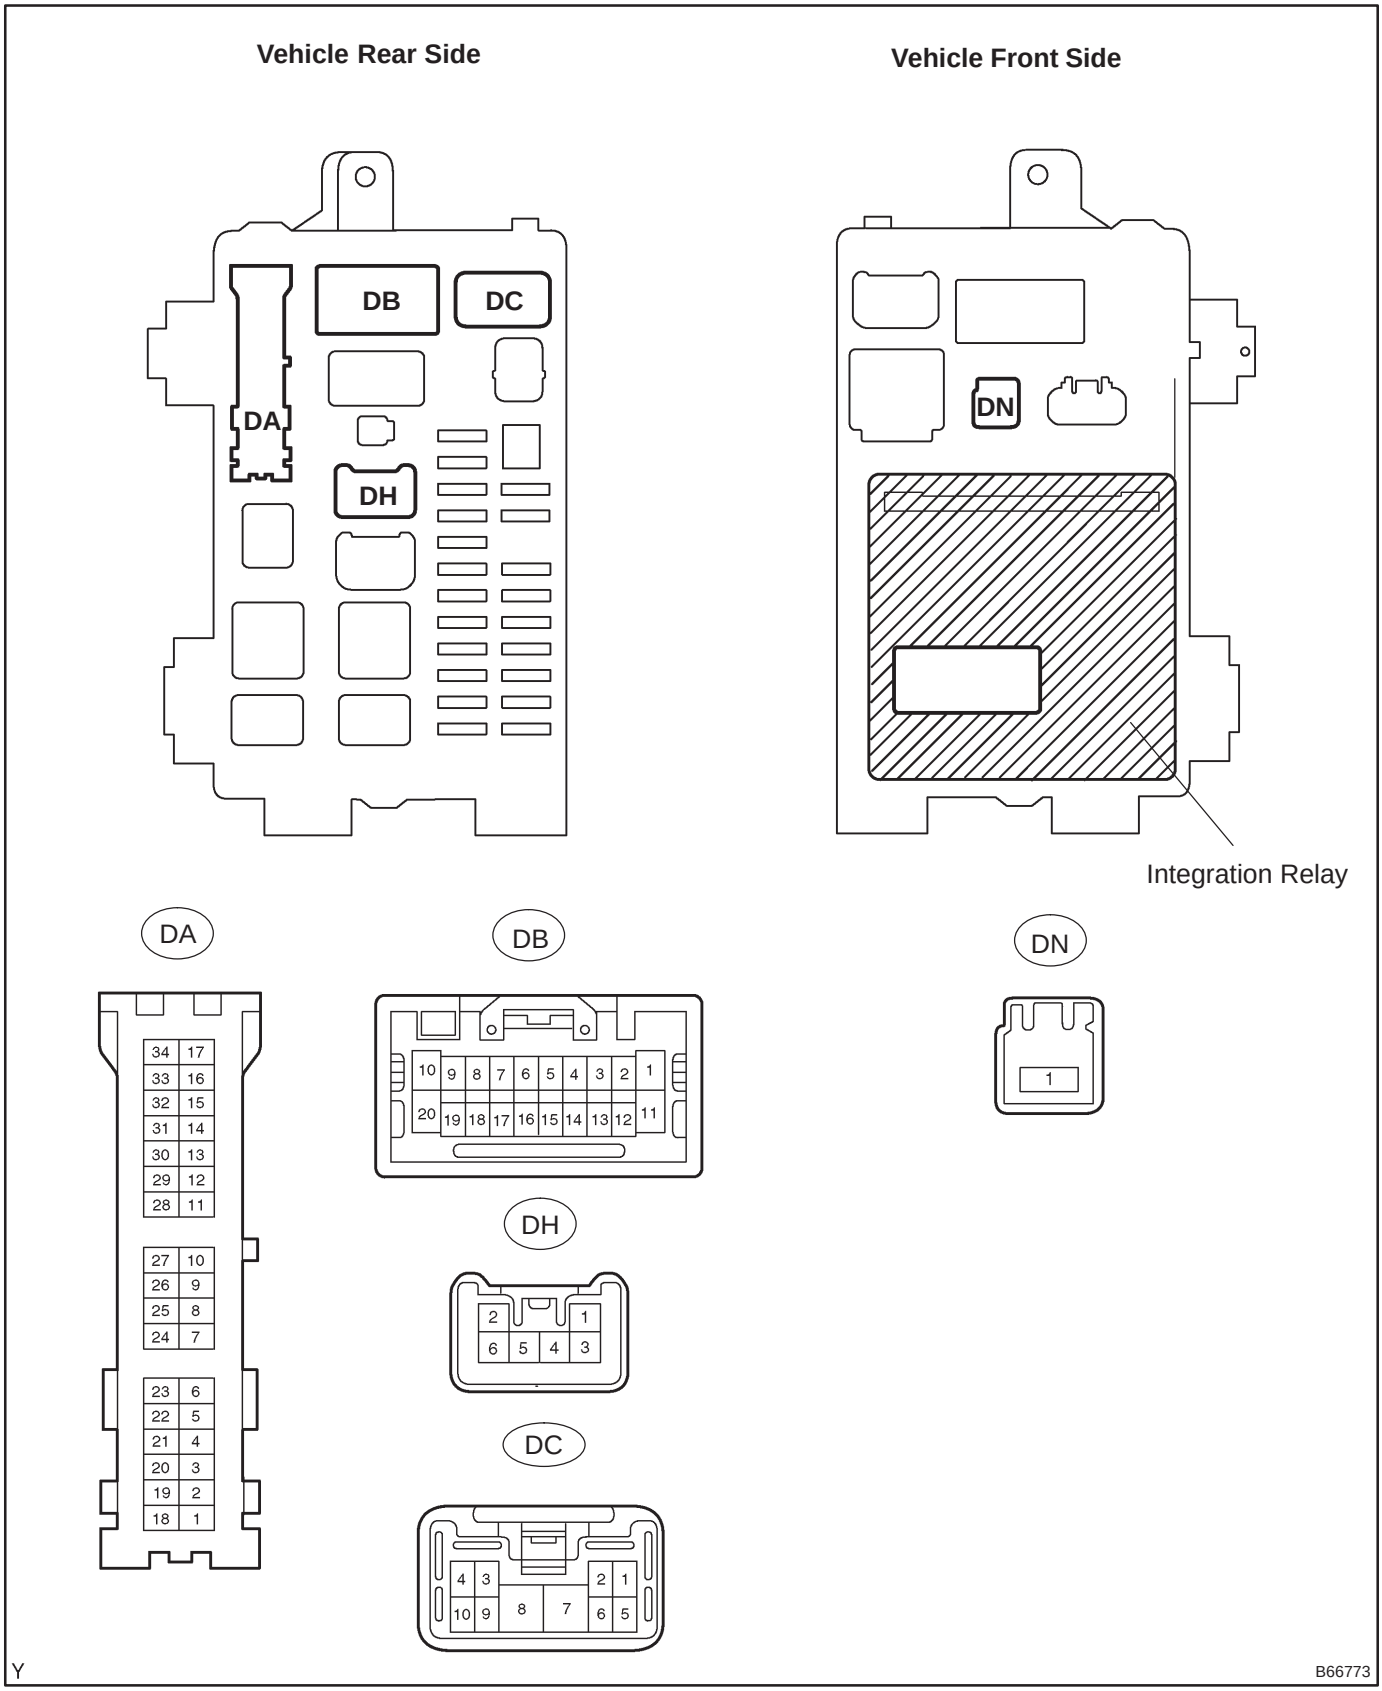
(3) Try to operate the power window past the fully closed position using the power window switch and measure the time until the electrical current changes into 1 A from 16 to 34 A (Inspection of current shut–off).

Standard: Less than 1 second

(4) Check that the door glass goes down when the power window regulator switch is pushed DOWN.

If the result is not as specified, replace the regulator sub–assy.

7. INSPECT IG1 RELAY



(a) Check resistance of the relay.

Standard:

Tester Connection	Specified Condition
3 – 5	10 kΩ or higher
	Below 1 Ω (When battery voltage is applied to terminals 1 and 2)

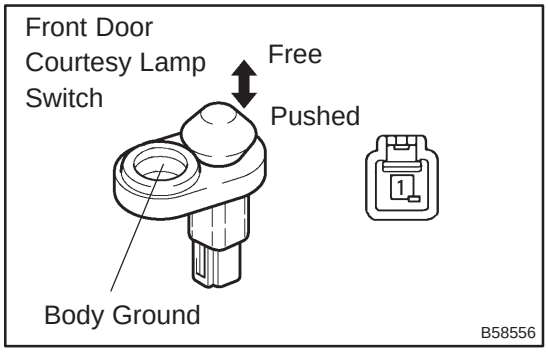
If the result is not as specified, replace the relay.

8. INSPECT INSTRUMENT PANEL JUNCTION BLOCK ASSY (INTEGRATION RELAY)

(a) Disconnect the DA, DB, DC, DH and DN J/B connectors.
(b) Check the voltage and resistance between each terminal of the wire harness side connectors and the body ground.

Standard:

Tester Connection	Condition	Specified Condition
DA–8 – Body ground	No key inserted in ignition key cylinder → Yes	10 kΩ or higher → Below 1 Ω
DA–9 – Body ground	Constant	Below 1 Ω
B–13 – Body ground	Driver side door CLOSED → OPEN	10 kΩ or higher → Below 1 Ω
DC–9 – Body ground	Passenger side door CLOSED → OPEN	10 kΩ or higher → Below 1 Ω
DH–5 – Body ground	Ignition switch ON → Others	10 to 14 V → 0 V
DN–1 – Body ground	Constant	10 to 14 V



If the result is not as specified, there may be a malfunction on the wire harness side or the J/B assy (integration relay) may have a malfunction.

(c) Reconnect the DA, DB, DC, DH and DN J/B connectors.
(d) Check the voltage of terminal 5 of the DH connector.

Standard:

Tester Connection	Condition	Specified Condition
DH–5 – Body ground	Ignition switch ON → Others	10 to 14 V → 0 V

If the result is not as specified, there may be a malfunction on the wire harness side or the J/B assy (integration relay) may have a malfunction.

9. INSPECT FRONT DOOR COURTESY LAMP SWITCH ASSY

(a) Remove the courtesy lamp switch.
(b) Check the switch resistance.

Standard:

Tester Connection	Switch Position	Specified Condition
1 – Body ground	Switch pushed	10 kΩ or higher
	Switch free	Below 1 Ω

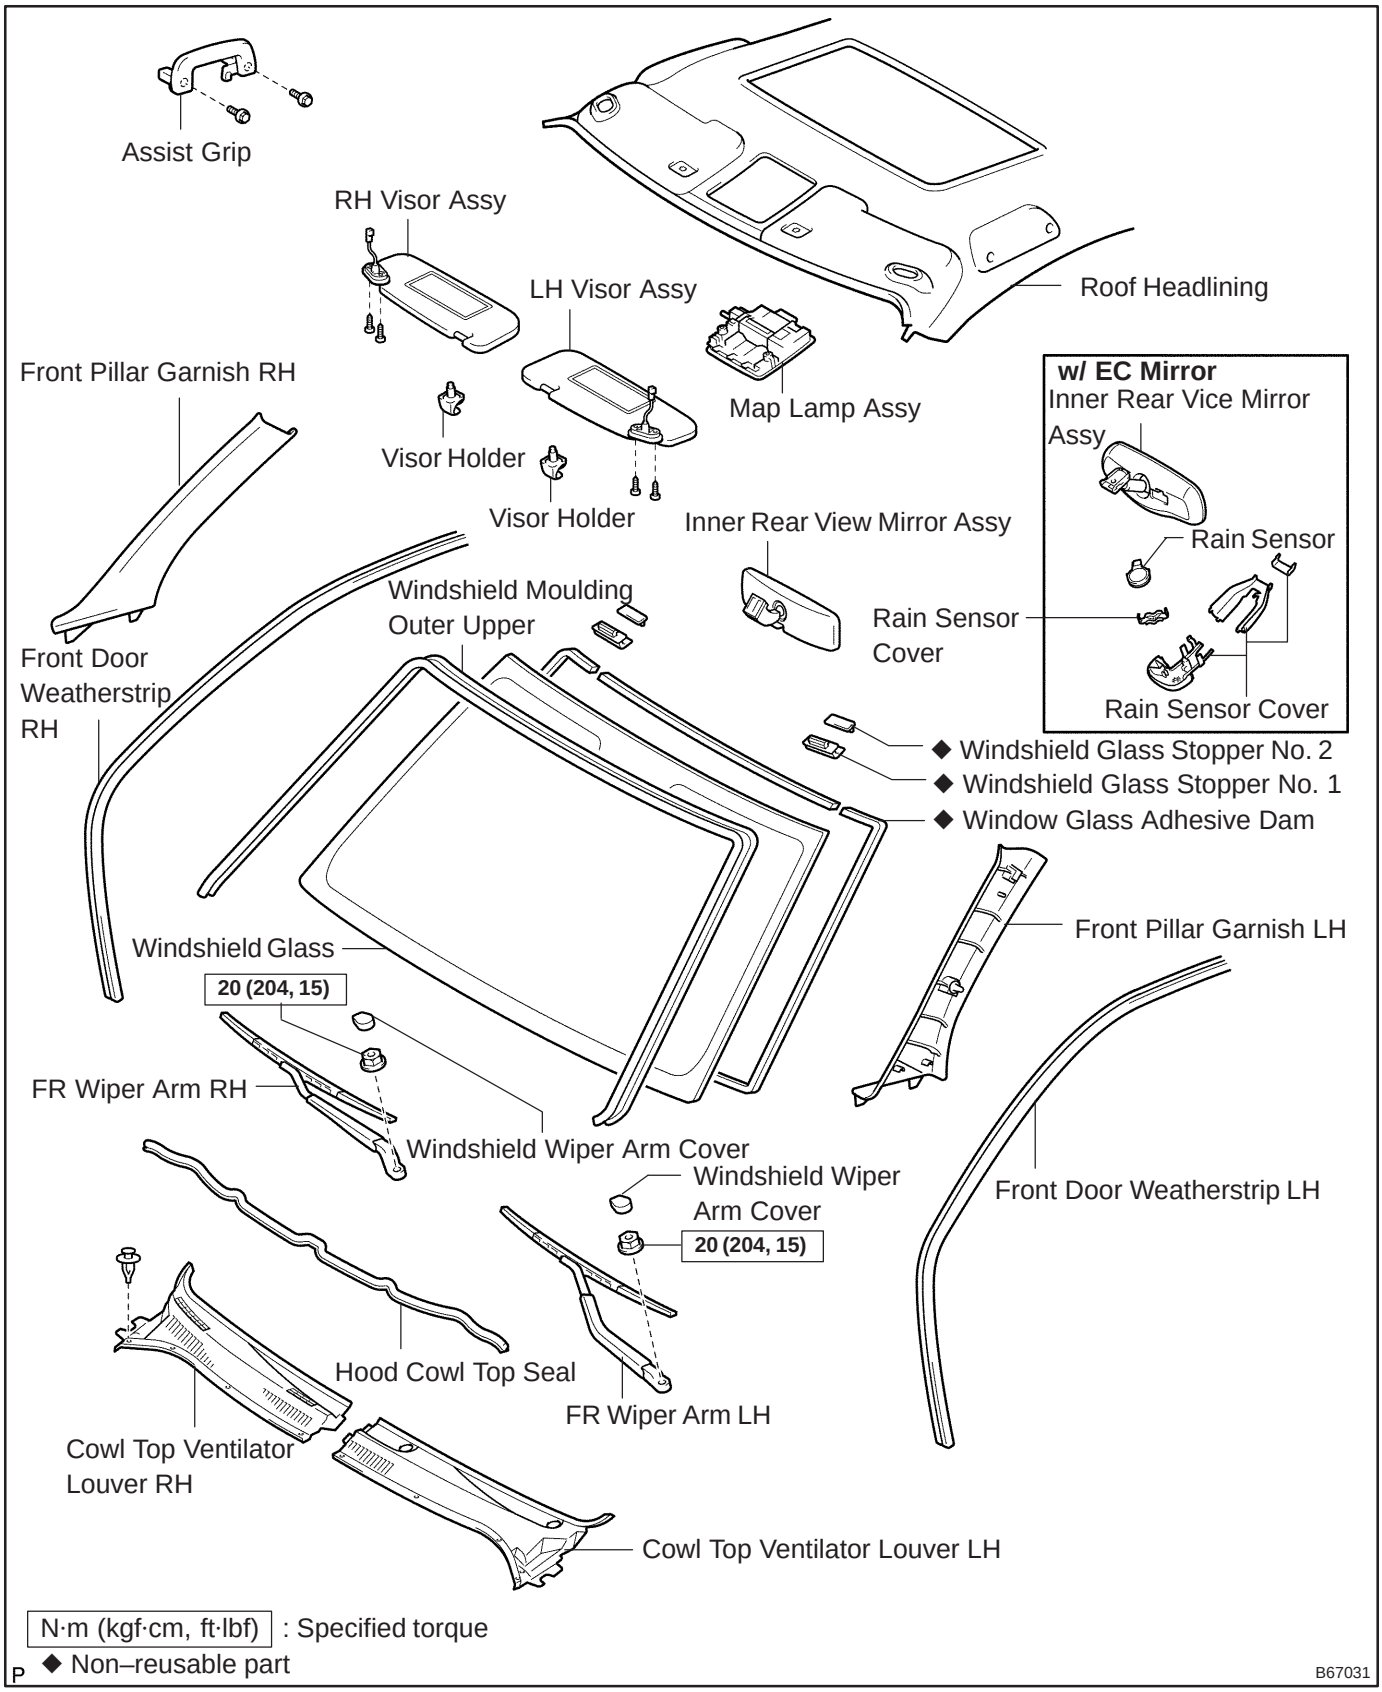
If the result is not as specified, replace the switch assy.

700SB–01

RESET

NOTICE:

- **The power window regulator motor must be reset when the fitting of the door glass is adjusted or when the door glass run is replaced.**
- **Whenever disconnecting the battery terminal, reset all the other systems besides the power window control system.**



1. RESET WINDOW REGULATOR SUB–ASSY (REGULATOR MOTOR)

(a) Turn the ignition switch ON.
(b) Operate the power window using the master (regulator) switch.
(c) Disconnect the battery, fuse or motor connector while the power window is operating, so that the power window motor is forced to stop.
(d) Reconnect the battery, fuse or motor connector.
(e) Pull up the power window switch until the power window is fully closed and hold the switch at least 1 second.
(f) Check that the AUTO UP/DOWN function operates completely.

WINDSHIELD GLASS

COMPONENTS

700T1–01

N·m (kgf·cm, ft·lbf) : Specified torque

◆ Non–reusable part

P

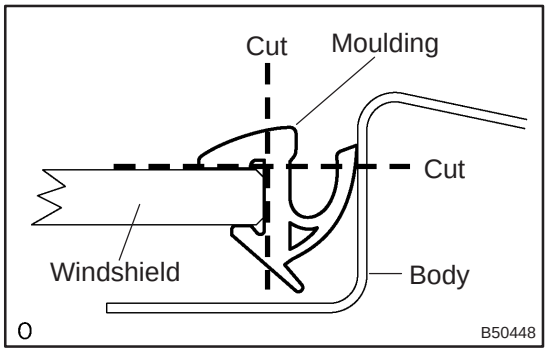
B67031

REPLACEMENT

HINT:

The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.

1. REMOVE ROOF HEADLINING ASSY (See page 76–36 or 76–45 or 76–54)



(a) Remove the front door weatherstrip LH.
(b) Remove the front door weatherstrip RH.
(c) Remove the front pillar garnish LH.
(d) Remove the front pillar garnish RH.
(e) Remove the LH visor.
(f) Remove the RH visor.
(g) Remove the assist grip.
(h) Remove the 2 visor holders.
(i) Remove the map lamp assy.
(j) Do not remove the roof headlining assy completely partially so that the windshield glass can be removed.

2. REMOVE INNER REAR VIEW MIRROR ASSY (See page 70–64)

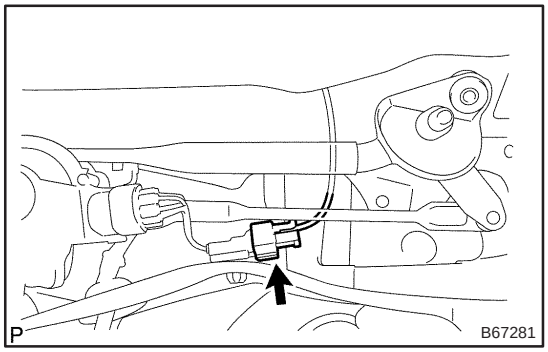
3. REMOVE RAIN SENSOR (See page 66–26)

4. REMOVE COWL TOP VENTILATOR LOUVER (See page66–13)

(a) Remove the 2 windshield wiper arm covers.
(b) Remove the FR wiper arm LH.
(c) Remove the FR wiper arm RH.
(d) Remove the hood to cowl top seal.
(e) Remove the cowl top ventilator louver LH.
(f) Remove the cowl top ventilator louver RH.

5. REMOVE WINDSHIELD MOULDING OUTER UPPER

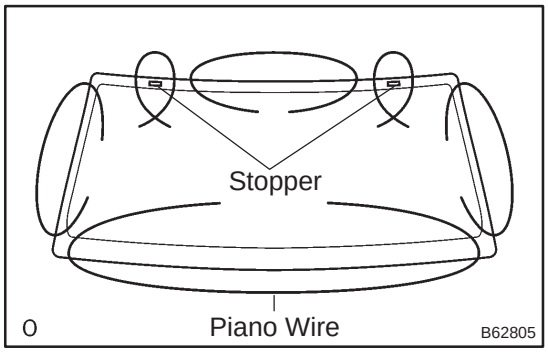
(a) Using a knife, cut off the moulding, as shown in the illustration.



NOTICE:

Do not damage the body with the knife.

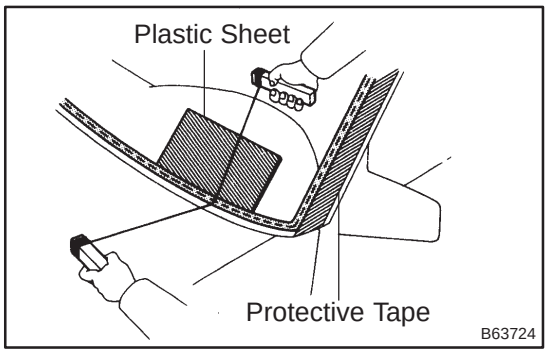
(b) Remove the remaining moulding.



HINT:

When removing, make a partial cut, then pull and remove it by hand.

6. DISCONNECT CONNECTOR (W/ DEICER)



(a) Disconnect the deicer connector, as shown in the illustration.

7. REMOVE WINDSHIELD GLASS

(a) Pass a piano wire between the vehicle body and glass from the interior.

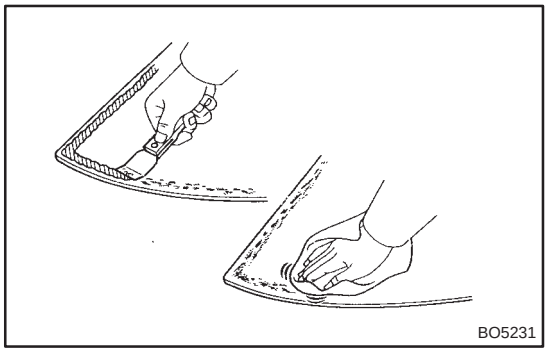
(b) Tie both wire ends to wooden blocks or similar objects.

HINT:

Apply protective tape to the outer surface to prevent the surface from being scratched.

NOTICE:

- **When separating the glass, take care not to damage the paint and the interior and exterior ornaments.**
- **To prevent the safety pad from being scratched when removing the glass, place a plastic sheet between the piano wire and safety pad.**



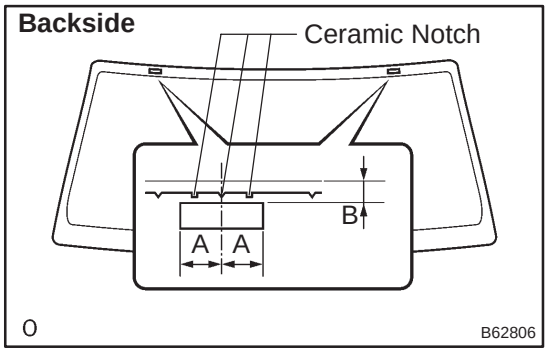
(c) Cut off the adhesive by pulling the piano wire around the glass.

(d) Disengage the stoppers.

(e) Using a suction cup, remove the glass.

NOTICE:

Leave as much adhesive on the body as possible when removing the glass.



8. CLEAN WINDSHIELD GLASS

(a) Using a scraper, remove the damaged stoppers, dam and adhesive sticking to the glass.

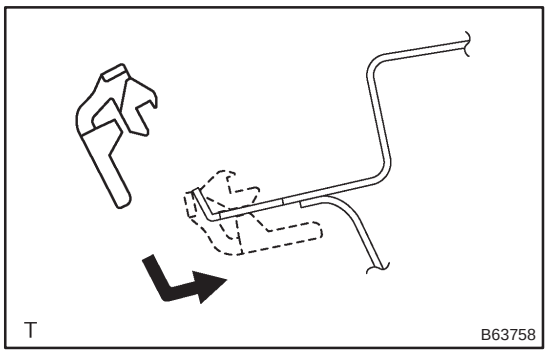
(b) Clean the outer circumference of the glass with white gasoline.

NOTICE:

- **Do not touch the glass surface after cleaning it.**
- **Be careful not to damage the body.**
- **Even if using new glass, clean the glass with white gasoline.**

9. INSTALL WINDSHIELD GLASS STOPPER NO.2

(a) Coat the installation part of the stopper with Primer G.



NOTICE:

- **Allow the primer coating to dry for 3 minutes or more.**
- **Do not keep any of the opened Primer G for later use.**
- **Do not apply too much primer.**

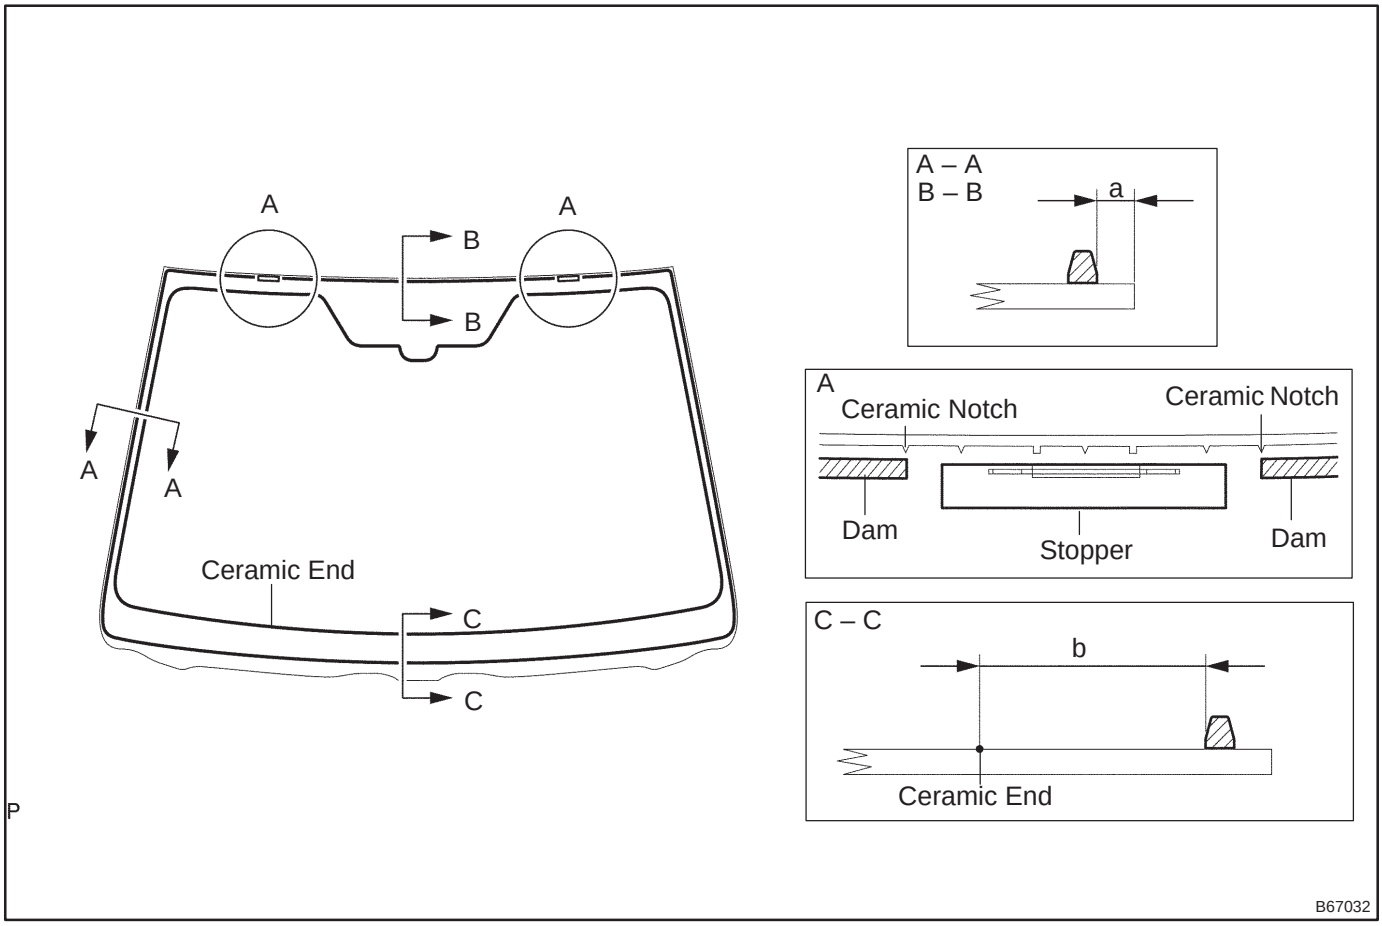
(b) Install 2 new stoppers onto the glass, as shown in the illustration.

Standard dimension:

A	40.0 mm (1.575 in.)
B	7.7 mm (0.303 in.)

10. INSTALL WINDSHIELD GLASS STOPPER NO.1

(a) Install 2 new stoppers to the vehicle body, as shown in the illustration.



11. INSTALL WINDOW GLASS ADHESIVE DAM

(a) Coat the installation part of the window glass adhesive dam with Primer G.

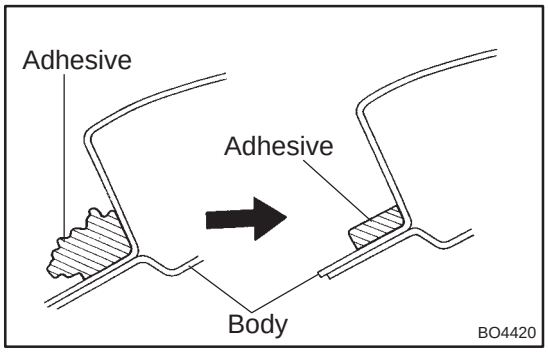
NOTICE:

- **Allow the primer coating to dry for 3 minutes or more.**
- **Do not apply too much primer.**

(b) Install a new dam, applying double–sided tape all the way around the glass except where the dam is installed, as shown in the illustration.

Standard dimension:

a	7.0 mm (0.276 in.)
b	56.0 mm (2.205 in.)



12. INSTALL WINDSHIELD MOULDING OUTER UPPER

(a) Using a brush or sponge, coat the edge of the glass and the contact surface with Primer G.

NOTICE:

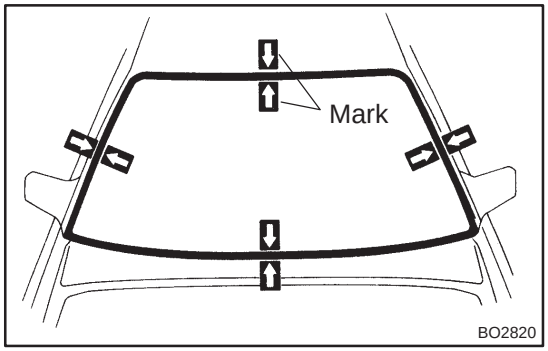
- **Allow the primer coating to dry for 3 minutes or more.**
- **Do not coat the adhesive with Primer G.**
- **Do not keep any of the opened Primer G for later use.**

(b) Install the moulding.

13. INSTALL WINDSHIELD GLASS

(a) Clean and shape the contact surface of the vehicle body.

(1) Using a knife, cut away any rough adhesive on the contact surface of the vehicle body to ensure the appropriate surface shape.



HINT:

Leave as much adhesive on the vehicle body as possible.

(2) Clean the contact surface of the vehicle body with a piece of shop rag saturated with cleaner.

HINT:

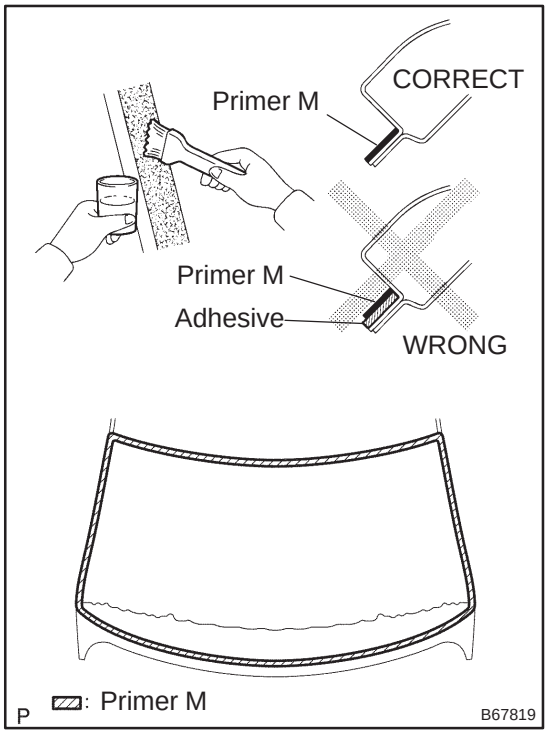
Even if all the adhesive has been removed, clean the vehicle body.

(b) Position the glass.

(1) Using a suction cup, place the glass in the correct position.

(2) Check that the whole contact surface of the glass rim is perfectly even.

(3) Place reference marks between the glass and vehicle body.

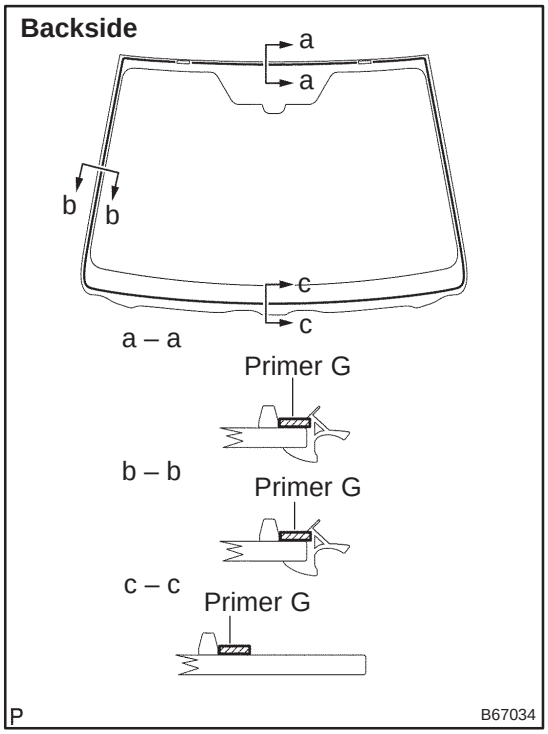


NOTICE:

Check that the stoppers are attached to the vehicle body correctly.

HINT:

When reusing the glass, check and correct the reference mark positions.

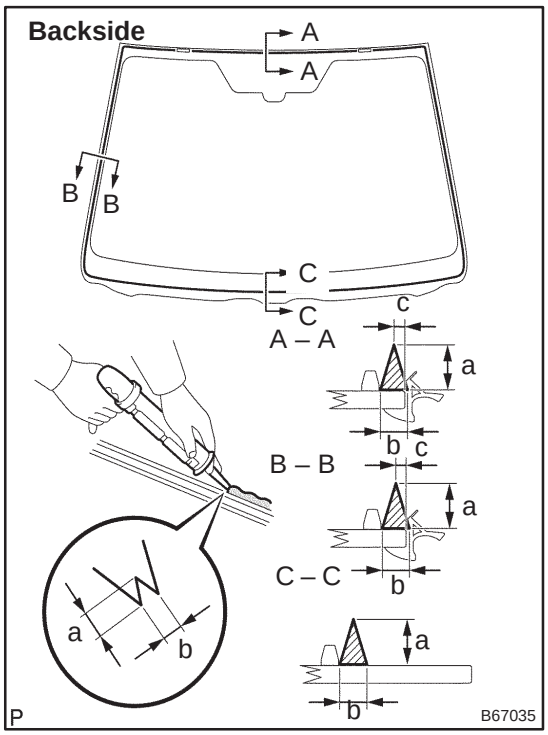


(4) Remove the glass.

(c) Using a brush, coat the exposed part of the vehicle body on the vehicle side with Primer M.

NOTICE:

- **Allow the primer coating to dry for 3 minutes or more.**
- **Do not coat the adhesive with Primer M.**
- **Do not keep any of the opened Primer M for later use.**



(d) Using a brush or sponge, coat the edge of the glass and the contact surface with Primer G.

HINT:

If an area other than that specified is coated by accident, wipe off the primer with a clean shop rag before it dries.

NOTICE:

- **Allow the primer coating to dry for 3 minutes or more.**
- **Do not keep any of the opened Primer G for later use.**

(e) Apply adhesive.

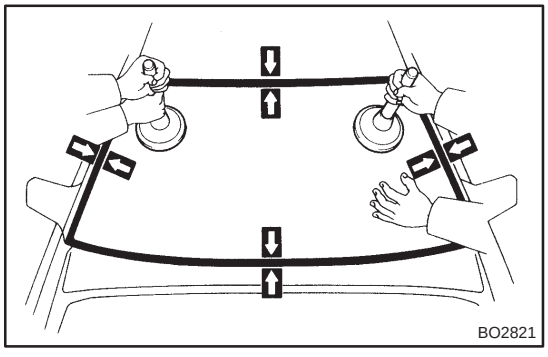
Adhesive: Part No. 08850–00801 or equivalent

(1) Cut off the tip of the cartridge nozzle, as shown in the illustration.

HINT:

After cutting off the tip, use all adhesive within the time described in the table below.

Tackfree time:



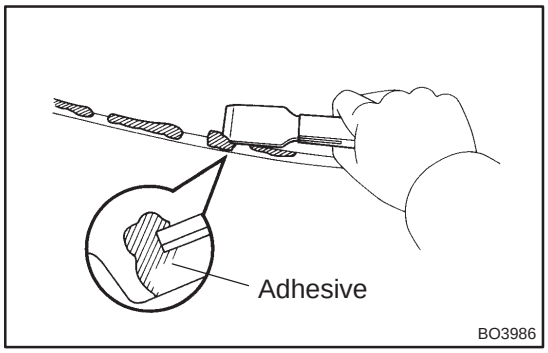
Temperature	Tackfree Time
35°C (95°F)	15 minutes
20°C (68°F)	1 hour 40 minutes
5°C (41°F)	8 hours

(2) Load the sealer gun with the cartridge.

(3) Coat the glass with adhesive, as shown in the illustration.

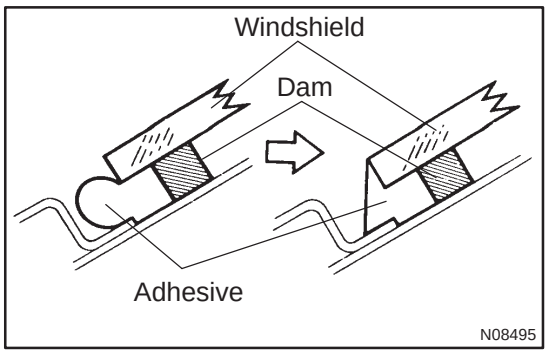
Standard dimension:

a	12.5 mm (0.492 in.)
b	8.0 mm (0.315 in.)
c	3.0 mm (0.118 in.)



(f) Install the glass to the body.

(1) Using a suction cup, position the glass so that the reference marks are aligned, and press it in gently along the rim.



NOTICE:

- **Allow the primer coating to dry for 3 minutes or more.**
- **Check that the stoppers are attached to the vehicle body correctly.**
- **Check the clearance between the vehicle body and glass.**

(2) Lightly press the front surface of the glass to ensure a close fit.

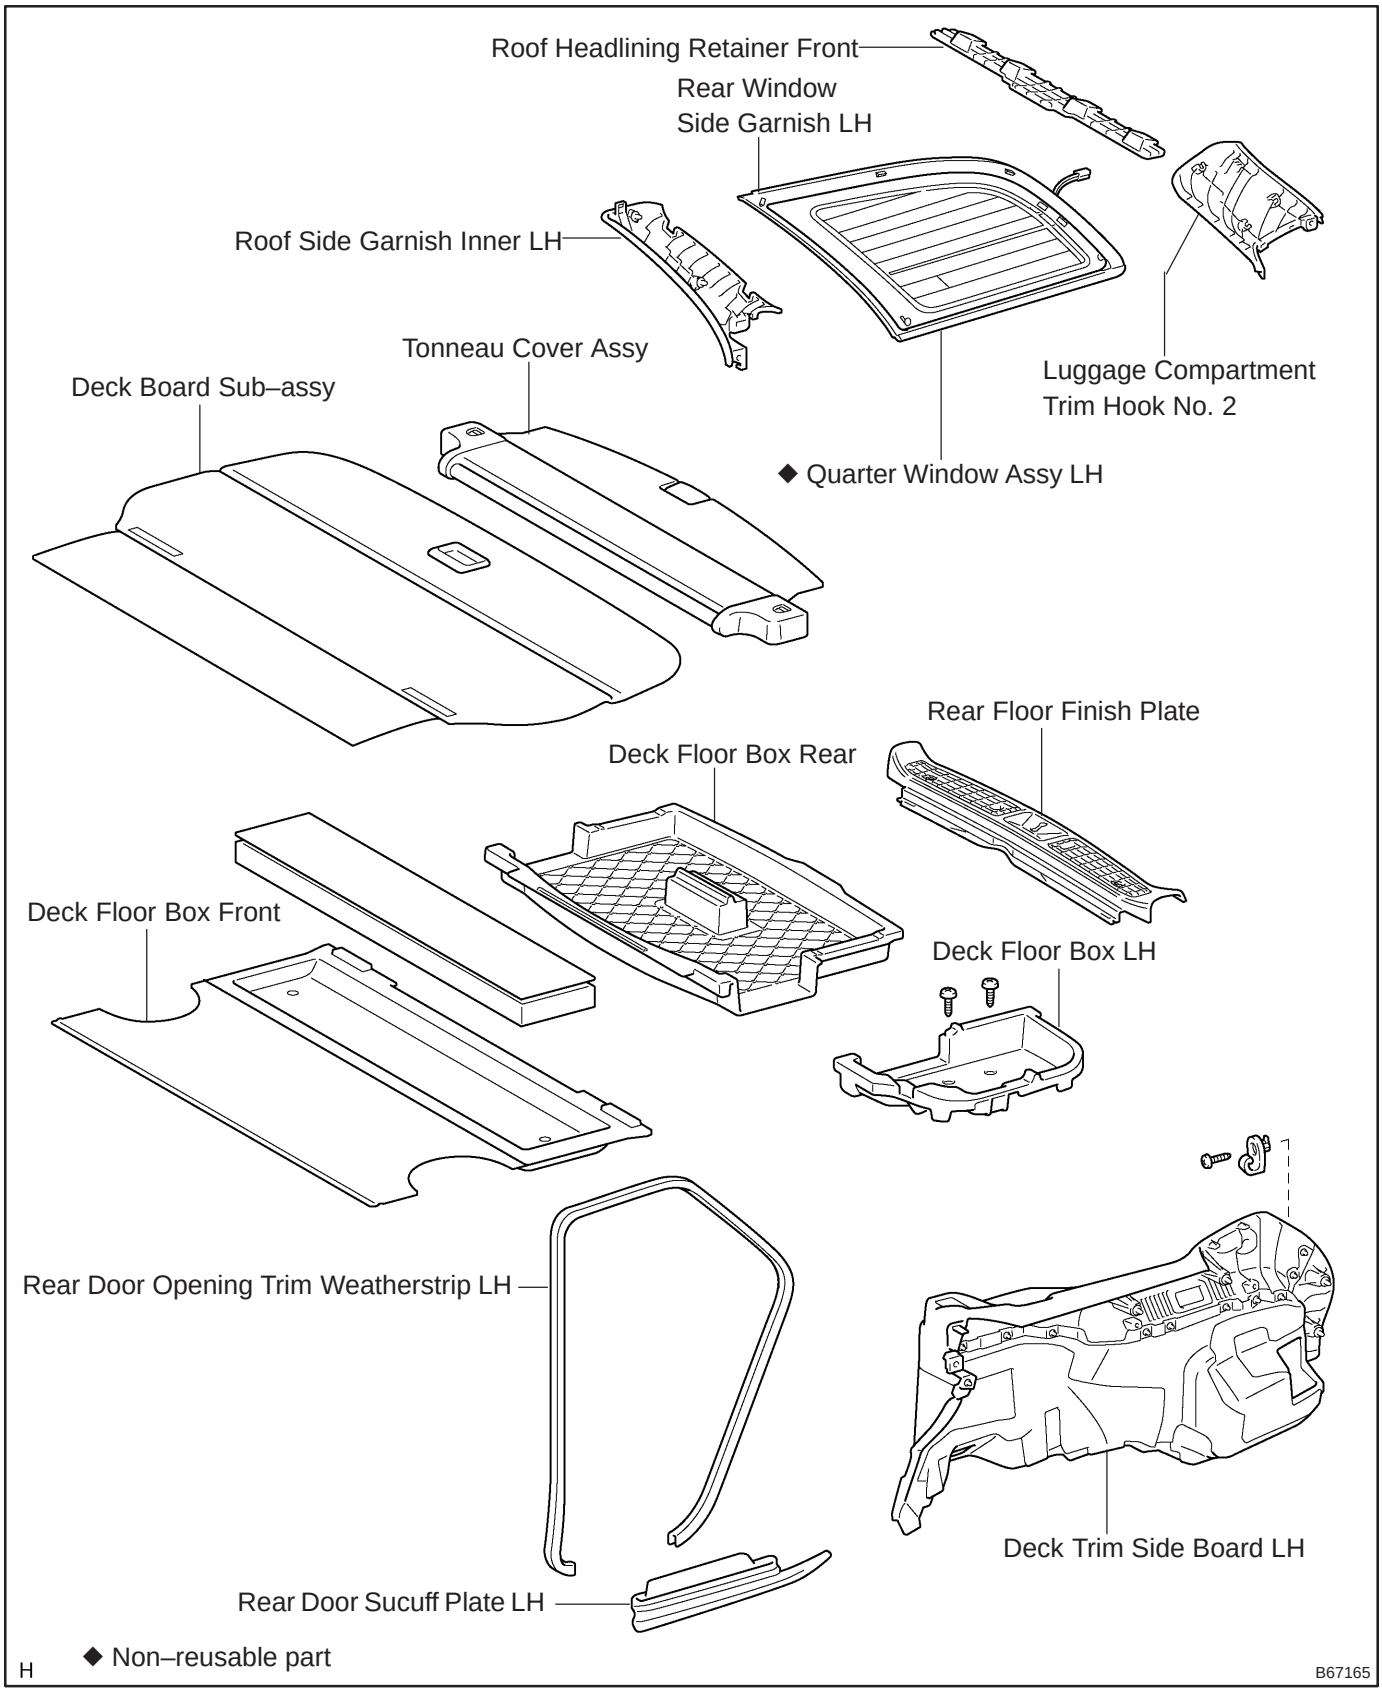
(3) Using a scraper, remove any excess or protruding adhesive.

HINT:
Apply adhesive onto the glass rim.

NOTICE:
Take care not to drive the vehicle for the time described in the table below.

Minimum time:

Temperature	Minimum time prior to driving vehicle
35˚C (95˚F)	1 hour 30 minutes
20˚C (68˚F)	5 hours
5˚C (41˚F)	24 hours



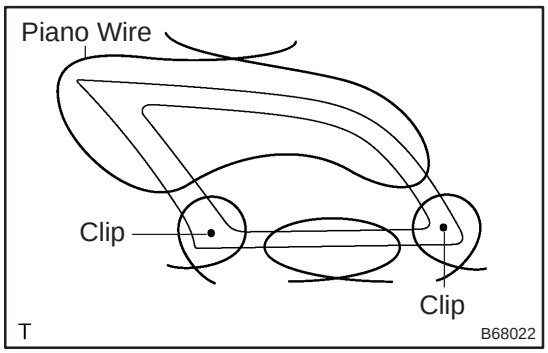
14. INSPECT FOR LEAKS AND REPAIR

(a) Conduct a leak test after the adhesive has completely hardened.
(b) Seal any leaks with auto glass sealer.

QUARTER WINDOW ASSY LH (WAGON MODELS)

700T3–01

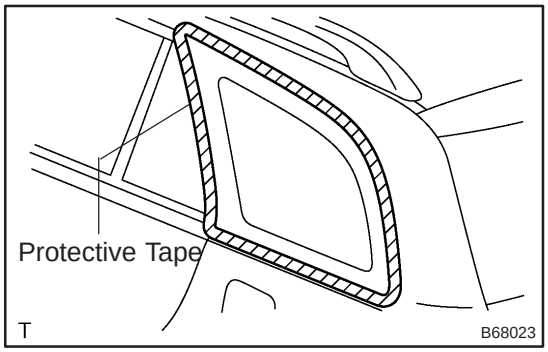
COMPONENTS



REPLACEMENT

HINT:

- The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.
- Use the same procedures on the RH side as on the LH side.



1. REMOVE REAR WINDOW SIDE GARNISH LH (See page 76–54)

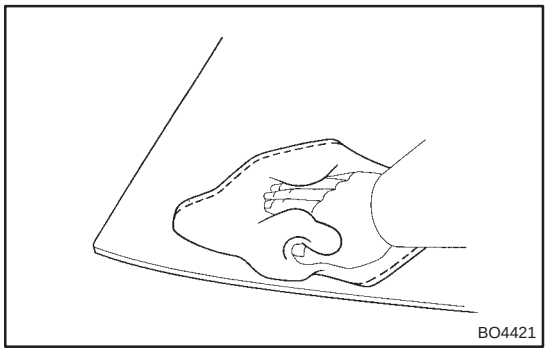
(a) Remove the rear door opening trim weatherstrip LH
(b) Remove the rear door scuff plate.
(c) Remove the tonneau cover.
(d) Remove the deck board.
(e) Remove the deck floor box rear.
(f) Remove the deck floor box.
(g) Remove the deck floor box front.
(h) Remove the rear floor finish plate.
(i) Remove the roof headlining retainer front.
(j) Remove the luggage compartment trim hook No. 2.
(k) Remove the deck trim side board.
(l) Remove the roof side garnish inner.
(m) Remove the rear window side garnish.

2. REMOVE QUARTER WINDOW ASSY LH

(a) Disconnect the connectors.
(b) Pass a piano wire between the vehicle body and glass from the interior.
(c) Tie both wire ends to wooden blocks or similar objects.

HINT:

Apply protective tape to the outer surface to prevent the surface from being scratched.



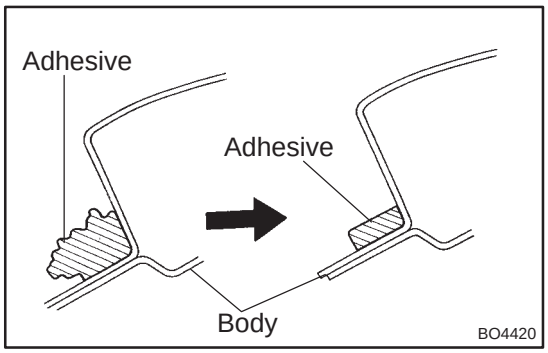
NOTICE:

When separating the glass, take care not to damage the paint and the interior and exterior ornaments.

(d) Cut off the adhesive by pulling the piano wire around the glass.
(e) Using a suction rubber, remove the glass.

NOTICE:

Leave as much adhesive on the body as possible when removing the glass.



3. CLEAN QUARTER WINDOW ASSY LH

(a) Clean the outer circumference of the glass with white gasoline.

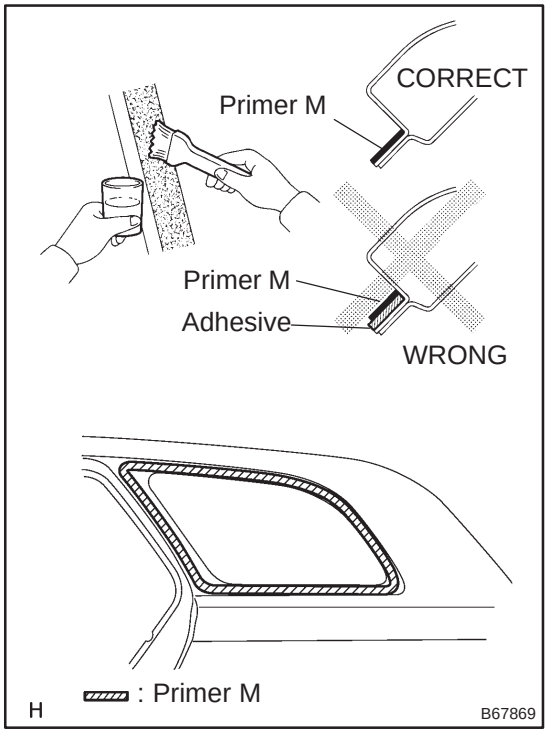
NOTICE:

- **Do not touch the glass surface after cleaning it.**

4. INSTALL QUARTER WINDOW ASSY LH

(a) Clean and shape the contact surface of the vehicle body.

