DOOR LOCK CONTROL SYSTEM

■ DESCRIPTION

The door lock control system has the following functions:

Function	Outline
Manual unlock prohibition function	Performing the door lock operation with a transmitter (wireless remote) or a key will prohibit the unlock operation by the door lock control switch (door mounted interior lock switch).
One-motion open	When the driver's door is locked, this function enables the driver's door to be unlocked by merely pulling the inside handle lever of the driver's door.
Key-linked lock and unlock function	This function, which is linked with the door key cylinder, can lock or unlock all the doors when a lock or unlock operation is effected using the mechanical key.
Key confine prevention function	When the key is in the interior detection area with the driver's door open and if you perform the door lock operation, all the doors will be unlocked.
