REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

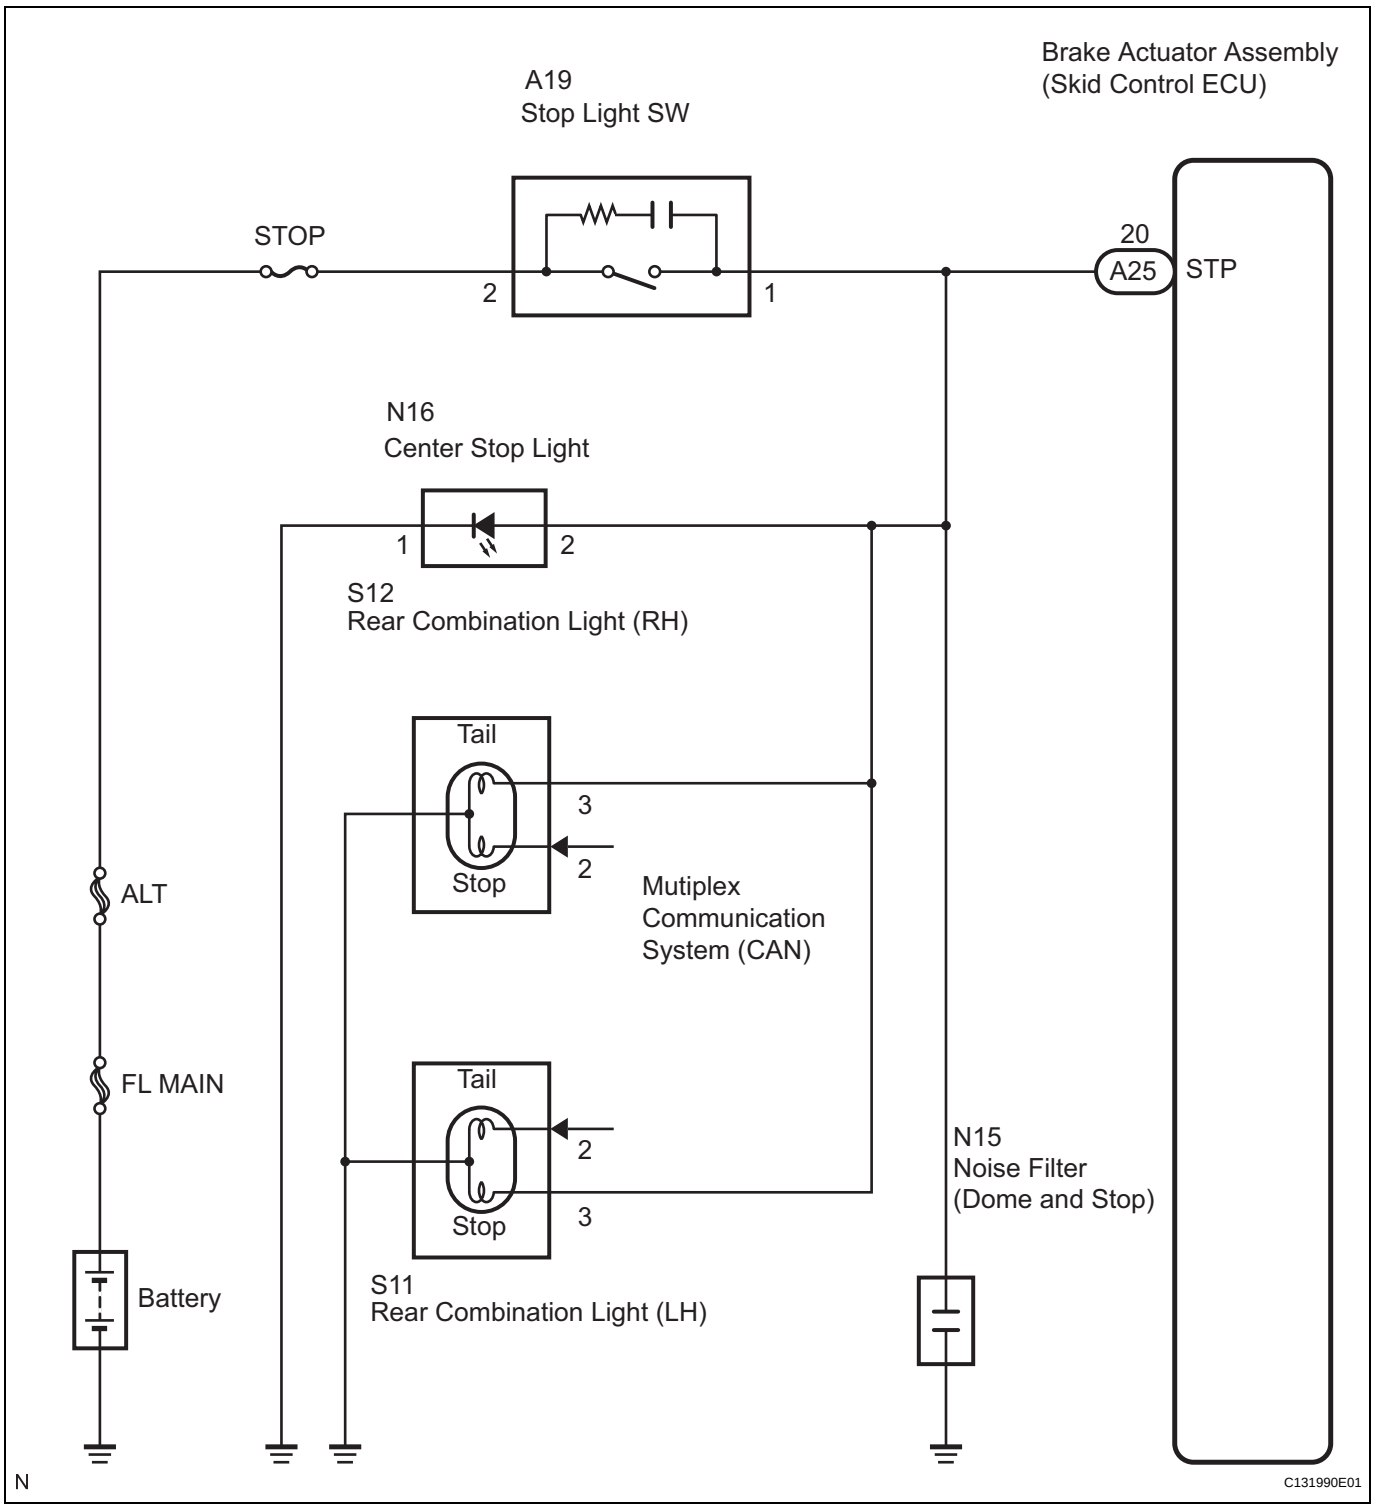
DTC	C1249/49	Open in Stop Light Switch Circuit

DESCRIPTION

This circuit recognizes brake operation by sending a stop light signal to the skid control ECU.
The skid control ECU has an open detection circuit, which outputs this DTC when detecting an open in the stop light signal input line (STP terminal) or the ground line of the stop light circuit with the stop light switch off (brake pedal not depressed).

DTC No.	DTC Detecting Condition	Trouble Area
C1249/49	Stop light switch circuit is open, and stop light switch voltage is 40% or more and less than 67% of the battery voltage.	• Stop light switch • Stop light switch circuit • Brake actuator assembly (Skid Control ECU)

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1 CHECK STOP LIGHT SWITCH OPERATION (STOP LIGHT SWITCH CIRCUIT)

(a) Check that the stop lights come on when the brake pedal is depressed and goes off when the brake pedal is released.

OK

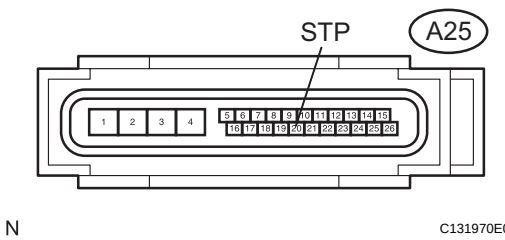
Pedal Condition	Illumination Condition
Brake pedal depressed	ON
Brake pedal released	OFF

NG → **Go to step 5**

OK

2 INSPECT SKID CONTROL ECU CONNECTOR (STP TERMINAL)

Skid Control ECU (Harness Side Connector Front View):



(a) Disconnect the skid control ECU connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

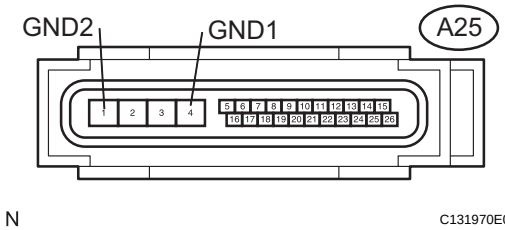
Tester Connection	Switch Condition	Specified Condition
A25-20 (STP) - Body ground	Brake pedal depressed	8 to 14 V
A25-20 (STP) - Body ground	Brake pedal released	Below 4.0 V

NG → **Go to step 7**

OK

3 INSPECT SKID CONTROL ECU CONNECTOR (GND TERMINAL CONTINUITY)

Skid Control ECU (Harness Side Connector Front View):



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
A25-4 (GND1) - Body ground	Below 1 Ω
A25-1 (GND2) - Body ground	Below 1 Ω

(b) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

4 RECONFIRM DTC

(a) Clear the DTC (See page BC-21).
(b) Start the engine.

(c) Depress the brake pedal several times to test the stop light circuit.
(d) Check if the same DTC is recorded (See page BC-21).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTC is not output	A
DTC is output (When troubleshooting in accordance with the DTC CHART)	B
DTC is output (When troubleshooting in accordance with the PROBLEM SYMPTOMS TABLE)	C

B → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

C → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page BC-16)**

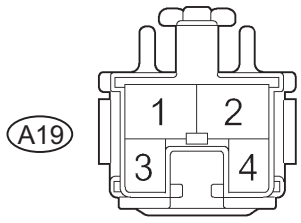
BC

A

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION) (See page BC-19)

5 INSPECT STOP LIGHT SWITCH ASSEMBLY (POWER SOURCE TERMINAL VOLTAGE)

Stop Light Switch (Wire Harness Side) Connector Front View:



I042363E17

(a) Disconnect the stop light switch connector.
(b) Measure the voltage according to the value(s) in the table below.

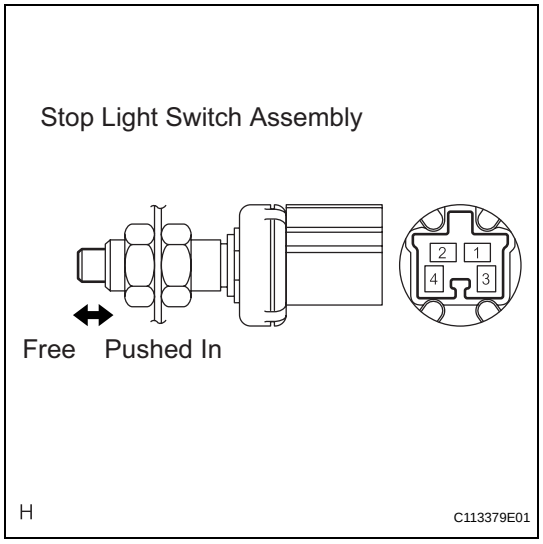
Standard voltage

Tester Connection	Condition	Specified Condition
A19-2 - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER SOURCE CIRCUIT)**

OK

6 INSPECT STOP LIGHT SWITCH ASSEMBLY



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

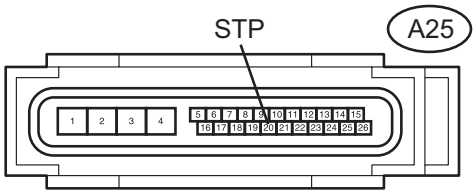
Tester Connection	Condition	Specified Condition
Switch pin free	1 - 2	Below 1 Ω
Switch pin pushed in	1 - 2	10 kΩ or higher

NG → **REPLACE STOP LIGHT SWITCH ASSEMBLY (See page BR-71)**

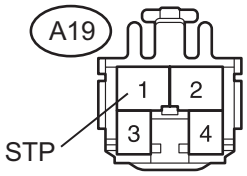
OK

7 CHECK HARNESS AND CONNECTOR (STOP LIGHT SWITCH TO SKID CONTROL ECU)

Skid Control ECU (Wire Harness Side) Connector Front View:



Stop Light Switch (Wire Harness Side) Connector Front View:



(a) Disconnect the stop light switch connector and skid control ECU connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
A25-20 (STP) - A19-1 (STP)	Below 1 Ω

(c) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (STOP LIGHT SWITCH TO SKID CONTROL ECU)**

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR (STOP LIGHT CIRCUIT)

BC

DTC	C1300/62	Skid Control ECU Malfunction

DESCRIPTION

The skid control ECU outputs this DTC, if malfunctions are found in the circuit inside the computer by self diagnosis.

DTC No.	DTC Detecting Condition	Trouble Area
C1300/62	Internal failure of the skid control ECU control unit	Brake actuator assembly (skid control ECU)

INSPECTION PROCEDURE

1	REPLACE BRAKE ACTUATOR ASSEMBLY

(a) Replace the brake actuator assembly (skid control ECU) (See page BC-432).
HINT:
This DTC is output when the skid control ECU detects a malfunction in the internal circuit.
(b) Clear the DTC (See page BC-21).

NEXT

END

DTC	U0073/94	Control Module Communication Bus OFF

DESCRIPTION

- The skid control ECU receives the signal sent from the ECM via the CAN communication system.
- When DTCs indicating a CAN communication system malfunction are output, repair the CAN communication system before repairing each corresponding sensor.

DTC No.	DTC Detecting Condition	Trouble Area
U0073/94	When any of the following is detected: 1. The skid control ECU cannot send a signal (30 cycles). 2. The condition that bus OFF state occurs for 300 msec.	• Wire harness (CANL, CANH circuit) • Brake actuator assembly (Skid control ECU)

INSPECTION PROCEDURE

Proceed to CAN communication system troubleshooting (See page CA-8).
HINT:
When DTCs indicating a CAN communication system malfunction are output, repair the CAN communication system before repairing each corresponding sensor.

ABS Warning Light Remains ON

DESCRIPTION

The skid control ECU sends the indicator signals to the combination meter assembly via the CAN communication system.

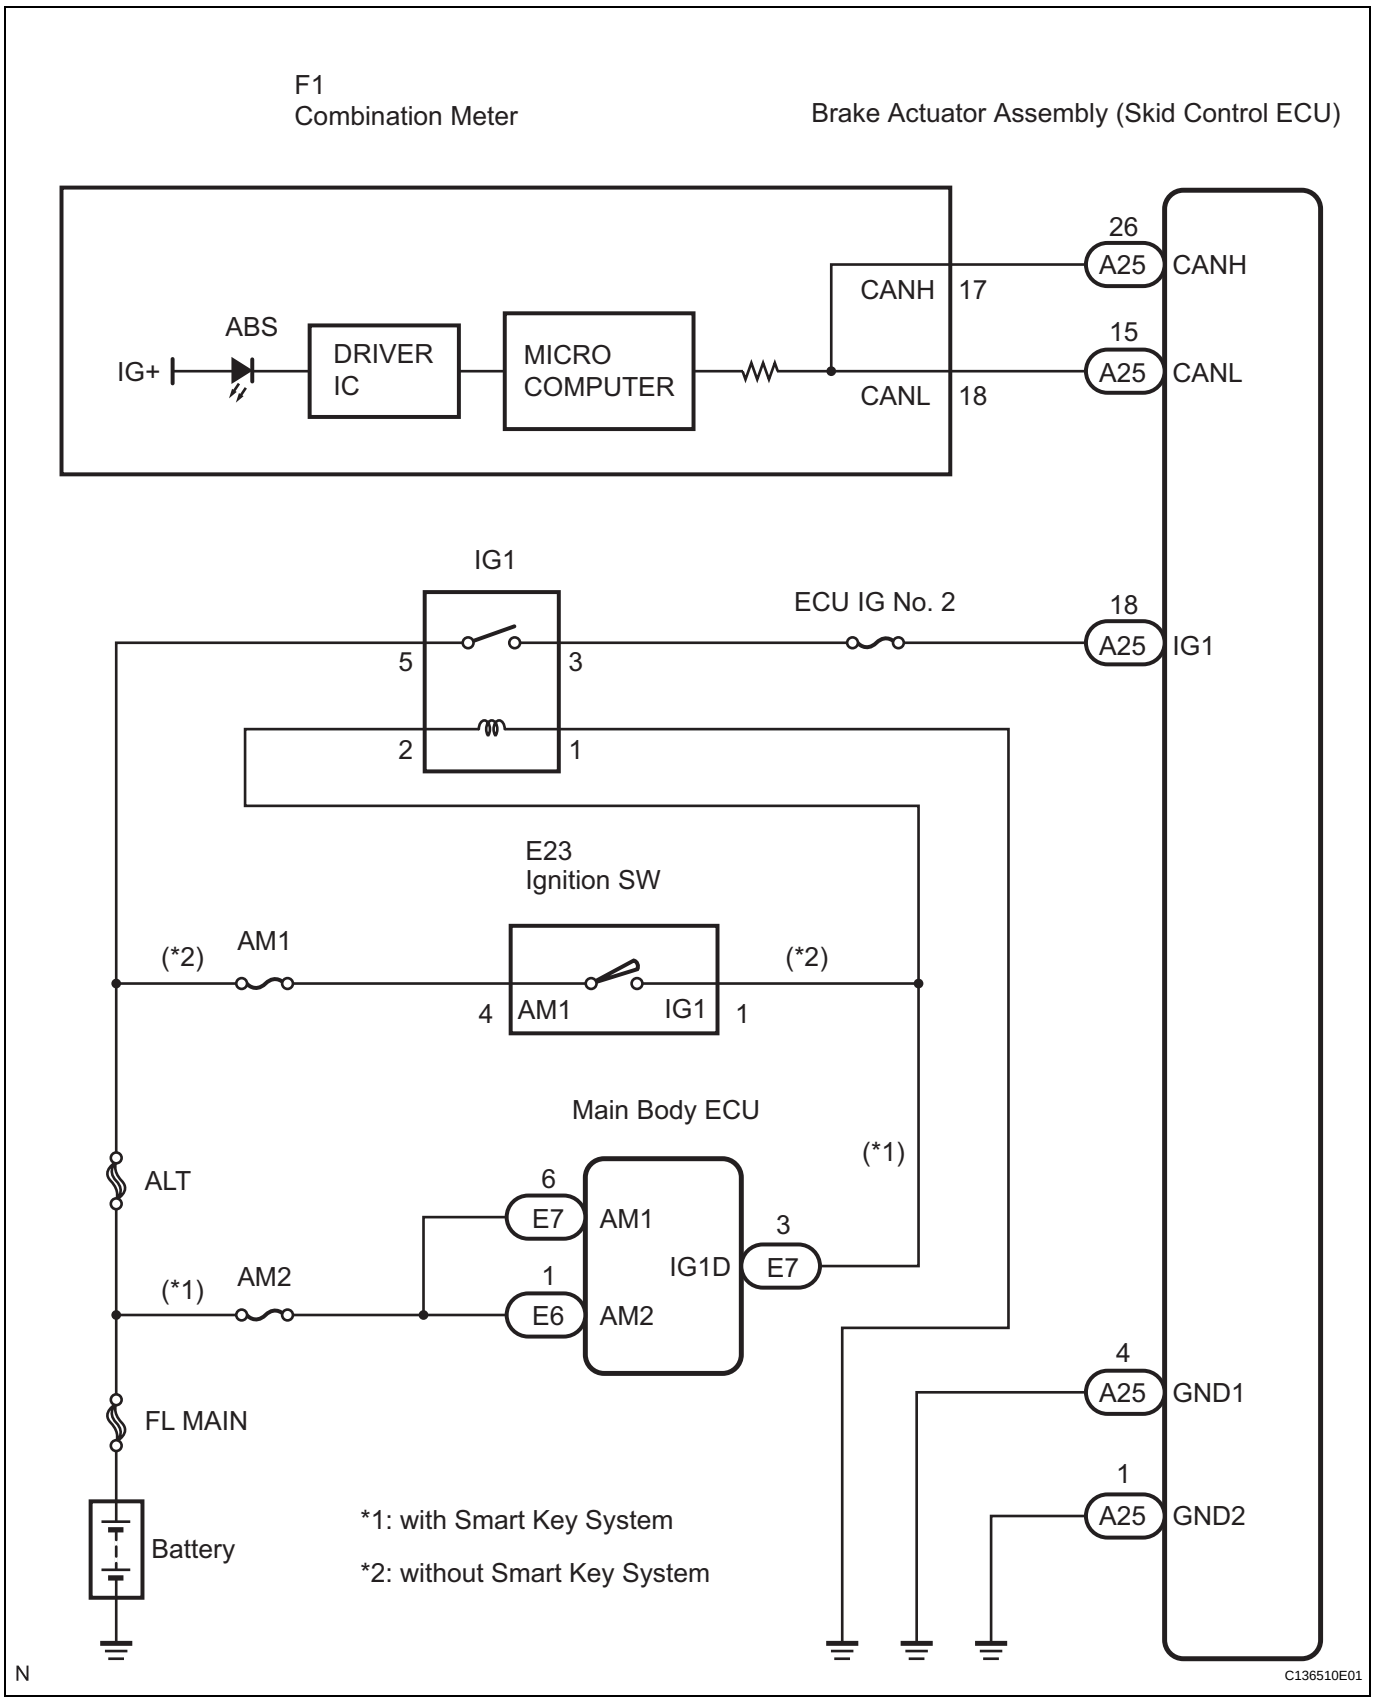
If any of the following is detected, the ABS warning light remains on.

- The skid control ECU connectors are disconnected from the skid control ECU.
- There is a malfunction in the skid control ECU internal circuit.
- There is an open in the wire harness between the combination meter and the skid control ECU.
- The ABS and/or EBD is defective.

HINT:

The intelligent tester may not be used when the skid control ECU is abnormal.

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

HINT:

Check the condition of each related circuit before troubleshooting (See page IN-40).

1	INSPECT CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication system DTC is output (See page BC-21).

Result

Condition	Proceed to
CAN communication system DTC is not output	A
CAN communication system DTC is output	B

B → **INSPECT CAN COMMUNICATION SYSTEM (See page CA-8)**

A

2	CHECK SKID CONTROL ECU CONNECTOR SECURELY CONNECTED

BC

(a) Check if the skid control ECU connector is connected.
OK:
The connector is securely connected.

NG → **CONNECT CONNECTOR TO ECU CORRECTLY**

OK

3	CHECK BATTERY

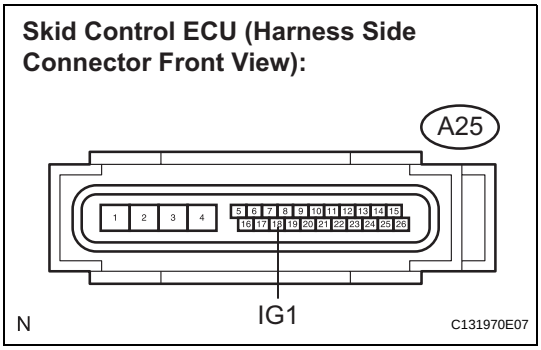
(a) Check the battery voltage.
Standard voltage:
11 to 14 V

NG → **INSPECT CHARGING SYSTEM**

OK

4	INSPECT SKID CONTROL ECU CONNECTOR (IG1 TERMINAL VOLTAGE)

Skid Control ECU (Harness Side Connector Front View):



(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.
Standard voltage

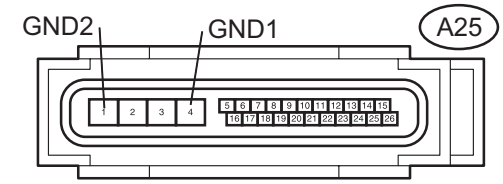
Tester Connection	Condition	Specified Condition
A25-18 (IG1) - Body ground	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (IG1 CIRCUIT)**

OK

5 INSPECT SKID CONTROL ECU CONNECTOR (GND TERMINAL CONTINUITY)

Skid Control ECU (Harness Side Connector Front View):



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
A25-4 (GND1) - Body ground	Below 1 Ω
A25-1 (GND2) - Body ground	Below 1 Ω

(b) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

6 INSPECT COMBINATION METER ASSEMBLY

(a) Connect the intelligent tester to the DLC3.
(b) Select the "ACTIVE TEST" on the tester (See page BC-25).

ACTIVE TEST: ABS

Item	Vehicle Condition / Test Details	Diagnostic Note
ABS WRN LIGHT	Turn ABS warning light ON / OFF	Observe combination meter

(c) Check the ABS warning light operation.

OK:

The ABS warning light turns on or off in accordance with the intelligent tester.

Result

Condition	Proceed to
OK	A
OK (When troubleshooting in accordance with the PROBLEM SYMPTOMS TABLE)	B
NG	C

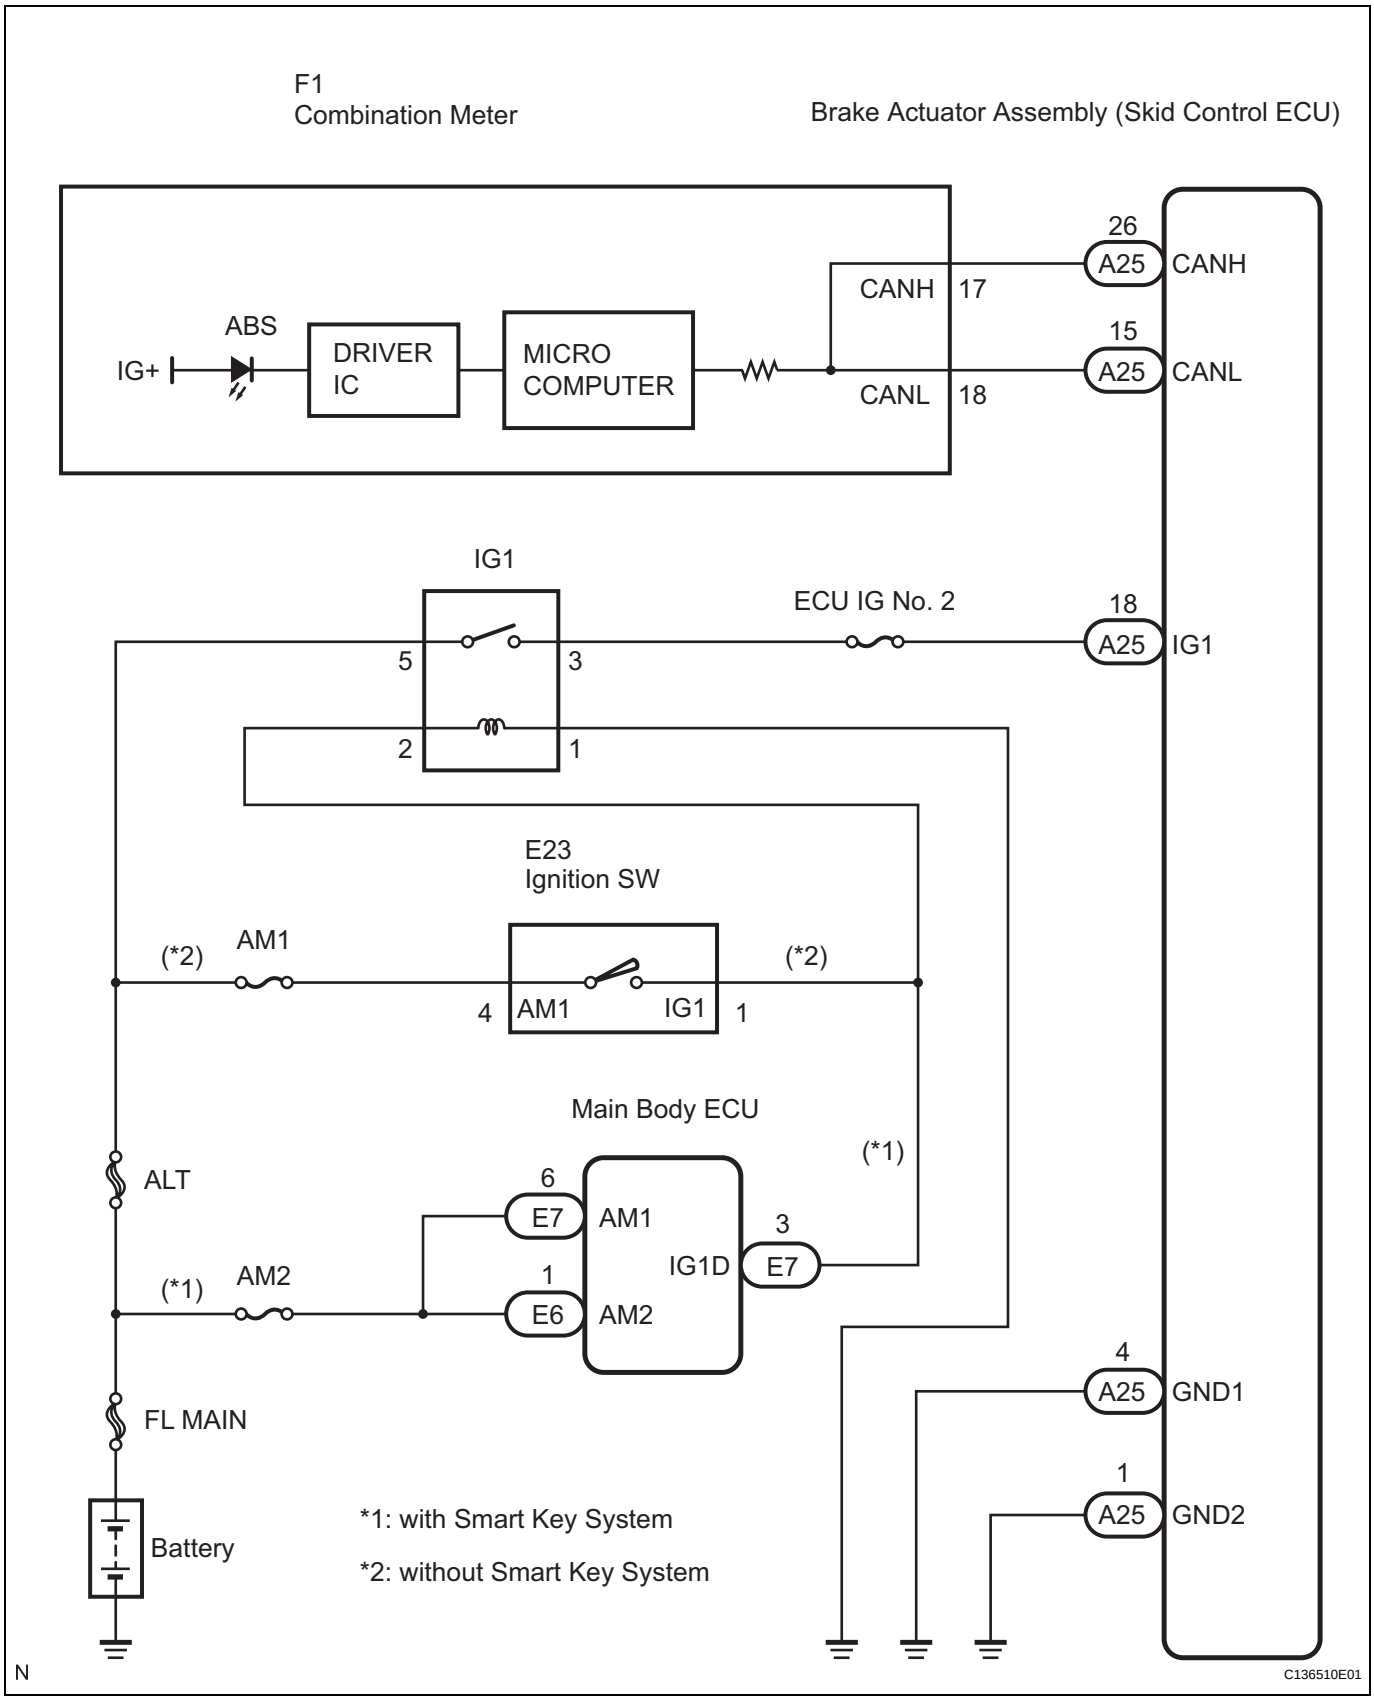
A

REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

ABS Warning Light does not Come ON

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1 INSPECT CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication system DTC is output (See page BC-21).

Result

Condition	Proceed to
CAN communication system DTC is not output	A
CAN communication system DTC is output	B

B → **REPAIR CAN COMMUNICATION SYSTEM (See page CA-8)**

A

2 INSPECT ABS WARNING LIGHT

HINT:
When disconnecting the skid control ECU connector, the ABS warning light comes on.

(a) Turn the ignition switch off.
(b) Disconnect the skid control ECU connector.
(c) Turn the ignition switch on (IG).
(d) Check that the ABS warning light comes on.
OK:
The ABS warning light comes on.
(e) Connect the connector.

NG → **Go to step 3**

OK

REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

3 INSPECT COMBINATION METER ASSEMBLY

(a) Connect the intelligent tester to the DLC3.
(b) Select the "ACTIVE TEST" on the tester (See page BC-25).

ACTIVE TEST: METER

Item	Vehicle Condition / Test Details	Diagnostic Note
ABS WRN LIGHT	Turn ABS warning light ON / OFF	Observe combination meter

(c) Check the ABS warning light operation.
OK:
The ABS warning light turns on or off in accordance with the intelligent tester.

NG → REPLACE COMBINATION METER ASSEMBLY (See page ME-63)

OK

REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

Brake Warning Light Remains ON

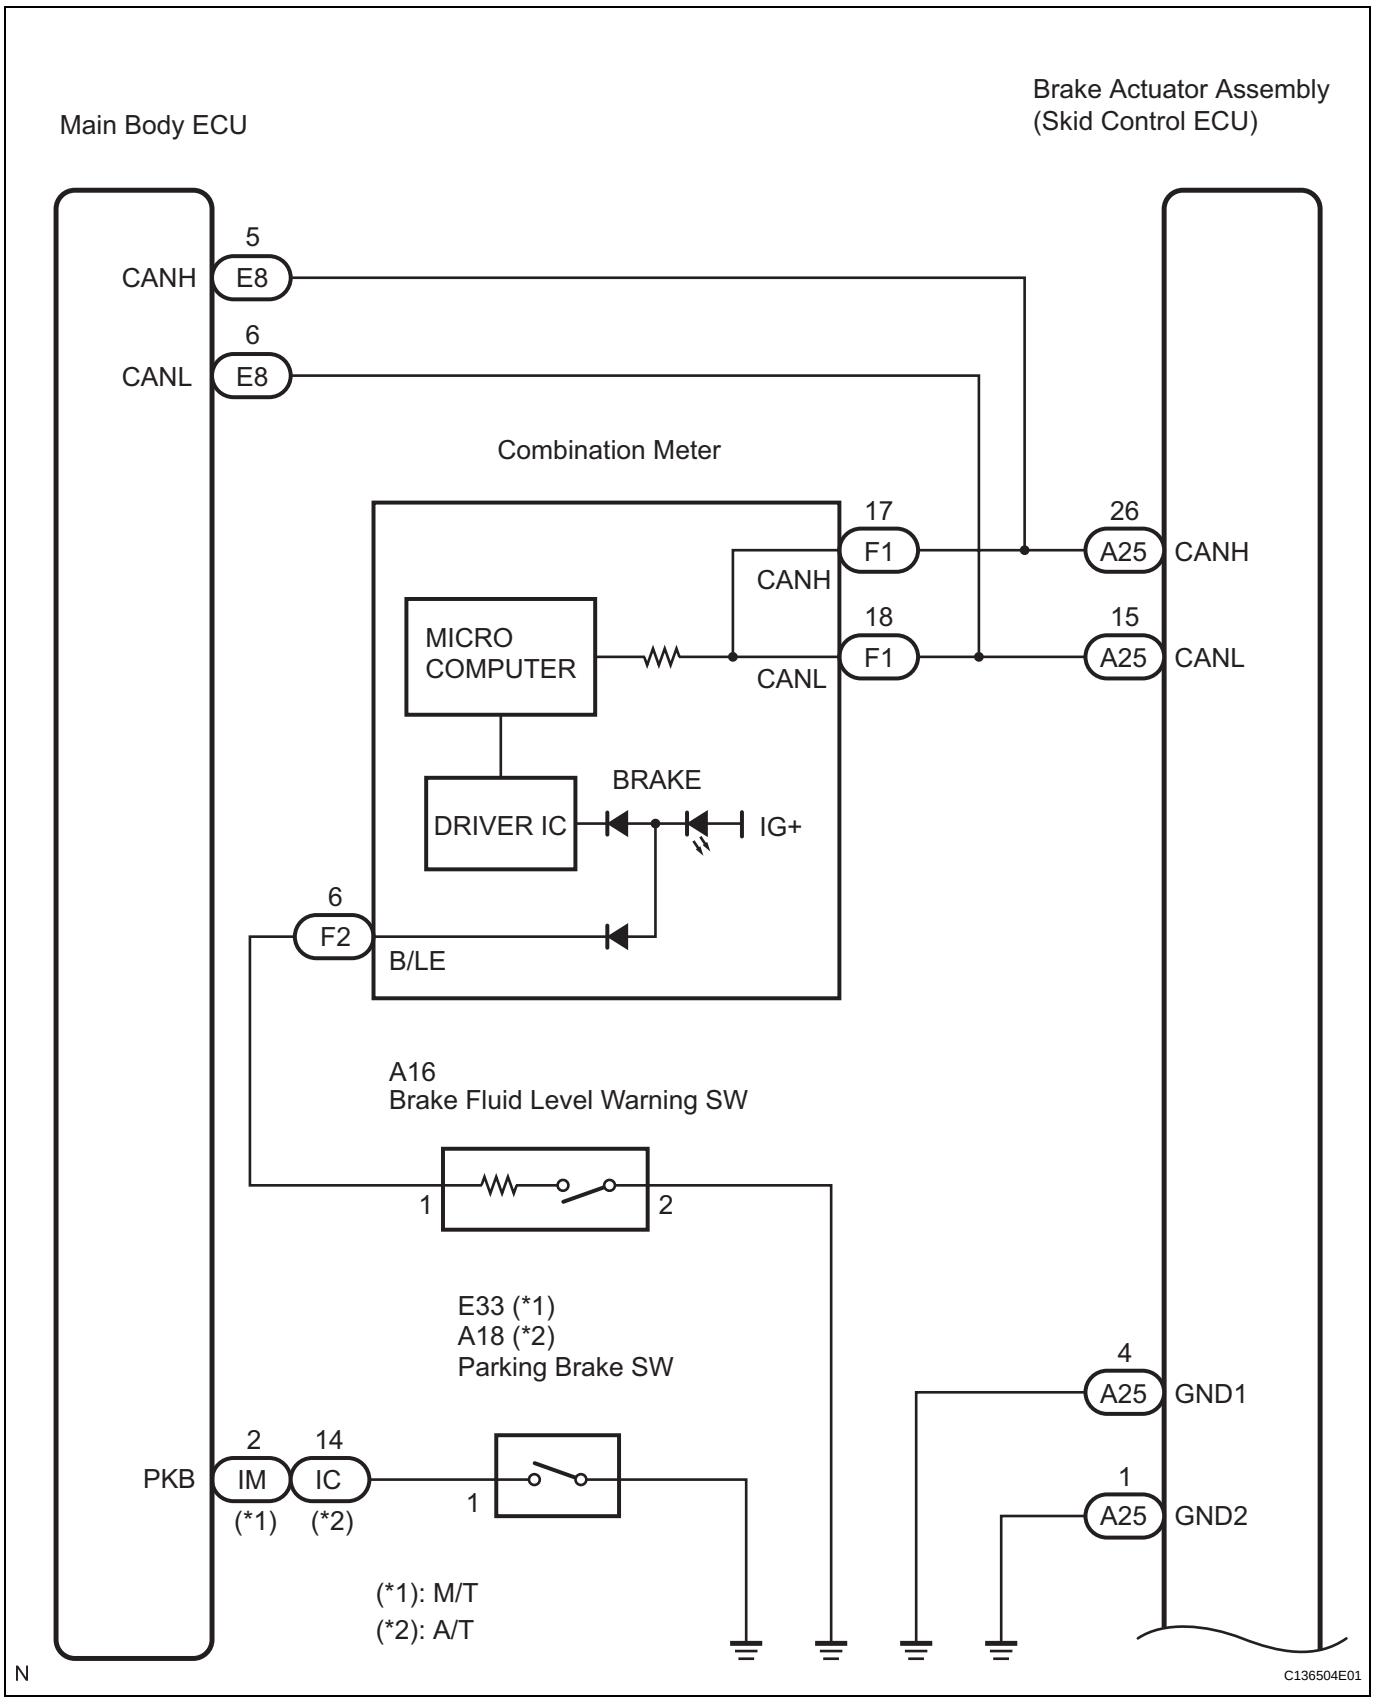
DESCRIPTION

The skid control ECU sends the indicator signals to the combination meter assembly via the CAN communication system.

If any of the following is detected, the brake warning light remains on:

- The skid control ECU connector is disconnected from the skid control ECU.
- The brake fluid level is insufficient.
- The parking brake is applied.
- EBD operation is not possible.

WIRING DIAGRAM



BC

A

3	CHECK IF SKID CONTROL ECU CONNECTOR SECURELY CONNECTED

(a) Check if the skid control ECU connector is connected securely.
OK:
The connector should be securely connected.

NG → **CONNECT CONNECTOR TO ECU CORRECTLY**

OK

4	CHECK BATTERY

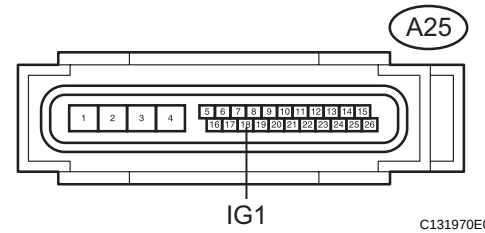
(a) Check the battery voltage.
Standard voltage:
11 to 14 V

NG → **INSPECT CHARGING SYSTEM**

OK

5 INSPECT SKID CONTROL ECU CONNECTOR (IG1 TERMINAL VOLTAGE)

Skid Control ECU (Harness Side Connector Front View):



(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
A25-18 (IG1) - Body ground	Ignition switch on (IG)	10 to 14 V

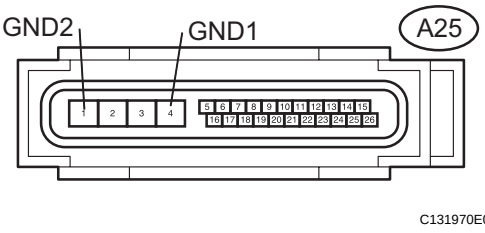
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (IG1 CIRCUIT)**

OK

6 INSPECT SKID CONTROL ECU CONNECTOR (GND TERMINAL CONTINUITY)

BC

Skid Control ECU (Harness Side Connector Front View):



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
A25-4 (GND1) - Body ground	Below 1 Ω
A25-1 (GND2) - Body ground	Below 1 Ω

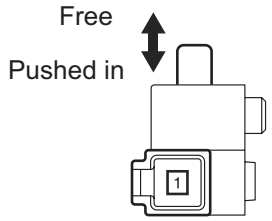
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

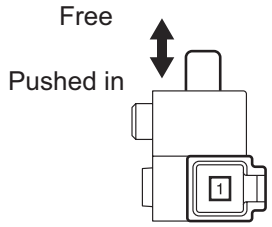
7	**INSPECT PARKING BRAKE SWITCH**

Parking Brake Switch:

Automatic Transaxle:



Manual Transaxle:



N C109430E03

(a) Remove the parking brake switch.
(b) Disconnect the parking brake switch connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Automatic Transaxle

Tester Connection	Condition	Specified Condition
(A18-1) - Ground part	Free	Below 1 Ω
(A18-1) - Ground part	Pushed in	10 kΩ or higher

Manual Transaxle

Tester Connection	Condition	Specified Condition
(E33-1) - Ground part	Free	Below 1 Ω
(E33-1) - Ground part	Pushed in	10 kΩ or higher

NG → **REPLACE PARKING BRAKE SWITCH**

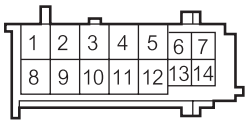
OK

BC

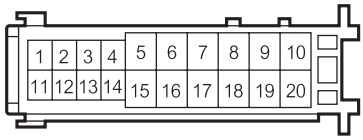
8	CHECK HARNESS AND CONNECTOR (MAIN BODY ECU TO PARKING BRAKE SWITCH)

Main Body ECU
Wire Harness View:

IC : Automatic Transaxle



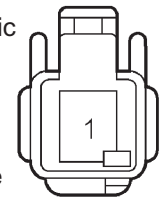
IM : Manual Transaxle



Parking Brake Switch Harness Side Connector Front View:

A18 : Automatic Transaxle

E33 : Manual Transaxle



C136418E03

OK

(a) Disconnect the main body ECU connector.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance:
Automatic Transaxle

Tester Connection	Specified Condition
IC-14 - A18-1 (PKB)	Below 1 Ω
A18-1 (PKB) - Body ground	10 kΩ or higher

Manual Transaxle

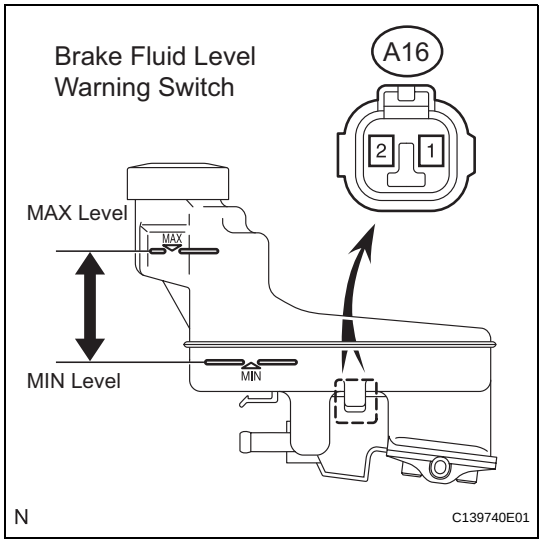
Tester Connection	Specified Condition
IM-2 (PKB) - E33-1 (PKB)	Below 1 Ω
E33-1 (PKB) - Body ground	10 kΩ or higher

(c) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (MAIN BODY ECU TO PARKING BRAKE SWITCH)**

BC

9	**INSPECT BRAKE FLUID LEVEL WARNING SWITCH ASSEMBLY**



(a) Remove the reservoir tank cap.
(b) Disconnect the brake fluid level warning switch connector.
(c) Measure the resistance according to the value(s) in the table below.
HINT:
A float is located inside the reservoir.
Its position can be changed by increasing or decreasing the level of brake fluid.
Standard resistance

Tester Connection	Condition	Specified Condition
(A16-1) - (A16-2)	Float UP	10 kΩ or higher (No Continuity)
(A16-1) - (A16-2)	Float DOWN	Below 1 Ω (Continuity)

HINT:
If there is no problem after finishing the above check, adjust the brake fluid level to the MAX level.

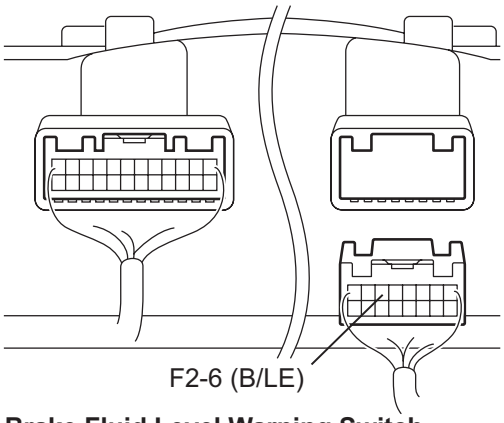
NG → **REPLACE BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY (BRAKE FLUID LEVEL WARNING SWITCH)**

OK

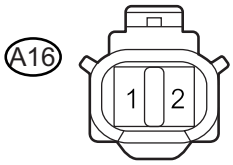
BC

10	CHECK HARNESS AND CONNECTOR (BRAKE FLUID LEVEL WARNING SWITCH TO COMBINATION METER)

Combination Meter Wire Harness View:



Brake Fluid Level Warning Switch Harness Side Connector Front View:



C136033E01

(a) Disconnect the combination meter assembly connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
A16-1 - F2-6 (B/LE)	Below 1 Ω
F2-6 (B/LE) - Body ground	10 kΩ or higher
A16-2 - Body ground	Below 1 Ω

(c) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (BRAKE FLUID LEVEL WARNING SWITCH TO COMBINATION METER)**

OK

11	INSPECT COMBINATION METER ASSEMBLY

(a) Connect the intelligent tester to the DLC3.
(b) Select the "ACTIVE TEST" on the tester (See page BC-25).

ACTIVE TEST: ABS

Item	Vehicle Condition / Test Details	Diagnostic Note
BRAKE WARN LIGHT	Turn brake warning light ON / OFF	Observe combination meter

(c) Check the ABS warning light operation.

OK:

The BRAKE warning light turns on or off in accordance with the intelligent tester.

Result

Condition	Proceed to
OK	A
OK (When troubleshooting in accordance with the PROBLEM SYMPTOMS TABLE)	B
NG	C

BC

B → PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page BC-16)

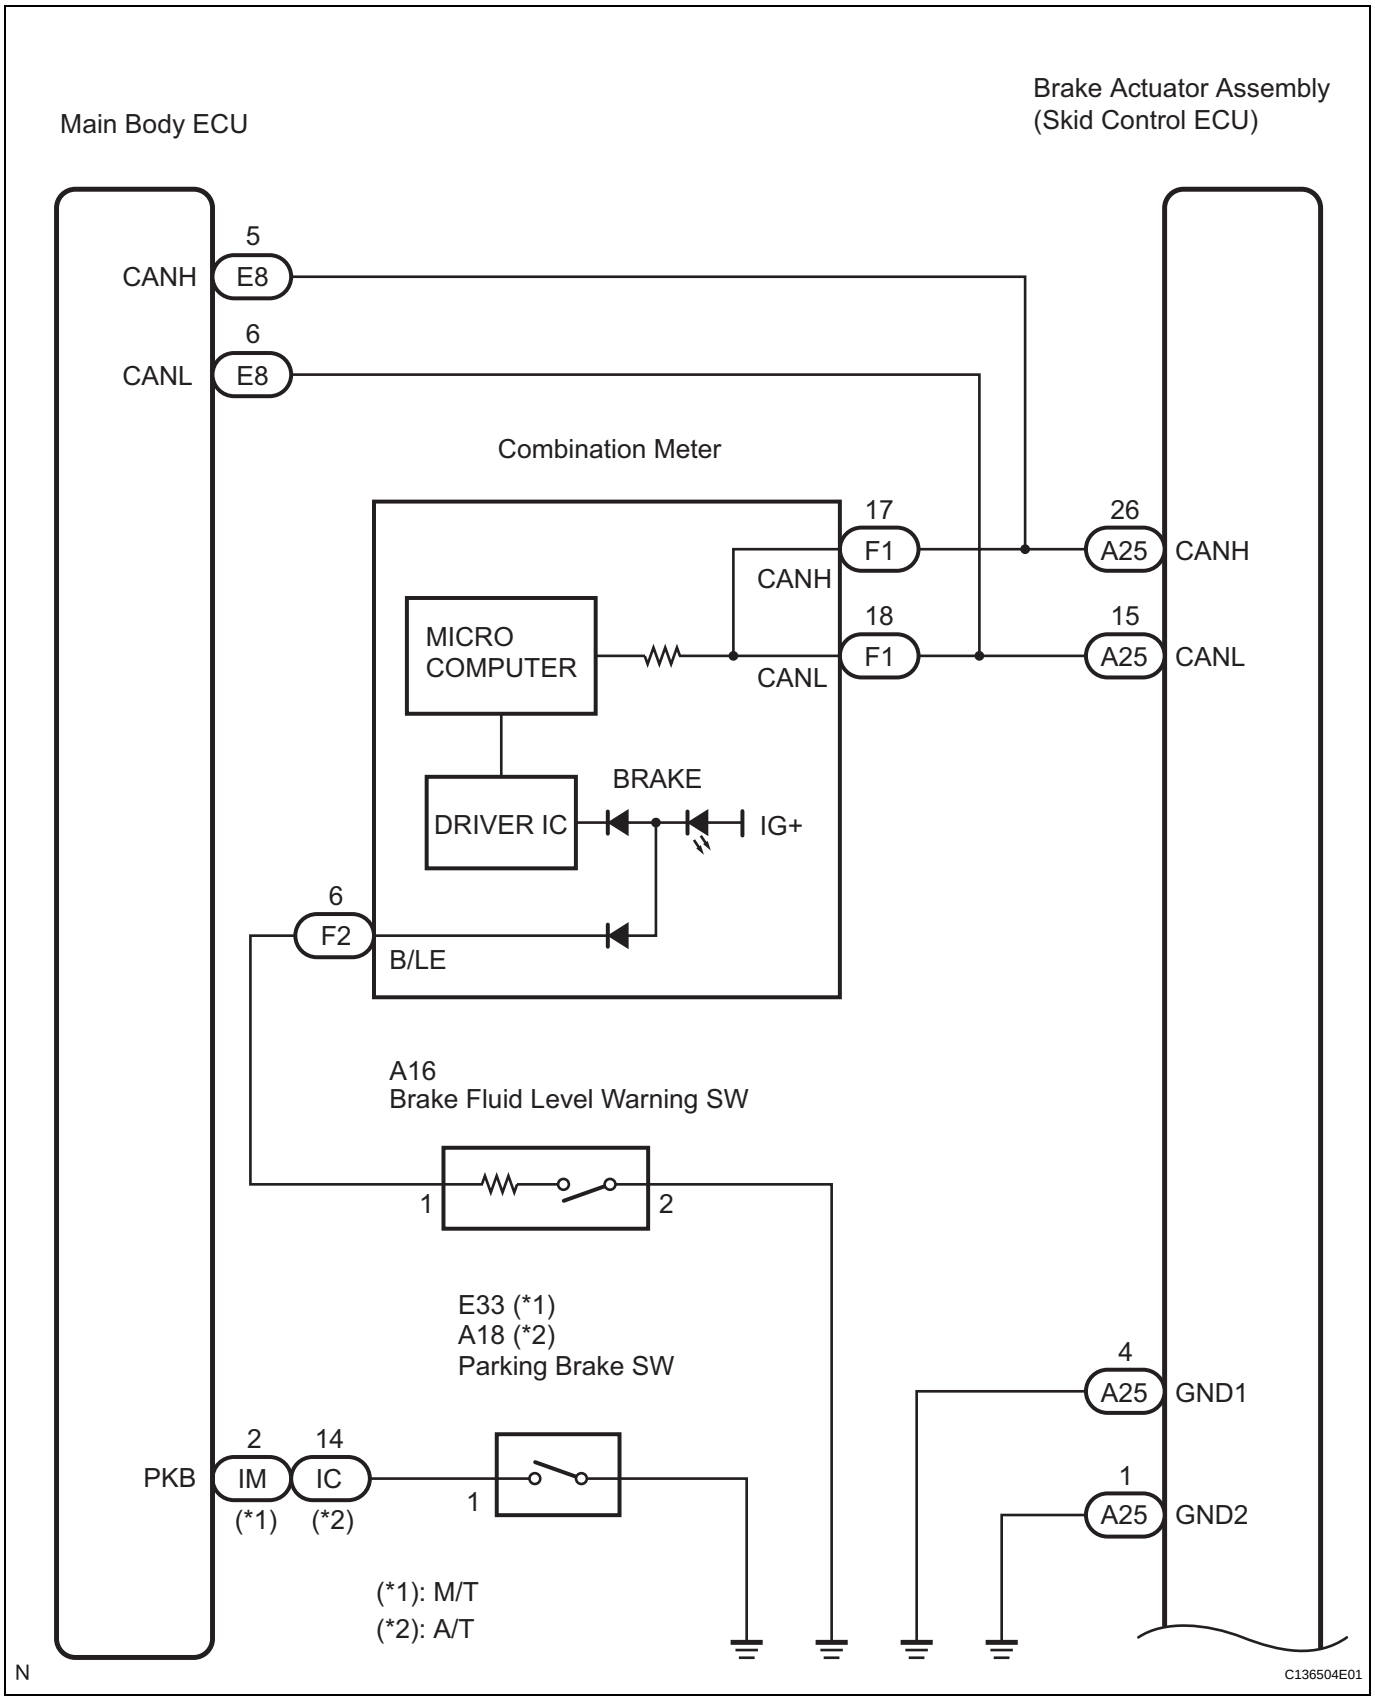
C → REPLACE COMBINATION METER ASSEMBLY (See page ME-63)

A

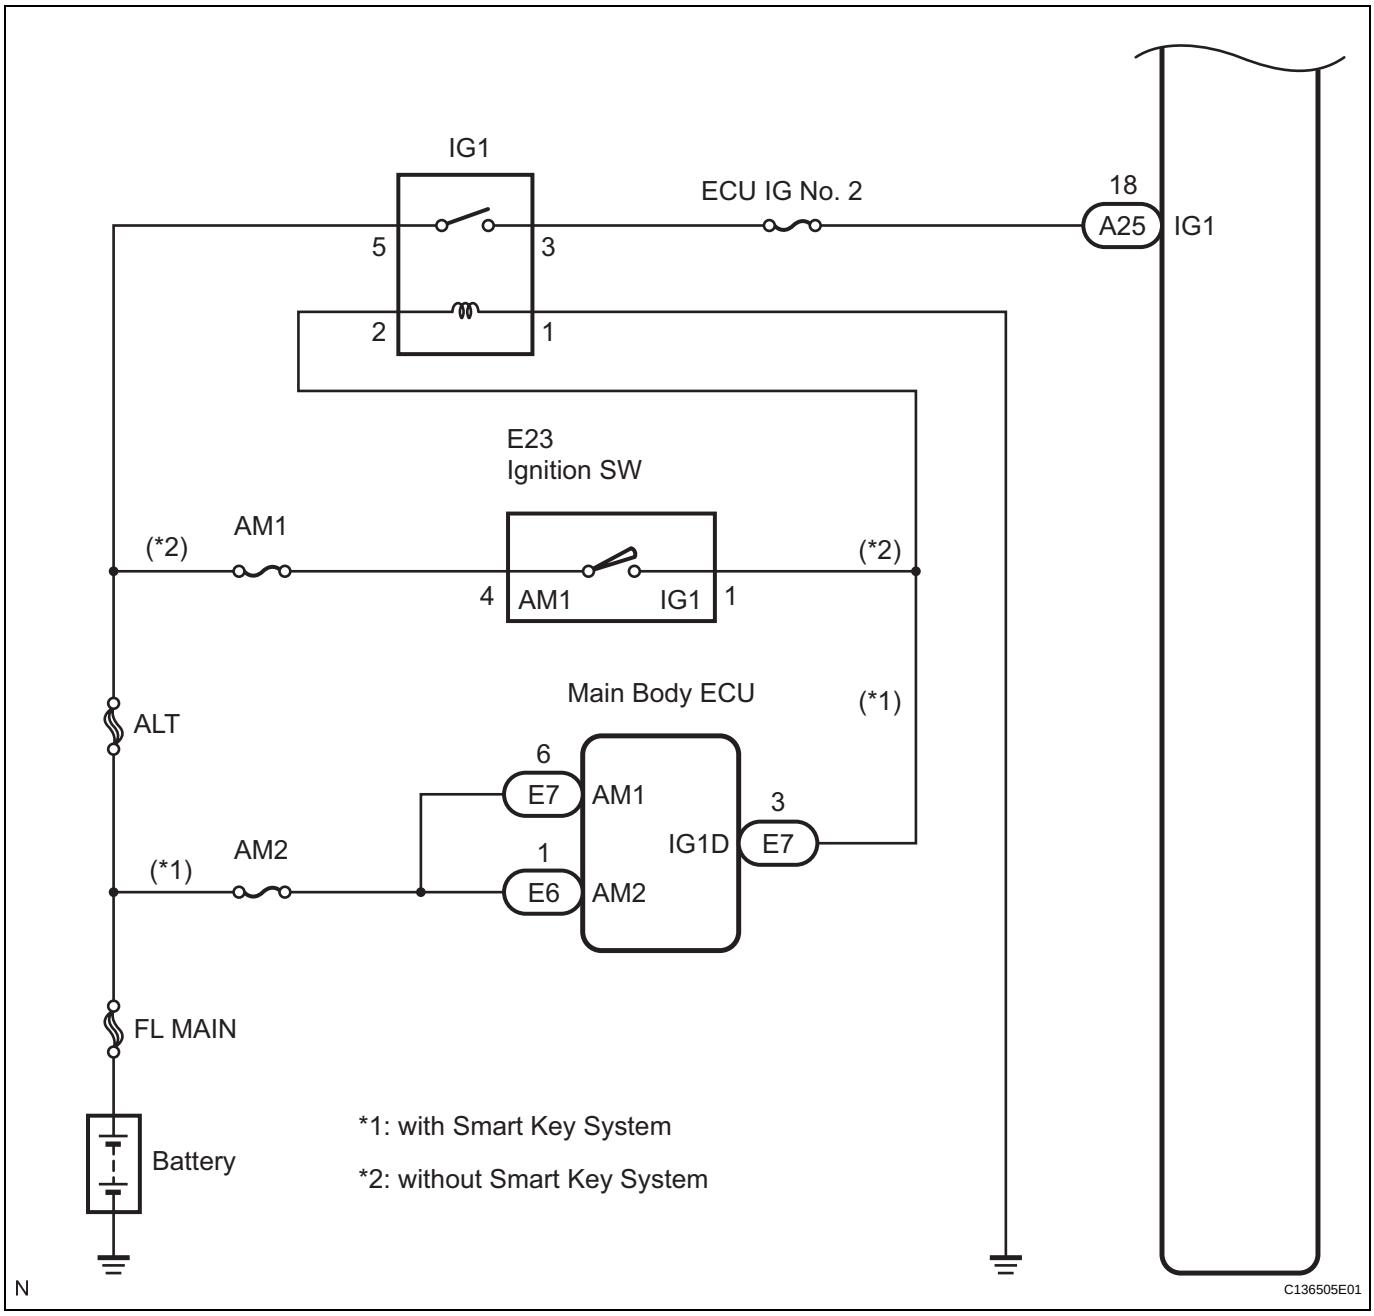
REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

Brake Warning Light does not Come ON

WIRING DIAGRAM



BC



INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	INSPECT CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication system DTC is output (See page BC-21).

Result

Condition	Proceed to
CAN communication system DTC is not output	A
CAN communication system DTC is output	B

B → **REPAIR CAN COMMUNICATION SYSTEM (See page CA-8)**

The BRAKE warning light turns on or off in accordance with the intelligent tester.

NG → **REPLACE COMBINATION METER ASSEMBLY (See page ME-63)**

OK

REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

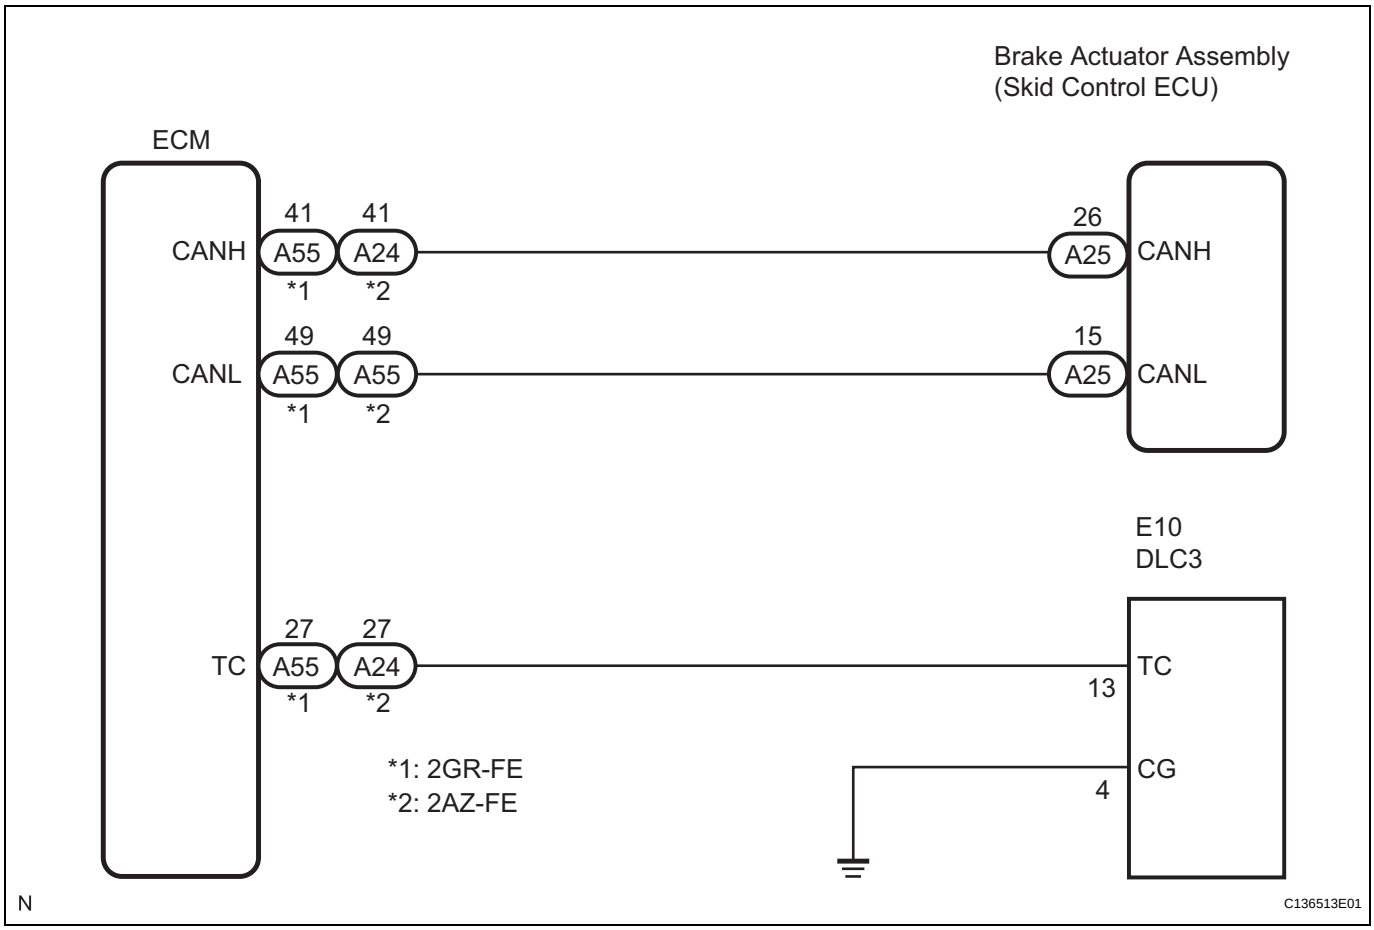
BC

TC and CG Terminal Circuit

DESCRIPTION

DTC output mode is set by connecting terminals TC and CG of the DLC3.
DTCs are indicated by the blinking pattern of the ABS warning light.

WIRING DIAGRAM



HINT:
When warning lights continue to blink, a ground short in the wiring of terminal TC of the DLC3 or an internal ground short in one or more ECUs is suspected.

INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication DTC is output (See page BC-21).

Result

Result	Proceed to
CAN communication system DTC is output	A
CAN communication system DTC is not output	B

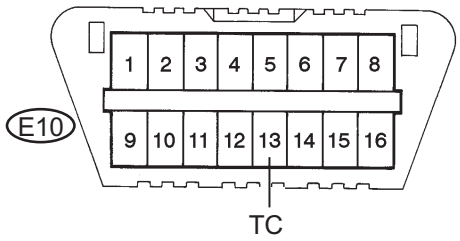
B → Go to step 2

A

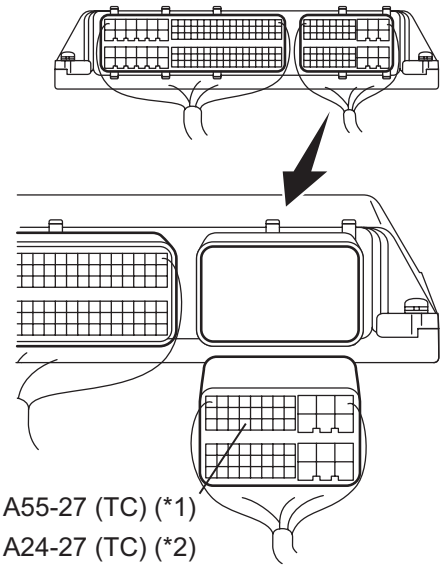
GO TO CAN COMMUNICATION SYSTEM (See page CA-8)

2 CHECK HARNESS AND CONNECTOR (ECM TO DLC3)

DLC3:



ECM Wire Harness View:



(*1): 2GR-FE (*2): 2AZ-FE

C136035E02

(a) Disconnect the ECM connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

2GR-FE

Tester Connection	Specified Condition
A55-27 (TC) - E10-13 (TC)	Below 1 Ω
E10-13 (TC) - Body ground	10 kΩ or higher

2AZ-FE

Tester Connection	Specified Condition
A24-27 (TC) - E10-13 (TC)	Below 1 Ω
E10-13 (TC) - Body ground	10 kΩ or higher

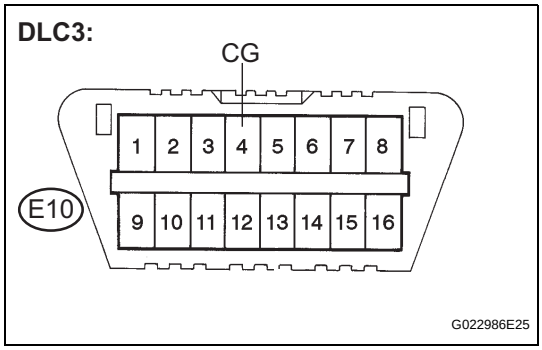
(c) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (TC TERMINAL CIRCUIT)**

OK

BC

3	CHECK HARNESS AND CONNECTOR (DLC3 CG CIRCUIT)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

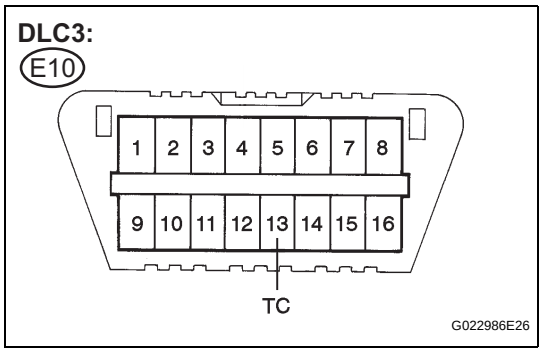
Tester Connection	Specified Condition
E10-4 (CG) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (CG TERMINAL CIRCUIT)**

OK

4	REPAIR OR REPLACE HARNESS OR CONNECTOR (TC TERMINAL CIRCUIT)

BC



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
E10-13 (TC) - Body ground	10 kΩ or higher

NG → **CHECK HARNESS AND CONNECTOR (TC TERMINAL CIRCUIT)**

OK

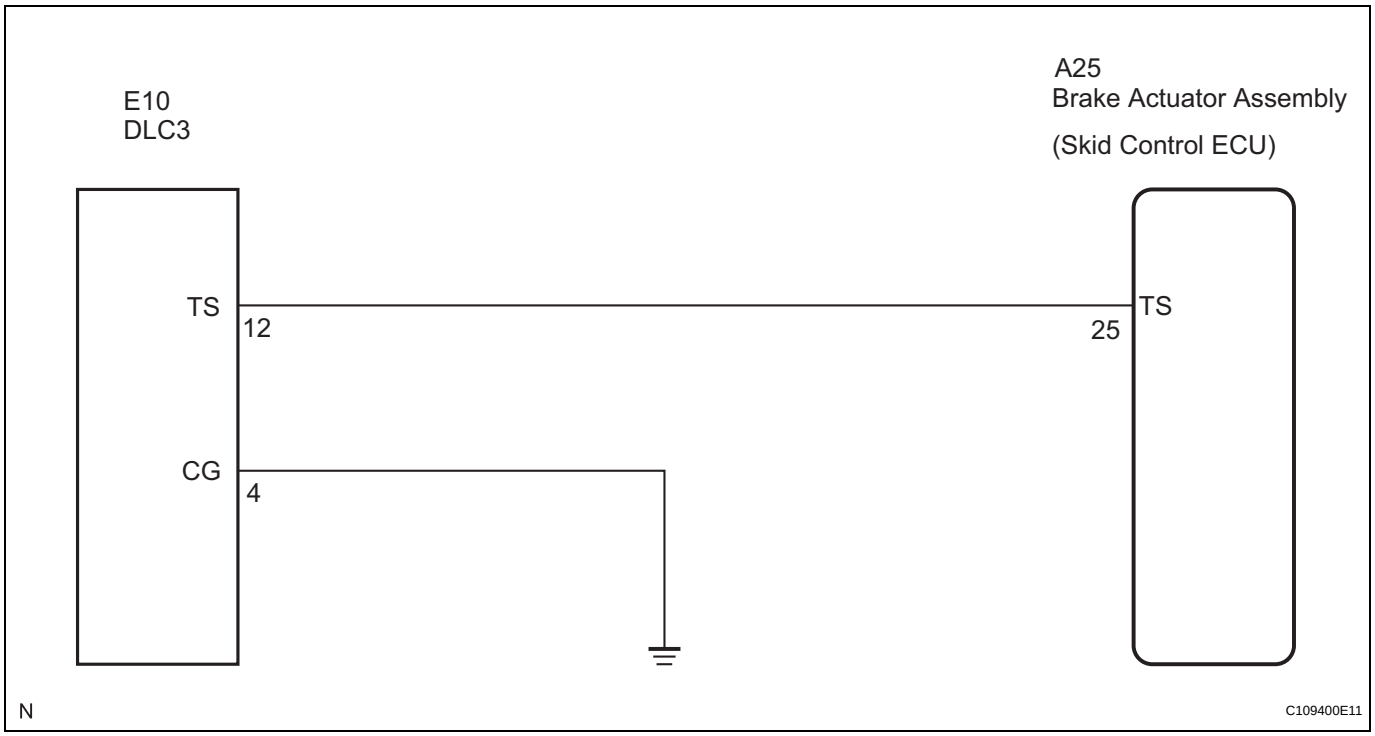
REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

TS and CG Terminal Circuit

DESCRIPTION

In the Test Mode (signal check), a malfunction of the speed sensor that cannot be detected when the vehicle is stopped can be detected while driving.
Transition to the sensor check mode can be performed by connecting terminals TS and CG of the DLC3 and turning the ignition switch from off to on (IG).

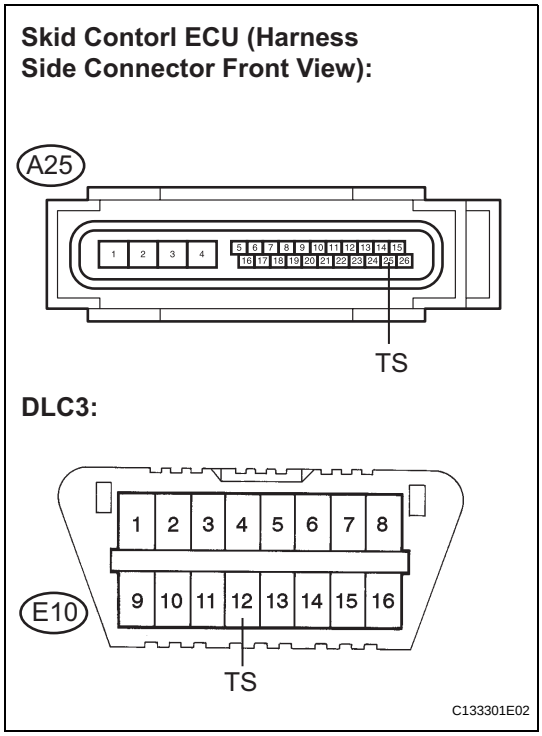
WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU TO DLC3)



(a) Disconnect the skid control ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

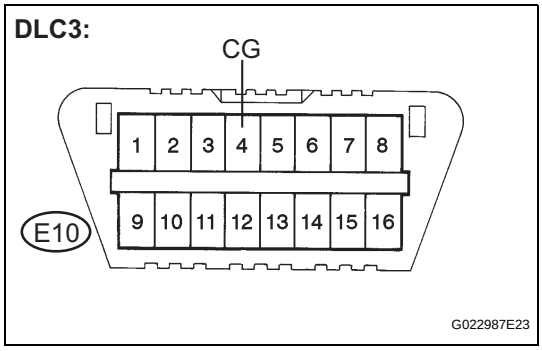
Tester Connection	Condition	Specified Condition
A25-25 (TS) - E10-12 (TS)	Always	Below 1 Ω

(c) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SKID CONTROL ECU TO DLC3)**

OK

2 CHECK HARNESS AND CONNECTOR (DLC3 TO BODY GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

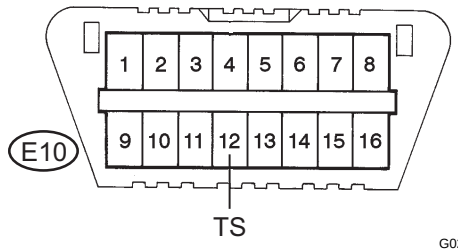
Tester Connection	Condition	Specified Condition
E10-4 (CG) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (DLC3 TO BODY GROUND)**

OK

3	CHECK HARNESS AND CONNECTOR (DLC3 TO BODY GROUND)

DLC3:



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E10-12 (TS) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (DLC3 TO BODY GROUND)**

OK

REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

VEHICLE STABILITY CONTROL SYSTEM (for ADVICS Made)

PRECAUTION

1. EXPRESSIONS OF IGNITION SWITCH

The type of ignition switch used on this model differs according to the specifications of the vehicle.
The expressions listed in the table below are used in this section.

Expression	Switch Type	
	Ignition Switch (Position)	Engine Switch (Condition)
Ignition switch off	LOCK	off
Ignition switch on (IG)	ON	on (IG)
Ignition switch on (ACC)	ACC	on (ACC)
Engine start	START	start

BC

2. TROUBLESHOOTING PRECAUTIONS

(a) When there is a malfunction with terminal contact points or part installation problems, removal and installation of the suspected problem parts may return the system to the normal condition either completely or temporarily.
(b) In order to determine the malfunctioning area, be sure to check the conditions at the time the malfunction occurred, such as DTC output and the Freeze Frame Data, and record it before disconnecting each connector or removing and installing parts.
(c) Since the system may be influenced by malfunctions in systems other than the brake control system, be sure to check for DTCs in other systems.

3. HANDLING PRECAUTIONS

(a) Do not remove or install VSC parts such as the steering angle sensor or yaw rate sensor (acceleration sensor included) except when required, as they cannot be adjusted correctly after removal or installation.
(b) Be sure to perform preparation before work and confirmation after work is completed by following the direction in the repair manual when working on the VSC system.
(c) Be sure to remove and install the ECU, actuator, each sensor, etc. with the ignition switch off unless it is not specified in the inspection procedure.
(d) If the ECU, brake actuator, or a sensor has been removed and installed, it is necessary to check the system for problems after the parts have been reassembled. Check for DTCs using the intelligent tester, also check that system functions and signals received by the ECU are normal using Test Mode.

4. DTC PRECAUTION

(a) Warnings for some DTCs cannot be cleared only by repairing the malfunctioning parts. If the warning is displayed after repair work, the DTC should be cleared after turning the ignition switch off.
NOTICE:
If a DTC for a malfunctioning part reappears after it was cleared, then it has been stored again.

5. CHASSIS DYNAMOMETER PRECAUTION

(a) Enter Test Mode to disable TRAC and VSC control when using a chassis dynamometer.
HINT:
The vehicle may move unexpectedly out of the dynamometer because of TRAC and VSC operations.
NOTICE:
- **Make sure that the VSC warning light is blinking (for vehicles without the multi information display) or "CHECK VSC SYSTEM" is displayed on the multi information display (for vehicles with the multi information display) (Test Mode is achieved).**
- **Secure the vehicle with the lock chain for safety.**

6. CAN COMMUNICATION SYSTEM PRECAUTIONS

(a) The CAN communication system is used for the data communication between the skid control ECU, the steering angle sensor, the yaw rate sensor (acceleration sensor included) and other ECUs. If there is trouble in the CAN communication line, corresponding DTCs in the communication line are output.

(b) If the DTC in the CAN communication line is output, repair the malfunction in the communication line and troubleshoot the VSC system while data communication is normal.

(c) In order to enable CAN communication, a specific type of wiring is used for the CAN communication lines. The wiring used for each communication line is a twisted pair of wires that have an equal length. A bypass wire should not be used, because the data being transmitted will be corrupted.

BC

SYSTEM DESCRIPTION

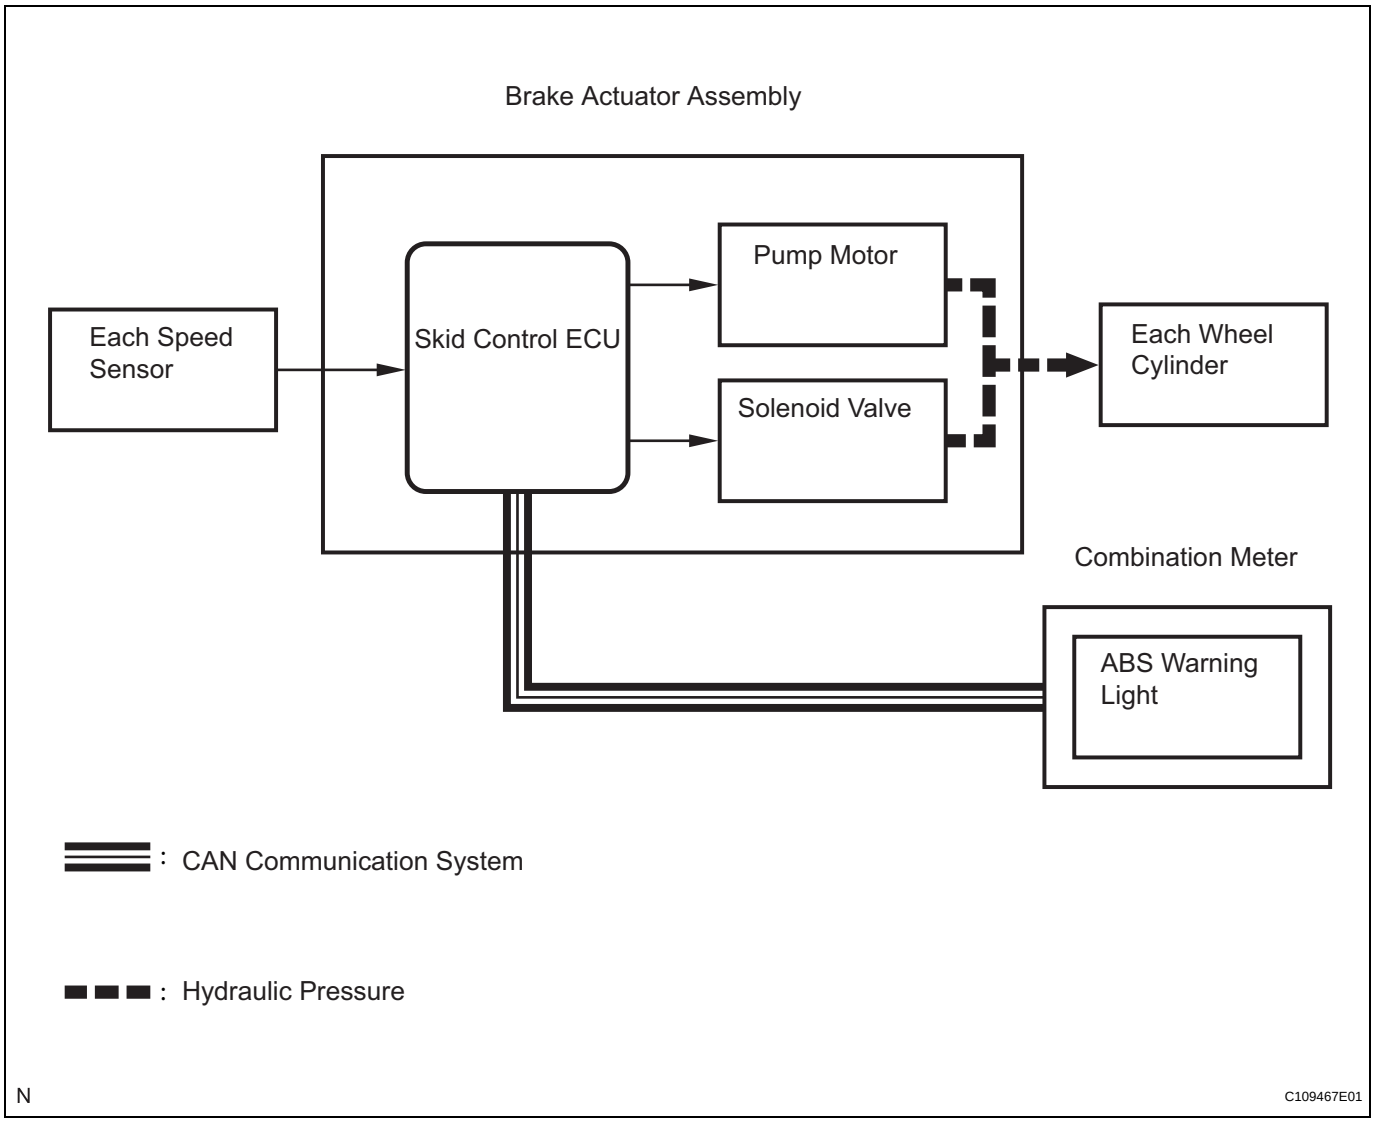
1. FUNCTION DESCRIPTION

HINT:

- The skid control ECU is located within the brake actuator assembly.
- The yaw rate sensor and acceleration sensor are combined in a single unit. This unit communicates with the skid control ECU through CAN communication.

(a) ABS (Anti-lock Brake System)

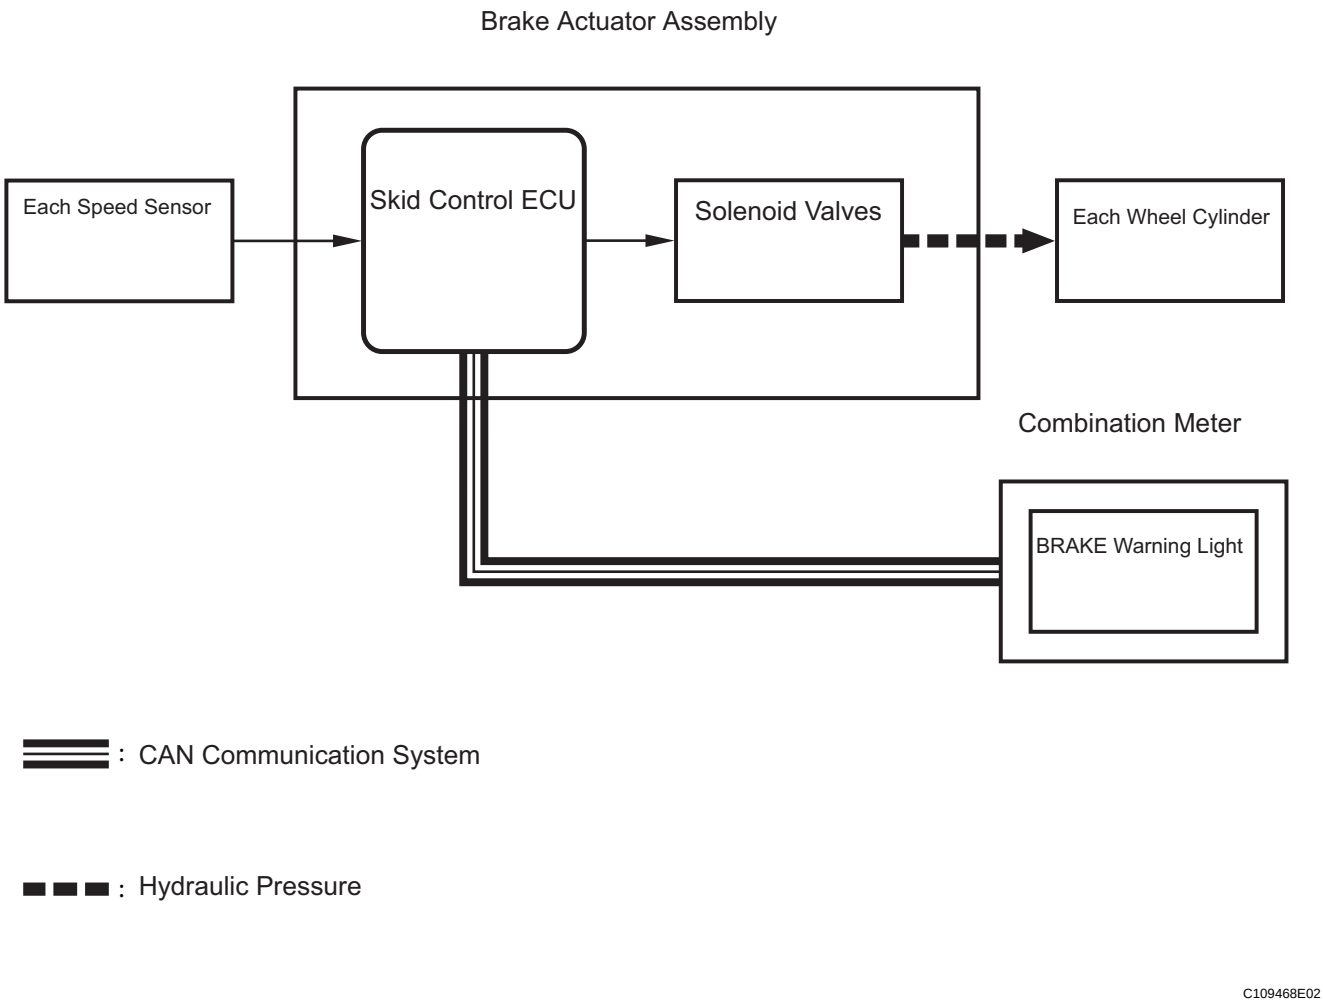
The ABS helps prevent the wheels from locking when the brakes are applied firmly or when braking on a slippery surface.



(1) Operation description
The skid control ECU detects wheel lock based on speed signals it receives from the wheel speed sensors. Based on this information, the skid control ECU controls the pump motor and solenoid valves. The pump motor and solenoid valves are used to prevent wheel lock by controlling the hydraulic pressure applied to the brakes at each wheel. The ABS warning light will come on when the system is malfunctioning.

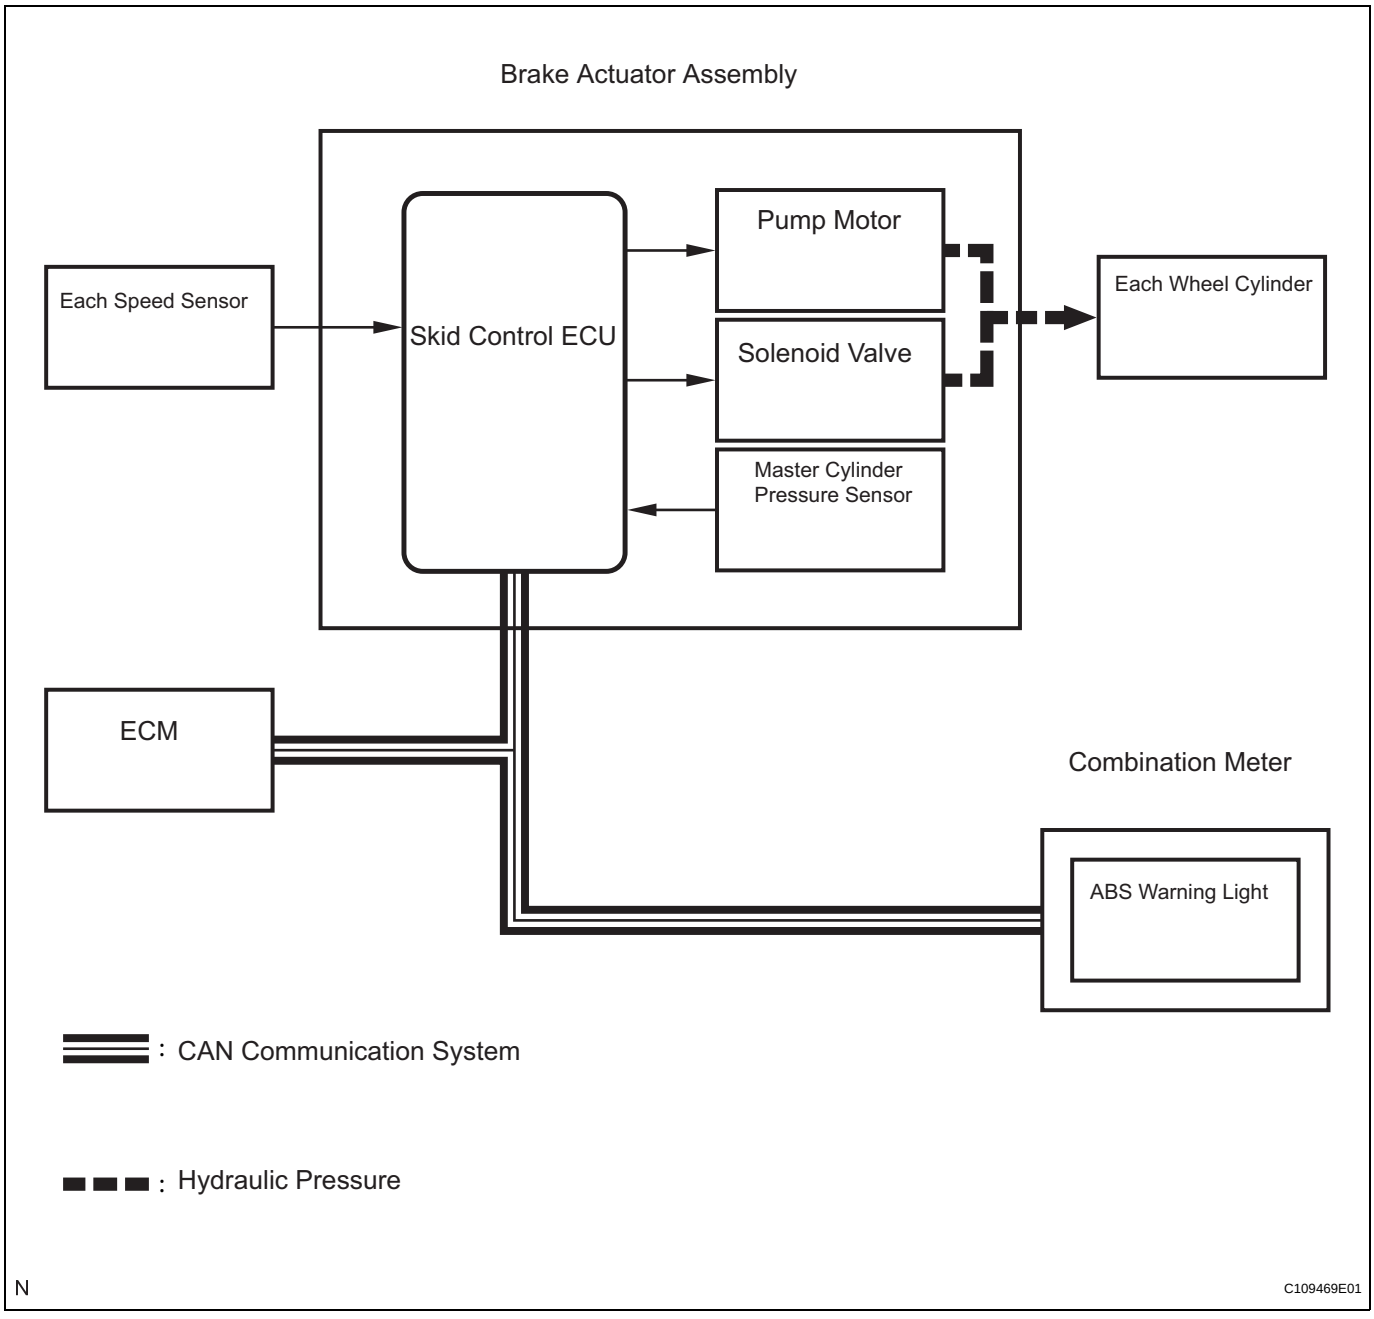
(b) EBD (Electronic Brake force Distribution)
The EBD control utilizes ABS, and performs proper brake force distribution between the front and rear wheels in accordance with driving conditions. When braking while cornering, it also controls the brake forces of the right and left wheels, helping to maintain vehicle behavior.

BC



(1) Operation description
The skid control ECU receives a speed signal from each wheel speed sensor, and uses these signals to detect locking of the wheels. The ECU uses this information in order to determine appropriate control of the solenoid valves.
The solenoid valves control the hydraulic pressure applied to the brake cylinder at each wheel. In this way, the solenoid valves are used to control the brake power split between the front and rear, and left and right wheels. The BRAKE warning light will come on if there is a malfunction in the EBD system.

(c) BA (Brake Assist)
The primary purpose of the brake assist system is to provide auxiliary brake force to assist the driver who cannot generate a large enough brake force during emergency braking, thus helping to maximize the brake performance of the vehicle.

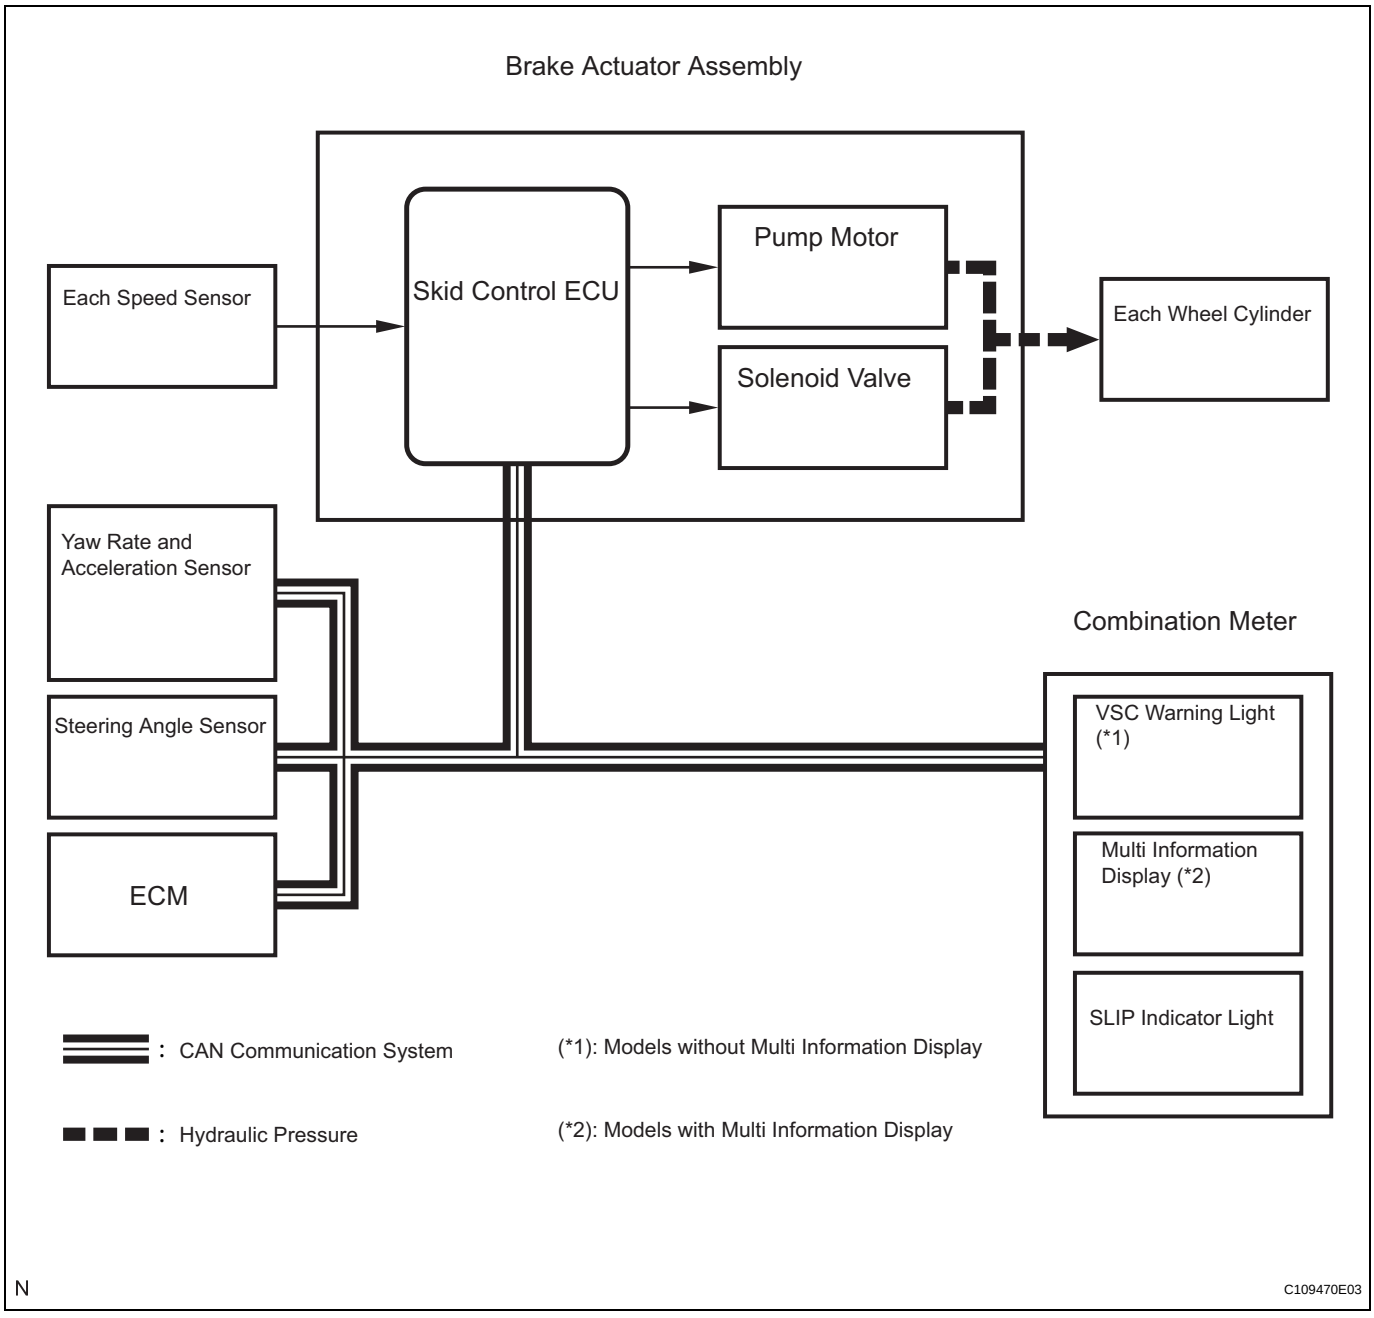


(1) Operation description

The skid control ECU receives the speed signal from each speed sensor and the fluid pressure signal from the master cylinder pressure sensor to determine whether brake assist is necessary. If brake assist is necessary, the skid control ECU sends control signals to the pump motor and solenoid. The pump and the solenoid valve then control the pressure applied to each wheel cylinder.

The ABS warning light comes on to indicate a malfunction in the BA system.

(d) TRAC (Traction Control)
The TRAC system helps prevent the drive wheels from slipping when the driver depresses the accelerator pedal excessively when starting off or accelerating on a slippery surface.



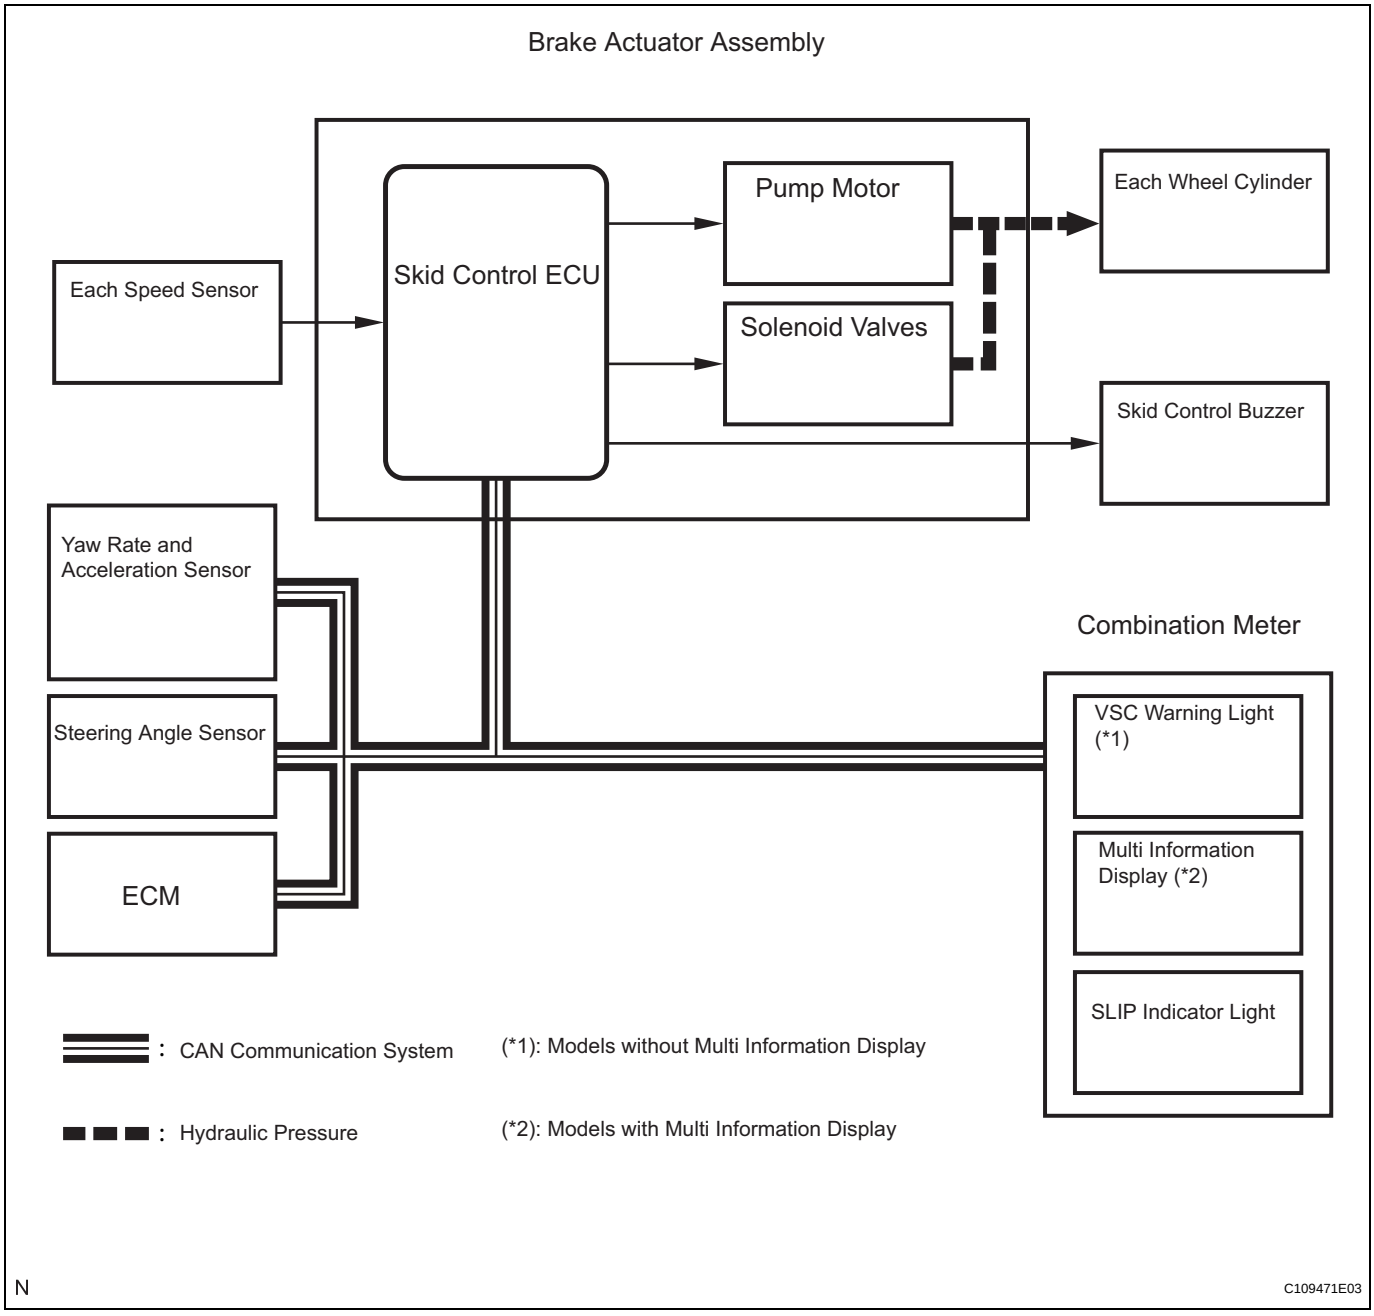
BC

(1) Operation description

The skid control ECU detects wheelspin by receiving signals from each speed sensor and the ECM via CAN communication. The skid control ECU controls engine torque with the ECM via CAN communication and brake hydraulic pressure through the pump and solenoid valve.

The SLIP indicator light blinks when the system is operating. When there is a malfunction in the TRAC system, both VSC warning light (models without multi information display) and SLIP indicator light will come on and the DTC will be displayed on the multi information display (models with multi information display).

(e) VSC (Vehicle Stability Control)
The VSC system helps prevent the vehicle from slipping sideways as a result of strong front or rear wheel skid during cornering.



(1) Operation description

The skid control ECU determines the vehicle operating conditions based on signals received from the wheel speed sensors, yaw rate and acceleration sensor, and steering angle sensor. The skid control ECU sends signals via CAN communication to the ECM in order to control engine torque. The skid control ECU controls brake hydraulic pressure using the pump and solenoid valves.

The SLIP indicator light will blink, and the skid control buzzer will sound when the system is operating. If a malfunction occurs in the VSC system, both the VSC warning light (models without multi information display) and the SLIP indicator light will come on. In addition, the DTC will appear on the multi information display (models with multi information display).

2. ABS with EBD, BA, TRAC and VSC OPERATION

(a) The skid control ECU calculates vehicle stability tendency based on the signals from the speed sensor, yaw rate and acceleration sensor, and steering angle sensor. In addition, it evaluates the results of the calculations to determine whether any control actions (control of the engine output torque by electronic throttle control and of the wheel brake pressure by the brake actuator assembly) should be implemented.

(b) The SLIP indicator blinks and the skid control buzzer sounds to inform the driver that the VSC system is operating. The SLIP indicator also blinks when traction control is operating, and the operation being performed is displayed.

3. FAIL SAFE

(a) When a failure occurs in the ABS with BA, TRAC and VSC systems, the ABS warning, VSC warning (models without multi information display), and SLIP indicator lights come on or the DTC will be displayed on the multi information display (models with multi information display) and ABS with BA, TRAC and VSC operations are prohibited. In addition, when there is a failure that disables the EBD operation, the BRAKE warning light also comes on and the EBD operation is prohibited.

(b) If control is prohibited due to a malfunction during operation, control will be disabled gradually. This is to avoid sudden vehicle instability.

4. INITIAL CHECK

(a) When the vehicle speed first becomes approximately 4 mph (6 km/h) or more after the ignition switch is turned on (IG), each solenoid valve and motor of the brake actuator is sequentially activated to perform an electrical check. During the initial check, the operating sound of solenoid valve and motor can be heard from the engine compartment, but this is not a malfunction.

5. INSPECTION MODE

(a) VSC operation can be disabled by operating the intelligent tester.
HINT:
Refer to the intelligent tester operator's manual for further details.

6. FUNCTION OF COMPONENTS

Components	Function
Speed sensor	Detects the wheel speed and sends the signal to the skid control ECU.
Skid control ECU (housed in brake actuator assembly)	• Processes the signals sent from each sensor to control the ABS, BA, TRAC, and VSC. • Sends and receives the control signals to or from the ECM, yaw rate and acceleration sensor, and steering angle sensor, etc. via CAN communication.
Brake actuator assembly	• Consists of the master cylinder cut solenoid valve, retention solenoid valve, pressure reduction solenoid valve, pump motor, and reservoir, and adjusts the brake fluid pressure applied to each wheel cylinder. • Houses the skid control ECU.
Solenoid relay	• Supplies power to each solenoid. • Housed in the skid control ECU.
Motor relay (VSC NO. 2 relay)	Supplies power to the pump motor.
Fail safe relay (VSC NO. 1 relay)	Cuts off power to the motor when the pump motor circuit malfunctions.
Steering angle sensor	• Installed in the combination switch. • Detects the steering amount and direction and sends the signals to the skid control ECU via CAN communication. • Has the magnetic resistance element which detects the rotation of the magnet housed in the detection gear in order to detect the changes of magnetic resistance and the steering amount and direction.
Yaw rate and acceleration sensor	• Acceleration sensor measures the capacity of the condenser that changes the distance between the electrodes depending on G force, which occurs when the vehicle is accelerated, and converts the measured value into electrical signals. • Yaw rate sensor detects the vehicle's angular velocity (yaw rate) in the vertical direction based on the amount and direction of the piezoelectric ceramics deflection. • Sends signals to the skid control ECU via CAN communication.
Master cylinder pressure sensor	• Detects the fluid pressure in the master cylinder. • Housed in the brake actuator assembly.
Stop light switch	Detects the brake operating conditions and inputs the results to the skid control ECU.
ECM	Controls the engine output when TRAC and VSC are operating with the skid control ECU via CAN communication.
Skid control buzzer	Intermittently sounds to inform the driver that the VSC is operating.
ABS warning light	• Comes on to inform the driver that a malfunction in the ABS or BA has occurred. • Blinks to output DTC.
BRAKE warning light	• Comes on to inform the driver that the parking brake is ON when the system is normal, or the brake fluid has decreased. • Comes on to inform the driver that a malfunction in the EBD has occurred.

Components	Function
VSC warning light (*1)	• Comes on to inform the driver that a malfunction in the VSC system has occurred. • Blinks to output DTC.
Multi information display (*2)	• Displays to inform the driver that a malfunction in the VSC system has occurred. • Displays to output DTC.
SLIP indicator light	Blinks to inform the driver that TRAC and VSC are operating.
Master caution indicator light	Comes on to inform the driver that a malfunction.

(*2): Models with multi information display

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
The intelligent tester can be used at steps 3, 7, and 10.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS

(a) Interview the customer and confirm the trouble (See page IN-45).

NEXT

BC

3	CHECK DTC AND FREEZE FRAME DATA

(a) Check and record a DTC and Freeze Frame Data.
(b) Clear the DTC and Freeze Frame Data (See page BC-141).
(c) Reconfirm the DTC.
  (1) Reconfirm the DTC based on the recorded DTC and Freeze Frame Data (See page BC-141 for DTC Check/Clear, and BC-144 for Freeze Frame Data).
  HINT:
  If any of the DTCs U0100/65, U0123/62, U0124/95, and U0126/63 is output together with a CAN communication DTC, first check the appropriate sensor for a momentary open circuit (See page BC-118).

Result

Condition	Proceed to
DTC is output	A
DTC is not output (Problem symptom does not occur)	B
DTC is not output (Problem symptom occurs)	C

B → GO TO STEP 5

C → GO TO STEP 6

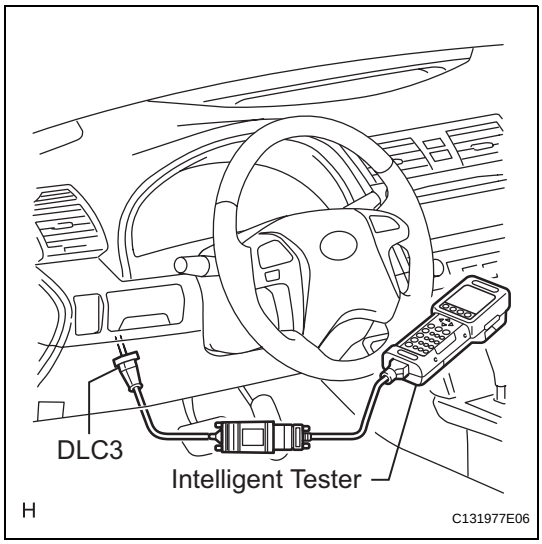
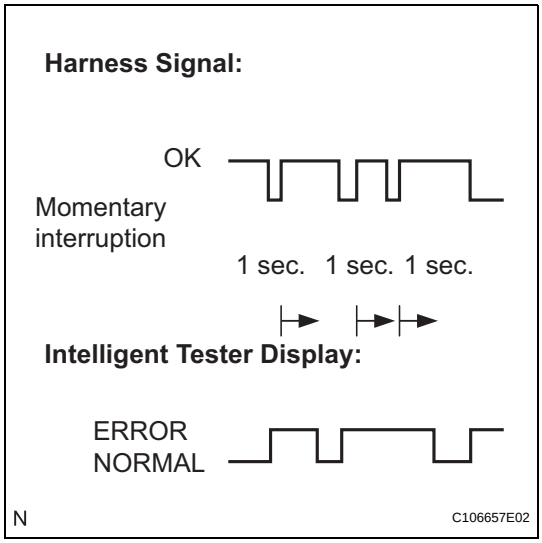
CHECK FOR INTERMITTENT PROBLEMS

1. CHECK FOR INTERMITTENT PROBLEMS

HINT:
A momentary interruption (open circuit) in the connectors and/or wire harness between the sensors and ECUs can be detected using the ECU Data List function of the intelligent tester.

(a) Turn the ignition switch off and connect the intelligent tester to the DLC3.

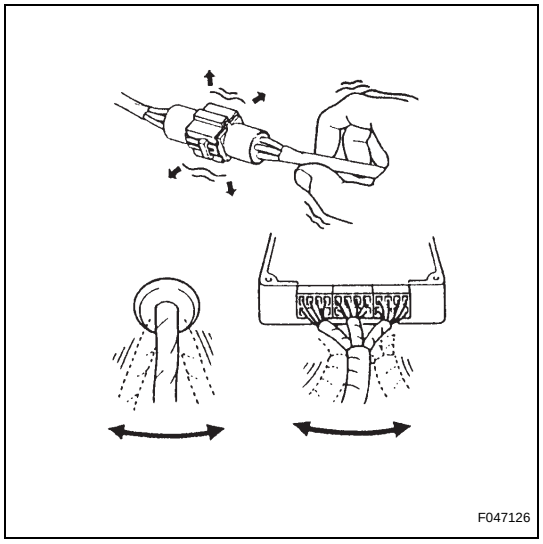




(b) Turn the ignition switch on (IG). Follow the directions on the intelligent tester to display the Data List and select areas where momentary interruption should be monitored.
HINT:
- A momentary interruption (open circuit) cannot be detected for 3 seconds after the ignition switch is turned on (IG) (initial check).
- If the status remains on (ERROR displayed), check the continuity between the ECU and the sensors, or between ECUs.
- The ERROR display on the intelligent tester remains on for 1 second after the harness signal changes from momentary interruption (open circuit) to normal condition.

Item (Display)	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
FR SPD OPN	FR speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
FL SPD OPN	FL speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
RR SPD OPN	RR speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
RL SPD OPN	RL speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
EFI COM OPN	EFI communication open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-

Item (Display)	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
YAW RATE OPN	Yaw rate sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
DECELERAT OPN	Acceleration sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
STEERING OPN	Steering angle sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
M/C OPN	Master cylinder pressure sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-



(c) While observing the screen, gently jiggle the connector or wire harness between the ECU and sensors, or between ECUs.

Result:

ERROR display does not change.

HINT:

The connector and/or wire harness will be in momentary interruption (open circuit) if the display changes. Repair or replace the connector and/or wire harness as one of them is faulty.

BC

PROBLEM SYMPTOMS TABLE

If there are no DTCs output and the problem still occurs, check the circuits for each problem symptom in the order given in the table below and proceed to the relevant troubleshooting page.

HINT:

- Inspect the fuse and relay before investigating the suspected areas as shown in the table below.
- Inspect each malfunction circuit in numerical order for the corresponding symptom.

Vehicle Stability Control System:

Symptom	Suspected Area	See page
ABS, BA and/or EBD does not operate	1. Check the DTC again and make sure that the normal system code is output.	BC-141
	2. IG power source circuit	BC-207
	3. Front speed sensor circuit	BC-156
	4. Rear speed sensor circuit	BC-164
	5. Check the brake actuator assembly with the intelligent tester. (Check brake actuator assembly operation using the Active Test function.) If abnormal, check the hydraulic circuit for leakage.	BC-425
	6. If the symptoms still occur even after the above circuits in suspected areas have been inspected and proved to be normal, replace the brake actuator assembly (skid control ECU).	BC-426
ABS, BA and/or EBD does not operate efficiently	1. Check the DTC again and make sure that the normal system code is output.	BC-141
	2. Front speed sensor circuit	BC-156
	3. Rear speed sensor circuit	BC-164
	4. Stop light switch circuit	BC-213
	5. Check the brake actuator assembly with the intelligent tester. (Check brake actuator assembly operation using the Active Test function.) If abnormal, check the hydraulic circuit for leakage.	BC-425
	6. If the symptoms still occur even after the above circuits in suspected areas have been inspected and proved to be normal, replace the brake actuator assembly (skid control ECU).	BC-426
ABS sensor DTC check cannot be done	1. Check the DTC again and make sure that the normal system code is output.	BC-141
	2. TC and CG terminal circuit	BC-266
	3. If the symptoms still occur even after the above circuit in suspected areas has been inspected and proved to be normal, replace the brake actuator assembly (skid control ECU).	BC-426
ABS warning light abnormal (Remains on)	1. ABS warning light circuit	BC-229
	2. Brake actuator assembly (Skid control ECU)	BC-426
ABS warning light abnormal (Does not come on)	1. ABS warning light circuit	BC-233
	2. Brake actuator assembly (Skid control ECU)	BC-426
BRAKE warning light abnormal (Remains on)	1. BRAKE warning light circuit	BC-244
	2. Brake actuator assembly (Skid control ECU)	BC-426
BRAKE warning light abnormal (Does not come on)	1. BRAKE warning light circuit	BC-252
	2. Brake actuator assembly (Skid control ECU)	BC-426

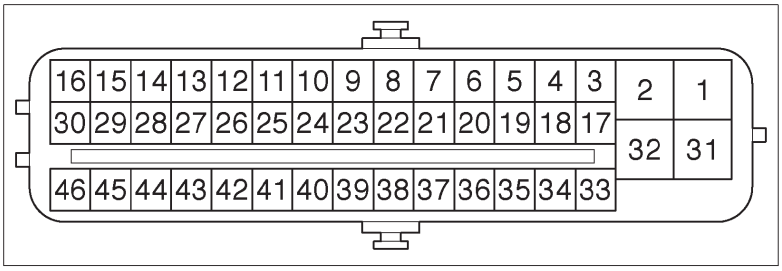
Symptom	Suspected Area	See page
VSC and/or TRAC does not operate	1. Check the DTC again and make sure that the normal system code is output.	BC-141
	2. IG power source circuit	BC-207
	3. Check the hydraulic circuit for leakage	-
	4. Front speed sensor circuit	BC-156
	5. Rear speed sensor circuit	BC-164
	6. Yaw rate and acceleration sensor circuit	BC-193
	7. Steering angle sensor circuit	BC-190
	8. If the symptoms still occur even after the above circuits in suspected areas have been inspected and proved to be normal, replace the brake actuator assembly (skid control ECU).	BC-426
VSC sensor DTC check cannot be done	1. Check the DTC again and make sure that the normal system code is output.	BC-141
	2. TC and CG terminal circuit	BC-266
	3. If the symptoms still occur even after the above circuit in suspected areas has been inspected and proved to be normal, replace the brake actuator assembly (skid control ECU).	BC-426
VSC warning light abnormal (Remains on) (*1)	1. VSC warning light circuit	BC-236
	2. Brake actuator assembly (Skid control ECU)	BC-426
VSC warning light abnormal (Does not come on) (*1)	1. VSC warning light circuit	BC-240
	2. Brake actuator assembly (Skid control ECU)	BC-426
Multi information display abnormal (Remains on) (*2)	1. VSC warning light circuit	BC-236
	2. Brake actuator assembly (Skid control ECU)	BC-426
Multi information display abnormal (Does not come on) (*2)	1. VSC warning light circuit	BC-240
	2. Brake actuator assembly (Skid control ECU)	BC-426
SLIP indicator light abnormal (Remains on)	1. SLIP indicator light circuit	BC-255
	2. Brake actuator assembly (Skid control ECU)	BC-426
SLIP indicator light abnormal (Does not come on)	1. SLIP indicator light circuit	BC-259
	2. Brake actuator assembly (Skid control ECU)	BC-426
Sensor check cannot be done	1. TS and CG terminal circuit	BC-269
	2. Brake actuator assembly (Skid control ECU)	BC-426
Skid control buzzer abnormal	1. Skid control buzzer circuit	BC-263
	2. Brake actuator assembly (Skid control ECU)	BC-426

(*1): Models without multi information display
(*2): Models with multi information display

TERMINALS OF ECU

1. Terminal of ECU

Skid Control ECU:



N

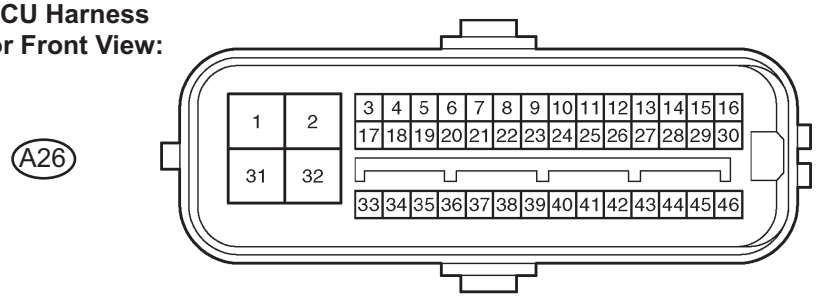
F045080E06

Symbols (Terminal No.)	Terminal Description
GND2 (1)	Pump motor ground
BM (2)	Motor relay input
FR+ (3)	Front wheel speed RH signal power supply output
FL- (4)	Front wheel speed LH signal input
RR+ (5)	Rear wheel speed RH signal power supply output
RL- (6)	Rear wheel speed LH signal input
CANH (11)	CAN communication line H
SP1 (12)	Speed signal output for combination meter
D/G (13)	Diagnosis tester communication line
MRF (14)	Fail safe motor relay output
MR (15)	Motor relay output
FR- (17)	Front wheel speed RH signal input
FL+ (18)	Front wheel speed LH signal power supply output
RR- (19)	Rear wheel speed RH signal input
RL+ (20)	Rear wheel speed LH signal power supply output
TS (24)	Test mode (signal check) input
CANL (25)	CAN communication line L
STP (27)	Stop light switch input
BZ (30)	Skid control buzzer output
+BS (31)	Solenoid relay power supply
GND1 (32)	Skid control ECU ground
WFSE (42)	WFSE input
R+ (45)	Power supply for motor relay
IG1 (46)	IG1 power supply

2. Terminal Inspection

(a) Disconnect the connector and measure the voltage or resistance on the wire harness side.

Skid Control ECU Harness Side Connector Front View:



HINT:
Voltage cannot be measured with the connector connected to the skid control ECU because the connector is watertight.

Standard

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
GND2 (A26-1) - Body ground	W-B - Body ground	Pump motor ground	Ignition switch off	Below 1 Ω
STP (A26-27) - Body ground	P - Body ground	Stop light switch input	Stop light switch ON → OFF (Brake pedal depressed → released)	8 to 14 V → Below 1.5 V
BZ (A26-30) - Body ground	R - Body ground	Buzzer output	Ignition switch on (IG), when buzzer not sounding	6 to 10 V
+BS (A26-31) - Body ground	L - Body ground	Solenoid relay power supply	Always	10 to 14 V
GND1 (A26-32) - Body ground	W-B - Body ground	Skid control ECU ground	Always	Below 1 Ω
IG1 (A26-46) - Body ground	P - Body ground	IG1 power supply	Ignition switch on (IG)	10 to 14 V

CALIBRATION

1. DESCRIPTION

- After replacing the VSC relevant components or performing "Front wheel alignment adjustment", clear and read the sensor calibration data.
- Follow the chart to perform calibration.

Replacing Parts / Operation	Necessary Operation
Skid control ECU	Yaw rate and acceleration sensor zero point calibration.
Yaw rate and acceleration sensor	1. Clearing zero point calibration data. 2. Yaw rate and acceleration sensor zero point calibration.
Front wheel alignment adjustment	1. Clearing zero point calibration data. 2. Yaw rate and acceleration sensor zero point calibration.

2. OBTAIN ZERO POINT OF YAW RATE AND ACCELERATION SENSOR (INTELLIGENT TESTER)

NOTICE:

- **While obtaining the zero point, keep the vehicle stationary and do not vibrate, tilt, move, or shake it. (Do not start the engine.)**
- **Be sure to perform this procedure on a level surface (with an inclination of less than 1 degree).**

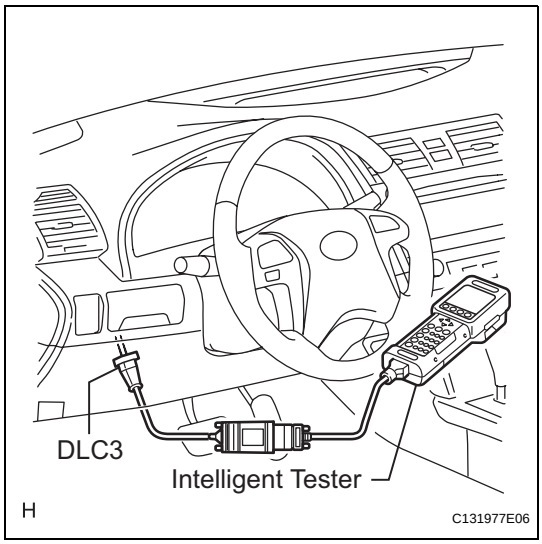
(a) Clear the zero point calibration data.

(1) Turn the ignition switch off.

(2) Connect the intelligent tester to the DLC3.

(3) Check that the steering wheel is centered and move the shift lever to the P position (A/T) or apply the parking brake (M/T).

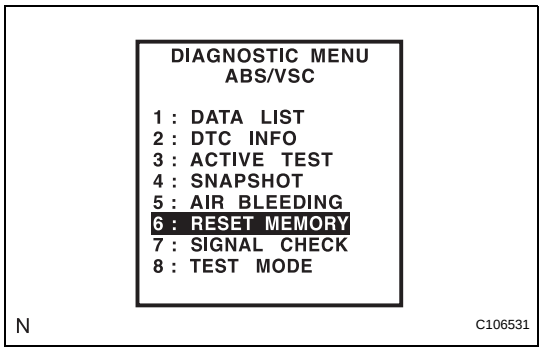
(4) Turn the ignition switch on (IG).



(5) Operate the intelligent tester to erase the codes (select "RESET MEMORY").

HINT:

Refer to the intelligent tester operator's manual for further details.



(6) Turn the ignition switch off.

NOTICE:

If the ignition switch is turned on (IG) for more than 15 seconds with the shift lever in the P position (A/T) or the parking brake applied (M/T) after zero point of the yaw rate and acceleration sensor has been cleared, only the zero point of the yaw rate sensor will be stored. If the vehicle is driven under these conditions, the skid control ECU will store the zero point calibration for the acceleration sensor as not being completed. The skid control ECU will then also indicate this as a malfunction of the VSC system using the indicator lights (models without multi information display) or multi information display (models with multi information display).

(b) Perform zero point calibration of the yaw rate and acceleration sensor.

(1) Turn the ignition switch off.

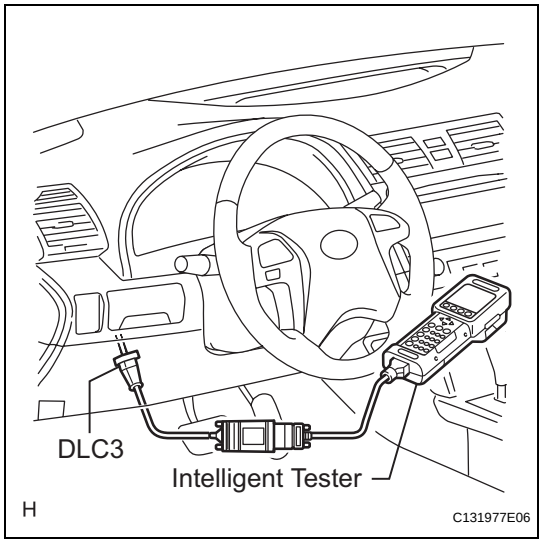
(2) Check that the steering wheel is centered and move the shift lever to the P position (A/T) or apply the parking brake (M/T).

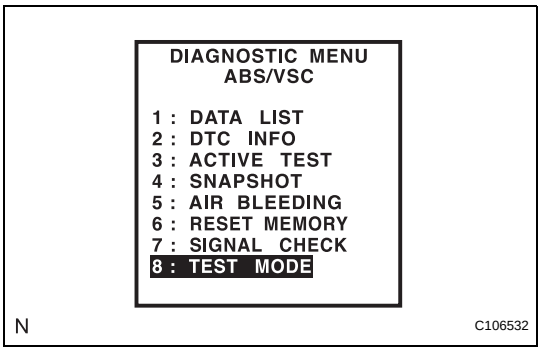
NOTICE:

DTCs C1210/36 and C1336/39 will be recorded if the shift lever is not in the P position (A/T) or the parking brake is not applied (M/T) (See page BC-188).

(3) Connect the intelligent tester to the DLC3.

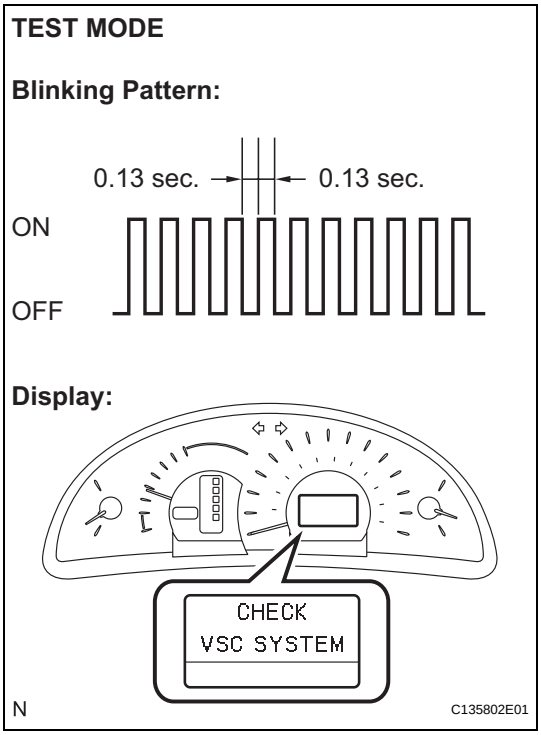
(4) Turn the ignition switch on (IG).





(5) Set the intelligent tester to Test Mode (select "TEST MODE").
HINT:
Refer to the intelligent tester operator's manual for further details.

(6) After the Test Mode has been entered, keep the vehicle stationary on a level surface for 2 seconds or more.

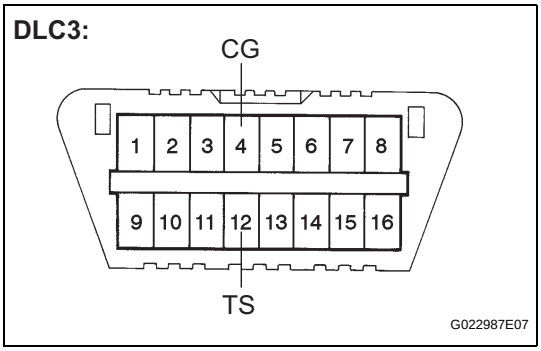


(7) Check that the VSC warning light blinks (models without multi information display) or "CHECK VSC SYSTEM" is displayed on the multi information display (models with multi information display) (Test Mode).
HINT:
- The SLIP indicator light remains on during Test Mode because TRAC is prohibited.
- If the VSC warning light does not blink (models without multi information display) or "CHECK VSC SYSTEM" is not displayed on the multi information display (models with multi information display), perform zero point calibration again.
- The zero point calibration is performed only once after the system enters the Test Mode.
- Calibration cannot be performed again until the stored data is cleared.

(8) Turn the ignition switch off and disconnect the intelligent tester.

3. OBTAIN ZERO POINT OF YAW RATE AND ACCELERATION SENSOR (SST CHECK WIRE)

NOTICE:
- **While obtaining the zero point, keep the vehicle stationary and do not vibrate, tilt, move, or shake it. (Do not start the engine.)**
- **Be sure to perform the procedure on a level surface (with an inclination of less than 1 degree).**

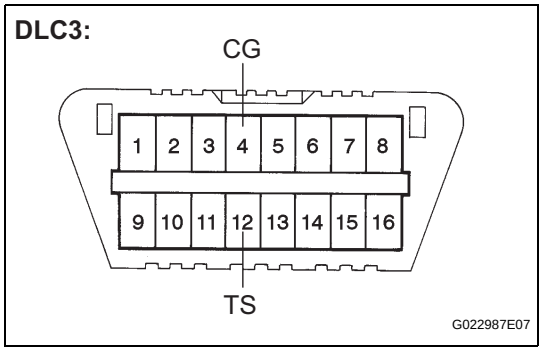


(a) Clear the zero point calibration data.
(1) Turn the ignition switch off.
(2) Check that the steering wheel is centered and move the shift lever to the P position (A/T) or apply the parking brake (M/T).
(3) Turn the ignition switch on (IG).
(4) The warning light and indicator light come on for 3 seconds to indicate that the initial check is completed.
(5) Using SST, connect and disconnect terminals TS and CG of the DLC3 4 times or more within 8 seconds.
SST 09843-18040

NOTICE:
If the ignition switch is turned on (IG) for more than 15 seconds with the shift lever in the P position (A/T) or the parking brake applied (M/T) after zero point of the yaw rate and acceleration sensor has been cleared, only the zero point of the yaw rate sensor will be stored. If the vehicle is driven under these conditions, the skid control ECU will store the zero point calibration for the acceleration sensor as not being completed. The skid control ECU will then also indicate this as a malfunction of the VSC system using the indicator lights (models without multi information display) or multi information display (models with multi information display).

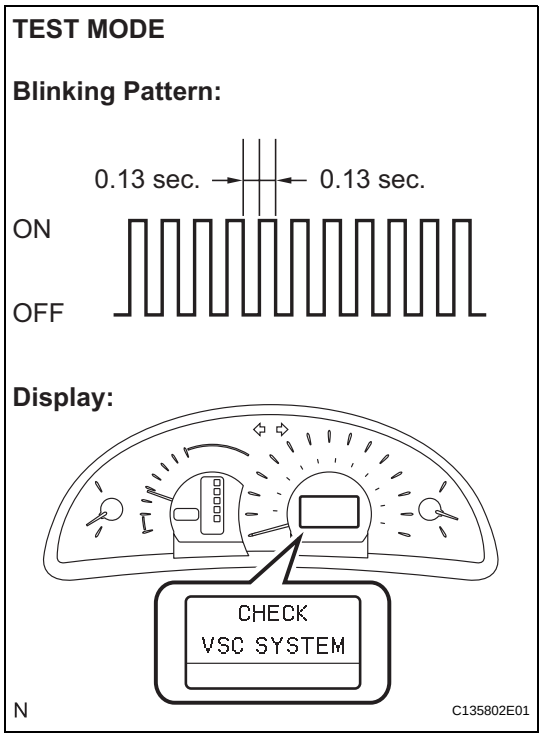
(b) Perform zero point calibration of the yaw rate and acceleration sensor.
(1) Turn the ignition switch off.
(2) Check that the steering wheel is centered and move the shift lever to the P position (A/T) or apply the parking brake (M/T).
NOTICE:
DTCs C1210/36 and C1336/39 will be recorded if the shift lever is not in the P position (A/T) or the parking brake is not applied (M/T) (See page BC-188).

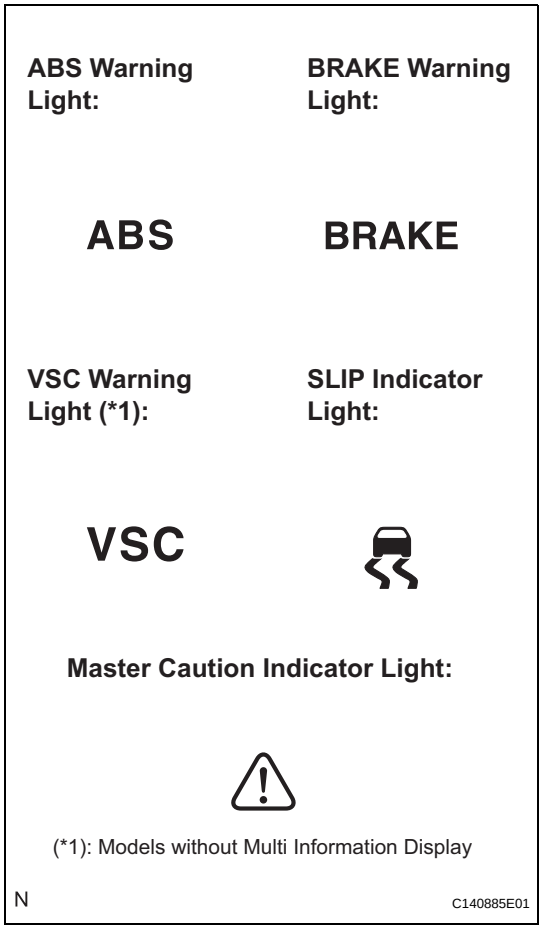
DLC3:



(3) Using SST, connect terminals TS and CG of the DLC3.
SST 09843-18040
(4) Turn the ignition switch on (IG).
(5) Keep the vehicle stationary on a level surface for 2 seconds or more.

BC





(6) Check that the VSC warning light blinks (models without multi information display) or "CHECK VSC SYSTEM" is displayed on the multi information display (models with multi information display) (Test Mode).
HINT:
- The SLIP indicator light remains on during Test Mode because TRAC is prohibited.
- If the VSC warning light does not blink (models without multi information display) or "CHECK VSC SYSTEM" is not displayed on the multi information display (models with multi information display), perform zero point calibration again.
- The zero point calibration is performed only once after the system enters the Test Mode.
- Calibration cannot be performed again until the stored data is cleared.

(7) Turn the ignition switch off and disconnect the SST from the DLC3.

TEST MODE PROCEDURE

1. WARNING LIGHT AND INDICATOR LIGHT INITIAL CHECK

(a) Release the parking brake.
NOTICE:
Before releasing the parking brake, move the shift lever to the P position for safety (A/T) or set the chocks to hold the vehicle for safety (M/T).
HINT:
When the parking brake is applied or the level of the brake fluid is low, the BRAKE warning light comes on.

(b) When the ignition switch is turned on (IG), check that the ABS warning, BRAKE warning, SLIP indicator, and master caution indicator lights come on for approximately 3 seconds. Vehicles equipped with VSC, which are not equipped with a multi information display, the VSC warning light will illuminate instead of the master caution indicator light.
HINT:
If the ECU stores a DTC, the ABS warning, BRAKE warning, VSC warning and SLIP indicator lights will come on.

If the vehicle is equipped with a multi information display, and the vehicle stores a DTC, the master caution indicator light will illuminate, and the multi information display will indicate the malfunction instead of the VSC warning light. In this case, the ABS warning, BRAKE warning, and SLIP indicator lights will also come on.
If the indicator remains on or does not come on, proceed to troubleshooting for the light circuits listed below.

Trouble Area	See procedure
ABS warning light circuit	BC-229 or BC-233
BRAKE warning light circuit	BC-244 or BC-252
VSC warning light circuit	BC-236 or BC-240
SLIP indicator light circuit	BC-255 or BC-259

2. SENSOR CHECK USING TEST MODE (SIGNAL CHECK) (INTELLIGENT TESTER)

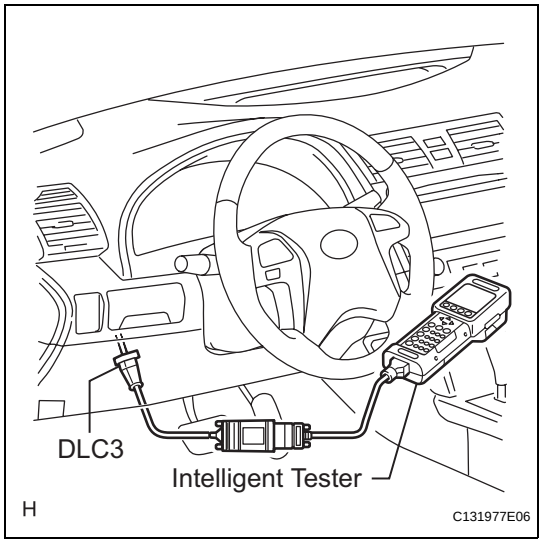
NOTICE:

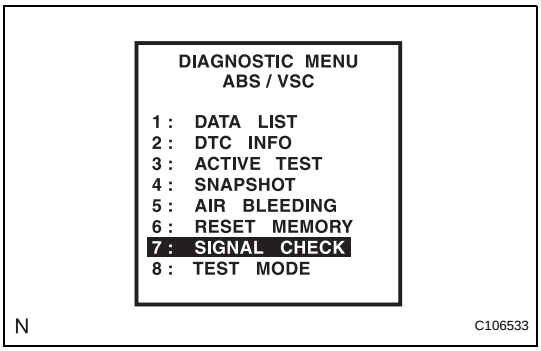
After replacement of the brake actuator assembly and/or yaw rate and acceleration sensor, perform zero point calibration of the yaw rate and acceleration sensor.

HINT:

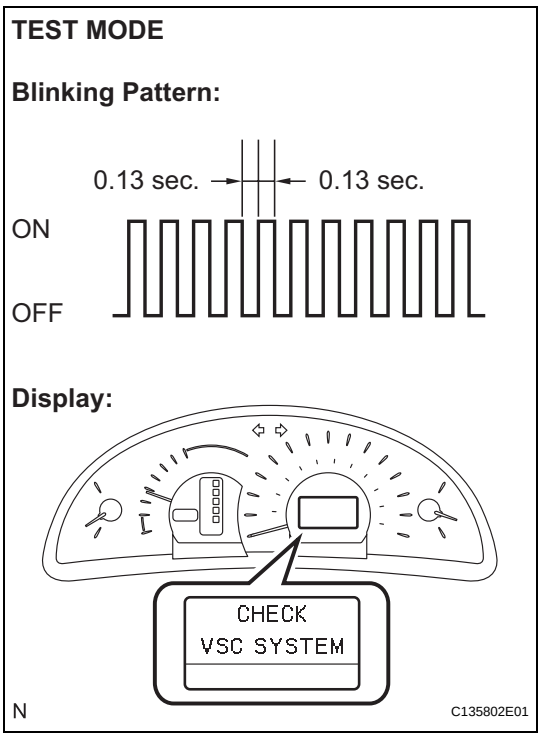
- If the ignition switch is turned from on (IG) to on (ACC) or off during Test Mode (signal check), DTCs of the signal check function will be erased.
- During Test Mode (signal check), the skid control ECU records all DTCs of the signal check function. By performing the Test Mode (signal check), the codes are erased if a normal condition is confirmed. The remaining codes are the codes where an abnormality was found.

(a) Procedure to enter Test Mode.
  (1) Turn the ignition switch off.
  (2) Connect the intelligent tester to the DLC3.
  (3) Check that the steering wheel is centered and move the shift lever to the P position (A/T) or apply the parking brake (M/T).
  (4) Turn the ignition switch on (IG).



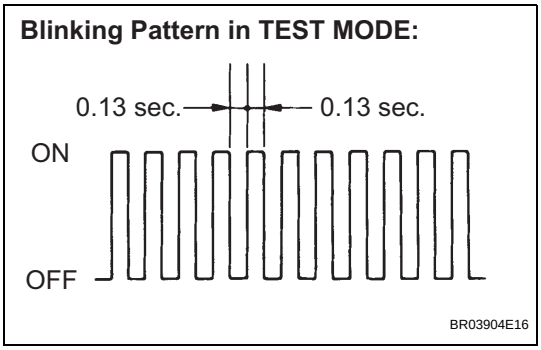


(5) Set the intelligent tester to Test Mode (select "SIGNAL CHECK").
HINT:
Refer to the intelligent tester operator's manual for further details.



(6) Check that the ABS and VSC (models without multi information display) warning lights blink or "CHECK VSC SYSTEM" is displayed on the multi information display (models with multi information display) (Test Mode).
HINT:
- The SLIP indicator light remains on during Test Mode because TRAC is prohibited.
- If the ABS and VSC (models without multi information display) warning lights do not blink or "CHECK VSC SYSTEM" is not displayed on the multi information display (models with multi information display), inspect the TS and CG terminal circuit, and ABS and VSC warning light circuits.

Trouble Area	See procedure
TS and CG terminal circuit	BC-269
ABS warning light circuit	BC-233
VSC warning light circuit	BC-240



(7) Check the ABS sensor.
HINT:
Check that the ABS warning light is blinking in Test Mode and perform the check.

3. ACCELERATION SENSOR CHECK (INTELLIGENT TESTER)

(a) Keep the vehicle stationary on a level surface for 1 second or more.
HINT:
Acceleration sensor check can be performed with the master cylinder pressure sensor check below.

4. MASTER CYLINDER PRESSURE SENSOR CHECK (INTELLIGENT TESTER)

(a) Leave the vehicle in a stationary condition and release the brake pedal for 1 second or more, and quickly and continuously depress the brake pedal with a force of 98 N (10 kgf, 22 lbf) or more for 1 second.

(b) Check that the ABS warning light stays on for 3 seconds.
HINT:
- Ensure that the ABS warning light comes on.
- While the ABS warning light stays on, continue to depress the brake pedal with a force of 98 N (10 kgf, 22 lbf) or more.
- The ABS warning light comes on for 3 seconds every time brake pedal operation above is performed.
- If the check of the master cylinder pressure sensor is not completed, depressing the brake pedal causes further decrease in the negative pressure, making the sensor check difficult to be completed.
- If the negative pressure is insufficient, the master cylinder pressure sensor check may not be completed. In this case, run the engine at idle to obtain sufficient negative pressure.
- If the brake pedal is strongly depressed when the negative pressure is insufficient, the BRAKE warning light may come on in accordance with the booster pressure control. In this case, run the engine at idle to obtain sufficient negative pressure.

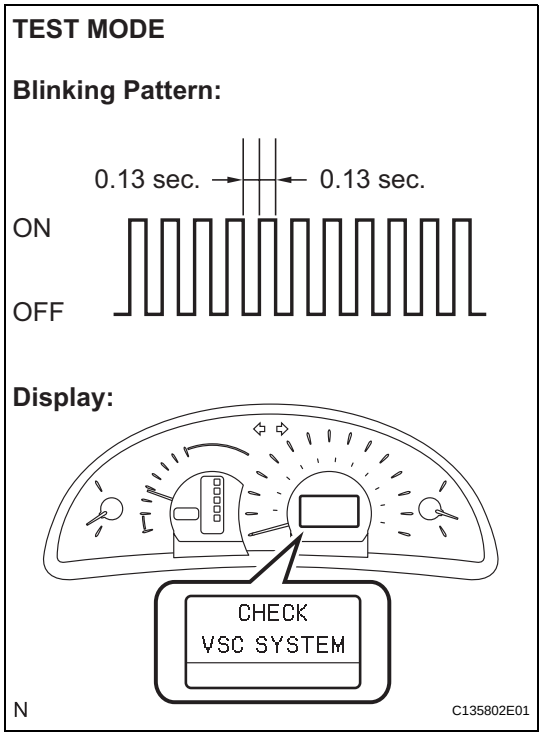
5. SPEED SENSOR CHECK (INTELLIGENT TESTER)

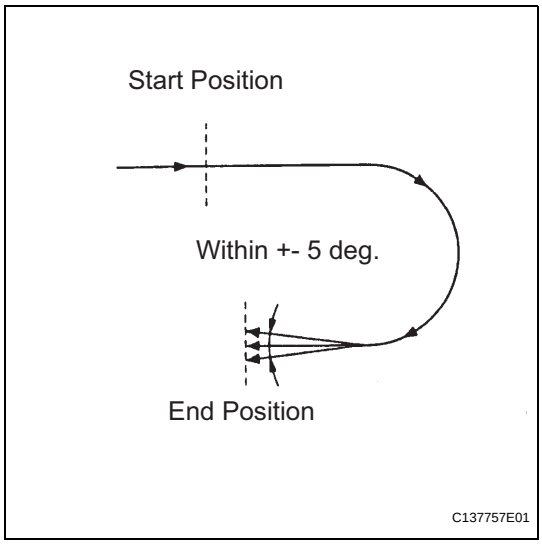
(a) Check the speed sensor signal.
(1) Drive the vehicle straight ahead.
Accelerate the vehicle to a speed of 28 mph (45 km/h) or more for several seconds and check that the ABS warning light goes off.
HINT:
The sensor check may not be completed if wheelspin occurs.

(b) Stop the vehicle.
NOTICE:
- **Before performing the speed sensor check, complete the acceleration sensor and master cylinder pressure sensor checks.**
- **The speed sensor check may not be completed if the speed sensor check is started while turning the steering wheel or spinning the wheels.**
- **After the ABS warning light goes off and if the vehicle speed exceeds 50 mph (80 km/h), a signal check code will be stored again. Accelerate or stop the vehicle before the speed reaches 50 mph (80 km/h).**
- **If the signal check has not been completed, the ABS warning light blinks while driving and the ABS system does not operate.**

HINT:
When the sensor check has been completed, the ABS warning light goes off while driving and blinks in the Test Mode pattern while stationary.

(c) Check the VSC sensor.
Check that the VSC warning light (models without multi information display) blinks or "CHECK VSC SYSTEM" is displayed on the multi information display (models with multi information display), and perform the check.



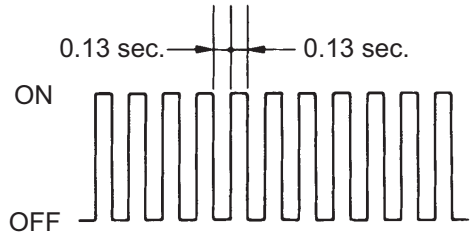


6. YAW RATE SENSOR CHECK (INTELLIGENT TESTER)

(a) Check the output of the yaw rate sensor.
(1) Keep the vehicle in a stationary condition on a level surface for 1 second or more.
(2) Move the shift lever from P to the D position (A/T) or release the parking brake (M/T) and drive the vehicle at a speed of approximately 3 mph (5 km/h), and turn the steering wheel either to the left or right 90° or more until the vehicle makes a 180° turn.
(3) Stop the vehicle and move the shift lever to the P position (A/T) or apply the parking brake (M/T). Check that the skid control buzzer sounds for 3 seconds.
HINT:
- If the skid control buzzer sounds, the sensor check is completed normally.
- If the skid control buzzer does not sound, check the skid control buzzer circuit (See page BC-263), then perform the sensor check again.
- If the skid control buzzer still does not sound, there is a malfunction in the yaw rate sensor, so check the DTC.
- Make a 180° turn. At the end of the turn, the direction of the vehicle should be within 180° +- 5° of its start position.

- Do not spin the wheels.
- Do not turn the ignition switch off while turning.
- Do not move the shift lever to the P position (A/T) or do not apply the parking brake (M/T) while turning, but changing in the vehicle speed, stopping, or driving in reverse is possible.
- Complete the turn within 20 seconds.

Blinking Pattern in TEST MODE:



7. END OF SENSOR CHECK (INTELLIGENT TESTER)

(a) If the sensor check is completed, the ABS warning light blinks (Test Mode) when the vehicle stops and the ABS warning light is off while the vehicle is driving.

NOTICE:

- **When the yaw rate sensor, acceleration sensor, speed sensor, and master cylinder pressure sensor checks are completed, the sensor check is completed.**
- **If the sensor check is not completed, the ABS warning light blinks even while the vehicle is driving and the ABS does not operate.**

8. READ DTC OF SIGNAL CHECK FUNCTION (INTELLIGENT TESTER)

(a) Read the DTC(s) by following the tester screen.

NOTICE:

- **If only the DTCs are displayed, repair the malfunction area and clear the DTCs.**
- **If the DTCs or Test Mode codes (DTC of signal check function) are displayed, repair the malfunction area, clear the DTCs and perform the Test Mode inspection.**

HINT:

See the list of DTC (See procedure "A").

9. SENSOR CHECK USING TEST MODE (SIGNAL CHECK) (SST CHECK WIRE)

NOTICE:

After replacement of the brake actuator assembly and/or yaw rate and acceleration sensor, perform zero point calibration of the yaw rate and acceleration sensor.

HINT:

- If the ignition switch is turned from on (IG) to on (ACC) or off during Test Mode (signal check), DTCs of the signal check function will be erased.
- During Test Mode (signal check), the skid control ECU records all DTCs of the signal check function. By performing the Test Mode (signal check), the codes are erased if a normal condition is confirmed. The remaining codes are the codes where an abnormality was found.

(a) Procedure to enter Test Mode.

(1) Turn the ignition switch off.

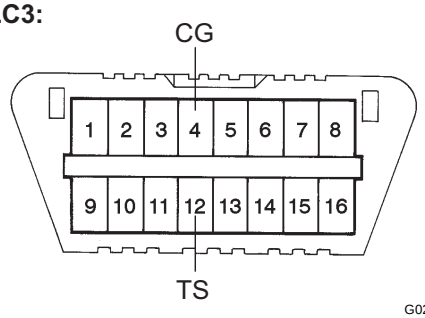
BC

(2) Check that the steering wheel is centered and move the shift lever to the P position (A/T) or apply the parking brake (M/T).

(3) Using SST, connect terminals TS and CG of the DLC3.
SST 09843-18040

(4) Turn the ignition switch on (IG).

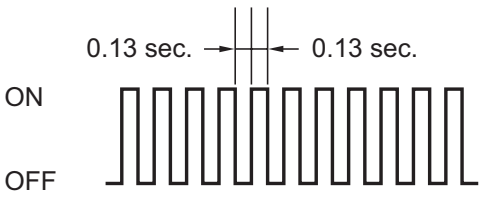
DLC3:



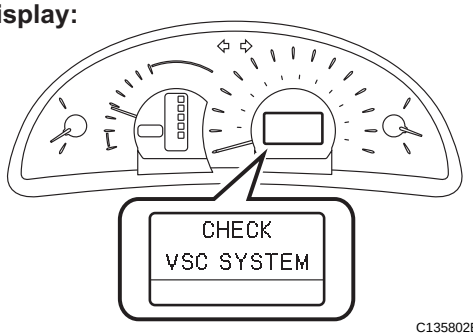
G022987E07

TEST MODE

Blinking Pattern:



Display:



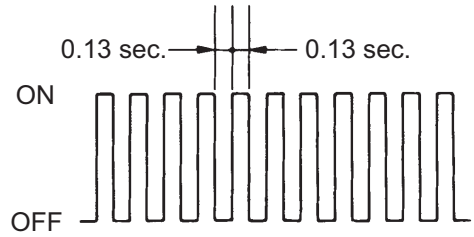
N

C135802E01

(5) Check that the ABS and VSC (models without multi information display) warning lights blink or "CHECK VSC SYSTEM" is displayed on the multi information display (models with multi information display) (Test Mode).
HINT:
- The SLIP indicator light remains on during Test Mode because TRAC is prohibited.
- If the ABS and VSC (models without multi information display) warning lights do not blink or "CHECK VSC SYSTEM" is not displayed on the multi information display (models with multi information display), inspect the TS and CG terminal circuit, and ABS and VSC warning light circuits.

Trouble Area	See procedure
TS and CG terminal circuit	BC-269
ABS warning light circuit	BC-233
VSC warning light circuit	BC-240

Blinking Pattern in TEST MODE:



BR03904E16

(6) Check the ABS sensor.
HINT:
Check that the ABS warning light is blinking in Test Mode and perform the check.

10. ACCELERATION SENSOR CHECK (SST CHECK WIRE)

(a) Keep the vehicle stationary on a level surface for 1 second or more.
HINT:
Acceleration sensor check can be performed with the master cylinder pressure sensor check below.

11. MASTER CYLINDER PRESSURE SENSOR CHECK (SST CHECK WIRE)

(a) Leave the vehicle in a stationary condition and release the brake pedal for 1 second or more, and quickly and continuously depress the brake pedal with a force of 98 N (10 kgf, 22 lbf) or more for 1 second.

(b) Check that the ABS warning light stays on for 3 seconds.
HINT:
- Ensure that the ABS warning light comes on.
- While the ABS warning light stays on, continue to depress the brake pedal with a force of 98 N (10 kgf, 22 lbf) or more.
- The ABS warning light comes on for 3 seconds every time the brake pedal operation above is performed.
- If the check of the master cylinder pressure sensor is not completed, depressing the brake pedal causes further decrease in the negative pressure, making the sensor check difficult to be completed.
- If the negative pressure is insufficient, the master cylinder pressure sensor check may not be completed. In this case, run the engine at idle to obtain sufficient negative pressure.
- If the brake pedal is strongly depressed when the negative pressure is insufficient, the BRAKE warning light may come on in accordance with the booster pressure control. In this case, run the engine at idle to obtain sufficient negative pressure.

12. SPEED SENSOR CHECK (SST CHECK WIRE)

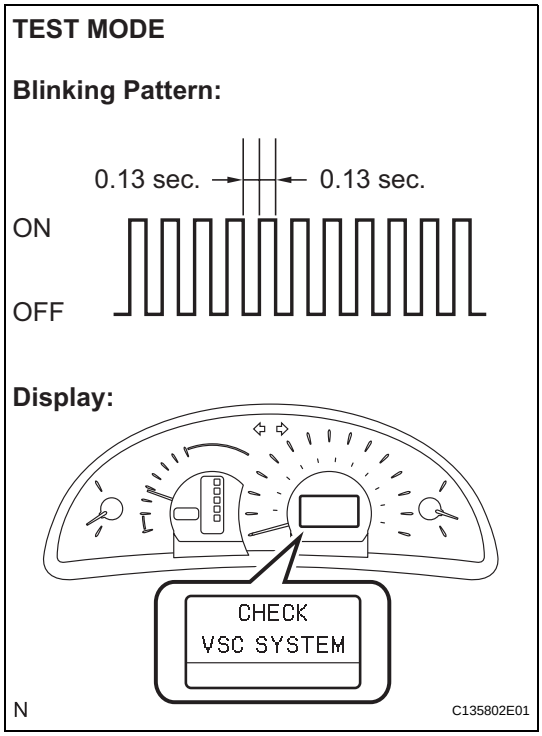
(a) Check the speed sensor signal.

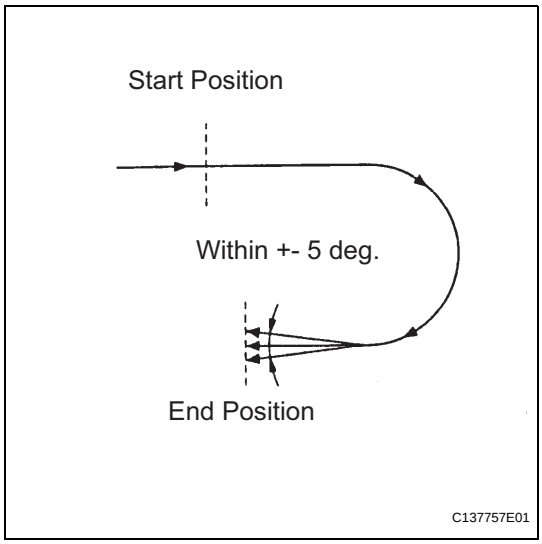
(1) Drive the vehicle straight ahead.
Accelerate the vehicle to a speed of 28 mph (45 km/h) or more for several seconds and check that the ABS warning light goes off.
HINT:
The sensor check may not be completed if wheelspin occurs.

(b) Stop the vehicle.
NOTICE:
- **Before performing the speed sensor check, complete the acceleration sensor and master cylinder pressure sensor checks.**
- **The speed sensor check may not be completed if the speed sensor check is started while turning the steering wheel or spinning the wheels.**
- **After the ABS warning light goes off, if vehicle speed exceeds 50 mph (80 km/h), a signal check code will be stored again. Accelerate or stop the vehicle before the speed reaches 50 mph (80 km/h).**
- **If the signal check has not been completed, the ABS warning light blinks while driving and the ABS system does not operate.**

HINT:
When the sensor check has been completed, the ABS warning light goes off while driving and blinks in the Test Mode pattern while stationary.

(c) Check the VSC sensor.
Check that the VSC warning light (models without multi information display) blinks or "CHECK VSC SYSTEM" is displayed on the multi information display (models with multi information display), and perform the check.



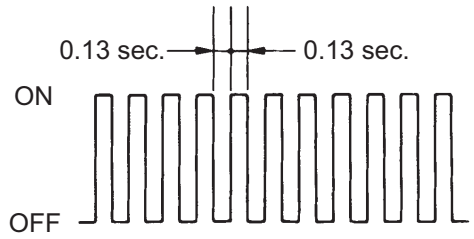


13. YAW RATE SENSOR CHECK (SST CHECK WIRE)

(a) Check the output of the yaw rate sensor.
(1) Keep the vehicle stationary on a level surface for 1 second or more.
(2) Move the shift lever from P to the D position (A/T) or release the parking brake (M/T) and drive the vehicle at a vehicle speed of approximately 3 mph (5 km/h) and turn the steering wheel either to the left or right 90° or more and until the vehicle makes a 180° turn.
(3) Stop the vehicle and move the shift lever to the P position (A/T) or apply the parking brake (M/T). Check that the skid control buzzer sounds for 3 seconds.
HINT:
- If the skid control buzzer sounds, the sensor check is completed normally.
- If the skid control buzzer does not sound, check the skid control buzzer circuit (See page BC-263), then perform the sensor check again.
- If the skid control buzzer still does not sound, there is a malfunction in the yaw rate sensor, so check the DTC.
- Make a 180° turn. At the end of the turn, the direction of the vehicle should be within 180° +- 5° of its start position.
- Do not spin the wheels.

- Do not turn the ignition switch off while turning.
- Do not move the shift lever to the P position (A/T) or do not apply the parking brake (M/T) while turning, but changing in the vehicle speed, stopping, or driving in reverse is possible.
- Complete the turn within 20 seconds.

Blinking Pattern in TEST MODE:



BR03904E16

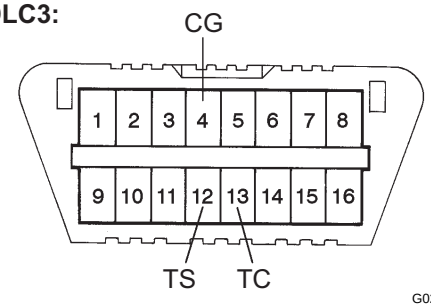
14. END OF SENSOR CHECK (SST CHECK WIRE)

(a) If the sensor check is completed, the ABS warning light blinks (Test Mode) when the vehicle stops and the ABS warning light is off while the vehicle is driving.

NOTICE:

- **When the yaw rate sensor, acceleration sensor, speed sensor, and master cylinder pressure sensor checks are completed, the sensor check is completed.**
- **If the sensor check is not completed, the ABS warning light blinks even while the vehicle is driving and the ABS does not operate.**

DLC3:



G022988E01

15. READ DTC OF SIGNAL CHECK FUNCTION (SST CHECK WIRE)

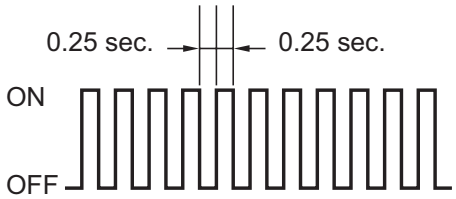
(a) Using SST, connect terminals TC and CG of the DLC3.

SST 09843-18040

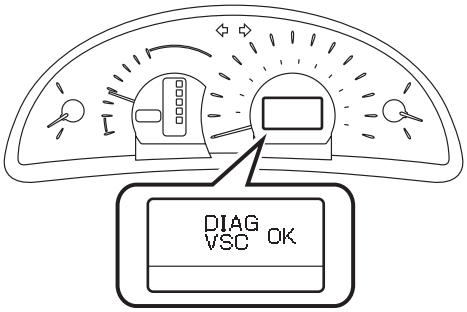
BC

(b) Count the number of blinks of the ABS and VSC (models without multi information display) warning lights or read "DIAG VSC" on the multi information display (models with multi information display).

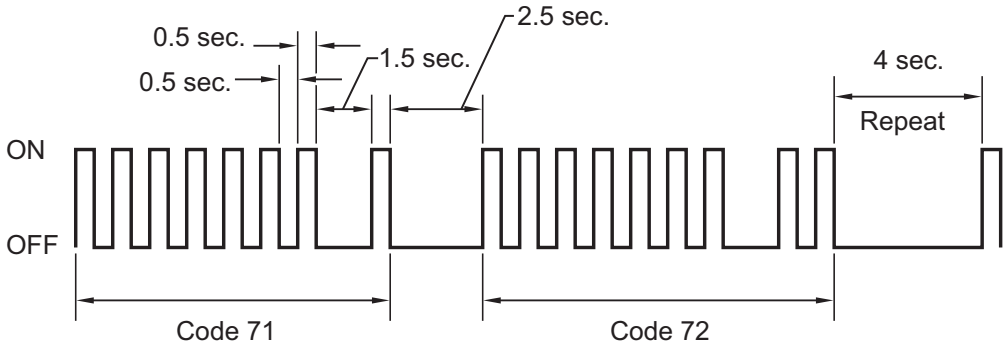
Blinking Pattern in Normal System Code:



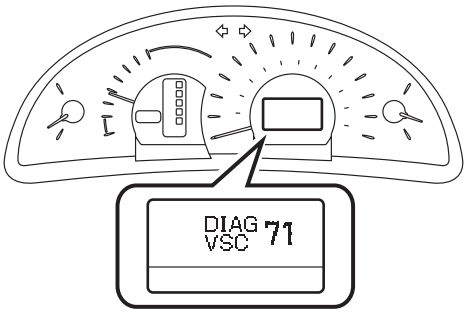
Display of Normal System Code:



Blinking Pattern in Trouble Code (Example Codes 71 and 72):



Display of Trouble Code (Example Code 71):



N

C135803E02

NOTICE:

- **If only the DTCs are displayed, repair the malfunction area and clear the DTCs.**
- **If the DTCs or Test Mode codes (DTC of signal check function) are displayed, repair the malfunction area, clear the DTCs and perform the Test Mode inspection.**

HINT:

- If more than 1 malfunction is detected at the same time, the lowest numbered code will be displayed first.
- See the list of DTC (See procedure "A").

(c) After performing the check, disconnect the SST from terminals TS and CG, and TC and CG of the DLC3 and turn the ignition switch off.

(d) Turn the ignition switch on (IG).
HINT:
- If the ignition switch is not turned on (IG) after the SST is removed from the DLC3, the previous Test Mode will continue.
- If the ignition switch is turned on (IG) with terminals TS and CG shorted, the previous Test Mode will continue.

16. DTC OF TEST MODE (SIGNAL CHECK) FUNCTION (Procedure "A")

ABS sensor:

Code No.	Diagnosis	Trouble Area
C1271/71	Low output signal of front speed sensor RH	• Front speed sensor RH • Sensor installation • Speed sensor rotor
C1272/72	Low output signal of front speed sensor LH	• Front speed sensor LH • Sensor installation • Speed sensor rotor
C1273/73	Low output signal of rear speed sensor RH	• Rear speed sensor RH • Sensor installation • Speed sensor rotor
C1274/74	Low output signal of rear speed sensor LH	• Rear speed sensor LH • Sensor installation • Speed sensor rotor
C1275/75	Abnormal change in output signal of front speed sensor RH	Speed sensor rotor
C1276/76	Abnormal change in output signal of front speed sensor LH	Speed sensor rotor
C1277/77	Abnormal change in output signal of rear speed sensor RH	Speed sensor rotor
C1278/78	Abnormal change in output signal of rear speed sensor LH	Speed sensor rotor
C1279/79	Acceleration sensor output voltage malfunction	• Yaw rate and acceleration sensor • Sensor installation
C1281/81	Master cylinder pressure sensor output malfunction	• Stop light switch • Master cylinder pressure sensor

VSC sensor:

Code No.	Diagnosis	Trouble Area
C0371/71	Yaw rate sensor	Yaw rate and acceleration sensor

HINT:
The codes in this table are output only in Test Mode (signal check).

BC

DIAGNOSIS SYSTEM

1. DESCRIPTION

When troubleshooting a vehicle with the diagnosis system, the only difference from the usual troubleshooting procedure is connecting the intelligent tester to the vehicle and reading various data output from the vehicle's skid control ECU.

The skid control ECU records DTCs when the computer detects a malfunction in the computer itself or in its circuits.

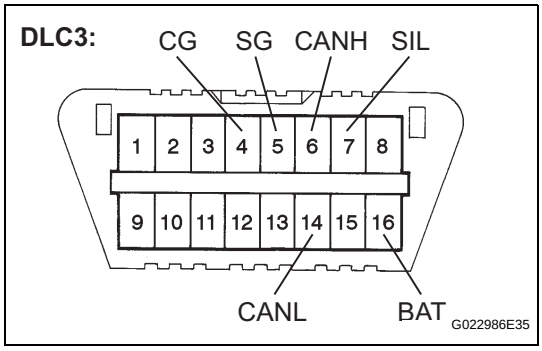
To check the DTCs, connect the intelligent tester to the DLC3 on the vehicle. The intelligent tester enables you to erase the DTCs, activate the various actuators, and check the Freeze Frame Data and Data List.

(a) Check the battery voltage.

Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge the battery before proceeding.



(b) Check the DLC3.

The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

Verify the conditions listed in the table below.

Symbols (Terminal No.)	Terminal Description	Condition	Specified condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	*Ignition switch off	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	*Ignition switch off	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	*Ignition switch off	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	*Ignition switch off	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	*Ignition switch off	6 kΩ or higher

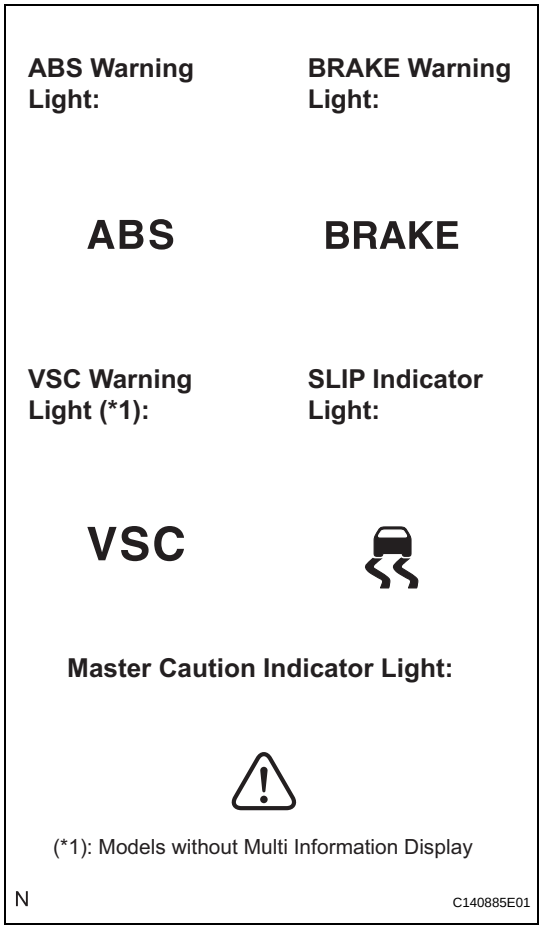
NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**

HINT:

Connect the cable of the intelligent tester to the DLC3, turn the ignition switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's operator's manual.

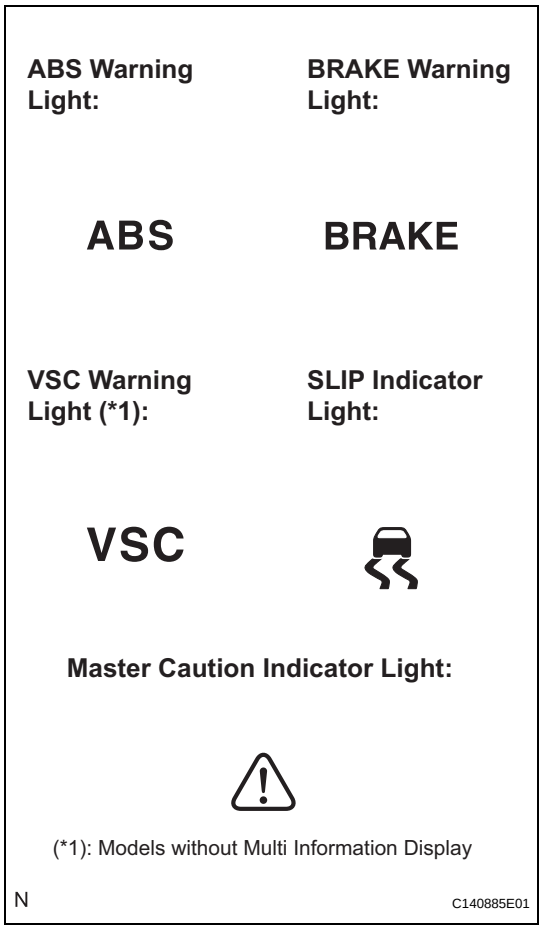


2. DIAGNOSIS

(a) If the skid control ECU detects a malfunction, the ABS, BRAKE, and VSC (models without multi information display) warning lights, and SLIP indicator light will come on and the multi information display (models with multi information display) shows warning messages in order to warn the driver.
The table below indicates which lights will come on when there is a malfunction in a particular function.

BC

Item / Trouble Area	ABS	EBD	BA	TRAC	VSC
ABS warning light	○	○	○	-	-
BRAKE warning light	-	○	-	-	-
VSC warning light (*1)	○	○	○	○	○
Multi information display (*2)	○	○	○	○	○
SLIP indicator light	○	○	○	○	○



○: Light ON
-: Light OFF
(*1): Models without multi information display
(*2): Models with multi information display

- The DTCs are simultaneously stored in the memory. The DTCs can be read by connecting the SST between terminals TC and CG of the DLC3 and observing the blinking pattern of the ABS and VSC (models without multi information display) warning lights, by reading the multi information display (models with multi information display), or by connecting the intelligent tester.
- This system has a Test Mode (signal check) function (See page BC-123).
  The DTC can be read by connecting the intelligent tester and observing the blinking pattern of the ABS and VSC (models without multi information display) warning lights or by reading the multi information display (models with multi information display).

3. WARNING LIGHT AND INDICATOR LIGHT CHECK

(a) Release the parking brake.
NOTICE:
When releasing the parking brake, move the shift lever to the P position for safety (A/T) or set the chocks to hold the vehicle for safety (M/T).
HINT:
When the parking brake is applied or the level of the brake fluid is low, the BRAKE warning light comes on.

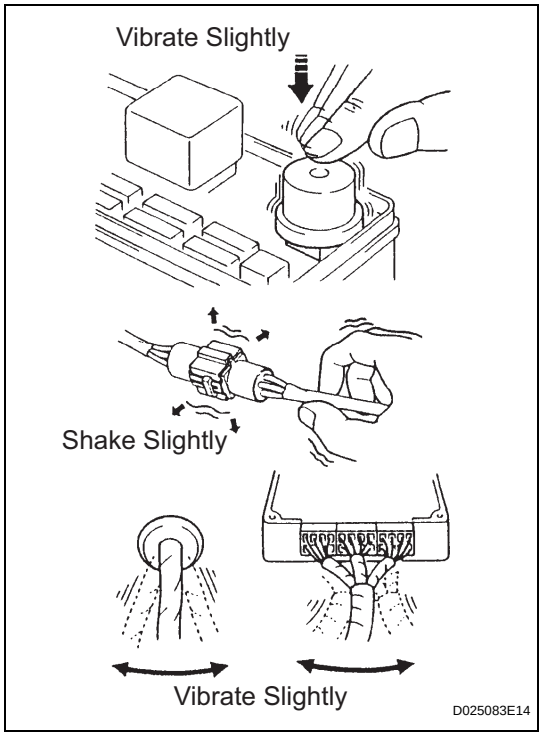
(b) When the ignition switch is turned on (IG), check that the ABS, BRAKE and VSC (models without multi information display) warning lights, and SLIP, and master caution indicator lights come on for approximately 3 seconds.
HINT:
If the warning light and indicator light check result is not normal, proceed to troubleshooting for the ABS, BRAKE and VSC warning light circuits and SLIP indicator light circuit.
If the indicator remains on, proceed to troubleshooting for the light circuit below.

Trouble Area	See procedure
ABS warning light circuit	BC-229
BRAKE warning light circuit	BC-244
VSC warning light circuit	BC-236
SLIP indicator light circuit	BC-255

4. SYMPTOM SIMULATION

HINT:

The most difficult case in troubleshooting is when no symptoms occur. In such cases, a thorough customer problem analysis must be carried out. Then the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be reproduced. No matter how experienced or skilled a technician may be, if he proceeds to troubleshoot without confirming the problem symptoms, he will likely overlook something important and make a wrong guess at some points in the repair operation. This leads to a standstill in troubleshooting.



(a) Vibration method: When vibration seems to be the major cause.

HINT:

Perform the simulation method only during the primary check period (for approximately 6 seconds after the ignition switch is on (IG)).

(1) Slightly vibrate the part of the sensor considered to be the problem cause with your fingers and check whether the malfunction occurs.

(2) Slightly shake the connector vertically and horizontally.

HINT:

Shaking the relays too strongly may result in open relays.

(3) Slightly shake the wire harness vertically and horizontally. The connector joint and fulcrum of the vibration are the major areas to be checked thoroughly.

BC

DTC CHECK / CLEAR

1. DTC CHECK/CLEAR (INTELLIGENT TESTER)

(a) Check the DTC.

(1) Connect the intelligent tester to the DLC3.

(2) Turn the ignition switch on (IG).

(3) Read the DTCs following the prompts on the tester screen.

(b) Clear the DTC.

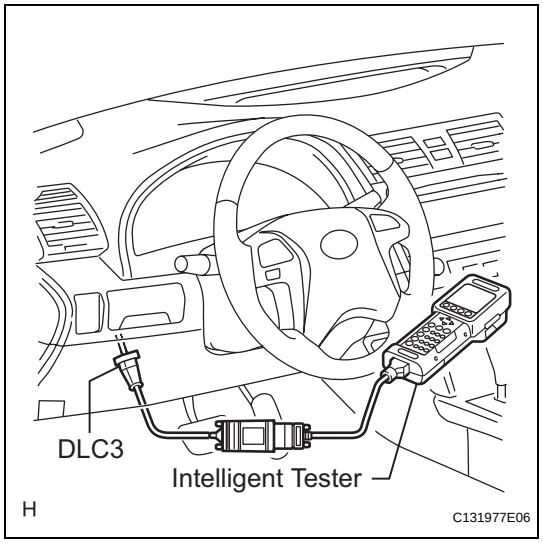
(1) Connect the intelligent tester to the DLC3.

(2) Turn the ignition switch on (IG).

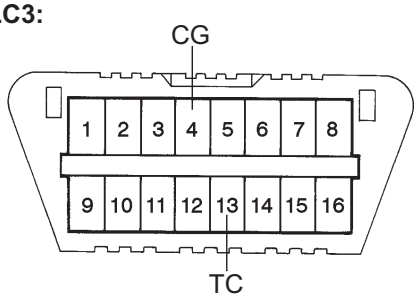
(3) Operate the intelligent tester to clear the codes.

HINT:

Refer to the intelligent tester operator's manual for further details.



DLC3:



2. DTC CHECK/CLEAR (SST CHECK WIRE)

(a) Check the DTC.

(1) Using SST, connect terminals TC and CG of the DLC3.

SST 09843-18040

(2) Turn the ignition switch on (IG).

(3) Observe the blinking pattern of the ABS and VSC (models without multi information display) warning lights or read the multi information display (models with multi information display) in order to identify the DTC.

HINT:

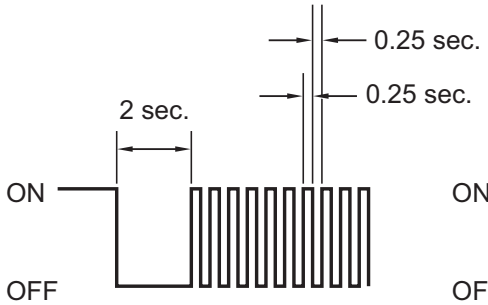
If no code appears, inspect the TC and CG terminal circuit, and ABS and VSC warning light circuits.

Trouble Area	See procedure
TC and CG terminal circuit	BC-266
ABS warning light circuit	BC-229 or BC-233
VSC warning light circuit	BC-236 or BC-240

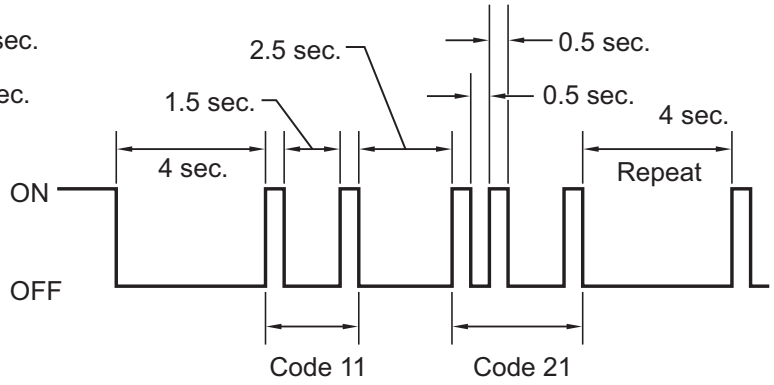
BC

(4) As an example, the illustration below shows the blinking patterns of the normal system code and trouble codes 11 and 21 for ABS and VSC (models without multi information display) warning lights or display of the normal system code and trouble code 43 for the VSC on the multi information display (models with multi information display).

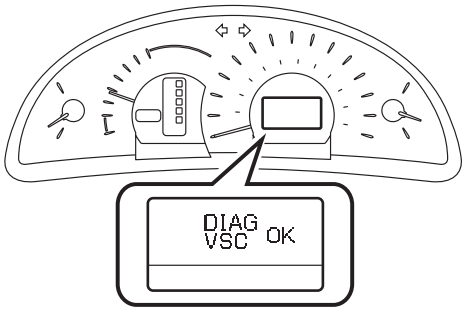
Blinking Pattern in Normal System Code:



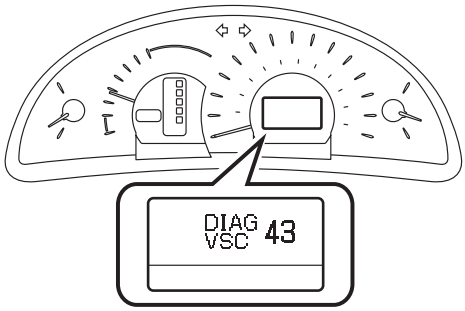
Blinking Pattern in Trouble Code (Example Codes 11 and 21):



Display of Normal System Code:



Display of Trouble Code (Example Code 43):



N

C135804E02

(5) The codes are explained in the code table (See page BC-151).

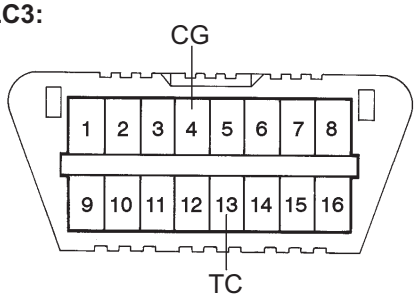
(6) After completing the check, disconnect terminals TC and CG of the DLC3, and turn off the display. If 2 or more DTCs are detected at the same time, the DTCs will be displayed in ascending order.

(b) Clear the DTC.

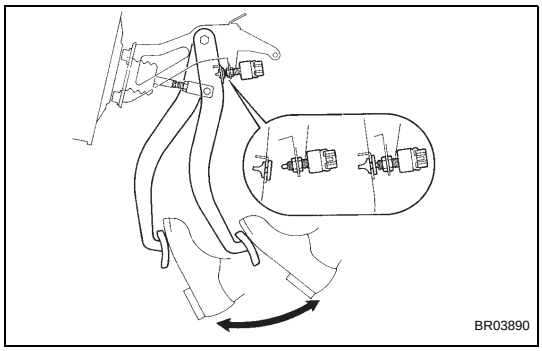
(1) Using SST, connect terminals TC and CG of the DLC3.
SST 09843-18040

(2) Turn the ignition switch on (IG).

DLC3:



G022986E01



(3) Clear the DTCs stored in the ECU by depressing the brake pedal 8 times or more within 5 seconds.
(4) Check that the warning light or multi information display indicates the normal system code.
(5) Remove the SST from the terminals of the DLC3.
HINT:
Clearing the DTCs cannot be performed by disconnecting the battery terminal or the ECU-IG NO. 2 fuse.

3. END OF DTC CHECK/CLEAR

(a) Turn the ignition switch on (IG).
(b) Check that the ABS warning light goes off within approximately 3 seconds.

FREEZE FRAME DATA

1. FREEZE FRAME DATA

(a) Whenever an ABS DTC is detected, the skid control ECU stores the current vehicle (sensor) state as Freeze Frame Data.
The skid control ECU stores the number of times (maximum: 31) the ignition switch has been turned from off to on (IG) since the last time the ABS was activated.
HINT:
- However, if the vehicle is stopped or at a low speed (4.3 mph (7 km/h) or less), or if a DTC is detected, the skid control ECU will stop counting the number.
- Freeze Frame Data at the time the ABS operates:
  The skid control ECU stores and updates data whenever the ABS system operates.
  When the ECU stores data at the time a DTC is detected, the data stored during ABS operation is erased.
- Freeze Frame Data at the time a DTC is detected:
  When the skid control ECU stores data at the time a DTC is detected, no updates will be performed until the data is cleared.

(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch on (IG).
(d) On the tester display, select the Freeze Frame Data.

Item (Display)	Measurement Item	Reference Value
VEHICLE SPD	Vehicle speed reading	Min.: 0 mph (0 km/h), Max.: 202 mph (326.4 km/h)
STOP LAMP SW	Stop light switch signal	Stop light switch ON: ON, OFF: OFF
#IG ON	Number of operations of ignition switch on (IG) after storing Freeze Frame Data	0 to 31
MAS CYL PRESS 1	Master cylinder pressure sensor reading	Brake pedal released: 0.3 to 0.5 V
M/C PRESS GRADE	Master cylinder pressure sensor change	Min.: -30 MPa/s, Max.: 225 MPa/s
YAW RATE	Yaw rate sensor reading	Min.: -128 deg/s, Max.: 127 deg/s
STEERING SEN	Steering angle sensor reading	Left turn: Increase Right turn: Decrease
FORWARD & REA G	Forward and backward G	Min.: -25.11 m/s^2, Max.: 24.91 m/s^2
SPD GRADE	Vehicle speed grade	Min.: -25.11 m/s^2, Max.: 24.91 m/s^2
BUZZER	Skid control buzzer signal	Skid control buzzer ON: ON, OFF: OFF
ACCELERATOR %	Accelerator opening angle %	Min.: 0 %, Max.: 128 %
PARKING BRAKE SW	Parking brake switch signal	Parking brake switch ON: ON, OFF: OFF
ENGINE TORQUE	Real engine torque	Min.: -1,024 Nm, Max.: 1,023 Nm
FR WHEEL SPD	FR wheel speed	Min.: 0 mph (0 km/h), Max.: 202 mph (326.4 km/h)
FL WHEEL SPD	FL wheel speed	Min.: 0 mph (0 km/h), Max.: 202 mph (326.4 km/h)
RR WHEEL SPD	RR wheel speed	Min.: 0 mph (0 km/h), Max.: 202 mph (326.4 km/h)

Item (Display)	Measurement Item	Reference Value
RL WHEEL SPD	RL wheel speed	Min.: 0 mph (0 km/h), Max.: 202 mph (326.4 km/h)
LATERAL G	Lateral G	Min.: -25.11 m/s^2, Max.: 24.91 m/s^2
GEAR POSITION	Gear position information	FAIL 1st 2nd 3rd 4th 5th 6th P, N R NOT R
LEVER POSITION	Shift lever position information	FAIL 1st 2nd 3rd 4th 5th 6th/B D/M P, N R
OPERATED SYSTEM	Operated system status	ABS activated: ABS VSC activated: VSC TRAC activated: TRAC BA activated: BA Fail safe mode activated: FAIL No system activated: NON System prohibited: SYS
FREEZE TIME	Elapsed time after freeze trigger	Min.: 0 ms, Max.: 500 ms
TROUBLE CODE	Freeze frame DTC	Displays to output DTC
INSPECTION MODE	Inspection mode	OTHER: Normal, INSPECT: Service

FAIL-SAFE CHART

1. FAIL SAFE OPERATION

- If there is a problem with sensor signals or actuator systems, the skid control ECU prohibits power supply to the brake actuator assembly and informs the ECM of VSC system failure.
  The brake actuator assembly turns off each solenoid and the ECM shuts off VSC control (traction control signal) from the skid control ECU accordingly, which turns out to be as if the ABS, TRAC and VSC systems were not installed.
  The ABS control will be prohibited, but EBD control continues as much as possible. If EBD control is impossible, the BRAKE warning light comes on to warn the driver (See page BC-138).
- If system components have any malfunction before starting control, immediately stop the operation. If system components have any malfunction during control, gradually stop the control so as not to trigger a sudden change in vehicle conditions.
  If it is impossible to control the systems, the warning light comes on to inform the driver of termination of the systems (See page BC-138).

HINT:
If the hydraulic brake booster encounters a malfunction, brake performance is gradually lost and ABS, BA, TRAC and VSC systems are prohibited.

BC

ABS, EBD and BA system:

Malfunction Area	Control Method
ABS system	ABS, BA, TRAC and VSC control prohibited
BA system	ABS, BA, TRAC and VSC control prohibited
EBD system	ABS, EBD, BA, TRAC and VSC control prohibited

HINT:
A malfunction in either the ABS or BA system will result in an identical operation, with ABS, BA, TRAC and VSC system control prohibited.

TRAC and VSC system:

Malfunction Area	Control Method
Engine control system (TRAC and VSC systems)	Before control: Disables control During control: Uses only the brakes to effect control
Brake control system (VSC system)	Before control: Disables control During control: Uses only the engine to effect control
Brake control system (TRAC system)	Before control: Disables control During control: Disables control (by gradually ending control)

HINT:
As for the TRAC and VSC systems, different systems prohibit different controls depending on a malfunctioning part.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

With the intelligent tester connected to the DLC3 and the ignition switch on (IG), the ABS, TRAC and VSC Data List can be displayed. Follow the prompts on the tester screen to access the Data List.

Item (Display)	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
ABS MTR RELAY	ABS motor relay / ON or OFF	ON: Motor relay ON OFF: Motor relay OFF	-
SOL RELAY	Solenoid relay / ON or OFF	ON: Solenoid relay ON OFF: Solenoid relay OFF	-

2. ACTIVE TEST

HINT:
Performing the Active Test using the intelligent tester allows the relay, actuator, and other items to operate without removing any parts. Performing the Active Test as the first step in troubleshooting is one of the methods to save labor time.
It is possible to display the Data List during the Active Test.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) On the tester display, select the Active Test.
HINT:
The ignition switch must be turned on (IG) to proceed to the Active Test using the intelligent tester.

DIAGNOSTIC TROUBLE CODE CHART

- If a trouble code is displayed during the DTC check, check the circuit indicated by the DTC. For details of each code, refer to the page for the respective "DTC No." in the DTC chart.
- Inspect the fuse and relay before investigating the trouble areas as shown in the table below.

DTC chart of ABS:

DTC No.	Detection Item	Trouble Area	See page
C0200/31 (*1)	Front Speed Sensor RH Circuit	1. Front speed sensor RH 2. Speed sensor circuit 3. Speed sensor rotor 4. Sensor installation 5. Brake actuator assembly (Skid control ECU)	BC-156
C0205/32 (*1)	Front Speed Sensor LH Circuit	1. Front speed sensor LH 2. Speed sensor circuit 3. Speed sensor rotor 4. Sensor installation 5. Brake actuator assembly (Skid control ECU)	BC-156

(*1, *2):

BC

Even after the trouble areas are repaired, the ABS warning light will not go off unless the following operations are performed:

- (*1):
  (a) Drive the vehicle at 12 mph (20 km/h) for 30 seconds or more and check that the ABS warning light goes off.
  (b) Clear the DTC.
- (*2):
  (a) Keep the vehicle stationary for 5 seconds or more and depress the brake pedal lightly 2 or 3 times.
  (b) Drive the vehicle at the vehicle speed of 31 mph (50 km/h) and keep depressing the brake pedal strongly for approximately 3 seconds.
  (c) Repeat the above operation 3 times or more and check that the ABS warning light goes off.
  (d) Clear the DTC.

HINT:
In some cases, the intelligent tester cannot be used when the ABS warning light remains on.

DTC	43	ABS Control System Malfunction

DESCRIPTION

This DTC is output when the VSC system detects a malfunction in the ABS control system.

DTC No.	DTC Detection Condition	Trouble Area
43	Malfunction in the ABS control system.	ABS control system

INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	CHECK ABS CONTROL SYSTEM

(a) Clear the DTC (See page BC-141).
(b) Turn the ignition switch on (IG).
(c) Check if the same DTC is recorded (See page BC-141).

BC

Result

Condition	Proceed to
DTC (ABS control system DTC) is not output	A
DTC (ABS control system DTC) is output	B

B → REPAIR CIRCUIT INDICATED BY OUTPUT DTC (See page BC-151)

A

2	RECONFIRM DTC

(a) Clear the DTC (See page BC-141).
(b) Turn the ignition switch on (IG).
(c) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTC (43) is not output	A
DTC (43) is output	B

B → REPLACE BRAKE ACTUATOR ASSEMBLY

A

USE SIMULATION METHOD TO CHECK

DTC	C0200/31	Front Speed Sensor RH Circuit

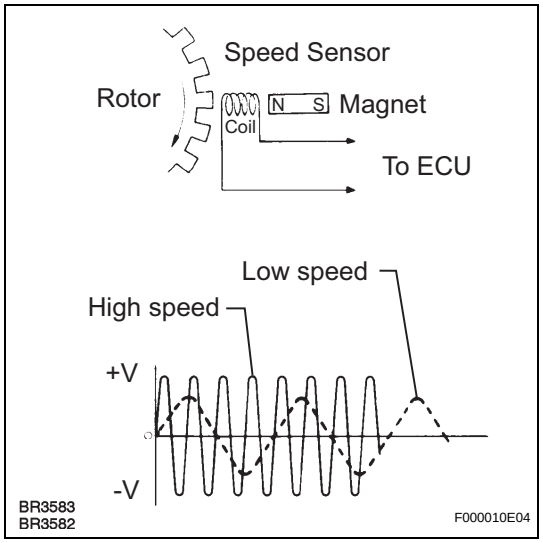
DTC	C0205/32	Front Speed Sensor LH Circuit

DTC	C1271/71	Low Output Signal of Front Speed Sensor RH (Test Mode DTC)

DTC	C1272/72	Low Output Signal of Front Speed Sensor LH (Test Mode DTC)

DESCRIPTION

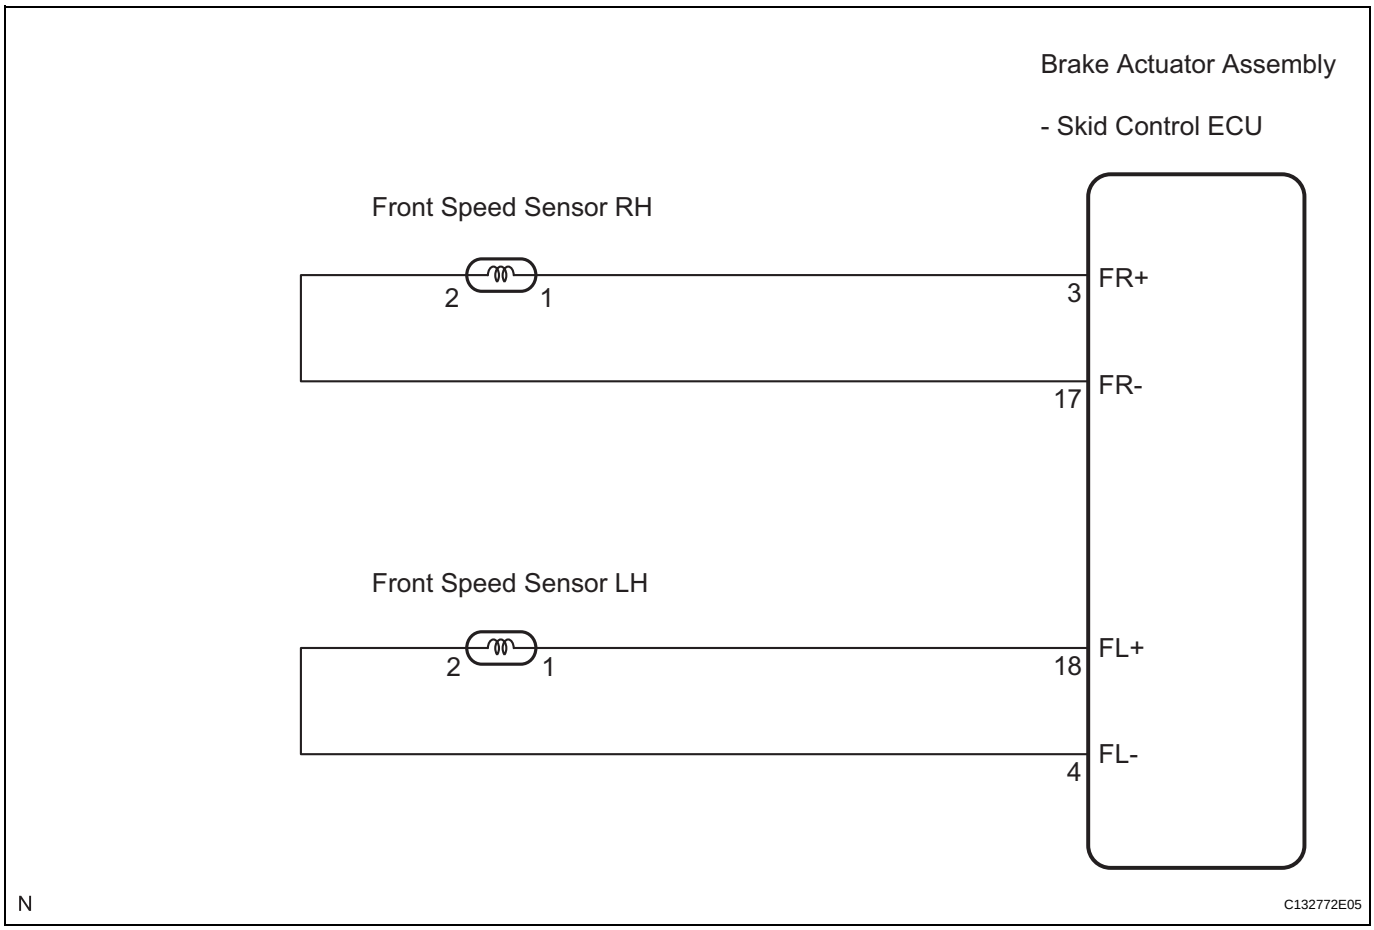
The speed sensors detect wheel speed and transmit the signals to the ECU. These signals are used for control of the ABS control system. Each of the front and rear rotors have 48 serrations.
When the rotors rotate, the magnetic field generated by the permanent magnet in the speed sensor induces an AC voltage.
Since the frequency of this AC voltage changes in direct proportion to the speed of the rotor, the frequency is used by the ECU to detect the speed of each wheel.
DTCs C1271/71 and C1272/72 can be deleted when the speed sensor sends a wheel speed signal or the Test Mode ends. DTCs C1271/71 and C1272/72 are output only in the Test Mode.



DTC No.	DTC Detection Condition	Trouble Area
C0200/31 C0205/32	When any of the following is detected: 1. At a vehicle speed of 6 mph (10 km/h) or more, an open or short in the sensor signal circuit continues for 1 second or more. 2. Momentary interruption of the sensor signal from the abnormal wheel occurs 7 times or more. 3. An open in the speed sensor signal circuit continues for 0.5 seconds or more.	• Front speed sensor RH/LH • Speed sensor circuit • Speed sensor rotor • Sensor installation • Brake actuator assembly (Skid control ECU)

HINT:
- DTC C0200/31 is for the front speed sensor RH.
- DTC C0205/32 is for the front speed sensor LH.

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	CHECK HARNESS AND CONNECTOR (MOMENTARY INTERRUPTION)

(a) Using the intelligent tester, check for any momentary interruption in the wire harness and connector corresponding to a DTC (See page BC-118).

ABS / VSC:

Item (Display)	Measurement Item / Range (Display)	Normal Condition
FR SPD OPN	FR speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal
FL SPD OPN	FL speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal

Result

Condition	Proceed to
There are no momentary interruptions	**A**
There are momentary interruptions	**B**
There is a constant open circuit	**C**

HINT:

Perform the above inspection before removing the sensor and connector.

B → Go to step 11

C → Go to step 5

A

2 READ VALUE OF INTELLIGENT TESTER (FRONT SPEED SENSOR)

(a) Turn the ignition switch off.
(b) Connect the intelligent tester to the DLC3.
(c) Start the engine.
(d) Select the Data List mode on the intelligent tester.

ABS / VSC:

Item (Display)	Measurement Item / Range (Display)	Normal Condition
FR WHEEL SPD	FR wheel speed sensor reading / min.: 0 mph (0 km/h), max.: 202 mph (326 km/h)	Actual wheel speed
FL WHEEL SPD	FL wheel speed sensor reading /min.: 0 mph (0 km/h), max.: 202 mph (326 km/h)	Actual wheel speed

BC

(e) Check that there is no difference between the speed value output from the speed sensor displayed on the intelligent tester and the speed value displayed on the speedometer when driving the vehicle.
OK:
The speed value output from the speed sensor displayed on the intelligent tester is the same as the actual vehicle speed.

NG → Go to step 5

OK

3 PERFORM TEST MODE (SIGNAL CHECK)

(a) Perform sensor check in the Test Mode procedure (See page BC-123).
OK:
All Test Mode DTCs are erased.

NG → Go to step 5

OK

4 RECONFIRM DTC

(a) Turn the ignition switch off.
(b) Clear the DTC (See page BC-141).
(c) Start the engine.
(d) Drive the vehicle at the speed of 20 mph (32 km/h) or more for at least 60 seconds.
(e) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTCs (C0200/31 and/or C0205/32) are not output	A
DTCs (C0200/31 and/or C0205/32) are output	B

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

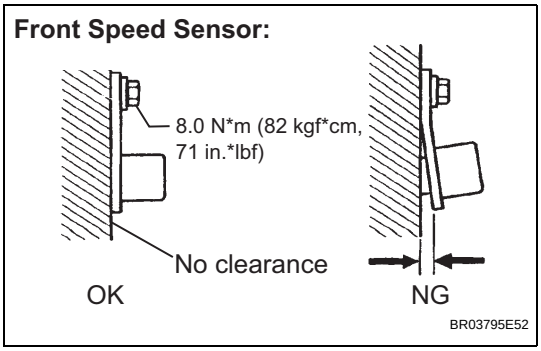
B → **Go to step 7**

A

USE SIMULATION METHOD TO CHECK

BC

5 CHECK FRONT SPEED SENSOR INSTALLATION



(a) Turn the ignition switch off.
(b) Check the speed sensor installation.
OK:
There is no clearance between the sensor and the front steering knuckle.
The installation bolt is tightened properly.
Torque:
8.0 N*m (82 kgf*cm, 71 in.*lbf)

NG → **INSTALL FRONT SPEED SENSOR CORRECTLY**

OK

6 CHECK FRONT SPEED SENSOR TIP

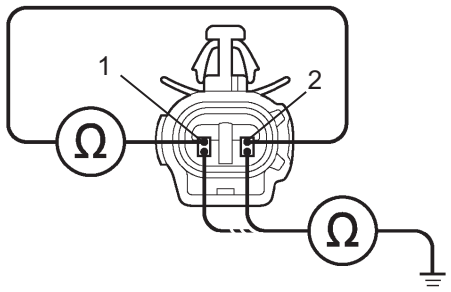
(a) Remove the front speed sensor (See page BC-438).
(b) Check the speed sensor tip.
OK:
No scratches or foreign matter on the sensor tip.
NOTICE:
Check the speed sensor signal after cleaning or replacement (See page BC-123).

NG → **CLEAN OR REPLACE FRONT SPEED SENSOR**

OK

7	INSPECT FRONT SPEED SENSOR

Front Speed Sensor:



C136017E01

(a) Turn the ignition switch off.
(b) Install the front speed sensor.
(c) Disconnect the front speed sensor connector.
(d) Measure the resistance according to the value(s) in the table below.

Standard resistance:

RH

Tester Connection	Condition	Specified Condition
1 (FR+) - 2 (FR-)	Always	1.4 to 1.8 kΩ at 20°C (68 °F)
1 (FR+) - Body ground	Always	10 kΩ or higher
2 (FR-) - Body ground	Always	10 kΩ or higher

LH

Tester Connection	Condition	Specified Condition
1 (FL+) - 2 (FL-)	Always	1.4 to 1.8 kΩ at 20°C (68 °F)
1 (FL+) - Body ground	Always	10 kΩ or higher
2 (FL-) - Body ground	Always	10 kΩ or higher

NOTICE:
Check the speed sensor signal after replacement (See page BC-123).

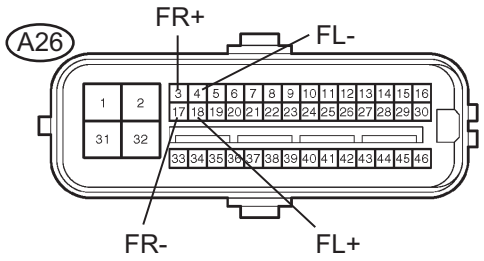
NG → **REPLACE FRONT SPEED SENSOR**

OK

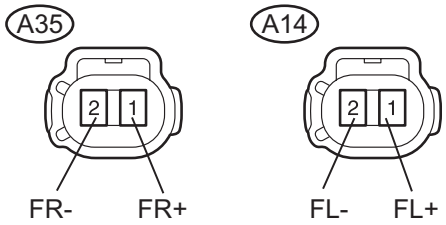
BC

8 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - FRONT SPEED SENSOR)

Skid Control ECU Harness Side Connector Front View:



Front Speed Sensor Harness Side Connector Front View:



C136018E01

(a) Disconnect the skid control ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

RH

Tester Connection	Condition	Specified Condition
A26-3 (FR+) - A35-1 (FR+)	Always	Below 1 Ω
A26-3 (FR+) - Body ground	Always	10 kΩ or higher
A26-17 (FR-) - A35-2 (FR-)	Always	Below 1 Ω
A26-17 (FR-) - Body ground	Always	10 kΩ or higher

LH

Tester Connection	Condition	Specified Condition
A26-18 (FL+) - A14-1 (FL+)	Always	Below 1 Ω
A26-18 (FL+) - Body ground	Always	10 kΩ or higher
A26-4 (FL-) - A14-2 (FL-)	Always	Below 1 Ω
A26-4 (FL-) - Body ground	Always	10 kΩ or higher

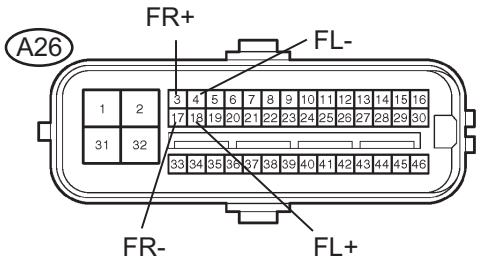
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

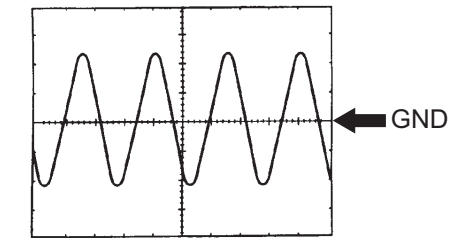
BC

9 CHECK SPEED SENSOR AND SPEED SENSOR ROTOR SERRATIONS

Skid Control ECU Harness Side Connector Front View:



Normal Signal Waveform:



1 V/Division, 2 ms/Division

C136019E04

(a) Reconnect the front speed sensor connector.
(b) Connect the oscilloscope to the front speed sensor terminal of the skid control ECU.
(c) Check that a waveform is output when the tires are rotated.

OK:

The same waveform is output from all the 4 wheels and there is no noise or interference in the waveform.

HINT:

- As the vehicle speed (wheel revolution speed) increases, a cycle of the waveform narrows and the output voltage becomes greater.
- When noise is identified in the waveform on the oscilloscope, the erratic signals are generated due to speed sensor rotor's scratches, looseness or foreign matter attached to it.

NG → **REPLACE BRAKE ACTUATOR ASSEMBLY**

OK

10 RECONFIRM DTC

(a) Reconnect the skid control ECU connector.
(b) Clear the DTC (See page BC-141).
(c) Start the engine.
(d) Drive the vehicle at the speed of 20 mph (32 km/h) or more for at least 60 seconds.
(e) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTCs (C0200/31 and/or C0205/32) are output	A
DTCs (C0200/31 and/or C0205/32) are not output	B

HINT:

If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

B → **USE SIMULATION METHOD TO CHECK**

BC

A

REPLACE BRAKE ACTUATOR ASSEMBLY

11	**REPAIR OR REPLACE HARNESS OR CONNECTOR (SKID CONTROL ECU - FRONT SPEED SENSOR)**

(a) Turn the ignition switch off.
(b) Repair or replace the harness or connector.
(c) Check for any momentary interruption between the skid control ECU and front speed sensor (See page BC-118).
(d) Check that there is no momentary interruption.

NEXT

BC

12	**RECONFIRM DTC**

(a) Clear the DTC (See page BC-141).
(b) Start the engine.
(c) Drive the vehicle at the speed of 20 mph (32 km/h) or more for at least 60 seconds.
(d) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTCs (C0200/31 and/or C0205/32) are not output	A
DTCs (C0200/31 and/or C0205/32) are output	B

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

B → **Go to step 2**

A

END

DTC	C0210/33	Rear Speed Sensor RH Circuit

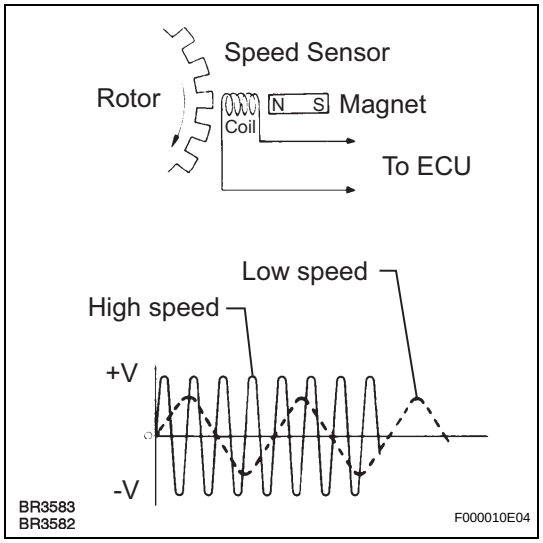
DTC	C0215/34	Rear Speed Sensor LH Circuit

DTC	C1273/73	Low Output Signal of Rear Speed Sensor RH (Test Mode DTC)

DTC	C1274/74	Low Output Signal of Rear Speed Sensor LH (Test Mode DTC)

DESCRIPTION

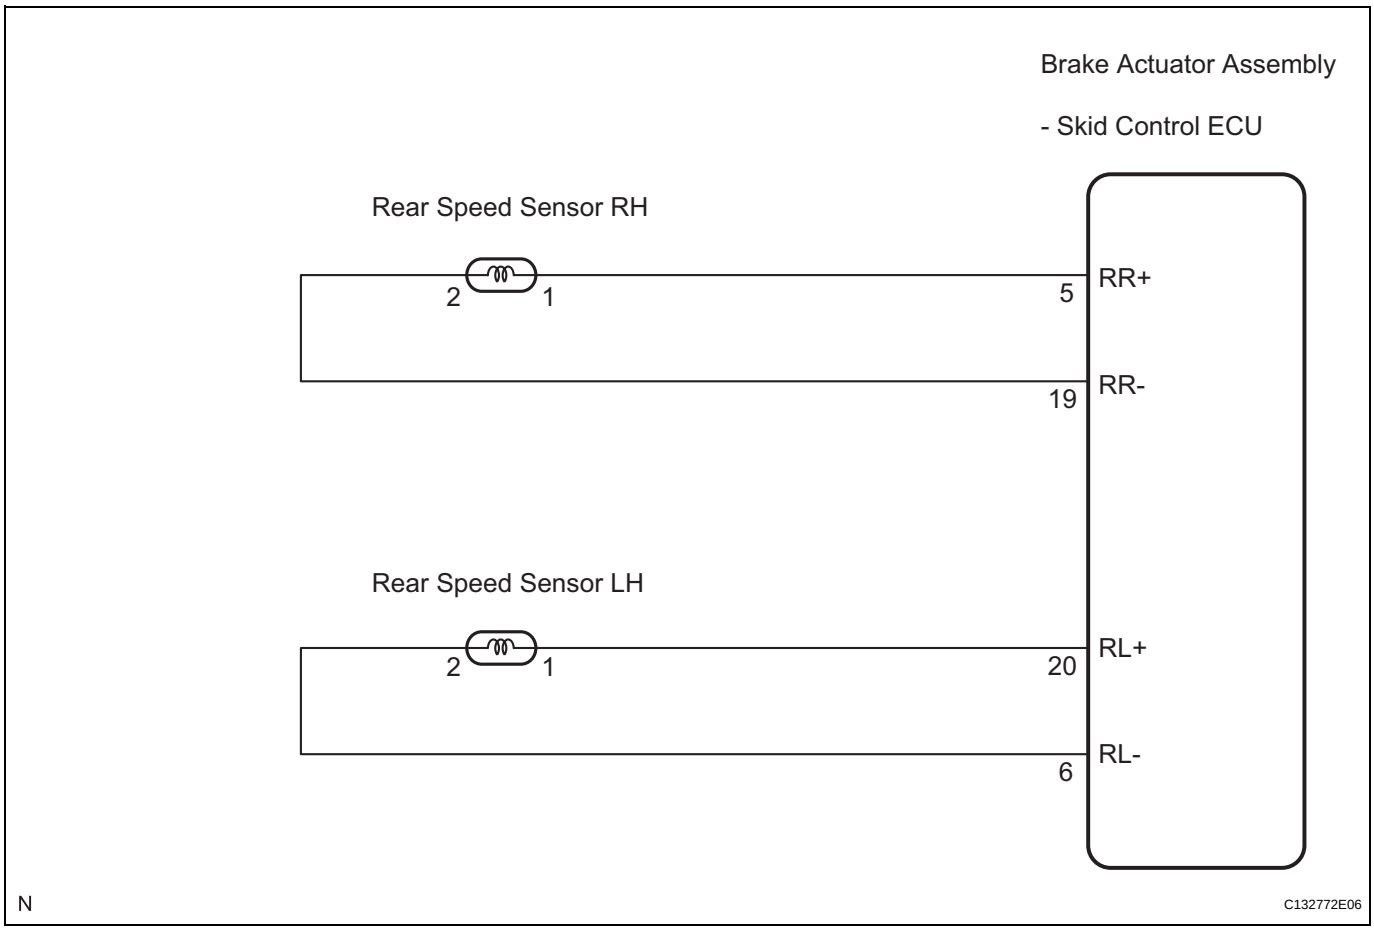
The speed sensors detect wheel speed and transmit the signals to the ECU. These signals are used for control of the ABS control system. Each of the front and rear rotors have 48 serrations.
When the rotors rotate, the magnetic field generated by the permanent magnet in the speed sensor induces an AC voltage.
Since the frequency of this AC voltage changes in direct proportion to the speed of the rotor, the frequency is used by the ECU to detect the speed of each wheel.
DTCs C1273/73 and C1274/74 can be deleted when the speed sensor sends a wheel speed signal or the Test Mode ends. DTCs C1273/73 and C1274/74 are output only in the Test Mode.



DTC No.	DTC Detection Condition	Trouble Area
C0210/33 C0215/34	When any of the following is detected: 1. At a vehicle speed of 6 mph (10 km/h) or more, an open or short in the sensor signal circuit continues for 1 second or more. 2. Momentary interruption of the sensor signal from the abnormal wheel occurs 7 times or more. 3. An open in the speed sensor signal circuit continues for 0.5 seconds or more.	• Rear speed sensor RH/LH • Speed sensor circuit • Speed sensor rotor • Sensor installation • Brake actuator assembly (Skid control ECU)

HINT:
- DTC C0210/33 is for the rear speed sensor RH.
- DTC C0215/34 is for the rear speed sensor LH.

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	CHECK HARNESS AND CONNECTOR (MOMENTARY INTERRUPTION)

(a) Using the intelligent tester, check for any momentary interruption in the wire harness and connector corresponding to a DTC (See page BC-118).

ABS / VSC:

Item (Display)	Measurement Item / Range (Display)	Normal Condition
RR SPD OPN	RR speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal
RL SPD OPN	RL speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal

Result

Condition	Proceed to
There are no momentary interruptions	**A**
There are momentary interruptions	**B**
There is a constant open circuit	**C**

HINT:

Perform the above inspection before removing the sensor and connector.

B → Go to step 11

C → Go to step 5

A

2 READ VALUE OF INTELLIGENT TESTER (REAR SPEED SENSOR)

(a) Turn the ignition switch off.
(b) Connect the intelligent tester to the DLC3.
(c) Start the engine.
(d) Select the Data List mode on the intelligent tester.

ABS / VSC:

Item (Display)	Measurement Item / Range (Display)	Normal Condition
RR WHEEL SPD	RR wheel speed sensor reading / min.: 0 mph (0 km/h), max.: 202 mph (326 km/h)	Actual wheel speed
RL WHEEL SPD	RL wheel speed sensor reading / min.: 0 mph (0 km/h), max.: 202 mph (326 km/h)	Actual wheel speed

BC

(e) Check that there is no difference between the speed value output from the speed sensor displayed on the intelligent tester and the speed value displayed on the speedometer when driving the vehicle.

OK:

The speed value output from the speed sensor displayed on the intelligent tester is the same as the actual vehicle speed.

NG → Go to step 5

OK

3 PERFORM TEST MODE (SIGNAL CHECK)

(a) Perform sensor check in the Test Mode procedure (See page BC-123).

OK:

All Test Mode DTCs are erased.

NG → Go to step 5

OK

4 RECONFIRM DTC

(a) Turn the ignition switch off.
(b) Clear the DTC (See page BC-141).
(c) Start the engine.
(d) Drive the vehicle at the speed of 20 mph (32 km/h) or more for at least 60 seconds.
(e) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTCs (C0210/33 and/or C0215/34) are not output	A
DTCs (C0210/33 and/or C0215/34) are output	B

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

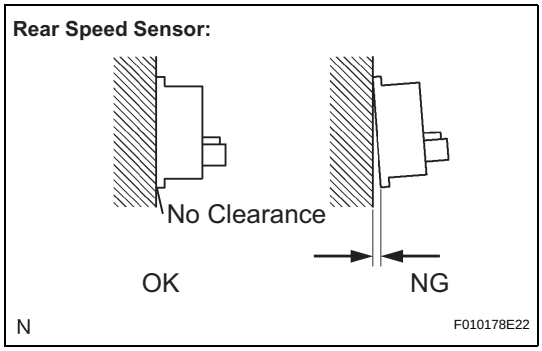
B → **Go to step 6**

A

USE SIMULATION METHOD TO CHECK

BC

5 CHECK REAR SPEED SENSOR INSTALLATION

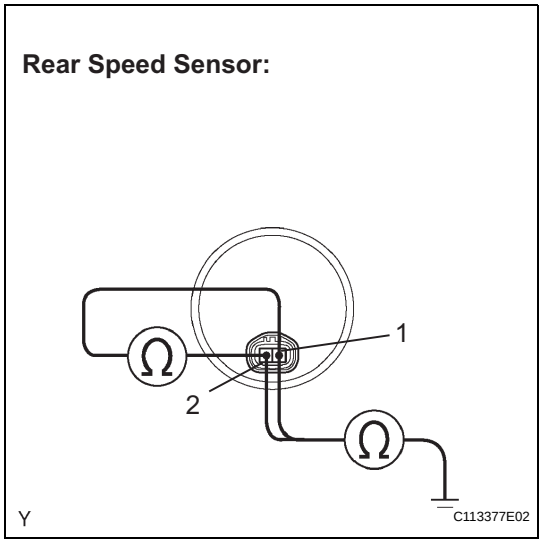


(a) Turn the ignition switch off.
(b) Check the speed sensor installation.
OK:
There is no clearance between the sensor and rear axle carrier.

NG → **INSTALL REAR SPEED SENSOR CORRECTLY**

OK

6 INSPECT REAR SPEED SENSOR



(a) Turn the ignition switch off.
(b) Disconnect the rear speed sensor connector.
(c) Measure the resistance according to the value(s) in the table below.
Standard resistance:
RH

Tester Connection	Condition	Specified Condition
2 (RR+) - 1 (RR-)	Always	0.9 to 2.1 kΩ
2 (RR+) - Body ground	Always	10 kΩ or higher
1 (RR-) - Body ground	Always	10 kΩ or higher

LH

Tester Connection	Condition	Specified Condition
2 (RL+) - 1 (RL-)	Always	0.9 to 2.1 kΩ
2 (RL+) - Body ground	Always	10 kΩ or higher
1 (RL-) - Body ground	Always	10 kΩ or higher

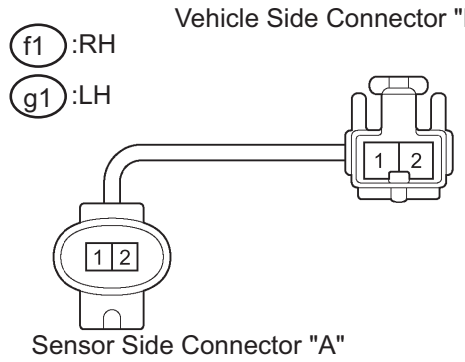
NOTICE:
Check the speed sensor signal after replacement (See page BC-123).

NG → **REPLACE REAR SPEED SENSOR**

OK

7 CHECK HARNESS AND CONNECTOR (SKID CONTROL SENSOR WIRE)

Skid Control Sensor Wire:



(a) Disconnect the skid control sensor wire.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

RH

Tester Connection	Condition	Specified Condition
f1 ("A"-1) - f1 ("B"-2)	Always	Below 1 Ω
f1 ("A"-1) - f1 ("B"-1)	Always	10 kΩ or higher
f1 ("A"-1) - Body ground	Always	10 kΩ or higher
f1 ("A"-2) - f1 ("B"-1)	Always	Below 1 Ω
f1 ("A"-2) - f1 ("B"-2)	Always	10 kΩ or higher
f1 ("A"-2) - Body ground	Always	10 kΩ or higher

LH

Tester Connection	Condition	Specified Condition
g1 ("A"-1) - g1 ("B"-2)	Always	Below 1 Ω
g1 ("A"-1) - g1 ("B"-1)	Always	10 kΩ or higher
g1 ("A"-1) - Body ground	Always	10 kΩ or higher
g1 ("A"-2) - g1 ("B"-1)	Always	Below 1 Ω
g1 ("A"-2) - g1 ("B"-2)	Always	10 kΩ or higher
g1 ("A"-2) - Body ground	Always	10 kΩ or higher

NOTICE:
Check the speed sensor signal after replacement (See page BC-123).

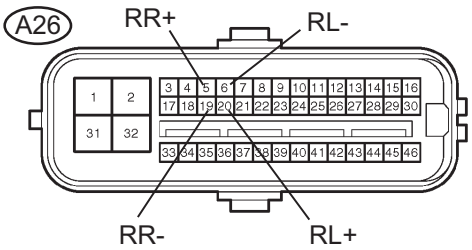
NG → **REPLACE SKID CONTROL SENSOR WIRE**

OK

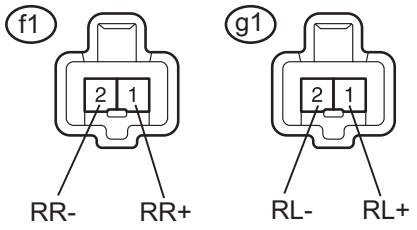
BC

8 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - REAR SPEED SENSOR)

Skid Control ECU Harness Side Connector Front View:



Rear Speed Sensor Harness Side Connector Front View:



N

C136020E01

(a) Disconnect the skid control ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

RH

Tester Connection	Condition	Specified Condition
A26-5 (RR+) - f1-1 (RR+)	Always	Below 1 Ω
A26-5 (RR+) - Body ground	Always	10 kΩ or higher
A26-19 (RR-) - f1-2 (RR-)	Always	Below 1 Ω
A26-19 (RR-) - Body ground	Always	10 kΩ or higher

LH

Tester Connection	Condition	Specified Condition
A26-20 (RL+) - g1-1 (RL+)	Always	Below 1 Ω
A26-20 (RL+) - Body ground	Always	10 kΩ or higher
A26-6 (RL-) - g1-2 (RL-)	Always	Below 1 Ω
A26-6 (RL-) - Body ground	Always	10 kΩ or higher

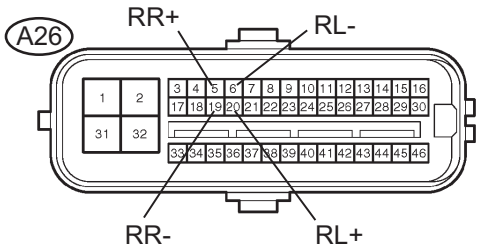
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

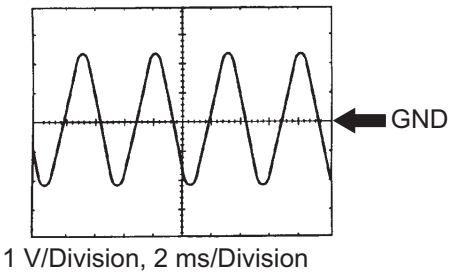
BC

9 CHECK SPEED SENSOR AND SPEED SENSOR ROTOR SERRATIONS

Skid Control ECU Harness Side Connector Front View:



Normal Signal Waveform:



C136019E02

(a) Reconnect the skid control sensor wire.
(b) Reconnect the rear speed sensor connector.
(c) Connect the oscilloscope to the rear speed sensor terminal of the skid control ECU.
(d) Check that a waveform is output when the tires are rotated.

OK:

The same waveform is output from all the 4 wheels and there is no noise or interference in the waveform.

HINT:

- As the vehicle speed (wheel revolution speed) increases, a cycle of the waveform narrows and the output voltage becomes greater.
- When noise is identified in the waveform on the oscilloscope, the erratic signals are generated due to speed sensor rotor's scratches, looseness or foreign matter attached to it.

NG → **REPLACE BRAKE ACTUATOR ASSEMBLY**

OK

10 RECONFIRM DTC

(a) Reconnect the skid control ECU connector.
(b) Clear the DTC (See page BC-141).
(c) Start the engine.
(d) Drive the vehicle at the speed of 20 mph (32 km/h) or more for at least 60 seconds.
(e) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTCs (C0210/33 and/or C0215/34) are output	A
DTCs (C0210/33 and/or C0215/34) are not output	B

HINT:

If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

B → **USE SIMULATION METHOD TO CHECK**

BC

A

REPLACE BRAKE ACTUATOR ASSEMBLY

11 **REPAIR OR REPLACE HARNESS OR CONNECTOR (SKID CONTROL ECU - REAR SPEED SENSOR)**

(a) Turn the ignition switch off.
(b) Repair or replace the harness or connector.
(c) Check for any momentary interruption between the skid control ECU and rear speed sensor (See page BC-118).
(d) Check that there is no momentary interruption.

NEXT

BC

12 **RECONFIRM DTC**

(a) Clear the DTC (See page BC-141).
(b) Start the engine.
(c) Drive the vehicle at the speed of 20 mph (32 km/h) or more for at least 60 seconds.
(d) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTCs (C0210/33 and/or C0215/34) are not output	A
DTCs (C0210/33 and/or C0215/34) are output	B

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

B → **Go to step 2**

A

END

DTC	C0226/21	SFR Solenoid Circuit

DTC	C0236/22	SFL Solenoid Circuit

DTC	C0246/23	SRR Solenoid Circuit

DTC	C0256/24	SRL Solenoid Circuit

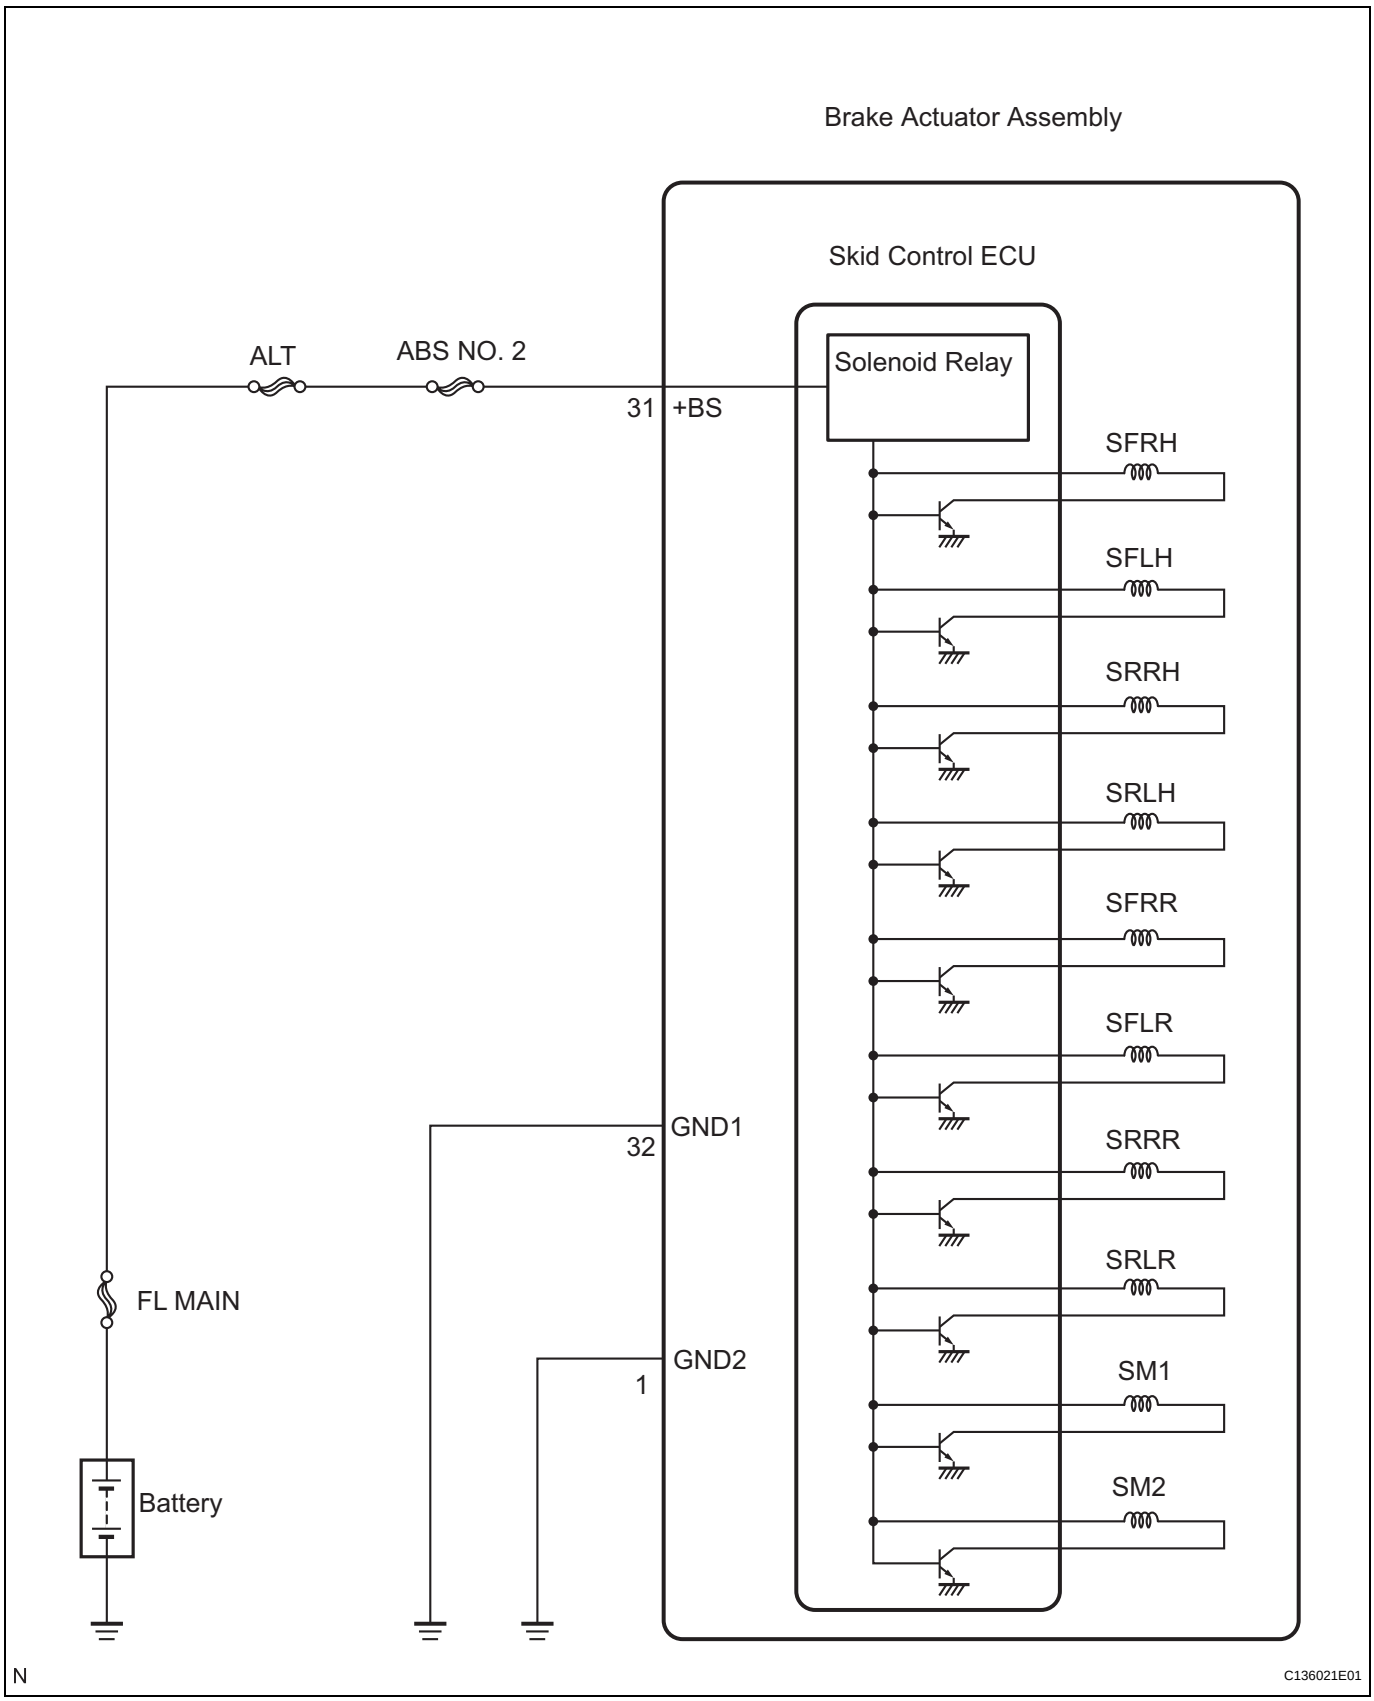
DTC	C1225/25	SM Solenoid Circuit

DESCRIPTION

These solenoids turn on when signals are received from the skid control ECU and they control the pressure acting on the wheel cylinders to control the braking force.

DTC No.	DTC Detection Condition	Trouble Area
C0226/21 C0236/22 C0246/23 C0256/24	Open or short in the solenoid circuit continues for 0.05 seconds or more.	• Brake actuator assembly • Solenoid circuit
C1225/25	When any of the following is detected: • While outputting switching solenoid (SM1 or SM2) ON, overcurrent continues for 0.05 seconds or more. • While outputting switching solenoid (SM1 or SM2) OFF, an open circuit continues for 0.05 seconds or more. • While outputting switching solenoid (SM1 or SM2) ON, an open circuit continues for 0.1 second or more. • While outputting switching solenoid (SM1 or SM2) OFF, current continues to be applied for 0.1 second or more. • Short to GND in the switching solenoid (SM1 or SM2) continues for 0.1 second or more. • Switching solenoids SM1 and SM2 are shorted for 0.1 second or more.	• Brake actuator assembly • SM1 or SM2 circuit

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	**RECONFIRM DTC**

HINT:
These codes are detected when a problem is determined in the brake actuator assembly.
The solenoid circuits are in the brake actuator assembly. Therefore, solenoid circuit inspection and solenoid unit inspection cannot be performed. Be sure to check if any DTC code is output before replacing the brake actuator assembly.

(a) Clear the DTC (See page BC-141).
(b) Start the engine.
(c) Drive the vehicle at the speed of 4 mph (6 km/h) or more.
(d) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTCs (C0226/21, C0236/22, C0246/23, C0256/24 and/or C1225/25) are not output	A
DTCs (C0226/21, C0236/22, C0246/23, C0256/24 and/or C1225/25) are output	B

BC

HINT:

- If a speed signal of 4 mph (6 km/h) or more is input to the skid control ECU, with the ignition switch on (IG) and the stop light switch off, the ECU performs self diagnosis of the motor and solenoid circuits.
- If the normal system code is output (the trouble code is not output), slightly jiggle the connectors, wire harness, and fuses of the brake actuator assembly. Make sure that no DTCs are output.
- If any DTCs are output while jiggling a connector or wire harness of the brake actuator assembly (skid control ECU), inspect and repair the connector or wire harness.

B → **REPLACE BRAKE ACTUATOR ASSEMBLY**

A

USE SIMULATION METHOD TO CHECK

DTC	C0273/13	Open in ABS Motor Relay Circuit

DTC	C0274/14	Short to B+ in ABS Motor Relay Circuit

DTC	C1361/91	Short Circuit in ABS Motor Fail Safe Relay Circuit

DESCRIPTION

If a DTC of the motor line is stored, the VSC NO. 1 (fail safe) relay cuts off the power supply to the VSC NO. 2 relay and performs fail safe.

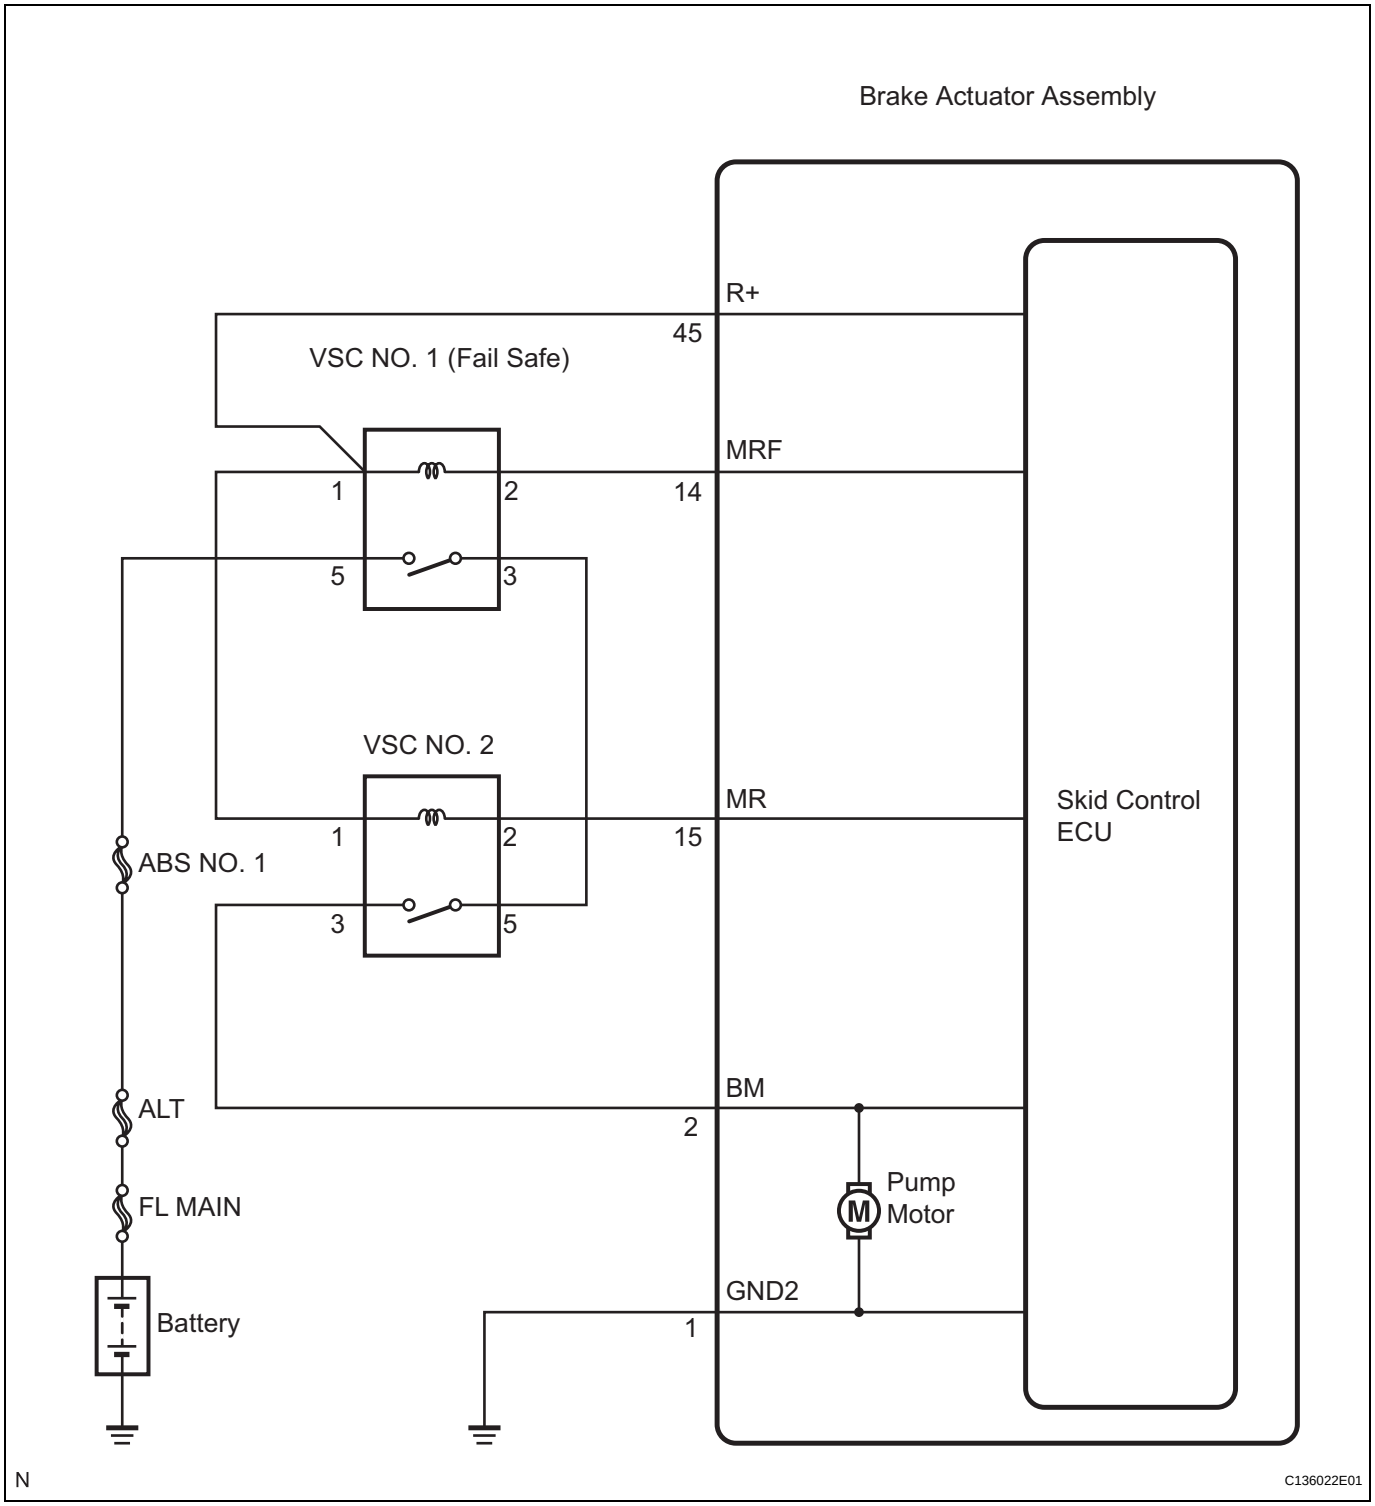
While any of the ABS, TRAC, VSC, or BA is operating, the skid control ECU (housed in the actuator assembly) turns the VSC NO. 2 relay on and activates the pump motor in the brake actuator.

This code may be stored if the motor relay (BM) voltage becomes lower than the DTC detecting condition due to insufficient output from the battery or alternator.

BC

DTC No.	DTC Detection Condition	Trouble Area
C0273/13	When any of the following (1 or 2) is detected: 1. All of the following conditions continue for 0.12 seconds or more. • The IG1 terminal voltage is between 9.5 and 17.2 V. • During initial check and ABS, BA, TRAC, or VSC are operating. • Relay contact is open when the relay is ON. 2. All of the following conditions continue for 0.12 seconds. • The IG1 terminal voltage is 9.5 V or less. • Relay contact remains open when the relay is ON.	• ABS NO. 1 fuse • VSC NO. 2 relay • VSC NO. 2 relay circuit • Brake actuator assembly
C0274/14	When the motor relay is OFF, the VSC NO. 2 relay remains closed for 4 seconds or more.	• ABS NO. 1 fuse • VSC NO. 2 relay • VSC NO. 2 relay circuit • Brake actuator assembly
C1361/91	Immediately after the ignition switch is turned on (IG), the relay contact is closed for 4 seconds when the VSC NO. 1 (fail safe) relay is OFF.	• ABS NO. 1 fuse • VSC NO. 1 (fail safe) relay • VSC NO. 1 (fail safe) relay circuit • Brake actuator assembly

WIRING DIAGRAM

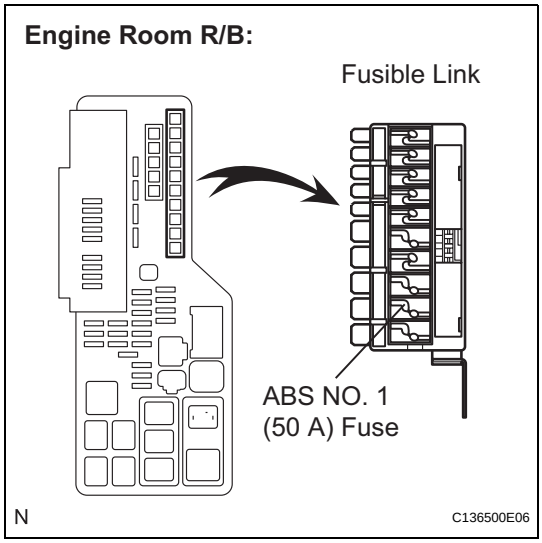


INSPECTION PROCEDURE

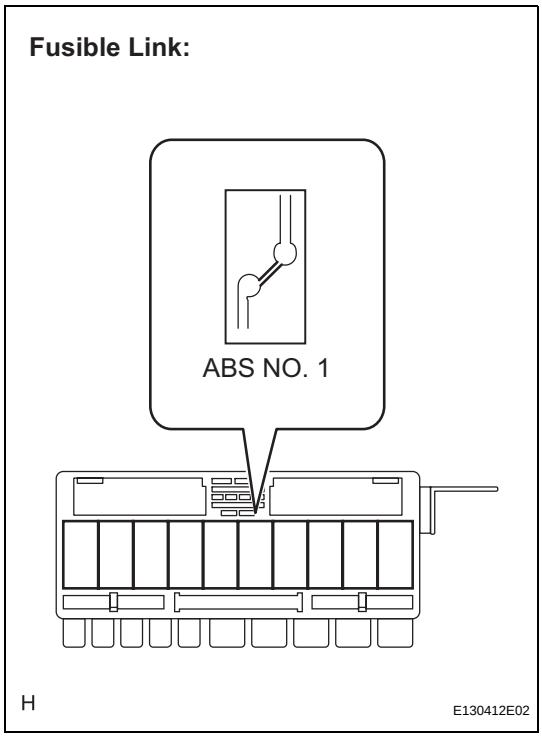
NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	**INSPECT ABS NO. 1 FUSE**



(a) Remove the fusible link from the engine room R/B.



(b) Check if the fusible link is melted.
OK:
The fusible link is melted.

(c) Install the fusible link to the engine room R/B with the nut.

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

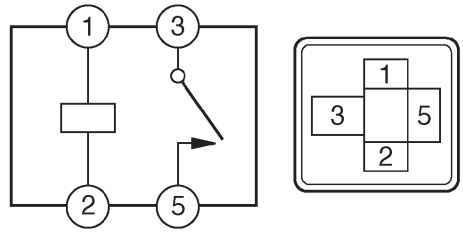
NG → **REPLACE FUSIBLE LINK (ABS NO. 1 FUSE)**

OK

BC

2 INSPECT VSC NO. 2 RELAY

VSC NO. 2 Relay:



F050240E07

(a) Remove the VSC NO. 2 relay.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

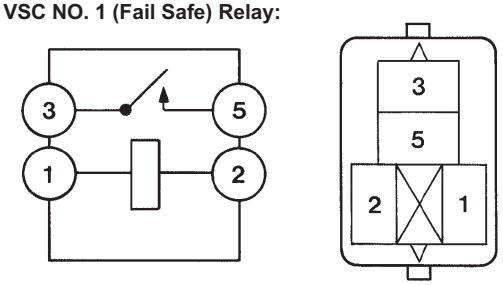
Tester Connection	Condition	Specified Condition
3 - 5	Always	10 kΩ or higher
3 - 5	Apply B+ between terminals 1 and 2	Below 1 Ω

NG → **REPLACE VSC NO. 2 RELAY**

OK

3 INSPECT VSC NO. 1 (FAIL SAFE) RELAY

VSC NO. 1 (Fail Safe) Relay:



F050241E11

(a) Remove the VSC NO. 1 (fail safe) relay.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
3 - 5	Always	10 kΩ or higher
3 - 5	Apply B+ between terminals 1 and 2	Below 1 Ω

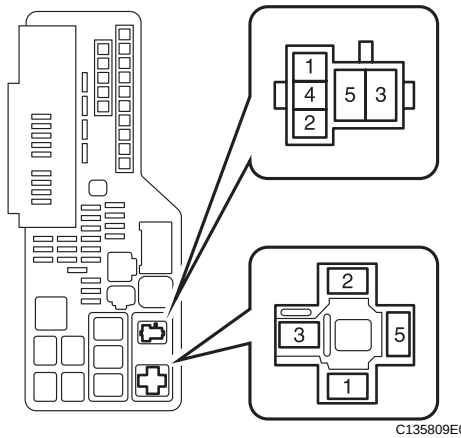
NG → **REPLACE VSC NO. 1 (FAIL SAFE) RELAY**

OK

4 INSPECT ENGINE ROOM RELAY BLOCK (POWER SOURCE TERMINAL)

Engine Room R/B:

VSC NO. 1 (Fail Safe) Relay



C135809E01

(a) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
VSC NO. 1 (fail safe) relay terminal 5 - Body ground	Always	10 to 14 V

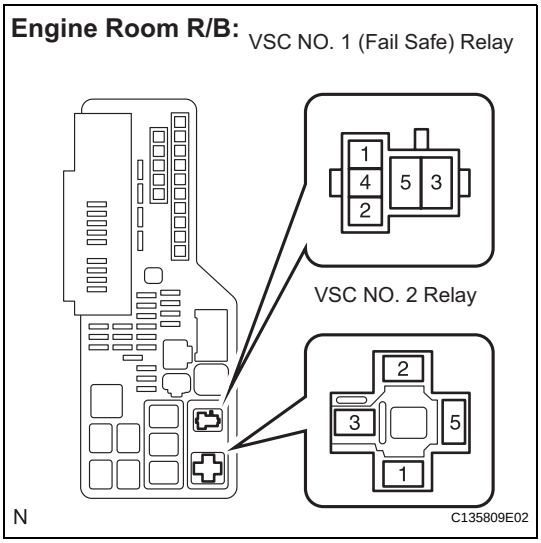
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER SOURCE CIRCUIT)**

OK

BC

5 INSPECT ENGINE ROOM RELAY BLOCK

Engine Room R/B: VSC NO. 1 (Fail Safe) Relay



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

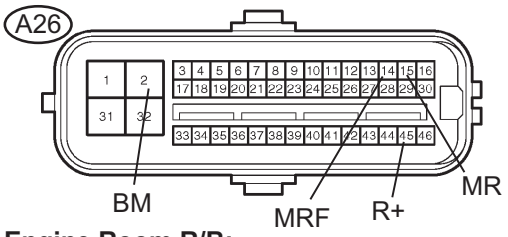
Tester Connection	Condition	Specified Condition
VSC NO. 1 (fail safe) relay terminal 3 - VSC NO. 2 relay terminal 5	Always	Below 1 Ω
VSC NO. 1 (fail safe) relay terminal 3 - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE ENGINE ROOM RELAY BLOCK**

OK

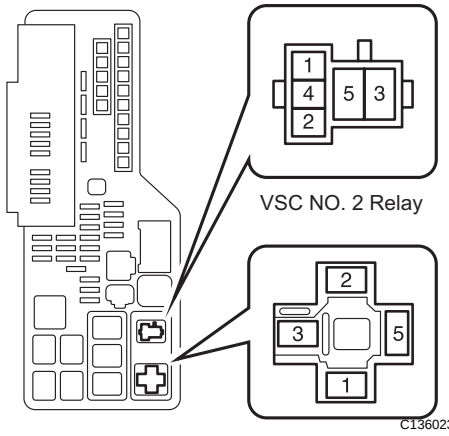
6 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - ENGINE ROOM RELAY BLOCK)

Skid Control ECU Harness Side Connector Front View:



Engine Room R/B:

VSC NO. 1 (Fail Safe) Relay



(a) Disconnect the skid control ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A26-2 (BM) - VSC NO. 2 relay terminal 3	Always	Below 1 Ω
A26-2 (BM) - Body ground	Always	10 kΩ or higher
A26-14 (MRF) - VSC NO. 1 (fail safe) relay terminal 2	Always	Below 1 Ω
A26-14 (MRF) - Body ground	Always	10 kΩ or higher
A26-15 (MR) - VSC NO. 2 relay terminal 2	Always	Below 1 Ω
A26-15 (MR) - Body ground	Always	10 kΩ or higher
A26-45 (R+) - VSC NO. 1 (fail safe) relay terminal 1	Always	Below 1 Ω
A26-45 (R+) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

BC

OK

7	RECONFIRM DTC

(a) Clear the DTC (See page BC-141).
(b) Start the engine.
(c) Drive the vehicle at the speed of 4 mph (6 km/h) or more.
(d) Check if the same DTC is recorded (See page BC-141).
HINT:
Reinstall the relays, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTCs (C0273/13, C0274/14 and/or C1361/91) are not output	A
DTCs (C0273/13, C0274/14 and/or C1361/91) are output	B

HINT:
- If a speed signal of 4 mph (6 km/h) or more is input to the skid control ECU, with the ignition switch on (IG) and the stop light switch off, the ECU performs self diagnosis of the motor and solenoid circuits.
- If the normal system code is output (the trouble code is not output), slightly jiggle the connectors, wire harness, and fuses of the brake actuator assembly. Make sure that no DTCs are output.
- If any DTCs are output while jiggling a connector or wire harness of the brake actuator assembly (skid control ECU), inspect and repair the connector or wire harness.

B → REPLACE BRAKE ACTUATOR ASSEMBLY

A

USE SIMULATION METHOD TO CHECK

BC

DTC	C0278/11	Open in ABS Solenoid Relay Circuit

DTC	C0279/12	Short to B+ in ABS Solenoid Relay Circuit

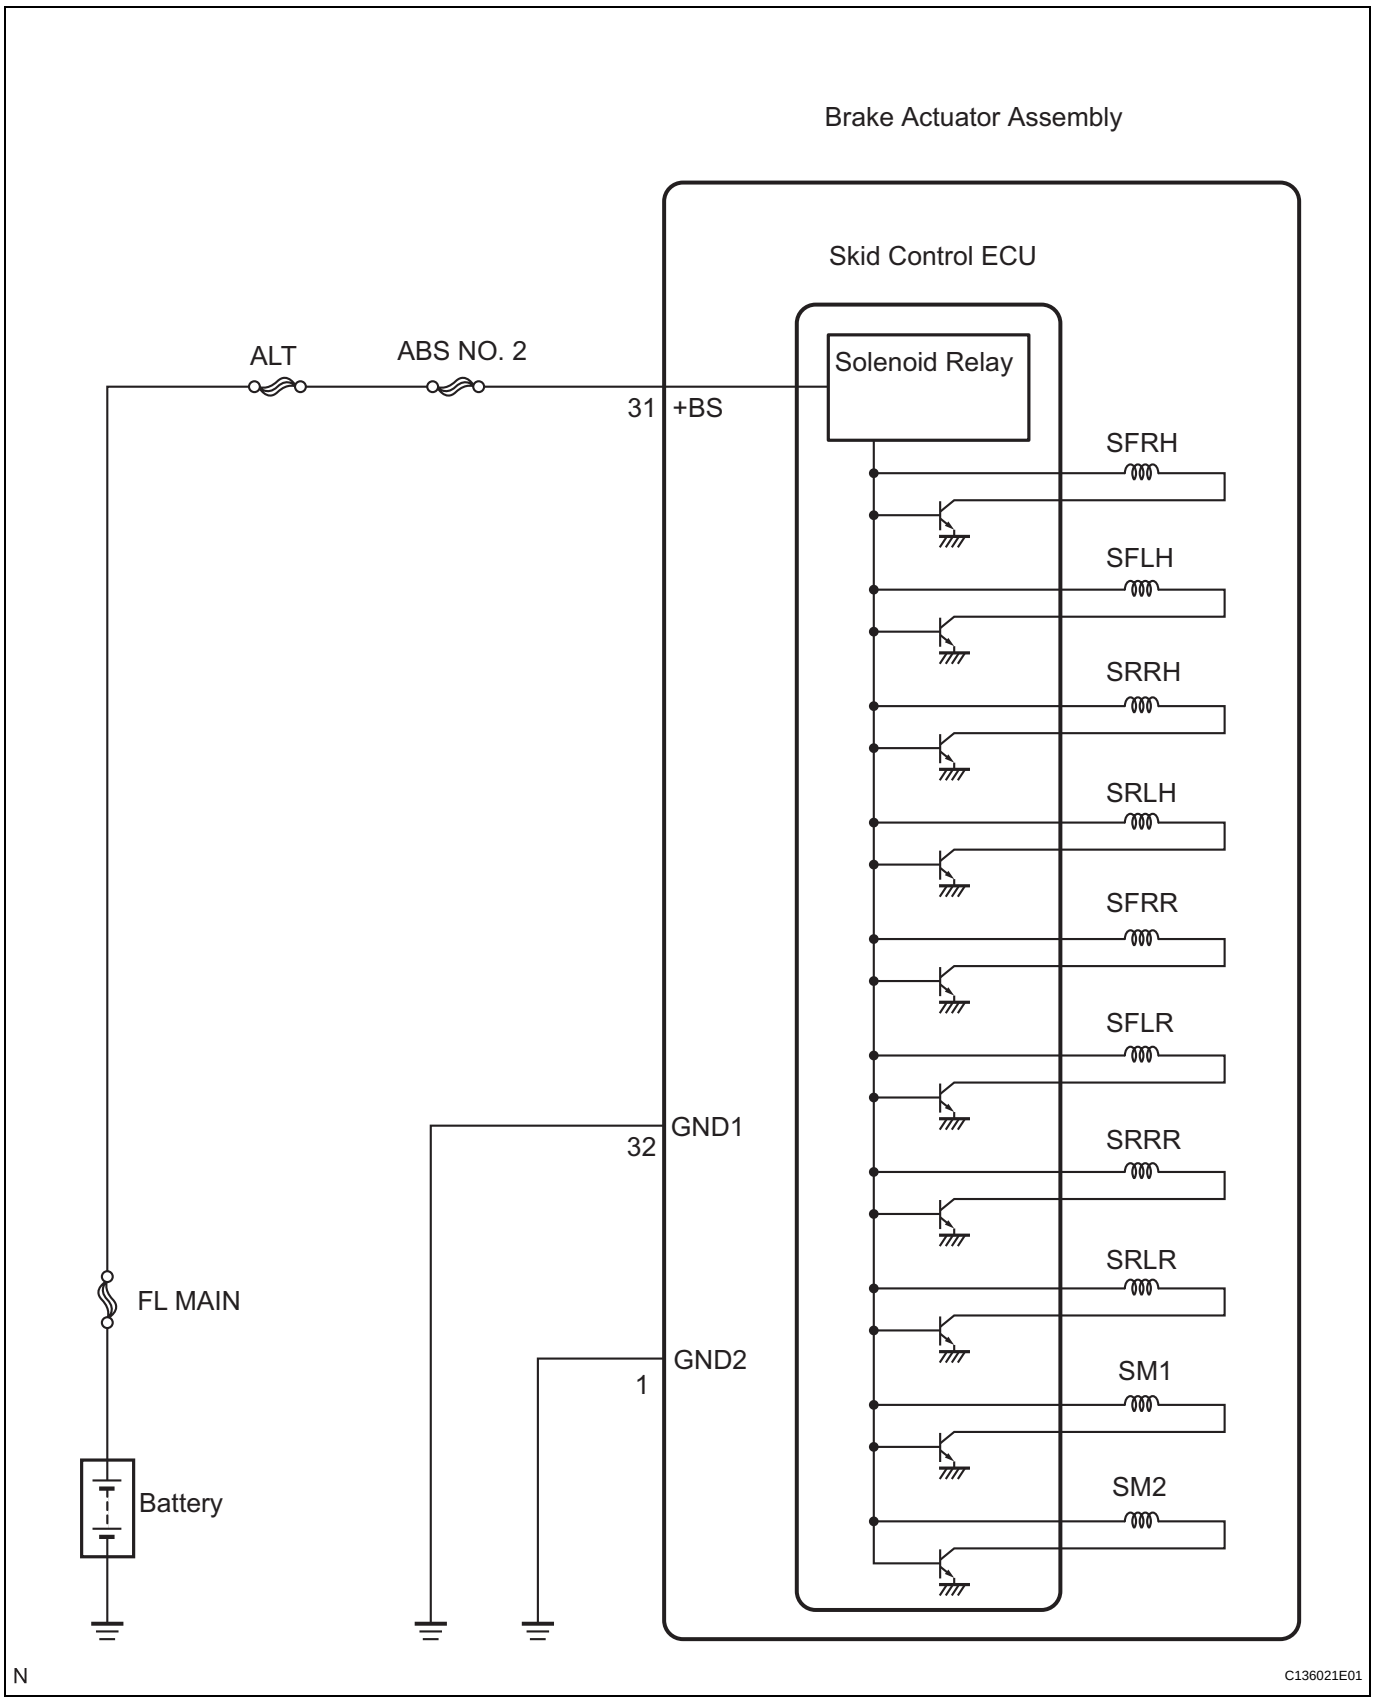
DESCRIPTION

The ABS solenoid relay supplies power to the ABS solenoid and TRAC solenoid.
The solenoid relay is turned on 1.5 seconds after the ignition switch is turned on (IG), and is turned off if an open or short in the solenoid is detected by self diagnosis performed when the vehicle starts running.
The ABS solenoid relay is housed in the skid control ECU in the actuator assembly.
HINT:
If a speed signal of 4 mph (6 km/h) or more is input to the skid control ECU, with the ignition switch on (IG) and the stop light switch off, the ECU performs self diagnosis of the motor and solenoid circuits.