(1) Using a knife, cut away any rough adhesive on the contact surface of the body to ensure the appropriate surface shape.

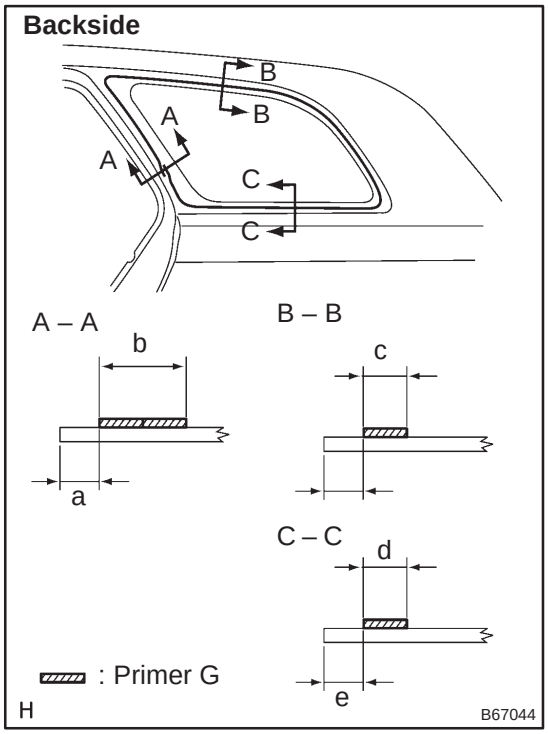


HINT:

Leave as much adhesive on the body as possible.

(2) Clean the contact surface of the body with a piece of shop rag saturated with cleaner.

HINT:



Even if all the adhesive has been removed, clean the body.

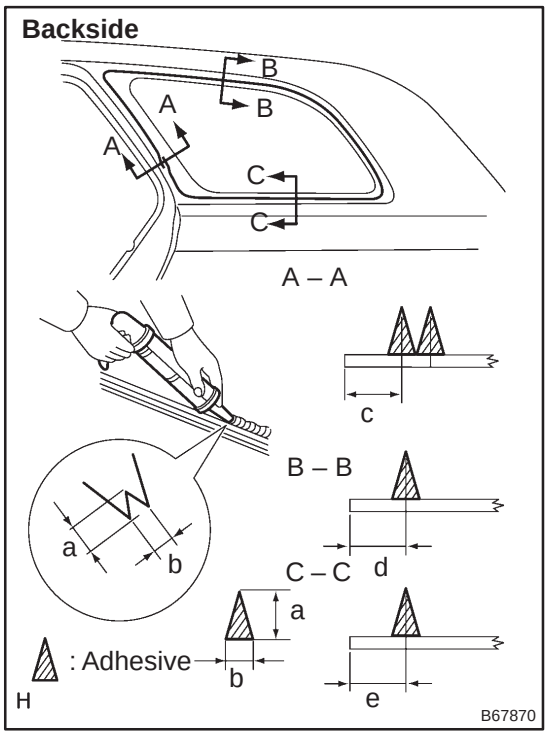
(b) Using a brush, coat the exposed part of the body on the vehicle side with Primer M.

NOTICE:

- **Allow the primer coating to dry for 3 minutes or more.**
- **Do not coat the adhesive with Primer M.**
- **Do not keep any of the opened Primer M for later use.**

(c) Using a brush or sponge, coat the edge of the glass and the contact surface with Primer G.

Standard dimension:



a	5.5 mm (0.217 in.)
b	19.0 mm (0.748 in.)
c	11.0 mm (0.433 in.)
d	11.0 mm (0.433 in.)
e	7.5 mm (0.295 in.)

HINT:

If an area other than that specified is coated by accident, wipe off the primer with a clean shop rag before it dries.

NOTICE:

- **Allow the primer coating to dry for 3 minutes or more.**
- **Do not keep any of the opened Primer G for later use.**

(d) Apply adhesive.

Adhesive: Part No. 08850–00801 or equivalent

(1) Cut off the tip of the cartridge nozzle, as shown in the illustration.

HINT:

After cutting off the tip, use all adhesive within the time described in the table below.

Tackfree time:

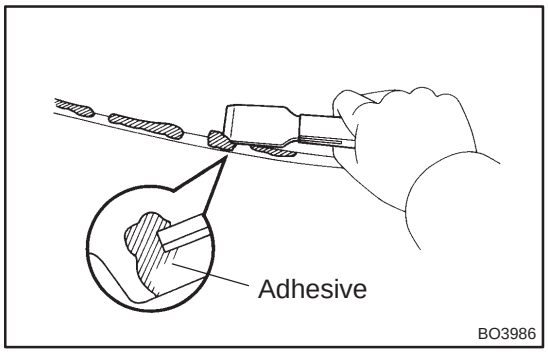
Temperature	Tackfree Time
35°C (95°F)	15 minutes
20°C (68°F)	1 hour 40 minutes
5°C (41°F)	8 hours

(2) Load the sealer gun with the cartridge.

(3) Coat the glass with adhesive, as shown in the illustration.

Standard dimension:

a	12.5 mm (0.492 in.)
b	8.0 mm (0.315 in.)
c	9.5 mm (0.374 in.)
d	11.0 mm (0.433 in.)
e	11.5 mm (0.453 in.)



(e) Install the glass to the body.

(1) Hold the quarter window in place securely with protective tape or equivalent until the adhesive hardens.

NOTICE:

- **Allow the primer coating to dry for 3 minutes or more.**
- **Check that the clips are attached to the body correctly.**
- **Check the clearance between the body and glass.**

(2) Lightly press the front surface of the glass to ensure a close fit.

(3) Using a scraper, remove any excess or protruding adhesive.

HINT:

Apply adhesive onto the glass rim.

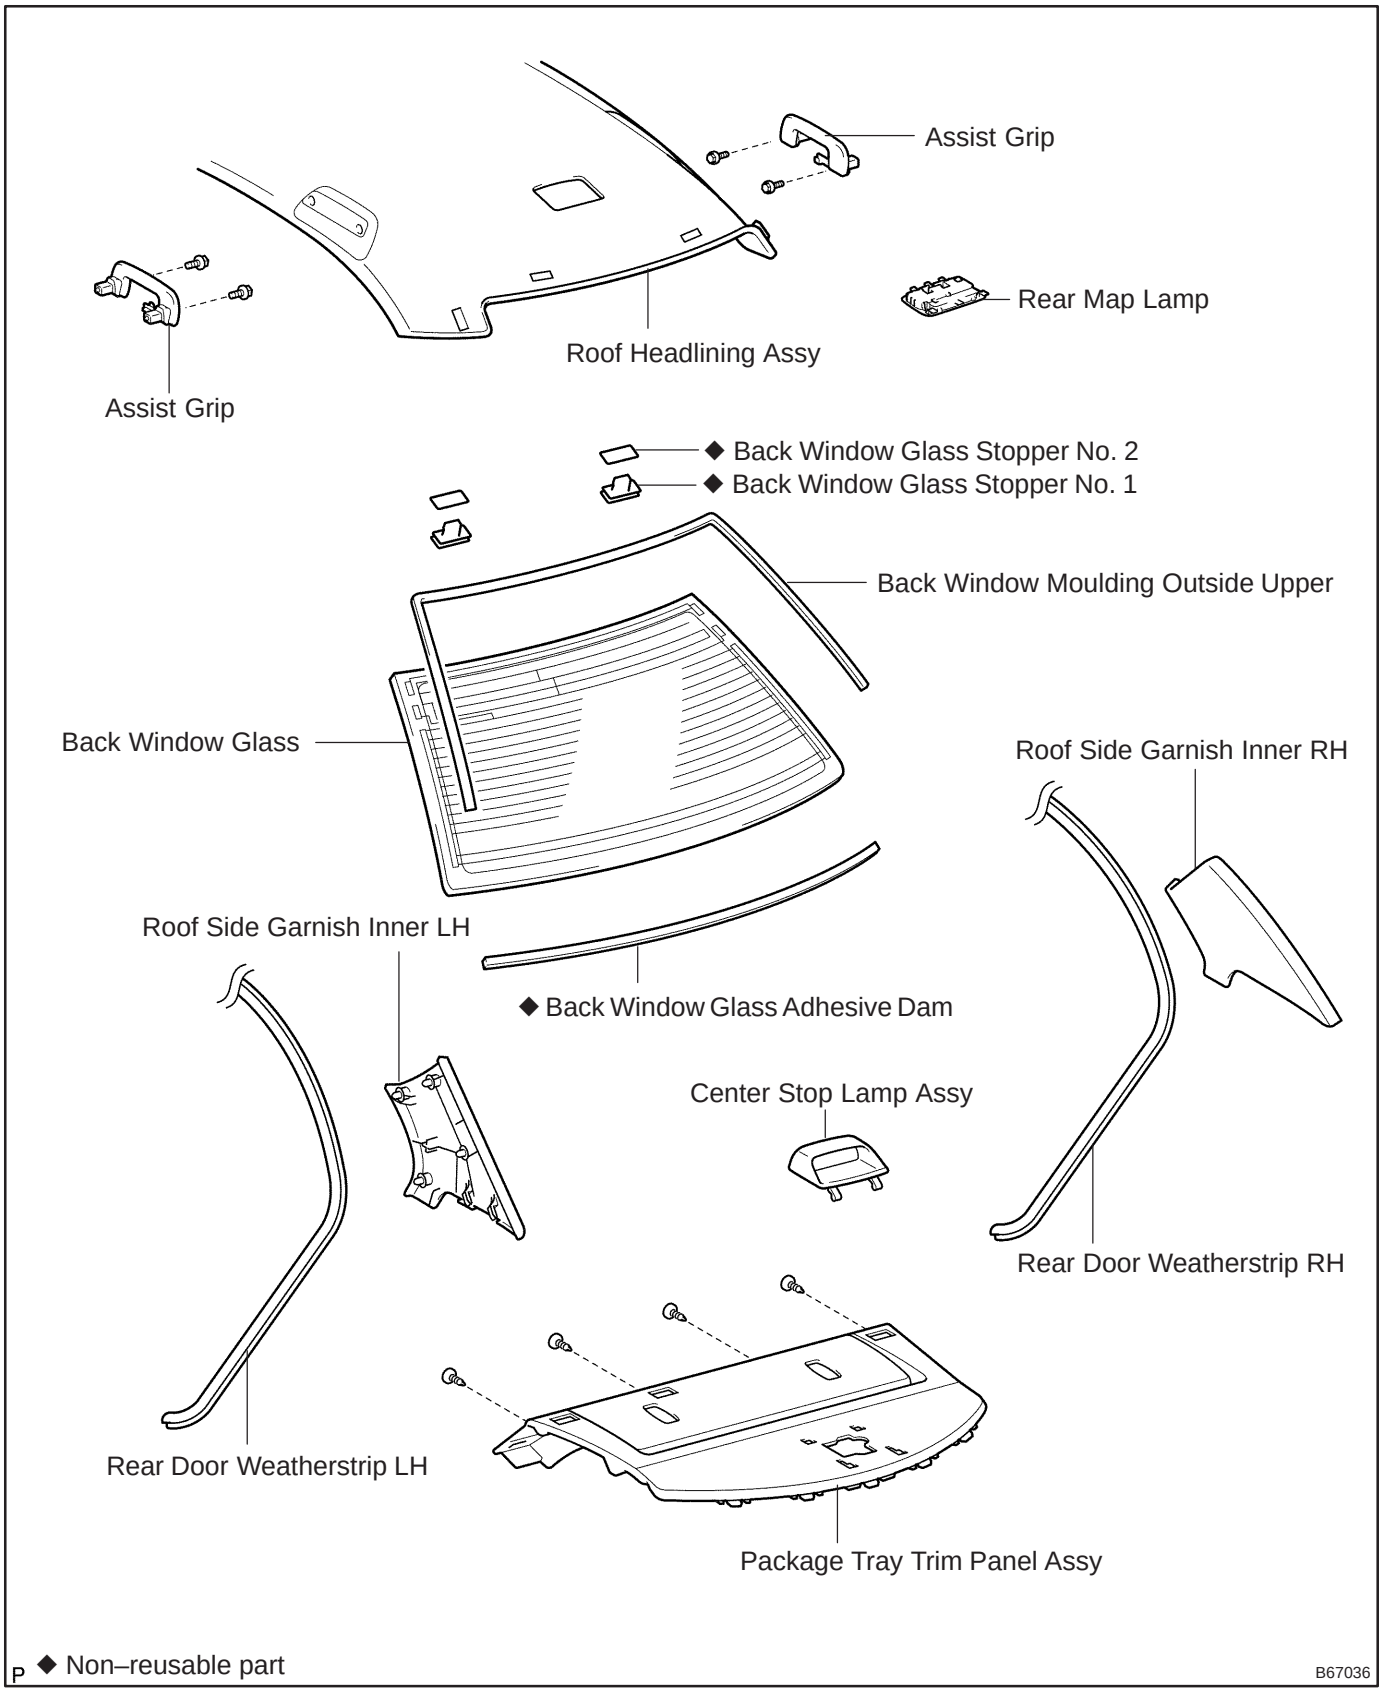
NOTICE:

Take care not to drive the vehicle for the time described in the table below.

Minimum time:

Temperature	Minimum time prior to driving the vehicle
35˚C (95˚F)	1 hour 30 minutes
20˚C (68˚F)	5 hours
5˚C (41˚F)	24 hours

5. INSPECT FOR LEAKS AND REPAIR



(a) Conduct a leak test after the adhesive has completely hardened.

(b) Seal any leaks with auto glass sealer.

BACK WINDOW GLASS (SEDAN MODELS)

COMPONENTS

700T5–01

P ◆ Non–reusable part

B67036

REPLACEMENT

HINT:

The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.

1. REMOVE REAR SEAT CUSHION ASSY (See page 72–27 or 72–32)

2. REMOVE REAR SEATBACK ASSY (See page 72–27 or 72–32)

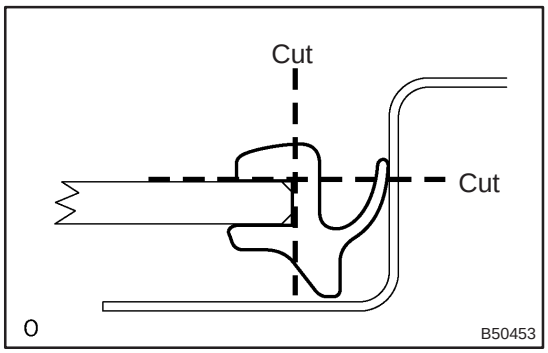
3. REMOVE ROOF HEADLINING ASSY (See page 76–36)

(a) Remove the rear door weatherstrip LH.

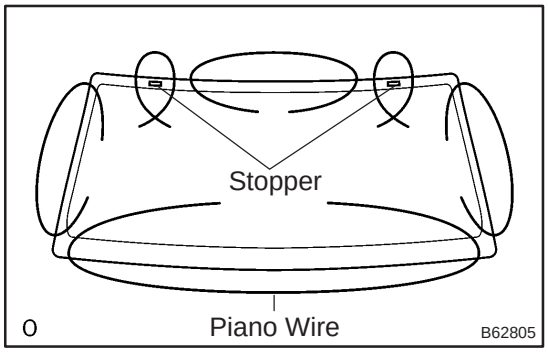
(b) Remove the rear door weatherstrip RH.

(c) Remove the roof side garnish inner LH.

(d) Remove the roof side garnish inner RH.



(e) Remove the 2 assist grips.



(f) Remove the rear map lamp.

(g) Remove the roof headlining assy.

4. REMOVE CENTER STOP LAMP ASSY (See page 65–26)

5. REMOVE PACKAGE TRAY TRIM PANEL ASSY (See page 61–15)

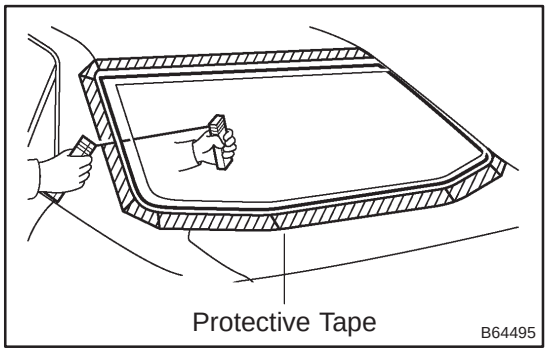
6. REMOVE BACK WINDOW MOULDING OUTSIDE UPPER

(a) Using a knife, cut off the moulding, as shown in the illustration.

NOTICE:

Do not damage the vehicle body with the knife.

(b) Remove the remaining moulding.



HINT:

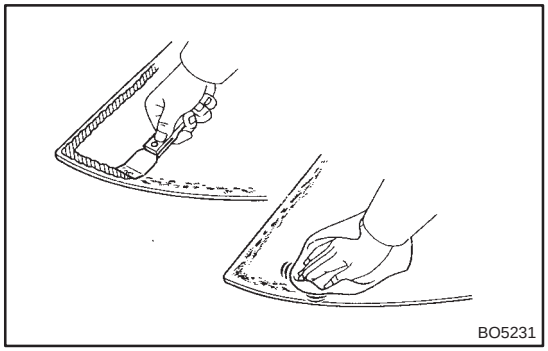
When removing, make a partial cut, then pull and remove it by hand.

7. REMOVE BACK WINDOW GLASS

(a) Pass a piano wire between the vehicle body and glass from the interior.

(b) Tie both wire ends to wooden blocks or similar objects.

HINT:
Apply protective tape to the outer surface to prevent the surface from being scratched.



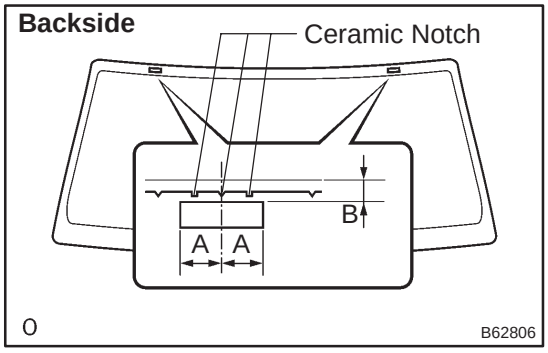
NOTICE:

- **When separating the glass, take care not to damage the paint and interior and exterior ornaments.**

(c) Cut off the adhesive by pulling the piano wire around the glass.
(d) Disengage the stoppers.
(e) Using a suction cup, remove the glass.

NOTICE:

Leave as much adhesive on the body as possible when removing the glass.



8. CLEAN BACK WINDOW GLASS

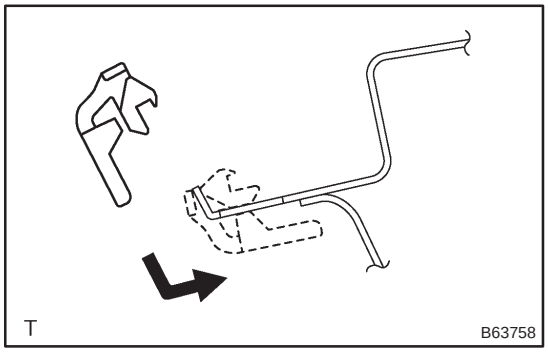
(a) Using a scraper, remove the damaged stoppers, dam and adhesive sticking to the glass.
(b) Clean the outer circumference of the glass with white gasoline.

NOTICE:

- **Do not touch the glass surface after cleaning it.**
- **Be careful not to damage the body.**
- **Even if using new glass, clean the glass with white gasoline.**

9. INSTALL BACK WINDW GLASS STOPPER NO.2

(a) Coat the installation part of the stopper with Primer G.



NOTICE:

- **Allow the primer coating to dry for 3 minutes or more.**
- **Do not keep any of the opened Primer G for later use.**
- **Do not apply too much primer.**

(b) Install 2 new stoppers onto the glass, as shown in the illustration.

Standard dimension:

A	40.0 mm (1.575 in.)
B	11.3 mm (0.445 in.)

10. INSTALL BACK WINDOW GLASS STOPPER NO.1

(a) Install 2 new stoppers to the vehicle body, as shown in the illustration.

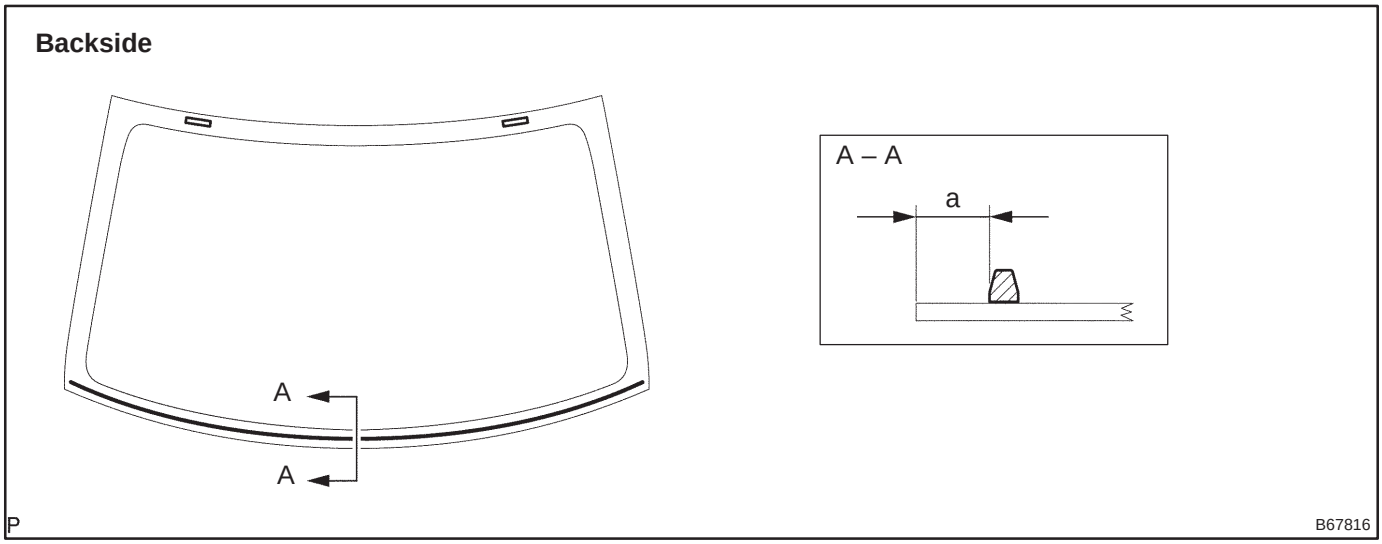
11. INSTALL BACK WINDOW MOULDING OUTSIDE UPPER

(a) Using a brush or sponge, coat the edge of the glass and the contact surface with Primer G.

NOTICE:

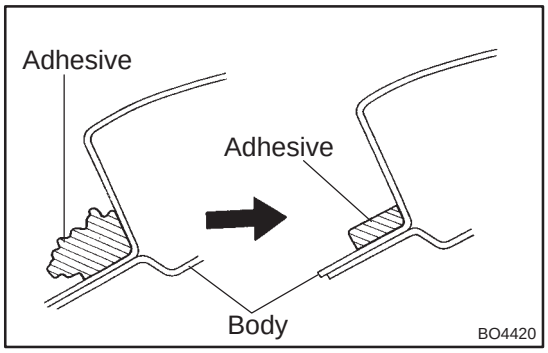
- **Allow the primer coating to dry for 3 minutes or more.**
- **Do not coat the adhesive with Primer G.**
- **Do not keep any of the opened Primer G for later use.**

(b) Install the moulding.



12. INSTALL BACK WINDOW GLASS ADHESIVE DAM

(a) Coat the installation part of the back window glass adhesive dam with Primer G.



NOTICE:

- **Allow the primer coating to dry for 3 minutes or more.**
- **Do not apply too much primer.**

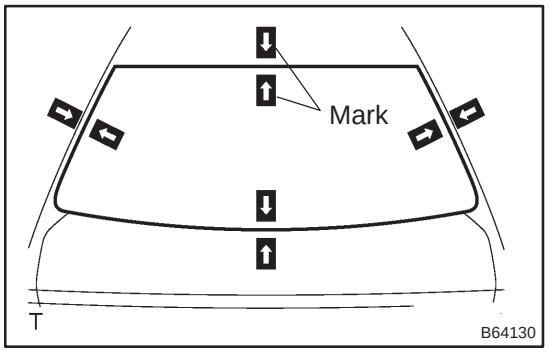
(b) Install a new dam, applying double–sided tape all the way around the glass except where the dam is installed, as shown in the illustration

Standard dimension (a) : 14.0 mm (0.551 in.)

13. INSTALL BACK WINDOW GLASS

(a) Clean and shape the contact surface of the vehicle body.

(1) Using a knife, cut away any rough adhesive on the contact surface of the vehicle body to ensure the appropriate surface shape.



HINT:

Leave as much adhesive on the vehicle body as possible.

(2) Clean the contact surface of the vehicle body with a piece of shop rag saturated with cleaner.

HINT:

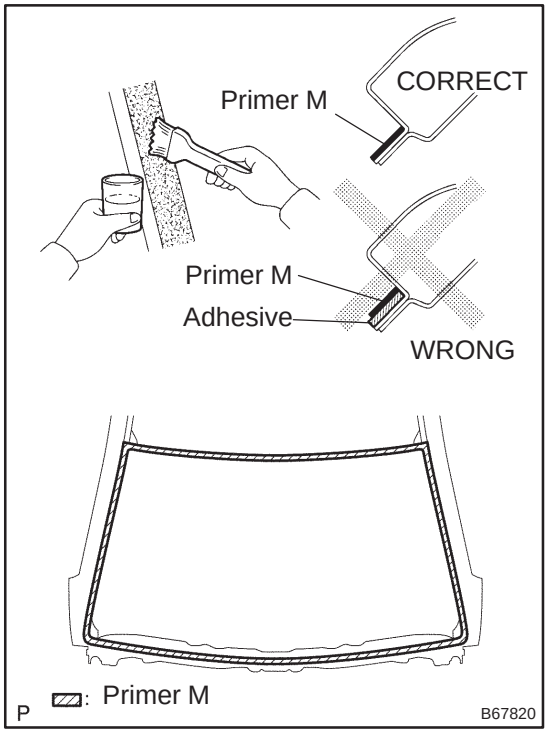
Even if all the adhesive has been removed, clean the vehicle body.

(b) Position the glass.

(1) Using a suction cup, place the glass in the correct position.

(2) Check that the whole contact surface of the glass rim is perfectly even.

(3) Place reference marks between the glass and vehicle body.

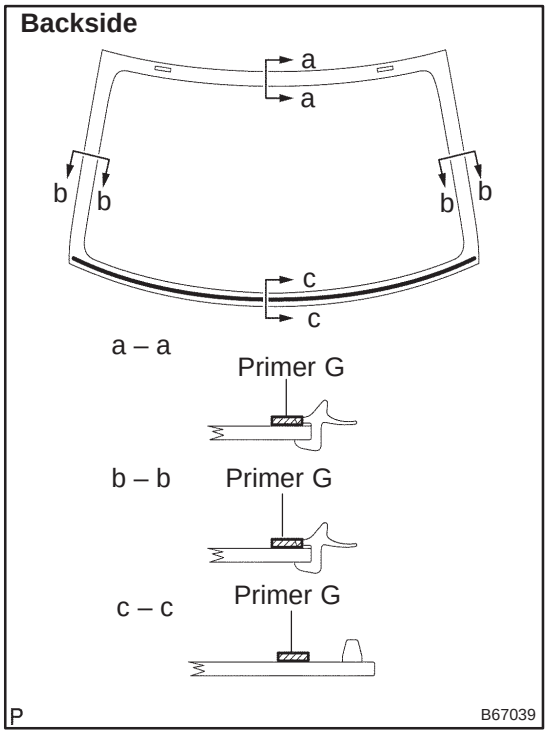


NOTICE:

Check that the stoppers are attached to the vehicle body correctly.

HINT:

When reusing the glass, check and correct the reference mark positions.

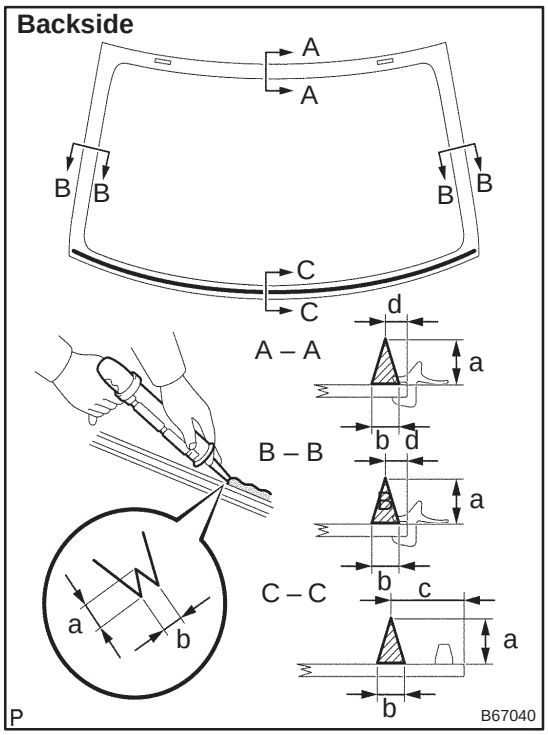


(4) Remove the glass.

(c) Using a brush, coat the exposed part of the vehicle body with Primer M.

NOTICE:

- **Allow the primer coating to dry for 3 minutes or more.**
- **Do not coat the adhesive with Primer M.**
- **Do not keep any of the opened Primer M for later use.**



(d) Using a brush or sponge, coat the edge of the glass and the contact surface with Primer G.

HINT:

If an area other than that specified is coated by accident, wipe off the primer with a clean shop rag before it dries.

NOTICE:

- **Allow the primer coating to dry for 3 minutes or more.**
- **Do not keep any of the opened Primer G for later use.**

(e) Apply adhesive.

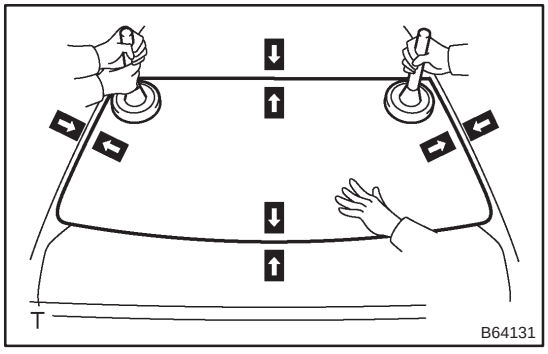
Adhesive: Part No. 08850–00801 or equivalent

(1) Cut off the tip of the cartridge nozzle, as shown in the illustration.

HINT:

After cutting off the tip, use all adhesive within the time described in the table below.

Tackfree time:



Temperature	Tackfree Time
35°C (95°F)	15 minutes
20°C (68°F)	1 hour 40 minutes
5°C (41°F)	8 hours

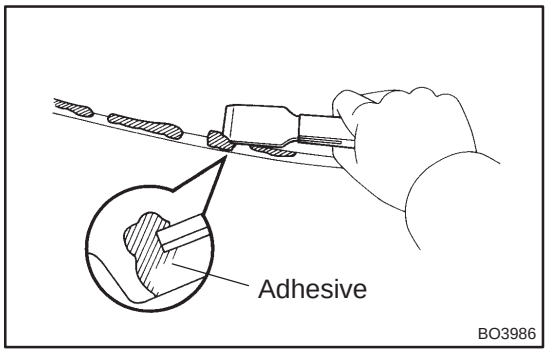
(2) Load the sealer gun with the cartridge.

(3) Coat the glass with adhesive, as shown in the illustration.

Standard dimension:

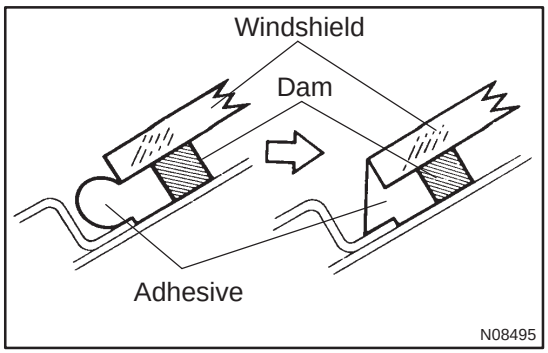
a	12.5 mm (0.492 in.)
b	8.0 mm (0.315 in.)
c	21.0 mm (0.827 in.)
d	6.5 mm (0.226 in.)

(f) Install the glass.



(1) Using a suction cup, position the glass so that the reference marks are aligned, and press it in gently along the rim.

NOTICE:



- **Allow the primer coating to dry for 3 minutes or more.**
- **Check that the stoppers are attached to the vehicle body correctly.**

- **Check the clearance between the vehicle body and glass.**

(2) Lightly press the front surface of the glass to ensure a close fit.

(3) Using a scraper, remove any excess or protruding adhesive.

HINT:

Apply adhesive onto the glass rim.

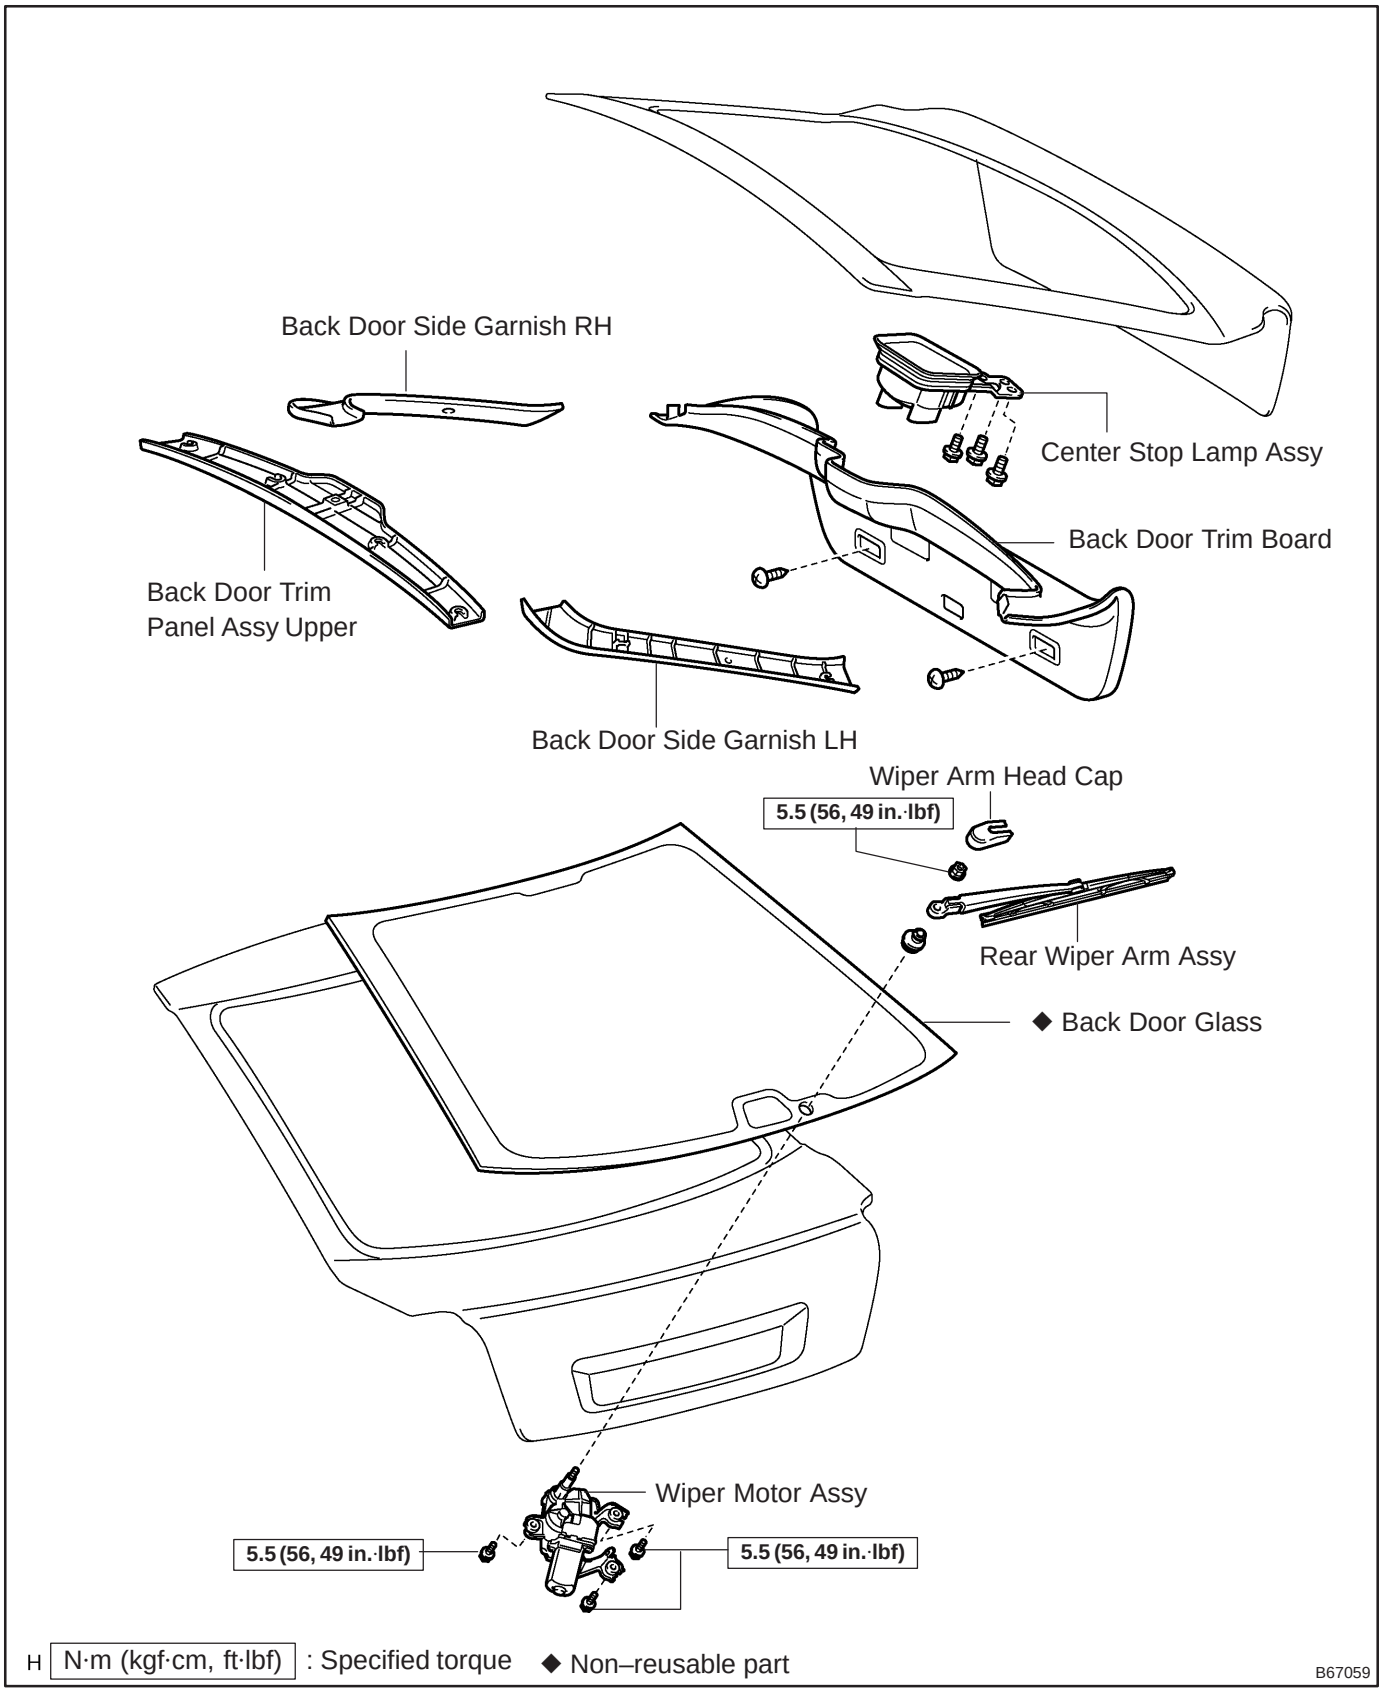
NOTICE:

Take care not to drive the vehicle for the time described in the table below.

Minimum time:

Temperature	Minimum time prior to driving vehicle
35˚C (95˚F)	1 hour 30 minutes
20˚C (68˚F)	5 hours
5˚C (41˚F)	24 hours

14. INSPECT FOR LEAKS AND REPAIR



(a) Conduct a leak test after the adhesive has completely hardened.

(b) Seal any leaks with auto glass sealer.

BACK DOOR GLASS (LIFTBACK MODELS)

COMPONENTS

700T7–01

H N·m (kgf·cm, ft·lbf) : Specified torque ◆ Non–reusable part

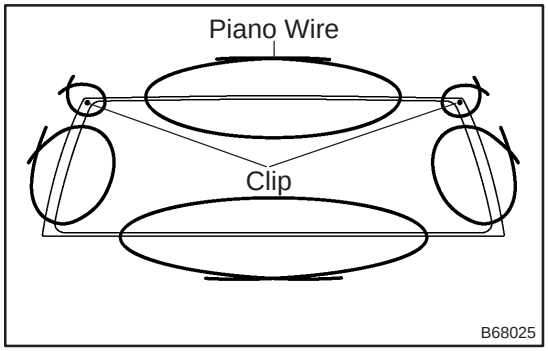
B67059

700T8–01

REPLACEMENT

HINT:

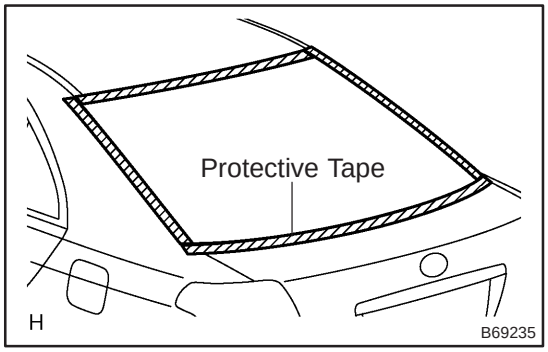
The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.



1. REMOVE BACK DOOR TRIM BOARD ASSY (See page 75–40)

(a) Remove the back door trim panel assy upper.
(b) Remove the back door side garnish LH.
(c) Remove the back door side garnish RH.
(d) Remove the back door trim board.

2. REMOVE CENTER STOP LAMP ASSY (See page 65–26)



3. REMOVE REAR WIPER MOTOR ASSY (See page 66–17)

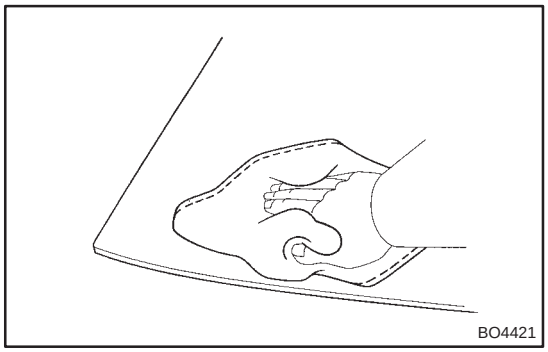
(a) Remove the wiper arm head cap.
(b) Remove the rear wiper arm.
(c) Remove the wiper motor.

4. REMOVE BACK DOOR GLASS

(a) Pass a piano wire between the body and glass from the interior.
(b) Tie both wire ends to wooden blocks or similar objects.

HINT:

Apply protective tape to the outer surface to prevent the surface from being scratched.



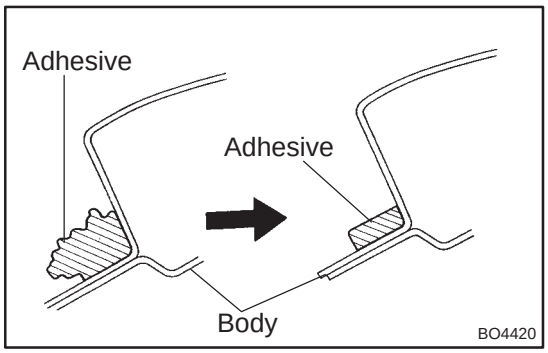
NOTICE:

When separating the glass, take care not to damage the paint and interior and exterior ornaments.

(c) Cut off the adhesive by pulling the piano wire around the glass.
(d) Using a suction rubber, remove the glass.

NOTICE:

Leave as much adhesive on the body as possible when removing the glass.



5. CLEAN BACK DOOR GLASS

(a) Clean the outer circumference of the glass with white gasoline.

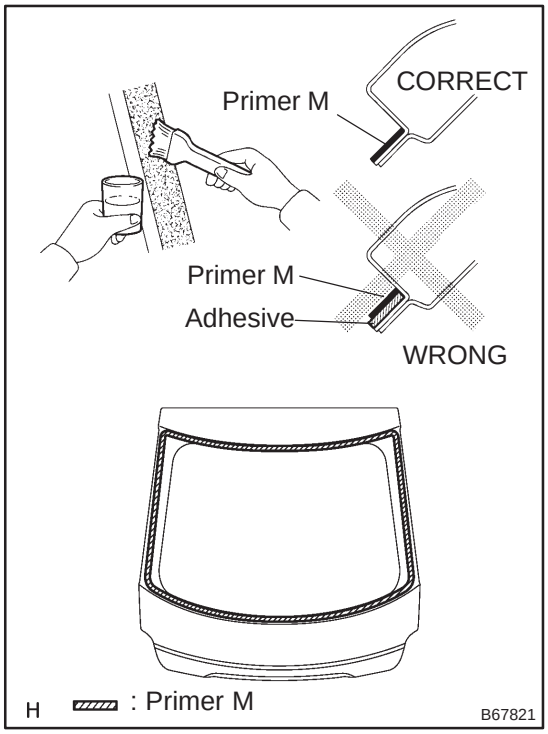
NOTICE:

- **Do not touch the glass surface after cleaning it.**
- **Be careful not to damage the body.**

6. INSTALL BACK DOOR GLASS

(a) Clean and shape the contact surface of the vehicle body.

(1) Using a knife, cut away any rough adhesive on the contact surface of the body to ensure the appropriate surface shape.



HINT:

Leave as much adhesive on the body as possible.

(2) Clean the contact surface of the body with a piece of shop rag saturated with cleaner.

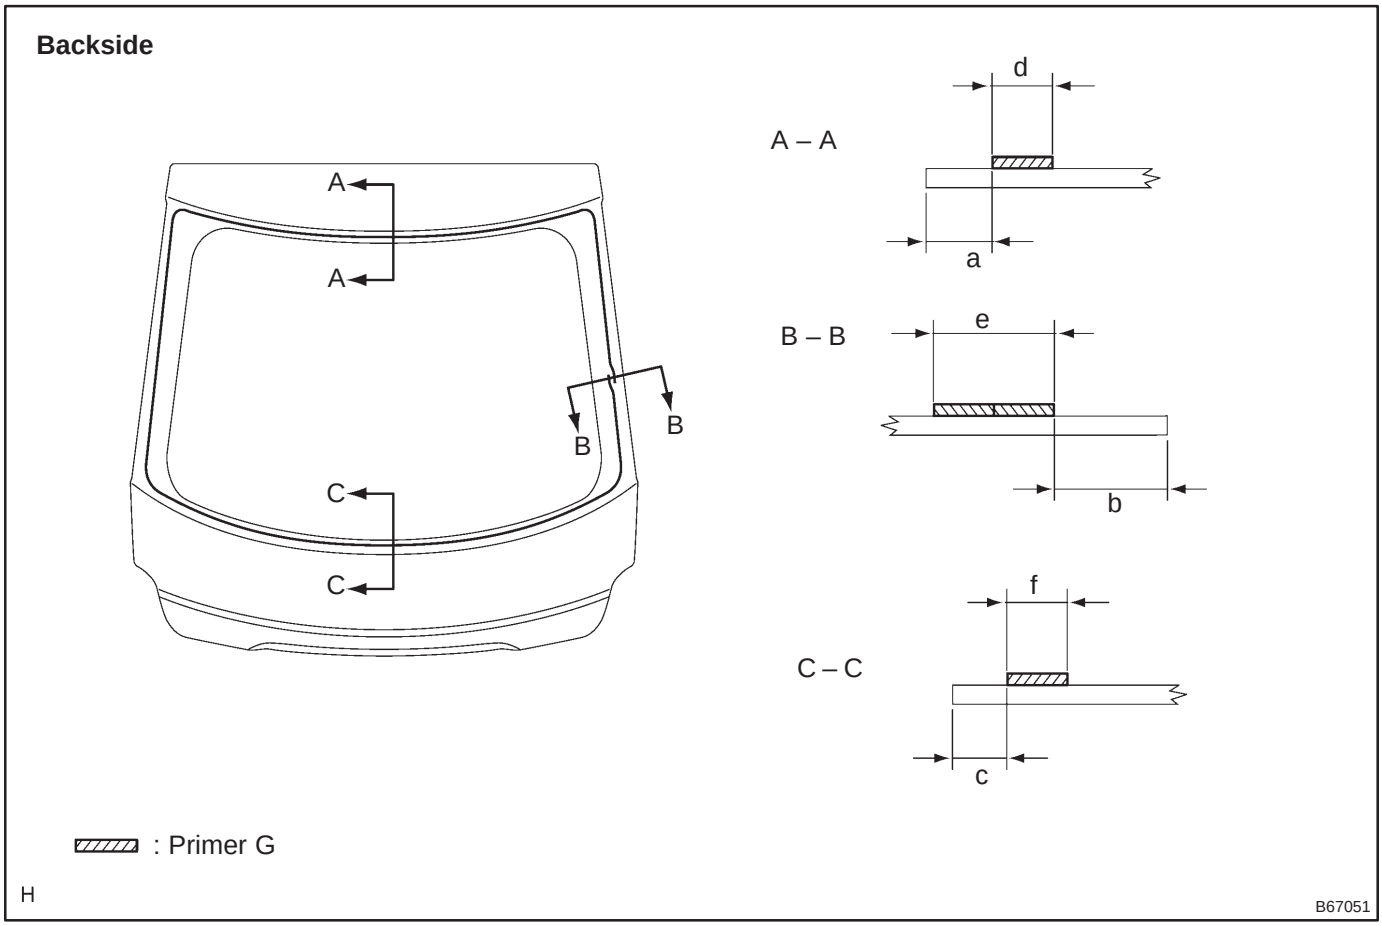
HINT:

Even if all the adhesive has been removed, clean the body.

(b) Using a brush, coat the exposed part of the body on the vehicle side with Primer M.

NOTICE:

- **Allow the primer coating to dry for 3 minutes or more.**
- **Do not coat the adhesive with Primer M.**
- **Do not keep any of the opened Primer M for later use.**



(c) Using a brush or sponge, coat the edge of the glass and the contact surface with Primer G.

HINT:

If an area other than that specified is coated by accident, wipe off the primer with a clean shop rag before it dries.

NOTICE:

- **Allow the primer coating to dry for 3 minutes or more.**
- **Do not keep any of the opened Primer G for later use.**

Standard dimension:

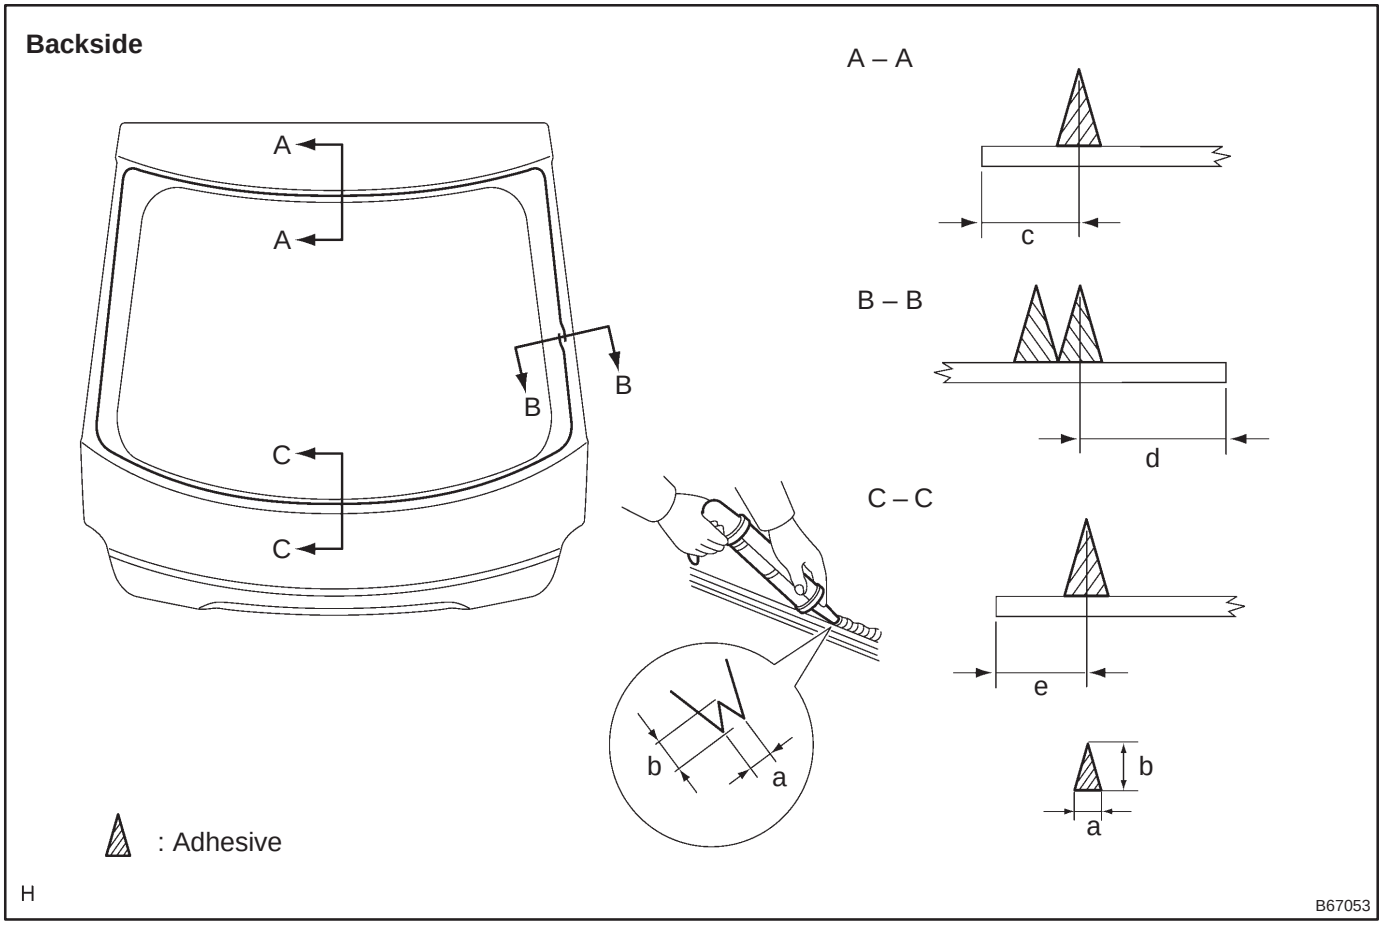
a	10.2 mm (0.402 in.)
b	23.7 mm (0.933 in.)
c	9.1 mm (0.358 in.)
d	11.0 mm (0.433 in.)
e	14.0 mm (0.551 in.)
f	11.0 mm (0.433 in.)

