VENTILATED SEAT SYSTEM

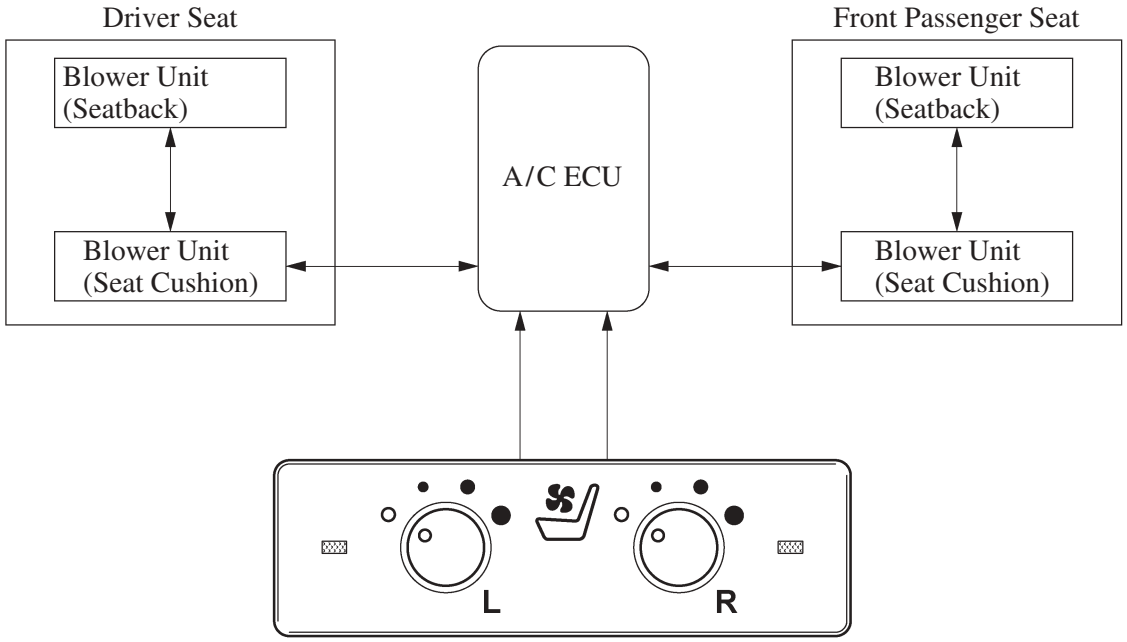

■ DESCRIPTION

The ventilated seat system has a ventilation function, in addition to the blower units in the conventional seat ventilation system. This creates a very comfortable seat.

- For the ventilation function, only air in the cabin is used and hot or cold air is not blown.
- The A/C ECU controls the ventilation function.
- The ventilated seat system is used as standard equipment on the driver and front passenger seats of G grade models with 2GR-FE engines for Taiwan, 2AZ-FE engine models for Thailand and 2GR-FE engine models for Thailand.

■ SYSTEM DIAGRAM

The system consists of two fan units, a switch for ventilated seats and A/C ECU.