DTC No.	DTC Detection Condition	Trouble Area
C0278/11	When any of the following (1 or 2) is detected: 1. Both of the following conditions continue for 0.2 seconds or more. • The IG1 terminal voltage is between 9.5 and 17.2 V. • The solenoid relay contact is open when the relay is ON. 2. Both of the following conditions continue for 0.2 seconds or more. • IG1 terminal voltage becomes lower than 9.5 V or less when the relay is turned on. • The relay contact remains open.	• ABS NO. 2 fuse • ABS solenoid relay • ABS solenoid relay circuit • Brake actuator assembly
C0279/12	Immediately after the ignition switch is turned on (IG), the solenoid relay contact is closed for 0.2 seconds when the relay is turned off.	Brake actuator assembly

BC

WIRING DIAGRAM

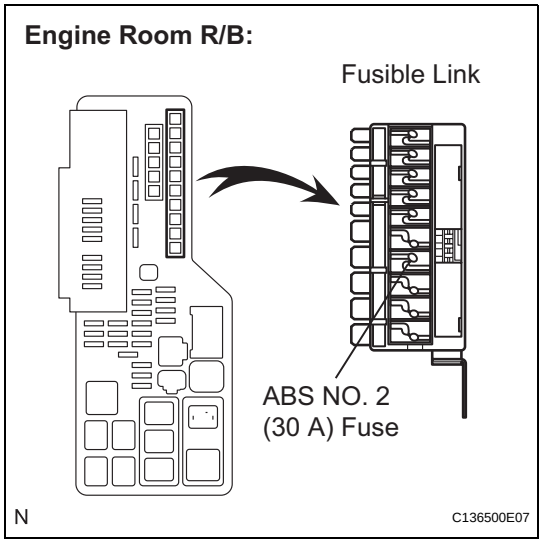


INSPECTION PROCEDURE

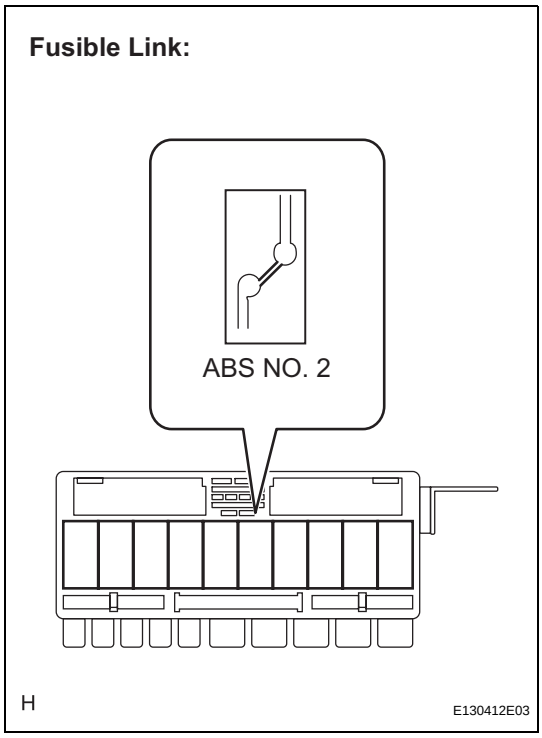
NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	**INSPECT ABS NO. 2 FUSE**



(a) Remove the fusible link from the engine room R/B.



(b) Check if the fusible link is melted.
OK:
The fusible link is melted.

(c) Install the fusible link to the engine room R/B with the nut.

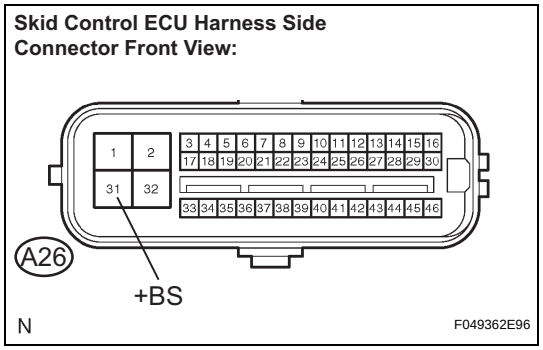
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

NG → **REPLACE FUSIBLE LINK (ABS NO. 2 FUSE)**

OK

BC

2 INSPECT SKID CONTROL ECU (+BS TERMINAL)



(a) Disconnect the skid control ECU connector.
(b) Measure the voltage according to the value(s) in the table below.

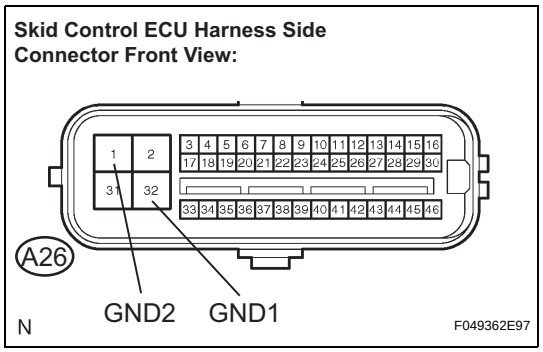
Standard voltage

Tester Connection	Condition	Specified Condition
A26-31 (+BS) - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (+BS CIRCUIT)**

OK

3 INSPECT SKID CONTROL ECU (GND TERMINAL)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A26-32 (GND1) - Body ground	Always	Below 1 Ω
A26-1 (GND2) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

4 RECONFIRM DTC

(a) Reconnect the skid control ECU connector.
(b) Clear the DTC (See page BC-141).
(c) Start the engine.
(d) Drive the vehicle at the speed of 4 mph (6 km/h) or more.
(e) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTCs (C0278/11 and/or C0279/12) are not output	A
DTCs (C0278/11 and/or C0279/12) are output	B

HINT:

- If a speed signal of 4 mph (6 km/h) or more is input to the skid control ECU, with the ignition switch on (IG) and the stop light switch off, the ECU performs self diagnosis of the motor and solenoid circuits.
- If the normal system code is output (the trouble code is not output), slightly jiggle the connectors, wire harnesses, and fuses of the brake actuator assembly. Make sure that no DTCs are output.

BC

- If any DTCs are output while jiggling a connector or wire harness of the brake actuator assembly (skid control ECU), inspect and repair the connector or wire harness.

B → **REPLACE BRAKE ACTUATOR ASSEMBLY**

USE SIMULATION METHOD TO CHECK

DTC	C1201/51	Engine Control System Malfunction

DESCRIPTION

If a malfunction in the engine control system is detected, the operations of VSC and TRAC are prohibited by the fail safe function. When the signals from the engine are input normally, the fail safe is cancelled and the DTC is not stored.

DTC No.	DTC Detection Condition	Trouble Area
C1201/51	Engine control system malfunction signal continues for 5 seconds.	Engine control system

INSPECTION PROCEDURE

1	CHECK ENGINE CONTROL SYSTEM

(a) Check if the engine control system DTC is output (See page ES-45 for 2GR-FE, or ES-38 for 2AZ-FE).

BC

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → INSPECT ENGINE CONTROL SYSTEM

A

REPLACE ECM

DTC	C1203/53	ECM Communication Circuit Malfunction

DESCRIPTION

The circuit is used to send TRAC and VSC control information from the skid control ECU to the ECM, and engine control information from the ECM to the skid control ECU.

DTC No.	DTC Detection Condition	Trouble Area
C1203/53	Engine, drive source and destination variations that are sent from the ECM do not match the ones of the skid control ECU.	ECM

INSPECTION PROCEDURE

1	CHECK PART NUMBER (ECM AND BRAKE ACTUATOR ASSEMBLY)

(a) Check that the proper ECM and brake actuator assembly (skid control ECU) are installed.
OK:
Proper ECUs are installed.

NG → **REPLACE ECUS WITH PROPER ONES**

OK

REPLACE ECM

BC

DTC	C1210/36	Zero Point Calibration of Yaw Rate Sensor Undone

DTC	C1336/39	Zero Point Calibration of Acceleration Sensor Undone

DESCRIPTION

The skid control ECU receives signals from the yaw rate and acceleration sensor via the CAN communication system.
The yaw rate sensor has the built in acceleration sensor and detects the vehicle's condition using 2 circuits (GL1, GL2). If there is trouble in the bus lines between the yaw rate and acceleration sensor and the CAN communication system, the DTCs U0123/62 (yaw rate sensor communication trouble) and U0124/95 (acceleration sensor communication trouble) are output.
The DTCs are also output when the calibration has not been completed.

DTC No.	DTC Detection Condition	Trouble Area
C1210/36	Zero point calibration of yaw rate sensor undone.	• Brake actuator assembly (Skid control ECU) • Yaw rate and acceleration sensor • Zero point calibration undone (Perform zero point calibration and check DTC. If DTC is not output again, the sensor is normal)
C1336/39	When either of the following is detected: 1. The vehicle runs in the normal mode with zero point calibration undone. 2. After the zero point has been obtained, the zero point voltage of the sensor is not between 2.38 and 2.62 V.	• Brake actuator assembly (Skid control ECU) • Yaw rate and acceleration sensor • Zero point calibration undone (Perform zero point calibration and check DTC. If DTC is not output again, the sensor is normal)

BC

INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

HINT:

When U0123/62, U0124/95 or U0126/63 is output along with C1210/36 or C1336/39, inspect and repair trouble areas indicated by U0123/62, U0124/95 or U0126/63 first.

1	PERFORM ZERO POINT CALIBRATION OF YAW RATE AND ACCELERATION SENSOR

(a) Perform zero point calibration of the yaw rate and acceleration sensor (See page BC-119).

NEXT

2	RECONFIRM DTC

(a) Clear the DTC (See page BC-141).
(b) Check if the same DTCs are recorded (See page BC-141).

Result

Condition	Proceed to
DTCs (C1210/36 and/or C1336/39) are output	A
DTCs (C1210/36 and/or C1336/39) are not output	B

HINT:
- The DTCs are recorded because zero point calibration has not been completed.
- End the procedure as the same DTCs are not recorded after completion of zero point calibration.

B → **END**

A

3	CHECK YAW RATE AND ACCELERATION SENSOR INSTALLATION

(a) Turn the ignition switch off.
(b) Check that the yaw rate and acceleration sensor has been installed properly (See page BC-448).
OK:
The sensor should be tightened to the specified torque.
The sensor should not be tilted.

NG → **INSTALL YAW RATE AND ACCELERATION SENSOR CORRECTLY**

OK

REPLACE BRAKE ACTUATOR ASSEMBLY

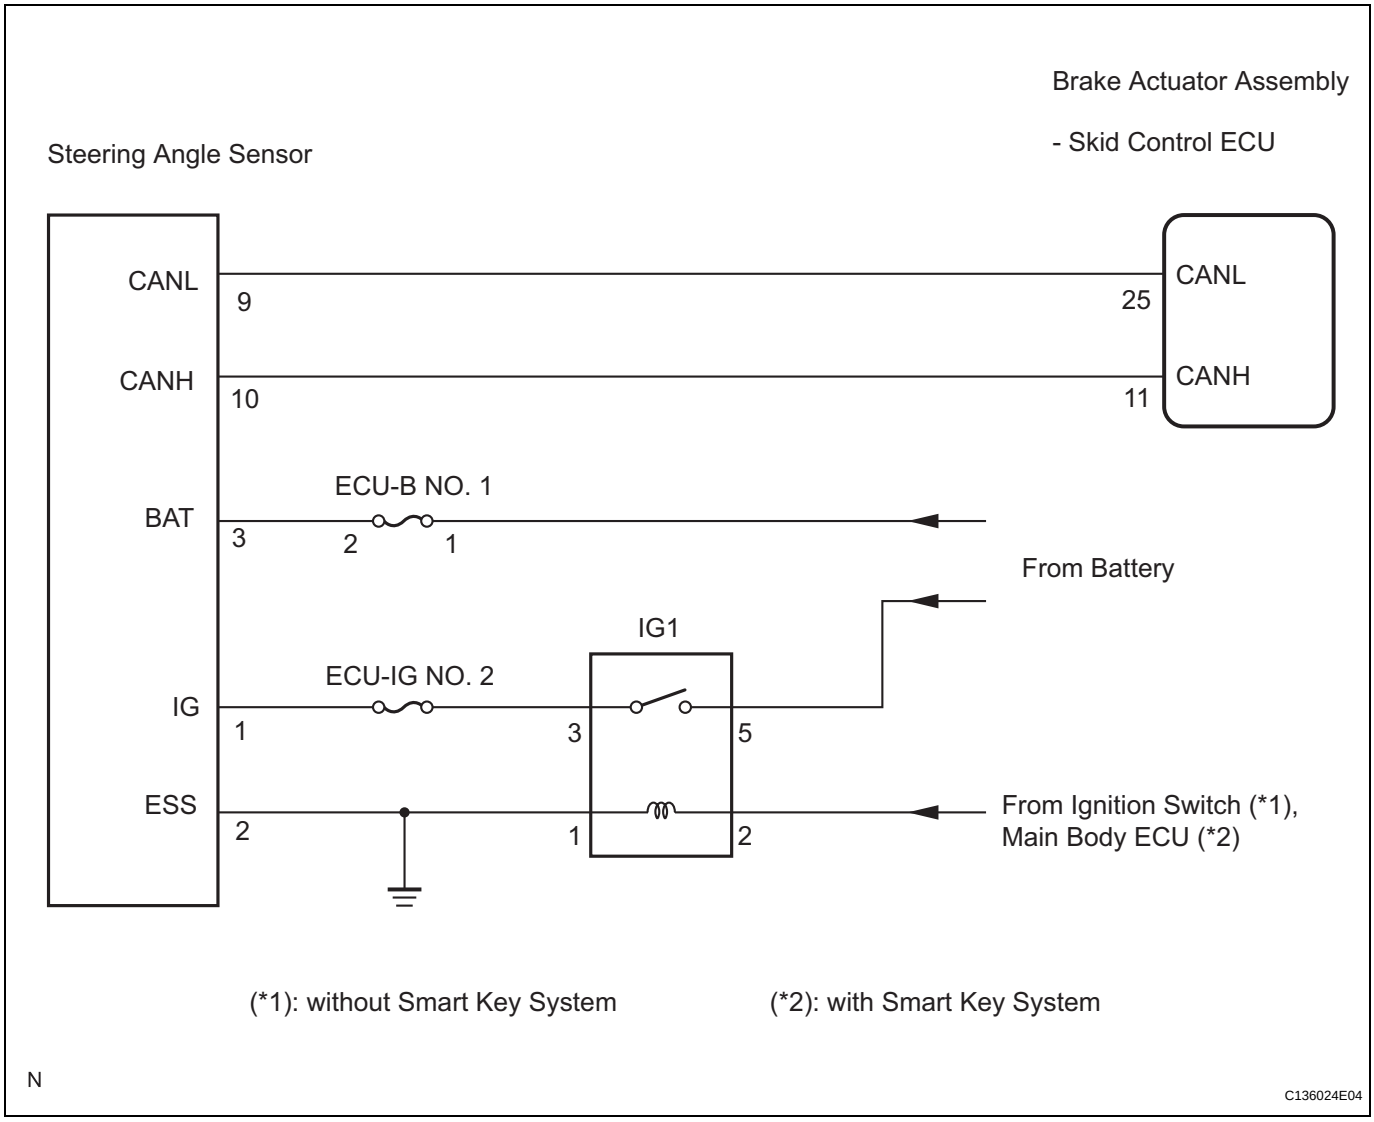
DTC	C1231/31	Steering Angle Sensor Circuit Malfunction

DESCRIPTION

The steering angle sensor signal is sent to the skid control ECU via the CAN communication system. When there is a malfunction in the CAN communication system, it will be detected by the steering angle sensor zero point malfunction diagnostic function.

DTC No.	DTC Detection Condition	Trouble Area
C1231/31	When ECU IG1 terminal voltage is 9.5 V or more, the steering angle sensor malfunction signal is received.	• Steering angle sensor • Steering angle sensor circuit • Steering angle sensor power supply • Brake actuator assembly (Skid control ECU)

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

- When U0073/94, U0123/62, U0124/95 or U0126/63 is output together with C1231/31, inspect and repair the trouble areas indicated by U0073/94, U0123/62, U0124/95 or U0126/63 first.

- When the speed sensor or the yaw rate sensor has trouble, DTCs for the steering angle sensor may be output even when the steering angle sensor is normal. When DTCs for the speed sensor or yaw rate sensor are output together with other DTCs for the steering angle sensor, inspect and repair the speed sensor and yaw rate sensor first, and then inspect and repair the steering angle sensor.

1 CHECK DTC

(a) Clear the DTC (See page BC-141).
(b) Turn the ignition switch off.
(c) Turn the ignition switch on (IG) again and check that no CAN communication system DTC is output.
(d) Drive the vehicle and turn the steering wheel to the right and left at the speed of 22 mph (35 km/h) and check that no speed sensor and yaw rate sensor DTCs are output.

Result

Condition	Proceed to
No CAN communication system DTC and the speed sensor or yaw rate sensor DTC are output	A
CAN communication system DTC is output	B
Speed sensor or yaw rate sensor DTC is output	C

BC

HINT:
- If there is a malfunction in the speed sensor or the yaw rate sensor, an abnormal value may be output although the steering angle sensor is normal.
- If the speed sensor and the yaw rate sensor DTCs are output simultaneously, repair the sensors and inspect the steering angle sensor.

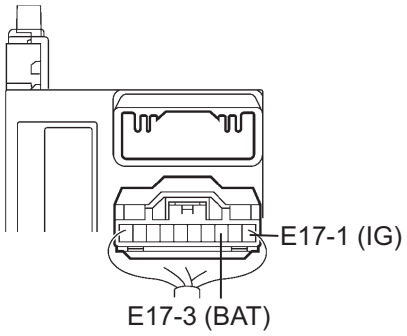
B → **INSPECT CAN COMMUNICATION SYSTEM**

C → **REPAIR CIRCUIT INDICATED BY OUTPUT DTC (See page BC-151)**

A

2 INSPECT STEERING ANGLE SENSOR (POWER SOURCE TERMINAL)

Steering Angle Sensor Wire Harness View:



(a) Turn the ignition switch off.
(b) Remove the steering wheel and the column cover lower.
(c) Disconnect the steering angle sensor connector.
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

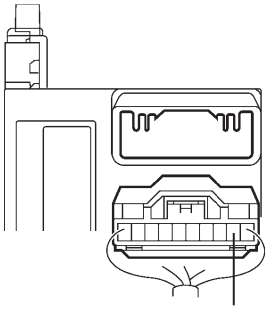
Tester Connection	Condition	Specified Condition
E17-1 (IG) - Body ground	Ignition switch on (IG)	10 to 14 V
E17-3 (BAT) - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER SOURCE CIRCUIT)**

OK

3	INSPECT STEERING ANGLE SENSOR (GROUND TERMINAL)

Steering Angle Sensor Wire Harness View:



G030156E16

(a) Turn the ignition switch off.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E17-2 (ESS) - Body ground	Always	Below 1 Ω

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GROUND CIRCUIT)**

OK

REPLACE STEERING ANGLE SENSOR

BC

DTC	**C1232/32**	**Stuck in Acceleration Sensor**
DTC	**C0371/71**	**Yaw Rate Sensor (Test Mode DTC)**
DTC	**C1234/34**	**Yaw Rate Sensor Malfunction**
DTC	**C1243/43**	**Acceleration Sensor Stuck Malfunction**
DTC	**C1244/44**	**Open or Short in Acceleration Sensor Circuit**
DTC	**C1245/45**	**Acceleration Sensor Output Malfunction**
DTC	**C1279/79**	**Acceleration Sensor Output Voltage Malfunction (Test Mode DTC)**
DTC	**C1381/97**	**Yaw Rate and / or Acceleration Sensor Power Supply Voltage Malfunction**

BC

DESCRIPTION

The skid control ECU receives signals from the yaw rate and acceleration sensor via the CAN communication system.

The yaw rate sensor has a built in acceleration sensor and detects the vehicle's condition using 2 circuits (GL1, GL2).

If there is trouble in the bus lines between the yaw rate and acceleration sensor and the CAN communication system, the DTC U0123/62 (malfunction in CAN communication with the yaw rate sensor) and U0124/95 (malfunction in CAN communication with the acceleration sensor) are output.

These DTCs are also output when calibration has not been completed.

DTCs C0371/71 and C1279/79 can be deleted when the yaw rate and acceleration sensor sends a yaw rate and/or acceleration signal or the Test Mode ends. DTCs C0371/71 and C1279/79 are output only in the Test Mode.

DTC No.	DTC Detection Condition	Trouble Area
C1232/32	At a vehicle speed of 6 mph (10 km/h) or more, either GL1 or GL2 (input signal) does not change for 30 seconds or more.	• Yaw rate and acceleration sensor • Yaw rate and acceleration sensor circuit
C1234/34	Sensor malfunction signal is received from the yaw rate sensor.	• Yaw rate and acceleration sensor • Yaw rate and acceleration sensor circuit
C1243/43	While the vehicle speed changes from 19 mph (30 km/h) to 0 mph (0 km/h), the condition that the values of GL1 and GL2 do not change occurs 16 times or more.	• Yaw rate and acceleration sensor • Yaw rate and acceleration sensor circuit
C1244/44	When either of the following is detected: 1. A data malfunction signal is received from the acceleration sensor. 2. After the difference between GL1 and GL2 becomes 0.6 G or more with the vehicle stationary, the difference remains 0.4 G or more for 60 seconds or more.	• Yaw rate and acceleration sensor • Yaw rate and acceleration sensor circuit
C1245/45	At a vehicle speed of 19 mph (30 km/h) or more, the difference between the forward and backward G calculated from the acceleration sensor value and that calculated from the vehicle speed sensor exceeds 0.35 G for 60 seconds or more.	• Yaw rate and acceleration sensor • Yaw rate and acceleration sensor circuit
C1381/97	At a vehicle speed of more than 2 mph (3 km/h), the acceleration sensor power source malfunction signal is received for 10 seconds or more.	• Yaw rate and acceleration sensor • Yaw rate and acceleration sensor power source circuit

BC

INSPECTION PROCEDURE

NOTICE:

When replacing the yaw rate and acceleration sensor, perform zero point calibration (See page BC-119).

HINT:

When U0123/62, U0124/95 or U0126/63 is output together with C1232/32, C1234/34, C1243/43, C1244/44, C1245/45, or C1381/97, inspect and repair the trouble areas indicated by U0123/62, U0124/95 or U0126/63 first.

1	CHECK DTC

(a) Clear the DTC (See page BC-141).
(b) Turn the ignition switch off.
(c) At a speed of 19 mph (30 km/h) or more, drive the vehicle, turn the steering wheel, and decelerate the vehicle (depress the brake pedal).

(d) Turn the ignition switch on (IG) again and check that no CAN communication system DTC is output.
(e) Check if DTCs for zero point calibration of the yaw rate sensor undone (C1210/36) or for zero point calibration of the acceleration sensor undone (C1336/39) are output.

Result

Condition	Proceed to
DTCs (C1210/36, C1336/39 and/or CAN communication system DTC) are not output	A
CAN communication system DTC is output	B
DTCs (C1210/36 and/or C1336/39) are output	C

B → **INSPECT CAN COMMUNICATION SYSTEM**

C → **REPAIR CIRCUIT INDICATED BY OUTPUT DTC (See page BC-151)**

A

BC

2 CHECK YAW RATE AND ACCELERATION SENSOR INSTALLATION

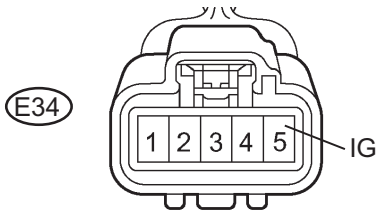
(a) Turn the ignition switch off.
(b) Check that the yaw rate and acceleration sensor has been installed properly (See page BC-448).
OK:
The sensor is tightened to the specified torque.
The sensor is not tilted.

NG → **INSTALL YAW RATE AND ACCELERATION SENSOR CORRECTLY**

OK

3 INSPECT YAW RATE AND ACCELERATION SENSOR (IG TERMINAL)

Yaw Rate and Acceleration Sensor Harness Side Connector Front View:



(a) Disconnect the yaw rate and acceleration sensor connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.
Standard voltage

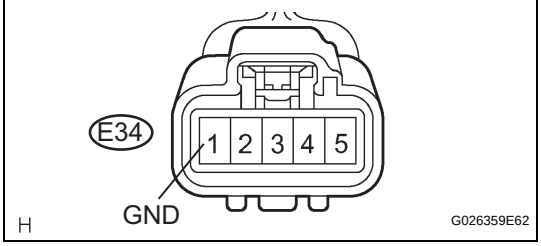
Tester Connection	Condition	Specified Condition
E34-5 (IG) - Body ground	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (IG CIRCUIT)**

OK

4 INSPECT YAW RATE AND ACCELERATION SENSOR (GND TERMINAL)

Yaw Rate and Acceleration Sensor Harness Side Connector Front View:



(a) Turn the ignition switch off.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E34-1 (GND) - Body ground	Always	Below 1 Ω

NOTICE:
Check the yaw rate and acceleration sensor signal after replacement (See page BC-123).
HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

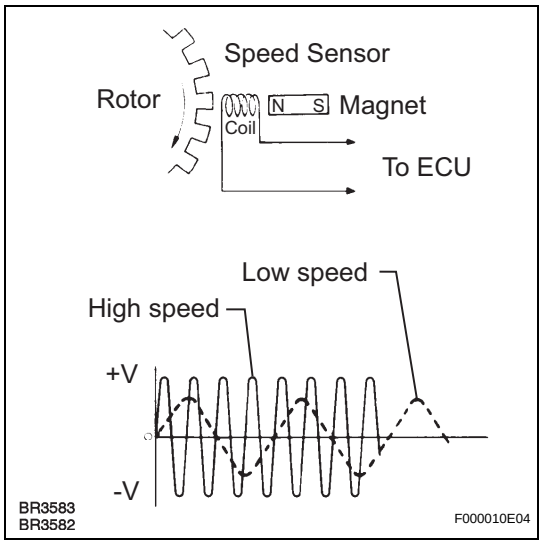
REPLACE YAW RATE AND ACCELERATION SENSOR

BC

DTC	**C1235/35**	**Foreign Object is Attached on Tip of Front Speed Sensor RH**
DTC	**C1236/36**	**Foreign Object is Attached on Tip of Front Speed Sensor LH**
DTC	**C1238/38**	**Foreign Object is Attached on Tip of Rear Speed Sensor RH**
DTC	**C1239/39**	**Foreign Object is Attached on Tip of Rear Speed Sensor LH**
DTC	**C1275/75**	**Abnormal Change in Output Signal of Front Speed Sensor RH (Test Mode DTC)**
DTC	**C1276/76**	**Abnormal Change in Output Signal of Front Speed Sensor LH (Test Mode DTC)**
DTC	**C1277/77**	**Abnormal Change in Output Signal of Rear Speed Sensor RH (Test Mode DTC)**
DTC	**C1278/78**	**Abnormal Change in Output Signal of Rear Speed Sensor LH (Test Mode DTC)**

DESCRIPTION

The speed sensors detect wheel speed and transmit the signals to the ECU. These signals are used for control of the ABS control system. Each of the front and rear rotors have 48 serrations.
When the rotors rotate, the magnetic field generated by the permanent magnet in the speed sensor induces an AC voltage.
Since the frequency of this AC voltage changes in direct proportion to the speed of the rotor, the frequency is used by the ECU to detect the speed of each wheel.
DTCs C1275/75 to C1278/78 can be deleted when the speed sensor sends a vehicle speed signal or the Test Mode ends. DTCs from C1275/75 to C1278/78 are output only in the Test Mode.



DTC No.	DTC Detection Condition	Trouble Area
C1235/35 C1236/36 C1238/38 C1239/39	At a vehicle speed of 12 mph (20 km/h) or more, noise occurs in the sensor signal from the abnormal wheel for 5 seconds or more.	• Speed sensor • Speed sensor rotor • Sensor installation • Brake actuator assembly (Skid control ECU)

BC

HINT:
- DTC C1235/35 is for the front speed sensor RH.
- DTC C1236/36 is for the front speed sensor LH.
- DTC C1238/38 is for the rear speed sensor RH.
- DTC C1239/39 is for the rear speed sensor LH.

INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

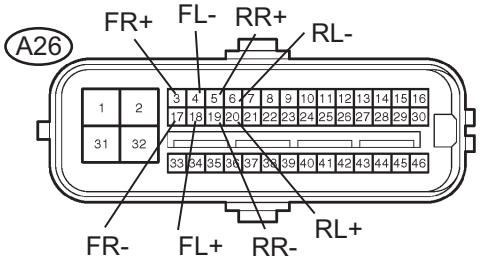
HINT:

When C0200/31, C0205/32, C0210/33, or C0215/34 is output together with C1235/35, C1236/36, C1238/38, or C1239/39, inspect and repair the trouble areas indicated by C0200/31, C0205/32, C0210/33, or C0215/34 first.

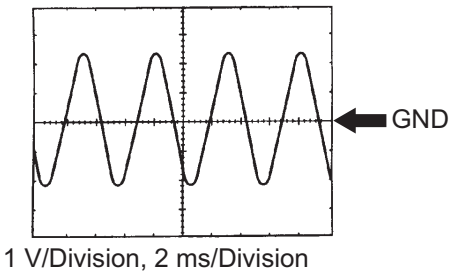
BC

1 CHECK SPEED SENSOR AND SPEED SENSOR ROTOR SERRATIONS

Skid Control ECU Harness Side Connector Front View:



Normal Signal Waveform:



C136019E05

(a) Disconnect the skid control ECU connector.
(b) Connect the oscilloscope to each speed sensor terminal of the skid control ECU.
(c) Check that a waveform is output when the tires are rotated (by the sensor circuit).

OK:

The same waveform is output from all the 4 wheels and there is no noise or interference in the waveform.

(d) Check that the waveform does not change while jiggling a connector or a wire harness.

OK:

The waveform does not change.

HINT:

- As the vehicle speed (wheel revolution speed) increases, a cycle of the waveform narrows and the output voltage becomes greater.
- When noise is identified in the waveform on the oscilloscope, the erratic signals are generated due to speed sensor rotor's scratches, looseness or foreign matter attached to it.

NG → **Go to step 3**

OK

2 RECONFIRM DTC

(a) Reconnect the skid control ECU connector.
(b) Clear the DTC (See page BC-141).
(c) Start the engine.
(d) Drive the vehicle at the speed of 12 mph (20 km/h) or more for at least 60 seconds.
(e) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTCs (C1235/35, C1236/36, C1238/38 and/or C1239/39) are not output	A
DTCs (C1235/35, C1236/36, C1238/38 and/or C1239/39) are output	B

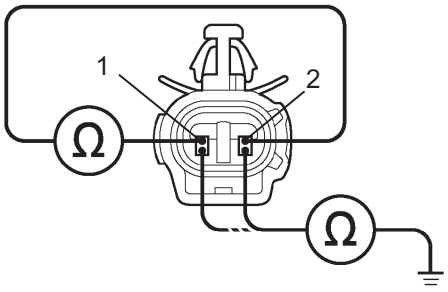
B → **REPLACE BRAKE ACTUATOR ASSEMBLY**

A

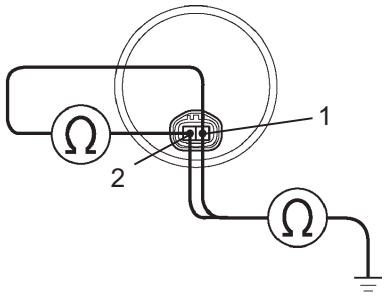
USE SIMULATION METHOD TO CHECK

3 INSPECT EACH SPEED SENSOR

Front Speed Sensor:



Rear Speed Sensor:



C136027E01

(a) Disconnect each speed sensor connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

RH

Tester Connection	Condition	Specified Condition
1 (FR+) - 2 (FR-)	Always	1.4 to 1.8 kΩ at 20°C (68 °F)
1 (FR+) - Body ground	Always	10 kΩ or higher
2 (FR-) - Body ground	Always	10 kΩ or higher
2 (RR+) - 1 (RR-)	Always	0.9 to 2.1 kΩ
2 (RR+) - Body ground	Always	10 kΩ or higher
1 (RR-) - Body ground	Always	10 kΩ or higher

LH

Tester Connection	Condition	Specified Condition
1 (FL+) - 2 (FL-)	Always	1.4 to 1.8 kΩ at 20°C (68 °F)
1 (FL+) - Body ground	Always	10 kΩ or higher
2 (FL-) - Body ground	Always	10 kΩ or higher
2 (RL+) - 1 (RL-)	Always	0.9 to 2.1 kΩ
2 (RL+) - Body ground	Always	10 kΩ or higher
1 (RL-) - Body ground	Always	10 kΩ or higher

BC

Result

Result	Proceed to
OK (for rear)	A
OK (for front)	B

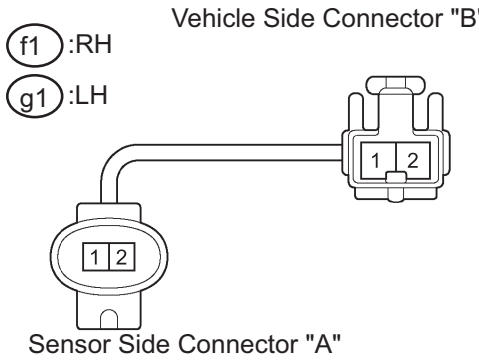
B → Go to step 5

C → REPLACE EACH SPEED SENSOR

A

4	CHECK HARNESS AND CONNECTOR (SKID CONTROL SENSOR WIRE)

Skid Control Sensor Wire:



C136026E01

(a) Disconnect the skid control sensor wire.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

RH

Tester Connection	Condition	Specified Condition
f1 ("A"-1) - f1 ("B"-2)	Always	Below 1 Ω
f1 ("A"-1) - f1 ("B"-1)	Always	10 kΩ or higher
f1 ("A"-1) - Body ground	Always	10 kΩ or higher
f1 ("A"-2) - f1 ("B"-1)	Always	Below 1 Ω
f1 ("A"-2) - f1 ("B"-2)	Always	10 kΩ or higher
f1 ("A"-2) - Body ground	Always	10 kΩ or higher

LH

Tester Connection	Condition	Specified Condition
g1 ("A"-1) - g1 ("B"-2)	Always	Below 1 Ω
g1 ("A"-1) - g1 ("B"-1)	Always	10 kΩ or higher
g1 ("A"-1) - Body ground	Always	10 kΩ or higher
g1 ("A"-2) - g1 ("B"-1)	Always	Below 1 Ω
g1 ("A"-2) - g1 ("B"-2)	Always	10 kΩ or higher
g1 ("A"-2) - Body ground	Always	10 kΩ or higher

NOTICE:
Check the speed sensor signal after replacement (See page BC-123).

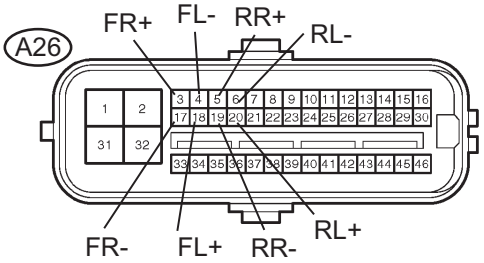
NG → **REPLACE SKID CONTROL SENSOR WIRE**

OK

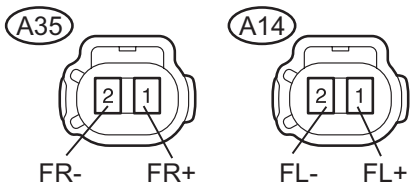
BC

5 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - EACH SPEED SENSOR)

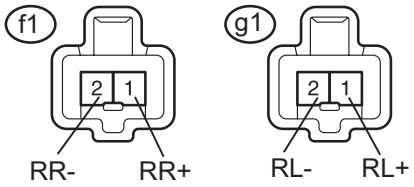
Skid Control ECU Harness Side Connector Front View:



Front Speed Sensor Harness Side Connector Front View:



Rear Speed Sensor Harness Side Connector Front View:



C136025E01

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance:

RH

Tester Connection	Condition	Specified Condition
A26-3 (FR+) - A35-1 (FR+)	Always	Below 1 Ω
A26-3 (FR+) - Body ground	Always	10 kΩ or higher
A26-17 (FR-) - A35-2 (FR-)	Always	Below 1 Ω
A26-17 (FR-) - Body ground	Always	10 kΩ or higher
A26-5 (RR+) - f1-1 (RR+)	Always	Below 1 Ω
A26-5 (RR+) - Body ground	Always	10 kΩ or higher
A26-19 (RR-) - f1-2 (RR-)	Always	Below 1 Ω
A26-19 (RR-) - Body ground	Always	10 kΩ or higher

LH

Tester Connection	Condition	Specified Condition
A26-18 (FL+) - A14-1 (FL+)	Always	Below 1 Ω
A26-18 (FL+) - Body ground	Always	10 kΩ or higher
A26-4 (FL-) - A14-2 (FL-)	Always	Below 1 Ω
A26-4 (FL-) - Body ground	Always	10 kΩ or higher
A26-20 (RL+) - g1-1 (RL+)	Always	Below 1 Ω
A26-20 (RL+) - Body ground	Always	10 kΩ or higher
A26-6 (RL-) - g1-2 (RL-)	Always	Below 1 Ω
A26-6 (RL-) - Body ground	Always	10 kΩ or higher

BC

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6 RECONFIRM DTC

(a) Reconnect the skid control sensor wire.
(b) Reconnect the skid control ECU connector and the speed sensor connector.
(c) Clear the DTC (See page BC-141).
(d) Start the engine.
(e) Drive the vehicle at the speed of 12 mph (20 km/h) or more for at least 60 seconds.
(f) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTCs (C1235/35, C1236/36, C1238/38 and/or C1239/39) are output (for front)	A
DTCs (C1235/35, C1236/36, C1238/38 and/or C1239/39) are output (for rear)	B

Condition	Proceed to
DTCs (C1235/35, C1236/36, C1238/38 and/or C1239/39) are not output	C

B → Go to step 8

C → USE SIMULATION METHOD TO CHECK

A

7 CHECK FRONT SPEED SENSOR TIP

(a) Turn the ignition switch off.
(b) Remove the front speed sensor (See page BC-438).
(c) Check the speed sensor tip.
OK:
No scratches or foreign matter on the sensor tip.
NOTICE:
Check the speed sensor signal after cleaning or replacement (See page BC-123).

NG → CLEAN OR REPLACE FRONT SPEED SENSOR

OK

8 CHECK EACH SPEED SENSOR ROTOR

(a) Turn the ignition switch off.
(b) Remove each speed sensor rotor.
(c) Check the speed sensor rotor.
OK:
No scratches, missing teeth, or foreign matter on the rotors.
NOTICE:
Check the speed sensor signal after cleaning or replacement (See page BC-123).

NG → CLEAN OR REPLACE EACH SPEED SENSOR ROTOR

OK

9 RECONFIRM DTC

(a) Install the front speed sensor and the speed sensor rotor.
(b) Clear the DTC (See page BC-141).
(c) Start the engine.
(d) Drive the vehicle at the speed of 12 mph (20 km/h) or more for at least 60 seconds.
(e) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTCs (C1235/35, C1236/36, C1238/38 and/or C1239/39) are output	A
DTCs (C1235/35, C1236/36, C1238/38 and/or C1239/39) are not output	B

B → **USE SIMULATION METHOD TO CHECK**

A

REPLACE BRAKE ACTUATOR ASSEMBLY

DTC	C1241/41	Low Battery Positive Voltage

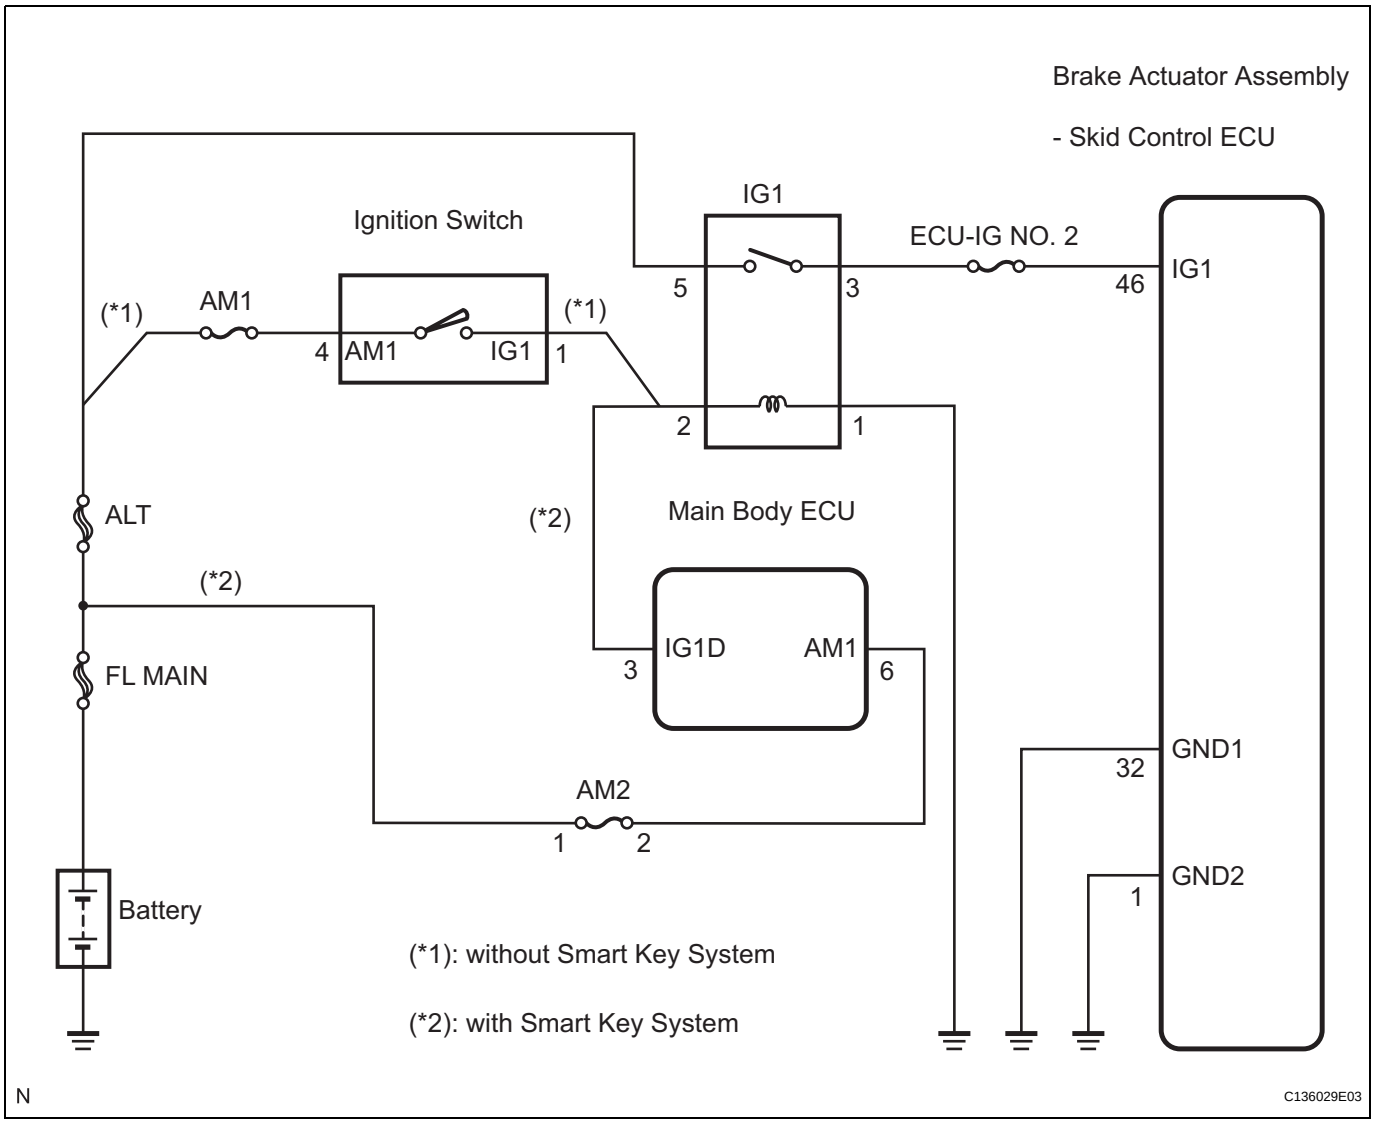
DESCRIPTION

If a malfunction is detected in the power supply circuit, the skid control ECU (housed in the actuator assembly) stores this DTC and the fail safe function prohibits ABS operation.
This DTC is stored when the IG1 terminal voltage deviates from the DTC detection condition due to a malfunction in the power supply or charging circuit such as the battery or alternator circuit, etc.
The DTC is cancelled when the IG1 terminal voltage returns to normal.

DTC No.	DTC Detection Condition	Trouble Area
C1241/41	When any of the following is detected: 1. At a vehicle speed of 2 mph (3 km/h) or more, the IG1 terminal voltage is 9.5 V or less for 10 seconds or more. 2. When the solenoid relay remains ON and the IG1 terminal voltage is 9.5 V or less, the relay contact is open for 0.2 seconds or more. 3. While the VSC NO. 1 (fail safe) relay is ON after VSC NO. 2 relay ON, the IG1 terminal voltage is 9.5 V or less and the actuator pump drive motor is OFF for 0.1 second or more.	• ECU-IG NO. 2 fuse • Battery • Charging system • Power source circuit • Internal power supply circuit of the skid control ECU

BC

WIRING DIAGRAM



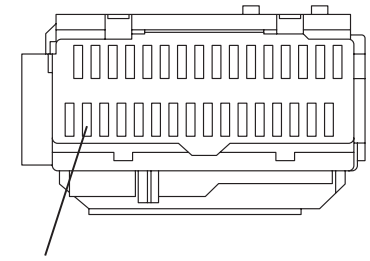
INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1 INSPECT ECU-IG NO. 2 FUSE

Main Body ECU:



N C135806E01

(a) Remove the ECU-IG NO. 2 fuse from the main body ECU.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
ECU-IG NO. 2 (7.5 A) fuse	Always	Below 1 Ω

NG → **REPLACE ECU-IG NO. 2 FUSE**

OK

2 CHECK BATTERY

(a) Install the ECU-IG NO. 2 fuse.
(b) Check the battery voltage.

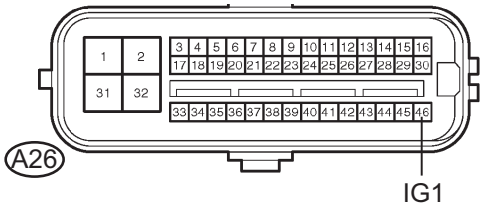
Standard voltage:
10 to 14 V

NG → **CHECK AND REPLACE CHARGING SYSTEM OR BATTERY**

OK

3 INSPECT SKID CONTROL ECU (IG1 TERMINAL)

Skid Control ECU Harness Side Connector Front View:



N F049362E98

(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

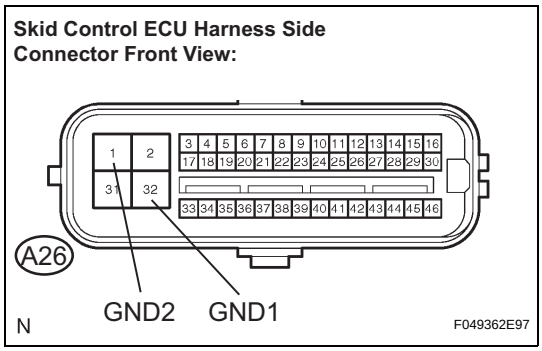
Tester Connection	Condition	Specified Condition
A26-46 (IG1) - Body ground	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (IG1 CIRCUIT)**

BC

OK

4 INSPECT SKID CONTROL ECU (GND TERMINAL)



(a) Turn the ignition switch off.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A26-32 (GND1) - Body ground	Always	Below 1 Ω
A26-1 (GND2) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

BC

5 RECONFIRM DTC

(a) Reconnect the skid control ECU connector.
(b) Clear the DTC (See page BC-141).
(c) Turn the ignition switch on (IG).
(d) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTC (C1241/41) is not output	A
DTC (C1241/41) is output	B

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

B → **REPLACE BRAKE ACTUATOR ASSEMBLY**

A

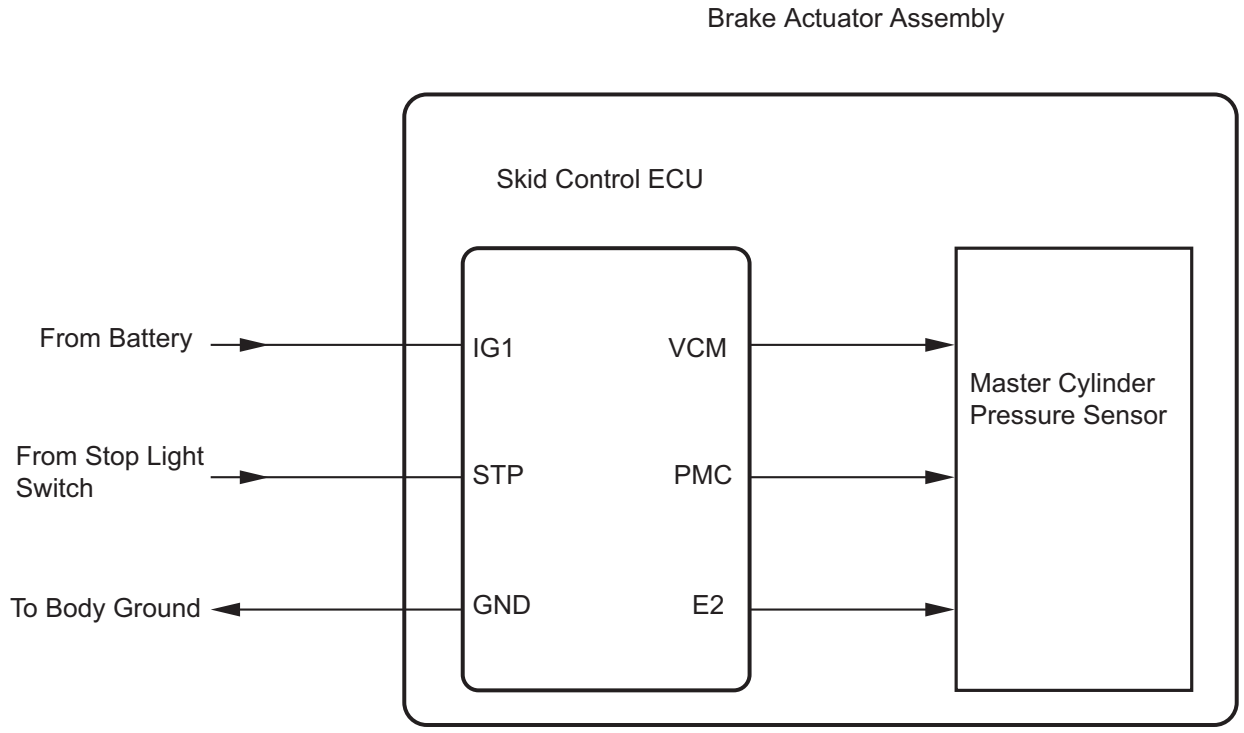
USE SIMULATION METHOD TO CHECK

DTC	C1246/46	Master Cylinder Pressure Sensor Malfunction

DTC	C1281/81	Master Cylinder Pressure Sensor Output Malfunction (Test Mode DTC)

DESCRIPTION

Master cylinder pressure sensor is connected to the skid control ECU in the brake actuator assembly. DTC C1281/81 can be deleted when the master cylinder pressure sensor sends a master cylinder pressure signal or the Test Mode ends. DTC C1281/81 is output only in the Test Mode.



VCM: Power Supply for Master Cylinder Pressure Sensor

PMC: Master Cylinder Pressure Sensor Input

E2: Master Cylinder Pressure Sensor Ground

N

C106656E05

BC

DTC No.	DTC Detection Condition	Trouble Area
C1246/46	When any of the following is detected: • At a vehicle speed of 4.3 mph (7 km/h) or more, when the PMC terminal voltage is over 0.86 V, it does not change by 0.005 V or more for 30 seconds. • Noise occurs in the PMC terminal 7 times or more within 5 seconds. • When the stop light switch is OFF, the PMC terminal voltage is more than 0.86 V or less than 0.3 V for 5 seconds or more. • With the IG1 terminal voltage between 9.5 and 17.2 V, the VCM terminal voltage is not between 4.4 and 5.6 V for 1.2 seconds or more. • When the VCM terminal voltage between 4.4 and 5.6 V, the PCM terminal voltage is not between 0.14 and 4.85 V for 1.2 seconds or more.	• Master cylinder pressure sensor • Master cylinder pressure sensor circuit • Stop light switch circuit • Brake actuator assembly

INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

BC

1 CHECK STOP LIGHT OPERATION

(a) Check that the stop light comes on when the brake pedal is depressed, and goes off when the brake pedal is released.

OK

Condition	Illumination Condition
Brake pedal depressed	**ON**
Brake pedal released	**OFF**

NG → **INSPECT STOP LIGHT CIRCUIT**

OK

2 READ VALUE OF INTELLIGENT TESTER (MASTER CYLINDER PRESSURE SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Select the Data List mode on the intelligent tester.

ABS / VSC:

Item (Display)	Measurement Item / Range (Display)	Normal Condition
MAS CYL PRESS 1	Master cylinder pressure sensor 1 reading / min.: 0 V, max.: 5 V	When brake pedal is released: 0.3 to 0.5 V

(d) Check that the brake fluid pressure value of the master cylinder pressure sensor observed on the intelligent tester changes when the brake pedal is depressed.

OK:

When the pedal is depressed, voltage displayed on the intelligent tester increases.

NG → **REPLACE BRAKE ACTUATOR ASSEMBLY**

OK

3	READ VALUE OF INTELLIGENT TESTER (STOP LIGHT SWITCH)

(a) Select the Data List mode on the intelligent tester.

ABS / VSC:

Item (Display)	Measurement Item / Range (Display)	Normal Condition
STOP LAMP SW	Stop light switch / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released

(b) Check that the stop light condition observed on the intelligent tester changes when the brake pedal is depressed.

OK:

When the brake pedal is depressed, the intelligent tester displays "ON".

NG → **REPLACE BRAKE ACTUATOR ASSEMBLY**

OK

BC

4	RECONFIRM DTC

(a) Turn the ignition switch off.
(b) Clear the DTC (See page BC-141).
(c) Start the engine.
(d) At a speed of 18 mph (30 km/h) or more, drive the vehicle and perform braking test (decelerate the vehicle by depressing the brake pedal).
(e) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTC (C1246/46) is not output	A
DTC (C1246/46) is output	B

B → **REPLACE BRAKE ACTUATOR ASSEMBLY**

A

USE SIMULATION METHOD TO CHECK

DTC	C1249/49	Open in Stop Light Switch Circuit

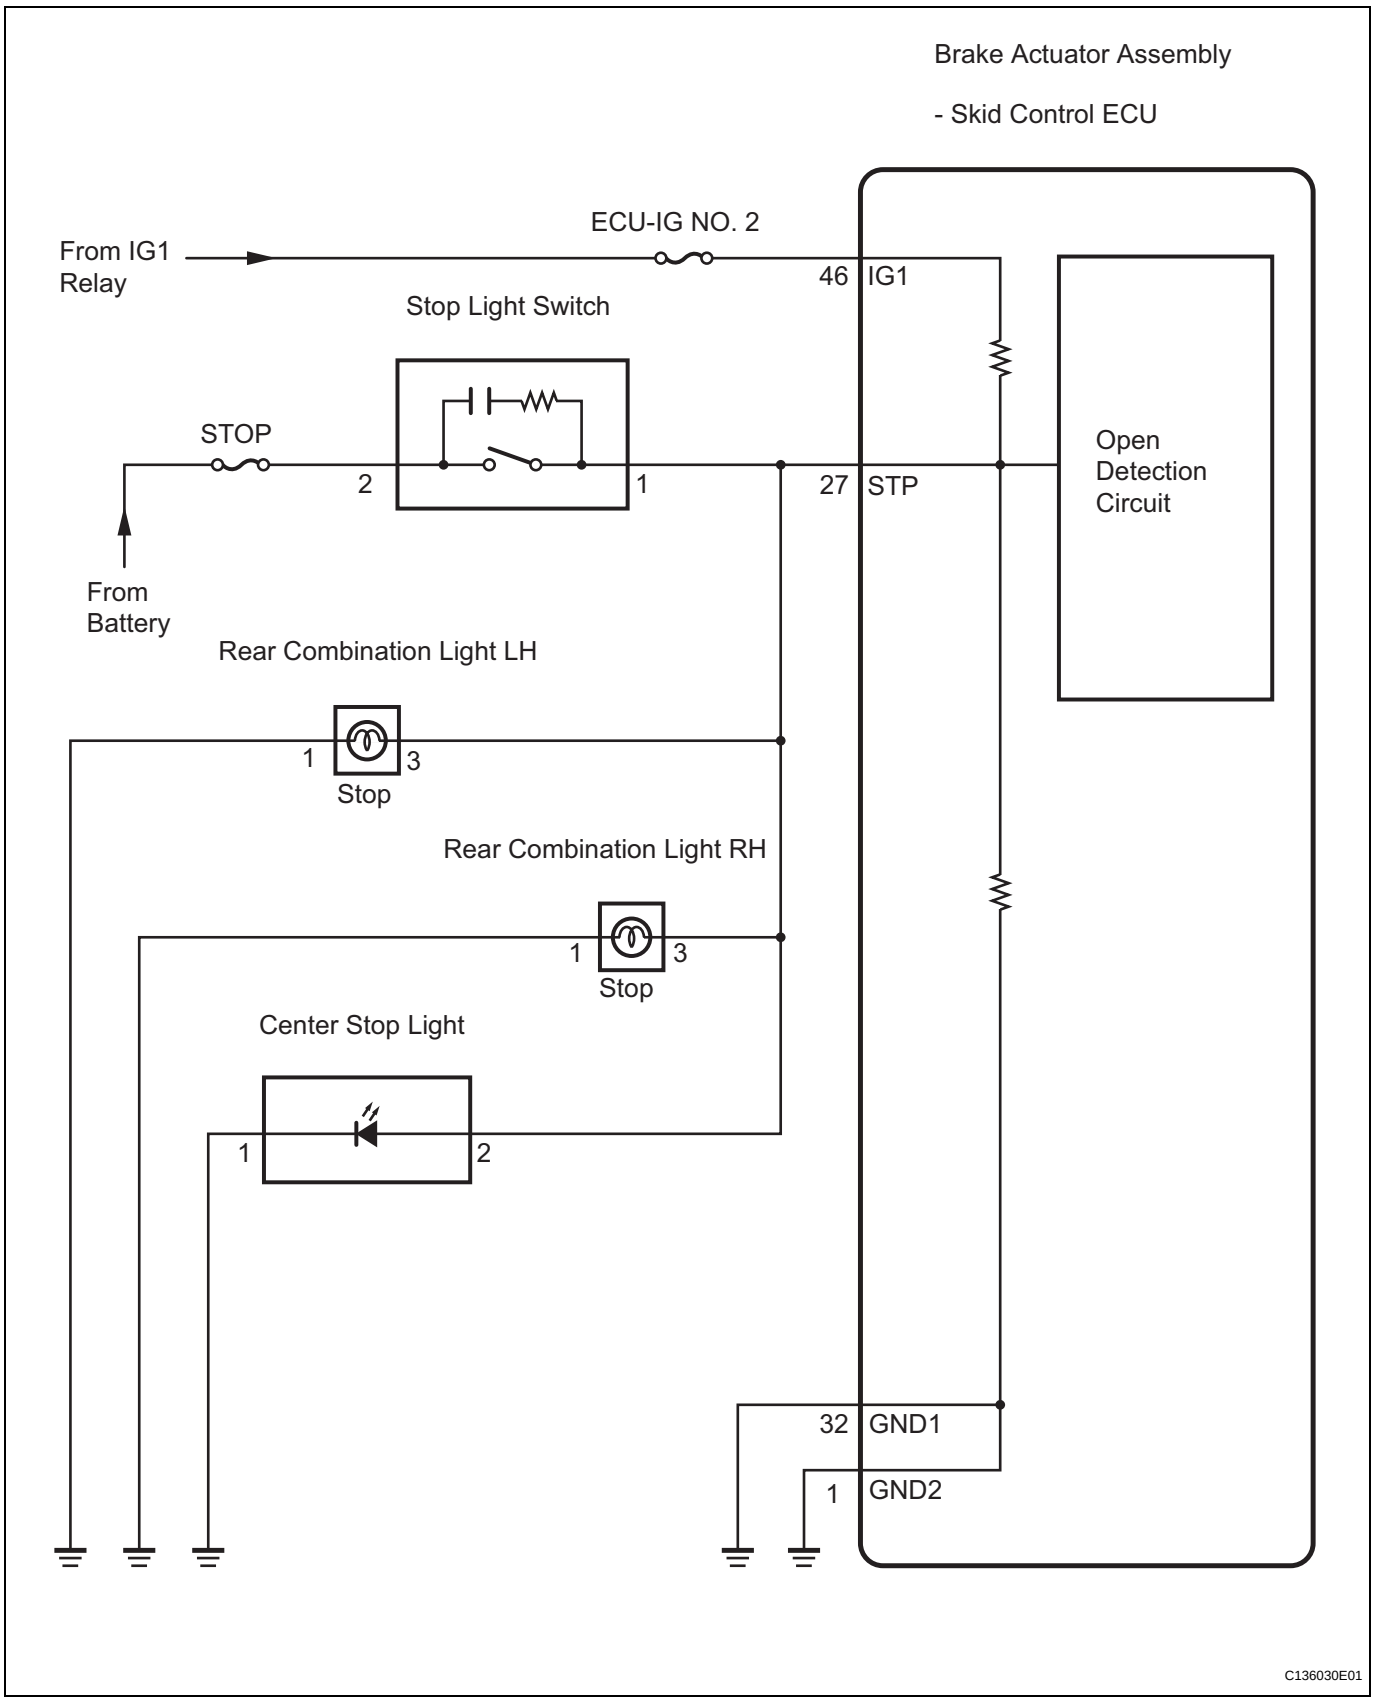
DESCRIPTION

The skid control ECU (housed in the actuator assembly) inputs the stop light switch signal and the condition of brake operation.

The skid control ECU has an open detection circuit, which outputs this DTC when detecting an open in the stop light input line while the stop light switch is OFF.

DTC No.	DTC Detection Condition	Trouble Area
C1249/49	When IG1 terminal voltage is 9.5 to 17.2 V, an open circuit of the stop light switch continues for 0.3 seconds or more.	• STOP fuse • Stop light switch • Stop light switch circuit • Brake actuator assembly (Skid control ECU)

WIRING DIAGRAM



BC

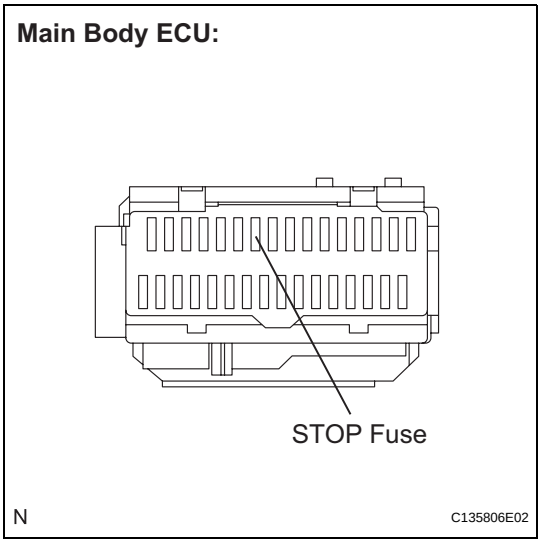
INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1 INSPECT STOP FUSE

Main Body ECU:



(a) Remove the STOP fuse from the main body ECU.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
STOP (10 A) fuse	Always	Below 1 Ω

NG → **REPLACE STOP FUSE**

OK

2 CHECK STOP LIGHT OPERATION

(a) Install the STOP fuse.
(b) Check that the stop light comes on when the brake pedal is depressed, and goes off when the brake pedal is released.

OK

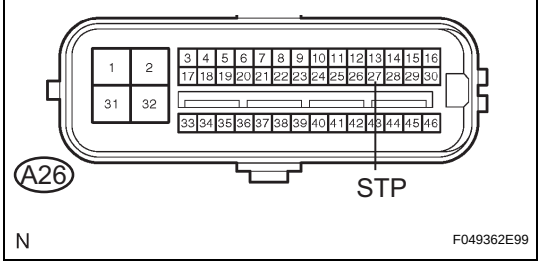
Condition	Illumination Condition
Brake pedal depressed	ON
Brake pedal released	OFF

NG → **Go to step 7**

OK

3 INSPECT SKID CONTROL ECU (STP TERMINAL)

Skid Control ECU Harness Side Connector Front View:



(a) Disconnect the skid control ECU connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

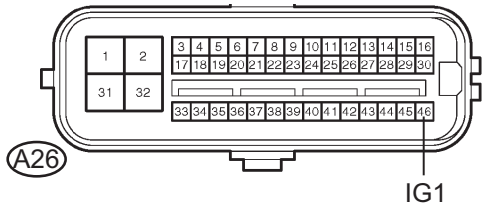
Tester Connection	Condition	Specified Condition
A26-27 (STP) - Body ground	Stop light switch ON (Brake pedal depressed)	8 to 14 V
A26-27 (STP) - Body ground	Stop light switch OFF (Brake pedal released)	Below 1.5 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (STP CIRCUIT)**

OK

4 INSPECT SKID CONTROL ECU (IG1 TERMINAL)

Skid Control ECU Harness Side Connector Front View:



(a) Turn the ignition switch on (IG).
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
A26-46 (IG1) - Body ground	Ignition switch on (IG)	10 to 14 V

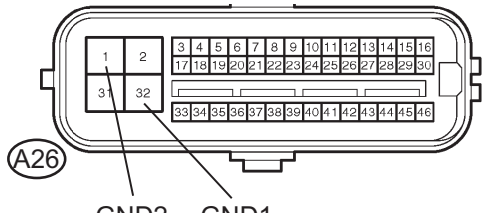
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (IG1 CIRCUIT)**

OK

BC

5 INSPECT SKID CONTROL ECU (GND TERMINAL)

Skid Control ECU Harness Side Connector Front View:



(a) Turn the ignition switch off.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A26-32 (GND1) - Body ground	Always	Below 1 Ω
A26-1 (GND2) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

6 RECONFIRM DTC

(a) Reconnect the skid control ECU connector.
(b) Clear the DTC (See page BC-141).
(c) Start the engine.
(d) Depress the brake pedal several times to test the stop light circuit.
(e) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTC (C1249/49) is not output	A
DTC (C1249/49) is output	B

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

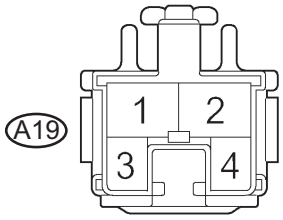
B → **REPLACE BRAKE ACTUATOR ASSEMBLY**

A

USE SIMULATION METHOD TO CHECK

7 INSPECT STOP LIGHT SWITCH (POWER SOURCE TERMINAL)

Stop Light Switch Harness Side Connector Front View:



I042363E16

(a) Disconnect the stop light switch connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
A19-2 - Body ground	Always	10 to 14 V

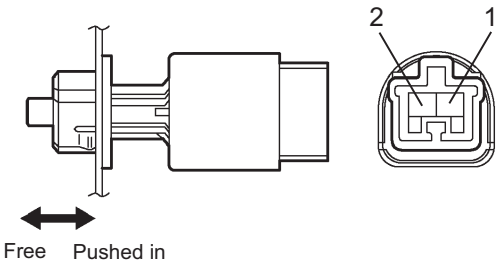
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER SOURCE CIRCUIT)**

BC

OK

8 INSPECT STOP LIGHT SWITCH

Stop Light Switch:



C124796E03

(a) Measure the resistance according to the value(s) in the table below.

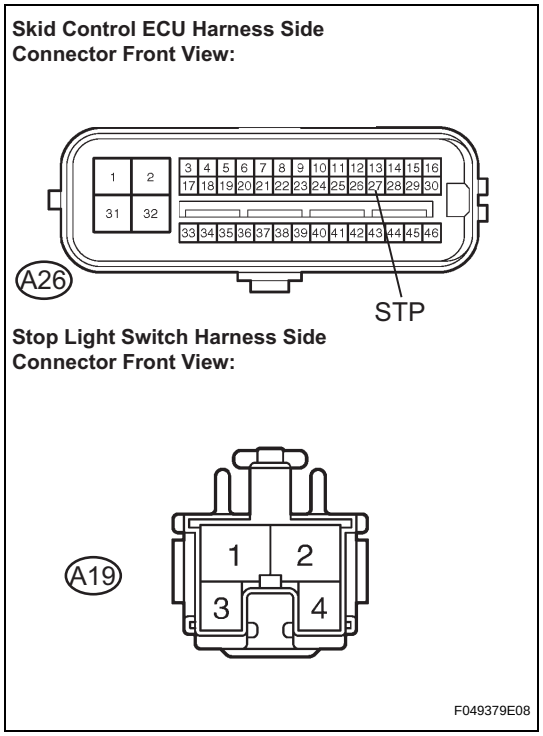
Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Switch pin free	Below 1 Ω
1 - 2	Switch pin pushed in	10 kΩ or higher

NG → **REPLACE STOP LIGHT SWITCH**

OK

9 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - STOP LIGHT SWITCH)



(a) Disconnect the skid control ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A26-27 (STP) - A19-1	Always	Below 1 Ω
A26-27 (STP) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

10 RECONFIRM DTC

(a) Reconnect the skid control ECU connector and the stop light switch connector.
(b) Clear the DTC (See page BC-141).
(c) Start the engine.
(d) Depress the brake pedal several times to test the stop light circuit.
(e) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTC (C1249/49) is not output	A
DTC (C1249/49) is output	B

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

B → **REPLACE BRAKE ACTUATOR ASSEMBLY**

A

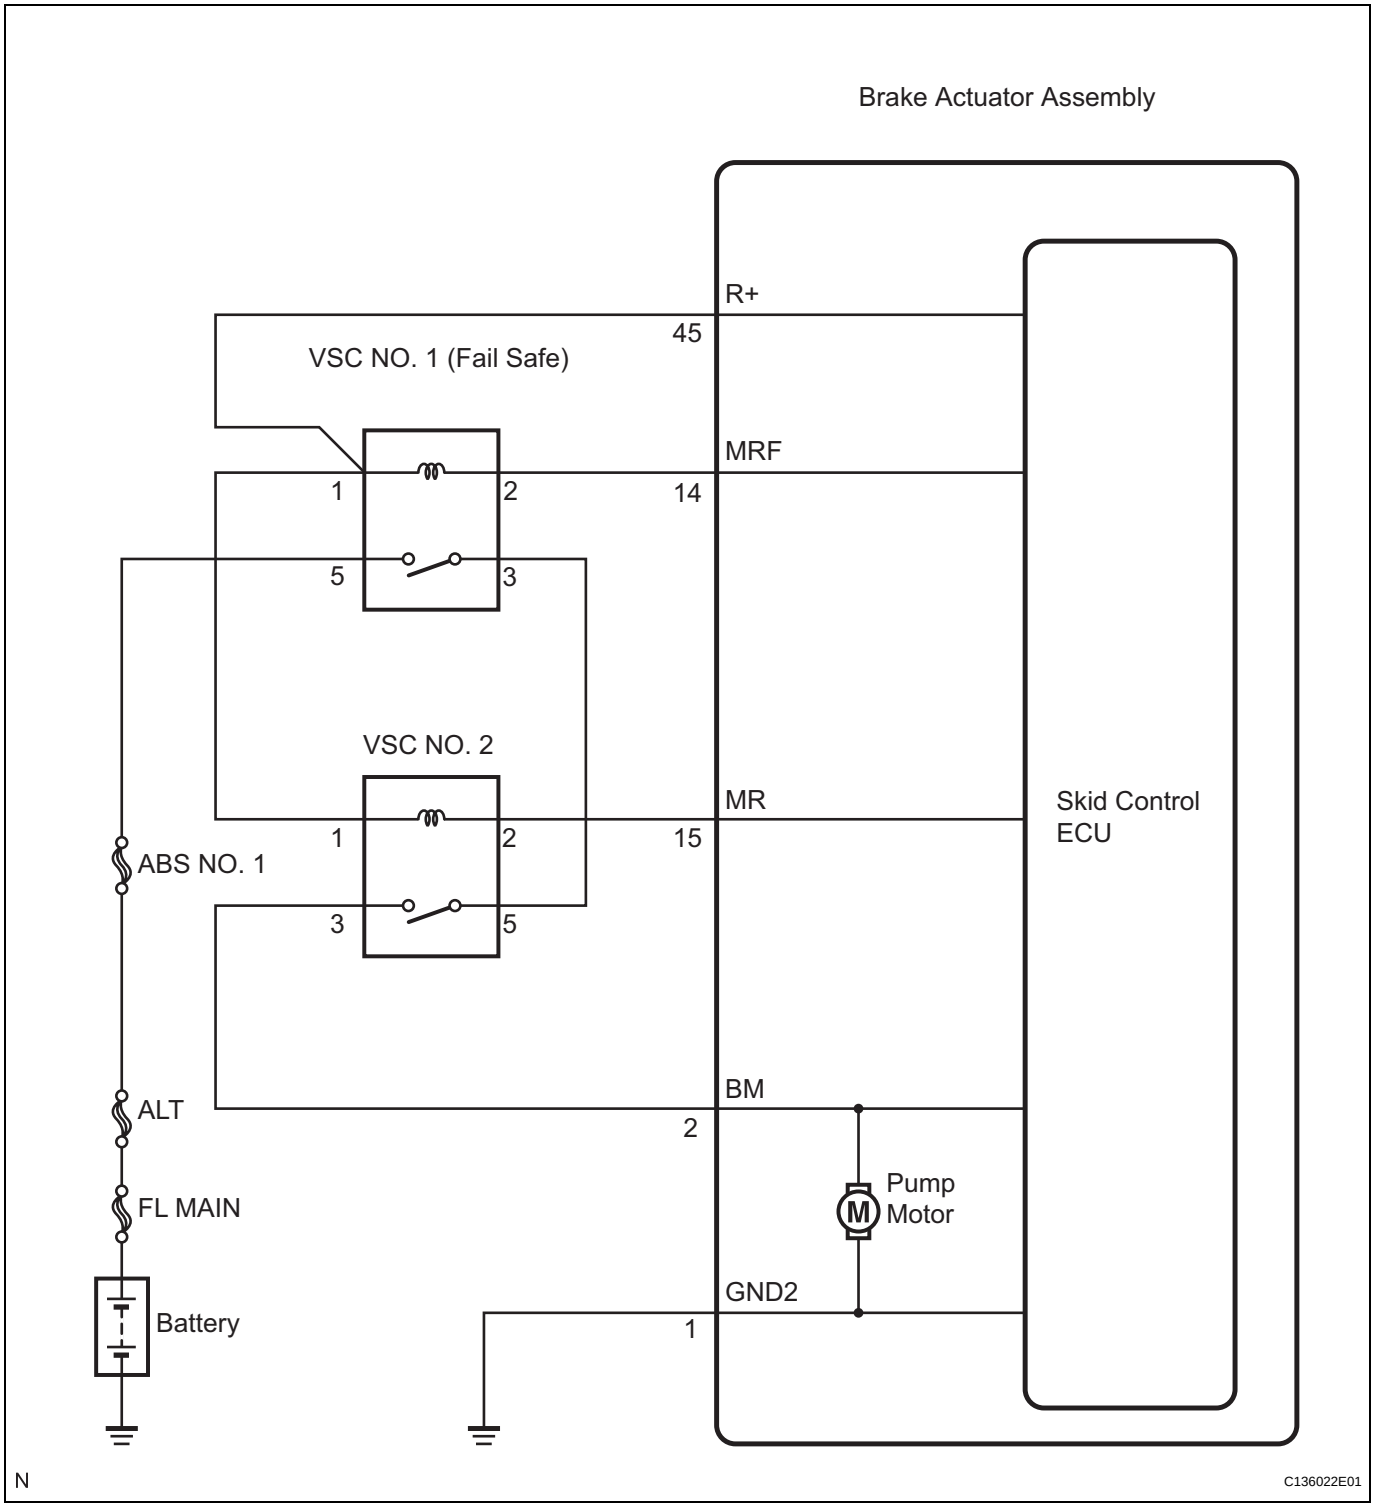
INSPECT LIGHTING SYSTEM (STOP LIGHT CIRCUIT)

DTC C1251/51 Open in Pump Motor Circuit

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
C1251/51	• Actuator pump motor does not operate properly. • Open in actuator pump motor circuit continues for at least 2 seconds.	• Brake actuator assembly (GND circuit) • Brake actuator assembly (Motor circuit)

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1 PERFORM ACTIVE TEST BY INTELLIGENT TESTER (ABS MOTOR RELAY)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Select the Active Test mode on the intelligent tester.

ABS / VSC:

Item (Display)	Vehicle Condition / Test Details	Diagnostic Note
MOTOR RELAY	Turns ABS motor relay ON / OFF	Operating sound of relay (clicking sound) and motor can be heard

(d) Check the operating sound of the ABS motor relay and motor when operating it with the intelligent tester.

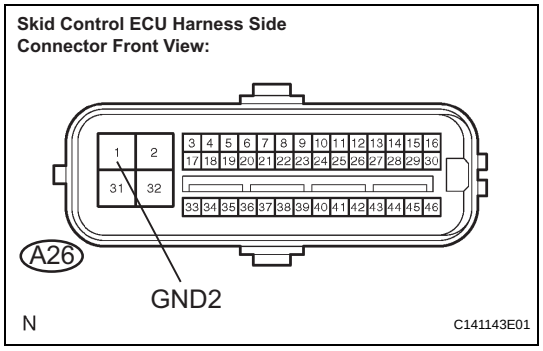
OK:

The operating sound of the ABS motor relay and motor can be heard.

OK → **Go to step 3**

NG

2 INSPECT SKID CONTROL ECU (GND2 TERMINAL)



(a) Turn the ignition switch off.
(b) Disconnect the skid control ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A26-1 (GND2) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND2 CIRCUIT)**

OK

3 RECONFIRM DTC

(a) Reconnect the skid control ECU connector.
(b) Clear the DTC (See page BC-141).
(c) Start the engine.
(d) Drive the vehicle at the speed of 4.3 mph (7 km/h) or more.
(e) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTC (C1251/51) is not output	A
DTC (C1251/51) is output	B

HINT:

- If a speed signal of 4 mph (6 km/h) or more is input to the skid control ECU, with the ignition switch on (IG) and the stop light switch off, the ECU performs self diagnosis of the motor and solenoid circuits.
- If a normal system code is output (the trouble code is not output), slightly jiggle the connectors, wire harness, and fuses of the brake actuator assembly. Make sure that no DTCs are output.
- If any DTCs are output while jiggling a connector or wire harness of the brake actuator assembly (skid control ECU), inspect and repair the connector or wire harness.

B → **REPLACE BRAKE ACTUATOR ASSEMBLY**

A

BC

USE SIMULATION METHOD TO CHECK

DTC	C1290/66	Steering Angle Sensor Zero Point Malfunction

DESCRIPTION

The skid control ECU acquires steering angle sensor zero point every time the ignition switch is turned on (IG) and the vehicle is driven at 22 mph (35 km/h) or more for approximately 5 seconds. The ECU also stores the previous zero point.
If front wheel alignment or steering wheel position is adjusted without disconnecting the negative battery terminal, or if yaw rate and acceleration sensor zero point is not acquired after the adjustments have been completed, the skid control ECU detects the difference between the previous zero point and newly acquired zero point and outputs this DTC to indicate a poor adjustment.
Warning of the steering angle sensor zero point malfunction will be cancelled by turning the ignition switch off.

DTC No.	DTC Detection Condition	Trouble Area
C1290/66	The steering angle sensor zero point calibration position vastly differs from the recorded value	• Yaw rate and acceleration sensor zero point calibration incomplete • Poor adjustment of the centered position of the steering wheel • Poor adjustment of front wheel alignment

BC

INSPECTION PROCEDURE

NOTICE:
When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	PERFORM ZERO POINT CALIBRATION OF YAW RATE AND ACCELERATION SENSOR

(a) Perform zero point calibration of the yaw rate and acceleration sensor (See page BC-119).
HINT:
- When the stored zero point of the yaw rate and acceleration sensor is erased, steering angle sensor zero point will also be erased.
- If the zero point and output value of the yaw rate and acceleration sensor and the output value of the speed sensors are not normal, steering angle sensor zero point cannot be acquired normally even if the vehicle is driven straight ahead at 22 mph (35 km/h) or more.

NEXT

2	CHECK STEERING ANGLE SENSOR ZERO POINT CALIBRATION

(a) Drive the vehicle straight ahead at 22 mph (35 km/h) or more for at least 5 seconds.
(b) Check that the centered position of the steering wheel is correctly set while driving straight ahead.
HINT:
If front wheel alignment and steering position are adjusted as a result of abnormal centered position of the steering wheel, acquire yaw rate and acceleration sensor zero point again after the adjustments are completed.

OK:
The centered position of the steering wheel is correctly set.

NG → **ADJUST FRONT WHEEL ALIGNMENT OR STEERING POSITION**

OK ↓

3	RECONFIRM DTC

(a) Turn the ignition switch off.
(b) Clear the DTC (See page BC-141).
(c) Start the engine.
(d) Drive the vehicle and turn the steering wheel to the right and left at the speed of 22 mph (35 km/h) or more.
(e) Check if the same DTC is recorded (See page BC-141).

Result

BC

Condition	Proceed to
DTC (C1290/66) is not output	A
DTC (C1290/66) is output	B

B → **REPLACE BRAKE ACTUATOR ASSEMBLY**

A ↓

END

DTC	U0073/94	Control Module Communication Bus OFF

DTC	U0100/65	Lost Communication with ECM / PCM

DTC	U0123/62	Lost Communication with Yaw Rate Sensor Module

DTC	U0124/95	Lost Communication with Lateral Acceleration Sensor Module

DTC	U0126/63	Lost Communication with Steering Angle Sensor Module

DESCRIPTION

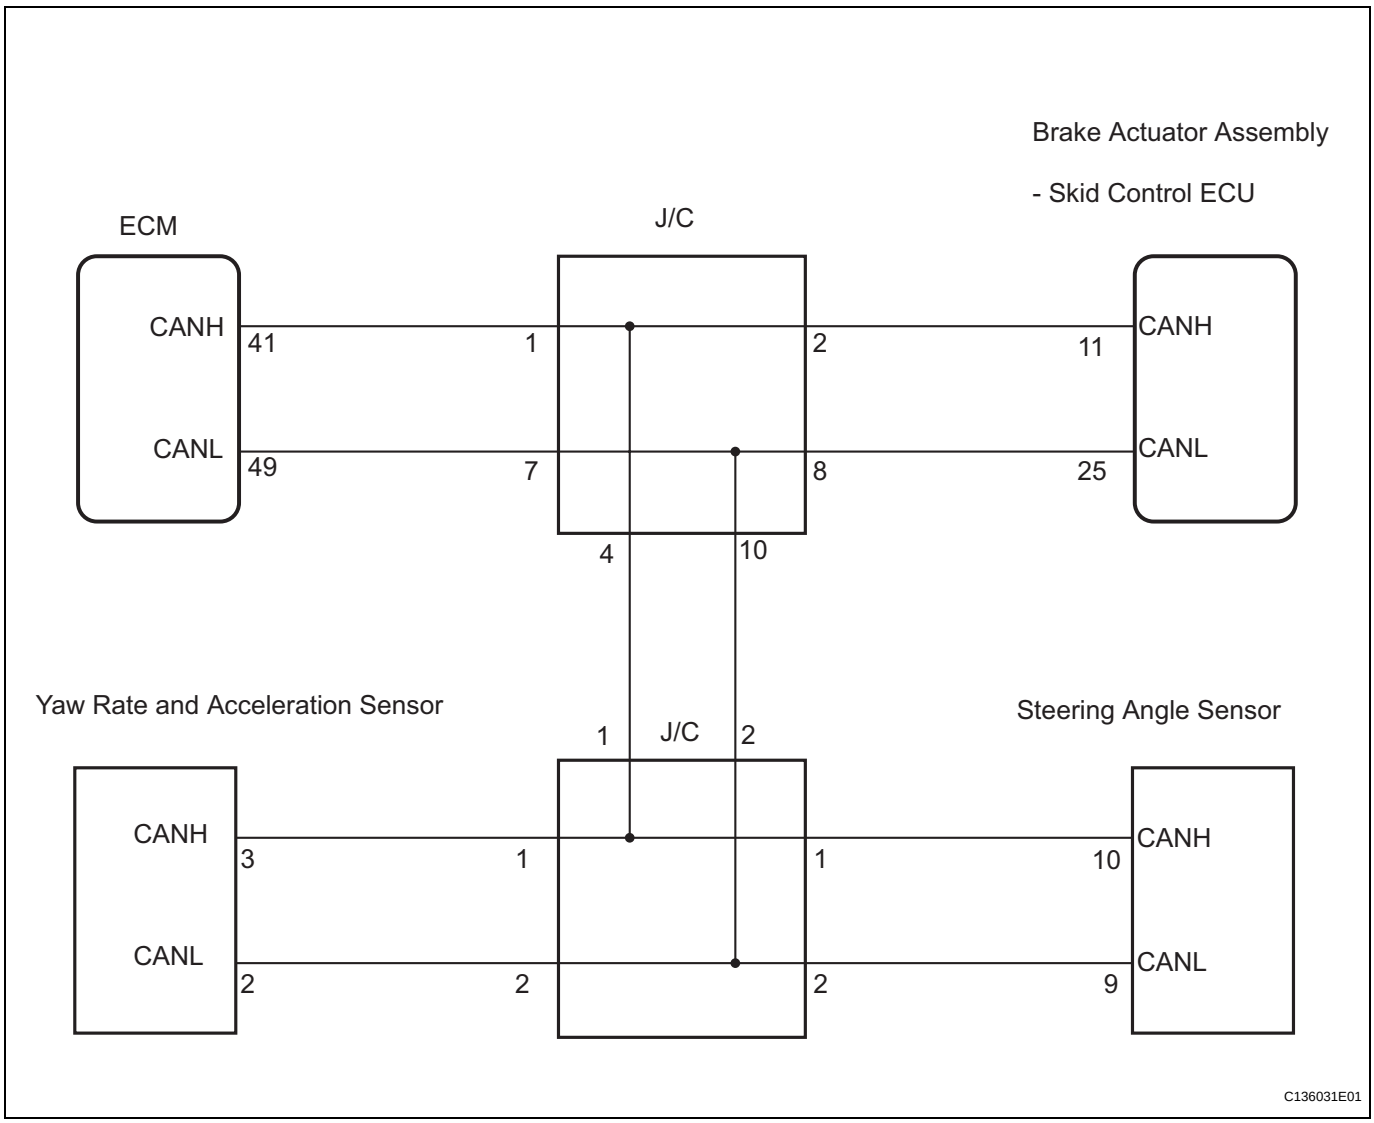
The skid control ECU receives the signals from the ECM, steering angle sensor, and yaw rate and acceleration sensor via the CAN communication system.

BC

DTC No.	DTC Detection Condition	Trouble Area
U0073/94	When any of the following is detected: 1. With the IG1 terminal voltage 10 V or more, after the output of data from the skid control ECU is completed, the sending continues for 5 seconds or more. 2. With the IG1 terminal voltage 10 V or more, the condition that bus OFF state occurs once or more within 100 ms occurs 10 times in succession. (Sent signals cannot be received.) 3. With the IG1 terminal voltage 10 V or more, a delay in receiving data from the yaw rate and acceleration sensor and steering angle sensor continues for 1 second or more. 4. With the IG1 terminal voltage 10 V or more, the condition that a delay in receiving data from the yaw rate and acceleration sensor and steering angle sensor occurs more than once within 5 seconds occurs 10 times in succession within 60 seconds.	CAN communication system
U0100/65	When either of the following is detected: 1. With the IG1 terminal voltage 10 V or more and the vehicle speed 9 mph (15 km/h) or more, data cannot be sent to the ECM for 2 seconds or more. 2. The IG1 terminal voltage 10 V or more and the vehicle speed 9 mph (15 km/h) or more for 2 seconds or more.	CAN communication system (Skid control ECU to ECM)
U0123/62	When either of the following is detected: 1. With the IG1 terminal voltage 10 V or more, data from the yaw rate sensor cannot be received for 1 second or more. 2. With the IG1 terminal voltage 10 V or more, the following occurs 10 times in succession within 60 seconds. • The condition that data from the yaw rate sensor cannot be received occurs once or more within 5 seconds.	CAN communication system (Skid control ECU to yaw rate and acceleration sensor)
U0124/95	When either of the following is detected: 1. With the IG1 terminal voltage 10 V or more, data from the acceleration sensor cannot be received for 1 second or more. 2. With the IG1 terminal voltage 10 V or more, the following occurs 10 times in succession within 60 seconds. • The condition that data from the acceleration sensor cannot be received occurs once or more within 5 seconds.	CAN communication system (Skid control ECU to yaw rate and acceleration sensor)

DTC No.	DTC Detection Condition	Trouble Area
U0126/63	When either of the following is detected: 1. With the IG1 terminal voltage 10 V or more, data from the steering angle sensor cannot be received for 1 second or more. 2. With the IG1 terminal voltage 10 V or more, the following occurs 10 times in succession within 60 seconds. • The condition that data from the steering angle sensor cannot be received occurs once or more within 5 seconds.	CAN communication system (Skid control ECU to steering angle sensor)

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR (MOMENTARY INTERRUPTION)

(a) Using the intelligent tester, check for any momentary interruption in the wire harness and connector corresponding to a DTC (See page BC-118).

ABS / VSC:

Item (Display)	Measurement Item / Range (Display)	Normal Condition
EFI COM OPN	EFI communication open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal
STEERING OPN	Steering sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal
YAW RATE OPN	Yaw rate sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal

Result

Condition	Proceed to
There is a constant open circuit	**A**
There are no momentary interruptions	**B**
There are momentary interruptions	**C**

HINT:
Perform the above inspection before removing the sensor and connector.

B → **Go to step 3**

C → **Go to step 4**

A

2	CHECK IF EACH SENSOR AND ECM CONNECTOR IS SECURELY CONNECTED

(a) Turn the ignition switch off.
(b) Check if each sensor or ECM connector is securely connected.
OK:
The connector should be securely connected.

NG → **CONNECT CONNECTOR TO EACH SENSOR OR ECM CORRECTLY**

OK

3	RECONFIRM DTC

(a) Turn the ignition switch off.
(b) Record the output DTCs (for ABS, VSC, and CAN communication) (See page BC-141).

HINT:
If the CAN communication system DTC and the relevant sensor DTCs are output simultaneously, troubleshoot the relevant sensor DTCs (for ABS and VSC) after the CAN communication system returns to normal.

Result

Condition	Proceed to
DTC (CAN communication system DTC) is output	A
DTC (ABS and/or VSC DTC) is output	B
DTC is not output	C

B → **REPAIR CIRCUIT INDICATED BY OUTPUT DTC (See page BC-151)**

C → **USE SIMULATION METHOD TO CHECK**

A

BC

INSPECT CAN COMMUNICATION SYSTEM

4 REPAIR OR REPLACE HARNESS OR CONNECTOR

(a) Turn the ignition switch off.
(b) Repair or replace the harness or connector.
(c) Check for any momentary interruption between the skid control ECU and each sensor or ECM (See page BC-118).
(d) Check that there is no momentary interruption.

NEXT

5 RECONFIRM DTC

(a) Turn the ignition switch off.
(b) Clear the DTC (See page BC-141).
(c) Start the engine.
(d) Drive the vehicle and turn the steering wheel to the right and left at a speed of 9 mph (15 km/h) or more.
(e) Check that no CAN communication system DTC is output.
(f) If ABS and VSC DTCs are output, record them.

Result

Condition	Proceed to
DTC output for the CAN communication system	A
No DTC is output (ABS and/or VSC DTC is output)	B
No DTC is output (No ABS and/or VSC DTC is output)	C

HINT:
The CAN communication system must be normal when repairing each sensor DTC (for ABS and VSC).

B	**REPAIR CIRCUIT INDICATED BY OUTPUT DTC (See page BC-151)**
C	**END**

A

INSPECT CAN COMMUNICATION SYSTEM

ABS Warning Light Remains ON

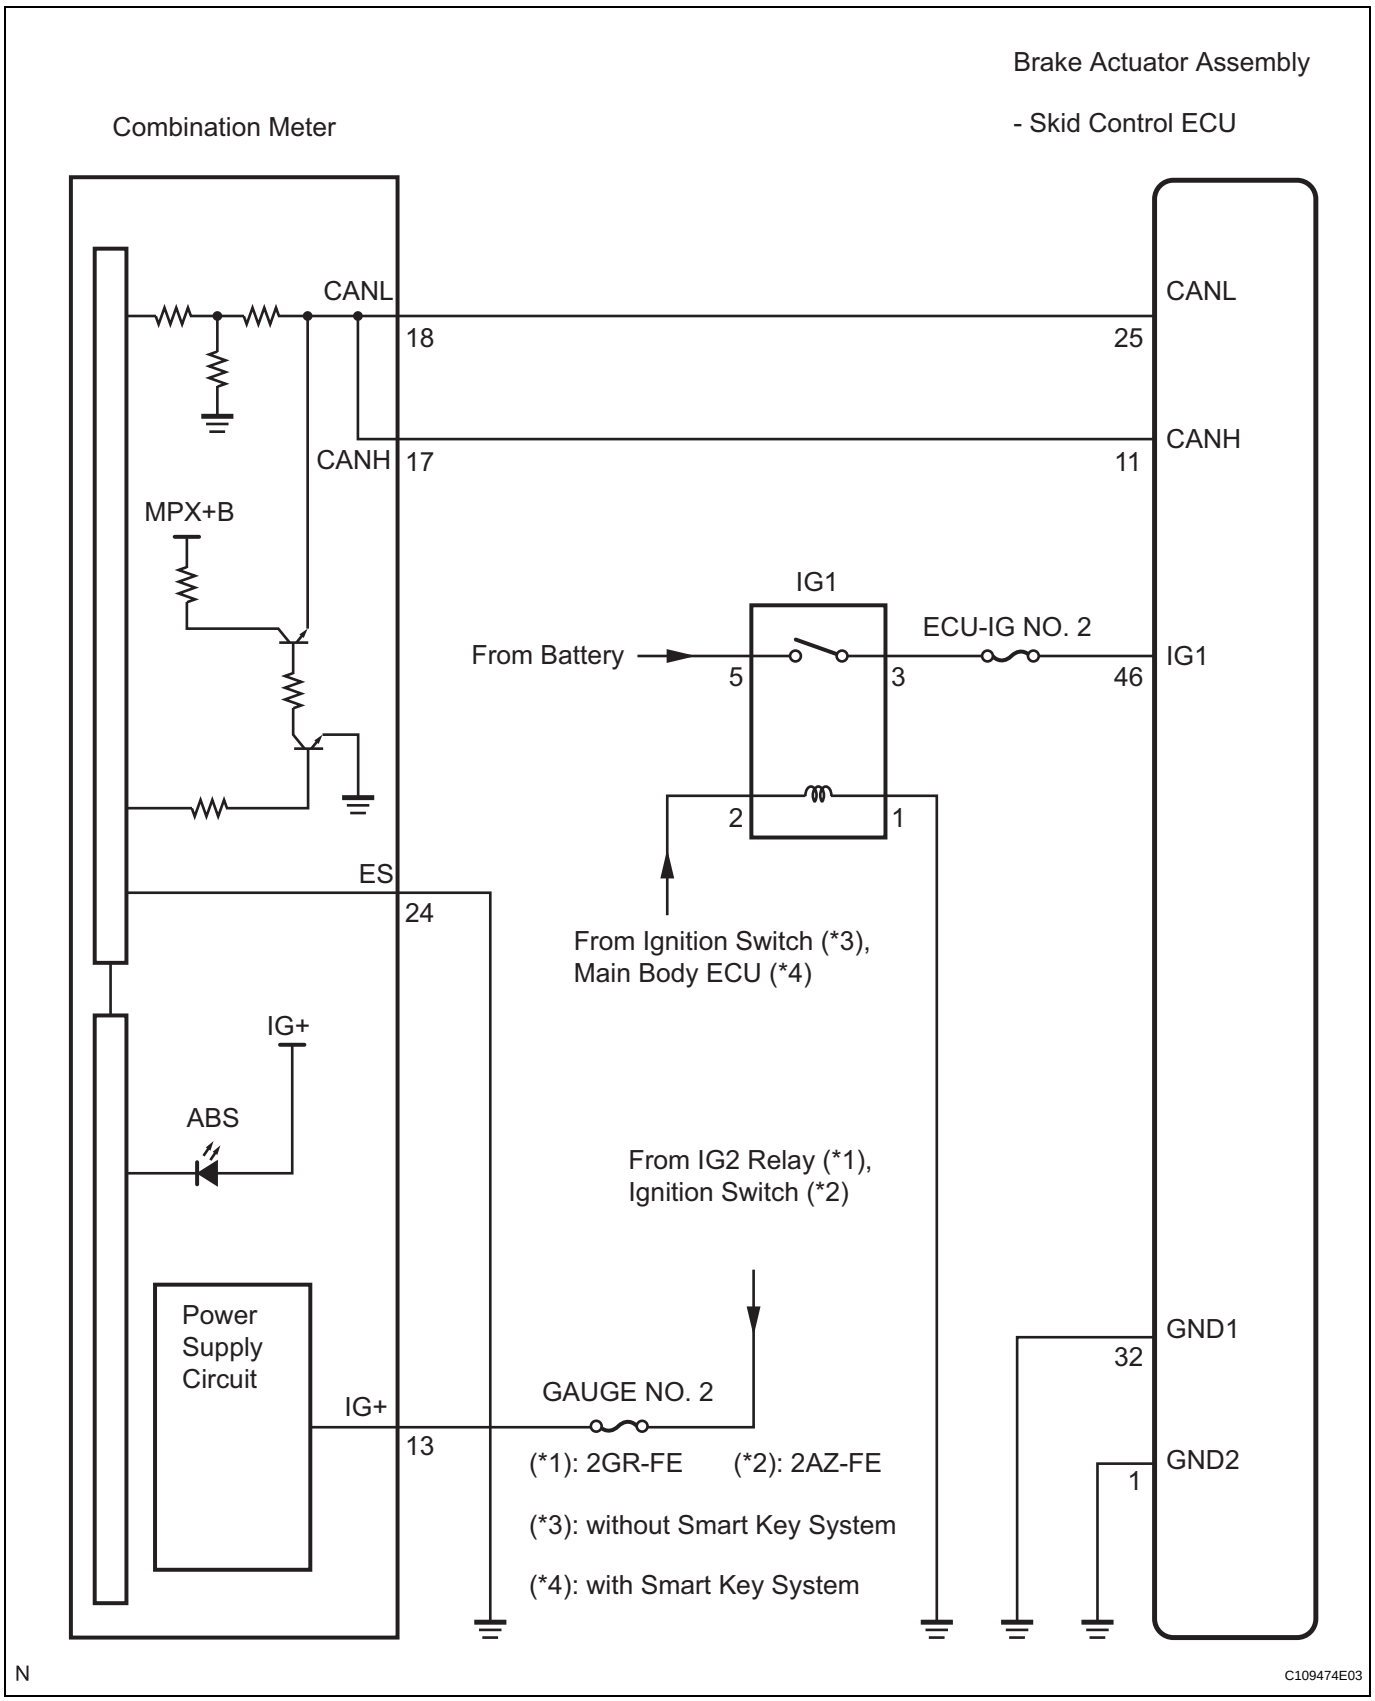
DESCRIPTION

The skid control ECU is connected to the combination meter via CAN communication.
If any of the following is detected, the ABS warning light remains on.

- The skid control ECU connectors are disconnected from the skid control ECU.
- There is a malfunction in the skid control ECU internal circuit.
- There is an open in the harness between the combination meter and the skid control ECU.

HINT:
In some cases, the intelligent tester cannot be used when the skid control ECU is abnormal.

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-25).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → **INSPECT CAN COMMUNICATION SYSTEM**

A

2	CHECK IF SKID CONTROL ECU CONNECTOR IS SECURELY CONNECTED

BC

(a) Check if the skid control ECU connector is securely connected.
OK:
The connector should be securely connected.

NG → **CONNECT CONNECTOR TO ECU CORRECTLY**

OK

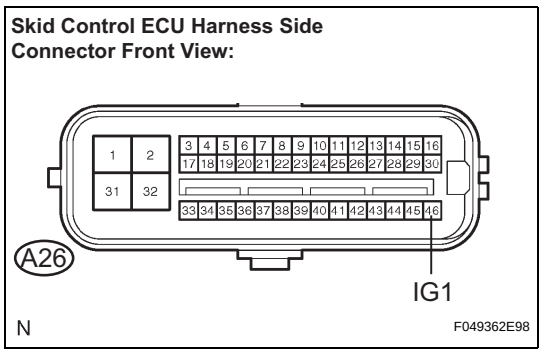
3	CHECK BATTERY

(a) Check the battery voltage.
Standard voltage:
11 to 14 V

NG → **CHECK AND REPLACE CHARGING SYSTEM OR BATTERY**

OK

4	INSPECT SKID CONTROL ECU (IG1 TERMINAL)



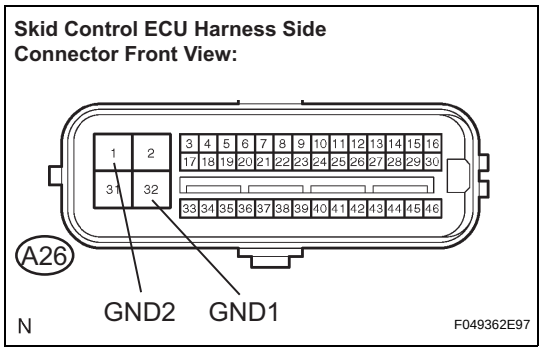
(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Condition	Specified Condition
A26-46 (IG1) - Body ground	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (IG1 CIRCUIT)**

OK

5 INSPECT SKID CONTROL ECU (GND TERMINAL)



(a) Turn the ignition switch off.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A26-32 (GND1) - Body ground	Always	Below 1 Ω
A26-1 (GND2) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

BC

6 INSPECT COMBINATION METER ASSEMBLY

(a) Reconnect the skid control ECU connector.
(b) Perform Active Test of the combination meter (meter CPU) using the intelligent tester (See page ME-32).

OK:

The ABS warning light turns on or off in accordance with the intelligent tester.

HINT:

If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-134).

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

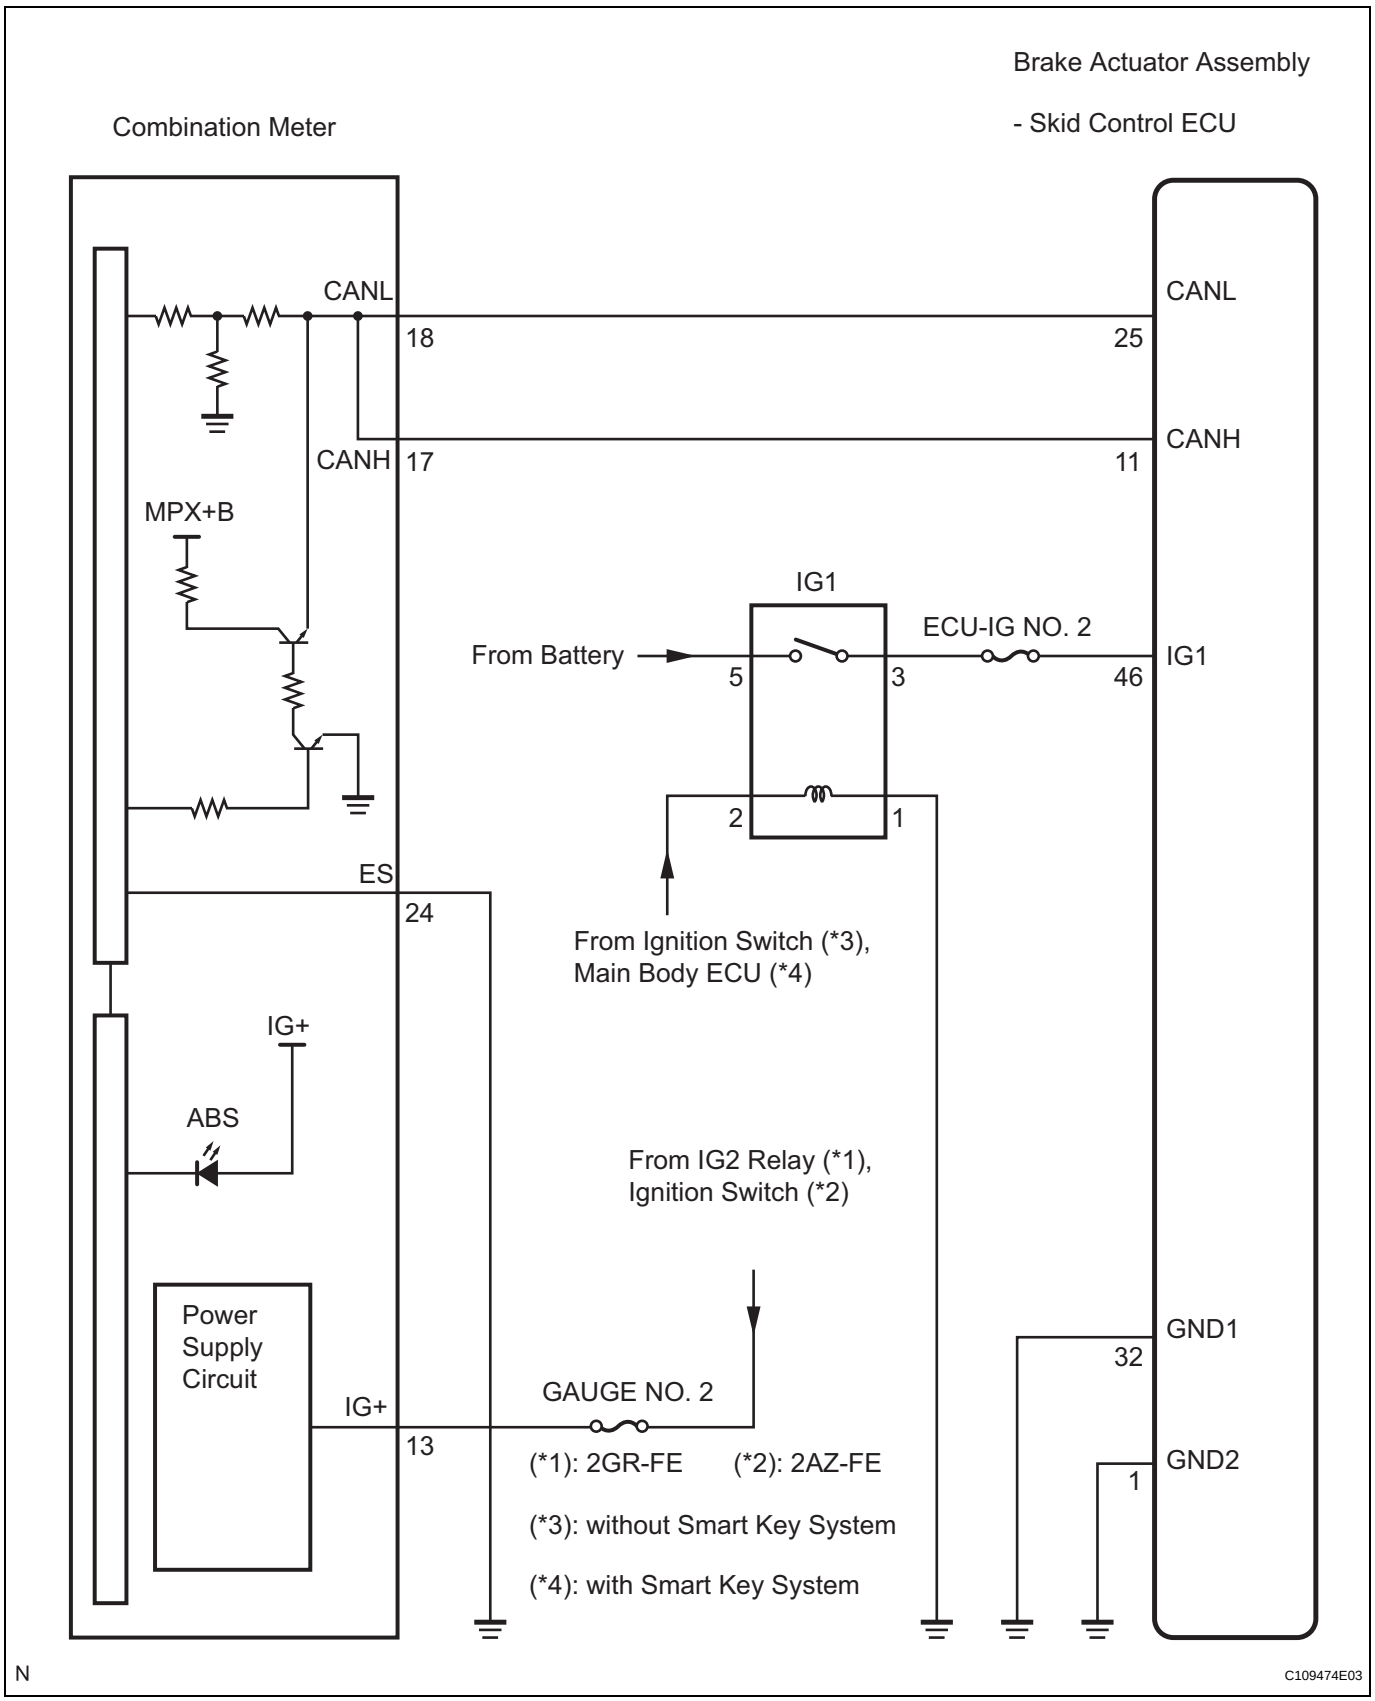
REPLACE BRAKE ACTUATOR ASSEMBLY

ABS Warning Light does not Come ON

DESCRIPTION

The skid control ECU is connected to the combination meter via CAN communication.

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-25).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → INSPECT CAN COMMUNICATION SYSTEM

A

2	CHECK ABS WARNING LIGHT

BC

(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch on (IG).
(c) Check that the ABS warning light comes on.
OK:
The ABS warning light comes on.
HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-134).

OK → REPLACE BRAKE ACTUATOR ASSEMBLY

NG

3	INSPECT COMBINATION METER ASSEMBLY

(a) Turn the ignition switch off.
(b) Reconnect the skid control ECU connector.
(c) Perform Active Test of the combination meter (meter CPU) using the intelligent tester (See page ME-32).
OK:
The ABS warning light turns on or off in accordance with the intelligent tester.
HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

NG → REPLACE COMBINATION METER ASSEMBLY

OK

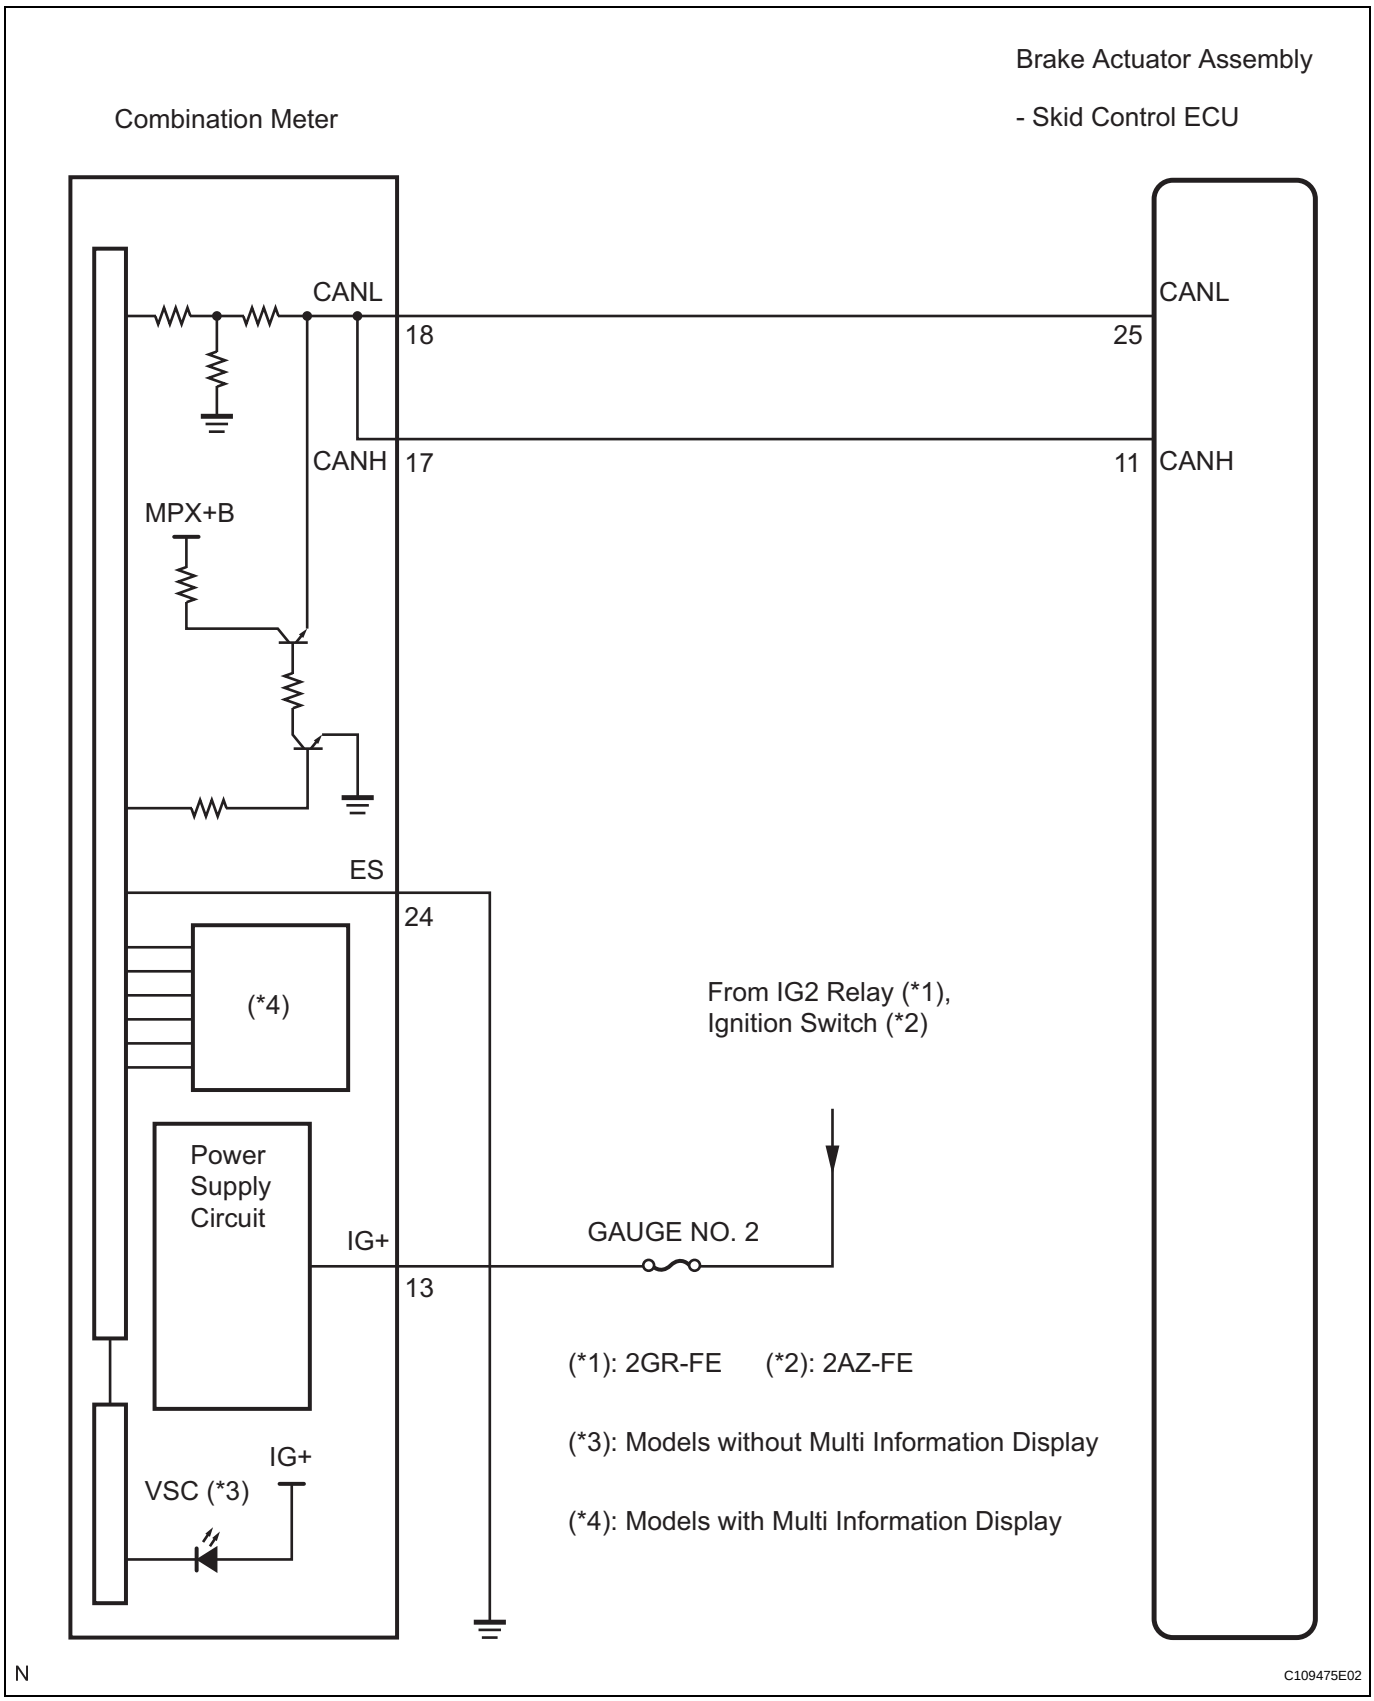
REPLACE BRAKE ACTUATOR ASSEMBLY

VSC Warning Light Remains ON

DESCRIPTION

The skid control ECU communicates with the combination meter via CAN communication. If the ECU stores a DTC, the DTC will be displayed on the multi information display in the combination meter (models with multi information display). On models without a multi information display, the VSC warning light will come on when the skid control ECU stores a DTC.

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-25).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → INSPECT CAN COMMUNICATION SYSTEM

A

2	CHECK IF SKID CONTROL ECU CONNECTOR IS SECURELY CONNECTED

(a) Check if the skid control ECU connector is securely connected.
OK:
The connector should be securely connected.

NG → CONNECT CONNECTOR TO ECU CORRECTLY

OK

3	CHECK BATTERY

(a) Check the battery voltage.
Standard voltage:
11 to 14 V

NG → CHECK AND REPLACE CHARGING SYSTEM OR BATTERY

OK

4	INSPECT COMBINATION METER ASSEMBLY

(a) Perform Active Test of the combination meter (meter CPU) using the intelligent tester (See page ME-32).
OK:
The VSC warning light (models without multi information display) or multi information display (models with multi information display) turns on or off in accordance with the intelligent tester.
HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-134).

BC

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

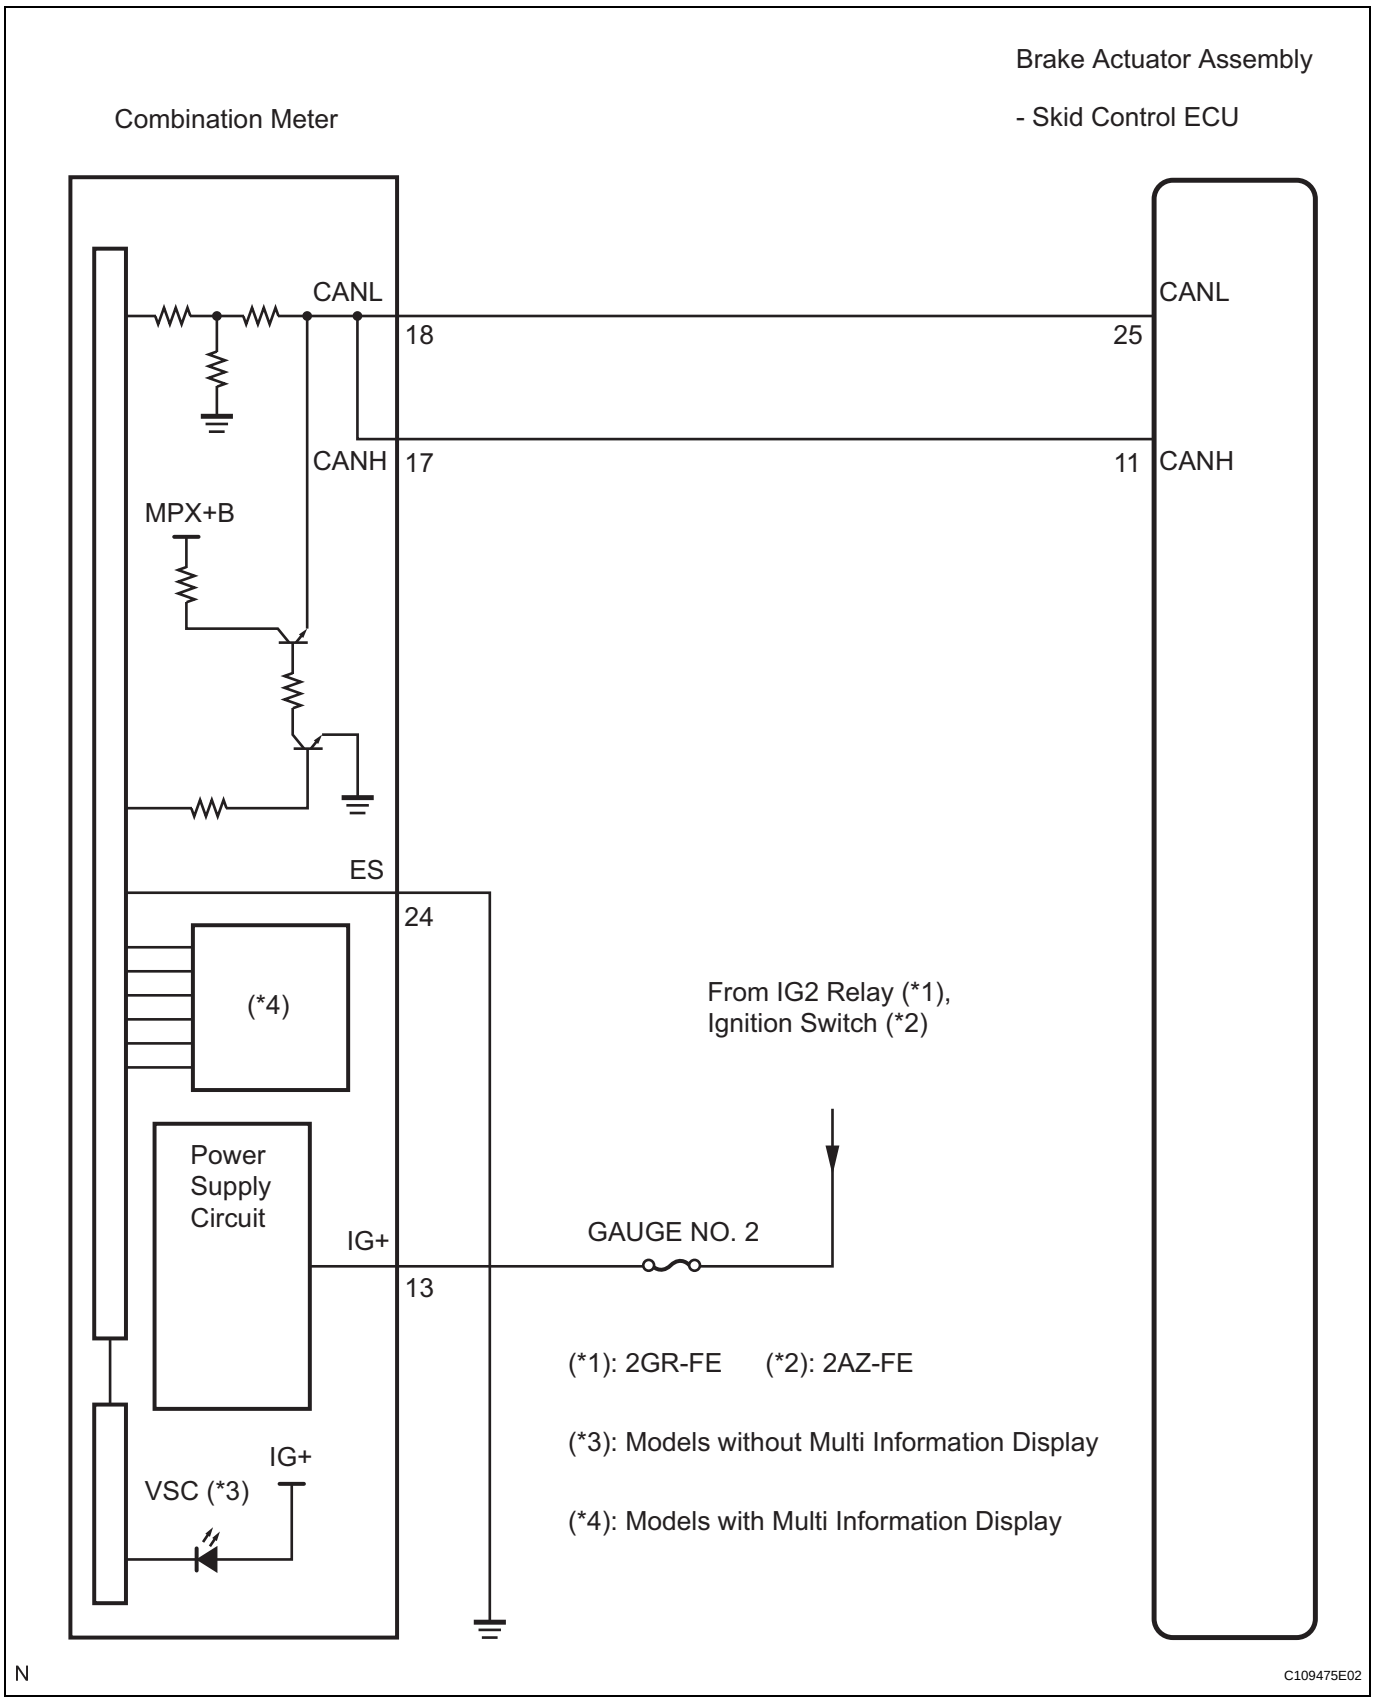
REPLACE BRAKE ACTUATOR ASSEMBLY

VSC Warning Light does not Come ON

DESCRIPTION

The skid control ECU communicates with the combination meter via CAN communication. If the ECU stores a DTC, the DTC will be displayed on the multi information display in the combination meter (models with multi information display). On models without a multi information display, the VSC warning light will come on when the skid control ECU stores a DTC.

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-25).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → INSPECT CAN COMMUNICATION SYSTEM

A

2	CHECK VSC WARNING LIGHT

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Select "VSC WARN LAMP" in the Active Test and operate the VSC warning light (models without multi information display) or multi information display (models with multi information display) using the intelligent tester.

ABS / VSC:

Item (Display)	Vehicle Condition / Test Details	Diagnostic Note
VSC WARN LAMP	Turn VSC warning light (*1) or multi information display (*2) ON / OFF	Observe combination meter

(*1): Models without multi information display
(*2): Models with multi information display

(d) Check that "ON" and "OFF" of the VSC warning light (models without multi information display) or multi information display (models with multi information display) are indicated on the combination meter when using the intelligent tester.

OK:

The VSC warning light (models without multi information display) or multi information display (models with multi information display) turns on or off in accordance with the intelligent tester.

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-134).

OK → REPLACE BRAKE ACTUATOR ASSEMBLY

NG

3	INSPECT COMBINATION METER ASSEMBLY

(a) Turn the ignition switch off.

(b) Perform Active Test of the combination meter (meter CPU) using the intelligent tester (See page ME-32).
OK:
The VSC warning light (models without multi information display) or multi information display (models with multi information display) turns on or off in accordance with the intelligent tester.
HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

REPLACE BRAKE ACTUATOR ASSEMBLY

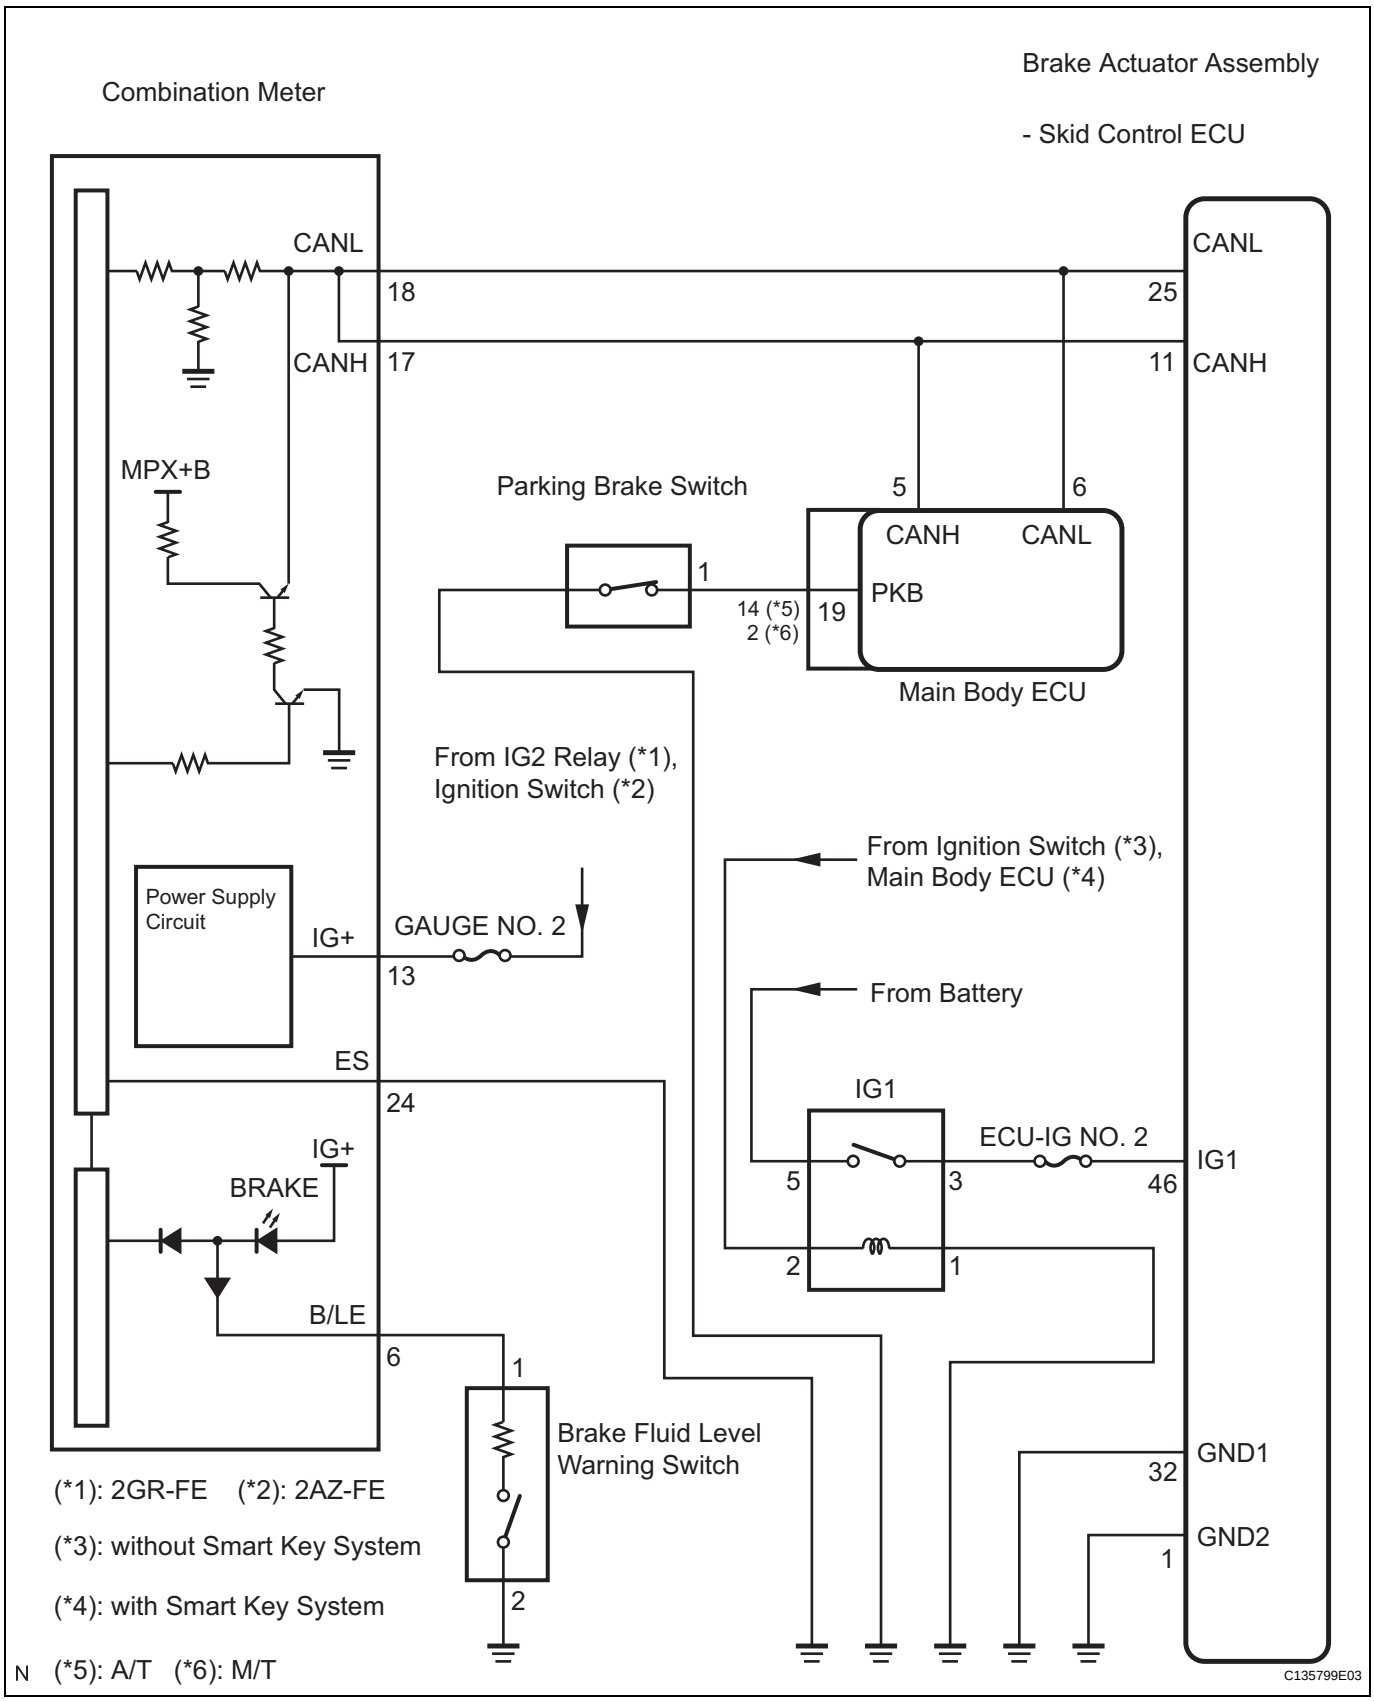
Brake Warning Light Remains ON

DESCRIPTION

The skid control ECU is connected to the combination meter via CAN communication.
If any of the following is detected, the BRAKE warning light remains on:

- The skid control ECU connector is disconnected from the skid control ECU.
- The brake fluid level is insufficient.
- The parking brake is applied.
- EBD operation is not possible.

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-25).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → INSPECT CAN COMMUNICATION SYSTEM

A

2	CHECK IF SKID CONTROL ECU CONNECTOR IS SECURELY CONNECTED

(a) Check if the skid control ECU connector is securely connected.
OK:
The connector should be securely connected.

NG → CONNECT CONNECTOR TO ECU CORRECTLY

OK

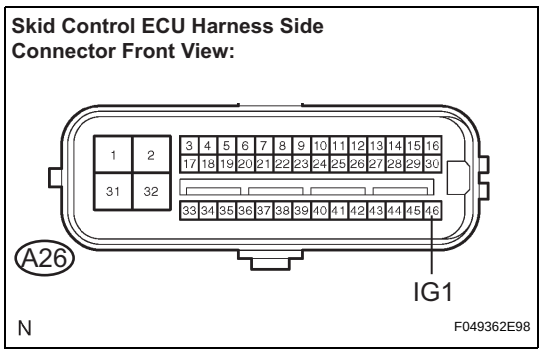
3	CHECK BATTERY

(a) Check the battery voltage.
Standard voltage:
11 to 14 V

NG → CHECK AND REPLACE CHARGING SYSTEM OR BATTERY

OK

4	INSPECT SKID CONTROL ECU (IG1 TERMINAL)



(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.
Standard voltage

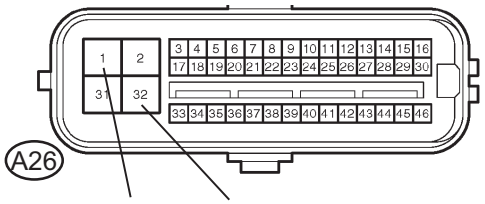
Tester Connection	Condition	Specified Condition
A26-46 (IG1) - Body ground	Ignition switch on (IG)	10 to 14 V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR (IG1 CIRCUIT)

OK

5 INSPECT SKID CONTROL ECU (GND TERMINAL)

Skid Control ECU Harness Side Connector Front View:



(a) Turn the ignition switch off.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A26-32 (GND1) - Body ground	Always	Below 1 Ω
A26-1 (GND2) - Body ground	Always	Below 1 Ω

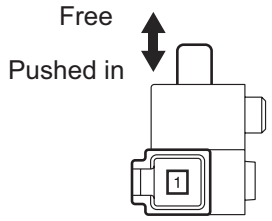
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

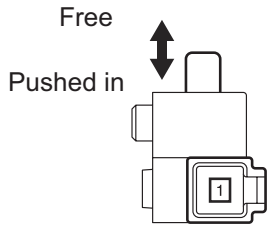
6 INSPECT PARKING BRAKE SWITCH

Parking Brake Switch

A/T:



M/T:



N C109430E02

(a) Disconnect the parking brake switch connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - Body ground	Parking brake switch ON (Switch pin free)	Below 1 Ω
1 - Body ground	Parking brake switch OFF (Switch pin pushed in)	10 kΩ or higher

NG → **REPLACE PARKING BRAKE SWITCH**

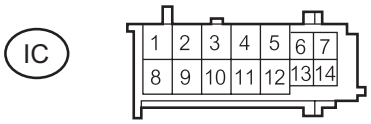
OK

BC

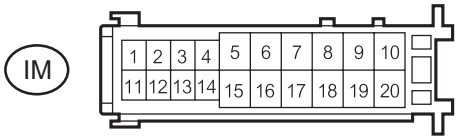
7	CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - PARKING BRAKE SWITCH)

Main Body ECU Harness Side Connector Front View

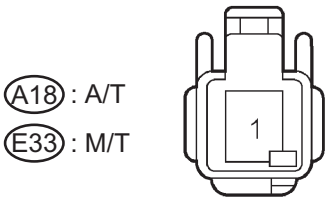
A/T:



M/T:



Parking Brake Switch Harness Side Connector Front View:



C136418E01

(a) Disconnect the main body ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

A/T

Tester Connection	Condition	Specified Condition
IC-14 (PKB) - A18-1	Always	Below 1 Ω
IC-14 (PKB) - Body ground	Always	10 kΩ or higher

M/T

Tester Connection	Condition	Specified Condition
IM-2 (PKB) - E33-1	Always	Below 1 Ω
IM-2 (PKB) - Body ground	Always	10 kΩ or higher

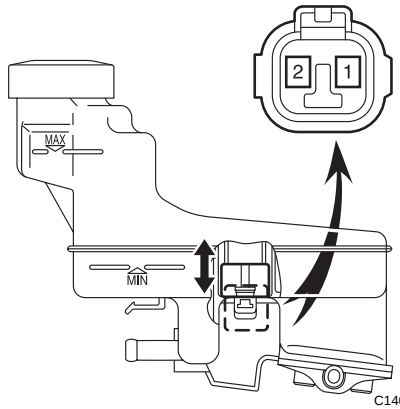
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

BC

8	**INSPECT BRAKE FLUID LEVEL WARNING SWITCH**

Brake Fluid Level Warning Switch:



C140953E01

(a) Remove the reservoir tank cap and strainer.
(b) Disconnect the brake fluid level warning switch connector.
(c) Measure the resistance according to the value(s) in the table below.

HINT:
A float is located inside the reservoir. Its position can be changed by increasing or decreasing the level of brake fluid.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Float up (Switch OFF)	1.9 to 2.1 kΩ
1 - 2	Float down (Switch ON)	Below 1 Ω

HINT:
If there is no problem after finishing the above check, adjust the brake fluid level to the MAX level.

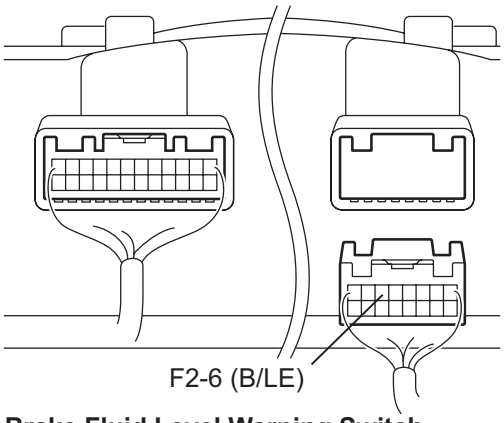
NG → **REPLACE BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY (BRAKE FLUID LEVEL WARNING SWITCH)**

OK

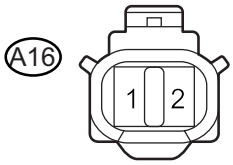
BC

9	CHECK HARNESS AND CONNECTOR (COMBINATION METER - BRAKE FLUID LEVEL WARNING SWITCH)

Combination Meter Wire Harness View:



Brake Fluid Level Warning Switch Harness Side Connector Front View:



C136033E01

(a) Disconnect the combination meter connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
F2-6 (B/LE) - A16-1	Always	Below 1 Ω
F2-6 (B/LE) - Body ground	Always	10 kΩ or higher
A16-2 - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

10	INSPECT COMBINATION METER ASSEMBLY

(a) Perform Active Test of the combination meter (meter CPU) using the intelligent tester (See page ME-32).

OK:

The BRAKE warning light turns on or off in accordance with the intelligent tester.

HINT:

- Reinstall the connectors and restore the vehicle to its prior condition before checking the combination meter.
- If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-134).

NG → **REPLACE COMBINATION METER ASSEMBLY**

BC

OK

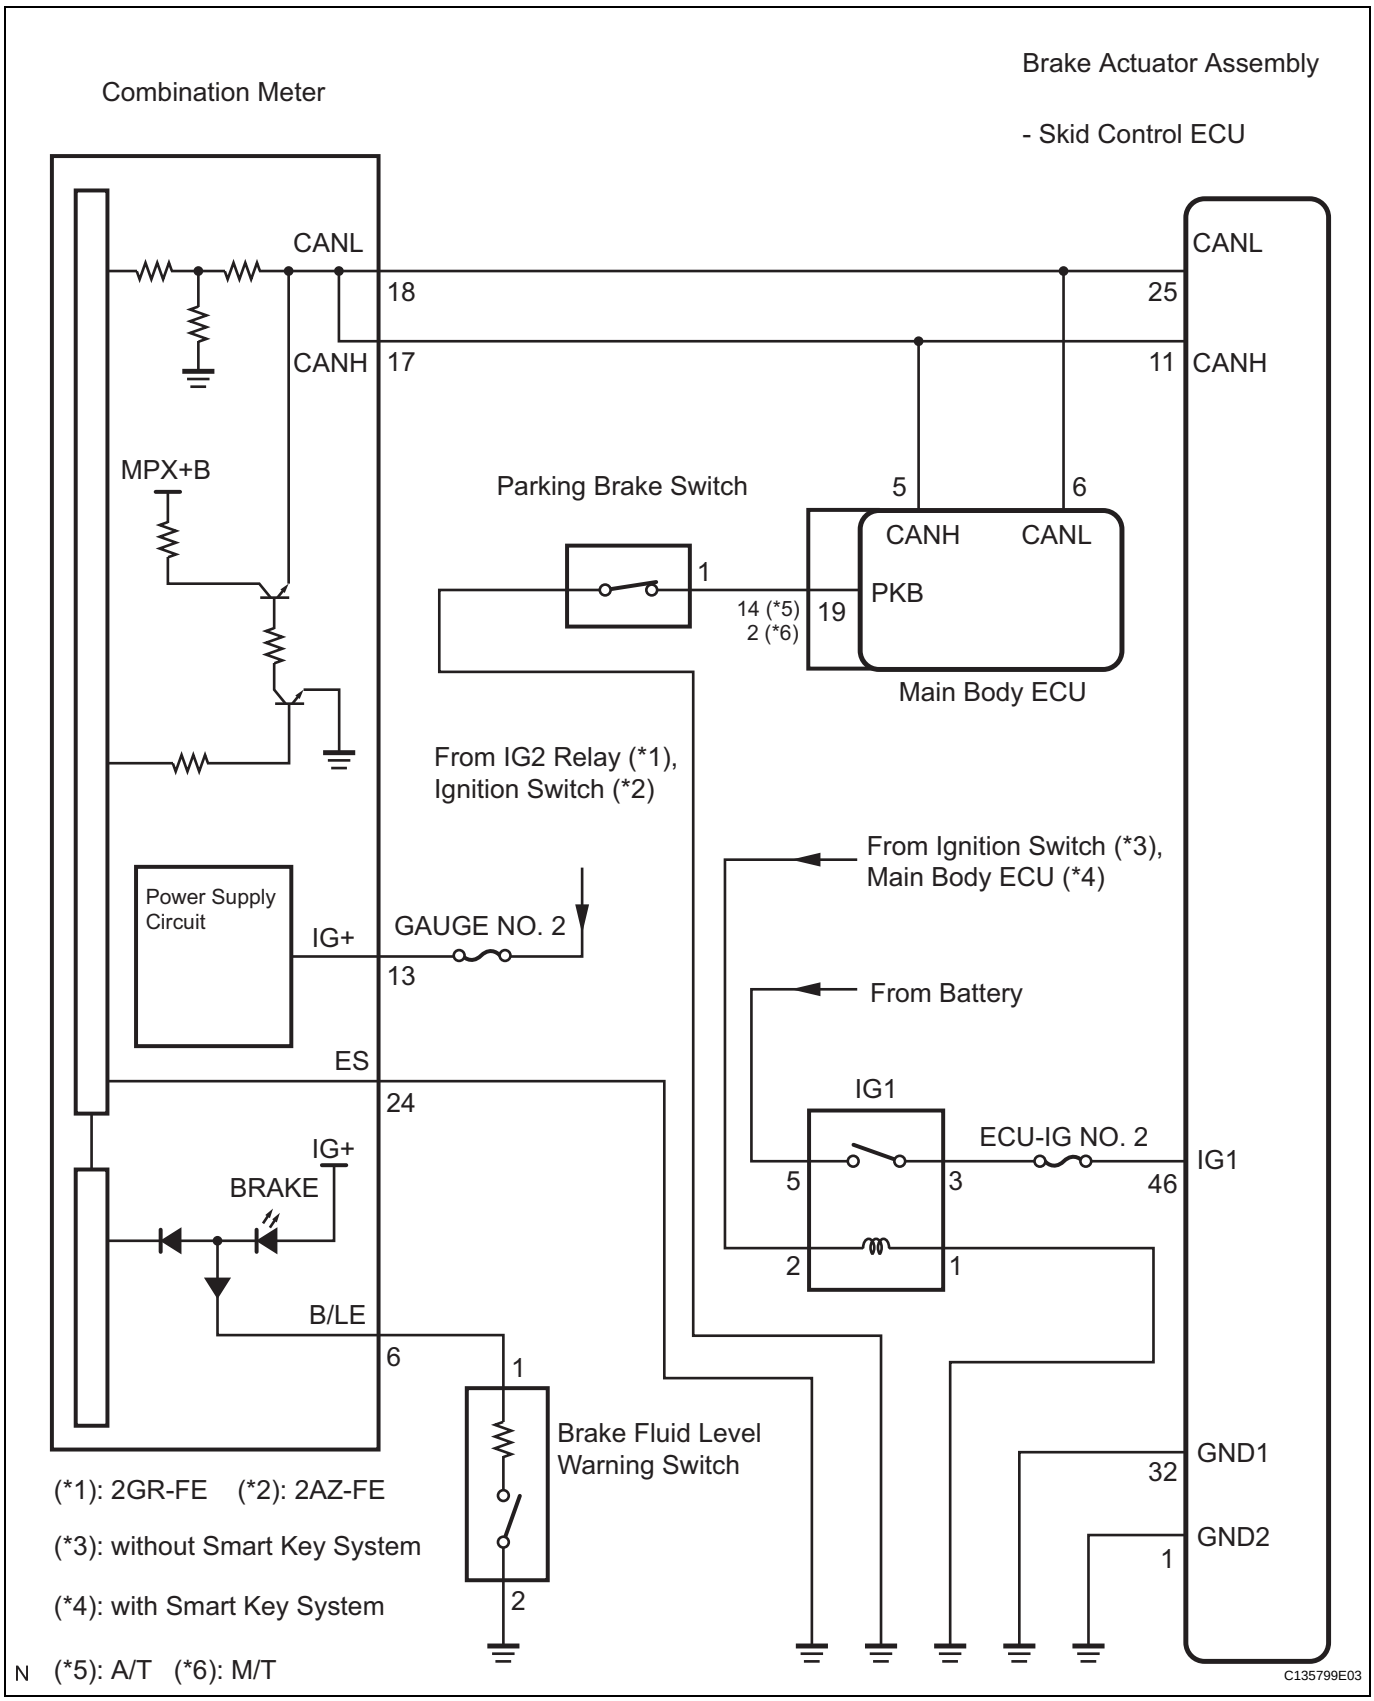
REPLACE BRAKE ACTUATOR ASSEMBLY

Brake Warning Light does not Come ON

DESCRIPTION

The skid control ECU is connected to the combination meter via CAN communication.

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-25).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → INSPECT CAN COMMUNICATION SYSTEM

A

2	CHECK BRAKE WARNING LIGHT

(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch on (IG).
(c) Check that the BRAKE warning light comes on.
OK:
The BRAKE warning light comes on.
HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-134).

OK → REPLACE BRAKE ACTUATOR ASSEMBLY

NG

3	INSPECT COMBINATION METER ASSEMBLY

(a) Turn the ignition switch off.
(b) Reconnect the skid control ECU connector.
(c) Perform Active Test of the combination meter (meter CPU) using the intelligent tester (See page ME-32).
OK:
The BRAKE warning light turns on or off in accordance with the intelligent tester.
HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

NG → REPLACE COMBINATION METER ASSEMBLY

OK

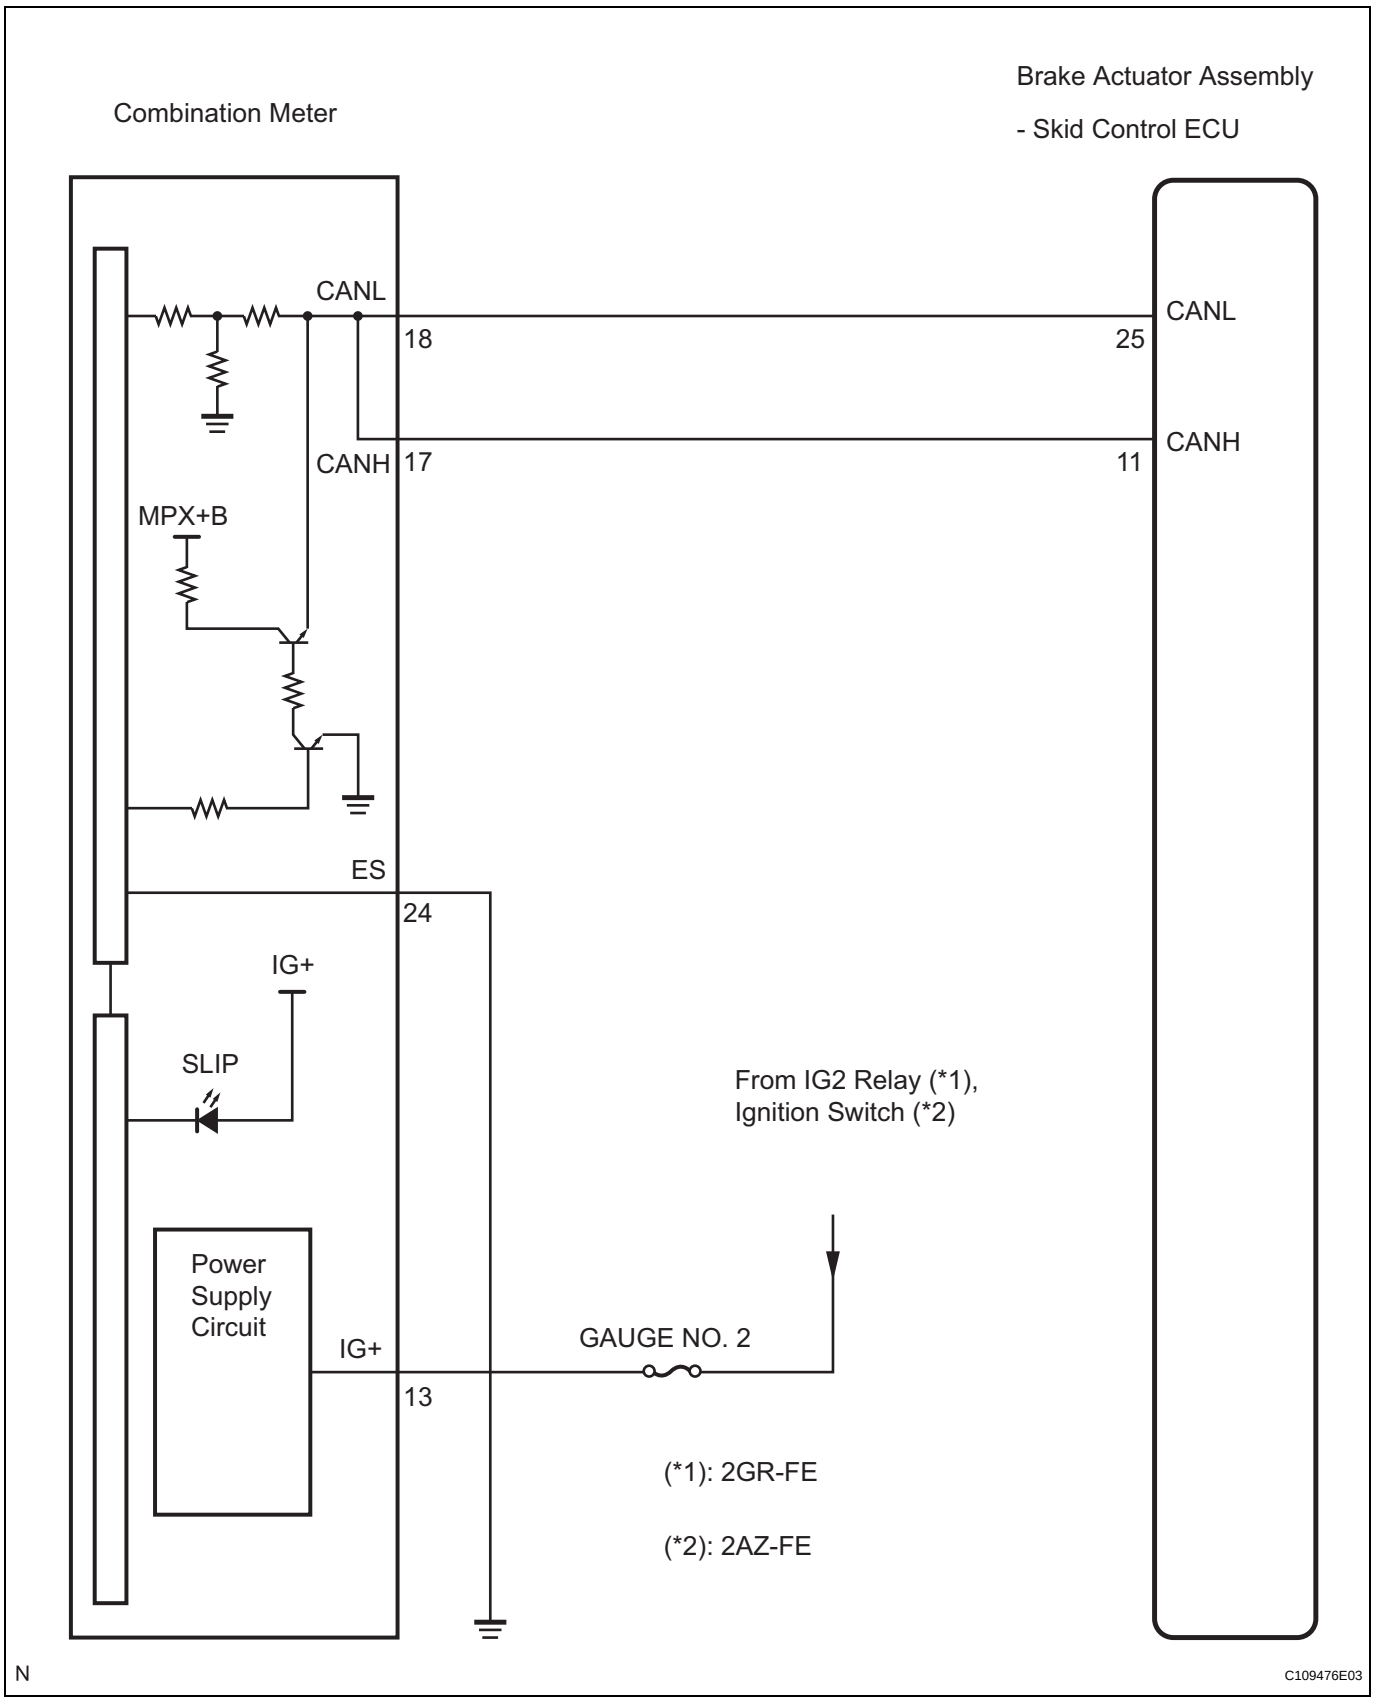
REPLACE BRAKE ACTUATOR ASSEMBLY

Slip Indicator Light Remains ON

DESCRIPTION

The skid control ECU is connected to the combination meter via CAN communication.
The SLIP indicator light blinks during VSC and/or TRAC operation.
When the system fails, the SLIP indicator light comes on to warn the driver (See page BC-138).

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-25).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → **INSPECT CAN COMMUNICATION SYSTEM**

A

2	CHECK IF SKID CONTROL ECU CONNECTOR IS SECURELY CONNECTED

BC

(a) Check if the skid control ECU connector is securely connected.
OK:
The connector should be securely connected.

NG → **CONNECT CONNECTOR TO ECU CORRECTLY**

OK

3	CHECK BATTERY

(a) Check the battery voltage.
Standard voltage:
11 to 14 V

NG → **CHECK AND REPLACE CHARGING SYSTEM OR BATTERY**

OK

4	INSPECT COMBINATION METER ASSEMBLY

(a) Perform Active Test of the combination meter (meter CPU) using the intelligent tester (See page ME-32).
OK:
The SLIP indicator light turns on or off in accordance with the intelligent tester.
HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-134).

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

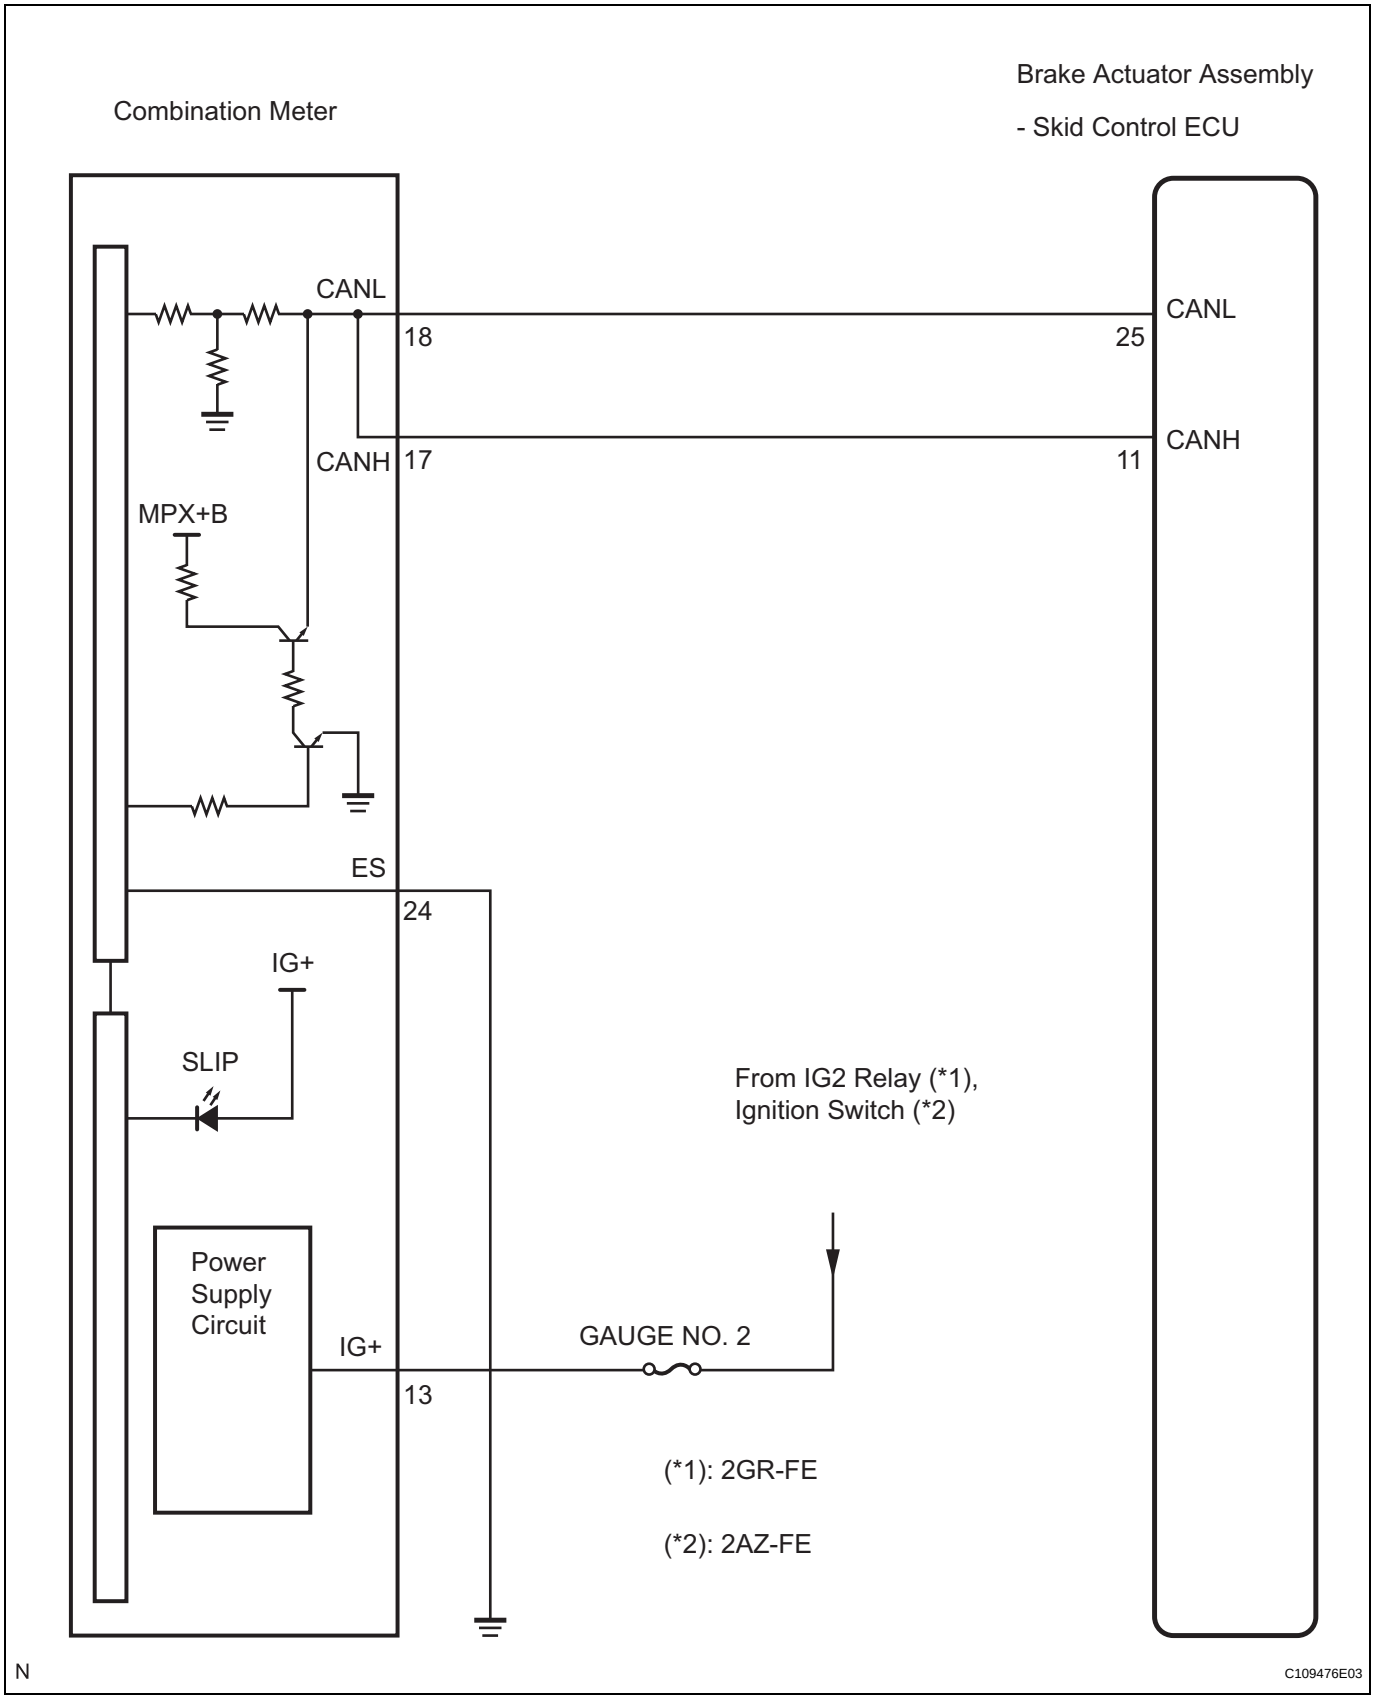
REPLACE BRAKE ACTUATOR ASSEMBLY

Slip Indicator Light does not Come ON

DESCRIPTION

The skid control ECU is connected to the combination meter via CAN communication.
The SLIP indicator light blinks during VSC and/or TRAC operation.
When the system fails, the SLIP indicator light comes on to warn the driver (See page BC-138).

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-25).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → INSPECT CAN COMMUNICATION SYSTEM

A

2	CHECK SLIP INDICATOR LIGHT

BC

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Select "SLIP INDI LAMP" in the Active Test and operate the SLIP indicator light using the intelligent tester.

ABS / VSC:

Item (Display)	Vehicle Condition / Test Details	Diagnostic Note
SLIP INDI LAMP	Turn SLIP indicator light ON / OFF	Observe combination meter

(d) Check that "ON" and "OFF" of the SLIP indicator light are indicated on the combination meter when using the intelligent tester.
OK:
The SLIP indicator light turns on or off in accordance with the intelligent tester.
HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-134).

OK → REPLACE BRAKE ACTUATOR ASSEMBLY

NG

3	INSPECT COMBINATION METER ASSEMBLY

(a) Turn the ignition switch off.
(b) Perform Active Test of the combination meter (meter CPU) using the intelligent tester (See page ME-32).
OK:
The SLIP indicator light turns on or off in accordance with the intelligent tester.
HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

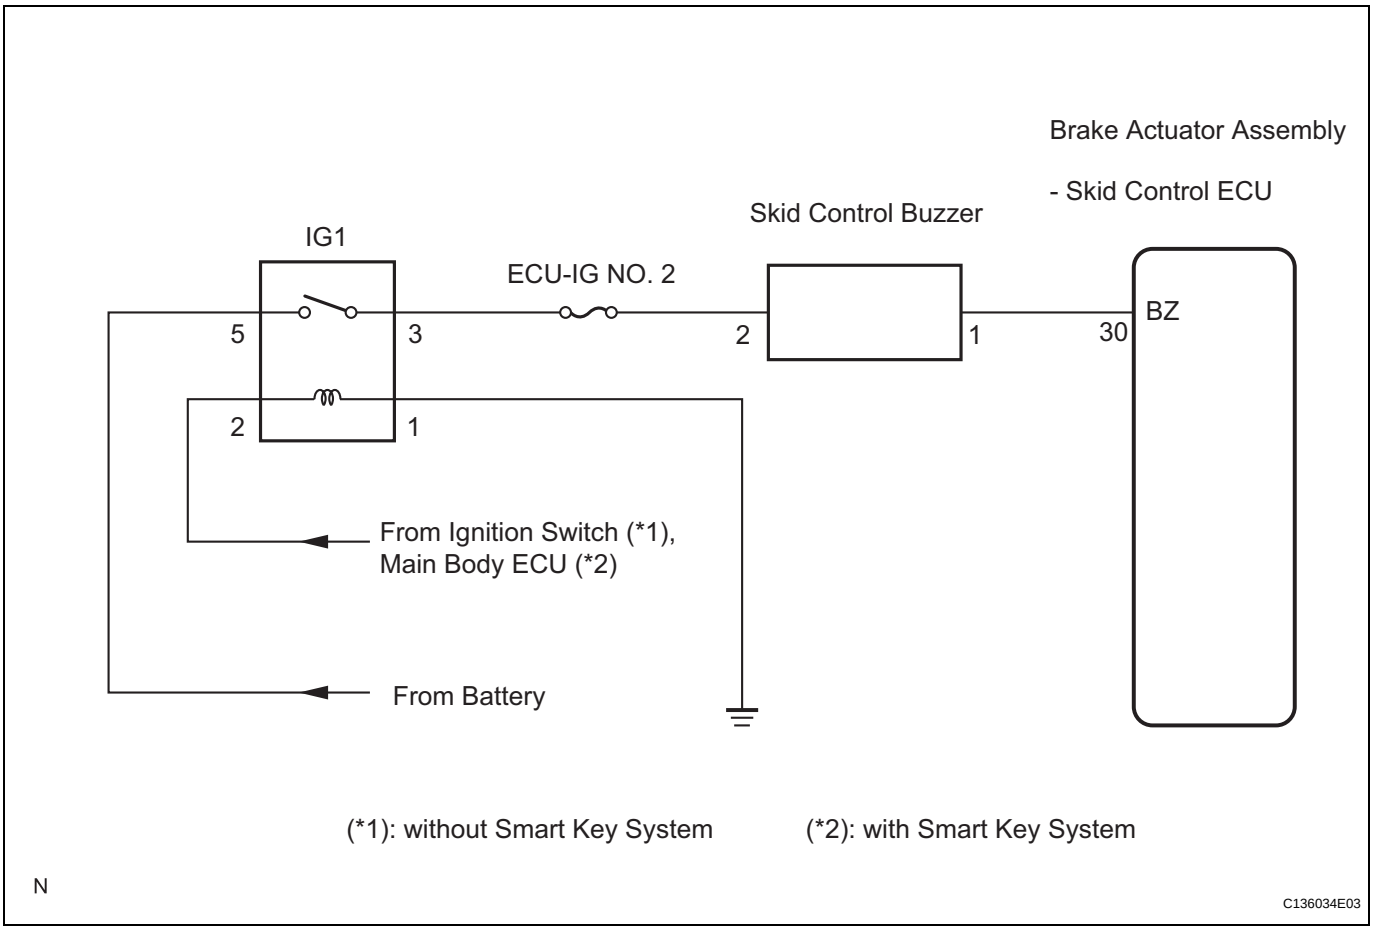
REPLACE BRAKE ACTUATOR ASSEMBLY

Skid Control Buzzer Circuit

DESCRIPTION

The skid control buzzer sounds while the accumulator pressure is abnormally low or when an abnormality causing low fluid pressure occurs, and then the VSC is activated.

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (SKID CONTROL BUZZER)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Select the Active Test mode on the intelligent tester.

ABS / VSC:

Item (Display)	Vehicle Condition / Test Details	Diagnostic Note
BUZZER	Turns skid control buzzer ON / OFF	Buzzer can be heard

(d) Check that the buzzer sounds/stops when turning the skid control buzzer on/off by using the intelligent tester.

Result

Condition	Proceed to
Buzzer does not sound or sounds constantly	A
Buzzer sounds/stops	B

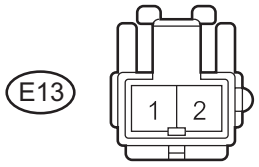
HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

B → **END**

A

2 INSPECT SKID CONTROL BUZZER (POWER SOURCE TERMINAL)

Skid Control Buzzer Harness Side Connector Front View:



(a) Turn the ignition switch off.
(b) Disconnect the skid control buzzer connector.
(c) Turn the ignition switch on (IG).
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

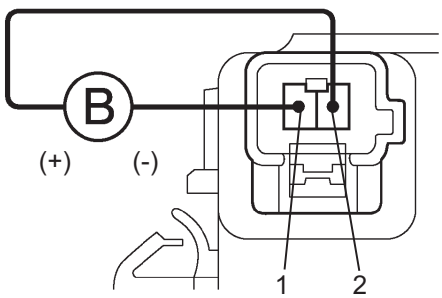
Tester Connection	Condition	Specified Condition
E13-2 - Body ground	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER SOURCE CIRCUIT)**

OK

3 INSPECT SKID CONTROL BUZZER

Skid Control Buzzer:



(a) Apply battery negative voltage to terminal 1, and battery positive voltage to terminal 2 of the skid control buzzer, and then check that the buzzer sounds.

OK:

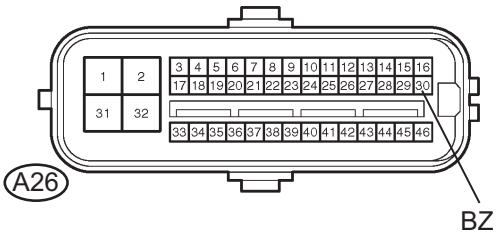
The skid control buzzer sounds.

NG → **REPLACE SKID CONTROL BUZZER**

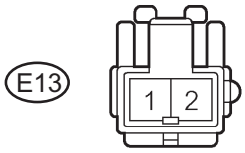
OK

4	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - SKID CONTROL BUZZER)

Skid Control ECU Harness Side Connector Front View:



Skid Control Buzzer Harness Side Connector Front View:



H

I045407E11

(a) Turn the ignition switch off.
(b) Disconnect the skid control ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A26-30 (BZ) - E13-1	Always	Below 1 Ω
A26-30 (BZ) - Body ground	Always	10 kΩ or higher

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-134).

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

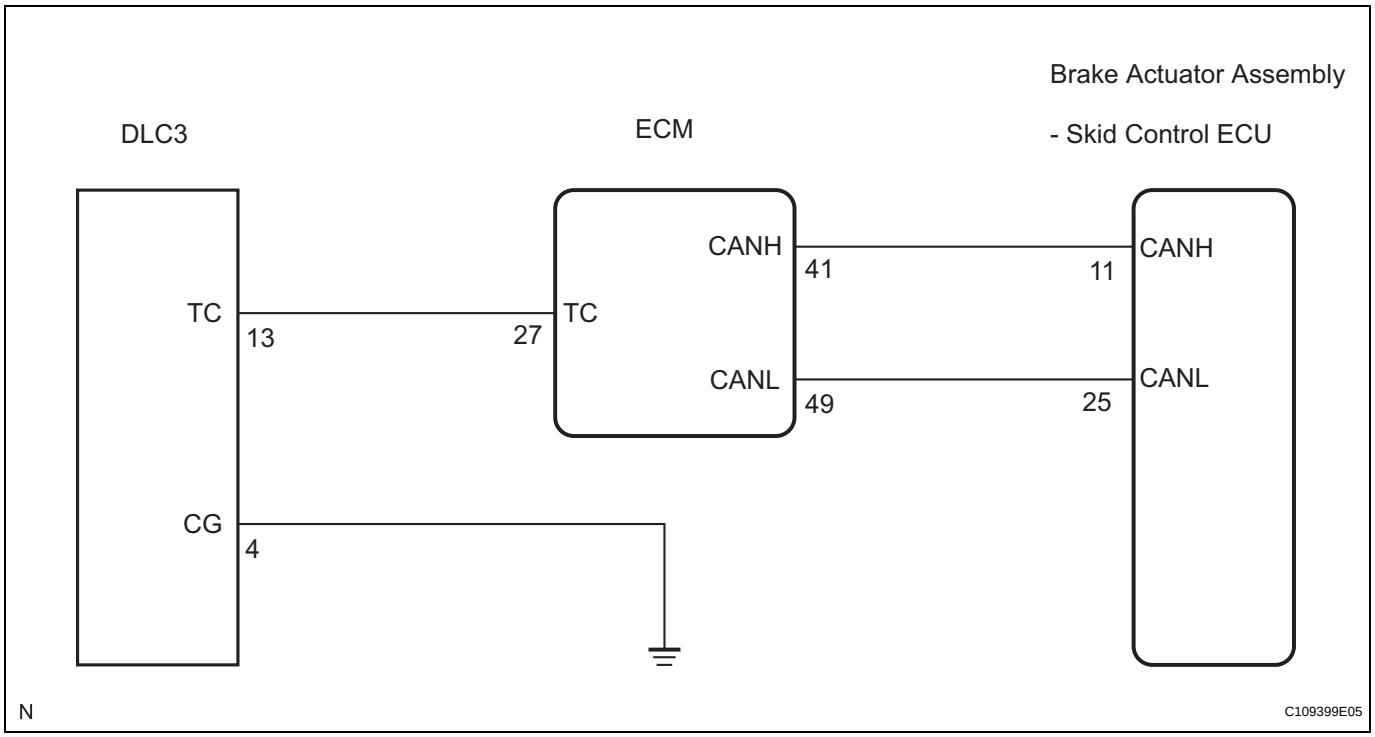
REPLACE BRAKE ACTUATOR ASSEMBLY

TC and CG Terminal Circuit

DESCRIPTION

Connecting terminals TC and CG of the DLC3 causes the ECU to display the DTC by blinking the ABS warning light.

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-25).

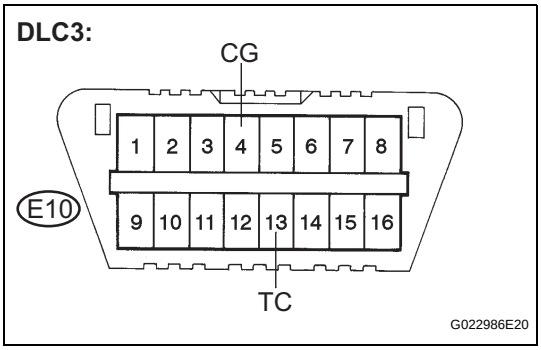
Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → INSPECT CAN COMMUNICATION SYSTEM

A

2	INSPECT DLC3



(a) Turn the ignition switch on (IG).
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

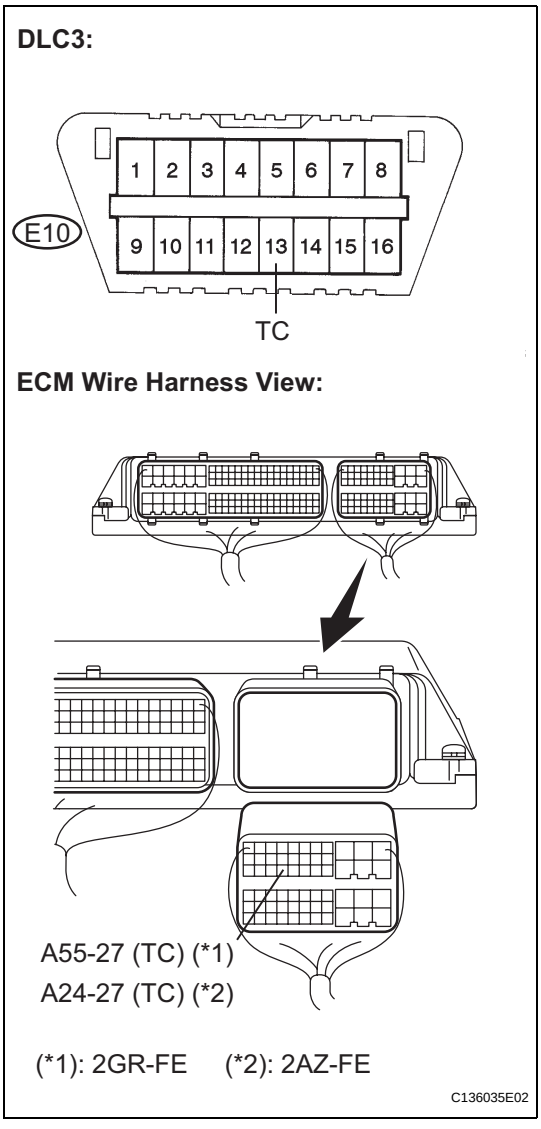
Tester Connection	Condition	Specified Condition
E10-13 (TC) - E10-4 (CG)	Ignition switch on (IG)	10 to 14 V

OK → **Go to step 5**

NG

3	CHECK HARNESS AND CONNECTOR (TC of DLC3 - ECM)

BC



(a) Turn the ignition switch off.
(b) Disconnect the ECM connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance:

2GR-FE

Tester Connection	Condition	Specified Condition
E10-13 (TC) - A55-27 (TC)	Always	Below 1 Ω
E10-13 (TC) - Body ground	Always	10 kΩ or higher

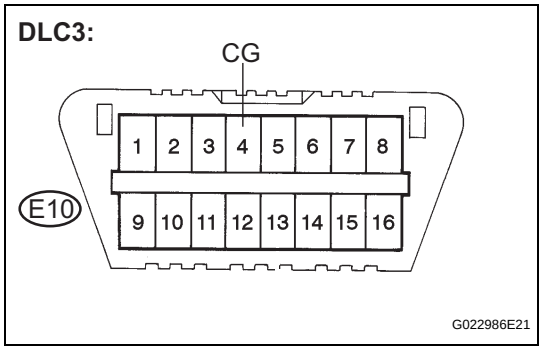
2AZ-FE

Tester Connection	Condition	Specified Condition
E10-13 (TC) - A24-27 (TC)	Always	Below 1 Ω
E10-13 (TC) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 CHECK HARNESS AND CONNECTOR (CG of DLC3 - BODY GROUND)



(a) Measure the resistance according to the value(s) in the table below.

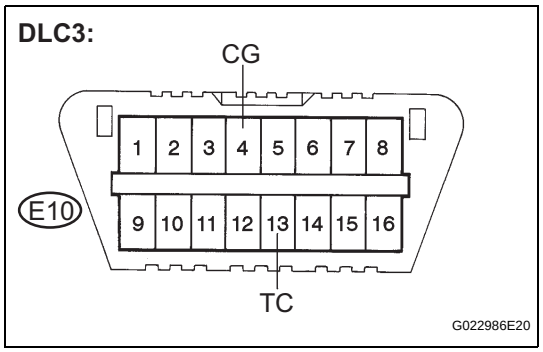
Standard resistance

Tester Connection	Condition	Specified Condition
E10-4 (CG) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5 CHECK ECM (TC of DLC3 INPUT)



(a) Turn the ignition switch off.
(b) Reconnect the ECM connector.
(c) Using SST, connect terminals TC and CG of the DLC3.
(d) Turn the ignition switch on (IG).
(e) Check that the check engine warning light is blinking.

Result

Condition	Proceed to
Check engine warning light is blinking	A
Check engine warning light is not blinking	B

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-134).

B → **REPAIR OR REPLACE WIRE HARNESS OR ECM (TC of ECM CIRCUIT)**

A

REPLACE BRAKE ACTUATOR ASSEMBLY

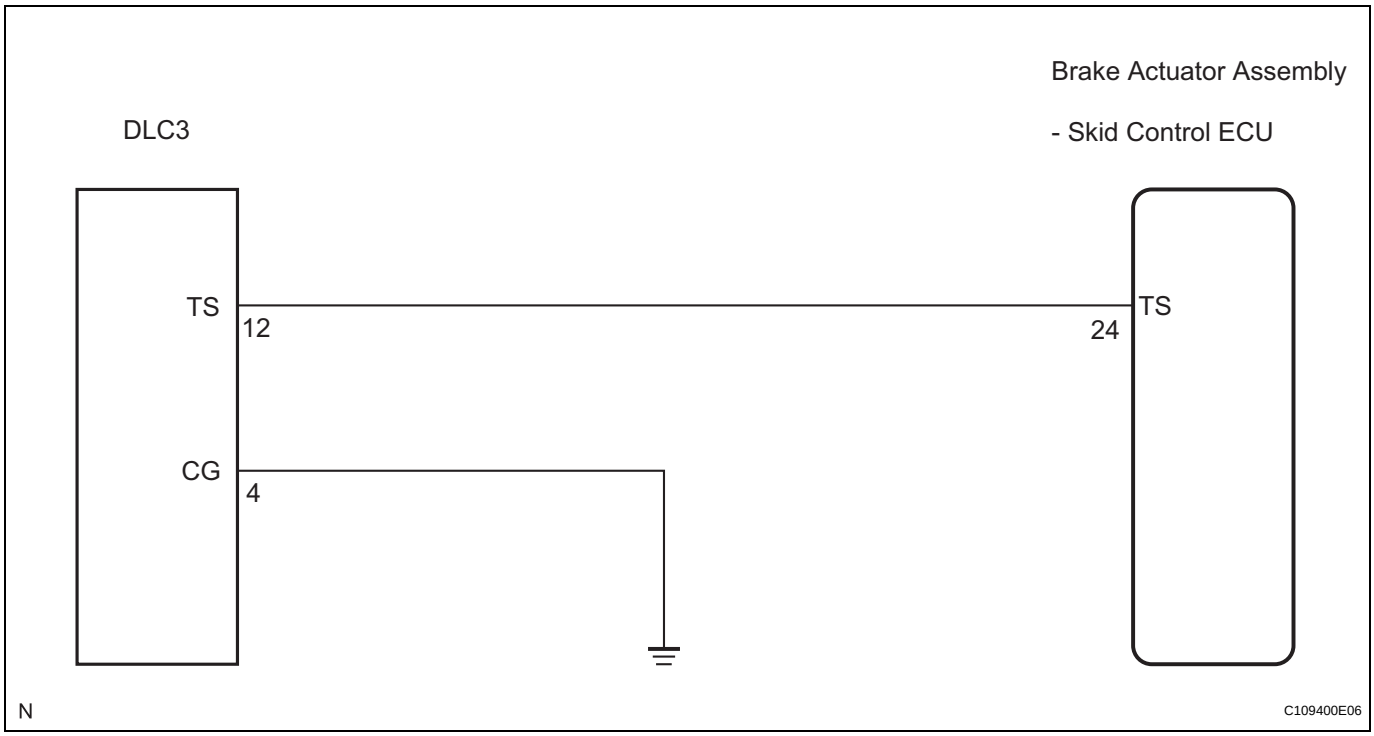
BC

TS and CG Terminal Circuit

DESCRIPTION

In the Test Mode (signal check), a malfunction of the speed sensor that cannot be detected when the vehicle is stopped can be detected while driving.
Transition to the sensor check mode can be performed by connecting terminals TS and CG of the DLC3 and turning the ignition switch from off to on (IG).

WIRING DIAGRAM

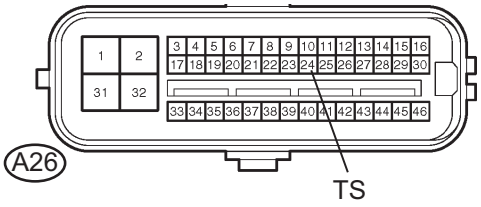


INSPECTION PROCEDURE

NOTICE:
When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

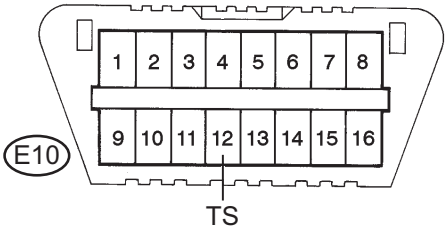
1 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - TS of DLC3)

Skid Control ECU Harness Side Connector Front View:



N

DLC3:



C128347E08

(a) Disconnect the skid control ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

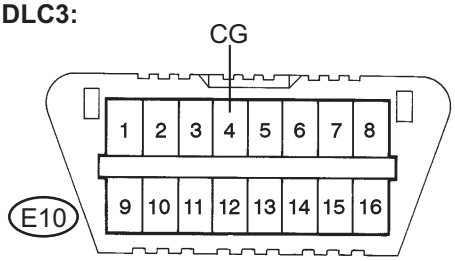
Tester Connection	Condition	Specified Condition
A26-24 (TS) - E10-12 (TS)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2 CHECK HARNESS AND CONNECTOR (CG of DLC3 - BODY GROUND)

DLC3:



G022987E21

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

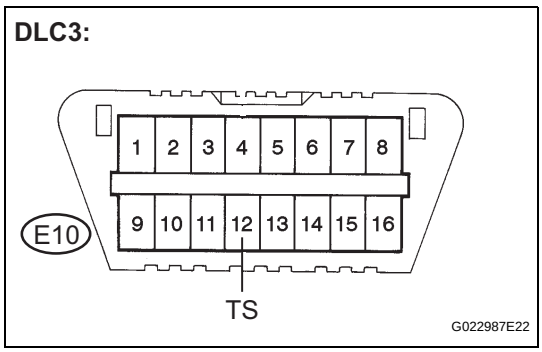
Tester Connection	Condition	Specified Condition
E10-4 (CG) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

BC

3	CHECK HARNESS AND CONNECTOR (TS of DLC3 - BODY GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E10-12 (TS) - Body ground	Always	10 kΩ or higher

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-134).

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

BC

OK

REPLACE BRAKE ACTUATOR ASSEMBLY

VEHICLE STABILITY CONTROL SYSTEM (for BOSCH Made)

PRECAUTION

1. EXPRESSIONS OF IGNITION SWITCH

The type of ignition switch used on this model differs according to the specifications of the vehicle.
The expressions listed in the table below are used in this section.

Expression	Switch Type	
	Ignition Switch (Position)	Engine Switch (Condition)
Ignition switch off	LOCK	off
Ignition switch on (IG)	ON	on (IG)
Ignition switch on (ACC)	ACC	on (ACC)
Engine start	START	start

BC

2. TROUBLESHOOTING PRECAUTION

(a) When there is a malfunction in the contact point of the terminals or installation problems with parts, the removal and installation of the suspected problem parts may return the system to the normal condition either completely or temporarily.
(b) In order to determine the malfunctioning area, be sure to check the conditions at the time the malfunction occurred, such as by DTC output and freeze frame data output, and record it before disconnecting each connector or removing and installing parts.
(c) Since the vehicle stability control system may be influenced by a malfunction in the other systems, be sure to check for DTCs in the other systems.
(d) Be sure to remove and install the brake actuator assembly and each sensor with the ignition switch off unless specified in the inspection procedure.
(e) If the brake actuator or a sensor has been removed and installed, it is necessary to check the system for problems after the parts have been reassembled. Check for DTCs using the intelligent tester, also check that system functions and signals received by the ECU are normal using test mode.

3. CAN COMMUNICATION SYSTEM PRECAUTION

(a) The CAN communication system is used for data communication between the skid control ECU, the steering angle sensor, and the yaw rate and acceleration sensor. If there is trouble in the CAN communication line, a DTC of the communication line is output.
(b) If a DTC of the CAN communication line is output, repair the malfunction in the communication line and troubleshoot the vehicle stability control system under the condition that data communication is normal.

(c) In order to enable CAN communication, a specific type of wiring is used for the CAN communication lines. The wiring used for each communication line is a twisted pair of wires that have an equal length. A bypass wire should not be used, because the data being transmitted will be corrupted.

4. DTC PRECAUTION

(a) Warnings for some DTCs cannot be cleared by only repairing the malfunctioning parts. If the warning is displayed after repair work, the DTC should be cleared after turning the ignition switch off.

NOTICE:

If a DTC for a malfunctioning part reappears after it was cleared, then it has been stored again.

5. CHASSIS DYNAMOMETER PRECAUTION

(a) Enter Test Mode to disable TRAC and VSC control when using a chassis dynamometer.

HINT:

The vehicle may move unexpectedly out of the dynamometer because of TRAC and VSC operations.

NOTICE:

- **Make sure that the VSC warning (multi information display and master caution indicator light) light is blinking (TEST Mode is achieved).**
- **Secure the vehicle with the lock chain for safety.**

BC

SYSTEM DESCRIPTION

1. SYSTEM DESCRIPTION

HINT:

- The skid control ECU is located within the brake actuator assembly.
- The yaw rate sensor and acceleration sensor are combined in a single unit. This unit communicates with the skid control ECU through the CAN communication system.

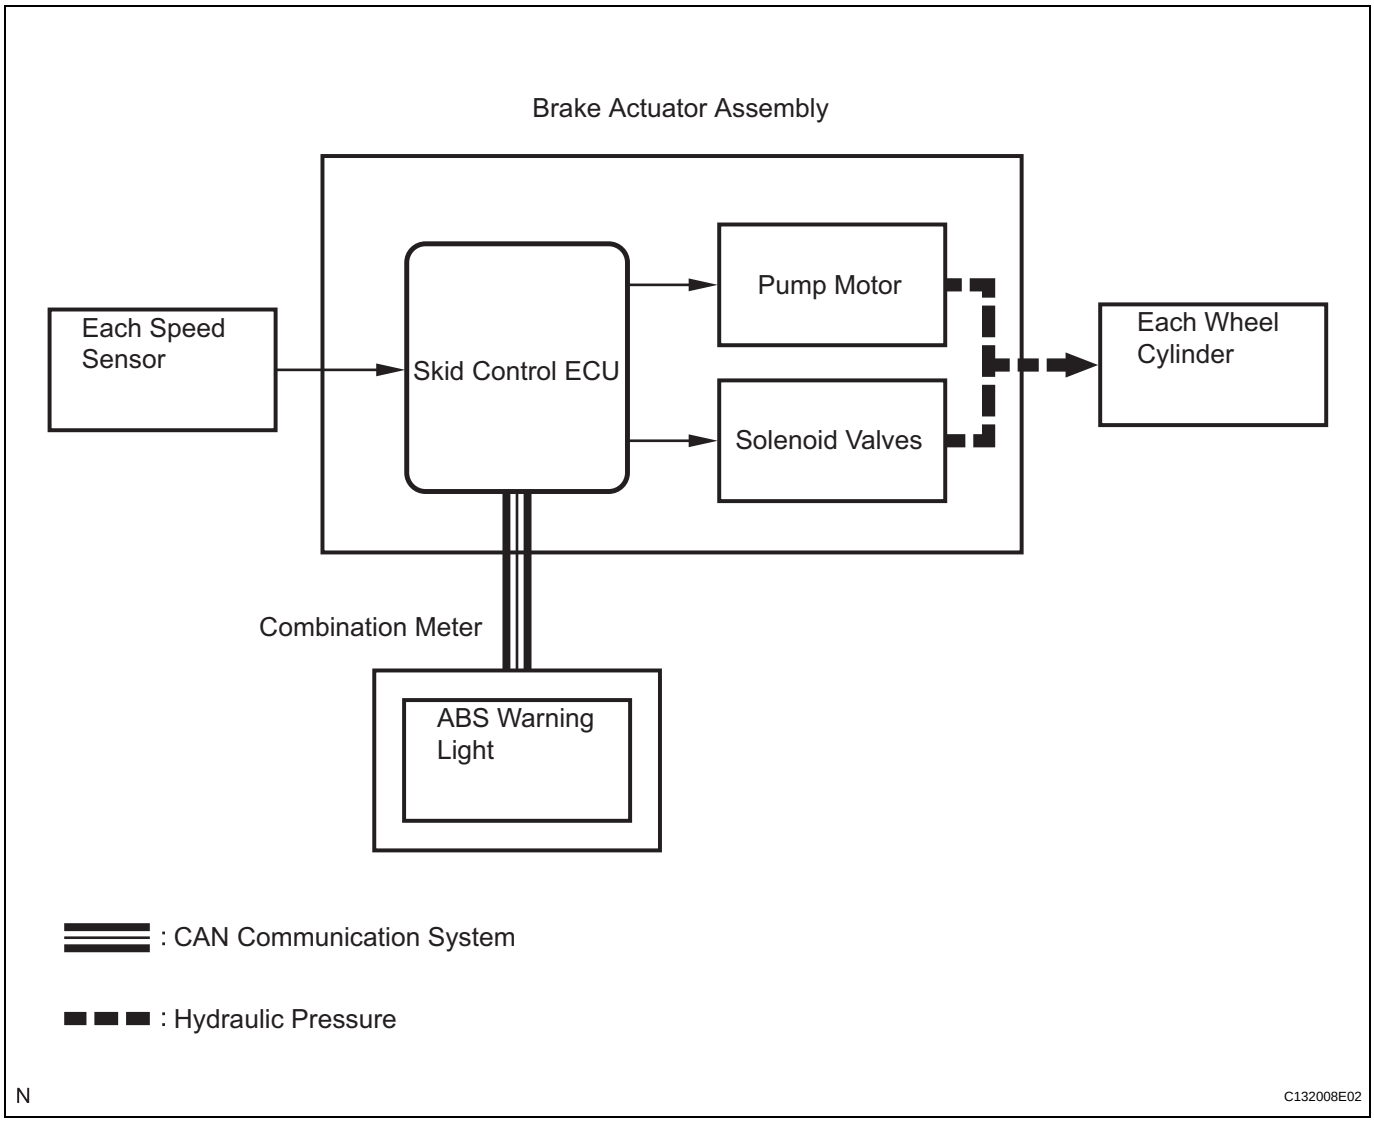
(a) ABS operation

(1) Based on the signals received from the 4 wheel speed sensors, the skid control ECU calculates the deceleration and speed of each wheel, while monitoring for wheel lock. If wheel lock is occurring, the ECU controls the solenoid valves in the brake actuator in order to adjust the hydraulic pressure applied to the brakes at each wheel.

2. FUNCTION DESCRIPTION

(a) ABS (Anti-lock Brake System)

The ABS helps prevent the wheels from locking when the brakes are applied firmly or when braking on a slippery surface.

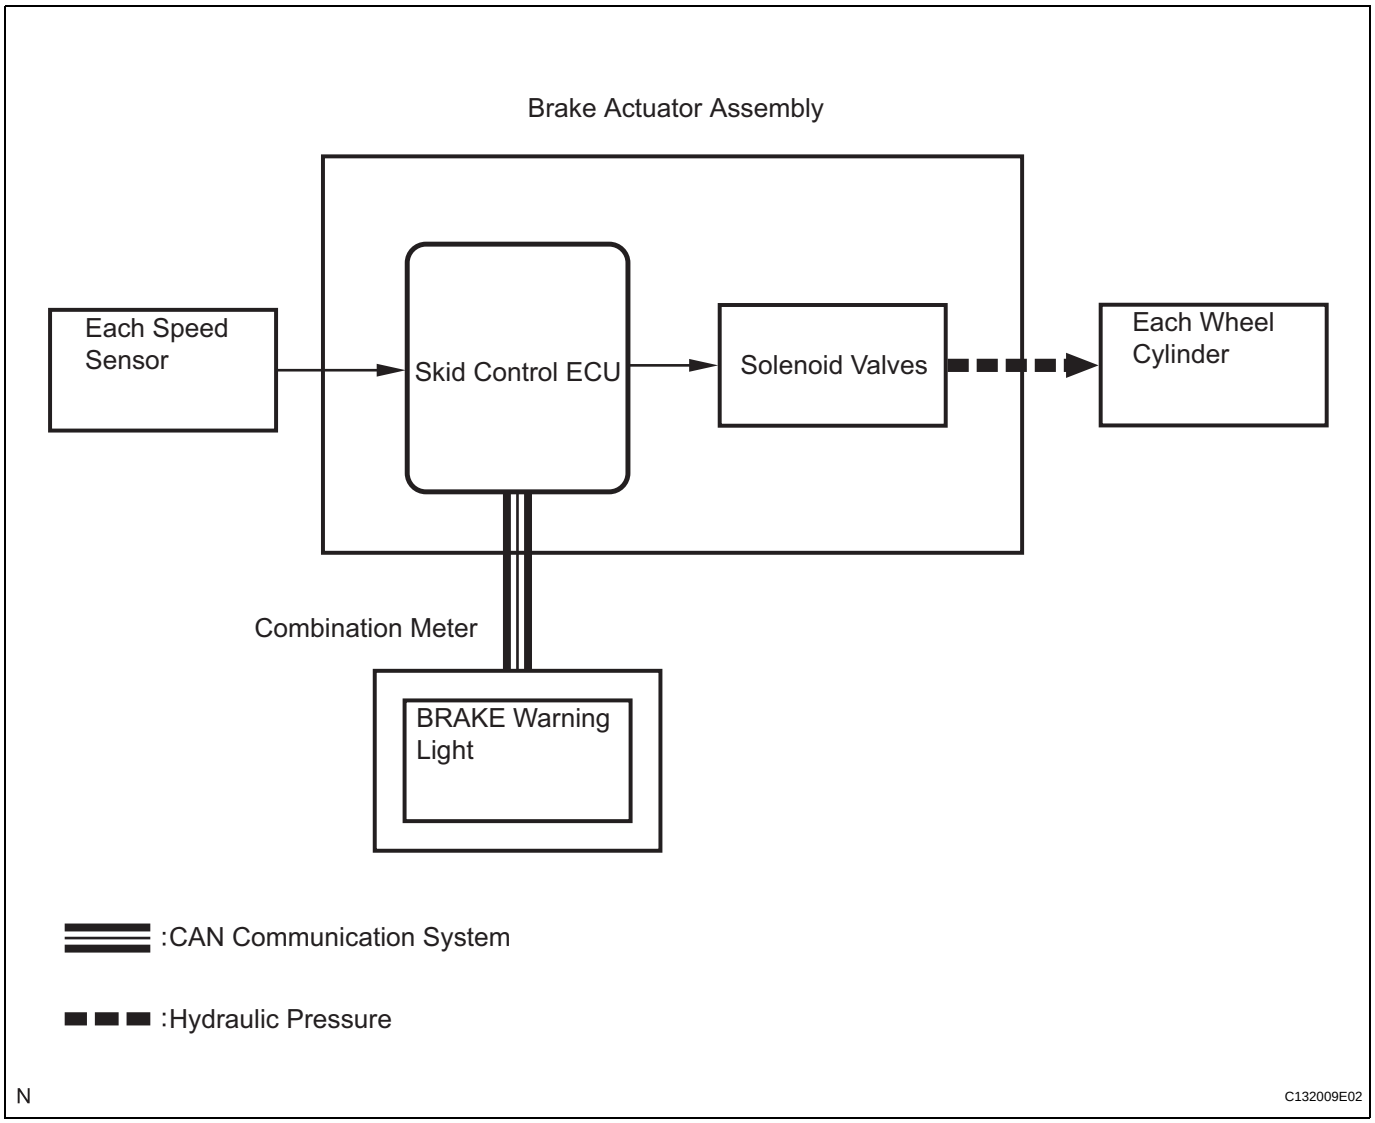


(1) Operation description

The skid control ECU detects wheel lock condition by receiving vehicle speed signals from each speed sensor, and sends control signals to the pump motor and solenoid valves. The pump motor and solenoid valves avoid wheel lock by controlling the hydraulic pressure of each wheel cylinder.

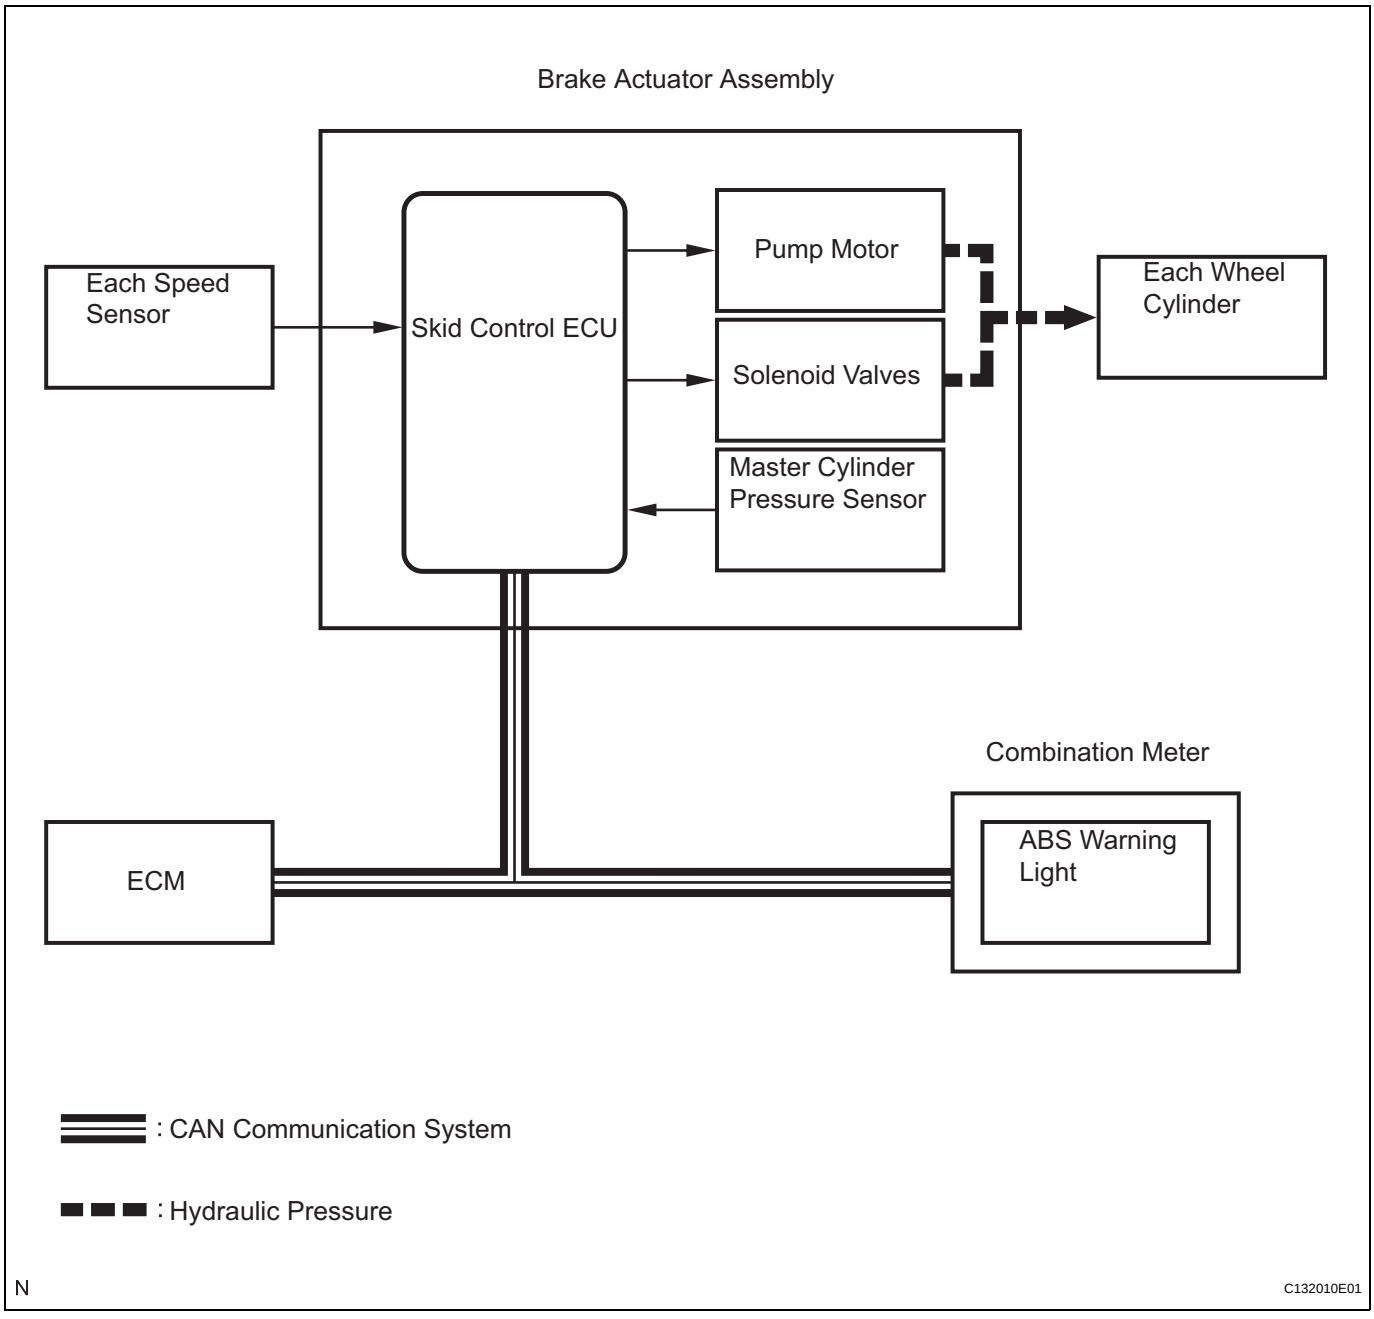
The ABS warning light comes on when the ABS system is malfunctioning.

(b) EBD (Electronic Brake force Distribution)
The EBD control utilizes ABS, which ensures proper brake force distribution between the front and rear wheels in accordance with driving conditions. In addition, when braking while cornering, it also controls the brake forces of the right and left wheels, helping to maintain vehicle behavior.



(1) Operation description
The skid control ECU receives a speed signal from each speed sensor, and uses these signals to detect locking of the wheels. The ECU uses this information in order to determine appropriate control of the solenoid valves.
The solenoid valves control the hydraulic pressure applied to the brake cylinder at each wheel. In this way, the solenoid valves are used to control the brake power split between the front and rear, and left and right wheels. The BRAKE warning light comes on if there is a malfunction in the EBD system.

(c) BA (Brake Assist)
The primary purpose of the brake assist system is to provide auxiliary brake force to assist a driver who cannot generate a large enough brake force during emergency braking. This system helps to maximize the brake performance of the vehicle.



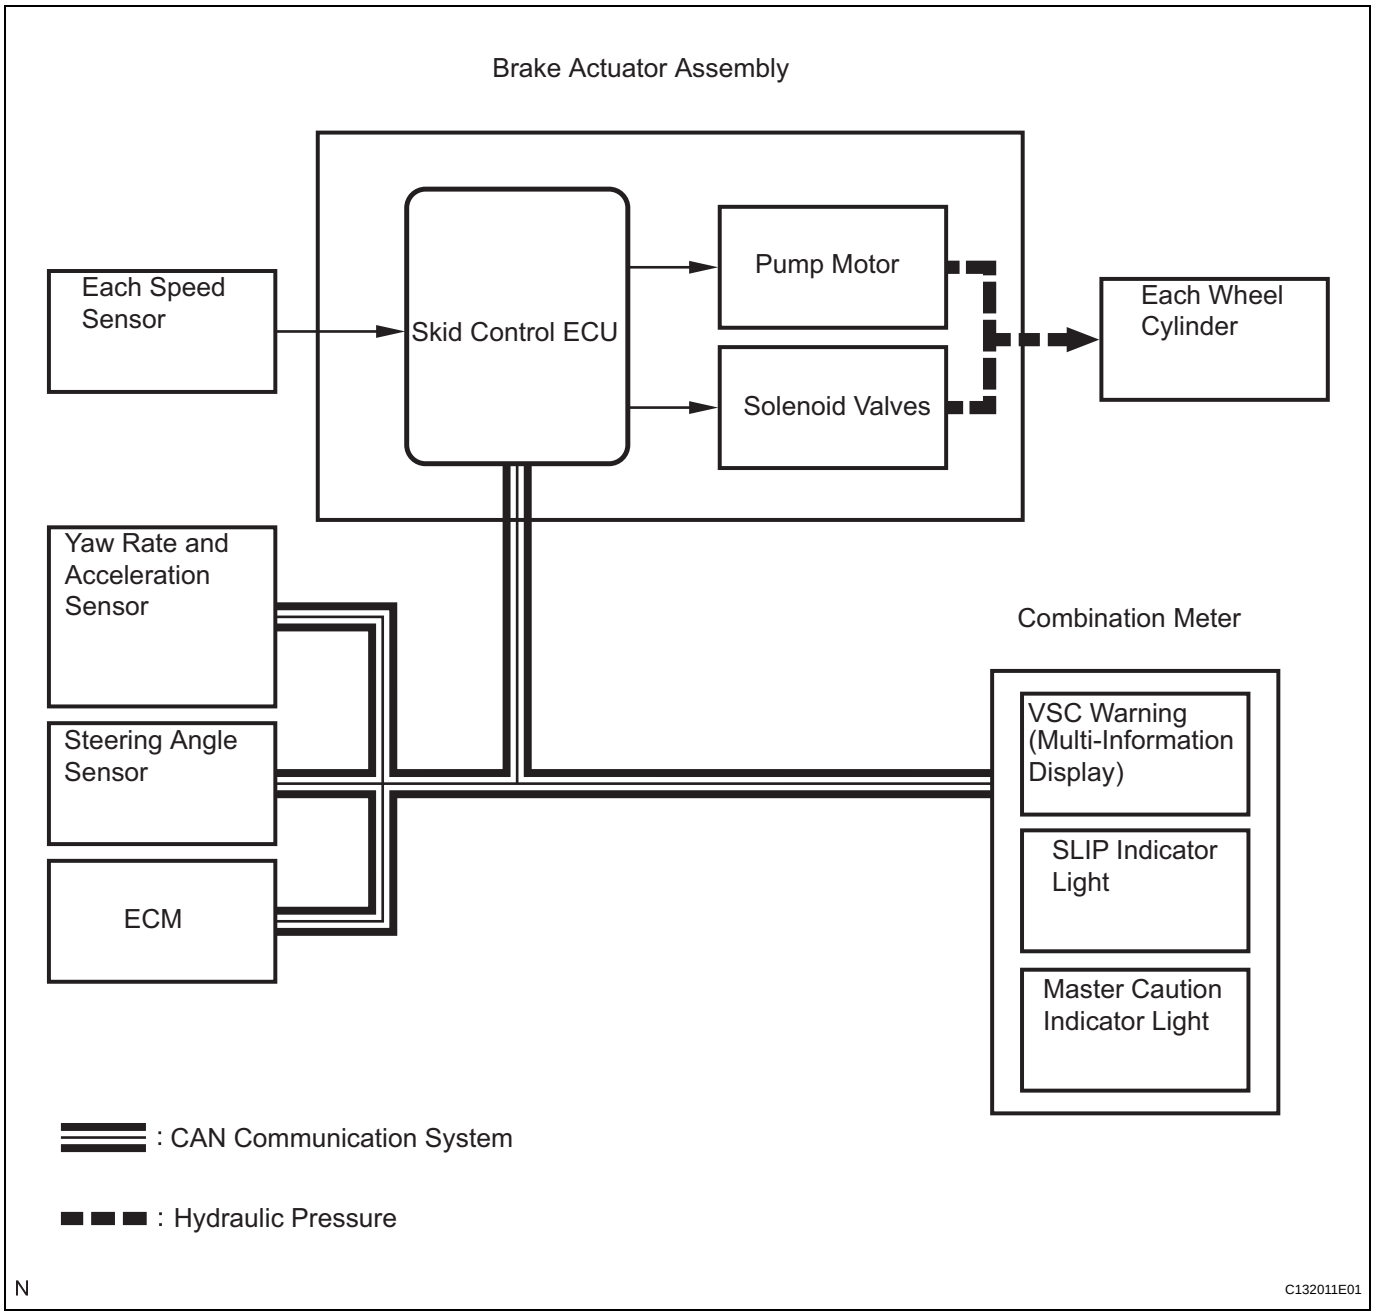
(1) Operation description

The skid control ECU receives the speed signal from each speed sensor and the hydraulic pressure signal from the master cylinder pressure sensor to determine whether brake assist is necessary. If brake assist is considered to be necessary, the skid control ECU sends control signals to the pump motor and solenoid valve.

The pump and solenoid valve then control the pressure applied to each wheel cylinder.

The ABS warning light comes on to indicate a malfunction in the BA (brake assist) system.

(d) TRAC (Traction Control)
The TRAC system helps prevent the drive wheel from slipping if the driver depresses the accelerator pedal excessively when starting off or accelerating on a slippery surface.

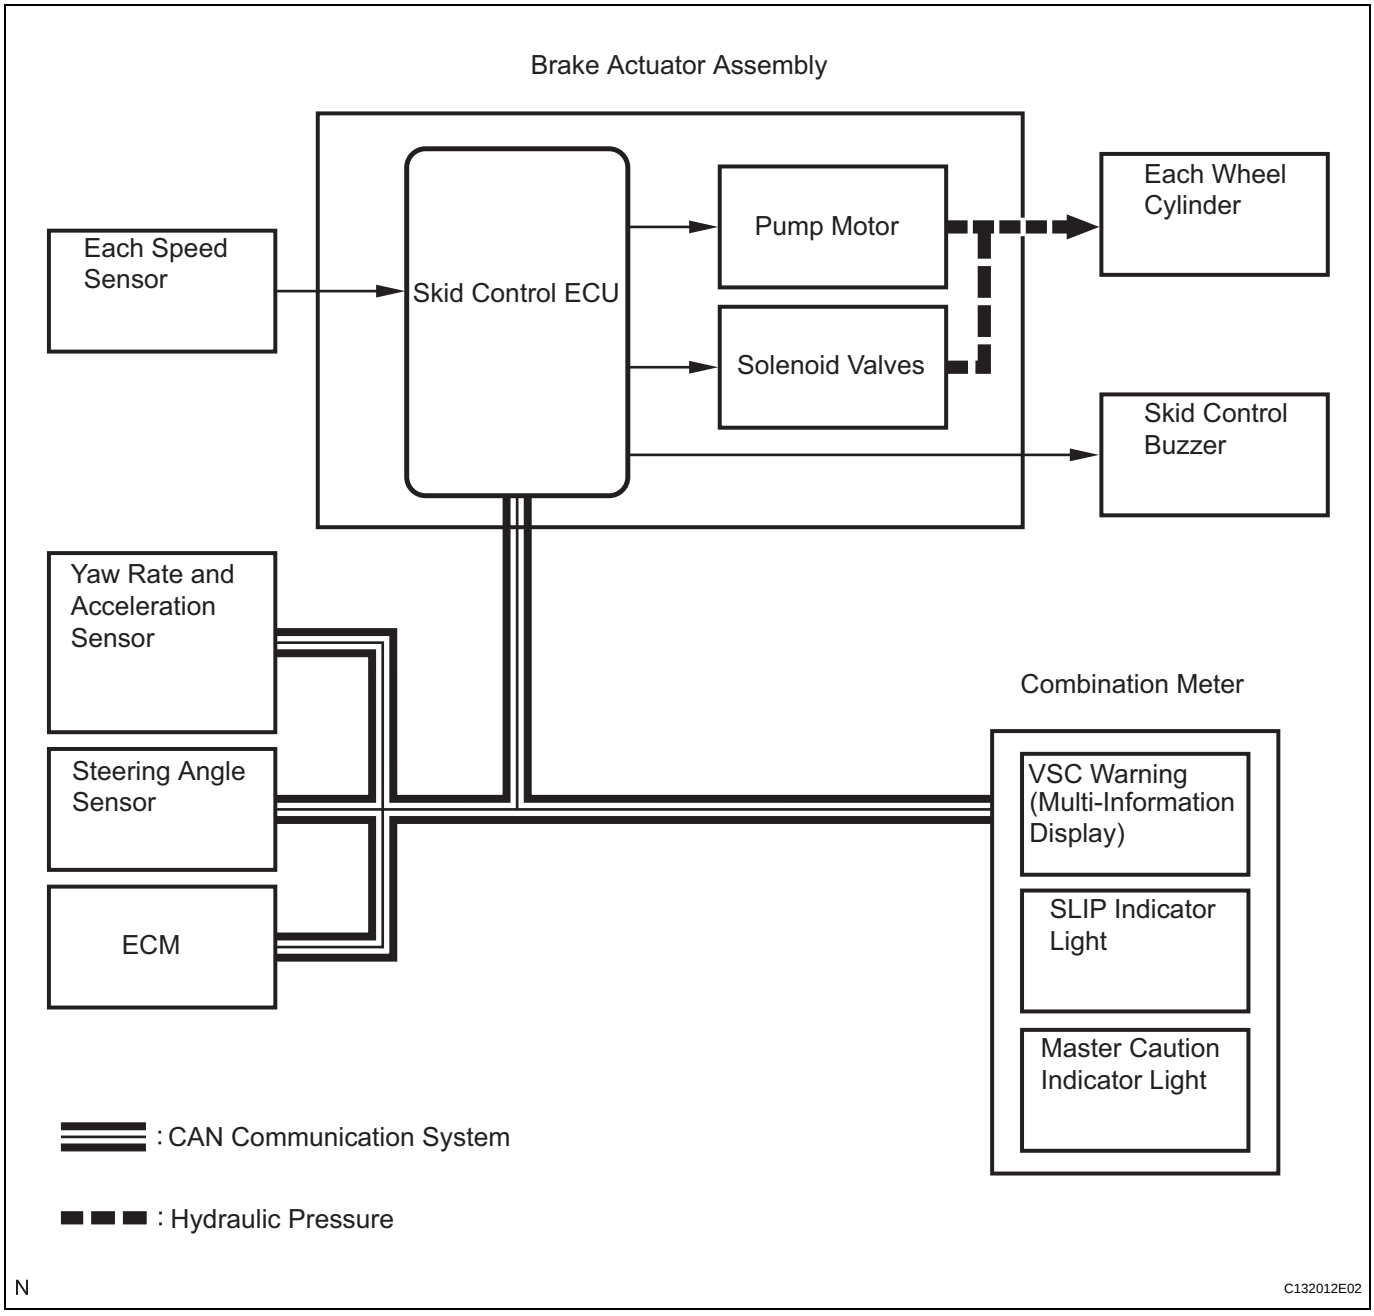


(1) Operation description

The skid control ECU detects wheelspin condition by receiving signals from each speed sensor and the ECM via CAN communication. The skid control ECU controls engine torque with the ECM via CAN communication and brake hydraulic pressure through the pump and solenoid valve.

The SLIP indicator light blinks when the system is operating. If a malfunction occurs in the TRAC system, both master caution and SLIP indicator lights will come on and the DTC will be displayed on the multi-information display.

(e) VSC (Vehicle Stability Control)
The VSC system helps prevent the vehicle from slipping sideways as a result of a strong front or rear wheel skid during cornering.



(1) Operation description

The skid control ECU determines the vehicle operating conditions based on signals received from the wheel speed sensors, yaw rate and acceleration sensor, and steering angle sensor. The skid control ECU sends signals via CAN communication to the ECM in order to control engine torque. The skid control ECU controls brake hydraulic pressure using the pump and solenoid valves.

The SLIP indicator light will blink, and the skid control system buzzer will sound when the system is operating. If a malfunction occurs in the VSC system, both the master caution indicator light and the SLIP indicator light will come on. In addition to this, the DTC will appear on the multi-information display. Vehicles without a multi-information display will illuminate the VSC warning light and SLIP indicator light if a malfunction occurs.

3. ABS with EBD, BA, TRAC and VSC OPERATION

(a) The skid control ECU calculates vehicle stability tendency based on the signals from the speed sensor, yaw rate and acceleration sensor, and steering angle sensor. In addition, it evaluates the results of the calculations to determine whether any control actions (control of the engine output torque by electronic throttle control and of the wheel brake pressure by the brake actuator assembly) should be implemented.

(b) The SLIP indicator blinks and the skid control buzzer sounds to inform the driver that the VSC system is operating. The SLIP indicator also blinks when traction control is operating, and the operation being performed is displayed.

4. FAIL SAFE

(a) When a failure occurs in the ABS with BA, TRAC and VSC systems, the ABS and VSC warning (with multi-information display) lights, and SLIP indicator light come on and ABS with BA, TRAC and VSC operations are prohibited. In addition, when there is a failure that disables the EBD operation, the BRAKE warning light also comes on and the EBD operation is prohibited.

(b) If control is prohibited due to a malfunction during operation, control will be disabled gradually. This is to avoid sudden vehicle instability.

5. INITIAL CHECK

(a) When the vehicle speed first becomes approximately 4 mph (6 km/h) or more after the ignition switch is turned on (IG), each solenoid valve and motor of the brake actuator assembly is sequentially activated to perform an electrical check. During the initial check, the operating sound of solenoid valve and motor can be heard from the engine compartment, but this is not a malfunction.

6. FUNCTION OF COMPONENTS

Components	Function
Brake actuator assembly	• Changes the fluid path based on the signals from the skid control ECU during the operation of the ABS with EBD & Brake Assist & TRAC & VSC system, in order to control the fluid pressure that is applied to the wheel cylinders. • Houses the skid control ECU.
Skid control ECU (housed in brake actuator assembly)	• Judges the vehicle driving condition based on the signals from each sensor, and controls the brake actuator assembly. • Sends and receives the control signals to or from the ECM, yaw rate and acceleration sensor, and steering angle sensor via CAN communication.
Master cylinder pressure sensor	• Detects the fluid pressure in the master cylinder. • Housed in the brake actuator assembly.
Speed sensor	Detects speed of each wheel and inputs the data into the skid control ECU.
Stop light switch	Illuminates the brake light when the brake pedal is depressed. (Sends a brake on signal to the skid control ECU)
Motor relay	• Supplies power to the pump motor. • Housed in the skid control ECU.
Solenoid relay	• Supplies power to each solenoid. • Housed in the skid control ECU.
ECM	• Controls the engine output based on the signals received from the skid control ECU. • Sends the accelerator pedal position signal and the engine speed signal to the skid control ECU.
ABS warning light	• Comes on to inform the driver that a malfunction in the ABS, EBD or BA (Brake Assist) has occurred. • Blinks to output DTC.
BRAKE warning light	• Comes on to inform the driver that the parking brake is ON when the system is normal. • Comes on to inform the driver that a malfunction in the EBD has occurred.
VSC warning light	Comes on to inform the driver that a malfunction in the VSC system has occurred.
SLIP indicator light	Blinks to inform the driver that TRC and VSC are operating.
Brake fluid level warning switch	Detects the brake fluid level.
Skid control buzzer	Intermittently sounds to inform the driver that the VSC is operating.
Yaw rate and acceleration sensor	• Acceleration sensor measures the capacity of the condenser that changes the distance between the electrodes depending on G force, which occurs when the vehicle is accelerated, and converts the measured value into electrical signals. • Yaw rate sensor detects the vehicle's angular velocity (yaw rate) in the vertical direction based on the amount and direction of the piezoelectric ceramics deflection. • Sends signals to the skid control ECU via CAN communication.
Steering angle sensor	• Installed in the steering column. • Detects the steering amount and direction and sends the signals to the skid control ECU via CAN communication. • Has the magnetic resistance element, which detects the rotation of the magnet housed in the detection gear in order to detect the changes in magnetic resistance and the steering amount and direction.

HOW TO PROCEED WITH TROUBLESHOOTING

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS

(a) Interview the customer to confirm the trouble.

NEXT

3	CHECK CAN COMMUNICATION SYSTEM

(a) Check for DTCs (See page BC-302).
HINT:
The skid control ECU is connected to the CAN communication system.
Therefore, before starting troubleshooting, make sure to check that there is no trouble in the CAN communication system.

Result

Result	Proceed to
DTC is not output	A
DTC is output	B

B → CHECK CAN COMMUNICATION CIRCUIT

A

4	CHECK DTC AND FREEZE FRAME DATA

(a) Check for DTCs and Freeze Frame Data (See page BC-302 for DTC Check / Clear, BC-305 for Freeze Frame Data).
(1) Record the DTCs and Freeze Frame Data.
(b) Clear the DTCs.
(c) Recheck for DTCs.
(1) Reproduce the malfunction and check if the DTCs are output again.

Result

Result	Proceed to
DTC is output	A
DTC is not output (Problem symptom does not occur)	B
DTC is not output (Problem symptom occurs)	C

TEST MODE PROCEDURE

1. WARNING LIGHT AND INDICATOR LIGHT INITIAL CHECK

(a) Release the parking brake.

NOTICE:

Before releasing the parking brake, move the shift lever to the P position for safety (Automatic Transaxle model) or set the chocks to hold the vehicle for safety (Manual Transaxle model).

HINT:

When the parking brake is applied or the level of the brake fluid is low, the BRAKE warning light comes on.

(b) When the ignition switch is turned on (IG), check that the ABS, VSC (without multi-information display), BRAKE warning lights, and master caution, SLIP indicator lights come on for approximately 3 seconds.

HINT:

If the ECU stores any DTCs, the ABS, BRAKE, VSC warning (without multi-information display and master caution indicator light) lights, and SLIP indicator light come on.

If the indicator remains on or does not come on, proceed to troubleshooting for the light circuits listed below.

Trouble Area	See procedure
ABS warning light (Remains on)	BC-380
ABS warning light (Does not come on)	BC-385
BRAKE warning light (Remains on)	BC-395
BRAKE warning light (Does not come on)	BC-404
VSC warning light (Remains on)	BC-388
VSC warning light (Does not come on)	BC-392
SLIP indicator light (Remains on)	BC-408
SLIP indicator light (Does not come on)	BC-412

2. SENSOR SIGNAL CHECK BY TEST MODE (SIGNAL CHECK) (INTELLIGENT TESTER)

HINT:

If the ignition switch is turned from on (IG) to on (ACC) or off during Test Mode (signal check), DTCs recorded during the signal check function will be erased.

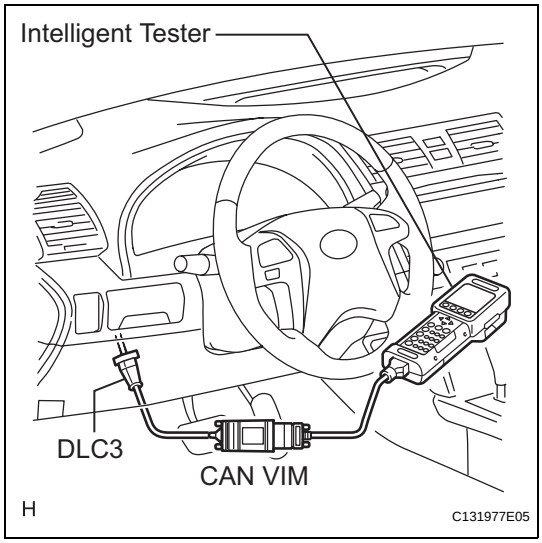
(a) Procedure to enter Test Mode.

(1) Turn the ignition switch off.

(2) Connect the intelligent tester to the DLC3.

(3) Check that the steering wheel is centered and move the shift lever to the P position (Automatic Transaxle) or apply the parking brake (Manual Transaxle).

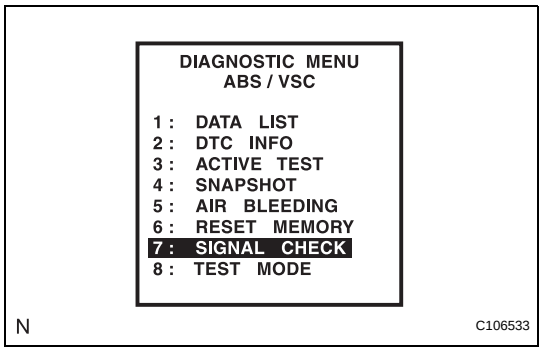
(4) Turn the ignition switch on (IG).

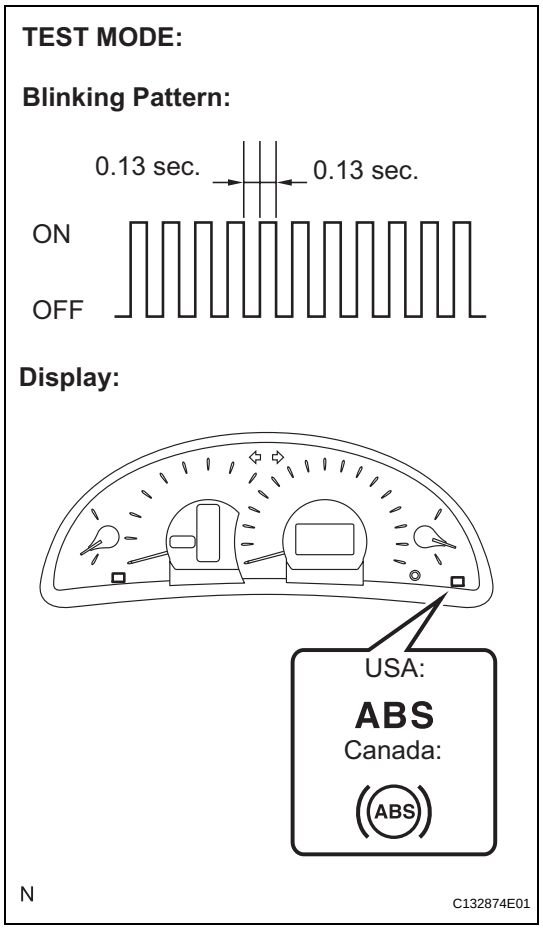


(5) Set the intelligent tester to Test Mode (select "SIGNAL CHECK").

HINT:

Refer to the intelligent tester operator's manual for further details.





(6) Check that the ABS warning light comes on for several seconds and then blinks in Test Mode.
HINT:
If the ABS warning light does not blink, inspect the ABS warning light circuit.

Trouble Area	See procedure
ABS warning light (Does not come on)	BC-404

(b) Check the sensor signal.
(1) Drive the vehicle straight ahead.
Accelerate the vehicle to a speed of 28 mph (45 km/h) or more for several seconds and check that the ABS warning light goes off when the brake pedal is depressed.
HINT:
- The sensor check may not be completed if wheelspin occurs, or if the steering wheel is turned during this check.
- The ABS warning light goes off when the sensor signal check has been completed and the brake pedal is depressed.
- The ABS warning light comes on immediately after a malfunction has been detected during the speed sensor signal check.

(c) Stop the vehicle.
NOTICE:
- **The speed sensor check may not be completed if the speed sensor check is started while turning the steering wheel or spinning the wheels.**
- **If the signal check has not been completed, the ABS warning light will blink while driving and the ABS system will not operate.**

(d) Read the DTC(s) by following the tester screen.
NOTICE:
- **If only the DTCs are displayed, repair the malfunction area and clear the DTCs.**
- **If the DTCs or Test Mode codes (DTC of signal check function) are displayed, repair the malfunction area, clear the DTCs and perform the Test Mode inspection.**

HINT:
See the list of DTCs (See procedure "A").

3. SENSOR SIGNAL CHECK BY TEST MODE (SIGNAL CHECK) (SST CHECK WIRE)

HINT:
If the ignition switch is turned from on (IG) to on (ACC) or off during Test Mode (signal check), DTCs recorded during the signal check will be erased.

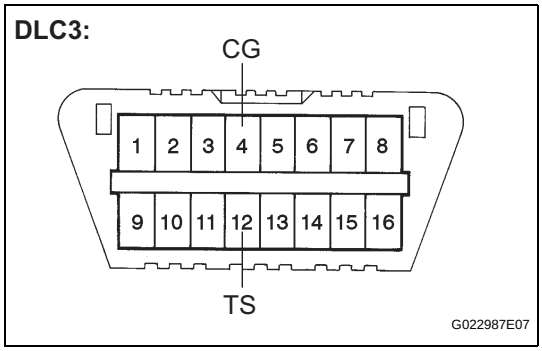
(a) Procedure to enter Test Mode.
(1) Turn the ignition switch off.

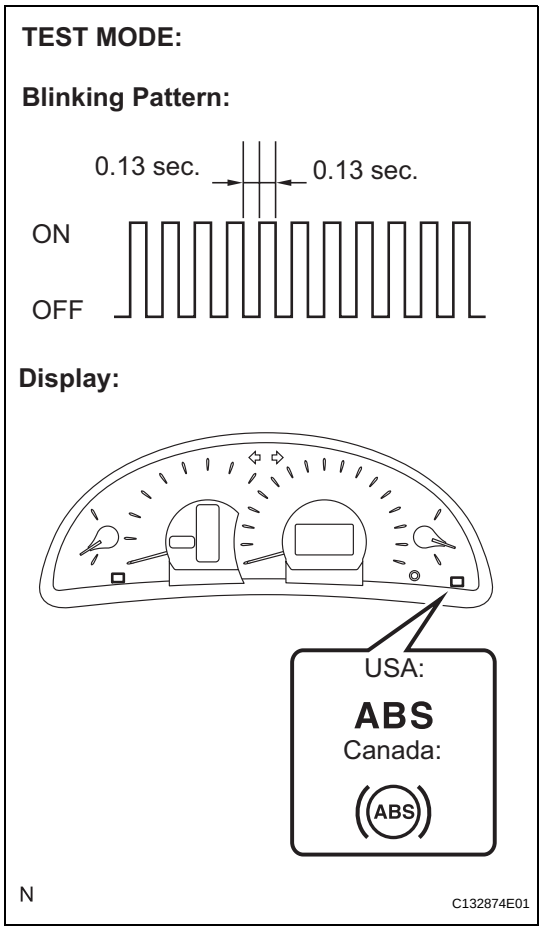
BC

(2) Check that the steering wheel is centered and move the shift lever to the P position (Automatic Transaxle) or apply the parking brake (Manual Transaxle).

(3) Using SST, connect terminals TS and CG of the DLC3.
SST 09843-18040

(4) Turn the ignition switch on (IG).



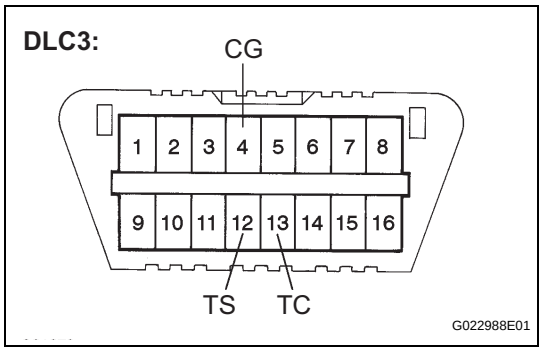


(5) Check that the ABS warning light comes on for several seconds and then blinks in Test Mode.
HINT:
If the ABS warning light does not blink, inspect the TS and CG terminal circuit, and ABS warning light circuit.

Trouble Area	See procedure
TS and CG terminal circuit	BC-421
ABS warning light circuit (Does not come on)	BC-385

(b) Check the sensor signal.
(1) Drive the vehicle straight ahead.
Accelerate the vehicle to a speed of 28 mph (45 km/h) or more for several seconds and check that the ABS warning light goes off when the brake pedal is depressed.
HINT:
- The sensor check may not be completed if wheelspin occurs, or if the steering wheel is turned during this check.
- The ABS warning light goes off when the sensor signal check has been completed and the brake pedal is depressed.
- The ABS warning light comes on immediately after a malfunction has been detected during the speed sensor signal check.

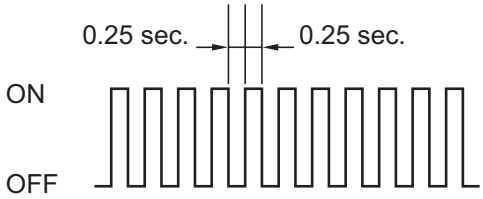
(c) Stop the vehicle.
NOTICE:
- **The speed sensor check may not be completed if the speed sensor check is started while turning the steering wheel or spinning the wheels.**
- **If the signal check has not been completed, the ABS warning light will blink while driving and the ABS system will not operate.**



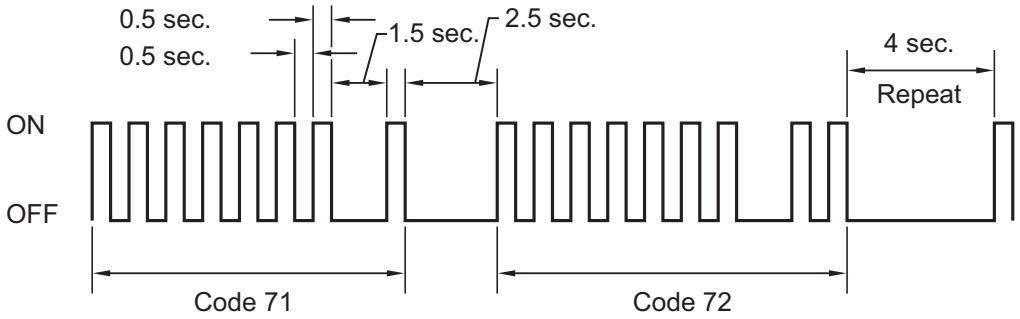
(d) Using SST, connect terminals TC and CG of the DLC3.
SST 09843-18040

(e) Count the number of blinks of the ABS warning light.

Blinking Pattern of Normal System Code:



Blinking Pattern of Trouble Code (Example Codes 71 and 72):



N

C132876E01

NOTICE:

- **If only the DTCs are displayed, repair the malfunction area and clear the DTCs.**
- **If the DTCs or Test Mode codes (DTC of signal check function) are displayed, repair the malfunction area, clear the DTCs and perform the Test Mode inspection.**

HINT:

- If more than 1 malfunction is detected at the same time, the lowest numbered code will be displayed first.
- See the list of DTCs (See procedure "A").

(f) After performing the check, disconnect the SST from terminals TS and CG, and TC and CG of the DLC3, and turn the ignition switch off.

BC

(g) Turn the engine switch on (IG) to cancel the Test Mode.
HINT:
- If the ignition switch is not turned on (IG) after the SST is removed from the DLC3, the previous Test Mode will continue.
- If the ignition switch is turned on (IG) with terminals TS and CG shorted, the previous Test Mode will continue.

4. DTC OF TEST MODE (SIGNAL CHECK) FUNCTION (Procedure "A")

DTC of Test Mode (Signal Check):

Code No.	Diagnosis	Trouble Area
C1271/71	Low output signal of front speed sensor RH	• Front speed sensor RH • Sensor installation • Speed sensor rotor
C1272/72	Low output signal of front speed sensor LH	• Front speed sensor LH • Sensor installation • Speed sensor rotor
C1273/73	Low output signal of rear speed sensor RH	• Rear speed sensor RH • Sensor installation • Speed sensor rotor
C1274/74	Low output signal of rear speed sensor LH	• Rear speed sensor LH • Sensor installation • Speed sensor rotor
C1275/75	Abnormal change in output signal of front speed sensor RH	• Front speed sensor RH • Sensor installation • Sensor rotor
C1276/76	Abnormal change in output signal of front speed sensor LH	• Front speed sensor LH • Sensor installation • Sensor rotor
C1277/77	Abnormal change in output signal of rear speed sensor RH	• Rear speed sensor RH • Sensor installation • Sensor rotor
C1278/78	Abnormal change in output signal of rear speed sensor LH	• Rear speed sensor LH • Sensor installation • Sensor rotor

HINT:
The codes in this table are output only in Test Mode (signal check).

5. ENGINE VARIANT LEARNING
- Engine variant learning is automatically performed immediately after the Test Mode is entered.
- The ABS, VSC, BRAKE, and SLIP indicators come on for 3 seconds after learning.

PROBLEM SYMPTOMS TABLE

If there are no DTCs output but the problem still occurs, check the circuits for each problem symptom in the order given in the table below, and proceed to the relevant troubleshooting page.

NOTICE:

Before replacing the brake actuator assembly, sensor, or other related parts, turn the ignition switch off.

Vehicle stability control system:

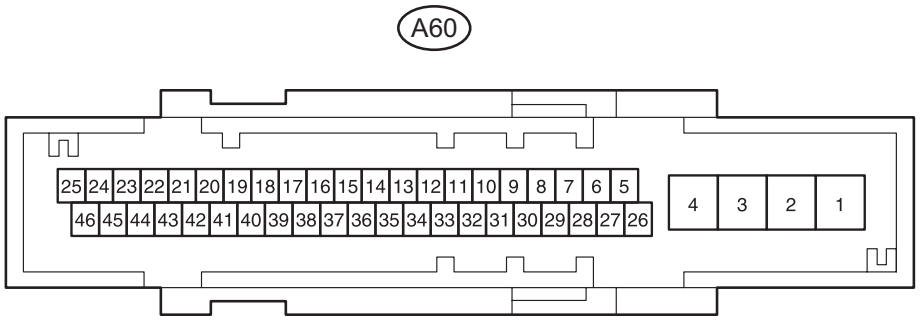
Symptom	Suspected area	See page
ABS, BA and/or EBD does not operate	1. Check for the DTC again and make sure that the normal system code is output.	BC-302
	2. IG power source circuit	BC-361
	3. Front speed sensor circuit	BC-316
	4. Rear speed sensor circuit	BC-324
	5. Check the brake actuator assembly with the intelligent tester (Check brake actuator assembly operation using the active test function). If abnormal, check the hydraulic circuit for leakage.	BC-431
	6. If the symptoms still occur even after the above circuits in suspected areas have been inspected and proved to be normal, replace the brake actuator assembly (skid control ECU).	BC-432
ABS, BA and/or EBD does not operate efficiently	1. Check for the DTC again and make sure that the normal system code is output.	BC-302
	2. Front speed sensor circuit	BC-316
	3. Rear speed sensor circuit	BC-324
	4. Stop light switch circuit	BC-368
	5. Check the brake actuator assembly with the intelligent tester (Check brake actuator assembly operation using the active test function). If abnormal, check the hydraulic circuit for leakage.	BC-431
	6. If the symptoms still occur even after the above circuits in suspected areas have been inspected and proved to be normal, replace the brake actuator assembly (skid control ECU).	BC-432
VSC and/or TRACTION does not operate	1. Check for the DTC again and make sure that the normal system code is output.	BC-302
	2. IG power source circuit	BC-361
	3. Check the hydraulic circuit for leakage.	-
	4. Front speed sensor circuit	BC-316
	5. Rear speed sensor circuit	BC-324
	6. Yaw rate and deceleration sensor circuit	BC-343
	7. Steering angle sensor circuit	BC-350
	8. If the symptoms still occur even after the above circuits in suspected areas have been inspected and proved to be normal, replace the brake actuator assembly (skid control ECU).	BC-432
ABS sensor DTC check cannot be done	1. Check for the DTC again and make sure that the normal system code is output.	BC-302
	2. TC and CG terminal circuit	BC-418
	3. If the symptoms still occur even after the above circuits in suspected areas have been inspected and proved to be normal, replace the brake actuator assembly (skid control ECU).	BC-432

Symptom	Suspected area	See page
VSC sensor DTC check cannot be done	1. Check for the DTC again and make sure that the normal system code is output.	BC-302
	2. TC and CG terminal circuit	BC-418
	3. If the symptoms still occur even after the above circuits in suspected areas have been inspected and proved to be normal, replace the brake actuator assembly (skid control ECU).	BC-432
Sensor signal check cannot be done	1. TS and CG terminal circuit	BC-421
	2. Brake actuator assembly (skid control ECU)	BC-432
ABS warning light abnormal (Remains on)	ABS warning light circuit	BC-380
ABS warning light abnormal (Does not come on)	ABS warning light circuit	BC-385
VSC warning light abnormal (Remains on)	VSC warning light circuit	BC-388
VSC warning light abnormal (Does not come on)	VSC warning light circuit	BC-392
Brake warning light abnormal (Remains on)	Brake warning light circuit	BC-395
Brake warning light abnormal (Does not come on)	Brake warning light circuit	BC-404
SLIP indicator light abnormal (Remains on)	SLIP indicator light circuit	BC-408
SLIP indicator light abnormal (Does not come on)	SLIP indicator light circuit	BC-412
Skid control buzzer abnormal	Skid control buzzer circuit	BC-415

TERMINALS OF ECU

1. TERMINALS OF ECU

Skid Control ECU:



N

C113404E05

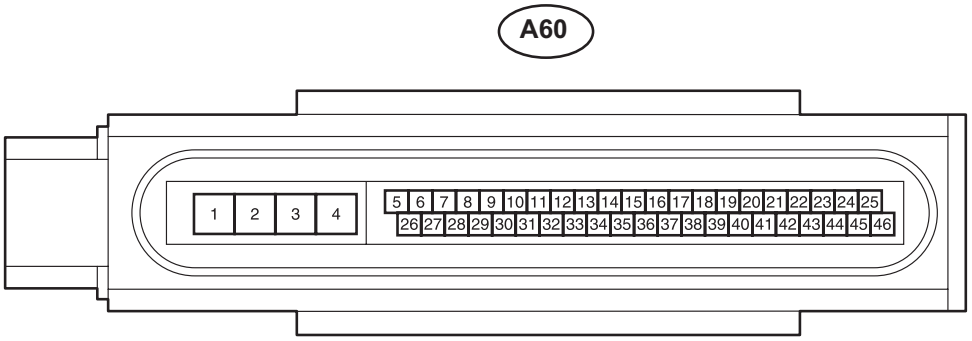
BC

Symbols (Terminal No.)	Terminal Description
GND2 (1)	Skid control ECU ground
+BM (2)	Power supply for motor
+BS (3)	Power supply for solenoid
GND1 (4)	Skid control ECU ground
FL+ (5)	Front left wheel speed sensor input
FL- (6)	Front left wheel speed sensor ground
RL+ (7)	Rear left wheel speed sensor input
RR- (8)	Rear right wheel speed sensor ground
FR- (9)	Front right wheel speed sensor ground
FR+ (10)	Front right wheel speed sensor input
D/G (11)	Diagnosis tester communication line
CANL (14)	CAN communication line L
BZ (23)	Buzzer output
RL- (27)	Rear left wheel speed sensor ground
IG1 (28)	ECU power supply
RR+ (29)	Rear right wheel speed sensor input
STP1 (30)	Stop light switch input
SP1 (33)	Speed signal output
CANH (35)	CAN communication line H
TS (39)	Sensor check switch input

2. TERMINAL INSPECTION

(a) Disconnect the connector and measure the voltage and resistance according to the value(s) in the table below.

Skid Control ECU (Harness Side Connector Front View):



N

C137467E01

BC

HINT:
Voltage cannot be measured with the connector connected to the skid control ECU, as the connector is watertight.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
GND2 (A60-1) - Body ground	W-B - Body ground	Actuator pump motor ground	Always	Below 1 Ω
+BM (A60-2) - Body ground	B - Body ground	Power supply for motor	Always	10 to 14 V
+BS (A60-3) - Body ground	L - Body ground	Power supply for solenoid	Always	10 to 14 V
GND1 (A60-4) - Body ground	W-B - Body ground	Skid control ECU ground	Always	Below 1 Ω
BZ (A60-23) - Body ground	R - Body ground	Buzzer warning light output	Ignition switch on (IG), Buzzer does not sound	6 to 10 V
IG1 (A60-28) - Body ground	P - Body ground	IG1 power supply	Ignition switch on (IG)	10 to 14 V
STP1 (A60-30) - Body ground	P - Body ground	Stop light switch input	Stop light switch ON →OFF (Brake pedal depressed → released)	5 to 14 V → Below 3 V

DIAGNOSIS SYSTEM

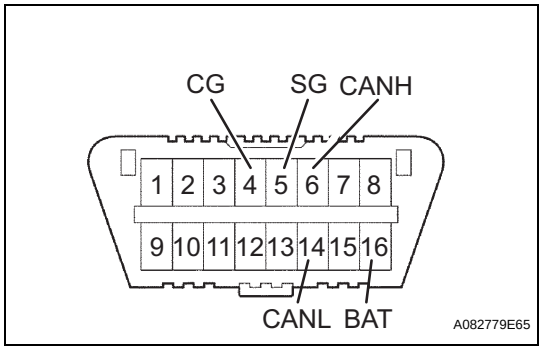
1. DIAGNOSIS SYSTEM

(a) Inspect the battery voltage.

Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge the battery before proceeding.



(b) The vehicle's ECU uses the ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

HINT:

Connect the cable of the intelligent tester to the DLC3, turn the ignition switch on (IG) and attempt to use the intelligent tester. If the screen displays a communication error message, a problem exists on either the vehicle side or the tester side.

If the communication is normal when the tester is connected to another vehicle, inspect the DLC3 on the original vehicle.

If the communication is still impossible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.

BC

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	9 to 14 V
CANH (6) - CANL (14)	HIGH-level CAN bus line	Ignition switch OFF*	54 to 69 Ω
CANH (6) - Battery positive	HIGH-level CAN bus line	Ignition switch OFF*	6 kΩ or higher
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANL (14) - Battery positive	LOW-level CAN bus line	Ignition switch OFF*	6 kΩ or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 Ω or higher

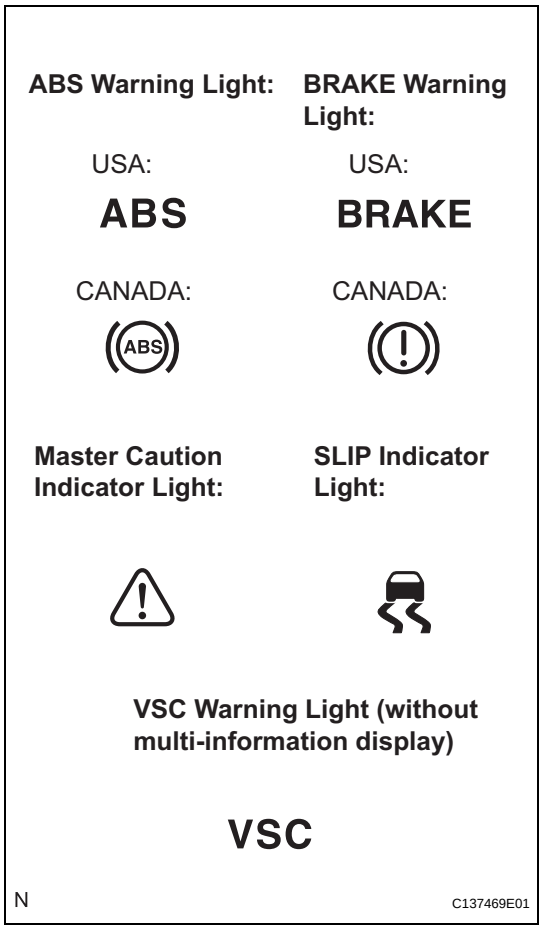
NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**

2. DESCRIPTION

NOTICE:

When releasing the parking brake, set chocks to hold the vehicle for safety.

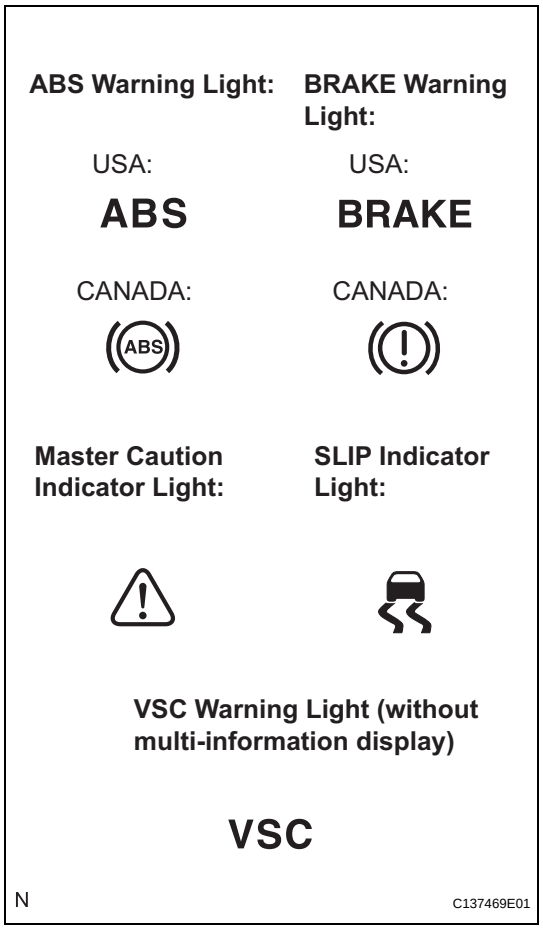


(a) If the skid control ECU detects a malfunction, the ABS, VSC (without multi-information display), and BRAKE warning lights, and master caution and SLIP indicator lights will come on and the multi-information display shows a warning message in order to warn the driver.
The table below indicates which lights will come on when there is a malfunction in a particular function.

Item/Trouble Area	ABS	EBD	BA	TRAC	VSC
ABS Warning Light	O	O	O	-	-
BRAKE Warning Light	-	O	-	-	-
VSC Warning Light (without multi-information display)	O	O	O	O	O
SLIP Indicator Light	O	O	O	O	O

O: Light ON
-: Light OFF

- The DTCs are simultaneously stored in the memory. The DTCs can be read by connecting the SST between terminals TC and CG of the DLC3 and observing the blinking pattern of the ABS warning light by connecting the intelligent tester (See page BC-302).
- This system has a signal check function (TEST MODE) (See page BC-290).
  The DTC can be read by connecting the intelligent tester and observing the blinking pattern of the ABS warning.



3. WARNING LIGHT AND INDICATOR LIGHT INITIAL CHECK

(a) Release the parking brake.

NOTICE:

Before releasing the parking brake, move the shift lever to the P position for safety (Automatic Transaxle model) or set the chocks to hold the vehicle for safety (Manual Transaxle model).

HINT:

When the parking brake is applied or the level of the brake fluid is low, the BRAKE warning light comes on.

(b) When the ignition switch is turned on (IG), check that the ABS, VSC (without multi-information display), and BRAKE warning lights, and master caution and SLIP indicator lights come on for approximately 3 seconds.

HINT:

If the ECU stores any DTCs, the ABS, BRAKE, and VSC warning (multi-information display and master caution indicator light) lights, and SLIP indicator light come on.

If the indicator remains on or does not come on, proceed to troubleshooting for the light circuits listed below.

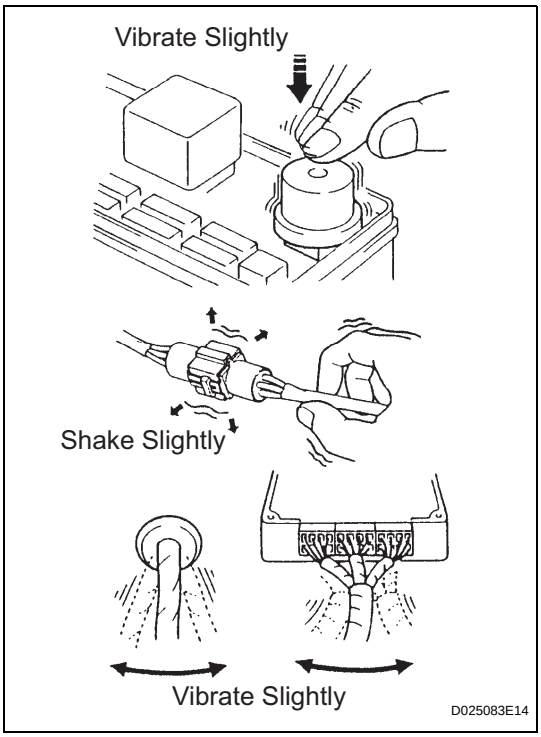
BC

Trouble Area	See procedure
ABS warning light (Remains on)	BC-380
ABS warning light (Does not come on)	BC-385
BRAKE warning light (Remains on)	BC-395
BRAKE warning light (Does not come on)	BC-404
VSC warning light (Remains on)	BC-388
VSC warning light (Does not come on)	BC-392
SLIP indicator light (Remains on)	BC-408
SLIP indicator light (Does not come on)	BC-412

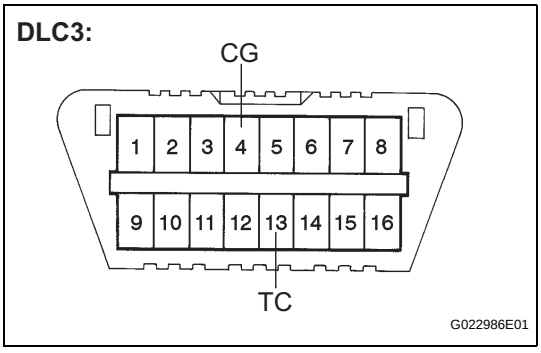
4. SYMPTOM SIMULATION

HINT:

The most difficult case in troubleshooting is when no symptoms occur. In such cases, a thorough customer problem analysis must be carried out. Then the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be reproduced. No matter how experienced or skilled a technician may be, if he proceeds to troubleshoot without confirming the problem symptoms, he will likely overlook something important and make a wrong guess at some points in the repair operation. This leads to a standstill in troubleshooting.



(a) Vibration method: When vibration seems to be the major cause.
HINT:
Perform the simulation method only during the primary check period (for approximately 6 seconds after the ignition switch is turned on (IG)).
(1) Slightly vibrate the part of the sensor considered to be the problem cause with your fingers and check whether the malfunction occurs.
(2) Slightly shake the connector vertically and horizontally.
HINT:
Shaking the relays too strongly may result in open relays.
(3) Slightly shake the wire harness vertically and horizontally. The connector joint and fulcrum of the vibration are the major areas to be checked thoroughly.

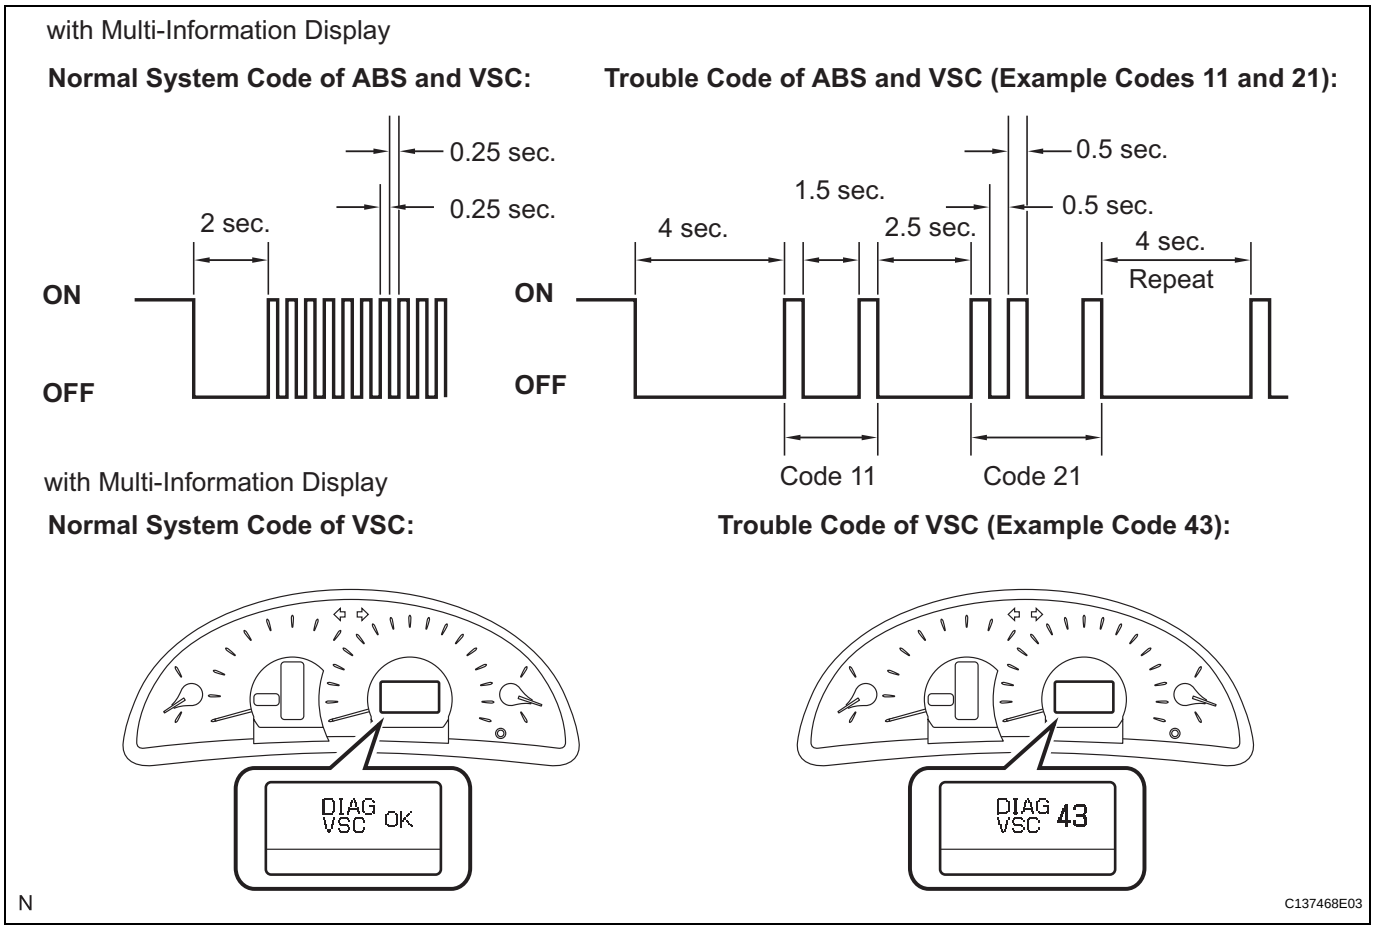


DTC CHECK / CLEAR

1. DTC CHECK/CLEAR (WHEN USING SST CHECK WIRE:)

(a) DTC check
(1) Using SST, connect terminals TC and CG of the DLC3.
SST 09843-18040
(2) Turn the ignition switch on (IG).

(3) Observe the blinking pattern of the ABS and VSC (without multi-information display) warning lights or read the multi information display (with multi-information display) in order to identify the DTC.



HINT:
If no code appears, inspect the TC and CG terminal circuit, the ABS warning light circuit, and the VSC warning light circuit.

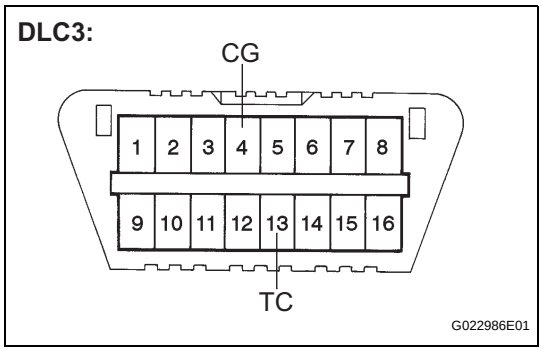
Trouble Area	See procedure
ABS warning light (Remains on)	BC-380
ABS warning light (Does not come on)	BC-385
VSC warning light (Remains on)	BC-388
VSC warning light (Does not come on)	BC-392
TC and CG Terminal Circuit	BC-418

- As an example, the blinking patterns for a normal system code and trouble codes 11 and 21 are shown in the illustration.

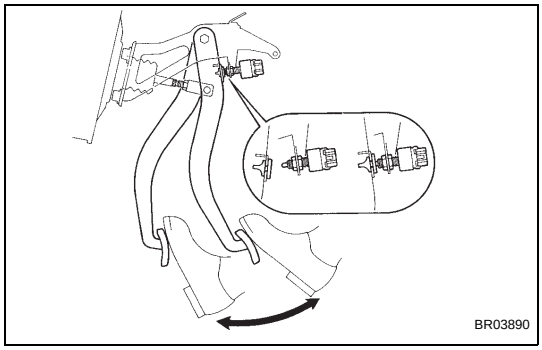
(4) Codes are explained in the code table (See page BC-311).

(5) After completing the check, disconnect terminals TC and CG of the DLC3, and turn off the display. If 2 or more DTCs are detected at the same time, the DTCs will be displayed in ascending order.