(d) Apply adhesive.

Adhesive: Part No. 08850–00801 or equivalent

(1) Cut off the tip of the cartridge nozzle, as shown in the illustration.

HINT:



After cutting off the tip, use all adhesive within the time described in the table below.

Tackfree time:

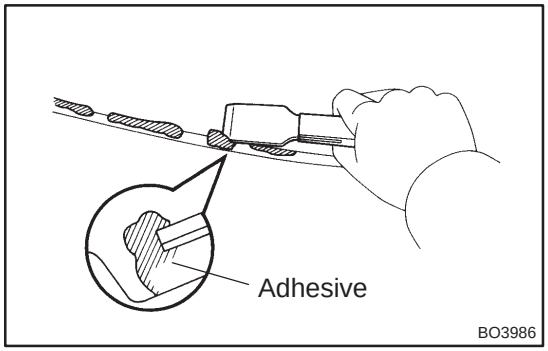
Temperature	Tackfree Time
35°C (95°F)	15 minutes
20°C (68°F)	1 hour 40 minutes
5°C (41°F)	8 hours

(2) Load the sealer gun with the cartridge.

(3) Coat the glass with adhesive, as shown in the illustration.

Standard dimension:

a	12.0 mm (0.472 in.)
b	8.0 mm (0.315 in.)
c	14.2 mm (0.559 in.)
d	30.7 mm (1.209 in.)
e	13.1 mm (0.516 in.)



(e) Install the glass to the body.

(1) Hold the back window glass in place securely with tape or equivalent to the body until the adhesive has hardened.

NOTICE:

- **Allow the primer coating to dry for 3 minutes or more.**
- **Check that the clips are attached to the body correctly.**
- **Check the clearance between the body and glass.**

(2) Lightly press the front surface of the glass to ensure a close fit.

(3) Using a scraper, remove any excess or protruding adhesive.

HINT:

Apply adhesive onto the glass rim.

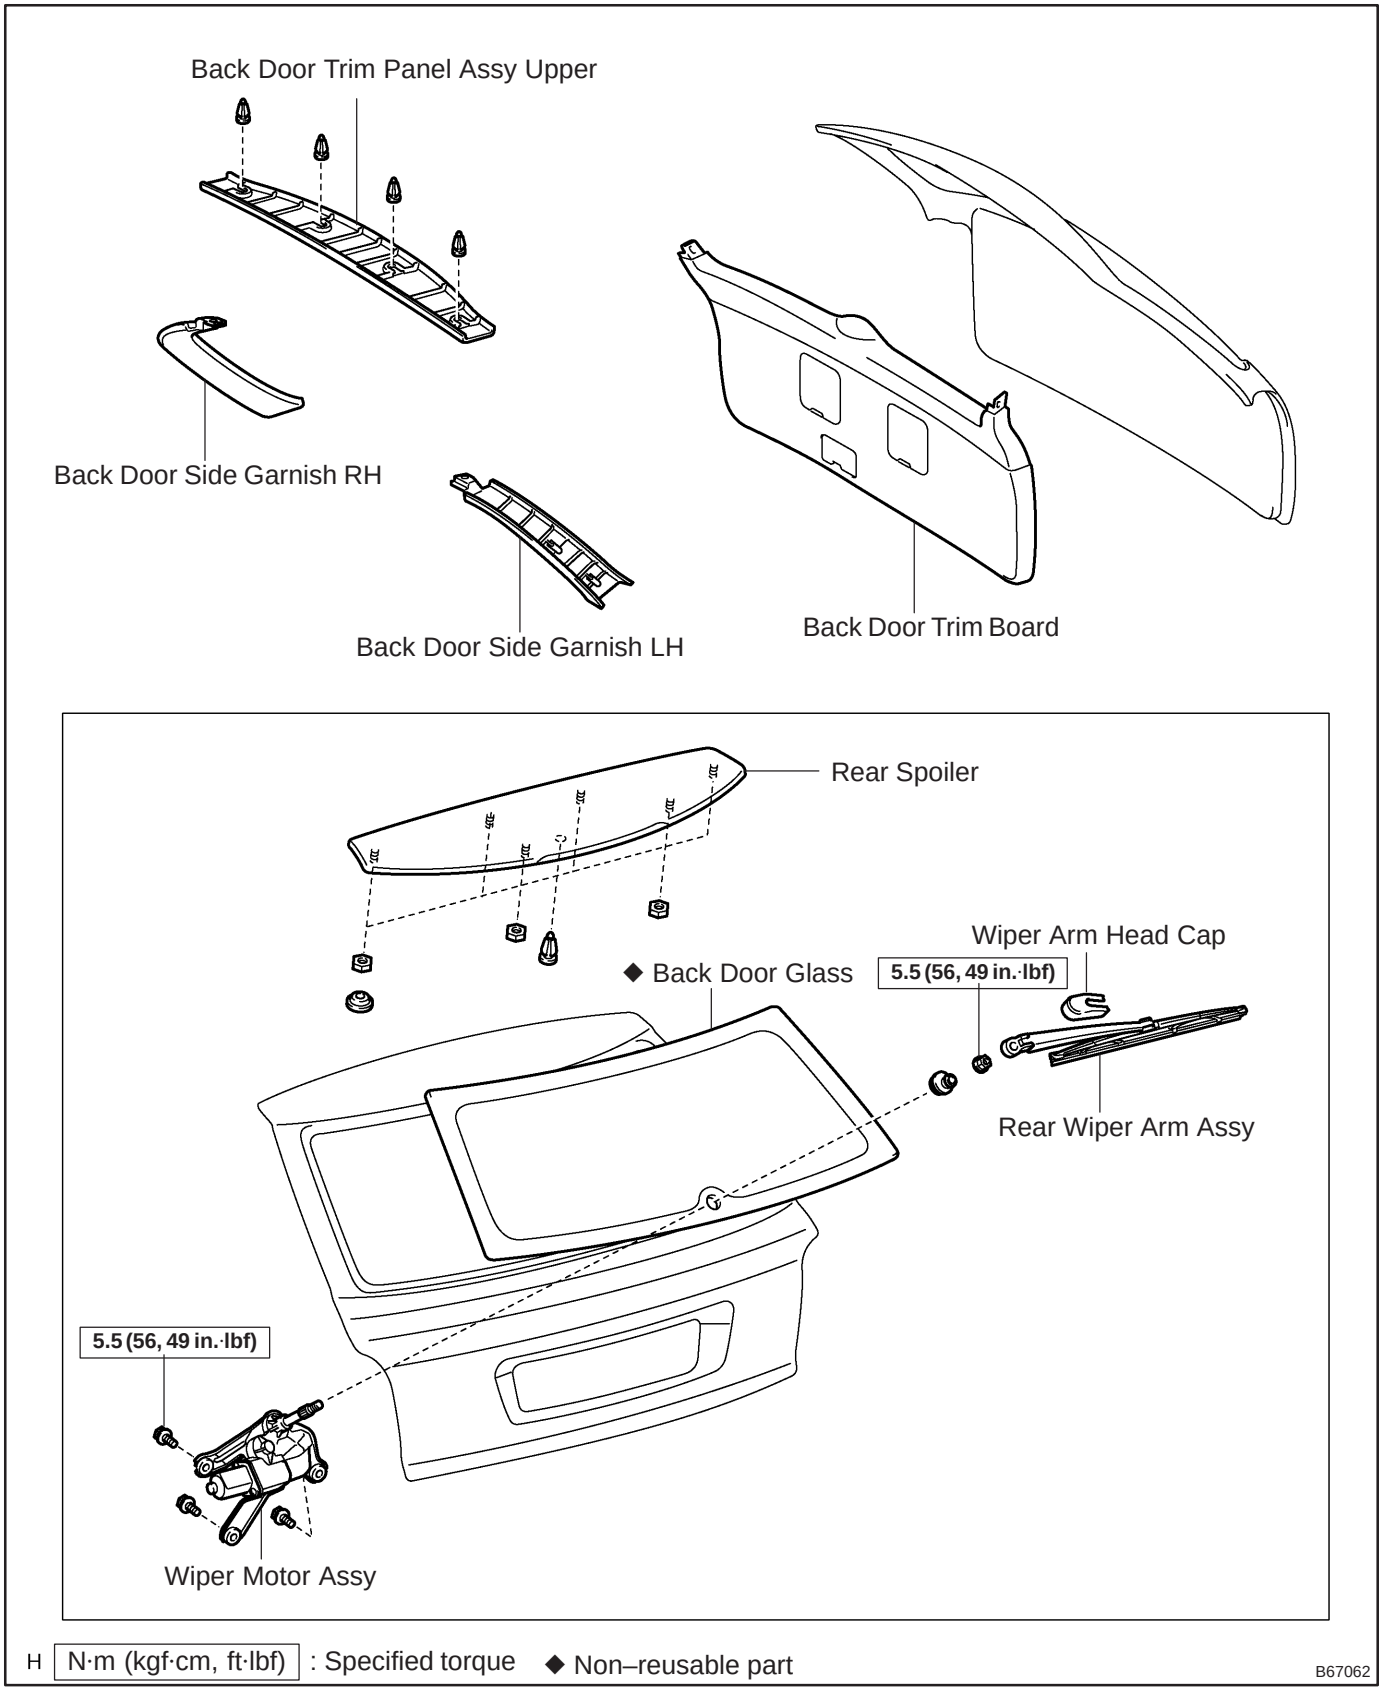
NOTICE:

Take care not to drive the vehicle for the time described in the table below.

Minimum time:

Temperature	Minimum time prior to driving vehicle
35˚C (95˚F)	1 hour 30 minutes
20˚C (68˚F)	5 hours
5˚C (41˚F)	24 hours

7. INSPECT FOR LEAKS AND REPAIR



(a) Conduct a leak test after the adhesive has completely hardened.

(b) Seal any leaks with auto glass sealer.

BACK DOOR GLASS (WAGON MODELS)

COMPONENTS

700T9–01

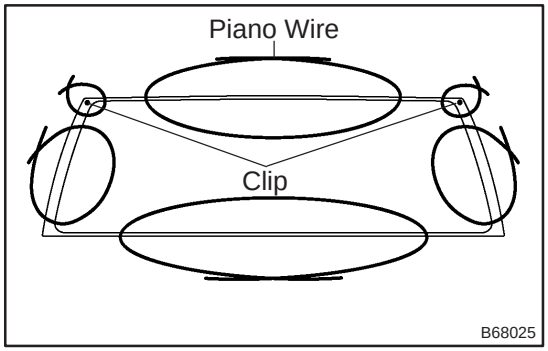
H N·m (kgf·cm, ft·lbf) : Specified torque ◆ Non–reusable part

B67062

REPLACEMENT

HINT:

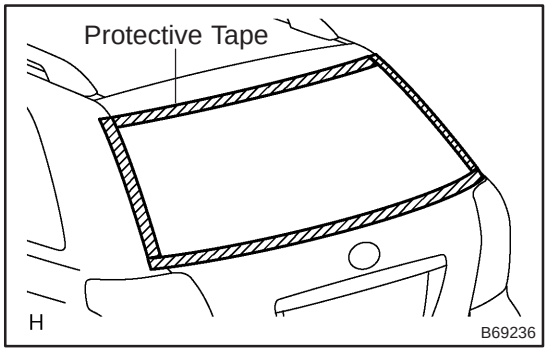
The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.



1. REMOVE BACK DOOR TRIM BOARD ASSY (See page 75–45)

(a) Remove the back door trim panel upper.
(b) Remove the back door side garnish LH.
(c) Remove the back door side garnish RH.
(d) Remove the back door trim board.

2. REMOVE REAR SPOILER (See page 76–30)



3. REMOVE REAR WIPER MOTOR ASSY (See page 66–17)

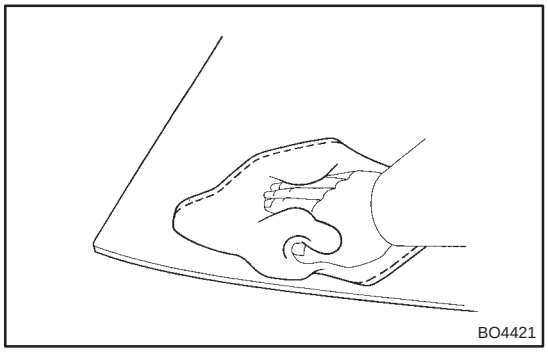
(a) Remove the wiper arm head cap.
(b) Remove the rear wiper arm.
(c) Remove the wiper motor.

4. REMOVE BACK DOOR GLASS

(a) Pass a piano wire between the body and glass from the interior.
(b) Tie both wire ends to wooden blocks or similar objects.

HINT:

Apply protective tape to the outer surface to prevent the surface from being scratched.



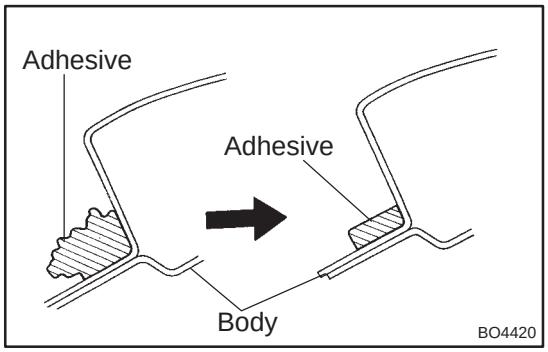
NOTICE:

When separating the glass, take care not to damage the paint and interior and exterior ornaments.

(c) Cut off the adhesive by pulling the piano wire around it.
(d) Using a suction rubber, remove the glass.

NOTICE:

Leave as much adhesive on the body as possible when removing the glass.



5. CLEAN BACK DOOR GLASS

(a) Clean the outer circumference of the glass with white gasoline.

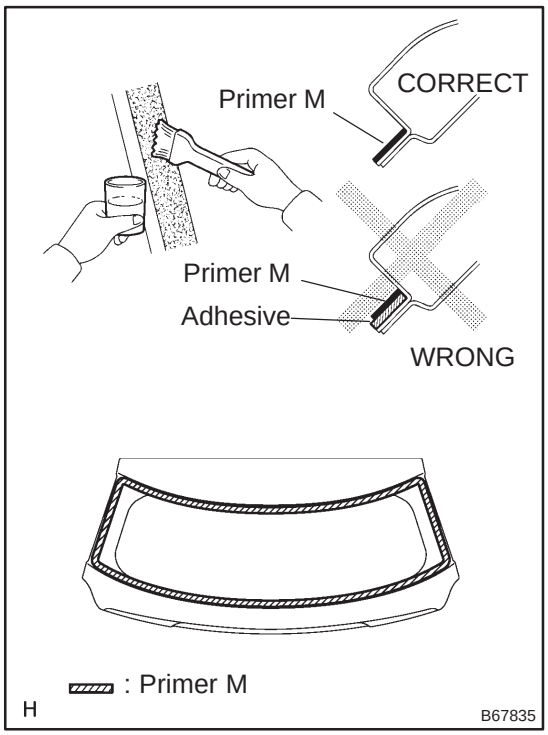
NOTICE:

- **Do not touch the glass surface after cleaning it.**
- **Be careful not to damage the body.**

6. INSTALL BACK DOOR GLASS

(a) Clean and shape the contact surface of the vehicle body.

(1) Using a knife, cut away any rough adhesive on the contact surface of the body to ensure the appropriate surface shape.



HINT:

Leave as much adhesive on the body as possible.

(2) Clean the contact surface of the body with a piece of shop rag saturated with cleaner.

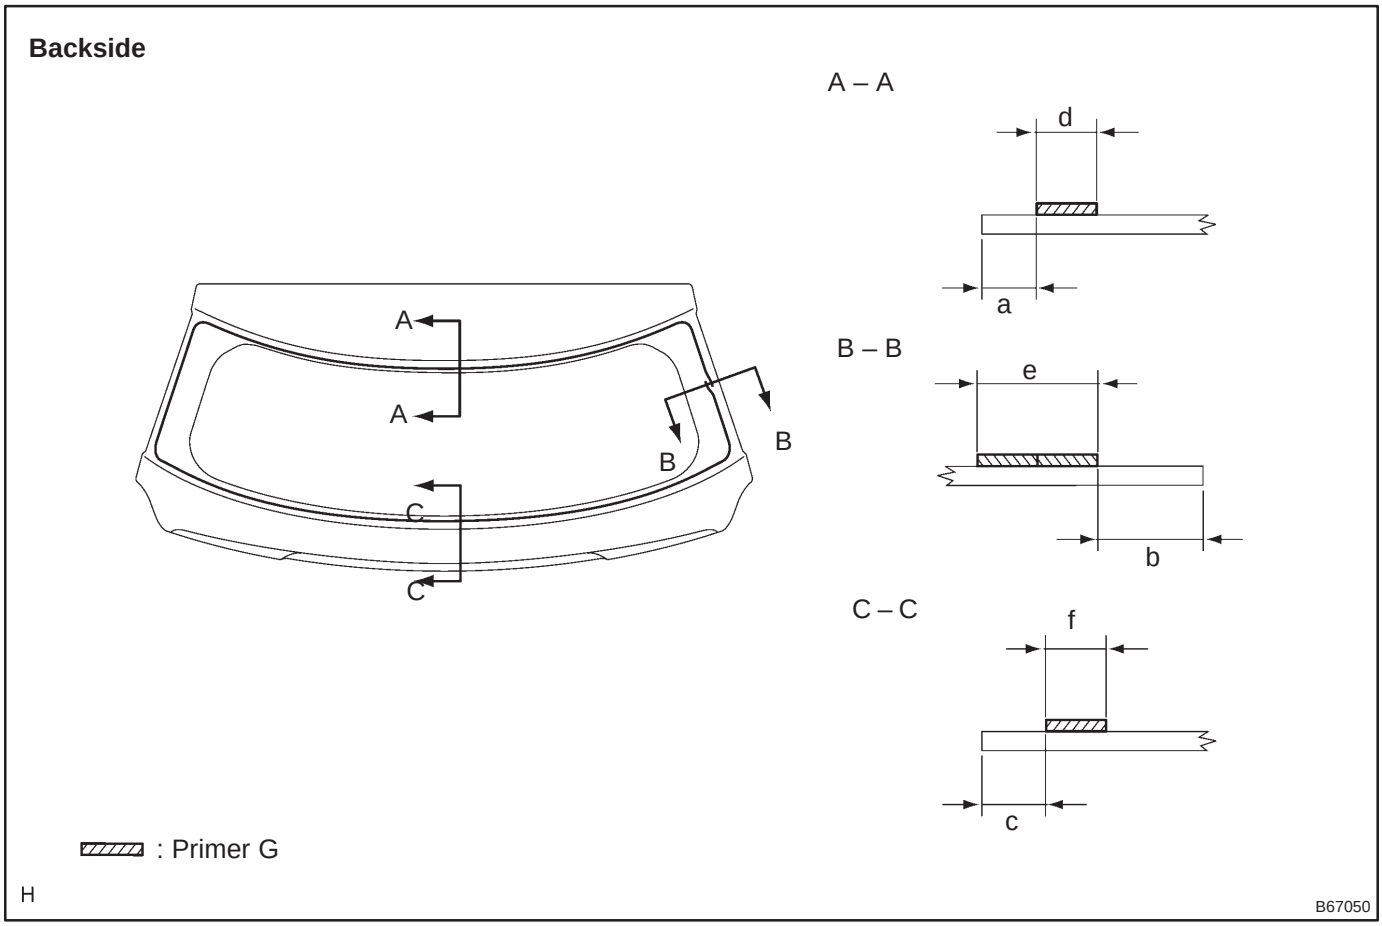
HINT:

Even if all the adhesive has been removed, clean the body.

(b) Using a brush, coat the exposed part of the body on the vehicle side with Primer M.

NOTICE:

- **Allow the primer coating to dry for 3 minutes or more.**
- **Do not coat the adhesive with Primer M.**
- **Do not keep any of the opened Primer M for later use.**



(c) Using a brush or sponge, coat the edge of the glass and the contact surface with Primer G.

HINT:

If an area other than that specified is coated by accident, wipe off the primer with a clean shop rag before it dries.

NOTICE:

- **Allow the primer coating to dry for 3 minutes or more.**
- **Do not keep any of the opened Primer G for later use.**

Standard dimension:

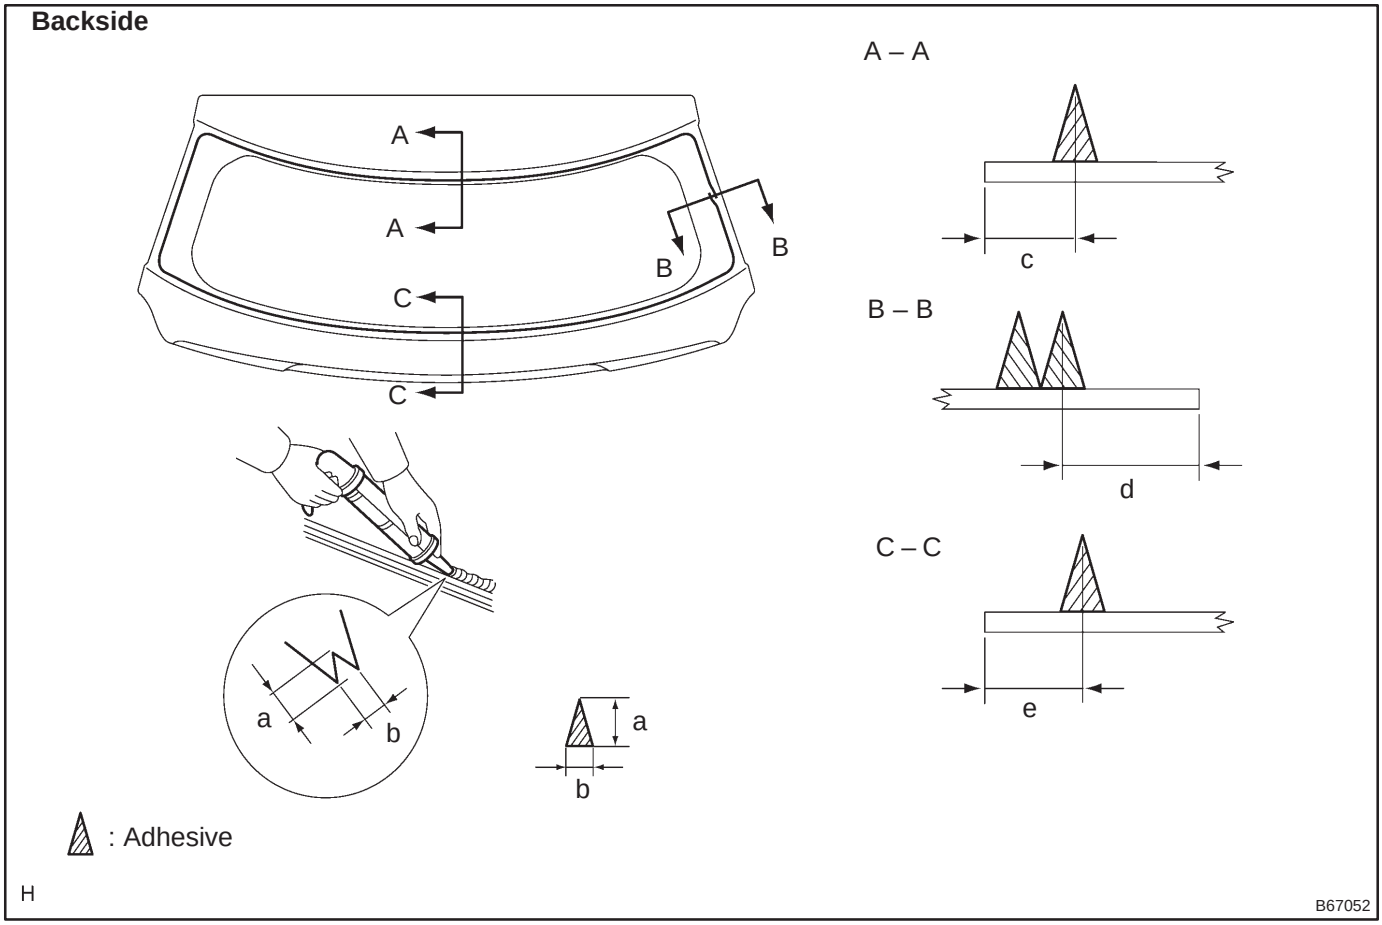
a	5.1 mm (0.201 in.)
b	20.4 mm (0.512 in.)
c	6.4 mm (0.252 in.)
d	11.0 mm (0.433 in.)
e	14.0 mm (0.551 in.)
f	11.0 mm (0.433 in.)

(d) Apply adhesive.

Adhesive: Part No. 08850–00801 or equivalent

(1) Cut off the tip of the cartridge nozzle, as shown in the illustration.

HINT:



After cutting off the tip, use all adhesive within the time described in the table below.

Tackfree time:

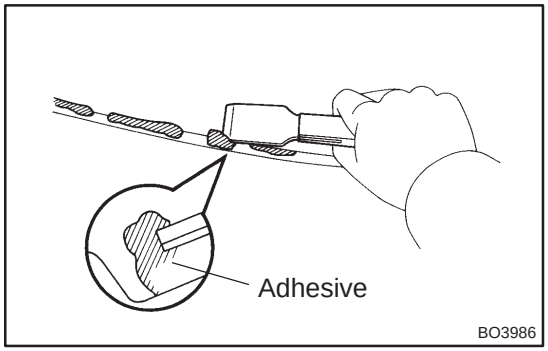
Temperature	Tackfree Time
35°C (95°F)	15 minutes
20°C (68°F)	1 hour 40 minutes
5°C (41°F)	8 hours

(2) Load the sealer gun with the cartridge.

(3) Coat the glass with adhesive, as shown in the illustration.

Standard dimension:

a	12.0 mm (0.472 in.)
b	8.0 mm (0.315 in.)
c	12.1 mm (0.476 in.)
d	27.4 mm (1.079 in.)
e	13.4 mm (0.528 in.)



(e) Install the glass to the body.

(1) Hold the back window glass in place securely with tape or equivalent to the body until the adhesive has hardened.

NOTICE:

- **Allow the primer coating to dry for 3 minutes or more.**
- **Check that the clips are attached to the body correctly.**
- **Check the clearance between the body and glass.**

(2) Lightly press the front surface of the glass to ensure a close fit.

(3) Using a scraper, remove any excess or protruding adhesive.

HINT:

Apply adhesive onto the glass rim.

NOTICE:

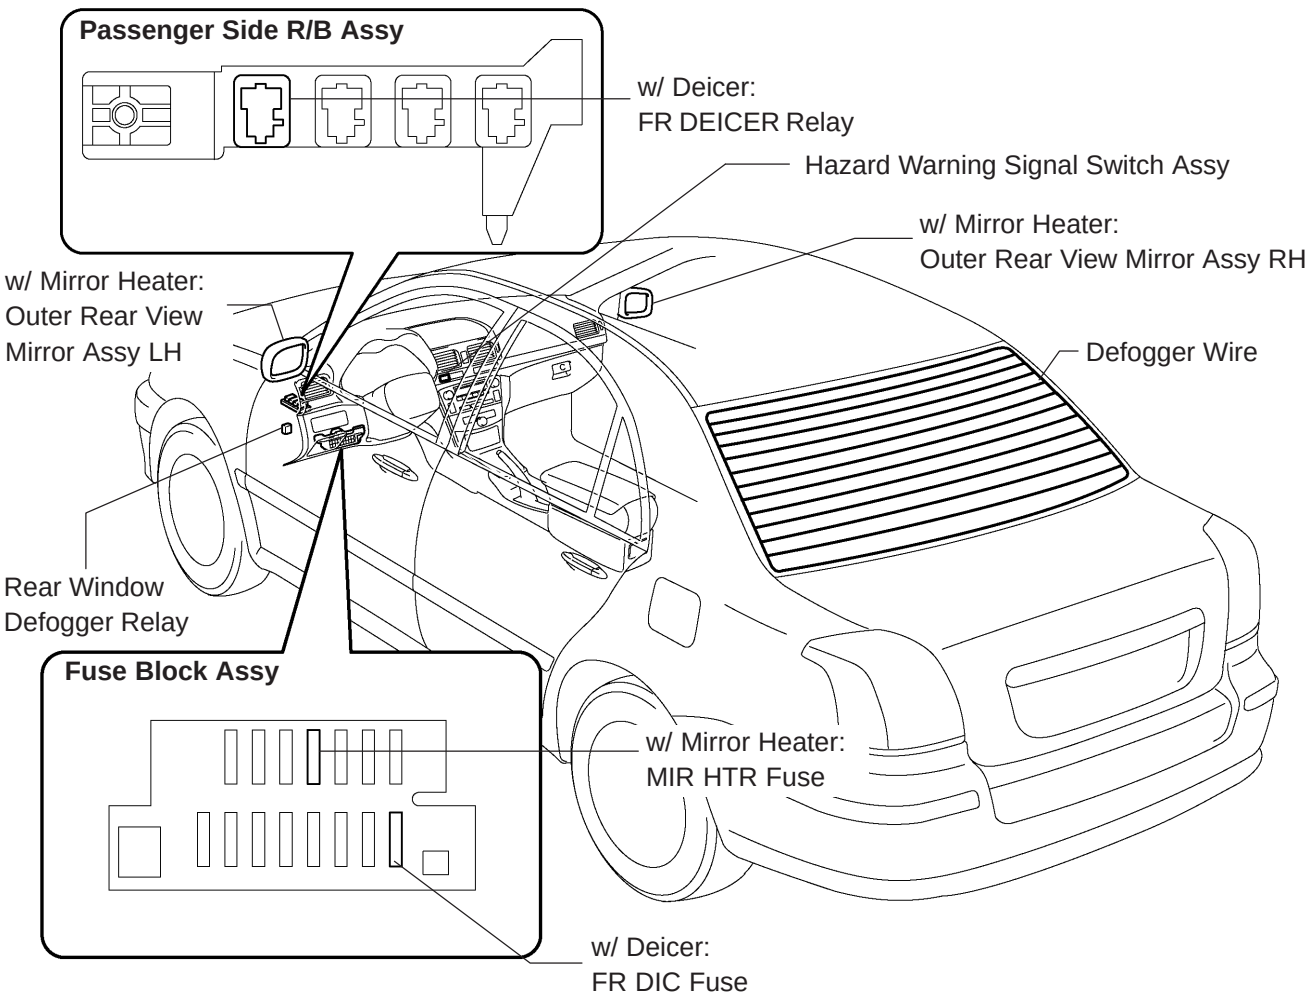
Take care not to drive the vehicle for the time described in the table below.

Minimum time:

Temperature	Minimum time prior to driving vehicle
35˚C (95˚F)	1 hour 30 minutes
20˚C (68˚F)	5 hours
5˚C (41˚F)	24 hours

7. INSPECT FOR LEAKS AND REPAIR

(a) Conduct a leak test after the adhesive has completely hardened.



(b) Seal any leaks with auto glass sealer.

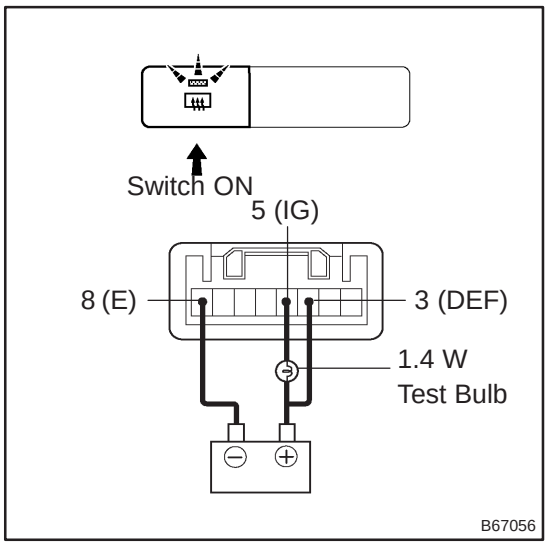
700TD–01

INSPECTION



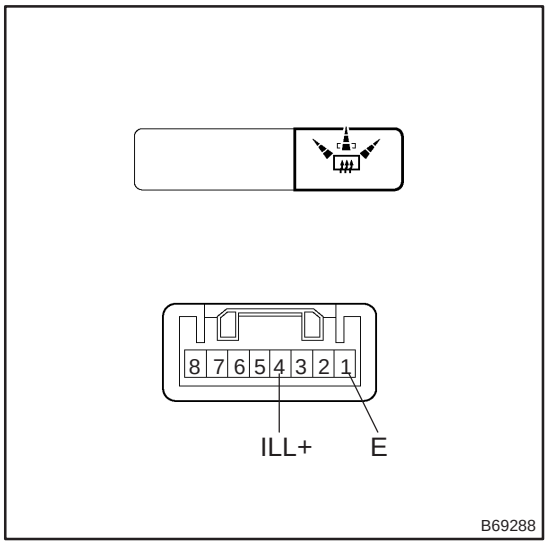
1. INSPECT REAR WINDOW DEFOGGER SWITCH (LHD Models)

(a) Check that the defogger switch illuminates.

Standard:

MeasurementCondition	SpecifiedCondition
Battery positive (+) → 5 (ILL+) Battery negative (–) → 8 (E)	Illuminates

If the result is not as specified, replace the switch assy or bulb.



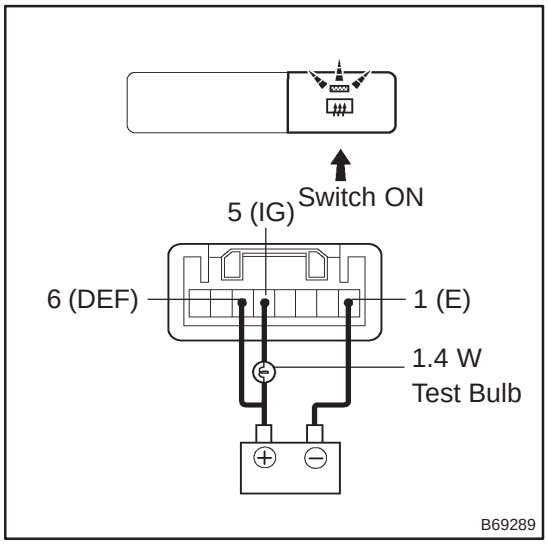
(b) Inspect operation of the defogger timer.

(1) Connect the positive (+) lead from the battery to terminal 3 and the negative (–) lead to terminal 8.

(2) Connect the positive (+) lead from the battery to terminal 4 through a 1.4 W test bulb.

(3) Push the rear window defogger switch ON, check the switch and the test bulb illuminate for 12 – 18 minutes, and then they go off.

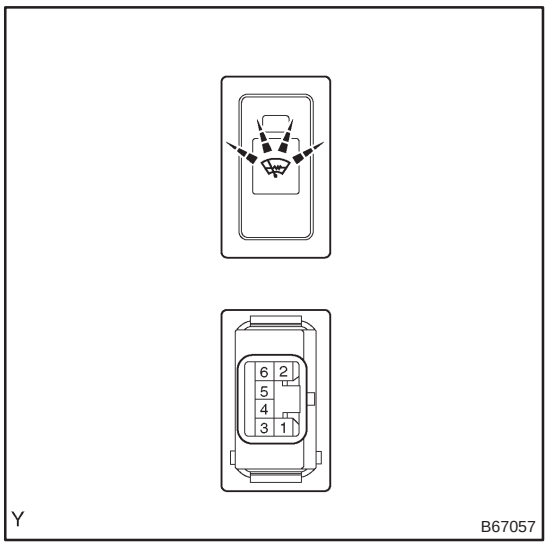
If the result is not as specified, replace the switch assy.



2. INSPECT REAR WINDOW DEFOGGER SWITCH (RHD Models)

(a) Check that the defogger switch illuminates.

Standard:

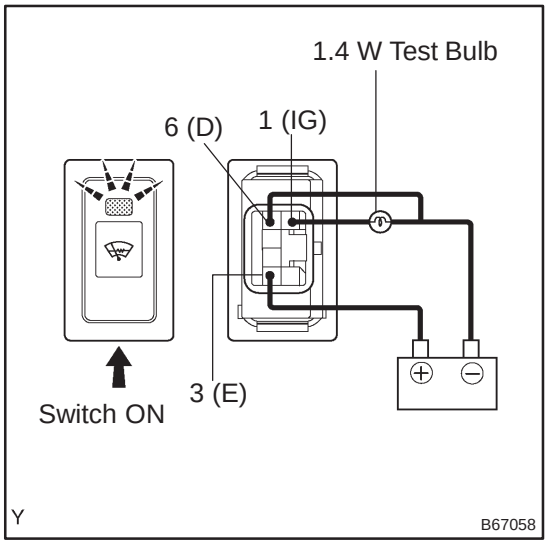


MeasurementCondition	SpecifiedCondition
Battery positive (+) → 4 (ILL+) Battery negative (–) → 1 (E)	Illuminates

If the result is not as specified, replace the switch assy or bulb.

(b) Inspect operation of the defogger timer.
(1) Connect the positive (+) lead from the battery to terminal 6 and the negative (–) lead to terminal 1.
(2) Connect the positive (+) lead from the battery to terminal 5 through a 1.4 W test bulb.
(3) Push the rear window defogger switch ON, check that the switch and the test bulb illuminate for 12 – 18 minutes, and then they go off.

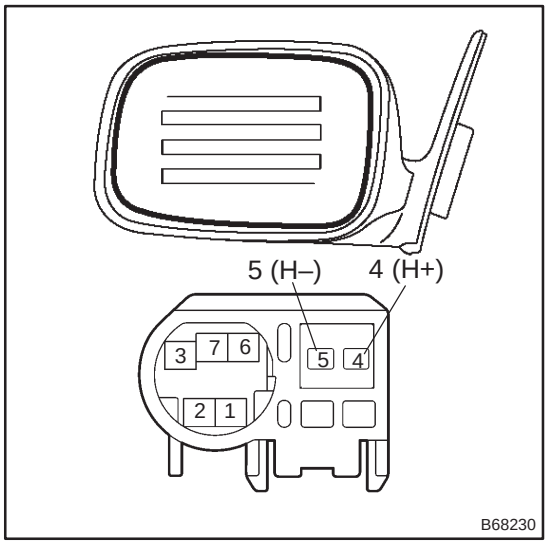
If the result is not as specified, replace the switch assy.



3. INSPECT FR WIPER DEICER SWITCH (W/ DEICER)

(a) check that the wiper deicer switch illuminates.

Standard:

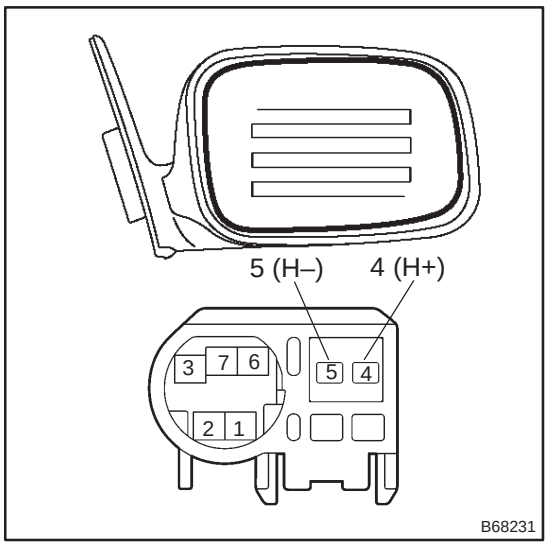


MeasurementCondition	SpecifiedCondition
Battery positive (+) → 1 Battery negative (–) → 4	Illuminates

If the result is not as specified, replace the switch or bulb.

(b) Inspect operation of the wiper deicer timer.
(1) Connect the positive (+) lead from the battery to terminal 6 and the negative (–) lead to terminal 3.
(2) Connect the positive (+) lead from the battery to terminal 1 through a 1.4 W test bulb.
(3) Push the wiper deicer switch ON, check that the switch and the test bulb illuminate for 12 – 18 minutes, and then they go off.

If the result is not as specified, replace the switch.



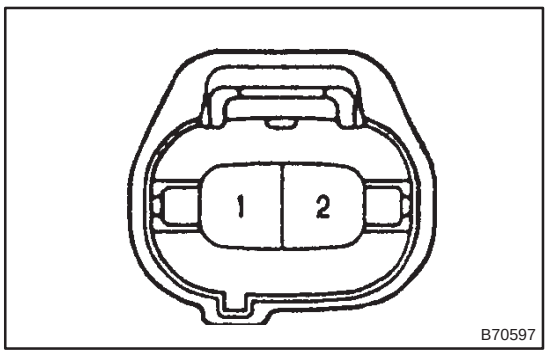
4. INSPECT OUTER REAR VIEW MIRROR ASSY LH (w/ OUTER MIRROR HEATER)

(a) Inspect operation of the mirror heater.

Standard:

MeasurementCondition	SpecifiedCondition
Battery positive (+) → H+ (4) Battery negative (–) → H– (5)	Mirror becomes warm

If the result is not as specified, replace the mirror assy.



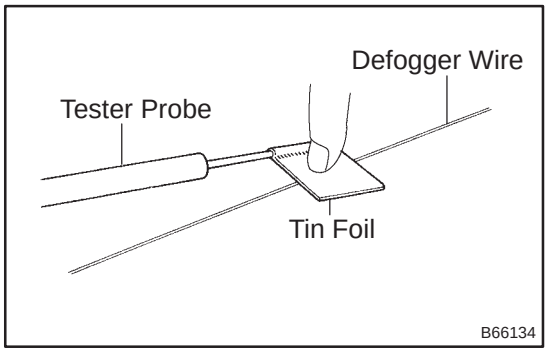
5. INSPECT OUTER REAR VIEW MIRROR ASSY RH (w/ OUTER MIRROR HEATER)

(a) Inspect operation of the mirror heater.

Standard:

MeasurementCondition	SpecifiedCondition
Battery positive (+) → H+ (4) Battery negative (–) → H– (5)	Mirror becomes warm

If the result is not as specified, replace the mirror assy.

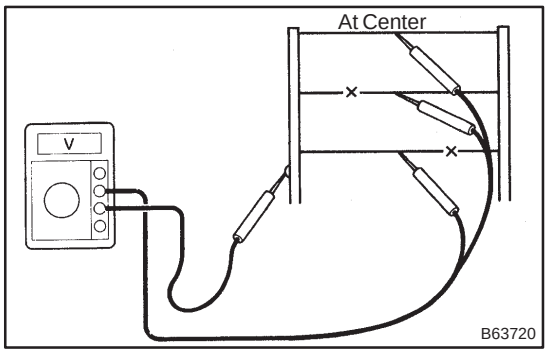


6. INSPECT FRONT WINDOW (DEICER WIRE) (W/ DEICER)

(a) Inspect the resistance of the deicer wire.

Standard:

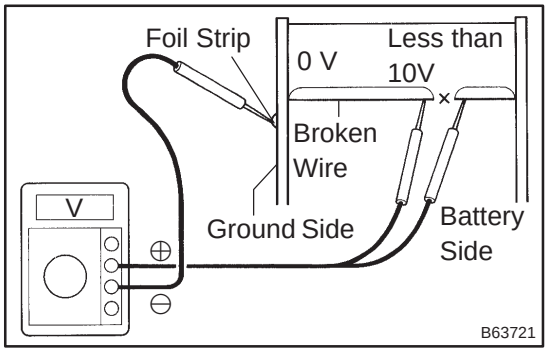
Terminal No.	SpecifiedCondition
1 – 2	Below 1 Ω



If the result is not as specified, replace the window.

7. INSPECT BACK WINDOW (DEFOGGER WIRE)

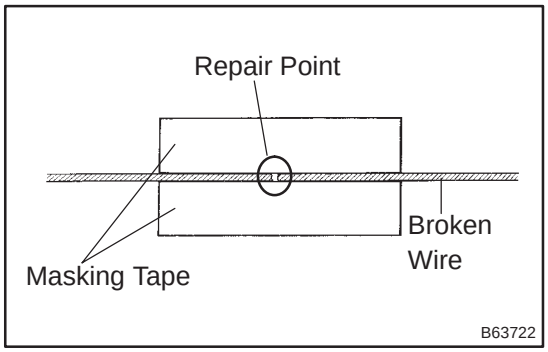
NOTICE:



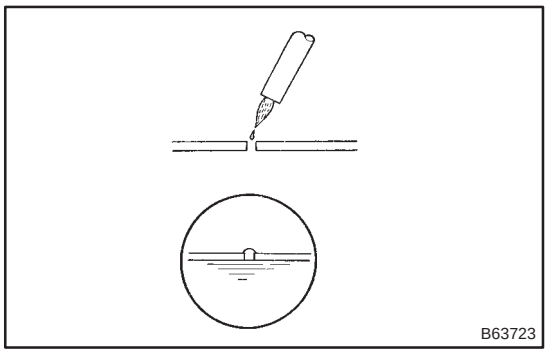
- **When cleaning the glass, wipe the glass along the wire using a soft and dry cloth. Take care not to damage the wires.**
- **Do not use detergents or glass cleaners including abrasive ingredients.**
- **When measuring voltage, wrap a piece of tin foil around the tip of the negative probe and press the foil against the wire with your finger, as shown in the illustration**

(a) Turn the ignition switch ON.
(b) Turn the defogger switch ON.
(c) Inspect the voltage at the center of each defogger wire, as shown in the illustration.

Standard:



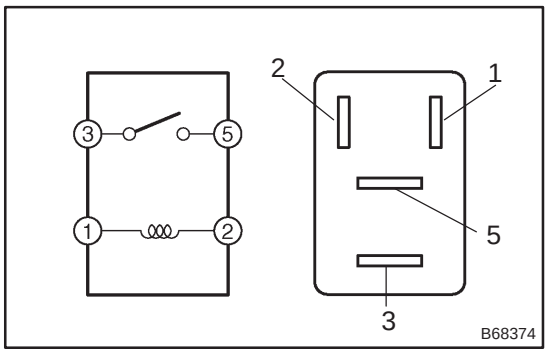
Voltage	Criteria
Approx. 5 V	Okay, wire is not broken
Approx. 10 or 0 V	Wire is broken



HINT:
If there is approximately 10 V, the wire may be broken between the center of the wire and the end on the battery side. If there is no voltage, the wire may be broken between the center of the wire and the end on the ground side.

(d) Place the voltmeter positive (+) lead against the defogger wire on the battery side.
(e) Place the voltmeter negative (–) lead with the foil strip against the wire on the ground side.
(f) Slide the positive (+) lead from the battery side to the ground side.
(g) The point where the voltmeter deflects from approx. 10V to 0 V is the place where the defogger wire is broken.

HINT:
If the defogger wire is not broken, the voltmeter indicates 0 V at the positive (+) end of the defogger wire but gradually increases to about 12 V as the meter probe moves to the other end.

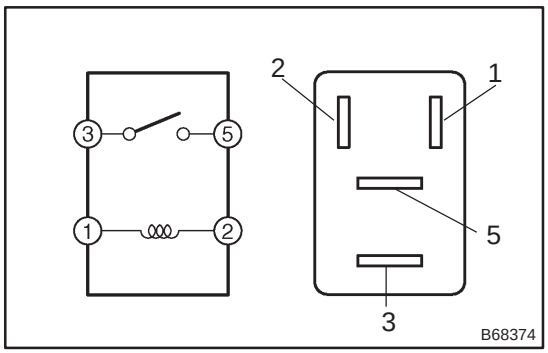


(h) If necessary, repair the defogger wire.
(1) Clean the broken wire tips with grease, wax and silicone remover.
(2) Place the masking tape along the both sides of the wire.
(3) Thoroughly mix the repair agent (Dupont paste No. 4817).

(4) Using a fine tip brush, apply a small amount of the agent to the wire.
(5) After a few minutes, remove the masking tape.

NOTICE:

Do not repair the defogger wire again for at least 24 hours.



8. INSPECT FR WIPER DEICER RELAY (W/ DEICER)

(a) Inspect the resistance.

Standard:

Terminal Connection.	Specified Condition
3 – 5	10 kΩ or higher
	Below 1 Ω (When battery voltage is applied to terminals 1 and 2)

If the result is not as specified, replace the relay.

9. INSPECT DEFOGGER RELAY

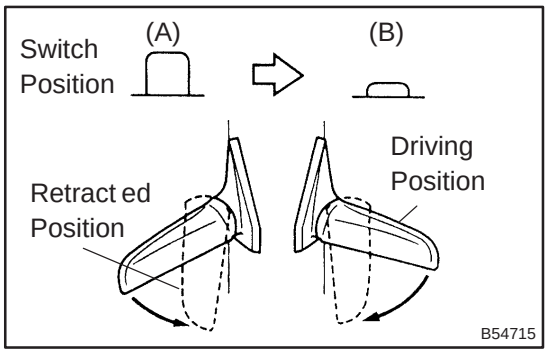
(a) Inspect the resistance.

Standard:

Terminal No.	Specified Condition
3 – 5	10 kΩ or higher
	Below 1 Ω (When battery voltage is applied to terminals 1 and 2)

If the result is not as specified, replace the relay.

POWER MIRROR CONTROL SYSTEM

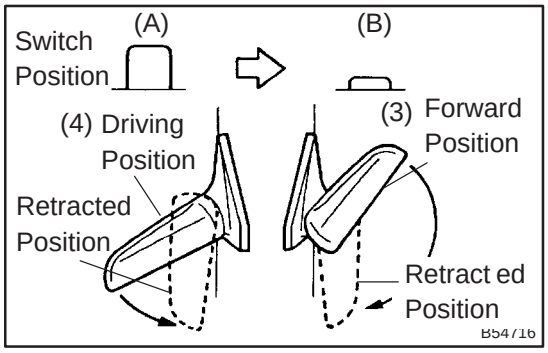


700TE–01

ON–VEHICLE INSPECTION

1. OPERATIONAL INSPECTION ELECTRICALLY–RETRACT DOOR MIRROR OPERATION

(a) Turn the ignition switch to the ACC position.

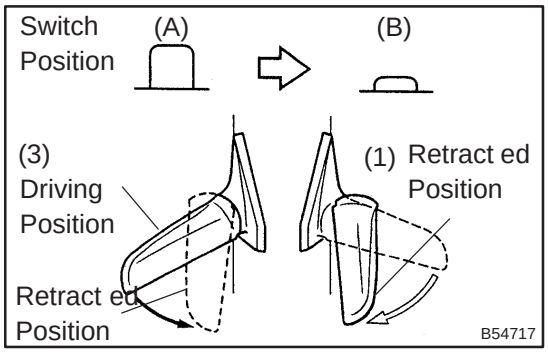


(b) At each position of the outer mirror body, check the operation when operating the retract switch of the outer mirror.

(c) Check the outer mirror operation, as shown in the illustration.

(1) Push the retract switch from the (A) position to the (B) position.

(2) Check that the right and left mirrors move from the driving position to the retracted position.



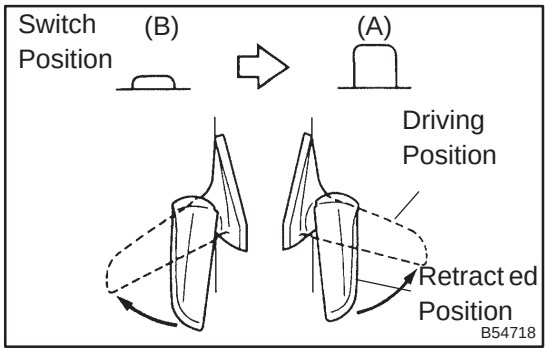
(d) Check the outer mirror operation, as shown in the illustration.

(1) Move one of the mirrors to the forward position by hand.

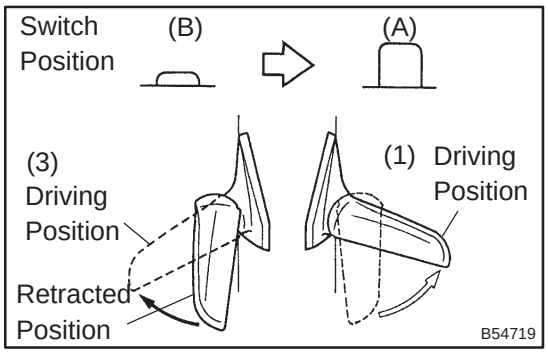
(2) Push the retract switch from the (A) position to the (B) position.

(3) Check that the mirror moves from the forward position to the retract position.

(4) Check that the other mirror moves from the driving position to the retracted position.



(e) Check the outer mirror operation, as shown in the illustration.



