EXTERIOR

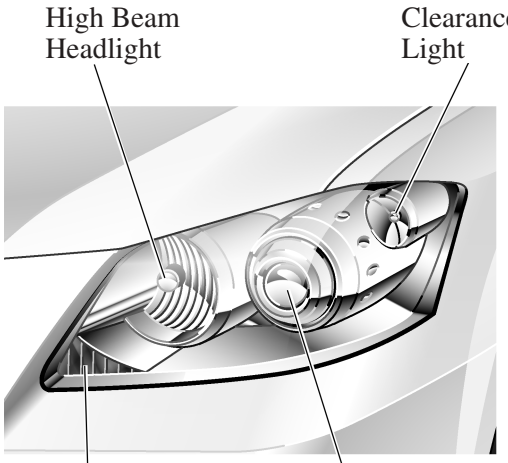

Front View

- Except Australian and G.C.C. Countries 2AZ-FE Engine Models -

- The vehicle front design is characterized by the unique U-shaped lines. The contrast created by the combination of concave and convex shapes gives the surface a sense of solidity and sharpness.
- Through the combination of clear outer lenses and the extensions, the headlights have given visual impact. Either halogen bulbs or discharge bulbs are used depending on the vehicle grade. Models with intelligent AFS are also available.

- Australian and G.C.C. Countries 2AZ-FE Engine Models -

- Dynamic modernism has been produced by providing a solid-looking hood shape from the front grille to the center of the hood and framing the hood with the left and right fenders.
- The front design, with minimum surface boundaries between the hood, grille, top mark and bumper, stretches out from the impressively projecting top mark.
- The headlights have a long, narrow design, which incorporates two accent lines, producing a crystal-like texture and boldness.