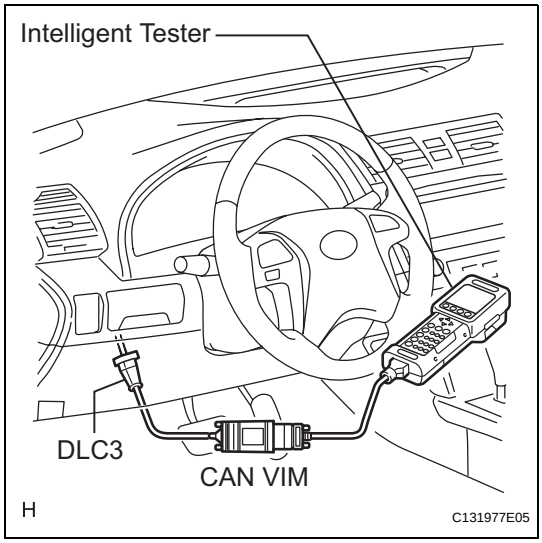
BC



(b) DTC clear
(1) Using SST, connect terminals TC and CG of the DLC3.
SST 09843-18040
(2) Turn the ignition switch on (IG).



(3) Clear the DTCs stored in the ECU by depressing the brake pedal 8 times or more within 5 seconds.
(4) Check that the warning light indicates a normal system code.
(5) Remove the SST.
HINT:
Clearing the DTCs cannot be performed by disconnecting the battery terminal or the ECU-IG fuse.



2. DTC CHECK/CLEAR (WHEN USING INTELLIGENT TESTER:)
(a) DTC check
(1) Connect the intelligent tester to the DLC3.
(2) Turn the ignition switch on (IG).
(3) Read the DTCs by following the prompts on the tester screen.
(b) DTC clear
(1) Connect the intelligent tester to the DLC3.
(2) Turn the ignition switch on (IG).
(3) Operate the intelligent tester to clear the codes.
HINT:
Refer to the intelligent tester operator's manual for further details.

3. END OF DTC CHECK/CLEAR
(a) Turn the ignition switch on (IG).
(b) Check that the ABS warning light goes off within approximately 3 seconds.

FREEZE FRAME DATA

1. FREEZE FRAME DATA

(a) Whenever an ABS DTC is detected, the skid control ECU stores the current vehicle (sensor) state as Freeze Frame Data.
The skid control ECU stores the number of times (maximum: 31) the ignition switch has been turned from off to on (IG) since the last time the ABS was activated.
HINT:
- However, if the vehicle is stopped or at a low speed (4.3 mph (7 km/h) or less), or if a DTC is detected, the skid control ECU will stop counting the number.
- Freeze Frame Data at the time the ABS operates:
  The skid control ECU stores and updates data whenever the ABS system operates.
  When the ECU stores data at the time a DTC is detected, the data stored during ABS operation is erased.
- Freeze Frame Data at the time a DTC is detected:
  When the skid control ECU stores data at the time a DTC is detected, no updates will be performed until the data is cleared.

(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch on (IG).
(d) Select the "DTC INFO" on the tester display.
(e) On the DTC data display screen, select the DTC data display with "*".

Item (Display)	Measurement Item	Reference Value
VEHICLE SPD	Vehicle speed reading	Min.: 0 mph (0 km/h), Max.: 202 mph (326.4 km/h)
STOP LAMP SW	Stop light switch signal	Stop light switch ON: ON, OFF: OFF
#IG ON	Number of operations of engine switch on (IG) after storing freeze frame data	0 to 31
MAS CYL PRESS 1	Master cylinder pressure sensor reading	Brake pedal released: 0.3 to 0.5 V
M/C PRESS GRADE	Master cylinder pressure sensor change	Min.: -30 MPa/s, Max.: 225 MPa/s
YAW RATE	Yaw rate sensor reading	Min.: -128 deg/s, Max.: 127 deg/s
STEERING SEN	Steering angle sensor reading	Left turn: Increase Right turn: Decrease
SPD GRADE	Vehicle speed grade	Min.: -25.11 m/s^2, Max.: 24.91 m/s^2
BUZZER	Skid control buzzer signal	Skid control buzzer ON: ON, OFF: OFF
PARKING BRAKE SW	Parking brake switch signal	Parking brake switch ON: ON, OFF: OFF
ENGINE TORQUE	Real engine torque	Min.: -1024 Nm, Max.: 1023 Nm
FR WHEEL SPD	FR wheel speed	Min.: 0 mph (0 km/h), Max.: 202 mph (326.4 km/h)
FL WHEEL SPD	FL wheel speed	Min.: 0 mph (0 km/h), Max.: 202 mph (326.4 km/h)
RR WHEEL SPD	RR wheel speed	Min.: 0 mph (0 km/h), Max.: 202 mph (326.4 km/h)
RL WHEEL SPD	RL wheel speed	Min.: 0 mph (0 km/h), Max.: 202 mph (326.4 km/h)

Item (Display)	Measurement Item	Reference Value
LATERAL G	Lateral G	Min.: -25.11 m/s^2, Max.: 24.91 m/s^2
GEAR POSITION *	Gear position information	FAIL 1st 2nd 3rd 4th 5th 6th P, N R NOT R
LEVER POSITION *	Shift lever position information	FAIL 1st 2nd 3rd 4th 5th 6th/B D/M P, N R
OPERATED SYSTEM	Operated system status	ABS activated: ABS VSC activated: VSC TRAC activated: TRAC BA activated: BA PB activated: PB Fail safe mode activated: FAIL No system activated: NON System prohibited: SYS
FREEZE TIME	Elapsed time after freeze trigger	Min.: 0 ms, Max.: 500 ms
TROUBLE CODE	Freeze frame DTC	Displays to output DTC
INSPECTION MODE	Inspection mode	OTHER: Normal, INSPECT: Service

*: Automatic Transaxle

FAIL-SAFE CHART

1. FAIL SAFE OPERATION

(a) If there is a problem with sensor signals or actuator systems, the skid control ECU prohibits power supply to the brake actuator assembly and informs the ECM of the VSC system failure.

(b) The brake actuator assembly turns off each solenoid and the ECM shuts off the VSC control (traction control signal) from the skid control ECU accordingly, which turns out to be as if the vehicle stability control system was not installed.

(c) ABS, VSC, and TRAC control will be prohibited, but EBD control continues as much as possible. If EBD control is impossible, the brake warning light comes on to warn the driver (See page BC-298).

Malfunction	Symptom
ABS system	Prohibits the ABS, BA, TRAC, and VSC control
BA system	Prohibits the ABS, BA, TRAC, and VSC control
EBD system	Prohibits the ABS, EBD, BA, TRAC, and VSC control
TRAC system	Prohibits the TRAC and VSC control
VSC system	Prohibits the TRAC and VSC control

HINT:

- A malfunction in either the ABS or BA system results in an identical operation, with ABS, BA, TRAC, and VSC system control prohibited.
- If control is prohibited due to a malfunction during operation, control will be disabled gradually to prevent the vehicle from becoming unstable suddenly.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

With the intelligent tester connected to the DLC3 and the ignition switch on (IG), the ABS, TRAC and VSC Data List can be displayed. Follow the prompts on the tester screen to access the Data List.

Item (Display)	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
MTR RELAY	ABS motor relay / ON or OFF	ON: Motor relay ON OFF: Motor relay OFF	-
SOL RELAY	Solenoid relay / ON or OFF	ON: Solenoid relay ON OFF: Solenoid relay OFF	-
IDLE SW	Main idle switch / ON or OFF	ON: Accelerator pedal released OFF: Accelerator pedal depressed	-
STOP LAMP SW	Stop light switch / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
PARKING BRAKE SW	Parking brake switch / ON or OFF	ON: Parking brake applied OFF: Parking brake released	-
ENG REVOLUTIONS	Engine revolutions / min.: 0 r/min, max.: 65,535 r/min	-	-

2. ACTIVE TEST

HINT:

Performing the Active Test using the intelligent tester allows the relay, actuator, and other items to operate without removing any parts. Performing the Active Test as the first step in troubleshooting is one of the methods to save labor time.

It is possible to display the Data List during the Active Test.

(a) Connect the intelligent tester to the DLC3.

(b) Turn the ignition switch on (IG).

(c) From the display on the tester, select the Active Test.

HINT:

The ignition switch must be turned on (IG) to proceed to the Active Test using the intelligent tester.

Item (Display)	Vehicle Condition / Test Details	Diagnostic Note
SFRR	Turns ABS solenoid (SFRR) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SFRH	Turns ABS solenoid (SFRH) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SFLR	Turns ABS solenoid (SFLR) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SFLH	Turns ABS solenoid (SFLH) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SRRR	Turns ABS solenoid (SRRR) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SRRH	Turns ABS solenoid (SRRH) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SRLR	Turns ABS solenoid (SRLR) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SRLH	Turns ABS solenoid (SRLH) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SRM2	Turns master cut solenoid (SRM2) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SRM1	Turns master cut solenoid (SRM1) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SRC2	Turns master cut solenoid (SRC2) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SRC1	Turns master cut solenoid (SRC1) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
MOTOR RELAY	Turns ABS motor relay ON / OFF	Operating sound of relay (clicking sound) and motor can be heard
ABS WARN LAMP	Turns ABS warning light ON / OFF	Observe combination meter
VSC WARN LAMP	Turns VSC warning (master caution indicator) light ON / OFF	Observe combination meter
SLIP INDI LAMP	Turns SLIP indicator light ON / OFF	Observe combination meter
BRAKE WARN LAMP	Turns BRAKE warning light ON / OFF	Observe combination meter
BUZZER	Turns skid control buzzer ON / OFF	Buzzer can be heard

DIAGNOSTIC TROUBLE CODE CHART

- If a trouble code is displayed during the DTC check, check the circuit indicated by the DTC. For details of each code, refer to the page for the respective "DTC No." in the DTC chart.
- Inspect the fuse and relay before investigating the trouble areas as shown in the table below.

DTC chart of ABS:

DTC No.	Detection Item	Trouble Area	See page
C0200/31	Right Front Wheel Speed Sensor Signal Malfunction	1. Front speed sensor RH 2. Front speed sensor circuit RH 3. Front speed sensor rotor RH 4. Sensor installation 5. Brake actuator assembly (skid control ECU)	BC-316
C0205/32	Left Front Wheel Speed Sensor Signal Malfunction	1. Front speed sensor LH 2. Front speed sensor circuit LH 3. Front speed sensor rotor LH 4. Sensor installation 5. Brake actuator assembly (skid control ECU)	BC-316
C0210/33	Right Rear Wheel Speed Sensor Signal Malfunction	1. Rear speed sensor RH 2. Rear speed sensor circuit RH 3. Rear speed sensor rotor RH 4. Sensor installation 5. Brake actuator assembly (skid control ECU)	BC-324

U0073/94	Control Module Communication Bus OFF	CAN communication system	BC-377

(*1, *2):
Even after the trouble areas are repaired, the ABS warning light will not go off unless the following operations are performed:

- (*1):
  (a) Drive the vehicle at 12 mph (20 km/h) for 30 seconds or more and check that the ABS warning light goes off.
  (b) Clear the DTC.
- (*2):
  (a) Keep the vehicle stationary for 5 seconds or more and depress the brake pedal lightly 2 or 3 times.
  (b) Drive the vehicle at the vehicle speed of 31 mph (50 km/h) and keep depressing the brake pedal strongly for approximately 3 seconds.
  (c) Repeat the above operation 3 times or more and check that the ABS warning light goes off.
  (d) Clear the DTC.

HINT:
In some cases, the intelligent tester cannot be used when the ABS warning light remains on.

DTC	43	ABS Control System Malfunction

DESCRIPTION

This DTC is output when the VSC system detects a malfunction in the ABS control system.

DTC No.	DTC Detection Condition	Trouble Area
43	Malfunction in the ABS control system	ABS control system

INSPECTION PROCEDURE

1	CHECK ABS CONTROL SYSTEM

(a) Clear the DTC (See page BC-302).
(b) Turn the ignition switch on (IG).
(c) Check if the same DTC is recorded (See page BC-302).

Result

Condition	Proceed to
DTC (ABS control system DTC) is not output	A
DTC (ABS control system DTC) is output	B

B → **REPAIR CIRCUITS INDICATED BY OUTPUT DTCS (BRAKE CONTROL SYSTEM) (See page BC-311)**

A

2	CONFIRM DTC

(a) Clear the DTC (See page BC-302).
(b) Turn the ignition switch on (IG).
(c) Check if the same DTC is recorded (See page BC-302).

Result

Condition	Proceed to
DTC (43) is not output	A
DTC (43) is output	B

B → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

A

END

DTC	**C0200/31**	**Right Front Wheel Speed Sensor Signal Malfunction**

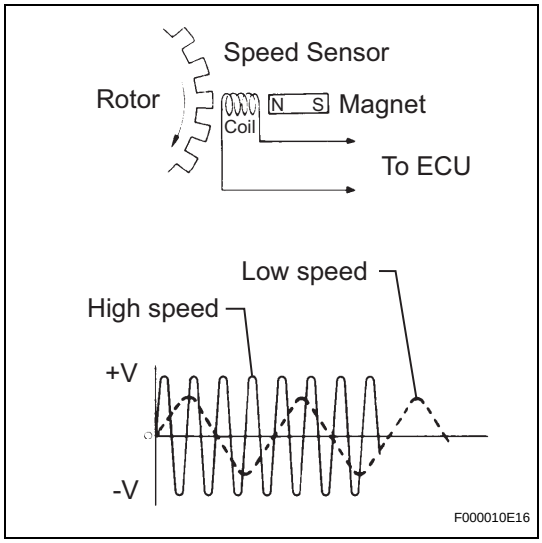
DTC	**C1331/36**	**Left Front Speed Sensor Circuit**

BC

DESCRIPTION

The speed sensors detects wheel speed and transmit the signals to the skid control ECU. These signals are used for control of the ABS control system. Each of the front and rear rotors has 48 serrations. When the rotors rotate, the magnetic field generated by the permanent magnet in the speed sensor induces AC voltage. Since the frequency of this AC voltage changes in direct proportion to the speed of the rotor, the frequency is used by the ECU to detect the speed of each wheel.

DTCs C1271/71 to C1276/76 can be deleted when the speed sensor sends a wheel speed signal or the test mode ends. DTCs C1271/71 to C1276/76 are output only in the test mode.

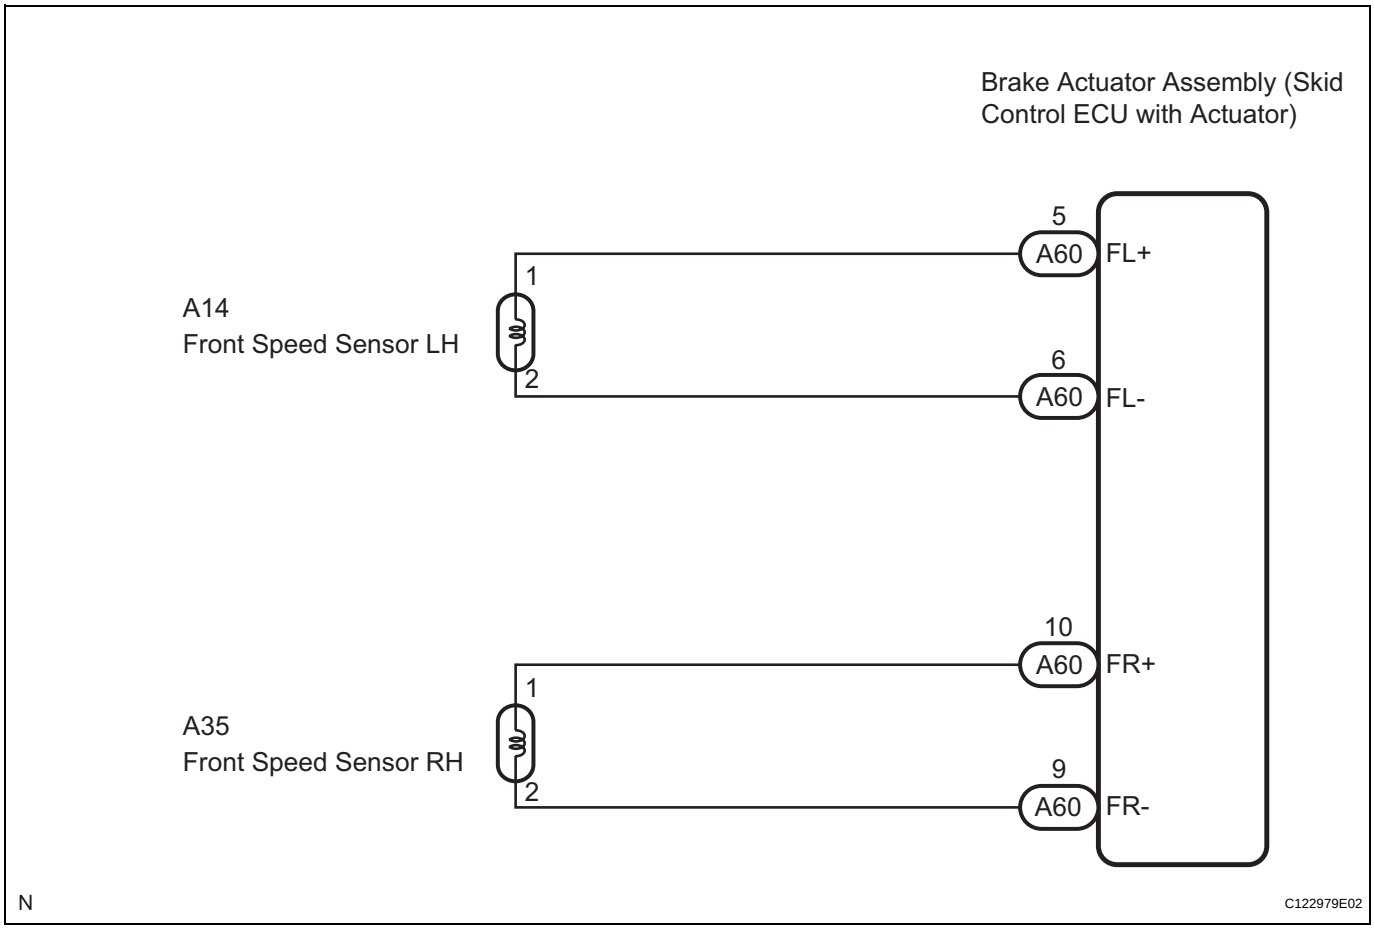


DTC No.	DTC Detecting Condition	Trouble Area
C0200/31 C0205/32	When either of the following is detected: • Vehicle speed is more than 25 mph (40 km/h), and pulses are not input for 0.03 sec. • When the vehicle speed has reached 8 mph (12 km/h) after the initial start or restart, a wheel speed of 0 mph (0 km/h) is detected.	• Front speed sensor RH and/or LH • Front speed sensor circuit RH and/or LH • Front speed sensor rotor RH and/or LH • Sensor installation • Brake actuator assembly (skid control ECU)
C1330/35 C1331/36	Abnormality in the resistance value of each speed sensor is detected.	• Front speed sensor RH and/or LH • Front speed sensor circuit RH and/or LH • Sensor installation
C1271/71 C1272/72	Detected only during test mode.	• Front speed sensor • Sensor installation • Sensor rotor
C1275/75 C1276/76	Detected only during test mode.	• Front speed sensor • Sensor installation • Sensor rotor

HINT:
DTC No. C0200/31 and C1330/35 are for the front speed sensor RH.
DTC No. C0205/32 and C1331/36 are for the front speed sensor LH.

BC

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	READ VALUE OF INTELLIGENT TESTER (FRONT SPEED SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Select "DATA LIST" and read the value displayed on the intelligent tester (See page BC-307).

DATA LIST: ABS/TRAC/VSC

Item	Measurement Item / Range (Display)	Normal Condition
FR WHEEL SPD	Wheel speed sensor (FR) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed
FL WHEEL SPD	Wheel speed sensor (FL) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed

(d) Check that there is no difference between the speed value output from the speed sensor displayed on the intelligent tester and the speed value displayed on the speedometer when driving the vehicle.

OK:

The speed value output from the speed sensor displayed on the intelligent tester is the same as the actual vehicle speed.

NG → **Go to step 5**

OK

2	PERFORM TEST MODE INSPECTION (SIGNAL CHECK)

(a) Check if test mode (signal check) DTCs are detected (See page BC-290).

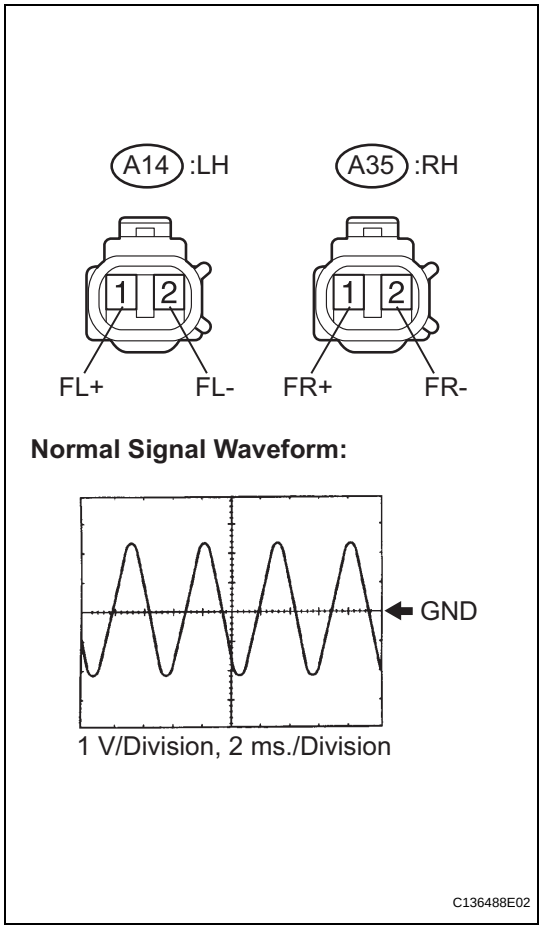
Result

Condition	Proceed to
Test mode (signal check) DTC is not output	A
Test mode (signal check) DTC is output	B

B → **Go to step 5**

A

3 INSPECT SPEED SENSOR SIGNAL WAVEFORM



(a) Lift up the vehicle.
(b) Perform the inspection using an oscilloscope.
  (1) Disconnect the front speed sensor connector.
  (2) Connect the oscilloscope to terminals 1 and 2 of the front speed sensor.
  (3) Check that a waveform is output when the tires are rotated.
  OK:
  The same waveform is output from front wheels and there is no noise or interference in the waveform.
  HINT:
  - As vehicle speed (wheel rotation speed) increases, the width of the waveform narrows and the output voltage becomes greater.
  - When noise is identified in the waveform on the oscilloscope, the erratic signals are generated due to rotor scratches, looseness or foreign matter attached to the speed sensor.
  (4) Connect the connector.

NG	Go to step 11

OK

4 RECONFIRM DTC

(a) Clear the DTCs (See page BC-302).
(b) Drive the vehicle at a speed of approximately 25 mph (40 km/h) or more for 60 seconds or more.
(c) Check if the same DTCs are recorded (See page BC-302).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTCs (C0200/31, C0205/32, C1330/35 and C1331/36) are output	A
DTCs (C0200/31, C0205/32, C1330/35 and C1331/36) are output (When troubleshooting in accordance with the PROBLEM SYMPTOMS TABLE)	B
DTCs (C0200/31, C0205/32, C1330/35 and C1331/36) are not output (When troubleshooting in accordance with the DTC CHART)	C

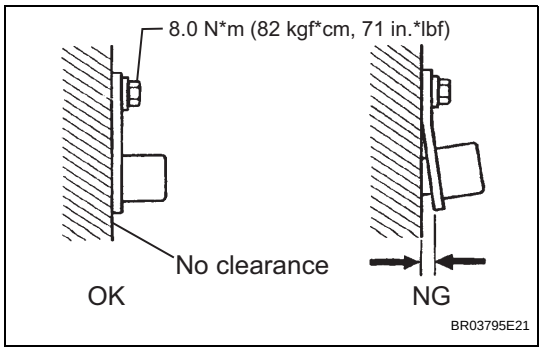
BC

B → PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page BC-295)

C → END

A

5 INSPECT FRONT SPEED SENSOR INSTALLATION



(a) Check the front speed sensor installation.

OK:

The installation bolt is tightened properly.
There is no clearance between the sensor and front steering knuckle.

Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

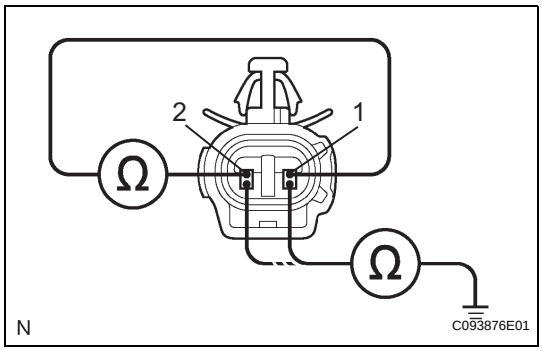
NOTICE:

Check the speed sensor signal after replacement (See page BC-290).

NG → **INSTALL FRONT SPEED SENSOR CORRECTLY (See page BC-440)**

OK

6 INSPECT FRONT SPEED SENSOR



(a) Make sure that there is no looseness at the locking part and the connecting part of the connectors.

(b) Disconnect the front speed sensor connectors.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance:

LH

Tester Connection	Specified Condition
A14-1 (FL+) - A14-2 (FL-)	0.92 to 1.22 kΩ at 20°C
A14-1 (FL+) - Body ground	10 kΩ or higher
A14-2 (FL-) - Body ground	10 kΩ or higher

RH

Tester Connection	Specified Condition
A35-1 (FR+) - A35-2 (FR-)	0.92 to 1.22 kΩ at 20°C
A35-1 (FR+) - Body ground	10 kΩ or higher
A35-2 (FR-) - Body ground	10 kΩ or higher

NOTICE:

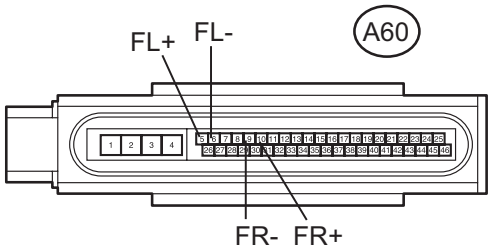
Check the speed sensor signal after replacement (See page BC-290).

NG → **REPLACE FRONT SPEED SENSOR (See page BC-438)**

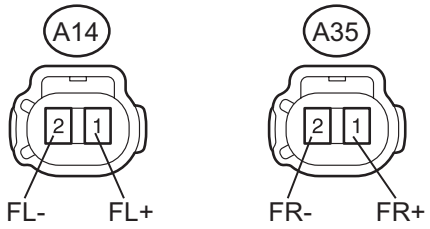
OK

7	CHECK HARNESS AND CONNECTOR (FRONT SPEED SENSOR TO SKID CONTROL ECU)

Skid Control ECU (Harness Side Connector Front View):



Front Speed Sensor (Harness Side Connecotor Front View):



N

C139143E01

(a) Disconnect the skid control ECU connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

LH

Tester Connection	Specified Condition
A60-5 (FL+) - A14-1 (FL+)	Below 1 Ω
A60-6 (FL-) - A14-2 (FL-)	Below 1 Ω
A60-5 (FL+) - Body ground	10 kΩ or higher
A60-6 (FL-) - Body ground	10 kΩ or higher

RH

Tester Connection	Specified Condition
A60-10 (FR+) - A35-1 (FR+)	Below 1 Ω
A60-9 (FR-) - A35-2 (FR-)	Below 1 Ω
A60-10 (FR+) - Body ground	10 kΩ or higher
A60-9 (FR-) - Body ground	10 kΩ or higher

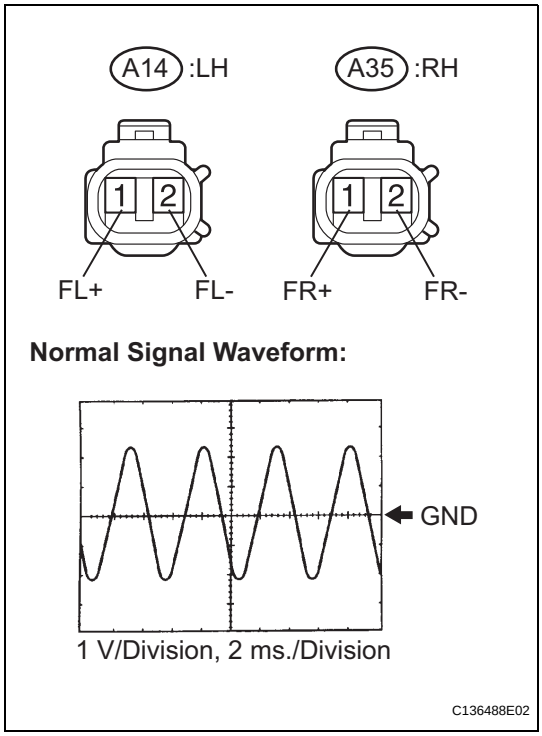
(c) Connect the connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (FRONT SPEED SENSOR TO SKID CONTROL ECU)**

OK

BC

8	INSPECT SPEED SENSOR SIGNAL WAVEFORM



(a) Lift up the vehicle.
(b) Perform the inspection using an oscilloscope.
  (1) Disconnect the front speed sensor connector.
  (2) Connect the oscilloscope to terminals 1 and 2 of the front speed sensor.
  (3) Check that a waveform is output when the tires are rotated.
    OK:
    The same waveform is output from all the 4 wheels and there is no noise or interference in the waveform.
    HINT:
    - As vehicle speed (wheel rotation speed) increases, the width of the waveform narrows and the output voltage becomes greater.
    - When noise is identified in the waveform on the oscilloscope, the erratic signals are generated due to rotor scratches, looseness or foreign matter attached to the speed sensor.
  (4) Connect the connector.

NG → **Go to step 11**

OK

9	READ VALUE OF INTELLIGENT TESTER (FRONT SPEED SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Select "DATA LIST" and read the value displayed on the intelligent tester (See page BC-307).

DATA LIST: ABS/TRAC/VSC

Item	Measurement Item / Range (Display)	Normal Condition
FR WHEEL SPD	Wheel speed sensor (FR) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed
FL WHEEL SPD	Wheel speed sensor (FL) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed

(d) Check that there is no difference between the speed value output from the speed sensor displayed on the intelligent tester and the speed value displayed on the speedometer when driving the vehicle.
OK:
The speed value output from the speed sensor displayed on the intelligent tester is the same as the actual vehicle speed.
HINT:
If troubleshooting has been carried out according to the "PROBLEM SYMPTOMS TABLE", refer back to the table and proceed to the next step before replacing the part (See page BC-295).

NG → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

OK

10 RECONFIRM DTC

(a) Clear the DTCs (See page BC-302).
(b) Drive the vehicle at a speed of approximately 25 mph (40 km/h) or more for 60 seconds or more.
(c) Check if the same DTCs are recorded (See page BC-302).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTCs (C0200/31, C0205/32, C1330/35 and C1331/36) are output	A
DTCs (C0200/31, C0205/32, C1330/35 and C1331/36) are output (When troubleshooting in accordance with the PROBLEM SYMPTOMS TABLE)	B
DTCs (C0200/31, C0205/32, C1330/35 and C1331/36) are not output (When troubleshooting in accordance with the DTC CHART)	C

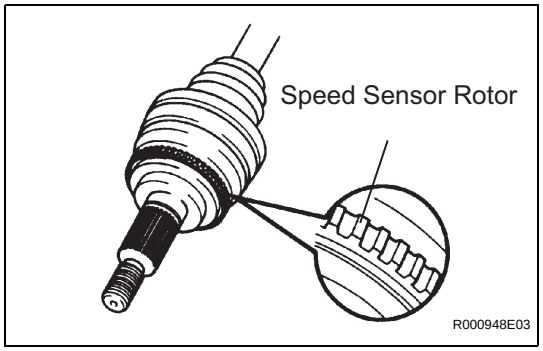
BC

B → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page BC-295)**

C → **END**

A

11 INSPECT SPEED SENSOR TIP



(a) Remove the front speed sensor.
(b) Check the sensor tip.
OK:
No scratches or foreign matter on the sensor tip.
NOTICE:
Check the speed sensor signal after cleaning or replacement (See page BC-290).
(c) Install the speed sensor.

NG → **CLEAN OR REPLACE SPEED SENSOR**

OK

CLEAN OR REPLACE SPEED SENSOR ROTOR

DTC	**C0210/33**	**Right Rear Wheel Speed Sensor Signal Malfunction**
DTC	**C0215/34**	**Left Rear Wheel Speed Sensor Signal Malfunction**
DTC	**C1273/73**	**Low Output Signal of Rear Speed Sensor RH (Test Mode DTC)**
DTC	**C1274/74**	**Low Output Signal of Rear Speed Sensor LH (Test Mode DTC)**
DTC	**C1277/77**	**Abnormal Change in Output Signal of Rear Speed Sensor RH (Test Mode DTC)**
DTC	**C1278/78**	**Abnormal Change in Output Signal of Rear Speed Sensor LH (Test Mode DTC)**
DTC	**C1332/38**	**Right Rear Speed Sensor Circuit**
DTC	**C1333/39**	**Left Rear Speed Sensor Circuit**

BC

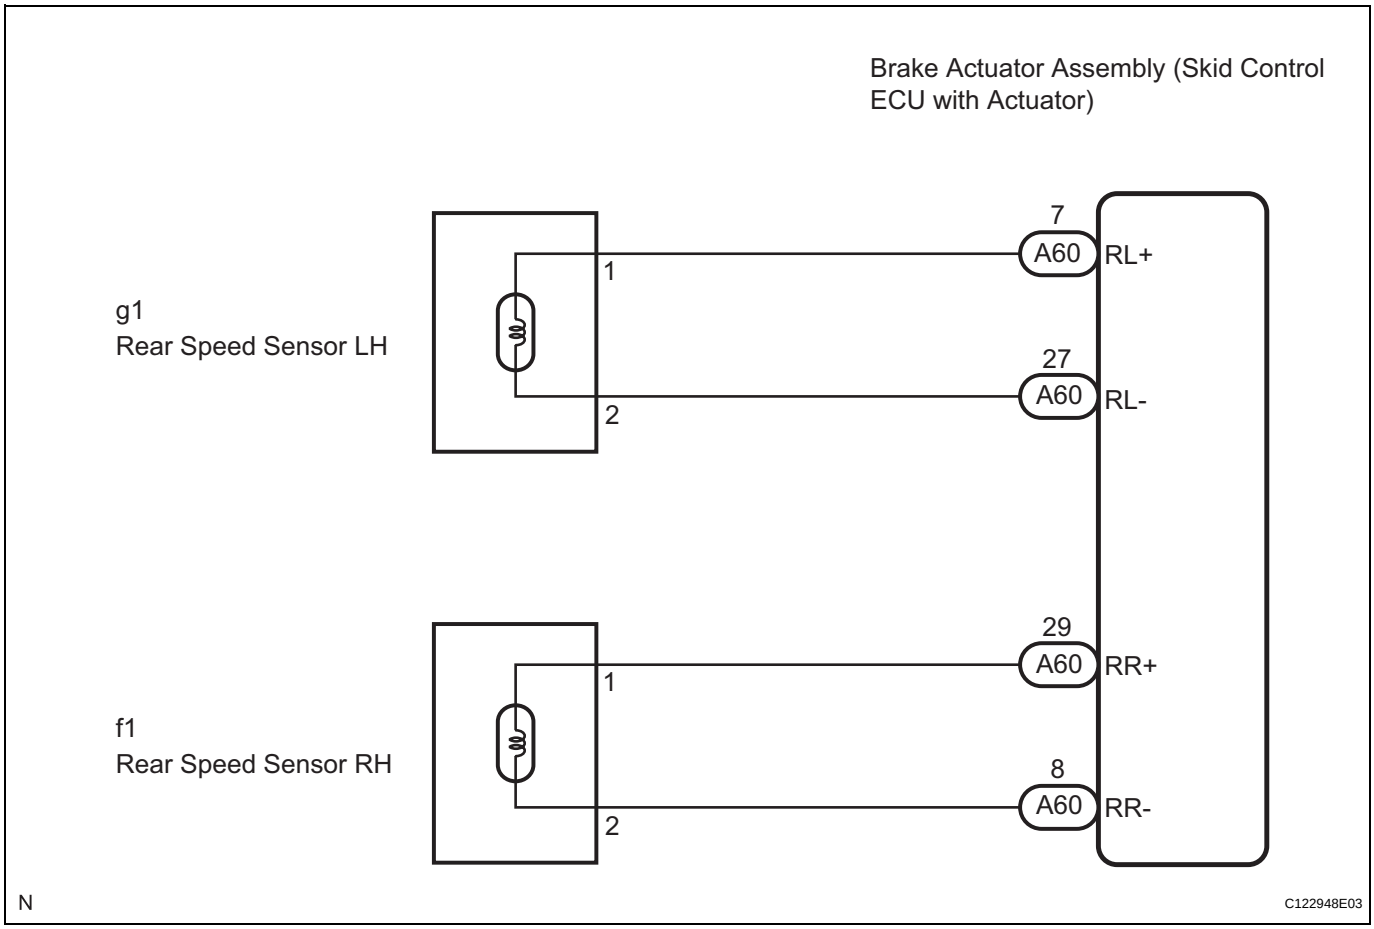
DESCRIPTION

Refer to DTCs C0200/31, C0205/32, C1330/35, and C1331/36 (See page BC-316).
DTCs from C1273/73 to C1278/78 can be deleted when the speed sensor sends a vehicle speed signal or the test mode ends. DTCs from C1273/73 to C1278/78 are output only in the test mode.

DTC No.	DTC Detecting Condition	Trouble Area
C0210/33 C0215/34	When either of the following is detected: • Vehicle speed is more than 25 mph (40 km/h) and pulses are not input for 0.03 sec. • When the vehicle speed has reached 8 mph (12 km/h), after the initial start or restart, a wheel speed of 0 mph (0 km/h) is detected.	• Rear speed sensor RH and/or LH • Rear speed sensor circuit RH and/or LH • Rear speed sensor rotor RH and/or LH • Sensor installation • Brake actuator assembly (skid control ECU)
C1332/38 C1333/39	Abnormality in the resistance value of each speed sensor is detected.	• Rear speed sensor RH and/or LH • Rear speed sensor circuit RH and/or LH • Sensor installation
C1273/73 C1274/74	Detected only during test mode.	• Rear speed sensor • Sensor installation • Sensor rotor
C1277/77 C1278/78	Detected only during test mode.	• Rear speed sensor • Sensor installation • Sensor rotor

HINT:
DTC No. C0210/33 and C1332/38 are for the rear speed sensor RH.
DTC No. C0215/34 and C1333/39 are for the rear speed sensor LH.

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	READ VALUE OF INTELLIGENT TESTER (REAR SPEED SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Select "DATA LIST" and read the value displayed on the intelligent tester (See page BC-307).

DATA LIST: ABS/TRAC/VSC

Item	Measurement Item / Range (Display)	Normal Condition
RR WHEEL SPD	Wheel speed sensor (RR) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed
RL WHEEL SPD	Wheel speed sensor (RL) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed

(d) Check that there is no difference between the speed value output from the speed sensor displayed on the intelligent tester and the speed value displayed on the speedometer when driving the vehicle.

OK:

The speed value output from the speed sensor displayed on the intelligent tester is the same as the actual vehicle speed.

NG → **Go to step 5**

OK

2 PERFORM TEST MODE INSPECTION (SIGNAL CHECK)

(a) Check if test mode (signal check) DTCs are detected (See page BC-290).

Result

Condition	Proceed to
Test mode (signal check) DTC is not output	A
Test mode (signal check) DTC is output	B

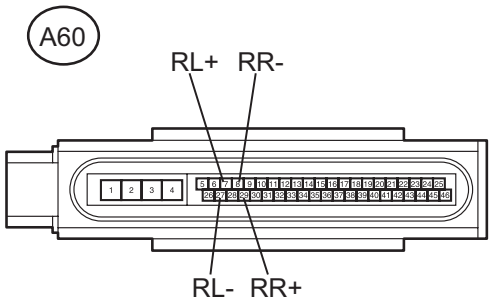
BC

B → **Go to step 5**

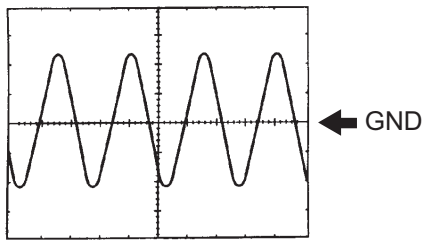
A

3 INSPECT SPEED SENSOR SIGNAL WAVEFORM

Skid Control ECU (Harness Side Connector Front View):



Normal Signal Waveform:



1 V/Division, 2 ms./Division

C139144E01

(a) Lift up the vehicle.
(b) Perform the inspection using an oscilloscope.
  (1) Disconnect the skid control ECU connector.
  (2) Connect the oscilloscope to the rear speed sensor terminals of the skid control ECU.
  (3) Check that a waveform is output when the tires are rotated.

  OK:

  The same waveform is output from all the 4 wheels and there is no noise or interference in the waveform.

  HINT:
  - As vehicle speed (wheel rotation speed) increases, the width of the waveform narrows and the output voltage becomes greater.
  - When noise is identified in the waveform on the oscilloscope, the erratic signals are generated due to rotor scratches, looseness or foreign matter attached to the speed sensor.

  (4) Connect the connector.

NG → **REPAIR OR REPLACE SPEED SENSOR AND SENSOR ROTOR**

OK

4 RECONFIRM DTC

(a) Clear the DTCs (See page BC-302).
(b) Drive the vehicle at a speed of approximately 25 mph (40 km/h) or more for 60 seconds or more.
(c) Check if the same DTCs are recorded (See page BC-302).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTCs (C0210/33, C0215/34, C1332/38 and C1333/39) are output	A
DTCs (C0210/33, C0215/34, C1332/38 and C1333/39) are output (When troubleshooting in accordance with the PROBLEM SYMPTOMS TABLE)	B
DTCs (C0210/33, C0215/34, C1332/38 and C1333/39) are not output (When troubleshooting in accordance with the DTC CHART)	C

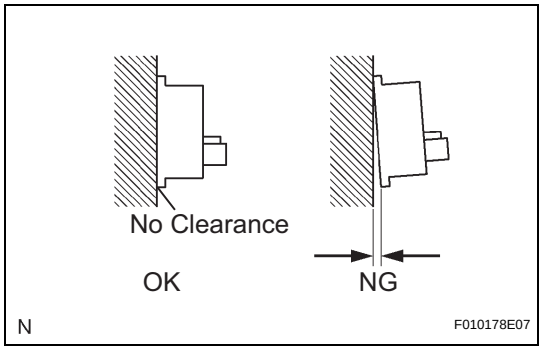
BC

B → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page BC-295)**

C → **END**

A

5 INSPECT SPEED SENSOR INSTALLATION

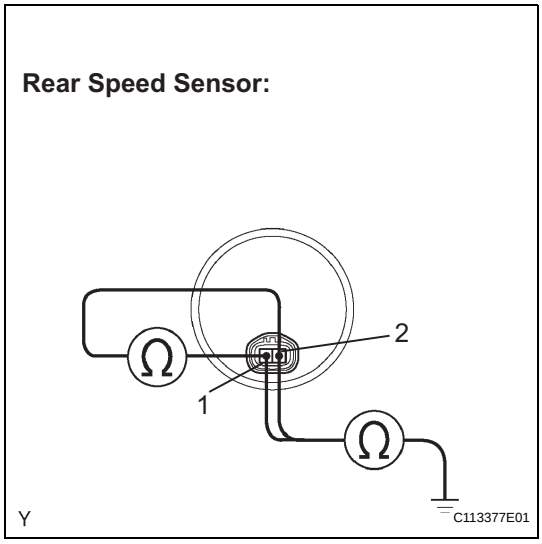


(a) Check the rear speed sensor installation.
OK:
There is no clearance between the sensor and rear axle carrier.
NOTICE:
Check the speed sensor signal after replacement (See page BC-290).

NG → **INSTALL REAR SPEED SENSOR CORRECTLY**

OK

6	INSPECT REAR SPEED SENSOR



(a) Disconnect the rear speed sensor connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

LH

Tester Connection	Specified Condition
g1-1 (RR+) - g1-2 (RR-)	Below 2.2 kΩ
g1-1 (RR+) - Body ground	10 kΩ or higher
g1-2 (RR-) - Body ground	10 kΩ or higher

RH

Tester Connection	Specified Condition
f1-1 (RL+) - f1-2 (RL-)	Below 2.2 kΩ
f1-1 (RL+) - Body ground	10 kΩ or higher
f1-2 (RL-) - Body ground	10 kΩ or higher

NOTICE:
Check the speed sensor signal after replacement (See page BC-290).

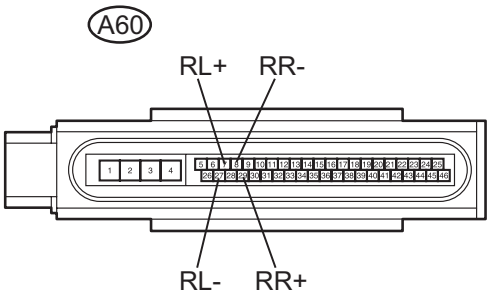
NG → **REPLACE REAR SPEED SENSOR (See page BC-443)**

OK

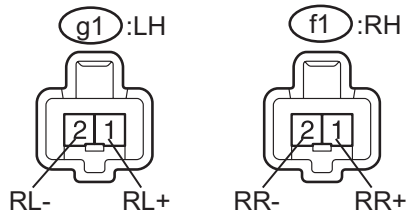
BC

7 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU TO SKID CONTROL SENSOR WIRE)

Skid Control ECU (Harness Side Connector Front View):



Rear Speed Sensor (Harness Side Connector Front View):



N

C139145E02

(a) Check the harness and connector.
(1) Disconnect the skid control ECU connector and the rear speed sensor connector.
(2) Disconnect the skid control sensor wire.
(3) Measure the resistance according to the value(s) in the table below.

Standard resistance:

LH

Tester Connection	Specified Condition
A60-7 (RL+) - g1-1 (RL+)	Below 1 Ω
A60-27 (RL-) - g1-2 (RL-)	Below 1 Ω
A60-7 (RL+) - Body ground	10 kΩ or higher
A60-27 (RL-) - Body ground	10 kΩ or higher

RH

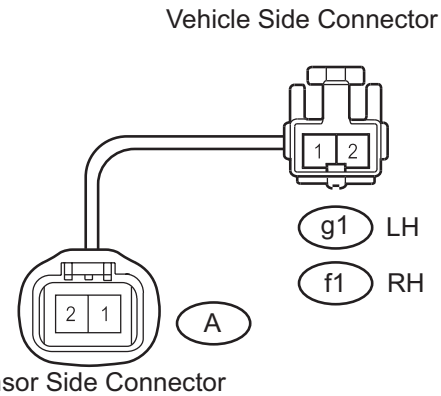
Tester Connection	Specified Condition
A60-29 (RR+) - f1-1 (RR+)	Below 1 Ω
A60-8 (RR-) - f1-2 (RR-)	Below 1 Ω
A60-29 (RR+) - Body ground	10 kΩ or higher
A60-8 (RR-) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SKID CONTROL ECU TO SKID CONTROL SENSOR WIRE)**

OK

8 CHECK HARNESS AND CONNECTOR (SKID CONTROL SENSOR WIRE TO REAR SPEED SENSOR)

Skid Control Sensor Wire:



C113396E05

(a) Check harness and connector (skid control sensor wire).
(1) Measure the resistance according to the value(s) in the table below.

Standard resistance:

LH

Tester Connection	Specified Condition
g1-1 - A-1	Below 1 Ω
g1-1 - A-2	10 kΩ or higher
g1-1 - Body ground	10 kΩ or higher
g1-2 - A-2	Below 1 Ω
g1-2 - A-1	10 kΩ or higher
g1-2 - Body ground	10 kΩ or higher

RH

Tester Connection	Specified Condition
f1-1 - A-1	Below 1 Ω

BC

Tester Connection	Specified Condition
f1-1 - A-2	10 kΩ or higher
f1-1 - Body ground	10 kΩ or higher
f1-2 - A-2	Below 1 Ω
f1-2 - A-1	10 kΩ or higher
f1-2 - Body ground	10 kΩ or higher

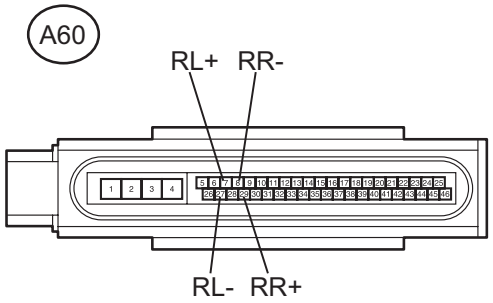
(2) Connect the connector.

NG → **REPAIR OR REPLACE SKID CONTROL SENSOR WIRE**

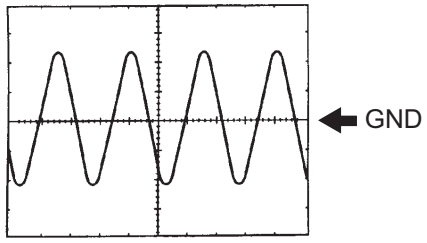
OK

9 INSPECT SPEED SENSOR SIGNAL WAVEFORM

Skid Control ECU (Harness Side Connector Front View):



Normal Signal Waveform:



1 V/Division, 2 ms./Division

C139144E01

(a) Lift up the vehicle.
(b) Perform the inspection using an oscilloscope.
(1) Disconnect the skid control ECU connector.
(2) Connect the oscilloscope to the rear speed sensor terminals of the skid control ECU.
(3) Check that a waveform is output when the tires are rotated.
OK:
The same waveforms is output from rear wheels and there is no noise or interference in the waveform.
HINT:
- As vehicle speed (wheel rotation speed) increases, the width of the waveform narrows and the output voltage becomes greater.
- When noise is identified in the waveform on the oscilloscope, the erratic signals are generated due to rotor scratches, looseness or foreign matter attached to the speed sensor.

(4) Connect the connector.

NG → **CLEAN OR REPLACE SPEED SENSOR AND SENSOR ROTOR**

OK

10 READ VALUE OF INTELLIGENT TESTER (REAR SPEED SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.

(c) Select "DATA LIST" and read the value displayed on the intelligent tester (See page BC-307).

DATA LIST: ABS/TRAC/VSC

Item	Measurement Item / Range (Display)	Normal Condition
RR WHEEL SPD	Wheel speed sensor (RR) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed
RL WHEEL SPD	Wheel speed sensor (RL) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed

(d) Check that there is no difference between the speed value output from the speed sensor displayed on the intelligent tester and the speed value displayed on the speedometer when driving the vehicle.

OK:

The speed value output from the speed sensor displayed on the intelligent tester is the same as the actual vehicle speed.

HINT:

- It is suspected that the DTCs were output due to a bad connection of the connector terminal.
- If troubleshooting has been carried out according to the "PROBLEM SYMPTOMS TABLE", refer back to the table and proceed to the next step (See page BC-295).

NG → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

OK

11 RECONFIRM DTC

(a) Clear the DTCs (See page BC-302).

(b) Drive the vehicle at a speed of approximately 25 mph (40 km/h) or more for 60 seconds or more.

(c) Check if the same DTCs are recorded (See page BC-302).

HINT:

Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTCs (C0210/33, C0215/34, C1332/38 and C1333/39) are output	**A**
DTCs (C0210/33, C0215/34, C1332/38 and C1333/39) are output (When troubleshooting in accordance with the PROBLEM SYMPTOMS TABLE)	**B**
DTCs (C0210/33, C0215/34, C1332/38 and C1333/39) are not output (When troubleshooting in accordance with the DTC CHART)	**C**

B → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page BC-295)**

C → **END**

A

12	INSPECT SPEED SENSOR ROTOR

(a) Turn the ignition switch off.
(b) Remove the rear axle.
(c) Check the rotor.
OK:
No scratches, cracks, oil, or foreign matter on the rotors.
NOTICE:
Check the speed sensor signal after cleaning or replacement (See page BC-290).
(d) Install the rear axle.

NG → **CLEAN OR REPLACE SPEED SENSOR ROTOR**

BC

OK

REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

DTC	C0226/21	SFR Solenoid Circuit

DTC	C0236/22	SFL Solenoid Circuit

DTC	C0246/23	SRR Solenoid Circuit

DTC	C0256/24	SRL Solenoid Circuit

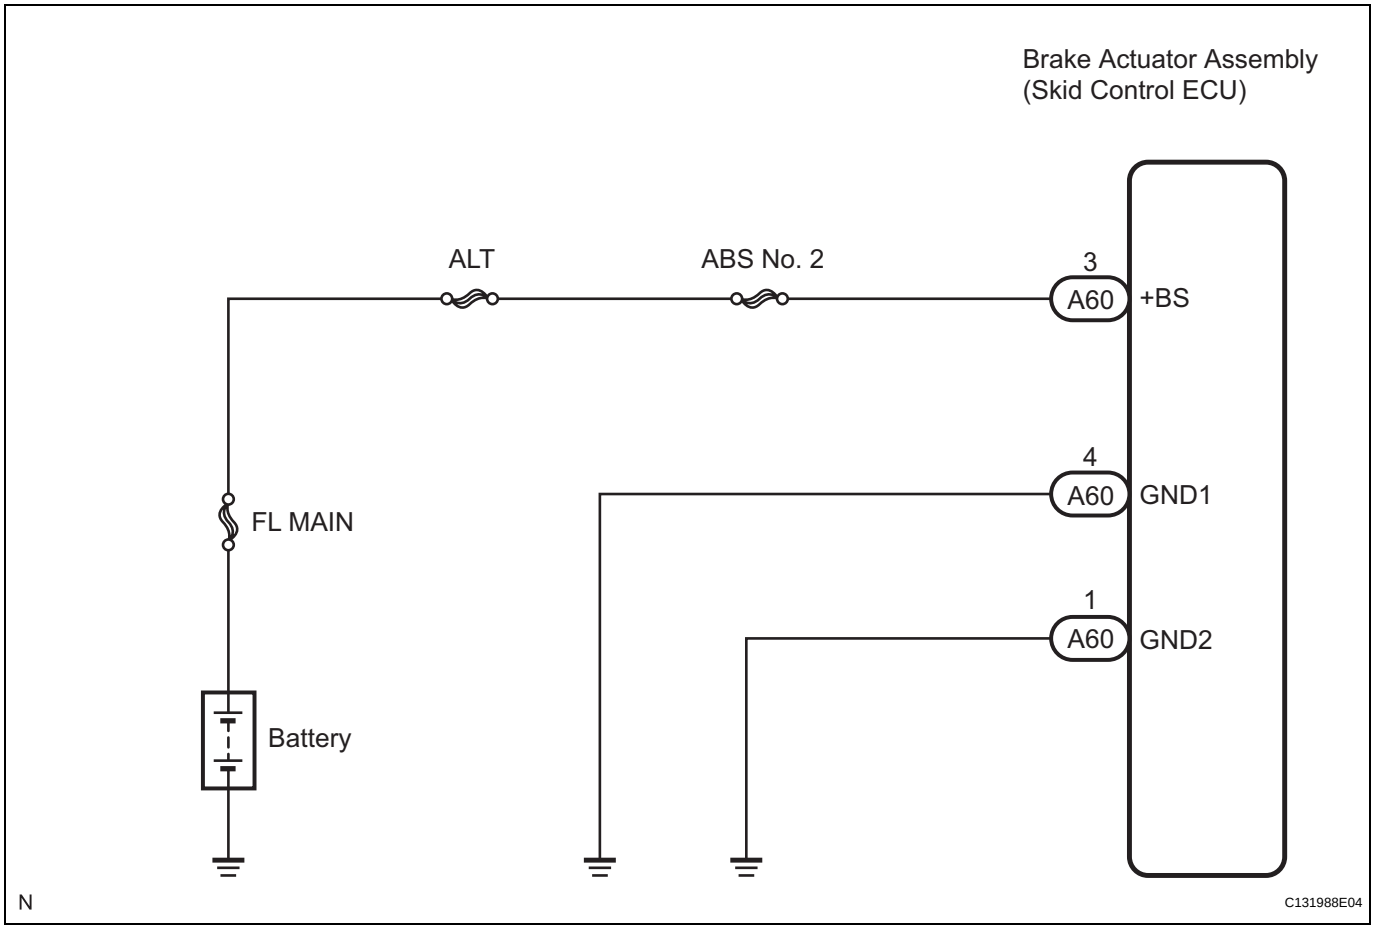
DESCRIPTION

These solenoids turn on when signals are received from the skid control ECU and they control the pressure acting on the wheel cylinders to control the braking force.

DTC No.	DTC Detection Condition	Trouble Area
C0226/21 C0236/22 C0246/23 C0256/24	Solenoid valve signal does not match the check result.	• Each solenoid circuit • Brake actuator assembly

BC

WIRING DIAGRAM



INSPECTION PROCEDURE

1	RECONFIRM DTC

HINT:
These codes are detected when a problem is identified in the brake actuator assembly.
The solenoid circuits are located in the brake actuator assembly.
Therefore, solenoid circuit inspection and solenoid unit inspection cannot be performed. Be sure to check if the DTC is output before replacing the brake actuator assembly.

(a) Clear the DTC (See page BC-302).
(b) Start the engine.
(c) Drive the vehicle at a speed of 12 mph (20 km/h) or more for 30 seconds or more.
(d) Check if the same DTC is recorded (See page BC-302).

BC

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

HINT:
- If the normal system code is output (the trouble code is not output), slightly jiggle the connectors, wire harness, and fuses of the brake actuator assembly (skid control ECU). Make sure that no DTCs are output.
- If any DTCs are output while jiggling a connector or wire harness of the brake actuator (skid control ECU), inspect and repair the connector or wire harness.
- It is suspected that the DTCs were output due to a bad connection of the connector terminal.

B → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

A

END

DTC	C0273/13	Open or Short Circuit in ABS Motor Relay Circuit

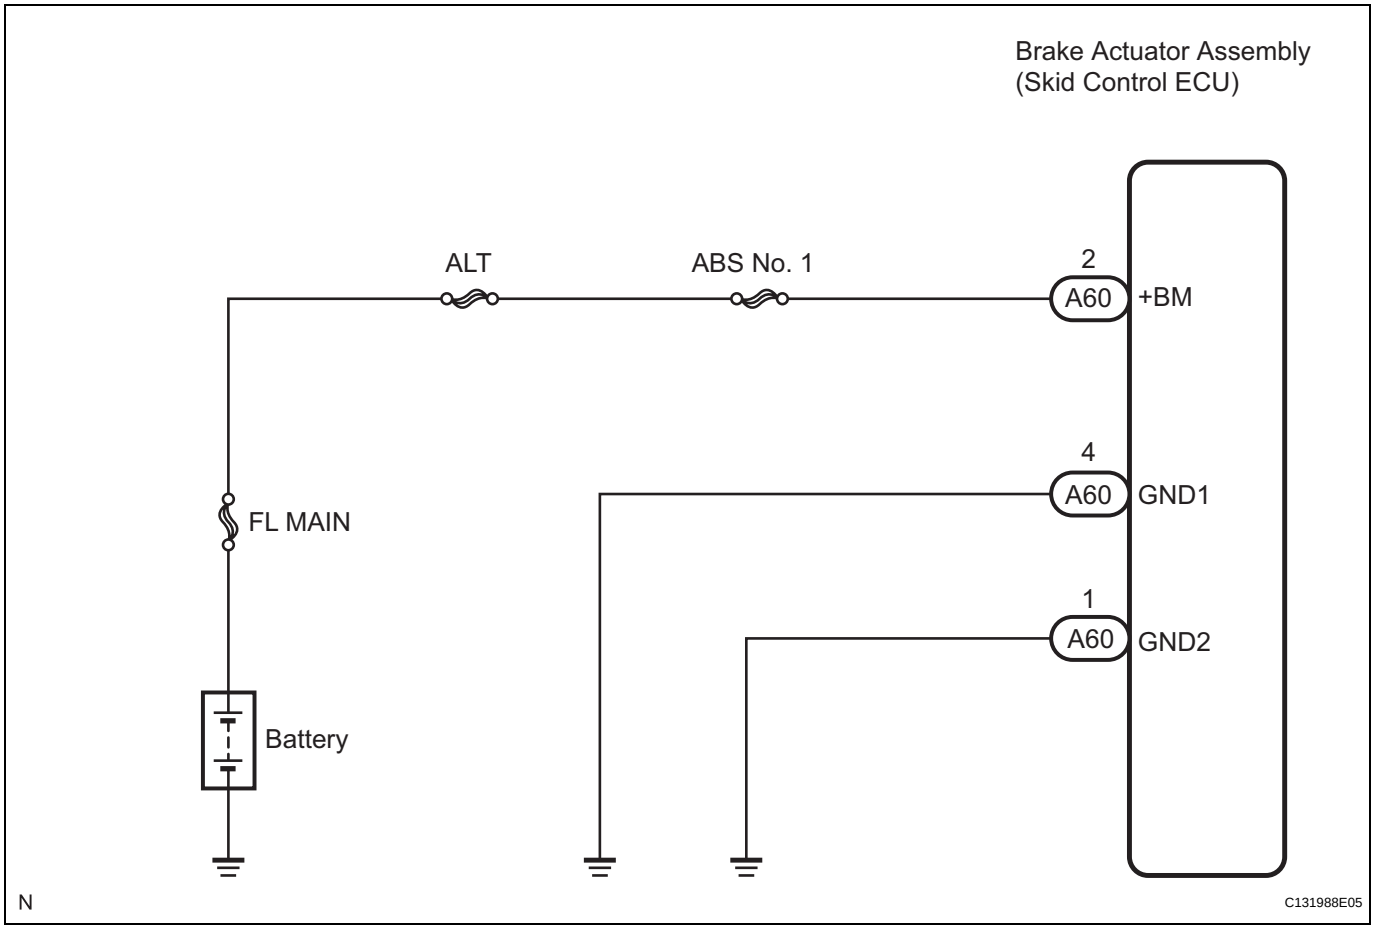
DESCRIPTION

The ABS motor relay supplies power to the ABS pump motor. While the ABS is activated, the ECU switches the motor relay on and operates the ABS pump motor.
If the voltage supplied to the motor relay (+BM) is below the DTCs detection threshold due to low voltage from the battery or alternator, the DTC may be stored.

DTC No.	DTC Detection Condition	Trouble Area
C0273/13	When any of the following is detected: • When the motor relay is actuated, voltage is not supplied to the pump motor within 0.1 seconds. • For 30 to 125 ms after the motor relay is turned from ON to OFF, the remaining high voltage is out of range. The motor relay is turned from ON to OFF 3 times. If the voltage is still out of range in the 3rd operation, this failure is detected. • When the motor relay is changed from ON to OFF, the remaining high voltage is more than 2 V for 1 second.	• ABS No. 1 fuse (Fusible link) • Brake actuator assembly (skid control ECU) • Motor relay circuit

BC

WIRING DIAGRAM



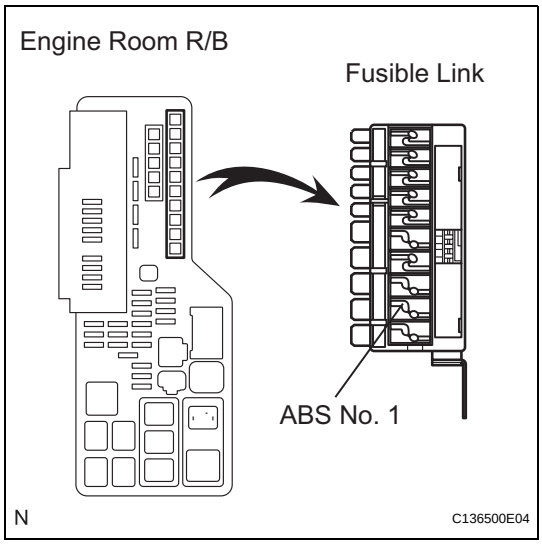
INSPECTION PROCEDURE

HINT:

- When C1241/41 is output together with C0273/13, inspect and repair the trouble areas indicated by C1241/41 (See page BC-361).

- Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	INSPECT FUSIBLE LINK (ABS NO. 1 FUSE)



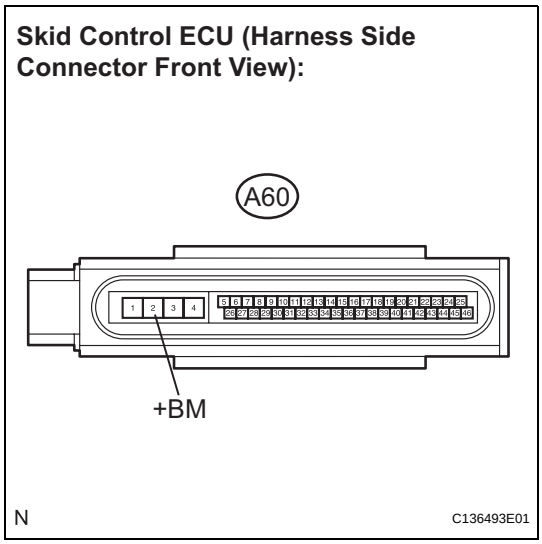
(a) Remove the fusible link from the engine room R/B.
(b) Check if the fusible link is malted.
OK:
The fusible link is not melted.
(c) Install the fusible link to the engine room R/B with the nut.

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

NG → **REPLACE FUSIBLE LINK**

OK

2	INSPECT SKID CONTROL ECU (+BM TERMINAL VOLTAGE)



(a) Disconnect the skid control ECU connector.
(b) Measure the voltage according to the value(s) in the table below.
Standard voltage

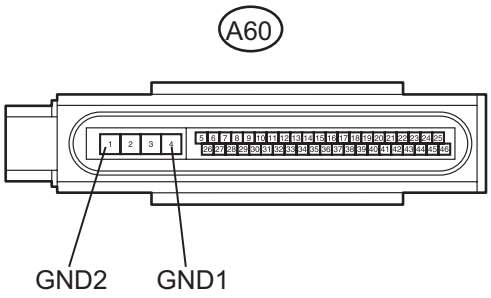
Tester Connection	Condition	Specified Condition
A60-2 (+BM) - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (+BM CIRCUIT)**

OK

3 INSPECT SKID CONTROL ECU (GND TERMINAL CONTINUITY)

Skid Control ECU (Harness Side Connector Front View):



N C136493E02

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
A60-4 (GND1) - Body ground	Below 1 Ω
A60-1 (GND2) - Body ground	Below 1 Ω

(b) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

4 PERFORM ACTIVE TEST BY INTELLIGENT TESTER (ABS MOTOR RELAY)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Select "ACTIVE TEST" on the intelligent tester (See page BC-307).

ACTIVE TEST: ABS/TRAC/VSC

Item	Measurement Item/Range (Display)	Normal Condition
ABS MTR RELAY	Turns ABS motor relay ON/OFF	Operating sound of motor is heard.

(d) Check the operating sound of the ABS motor relay when operating it with the intelligent tester.

OK:

The operating sound of the ABS motor relay is heard.

NG → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

OK

5 RECONFIRM DTC

HINT:
This code is detected when a problem is identified in the brake actuator assembly.
The ABS motor relay is located in the brake actuator assembly.
Therefore, ABS motor relay inspection and motor relay unit inspection cannot be performed. Be sure to check if the DTC is output before replacing the brake actuator assembly.

(a) Clear the DTC (See page BC-302).

BC

(b) Start the engine.
(c) Drive the vehicle at a speed of 12 mph (20 km/h) or more for 30 seconds or more.
(d) Check if the same DTC is recorded (See page BC-302).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

HINT:
- If the normal system code is output (the trouble code is not output), slightly jiggle the connectors, wire harness, and fuses of the brake actuator assembly (skid control ECU). Make sure that no DTCs are output.
- If any DTCs are output while jiggling a connector or wire harness of the brake actuator assembly (skid control ECU), inspect and repair the connector or wire harness.
- It is suspected that the DTCs were output due to a bad connection of the connector terminal.

B → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

A →

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION) (See page BC-298)

DTC	C0278/11	Open or Short Circuit in ABS Solenoid Relay Circuit

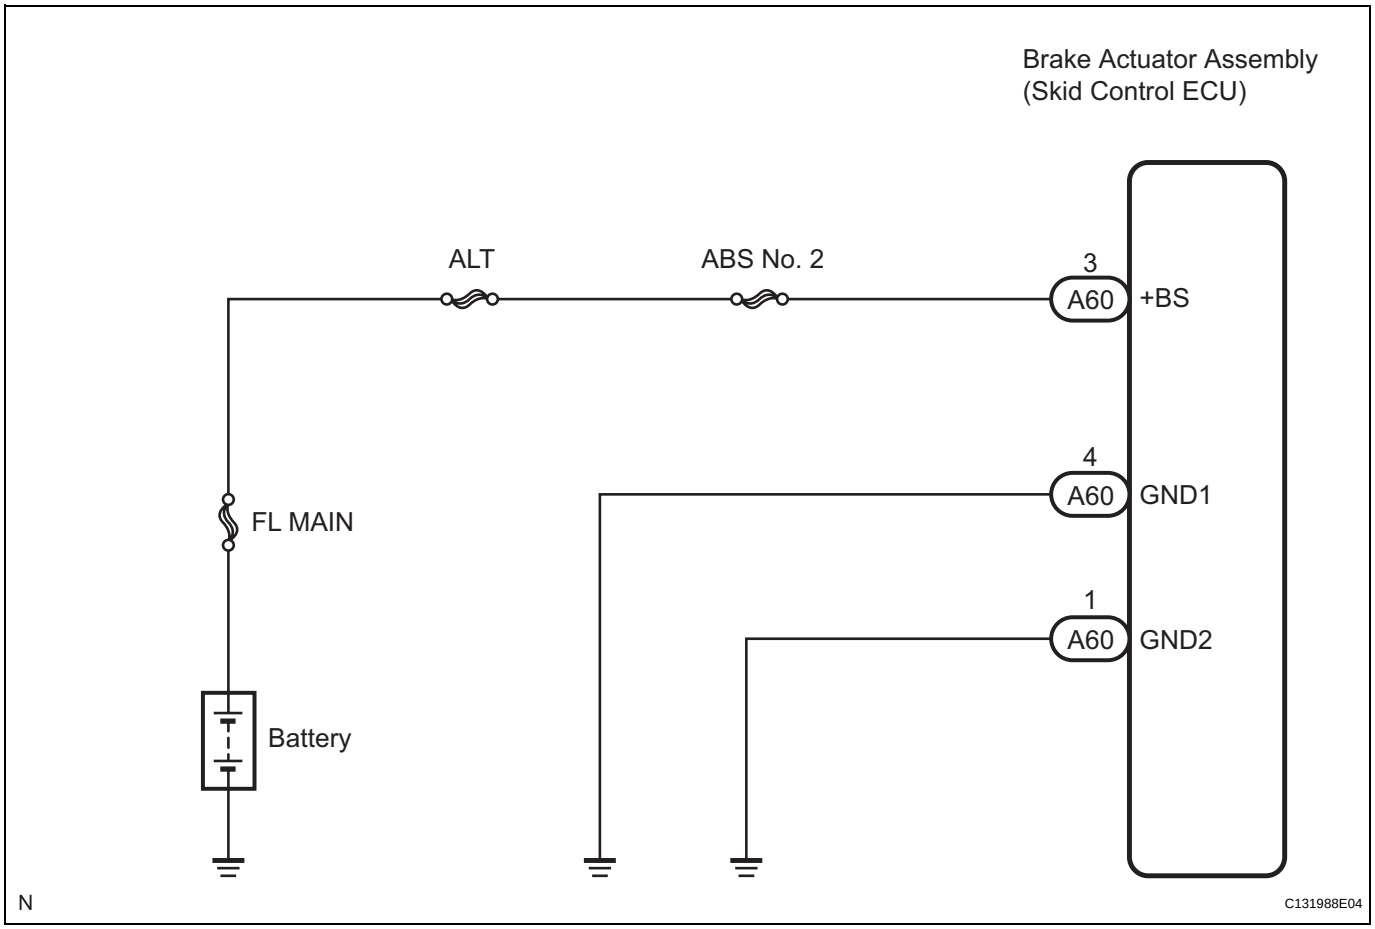
DESCRIPTION

The ABS solenoid relay supplies power to the ABS solenoid.
The solenoid relay is turned on 1.5 seconds after the ignition switch is turned on (IG), and is turned off if an open or short in the solenoid is detected by self diagnosis performed when the vehicle starts running.
The ABS solenoid relay is housed in the skid control ECU in the brake actuator assembly.
HINT:
If a speed signal of 4 mph (6 km/h) or more is input to the skid control ECU, with the ignition switch on (IG) and the stop light switch off, the skid control ECU performs self diagnosis of the motor and solenoid circuits.

DTC No.	DTC Detection Condition	Trouble Area
C0278/11	When any of the following is detected: • When the relay is ON, the voltage is less than IG terminal voltage x 0.8 V for 0.5 seconds. • When the relay is OFF, the voltage is out of range (IG terminal voltage x 0.1 to IG terminal voltage x 0.8).	• ABS No. 2 fuse (Fusible link) • Brake actuator assembly (skid control ECU) • Solenoid relay circuit

BC

WIRING DIAGRAM

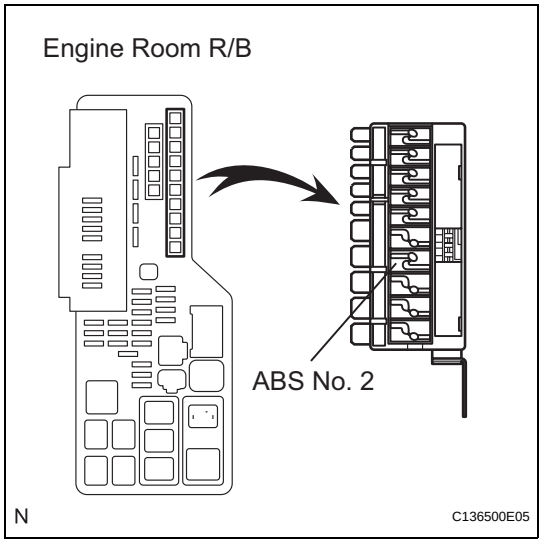


INSPECTION PROCEDURE

HINT:

- When C1241/41 is output together with C0278/11, inspect and repair the trouble areas indicated by C1241/41 (See page BC-361).
- Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1 INSPECT FUSIBLE LINK (ABS NO. 2 FUSE)



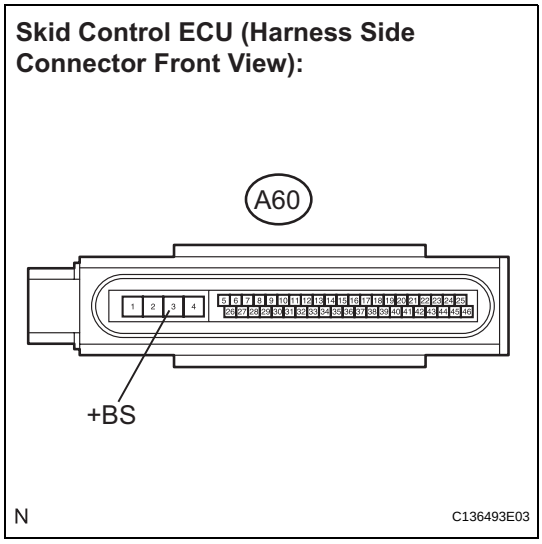
(a) Remove the fusible link from the engine room R/B.
(b) Check if the fusible link is melted.
OK:
The fusible link is not melted.
(c) Install the fusible link to the engine room R/B with the nut.

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

NG → **REPLACE FUSIBLE LINK**

OK

2 INSPECT SKID CONTROL ECU (+BS TERMINAL VOLTAGE)



(a) Disconnect the skid control ECU connector.
(b) Measure the voltage according to the value(s) in the table below.
Standard voltage

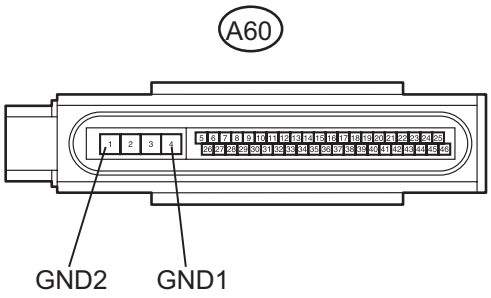
Tester Connection	Condition	Specified Condition
A60-3 (+BS) - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (+BS CIRCUIT)**

OK

3 INSPECT SKID CONTROL ECU (GND TERMINAL CONTINUITY)

Skid Control ECU (Harness Side Connector Front View):



N C136493E02

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
A60-4 (GND1) - Body ground	Below 1 Ω
A60-1 (GND2) - Body ground	Below 1 Ω

(b) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

4 RECONFIRM DTC

HINT:
This code is detected when a problem is identified in the brake actuator assembly.
The solenoid circuit is located in the brake actuator assembly. Therefore, solenoid circuit inspection and solenoid unit inspection cannot be performed. Be sure to check if the DTC code is output before replacing the brake actuator assembly.

(a) Clear the DTC (See page BC-302).
(b) Start the engine.
(c) Drive the vehicle at a speed of 12 mph (20 km/h) or more for 30 seconds or more.
(d) Check if the same DTC is recorded (See page BC-302).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

HINT:
- If the normal system code is output (the trouble code is not output), slightly jiggle the connectors, wire harnesses, and fuses of the brake actuator assembly. Make sure that no DTCs are output.
- If any DTCs are output while jiggling a connector or wire harness of the brake actuator (skid control ECU), inspect and repair the connector or wire harness.
- It is suspected that the DTCs were output due to a bad connection of the connector terminal.

BC

B → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

A

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION) (See page BC-298)

DTC	C0365/28	Malfunction in Deceleration Sensor

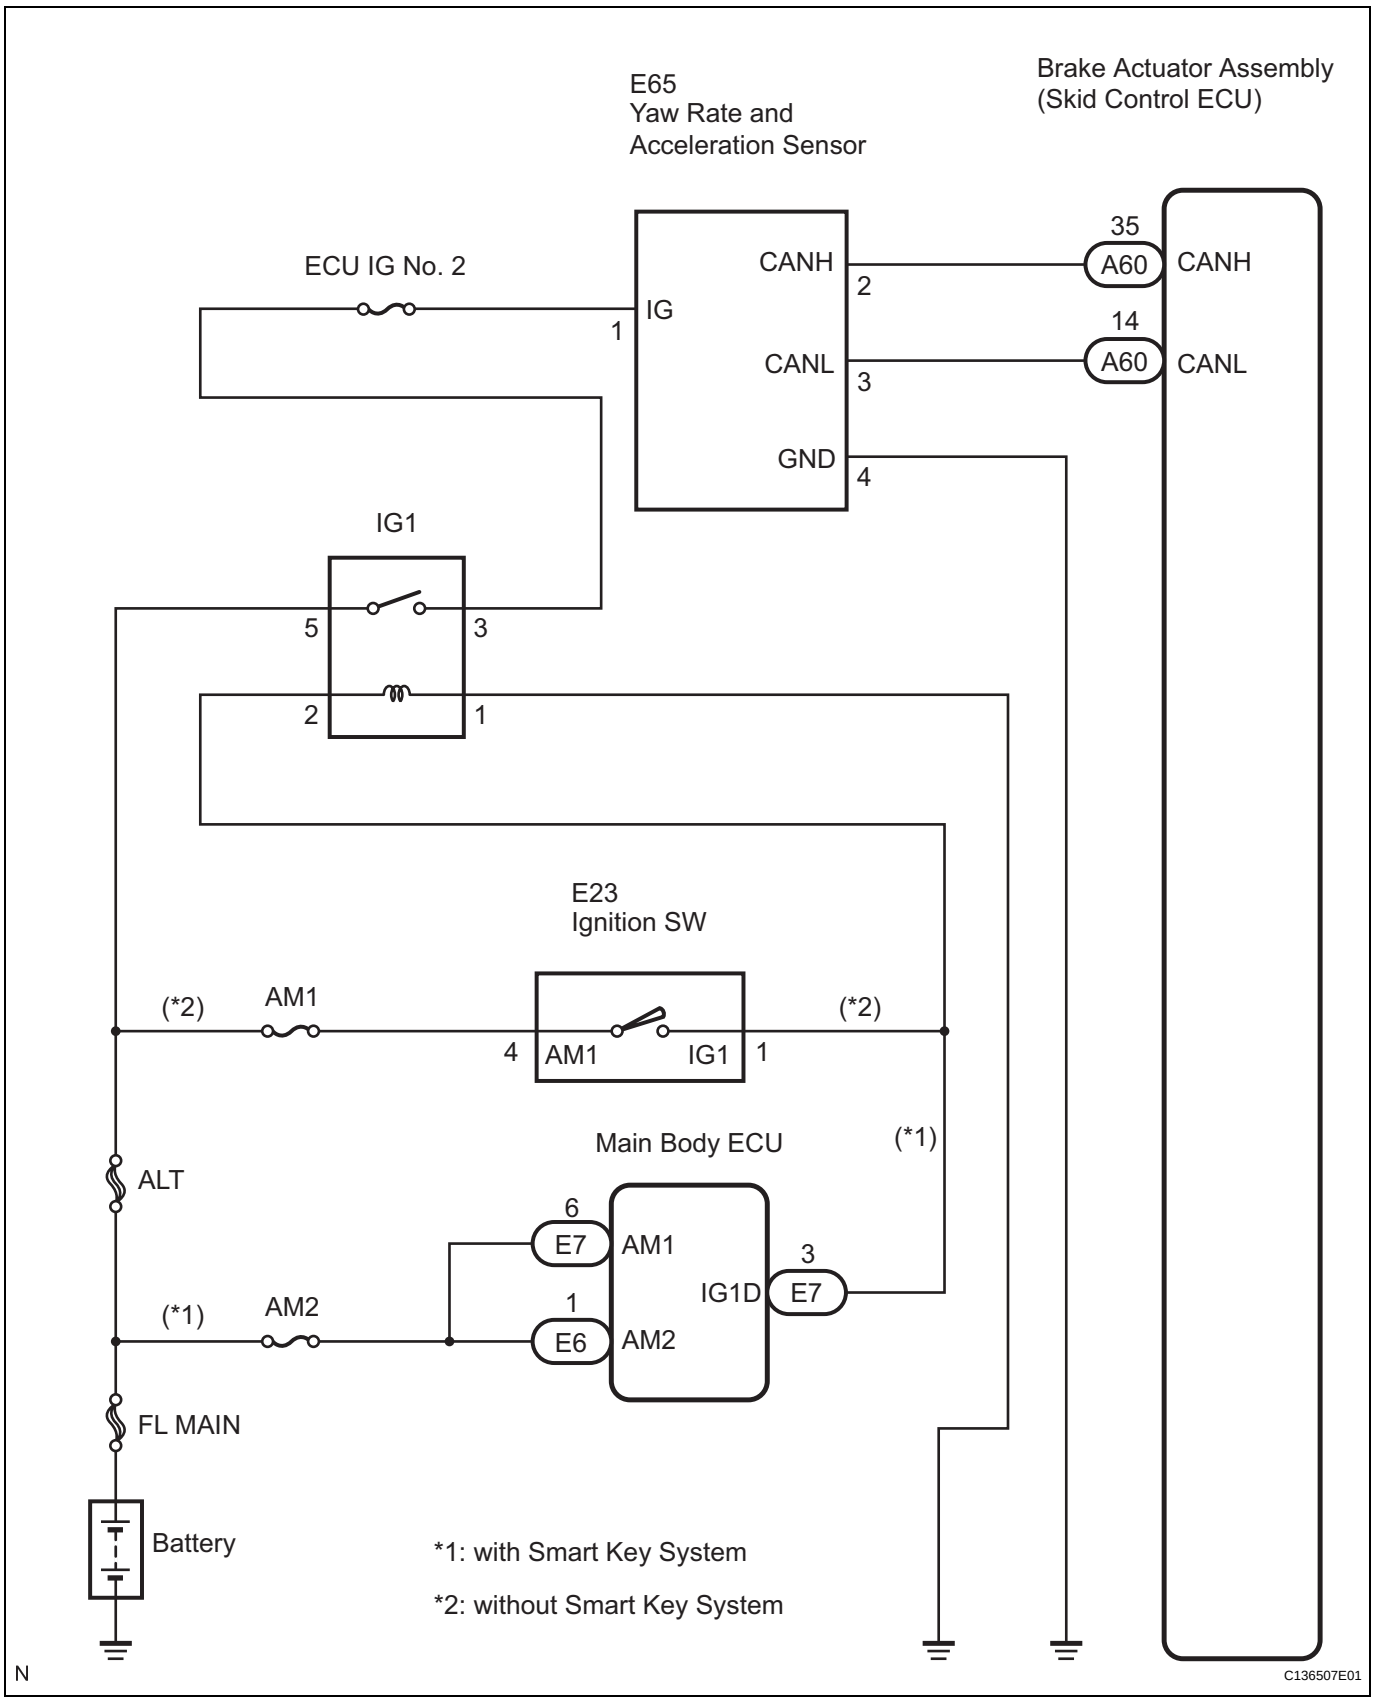
DTC	C1234/34	Yaw Rate Sensor Malfunction

DESCRIPTION

The deceleration sensor is combined with the yaw rate and acceleration sensor.
The brake actuator receives signals from the yaw rate and acceleration sensor via the CAN communication system.
If there is trouble in the CAN communication system, DTCs U0073/94 and U0123/62 are output.

DTC No.	DTC Detection Condition	Trouble Area
C0365/28	When any of the following is detected: • Lateral acceleration difference between sensor signal and reference value is large. • Offset value of sensor signal is higher than the standard value. • Sensor signal is out of range (2.25 m/s^2).	• Yaw rate and acceleration sensor • Yaw rate and acceleration sensor circuit • Sensor installation • Brake actuator assembly (skid control ECU)
C1234/34	Sensor malfunction signal is received from the yaw rate sensor.	• Yaw rate and acceleration sensor • Yaw rate and acceleration sensor circuit

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

- Check the condition of each related circuit connector before troubleshooting (See page IN-40).

- When U0073/94, U0100/65, U0123/62 and/or U0126/63 is output together with C0365/28, inspect and repair the trouble areas indicated by U0073/94, U0100/65, U0123/62 and/or U0126/63 first.

1 CHECK DTC

(a) Clear the DTCs (See page BC-302).
(b) Start the engine.
(c) At a speed of 18 mph (30 km/h) or more, drive the vehicle, turn the steering wheel, and decelerate (depress the brake pedal) the vehicle.
(d) Turn the ignition switch on (IG) again and check that no CAN communication system DTC is output (See page BC-302).

Result

Condition	Proceed to
CAN communication system DTC is not output	A
CAN communication system DTC is output	B

BC

B → **INSPECT CAN COMMUNICATION SYSTEM (See page CA-8)**

A

2 INSPECT YAW RATE AND ACCELERATION SENSOR INSTALLATION

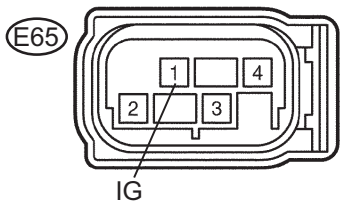
(a) Check that the yaw rate and acceleration sensor has been installed properly (See page BC-448).
OK:
The sensor should be tightened to the specified torque.
The sensor should not be titled.

NG → **INSTALL YAW RATE AND ACCELERATION SENSOR CORRECTLY**

OK

3 INSPECT YAW RATE AND ACCELERATION SENSOR (IG TERMINAL)

Yaw Rate and Acceleration Sensor (Harness Side Connector Front View):



F048983E13

(a) Disconnect the yaw rate and acceleration sensor connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.
Standard voltage

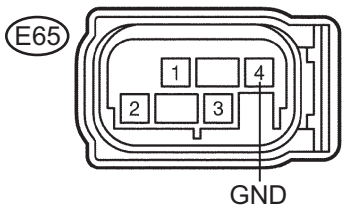
Tester Connection	Condition	Specified Condition
E65-1 (IG) - Body ground	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (IG CIRCUIT)**

OK

4 INSPECT YAW RATE AND ACCELERATION SENSOR (GND TERMINAL)

Yaw Rate and Acceleration Sensor (Harness Side Connector Front View):



(a) Turn the ignition switch off.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E65-4 (GND) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

BC

5 RECONFIRM DTC

(a) Clear the DTCs (See page BC-302).
(b) Start the engine.
(c) At a speed of 18 mph (30 km/h) or more, drive the vehicle, turn the steering wheel, and decelerate (depress the brake pedal) the vehicle.
(d) Turn the ignition switch on (IG) again and check that no CAN communication system DTC is output (See page BC-302).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTC is output	A
DTC is output (When troubleshooting in accordance with the PROBLEM SYMPTOMS TABLE)	B
DTC is not output (When troubleshooting in accordance with the DTC CHART)	C

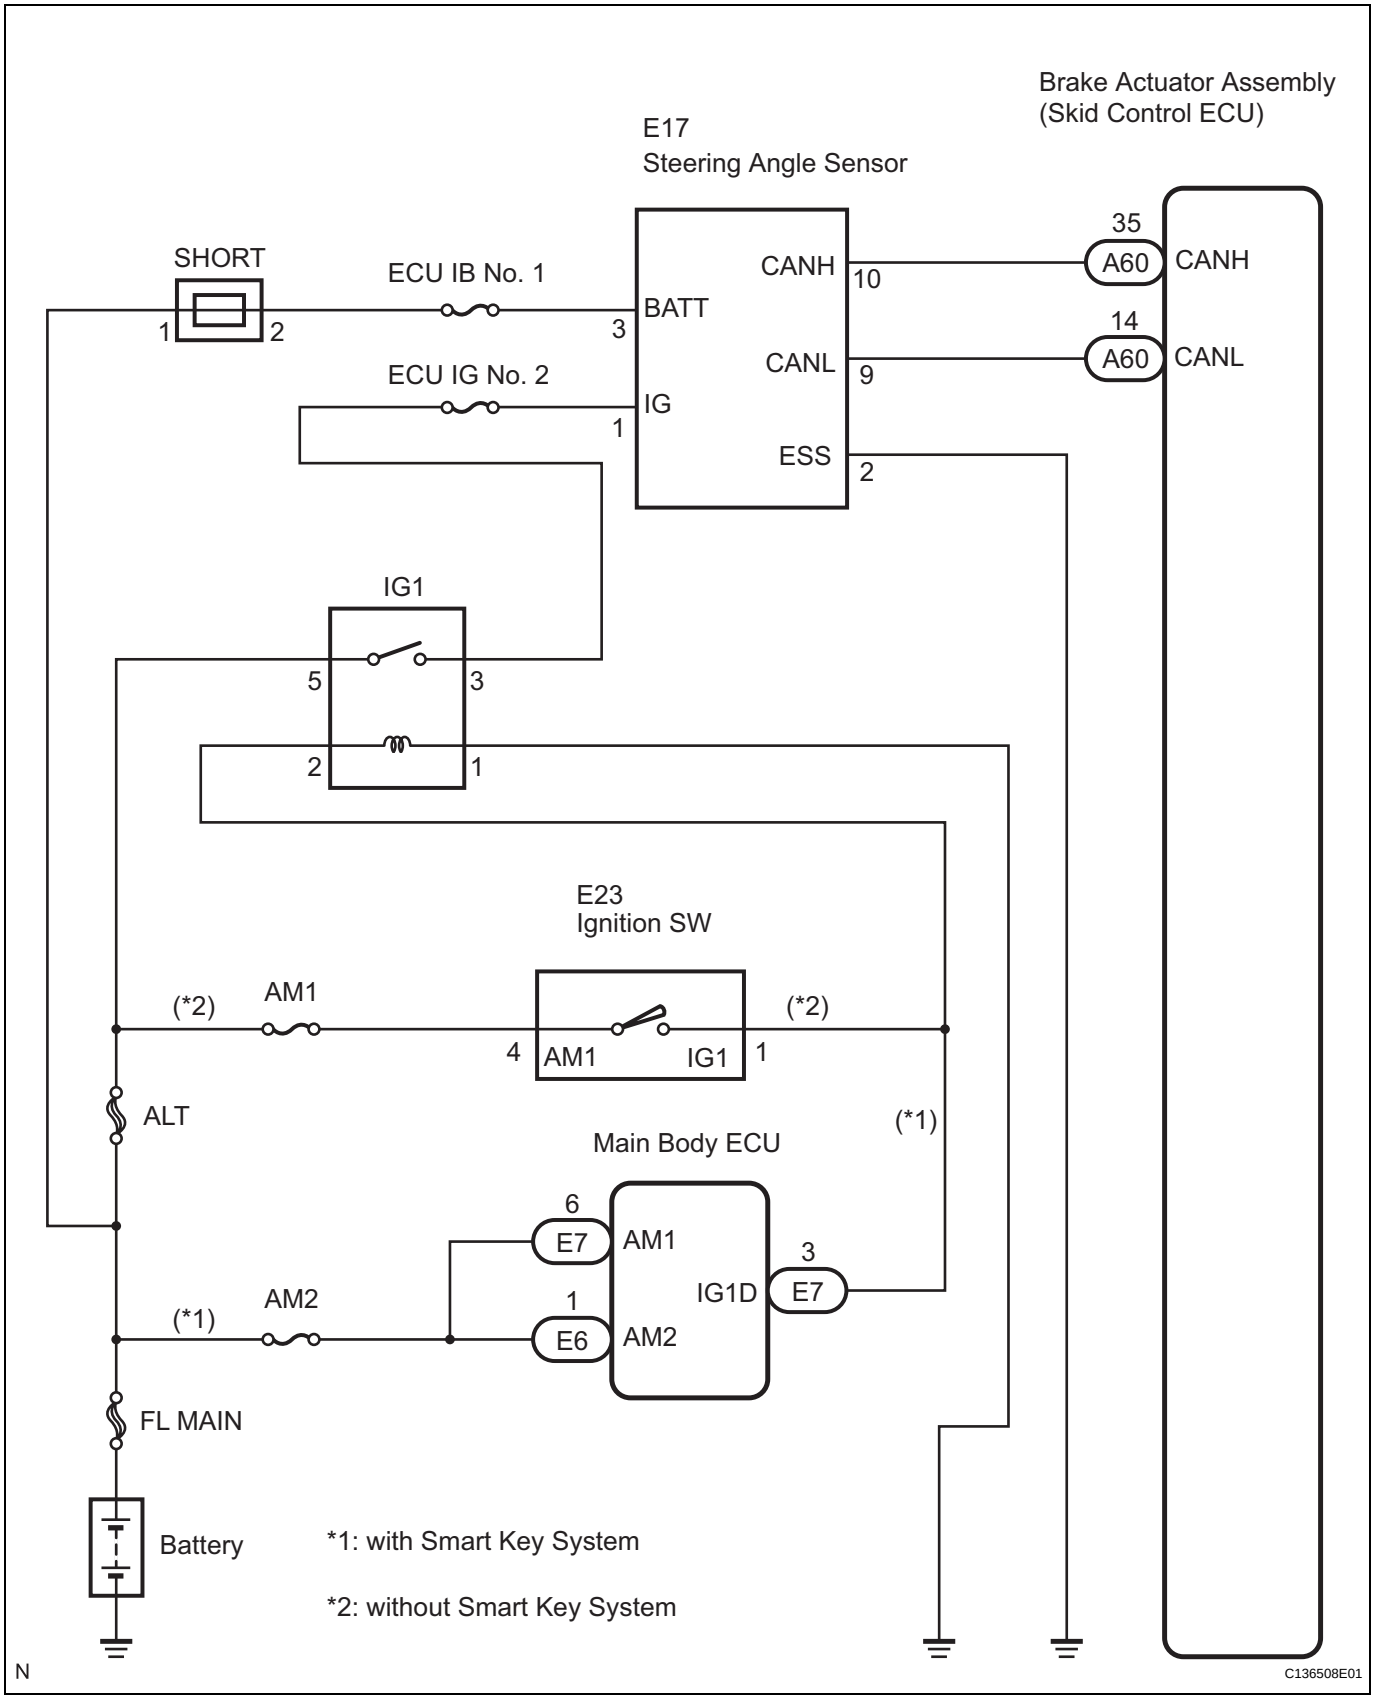
DTC	C1231/31	Steering Angle Sensor Circuit Malfunction

DESCRIPTION

The steering angle sensor signal is sent to the skid control ECU via the CAN communication system. When there is a malfunction in the CAN communication system, it will be detected by the steering angle sensor zero point malfunction diagnostic function.

DTC No.	DTC Detection Condition	Trouble Area
C1231/31	When any of the following is detected: • With ECU terminal IG1 voltage 9.8 V or more, the condition that the ECU does not receive data from the steering angle sensor continues. • Internal sensor failure • The offset value is out of range. • Sensor signal changes too rapidly. • Steering angle value difference between measured and reference is out of range. • Steering angle sensor signal is out of range.	• Steering angle sensor • Steering angle sensor circuit • Steering angle sensor power supply

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

HINT:

- When U0073/94, U0100/63, U0123/62 and/or U0126/63 is output together with C1231/31, inspect and repair the trouble areas indicated by U0073/94, U0100/65, U0123/62 and/or U0126/63 first.
- When the speed sensor or the yaw rate and acceleration sensor has trouble, DTCs for the steering angle sensor may be output even when the steering angle sensor is normal. When DTCs for the speed sensor or yaw rate and acceleration sensor are output together with other DTCs for the steering angle sensor, inspect and repair the speed sensor and yaw rate and acceleration sensor first, and then inspect and repair the steering angle sensor.
- Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK DTC

(a) Clear the DTC (See page BC-302).
(b) Turn the ignition switch off.
(c) Turn the ignition switch on (IG) again and check that no CAN communication system DTC is output.
(d) Drive the vehicle and turn the steering wheel to the right and left at the speed of 22 mph (35 km/h) and check that no speed sensor and yaw rate and acceleration sensor DTCs are output (See page BC-302).

Result

Condition	Proceed to
No CAN communication system DTC and the speed sensor or yaw rate and acceleration sensor DTC are output	A
CAN communication system DTC is output	B
Speed sensor or yaw rate and acceleration sensor DTC is output	C

HINT:

- If there is a malfunction in the speed sensor or the yaw rate and acceleration sensor, an abnormal value may be output although the steering angle sensor is normal.
- If the speed sensor and the yaw rate and acceleration sensor DTCs are output simultaneously, repair the sensors and inspect the steering angle sensor.

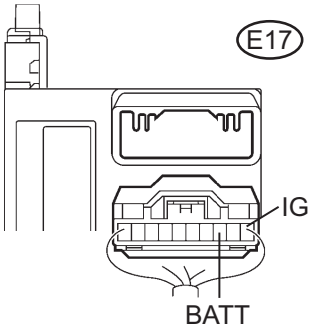
B → **INSPECT CAN COMMUNICATION SYSTEM (See page CA-8)**

C → **REPAIR CIRCUITS INDICATED BY OUTPUT DTCS (See page BC-311)**

A

2 INSPECT STEERING ANGLE SENSOR (POWER SOURCE TERMINAL)

Steering Angle Sensor Wire Harness View:



G030156E17

(a) Remove the column cover lower.
(b) Disconnect the steering angle sensor connector.
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

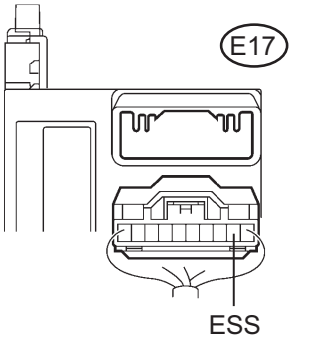
Tester Connection	Condition	Specified Condition
E17-1 (IG) - Body ground	Ignition switch on (IG)	10 to 14 V
E17-3 (BAT) - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER SOURCE CIRCUIT)**

OK

3 INSPECT STEERING ANGLE SENSOR (GROUND TERMINAL)

Steering Angle Sensor Wire Harness View:



G030156E18

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E17-2 (ESS) - Body ground	Always	Below 1 Ω

(b) Connect the connector.
(c) Install the column cover lower.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GROUND CIRCUIT)**

OK

REPLACE STEERING ANGLE SENSOR (See page BC-450)

BC

DTC	C1237/37	Tires of Different Size

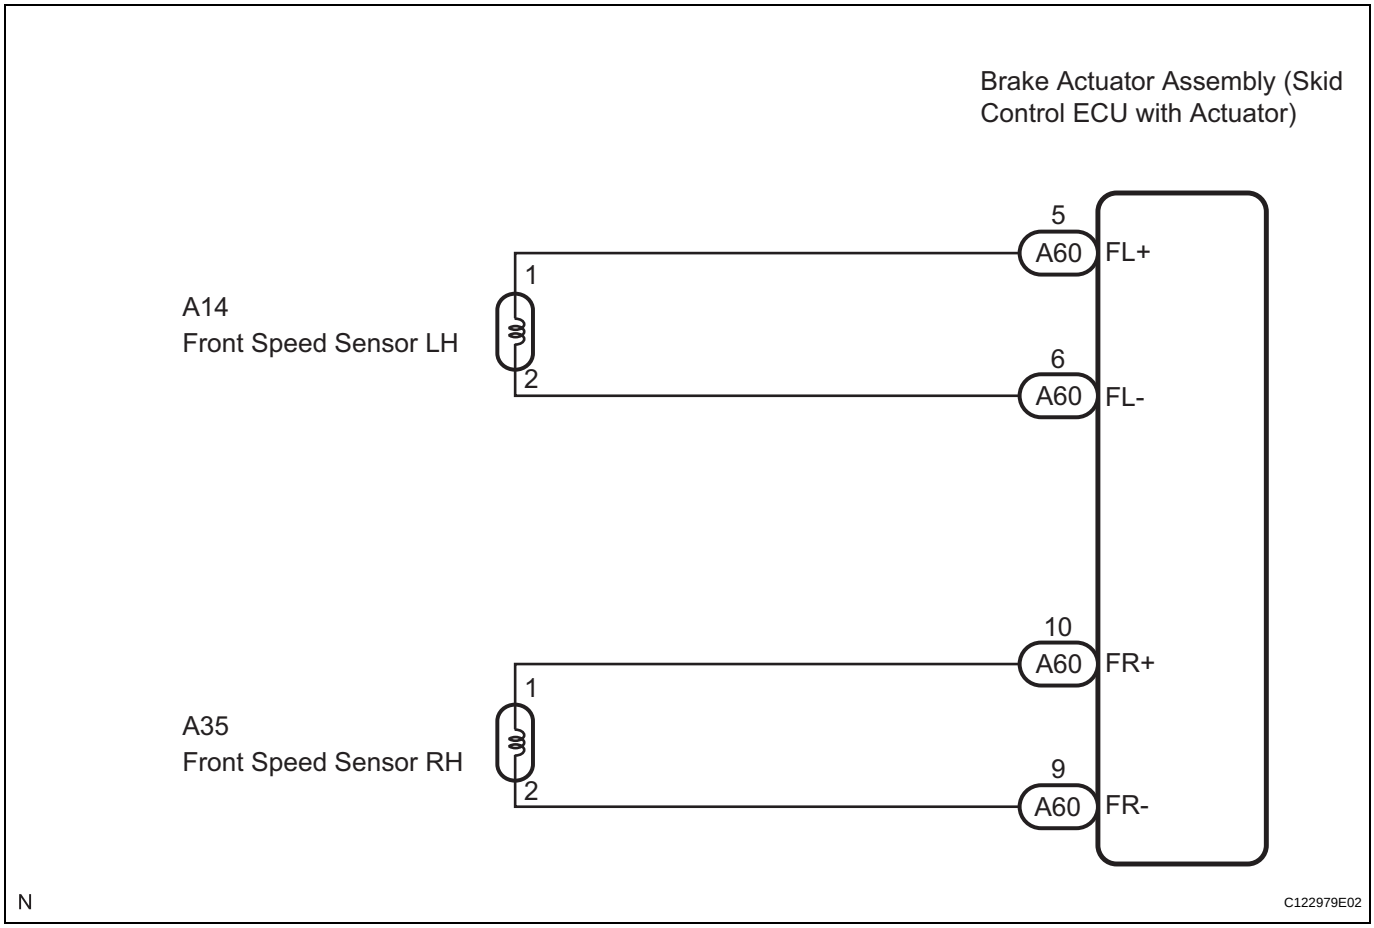
DESCRIPTION

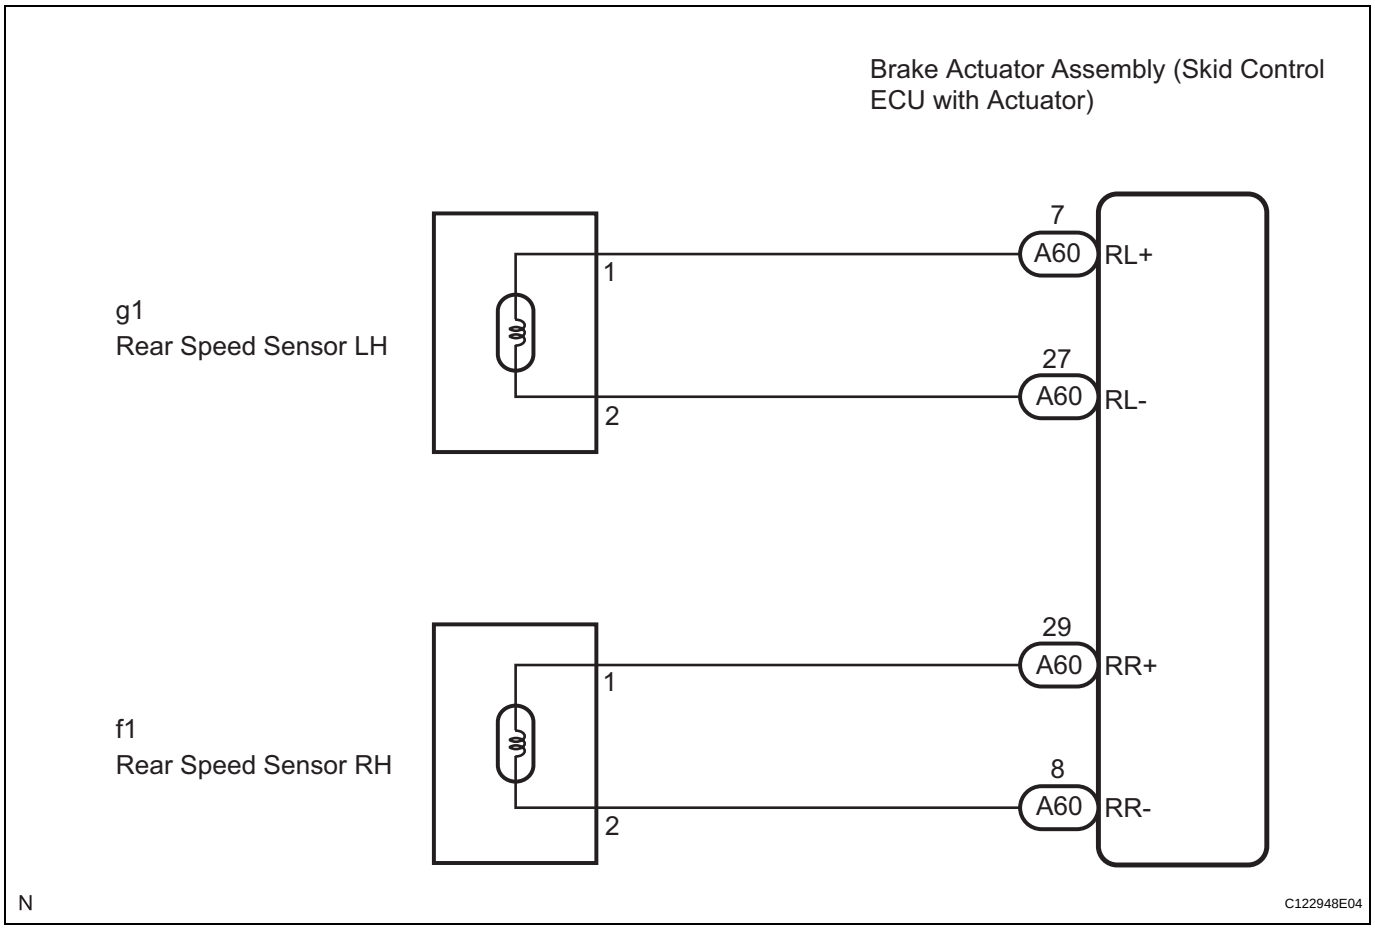
The skid control ECU measures the speed of each wheel by receiving signals from the speed sensor. These signals are used for recognizing that all 4 wheels are operating properly.
Therefore, all wheel signals must be equal.

DTC No.	DTC Detecting Condition	Trouble Area
C1237/37	When any of the following is detected: • Wheel speed difference between the wheels. • Wheel sensor signal failure. • ABS control continues for 60 sec. or more.	• Brake actuator assembly (skid control ECU) • Speed sensor rotor (Front) • Rear axle hub and bearing assembly • Speed sensor • Speed sensor circuit • Tire and wheel size • Tire deformation

WIRING DIAGRAM

BC





BC

INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK TIRES

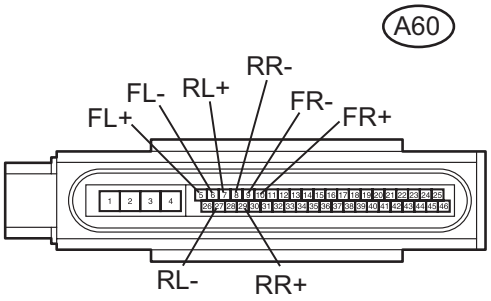
(a) Check the size and condition of all 4 wheels (See page TW-3).
HINT:
The DTC is output when tire deformation or a difference in tire size is detected.
OK:
The diameter of all 4 tires and air pressure are the same.

NG → **REPLACE TIRES SO THAT ALL 4 TIRES ARE THE SAME SIZE**

OK

2 INSPECT SPEED SENSOR AND SENSOR ROTOR SERRATIONS

Skid Control ECU (Harness Side Connector Front View):



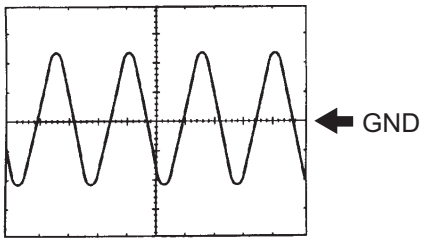
N C136493E04

(a) Lift up the vehicle.
(b) Disconnect the skid control ECU connector.
(c) Connect the oscilloscope to each speed sensor terminal of the skid control ECU connector.

Terminals

Connector	Circuit
A60-5 (FL+) - A60-6 (FL-)	Front left speed sensor
A60-10 (FR+) - A60-9 (FR-)	Front right speed sensor
A60-7 (RL+) - A60-27 (RL-)	Rear left speed sensor
A60-29 (RR+) - A60-8 (RR-)	Rear right speed sensor

Normal Signal Waveform:



1 V/Division, 2 ms./Division

C140980E03

(d) Check that a waveform is output when the tires are rotated (by the sensor circuit).

OK:

A waveform as shown in the figure is output.

HINT:

- Each sensor circuit outputs the same waveform without noise.
- As vehicle speed (wheel rotation speed) increases, the width of the waveform narrows and the fluctuation in the output voltage becomes greater.
- When noise is identified in the waveform on the oscilloscope, the erratic signals are generated due to rotor scratches, looseness or foreign matter attached to the speed sensor.

(e) Make sure that the waveform does not change while jiggling a connector or a wire harness.

OK:

The waveform does not change.

HINT:

If the waveform changes while jiggling a connector or a wire harness, there may be a malfunction in the connector or the wire harness.

(f) Connect the connector.

NG → **Go to step 4**

OK

3 RECONFIRM DTC

(a) Clear the DTC (See page BC-302).
(b) Start the engine.
(c) Drive the vehicle at a speed of 20 mph (32 km/h) or more for 60 seconds or more.

(d) Check if the same DTC is recorded (See page BC-302).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

A

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION) (See page BC-298)

BC

4 CHECK SPEED SENSOR ROTOR

(a) Check the speed sensor rotor.
Front Speed Sensor Rotor (Front drive outboard joint shaft assembly): (See page DS-23)
Rear Speed Sensor Rotor (Rear axle hub and bearing assembly): (See page AH-14)
OK:
No scratches or foreign matter on the rotors.
NOTICE:
Check the speed sensor signal after the cleaning/ replacement (See page BC-290).

NG → **CLEAN OR REPLACE SPEED SENSOR ROTOR**

OK

5 CHECK SPEED SENSOR TIP

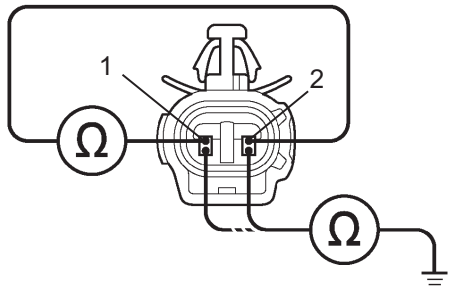
(a) Remove each speed sensor (See page BC-438 for front, BC-443 for rear).
(b) Check the speed sensor tip.
OK:
No scratches or foreign matter on the sensor tip.
NOTICE:
Check the speed sensor signal after the cleaning/ replacement (See page BC-290).
(c) Install the speed sensor.

NG → **CLEAN OR REPLACE SPEED SENSOR**

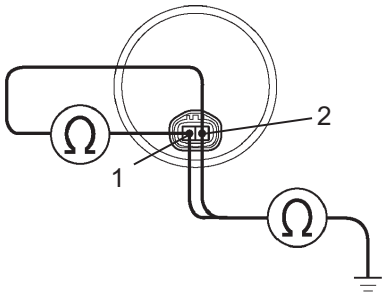
OK

6	INSPECT SPEED SENSOR

Front Speed Sensor:



Rear Speed Sensor:



C136027E02

(a) Disconnect each speed sensor connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

FRONT

Tester Connection	Condition	Specified Condition
A14-1 (FL+) - A14-2 (FL-)	Always	0.92 to 1.22 kΩ at 20°C
A14-1 (FL+) - Body ground	Always	10 kΩ or higher
A14-2 (FL-) - Body ground	Always	10 kΩ or higher
A35-1 (FR+) - A35-2 (FR-)	Always	0.92 to 1.22 kΩ at 20°C
A35-1 (FR+) - Body ground	Always	10 kΩ or higher
A35-2 (FR-) - Body ground	Always	10 kΩ or higher

REAR

Tester Connection	Condition	Specified Condition
g1-1 (RL+) - g1-2 (RL-)	Always	Below 2.2 kΩ
g1-1 (RL+) - Body ground	Always	10 kΩ or higher
g1-2 (RL-) - Body ground	Always	10 kΩ or higher
f1-1 (RR+) - f1-2 (RR-)	Always	Below 2.2 kΩ
f1-1 (RR+) - Body ground	Always	10 kΩ or higher
f1-2 (RR-) - Body ground	Always	10 kΩ or higher

NOTICE:

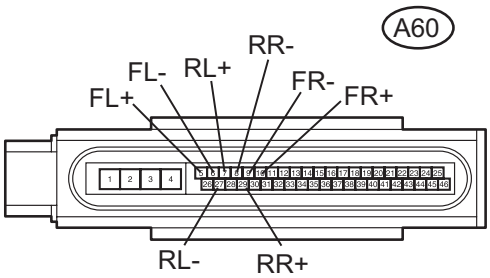
Check the speed sensor signal after replacement (See page BC-290).

NG → **REPLACE EACH SPEED SENSOR**

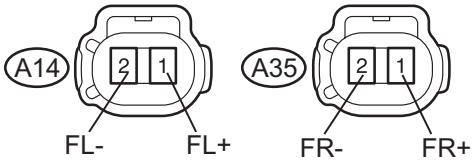
OK

7 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU TO EACH SPEED SENSOR)

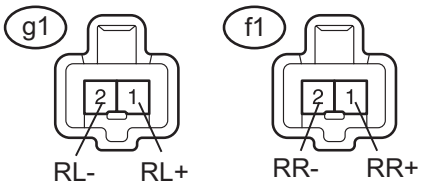
Skid Control ECU (Harness Side Connector Front View):



Front Speed Sensor Harness Side Connector Front View:



Rear Speed Sensor Harness Side Connector Front View:



C139146E02

(a) Disconnect the skid control ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

FRONT

Tester Connection	Condition	Specified Condition
A60-5 (FL+) - A14-1 (FL+)	Always	Below 1 Ω
A60-5 (FL+) - Body ground	Always	10 kΩ or higher
A60-6 (FL-) - A14-2 (FL-)	Always	Below 1 Ω
A60-6 (FL-) - Body ground	Always	10 kΩ or higher
A60-10 (FR+) - A35-1 (FR+)	Always	Below 1 Ω
A60-10 (FR+) - Body ground	Always	10 kΩ or higher
A60-9 (FR-) - A35-2 (FR-)	Always	Below 1 Ω
A60-9 (FR-) - Body ground	Always	10 kΩ or higher

REAR

Tester Connection	Condition	Specified Condition
A60-7 (RL+) - g1-1 (RL+)	Always	Below 1 Ω
A60-7 (RL+) - Body ground	Always	10 kΩ or higher
A60-27 (RL-) - g1-2 (RL-)	Always	Below 1 Ω
A60-27 (RL-) - Body ground	Always	10 kΩ or higher
A60-29 (RR+) - f1-1 (RR+)	Always	Below 1 Ω
A60-29 (RR+) - Body ground	Always	10 kΩ or higher
A60-8 (RR-) - f1-2 (RR-)	Always	Below 1 Ω
A60-8 (RR-) - Body ground	Always	10 kΩ or higher

(c) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SKID CONTROL ECU TO EACH SPEED SENSOR)**

OK

8 RECONFIRM DTC

(a) Clear the DTC (See page BC-302).
(b) Start the engine.

BC

(c) Drive the vehicle at a speed of 20 mph (32 km/h) or more for at least 60 seconds.

(d) Check if the same DTC is recorded (See page BC-302).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTC (C1237/37) is not output	A
DTC (C1237/37) is output	B

B → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

A → **CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION) (See page BC-298)**

DTC	C1241/41	Low Battery Positive Voltage or Abnormally High Battery Positive Voltage

DESCRIPTION

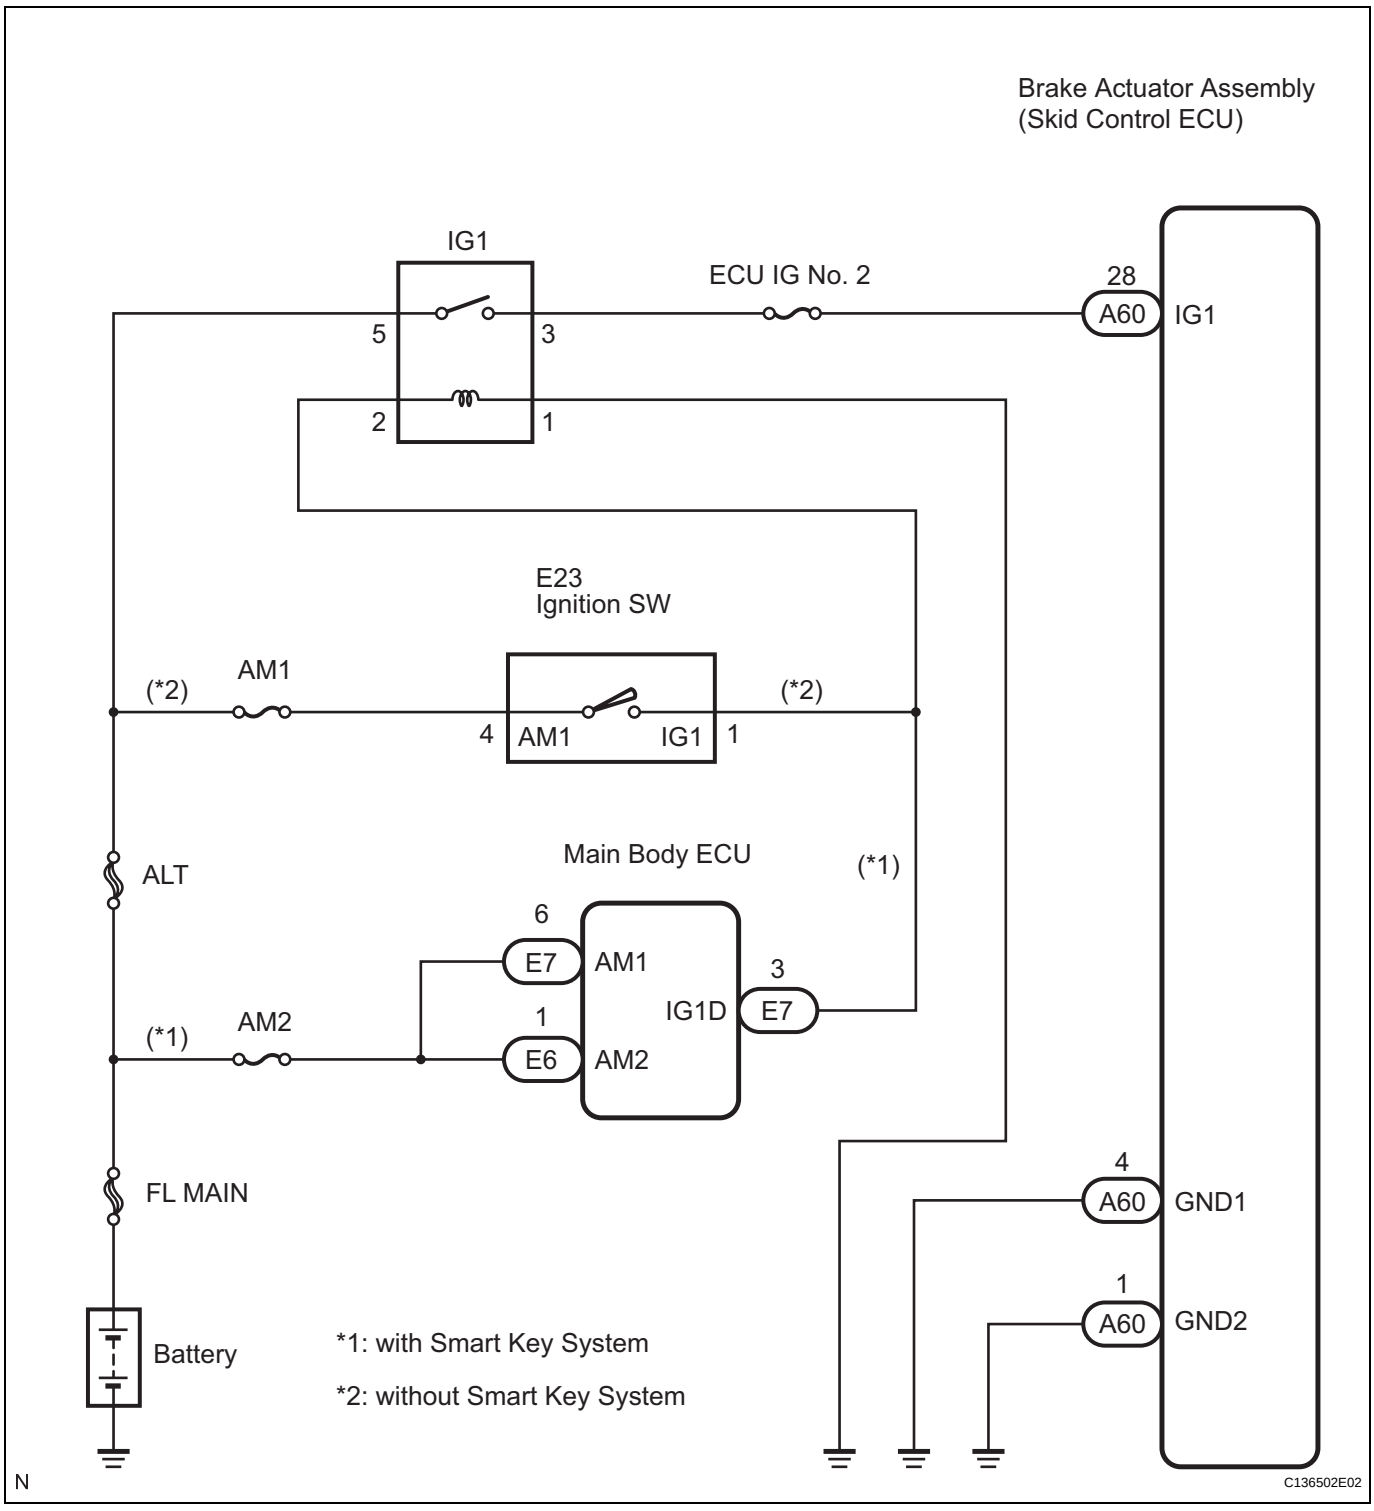
If a malfunction is detected in the power supply circuit of the brake actuator assembly (skid control ECU), the skid control ECU (housed in the actuator assembly) stores this DTC and the fail-safe function prohibits ABS operation.

This DTC is output when the IG1 terminal voltage deviates from the normal condition due to a malfunction in the power supply or charging circuit such as the battery or alternator circuit.

This DTC is cancelled when the IG1 terminal voltage returns to normal (only when the voltage returns to normal from a voltage lower than the specified value).

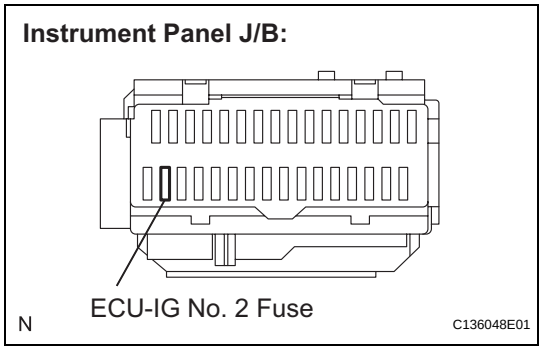
DTC No.	DTC Detection Condition	Trouble Area
C1241/41	When either of the following is detected: • Battery voltage is 16.8 V or more. • Battery voltage is 9.2 V or less.	• Battery • ECU-IG No. 2 fuse • Charging system • Power source circuit • Brake actuator assembly (internal power source circuit)

WIRING DIAGRAM



INSPECTION PROCEDURE

1 INSPECT FUSE (ECU-IG NO. 2 FUSE)



(a) Remove the ECU-IG No. 2 fuse from the instrument panel J/B.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition
ECU-IG No. 2 fuse	Below 1 Ω (Continuity)

(c) Install the fuse.

NG → **REPLACE FUSE**

OK

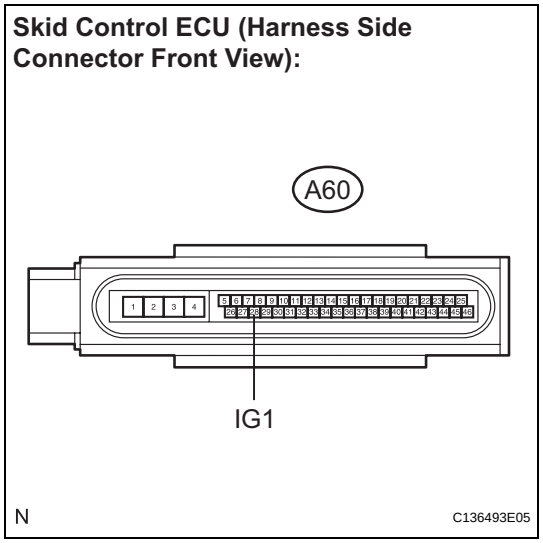
2 INSPECT BATTERY

(a) Check the battery voltage.
Standard voltage:
11 to 14 V

NG → **INSPECT CHARGING SYSTEM**

OK

3 INSPECT SKID CONTROL ECU (IG1 TERMINAL VOLTAGE)



(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Condition	Specified Condition
A60-28 (IG1) - Body ground	Ignition switch on (IG)	10 to 14 V

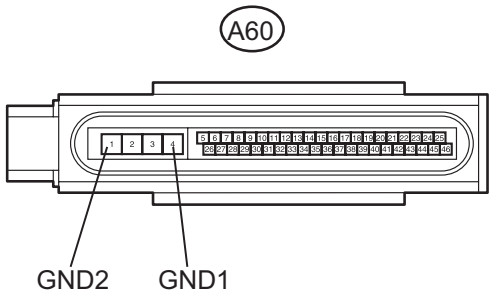
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (IG1 CIRCUIT)**

OK

BC

4 INSPECT SKID CONTROL ECU (GND TERMINAL CONTINUITY)

Skid Control ECU (Harness Side Connector Front View):



N C136493E02

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
A60-4 (GND1) - Body ground	Below 1 Ω
A60-1 (GND2) - Body ground	Below 1 Ω

(b) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

BC

OK

5 RECONFIRM DTC

(a) Clear the DTC (See page BC-302).
(b) Start the engine.
(c) Check if the same DTC is recorded (See page BC-302).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTC is not output	A
DTC is output (When troubleshooting in accordance with the PROBLEM SYMPTOMS TABLE)	B
DTC is output (When troubleshooting in accordance with the DTC CHART)	C

B → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page BC-295)**

C → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

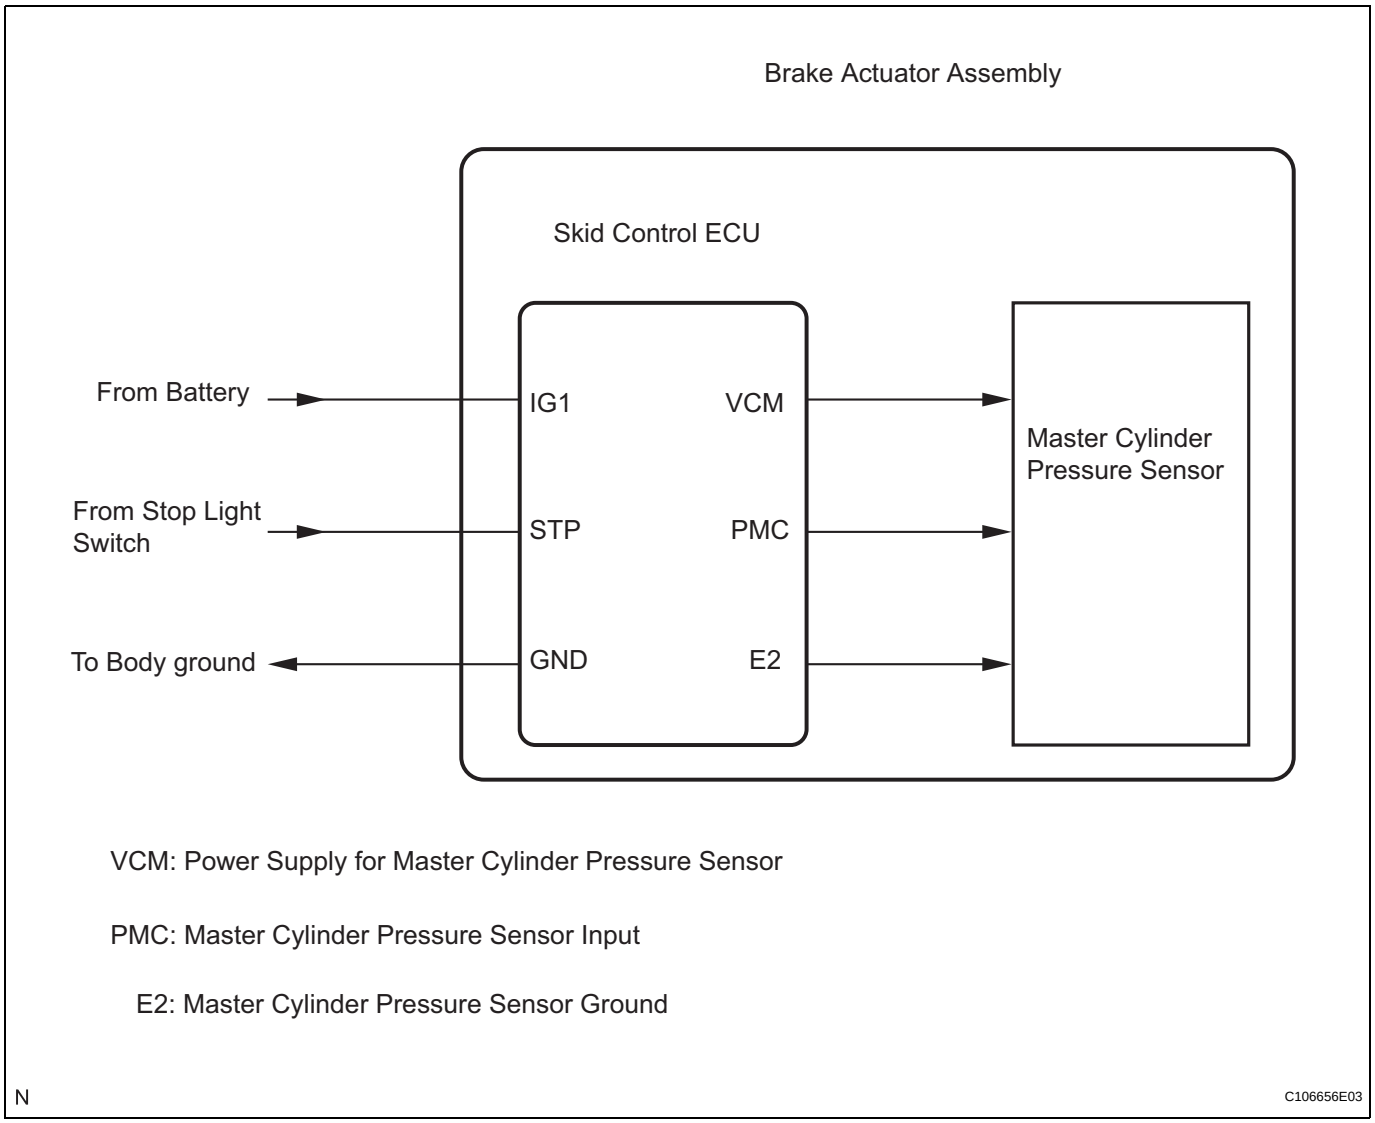
A

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION) (See page BC-298)

DTC	C1246/46	Master Cylinder Pressure Sensor Malfunction

DESCRIPTION

The master cylinder pressure sensor is connected to the skid control ECU in the brake actuator assembly.



DTC No.	DTC Detection Condition	Trouble Area
C1246/46	When any of the following is detected: • The voltage of the sensor signal is out of range (less than 0.3 V, more than 4.86 V). • The sensor supply voltage is out of range (above 5.3 V, below 4.7 V). • The sensor signal offset value is out of range. • The sum of signal 1 and signal 2 is out of range (above 5.5 V, below 4.5 V).	• Master cylinder pressure sensor • Master cylinder pressure sensor circuit • Stop light switch circuit • Brake actuator assembly (skid control ECU)

INSPECTION PROCEDURE

HINT:

Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK STOP LIGHT OPERATION

(a) Check that the stop light comes on when the brake pedal is depressed, and goes off when the brake pedal is released.

OK

Condition	Illumination Condition
Brake pedal depressed	ON
Brake pedal released	OFF

NG → **INSPECT STOP LIGHT CIRCUIT**

OK ↓

2	READ VALUE OF INTELLIGENT TESTER (MASTER CYLINDER PRESSURE SENSOR)

BC

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Select the "DATA LIST" mode on the intelligent tester (See page BC-307).

DATA LIST: ABS/TRAC/VSC

Item (Display)	Measurement Item / Range (Display)	Normal Condition
MAS CYL PRESS 1	Master cylinder pressure sensor 1 reading / min.: 0 V, max.: 5 V	When brake pedal is released: 0.3 to 0.5 V

(d) Check that the hydraulic pressure value of the master cylinder pressure sensor observed on the intelligent tester changes when the brake pedal is depressed.
OK:
When the pedal is depressed, voltage displayed on the intelligent tester increases.

NG → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

OK ↓

3	READ VALUE OF INTELLIGENT TESTER (STOP LIGHT SWITCH)

(a) Select the "DATA LIST" mode on the intelligent tester (See page BC-307).

DATA LIST: ABS/TRAC/VSC

Item (Display)	Measurement Item / Range (Display)	Normal Condition
STOP LAMP SW	Stop light switch / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released

(b) Check that the stop light condition observed on the intelligent tester changes when the brake pedal is depressed.
OK:
When the brake pedal is depressed, the intelligent tester displays "ON".

NG → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

OK

4	RECONFIRM DTC

(a) Clear the DTC (See page BC-302).
(b) Start the engine.
(c) At a speed of 18 mph (30 km/h) or more, drive the vehicle and perform braking test (decelerate the vehicle by depressing the brake pedal).
(d) Check if the same DTC is recorded (See page BC-302).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTC (C1246/46) is not output	A
DTC (C1246/46) is output	B

B → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

A

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION) (See page BC-298)

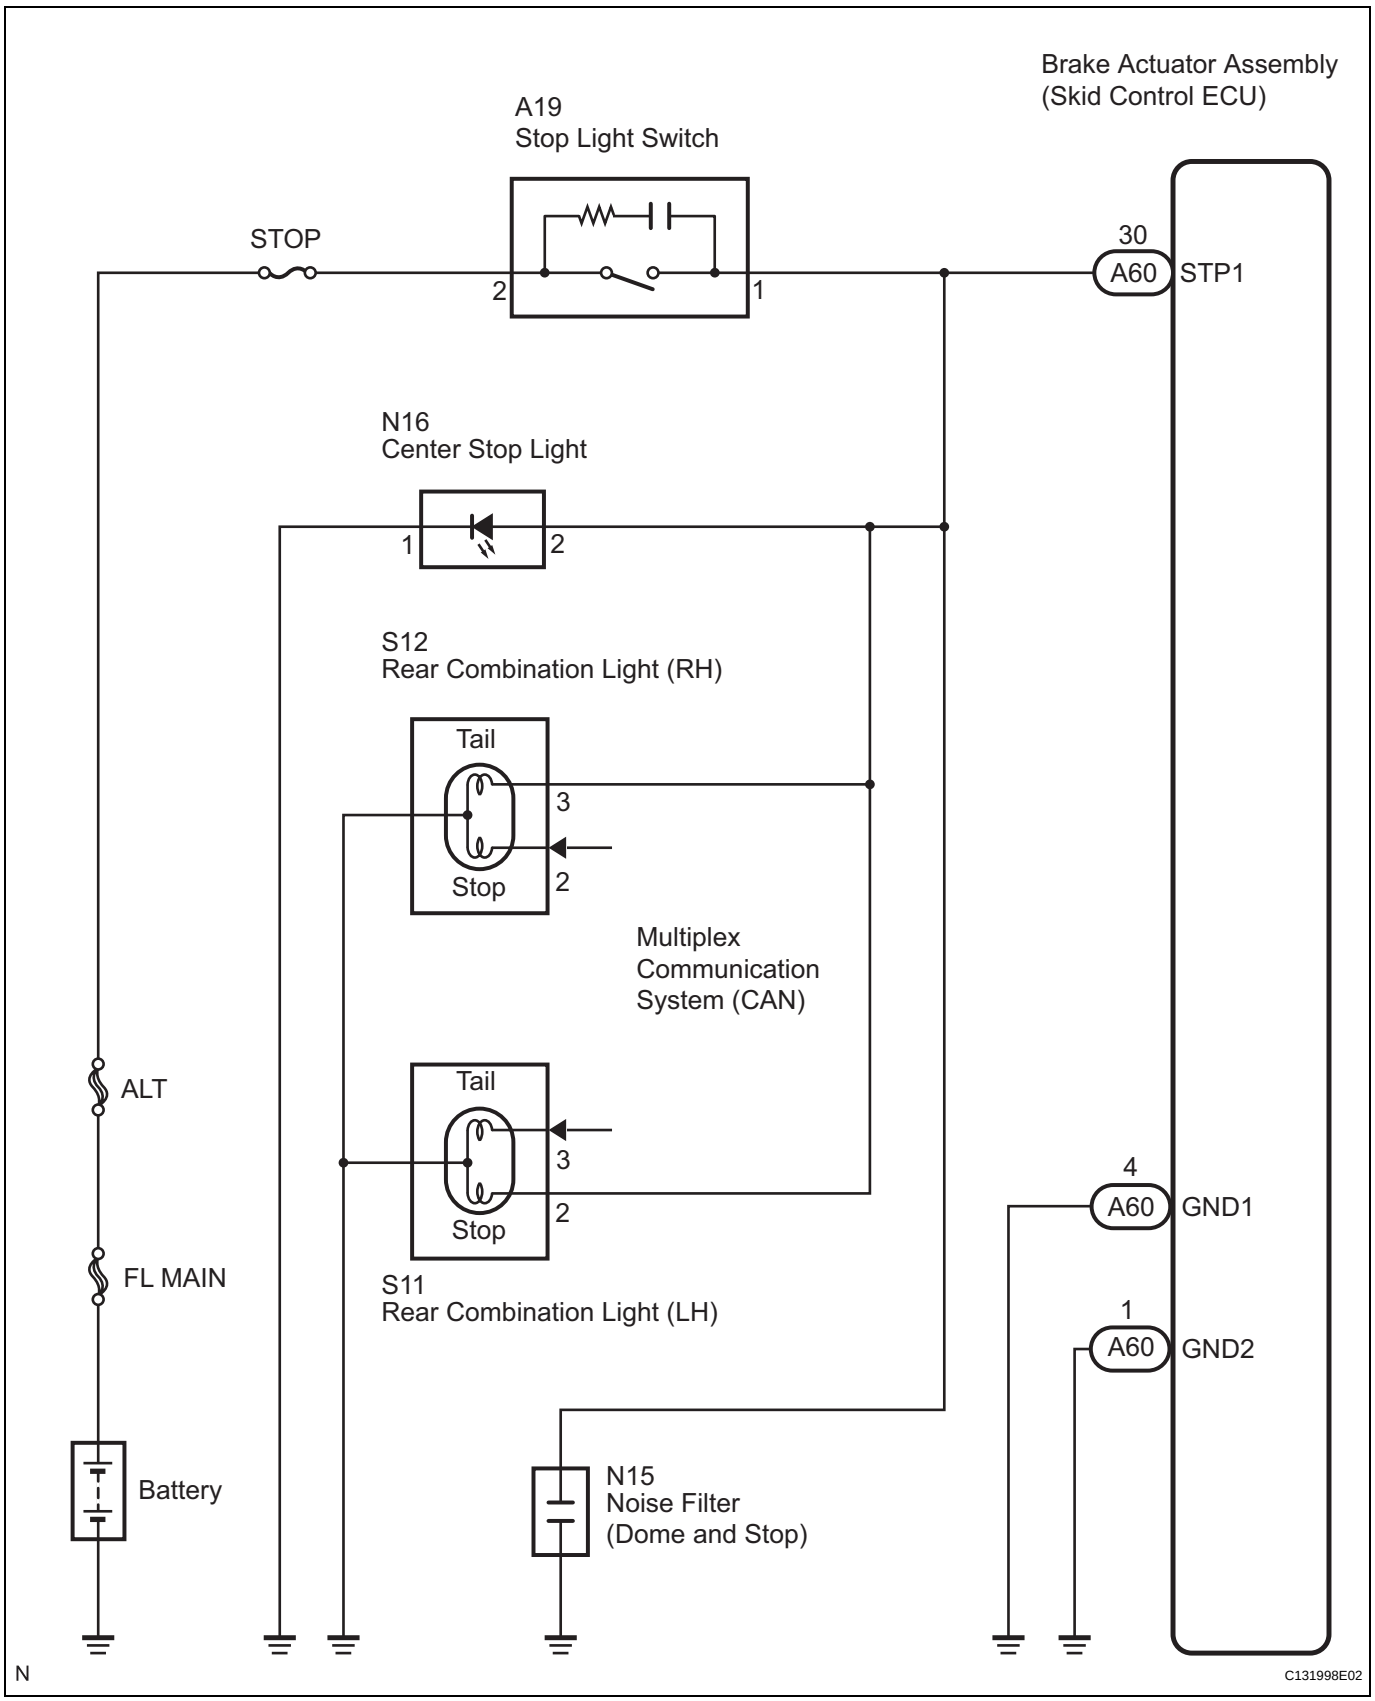
DTC	C1249/49	Open in Stop Light Switch Circuit

DESCRIPTION

This circuit recognizes brake operation by sending a stop light signal to the skid control ECU.
The skid control ECU has an open detection circuit, which outputs this DTC when detecting an open in the stop light signal input line (STP terminal) or the ground line of the stop light circuit with the stop light switch off (brake pedal not depressed).

DTC No.	DTC Detection Condition	Trouble Area
C1249/49	When either of the following is detected: • After the ignition switch is turned on (IG), the STP terminal voltage of the ECU is 40% to 67% of its supplied voltage for 0.5 seconds. • When STP signal is OFF (release the brake pedal), the pressure sensor value exceeds 725 bar for 1 second.	• Stop light switch • Stop light switch circuit • Brake actuator assembly (skid control ECU)

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

HINT:

Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK STOP LIGHT SWITCH OPERATION (STOP LIGHT SWITCH CIRCUIT)

(a) Check that the stop lights come on when the brake pedal is depressed and go off when the brake pedal is released.

OK

Pedal Condition	Illumination Condition
Brake pedal depressed	ON
Brake pedal released	OFF

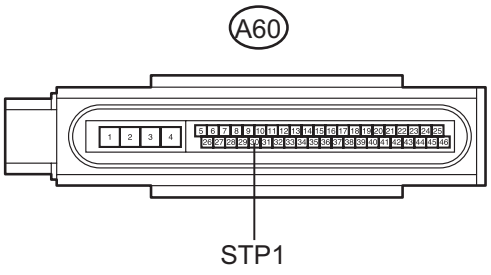
NG → **Go to step 5**

OK

2	INSPECT SKID CONTROL ECU (STP TERMINAL)

BC

Skid Control ECU (Harness Side Connector Front View):



(a) Disconnect the skid control ECU connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

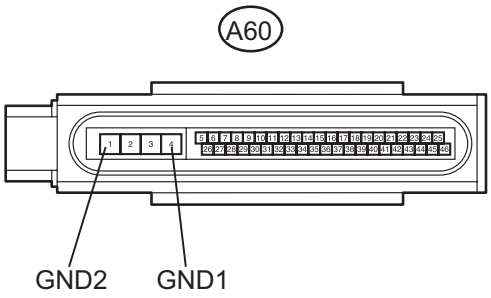
Tester Connection	Switch Condition	Specified Condition
A60-30 (STP1) - Body ground	Brake pedal depressed	8 to 14 V
A60-30 (STP1) - Body ground	Brake pedal released	Below 4.0 V

NG → **Go to step 7**

OK

3 INSPECT SKID CONTROL ECU (GND TERMINAL CONTINUITY)

Skid Control ECU (Harness Side Connector Front View):



N C136493E02

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
A60-4 (GND1) - Body ground	Below 1 Ω
A60-1 (GND2) - Body ground	Below 1 Ω

(b) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

4 RECONFIRM DTC

(a) Clear the DTC (See page BC-302).
(b) Start the engine.
(c) Depress the brake pedal several times to test the stop light circuit.
(d) Check if the same DTC is recorded (See page BC-302).

HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

HINT:
It is suspected that the DTCs were output due to a bad connection of the connector terminal.

B → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

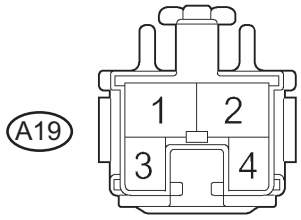
A

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION) (See page BC-298)

BC

5	CHECK HARNESS AND CONNECTOR (STOP LIGHT SWITCH POWER SOURCE TERMINAL VOLTAGE)

Stop Light Switch (Harness Side Connector Front View):



I042363E18

(a) Disconnect the stop light switch connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
A19-2 - Body ground	Always	10 to 14 V

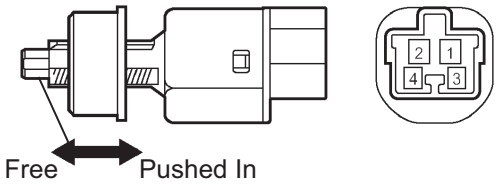
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (STOP LIGHT SWITCH POWER SOURCE CIRCUIT)**

OK

BC

6	INSPECT STOP LIGHT SWITCH ASSEMBLY

Stop Light Switch Assembly:



H

F047752E04

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Switch Condition	Specified Condition
1 - 2	Switch pin free	Below 1 Ω
1 - 2	Switch pin pushed in	10 kΩ or higher

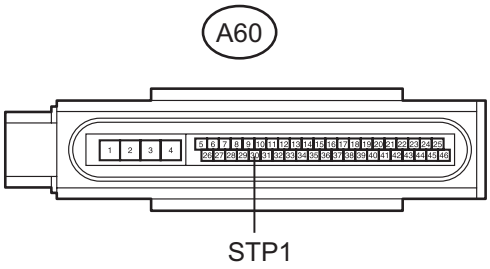
(b) Connect the connector.

NG → **REPLACE STOP LIGHT SWITCH ASSEMBLY**

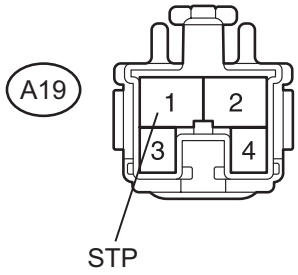
OK

7	CHECK HARNESS AND CONNECTOR (STOP LIGHT SWITCH TO SKID CONTROL ECU)

Skid Control ECU (Harness Side Connector Front View):



Stop Lignt Switch (Harness Side Connector Front View):



N C139147E01

(a) Disconnect the stop light switch connector and skid control ECU connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
A60-30 (STP1) - A19-1 (STP1)	Below 1 Ω

(c) Connect the connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (STOP LIGHT SWITCH TO SKID CONTROL ECU)**

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR (STOP LIGHT CIRCUIT)

BC

DTC	C1300/62	Skid Control ECU Malfunction

DESCRIPTION

The skid control ECU is housed in the brake actuator assembly.
The skid control ECU judges the vehicle driving condition based on the signals from each sensor, and controls the brake actuator assembly.

DTC No.	DTC Detection Condition	Trouble Area
C1300/62	Internal failure of the skid control ECU control unit	Brake actuator assembly (skid control ECU)

INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK DTC

(a) Check the DTC (See page BC-302).

BC

Result

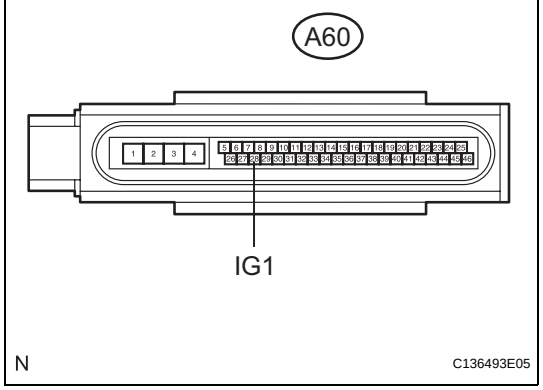
Condition	Proceed to
DTC C1300/62 is output (only C1300/62)	A
Other DTCs are output	B

B → **REPAIR CIRCUITS INDICATED BY OUTPUT DTCS (See page BC-302)**

A

2	INSPECT SKID CONTROL ECU (IG1 TERMINAL VOLTAGE)

Skid Control ECU (Harness Side Connector Front View):



(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

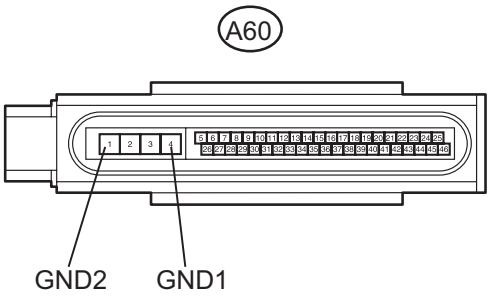
Tester Connection	Condition	Specified Condition
A60-28 (IG1) - Body ground	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (IG1 CIRCUIT)**

OK

3	INSPECT SKID CONTROL ECU (GND TERMINAL CONTINUITY)

Skid Control ECU (Harness Side Connector Front View):



N C136493E02

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
A60-4 (GND1) - Body ground	Below 1 Ω
A60-1 (GND2) - Body ground	Below 1 Ω

(b) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

DTC	U0073/94	Control Module Communication Bus OFF

DTC	U0100/65	Lost Communication with ECM / PCM

DTC	U0123/62	Lost Communication with Yaw Rate Sensor Module

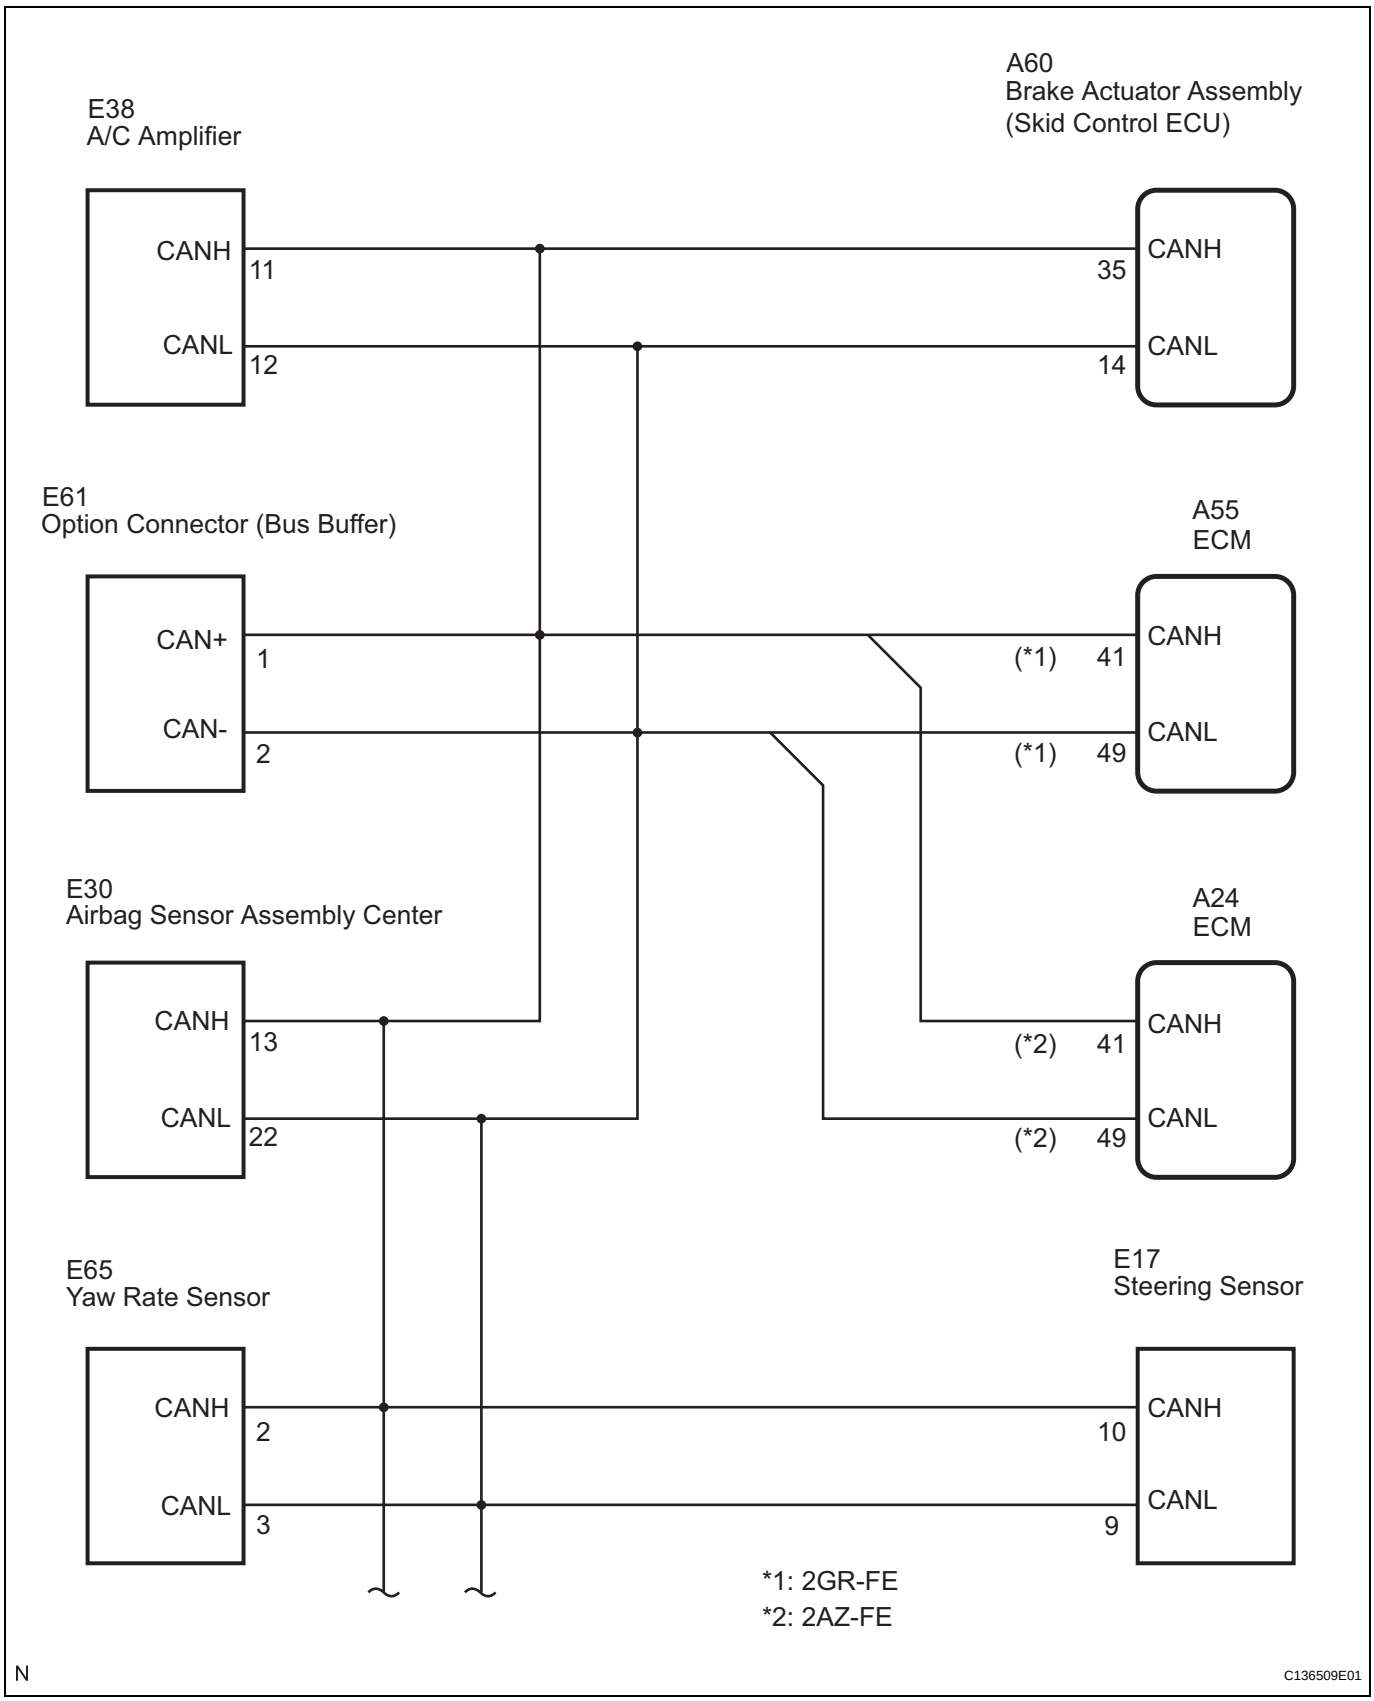
DTC	U0126/63	Lost Communication with Steering Angle Sensor Module

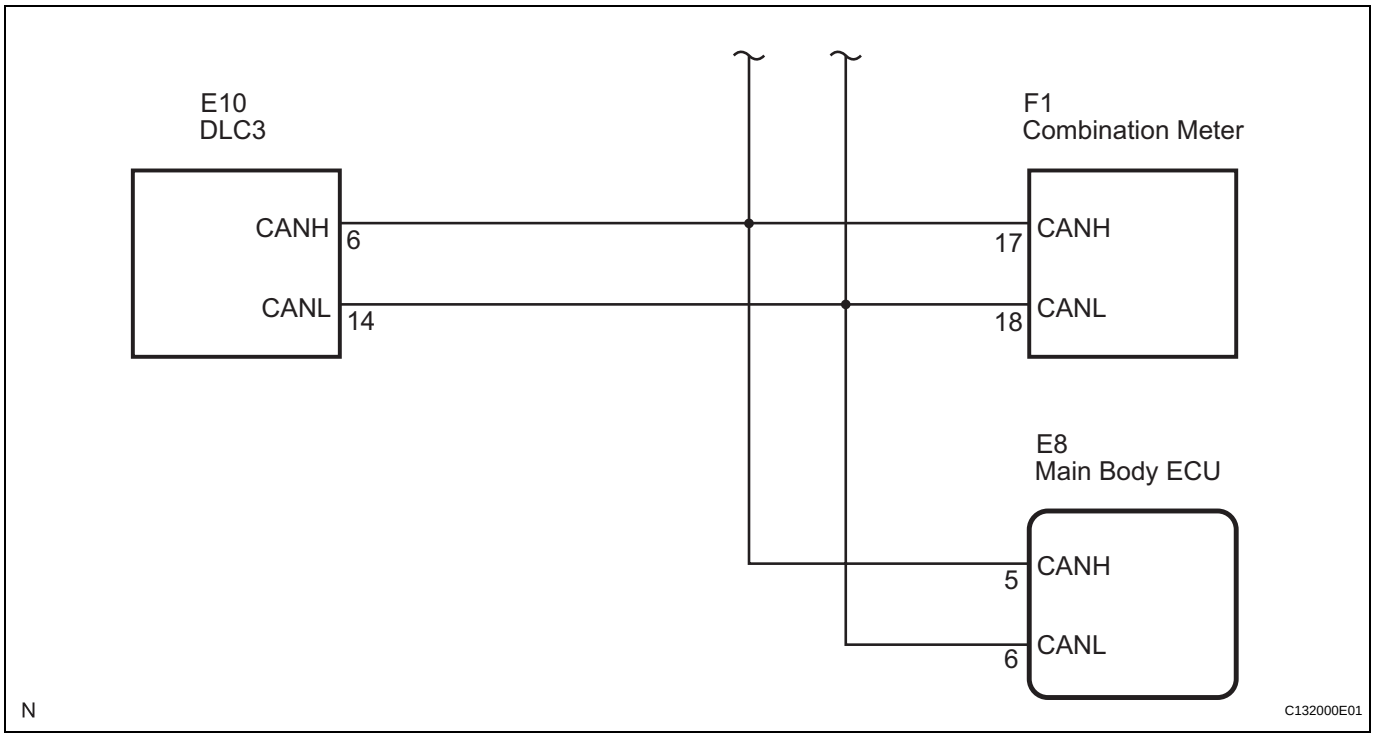
DESCRIPTION

The skid control ECU receives the signals from the ECM, steering angle sensor, and yaw rate and acceleration sensor via the CAN communication system.

DTC No.	DTC Detection Condition	Trouble Area
U0073/94	When either of the following is detected: 1. Bus OFF state continues for 300 msec. 2. The ECU detects that it cannot send a signal.	CAN communication system
U0100/65	When either of the following is detected: 1. At a vehicle speed of 4 mph (6 km/h) or more, the skid control ECU receives data that is out of range from the engine. 2. At a vehicle speed of 4 mph (6 km/h) or more, the skid control ECU receives abnormal data from the engine (5 cycles).	CAN communication system (Skid control ECU to ECM)
U0123/62	When any r of the following is detected: 1. The skid control ECU receives an abnormal signal from the yaw rate sensor (5 cycles). 2. The skid control ECU receives a signal that has a shorter message than normal. 3. The skid control ECU cannot receive a signal from the yaw rate sensor.	CAN communication system (Skid control ECU to yaw rate and acceleration sensor)
U0126/63	When any of the following is detected: 1. The skid control ECU receives an abnormal signal from the steering angle sensor (5 cycles). 2. The skid control ECU receives a signal that has a shorter message than normal. 3. The skid control ECU cannot receive a signal from the steering angle sensor.	CAN communication system (Skid control ECU to steering angle sensor)

WIRING DIAGRAM





BC

INSPECTION PROCEDURE

Proceed to CAN communication system troubleshooting (See page CA-8).

HINT:

When a DTC indicating a CAN communication system malfunction is output, repair the CAN communication system before repairing each corresponding sensor.

ABS Warning Light Remains ON

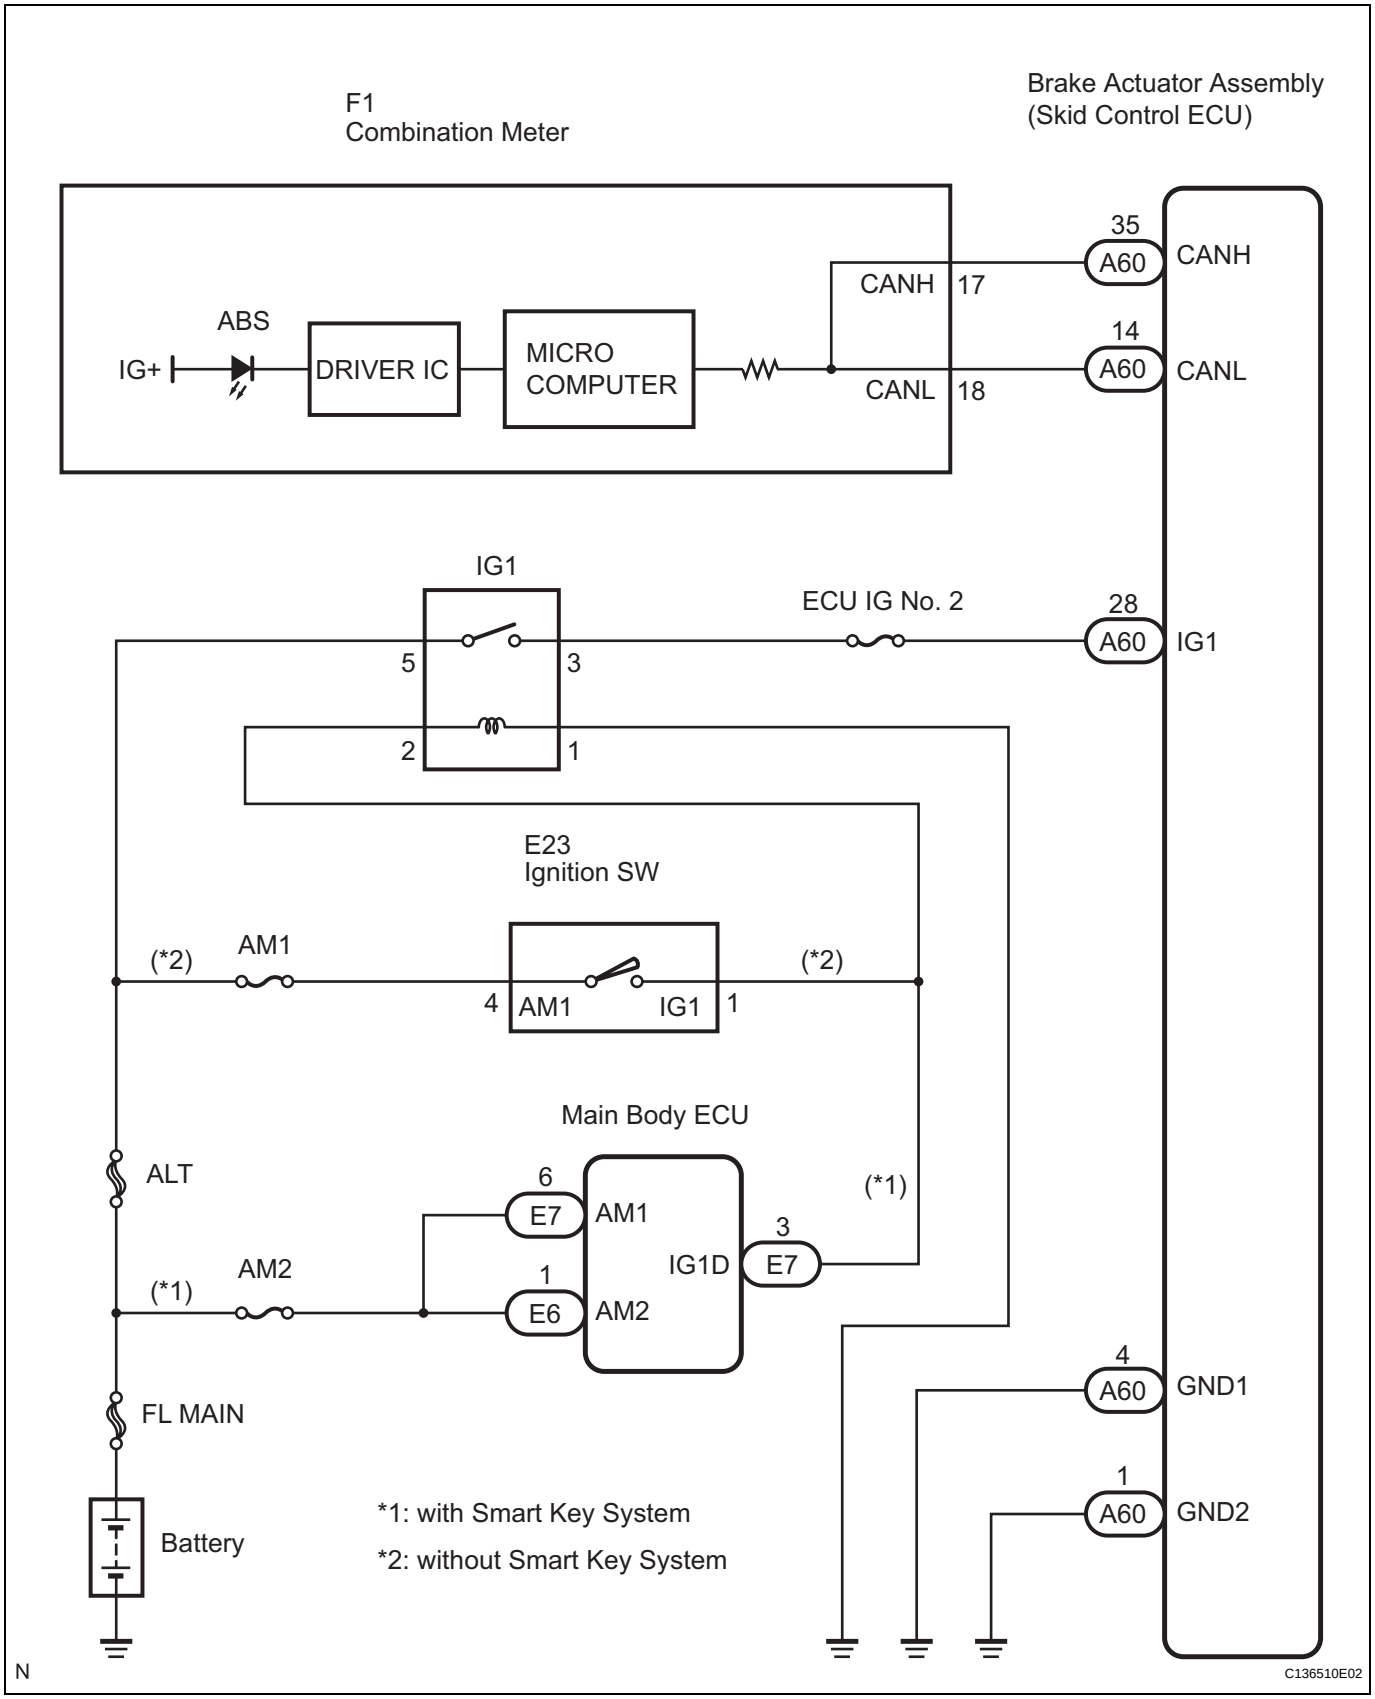
DESCRIPTION

The skid control ECU is connected to the combination meter assembly via CAN communication.
If any of the following is detected, the ABS warning light remains on.

- The skid control ECU connectors are disconnected from the skid control ECU.
- There is a malfunction in the skid control ECU internal circuit.
- There is an open in the wire harness between the combination meter assembly and the skid control ECU.

HINT:
In some cases, the intelligent tester cannot be used when the skid control ECU is abnormal.

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

HINT:

Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication system DTC is output (See page BC-302).

Result

Condition	Proceed to
CAN communication system DTC is not output	A
CAN communication system DTC is output	B

B → **INSPECT CAN COMMUNICATION SYSTEM (See page CA-8)**

A

2	CHECK IF SKID CONTROL ECU CONNECTOR IS SECURELY CONNECTED

BC

(a) Check if the skid control ECU connector is securely connected.
OK:
The connector is securely connected.

NG → **CONNECT CONNECTOR TO ECU CORRECTLY**

OK

3	CHECK BATTERY

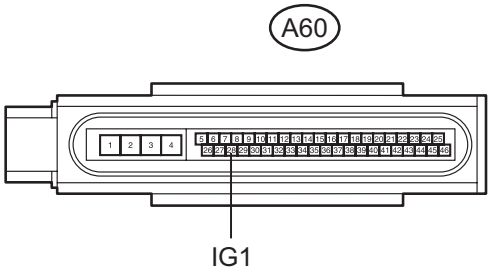
(a) Check the battery voltage.
Standard voltage:
11 to 14 V

NG → **CHECK AND REPLACE CHARGING SYSTEM OR BATTERY**

OK

4 INSPECT SKID CONTROL ECU (IG1 TERMINAL)

Skid Control ECU (Harness Side Connector Front View):



N C136493E05

(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

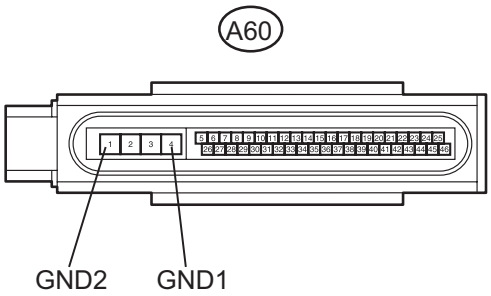
Tester Connection	Condition	Specified Condition
A60-28 (IG1) - Body ground	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (IG1 CIRCUIT)**

OK

5 INSPECT SKID CONTROL ECU (GND TERMINAL)

Skid Control ECU (Harness Side Connector Front View):



N C136493E02

(a) Turn the ignition switch off.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A60-4 (GND1) - Body ground	Always	Below 1 Ω
A60-1 (GND2) - Body ground	Always	Below 1 Ω

(c) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

6 INSPECT COMBINATION METER ASSEMBLY

(a) Connect the intelligent tester to the DLC3.
(b) Perform "ACTIVE TEST" of the combination meter assembly using the intelligent tester (See page ME-32).
(c) Check the ABS warning light operation.

OK:

The ABS warning light turns on or off in accordance with the intelligent tester.

BC

NG → **REPLACE COMBINATION METER ASSEMBLY (See page ME-63)**

OK

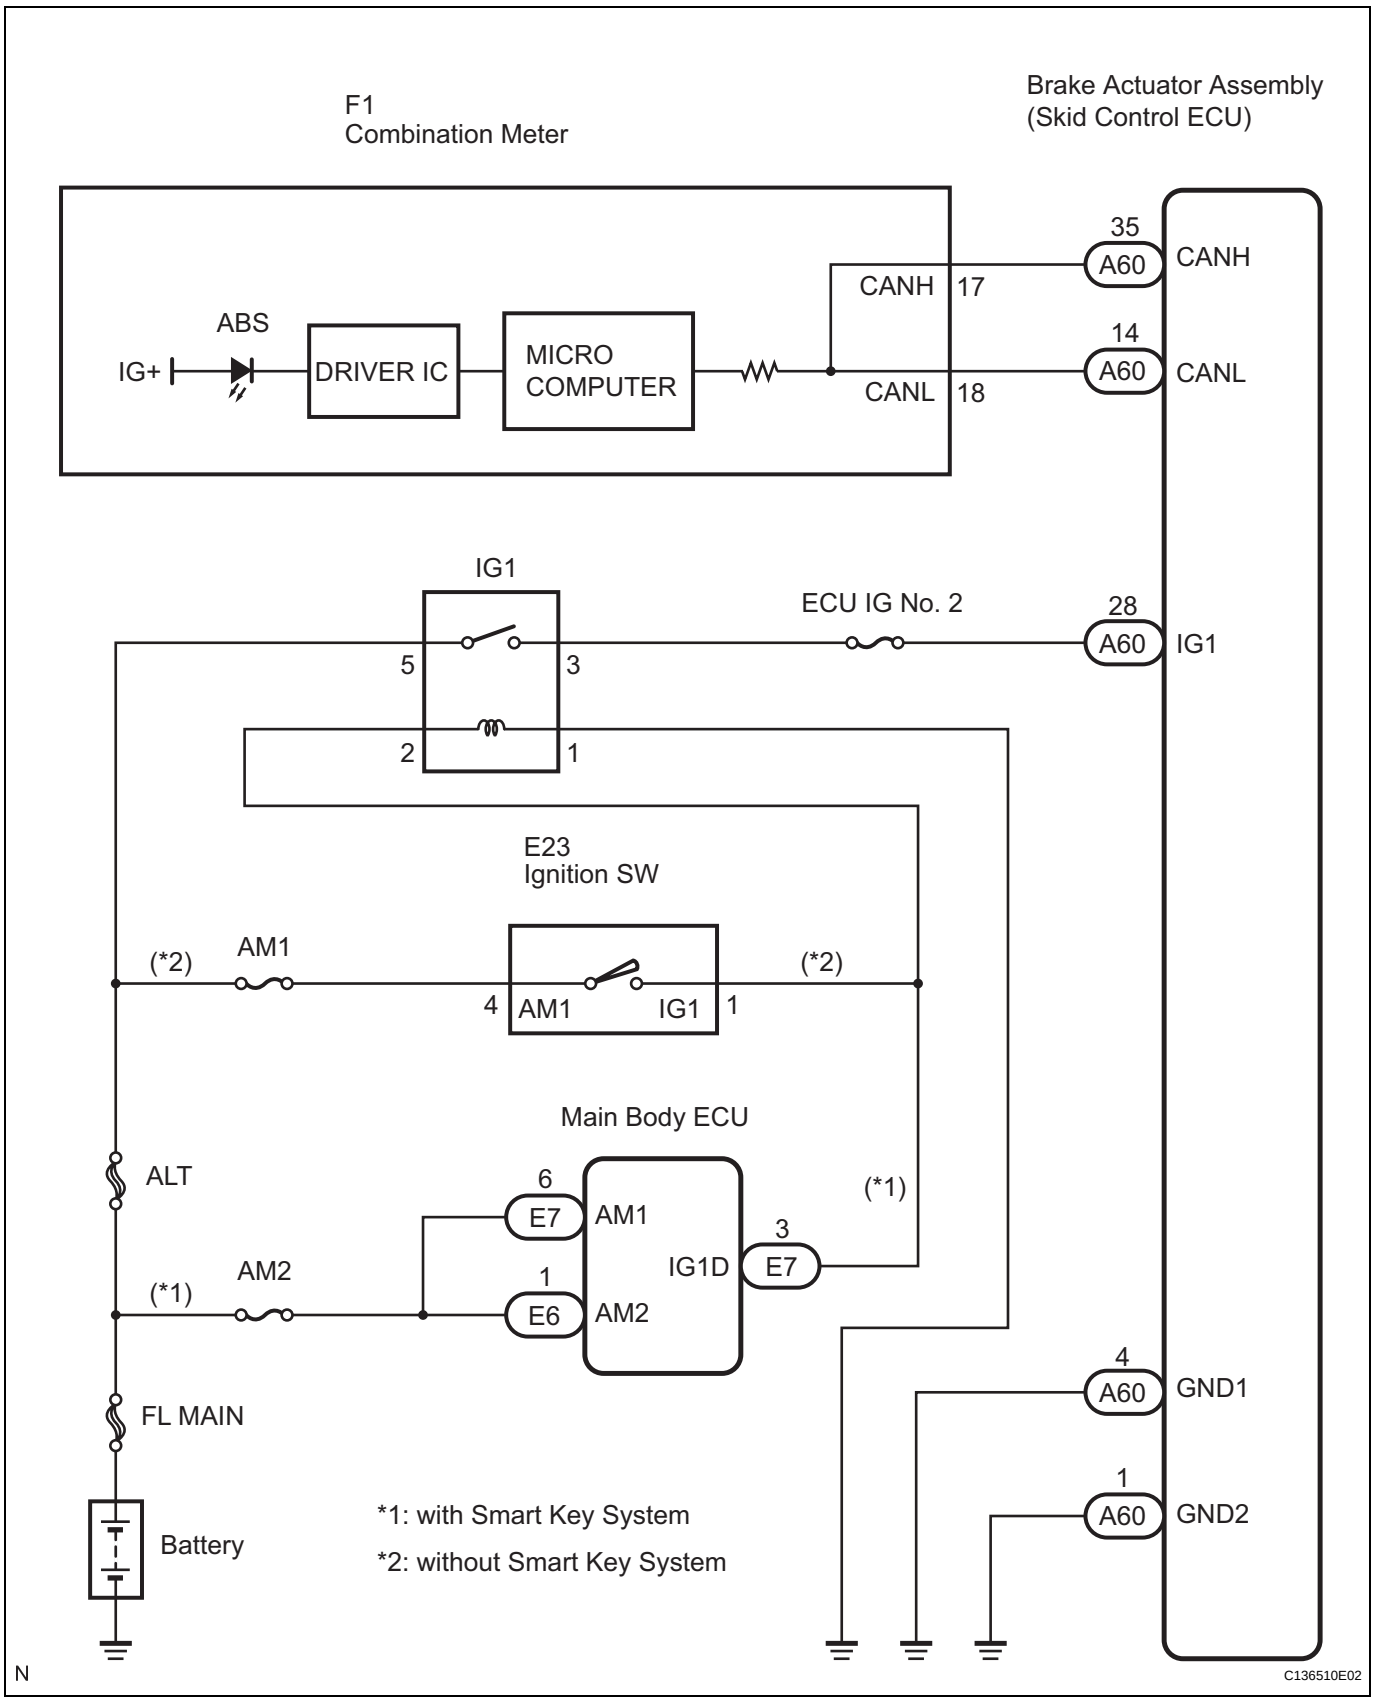
REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

ABS Warning Light does not Come ON

DESCRIPTION

The skid control ECU is connected to the combination meter assembly via CAN communication.

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication system DTC is output (See page BC-302).

Result

Condition	Proceed to
CAN communication system DTC is not output	A
CAN communication system DTC is output	B

B → **INSPECT CAN COMMUNICATION SYSTEM (See page CA-8)**

A

2	CHECK ABS WARNING LIGHT

(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch on (IG).
(c) Check that the ABS warning light comes on.
OK:
The ABS warning light comes on.
(d) Connect the connector.

OK → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

NG

3	INSPECT COMBINATION METER ASSEMBLY

(a) Connect the intelligent tester to the DLC3.
(b) Perform "ACTIVE TEST" of the combination meter assembly using the intelligent tester (See page ME-32).
(c) Check ABS warning light operation.
OK:
The ABS warning light turns on or off in accordance with the intelligent tester.

NG → **REPLACE COMBINATION METER ASSEMBLY (See page ME-63)**

OK

REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

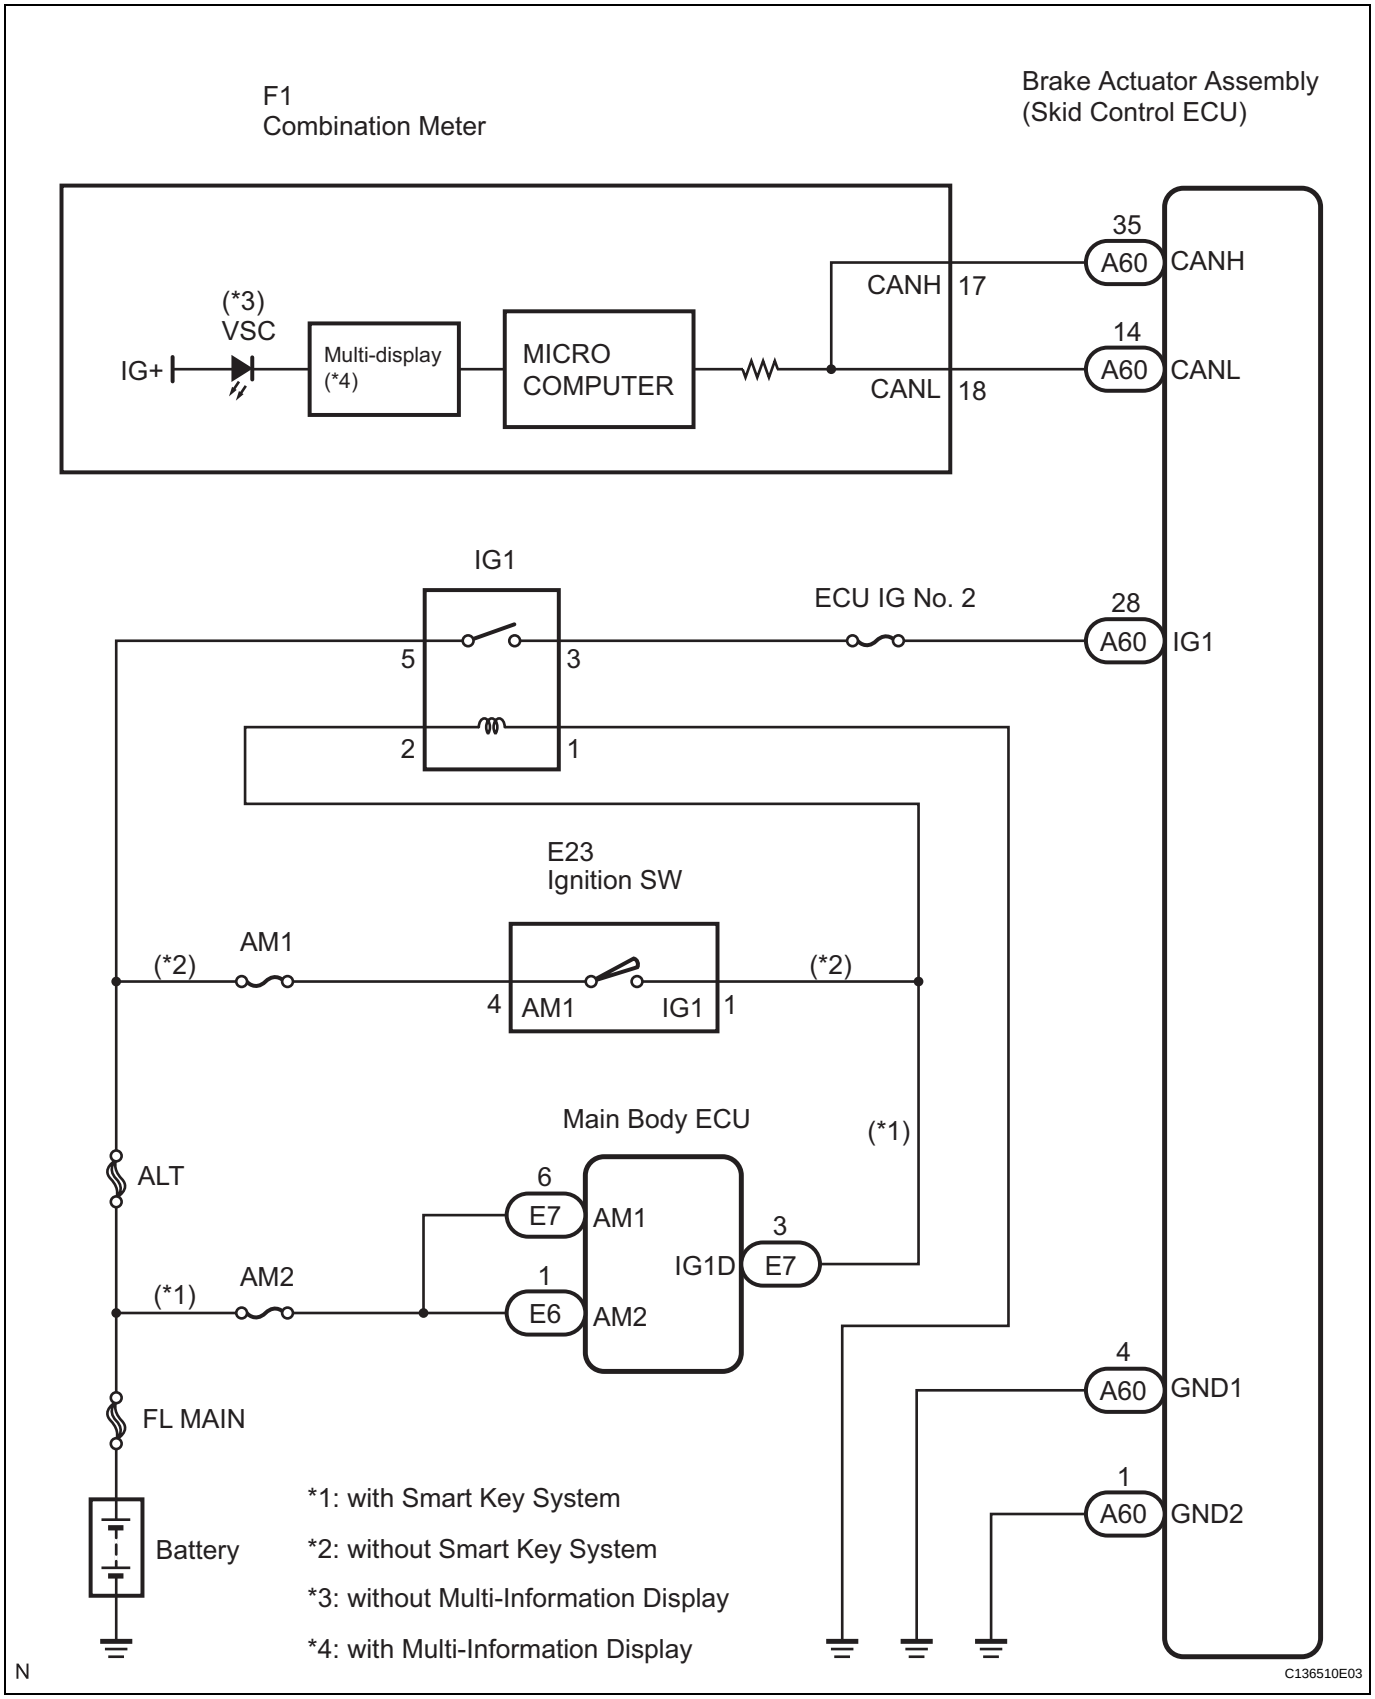
BC

VSC Warning Light Remains ON

DESCRIPTION

The skid control ECU communicates with the combination meter assembly via CAN communication. If the ECU stores a DTC, the master caution indicator light will illuminate, and the DTC will be displayed on the multi-information display in the combination meter (models with multi-information display). On models without a multi-information display, the VSC warning light will come on when the skid control ECU stores a DTC.

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

HINT:

Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication system DTC is output (See page BC-302).

Result

Condition	Proceed to
CAN communication system DTC is not output	A
CAN communication system DTC is output	B

B → **INSPECT CAN COMMUNICATION SYSTEM (See page CA-8)**

A

2	CHECK IF SKID CONTROL ECU CONNECTOR IS SECURELY CONNECTED

(a) Check if the skid control ECU connector is securely connected.
OK:
The connector is securely connected.

NG → **CONNECT CONNECTOR TO ECU CORRECTLY**

OK

3	CHECK BATTERY

(a) Check the battery voltage.
Standard voltage:
11 to 14 V

NG → **CHECK AND REPLACE CHARGING SYSTEM OR BATTERY**

OK

4	INSPECT COMBINATION METER ASSEMBLY

(a) Connect the intelligent tester to the DLC3.
(b) Perform "ACTIVE TEST" of the combination meter assembly using the intelligent tester (See page ME-32).
(c) Check VSC warning (multi-information display)/VSC warning light (without multi-information display) operation.
OK:
The VSC warning (multi-information display) or VSC warning light turns on or off in accordance with the intelligent tester.

NG → **REPLACE COMBINATION METER ASSEMBLY (See page ME-63)**

OK

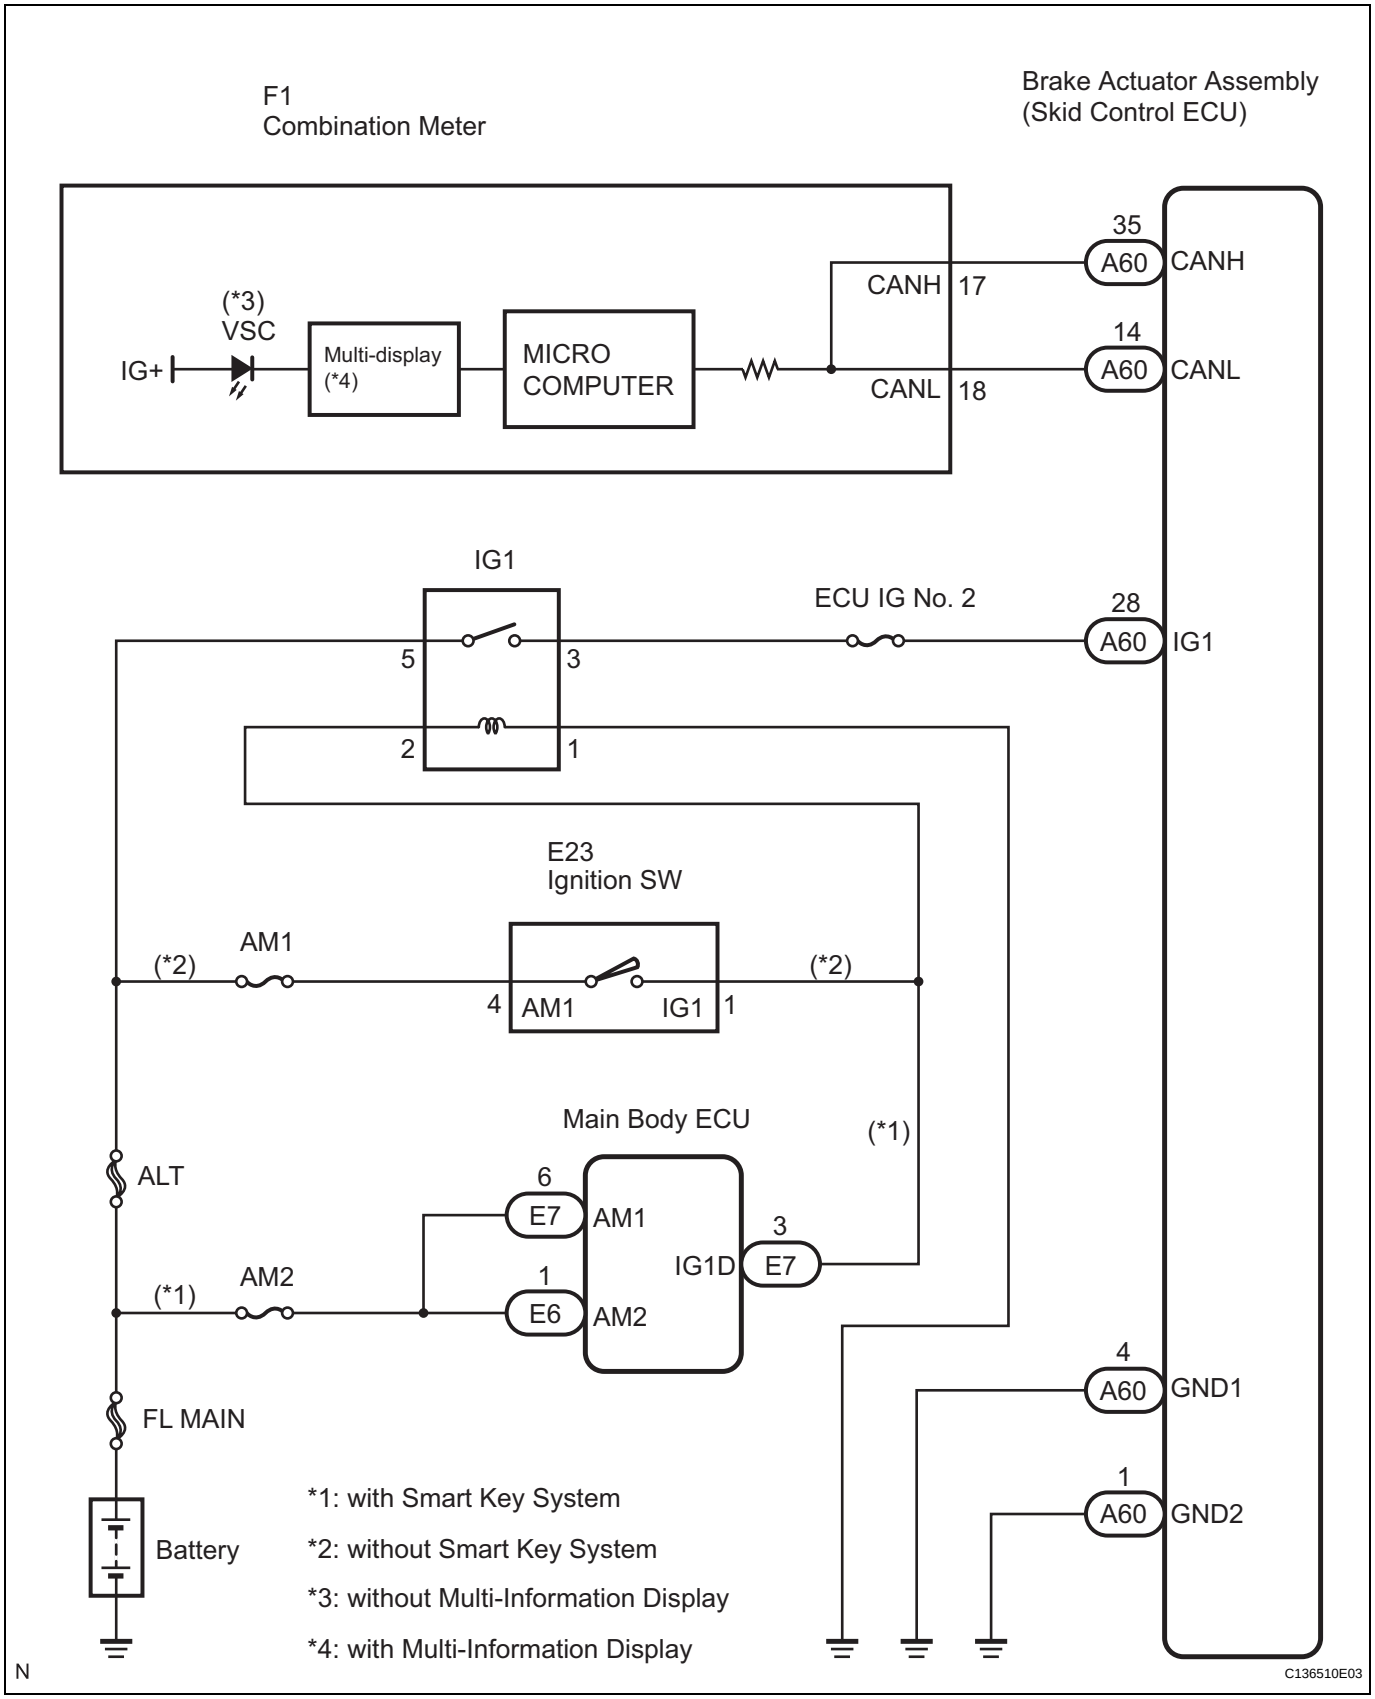
REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

VSC Warning Light does not Come ON

DESCRIPTION

The skid control ECU communicates with the combination meter assembly via CAN communication. If the ECU stores a DTC, the master caution indicator light will illuminate, and the DTC will be displayed on the multi-information display in the combination meter (models with multi-information display). On models without a multi-information display, the VSC warning light will come on when the skid control ECU stores a DTC.

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication system DTC is output (See page BC-302).

Result

Condition	Proceed to
CAN communication system DTC is not output	A
CAN communication system DTC is output	B

B → **INSPECT CAN COMMUNICATION SYSTEM (See page CA-8)**

A

2	INSPECT COMBINATION METER ASSEMBLY

(a) Connect the intelligent tester to the DLC3.
(b) Perform "ACTIVE TEST" of the combination meter assembly using the intelligent tester (See page ME-32).
(c) Check that "ON" and "OFF" of the VSC warning (multi-information display) or VSC warning light are indicated on the combination meter assembly when using the intelligent tester.

OK:

The VSC warning (multi-information display) turns on or off in accordance with the intelligent tester.

NG → **REPLACE COMBINATION METER ASSEMBLY (See page ME-63)**

OK

REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

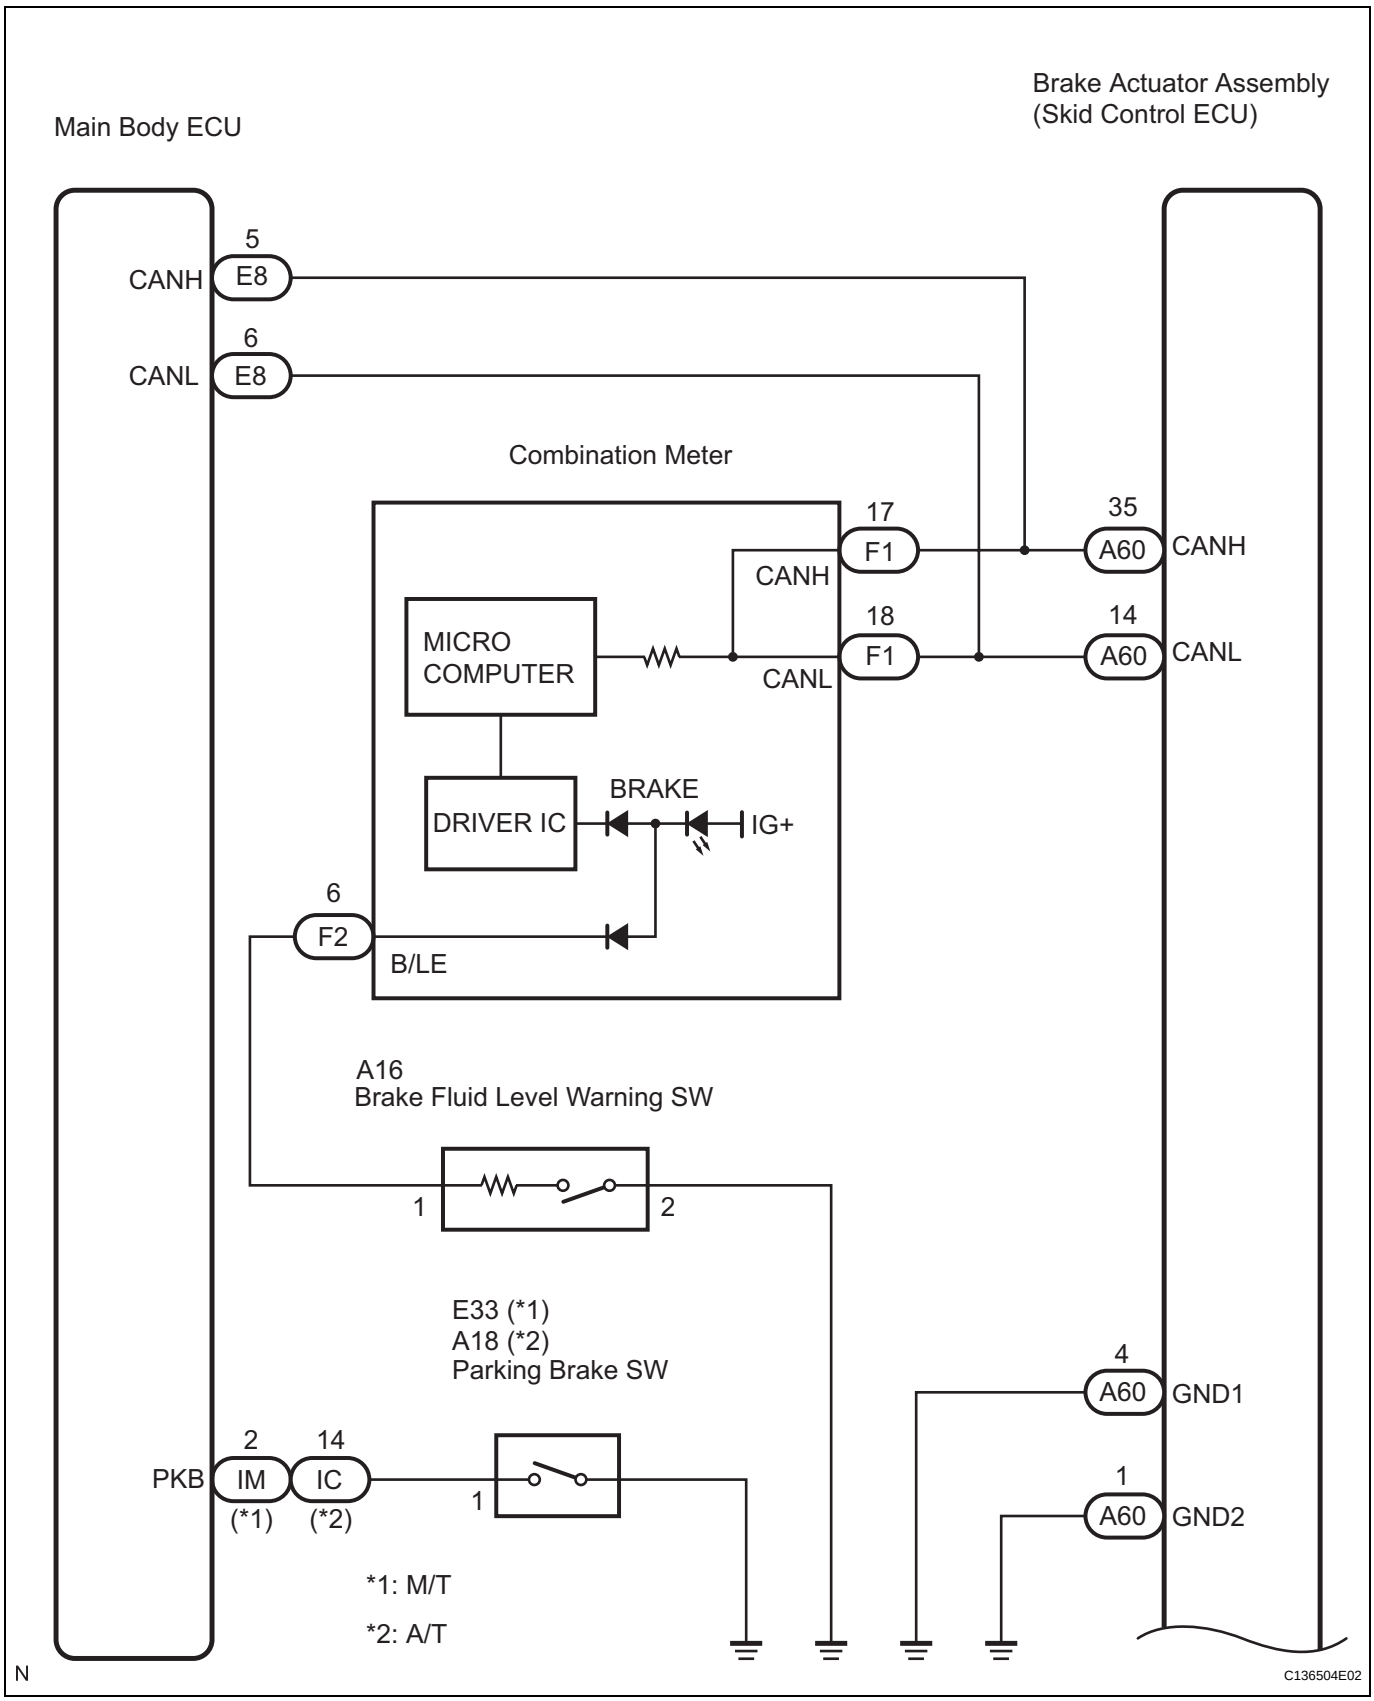
Brake Warning Light Remains ON

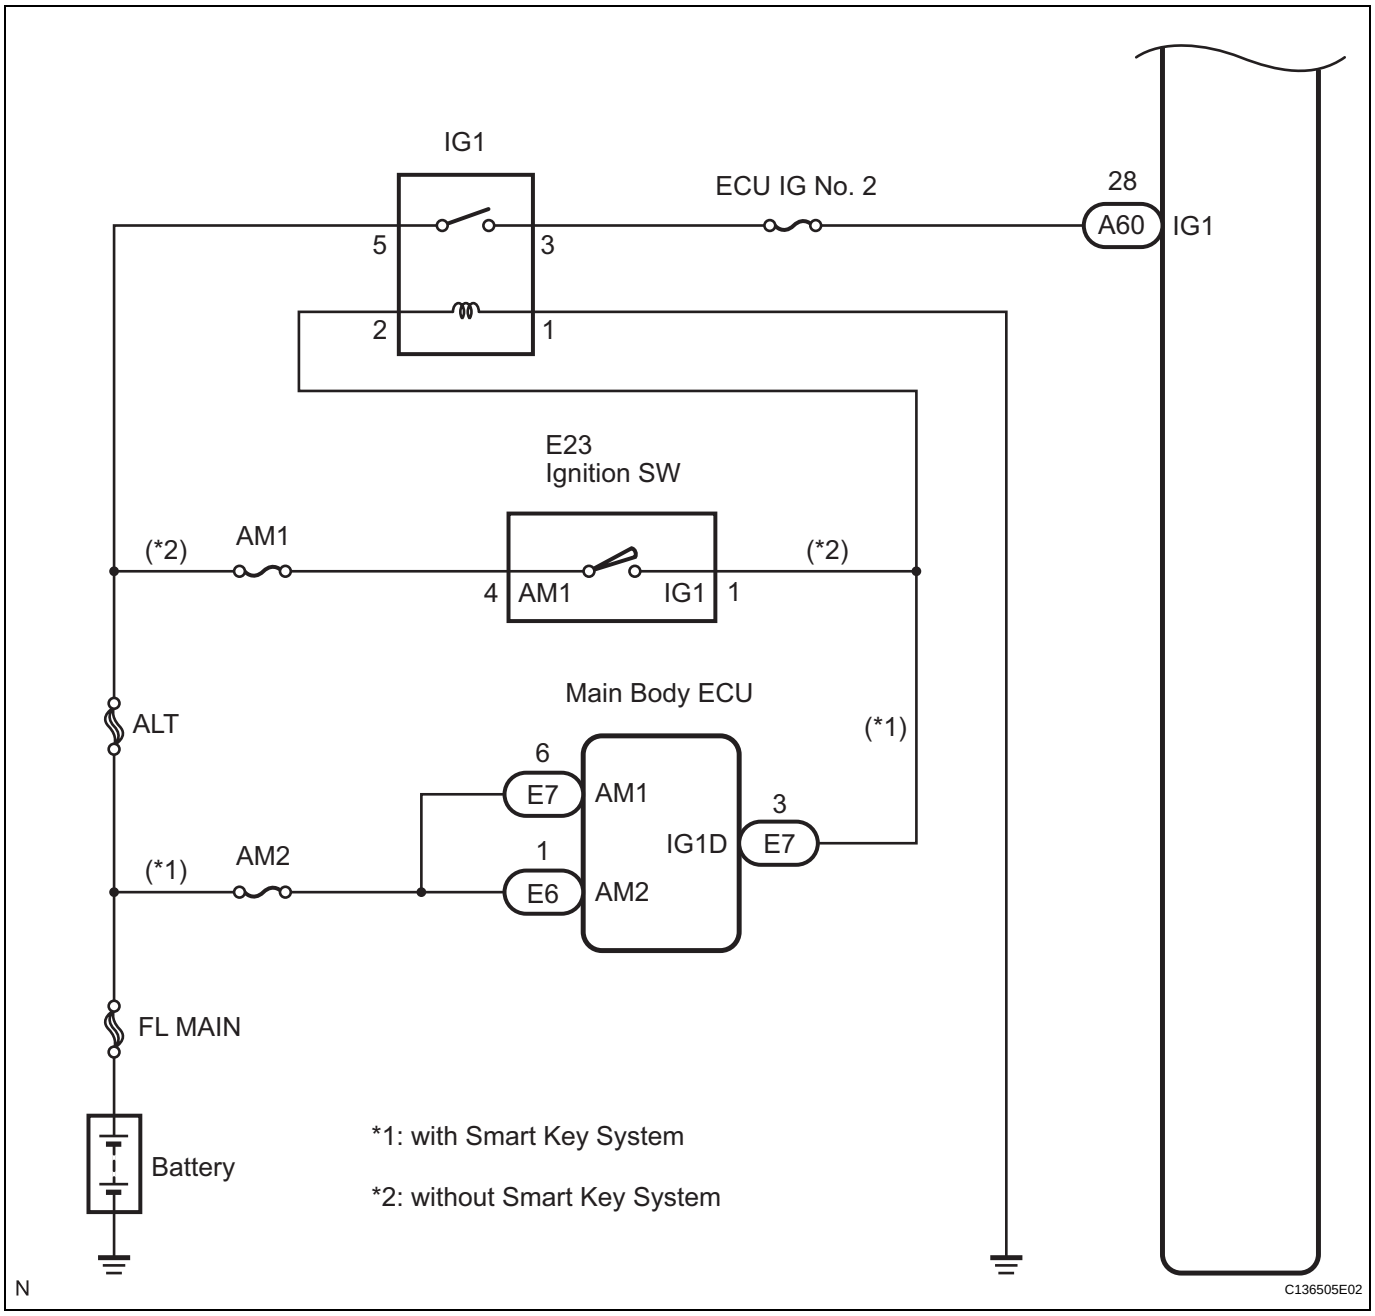
DESCRIPTION

The skid control ECU is connected to the combination meter assembly via CAN communication.
If any of the following is detected, the BRAKE warning light remains on:

- The skid control ECU connector is disconnected from the skid control ECU.
- The brake fluid level is insufficient.
- The parking brake is applied.
- EBD operation is not possible.

WIRING DIAGRAM





BC

INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication system DTC is output (See page BC-302).

Result

Condition	Proceed to
CAN communication system DTC is not output	A
CAN communication system DTC is output	B

B → **INSPECT CAN COMMUNICATION SYSTEM (See page CA-8)**

A

2 CHECK IF SKID CONTROL ECU CONNECTOR IS SECURELY CONNECTED

(a) Check if the skid control ECU connector is securely connected.
OK:
The connector is securely connected.

NG → **CONNECT CONNECTOR TO ECU CORRECTLY**

OK

BC

3 CHECK BATTERY

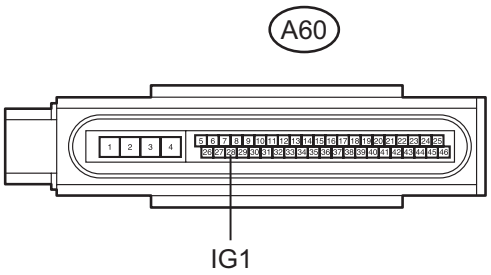
(a) Check the battery voltage.
Standard voltage:
11 to 14 V

NG → **CHECK AND REPLACE CHARGING SYSTEM OR BATTERY**

OK

4 INSPECT SKID CONTROL ECU (IG1 TERMINAL)

Skid Control ECU (Harness Side Connector Front View):



(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.
Standard voltage

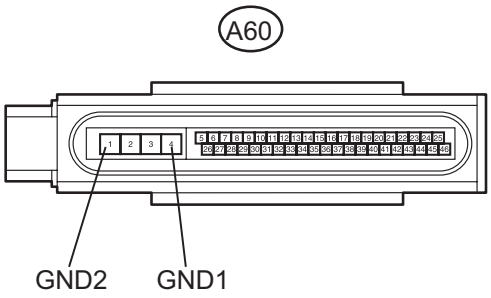
Tester Connection	Condition	Specified Condition
A60-28 (IG1) - Body ground	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (IG1 CIRCUIT)**

OK

5 INSPECT SKID CONTROL ECU (GND TERMINAL)

Skid Control ECU (Harness Side Connector Front View):



N C136493E02

(a) Turn the ignition switch off.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A60-4 (GND1) - Body ground	Always	Below 1 Ω
A60-1 (GND2) - Body ground	Always	Below 1 Ω

(c) Connect the connector.

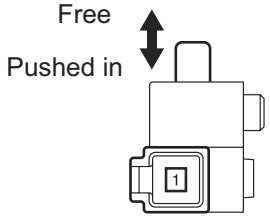
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

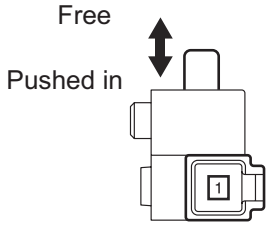
6 INSPECT PARKING BRAKE SWITCH

Parking Brake Switch:

Automatic Transaxle:



Manual Transaxle:



N C109430E03

(a) Disconnect the parking brake switch connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - Body ground	Parking brake switch ON (Switch pin free)	Below 1 Ω
1 - Body ground	Parking brake switch OFF (Switch pin pushed in)	10 kΩ or higher

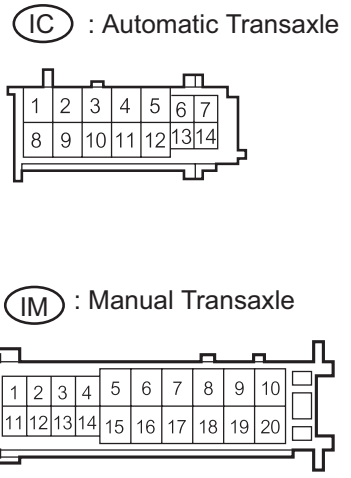
NG → **REPLACE PARKING BRAKE SWITCH**

OK

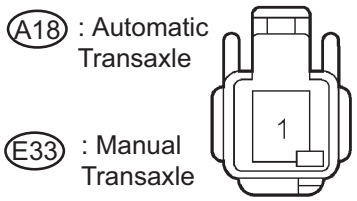
BC

7	CHECK HARNESS AND CONNECTOR (MAIN BODY ECU TO PARKING BRAKE SWITCH)

Main Body ECU
Wire Harness View:



Parking Brake Switch Harness Side Connector Front View:



C136418E03

OK

(a) Measure the resistance according to the value(s) in the table below.
Standard resistance:
Automatic Transaxle

Tester Connection	Condition	Specified Condition
IC-14 (PKB) - A18-1	Always	Below 1 Ω
IC-14 (PKB) - Body ground	Always	10 kΩ or higher

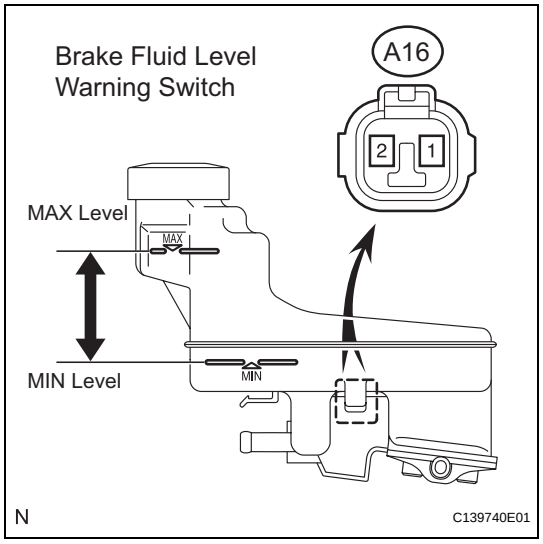
Manual Transaxle

Tester Connection	Condition	Specified Condition
IM-2 (PKB) - E33-1	Always	Below 1 Ω
IM-2 (PKB) - Body ground	Always	10 kΩ or higher

(b) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (MAIN BODY ECU TO PARKING BRAKE SWITCH)**

8	INSPECT BRAKE FLUID LEVEL WARNING SWITCH



(a) Remove the reservoir tank cap and strainer.
(b) Disconnect the brake fluid level warning switch connector.
(c) Measure the resistance according to the value(s) in the table below.
HINT:
A float is located inside the reservoir. Its position can be changed by increasing or decreasing the level of brake fluid.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Float up (Switch OFF)	1.9 to 2.1 kΩ
1 - 2	Float down (Switch ON)	Below 1 Ω

HINT:
If there is no problem after finishing the above check, adjust the brake fluid level to the MAX level.

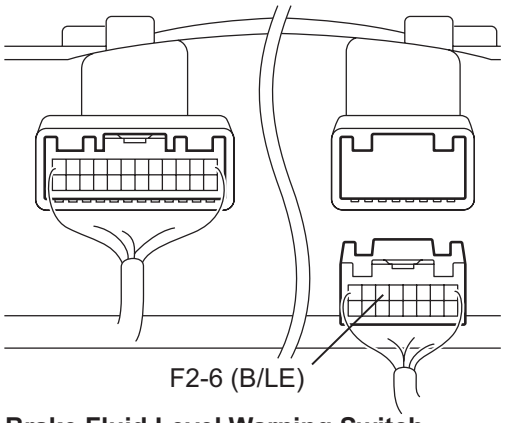
NG → **REPLACE BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY (BRAKE FLUID LEVEL WARNING SWITCH)**

OK

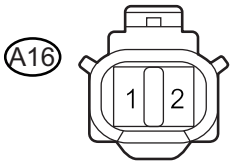
BC

9	CHECK HARNESS AND CONNECTOR (COMBINATION METER TO BRAKE FLUID LEVEL WARNING SWITCH)

Combination Meter Wire Harness View:



Brake Fluid Level Warning Switch Harness Side Connector Front View:



C136033E01

(a) Disconnect the combination meter connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
F2-6 (B/LE) - A16-1	Always	Below 1 Ω
F2-6 (B/LE) - Body ground	Always	10 kΩ or higher
A16-2 - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (COMBINATION METER TO BRAKE FLUID LEVEL WARNING SWITCH)**

OK

10	INSPECT COMBINATION METER ASSEMBLY

(a) Connect the intelligent tester to the DLC3.
(b) Select the "ACTIVE TEST" on the tester (See page BC-307).

ACTIVE TEST: ABS/TRAC/VSC

Item	Vehicle Condition/Test Details	Diagnostic Note
BRAKE WRN LIGHT	Turns brake warning light on / off	Observe combination meter

(c) Check BRAKE warning light operation.

OK:

The BRAKE warning light turns on or off in accordance with the intelligent tester.

NG → **REPLACE COMBINATION METER ASSEMBLY (See page ME-63)**

OK

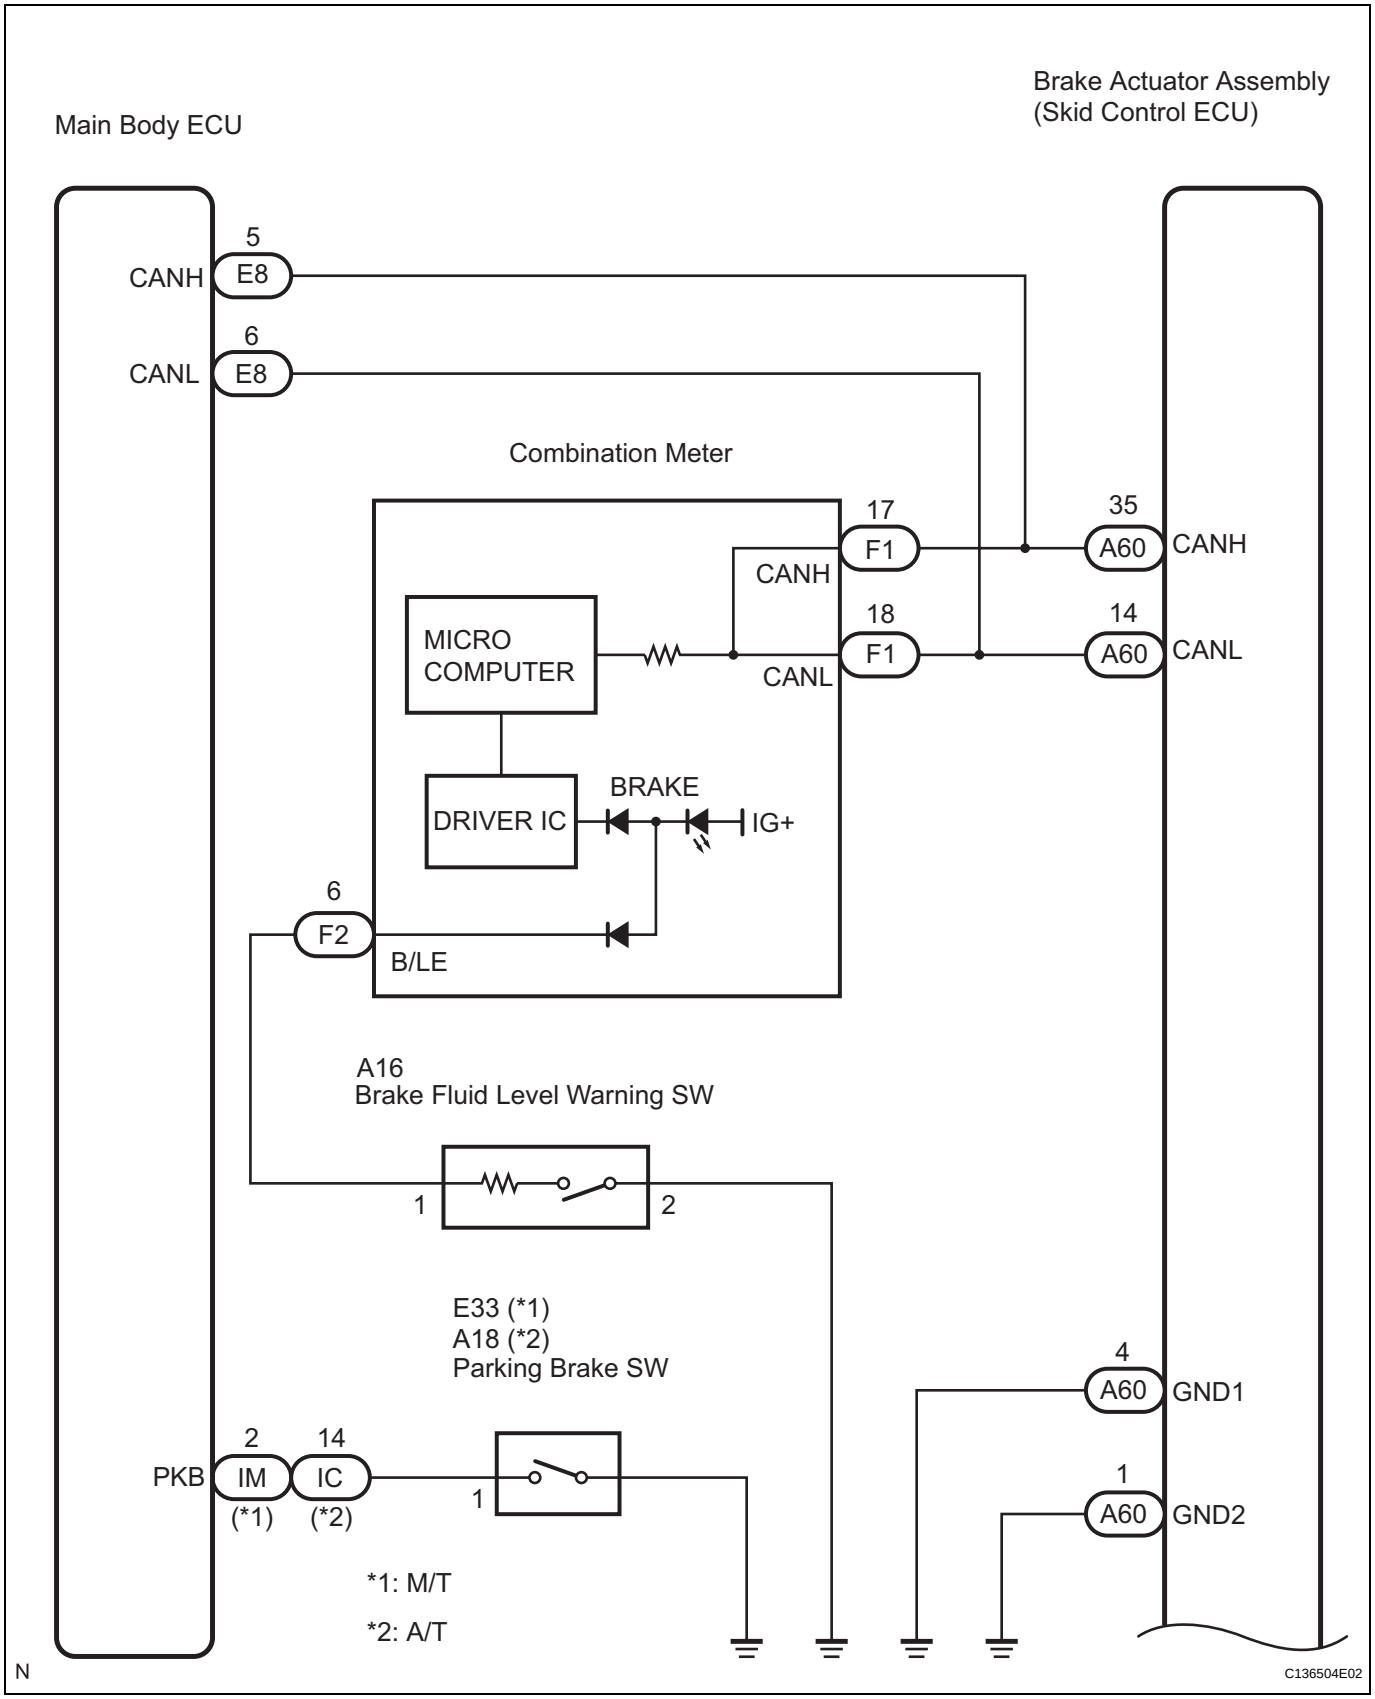
REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

Brake Warning Light does not Come ON

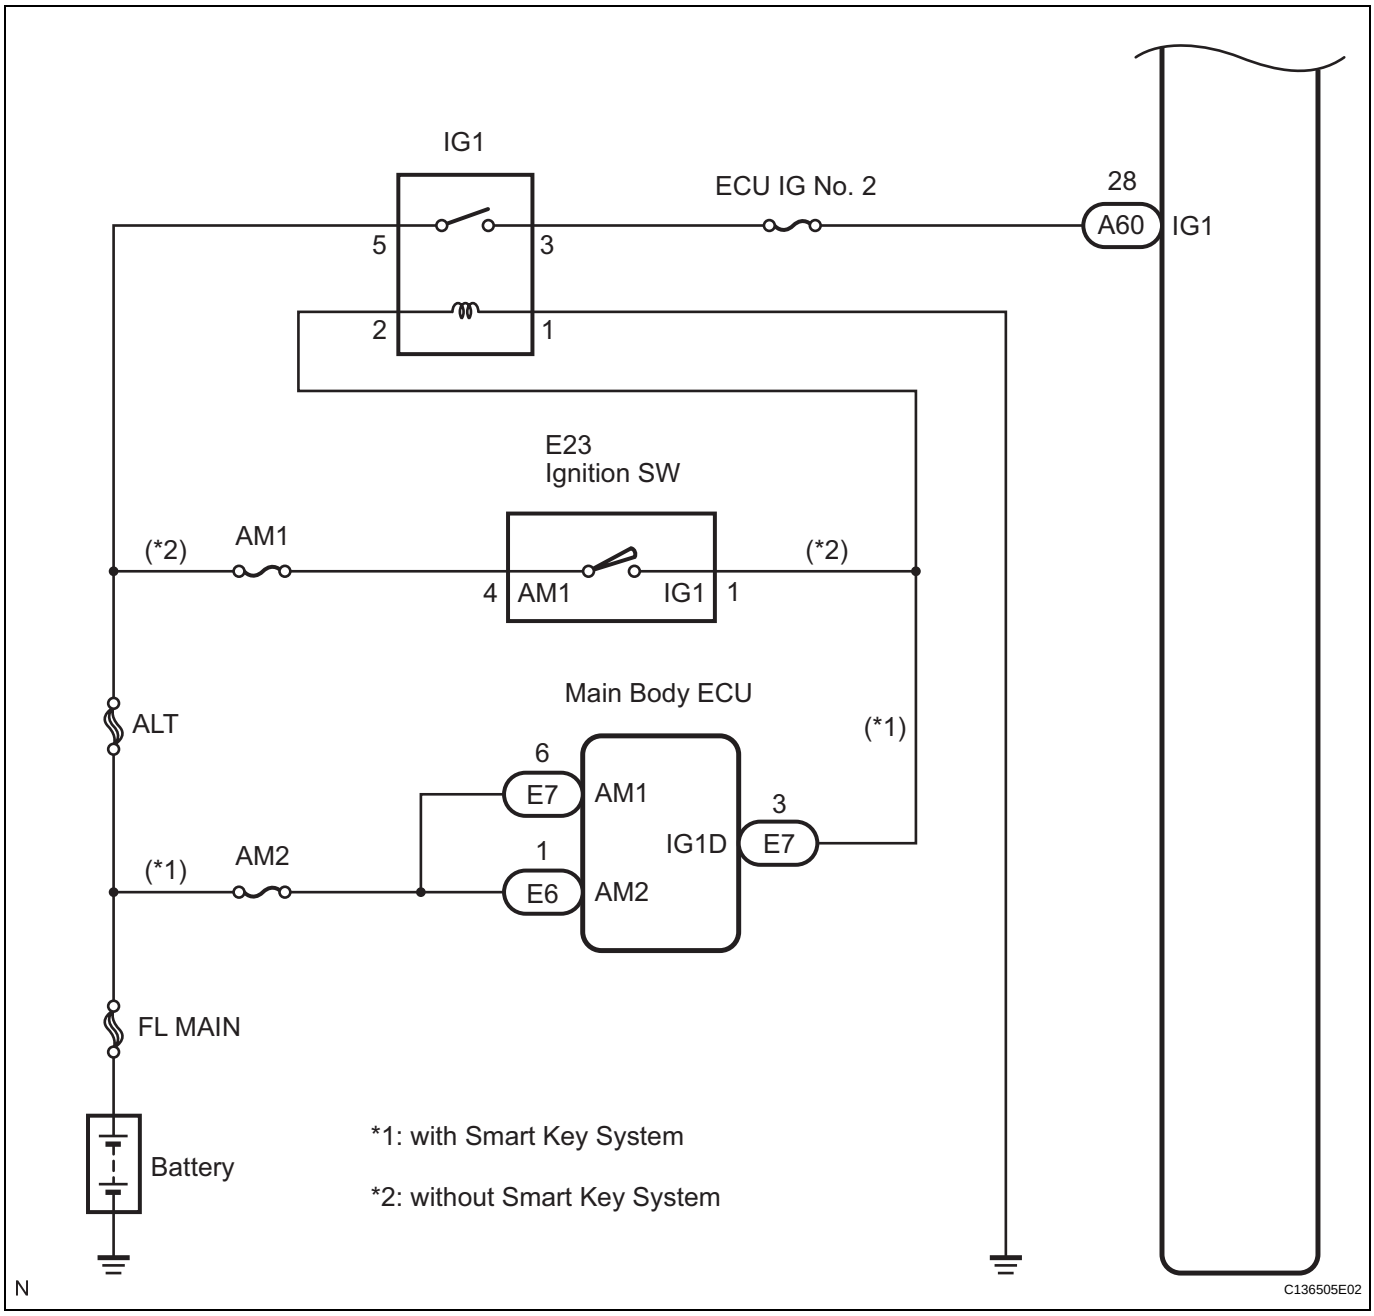
DESCRIPTION

The skid control ECU is connected to the combination meter assembly via CAN communication.

WIRING DIAGRAM



BC



BC

INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication system DTC is output (See page BC-302).

Result

Condition	Proceed to
CAN communication system DTC is not output	A
CAN communication system DTC is output	B

B → **INSPECT CAN COMMUNICATION SYSTEM (See page CA-8)**

A

2	CHECK BRAKE WARNING LIGHT

(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch on (IG).
(c) Check that the BRAKE warning light comes on.
OK:
The BRAKE warning light comes on.
(d) Connect the connector.

OK → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

NG

BC

3	INSPECT COMBINATION METER ASSEMBLY

(a) Connect the intelligent tester to the DLC3.
(b) Perform "ACTIVE TEST" of the combination meter assembly using the intelligent tester (See page ME-32).
(c) Check BRAKE warning light operation.
OK:
The BRAKE warning light turns on or off in accordance with the intelligent tester.

NG → **REPLACE COMBINATION METER ASSEMBLY (See page ME-63)**

OK

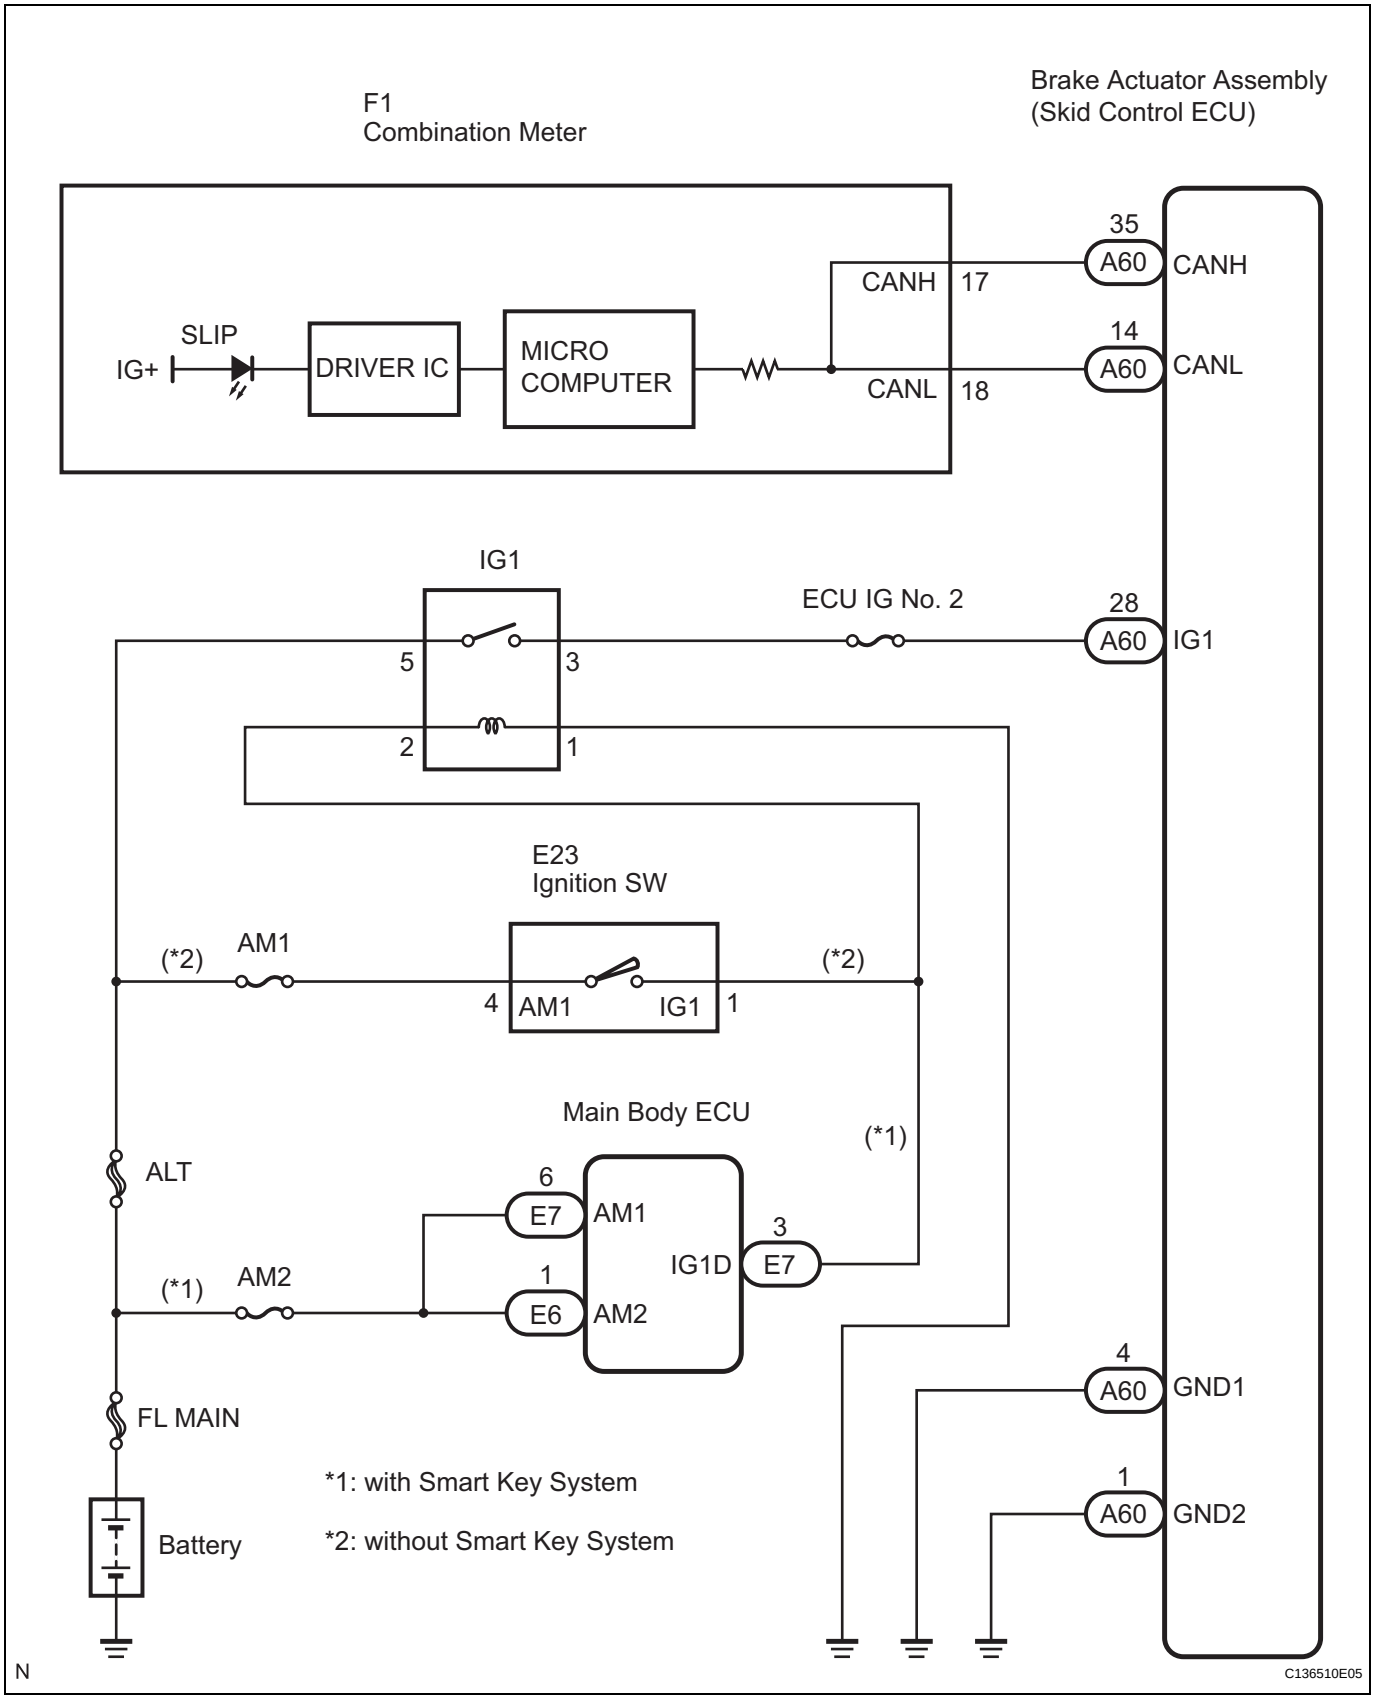
REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

Slip Indicator Light Remains ON

DESCRIPTION

The skid control ECU is connected to the combination meter assembly via CAN communication.
The SLIP indicator light blinks during VSC and/or TRAC operation.
When the system fails, the SLIP indicator light comes on to warn the driver (See page BC-278).

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

HINT:

Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication system DTC is output (See page BC-302).

Result

Condition	Proceed to
CAN communication system DTC is not output	A
CAN communication system DTC is output	B

B → **INSPECT CAN COMMUNICATION SYSTEM (See page CA-8)**

A

2	CHECK IF SKID CONTROL ECU CONNECTOR IS SECURELY CONNECTED

(a) Check if the skid control ECU connector is securely connected.
OK:
The connector is securely connected.

NG → **CONNECT CONNECTOR TO ECU CORRECTLY**

OK

3	CHECK BATTERY

(a) Check the battery voltage.
Standard voltage:
11 to 14 V

NG → **CHECK AND REPLACE CHARGING SYSTEM OR BATTERY**

OK

4	INSPECT COMBINATION METER ASSEMBLY

(a) Connect the intelligent tester to the DLC3.
(b) Perform "ACTIVE TEST" of the combination meter assembly using the intelligent tester (See page ME-32).
(c) Check SLIP indicator light operation.
OK:
The SLIP indicator light turns on or off in accordance with the intelligent tester.

NG → **REPLACE COMBINATION METER ASSEMBLY (See page ME-63)**

OK

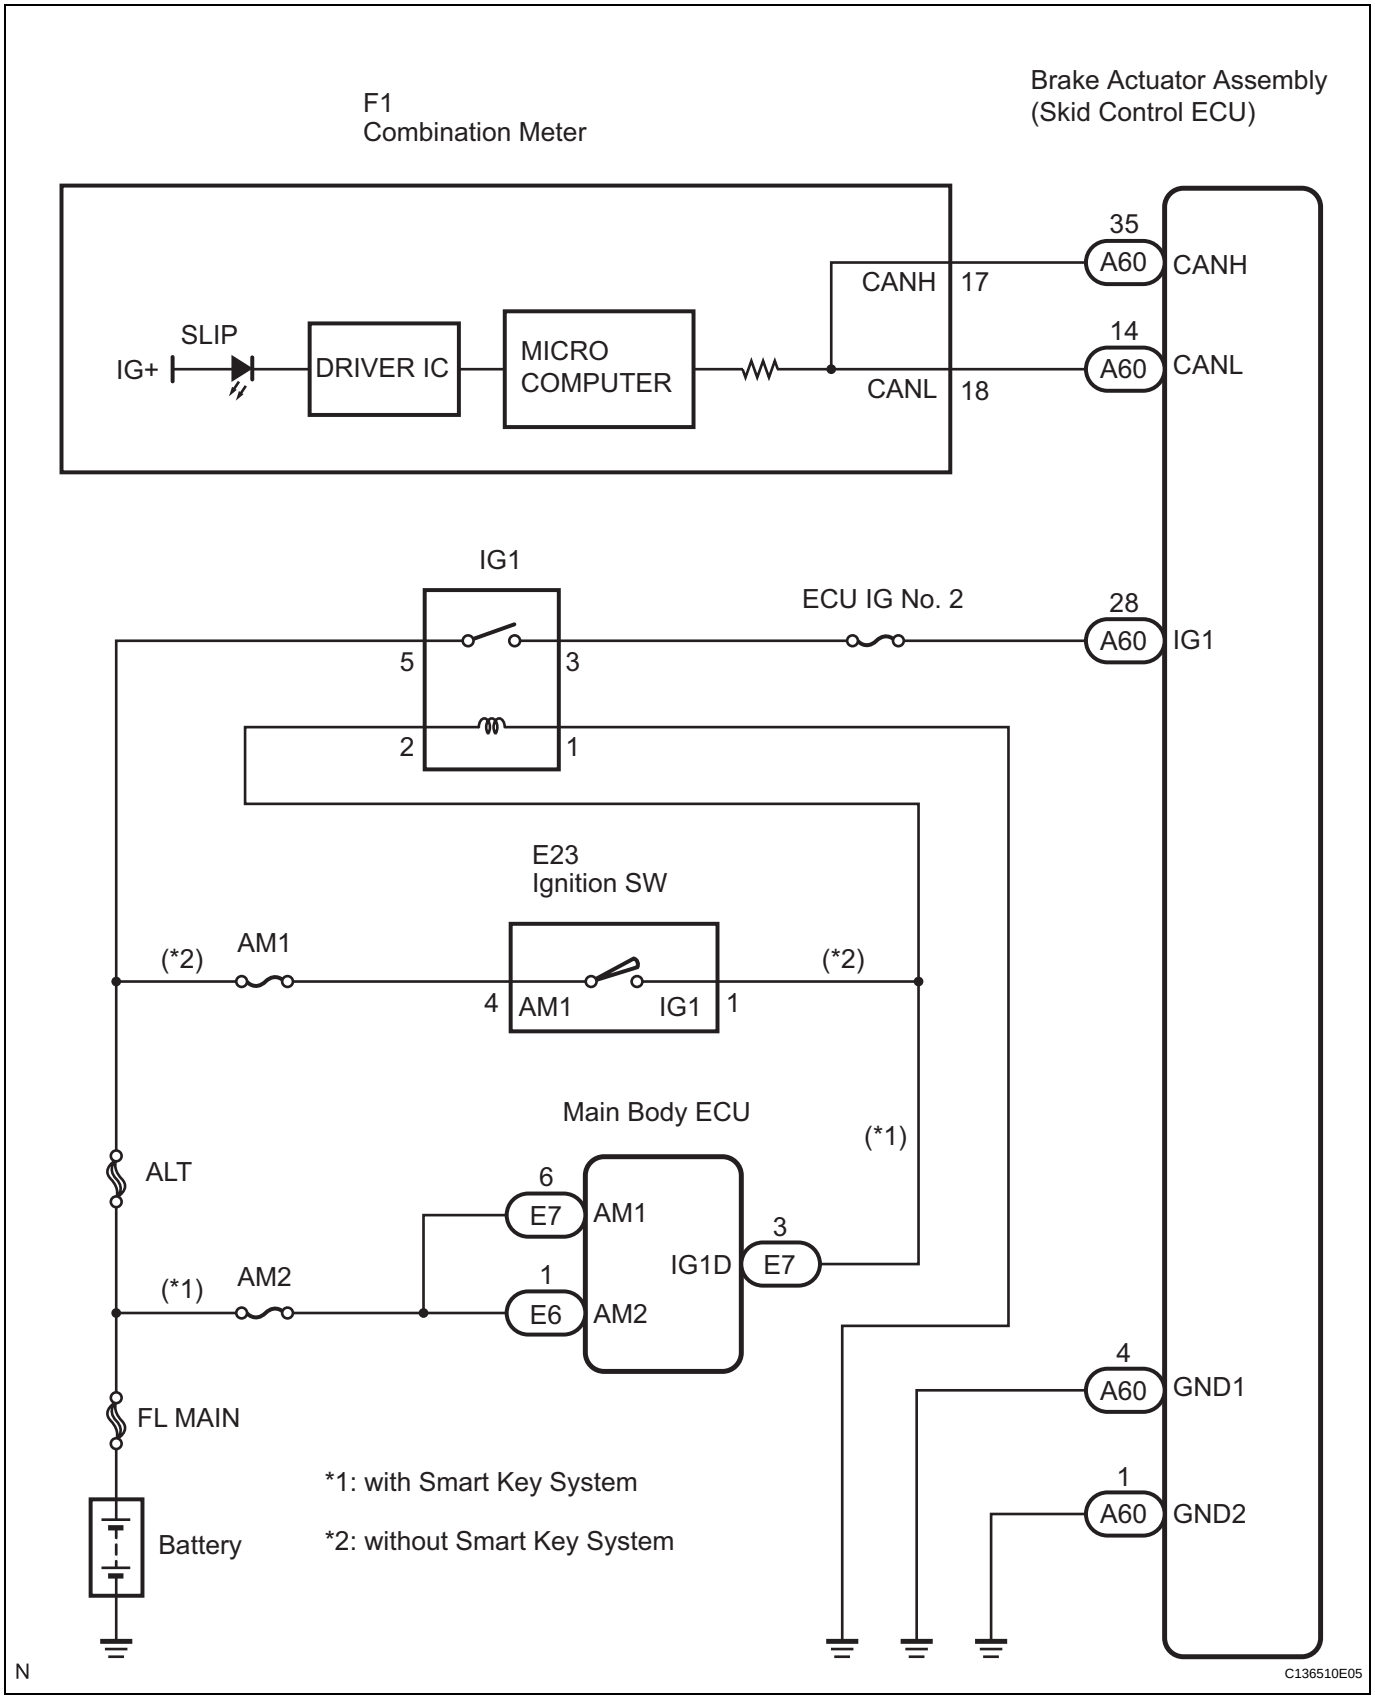
REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

Slip Indicator Light does not Come ON

DESCRIPTION

The skid control ECU is connected to the combination meter assembly via CAN communication.
The SLIP indicator light blinks during VSC and/or TRAC operation.
When the system fails, the SLIP indicator light comes on to warn the driver (See page BC-278).

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

HINT:

Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication system DTC is output (See page BC-302).

Result

Condition	Proceed to
CAN communication system DTC is not output	A
CAN communication system DTC is output	B

B → **INSPECT CAN COMMUNICATION SYSTEM (See page CA-8)**

A

2	INSPECT COMBINATION METER ASSEMBLY

(a) Connect the intelligent tester to the DLC3.
(b) Perform "ACTIVE TEST" of the combination meter assembly using the intelligent tester (See page ME-32).
(c) Check the SLIP indicator light operation.
OK:
The SLIP indicator light turns on or off in accordance with the intelligent tester.

NG → **REPLACE COMBINATION METER ASSEMBLY (See page ME-63)**

OK

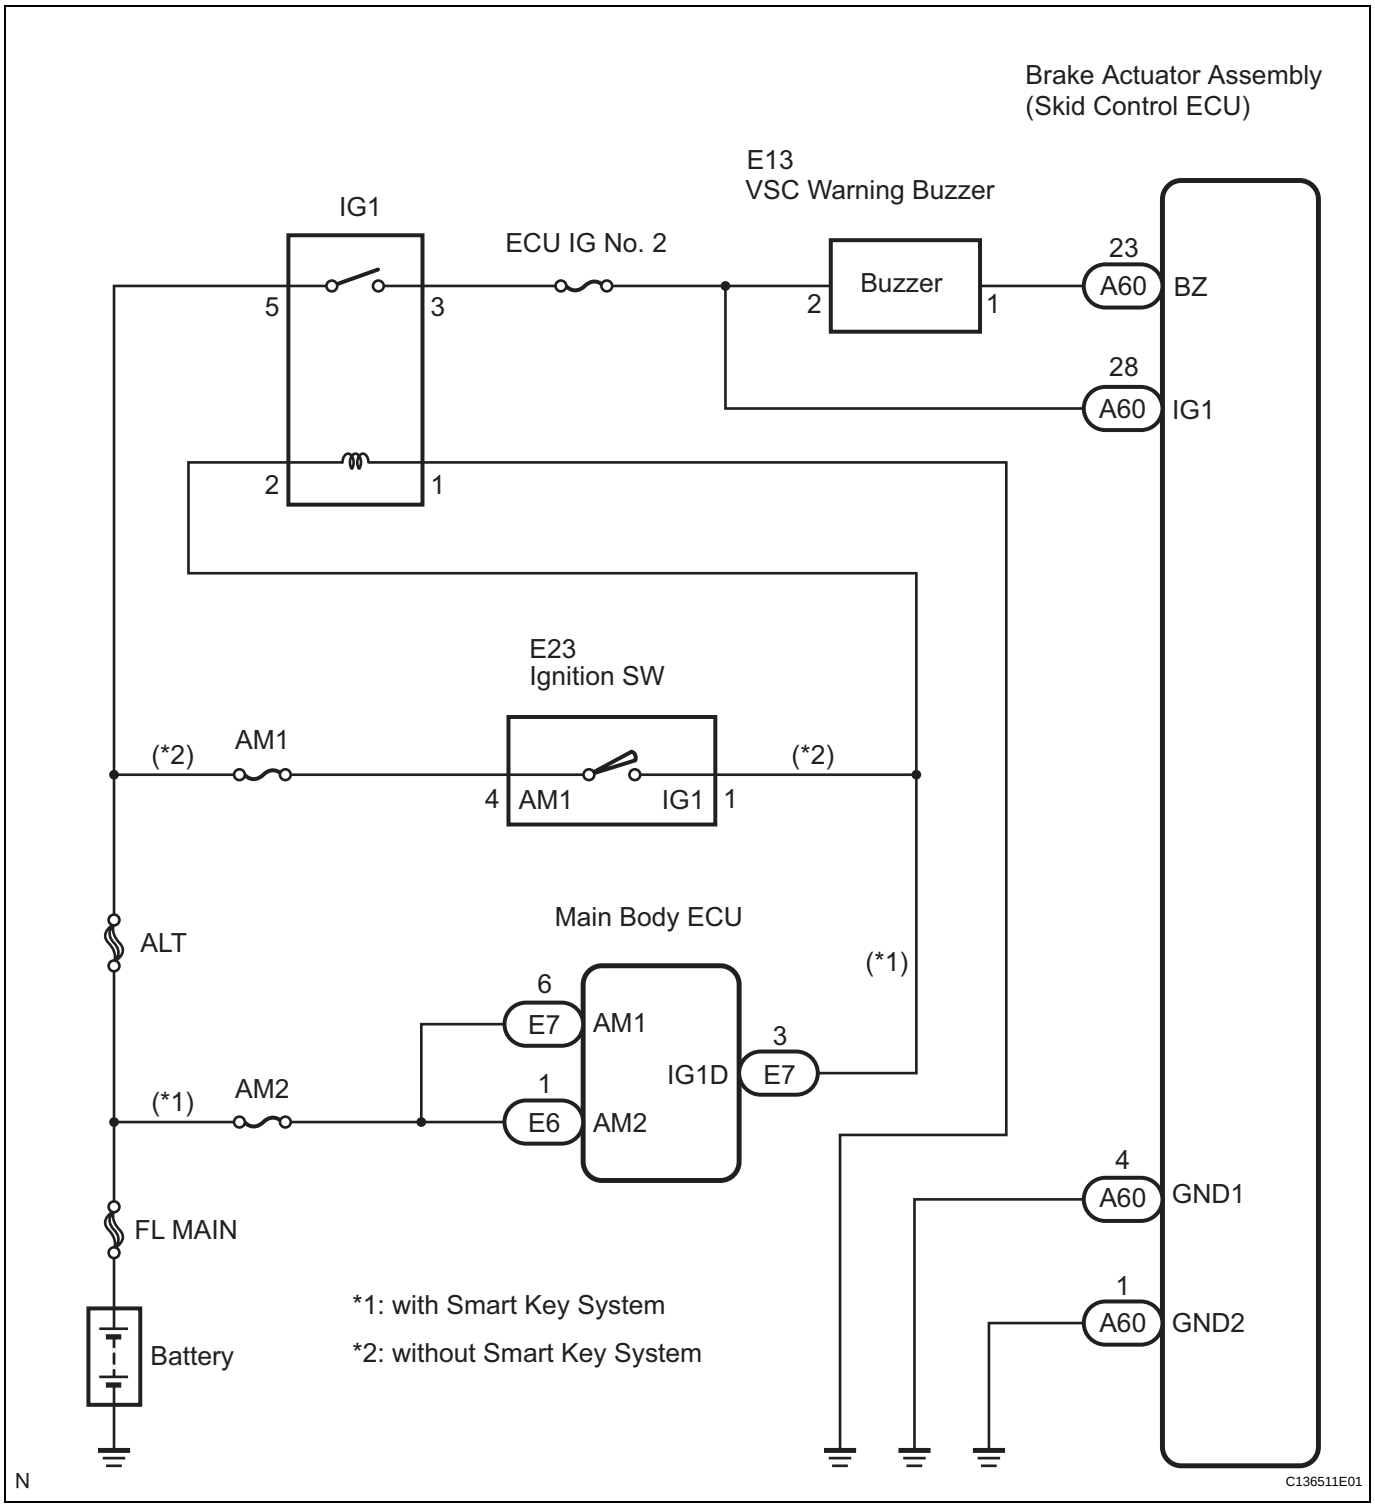
REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

Skid Control Buzzer Circuit

DESCRIPTION

The skid control buzzer sounds and the SLIP indicator light blinks during VSC operation.

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1 PERFORM ACTIVE TEST BY INTELLIGENT TESTER (SKID CONTROL BUZZER)

(a) Connect the intelligent tester to the DLC3.
(b) Select the "ACTIVE TEST" on the intelligent tester (See page BC-307).

ACTIVE TEST: ABS/TRAC/VSC

Item (Display)	Vehicle Condition / Test Details	Diagnostic Note
BUZZER	Turns skid control buzzer ON / OFF	Buzzer can be heard

(c) Check that the buzzer sounds/stops when turning the skid control buzzer on/off by using the intelligent tester.

Result

Condition	Proceed to
Buzzer does not sound or sounds constantly	A
Buzzer sounds/stops	B

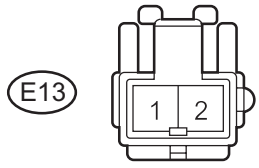
BC

B → **CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION) (See page BC-298)**

A

2 INSPECT SKID CONTROL BUZZER (POWER SOURCE TERMINAL)

Skid Control Buzzer (Harness Side Connector Front View):



(a) Disconnect the skid control buzzer connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

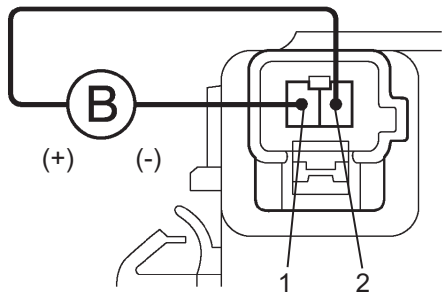
Tester Connection	Condition	Specified Condition
E13-2 - Body ground	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER SOURCE CIRCUIT)**

OK

3	INSPECT SKID CONTROL BUZZER

Skid Control Buzzer:



C125130E01

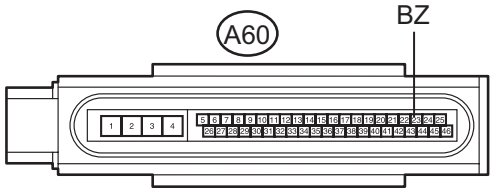
(a) Apply battery negative voltage to terminal 1, and battery positive voltage to terminal 2 of the skid control buzzer, and then check that the buzzer sounds.
OK:
The skid control buzzer sounds.

NG → **REPLACE SKID CONTROL BUZZER (See page BC-453)**

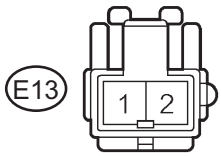
OK

4	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU TO SKID CONTROL BUZZER)

Skid Control ECU (Harness Side Connector Front View):



Skid Control Buzzer (Harness Side Connector Front View):



C139149E01

(a) Disconnect the skid control ECU connector.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
A60-23 (BZ) - E13-1	Always	Below 1 Ω
A60-23 (BZ) - Body ground	Always	10 kΩ or higher

(c) Connect the connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SKID CONTROL ECU TO SKID CONTROL BUZZER)**

OK

REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

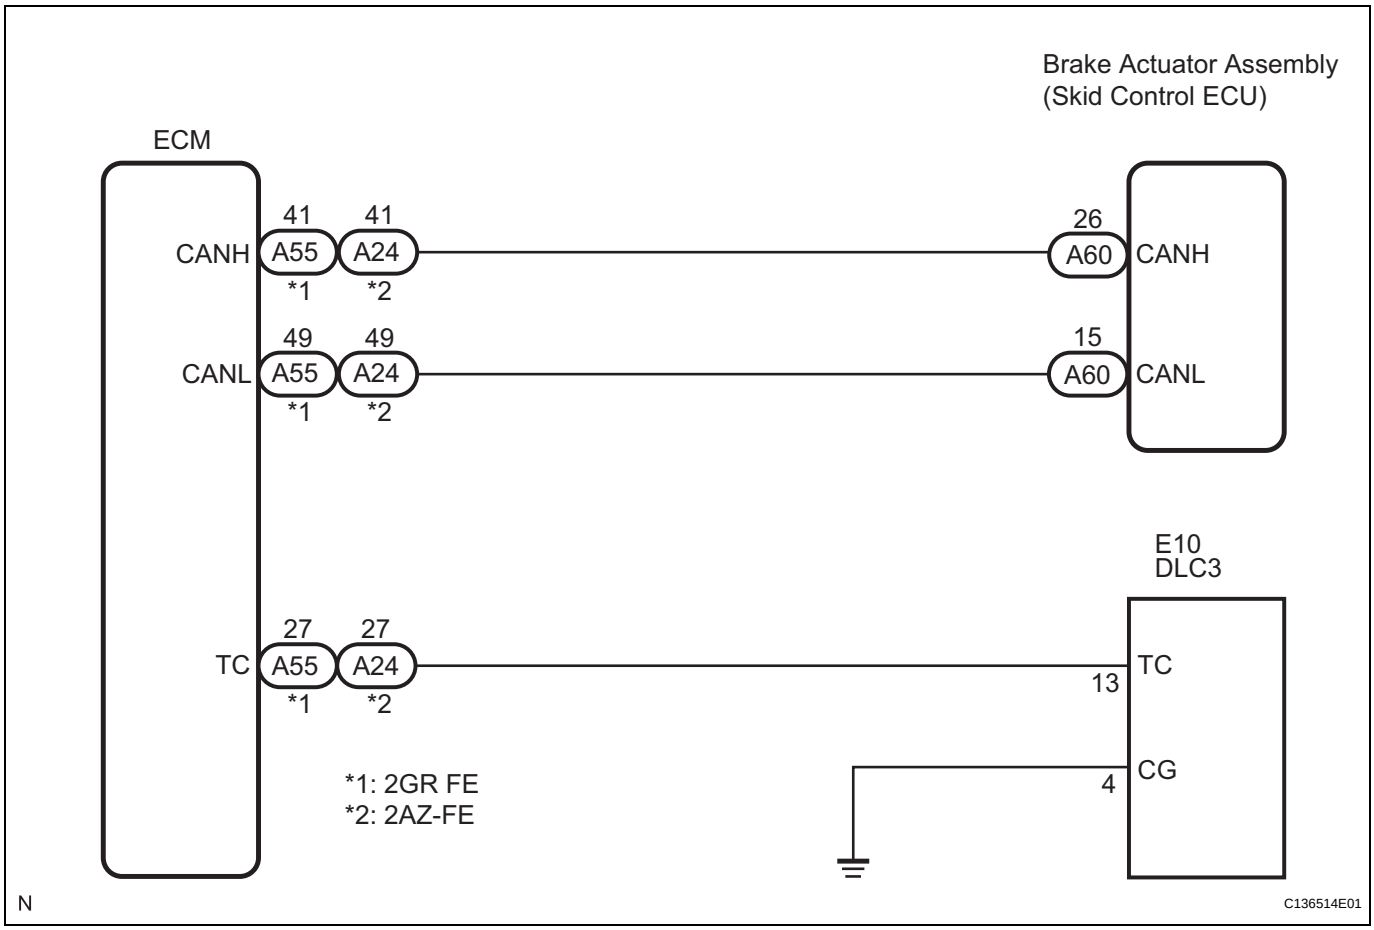
BC

TC and CG Terminal Circuit

DESCRIPTION

DTC output mode is set by connecting terminals TC and CG of the DLC3.
DTCs are indicated by the blinking pattern of the ABS warning light.

WIRING DIAGRAM



HINT:
When warning lights continue to blink, a ground short in the wiring of terminal TC of the DLC3 or an internal ground short in one or more ECUs is suspected.

INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication DTC is output (See page BC-302).