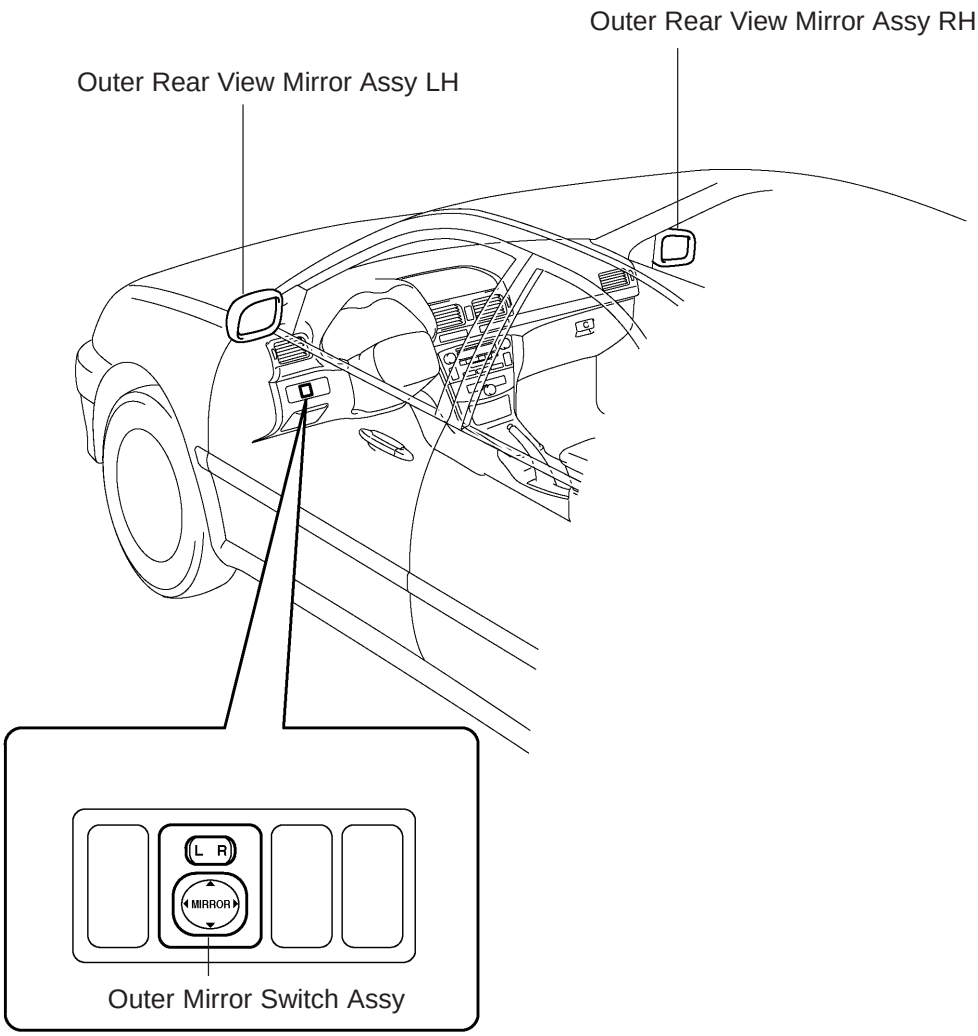
(1) Move one of the mirrors to the retracted position by hand.

(2) Push the retract switch from the (A) position to the (B) position.

(3) Check that the other mirror moves from the driving position to the retracted position.

(f) Check the outer mirror operation, as shown in the illustration.
  (1) Push the retract switch from the (B) position to the (A) position.
  (2) Check that the right and left mirrors move from the retracted position to the driving position.

(g) Check the outer mirror operation, as shown in the illustration.
  (1) Move one of mirrors to the driving position by hand.
  (2) Push the retract switch From the (A) position to the (B) position.
  (3) Check that the other mirror moves from the retracted position to the driving position.



(h) Check operation of the outer mirror body when the ignition switch is turned OFF during operation.
  (1) When turning the ignition switch OFF during operation of the mirror body, check that the mirror body operation stops.
  (2) Check that the mirror body continues to operate when the ignition switch is turned to ACC again.

HINT:
If the retract switch is switched while the ignition switch is OFF and the ignition switch is turned to ACC again, the mirror body will operate in the opposite direction.

(i) Check operation of the outer mirror body when it is restrained by an obstacle.
  (1) Check that operation stops when restraining the mirror body movement by hand while the mirror body is moving to the retraced position or the driving position.
  (2) Switch the retract switch under the above condition, and check that the mirror body starts operation again to the opposite direction.

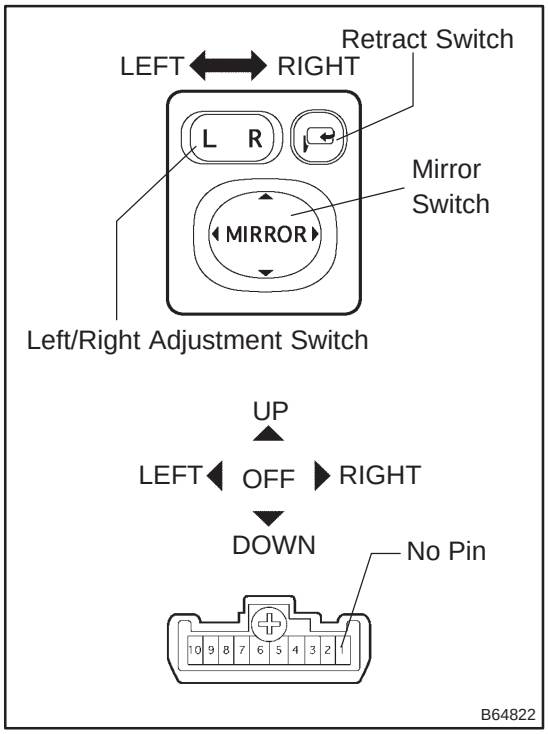
INSPECTION

1. INSPECT OUTER MIRROR SWITCH ASSY

(a) The L side of the left/right adjustment switch:
Inspect the mirror switch resistance.
Standard (Left side):



Terminal Connection	Switch Position	Specified Condition
4 – 8	UP	Below 1 Ω
6 – 7		
4 – 7	DOWN	Below 1 Ω
6 – 8		
5 – 8	LEFT	Below 1 Ω
6 – 7		
5 – 7	RIGHT	Below 1 Ω
6 – 8		

If the result is not as specified, replace the switch assy.

(b) The R side of the left/right adjustment switch:
Inspect the mirror switch resistance.
Standard (Right side):

Terminal Connection	Switch Position	Specified Condition
3 – 8	UP	Below 1 Ω
6 – 7		
3 – 7	DOWN	Below 1 Ω
6 – 8		
2 – 8	LEFT	Below 1 Ω
6 – 7		
2 – 7	RIGHT	Below 1 Ω
6 – 8		

If the result is not as specified, replace the switch assy.

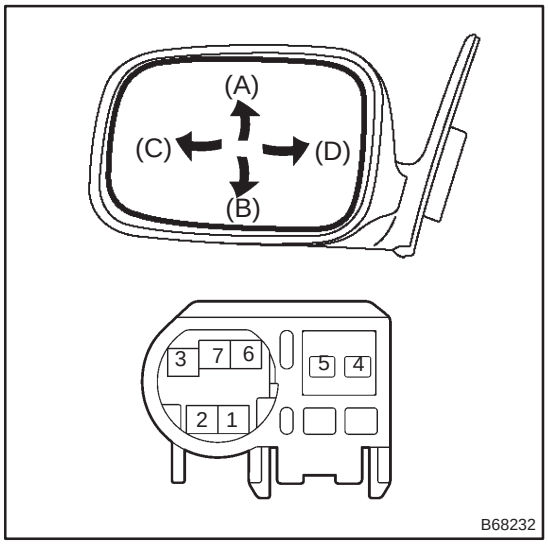
2. INSPECT OUTER MIRROR SWITCH ASSY (w/ RETRACT MIRROR)

(a) The L side of the left/right adjustment switch:
Inspect the mirror switch resistance.
Standard (Left side):

Terminal Connection	Switch Position	Specified Condition
–	OFF	10 kΩ or higher
4 – 8	UP	Below 1 Ω
6 – 7		
4 – 7	DOWN	Below 1 Ω
6 – 8		
5 – 8	LEFT	Below 1 Ω
6 – 7		
5 – 7	RIGHT	Below 1 Ω
6 – 8		

If the result is not as specified, replace the switch assy.

(b) The R side of the left/right adjustment switch:
Inspect the mirror switch resistance.
Standard (Right side):



Terminal Connection	Switch Position	Specified Condition
–	OFF	10 kΩ or higher
3 – 8	UP	Below 1 Ω
6 – 7		
3 – 7	DOWN	Below 1 Ω
6 – 8		
2 – 8	LEFT	Below 1 Ω
6 – 7		
2 – 7	RIGHT	Below 1 Ω
6 – 8		

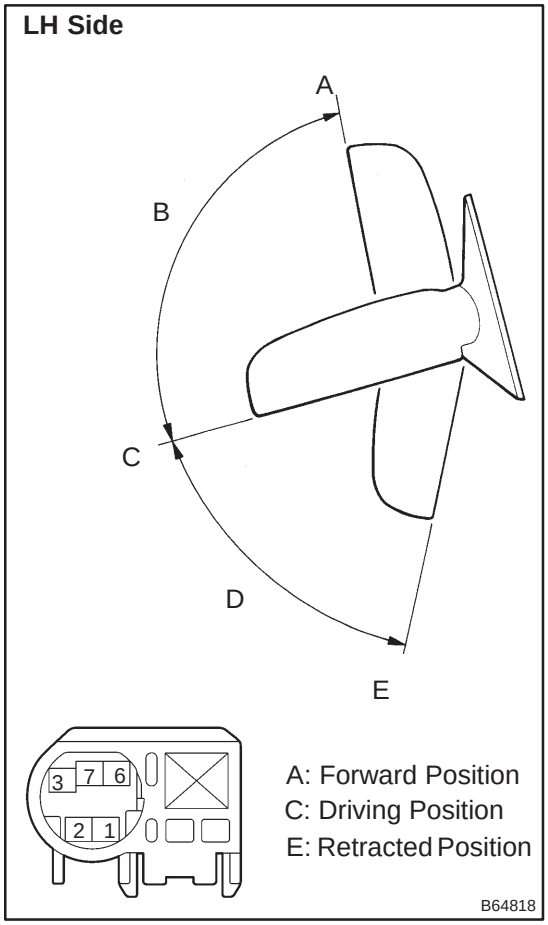
If the result is not as specified, replace the switch assy.

(c) Inspect the retract switch resistance.
Standard:

Terminal Connection	Switch Position	Specified Condition
7 – 9	DRIVING	Below 1 Ω
8 – 10		
7 – 10	RETRACT	Below 1 Ω
8 – 9		

If the result is not as specified, replace the switch assy.

3. INSPECT OUTER REAR VIEW MIRROR ASSY LH



(a) Disconnect the mirror connector.

(b) Apply battery voltage and inspect operation of the mirror face, as shown in the table and illustration.

Standard:

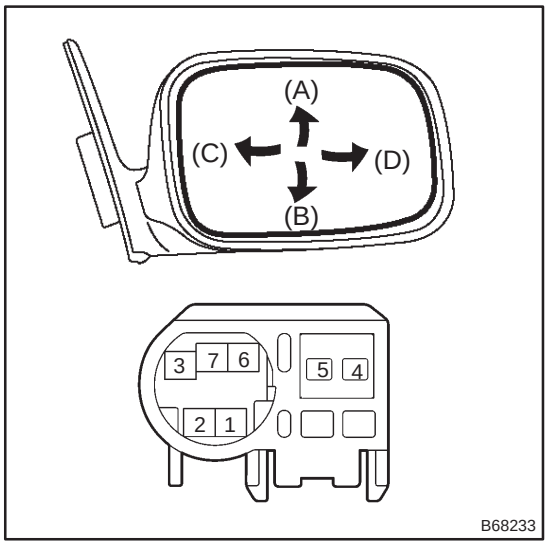
Measurement Condition	Mirror Operation
Battery positive (+) → 3 (MV) Battery negative (–) → 7 (M+)	Turns upward (A)
Battery positive (+) → 7 (M+) Battery negative (–) → 3 (MV)	Turns downward (B)
Battery positive (+) → 7 (M+) Battery negative (–) → 6 (MH)	Turns left (C)
Battery positive (+) → 6 (MH) Battery negative (–) → 7 (M+)	Turns right (D)

If the result is not as specified, replace the mirror assy.

(c) Only retract mirror:

Inspect operation of the electrical retract motor.

NOTICE:



- **When repeating the inspection, cut off the battery voltage, and then perform operation in the same procedures.**
- **With the battery voltage applied, the mirror will not operate even trying to move only the mirror body.**

Standard:

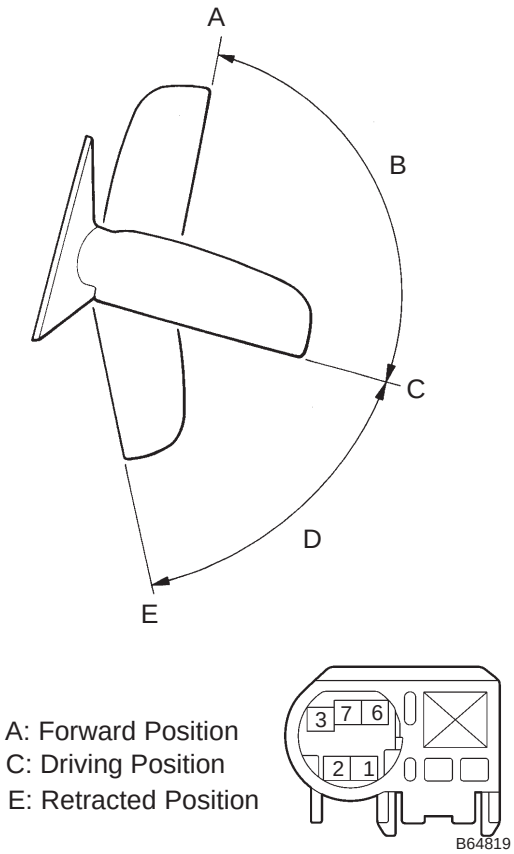
Mirror Position	Measurement Condition	Mirror Operation
A (Forward position)	Battery positive (+) → 1 (MR) Battery negative (–) → 2 (MF)	Moves to retracted position (stop)
	Battery positive (+) → 2 (MF) Battery negative (–) → 1 (MR)	No operation
B (Between forward position and driving position)	Battery positive (+) → 1 (MR) Battery negative (–) → 2 (MF)	Moves to retracted position and then stops
	Battery positive (+) → 2 (MF) Battery negative (–) → 1 (MR)	Moves to forward position and then stops
C (Driving position)	Battery positive (+) → 1 (MR) Battery negative (–) → 2 (MF)	Moves to retracted position and then stops
	Battery positive (+) → 2 (MF) Battery negative (–) → 1 (MR)	No operation

Mirror Position	Measurement Condition	Mirror Operation
D (Between driving position and retracted position)	Battery positive (+) → 1 (MR) Battery negative (–) → 2 (MF)	Moves to retracted position and then stops
	Battery positive (+) → 2 (MF) Battery negative (–) → 1 (MR)	Moves to driving position and then stops
E (Retracted position)	Battery positive (+) → 1 (MR) Battery negative (–) → 2 (MF)	No operation
	Battery positive (+) → 2 (MF) Battery negative (–) → 1 (MR)	Moves to driving position and then stops

If the result is not as specified, replace the mirror assy.

4. INSPECT OUTER REAR VIEW MIRROR ASSY RH

(a) Disconnect the mirror connector.



(b) Apply battery voltage and inspect operation of the mirror face, as shown in the table and illustration.

Standard:

Measurement Condition	Mirror Operation
Battery positive (+) → 3 (MV) Battery negative (–) → 7 (M+)	Turns upward (A)
Battery positive (+) → 7 (M+) Battery negative (–) → 3 (MV)	Turns downward (B)
Battery positive (+) → 7 (M+) Battery negative (–) → 6 (MH)	Turns right (D)
Battery positive (+) → 6 (MH) Battery negative (–) → 7 (M+)	Turns left (C)

If the result is not as specified, replace the mirror assy.

RH Side

(c) Only retract mirror:
Inspect operation of the electrical retract motor.

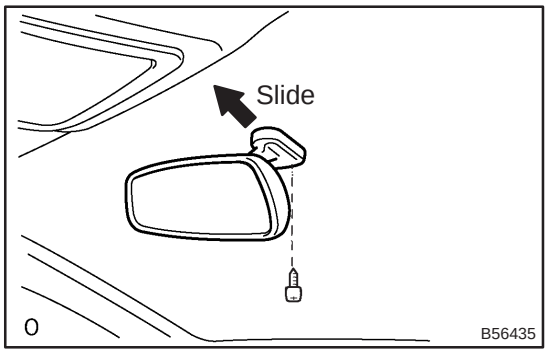
NOTICE:

- **When repeating the inspection, cut off the battery voltage, and then perform operation in the same procedures.**
- **With the battery voltage applied, the mirror will not operate even trying to move only the mirror body.**

Standard:

Mirror Position	Measurement Condition	Mirror Operation
A (Forward position)	Battery positive (+) → 1 (MR) Battery negative (–) → 2 (MF)	Moves to retracted position and then stops
	Battery positive (+) → 2 (MF) Battery negative (–) → 1 (MR)	No operation
B (Between forward position and driving position)	Battery positive (+) → 1 (MR) Battery negative (–) → 2 (MF)	Moves to retracted position and then stops
	Battery positive (+) → 2 (MF) Battery negative (–) → 1 (MR)	Moves to forward position and then stops
C (Driving position)	Battery positive (+) → 1 (MR) Battery negative (–) → 2 (MF)	Moves to retracted position and then stops
	Battery positive (+) → 2 (MF) Battery negative (–) → 1 (MR)	No operation
D (Between driving position and retracted position)	Battery positive (+) → 1 (MR) Battery negative (–) → 2 (MF)	Moves to retracted position and then stops
	Battery positive (+) → 2 (MF) Battery negative (–) → 1 (MR)	Moves to driving position and then stops
E (Retracted position)	Battery positive (+) → 1 (MR) Battery negative (–) → 2 (MF)	No operation
	Battery positive (+) → 2 (MF) Battery negative (–) → 1 (MR)	Moves to driving position and then stops

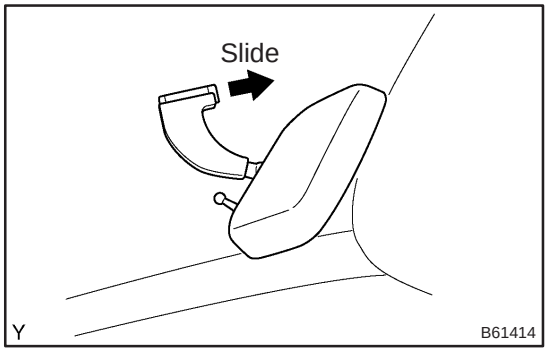
If the result is not as specified, replace the mirror assy.



INNER REAR VIEW MIRROR ASSY

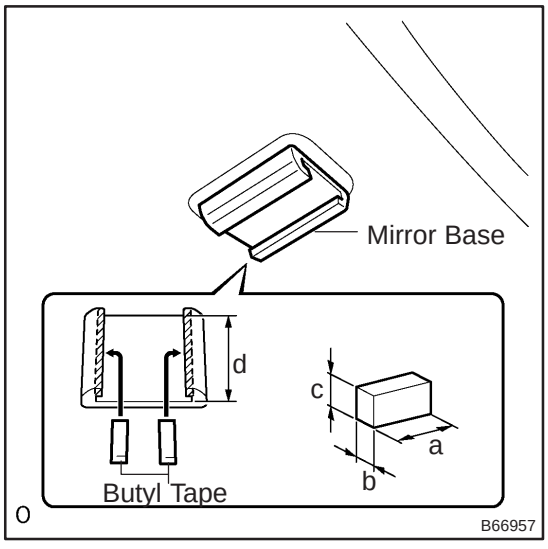
700TJ–01

REPLACEMENT



HINT:

The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.



1. REMOVE INNER REAR VIEW MIRROR ASSY (EC MIRROR)

(a) Remove the inner rear view mirror cover.
(b) Remove the rain sensor covers (See page XX–XXX).
(c) Remove the screw.
(d) Disconnect the connector.
(e) Remove the rear view inner mirror.

2. REMOVE INNER REAR VIEW MIRROR ASSY (NORMAL MIRROR)

(a) Remove the inner rear view mirror, as shown in the illustration.

3. INSTALL INNER REAR VIEW MIRROR ASSY (NORMAL MIRROR)

(a) Prepare 2 pieces of butyl tape having the dimensions, as shown in the illustration.
(b) While extending them until they fit the length of the mirror base (24 mm, (0.944 in.)), apply them to both side of the mirror base respectively.
(c) Install inner rear view mirror.

NOTICE:

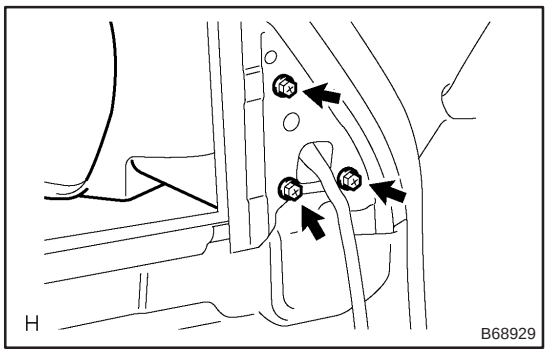
If butyl tape spreads out of the inside groove when applied, remove the excessive amount of tape so that it will not stick to the glass.

Dimension:

a	10 mm (0.393 in.)
b	4 mm (0.157 in.)
c	6 mm (0.236 in.)
d	24 mm (0.944 in.)

OUTER REAR VIEW MIRROR ASSY LH

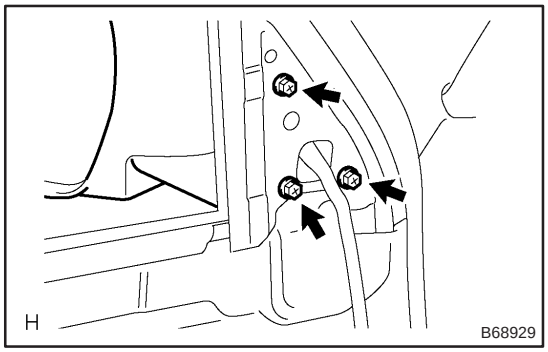
700TI–01



REPLACEMENT

HINT:

- The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.
- Use the same procedures on the RH side as on the LH side.



1. REMOVE FRONT DOOR HOLE COVER SUB–ASSY NO.1 LH (See page 75–8)

(a) Remove the front door lower frame bracket garnish.
(b) Remove the front door trim base.
(c) Only driver side:
Remove the fuel lid opener switch.
(d) w/ Power window:
Remove the power window regulator switch.
(e) Remove the front door trim board sub.
(f) Remove the front door inside handle.
(g) remove the front service hole cover No. 1.

2. REMOVE OUTER REAR VIEW MIRROR ASSY LH

(a) Disconnect the connector.
(b) Remove the 3 screws and mirror .

3. INSTALL OUTER REAR VIEW MIRROR ASSY LH

(a) Install the mirror with the 3 screws.
Torque: 10 N·m (102 kgf·cm, 7 ft·lbf)
(b) Connect the connector.

COMBINATION METER

710CM–02

PROBLEM SYMPTOMS TABLE

Warning Lights:

Symptom	Suspect Area	See page
Check Engine warning light does not come on.	1. Wire Harness or Connector 2. ECM 3. Combination Meter Assy	– – –
Discharge warning light does not come on.	1. Wire Harness or Connector 2. ECM 3. Combination Meter Assy	– – –
Brake warning light does not come on.	1. Wire Harness or Connector 2. Skid control ECU 3. Combination Meter Assy	– – –
ABS warning light does not come on.	1. Wire Harness or Connector 2. Skid control ECU 3. Combination Meter Assy	– – –
SRS warning light does not come on.	1. Wire Harness or Connector 2. Airbag Sensor Assy 3. Combination Meter Assy	– 05–1197 –
Open Door warning light does not come on.	1. Wire Harness or Connector 2. Front Door Courtesy Light 3. Body ECU 4. Combination Meter Assy	– – – –
Fuel Level warning light does not come on.	1. Wire Harness or Connector 2. Fuel Sender Gauge 3. Combination Meter Assy	– – –
Low Oil Pressure warning light does not come on.	1. Wire Harness or Connector 2. Low Oil Pressure Warning Switch 3. Combination Meter Assy	– – –
Engine Oil Level warning light does not come on.	1. Wire Harness or Connector 2. Oil Level Sensor 3. Combination Meter Assy	– – –
Belt warning light does not come on.	1. Wire Harness or Connector 2. Body ECU 3. Front Inner Belt Assy 4. Combination Meter Assy	– – 05–1522 –
VSC warning light does not come on.	1. Wire Harness or Connector 2. VSC Circuit 3. Combination Meter Assy	– 05–752 –

Indicator Lights:

Symptom	Suspect Area	See page
Shift indicator light do not come on.	1. Wire Harness or Connector 2. ECM 3. Neutral Start Switch Circuit 4. Combination Meter Assy	– – – –
Turn indicator light does not come on.	1. Wire Harness or Connector 2. Turn Signal and Hazard Warning System 3. Combination Meter Assy	– 65–9 –
Glow indicator light does not come on.	1. Wire Harness or Connector 2. ECM 3. Combination Meter Assy	– – –
TRC off indicator light does not come on.	1. Wire Harness or Connector 2. VSC Circuit 3. Combination Meter Assy	– 05–752 –

SLIP indicator light does not come on.	1. Wire Harness or Connector 2. Skid Control ECU 3. Combination Meter Assy	– 05–752 –
CRUISE indicator light does not come on.	1. Wire Harness or Connector 2. ECM 3. Combination Meter Assy	– – –
High Beam indicator light does not come on.	1. Wire Harness or Connector 2. Headlight Dimmer Switch 3. Combination Meter Assy	– 65–9 –
Fr FOG indicator does not come on.	1. Wire Harness or Connector 2. Fr FOG Relay 3. Fr FOG Light Switch 4. Combination Meter Assy	– – – –
Rr FOG indicator does not come on.	1. Wire Harness or Connector 2. Rr FOG Relay 3. Rr FOG Light Switch 4. Combination Meter Assy	– – – –
TAIL indicator does not come on.	1. Wire Harness or Connector 2. TAIL Relay 3. Combination Meter Assy	– – –
WATER LEVEL indicator does not come on (1KD–FTV).	1. Wire Harness or Connector 2. Water Level Sensor 3. Combination Meter Assy	– – –
EMPS indicator does not come on.	1. Wire Harness or Connector 2. EMPS ECU 3. Combination Meter Assy	– – –
A/T OIL TEMP indicator does not come on.	1. Refer to troubleshooting 2. Wire Harness or Connector 3. Combination Meter Assy	05–856 – –
ECT SNOW indicator does not come on.	1. Refer to troubleshooting 2. Wire Harness or Connector 3. Combination Meter Assy	05–980 – –
AUTO LEVELING indicator does not come on.	1. Wire Harness or Connector 2. Auto Leveling ECU 3. Combination Meter Assy	– – –

Meter Gauges:

Symptom	Suspect Area	See page
Speedometer does not operate.	1. Refer to troubleshooting	05–1510
Water temperature does not operate.	1. Refer to troubleshooting	05–1515
Tachometer does not operate.	1. Refer to troubleshooting	05–1513
Fuel Gauge does not operate or operates abnormally.	1. Refer to troubleshooting	05–1517

OTHERS:

Symptom	Suspect Area	See page
key reminder buzzer does not operate.	1. Wire Harness or Connector 2. Body ECU (KSW, DCTY) 3. Door Coutesy Switch 4. Key Unlock Warning Switch 5. Combination Meter Assy	– – – 05–1586 –
Light reminder buzzer does not operate.	1. Wire Harness or Connector 2. Body ECU (DCTY) 3. Combination Meter Assy	– – –
Seat belt Warning buzzer does not operate.	1. Perform DATA LIST with hand–held tester 2. Wire Harness or Connector 3. Seat Belt Buckle Switch 4. Combination Meter Assy	05–1499 – 61–3 –

710CN–02

ON–VEHICLE INSPECTION

1. INSPECT SPEEDOMETER

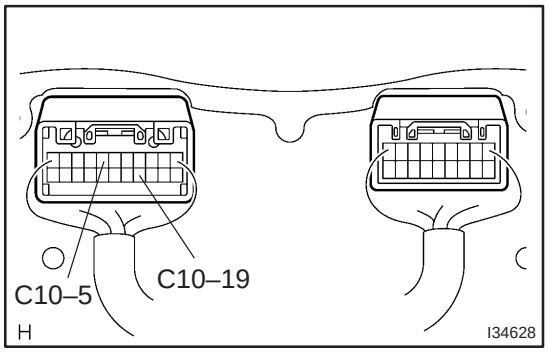
(a) Check the operation.

(1) Using a speedometer tester, inspect the speedometer for acceptable indication error and check the operation of the odometer.

Reference: km/h (Europe)

Standard indication	Acceptable range
20 km/h	21.0 – 25.0 km/h
40 km/h	41.7 – 46.2 km/h
60 km/h	62.7 – 67.2 km/h
80 km/h	83.4 – 88.4 km/h
100 km/h	104.3 – 109.3 km/h
120 km/h	125.1 – 130.6 km/h
140 km/h	145.8 – 151.8 km/h
160 km/h	166.2 – 173.2 km/h
180 km/h	186.9 – 194.5 km/h
200 km/h	207.7 – 215.7 km/h
220 km/h	228.4 – 236.8 km/h
240 km/h	249.2 – 258.0 km/h

Reference: MPH (Europe)



Standard indication	Acceptable range
20 mph	21.0 – 23.5 mph
40 mph	42.0 – 44.5 mph
60 mph	62.5 – 66.0 mph
80 mph	83.1 – 87.1 mph
100 mph	103.9 – 108.4 mph
120 mph	124.7 – 129.6 mph
140 mph	145.4 – 150.7 mph

NOTICE:

Tire wear and over or under inflation will affect the indication error.

(2) Check the deflection width of the speed meter indicator.

Reference: Below 0.5 km/h (0.3 mph)

2. INSPECT OUTPUT SIGNAL OF VEHICLE SPEED

(a) Check for the signal.

(1) While driving the vehicle at the speed of 10 km/h, check the voltage between the terminal C11–15 of the combination meter assy and the body ground.

Standard: Fluctuation between 10 to 14 V or less is repeated 7 times within 1 sec.

NOTICE:

Check it with the ignition switch ON and the connector connected.

3. INSPECT TACHOMETER

(a) Check the operation

(1) Connect a tune–up test tachometer, and start the engine.

NOTICE:

- **Reversing the connection of the tachometer will damage the transistors and the insides of the diodes .**
- **When removing or installing the tachometer, be careful not to drop or subject it to heavy shocks.**

(2) Compare the result of the test with standard indication.

DC 13.5 V, 25 °C at (77 °F)

Standard indication (r/min)	Acceptable range (r/min) Data in ( ) are for reference
700	630 – 770
1,000	(900 – 1100)
2,000	(1850 – 2150)
3,000	2800 – 3200
4,000	(3800 – 4200)
5,000	4800 – 5200
6,000	(5750 – 6250)
7,000	6700 – 7300

Fuel Sender Gauge:

Ie–5–1–A I30899

4. INSPECT FUEL RECEIVER GAUGE

(a) Inspect the circuit.

(1) Disconnect the connector from the sender gauge.

(2) Turn the ignition switch to ON, then check the position of the receiver gauge needle.

Needle position: EMPTY

(3) Connect the terminal 2 and 3 on the wire harness side connector of fuel sender gauge.

(4) Turn the ignition switch to ON, then check the position of the receiver gauge needle.

Needle position: FULL

5. INSPECT FUEL LEVEL WARNING

(a) Inspect the circuit.

(1) Disconnect the connector from the sender gauge.

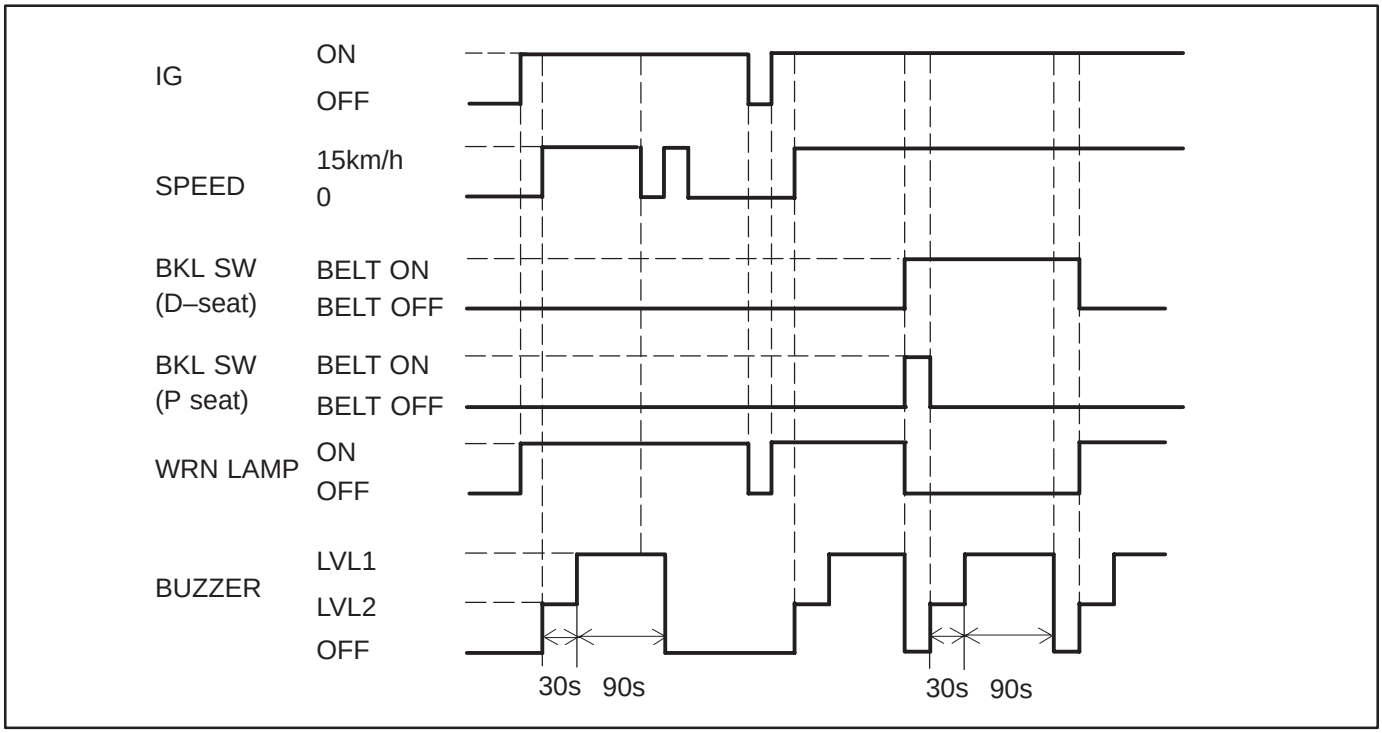
(2) Turn the ignition switch to ON, check the fuel level needle indicates EMPTY and fuel level warning light comes on.

6. INSPECT ENGINE COOLANT TEMPERATURE RECEIVER GAUGE WARNING LIGHT

(a) Inspect the circuit.

(1) Disconnect the connector from the sender gauge.

(2) Turn the ignition switch to ON, check the position of the water temperature receiver gauge needle.



Needle position: COOL

(3) Ground the terminal 2 on the wire harness side, then check the position of the water temperature receiver gauge needle.

Needle position: HOT

7. INSPECT SEAT BELT WARNING LIGHT & BUZZER

(a) Check the operation.
  (1) Turn the ignition switch to ON and check that the warning light comes on.
  (2) Fasten the outer belt to the inner belt and check that the warning light goes out.
  (3) Disconnect the connector from the buckle switch and ground the terminal on the wire harness side connector.
  (4) Turn the ignition switch to ON and check that the warning light comes on.

8. INSPECT LOW OIL PRESSURE WARNING LIGHT

(a) Inspect the circuit.
  (1) Disconnect the connector from the low oil pressure switch.
  (2) Turn the ignition switch to ON.
  (3) Ground the terminal of the wire harness side connector, then check the low oil pressure warning light.

  Low oil pressure warning light: Come on

9. INSPECT BRAKE WARNING LIGHT

(a) Inspect the parking brake warning light.
  (1) Disconnect the connector from the parking brake switch and ground the terminal on the wire harness side connector.
  (2) Turn the ignition switch to ON and check that the warning light comes on.

(b) Inspect the brake fluid level warning light.
  (1) Disconnect the connector from the brake fluid level warning switch and connect the terminals on the wire harness side connector.
  (2) Turn the ignition switch to ON and check that the warning light comes on.

10. INSPECT BRAKE FLUID LEVEL WARNING SWITCH

(a) Inspect the continuity.
  (1) Remove the reservoir tank cap and strainer.
  (2) Disconnect the connector.

(3) Check that the continuity exists between the terminals.

Float up (switch off): No continuity

(4) Use a syphon, etc., to take fluid out of the reservoir tank.

(5) Check that the continuity exists between the terminals.

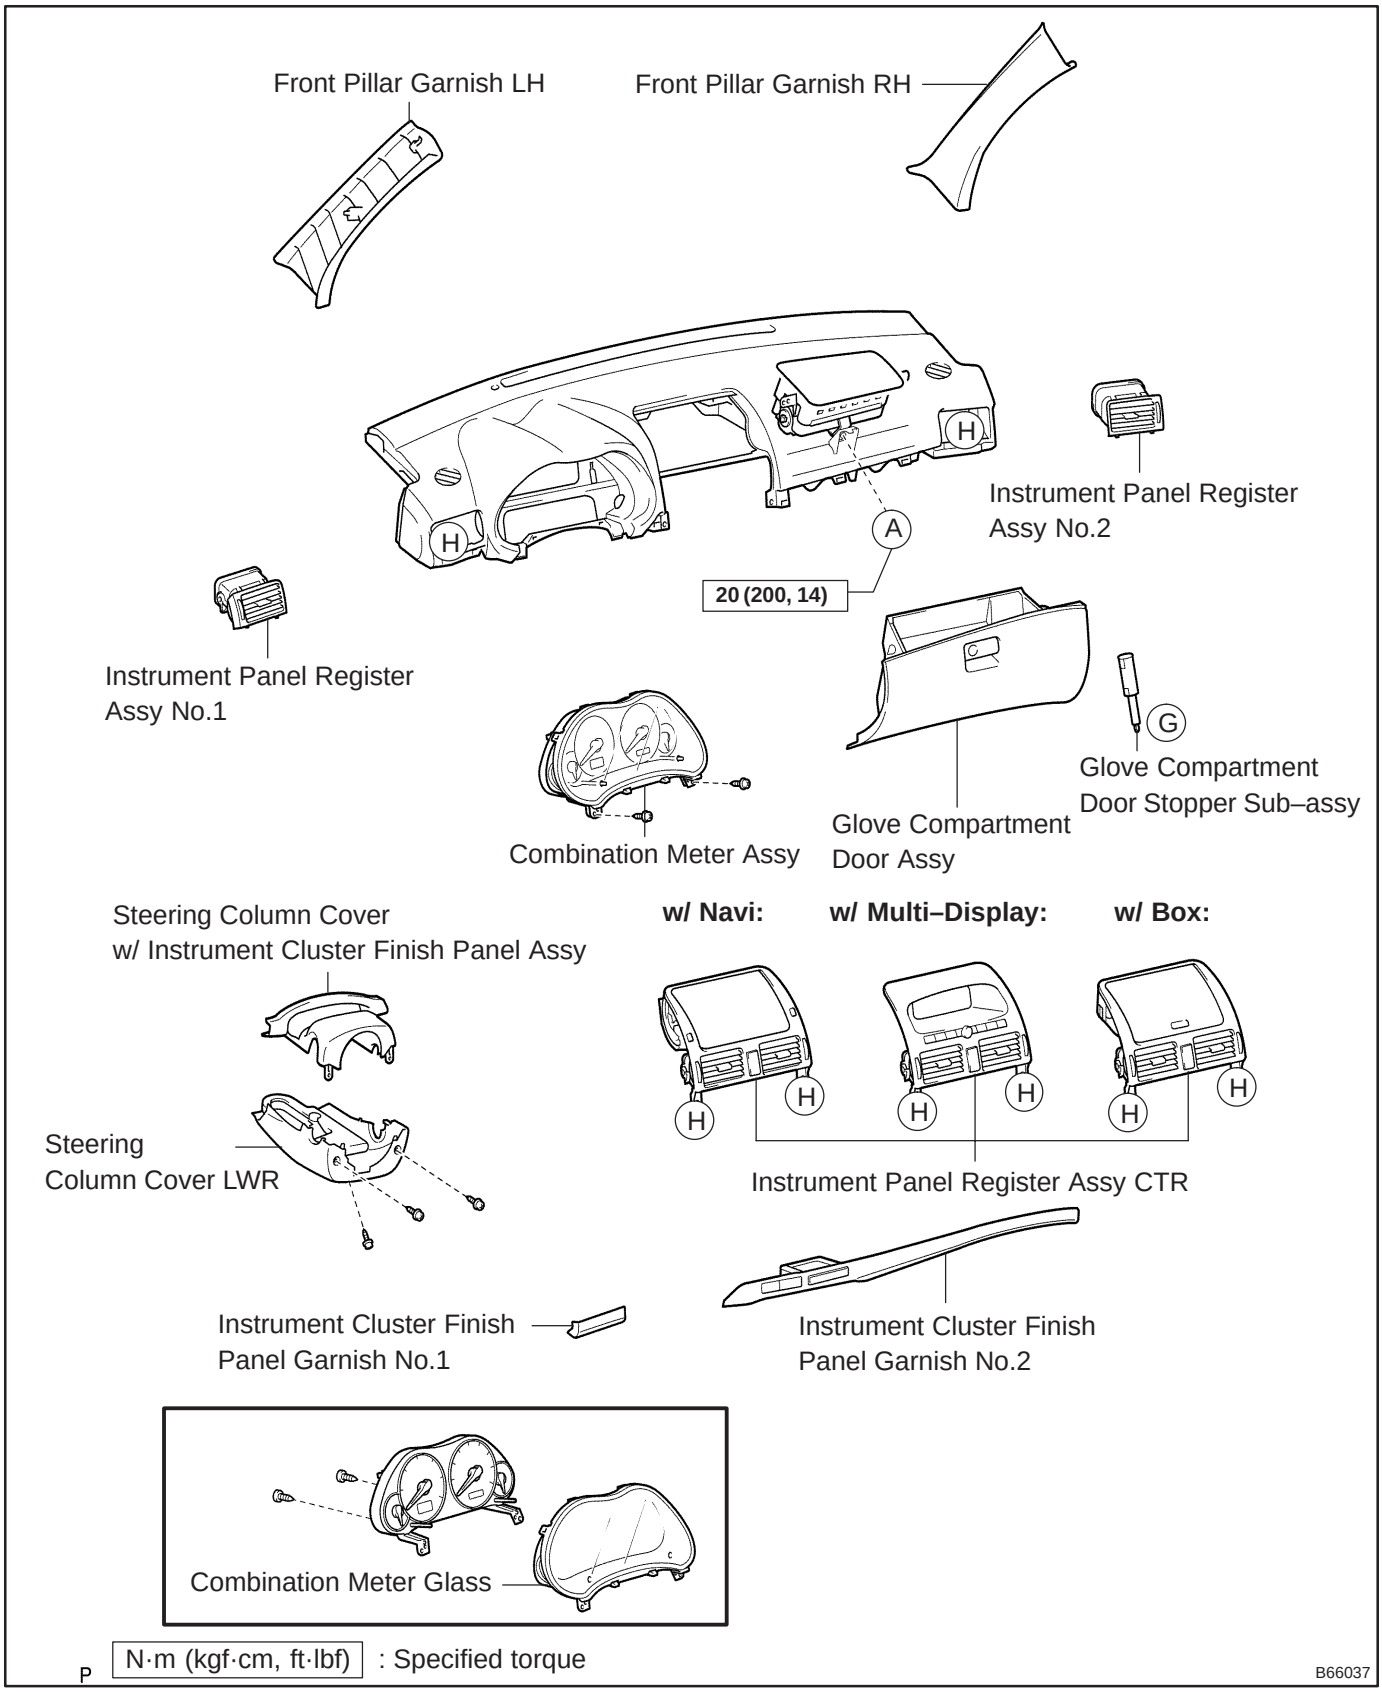
Float down (switch on): Continuity

(6) Pour the fluid back in the reservoir tank.

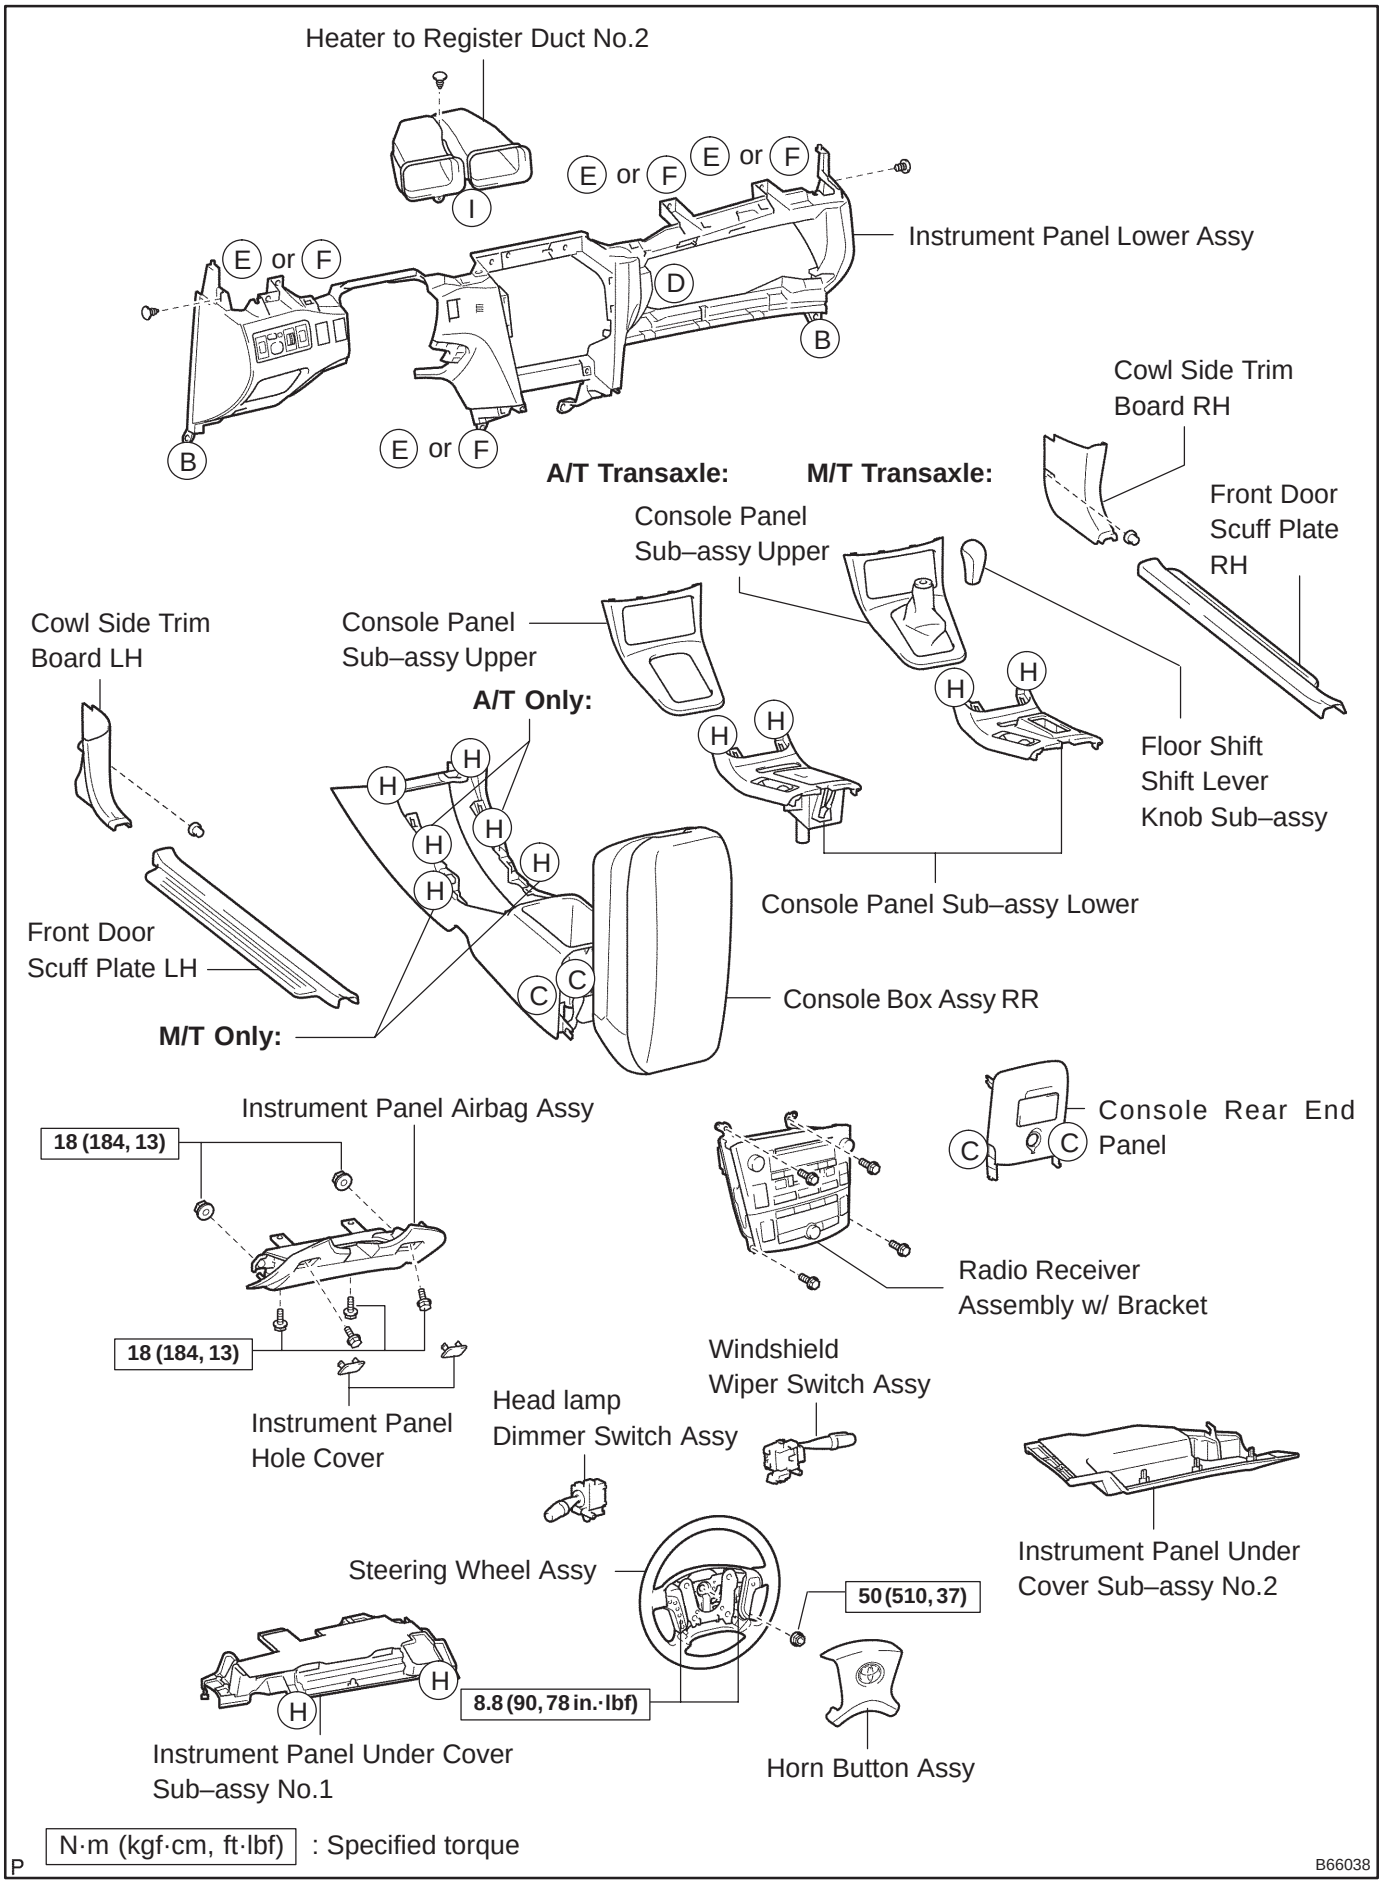
(7) Reconnect the connector.

(8) Check that the buzzer stop after about 4 to 8 seconds.

11. INSPECT KEY REMINDER WARNING BUZZER



(a) Check warning buzzer function.



(1) Turn the ignition switch ON and check that the key reminder warning sounds if the ignition key is insert the key cylinder and front driver side door is opened (See Page 05–1586).

PRECAUTION

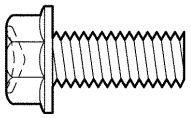
1. PRECAUTION FOR VEHICLE WITH SRS AIRBAG AND SEAT BELT PRETENSIONER

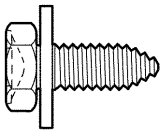
(a) Some operations in this section may affect the SRS airbags. Prior to performing the corresponding operations, read the SRS airbag NOTICE.

