■Front Brake

- The diameter of the front rotors is 296 mm (11.65 in.). They are the ventilated type that excels in heat dissipation to ensure reliability.
- The shape of the front dust cover has been optimized to efficiently direct cool air to the ventilated disc, thus ensuring excellent cooling performance.

■Rear Brake

- The diameter of the rear rotors is 281 mm (11.06 in.). It has a built-in duo servo type parking brake.
- For weight reduction, a caliper cylinder made of aluminum is used for the rear caliper of the new Camry.