Result

Result	Proceed to
CAN communication system DTC is output	A
CAN communication system DTC is not output	B

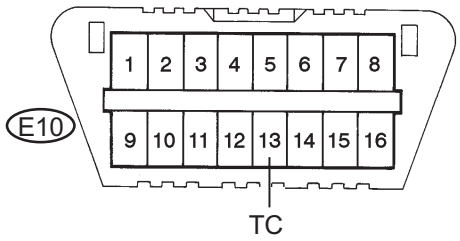
B → Go to step 2

A

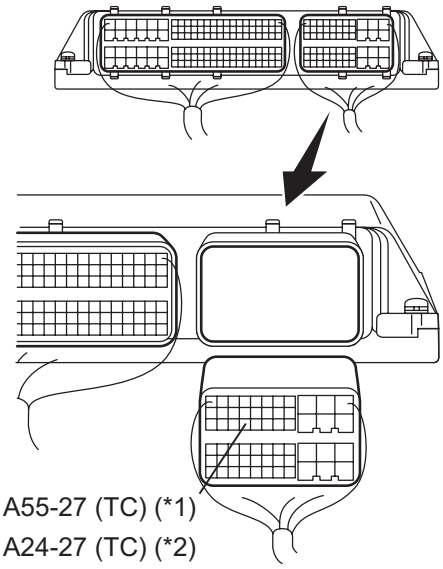
GO TO CAN COMMUNICATION SYSTEM (See page CA-8)

2 CHECK HARNESS AND CONNECTOR (ECM TO DLC3)

DLC3:



ECM Wire Harness View:



(*1): 2GR-FE (*2): 2AZ-FE

C136035E02

(a) Disconnect the ECM connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

2GR-FE

Tester Connection	Specified Condition
E10-13 (TC) - A55-27 (TC)	Below 1 Ω
E10-13 (TC) - Body ground	10 kΩ or higher

2AZ-FE

Tester Connection	Specified Condition
E10-13 (TC) - A24-27 (TC)	Below 1 Ω
E10-13 (TC) - Body ground	10 kΩ or higher

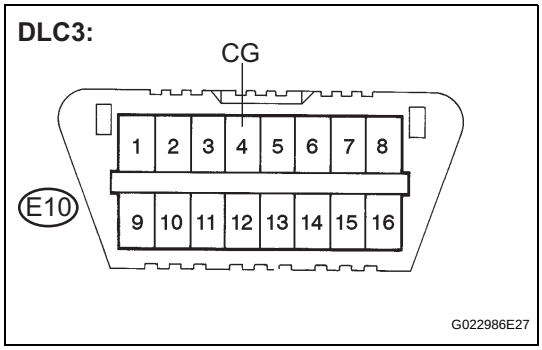
(c) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (TC TERMINAL CIRCUIT)**

OK

BC

3	CHECK HARNESS AND CONNECTOR (DLC3 TO CG CIRCUIT)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

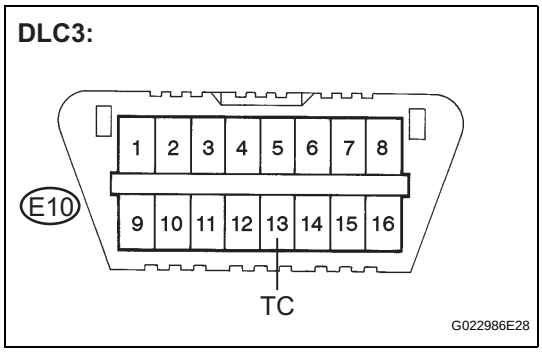
Tester Connection	Specified Condition
E10-4 (CG) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (CG TERMINAL CIRCUIT)**

OK

4	CHECK HARNESS AND CONNECTOR (TC TERMINAL CIRCUIT)

BC



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
E10-13 (TC) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (TC TERMINAL CIRCUIT)**

OK

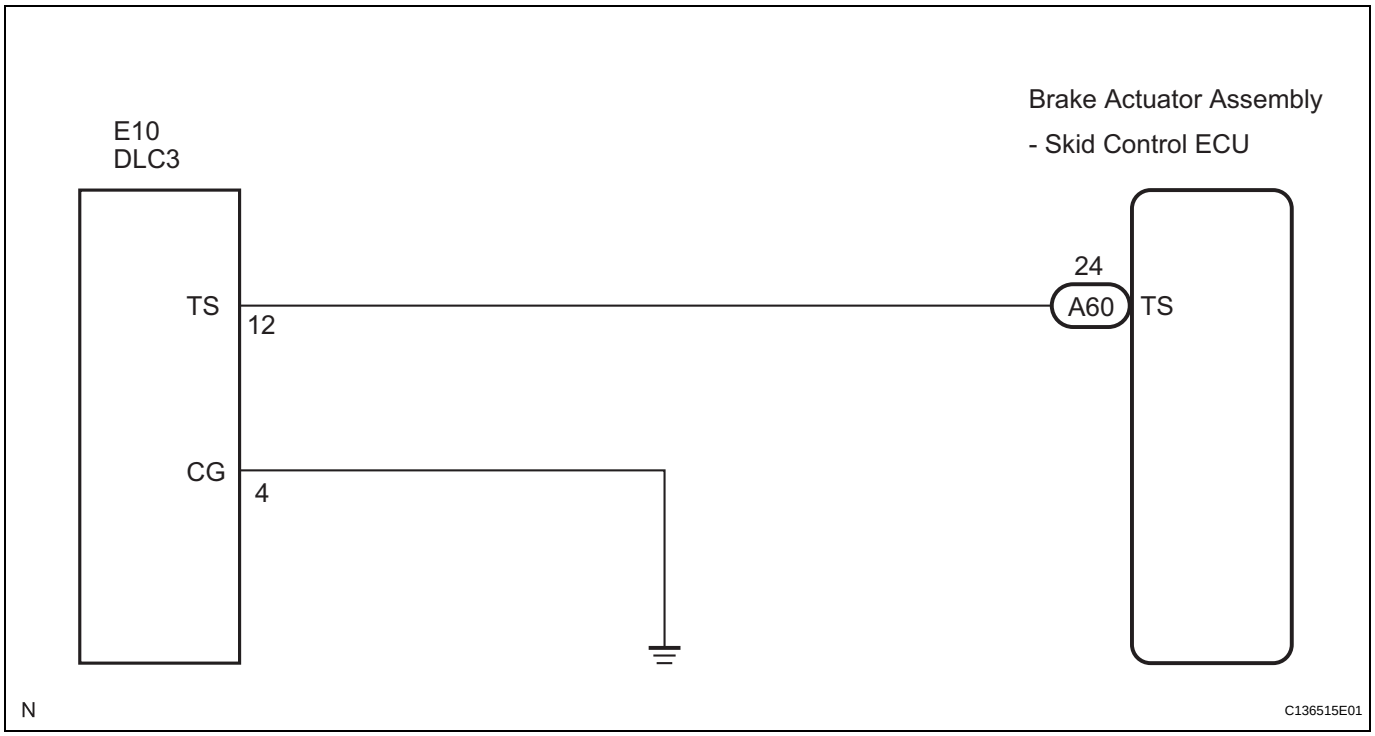
REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

TS and CG Terminal Circuit

DESCRIPTION

In the Test Mode (signal check), a malfunction of the speed sensor that cannot be detected when the vehicle is stopped can be detected while driving.
Transition to the sensor check mode can be performed by connecting terminals TS and CG of the DLC3 and turning the ignition switch from off to on (IG).

WIRING DIAGRAM

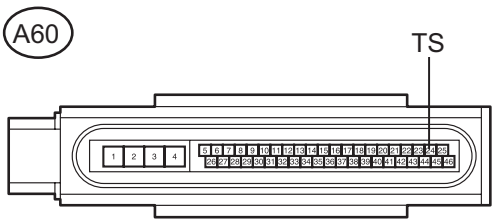


INSPECTION PROCEDURE

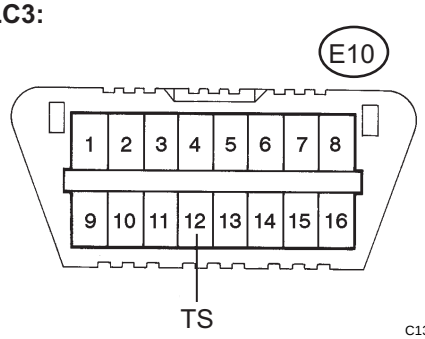
HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU TO DLC3)

Skid Control ECU (Harness Side Connector Front View):



DLC3:



C139177E01

(a) Disconnect the skid control ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A60-24 (TS) - E10-12 (TS)	Always	Below 1 Ω

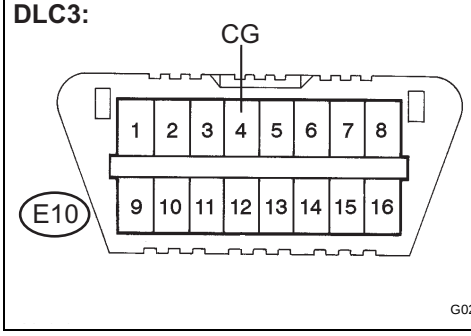
(c) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SKID CONTROL ECU TO DLC3)**

OK

2 CHECK HARNESS AND CONNECTOR (DLC3 TO BODY GROUND)

DLC3:



G022987E25

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

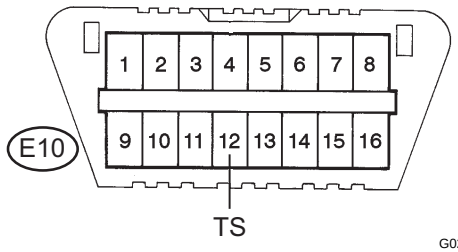
Tester Connection	Condition	Specified Condition
E10-4 (CG) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (DLC3 TO BODY GROUND)**

OK

3	CHECK HARNESS AND CONNECTOR (TS TERMINAL CIRCUIT)

DLC3:



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E10-12 (TS) - Body ground	Always	10 kΩ or higher

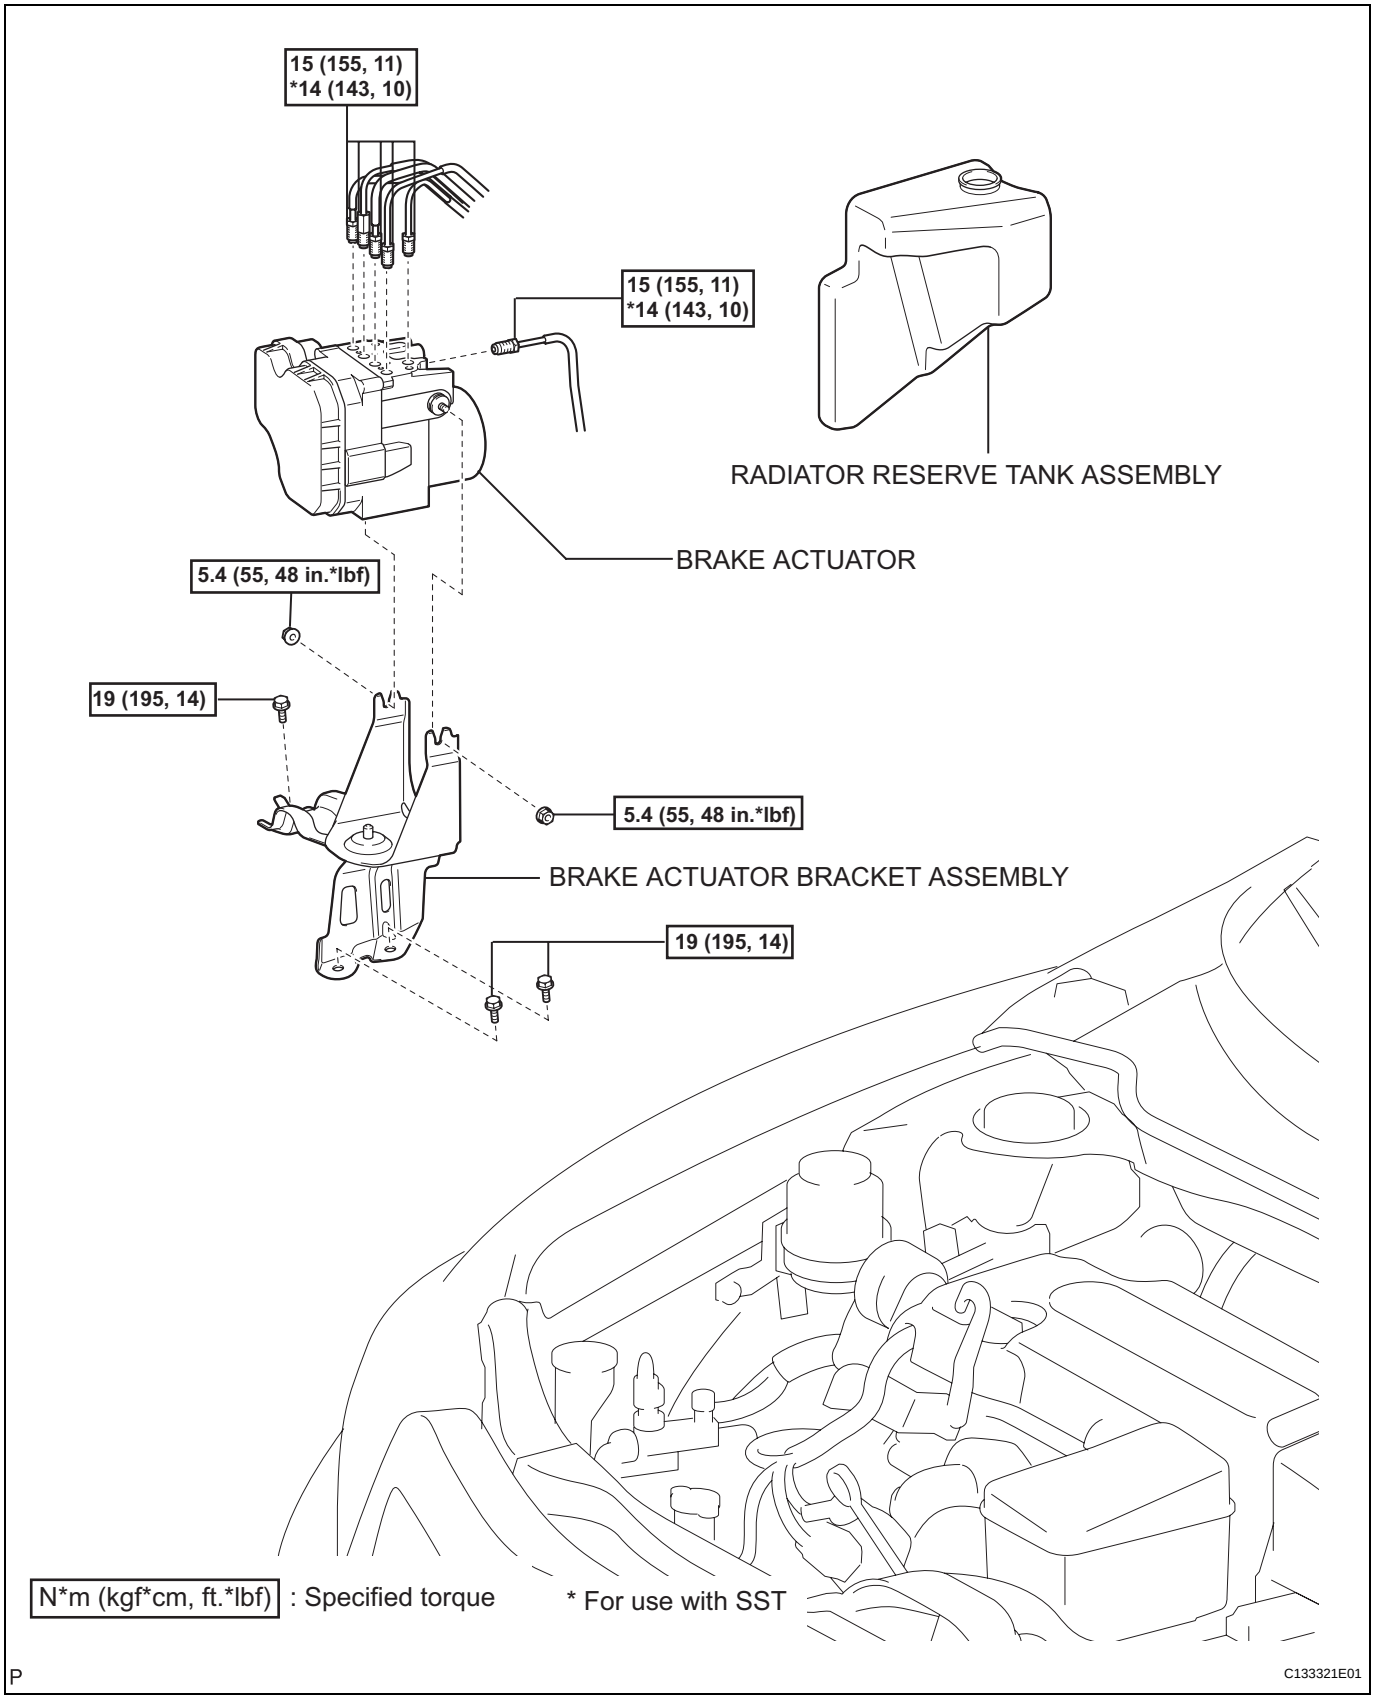
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (TS TERMINAL CIRCUIT)**

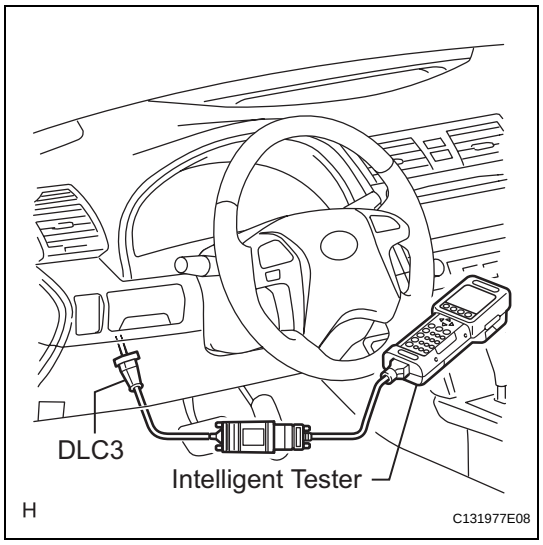
OK

REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

BRAKE ACTUATOR (for ADVICS Made)

COMPONENTS





ON-VEHICLE INSPECTION

1. CONNECT INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and run it at idle .
(c) Select the Active Test mode on the intelligent tester.
HINT:
Refer to the intelligent tester operator's manual for further details.

2. INSPECT ACTUATOR MOTOR OPERATION

NOTICE:
Do not keep a motor relay on continuously for more than 5 seconds. When operating it continuously, set an interval of more than 20 seconds.

(a) With the motor relay on, check the actuator motor operation sounds.
(b) Turn the motor relay off.
(c) Depress the brake pedal and hold it for approximately 15 seconds. Check that the brake pedal cannot be depressed farther.
(d) With the motor relay on, check that the pedal does not pulsate.
(e) Turn the motor relay off and release the brake pedal.

3. INSPECT RIGHT FRONT WHEEL OPERATION

NOTICE:
Do not turn on a solenoid in a manner different than described below.

(a) Depress the brake pedal and hold it.
(b) Turn the SFRH and SFRR solenoids on simultaneously, and check that the pedal cannot be depressed.
(c) Turn the SFRH and SFRR solenoids off simultaneously, and check that the pedal can be depressed.
NOTICE:
Do not keep the motor relay on continuously for more than 5 seconds. When operating them continuously, set an interval of more than 20 seconds.
(d) Turn the motor relay on and check that the pedal returns.
NOTICE:
Do not keep the motor relay on continuously for more than 5 seconds. When operating it continuously, set an interval of more than 20 seconds.
(e) Turn the motor relay off and release the brake pedal.

4. INSPECT OTHER WHEEL OPERATION

(a) Using the same procedure, check the solenoids of the other wheels.
HINT:
- Left front wheel: SFLH, SFLR
- Right rear wheel: SRRH, SRRR
- Left rear wheel: SRLH, SRLR

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE RADIATOR RESERVE TANK ASSEMBLY

(a) Separate the radiator reserve tank hose.

(b) Remove the radiator reserve tank assembly.

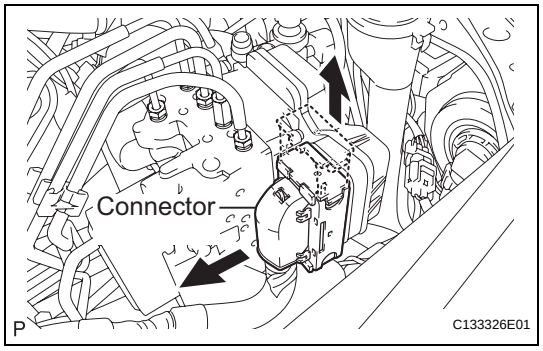
3. DRAIN BRAKE FLUID

NOTICE:

If brake fluid leaks onto any painted surface, immediately clean it off completely.

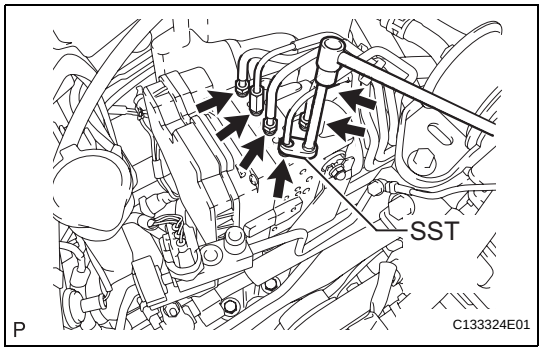
4. REMOVE BRAKE ACTUATOR

(a) Release the lock lever and disconnect the actuator connector.



(b) Using SST, disconnect the 6 brake lines from the actuator assembly with bracket.

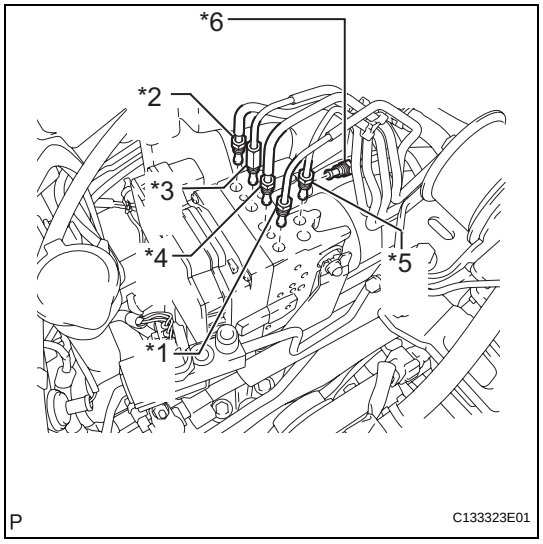
SST 09023-00101

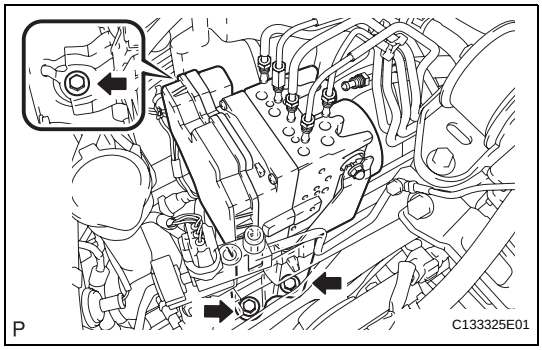


(c) Use tags or make a memo to identify the places to reconnect.

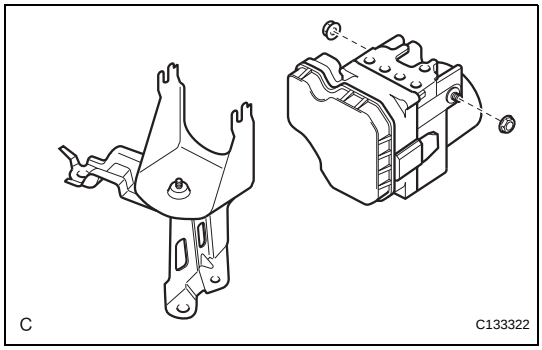
HINT:

- *1: To Front Wheel Cylinder RH
- *2: To Front Wheel Cylinder LH
- *3: To Rear Wheel Cylinder RH
- *4: To Rear Wheel Cylinder LH
- *5: From 1st Master Cylinder
- *6: From 2nd Master Cylinder





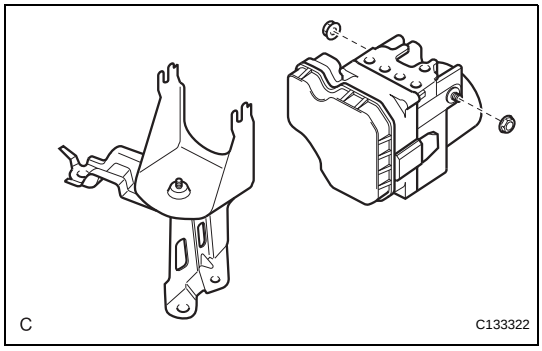
(d) Remove the 3 bolts and brake actuator assembly with bracket from the body.
NOTICE:
Do not damage the brake tubes and wire harness.



DISASSEMBLY

1. REMOVE BRAKE ACTUATOR BRACKET ASSEMBLY

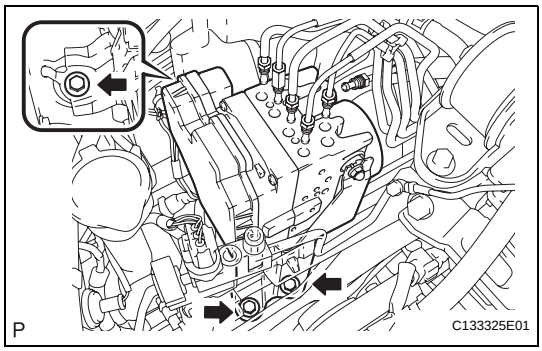
(a) Remove the 2 nuts and the brake actuator assembly from the actuator bracket assembly.



REASSEMBLY

1. INSTALL BRAKE ACTUATOR BRACKET ASSEMBLY

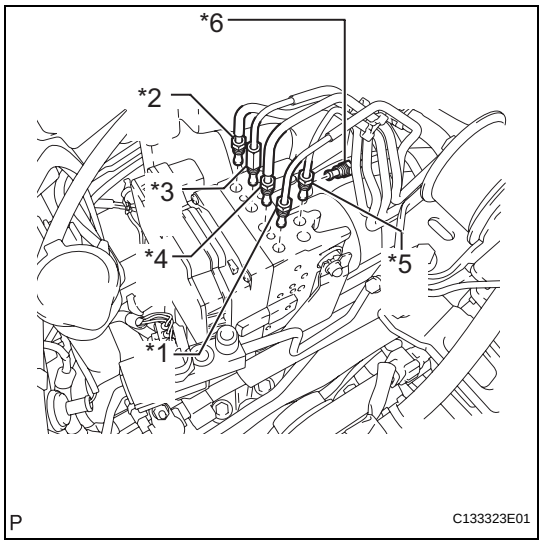
(a) Install the actuator assembly to the brake actuator bracket assembly with the 2 nuts.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
NOTICE:
Do not remove the hole plug before installing a new brake actuator because the brake actuator assembly is filled with brake fluid.



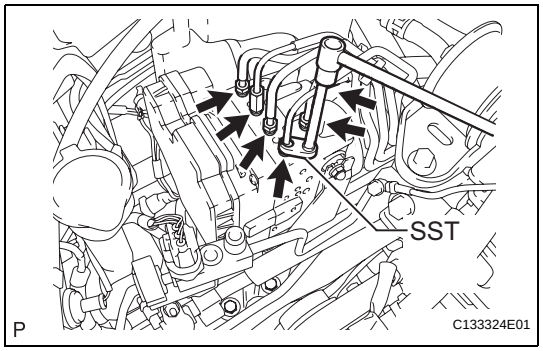
INSTALLATION

1. INSTALL BRAKE ACTUATOR

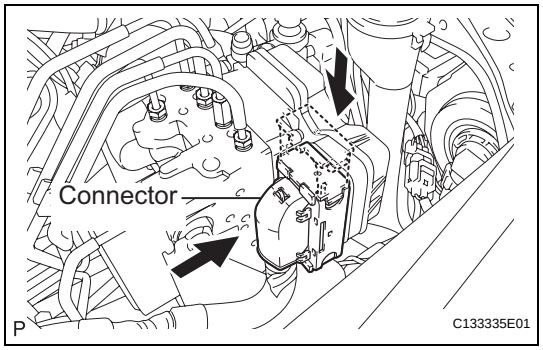
(a) Install the brake actuator assembly with bracket to the body with the 3 bolts.
Torque: 19 N*m (195 kgf*cm, 14 ft.*lbf)
NOTICE:
Do not damage the brake tubes and wire harness.



(b) Temporarily tighten each brake tube to the correct positions of the brake actuator assembly with bracket as shown in the illustration.
HINT:
- *1: To Front Wheel Cylinder RH
- *2: To Front Wheel Cylinder LH
- *3: To Rear Wheel Cylinder RH
- *4: To Rear Wheel Cylinder LH
- *5: From 1st Master Cylinder
- *6: From 2nd Master Cylinder



(c) Using SST, fully tighten each brake tube.
SST 09023-00101
Torque: without SST
15 N*m (155 kgf*cm, 11 ft.*lbf)
with SST
14 N*m (143 kgf*cm, 10 ft.*lbf)
NOTICE:
- **Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).**
- **This torque value is effective when SST is parallel to a torque wrench.**



(d) Connect the actuator connector.
NOTICE:
Make sure that the connector is locked securely.

2. INSTALL RADIATOR RESERVE TANK ASSEMBLY
(a) Install the radiator reserve tank assembly.
(b) Connect the radiator reservoir tank hose.

3. FILL RESERVOIR WITH BRAKE FLUID (See page BR-6)

4. BLEED BRAKE LINE (See page BR-7)

5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

6. BLEED BRAKE ACTUATOR (See page BR-8)

7. INSPECT BRAKE FLUID LEVEL (See page BR-10)

8. INSPECT FOR BRAKE FLUID LEAKAGE

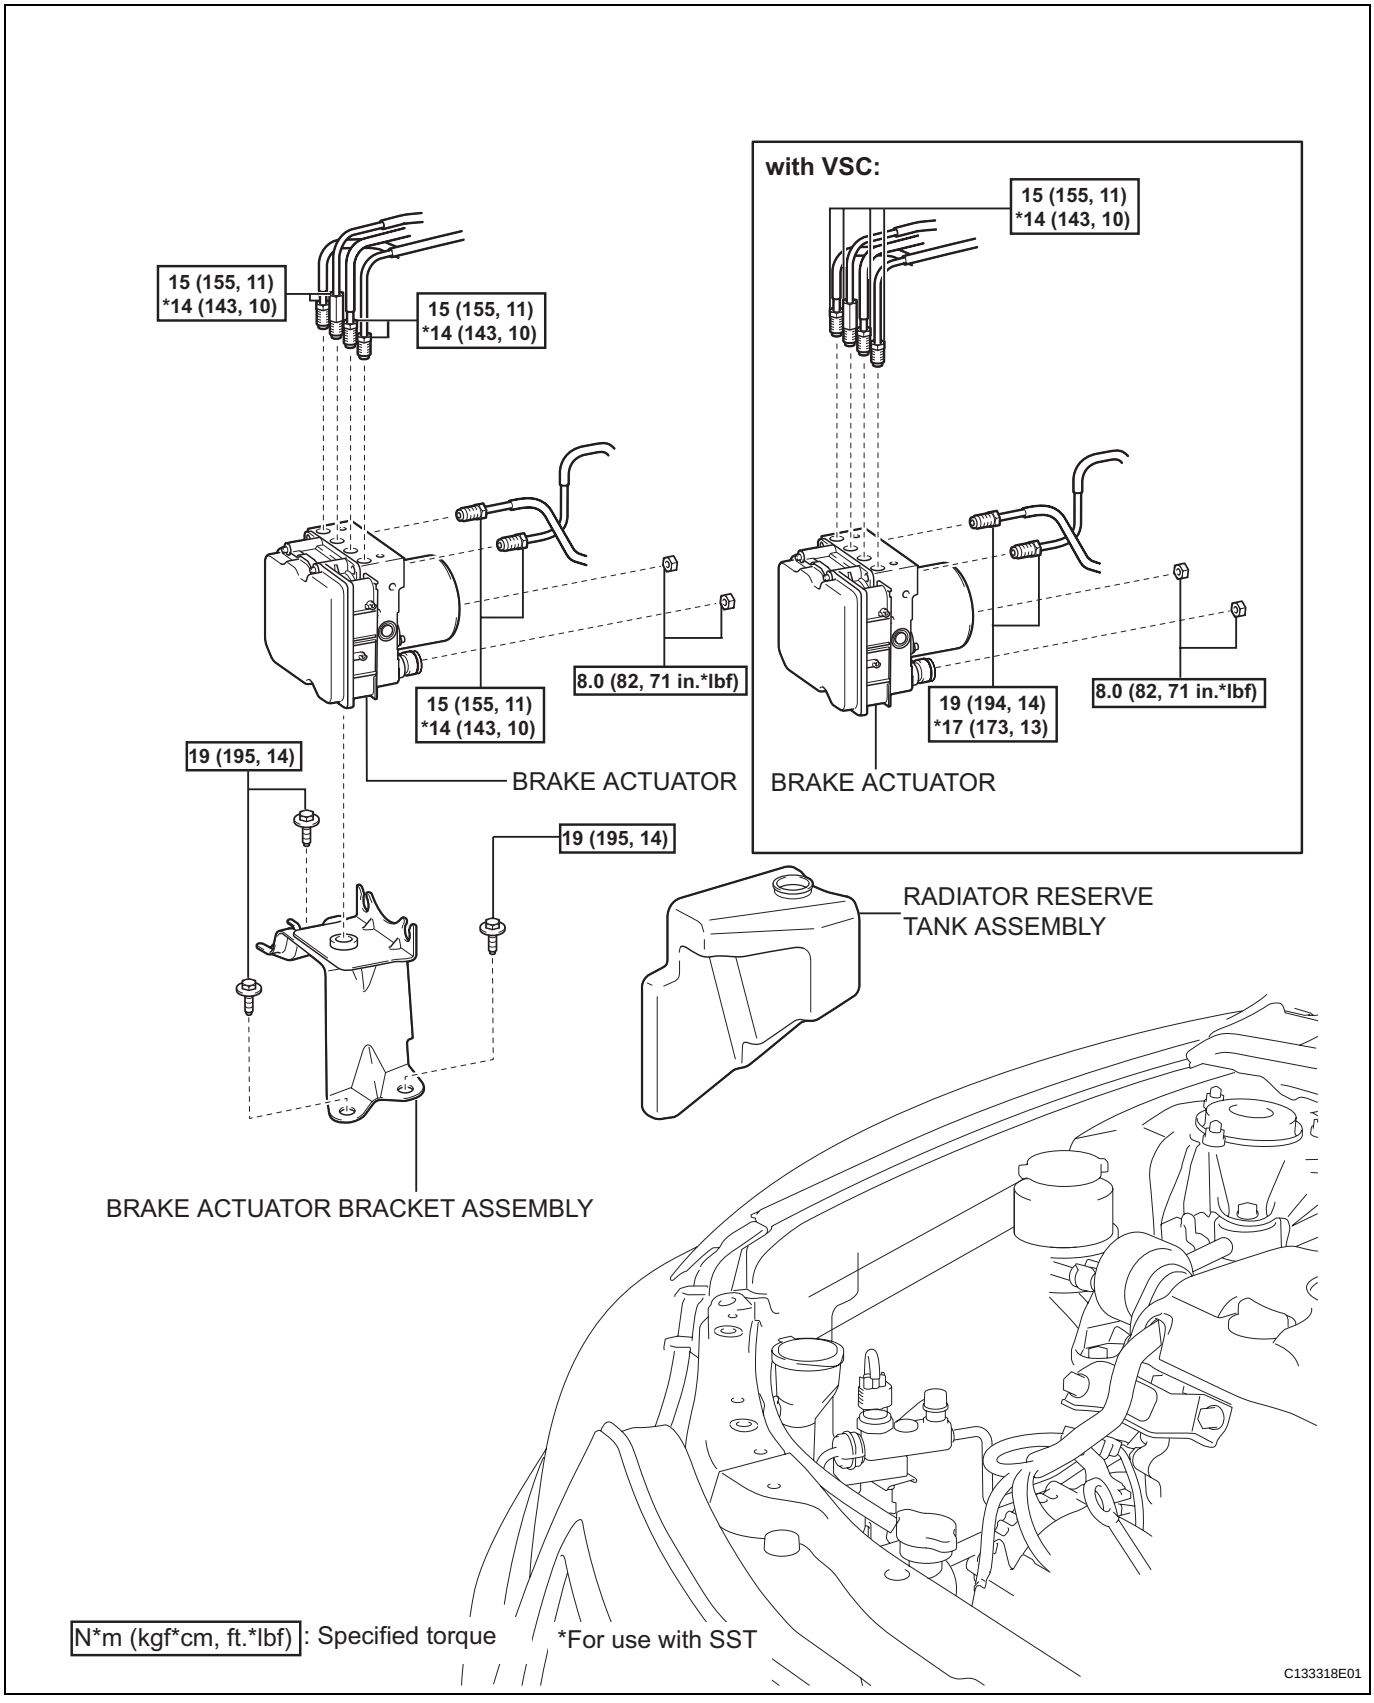
9. PERFORM YAW RATE SENSOR ZERO POINT CALIBRATION
HINT:
(See page BC-119)

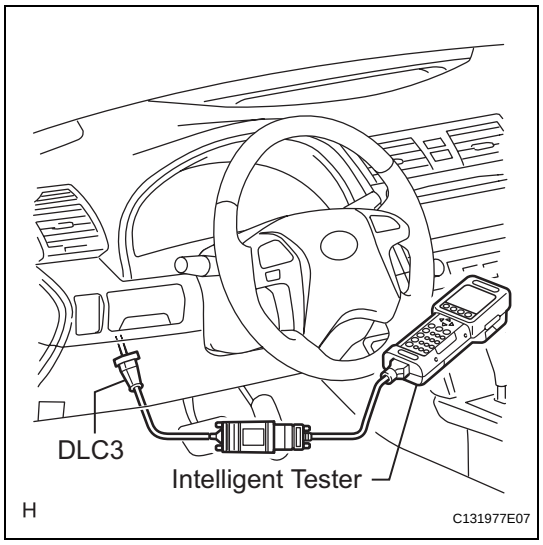
10. INSPECT ACTUATOR WITH INTELLIGENT TESTER
HINT:
(See page BC-425)

BC

BRAKE ACTUATOR (for BOSCH Made)

COMPONENTS





ON-VEHICLE INSPECTION

1. CONNECT INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and run it at idle.
(c) Select the Active Test mode on the intelligent tester.
HINT:
Refer to the intelligent tester operator's manual for further details.

2. INSPECT ACTUATOR MOTOR OPERATION

NOTICE:
Do not keep a motor relay on continuously for more than 5 seconds. When operating it continuously, set an interval of more than 20 seconds.

(a) With the motor relay on, check the actuator motor operation sounds.
(b) Turn the motor relay off.
(c) Depress the brake pedal and hold it for approximately 15 seconds. Check that the brake pedal cannot be depressed farther.
(d) With the motor relay on, check that the pedal does not pulsate.
(e) Turn the motor relay off and release the brake pedal.

3. INSPECT RIGHT FRONT WHEEL OPERATION

NOTICE:
Do not turn on a solenoid in a manner different than described below.

(a) Depress the brake pedal and hold it.
(b) Turn the SFRH and SFRR solenoids on simultaneously, and check that the pedal cannot be depressed.
(c) Turn the SFRH and SFRR solenoids off simultaneously, and check that the pedal can be depressed.
NOTICE:
Do not keep the motor relay on continuously for more than 5 seconds. When operating them continuously, set an interval of more than 20 seconds.
(d) Turn the motor relay on and check that the pedal returns.
NOTICE:
Do not keep the motor relay on continuously for more than 5 seconds. When operating it continuously, set an interval of more than 20 seconds.
(e) Turn the motor relay off and release the brake pedal.

4. INSPECT OTHER WHEEL OPERATION

(a) Using the same procedure, check the solenoids of the other wheels.

HINT:

- Left front wheel: SFLH, SFLR
- Right rear wheel: SRRH, SRRR
- Left rear wheel: SRLH, SRLR

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE RADIATOR RESERVE TANK ASSEMBLY

(a) Separate the radiator reserve tank hose.

(b) Remove the radiator reserve tank assembly.

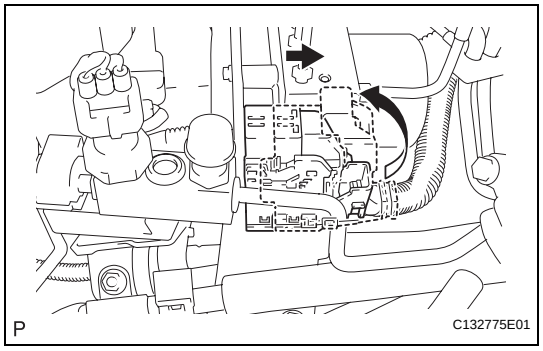
3. DRAIN BRAKE FLUID

NOTICE:

If brake fluid leaks onto any painted surface, immediately clean it off completely.

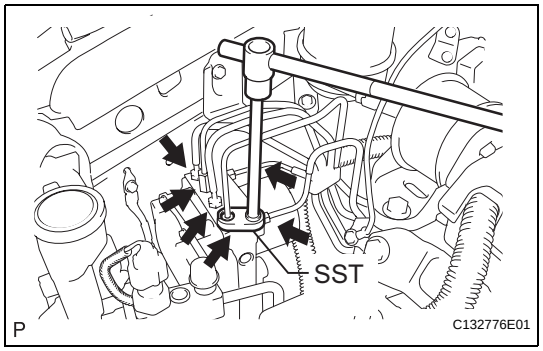
4. REMOVE BRAKE ACTUATOR

(a) Release the lock lever and disconnect the actuator connector.



(b) Using SST, disconnect the 6 brake lines from the actuator assembly with bracket.

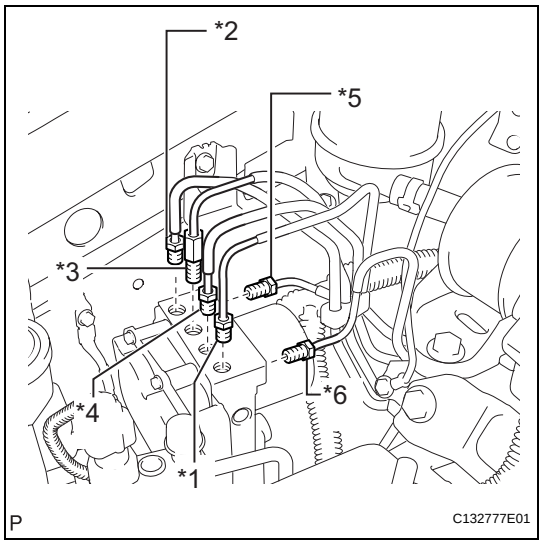
SST 09023-00101

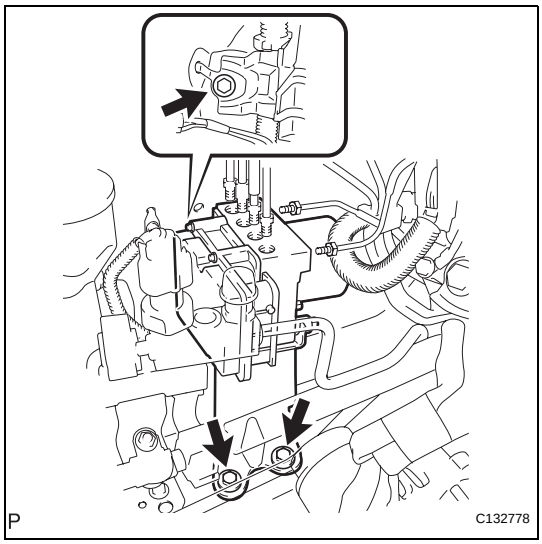


(c) Use tags or make a memo to identify the places to reconnect.

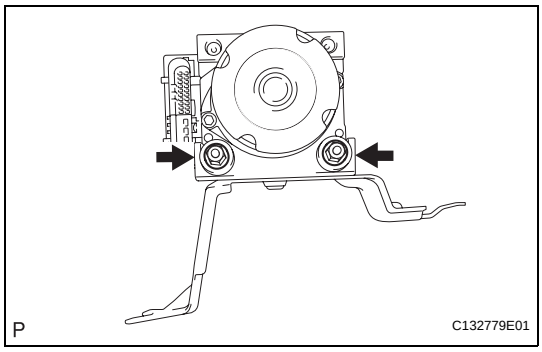
HINT:

- *1: To Front Wheel Cylinder RH
- *2: To Front Wheel Cylinder LH
- *3: To Rear Wheel Cylinder RH
- *4: To Rear Wheel Cylinder LH
- *5: From 2nd Master Cylinder
- *6: From 1st Master Cylinder





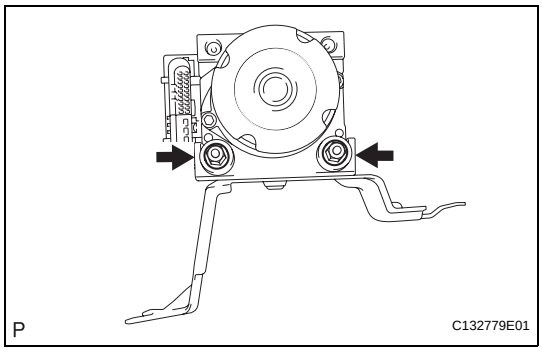
(d) Remove the 3 bolts and actuator assembly from the body with bracket.
NOTICE:
Do not damage the brake tubes and wire harness.



DISASSEMBLY

1. REMOVE BRAKE ACTUATOR BRACKET ASSEMBLY

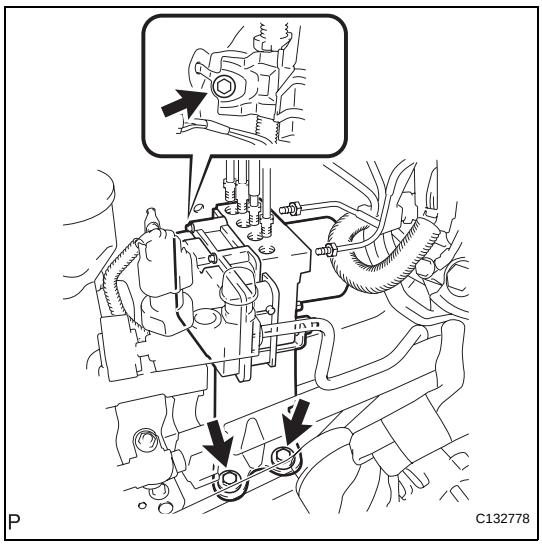
(a) Remove the 2 nuts and the brake actuator assembly from the actuator bracket assembly.



REASSEMBLY

1. INSTALL BRAKE ACTUATOR BRACKET ASSEMBLY

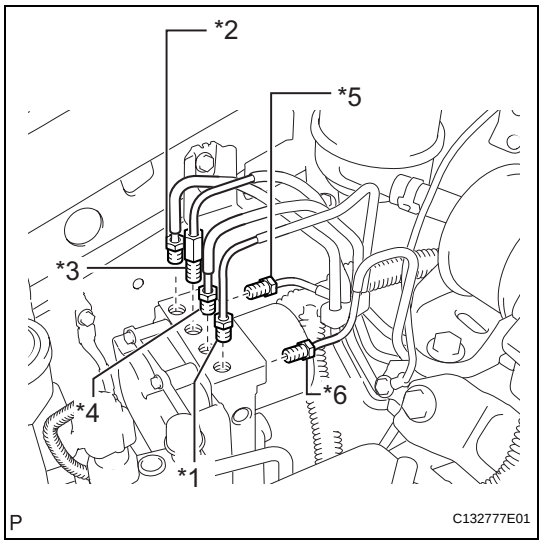
(a) Install the actuator assembly to the actuator bracket assembly with the 2 nuts.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
NOTICE:
Do not remove the hole plug before installing a new brake actuator because the brake actuator assembly is filled with brake fluid.



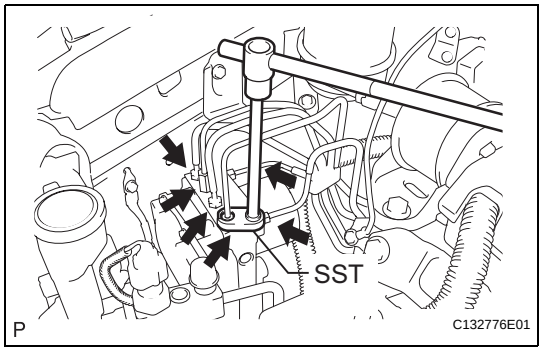
INSTALLATION

1. INSTALL BRAKE ACTUATOR (w/o VSC)

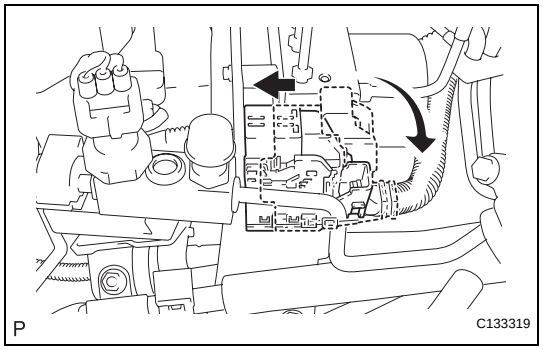
(a) Install the actuator assembly with bracket to the body with the 3 bolts.
Torque: 19 N*m (195 kgf*cm, 14 ft.*lbf)
NOTICE:
Do not damage the brake tubes and wire harness.



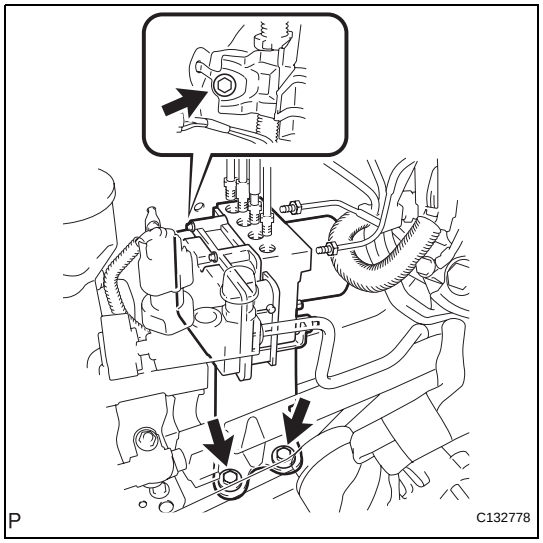
(b) Temporarily tighten each brake tube to the correct positions of the actuator assembly with bracket as shown in the illustration.
HINT:
- *1: To Front Wheel Cylinder RH
- *2: To Front Wheel Cylinder LH
- *3: To Rear Wheel Cylinder RH
- *4: To Rear Wheel Cylinder LH
- *5: From 2nd Master Cylinder
- *6: From 1st Master Cylinder



(c) Using SST, fully tighten each brake tube.
SST 09023-00101
Torque: without SST
15 N*m (155 kgf*cm, 11 ft.*lbf)
with SST
14 N*m (143 kgf*cm, 10 ft.*lbf)
NOTICE:
- **Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).**
- **This torque value is effective when SST is parallel to a torque wrench.**



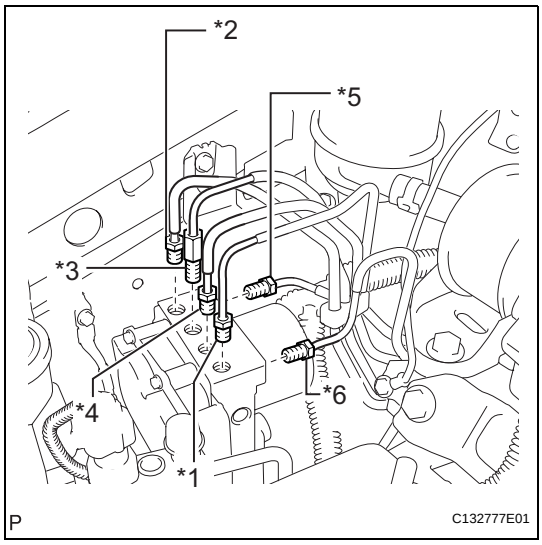
(d) Connect the actuator connector.
NOTICE:
Make sure that the connector is locked securely.



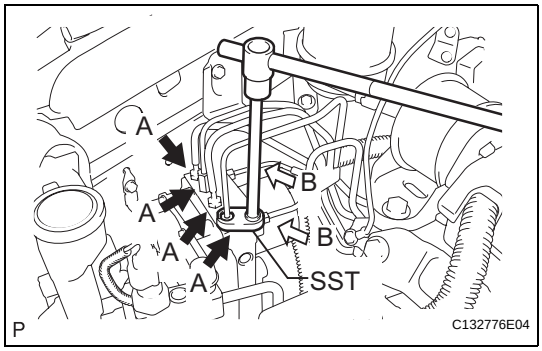
2. INSTALL BRAKE ACTUATOR (w/ VSC)

(a) Install the actuator assembly with bracket to the body with the 3 bolts.
Torque: 19 N*m (195 kgf*cm, 14 ft.*lbf)
NOTICE:
Do not damage the brake tubes.

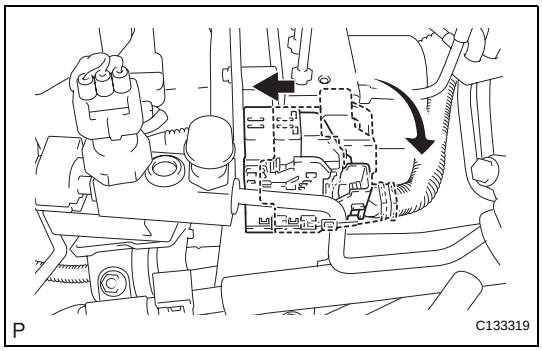
BC



(b) Temporarily tighten each brake tube to the correct positions of the actuator assembly with bracket as shown in the illustration.
HINT:
- *1: To Front Wheel Cylinder RH
- *2: To Front Wheel Cylinder LH
- *3: To Rear Wheel Cylinder RH
- *4: To Rear Wheel Cylinder LH
- *5: From 2nd Master Cylinder
- *6: From 1st Master Cylinder



(c) Using SST, fully tighten each brake tube.
SST 09023-00101, 09023-38200
Torque: bolt A M10 without SST
15 N*m (155 kgf*cm, 11 ft.*lbf)
bolt A M10 with SST
14 N*m (143 kgf*cm, 10 ft.*lbf)
bolt B M12 without SST
19 N*m (194 kgf*cm, 14 ft.*lbf)
bolt B M12 with SST
17 N*m (173 kgf*cm, 13 ft.*lbf)
NOTICE:
- **Use a torque wrench with a fulcrum length of 30 cm (11.81 in.).**
- **This torque value is effective when SST is parallel to a torque wrench.**



(d) Connect the actuator connector.
NOTICE:
Make sure that the connector is locked securely.

3. **INSTALL RADIATOR RESERVE TANK ASSEMBLY**
(a) Install the radiator reserve tank assembly.
(b) Connect the radiator reservoir tank hose.

4. **FILL RESERVOIR WITH BRAKE FLUID (See page BR-6)**

5. **BLEED BRAKE LINE (See page BR-7)**

6. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

7. **BLEED BRAKE ACTUATOR ASSEMBLY (w/ VSC) (See page BR-8)**

8. **INSPECT BRAKE FLUID LEVEL (See page BR-10)**

9. **INSPECT FOR BRAKE FLUID LEAKAGE**

10. **INSPECT ACTUATOR WITH INTELLIGENT TESTER**
HINT:
(See page BC-431)

11. PERFORM YAW RATE SENSOR ZERO POINT CALIBRATION (w/ VSC)

HINT:

(See page BC-278)

12. INSPECT SENSOR SIGNAL

HINT:

- without VSC (see page BC-11)
- with VSC (see page BC-290)

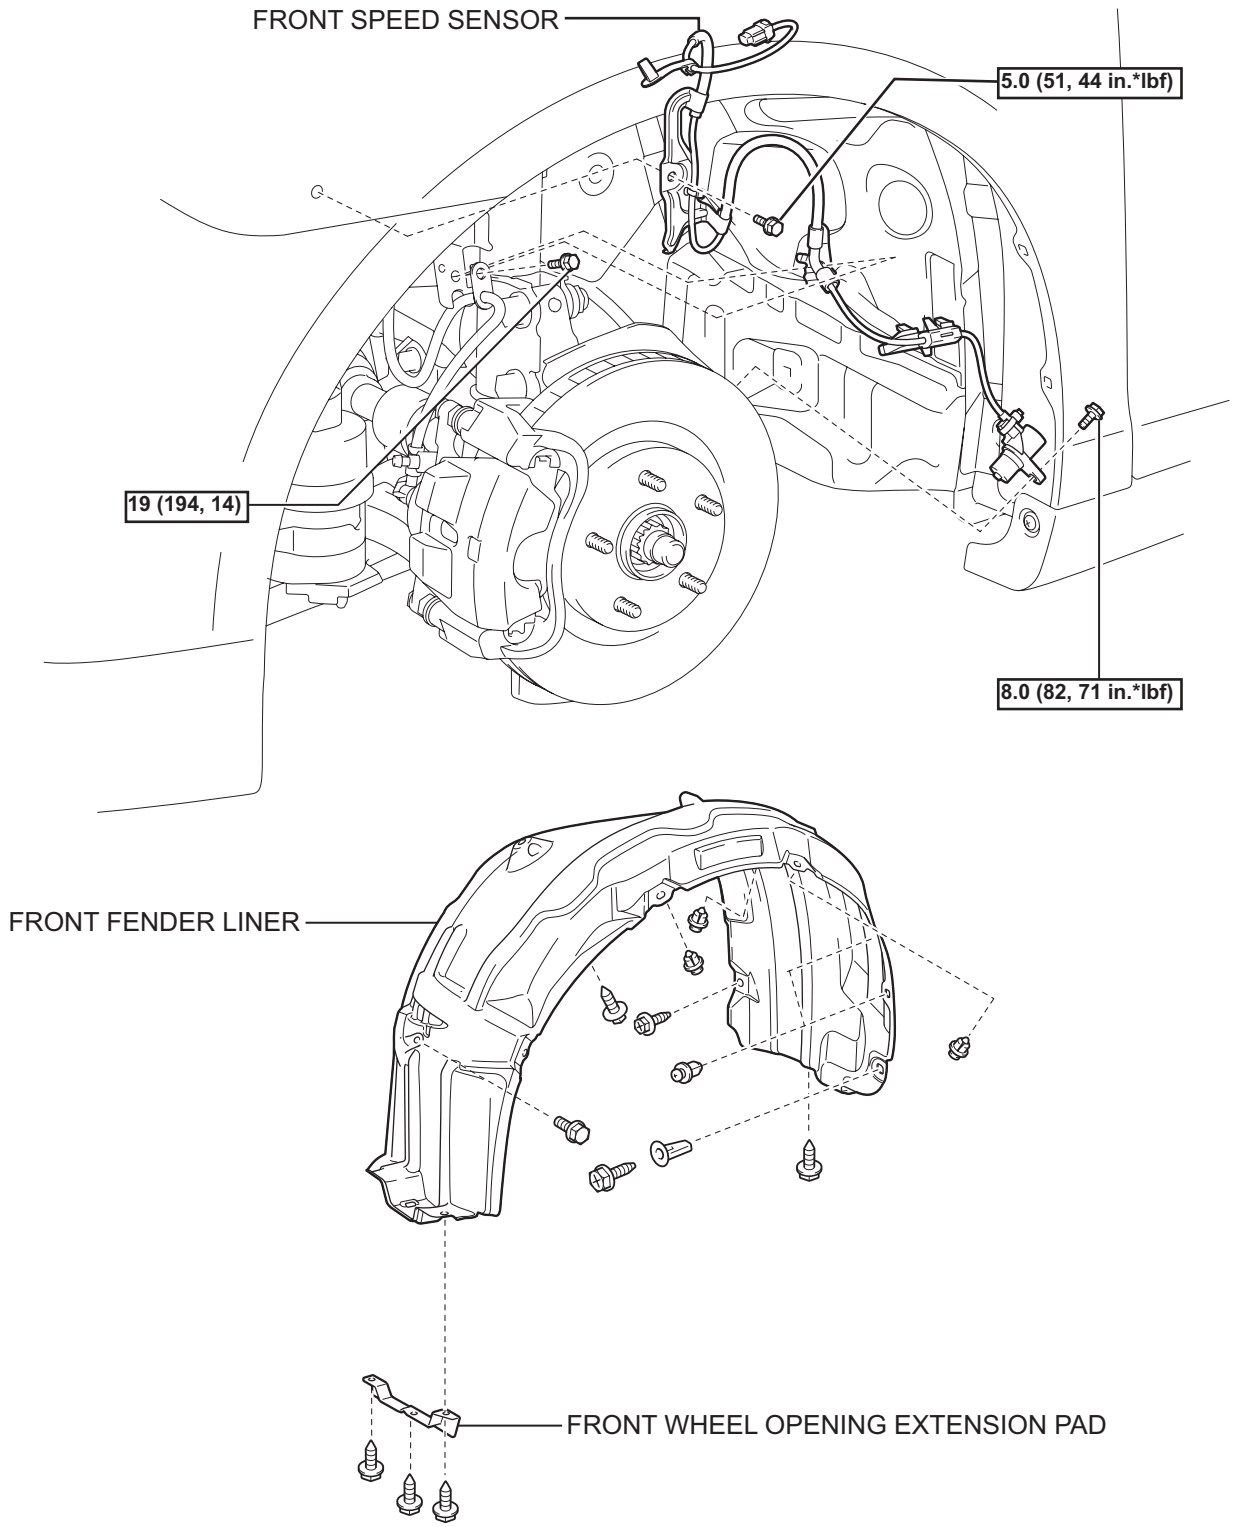
13. INSPECT DTC AND CLEAR

HINT:

- without VSC (See page BC-21)
- with VSC (See page BC-302)

FRONT SPEED SENSOR

COMPONENTS

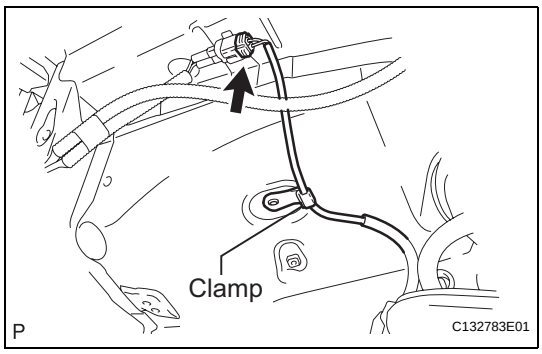


N*m (kgf*cm, ft.*lbf): Specified torque

C132784E01

REMOVAL

1. **REMOVE FRONT WHEEL**
2. **REMOVE FRONT WHEEL OPENING EXTENSION PAD LH (See page ED-6)**
3. **REMOVE FRONT FENDER LINER (See page ED-6)**
4. **REMOVE FRONT SPEED SENSOR**
   (a) Disconnect the front speed sensor connector and clamp.



BC

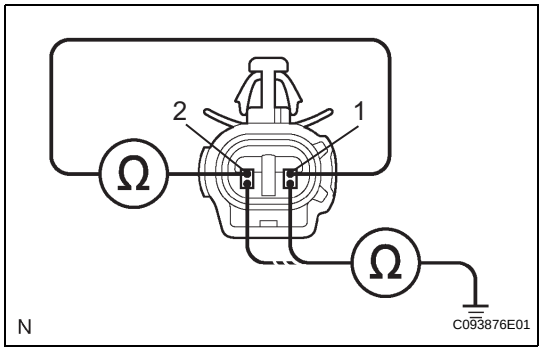
   (b) Remove the 2 bolts from the body and the shock absorber assembly.
   (c) Disengage the 2 claws from the steering knuckle and body.

   (d) Remove the bolt and the front speed sensor.
   NOTICE:
   - **Prevent foreign matter from attaching to the sensor tip.**
   - **Clean the installation hole and the surface for the speed sensor every time the speed sensor is removed.**

INSPECTION

1. INSPECT FRONT SPEED SENSOR (for BOSCH Made)

(a) Inspect the front speed sensor. If any of the following occurs, replace the front speed sensor with a new one:
- The surface of the front speed sensor is cracked, dented, or chipped off.
- The connector or wire harness is scratched, cracked, or damaged.
- The front speed sensor has been dropped.



(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

LH

Tester Connection	Specified Condition
1 (FL+) - 2 (FL-)	0.92 to 1.22 kΩ at 20 °C (68°F)
1 (FL+) - Body ground	10 kΩ or higher
2 (FL-) - Body ground	10 kΩ or higher

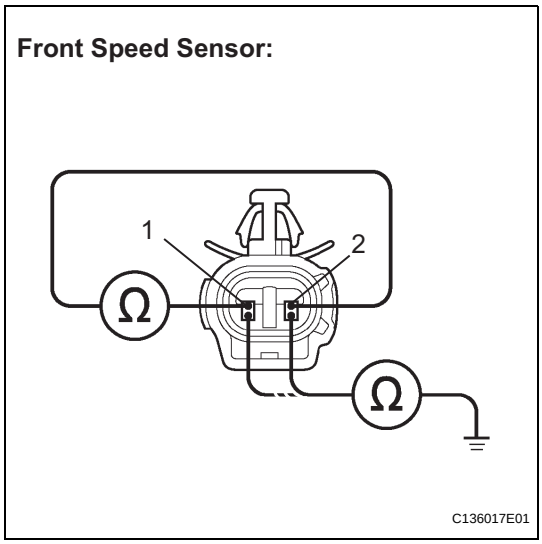
RH

Tester Connection	Specified Condition
1 (FR+) - 2 (FR-)	0.92 to 1.22 kΩ at 20 °C(68°F)
1 (FR+) - Body ground	10 kΩ or higher
2 (FR-) - Body ground	10 kΩ or higher

If the value is not as specified, replace the front speed sensor.

2. INSPECT FRONT SPEED SENSOR (for ADVICS Made)

(a) Inspect the front speed sensor. If any of the following occurs, replace the front speed sensor with a new one:
- The surface of the front speed sensor is cracked, dented, or chipped off.
- The connector or wire harness is scratched, cracked, or damaged.
- The front speed sensor has been dropped.



(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

RH

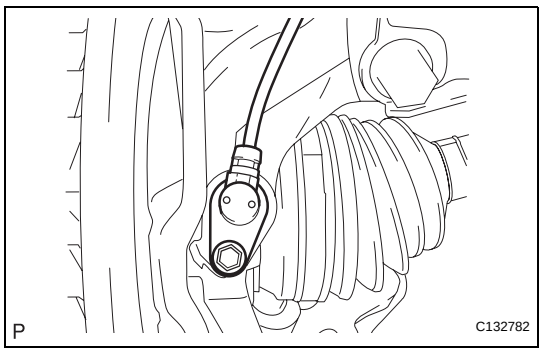
Tester Connection	Condition	Specified Condition
1 (FR+) - 2 (FR-)	Always	1.4 to 1.8 kΩ at 20°C (68 °F)
1 (FR+) - Body ground	Always	10 kΩ or higher
2 (FR-) - Body ground	Always	10 kΩ or higher

LH

Tester Connection	Condition	Specified Condition
1 (FL+) - 2 (FL-)	Always	1.4 to 1.8 kΩ at 20°C (68 °F)
1 (FL+) - Body ground	Always	10 kΩ or higher
2 (FL-) - Body ground	Always	10 kΩ or higher

If the value is not as specified, replace the front speed sensor.

BC



INSTALLATION

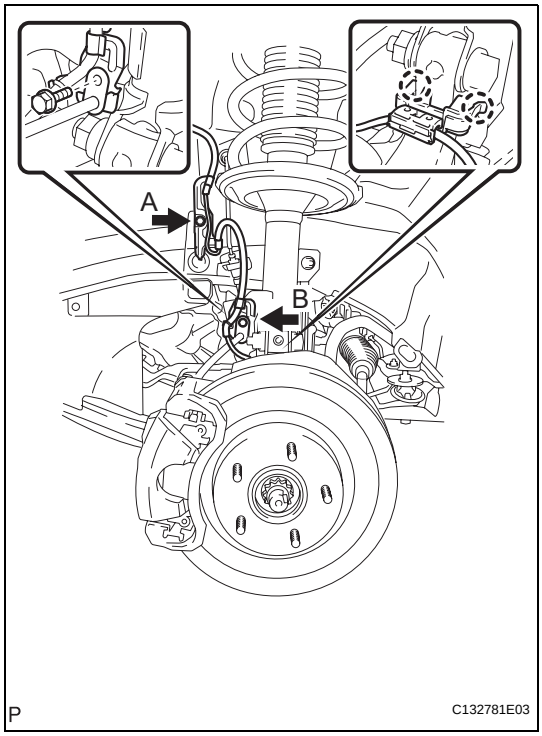
1. INSTALL FRONT SPEED SENSOR

(a) Install the front speed sensor with the bolt.

Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

NOTICE:

Prevent foreign matter from attaching to the sensor tip.



(b) Install the front speed sensor with the 2 bolts and engage the 2 claws.

Torque: Bolt A

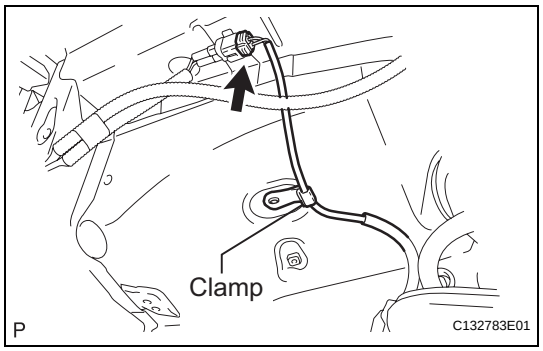
5.0 N*m (51 kgf*cm, 44 in.*lbf)

Bolt B

19 N*m (194 kgf*cm, 14 ft.*lbf)

NOTICE:

Do not twist the wire harness for the front speed sensor when installing the speed sensor.



(c) Connect the front speed sensor connector and clamp.

2. **INSTALL FRONT FENDER LINER (See page ED-10)**

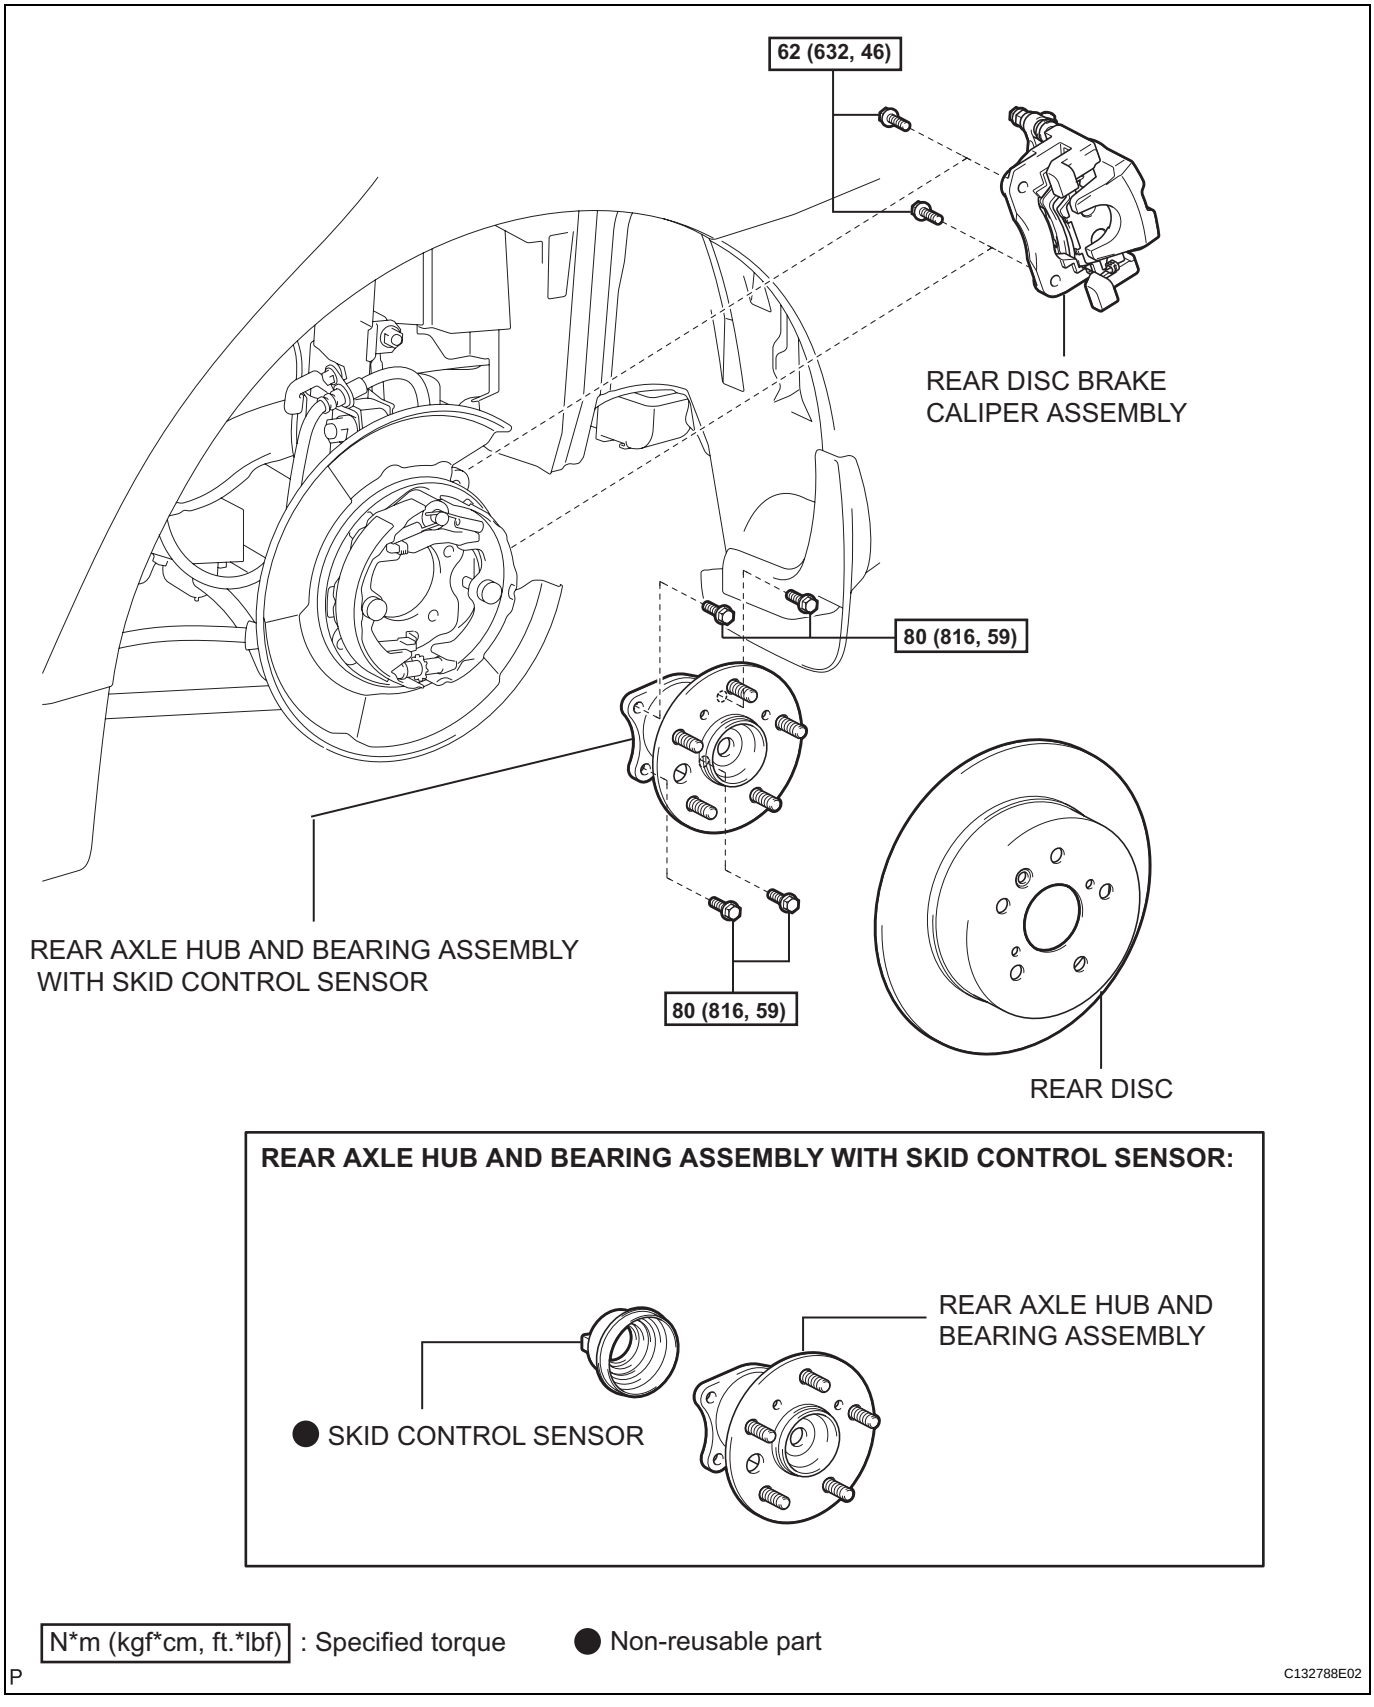
3. **INSTALL FRONT WHEEL OPENING EXTENSION PAD LH (See page ED-10)**

4. **INSTALL FRONT WHEEL**
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

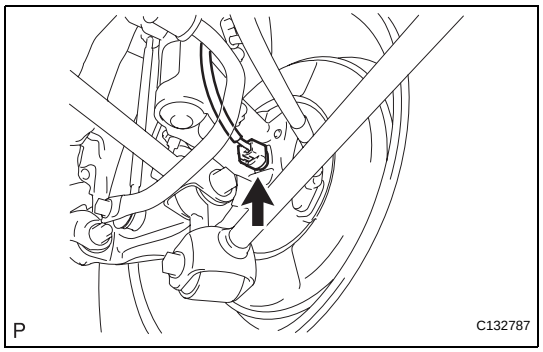
5. **CHECK SPEED SENSOR SIGNAL**
HINT:
- for BOSCH without VSC (See page BC-11)
- for BOSCH with VSC (See page BC-290)
- for ADVICS (See page BC-123)

SKID CONTROL SENSOR

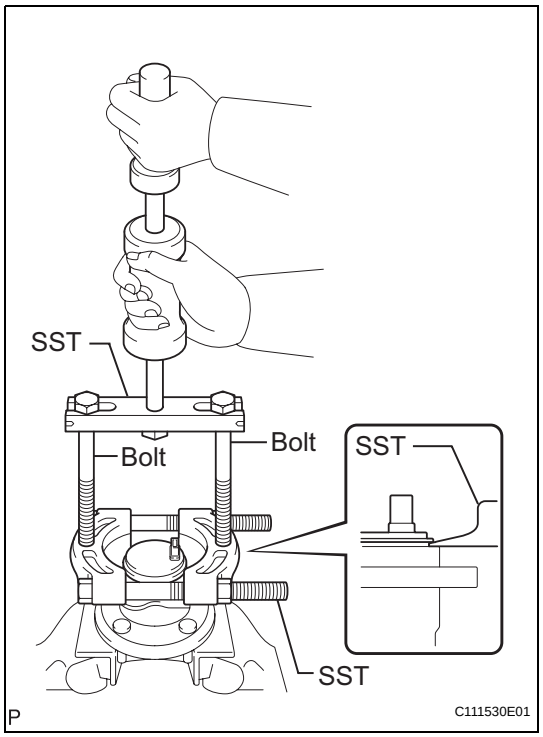
COMPONENTS



REMOVAL



1. **REMOVE REAR WHEEL**
2. **DISCONNECT SKID CONTROL SENSOR WIRE**
   (a) Disconnect the connector from the skid control sensor.
   NOTICE:
   Be careful not to damage the speed sensor.
3. **REMOVE REAR DISC BRAKE CALIPER ASSEMBLY (See page AH-18)**
4. **REMOVE REAR DISC (See page BR-62)**
5. **REMOVE REAR AXLE HUB AND BEARING ASSEMBLY WITH SKID CONTROL SENSOR (See page AH-15)**



6. **REMOVE SKID CONTROL SENSOR**
   (a) Mount the rear axle hub in a vise using aluminum plates.
   NOTICE:
   Replace the hub and bearing assembly if it is dropped or receives a strong shock.
   (b) Using a pin punch and hammer, drive out the 2 pins and remove the 2 attachments from SST.
   SST 09520-00031 (09521-00010, 09520-00040), 09521-00020
   (c) Using SST and 2 bolts (Diameter: 12 mm, pitch: 1.5 mm), remove the skid control sensor from the hub and bearing assembly.
   SST 09520-00031 (09521-00010, 09520-00040), 09521-00020, 09950-00020
   NOTICE:
   - **Keep the sensor away from magnets.**
   - **Pull the skid control sensor off straight, taking care not to make contact with the skid control sensor rotor.**
   - **If the speed sensor rotor is damaged or deformed, replace the hub and bearing assembly.**
   - **Do not scratch the contact surface between the axle hub and the skid control sensor.**
   - **Do not attach foreign matter to the speed sensor rotor and tip.**

INSPECTION

1. INSPECT SKID CONTROL SENSOR (for BOSCH Made)

(a) Inspect the skid control sensor. If any of the following occurs, replace the skid control sensor with a new one:
- The surface of the skid control sensor is cracked, dented, or chipped off.
- The connector is scratched, cracked, or damaged.
- The skid control sensor has been dropped.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

LH

Tester Connection	Specified Condition
1 (RR+) - 2 (RR-)	Below 2.2 kΩ
1 (RR+) - Body ground	10 kΩ or higher
2 (RR-) - Body ground	10 kΩ or higher

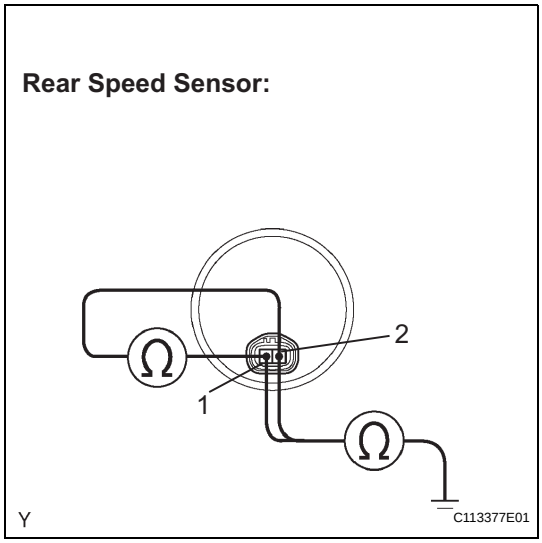
RH

Tester Connection	Specified Condition
1 (RL+) - 2 (RL-)	Below 2.2 kΩ
1 (RL+) - Body ground	10 kΩ or higher
2 (RL-) - Body ground	10 kΩ or higher

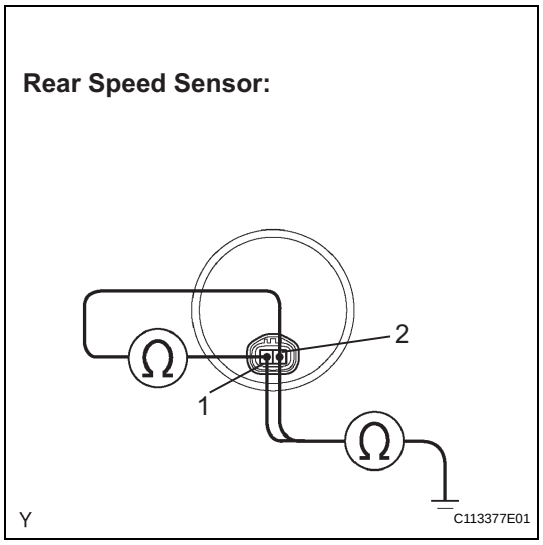
If the value is not as specified, replace the skid control sensor.

2. INSPECT SKID CONTROL SENSOR (for ADVICS Made)

(a) Inspect the skid control sensor. If any of the following occurs, replace the skid control sensor with a new one:
- The surface of the skid control sensor is cracked, dented, or chipped off.
- The connector is scratched, cracked, or damaged.
- The skid control sensor has been dropped.



BC



(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

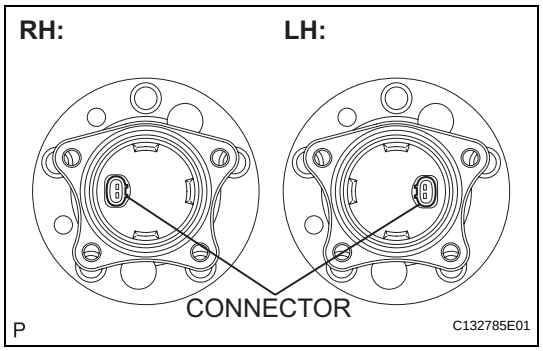
RH

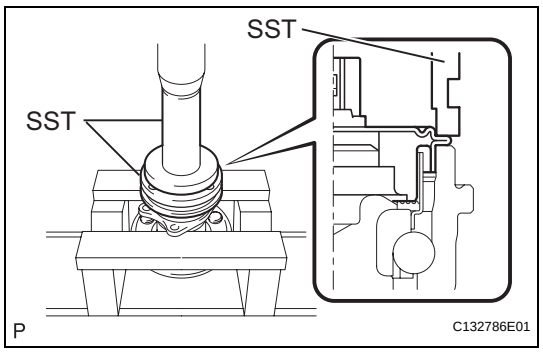
Tester Connection	Condition	Specified Condition
2 (RR+) - 1 (RR-)	Always	0.9 to 2.1 kΩ
2 (RR+) - Body ground	Always	10 kΩ or higher
1 (RR-) - Body ground	Always	10 kΩ or higher

LH

Tester Connection	Condition	Specified Condition
2 (RL+) - 1 (RL-)	Always	0.9 to 2.1 kΩ
2 (RL+) - Body ground	Always	10 kΩ or higher
1 (RL-) - Body ground	Always	10 kΩ or higher

If the value is not as specified, replace the skid control sensor.





INSTALLATION

1. **INSTALL SKID CONTROL SENSOR**

(a) Clean the contact surface between the axle hub and a new skid control sensor.

NOTICE:

Prevent foreign matter from attaching to the sensor rotor.

(b) Place the skid control sensor on the axle hub so that the connector is positioned as shown in the illustration.

(c) Using SST, a press, 2 V-blocks, and 2 steel plates, install the skid control sensor to the axle hub.

SST 09309-36010, 09213-58013

NOTICE:

- **Keep the sensor away from magnets.**
- **Do not use a hammer on the skid control sensor.**
- **Check that there is no foreign matter such as iron chips on the detecting portion of the skid control sensor.**
- **Slowly press the skid control sensor straight.**

2. **INSTALL REAR AXLE HUB AND BEARING ASSEMBLY WITH SKID CONTROL SENSOR (See page AH-16)**

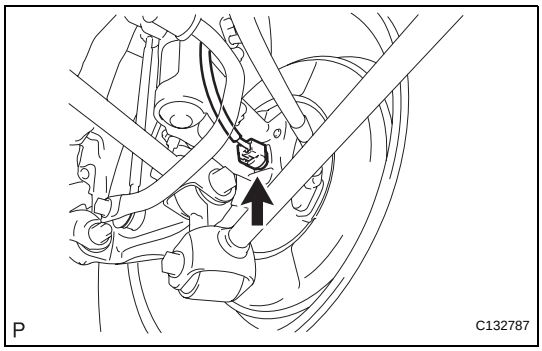
3. **INSPECT REAR AXLE HUB BEARING LOOSENESS (See page AH-15)**

4. **INSPECT REAR AXLE HUB RUNOUT (See page AH-15)**

5. **INSTALL REAR DISC (See page BR-63)**

6. **INSTALL REAR DISC BRAKE CALIPER ASSEMBLY (See page AH-20)**

BC



7. **CONNECT SKID CONTROL SENSOR WIRE**
   (a) Connect the connector to the skid control sensor.

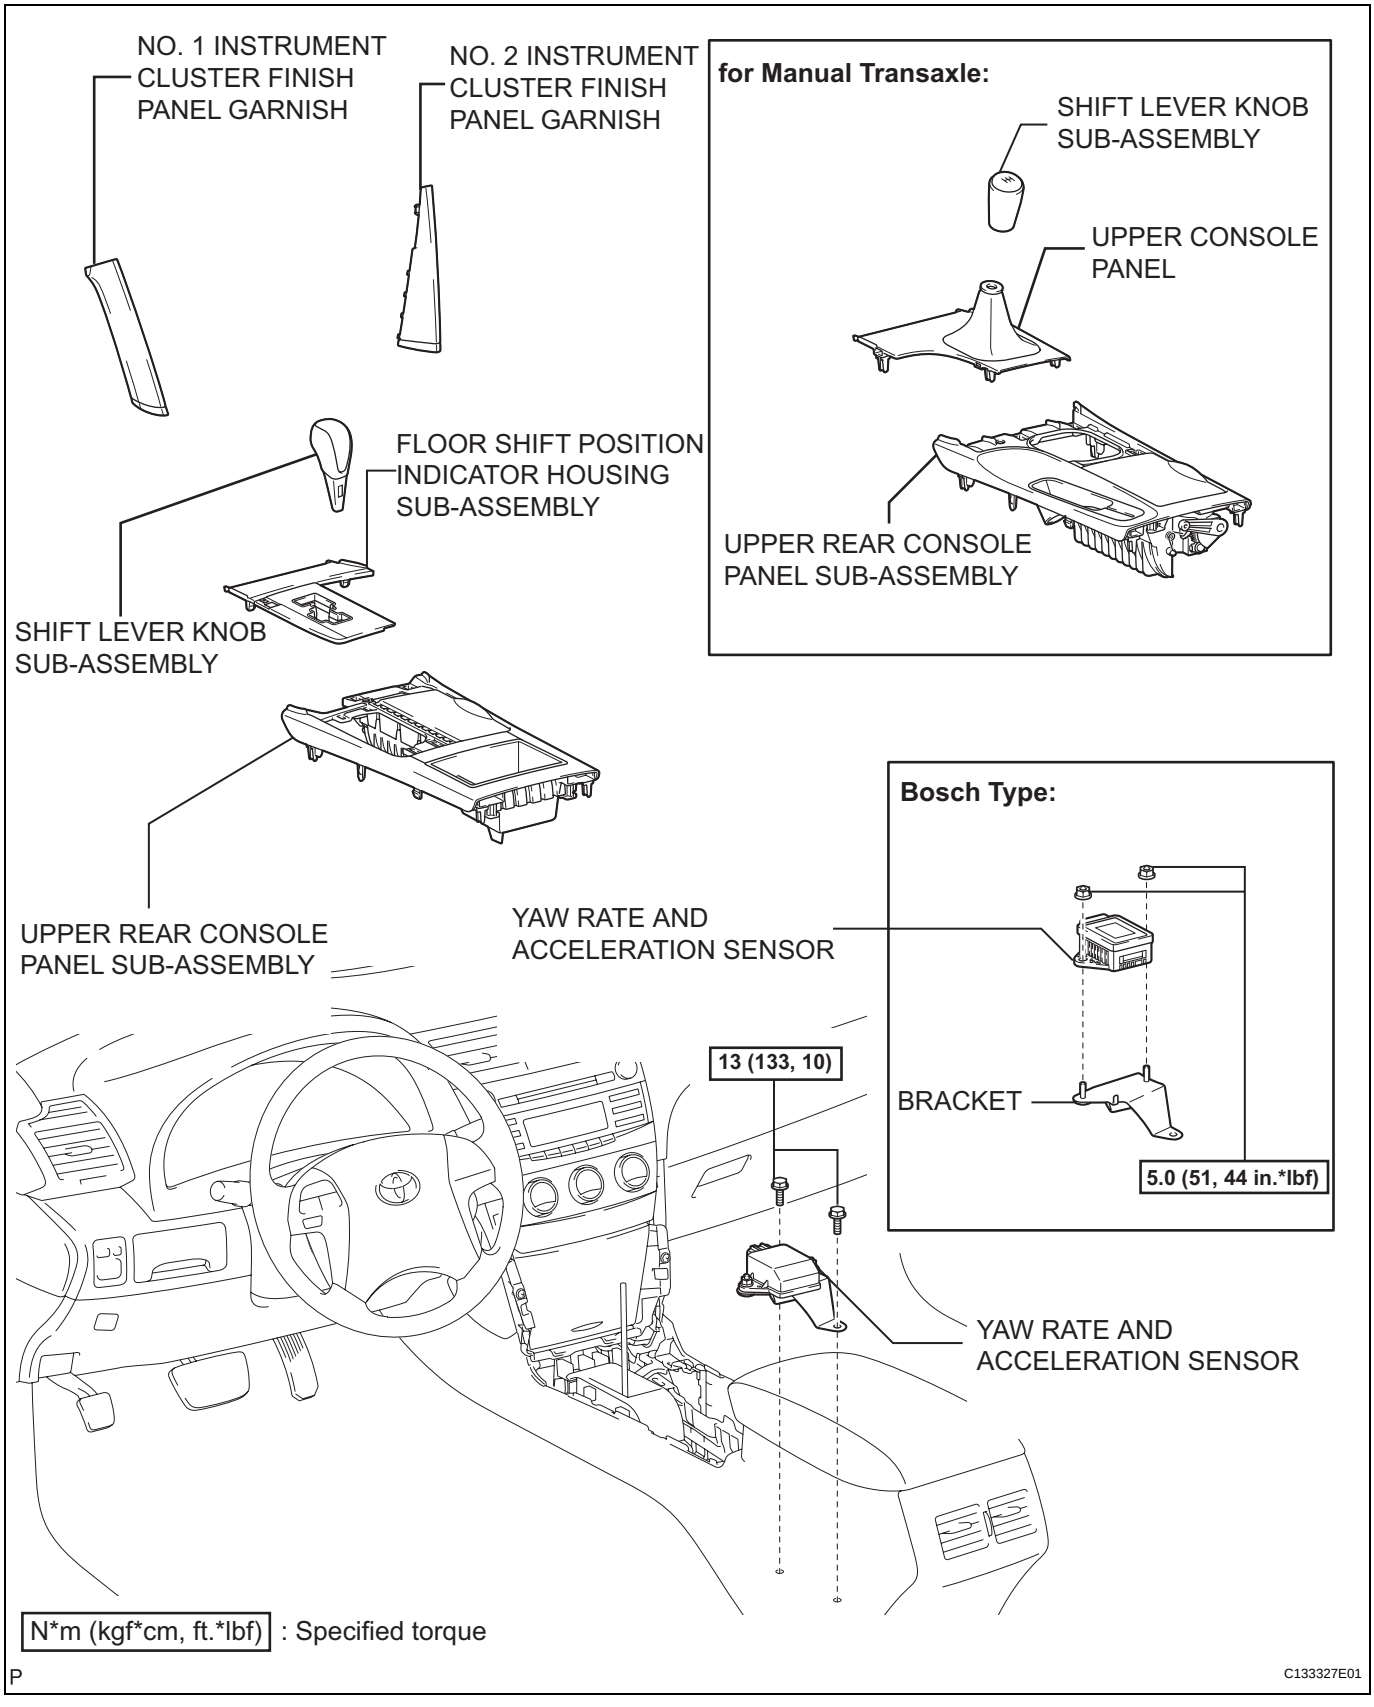
8. **INSTALL REAR WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

9. **INSPECT AND ADJUST REAR WHEEL ALIGNMENT**
   HINT:
   (See page SP-13)

10. **CHECK SPEED SENSOR SIGNAL**
    HINT:
    - for BOSCH without VSC (See page BC-11)
    - for BOSCH with VSC (See page BC-290)
    - for ADVICS (See page BC-123)

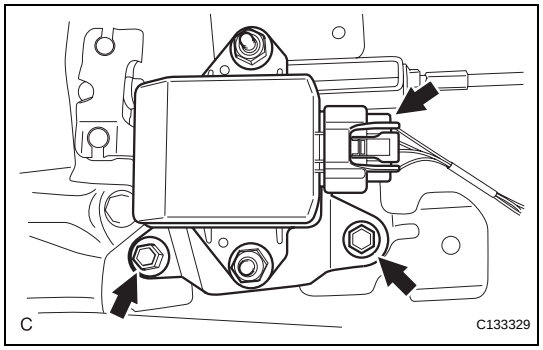
YAW RATE AND ACCELERATION SENSOR (w/ VSC)

COMPONENTS

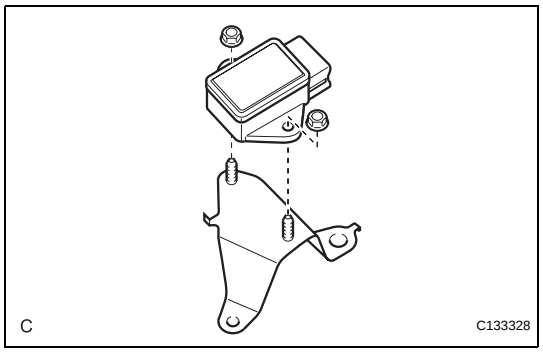


REMOVAL

1. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-24)**
2. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-24)**
3. **REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-24)**
4. **REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-25)**
5. **REMOVE FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-25)**
6. **REMOVE UPPER CONSOLE PANEL (for Manual Transaxle) (See page IP-25)**
7. **REMOVE UPPER REAR CONSOLE PANEL SUB-ASSEMBLY (for Manual Transaxle) (See page IP-26)**
8. **REMOVE UPPER REAR CONSOLE PANEL SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-26)**
9. **REMOVE YAW RATE AND ACCELERATION SENSOR**
   (a) Disconnect the yaw rate sensor connector.
   (b) Remove the 2 bolts and yaw rate sensor.
   NOTICE:
   Do not remove the sensor from the bracket.



10. **REMOVE YAW RATE AND ACCELERATION SENSOR (for BOSCH Made)**
    (a) Remove the 2 nuts and yaw rate sensor from the bracket.

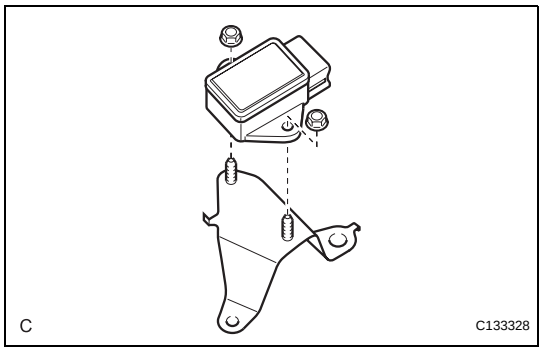


BC

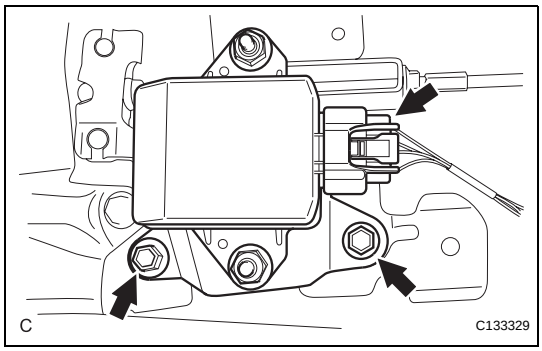
INSPECTION

1. **INSPECT YAW RATE AND ACCELERATION SENSOR**
   (a) Inspect the yaw rate sensor. If any of the following occurs, replace the yaw rate sensor with a new one:
   - The surface of the yaw rate sensor is cracked, dented, or chipped off.
   - The connector is scratched, cracked, or damaged.
   - The yaw rate sensor has been dropped.

INSTALLATION



1. **INSTALL YAW RATE AND ACCELERATION SENSOR (for BOSCH Made)**
   (a) Install the yaw rate and acceleration sensor to the bracket with the 2 nuts.
   Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)



2. **INSTALL YAW RATE AND ACCELERATION SENSOR**
   (a) Install the yaw rate sensor and acceleration with the 2 bolts.
   NOTICE:
   - **Do not damage the yaw rate and acceleration sensor.**
   - **Make sure that the yaw rate and acceleration sensor is installed securely.**

   Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)
   (b) Connect the yaw rate and acceleration sensor connector.

3. **INSTALL UPPER REAR CONSOLE PANEL SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-53)**
4. **INSTALL UPPER REAR CONSOLE PANEL SUB-ASSEMBLY (for Manual Transaxle) (See page IP-53)**
5. **INSTALL UPPER CONSOLE PANEL (for Manual Transaxle) (See page IP-54)**
6. **INSTALL FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-53)**
7. **INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-54)**
8. **INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-55)**
9. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-55)**
10. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-55)**

BC

11. PERFORM YAW RATE SENSOR ZERO POINT CALIBRATION

HINT:

- for BOSCH (See page BC-278)
- for ADVICS (See page BC-119)

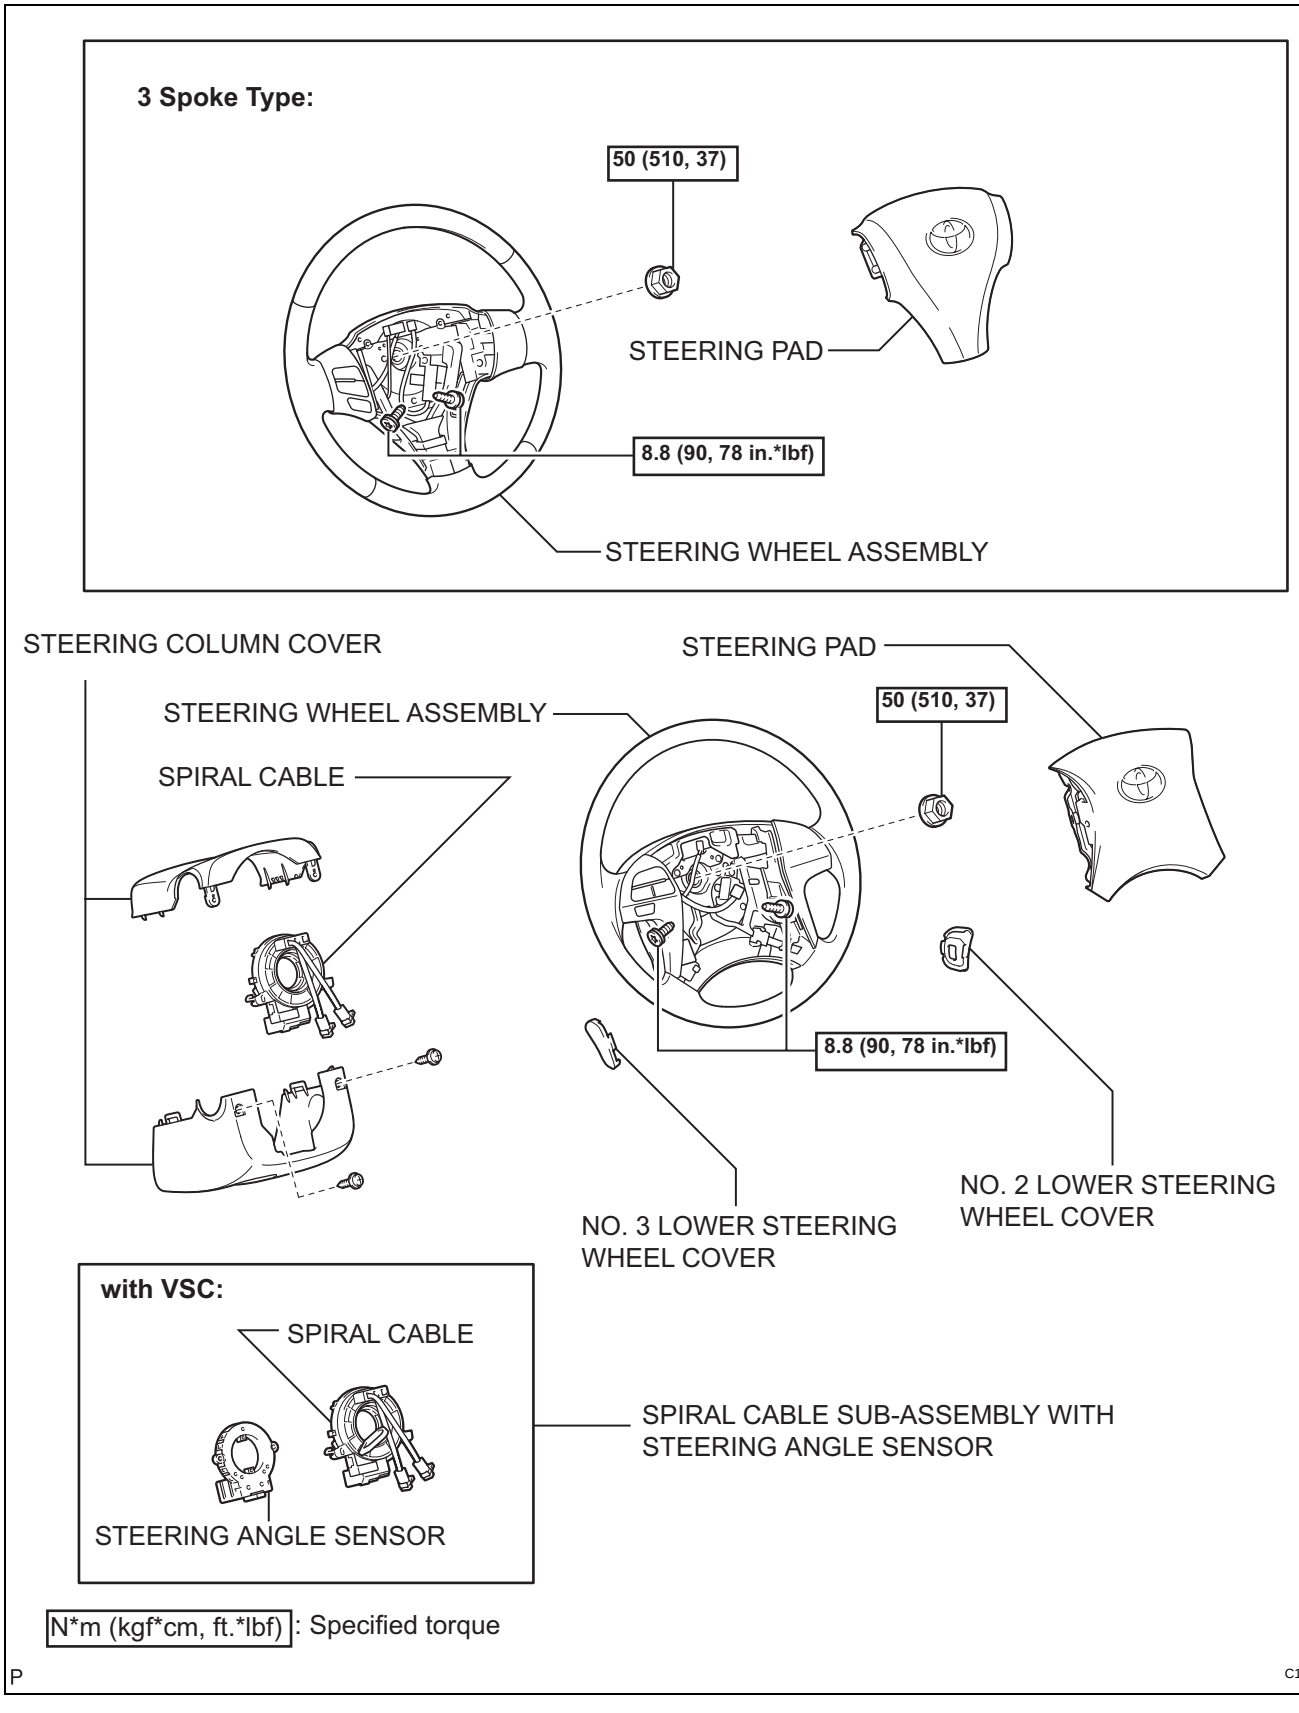
STEERING ANGLE SENSOR (w/ VSC)

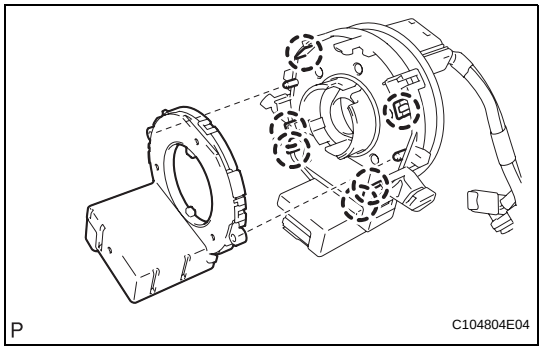
COMPONENTS



BC

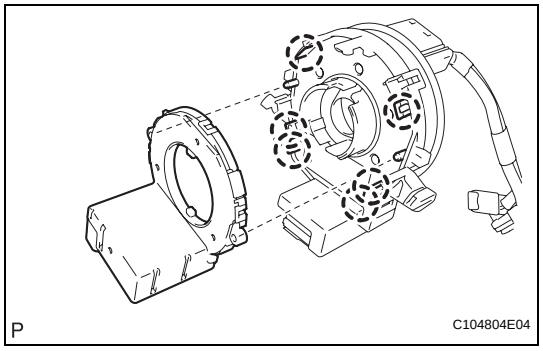
REMOVAL

1. **PRECAUTION**
   CAUTION:
   Be sure to read "PRECAUTION" thoroughly before servicing (See page RS-1).
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
3. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**
   NOTICE:
   When reconnecting the cable to the negative battery terminal after installing the steering sensor, check that the front tires and steering wheel are kept aligned straight ahead before and after connecting the cable to the negative battery terminal.
4. **REMOVE NO. 2 STEERING WHEEL COVER LOWER (See page RS-349)**
5. **REMOVE NO. 3 STEERING WHEEL COVER LOWER (See page RS-349)**
6. **REMOVE STEERING PAD (See page RS-350)**
7. **REMOVE STEERING WHEEL ASSEMBLY (See page SR-38)**
8. **REMOVE STEERING COLUMN COVER (See page SR-39)**
9. **REMOVE SPIRAL CABLE SUB-ASSEMBLY WITH STEERING ANGLE SENSOR (See page RS-364)**
10. **REMOVE STEERING ANGLE SENSOR**
    (a) Disengage the claws and remove the steering angle sensor from the spiral cable.



INSPECTION

1. **INSPECT STEERING ANGLE SENSOR**
   (a) Inspect the steering angle sensor. If any of the following occurs, replace the steering angle sensor with a new one:
   - The surface of the steering angle sensor is cracked, dented, or chipped off.
   - The connector is scratched, cracked, or damaged.
   - The steering angle sensor has been dropped.



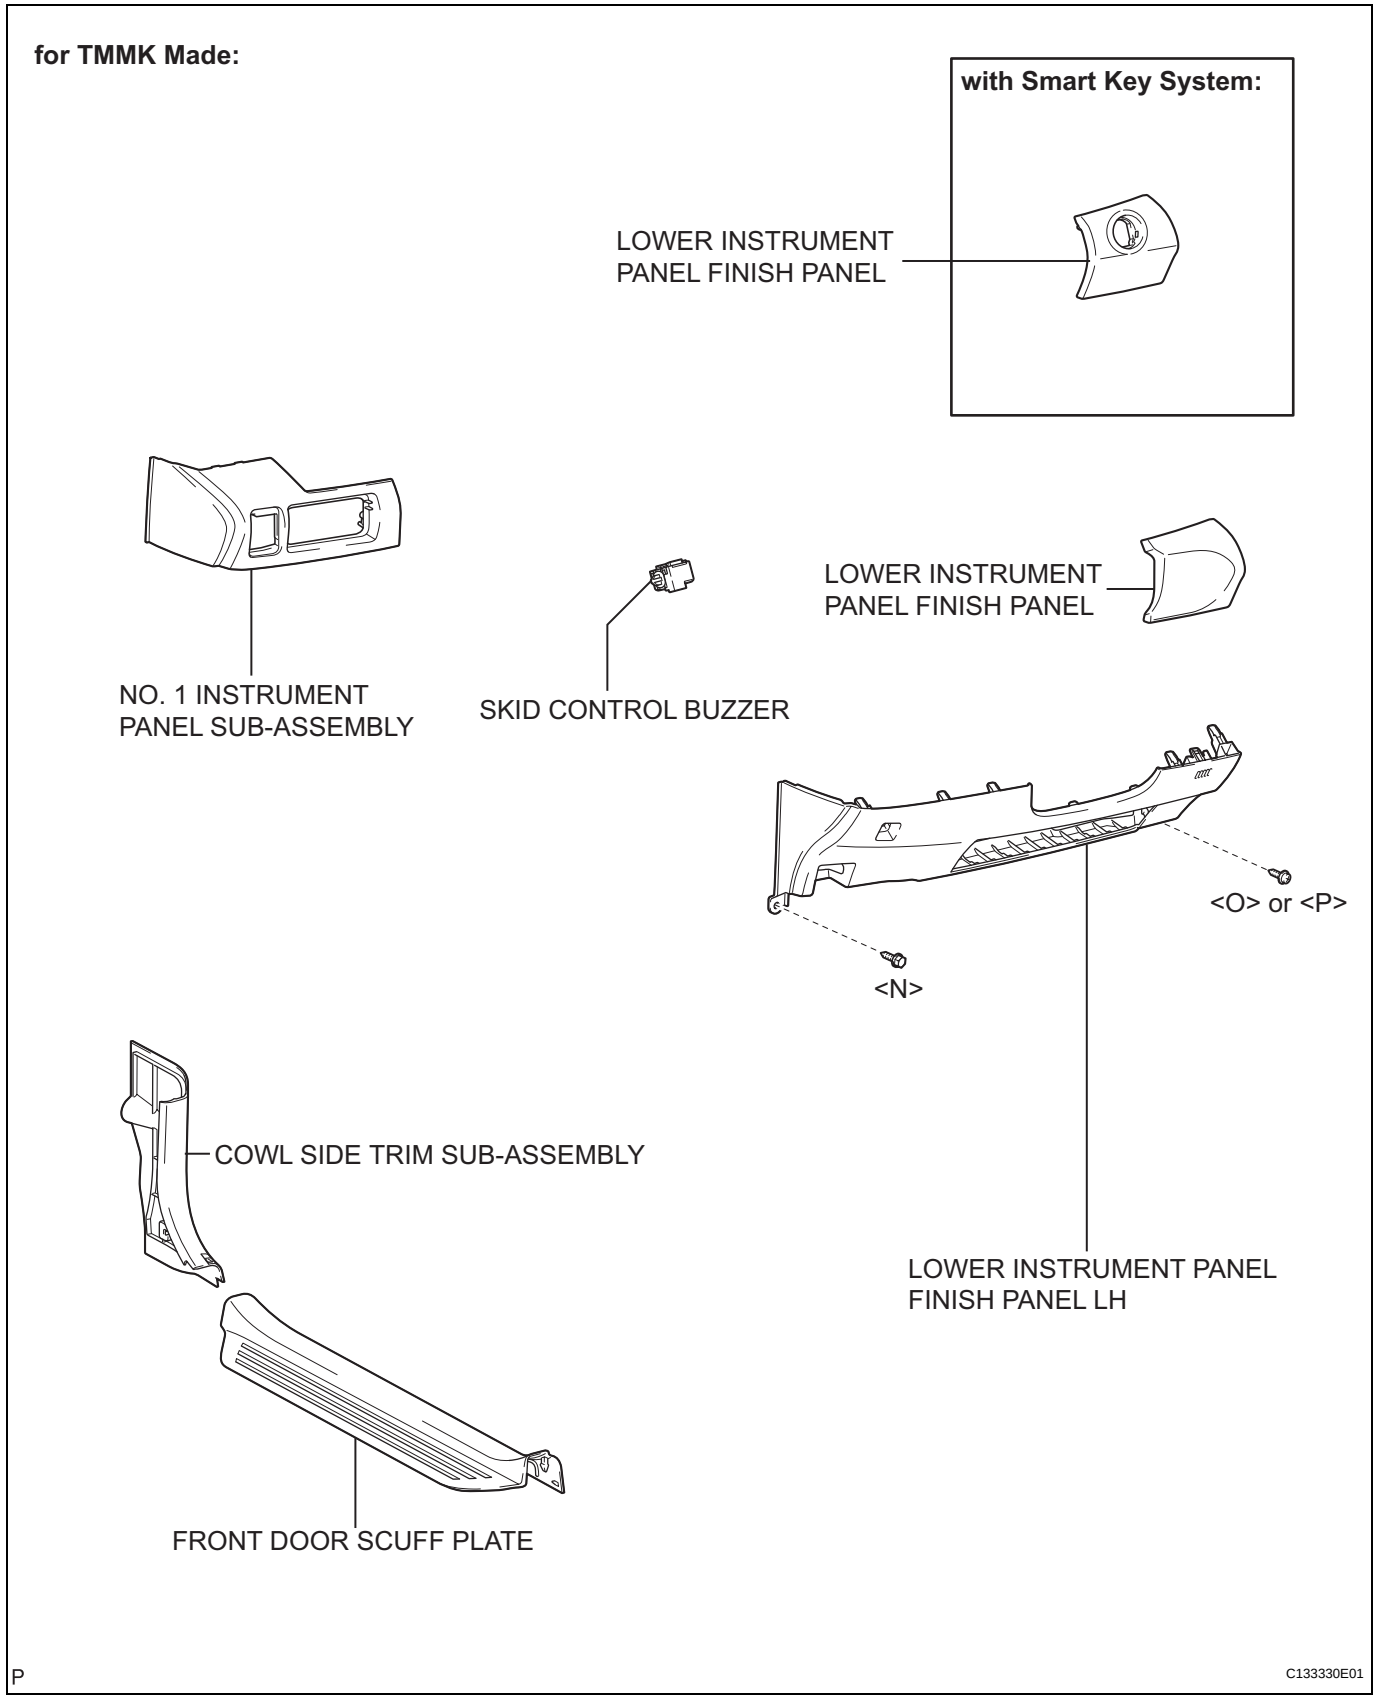
INSTALLATION

1. **INSTALL STEERING ANGLE SENSOR**
   (a) Align the locating pins, engage the claws, and install the steering angle sensor to the spiral cable sub-assembly.
2. **INSTALL SPIRAL CABLE SUB-ASSEMBLY WITH STEERING ANGLE SENSOR (See page RS-366)**
3. **INSTALL STEERING COLUMN COVER (See page SR-50)**
4. **ADJUST SPIRAL CABLE (See page RS-367)**
5. **INSTALL STEERING WHEEL ASSEMBLY (See page SR-51)**
6. **INSPECT STEERING WHEEL CENTER POINT (See page SR-47)**
7. **INSTALL STEERING PAD (See page RS-350)**
8. **INSTALL NO. 2 STEERING WHEEL COVER LOWER (See page RS-352)**
9. **INSTALL NO. 3 STEERING WHEEL COVER LOWER (See page RS-351)**
10. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
11. **INSPECT STEERING PAD (See page RS-347)**
12. **INSPECT SRS WARNING LIGHT**
    HINT:
    (See page RS-32)

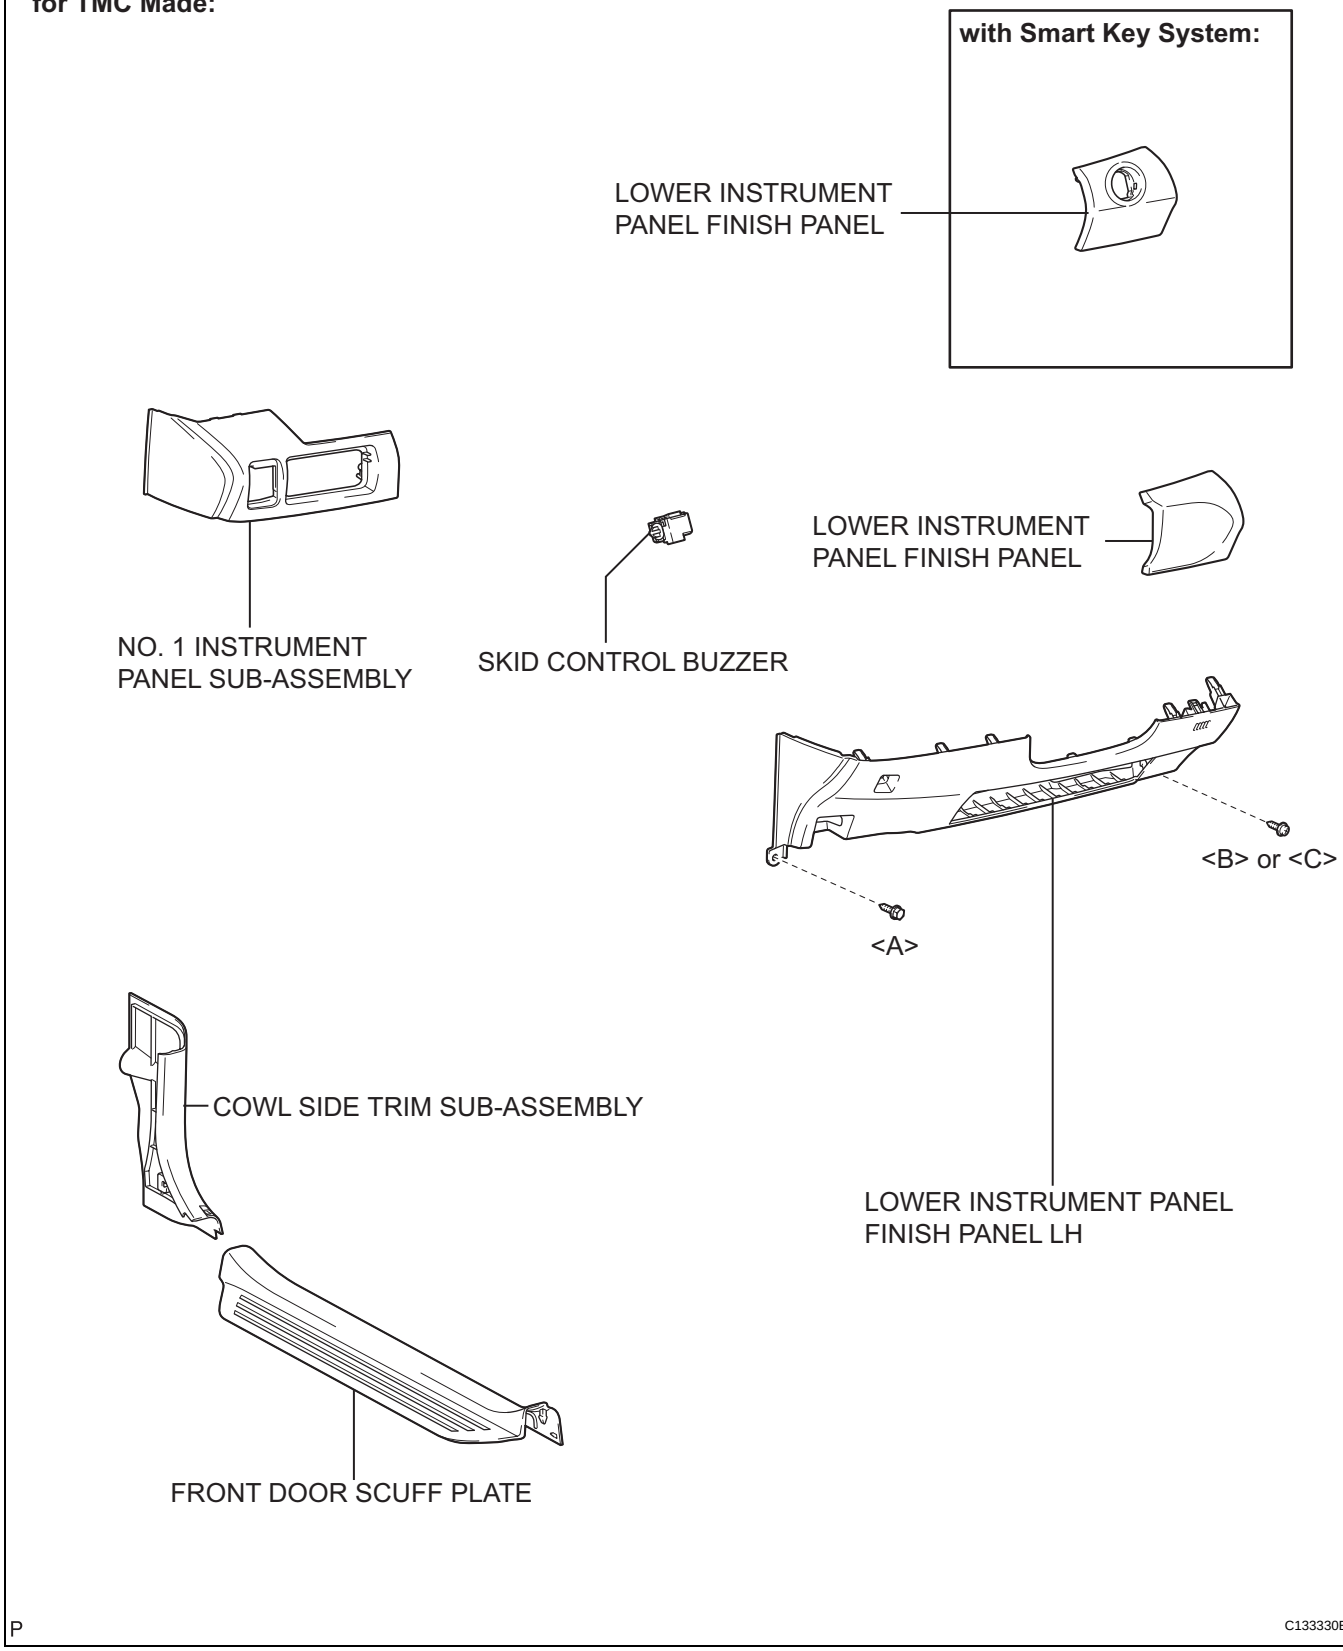
BC

SKID CONTROL BUZZER (w/ VSC)

COMPONENTS



for TMC Made:



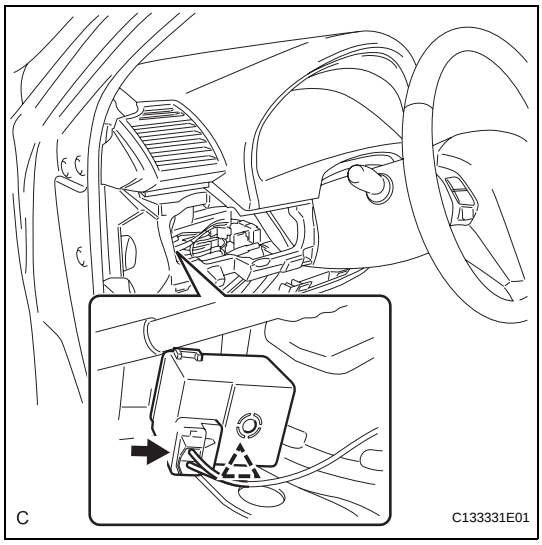
P

C133330E03

BC

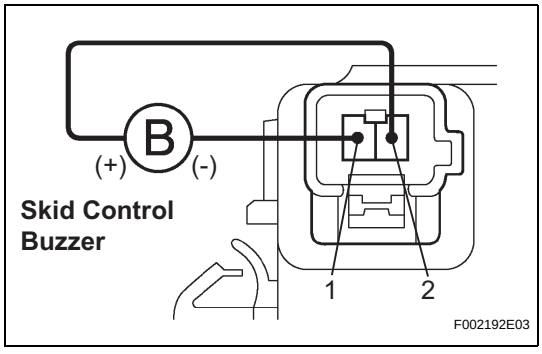
REMOVAL

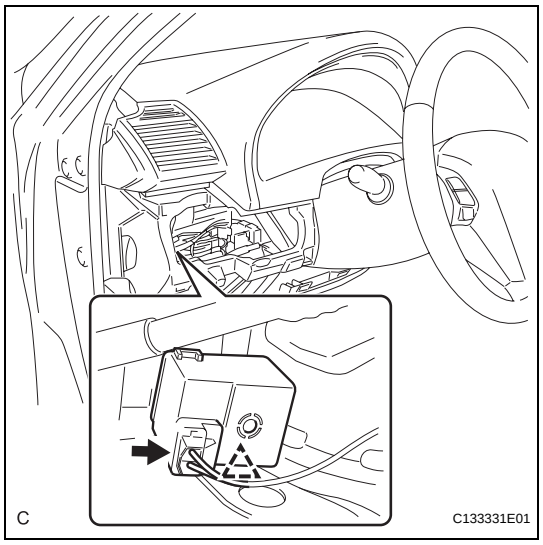
1. **PRECAUTION (See page IP-20)**
2. **REMOVE FRONT DOOR SCUFF PLATE (See page IR-24)**
3. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY (See page IR-25)**
4. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-20)**
5. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-21)**
6. **REMOVE NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-22)**
7. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/o Smart Key System) (See page IP-22)**
8. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/ Smart Key System) (See page IP-22)**
9. **REMOVE SKID CONTROL BUZZER**
   (a) Disconnect the skid control buzzer connector.
   (b) Remove the clip and skid control buzzer assembly.



INSPECTION

1. **INSPECT SKID CONTROL BUZZER**
   (a) Apply battery negative voltage to terminal 1, and battery positive voltage to terminal 2 of the skid control buzzer, and then check that the buzzer sounds.
   OK:
   The skid control buzzer sounds.
   If the skid control buzzer does not sound, replace the skid control buzzer.





INSTALLATION

1. **INSTALL SKID CONTROL BUZZER**
   (a) Attach the claw and install the skid control buzzer.
   (b) Connect the skid control buzzer assembly connector.
2. **INSTALL NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-57)**
3. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (w/ Smart Key System) (See page IP-57)**
4. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (w/o Smart Key System) (See page IP-57)**
5. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-58)**
6. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-59)**
7. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY (See page IR-54)**
8. **INSTALL FRONT DOOR SCUFF PLATE (See page IR-54)**

ABS MOTOR RELAY (w/ VSC)

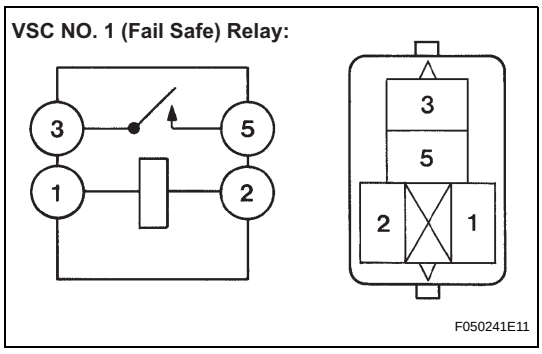
ON-VEHICLE INSPECTION

1. INSPECT VSC NO. 1 (FAIL SAFE) RELAY

(a) Remove the VSC NO. 1 (fail safe) relay.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance



Tester Connection	Condition	Specified Condition
3 - 5	Always	10 kΩ or higher
3 - 5	Apply B+ between terminals 1 and 2	Below 1 Ω

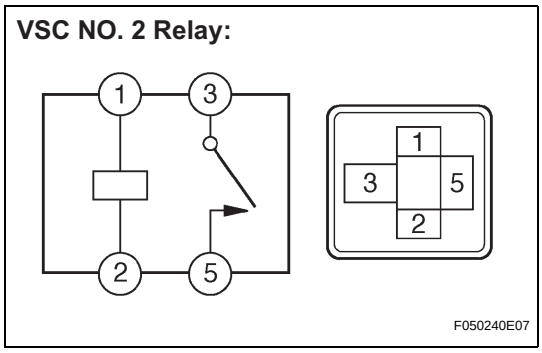
If the value is not as specified, replace the VSC NO. 1 (fail safe) relay.

2. INSPECT VSC NO. 2 RELAY

(a) Remove the VSC NO. 2 relay.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance



Tester Connection	Condition	Specified Condition
3 - 5	Always	10 kΩ or higher
3 - 5	Apply B+ between terminals 1 and 2	Below 1 Ω

If the value is not as specified, replace the VSC NO. 2 relay.

BC

CAN COMMUNICATION SYSTEM

PRECAUTION

1. STEERING SYSTEM HANDLING PRECAUTIONS

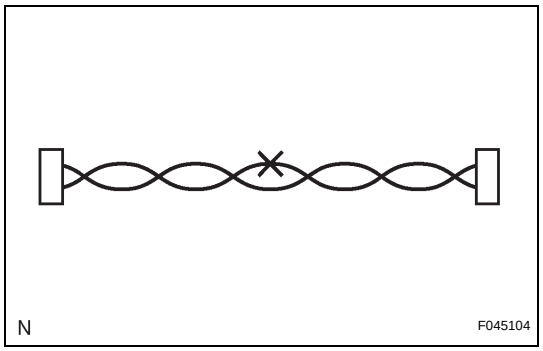
(a) Care must be taken when replacing parts. Incorrect replacement could affect the performance of the steering system and result in hazardous driving.

2. SRS AIRBAG SYSTEM HANDLING PRECAUTIONS

(a) This vehicle is equipped with an SRS (Supplemental Restraint System) which includes parts such as the driver airbag and front passenger airbag. Failure to carry out service operations in the correct sequence could cause unexpected SRS deployment during servicing and may lead to a serious accident. Before servicing (including removal or installation of parts, inspection or replacement), be sure to read the precautionary notice for the Supplemental Restraint System (See page RS-1).

CA

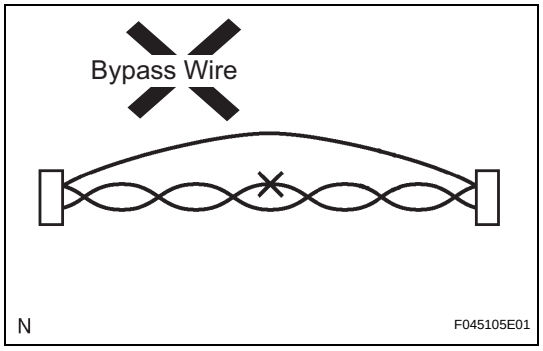
3. BUS WIRE REPAIR



(a) After repairing a bus wire with solder, wrap the repaired part with vinyl tape.

NOTICE:

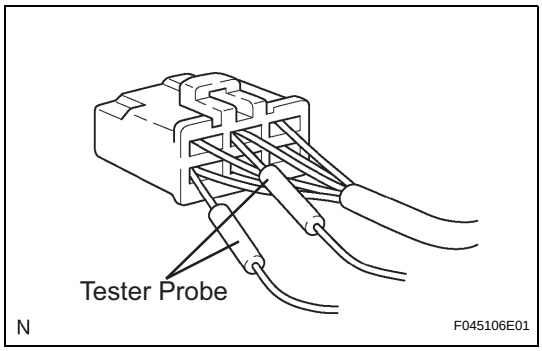
- **The CANL bus wire and CANH bus wire must be installed together at all times.**
- **When installing, make sure that they are twisted.**
- **CAN bus wires are likely to be influenced by noise if the bus wires are not twisted.**
- **The difference in length between the CANL bus wire and CANH bus wire should be within 100 mm (3.937 in.).**
- **Leave approximately 80 mm (3.150 in.) loose in the twisted wires around the connector.**



(b) Do not use bypass wiring between the connectors.

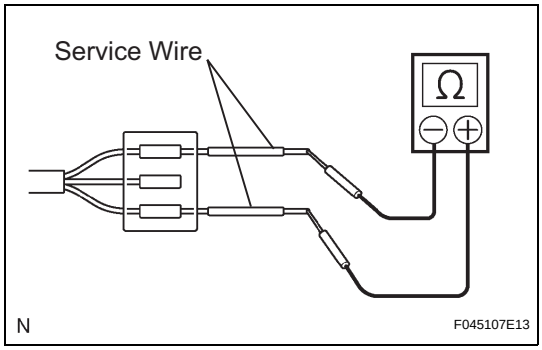
NOTICE:

The protective effect of the twisted wire harness will be lost if you use bypass wiring.



4. CONNECTOR HANDLING

(a) When checking resistance with a tester, insert the tester probes from the backside (harness side) of the connector.



(b) Use a service wire to check the connector if it is impossible to check continuity from the rear of the connector.

5. EXPRESSIONS OF IGNITION SWITCH

The type of ignition switch used on this model differs according to the specifications of the vehicle.
The expressions listed in the table below are used in this section.

CA

Expression	Switch Type	
	Ignition Switch (Position)	Engine Switch (Condition)
Ignition switch off	LOCK	Off
Ignition switch on (IG)	ON	On (IG)
Ignition switch on (ACC)	ACC	ON (ACC)
Engine start	START	Start

CA

HINT:

- The skid control ECU detects and stores steering angle sensor and yaw rate sensor DTCs and allows DTC communication by receiving information from the steering angle sensor and yaw rate sensor.

SYSTEM DESCRIPTION

1. BRIEF DESCRIPTION

(a) Two different CAN busses are used. The CAN busses are classified into two types based on typical communication speed.
The HS-CAN bus is a high-speed communication bus that is used for powertrain, chassis, and some body electrical communication. The HS-CAN bus is referred to as the "CAN bus" and it operates at speeds of approximately 500 kbps. Terminating resistors for the HS-CAN bus are located in the ECM and combination meter.
The MS-CAN bus is a medium-speed communication bus that is used for body electrical communication. The MS-CAN bus is referred to as the "MS bus" and it operates at speeds of approximately 250 kbps. Terminating resistors for the MS-CAN bus are located in the main body ECU and the certification ECU. The resistance of the MS-CAN bus cannot be measured from the DLC3 connector.
Communication between these two networks is handled via the main body ECU, which acts as a gateway ECU.

(b) By pairing the CANH and CANL bus wires, the CAN performs communication based on differential voltage.

(c) Many ECUs (sensors) installed on the vehicle operate by sharing information and communicating with each other.

(d) The CAN has two resistors of 120 Ω which are necessary to enable communication on the main bus wire.

2. DEFINITION OF TERMS

(a) Main bus wire

(1) The main bus wire is a wire harness between the two terminus circuits on the bus (communication line).

(b) Branch wire

(1) The branch wire is a wire harness which diverges from the main bus wire to an ECU or sensor.

(c) Terminating resistors
(1) Two resistors of 120 Ω resistance are installed in parallel across the ends of the CAN main bus wires. They are called terminating resistors. These resistors allow the changes of the voltage differential between the CAN bus wires to be accurately judged. To allow proper function of CAN communication, it is necessary to have both terminating resistors installed. Since the two resistors are installed in parallel, a measurement of resistance between the two CAN bus wires should produce a reading of approximately 60 Ω.

3. ECUS OR SENSORS WHICH COMMUNICATE THROUGH CAN COMMUNICATION SYSTEM

(a) Skid control ECU with actuator
(b) Air conditioning amplifier
(c) Main body ECU
(d) Combination meter ECU
(e) Yaw rate sensor
(f) Steering angle sensor
(g) Center airbag sensor
(h) ECM
(i) Certification ECU (with smart key system)
(j) TCM
(k) Accessory gateway

4. DIAGNOSTIC CODE FOR CAN COMMUNICATION SYSTEM

(a) DTCs for the CAN communication system are as follows: U0101, U0073, U0100, U0123, U0124, U0126, U0129, B1207, B1499, and B2326.

5. TROUBLESHOOTING REMARKS

(a) DTCs for the CAN communication system can be checked using the intelligent tester via the CAN VIM. The DLC3 is connected to the CAN communication system, but no DTCs exist regarding problems in the DLC3 or the DLC3 branch wires. If there is trouble in the DLC3 or the DLC3 branch wires, ECUs on the CAN network cannot output codes to the intelligent tester via the CAN VIM.
(b) Trouble in the CAN buses (communication lines) can be checked by measuring the resistance between terminals of the DLC3. However, an open circuit in a branch wire other than the DLC3 branch wires cannot be checked from the DLC3.
NOTICE:
Do not insert the tester probes directly into the DLC3. Be sure to use a service wires.

6. HOW TO DISTINGUISH THE CAN J/C CONNECTOR

(a) In the CAN communication system, the shape of all connectors connected to the CAN J/C No. 1 is the same. The connectors connected to the CAN J/C No. 1 can be connecting side of the junction connector.
HINT:
See "TERMINALS OF ECU" (See page CA-10) for bus wire color or the type of connecting surface.

HOW TO PROCEED WITH TROUBLESHOOTING

NOTICE:

- **DTCs for the CAN communication system are as follows: U0101, U0073, U0100, U0123, U0124, U0126, B1207, B1499, and B2326.**
- **Refer to troubleshooting of each system if DTCs regarding the CAN communication system are not output.**

1	CHECK AND CLEAR DTCS

NEXT

2	CHECK FOR INSTALLED SYSTEMS (ECUS & SENSORS) THAT ADOPT CAN COMMUNICATION)

CA

(a) Check which of the following is adopted: SFI system, automatic transaxle system, brake control system, supplemental restraint system, smart key system, air conditioning system and meter / gauge system (See page CA-25).

NEXT

3	CHECK CAN BUS LINE

(a) Check the CAN bus wires (See page CA-65).

NEXT

4	CHECK INTELLIGENT TESTER

(a) Select "Communication Bus Check" (See page CA-25).

Result

Symptom	Proceed	See procedure
All the ECUs and sensors connected to the CAN communication system are displayed on the screen.	A	Go to step 5
An ECU or sensor not connected to the CAN communication system is displayed on the screen.	B	CA-10
More than one of the ECUs and sensors not connected to the CAN communication system are displayed on the screen. (If the displayed ECUs and sensors are only those relating to the "Engine" and "ECT", proceed to B.)	C	CA-119

NOTICE:

- **The systems (ECUs, sensors) that adopt CAN communication vary depending on the vehicle and option settings. Check which systems (ECUs, sensors) are installed on the vehicle (See page CA-25).**

- **Non-installed ECUs or sensors are not displayed. Do not mistake ECUs that are not installed as being in communication stop mode.**
- **If 2 or more ECUs or sensors are not displayed on the intelligent tester, perform troubleshooting for communication stop mode for each undisplayed ECU or sensor. (Open in one side of the CAN branch wires.)**

B	**GO TO "COMMUNICATION STOP MODE TABLE"**
C	**GO TO "OPEN IN ONE SIDE OF CAN BRANCH LINE"**

A

5	**DTC COMBINATION TABLE**

(a) Confirm trouble according to the combination of output DTCs regarding the CAN communication system (See page CA-25).
HINT:
Previous CAN communication system DTCs may be the cause if CAN communication system DTCs are output and all ECUs and sensors connected to the CAN communication system are displayed on the intelligent tester "Communication Bus Check" screen.

PROBLEM SYMPTOMS TABLE

RESULT LIST OF HOW TO PROCEED WITH TROUBLESHOOTING:

Symptom	Suspected area	See page
The result of "HOW TO PROCEED WITH TROUBLESHOOTING" is "Open in CAN Main Bus Line"	Open in CAN Main Bus Wire	CA-69
The result of "HOW TO PROCEED WITH TROUBLESHOOTING" is "Short in CAN Bus Line"	Short in CAN Bus Wires	CA-74
The result of "HOW TO PROCEED WITH TROUBLESHOOTING" is "Short to +B in CAN Bus Line"	Short to B+ in CAN Bus Wire	CA-89
The result of "HOW TO PROCEED WITH TROUBLESHOOTING" is "Short to GND in CAN Bus Line"	Short to GND in CAN Bus Wire	CA-104
The result of "HOW TO PROCEED WITH TROUBLESHOOTING" is "Open in One Side of CAN Sub Bus Line"	Open in One Side of CAN Branch Wire	CA-119

COMMUNICATION STOP MODE TABLE:

Symptom	Suspected area	See page
"ABS/VSC/TRAC" is not displayed on the intelligent tester (with VSC)	Skid Control ECU Communication Stop Mode	CA-42
"A/C " is not displayed on the intelligent tester	Air Conditioning Amplifier Communication Stop Mode	CA-46
"Body/Gateway" is not displayed on the intelligent tester	Main Body ECU Communication Stop Mode	CA-57
"Steering Angle Sensor" is not displayed on the intelligent tester	Steering Angle Sensor Communication Stop Mode	CA-49
"Yaw Rate/Deceleration Sensor" is not displayed on the intelligent tester	Yaw Rate Sensor Communication Stop Mode	CA-51
"Engine" are not displayed on the intelligent tester	ECM Communication Stop Mode	CA-54
"Meter " is not displayed on the intelligent tester	Combination Meter Communication Stop Mode	CA-61
"SRS Airbag" is not displayed on the intelligent tester	Center Airbag Sensor Communication Stop Mode	CA-63

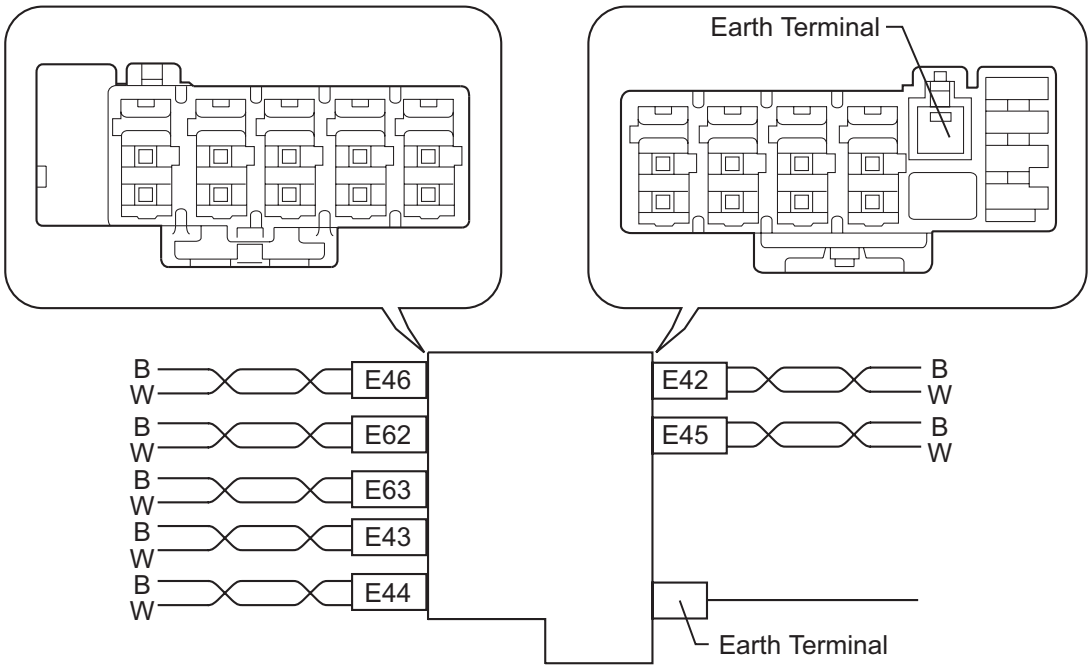
TERMINALS OF ECU

NOTICE:
This section describes the standard CAN values for all CAN related components.

1. JUNCTION CONNECTOR (NO. 1 CAN J/C, NO. 2 CAN J/C)

(a) No. 1 CAN J/C

No. 1 CAN J/C "B" side (without Earth Terminal): **No. 1 CAN J/C "A" side (with Earth Terminal):**



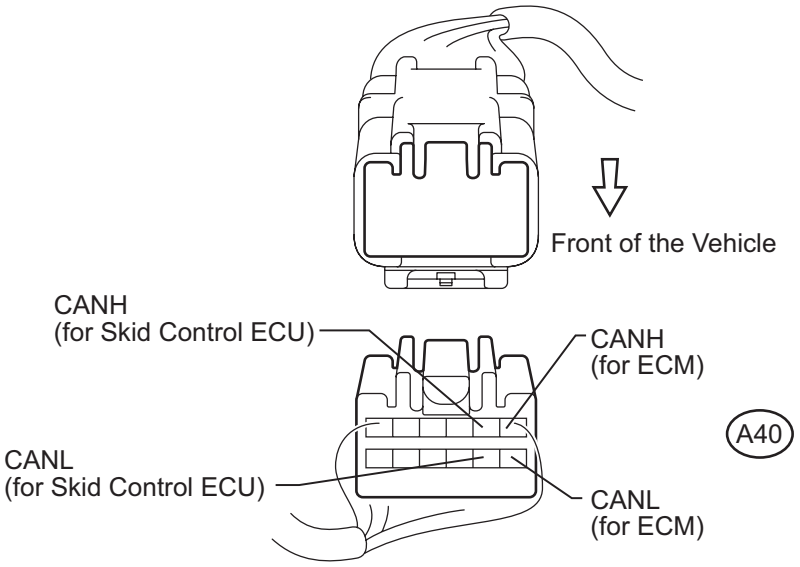
No. 1 CAN J/C connectors ("A" side, with earth terminal)	Connector Color	Wire Color (CAN-H)	Wire Color (CAN-L)
CAN Main Bus Wire (E42)	White	B	W
Airbag Sensor Assembly Center (E45)	Black	B	W

No. 1 CAN J/C connectors ("B" side, with earth terminal)	Connector Color	Wire Color (CAN-H)	Wire Color (CAN-L)
Yaw Rate Sensor* (E46)	Blue	B	W
DLC3 (E62)	Gray	B	W
Steering Angle Sensor* (E63)	Brown	B	W
Combination Meter (E43)	White	B	W
Main Body ECU (E44)	Black	B	W

*: with VSC

(b) No. 2 CAN J/C (FRONT OF THE VEHICLE)

No. 2 CAN J/C (Front of the Vehicle) Wire Harness View:



H

C137762E02

Terminals	Wiring Color	Connects to
A40-1 (CANH)	B	ECM (CANH)
A40-7 (CANL)	W	ECM (CANL)
A40-2 (CANH)	B	Skid Control ECU (CANH)
A40-8 (CANL)	W	Skid Control ECU (CANL)

(c) No. 2 CAN J/C (REAR OF THE VEHICLE)

No. 2 CAN J/C (Rear of the Vehicle) Wire Harness View:

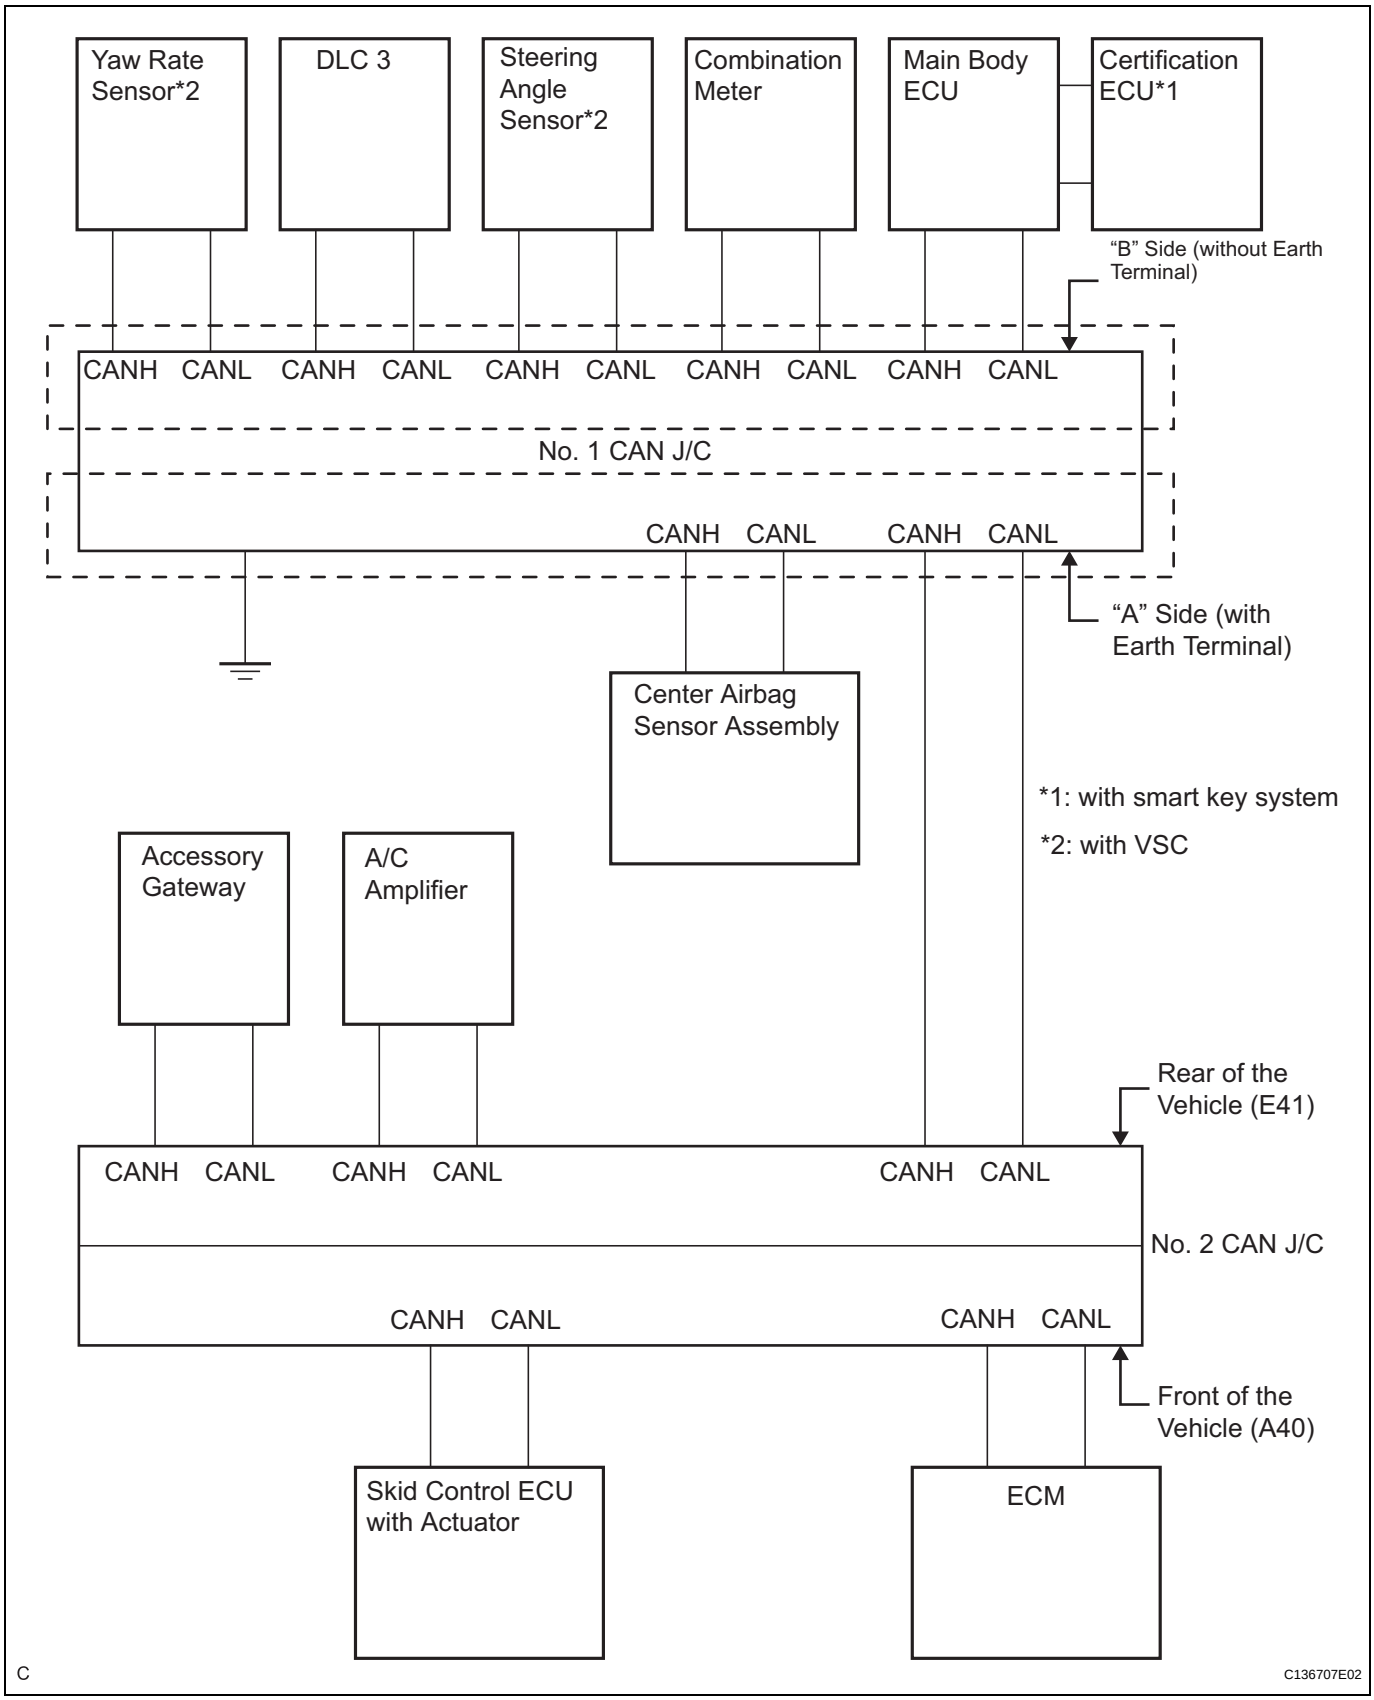
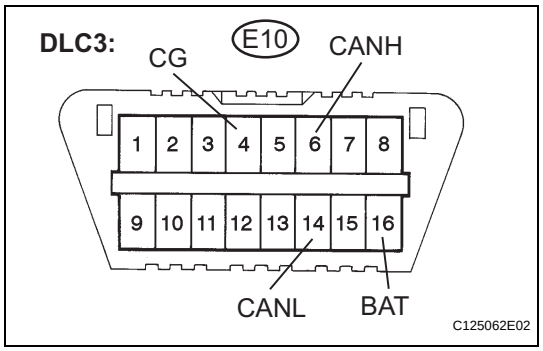
E41-8 (CANL)	W	A/C Amplifier (CANL)
E41-4 (CANH)	B	No. 1 CAN J/C (CANH)
E41-10 (CANL)	W	No. 1 CAN J/C (CANL)

(d) The connection diagram of the components which are connected to the CAN J/C





2. DLC3

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

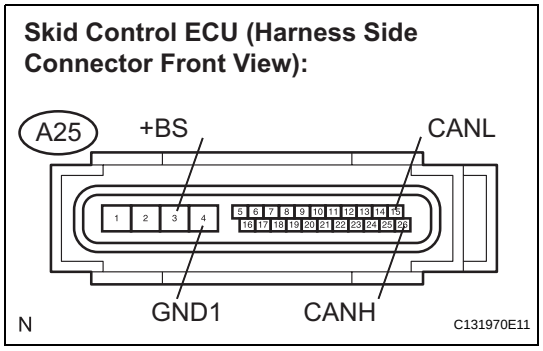
Terminals	Wiring Color	Terminal Description	Condition	Specified Condition
E10-6 (CANH) - E10-14 (CANL)	B - W	HIGH-level CAN bus wire - LOW-level CAN bus wire	Ignition Switch off	54 to 69 Ω
E10-6 (CANH) - E10-4 (CG)	B - W-B	HIGH-level CAN bus wire - Ground	Ignition Switch off	200 Ω or higher
E10-14 (CANL) - E10-4 (CG)	W - W-B	LOW-level CAN bus wire - Ground	Ignition Switch off	200 Ω or higher
E10-6 (CANH) - E10-16 (BAT)	B - L	HIGH-level CAN bus wire - Battery positive	Ignition Switch off	1 MΩ or higher
E10-14 (CANL) - E10-16 (BAT)	W - L	LOW-level CAN bus wire - Battery positive	Ignition Switch off	1 MΩ or higher

CA

3. SKID CONTROL ECU (w/o VSC)

(a) Disconnect the A25 connector from the skid control ECU.

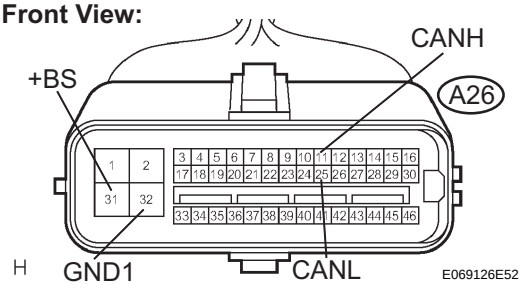
(b) Measure the resistance according to the value(s) in the table below.



Standard resistance

Terminals	Wiring Color	Terminal Description	Condition	Specified Condition
A25-26 (CANH) - A25-15 (CANL)	B - W	HIGH-level CAN bus wire - LOW-level CAN bus wire	Ignition Switch off	54 to 69 Ω
A25-26 (CANH) - A25-4 (GND1)	B - W-B	HIGH-level CAN bus wire - Ground	Ignition Switch off	200 Ω or higher
A25-15 (CANL) - A25-4 (GND1)	W - W-B	LOW-level CAN bus wire - Ground	Ignition Switch off	200 Ω or higher
A25-26 (CANH) - A25-3 (+BS)	B - L	HIGH-level CAN bus wire - Battery positive	Ignition Switch off	6 kΩ or higher
A25-15 (CANL) - A25-3 (+BS)	W - L	LOW-level CAN bus wire - Battery positive	Ignition Switch off	6 kΩ or higher

Skid Control ECU Connector Front View:



4. SKID CONTROL ECU WITH ACTUATOR (w/ VSC)

(a) TMC made

(1) Disconnect A26 connector from the skid control ECU.

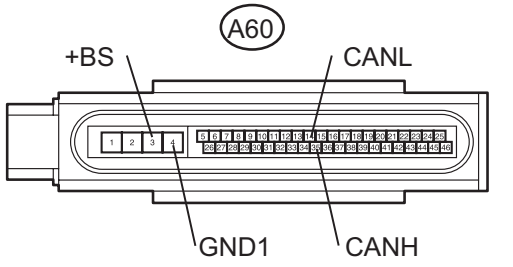
(2) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminals	Wiring Color	Terminal Description	Condition	Specified Condition
A26-11 (CANH) - A26-25 (CANL)	B - W	HIGH-level CAN bus wire - LOW-level CAN bus wire	Ignition Switch off	54 to 69 Ω
A26-11 (CANH) - A26-32 (GND1)	B - W-B	HIGH-level CAN bus wire - Ground	Ignition Switch off	200 Ω or higher
A26-25 (CANL) - A26-32 (GND1)	W - W-B	LOW-level CAN bus wire - Ground	Ignition Switch off	200 Ω or higher
A26-11 (CANH) - A26-31 (+BS)	B - L	HIGH-level CAN bus wire - Battery positive	Ignition Switch off	6 kΩ or higher
A26-25 (CANL)- A26-31 (+BS)	W - L	LOW-level CAN bus wire - Battery positive	Ignition Switch off	6 kΩ or higher

CA

Skid Control ECU (Harness Side Connector Front View):



(b) TMMK made

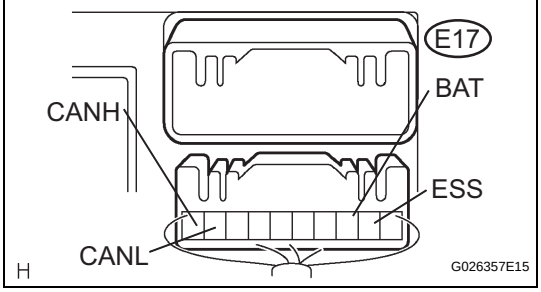
(1) Disconnect the A60 connector from the skid control ECU.

(2) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminals	Wiring Color	Terminal Description	Condition	Specified Condition
A60-35 (CANH) - A60-14 (CANL)	B - W	HIGH-level CAN bus wire - LOW-level CAN bus wire	Ignition Switch off	54 to 69 Ω
A60-35 (CANH) - A60-4 (GND1)	B - W-B	HIGH-level CAN bus wire - Ground	Ignition Switch off	200 Ω or higher
A60-14 (CANL) - A60-4 (GND1)	W - W-B	LOW-level CAN bus wire - Ground	Ignition Switch off	200 Ω or higher
A60-35 (CANH) - A60-3 (+BS)	B - L	HIGH-level CAN bus wire - Battery positive	Ignition Switch off	6 kΩ or higher
A60-14 (CANL)- A60-3 (+BS)	W - L	LOW-level CAN bus wire - Battery positive	Ignition Switch off	6 kΩ or higher

Steering Angle Sensor Wire Harness View:



5. STEERING ANGLE SENSOR (W/ VSC)

(a) Disconnect the E17 connector from the steering angle sensor.

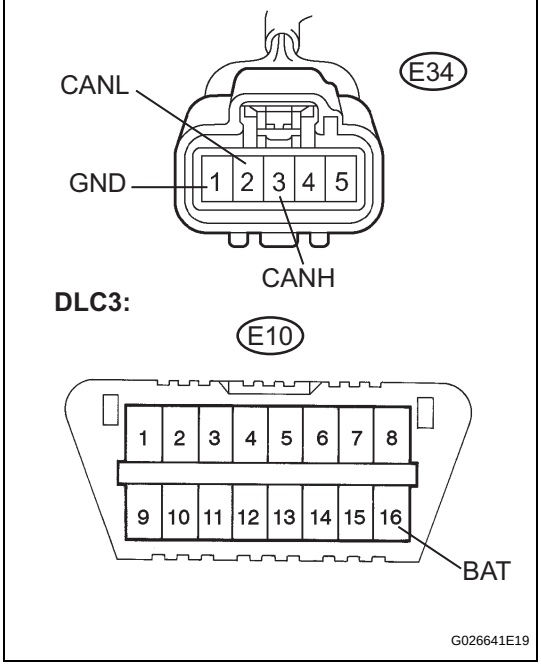
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminals	Wiring Color	Terminal Description	Condition	Specified Condition
E17-10 (CANH) - E17-9 (CANL)	B - W	HIGH-level CAN bus wire - LOW-level CAN bus wire	Ignition Switch off	54 to 69 Ω
E17-10 (CANH) - E17-2 (ESS)	B - W-B	HIGH-level CAN bus wire - Ground	Ignition Switch off	200 Ω or higher
E17-9 (CANL) - E17-2 (ESS)	W - W-B	LOW-level CAN bus wire - Ground	Ignition Switch off	200 Ω or higher
E17-10 (CANH) - E17-3 (BAT)	B - W	HIGH-level CAN bus wire - Battery positive	Ignition Switch off	6 kΩ or higher
E17-9 (CANL) - E17-3 (BAT)	W - W	LOW-level CAN bus wire - Battery positive	Ignition Switch off	6 kΩ or higher

CA

Yaw Rate Sensor Connector Front View:



6. YAW RATE SENSOR (W/ VSC)

(a) TMC made

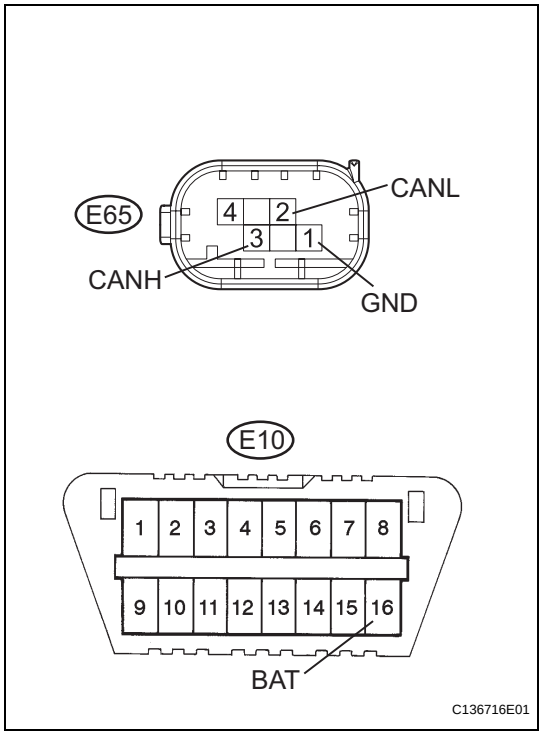
(1) Disconnect the E34 connector from the yaw rate sensor.

(2) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminals	Wiring Color	Terminal Description	Condition	Specified Condition
E34-3 (CANH) - E34-2 (CANL)	B - W	HIGH-level CAN bus wire - LOW-level CAN bus wire	Ignition Switch off	54 to 69 Ω
E34-3 (CANH) - E34-1 (GND)	B - W-B	HIGH-level CAN bus wire - Ground	Ignition Switch off	200 Ω or higher
E34-2 (CANL) - E34-1 (GND)	W - W-B	LOW-level CAN bus wire - Ground	Ignition Switch off	200 Ω or higher
E34-3 (CANH) - E10-16 (BAT)	B - O	HIGH-level CAN bus wire - Battery positive	Ignition Switch off	6 kΩ or higher

Terminals	Wiring Color	Terminal Description	Condition	Specified Condition
E34-2 (CANL) - E10-16 (BAT)	W - O	LOW-level CAN bus wire - Battery positive	Ignition Switch off	6 kΩ or higher



(b) TMMK made
(1) Disconnect the E34 connector from the yaw rate sensor.
(2) Measure the resistance according to the value(s) in the table below.

Standard resistance

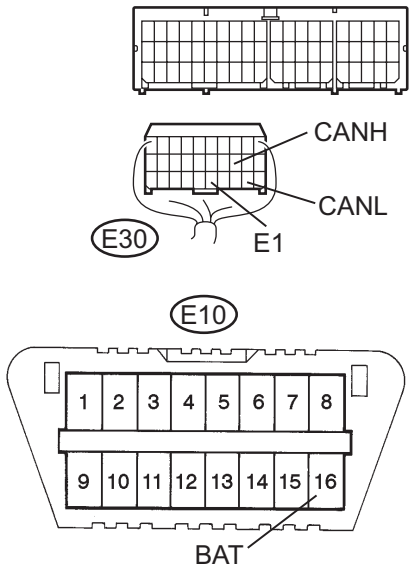
Terminals	Wiring Color	Terminal Description	Condition	Specified Condition
E65-3 (CANH) - E65-2 (CANL)	B - W	HIGH-level CAN bus wire - LOW-level CAN bus wire	Ignition Switch off	54 to 69 Ω
E65-3 (CANH) - E65-1 (GND)	B - W-B	HIGH-level CAN bus wire - Ground	Ignition Switch off	200 Ω or higher
E65-2 (CANL) - E65-1 (GND)	W - W-B	LOW-level CAN bus wire - Ground	Ignition Switch off	200 Ω or higher
E65-3 (CANH) - E10-16 (BAT)	B - O	HIGH-level CAN bus wire - Battery positive	Ignition Switch off	6 kΩ or higher
E65-2 (CANL) - E10-16 (BAT)	W - O	LOW-level CAN bus wire - Battery positive	Ignition Switch off	6 kΩ or higher

7. CENTER AIRBAG SENSOR ASSEMBLY

(a) Disconnect the E30 connector from the center airbag sensor assembly.

CA

Center Airbag Sensor Wire Harness View :



(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

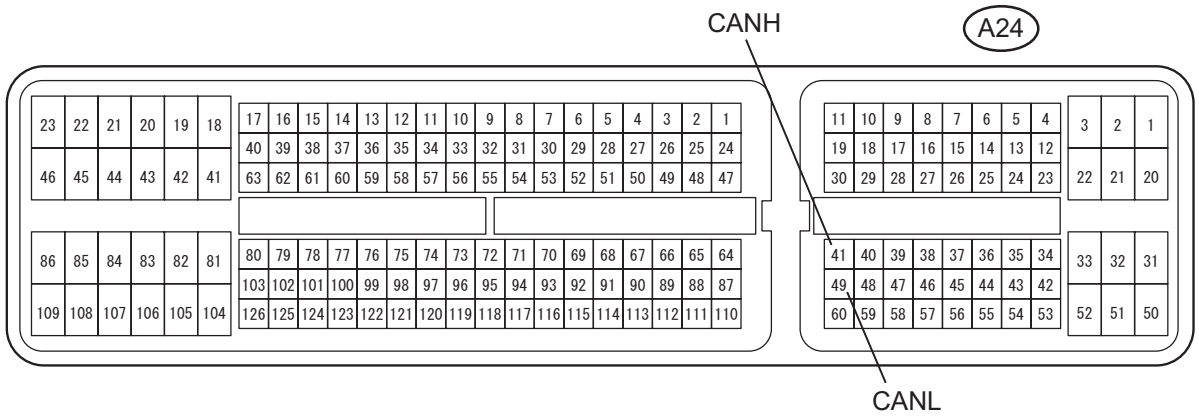
Terminals	Wiring Color	Terminal Description	Condition	Specified Condition
E30-13 (CANH) - E30-22 (CANL)	B - W	HIGH-level CAN bus wire - LOW-level CAN bus wire	Ignition Switch off	54 to 69 Ω
E30-13 (CANH) - E30-25 (E1)	B - W-B	HIGH-level CAN bus wire - Ground	Ignition Switch off	200 Ω or higher
E30-22 (CANL) - E30-25 (E1)	W - W-B	LOW-level CAN bus wire - Ground	Ignition Switch off	200 Ω or higher
E30-13 (CANH) - E10-16 (BAT)	B - L	HIGH-level CAN bus wire - Battery positive	Ignition Switch off	6 kΩ or higher
E30-22 (CANL) - E10-16 (BAT)	W - L	LOW-level CAN bus wire - Battery positive	Ignition Switch off	6 kΩ or higher

CA

8. ECM

(a) 2AZ-FE

ECM:

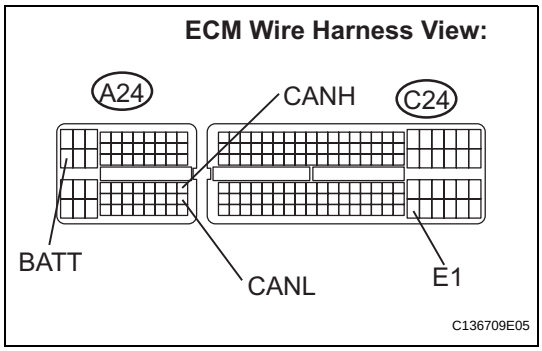


(1) Disconnect the A24 connector from the ECM.

(2) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminals	Condition	Specified Condition
A24-41 (CANH) - A29-49 (CANL)	Ignition Switch off	108 to 132 Ω



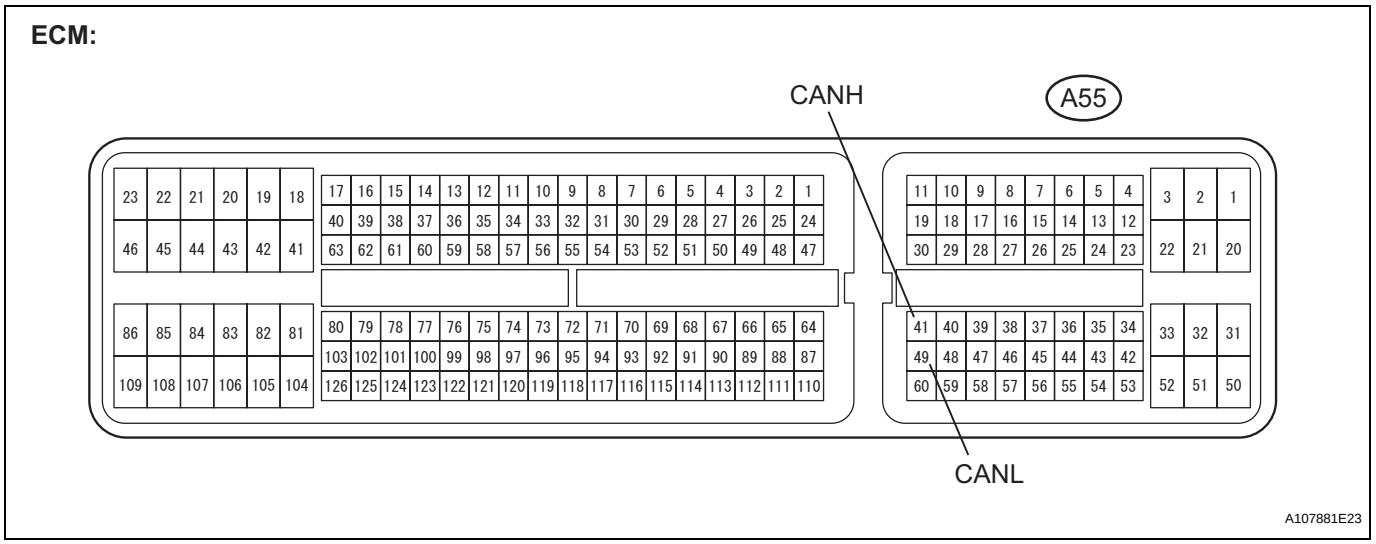
(3) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminals	Wiring Color	Terminal Description	Condition	Specified Condition
A24-41 (CANH) - A24-49 (CANL)	B - W	HIGH-level CAN bus wire - LOW-level CAN bus wire	Ignition Switch off	108 to 132 Ω
A24-41 (CANH) - C24-104 (E1)	B - W-B	HIGH-level CAN bus wire - Ground	Ignition Switch off	200 Ω or higher
A24-49 (CANL) - C24-104 (E1)	B - W-B	LOW-level CAN bus wire - Ground	Ignition Switch off	200 Ω or higher
A24-41 (CANH) - A24-20 (BATT)	B - Y	HIGH-level CAN bus wire - Battery positive	Ignition Switch off	6 kΩ or higher
A24-49 (CANL) - A24-20 (BATT)	W - Y	LOW-level CAN bus wire - Battery positive	Ignition Switch off	6 kΩ or higher

CA

(b) 2GR-FE

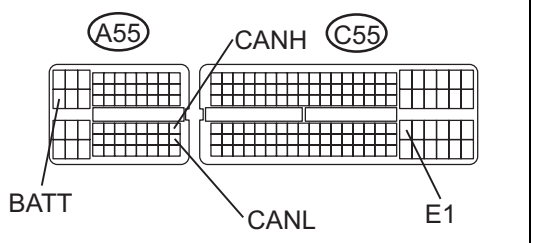


(1) Disconnect the A55 connector from the ECM.
(2) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminals	Condition	Specified Condition
A55-41 (CANH) - A55-49 (CANL)	Ignition Switch off	108 to 132 Ω

ECM Wire Harness View:



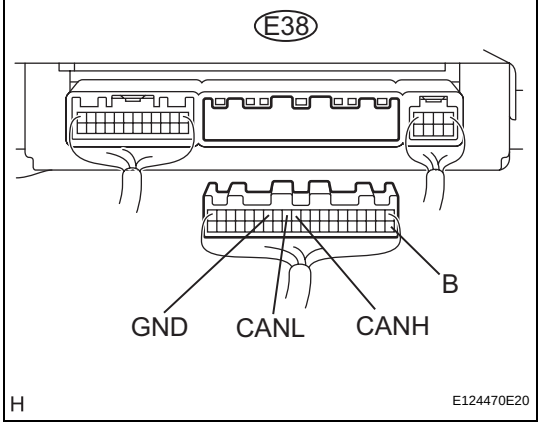
(3) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminals	Wiring Color	Terminal Description	Condition	Specified Condition
A55-41 (CANH) - A55-49 (CANL)	B - W	HIGH-level CAN bus wire - LOW-level CAN bus wire	Ignition Switch off	108 to 132 Ω
A55-41 (CANH) - C55-81 (EC)	B - W-B	HIGH-level CAN bus wire - Ground	Ignition Switch off	200 Ω or higher
A55-49 (CANL) - C55-81 (EC)	B - W-B	LOW-level CAN bus wire - Ground	Ignition Switch off	200 Ω or higher
A55-41 (CANH) - A55-20 (BATT)	B - Y	HIGH-level CAN bus wire - Battery positive	Ignition Switch off	6 kΩ or higher
A55-49 (CANL) - A55-20 (BATT)	W - Y	LOW-level CAN bus wire - Battery positive	Ignition Switch off	6 kΩ or higher

CA

Air Conditioning Amplifier (Wire Harness Side):



9. AIR CONDITIONING AMPLIFIER

(a) Check the harness side connector (E38) of the air conditioning amplifier.

(1) Disconnect the connector (E38) from the air conditioning amplifier.

(2) Measure the resistance according to the value(s) in the table below.

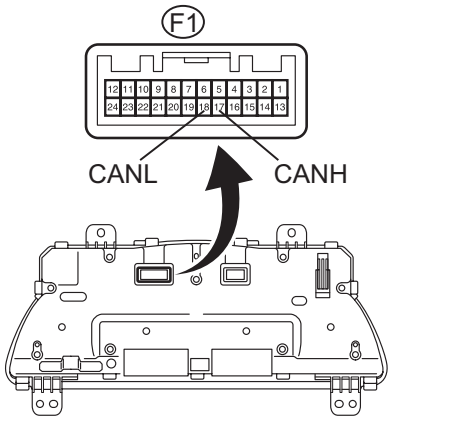
Standard resistance

Terminals	Wiring Color	Terminal Description	Condition	Specified Condition
E38-11 (CANH) - E38-12 (CANL)	B - W	HIGH-level CAN bus wire - LOW-level CAN bus wire	Ignition Switch off	54 to 69 Ω
E38-11 (CANH) - E38-14 (GND)	B - W-B	HIGH-level CAN bus wire - Ground	Ignition Switch off	200 Ω or higher
E38-12 (CANL) - E38-14 (GND)	W - W-B	LOW-level CAN bus wire - Ground	Ignition Switch off	200 Ω or higher
E38-11 (CANH) - E38-21 (B)	B - GR	HIGH-level CAN bus wire - Battery positive	Ignition Switch off	6 kΩ or higher
E38-12 (CANL) - E38-21 (B)	W - GR	LOW-level CAN bus wire - Battery positive	Ignition Switch off	6 kΩ or higher

10. COMBINATION METER ECU

(a) Disconnect the F1 connector from the combination meter.

Combination Meter (Component Side):



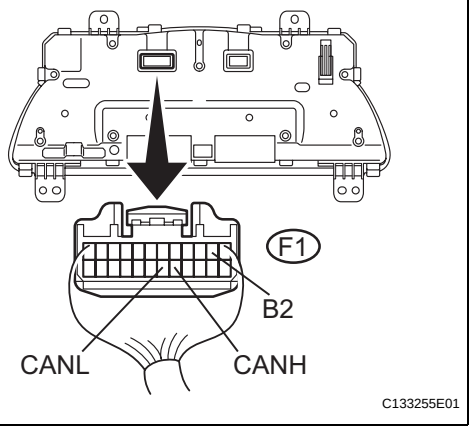
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminals	Condition	Specified Condition
F1-17 (CANH) - F1-18 (CANL)	Ignition Switch off	108 to 132 Ω

CA

Combination Meter (Wire Harness Side):



(c) Measure the resistance according to the value(s) in the table below.

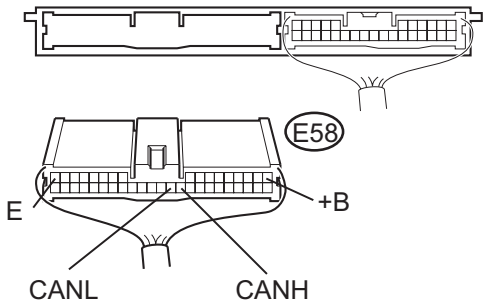
Standard resistance

Terminals	Wiring Color	Terminal Description	Condition	Specified Condition
F1-17 (CANH) - F1-18 (CANL)	B - W	HIGH-level CAN bus wire - LOW-level CAN bus wire	Ignition Switch off	108 to 132 Ω
F1-17 (CANH) - F1-12 (E2)	B - W-B	HIGH-level CAN bus wire - Ground	Ignition Switch off	200 Ω or higher
F1-18 (CANL) - F1-12 (E2)	B - W-B	LOW-level CAN bus wire - Ground	Ignition Switch off	200 Ω or higher
F1-17 (CANH) - F1-2 (B2)	B - R	HIGH-level CAN bus wire - Battery positive	Ignition Switch off	6 kΩ or higher
F1-18 (CANL) - F1-2 (B2)	B - R	LOW-level CAN bus wire - Battery positive	Ignition Switch off	6 kΩ or higher

11. CERTIFICATION ECU (W/ SMART KEY SYSTEM)

(a) Disconnect the E58 connector from the certification ECU.

Certification ECU (Wire Harness Side):



(b) Measure the resistance according to the value(s) in the table below.

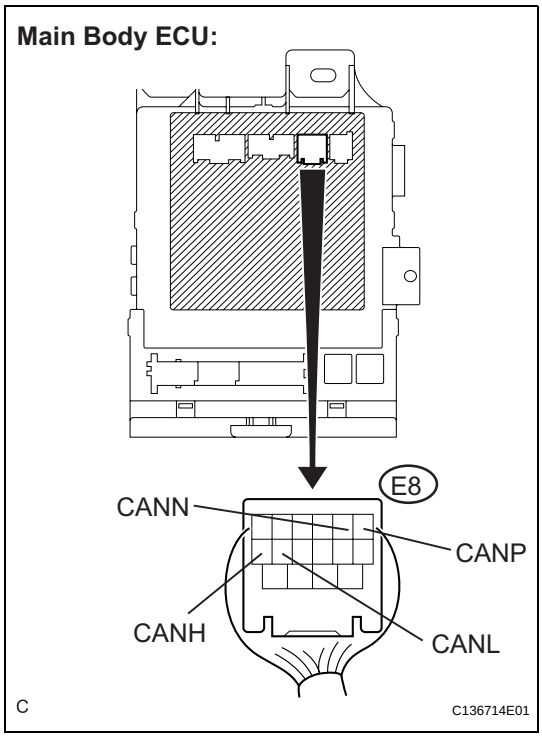
Standard resistance

Terminals	Wiring Color	Terminal Description	Condition	Specified Condition
E58-27 (CANH) - E58-28 (CANL)	B - W	HIGH-level CAN bus wire - LOW-level CAN bus wire	Ignition Switch off	108 to 132 Ω
E58-27 (CANH) - E58-17 (E)	B - W-B	HIGH-level CAN bus wire - Ground	Ignition Switch off	200 Ω or higher
E58-28 (CANL) - E58-17 (E)	B - W-B	LOW-level CAN bus wire - Ground	Ignition Switch off	200 Ω or higher
E58-27 (CANH) - E58-1 (+B)	B - W	HIGH-level CAN bus wire - Battery positive	Ignition Switch off	6 kΩ or higher
E58-28 (CANL) - E58-1 (+B)	W - W	LOW-level CAN bus wire - Battery positive	Ignition Switch off	6 kΩ or higher

CA

12. MAIN BODY ECU (INSTRUMENT PANEL J/B)

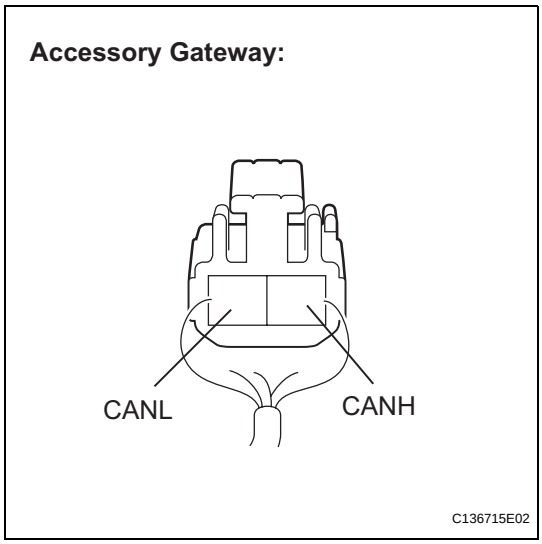
(a) Disconnect the E8 connector from the main body ECU.



(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminals	Wiring Color	Terminal Description	Condition	Specified Condition
E8-5 (CANH) - E8-6 (CANL)	B - W	HIGH-level CAN bus wire - LOW-level CAN bus wire	Ignition Switch off	54 to 69 Ω
E8-16 (CANP) - E8-15 (CANN)	W - L	HIGH-level CAN bus wire - LOW-level CAN bus wire	Ignition Switch off	108 to 132 Ω

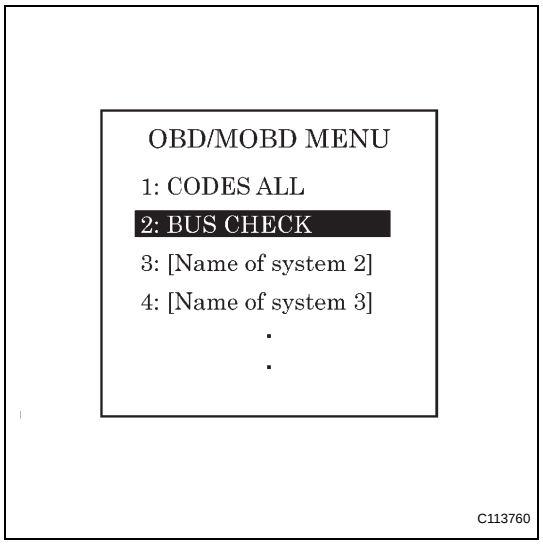


13. ACCESSORY GATEWAY

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

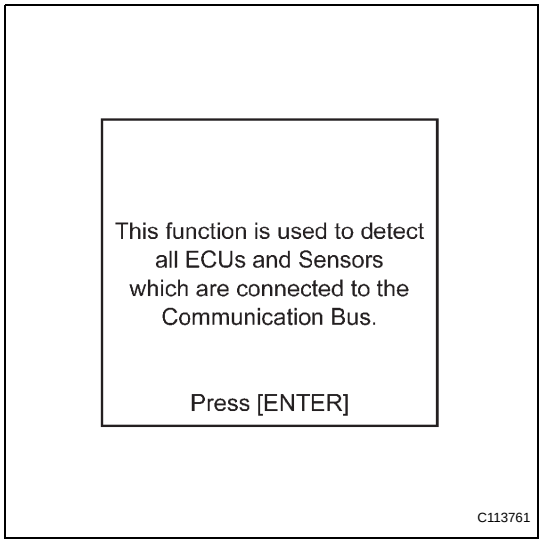
Terminals	Terminal Description	Condition	Specified Condition
E61-6 (CANH) - E61-14 (CANL)	HIGH-level CAN bus wire - LOW-level CAN bus wire	Ignition Switch off	54 to 69 Ω



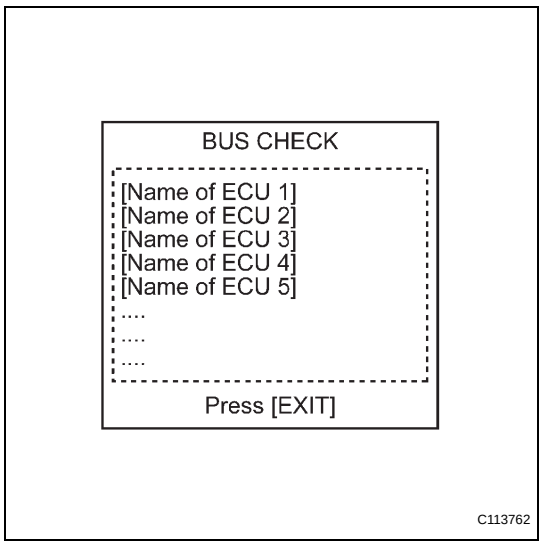
DIAGNOSIS SYSTEM

1. BUS CHECK

(a) Select "BUS CHECK" from the "OBD/MOBD MENU" screen.
HINT:
The ECUs and sensors that are properly connected to the CAN communication system can be displayed using the intelligent tester via the CAN VIM.



(b) Press "ENTER" on the intelligent tester.



(c) The screen displays the ECUs and sensors that are properly connected to the CAN communication system.
HINT:
Properly connected ECUs or sensors that are not displayed on the screen indicate that a communication stop is occuring in the system, sensor, or ECU which is not displayed.

2. CHECK FOR INSTALLED SYSTEMS (ECUS AND SENSORS) THAT USE CAN COMMUNICATION

(a) Systems (ECUs, sensors) that use CAN communication vary depending on the vehicle's optional equipment. Check which systems (ECUs, sensors) are installed on the vehicle.

ECU/Sensor name	Check method
ABS/VSC/TRC	Installed on all vehicles
STEERING SENSOR	With VSC system
YAW / DECELERAT	With VSC system
ENGINE	Installed on all vehicles

ECU/Sensor name	Check method
ECT	With automatic transaxle
SRS AIRBAG	Installed on all vehicles
A/C	Installed on all vehicles
METER	Installed on all vehicles
MAIN BODY	Installed on all vehicles
ACCESSORY G/W	With dealer option
SMART ACCESS/KEY	With smart key system

3. DTC TABLE BY ECU

HINT:

- For the CAN communication system, CAN communication system DTCs stored in certain ECUs can be displayed using the intelligent tester.
- If CAN communication system DTCs are output, trouble cannot be determined only by the DTCs. Perform troubleshooting according to "HOW TO PROCEED WITH TROUBLESHOOTING" (See page CA-8).

(a) ECM (2AZ-FE)

DTC No.	Detection Item
U0101*	High speed CAN Communication Bus

HINT:

- DTC communication is via the CAN communication system.
- *: The ECM is malfunctioning if only U0101 is output. Replace the ECM.

(b) ECM (2GR-FE)

DTC No.	Detection Item
U0101*	High speed CAN Communication Bus

HINT:

- DTC communication is via the CAN communication system.
- *: The ECM is malfunctioning if only U0101 is output. Refer to SFI system (See page ES-389).

(c) ECT (2AZ-FE)

DTC No.	Detection Item
U0100*	High speed CAN Communication Bus

HINT:

- DTC communication is via the CAN communication system.
- *: The ECM is malfunctioning if only U0100 is output. Replace the ECM.

(d) ECT (2GR-FE)

DTC No.	Detection Item
U0100*	High speed CAN Communication Bus

HINT:

- DTC communication is via the CAN communication system.

- *: The ECM is malfunctioning if only U0100 is output. Refer to Automatic Transaxle system (See page AX-151).

(e) SKID CONTROL ECU (with VSC)

DTC No.	Detection Item
U0073	Control Module Communication Bus Off
U0100	Lost Communication With ECM/PCM "A"
U0123	Lost Communication With Yaw Rate Sensor Module
U0124*	Lost Communication With Lateral Acceleration Sensor Module
U0126	Lost Communication With Steering Angle Sensor Module

HINT:

- DTC communication is via the CAN communication system.
- *: TMC made only

(f) SKID CONTROL ECU (without VSC)

DTC No.	Detection Item
U0073	Control Module Communication Bus Off

HINT:
DTC communication is via the CAN communication system.

(g) COMBINATION METER ECU

DTC No.	Detection Item
U0100	Lost Communication With ECM/PCM "A"
U0129	Lost Communication with Brake System Control Mode

HINT:
DTC communication is via the CAN communication system.

(h) AIR CONDITIONER AMPLIFIER

DTC No.	Detection Item
B1499	Multiplex Communication Circuit

HINT:
DTC communication is via the CAN communication system.

(i) MAIN BODY ECU (with smart key system)

DTC No.	Detection Item
B1207*	Certification ECU Communication Malfunction
B2326*	CAN MS Bus Line Communication Malfunction

HINT:

- DTC communication is via the CAN communication system.
- *: The main body ECU is malfunctioning if B1207 and/or B2326 are output alone. Refer to DTC chart (See page AX-46).

(j) MAIN BODY ECU (without smart key system)

HINT:
Although the center airbag sensor is connected to the CAN communication system, CAN communication DTCs are not output.

(k) CENTER AIRBAG SENSOR
HINT:
Although the center airbag sensor is connected to the CAN communication system, CAN communication DTCs are not output.

(l) CERTIFICATION ECU
HINT:
Although the Main Body ECU is connected to the CAN communication system, CAN communication DTCs are not output.

4. DTC COMBINATION TABLE

FAIL-SAFE CHART

1. FAIL-SAFE FUNCTION

(a) When communication fails in any of the CAN bus wire (communication lines) due to a short circuit or other causes, a fail-safe functions, will operate. The fail-safe function that is specified for each system operates to prevent those systems from malfunctioning.

(b) The following chart shows the relationships between components and system functions and effects of communication failure on these functions. (For further details, see the pages for each system.)

Function	ECM	Skid Control ECU (Without VSC)	Skid Control ECU (With VSC)	Steering Sensor	Yaw Rate Sensor	Condition when communication impossible	DTC detection (Driver detectable)
VSC control (Controls driving force while VSC in operation)	○	-	●	○	○	Control inoperative (gradually stops controlling during VSC control)	Detectable (Light comes on)
TRC control (Controls driving force and engine power when wheel slip detected during acceleration)	○	-	●	-	-	Control inoperative (gradually stops controlling during TRC control)	Detectable (Light comes on)
ABS control (Controls driving force while ABS in operation)	○	●	●	-	○ *1	Control is inoperative (gradually stops controlling during ABS control)	Detectable (Light comes on)
Security function	-	-	-	-	-	Theft deterrent system cannot be set	Detectable (Indicator light does not comes on)
Air conditioning control	○	-	-	-	-	Air conditioning function stops	None (Air conditioning inoperative)
Meter Display (Displays operation condition and DTCs)	○	○	○ *2	-	-	Light does not come on, illuminates abnormally, or blinks abnormally	Detectable (Abnormal display)
Buzzer control	○	○	○ *2	-	-	Buzzer function stops	Detectable (Buzzer does not sound)
Illumination control	○	-	-	-	-	Light illumination rheostat inoperative	None (Rheostat inoperative)
Smart entry / Power door lock control *3	-	-	-	-	-	Unlock permitted	None (Wireless door lock operation)

CA

DIAGNOSTIC TROUBLE CODE CHART

CAN COMMUNICATION SYSTEM

DTC No.	Detection Item	Trouble Area	See page
B1207	Certification ECU Communication Malfunction	1. CAN MS bus wire or connector 2.Certification ECU power source circuit 3. Certification ECU 4. Main Body ECU	CA-32
B2326	CAN MS Bus Line Communication Malfunction	1. CAN MS bus wire or connector 2.Certification ECU power source circuit 3. Certification ECU 4. Main Body ECU	CA-32

DTC	B1207	Certification ECU Communication Malfunction

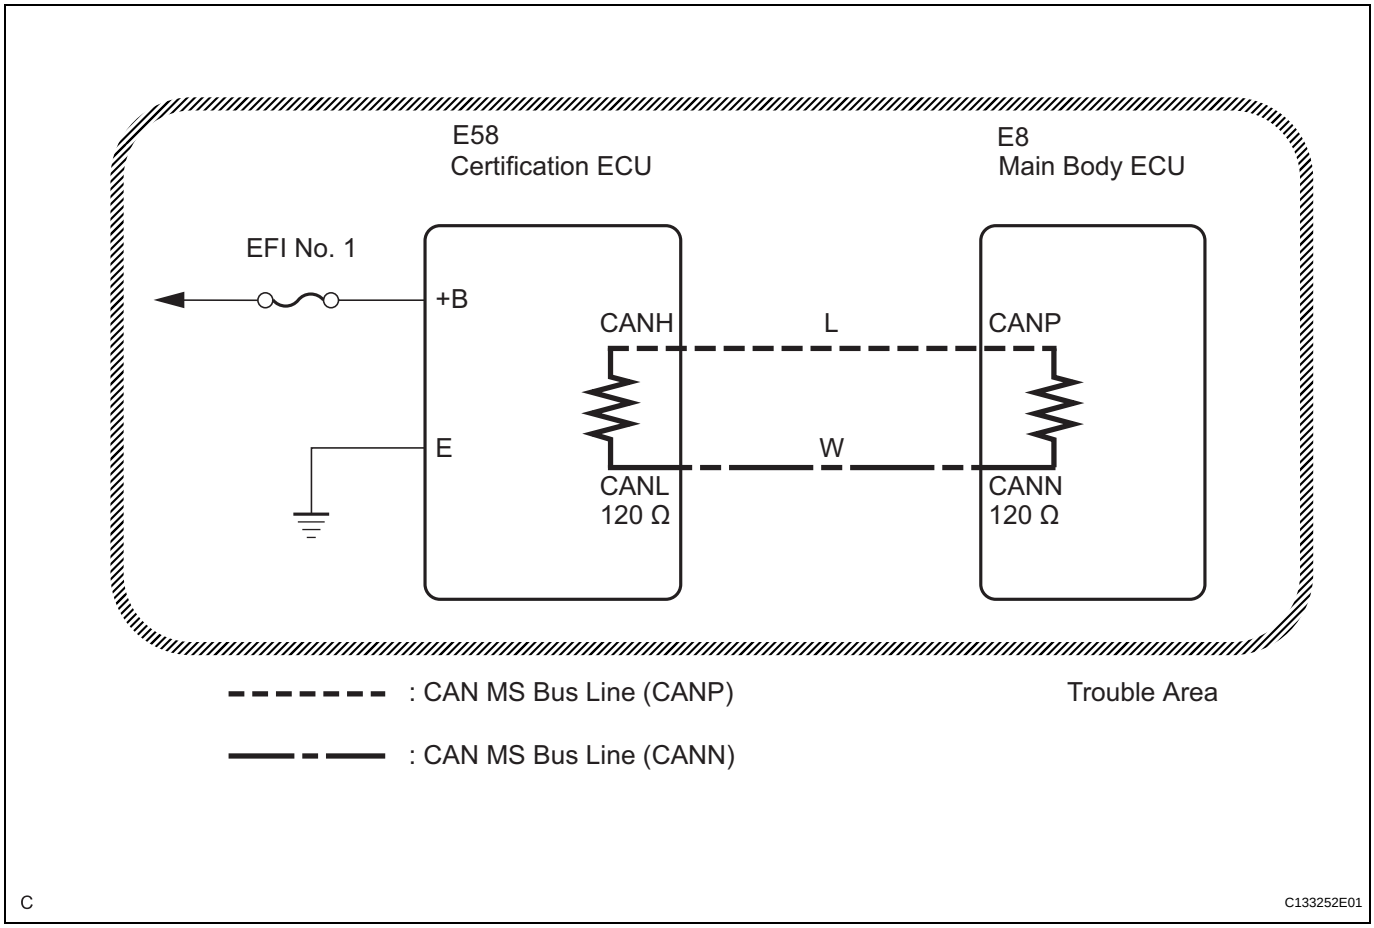
DTC	B2326	CAN MS Bus Line Communication Malfunction

DESCRIPTION

The Main Body ECU and Certification ECU perform 2-way communication with each other via the Controller Area Network (CAN). If the Certification ECU cannot communicate with the Main Body ECU, the Main Body ECU will conclude that there is a malfunction in the CAN system, and set a DTC.

DTC No.	DTC Detection Condition	Trouble Area
B1207 B2326	No communication from certification ECU continues	• CAN MS bus wire or connector • Certification ECU power source circuit • Certification ECU • Main body ECU

WIRING DIAGRAM



INSPECTION PROCEDURE

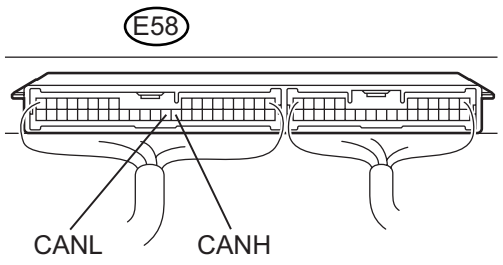
NOTICE:

- **Turn the ignition switch off before measuring the resistance of the CAN main wire and CAN branch wires.**
- **After the ignition switch is turned off, check that the key reminder warning system and light reminder warning system are not operating.**
- **Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:
Operating the ignition switch, any other switches or any triggers related ECU and sensor communication on the CAN, which would cause resistance reading variations.

1 CHECK CAN MS BUS WIRE

Certification ECU Connector:



H B139430E05

(a) Turn the ignition switch off.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition	Proceed to
E58-27 (CANH) - E58-28 (CANL)	Ignition switch off	54 to 69 Ω	A
E58-27 (CANH) - E58-28 (CANL)	Ignition switch off	69 Ω or more	B
E58-27 (CANH) - E58-28 (CANL)	Ignition switch off	54 Ω or less	C

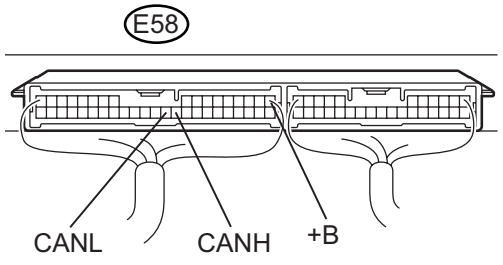
B → **Go to step 9**

C → **Go to step 11**

A

2 CHECK SHORT TO +B IN CAN MS BUS WIRE

Certification ECU Connector:



H B139430E06

(a) Turn the ignition switch off.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

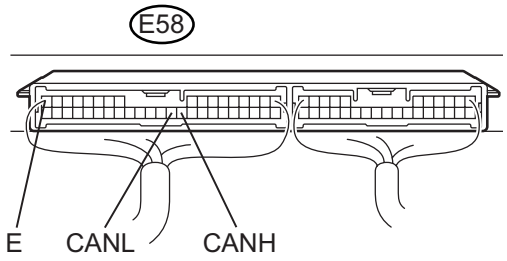
Tester Connection	Condition	Specified Condition
E58-27 (CANH) - E58-1 (+B)	Ignition switch off	6 kΩ or higher
E58-2 (CANL) - E58-1 (+B)	Ignition switch off	6 kΩ or higher

NG → **Go to step 5**

OK

3 CHECK SHORT TO GND IN CAN MS BUS WIRE

Certification ECU Connector:



H B139430E07

(a) Turn the ignition switch off.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

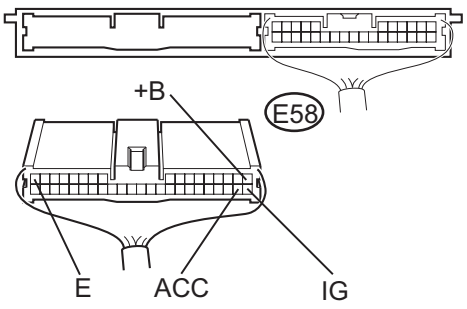
Tester Connection	Condition	Specified Condition
E58-27 (CANH) - E58-17 (E)	Ignition switch off	200 Ω or higher
E58-28 (CANL) - E58-17 (E)	Ignition switch off	200 Ω or higher

NG → **Go to step 7**

OK

4 CHECK CERTIFICATION ECU (POWER SOURCE CIRCUIT)

Certification ECU Connector



C C136713E06

(a) Turn the ignition switch off.
(b) Disconnect the E58 certification ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E58-17 (E) - Body ground	Always	Below 1 Ω

(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E58-1 (B) - Body ground	Always	10 to 14 V
E58-18 (IG) - Body ground	Ignition switch on (IG)	10 to 14 V
E58-19 (ACC) - Body ground	Ignition switch on (ACC)	10 to 14 V

OK → **REPLACE CERTIFICATION ECU**

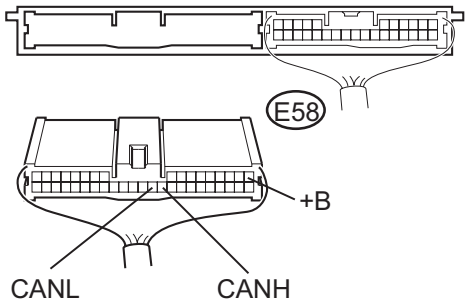
NG

REPAIR OR REPLACE HARNESS OR CONNECTOR (FUSES - ECU, ECU - BODY GROUND)

CA

5	CHECK SHORT TO +B IN CAN MS BUS WIRE (CERTIFICATION ECU)

Certification ECU Connector (Wire Harness Side):



C C136713E02

(a) Turn the ignition switch off.
(b) Disconnect the E58 certification ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

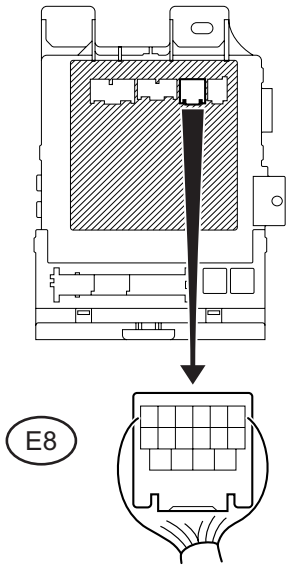
Tester Connection	Condition	Specified Condition
E58-27 (CANH) - E58-1 (+B)	Ignition switch off	6 kΩ or higher
E58-28 (CANL) - E58-1 (+B)	Ignition switch off	6 kΩ or higher

OK → REPLACE CERTIFICATION ECU

NG

6	CHECK SHORT TO +B IN CAN MS BUS WIRE (CERTIFICATION ECU - MAIN BODY ECU)

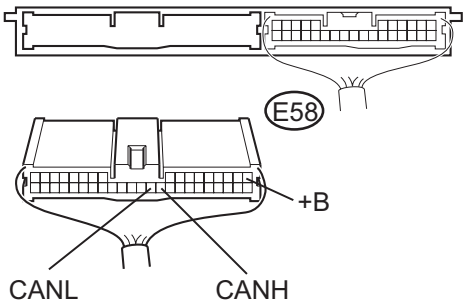
Main Body ECU:



C C140857E01

(a) Turn the ignition switch off.
(b) Disconnect the E8 main body ECU connector.

Certification ECU Connector (Wire Harness Side):



C C136713E02

(c) Measure the resistance according to the value(s) in the table below.
HINT:
The resistance must be measured after the E58 certification ECU connector is disconnected.
Standard resistance

Tester Connection	Condition	Specified Condition
E58-27 (CANH) - E58-1 (+B)	Ignition switch off	6 kΩ or higher
E58-28 (CANL) - E58-1 (+B)	Ignition switch off	6 kΩ or higher

OK → **REPLACE MAIN BODY ECU**

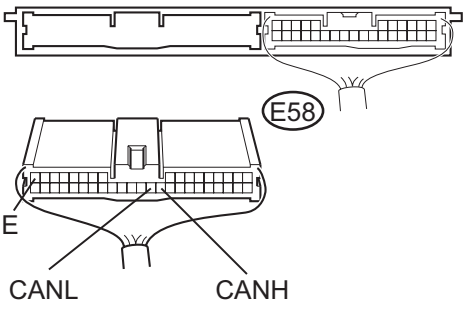
NG

REPAIR OR REPLACE CAN MS BUS MAIN WIRE OR CONNECTOR

CA

7 **CHECK SHORT TO GND IN CAN MS BUS WIRE (CERTIFICATION ECU)**

Certification ECU Connector (Wire Harness Side):



C C136713E03

(a) Turn the ignition switch off.
(b) Disconnect the E58 certification ECU connector.
(c) Measure the resistance according to the value(s) in the table below.
Standard resistance

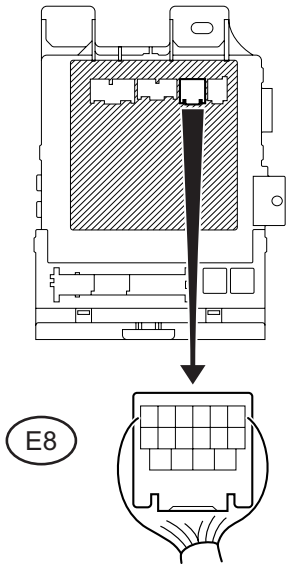
Tester Connection	Condition	Specified Condition
E58-27 (CANH) - E58-17 (E)	Ignition switch off	6 kΩ or higher
E58-28 (CANL) - E58-17 (E)	Ignition switch off	6 kΩ or higher

OK → **REPLACE CERTIFICATION ECU**

NG

8	CHECK SHORT TO GND IN CAN MS BUS WIRE

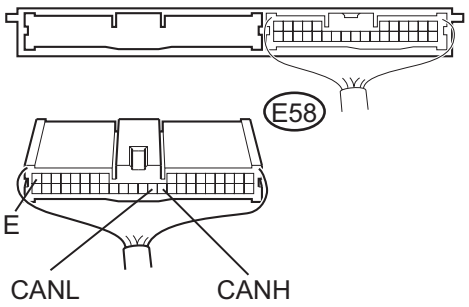
Main Body ECU:



C C140857E01

(a) Turn the ignition switch off.
(b) Disconnect the E8 main body ECU connector.

Certification ECU Connector (Wire Harness Side):



C C136713E03

(c) Measure the resistance according to the value(s) in the table below.
HINT:
The resistance must be measured after the E58 certification ECU connector is disconnected.
Standard resistance

Tester Connection	Condition	Specified Condition
E58-27 (CANH) - E58-17 (E)	Ignition switch off	6 kΩ or higher
E58-28 (CANL) - E58-17 (E)	Ignition switch off	6 kΩ or higher

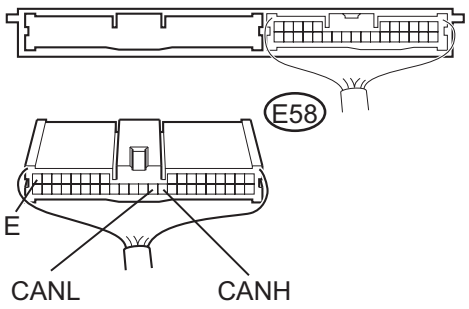
OK → **REPLACE MAIN BODY ECU**

NG

REPAIR OR REPLACE CAN MS BUS MAIN WIRE OR CONNECTOR

9	CHECK CAN MS BUS MAIN WIRE OR CONNECTOR (CERTIFICATION ECU)

Certification ECU Connector (Wire Harness Side):



C C136713E03

(a) Turn the ignition switch off.
(b) Disconnect the E58 certification ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E58-27 (CANH) - E58-28 (CANL)	Ignition switch off	108 to 132 Ω or higher

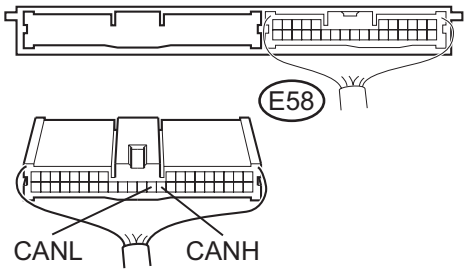
OK → **REPLACE CERTIFICATION ECU**

NG

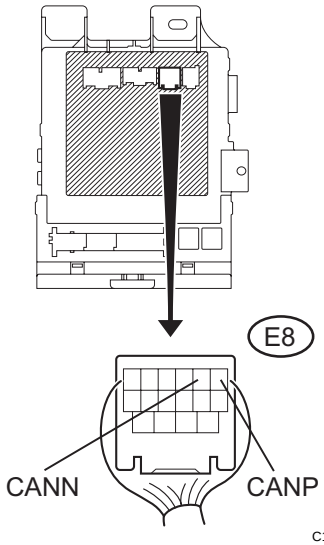
CA

10	**CHECK CAN MS BUS MAIN WIRE OR CONNECTOR (CERTIFICATION ECU - MAIN BODY ECU)**

Certification ECU Connector (Wire Harness Side):



Main Body ECU Connector (Wire Harness Side):



C

C133244E01

(a) Turn the ignition switch off.
(b) Disconnect the E8 main body ECU connector.
(c) Measure the resistance according to the value(s) in the table below.
HINT:
The resistance must be measured after the E58 certification ECU connector is disconnected.
Standard resistance

Tester Connection	Condition	Specified Condition
E58-27 (CANH) - E8-16 (CANP)	Always	Below 1 Ω
E58-28 (CANL) - E8-15 (CANN)	Always	Below 1 Ω

OK → **REPLACE MAIN BODY ECU**

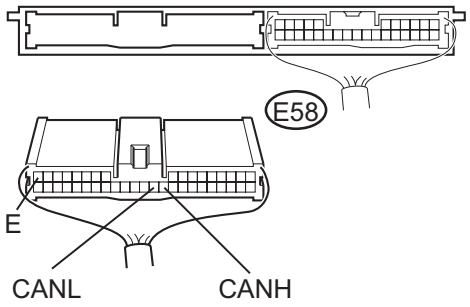
NG

REPAIR OR REPLACE CAN MS BUS MAIN WIRE OR CONNECTOR

CA

11 CHECK SHORT IN CAN MS BUS WIRES (CERTIFICATION ECU)

Certification ECU Connector (Wire Harness Side):



C C136713E03

(a) Turn the ignition switch off.
(b) Disconnect the E58 certification ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

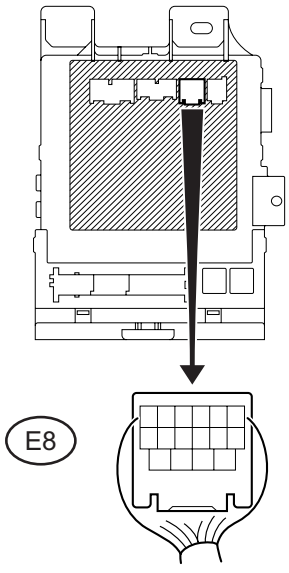
Tester Connection	Condition	Specified Condition
E58-27 (CANH) - E58-28 (CANL)	Ignition switch off	108 to 132 Ω or higher

OK → **REPLACE CERTIFICATION ECU**

NG

12 CHECK SHORT IN CAN MS BUS WIRES

Main Body ECU:

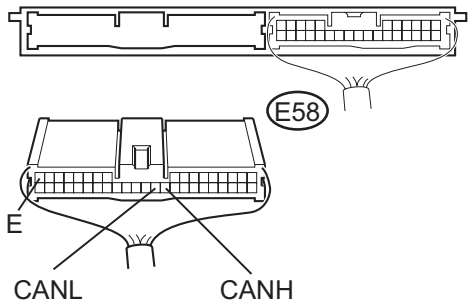


C C140857E01

(a) Turn the ignition switch off.
(b) Disconnect the E8 main body ECU connector.

CA

Certification ECU Connector (Wire Harness Side):



(c) Measure the resistance according to the value(s) in the table below.
HINT:
The resistance must be measured after the E58 certification ECU connector is disconnected.
Standard resistance

Tester Connection	Condition	Specified Condition
E58-27 (CANH) - E58-28 (CANL)	Ignition switch off	1 MΩ or higher

OK → **REPLACE MAIN BODY ECU**

NG

REPAIR OR REPLACE CAN MS BUS MAIN WIRE OR CONNECTOR

CA

Skid Control ECU Communication Stop Mode

DESCRIPTION

Detection Item	Symptom	Trouble Area
Skid Control ECU Communication Stop Mode	• "ABS/VSC/TRC" is not displayed on the "Communication Bus Check" screen of the intelligent tester • Applies to "Skid Control ECU Communication Stop Mode" in the "DTC COMBINATION TABLE"	• Power source circuit of skid control ECU • Skid control ECU branch wire or connector • Brake actuator assembly (Skid control ECU)

WIRING DIAGRAM

without VSC:

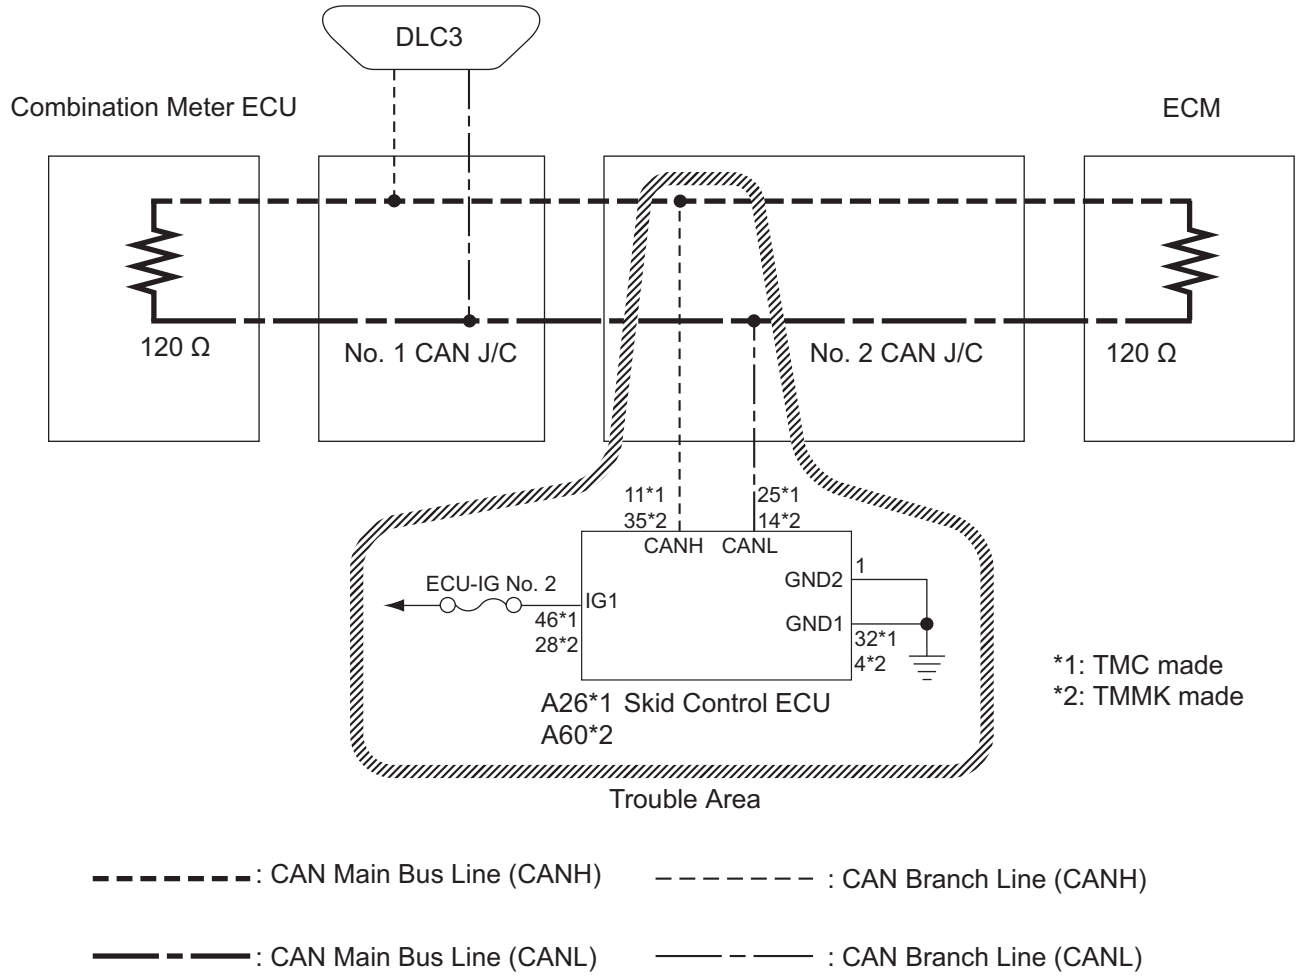
with VSC:



INSPECTION PROCEDURE

NOTICE:

- **Turn the ignition switch off before measuring the resistance of the CAN main wire and CAN branch wires.**
- **After the ignition switch is turned off, check that the key reminder warning system and light reminder warning system are not operating.**
- **Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:

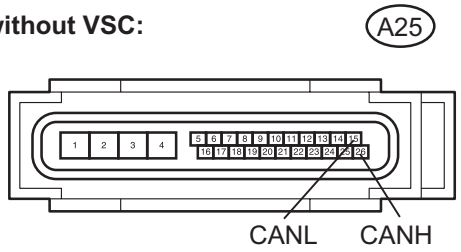
Operating the ignition switch, any other switches or any triggers related ECU and sensor communication on the CAN, which would cause resistance reading variations.

1	**CHECK OPEN IN CAN BUS WIRE (SKID CONTROL ECU BRANCH WIRE)**

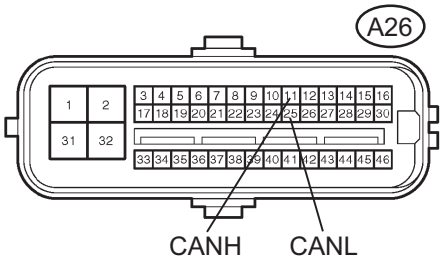
(a) Turn the ignition switch off.
(b) Disconnect the skid control ECU connector.

Skid Control ECU Connector (Front View):

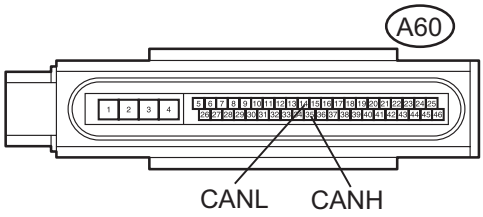
without VSC:



with VSC (TMC Made):



with VSC (TMMK Made):



C133241E01

OK

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance:

without VSC

Tester Connection	Condition	Specified Value
A25-26 (CANH) - A25-15 (CANL)	Ignition switch off	54 to 69 Ω

with VSC (TMC made)

Tester Connection	Condition	Specified Value
A26-11 (CANH) - A26-25 (CANL)	Ignition switch off	54 to 69 Ω

with VSC (TMMK made)

Tester Connection	Condition	Specified Value
A60-35 (CANH) - A60-14 (CANL)	Ignition switch off	54 to 69 Ω

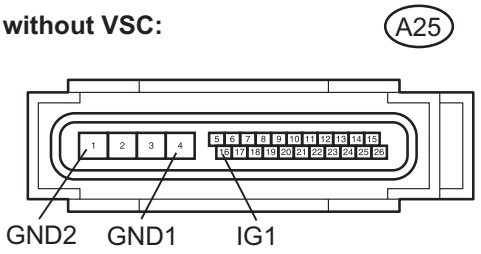
NG → **REPAIR OR REPLACE SKID CONTROL ECU BRANCH WIRE OR CONNECTOR (CAN-H, CAN-L)**

CA

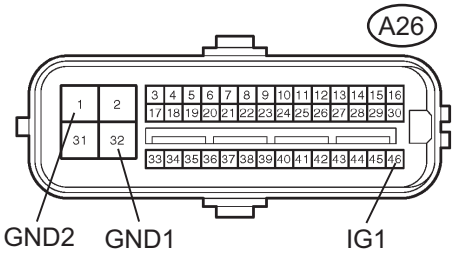
2	CHECK WIRE HARNESS (IG1, GND1, GND2)

Skid Control ECU Connector (Front View):

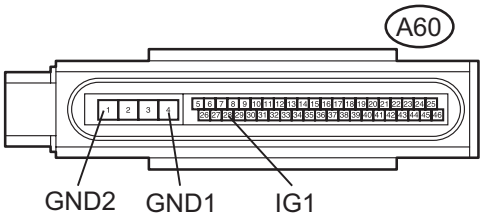
without VSC:



with VSC (TMC Made):



with VSC (TMMK Made):



C133241E02

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance:

without VSC

Tester Connection	Condition	Specified Value
A25-4 (GND1) - Body ground	Always	Below 1 Ω
A25-1 (GND2) - Body ground	Always	Below 1 Ω

with VSC (TMC made)

Tester Connection	Condition	Specified Value
A26-32 (GND1) - Body ground	Always	Below 1 Ω
A26-1 (GND2) - Body ground	Always	Below 1 Ω

with VSC (TMMK made)

Tester Connection	Condition	Specified Value
A60-4 (GND1) - Body ground	Always	Below 1 Ω
A60-1 (GND2) - Body ground	Always	Below 1 Ω

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage:

without VSC

Tester Connection	Condition	Specified Value
A25-18 (IG1) - Body ground	Ignition switch on (IG)	10 to 14 V

with VSC (TMC made)

Tester Connection	Condition	Specified Value
A26-46 (IG1) - Body ground	Ignition switch on (IG)	10 to 14 V

with VSC (TMMK made)

Tester Connection	Condition	Specified Value
A60-28 (IG1) - Body ground	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

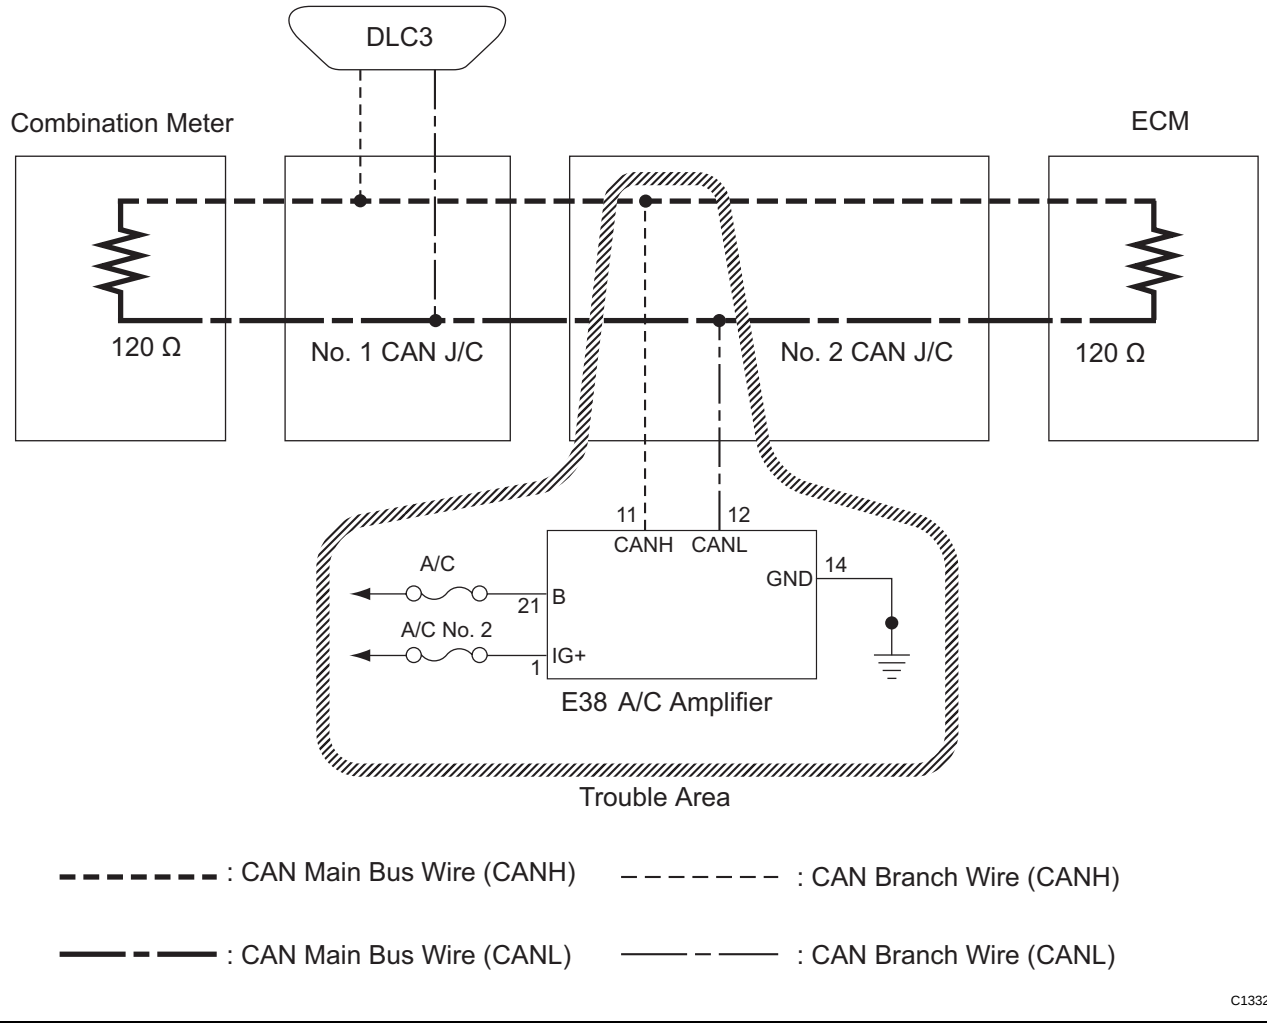
REPLACE BRAKE ACTUATOR ASSEMBLY

Air Conditioning Amplifier Communication Stop Mode

DESCRIPTION

Detection Item	Symptom	Trouble Area
Air Conditioning Amplifier Communication Stop Mode	• "Air Conditioner" not displayed on "Communication Bus Check" screen of intelligent tester • Applies to "Air Conditioning Amplifier Communication Stop Mode" in "DTC combination table"	• Power source circuit of the air conditioning amplifier • Air conditioning amplifier branch wire or connector • Air conditioning amplifier

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

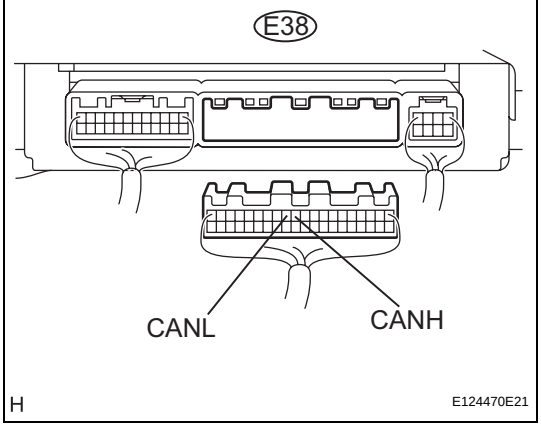
- **Turn the ignition switch off before measuring the resistance of the CAN main wire and CAN branch wires.**
- **After the ignition switch is turned off, check that the key reminder warning system and light reminder warning system are not operating.**

- **Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:
Operating the ignition switch, any other switches or any triggers related ECU and sensor communication on the CAN, which would cause resistance reading variations.

1	CHECK CAN BUS LINE FOR DISCONNECTION (AIR CONDITIONING AMPLIFIER BRANCH WIRE)

Air Conditioning Amplifier (Wire Harness Side):



(a) Turn the ignition switch off.
(b) Disconnect the air conditioning amplifier connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

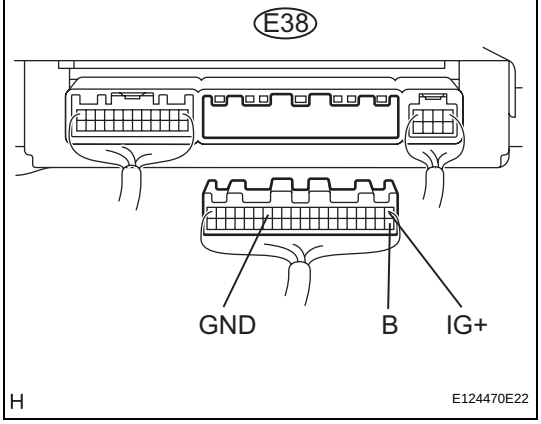
Tester Connection	Condition	Specified Condition
E38-11 (CANH) - E38-12 (CANL)	Ignition Switch off	54 to 69 Ω

NG → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO AIR CONDITIONING AMPLIFIER (CAN-H, CAN-L)**

OK

2	CHECK HARNESS AND CONNECTOR (IG+, B, GND)

Air Conditioning Amplifier (Wire Harness Side):



(a) Disconnect the air conditioning amplifier connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E38-14 (GND) - Body Ground	Always	Below 1 Ω

(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E38-1 (IG+) - Body Ground	Ignition Switch on (IG)	10 to 14 V
E38-21 (B)- Body Ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

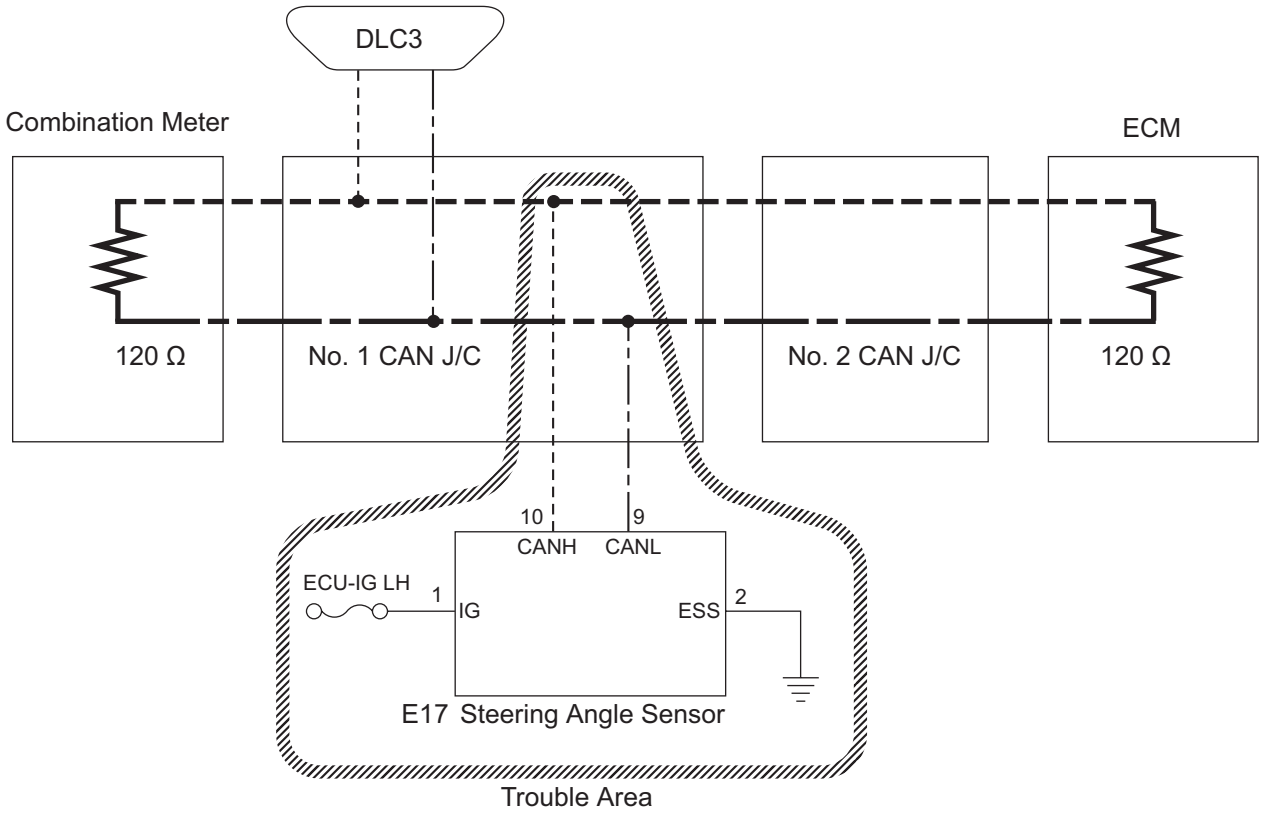
REPLACE AIR CONDITIONING AMPLIFIER

Steering Angle Sensor Communication Stop Mode

DESCRIPTION

Detection Item	Symptom	Trouble Area
Steering Angle Sensor Communication Stop Mode	• "Steering Angle Sensor" is not displayed on the "Communication Bus Check" screen of the intelligent tester • Applies to "Steering Angle Sensor Communication Stop Mode" in the "DTC COMBINATION TABLE"	• Power source circuit of the steering angle sensor • Steering angle sensor branch wire or connector • Steering angle sensor

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

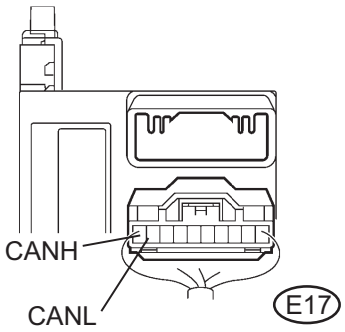
- **Turn the ignition switch off before measuring the resistance of the CAN main wire and CAN branch wires.**
- **After the ignition switch is turned off, check that the key reminder warning system and light reminder warning system are not operating.**

- **Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:
Operating the ignition switch, any other switches or any triggers related ECU and sensor communication on the CAN, which would cause resistance reading variations.

1 CHECK OPEN IN CAN BUS WIRE (STEERING ANGLE SENSOR BRANCH LINE)

Steering Angle Sensor Connector (Wire Harness View):



G030155E40

(a) Turn the ignition switch off.
(b) Disconnect the steering angle sensor connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

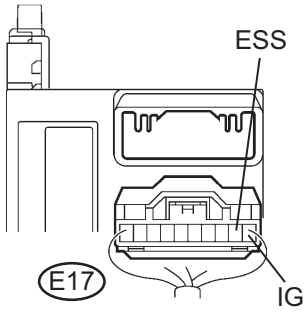
Tester Connection	Condition	Specified Value
E17-10 (CANH) - E17-9 (CANL)	Ignition switch off	54 to 69 Ω

NG → **REPAIR OR REPLACE STEERING ANGLE SENSOR BRANCH WIRE OR CONNECTOR (CANH, CANL)**

OK

2 CHECK WIRE HARNESS (IG, ESS)

Steering Angle Sensor Connector (Wire Harness View):



G030155E41

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
E17-2 (ESS) - Body ground	Always	Below 1 Ω

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Value
E17-1 (IG) - Body ground	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE STEERING ANGLE SENSOR

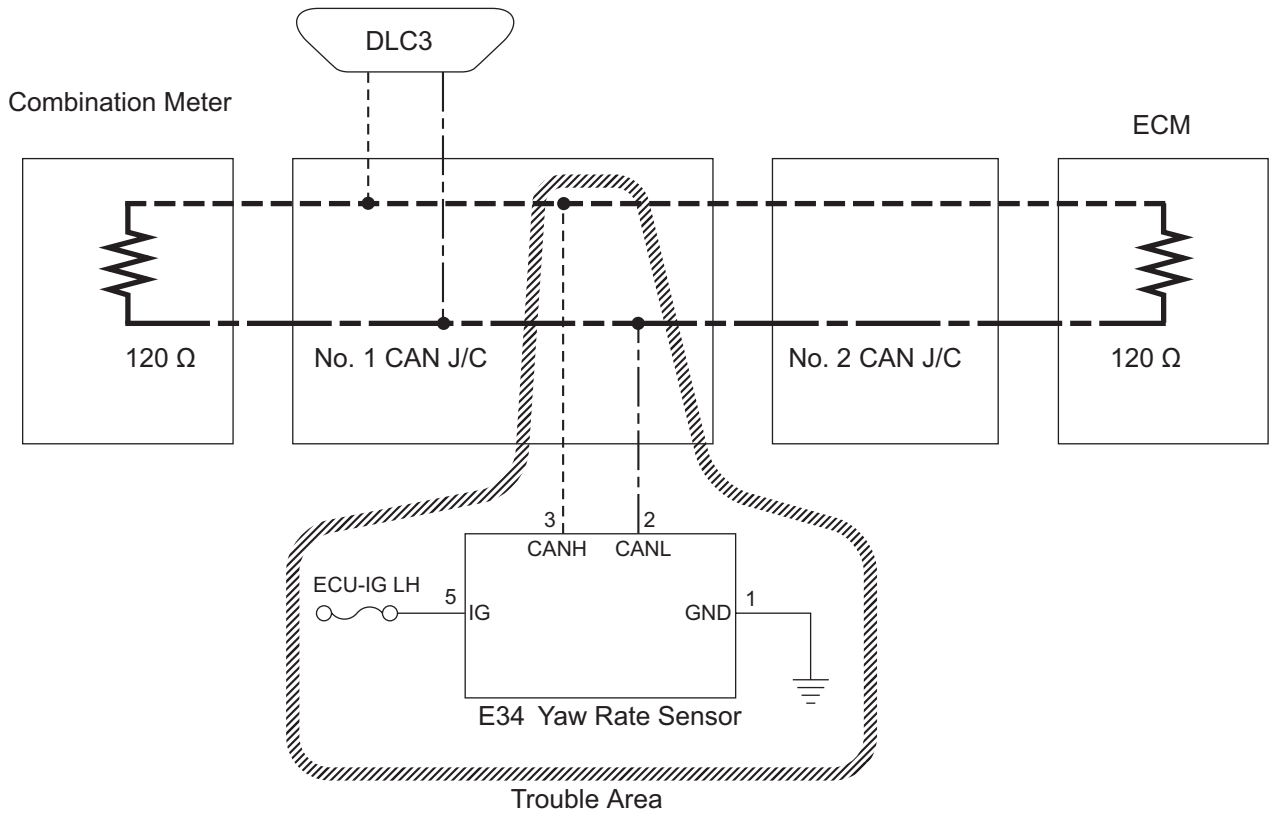
CA

Yaw Rate Sensor Communication Stop Mode

DESCRIPTION

Detection Item	Symptom	Trouble Area
Yaw Rate Sensor Communication Stop Mode	• "Yaw Rate/Decelerate Sensor" is not displayed on the "Communication Bus Check" screen of the intelligent tester • Applies to "Yaw Rate Sensor Communication Stop Mode" in the "DTC COMBINATION TABLE"	• Power source circuit of the yaw rate sensor • Yaw rate sensor branch wire or connector • Yaw rate sensor

WIRING DIAGRAM



H

C126215E04

INSPECTION PROCEDURE

NOTICE:

- **Turn the ignition switch off before measuring the resistance of the CAN main wire and CAN branch wires.**
- **After the ignition switch is turned off, check that the key reminder warning system and light reminder warning system are not operating.**

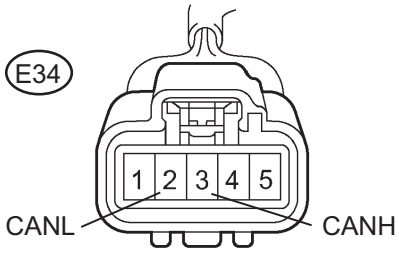
- **Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:
Operating the ignition switch, any other switches or any triggers related ECU and sensor communication on the CAN, which would cause resistance reading variations.

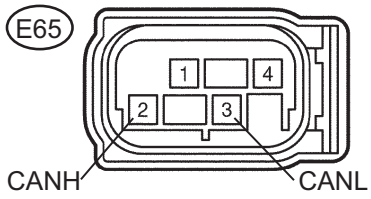
1	CHECK OPEN IN CAN BUS WIRE (YAW RATE SENSOR BRANCH LINE)

Yaw Rate Sensor Connector (Front View):

TMC Made:



TMMK Made:



C133237E01

(a) Turn the ignition switch off.
(b) Disconnect the yaw rate sensor connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TMC made

Tester Connection	Condition	Specified Value
E34-3 (CANH) - E34-2 (CANL)	Ignition switch off	54 to 69 Ω

TMMK made

Tester Connection	Condition	Specified Value
E65-3 (CANL) - E65-2 (CANH)	Ignition switch off	54 to 69 Ω

NG → **REPAIR OR REPLACE YAW RATE SENSOR BRANCH WIRE OR CONNECTOR (CANH, CANL)**

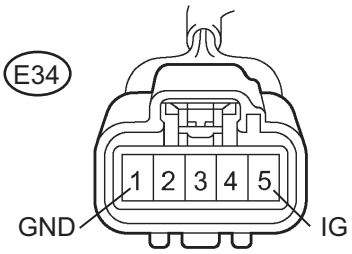
OK

CA

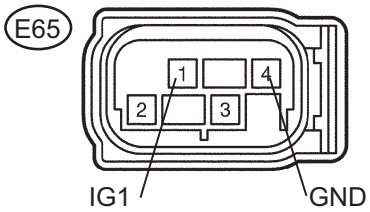
2	CHECK WIRE HARNESS (IG, GND)

Yaw Rate Sensor Connector (Front View):

TMC Made:



TMMK Made:



C133237E02

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TMC made

Tester Connection	Condition	Specified Value
E34-1 (GND) - Body ground	Always	Below 1 Ω

TMMK made

Tester Connection	Condition	Specified Value
E65-4 (GND) - Body ground	Always	Below 1 Ω

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage:

TMC made

Tester Connection	Condition	Specified Value
E34-5 (IG) - Body ground	Ignition switch on (IG)	10 to 14 V

TMMK made

Tester Connection	Condition	Specified Value
E65-1 (IG1) - Body ground	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE YAW RATE AND ACCELERATION SENSOR

CA

ECM Communication Stop Mode

DESCRIPTION

Detection Item	Symptom	Trouble Area
ECM Communication Stop Mode	• "Engine" and "ECT" are not displayed on the "Communication Bus Check" screen of the intelligent tester • Applies to "ECM Communication Stop Mode" in the "DTC COMBINATION TABLE"	• Power source circuit of the ECM • ECM main bus wire or connector • ECM

WIRING DIAGRAM

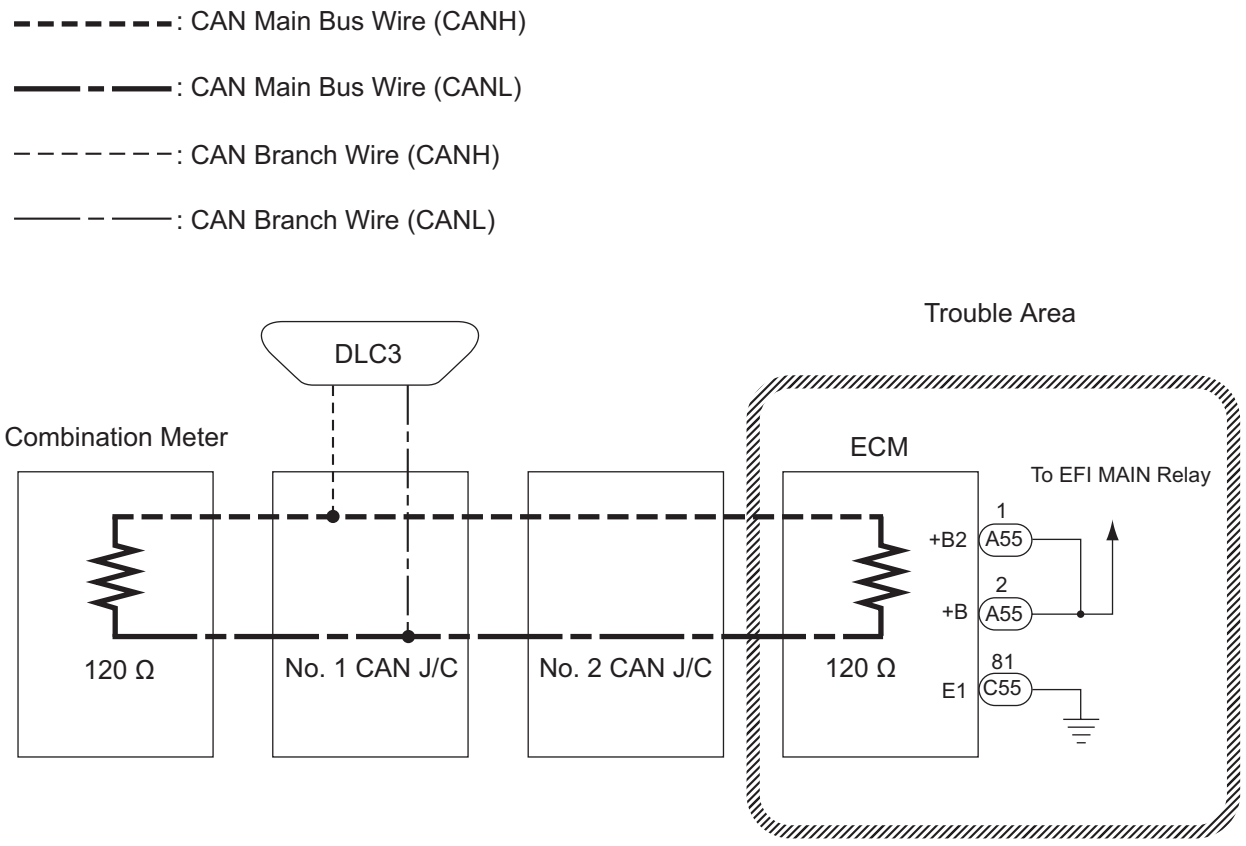
2GR-FE:



INSPECTION PROCEDURE

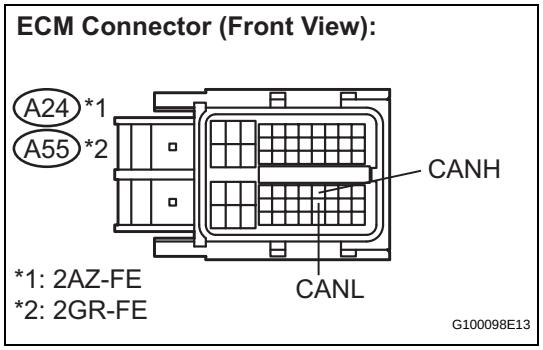
NOTICE:

- **Turn the ignition switch off before measuring the resistance of the CAN main wire and CAN branch wires.**
- **After the ignition switch is turned off, check that the key reminder warning system and light reminder warning system are not operating.**
- **Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:

Operating the ignition switch, any other switches or any triggers related ECU and sensor communication on the CAN, which would cause resistance reading variations.

1	CHECK CAN BUS LINE FOR DISCONNECTION (ECU MAIN BUS LINE)



(a) Reconnect the CAN main bus line connector (A40) to the No. 2 CAN J/C (front side of the vehicle).
(b) Disconnect the ECM connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance:

2AZ-FE

Tester Connection	Condition	Specified Value
A24-38 (CANH) - A24-46 (CANL)	Ignition switch off	108 to 132 Ω

2GR-FE

Tester Connection	Condition	Specified Value
A55-38 (CANH) - A55-46 (CANL)	Ignition switch off	108 to 132 Ω

NG → **REPAIR OR REPLACE CAN MAIN WIRE OR CONNECTOR**

OK

2	CHECK ECM POWER SOURCE CIRCUIT

(a) Check the ECM power source circuit (2AZ-FE: See page ES-380 or 2GR-FE: See page ES-432)

NG → **REPAIR OR REPLACE ECM POWER SOURCE CIRCUIT**

OK

REPLACE ECM

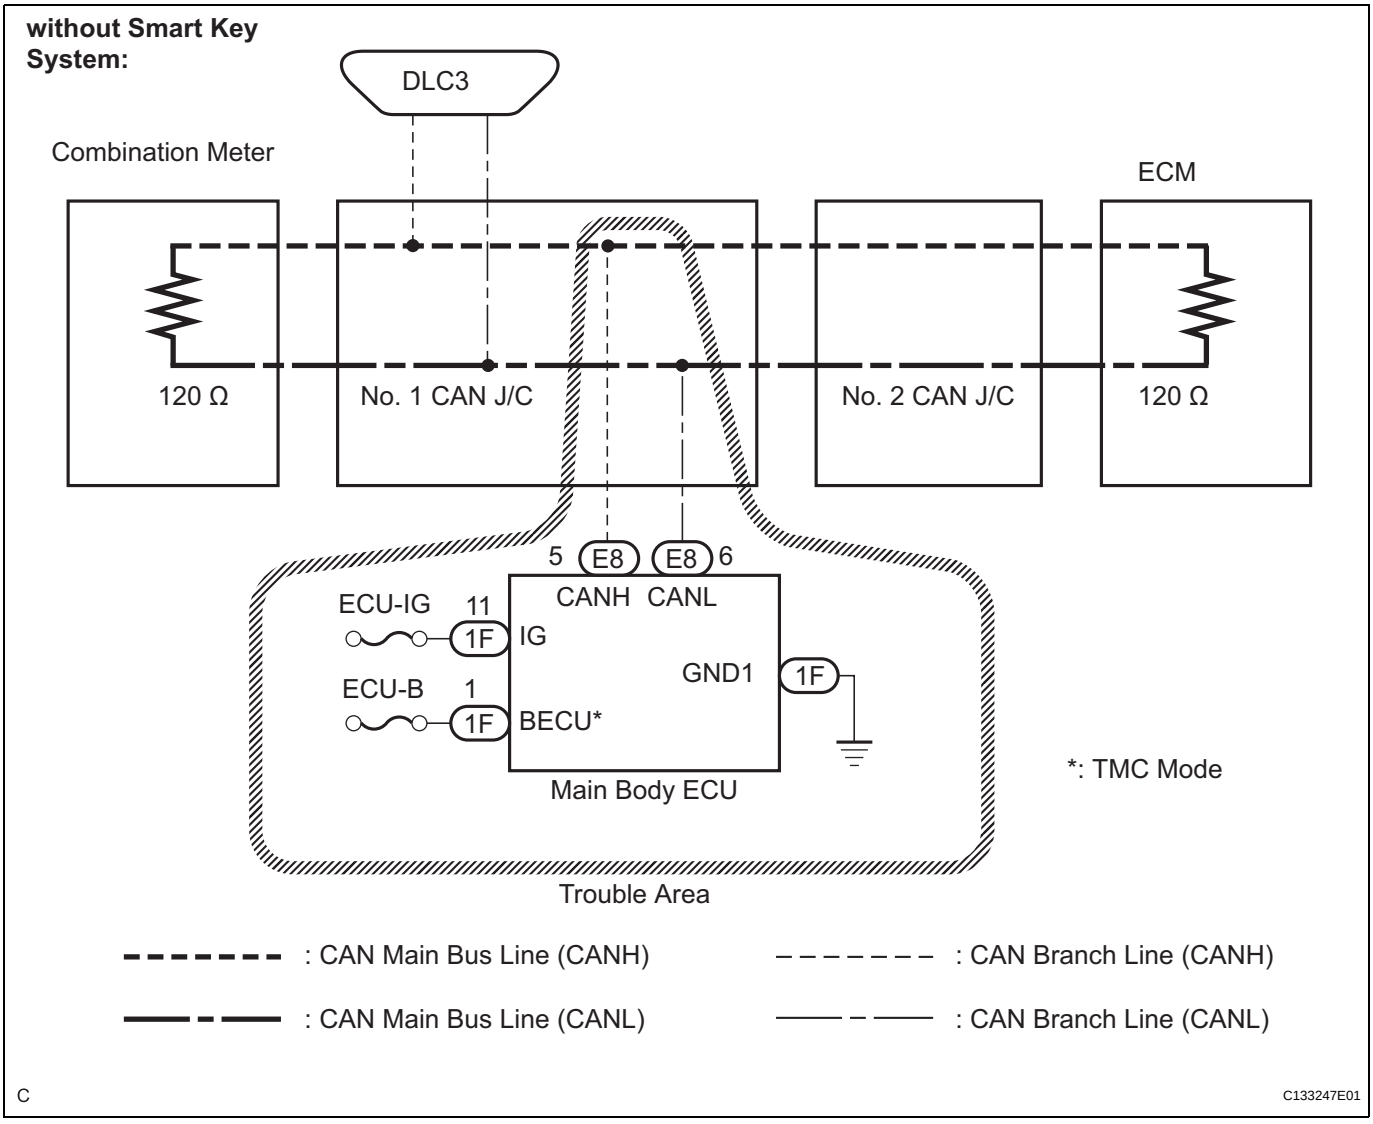
CA

Main Body ECU Communication Stop Mode

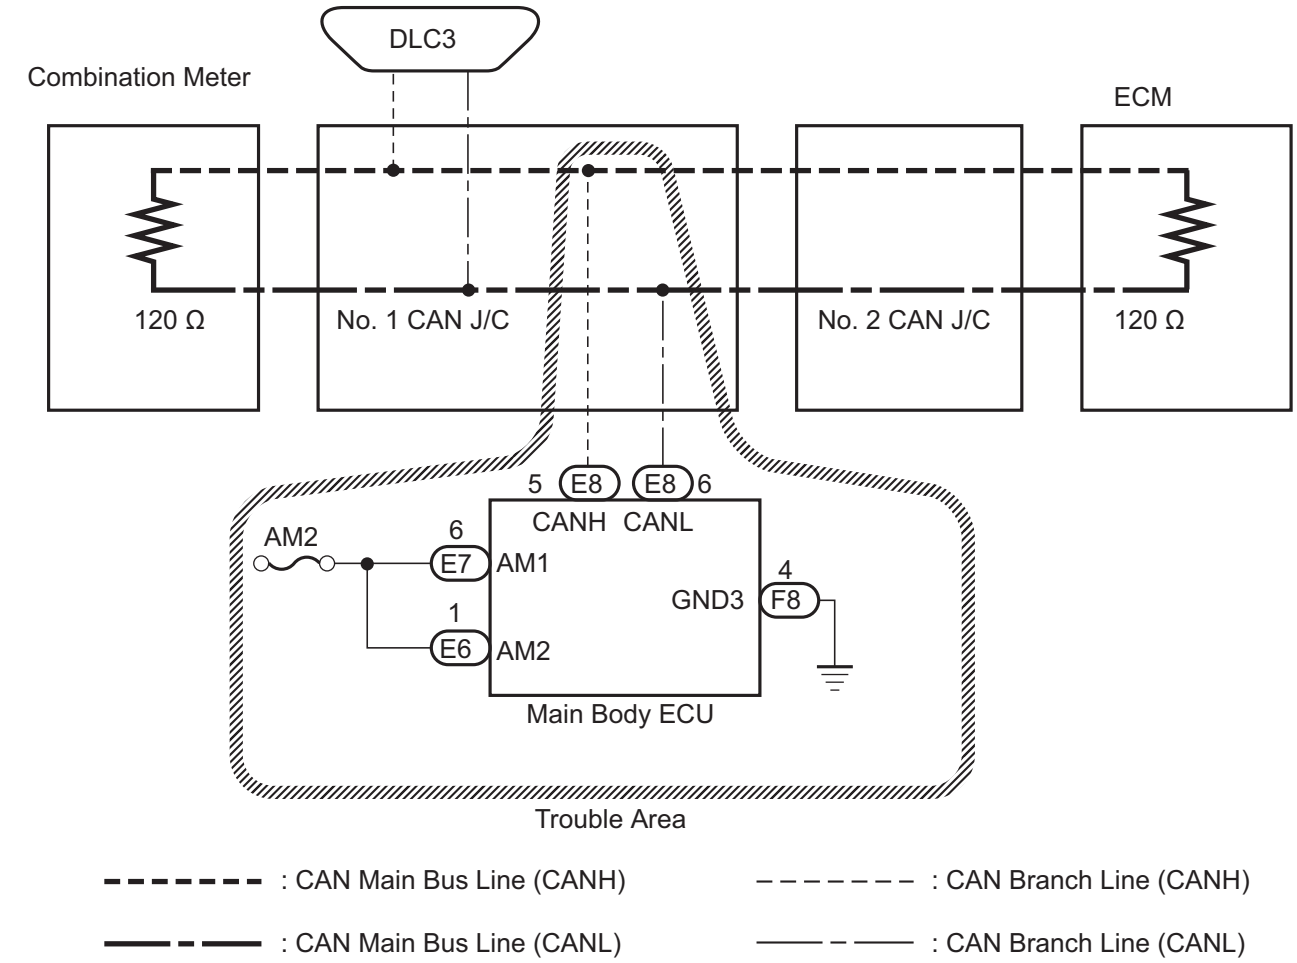
DESCRIPTION

Detection Item	Symptom	Trouble Area
Main Body ECU Communication Stop Mode	• "Integrated J/B" not displayed on "Communication Bus Check" screen of the intelligent tester • Applies to "Main Body ECU Communication Stop Mode" in "DTC combination table"	• Power source circuit of the main body ECU • Main body ECU branch wire or connector • Main body ECU

WIRING DIAGRAM



with Smart Key System:



C

C133291E01

INSPECTION PROCEDURE

NOTICE:

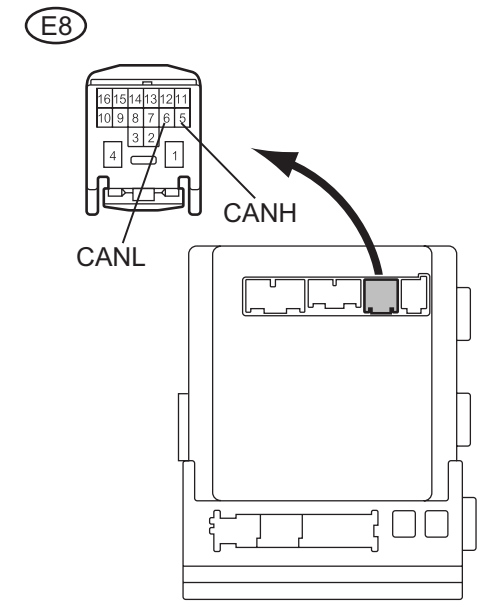
- **Turn the ignition switch off before measuring the resistance of the CAN main wire and CAN branch wires.**
- **After the ignition switch is turned off, check that the key reminder warning system and light reminder warning system are not operating.**
- **Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:

Operating the ignition switch, any other switches or any triggers related ECU and sensor communication on the CAN, which would cause resistance reading variations.

1 CHECK CAN BUS LINE FOR DISCONNECTION (MAIN BODY ECU BRANCH WIRE)

Main Body ECU Connector (Front View):



(a) Turn the ignition switch off.
(b) Disconnect the main body ecu connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

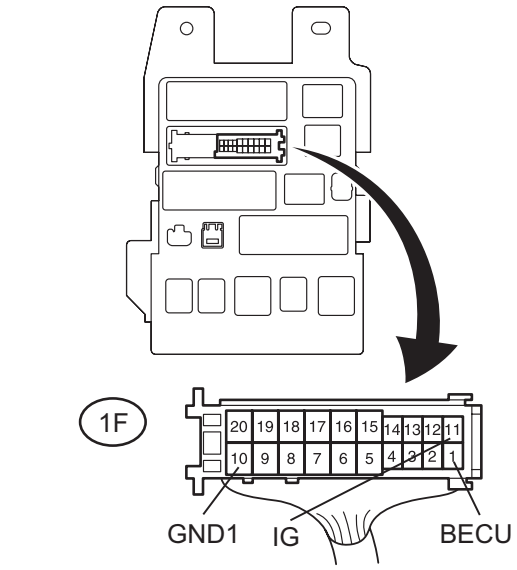
Tester Connection	Condition	Specified Condition
E8-5 (CANH) - E8-6 (CANL)	Ignition switch off	54 to 69 Ω

NG → **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO MAIN BODY ECU (CAN-H, CAN-L)**

OK

2 CHECK HARNESS AND CONNECTOR (BECU, IG, GND1)

Wire Harness Side:



(a) without Smart Key System
  (1) Disconnect the 1F J/B connector.
  (2) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
1F-10 (GND1) - Body ground	Always	Below 1 Ω

  (3) Measure the voltage according to the value(s) in the table below.

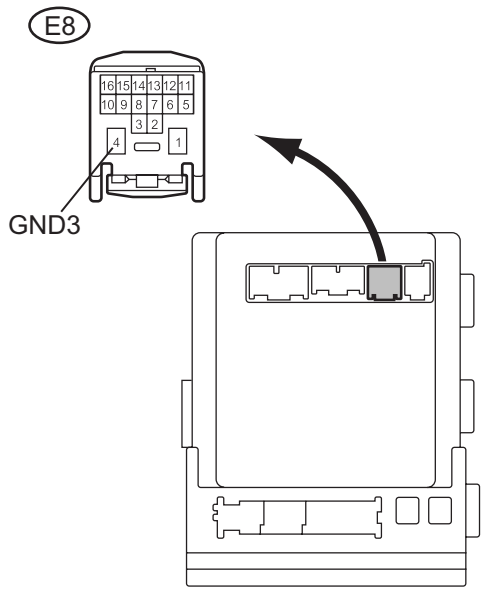
Standard voltage

Tester Connection	Condition	Specified Condition
1F-1 (BECU)* - Body ground	Always	10 to 14 V
1F-11 (IG) - Body ground	Ignition switch on (IG)	10 to 14 V

*: TMC Made only

  (4) Reconnect the J/B connector.

Main Body ECU Connector (Front View):



(b) with Smart Key System

(1) Disconnect the E8 main body ECU connector.

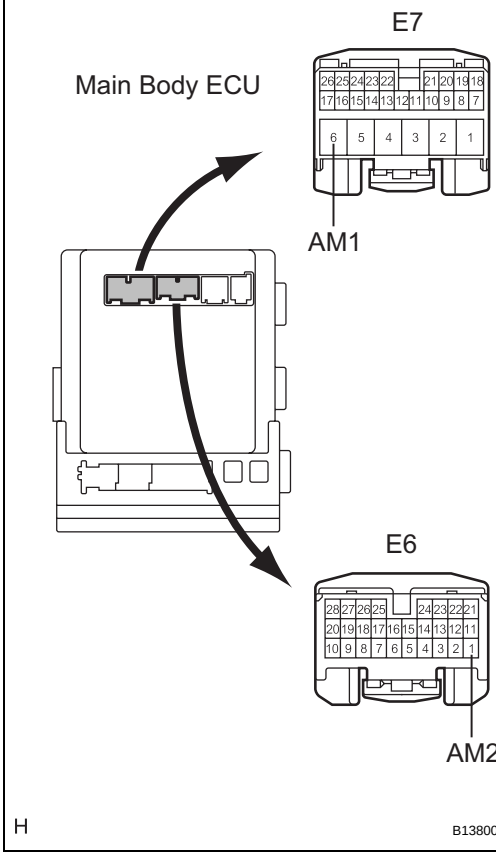
(2) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E8-4 (GND3) - Body ground	Always	Below 1 Ω

CA

Wire Harness Side:



(3) Disconnect the E6 and E7 main body ECU connectors.