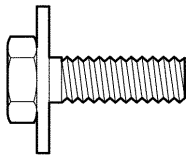
710FZ–01

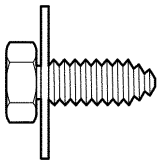
REPLACEMENT

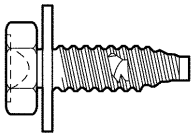
HINT:

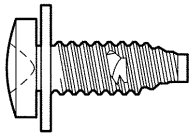


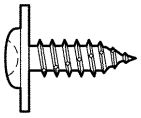


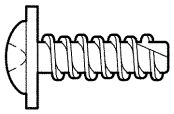


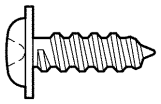








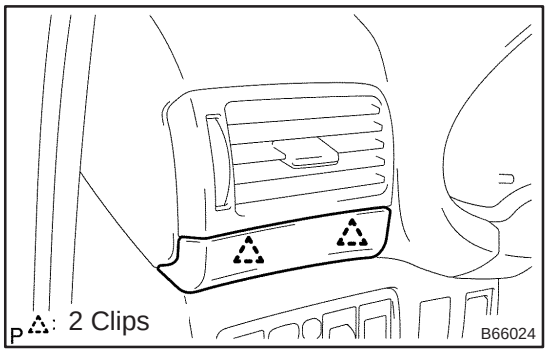




COMPONENTS: See page 71–7

1. TABLE OF BOLT, SCREW AND NUT

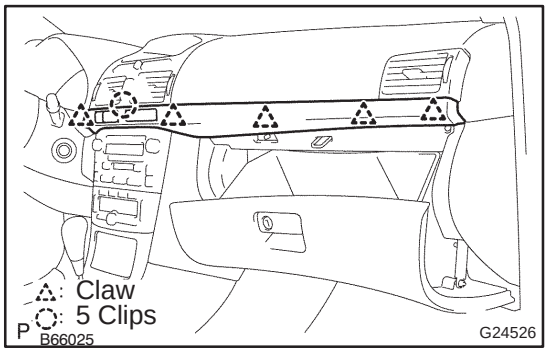
HINT:



The bolts, screws and nuts, which are necessary for installation and removal of the instrument panel, are shown in the illustration below with alphabets.

mm (in.) (L = Length)

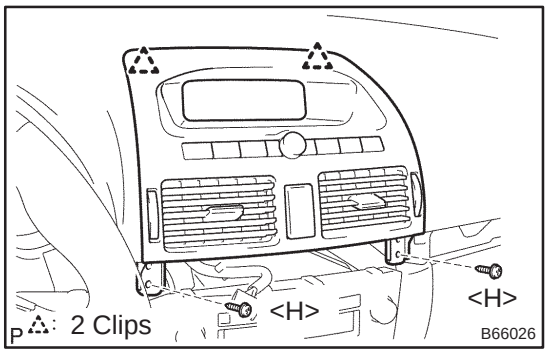
Code	Shape	Code	Shape	Code	Shape
<A>	 ϕ = 8 (0.31) L = 18 (0.71) B50533 91535-60816	<B>	 ϕ = 6 (0.24) L = 16 (0.63) 91635-60616	<C>	 ϕ = 6 (0.24) L = 20 (0.79) B50534 91635-60625
<D>	 ϕ = 6 (0.24) L = 20 (0.79) B52926 90159-60125	<E>	 ϕ = 6 (0.24) L = 20 (0.79) B52928 90159-60546	<F>	 ϕ = 7 (0.28) L = 20 (0.79) B52927 90159-70004
<G>	 ϕ = 5 (0.20) L = 14 (0.55) B59217 90167-50022	<H>	 ϕ = 5 (0.20) L = 14 (0.55) B32741 93568-55014	<I>	 L = 16 (0.63) E33943 93560-15016



P B66036

2. DISCONNECT BATTERY NEGATIVE TERMINAL (See page 60–1)

3. REMOVE INSTRUMENT CLUSTER FINISH PANEL GARNISH NO.1

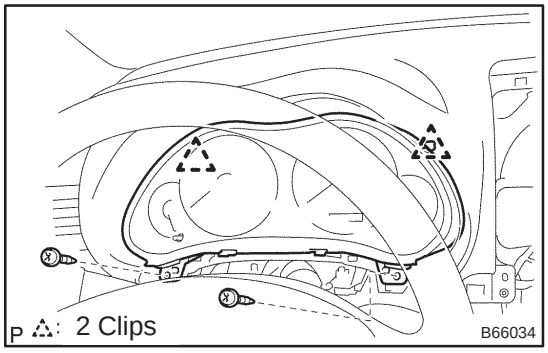


(a) Disengage the 2 clips and remove the instrument cluster finish panel garnish No.1.

4. REMOVE INSTRUMENT CLUSTER FINISH PANEL GARNISH NO.2

(a) Disengage the 5 clips and claw, and then remove the instrument cluster finish panel garnish No.2.

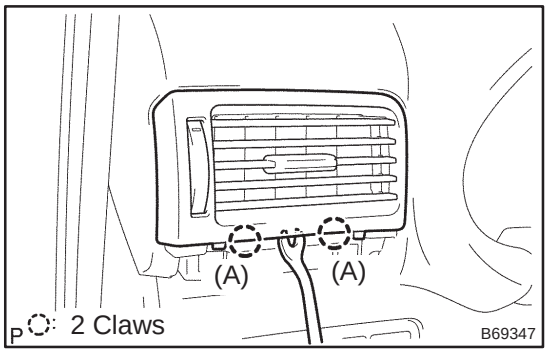
(b) Disconnect the connectors.



5. REMOVE INSTRUMENT PANEL REGISTER ASSY CTR

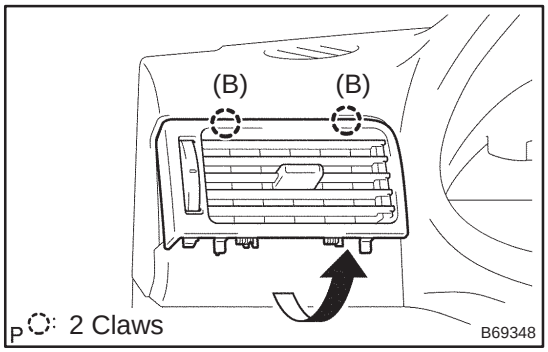
(a) Remove the 2 screws <H>.

(b) Disengage the 2 clips and remove the instrument panel register assy CTR, and then disconnect the connectors.



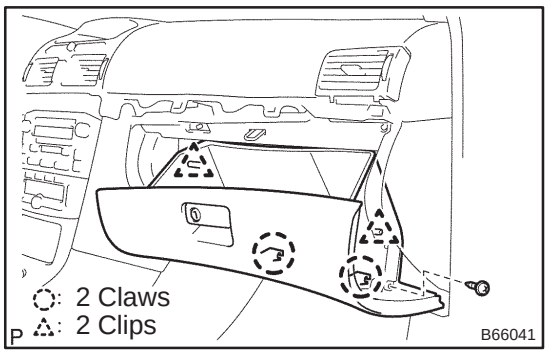
6. REMOVE STEERING COLUMN COVER W/INSTRUMENT CLUSTER FINISH PANEL ASSY (See page 50–9)

7. REMOVE COMBINATION METER ASSY



(a) Remove the 2 screws and disengage the 2 clips.

(b) Pull out the combination meter assy, and then disconnect the connectors.

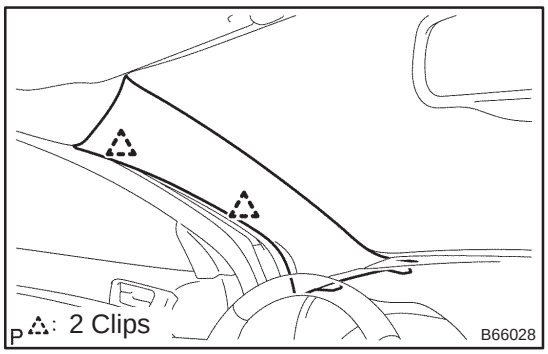


8. REMOVE INSTRUMENT PANEL REGISTER ASSY NO.1

(a) Insert a clip remover between the center of the instrument panel register assy No.1 lower and the instrument panel sub–assy upper to desengage the 2 claws (A) shown in the illustration.

(b) Disengage the 2 claws (B) and remove the instrument panel register assy No.1.

9. REMOVE INSTRUMENT PANEL REGISTER ASSY NO.2



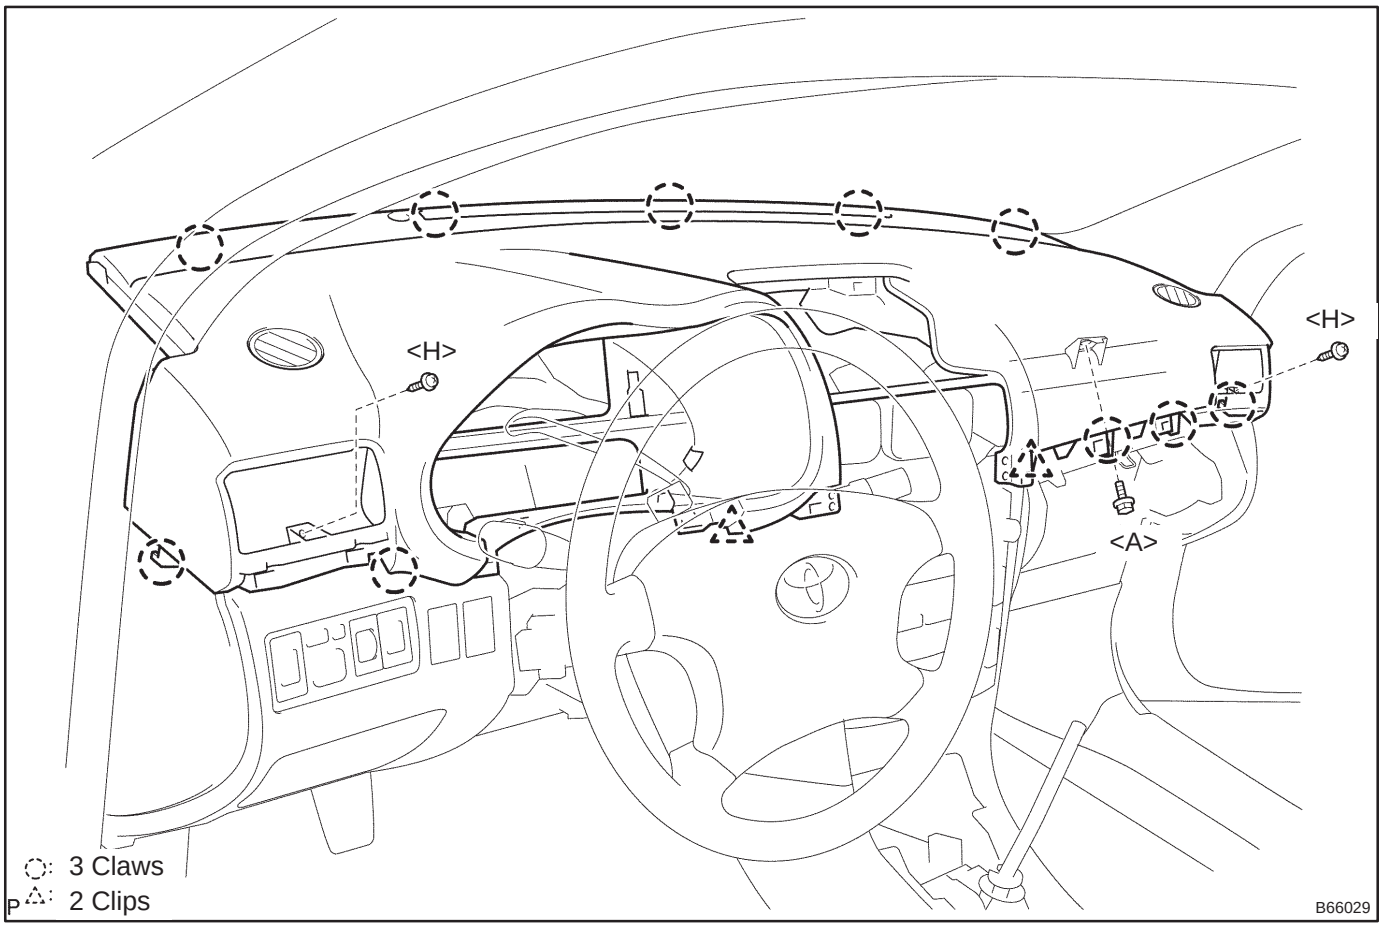
10. REMOVE GLOVE COMPARTMENT DOOR ASSY

(a) Remove the screw.

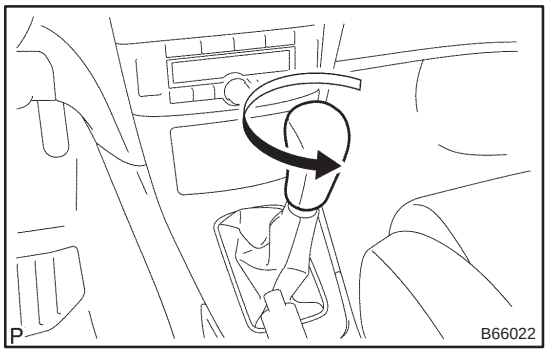
(b) Deform the upper part of the glove compartment door assy to release the stoppers.

(c) Pull the glove compartment door assy upward to remove it.

11. REMOVE FRONT PILLAR GARNISH LH



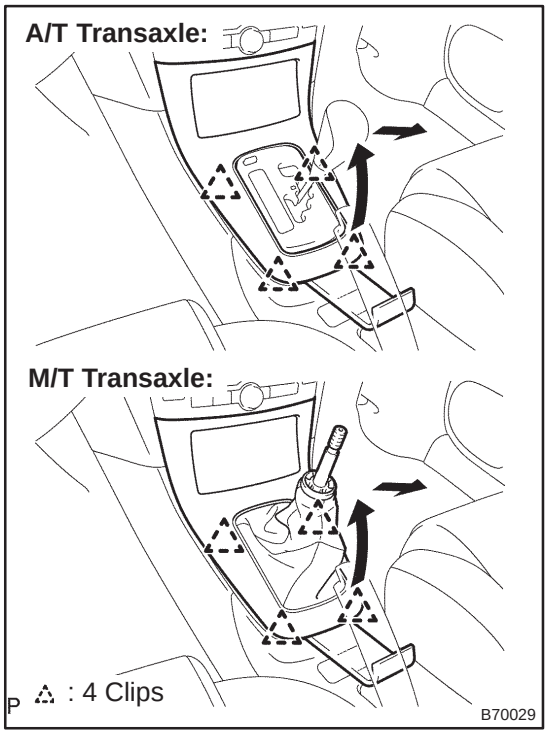
(a) Disengage the 2 clips, and remove the front pillar garnish LH.



12. REMOVE FRONT PILLAR GARNISH RH

13. DISCONNECT PASSENGER AIRBAG CONNECTOR (See page 60–29)

14. REMOVE INSTRUMENT PANEL SUB–ASSY UPPER W/INSTR PNL PASS L/DOOR AIR BAG ASSY



(a) Remove the 2 screws <H> and bolt <A>.
(b) Disengage the 2 clips and 3 claws.
(c) Pull the instrument panel sub–assy upper w/ passenger air bag assy upper rearward to remove it.
(d) Disconnect the connectors.

15. REMOVE FLOOR SHIFT SHIFT LEVER KNOB SUB–ASSY (M/T TRANSAXLE)

(a) Remove the floor shift shift lever knob sub–assy.

16. REMOVE CONSOLE PANEL SUB–ASSY UPPER

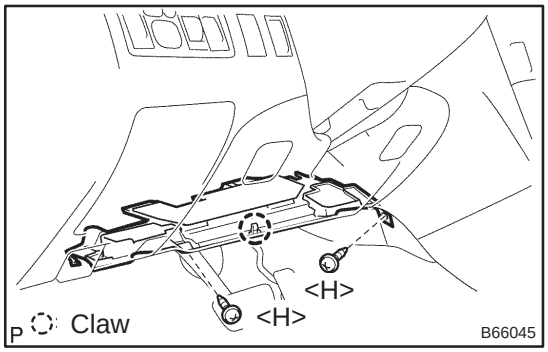
(a) Using a moulding remover, disengage the 4 clips.

(b) Disconnect the connectors, and remove the console panel sub–assy upper.

17. REMOVE INSTRUMENT CLUSTER FINISH PANEL SUB–ASSY CENTER (W/O RADIO) (See page 55–50)

18. REMOVE STEREO OPENING COVER W/BRACKET (W/O RADIO)

19. REMOVE RADIO RECEIVER ASSEMBLY W/BRACKET (See page 67–5)



20. REMOVE HORN BUTTON ASSY (See page 60–17)

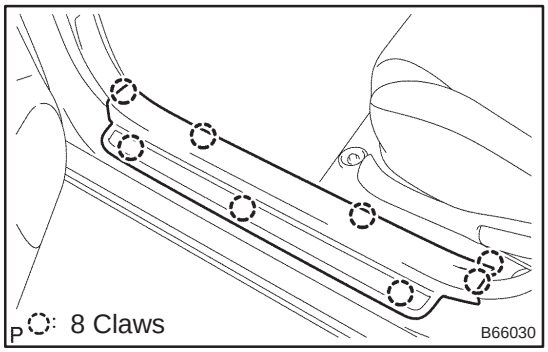
21. REMOVE STEERING WHEEL ASSY (See page 50–9)

SST 09950–50013 (09951–05010, 09952–05010, 09953–05020, 09954–05021)

22. REMOVE HEADLAMP DIMMER SWITCH ASSY (See page 65–27)

23. REMOVE WINDSHIELD WIPER SWITCH ASSY (See page 66–24)

24. REMOVE INSTRUMENT PANEL UNDER COVER SUB–ASSY NO.1

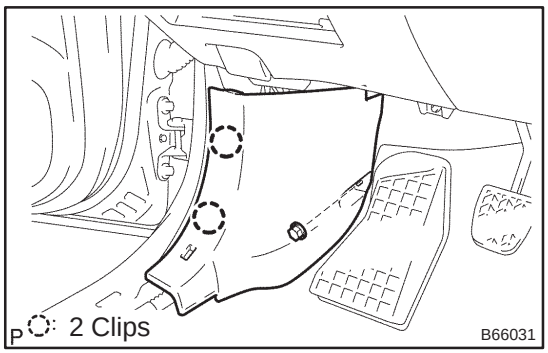


(a) Remove the 2 screws <H>.

(b) Disengage the claw and remove the instrument panel under cover sub–assy No.1.

25. REMOVE INSTRUMENT PANEL HOLE COVER (See page 60–54)

26. REMOVE INSTRUMENT PANEL AIR BAG ASSY (See page 60–54)

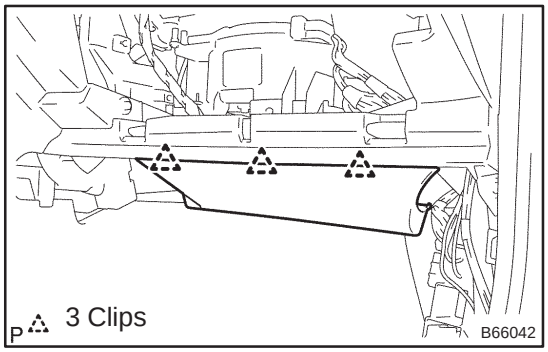


27. REMOVE STEERING COLUMN COVER LWR (See page 50–9)

28. REMOVE FRONT DOOR SCUFF PLATE LH

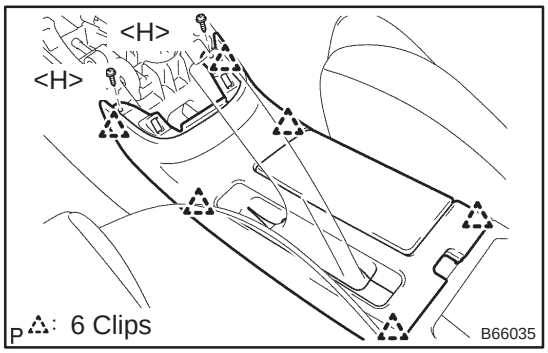
(a) Disengage the 8 claws and remove the front door scuff plate LH.

29. REMOVE FRONT DOOR SCUFF PLATE RH



30. REMOVE COWL SIDE TRIM BOARD LH

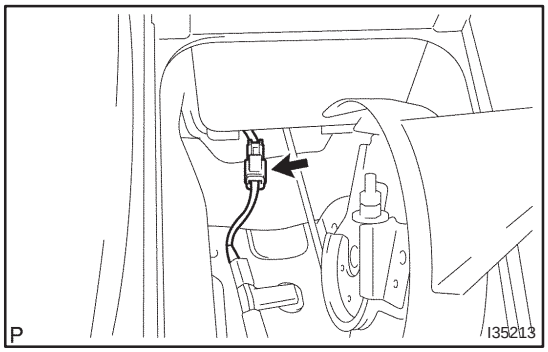
(a) Remove the clip.



(b) Disengage the 2 clips and remove the cowl side trim board LH.

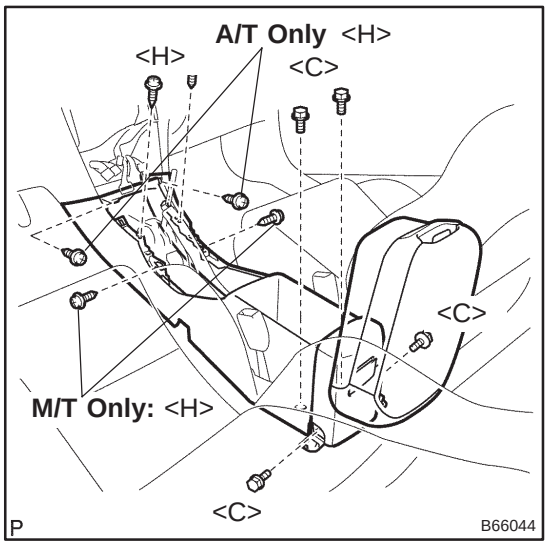
31. REMOVE COWL SIDE TRIM BOARD RH

32. REMOVE INSTRUMENT PANEL UNDER COVER SUB–ASSY NO.2



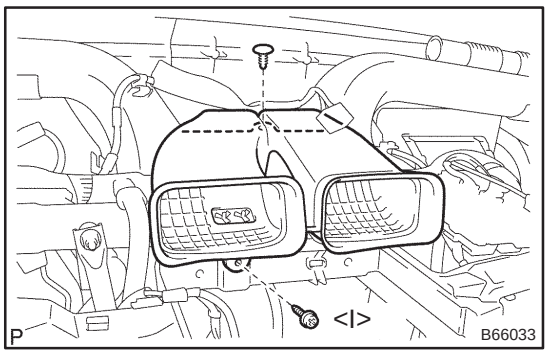
(a) Disengage the 3 clips and remove the instrument panel under cover sub–assy No.2.

33. REMOVE CONSOLE PANEL SUB–ASSY LOWER



(a) Remove the 2 screws <H>.

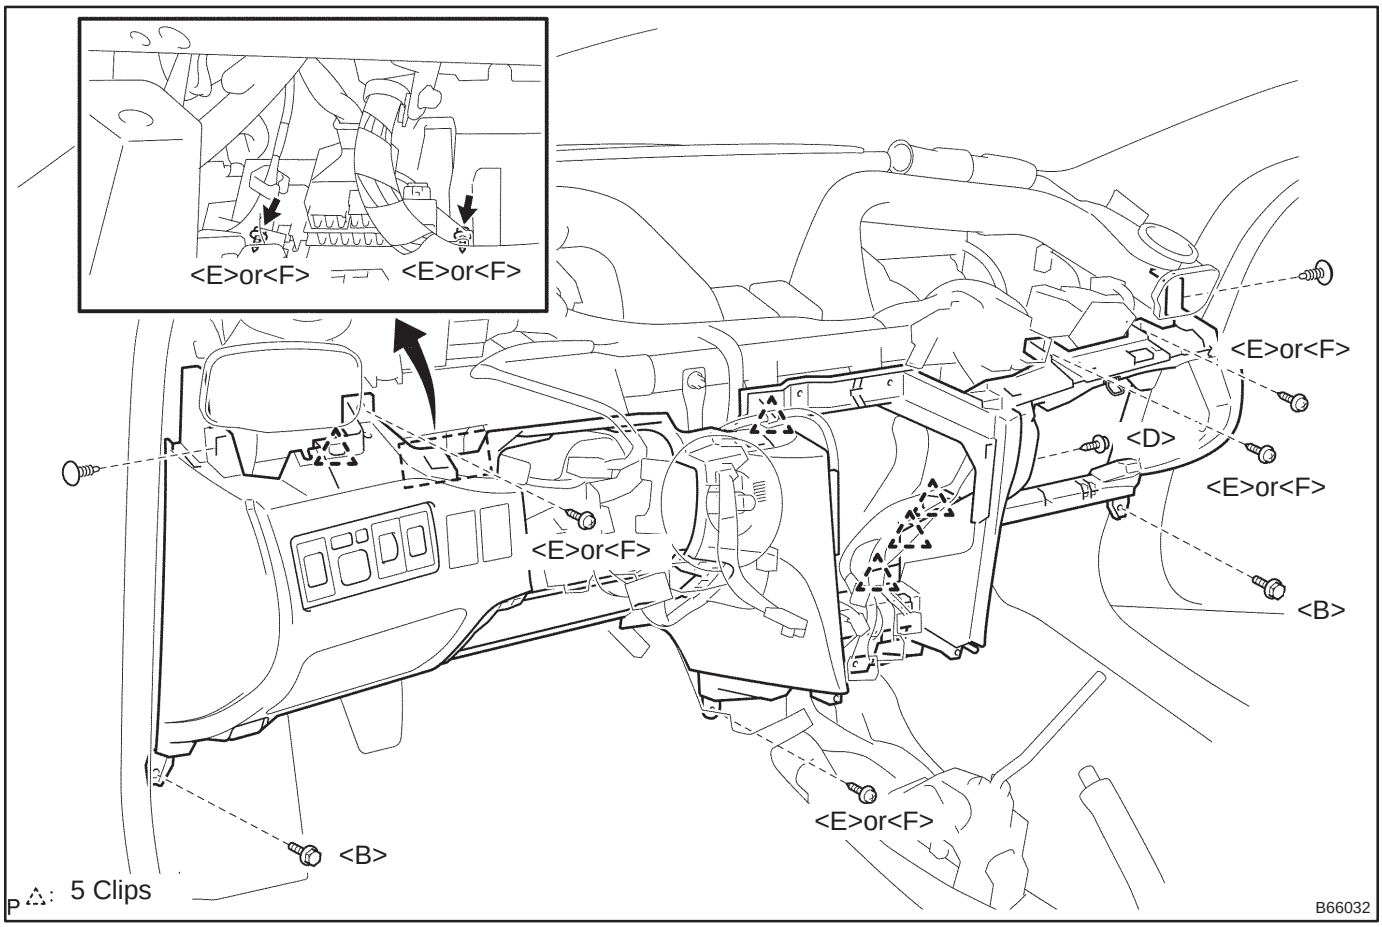
(b) Disengage the 6 clips and remove the console panel sub–assy lower.



34. REMOVE CONSOLE BOX ASSY RR

(a) Disconnect the connector.

(b) Remove the 2 bolts <C>, 4 screws <H> and the console box assy RR.

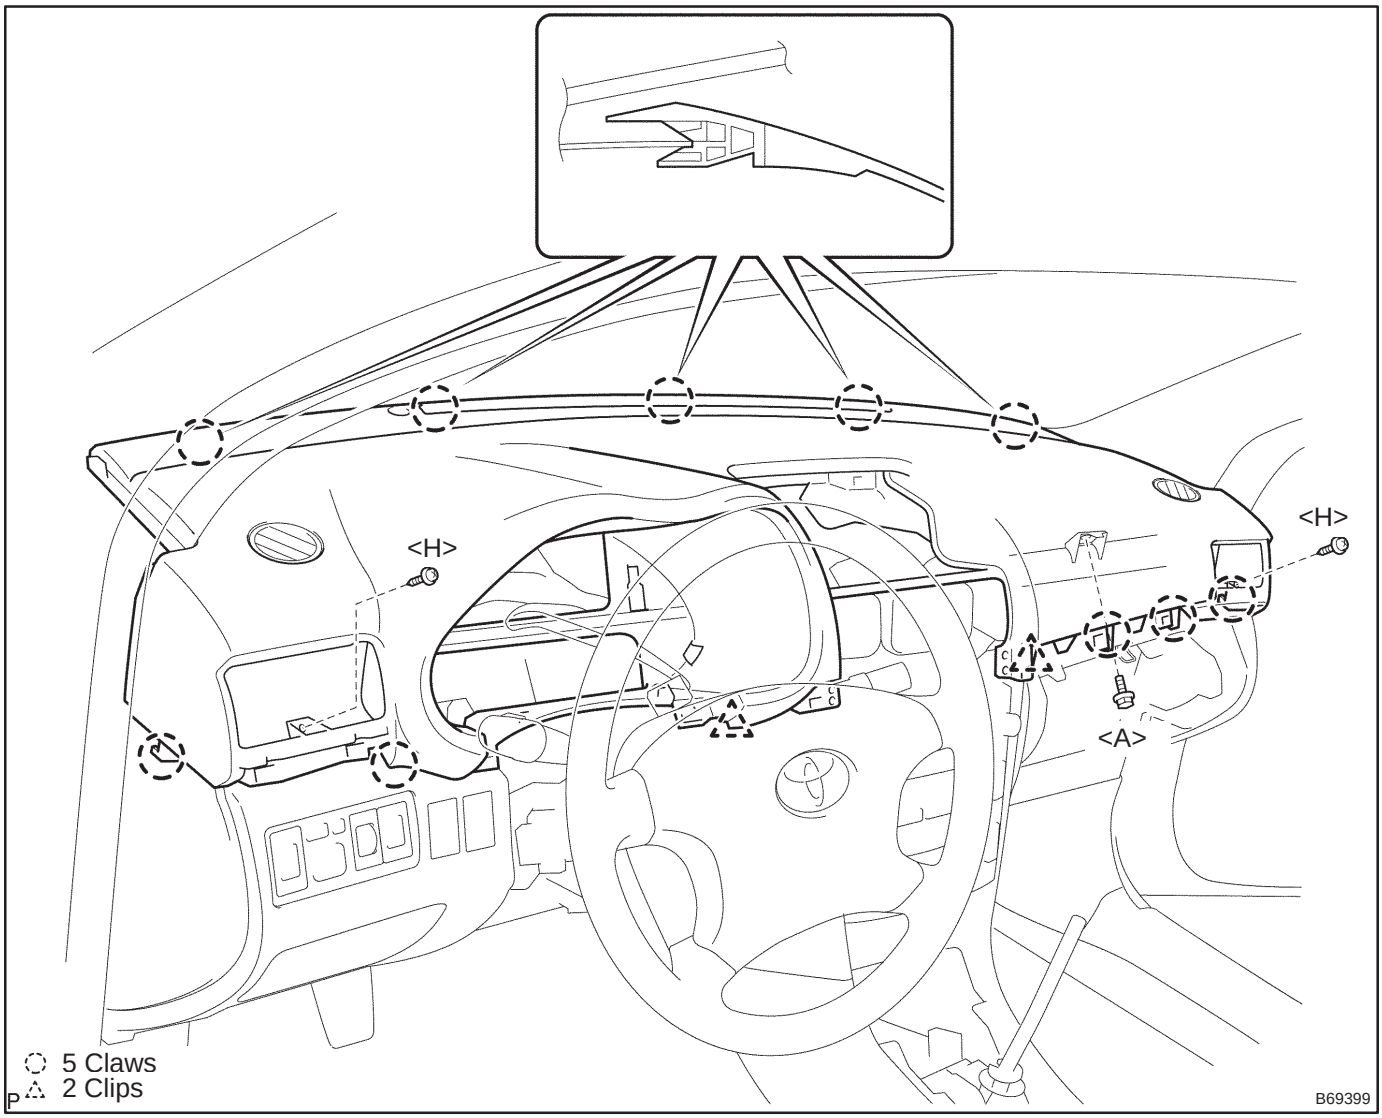


35. REMOVE HEATER TO REGISTER DUCT NO.2

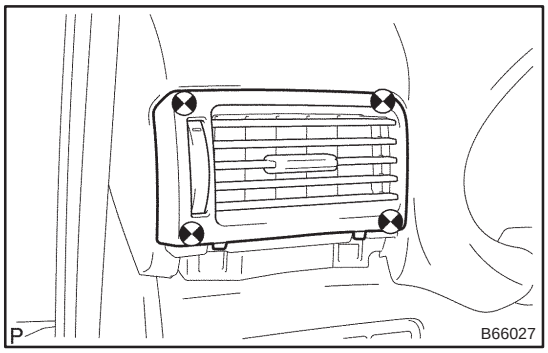
(a) Remove the screw <I>, clip and the heater to register duct No.2.

36. REMOVE INSTRUMENT PANEL LOWER ASSY

(a) Disconnect the hood lock control cable.
(b) Using a clip remover, remove the 2 clips.
(c) Remove the 2 bolts <B> 7 screws <D> <E> or <F>.
(d) Disengage the wire harness 5 clamps.
(e) Remove the instrument panel lower assy.



37. REMOVE OUTER MIRROR SWITCH ASSY W/BEZEL
38. REMOVE FUSE BOX OPENING COVER
39. REMOVE GLOVE BOX LAMP ASSY
40. REMOVE INSTRUMENT PANEL BRACKET SUB–ASSY CENTER



(a) Remove the screw <H> and the instrument panel bracket sub–assy center.

41. REMOVE INSTRUMENT PANEL SUB–ASSY LOWER
42. INSTALL INSTRUMENT PANEL AIR BAG ASSY (See page 60–29)

43. INSTALL INSTRUMENT PANEL SUB–ASSY UPPER W/INSTR PNL PASS L/DOOR AIR BAG ASSY

(a) Install the instrument panel sub–assy upper, 2 screws <H> and bolt <A>.
Torque: Bolt: 20 N·m (204 kgf·cm, 15 ft·lbf)

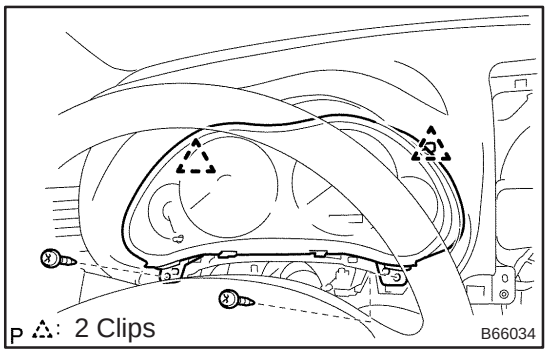
44. INSTALL INSTRUMENT PANEL REGISTER ASSY NO.1

(a) Install the istrument panel register assy No.1 by pushing the 4 positions on the face panel shown in the illustration with fingers.

NOTICE:

Do not push the fins and the knobs (center and open & shut).

45. INSTALL INSTRUMENT PANEL REGISTER ASSY NO.2

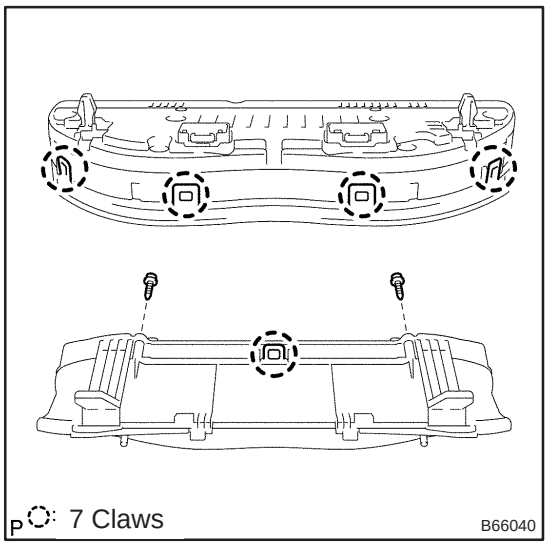


46. ADJUST SPIRAL CABLE SUB–ASSY (See page 60–26)
47. INSTALL STEERING WHEEL ASSY (See page 50–9)
48. INSTALL HORN BUTTON ASSY (See page 60–17)
49. INSPECT HORN BUTTON ASSY (See page 60–11)
50. INSPECT SRS WARNING LIGHT (See page 05–1184)

COMBINATION METER ASSY

710G0–01

OVERHAUL



1. REMOVE STEERING COLUMN COVER LWR (See page 50–9)
2. REMOVE STEERING COLUMN COVER W/INSTRUMENT CLUSTER FINISH PANEL ASSY (See page 50–9)

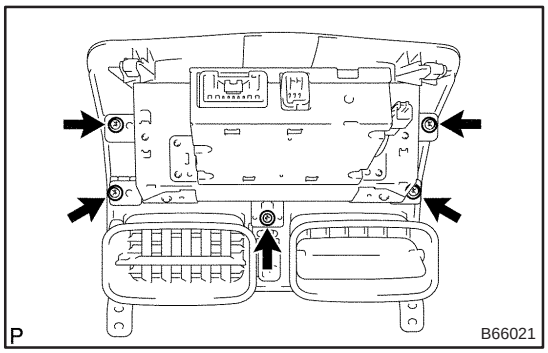
3. REMOVE COMBINATION METER ASSY

(a) Remove the 2 screws and disengage the 2 clips.

(b) Pull out the combination meter assy, then disconnect the connectors.

4. REMOVE COMBINATION METER GLASS

(a) Remove the 2 screws.



(b) Disengage the 7 claws and remove the combination meter glass.

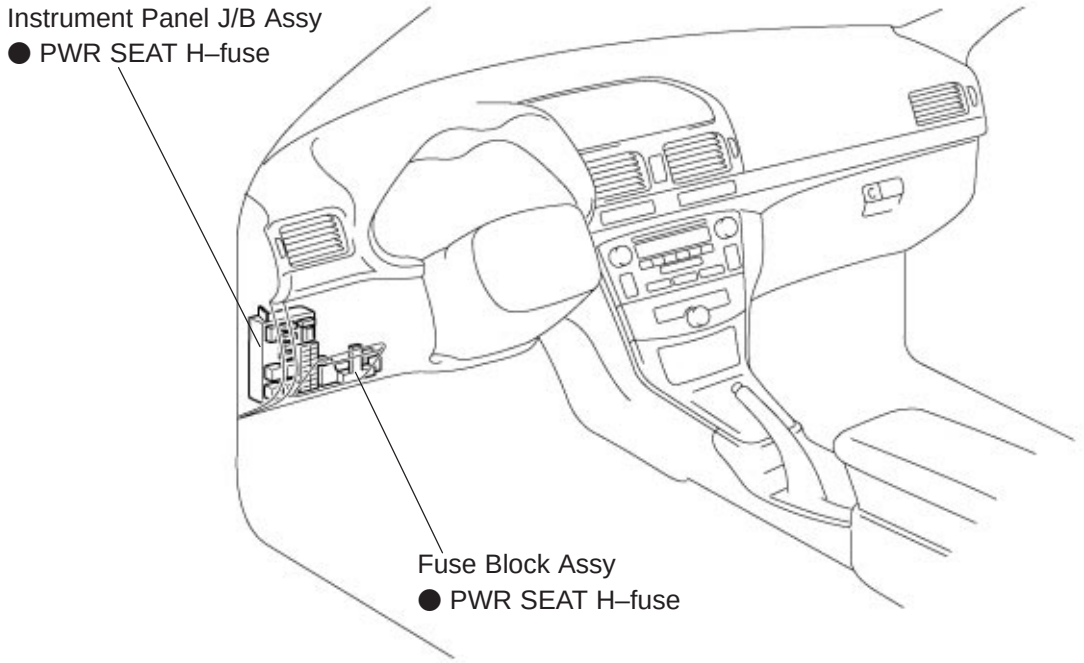
MULTI–DISPLAY (CRT DISPLAY) DISPLAY

710G1–01

REPLACEMENT

1. **REMOVE INSTRUMENT CLUSTER FINISH PANEL GARNISH NO.2 (See page 71–11)**
2. **REMOVE INSTRUMENT PANEL REGISTER ASSY CTR (See page 71–11)**

3. **REMOVE MULTI–DISPLAY (CRT DISPLAY) DISPLAY**



(a) Remove the 5 screws multi–display (crt display) display.

Only lifter operation function does not operate (Driver seat only)	1. Front power seat switch 2. Lifter motor 3. Wire harness	72–6 72–6 –
Only reclining operation function does not operate	1. Front power seat switch 2. Reclining motor 3. Wire harness	72–6 72–6 –
Only lumbar support operation function does not operate (Driver seat only)	1. Power seat switch assy (Lumbar support) 2. Lumbar support adjuster motor 3. Wire harness	72–6 72–6 –

720J3–01

ON–VEHICLE INSPECTION

1. CHECK POWER SEAT FUNCTION

(a) Check the basic function.

(1) Check that each part functions properly (sliding, front vertical, lifter, reclining, lumbar support) when operating the power seat switches.

2. CHECK POWER SEAT MOTOR ASSY (SLIDING, FRONT VERTICAL, LIFTER, RECLINING FUNCTIONS)

(a) Check the PTC operation inside the power seat motor.

NOTICE:

- **The inspection should be performed with the seat installed in the vehicle.**
- **Perform this inspection for every maximum position.**

(1) Move the seat to any of the maximum positions by operating the power seat switch and keep the seat there for approx. 60 seconds.

(2) Try to operate the power seat past the maximum position using the power seat switch and measure the time until the electrical current is shut off (motor operation sound will stop, inspection of current shut–off).

Standard: 4 to 90 seconds

(3) Turn the power seat switch off after the inspection of current shut–off and keep that condition for approx. 60 seconds.

(4) Operate the power seat switch to move the seat to the opposite position and check that the motor operates.

3. CHECK LUMBAR SUPPORT ADJUSTER ASSY LH

(a) Inspect the PTC operation inside the lumber support motor.

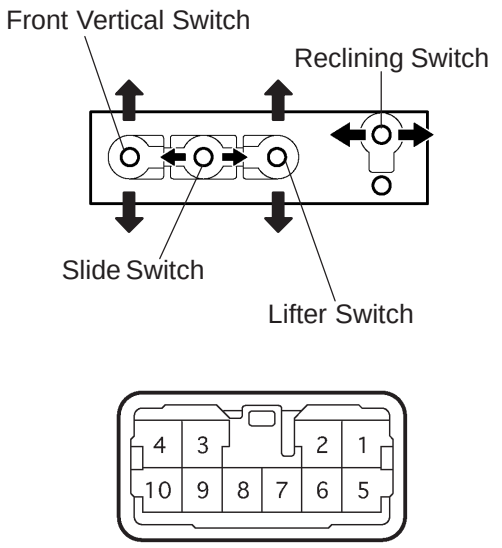
NOTICE:

The inspection should be performed with the seat installed to the vehicle.

(1) Move the lumbar support to either the foremost or rearmost position by operating the lumbar support switch and keep it there for approx. 60 seconds.

(2) Try to move the lumbar support past the maximum position using the switch and measure the time until the electrical current is shut off (motor operation sound will stop, inspection of current shut–off).

Standard: 4 to 90 seconds



(3) Turn the lumbar support switch off after the inspection of current shut–off and keep that condition for approx. 60 seconds.

(4) Operate the lumbar support switch to move the lumbar support to the opposite position and check that the motor operates.

720J4–01

INSPECTION

Front Power Seat Switch

1. Driver side:

INSPECT FRONT POWER SEAT SWITCH

(a) Inspect the resistance between the terminals when each switch is operated.

Standard:

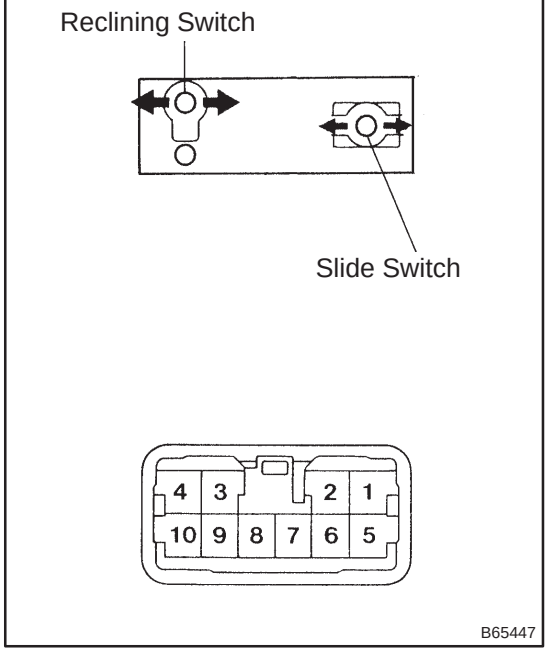
Slide switch

Tester Connection	Switch Position	Specified Condition
1 – 9	FRONT	Below 1 Ω
4 – 6		
4 – 6	OFF	
4 – 9		
1 – 6	REAR	
4 – 9		

Front vertical switch

Tester Connection	Switch Position	Specified Condition
1 – 10	UP	Below 1 Ω
4 – 5		
4 – 5	OFF	
4 – 10		
1 – 5	DOWN	
4 – 10		

Lifter switch



Tester Connection	Switch Position	Specified Condition
1 – 7	UP	Below 1 Ω
4 – 8		
4 – 7	OFF	
4 – 8		
1 – 8	DOWN	
4 – 7		

Reclining switch

Tester Connection	Switch Position	Specified Condition
1 – 3	FRONT	Below 1 Ω
2 – 4		
2 – 4	OFF	
3 – 4		
1 – 2	REAR	
3 – 4		

If the result is not as specified, replace the front power seat switch.

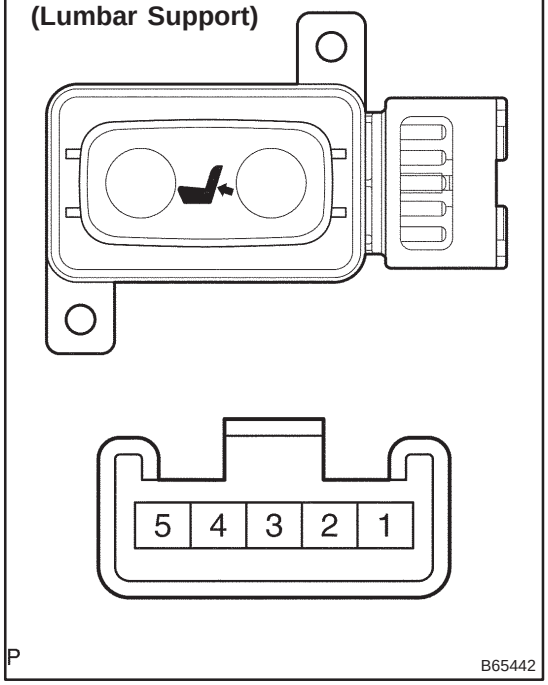
Front Power Seat Switch

2. Passenger side:
INSPECT FRONT POWER SEAT SWITCH

(a) Inspect the resistance between the terminals when each switch is operated.

Standard:

Slide switch



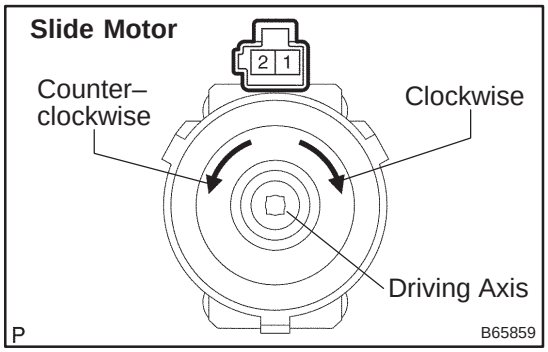
Tester Connection	Switch Condition	Specified Condition
1 – 9	FRONT	Below 1 Ω
4 – 6		
4 – 6	OFF	
4 – 9		
4 – 9	REAR	
1 – 6		

Reclining switch

Tester Connection	Switch Condition	Specified Condition
1 – 3	FRONT	Below 1 Ω
2 – 4		
2 – 4	OFF	
3 – 4		
1 – 2	REAR	
3 – 4		

If the result is not as specified, replace the front power seat switch.

Power Seat Switch Assy (Lumbar Support)



3. Driver side seat:
INSPECT POWER SEAT SWITCH ASSY (LUMBAR SUPPORT)

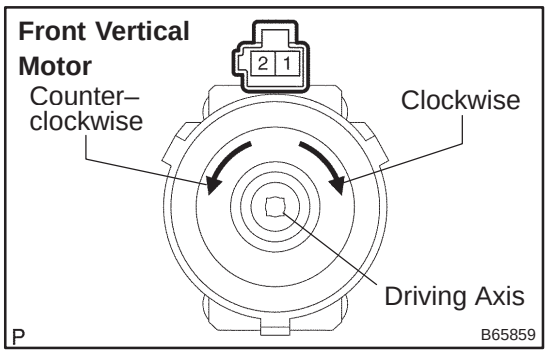
(a) Inspect the resistance between the terminals when the switch is operated.

Standard:

Tester Connection	Switch Condition	Specified Condition
1 – 2	HOLD	Below 1 Ω
3 – 4		
1 – 2	OFF	
4 – 5		
1 – 3	RELEASE	
4 – 5		

If the result is not as specified, replace the power seat switch assy.

4. INSPECT POWER SEAT MOTOR ASSY



(a) Inspect operation of the slide motor.

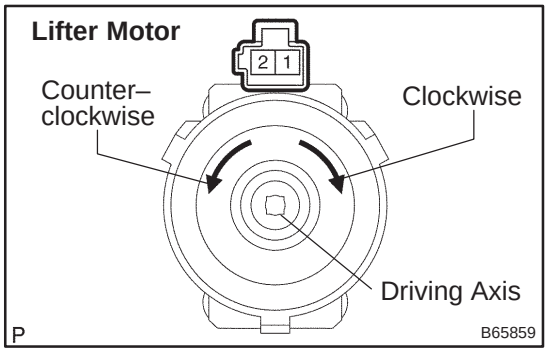
(1) Check that the motor rotates smoothly when the battery is connected to the motor connector terminals.

Standard:

Tester Connection	Operational Direction
Battery positive voltage → 1 Battery negative voltage → 2	Clockwise
Battery positive voltage → 2 Battery negative voltage → 1	Counterclockwise

If the result is not as specified, replace the motor assy.

(b) Driver side seat:



Inspect operation of the front vertical motor.

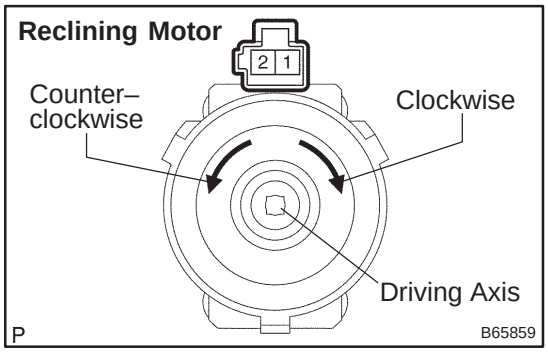
(1) Check that the motor rotates smoothly when the battery is connected to the front vertical motor connector terminals.

Standard:

Tester Connection	Operational Direction
Battery positive voltage → 1 Battery negative voltage → 2	Clockwise
Battery positive voltage → 2 Battery negative voltage → 1	Counterclockwise

If the result is not as specified, replace the motor assy.

(c) Driver side seat:



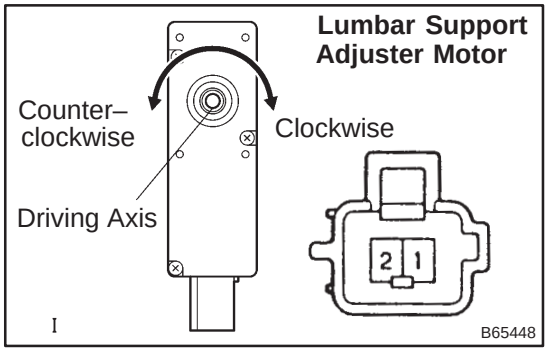
Inspect operation of the lifter motor.

(1) Check that the motor rotates smoothly when the battery is connected to the lifter motor connector terminals.

Standard:

Tester Connection	Operational Direction
Battery positive voltage → 1 Battery negative voltage → 2	Clockwise
Battery positive voltage → 2 Battery negative voltage → 1	Counterclockwise

If the result is not as specified, replace the motor assy.



(d) Inspect operation of the reclining motor.

(1) Check that the motor rotates smoothly when the battery is connected to the reclining motor connector terminals.

Standard:

Tester Connection	Operational Direction
Battery positive voltage → 1 Battery negative voltage → 2	Clockwise
Battery positive voltage → 2 Battery negative voltage → 1	Counterclockwise

If the result is not as specified, replace the motor assy.

