Bluetooth® Hands-free System

- Bluetooth® is a high-speed wireless data communication system that uses the 2.4 GHz frequency band prescribed by the Bluetooth SIG (Special Interest Group), with a communication speed of 1 Mbps. By simply bringing a cellular phone that has been pre-registered on the navigation with AV system into the vehicle, the user can talk hands-free. Thus, it is no longer necessary to connect the telephone to a hands-free connection device as in the past.
- A Bluetooth® hands-free system, which enables the user to make and receive calls and talk hands-free by operating the switches on the steering pad or the screen display, is provided on the navigation with AV system.
- A Bluetooth® hands-free system consists of an audio head unit, a microphone in the overhead console, and the switches on the steering pad.