(4) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E7-6 (AM1) - Body ground	Always	10 to 14 V
E6-1 (AM2) - Body ground	Always	10 to 14 V

*: TMC Made only

(5) Reconnect the main body ECU connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

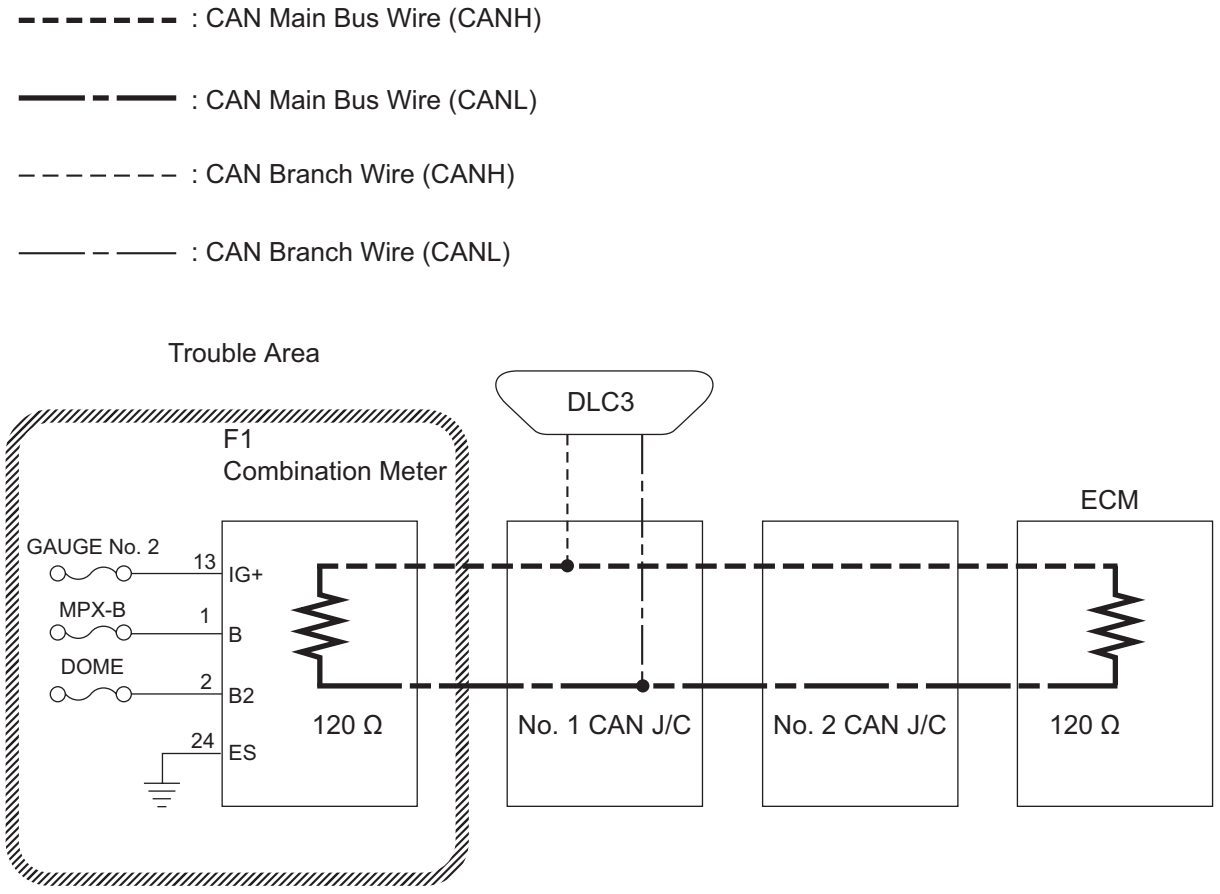
REPLACE MAIN BODY ECU

Combination Meter ECU Communication Stop Mode

DESCRIPTION

Detection Item	Symptom	Trouble Area
Combination Meter ECU Communication Stop Mode	• "Combination Meter" not displayed on "Communication Bus Check" screen of intelligent tester • Applies to "Combination Meter ECU Communication Stop Mode" in "DTC combination table"	• Power source circuit of the combination meter • Combination meter main bus wire or connector • Combination meter

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

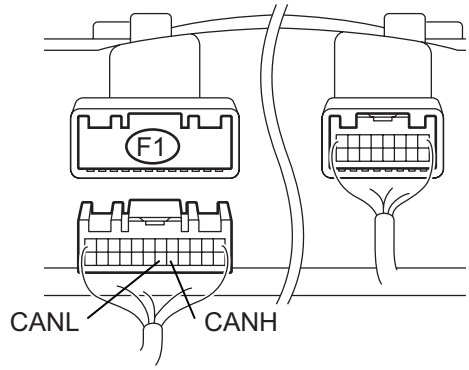
- **Turn the ignition switch off before measuring the resistance of the CAN main wire and CAN branch wires.**
- **After the ignition switch is turned off, check that the key reminder warning system and light reminder warning system are not operating.**

- **Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:
Operating the ignition switch, any other switches or any triggers related ECU and sensor communication on the CAN, which would cause resistance reading variations.

1 CHECK CAN BUS LINE FOR DISCONNECTION (COMBINATION METER MAIN BUS WIRE)

Combination Meter Connector (Wire Harness Side View):



(a) Turn the ignition switch off.
(b) Disconnect the combination meter connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

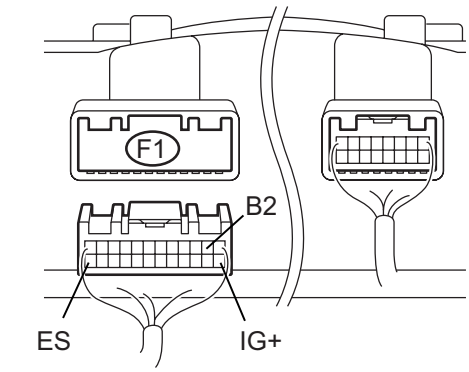
Tester Connection	Condition	Specified Condition
F1-17 (CANH) - F1-18 (CANL)	Ignition switch off	108 to 132 Ω

NG → **REPAIR OR REPLACE CAN BUS MAIN WIRE OR CONNECTOR (COMBINATION METER MAIN BUS LINE)**

OK

2 CHECK HARNESS AND CONNECTOR (ES, IG+, B2)

Combination Meter Connector (Wire Harness Side View):



(a) Disconnect the combination meter connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
F1-24 (ES) - Body ground	Always	Below 1 Ω

(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
F1-13 (IG+) - Body ground	Ignition switch on (IG)	10 to 14 V
F1-2 (B2) - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE COMBINATION METER ECU

CA

Center Airbag Sensor Communication Stop Mode

DESCRIPTION

Detection Item	Symptom	Trouble Area
Center Airbag Sensor Communication Stop Mode	• "SRS Airbag" is not displayed on the "Communication Bus Check" screen of the intelligent tester • Applies to "Center Airbag Sensor Communication Stop Mode" in the "DTC COMBINATION TABLE"	• Power source circuit of the center airbag sensor • Center airbag sensor branch wire or connector • Center airbag sensor

INSPECTION PROCEDURE

NOTICE:

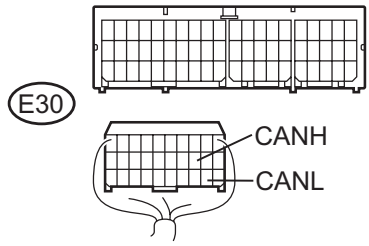
- **Turn the ignition switch off before measuring the resistance of the CAN main wire and CAN branch wires.**
- **After the ignition switch is turned off, check that the key reminder warning system and light reminder warning system are not operating.**

- **Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:
Operating the ignition switch, any other switches or any triggers related ECU and sensor communication on the CAN, which would cause resistance reading variations.

1 CHECK OPEN IN CAN BUS WIRE (CENTER AIRBAG SENSOR BRANCH LINE)

Center Airbag Sensor Wire Harness View:



(a) Turn the ignition switch off.
(b) Disconnect the center airbag sensor connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

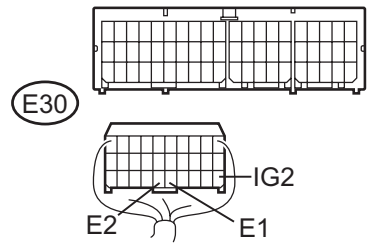
Tester Connection	Condition	Specified Value
E30-13 (CANH) - E30-22 (CANL)	Ignition switch off	54 to 69 Ω

NG → **REPAIR OR REPLACE CENTER AIRBAG SENSOR BRANCH WIRE OR CONNECTOR**

OK

2 CHECK WIRE HARNESS (IG2, E1, E2)

Center Airbag Sensor Wire Harness View:



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
E30-25 (E1) - Body ground	Always	Below 1 Ω
E30-26 (E2) - Body ground	Always	Below 1 Ω

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Value
E30-21 (IG2) - Body ground	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE CENTER AIRBAG SENSOR

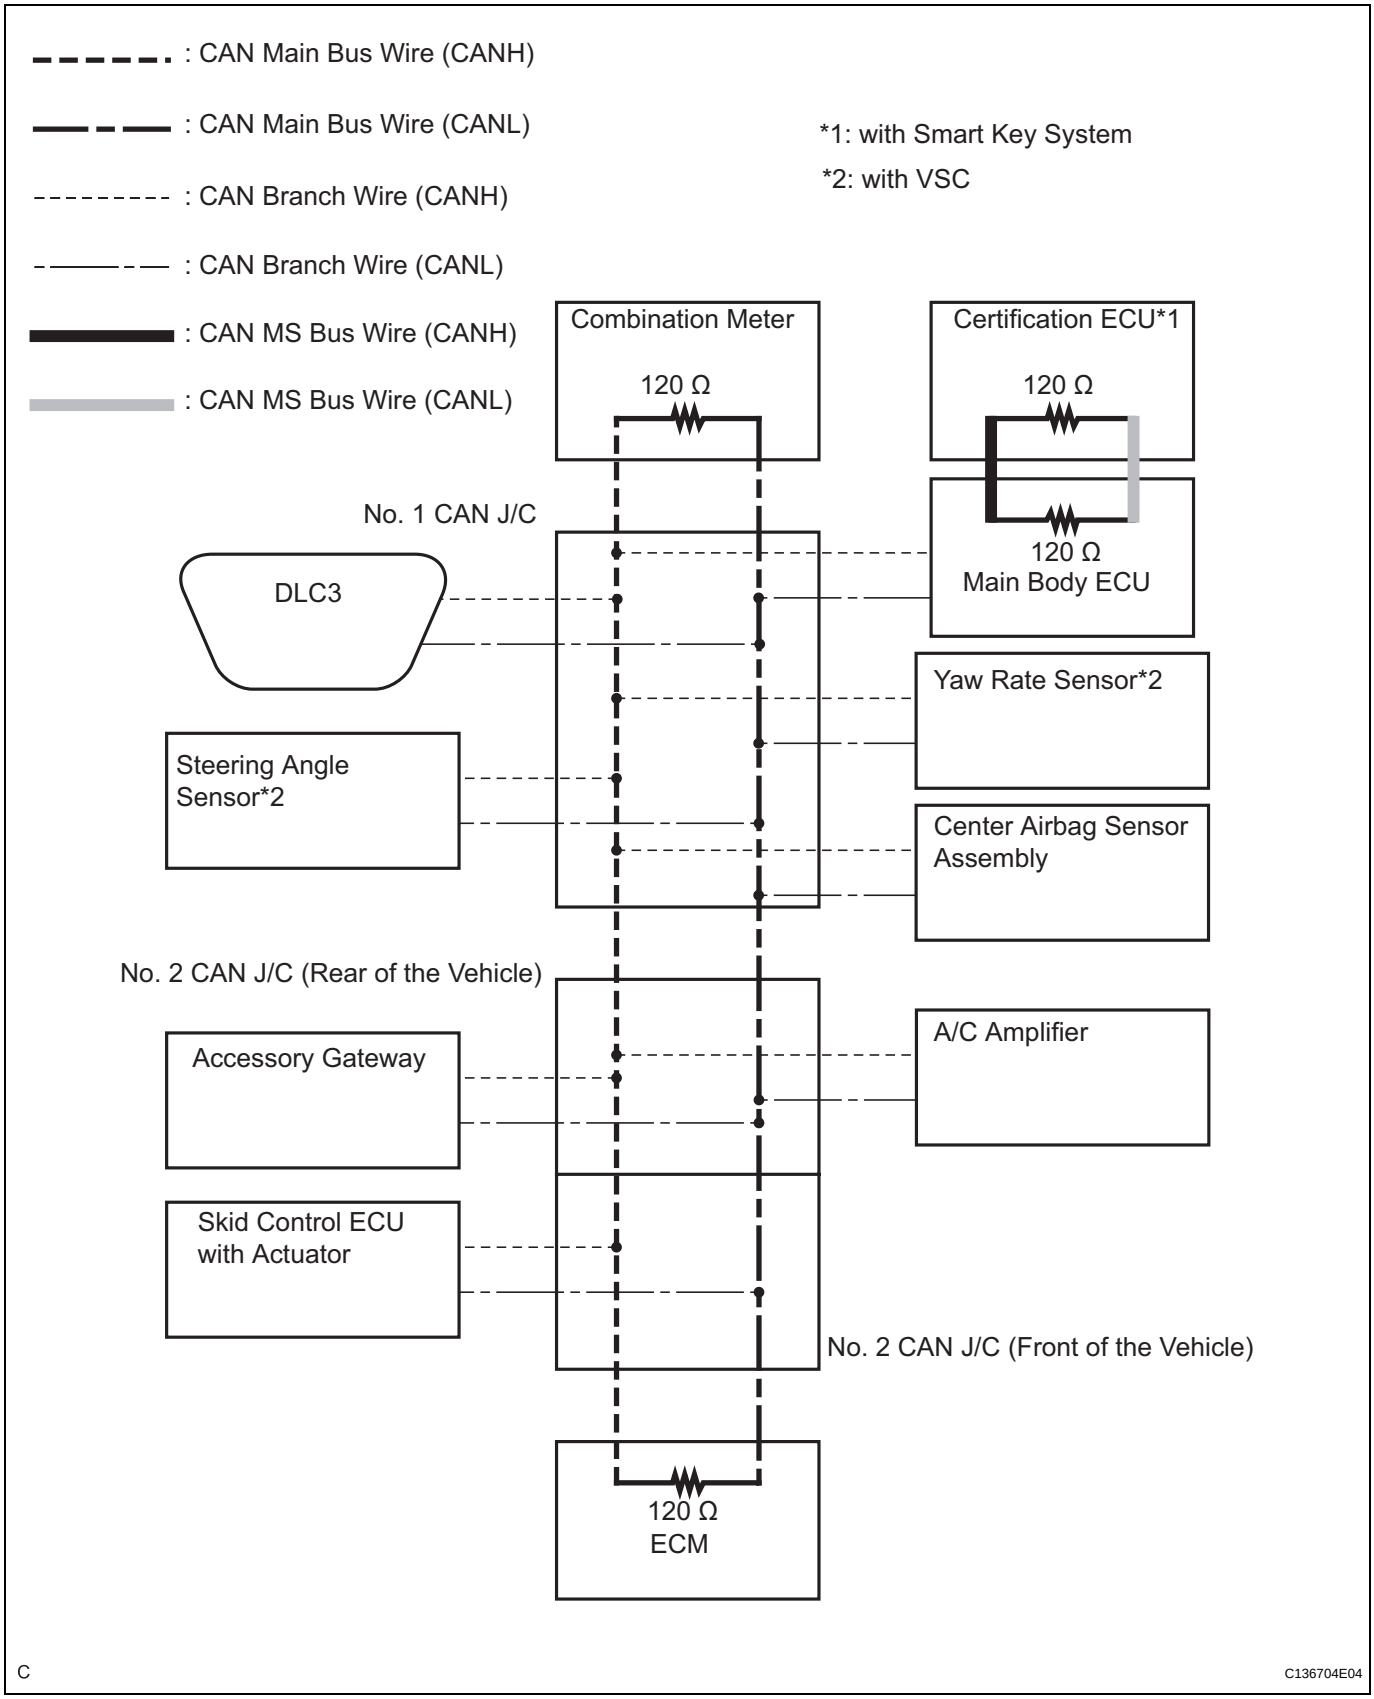
CA

CAN Bus Line

DESCRIPTION

When any DTC of the CAN communication system is output, first measure the resistance between the terminals of the DLC3 to confirm the trouble area.

WIRING DIAGRAM



CA

INSPECTION PROCEDURE

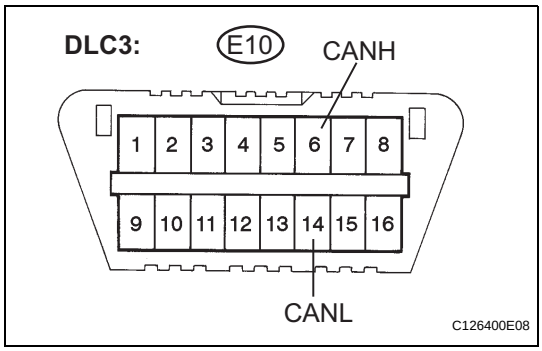
NOTICE:

- **Turn the ignition switch off before measuring the resistance of the CAN main wire and CAN branch wires.**
- **After the ignition switch is turned off, check that the key reminder warning system and light reminder warning system are not operating.**
- **Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:

Operating the ignition switch, any other switches or any triggers related ECU and sensor communication on the CAN, which would cause resistance reading variations.

1 CHECK CAN BUS WIRE (MAIN BUS WIRE FOR DISCONNECTION, BUS WIRES FOR SHORT CIRCUIT)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value	Result
E10-6 (CANH) - E10-14 (CANL)	Ignition switch off	54 to 69 Ω	OK

Result

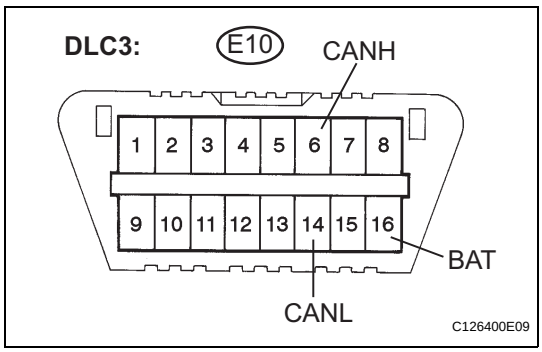
Result	Proceed to
OK	A
69 Ω or higher	B
Below 54 Ω	C

B → **OPEN IN CAN BUS MAIN WIRE (See page CA-69)**

C → **SHORT IN CAN BUS WIRES (See page CA-74)**

A

2 CHECK CAN BUS WIRE (SHORT TO B+ IN CAN BUS WIRE)



(a) Measure the resistance according to the value(s) in the table below.

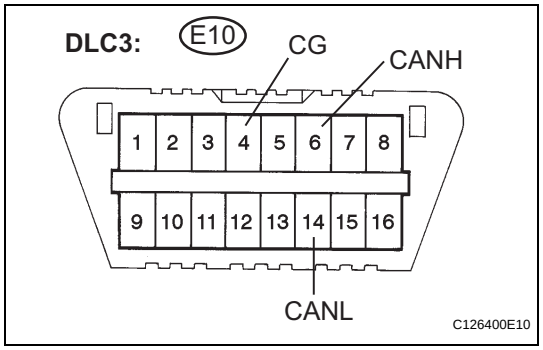
Standard resistance

Tester Connection	Condition	Specified Value
E10-6 (CANH) - E10-16 (BAT)	Ignition switch off	6 kΩ or higher
E10-14 (CANL) - E10-16 (BAT)	Ignition switch off	6 kΩ or higher

NG → **SHORT TO B+ IN CAN BUS WIRE (See page CA-89)**

OK

3	CHECK CAN BUS WIRE (SHORT TO GND IN CAN BUS WIRE)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
E10-4 (CG) - E10-6 (CANH)	Ignition switch off	200 Ω or higher
E10-4 (CG) - E10-14 (CANL)	Ignition switch off	200 Ω or higher

NG → **SHORT TO GND IN CAN BUS WIRE (See page CA-104)**

CA

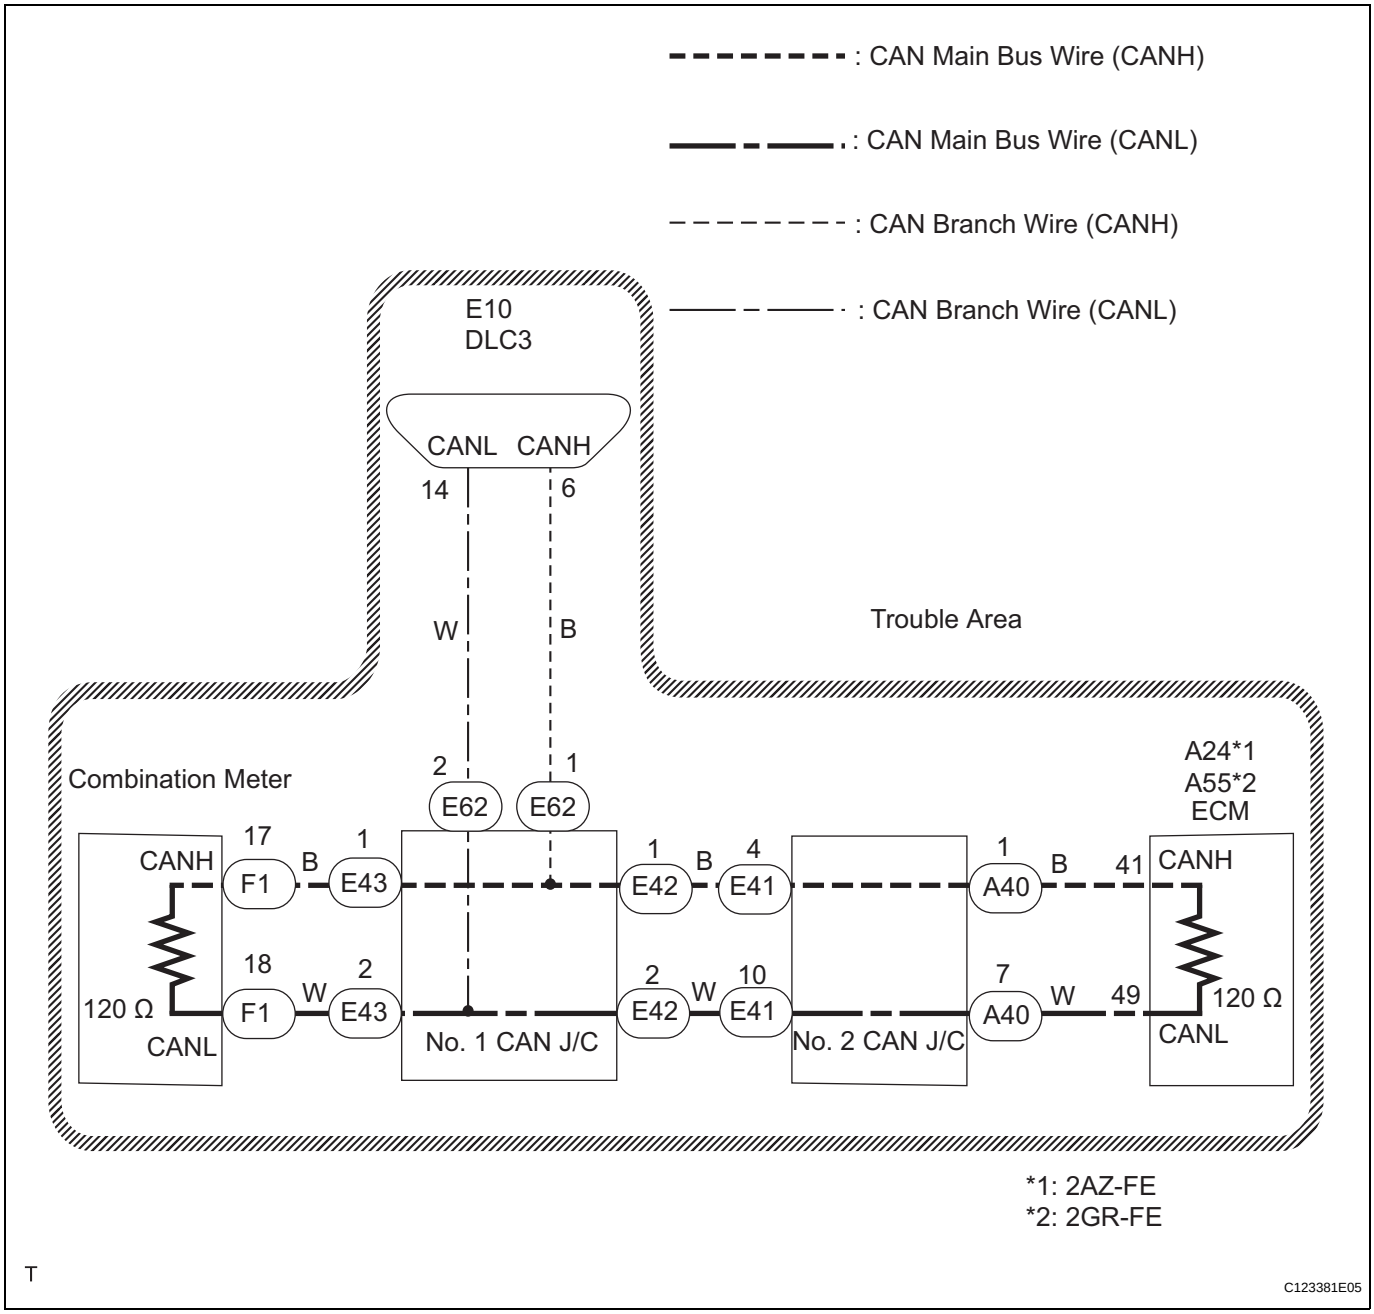
Open in CAN Main Bus Line

DESCRIPTION

There may be an open circuit in the CAN main bus wire and/or the DLC3 branch wire when the resistance between terminals 6 (CANH) and 14 (CANL) of the DLC3 is 69 Ω or more.

Symptom	Trouble Area
Resistance between terminals 6 (CANH) and 14 (CANL) of the DLC3 is 69 Ω or more.	• CAN main bus wire or connector • No. 1 CAN J/C • No. 2 CAN J/C • DLC3 branch wire or connector • Combination meter • ECM

WIRING DIAGRAM



INSPECTION PROCEDURE

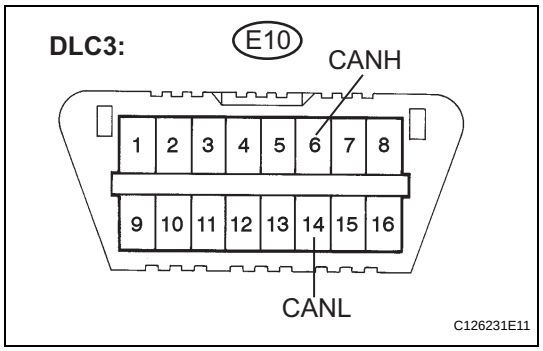
NOTICE:

- **Turn the ignition switch off before measuring the resistance of the CAN main wire and CAN branch wires.**
- **After the ignition switch is turned off, check that the key reminder warning system and light reminder warning system are not operating.**
- **Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:

Operating the ignition switch, any other switches or any triggers related ECU and sensor communication on the CAN, which would cause resistance reading variations.

1	CHECK DLC3



(a) Turn the ignition switch off.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value	Result
E10-6 (CANH) - E101-14 (CANL)	Ignition switch off	108 to 132 Ω	A
E10-6 (CANH) - E10-14 (CANL)	Ignition switch off	132 Ω or higher	B

NOTICE:

When the measured value is 132 Ω or more and a CAN communication system diagnostic trouble code is output, there may be a fault besides disconnection of the DLC3 branch wire. For that reason, troubleshooting should be performed again from "HOW TO PROCEED WITH TROUBLESHOOTING" (See page CA-8) after repairing the trouble area.

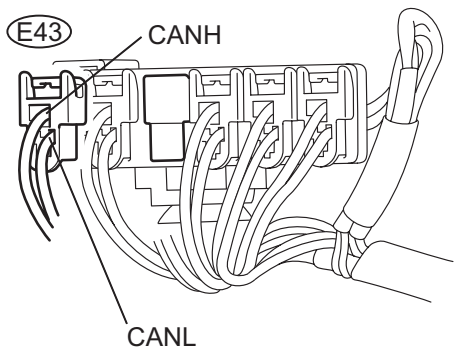
B → **REPAIR OR REPLACE DLC3 BRANCH WIRE OR CONNECTOR (CANH, CANL)**

A

CA

2	CHECK FOR OPEN IN CAN BUS MAIN WIRE (COMBINATION METER MAIN BUS LINE)

No. 1 CAN "B" J/C Side (without Earth Terminal) Wire Harness Side



N C133231E01

(a) Disconnect the CAN main bus wire white connector (E43) from the No. 1 CAN J/C "B" side (without earth terminal).
NOTICE:
- **Before disconnecting the connector, make a note of where it is connected.**
- **Reconnect the connector to its original position.**

(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Value
E43-1 (CANH) - E43-2 (CANL)	Ignition switch off	108 to 132 Ω

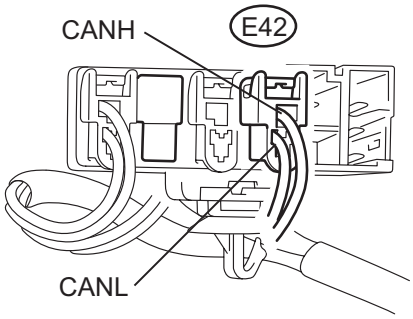
NG → **Go to step 7**

CA

OK

3	CHECK FOR OPEN IN CAN BUS MAIN WIRE (NO. 1 CAN J/C)

No. 1 CAN J/C "A" Side (with Earth Terminal) :



N C133228E02

(a) Reconnect the CAN main bus wire connector (E43) to the No. 1 CAN J/C "B" side (without earth terminal).
(b) Disconnect the CAN main bus wire white connector (E42) from the No. 1 CAN J/C "A" side (with earth terminal).
NOTICE:
- **Before disconnecting the connector, make a note of where it is connected.**
- **Reconnect the connector to its original position.**

(c) Measure the resistance according to the value(s) in the table below.
Standard resistance

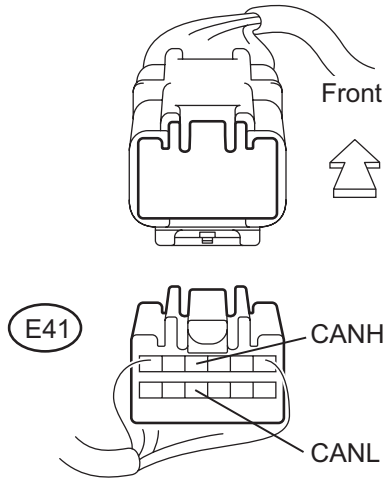
Tester Connection	Condition	Specified Value
E41-1 (CANH) - E41-2 (CANL)	Ignition switch off	108 to 132 Ω

OK → **REPLACE NO. 1 CAN J/C**

NG

4 CHECK FOR OPEN IN CAN BUS MAIN WIRE (NO. 1 CAN J/C - NO. 2 CAN J/C)

No. 2 CAN J/C Connector (Rear of the Vehicle) Wire Harness Side View:



C133246E01

(a) Reconnect the CAN main bus wire connector (E42) to the No. 1 CAN J/C "A" side (with earth terminal).
(b) Disconnect the CAN main bus wire connector (E41) from the No. 2 CAN J/C (rear of the vehicle).
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

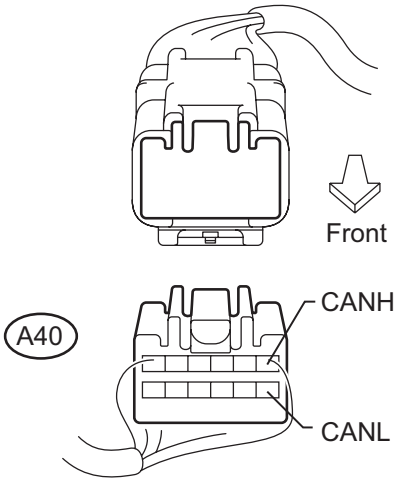
Tester Connection	Condition	Specified Value
E42-4 (CANH) - E42-10 (CANL)	Ignition switch off	108 to 132 Ω

NG → **REPAIR OR REPLACE CAN BUS MAIN WIRE OR CONNECTOR (NO. 1 CAN J/C - NO. 2 CAN J/C)**

OK

5 CHECK FOR OPEN IN CAN BUS MAIN WIRE (NO. 2 CAN J/C)

No. 2 CAN J/C Connector (Front of the Vehicle) Wire Harness Side View:



C133245E04

(a) Reconnect the CAN main bus wire connector (E41) to the No. 2 CAN J/C (rear of the vehicle).
(b) Disconnect the CAN main bus wire connector (A40) from the No. 2 CAN J/C (front of the vehicle).
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

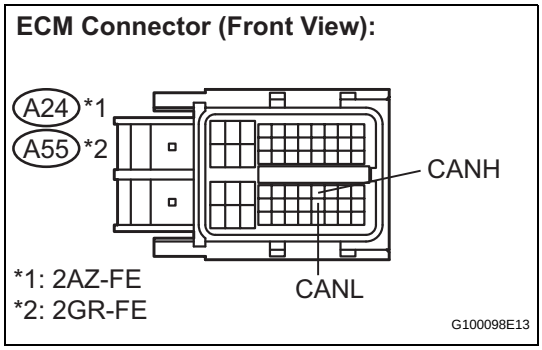
Tester Connection	Condition	Specified Value
A40-1 (CANH) - A40-7 (CANL)	Ignition switch off	108 to 132 Ω

OK → **REPLACE NO. 2 CAN J/C**

NG

CA

6	CHECK FOR OPEN IN CAN BUS MAIN WIRE (ECM CAN MAIN BUS WIRE)



(a) Reconnect the CAN main bus wire connector (A40) to the No. 2 CAN J/C (front of the vehicle).
(b) Disconnect the ECM connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance:

2AZ-FE

Tester Connection	Condition	Specified Value
A24-38 (CANH) - A24-46 (CANL)	Ignition switch off	108 to 132 Ω

2GR-FE

Tester Connection	Condition	Specified Value
A55-38 (CANH) - A55-46 (CANL)	Ignition switch off	108 to 132 Ω

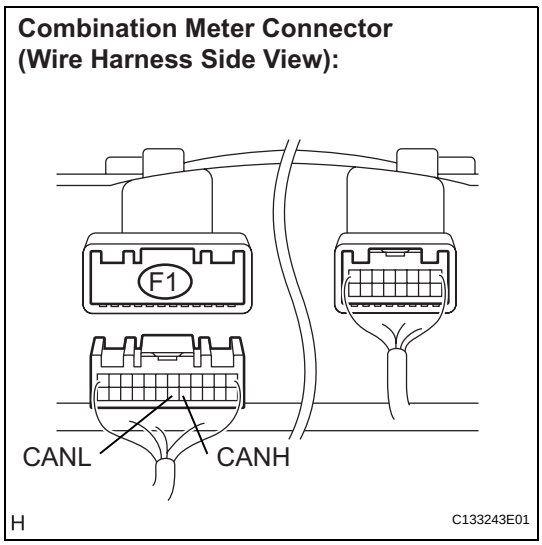
CA

OK → REPLACE ECM

NG

REPAIR OR REPLACE CAN BUS MAIN WIRE OR CONNECTOR (NO. 2 CAN J/C - ECM)

7	CHECK FOR OPEN IN CAN BUS MAIN WIRE (COMBINATION METER - NO. 1 CAN J/C)



(a) Reconnect the CAN main bus wire connector (E43) to the No. 1 CAN J/C "B" side (without earth terminal).
(b) Disconnect the combination meter connector (F1).
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
F1-17 (CANH) - F1-18 (CANL)	Ignition switch off	108 to 132 Ω

OK → REPLACE COMBINATION METER

NG

REPAIR OR REPLACE CAN BUS MAIN WIRE OR CONNECTOR (NO. 1 CAN J/C - COMBINATION METER)

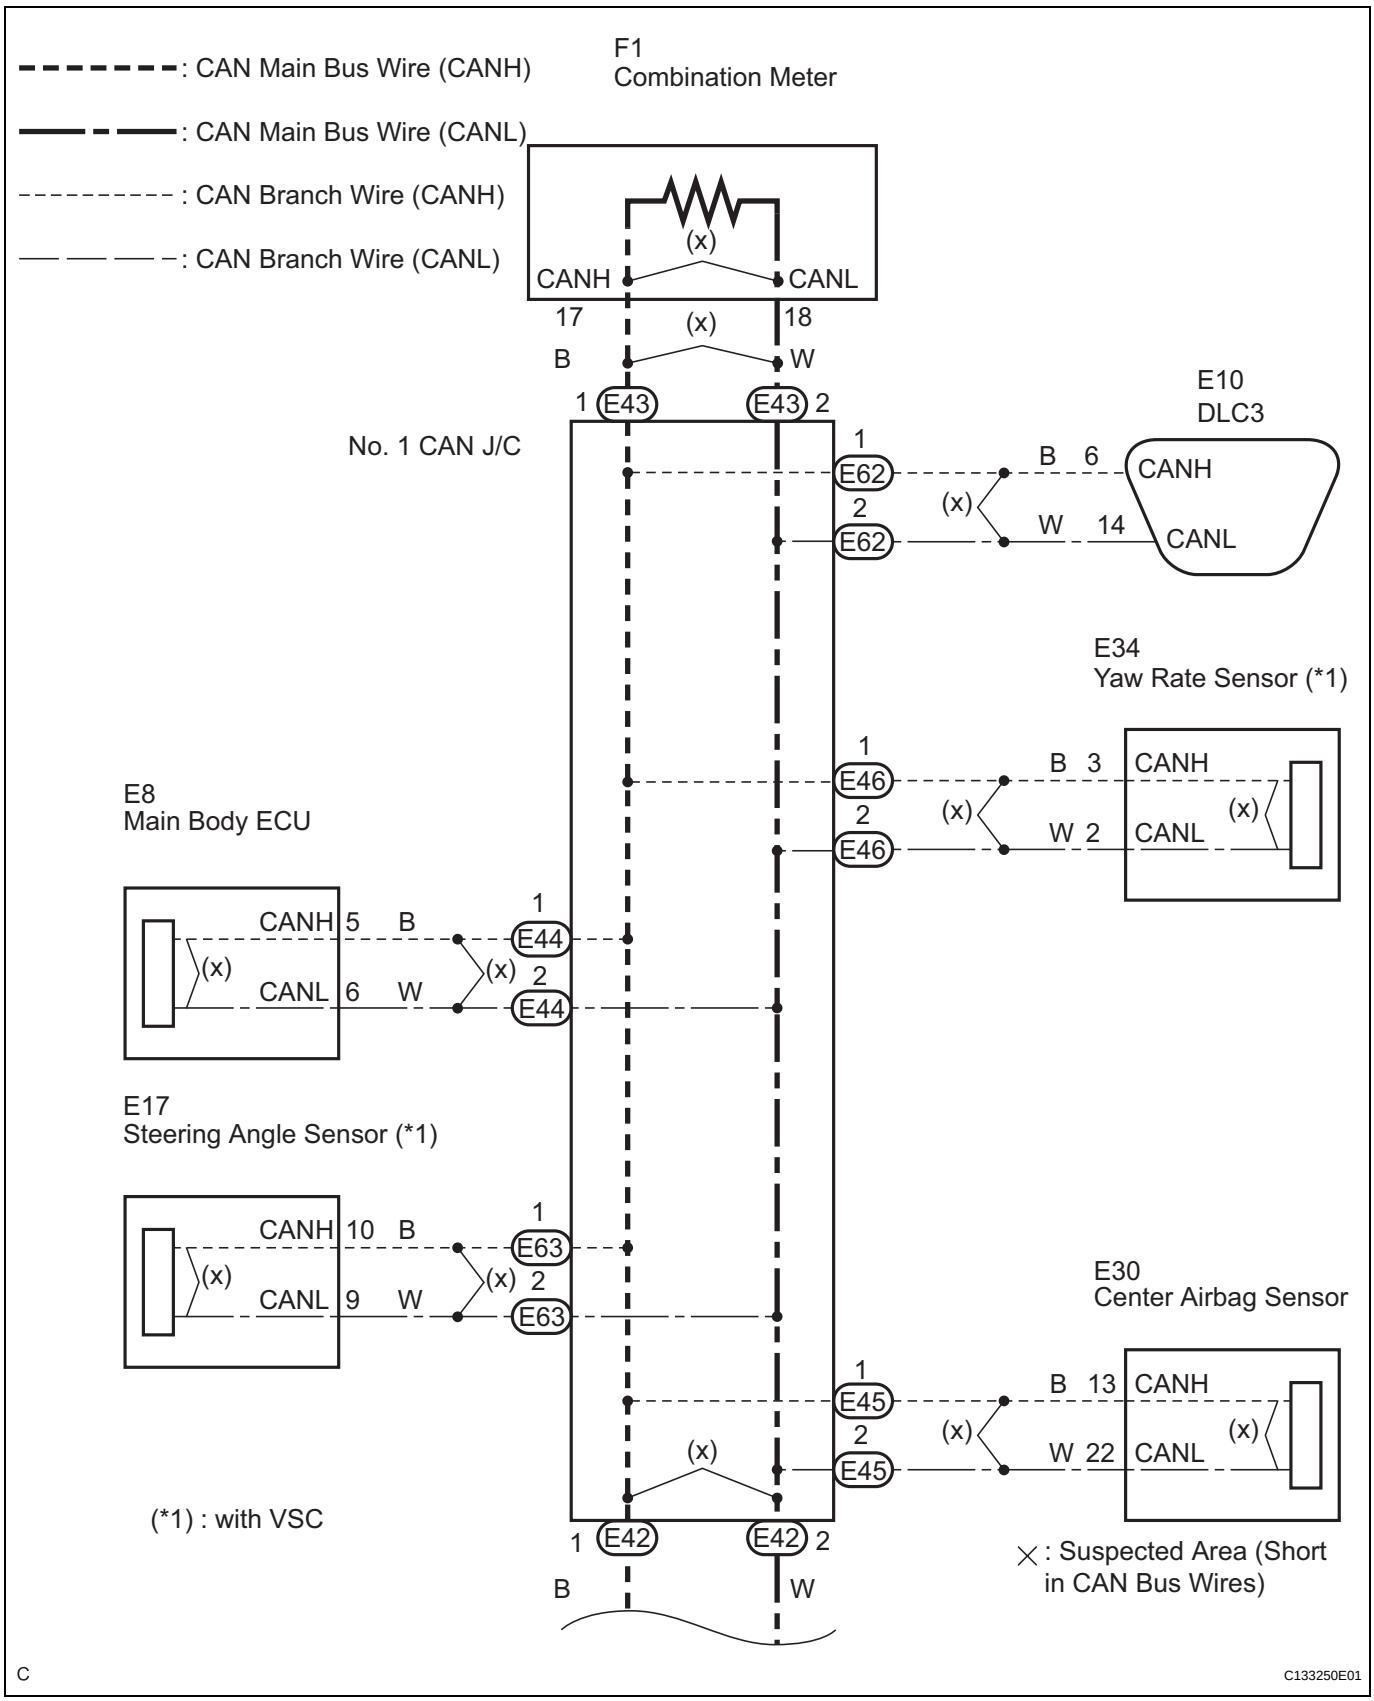
Short in CAN Bus Lines

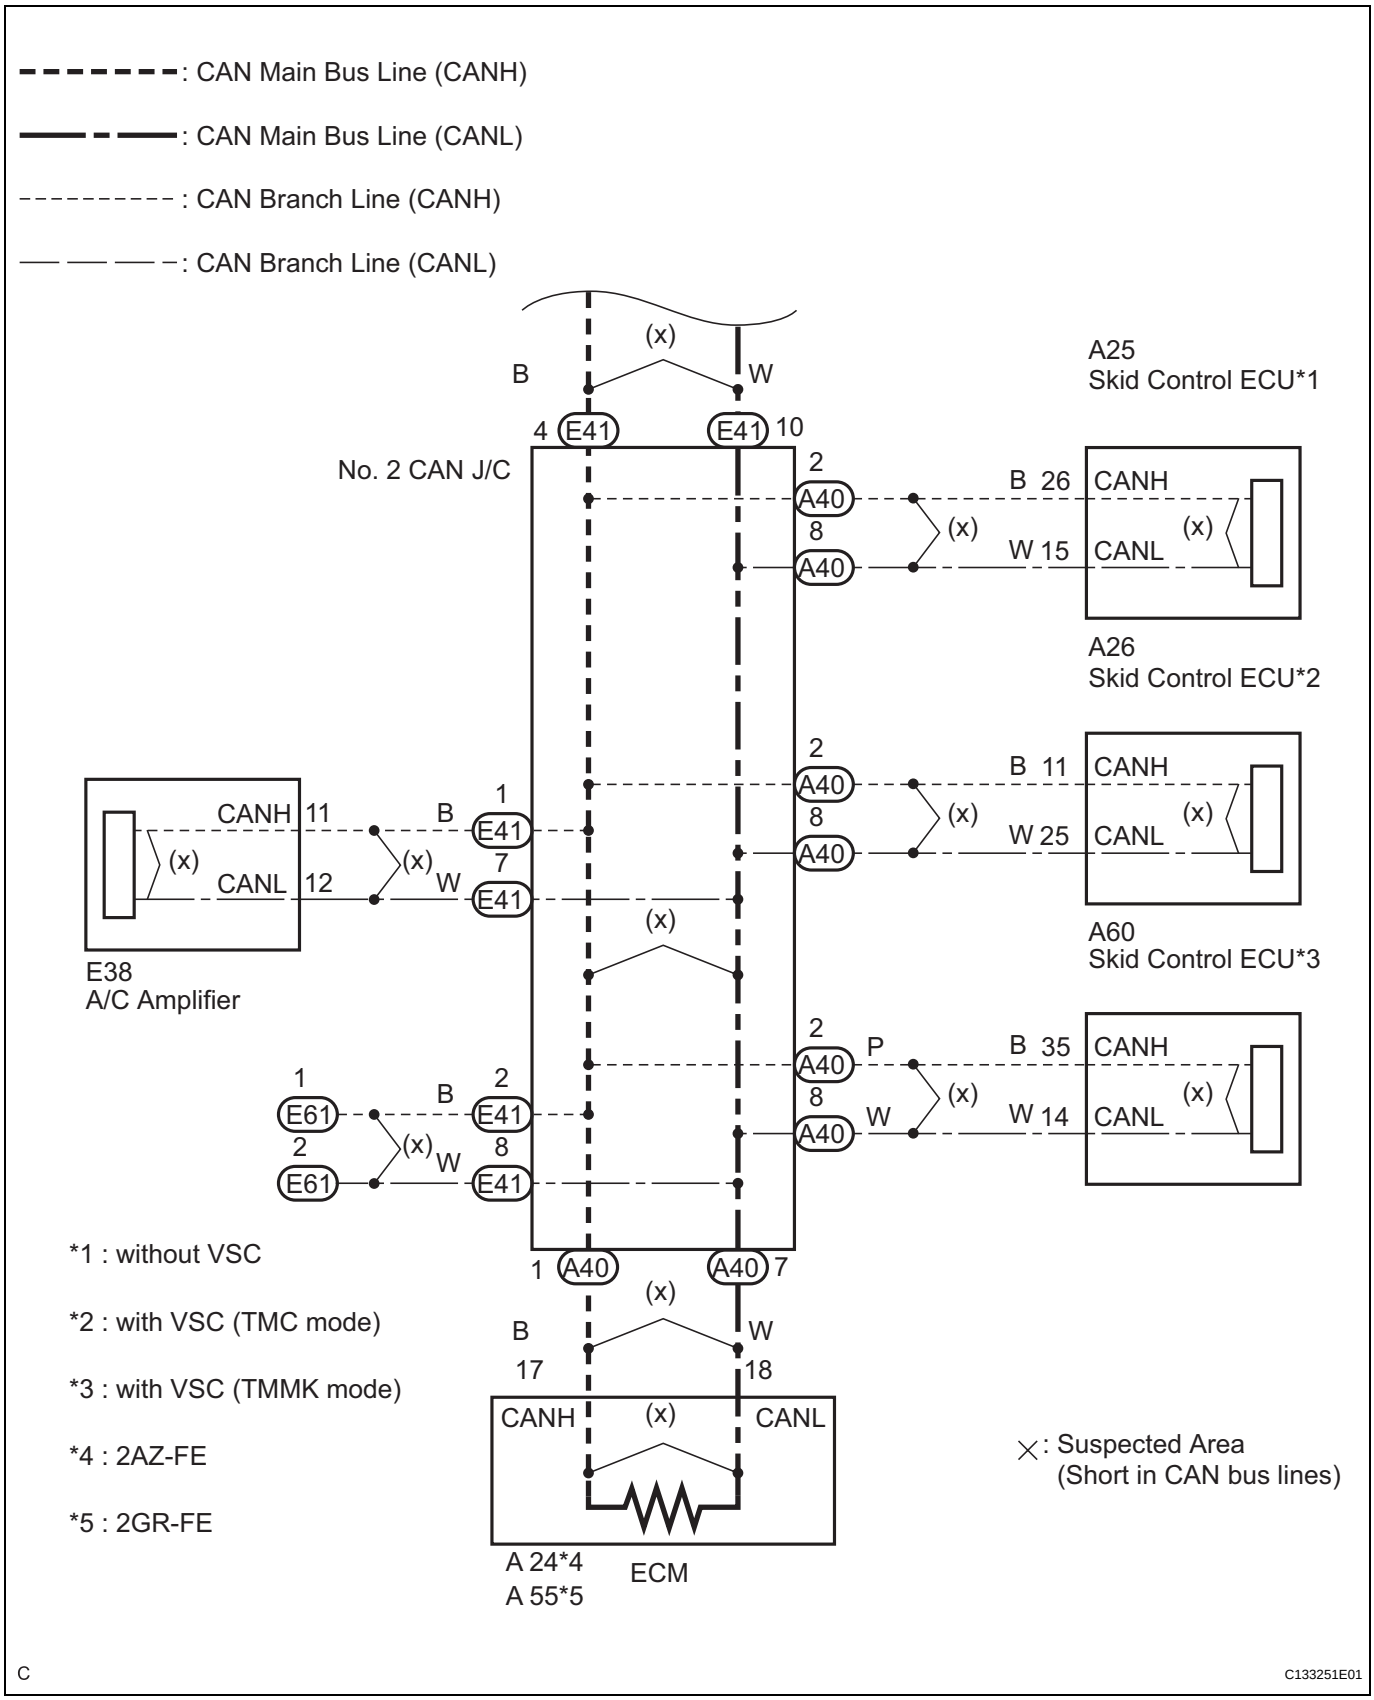
DESCRIPTION

The CAN bus wires are considered to be shorted when the resistance between terminals 6 (CANH) and 14 (CANL) of the DLC3 is below 54 Ω.

Symptom	Trouble Area
Resistance between terminals 6 (CANH) and 14 (CANL) of the DLC3 is below 54 Ω.	• Short in CAN bus wires • Brake actuator assembly (Skid control ECU) • Steering angle sensor • Yaw rate sensor • ECM • Combination meter • Main body ECU • A/C amplifier • Center airbag sensor • No. 1 CAN J/C • No. 2 CAN J/C

WIRING DIAGRAM





INSPECTION PROCEDURE

NOTICE:

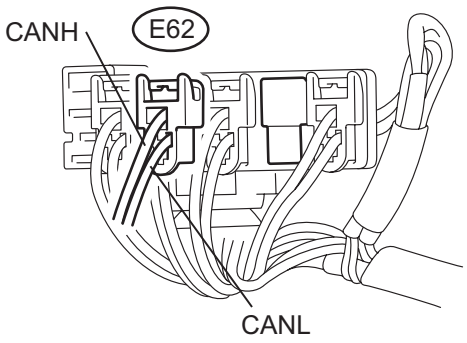
- **Turn the ignition switch off before measuring the resistance of the CAN main wire and CAN branch wires.**

- **After the ignition switch is turned off, check that the key reminder warning system and light reminder warning system are not operating.**
- **Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:
Operating the ignition switch, any other switches or any triggers related ECU and sensor communication on the CAN, which would cause resistance reading variations.

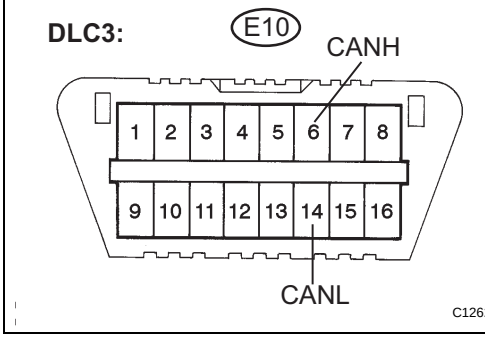
1	CHECK FOR SHORT IN CAN BUS WIRES (DLC3 BRANCH WIRE)

No. 1 CAN J/C "B" Side (without Earth Terminal) Wire Harness Side:



(a) Turn the ignition switch off.
(b) Disconnect the DLC3 branch wire gray connector (E62) from the No. 1 CAN J/C "B" side (without earth terminal).
NOTICE:
- **Before disconnecting the connector, make a note of where it is connected.**
- **Reconnect the connector to its original position.**

DLC3:



(c) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Value
E10-6 (CANH) - E10-14 (CANL)	Ignition switch off	1 MΩ or higher

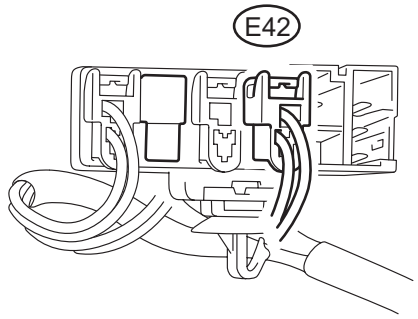
(d) Reconnect the DLC3 branch wire connector (E62) to the No. 1 CAN J/C "B" side (without earth terminal).

NG → **REPAIR OR REPLACE DLC3 BRANCH WIRE OR CONNECTOR**

OK

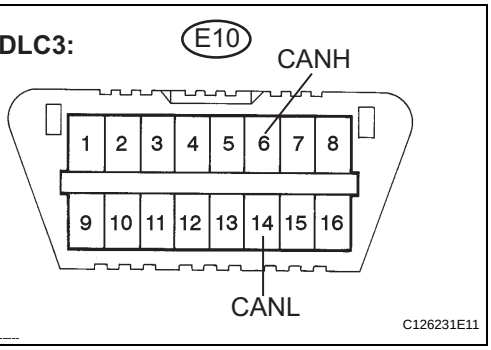
2 CHECK FOR SHORT IN CAN BUS WIRES (NO. 1 CAN J/C SIDE)

No. 1 CAN J/C "A" Side (with Earth Terminal):



N C133228E01

(a) Disconnect the CAN main bus wire white connector (E42) from the No. 1 CAN J/C "A" side (with earth terminal).



C126231E11

(b) Connect the probes of an ohmmeter to terminals 6 (CANH) and 14 (CANL) of the DLC3.
(c) Measure the resistance according to the value(s) in the table below.

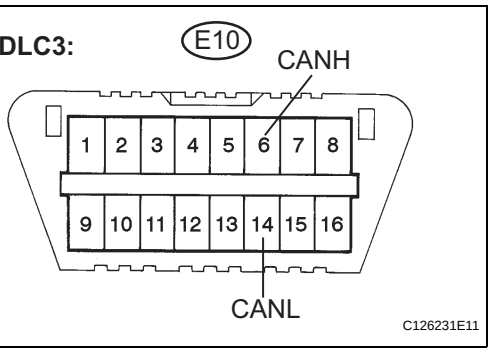
Standard resistance

Tester Connection	Condition	Specified Value
E10-6 (CANH) - E10-14 (CANL)	Ignition switch off	108 to 132 Ω

OK → **Go to step 7**

NG

3 CHECK FOR SHORT IN CAN BUS WIRES (NO. 1 CAN J/C BRANCH WIRE)



C126231E11

(a) Reconnect the CAN main bus wire connector (E42) to the No. 1 CAN J/C "A" side (with earth terminal).
(b) Connect the probes of an ohmmeter to terminals 6 (CANH) and 14 (CANL) of the DLC3.
(c) While observing the resistance value shown on the tester, disconnect connectors E44, E45, E46 and E63 from the No. 1 CAN J/C one by one until the resistance becomes normal (between 54 and 69 Ω).
HINT:
Disconnect the branch wire connectors other than those of the DLC3.

Main Body ECU (E44)	Black	B	W

*: with VSC

NOTICE:

Do not reconnect the disconnected connectors until this inspection is complete because there may be a short in 2 or more branch wires.

Result

Symptom	Proceed to
The resistance is still below 54 Ω when all the specified connectors are disconnected. (There are no shorts in the branch wires.)	**A**
The resistance becomes normal (between 54 and 69 Ω) when a connector is disconnected. (There is a short in one or more of the branch wires.)	**B**

(d) When there is a short in one or more of the branch wires:

(1) Reconnect all of the connectors to the No. 1 CAN J/C, except for the one that was disconnected last (the short-circuited bus wire). Check that the resistance shown on the tester is normal (between 54 and 69 Ω) to confirm that there is a short in one branch wire only.

CA

HINT:
- The connectors connected to the No. 1 CAN J/C can be distinguished according to the color of the communication bus wires and the shape of the connectors.
- Reconnecting the connectors to non-specified positions on the No. 1 CAN J/C does not affect system operation. However, it is preferred to reconnect the connectors to their specified positions to avoid negative effects on the wiring such as tension on the wiring harnesses, and to make future maintenance easier.

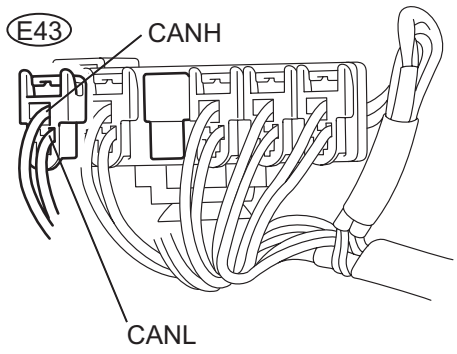
B → **Go to step 15**

A

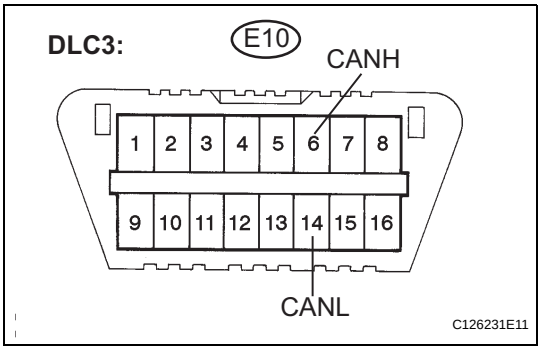
4 CHECK FOR SHORT IN CAN BUS WIRES (COMBINATION METER MAIN BUS WIRE)

CA

No. 1 CAN "B" J/C Side (without Earth Terminal) Wire Harness Side



(a) Disconnect the combination meter main bus wire white connector (E43) from the No. 1 CAN J/C "B" side (without earth terminal).
NOTICE:
- **Before disconnecting the connector, make a note of where it is connected.**
- **Reconnect the connector to its original position.**



(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Value
E10-6 (CANH) - E10-14 (CANL)	Ignition switch off	108 to 132 Ω

NG → **REPLACE NO. 1 CAN J/C**

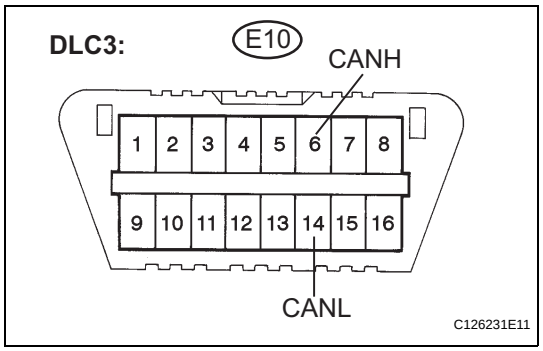
OK

5 RECONNECT CONNECTOR

(a) Reconnect the combination meter main bus wire connector (E43) to the No. 1 CAN J/C "B" side (without earth terminal).

NEXT

6 CHECK FOR SHORT IN CAN BUS WIRES (COMBINATION METER)



(a) Disconnect the combination meter connector (F1).
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
E10-6 (CANH) - E10-14 (CANL)	Ignition switch off	108 to 132 Ω

HINT:
If the resistance changes to 108 to 132 Ω when the connector is disconnected, there may be a short in the Combination meter.

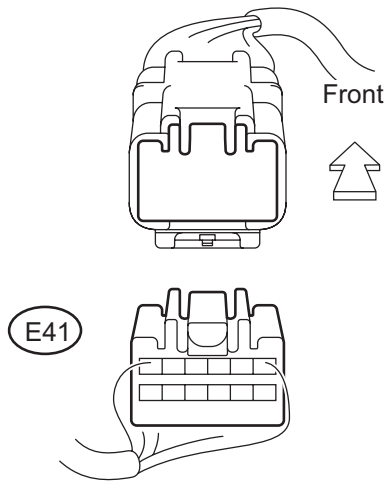
NG → **REPAIR OR REPLACE CAN BUS MAIN WIRE (COMBINATION METER MAIN BUS WIRE)**

OK

REPLACE COMBINATION METER

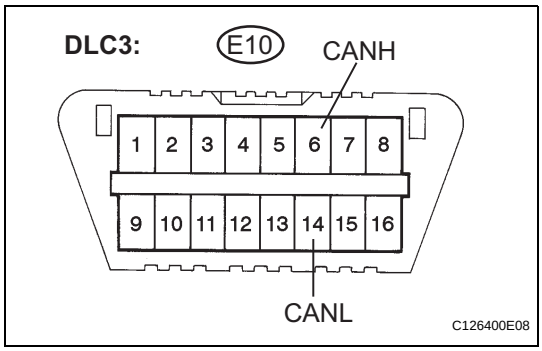
7 CHECK FOR SHORT IN CAN BUS WIRES (NO. 2 CAN - NO. 1 CAN J/C)

No. 2 CAN J/C Connector (Rear of the Vehicle) Wire Harness Side View:



(a) Reconnect the No. 1 CAN J/C connector (E42).
(b) Disconnect the No. 2 CAN J/C connector (E41).

CA



(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

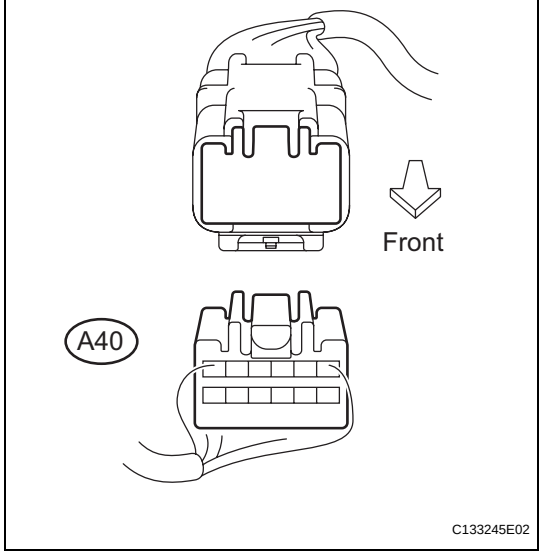
Tester Connection	Condition	Specified Value
E10-6 (CANH) - E10-14 (CANL)	Ignition switch off	108 to 132 Ω

NG → **REPAIR OR REPLACE CAN BUS MAIN WIRE OR CONNECTOR (NO. 1 CAN J/C - NO. 2 CAN J/C)**

OK

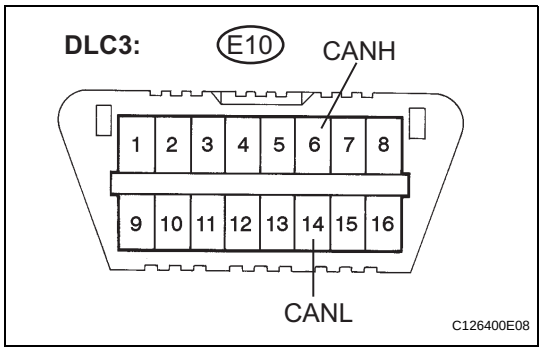
8 CHECK FOR SHORT IN CAN BUS WIRES (NO. 1 CAN J/C - NO. 2 CAN J/C)

No. 2 CAN J/C Connector (Front of the Vehicle) Wire Harness Side View:



(a) Reconnect the No. 2 CAN J/C connector (E41) (rear of the vehicle).

(b) Disconnect the No. 2 CAN J/C connector (A40) (front of the vehicle).



(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

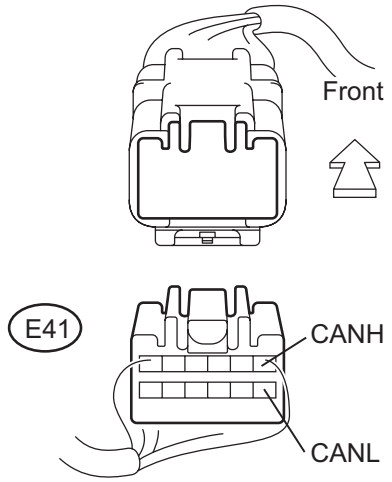
Tester Connection	Condition	Specified Value
E10-6 (CANH) - E10-14 (CANL)	Ignition switch off	108 to 132 Ω

OK → **Go to step 12**

NG

9 CHECK FOR SHORT IN CAN BUS WIRES (A/C AMPLIFIER BRANCH WIRE)

No. 2 CAN J/C Connector (Rear of the Vehicle) Wire Harness Side View:



C133246E05

(a) Reconnect the No. 2 CAN J/C connector (A40) (front of the vehicle).
(b) Disconnect the No. 2 CAN J/C connector (E41) (rear of the vehicle).
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

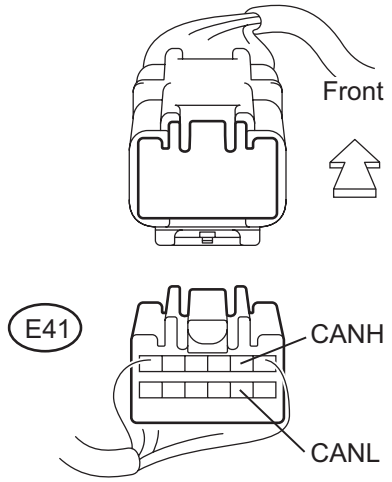
Tester Connection	Condition	Specified Value
E41-1 (CANH) - E41-7 (CANL)	Ignition switch off	1 MΩ or higher

NG → **Go to step 11**

OK

10 CHECK FOR SHORT IN CAN BUS WIRES (ACCESSORY GATEWAY BRANCH WIRE)

No. 2 CAN J/C Connector (Rear of the Vehicle) Wire Harness Side View:



C133246E03

(a) Disconnect the No. 2 CAN J/C connector (E41) (rear of the vehicle).
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
E41-2 (CANH) - E41-8 (CANL)	Ignition switch off	1 MΩ or higher

NG → **REPAIR OR REPLACE ACCESSORY GATEWAY BRANCH WIRE OR CONNECTOR**

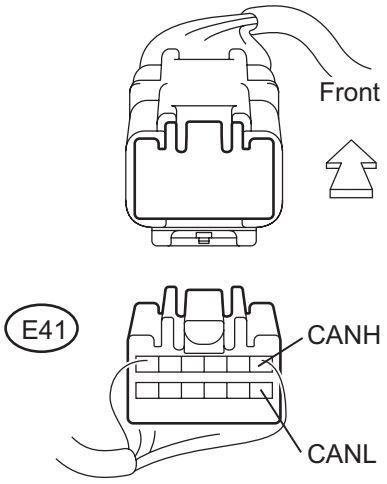
CA

OK

REPLACE NO. 2 CAN J/C

11	CHECK FOR SHORT IN CAN BUS WIRES (A/C AMPLIFIER - NO. 2 CAN J/C)

No. 2 CAN J/C Connector (Rear of the Vehicle) Wire Harness Side View:



C133246E05

(a) Disconnect the A/C amplifier connector (E38).
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
E41-1 (CANH) - E41-7 (CANL)	Ignition switch off	1 MΩ or higher

NG → **REPAIR OR REPLACE A/C AMPLIFIER BRANCH WIRE OR CONNECTOR**

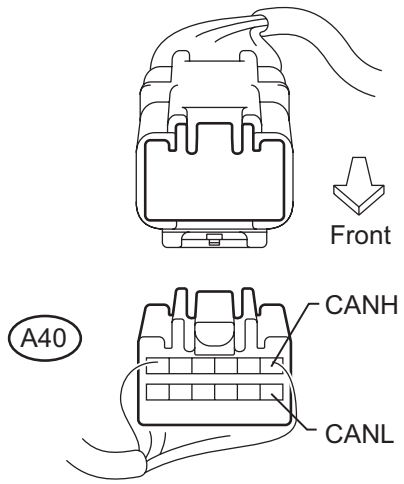
OK

REPLACE A/C AMPLIFIER

CA

12 CHECK FOR SHORT IN CAN BUS WIRES (ECM MAIN BUS WIRE)

No. 2 CAN J/C Connector (Front of the Vehicle) Wire Harness Side View:



C133245E04

(a) Disconnect the No. 2 CAN J/C connector (A40).
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

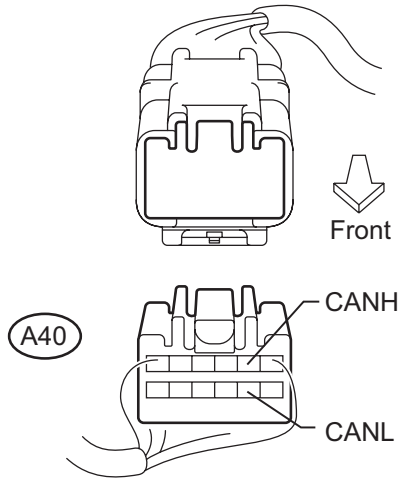
Tester Connection	Condition	Specified Value
A40-1 (CANH) - A40-7 (CANL)	Ignition switch off	108 to 132 Ω

NG → **Go to step 14**

OK

13 CHECK FOR SHORT IN CAN BUS WIRES (SKID CONTROL ECU - NO. 2 CAN J/C)

No. 2 CAN J/C Connector (Front of the Vehicle) Wire Harness Side View:



C133245E05

(a) Disconnect the skid control ECU connector (A25, A26 or A60).
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
A40-2 (CANH) - A40-8 (CANL)	Ignition switch off	1 MΩ or higher

HINT:
Measure the resistance with the No. 2 CAN J/C connector (A40) disconnected.

OK → **REPLACE BRAKE ACTUATOR ASSEMBLY**

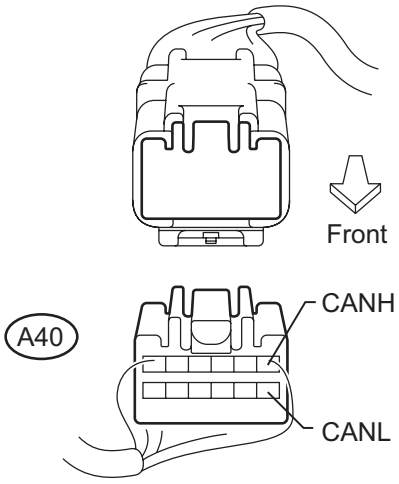
CA

NG

REPAIR OR REPLACE SKID CONTROL ECU BRANCH WIRE OR CONNECTOR

14 CHECK FOR SHORT IN CAN BUS WIRES (ECM MAIN BUS WIRE)

No. 2 CAN J/C Connector (Front of the Vehicle) Wire Harness Side View:



C133245E04

(a) Disconnect the ECM connector (A24 or A55).
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
A40-1 (CANH) - A40-7 (CANL)	Ignition switch off	1 MΩ or higher

HINT:
Measure the resistance with the No. 2 CAN J/C connector (A40) disconnected.

NG → **REPAIR OR REPLACE CAN BUS MAIN WIRE OR CONNECTOR (ECM - NO. 2 CAN J/C)**

OK

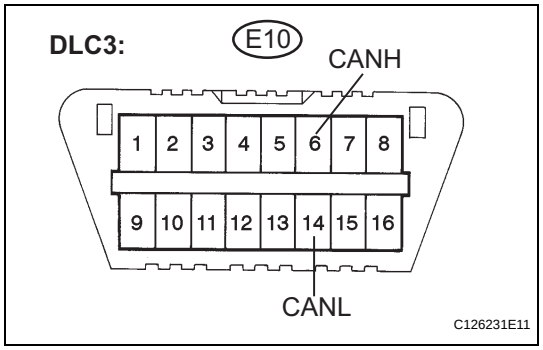
REPLACE ECM

15 RECONNECT CONNECTOR

(a) Reconnect the connector for the short-circuited branch wire to the No. 1 CAN J/C (the connector that caused the bus wire resistance to become normal (between 54 and 69 Ω) when it was disconnected).

NEXT

16	CHECK FOR SHORT IN CAN BUS WIRES



(a) Disconnect the connector that includes terminals CANH and CANL from the ECU (or sensor) to which the short-circuited branch wire is connected. (See page CA-10)

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
E10-6 (CANH) - E10-14 (CANL)	Ignition switch off	54 to 69 Ω

HINT:
If the resistance becomes normal (between 54 and 69 Ω) when the connector is disconnected from the ECU (or sensor), there may be a short in the ECU (or sensor).

NG → **REPAIR OR REPLACE CORRESPONDING ECU OR SENSOR BRANCH WIRE OR CONNECTOR**

OK

REPLACE CORRESPONDING ECU OR SENSOR

CA

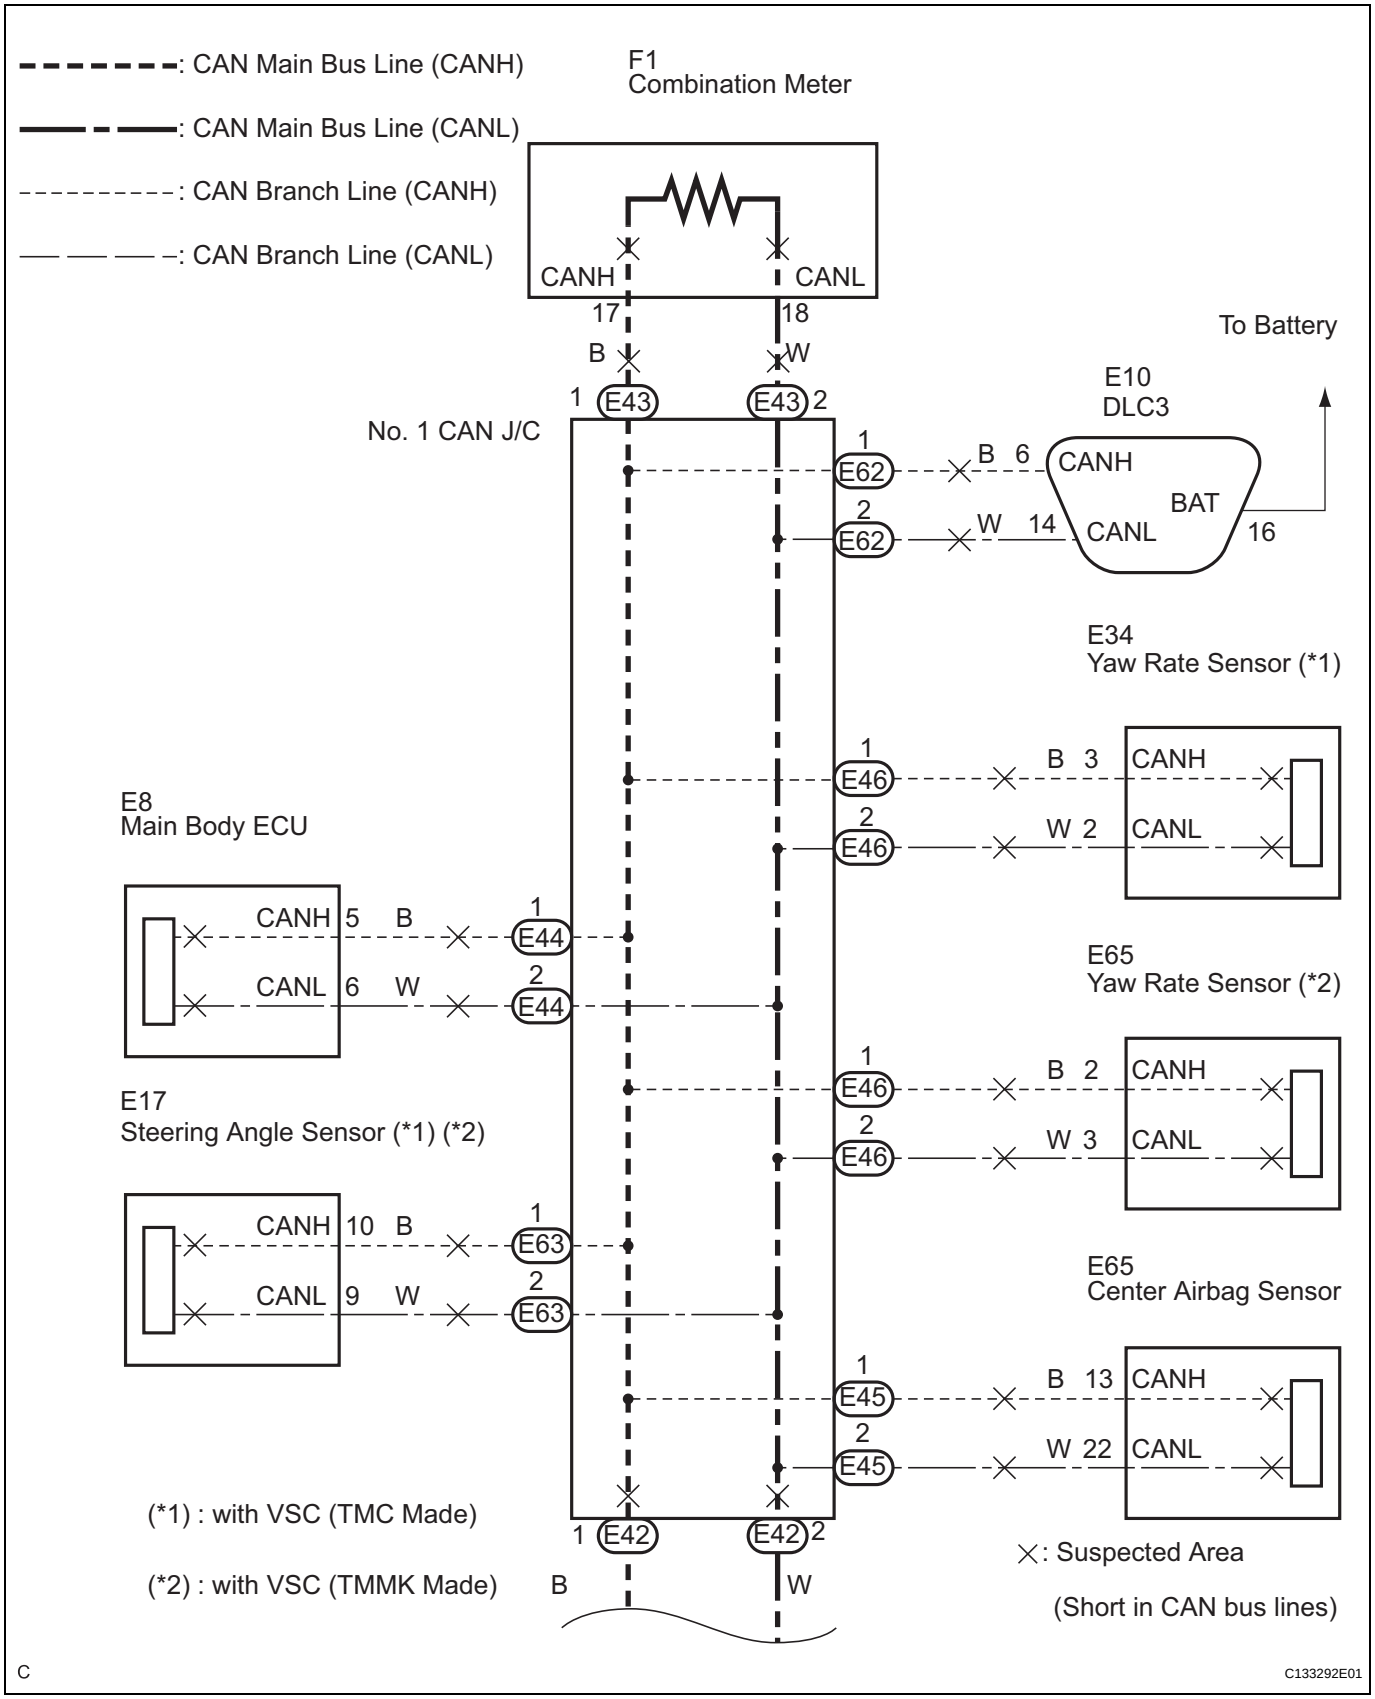
Short to B+ in CAN Bus Line

DESCRIPTION

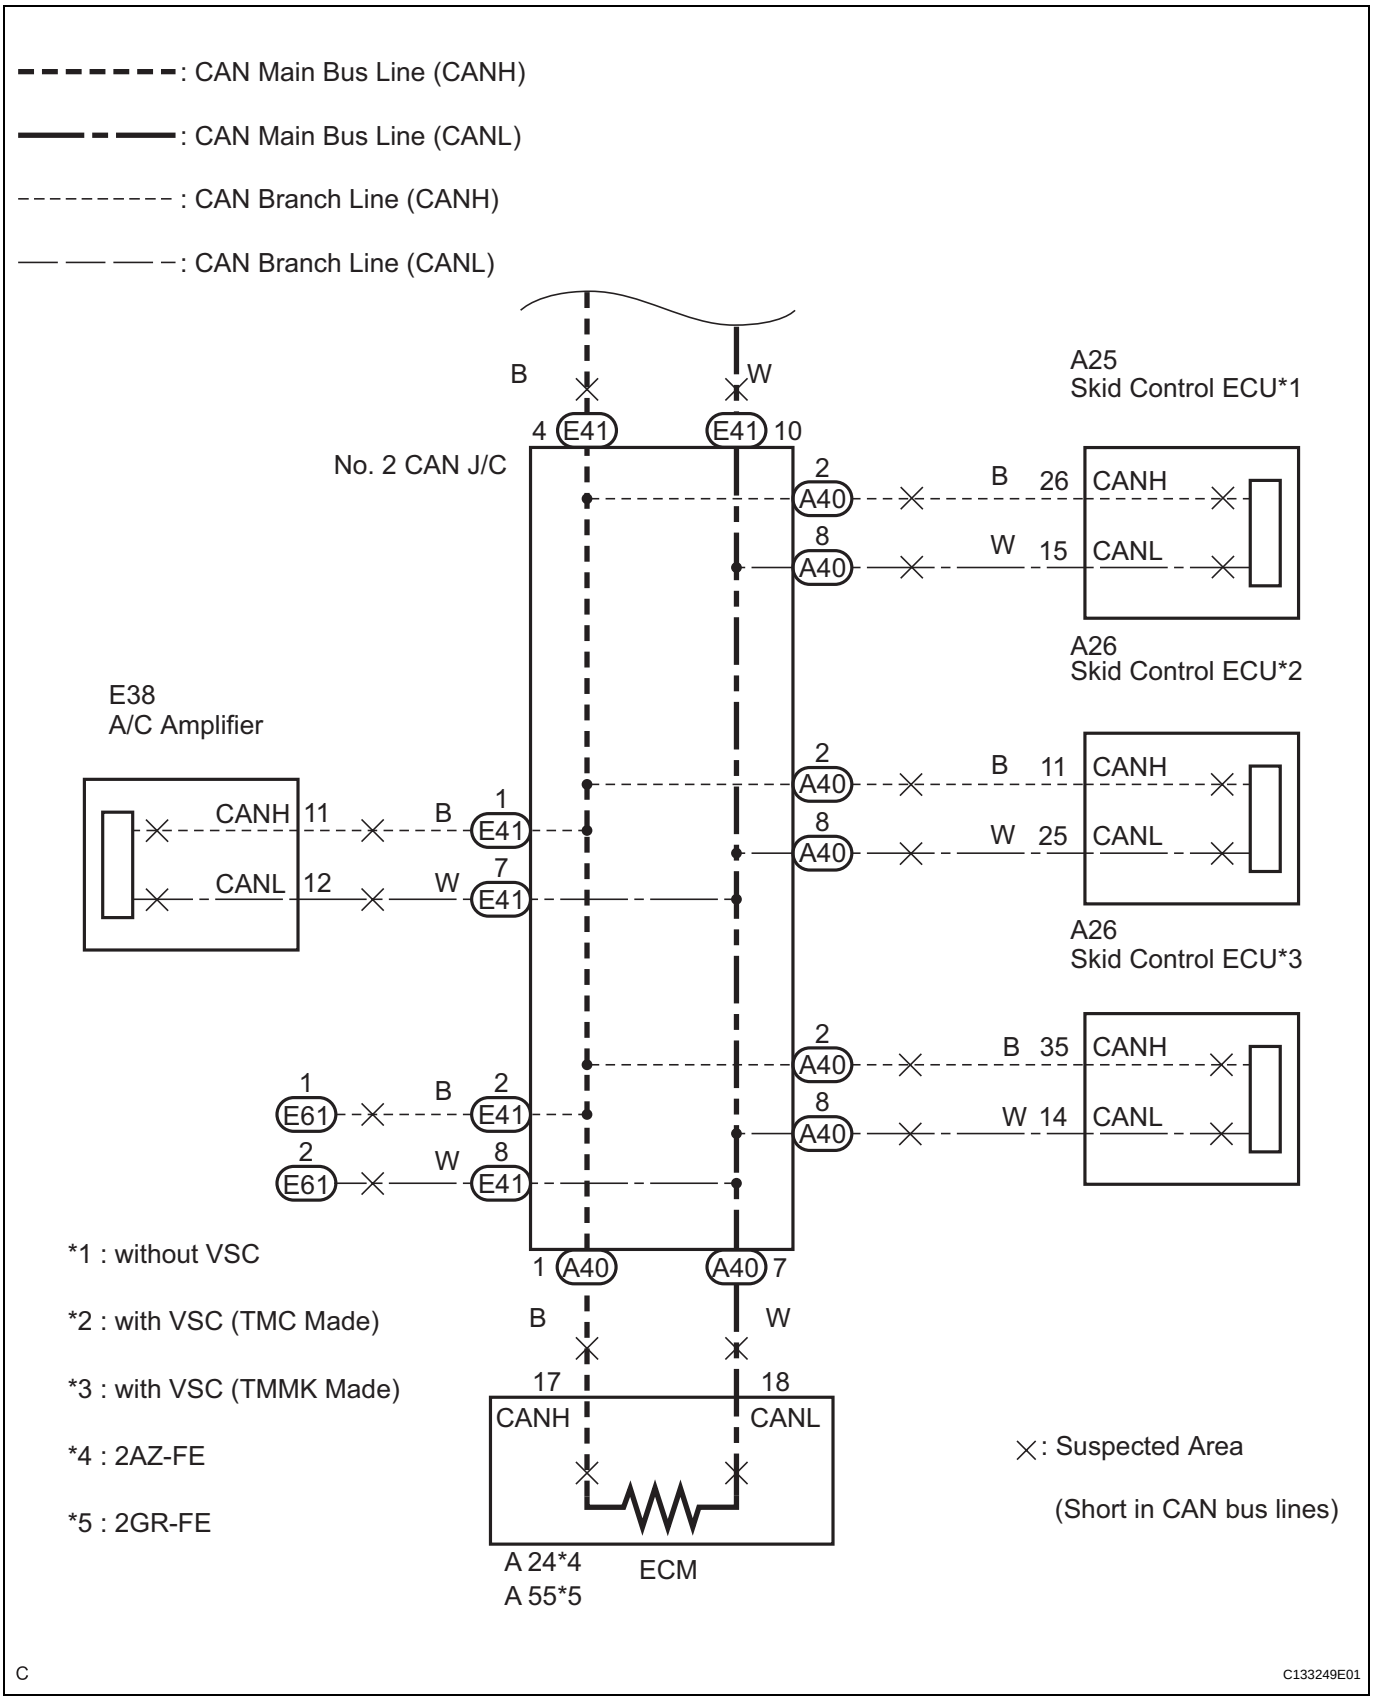
A short to B+ is suspected in the CAN bus wire when the resistance between terminals 6 (CANH) and 16 (BAT), or terminals 14 (CANL) and 16 (BAT) of the DLC3 is below 6 kΩ.

Symptom	Trouble Area
The resistance between terminals 6 (CANH) and 16 (BAT), or terminals 14 (CANL) and 16 (BAT) of the DLC3 is below 6 kΩ.	• Short to B+ in CAN bus wire • Brake actuator assembly (Skid control ECU) • Steering angle sensor • Yaw rate sensor • ECM • Combination meter • Main body ECU • A/C amplifier • Center airbag sensor • No. 1 CAN J/C

WIRING DIAGRAM



CA



INSPECTION PROCEDURE

NOTICE:

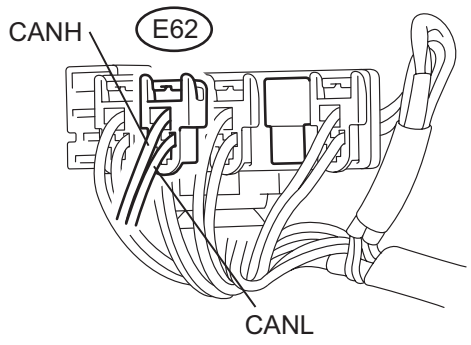
- **Turn the ignition switch off before measuring the resistance of the CAN main wire and CAN branch wires.**

- **After the ignition switch is turned off, check that the key reminder warning system and light reminder warning system are not operating.**
- **Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:
Operating the ignition switch, any other switches or any triggers related ECU and sensor communication on the CAN, which would cause resistance reading variations.

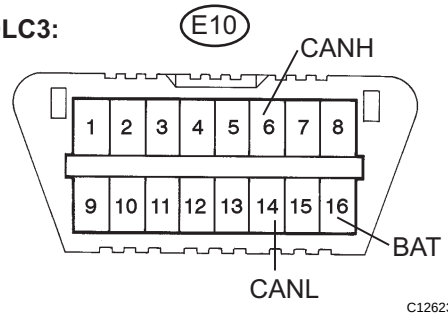
1	CHECK FOR SHORT TO B+ IN CAN BUS WIRE (DLC3 BRANCH WIRE)

No. 1 CAN J/C "B" Side (without Earth Terminal) Wire Harness Side:



(a) Turn the ignition switch off.
(b) Disconnect the DLC3 branch wire gray connector (E62) from the No. 1 CAN J/C "B" side (without earth terminal).
NOTICE:
- **Before disconnecting the connector, make a note of where it is connected.**
- **Reconnect the connector to its original position.**

DLC3:



(c) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Value
E10-6 (CANH) - E10-16 (BAT)	Ignition switch off	6 kΩ or higher
E10-14 (CANL) - E10-16 (BAT)	Ignition switch off	6 kΩ or higher

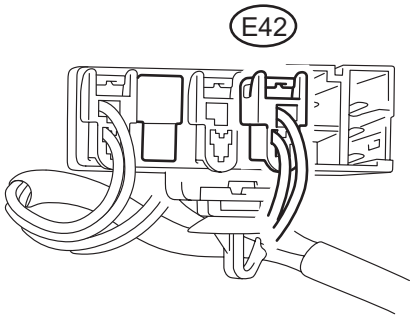
(d) Reconnect the DLC3 branch wire connector (E62) to the No. 1 CAN J/C "B" side (without earth terminal).

NG → **REPAIR OR REPLACE DLC3 BRANCH WIRE OR CONNECTOR**

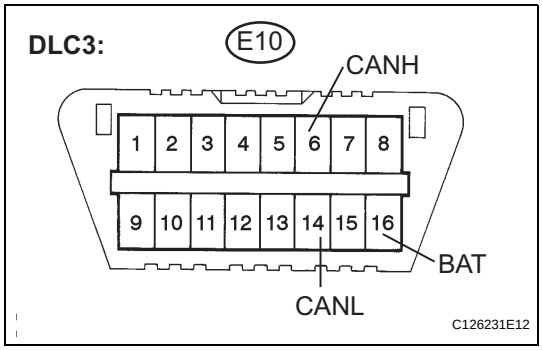
OK

2 CHECK FOR SHORT TO B+ IN CAN BUS WIRE (NO. 1 CAN J/C SIDE)

No. 1 CAN J/C "A" Side (with Earth Terminal):



(a) Disconnect the CAN main bus wire white connector (E42) from the No. 1 CAN J/C "A" side (with earth terminal).



(b) Measure the resistance between terminals 6 (CANH) and 16 (BAT), and between terminals 14 (CANL) and 16 (BAT) of the DLC3 each time a connector is disconnected.

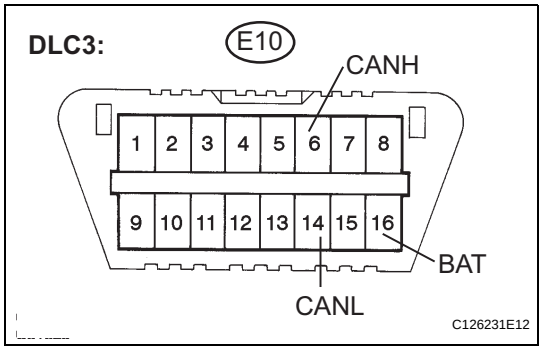
Standard resistance

Tester Connection	Condition	Specified Value
E10-6 (CANH) - E10-16 (BAT)	Ignition switch off	6 kΩ or higher
E10-14 (CANL) - E10-16 (BAT)	Ignition switch off	6 kΩ or higher

OK → **Go to step 6**

NG

3 CHECK FOR SHORT TO B+ IN CAN BUS WIRE



(a) Disconnect connectors from the No. 1 CAN J/C one at a time.
HINT:
Disconnect the ECU and sensor connectors other than the DLC3 branch wires and CAN main bus wires between the No. 1 CAN J/C.

(b) Measure the resistance between terminals 6 (CANH) and 16 (BAT), and between terminals 14 (CANL) and 16 (BAT) of the DLC3 each time a connector is disconnected.

*: with VSC

NOTICE:

Do not reconnect the disconnected connectors until this inspection is complete because there may be a short to B+ in 2 or more CAN bus wires.

Result

Symptom	Proceed to
The resistance between terminals 6 (CANH) and 16 (BAT), or the resistance between 14 (CANL) and 16 (BAT) is still below 6 kΩ when all the specified connectors are disconnected from the No. 1 CAN J/C. (There is a short to B+ in the CAN main bus wires between the No. 1 CAN J/C and No. 2 CAN J/C.)	**OK**
The resistance between terminals 6 (CANH) and 16 (BAT), or the resistance between 14 (CANL) and 16 (BAT) becomes normal (6 kΩ or more) when a connector is disconnected from the No. 1 CAN J/C. (There is a short to B+ in one of the areas that relate to one or more of the disconnected bus wires.)	**NG**

(c) When there is a short to B+ in one or more of the bus wires that connect to an ECU (or sensor):

(1) Reconnect all of the connectors to the No. 1 CAN J/C, except for the one that was disconnected last (the bus wire that is shorted to B+). Check that the resistance shown on the tester is normal (6 kΩ or more) to confirm that there is a short to B+ in one bus wire only.
HINT:
- The connectors connected to the No. 1 CAN J/C can be distinguished according to the color of the communication bus wires and the shape of the connectors.
- Reconnecting the connectors to non-specified positions on the No. 1 CAN J/C does not affect system operation. However, it is preferred to reconnect the connectors to their specified positions to avoid negative effects on the wiring such as tension on the wiring harnesses, and to make future maintenance easier.

OK → **REPLACE NO. 1 CAN J/C**

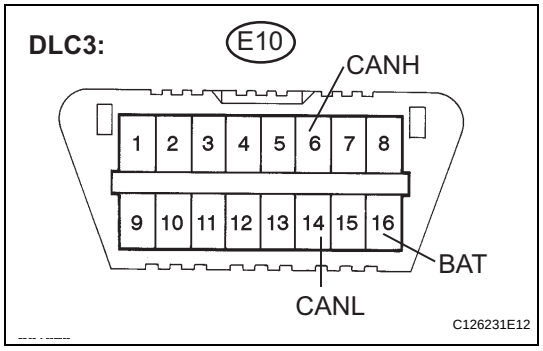
NG

4	RECONNECT CONNECTOR

(a) Reconnect the connector of the bus wire that is shorted to B+ to the No. 1 CAN J/C (the connector that caused the bus wire resistance to change to 6 kΩ or more when it was disconnected).

NEXT

5	CHECK FOR SHORT TO B+ IN CAN BUS WIRE



(a) Disconnect the connector that includes terminals CANH and CANL from the ECU (or sensor) to which the bus wire shorted to B+ is connected. (See page CA-10)
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
E10-6 (CANH) - E10-16 (BAT)	Ignition switch off	6 kΩ or higher
E10-14 (CANL) - E10-16 (BAT)	Ignition switch off	6 kΩ or higher

HINT:
If the resistance changes to 6 kΩ or higher when the connector is disconnected from the ECU (or sensor), there may be a short in the ECU (or sensor).

NG → **REPAIR OR REPLACE CORRESPONDING ECU OR SENSOR BUS LINE OR CONNECTOR**

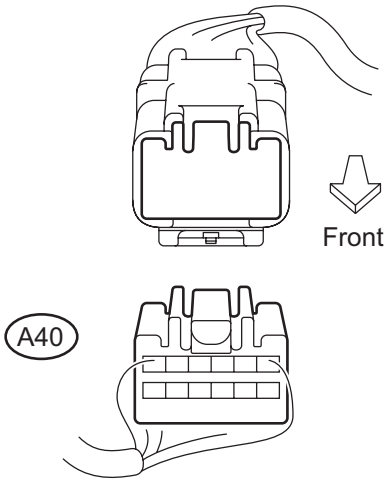
CA

OK

REPLACE CORRESPONDING ECU OR SENSOR

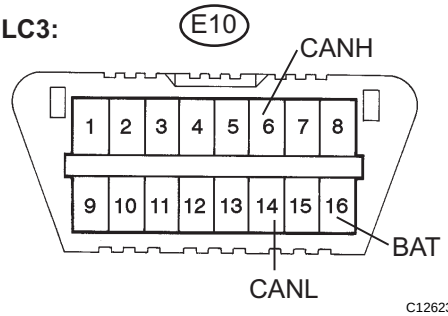
6	CHECK FOR SHORT TO B+ IN CAN BUS WIRE

No. 2 CAN J/C Connector (Front of the Vehicle) Wire Harness Side View:



(a) Reconnect the CAN main bus wire connector (E42) to the No. 1 CAN J/C "A" side (with earth terminal).
(b) Disconnect the No. 2 CAN J/C connector (A40) (front of the vehicle).

DLC3:



(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

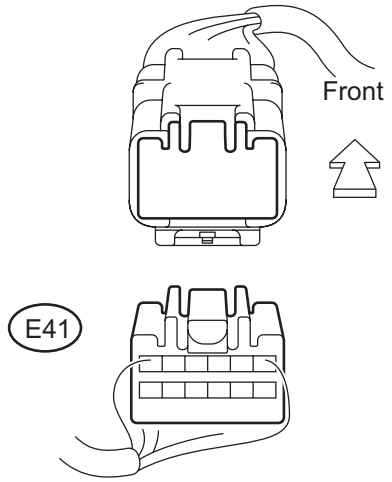
Tester Connection	Condition	Specified Value
E10-6 (CANH) - E10-16 (BAT)	Ignition switch off	6 kΩ or higher
E10-14 (CANL) - E10-16 (BAT)	Ignition switch off	6 kΩ or higher

OK → **Go to step 11**

NG

7	CHECK FOR SHORT TO B+ IN CAN BUS WIRE (NO. 1 CAN J/C - NO. 2 CAN J/C)

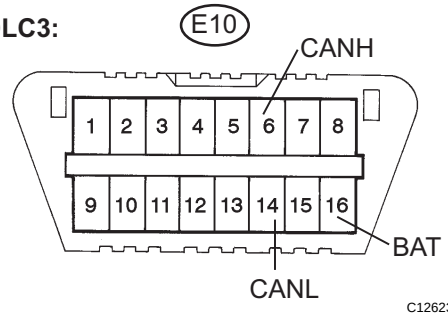
No. 2 CAN J/C Connector (Rear of the Vehicle) Wire Harness Side View:



C133246E06

(a) Disconnect the No. 2 CAN J/C connector (E41) (rear of the vehicle).

DLC3:



C126231E12

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
E10-6 (CANH) - E10-16 (BAT)	Ignition switch off	6 kΩ or higher
E10-14 (CANL) - E10-16 (BAT)	Ignition switch off	6 kΩ or higher

HINT:
Measure the resistance with the No. 2 CAN J/C connector (A40) disconnected.

NG → **REPAIR OR REPLACE CAN BUS MAIN WIRE (NO. 1 CAN J/C - NO. 2 CAN J/C)**

OK

8	RECONNECT CONNECTOR

(a) Reconnect the No. 2 CAN J/C connector (A40) (front of the vehicle).

NEXT

CA

9	CHECK FOR SHORT TO B+ IN CAN BUS WIRE (A/C AMPLIFIER BRANCH WIRE)

No. 2 CAN J/C Connector (Rear of the Vehicle) Wire Harness Side View:

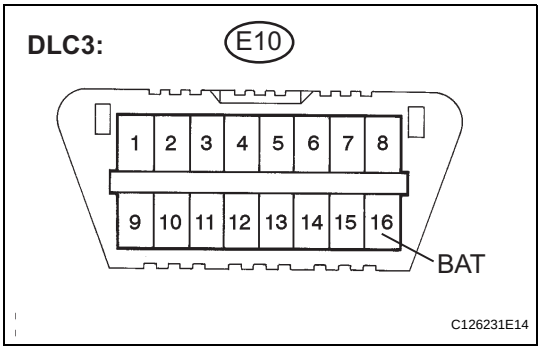
DLC3:



(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

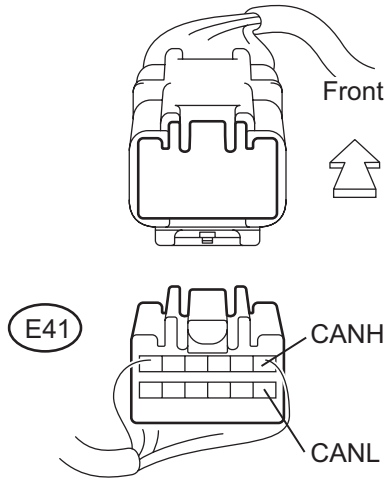
Tester Connection	Condition	Specified Value
E41-1 (CANH) - E10-16 (BAT)	Ignition switch off	6 kΩ or higher
E41-7 (CANL) - E10-16 (BAT)	Ignition switch off	6 kΩ or higher

OK → **REPAIR OR REPLACE ACCESSORY GATEWAY BRANCH WIRE OR CONNECTOR**

NG

10	CHECK FOR SHORT TO B+ IN CAN BUS WIRE (A/C AMPLIFIER)

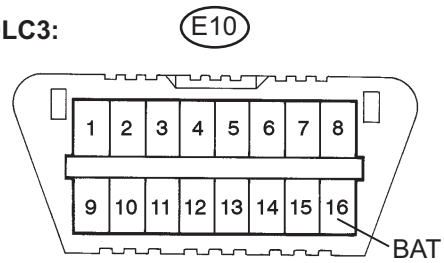
No. 2 CAN J/C Connector (Rear of the Vehicle) Wire Harness Side View:



C133246E05

(a) Disconnect the A/C amplifier connector (E38).

DLC3:



C126231E14

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
E41-1 (CANH) - E10-16 (BAT)	Ignition switch off	6 kΩ or higher
E41-7 (CANL) - E10-16 (BAT)	Ignition switch off	6 kΩ or higher

HINT:
Measure the resistance with the No. 2 CAN J/C connector (E41) disconnected.

NG → **REPAIR OR REPLACE A/C AMPLIFIER BRANCH WIRE OR CONNECTOR**

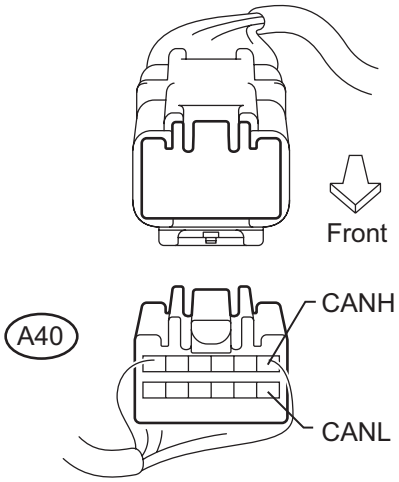
OK

REPLACE A/C AMPLIFIER

CA

11	CHECK FOR SHORT TO B+ IN CAN BUS WIRE (ECM MAIN BUS WIRE)

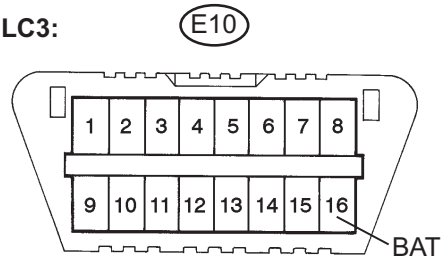
No. 2 CAN J/C Connector (Front of the Vehicle) Wire Harness Side View:



C133245E04

(a) Disconnect the No. 2 CAN J/C connector (E40) (front of the vehicle).

DLC3:



C126231E14

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

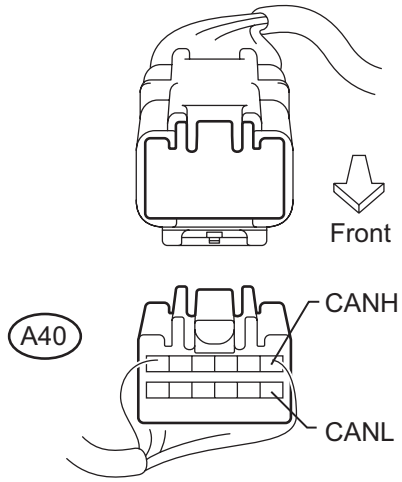
Tester Connection	Condition	Specified Value
A40-1 (CANH) - E10-16 (BAT)	Ignition switch off	6 kΩ or higher
A40-7 (CANL) - E10-16 (BAT)	Ignition switch off	6 kΩ or higher

OK → **Go to step 13**

NG

12	CHECK FOR SHORT TO B+ IN CAN BUS WIRE (ECM)

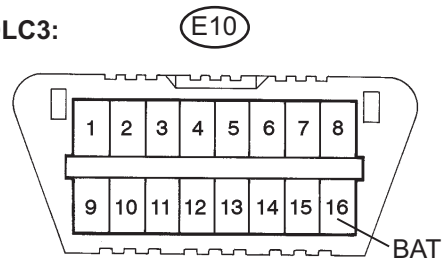
No. 2 CAN J/C Connector (Front of the Vehicle) Wire Harness Side View:



C133245E04

(a) Disconnect the ECM connector (A24 or A55).

DLC3:



C126231E14

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
A40-1 (CANH) - E10-16 (BAT)	Ignition switch off	6 kΩ or higher
A40-7 (CANL) - E10-16 (BAT)	Ignition switch off	6 kΩ or higher

HINT:
Measure the resistance with the No. 2 CAN J/C connector (A40) disconnected.

NG → **REPAIR OR REPLACE CAN BUS MAIN WIRE OR CONNECTOR (ECM - NO. 2 CAN J/C)**

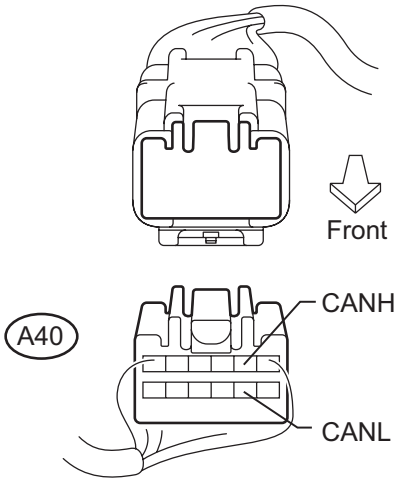
OK

REPLACE ECM

CA

13	CHECK FOR SHORT TO B+ IN CAN BUS WIRE (SKID CONTROL ECU)

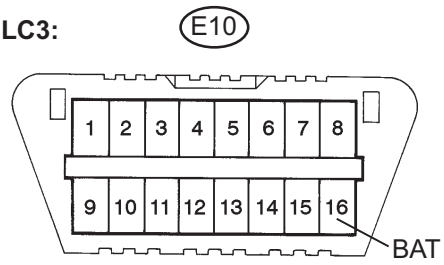
No. 2 CAN J/C Connector (Front of the Vehicle) Wire Harness Side View:



C133245E05

(a) Disconnect the skid control ECU connector (A25, A26 or A60).

DLC3:



C126231E14

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
A40-2 (CANH) - E10-16 (BAT)	Ignition switch off	6 kΩ or higher
A40-8 (CANL) - E10-16 (BAT)	Ignition switch off	6 kΩ or higher

OK → **REPLACE BRAKE ACTUATOR ASSEMBLY**

NG

REPAIR OR REPLACE SKID CONTROL ECU BRANCH WIRE OR CONNECTOR

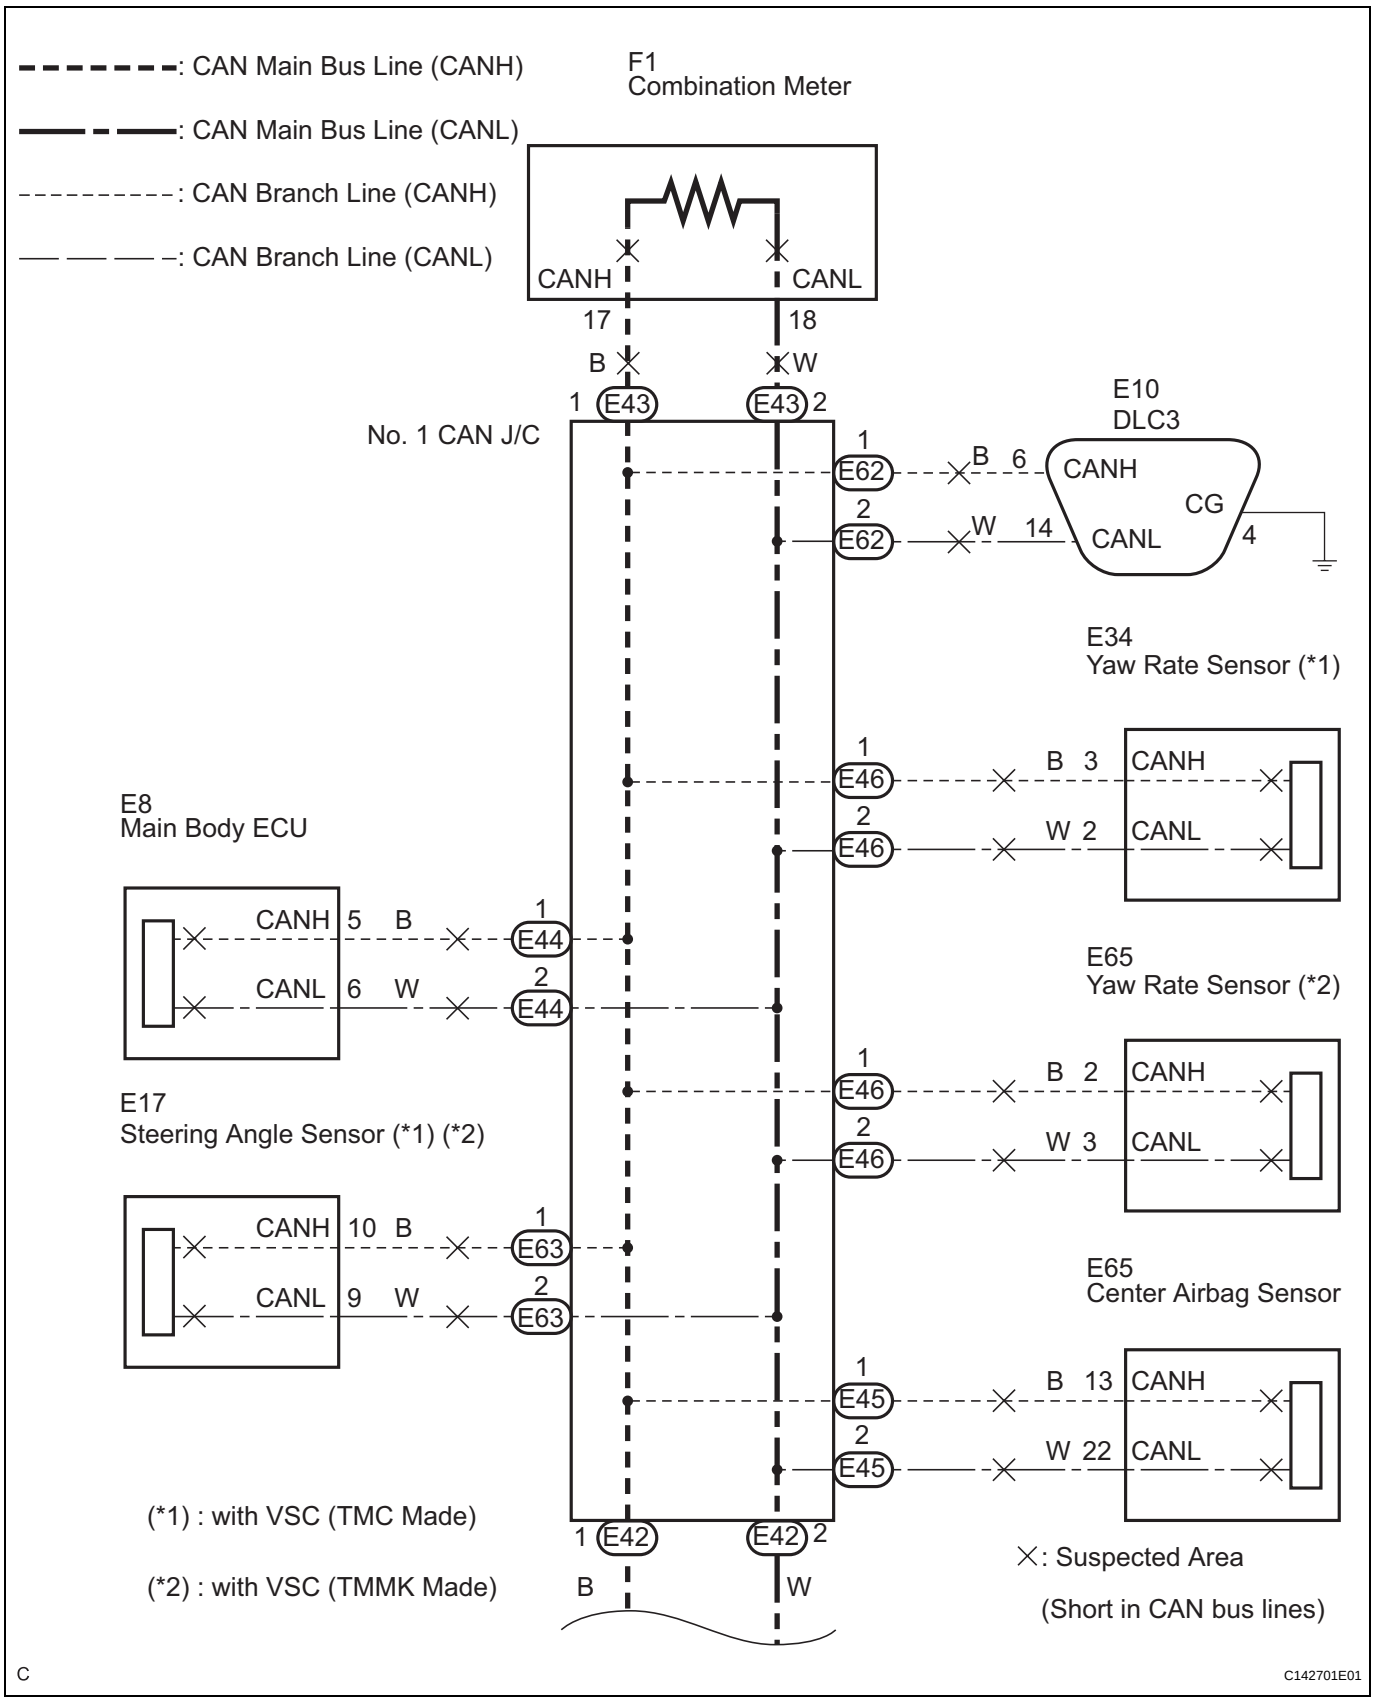
Short to GND in CAN Bus Line

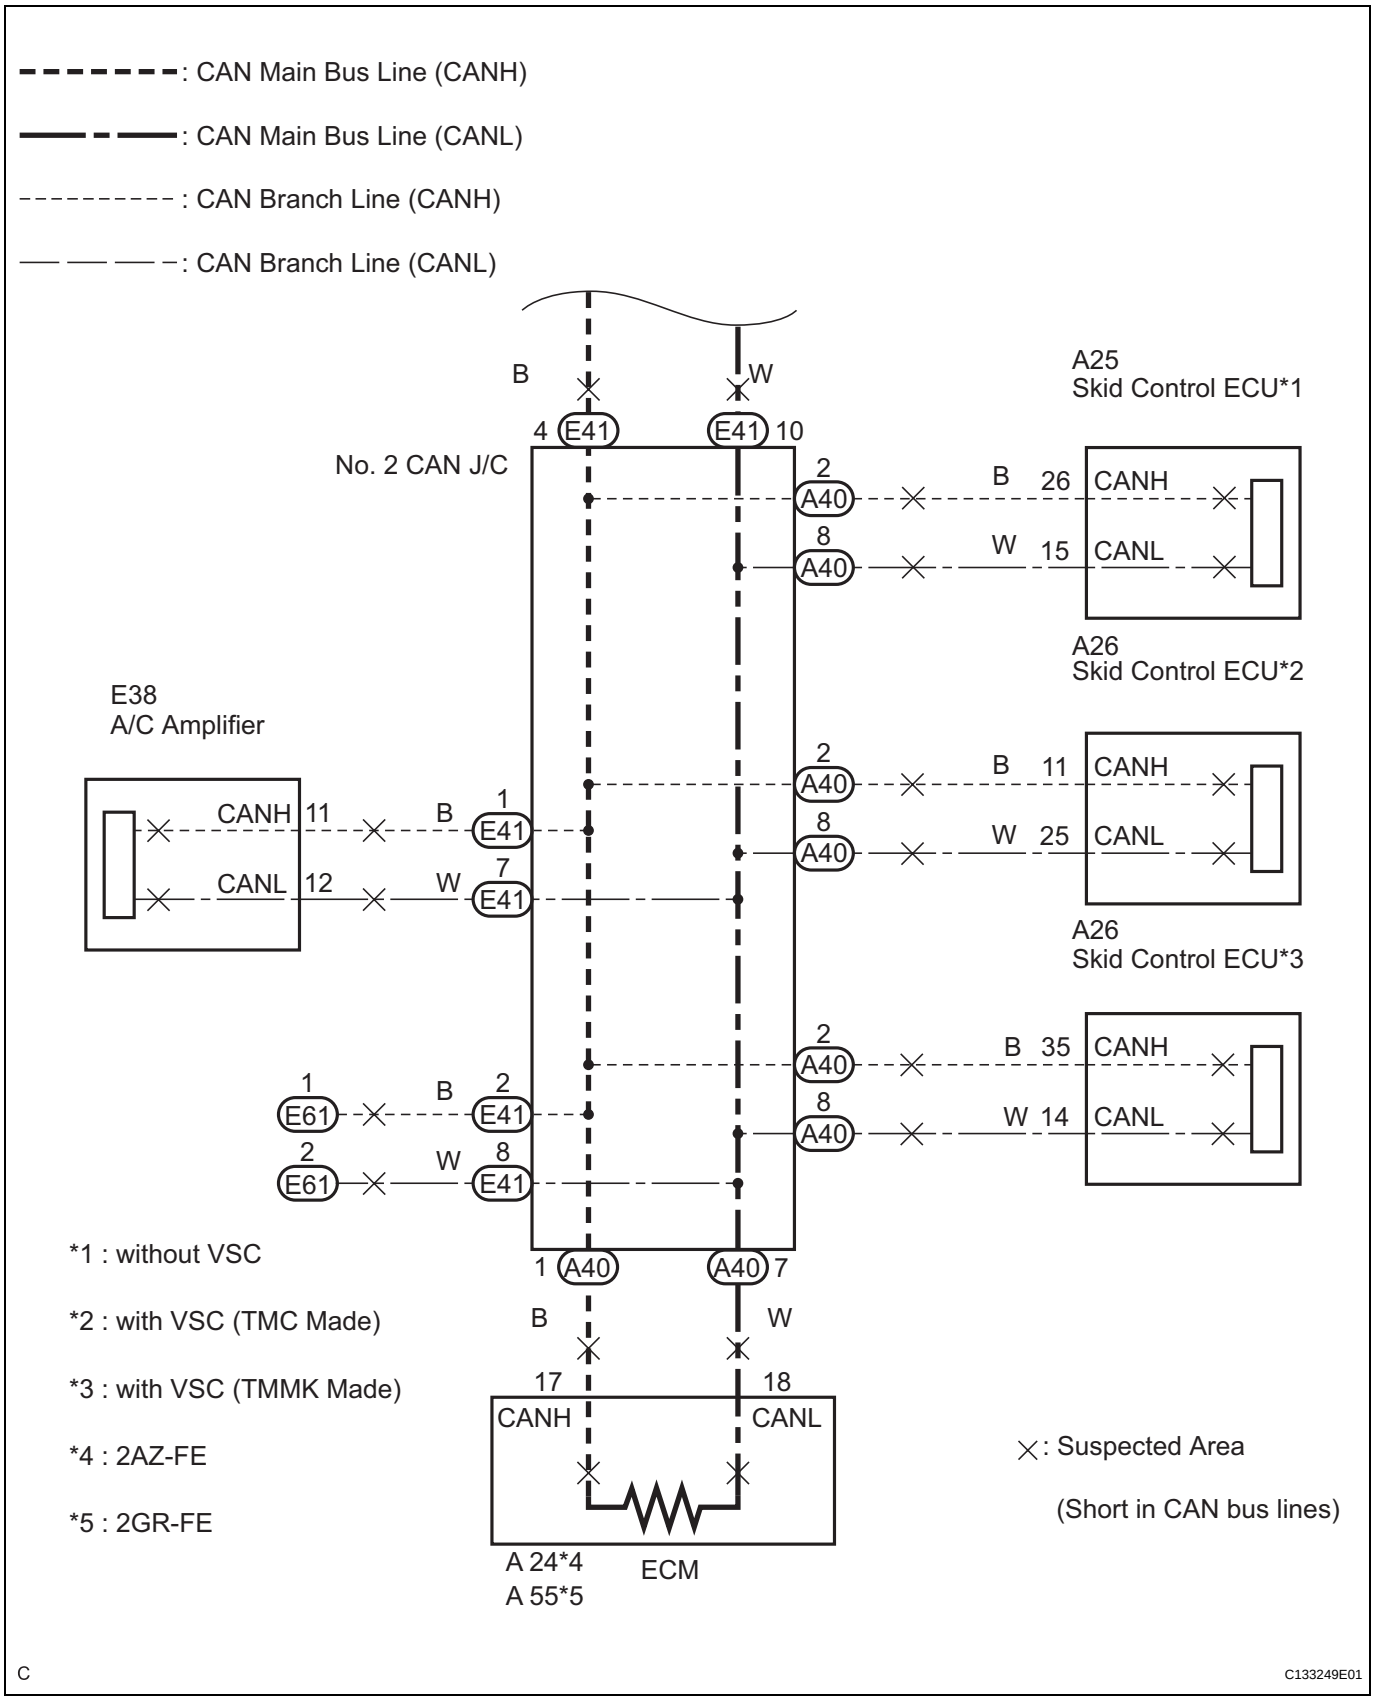
DESCRIPTION

A short to GND is suspected in the CAN bus wire when the resistance between terminals 4 (CG) and 6 (CANH), or terminals 4 (CG) and 14 (CANL) of the DLC3 is below 200 Ω.

Symptoms	Trouble Area
The resistance between terminals 6 (CANH) and 4 (CG), or terminals 14 (CANL) and 4 (CG) of the DLC3 is below 200 Ω.	• Short to GND in CAN bus wire • ECM • Brake actuator assembly (Skid control ECU) • Steering angle sensor • Yaw rate sensor • Main Body ECU • A/C amplifier • Combination meter • Center airbag sensor • No. 1 CAN J/C

WIRING DIAGRAM





INSPECTION PROCEDURE

NOTICE:

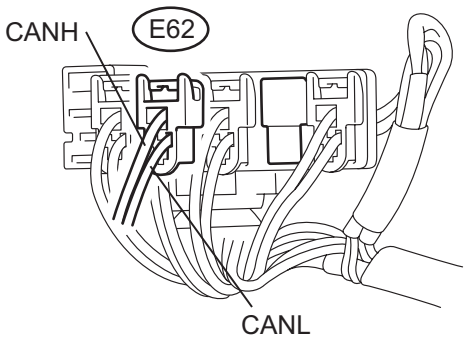
- **Turn the ignition switch off before measuring the resistance of the CAN main wire and CAN branch wires.**

- **After the ignition switch is turned off, check that the key reminder warning system and light reminder warning system are not operating.**
- **Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:
Operating the ignition switch, any other switches or any triggers related ECU and sensor communication on the CAN, which would cause resistance reading variations.

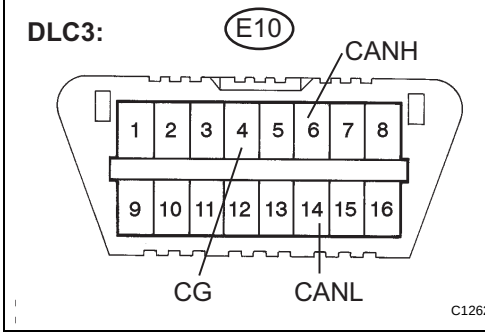
1	CHECK FOR SHORT TO GND IN CAN BUS WIRE (DLC3 BRANCH WIRE)

No. 1 CAN J/C "B" Side (without Earth Terminal) Wire Harness Side:



(a) Turn the ignition switch off.
(b) Disconnect the DLC3 branch wire gray connector (E62) from the No. 1 CAN J/C "B" side (without earth terminal).
NOTICE:
- **Before disconnecting the connector, make a note of where it is connected.**
- **Reconnect the connector to its original position.**

DLC3:



(c) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Value
E10-6 (CANH) - E10-4 (CG)	Ignition switch off	200 Ω or higher
E10-14 (CANL) - E10-4 (CG)	Ignition switch off	200 Ω or higher

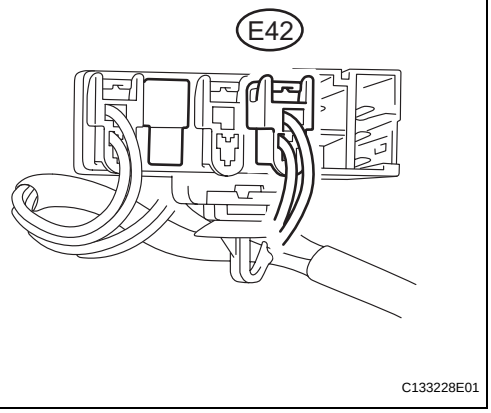
(d) Reconnect the DLC3 branch wire connector (E62) to the No. 1 CAN J/C "B" side (without earth terminal).

NG → **REPAIR OR REPLACE DLC3 BRANCH WIRE OR CONNECTOR**

OK

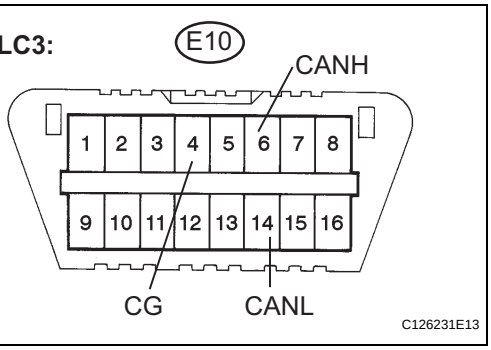
2 CHECK FOR SHORT TO GND IN CAN BUS WIRE (NO. 1 CAN J/C SIDE)

No. 1 CAN J/C "A" Side (with Earth Terminal):



(a) Disconnect the CAN main bus wire white connector (E42) from the No. 1 CAN J/C "A" side (with earth terminal).

DLC3:



(b) Measure the resistance between terminals 6 (CANH) and 4 (CG), and between terminals 14 (CANL) and 4 (CG) of the DLC3 each time a connector is disconnected.

Standard resistance

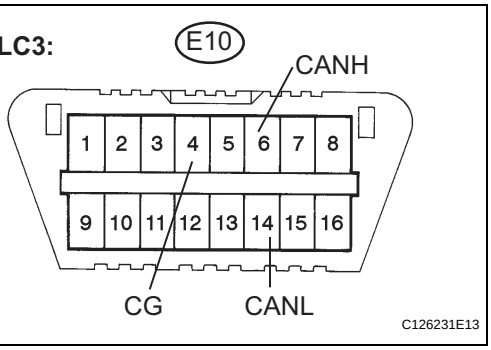
Tester Connection	Condition	Specified Value
E10-6 (CANH) - E10-4 (CG)	Ignition switch off	200 Ω or higher
E10-14 (CANL) - E10-4 (CG)	Ignition switch off	200 Ω or higher

OK → **Go to step 6**

NG

3 CHECK FOR SHORT TO GND IN CAN BUS WIRE

DLC3:



(a) Disconnect connectors from the No. 1 CAN J/C one at a time.
HINT:
Disconnect the ECU and sensor connectors other than the DLC3 branch wires and CAN main bus lines between the No. 1 CAN J/C.

(b) Measure the resistance between terminals 6 (CANH) and 4 (CG), and between terminals 14 (CANL) and 4 (CG) of the DLC3 each time a connector is disconnected.

INSPECTION PROCEDURE

HINT:
Perform the following inspection for the ECUs (sensors) which are not displayed on the intelligent tester. If the malfunction cannot be identified, then perform the following inspections for the ECUs (sensors) connected to CAN communication.

1	CHECK FOR OPEN IN ONE SIDE OF CAN BRANCH WIRE

(a) Confirm the systems (ECUs and sensors), which use CAN communication, equipped on the vehicle. (See page CA-25)
(b) Using the intelligent tester, select and perform "Communication Bus Check". (See page CA-25) [*1]
(c) Disconnect the connectors from the ECUs or sensors that are not displayed on the screen. [*2]
(d) Check that only the ECUs and sensors from which the connectors were disconnected in the previous step are not displayed on the "Communication Bus Check" screen. [*3]
HINT:
If any ECUs or sensors, other than those from which the connectors were disconnected in the previous step, are not displayed on the "Communication Bus Check" screen, reconnect the disconnected connectors and repeat the procedures [*1], [*2], and [*3].
(e) Perform the communication stop mode check for the ECUs and sensors which correspond to the disconnected connectors. (See page CA-10)

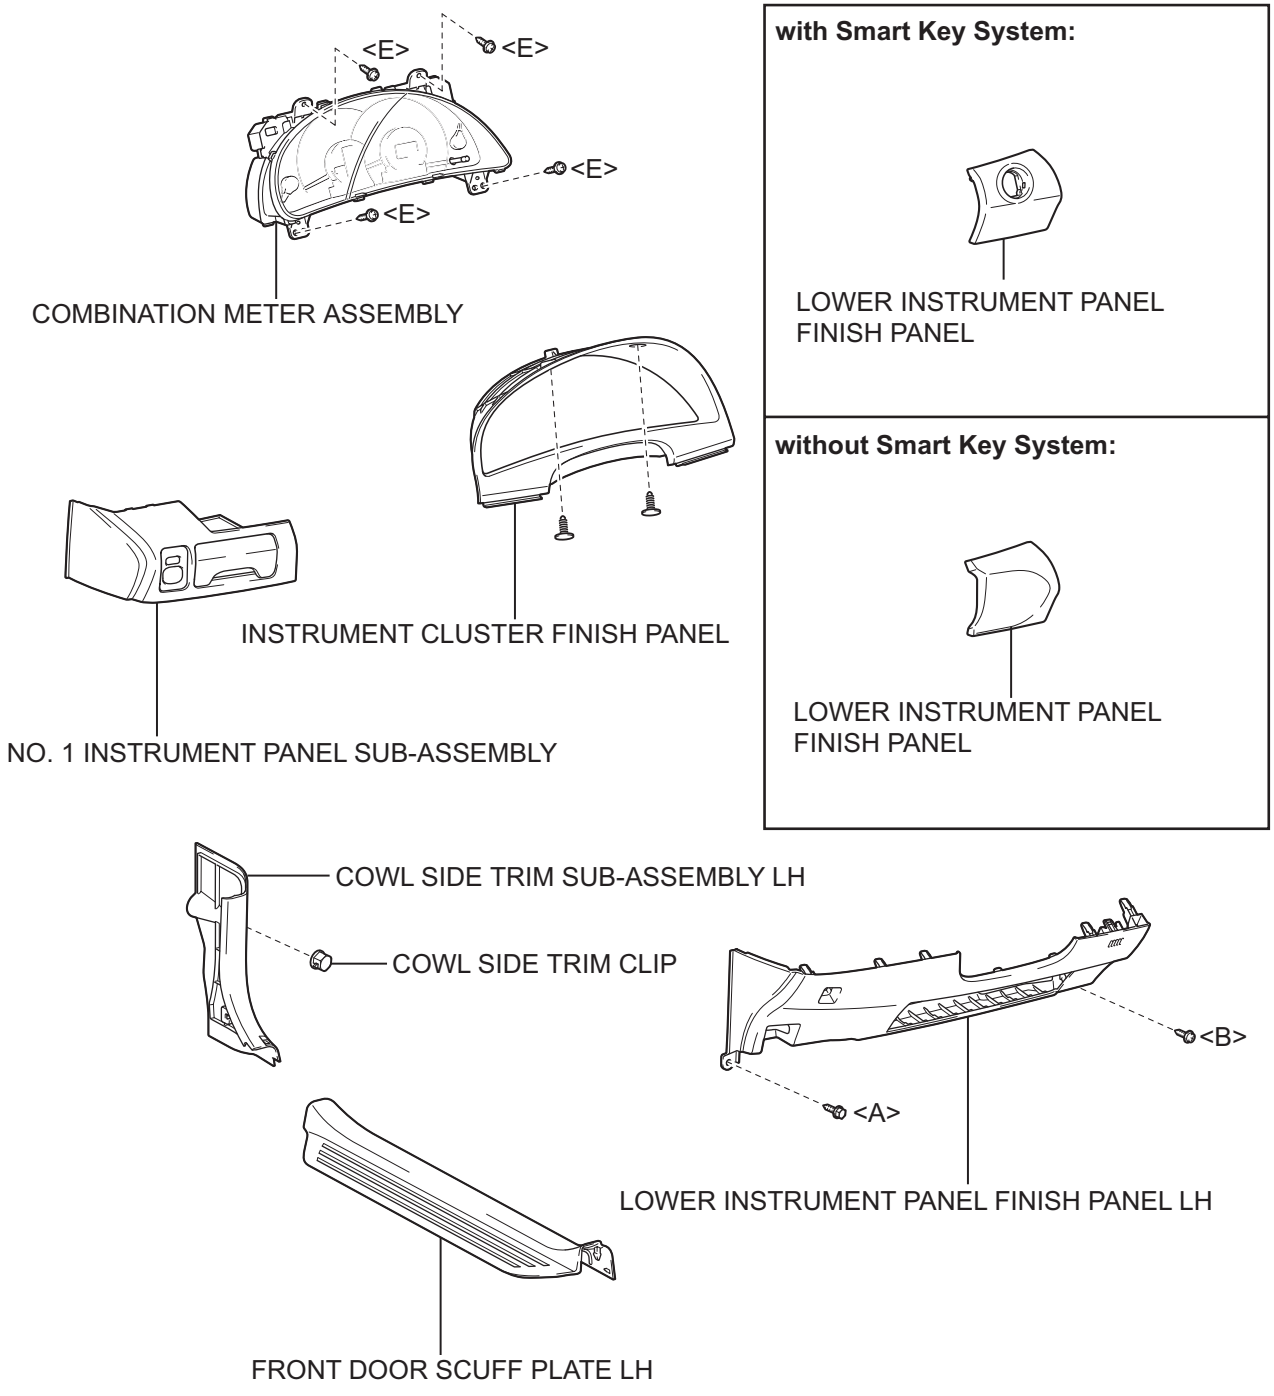
	5. Clutch disc torsion rubber (Damaged)	CL-32
	6. Clutch disc (Glazed)	CL-32
	7. Diaphragm spring (Out of tip alignment)	CL-32
Clutch pedal is spongy	1. Clutch Line (Air in line)	CL-25
	2. Master cylinder cup (Damaged)	CL-15
	3. Release cylinder rubber (Damaged)	CL-24
Clutch is noisy	1. Release bearing (Worn, dirty, or damaged)	CL-33
Clutch slips	1. Clutch pedal (Free play is out of adjustment)	CL-4
	2. Clutch disc (Oily)	CL-32
	3. Clutch disc (Worn out)	CL-32
	4. Diaphragm spring (Damaged)	CL-33
	5. Pressure plate (Distortion)	CL-32
	6. Flywheel (Distortion)	CL-33
Clutch does not disengage	1. Clutch pedal (Free play is out of adjustment)	CL-4
	2. Clutch line (Air in line)	CL-25
	3. Master cylinder cup (Damaged)	CL-15
	4. Release cylinder cup (Damaged)	CL-24
	5. Clutch disc (Out of true)	CL-32
	6. Clutch disc (Runout is excessive)	CL-32
	7. Clutch disc (Lining broken)	CL-32
	8. Clutch disc (Dirty or burned)	CL-32
	9. Clutch disc (Oily)	CL-32
	10. Clutch disc (Lack of spline grease)	CL-32

CLUTCH PEDAL

COMPONENTS

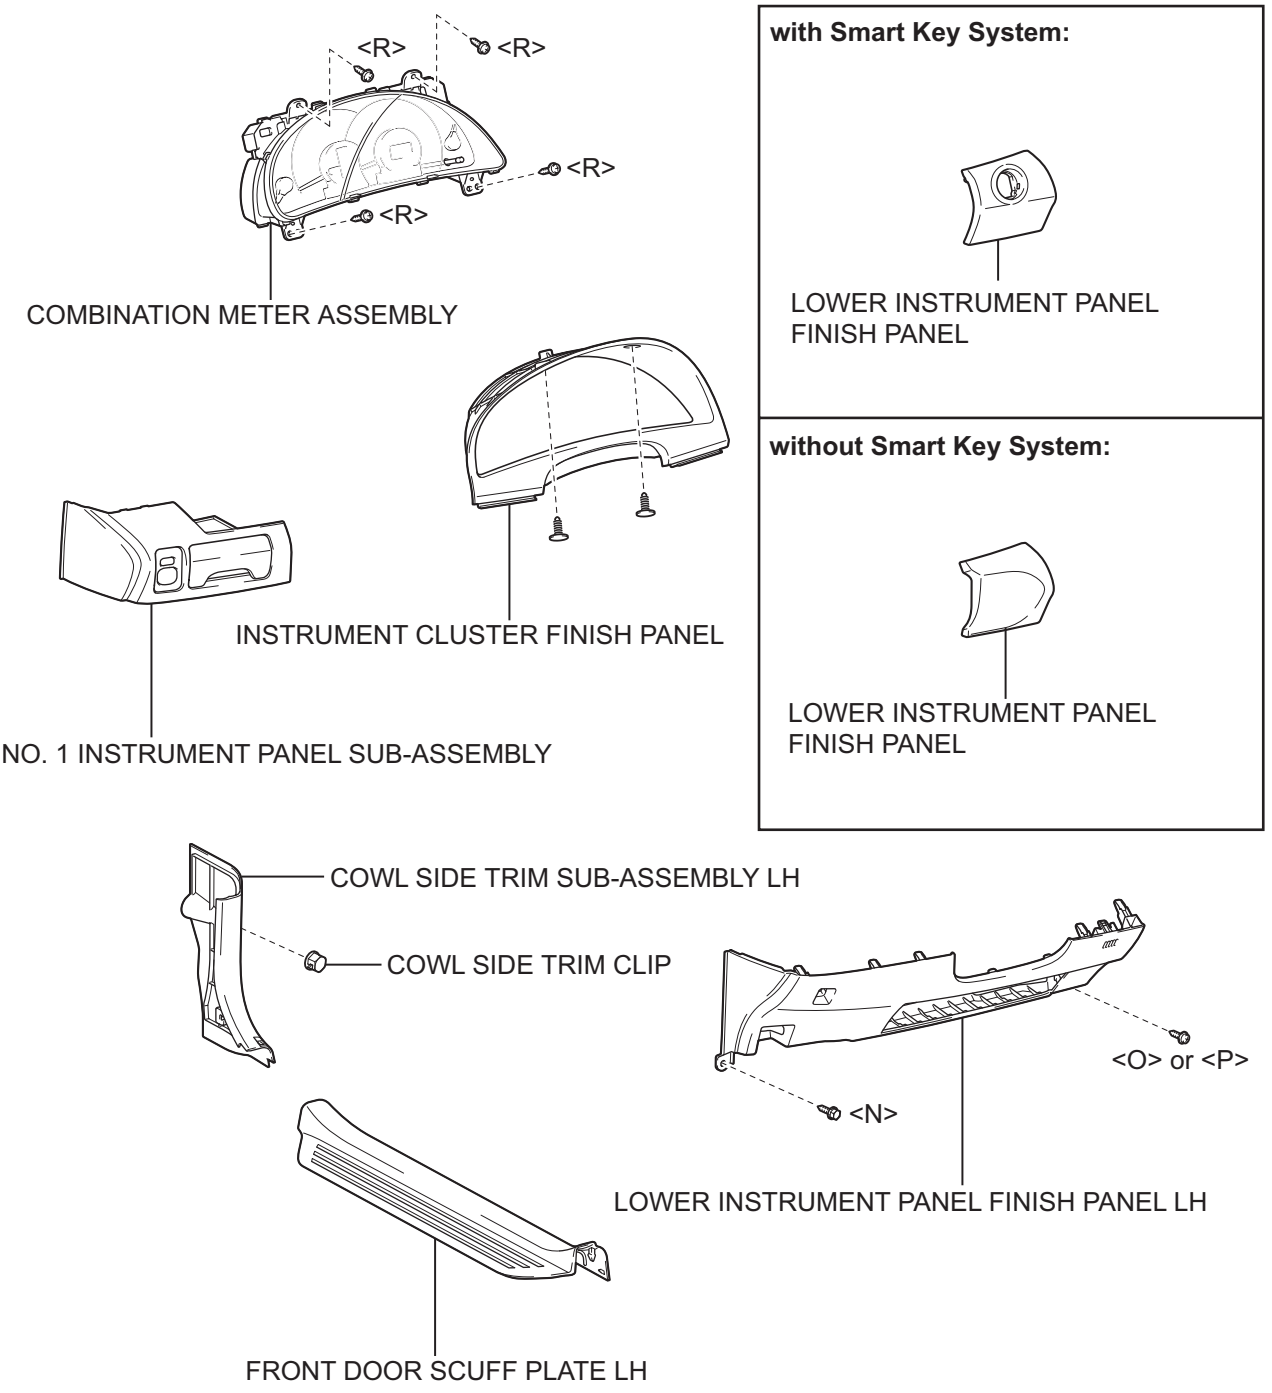
for TMC Made:



P

C138372E01

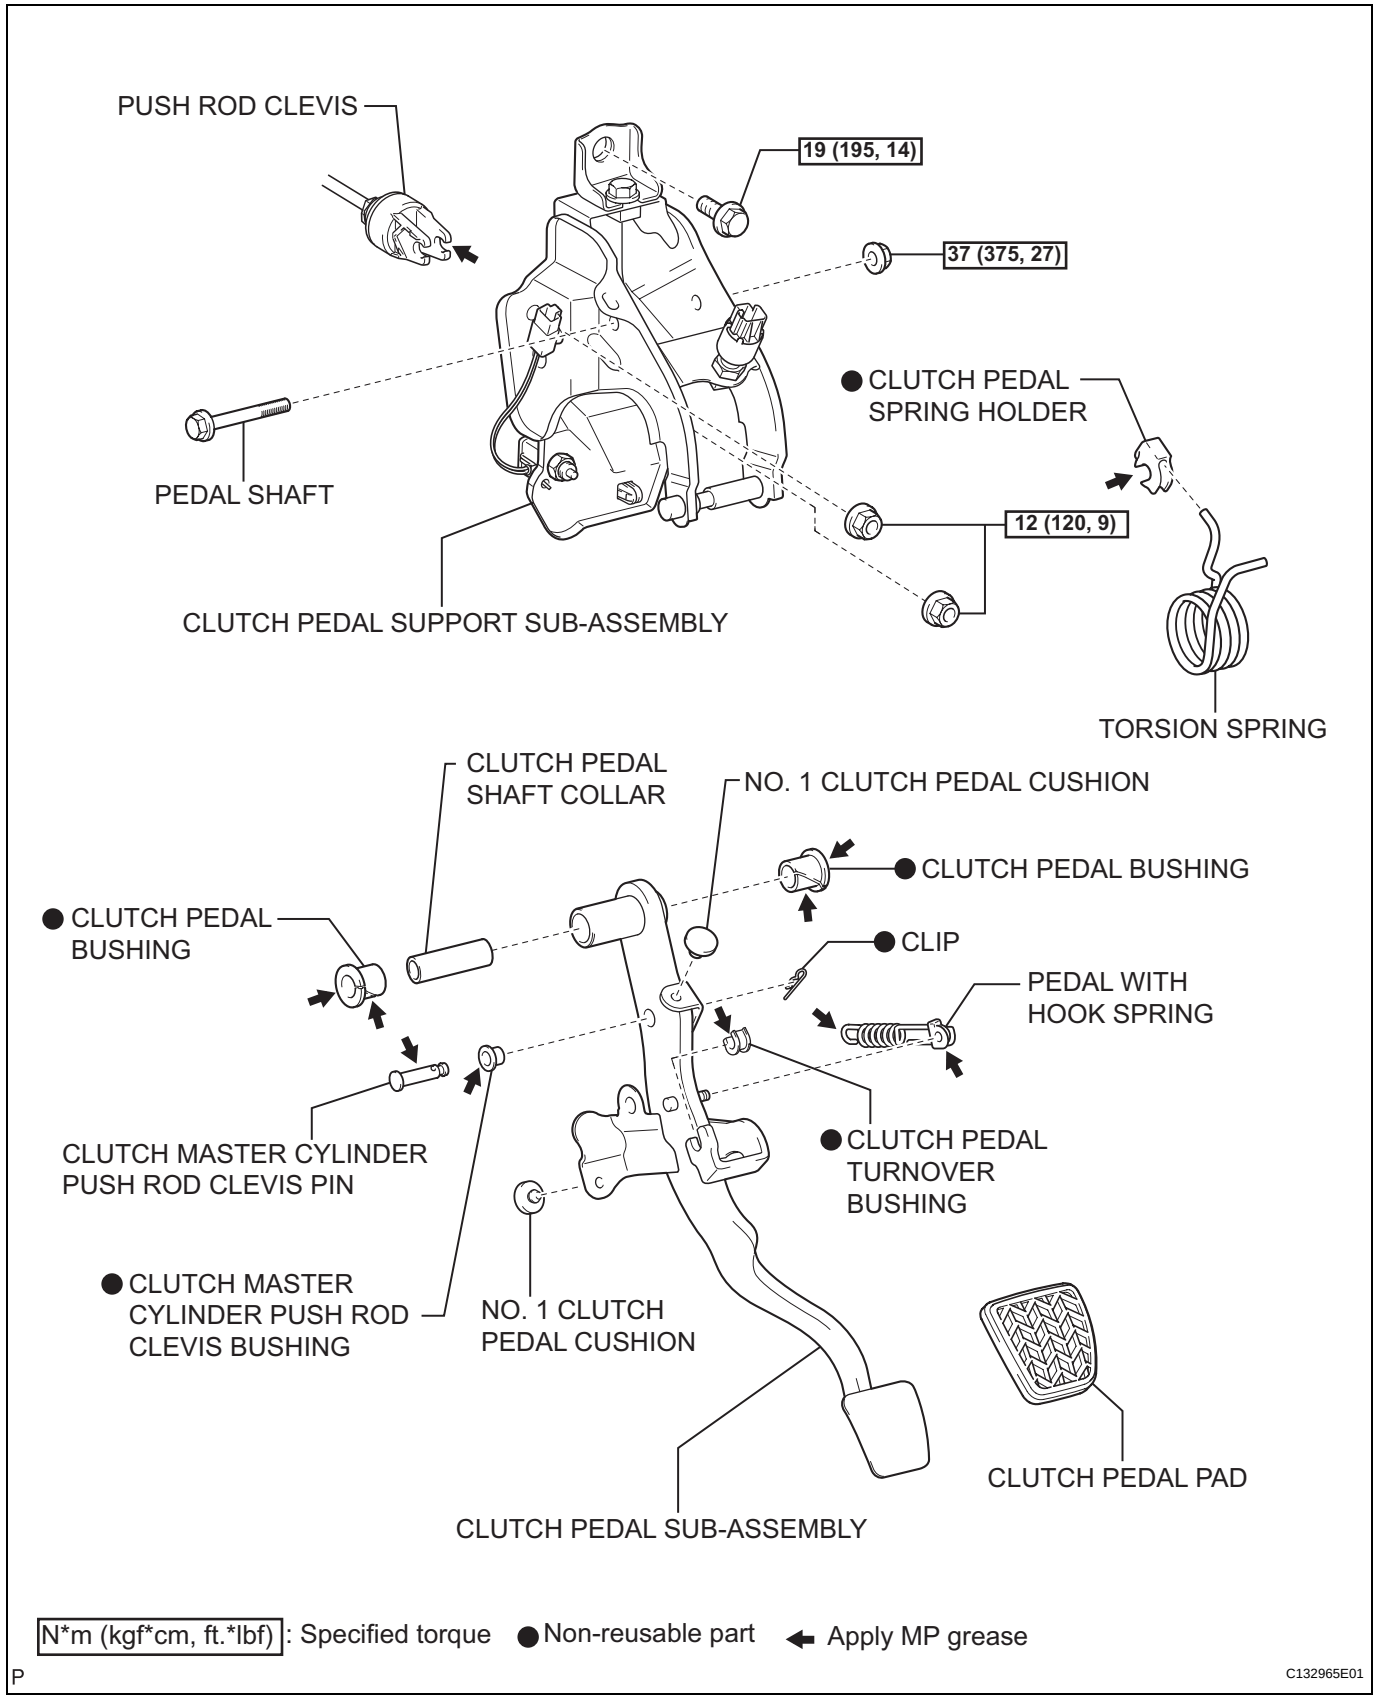
for TMMK Made:



P

C138372E02

CL



N*m (kgf*cm, ft.*lbf): Specified torque ● Non-reusable part ← Apply MP grease

P

C132965E01

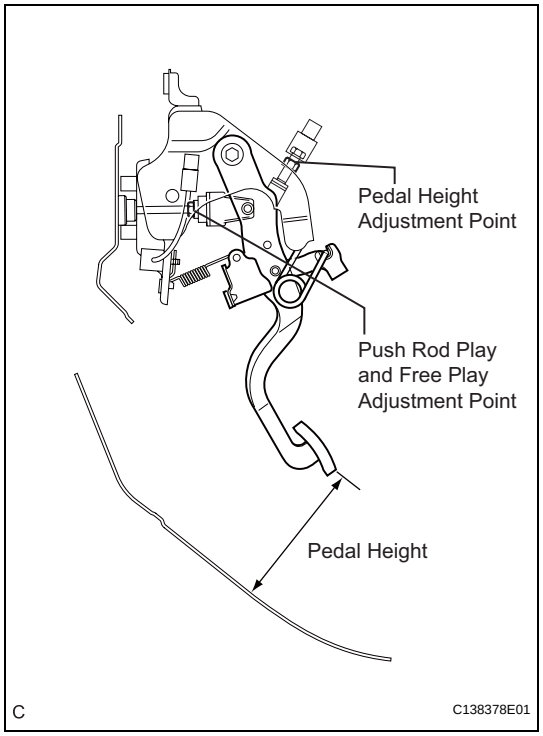
ON-VEHICLE INSPECTION

1. INSPECT AND ADJUST CLUTCH PEDAL HEIGHT

(a) Turn back the floor carpet.

(b) Check the pedal height.
Pedal height from asphalt sheet:
148.0 to 158.0 mm (5.8268 to 6.2205 in.)
If necessary, adjust the pedal height.

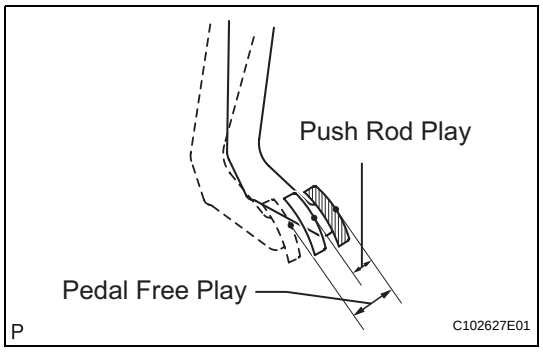
(c) Adjust the pedal height.
(1) Loosen the lock nut and turn the clutch switch until the height is correct. Tighten the lock nut.
Torque: 16 N*m (160 kgf*cm, 12 ft.*lbf)



2. INSPECT CLUTCH PEDAL FREE PLAY AND PUSH ROD PLAY

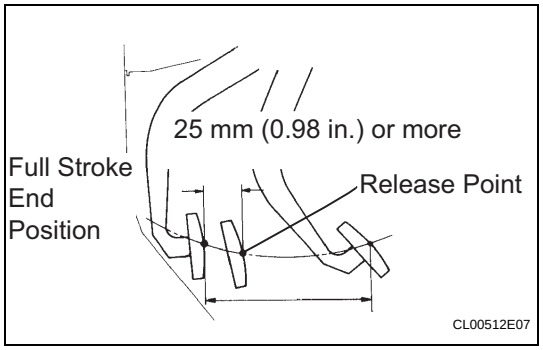
(a) Check that the pedal free play and push rod play are correct.
(1) Depress the pedal until clutch resistance is felt.
Pedal free play:
5.0 to 15.0 mm (0.197 to 0.591 in.)
(2) Gently depress the pedal until the resistance begins to increase a little.
Push rod play at pedal top:
1.0 to 5.0 mm (0.039 to 0.197 in.)

(b) Adjust the pedal free play and push rod play.
(1) Loosen the lock nut and turn the push rod until the free play and push rod play are correct.
(2) Tighten the lock nut.
Torque: 12 N*m (120 kgf*cm, 9 ft.*lbf)
(3) After adjusting the pedal free play, check the pedal height.



3. INSPECT CLUTCH RELEASE POINT

(a) Check the clutch release point.
(1) Pull the parking brake lever and install the wheel stopper.
(2) Start and idle the engine.
(3) Without depressing the clutch pedal, slowly move the shift lever to the reverse position until the gears are engaged.



(4) Gradually depress the clutch pedal and measure the stroke distance from the point that the gear noise stops (release point) to the full stroke end position.

Standard distance:

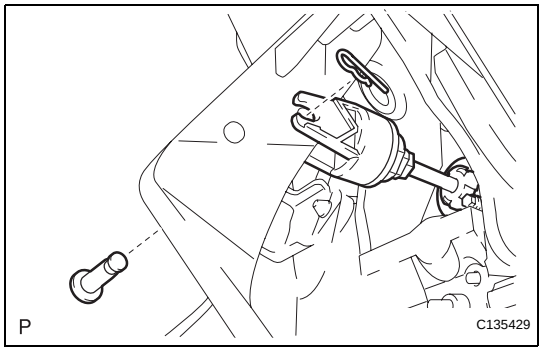
25 mm (0.98 in.) or more (From pedal stroke end position to release point)

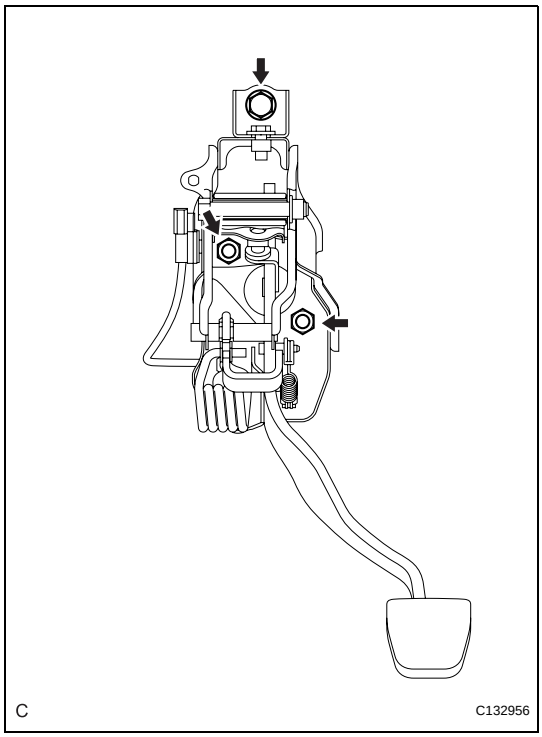
If the distance is not as specified, perform the following operations:

- Check the pedal height.
- Check push rod play and pedal free play.
- Bleed the clutch line.
- Check the clutch cover assembly and disc assembly.

REMOVAL

1. **PRECAUTION**
   See page IP-1.
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-24)**
4. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-25)**
5. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-20)**
6. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-21)**
7. **REMOVE NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-22)**
8. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/o Smart Key System) (See page IP-22)**
9. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/ Smart Key System) (See page IP-22)**
10. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page IP-22)**
11. **REMOVE COMBINATION METER ASSEMBLY (for TMC Made) (See page IP-23)**
12. **REMOVE COMBINATION METER ASSEMBLY (for TMMK Made) (See page IP-23)**
13. **DISCONNECT CONNECTORS**
    (a) Disconnect the clutch start switch connector.
    (b) Disconnect the clutch switch connector (with cruise control).
14. **REMOVE CLUTCH MASTER CYLINDER PUSH ROD CLEVIS PIN**
    (a) Remove the clip and pin.





15. REMOVE CLUTCH PEDAL SUPPORT SUB-ASSEMBLY

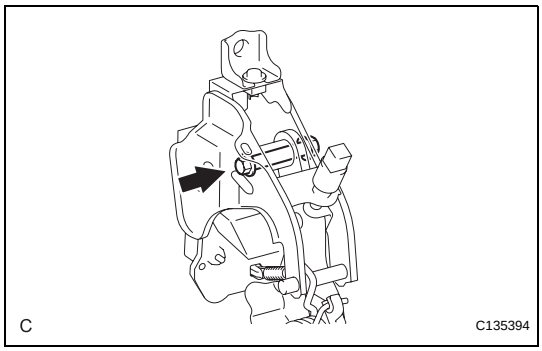
(a) Remove the bolt, 2 nuts and clutch pedal support assembly.

16. REMOVE TORSION SPRING

(a) While the clutch pedal is fully depressed, remove the torsion spring.

17. REMOVE PEDAL WITH HOOK SPRING

(a) Remove the pedal with hook spring.



18. REMOVE CLUTCH PEDAL SUB-ASSEMBLY

(a) Remove the pedal shaft and nut.

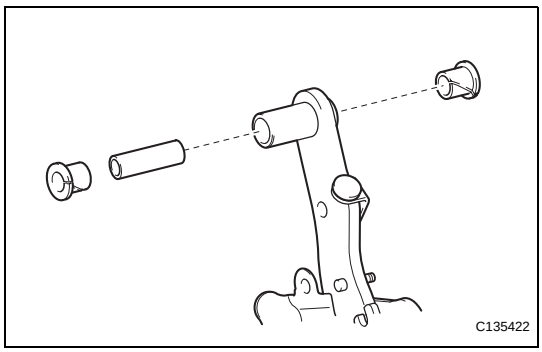
(b) Remove the clutch pedal from the clutch pedal support.

19. REMOVE CLUTCH PEDAL SPRING HOLDER

(a) Remove the clutch pedal spring holder from the clutch pedal support.

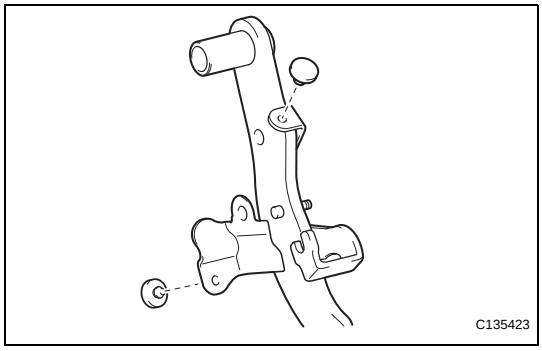
20. REMOVE CLUTCH PEDAL PAD

(a) Remove the clutch pedal pad from the clutch pedal.



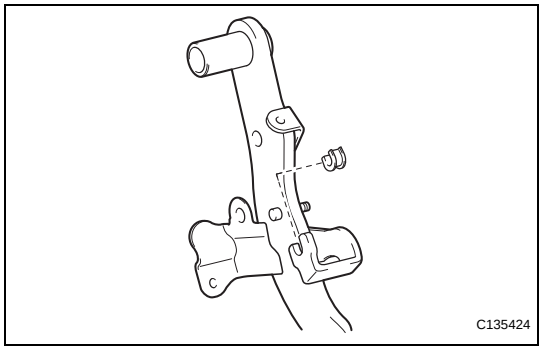
21. REMOVE CLUTCH PEDAL BUSHING

(a) Remove the 2 pedal bushings and pedal shaft collar from the clutch pedal.



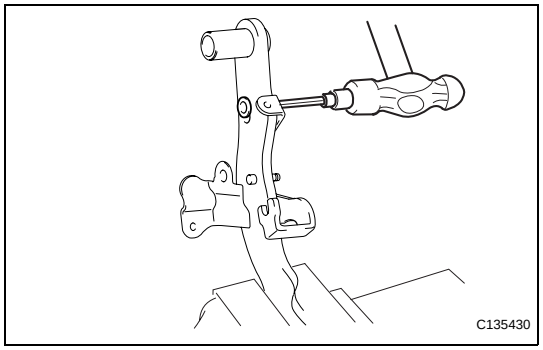
22. REMOVE NO. 1 CLUTCH PEDAL CUSHION

(a) Using needle-nose pliers, remove the 2 No. 1 clutch pedal cushions from the clutch pedal.



23. REMOVE CLUTCH PEDAL TURNOVER BUSHING

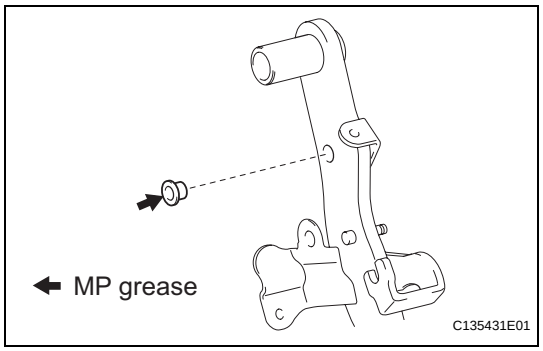
(a) Remove the turnover bushing from the clutch pedal.



24. REMOVE CLUTCH MASTER CYLINDER PUSH ROD CLEVIS BUSHING

(a) Using an 8 mm hexagon wrench and a hammer, remove the clevis bushing from the clutch pedal.

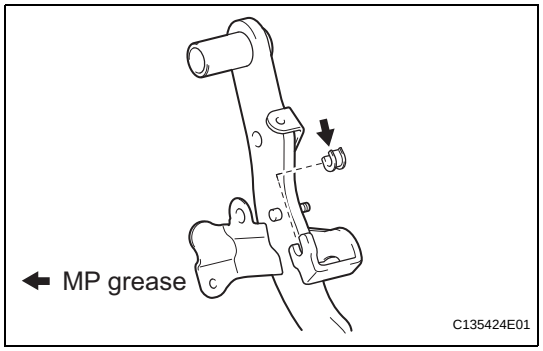
INSTALLATION



1. INSTALL CLUTCH MASTER CYLINDER PUSH ROD CLEVIS BUSHING

(a) Apply MP grease to the inside of a new clevis bushing.

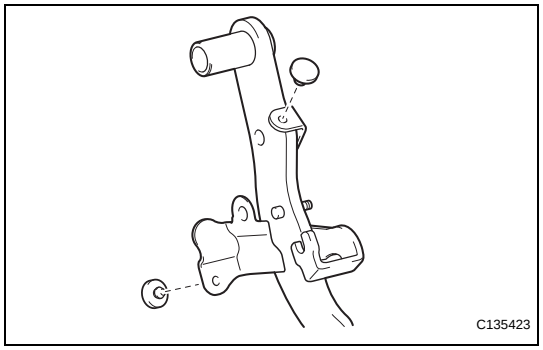
(b) Install the clevis bushing to the clutch pedal.
HINT:
Install the clevis bushing from the left side of the vehicle.



2. INSTALL CLUTCH PEDAL TURNOVER BUSHING

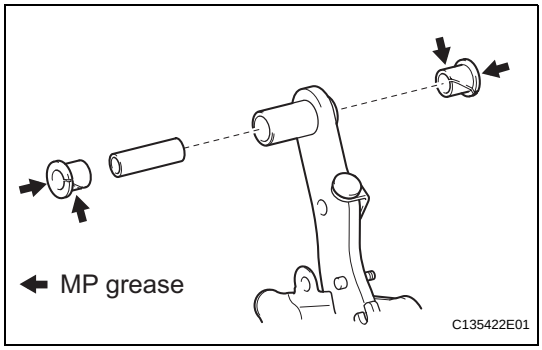
(a) Apply MP grease to the inside of the turnover bushing.

(b) Install the turnover bushing to the clutch pedal.



3. INSTALL NO. 1 CLUTCH PEDAL CUSHION

(a) Using needle-nose pliers, install the 2 No. 1 clutch pedal cushions to the clutch pedal.



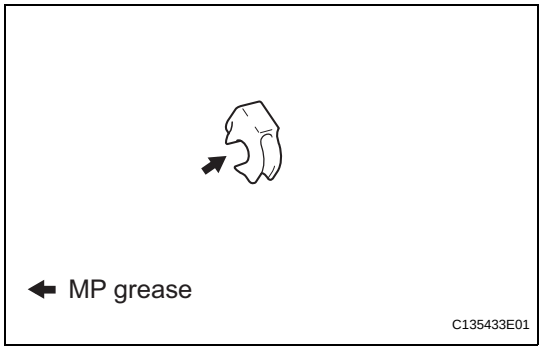
4. INSTALL CLUTCH PEDAL BUSHING

(a) Apply MP grease to the inner, outer and end surfaces of 2 new pedal bushings.

(b) Install the clutch pedal shaft collar and 2 pedal bushings to the clutch pedal.

5. INSTALL CLUTCH PEDAL PAD

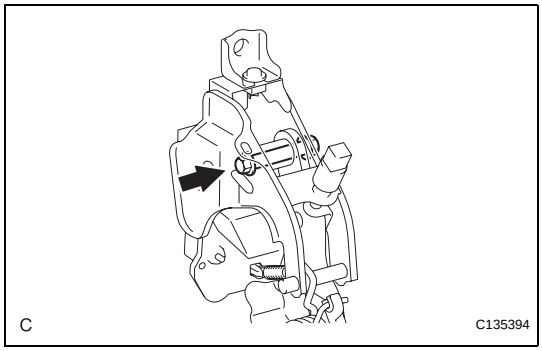
(a) Install the clutch pedal pad to the clutch pedal.



6. INSTALL CLUTCH PEDAL SPRING HOLDER

(a) Apply MP grease to the inside of a new clutch pedal spring holder.

(b) Install the clutch pedal spring holder.



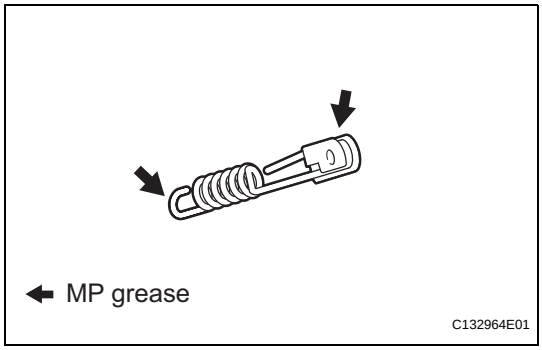
7. INSTALL CLUTCH PEDAL SUB-ASSEMBLY

(a) Install the clutch pedal to the clutch pedal support with the bolt and nut.

Torque: 37 N*m (375 kgf*cm, 27 ft.*lbf)

HINT:

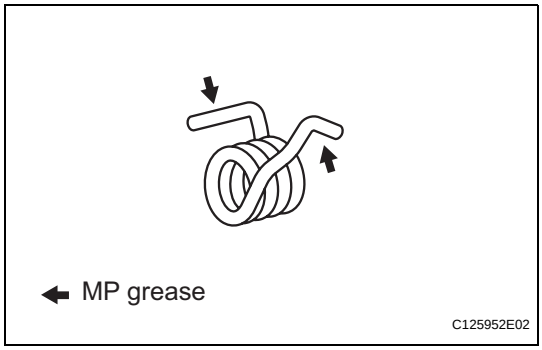
Install the bolt from the right side of the vehicle.



8. INSTALL PEDAL WITH HOOK SPRING

(a) Apply MP grease to the sliding portion of the spring.

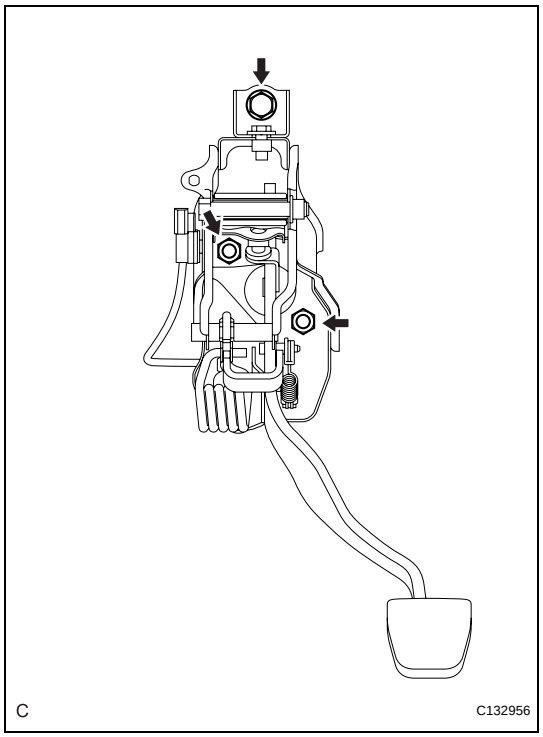
(b) Install the hook spring.



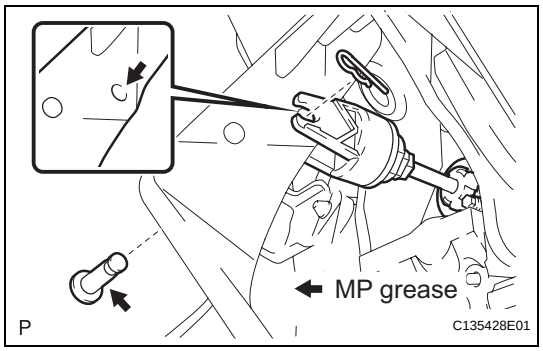
9. INSTALL TORSION SPRING

(a) Apply MP grease to the sliding portion of the spring.

(b) Install the torsion spring.



10. **INSTALL CLUTCH PEDAL SUPPORT SUB-ASSEMBLY**
    (a) Install the clutch pedal support to the vehicle with the 2 nuts and bolt.
    Torque: Bolt
    19 N*m (195 kgf*cm, 14 ft.*lbf)
    Nut
    12 N*m (120 kgf*cm, 9 ft.*lbf)



11. **INSTALL CLUTCH MASTER CYLINDER PUSH ROD CLEVIS PIN**
    (a) Apply MP grease to the contact surface of the pin and clevis bushing.
    (b) Connect the clevis to the clutch pedal with the pin and a new clip.
    HINT:
    Install the pin from the left side of the vehicle.

12. **CONNECT CONNECTORS**
    (a) Connect the clutch start switch connector.
    (b) Connect the clutch switch connector (with cruise control).

13. **INSTALL COMBINATION METER ASSEMBLY (for TMC Made) (See page IP-56)**

14. **INSTALL COMBINATION METER ASSEMBLY (for TMMK Made) (See page IP-56)**

15. **INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page IP-57)**

16. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (w/o Smart Key System) (See page IP-57)**

17. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (w/ Smart Key System) (See page IP-57)**

18. **INSTALL NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-57)**

19. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-58)**

20. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-59)**

21. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-54)**
22. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-54)**
23. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
24. **INSPECT AND ADJUST CLUTCH PEDAL SUB-ASSEMBLY**
    See page CL-4.

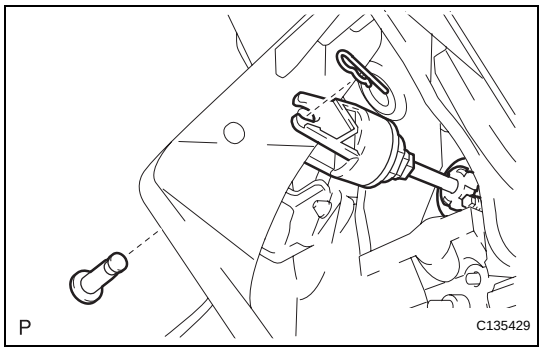
REMOVAL

1. **PRECAUTION**
   See page IP-1.
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **DRAIN BRAKE FLUID (See page BR-28)**
4. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-416)**
5. **REMOVE AIR CLEANER CASE SUB-ASSEMBLY (See page EM-95)**
6. **REMOVE WINDSHIELD WIPER ARM AND BLADE ASSEMBLY LH (See page WW-9)**
7. **REMOVE WINDSHIELD WIPER ARM AND BLADE ASSEMBLY RH (See page WW-9)**
8. **REMOVE FRONT FENDER TO COWL SIDE SEAL LH (See page WW-9)**
9. **REMOVE FRONT FENDER TO COWL SIDE SEAL RH (See page WW-9)**
10. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-10)**
11. **REMOVE WINDSHIELD WIPER LINK ASSEMBLY (See page WW-10)**
12. **REMOVE COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-424)**
13. **REMOVE BRAKE BOOSTER ASSEMBLY**
    See page BR-42.
14. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-24)**
15. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-25)**
16. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-20)**
17. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-21)**
18. **REMOVE NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-22)**
19. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/o Smart Key System) (See page IP-22)**
20. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/ Smart Key System) (See page IP-22)**
21. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page IP-22)**
22. **REMOVE COMBINATION METER ASSEMBLY (for TMC Made) (See page IP-23)**

23. REMOVE COMBINATION METER ASSEMBLY (for TMMK Made) (See page IP-23)



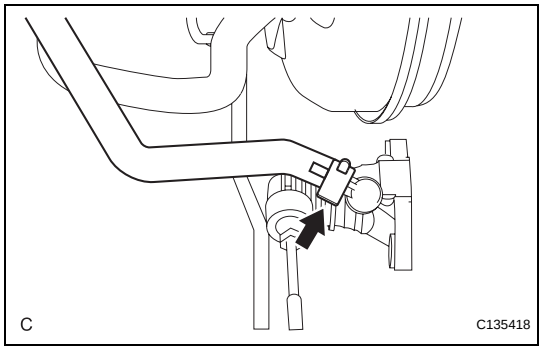
24. DISCONNECT CLUTCH MASTER CYLINDER PUSH ROD CLEVIS

(a) Remove the clip and pin, and disconnect the push rod clevis from the clutch pedal.

25. DRAIN BRAKE FLUID

NOTICE:

Wash brake fluid off immediately if it is spilled on any painted surface.

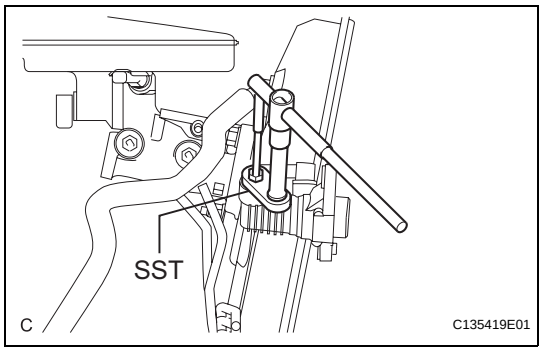


26. DISCONNECT CLUTCH RESERVOIR TUBE

(a) Using pliers, grip the claws of the clip and slide the clip to disconnect the tube from the clutch master cylinder.

HINT:

Use a container to catch the fluid.



27. DISCONNECT CLUTCH LINE

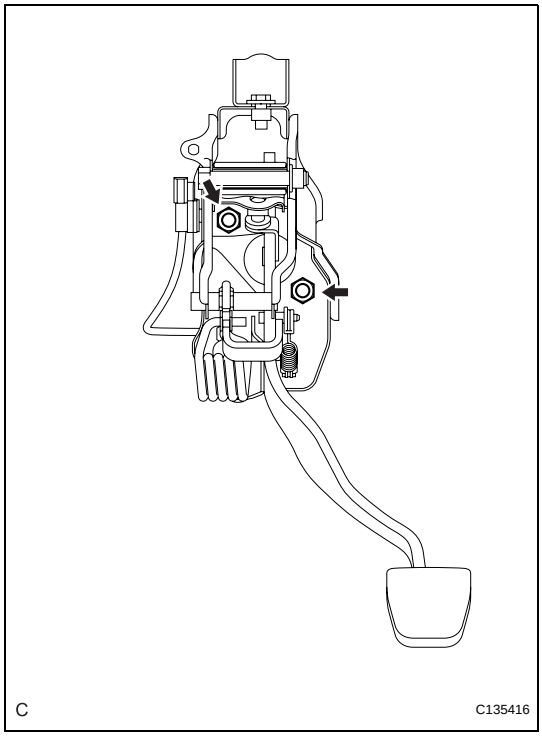
(a) Using SST, disconnect the clutch line.

SST 09023-00101

HINT:

Use a container to catch the fluid.

CL

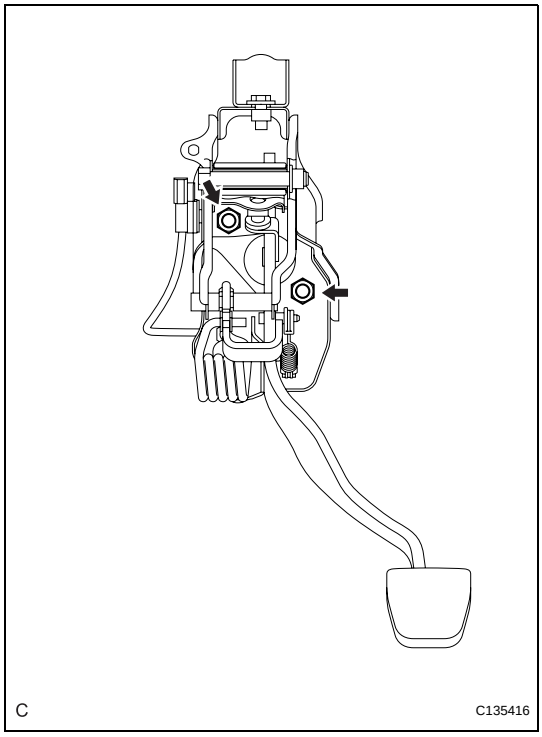


28. REMOVE CLUTCH MASTER CYLINDER ASSEMBLY

(a) Remove the 2 nuts and clutch master cylinder.

(b) Remove the gasket from the clutch master cylinder assembly.

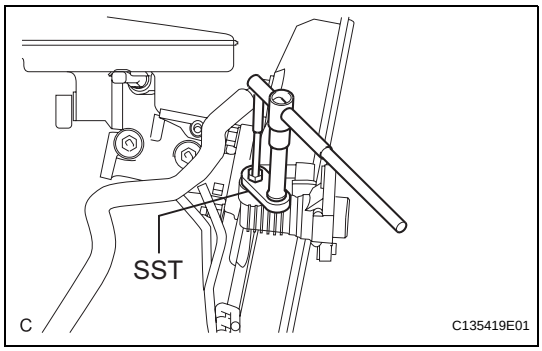
INSTALLATION



1. INSTALL CLUTCH MASTER CYLINDER ASSEMBLY

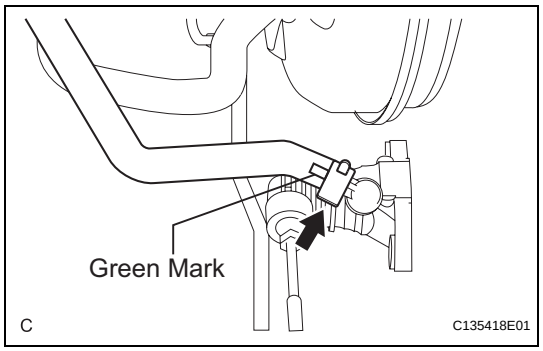
(a) Install a new gasket to the clutch master cylinder assembly.

(b) Install the clutch master cylinder with the 2 nuts.
Torque: 12 N*m (120 kgf*cm, 9 ft.*lbf)



2. CONNECT CLUTCH LINE

(a) Using SST, connect the clutch line.
SST 09023-00101
Torque: 15 N*m (155 kgf*cm, 11 ft.*lbf)

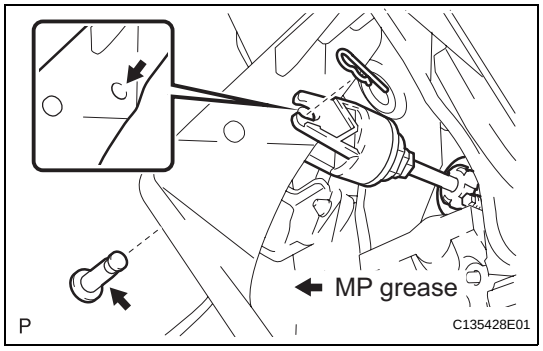


3. CONNECT CLUTCH RESERVOIR TUBE

(a) Connect the clutch reservoir tube to the clutch master cylinder with the clip.

NOTICE:

- **Connect the clutch reservoir tube so that it will not be twisted.**
- **Make sure that the green mark is positioned as shown in the illustration.**



4. CONNECT CLUTCH MASTER CYLINDER PUSH ROD CLEVIS

(a) Apply MP grease to the contact surface of the pin and clevis bushing.

(b) Connect the clevis to the clutch pedal with the pin and a new clip.

HINT:

Install the pin from the left side of the vehicle.

5. INSTALL BRAKE BOOSTER ASSEMBLY

See page BR-43.

6. INSTALL COMBINATION METER ASSEMBLY (for TMC Made) (See page IP-56)

7. INSTALL COMBINATION METER ASSEMBLY (for TMMK Made) (See page IP-56)

8. INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page IP-57)

9. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (w/o Smart Key System) (See page IP-57)

10. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (w/ Smart Key System) (See page IP-57)

11. INSTALL NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-57)

12. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-58)

13. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-59)

14. INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-54)

15. INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-54)

16. INSTALL COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-426)

17. INSTALL WINDSHIELD WIPER LINK ASSEMBLY (See page WW-14)

18. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-15)

19. **INSTALL FRONT FENDER TO COWL SIDE SEAL LH (See page WW-15)**
20. **INSTALL FRONT FENDER TO COWL SIDE SEAL RH (See page WW-15)**
21. **INSTALL WINDSHIELD WIPER ARM AND BLADE ASSEMBLY LH (See page WW-15)**
22. **INSTALL WINDSHIELD WIPER ARM AND BLADE ASSEMBLY RH (See page WW-16)**
23. **INSTALL AIR CLEANER CASE SUB-ASSEMBLY (See page EM-120)**
24. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-419)**
25. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
26. **BLEED CLUTCH PIPE LINE**
    (a) Fill the brake reservoir with brake fluid and bleed the clutch system.
    Torque: 8.3 N*m (85 kgf*cm, 74 in.*lbf)
27. **CHECK BRAKE FLUID**
    (a) Check the brake fluid (See page BR-6).
    HINT:
    - Check for leakage in the brake system.
    - Check for leakage in the clutch system.
28. **CHECK FLUID LEVEL IN RESERVOIR (See page BR-6)**
29. **INSPECT AND ADJUST CLUTCH PEDAL SUB-ASSEMBLY**
    See page CL-4.

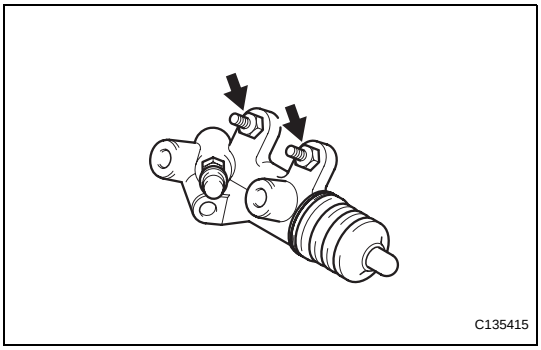
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE AIR CLEANER INLET ASSEMBLY (See page EM-94)**
3. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-416)**
4. **REMOVE AIR CLEANER CASE SUB-ASSEMBLY (See page EM-95)**
5. **REMOVE CLUTCH ACCUMULATOR BRACKET (See page CL-28)**
6. **REMOVE RELEASE CYLINDER HEAT INSULATOR (See page CL-28)**
7. **DISCONNECT CLUTCH LINE (See page CL-28)**
8. **REMOVE CLUTCH ACCUMULATOR ASSEMBLY (See page CL-28)**
9. **REMOVE CLUTCH RELEASE CYLINDER ASSEMBLY**
   (a) Remove the 2 bolts and clutch release cylinder assembly.



DISASSEMBLY

1. REMOVE CLUTCH RELEASE CYLINDER KIT

(a) Remove the boot from the cylinder body.
(b) Remove the push rod from the cylinder body.
(c) Remove the piston from the cylinder body.
NOTICE:
Be careful not to damage the inside of the cylinder body.
(d) Remove the spring from the cylinder body.
(e) Remove the bleeder plug cap from the bleeder plug.

2. REMOVE RELEASE CYLINDER BLEEDER PLUG

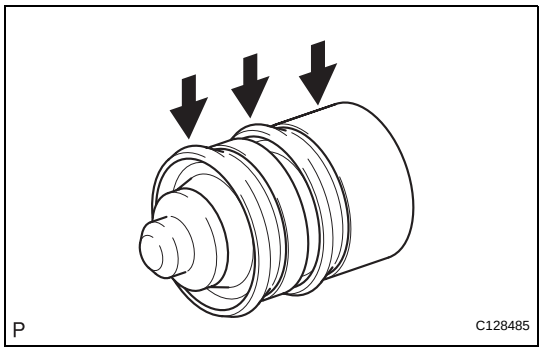
(a) Remove the bleeder plug from the cylinder body.

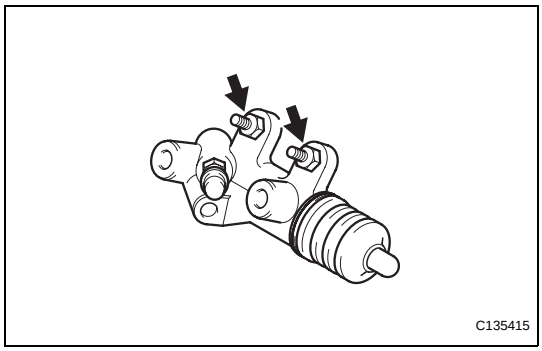
CL

REASSEMBLY

1. **INSTALL RELEASE CYLINDER BLEEDER PLUG**
   (a) Install the bleeder plug to the cylinder body.
   Torque: 8.3 N*m (85 kgf*cm, 73 in.*lbf)

2. **INSTALL CLUTCH RELEASE CYLINDER KIT**
   (a) Install the bleeder plug cap to the bleeder plug.
   (b) Install a new spring to the cylinder body.
   (c) Coat the piston with lithium soap base glycol grease as shown in the illustration.
   (d) Install the piston to the cylinder body.
   NOTICE:
   Be careful not to damage the inside of the cylinder body.
   (e) Install the push rod to the cylinder body.
   (f) Install the boot to the cylinder body.





INSTALLATION

1. **INSTALL CLUTCH RELEASE CYLINDER ASSEMBLY**
   (a) Install the clutch release cylinder and clutch line bracket with the 2 bolts.
   Torque: 12 N*m (120 kgf*cm, 9 ft.*lbf)

2. **INSTALL CLUTCH ACCUMULATOR ASSEMBLY (See page CL-29)**

3. **CONNECT CLUTCH LINE (See page CL-29)**

4. **INSTALL RELEASE CYLINDER HEAT INSULATOR (See page CL-29)**

5. **INSTALL CLUTCH ACCUMULATOR BRACKET (See page CL-29)**

6. **BLEED CLUTCH LINE**
   (a) Fill the brake reservoir with brake fluid and bleed the clutch system.
   Torque: 8.3 N*m (85 kgf*cm, 74 in.*lbf)

7. **CHECK FOR BRAKE FLUID LEAKAGE**
   HINT:
   Check for leakage in the clutch system.

8. **INSTALL AIR CLEANER CASE SUB-ASSEMBLY (See page EM-120)**

9. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-419)**

10. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-120)**

11. **CHECK FLUID LEVEL IN RESERVOIR**

12. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

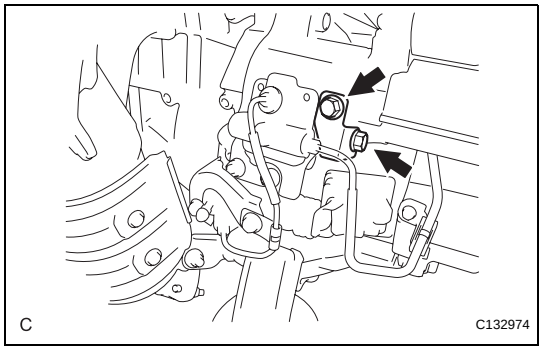
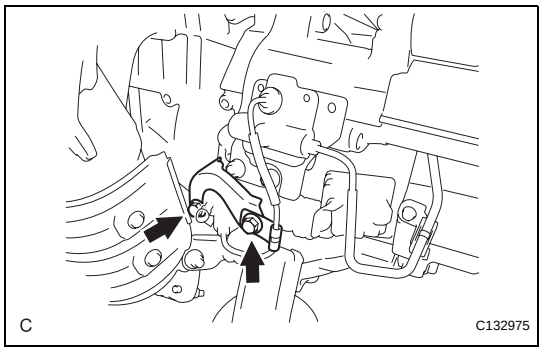
REMOVAL

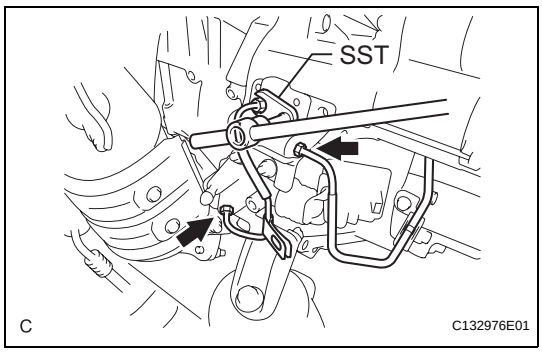
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE AIR CLEANER INLET ASSEMBLY (See page EM-94)**
3. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-416)**
4. **REMOVE AIR CLEANER CASE SUB-ASSEMBLY (See page EM-95)**
5. **REMOVE CLUTCH ACCUMULATOR BRACKET**
   (a) Remove the 2 bolts and clutch accumulator bracket.



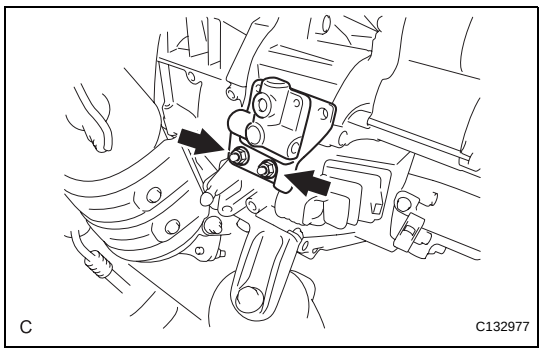
6. **REMOVE RELEASE CYLINDER HEAT INSULATOR**
   (a) Remove the 2 bolts and release cylinder heat insulator.

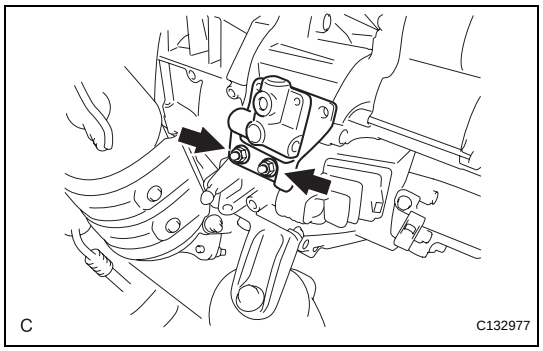


7. **DISCONNECT CLUTCH LINE**
   (a) Using SST, disconnect the clutch lines.
   SST 09023-00101
   HINT:
   Use a container to catch the fluid.



8. **REMOVE CLUTCH ACCUMULATOR ASSEMBLY**
   (a) Remove the 2 nuts and clutch accumulator assembly.



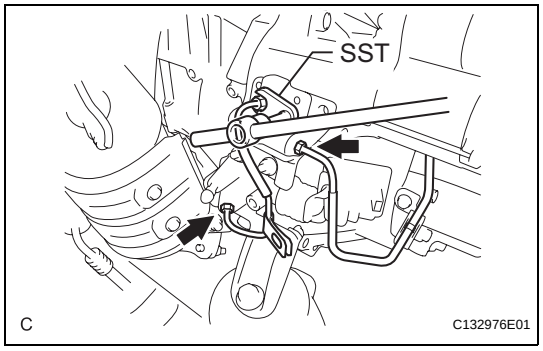


INSTALLATION

1. INSTALL CLUTCH ACCUMULATOR ASSEMBLY

(a) Install the clutch accumulator assembly with the 2 nuts.

Torque: 12 N*m (120 kgf*cm, 9 ft.*lbf)

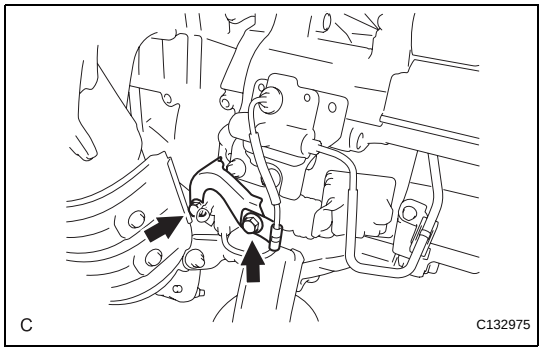


2. CONNECT CLUTCH LINE

(a) Using SST, connect the clutch lines to the clutch accumulator assembly.

SST 09023-00101

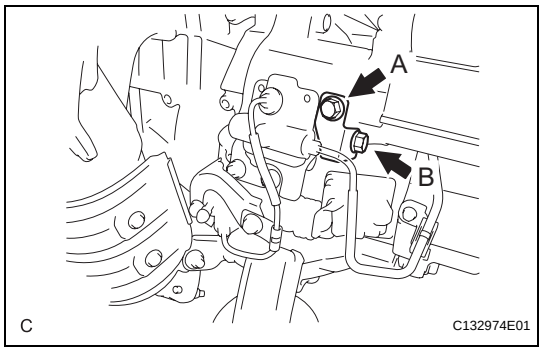
Torque: 15 N*m (155 kgf*cm, 11 ft.*lbf)



3. INSTALL RELEASE CYLINDER HEAT INSULATOR

(a) Install the release cylinder heat insulator with the 2 bolts.

Torque: 12 N*m (120 kgf*cm, 9 ft.*lbf)



4. INSTALL CLUTCH ACCUMULATOR BRACKET

(a) Install the clutch accumulator bracket with the 2 bolts.

Torque: Bolt A
12 N*m (120 kgf*cm, 9 ft.*lbf)
Bolt B
37 N*m (380 kgf*cm, 28 ft.*lbf)

5. BLEED CLUTCH PIPE LINE

(a) Fill the brake reservoir with brake fluid and bleed the clutch system.

Torque: 8.4 N*m (86 kgf*cm, 74 in.*lbf)

6. CHECK FOR BRAKE FLUID LEAKAGE

HINT:
Check for leakage in the clutch system.

7. INSTALL AIR CLEANER CASE SUB-ASSEMBLY (See page EM-120)

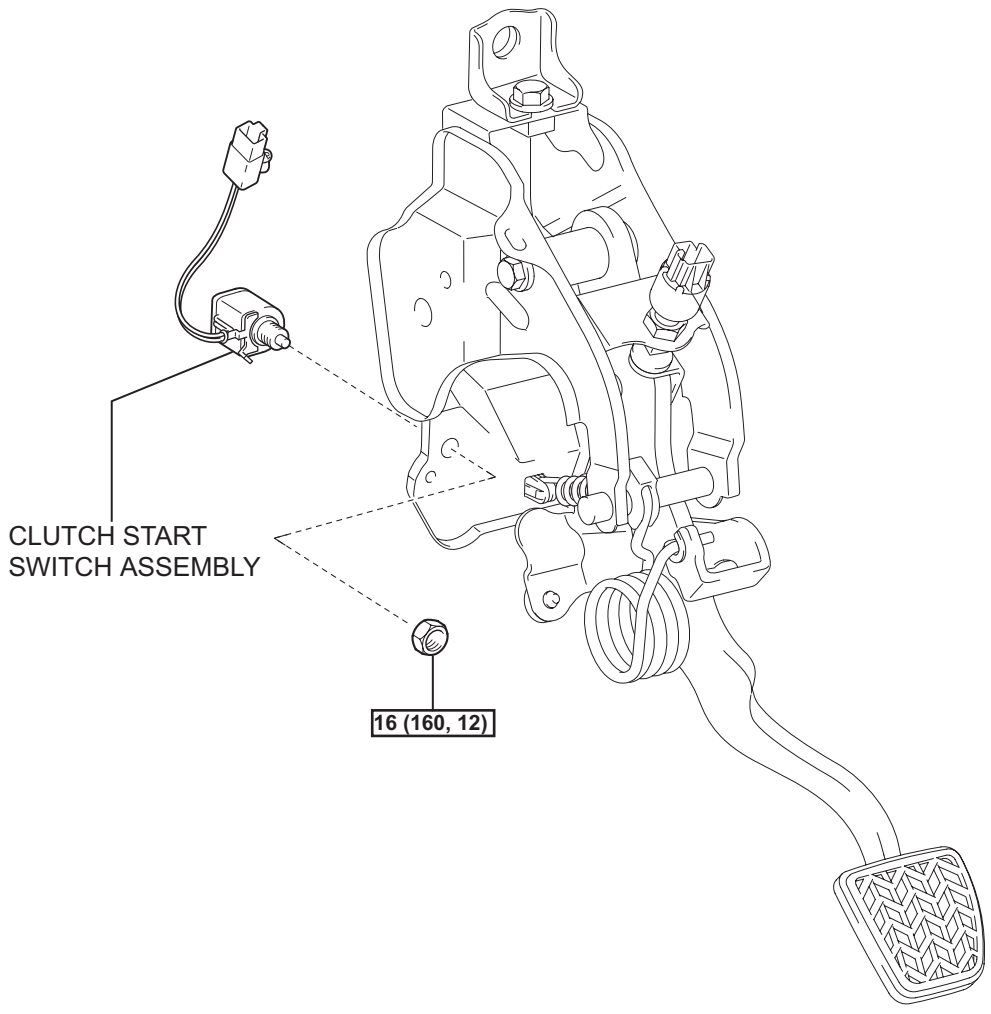
8. INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-419)

9. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-120)**
10. **CHECK BRAKE FLUID LEVEL IN RESERVOIR**
11. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

CLUTCH START SWITCH

COMPONENTS

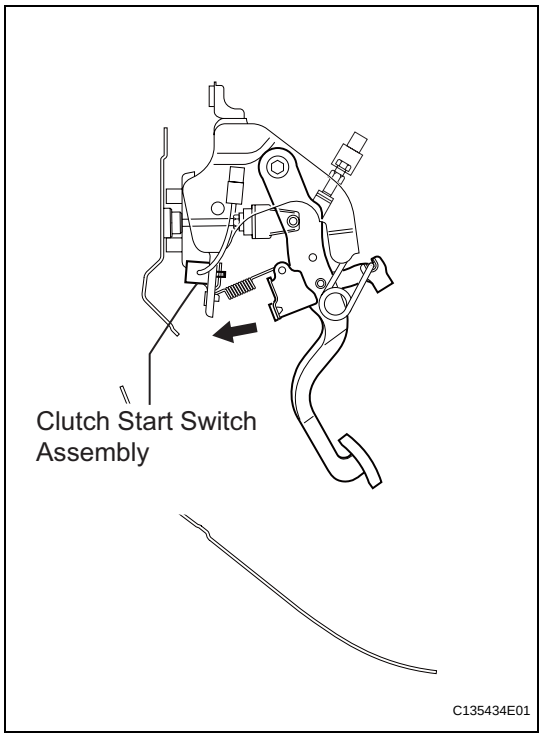
CL



N*m (kgf*cm, ft.*lbf): Specified torque

P

C135420E01



ON-VEHICLE INSPECTION

1. INSPECT CLUTCH START SWITCH ASSEMBLY

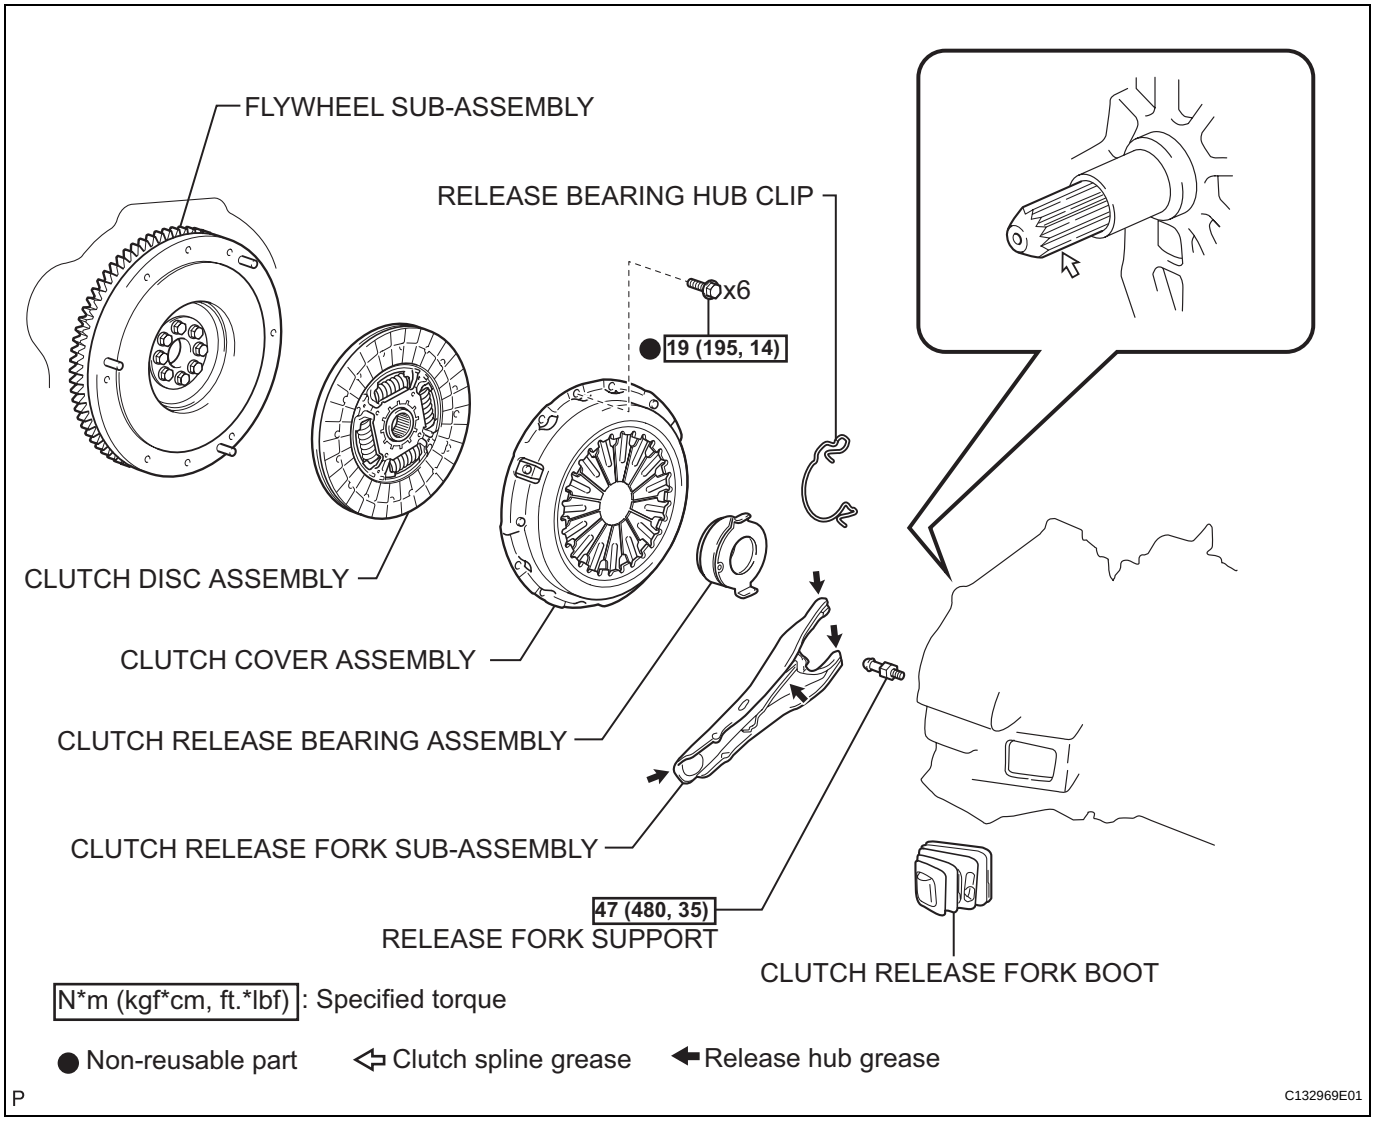
(a) Check that the engine does not start when the clutch pedal is released.

(b) Check that the engine starts when the clutch pedal is fully depressed.

If necessary, replace the clutch start switch assembly.

CLUTCH UNIT

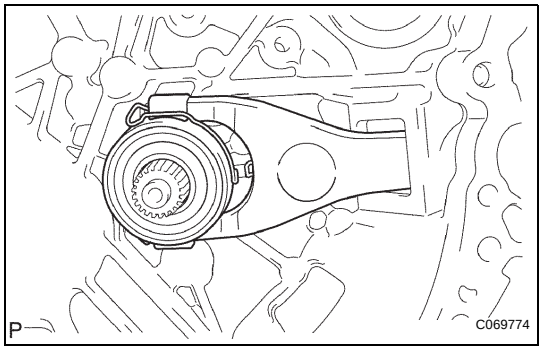
COMPONENTS



CL

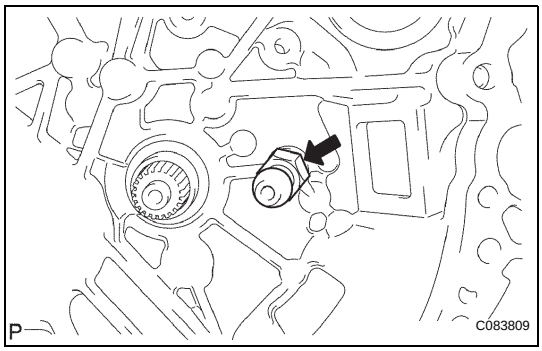
DISASSEMBLY

1. **REMOVE MANUAL TRANSAXLE ASSEMBLY**
   See page MX-24.



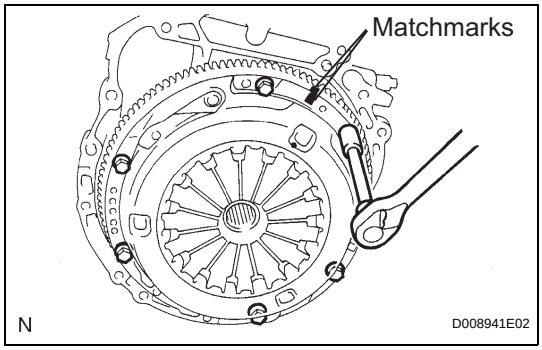
2. **REMOVE CLUTCH RELEASE FORK SUB-ASSEMBLY**
   (a) Remove the clutch release fork with the clutch release bearing from the transaxle assembly.

3. **REMOVE CLUTCH RELEASE BEARING ASSEMBLY**
   (a) Remove the release bearing hub clip and clutch release bearing assembly from the clutch release fork.



4. **REMOVE RELEASE FORK SUPPORT**
   (a) Remove the release fork support from the manual transaxle assembly.

5. **REMOVE CLUTCH RELEASE FORK BOOT**

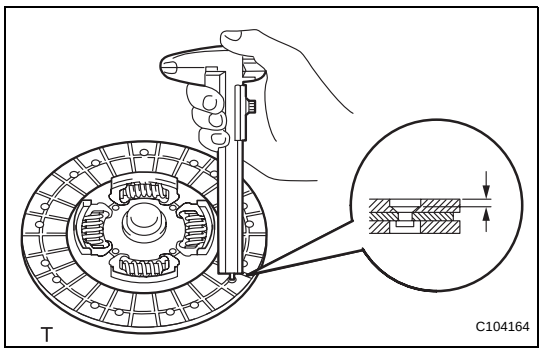


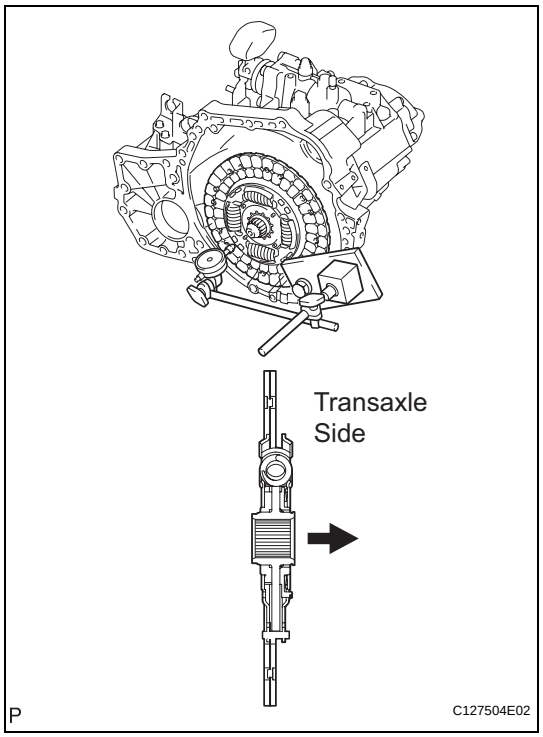
6. **REMOVE CLUTCH COVER ASSEMBLY**
   (a) Put matchmarks on the clutch cover assembly and flywheel sub-assembly.
   (b) Loosen the 6 bolts one turn at a time until spring tension is released.
   (c) Remove the 6 bolts and pull off the clutch cover assembly.
   NOTICE:
   Do not drop the clutch disc assembly.

7. **REMOVE CLUTCH DISC ASSEMBLY**
   NOTICE:
   Keep the lining part of the clutch disc assembly, the pressure plate and surface of the flywheel sub-assembly away from oil and foreign matter.

INSPECTION

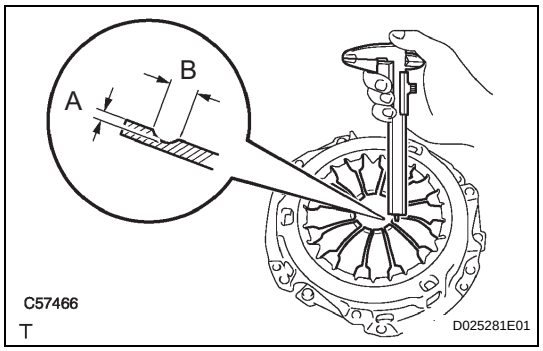
1. **INSPECT CLUTCH DISC ASSEMBLY**
   (a) Using vernier calipers, measure the rivet head depth.
   Minimum rivet depth:
   0.3 mm (0.012 in.)
   If necessary, replace the clutch disc assembly.





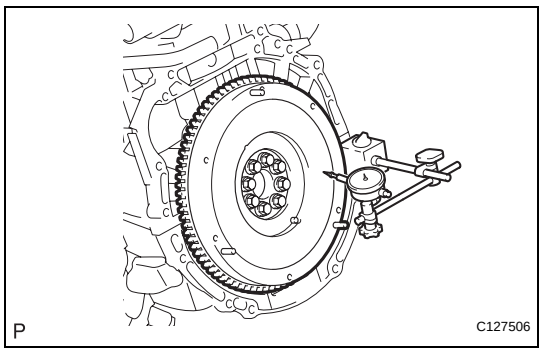
(b) Install the clutch disc assembly to the transaxle assembly.
NOTICE:
Take care not to insert the clutch disc assembly in the wrong direction.

(c) Using a dial indicator with a roller instrument, measure the clutch disc assembly runout.
Maximum runout:
0.8 mm (0.031 in.)
If necessary, replace the clutch disc assembly.



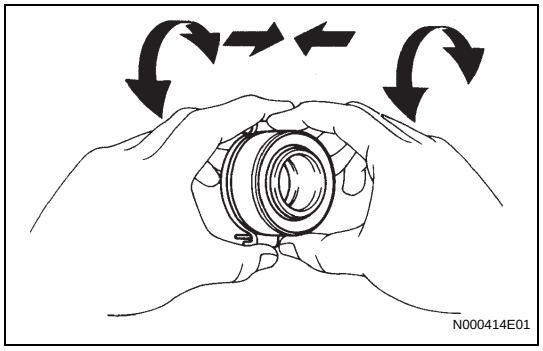
2. INSPECT CLUTCH COVER ASSEMBLY

(a) Using vernier calipers, inspect the diaphragm spring for depth and width of wear.
Maximum:
A (Depth):
0.5 mm (0.020 in.)
B (Width):
6.0 mm (0.236 in.)
If necessary, replace the clutch cover assembly.



3. INSPECT FLYWHEEL SUB-ASSEMBLY

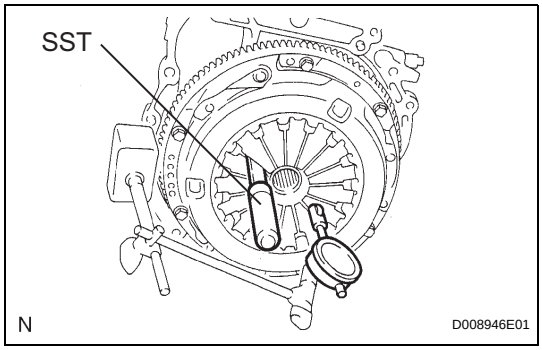
(a) Using a dial indicator, measure the flywheel runout.
Maximum runout:
0.1 mm (0.004 in.)
If necessary, replace the flywheel sub-assembly.



4. INSPECT CLUTCH RELEASE BEARING ASSEMBLY

(a) Check that the bearing moves smoothly without abnormal resistance by turning the sliding parts of the bearing (contact surfaces with the clutch cover) while applying force in the axial direction.

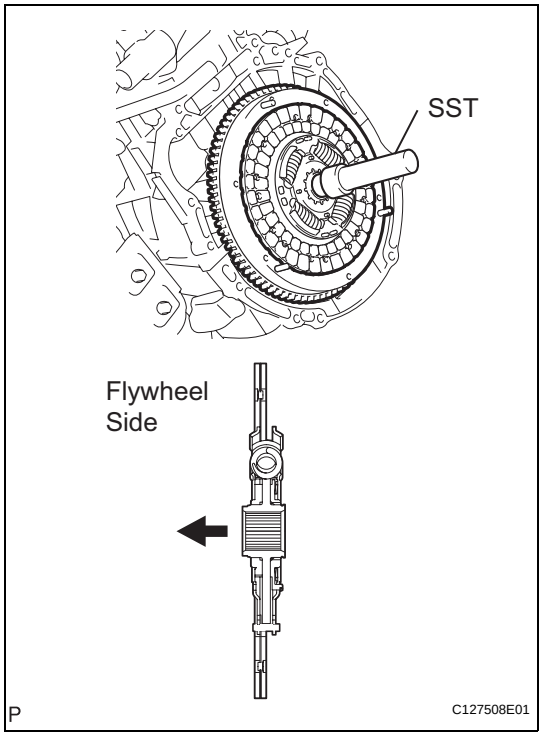
(b) Inspect the bearing for damage or wear. If necessary, replace the release bearing assembly.



5. INSPECT AND ADJUST CLUTCH COVER ASSEMBLY

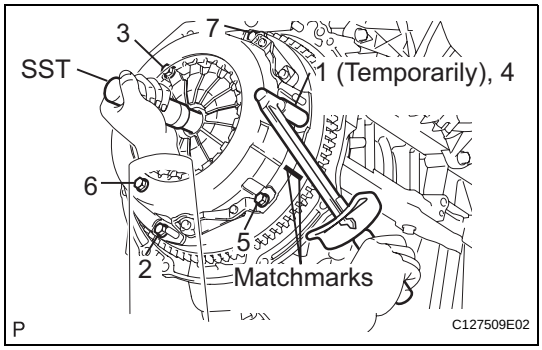
(a) Using a dial indicator with a roller instrument, check the diaphragm spring tip alignment.
Maximum variation:
0.5 mm (0.020 in.)
If alignment is not as specified, adjust the diaphragm spring tip alignment with SST.
SST 09333-00013

REASSEMBLY



1. INSTALL CLUTCH DISC ASSEMBLY

(a) Insert SST into the clutch disc assembly, then insert them into the flywheel sub-assembly.
SST 09301-00220
NOTICE:
Take care not to insert the clutch disc assembly in the wrong direction.

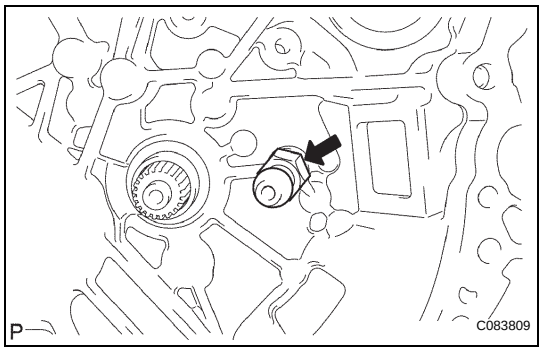


2. REMOVE AND INSTALL CLUTCH COVER ASSEMBLY

(a) Align the matchmarks on the clutch cover assembly with the one on the flywheel sub-assembly.

(b) Following the procedures shown in the illustration, tighten the 6 bolts in order, starting with the bolt located near the knock pin on the top.
Torque: 19 N*m (195 kgf*cm, 14 ft.*lbf)
HINT:
- Following the order in the illustration, evenly tighten the bolts one turn at a time.
- Lightly move SST up and down, and right and left after checking that the disc is in the center to tighten the bolts.

SST 09301-00210

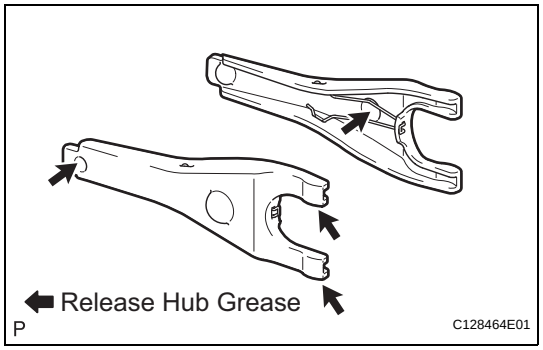


3. INSTALL RELEASE FORK SUPPORT

(a) Install the release fork support to the manual transaxle assembly.
Torque: 47 N*m (480 kgf*cm, 35 ft.*lbf)

4. INSTALL RELEASE BEARING HUB CLIP

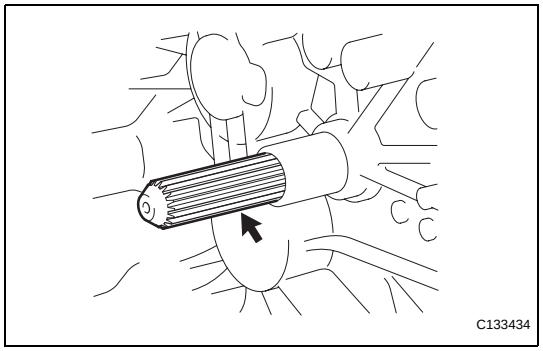
(a) Install the release bearing hub clip to the release bearing assembly.



5. INSTALL CLUTCH RELEASE FORK SUB-ASSEMBLY

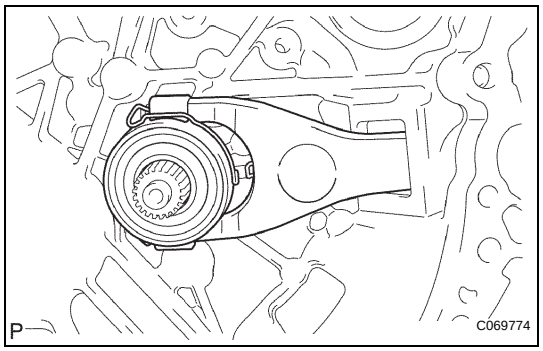
(a) Apply release hub grease to the contact surfaces between the release fork and release bearing, fork and push rod, and fork and fork support.
Sealant:
Part No. 08887-01806, RELEASE HUB GREASE or equivalent

(b) Install the release fork to the release bearing assembly.



6. INSTALL CLUTCH RELEASE BEARING ASSEMBLY

(a) Apply clutch spline grease to the input shaft spline as shown in the illustration.
Sealant:
Part No. 08887-01706, CLUTCH SPLINE GREASE or equivalent

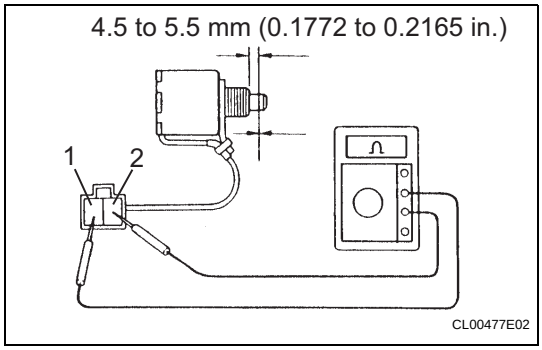


(b) Install the release fork with the release bearing assembly to the manual transaxle assembly.
NOTICE:
After installation, move the fork back and forth to check that the release bearing slides smoothly.

7. INSTALL CLUTCH RELEASE FORK BOOT

8. INSTALL MANUAL TRANSAXLE ASSEMBLY
See page MX-27.

CL



REMOVAL

1. REMOVE CLUTCH START SWITCH ASSEMBLY

(a) Disconnect the clutch start switch assembly connector.

(b) Remove the nut and clutch start switch assembly from the clutch pedal support.

INSPECTION

1. INSPECT CLUTCH START SWITCH ASSEMBLY

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminal connection	Switch position	Condition
1 - 2	ON (pushed)	Below 1 Ω
1 - 2	OFF (free)	10 kΩ or higher

INSTALLATION

1. **INSTALL CLUTCH START SWITCH ASSEMBLY**
   (a) Install the clutch start switch assembly with the nut.
   Torque: 16 N*m (160 kgf*cm, 12 ft.*lbf)
   (b) Connect the clutch start switch assembly connector.

2. **INSPECT CLUTCH START SWITCH ASSEMBLY**
   See page CL-37.

CRUISE CONTROL SYSTEM

PRECAUTION

1. EXPRESSIONS OF IGNITION SWITCH

(a) The type of ignition switch used on this model differs according to the specifications of the vehicle.

Switch Type		Ignition Switch (position)	Engine Switch (condition)
Expression	Ignition switch off	LOCK	Off
	Ignition switch on (IG)	ON	On (IG)
	Ignition switch on (ACC)	ACC	On (ACC)
	Engine start	START	Start

2. HANDLING PRECAUTION FOR CRUISE CONTROL SYSTEM

(a) Turn the cruise control main switch off when not using the cruise control system.

(b) Be careful as the vehicle speed increases when driving downhill with the cruise control system on.

(c) The + (ACCEL)/RES (RESUME) operation changes according to the cruise control system status. When the cruise control system is operating, the + (ACCEL) function operates. When the cruise control system is not operating, the RES (RESUME) function operates.

(d) If the CRUISE main indicator light blinks while the cruise control system is operating, turn the cruise control main switch off to reset the cruise control system. After the reset, if the cruise control main switch cannot be turned on, or the cruise control system is canceled immediately after turning the cruise control main switch on, the system may have a malfunction.

(e) Do not use the cruise control system where the road conditions are as follows:

- Heavy traffic
- Steep decline
- Roads with sharp turns
- Icy or snowy roads
- Slippery roads

ECM	Combination Meter ECU	CRUISE main indicator operation signal	CAN

SYSTEM DESCRIPTION

1. CRUISE CONTROL SYSTEM

This system is controlled by the ECM, and is activated by the throttle position sensor and motor. The ECM controls the following functions: ON-OFF, - (COAST)/SET, + (ACCEL)/RES (RESUME), CANCEL, vehicle speed operation, motor output control, and overdrive control.

- The ECM compares the driving vehicle speed from the speed sensor with the stored vehicle speed set through the cruise control main switch. The ECM instructs the throttle valve motor of the throttle body assembly to close the valve when the driving speed is greater than the stored speed, and instructs it to open the valve when the driving speed is less than the stored speed.
- The ECM receives signals such as ON-OFF, - (COAST)/SET, + (ACCEL)/RES (RESUME), and CANCEL from the cruise control main switch and executes the command.
- The ECM illuminates the combination meter's CRUISE main indicator light when it receives a cruise control main switch ON signal.
- The ECM cancels the cruise control system when the brake pedal is depressed and the ECM receives a stop light switch signal.
- The ECM cancels the cruise control system when the shift lever is moved from the D to the N position or the transmission is shifted to the 3rd, 2nd, or 1st gear with the shift lever in the S position, and the ECM receives a park/neutral position switch signal.
- The ECM cancels the cruise control system when the clutch pedal is depressed and the ECM receives a clutch switch signal.

2. LIMIT CONTROL

(a) Low speed limit

The lowest possible limit of the speed setting range is set at approximately 40 km/h (25 mph). The cruise control system cannot be set when the driving vehicle speed is below the low speed limit. Cruise control operation will be automatically canceled but the stored vehicle speed will be retained when the vehicle speed drops below the low speed limit 40 km/h (25 mph) while the cruise control is in operation.

(b) High speed limit

The highest possible limit of the speed setting range is set at approximately 200 km/h (125 mph). The cruise control system cannot be set when the driving vehicle speed is over the high speed limit. Also, + (ACCEL)/RES (RESUME) cannot be used to increase speed beyond the high speed limit.

3. OPERATION OF CRUISE CONTROL

The cruise control main switch operates 7 functions: SET, - (COAST), TAP-DOWN, RES (RESUME), + (ACCEL), TAP-UP, and CANCEL. The SET, TAP-DOWN, and - (COAST) functions, and the RES (RESUME), TAP-UP, and + (ACCEL) functions are operated with the same switch. The cruise control main switch is an automatic return type switch which turns on only while operating it in the direction of each arrow and turns off after releasing it.

(a) SET CONTROL

The vehicle speed is stored and constant speed control is maintained when pushing the cruise control main switch to - (COAST)/SET while driving with the main switch on (the CRUISE main indicator light is on), and the vehicle speed is within the set speed range (between the low and high speed limits).

(b) - (COAST) CONTROL

When the cruise control main switch is set to - (COAST)/SET and held in that position while the cruise control system is operating, the ECM sends a "throttle valve opening angle 0°" demand signal to the cruise control system. Then the vehicle speed, when the cruise control main switch is released, is stored and maintained.

HINT:

An actual throttle valve opening angle of 0° is not possible due to the idle speed control, etc.

(c) TAP-DOWN CONTROL

When tapping down the cruise control main switch to - (COAST)/SET (for approximately 0.6 seconds) while the cruise control system is in operation, the stored vehicle speed decreases each time by approximately 1.6 km/h (1.0 mph). When the cruise control main switch is released from - (COAST)/SET and the difference between the driving and stored vehicle speed is more than 5 km/h (3 mph), the driving vehicle speed is stored and constant speed control is maintained.

(d) ACCELERATION CONTROL

The throttle valve motor of the throttle body assembly is instructed by the ECM to open the throttle valve when + (ACCEL)/RES (RESUME) on the cruise control main switch is pressed and held while the cruise control system is in operation. When the cruise control main switch is released from + (ACCEL)/RES (RESUME), the vehicle speed is stored and the vehicle is controlled at a constant speed.

(e) TAP-UP CONTROL
When tapping up the cruise control main switch to + (ACCEL)/RES (RESUME) (for approximately 0.6 seconds) while the cruise control system is in operation, the stored vehicle speed increases each time by approximately 1.6 km/h (1.0 mph). However, when the difference between the driving and the stored vehicle speed is more than 5 km/h (approximately 3.1 mph), the stored vehicle speed will not be changed.

(f) RESUME CONTROL
If cruise control operation was canceled with the stop light switch or the CANCEL switch, and if driving speed is within the limit range, pushing the cruise control main switch to + (ACCEL)/RES (RESUME) restores vehicle speed memorized at the time of cancellation, and maintains constant speed control.

(g) MANUAL CANCEL CONTROL
Performing any of the following cancels the cruise control system while in operation (the stored vehicle speed in the ECM is maintained).
- Depressing the brake pedal
- Depressing the clutch pedal
- The shift lever is moved from the D to the N position or the transmission is shifted to the 3rd, 2nd, or 1st gear with the shift lever in the S position.
- Pulling the cruise control main switch to CANCEL
- Turning the cruise control main switch off (the stored vehicle speed in the ECM is not maintained).

4. AUTO CANCEL (FAIL-SAFE)
This system has an automatic cancellation function (fail-safe) (See page CC-16).

CC

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedures to troubleshoot the cruise control system.
- *: Use the intelligent tester.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	PROBLEM SYMPTOM CONFIRMATION

NEXT

3	CHECK CAN COMMUNICATION SYSTEM*

Refer to PRECAUTION (See page CA-1).

(a) Check for output DTCs.

Result

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output	B

HINT:

The ECM of this system is connected to the CAN communication system. Therefore, before starting troubleshooting, make sure to check that there is no trouble in the CAN communication system.

B → PROCEED TO "CAN COMMUNICATION SYSTEM"

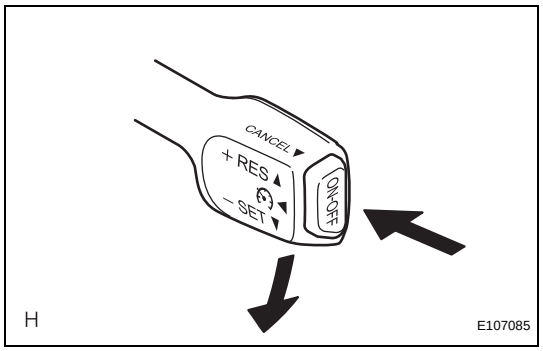
ROAD TEST

1. PROBLEM SYMPTOM CONFIRMATION

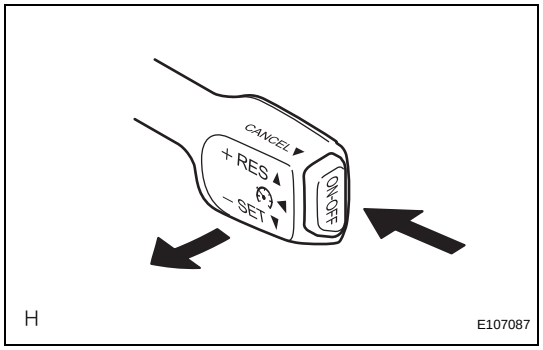
(a) Inspect the SET function.
- (1) Turn the cruise control main switch on.
- (2) Drive at the required speed (40 km/h (25 mph) or higher).
- (3) Push the cruise control main switch to - (COAST)/SET.
- (4) After releasing the switch, check that the vehicle cruises at the set speed.

(b) Inspect the ACCELERATION function.
- (1) Turn the cruise control main switch on.
- (2) Drive at the required speed (40 km/h (25 mph) or higher).
- (3) Push the cruise control main switch to - (COAST)/SET.
- (4) Check that vehicle speed increases while the cruise control main switch is pushed to + (ACCEL)/RES (RESUME), and that the vehicle cruises at the newly set speed when the switch is released.
- (5) Push the cruise control main switch to + (ACCEL)/RES (RESUME) and then release it immediately. Check that vehicle speed increases by approximately 1.6 km/h (1.0 mph) (tap-up control).

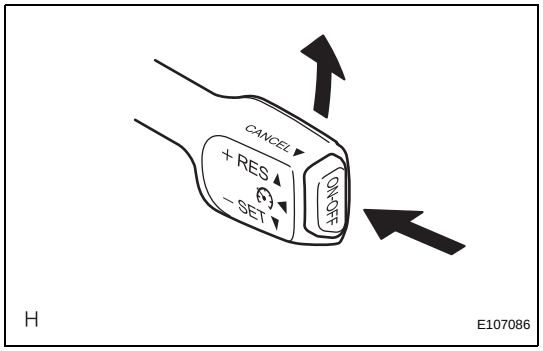
CC



(c) Inspect the - (COAST) function.
(1) Turn the cruise control main switch on.
(2) Drive at the required speed between 40 km/h (25 mph) and 200 km/h (125 mph).
(3) Push the cruise control main switch to - (COAST)/SET.
(4) Check that vehicle speed decreases while the cruise control main switch is pushed to - (COAST)/SET, and the vehicle cruises at the newly set speed when the switch is released.
(5) Push the cruise control main switch to - (COAST)/SET, and then release it immediately. Check that vehicle speed decreases by approximately 1.6 km/h (1.0 mph) (tap-down control).



(d) Inspect the CANCEL function.
(1) Turn the cruise control main switch on.
(2) Drive at the required speed between 40 km/h (25 mph) and 200 km/h (125 mph).
(3) Push the cruise control main switch to - (COAST)/SET.
(4) When performing any one of the following, check that the cruise control system is canceled and that the normal driving mode is reset.
- Depressing the brake pedal
- Depressing the clutch pedal
- The shift lever is moved from the D to the N position or the transmission is shifted to the 3rd, 2nd, or 1st gear with the shift lever in the S position
- Turning the cruise control main switch off
- Pulling the cruise control main switch to CANCEL



(e) Inspect the RES (RESUME) function.
(1) Turn the cruise control main switch on.
(2) Drive at the required speed between 40 km/h (25 mph) and 200 km/h (125 mph).
(3) Push the cruise control main switch to - (COAST)/SET.
(4) Cancel the cruise control system by performing any of the above operations (other than turning the main switch off).
(5) After pushing the cruise control main switch to + (ACCEL)/RES (RESUME) at a driving speed of more than 40 km/h (25 mph), check that the vehicle resumes the speed set prior to the cancellation.

PROBLEM SYMPTOMS TABLE

HINT:
Be sure to perform the SYMPTOM SIMULATION procedure before replacing the ECM. If these symptoms do not persist, the cause of the problem may be poor intermittent electrical contact (open or short) of a wire harness or connector.

Cruise control system:

Symptom	Suspected area	See page
Vehicle speed cannot be set. (The CRUISE main indicator light comes on.)	1. Cruise control switch circuit	CC-28
	2. Combination meter	ME-15
	3. Vehicle speed sensor circuit	CC-19
	4. Stop light switch	CC-20
	5. Transmission range sensor circuit (U250E)	AX-39
	5. Park / Neutral position sensor circuit (U660E)	AX-158
	6. Clutch switch circuit	CC-25
	7. If the symptoms still occur after the above ares have been inspected and have proven to be normal, replace the ECM. (2AZ-FE)	ES-432
	7. If the symptoms still occur after the above ares have been inspected and have proven to be normal, replace the ECM. (2GR-FE)	ES-518
Pushing the ON-OFF button does not turn the cruise control system on. (Vehicle speed cannot be set.)	1. Stop light switch circuit	CC-20
	2. Clutch switch circuit (M/T)	CC-25
	3. Vehicle speed sensor circuit	CC-19
	4. Cruise control switch circuit	CC-28
	5. Transmission range sensor circuit (U250E)	AX-39
	5. Park / Neutral position sensor circuit (U660E)	AX-158
	6. If the symptoms still occur after the above areas have been inspected and have proven to be normal, replace the ECM. (2AZ- FE)	ES-432
	6. If the symptoms still occur after the above areas have been inspected and have proven to be normal, replace the ECM. (2GR-FE)	ES-518
The cruise control is canceled while it is operating.	1. Stop light switch circuit	CC-20
	2. Clutch switch circuit (M/T)	CC-25
	3. Transmission range sensor circuit (U250E)	AX-39
	3. Park / Neutral position sensor circuit (U660E)	AX-158
	4. Cruise control switch circuit	CC-28
	5. Vehicle speed sensor circuit	CC-19
	6. Combination meter	ME-15
	7. If the symptoms still occur after the above areas have been inspected and have proven to be normal, replace the ECM. (2AZ-FE)	ES-432
	7. If the symptoms still occur after the above areas have been inspected and have proven to be normal, replace the ECM. (2GR-FE)	ES-518
Pulling back on the control main switch does not cancel the cruise control. (The CRUISE main indicator light remains on.)	1. Cruise control switch circuit	CC-28
	2. If the symptoms still occur after the above area has been inspected and has proven to be normal, replace the ECM. (2AZ-FE)	ES-432
	2. If the symptoms still occur after the above area has been inspected and has proven to be normal, replace the ECM. (2GR-FE)	ES-518
Pulling back on the control main switch does not cancel the cruise control. (The CRUISE main indicator light goes off.)	Replace ECM (2AZ-FE)	ES-432
	Replace ECM (2GR-FE)	ES-518

Symptom	Suspected area	See page
The cruise control is not canceled when vehicle speed drops below the low speed limit. (The CRUISE main indicator light remains on.)	1. Vehicle speed sensor circuit	CC-19
	2. If the symptoms still occur after the above area has been inspected and has proven to be normal, replace the ECM. (2AZ-FE)	ES-432
	2. If the symptoms still occur after the above area has been inspected and has proven to be normal, replace the ECM. (2GR-FE)	ES-518
The cruise control is not canceled when vehicle speed drops below the low speed limit. (The CRUISE main indicator light goes off.)	Replace ECM (2AZ-FE)	CC-13
	Replace ECM (2GR-FE)	ES-518
Depressing the brake pedal does not cancel the cruise control. (The CRUISE main indicator light remains on.)	1. Stop light switch circuit	CC-20
	2. If the symptoms still occur after the above area has been inspected and has proven to be normal, replace the ECM. (2AZ-FE)	ES-432
	2. If the symptoms still occur after the above area has been inspected and has proven to be normal, replace the ECM. (2GR-FE)	ES-518
Depressing the brake pedal does not cancel the cruise control. (The CRUISE main indicator light goes off.)	Replace ECM (2AZ-FE)	ES-432
	Replace ECM (2GR-FE)	ES-518
Depressing the clutch pedal does not cancel the cruise control. (The CRUISE main indicator light remains on.)	1. Clutch switch circuit	CC-25
	2. If the symptoms still occur after the above area has been inspected and has proven to be normal, replace the ECM. (2AZ-FE)	ES-432
	2. If the symptoms still occur after the above area has been inspected and has proven to be normal, replace the ECM. (2GR-FE)	ES-518
Depressing the clutch pedal does not cancel the cruise control. (The CRUISE main indicator light goes off.)	Replace ECM (2AZ-FE)	ES-432
	Replace ECM (2GR-FE)	ES-518
Moving the shift liver does not cancel the cruise control.	1. Transmission range sensor circuit (U250E)	AX-39
	1. Park / Neutral position sensor circuit (U660E)	AX-158
	2. If the symptoms still occur after the above area has been inspected and has proven to be normal, replace the ECM. (2AZ-FE)	ES-432
	2. If the symptoms still occur after the above area has been inspected and has proven to be normal, replace the ECM. (2GR-FE)	ES-518
Hunting (Speed is not constant.)	1. Vehicle speed sensor circuit	CC-19
	2. Combination meter	ME-15
	3. If the symptoms still occur after the above ares have been inspected and have proven to be normal, replace the ECM. (2AZ-FE)	ES-432
	3. If the symptoms still occur after the above ares have been inspected and have proven to be normal replace the ECM. (2GR-FE)	ES-518
The CRUISE main indicator light remains blinking.	1. TC and CG terminal circuit	CC-35
	2. If the symptoms still occur after the above area has been inspected and has proven to be normal, replace the ECM.	CC-13

*2: 2AZ-FE

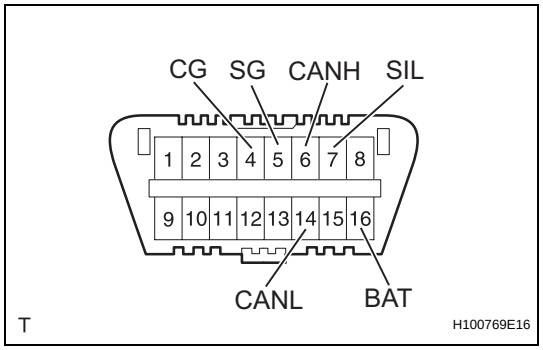
CC

DIAGNOSIS SYSTEM

1. DESCRIPTION

The ECU controls the cruise control system of the vehicle. The data and DTCs relating to the cruise control system can be read from the DLC3 of the vehicle. If either DTC or CRUISE OK is not displayed on the multi-information display on the combination meter when checking for DTCs, there may be a problem with either the combination meter or the CAN communication and multiplex communication systems. Use the intelligent tester to check and solve the problem.

2. CHECK DLC3



(a) The ECU uses the ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Terminal No. (Symbols)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch off*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch off*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch off*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch off*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition switch off*	6 kΩ or higher

NOTICE:

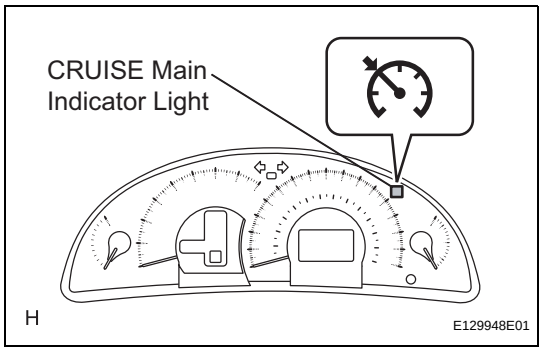
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

(b) Connect the cable of the intelligent tester to the DLC3, turn the ignition switch on (IG), and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem with either the vehicle or the tester.

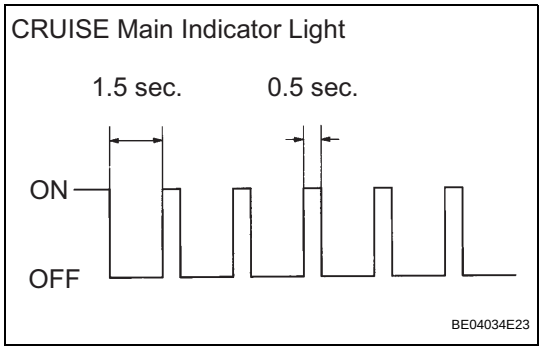
- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.

- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.



3. CHECK INDICATOR

(a) Turn the ignition switch on (IG).

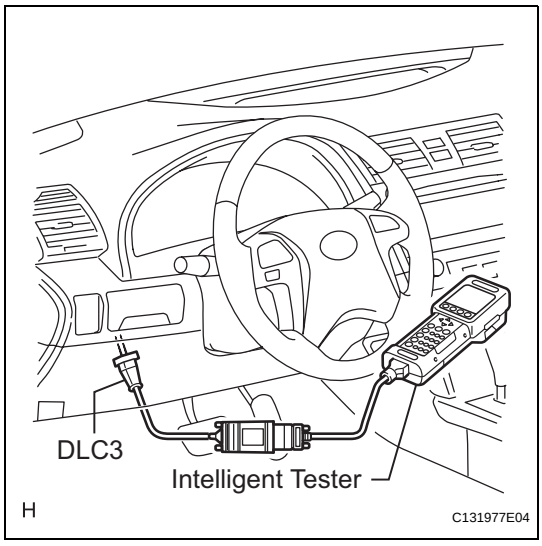


(b) Check that the CRUISE main indicator light illuminates when the cruise control main switch is turned on, and that the indicator light turns off when the main switch is turned off. If the results are not as specified, inspect the CRUISE main indicator light circuit (See page CC-34).

HINT:

While driving with cruise control, the ECM activates AUTO CANCEL of the cruise control system when a malfunction occurs in one of the following: vehicle speed sensors, stop light switch, or other related parts. When AUTO CANCEL is activated, the CRUISE main indicator light outputs the blinking pattern shown to the left. At the same time, data of the malfunction is stored as a DTC.

DTC CHECK / CLEAR



1. DTC CHECK

(a) Connect the intelligent tester to the DLC3.
  (1) Connect the intelligent tester to the Controller Area Network Vehicle Interface Module (CAN VIM). Then connect the CAN VIM to the Data Link Connector 3 (DLC3).

(b) Turn the ignition switch on (IG).

(c) Read the DTCs by following the prompts on the tester screen.

HINT:

Refer to the intelligent tester operator's manual for further details.

2. DTC CLEAR

(a) Connect the intelligent tester to the DLC3.

(b) Turn the ignition switch on (IG).

(c) Operate the intelligent tester to erase the codes.

HINT:

Refer to the intelligent tester operator's manual for further details.

CC

FAIL-SAFE CHART

HINT:
If the following conditions are detected while the cruise control is in operation, the system clears the stored vehicle speed in the ECM and cancels the cruise control operation.

Vehicle Condition	Auto Cancel Condition	Re-operation Condition
CRUISE main indicator light blinks	• There is open or short in stop light switch circuit • There is problem with vehicle speed signal • There is problem with throttle position sensor and motor	Turn cruise control main switch on again
CRUISE main indicator light blinks	• There is problem with input circuit of stop light switch circuit • There is problem with cancel circuit	• Turn cruise control main switch on again • Turn ignition switch off then on again
CRUISE main indicator light remains on (Cruise control is canceled)	• Vehicle speed is lower than low speed limit (approx. 40 km/h (25 mph)) while running with cruise control on	Push cruise control main switch to + (ACCEL)/RES (RESUME)
	• Vehicle speed is lower than stored speed by approx. 16 km/h (9.9 mph) or more	Push cruise control main switch to - (COAST)/ SET

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:
Using the intelligent tester's DATA LIST allows switch, sensor, actuator, and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Read the DATA LIST according to the display on the tester.

ECM (Cruise control):

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
VEHICLE SPD	Vehicle speed / min.: 0 km/h (0 mph), max.: 255 km/h (158 mph)	Actual vehicle speed	-
MEMORY SPD	Cruise control memorized speed / min.: 36 km/h (22.5 mph), max.: 200 km/h (125 mph)	Actual stored vehicle speed	-
THROTTLE	Throttle opening angle / min.: 0°, max.: 125°	Actual demanded throttle angle	-
SHIFT D POS	Shift D position / ON or OFF	ON: Shift lever in D or 4 OFF: Shift lever is except D or 4 position	-
CRUISE CONTROL	Cruise control system active condition / ON or OFF	ON: Cruise control activated OFF: Cruise control deactivated	-
CCS INDICATOR M	Cruise indicator signal (Main CPU) / ON or OFF	ON: "CRUISE" on OFF: "CRUISE" off	-
MAIN SW (MAIN)	Main switch signal (Main CPU) / ON or OFF	ON: Cruise control main switch on OFF: Cruise control main switch off	"1"
MAIN SW (SUB)	Main switch signal (Main CPU) / ON or OFF	ON: Cruise control main switch on OFF: Cruise control main switch off	-
SHIFT D POS	Clutch pedal / ON or OFF	ON: Clutch pedal released OFF: Clutch pedal depressed	-
CANCEL SW	CANCEL switch signal / ON or OFF	ON: CANCEL switch on OFF: CANCEL switch off	-
SET/COAST SW	SET / COAST switch signal / ON or OFF	ON: - (COAST) / SET switch on OFF: - (COAST) / SET switch off	-
RES/ACC SW	RES / ACC switch signal / ON or OFF	ON: + (ACCEL) / RES (RESUME) switch on OFF: + (ACCEL) / RES (RESUME) switch off	-
STP LIGHT SW M (STP)	Stop light switch signal (Main CPU) / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
STP LIGHT SW S2 (STP)	Stop light switch signal (Sub CPU) / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
STP LIGHT SW S1 (ST1-)	Stop light switch signal (Sub CPU)	ON: Brake pedal depressed OFF: Brake pedal released	-

HINT:

- "1" is OK but CRUISE main indicator light does not illuminate → CRUISE main indicator light, wire harness, or ECM failure

CC

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows relays, VSVs, actuators, and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Perform the ACTIVE TEST according to the display on the tester.

HINT:

The ignition switch must be turned on (IG) to proceed to with the ACTIVE TEST using the intelligent tester.

Combination meter:

Item	Vehicle Condition / Test Details	Diagnostic Note
CRUISE INDIC	Turns CRUISE main indicator light ON / OFF	-

DIAGNOSTIC TROUBLE CODE CHART

If a trouble code is displayed during the DTC check, check the trouble areas listed for that code in the table below and proceed to the appropriate page.

Cruise control system:

DTC No.	Detection Item	Trouble Area	See page
P0500	Vehicle Speed Sensor Malfunction	1. Vehicle speed sensor 2. Vehicle speed sensor signal circuit 3. ECM	CC-19
P0503	Vehicle Speed Sensor "A" Intermittent / Erratic / High	1. Vehicle speed sensor 2. Vehicle speed sensor signal circuit 3. ECM	CC-19
P0571	Brake Switch "A" Circuit	1. Stop light switch 2. Stop light switch circuit 3. ECM	CC-20
P0607	Control Module Performance	ECM	CC-24

DTC	P0500	Vehicle Speed Sensor Malfunction

DTC	P0503	Vehicle Speed Sensor "A" Intermittent / Erratic / High

DESCRIPTION

Refer to DTC P0500 (See page ES-229).

DTC No.	DTC Detection Condition	Trouble Area
P0500	The vehicle speed signal from the vehicle speed sensor is cut for 0.14 sec. or more while cruise control is in operation.	• Vehicle speed sensor • Vehicle speed sensor signal circuit • ECM
P0503	Momentary interruption and noise are detected when a rapid change of vehicle speed occurs while cruise control is in operation.	• Vehicle speed sensor • Vehicle speed sensor signal circuit • ECM

WIRING DIAGRAM

Refer to DTC P0500 (See page ES-231).

INSPECTION PROCEDURE

Refer to DTC P0500 (See page ES-231).

DTC	P0571	Brake Switch "A" Circuit

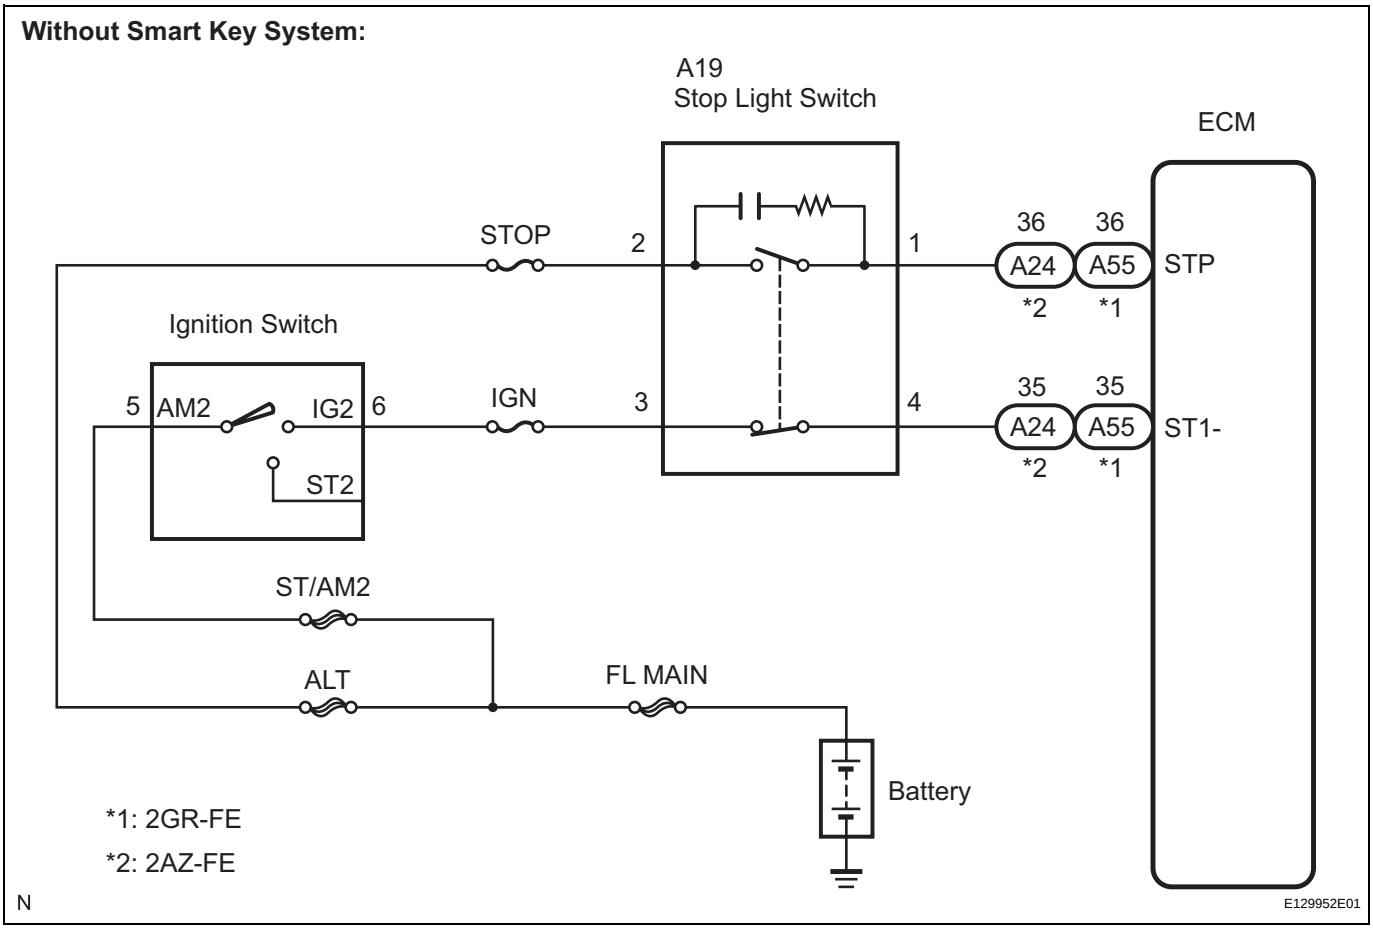
DESCRIPTION

When the brake pedal is depressed, the stop light switch sends a signal to the ECM. When the ECM receives this signal, it cancels the cruise control. The fail-safe function operates to enable normal driving even if there is a malfunction in the stop light signal circuit. The cancellation condition occurs when voltage is applied to terminal STP. When the brake is applied, voltage is normally applied to terminal STP of the ECM through the STOP SW fuse and the stop light switch, and the ECM turns the cruise control off.

DTC No.	DTC Detection Condition	Trouble Area
P0571	When voltage of STP terminal and that of ST1- terminal of ECM are less than 1 V for 0.5 sec. or more	• Stop light switch • Stop light switch circuit • ECM

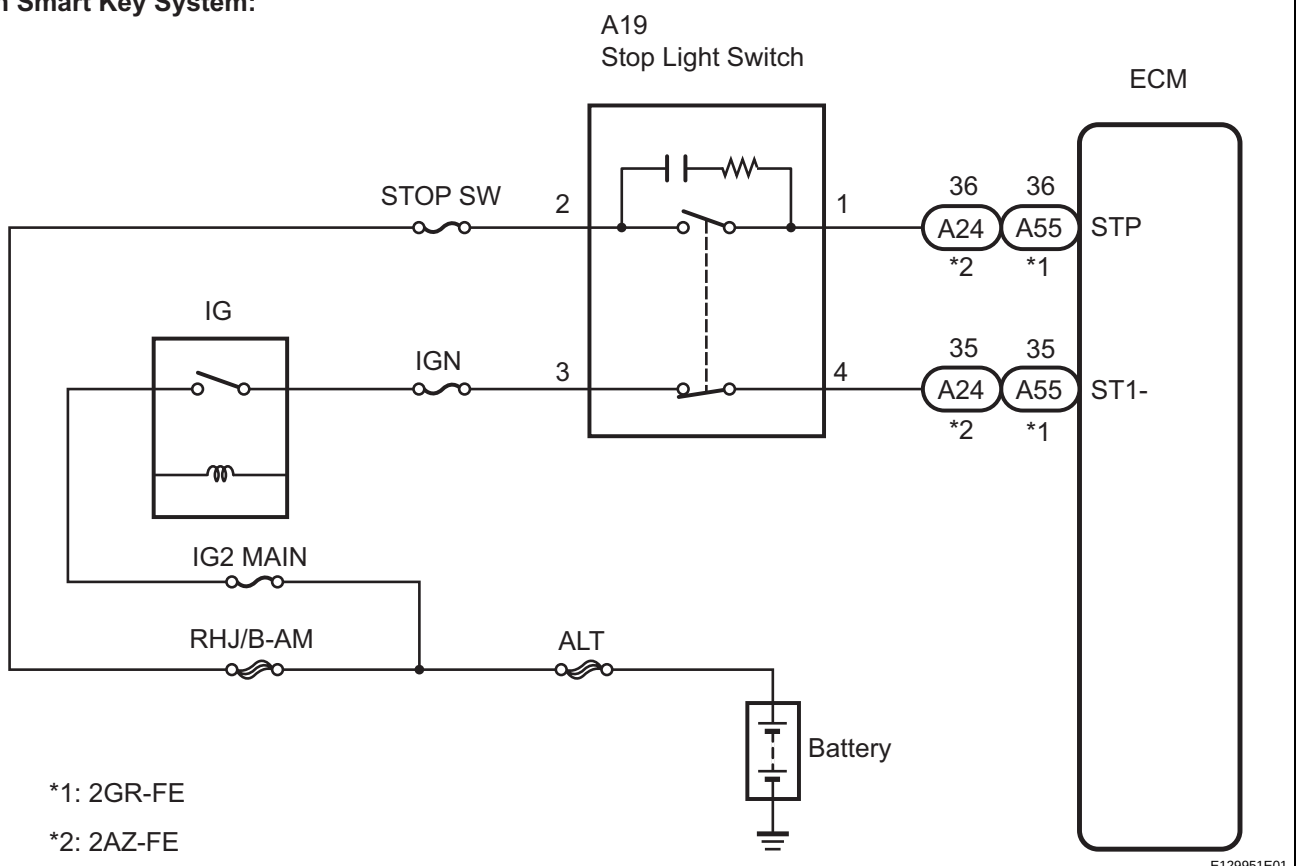
WIRING DIAGRAM

Without Smart Key System:



CC

With Smart Key System:



INSPECTION PROCEDURE

1	READ VALUE ON INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG), and turn the intelligent tester main switch on.
(c) Check the DATA LIST for proper functioning of the stop light switch.

ECM (Cruise control):

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
STP LIGHT SW M (STP)	Stop light switch signal (Main CPU) / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
STP LIGHT SW S2 (STP)	Stop light switch signal (Sub CPU) / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
STP LIGHT SW S1 (ST1-)	Stop light switch signal (Sub CPU) / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-

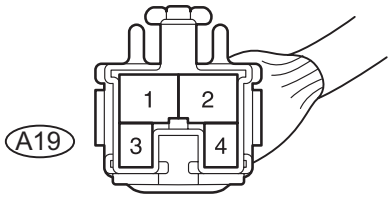
OK:
When the brake pedal is operated, the display changes as shown above.

OK → **REPLACE ECM**

NG

2 CHECK HARNESS AND CONNECTOR (STOP LIGHT SWITCH - BATTERY)

Stop Light Switch Wire Harness Side Connector Front View:



N E114084E08

(a) Disconnect the A19 connector from the stop light switch.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

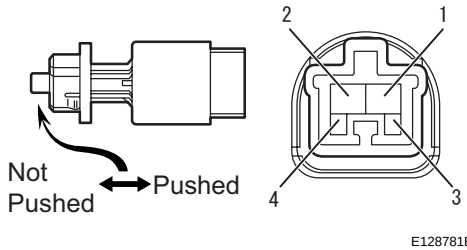
Tester Connection	Condition	Specified Condition
A19-2 - Body ground	Always	10 to 14 V
A19-3 - Body ground	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 INSPECT STOP LIGHT SWITCH

Stop Light Switch:



H E128781E02

(a) Remove the stop light switch. (See page CC-42)
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Switch Condition	Specified Condition
1 - 2	Switch pin not pushed	Below 1 Ω
3 - 4	Switch pin not pushed	10 kΩ or higher
1 - 2	Switch pin pushed	10 kΩ or higher
3 - 4	Switch pin pushed	Below 1 Ω

(c) Install the stop light switch.

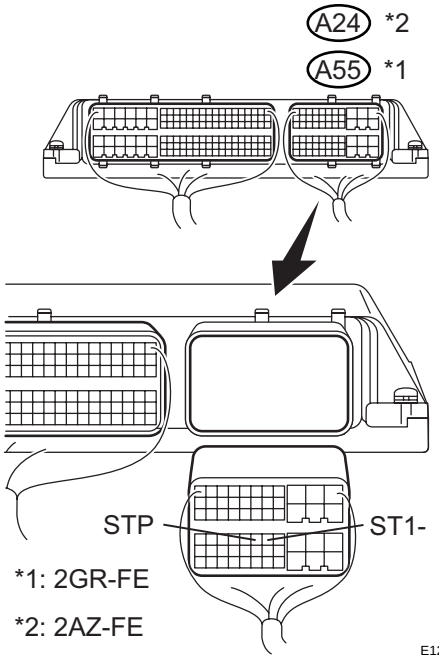
NG → **REPLACE STOP LIGHT SWITCH**

OK

CC

4	CHECK ECM

ECM Wire Harness View:



(a) Reconnect the stop light switch connector.
(b) Disconnect the A55 connector from the ECM. (2GR-FE)
(c) Disconnect the A24 connector from the ECM. (2AZ-FE)
(d) Turn the ignition switch on (IG).
(e) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Brake Pedal Condition	Specified Condition
A55-36 (STP) - Body ground*1 A24-36 (STP) - Body ground*2	Depressed	10 to 14 V
A55-36 (STP) - Body ground*1 A24-36 (STP) - Body ground*2	Released	Below 1 V
A55-35 (ST1-) - Body ground*1 A24-35 (ST1-) - Body ground*2	Depressed	Below 1 V
A55-35 (ST1-) - Body ground*1 A24-35 (ST1-) - Body ground*2	Released	10 to 14 V

HINT:
*1: 2GR-FE
*2: 2AZ-FE

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (STOP LIGHT SWITCH - ECM)**

OK

REPLACE ECM

CC

DTC	P0607	Control Module Performance

DESCRIPTION

This DTC indicates the internal abnormalities of the ECM.

DTC No.	DTC Detection Condition	Trouble Area
P0607	When both of the following conditions are met: • STP signals input to the ECM supervisory CPU and control ECU are different for 0.15 sec. or more • 0.4 sec. have passed after cruise cancel input signal (STP input) is input to the ECM	ECM

HINT:
The ECM receives signals from each sensor to control all functions of the cruise control system. When a trouble code is detected, the fail-safe function remains on until the ignition switch is turned off.

INSPECTION PROCEDURE

1	REPLACE ECM

NEXT

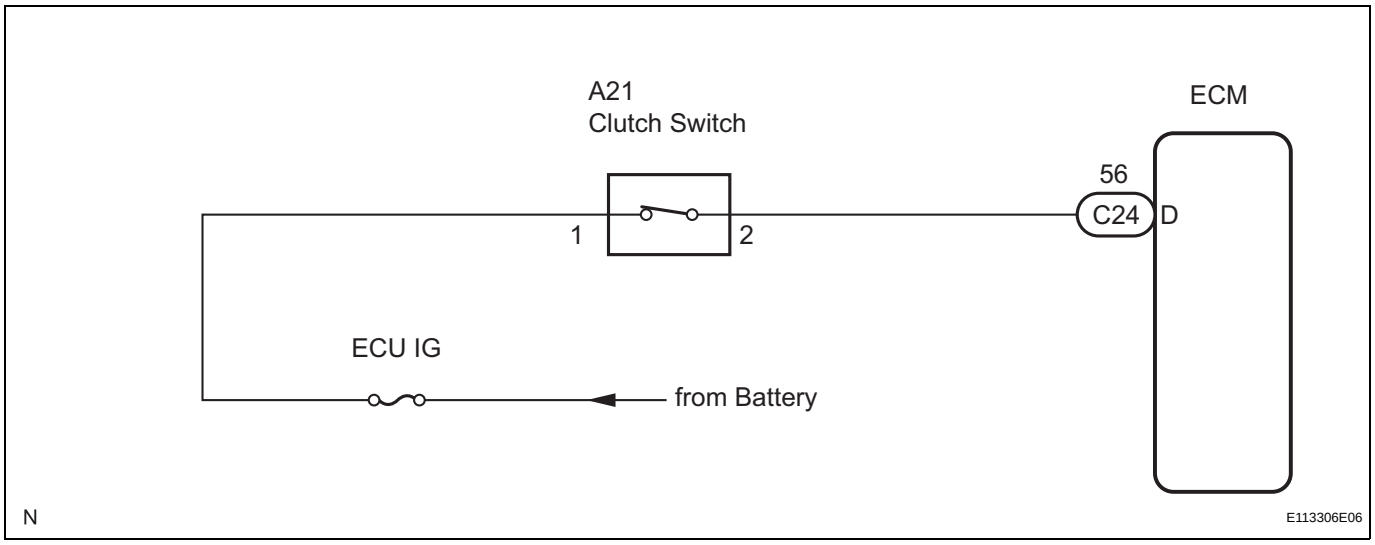
END

Clutch Switch Circuit

DESCRIPTION

Clutch switch circuit inspection is necessary for M/T vehicles.
When the clutch pedal is released, the ECM receives positive (+) battery voltage through the ECU IG fuse. While depressing the clutch pedal, the clutch switch sends a signal to terminal D of the ECM. The ECM cancels cruise control drive when terminal D receives the signal.