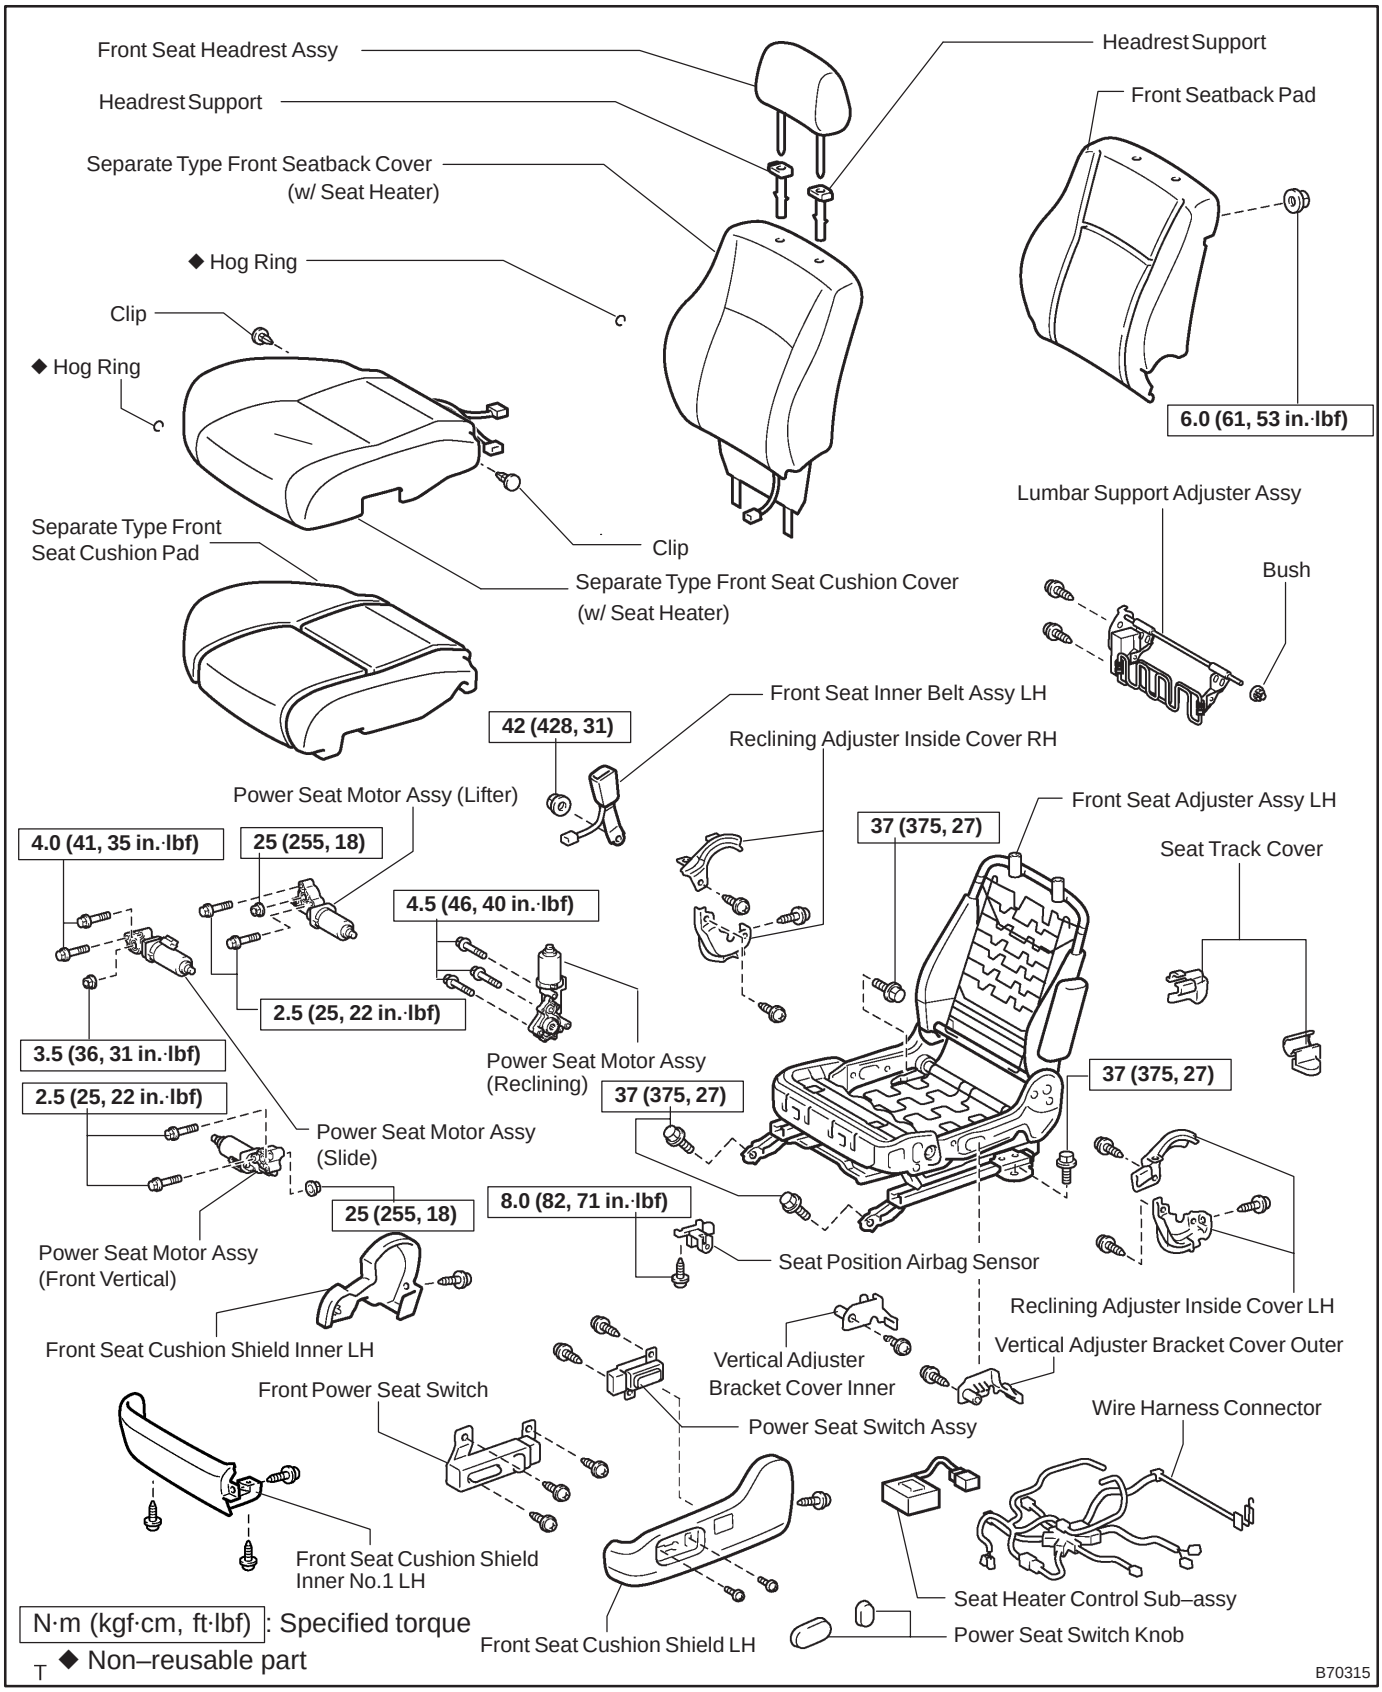
5. Driver side seat:

INSPECT LUMBAR SUPPORT ADJUSTER ASSY

(a) Inspect operation of the motor.

(1) Check that the motor rotates smoothly when the battery is connected to the lumber support adjuster motor connector terminals.

Standard:



Tester Connection	Operational Direction
Battery positive voltage → 1 Battery negative voltage → 2	Clockwise
Battery positive voltage → 2 Battery negative voltage → 1	Counterclockwise

If the result is not as specified, replace the adjuster assy.

FRONT SEAT ASSEMBLY LH (POWER SEAT TYPE)

COMPONENTS

720J5–01

720J6–01

OVERHAUL

CAUTION:

- **Wear safety gloves, because the cutting surface of the seatback frame and seat adjuster may injure your hand.**
- **Work must be started more than 90 seconds after the ignition switch is turned to the LOCK position and the negative (–) terminal cable is disconnected from the battery.**
  (The SRS is equipped with a back–up power source. If work is started within 90 seconds from disconnecting the negative (–) terminal cable of the battery, the SRS may be deployed.)

HINT:

- The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.
- Use the same procedures on the RH side as on the LH side.

1. REMOVE FRONT SEAT ASSY LH

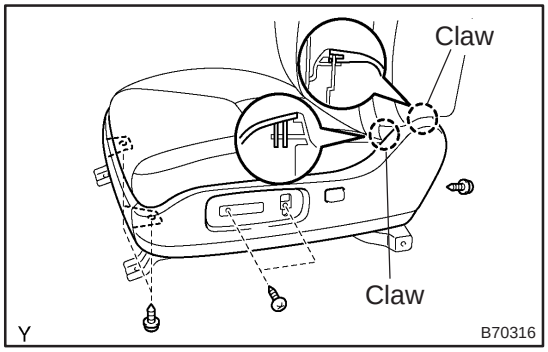
(a) Remove the headrest.

(b) Using a screwdriver, remove the 2 seat track covers.

HINT:

Tape the screwdriver tip before use.

(c) Disconnect the connectors under the seat.



(d) Remove the 4 bolts and seat.

2. REMOVE FRONT SEAT CUSHION SHIELD LH

(a) Using a screwdriver, remove the 2 seat switch knobs.

HINT:

Tape the screwdriver tip before use.

(b) Remove the 5 screws.

(c) Using a screwdriver, disengage the claws and remove the cushion shield with the inner No. 1 LH, and then disconnect the connector.

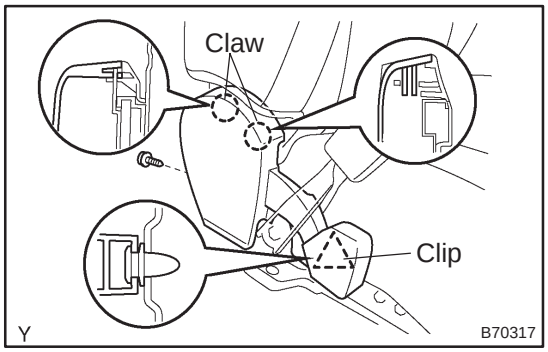
HINT:

Tape the screwdriver tip before use.

(d) Remove the 2 screws and seat switch.

3. REMOVE FRONT SEAT CUSHION SHIELD INNER NO.1 LH

(a) Remove the screw and cushion shield.



4. REMOVE FRONT POWER SEAT SWITCH

(a) Disconnect the connectors.

(b) Remove the 3 screws and seat switch.

5. REMOVE FRONT SEAT INNER BELT ASSY LH

(a) Remove the nut and inner belt.

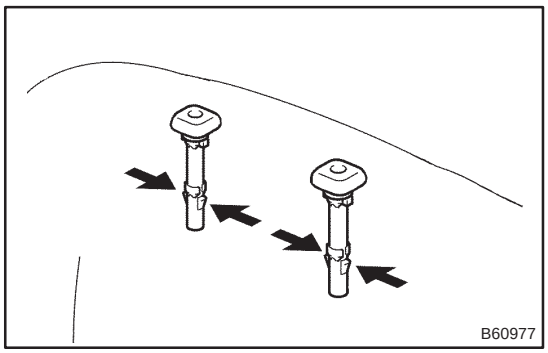
6. REMOVE FRONT SEAT CUSHION SHIELD INNER LH

(a) Remove the screw.

(b) Using a screwdriver, disengage the 2 claws and clip, and remove the cushion shield.

HINT:

Tape the screwdriver tip before use.



7. REMOVE SEPARATE TYPE FRONT SEAT CUSHION COVER

(a) Disengage the hook and remove the seat cushion cover together with the pad.

(b) Remove the hog rings and seat cushion cover.

8. REMOVE SEPARATE TYPE FRONT SEAT BACK COVER

(a) w/ Side airbag:
Remove the hog rings, nut and seatback cover bracket.

(b) Remove the 2 headrest supports.

(c) Remove the hog rings and seatback cover together with the pad.

(d) Remove the hog rings and seatback cover.

9. REMOVE SEAT POSITION AIR BAG SENSOR

(a) Remove the screw and airbag sensor.

10. REMOVE POWER SEAT MOTOR ASSY (RECLINING)

(a) Remove the 3 bolts and reclining motor.

11. REMOVE POWER SEAT MOTOR ASSY (SLIDE)

(a) Remove the 2 bolts, nut and slide motor.

12. REMOVE POWER SEAT MOTOR ASSY (LIFTER)

(a) Remove the 2 bolts, nut and lifter motor.

13. REMOVE POWER SEAT MOTOR ASSY (FRONT VERTICAL)

(a) Remove the 2 bolts, nut and vertical motor.

14. REMOVE FRONT SEAT ADJUSTER SUB–ASSY LH

(a) Remove the 2 screws and lumbar support adjuster.

(b) Remove the wire harness connector.

(c) Remove the 3 screws and 2 reclining adjuster inside covers LH.

(d) Remove the 3 screws and 2 reclining adjuster inside covers RH.

(e) Remove the screw and vertical adjuster bracket cover outer.

(f) Remove the screw and vertical adjuster bracket cover inner.

(g) w/ Seat heater:
Remove the seat heater control.

15. INSTALL POWER SEAT MOTOR ASSY (RECLINING)

(a) Install the reclining motor with the 3 bolts.
Torque: 4.5 N·m (46 kgf·cm, 40 in.·lbf)

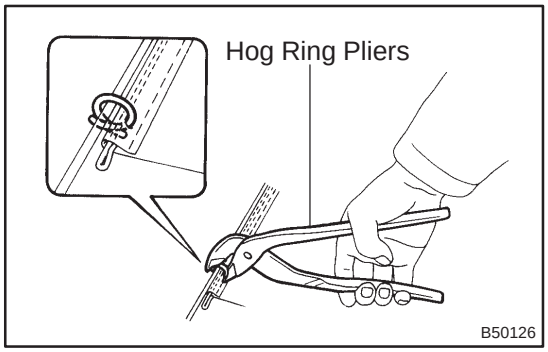
16. INSTALL POWER SEAT MOTOR ASSY (SLIDE)

(a) Install the slide motor with the 2 bolts and nut.
Torque:
Bolt 4.0 N·m (41 kgf·cm, 35 in.·lbf)
Nut 3.5 N·m (36 kgf·cm, 31 in.·lbf)

17. INSTALL POWER SEAT MOTOR ASSY (LIFTER)

(a) Install the lifter motor with the 2 bolts and nut.
Torque:
Bolt 2.5 N·m (25 kgf·cm, 22 in.·lbf)
Nut 25 N·m (255 kgf·cm, 18 ft·lbf)

18. INSTALL POWER SEAT MOTOR ASSY (FRONT VERTICAL)

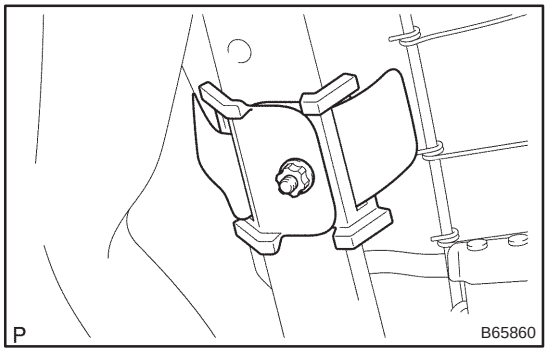


(a) Install the vertical motor with the 2 bolts and nut.
Torque:
Bolt 2.5 N·m (25 kgf·cm, 22 in.·lbf)
Nut 25 N·m (255 kgf·cm, 18 ft·lbf)

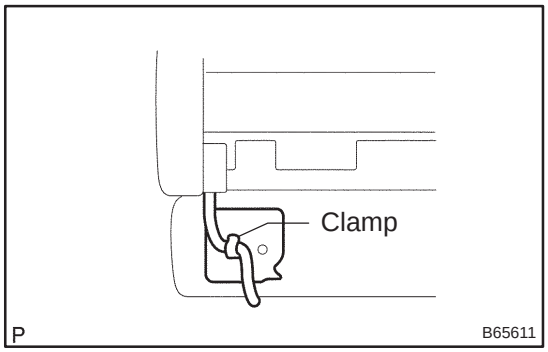
19. INSTALL SEAT POSITION AIR BAG SENSOR

(a) Install the airbag sensor with the screw.
Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)

20. INSTALL SEPARATE TYPE FRONT SEAT BACK COVER



(a) Install the lumbar support adjuster with the 2 screws.
(b) Install the seatback pad.
(c) Cover the top of the seatback pad with the seatback cover.
(d) Install the 2 headrest supports.

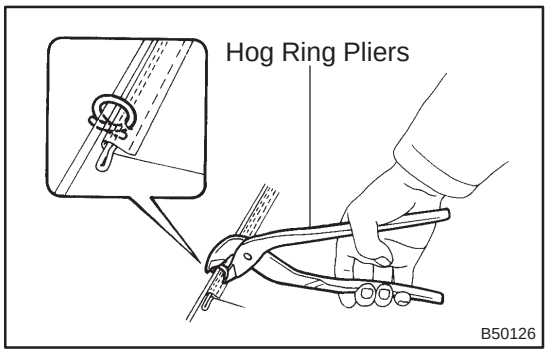


(e) Using hog ring pliers, install the seatback cover completely with new hog rings.

NOTICE:

- **Be careful not to damage the cover.**
- **When installing the hog rings, take care to prevent wrinkles as much as possible.**

(f) w/ Side airbag:
Install the seatback cover bracket with the nut.
Torque: 6.0 N·m (61 kgf·cm, 53 in·lbf)



(g) w/ Side airbag:
Install the wire harness and clamp of the side airbag through the seat cushion cover end.

NOTICE:

Be careful not to damage the cover.

(h) Install the seatback board with the 2 screws.

21. INSTALL SEPARATE TYPE FRONT SEAT CUSHION COVER

(a) Install the seat cushion pad to the seat cushion cover.

(b) Using hog ring pliers, install the seat cushion cover with new hog rings to the seat cushion pad.

NOTICE:

- **Be careful not to damage the cover.**
- **When installing the hog rings, take care to prevent wrinkles as much as possible.**

22. INSTALL FRONT SEAT INNER BELT ASSY LH

(a) Install the inner belt with the nut.
Torque: 42 N·m (428 kgf·cm, 31 ft·lbf)

(b) Connect the connectors.

(c) Check that the inner seat belt moves smoothly.

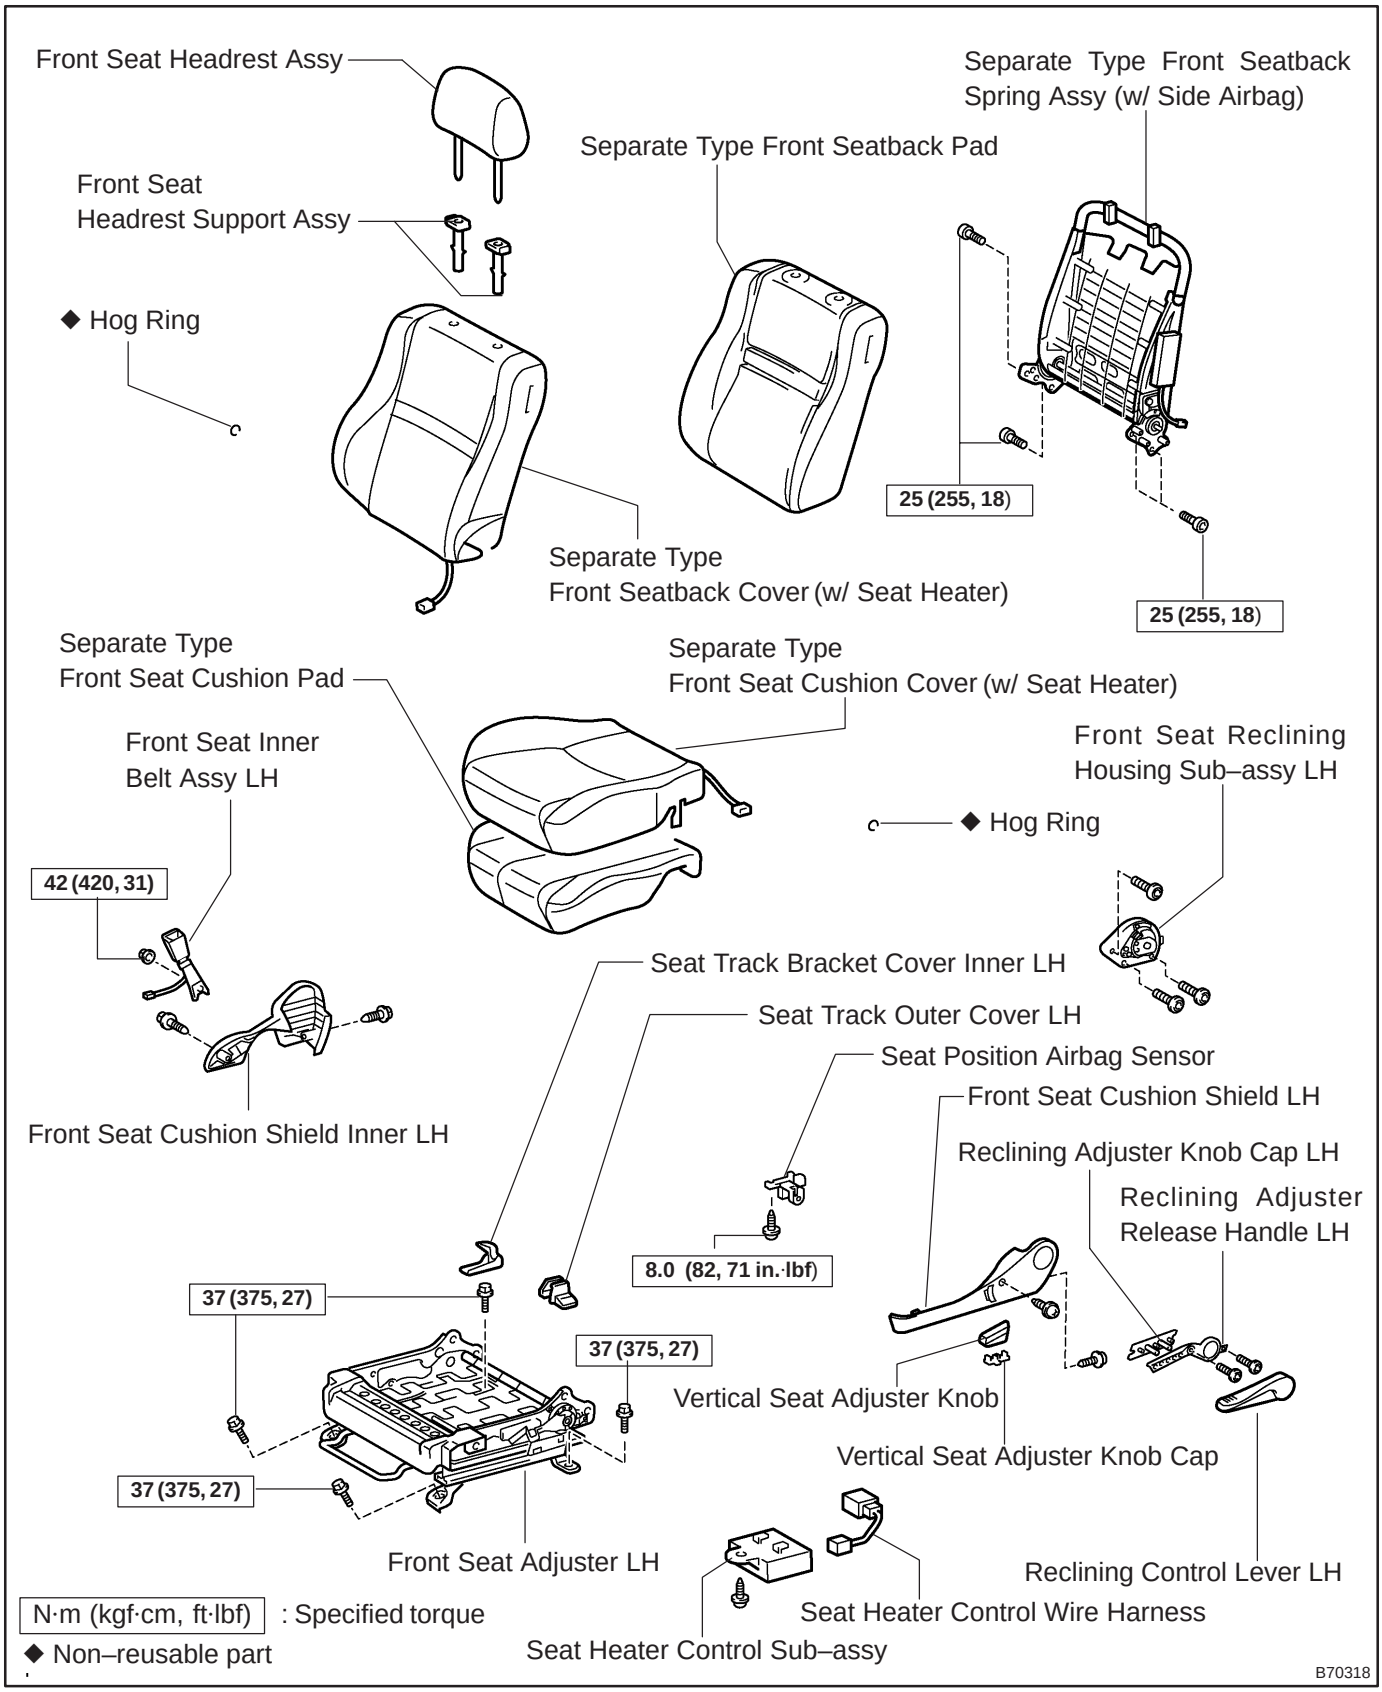
23. INSTALL FRONT SEAT ASSY LH

(a) Place the seat in the cabin.

(b) Connect the connectors under the seat.

(c) Install the seat with the 4 bolts.
Torque: 37 N·m (375 kgf·cm, 27 ft·lbf)

(d) Install the 4 seat track covers.



(e) Install the headrest.

24. INSPECT POWER SEAT OPERATION (See page 72–4)

FRONT SEAT ASSEMBLY LH (MANUAL SEAT TYPE)

720J7–01

COMPONENTS

720J8–01

OVERHAUL

CAUTION:

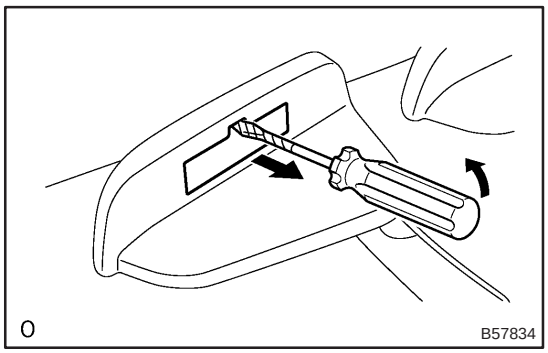
- **Wear safety gloves, because the cutting surface of the seatback frame and seat adjuster may injure your hand.**
- **Work must be started more than 90 seconds after the ignition switch is turned to the LOCK position and the negative (–) terminal cable is disconnected from the battery.**
  (The SRS is equipped with a back–up power source. If work is started within 90 seconds from disconnecting the negative (–) terminal cable of the battery, the SRS may be deployed.)

HINT:

- The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.
- Use the same procedures on the RH side as on the LH side.

1. REMOVE FRONT SEAT ASSEMBLY LH

(a) Remove the headrest.



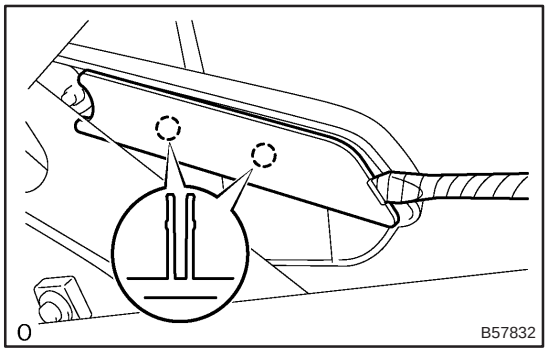
(b) Using a screwdriver, remove the 2 seat track covers.

HINT:

Tape the screwdriver tip before use.

(c) Disconnect the connectors under the seat.

(d) Remove the 4 bolts and seat.

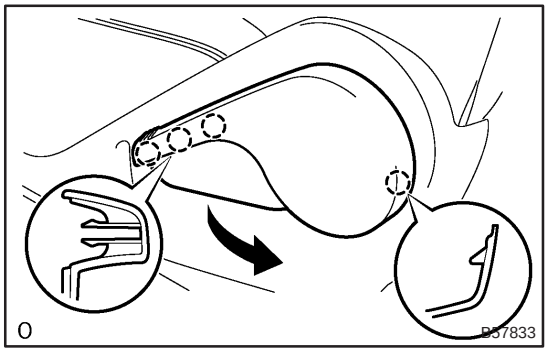


2. REMOVE VERTICAL SEAT ADJUSTER KNOB

(a) Using a screwdriver, remove the vertical seat adjuster knob cap and vertical seat adjuster knob.

HINT:

Tape the screwdriver tip before use.



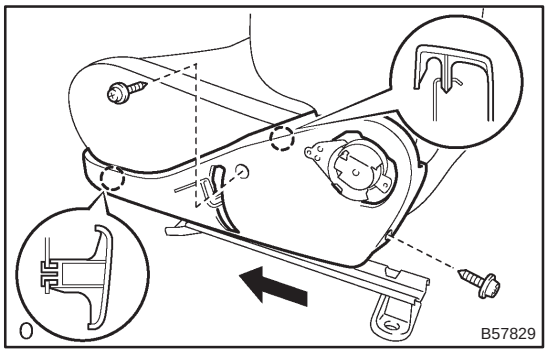
3. REMOVE RECLINING ADJUSTER RELEASE HANDLE LH

(a) Hold up the reclining adjuster release handle.

(b) Using a screwdriver, remove the hooks and reclining adjuster knob cap.

HINT:

Tape the screwdriver tip before use.



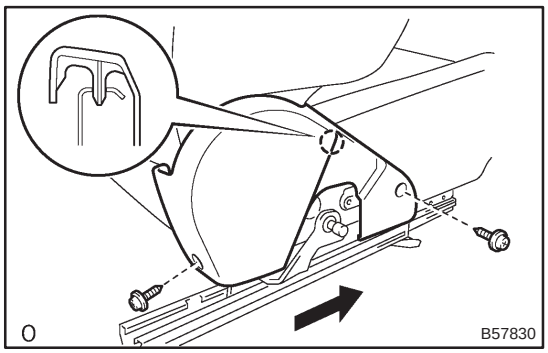
(c) Using a screwdriver, remove the hooks and reclining adjuster release handle.

HINT:

Tape the screwdriver tip before use.

4. REMOVE RECLINING CONTROL LEVER LH

(a) Using a hexagon wrench, remove the 2 bolts and reclining control lever.



5. REMOVE FRONT SEAT CUSHION SHIELD LH

(a) Remove the 2 screws and seat cushion shield LH.

6. REMOVE FRONT SEAT INNER BELT ASSY LH

(a) Remove the nut and inner belt.

7. REMOVE FRONT SEAT CUSHION SHIELD INNER LH

(a) Remove the 2 screws and seat cushion shield.

8. REMOVE FRONT SEAT RECLINING HOUSING SUB–ASSY LH

(a) Using a hexagon wrench, remove the 3 bolts and seat reclining housing.

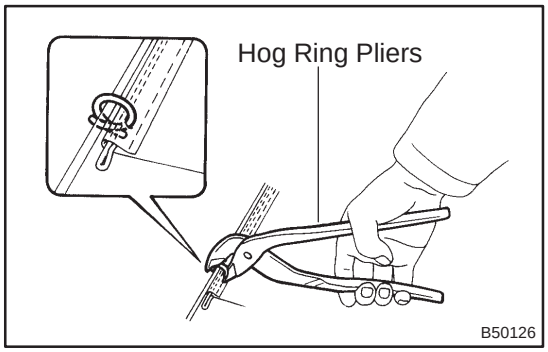
9. REMOVE SEPARATE TYPE FRONT SEATBACK ASSY

(a) Using a hexagon wrench, remove the 4 bolts and front seatback.

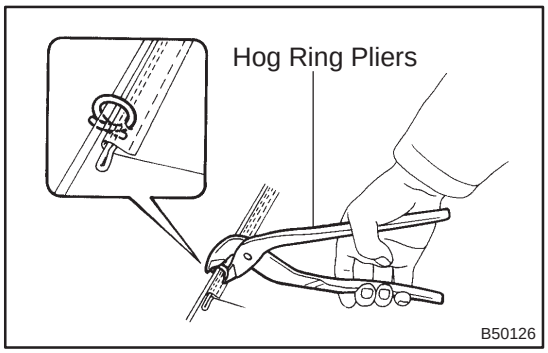
10. REMOVE SEPARATE TYPE FRONT SEATBACK COVER

(a) Disengage the seatback cover hook.
(b) Remove the 2 headrest supports.
(c) Remove the hog rings and seatback cover.

11. REMOVE SEPARATE TYPE FRONT SEATBACK SPRING ASSY



(a) Remove the pad from the seatback spring.



12. REMOVE SEPARATE TYPE FRONT SEAT CUSHION COVER

(a) Disengage the seat cushion cover hook.
(b) Remove the hog rings and seat cushion cover together with the pad from the seat cushion frame.
(c) Remove the hog rings and seat cushion pad from the seat cushion cover.

13. REMOVE FRONT SEAT ADJUSTER ASSY

(a) w/ Seat heater:
Remove the screw, seat heater control and seat heater control wire harness.

14. INSTALL SEPARATE TYPE FRONT SEAT CUSHION COVER

(a) Install the seat cushion cover with new hog rings to the seat cushion pad.

(b) Install the seat cushion cover with pad to the seat cushion frame with new hog rings.

HINT:

- Do not damage the seat cushion cover nor make it dirty.
- When installing the hog rings, take care to prevent wrinkles as much as possible.

15. INSTALL SEPARATE TYPE FRONT SEATBACK COVER

(a) Install the seatback cover with new hog rings to the seat cushion pad.

(b) Install the seatback cover with pad to the seatback frame with new hog rings.

HINT:

- Do not damage the seatback cover nor make it dirty.
- When installing the hog rings, take care to prevent wrinkles as much as possible.

16. INSTALL SEPARATE TYPE FRONT SEATBACK ASSY

(a) Using a hexagon wrench, Install the seatback with the 4 bolts.

17. INSTALL FRONT SEAT INNER BELT ASSY LH

(a) Install the inner belt with the nut.
Torque: 42 N·m (428 kgf·cm, 31 ft·lbf)

(b) Connect the connectors.

(c) Check that the inner seat belt moves smoothly.

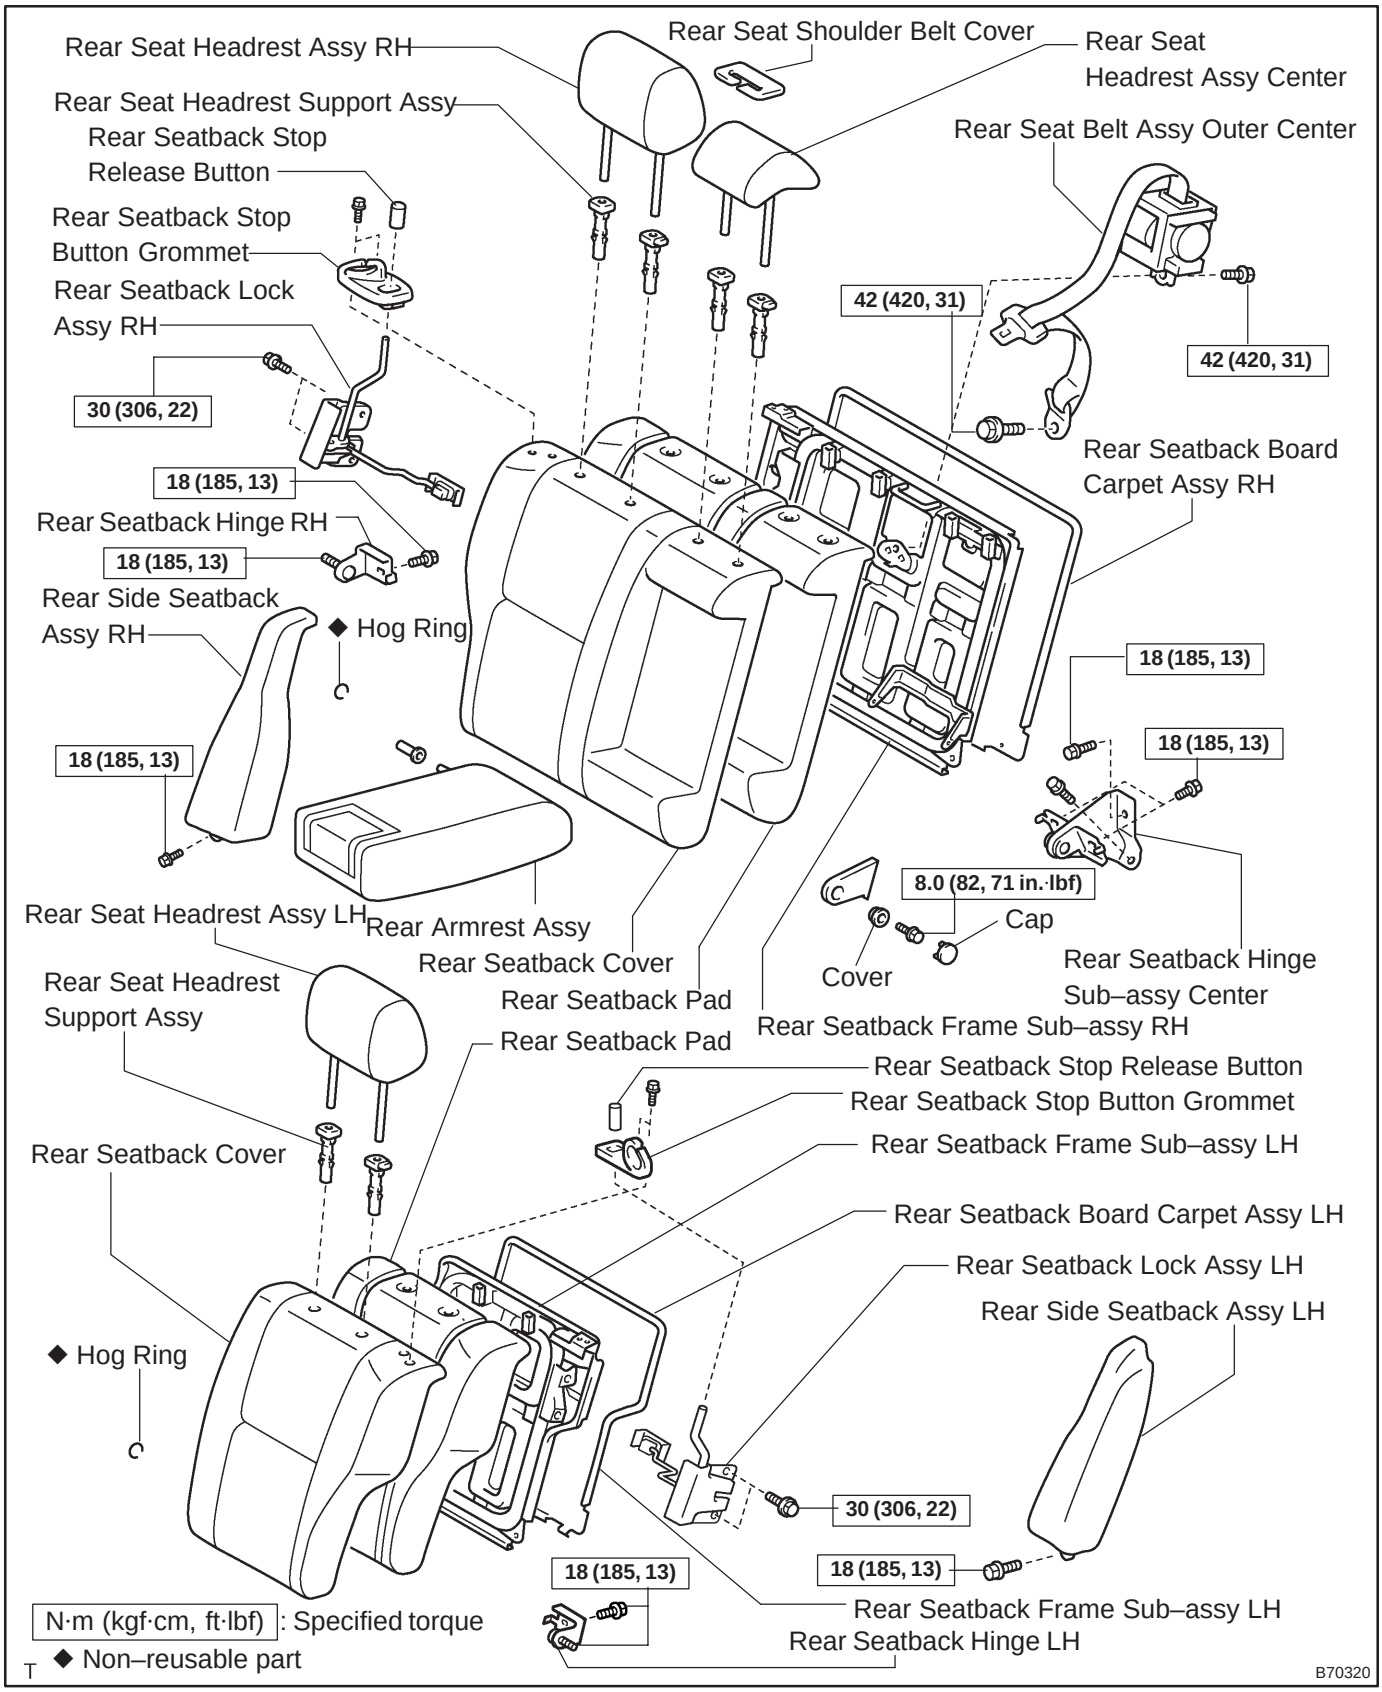
18. INSTALL FRONT SEAT ASSEMBLY LH

(a) Place the seat in the cabin.

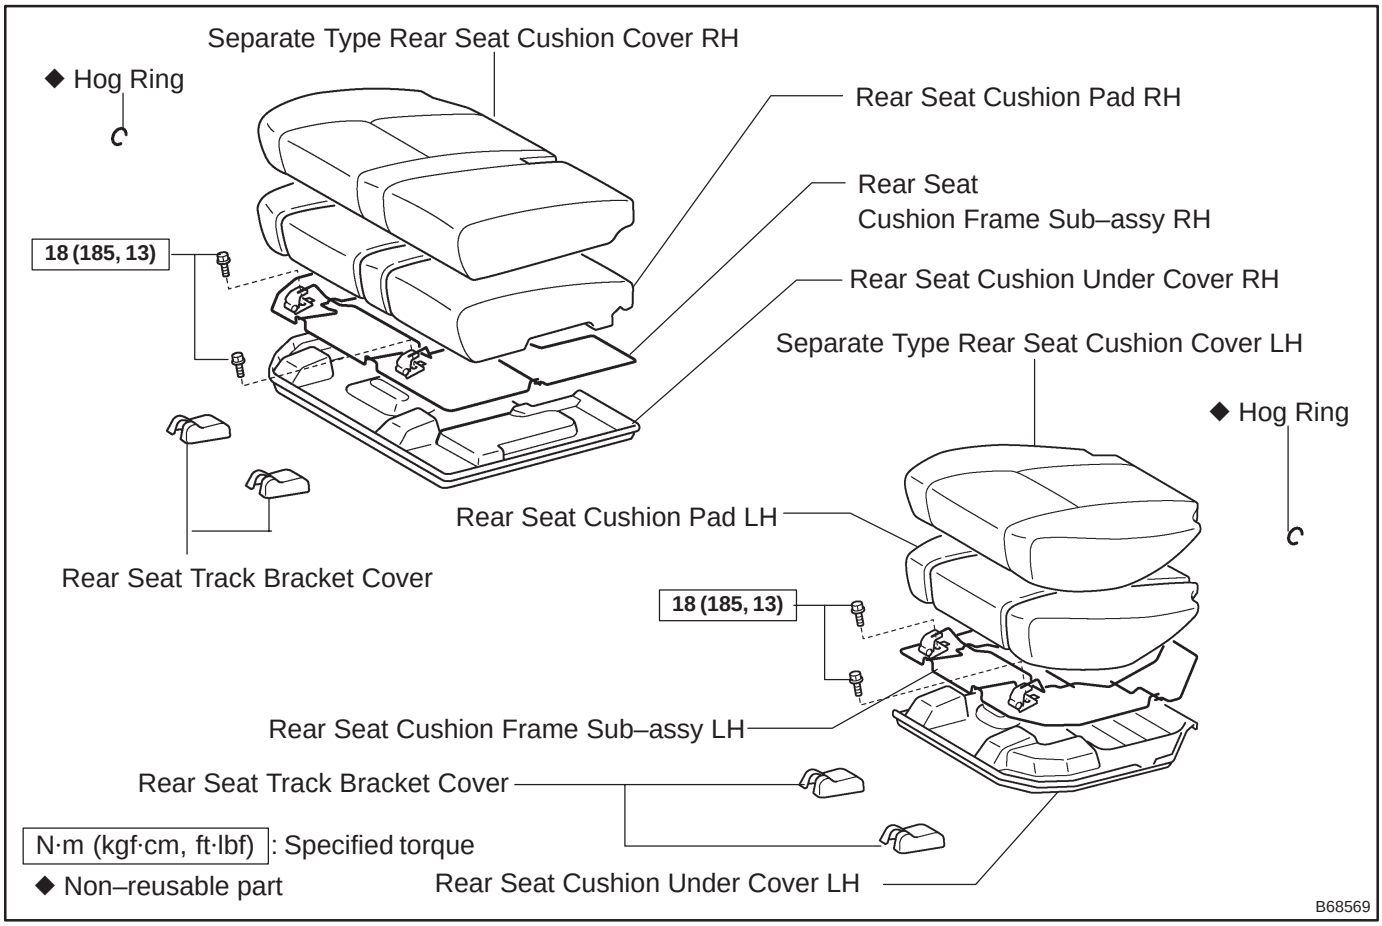
(b) Connect the connectors under the seat.

(c) Install the seat with the 4 bolts.
Torque: 37 N·m (375 kgf·cm, 27 ft·lbf)

(d) Install the 4 seat track covers.



(e) Install the headrest.



19. CHECK SEAT SLIDE ADJUSTER LOCKS

OVERHAUL

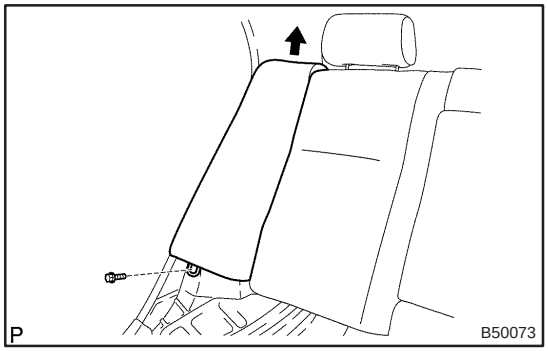
HINT:

The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.

1. REMOVE REAR SEAT HEADREST ASSY LH AND RH

2. REMOVE REAR SEAT HEADREST ASSY CENTER

3. REMOVE REAR SEAT CUSHION ASSY LH



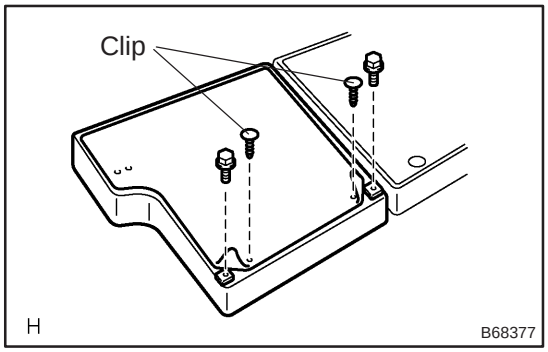
(a) Remove the 2 hinge covers.

(b) Remove the 2 bolts and seat cushion.

4. REMOVE REAR SEAT CUSHION ASSY RH

(a) Remove the 2 hinge covers.

(b) Remove the 2 bolts and seat cushion.

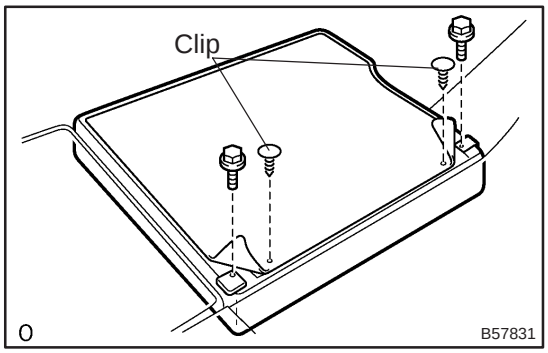


5. REMOVE REAR SIDE SEATBACK ASSY LH

(a) Remove the bolt and seatback.

6. REMOVE REAR SIDE SEATBACK ASSY RH

(a) Remove the bolt and seatback.



7. REMOVE REAR SEATBACK BOARD CARPET ASSY LH

(a) Using a clip remover, remove the 2 clips.

8. REMOVE REAR SEATBACK ASSY LH

(a) Remove the 2 bolts and seatback.

9. REMOVE REAR SEATBACK BOARD CARPET ASSY RH

(a) Using a clip remover, remove the 2 clips.

10. REMOVE REAR SEATBACK ASSY RH

(a) Remove the bolt and floor anchor for the rear seat belt assy outer center.

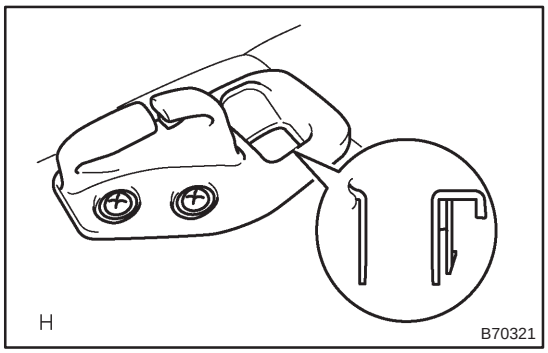
(b) Remove the 2 bolts and seatback.

11. REMOVE REAR SEATBACK HINGE SUB–ASSY LH

(a) Remove the bolt and seatback hinge.

12. REMOVE REAR SEATBACK HINGE SUB–ASSY RH

(a) Remove the bolt and seatback hinge.



13. REMOVE REAR SEATBACK HINGE SUB–ASSY CENTER

(a) Remove the 2 bolts and seatback hinge.

14. REMOVE REAR SEAT ARMREST ASSY CENTER

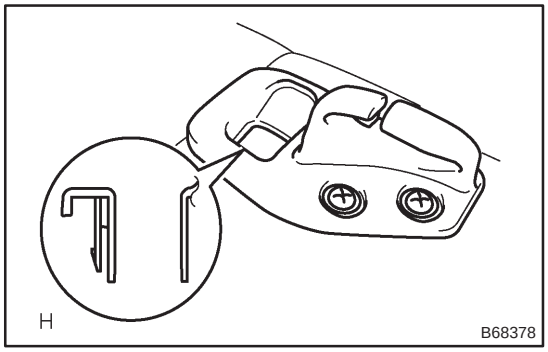
(a) Remove the screw and armrest cover.

(b) Remove the bolt and armrest.

15. REMOVE SEPARATE TYPE REAR SEATBACK COVER LH

(a) Remove the 2 screws.

(b) Using a screwdriver, disengage the claw and remove the stop button grommet.



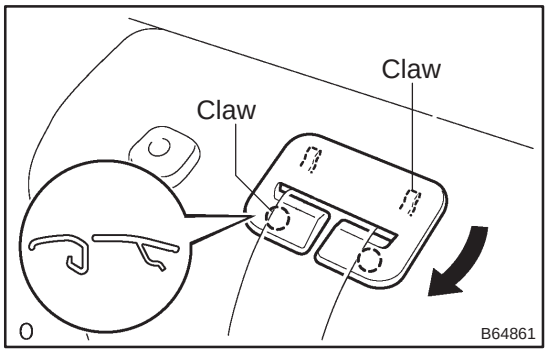
HINT:

Tape the screwdriver tip before use.

(c) Remove the 2 headrest supports.

(d) Remove the hog rings and the seatback cover together with the pad from the seatback frame.

(e) Remove the hog rings and the seatback cover from the seatback pad.



16. REMOVE SEPARATE TYPE REAR SEATBACK COVER RH

(a) Remove the 2 screws.

(b) Using a screwdriver, disengage the claw and remove the stop button grommet.

HINT:

Tape the screwdriver tip before use.

(c) Using a screwdriver, disengage the 4 claws and remove the shoulder belt cover.

HINT:

Tape the screwdriver tip before use.

(d) Remove the 4 headrest supports.

(e) Remove the hog rings and the seatback cover together with the pad from the seatback frame.

(f) Remove the hog rings and seatback cover from the seatback pad.

17. REMOVE REAR SEATBACK LOCK ASSY LH

(a) Remove the seatback lock release button.

(b) Remove the 2 bolts and seatback lock.

18. REMOVE REAR SEATBACK LOCK ASSY RH

HINT:

Use the same procedures described for the LH side.

19. REMOVE REAR SEAT BELT ASSY OUTER CENTER

(a) Remove the bolt and belt.

20. REMOVE REAR SEAT CUSHION UNDER COVER LH

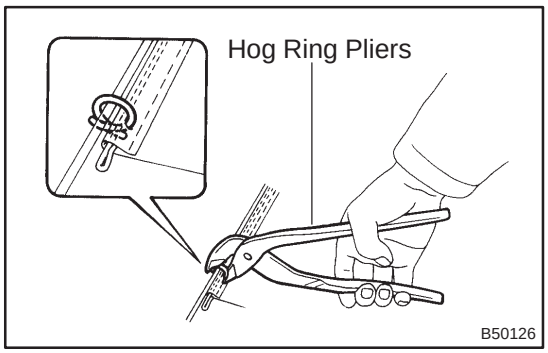
(a) Disengage the cushion cover hook.

(b) Remove the cushion cover together with the pad.

(c) Remove the cushion under cover.

21. REMOVE REAR SEAT CUSHION UNDER COVER RH

HINT:



Use the same procedures described for the LH side.

22. REMOVE SEPARATE TYPE REAR SEAT CUSHION COVER LH

(a) Remove the hog rings and cushion cover from the cushion pad.

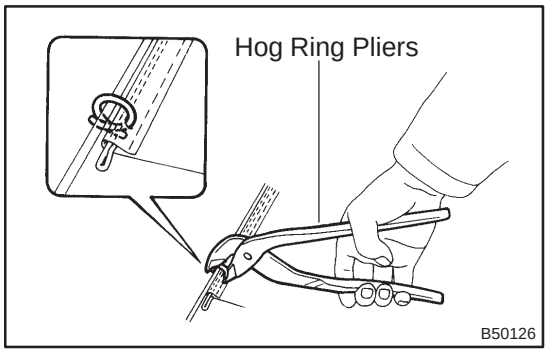
23. REMOVE SEPARATE TYPE REAR SEAT CUSHION COVER RH

(a) Remove the hog rings and cushion cover from the cushion pad.

