EQUIPMENT

Navigation with AV System

- Through the use of the GPS (Global Positioning System) and the map data in a DVD (Digital Versatile Disc), the navigation with AV (Audio Visual) system analyzes the position of the vehicle and indicates that position on the map that is displayed on the screen. Additionally, it provides voice instructions to guide the driver along the route to reach the destination that has been selected.
- The languages available for the voice navigation system vary depending on destinations.
  - China and Taiwan: Chinese
  - Thailand: English and Thai
  - Australia: English
- The display, which consists of a wide 7.0-inch LCD (Liquid Crystal Display) screen with a pressure sensitive touch panel, is easier to use.
- Only for Chinese models, the navigation system employs a voice recognition function with a voice recognition microphone installed in the overhead console. The voice recognition function can be turned on and off using the switch on the steering wheel.