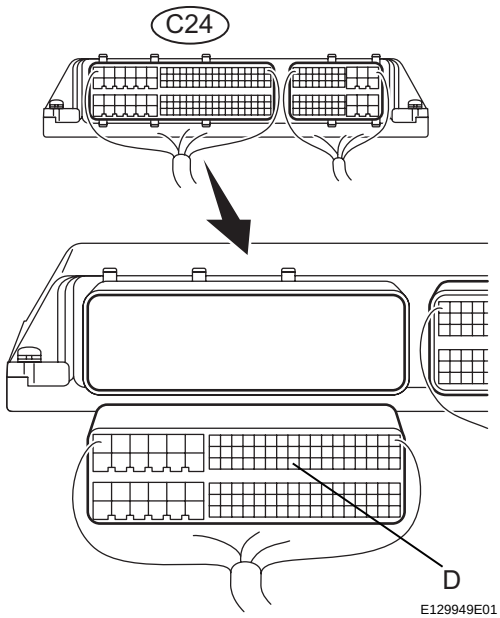
WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT ECM

ECM Wire Harness View:



(a) Disconnect the C24 connector from the ECM.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
C24-56 (D) - Body ground	Clutch pedal depressed	Below 1 V
	Clutch pedal released	10 to 14 V

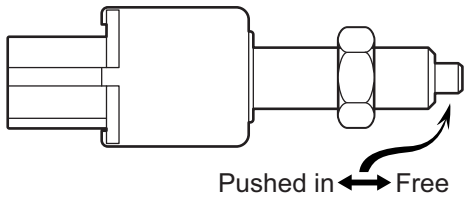
OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

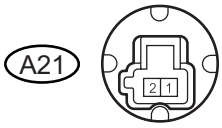
CC

NG

2	INSPECT CLUTCH SWITCH

Clutch Switch:





H

E133093E01

(a) Turn the ignition switch off.
(b) Disconnect the A21 connector from the clutch switch.
(c) Remove the clutch switch. (See page CC-42)
(d) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Switch pin free (Clutch pedal depressed)	10 kΩ or higher
	Switch pin pushed in (Clutch pedal released)	Below 1Ω

NG → REPLACE CLUTCH SWITCH

OK

CC

3	CHECK HARNESS AND CONNECTOR

C24-56 (D) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (ECM - CLUTCH SWITCH)**

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR (BATTERY - CLUTCH SWITCH)

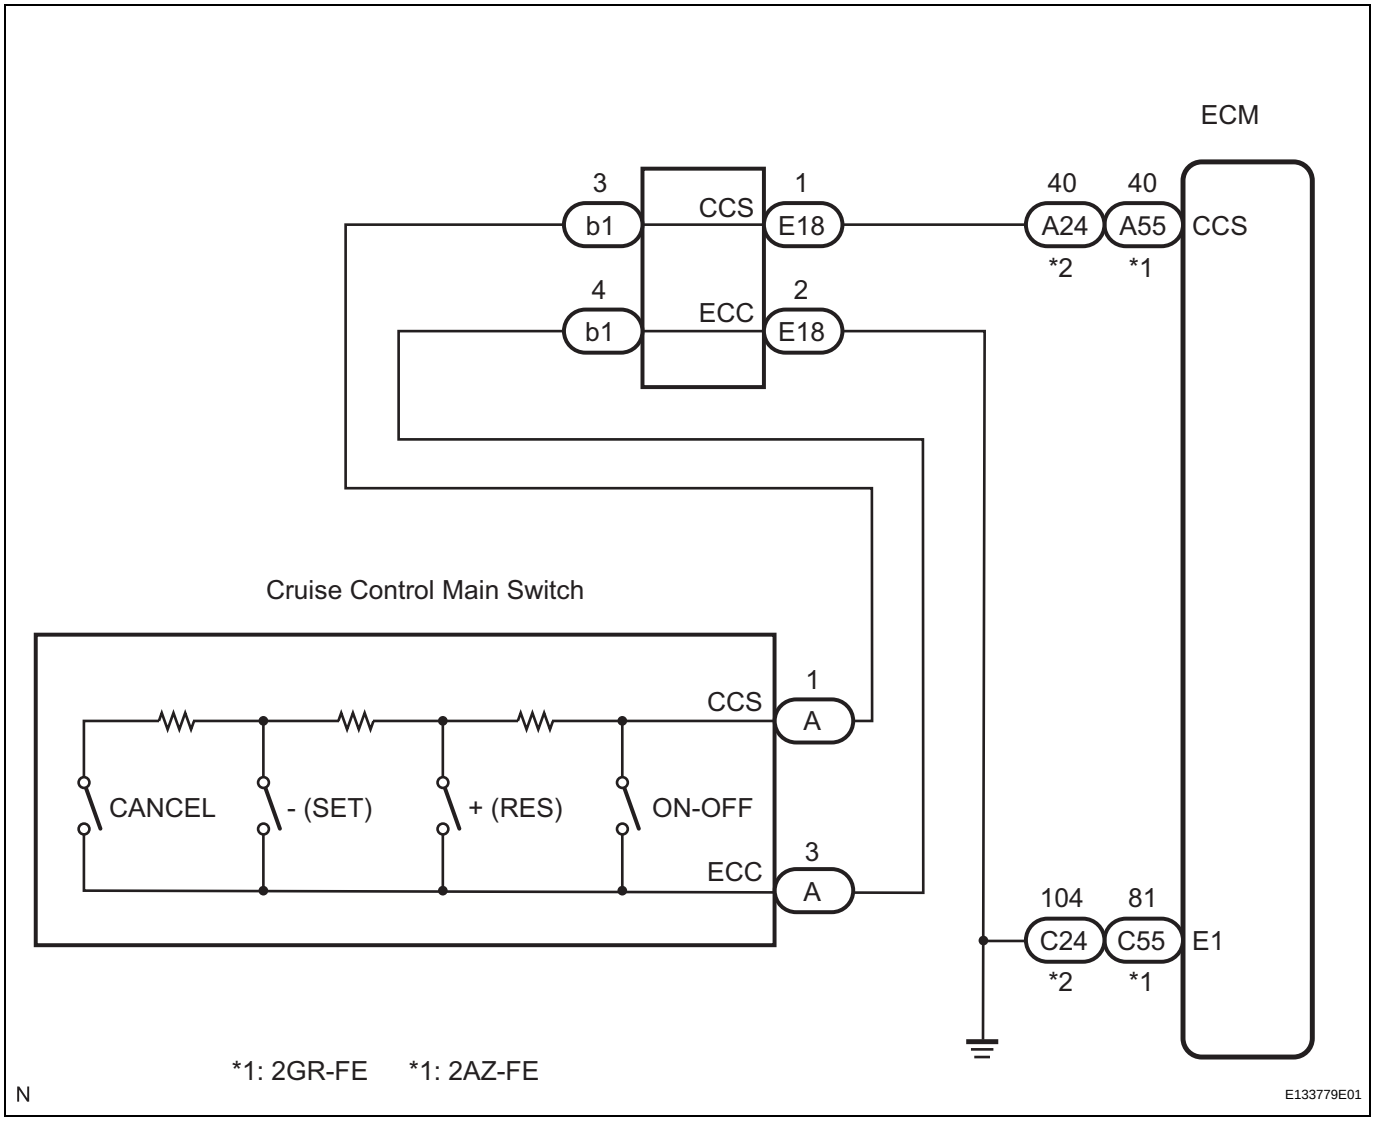
CC

Cruise Control Switch Circuit

DESCRIPTION

The cruise control main switch operates 7 functions: SET, - (COAST), TAP-DOWN, RES (RESUME), + (ACCEL), TAP-UP, and CANCEL. The SET, TAP-DOWN, and - (COAST) functions, and the RES (RESUME), TAP-UP, and + (ACCEL) functions are operated with the same switch. The cruise control main switch is an automatic return type switch which turns on only while operating it in the direction of each arrow and turns off after releasing it. The internal contact point of the cruise control main switch is turned on with the switch operation. Then the ECM reads the voltage value that has been changed by the switch operation to control SET, - (COAST), RES (RESUME), + (ACCEL), and CANCEL.

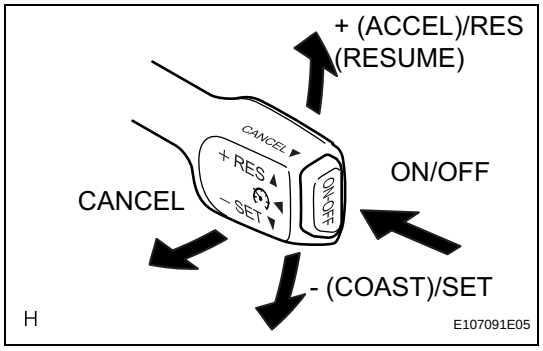
WIRING DIAGRAM



CC

INSPECTION PROCEDURE

1	READ VALUE ON INTELLIGENT TESTER



(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the intelligent tester main switch on.
(c) Check the DATA LIST for proper functioning of the cruise control main switch.

ECM (Cruise control):

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
MAIN SW (MAIN)	Main switch signal (Main CPU)/ ON or OFF	ON: Cruise control main switch on OFF: Cruise control main switch off	-
CANCEL SW	CANCEL switch signal/ON or OFF	ON: CANCEL switch on OFF: CANCEL switch off	-
SET / COAST SW	SET / COAST switch signal/ON or OFF	ON: - (COAST)/SET switch on OFF: - (COAST)/SET switch off	-
RES / ACC SW	RES / ACC switch signal/ON or OFF	ON: + (ACCEL)/RES (RESUME) switch on OFF: + (ACCEL)/RES (RESUME) switch off	-
MAIN SW (SUB)	Main switch signal (Sub CPU) / ON or OFF	ON: Cruise control main switch ON OFF: Cruise control main switch OFF	-

OK:
When the cruise control main switch is operated, the display changes as shown above.

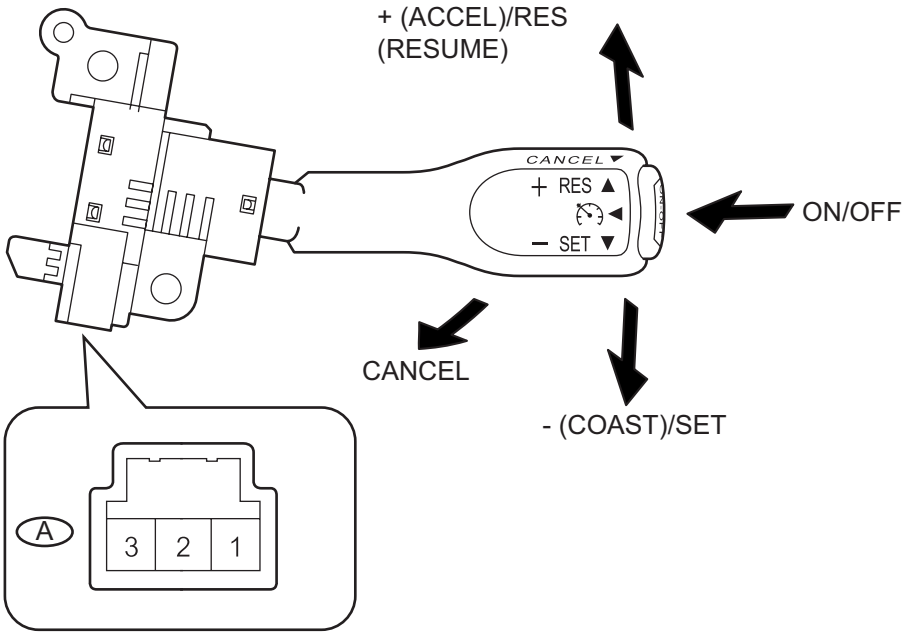
2	INSPECT CRUISE CONTROL MAIN SWITCH

(a) Remove the cruise control main switch (See page CC-38).

CC

(b) Measure the resistance according to the value(s) in the table below.

Cruise Control Main Switch:



H

E106137E06

Standard resistance

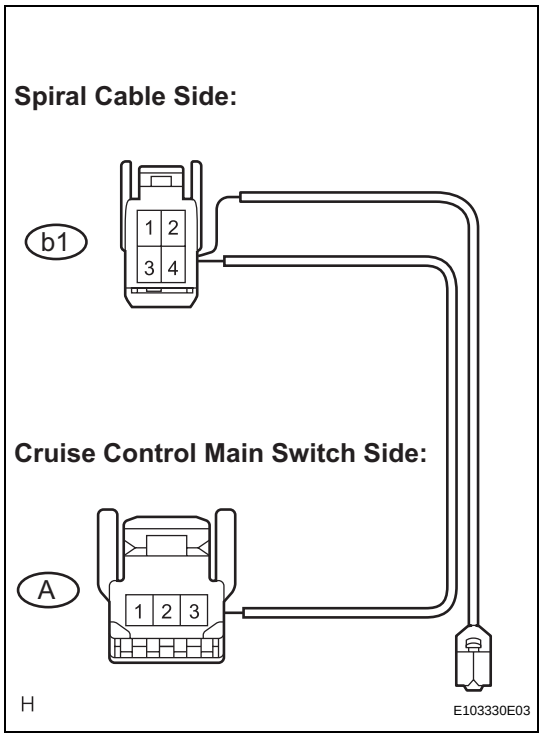
Tester Connection	Switch Condition	Specified Condition
A-1 (CCS) - A-3 (ECC)	Neutral	10 kΩ or higher
A-1 (CCS) - A-3 (ECC)	+ (ACCEL)/RES (RESUME)	216 to 264 Ω
A-1 (CCS) - A-3 (ECC)	- (COAST)/SET	567 to 693 Ω
A-1 (CCS) - A-3 (ECC)	CANCEL	1,386 to 1,694 Ω
A-1 (CCS) - A-3 (ECC)	Main Switch off	10 kΩ or higher
A-1 (CCS) - A-3 (ECC)	Main Switch on	Below 1 Ω

NG → **REPLACE CRUISE CONTROL MAIN SWITCH**

CC

OK

3	CHECK HARNESS AND CONNECTOR (CRUISE CONTROL MAIN SWITCH - SPIRAL CABLE)



(a) Disconnect the b1 connector from the spiral cable.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

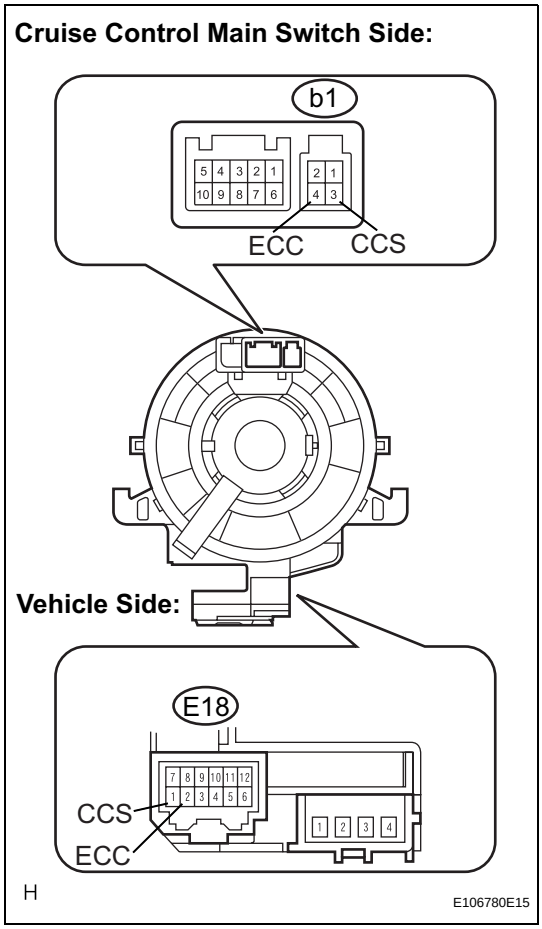
Tester connection	Specified condition
A-1 - b1-3	Below 1 Ω
A-3 - b1-4	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CC

4	CHECK SPIRAL CABLE



NOTICE:
The spiral cable is an important part of the SRS airbag system. Incorrect removal or installation of the spiral cable may prevent the airbag from deploying. Be sure to read the page shown in the brackets.
HINT:
- Removal (See page RS-363)
- Installation (See page RS-366)

(a) Remove the spiral cable.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Spiral Cable Position	Specified Condition
b1-3 - E18-1 (CCS)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
b1-4 - E18-2 (ECC)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	

HINT:
The spiral cable makes a maximum of approximately 5 rotations.

NG → REPLACE SPIRAL CABLE

OK

CC

REPLACE ECM

CC

Cruise Main Indicator Light Circuit

DESCRIPTION

- The ECM detects a cruise control switch signal and sends it to the combination meter through CAN. Then the CRUISE main indicator light comes on.
- The CRUISE main indicator light circuit uses CAN for communication. If there is a malfunction in this circuit, check for DTCs in the CAN communication system before troubleshooting this circuit.

INSPECTION PROCEDURE

1 **PERFORM ACTIVE TEST USING INTELLIGENT TESTER**

(a) Connect the intelligent tester to the DLC3.
(b) Check the CRUISE main indicator light by performing the ACTIVE TEST.

Combination meter:

Item	Test Details	Diagnostic Note
CRUISE INDIC	Turns CRUISE main indicator light ON / OFF	-

OK:
Indicator light comes on / goes off.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

2 **READ VALUE ON INTELLIGENT TESTER**

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the intelligent tester main switch on.
(c) Check the DATA LIST for proper functioning of the CRUISE main indicator light.

CC

ECM (Cruise control):

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
CCS INDICATOR M	Cruise indicator signal (Main CPU) / ON or OFF	ON: "CRUISE" on OFF: "CRUISE" off	-

OK:
When the cruise control main switch is operated, the display changes as shown above.

NG → **REPLACE ECM**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

TC and CG Terminal Circuit

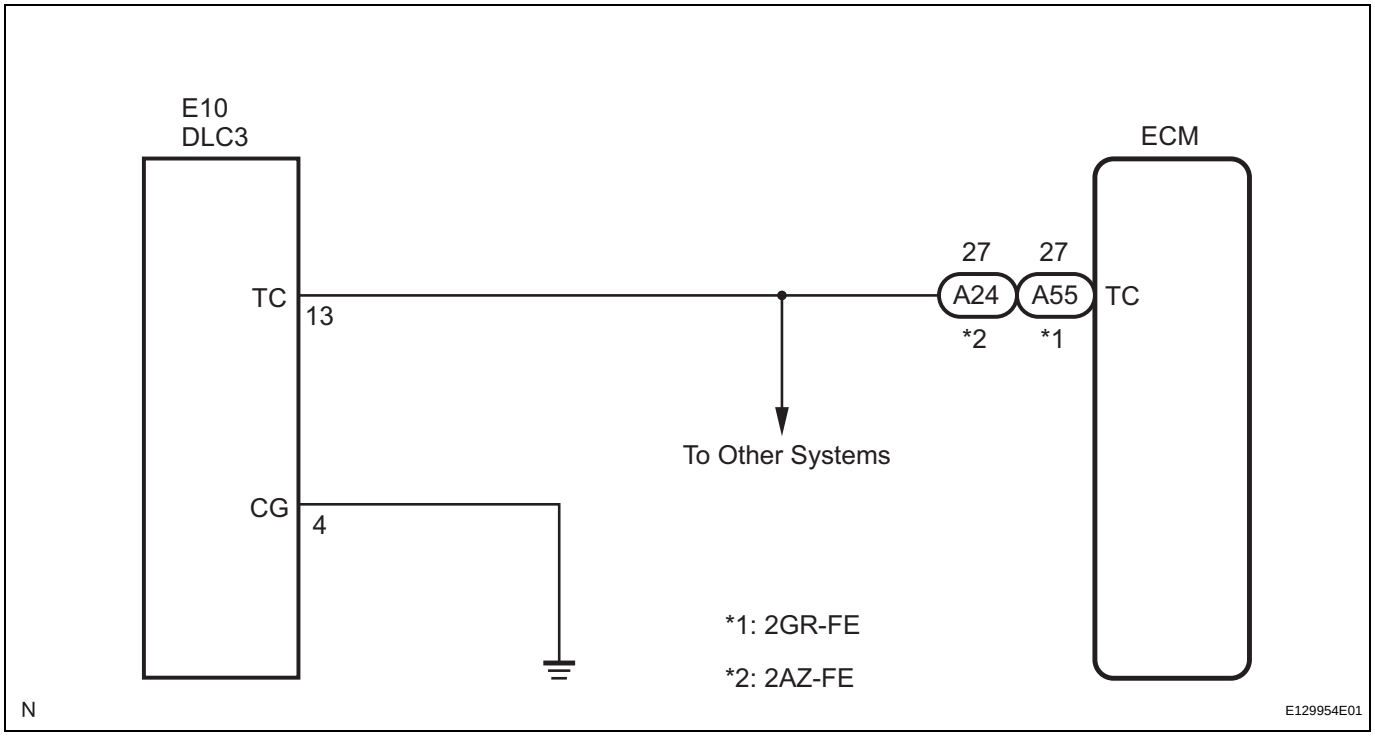
DESCRIPTION

Connecting terminals TC and CG of the DLC3 causes the system to enter self-diagnostic mode. If a malfunction is present, DTCs will be output.

HINT:

When a particular warning light remains blinking, a ground short in the wiring of terminal TC of the DLC3 or an internal ground short in the relevant ECU is suspected.

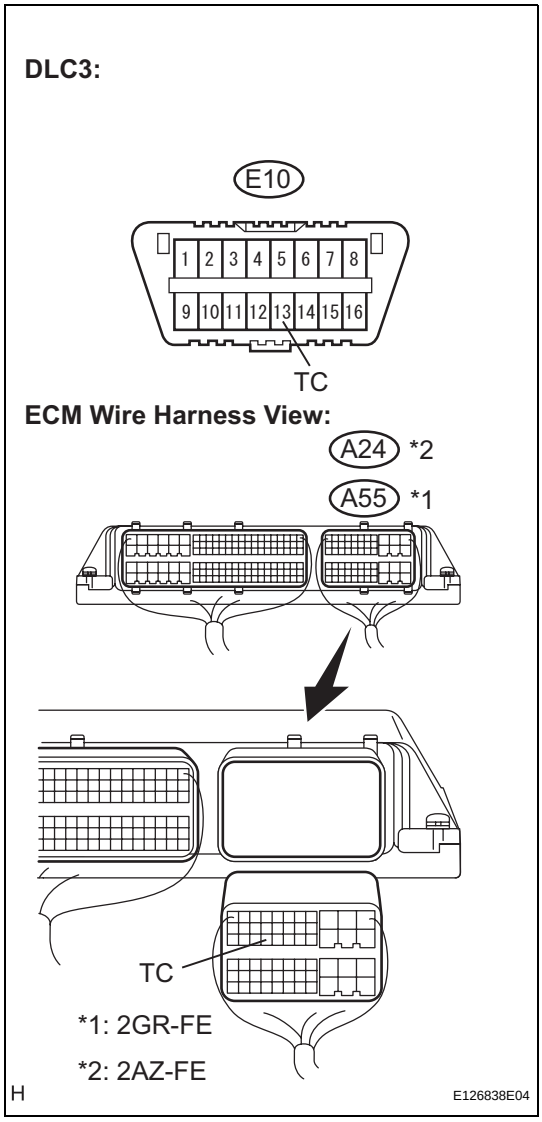
WIRING DIAGRAM



CC

INSPECTION PROCEDURE

1 CHECK WIRE HARNESS (TERMINAL TC of DLC3 - ECM)



(a) Disconnect the A55 connector from the ECM. (2GR-FE)
(b) Disconnect the A24 connector from the ECM. (2AZ-FE)
(c) Measure the resistance according to the value(s) in the table below.

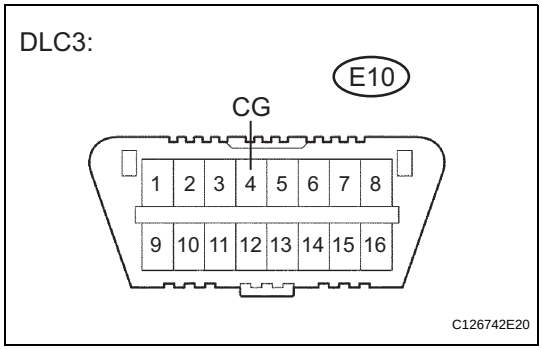
Standard resistance

Tester Connection	Condition	Specified Condition
A55-27 (TC) - E10-13 (TC)*1 A24-27 (TC) - E10-13 (TC)*2	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (DLC3 - ECM)**

OK

2 CHECK WIRE HARNESS (TERMINAL CG of DLC3 - BODY GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

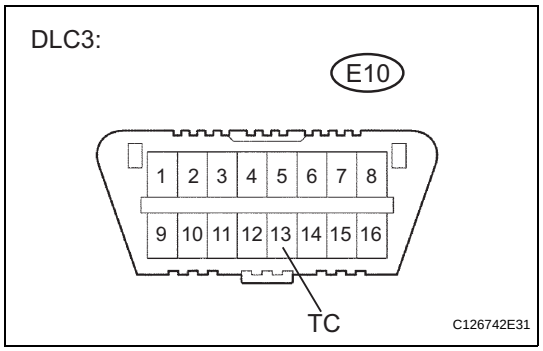
Tester connection	Condition	Specified condition
E10-4 (CG) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (DLC3 - BODY GROUND)**

CC

OK

3	CHECK WIRE HARNESS (TERMINAL TC of DLC3 - BODY GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E10-13 (TC) - Body ground	Always	10 kΩ or higher

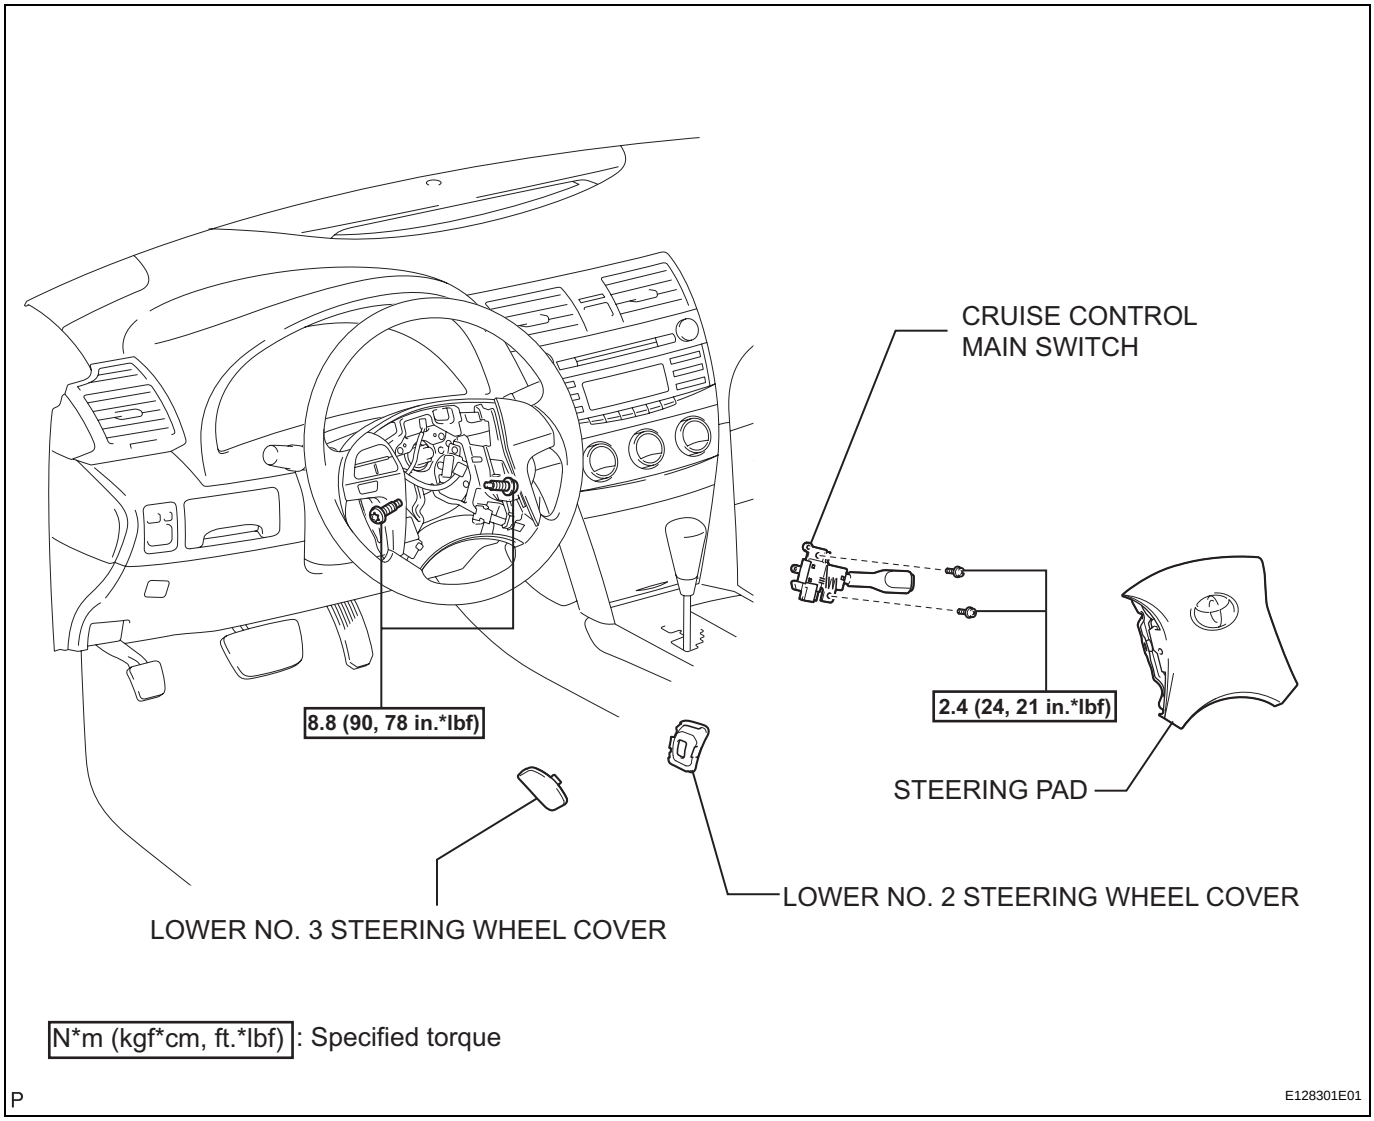
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR OR EACH ECU**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

CRUISE CONTROL MAIN SWITCH

COMPONENTS



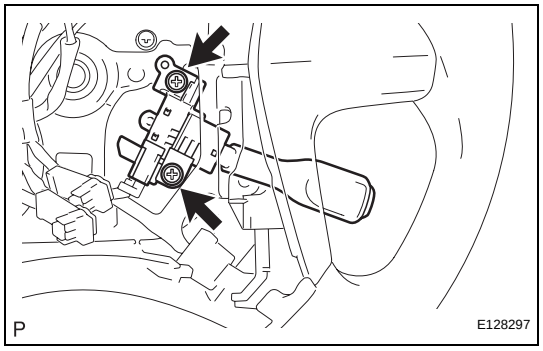
N*m (kgf*cm, ft.*lbf): Specified torque

P

E128301E01

REMOVAL

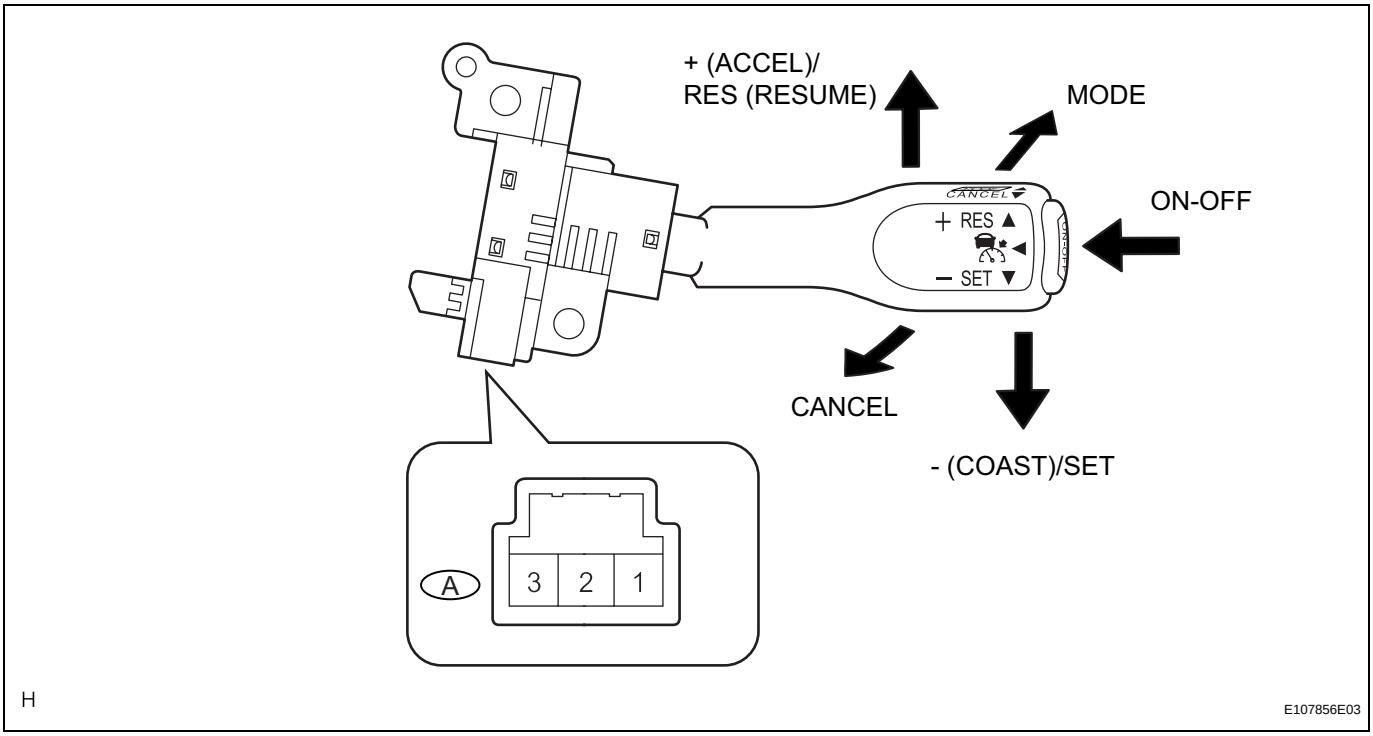
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation (See page RS-1).
2. **REMOVE LOWER NO. 3 STEERING WHEEL COVER (See page RS-349)**
3. **REMOVE LOWER NO. 2 STEERING WHEEL COVER (See page RS-349)**
4. **REMOVE STEERING PAD (See page RS-350)**
5. **REMOVE CRUISE CONTROL MAIN SWITCH**
   (a) Disconnect the connector.
   (b) Remove the 2 screws and the cruise control main switch.



INSPECTION

1. INSPECT CRUISE CONTROL MAIN SWITCH

(a) Remove the cruise control main switch



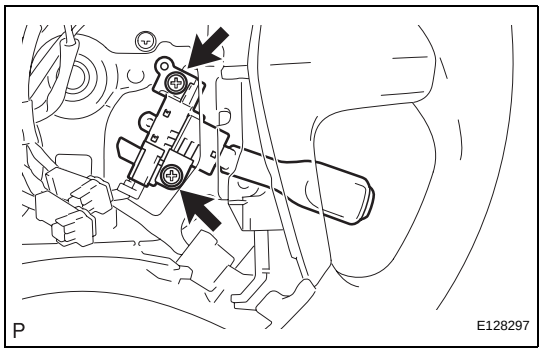
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Switch Condition	Specified Condition
A-1(ECC) - A-2(R/N), A-1(ECC) - A-3(CCS)	Neutral	10 kΩ or higher
A-1(ECC) - A-3(CCS)	+ (ACCEL)/RES (RESUME)	216 to 264Ω
A-1(ECC) - A-3(CCS)	- (COAST)/SET	567 to 693Ω
A-1(ECC) - A-3(CCS)	CANCEL	1,386 to 1,694Ω
A-1(ECC) - A-3(CCS)	Main Switch off	10kΩ or higher
A-1(ECC) - A-3(CCS)	Main Switch on	Below 1Ω
A-1(ECC) - A-2(R/N)	Main Switch on and Mode Switch on	Below 1Ω

CC

If the result is not as specified, replace the cruise control main switch



INSTALLATION

1. INSTALL CRUISE CONTROL MAIN SWITCH

(a) Install the cruise control main switch with the 2 screws.

Torque: 2.4 N*m (24 kgf*cm, 21 in.*lbf)

(b) Connect the connector.

2. INSTALL STEERING PAD (See page RS-350)

3. INSTALL LOWER NO. 2 STEERING WHEEL COVER (See page RS-352)

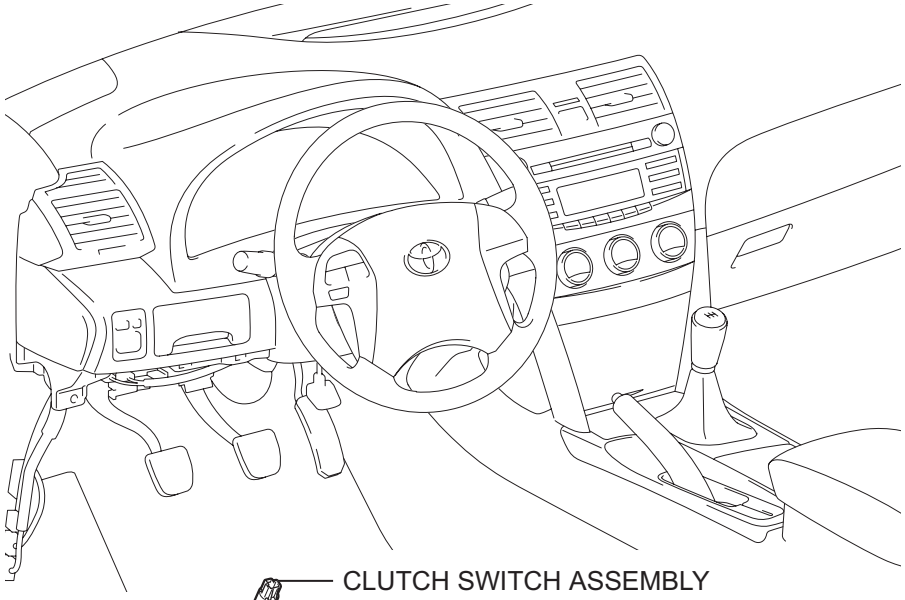
4. INSTALL LOWER NO. 3 STEERING WHEEL COVER (See page RS-351)

5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

6. **INSPECT SRS WARNING LIGHT**
(See page RS-32)

CLUTCH SWITCH

COMPONENTS



CLUTCH SWITCH ASSEMBLY

15.7 (160, 12)

MAIN BODY ECU (COWL SIDE JUNCTION BLOCK LH)

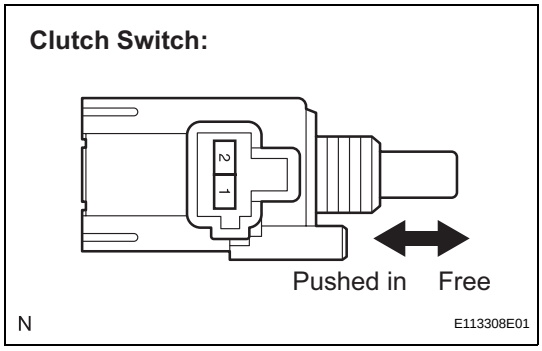
CC

REMOVAL

1. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-24)**
2. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-25)**
3. **REMOVE INSTRUMENT PANEL FINISH LOWER PANEL LH (for TMC Made) (See page IP-20)**
4. **REMOVE INSTRUMENT PANEL FINISH LOWER PANEL LH (for TMMK Made) (See page IP-21)**
5. **REMOVE MAIN BODY ECU (COWL SIDE JUNCTION BLOCK LH)**
   (a) Disconnect all connectors.
   (b) Remove the 2 nuts and the main body ECU (cowl side junction block LH).
6. **REMOVE CLUTCH SWITCH ASSEMBLY**
   (a) Disconnect the connector.

   (b) Loosen the nut and remove the clutch switch assembly.



INSPECTION

1. **INSPECT CLUTCH SWITCH**
   (a) Remove the clutch switch.
   (b) Measure the resistance according to the value(s) in the table below.

Standard resistance

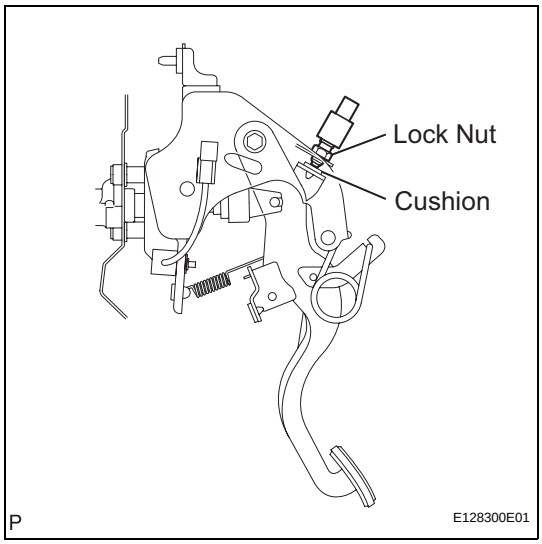
Tester Connection	Condition	Specified Condition
1 - 2	Switch pin free (Clutch pedal depressed)	10 kΩ or higher
	Switch pin pushed in (Clutch pedal released)	Below 1Ω

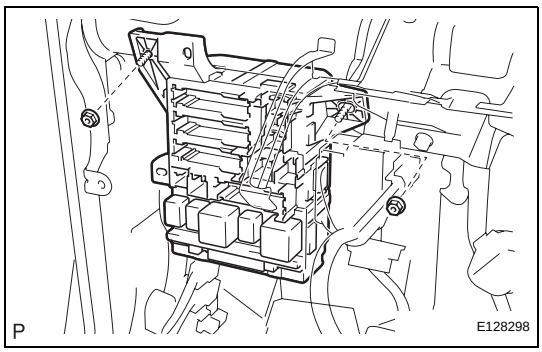
CC

If the result is not as specified, replace the clutch switch.

INSTALLATION

1. **INSTALL CLUTCH SWITCH ASSEMBLY**
   (a) Completely loosen the lock nut of the clutch switch assembly.
   (b) Adjust the clutch switch until the threaded portion makes gentle contact with the cushion. Tighten the lock nut and verify the contact of the switch threaded portion with the cushion.
   Torque: 15.7 N*m (160 kgf*cm, 12 ft.*lbf)
   (c) Connect the connector.





2. **INSTALL MAIN BODY ECU (COWL SIDE JUNCTION BLOCK LH)**
   (a) Install the main body ECU (cowl side junction block LH) with the 2 nuts.
   Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
   (b) Connect all connectors.
3. **INSTALL INSTRUMENT PANEL FINISH LOWER PANEL LH (for TMC Made) (See page IP-58)**
4. **INSTALL INSTRUMENT PANEL FINISH LOWER PANEL LH (for TMMK Made) (See page IP-59)**
5. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-54)**
6. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-54)**

CC

POWER DOOR LOCK CONTROL SYSTEM

PRECAUTION

1. EXPRESSIONS OF IGNITION SWITCH

(a) The type of ignition switch used on this model differs according to the specifications of the vehicle.
The expressions listed in the table below are used in this section.

Switch Type		Ignition Switch (position)	Engine Switch (condition)
Expression	Ignition switch off	LOCK	Off
	Ignition switch on (IG)	ON	On (IG)
	Ignition switch on (ACC)	ACC	On (ACC)
	Engine start	START	Start

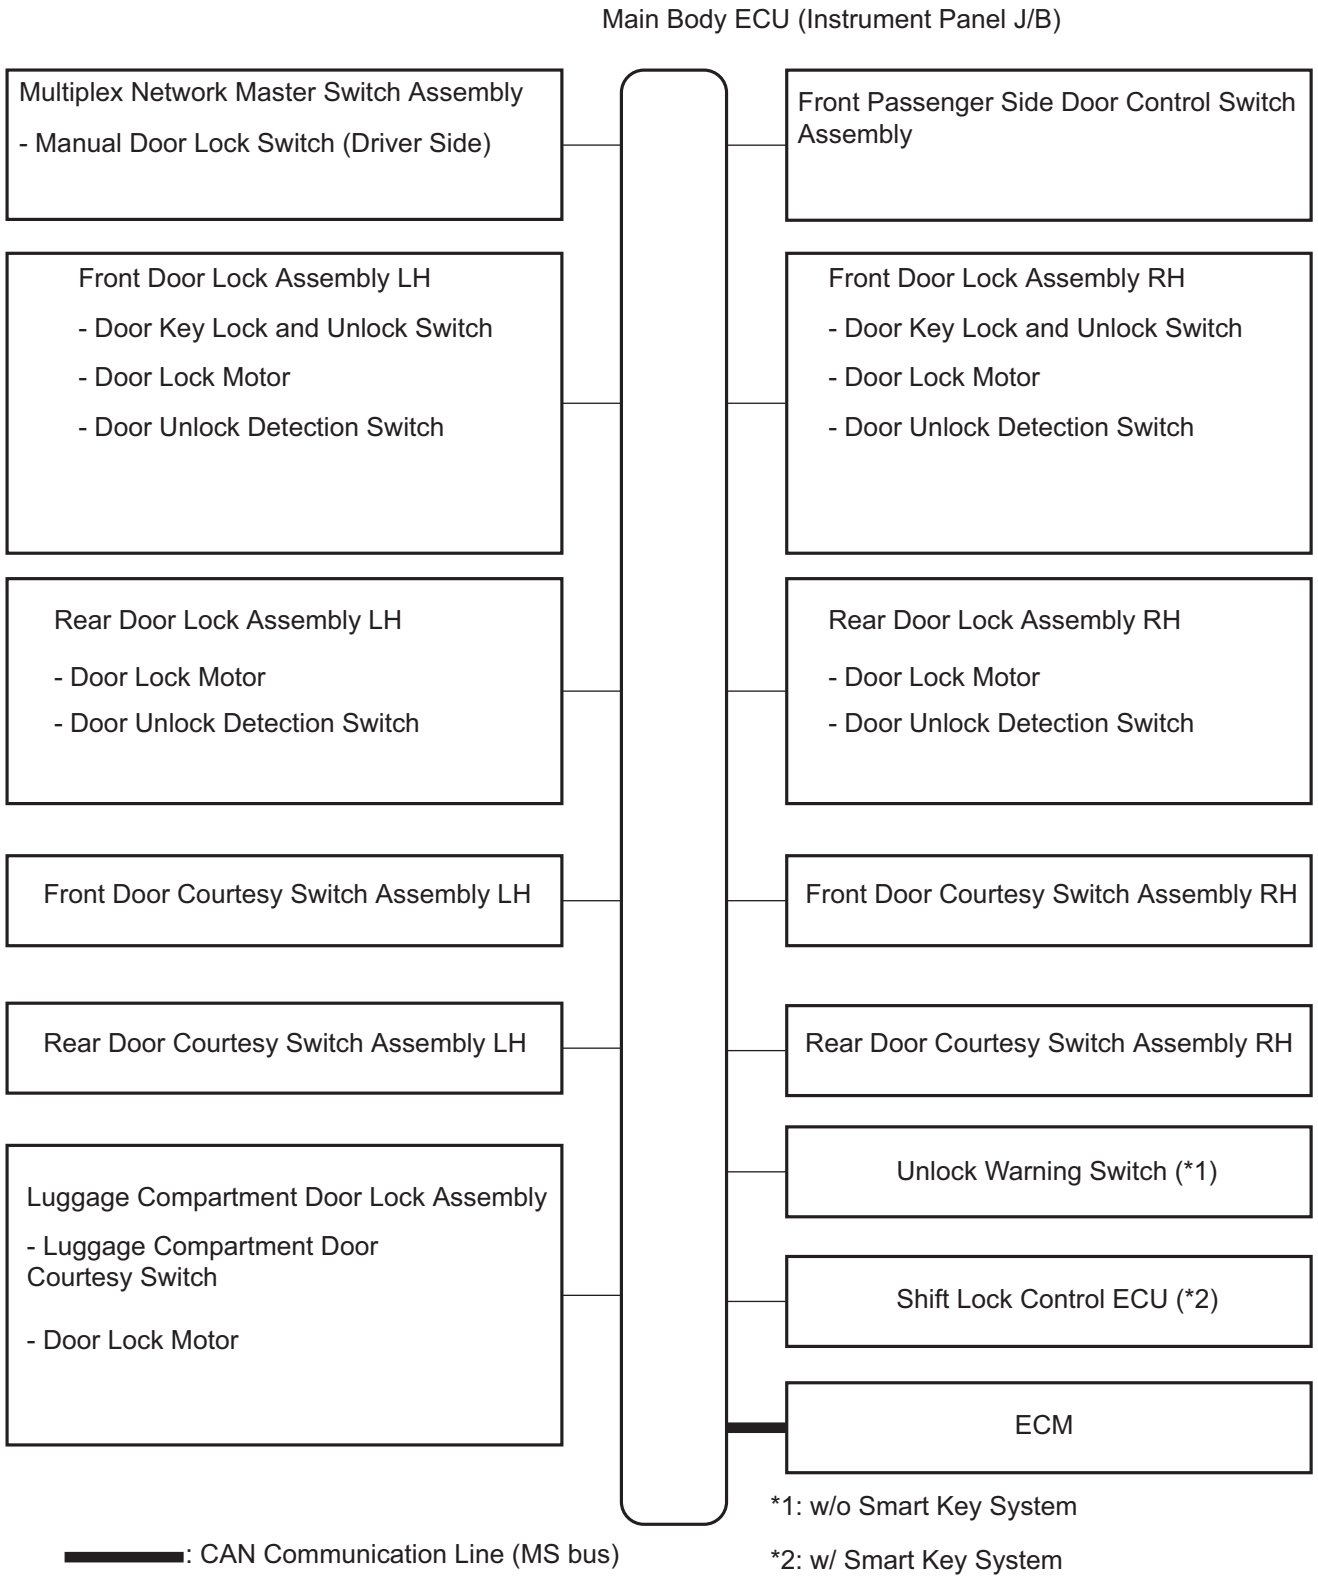
SYSTEM DIAGRAM

Door Lock Control System:



H

B112604E01

Transmitting ECU (Transmitter)	Receiving ECU (Receiver)	Signals	Communication method
ECM	Main Body ECU	Park / Neutral Position Switch Signal	CAN (MS bus)

SYSTEM DESCRIPTION

1. POWER DOOR LOCK CONTROL SYSTEM DESCRIPTION

(a) The power door lock system locks/unlocks all the doors.

The master switch and the door control switch on the passenger door send "lock/unlock" request signals to the main body ECU. Then, the main body ECU sends these request signals to the lock motors in each door to lock/unlock all the doors at once in response to the inputs.

Operating the driver's door lock using a mechanical key sends request signals to lock/unlock the doors to the main body ECU via the master switch. "2-step unlock function" is optional for unlocking procedures of the key-linked lock for the driver side door.

2. FUNCTION OF MAIN COMPONENT

Components	Function
Multiplex network master switch assembly (Manual door lock switch)	Door control switch on master switch assembly locks/unlocks all doors.
Door control switch	Door control switch on passenger side door locks/unlocks all doors.
Door courtesy switch	Placed on each door. Detects door status (open or closed) and outputs data to main body ECU. Turns on when door is open and turns off when door is closed.
Driver side door lock	• Built-in motor locks/unlocks door. • Built-in door control switch (key-linked) detects door key operation's door status (locked or unlocked) and outputs data to main body ECU. • Built-in position switch detects door status (locked or unlocked) and outputs data to main body ECU. This switch turns off when door is locked and turns on when door is unlocked.
Front passenger side door lock, luggage compartment door lock, rear LH and RH door locks	• Built-in motor locks/unlocks door. • Built-in position switch detects door status (locked or unlocked) and outputs data to main body ECU. This switch turns off when door is locked and turns on when door is unlocked.

3. SYSTEM FUNCTION

HINT:

The following functions' default settings are ON. Some of these functions can be customized (See page DL-10).

(a) This system is controlled by the main body ECU. The main body ECU outputs signals to each door lock motor. The door lock control system of the CAMRY has the following functions:

DL

Function	Outline
Manual lock and unlock function	This function can lock or unlock all doors by the door lock control switch operation.
Key-linked lock and unlock function	This function, which is linked with the key cylinder, can lock or unlock all the doors when a lock or unlock operation is effected.
Manual unlock prohibition function	Performing the door lock operation with an electrical key (*1) or a mechanical key (transmitter) will prohibit the unlock operation by the door lock control switch.
Key lock-in prevention function (Electrical key)	If a each door lock (*1) or driver's door lock (*2) operation is performed when the electrical key (*1) or mechanical key is in the cabin (*1) or ignition key cylinder (*2), all the doors will be unlocked.

Function	Outline
Shift-linked automatic door lock function (A/T)	When the conditions listed below are met consecutively, this function causes all the doors to be automatically locked. • The ignition switch is on (IG). • All doors are closed. • The shift lever is moved out of the P position. • Any of the doors are unlocked.
Shift-linked automatic door unlock function (A/T)	When the ignition switch is on (IG), if moving the shift lever to the P position from any other position, all the doors will be automatically unlocked.
One-motion open	When the door is locked, this function enables the door to be unlocked by pulling the inside handle of the driver's or front passenger's door.
2-step unlock function	This function is provided to unlock the driver's door by turning the key cylinder once and to unlock the remaining doors by turning it the second time.

*2: w/o Smart Key System

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedures to troubleshoot the power door lock control system.
- The intelligent tester should be used in step 5 and 7.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS CHECK

HINT:

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points in the problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Running conditions, driving conditions, weather conditions
How did it happen?	Problem symptoms

NEXT

3	INSPECT BATTERY VOLTAGE

Standard Voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

OPERATION CHECK

1. CHECK ELECTRICAL DOOR LOCK OPERATION

NOTICE:

The initial condition that the customizing function using the intelligent tester is not chosen is shown.

(a) Check the basic function.

(1) Check that all doors lock when the door control switch (for manual operation) is turned to LOCK and all doors unlock when turned to UNLOCK.

(2) Check that all doors lock when the driver side door lock key cylinder is turned to LOCK using the mechanical key.

(b) Check the electrical key lock-in prevention function (w/ Smart Key System).

NOTICE:

In order to prevent the electrical key from being actually locked-in, the following inspection should be performed with the driver side door window open.

(1) Place the electrical key in the cabin.

(2) With the driver side door open, check that all doors unlock immediately after the door lock knob for the driver side door is turned to LOCK.

(3) With the driver side door open, check that all doors unlock immediately after the door control switch (for manual operation) is turned to LOCK.

(4) With the driver side door open, turn the driver side door lock knob to LOCK, and then close the driver side door. Then check that all doors unlock.

(c) Check the key lock-in prevention function (w/o Smart Key System).

NOTICE:

In order to prevent the key from being actually locked-in, the inspection should be performed with the driver side door window open.

(1) Have the key inserted into the ignition key cylinder.

(2) With the driver side door open, check that all doors unlock immediately after the door lock knob for the driver side door is turned to LOCK.

(3) With the driver side door open, check that all doors unlock immediately after the door control switch (for manual operation) is turned to LOCK.

(4) With the driver side door open, turn the driver side door lock knob to LOCK, and then close the driver side door. Then check that all doors unlock.

(d) Check the security function.

*1: w/ Smart Key System

(1) Close all doors with the driver side door window open so that the door control switch can be operated from outside the vehicle.

(2) Pull out the electrical key (*1) or mechanical key (transmitter), open the driver side door and then close and lock the door using the electrical key (*1) or mechanical key (transmitter). Under this condition, check that all doors do not unlock when the door control switch (for manual operation) is turned to UNLOCK from outside the vehicle.

(3) Pull out the electrical key (*1) or the mechanical key, and close and lock the driver side door by mechanical key operation. Under this condition, check that all doors do not unlock when the door control switch (for manual operation) is turned to UNLOCK from outside the vehicle.

(4) Pull out the electrical key (*1) or mechanical key (transmitter), close the driver side door, and lock the door by wireless door lock operation. Under this condition, check that all doors do not unlock when the door control switch (for manual operation) is turned to UNLOCK from outside the vehicle.

HINT:

Check that the security function is canceled under the following conditions:

- The ignition switch is turned on (IG).
- The driver side door is unlocked using the mechanical key (transmitter) or the electrical key.
- The door control switch (for manual operation) is turned to UNLOCK after the door control knob is turned to UNLOCK manually.

(e) Check the illumination function.

(1) Set the room light switch to the DOOR position.

(2) With all doors locked, check that driver's door unlock when the driver side door lock cylinder is turned to UNLOCK using the key. At the same time, the room light comes on.

(3) Check that the room light goes off in approximately 15 seconds if the doors have not been opened.

(f) Check the AUTO lock function (w/ Smart Key System).

(1) Lock all doors.

(2) Unlock driver's door using the electrical key.

(3) Allow 30 seconds to elapse while all doors remain closed and the electrical key switch and the entry unlock switch remain untouched. Then, check that all doors will lock automatically.

(g) Check the automatic locking function interlocked with the shift lever.
*1: w/o Smart Key System and w/o Theft Deterrent System
*2: Except *1
(1) When any door (*1), driver's door or passenger's door (*2) is unlocked with all doors closed and the engine started, check that all doors automatically lock when the shift lever is moved into any position from the P position (A/T).
(2) When any door is unlocked after all doors automatically lock, check that all doors attempt to automatically lock once again (retry function). The retry function is canceled when any of the following conditions is fulfilled:
- All doors are locked.
- Any door is opened.
- The shift lever is moved into the P position.
- The doors are locked or unlocked by the user.
- The ignition switch is turned off.
- The engine is stopped.

CUSTOMIZE PARAMETERS

1. CUSTOMIZING FUNCTION WITH INTELLIGENT TESTER

HINT:

The following items can be customized.

NOTICE:

- **Before attempting to customize vehicle settings, confirm whether it is possible to make the change that the customer has requested.**
- **Be sure to record the current settings before customizing.**
- **When troubleshooting, make sure that the item in question has not been disabled using the customizing function.**

DOOR LOCK:

Display (Item)	Default	Contents	Setting
UNLOCK/PARK (Unlock w/ engine switch on (IG), shift P, speed 0 km/h (0 mph))	A/T: ON M/T: OFF (Cannot be changed)	Function that unlocks doors when the shift lever is moved to the P position from any other position while the ignition switch is on (IG)	ON/OFF
ALL UNLK/OPN-CL (All unlock w/ D door open-close)	A/T: OFF M/T: ON	Function that unlocks all other doors when opening driver side door within 10 seconds after turning the ignition switch off from on (IG)	ON/OFF
UNLK/KEY TWICE (Unlock w/ 2 times D key operation)	ON	• Function that unlocks only the driver side door when the driver side door key cylinder is turned to unlock once and unlocks all the doors when it is turned to unlock twice • In the OFF setting, turning it once unlocks all doors	ON/OFF
AUTO LOCK/SHIFT (Auto lock/shift not P)	A/T: ON M/T: OFF (Cannot be changed)	Function that locks doors when the shift lever is moved from the P position to any other position	ON/OFF
AUTO LOCK	OFF	Function that locks doors when vehicle reaches a vehicle speed 20 km/h (13 mph)	ON/OFF

WIRELESS D LOCK:

Display (Item)	Default	Contents	Setting
AUTO LOCK DELAY	60s	Function that selects AUTO LOCK time (30 sec. or 60 sec.)	30s/60s

PROBLEM SYMPTOMS TABLE

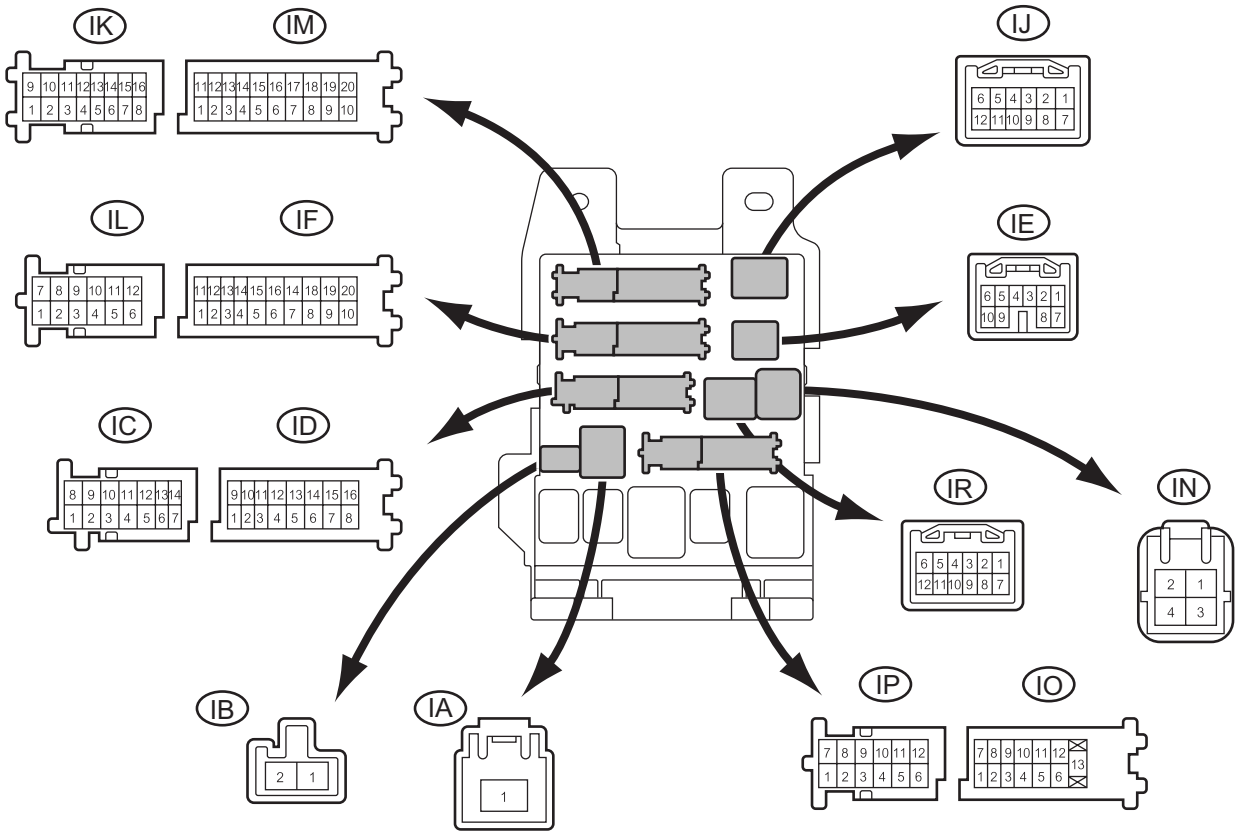
POWER DOOR LOCK CONTROL SYSTEM:

Symptom	Suspected area	See page
All doors cannot be locked/unlocked simultaneously by neither door control switch nor door key cylinder	Power source circuit (Main body ECU)	DL-13
	Replace main body ECU (Instrument panel J/B)	-
All doors cannot be locked/unlocked simultaneously by driver side door control switch	Door control switch circuit (Driver side)	DL-60
	Replace main body ECU (Instrument panel J/B)	-
All doors cannot be locked/unlocked simultaneously by front passenger side door control switch	Door control switch circuit (Front passenger side door)	DL-60
	Replace main body ECU (Instrument panel J/B)	-
All doors cannot be locked/unlocked simultaneously by door key cylinder	Driver side door key lock and unlock switch circuit	DL-56
	Multiplex network master switch assembly	DL-13
	Replace main body ECU (Instrument panel J/B)	-
Driver side door lock does not operate	Driver side door lock motor circuit	DL-32
	Replace main body ECU (Instrument panel J/B)	-
Passenger side door lock does not operate	Front passenger side door lock motor circuit	DL-35
	Replace main body ECU (Instrument panel J/B)	-
Rear LH side door lock does not operate	Rear door lock motor LH circuit	DL-38
	Replace main body ECU (Instrument panel J/B)	-
Rear RH side door lock does not operate	Rear door lock motor RH circuit	DL-41
	Replace main body ECU (Instrument panel J/B)	-
Luggage compartment door lock does not operate	Luggage compartment door lock circuit	DL-47
	Replace main body ECU (Instrument panel J/B)	-
Key lock-in prevention function does not work properly (manual operation and key-linked lock are active) w/ Smart Key System	Door courtesy switch circuit (Driver side)	LI-52
	Smart key system	DL-147
	Replace main body ECU (Instrument panel J/B)	-
Key lock-in prevention function does not work properly (manual operation and key-linked lock are active) w/o Smart Key System	Door courtesy switch circuit (Driver side)	LI-52
	Unlock warning switch circuit	DL-205
	Replace main body ECU (Instrument panel J/B)	-
Shift-linked automatic door lock does not operate (A/T)	CAN communication system	CA-8
	Replace main body ECU (Instrument panel J/B)	-
One or more doors cannot be locked/unlocked simultaneously (Wireless key operation)	Wireless door lock system (w/ smart key system)	DL-74
	Wireless door lock system (w/o smart key system)	DL-104
	Driver side door unlock detection switch circuit	DL-19
	Front passenger door unlock detection switch circuit	DL-22
	Rear door unlock detection switch LH circuit	DL-25
	Rear door unlock detection switch RH circuit	DL-28
	Replace main body ECU (Instrument panel J/B)	-
One or more doors cannot be locked/unlocked simultaneously (Theft deterrent operation)	Theft deterrent system (w/ smart key system)	TD-15
	Theft deterrent system (w/o smart key system)	TD-53
	Driver side door unlock detection switch circuit	DL-19
	Front passenger door unlock detection switch circuit	DL-22
	Rear door unlock detection switch LH circuit	DL-25
	Rear door unlock detection switch RH circuit	DL-28
	Replace main body ECU (Instrument panel J/B)	-

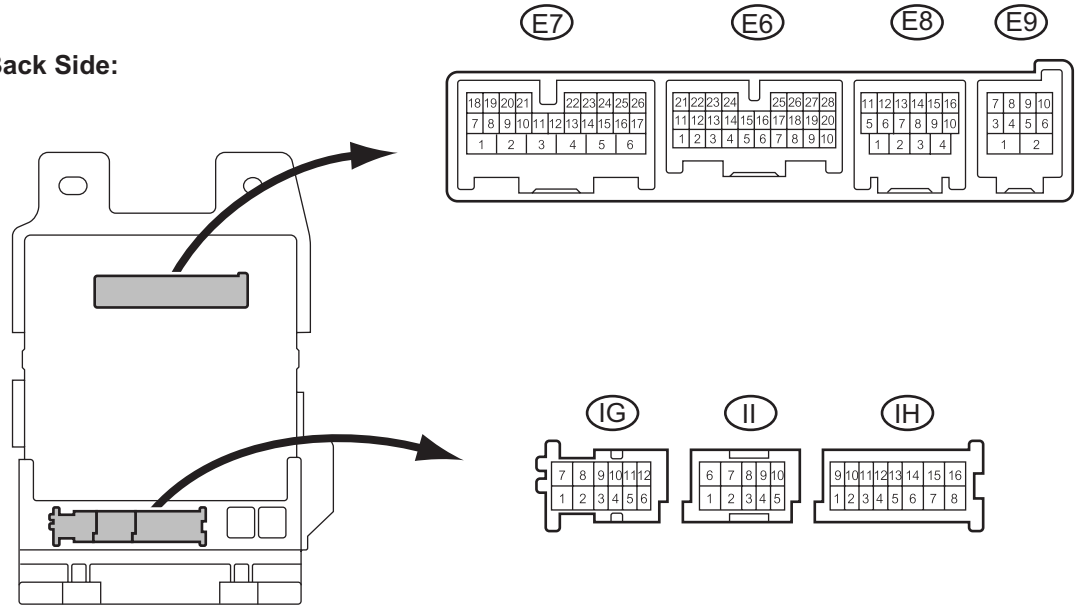
TERMINALS OF ECU

1. CHECK MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)

Front Side:



Back Side:



H

B112605E01

(a) Disconnect the E6, E7, IO, IK, IM, ID, IA, IF, IJ, and E9 J/B and ECU connectors.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
DCTY (E7-24) - Body ground	L - Body ground	Driver door courtesy switch	Driver door CLOSED → OPEN	10 kΩ or higher → Below 1 Ω
RCTY (E6-5 (*1), 7 (*2)) - Body ground	GR - Body ground	Rear right door courtesy switch input	Rear right door CLOSED → OPEN	10 kΩ or higher → Below 1 Ω
PCTY (E6-21) - Body ground	Y - Body ground	Passenger door courtesy switch input	Passenger door CLOSED → OPEN	10 kΩ or higher → Below 1 Ω
LCTY (IO-7) - Body ground	LG - Body ground	Rear left door courtesy switch input	Rear left door CLOSED → OPEN	10 kΩ or higher → Below 1 Ω
GND2 (IM-9) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
IG (IA-1) - Body ground	B - Body ground	Engine power supply	Ignition switch on (IG) → off	10 to 14 V → Below 1 V
GND1 (IF-10) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
ACC (IA-1) - Body ground	B - Body ground	ACC power supply	Always	10 to 14 V
L1 (IJ-3) - Body ground	L - Body ground	Passenger door control switch LOCK input	Passenger door control switch OFF → LOCK	10 kΩ or higher → Below 1 Ω
UL1 (IJ-4) - Body ground	G - Body ground	Passenger door control switch UNLOCK input	Passenger door control switch OFF → UNLOCK	10 kΩ or higher → Below 1 Ω
L1 (IK-15) - Body ground	V - Body ground	Driver door control switch LOCK input	Driver door control switch OFF → LOCK	10 kΩ or higher → Below 1 Ω
UL1 (IK-12) - Body ground	G - Body ground	Driver door control switch UNLOCK input	Driver door control switch OFF → UNLOCK	10 kΩ or higher → Below 1 Ω
KSW (*1) (E9-5) - Body ground	L - Body ground	Unlock warning switch signal input	No key is in ignition key cylinder → Key is in ignition key cylinder	10 kΩ or higher → Below 1 Ω
LGCY (E6-25) - Body ground	W - Body ground	Luggage compartment door courtesy switch input	Luggage compartment door CLOSED → OPEN	10 kΩ or higher → Below 1 Ω
TSW (E6-2) - Body ground	R - Body ground	Luggage compartment door key-linked door unlock input	Using mechanical key, operate luggage compartment door lock cylinder to LOCK → OPEN → UNLOCK	10 kΩ or higher → Below 1 Ω → 10 kΩ or higher →
BECU (*1) (ID-10) - Body ground	O - Body ground	+B (BECU) power supply	Always	10 to 14 V

*1: w/o Smart Key System
*2: w/ Smart Key System
If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the J/B and ECU connectors.
(d) Measure the voltage according to the value(s) in the table below.

DL

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
LSWL (*2), LSR (*1) (IP-5) - Body ground	GR - Body ground	Rear left door lock position switch input	Rear left door UNLOCK → LOCK	Below 1 V → 10 to 14 V (or pulse generation)
LSWL (*1) (IL-5) - Body ground	GR - Body ground	Rear right door lock position switch input	Rear right door UNLOCK → LOCK	Below 1 V → 10 to 14 V (or pulse generation)
LSWD (E7-9) - Body ground	L - Body ground	Driver door lock position switch input	Driver door UNLOCK → LOCK	Below 1 V → 10 to 14 V (or pulse generation)

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
UL3 (E7-8) - Body ground	GR - Body ground	Driver door key-linked door unlock input	Using mechanical key, operate driver door lock cylinder to LOCK → UNLOCK	Below 1 V → 10 to 14 V (or pulse generation)
L2 (IK-16) - Body ground	BR - Body ground	Driver door key-linked door lock input	Using mechanical key, operate driver door lock cylinder to UNLOCK → LOCK	Below 1 V → 10 to 14 V (or pulse generation)
UL2 (IK-7) - Body ground	GR - Body ground	Front passenger door key-linked door unlock input	Using mechanical key, operate passenger door lock cylinder to LOCK → UNLOCK	Below 1 V → 10 to 14 V (or pulse generation)
L2 (IJ-5) - Body ground	W - Body ground	Front passenger door key-linked door lock input	Using mechanical key, operate passenger door lock cylinder to UNLOCK → LOCK	Below 1 V → 10 to 14 V (or pulse generation)
ACT+ (IJ-1) - Body ground	L - Body ground	Door lock motor LOCK drive output (Front passenger door)	Door control switch (Master switch or passenger side switch) or driver side door key cylinder OFF → LOCK → OFF	Below 1 V → 10 to 14 V → Below 1 V
ACT+ (IP-11) - Body ground	W - Body ground	Door lock motor LOCK drive output (Rear door LH)	Door control switch (Master switch or passenger side switch) or driver side door key cylinder OFF → LOCK → OFF	Below 1 V → 10 to 14 V → Below 1 V
ACT+ (IF-5) - Body ground	L - Body ground	Door lock motor LOCK drive output (Rear door RH)	Door control switch (Master switch or passenger side switch) or driver side door key cylinder OFF → LOCK → OFF	Below 1 V → 10 to 14 V → Below 1 V
ACT- (IP-6) - Body ground	G - Body ground	Door lock motor UNLOCK drive output (Rear door LH)	Door control switch (Master switch or passenger side switch) or driver side door key cylinder OFF → UNLOCK → OFF	Below 1 V → 10 to 14 V → Below 1 V
ACT- (IF-18) - Body ground	B - Body ground	Door lock motor UNLOCK drive output (Rear door RH)	Door control switch (Master switch or passenger side switch) or driver side door key cylinder OFF → UNLOCK → OFF	Below 1 V → 10 to 14 V → Below 1 V
TR+ (E7-1) - Body ground	B - Body ground	Door lock motor UNLOCK drive output (Luggage compartment door)	Luggage compartment open switch (Transmitter) or luggage compartment door key cylinder OFF → UNLOCK → OFF	Below 1 V → 10 to 14 V → Below 1 V
ACTD (E7-5) - Body ground	GR - Body ground	Door lock motor UNLOCK drive output (Driver door)	Door control switch (Master switch or passenger side switch) or driver side door key cylinder OFF → UNLOCK → OFF	Below 1 V → 10 to 14 V → Below 1 V
ACT+ (IK-2) - Body ground	W - Body ground	Door lock motor LOCK drive output (Driver door)	Door control switch (Master switch or passenger side switch) or driver side door key cylinder OFF → LOCK → OFF	Below 1 V → 10 to 14 V → Below 1 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
ACT- (IJ-2) - Body ground	LG - Body ground	Door lock motor UNLOCK drive output (Front passenger)	Door control switch (Master switch or passenger side switch) or driver side door key cylinder OFF → UNLOCK → OFF	Below 1 V → 10 to 14 V → Below 1 V
LSWR (*2) (E6-5) - Body ground	V - Body ground	Rear right door lock position switch input	Rear right door UNLOCK → LOCK	Below 1 V → 10 to 14 V (or pulse generation)
LSWP (E6-27) - Body ground	LG - Body ground	Passenger door lock position switch input	Passenger door UNLOCK → LOCK	Below 1 V → 10 to 14 V (or pulse generation)

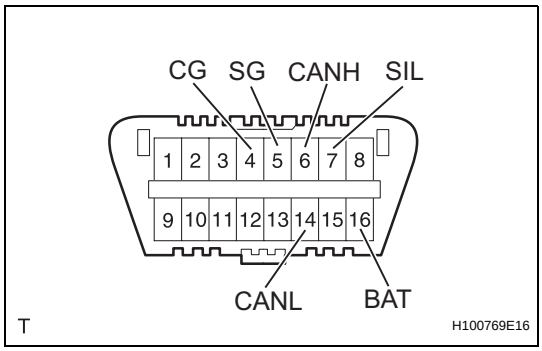
*1: w/o Smart Key System
*2: w/ Smart Key System
If the result is not as specified, the main body ECU (instrument panel J/B) may have a malfunction.

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) Power door lock control system data and Diagnostic Trouble Codes (DTCs) can be read through the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the intelligent tester to check for malfunctions and perform repairs.

2. CHECK DLC3



HINT:

The vehicle uses the ISO 15765-4 communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition Switch OFF*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition Switch OFF*	200 Ω or more
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition Switch OFF*	200 Ω or more
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition Switch OFF*	6 kΩ or more
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition Switch OFF*	6 kΩ or more

NOTICE:

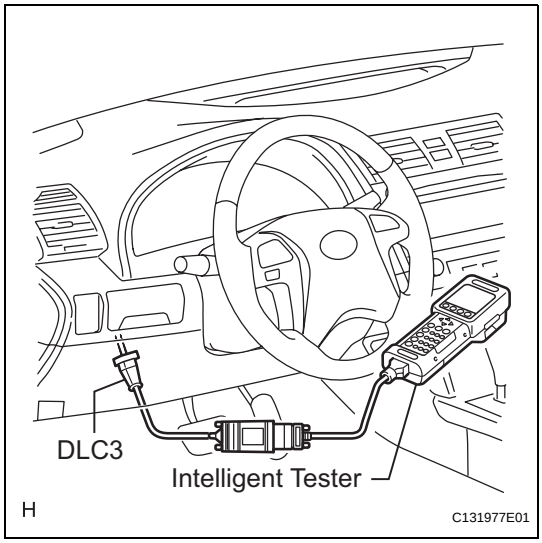
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

Connect the cable of the intelligent tester to the DLC3, turn the ignition switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.



3. INSPECT BATTERY VOLTAGE

Standard Voltage:

11 to 14 V

DL

If the voltage is below 11 V, recharge or replace the battery before proceeding.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the intelligent tester's DATA LIST allows switch, sensor, actuator, and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST.
(d) Read the DATA LIST according to the display on the tester.

MAIN BODY:

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
D DOR CTY SW	Driver side door courtesy light switch signal/ON or OFF	ON: Driver side door is CLOSED OFF: Driver side door is OPEN	-
P DOR CTY SW	Passenger side door courtesy light switch signal/ON or OFF	ON: Passenger side door is CLOSED OFF: Passenger side door is OPEN	-
RR DOR CTY SW	Rear right door courtesy light switch signal/ON or OFF	ON: Rear right door is CLOSED OFF: Rear right door is OPEN	-
RL DOR CTY SW	Rear left door courtesy light switch signal/ON or OFF	ON: Rear left door is CLOSED OFF: Rear left door is OPEN	-
D LOCK POS SW	Driver side door lock position switch signal/ON or OFF	ON: Driver side door is unlocked ON: Driver side door is locked	-
P LOCK POS SW	Front passenger side door lock position switch signal/ON or OFF	ON: Front passenger side door is unlocked ON: Front passenger side door is locked	-
RR LOCK POS SW (*1)	Rear right door lock position switch signal/ON or OFF	ON: Rear right door is unlocked OFF: Rear right door is locked	-
RL LOCK POS SW (*1)	Rear left door lock position switch signal/ON or OFF	ON: Rear left door is unlocked OFF: Rear left door is locked	-
LUGG COURTSY SW	Luggage compartment door courtesy light switch signal/ON or OFF	ON: Luggage compartment door is OPEN OFF: Luggage compartment door is CLOSED	-
D/L SW-LOCK	Door control switch lock signal/ ON or OFF	ON: Door control switch is pushed to lock position OFF: Door control switch is not pushed to lock position	-

DOR KEY SW-LOCK	Driver door lock/unlock switch lock signal (key-linked lock switch)/ON or OFF	ON: Driver side door key cylinder is turned to lock position OFF: Driver side door key cylinder is turned to unlock position	-
DOR KEY SW-ULCK	Driver door lock/unlock switch unlock signal (key-linked unlock switch)/ON or OFF	ON: Driver side door key cylinder is turned to unlock position OFF: Driver side door key cylinder is turned to lock position	-

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
D DOR KEY SW-UL	Driver door lock/unlock switch unlock signal (2 times key-linked unlock switch)/ON or OFF	ON: Driver side door key cylinder is turned to unlock position OFF: Driver side door key cylinder is turned to lock position	-
TRUNK KEY UNLK	Luggage compartment door key cylinder switch/ON or OFF	ON: Ignition key is inserted and turned to lock position OFF: Ignition key is inserted and turned to unlock position	-

*1: w/ Smart Key System, w/o Smart Key System with Theft Deterrent System

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows relays, VSVs, actuators, and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST.
(d) Perform the ACTIVE TEST according to the display on the tester.

MAIN BODY:

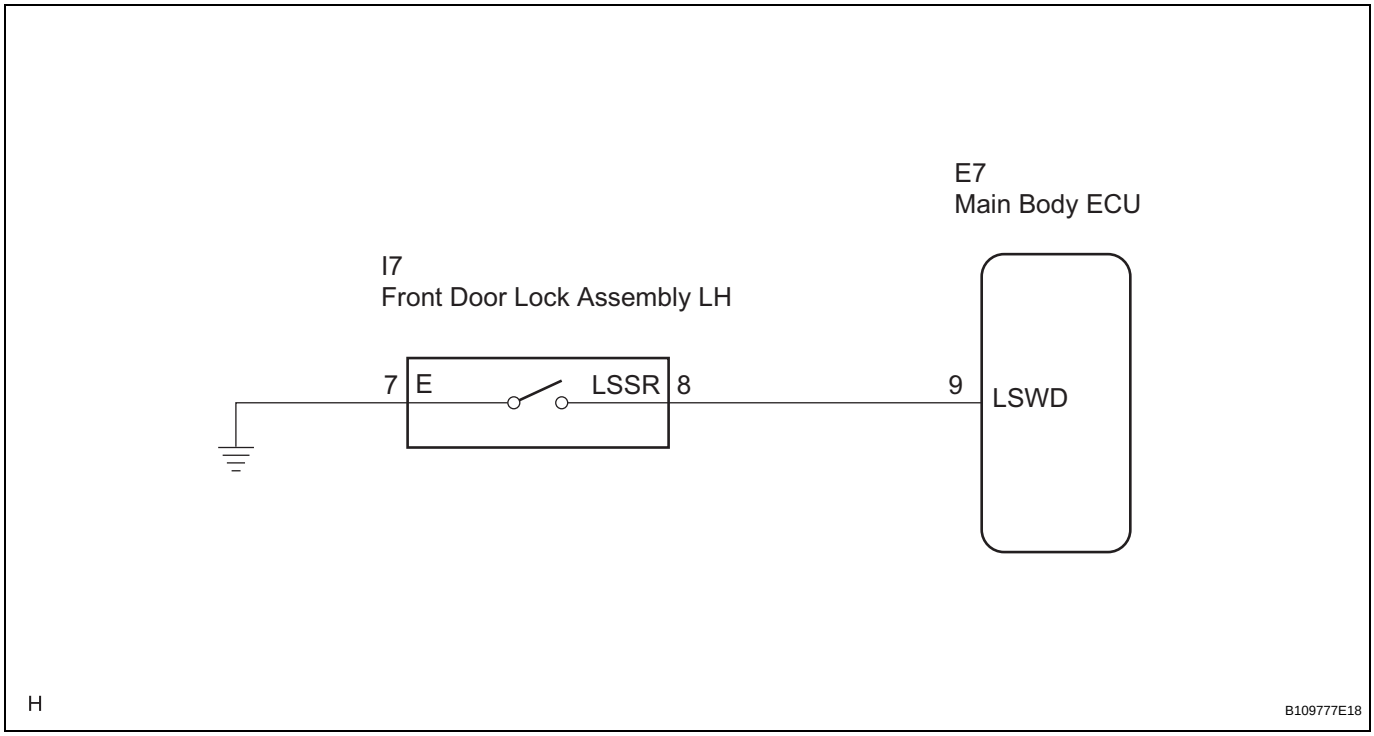
Item	Test Details	Diagnostic Note
DOOR LOCK	Operate door lock motor LOCK/UNLOCK	-
D DOOR UNLOCK	Operate driver door lock motor LOCK	-
TRUNK/BDOR OPEN	Operate luggage compartment door lock motor LOCK	-

Driver Side Door UNLOCK Detection Switch Circuit

DESCRIPTION

The driver's door unlock detection switch is built into the driver's door lock assembly. The switch turns on when the driver's door is locked and turns off when the door is unlocked.
The main body ECU is connected to the driver's door lock assembly via terminal LSWD and driver's door lock/unlock state signals are input to the main body ECU.
The main body ECU applies voltage to the door unlock detection switch via terminal LSWD. When the door unlock detection switch is on (there is continuity between the switch terminals), a lock state signal is input to the main body ECU. When the switch is off (there is no continuity between the switch terminals), an unlock state signal is input.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF DATA LIST (DOOR UNLOCK DETECTION SWITCH)

(a) Check the DATA LIST to ensure proper function of the door unlock detection switch.

MAIN BODY:

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
D LOCK POS SW	Driver side door unlock detection switch signal /ON or OFF	ON: Driver side door is unlocked OFF: Driver side door is locked	-

OK:

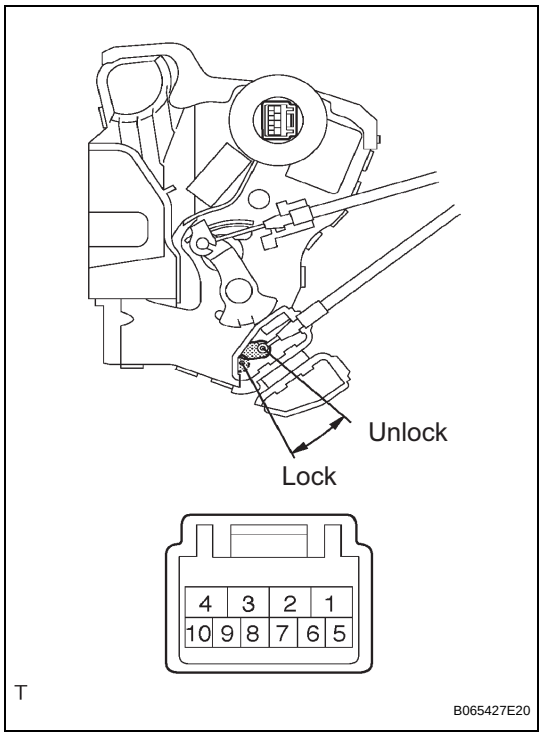
The display is as specified in the normal condition column.

NG	Go to step 2

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

2 INSPECT FRONT DOOR LOCK ASSEMBLY (DOOR UNLOCK DETECTION SWITCH)



(a) Remove the front door lock assembly LH.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Measurement Condition	Door Lock Condition	Specified Condition
7 - 8	Battery positive (+) → Terminal 4 Battery negative (-) → Terminal 1	Lock	10 kΩ or higher
7 - 8	Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 4	Unlock	Below 1 Ω

NG → **REPLACE FRONT DOOR LOCK ASSEMBLY**

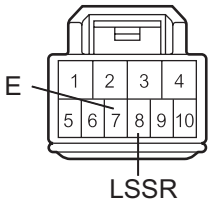
OK

DL

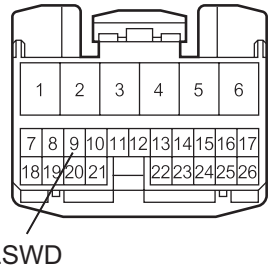
3	CHECK WIRE HARNESS (FRONT DOOR LOCK ASSEMBLY - MAIN BODY ECU)

Wire Harness Side:

I7
Front Door Lock Assembly LH



E7
Main Body ECU



H

B112606E01

(a) Disconnect the front door lock assembly LH connector.
(b) Disconnect the main body ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
I7-8 (LSSR) - E7-9 (LSWD)	Always	Below 1 Ω
I7-8 (LSSR) - Body ground	Always	10 kΩ or higher
I7-7 (E) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

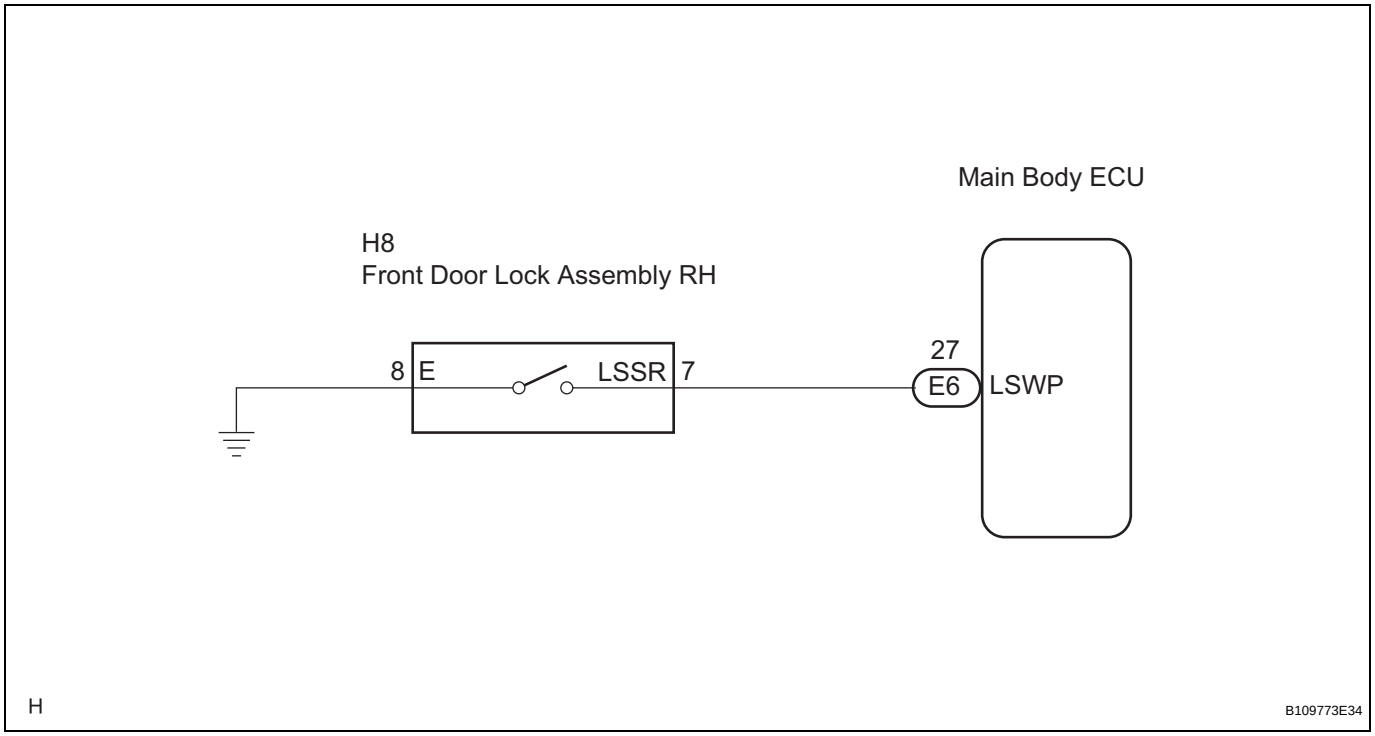
REPLACE MAIN BODY ECU

Front Passenger Side Door UNLOCK Detection Switch Circuit

DESCRIPTION

The front passenger door unlock detection switch is built into the front passenger door lock assembly. The switch turns on when the front passenger door is locked and turns off when the door is unlocked.
The main body ECU is connected to the front passenger door lock assembly via terminal LSWP and front passenger door lock/unlock state signals are input to the ECU.
The main body ECU applies voltage to the door unlock detection switch via terminal LSWP. When the door unlock detection switch is on (there is continuity between the switch terminals), a lock state signal is input to the ECU. When the switch is off (there is no continuity between the switch terminals), an unlock state signal is input.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF DATA LIST (DOOR UNLOCK DETECTION SWITCH)

(a) Check the DATA LIST to ensure proper function of the door unlock detection switch.

MAIN BODY:

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MAIN BODY ECU

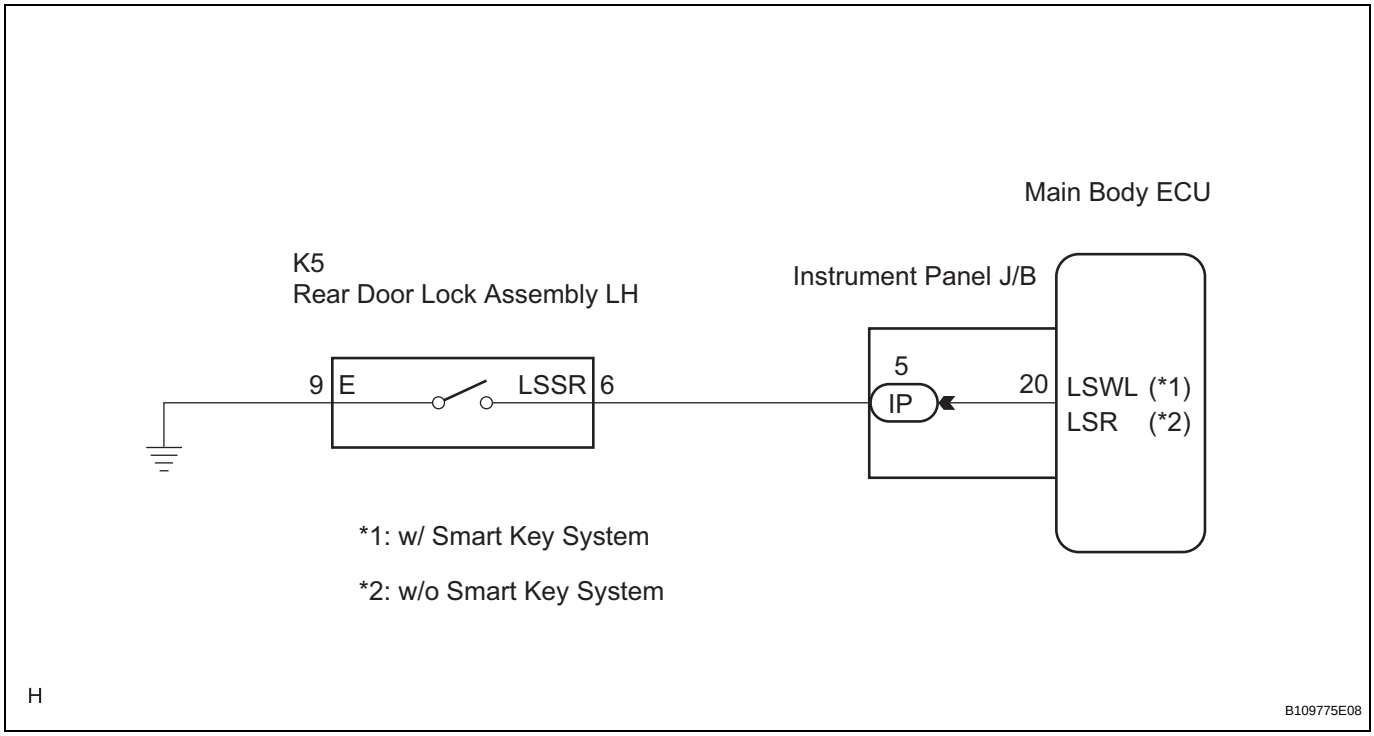
DL

Rear Door UNLOCK Detection Switch LH Circuit

DESCRIPTION

The rear left door unlock detection switch is built into the rear left door lock assembly. The switch turns on when the rear left door is locked and turns off when the door is unlocked.
The main body ECU is connected to the rear left door lock assembly via terminal LSWL (w/ Smart key system) or LSR (w/o Smart key system) and rear left door lock/unlock state signals are input to the ECU. The main body ECU applies voltage to the door unlock detection switch via terminal LSWL (w/ Smart key system) or LSR (w/o Smart key system). When the door unlock detection switch is on (there is continuity between the switch terminals), a lock state signal is input to the ECU. When the switch is off (there is no continuity between the switch terminals), an unlock state signal is input.

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
Start the inspection from step 1 when w/ smart key system or w/o smart key system and w/ theft deterrent system, and start from step 2 when w/o smart key system and w/o theft deterrent system.

DL

1	READ VALUE OF DATA LIST (UNLOCK DETECTION SWITCH)

(a) Check the DATA LIST to ensure proper function of the door unlock detection switch.

MAIN BODY:

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
RL LOCK POS SW	Rear left door lock position switch signal / ON or OFF	ON: Rear left door lock is in UNLOCK position OFF: Rear left door lock is in LOCK position	-

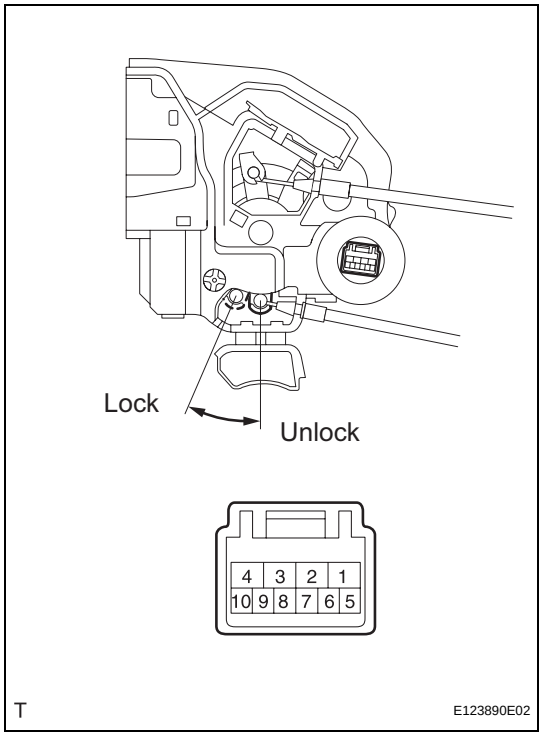
OK:
The display is as specified in the normal condition column.

NG → **Go to step 2**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

2 INSPECT REAR DOOR LOCK ASSEMBLY (UNLOCK DETECTION SWITCH)



(a) Remove the rear door lock assembly LH.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Measurement Condition	Door Lock Condition	Specified Condition
6 - 9	Battery positive (+) → Terminal 4 Battery negative (-) → Terminal 1	Lock	10 kΩ or higher
6 - 9	Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 4	Unlock	Below 1 Ω

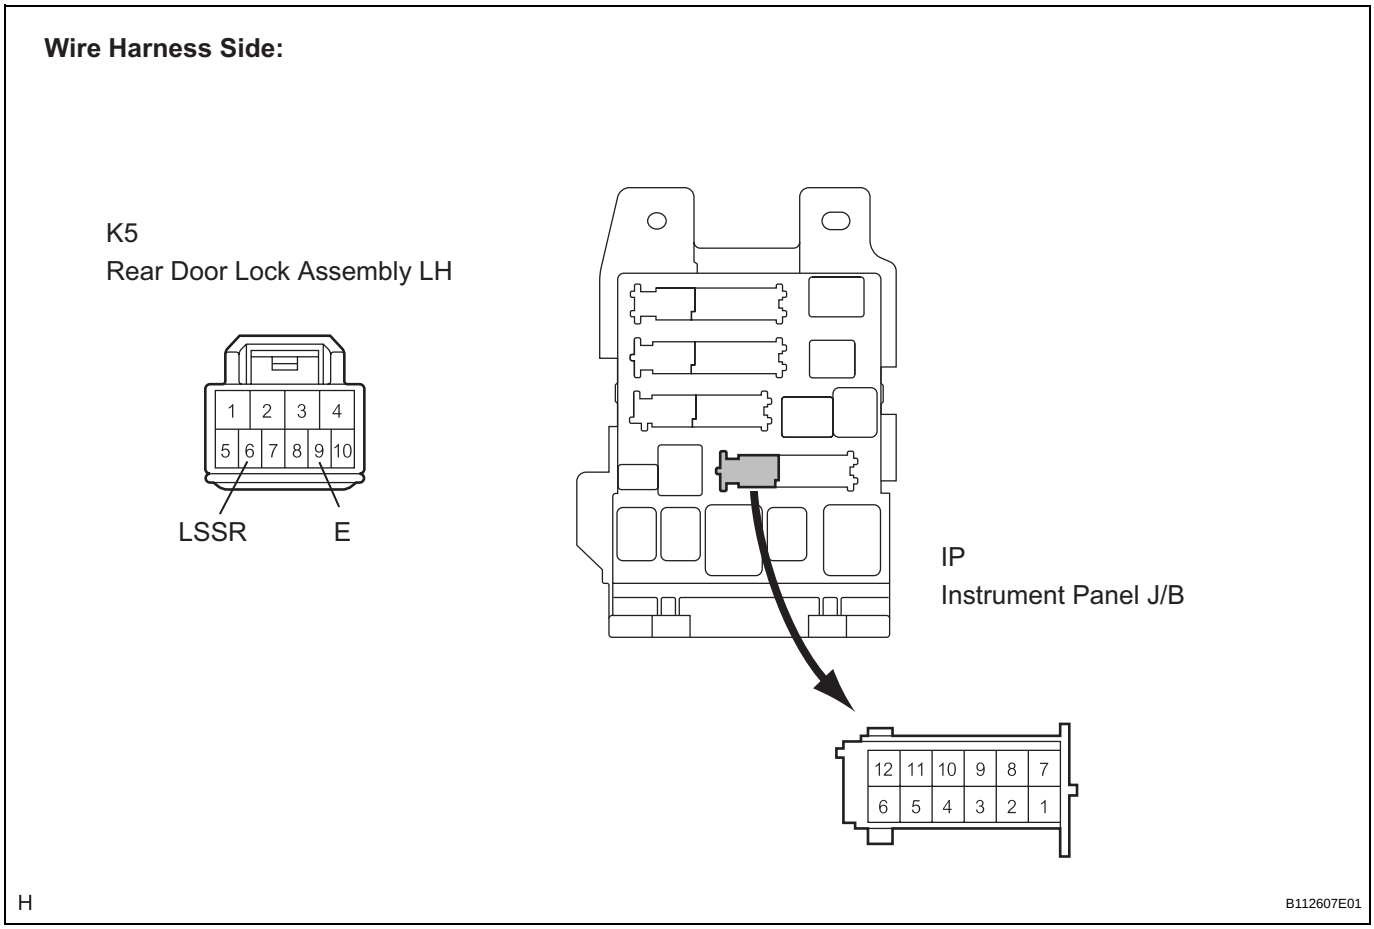
NG → **REPLACE REAR DOOR LOCK ASSEMBLY**

OK

3 CHECK WIRE HARNESS (REAR DOOR LOCK ASSEMBLY - MAIN BODY ECU)

(a) Disconnect the rear door lock assembly LH connector.

DL



(b) Disconnect the ECU (instrument panel J/B) connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
K5-6 (LSSR) - IP-5	Always	Below 1 Ω
K5-6 (LSSR) - Body ground	Always	10 kΩ or higher
K5-9 (E) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

DL

OK

REPLACE MAIN BODY ECU (INSTRUMENT PANEL J/B)

Rear Door UNLOCK Detection Switch RH Circuit

DESCRIPTION

The rear right door unlock detection switch is built into the rear right door lock assembly. The switch turns on when the rear right door is locked and turns off when the door is unlocked.
The main body ECU is connected to the rear right door lock assembly via terminal LSWR (w/ smart key system), LSWL (w/o smart key system), and rear right door lock/unlock state signals are input to the ECU. The main body ECU applies voltage to the door unlock detection switch via terminal LSWR (w/ smart key system), LSWL (w/o smart key system). When the door unlock detection switch is on (there is continuity between the switch terminals), a lock state signal is input to the ECU. When the switch is off (there is no continuity between the switch terminals), an unlock state signal is input.

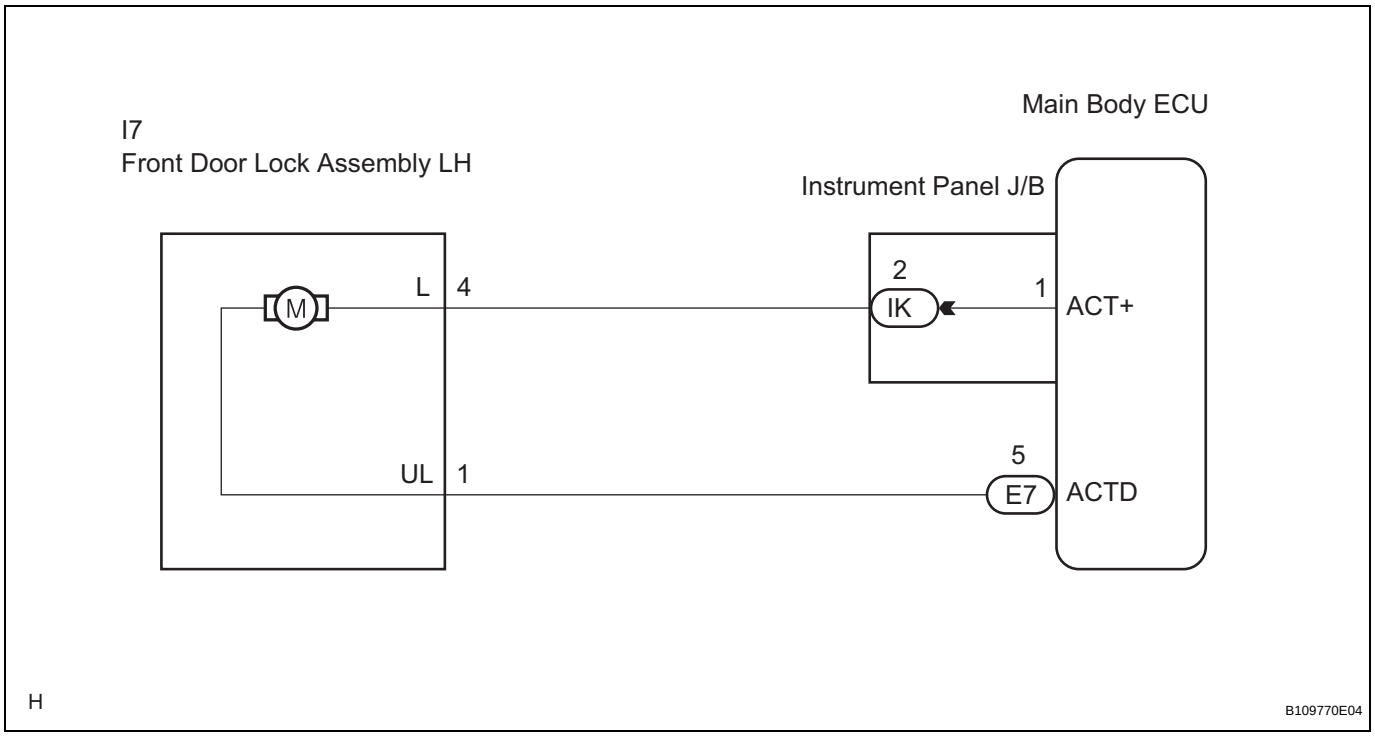
REPLACE MAIN BODY ECU (INSTRUMENT PANEL J/B)

Driver Side Door Lock Motor Circuit

DESCRIPTION

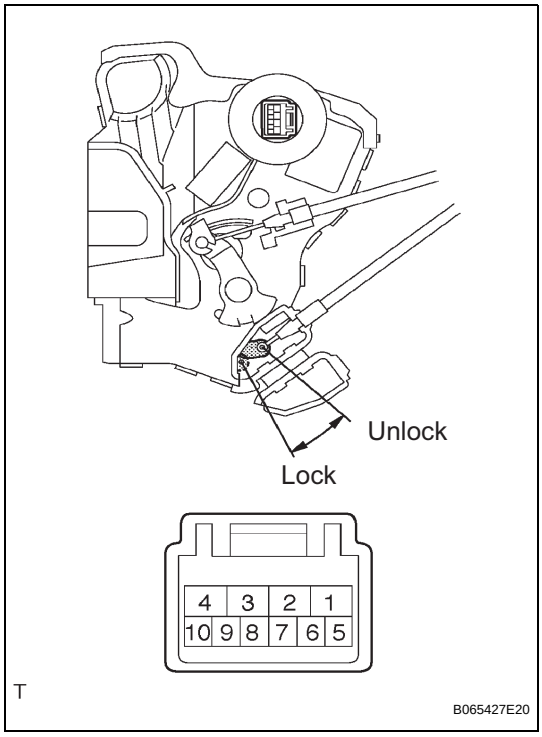
The driver's door lock motor is built into the driver's door lock assembly.
The main body ECU controls the driver's door lock motor to lock/unlock the driver's door. This ECU applies current from terminal ACT+ to terminal ACTD to operate the motor to lock the door. It reverses the direction of the current flow to operate the motor to unlock the door.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT FRONT DOOR LOCK ASSEMBLY (DOOR LOCK MOTOR)



(a) Remove the front door lock assembly LH.
(b) Apply battery voltage and check operation of the door lock motor.

OK

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 4 Battery negative (-) → Terminal 1	Lock
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 4	Unlock

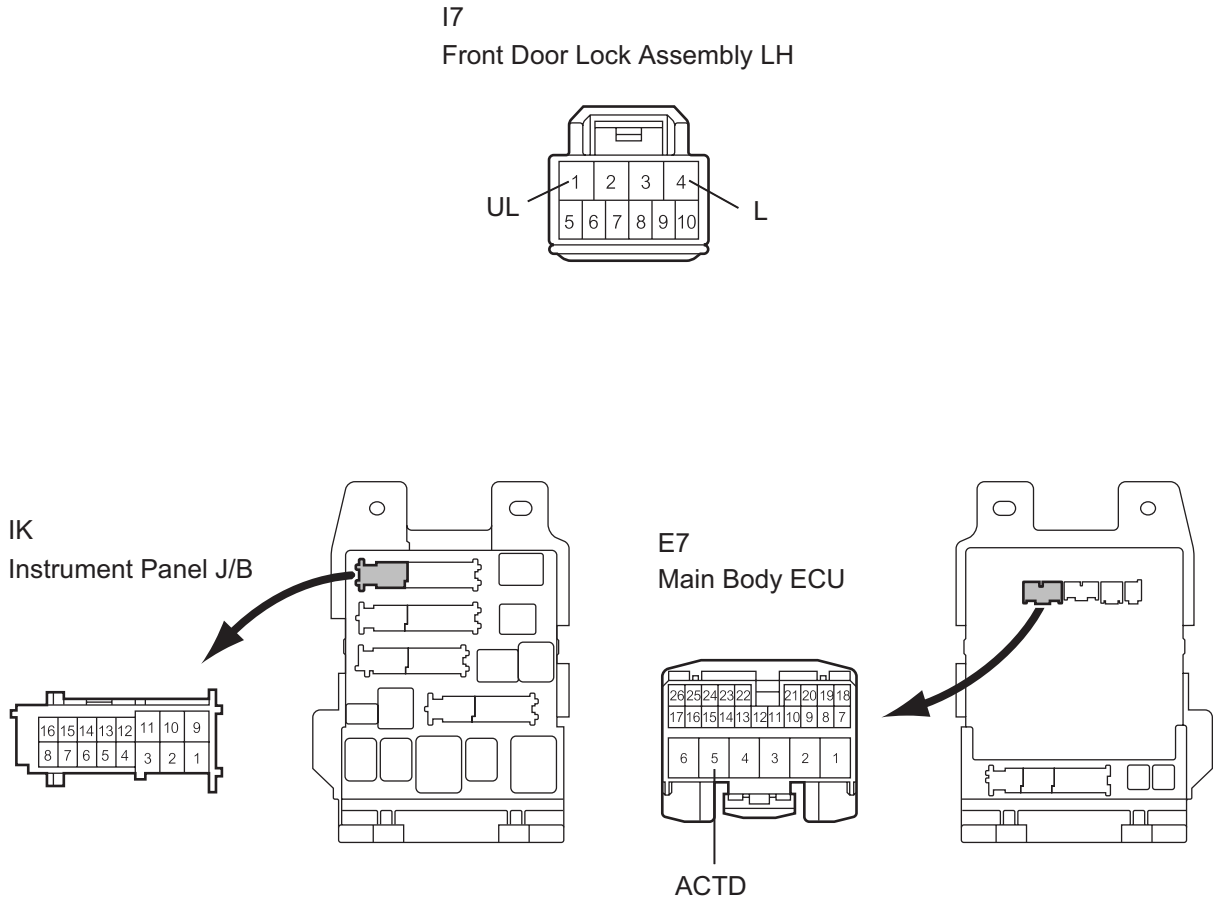
NG → **REPLACE FRONT DOOR LOCK ASSEMBLY**

OK

2	CHECK WIRE HARNESS (FRONT DOOR LOCK - MAIN BODY ECU (INSTRUMENT PANEL J/B))

(a) Disconnect the front door lock assembly LH connector.

Wire Harness Side:



(b) Disconnect the ECU (instrument panel J/B) connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
I7-4 (L) - IK-2	Always	Below 1 Ω
I7-1 (UL) - E7-5 (ACTD)	Always	Below 1 Ω
IK-2 - Body ground	Always	10 kΩ or higher
E7-5 (ACTD) - Body ground	Always	10 kΩ or higher

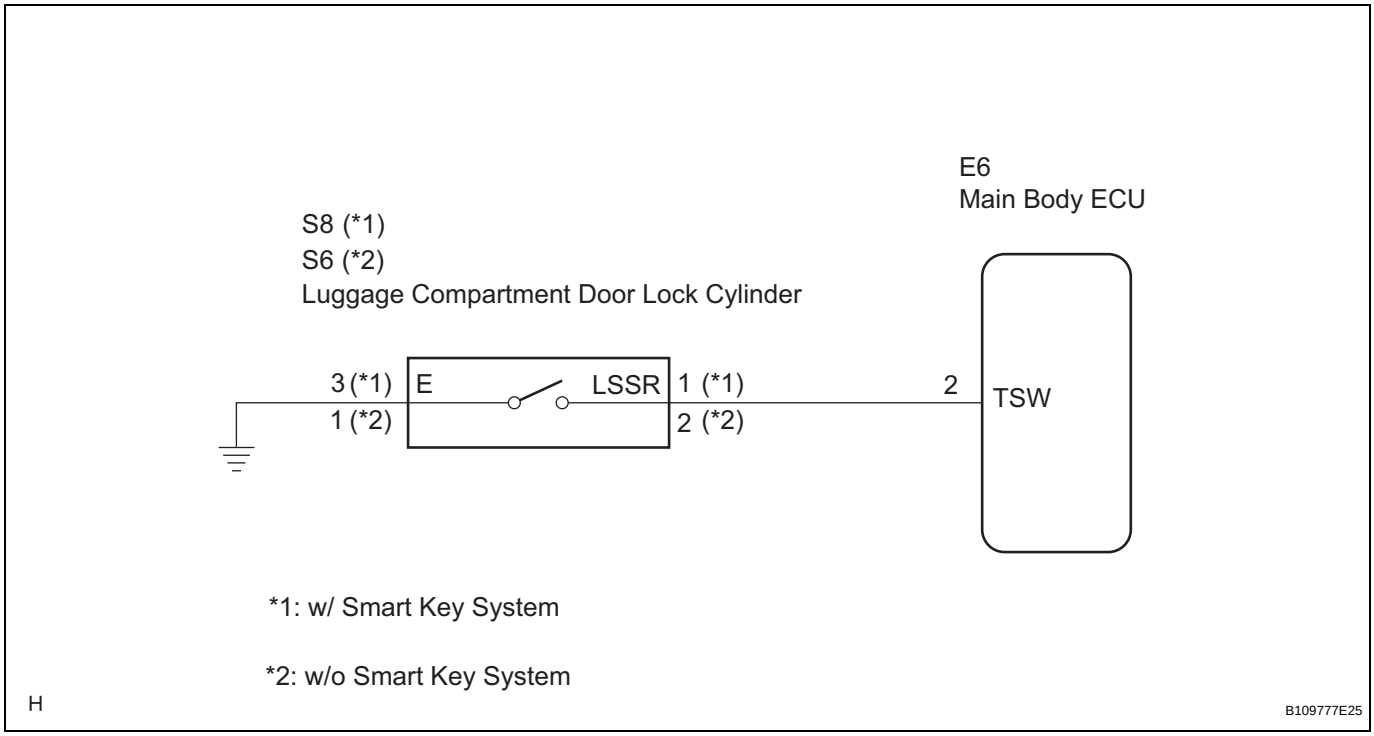
Luggage Compartment Door Key Cylinder Switch Circuit

DESCRIPTION

When the luggage compartment door lock cylinder is turned to unlock the door by key, there is continuity between terminal TSW of the main body ECU and body ground.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the intelligent tester main switch on.
(c) Select the item below in the "DATA LIST" and read the display on the intelligent tester.

MAIN BODY:

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
TRUNK KEY UNLK	Luggage compartment door key cylinder switch/ON or OFF	ON: Ignition key inserted and turned to lock position OFF: Ignition key inserted and turned to unlock position	-

OK:

When the ignition switch is operated, the display changes as shown above.

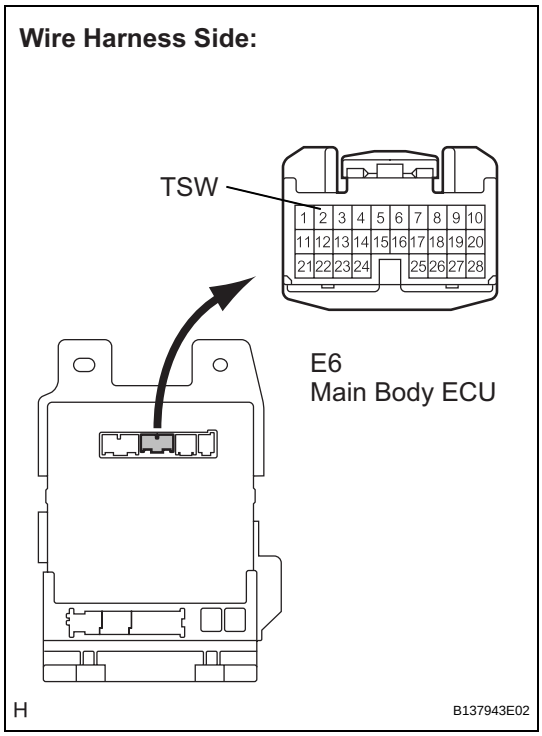
NG	Go to step 2

DL

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

2 INSPECT MAIN BODY ECU (TSW TERMINAL)



(a) Turn the ignition switch off.
(b) Disconnect the ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

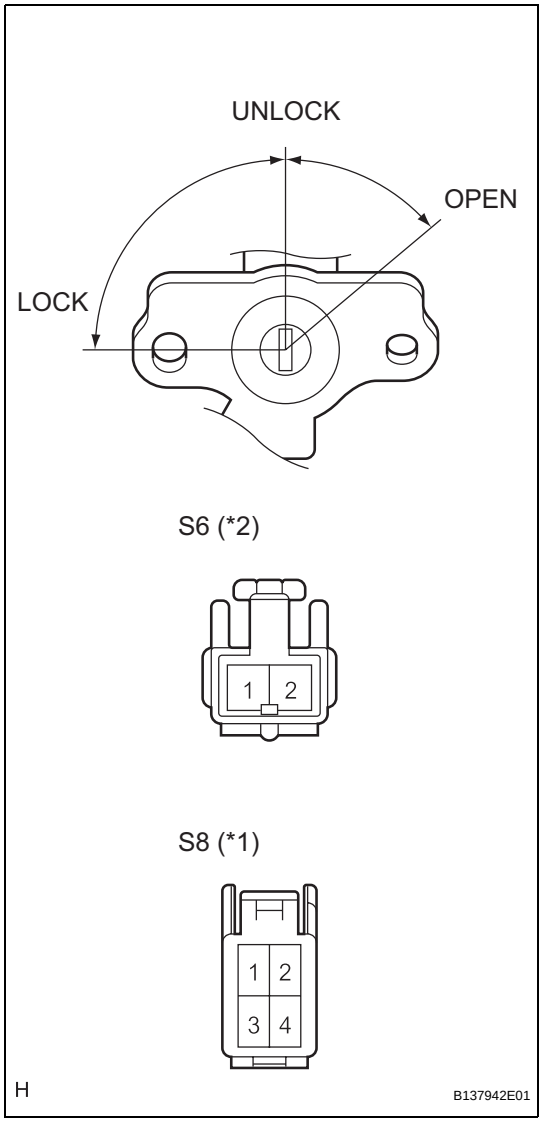
Tester Connection (Symbols)	Condition	Specified Condition
E6-2 (TSW) - Body ground	Luggage compartment door lock cylinder LOCK	10 kΩ or higher
E6-2 (TSW) - Body ground	Luggage compartment door lock cylinder OPEN	Below 1 Ω
E6-2 (TSW) - Body ground	Luggage compartment door lock cylinder UNLOCK	10 kΩ or higher

NG → **Go to step 3**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

3	INSPECT LUGGAGE COMPARTMENT DOOR LOCK CYLINDER



(a) Disconnect the luggage compartment door lock cylinder connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
*1 S8-1 - S8-3	Luggage compartment door lock cylinder LOCK	10 kΩ or higher
*1 S8-1 - S8-3	Luggage compartment door lock cylinder OPEN	Below 1 Ω
*1 S8-1 - S8-3	Luggage compartment door lock cylinder UNLOCK	10 kΩ or higher
*2 S6-2 - S6-1	Luggage compartment door lock cylinder LOCK	10 kΩ or higher
*2 S6-2 - S6-1	Luggage compartment door lock cylinder OPEN	Below 1 Ω
*2 S6-2 - S6-1	Luggage compartment door lock cylinder UNLOCK	10 kΩ or higher

*1: w/ SMART KEY SYSTEM
*2: w/o SMART KEY SYSTEM

NG → **REPLACE LUGGAGE COMPARTMENT DOOR LOCK CYLINDER**

OK

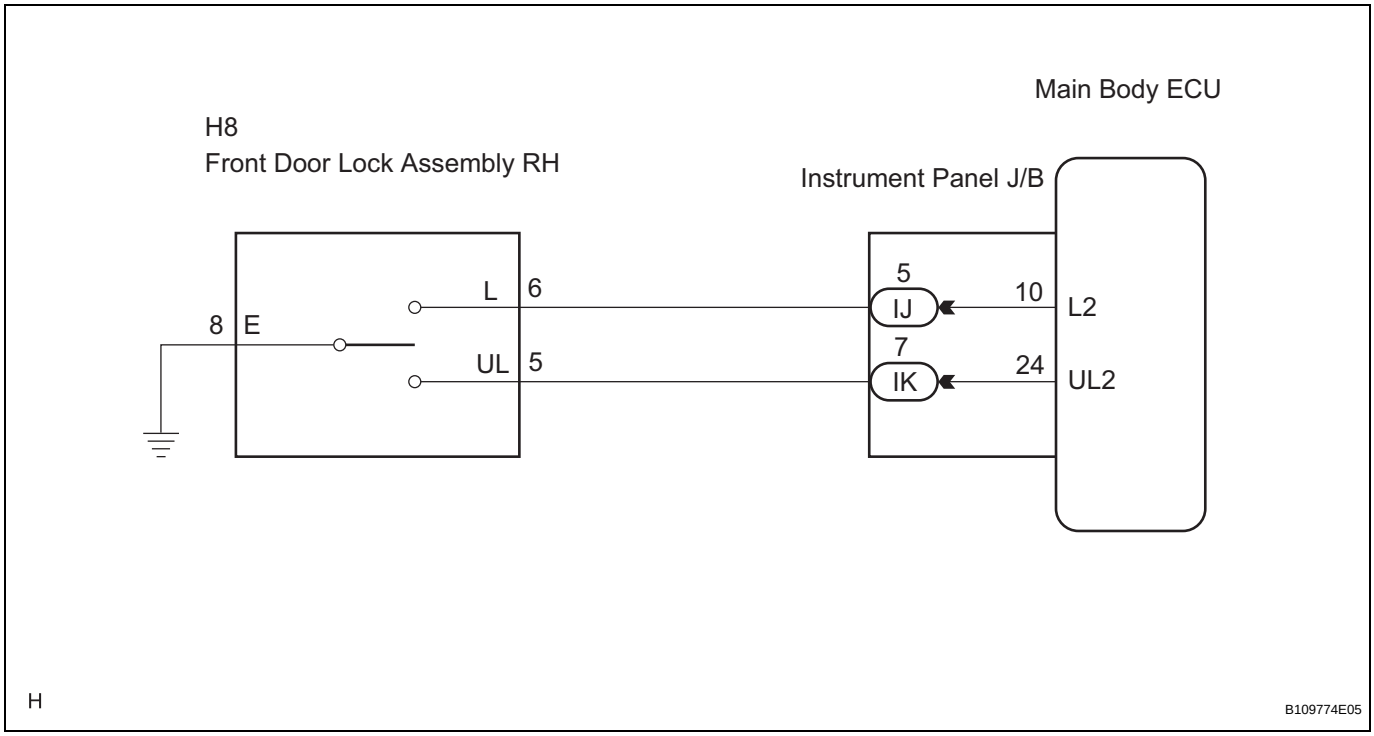
REPAIR OR REPLACE HARNESS OR CONNECTOR (MAIN BODY ECU, BODY GROUND - DOOR LOCK CYLINDER)

Door Key Lock / Unlock Switch Circuit

DESCRIPTION

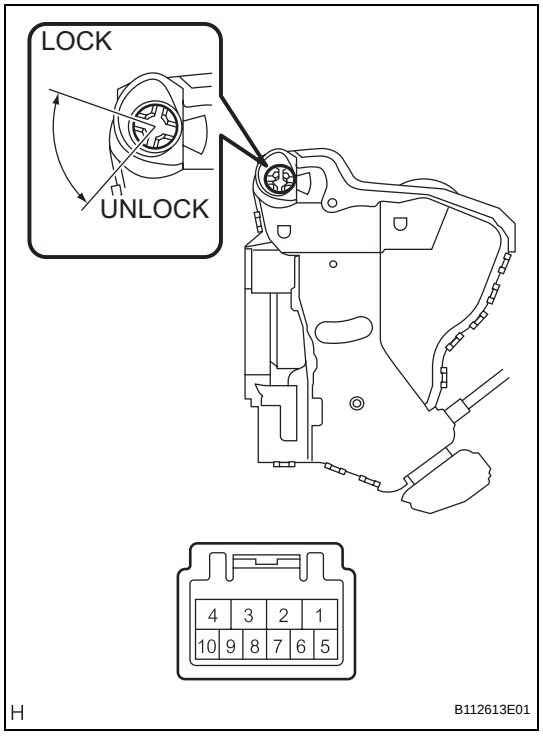
The door lock and unlock switch is built into the door lock assembly.
This switch is ON when the door key is in the unlock position and OFF when the door key is in the lock position. It is used as one of the operating conditions for the key confinement prevention function.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	**INSPECT FRONT DOOR LOCK ASSEMBLY RH (DOOR KEY LOCK AND UNLOCK SWITCH)**



(a) Remove the front door lock assembly RH.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
5 - 8	ON (Door lock set to UNLOCK)	Below 1 Ω
5 - 8 6 - 8	OFF (Free)	10 kΩ or higher
6 - 8	ON (Door lock set to LOCK)	Below 1 Ω

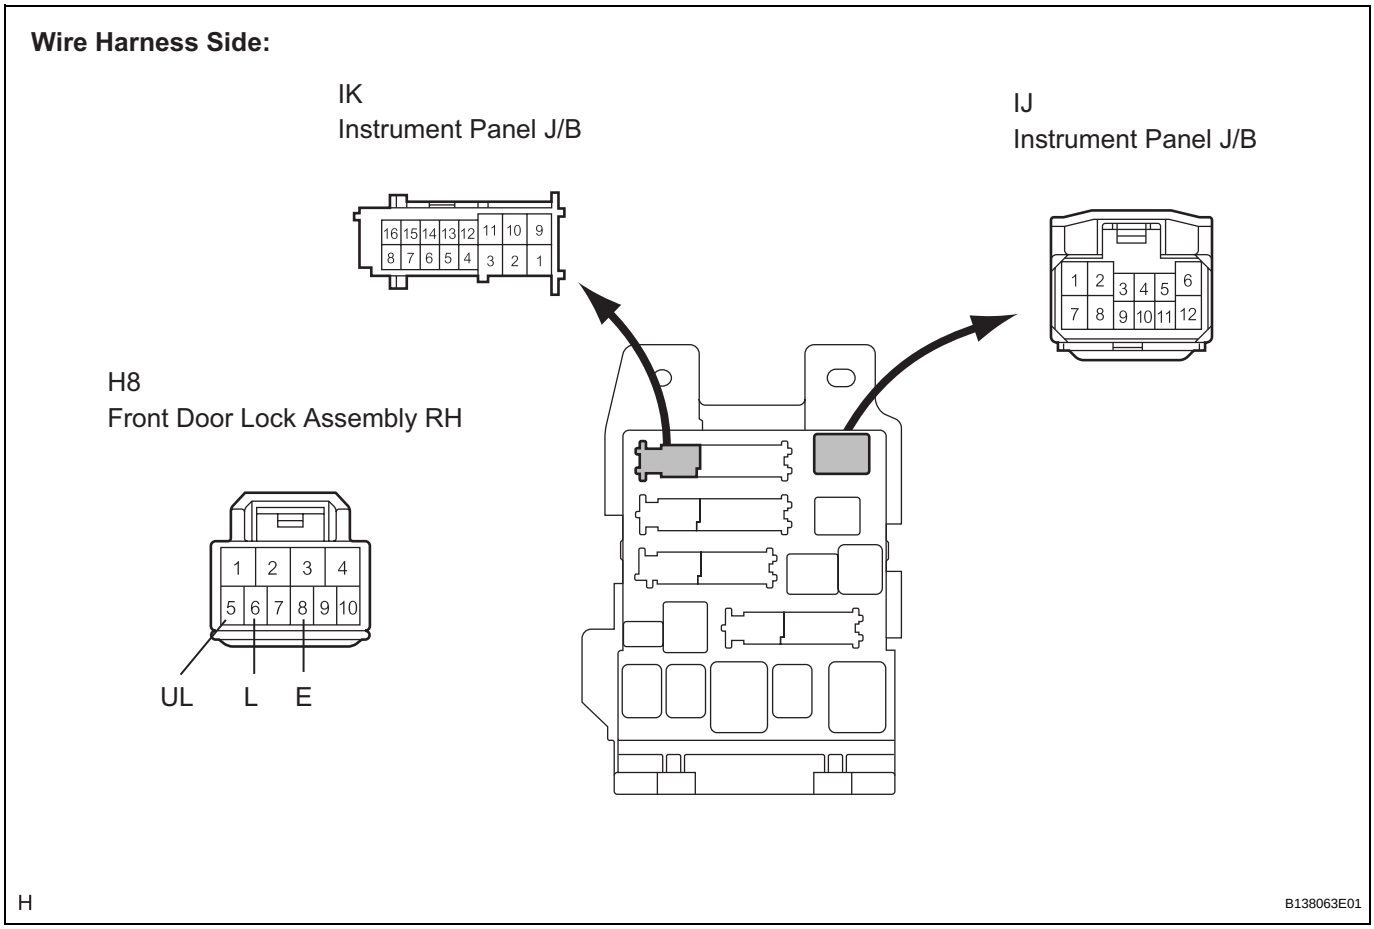
NG → **REPLACE FRONT DOOR LOCK ASSEMBLY LH**

OK

2	**CHECK WIRE HARNESS (FRONT DOOR LOCK RH - MAIN BODY ECU (INSTRUMENT PANEL J/B))**

(a) Disconnect the IJ J/B connector.

DL



(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
H8-6 (L) - IJ-5	Always	Below 1 Ω
H8-5 (UL) - IK-7	Always	Below 1 Ω
H8-8 (E) - Body ground	Always	Below 1 Ω
H8-6 (L) - Body ground	Always	10 kΩ or higher
H8-5 (UL) - Body ground	Always	10 kΩ or higher

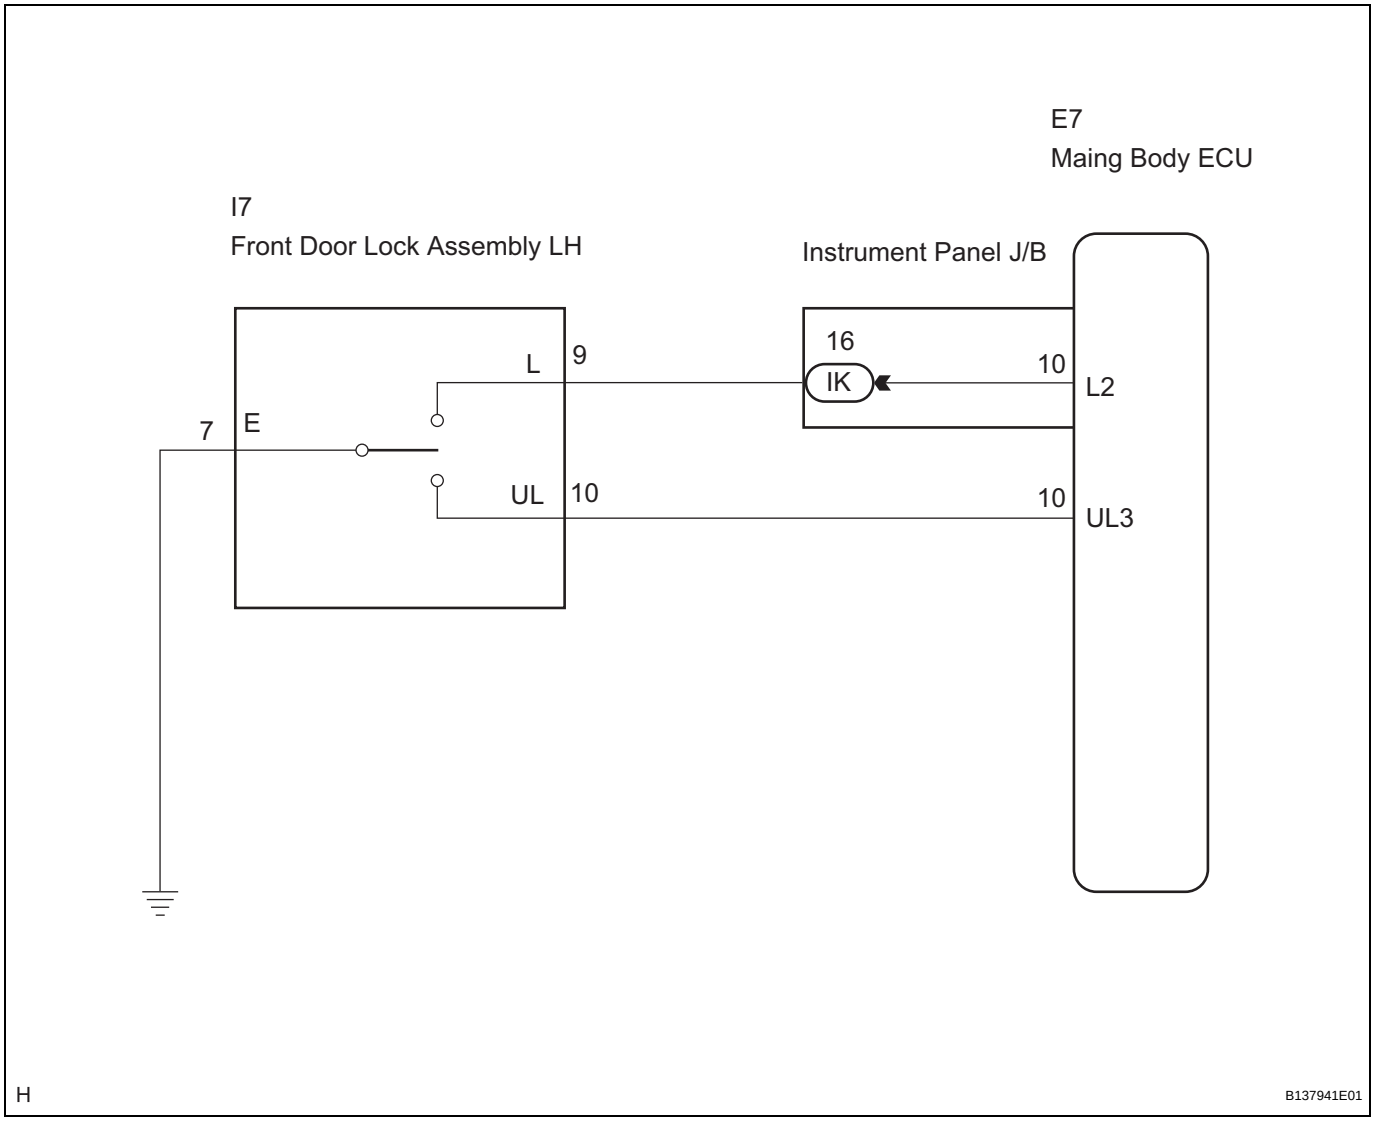
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Driver Side Door Key Lock and Unlock Switch Circuit

DESCRIPTION

The driver's door key lock and unlock switch is built into the driver's door lock assembly.
When the driver's door key cylinder is turned to lock all the doors by key, there is continuity between terminals L and E of the key lock and unlock switch. When the cylinder is turned to unlock the door(s), there is continuity between terminals UL and E.
Terminals L2 and UL3 of the main body ECU are connected to the door lock assembly, and door lock/unlock request signals (by key) are input to the main body ECU.
The main body ECU constantly applies voltage to terminal L of the driver's door lock assembly via terminal L2. When the driver's door key cylinder is turned to lock all the doors by key, current flows from terminal L2 to terminal L.
The main body ECU also applies constant voltage to terminal UL of the door lock assembly via terminal UL3. When the door key cylinder is turned in the direction to unlock the door(s) by key, current flows from terminal UL3 to terminal UL.

WIRING DIAGRAM



DL

INSPECTION PROCEDURE

1	READ VALUE OF DATA LIST

(a) Check the DATA LIST to ensure proper function of the door unlock detection switch.

MAIN BODY:

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
DOR KEY SW-LOCK	Driver door lock/unlock switch lock signal (key-linked lock switch) /ON or OFF	ON: Driver side door key cylinder is turned to LOCK OFF: Driver side door key cylinder is not turned to LOCK	-
DOR KEY SW-ULCK	Driver door lock/unlock switch unlock signal (key-linked unlock switch) /ON or OFF	ON: Driver side door key cylinder is turned to UNLOCK OFF: Driver side door key cylinder is not turned to UNLOCK	-

OK:

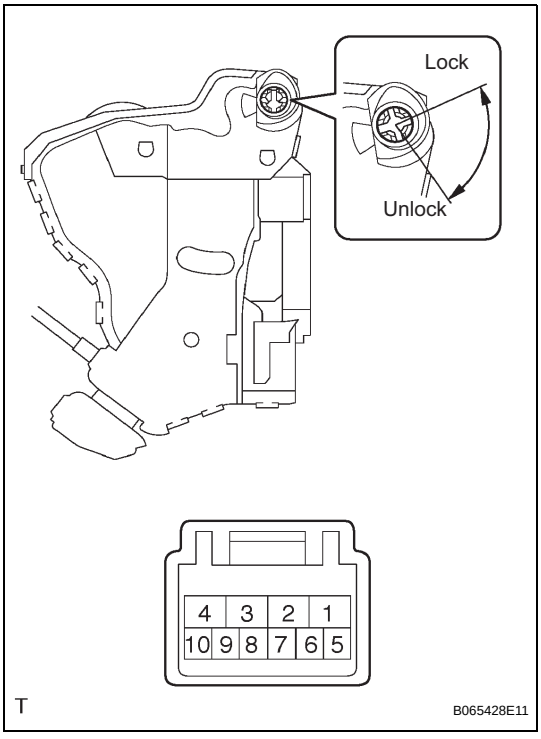
The display is as specified in the normal condition column.

NG → **Go to step 2**

OK ↓

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

2	INSPECT FRONT DOOR LOCK ASSEMBLY (DOOR KEY LOCK AND UNLOCK SWITCH)



(a) Remove the front door lock assembly LH.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
7 - 9	ON (Door lock set to LOCK)	Below 1 Ω
7 - 9 7 - 10	OFF (Free)	10 kΩ or higher
7 - 10	ON (Door lock set to UNLOCK)	Below 1 Ω

NG → **REPLACE FRONT DOOR LOCK ASSEMBLY**

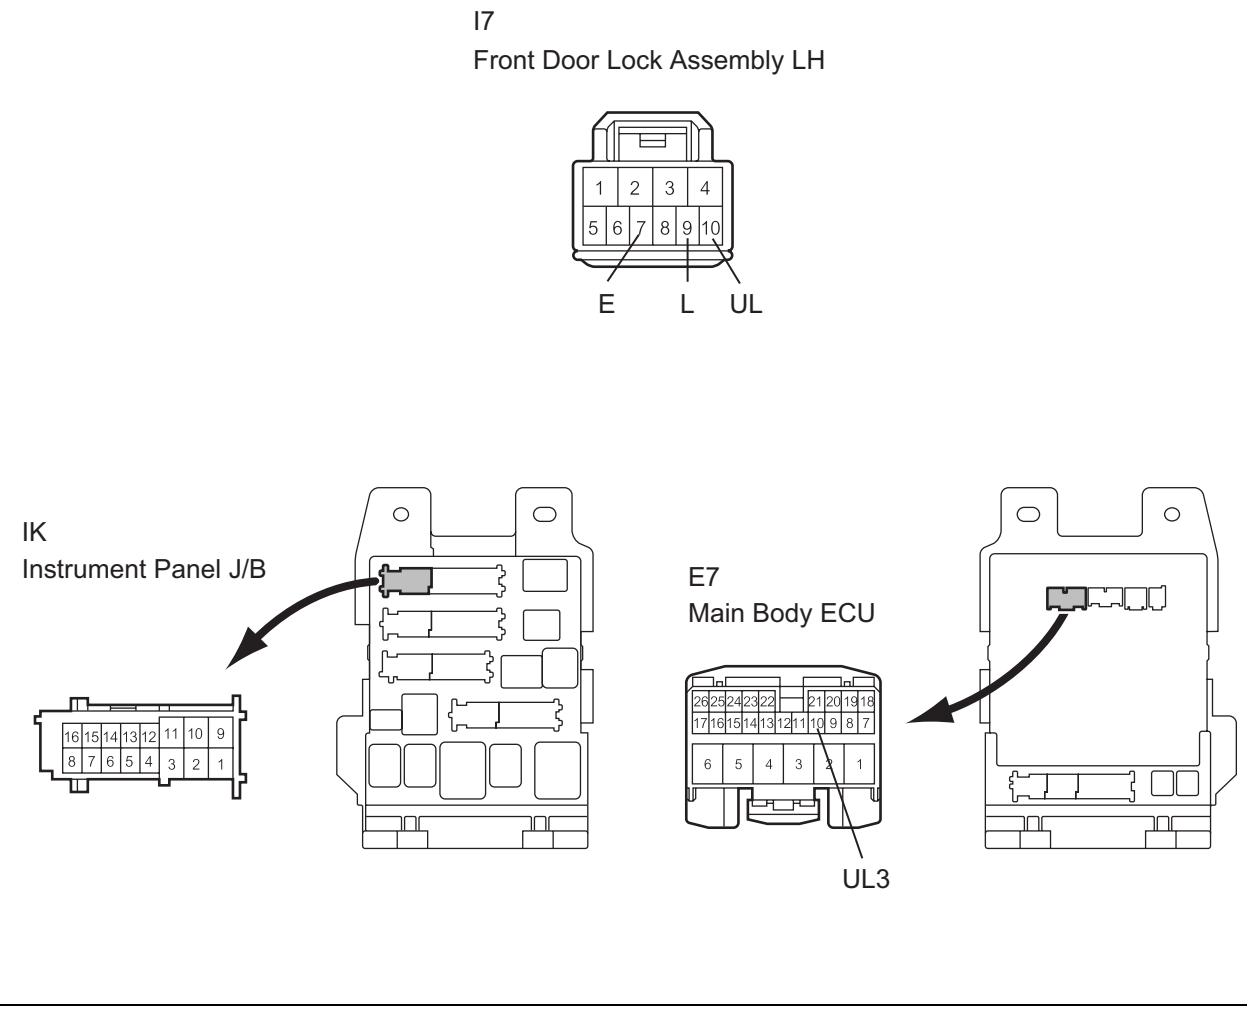
OK ↓

DL

3	CHECK WIRE HARNESS (FRONT DOOR LOCK ASSEMBLY - MAIN BODY ECU)

(a) Disconnect the front door lock assembly LH connector.

Wire Harness Side:



(b) Disconnect the main body ECU connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
I7-9 (L) - IK-16	Always	Below 1 Ω
I7-10 (UL) - E7-10 (UL3)	Always	Below 1 Ω
I7-7 (E) - Body ground	Always	Below 1 Ω
I7-9 (L) - Body ground	Always	10 kΩ or higher
I7-10 (UL) - Body ground	Always	10 kΩ or higher

NG	REPAIR OR REPLACE HARNESS OR CONNECTOR

DL

OK

REPLACE MAIN BODY ECU

Door Control Switch Circuit

DESCRIPTION

When the lock side of the door control switch is pressed, continuity is established between terminal 2 (driver side) or 4 (passenger side) and terminal 1 (driver side) or 3 (passenger side) of the switch. When the unlock side of the switch is pressed, continuity is established between terminal 9 (driver side) or 2 (passenger side) and terminal 1 (driver side) or 3 (passenger side).
Terminals L1 and UL1 of the main body ECU are connected to the door control switch and door lock/unlock request signals (by door control switch operation) are input to the ECU.
The main body ECU constantly applies voltage to terminal 2 (driver side) or 4 (passenger side) of the door control switch via terminal L1. When the door control switch is operated to lock all doors, current flows from terminal L1 to terminal 2 (driver side) or 4 (passenger side). The main body ECU determines that this is door lock request signal input.
The main body ECU also applies constant voltage to terminal 9 (driver side) or 2 (passenger side) of the door control switch via terminal UL1. When the door control switch is operated to unlock the doors, current flows from terminal UL1 to terminal 9 (driver side) or 2 (passenger side). The main body ECU determines that this is door unlock request signal input.

DL

H

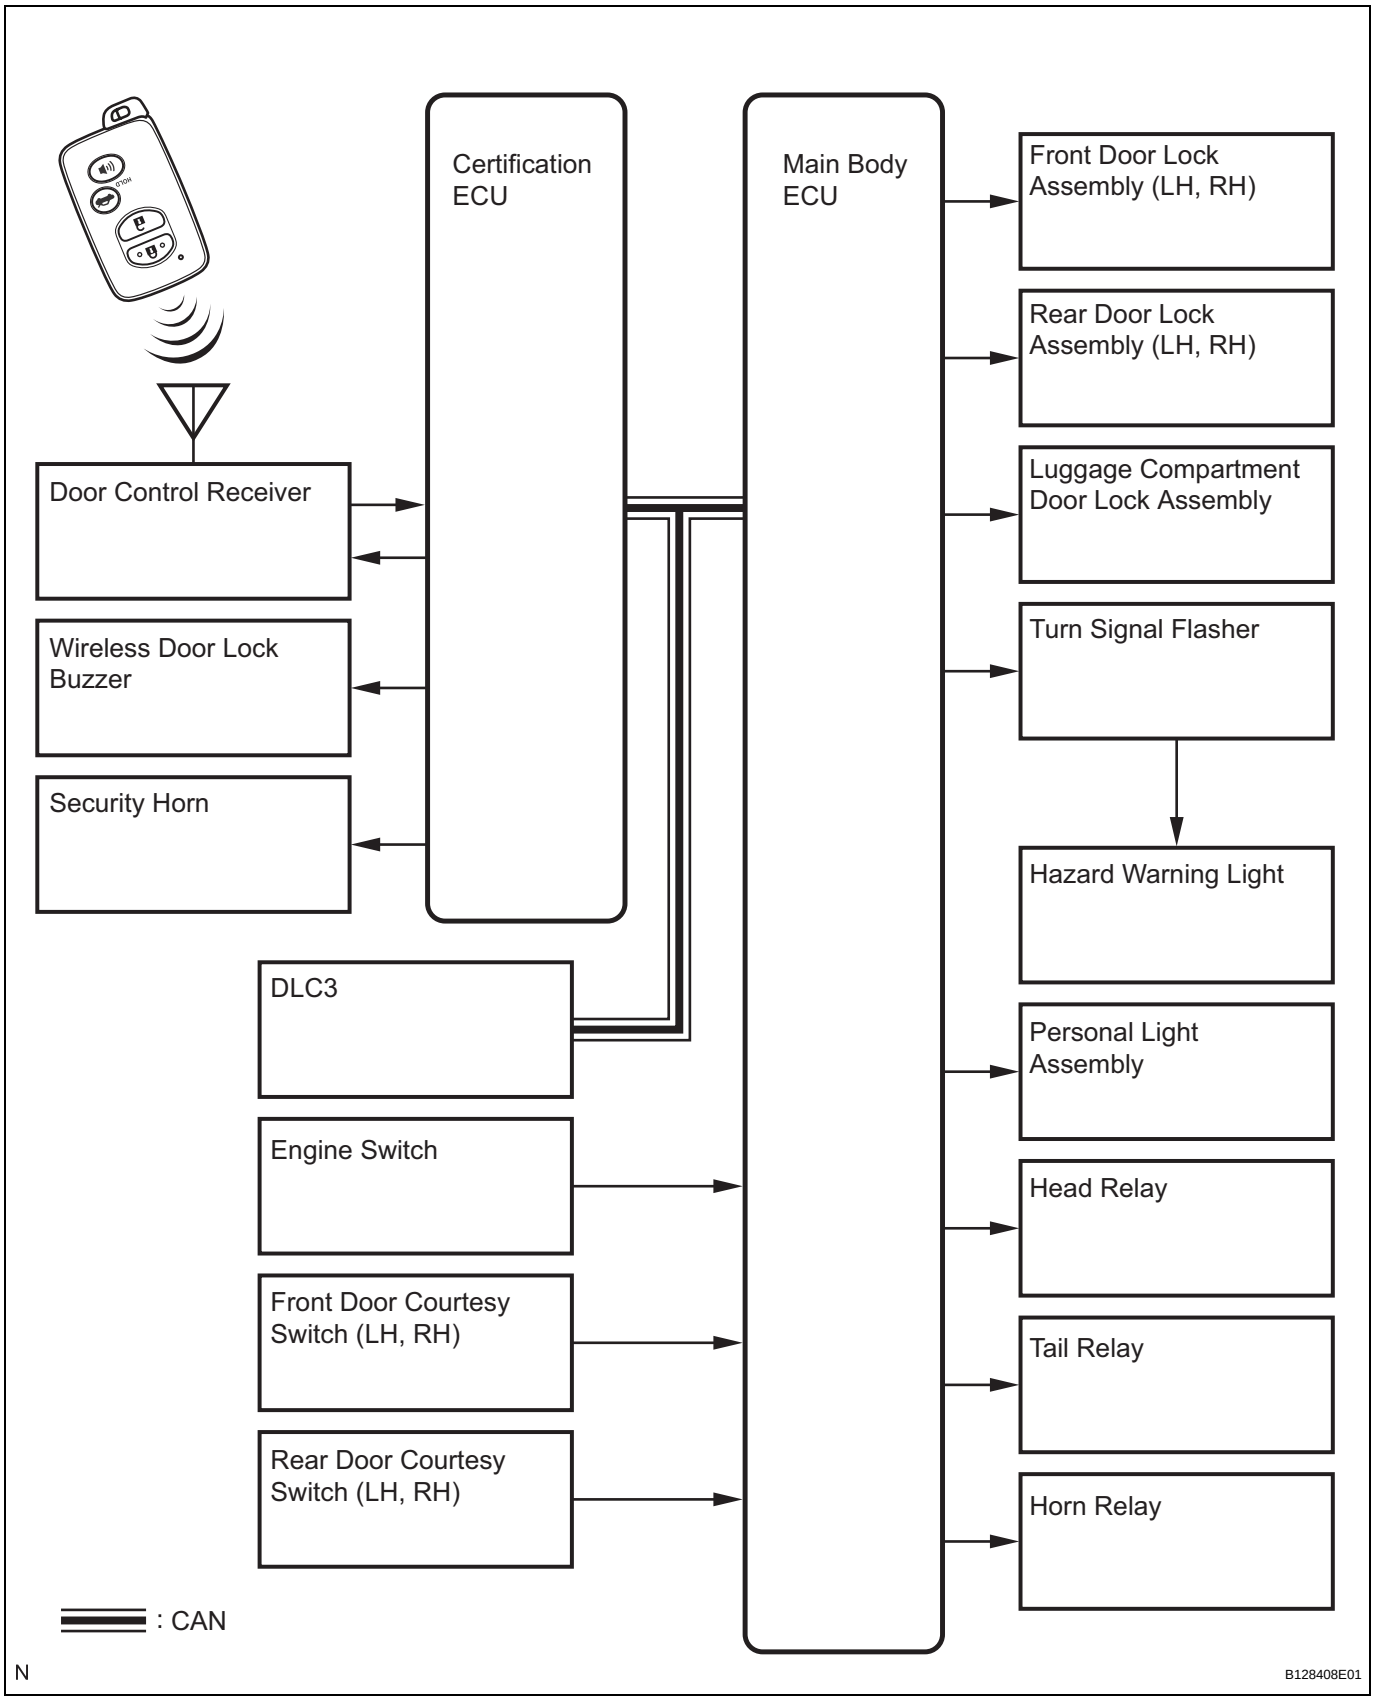
B128402E01

SYSTEM DIAGRAM



Transmitting ECU (Transmitter)	Receiving ECU (Receiver)	Signal	Line
Certification ECU	Main body ECU	Wireless door lock signal	CAN

DL

SYSTEM DESCRIPTION

1. WIRELESS DOOR LOCK CONTROL SYSTEM

The wireless door lock control system functions to lock and unlock all the doors from a distance. The system is controlled by a hand-held transmitter which sends radio waves to the door control receiver. The certification ECU performs an ID code identification process and engages the door lock control.

2. FUNCTION OF MAIN COMPONENTS

Component	Function
Door control transmitter	• Has LOCK, UNLOCK, LUGGAGE OPEN, and PANIC switches. • Transmits weak radio waves (recognition codes and function codes) to the door control receiver.
Door control receiver	Receives weak radio waves from the door control transmitter and sends them to the certification ECU.
• Front door courtesy light switch • Rear door courtesy light switch • Luggage compartment door courtesy light switch	Turns on when a door is opened and turns off when it is closed. Outputs door status codes (open or closed) to the main body ECU.
Door lock position switch	Transmits the door lock positions of each door to the main body ECU.
Wireless door lock buzzer	Emits beep (answer back) when doors are locked or unlocked, or luggage compartment door is opened by wireless operation.
Certification ECU	Sends wireless door lock control signals in response to the code data from the door control receiver and signals from each ECU.

3. SYSTEM FUNCTION

The door control transmitter has the LOCK, UNLOCK, LUGGAGE OPEN, and PANIC switches. Operating these switches activates each function.

The wireless door lock control system has the following functions:

HINT:

The default settings of the following functions are ON. Part of these functions can be customized (See page DL-73).

Function	Operation
All door lock	Pressing the LOCK switch locks all doors.
All door unlock (2-step unlock)	Pressing the UNLOCK switch twice within 3 seconds unlocks all the doors after the driver's door is unlocked.
Automatic lock	If none of the doors is opened within 60 seconds after they are unlocked by the wireless door lock control, all the doors will lock again automatically.
Luggage compartment door open	Pressing the LUGGAGE OPEN switch of the transmitter opens the luggage compartment door.
Answer back	• When the doors are locked by wireless operation, the hazard warning lights flash once and the wireless door lock buzzer sounds once. • When the doors are unlocked by wireless operation, the hazard warning lights flash twice and the wireless door lock buzzer sounds twice. • When the luggage compartment door is opened by wireless operation, the wireless door lock buzzer sounds.
Panic alarm	Pressing the PANIC switch of the transmitter for longer than about 0.8 seconds causes the following alarms to activate: • Sounds the horn and security horn. • Flashes the hazard lights, headlights, and taillights. • Illuminates the front interior light (when the switch is in the DOOR position). While the panic alarm is operating, pressing any switch of the transmitter cancels the alarm operation.

Function	Operation
Door ajar warning	The buzzer sounds when LOCK is pressed when any of the doors are ajar. When all the doors are closed or when UNLOCK is pressed, the buzzer will stop after it sounds for 10 seconds continuously.
Illuminated Entry	When all the doors are locked, pressing the UNLOCK switch causes the interior light to come on simultaneously with the unlock operation.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
The wireless door lock control system troubleshooting procedures are based on the premise that the power door lock control system is operating normally. Check the power door lock control system first before troubleshooting the wireless door lock control system.
Use this procedure to troubleshoot the wireless door lock control system.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS

(a) Interview the customer to confirm the trouble (See page IN-45).

NEXT

3	INSPECT COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM

(a) Use the intelligent tester to check for normal function of the multiplex communication system.
  (1) (ECU unconnected, communication line malfunctioning) If no code is output, proceed to A.
  (2) (ECU unconnected, communication line malfunctioning) If any code is output, proceed to B.

B → Go To CAN COMMUNICATION SECTION

A

4	DTC CHECK

(a) Check for a DTC and note any codes that are output.
(b) Delete the DTC.
(c) Recheck for DTCs. Try to prompt the DTC by simulating the original symptom that the DTC suggests.
  (1) If the DTC does not reoccur, proceed to A.
  (2) If the DTC reoccurs, proceed to B.

B → Go To DTC chart

OPERATION CHECK

1. FUNCTIONS AND OPERATING CONDITIONS

(a) The wireless door LOCK/UNLOCK function:
This wireless door lock control function operates only when the following 4 conditions are met:
(1) There is no wireless transmitter in the cabin.
(2) All the doors are closed.
(3) The power door lock system is functioning normally.
(4) The function is not disabled by customization.
HINT:
The UNLOCK function operates even when any of the doors are open.

(b) The wireless transmitter operational range differs depending on the situation.
(1) The operational range differs depending on the user, the way the transmitter is held, and the location.
(2) In certain areas, the operational range will be reduced due to the vehicle body shape and the influence of the surrounding environment.
(3) Since the transmitter uses weak radio waves, the operational range may be reduced or the transmitter may not function if interference or stronger radio waves occur in the area where the transmitter is used.
(4) When the battery is low, the operational range is reduced and/or the transmitter may not function.
HINT:
If the transmitter has been left in a place that is exposed to direct sunlight, such as on the instrument panel, the battery may be weakened or other problems may occur.

2. CHECK WIRELESS DOOR LOCK CONTROL FUNCTIONS

HINT:
- The switches built into the door control transmitter send radio waves to the door lock control receiver.
- The operational range must be taken into account during checks.

(a) Establish conditions that allow the wireless control function to be operated successfully.
(b) Check these basic functions.
(1) Check that all the doors lock when the LOCK switch is pressed.
(2) Check that the driver's door unlocks when the UNLOCK switch is pressed once, and all doors unlock when pressed twice within 3 seconds.
(c) Check the automatic lock function.
(1) Check that if the driver's door or all doors are unlocked with the UNLOCK switch and none of the doors are opened or locked within approximately 60 seconds, the doors automatically re-lock.

(2) Check that if the driver's door or all doors are unlocked with the UNLOCK switch and a door is opened or locked within approximately 60 seconds, the automatic lock function does not operate.

(d) Check the interior light ON function.
HINT:
Turn the interior light switch to the DOOR position before the check.
(1) Check that the interior light comes on simultaneously with the unlocking operation when the UNLOCK switch has been pressed.
(2) Check that the interior light goes off in approximately 15 seconds if none of the doors is opened after the unlocking operation.

(e) Check the answer back function.
(1) When the doors are locked by wireless operation, the hazard warning lights flash once and the wireless door lock buzzer sounds once.
(2) When the doors are unlocked by wireless operation, the hazard warning lights flash twice and the wireless door lock buzzer sounds twice.
(3) When the luggage compartment door is opened by wireless operation, the wireless door lock buzzer sounds.

(f) Check the switch operation fail-safe function.
(1) Check that the doors cannot be locked by operating a switch while the wireless transmitter is in the cabin.
(2) Check that the doors cannot be locked or unlocked by operating a switch on the unregistered transmitter, and that the doors are locked and unlocked by operating a switch on the registered transmitter.

(g) Check the chattering prevention function.
(1) Check that the corresponding operation occurs only once, and does not repeat itself while the switch is kept pressed. Check that the corresponding operation is carried out when the switch is operated repeatedly at 1-second intervals.

(h) Check the luggage compartment door opener function.
(1) Check that the luggage compartment door opens when the LUGGAGE OPEN switch is held down for 0.6 seconds or more.

(i) Check the door ajar warning function.
(1) Check that the wireless door lock buzzer sounds for approximately 10 seconds when the LOCK switch is pressed with any of the doors ajar or open.

CUSTOMIZE PARAMETERS

HINT:
The following items can be customized.
NOTICE:

- **When the customer requests a change in a function, first make sure that customization of the function(s) is possible.**
- **Be sure to record the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is not set to OFF.**

WIRELESS DOOR LOCK CONTROL SYSTEM

Display (item)	Default	Function	Setting
WIRELESS OPER (Wireless door lock control function)	ON	Function that turns wireless door lock function ON/OFF	ON/OFF
HAZARD ANS BACK (Hazard answer-back for wireless door lock control)	ON	• When the doors are locked by wireless operation, the hazard warning lights flash once. • When the doors are unlocked by wireless operation, the hazard warning lights flash twice.	ON/OFF
OPEN DOOR WARN (Door ajar warning)	ON	The buzzer sounds when LOCK is pressed when any of the doors are ajar.	ON/OFF
AUTO LOCK DELAY (Auto lock time)	60 s	This function regulates the interval between unlocking and automatic relocking of doors.	30 s/60 s
UNLOCK /2OPER (Wireless unlock operated twice)	ON	This function unlocks the driver's door when the UNLOCK switch is pressed once, and unlocks all doors when pressed twice within 3 seconds. If set to OFF, pressing UNLOCK once unlocks all doors.	ON/OFF
ALARM FUNCTION (Panic function)	ON	This function operates the theft deterrent system when PANIC is pressed and held for 0.8 seconds.	ON/OFF
WIRLS BUZZ RESP (Wireless buzzer answer-back)	ON	Wireless door lock buzzer response/ON or OFF	ON/OFF
TRUNK LID OPER (Wireless trunk opener function setting)	0.6 s PR ON	This function changes operation method of transmitter to open luggage compartment door. 1 TIME: Push 1 time 2 TIMES: Push 2 times 0.6 s PR: Push 0.6 seconds OFF: Does not operate	1 TIME/2 TIMES/0.6 s PR/ OFF

PROBLEM SYMPTOMS TABLE

If a normal system code is displayed during the DTC check, but the problem still occurs, check the circuits for each problem symptom in the order given in the table below and proceed to the relevant troubleshooting page.

HINT:

- The following is the troubleshooting procedure for the wireless door lock control of a vehicle without the smart key system.
- For the troubleshooting procedure for the wireless door lock control of a vehicle with the smart key system, refer to the wireless door lock control system (without Smart Key System).
- Inspect the fuse and relay before investigating the suspected areas shown in the table below.
- Inspect each malfunction circuit in numerical order for its corresponding symptom.

WIRELESS DOOR LOCK CONTROL SYSTEM:

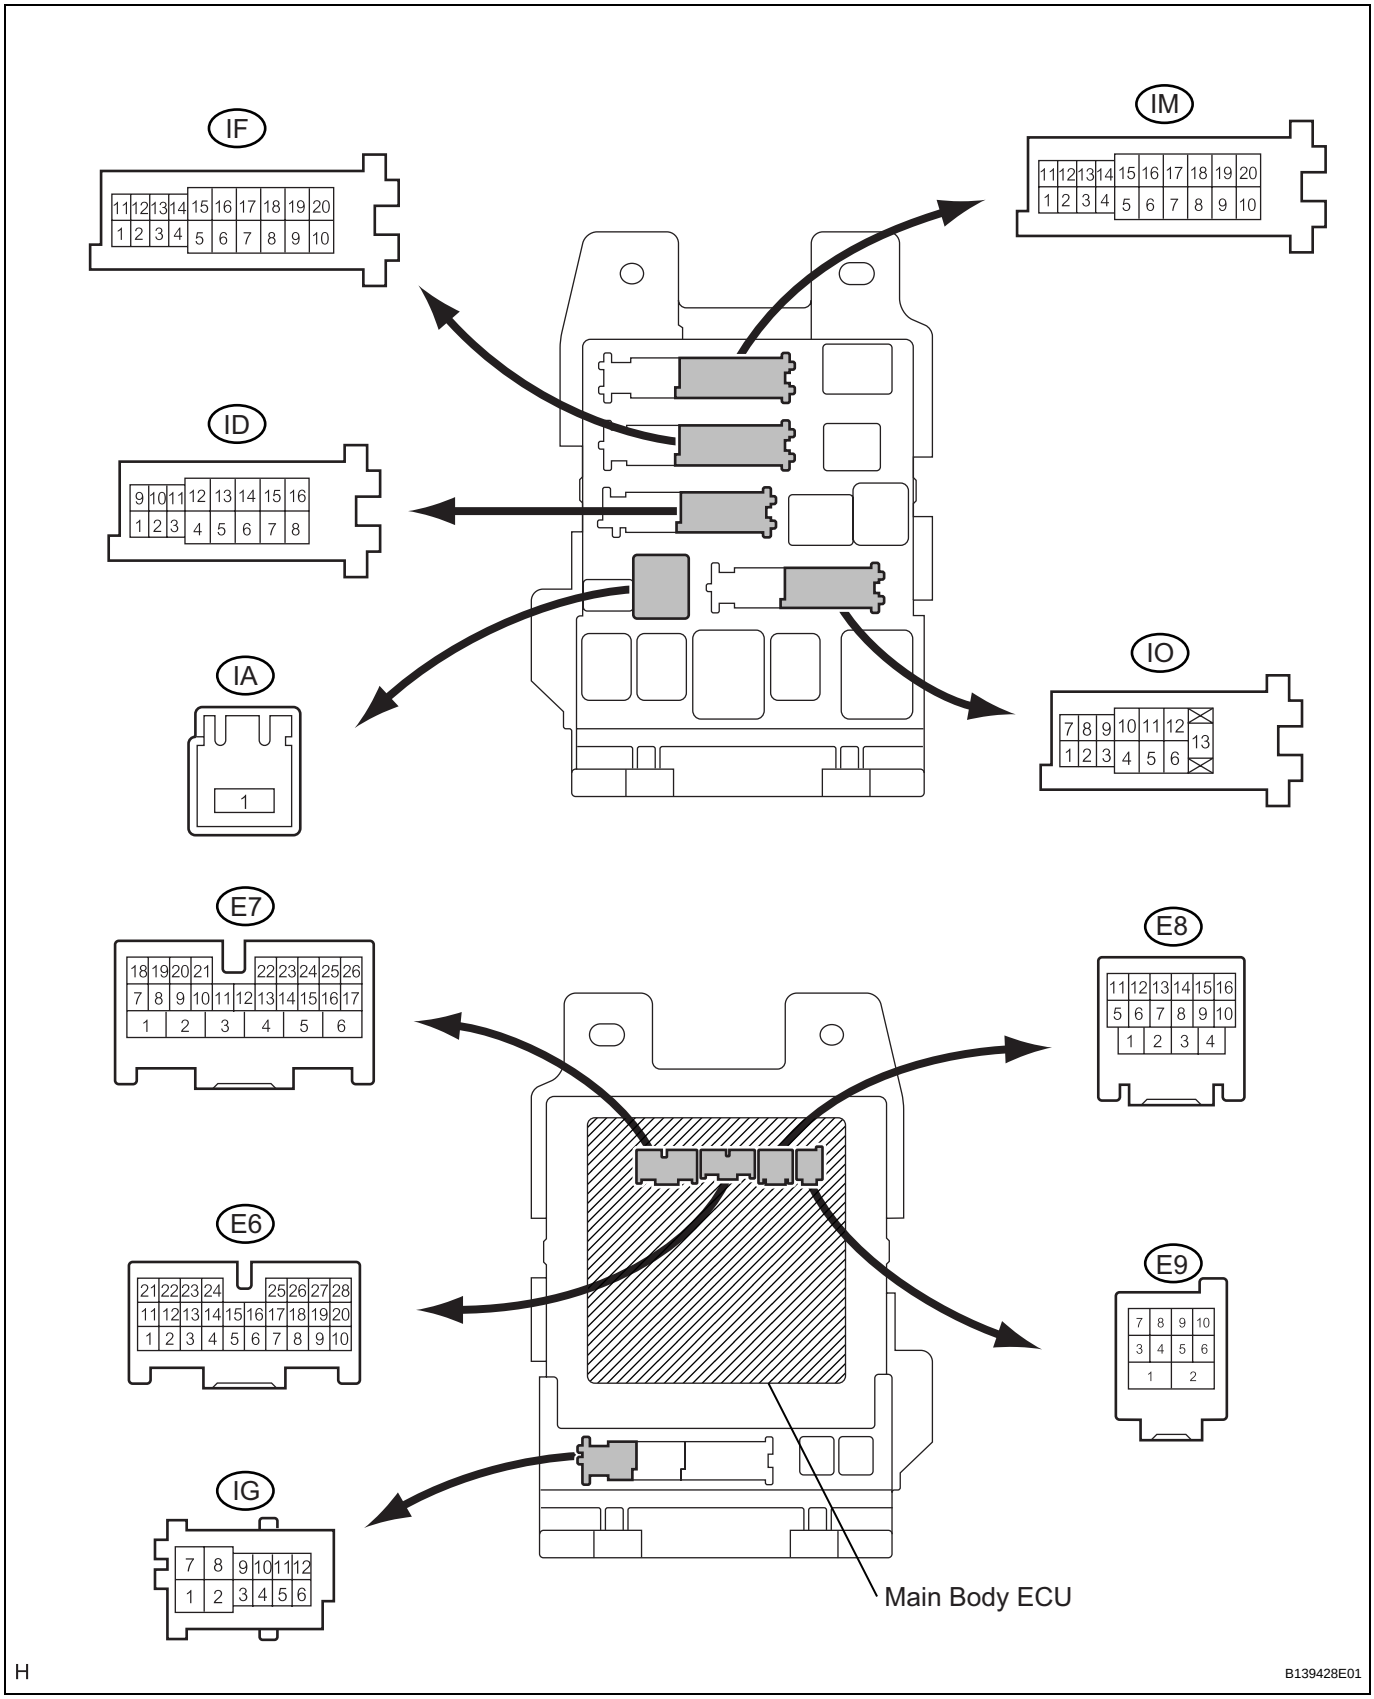
Symptom	Suspected area	See page
The wireless door lock control system does not operate.	1. Perform the operation check	DL-71
	2. Check if the CAN communication DTC is output	CA-31
	3. Door control transmitter	DL-210
	4. Door courtesy light switch circuit	LI-52
	5. Luggage compartment door courtesy light switch	DL-44
	6. Power source circuit	DL-89
	7. Replace door control receiver	-
	8. Replace certification ECU	-
	9. If the symptom still occurs after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-
The automatic lock function does not operate normally.	1. Perform the operation check	DL-71
	2. Door courtesy light switch circuit	LI-52
	3. If the symptom still occurs after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-
The illuminated entry function only does not operate.	1. Perform the operation check	DL-71
	2. Lighting system	LI-12
	3. If the symptom still occurs after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-
The answer back function does not operate (Wireless door lock buzzer).	1. Perform the operation check	DL-71
	2. Wireless door lock buzzer circuit	DL-86
	3. Replace certification ECU	-
	4. If the symptom still occurs after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-
The answer back function does not operate (Hazard warning light).	1. Perform the operation check	DL-71
	2. Wire harness	-
	3. Turn signal flasher	LI-138
	4. If the symptom still occurs after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-

Symptom	Suspected area	See page
The door ajar warning function only does not operate.	1. Perform the operation check	DL-71
	2. Door courtesy switch circuit	LI-52
	3. If the symptom still occurs after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-
The panic alarm function only does not operate.	1. Perform the operation check	DL-71
	2. Door control transmitter	DL-210
	3. If the symptom still occurs after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-
The panic alarm function does not operate (Vehicle horn).	1. Perform the operation check	DL-71
	2. Horn circuit	TD-25
	3. If the symptom still occurs after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-
The panic alarm function does not operate (Security horn).	1. Perform the operation check	DL-71
	2. Security horn circuit	TD-27
	3. Replace certification ECU	-
	4. If the symptom still occurs after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-
The panic alarm function does not operate (Hazard warning light).	1. Perform the operation check	DL-71
	2. Wire harness	-
	3. Turn signal flasher	LI-138
	4. If the symptom still occurs after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-
The panic alarm function does not operate (Headlight or taillight).	1. Perform the operation check	DL-71
	2. Lighting system	LI-12
	3. If the symptom still occurs after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-

TERMINALS OF ECU

1. CHECK MAIN BODY ECU (INSTRUMENT PANEL J/B)

(a) Disconnect the main body ECU (instrument panel J/B) connectors.



DL

(b) Measure the resistance and voltage between each terminal of the wire harness side connectors and body ground.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
RCTY (E6-7) - Body ground	GR - Body ground	Rear courtesy light switch RH input	Rear door RH CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω
PCTY (E6-21) - Body ground	Y - Body ground	Passenger side courtesy light switch input	Passenger side door CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω
LGCY (E6-25) - Body ground	W - Body ground	Luggage compartment door courtesy light switch input	Luggage compartment door CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω
DCTY (E7-24) - Body ground	L - Body ground	Driver side door courtesy light switch input	Driver side door CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω
ACC (IA-1) - Body ground	B - Body ground	Ignition power supply (ACC signal)	Engine switch on (ACC) → off	10 to 14 V → Below 1 V
IG (IA-1) - Body ground	B - Body ground	Ignition power supply (IG signal)	Engine switch on (IG) → off	10 to 14 V → Below 1 V
BATB (IA-1) - Body ground	B - Body ground	+B (power battery system) power supply	Always	10 to 14 V
ALTB (ID-16) - Body ground	W - Body ground	+B (power system alternator system) power supply	Always	10 to 14 V
GND1 (IF-10) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
GND2 (IM-9) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
LCTY (IO-7) - Body ground	LG - Body ground	Rear courtesy light switch LH input	Rear door LH CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the main body (instrument panel J/B) connectors.

(d) Measure the voltage between each terminal of the wire harness side connectors and body ground.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
TR+ (E7-1) - Body ground	B - Body ground	Luggage compartment door opener motor input	Luggage compartment door CLOSED (LOCKED) → OPEN (UNLOCKED)	Below 1 V → 10 to 14 V*1
HAZ (E8-4) - Body ground	W - Body ground	Turn signal flasher relay signal	Any transmitter switch is pressed → not pressed	Below 1 V → 10 to 14 V*2

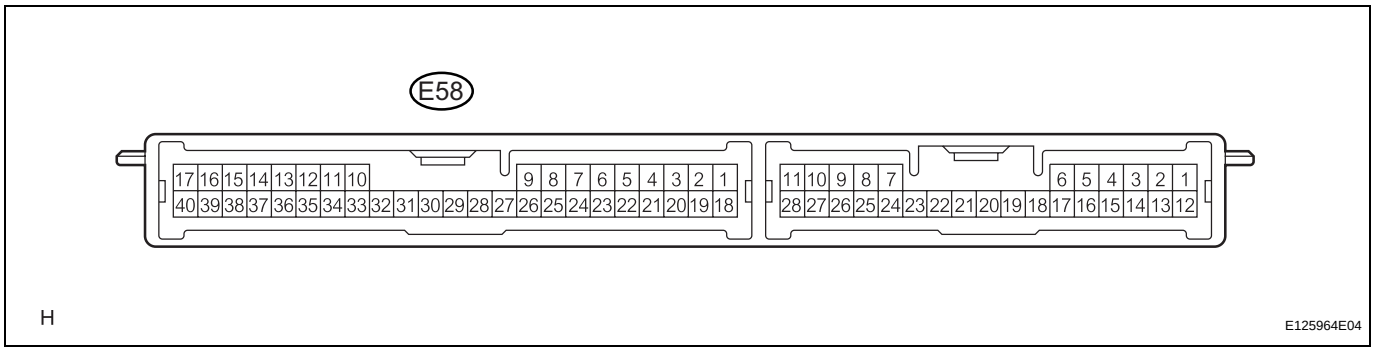
HINT:

- *1: When operating the motor.
- *2: When operating the answer back function.

DL

2. CHECK CERTIFICATION ECU ASSEMBLY

(a) Disconnect the E58 ECU connector.



(b) Measure the voltage and resistance of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
+B (E58-1) - E (E58-17)	W - W-B	Battery power supply	Always	10 to 14 V
E (E58-17) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
IG (E58-18) - E (E58-17)	LG - W-B	IG power supply	Engine switch on (IG)	10 to 14 V
IG (E58-18) - E (E58-17)	LG - W-B	IG power supply	Engine switch off	Below 1 V

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the E58 ECU connector.

(d) Measure the voltage of the connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
BZR (E58-21) - Body ground	O - Body ground	Wireless door lock buzzer	Wireless door lock buzzer OFF → ON	0 V → Pulse generation
RC0 (E58-29) - E (E58-17)	G - W-B	Door control receiver power supply	Engine switch off, all doors closed and transmitter switch not pressed	Below 1 V
RC0 (E58-29) - E (E58-17)	G - W-B	Door control receiver power supply	Engine switch off, all doors closed and transmitter switch pressed	4.6 to 5.4 V
RDA (E58-38) - E (E58-17)	Y - W-B	Door control receiver output signal	Engine switch off, all doors closed and transmitter switch not pressed	10 to 14 V
RDA (E58-38) - E (E58-17)	Y - W-B	Door control receiver output signal	Engine switch off, all doors closed and transmitter switch pressed	Pulse generation

If the result is not as specified, the ECU may have a malfunction.

DIAGNOSIS SYSTEM

1. DESCRIPTION

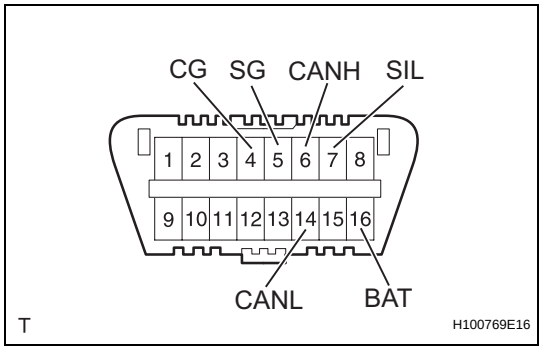
The main body ECU stores trouble codes when trouble occurs on the vehicle.

The diagnostic system allows for reading of the trouble codes from the DLC3.

Use the intelligent tester to check and solve the problem.

2. CHECK DLC3

(a) The main body ECU uses ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

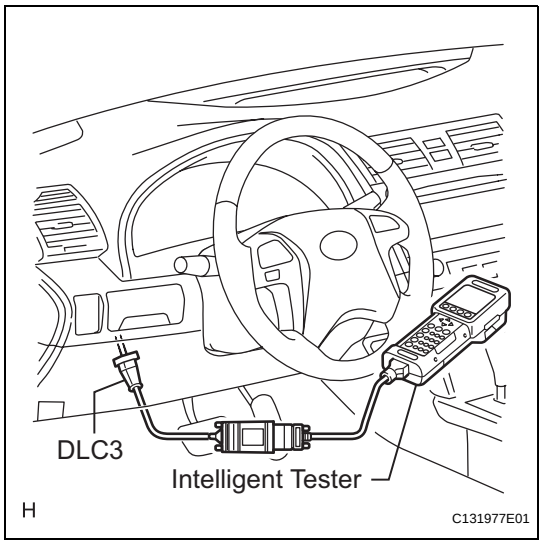


Symbols (Terminal No.)	Terminal Description	Condition	Specified condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Engine switch off*	54 to 67 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Engine switch off*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Engine switch off*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Engine switch off*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Engine switch off*	6 kΩ or higher

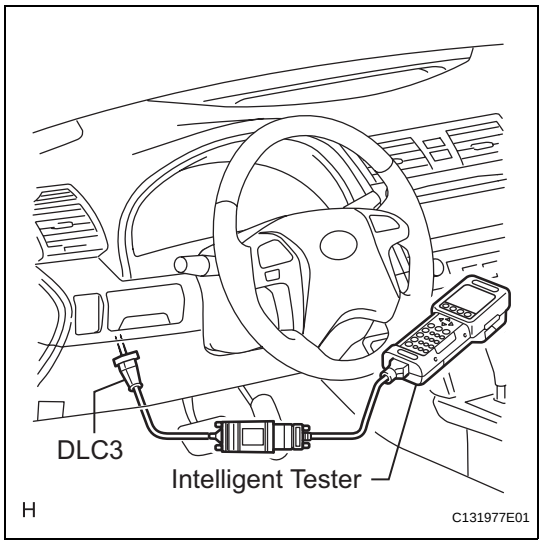
NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the engine switch, any other switches or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.



(b) Connect the cable of the intelligent tester (with CAN VIM) to the DLC3, turn the engine switch on (IG) and attempt to use the intelligent tester. If the screen displays a communication error message, a problem exists in the vehicle or in the tester.
- If communication is normal when the tool is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still impossible when the tool is connected to another vehicle, the problem is probably in the tool itself. Consult the Service Department listed in the tool's instruction manual.



DTC CHECK / CLEAR

1. CHECK DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Enter the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Read the DTC by following the prompts on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

2. CLEAR DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Enter the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CLEAR CODES.
(d) Erase the DTC by following the directions on the tester screen.

HINT:
Refer to the intelligent tester operator's manual for further details.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the intelligent tester DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to shorten labor time.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the engine switch on (IG).
(c) Enter the following menus: DIAGNOSIS / OBD/ MOBD / BODY or SMART / DATA LIST.
(d) Read the DATA LIST according to the display on the tester.

MAIN BODY (Main body ECU):

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
WIRELESS OPER	Wireless door lock control function / ON or OFF	ON: Operating OFF: Not operating	-
HAZARD ANS BACK	Hazard answer-back of wireless / ON or OFF	ON: Operating OFF: Not operating	-
OPEN DOOR WARN	Open door warning / ON or OFF	ON: Operating OFF: Not operating	-
AUTO LOCK DELAY	Automatic lock time / 60 s or 30 s	60 s: 60 seconds 30 s: 30 seconds	-
UNLOCK /2OPER	2 times operation of wireless unlock / ON or OFF	ON: All doors unlock when UNLOCK is pressed twice OFF: All doors unlock when UNLOCK is pressed once	-
WIRLS BUZZ RESP	Wireless door lock buzzer response / ON or OFF	ON: Operating OFF: Not operating	-
TRUNK LID OPER	Luggage compartment door open function type / 1 TIME/2 TIME/ 0.6 s PR/ OFF	1 TIME: Luggage compartment door opens when LUGGAGE OPEN switch is pressed once 2 TIME: Luggage compartment door opens when LUGGAGE OPEN switch is pressed twice 0.6 s PR: Luggage compartment door opens when LUGGAGE OPEN switch is pressed and held down for 0.6 seconds. OFF: Not operating	-

SMART (Certification ECU):

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
ALARM FUNCTION	Panic function / ON or OFF	ON: Operating OFF: Not operating	-

2. ACTIVE TEST

HINT:

Performing the intelligent tester ACTIVE TEST allows relay, VSV, actuator and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to shorten the labor time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the engine switch on (IG).
(c) Enter the following menus: DIAGNOSIS / OBD/ MOBD / BODY or SMART / ACTIVE TEST.

(d) Perform the ACTIVE TEST according to the display on the tester.

MAIN BODY (Main body ECU):

Item	Tester Detail	Diagnostic Note
HAZARD	Turns the turn signal flasher relay ON / OFF	Observe headlight and rear combination light for correct operation
VEHICLE HORN	Vehicle horn ON / OFF	-
TRUNK/BDOR OPEN	Turns luggage compartment door opener motor ON / OFF	Observe luggage compartment door

SMART (Certification ECU):

Item	Tester Detail	Diagnostic Note
WIRELESS BUZZER	Wireless door lock buzzer ON / OFF	-

DIAGNOSTIC TROUBLE CODE CHART

HINT:
If a trouble code is indicated during the DTC check, check the circuit listed for that code in the table below. Then proceed to the appropriate page.

WIRELESS DOOR LOCK CONTROL SYSTEM:

DTC No.	Detection Item	Trouble Area	See page
B1242	Wireless Door Lock Tuner Circuit Malfunction	1. Door control receiver 2. Wire harness 3. Certification ECU	DL-83

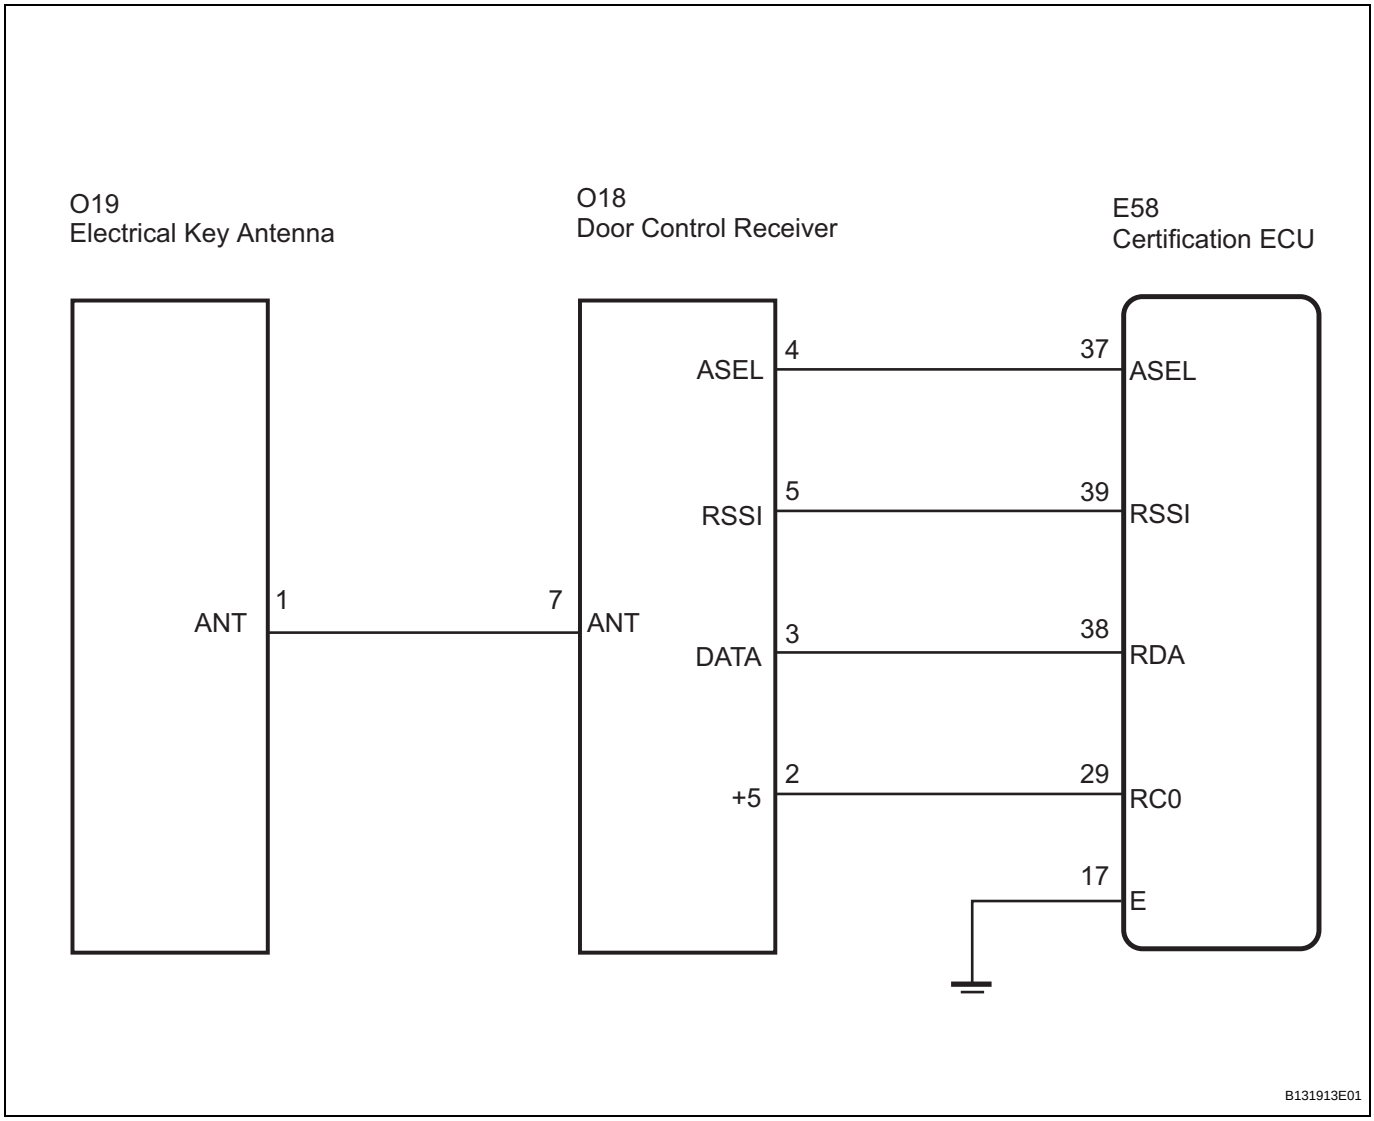
DTC	B1242	Wireless Door Lock Tuner Circuit Malfunction

DESCRIPTION

- The electrical key antenna is used to receive electric waves relating to the entry functions of the smart access system with push-button start. The certification ECU decodes the requested smart access system with push-button start operation by identifying a key code based on electric waves received via the electrical key antenna and the door control receiver.
- The door control receiver receives a signal from the wireless door control transmitter and sends signals to the main body ECU through the certification ECU.
- The certification ECU then sends a command, according to the requested operation, to each ECU. (e.g. If door lock operation is requested, the ECU sends a door lock command to the main body ECU.)

DTC No.	DTC Detection Condition	Trouble Area
B1242	The certification ECU detects that there is a short in the circuit between terminals RSSI, or between terminals DATA and RDA.	• Door Control Receiver • Wire harness • Certification ECU

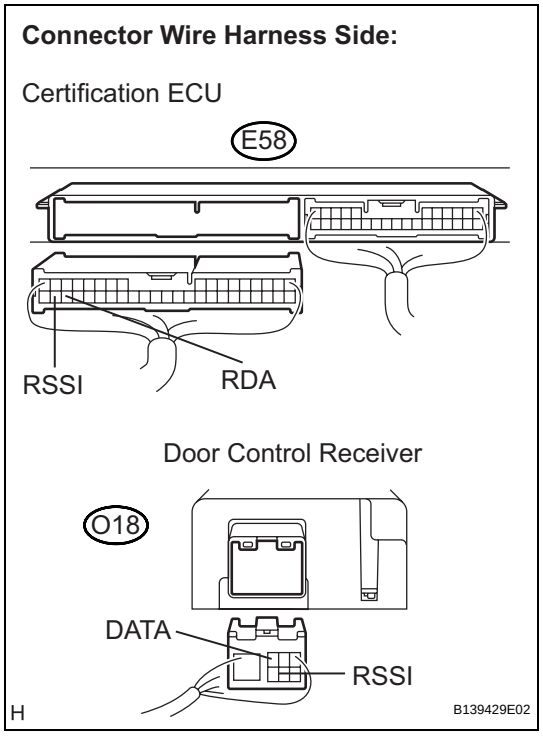
WIRING DIAGRAM



DL

INSPECTION PROCEDURE

1 CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - DOOR CONTROL RECEIVER)



(a) Disconnect the E58 certification ECU connector and O18 door control receiver connector.
(b) Measure the resistance according to the value(s) in the table below.

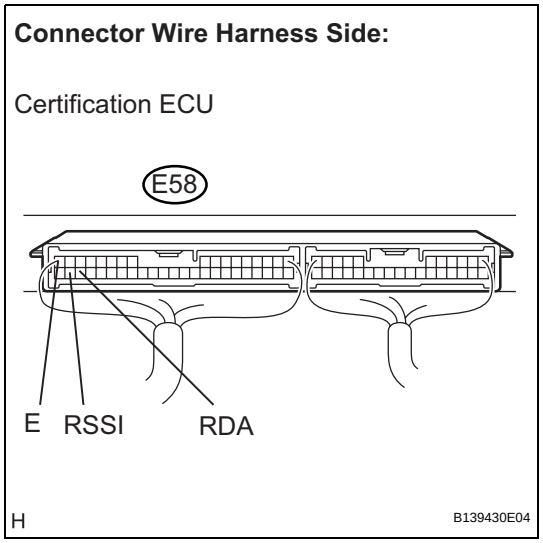
Standard resistance

Symbol (Tester Connection)	Condition	Specified Condition
RSSI (E58-39) - RSSI (O18-5)	Always	Below 1 Ω
RDA (E58-38) - DATA (O18-3)	Always	Below 1 Ω
RSSI (E58-39) - RDA (E58-38)	Always	10 kΩ or higher
RSSI (E58-39) - Body ground	Always	10 kΩ or higher
RDA (E58-38) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

2 INSPECT CERTIFICATION ECU



(a) Reconnect the E58 ECU connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Symbol (Tester Connection)	Condition	Specified Condition
RSSI (E58-39) - E (E58-17)	Engine switch OFF, all doors closed, the electrical key is not in the actuation area	Below 1 V
	Engine switch OFF, all doors closed, the electrical key is in the actuation area	4.6 to 5.4 V
RDA (E58-38) - E (E58-17)	Engine switch OFF, all doors closed and transmitter switch not pressed	Below 1 V
	Engine switch OFF, all doors closed and transmitter switch pressed	4.6 to 5.4 V

NG → REPLACE CERTIFICATION ECU

DL

OK

3	**REPLACE DOOR CONTROL RECEIVER**

(a) Replace the door control receiver with a normal one.
(b) Perform the registration procedure.
OK:
The system returns to normal operation.

NG → **REPLACE CERTIFICATION ECU**

OK

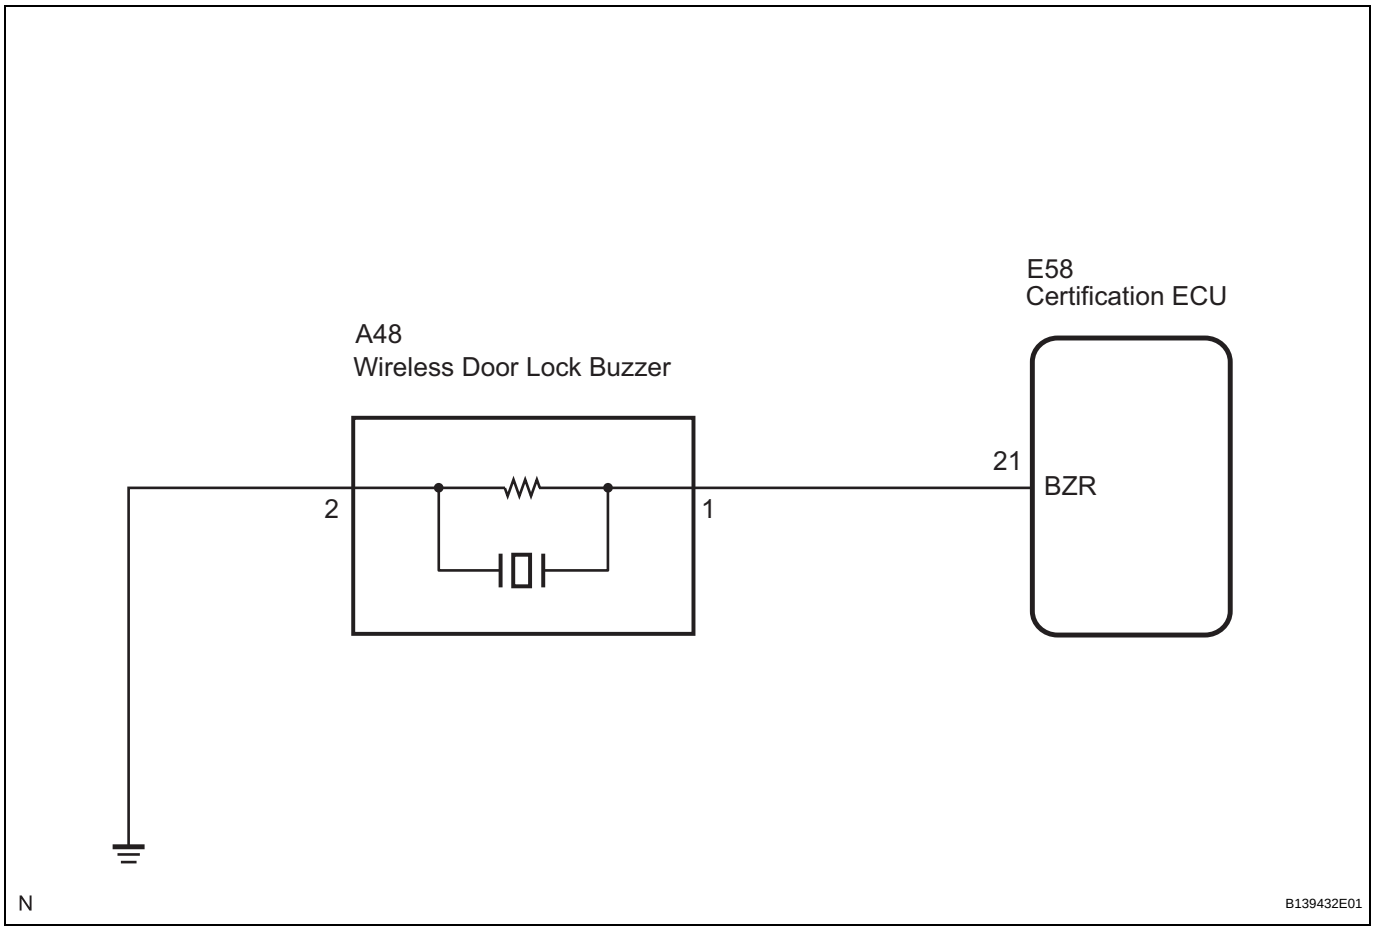
END

Wireless Door Lock Buzzer Circuit

DESCRIPTION

The certification ECU activates the wireless door lock buzzer when detecting a lock/unlock signal from the door control transmitter.

WIRING DIAGRAM

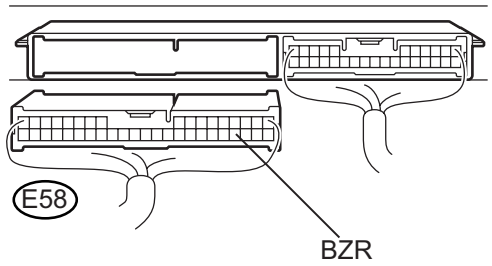


DL

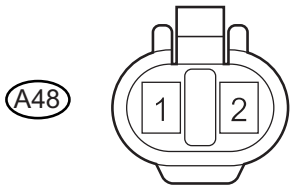
INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - WIRELESS DOOR LOCK BUZZER - BODY GROUND)

Connector Wire Harness View:



Wire Harness Side Connector Front View:



H B139431E01

(a) Disconnect the E58 certification ECU connector and A48 wireless door lock buzzer connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

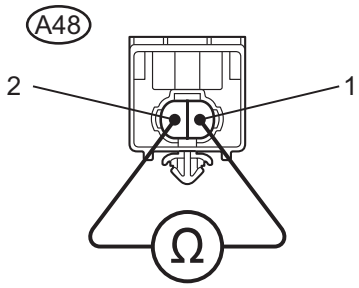
Symbol (Tester Connection)	Condition	Specified Condition
BZR (E58-21) - A48-1	Always	Below 1 Ω
BZR (E58-21) - Body ground	Always	10 kΩ or higher
A48-2 - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2	INSPECT WIRELESS DOOR LOCK BUZZER

Wireless Door Lock Buzzer:



N B144393E01

(a) Measure the resistance according to the value(s) in the table below.
HINT:
The buzzer activation circuit is built into the ECU, not into the buzzer itself. When battery voltage is applied directly to the buzzer, the buzzer will not sound.

Standard resistance

Tester Connection	Condition	Specified Condition
A48-1 - A48-2	Always	Approx. 1 kΩ

NG → **REPLACE WIRELESS DOOR LOCK BUZZER**

DL

OK

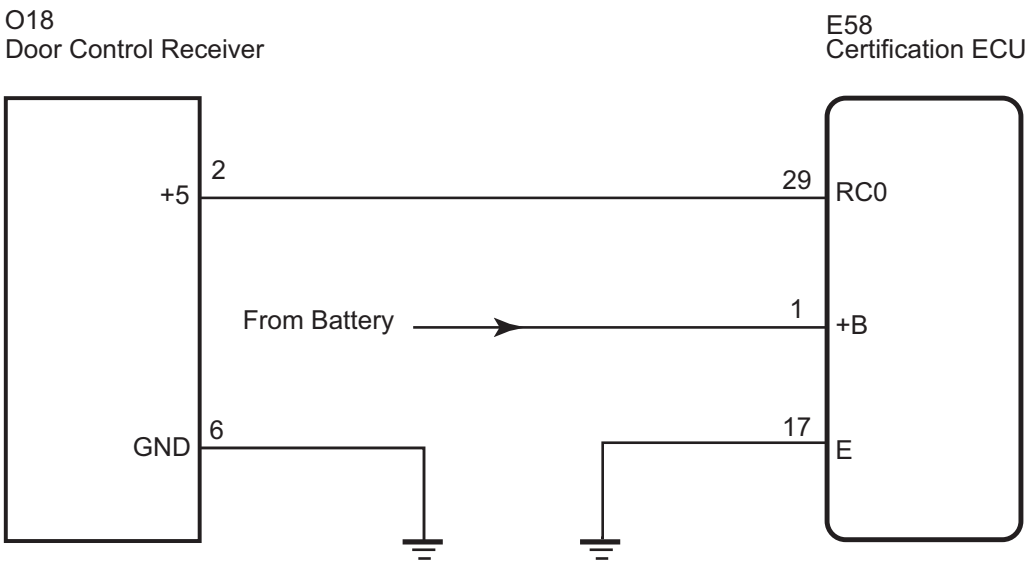
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Power Source Circuit

DESCRIPTION

The certification ECU provides power for the door control receiver operation.

WIRING DIAGRAM

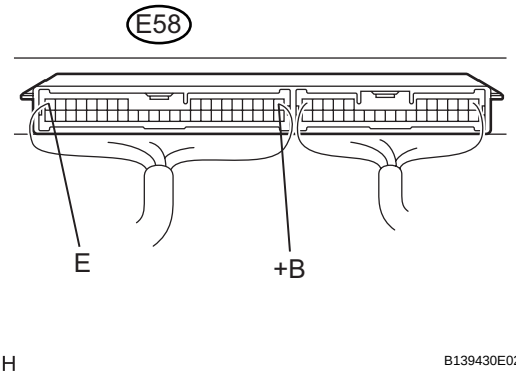


INSPECTION PROCEDURE

1	INSPECT CERTIFICATION ECU (+B TERMINAL)

Connector Wire Harness View:

Certification ECU



(a) Measure the voltage according to value(s) in the table below.

Standard voltage

Symbol (Tester Connection)	Condition	Specified Condition
+B (E58-1) - E (E58-17)	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

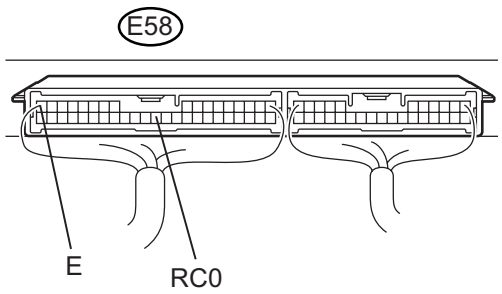
OK

DL

2 INSPECT CERTIFICATION ECU (RC0 TERMINAL)

Connector Wire Harness View:

Certification ECU



H B139430E03

(a) Measure the voltage according to value(s) in the table below.

Standard voltage

Symbol (Tester Connection)	Condition	Specified Condition
RC0 (E58-29) - E (E58-17)	Engine switch off, all doors closed and transmitter switch not pressed	Below 1 V
	Engine switch off, all doors closed and transmitter switch pressed	4.6 to 5.4 V

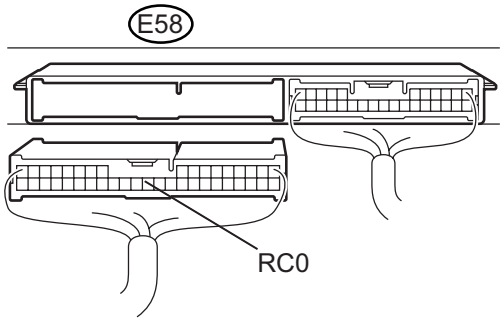
OK → **Go to step 4**

NG

3 CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - BATTERY - BODY GROUND)

Connector Wire Harness Side:

Certification ECU



H E125974E10

(a) Disconnect the E58 certification ECU connector.
(b) Measure the voltage and resistance according to value(s) in the table below.

Standard resistance

Symbol (Tester Connection)	Condition	Specified Condition
RC0 (E58-29) - Body ground	Always	Below 1 V
	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

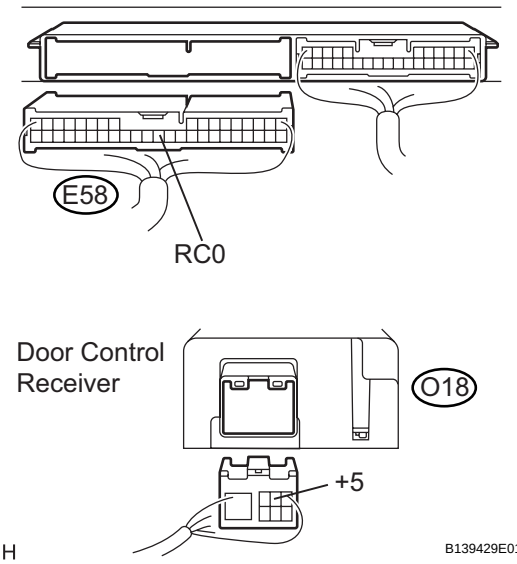
OK

REPLACE CERTIFICATION ECU

DL

4	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - DOOR CONTROL RECEIVER)

Connector Wire Harness View:



(a) Disconnect the O18 door control receiver connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

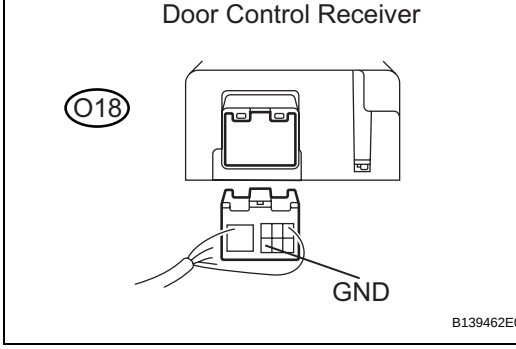
Symbol (Tester Connection)	Condition	Specified Condition
RC0 (E58-29) - +5 (O18-2)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5	CHECK HARNESS AND CONNECTOR (BODY GROUND)

Connector Wire Harness View:



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Symbol (Tester Connection)	Condition	Specified Condition
GND (O18-6) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

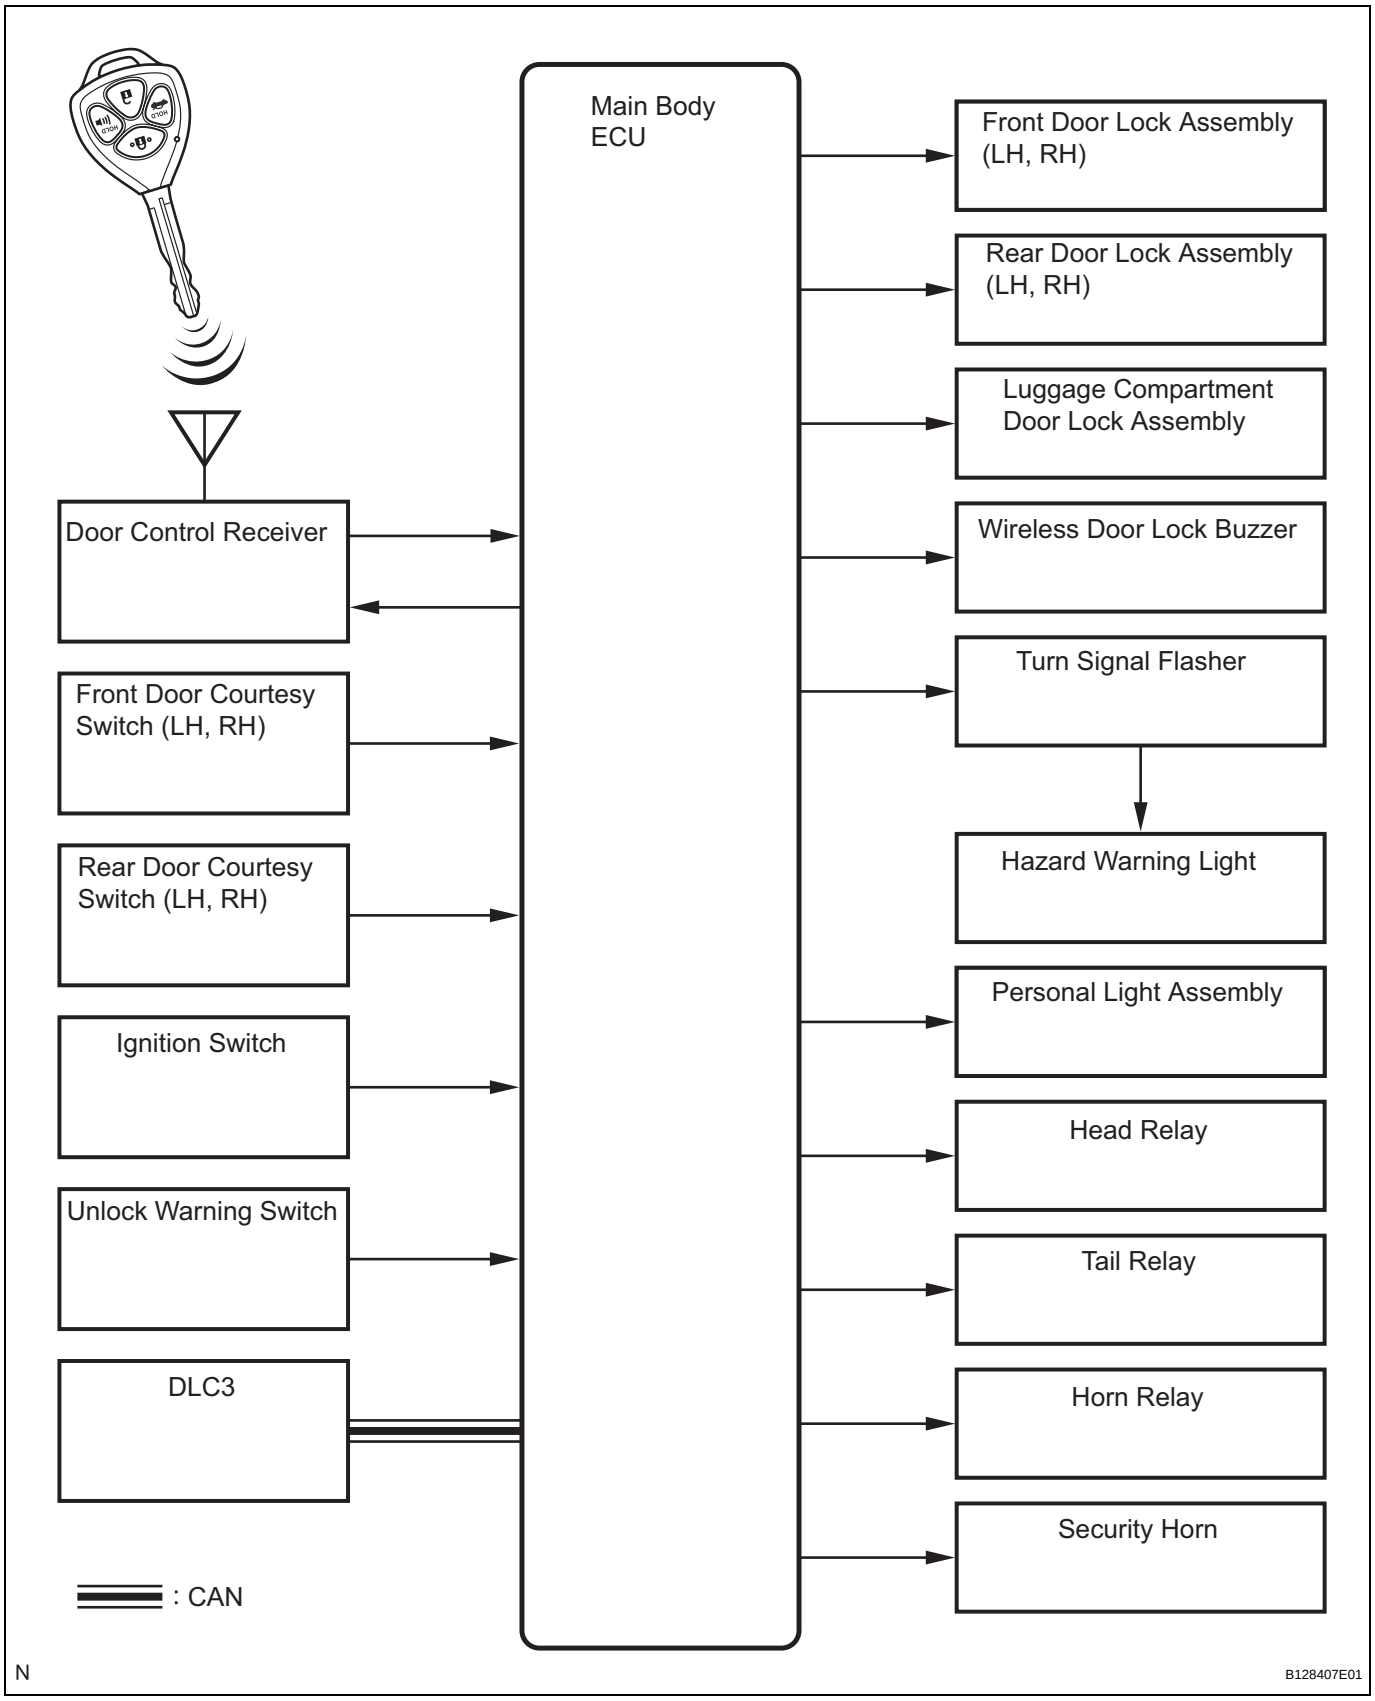
SYSTEM DIAGRAM



DL

SYSTEM DESCRIPTION

1. WIRELESS DOOR LOCK CONTROL SYSTEM

The wireless door lock control system functions to lock and unlock all the doors from a distance. The system is controlled by a hand-held transmitter which sends radio waves to the door control receiver. The main body ECU performs an ID code identification process and engages the door lock control.

2. FUNCTION OF MAIN COMPONENTS

Component	Function
Door control transmitter	• Has LOCK, UNLOCK, LUGGAGE OPEN, and PANIC switches. • Transmits weak radio waves (recognition codes and function codes) to the door control receiver. • Illuminates the indicator light (LED) during transmission.
Door control receiver	Receives weak radio waves (recognition codes and function codes) and outputs them as code data to the main body ECU.
• Front door courtesy light switch • Rear door courtesy light switch • Luggage compartment door courtesy light switch	Turns on when a door is opened and turns off when it is closed. Outputs door status codes (open or closed) to the main body ECU.
Unlock warning switch	Detects if the key is inserted in the ignition key cylinder or not.
Door lock position switch	Transmits the door lock positions of each door to the main body ECU.
Wireless door lock buzzer	Emits beep (answer back) when doors are locked or unlocked, or luggage compartment door is opened by wireless operation.
Main body ECU	Sends wireless door lock control signals in response to the code data from the door control receiver and signals from each switch.

3. SYSTEM FUNCTION

The door control transmitter has the LOCK, UNLOCK, LUGGAGE OPEN, and PANIC switches. Operating these switches activates each function.

The wireless door lock control system has the following functions:

HINT:

The default settings of the following functions are ON. Part of these functions can be customized (See page DL-103).

Function	Operation
All door lock	Pressing the LOCK switch locks all doors.
All door unlock (2-step unlock)	Pressing the UNLOCK switch twice within 3 seconds unlocks all the doors after the driver's door is unlocked.
Automatic lock	If none of the doors is opened within 60 seconds after they are unlocked by the wireless door lock control, all the doors will lock again automatically.
Panic alarm	Pressing the PANIC switch of the transmitter for longer than about 0.8 seconds causes the following alarms to activate: • Sounds the horn and security horn. • Flashes the hazard lights, headlights, and taillights. • Illuminates the front interior light (when the switch is in the DOOR position). While the panic alarm is operating, pressing any switch of the transmitter cancels the alarm operation.
Luggage compartment door opener	Pressing the LUGGAGE OPEN switch of the transmitter opens the luggage compartment door.
Answer back	• When the doors are locked by wireless operation, the wireless door lock buzzer sounds once and the hazard warning lights flash once. • When the doors are unlocked by wireless operation, the wireless door lock buzzer sounds twice and the hazard warning lights flash twice. • When the luggage compartment door is opened by wireless operation, the wireless door lock buzzer sounds once.

Function	Operation
Door ajar warning	The buzzer sounds when LOCK is pressed when any of the doors are ajar. When all the doors are closed or when UNLOCK is pressed, the buzzer will stop after it sounds for 10 seconds continuously.
Illuminated entry	When all the doors are locked, pressing UNLOCK causes the interior lights to come on simultaneously with the unlock operation.
Self-diagnostic mode	The following are ways to enter the self-diagnostic mode: • If the door control receiver receives normal radio waves from the door control transmitter when the system is in diagnostic mode, it sounds the wireless door lock buzzer and flashes the interior light in a normal pattern that corresponds to the function of each switch. • Read DTCs with the intelligent tester.
Transmitter recognition code registration	Enables the registration (writing and storing) of 6 types of transmitter recognition codes in the EEPROM that is contained in the door control receiver.

4. TRANSMITTER RECOGNITION CODE REGISTRATION FUNCTION

The table below shows the 6 ID registration function modes by which up to 6 different codes can be registered. The codes are electronically registered (written and stored) in the EEPROM that is contained in the door control receiver.

Mode	Function
Add mode	Adds a newly received code while preserving any previously registered codes. This mode is used when adding a new transmitter. If the number of registered codes exceeds 6, the oldest registered code is erased first.
Rewrite mode	Erases all previously registered codes and registers only newly input codes.
Confirmation mode	Confirms how many codes are currently registered. When adding a new code, this mode is used to check how many codes already exist.
Prohibition mode	Deletes all the registered codes and disables the wireless door lock function. This mode is used when the transmitter is lost.

5. CONDITIONS THAT WIRELESS FUNCTIONS DO NOT OPERATE

(a) Lock operation is not available when:
- Any of the doors is open.
- The key is inserted in the ignition key cylinder.

(b) Unlock operation is not available when:
- The key is inserted in the ignition key cylinder.

(c) Luggage compartment door opener is not available when:
- The key is inserted in the ignition key cylinder.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
The wireless door lock control system troubleshooting procedures are based on the premise that the power door lock control system is operating normally. Check the power door lock control system first before troubleshooting the wireless door lock control system.
Use this procedure to troubleshoot the wireless door lock control system.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS

(a) Interview the customer to confirm the trouble (See page IN-45).

NEXT

3	INSPECT COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM

(a) Use the intelligent tester to check for normal function of the multiplex communication system.
  (1) (ECU unconnected, communication line malfunctioning) If no code is output, proceed to A.
  (2) (ECU unconnected, communication line malfunctioning) If any code is output, proceed to B.

B → Go To CAN COMMUNICATION SECTION

A

4	DTC CHECK

DL

(a) Check for a DTC and note any codes that are output.
(b) Delete the DTC.
(c) Recheck for DTCs. Try to prompt the DTC by simulating the original symptom that the DTC suggests.
  (1) If the DTC does not reoccur, proceed to A.
  (2) If the DTC reoccurs, proceed to B.

B → Go To DTC chart

A

5	SYMPTOM SIMULATION

NEXT

6	PROBLEM SYMPTOMS TABLE

(a) If the fault is not listed in the problem symptoms table, proceed to A.
(b) If the fault is listed in the problem symptoms table, proceed to B.

B → Go to step 7

A

7	PERFORM TROUBLESHOOTING ACCORDING TO MALFUNCTION SYMPTOM

(a) Terminals of ECU (See page DL-106)
(b) DATA LIST/ACTIVE TEST (See page DL-111)

END

OPERATION CHECK

1. FUNCTIONS AND OPERATING CONDITIONS

(a) The wireless door LOCK/UNLOCK function:
This wireless door lock control function operates only when the following 4 conditions are met:
(1) There is no key in the ignition key cylinder.
(2) All the doors are closed.
(3) The power door lock system is functioning normally.
(4) The function is not disabled by customization.
HINT:
The UNLOCK function operates even when any of the doors are open.

(b) The wireless transmitter operational range differs depending on the situation.
(1) The operational range differs depending on the user, the way the transmitter is held and the location.
(2) In certain areas, the operational range will be reduced due to the vehicle body shape and the influence of the surrounding environment.
(3) Since the transmitter uses weak radio waves, the operational range may be reduced or the transmitter may not function if interference or stronger radio waves occur in the area where the transmitter is used.
(4) When the battery is low, the operational range is reduced and/or the transmitter may not function.
HINT:
If the transmitter has been left in a place that is exposed to direct sunlight, such as on the instrument panel, the battery may be weakened or other problems may occur.

2. CHECK WIRELESS DOOR LOCK CONTROL FUNCTIONS

HINT:
- The switches built into the door control transmitter send radio waves to the door lock control receiver.
- The operational range must be taken into account during checks.

(a) Establish conditions that allow the wireless control function to be operated successfully.
(b) Check the following basic functions.
(1) Check that the transmitter's LED lights up 3 times when each switch is pressed 3 times and that the LED blinks when each switch is pressed and held down.
HINT:
If the LED does not illuminate when the switch has been pressed 3 times or more, the battery may be depleted.
(2) Check that all the doors lock when the LOCK switch is pressed.

(3) Check that the driver's door unlocks when the UNLOCK switch is pressed once, and all the doors unlock when pressed twice within 3 seconds.

(c) Check the automatic lock function.
(1) Check that if the driver's door or all doors are unlocked with the UNLOCK switch and none of the doors are opened or locked within approximately 60 seconds, the doors automatically re-lock.
(2) Check that if the driver's door or all doors are unlocked with the UNLOCK switch and a door is opened or locked within approximately 60 seconds, the automatic lock function does not operate.

(d) Check the interior light ON function.
HINT:
Turn the interior light switch to the DOOR position before the check.
(1) Check that the interior light comes on simultaneously with the unlocking operation when the UNLOCK switch is pressed.
(2) Check that the interior light goes off in approximately 15 seconds if none of the doors is opened after the unlocking operation.

(e) Check the answer back function.
(1) When the doors are locked by wireless operation, the wireless door lock buzzer sounds once and the hazard warning lights flash once.
(2) When the doors are unlocked by wireless operation, the wireless door lock buzzer sounds twice and the hazard warning lights flash twice.
(3) When the luggage compartment door is opened by wireless operation, the wireless door lock buzzer sounds once.

(f) Check the switch operation fail-safe function.
(1) Check that the doors cannot be locked by operating a switch while the key is in the ignition key cylinder.
HINT:
This check cannot be made when the system is in recognition code registration mode.

(g) Check the chattering prevention function.
(1) Check that the corresponding operation occurs only once, and does not repeat itself while the switch is kept pressed. Check that the corresponding operation is carried out when the switch is operated repeatedly at 1-second intervals.

(h) Check the luggage compartment door opener function.
(1) Check that the luggage compartment door opens when the LUGGAGE OPEN switch is held down for 0.6 seconds or more.

(i) Check the door ajar warning function.
  (1) Check that the buzzer sounds when the LOCK switch is pressed when any of the doors are ajar. When all the doors are closed or when the UNLOCK switch is pressed, the buzzer will stop after it sounds for 10 seconds continuously.

(j) Check the panic alarm function.
  (1) Check that the following alarms operate when the PANIC switch is pressed longer than about 0.8 seconds:
    - The vehicle horns and the security horn sound.
    - The hazard warning lights, headlights and taillights flash.
    - The front interior light illuminates (when the switch is in the DOOR position).
  (2) Check that during the panic alarm is operating, pressing any switch of transmitter cancels the alarm operation.

REGISTRATION

HINT:

- Register the recognition code when replacing the door control transmitter or the door control receiver.
- Add mode is used to register new recognition codes while still retaining codes already registered. This mode is used when a new transmitter is added. If the number of registered codes exceeds 6, the previously registered codes will be erased in order, starting from the first registered code.
- Rewrite mode is used to erase all the previously registered recognition codes in order to register all-new recognition codes. This mode is used when the transmitter or the door control receiver is replaced with a new one.
- Confirmation mode is used to confirm how many recognition codes have already been registered before another recognition code is registered.
- Prohibition mode is used to erase all the registered codes and disable the wireless door lock function.
  This mode is used when the transmitter is lost.
- All the following registration procedures must be performed in order.

1. REGISTRATION OF RECOGNITION CODE (USING INTELLIGENT TESTER)

(a) Turn the ignition switch ON.

(b) Select the add or rewrite mode according to the intelligent tester display.

(c) The number of registered codes is indicated.

(d) Registration of the door control transmitter.

(1) If the add mode or rewrite mode has been selected, press the LOCK and UNLOCK switches on the transmitter simultaneously.

(2) Within 3 seconds of releasing the LOCK and UNLOCK switches, press either of the switches on the door control transmitter.

NOTICE:

- **Do not press the LOCK and UNLOCK switches simultaneously for more than 1.5 seconds.**
- **Do the operation within 1 meter of the driver's seat to register the transmitter.**
- **Do not push other transmitter switches during the transmitter registration process.**

(3) The main body ECU automatically performs the power door LOCK-UNLOCK operation once and sounds the wireless door lock buzzer twice, in order to indicate whether registration has been completed correctly or not.

(4) If registration is continued, the next recognition code must be registered in the door control transmitter within 30 seconds.
HINT:
Up to 6 recognition codes can be registered.

(e) Completing the registration mode.
(1) The registration mode will cease when any of the following occurs:
- 30 seconds or more have elapsed after a code is registered.
- The intelligent tester is used to complete.
- The intelligent tester is disconnected.
- The ignition switch is turned off.

(f) Perform the following after registration is completed.
(1) Perform the wireless door lock control operation check (See page DL-99).
HINT:
If the wireless door lock control does not operate, perform the registration procedure again.

CUSTOMIZE PARAMETERS

HINT:
The following items can be customized.
NOTICE:

- **When the customer requests a change in a function, first make sure that customization of the function(s) is possible.**
- **Be sure to record the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is not set to OFF.**

WIRELESS DOOR LOCK CONTROL SYSTEM:

Display (item)	Default	Function	Setting
WIRELESS OPER (Wireless door lock control function)	ON	Function that turns wireless door lock function ON/OFF	ON/OFF
HAZARD ANS BACK (Hazard answer-back for wireless door lock control)	ON	• When the doors are locked by wireless operation, the hazard warning lights flash once. • When the doors are unlocked by wireless operation, the hazard warning lights flash twice.	ON/OFF
OPEN DOOR WARN (Door ajar warning)	ON	The buzzer sounds when LOCK is pressed when any of the doors are ajar.	ON/OFF
AUTO LOCK DELAY (Auto lock time)	60 s	This function regulates the interval between unlocking and automatic relocking of doors.	30 s/60 s
UNLOCK /2OPER (Wireless unlock operated twice)	ON	This function unlocks the driver's door when the UNLOCK switch is pressed once, and unlocks all doors when pressed twice within 3 seconds. If set to OFF, pressing UNLOCK once unlocks all doors.	ON/OFF
ALARM FUNCTION (Panic function)	ON	This function operates the theft deterrent system when PANIC is pressed and held for 0.8 seconds.	ON/OFF
WIRLS BUZZ RESP (Wireless buzzer answer-back)	ON	Wireless door lock buzzer response/ON or OFF	ON/OFF
TRUNK LID OPER (Wireless trunk opener function setting)	0.6 s ON	This function changes operation method of transmitter to open luggage compartment door. 1 TIME: Push 1 time 2 TIMES: Push 2 times 0.6 s PR: Push 0.6 seconds OFF: Does not operate	1 TIME/2 TIMES/0.6 s PR/ OFF

PROBLEM SYMPTOMS TABLE

If a normal system code is displayed during the DTC check, but the problem still occurs, check the circuits for each problem symptom in the order given in the table below and proceed to the relevant troubleshooting page.

HINT:

- The following is the troubleshooting procedure for the wireless door lock control of a vehicle without the smart key system.
- For the troubleshooting procedure for the wireless door lock control of a vehicle with the smart key system, refer to the wireless door lock control system (with Smart Key System).
- Inspect the fuse and relay before investigating the suspected areas shown in the table below.
- Inspect each malfunction circuit in numerical order for its corresponding symptom.

WIRELESS DOOR LOCK CONTROL SYSTEM

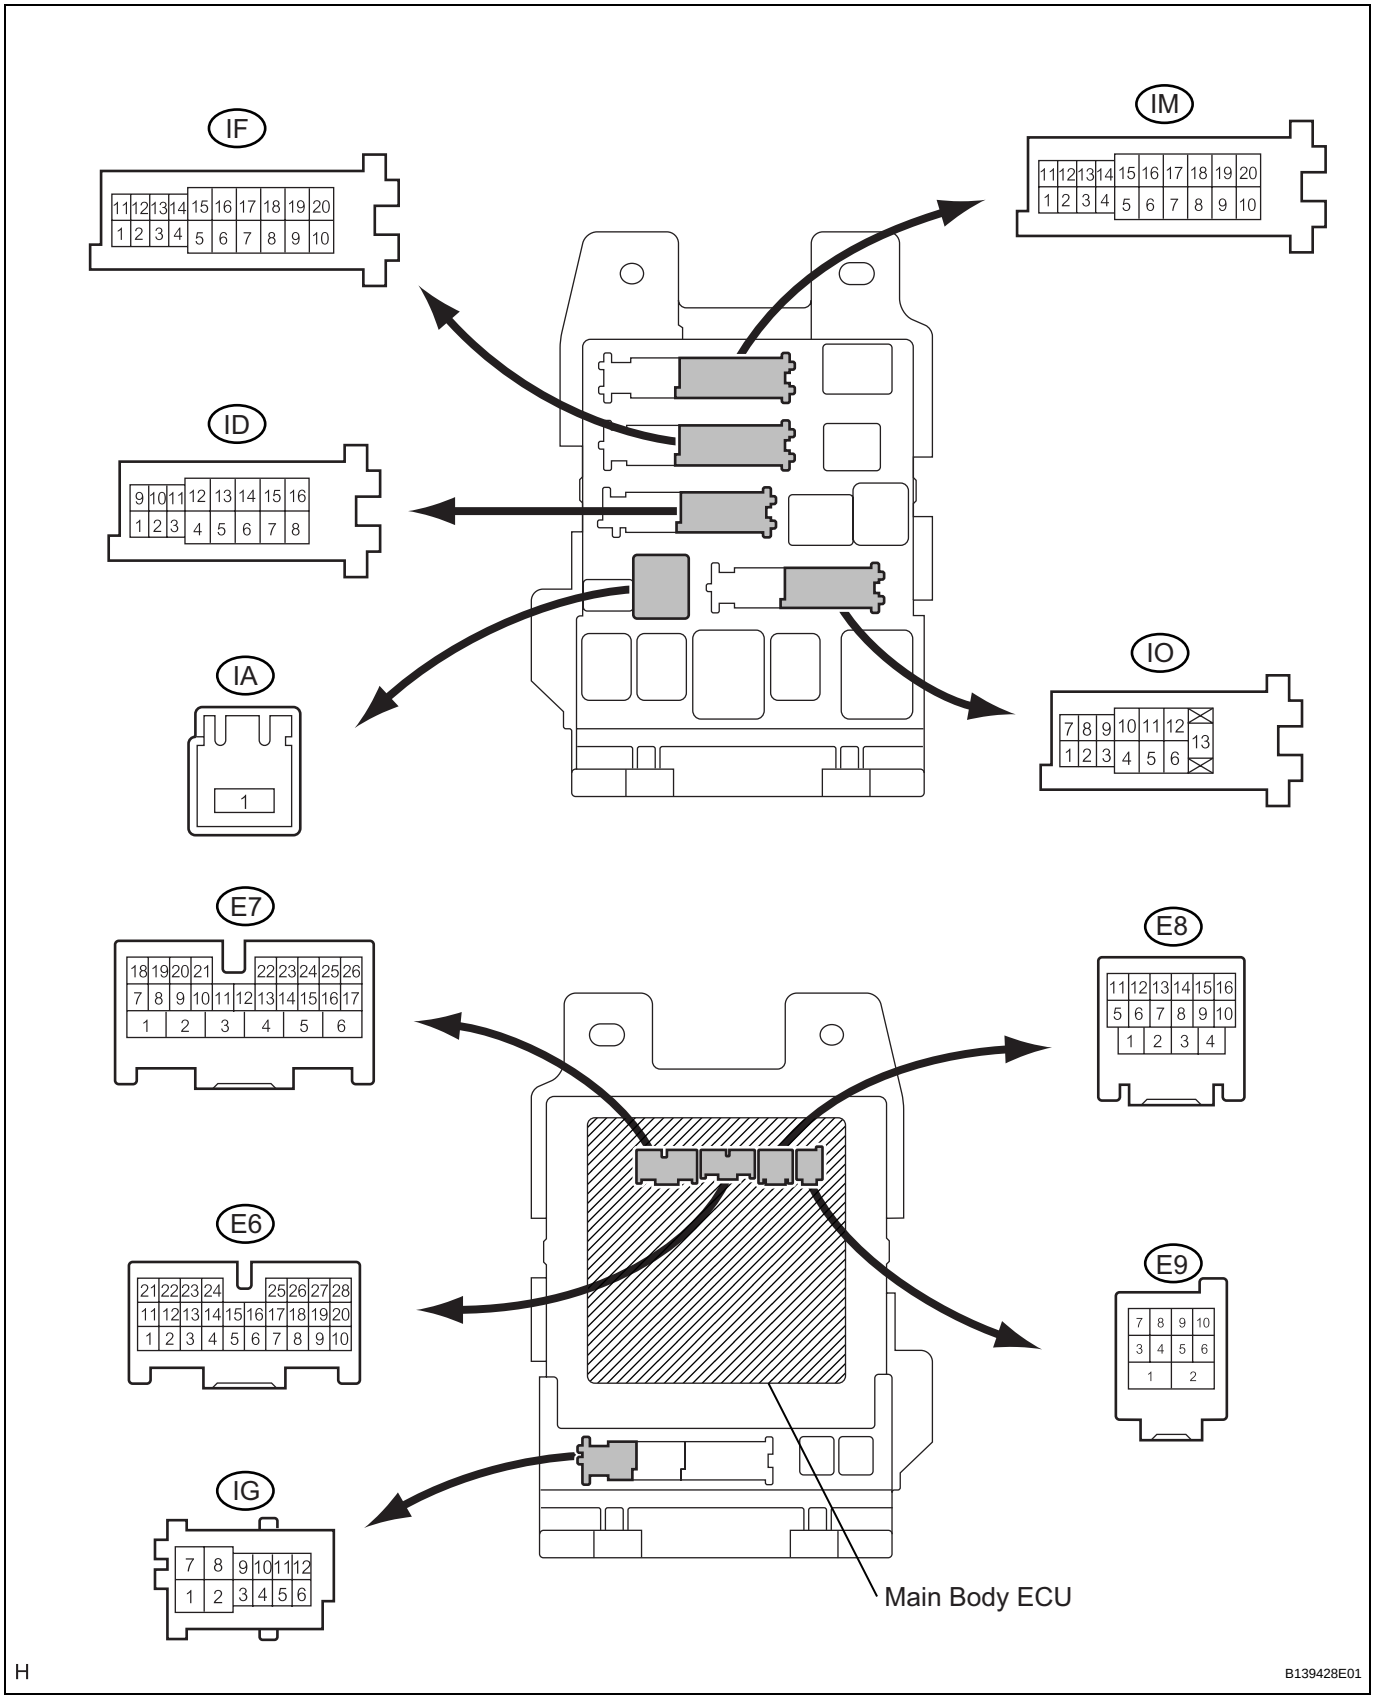
Symptom	Suspected area	See page
The wireless door lock control system does not operate.	1. Perform the operation check	DL-99
	2. Door control transmitter	DL-216
	3. Enter the self-diagnostic mode	DL-109
	4. If the recognition code does not match the key code, check that the key code can be registered in the rewrite or add mode of the recognition code registration	-
	5. Unlock warning switch circuit	DL-205
	6. Door courtesy switch circuit	LI-52
	7. Luggage compartment door courtesy switch circuit	DL-44
	8. If the symptoms still occur after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument Panel J/B)	-
The automatic lock function does not operate normally.	1. Perform the operation check	DL-99
	2. Unlock warning switch circuit	DL-205
	3. Door courtesy switch circuit	LI-52
	4. If the symptoms still occur after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument Panel J/B)	-
The illuminated entry function only does not operate.	1. Perform the operation check	DL-99
	2. Lighting system	LI-12
	3. If the symptoms still occur after the above area has been inspected and proved to be normal, replace the main body ECU (Instrument Panel J/B)	-
The answer back function does not operate (Wireless door lock buzzer).	1. Perform the operation check	DL-99
	2. Wireless door lock buzzer circuit	DL-116
	3. If the symptoms still occur after the above area has been inspected and proved to be normal, replace the main body ECU (Instrument Panel J/B)	-
The answer back function does not operate (Hazard warning light).	1. Perform the operation check	DL-99
	2. Wire harness	-
	3. Turn signal flasher	LI-138
	4. If the symptoms still occur after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument Panel J/B)	-

Symptom	Suspected area	See page
The wireless trunk opener function only does not operate.	1. Perform the operation check	DL-99
	2. Unlock warning switch circuit	DL-205
	3. Luggage compartment door courtesy switch circuit	DL-44
	4. If the symptoms still occur after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument Panel J/B)	-
The door ajar warning function only does not operate.	1. Perform the operation check	DL-99
	2. Door courtesy circuit	LI-52
	3. If the symptom still occurs after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument Panel J/B)	-
The panic alarm function only does not operate.	1. Perform the operation check	DL-99
	2. Door control transmitter	DL-216
	3. If the symptoms still occur after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument Panel J/B)	-
The panic alarm function does not operate (Vehicle horn).	1. Perform the operation check	DL-99
	2. Horn circuit	TD-62
	3. If the symptom still occurs after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument Panel J/B)	-
The panic alarm function does not operate (Security horn).	1. Perform the operation check	DL-99
	2. Security horn circuit	TD-64
	3. If the symptom still occurs after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument Panel J/B)	-
The panic alarm function does not operate (Hazard warning light).	1. Perform the operation check	DL-99
	2. Wire harness	-
	3. Turn signal flasher	LI-138
	4. If the symptom still occurs after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument Panel J/B)	-
The panic alarm function does not operate (Headlight, taillight or interior light).	1. Perform the operation check	DL-99
	2. Lighting system	LI-12
	3. If the symptom still occurs after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument Panel J/B)	-

TERMINALS OF ECU

1. CHECK MAIN BODY ECU (INSTRUMENT PANEL J/B)

(a) Disconnect the main body ECU (instrument panel J/B) connectors.



DL

(b) Measure the resistance and voltage between each terminal of the wire harness side connectors and body ground.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
RCTY (E6-5) - Body ground	GR - Body ground	Rear courtesy light switch RH input	Rear door RH CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω
PCTY (E6-21) - Body ground	Y - Body ground	Passenger side courtesy light switch input	Passenger side door CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω
LGCY (E6-25) - Body ground	W - Body ground	Luggage compartment door courtesy light switch input	Luggage compartment door CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω
DCTY (E7-24) - Body ground	L - Body ground	Driver side door courtesy light switch input	Driver side door CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω
KSW (E9-5) - Body ground	L - Body ground	Unlock warning switch input	No key in ignition key cylinder (OFF) → Key inserted (ON)	10 kΩ or higher → Below 1 Ω
ACC (IA-1) - Body ground	B - Body ground	Ignition power supply (ACC signal)	Ignition switch ACC → OFF	10 to 14 V → Below 1 V
IG (IA-1) - Body ground	B - Body ground	Ignition power supply (IG signal)	Ignition switch ON → OFF	10 to 14 V → Below 1 V
ALTB (ID-16) - Body ground	W - Body ground	+B (power system alternator system) power supply	Always	10 to 14 V
GND1 (IF-10) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
BECU (ID-10) - Body ground	O - Body ground	+B power supply	Always	10 to 14 V
GND2 (IM-9) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
LCTY (IO-7) - Body ground	LG - Body ground	Rear courtesy light switch LH input	Rear door LH CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the main body ECU (instrument panel J/B) connectors.

(d) Measure the voltage between each terminal of the wire harness side connectors and body ground.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
TR+ (E7-1) - Body ground	B - Body ground	Luggage compartment door opener motor input	Luggage compartment door CLOSED (LOCKED) → OPEN (UNLOCKED)	Below 1 V → 10 to 14 V*1
HAZ (E8-4) - Body ground	W - Body ground	Turn signal flasher relay signal	Any transmitter switch is pressed → not pressed	Below 1 V → 10 to 14 V*2
BZR (E9-7) - Body ground	O - Body ground	Wireless door lock buzzer	Wireless door lock buzzer OFF → ON	0 V → Pulse generation

HINT:

- *1: When operating the motor.
- *2: When operating the answer back function.

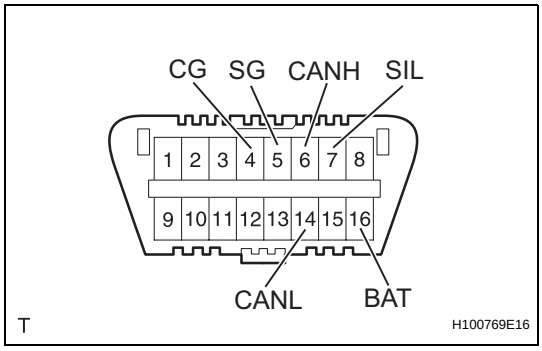
DIAGNOSIS SYSTEM

1. DESCRIPTION

The main body ECU stores trouble codes when trouble occurs on the vehicle.
The diagnostic system allows for reading of the trouble codes from the DLC3.
Use the intelligent tester to check and solve the problem.

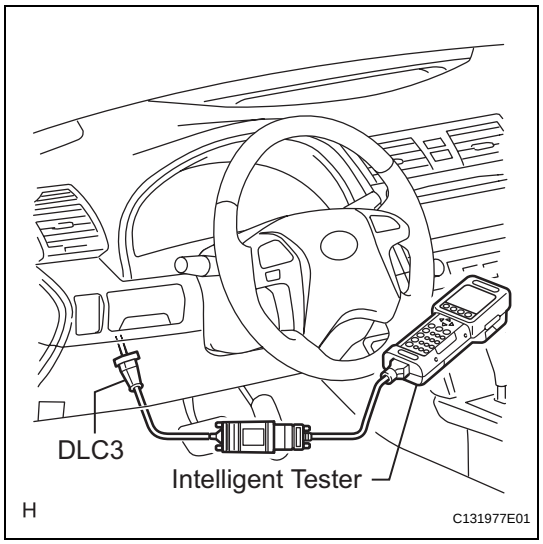
2. CHECK DLC3

(a) The main body ECU uses ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

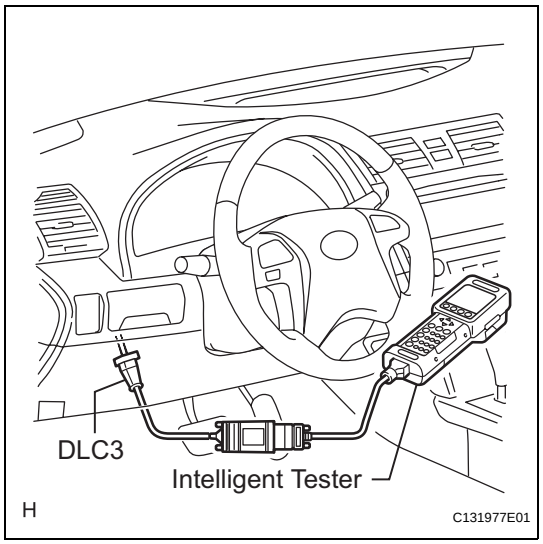


Symbols (Terminal No.)	Terminal Description	Condition	Specified condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch OFF*	54 to 67 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch OFF*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition switch OFF*	6 kΩ or higher

NOTICE:
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**
If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.



(b) Connect the cable of the intelligent tester (with CAN VIM) to the DLC3, turn the ignition switch ON and attempt to use the intelligent tester. If the screen displays a communication error message, a problem exists in the vehicle or in the tester.
- If communication is normal when the tool is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still impossible when the tool is connected to another vehicle, the problem is probably in the tool itself. Consult the Service Department listed in the tool's instruction manual.



DTC CHECK / CLEAR

1. DTC CHECK/CLEAR (USING INTELLIGENT TESTER)

(a) DTC check
- (1) Connect the intelligent tester to the DLC3.
- (2) Turn the ignition switch ON.
- (3) Read DTCs on the tester screen.

(b) DTC clear
- (1) Connect the intelligent tester to the DLC3.
- (2) Turn the ignition switch ON.
- (3) Clear the DTCs following the prompts on the tester screen.
  HINT:
  The intelligent tester has a SNAPSHOT function which records the monitored data.
  Refer to the intelligent tester operator's manual for further details.

2. SELF-DIAGNOSTIC MODE (OPERATING IGNITION KEY CYLINDER)

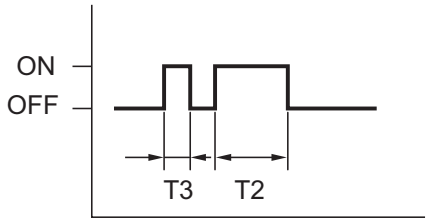
(a) Switch to self-diagnostic mode.
- (1) Establish the vehicle's initial conditions (See page DL-99).
- (2) Insert the key into the ignition key cylinder and remove it.
- (3) Within 5 seconds after the key is removed, insert it into the ignition key cylinder and then turn the ignition switch ON then OFF 1 time (End in OFF).
- (4) Within 30 seconds of turning the ignition switch OFF, perform the following 9 times: Turn the ignition switch ON then OFF (End in OFF).
  HINT:
  - Turning the ignition switch ON after the procedure above has been completed will end the self-diagnostic mode.
  - Do not lock or unlock doors while performing the self-diagnostic mode.

NOTICE:
If the system fails to enter the self-diagnostic mode, the system will return to normal mode.

(b) Check that the system has switched to self-diagnostic mode by checking the sound of the wireless door lock buzzer.
(c) Check the diagnostic outputs when the door control transmitter switch is held down. The diagnostic outputs can be checked by the sound of the wireless door lock buzzer.

Timing Chart

Buzzer Output:



T1: 0.25 seconds

T2: 0.5 seconds

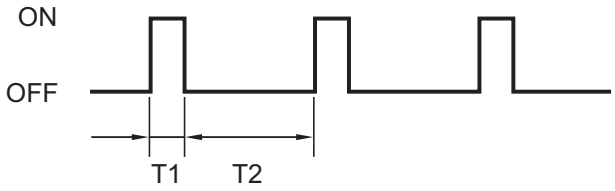
T3: 0.13 seconds

B144376E01

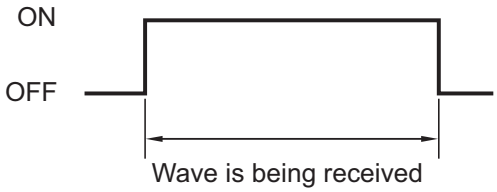
Buzzer Output:

Normal Wave

(LOCK/UNLOCK or LUGGAGE OPEN Switch):



Unmatching Recognition Code:



No Diagnosis Output:

T1: 0.13 seconds

T2: 0.5 seconds

N

B113635E02

3. SELF-DIAGNOSTIC MODE (USING INTELLIGENT TESTER)

(a) Switch to self-diagnostic mode.
(1) Connect the intelligent tester to the DLC3.

DL

(2) Turn the ignition switch ON and turn the intelligent tester main switch on.
HINT:
Refer to the intelligent tester operator's manual for further details.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the intelligent tester DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to shorten labor time.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON.
(c) Enter the following menus: DIAGNOSIS / OBD/ MOBD / BODY / DATA LIST.
(d) Read the DATA LIST according to the display on the tester.

BODY (Main body ECU RH):

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
WIRELESS OPER	Wireless door lock control function / ON or OFF	ON: Operating OFF: Not operating	-
HAZARD ANS BACK	Hazard answer-back of wireless / ON or OFF	ON: Operating OFF: Not operating	-
OPEN DOOR WARN	Open door warning / ON or OFF	ON: Operating OFF: Not operating	-
AUTO LOCK DELAY	Automatic lock time / 60 s or 30 s	60 s: 60 seconds 30 s: 30 seconds	-
UNLOCK /2OPER	2 times operation of wireless unlock / ON or OFF	ON: All doors unlock when UNLOCK is pressed twice OFF: All doors unlock when UNLOCK is pressed once	-
ALARM FUNCTION	Panic function / ON or OFF	ON: Operating OFF: Not operating	-
WIRLS BUZZ RESP	Wireless door lock buzzer response / ON or OFF	ON: Operating OFF: Not operating	-
TRUNK LID OPER	Luggage compartment door open function type / 1 TIME/2 TIME/ 0.6 s PR/ OFF	1 TIME: Luggage compartment door opens when LUGGAGE OPEN switch is pressed once 2 TIME: Luggage compartment door opens when LUGGAGE OPEN switch is pressed twice 0.6 s PR: Luggage compartment door opens when LUGGAGE OPEN switch is pressed and held down for 0.6 seconds. OFF: Not operating	-

2. ACTIVE TEST

HINT:

Performing the intelligent tester ACTIVE TEST allows relay, VSV, actuator and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to shorten the labor time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON.
(c) Enter the following menus: DIAGNOSIS / OBD/ MOBD / BODY / ACTIVE TEST.
(d) Perform the ACTIVE TEST according to the display on the tester.

BODY (Main body ECU RH):

Item	Tester Detail	Diagnostic Note
BUZZ RESP SOUND	Wireless door lock buzzer ON / OFF	-

Item	Tester Detail	Diagnostic Note
HAZARD	Turns the turn signal flasher relay ON / OFF	Observe headlight and rear combination light for correct operation
VEHICLE HORN	Vehicle horn ON / OFF	-
TRUNK/BDOR OPEN	Turns luggage compartment door opener motor ON / OFF	Observe luggage compartment door

DIAGNOSTIC TROUBLE CODE CHART

HINT:
If a trouble code is displayed during the DTC check, inspect the trouble areas listed for that code. For details of the code, refer to "See Page" in the DTC chart.

- The following is the troubleshooting procedure for the wireless door lock control of a vehicle without the smart key system.
  For the troubleshooting procedure for the wireless door lock control of a vehicle with the entry and start system, refer to the wireless door lock control system (with Smart Key System).
- Inspect the fuse and relay before investigating the trouble areas shown in the table below.

WIRELESS DOOR LOCK CONTROL SYSTEM:

DTC No.	Detection Item	Trouble Area	See page
B1242	Wireless Door Lock Tuner Circuit Malfunction	1. Wire harness 2. Door control receiver 3. Main body ECU	DL-113

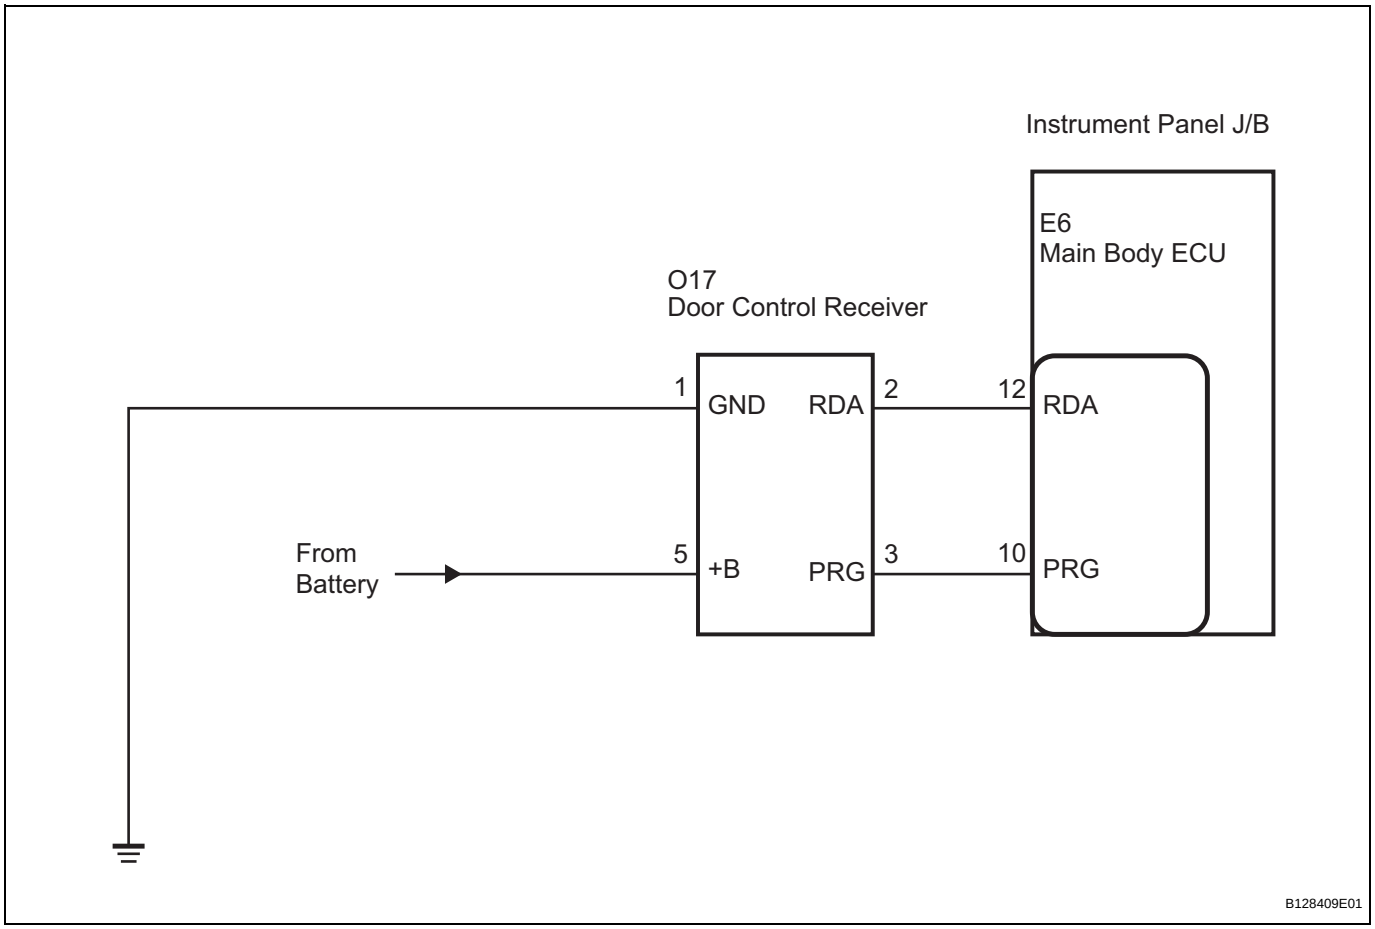
DTC	B1242	Wireless Door Lock Tuner Circuit Malfunction

DESCRIPTION

The door control receiver receives signals from the transmitter and sends these signals to the main body ECU.

DTC No.	DTC Detection Condition	Trouble Area
B1242	In diagnostic mode, an applicable RDA signal cannot be received within 1 second after an PRG signal has been output from the main body ECU.	• Wire harness • Door control receiver • Main body ECU (Instrument panel J/B)

WIRING DIAGRAM



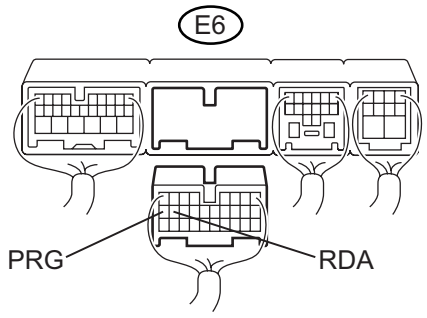
DL

INSPECTION PROCEDURE

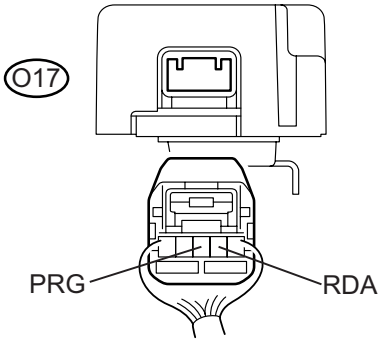
1 CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - DOOR CONTROL RECEIVER)

Connector Wire Harness Side:

Main Body ECU



Door Control Receiver



B139427E01

(a) Disconnect the E6 main body ECU connector and the O17 door control receiver connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Symbol (Tester Connection)	Condition	Specified Condition
RDA (E6-12) - RDA (O17-2)	Always	Below 1 Ω
RDA (E6-12) - Body ground	Always	10 kΩ or higher
PRG (E6-10) - PRG (O17-3)	Always	Below 1 Ω
PRG (E6-10) - Body ground	Always	10 kΩ or higher

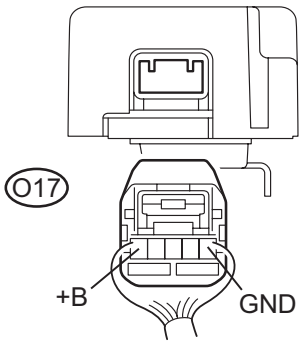
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2 CHECK HARNESS AND CONNECTOR (BATTERY, BODY GROUND)

Connector Wire Harness View:

Door Control Receiver



N

B113637E02

(a) Measure the voltage and resistance according to the value(s) in the table below.

Standard

Symbol (Tester Connection)	Condition	Specified Condition
GND (O17-1) - Body ground	Always	Below 1 Ω
+B (O17-5) - Body ground	Always	10 - 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

DL

OK

3	REPLACE DOOR CONTROL RECEIVER

(a) Reconnect the E6 main body ECU connector.
(b) Replace the door control receiver with a normal one.
(c) Perform the registration procedures (See page DL-101).
HINT:
If a normally functioning door control receiver is available, connect it and check if the wireless door lock function is normal or DTCs are output. If the alternative receiver functions normally, replace the original door control receiver.

NEXT

4	CONFIRM DTC

(a) Clear the DTCs (See page DL-109).
(b) Check if the same DTC is detected.
HINT:
Reinstall the sensors, connectors, etc. and restore the previous vehicle conditions before rechecking for DTCs.

Result

Result	Proceed To
DTC is output	A
DTC is not output (When troubleshooting in accordance with the DTC CHART)	B
DTC is not output (When troubleshooting in accordance with the PROBLEM SYMPTOMS TABLE)	C

B → END

C → PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

A

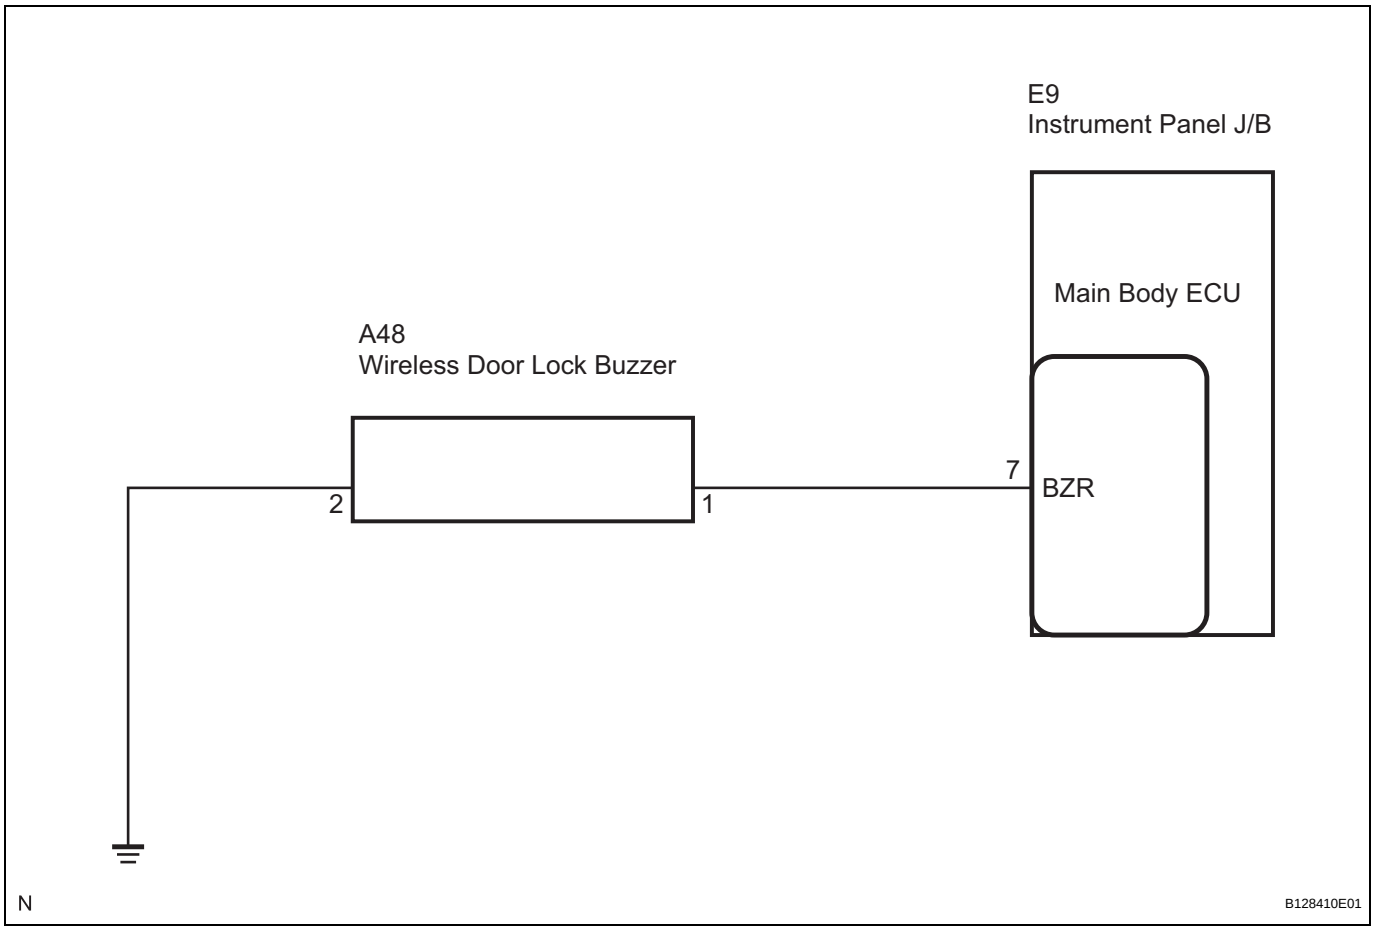
REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)

Wireless Door Lock Buzzer Circuit

DESCRIPTION

The main body ECU RH activates the wireless door lock buzzer when detecting a lock/unlock signal from the door control transmitter.

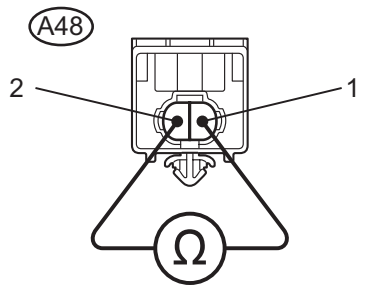
WIRING DIAGRAM



INSPECTION PROCEDURE

1 INSPECT WIRELESS DOOR LOCK BUZZER

Wireless Door Lock Buzzer:



N B144393E01

(a) Disconnect the A48 wireless door lock buzzer connector.
(b) Measure the resistance according to the value(s) in the table below.
HINT:
The buzzer activation circuit is built into the ECU, not into the buzzer itself. When battery voltage is applied directly to the buzzer, the buzzer will not sound.
Standard resistance

Tester Connection	Condition	Specified Condition
A48-1 - A48-2	Always	Approx. 1 kΩ

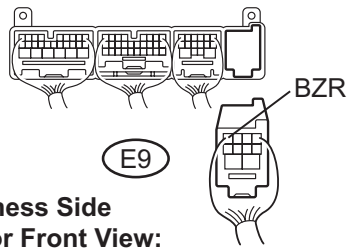
NG → **REPLACE WIRELESS DOOR LOCK BUZZER**

OK

2 CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - WIRELESS DOOR LOCK BUZZER - BODY GROUND)

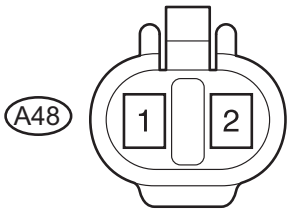
Connector Wire Harness View:

Main Body ECU



Wire Harness Side Connector Front View:

Wireless Door Lock Buzzer



N B113633E03

(a) Disconnect the E9 main body ECU connector.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Symbol (Tester Connection)	Condition	Specified Condition
BZR (E9-7) - A48-1	Always	Below 1 Ω
BZR (E9-7) - Body ground	Always	10 kΩ or higher
A48-1 - Body ground	Always	10 kΩ or higher
A48-2 - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

DL

SMART KEY SYSTEM

PRECAUTION

1. PRECAUTIONS WHEN USING INTELLIGENT TESTER

(a) When troubleshooting the smart key system using the intelligent tester with the engine switch off, connect the intelligent tester to the vehicle and repeat turning any of the courtesy light switches on and off until communication between the tester and the vehicle begins (the interval between ON and OFF should be less than 1.5 seconds).

(b) After DTCs are all cleared, check if the trouble occurs again 6 seconds after the engine switch is turned on (IG).

2. PRECAUTIONS FOR EACH FUNCTION

(a) Precautions for the electrical key:
The electrical key is a precision instrument. Be sure to observe the following:
(1) Do not drop or strike the electrical key.
(2) Do not keep the electrical key in a high temperature area for a long time.
(3) Do not use an ultrasonic washing machine to clean the electrical key.
(4) Keep the electrical key away from magnets or magnetized items during use.
(5) Do not attach any stickers to the electrical key.
(6) If an electrical key is lost, delete all registered electrical key ID codes and then reregister the remaining electrical keys.

(b) Precautions for the entry unlock function:
(1) As the sensor is built into the backside of the outside door handle, the user must touch the backside of the handle when performing the unlock function.
(2) If touched with gloved hands, the response of the door may be delayed.
(3) During the entry unlock operation, if the door handle is pulled before the door unlocks, the unlock function cannot be completed. Confirm that the door has been unlocked before pulling the door handle to open the door.

(4) Make sure that the doors are unlocked when touching the touch sensor on the outside door handle while the electrical key is being carried.
If the doors cannot be unlocked, the certification ECU orders the main body ECU to perform the door unlock operation 4 times at intervals of 0.75 seconds.
At this time, the door may not be unlocked because the handle is being pulled due to some mechanical reasons.
Be sure to return the door handle to its original position.
If the door cannot be opened by pulling the handle, perform the entry unlock operation again.

(5) If the electrical key is too close to the oscillator on the outside of the vehicle, the door may not be unlocked because the electrical key cannot react to the strong wave output from the transmitter.

(6) If the electrical key is within the vehicle exterior detection area, the door can be unlocked even when a person other than the person carrying the electrical key holds the door handle.
However, the doors other than the door that the codes match will not be unlocked.
(If the electrical key is within the driver side door's detection area outside the vehicle, the doors will be unlocked when the person carrying the electrical key holds the driver side door handle. However, if any door handle other than that of the driver side door is held, the doors will not be unlocked).

(7) If a door is not opened after the door unlock operation, the doors automatically lock after approximately 30 seconds.

(8) If a large amount of water is applied to the door handle due to a car wash or heavy rain, the electrical key being within the vehicle exterior detection area may cause the doors to be unlocked.
However, the doors will be locked again after approximately 30 seconds if a door is not opened.

(9) If the electrical key of the smart key system is used while it is being carried with the electrical key of another smart key system, the time before the entry unlock operation will become longer than usual. This is not a malfunction.

(c) Precautions for the entry lock function:

(1) When performing the entry lock operation, firmly press the lock switch on the outside door handle. If pressed too quickly or lightly, the entry lock may not operate.

(2) It is possible that signals output from the indoor electrical key antenna may leak through the window. Also, if the electrical key is too close to a door oscillator, the oscillator output signals are too strong and the electrical key cannot respond. As a result, when the electrical key is near the vehicle interior (window, door handle), the entry lock function may not operate. Also, the electrical key reminder warning buzzer may sound and the entry unlock operation may stop functioning. In this situation, move the electrical key away from the vehicle interior (window, door handle), perform the entry lock operation and perform the entry unlock operation.

(3) Do not touch the lock switch while opening or closing the door.
If the lock switch is pressed when opening or closing the door while the electrical key is being carried, the door ajar warning buzzer sounds (beeps outside the vehicle for 10 seconds).

(4) If the electrical key is on the instrument panel, rear package tray, floor, or in the glove box, the electrical key reminder function may not operate and the electrical key may be locked in the vehicle. Always carry the electrical key.

(5) If the electrical key is outside the vehicle but is very close to a window or door handle (the ECU determines that the electrical key is inside the vehicle) and the transmitter or mechanical key is used to lock the doors (entry lock is not used), entry unlock will not operate. To unlock the doors, perform a wireless door unlock operation. The entry lock function operates in this way to prevent the user from unintentionally unlocking the doors from outside the vehicle. For example, when a user operates the wireless door lock operation from inside the vehicle, radio waves from a door oscillator may leak into the vehicle interior and the doors may unlock.

(6) To allow the user enough time to check if the doors are locked after performing a door lock operation (entry lock function or wireless door lock operation), the entry unlock function will not be permitted for 3 seconds after the door lock operation.

(d) Precautions for the entry ignition function:

(1) To start the engine, first depress the brake pedal firmly until the engine switch indicator illuminates green.

(2) When operating the engine switch, firmly press the switch. If the switch is pressed too quickly, power source control and engine starting may not operate.

(3) While driving the vehicle, continuously pressing the engine switch for 3 seconds or more will turn off the engine. Do not touch the engine switch while driving, except in an emergency.
(4) Do not touch the engine switch with oily hands.
(5) If the vehicle has been in a high temperature location for an extended period of time, be careful when touching the engine switch. It may be very hot and lead to burns.
(6) Take care to avoid spilling beverages on the engine switch. Keep all liquids away from the engine switch.
(7) Do not use the engine switch if it seems to be sticking or feels abnormal.
(8) The vehicle continually records the power source mode (off, on (ACC), on (IG), start). When the battery cable is disconnected and reconnected, the power source mode will return to the mode that was selected before disconnecting the battery cable. Always turn the power off before disconnecting the battery cable. When the vehicle battery is fully depleted, power will be cut. As a result, the power source mode before the power was cut cannot be recognized, so be extremely careful.
(9) Do not connect any electronic products to the ACC, IG1 or IG2 coil side wiring, as the vehicle power supply may be unable to be turned on, or other problems may occur.
(10) After the battery cable has been disconnected and reconnected, the engine will not start on the first attempt. The engine will start normally on the second attempt.
(11) When starting the engine immediately after reconnecting the battery cable, connect the cable and wait at least 10 seconds before attempting to start the engine. The engine may not start when attempting an engine start immediately after disconnecting and reconnecting the battery cable.
(12) If the electrical key is held over the engine switch to start the engine because the electrical key battery is depleted, the following warnings will sound:
- Driver's door open → closed:
  – An exit warning if the shift lever is in a position other than P and the power source is in a mode other than off.
  – An exit warning if the shift lever is in the P position and the power source is in a mode other than off.
- Doors other than the driver door open → closed:

DL

Warning to inform that the electrical key has been taken out of the vehicle.