24. INSTALL SEPARATE TYPE REAR SEAT CUSHION COVER LH

(a) Install the seat cushion cover to the seat cushion pad with new hog rings.

(b) Install the seat cushion cover with the pad to the seat cushion frame and the under cover.



HINT:

When installing hog rings, take care to prevent wrinkles as much as possible.

25. INSTALL SEPARATE TYPE REAR SEAT CUSHION COVER RH

HINT:

Use the same procedures described for the LH side.

26. INSTALL SEPARATE TYPE REAR SEATBACK COVER LH

(a) Install the seatback cover to the seatback pad with new hog rings.

(b) Install the seatback cover with the pad to the seatback frame with new hog rings.

HINT:

When installing hog rings, take care to prevent wrinkles as much as possible.

27. INSTALL SEPARATE TYPE REAR SEATBACK COVER RH

HINT:

Use the same procedures described for the LH side.

28. INSTALL REAR SEATBACK LOCK ASSY LH

(a) Install the seatback lock with the 2 bolts.

Torque: 30 N·m (306 kgf·cm, 22 ft·lbf)

29. INSTALL REAR SEATBACK LOCK ASSY RH

HINT:

Use the same procedures described for the LH side.

30. INSTALL REAR SEAT BELT ASSY OUTER CENTER

(a) Install the belt with the bolt.

Torque: 42 N·m (428 kgf·cm, 31 ft·lbf)

31. INSTALL REAR SEAT ARMREST ASSY CENTER

(a) Install the armrest with the bolt.

Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)

(b) Install the armrest cover with the screw.

32. INSTALL REAR SEATBACK HINGE SUB–ASSY CENTER

(a) Install the hinge with the 2 bolts.

Torque: 18 N·m (185 kgf·cm, 13 ft·lbf)

33. INSTALL REAR SEATBACK HINGE SUB–ASSY LH

(a) Install the hinge with the bolt.

Torque: 18 N·m (185 kgf·cm, 13 ft·lbf)

34. INSTALL REAR SEATBACK HINGE SUB–ASSY RH

HINT:

Use the same procedures described for the LH side.

35. INSTALL REAR SEATBACK ASSY LH

(a) Install the seatback with the 2 bolts.

Torque: 18 N·m (185 kgf·cm, 13 ft·lbf)

36. INSTALL REAR SEATBACK ASSY RH

(a) Install the seatback with the 2 bolts.

Torque: 18 N·m (185 kgf·cm, 13 ft·lbf)

(b) Install the floor anchor with the bolt.

Torque: 42 N·m (428 kgf·cm, 31 ft·lbf)

37. INSTALL REAR SIDE SEATBACK ASSY LH

(a) Install the seatback with the bolt.

Torque: 18 N·m (185 kgf·cm, 13 ft·lbf)

NOTICE:

Insert the side seat hook into the hole of body.

38. INSTALL REAR SIDE SEATBACK ASSY RH

HINT:

Use the same procedures described for the LH side.

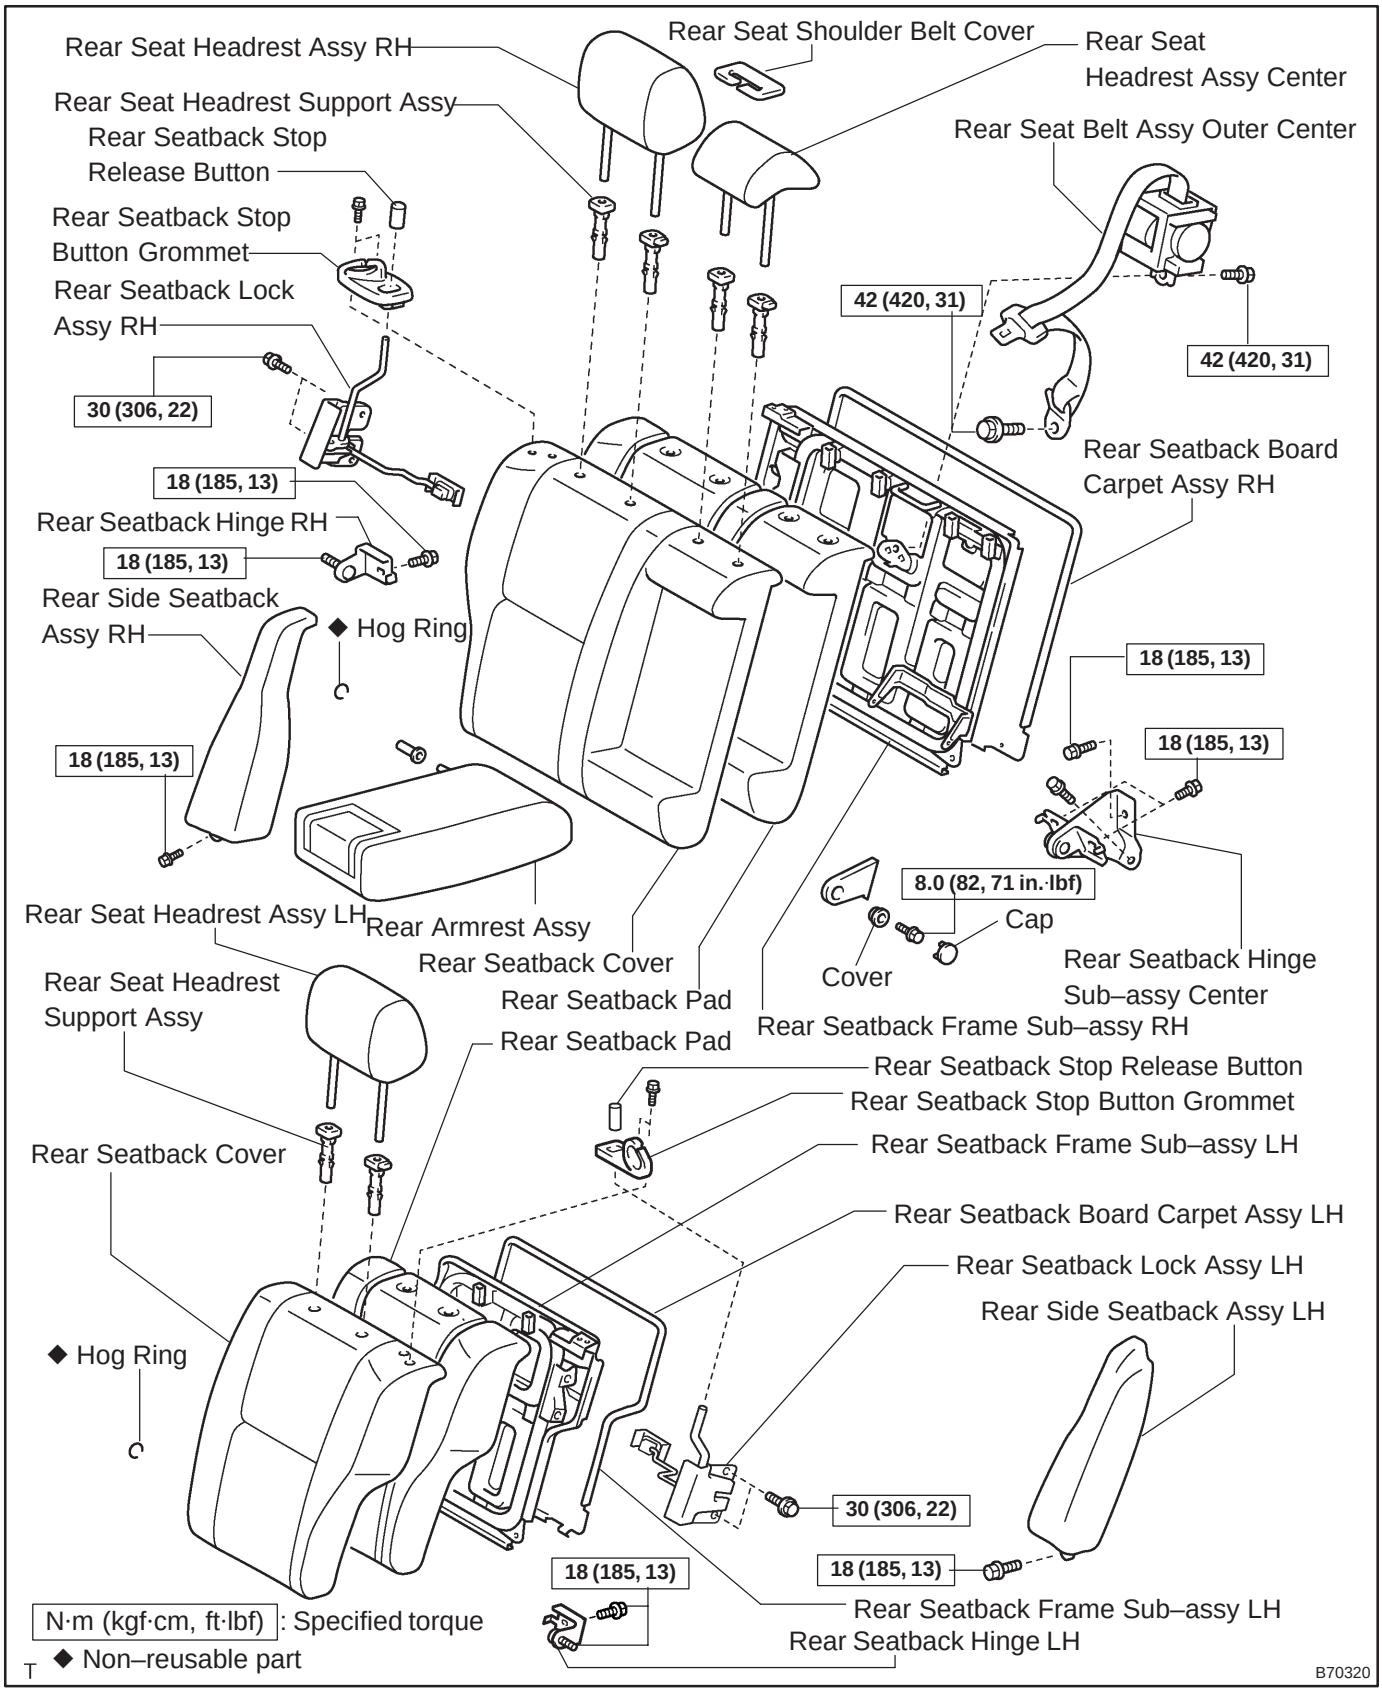
39. INSTALL REAR SEAT CUSHION ASSY LH

(a) Install the cushion with the 2 bolts.

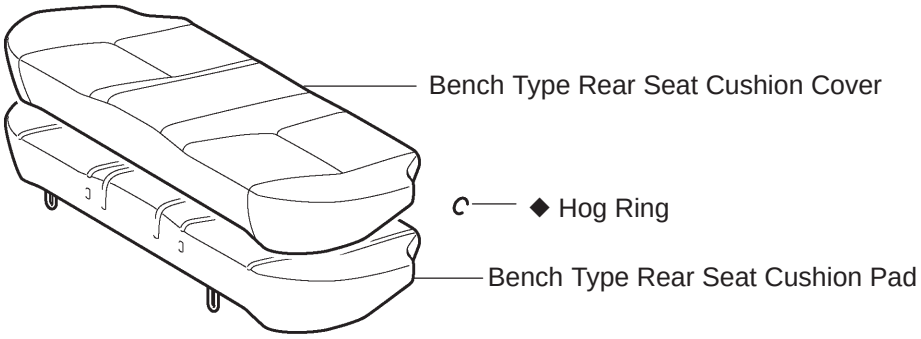
Torque: 18 N·m (184 kgf·cm, 13 ft·lbf)

(b) Install the 2 hinge covers.

40. INSTALL REAR SEAT CUSHION ASSY RH



HINT:



Use the same procedures described for the LH side.

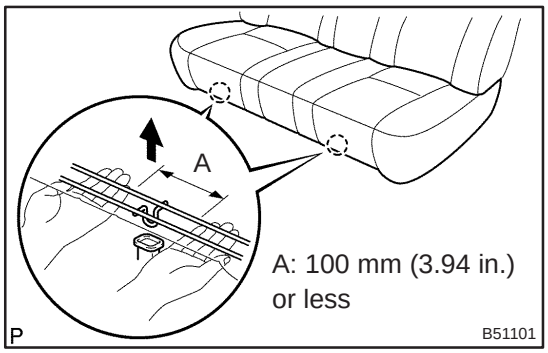
REAR SEAT ASSY (40/60 FOLDING)

720J9–01

COMPONENTS

◆ Non–reusable part

B68225



OVERHAUL

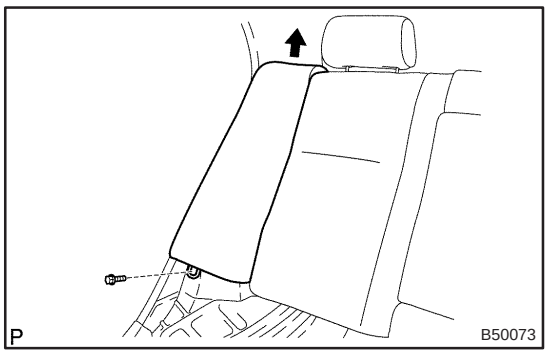
HINT:

The installation is in the reverse order of the removal. However, when there is a special point concerning the installation, it is indicated.

1. REMOVE REAR SEAT HEADREST ASSY LH AND RH

2. REMOVE REAR SEAT HEADREST ASSY CENTER

3. REMOVE REAR SEAT CUSHION ASSY



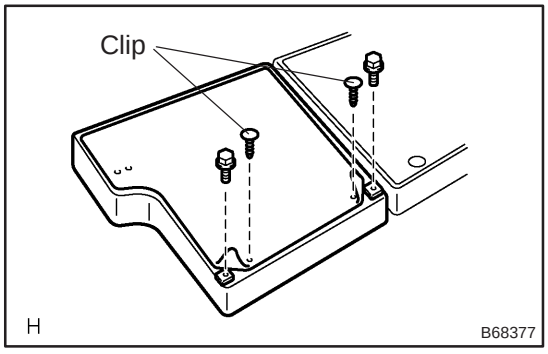
(a) Pull up the 2 front portions of the seat cushion, then remove it.

NOTICE:

In this case, hold the base of the clip up to prevent the cushion frame from being distorted.

4. REMOVE BENCH TYPE REAR SEAT CUSHION COVER

(a) Remove the hog rings and seat cushion cover.

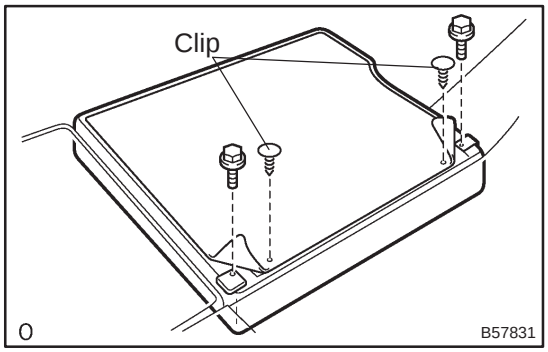


5. REMOVE REAR SIDE SEATBACK ASSY LH

(a) Remove the bolt and the seatback.

6. REMOVE REAR SIDE SEATBACK ASSY RH

(a) Remove the bolt and the seatback.



7. REMOVE REAR SEATBACK BOARD CARPET ASSY LH

(a) Using a clip remover, remove the 2 clips.

8. REMOVE REAR SEATBACK ASSY LH

(a) Remove the 2 bolts and seatback.

9. REMOVE REAR SEATBACK BOARD CARPET ASSY RH

(a) Using a clip remover, remove the 2 clips.

10. REMOVE REAR SEATBACK ASSY RH

(a) Remove the bolt and floor anchor for the seat belt outer center.

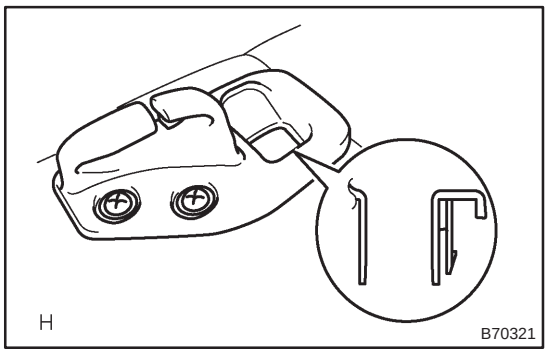
(b) Remove the 2 bolts and seatback assy.

11. REMOVE REAR SEATBACK HINGE SUB–ASSY LH

(a) Remove the bolt and seatback hinge.

12. REMOVE REAR SEATBACK HINGE SUB–ASSY RH

(a) Remove the bolt and seatback hinge.



13. REMOVE REAR SEATBACK HINGE SUB–ASSY CENTER

(a) Remove the 2 bolts and seatback hinge.

14. REMOVE REAR SEAT ARMREST ASSY CENTER

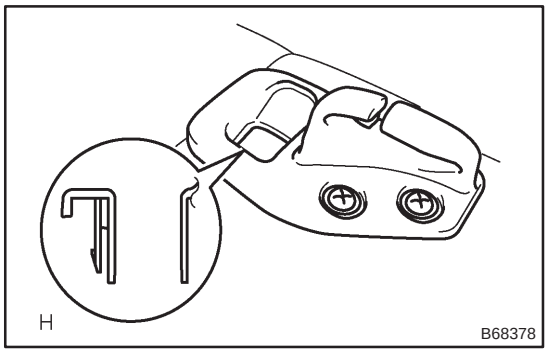
(a) Remove the armrest cover.

(b) Remove the bolt and armrest.

15. REMOVE SEPARATE TYPE REAR SEATBACK COVER LH

(a) Remove the 2 screws.

(b) Using a screwdriver, disengage the claw and remove the stop button grommet.



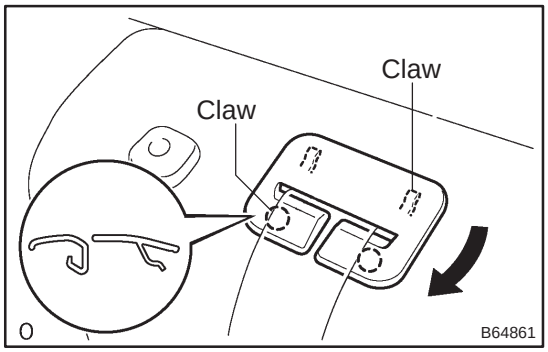
HINT:

Tape the screwdriver tip before use.

(c) Remove the 2 headrest supports.

(d) Remove the hog rings and the seatback cover together with the pad from the seatback frame.

(e) Remove the hog rings and the seatback cover from the seatback pad.



16. REMOVE SEPARATE TYPE REAR SEATBACK COVER RH

(a) Remove the 2 screws.

(b) Using a screwdriver, disengage the claw and remove the stop button grommet.

HINT:

Tape the screwdriver tip before use.

(c) Using a screwdriver, disengage the 2 claws and remove the shoulder belt cover.

HINT:

Tape the screwdriver tip before use.

(d) Remove the 4 headrest supports.

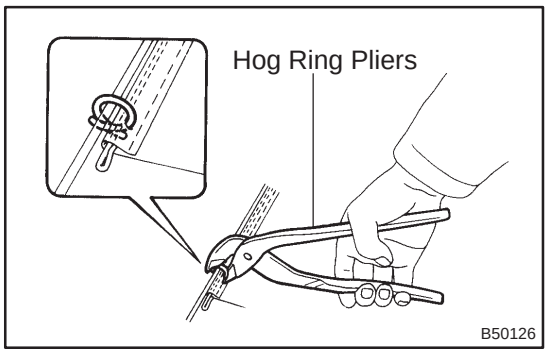
(e) Remove the hog rings and the seatback cover together with the pad from the seatback frame.

(f) Remove the hog rings and seatback cover from the seatback pad.

17. REMOVE REAR SEATBACK LOCK ASSY LH

(a) Remove the seatback lock release button.

(b) Remove the 2 bolts and seatback lock.



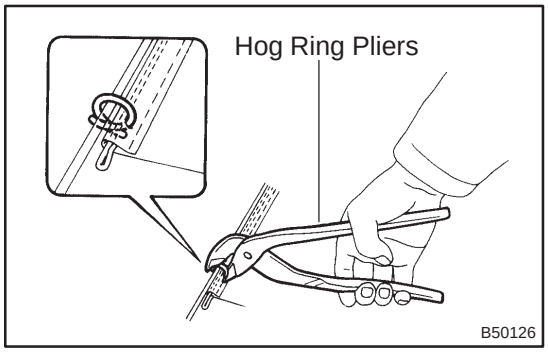
18. REMOVE REAR SEATBACK LOCK ASSY RH

HINT:

Use the same procedures described for the LH side.

19. REMOVE REAR SEAT BELT ASSY OUTER CENTER

(a) Remove the bolt and belt.



20. INSTALL BENCH TYPE REAR SEAT CUSHION COVER

(a) Install the rear seat cushion cover with new hog rings to the rear seat cushion pad.

HINT:

- Do not damage the seat cushion cover nor make it dirty.
- When installing the hog rings, take care to prevent wrinkles as much as possible.

21. INSTALL SEPARATE TYPE REAR SEATBACK COVER LH

(a) Install the seatback cover to the seatback pad with new hog rings.

(b) Install the seatback cover with the pad to the seatback frame with new hog rings.

HINT:

When installing hog rings, take care to prevent wrinkles as much as possible.

22. INSTALL SEPARATE TYPE REAR SEATBACK COVER RH

HINT:

Use the same procedures described for the LH side.

23. INSTALL REAR SEAT BACK LOCK ASSY LH

(a) Install the seatback lock with the 2 bolts.

Torque: 30 N·m (306 kgf·cm, 22 ft·lbf)

24. INSTALL REAR SEATBACK LOCK ASSY RH

HINT:

Use the same procedures described for the LH side.

25. INSTALL REAR SEAT BELT ASSY OUTER CENTER

(a) Install the belt with the bolt.
Torque: 42 N·m (428 kgf·cm, 31 ft·lbf)

26. INSTALL REAR SEAT ARMREST ASSY CENTER

(a) Install the armrest with the bolt.
Torque: 8.0 N·m (82 kgf·cm, 71 in.·lbf)

(b) Install the armrest cover with the screw.

27. INSTALL REAR SEAT BACK HINGE SUB–ASSY CENTER

(a) Install the hinge with the 2 bolts.
Torque: 18 N·m (185 kgf·cm, 13 ft·lbf)

28. INSTALL REAR SEATBACK HINGE SUB–ASSY LH

(a) Install the hinge with the bolt.
Torque: 18 N·m (185 kgf·cm, 13 ft·lbf)

29. INSTALL REAR SEATBACK HINGE SUB–ASSY RH

HINT:
Use the same procedures described for the LH side.

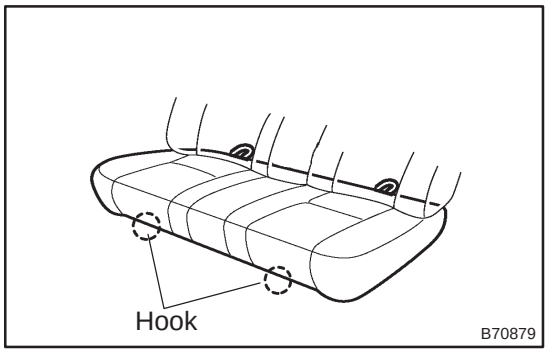
30. INSTALL REAR SEATBACK ASSY LH

(a) Install the seatback with the 2 bolts.
Torque: 18 N·m (185 kgf·cm, 13 ft·lbf)

31. INSTALL REAR SEATBACK ASSY RH

(a) Install the seatback with the 2 bolts.
Torque: 18 N·m (185 kgf·cm, 13 ft·lbf)

(b) Install the floor anchor with the bolt.
Torque: 42 N·m (428 kgf·cm, 31 ft·lbf)



32. INSTALL REAR SIDE SEATBACK ASSY LH

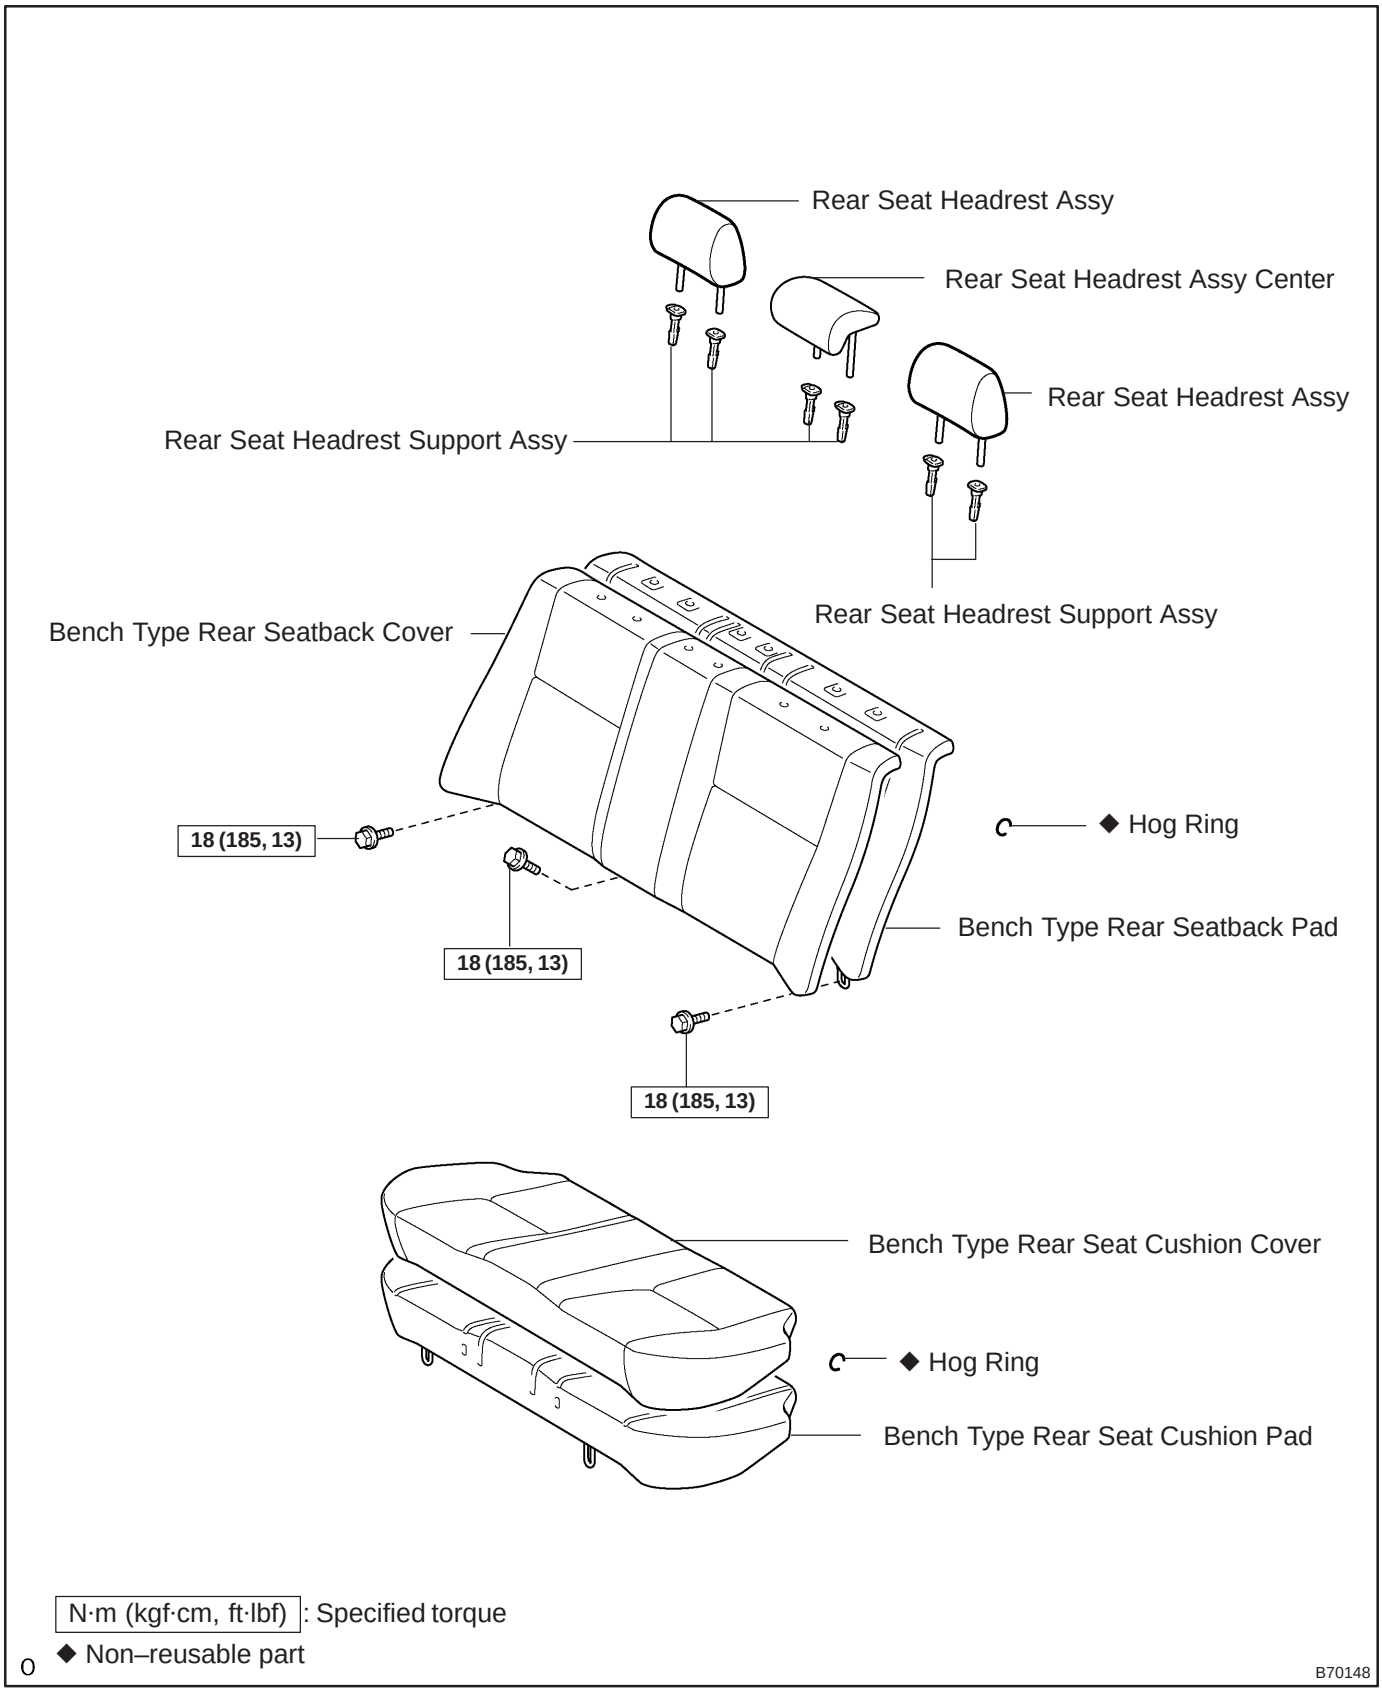
(a) Install the seatback LH with the bolt.
Torque: 18 N·m (185 kgf·cm, 13 ft·lbf)

NOTICE:
Insert the side seat hook into the hole of body.

33. INSTALL REAR SIDE SEATBACK ASSY RH

HINT:
Use the same procedures described for the LH side.

34. INSTALL REAR SEAT CUSHION ASSY



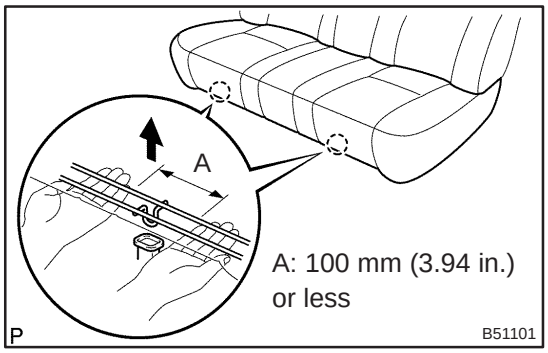
(a) Place the 2 hooks in the body firmly.

(b) Insert the frame into the 2 hooks.

REAR SEAT ASSY (UNITED FIXED)

720JD–01

COMPONENTS



N·m (kgf·cm, ft·lbf) : Specified torque

◆ Non–reusable part

B70148

OVERHAUL

1. REMOVE REAR SEAT CUSHION ASSY

(a) Pull up the 2 front portions of the seat cushion, then remove it.

NOTICE:

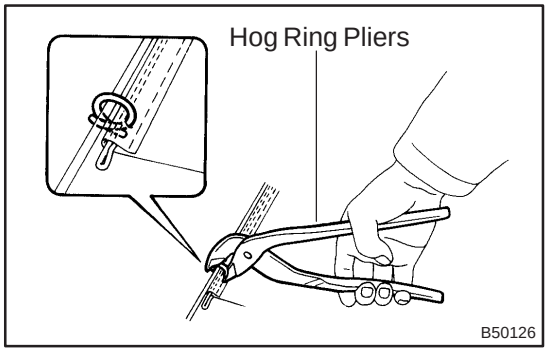
In this case, hold the base of the clip up to prevent the cushion frame from being distorted.

2. REMOVE BENCH TYPE REAR SEAT CUSHION COVER

(a) Remove the hog rings and cushion cover.

3. REMOVE REAR SEATBACK ASSY

(a) Remove the 3 bolts and seatback.



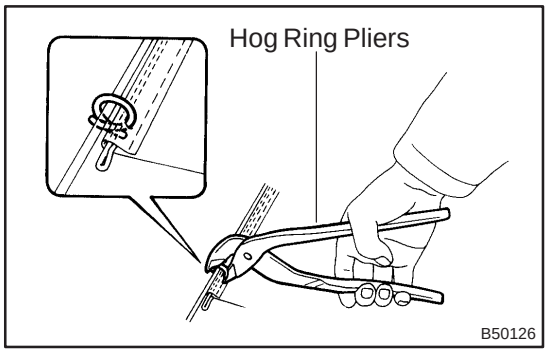
4. REMOVE REAR SEAT HEADREST ASSY

5. REMOVE REAR SEAT HEADREST ASSY CENTER

6. REMOVE BENCH TYPE REAR SEATBACK COVER

(a) Remove the 6 headrest supports.

(b) Remove the hog rings and seatback cover.



7. INSTALL BENCH TYPE REAR SEATBACK COVER

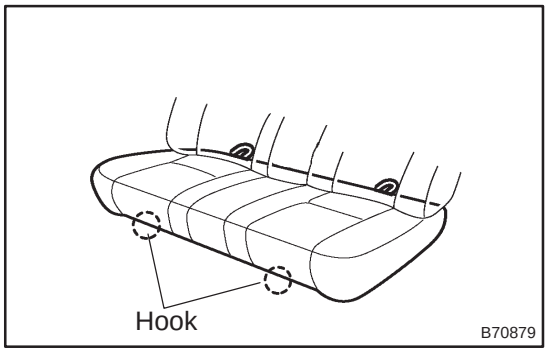
(a) Install the seatback cover with new hog rings to the rear seatback pad.

HINT:

- Do not damage the seat cushion cover nor make it dirty.
- When installing the hog rings, take care to prevent wrinkles as much as possible.

8. INSTALL BENCH TYPE REAR SEAT CUSHION COVER

(a) Install the rear seat cushion cover with new hog rings to the rear seat cushion pad.



HINT:

- Do not damage the seatback cover nor make it dirty.
- When installing the hog rings, take care to prevent wrinkles as much as possible.

9. INSTALL REAR SEATBACK ASSY

(a) Install the seatback with the 3 bolts.

Torque: 18 N·m (185 kgf·cm, 13 ft·lbf)

10. INSTALL REAR SEAT CUSHION ASSY

(a) Place the 2 hooks in the body firmly.

(b) Insert the frame into the 2 hooks.

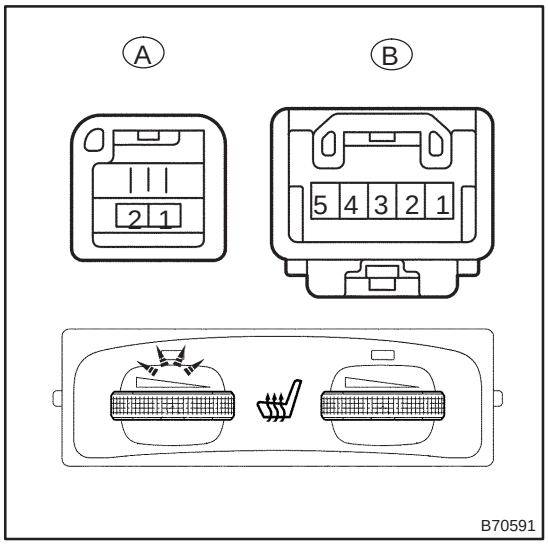
INSPECTION

1. LH side:
INSPECT SEAT HEATER SWITCH

(a) Check the seat heater switch resistance.

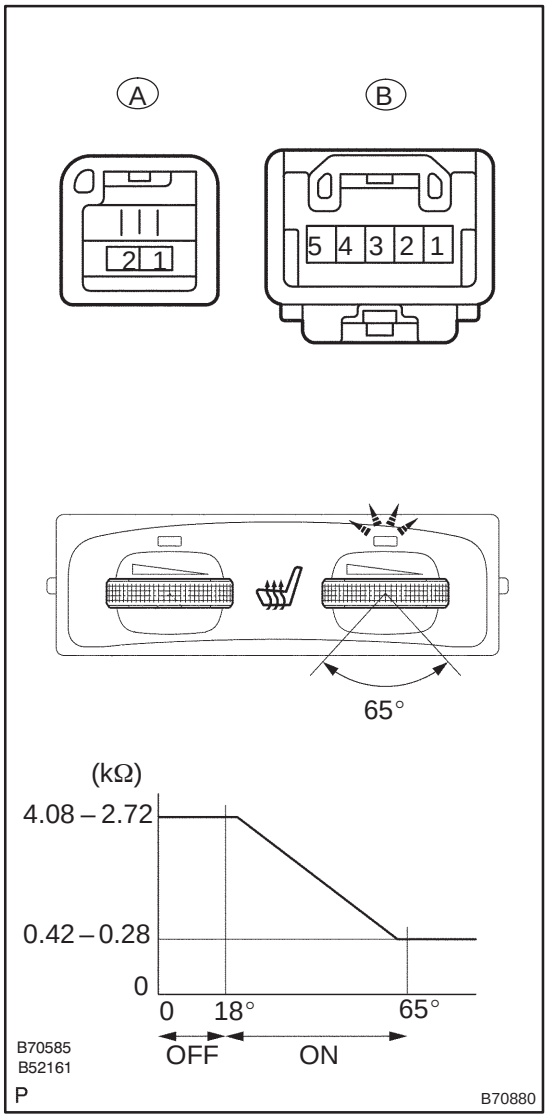


Tester Connection	Switch Position	Specified Condition
B–2 – B–4	OFF	10 kΩ or higher
	ON (Minimum – Maximum)	Below 1 Ω
B–2 – B–3	OFF	10 kΩ or higher
	ON (Minimum – Maximum)	Refer to illustration

If the continuity is not as specified, replace the switch.

(b) Turn the seat heater switch ON and check the seat heater switch indicator illuminates.

Tester Connection	Specified Condition
Battery positive voltage → B–2 Battery negative voltage → B–5	Illuminates



If the result is not as specified, replace the switch.

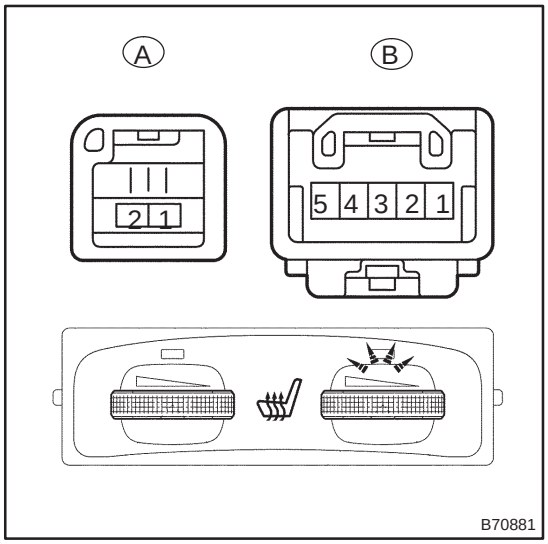
(c) Check the seat heater switch illuminates.

Tester Connection	Specified Condition
Battery positive voltage → B–1 Battery negative voltage → B–5	Illuminates

If the result is not as specified, replace the switch or bulb.

2. RH side:
INSPECT SEAT HEATER SWITCH

(a) Check the seat heater switch resistance.

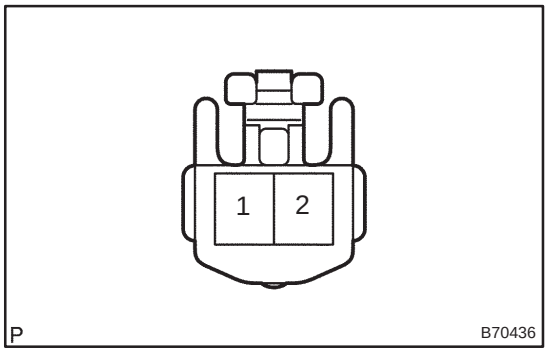


Tester Connection	Switch Position	Specified Condition
B–2 – A–1	OFF	10 kΩ or higher
	ON (Minimum – Maximum)	Below 1 Ω
B–2 – A–2	OFF	10 kΩ or higher
	ON (Minimum – Maximum)	Refer to illustration

If the continuity is not as specified, replace the switch.

(b) Turn the seat heater switch ON and check the seat heater switch indicator illuminates.

Tester Connection	Specified Condition
Battery positive voltage → B–2 Battery negative voltage → B–5	Illuminates

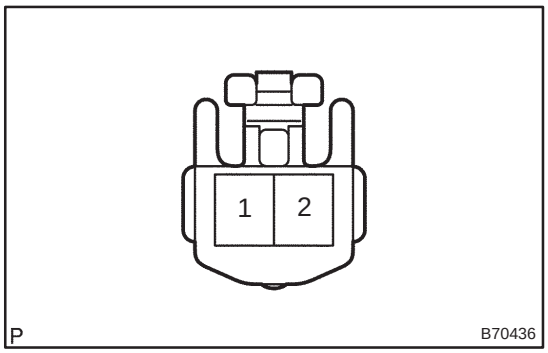


If the result is not as specified, replace the switch.

(c) Check the seat heater switch indicator illuminates.

Tester Connection	Specified Condition
Battery positive voltage → B–1 Battery negative voltage → B–5	Illuminates

If the result is not as specified, replace the switch or bulb.

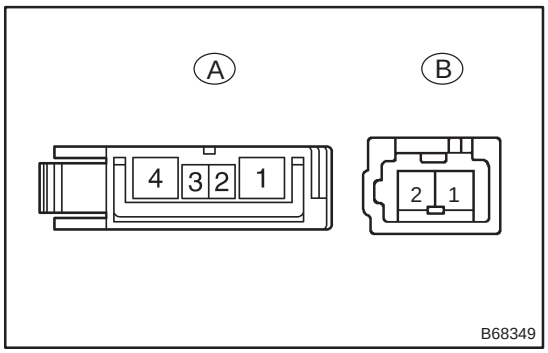


3. INSPECT SEPARATE TYPE FRONT SEATBACK COVER LH

(a) Check the resistance of the seatback heater.

Tester Connection	Specified Condition
1 – 2	Below 1 Ω

If the result is not as specified, replace the seatback cover.

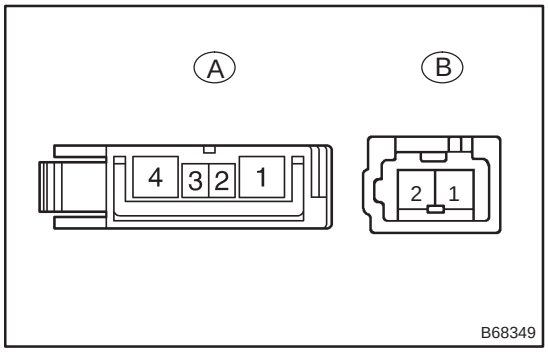


4. INSPECT SEPARATE TYPE FRONT SEATBACK COVER RH

(a) Check the resistance of the seatback heater.

Tester Connection	Specified Condition
1 – 2	Below 1 Ω

If the result is not as specified, replace the seatback cover.

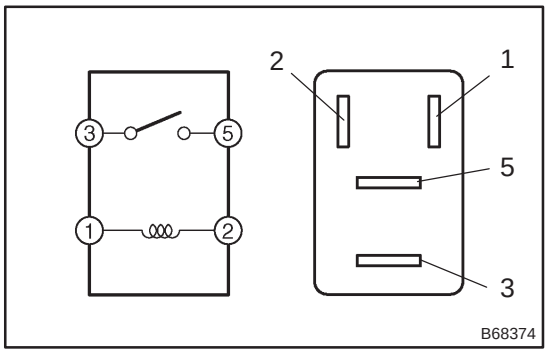


5. INSPECT SEPARATE TYPE FRONT SEAT CUSHION COVER LH

(a) Check the resistance of the seat cushion heater.

Tester Connection	Specified Condition
A–1 – B–1	Below 1 Ω
A–2 – A–3	
A–4 – B–2	

If the result is not as specified, replace the seat cushion cover.



6. INSPECT SEPARATE TYPE FRONT SEAT CUSHION COVER RH

(a) Check the resistance of the seat cushion heater.

Tester Connection	Specified Condition
A–1 – B–1	Below 1 Ω
A–2 – A–3	
A–4 – B–2	

If the result is not as specified, replace the seat cushion cover.

7. INSPECT RELAY (SEAT HTR)

(a) Check the resistance of the relay.

Standard:

Tester Connection	Specified Condition
3 – 5	10 kΩ or higher
	Below 1 Ω (When battery voltage is applied to terminals 1 and 2)

If the result is not as specified, replace the relay.

POWER DOOR LOCK CONTROL SYSTEM

730GV–01

ON–VEHICLE INSPECTION

1. DOOR LOCK FAIL–SAFE

(a) When a malfunction in the door control switch (manual switch, driver's door lock) has been detected, door lock/unlock operation becomes disabled.

2. CHECK ELECTRICAL DOOR LOCK OPERATION

(a) Check the basic function.

(1) Check that all doors lock when the door control switch (for manual operation) is turned to LOCK and all doors unlock when turned to UNLOCK.

(2) Check that all doors lock when the driver's door is locked from the outside using the key. Check that all doors unlock when the driver's door is unlocked from the outside using the key.

(b) Check the key lock–in prevention function.

NOTICE:

In order to prevent the key from being locked in, the inspection should be made with the driver side door glass open.

(1) Have the key inserted into the ignition key cylinder.

(2) With the driver side door open, check that all doors unlock immediately after the door lock knob for the driver side door is turned to LOCK.

(3) With the driver side door open, check that all doors unlock immediately after the door control switch (for manual operation) is turned to LOCK.

(4) With the driver side door open, turn the driver side door lock knob to LOCK and hold it for 2 seconds or more, and then close the driver side door. Then check that all doors unlock.

(c) Check the security function.

(1) Close all doors with the driver side door glass open so that the door control switch can be operated from outside the vehicle

(2) Pull out the key, open the driver side door and then close and lock the door without using the key. Then, check that all doors do not unlock when the door control switch (for manual operation) is turned to UNLOCK from outside the vehicle.

(3) Pull out the key, close and lock the driver side door by key operation. Under this condition, check that all doors do not unlock when the door control switch (for manual operation) is turned to UNLOCK from outside the vehicle.

(4) Pull out the key, close the driver side door and lock the door by wireless door lock operation. Then, check that all doors do not unlock when the door control switch (for manual operation) is turned to UNLOCK from outside the vehicle.

HINT:

Check that the security function is canceled under the following conditions.

- The ignition switch is turned ON.
- The driver side door is unlocked using the key.
- The door control switch (for manual operation) is turned to UNLOCK after the door control knob is turned to UNLOCK manually.
- The doors are unlocked with wireless operation.

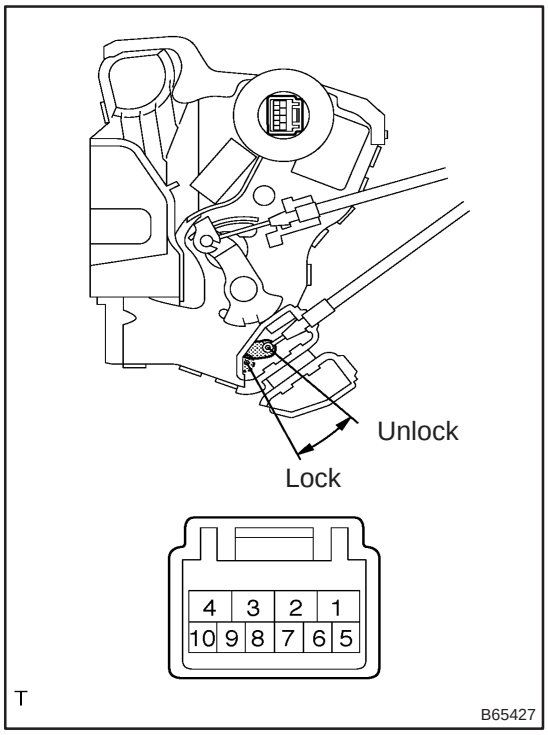
(d) Check the illumination function.
  (1) Set the room light switch in the DOOR position.
  (2) With all doors locked, check that all doors unlock when the driver side door lock cylinder is turned to UNLOCK using the key and that the room right turns on.
  (3) Check that the room light turns off in approx. 15 seconds after the doors have not been opened for a while.

3. w/ Double lock:

CHECK DOUBLE LOCKING FUNCTION SYSTEM

(a) Check that the double locking system is set to ON.
  (1) Open all the windows.
  (2) Turn the ignition switch to LOCK and remove the key.
  (3) Open and close the driver side door, and make sure that all doors including the back door are closed securely.
  (4) Push the LOCK switch on the wireless transmitter twice within 5 seconds, and check that the hazard warning lights flash once at this time to show that the system is set.
  (5) Try to unlock all doors using the inside handle of the vehicle, and check that none of the doors unlock.

NOTICE:



- **The double locking system cannot be set to ON without using the wireless transmitter.**
- **The double locking system operation is not related to the back door.**

(b) Check that the double locking system is set to OFF.
  (1) Push the UNLOCK switch on the wireless transmitter while the double locking system is ON, and check that the hazard warning lights flash twice at this time to show that the system is set to OFF.
  (2) Check that the doors can be opened both by the inside handle and the outside handle.

NOTICE:

If the battery of the wireless transmitter is dead, only the driver side door can be opened using the key. However, the theft deterrent system still remains on. Therefore, be aware that the theft alarm is set off when the door is opened without the use of the wireless transmitter.

INSPECTION

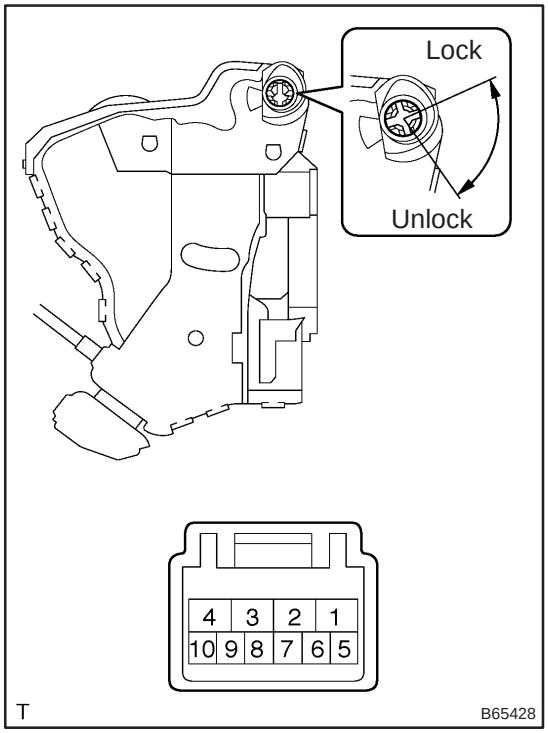
1. INSPECT FRONT DOOR W/MOTOR LOCK ASSY LH (W/O DOUBLE DOOR LOCK)

(a) Apply battery voltage to the door lock motor and check operation.

Standard:

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 4 Battery negative (–) → Terminal 1	Lock
Battery positive (+) → Terminal 1 Battery negative (–) → Terminal 4	Unlock

If the result is not as specified, replace the door lock assy.



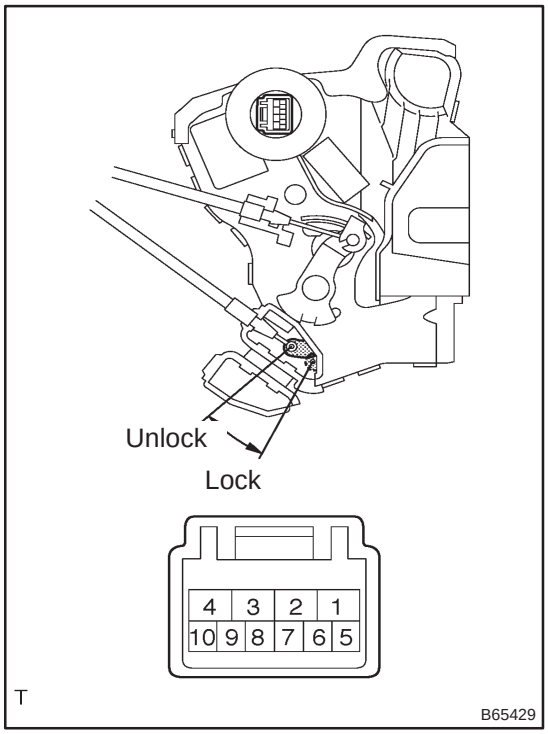
(b) Driver side only:

Check the resistance of the position switch.