These warnings will sound because whether the electrical key is in the cabin or not cannot be determined. They do not indicate system malfunctions.

(e) Precautions for luggage compartment door entry function:

Even if the electrical key is within the electrical key oscillator (outside luggage compartment) detection area, the luggage compartment door cannot be opened if the electrical key is in the following areas:

- Near the center of the bumper
- Too close to the ground or in a high place

(f) Precautions for the function to prevent electrical key confinement in the luggage compartment:

(1) Do not place the electrical key in the luggage compartment.

If the luggage compartment is closed with the electrical key in it when all the doors are locked, the alarm to indicate electrical key confinement will operate (beeping sound for 2 seconds outside of the vehicle). However, the alarm may not operate for some reason relating to the electrical key location (near the spare tire or the side of the luggage compartment), the electrical key condition (covered with metal or near metal), or ambient radio waves.

(2) If the luggage compartment is closed with the electrical key in it when any of the doors is unlocked or open, the electrical key confinement prevention function will not operate. In this case, use the luggage compartment opener in the cabin to open the luggage compartment and take out the electrical key.

(3) The alarm may erroneously operate in the following conditions. If you can confirm that you are carrying the electrical key or that the electrical key is in the cabin, there is no problem. The entry luggage compartment open function may not operate if the alarm erroneously operates. In this case, use the luggage compartment opener in the cabin or perform a wireless operation to open the luggage compartment.

- The electrical key is brought into the cabin after the luggage compartment is opened, and then the luggage compartment is closed.
- The luggage compartment is closed by the person who is carrying the electrical key.

(4) If the alarm operates when the luggage compartment is closed with all the doors locked, the electrical key is in the cabin or luggage compartment. Check the cabin and luggage compartment to find the electrical key.
(5) If the luggage compartment is closed with the electrical key in it when all the doors are locked, the alarm will sound and the luggage compartment can be opened. This may increase the risk of the vehicle being stolen.
(6) Do not open or close the luggage compartment after all the doors are locked if you want to keep the spare electrical keys in the cabin. As a result, the alarm may sound and the luggage compartment can be opened. This may increase the risk of the vehicle being stolen.

(g) Precautions for the battery built into the electrical key and the vehicle battery:
(1) The electrical key is constantly checking for signals from the vehicle, which requires power from the electrical key's built-in battery. The life of the battery is approximately 1 to 2 years depending on the usage conditions. Be sure to replace the battery when its power is low. When replacing the battery, do not touch the inner circuit board or other inner parts.
(2) The electrical key is constantly checking for signals from the vehicle using battery power to determine whether the electrical key is being used or not. Even if the user is carrying 2 electrical keys and only 1 electrical key is used, both electrical keys will consume battery power.
(3) The electrical key receives radio waves at approximately 314 MHz. If the electrical key continuously receives strong, identical frequency waves, this may drain the electrical key's battery. Store the electrical key at least 1 m (3.3 ft) from TVs, personal computers, or other electrical products.
(4) When a door is being locked, the vehicle battery is used to transmit radio waves. The battery may be dead if the vehicle remains stopped for a long time. If the vehicle is not used for a long time, remove the battery from the vehicle or cancel the smart key system.
(5) When a door is being locked with the electrical key in the detection area of a door oscillator, the battery is used for regular communication between the electrical key and vehicle. If the vehicle is not used, keep the electrical key away from the vehicle (more than 2 m (6.6 ft)).

(6) After disconnecting and reconnecting the battery cable, the entry unlock function may not operate. If this occurs, perform a wireless door unlock and lock operation.

(h) Precautions for the entry unlock mode switching function:

(1) Perform the entry unlock mode switching function within a 1 m (3.3 ft) area around the vehicle.

(2) The entry unlock mode switching function cannot be performed within 5 seconds of the previous mode change. Wait 5 seconds or more before performing a mode change.

SYSTEM DESCRIPTION

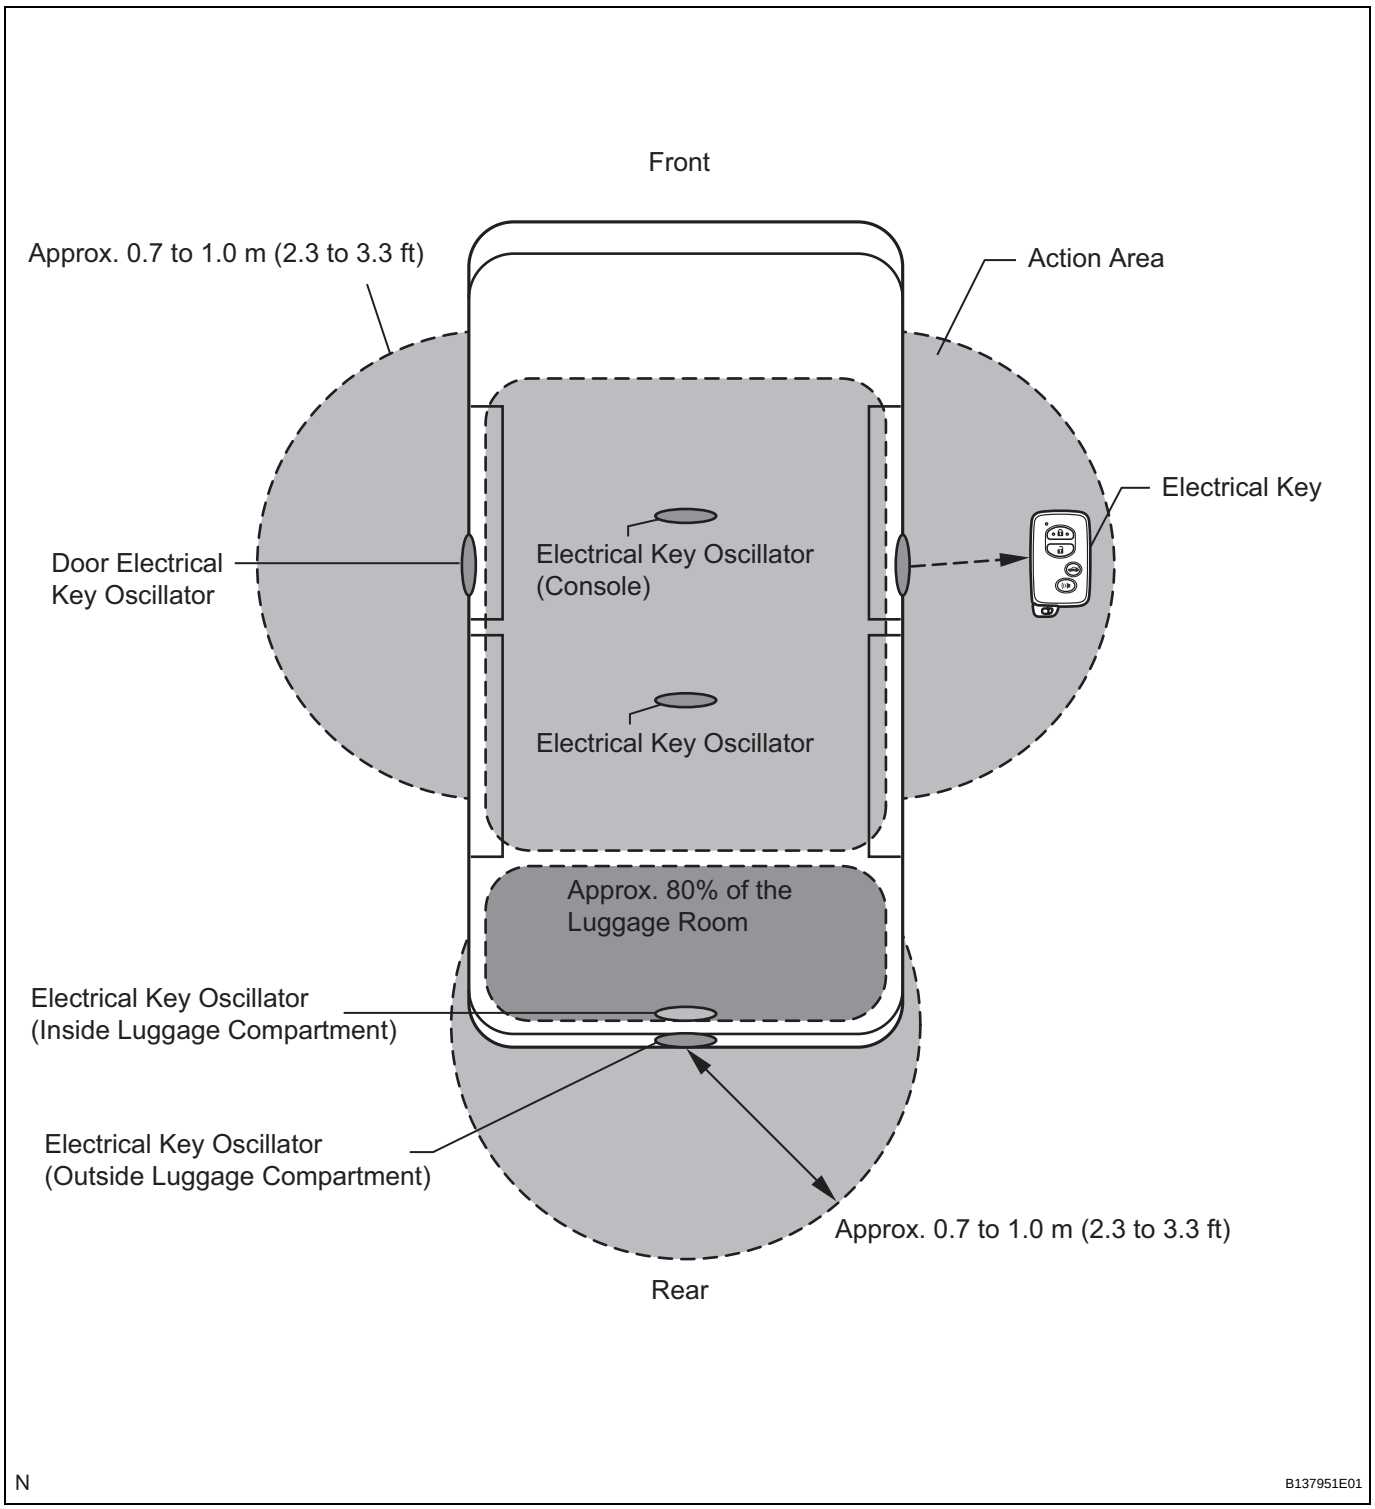
CAUTION:
If using a pacemaker, be sure to read the manual of the pacemaker before using the electrical key because the radio waves of the electrical key may affect the pacemaker.

1. SMART KEY SYSTEM DESCRIPTION

(a) In addition to conventional mechanical key and wireless door lock control functions, the smart key system enables door locking/unlocking, steering lock releasing, engine starting, and luggage compartment door opening without operating the electrical key. The only requirement is that the electrical key is in the user's possession.

- This system is controlled by the certification ECU. When the certification ECU detects the presence of an electrical key in one of the detection areas, it identifies and checks the ID code, and outputs operation signals to the related ECU in accordance with their functions.
- The detection areas are formed by 6 oscillators (2 door oscillators, 2 luggage compartment oscillators, and 2 cabin oscillators).

2. DETECTION AREA



(a) Precautions for the entire system:
- Be sure to carry the electrical key during inspection of the smart key system.
- As weak radio waves are used to detect the electrical key, the electrical key detection area may decrease, or the electrical key may not be detected correctly in the following situations:
  (a) The electrical key battery is depleted.

(b) Any facilities that generate strong radio waves, such as a TV tower, power plant, broadcast station, or gas station, are located near the inspection site.
(c) A wireless device, such as a cellular phone, is carried with the electrical key.
(d) The electrical key is in contact with or covered with metal.
(e) Another wireless door lock control function is operated near the vehicle.
(f) The electrical key is located near a device that generates high voltage or noise.

- The electrical key may be difficult to operate for a reason relating to the vehicle body shape.
- The electrical key may not be detected correctly if it is around the vehicle's windows, the door handle, or the center of the bumper even when it is in the detection area outside the vehicle.
- The electrical key may not be detected correctly if it is on the instrument panel, auxiliary box of the driver's side instrument panel, rear package tray, floor, or in the glove box even when it is in the detection area inside the vehicle.
- The engine cannot be started even when the electrical key is in the detection area inside the luggage compartment.
- The electrical key may not operate if the electrical key is not held properly.
- The smart key system does not operate in the following conditions:
  (a) The smart key system is canceled.
  (b) The electrical key battery is completely depleted (the indicator does not blink when pushing any of the buttons on the electrical key).

3. FUNCTION OF MAIN COMPONENTS

Component	Function
Electrical Key	Consists of mechanical key, transmitter for wireless door lock control, and transceiver for smart key system
Certification ECU	Controls smart key system in accordance with signals from each oscillator, various switches, ECUs, and electrical key • Judges and certifies ID code from entry door control receiver • Transmits engine immobiliser unset signal to ID code box • Transmits steering unlock signals to steering lock ECU
Main Body ECU (Instrument Panel J/B)	Controls push button start function in accordance with signals from various switches, ECUs, and combination meter • Transmits electrical key verification request signal to certification ECU in accordance with engine switch signal, and turns relays ON and OFF • Receives request signal from certification ECU and actuates door lock motor to unlock or lock door • Transmits each door condition signal to certification ECU
ID Code ECU	Receives steering unlock or engine immobiliser unset signals from certification ECU, certifies them, and transmits unset signals to steering lock ECU or ECM
Outside Door Handle (driver and passenger doors) (antenna)	Transmits request signals
Outside Door Handle (driver and passenger doors) (touch sensor)	Detects that person touches inside of outside handle

Component	Function
Outside Door Handle (driver and passenger doors) (lock switch)	Transmits door lock request signals to certification ECU
Door Electrical Key Oscillator (driver and passenger doors)	Receives request signal from certification ECU, and forms detection area around front door
Indoor Electrical Key Oscillator (console and rear seat)	Receives request signal from certification ECU, and forms detection area in vehicle interior
Luggage Compartment Electrical Key Oscillator (inner)	Receives request signal from certification ECU, and forms detection area in luggage compartment
Luggage Compartment Electrical Key Oscillator (outer)	Receives request signal from certification ECU, and forms detection area around luggage compartment door
Door Control Receiver	• Receives ID code from electrical key in detection area and transmits it to certification ECU • Receives ID code from electrical key in luggage compartment and transmits it to certification ECU
Electrical Key Antenna	Receives ID code from electrical key and transmits it to entry door control receiver
Luggage Compartment Opener Switch	Transmits luggage compartment door open request signal to certification ECU
Stop Light Switch	Outputs state of brake pedal to main body ECU
Wireless Door Lock Buzzer • Combination Meter – Multi-information Display – Buzzer	When certification ECU detects human errors such as those below, it warns driver by sounding wireless door lock buzzer, displaying information and sounding a buzzer in combination meter in accordance with request signal from ECU Example: • Electrical key is taken out of vehicle • Driver leaves vehicle while engine is still running • Driver leaves vehicle while shift lever is in any position other than P

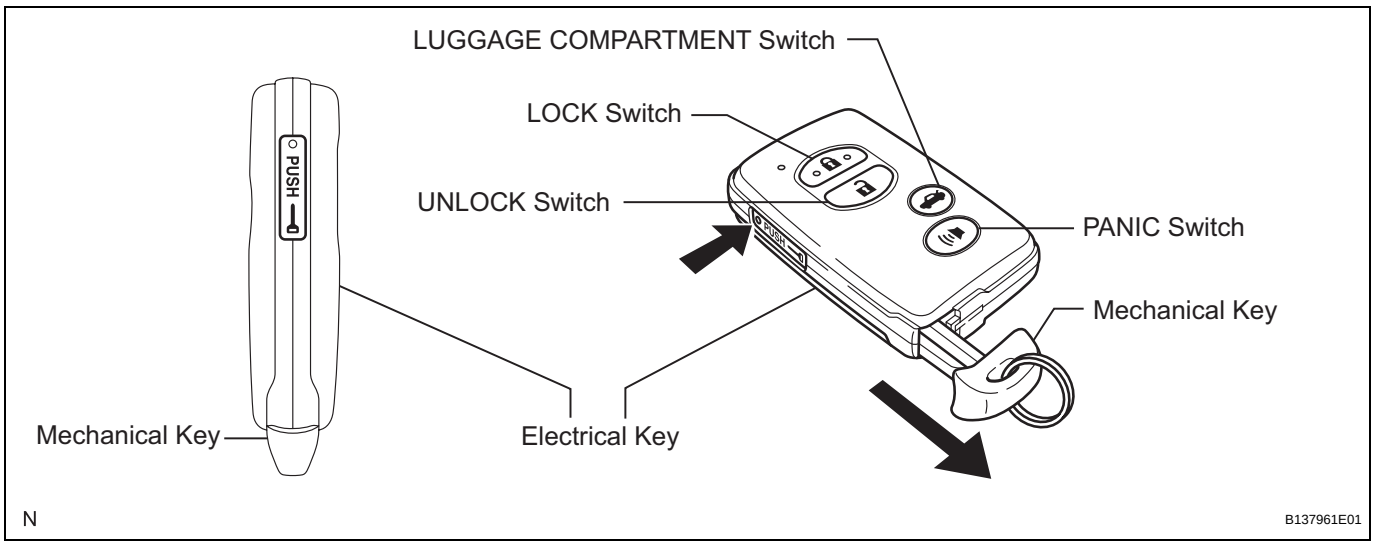
4. CONSTRUCTION AND OPERATION

(a) Electrical Key

The electrical key consists of a mechanical key, a transmitter for the wireless door lock control, and a transceiver for the smart key system.

- The transceiver for the smart key system receives signals from the oscillators and sends the ID code to the tuner.
- The transmitter for the wireless door lock control has a LOCK switch, UNLOCK switch, LUGGAGE COMPARTMENT switch, and PANIC switch.
- This mechanical key works for the driver door, luggage compartment door, and glove box, but cannot start the engine.

A total of 7 electrical keys can be registered.



(b) Oscillator (front door oscillator, front and rear indoor oscillator, luggage compartment inner oscillator, luggage compartment outer oscillator)
Each oscillator transmits the request signal received from the certification ECU, and forms an electrical key detection area to detect the presence of an electrical key. The detection area formed by front door oscillator and luggage compartment outer oscillator is approximately 0.7 to 1.0 m (2.3 to 3.3 ft) from the outside handle of front door or the center of the rear bumper.

- The detection area of front door oscillator is formed by transmitting a request signal every 0.25 seconds while the engine switch is off and each door is locked. In this way, it detects the proximity of an electrical key. During entry lock, the detection area is formed with the lock switch on.
- The detection area of the luggage compartment outer oscillator is formed when the power luggage door open switch is on.
- The detection area of the indoor oscillator (front and rear) is formed when the driver door is opened or closed, entry luggage compartment open, electrical key lock-in prevention during start ignition, when a warning is activated, or when the lock switch is on.
- The detection area of the luggage compartment inner oscillator is formed when the luggage compartment door is closed, entry luggage compartment open, electrical key lock-in prevention, the luggage compartment open switch or lock switch is pressed.

5. ENTRY FUNCTION OPERATION

(a) The smart key system has the following functions:

Function	Outline
Mechanical Key	Operation is same as conventional mechanical key.
Wireless Door Lock Control	This function remotely locks and unlocks all doors or luggage compartment. Operation is same as wireless door lock control system. However, receiver in certification ECU uses entry door control receiver to control locking and unlocking.
Entry Illumination	When person carrying electrical key enters detection area, door will enter unlock standby mode and front map light will illuminate.
Entry Unlock	When electrical key is located in detection area of door oscillator, door will unlock by touching inside of outside door handle.
Entry Unlock Mode Switching (See page DL-145)	Changes doors that can be unlocked with entry unlock function between 2 modes. • Driver door mode • All door mode
Entry Lock	When electrical key is located in detection area of door oscillator and engine switch is off, door can be locked by pressing lock switch on outside door handle.
Entry Luggage Compartment Open	When electrical key is in detection area of luggage compartment outer oscillator, luggage compartment opens by pressing luggage compartment open switch.
Memory Call	This function operates driving position memory system in accordance with electrical key ID code.
Electrical Key Lock-in Prevention	• Prevents confinement of electrical key if door is locked using outside door handle while electrical key is still inside vehicle. • If all doors are locked and luggage compartment door is closed while electrical key is still in luggage compartment, warning buzzer sounds. If luggage compartment open switch is operated, luggage compartment door can be opened.
Warning	When any of situations below occur, smart key system causes certification ECU to sound buzzer in combination meter and wireless door lock buzzer, and display information in order to alert driver. • Exit warning if shift lever position is not P and power source mode is not off. • Exit warning if shift lever position is P and power source mode is not off. • Warning if occupant leaves with electrical key. • Warning if engine switch is operated while electrical key is outside actuation area. • Warning if entry lock is operated while electrical key is inside vehicle. • Warning if electrical key battery is weak.
Battery Saving	If electrical key is constantly located within actuation area of door oscillator, system maintains periodic communication with electrical key. Therefore, if vehicle remains parked in that state for a long time, electrical key battery and vehicle battery could be drained.
Key Cancel (See page DL-145)	Following electrical key functions can be cancelled by performing certain operations: • Entry Unlock/Lock • Memory Call • Entry Luggage Compartment Open • Electrical key Lock-in Prevention • Warning
Electrical Key Code Registration	The total number of electrical keys that can be registered is seven. Enables the registration (writing and storing) of transmitter recognition codes in the EEPROM that is contained in the certification ECU.

6. WIRELESS DOOR LOCK AND UNLOCK AND LUGGAGE COMPARTMENT OPEN FUNCTION

Push the LOCK/UNLOCK/PANIC/LUGGAGE COMPARTMENT switch on the electrical key to operate each function. For details, (See page DL-69).

7. ENTRY UNLOCK FUNCTION

(a) The detection area is formed by communication between a door oscillator and door control receiver when the door is locked in order to detect access of the person carrying the electrical key.

(b) When the person carrying the electrical key enters the detection area around the vehicle, the matching of the ID codes for a door oscillator and electrical key will automatically be performed. After the matching is completed, the door will enter unlock standby mode.

(c) In unlock standby mode, the antenna built into the outside handle starts sensing. If the outside handle is held (the back side of the handle is touched), the door unlock operation will be performed. At this time, the hazard warning light blinks twice and the wireless door lock buzzer sounds twice.

(d) If any of the doors are not opened after a door unlock operation, all doors will automatically lock after 60 seconds.

8. ENTRY LOCK FUNCTION

(a) After leaving the vehicle carrying the electrical key, push the lock switch on the outside handle when all the doors are closed.

(b) The certification ECU determines whether the electrical key is located inside or outside of the cabin based on the information from a door oscillator and room oscillator. Then matching of the ID codes is performed.

(c) When the matching result shows that the ID codes of the electrical key and indoor antenna do not match and the ID codes of the electrical key and door oscillator match, the door lock function will operate. At this time, the hazard warning lights blink once and the wireless door lock buzzer sounds once.

(d) If the electrical key is located inside of the cabin, the door lock function will not operate and the alarm buzzer (beep sound) will sound for 2 seconds.

9. ENTRY LUGGAGE COMPARTMENT OPEN FUNCTION

Stand in front of the luggage compartment with the electrical key and push the power luggage compartment opener switch to start the matching of the ID codes for the electrical key oscillator (outside luggage compartment). If the ID codes match, luggage compartment door open operation will be performed.

10. PREVENTION OF ELECTRICAL KEY CONFINEMENT FUNCTION

(a) If you attempt to lock the door through keyless operation (move the lock knob to the lock position and then close the door) with the electrical key in the cabin, the system determines that the electrical key is located in the cabin and unlocks the door.

(b) If the luggage compartment is closed with the electrical key in it, the alarm will sound and the luggage compartment can be opened only when all the doors are locked in order to prevent electrical key confinement in the vehicle.

11. ENTRY ILLUMINATION FUNCTION

When a person carrying the electrical key enters the detection area, the door will enter unlock standby mode and the front map light will illuminate.

HINT:

The entry illumination function operates when the electrical key enters the vehicle exterior detection area from out of the detection area. If the electrical key remains in the detection area for 3 seconds or more, the illumination function does not operate.

12. MEMORY CALL FUNCTION

When the engine switch is off and the driver side door is closed, opening the door will operate the memory call function (the door will move to a previously recorded driving position). Using the electrical key, memory call, electrical key registration and electrical key cancellation can be performed.

13. WARNING FUNCTION

(a) General

When any of the situations below occur, the smart key system causes the certification ECU to sound the buzzer in the combination meter and the wireless door lock buzzer, and illuminate the combination meter's multi-information display in order to alert the driver.

Warning Function Operation Condition	Situation
Exit warning if shift lever position is not P and power source mode is not off.	A
Exit warning if shift lever position is P and power source mode is not off.	B
Warning if occupant leaves with electrical key.	C
Warning if engine switch is operated while electrical key is outside detection area.	D
Warning if entry lock is operated while electrical key is inside cabin.	E
Warning if electrical key battery is weak.	F

(b) Situation A

There are 2 patterns for situation A.

Pattern 1: In situation A, the door is opened and the user tries to leave the vehicle.

Pattern 2: Then the user holds the electrical key and tries to move away from the vehicle.

In these situations, the following control is performed:

- Pattern 1

Possible Effects without Warning	Sudden vehicle start, vehicle theft, vehicle roll-away
Warning Condition	Certification ECU gives warning when all following conditions are satisfied: • Shift lever position is not P • Engine switch is not off • Driver side door is opened • Vehicle speed is 5 km/h (3.1 mph)

DL

Possible Effects without Warning	Sudden vehicle start, vehicle theft, vehicle roll-away
Combination Meter • Buzzer	Warning: Continuous sound Warning is stopped when one of following conditions is met: • Engine switch is off • Shift lever position is P • Driver side door is opened • Vehicle speed is above 5 km/h (3.1 mph)
Combination Meter • Multi-information Display	Warning: Continuous sound Warning is stopped when one of following conditions is met: • Engine switch is off • Shift lever position is P • Driver side door is opened • Vehicle speed is above 5 km/h (3.1 mph)
Wireless Door Lock Buzzer	-

• Pattern 2

Possible Effects without Warning	Sudden vehicle start, vehicle theft, vehicle roll-away
Warning Condition	Certification ECU gives warning when all following conditions are satisfied: • Shift lever position is not P • Engine switch is not off • Driver side door is opened and closed • Vehicle speed is 0 km/h (0 mph) • Electrical key is not in cabin or luggage compartment
Combination Meter • Buzzer	Warning: Continuous sound Warning is stopped when one of following conditions is met: • Engine switch is off • Shift lever position is P • Electrical key is in cabin or luggage compartment • Vehicle speed is above 0 km/h (0 mph)
Combination Meter • Multi-information Display	Warning: Information below is displayed alternately on combination meter: • "Shift to P Range" • "Key is not Detected" "Shift to P Range" warning is stopped when one of following conditions is met: • Engine switch is off • Vehicle speed is above 0 km/h (0 mph) • Shift lever position is P "Key is not Detected" warning is stopped when either of following conditions is met: • Engine switch is off • Electrical key is in cabin
Wireless Door Lock Buzzer	Warning: Continuous sound Warning is stopped when one of following conditions is met: • Engine switch is off • Shift lever position is P • Electrical key is in cabin or luggage compartment • Vehicle speed is above 0 km/h (0 mph)

(c) Situation B

There are 2 patterns for situation B.

Pattern 1: In situation B, the door is opened and the user tries to leave the vehicle.

Then the user holds the electrical key and tries to move away from the vehicle.

Pattern 2: Then the user tries to use the entry lock and presses the lock switch.

In these situations, the following control is performed:

- Pattern 1

Possible Effects without Warning	Vehicle theft, engine cannot be restarted
Warning Condition	Certification ECU gives warning when all following conditions are satisfied: • Shift lever position is P • Engine switch is not off • Driver side door is opened and closed • Electrical key is not in cabin or luggage compartment
Combination Meter • Buzzer	Warning: Sounds once
Combination Meter • Multi-information Display	Warning: Information below is displayed on combination meter: • "Key is not Detected" Warning is stopped when either of following conditions is met: • Engine switch is off • Electrical key is in cabin or luggage compartment
Wireless Door Lock Buzzer	Warning: Sounds 3 times Warning is stopped when either of following conditions is met: • Engine switch is off • Electrical key is in cabin or luggage compartment

- Pattern 2

Possible Effects without Warning	Vehicle theft
Warning Condition	Certification ECU gives warning when all following conditions are satisfied: • Shift lever position is P • Engine switch is not off • All doors are closed • Lock switch is "ON" • Electrical key is not in cabin or luggage compartment
Combination Meter • Buzzer	-
Combination Meter • Multi-information Display	-
Wireless Door Lock Buzzer	Warning: Sounds for 2 seconds

(d) Situation C

In this situation, the following control is performed:

Possible Effects without Warning	Engine cannot be restarted
Warning Condition	Certification ECU gives warning when all following conditions are satisfied: • Engine switch is not off • Door other than driver side door is opened and closed • Vehicle speed is 0 km/h (0 mph) • Electrical key is not in cabin or luggage compartment
Combination Meter • Buzzer	Warning: Sounds once

Possible Effects without Warning	Engine cannot be restarted
Combination Meter • Multi-information Display	Warning: Information below is displayed on combination meter: • "Key is not Detected" Warning is stopped when one of following conditions is met: • Engine switch is off • Vehicle speed is above 0 km/h (0 mph) • Electrical key is in cabin or luggage compartment
Wireless Door Lock Buzzer	Warning: Sounds 3 times Warning is stopped when one of following conditions is met: • Engine switch is off • Vehicle speed is above 0 km/h (0 mph) • Electrical key is in cabin or luggage compartment

(e) Situation D

In this situation, the following control is performed:

Possible Effects without Warning	Confuses the user
Warning Condition	Certification ECU gives warning when both following conditions are satisfied: • Engine switch is not off • Electrical key is not in cabin
Combination Meter • Buzzer	Warning: Sounds once
Combination Meter • Multi-information Display	Warning: Information below is displayed on combination meter for 8 seconds (disappears after 8 seconds): • "Key is not Detected"
Wireless Door Lock Buzzer	-

(f) Situation E

In this situation, the following control is performed:

Possible Effects without Warning	Vehicle theft
Warning Condition	Certification ECU gives warning when all following conditions are satisfied: • Engine switch is off • All doors are closed • Lock switch is "ON" • Electrical key is in cabin or luggage compartment
Combination Meter • Buzzer	-
Combination Meter • Multi-information Display	-
Wireless Door Lock Buzzer	Warning: Sounds for 2 seconds

(g) Situation F

In this situation, the following control is performed:

Possible Effects without Warning	Smart key system does not function
Warning Condition	Certification ECU gives warning when all following conditions are satisfied: • Engine switch is turned off after being left on (IG) for over 20 minutes • Electrical key battery voltage is low • Electrical key is in cabin
Combination Meter • Buzzer	Warning: Sounds once
Combination Meter • Multi-information Display	Information below is displayed on combination meter: • "Low Key Battery"
Wireless Door Lock Buzzer	-

14. BATTERY SAVING

(a) Vehicle Battery Saving Function

In the smart key system, signals are emitted outside of the vehicle at a prescribed interval (0.25 seconds) when the doors are locked. Therefore, the vehicle battery could be drained if the vehicle remains parked for a long time. For this reason, the controls listed below are carried out:

Condition	Control
Both conditions below are met for 5 days: • Electrical key is not in detection area • Touch sensor or lock switch operation is not performed	Signal transmission interval is extended from 0.25 to 0.75 seconds
Both conditions below are met for 14 days: • Electrical key is not in detection area • Touch sensor or lock switch operation is not performed	Automatically deactivates the smart key system

Reinstatement Conditions

- A wireless door lock control signal (lock, unlock) is input and the ID code matches.
- A user carries the electrical key and pushes a lock switch on an outside door handle.
- A door is locked or unlocked by the mechanical key.

(b) Electrical Key Battery and Vehicle Battery Saving Function

In the smart key system, if the electrical key is constantly located within the vehicle exterior detection area of the doors, the system maintains periodic communication with the electrical key. Therefore, if the vehicle remains parked in that state for a long time, the electrical key battery and the vehicle battery could be drained. For this reason, if this state continues longer than 10 minutes, the smart key system automatically becomes deactivated.

Reinstatement Conditions

- A wireless door lock control signal (lock, unlock) is input and the ID code matches.
- A user carries the electrical key and pushes a lock switch on an outside door handle.
- A door is locked or unlocked by the mechanical key.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedures to troubleshoot the smart key system.
- The intelligent tester can be used in steps 4, 5 and 7.
- When troubleshooting the smart key system using the intelligent tester with the engine switch off, connect the intelligent tester to the vehicle and repeat turning any of the courtesy light switches on and off until communication between the tester and the vehicle begins (the interval between ON and OFF should be less than 1.5 sec.).

1	**VEHICLE BROUGHT TO WORKSHOP**

NEXT

2	**CUSTOMER PROBLEM ANALYSIS CHECK**

HINT:

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points in the problem analysis

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Running conditions, driving conditions, weather conditions
How did it happen?	Problem symptoms

DL

NEXT

3	**INSPECT BATTERY VOLTAGE**

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

CUSTOMIZE PARAMETERS

1. CUSTOMIZING FUNCTION WITH INTELLIGENT TESTER

HINT:

The items in the table below can be customized.

NOTICE:

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Be sure to make a note of the current setting before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

HINT:

The following functions' default settings are ON. Part of these functions can be customized.

SMART:

Display (Item)	Default	Contents	Setting
PARK WAIT TIME (Wait time to permit opening door after locking)	2.5s	Function that sets waiting time to permit opening door after door is locked with entry lock function.	0.5s / 1.5s / 2.5s / 5.0s
SMART UNLOCK	D_DOOR	Function that switches the entry unlock detection area.	ALL / D_DOOR
SMART IGNITION (SMART ignition available area)	ALL	Function to choose the available area for electrical key to start E/G and cancel the steering lock.	FRONT / ALL
SMART TRUNK (Luggage compartment opening operation)	ON	Function to open a luggage compartment when the driver has the electrical key and presses the luggage open button.	ON / OFF

WIRELESS DOOR LOCK:

Display (Item)	Default	Contents	Setting
ALARM FUNCTION (Panic function)	ON	Function to operate the theft deterrent system by keeping pressing the lock button of the transmitter for 2.5 seconds. If there is a panic button, press the panic button instead of the lock button.	ON / OFF

WARNING:

Display (Item)	Default	Contents	Setting
KEY LOW-BATT WRN	ON	Function to set a warning function for the time when a key battery becomes weak.	ON / OFF

2. Entry Unlock Mode Switching Function

(a) To change the vehicle to entry unlock mode switching function, make sure the vehicle power is off and simultaneously press and hold the electrical key's LOCK switch and another electrical key switch for 4.5 seconds.

When the switches are pressed and held for 4.5seconds, the entry door unlock mode changes in the following order: driver door mode, all door mode.

NOTICE:

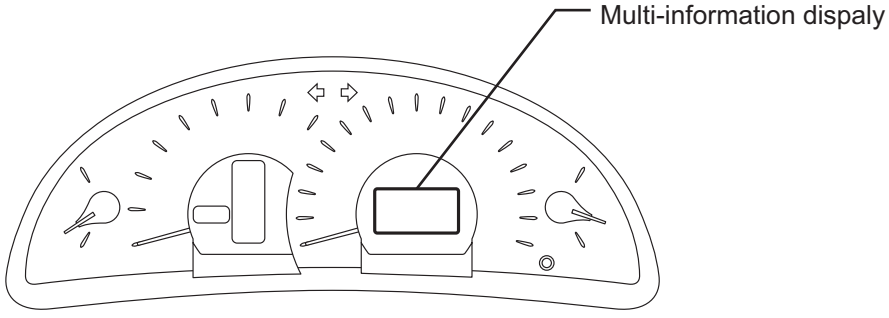
After pressing and holding the switches for 4.5 seconds, wait 5 seconds before performing the same procedure again.

- Driver door unlock mode:
  When the driver door's touch sensor is touched, only the driver door unlocks. When another touch sensor is touched, all doors unlock.
- All door unlock mode:
  When the touch sensor is touched, all doors unlock.

(b) The certification ECU receives this signal from the entry door control receiver and changes the smart key system to the entry unlock mode.

(c) The certification ECU sounds the buzzers of the wireless door lock buzzer and combination meter to inform the user that the mode has been switched.

Mode	Wireless Door Lock Buzzer	Combination Meter		
		Multi-information Display		Buzzer
Driver Door (Default)	ON OFF Sounds 3 times	Displayed for 5 sec.	Passenger, rear LH and RH door “open” indication	Sounds once
All Doors (Customized)	ON OFF Sounds 2 times	Displayed for 5 sec.	All door “open” indication	Sounds once



N

B137954E01

DL

HINT:
The function only changes the entry unlock mode of the smart key system. It does not switch the unlocking of the wireless door lock control.

3. Electrical Key Cancel

The electrical key cancel operation disables the following functions:

- Entry Ignition
- Entry Unlock/Lock
- Entry Luggage Compartment Open
- Electrical Key Lock-in Prevention
- Warning
- Memory Call

(a) The operation procedures are as follows:
Precondition:
Engine switch off, driver side door closed and unlocked.
(1) Unlock the driver side door once with the UNLOCK switch of the electrical key.
(2) Open the driver door within 5 seconds.
(3) Unlock the driver side door twice with the UNLOCK switch of the electrical key within 5 seconds.
(4) Repeat open → close twice for the driver door within 30 seconds, and open again.
(Driver door: Open → Close → Open → Close → Open)
(5) Unlock the driver side door twice with the UNLOCK switch of the electrical key within 5 seconds.
(6) Repeat open → close once for the driver door within 30 seconds, and open again.
(Driver door: Open → Close → Open)
(7) Close the driver door within 5 seconds.
When electrical key cancel is activated, the wireless door lock buzzer sounds twice.
To return to the original condition, perform the procedures again. When the original condition is returned, the wireless door lock buzzer sounds once.

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of the problem symptoms. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

SMART KEY SYSTEM:

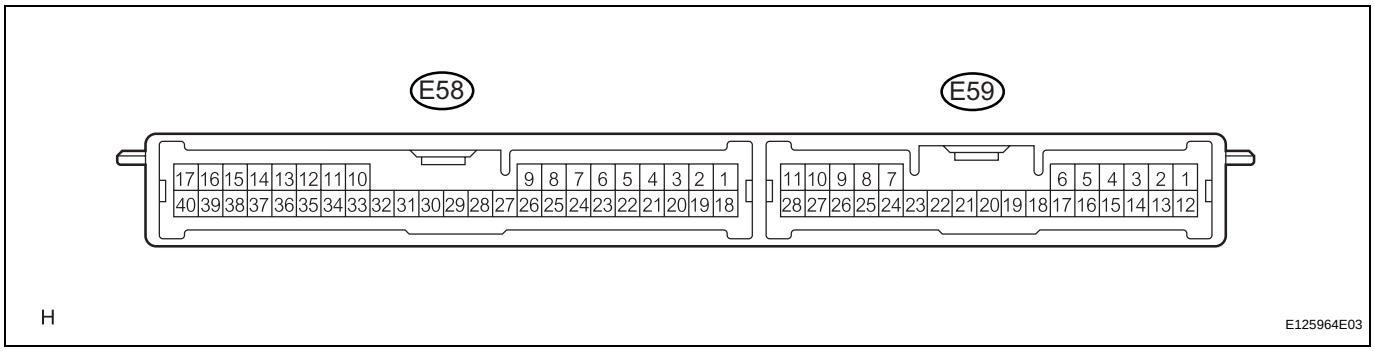
Symptom	Suspected area	See page
Entry lock/unlock does not operate.	1. Check for DTCs in the smart key system (Starting function).	ST-26
	2. Refer to PROBLEM SYMPTOMS TABLE of the power door lock control system ("All doors cannot be locked/unlocked simultaneously by neither door control switch nor door key cylinder").	DL-11
	3. Courtesy light switch circuit	LI-52
	4. Lock position switch circuit	-
	- Driver door	DL-19
	- Front passenger door	DL-22
	- Rear passenger door LH	DL-25
	- Rear passenger door RH	DL-28
	5. Entry lock switch cirucit	DL-173
	6. Touch sensor circuit	DL-177
	7. Antenna circuit	DL-180
	8. Refer to "ID code matching inside the cabin cannot be performed".	-
	9. Door oscillator circuit	DL-168
	10. Replace the main body ECU.	-
	11. Replace the certification ECU.	-
Luggage compartment does not open (when the electrical key is outside the vehicle).	1. Check for DTCs in the smart key system (Starting function).	ST-26
	2. Check if any function is cancelled due to customization.	DL-145
	3. Refer to PROBLEM SYMPTOM TABLE of the power door lock control system ("Luggage compartment door opener does not operate").	DL-11
	4. Operate the luggage compartment opener switch on the electrical key to check the wireless function.	DL-71
	5. Refer to PROBLEM SYMPTOMS TABLE of the wireless door lock control system of the wireless door lock control system ("The wireless door lock control system does not operate").	DL-74
	6. Check operation of the cabin oscillator in active test.	DL-156
	7. Luggage oscillator circuit	DL-182
	8. Luggage compartment opener switch circuit	DL-188
	9. Replace the main body ECU.	-
	10. Replace the certification ECU.	-
All entry function does not operate.	1. Registration of the key.	EI-8
	2. Certification ECU power source circuit	DL-190
	3. Replace certification ECU.	-

Symptom	Suspected area	See page
Function to prevent electrical key confinement in the luggage compartment does not operate. (The luggage compartment does not open.)	1. Check for DTCs in the smart key system (Starting function).	ST-26
	2. Power door lock control system	DL-11
	3. Courtesy light switch circuit	LI-52
	4. Lock position switch circuit	-
	- Driver door	DL-19
	- Front passenger door	DL-22
	- Rear passenger door LH	DL-38
	- Rear passenger door RH	DL-28
	5. Check if any function is not cancelled due to customization.	DL-145
	6. Operate the LOCK/UNLOCK SW on the key to check the wireless function.	DL-71
	7. Refer to PROBLEM SYMPTOMS TABLE of the wireless door lock control system ("The wireless door lock control system does not operate").	DL-74
	8. Check operation of the cabin oscillator in active test.	DL-156
	9. Luggage oscillator circuit	DL-182
	10. Replace the main body ECU.	-
	11. Replace the certification ECU.	-
Function to prevent electrical key confinement in the luggage compartment does not operate. (The alarm does not sound.)	1. Check if the function to prevent electrical key confinement in the luggage compartment operates.	DL-160
	2. Check if answer back is performed when the wireless door lock is operated.	DL-74
	3. Replace the certification ECU.	-
The outside alarm of the answer back and entry systems does not sound.	1. Check if the function to prevent electrical key confinement in the luggage compartment operates.	DL-160
	2. Check that "WIRLS BUZZ RESP" and "HAZARD ANS BACK" in the DATA LIST of the main body ECU are YES. (If it is NO, go to power door lock system.)	DL-81
	3. Wireless door lock tuner circuit (DTC B1242)	DL-164
	4. Replace the certification ECU.	-
The inside alarm of the entry system does not sound.	1. Operate the LOCK/UNLOCK SW on the electrical key to check the wireless function.	DL-71
	2. Refer to PROBLEM SYMPTOMS TABLE of the wireless door lock control system ("Wireless door lock function").	DL-74
	3. Check if the electrical key reminder buzzer sounds.	DL-160
	4. Replace the certification ECU.	-
ID code matching inside the cabin cannot be performed.	1. Check if any function is cancelled due to customization.	DL-145
	2. Operate the LOCK/UNLOCK SW on the key to check the wireless function.	DL-71
	3. Refer to PROBLEM SYMPTOMS TABLE of the wireless door lock control system ("The wireless door lock control system does not operate").	DL-74
	4. Check the cabin oscillator operation in the active test.	DL-156
	5. Room oscillator circuit	DL-185
	6. Luggage oscillator circuit	DL-182
	7. Replace the certification ECU.	-
ID code matching outside the cabin cannot be performed.	1. Check if any function is cancelled due to customization.	DL-145
	2. Operate the LOCK/UNLOCK SW on the electrical key to check the wireless function.	DL-71
	3. Refer to PROBLEM SYMPTOMS TABLE of the wireless door lock control system ("The wireless door lock control system does not operate").	DL-74
	4. Check operation of each door oscillator in active test.	DL-156
	5. Door oscillator circuit	DL-168

Symptom	Suspected area	See page
Key reminder buzzer does not sound.	1. Perform ACTIVE TEST for the combination meter.	ME-32
	2. Check "COURTESY SW" in the DATA LIST of the power door lock control system.	DL-17
	3. Check the key reminder buzzer when the engine switch is on (ACC) and the driver's door is opened.	-
	4. Check if the steering wheel is locked when all power supplies are OFF and the driver's door is opened.	-
	5. Refer to PROBLEM SYMPTOMS TABLE of the steering lock system ("Steering wheel cannot be locked").	SR-10
	6. Check that the "LCK BAR STUCK" item in the DATA LIST of the certification ECU displays OK.	SR-14
	7. Replace the steering lock ECU.	-
	8. Replace the certification ECU.	-

TERMINALS OF ECU

1. CHECK CERTIFICATION ECU



(a) Disconnect the E58 ECU connector.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
+B (E58-1) - Body ground	W - Body ground	+B power supply	Always	10 to 14 V
IG (E58-18) - Body ground	LG - Body ground	Ignition power supply	Engine switch off	Below 1 V
IG (E58-18) - Body ground	LG - Body ground	Ignition power supply	Engine switch on (IG)	10 to 14 V
E (E58-17) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
ACC (E58-19) - Body ground	L - Body ground	ACC power supply	Engine switch off	Below 1 V
ACC (E58-19) - Body ground	L - Body ground	ACC power supply	Engine switch on (ACC)	10 to 14 V
TSW1 (E58-3) - Body ground	GR - Body ground	Entry lock switch signal	Front lock switch LH not pushed	10 kΩ or higher
TSW1 (E58-3) - Body ground	GR - Body ground	Entry lock switch signal	Front lock switch LH pushed	Below 1 Ω
TSW2 (E58-4) - Body ground	L - Body ground	Entry lock switch signal	Front lock switch RH not pushed	10 kΩ or higher
TSW2 (E58-4) - Body ground	L - Body ground	Entry lock switch signal	Front lock switch RH pushed	Below 1 Ω
LIN (E58-10) - Body ground	O - Body ground	LIN line	Always	10 kΩ or higher
CANH (E58-27) - Body ground	L - Body ground	CAN line	Always	10 kΩ or higher
CANL (E58-28) - Body ground	W - Body ground	CAN line	Always	10 kΩ or higher
AGND (E58-40) - Body ground	G - Body ground	Ground	Always	Below 1 Ω
TSW5 (E58-7) - Body ground	G - Body ground	Luggage compartment opener switch signal	Opener switch OFF	10 kΩ or higher
TSW5 (E58-7) - Body ground	G - Body ground	Luggage compartment opener switch signal	Opener switch ON	Below 1 Ω

If the result is not as specified, the wire harness side may have a malfunction.

(c) Reconnect the E58 ECU connector.
(d) Measure the voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
CLG1 (E58-33) - CG1B (E58-34)	LG - L	Door electrical key oscillator (front LH) sensor signal	All doors closed, all doors locked and engine switch off	Alternating between 5 V and below 1 V
CLG1 (E58-33) - CG1B (E58-34)	LG - L	Door electrical key oscillator (front LH) sensor signal	Door unlocked or door open	Below 1 V
SEN1 (E58-22) - E (E58-17)	B - W-B	Touch sensor detection signal	Outside door handle touched	Below 1 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
SEN1 (E58-22) - E (E58-17)	B - W-B	Touch sensor detection signal	Outside door handle not touched (Have the electrical key outside the cabin)	10 to 14 V
SEL1 (E58-5) - E (E58-17)	V - W-B	Touch sensor activation control signal	Move the key more than 5 m (16.4 ft) away from the front door LH	10 to 14 V
SEL1 (E58-5) - E (E58-17)	V - W-B	Touch sensor activation control signal	Bring it to the outside handle	Below 1 V
CLG2 (E58-35) - CG2B (E58-36)	GR - BR	Door electrical key oscillator (front RH) sensor signal	All doors closed, all doors locked and engine switch off	Alternating between 5 V and below 1 V
CLG2 (E58-35) - CG2B (E58-36)	GR - BR	Door electrical key oscillator (front RH) sensor signal	Door unlocked or door open	Below 1 V
SEN2 (E58-23) - E (E58-17)	O - W-B	Touch sensor detection signal	Outside door handle touched	Below 1 V
SEN2 (E58-23) - E (E58-17)	O - W-B	Touch sensor detection signal	Outside door handle not touched (Have the electrical key outside the cabin)	10 to 14 V
SEL2 (E58-6) - E (E58-17)	P - W-B	Touch sensor activation control signal	Move the key more than 5 m (16.4 ft) away from the front door RH	10 to 14 V
SEL2 (E58-6) - E (E58-17)	P - W-B	Touch sensor activation control signal	Bring it to the outside handle	Below 1 V
CLG5 (E58-11) - CG5B (E58-12)	R - W	Indoor electrical key oscillator (front) sensor signal	Within 30 seconds driver side door opened and closed, engine switch off	Alternating between 5 V and below 1 V
CLG5 (E58-11) - CG5B (E58-12)	R - W	Indoor electrical key oscillator (front) sensor signal	Engine switch on (IG)	Below 1 V
CLG6 (E58-13) - CG6B (E58-14)	Y - B	Indoor electrical key oscillator (rear) sensor signal	Within 30 seconds after driver side door opened and closed, engine switch off	Alternating between 5 V and below 1 V
CLG6 (E58-13) - CG6B (E58-14)	Y - B	Indoor electrical key oscillator (rear) sensor signal	Engine switch on (IG)	Below 1 V
CLG7 (E58-15) - CG7B (E58-16)	R - W	Luggage electrical key oscillator (inner) sensor signal	Luggage compartment door opening switch ON	Alternating between 5 V and below 1 V
CLG7 (E58-15) - CG7B (E58-16)	R - W	Luggage electrical key oscillator (inner) sensor signal	Luggage compartment door opening switch OFF	Below 1 V
CLG8 (E58-31) - CG8B (E58-32)	V - P	Luggage electrical key oscillator (outer) sensor signal	Luggage compartment door opening switch ON	Alternating between 5 V and below 1 V
CLG8 (E58-31) - CG8B (E58-32)	V - P	Luggage electrical key oscillator (outer) sensor signal	Luggage compartment door opening switch OFF	Below 1 V
RC0 (E58-29) - E (E58-17)	G - W-B	Entry door control receiver power source	Engine switch off, all doors closed and electrical key switch on	4.5 to 5.5 V
RC0 (E58-29) - E (E58-17)	G - W-B	Entry door control receiver power source	Engine switch off, all doors closed and electrical key switch off	Below 1 V
RSSI (E58-39) - E (E58-17)	R - W-B	Entry door control receiver electric wave existence signal	Engine switch off, all doors closed, the electrical key is not in the action area	10 to 14 V

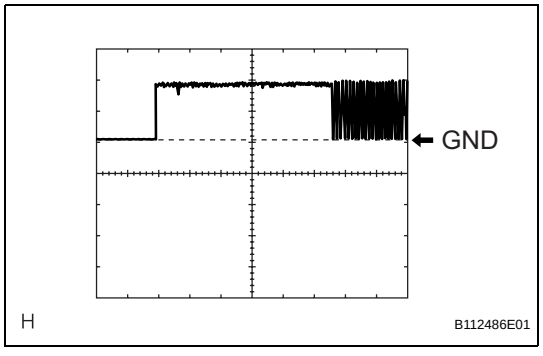
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
RSSI (E58-39) - E (E58-17)	R - W-B	Entry door control receiver electric wave existence signal	Engine switch off, all doors closed, the electrical key is in the action area	Below 1 V
RDA (E58-38) - E (E58-17)	Y - W-B	Entry door control receiver data input signal	Engine switch off, all doors closed and electrical key switch off	10 to 14 V (Pulse generation)
RDA (E58-38) - E (E58-17)	Y - W-B	Entry door control receiver data input signal	Engine switch off, all doors closed and electrical key switch on	Pulse generation
RDA (E58-38) - Body ground	Y - Body ground	Tuner input signal	Engine switch off, all doors closed, the electrical key is not in the action area	10 to 14 V (Pulse generation)
RDA (E58-38) - Body ground	Y - Body ground	Tuner input signal	The electrical key is in the action area.	Pulse generation
ASEL (E58-37) - Body ground	V - Body ground	Cabin / luggage receiver select signal	Engine switch off, luggage compartment door closed and the electrical key is in the luggage action area	4.6 to 6.0 V
ASEL (E58-37) - Body ground	V - Body ground	Cabin / luggage receiver select signal	Engine switch off, luggage compartment door open	Below 1 V
VC5 (E58-30) - Body ground	R - Body ground	Transponder key amplifier power supply	Electrical key is not in the cabin.	Below 1 V
VC5 (E58-30) - Body ground	R - Body ground	Transponder key amplifier power supply	Have the electrical key outside the cabin and open the driver's door.	4.5 to 5.5 V
TXCT (E58-8) - Body ground	GR - Body ground	Transponder key amplifier output signal	Electrical key is not in the cabin.	Below 1 V
TXCT (E58-8) - Body ground	GR - Body ground	Transponder key amplifier output signal	Have the electrical key outside the cabin and open the driver's door.	Pulse generation (see waveform 1)
CODE (E58-9) - Body ground	W - Body ground	Transponder key amplifier communication signal	Electrical key is not in the cabin.	Below 1 V
CODE (E58-9) - Body ground	W - Body ground	Transponder key amplifier communication signal	Have the electrical key outside the cabin and open the driver's door. Hold the electrical key close to the engine switch with the brake pedal depressed.	Pulse generation (see waveform 2)
BZR (E58-21) - Body ground	O - Body ground	Wireless door lock buzzer signal	Wireless door lock buzzer OFF	Below 1 V
BZR (E58-21) - Body ground	O - Body ground	Wireless door lock buzzer signal	Wireless door lock buzzer ON	Pulse generation

If the result is not as specified, the ECU may have a malfunction.

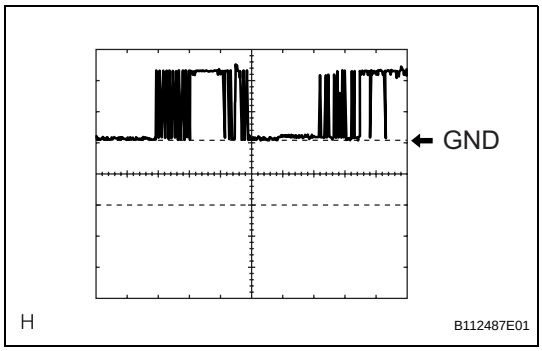
(e) Inspect using an oscilloscope.

Waveform 1 (Reference):

Terminal	TXCT - Body ground
Tool Setting	2 V/DIV, 10 ms./DIV
Condition	Have the electrical key outside the cabin and open the driver's door.



DL



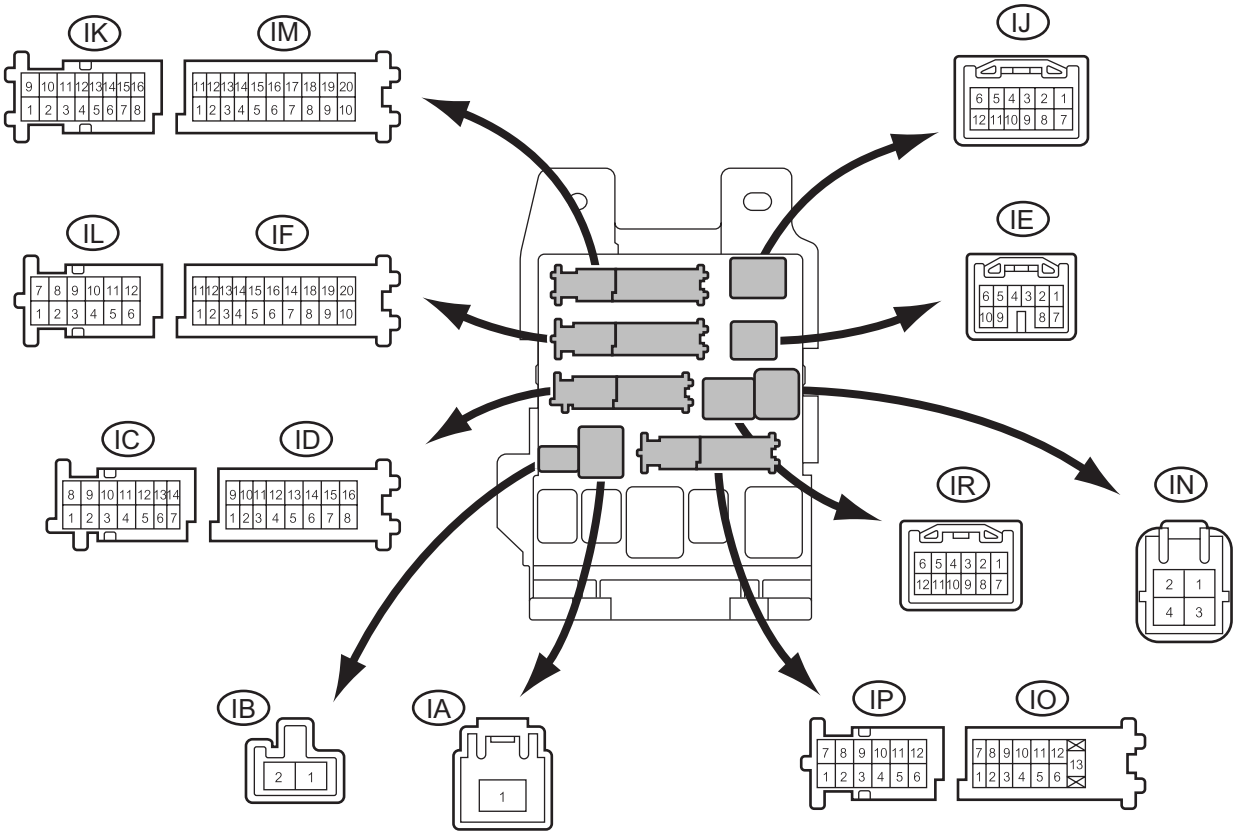
(f) Inspect using an oscilloscope.
Waveform 2 (Reference):

Terminal	CODE - Body ground
Tool Setting	2 V/DIV, 20 ms./DIV
Condition	Have the electrical key outside the cabin and open the driver's door. Hold the electrical key close to the engine switch with the brake pedal depressed.

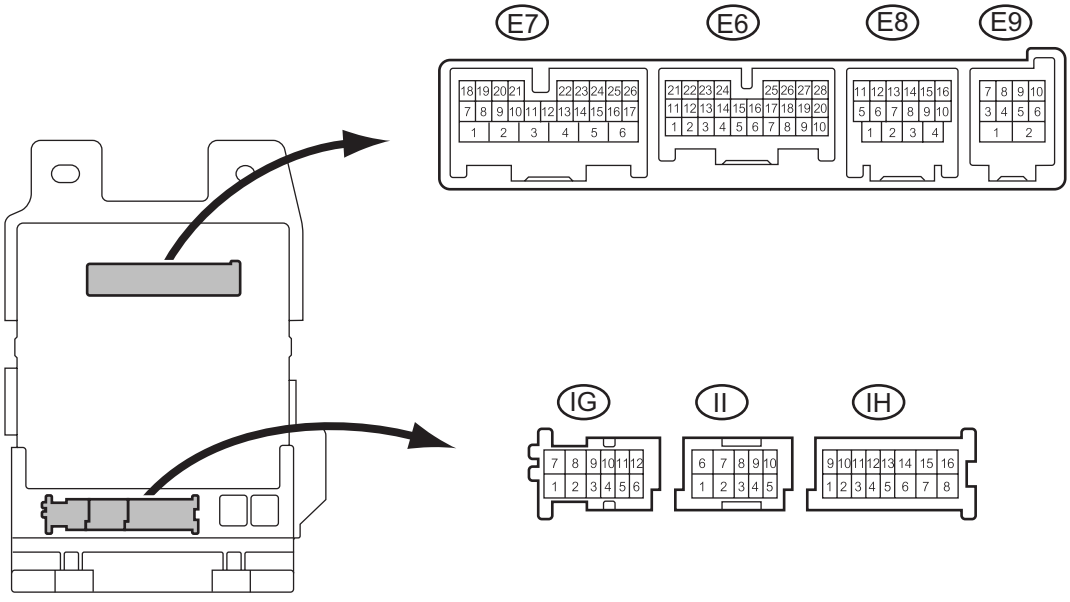
2. MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)

(a) Measure the voltage and resistance according to the value(s) in the table below.

Front Side:



Back Side:



DL

H

B112605E02

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
CANN (E8-15) - Body ground	W - Body ground	CAN Line	Always	10 kΩ or higher
CANP (E8-16) - Body ground	L - Body ground	CAN Line	Always	10 kΩ or higher
STP (IL-7) - Body ground	L - Body ground	Stop light switch signal	Brake pedal depressed	10 to 14 V
STP (IL-7) - Body ground	L - Body ground	Stop light switch signal	Brake pedal depressed	Below 1 V

If the result is not as specified, the junction block may have a malfunction.

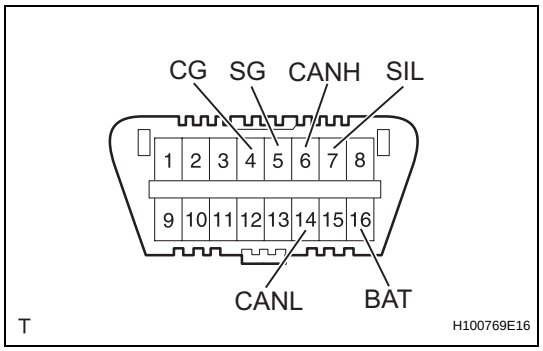
DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) Smart key system data and the Diagnostic Trouble Codes (DTCs) can be read from the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the intelligent tester to check for malfunctions and perform repairs.

2. CHECK DLC3

The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.



Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Engine switch OFF*	54 to 69 Ω
CANH (6) - Battery positive (+)	HIGH-level CAN bus line	Engine switch OFF*	6 kΩ or higher
CANH (6) - CG (4)	HIGH-level CAN bus line	Engine switch OFF*	200 Ω or higher
CANL (14) - Battery positive (+)	LOW-level CAN bus line	Engine switch OFF*	6 kΩ or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Engine switch OFF*	200 Ω or higher

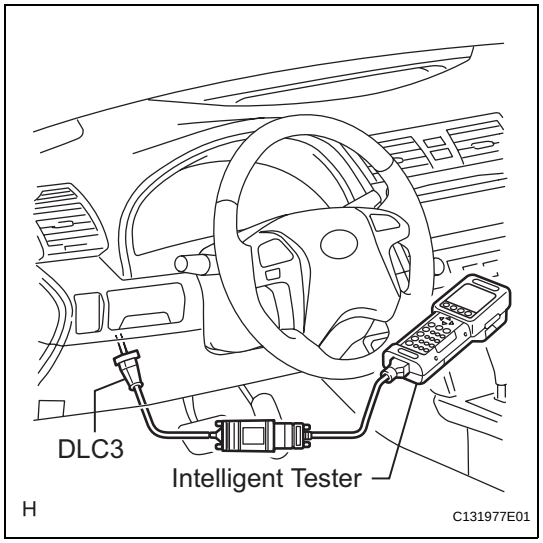
*: Before measuring the resistance, leave the vehicle for at least 1 minute and do not operate the engine switch, any switches or doors.

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

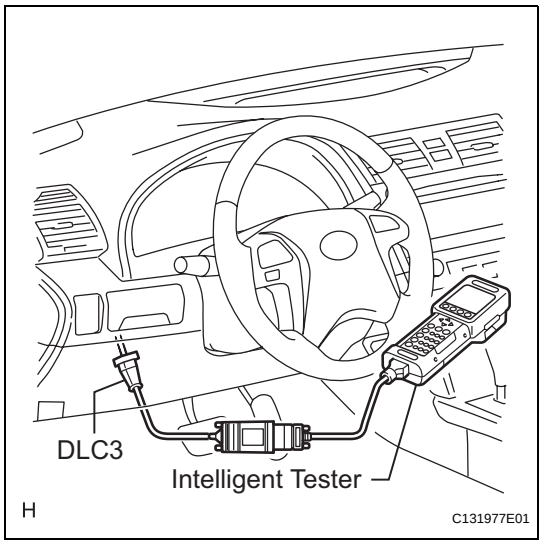
HINT:

Connect the cable of the intelligent tester (with CAN VIM) to the DLC3, turn the engine switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.



DL



DTC CHECK / CLEAR

1. CHECK DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Enter the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Read the DTC by following the prompts on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

2. CLEAR DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Enter the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CLEAR CODES.
(d) Erase the DTC by following the directions on the tester screen.

HINT:
Refer to the intelligent tester operator's manual for further details.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST relay in troubleshooting is one way to save time.

(a) Connect the intelligent tester to the DLC3.

(b) Turn the engine switch on (IG). When the intelligent tester cannot be turned on due to a malfunction or other problem, refer to "precautions when using the intelligent tester" (See page DL-118).

(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST.

(d) Read the DATA LIST according to the display on the tester.

SMART ACCESS (Certification ECU):

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
D TOUCH SENSOR	Driver side door touch sensor / ON or OFF	ON: Sensor is touched OFF: Sensor is not touched	-
P TOUCH SENSOR	Front passenger side door touch sensor / ON or OFF	ON: Sensor is touched OFF: Sensor is not touched	-
D TRIGGER SW	Driver side door lock switch / ON or OFF	ON: Switch is touched OFF: Switch is not touched	-
P TRIGGER SW	Front passenger side door lock switch / ON or OFF	ON: Switch is touched OFF: Switch is not touched	-
TR/B-DOOR UNLK	Luggage compartment door unlock switch / ON or OFF	ON: Switch is pushed OFF: Switch is not pushed	-
IG SW	Engine switch / ON or OFF	ON: Engine switch is on (IG) OFF: Engine switch is off	-
ACC SW	Engine switch / ON or OFF	ON: Engine switch is on (ACC) OFF: Engine switch is off	-
P/S 10-MIN	Power save counter - 10 minutes / Min: 0; Max: 255	Power save counter after door LOCK/UNLOCK-10 minutes	-
P/S 5-DAY	Power save counter - 5 days / Min: 0; Max: 255	Power save counter after door LOCK/UNLOCK-5 days	-

IG SW	Engine switch / ON or OFF	ON: Engine switch is on (IG) OFF: Engine switch is off	-

METER (Combination Meter):

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
KEY REMND VOLUM	Key reminder buzzer volume condition / LARGE, MEDIUM, SMALL	LARGE: Volume is large MEDIUM: Volume is medium SMALL: Volume is small	-
KEY REMND SOUND	Key reminder buzzer sound condition / FAST, NORMAL, SLOW	FAST: Buzz pattern is fast NORMAL: Buzz pattern is normal SLOW: Buzz pattern is slow	-

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows relay, VSV, actuator and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST.
(d) Perform the ACTIVE TEST according to the display on the tester.

SMART ACCESS (Certification ECU):

Item	Test Details	Diagnostic Note
OVERHEAD TUNER	Entry door control receiver ON / OFF	-
IN LUG TUNER	Luggage receiver ON / OFF	-
D TRANSMITTER	Driver side electrical key oscillator ON / OFF	-
P TRANSMITTER	Front passenger side electrical key oscillator ON / OFF	-
FR TRANSMITTER	Indoor electrical key oscillator (console) ON / OFF	-
RR TRANSMITTER	Indoor electrical key oscillator (rear seat) ON / OFF	-
IN_BDR TRNSMTTR	Luggage compartment door inner oscillator ON / OFF	-
BDOOR TRNSMTTR	Luggage compartment door outer oscillator ON / OFF	-
D SELECT SIG	Driver side select ON / OFF	-
P SELECT SIG	Front passenger side select ON / OFF	-
WIRELESS BUZZER	Wireless buzzer ON / OFF	-

MAIN BODY:

Item	Test Details	Diagnostic Note
TRNK/BDOR OPEN	Luggage compartment open switch signal ON / OFF	-

DIAGNOSTIC TROUBLE CODE CHART

HINT:
If a trouble code is indicated during the DTC check, check the circuit listed for that code in the table below. Then proceed to the appropriate page.

Power door lock control system:

DTC No.	Detection Item	Trouble Area	See page
B1242	Wireless Door Lock Tuner Circuit Malfunction	1. Electrical key antenna 2. Door control receiver 3. Wire harness 4. Certification ECU	DL-164

ON-VEHICLE INSPECTION

1. SMART KEY SYSTEM OPERATION INSPECTION

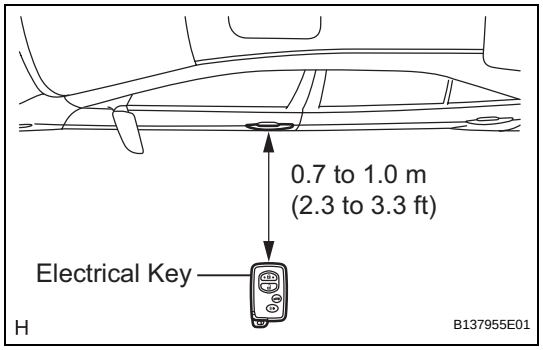
HINT:

Refer to PROBLEM SYMPTOMS TABLE if the results of the following checks are not normal (See page DL-147).

(a) Check the entry unlock function.

(1) Use the wireless lock operation to lock the doors. With the electrical key in your possession, touch a door's outside handle (touch sensor) and check that the door unlocks.

(b) Check the entry unlock operation's detection area.



(1) Step 1: Hold the electrical key at the same height as the door's outside handle (approximately 0.8 m (2.6 ft)). Pay attention to the direction of the electrical key in the illustration.

(2) Step 2: When the electrical key is brought within 0.7 to 1.0 m (2.3 to 3.3 ft) of the vehicle, check that the system enters unlock standby mode.

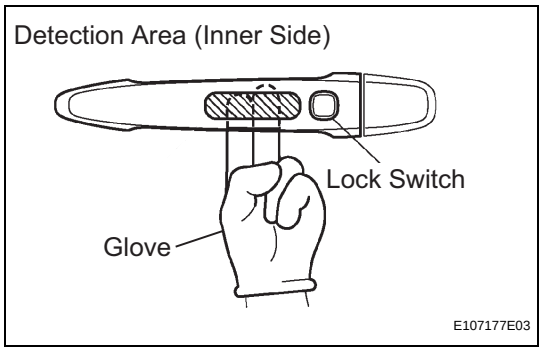
HINT:

Unlock standby mode is signified by the electrical key's red LED illuminating.

(3) Step 3: After the system enters unlock standby mode, touch the outside handle's sensor within 3 seconds. Check that the door unlocks.

NOTICE:

The electrical key cannot communicate with the system within a 0.2 m (0.6 ft) radius of each outside handle.



(4) Step 4: Repeat steps 2 and 3 for the remaining doors.

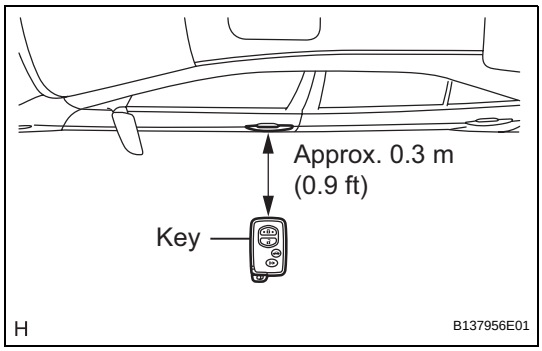
(5) Step 5: Inspect the door electrical key oscillator's response sensitivity. Wear protective gloves, set the system to unlock standby mode, and check that touching the inner side of the outside handle (the highlighted area in the illustration) with your finger causes the door to unlock.

NOTICE:

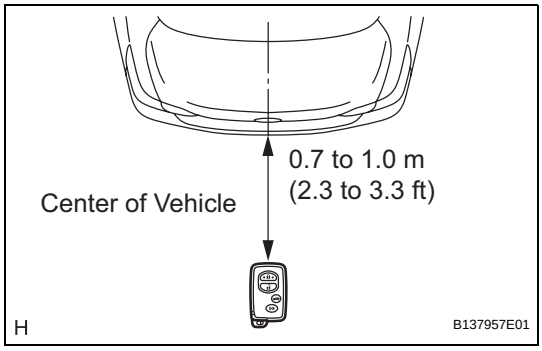
When touching the highlighted area, tapping too quickly or having extended contact may not trigger the sensor. In such a case, the door will not unlock.

(6) Step 6: Repeat step 5 for the remaining doors.

DL

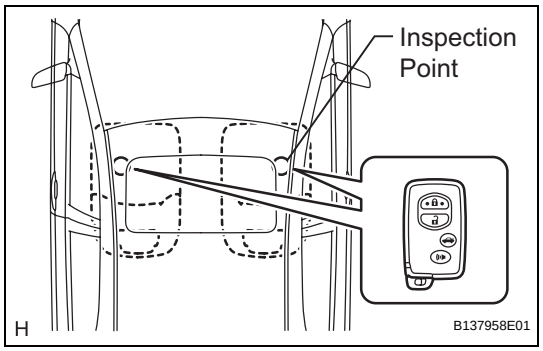


(c) Check the entry lock function.
  (1) Step 1: Close all of the vehicle's doors. With the electrical key in your possession outside the vehicle, check that pressing the lock switch locks the doors.
  (2) Step 2: Inspect the entry lock operation's detection area and the indoor electrical key antenna for wave leaks. Hold the electrical key at a height of 1 m (3.3 ft) (0.1 m (0.3 ft) above the lower edge of the window frame). Pay attention to the direction and position of the electrical key in the illustration. When the electrical key is approximately 0.3 m (0.9 ft) from the vehicle and the lock switch is pressed, check that the all doors lock and the warning buzzer (for when the electrical key is forgotten) does not sound. If the warning buzzer sounds, the indoor electrical key antenna may have a wave leak.
  HINT:
  Do not press the lock switch with the same hand that is holding the electrical key because the electrical key cannot communicate with the system within a 0.2 m (0.6 ft) radius of the outside handle. The doors will not lock.
  (3) Step 3: Repeat steps 1 and 2 for the remaining doors.



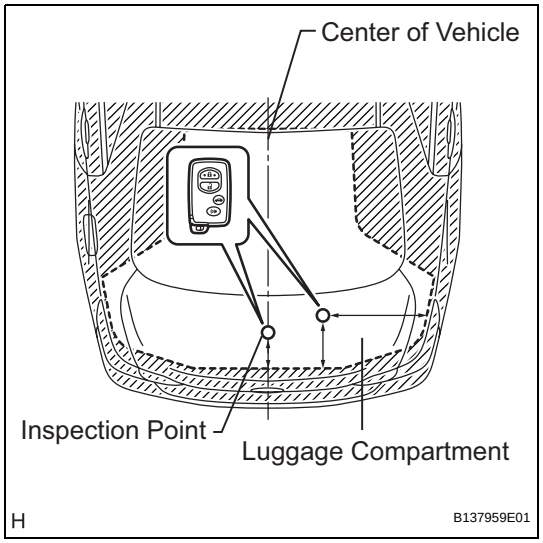
(d) Check the entry luggage compartment door open function.
  (1) Close the luggage compartment door. With the electrical key in your possession, check that pressing the power luggage door open switch opens the luggage compartment door.
  (2) Inspect the entry luggage compartment door open operation's detection area. Hold the electrical key at the same height as the power luggage door open switch (approximately 0.8 m (2.6 ft)) and align the key with the center of the rear of the vehicle. Pay attention to the direction of the electrical key shown in the illustration. When the electrical key is brought within 0.7 to 1.0 m (2.3 to 3.3 ft) of the vehicle, check that pressing the power luggage door open switch opens the luggage compartment door.

(e) Check the entry ignition function.
  (1) When the engine is off:
  With the electrical key in your possession and the brake pedal depressed, check that pressing the engine switch releases the steering wheel lock and starts the engine.
  HINT:
  The engine can be started only when the engine switch indicator illuminates in green.



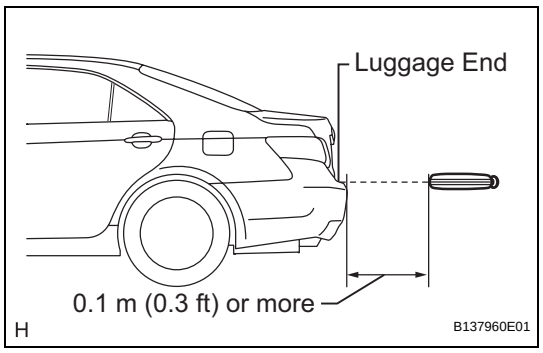
(2) When the engine is running:
With the electrical key in your possession, check that pressing the engine switch stops the engine.
HINT:
The shift position must be P to stop the engine.

(3) Inspect the entry ignition operation's detection area. Pay attention to the direction of the electrical key in the illustration. When the electrical key is in either of the 2 inspection points in the illustration, check that the engine can start.
NOTICE:
The engine cannot be started when the electrical key is on the instrument panel, rear package tray, or in the glove box.



(f) Check the electrical key lock-in prevention function.

(1) Place the electrical key in the luggage compartment with all doors locked. Check that: 1) closing the luggage compartment door triggers the electrical key's wireless buzzer (which lasts approximately 2 seconds), and 2) pressing the power luggage door open switch opens the luggage compartment door.



(2) Inspect the electrical key lock-in prevention's detection area. Pay attention to the direction of the electrical key shown in the illustration. When the electrical key is in either of the 2 inspection points in the illustration, check that: 1) closing the luggage compartment door sounds the electrical key's wireless buzzer, and 2) pressing the power luggage door open switch opens the luggage compartment door.
NOTICE:
If the electrical key is inside a metal storage item, such as a metal briefcase or metal box, the electrical key will not be detected by the system.

(3) Inspect the electrical key lock-in prevention's detection area and the entry door control receiver for wave leaks. Hold the electrical key at the same height as the lower edge of the luggage compartment door and align the key with the center of the rear of the vehicle. Pay attention to the direction and position of the electrical key shown in the illustration. When the electrical key is over 0.1 m (0.3 ft) from the vehicle's rear bumper, check that the electrical key's wireless buzzer does not sound.
If the warning buzzer sounds, the entry door control receiver may have a wave leak.

(g) Check the electrical key cancel function.
(1) While the engine switch is on (IG), check that the power luggage door open switch, entry ignition, electrical key lock-in prevention and warning are the only switch in the smart key system that can be operated.
(2) While the electrical key cancel function (smart key system cancel function) is ON, check that all functions in the smart key system cannot be operated.

(h) Check the answer-back function (hazard warning light flashing and buzzer sounding).

Entry Operation	Hazard Warning Light	Buzzer
Entry Door Lock	Flashes once	Sounds once
Entry Door Unlock	Flashes twice	Sounds twice
Entry Luggage Compartment Door Open	Does not flash	Does not sound

(i) Check that the electrical key reminder warning buzzer sounds.
(1) Carry the electrical key in the vehicle and close the driver side door. Then turn the engine switch off or on (ACC). The steering lock is unlocked.
(2) Open the driver side door and check that the buzzer sounds intermittently.

(j) Check that the electrical key reminder warning buzzer stops.
(1) When the buzzer is sounding, check that the buzzer stops sounding if either of the following is performed:
- Close the driver side door (front door courtesy light switch is off).
- Turn the engine switch on (IG, ACC) and lock the steering lock.

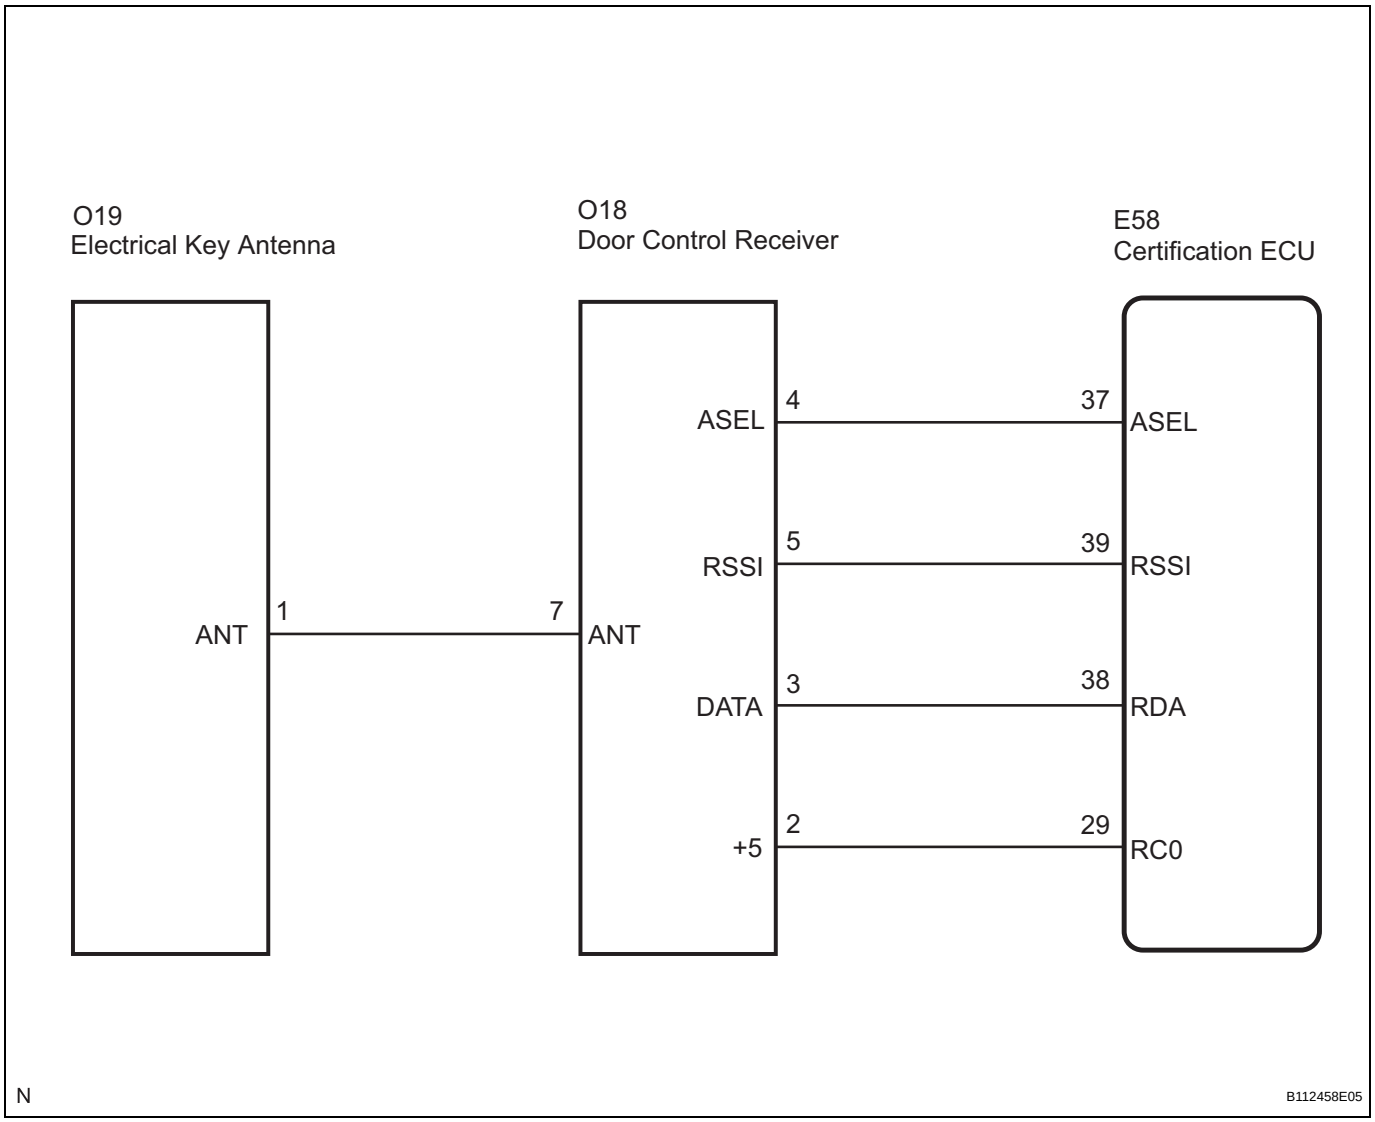
DTC	B1242	Wireless Door Lock Tuner Circuit Malfunction

DESCRIPTION

- The electrical key antenna and the door control receiver are used as antennas for the entry and wireless door lock functions of the smart key system.
- The certification ECU decodes the requested smart key system operation by identifying a key code based on electric waves received via the electrical key antenna and the door control receiver. The ECU then sends a command, according to the requested operation, to each ECU. (e.g. If door lock operation is requested, the ECU sends a door lock command to the main body ECU.)

DTC No.	DTC Detection Condition	Trouble Area
B1242	If the certification ECU detects that terminal RDA or RSSI is short-circuited, this DTC is stored.	• Electrical key antenna • Door control receiver • Wire harness • Certification ECU

WIRING DIAGRAM

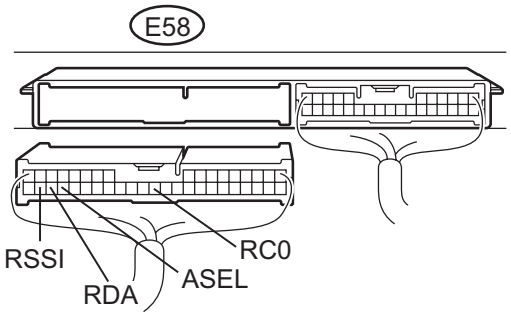


DL

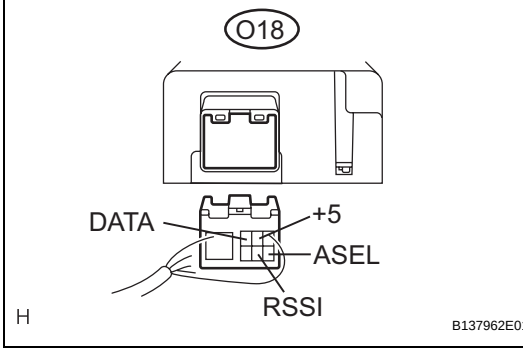
INSPECTION PROCEDURE

1	**CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - DOOR CONTROL RECEIVER)**

Certification ECU:



Door Control Receiver:



(a) Disconnect the E58 ECU connector.
(b) Disconnect the O18 receiver connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

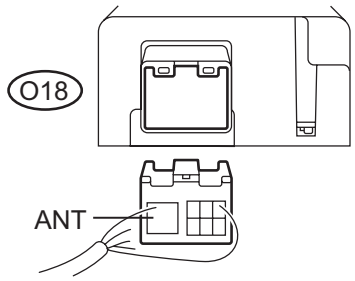
Tester Connection (Symbols)	Condition	Specified Condition
E58-37 (ASEL) - O18-4 (ASEL)	Always	Below 1 Ω
E58-39 (RSSI) - O18-5 (RSSI)	Always	Below 1 Ω
E58-38 (RDA) - O18-3 (DATA)	Always	Below 1 Ω
E58-29 (RC0) - O18-2 (+5)	Always	Below 1 Ω
E58-37 (ASEL) - Body ground	Always	10 kΩ or higher
E58-39 (RSSI) - Body ground	Always	10 kΩ or higher
E58-38 (RDA) - Body ground	Always	10 kΩ or higher
E58-29 (RC0) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

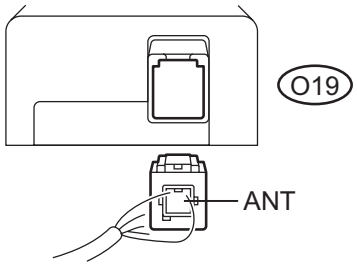
OK

2	CHECK HARNESS AND CONNECTOR (DOOR CONTROL RECEIVER - ELECTRICAL KEY ANTENNA)

Door Control Receiver:



Electrical Key Antenna:



H

B112462E03

(a) Disconnect the O19 antenna connector.
(b) Measure the resistance according to the value(s) in the table below.
HINT:
Perform the measurement with the O18 receiver connector disconnected.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
O18-7 (ANT) - O19-1 (ANT)	Always	Below 1 Ω
O18-7 (ANT) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	CHECK AND REPLACE DOOR CONTROL RECEIVER (RECONFIRM DTC)

(a) Replace the receiver.
(b) Clear the DTCs and repeat the procedure to recheck for DTCs (See page DL-156).

OK:

DTC is not output.

OK → **END (RECEIVER IS DEFECTIVE)**

NG

DL

4	CHECK AND REPLACE ELECTRICAL KEY ANTENNA (RECONFIRM DTC)

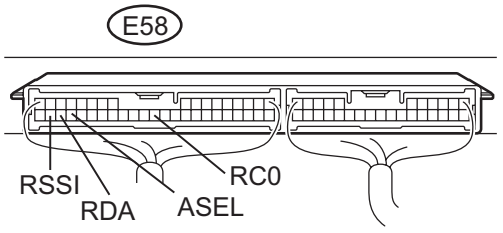
(a) Replace the antenna.
(b) Clear the DTCs and repeat the procedure to recheck for DTCs (See page DL-156).
OK:
DTC is not output.

OK → **END (ANTENNA IS DEFECTIVE)**

NG

5	INSPECT CERTIFICATION ECU

Certification ECU:



H

B137963E01

(a) Reconnect the E58 ECU connector.
(b) Reconnect the O19 antenna connector.
(c) Reconnect the O18 receiver connector.
(d) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection (Symbols)	Condition	Specified Condition
E58-37 (ASEL) - Body ground	Engine switch OFF, luggage compartment door OPEN	Below 1 V
	Engine switch OFF, luggage compartment door CLOSED	4.5 to 5.5 V
E58-39 (RSSI) - Body ground	Engine switch OFF, all doors closed, the electrical key is not in the action area	10 to 14 V
	Engine switch OFF, all doors closed, the electrical key in the action area	Below 1 V
E58-38 (RDA) -Body ground	Engine switch OFF, all doors closed and electrical key switch OFF	10 to 14 V (Pulse generation)
	Engine switch OFF, all doors closed and electrical key switch ON	Pulse generation
E58-29 (RC0) - Body ground	Engine switch OFF, all doors closed and electrical key switch OFF	Below 1 V
	Engine switch OFF, all doors closed and electrical key switch ON	4.5 to 5.5 V

NG → **REPLACE CERTIFICATION ECU**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

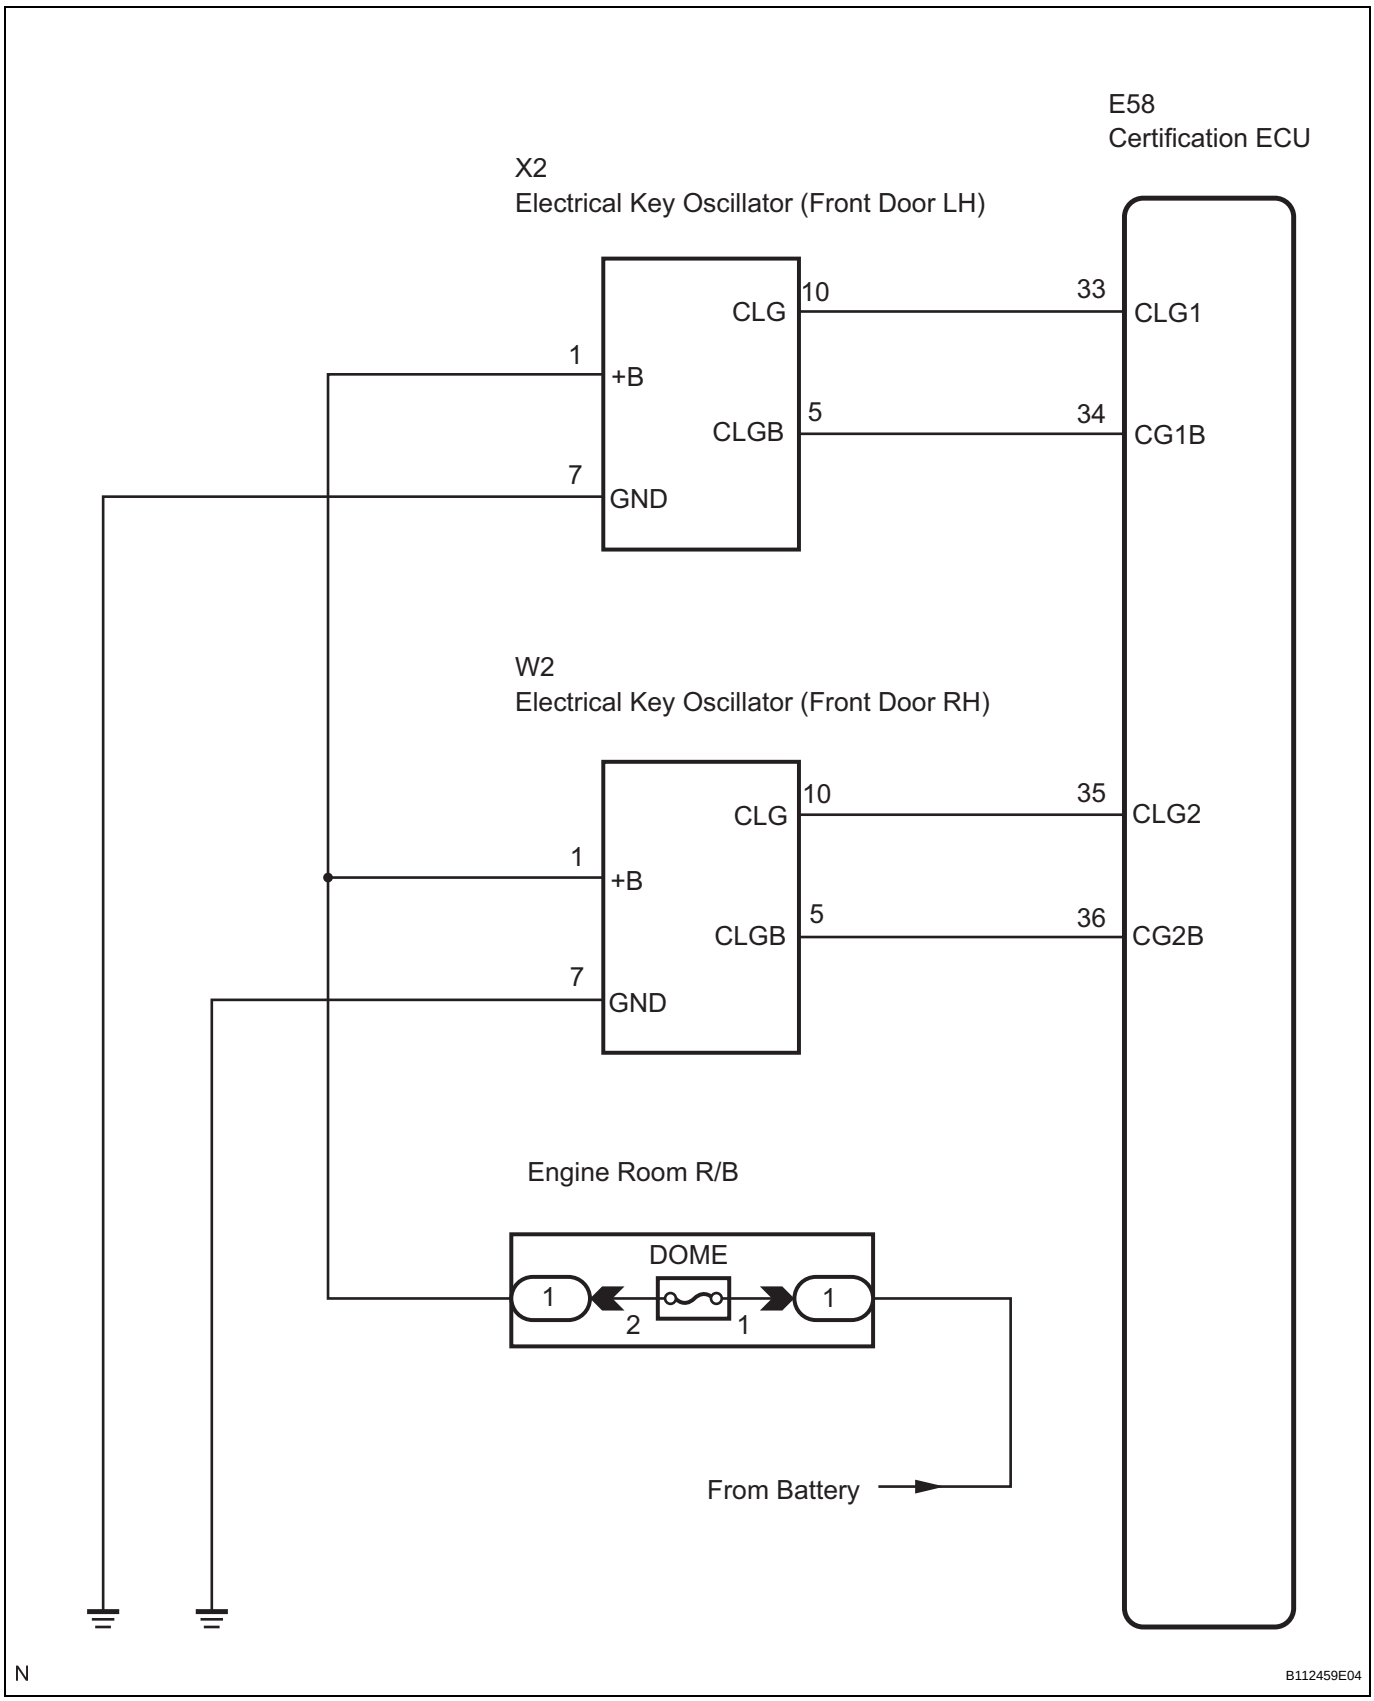
DL

Door Oscillator Circuit

DESCRIPTION

Door oscillators are built into each door. Each of them forms its own action area around its door and detects the presence of the electrical key.

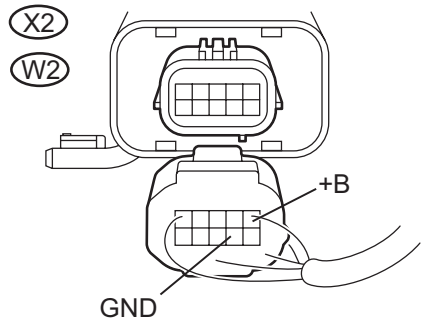
WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT ELECTRICAL KEY OSCILLATOR

Door Oscillator:



H B112463E04

(a) Disconnect the oscillator connectors.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage:

Front LH side

Tester Connection (Symbols)	Condition	Specified Condition
X2-1 (+B) - X2-7 (GND)	Always	10 to 14 V

Front RH side

Tester Connection (Symbols)	Condition	Specified Condition
W2-1 (+B) - W2-7 (GND)	Always	10 to 14 V

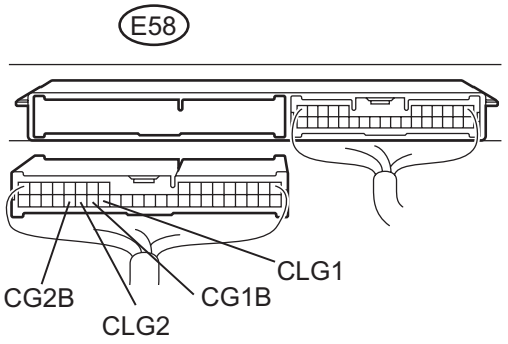
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

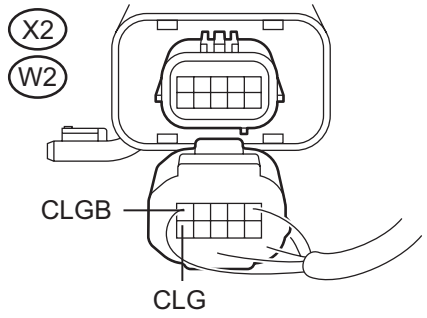
DL

2	CHECK HARNESS AND CONNECTOR (ELECTRICAL KEY OSCILLATOR - CERTIFICATION ECU)

Certification ECU:



Door Oscillator:



H

B137964E01

(a) Disconnect the E58 ECU connector.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E58-33 (CLG1) - X2-10 (CLG)	Always	Below 1 Ω
E58-34 (CG1B) - X2-5 (CLGB)	Always	Below 1 Ω
E58-35 (CLG2) - W2-10 (CLG)	Always	Below 1 Ω
E58-36 (CG2B) - W2-5 (CLGB)	Always	Below 1 Ω
E58-33 (CLG1) - Body ground	Always	10 kΩ or higher
E58-34 (CG1B) - Body ground	Always	10 kΩ or higher
E58-35 (CLG2) - Body ground	Always	10 kΩ or higher
E58-36 (CG2B) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

DL

3	CHECK AND REPLACE ELECTRICAL KEY OSCILLATOR (CHECK OPERATION OF OSCILLATOR)

(a) Replace the door oscillator.
(b) Check that the entry LOCK/UNLOCK function operates normally.

OK:

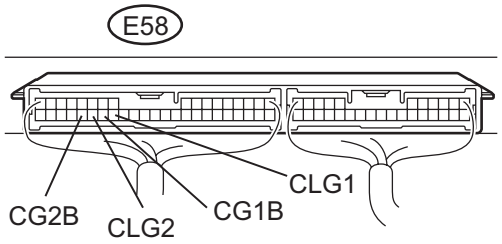
Entry LOCK/UNLOCK function operates normally.

OK → **END (ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)**

NG

4	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (CERTIFICATION ECU OUTPUT SIGNAL)

Certification ECU:



H

B137963E02

(a) Reconnect the ECU and the oscillator connectors.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the engine switch on (IG).
(d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST.
(e) Following the display on the tester, select the "ACTIVE TEST".

SMART ACCESS (Certification ECU):

Item	Vehicle Condition/Test Details
D TRANSMITTER	Door Oscillator ON/OFF
P TRANSMITTER	Door Oscillator ON/OFF

(f) Measure the frequency according to the value(s) in the table below.

Standard

Tester Connection (Symbols)	Condition	Specified Condition
E58-33 (CLG1) - E58-34 (CG1B)	During ACTIVE TEST	Frequency is generated (higher than 0 Hz)
E58-35 (CLG2) - E58-36 (CG2B)	During ACTIVE TEST	Frequency is generated (higher than 0 Hz)

NG → **REPLACE CERTIFICATION ECU**

OK

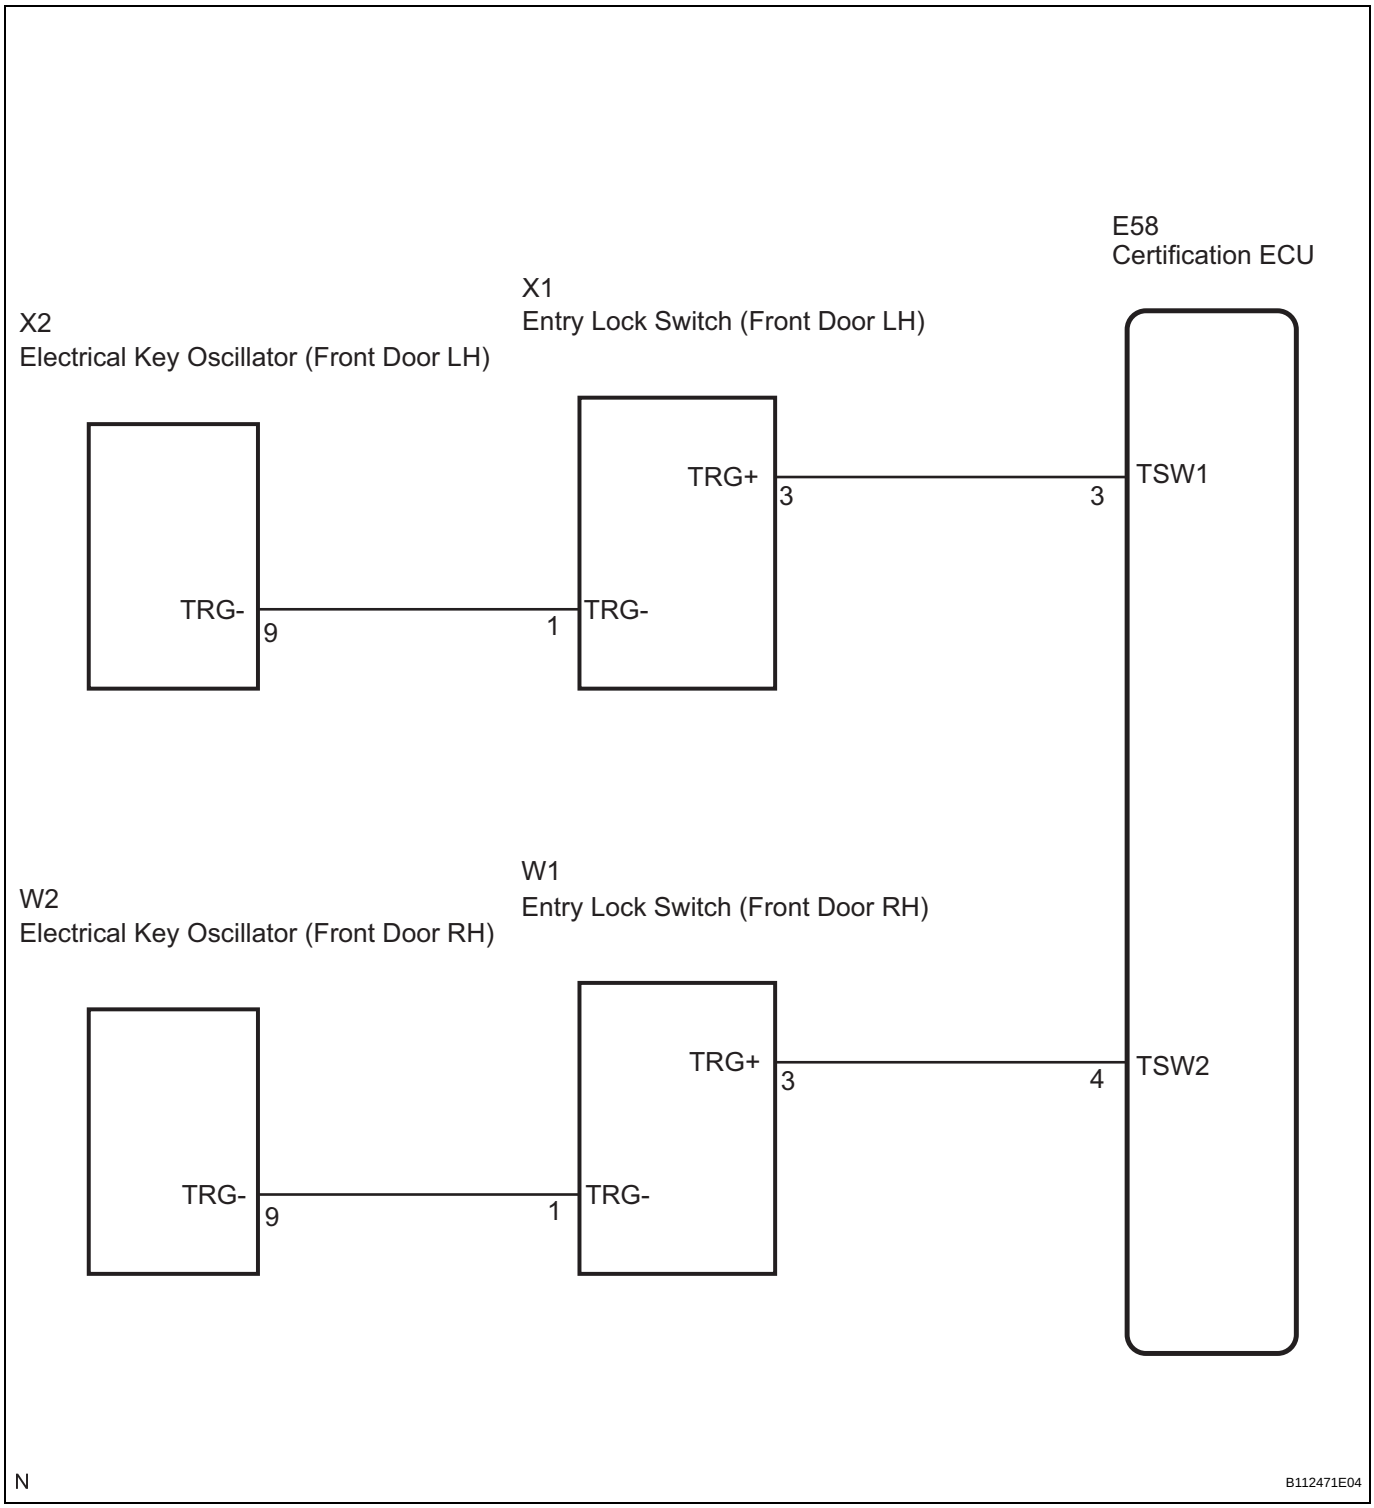
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Entry Lock Switch Circuit

DESCRIPTION

The entry lock switches (trigger switch) are built into the outside handles of the LH/RH door. The certification ECU detects the conditions of the each lock switch.

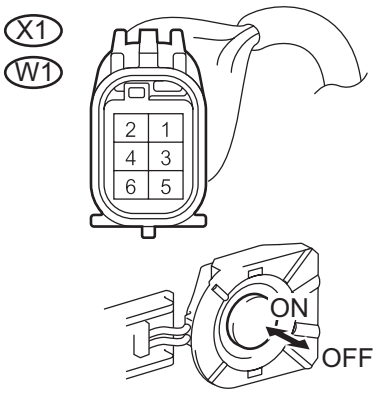
WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT ENTRY LOCK SWITCH

Lock Switch:



H B112465E07

(a) Remove the outside handle.
(b) Disconnect the connectors.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
X1-1 (TRG-) - X1-3 (TRG+)	Lock switch not pushed	10 kΩ or higher
	Lock switch pushed	Below 1 Ω
W1-1 (TRG-) - W1-3 (TRG+)	Lock switch not pushed	10 kΩ or higher
	Lock switch pushed	Below 1 Ω

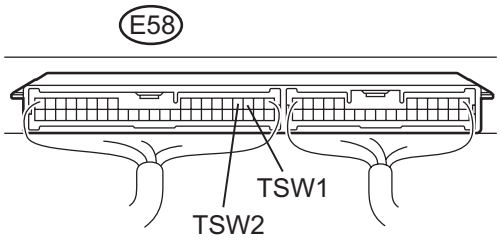
NG → **REPLACE OUTSIDE HANDLE ASSEMBLY**

OK

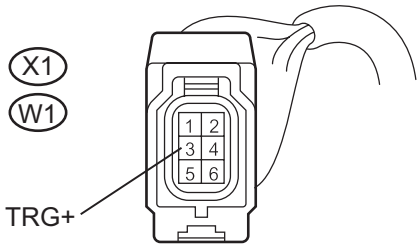
DL

2	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - ENTRY LOCK SWITCH)

Certification ECU:



Lock Switch Wire Harness:



H

B137967E01

(a) Disconnect the E58 ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

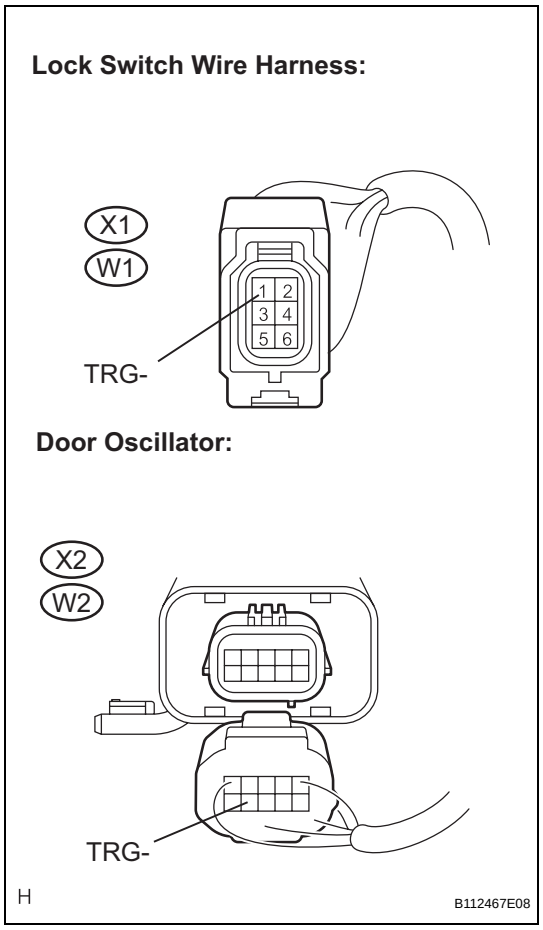
Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E58-3 (TSW1) - X1-3 (TRG+)	Always	Below 1 Ω
E58-4 (TSW2) - W1-3 (TRG+)	Always	Below 1 Ω
E58-3 (TSW1) - Body ground	Always	10 kΩ or higher
E58-4 (TSW2) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	CHECK HARNESS AND CONNECTOR (ELECTRICAL KEY OSCILLATOR - ENTRY LOCK SWITCH)



(a) Disconnect the door oscillator connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
X2-9 (TRG-) - X1-1 (TRG-)	Always	Below 1 Ω
W2-9 (TRG-) - W1-1 (TRG-)	Always	Below 1 Ω
X2-9 (TRG-) - Body ground	Always	10 kΩ or higher
W2-9 (TRG-) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	CHECK AND REPLACE ELECTRICAL KEY OSCILLATOR

(a) Replace the electrical key oscillator.
(b) Check that the entry LOCK/UNLOCK function operates normally.

OK:

Entry LOCK/UNLOCK function operates normally.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK

END (ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)

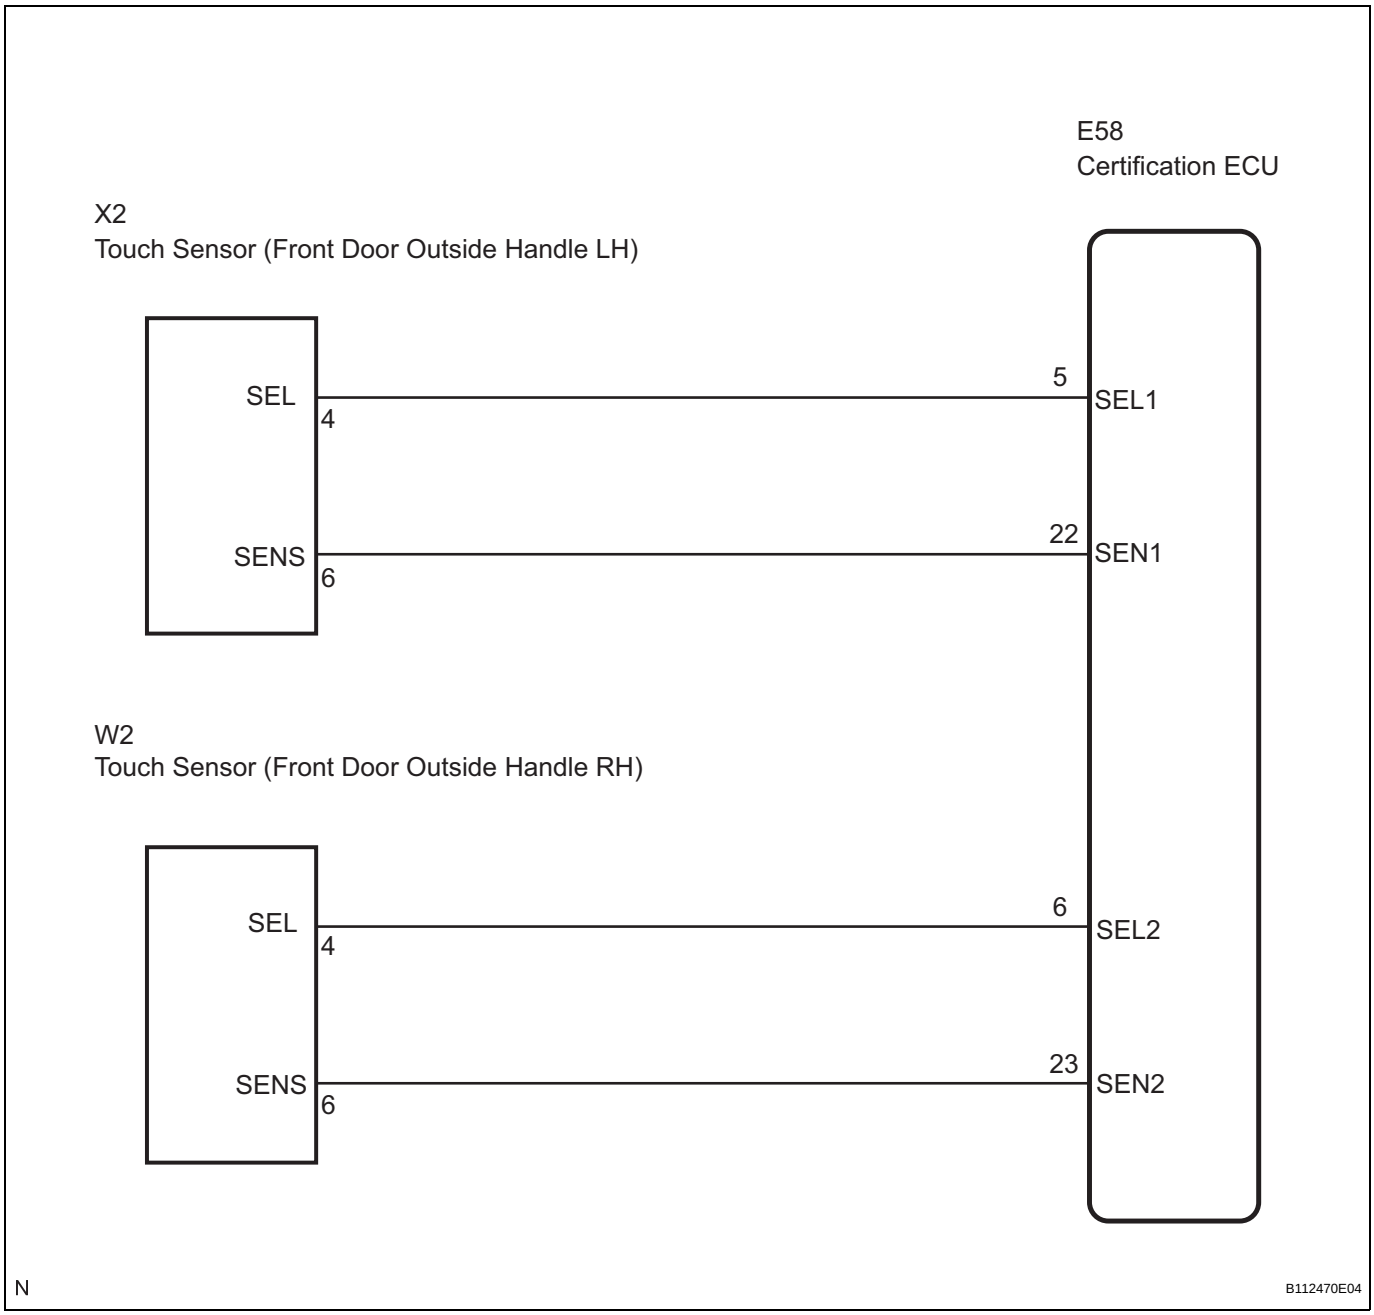
DL

Touch Sensor Circuit

DESCRIPTION

This circuit receives a signal indicating whether a touch sensor signal is detected.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).

(c) Following the display on the tester, select "DATA LIST".

SMART ACCESS (Certification ECU):

Item	Measurement Item/Range (Display)	Normal Condition	Diagnostic Note
D TOUCH SENSOR	Status of touch sensor front LH/ ON or OFF	ON: Touch sensor is touched OFF: Touch sensor is not touched	-
P TOUCH SENSOR	Status of touch sensor front RH/ ON or OFF	ON: Touch sensor is touched OFF: Touch sensor is not touched	-

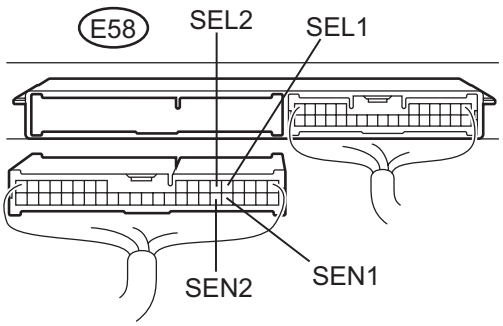
OK:
"ON" (screen is touched) or "OFF" (screen is not touched) appears on the tester screen.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

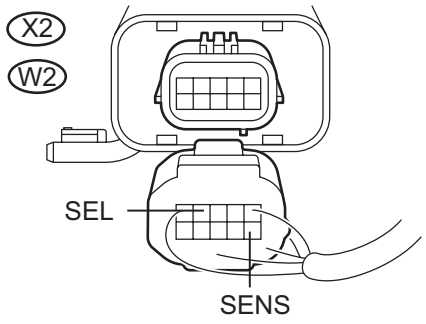
NG

2 CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - ELECTRICAL KEY OSCILLATOR)

Certification ECU:



Door Oscillator:



H

B137964E02

(a) Disconnect the E58 ECU connector.
(b) Disconnect the oscillator connectors.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E58-5 (SEL1) - X2-4 (SEL)	Always	Below 1 Ω
E58-22 (SEN1) - X2-6 (SENS)	Always	Below 1 Ω
E58-6 (SEL2) - W2-4 (SEL)	Always	Below 1 Ω
E58-23 (SEN2) - W2-6 (SENS)	Always	Below 1 Ω
E58-5 (SEL1) - Body ground	Always	10 kΩ or higher
E58-22 (SEN1) - Body ground	Always	10 kΩ or higher
E58-6 (SEL2) - Body ground	Always	10 kΩ or higher
E58-23 (SEN2) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

DL

OK

3	CHECK AND REPLACE ELECTRICAL KEY OSCILLATOR (CHECK OPERATION OF OSCILLATOR)

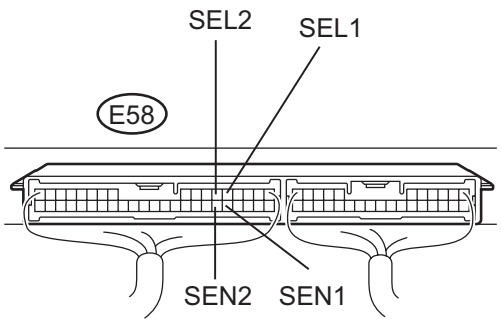
(a) Replace the door oscillator.
(b) Check that the entry UNLOCK function operates normally.
OK:
Entry UNLOCK function operates normally.

NG → **END (ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)**

OK

4	INSPECT CERTIFICATION ECU

Certification ECU:



H B137963E03

(a) Reconnect the ECU and the oscillator connectors.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the engine switch on (IG).
(d) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection (Symbols)	Condition	Specified Condition
E58-5 (SEL1) - Body ground	Move the key more than 5 m (16.4 ft) away from the front door LH	10 to 14 V
E58-5 (SEL1) - Body ground	Bring it to the outside handle	Below 1 V
E58-6 (SEL2) - Body ground	Move the key more than 5 m (16.4 ft) away from the front door RH	10 to 14 V
E58-6 (SEL2) - Body ground	Bring it to the outside handle	Below 1 V
E58-22 (SEN1) - Body ground	Front door LH outside handle is not held (Bring the electrical key to the outside handle)	10 to 14 V
E58-22 (SEN1) - Body ground	Front door LH outside handle is held	Below 1 V
E58-23 (SEN2) - Body ground	Front door RH outside handle is not held (Bring the electrical key to the outside handle)	10 to 14 V
E58-23 (SEN2) - Body ground	Front door RH outside handle is held	Below 1 V

NG → **REPLACE CERTIFICATION ECU**

OK

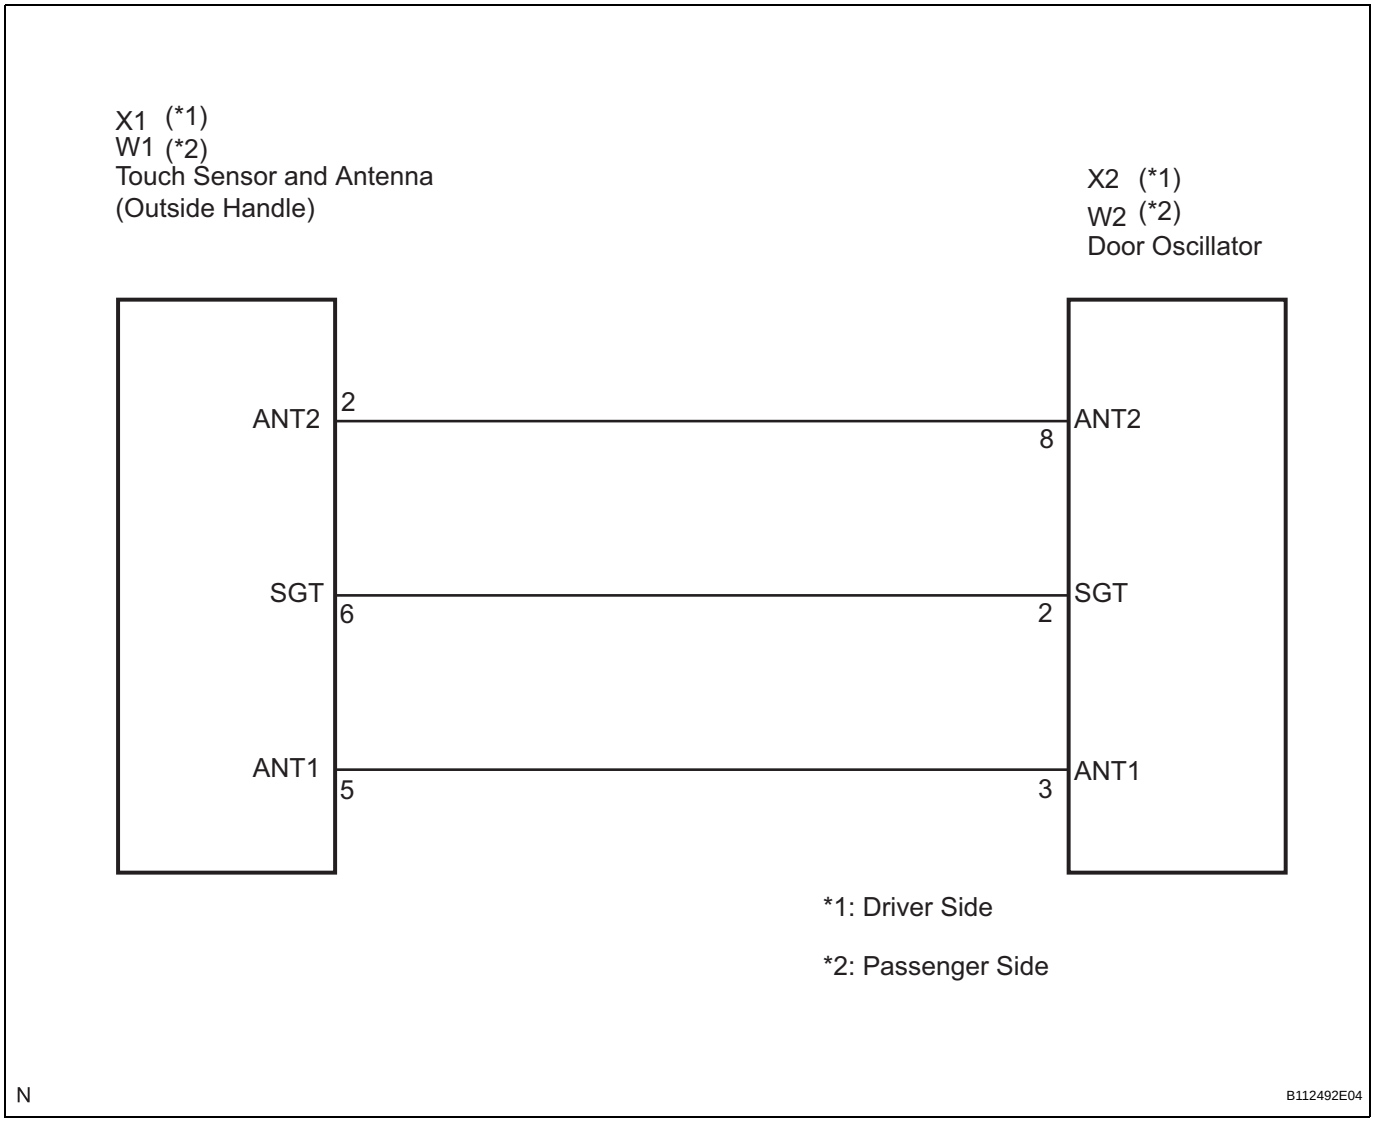
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Antenna Circuit

DESCRIPTION

Terminals ANT1 and ANT2 of the antenna (door outside handle) detect if the electrical key is within the action area around the door outside handle.

WIRING DIAGRAM

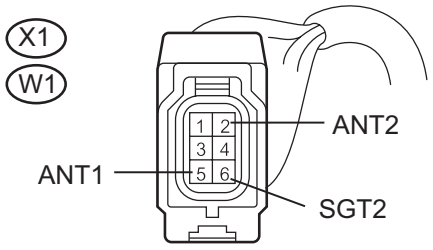


DL

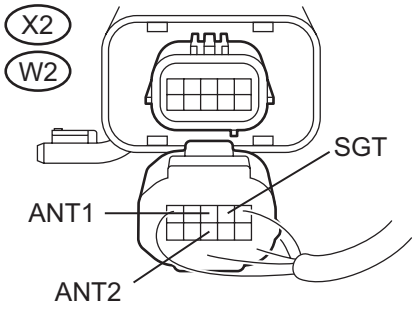
INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR (ELECTRICAL KEY OSCILLATOR - ANTENNA)

Antenna Wire Harness:



Door Oscillator:



H

B112467E07

(a) Remove the outside handle.
(b) Disconnect the antenna and door oscillator connectors.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
X1-2 (ANT2) - X2-8 (ANT2) (*1)	Always	Below 1 Ω
X1-6 (SGT) - X2-2 (SGT) (*1)	Always	Below 1 Ω
X1-5 (ANT1) - X2-3 (ANT1) (*1)	Always	Below 1 Ω
X1-2 (ANT2) - Body ground (*1)	Always	10 kΩ or higher
X1-6 (SGT) - Body ground (*1)	Always	10 kΩ or higher
X1-5 (ANT1) - Body ground (*1)	Always	10 kΩ or higher
W1-2 (ANT2) - W2-8 (ANT2) (*2)	Always	Below 1 Ω
W1-6 (SGT) - W2-2 (SGT) (*2)	Always	Below 1 Ω
W1-5 (ANT1) - W2-3 (ANT1) (*2)	Always	Below 1 Ω
W1-2 (ANT2) - Body ground (*2)	Always	10 kΩ or higher
W1-6 (SGT) - Body ground (*2)	Always	10 kΩ or higher
W1-5 (ANT1) - Body ground (*2)	Always	10 kΩ or higher

*1: Driver side
*2: Passenger side

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2	CHECK AND REPLACE DOOR OUTSIDE HANDLE

(a) Replace the door outside handle.
(b) Check that the entry LOCK/UNLOCK function operates normally.

OK:

Entry LOCK/UNLOCK function operates normally.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK

END (DOOR OUTSIDE HANDLE IS DEFECTIVE)

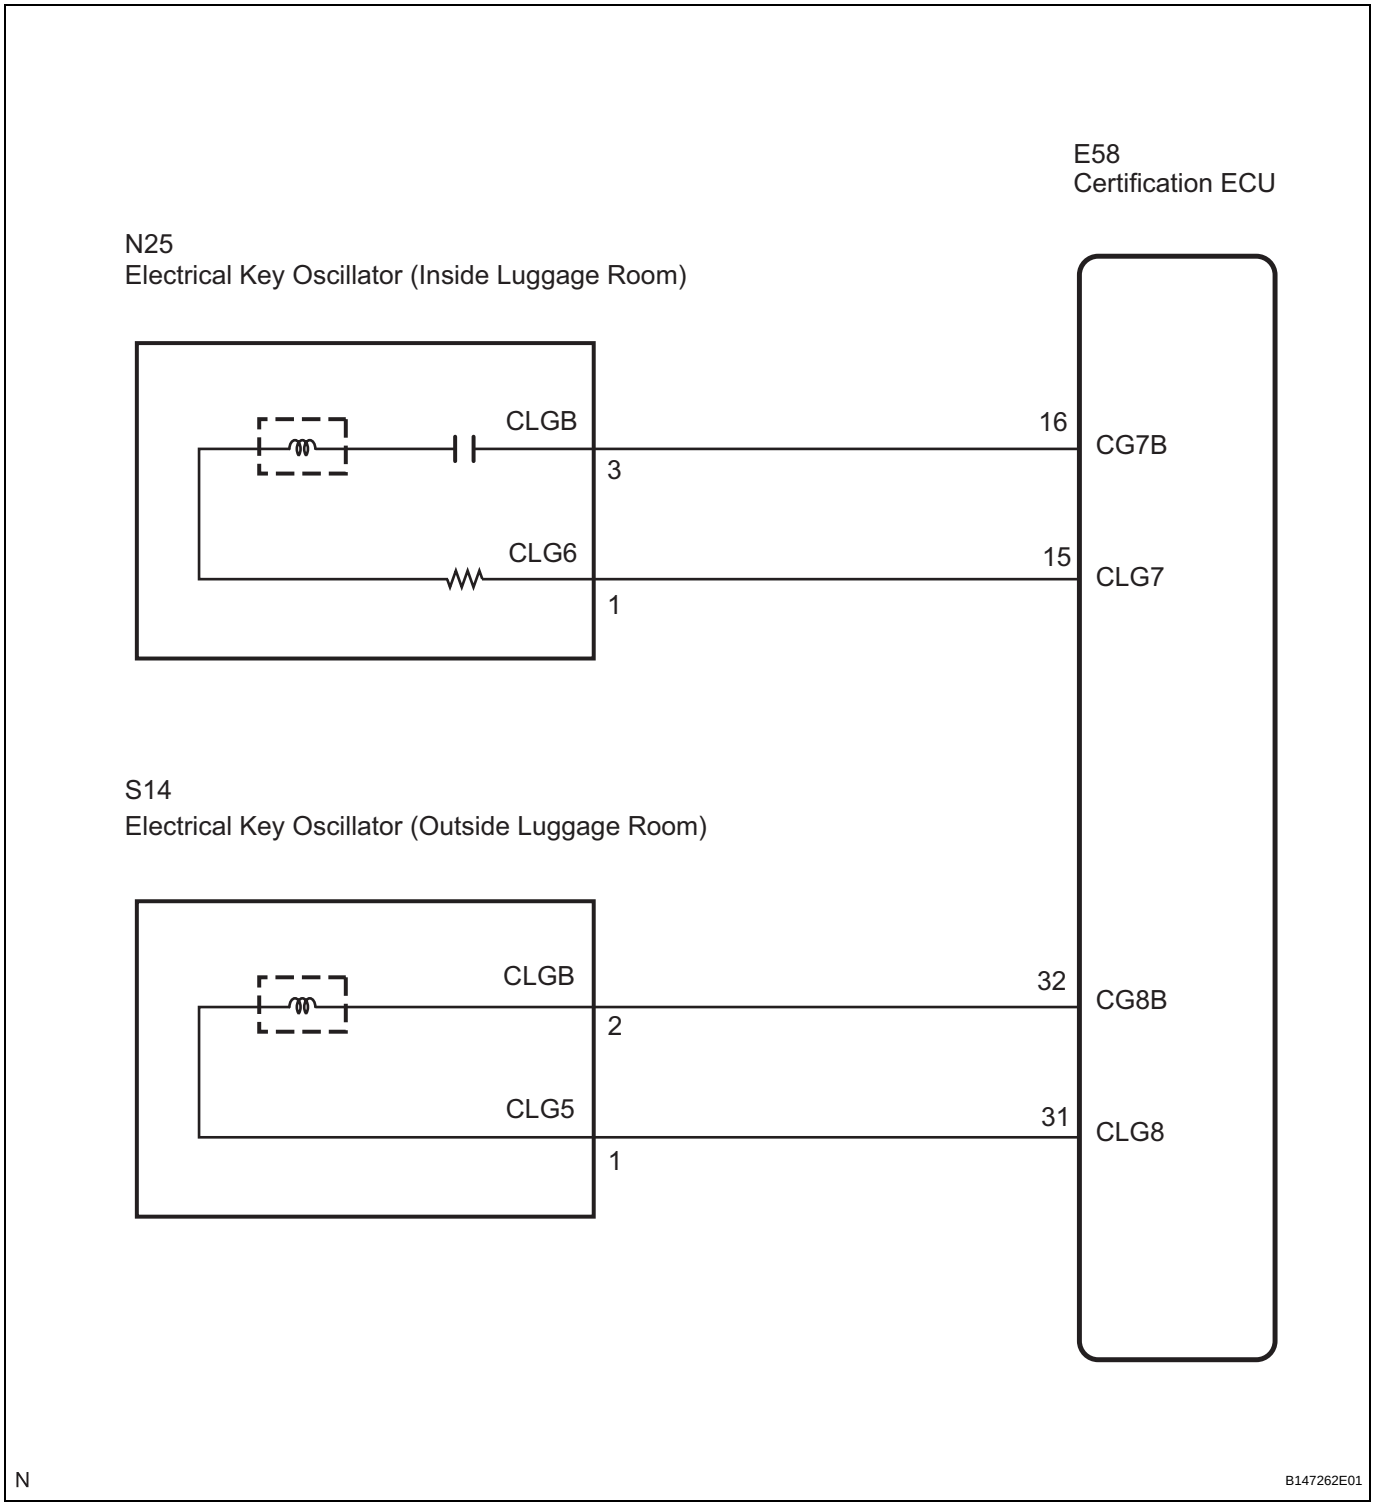
DL

Luggage Oscillator Circuit

DESCRIPTION

The certification ECU activates the inner and outer luggage compartment oscillators. The power is supplied from the certification ECU to both the inner and outer luggage compartment oscillators. The inner and outer luggage compartment oscillator circuits have the same wiring. If the entry luggage compartment function has a problem, check both the inner and outer luggage compartment oscillator circuits.

WIRING DIAGRAM

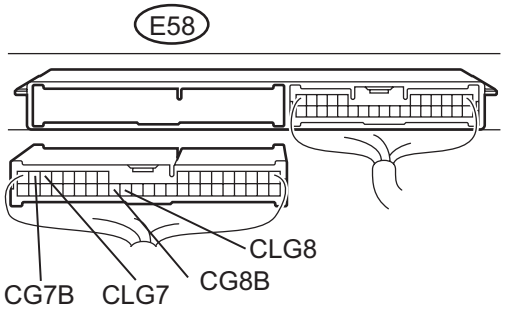


DL

INSPECTION PROCEDURE

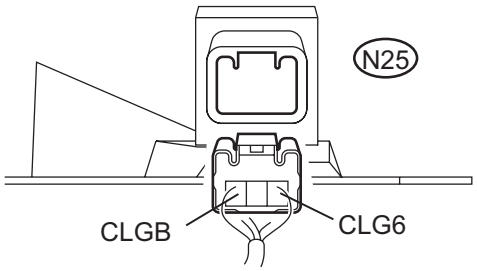
1	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - ELECTRICAL KEY OSCILLATOR)

Certification ECU:



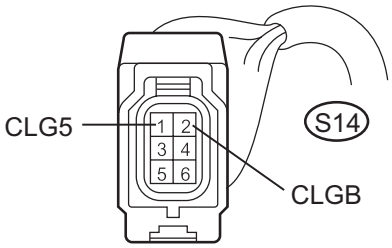
Electrical Key Oscillator

(Inside Luggage Compartment):



Electrical Key Oscillator

(Outside Luggage Compartment):



H

B137965E01

(a) Disconnect the E58 ECU connector.
(b) Disconnect the oscillator connectors.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E58-16 (CG7B) - N25-3 (CLGB)	Always	Below 1 Ω
E58-15 (CLG7) - N25-1 (CLG6)	Always	Below 1 Ω
E58-32 (CG8B) - S14-2 (CLGB)	Always	Below 1 Ω
E58-31 (CLG8) - S14-1 (CLG5)	Always	Below 1 Ω
E58-16 (CG7B) - Body ground	Always	10 kΩ or higher
E58-15 (CLG7) - Body ground	Always	10 kΩ or higher
E58-32 (CG8B) - Body ground	Always	10 kΩ or higher
E58-31 (CLG8) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

DL

2	CHECK AND REPLACE ELECTRICAL KEY OSCILLATOR

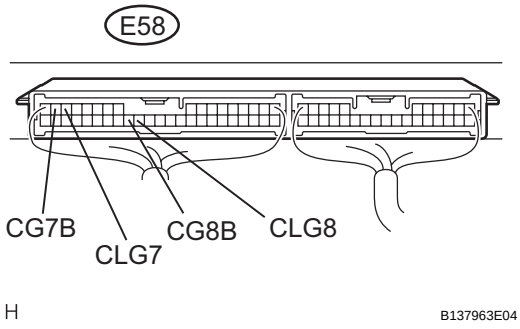
(a) Replace the electrical key oscillator.
(b) Check that the luggage compartment door entry LOCK/UNLOCK function operates normally.
OK:
Luggage compartment door entry LOCK/UNLOCK function operates normally.

OK → **END (ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)**

NG

3	PERFORM ACTIVE TEST BY INTELLIGENT TESTER

Certification ECU:



(a) Reconnect the oscillator and the ECU connectors.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the engine switch on (IG).
(d) Following the display on the tester, select the "ACTIVE TEST".
SMART ACCESS (Certification ECU):

Item	Vehicle Condition/Test Details
IN-BDR TRNSMTTR	Electrical key oscillator (Luggage compartment inner) ON/OFF
BDOOR TRNSMTTR	Electrical key oscillator (Luggage compartment outer) ON/OFF

(e) Measure the frequency according to the value(s) in the table below.
Standard

Tester Connection (Symbols)	Condition	Specified Condition
E58-16 (CG7B) - E58-15 (CLG7)	During ACTIVE TEST	Frequency is generated (higher than 0 Hz)
E58-32 (CG8B) - E58-31 (CLG8)	During ACTIVE TEST	Frequency is generated (higher than 0 Hz)

NG → **REPLACE CERTIFICATION ECU**

OK

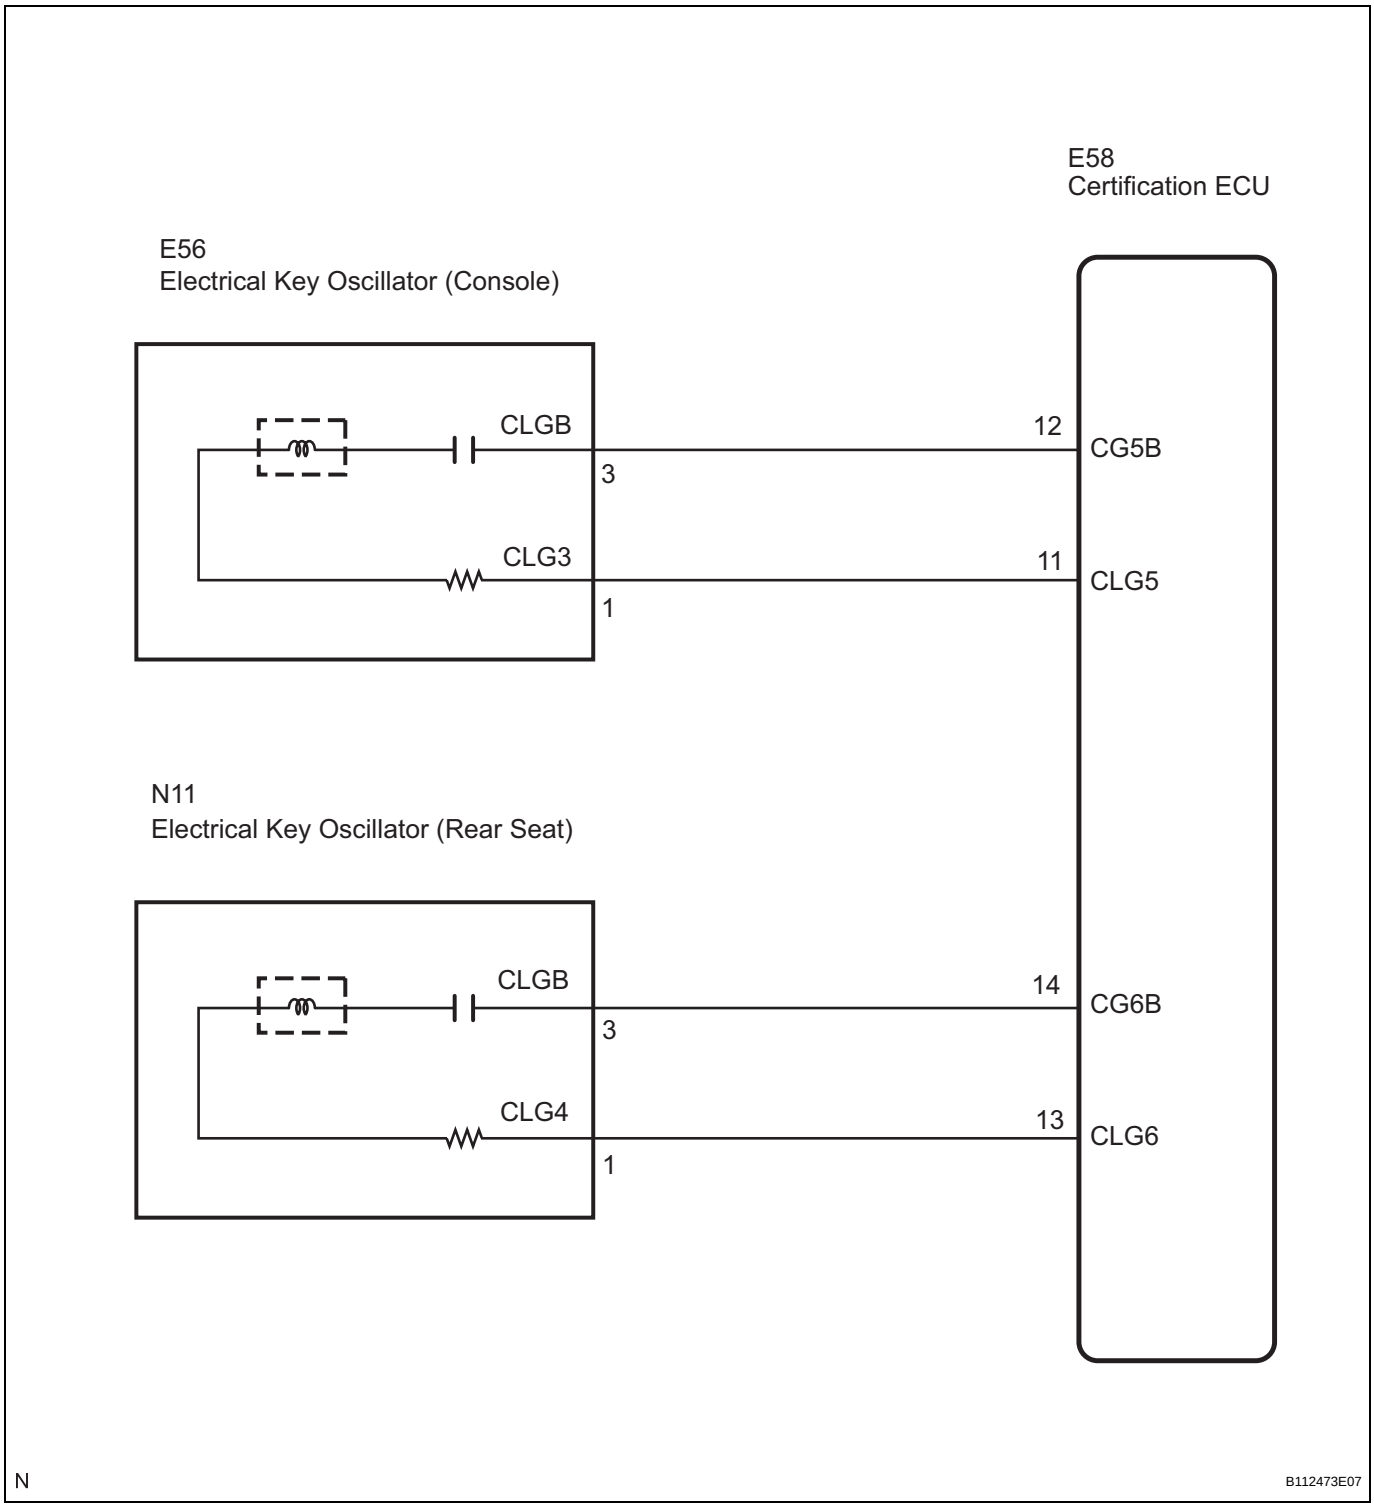
DL

Room Oscillator Circuit

DESCRIPTION

The certification ECU activates the front and rear cabin oscillators. The power is supplied from the certification ECU to both the front and rear cabin oscillators. The front and rear cabin oscillator circuits have the same wiring. If the smart key system does not operate properly inside the vehicle, check both the front and rear cabin oscillator circuits.

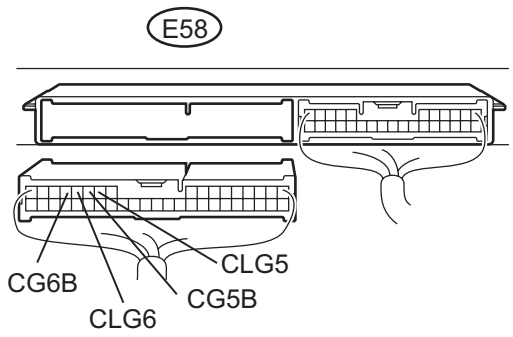
WIRING DIAGRAM



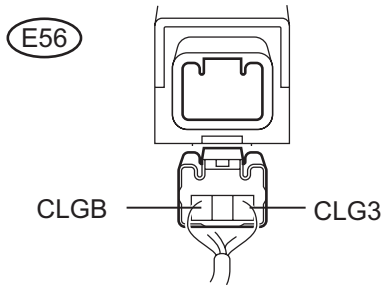
INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - ELECTRICAL KEY OSCILLATOR)

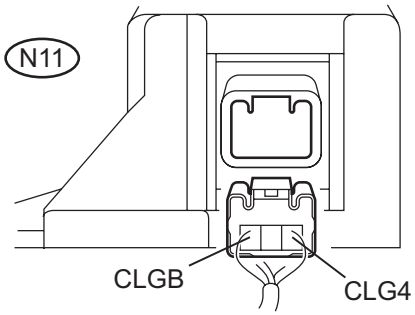
Certification ECU:



Electrical Key Oscillator (Console):



Electrical Key Oscillator (Rear Seat):



H

B137966E01

(a) Disconnect the E58 ECU connector.
(b) Disconnect the oscillator connectors.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E58-12 (CG5B) - E56-3 (CLGB)	Always	Below 1 Ω
E58-11 (CLG5) - E56-1 (CLG3)	Always	Below 1 Ω
E58-14 (CG6B) - N11-3 (CLGB)	Always	Below 1 Ω
E58-13 (CLG6) - N11-1 (CLG4)	Always	Below 1 Ω
E58-12 (CG5B) - Body ground	Always	10 kΩ or higher
E58-11 (CLG5) - Body ground	Always	10 kΩ or higher
E58-14 (CG6B) - Body ground	Always	10 kΩ or higher
E58-13 (CLG6) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

DL

2	CHECK AND REPLACE ELECTRICAL KEY OSCILLATOR

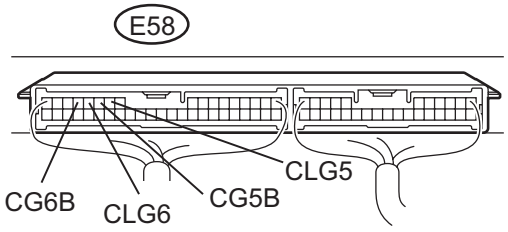
(a) Replace the electrical key oscillator.
(b) Check that the entry LOCK/UNLOCK function operates normally.
OK:
Entry LOCK/UNLOCK function operates normally.

OK → **END (ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)**

NG

3	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (CERTIFICATION ECU OUTPUT SIGNAL)

Certification ECU:



(a) Reconnect the oscillator and the ECU connectors.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the engine switch on (IG).
(d) Following the display on the tester, select the "ACTIVE TEST".
SMART ACCESS (Certification ECU):

Item	Vehicle Condition/Test Details
Fr TRANSMITTER	Electrical key oscillator (console) ON/OFF
Rr TRANSMITTER	Electrical key oscillator (rear seat) ON/OFF

(e) Measure the frequency according to the value(s) in the table below.
Standard

Tester Connection (Symbols)	Condition	Specified Condition
E58-12 (CG5B) - E58-11 (CLG5)	During ACTIVE TEST	Frequency is generated (higher than 0 Hz)
E58-14 (CG6B) - E58-13 (CLG6)	During ACTIVE TEST	Frequency is generated (higher than 0 Hz)

NG → **REPLACE CERTIFICATION ECU**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

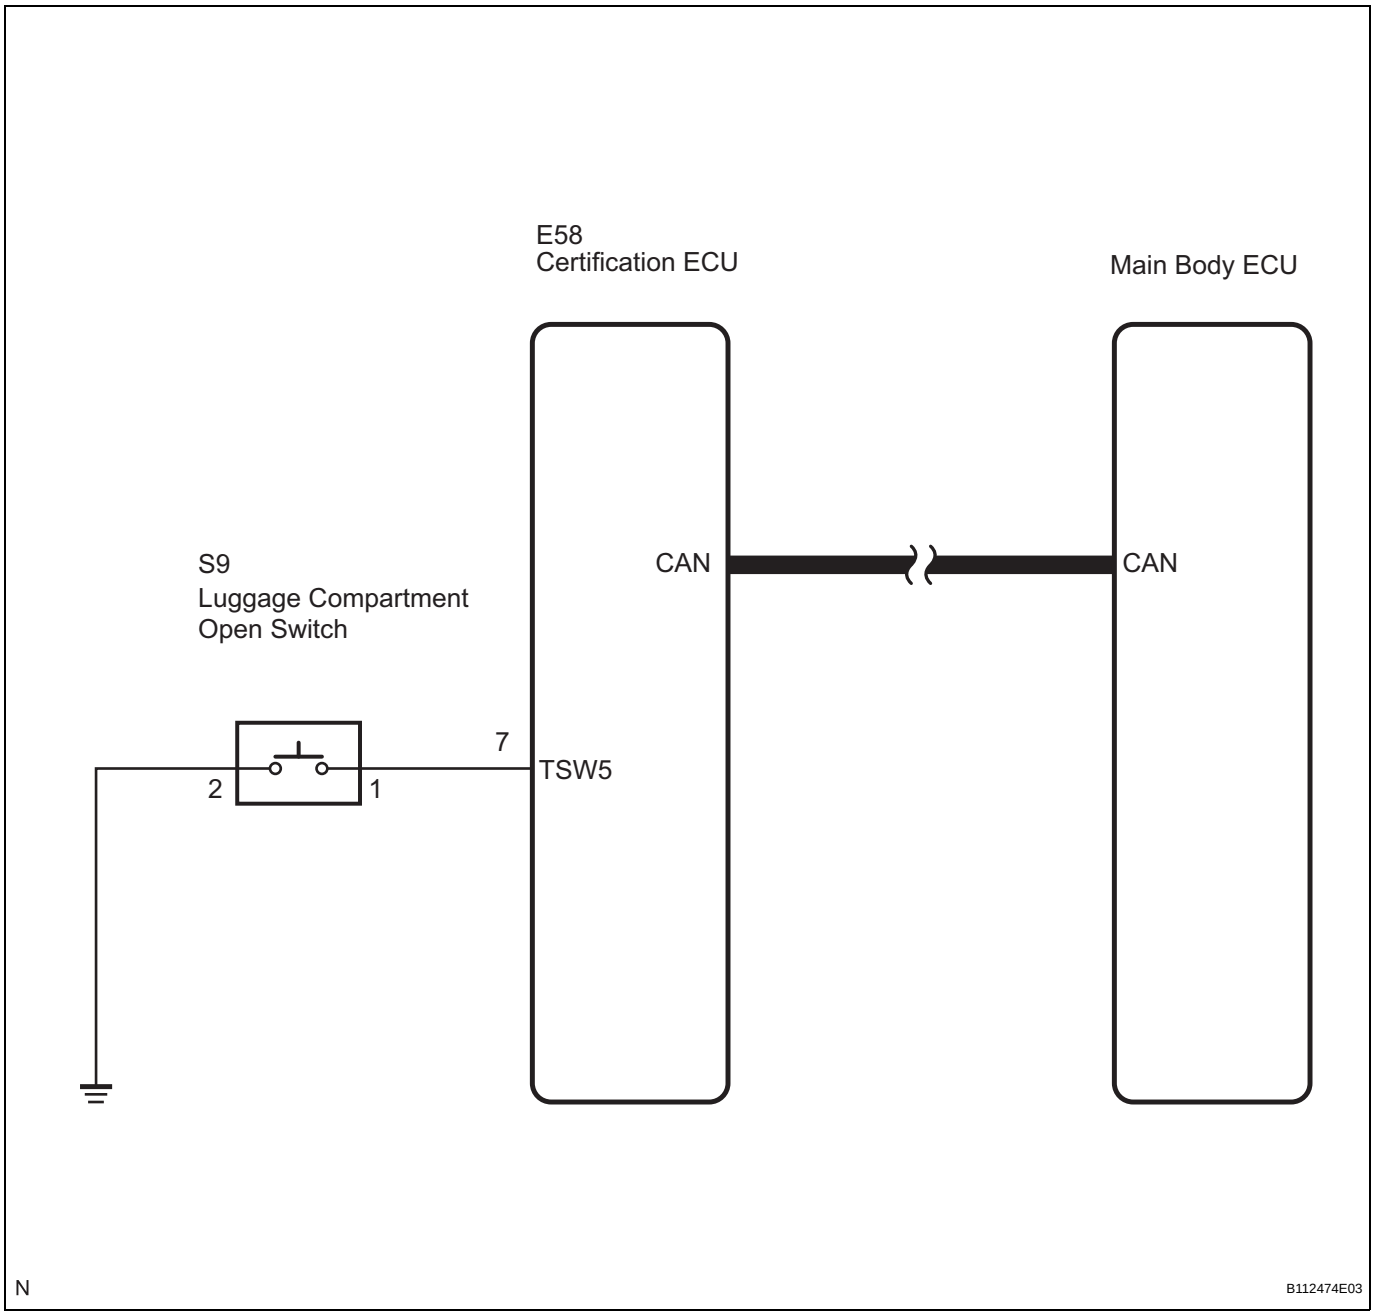
DL

Luggage Compartment Door Open Switch Circuit

DESCRIPTION

If the certification ECU detects that the luggage compartment open switch is pressed when the driver is carrying the electrical key or when the electrical key is locked in the luggage compartment door, the certification ECU sends a luggage compartment door open motor drive request signal to the main body ECU.

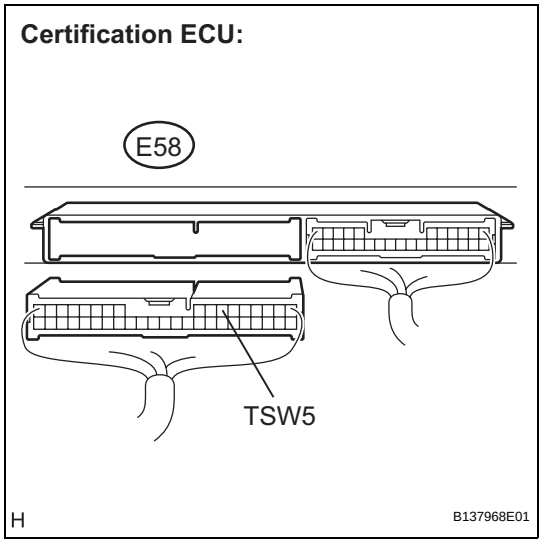
WIRING DIAGRAM



DL

INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - LUGGAGE COMPARTMENT OPEN SWITCH)



(a) Disconnect the E58 ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

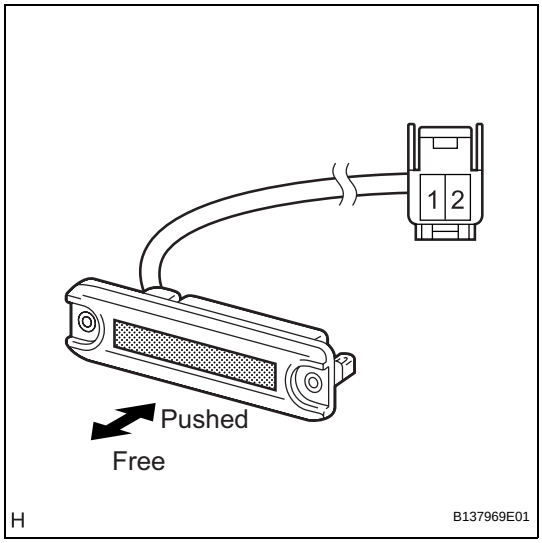
Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E58-7 (TSW5) - Body ground	Luggage compartment open switch not pushed	10 kΩ or higher
	Luggage compartment open switch pushed	Below 1 Ω

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

2	INSPECT LUGGAGE COMPARTMENT OPEN SWITCH



(a) Disconnect the switch connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
S9-1 - S9-2	Luggage compartment open switch not pushed (OFF)	10 kΩ or higher
	Luggage compartment open switch pushed (ON)	Below 1 Ω

NG → **REPLACE LUGGAGE COMPARTMENT OPEN SWITCH**

OK

REPLACE CERTIFICATION ECU

DL

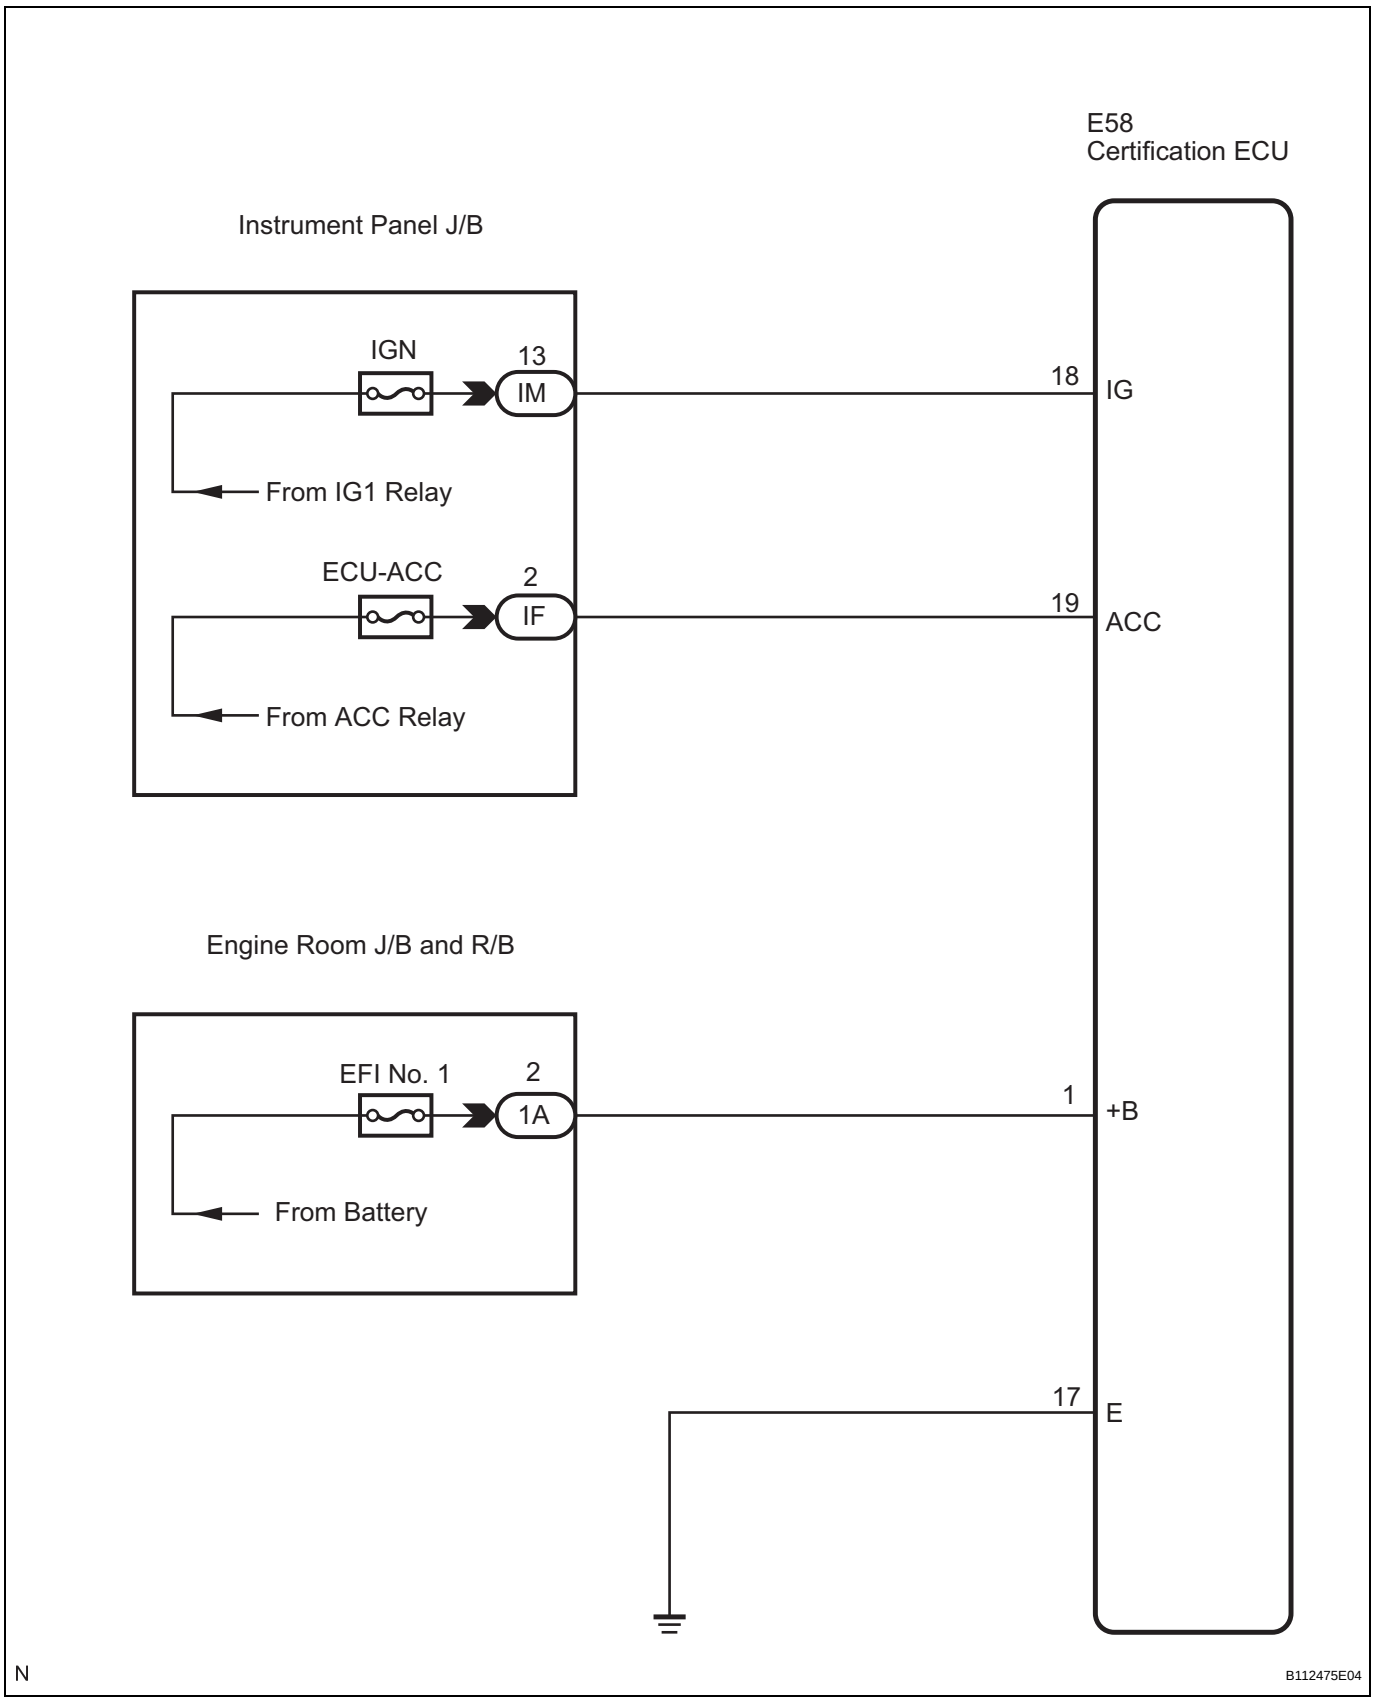
Certification ECU Power Source Circuit

DESCRIPTION

This is the power source circuit of the certification ECU.
The certification ECU controls the following:

- Electrical key verification confirmation
- Cabin and door oscillator control
- Entry door LOCK/UNLOCK request to the main body ECU
- Steering LOCK/UNLOCK request
- Immobilizer SET/UNSET request to the ID code box

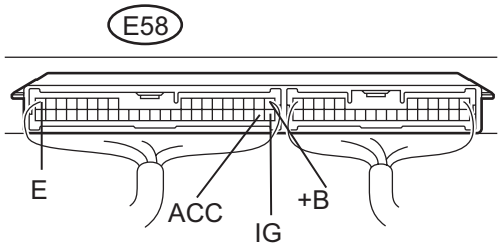
WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR (POWER SOURCE CIRCUIT)

Certification ECU:



H

B137963E07

(a) Disconnect the E58 certification ECU connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection (Symbols)	Condition	Specified Condition
E58-1 (+B) - Body ground	Always	10 to 14 V
E58-18 (IG) - Body ground	Engine switch OFF	Below 1 V
	Engine switch ON (IG)	10 to 14 V
E58-19 (ACC) - Body ground	Engine switch OFF	Below 1 V
	Engine switch ON (ACC)	10 to 14 V

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E58-17 (E) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

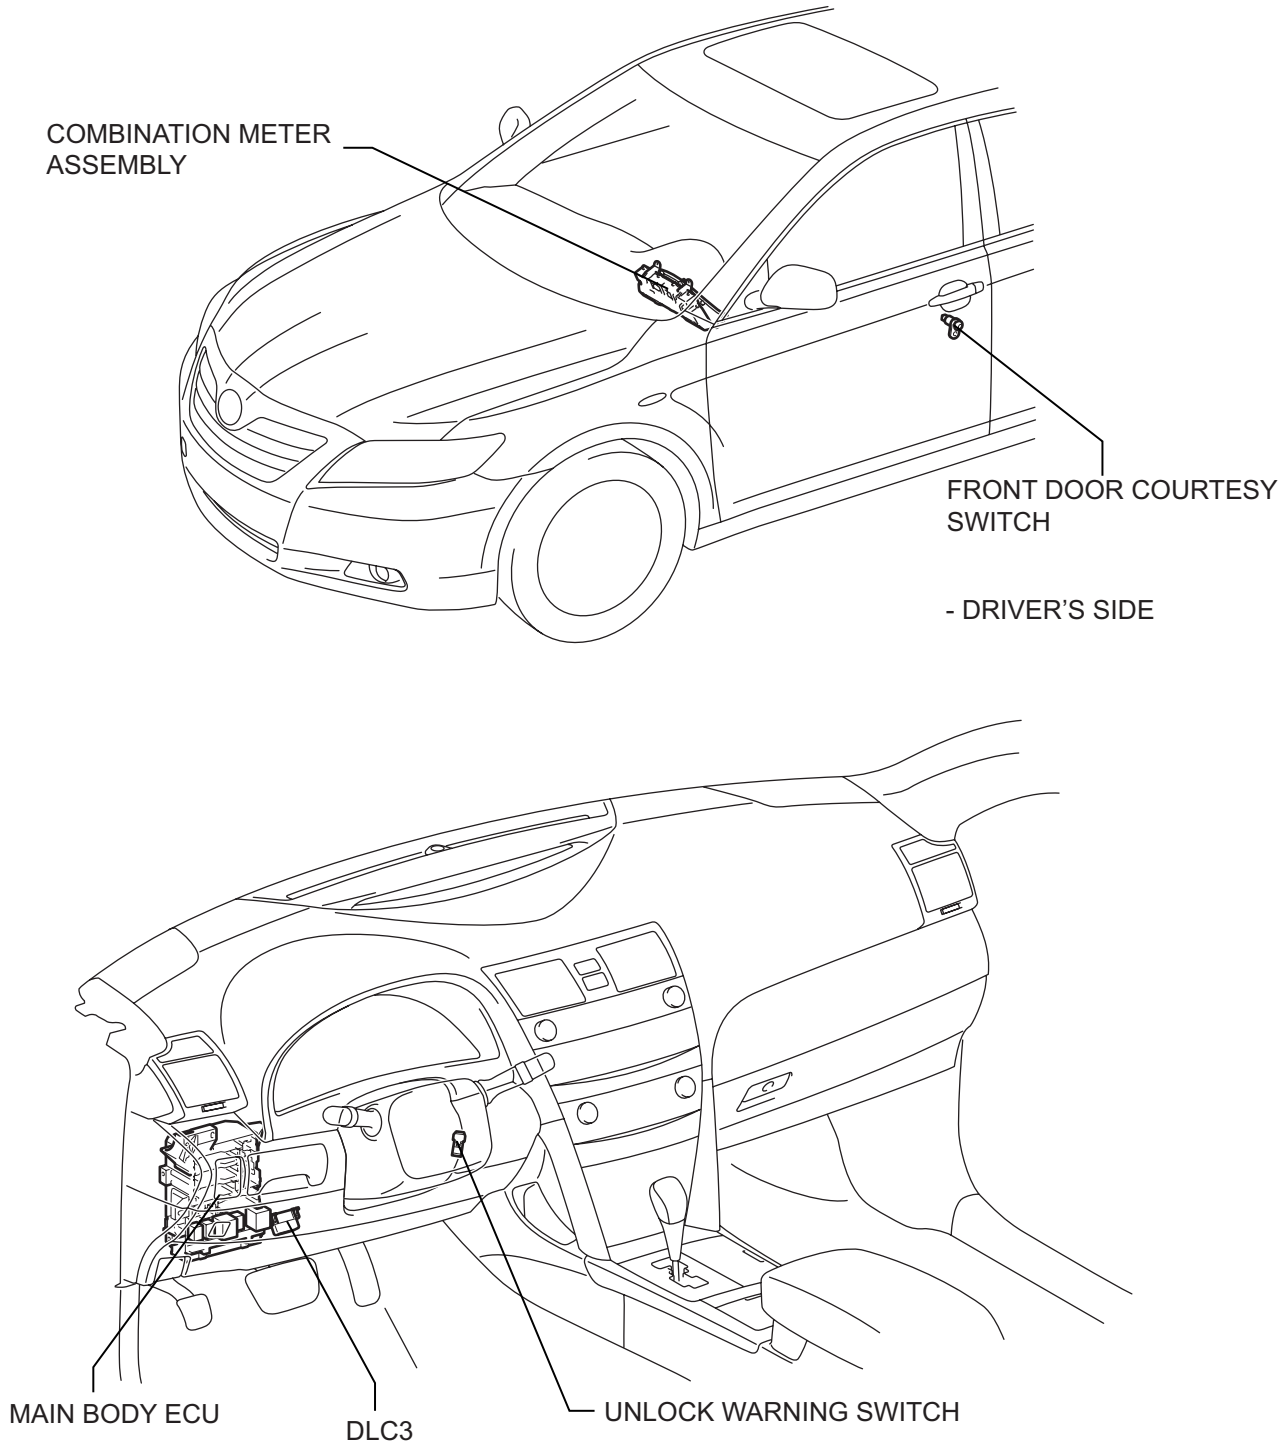
KEY REMINDER WARNING SYSTEM

PRECAUTION

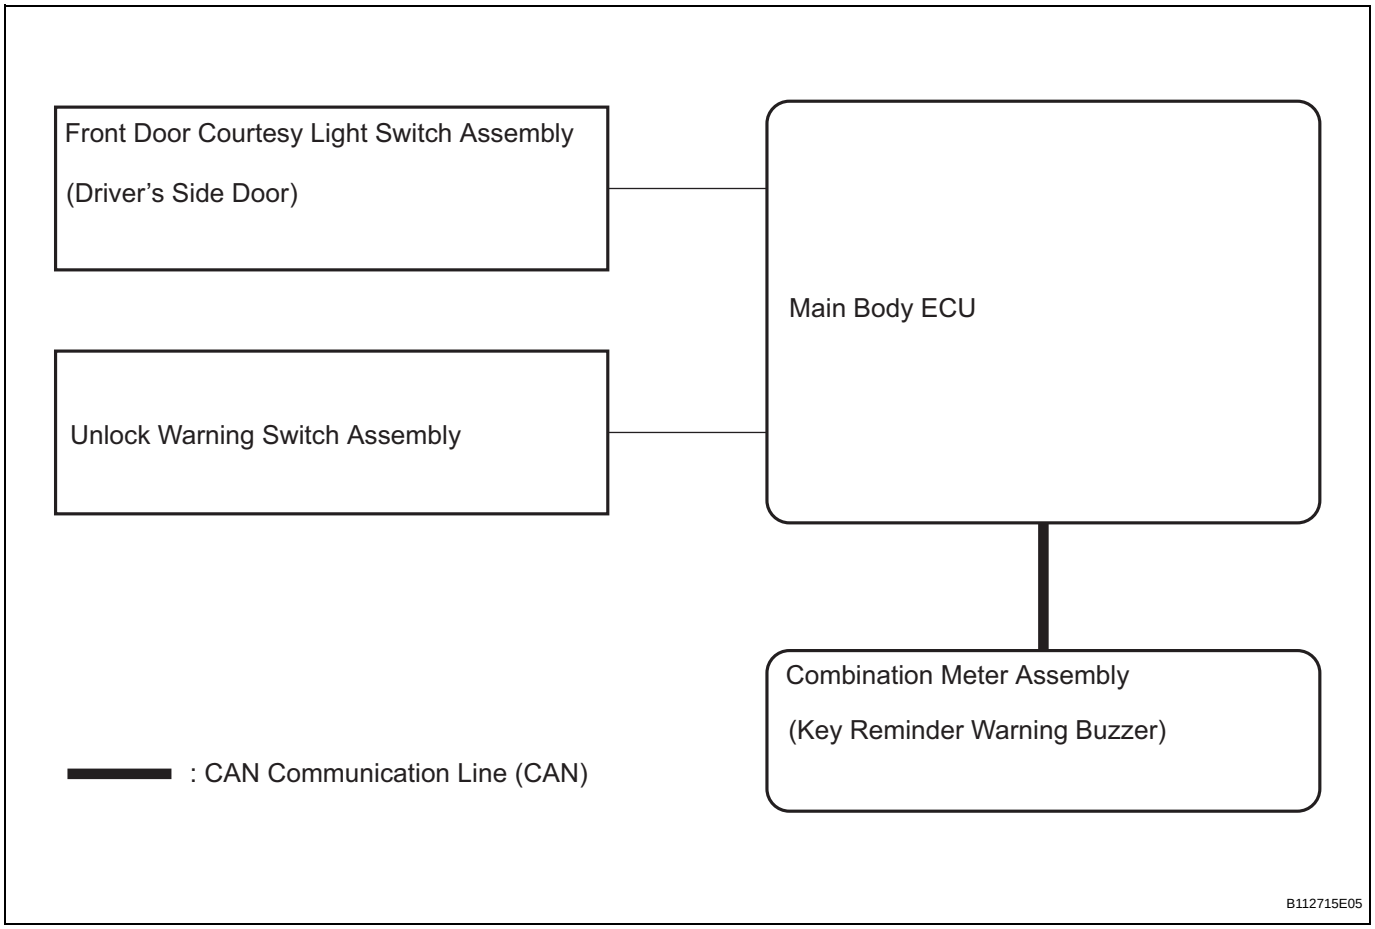
1. PRECAUTION FOR KEY REMINDER WARNING SYSTEM

(a) For the inspection procedure of the key reminder warning system for models equipped with the entry and start system, refer to SMART KEY SYSTEM (See page DL-142).

PARTS LOCATION



SYSTEM DIAGRAM



BODY ECU:

Transmitting ECU	Receiving ECU	Signals	Communication method
Main Body ECU	Combination Meter Assembly	Driver's side door courtesy light switch signal	CAN
Main Body ECU	Combination Meter Assembly	Unlock warning switch signal	CAN

SYSTEM DESCRIPTION

1. KEY REMINDER WARNING SYSTEM DESCRIPTION

(a) When the driver's side door is opened with the ignition key in the ACC or LOCK position, this system causes a buzzer to sound in order to warn the driver that the ignition key has not been removed.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedures to troubleshoot the key reminder warning system.
- The intelligent tester should be used in steps 3 and 5.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 INSPECT BATTERY VOLTAGE

(a) Measure the battery voltage.
Standard voltage:
10 to 14 V
If the voltage is below 10 V, recharge or replace the battery before proceeding to the next step.

NEXT

3 INSPECT COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM (CAN)

(a) Use the intelligent tester to check if the CAN communication system (CAN) is functioning normally.
(1) (ECU connected, communication line malfunctioning) If no code is output, proceed to A.
(2) (ECU connected, communication line malfunctioning) If any code is output, proceed to B.

B → **GO TO CAN COMMUNICATION SYSTEM**

A

4 PROBLEM SYMPTOMS TABLE

(a) If the fault is not listed in the problem symptoms table, proceed to A.
(b) If the fault is listed in the problem symptoms table, proceed to B.

B → **Go to step 6**

A

5 OVERALL ANALYSIS AND TROUBLESHOOTING

(a) Inspection with the intelligent tester (DATA LIST)
(b) TERMINALS OF ECU (See page DL-198)

DL

NEXT

6	**REPAIR OR REPLACE**

NEXT

7	**CONFIRMATION TEST**

NEXT

END

OPERATION CHECK

1. CHECK FUNCTION

(a) Check that the key reminder warning buzzer sounds.

(1) With the driver's side door closed, insert the key into the ignition key cylinder and then turn the key to the LOCK or ACC position.

(2) Check that the buzzer sounds intermittently if the driver's side door is opened.

(b) Check that the key reminder warning buzzer stops.

(1) Check that the buzzer stops sounding if any of the following operations is performed while the buzzer is sounding:

- Close the driver's side door (front door courtesy light switch is off).
- Turn the ignition switch to the ON position.
- Pull out the key from the ignition key cylinder.

CUSTOMIZE PARAMETERS

1. PARAMETERS (USING INTELLIGENT TESTER)

HINT:

The following items can be customized.

NOTICE:

- **Be sure to record current values before customizing.**
- **When performing troubleshooting, be aware that the functions may be set to OFF by customizing. (Example: In case of the symptom in which "The wireless operation does not function", check that the wireless operation is not set to OFF by customizing, then perform the troubleshooting.)**

METER:

Display (Item)	Default	Contents	Setting
KEY REMND VOLUM	LARGE	Function to change volume of the key reminder warning buzzer.	LARGE/MEDIUM/SMALL
KEY REMND SOUND	NORMAL	Function to change cycle of the key reminder warning buzzer.	FAST/NORMAL/SLOW

PROBLEM SYMPTOMS TABLE

KEY REMINDER WARNING SYSTEM:

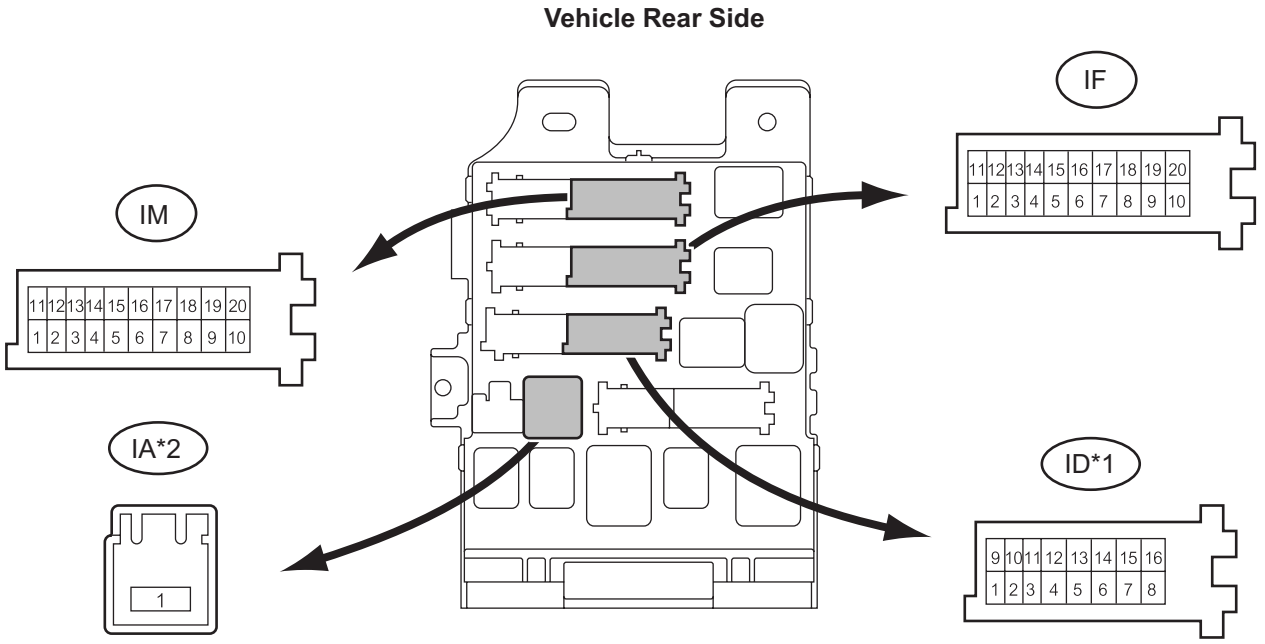
Symptom	Suspected area	See page
Key reminder buzzer does not sound.	1. Unlock warning switch circuit	DL-205
	2. Door courtesy switch circuit	DL-202
	3. Combination meter assembly (Key reminder buzzer)	ME-15
	4. Main body ECU (Instrument panel J/B)	-

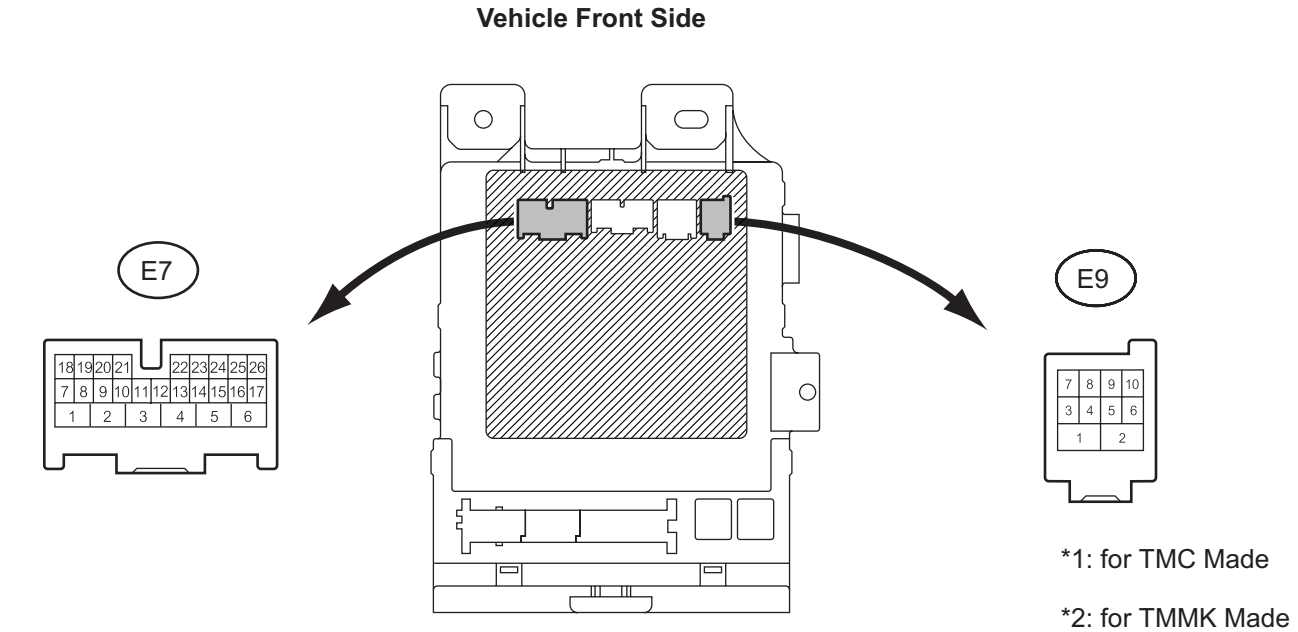
TERMINALS OF ECU

1. CHECK MAIN BODY ECU (INSTRUMENT PANEL J/B)

(a) Disconnect the IF and IM, ID*1 or IA*2 junction block connectors.
*1: for TMC Made
*2: for TMMK Made

(b) Disconnect the E7 and E9 main body ECU connectors.





H

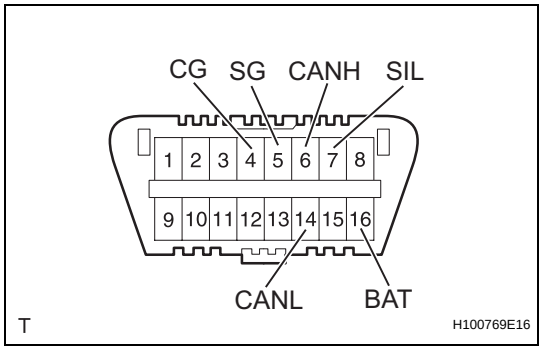
B128346E01

DL

(c) Measure the resistance and voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
GND1 (IF-10) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
GND2 (IM-9) - Body ground				
BECU*1 (ID-10) - Body ground	O*1 - Body ground	Power source	Always	10 to 14 V
BATB*2 (IA-1) - Body ground	B*2 - Body ground			
DCTY (E7-24) - Body ground	L - Body ground	Driver door courtesy light switch signal	Switch pushed (Door closed)	Below 1 Ω
			Switch free (Door opened)	10 kΩ or higher
KSW (E9-5) - Body ground	L - Body ground	Key unlock warning switch signal	No key is in ignition key cylinder	10 kΩ or higher
			Key is in ignition key cylinder	Below 1 Ω

*1: for TMC Made
*2: for TMMK Made
HINT:
If the result is not as specified, there may be a malfunction on the wire harness side.



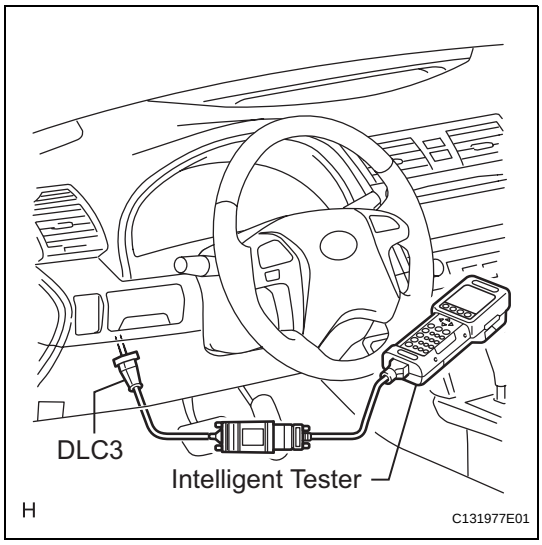
DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The vehicle's ECU uses ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch OFF*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch OFF*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition switch OFF*	6 kΩ or higher

NOTICE:
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**
If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.



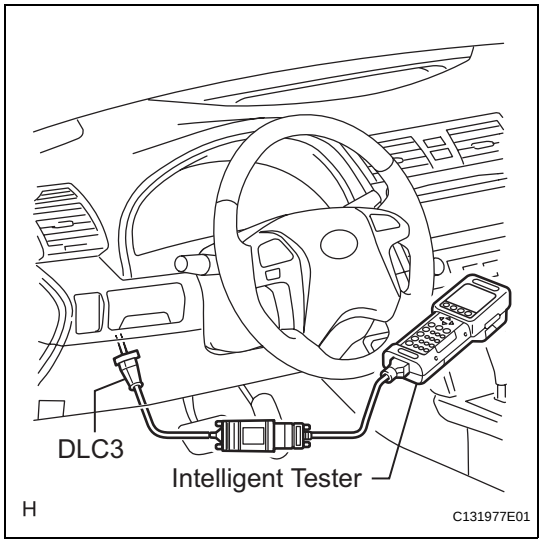
(b) Connect the cable of the intelligent tester (with CAN VIM) to the DLC3, turn the ignition switch to the ON position and attempt to use the intelligent tester. If the screen displays a communication error message, a problem exists in the vehicle side or tester side.
HINT:
- If communication is normal when the tool is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still impossible when the tool is connected to another vehicle, the problem is probably in the tool itself. Consult the Service Department listed in the tool's instruction manual.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the intelligent tester to read the DATA LIST allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non intrusive inspection can be very useful as intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the DATA LIST information early in troubleshooting is one way to save diagnostic time.



(a) Connect the intelligent tester to the Controller Area Network Vehicle Interface Module (CAN VIM). Then connect the CAN VIM to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Read the DATA LIST.

MAIN BODY:

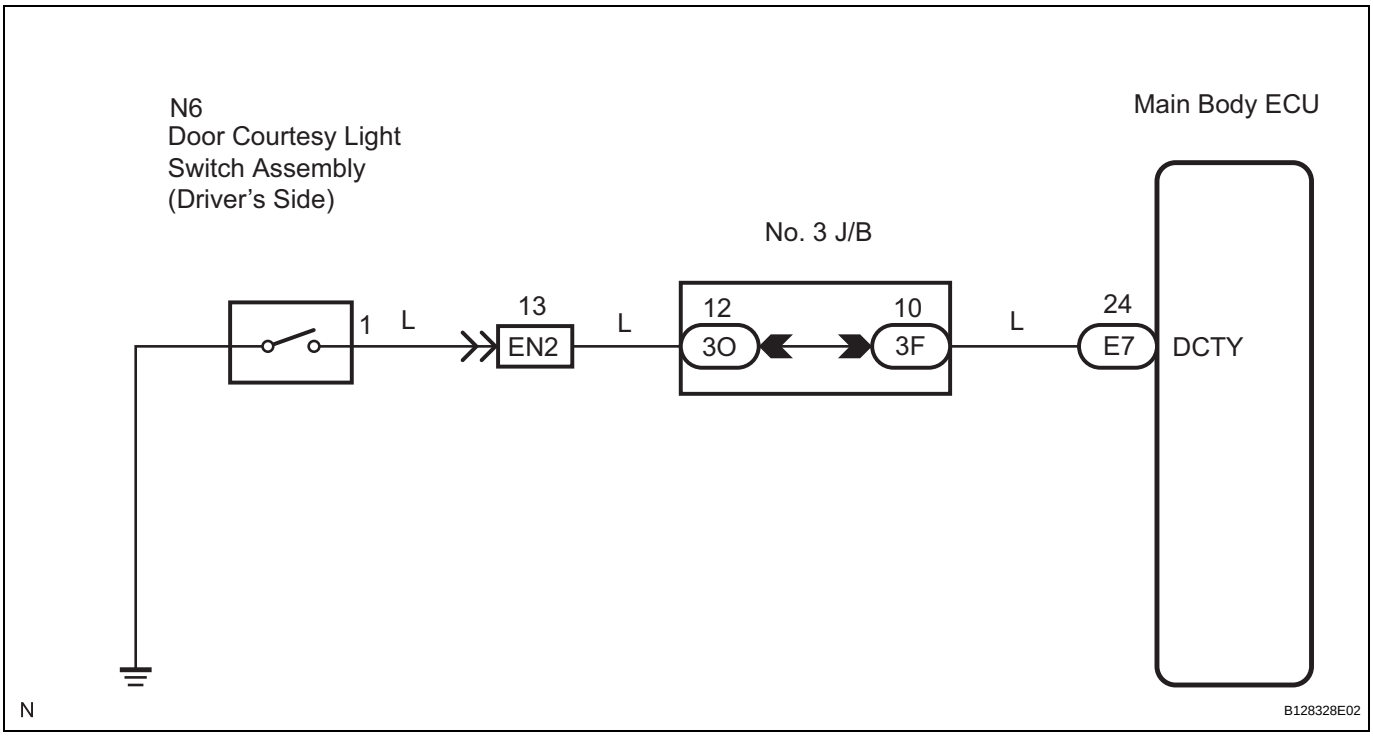
Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
KEY UNLK WRN SW	Unlock warning switch signal /ON or OFF	ON: Key is in ignition key cylinder OFF: No key is in ignition key cylinder	-
D DOR CTY SW	Driver's side door courtesy switch signal /ON or OFF	ON: Driver's side door is open OFF: Driver's side door is closed	-

Door Courtesy Switch Circuit

DESCRIPTION

The main body ECU detects the condition of the front door courtesy light switch assembly (driver's side).

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch to the ON position and turn the intelligent tester main switch on.
(c) Select D DOR CTY SW in the DATA LIST and read the value displayed on the tester.

DL

BODY:

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
D DOR CTY SW	Driver's side door courtesy switch signal/ON or OFF	ON: Driver's side door is open OFF: Driver's side door is closed	-

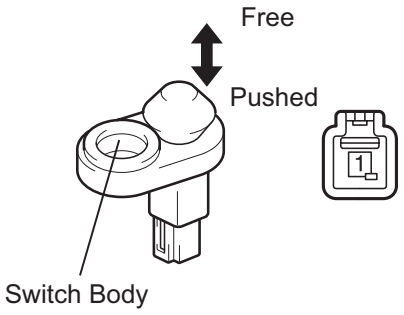
OK:
ON (Driver's door is open) appears on the screen.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

2 INSPECT FRONT DOOR COURTESY LIGHT SWITCH ASSEMBLY

Front Door Courtesy Light Switch Side Connector Front View:



(a) Remove the driver's side front door courtesy light switch (See page LI-128).
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - Switch body	Courtesy switch pushed (Door closed)	10 kΩ or higher
	Courtesy switch free (Door open)	Below 1 Ω

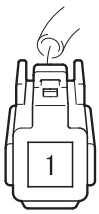
NG → **REPLACE FRONT DOOR COURTESY LIGHT SWITCH ASSEMBLY**

OK

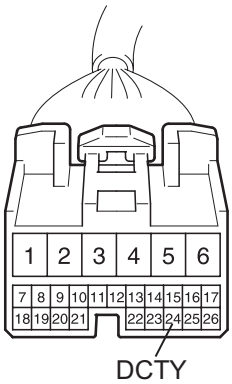
3 CHECK HARNESS AND CONNECTOR (FRONT DOOR COURTESY LIGHT SWITCH - MAIN BODY ECU)

Wire Harness Side Connector Front View:

N6
Front Door Courtesy Light Switch Assembly



E7
Main Body ECU



(a) Disconnect the E7 ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
N6-1 - E7-24 (DCTY)	Always	Below 1 Ω
N6-1 - Body ground		10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

DL

OK

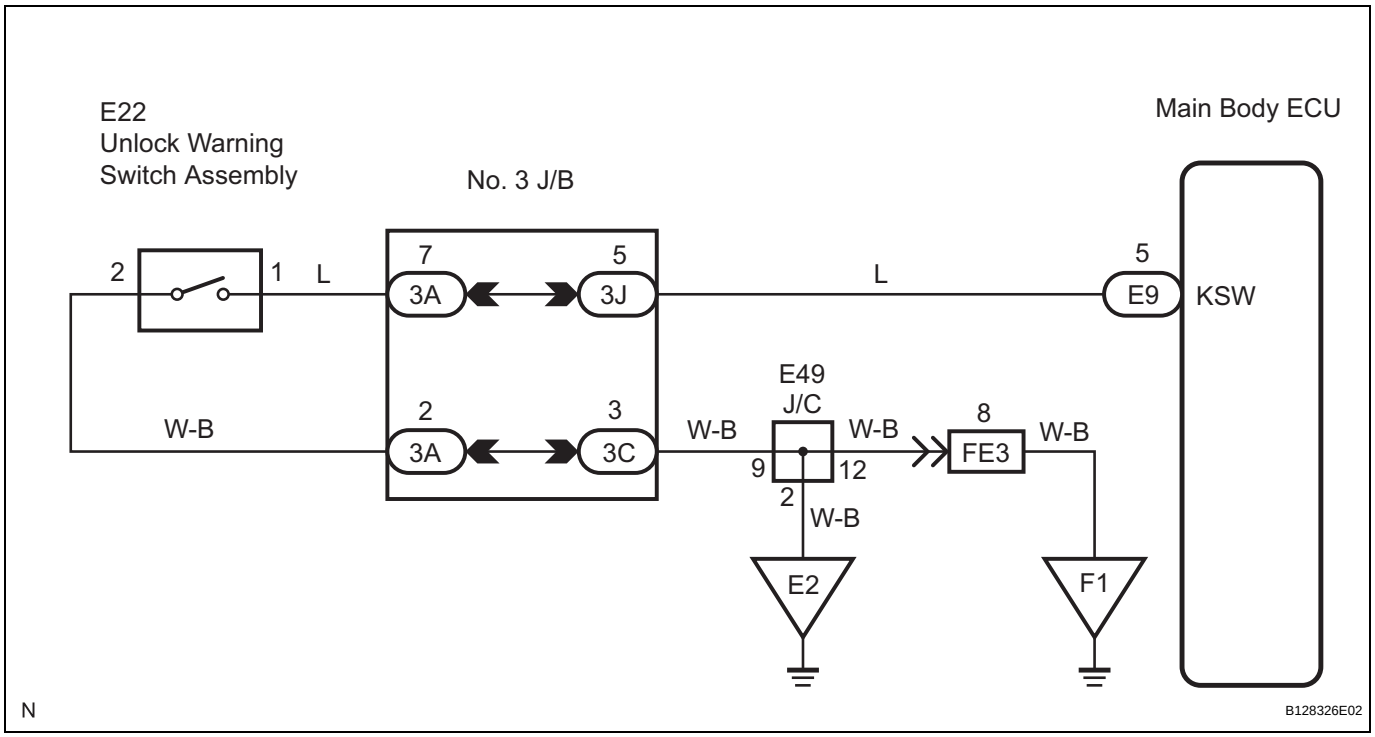
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Unlock Warning Switch Circuit

DESCRIPTION

The unlock warning switch detects if the key is in the ignition key cylinder.
The unlock warning switch turns on when the key is inserted into the ignition key cylinder and turns off when the key is removed from the cylinder.
The main body ECU is connected to the unlock warning switch via terminal KSW and key detection status signals are input to the main body ECU.
The main body ECU applies voltage to the unlock warning switch via terminal KSW. When the unlock warning switch is on (there is continuity between the switch terminals), a signal indicating that the key is in the ignition key cylinder is input to the main body ECU. When the switch is off (there is no continuity between the switch terminals), a signal indicating that the key is not in the cylinder is input.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

DL

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch to the ON position and turn the intelligent tester main switch on.
(c) Select KEY UNLK WRN SW in the DATA LIST and read the value displayed on the tester.

BODY:

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
KEY UNLK WRN SW	Unlock warning switch signal /ON or OFF	ON: Key is in ignition key cylinder OFF: No key is in ignition key cylinder	-

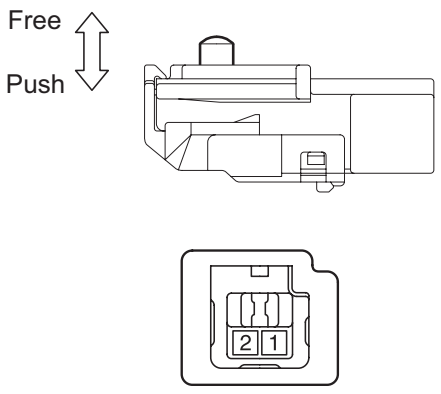
OK:
ON (Key is in ignition key cylinder) appears on the screen.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

2 INSPECT UNLOCK WARNING SWITCH ASSEMBLY

Unlock Warning Switch Assembly:



(a) Remove the unlock warning switch assembly (See page DL-225).
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Switch free (Key removed)	10 kΩ or higher
1 - 2	Switch pushed (Key set)	Below 1 Ω

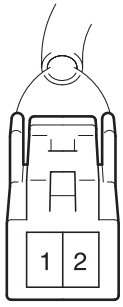
NG → **REPLACE UNLOCK WARNING SWITCH ASSEMBLY**

OK

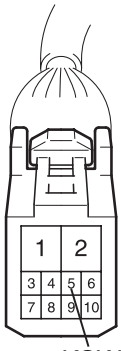
3 CHECK HARNESS AND CONNECTOR (UNLOCK WARNING SWITCH - MAIN BODY ECU)

Wire Harness Side Connector Front View:

E22
Unlock Warning Switch Assembly



E9
Main Body ECU



P B139168E01

(a) Disconnect the E22 switch and E9 ECU connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E22-1 - E9-5 (KSW)	Always	Below 1 Ω
E22-1 - Body ground		10 kΩ or higher

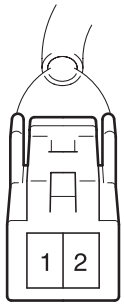
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 CHECK HARNESS AND CONNECTOR (UNLOCK WARNING SWITCH - BODY GROUND)

Wire Harness Side Connector Front View:

E22
Unlock Warning Switch Assembly



P B139172E01

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E22-2 - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

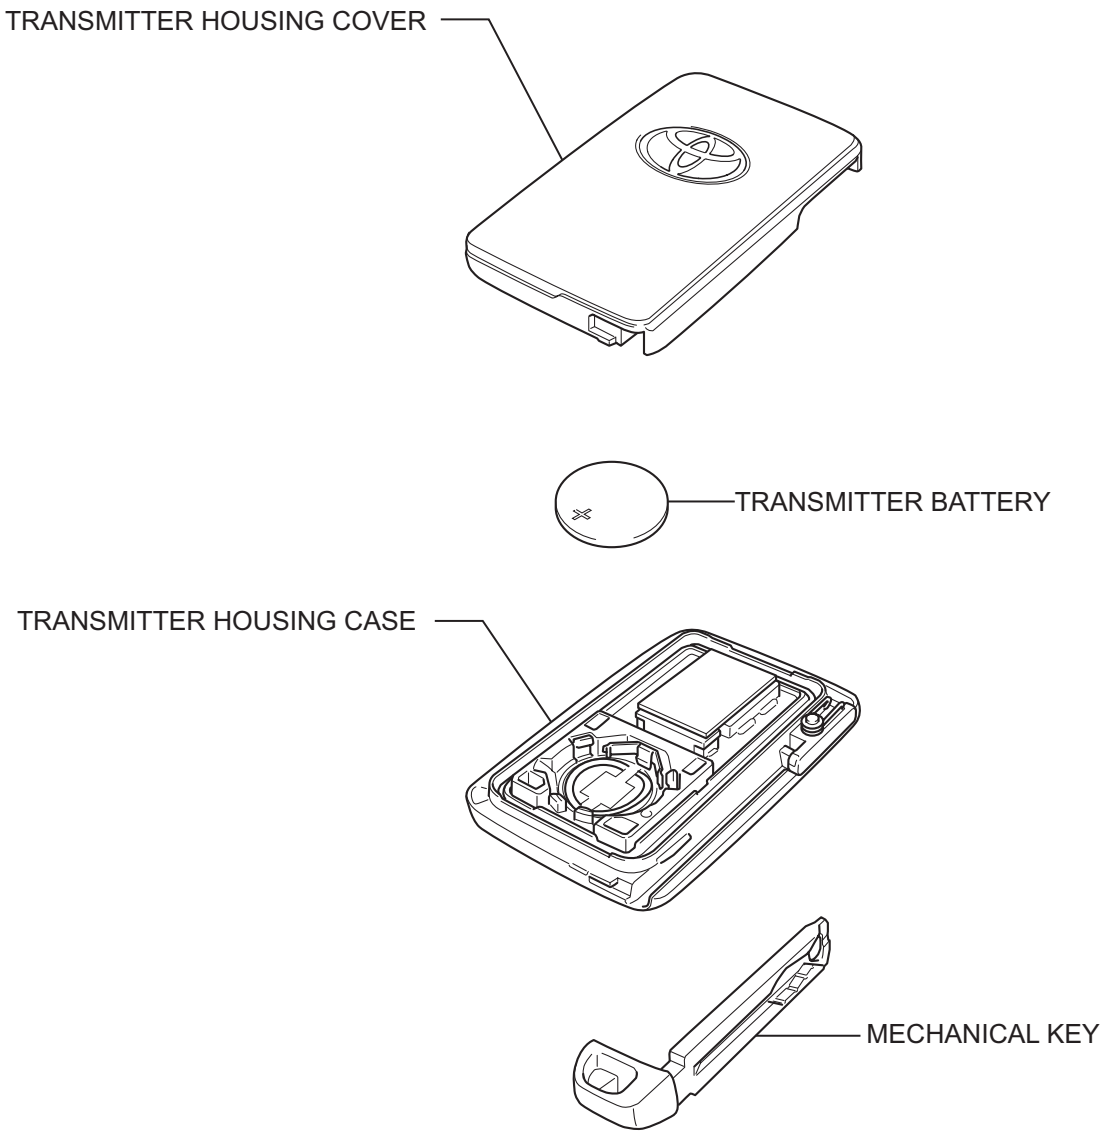
DL

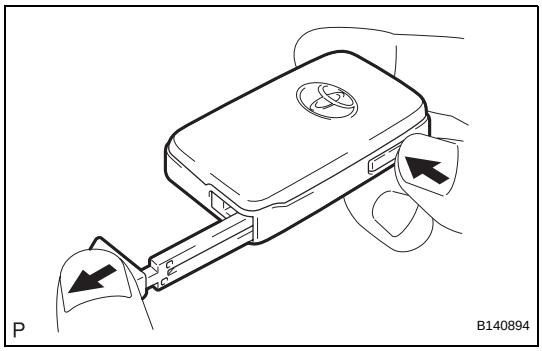
OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

DOOR CONTROL TRANSMITTER (w/ Smart Key System)

COMPONENTS

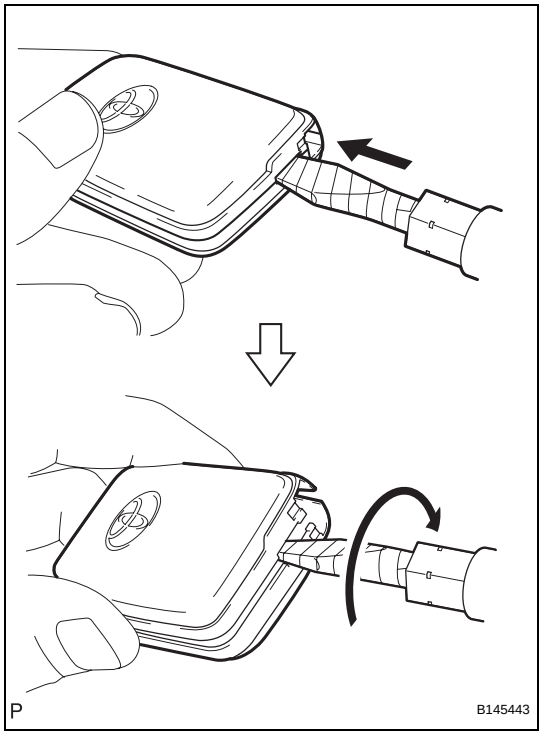




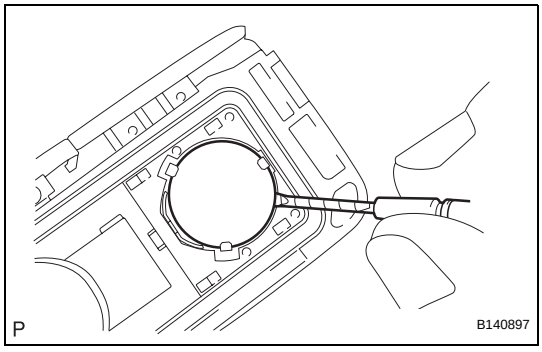
REMOVAL

1. REMOVE TRANSMITTER BATTERY

(a) Remove the mechanical key.



(b) Insert a screwdriver into the gap, and turn the screwdriver to detach the cover.
HINT:
Tape the screwdriver tip before use.



(c) Insert a screwdriver into the gap and gently remove the battery (lithium battery).
NOTICE:

- **Do not push the terminals with your finger.**
- **Do not forcibly pry up the battery (lithium battery) because doing so will deform the terminals.**
- **Do not touch the battery with wet hands. Water may result in corrosion.**
- **Do not touch or move any components inside the transmitter because handling the components may interfere with proper operation of the transmitter.**

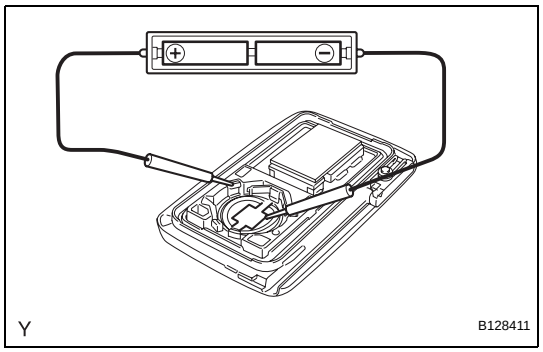
INSPECTION

1. INSPECT DOOR CONTROL TRANSMITTER

(a) Inspect operation of the transmitter.

(1) Remove the battery (lithium battery) from the transmitter (See page DL-210).

(2) Install a new or normal battery (lithium battery).
HINT:
If a new or normal battery is not available, first connect 2 new 1.5 V batteries in series. Then connect leads to the batteries and apply 3 V to the transmitter, as shown in the illustration.



(3) From outside the vehicle, approximately 1 m (3.28 ft.) away from the driver side outside door handle, test the transmitter by pointing its key plate at the vehicle and pressing a transmitter switch.
OK:
The door lock can be operated via the transmitter.
The LED comes on more than once.

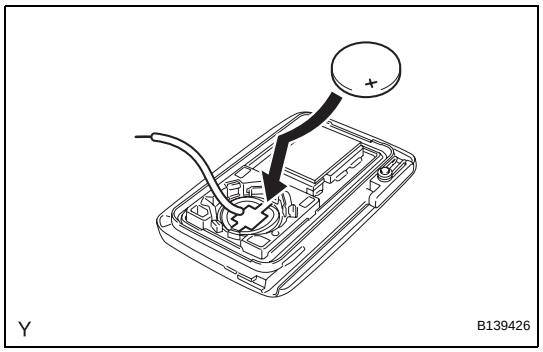
- The operational area differs depending on the user, the way the transmitter is held, and the location.
- The transmitter's faint electric waves may be affected if the area has strong electric waves or noise. The transmitter's operation area may be shortened or the transmitter may not function.

(b) Inspect the battery capacity.
HINT:

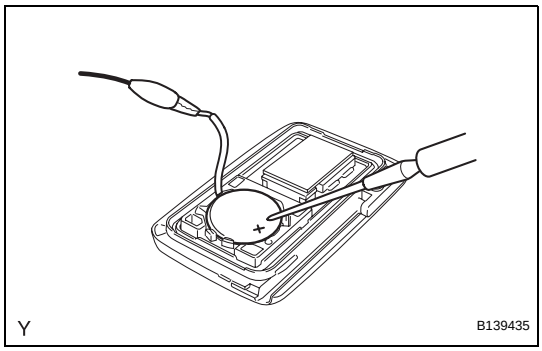
- When checking the amount of energy left in the battery (lithium battery), the battery must be checked while it is installed in the transmitter (a resistance of 1.2 kΩ is applied to the battery). When the battery energy is checked by itself (removed from the vehicle), the voltage reading will be more than 2.5 V until the energy is depleted.
- If the transmitter is malfunctioning, the voltage reading of the energy left in the battery will be inaccurate.

(1) Remove the battery (lithium battery) from the transmitter (See page DL-210).

(2) Connect a wire to the negative (-) terminal of the transmitter and install the battery.



DL

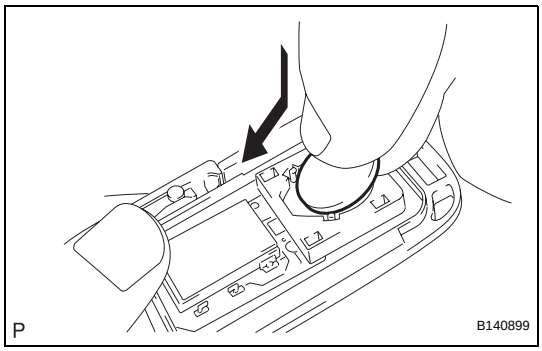


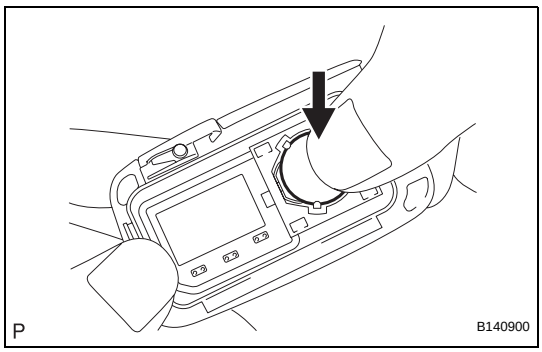
(3) Connect the tester positive (+) lead to the positive (+) battery (lithium battery), and the tester negative (-) lead to the wire connected in the previous step.
(4) Press one of the transmitter switches on the transmitter for approximately 1 second.
(5) Press the transmitter switch on the transmitter again to check the voltage.
Voltage:
2.2 V or higher
HINT:
- If the temperature of the battery is low, the inspection cannot be performed correctly. If the result of the test is less than 2.2 V, perform the test again after leaving the battery in a place at a temperature of 18°C (64°F) for 30 minutes or more.
- Read the voltage immediately after the switch is pressed. When 0.8 seconds have passed after the switch is pressed, the automatic power-off function starts and the resistance applied to the battery will cease. The voltage of the battery will be 2.5 V or more.
- Press the switch at least 3 times before reading the voltage. If the battery has just been returned to 18°C (64°F), the voltage may be unusually high for the first or second voltage reading.

INSTALLATION

1. INSTALL TRANSMITTER BATTERY

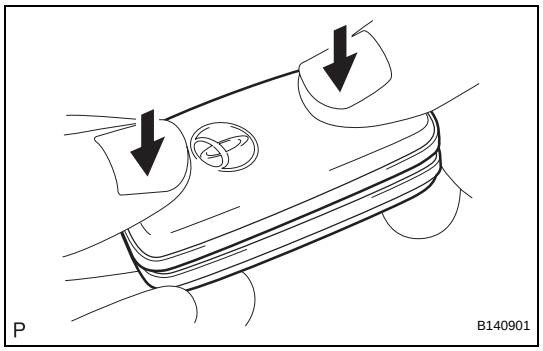
(a) Install a new battery (lithium battery) with the positive (+) side up as shown in the illustration.



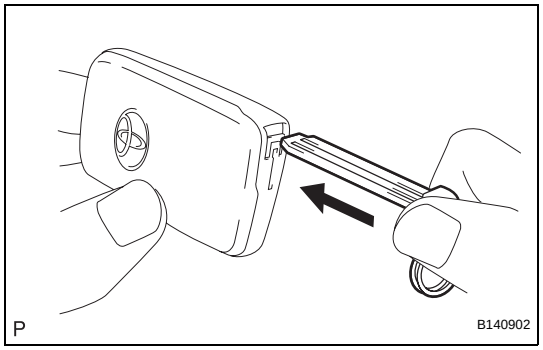


(b) Press down gently on the battery to set it in place.
NOTICE:
- **Be sure that the positive and negative sides of the transmitter battery are positioned correctly.**
- **Be careful not to bend the terminals of the transmitter battery during installation.**
- **Keep the interior of the transmitter case free of dust, water, and oil.**

DL



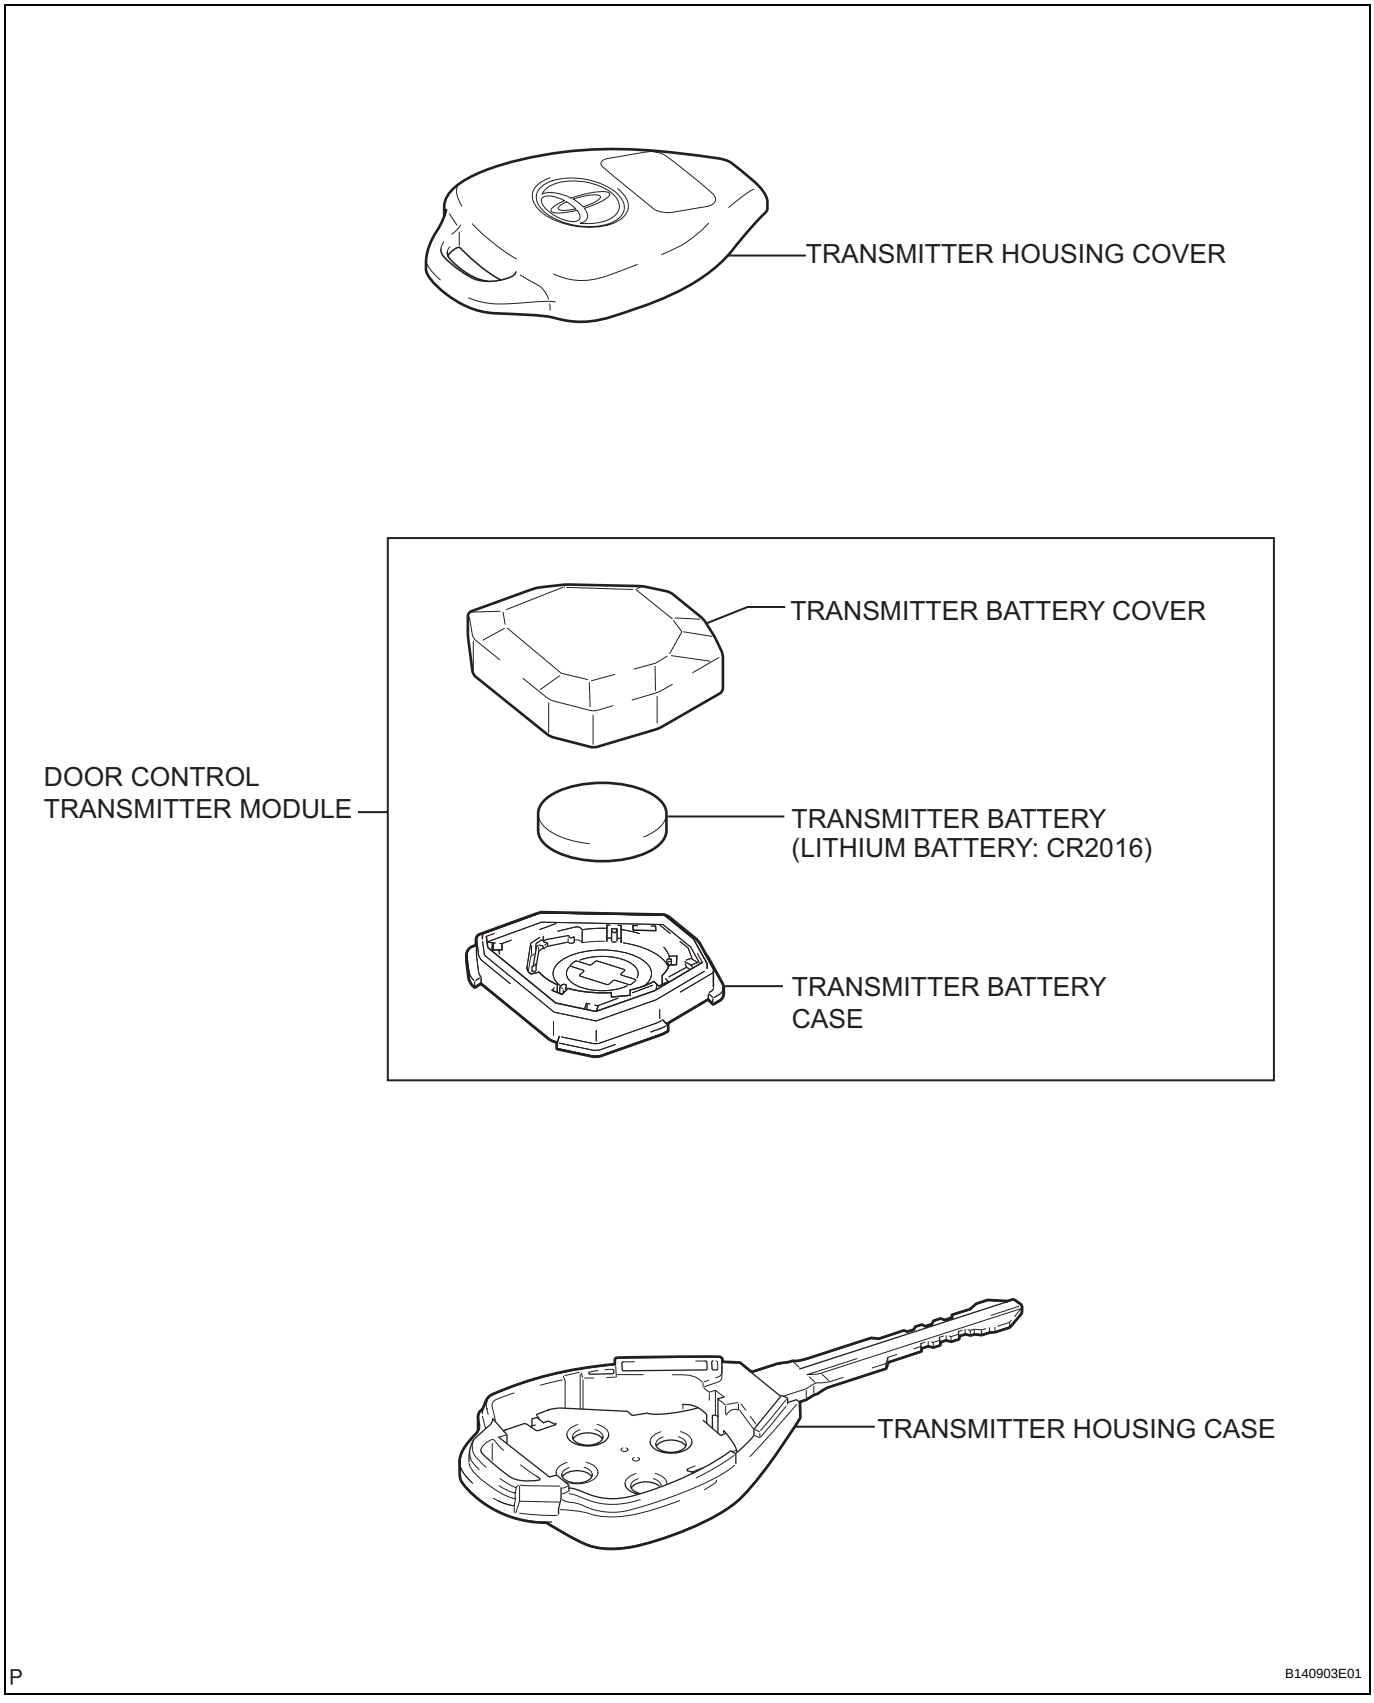
(c) Install the cover by pressing down on it as shown in the illustration.



(d) Install the mechanical key.
HINT:
After the installation, press one of the transmitter switches and check that the LED illuminates.

DOOR CONTROL TRANSMITTER (w/o Smart Key System)

COMPONENTS



DL

REMOVAL

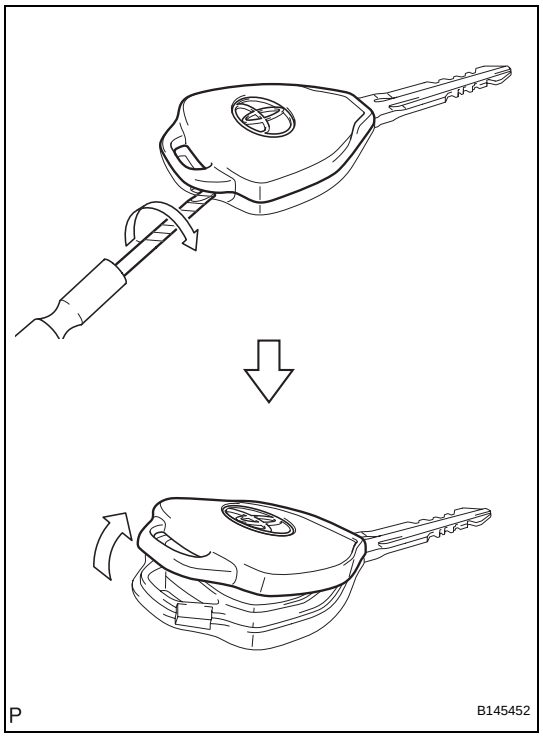
1. REMOVE TRANSMITTER BATTERY

(a) Remove the transmitter battery.

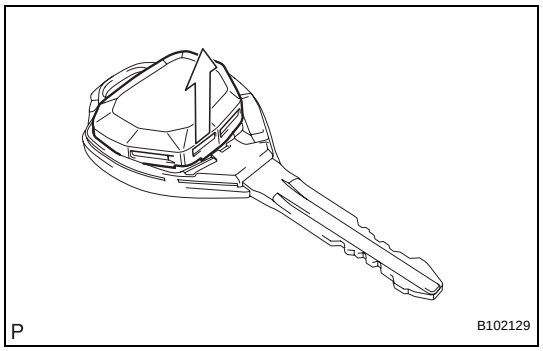
(1) Using a screwdriver with its tip wrapped in protective tape, pry open the transmitter housing cover.

NOTICE:

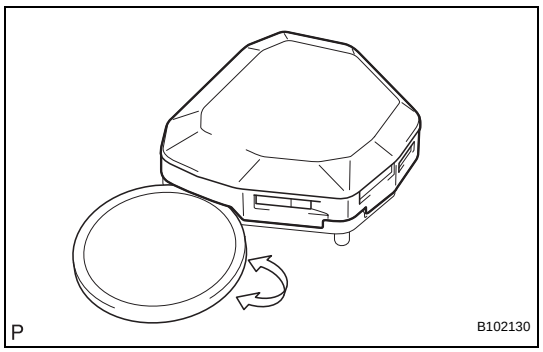
Do not use excessive force when prying open the housing cover.



(b) Remove the door control transmitter module from the transmitter housing case.



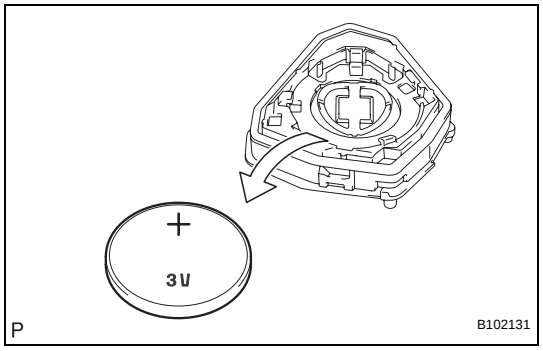
(c) Using a coin, or other flat object, pry open the transmitter cover.



(d) Remove the transmitter battery (lithium battery).

NOTICE:

- **Do not push the terminals with your finger.**
- **Do not forcibly pry up the battery (lithium battery) because doing so will deform the terminals.**
- **Do not touch the battery with wet hands. Water may result in corrosion.**



DL

- **Do not touch or move any components inside the transmitter because handling the components may interfere with proper operation of the transmitter.**

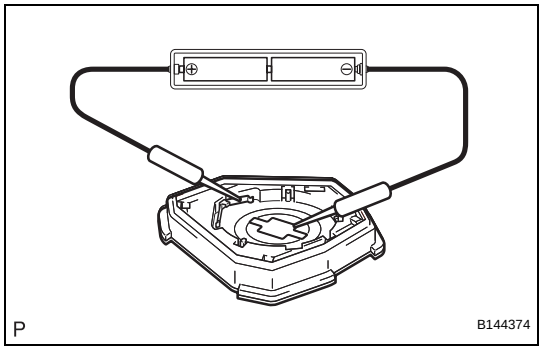
INSPECTION

1. INSPECT DOOR CONTROL TRANSMITTER

(a) Inspect operation of the transmitter.

(1) Remove the battery (lithium battery) from the transmitter (See page DL-215).

(2) Install a new or normal battery (lithium battery).



(3) If a new or normal battery is not available, connect 2 new 1.5 V batteries in a series. Connect the positive (+) battery electrode to the battery receptacle side terminal, and the negative (-) battery electrode to the bottom terminal, and apply a voltage of 3 V to the transmitter.

(4) In a location that is approximately 1 m (3.28 ft) away from the driver side outside door handle, point the key plate of the transmitter at the vehicle and check operation of the transmitter by pressing the transmission switches on the transmitter body.

Standard:

The door lock/unlock can be operated via remote control.

The LED lights up when each switch is pressed.

HINT:

- The minimum operational distance differs depending on the way the transmitter is held and the location.
- Since the transmitter uses faint electric waves, the operational distance might be shortened if noise or a strong electric wave occurs in the area where the frequency is used.

(5) Install the battery (lithium battery).

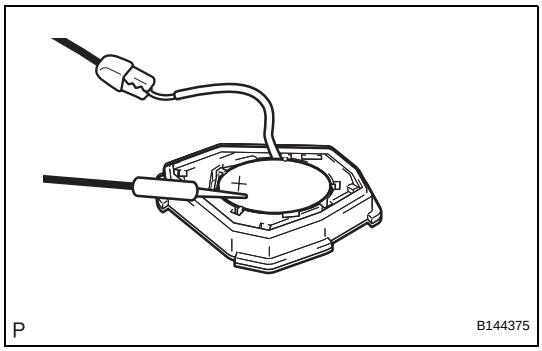
(b) Inspect the battery capacity.

HINT:

- The capacity of the battery can be determined only when the battery is installed in the transmitter. For a lithium battery used in the transmitter, a voltage of more than 2.5 V is shown on the tester until the energy is completely consumed without the battery installed in the transmitter. Therefore, it is necessary to measure the voltage with the battery installed in the transmitter (a resistance of 1.2 kΩ is applied to the battery) to check the amount of energy left in the battery.
- If the transmitter is faulty, the amount of energy left in the battery might not be checked correctly.

(1) Remove the battery (lithium battery) from the transmitter (See page DL-215).

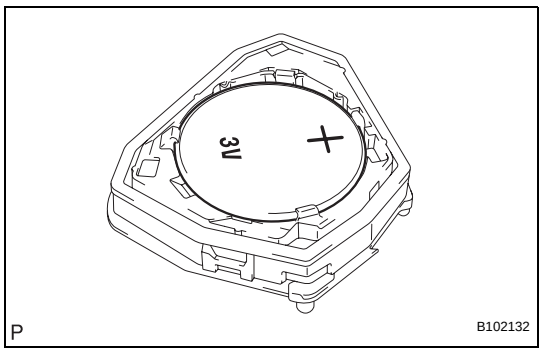
(2) Connect the lead to the negative (-) terminal of the transmitter and install the battery.



(3) Connect the positive (+) tester probe to the positive (+) side of the battery (lithium battery), and the negative (-) tester probe to the lead respectively.
(4) Press one of the transmission switches on the transmitter for approximately 1 second.
(5) Press the same or another transmission switch again and check the voltage.
Voltage:
2.2 V or higher
HINT:
- If the temperature of the battery is low, the inspection cannot be done correctly.
If the outcome of the test is less than 2.2 V, conduct the test again after leaving the battery in a place with a temperature of 18°C (64°F) for more than 30 minutes.
- The automatic power-off function causes the battery voltage to be 2.5 V or more (with no resistance applied to the battery) when 0.8 seconds have passed after the switch is pressed. Therefore, make sure to read the voltage immediately after the switch is pressed.

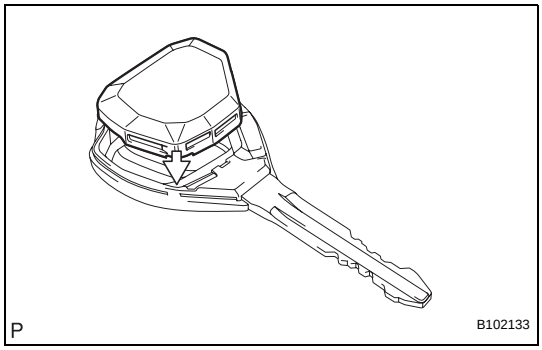
(6) Remove the lead.
(7) Set the battery (lithium battery) in the transmitter.

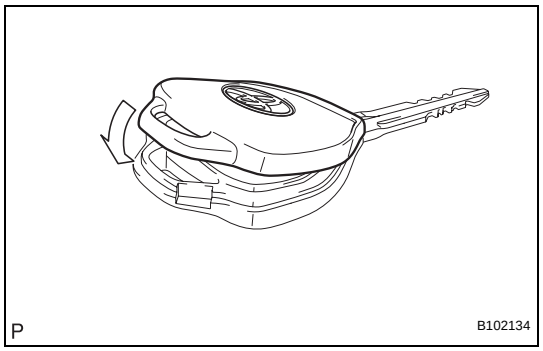
INSTALLATION



1. INSTALL TRANSMITTER BATTERY
(a) Install the transmitter battery.
(1) Install a battery (lithium battery: CR2016) with the positive (+) side up, as shown in the illustration.
NOTICE:
- **Be sure that the positive and negative sides of the transmitter battery are positioned correctly.**
- **Be careful not to bend the terminals of the transmitter battery during installation.**
- **Keep the interior of the transmitter case free of dust, water, and oil.**

(b) Install the door control transmitter module into the transmitter housing case.

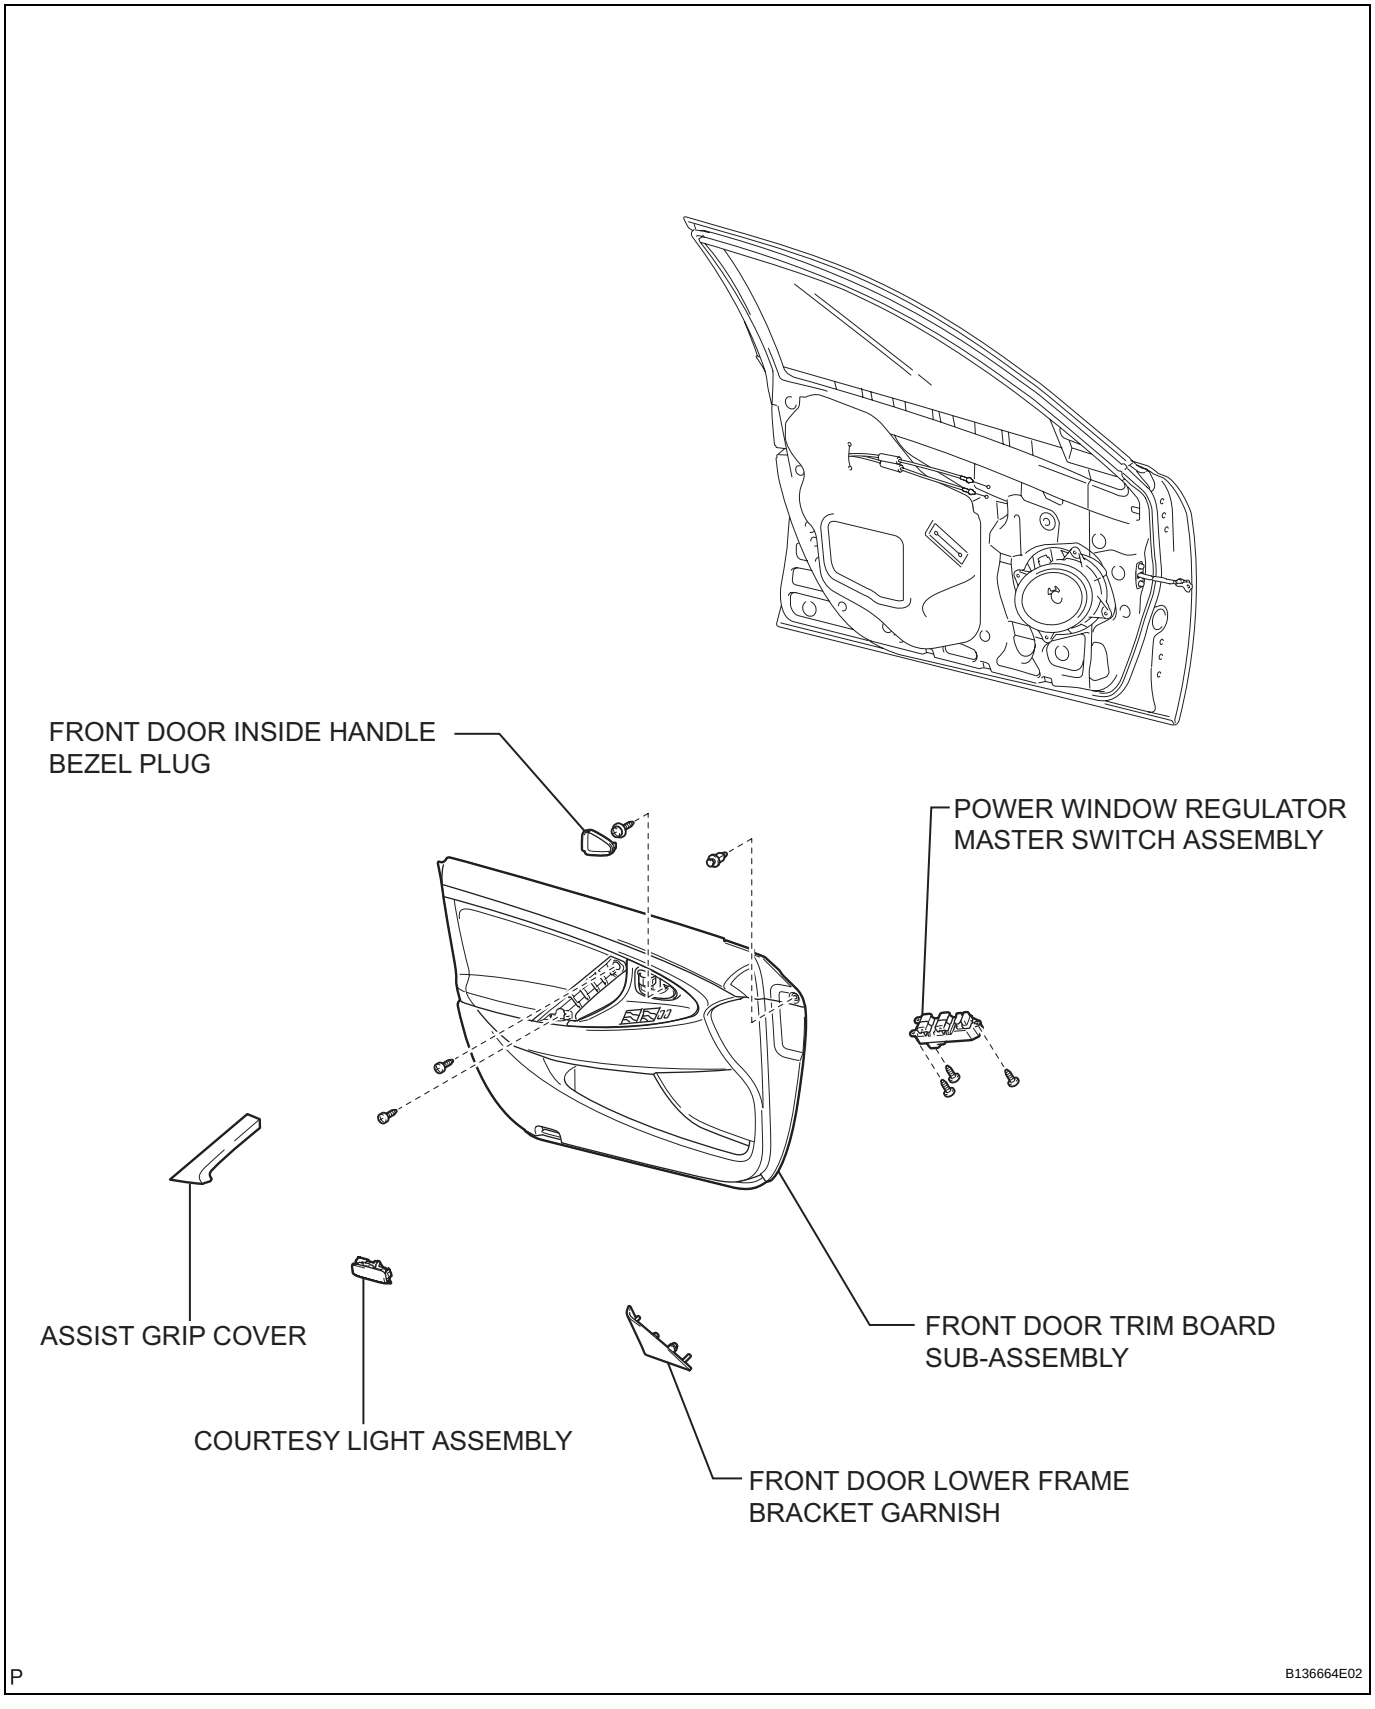




(c) Install the transmitter housing cover securely onto the transmitter housing case.
HINT:
After the installation, press one of the transmitter switches and check that the LED illuminates.

DOOR CONTROL SWITCH

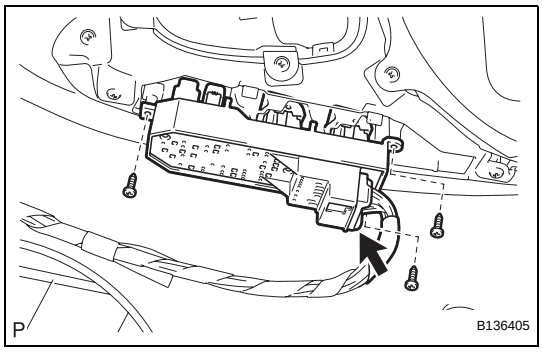
COMPONENTS



DL

REMOVAL

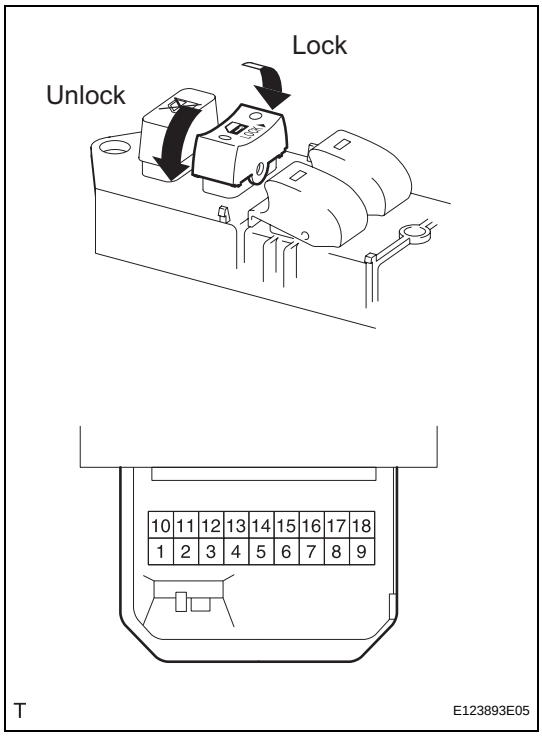
1. **REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH (See page ED-14)**
2. **REMOVE FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-14)**
3. **REMOVE ASSIST GRIP COVER (See page ED-15)**
4. **REMOVE COURTESY LIGHT ASSEMBLY (See page ED-15)**
5. **REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-15)**
6. **REMOVE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY**
   (a) Disconnect the connector.
   (b) Remove the 3 screws and the power window regulator master switch assembly.



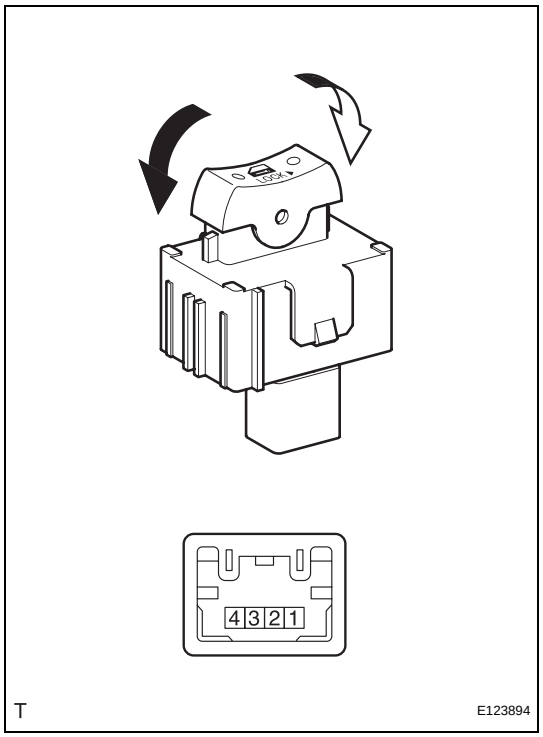
INSPECTION

1. **INSPECT DOOR CONTROL SWITCH (for Driver Side)**
   (a) Measure the resistance of the door control switch.
   Standard resistance

Tester Connection	Switch Condition	Specified Condition
2 - 1	Lock	Below 1 Ω
2 - 1	OFF (Free)	10 kΩ or higher
9 - 1	Unlock	Below 1 Ω
9 - 1	OFF (Free)	10 kΩ or higher

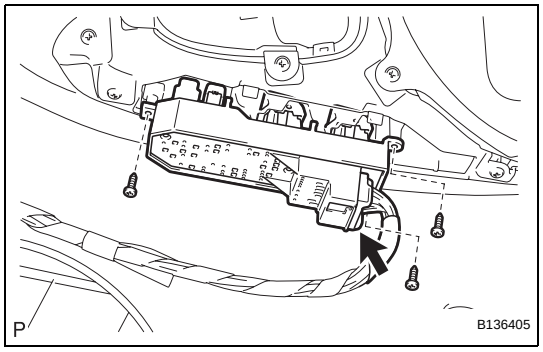


DL



2. **INSPECT DOOR CONTROL SWITCH (for Front Passenger Side)**
   (a) Measure the resistance according to the value(s) in the table below.
   Standard resistance

Tester Connection	Switch Condition	Specified Condition
4 - 3	Lock	Below 1 Ω
4 - 3 2 - 3	OFF (Free)	10 kΩ or higher
2 - 3	Unlock	Below 1 Ω



INSTALLATION

1. **INSTALL POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY**
   (a) Install the power window regulator master switch assembly with the 3 screws.
   (b) Connect the connector.
2. **REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-33)**
3. **REMOVE COURTESY LIGHT ASSEMBLY (See page ED-34)**
4. **REMOVE ASSIST GRIP COVER (See page ED-34)**
5. **REMOVE FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-34)**
6. **REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH (See page ED-34)**

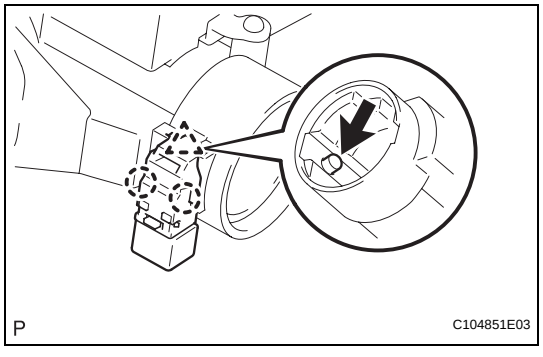
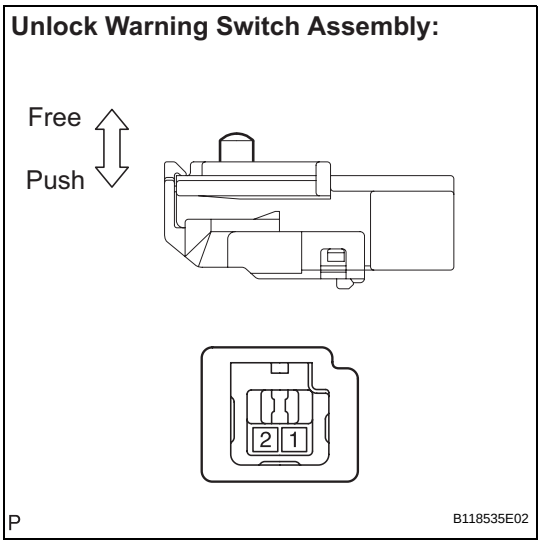
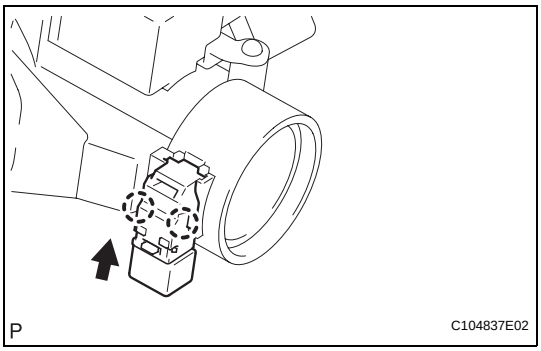
REMOVAL

1. **PRECAUTION**
   (See page RS-1)
2. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**
3. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   (See page RS-1)
4. **REMOVE FRONT WHEEL LH**
5. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-24)**
6. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-25)**
7. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-20)**
8. **REMOVE DRIVER SIDE KNEE AIRBAG ASSEMBLY (See page RS-370)**
9. **REMOVE LOWER NO. 2 STEERING WHEEL COVER**
10. **REMOVE LOWER NO. 3 STEERING WHEEL COVER**
11. **REMOVE STEERING PAD (See page RS-350)**
12. **REMOVE STEERING WHEEL ASSEMBLY (See page SR-38)**
13. **REMOVE STEERING COLUMN COVER (See page SR-39)**
14. **REMOVE TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (See page SR-39)**
15. **REMOVE NO. 1 AIR DUCT (See page SR-39)**
16. **REMOVE STEERING COLUMN ASSEMBLY (See page SR-39)**
17. **REMOVE TRANSPONDER KEY AMPLIFIER (See page SR-42)**
18. **REMOVE STEERING COLUMN UPPER WITH SWITCH BRACKET ASSEMBLY (See page SR-43)**
19. **REMOVE IGNITION SWITCH LOCK CYLINDER ASSEMBLY (See page SR-43)**
20. **REMOVE UNLOCK WARNING SWITCH ASSEMBLY**
    (a) Remove the unlock warning switch assembly by pushing up the center part and releasing the 2 claws.



DL





INSPECTION

1. **INSPECT UNLOCK WARNING SWITCH ASSEMBLY**
   (a) Measure the resistance according to the value(s) in the table below.
   Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Switch free (Key removed)	10 kΩ or higher
1 - 2	Switch pushed (Key set)	Below 1 Ω

   If the result as specified, replace the unlock warning switch assembly.

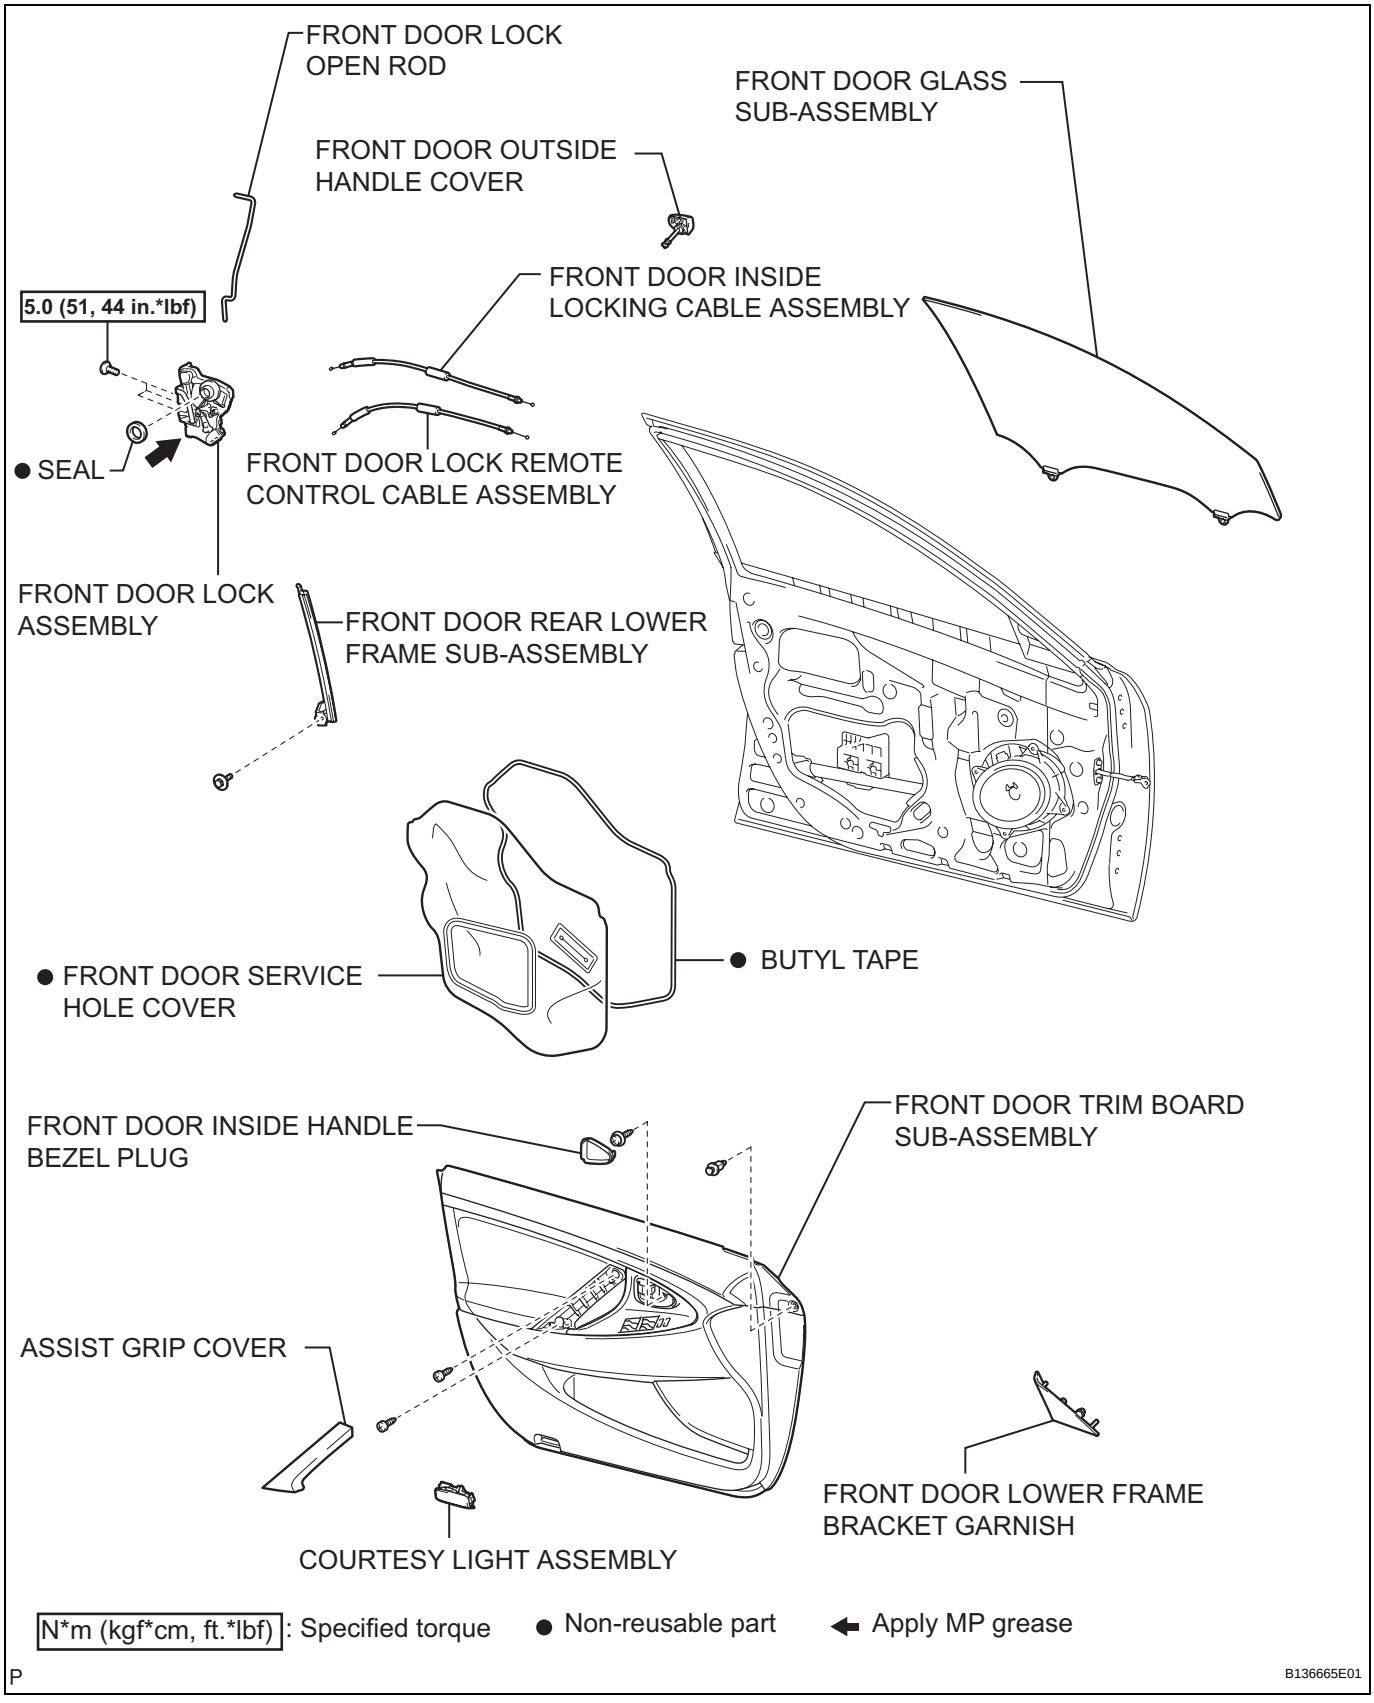
INSTALLATION

1. **INSTALL UNLOCK WARNING SWITCH ASSEMBLY**
   (a) Engage the 2 claws to install the unlock warning switch assembly to the steering lock sub-assembly.
2. **INSTALL IGNITION SWITCH LOCK CYLINDER ASSEMBLY (See page SR-46)**
3. **INSPECT STEERING LOCK OPERATION**
4. **INSTALL STEERING COLUMN UPPER WITH SWITCH BRACKET ASSEMBLY (See page SR-46)**
5. **INSTALL TRANSPONDER KEY AMPLIFIER (See page SR-46)**
6. **INSTALL STEERING COLUMN ASSEMBLY (See page SR-47)**
7. **INSTALL NO. 1 AIR DUCT (See page SR-50)**
8. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**
9. **INSTALL TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (See page SR-50)**
10. **INSTALL STEERING COLUMN COVER (See page SR-50)**
11. **ADJUST SPIRAL CABLE SUB-ASSEMBLY (See page RS-367)**
12. **INSTALL STEERING WHEEL ASSEMBLY (See page SR-51)**
13. **INSPECT STEERING WHEEL CENTER POINT**
14. **INSPECT STEERING PAD (See page RS-352)**
15. **INSTALL STEERING PAD (See page RS-350)**
16. **INSTALL LOWER NO. 2 STEERING WHEEL COVER**
17. **INSTALL LOWER NO. 3 STEERING WHEEL COVER**
18. **INSTALL DRIVER SIDE KNEE AIRBAG ASSEMBLY (See page RS-370)**

19. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-55)**
20. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-54)**
21. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-54)**
22. **INSTALL FRONT WHEEL LH (See page SR-51)**
23. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
24. **INSPECT SRS WARNING LIGHT**
    (See page RS-32)

FRONT DOOR LOCK

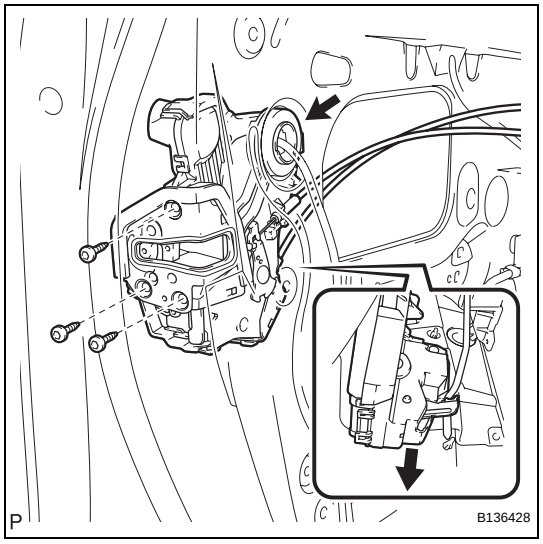
COMPONENTS

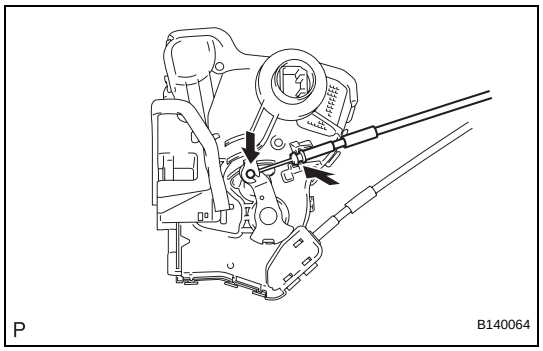


DL

REMOVAL

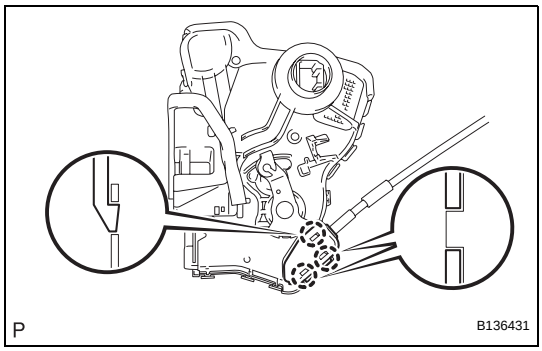
1. **REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH (See page ED-14)**
2. **REMOVE FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-14)**
3. **REMOVE ASSIST GRIP COVER (See page ED-15)**
4. **REMOVE COURTESY LIGHT ASSEMBLY (See page ED-15)**
5. **REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-15)**
6. **REMOVE FRONT DOOR SERVICE HOLE COVER (See page ED-17)**
7. **REMOVE FRONT DOOR GLASS SUB-ASSEMBLY (See page ED-17)**
8. **REMOVE FRONT DOOR REAR LOWER FRAME SUB-ASSEMBLY (See page ED-19)**
9. **REMOVE FRONT DOOR OUTSIDE HANDLE COVER (See page ED-19)**
10. **REMOVE FRONT DOOR LOCK ASSEMBLY**
    (a) Disconnect the connector.
    (b) Using a "torx" socket wrench (T30), remove the 3 screws.
    (c) Slide the front door lock assembly downward and pull out the front door lock open rod from the outside handle frame. Remove the front door lock assembly and cables as a unit.
    (d) Remove the front door lock open rod from the front door lock assembly.
    (e) Remove the door lock wiring harness seal from the front door lock assembly.