Standard:

Tester Connection	Door Lock Position	Specified Condition
7 – 8	Lock	10 kΩ or higher
	Unlock	Below 1 Ω

If the result is not as specified, replace the door lock assy.



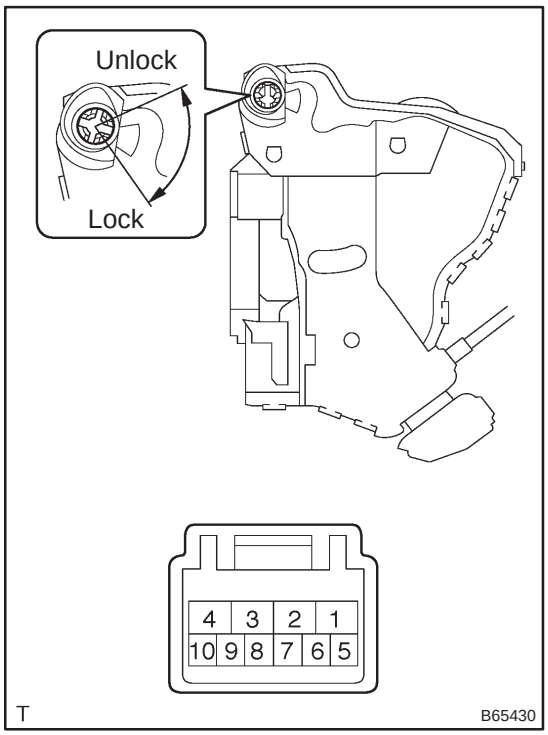
(c) Driver side only:

Check the resistance of the door lock and unlock switch.

Standard:

Tester Connection	Door Lock Position	Specified Condition
7 – 9	Lock	Below 1 Ω
7 – 9	OFF	10 kΩ or higher
7 – 10		
7 – 10	Unlock	Below 1 Ω

If the result is not as specified, replace the door lock assy.



2. INSPECT FRONT DOOR W/MOTOR LOCK ASSY RH (W/O DOUBLE DOOR LOCK)

(a) Apply battery voltage to the door lock motor and check operation.

Standard:

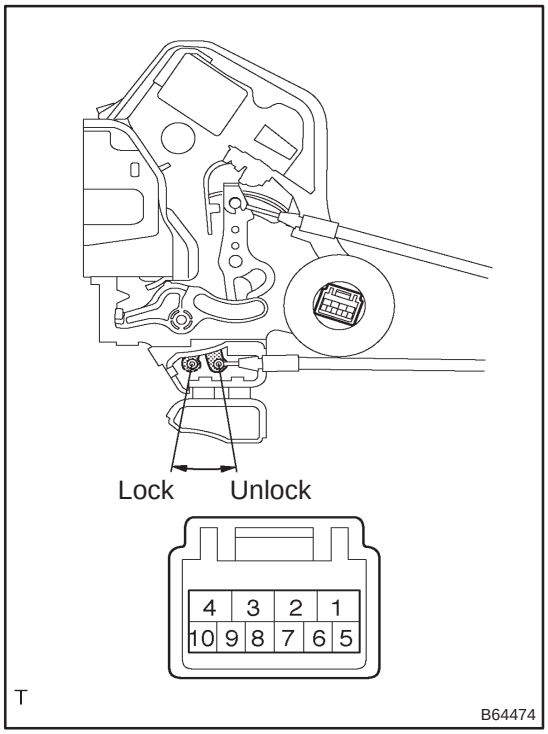
MeasurementCondition	SpecifiedCondition
Battery positive (+) → Terminal 4 Battery negative (–) → Terminal 1	Lock
Battery positive (+) → Terminal 1 Battery negative (–) → Terminal 4	Unlock

If the result is not as specified, replace the door lock assy.

(b) Driver side only:
Check the door lock and unlock switch resistance.

Standard:

Tester Connection	Door Lock Position	SpecifiedCondition
6 – 8	Lock	Below 1 Ω
6 – 8	OFF	10 kΩ or higher
5 – 8		
5 – 8	Unlock	Below 1 Ω



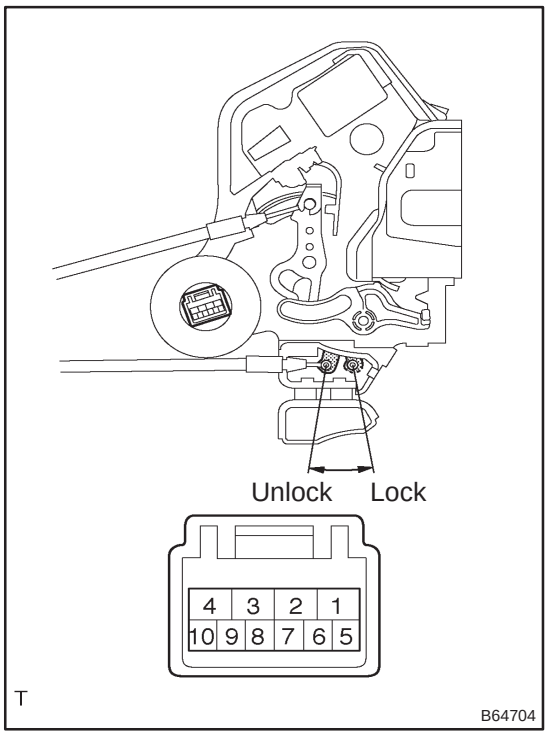
If the result is not as specified, replace the door lock assy.

(c) Driver side only:
Check the position switch resistance.

Standard:

Tester Connection	Door Lock Position	SpecifiedCondition
7 – 8	Lock	10 kΩ or higher
	Unlock	Below 1 Ω

If the result is not as specified, replace the door lock assy.



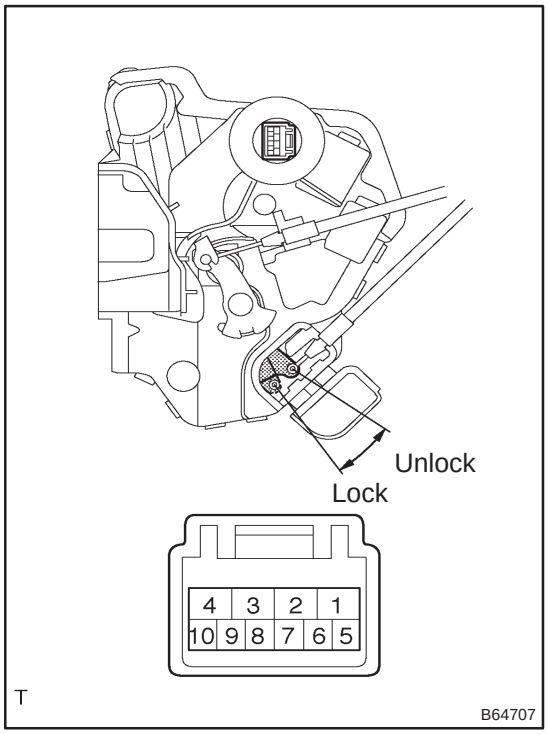
3. INSPECT REAR DOOR W/MOTOR LOCK ASSY LH (W/O DOUBLE DOOR LOCK)

(a) Apply battery voltage to the door lock motor and check operation.

Standard:

MeasurementCondition	SpecifiedCondition
Battery positive (+) → Terminal 4 Battery negative (–) → Terminal 1	Lock
Battery positive (+) → Terminal 1 Battery negative (–) → Terminal 4	Unlock

If the result is not as specified, replace the door lock assy.



4. INSPECT REAR DOOR W/MOTOR LOCK ASSY RH (W/O DOUBLE DOOR LOCK)

(a) Apply battery voltage to the door lock motor and check operation.

Standard:

MeasurementCondition	SpecifiedCondition
Battery positive (+) → Terminal 4 Battery negative (–) → Terminal 1	Lock
Battery positive (+) → Terminal 1 Battery negative (–) → Terminal 4	Unlock

If the result is not as specified, replace the door lock assy.

5. INSPECT FRONT DOOR W/MOTOR LOCK ASSY LH (W/ DOUBLE DOOR LOCK)

(a) Apply battery voltage to the door lock motor and check operation.

Standard:

MeasurementCondition	SpecifiedCondition
Battery positive (+) → Terminal 4 Battery negative (–) → Terminal 3	Lock
Battery positive (+) → Terminal 3 Battery negative (–) → Terminal 4	Unlock

If the result is not as specified, replace the door lock assy.

(b) Check the resistance of the position switch.

Standard:

Tester Connection	Door Lock Position	SpecifiedCondition
7 – 8	Lock	10 kΩ or higher
	Unlock	Below 1 Ω

If the result is not as specified, replace the door lock assy.

(c) Check operation of the double lock motor.

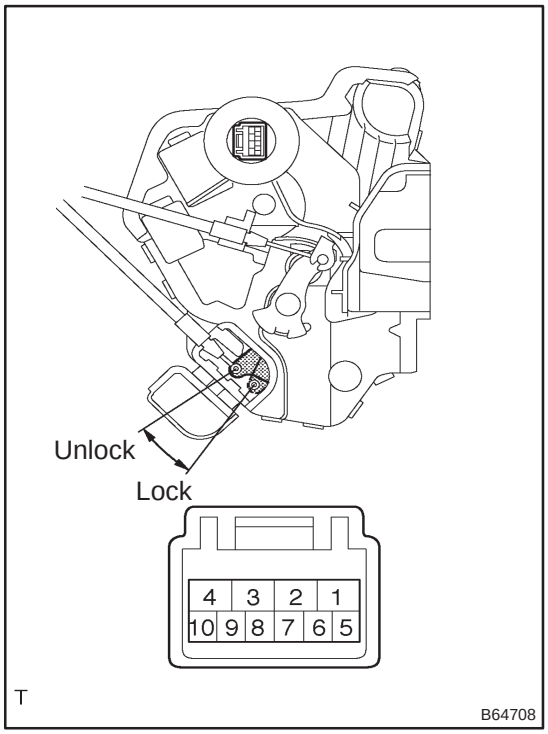
(1) Apply battery voltage to the door lock motor and set it to LOCK.

(2) Apply battery voltage to the double lock motor and check operation.

Standard:

MeasurementCondition	SpecifiedCondition
Battery positive (+) → Terminal 2 Battery negative (–) → Terminal 1	Double Locking System is ON
Battery positive (+) → Terminal 1 Battery negative (–) → Terminal 2	Double Locking System is OFF

(3) Check that the doors cannot be unlocked by operating the control cable while the double locking system is ON.



If the result is not as specified, replace the door lock assy.

(d) Check the resistance of the double lock position switch.

Standard:

Tester Connection	Double Lock Position	SpecifiedCondition
5 – 6	SET	Below 1 Ω
	UNSET	10 kΩ or higher

If the result is not as specified, replace the door lock assy.

6. INSPECT FRONT DOOR W/MOTOR LOCK ASSY RH (W/ DOUBLE DOOR LOCK)

(a) Apply battery voltage to the door lock motor and check operation.

Standard:

MeasurementCondition	SpecifiedCondition
Battery positive (+) → Terminal 2 Battery negative (–) → Terminal 1	Lock
Battery positive (+) → Terminal 1 Battery negative (–) → Terminal 2	Unlock

If the result is not as specified, replace the door lock assy.

(b) Check the resistance of the position switch.

Standard:

Tester Connection	Door Lock Position	SpecifiedCondition
7 – 8	Lock	10 kΩ or higher
	Unlock	Below 1 Ω

If the result is not as specified, replace the door lock assy.

(c) Check operation of the double lock motor.

(1) Apply battery voltage to the door lock motor and set it to LOCK.

(2) Apply battery voltage to the double lock motor and check operation.

Standard:

MeasurementCondition	SpecifiedCondition
Battery positive (+) → Terminal 4 Battery negative (–) → Terminal 3	Double Locking System is ON
Battery positive (+) → Terminal 3 Battery negative (–) → Terminal 4	Double Locking System is OFF

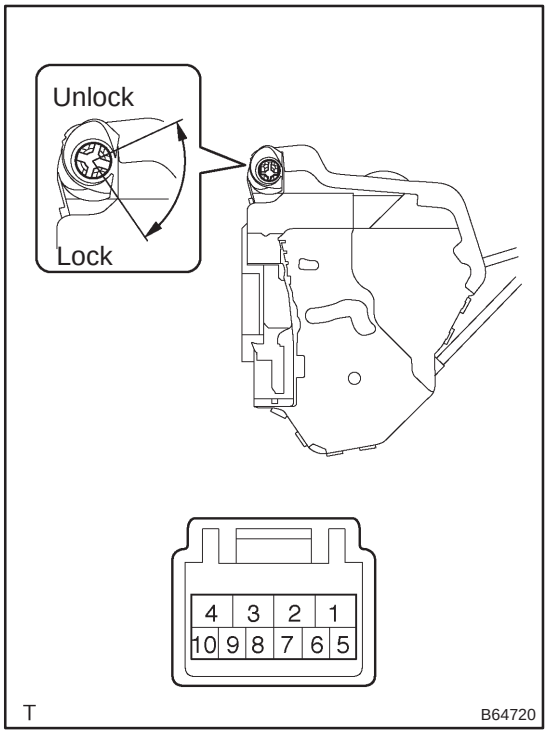
(3) Check that the doors cannot be unlocked by operating the control cable while the double locking system is ON.

If the result is not as specified, replace the door lock assy.

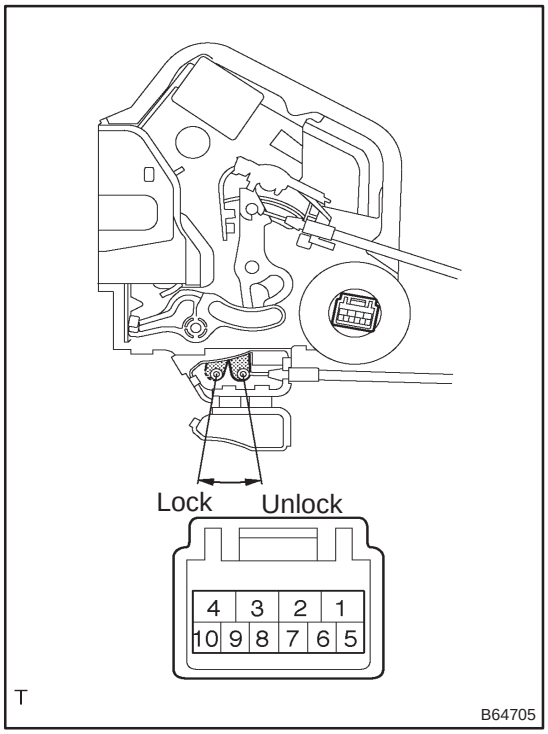
(d) Check the resistance of the double lock position switch.

Standard:

Tester Connection	Double Lock Position	SpecifiedCondition
9 – 10	SET	Below 1 Ω
	UNSET	10 kΩ or higher



If the result is not as specified, replace the door lock assy.



(e) Check the resistance of the door lock and unlock switch.

Standard:

Tester Connection	Door Lock Position	SpecifiedCondition
6 – 8	Lock	Below 1 Ω
6 – 8	OFF	10 kΩ or higher
5 – 8		
5 – 8	Unlock	Below 1 Ω

If the result is not as specified, replace the door lock assy.

7. INSPECT REAR DOOR W/MOTOR LOCK ASSY LH (W/ DOUBLE DOOR LOCK)

(a) Apply battery voltage to the door lock motor and check operation.

Standard:

MeasurementCondition	SpecifiedCondition
Battery positive (+) → Terminal 2 Battery negative (–) → Terminal 1	Lock
Battery positive (+) → Terminal 1 Battery negative (–) → Terminal 2	Unlock

If the result is not as specified, replace the door lock assy.

(b) Check the resistance of the position switch.

Standard:

Tester Connection	Door Lock Position	SpecifiedCondition
5 – 6	Lock	Below 1 Ω
	Unlock	10 kΩ or higher

If the result is not as specified, replace the door lock assy.

(c) Check operation of the double lock motor.

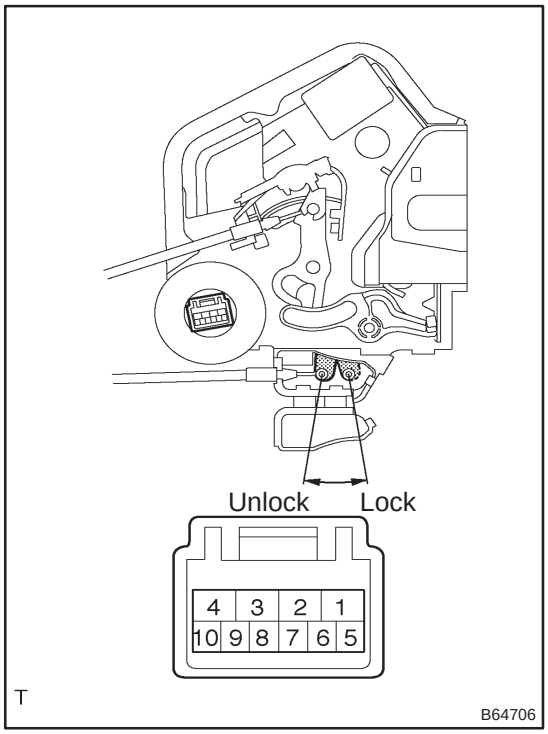
(1) Apply battery voltage to the door lock motor and set it to LOCK.

(2) Apply battery voltage to the double lock motor and check operation.

Standard:

MeasurementCondition	SpecifiedCondition
Battery positive (+) → Terminal 4 Battery negative (–) → Terminal 3	Double Locking System is ON
Battery positive (+) → Terminal 3 Battery negative (–) → Terminal 4	Double Locking System is OFF

(3) Check that the doors cannot be unlocked by operating the control cable while the double locking system is ON.



If the result is not as specified, replace the door lock assy.

(d) Check the resistance of the double lock position switch.

Standard:

Tester Connection	Double Lock Position	SpecifiedCondition
9 – 10	SET	Below 1 Ω
	UNSET	10 kΩ or higher

If the result is not as specified, replace the door lock assy.

8. INSPECT REAR DOOR W/MOTOR LOCK ASSY RH (W/ DOUBLE DOOR LOCK)

(a) Apply battery voltage to the door lock motor and check operation.

Standard:

MeasurementCondition	SpecifiedCondition
Battery positive (+) → Terminal 4 Battery negative (–) → Terminal 3	Lock
Battery positive (+) → Terminal 3 Battery negative (–) → Terminal 4	Unlock

If the result is not as specified, replace the door lock assy.

(b) Check the resistance of the position switch.

Standard:

Tester Connection	Door Lock Position	SpecifiedCondition
9 – 10	Lock	Below 1 Ω
	Unlock	10 kΩ or higher

If the result is not as specified, replace the door lock assy.

(c) Check operation of the double lock motor.

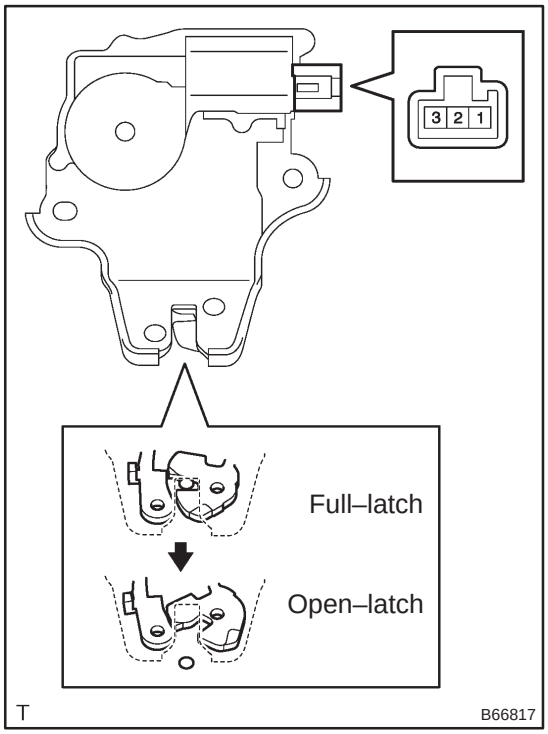
(1) Apply battery voltage to the door lock motor and set it to LOCK.

(2) Apply battery voltage to the double lock motor and check operation.

Standard:

MeasurementCondition	SpecifiedCondition
Battery positive (+) → Terminal 2 Battery negative (–) → Terminal 1	Double Locking System is ON
Battery positive (+) → Terminal 1 Battery negative (–) → Terminal 2	Double Locking System is OFF

(3) Check that the doors cannot be unlocked by operating the control cable while the double locking system is ON.



If the result is not as specified, replace the door lock assy.

(d) Check the resistance of the double lock position switch.

Standard:

Tester Connection	Double Lock Position	SpecifiedCondition
5 – 6	SET	Below 1 Ω
	UNSET	10 kΩ or higher

If the result is not as specified, replace the door lock assy.

9. INSPECT BACK DOOR LOCK ASSY (SEDAN MODELS)

(a) Check operation of the door lock.

(1) Using a screwdriver, push the latch in order to put the back door lock in the locked condition (full–latch position).

(2) Apply battery voltage to the door lock and check operation of the latch.

Standard:

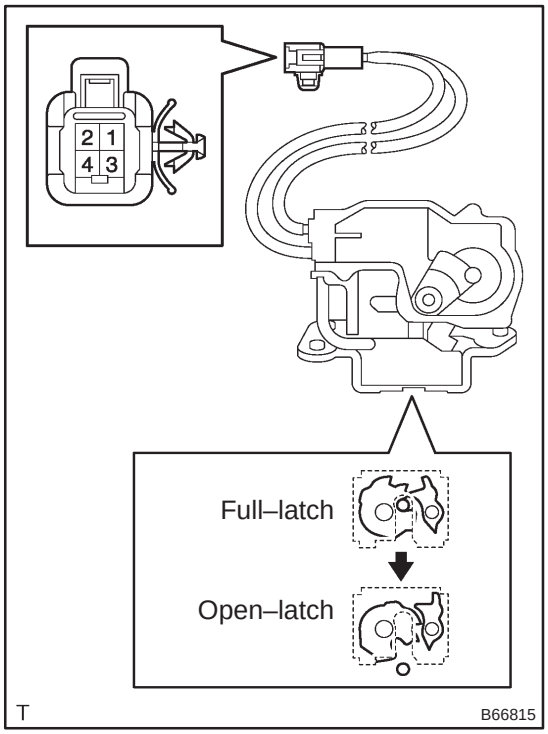
Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (–) → Terminal 3	Latch turns to open–latch position

If the result is not as specified, replace the door lock assy.

(b) Apply battery voltage to the door lock motor and check motor operation.

Standard:

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 3 Battery negative (–) → Terminal 1	Clockwise (Motor in normal rotation)
Battery positive (+) → Terminal 1 Battery negative (–) → Terminal 3	Counterclockwise (Motor in reverse rotation)



If the result is not as specified, replace the door lock assy.

(c) Check the resistance of the courtesy switch.

Standard:

Tester Connection	Door Lock Latch Position	Specified Condition
2 – 3	Open–latch position	Below 1 Ω
	Full–latch position	10 kΩ or higher

If the result is not as specified, replace the door lock assy.

10. INSPECT BACK DOOR LOCK ASSY (WAGON MODELS)

(a) Check operation of the door lock.

(1) Using a screwdriver, push the latch in order to put the back door lock in the locked condition (full–latch position).

(2) Apply battery voltage to the door lock and check operation of the latch.

Standard:

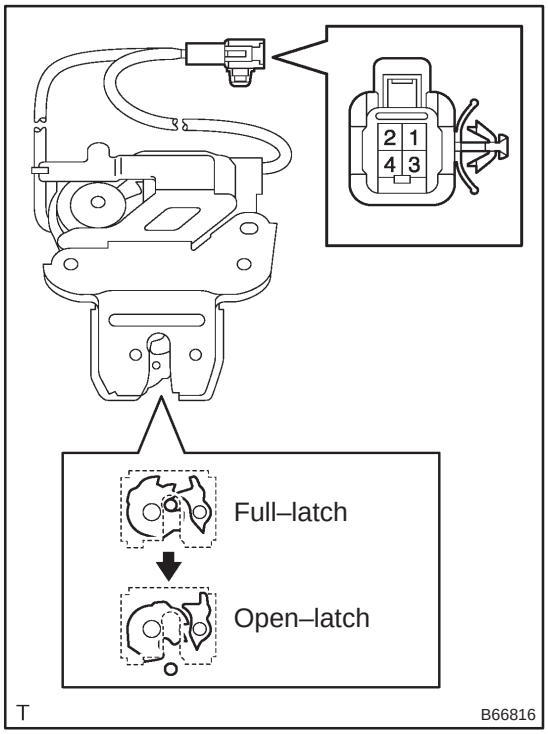
Measurement Condition	Specified Condition
Battery positive (+) → Terminal 4 Battery negative (–) → Terminal 3	Latch turns to open–latch position

If the result is not as specified, replace the door lock assy.

(b) Apply battery voltage to the door lock motor and check motor operation.

Standard:

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 4 Battery negative (–) → Terminal 3	Clockwise (Motor in normal rotation)
Battery positive (+) → Terminal 3 Battery negative (–) → Terminal 4	Counterclockwise (Motor in reverse rotation)



If the result is not as specified, replace the door lock assy.

(c) Check the resistance of the courtesy switch.

Standard:

Tester Connection	Door Lock Latch Position	Specified Condition
1 – 2	Open–latch position	Below 1 Ω
	Full–latch position	10 kΩ or higher

If the result is not as specified, replace the door lock assy.

11. INSPECT BACK DOOR LOCK ASSY (LIFTBACK MODELS)

(a) Check operation of the door lock.

(1) Using a screwdriver, push the latch in order to put the back door lock in the locked condition (full–latch position).

(2) Apply battery voltage to the door lock and check operation of the latch.

Standard:

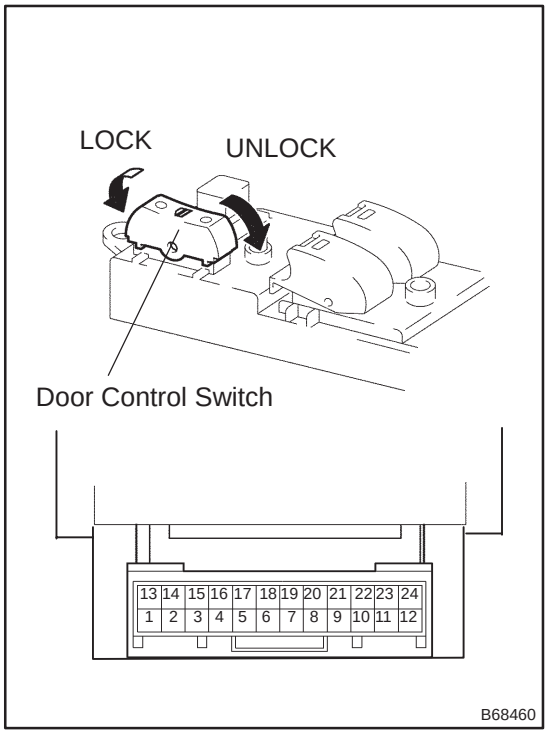
Measurement Condition	Specified Condition
Battery positive (+) → Terminal 4 Battery negative (–) → Terminal 3	Latch turns to open–latch position

If the result is not as specified, replace the door lock assy.

(b) Apply battery voltage to the door lock motor and check motor operation.

Standard:

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 4 Battery negative (–) → Terminal 3	Clockwise (Motor in normal rotation)
Battery positive (+) → Terminal 3 Battery negative (–) → Terminal 4	Counterclockwise (Motor in reverse rotation)



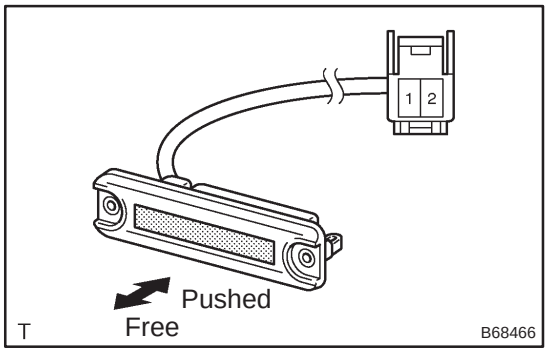
If the result is not as specified, replace the door lock assy.

(c) Check the resistance of the courtesy switch.

Standard:

Tester Connection	Door Lock Latch Position	Specified Condition
1 – 2	Open–latch position	Below 1 Ω
	Full–latch position	10 kΩ or higher

If the result is not as specified, replace the door lock assy.



12. INSPECT POWER WINDOW REGULATOR MASTER SWITCH ASSY

(a) Check the resistance of the door control switch.

Standard:

Tester Connection	Door Lock Position	Specified Condition
7 – 8	Lock	Below 1 Ω
7 – 8	OFF	10 kΩ or higher
5 – 7		
5 – 7	Unlock	Below 1 Ω

If the result is not as specified, replace the switch assy.

13. INSPECT BACK DOOR OPENER SWITCH ASSY

(a) Check the resistance of the switch.

Standard:

Tester Connection	Switch Position	Specified Condition
1 – 2	Free	10 kΩ or higher
	Pushed	Below 1 Ω

If the result is not as specified, replace the door lock assy.

WIRELESS DOOR LOCK CONTROL SYSTEM

730EU–02

PRECAUTION

1. NOTICES WHEN CHECKING

(a) The wireless door lock remote control function operates only when the following 3 conditions are met.
  (1) All the doors are closed.
  (2) No key is inserted in the ignition key cylinder.
  (3) The power door lock system operates normally.

HINT:

The door UNLOCK and luggage door (back door) UNLOCK functions operate even when a door is open.

(b) The wireless door lock remote control operational area differs depending on the situation.
  (1) The operational area differs depending on the operators and the ways the transmitter is held.
  (2) In certain areas, the remote control function will only operate partially for the operational area will be reduced due to the vehicle body shape and the influence of the surrounding environment.
  (3) Since the transmitter uses faint electric waves, strong electric waves or noise in the frequency used may reduce the operational area or the remote control may not function.
  (4) When the battery weakens, the operational area is reduced or the remote control may not function.

HINT:

If the door control transmitter has been left in a place that is exposed to the direct sunlight, such as on the instrument panel, it may cause the battery to weaken or cause other such problems.

730EV–02

ON–VEHICLE INSPECTION

1. CHECK WIRELESS DOOR LOCK CONTROL FUNCTIONS

HINT:

- The switch described in this text is a switch for transmitting signals (LOCK switch, UNLOCK switch and luggage door (back door) unlock switch) which is built in the door control transmitter.
- All the functions listed below must be checked in comparison with the remote control operational area.

(a) Put the vehicle under the conditions that allow the wireless control function to be operated (See PRECAUTION on page 73–14).

(b) Check the basic function.

(1) Check whether the LED of the transmitter lights up 3 times when each switch is pressed 3 times.

HINT:

If the LED does not light up when the switch has been pressed 3 times or more, it may have a dead battery.

(2) Check that all the doors including the luggage door (back door) lock when the LOCK switch is pressed (However, this will not happen when any door is open).

(3) w/ Double locking system:
Check that the double locking system is set when the LOCK switch is pressed within 5 seconds after the above step (However, the double locking system is not applicable to the luggage door (back door)).

CAUTION:

Never activate the double locking system when there are people in the vehicle, because all the doors cannot be opened from inside the vehicle with the system on. If you lock the doors by accident, push UNLOCK switch of the door control transmitter.

(4) Check that all the doors including the luggage door (back door) unlock when the UNLOCK switch is pressed. Also, check that the double locking system is canceled at the same time.

(5) Check that the luggage door (back door) unlocks when the luggage door (back door) unlock switch is pressed.

HINT:

The UNLOCK switch and luggage door (back door) unlock switch can unlock the doors even when any door is open.

(c) Check the chattering prevention function.

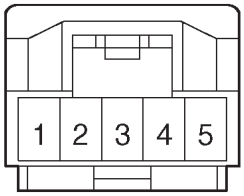
(1) Check that the corresponding operation occurs only once, and not repeated continuously while the switch is held down. However, when the switch is operated repeatedly at 1 second intervals, check that the corresponding operation is carried out.

(d) Check the automatic locking function.

(1) Check that all the doors including the luggage door (back door) lock automatically as long as none of them have been opened or locked within approx. 30 seconds after they are unlocked by pressing the switch.

(2) Check that the automatic locking function does not operate when any door including the luggage door (back door) has been opened or all of them have been locked within approx. 30 seconds after they are unlocked by pressing the switch.

(e) Check the switch operation fail–safe function.



(1) Check that the doors can not be locked by the switch while the key is in the ignition key cylinder. However, this does not apply when the system is in the recognition code registration mode.

(f) Check the repeat function.

(1) Check that all the doors attempt to automatically lock once again 1 second after the LOCK switch has been pressed while the movement of the driver side door control knob, which is in the unlocked state, is being restricted.

(g) Check the hazard warning lamps flashing function (answer–back).
  (1) When the LOCK switch is pressed, check that the hazard warning lamps flash once, simultaneously with the locking of all the doors.
  (2) When the UNLOCK switch is pressed once, check that the hazard warning lamps flash twice simultaneously with the unlocking of all the doors.
  (3) When the luggage door (back door) unlock switch is pressed once, check that the hazard warning lamps flash twice simultaneously with the unlocking of the luggage door (back door).

Wire Harness Side

Door Control Receiver

B59092

2. CHECK DOOR CONTROL RECEIVER

(a) Disconnect the receiver connector.

(b) Check the voltage and resistance between the terminals of the wire harness side connector and the body ground.

Standard:

Tester Connection	Condition	Specified Condition
5 (+B) – Body ground	Constant	10 to 14 V
1 (GROUND) – Body ground	Constant	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

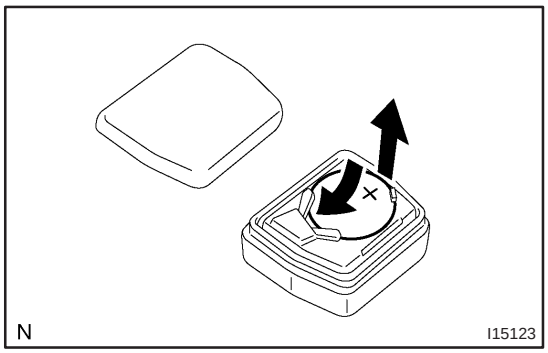
(c) Reconnect the connector and check the voltage between the terminal and body ground.

Standard:

Tester Connection	Condition	Specified Condition
2 (RDA) – Body ground	No key in ignition key cylinder, all doors closed and each transmitter switch OFF → ON	Below 1 V → Approx. 6 to 7 V → Below 1 V

If the result is not as specified, the receiver may have a malfunction.

TRANSMITTER BATTERY



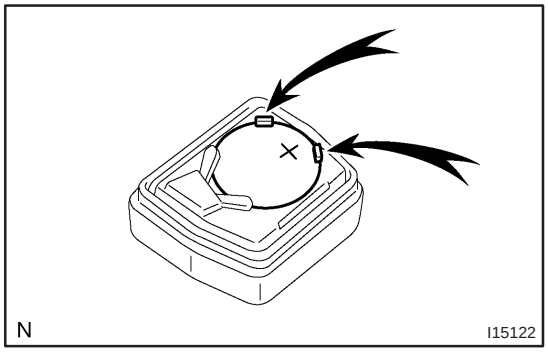
730EW–02

REPLACEMENT

1. REMOVE TRANSMITTER SUB–ASSY MODULE SET DOOR CONTROL (See page 73–18)

NOTICE:

Special caution should be taken for handling each component as they are precision electronic components.



2. REMOVE TRANSMITTER BATTERY

(a) Remove the cover.

(b) Remove the transmitter battery (lithium battery).

NOTICE:

- **Do not push the terminals with your finger.**
- **Prying up the battery (lithium battery) to forcibly remove it will cause deformation of the terminals.**
- **Do not touch the battery with wet hands. Water may cause unexpected rust.**
- **Do not touch or move any components inside the transmitter as it may interfere with proper operation.**

3. INSTALL TRANSMITTER BATTERY

(a) Install a new battery (lithium battery) with the positive (+) side up, as shown in the illustration.

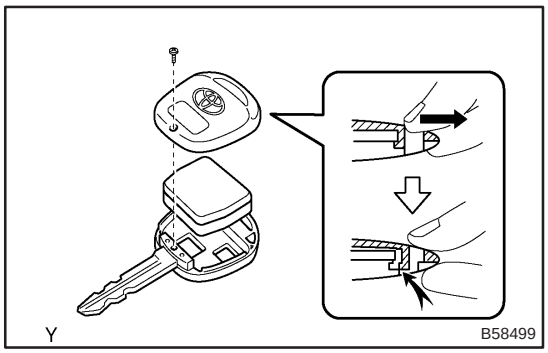
NOTICE:

- **Be sure that the positive side and the negative side of the transmitter battery are matched–up correctly.**
- **Be careful not to bend the electrode of the transmitter battery insertion.**
- **Be careful that dust or oil does not adhere to the transmitter case.**

(b) Install the cover.

NOTICE:

If the screws are loose, it may cause faulty contact between the battery (lithium battery) and the terminals.



TRANSMITTER SUB–ASSY MODULE SET DOOR CONTROL

730EX–03

REPLACEMENT

HINT:

The installation is in the reverse order of the removal.

1. REMOVE TRANSMITTER SUB–ASSY MODULE SET DOOR CONTROL

NOTICE:

Special caution should be taken when handling each component as they are precise electronic components.

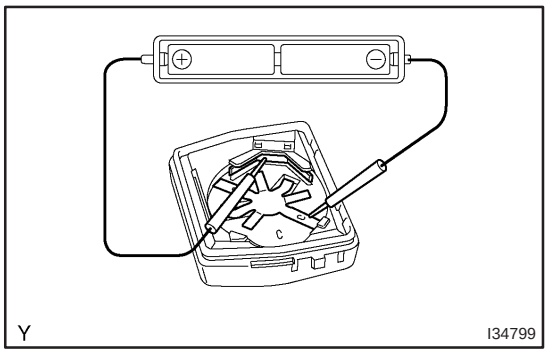
(a) Using a screwdriver, remove the screw.

(b) Push the cover with your finger as shown in the illustration so a gap appears. Then, pry out the cover using that gap.

NOTICE:

Do not forcibly pry up the cover.

730EZ–03



INSPECTION

1. INSPECT TRANSMITTER SUB–ASSY MODULE SET DOOR CONTROL

(a) Inspect operation of the transmitter.

(1) Remove the battery (lithium battery) from the transmitter (See page 73–17).

(2) Install a new or normal battery (lithium battery).

HINT:
When a new or normal battery is not available, connect 2 new 1.5 V batteries in a series, connect the battery positive (+) to the battery receptacle side terminal and battery negative (–) to the bottom terminal, then apply 3 V of voltage to the transmitter.

(3) In a location that is approx. 1 m (3.28 ft) away from the driver side outside door handle in the right direction, point the key plate of the transmitter at the vehicle and check operation of the transmitter by pressing the transmission switch on the transmitter body.

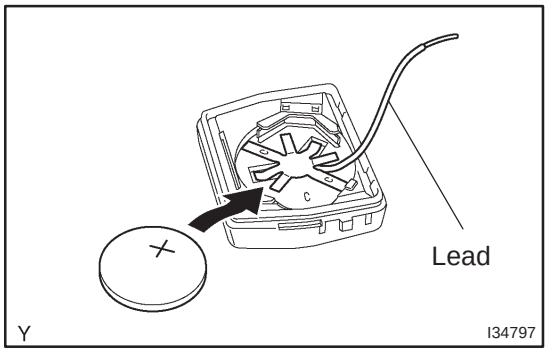
Standard:

The door lock can be operated via the remote control.

The LED lights up more than once.

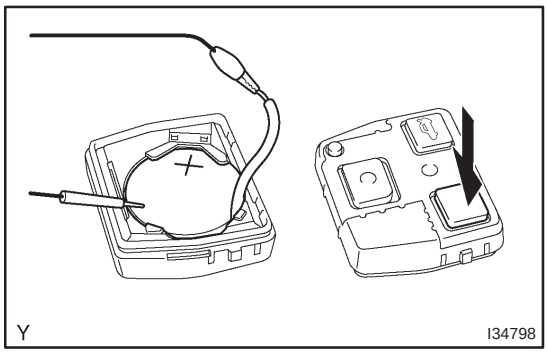
HINT:

- The minimum operational distance differs, depending on the operator, the way the transmitter is held, and the location.
- Since the transmitter uses faint electric waves, the operational distance might be shortened if noise or strong electric wave occurs in the area where the frequency is used.



(4) Install the battery (lithium battery).

(b) Inspect the battery capacity.



HINT:

- The capacity of the battery can be determined only when the battery is installed in the transmitter. For a lithium battery used in the transmitter, a voltage of more than 2.5 V is shown on the tester until the energy is completely consumed, while no battery is installed in the transmitter. Therefore, it is necessary to measure the voltage while the battery is installed in the transmitter (a resistance of 1.2 kΩ is applied to the battery) when checking the amount of energy left in the battery.
- If the transmitter is faulty, the amount of energy left in the battery might not be checked correctly.

(1) Remove the battery (lithium battery) from the transmitter (See page 73–17).

(2) Connect the lead to the negative (–) terminal of the transmitter and install the battery.

(3) Connect the tester positive (+) probe to the (+) battery (lithium battery) and the tester negative (–) probe to the lead respectively.
(4) Press one of the transmission switches on the transmitter for approx. 1 second.
(5) Press the transmission switch on the transmitter again to check the voltage.

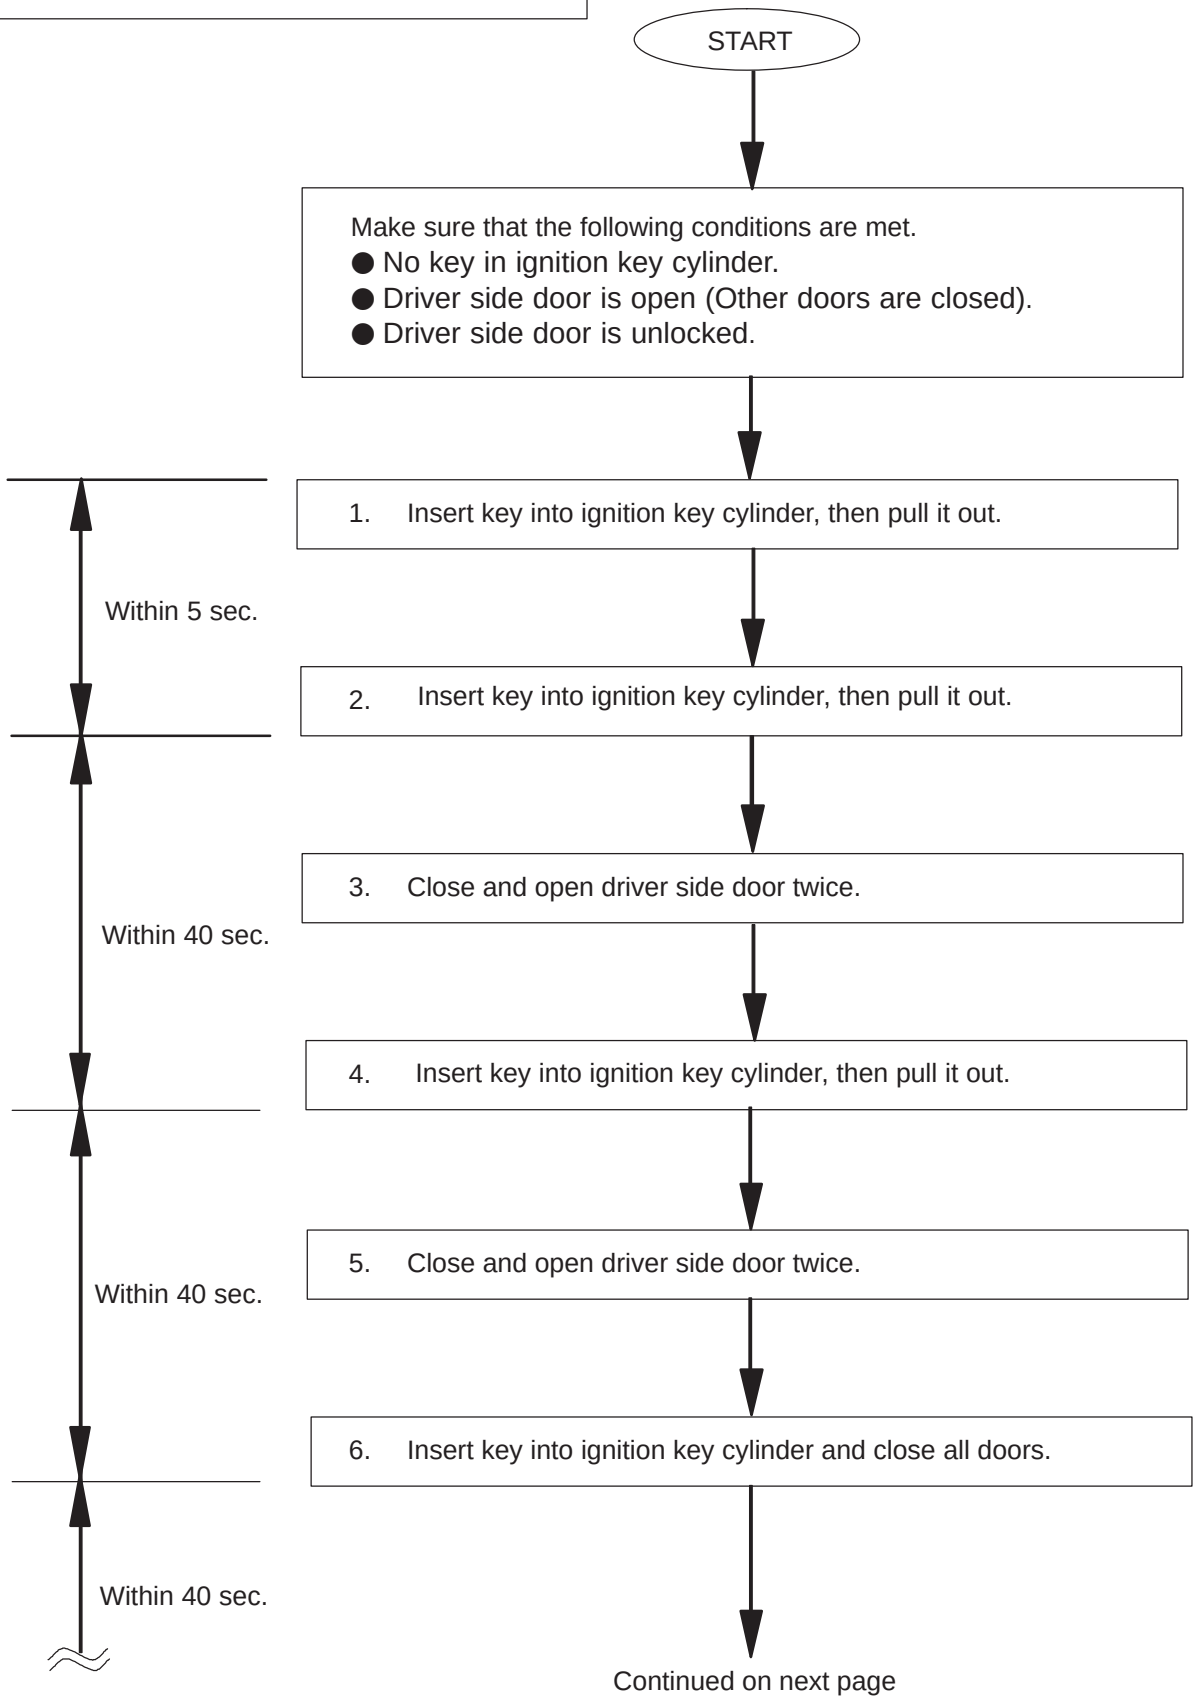
Standard: 2.2 V or higher

HINT:

- When the temperature of the battery is low, the inspection can not be made correctly.
  When the outcome of the test is less than 2.2 V, conduct the test again after leaving the battery in a place with a temperature of 18°C (64°F) for more than 30 minutes.
- The automatic power–off function causes the voltage of the battery to be 2.5 V or more (a voltage with no resistance applied to the battery) when 0.8 seconds have passed after the switch is pressed. Therefore, make sure to read the voltage just after the switch is pressed.
- Because high voltage might be shown once or twice after the battery returns to the specified temperature, the inspection should be made with the voltage shown after the switch is pressed at least 3 times.

(6) Disconnect the lead.
(7) Set the battery (lithium battery) in the transmitter.

730EY–02



REGISTRATION

1. REGISTER RECOGNITION CODE

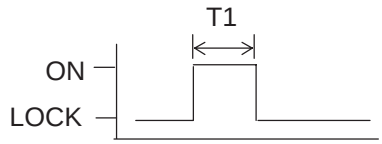
HINT:

- Register the recognition code when replacing the door control transmitter or the door control receiverr.
- The add mode is used to register new recognition codes while still retaining codes already registered. This mode is used when a new transmitter is added. If the number of registered codes exceeds 4, the previously registered codes will be erased in order, starting from the first registered code.
- The rewrite mode is used to erase all the previously registered recognition codes in order to register new recognition codes. This mode is used when the transmitter or the door control receiver is exchanged for a new one.
- The confirmation mode is used to confirm how many recognition codes have already been registered before an additional registration of a recognition codes.
- The all clear mode is used to erase all the registered codes and disables the wireless door lock function. This mode is used when the transmitter is lost.
- All the following registration procedures must be performed in order continuously.

Flow Chart of Recognition Code Registration

Continued from previous page

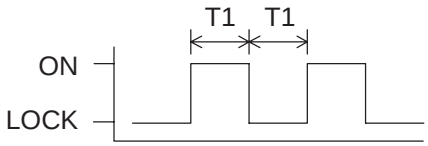
Mode Selection:



7. Turn ignition switch from LOCK to ON and back to LOCK at approximately 1 second intervals according to the number of times shown below.

Number of ON–LOCK operations of ignition switch:

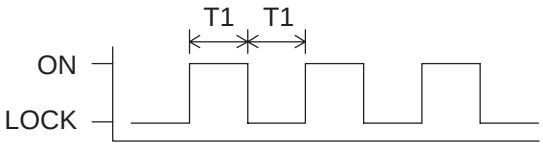
Add Mode



ON–LOCK operation: 1 time

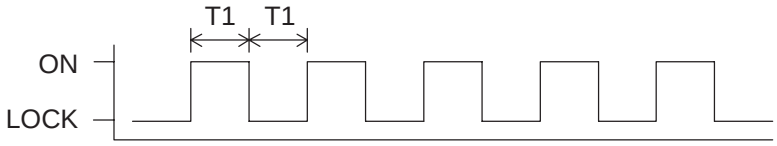
T1: Approx. 1 sec.

Rewrite Mode



ON–LOCK operation: 2 times

Within 40 sec.



Confirmation Mode

ON–LOCK operation: 3 times

All Clear Mode

ON–LOCK operation: 5 times

If the number of the ON–LOCK operations of the ignition switch is 0, 4 or 6 or more, there will be no response (power door lock and unlock operation) to inform which mode has been selected.

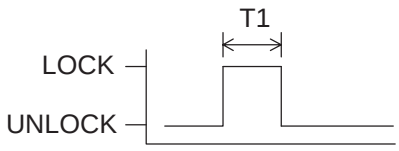
8. Remove key from ignition key cylinder.

Within 3 sec.

Continued on next page

Continued from previous page

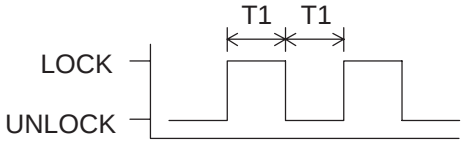
Within 3 sec.



Response to selected mode (Power door lock operation):

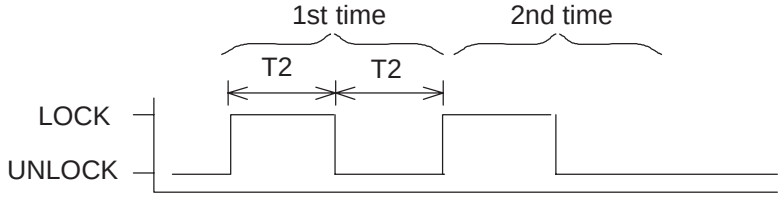
Integration relay automatically performs power door LOCK–UNLOCK operation to inform which mode has been selected.

Add Mode



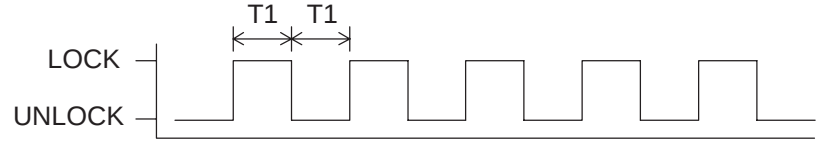
LOCK–UNLOCK operation: 1 time

T1: Approx. 1 sec.
T2: Approx. 2 sec.



Rewrite Mode

LOCK–UNLOCK operation: 2 times



Confirmation Mode

LOCK–UNLOCK operation: The number of registered codes (1 – 5 times)

All Clear Mode

LOCK–UNLOCK operation: 5 times

HINT:

● In the confirmation mode, when LOCK–UNLOCK operation is performed twice, the number of registered recognition codes is 2.

● In the confirmation mode, when 0 codes are registered, LOCK–UNLOCK operation is automatically performed 5 times.

Within 40 sec.

Add Mode or Rewrite Mode

Confirmation Mode and All Clear Mode

Continued on next page

Registration procedures are completed.