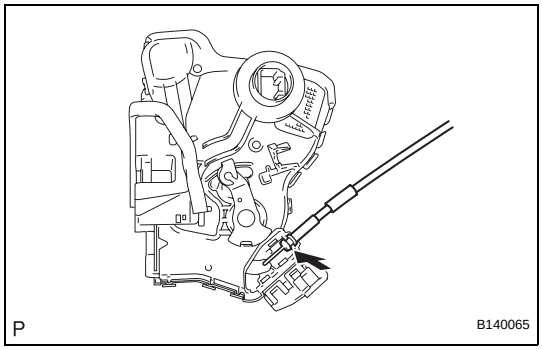


(f) Remove the front door lock remote control cable assembly.

DL



(g) Using a screwdriver, disengage the 3 claws.
HINT:
Tape the screwdriver tip before use.



(h) Remove the front door inside locking cable assembly.

INSPECTION

1. INSPECT FRONT DOOR LOCK LH ASSEMBLY

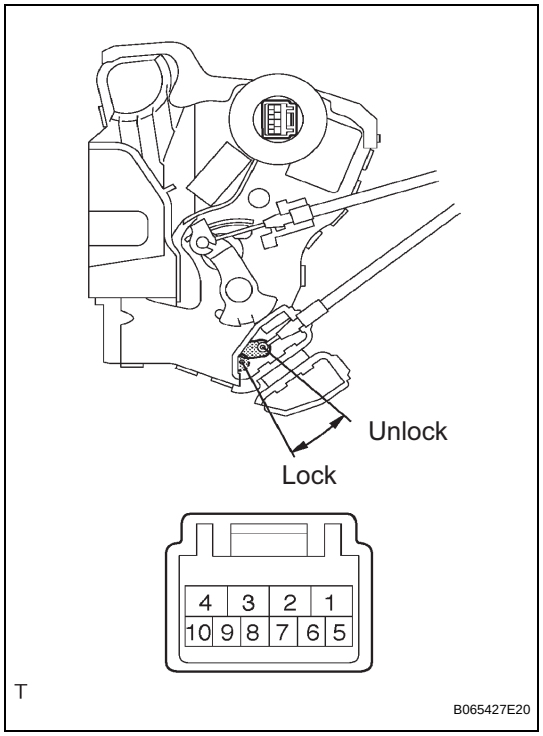
(a) Remove the front door lock assembly LH.

(b) Check operation of the door lock motor.

(1) Apply battery voltage and check operation of the door lock motor.

OK

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 4 Battery negative (-) → Terminal 1	Lock
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 4	Unlock

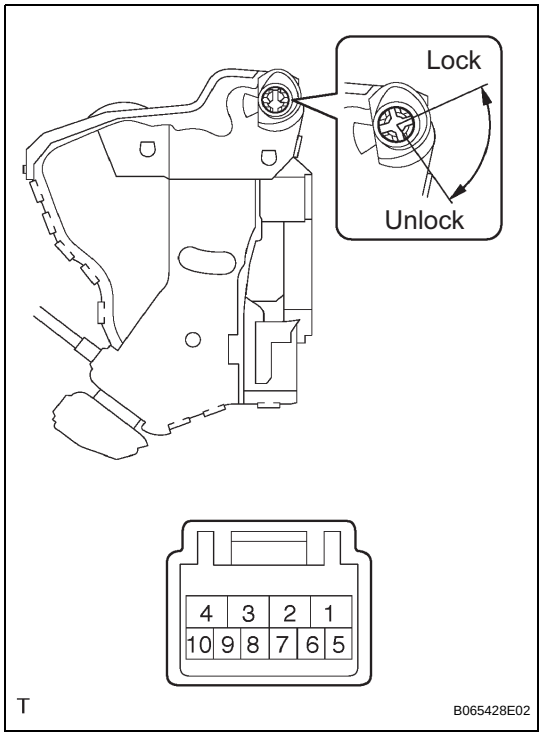


(c) Check operation of the door key lock and unlock switch.

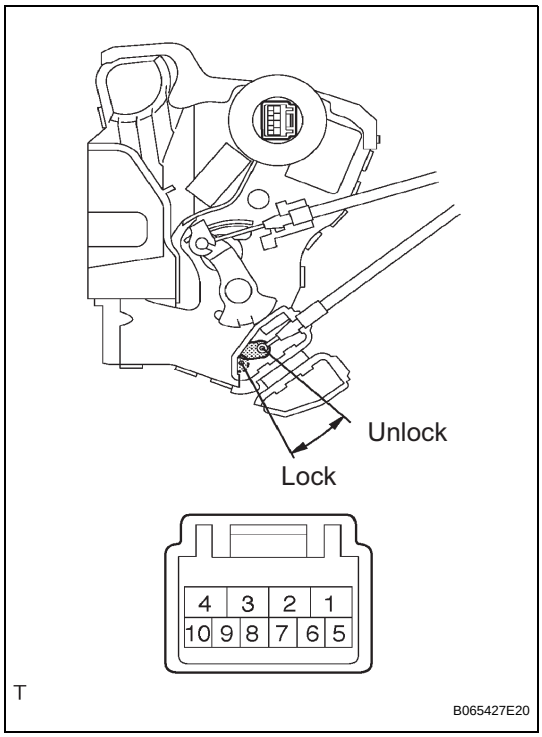
(1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
7 - 9	ON (Door lock set to LOCK)	Below 1 Ω
7 - 9 7 - 10	OFF (Free)	10 kΩ or higher
7 - 10	ON (Door lock set to UNLOCK)	Below 1 Ω



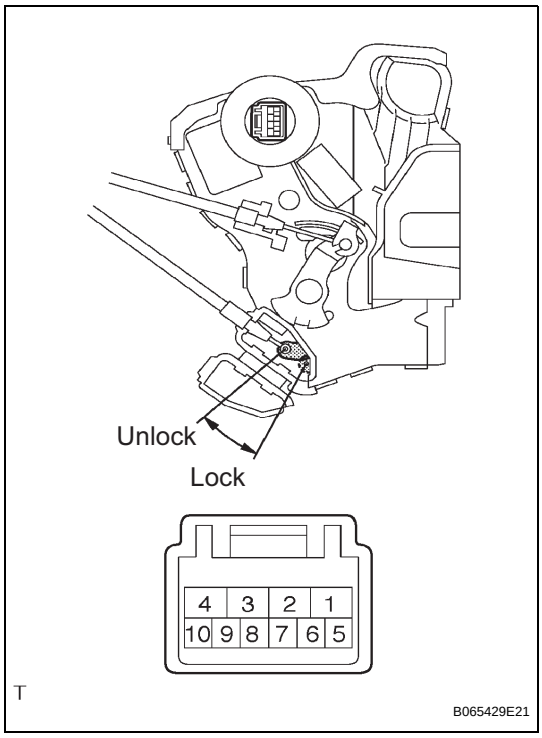
DL



(d) Check operation of the door unlock detection switch.
(1) Measure the resistance according to the value(s) in the table below.
Standard resistance

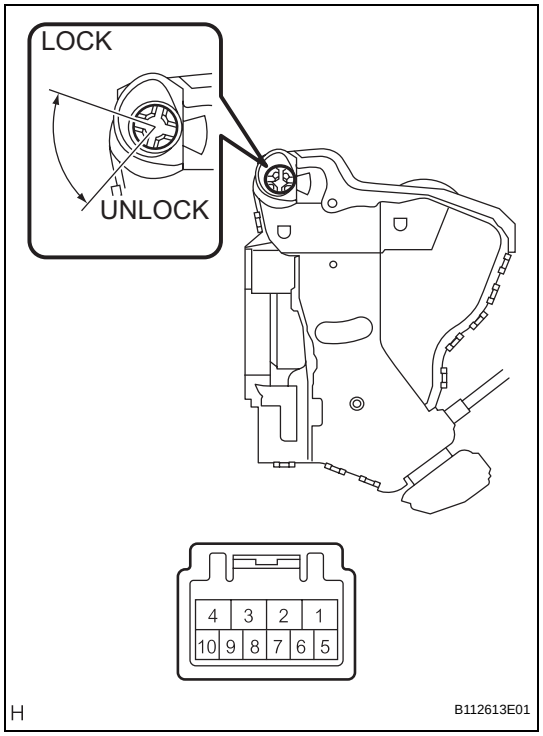
Tester Connection	Measurement Condition	Door Lock Condition	Specified Condition
7 - 8	Battery positive (+) → Terminal 4 Battery negative (-) → Terminal 1	Lock	10 kΩ or higher
7 - 8	Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 4	Unlock	Below 1 Ω

2. INSPECT FRONT DOOR LOCK RH ASSEMBLY
(a) Remove the front door lock assembly RH.



(b) Check operation of the door lock motor.
(1) Apply battery voltage and check operation of the door lock motor.
OK

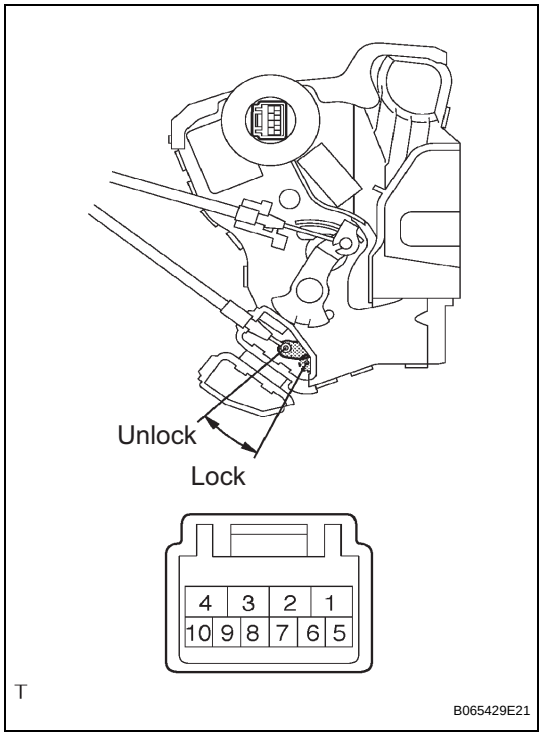
Measurement Condition	Specified Condition
Battery positive (+) → Terminal 4 Battery negative (-) → Terminal 1	Lock
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 4	Unlock



(c) Check operation of the door key lock and unlock switch.
(1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
5 - 8	ON (Door lock set to UNLOCK)	Below 1 Ω
5 - 8 6 - 8	OFF (Free)	10 kΩ or higher
6 - 8	ON (Door lock set to LOCK)	Below 1 Ω



(d) Check operation of the door unlock detection switch.
(1) Measure the resistance according to the value(s) in the table below.

Standard resistance

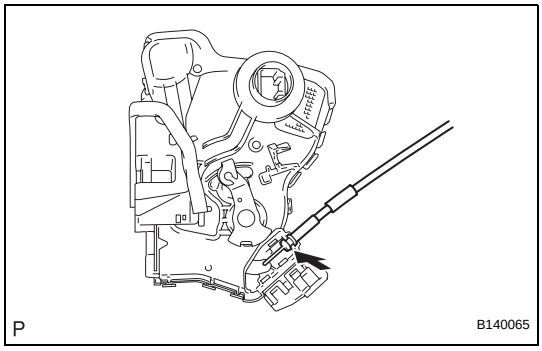
Tester Connection	Measurement Condition	Door Lock Condition	(Specified Condition)
7 - 8	Battery positive (+) → Terminal 4 Battery negative (-) → Terminal 1	LOCK	10 kΩ or higher
7 - 8	Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 4	UNLOCK	Below 1 Ω

DL

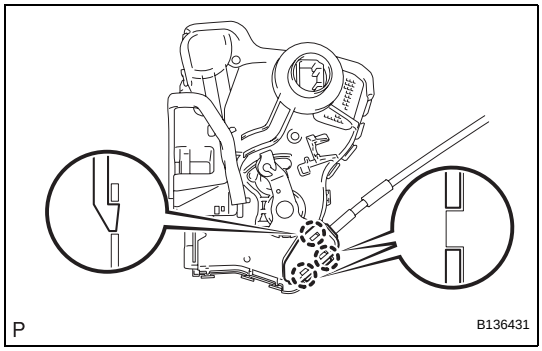
INSTALLATION

1. INSTALL FRONT DOOR LOCK ASSEMBLY
NOTICE:
- **When reusing the removed front door lock assembly, replace the door lock wiring harness seal on the door lock with a new one.**
- **Do not allow grease or dust to adhere to the surface of the door lock where the seal attaches.**
- **Reusing the door lock wiring harness seal or using a damaged door lock wiring harness seal may allow water intrusion to the connection, and result in a malfunction in the front door lock assembly.**

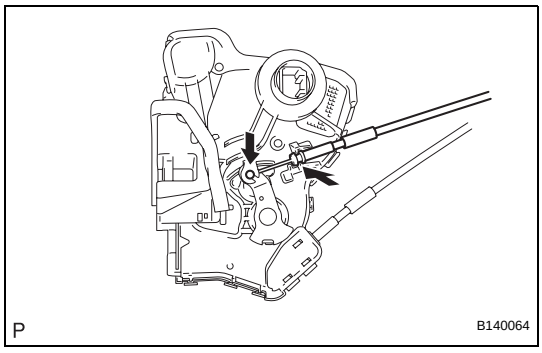
(a) Install the front door inside locking cable assembly.



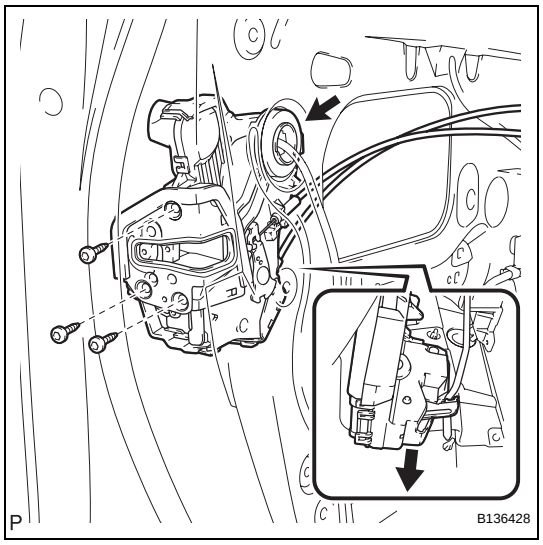
(b) Engage the 3 claws.



(c) Install the front door lock remote control cable assembly.
(d) Apply MP grease to the sliding parts on the front door lock assembly.
(e) Install a new door lock wiring harness seal to the front door lock assembly.



DL



(f) Insert the front door lock open rod to the front door lock assembly, and set the assembly to the front door outside handle frame.
(g) Make sure that the front door lock open rod is securely connected to the front door lock assembly.
(h) Using a "torx" socket wrench (T30), install the front door lock assembly with the 3 screws.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)
(i) Connect the connector.

2. **INSTALL FRONT DOOR OUTSIDE HANDLE COVER (See page ED-29)**
3. **INSTALL FRONT DOOR REAR LOWER FRAME SUB-ASSEMBLY (See page ED-30)**
4. **INSTALL FRONT DOOR GLASS SUB-ASSEMBLY (See page ED-31)**
5. **INSTALL FRONT DOOR SERVICE HOLE COVER (See page ED-32)**
6. **INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-33)**
7. **INSTALL COURTESY LIGHT ASSEMBLY (See page ED-34)**
8. **INSTALL ASSIST GRIP COVER (See page ED-34)**
9. **INSTALL FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-34)**
10. **INSTALL FRONT DOOR LOWER FRAME BRACKET GARNISH (See page ED-34)**

INSPECTION

1. INSPECT REAR DOOR LOCK LH ASSEMBLY

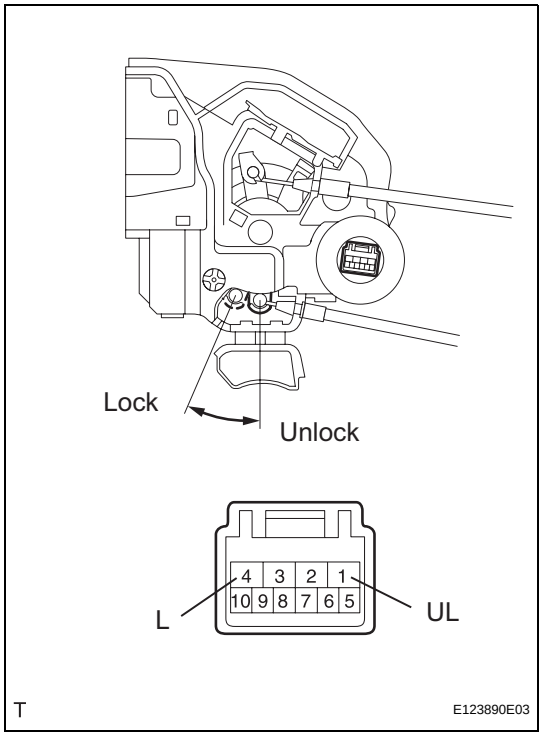
(a) Remove the rear door lock assembly LH.

(b) Check operation of the door lock motor.

(1) Apply battery voltage and check operation of the door lock motor.

OK

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 4 Battery negative (-) → Terminal 1	Lock
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 4	Unlock

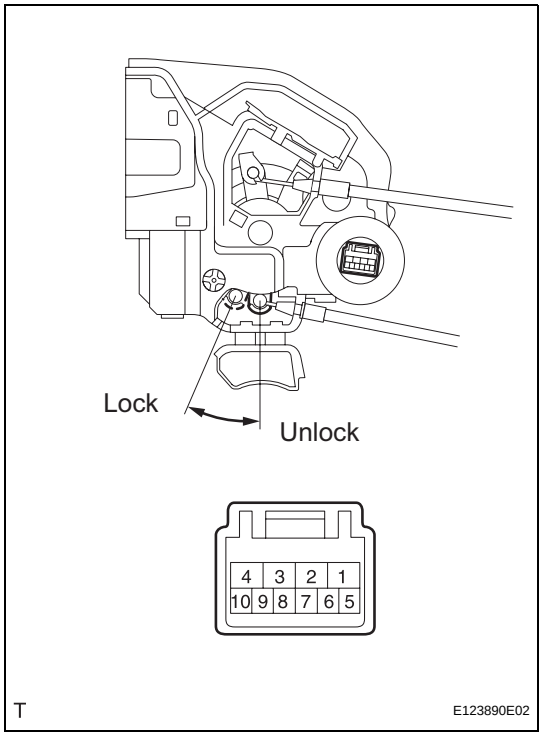


(c) Check operation of the unlock detection switch.

(1) Measure the resistance according to the value(s) in the table below.

Standard resistance

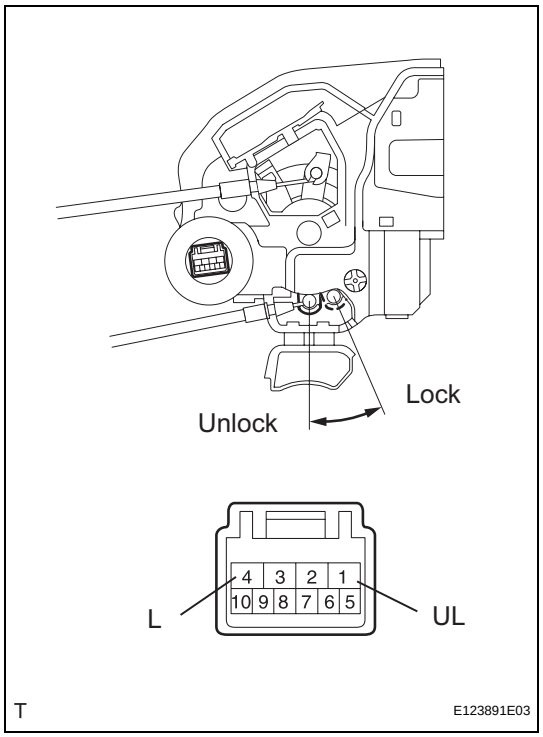
Tester Connection	Measurement Condition	Door Lock Condition	(Specified Condition)
6 - 9	Battery positive (+) → Terminal 4 Battery negative (-) → Terminal 1	Lock	10 kΩ or higher
6 - 9	Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 4	Unlock	Below 1 Ω



2. INSPECT REAR DOOR LOCK RH ASSEMBLY

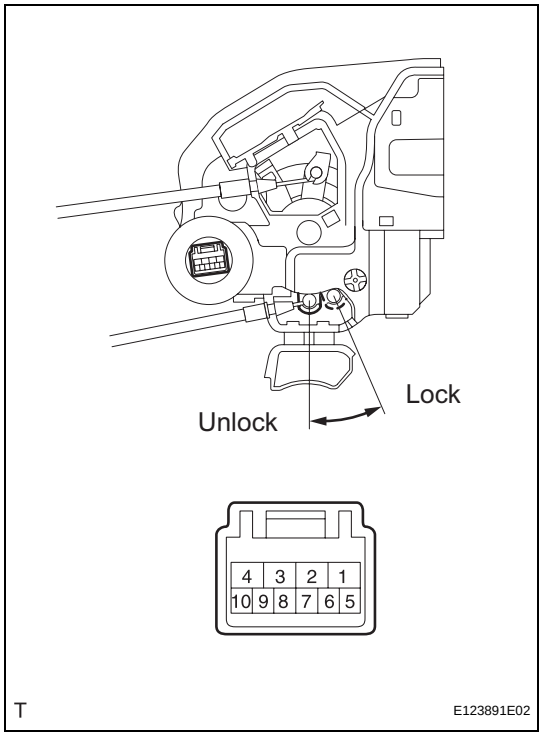
(a) Remove the rear door lock assembly RH.

DL



(b) Check operation of the door lock motor.
(1) Apply battery voltage and check operation of the door lock motor.
OK

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 4 Battery negative (-) → Terminal 1	Lock
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 4	Unlock



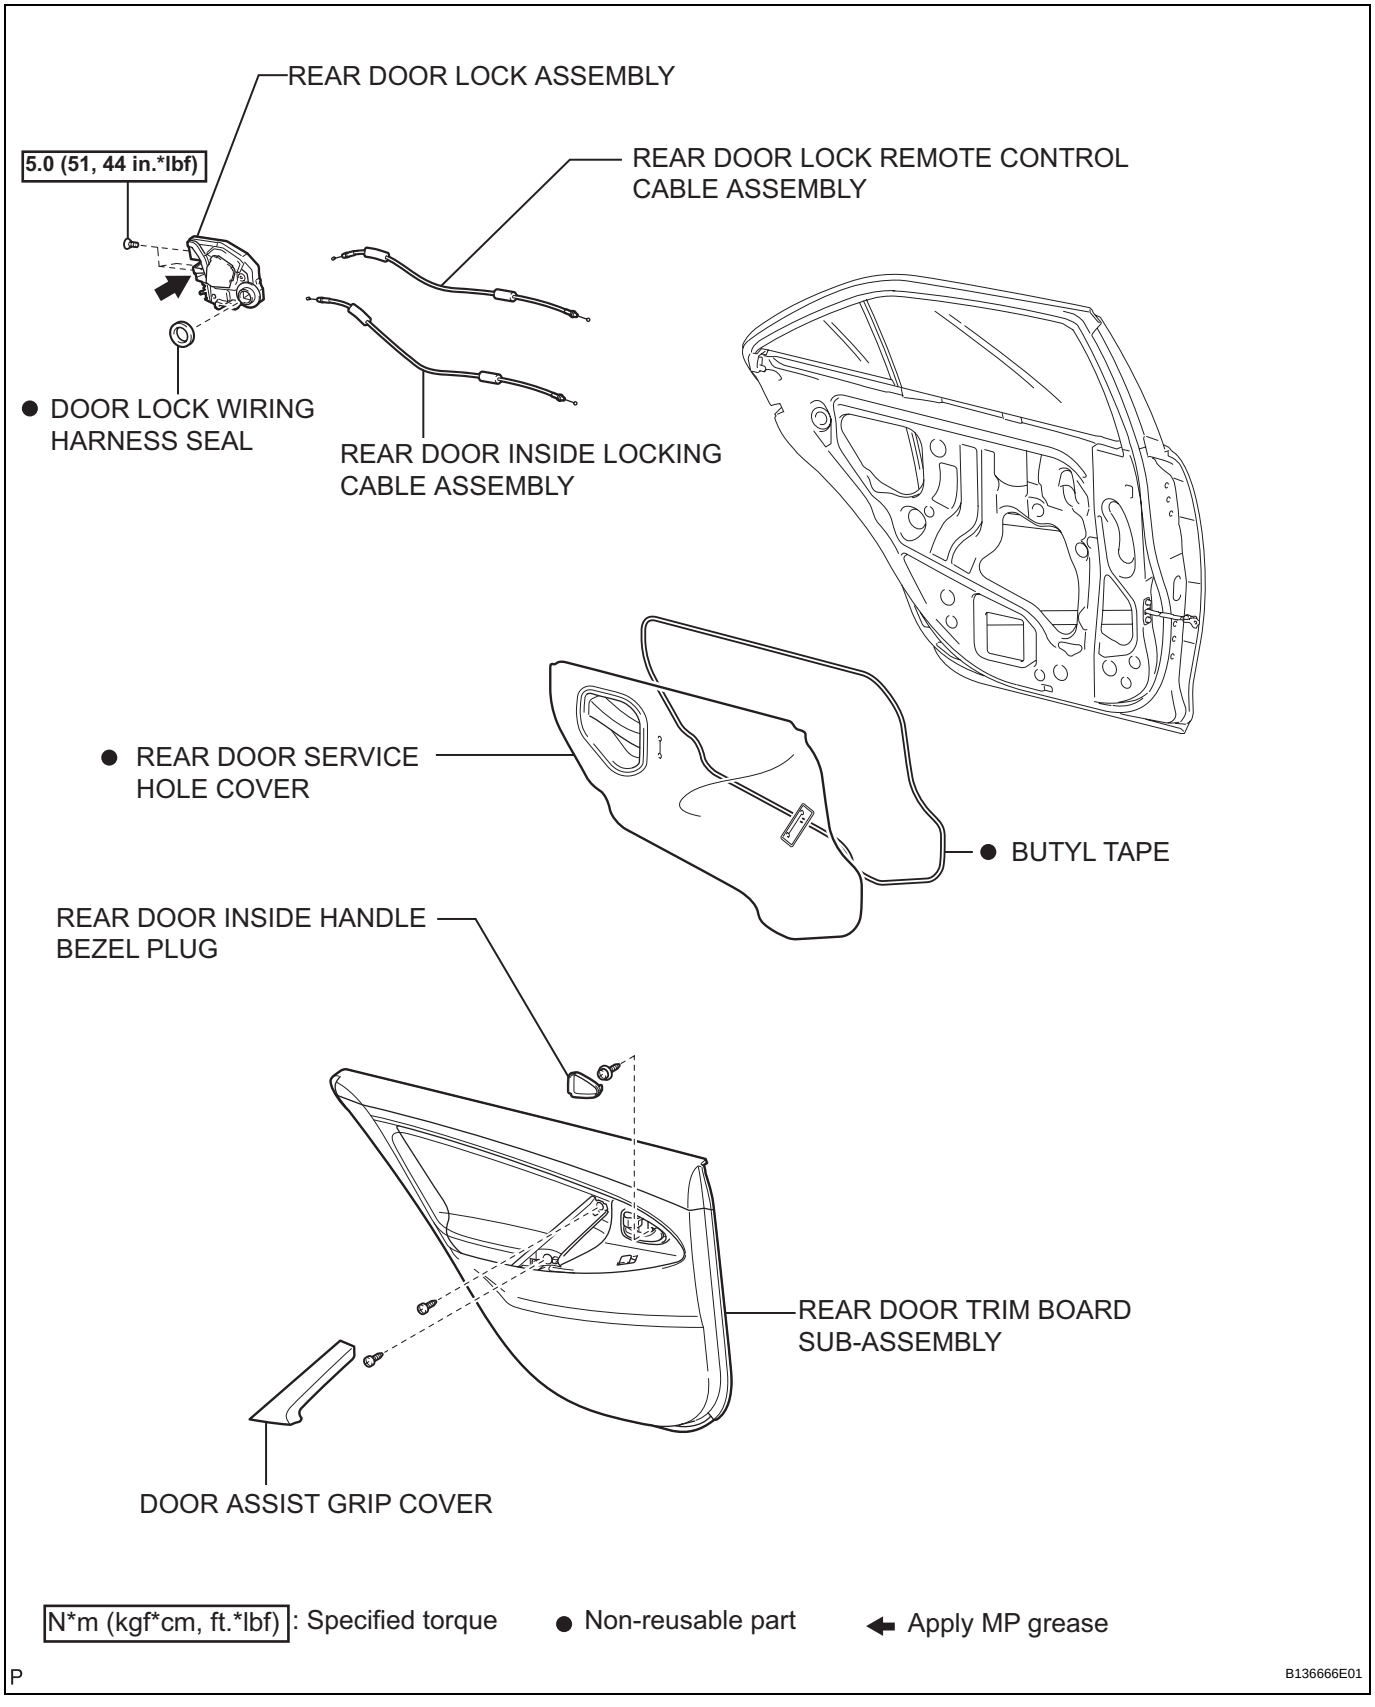
(c) Check operation of the unlock detection switch.
(1) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Measurement Condition	Door Lock Condition	(Specified Condition)
6 - 9	Battery positive (+) → Terminal 4 Battery negative (-) → Terminal 1	Lock	10 kΩ or higher
6 - 9	Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 4	Unlock	Below 1 Ω

DL

REAR DOOR LOCK

COMPONENTS



DL

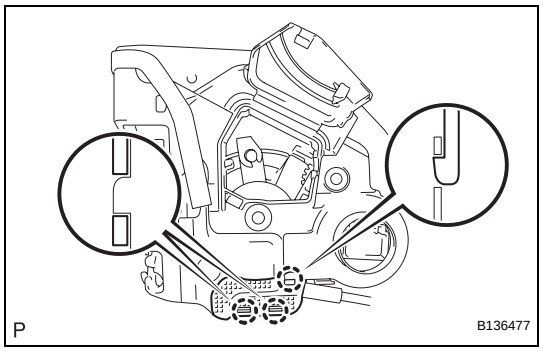
REMOVAL

1. **REMOVE REAR DOOR INSIDE HANDLE BEZEL PLUG (See page ED-38)**
2. **REMOVE DOOR ASSIST GRIP COVER (See page ED-38)**
3. **REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-39)**
4. **REMOVE REAR DOOR SERVICE HOLE COVER (See page ED-41)**
5. **REMOVE REAR DOOR LOCK ASSEMBLY**
   (a) Using a "torx" socket wrench (T30), remove the 3 screws.
   (b) Move the rear door lock assembly downward and pull the release plate out of the rear door outside handle frame.
   (c) Remove the door lock wiring harness seal from the rear door lock assembly.

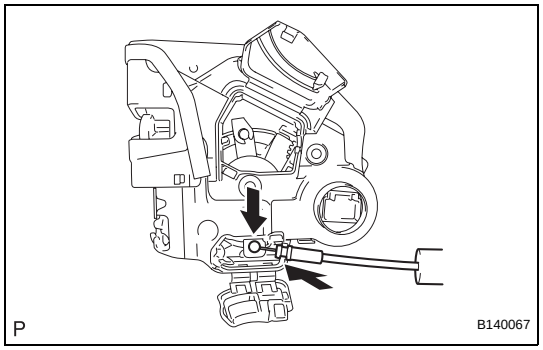
   (d) Using a screwdriver, disengage the claw.
   HINT:
   Tape the screwdriver tip before use.

   (e) Remove the rear door inside locking cable assembly.

DL



(f) Using a screwdriver, disengage the 3 claws.
HINT:
Tape the screwdriver tip before use.



(g) Remove the rear door inside locking cable assembly.

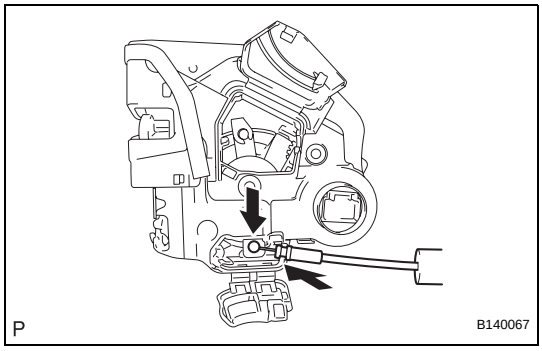
INSTALLATION

1. INSTALL REAR DOOR LOCK ASSEMBLY

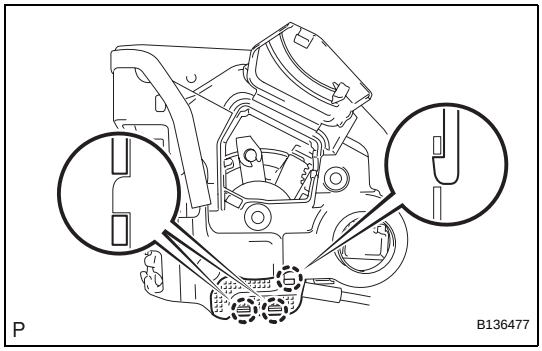
NOTICE:

- **When reusing the removed rear door lock assembly, replace the door lock wiring harness seal on the door lock with a new one.**
- **Do not allow grease or dust to adhere to the surface of the door lock where the seal attaches.**
- **Reusing the door lock wiring harness seal or using a damaged door lock wiring harness seal may allow water intrusion to the connection, and result in a malfunction in the rear door lock assembly.**

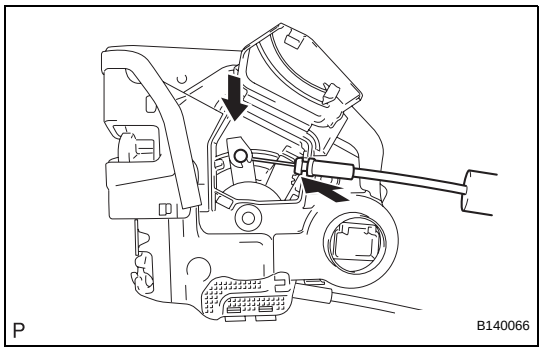
(a) Install the rear door inside locking cable assembly.

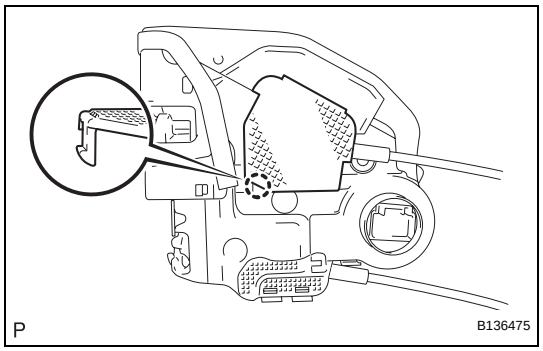


(b) Engage the 3 claws.

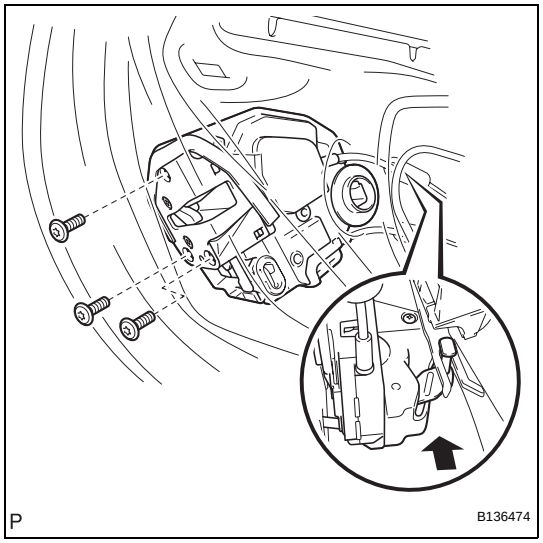


(c) Install the rear door lock remote control cable assembly.





(d) Engage the claw.
(e) Apply MP grease to the sliding parts on the rear door lock assembly.
(f) Install a new door lock wiring harness seal to the rear door lock assembly.

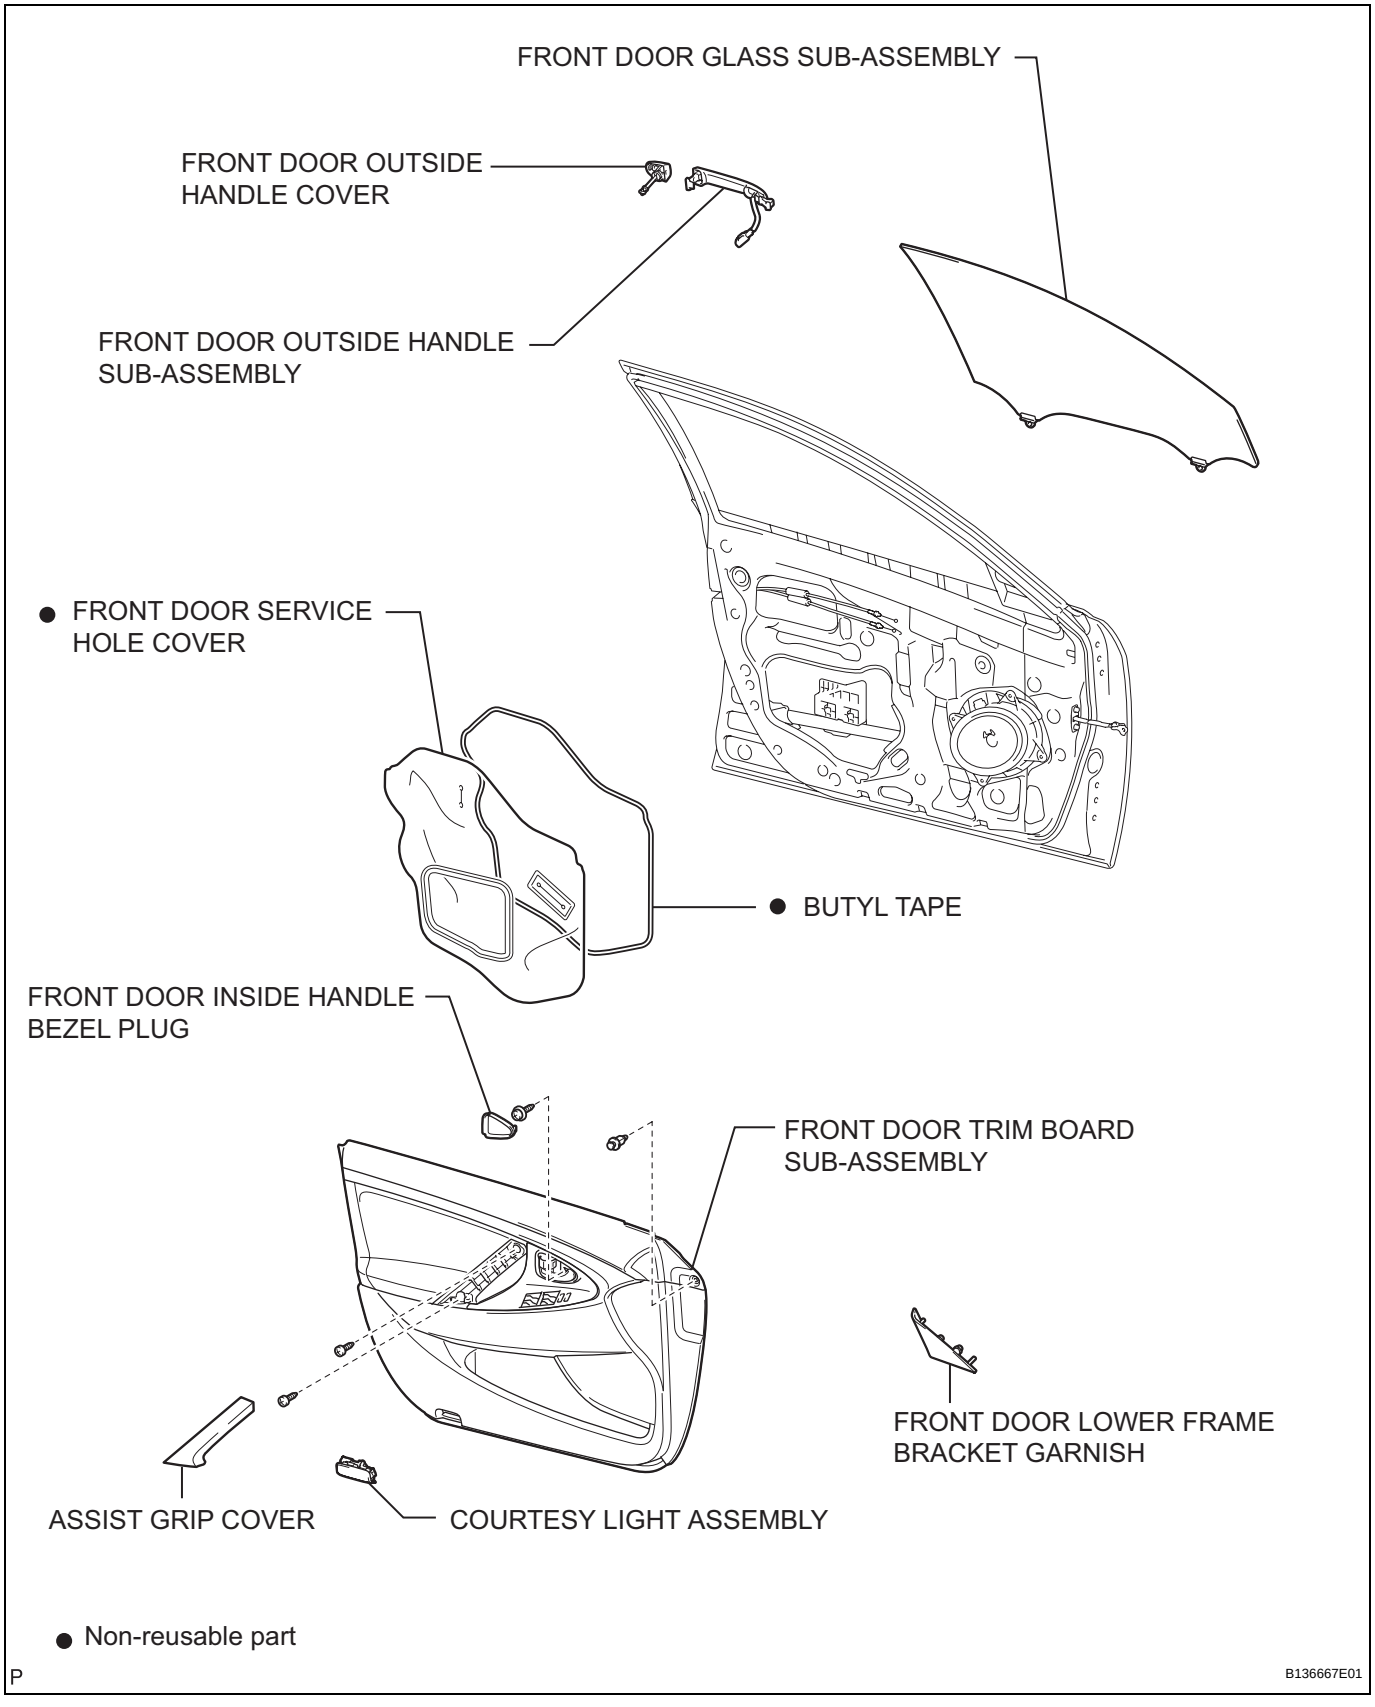


(g) Insert the rear door lock assembly to the rear door outside handle release plate, and set the assembly to the rear door panel.
(h) Make sure that the rear door outside handle frame release plate is securely connected to the rear door lock assembly.
(i) Using a "torx" socket wrench (T30), install the rear door lock assembly with the 3 screws.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)
(j) Connect the connector.

2. **INSTALL REAR DOOR SERVICE HOLE COVER (See page ED-53)**
3. **INSTALL REAR DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-55)**
4. **INSTALL DOOR ASSIST GRIP COVER (See page ED-56)**
5. **INSTALL REAR DOOR INSIDE HANDLE BEZEL PLUG (See page ED-56)**

ENTRY LOCK AND UNLOCK SWITCH

COMPONENTS

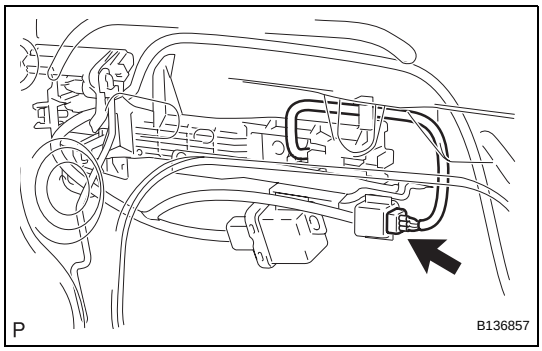


DL

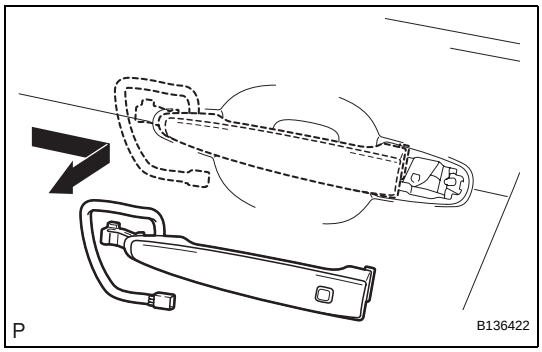
REMOVAL

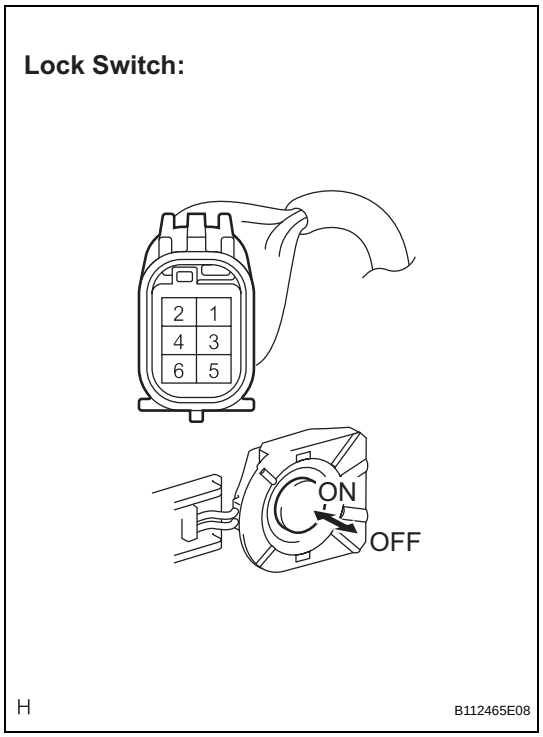
1. **REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH (See page ED-14)**
2. **REMOVE FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-14)**
3. **REMOVE ASSIST GRIP COVER (See page ED-15)**
4. **REMOVE COURTESY LIGHT ASSEMBLY (See page ED-15)**
5. **REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-15)**
6. **REMOVE FRONT DOOR SERVICE HOLE COVER (See page ED-17)**
7. **REMOVE FRONT DOOR GLASS SUB-ASSEMBLY (See page ED-17)**
8. **REMOVE FRONT DOOR OUTSIDE HANDLE COVER (See page ED-19)**
9. **REMOVE FRONT DOOR OUTSIDE HANDLE SUB-ASSEMBLY**

(a) Disconnect the connector.



(b) Remove the front door outside handle assembly as shown in the illustration.

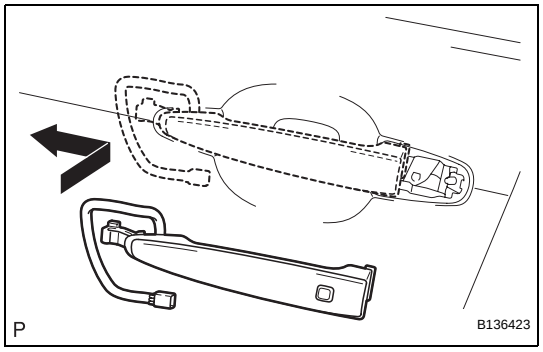


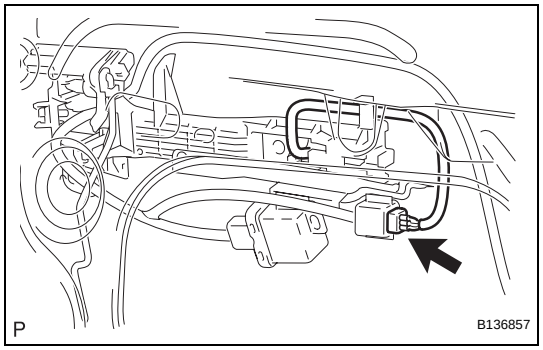


INSPECTION

1. **INSPECT ENTRY LOCK AND UNLOCK SWITCH**
   (a) Remove the outside handle.
   (b) Disconnect the connectors.
   (c) Measure the resistance according to the value(s) in the table below.
   Standard resistance

Tester Connection	Condition	Specified Condition
1 - 3	Lock switch not pushed (OFF)	10 kΩ or higher
	Lock switch pushed (ON)	Below 1 Ω





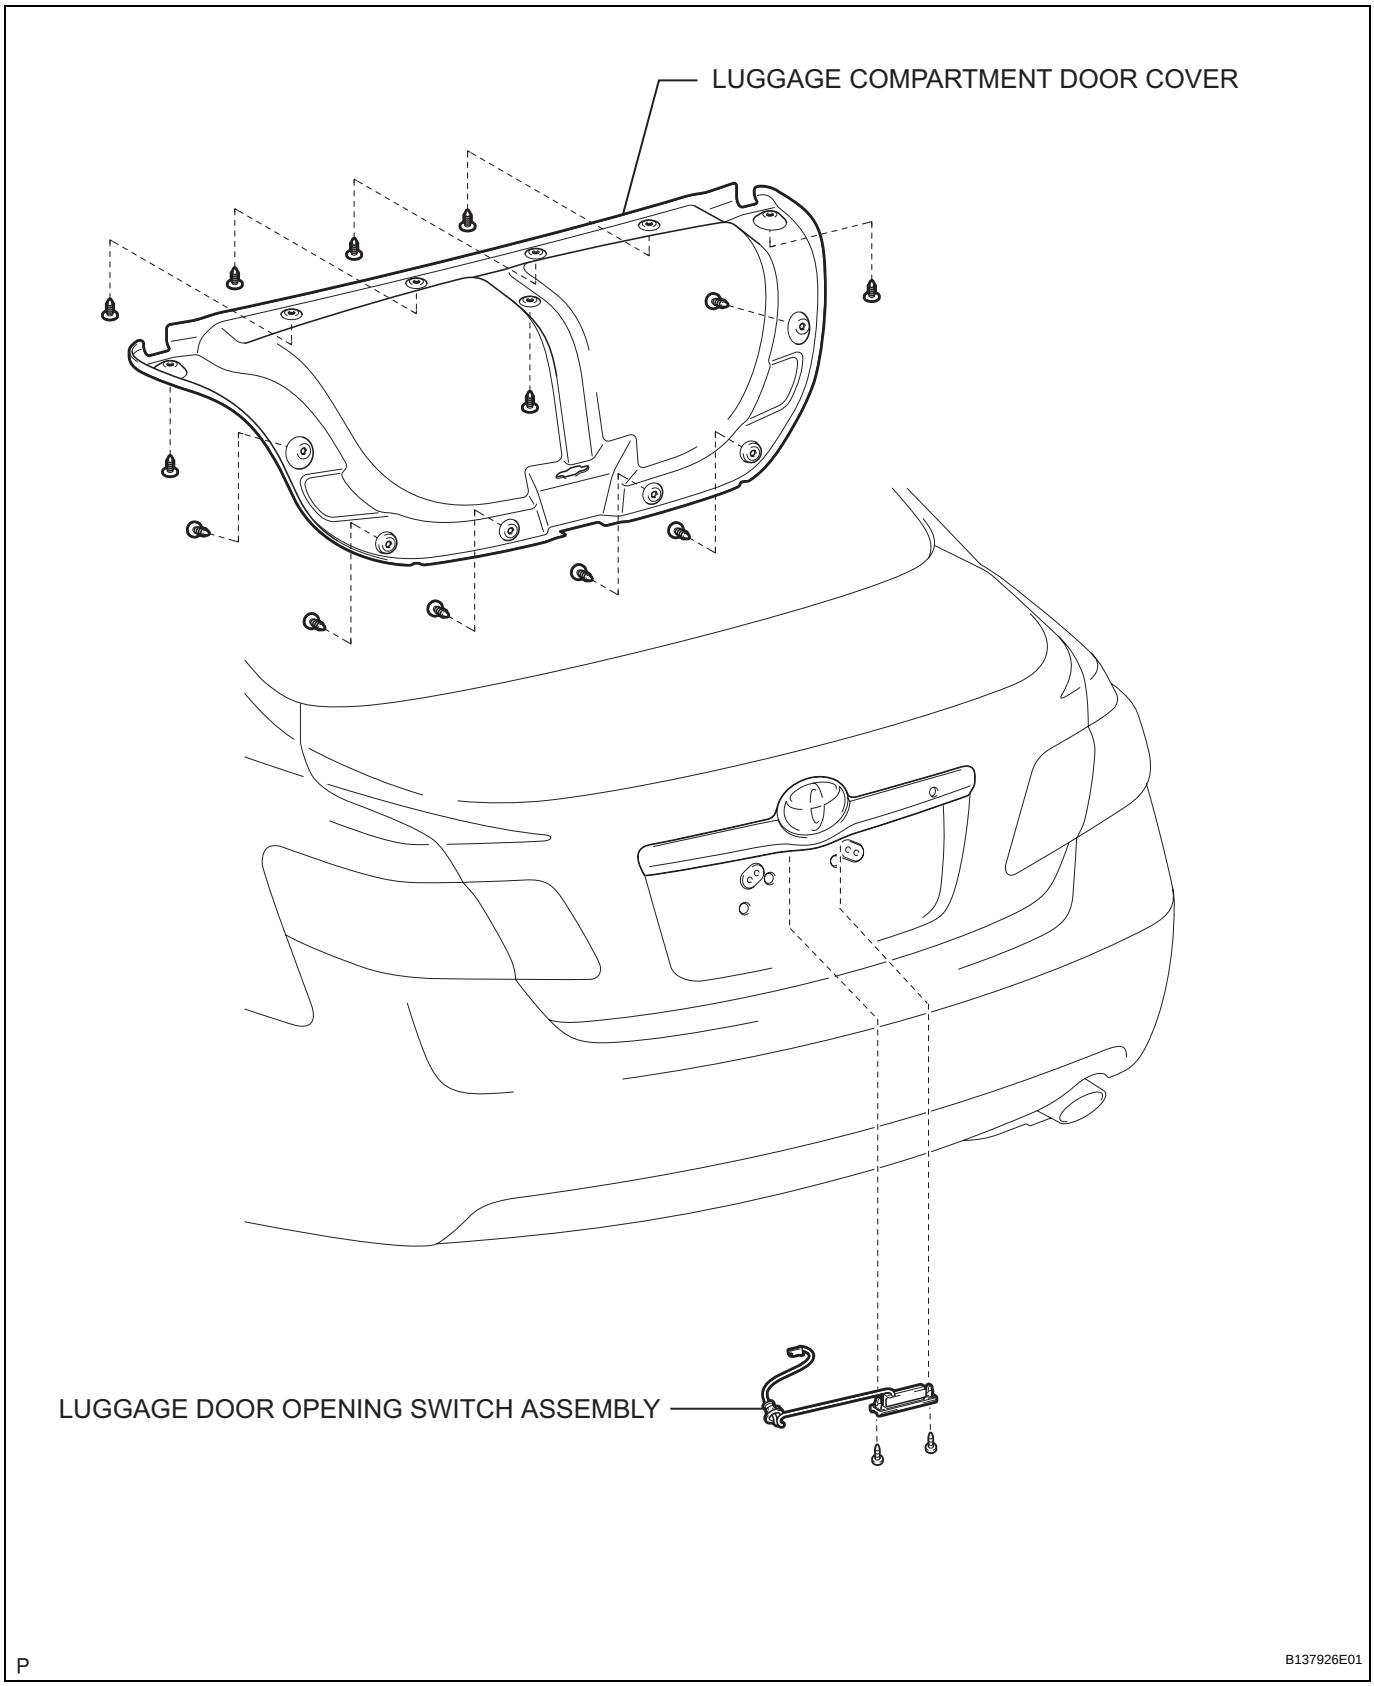
INSTALLATION

1. **INSTALL FRONT DOOR OUTSIDE HANDLE SUB-ASSEMBLY**
   (a) Insert the front end of the front door outside handle assembly into the front door outside handle frame.
   (b) Insert the rear end of the front door outside handle assembly into the front door outside handle frame. Slide the front door outside handle assembly to the front of the vehicle to install it.
   (c) Connect the connector.
2. **INSTALL FRONT DOOR OUTSIDE HANDLE COVER (See page ED-29)**
3. **INSTALL FRONT DOOR GLASS SUB-ASSEMBLY (See page ED-31)**
4. **INSTALL FRONT DOOR SERVICE HOLE COVER (See page ED-32)**
5. **INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-33)**
6. **INSTALL COURTESY LIGHT ASSEMBLY (See page ED-34)**
7. **INSTALL ASSIST GRIP COVER (See page ED-34)**
8. **INSTALL FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-34)**

9. **INSTALL FRONT DOOR LOWER FRAME BRACKET GARNISH (See page ED-34)**

LUGGAGE COMPARTMENT DOOR OPENER OUTER SWITCH

COMPONENTS

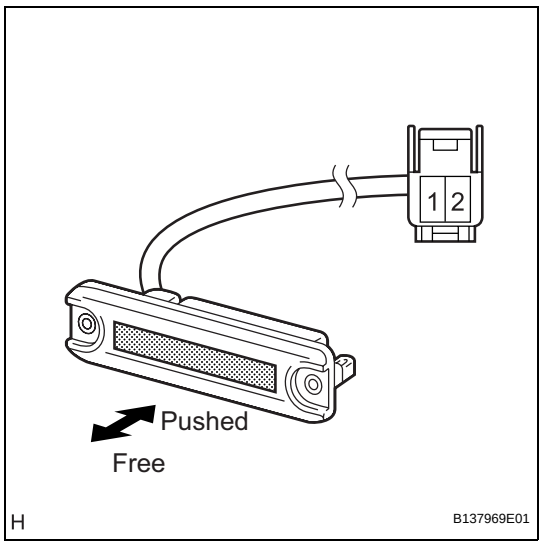


REMOVAL

1. **REMOVE LUGGAGE COMPARTMENT DOOR COVER (See page ET-61)**
2. **REMOVE LUGGAGE DOOR OPENING SWITCH ASSEMBLY**
   (a) Disconnect the connector.
   (b) Remove the 2 screws and the luggage door opening switch assembly.

INSPECTION

1. **INSPECT LUGGAGE KEY ELECTRICAL SWITCH**
   (a) Disconnect the switch connector.
   (b) Measure the resistance according to the value(s) in the table below.
   Standard resistance



Tester connection	Condition	Specified condition
1 - 2	Luggage compartment open switch not pushed (OFF)	10 kΩ or higher
	Luggage compartment open switch pushed (ON)	Below 1 Ω

INSTALLATION

1. **INSTALL LUGGAGE DOOR OPENING SWITCH ASSEMBLY**
   (a) Install the luggage door opening switch assembly with the 2 screws.
   (b) Connect the connector.
2. **INSTALL LUGGAGE COMPARTMENT DOOR COVER (See page ET-64)**

DRIVE SHAFT SYSTEM

PROBLEM SYMPTOMS TABLE

Use the table below to help find the cause of the problem. Check each part. If necessary, replace these parts.

For TMC made

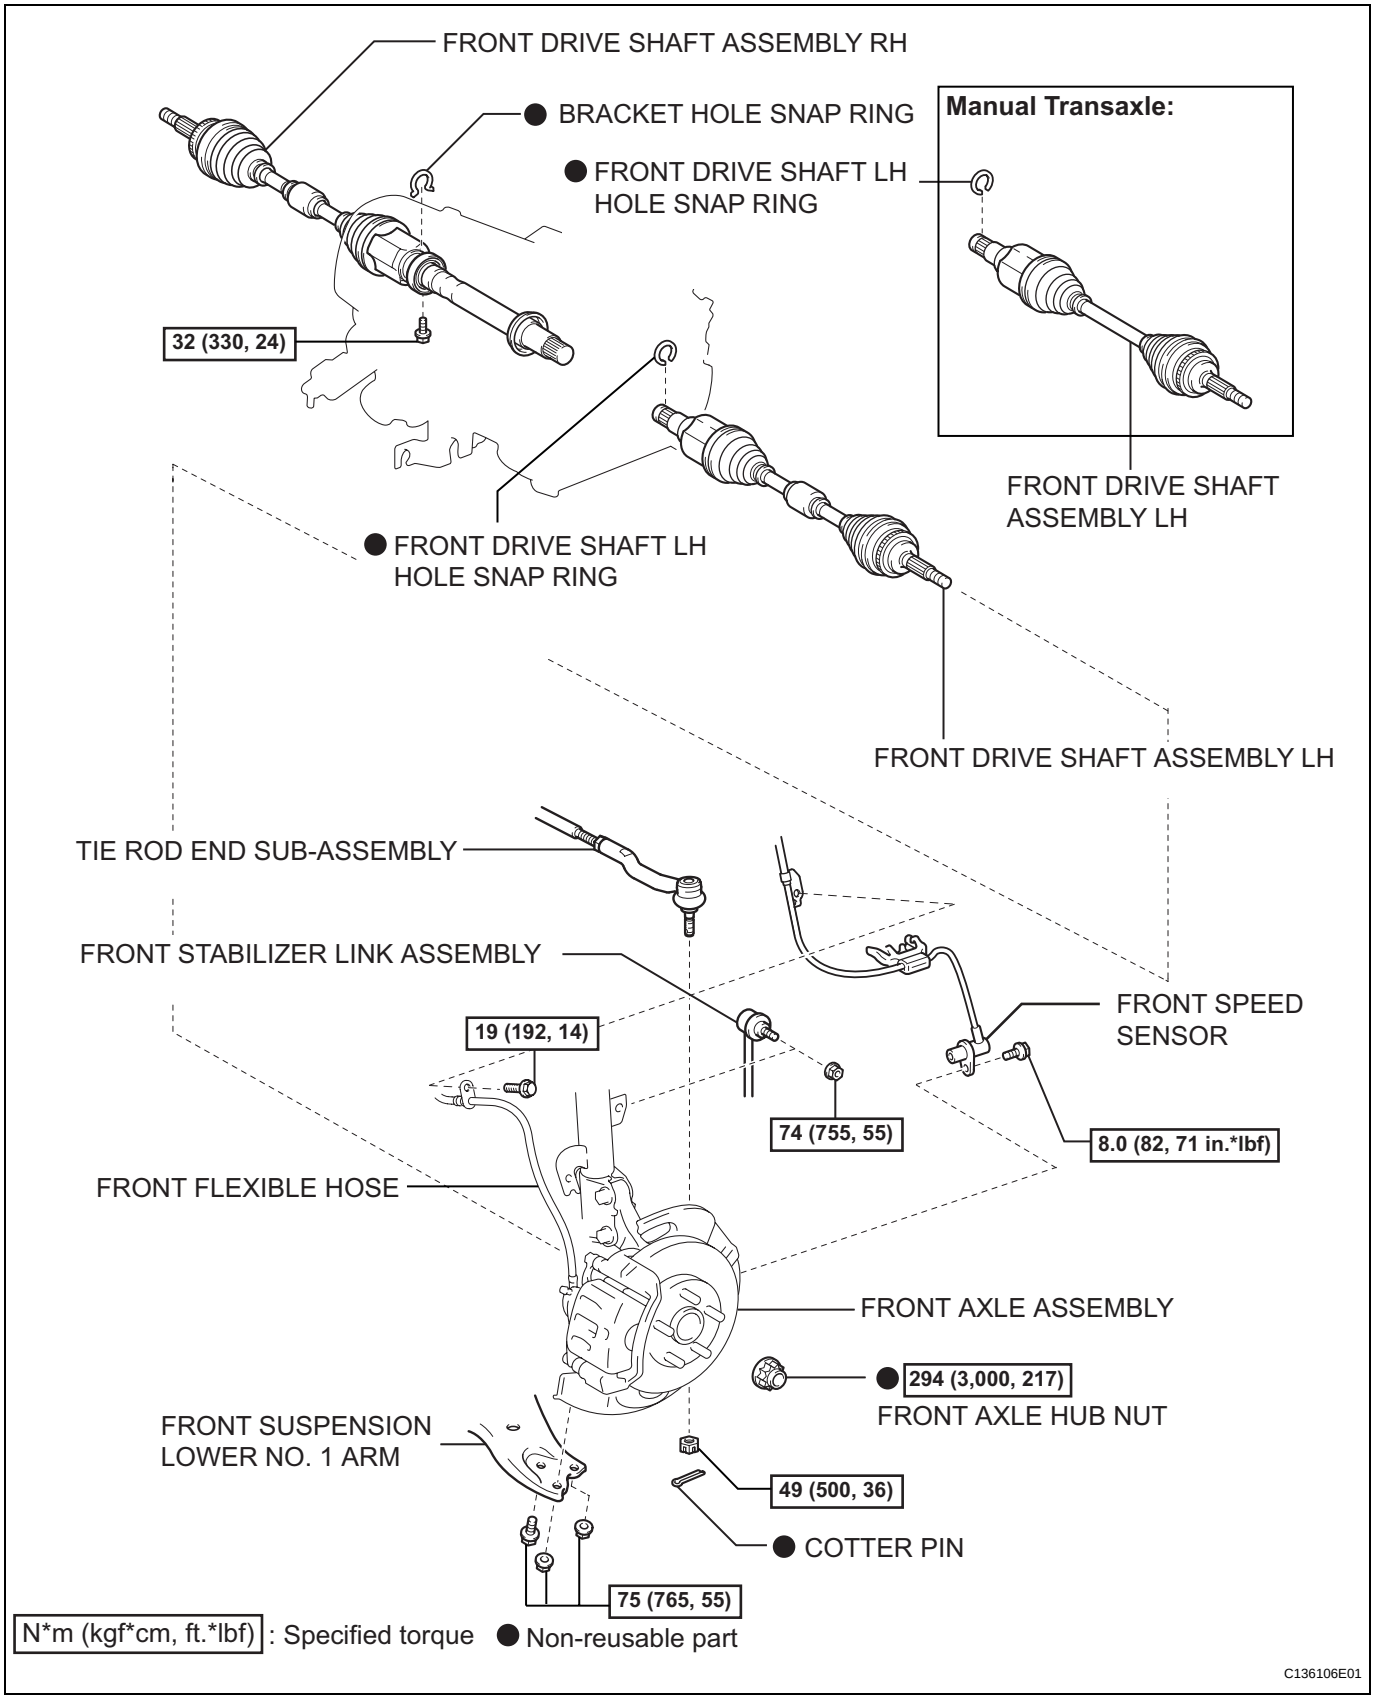
Symptom	Suspected area	See page
Noise (Front drive shaft)	Inboard or outboard joint (Worn)	DS-13

For TMMK made

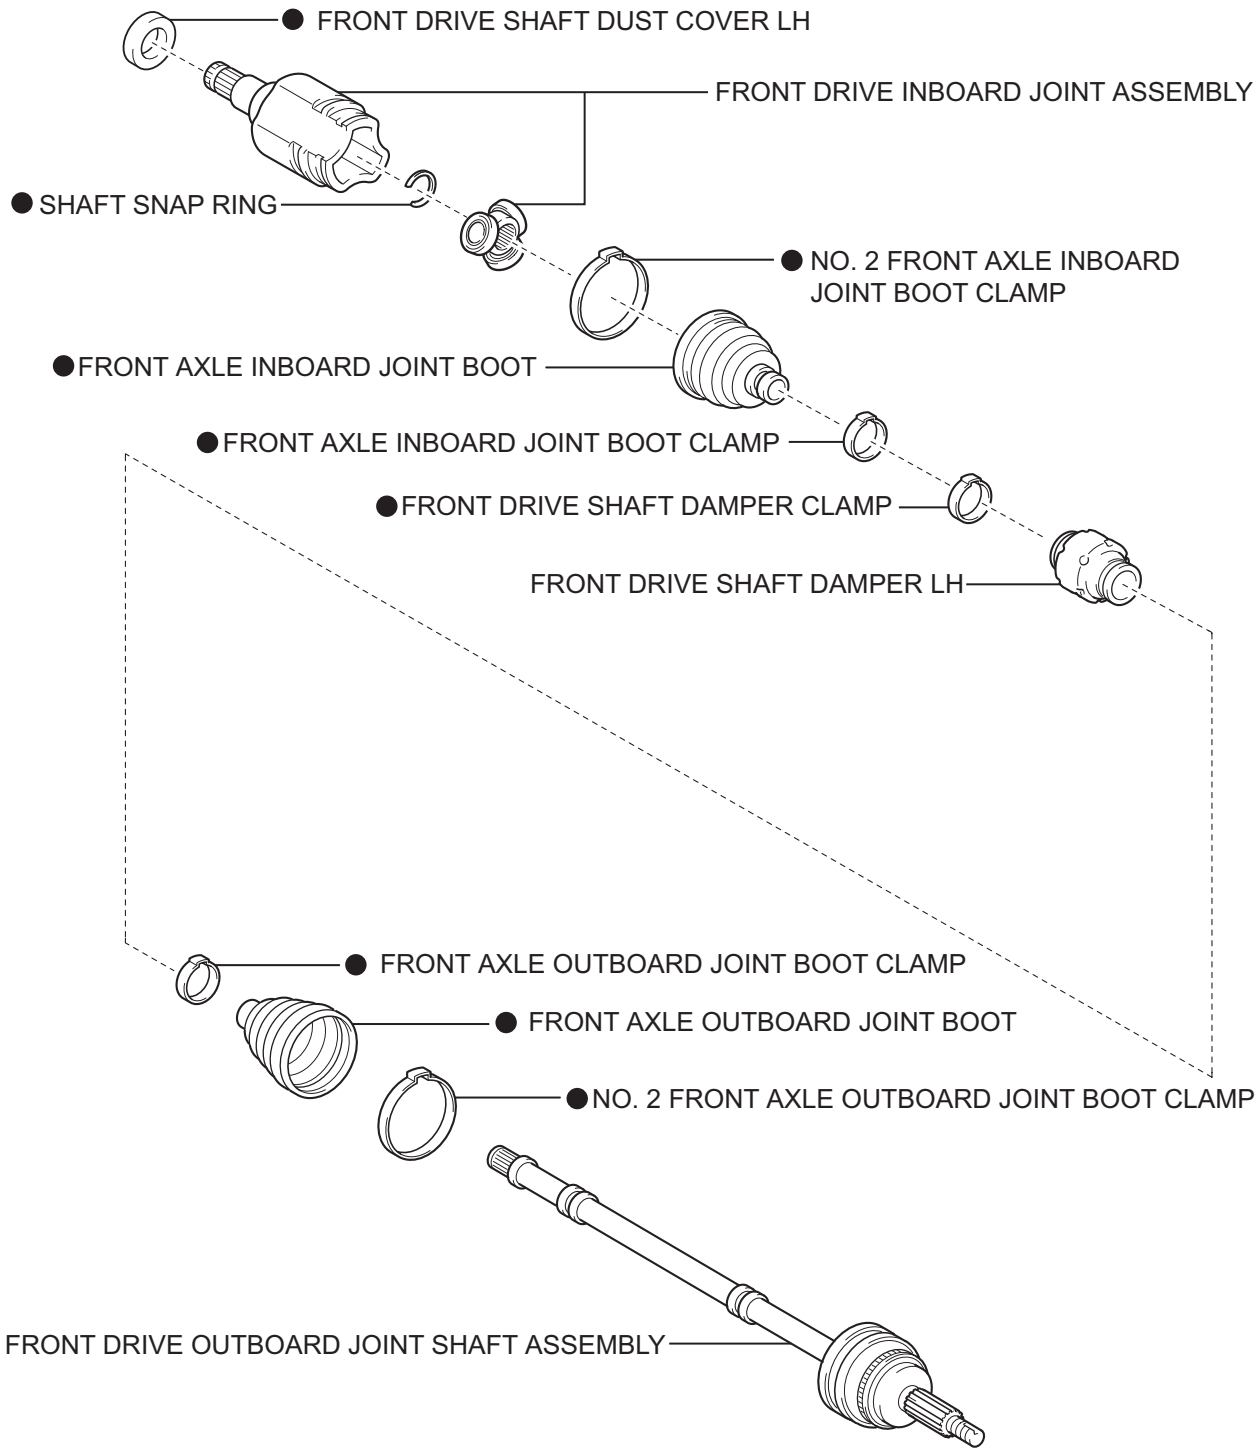
Symptom	Suspected area	See page
Noise (Front drive shaft)	Inboard or outboard joint (Worn)	DS-29

FRONT DRIVE SHAFT (for TMC Made)

COMPONENTS



2GR-FE LH SIDE:

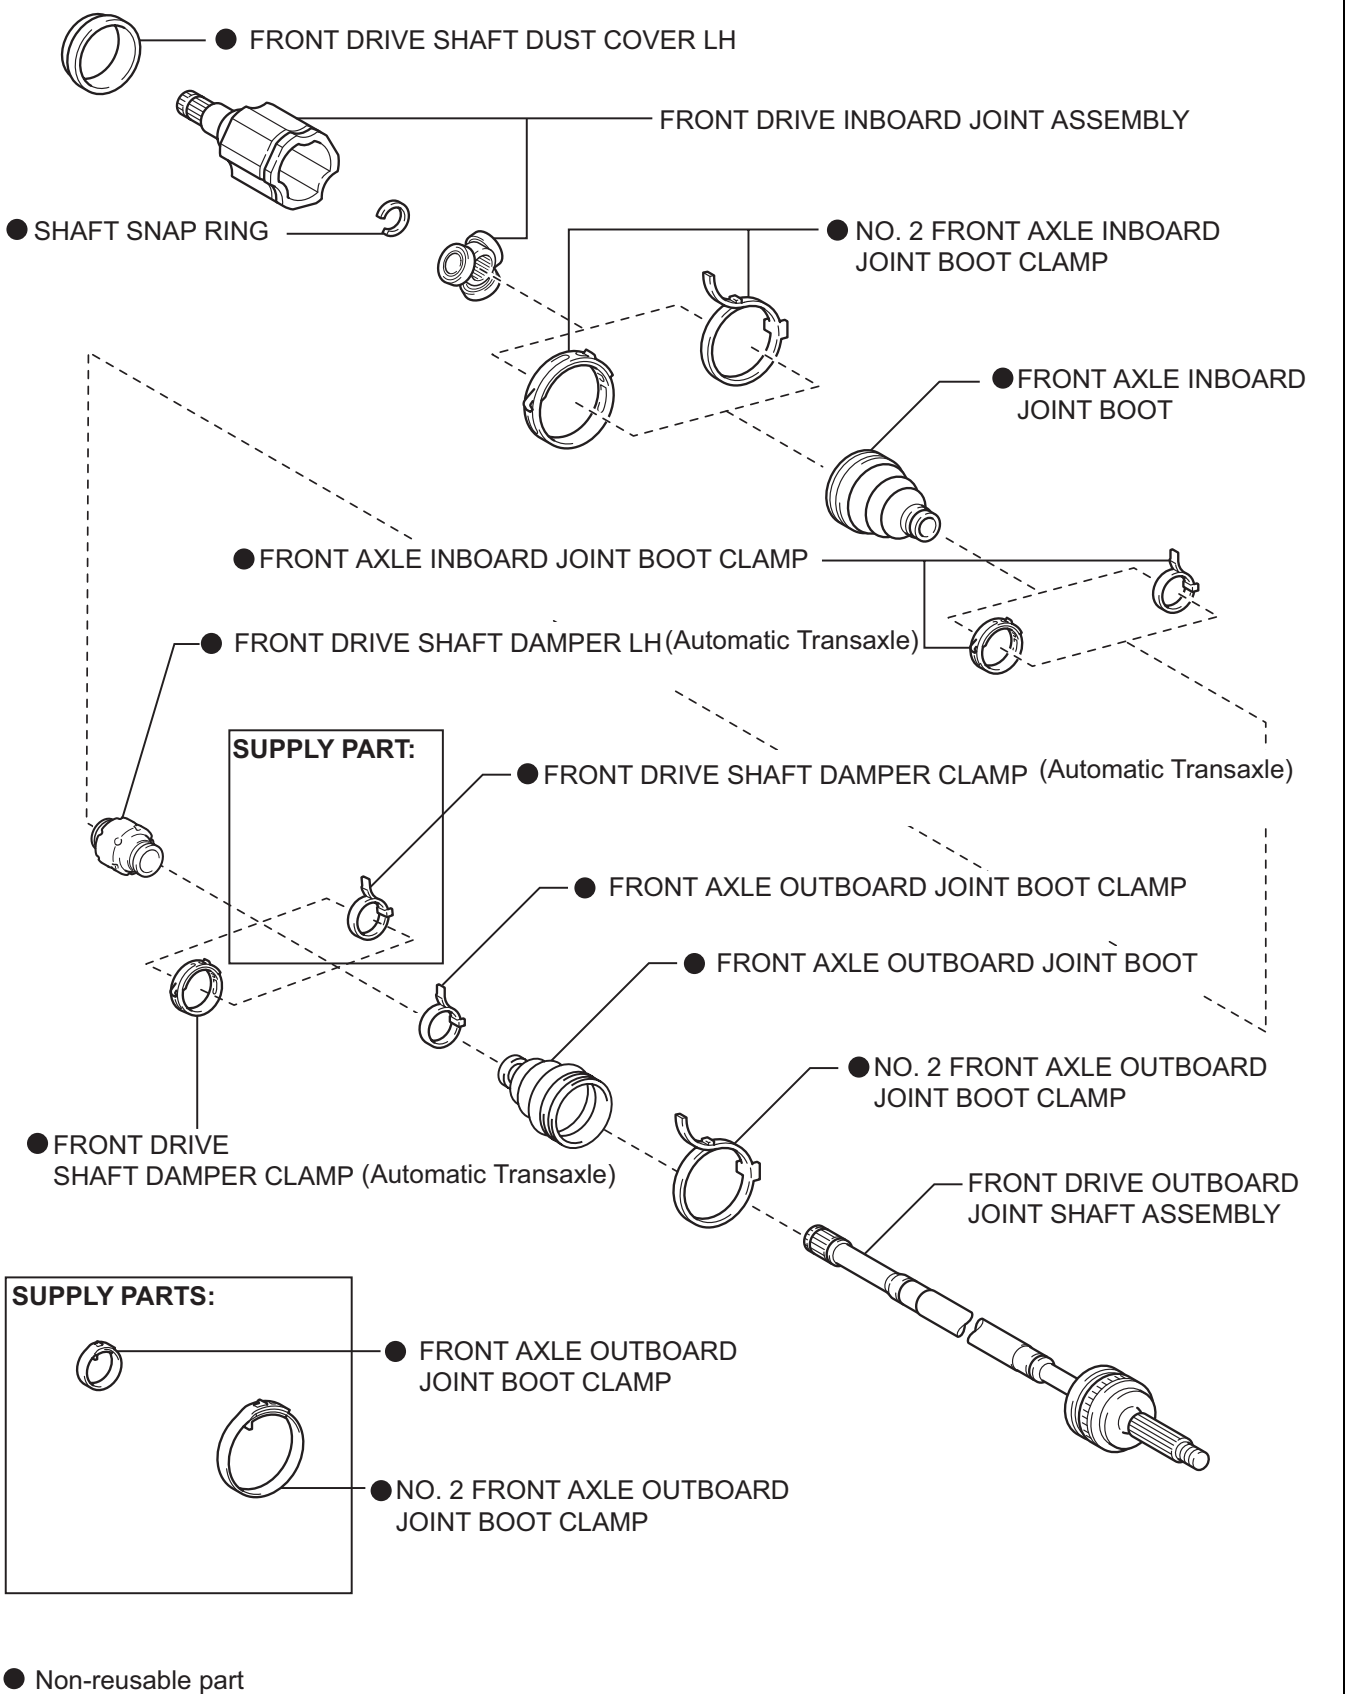


● Non-reusable part

C136538E01

DS

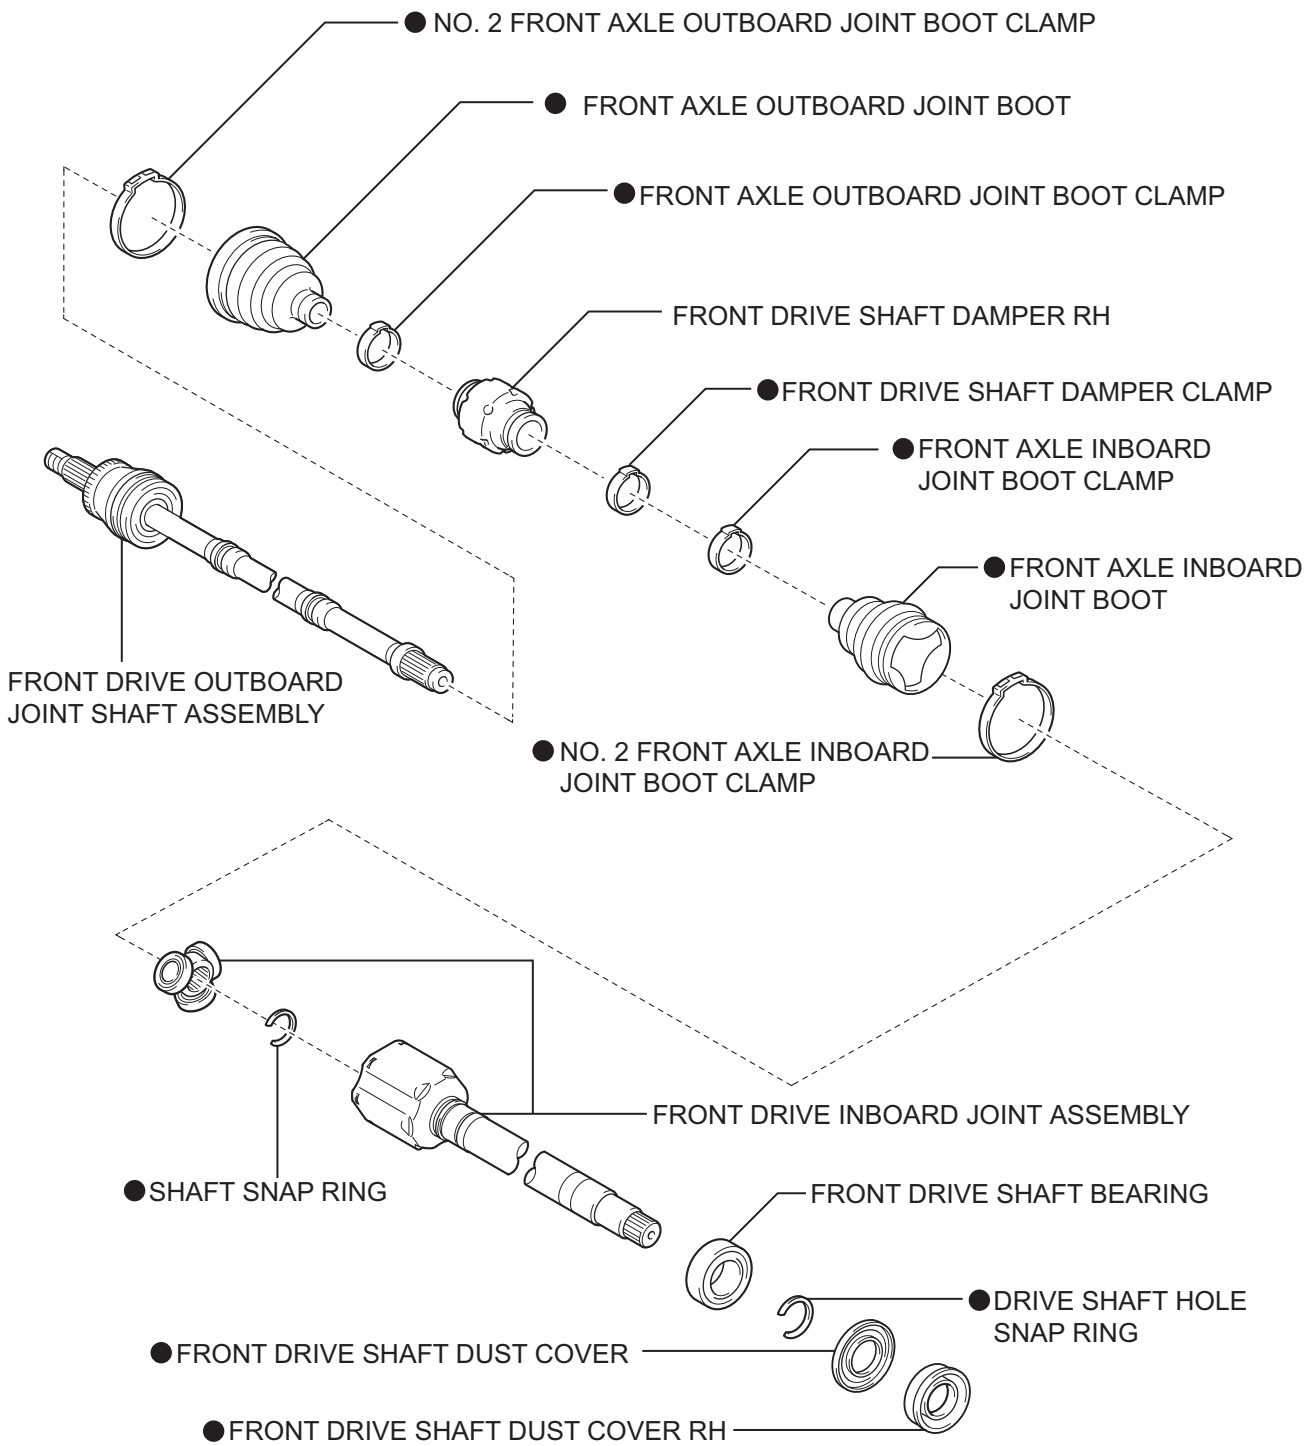
2AZ-FE LH SIDE:



● Non-reusable part

C141176E01

2GR-FE RH SIDE:



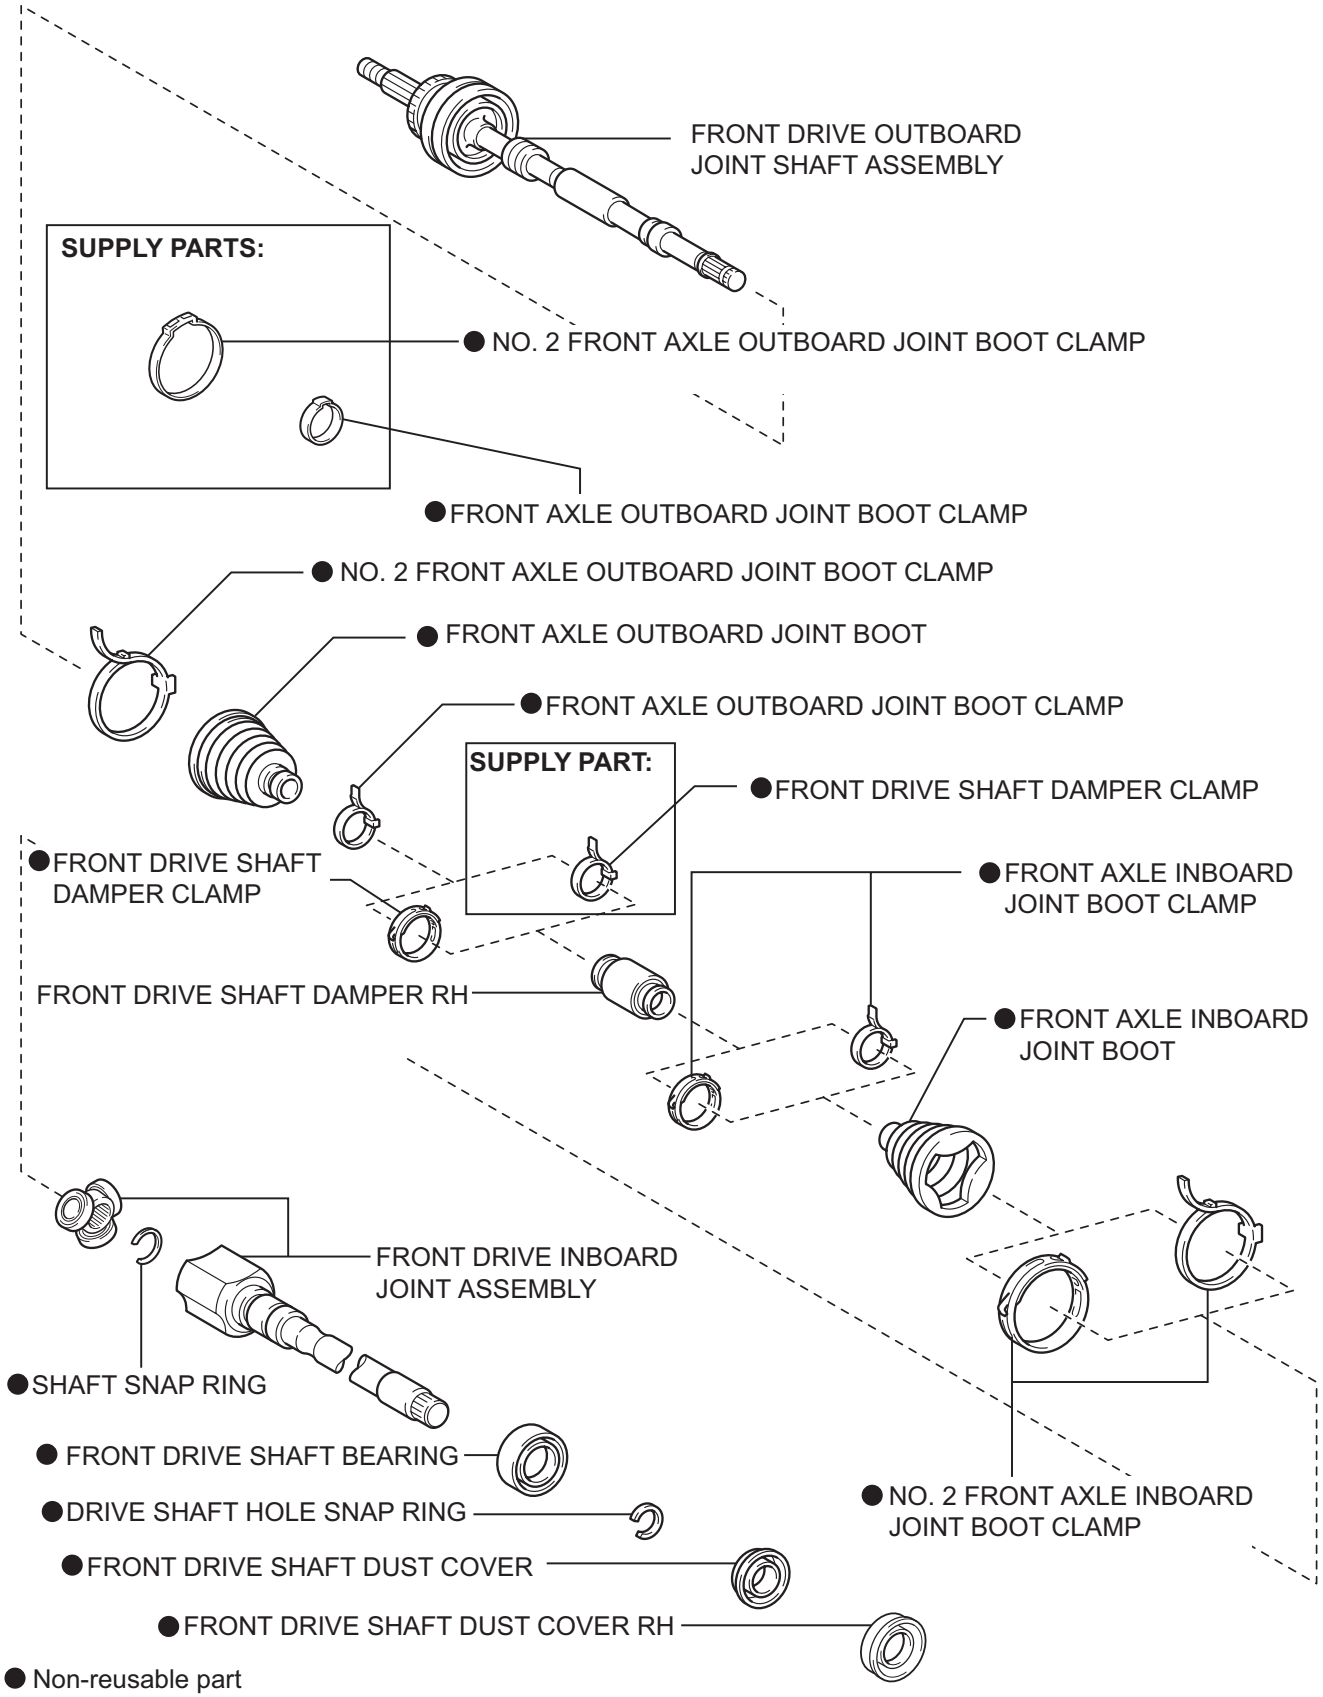
● Non-reusable part

C136540E01

DS

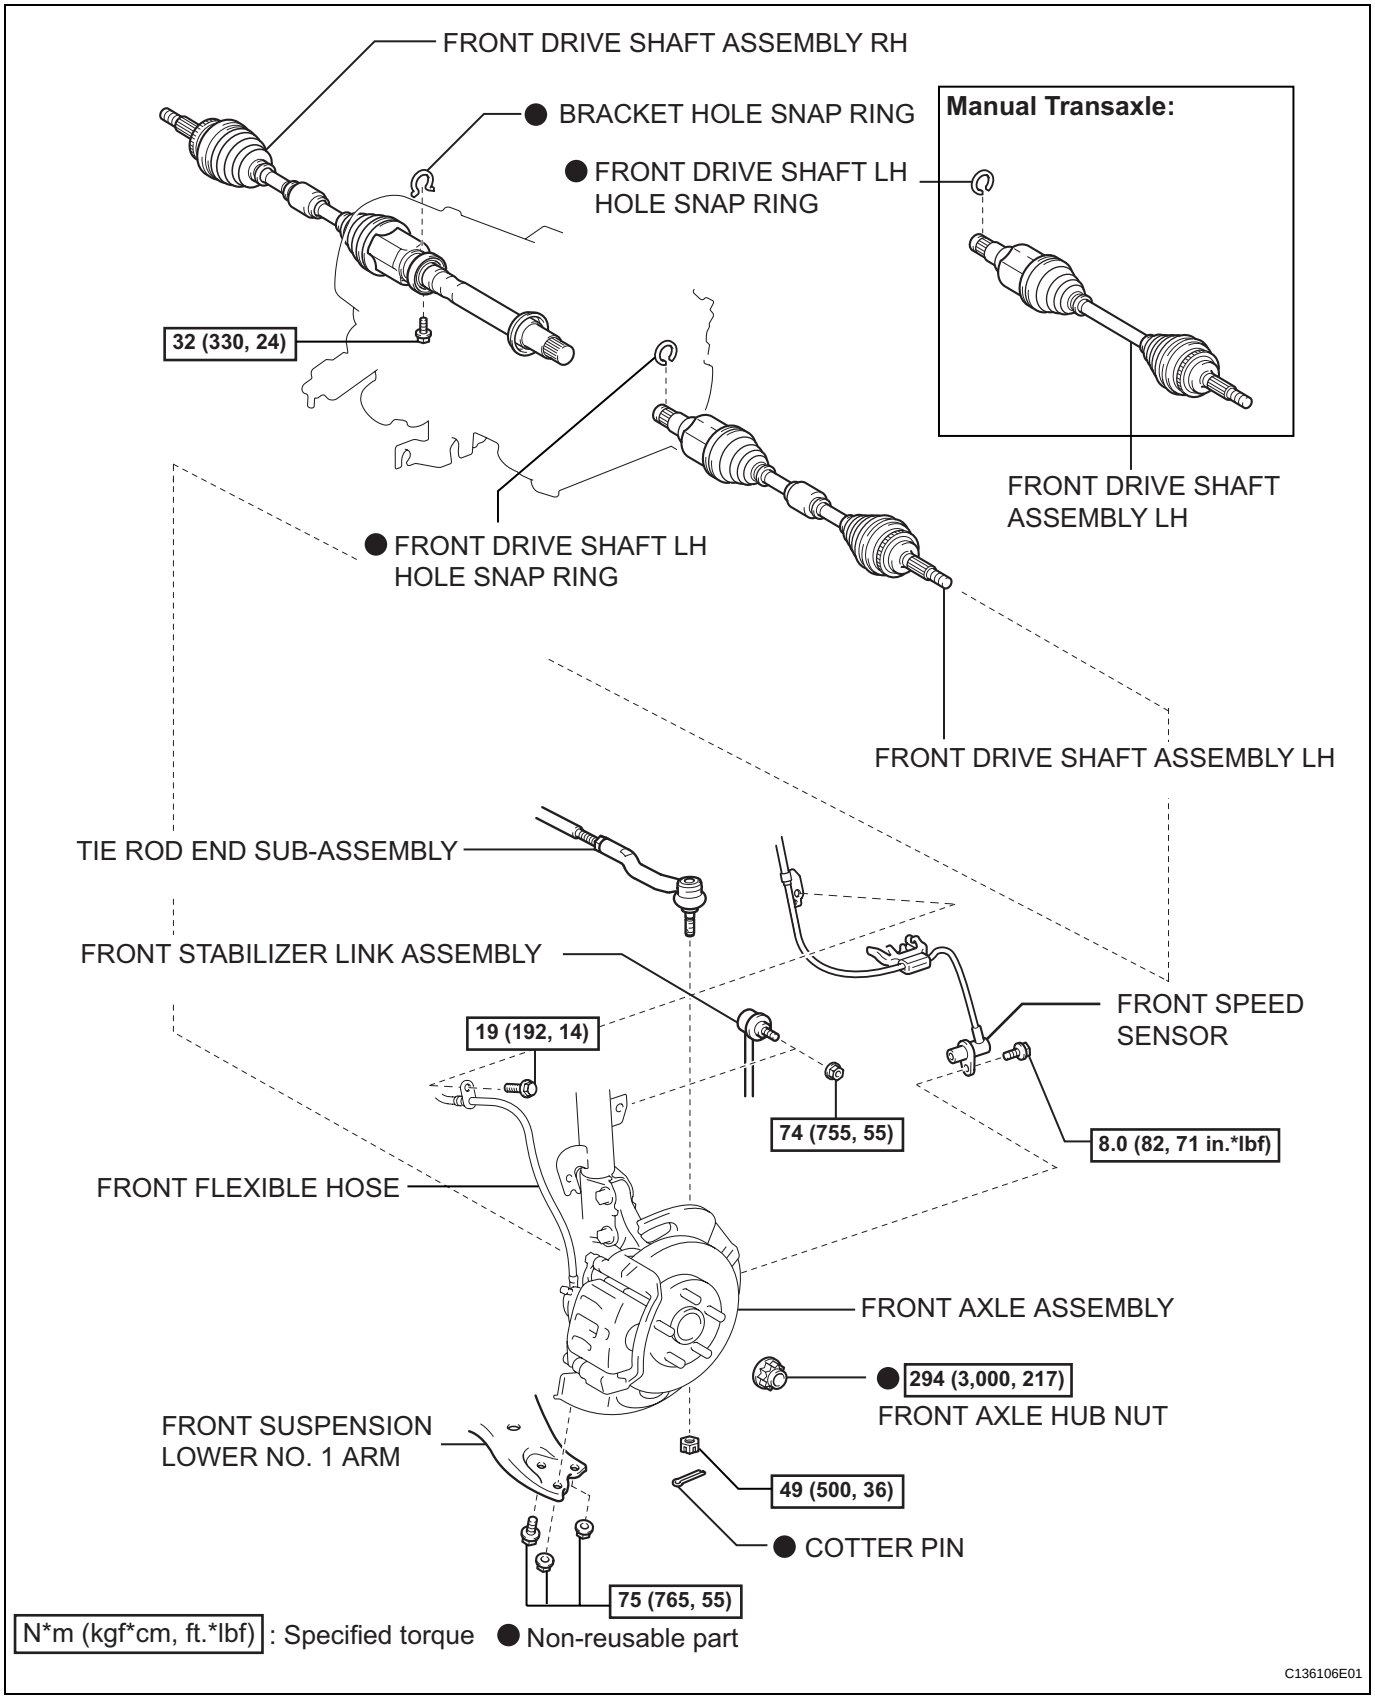
DS

2AZ-FE RH SIDE:

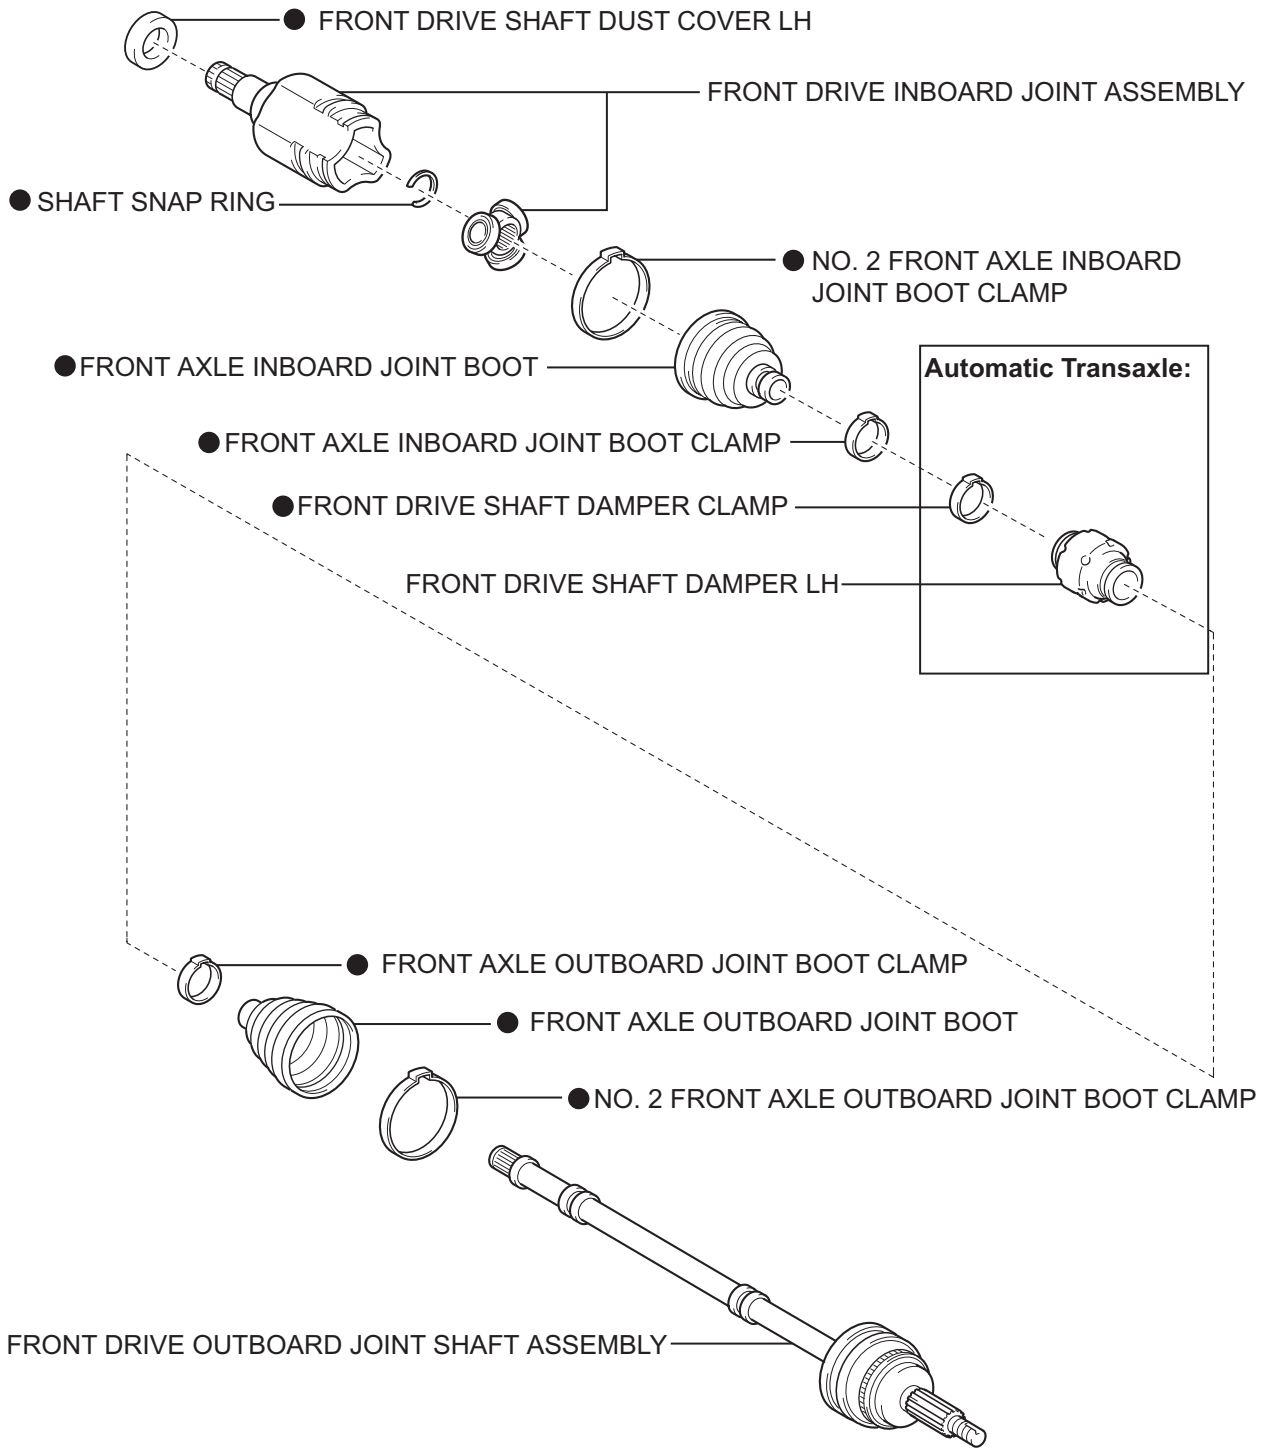


FRONT DRIVE SHAFT (for TMMK Made)

COMPONENTS



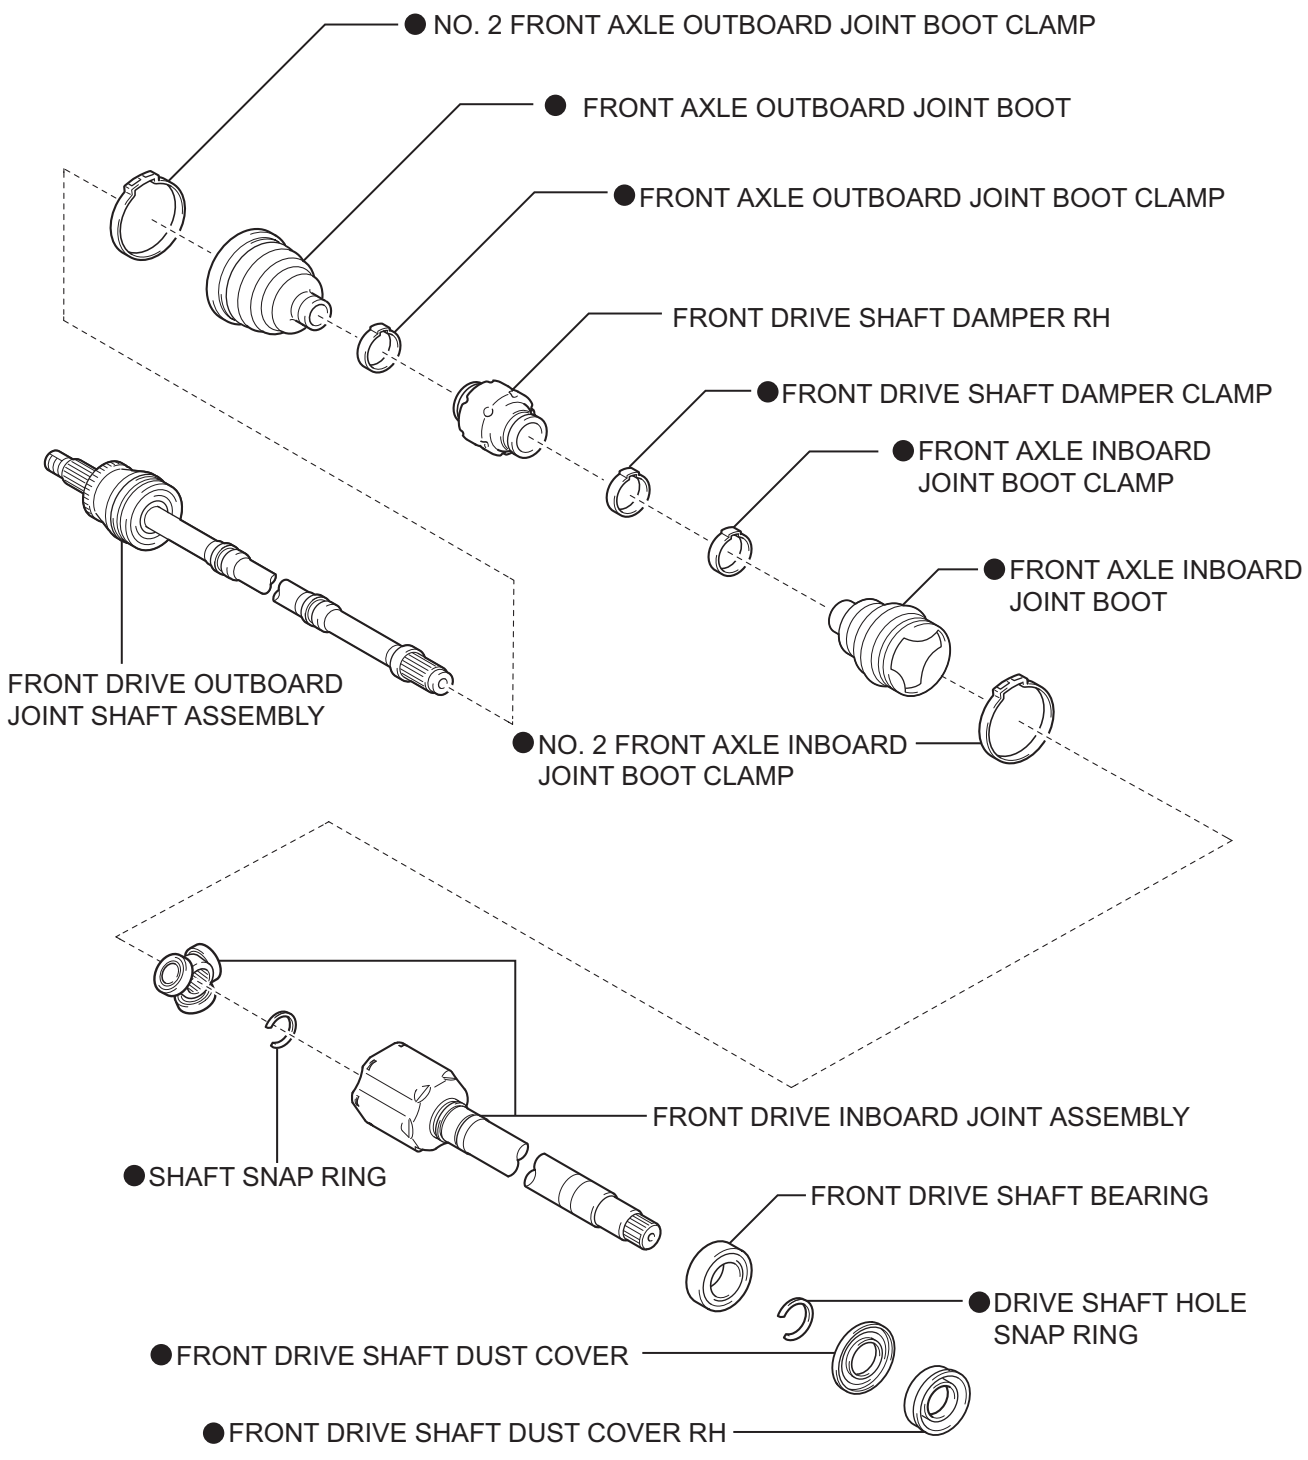
LH SIDE:



● Non-reusable part

C136538E02

RH SIDE:



● Non-reusable part

C136540E02

DS

REMOVAL

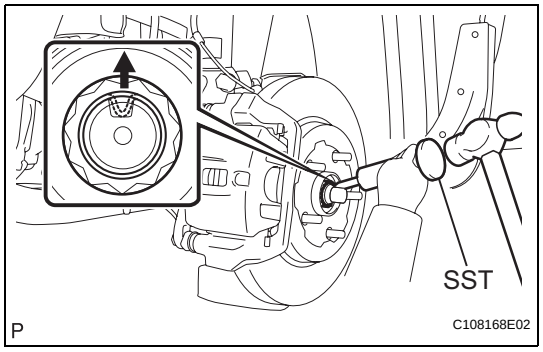
HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. DRAIN AUTOMATIC TRANSAXLE FLUID (for Automatic Transaxle)
(a) for 2GR-FE: See page AX-207
(b) for 2AZ-FE: See page AX-162

2. DRAIN MANUAL TRANSAXLE OIL (for Manual Transaxle) (See page MX-5)

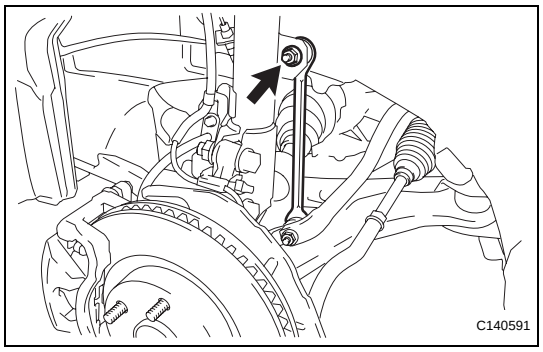
3. REMOVE FRONT WHEEL

4. REMOVE FRONT AXLE HUB NUT



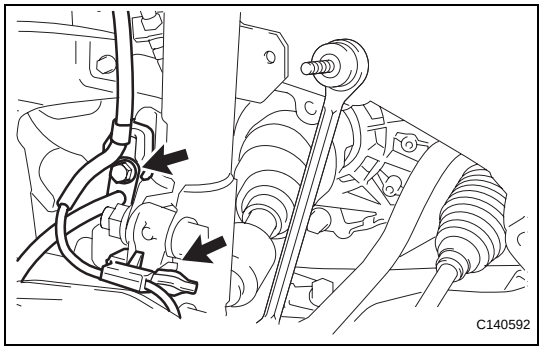
(a) Using SST and a hammer, release the staked part of the front axle hub nut.
SST 09930-00010
NOTICE:
Loosen the staked part of the nut completely, otherwise the thread of the drive shaft may be damaged.
(b) While applying the brakes, remove the front axle hub nut.

5. SEPARATE FRONT STABILIZER LINK ASSEMBLY

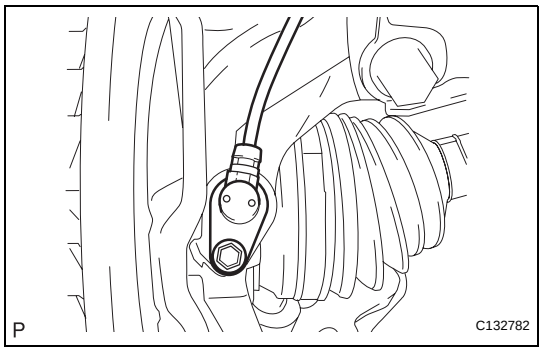


(a) Remove the nut and separate the front stabilizer link assembly.
HINT:
If the ball joint turns together with the nut, use a hexagon wrench (6 mm) to hold the stud.

6. SEPARATE FRONT SPEED SENSOR

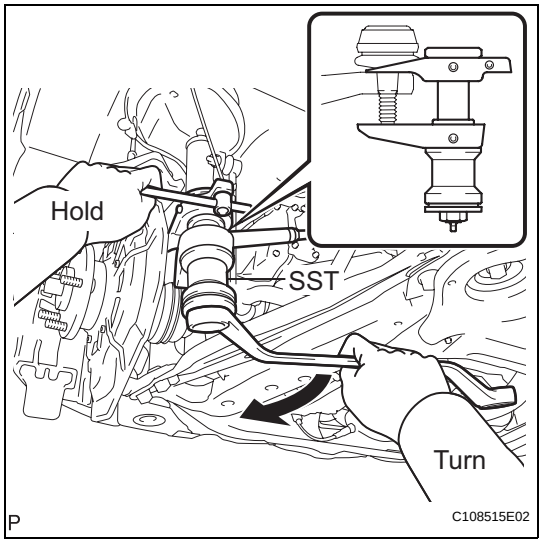


(a) Remove the bolt and clip, and separate the speed sensor wire and flexible hose from the shock absorber.

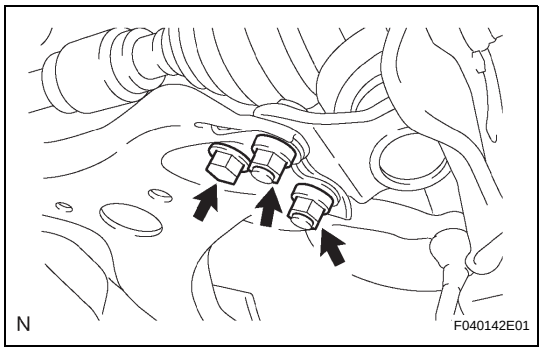


(b) Remove the bolt and separate the speed sensor from the steering knuckle.
NOTICE:
- **Prevent foreign matter from adhering to the speed sensor.**
- **Be careful not to damage the speed sensor.**

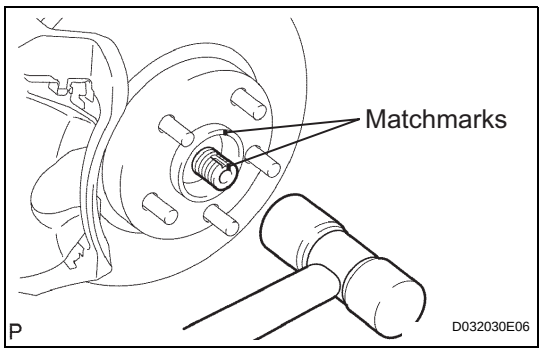
DS



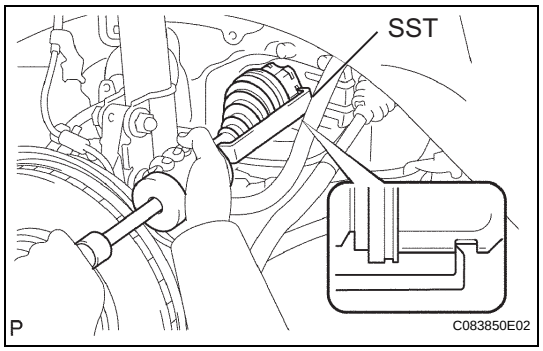
7. SEPARATE TIE ROD END SUB-ASSEMBLY
(a) Remove the cotter pin and nut.
(b) Using SST, separate the tie rod end sub-assembly from the steering knuckle.
SST 09628-00011
NOTICE:
- **Make sure that the string of the SST is securely tied to the vehicle.**
- **Be careful not to damage the ball joint dust cover.**
- **Be careful not to damage the steering knuckle.**
- **Be careful not to damage the front disc brake dust cover.**



8. SEPARATE FRONT SUSPENSION LOWER NO. 1 ARM
(a) Remove the bolt and 2 nuts, and separate the front suspension lower No. 1 arm from the lower ball joint.



9. SEPARATE FRONT AXLE ASSEMBLY
(a) Put matchmarks on the front drive shaft assembly and the axle hub.
(b) Using a plastic hammer, separate the front drive shaft assembly from the front axle assembly.
NOTICE:
Be careful not to damage the drive shaft boot and speed sensor rotor.



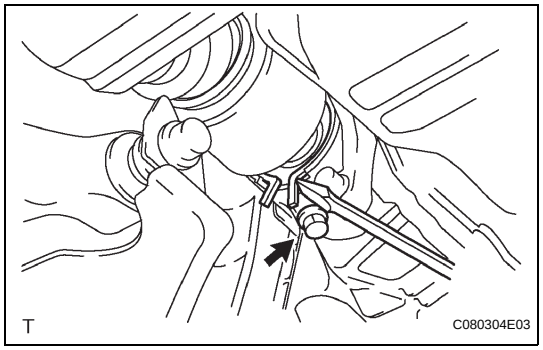
10. REMOVE FRONT DRIVE SHAFT ASSEMBLY LH

(a) Using SST, remove the front drive shaft assembly LH.

SST 09520-01010, 09520-24010 (09520-32040)

NOTICE:

- **Be careful not to damage the drive shaft dust cover, boot, and oil seal.**
- **Be careful not to drop the drive shaft assembly.**



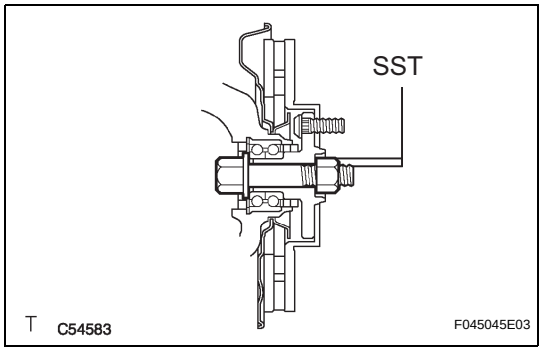
11. REMOVE FRONT DRIVE SHAFT ASSEMBLY RH

(a) Using a screwdriver, remove the bearing bracket hole snap ring.

(b) Remove the bolt and front drive shaft assembly RH from the drive shaft bearing bracket.

NOTICE:

Do not damage the boot and oil seal.



12. SECURE FRONT AXLE HUB SUB-ASSEMBLY

(a) Secure the front axle hub bearing.

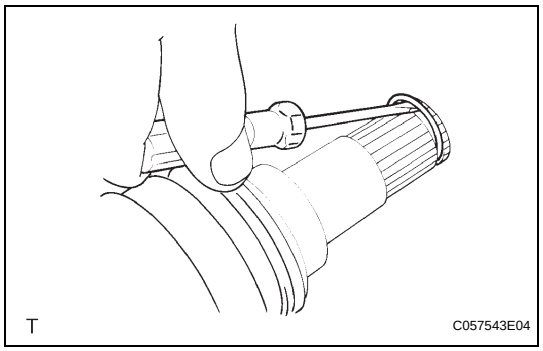
SST 09608-16042 (09608-02021, 09608-02041)

NOTICE:

The hub bearing may be damaged if it is subjected to the vehicle's full weight, such as moving the vehicle with the drive shaft removed. If it is necessary to place the vehicle's weight on the hub bearing, first support it with SST.

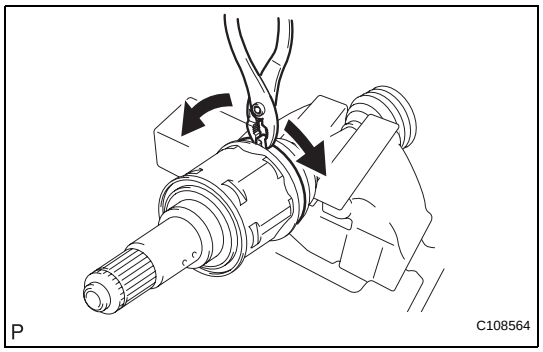
13. INSPECT FRONT DRIVE SHAFT ASSEMBLY (See page DS-13)

DISASSEMBLY



1. REMOVE FRONT DRIVE SHAFT LH HOLE SNAP RING

(a) Using a screwdriver, remove the front drive shaft LH hole snap ring.



2. REMOVE NO. 2 FRONT AXLE INBOARD JOINT BOOT CLAMP (for 2GR-FE)

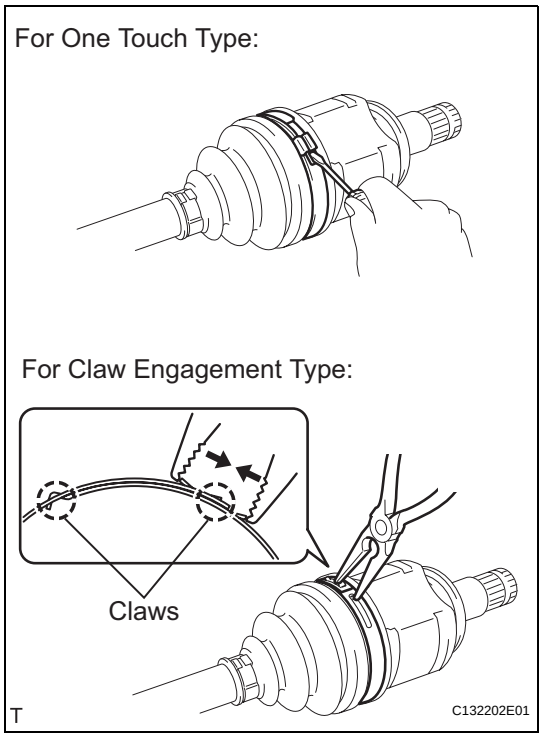
(a) Using pliers, remove the No. 2 front axle inboard joint boot clamp as shown in the illustration.

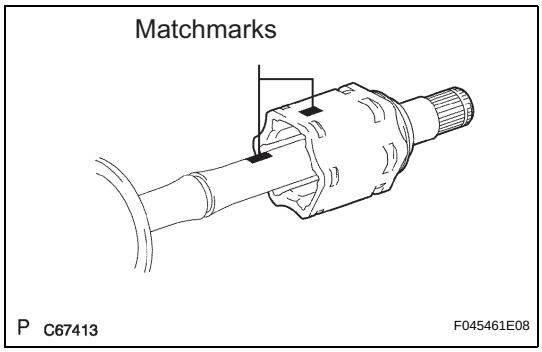
3. REMOVE FRONT AXLE INBOARD JOINT BOOT CLAMP (for 2GR-FE)

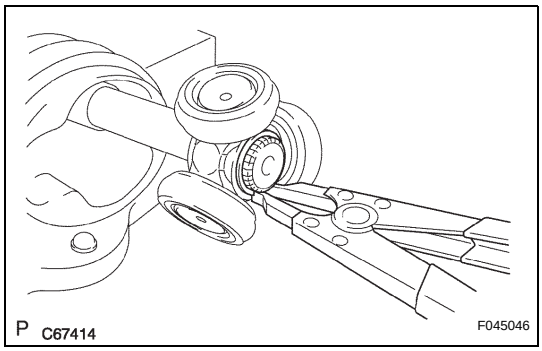
(a) Remove the front axle inboard joint boot clamp.

HINT:

Perform the same procedures as for the No. 2 front axle inboard joint boot clamp.







4. REMOVE NO. 2 FRONT AXLE INBOARD JOINT BOOT CLAMP (for 2AZ-FE)

(a) For one touch type:
  (1) Using a screwdriver, remove the No. 2 front axle inboard joint boot clamp as shown in the illustration.

(b) For claw engagement type:
  (1) Using needle-nose pliers, remove the No. 2 front axle inboard joint boot clamp as shown in the illustration.

5. REMOVE FRONT AXLE INBOARD JOINT BOOT CLAMP (for 2AZ-FE)

(a) Remove the front axle inboard joint boot clamp.
HINT:
Perform the same procedures as for the No. 2 front axle inboard joint boot clamp.

6. SEPARATE FRONT AXLE INBOARD JOINT BOOT

(a) Separate the front axle inboard joint boot from the inboard joint assembly.

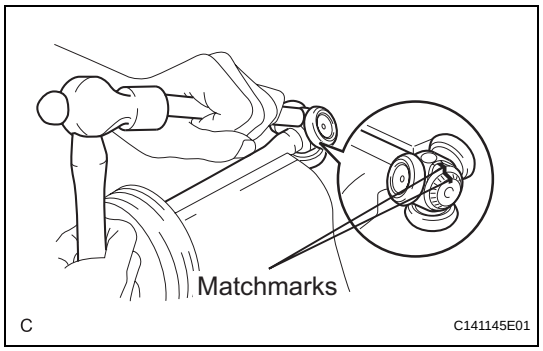
7. REMOVE FRONT DRIVE INBOARD JOINT ASSEMBLY

(a) Remove the grease from the inboard joint assembly.

(b) Put matchmarks on the inboard joint assembly and outboard joint shaft.
NOTICE:
Do not use a punch for the marks.

(c) Remove the inboard joint assembly from the outboard joint shaft.

(d) Using a snap ring expander, remove the shaft snap ring.

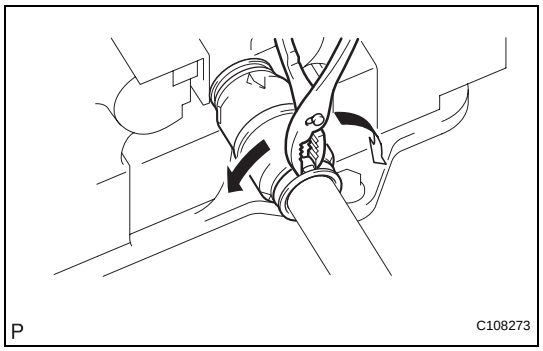


(e) Put matchmarks on the outboard joint shaft and tripod joint.
NOTICE:
Do not use a punch for the marks.

(f) Using a brass bar and a hammer, remove the tripod joint from the outboard joint shaft.
NOTICE:
Do not tap the roller.

8. REMOVE FRONT AXLE INBOARD JOINT BOOT

(a) Remove the inboard joint boot from the outboard joint shaft.



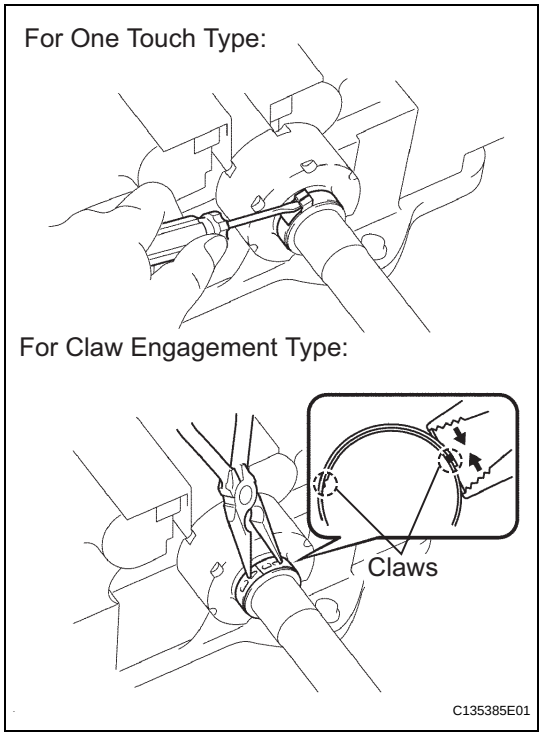
9. REMOVE FRONT DRIVE SHAFT DAMPER LH (for 2GR-FE)

(a) Using pliers, remove the drive shaft damper clamp as shown in the illustration.

(b) Remove the drive shaft damper.

10. REMOVE FRONT DRIVE SHAFT DAMPER RH (for 2GR-FE)

(a) Remove the front drive shaft damper RH.
HINT:
Perform the same procedures as for the front drive shaft damper LH.



11. REMOVE FRONT DRIVE SHAFT DAMPER LH (for 2AZ-FE Automatic Transaxle)

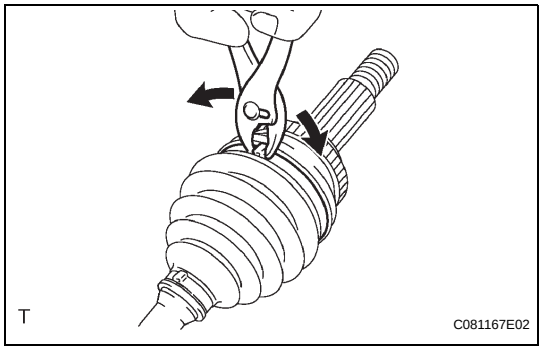
(a) For one touch type:
(1) Using a screwdriver, remove the drive shaft damper clamp as shown in the illustration.

(b) For claw engagement type:
(1) Using needle-nose pliers, remove the drive shaft damper clamp as shown in the illustration.

(c) Remove the drive shaft damper.

12. REMOVE FRONT DRIVE SHAFT DAMPER RH (for 2AZ-FE)

(a) Remove the front drive shaft damper RH.
HINT:
Perform the same procedures as for the front drive shaft damper LH.



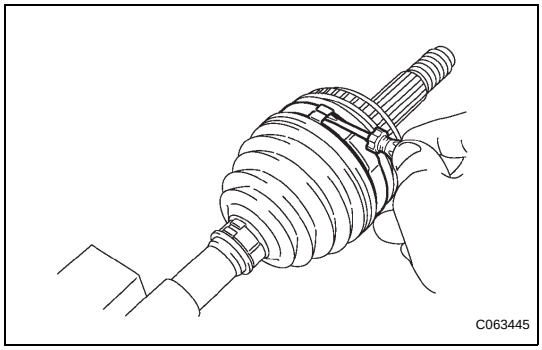
13. REMOVE NO. 2 FRONT AXLE OUTBOARD JOINT BOOT CLAMP (for 2GR-FE)

(a) Using pliers, remove the No. 2 front axle outboard joint boot clamp as shown in the illustration.

14. REMOVE FRONT AXLE OUTBOARD JOINT BOOT CLAMP (for 2GR-FE)

(a) Remove the front axle outboard joint boot clamp.
HINT:
Perform the same procedures as for the No. 2 front axle outboard joint boot clamp.

DS



15. REMOVE NO. 2 FRONT AXLE OUTBOARD JOINT BOOT CLAMP (for 2AZ-FE)

(a) Using a screwdriver, remove the No. 2 front axle outboard joint boot clamp as shown in the illustration.

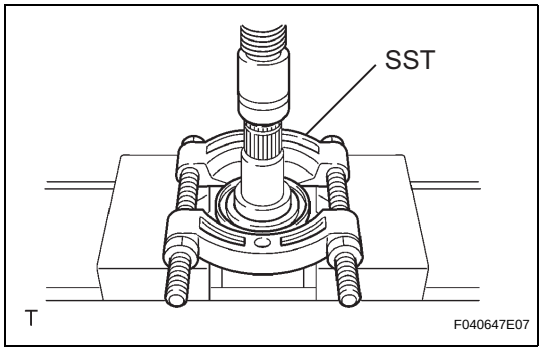
16. REMOVE FRONT AXLE OUTBOARD JOINT BOOT CLAMP (for 2AZ-FE)

(a) Remove the front axle outboard joint boot clamp.
HINT:
Perform the same procedures as for the No. 2 front axle outboard joint boot clamp.

17. REMOVE FRONT AXLE OUTBOARD JOINT BOOT

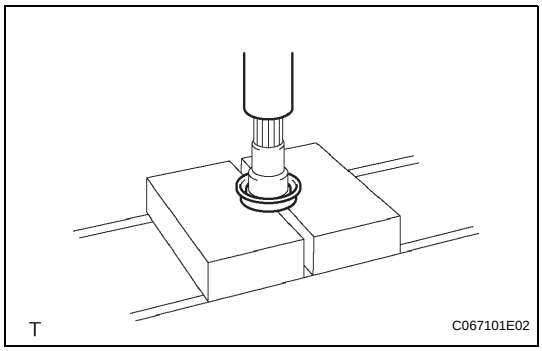
(a) Remove the outboard joint boot from the outboard joint shaft.

(b) Remove the grease from the outboard joint.



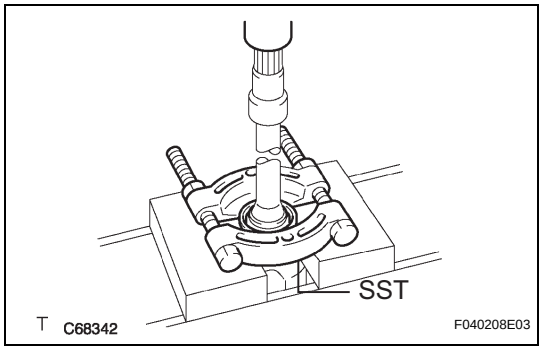
18. REMOVE FRONT DRIVE SHAFT DUST COVER LH

(a) Using SST and a press, remove the drive shaft dust cover LH.
SST 09950-00020
NOTICE:
Be careful not to drop the inboard joint assembly.



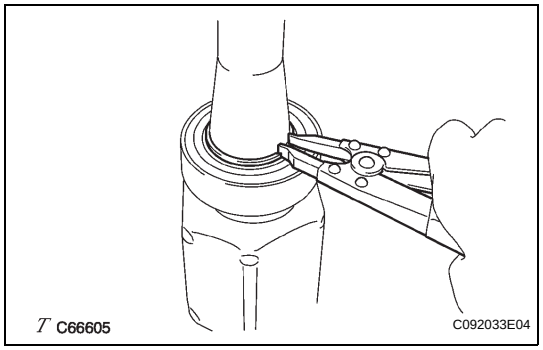
19. REMOVE FRONT DRIVE SHAFT DUST COVER RH

(a) Using a press, remove the drive shaft dust cover RH.



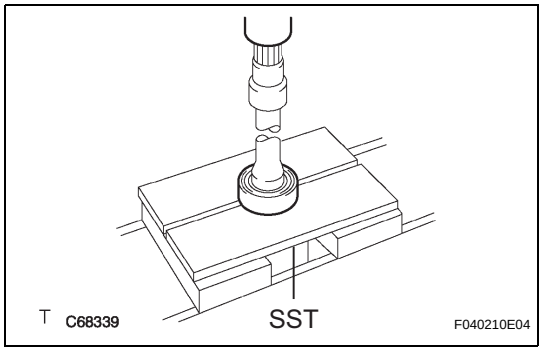
20. REMOVE FRONT DRIVE SHAFT DUST COVER

(a) Using SST and a press, remove the drive shaft dust cover.
SST 09950-00020



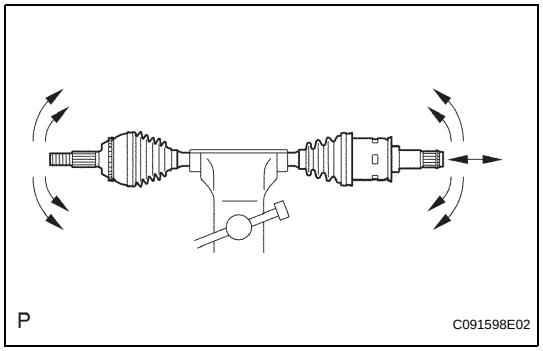
21. REMOVE FRONT DRIVE SHAFT BEARING

(a) Using a snap ring expander, remove the drive shaft hole snap ring.



(b) Using SST and a press, remove the bearing.
SST 09527-10011

(c) Remove the bearing bracket hole snap ring.
NOTICE:
Be careful not to drop the inboard joint assembly.



INSPECTION

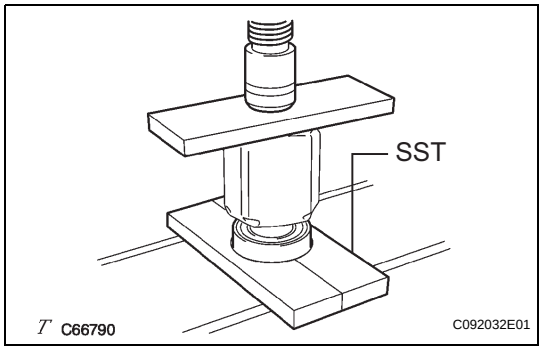
1. INSPECT FRONT DRIVE SHAFT ASSEMBLY

(a) Check that there is no excessive play in the outboard joint.

(b) Check that the inboard joint slides smoothly in the thrust direction.

(c) Check that there is no excessive play in the radial directions of the inboard joint.

(d) Check the boots for damage.

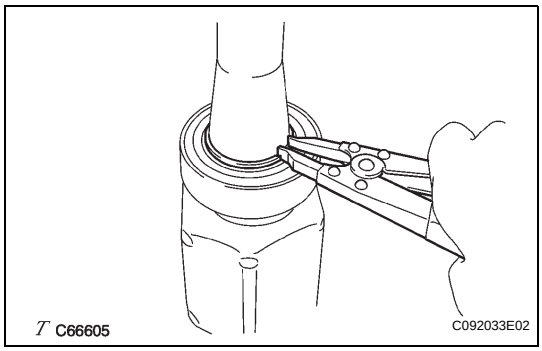


REASSEMBLY

1. INSTALL FRONT DRIVE SHAFT BEARING

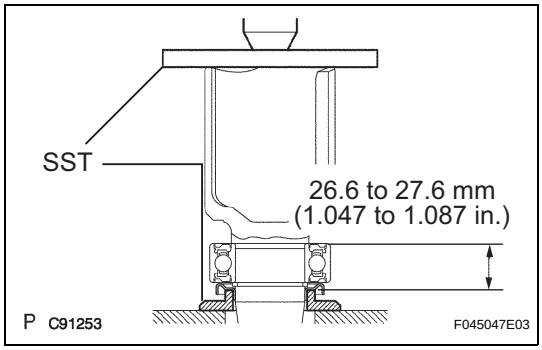
(a) Install a new bearing bracket hole snap ring to the front drive shaft assembly RH.

(b) Using SST and a steel plate, install a new front drive shaft bearing.
SST 09527-30010, 09527-10011
NOTICE:
Bearing should be completely installed.



(c) Using a snap ring expander, install a new drive shaft hole snap ring.

DS



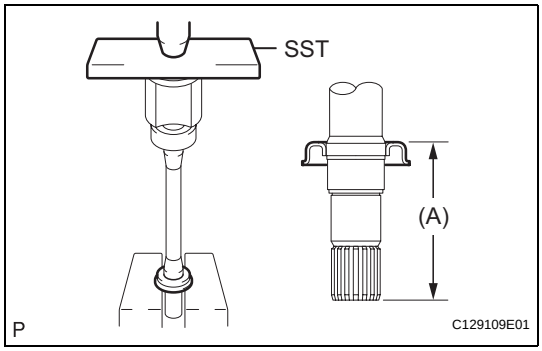
2. INSTALL FRONT DRIVE SHAFT DUST COVER

(a) Using SST and a press, install a new drive shaft dust cover.

SST 09726-40010, 09527-10011

NOTICE:

- **The dust cover should be completely installed.**
- **Be careful not to damage the dust deflector.**



3. INSTALL FRONT DRIVE SHAFT DUST COVER RH

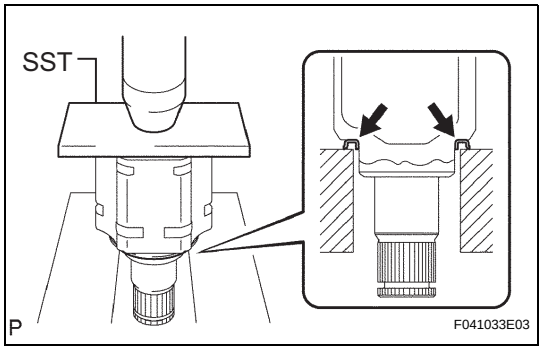
(a) Using SST and a press, install a new drive shaft dust cover RH until distance (A) from the tip of the center drive shaft to the drive shaft dust cover RH meets the specification.

SST 09527-10011

Engine type	Distance (A)
2GR-FE	110.0 to 111.0 mm (4.3307 to 4.3701 in.)
2AZ-FE	91.0 to 92.0 mm (3.5827 to 3.6220 in.)

NOTICE:

- **The dust cover should be completely installed.**
- **Be careful not to damage the dust deflector.**



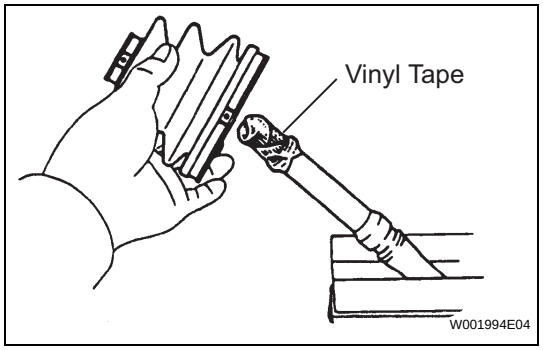
4. INSTALL FRONT DRIVE SHAFT DUST COVER LH

(a) Using SST and a press, install a new drive shaft dust cover LH.

SST 09527-10011

NOTICE:

- **The dust cover should be completely installed.**
- **Be careful not to damage the dust deflector.**



5. INSTALL FRONT AXLE OUTBOARD JOINT BOOT

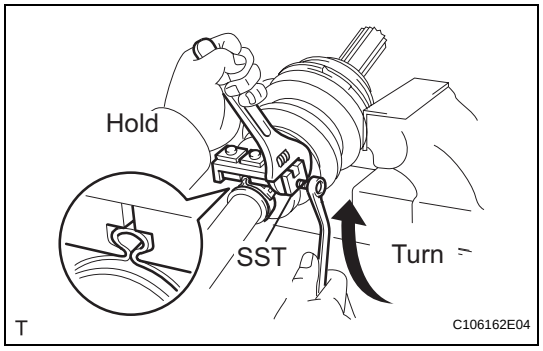
(a) Hold the drive shaft lightly in a vise between aluminium plates.
HINT:
Before installing the boots, wrap the spline of the drive shaft with vinyl tape to prevent the boots from being damaged.

(b) Temporarily install a new outboard joint boot to the drive shaft with the 2 clamps.

(c) Pack the outboard joint shaft and boot with grease.

Engine type	Grease capacity
2GR-FE	164 to 184 g (5.8 to 6.5 oz.)
2AZ-FE	190 to 200 g (6.7 to 7.1 oz.)

DS



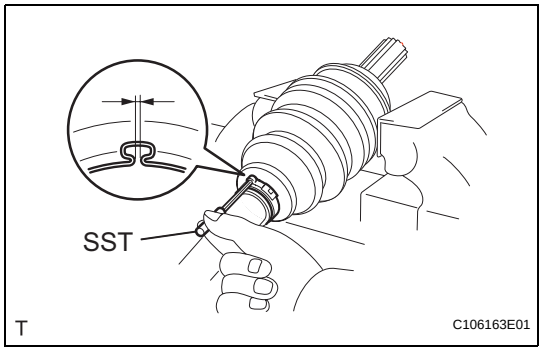
6. INSTALL FRONT AXLE OUTBOARD JOINT BOOT CLAMP

(a) Hold the drive shaft lightly in a vise between aluminum plates.
NOTICE:
Do not overtighten the vise.

(b) Install the 2 outboard joint boot clamps onto the boot.

(c) Place SST onto the outboard joint boot clamp.
SST 09521-24010

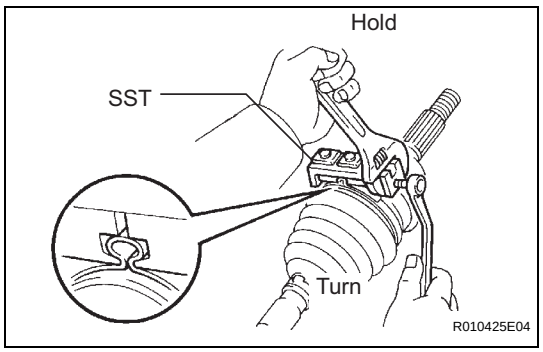
(d) Tighten the SST so that the outboard joint boot clamp is pinched.
NOTICE:
Do not overtighten the SST.



(e) Using SST, measure the clearance of the outboard joint boot clamp.
SST 09240-00020
Clearance:
0.5 to 1.5 mm (0.0197 to 0.0591 in.)
NOTICE:
If the measured value is greater than the specified value, retighten the clamp.

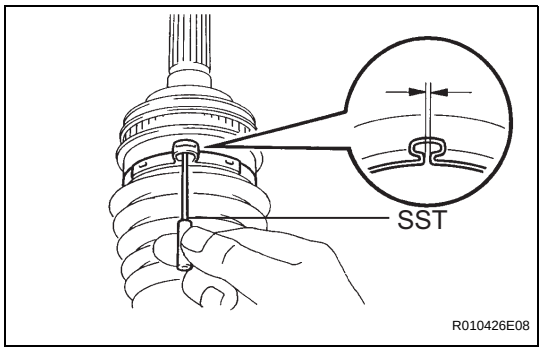
7. INSTALL NO. 2 FRONT AXLE OUTBOARD JOINT BOOT CLAMP

(a) Install the No. 2 outboard joint boot clamp onto the boot.



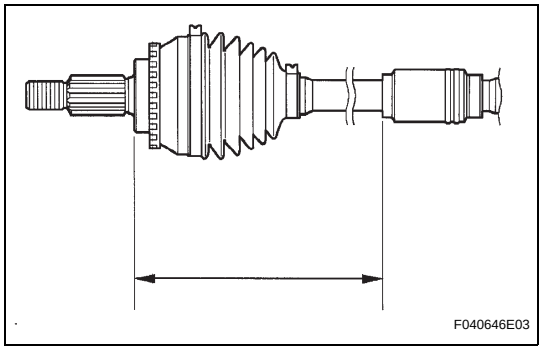
(b) Place SST onto the No. 2 outboard joint boot clamp.
SST 09521-24010

(c) Tighten the SST so that the No. 2 outboard joint boot clamp is pinched.
NOTICE:
Do not overtighten the SST.

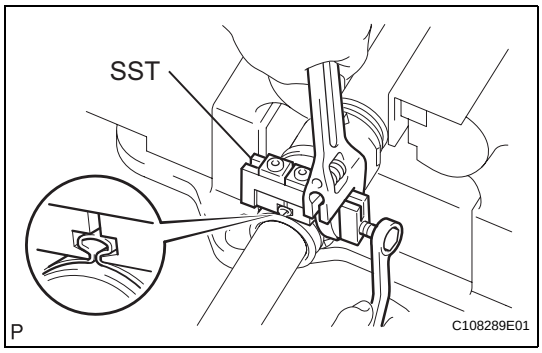


(d) Using SST, measure the clearance of the No. 2 outboard joint boot clamp.
SST 09240-00020
Clearance:
0.5 to 1.5 mm (0.0197 to 0.0591 in.)
NOTICE:
If the measured value is greater than the specified value, retighten the clamp.

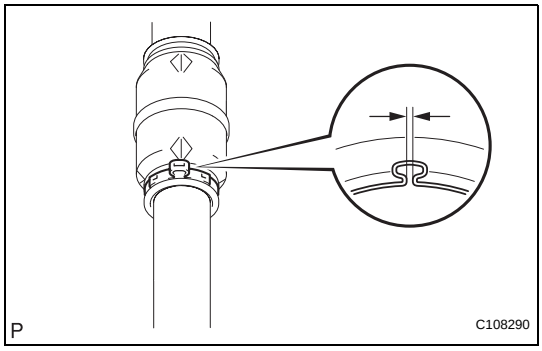
DS



8. INSTALL FRONT DRIVE SHAFT DAMPER LH (for 2GR-FE)
(a) Install the drive shaft damper to the drive shaft.
(b) Make sure that the damper is on the shaft groove.
(c) Set the distance as specified below.
Distance:
228.0 to 232.0 mm (8.976 to 9.134 in.)
(d) Install the drive shaft damper clamp onto the drive shaft damper.
NOTICE:
Be sure to install the clamp in the correct position.

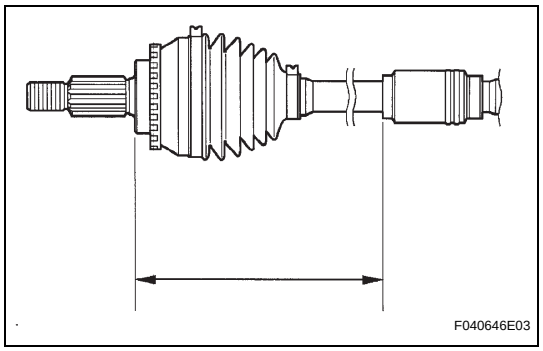


(e) Place SST onto the drive shaft damper clamp.
SST 09521-24010
(f) Tighten the SST so that the clamp is pinched.
NOTICE:
Do not overtighten the SST.



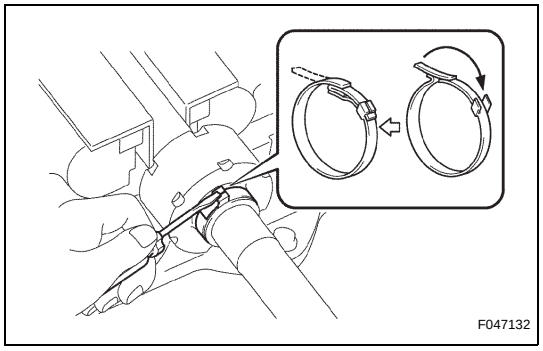
(g) Using SST, measure the clearance of the drive shaft damper clamp.
SST 09240-00020
Clearance:
0.5 to 1.5 mm (0.0197 to 0.0591 in.)
NOTICE:
If the measured value is greater than the specified value, retighten the clamp.

9. INSTALL FRONT DRIVE SHAFT DAMPER RH (for 2GR-FE)
(a) Install the front drive shaft damper RH.
HINT:
Perform the same procedures as for the front drive shaft damper LH.



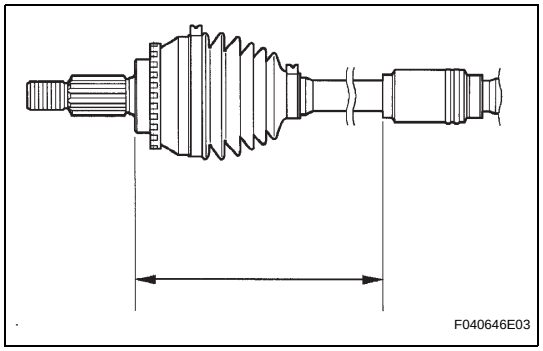
10. INSTALL FRONT DRIVE SHAFT DAMPER LH (for 2AZ-FE Automatic Transaxle)

(a) Install the drive shaft damper to the drive shaft.
(b) Make sure that the damper is on the shaft groove.
(c) Set the distance as specified below.
Distance:
222.0 to 226.0 mm (8.740 to 8.898 in.)



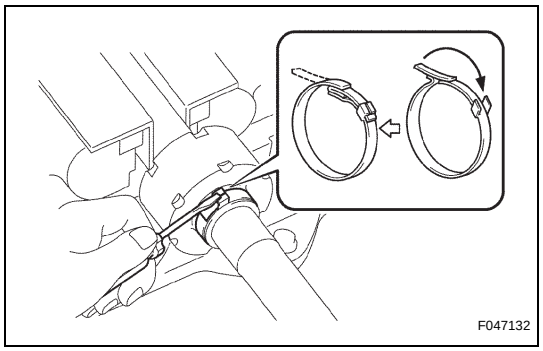
(d) Using a screwdriver, install a new drive shaft damper clamp as shown in the illustration.

DS

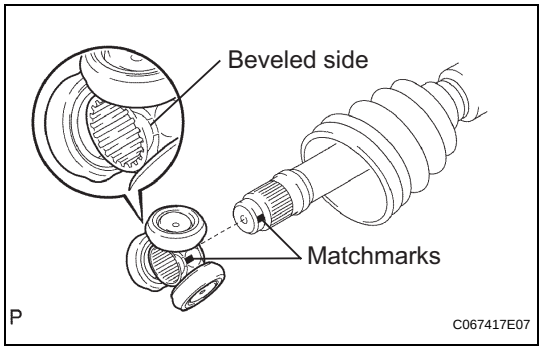


11. INSTALL FRONT DRIVE SHAFT DAMPER RH (for 2AZ-FE)

(a) Install the drive shaft damper to the drive shaft.
(b) Make sure that the damper is on the shaft groove.
(c) Set the distance as specified below.
Distance:
223.4 to 227.4 mm (8.795 to 8.953 in.)



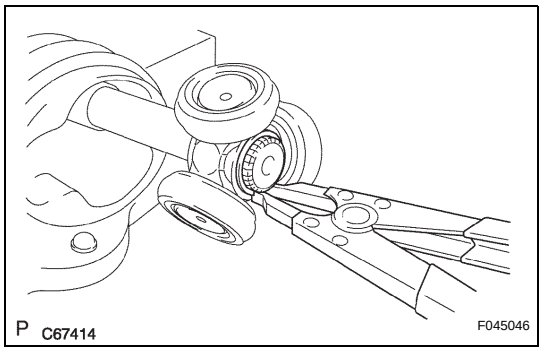
(d) Using a screwdriver, install a new drive shaft damper clamp as shown in the illustration.



12. INSTALL FRONT DRIVE INBOARD JOINT ASSEMBLY

(a) Temporarily install a new inboard joint boot to the drive shaft with the 2 clamps.
(b) Place the beveled side of the tripod joint axial spline toward the outboard joint shaft.
(c) Align the matchmarks.
(d) Using a brass bar and hammer, tap in the tripod joint to the outboard joint shaft.
NOTICE:
- **Do not tap the roller.**

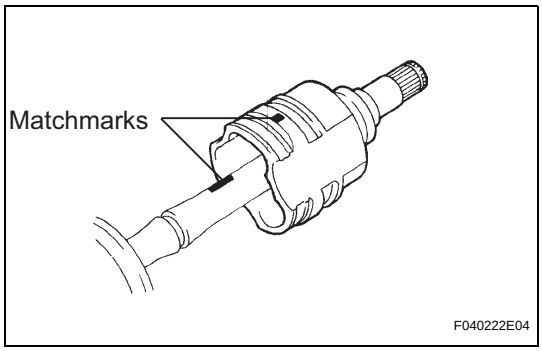
- **Be sure to install the tripod joint assembly in the correct direction.**



(e) Using a snap ring expander, install a new shaft snap ring.

(f) Coat the outboard joint shaft and boot with grease.

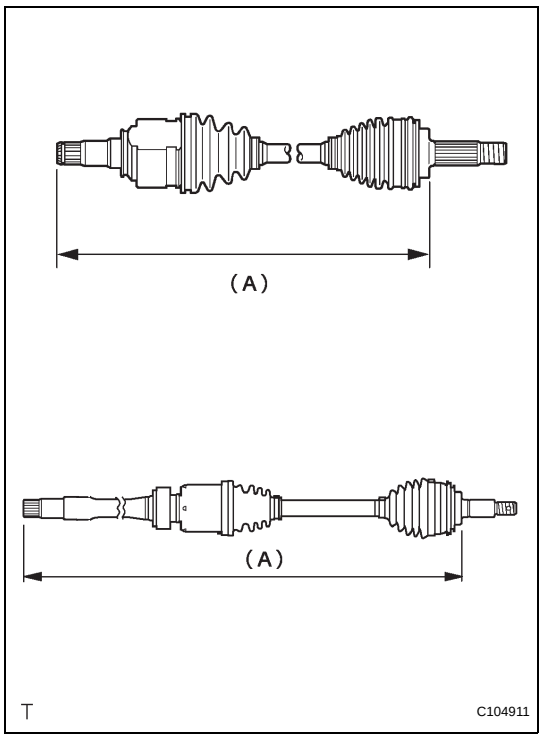
Engine type	Grease capacity
2GR-FE	155 to 175 g (5.5 to 6.2 oz.)
2AZ-FE	175 to 185 g (6.2 to 6.5 oz.)



(g) Align the matchmarks and install the inboard joint assembly to the outboard joint shaft assembly.

13. INSTALL FRONT AXLE INBOARD JOINT BOOT

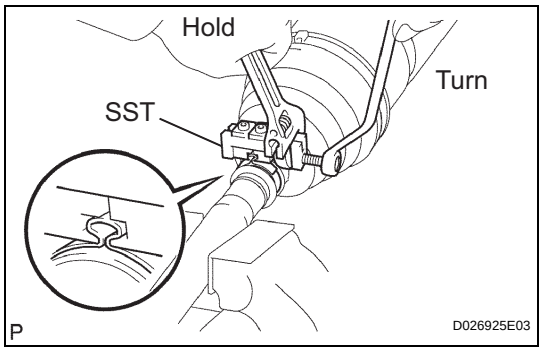
(a) Install the inboard joint boot to the inboard joint assembly.



(b) Check whether the drive shaft dimensions are within the following specifications.
HINT:
The following table shows dimension (A) of the drive shaft.
Dimension (A)

Engine Type	LH	RH
2GR-FE	**585.5 to 589.5 mm (23.05 to 23.21 in.)**	**904.4 to 908.4 mm (35.61 to 35.76 in.)**
2AZ-FE	**592.2 to 602.2 mm (23.32 to 23.71 in.)**	**891.0 to 901.0 mm (35.08 to 35.47 in.)**

DS



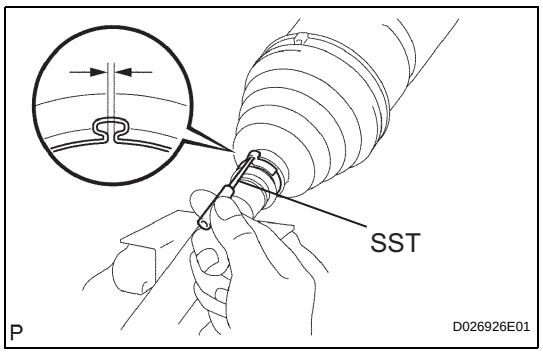
14. INSTALL FRONT AXLE INBOARD JOINT BOOT CLAMP (for 2GR-FE)

(a) Hold the drive shaft lightly in a vise between aluminum plates.
NOTICE:
Do not overtighten the vise.

(b) Install the 2 inboard joint boot clamps onto the boot.

(c) Place SST onto the inboard joint boot clamp.
SST 09521-24010

(d) Tighten the SST so that the inboard joint boot clamp is pinched.
NOTICE:
Do not overtighten the SST.

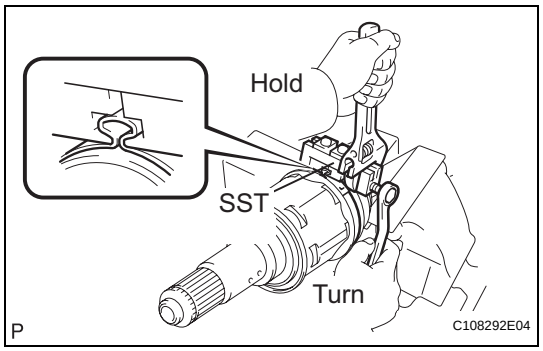


(e) Using SST, measure the clearance of the inboard joint boot clamp.
SST 09240-00020
Clearance:
0.5 to 1.5 mm (0.0197 to 0.0591 in.)
NOTICE:
If the measured value is greater than the specified value, retighten the clamp.

15. INSTALL NO. 2 FRONT AXLE INBOARD JOINT BOOT CLAMP (for 2GR-FE)

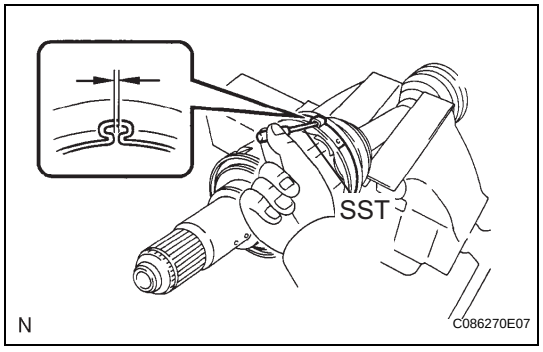
(a) Hold the inboard joint shaft assembly in a vise between aluminium plates.
NOTICE:
Do not overtighten the vise.

(b) Install the No. 2 front axle inboard joint boot clamp onto the boot.



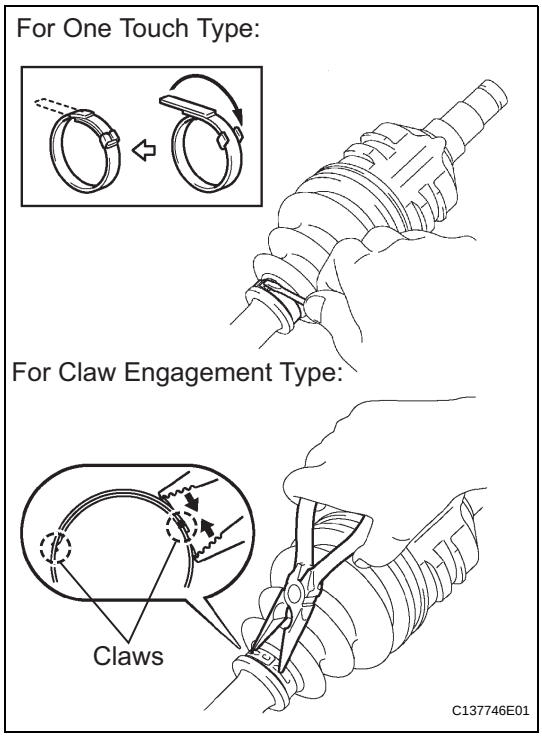
(c) Place SST onto the No. 2 front axle inboard joint boot clamp.
SST 09521-24010

(d) Tighten the SST so that the No. 2 front axle inboard joint boot clamp is pinched.
NOTICE:
Do not overtighten the SST.



(e) Using SST, measure the clearance of the No. 2 front axle inboard joint boot clamp.
SST 09240-00020
Clearance:
0.5 to 1.5 mm (0.0197 to 0.0591 in.)
NOTICE:
If the measured value is greater than the specified value, retighten the clamp.

DS



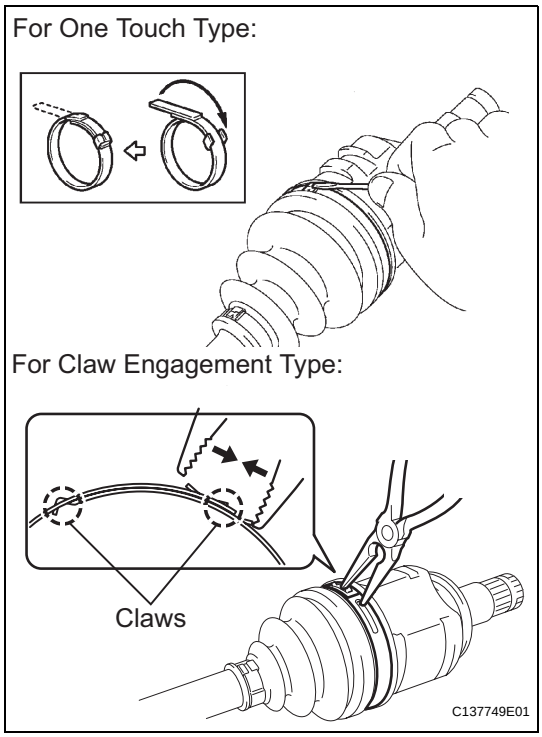
16. INSTALL FRONT AXLE INBOARD JOINT BOOT CLAMP (for 2AZ-FE)

(a) For one touch type:

(1) Using a screwdriver, install the inboard joint boot clamp as shown in the illustration.

(b) For claw engagement type:

(1) Using needle nose pliers, install the inboard joint boot clamp as shown in the illustration.



17. INSTALL NO. 2 FRONT AXLE INBOARD JOINT BOOT CLAMP (for 2AZ-FE)

(a) For one touch type:

(1) Using a screwdriver, install the No. 2 front axle inboard joint boot clamp as shown in the illustration.

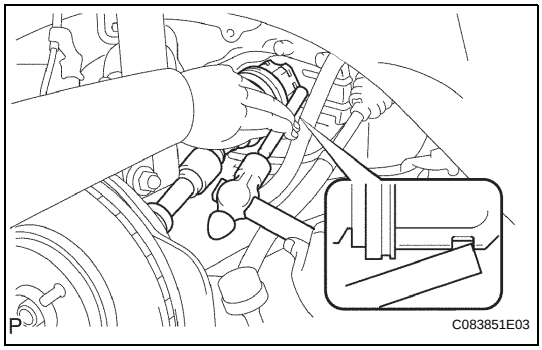
(b) For claw engagement type:

(1) Using needle nose pliers, install the No. 2 front axle inboard joint boot clamp as shown in the illustration.

18. INSTALL FRONT DRIVE SHAFT LH HOLE SNAP RING

(a) Install a new hole snap ring.

19. INSPECT FRONT DRIVE SHAFT ASSEMBLY (See page DS-13)



INSTALLATION

1. INSTALL FRONT DRIVE SHAFT ASSEMBLY LH

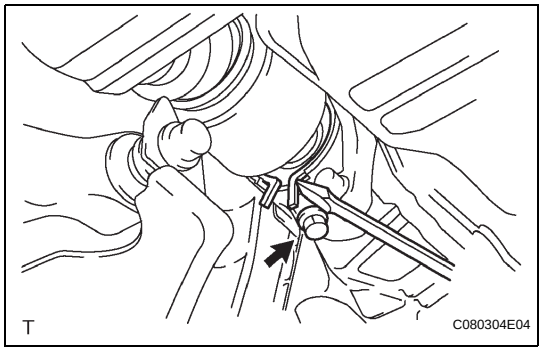
(a) Coat the spline of the inboard joint shaft assembly with ATF.

(b) Align the shaft splines and install the drive shaft assembly LH with a brass bar and hammer.

NOTICE:

- **Set the shaft snap ring with the opening side facing down.**

- **Be careful not to damage the drive shaft dust cover, boot, and oil seal.**
- **Move the drive shaft assembly while keeping it level.**



2. INSTALL FRONT DRIVE SHAFT ASSEMBLY RH

(a) Coat the spline of the inboard joint shaft assembly with ATF.

(b) Install the front drive shaft the assembly RH.

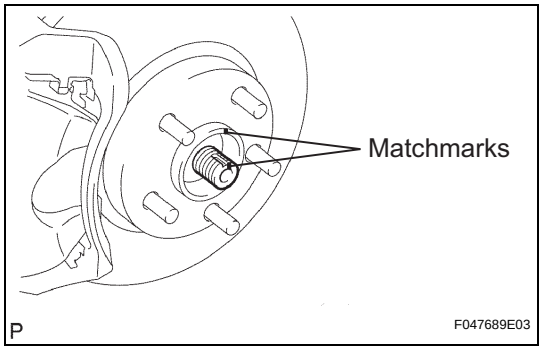
(c) Using a screwdriver, install a new bearing bracket hole snap ring.

NOTICE:

- **Do not damage the boot and oil seal.**
- **Move the drive shaft assembly while keeping it level.**

(d) Install a new bolt.

Torque: 32 N*m (330 kgf*cm, 24 ft.*lbf)

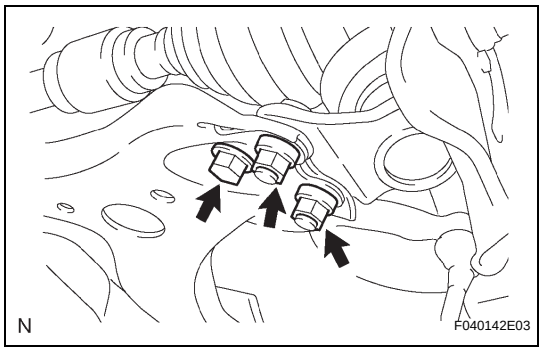


3. INSTALL FRONT AXLE ASSEMBLY

(a) Align the matchmarks and install the front drive shaft assembly to the front axle hub sub-assembly.

NOTICE:

Be careful not to damage the drive shaft boot and speed sensor rotor.



4. INSTALL FRONT SUSPENSION LOWER NO. 1 ARM

(a) Install the lower ball joint to the front suspension lower No. 1 arm with the bolt and 2 nuts.

Torque: 75 N*m (765 kgf*cm, 55 ft.*lbf)

5. INSTALL TIE ROD END SUB-ASSEMBLY

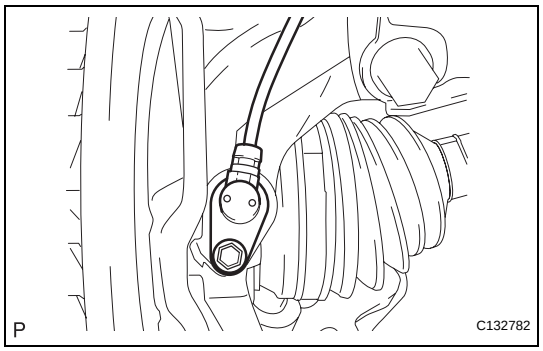
(a) Install the tie rod end sub-assembly to the steering knuckle with the nut.

Torque: 49 N*m (500 kgf*cm, 36 ft.*lbf)

(b) Install a new cotter pin.

NOTICE:

If the holes for the cotter pin are not aligned, tighten the nut up to 60° further.



6. INSTALL FRONT SPEED SENSOR

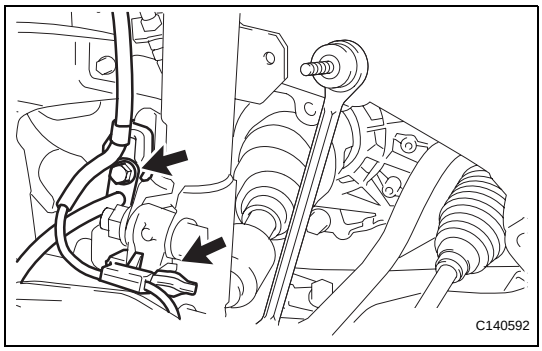
(a) Install the front speed sensor to the steering knuckle with the bolt.

Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

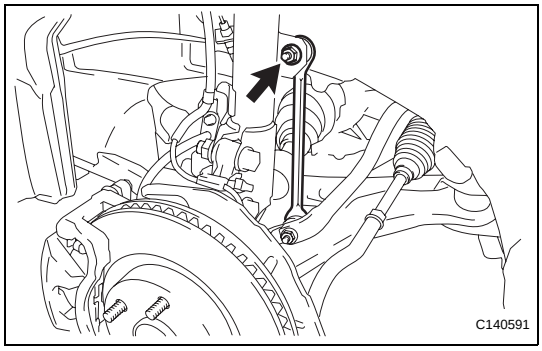
NOTICE:

- **Prevent foreign matter from adhering to the speed sensor.**
- **Be careful not to damage the speed sensor.**

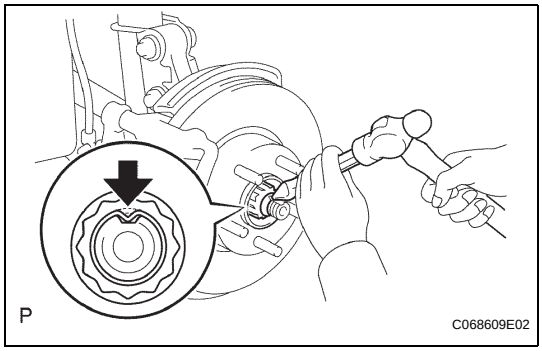
DS



(b) Install the flexible hose and the speed sensor to the shock absorber with the bolt and set the sensor clip on the knuckle.
Torque: 19 N*m (192 kgf*cm, 14 ft.*lbf)
NOTICE:
- **Be careful not to damage the speed sensor.**
- **Prevent foreign matter from adhering to the speed sensor.**
- **Do not twist the sensor wire when installing the speed sensor.**



7. INSTALL FRONT STABILIZER LINK ASSEMBLY
(a) Install the stabilizer link assembly with the nut.
Torque: 74 N*m (755 kgf*cm, 55 ft.*lbf)
HINT:
If the ball joint turns together with the nut, use a hexagon wrench (6 mm) to hold the stud.



8. INSTALL FRONT AXLE HUB NUT
(a) Using a socket wrench (30 mm), install a new axle hub nut.
Torque: 294 N*m (3,000 kgf*cm, 217 ft.*lbf)
(b) Using a chisel and hammer, stake the front axle hub nut.

9. INSTALL FRONT WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

10. ADD AUTOMATIC TRANSAXLE FLUID (for Automatic Transaxle)
(a) for 2GR-FE: See page AX-164
(b) for 2AZ-FE: See page AX-175

11. ADD MANUAL TRANSAXLE OIL (for Manual Transaxle) (See page MX-6)

12. INSPECT AUTOMATIC TRANSAXLE FLUID (for 2AZ-FE Automatic Transaxle) (See page AX-123)

13. INSPECT MANUAL TRANSAXLE OIL (for Manual Transaxle) (See page MX-2)

14. ADJUST FRONT WHEEL ALIGNMENT
HINT:
See page SP-4

15. CHECK ABS SPEED SENSOR SIGNAL
(a) ABS: See page BC-11
(b) VSC (for BOSCH): See page BC-123
(c) VSC (for ADVICS): See page BC-290

DS

REMOVAL

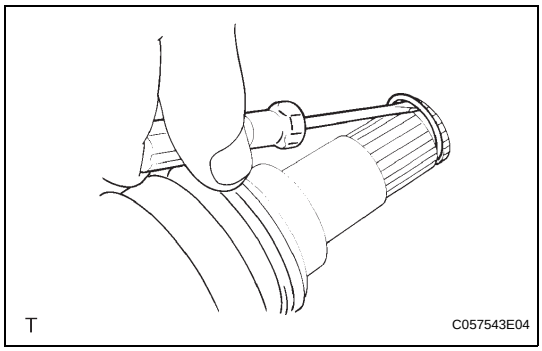
HINT:

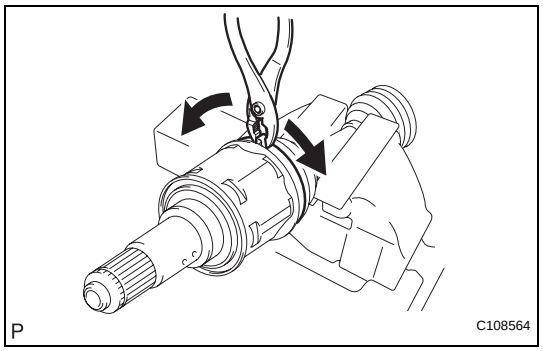
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. **DRAIN AUTOMATIC TRANSAXLE FLUID (for Automatic Transaxle)**
   (a) for 2GR-FE: See page AX-207
   (b) for 2AZ-FE: See page AX-162
2. **DRAIN MANUAL TRANSAXLE OIL (for Manual Transaxle) (See page MX-5)**
3. **REMOVE FRONT WHEEL**
4. **REMOVE FRONT AXLE HUB NUT (See page DS-7)**
5. **SEPARATE FRONT STABILIZER LINK ASSEMBLY (See page DS-7)**
6. **SEPARATE FRONT SPEED SENSOR (See page DS-7)**
7. **SEPARATE TIE ROD END SUB-ASSEMBLY (See page DS-8)**
8. **SEPARATE FRONT SUSPENSION LOWER NO. 1 ARM (See page DS-8)**
9. **SEPARATE FRONT AXLE ASSEMBLY (See page DS-8)**
10. **REMOVE FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-9)**
11. **REMOVE FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-9)**
12. **SECURE FRONT AXLE HUB SUB-ASSEMBLY (See page DS-9)**
13. **INSPECT FRONT DRIVE SHAFT ASSEMBLY (See page DS-29)**

DISASSEMBLY

1. **REMOVE FRONT DRIVE SHAFT LH HOLE SNAP RING**
   (a) Using a screwdriver, remove the front drive shaft LH hole snap ring.





2. REMOVE NO. 2 FRONT AXLE INBOARD JOINT BOOT CLAMP

(a) Using pliers, remove the No. 2 front axle inboard joint boot clamp as shown in the illustration.

3. REMOVE FRONT AXLE INBOARD JOINT BOOT CLAMP

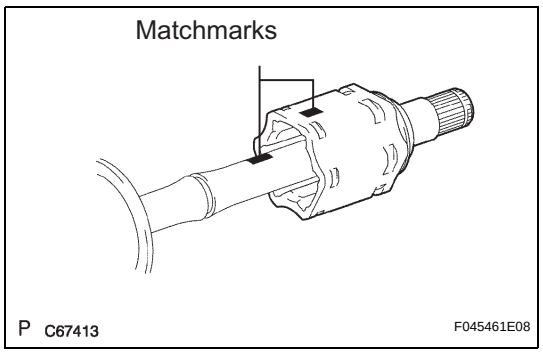
(a) Remove the front axle inboard joint boot clamp.
HINT:
Perform the same procedures as for the No. 2 front axle inboard joint boot clamp.

4. SEPARATE FRONT AXLE INBOARD JOINT BOOT

(a) Separate the front axle inboard joint boot from the inboard joint assembly.

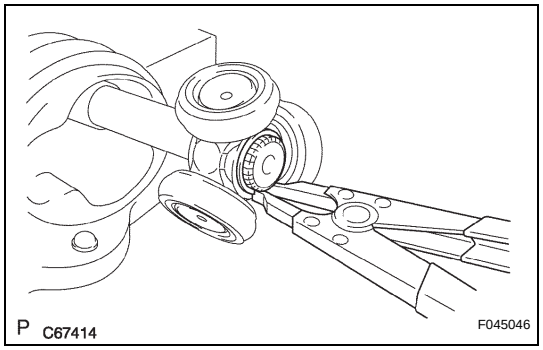
5. REMOVE FRONT DRIVE INBOARD JOINT ASSEMBLY

(a) Remove the grease from the inboard joint assembly.

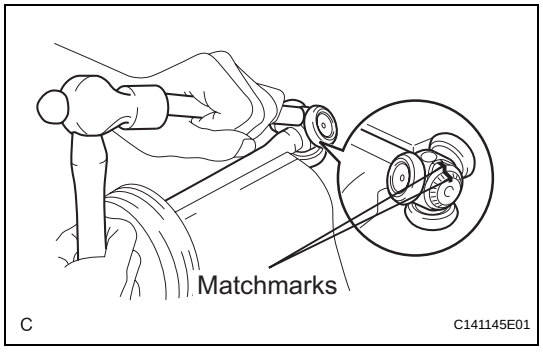


(b) Put matchmarks on the inboard joint assembly and outboard joint shaft.
NOTICE:
Do not use a punch for the marks.

(c) Remove the inboard joint assembly from the outboard joint shaft.



(d) Using a snap ring expander, remove the shaft snap ring.

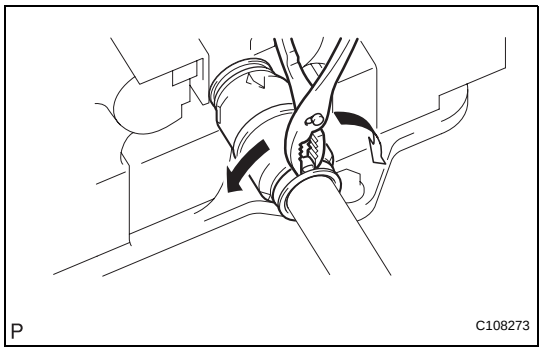


(e) Put matchmarks on the outboard joint shaft and tripod joint.
NOTICE:
Do not use a punch for the marks.

(f) Using a brass bar and a hammer, remove the tripod joint from the outboard joint shaft.
NOTICE:
Do not tap the roller.

6. REMOVE FRONT AXLE INBOARD JOINT BOOT

(a) Remove the inboard joint boot from the outboard joint shaft.



7. REMOVE FRONT DRIVE SHAFT DAMPER LH

(a) Using pliers, remove the drive shaft damper clamp as shown in the illustration.

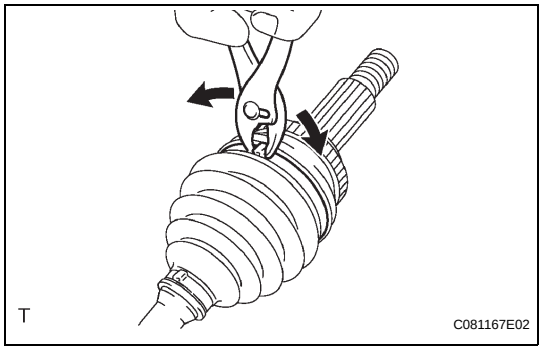
(b) Remove the drive shaft damper.

8. REMOVE FRONT DRIVE SHAFT DAMPER RH

(a) Remove the front drive shaft damper RH.

HINT:

Perform the same procedures as for the front drive shaft damper LH.



9. REMOVE NO. 2 FRONT AXLE OUTBOARD JOINT BOOT CLAMP

(a) Using pliers, remove the No. 2 front axle outboard joint boot clamp as shown in the illustration.

10. REMOVE FRONT AXLE OUTBOARD JOINT BOOT CLAMP

(a) Remove the front axle outboard joint boot clamp.

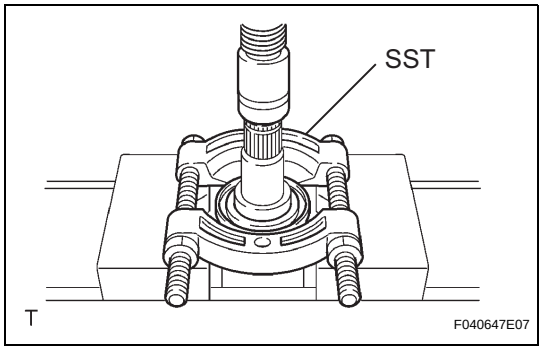
HINT:

Perform the same procedures as for the No. 2 front axle outboard joint boot clamp.

11. REMOVE FRONT AXLE OUTBOARD JOINT BOOT

(a) Remove the outboard joint boot from the outboard joint shaft.

(b) Remove the grease from the outboard joint.



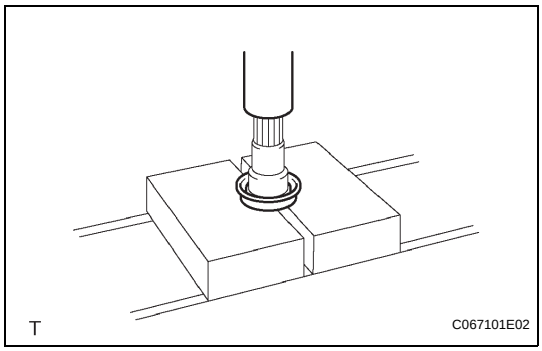
12. REMOVE FRONT DRIVE SHAFT DUST COVER LH

(a) Using SST and a press, remove the drive shaft dust cover LH.

SST 09950-00020

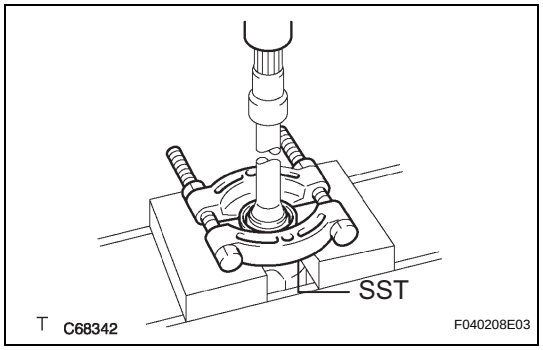
NOTICE:

Be careful not to drop the inboard joint assembly.



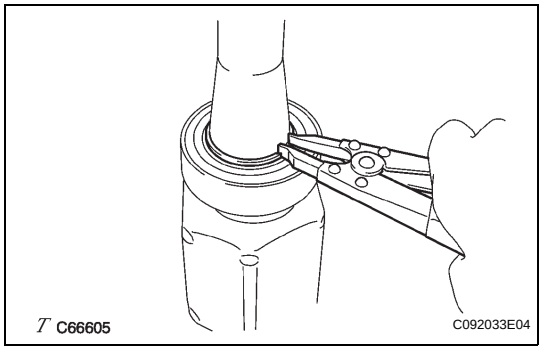
13. REMOVE FRONT DRIVE SHAFT DUST COVER RH

(a) Using a press, remove the drive shaft dust cover RH.



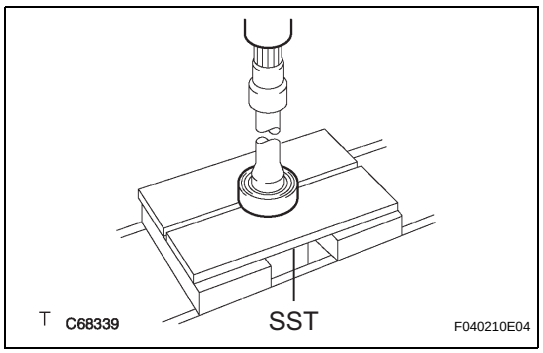
14. REMOVE FRONT DRIVE SHAFT DUST COVER

(a) Using SST and a press, remove the drive shaft dust cover.
SST 09950-00020



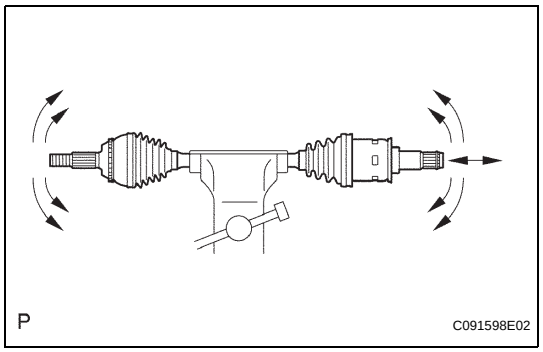
15. REMOVE FRONT DRIVE SHAFT BEARING

(a) Using a snap ring expander, remove the drive shaft hole snap ring.



(b) Using SST and a press, remove the bearing.
SST 09527-10011

(c) Remove the bearing bracket hole snap ring.
NOTICE:
Be careful not to drop the inboard joint assembly.



INSPECTION

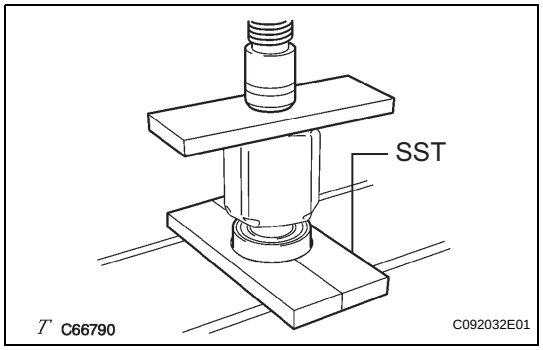
1. INSPECT FRONT DRIVE SHAFT ASSEMBLY

(a) Check that there is no excessive play in the outboard joint.

(b) Check that the inboard joint slides smoothly in the thrust direction.

(c) Check that there is no excessive play in the radial directions of the inboard joint.

(d) Check the boots for damage.

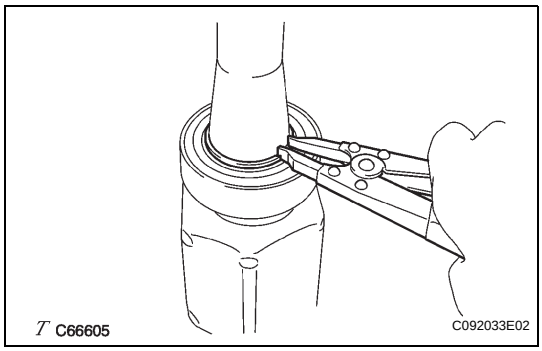


REASSEMBLY

1. INSTALL FRONT DRIVE SHAFT BEARING

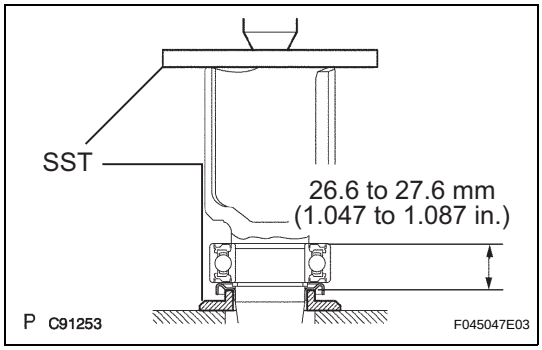
(a) Install a new bearing bracket hole snap ring to the front drive shaft assembly RH.

(b) Using SST and a steel plate, install a new front drive shaft bearing.
SST 09527-30010, 09527-10011
NOTICE:
Bearing should be completely installed.



(c) Using a snap ring expander, install a new drive shaft hole snap ring.

DS



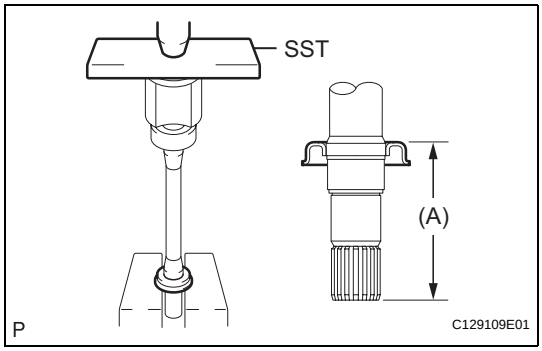
2. INSTALL FRONT DRIVE SHAFT DUST COVER

(a) Using SST and a press, install a new drive shaft dust cover.

SST 09726-40010, 09527-10011

NOTICE:

- **The dust cover should be completely installed.**
- **Be careful not to damage the dust cover.**



3. INSTALL FRONT DRIVE SHAFT DUST COVER RH

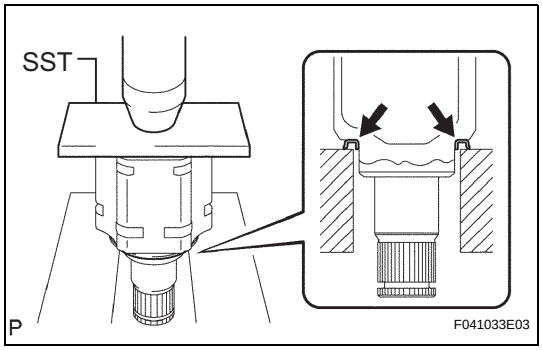
(a) Using SST and a press, install a new drive shaft dust cover RH until distance (A) from the tip of the center drive shaft to the drive shaft dust cover RH meets the specification.

SST 09527-10011

Engine type	Distance (A)
2GR-FE	110.0 to 111.0 mm (4.3307 to 4.3701 in.)
2AZ-FE	91.0 to 92.0 mm (3.5827 to 3.6220 in.)

NOTICE:

- **The dust cover should be completely installed.**
- **Be careful not to damage the dust cover.**



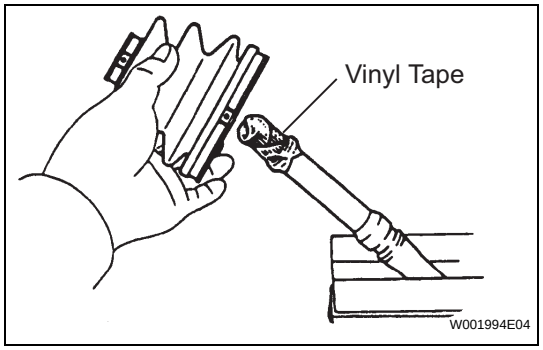
4. INSTALL FRONT DRIVE SHAFT DUST COVER LH

(a) Using SST and a press, install a new drive shaft dust cover LH.

SST 09527-10011

NOTICE:

- **The dust cover should be completely installed.**
- **Be careful not to damage the dust cover.**



5. INSTALL FRONT AXLE OUTBOARD JOINT BOOT

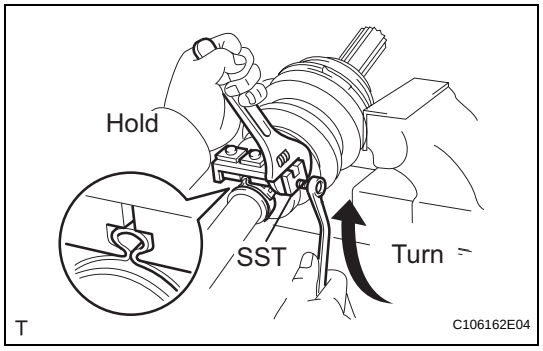
(a) Hold the drive shaft lightly in a vise between aluminium plates.
HINT:
Before installing the boots, wrap the spline of the drive shaft with vinyl tape to prevent the boots from being damaged.

(b) Temporarily install a new outboard joint boot to the drive shaft with the 2 clamps.

(c) Coat the outboard joint shaft and boot with grease.

Engine type	Grease capacity
2GR-FE	164 to 184 g (5.8 to 6.5 oz.)
2AZ-FE	100 to 120 g (3.5 to 4.2 oz.)

DS



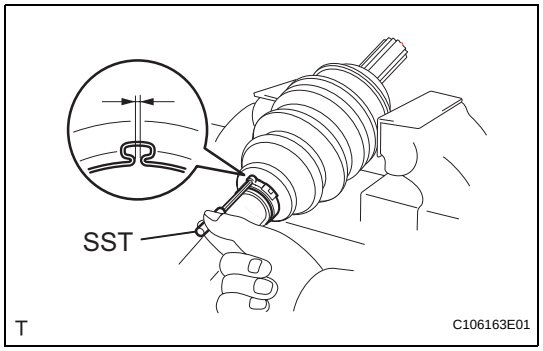
6. INSTALL FRONT AXLE OUTBOARD JOINT BOOT CLAMP

(a) Hold the drive shaft lightly in a vise between aluminum plates.
NOTICE:
Do not overtighten the vise.

(b) Install the 2 outboard joint boot clamps onto the boot.

(c) Place SST onto the outboard joint boot clamp.
SST 09521-24010

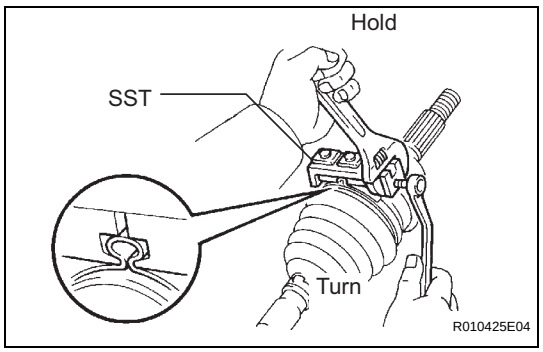
(d) Tighten the SST so that the outboard joint boot clamp is pinched.
NOTICE:
Do not overtighten the SST.



(e) Using SST, measure the clearance of the outboard joint boot clamp.
SST 09240-00020
Clearance:
0.5 to 1.5 mm (0.0197 to 0.0591 in.)
NOTICE:
If the measured value is greater than the specified value, retighten the clamp.

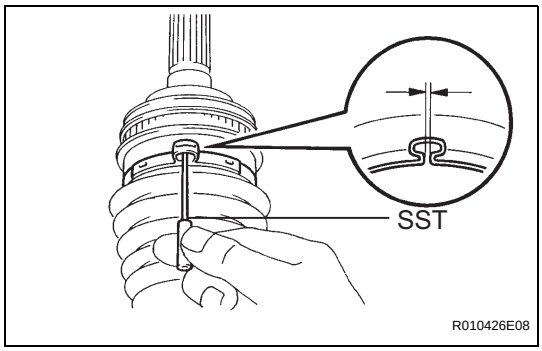
7. INSTALL NO. 2 FRONT AXLE OUTBOARD JOINT BOOT CLAMP

(a) Install the No. 2 outboard joint boot clamp onto the boot.



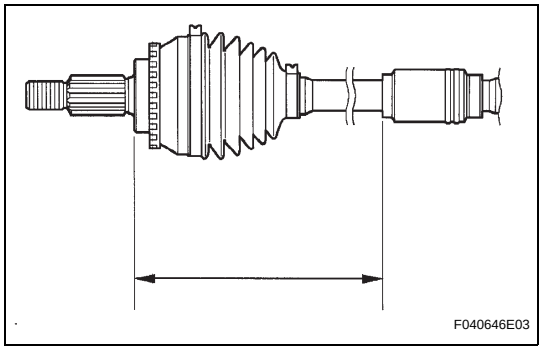
(b) Place SST onto the No. 2 outboard joint boot clamp.
SST 09521-24010

(c) Tighten the SST so that the No. 2 outboard joint boot clamp is pinched.
NOTICE:
Do not overtighten the SST.

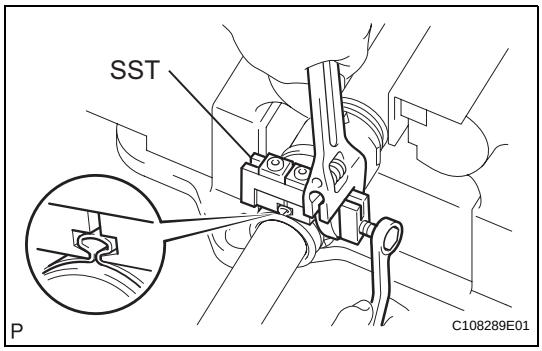


(d) Using SST, measure the clearance of the No. 2 outboard joint boot clamp.
SST 09240-00020
Clearance:
0.5 to 1.5 mm (0.0197 to 0.0591 in.)
NOTICE:
If the measured value is greater than the specified value, retighten the clamp.

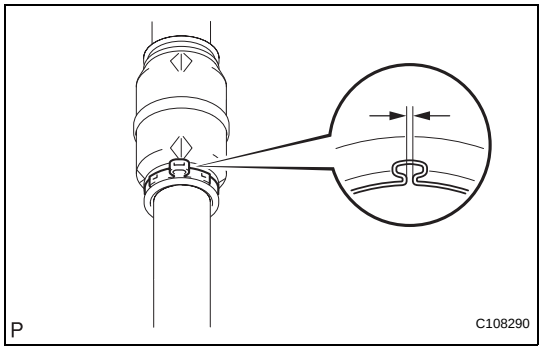
DS



8. INSTALL FRONT DRIVE SHAFT DAMPER LH
(a) Install the drive shaft damper to the drive shaft.
(b) Make sure that the damper is on the shaft groove.
(c) Set the distance as specified below.
Distance:
228.0 to 232.0 mm (8.976 to 9.134 in.)
(d) Install the drive shaft damper clamp onto the drive shaft damper.
NOTICE:
Be sure to install the clamp in the correct position.

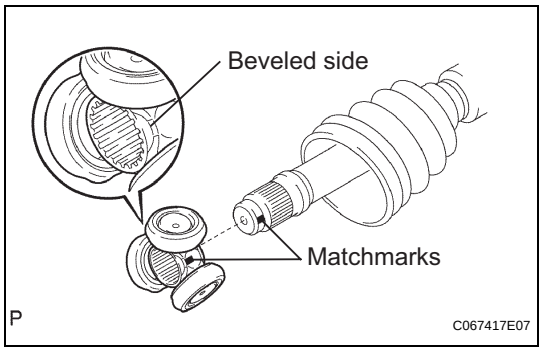


(e) Place SST onto the drive shaft damper clamp.
SST 09521-24010
(f) Tighten the SST so that the clamp is pinched.
NOTICE:
Do not overtighten the SST.



(g) Using SST, measure the clearance of the drive shaft damper clamp.
SST 09240-00020
Clearance:
0.5 to 1.5 mm (0.0197 to 0.0591 in.)
NOTICE:
If the measured value is greater than the specified value, retighten the clamp.

9. INSTALL FRONT DRIVE SHAFT DAMPER RH
(a) Install the front drive shaft damper RH.
HINT:
Perform the same procedures as for the front drive shaft damper LH.



10. INSTALL FRONT DRIVE INBOARD JOINT ASSEMBLY

(a) Temporarily install a new inboard joint boot to the drive shaft with the 2 clamps.

(b) Place the beveled side of the tripod joint axial spline toward the outboard joint shaft.

(c) Align the matchmarks.

(d) Using a brass bar and hammer, tap in the tripod joint to the outboard joint shaft.

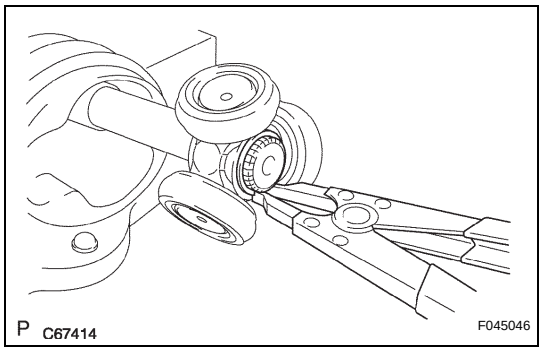
NOTICE:

- **Do not tap the roller.**
- **Be sure to install the tripod joint assembly in the correct direction.**

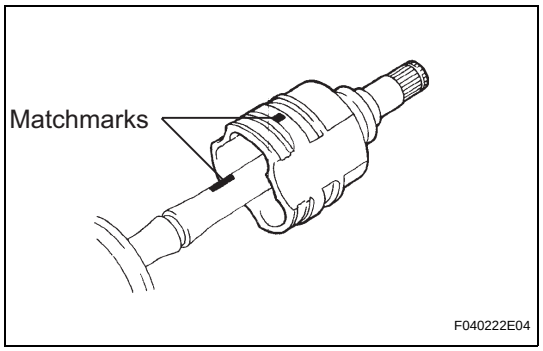
(e) Using a snap ring expander, install a new shaft snap ring.

(f) Coat the outboard joint shaft and boot with grease.

Engine type	Grease capacity
2GR-FE	155 to 175 g (5.5 to 6.2 oz.)
2AZ-FE	170 to 190 g (6.0 to 6.7 oz.)



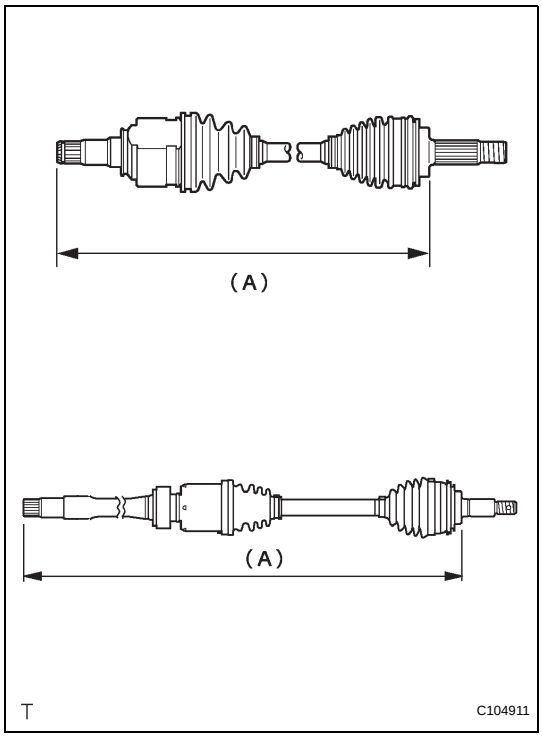
(g) Align the matchmarks and install the inboard joint assembly to the outboard joint shaft assembly.



11. INSTALL FRONT AXLE INBOARD JOINT BOOT

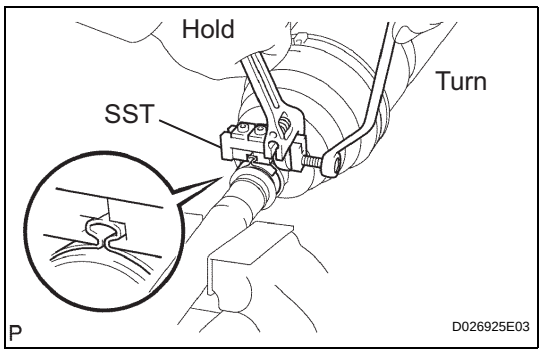
(a) Install the inboard joint boot to the inboard joint assembly.

DS



(b) Check whether the drive shaft dimensions are within the following specifications.
HINT:
The following table shows dimension (A) of the drive shaft.
Dimension (A)

Engine Type	LH	RH
2GR-FE	585.5 to 589.5 mm (23.05 to 23.21 in.)	904.4 to 908.4 mm (35.61 to 35.76 in.)
2AZ-FE	598.0 to 602.0 mm (23.54 to 23.70 in.)	897.0 to 901.0 mm (35.32 to 35.47 in.)



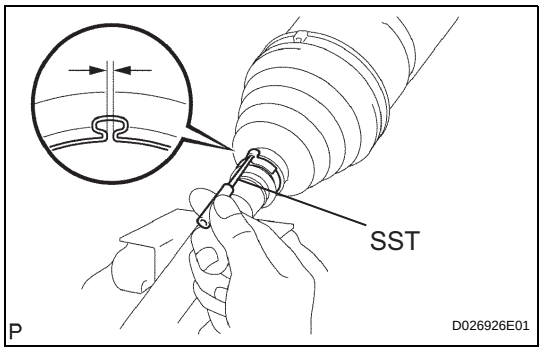
12. INSTALL FRONT AXLE INBOARD JOINT BOOT CLAMP

(a) Hold the drive shaft lightly in a vise between aluminum plates.
NOTICE:
Do not overtighten the vise.

(b) Install the 2 inboard joint boot clamps onto the boot.

(c) Place SST onto the inboard joint boot clamp.
SST 09521-24010

(d) Tighten the SST so that the inboard joint boot clamp is pinched.
NOTICE:
Do not overtighten the SST.

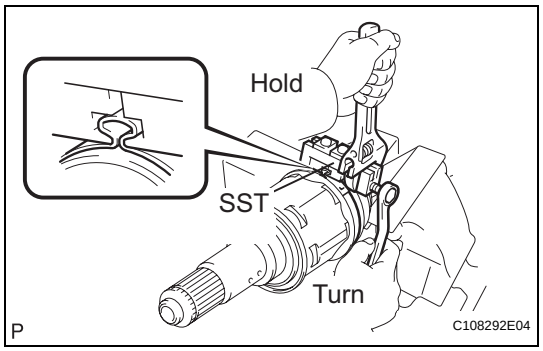


(e) Using SST, measure the clearance of the inboard joint boot clamp.
SST 09240-00020
Clearance:
0.5 to 1.5 mm (0.0197 to 0.0591 in.)
NOTICE:
If the measured value is greater than the specified value, retighten the clamp.

13. INSTALL NO. 2 FRONT AXLE INBOARD JOINT BOOT CLAMP

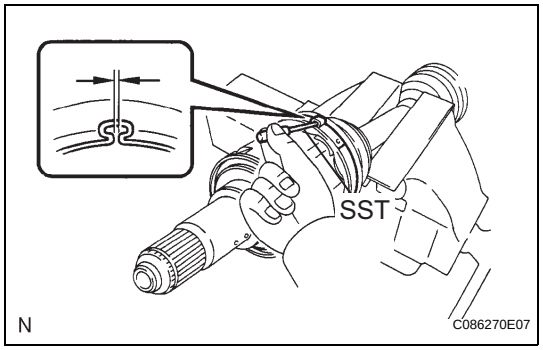
(a) Hold the inboard joint shaft assembly in a vise between aluminium plates.
NOTICE:
Do not overtighten the vise.

(b) Install the No. 2 front axle inboard joint boot clamp onto the boot.



(c) Place SST onto the No. 2 front axle inboard joint boot clamp.
SST 09521-24010

(d) Tighten the SST so that the No. 2 front axle inboard joint boot clamp is pinched.
NOTICE:
Do not overtighten the SST.



(e) Using SST, measure the clearance of the No. 2 front axle inboard joint boot clamp.
SST 09240-00020
Clearance:
0.5 to 1.5 mm (0.0197 to 0.0591 in.)
NOTICE:
If the measured value is greater than the specified value, retighten the clamp.

14. INSTALL FRONT DRIVE SHAFT LH HOLE SNAP RING

(a) Install a new hole snap ring.

15. INSPECT FRONT DRIVE SHAFT ASSEMBLY (See page DS-29)

DS

INSTALLATION

1. **INSTALL FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-20)**
2. **INSTALL FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-21)**
3. **INSTALL FRONT AXLE ASSEMBLY (See page DS-21)**
4. **INSTALL FRONT SUSPENSION LOWER NO. 1 ARM (See page DS-21)**
5. **INSTALL TIE ROD END SUB-ASSEMBLY (See page DS-21)**
6. **INSTALL FRONT SPEED SENSOR (See page DS-21)**
7. **INSTALL FRONT STABILIZER LINK ASSEMBLY (See page DS-22)**
8. **INSTALL FRONT AXLE HUB NUT (See page DS-22)**
9. **INSTALL FRONT WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
10. **ADD AUTOMATIC TRANSAXLE FLUID (for Automatic Transaxle)**
    (a) for 2GR-FE: See page AX-164
    (b) for 2AZ-FE: See page AX-175
11. **ADD MANUAL TRANSAXLE OIL (for Manual Transaxle) (See page MX-6)**
12. **INSPECT AUTOMATIC TRANSAXLE FLUID (for 2AZ-FE Automatic Transaxle) (See page AX-123)**
13. **INSPECT MANUAL TRANSAXLE OIL (for Manual Transaxle) (See page MX-2)**
14. **ADJUST FRONT WHEEL ALIGNMENT**
    HINT:
    See page SP-4
15. **CHECK ABS SPEED SENSOR SIGNAL**
    (a) ABS: See page BC-11
    (b) VSC (for BOSCH): See page BC-290
    (c) VSC (for ADVICS): See page BC-123

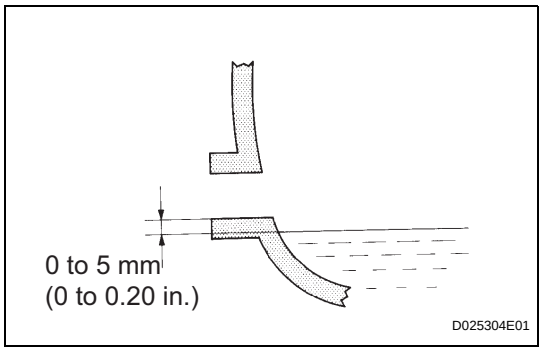
MANUAL TRANSAXLE SYSTEM

PROBLEM SYMPTOMS TABLE

Use the table below to help you find the cause of the problem. The numbers indicate the ranked order of probability of each of the possible causes. Check each part in order. Replace parts as necessary.

Manual transaxle system (MTM)

Symptom	Suspected area	See page
Noise	1. Oil (Level low)	MX-2
	2. Oil (Wrong)	MX-2
	3. Gear (Worn or damaged)	MX-54
	-	MX-79
	-	MX-89
	4. Bearing (Worn or damaged)	MX-40
	-	MX-79
	-	MX-89
Oil leakage	1. Oil (Level too high)	MX-2
	2. Gasket (Damaged)	MX-40
	3. Oil seal (Worn or damaged)	MX-5
	-	MX-99
	4. O-Ring (Worn or damaged)	MX-40
Hard to shift or will not shift	1. Control cable assembly	MX-13
	2. Synchronizer ring (Worn or damaged)	MX-54
	-	MX-79
	-	MX-89
	3. Shift key spring (Damaged)	MX-40
	-	MX-77
	-	MX-87
Jumps out of gear	1. Locking ball spring (Damaged)	MX-40
	2. Shift fork (Worn)	MX-54
	-	MX-79
	-	MX-89
	3. Gear (Worn or damaged)	MX-54
	-	MX-79
	-	MX-89
	4. Bearing (Worn or damaged)	MX-40
	-	MX-79
	-	MX-89



MX

MANUAL TRANSAXLE OIL

ON-VEHICLE INSPECTION

1. INSPECT MANUAL TRANSAXLE OIL

(a) Stop the vehicle on a level surface.

(b) Remove the transmission filler plug and gasket.

(c) Check that the oil surface is within 5 mm (0.20 in.) of the bottom of the transmission filler plug opening.

NOTICE:

- **Excessively large or small amounts of oil may cause trouble.**
- **After replacing the oil, drive the vehicle and check the oil level again.**

HINT:

Insert your finger into the filler plug hole. You should be able to just touch the surface of the oil if the oil is at the correct level.

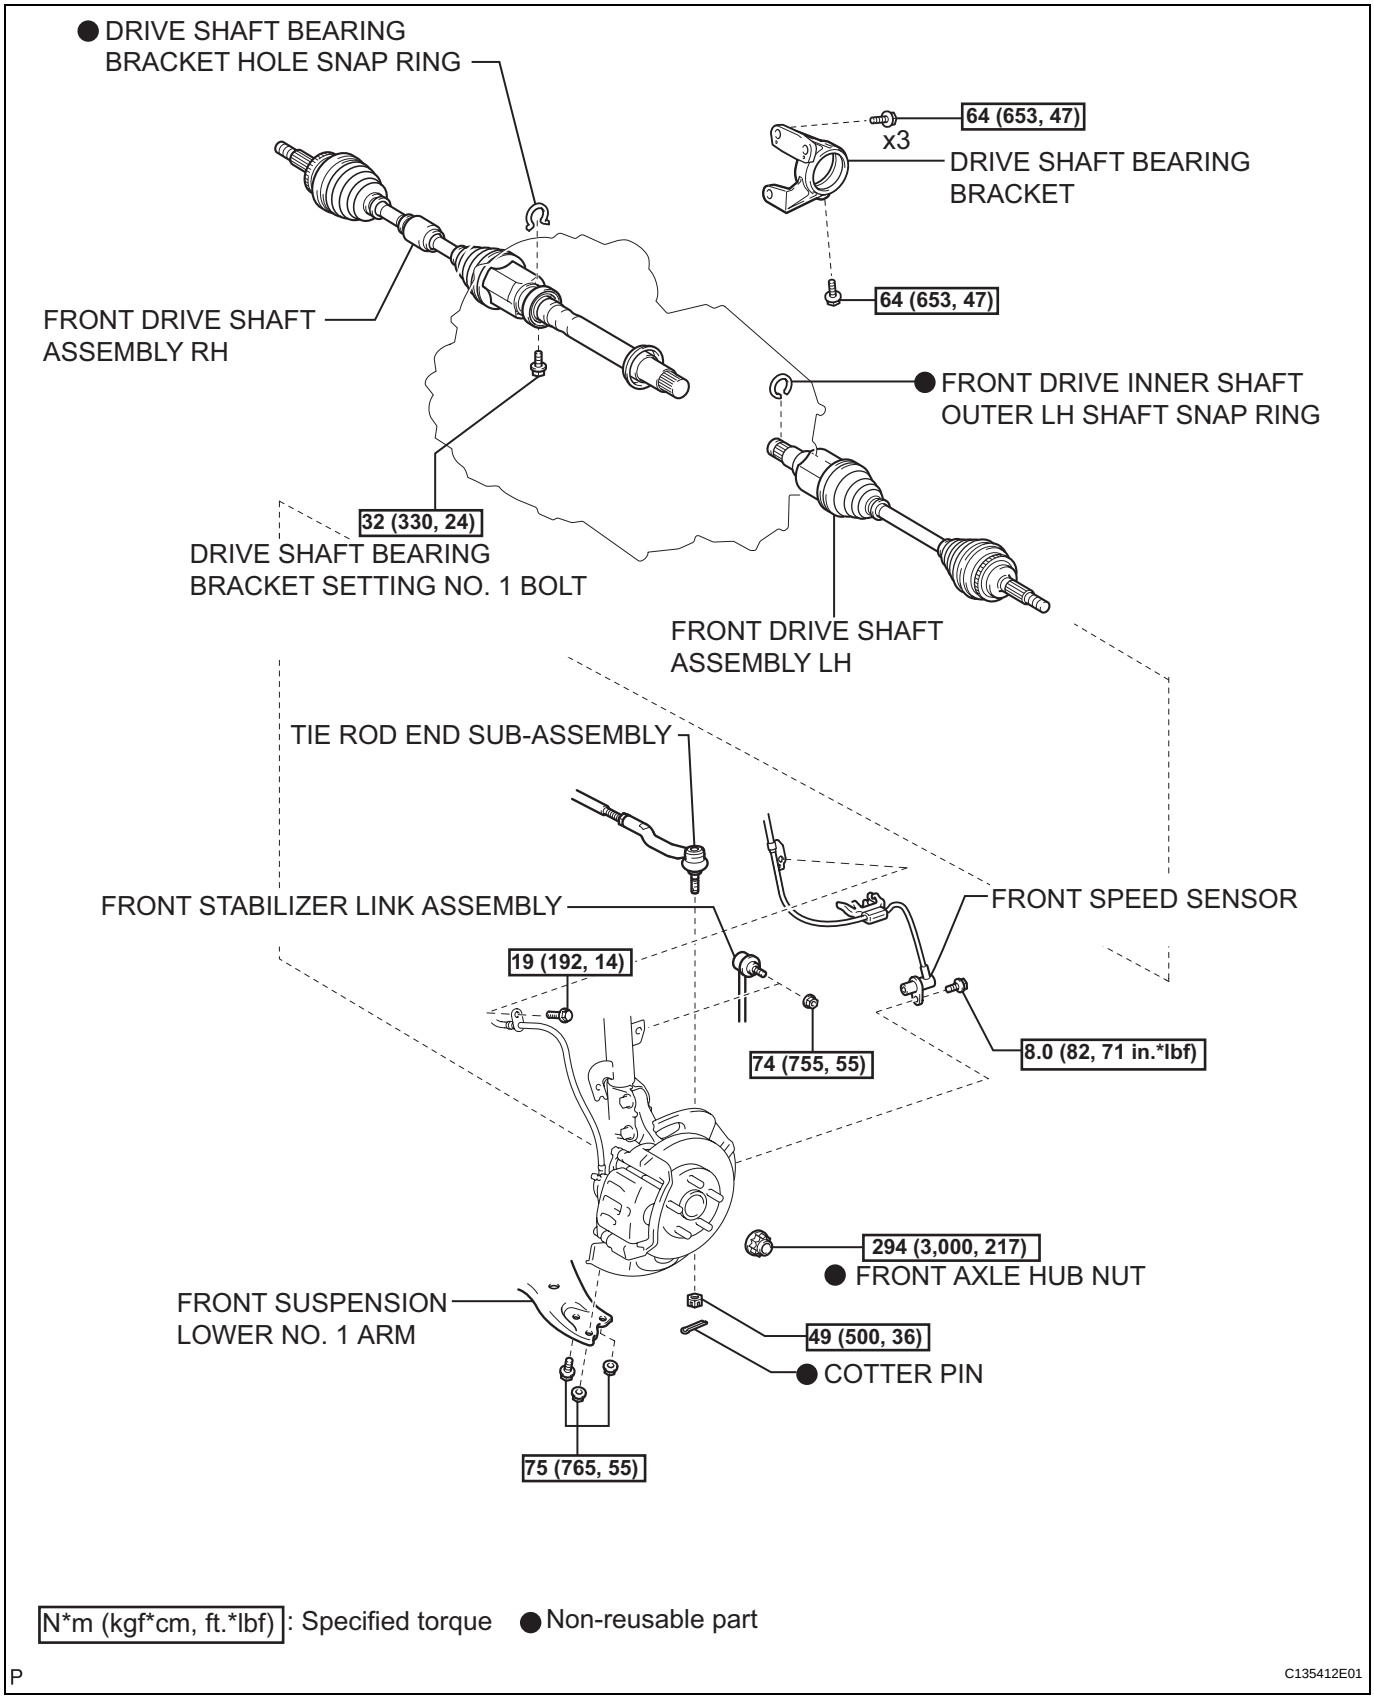
(d) Check for oil leakage if the oil level is low.

(e) Install the transmission filler plug and a new gasket.

Torque: 49 N*m (500 kgf*cm, 36 ft.*lbf)

DIFFERENTIAL OIL SEAL

COMPONENTS



N*m (kgf*cm, ft.*lbf): Specified torque ● Non-reusable part

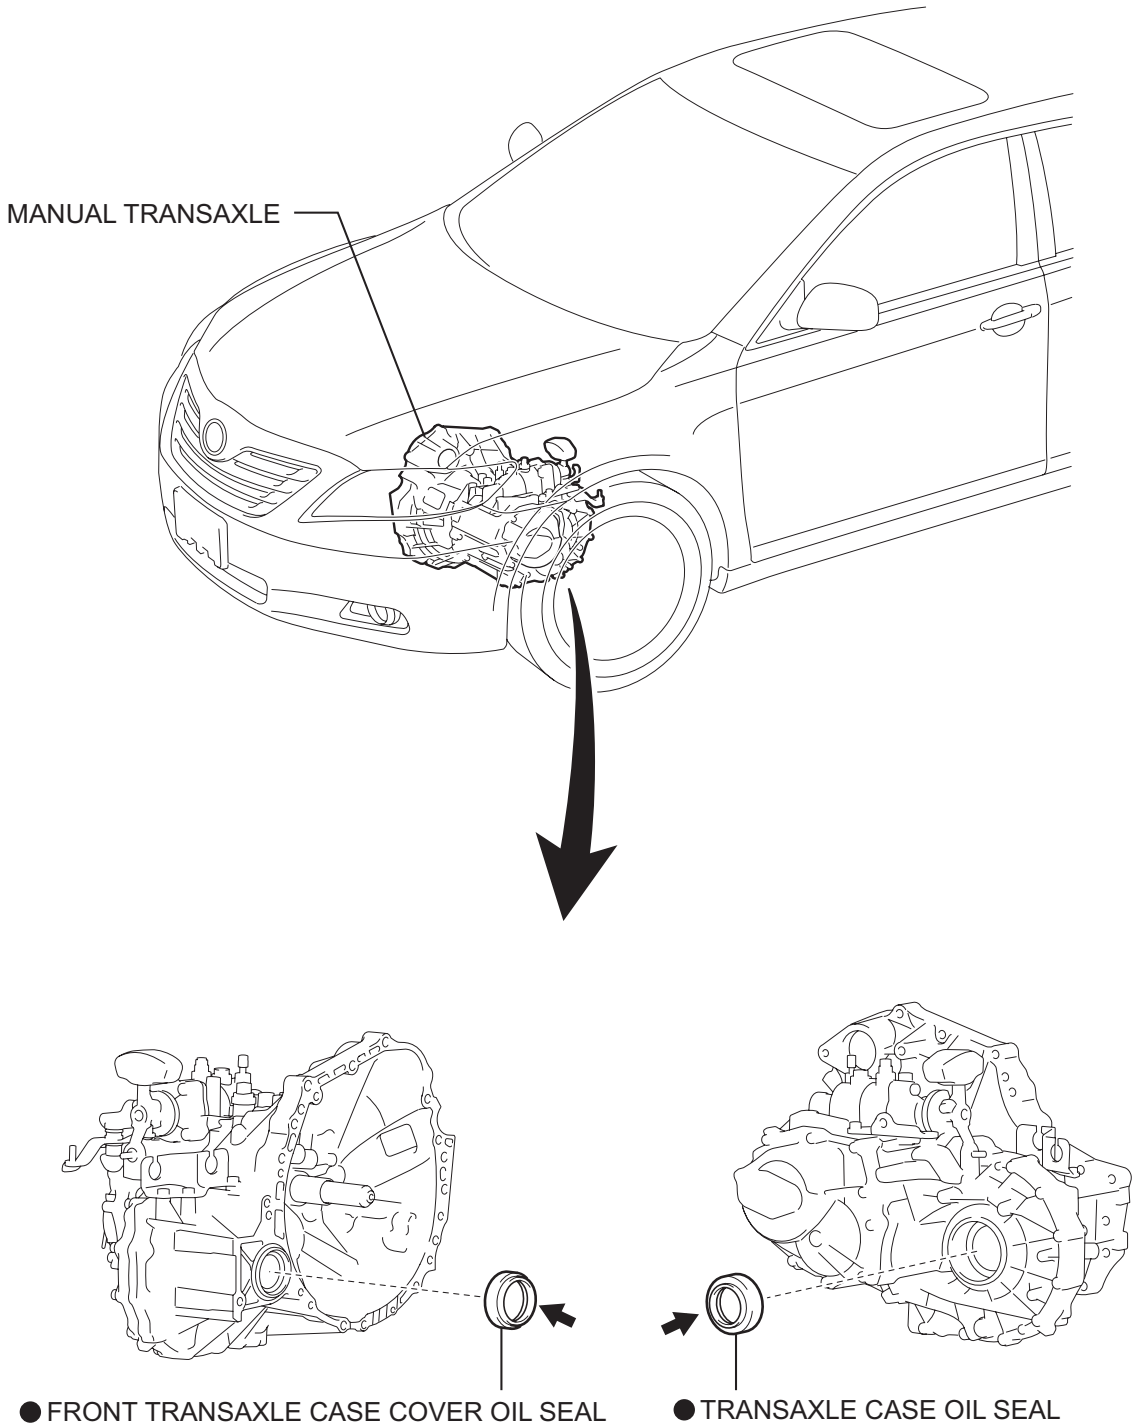
MX

MX



C135407E01

REMOVAL

HINT:

- Use the same procedures for the RH side (transaxle case oil seal) and LH side (transaxle case cover oil seal).
- The procedures listed below are for the LH side (transaxle case cover oil seal).

1. DRAIN MANUAL TRANSAXLE OIL

(a) Remove the filler plug and the gasket.

(b) Remove the drain plug and gasket, and drain the manual transaxle oil.

(c) Install a new gasket and the drain plug.
Torque: 49 N*m (500 kgf*cm, 36 ft.*lbf)

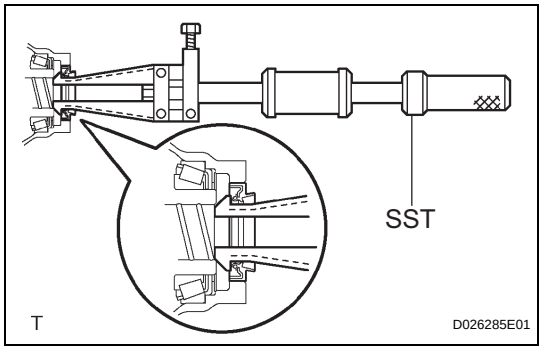
2. REMOVE FRONT WHEELS

3. REMOVE FRONT DRIVE SHAFT ASSEMBLY LH
TMC made: (See page DS-7).
TMMK made: (See page DS-25).

4. REMOVE FRONT DRIVE SHAFT ASSEMBLY RH
HINT:
Use the same procedures described for the LH side.

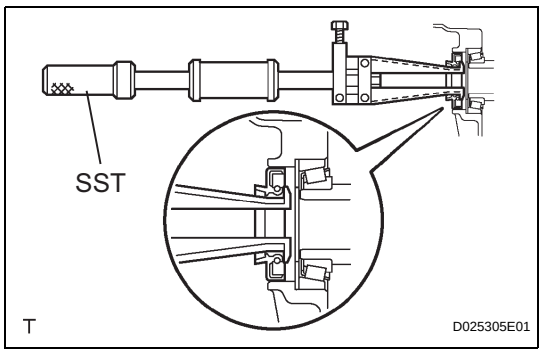
5. REMOVE FRONT TRANSAXLE CASE COVER OIL SEAL

(a) Using SST, remove the oil seal.
SST 09308-00010



6. REMOVE TRANSAXLE CASE OIL SEAL

(a) Using SST, remove the oil seal.
SST 09308-00010

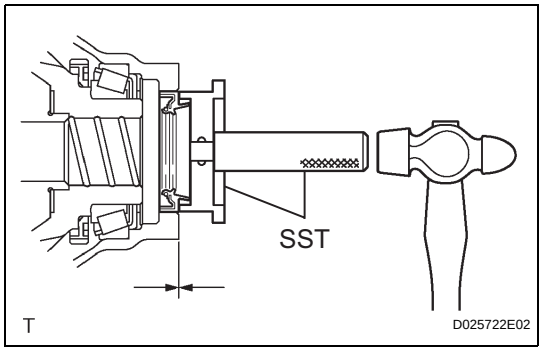


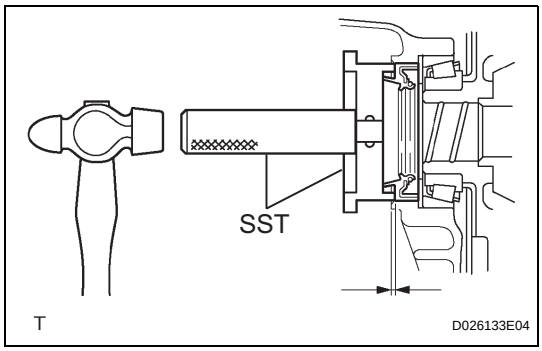
INSTALLATION

1. INSTALL FRONT TRANSAXLE CASE COVER OIL SEAL

(a) Coat a new oil seal lip with MP grease.

(b) Using SST and a hammer, install the oil seal.
SST 09608-10010, 09950-70010 (09951-07200)
Installation depth:
-0.5 to 0.5 mm (-0.020 to 0.020 in.)
NOTICE:
Be careful not to damage the oil seal lip.





2. INSTALL TRANSAXLE CASE OIL SEAL

(a) Coat a new oil seal lip with MP grease.

(b) Using SST and a hammer, install the oil seal.

SST 09608-32010, 09950-70010 (09951-07200)

Installation depth:

3.0 to 4.0 mm (0.1181 to 0.1575 in.)

NOTICE:

Be careful not to damage the oil seal lip.

3. INSTALL FRONT DRIVE SHAFT ASSEMBLY LH

TMC made: (See page DS-20).

TMMK made: (See page DS-34).

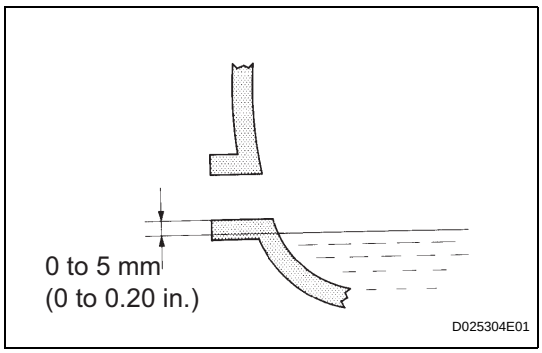
4. INSTALL FRONT DRIVE SHAFT ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

5. INSTALL FRONT WHEELS

Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)



6. ADD MANUAL TRANSAXLE OIL

(a) Park the vehicle on a level place.

(b) Remove the filler plug and gasket.

(c) Check that the oil surface is within 5 mm (0.20 in.) below the lowest point of the filler plug opening.

Oil grade:

API GL-4 or GL-5

Viscosity:

SAE 75W-90

NOTICE:

- **Problems may occur if the oil level is too high or too low.**
- **After replacing the oil, drive the vehicle and check the oil level again.**

(d) Check for oil leakage if the oil level is low.

(e) Install the filler plug and a new gasket.

Torque: 49 N*m (500 kgf*cm, 36 ft.*lbf)

7. INSPECT MANUAL TRANSAXLE OIL

8. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT

See page SP-4.

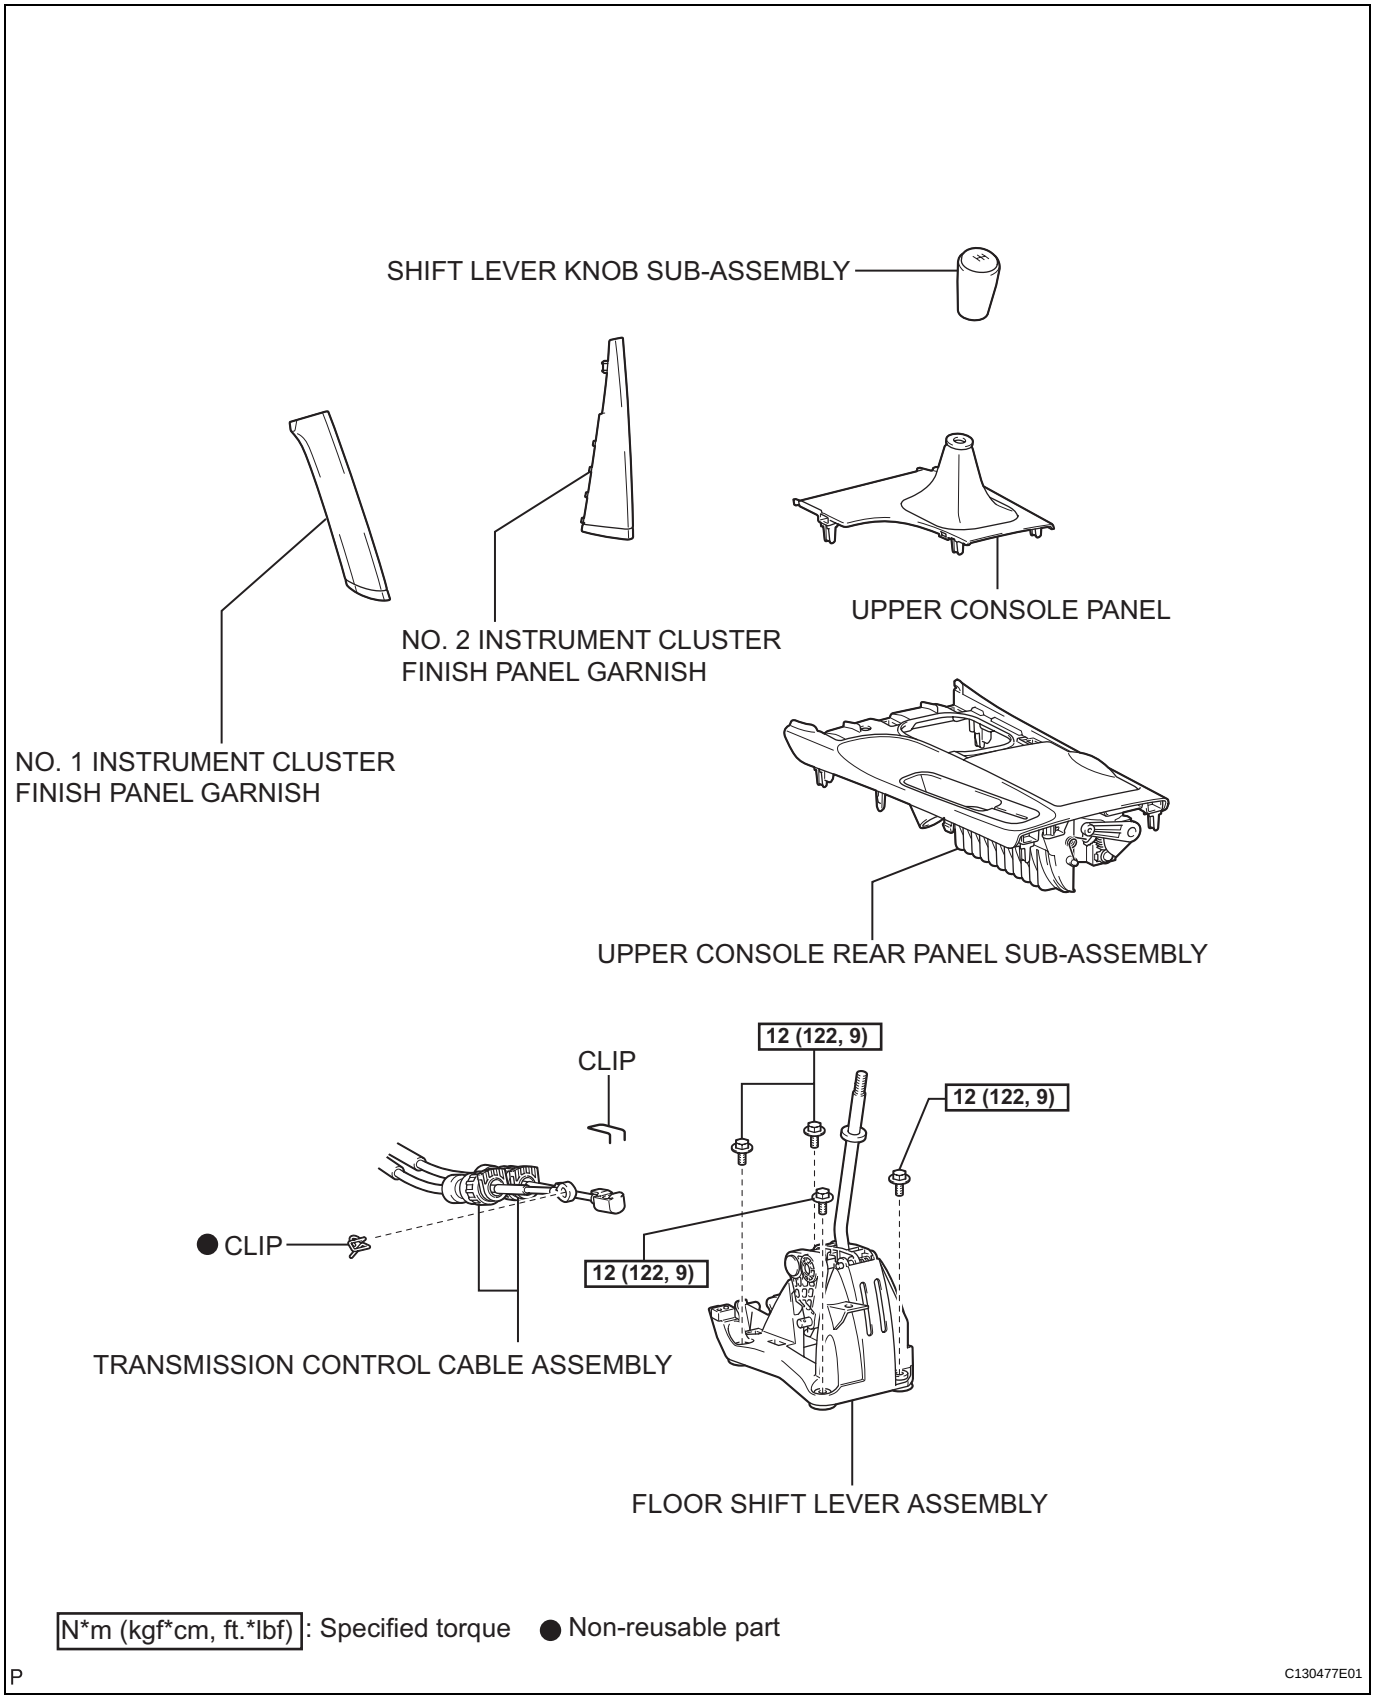
9. CHECK ABS SPEED SENSOR SIGNAL

See page BC-11.

MX

FLOOR SHIFT LEVER ASSEMBLY

COMPONENTS



N*m (kgf*cm, ft.*lbf): Specified torque ● Non-reusable part

P

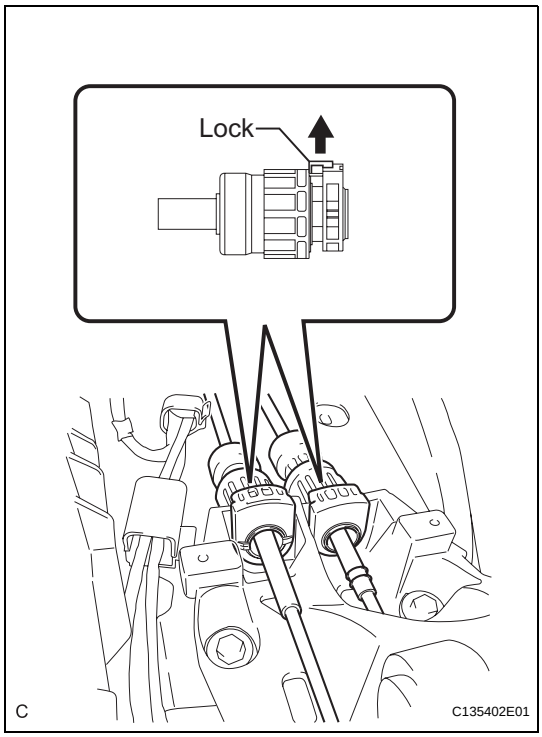
C130477E01

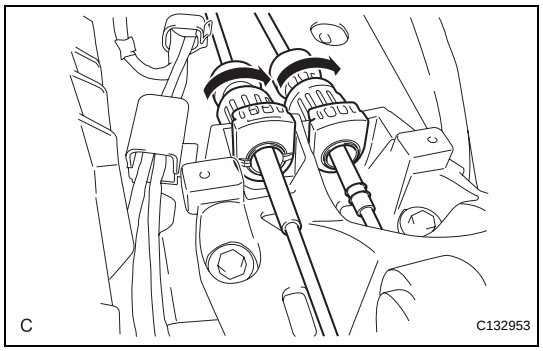
MX

REMOVAL

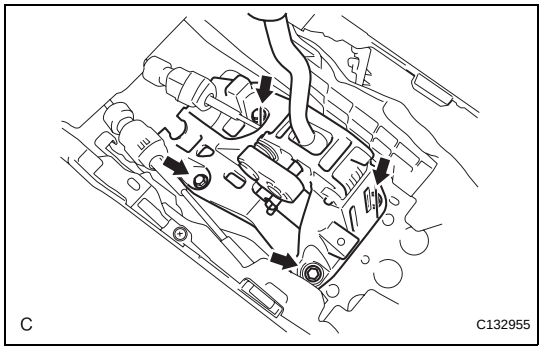
1. **REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-24)**
2. **REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-25)**
3. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-24)**
4. **REMOVE UPPER CONSOLE PANEL (See page IP-25)**
5. **REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-26)**
6. **DISCONNECT TRANSMISSION CONTROL CABLE ASSEMBLY**
   (a) Remove the 2 clips and disconnect the end of the transmission control cable.

   (b) Pull out the control cable assembly locks.





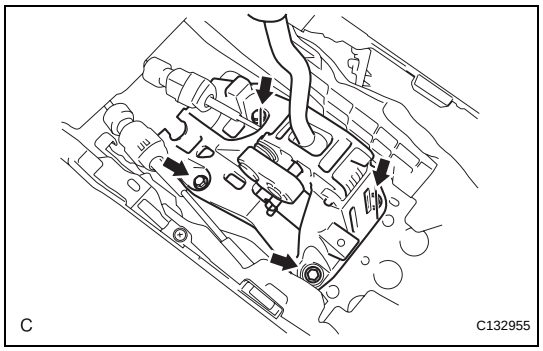
(c) Turn the adjust nut 180° clockwise. While holding the adjust nut, separate the control cable assembly.



7. REMOVE FLOOR SHIFT LEVER ASSEMBLY

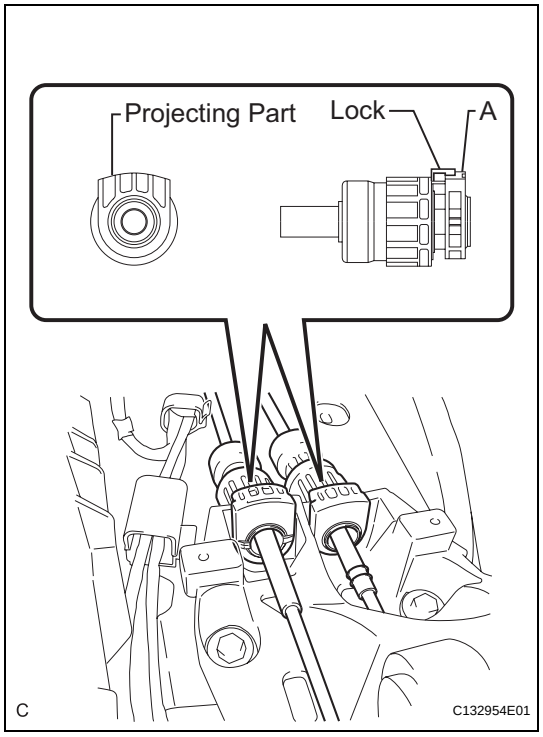
(a) Remove the 4 bolts and shift lever assembly.

INSTALLATION



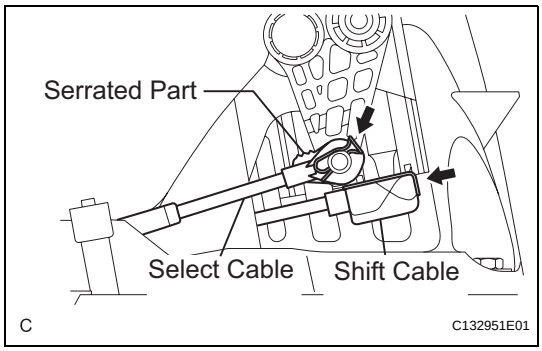
1. INSTALL FLOOR SHIFT LEVER ASSEMBLY

(a) Install the shift lever assembly with the 4 bolts.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)



2. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY

(a) Connect the control cable to the shift lever retainer.
NOTICE:
- **The projecting part of the cable outer should face upward when the shift cable is connected.**
- **After installation, make sure that the cable outer lock is projecting from A as shown in the illustration.**



(b) Connect the end of the shift cable to the shift lever assembly with the clip.

(c) Connect the end of the select cable to the shift lever assembly with a new clip.

NOTICE:

- **The serrated part of the select cable point should face upward when the select cable point is connected.**
- **The clip should be installed in the direction as shown in the illustration.**

3. **INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-53)**
4. **INSTALL UPPER CONSOLE PANEL (See page IP-53)**
5. **INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-54)**
6. **INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-55)**
7. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-55)**

TRANSMISSION CONTROL CABLE

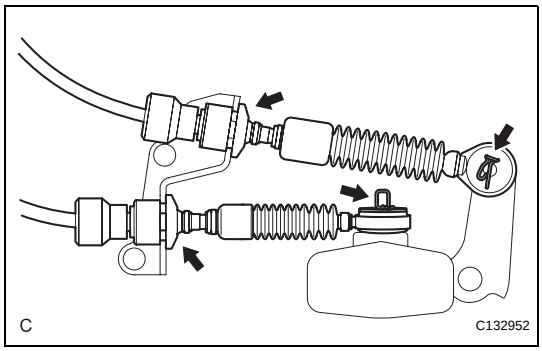
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-24)**
3. **REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-25)**
4. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-24)**
5. **REMOVE UPPER CONSOLE PANEL (See page IP-25)**
6. **REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-53)**
7. **SEPARATE TRANSMISSION CONTROL CABLE ASSEMBLY**
   (a) Remove the 2 clips and disconnect the end of the transmission control cable.

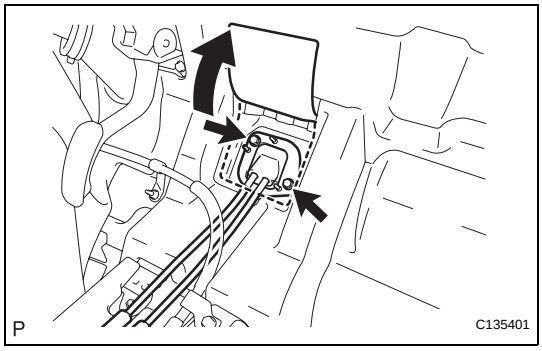
   (b) Pull out the control cable assembly locks.
   (c) Turn the adjust nut 180° clockwise. While holding the adjust nut, separate the control cable assembly.
8. **REMOVE INSTRUMENT PANEL SAFETY PAD SUB-ASSEMBLY**
   See page IP-20.
9. **REMOVE AIR CONDITIONER UNIT ASSEMBLY**
   See page AC-151.
10. **REMOVE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-442)**
11. **REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-94)**
12. **REMOVE AIR CLEANER INLET ASSEMBLY (See page EM-94)**
13. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-416)**
14. **REMOVE AIR CLEANER CASE SUB-ASSEMBLY (See page EM-95)**
15. **REMOVE BATTERY (See page EM-95)**



16. REMOVE TRANSMISSION CONTROL CABLE ASSEMBLY

(a) Remove the 2 clips and 2 washers and disconnect the 2 cables from the transaxle.

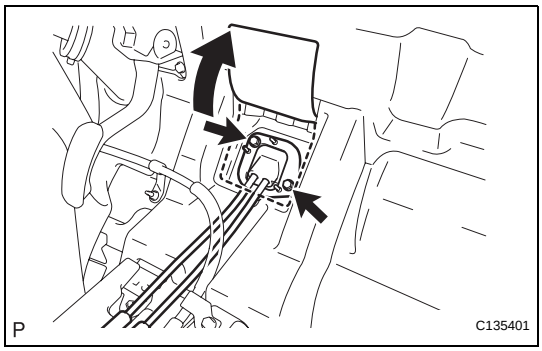
(b) Remove the 2 clips and disconnect the 2 cables from the control cable bracket.



(c) Remove the 2 bolts and control cable assembly.

(d) Remove the No. 2 shift cable grommet retainer from the control cable assembly.

INSTALLATION

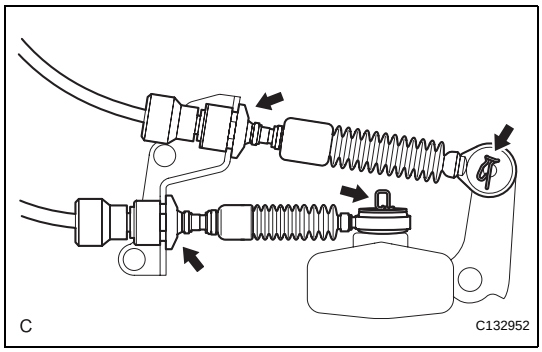


1. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY

(a) Install the No. 2 shift cable grommet retainer to the transmission control cable assembly.

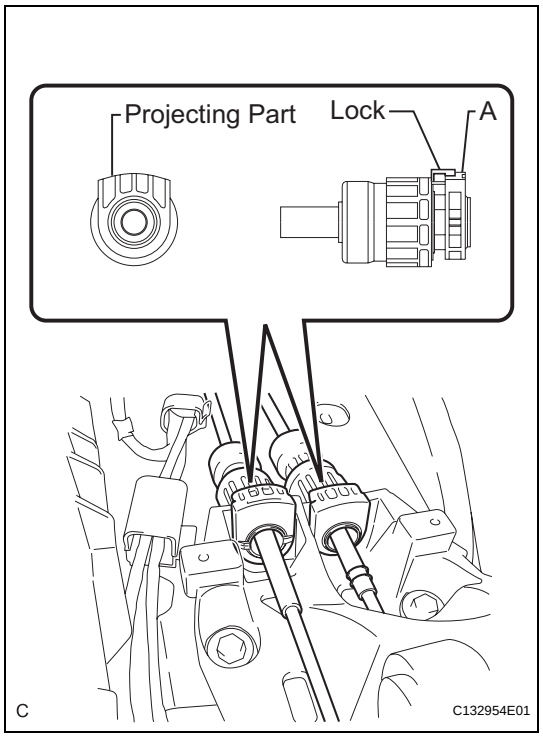
(b) Install the control cable assembly through the floor hole.

(c) Install the control cable assembly with the 2 bolts.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)



(d) Connect the ends of the 2 cables and install the 2 washers and 2 clips.

(e) Install 2 new clips to the control cable bracket.



2. **INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY**
   (a) Connect the control cable to the shift lever retainer.
   NOTICE:
   - **The projecting part of the cable outer should face upward when the shift cable is connected.**
   - **After installation, make sure that the cable outer lock is projecting from A as shown in the illustration.**

   (b) Connect the end of the shift cable to the shift lever assembly with the clip.
   (c) Connect the end of the select cable to the shift lever assembly with a new clip.
   NOTICE:
   - **The serrated part of the select cable point should face upward when the select cable point is connected.**
   - **The clip should be installed in the direction as shown in the illustration.**

3. **INSTALL CENTER AIRBAG SENSOR ASSEMBLY (See page RS-442)**
4. **INSTALL AIR CONDITIONER UNIT ASSEMBLY**
   See page AC-173.
5. **INSTALL INSTRUMENT PANEL SAFETY PAD SUB-ASSEMBLY**
   See page IP-43.
6. **INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-53)**
7. **INSTALL UPPER CONSOLE PANEL (See page IP-54)**
8. **INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-54)**
9. **INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-55)**
10. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-55)**
11. **INSTALL BATTERY (See page EM-119)**

MX

12. **INSTALL AIR CLEANER CASE SUB-ASSEMBLY (See page EM-120)**
13. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-419)**
14. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-120)**
15. **INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-121)**
16. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (See page EM-120)**

REMOVAL

1. **DISCHARGE FUEL SYSTEM PRESSURE**
   See page FU-1.
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**
4. **REMOVE FRONT WHEELS**
5. **REMOVE ENGINE UNDER COVER LH**
6. **REMOVE ENGINE UNDER COVER RH**
7. **REMOVE FRONT FENDER APRON SEAL RH**
8. **DRAIN ENGINE OIL (See page LU-4)**
9. **DRAIN ENGINE COOLANT (See page CO-5)**
10. **DRAIN MANUAL TRANSAXLE OIL (See page MX-5)**
11. **DRAIN BRAKE FLUID (See page BR-28)**
12. **REMOVE WINDSHIELD WIPER MOTOR ASSEMBLY**
    See page WW-9.
13. **REMOVE COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-424)**
14. **REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-94)**
15. **REMOVE V-RIBBED BELT (See page EM-6)**
16. **REMOVE AIR CLEANER INLET ASSEMBLY (See page EM-94)**
17. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-416)**
18. **REMOVE AIR CLEANER CASE SUB-ASSEMBLY (See page EM-95)**
19. **REMOVE BATTERY (See page EM-95)**
20. **REMOVE NO. 2 ENGINE MOUNTING STAY RH (See page EM-95)**
21. **REMOVE ENGINE MOVING CONTROL ROD SUB-ASSEMBLY (See page EM-95)**
22. **REMOVE NO. 2 ENGINE MOUNTING BRACKET RH (See page EM-96)**
23. **DISCONNECT NO. 1 VACUUM HOSE CONNECTOR (See page EM-96)**
24. **DISCONNECT RADIATOR HOSE INLET (See page EM-96)**
25. **DISCONNECT RADIATOR HOSE OUTLET (See page EM-96)**
26. **DISCONNECT HEATER INLET WATER HOSE (See page EM-97)**

27. **DISCONNECT HEATER OUTLET WATER HOSE (See page EM-97)**
28. **REMOVE ECM**
    See page ES-432.
29. **DISCONNECT ENGINE WIRE (See page EM-97)**
30. **DISCONNECT TRANSMISSION CONTROL CABLE ASSEMBLY (See page EM-98)**
31. **DISCONNECT NO. 1 OIL RESERVOIR TO PUMP HOSE (See page EM-98)**
32. **DISCONNECT RETURN TUBE SUB-ASSEMBLY (See page EM-99)**
33. **REMOVE CLUTCH ACCUMULATOR ASSEMBLY**
    See page CL-15.
34. **REMOVE CLUTCH RELEASE CYLINDER ASSEMBLY**
    See page CL-23.
35. **DISCONNECT FUEL TUBE SUB-ASSEMBLY (See page EM-99)**
36. **REMOVE GENERATOR ASSEMBLY (See page CH-11)**
37. **SEPARATE COMPRESSOR AND MAGNETIC CLUTCH (See page EM-99)**
38. **REMOVE FRONT EXHAUST PIPE ASSEMBLY**
    See page EX-2.
39. **REMOVE FRONT AXLE HUB NUT LH (See page DS-7)**
40. **REMOVE FRONT AXLE HUB NUT RH**
    HINT:
    Use the same procedures described for the LH side.
41. **REMOVE FRONT STABILIZER LINK ASSEMBLY LH (See page DS-7)**
42. **REMOVE FRONT STABILIZER LINK ASSEMBLY RH**
    HINT:
    Use the same procedures described for the LH side.
43. **REMOVE FRONT SPEED SENSOR LH (See page DS-7)**
44. **REMOVE FRONT SPEED SENSOR RH**
    HINT:
    Use the same procedures described for the LH side.
45. **DISCONNECT TIE ROD ASSEMBLY LH (See page DS-8)**
46. **DISCONNECT TIE ROD ASSEMBLY RH**
47. **DISCONNECT FRONT SUSPENSION LOWER NO. 1 ARM LH (See page DS-8)**

48. DISCONNECT FRONT SUSPENSION LOWER NO. 1 ARM RH

HINT:

Use the same procedures described for the LH side.

49. SEPARATE FRONT AXLE ASSEMBLY LH (See page DS-8)

50. SEPARATE FRONT AXLE ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

51. SEPARATE STEERING SLIDING YOKE (See page PS-40)

52. REMOVE ENGINE ASSEMBLY WITH TRANSAXLE (See page EM-100)

53. REMOVE VANE PUMP ASSEMBLY (See page EM-101)

54. REMOVE FRONT FRAME ASSEMBLY (See page EM-101)

55. REMOVE FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-9)

56. REMOVE FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-9)

57. REMOVE STARTER ASSEMBLY (See page ST-5)

58. DISCONNECT WIRE HARNESS

(a) Remove the bolt and separate the ground cable.

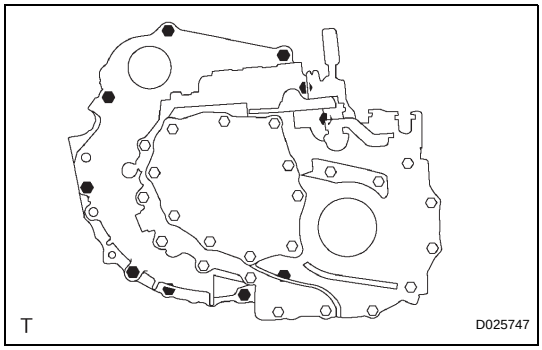
(b) Disconnect the back-up light switch connector.

(c) Disconnect the wire harness.

59. REMOVE MANUAL TRANSAXLE ASSEMBLY

(a) Remove the 10 bolts.

(b) Separate and remove the transaxle from the engine.



60. REMOVE CLUTCH LINE

(a) Remove the 2 bolts, clutch line and bracket.

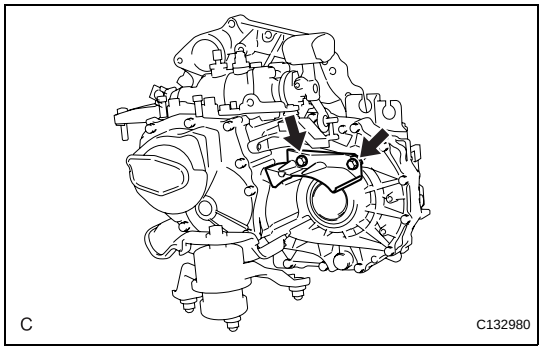
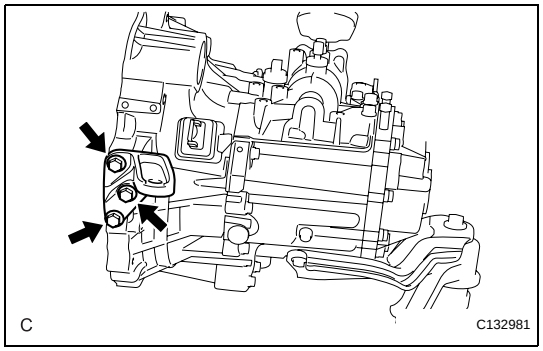
61. REMOVE WIRE HARNESS CLAMP

(a) Remove the 2 bolts and wire harness clamps.



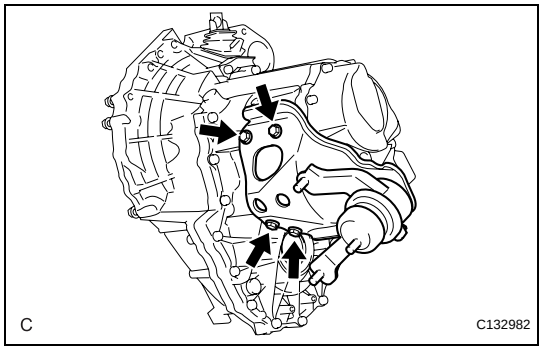
62. REMOVE MANUAL TRANSMISSION CASE PROTECTOR

(a) Remove the 2 bolts and manual transmission case protector.



63. REMOVE ENGINE MOUNTING FRONT BRACKET

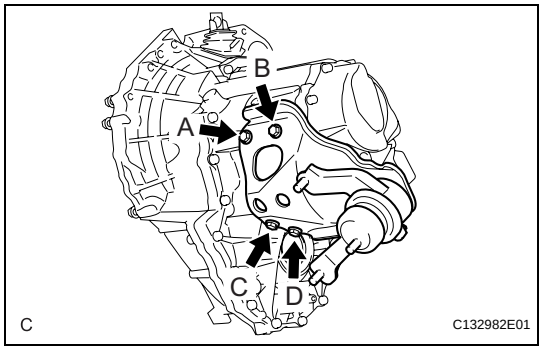
(a) Remove the 3 bolts and engine mounting front bracket.



64. REMOVE ENGINE MOUNTING INSULATOR LH

(a) Remove the 4 bolts and engine mounting insulator LH.

INSTALLATION



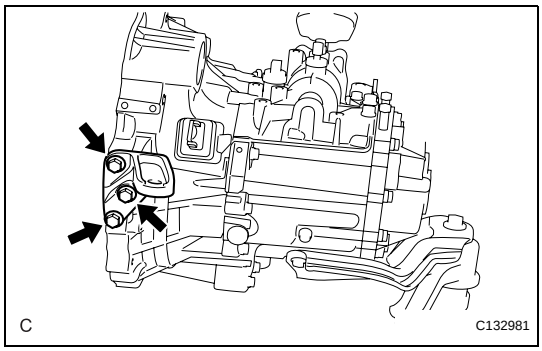
1. INSTALL ENGINE MOUNTING INSULATOR LH

(a) Install the engine mounting insulator LH with the 4 bolts.

Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)

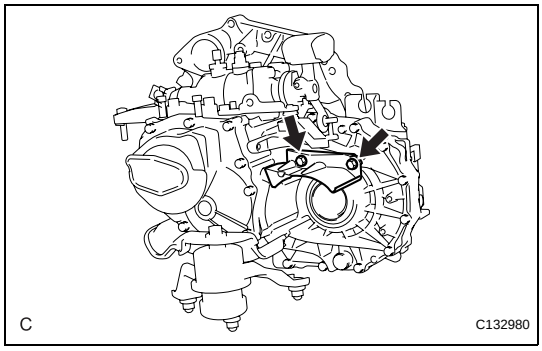
HINT:

Tighten the bolts in order: A, B, C and D.



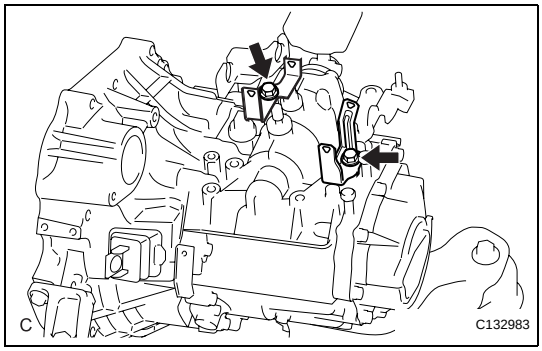
2. INSTALL ENGINE MOUNTING FRONT BRACKET

(a) Install the engine mounting front bracket with the 3 bolts.
Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)



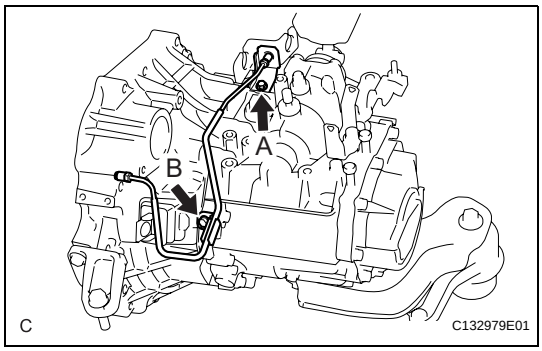
3. INSTALL MANUAL TRANSMISSION CASE PROTECTOR

(a) Install the manual transmission case protector with the 2 bolts.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)



4. INSTALL WIRE HARNESS CLAMP

(a) Install the 2 wire harness clamps with the 2 bolts.
Torque: 8.4 N*m (86 kgf*cm, 74 in.*lbf)

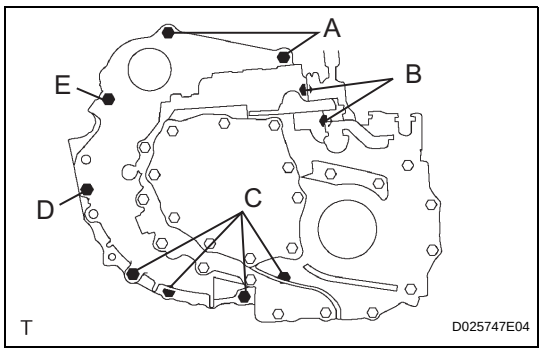


5. INSTALL CLUTCH LINE

(a) Install the clutch line and bracket with the 2 bolts.
Torque: Bolt A
12 N*m (122 kgf*cm, 9 ft.*lbf)
Bolt B
7.0 N*m (71 kgf*cm, 62 in.*lbf)

6. INSTALL MANUAL TRANSAXLE ASSEMBLY

(a) Align the input shaft with the clutch disc and install the transaxle to the engine.



(b) Install the 10 bolts.
Torque: Bolt A
64 N*m (653 kgf*cm, 47 ft.*lbf)
Bolt B
46 N*m (470 kgf*cm, 34 ft.*lbf)
Bolt C
44 N*m (449 kgf*cm, 32 ft.*lbf)
Bolt D
46 N*m (470 kgf*cm, 34 ft.*lbf)
Bolt E
64 N*m (653 kgf*cm, 47 ft.*lbf)

Bolt length:
Bolt A:
60 mm (2.3622 in.)
Bolt B:
60 mm (2.3622 in.)
Bolt C:
32 mm (1.2598 in.)
Bolt D:
65 mm (2.5591 in.)
Bolt E:
74.5 mm (2.9331 in.)

7. **CONNECT WIRE HARNESS**
   (a) Install the wire harness.
   (b) Connect the back-up light switch connector.
   (c) Install the ground cable with the bolt.
   Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)
8. **INSTALL STARTER ASSEMBLY (See page ST-13)**
9. **INSTALL FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-20)**
10. **INSTALL FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-21)**
11. **INSTALL FRONT FRAME ASSEMBLY (See page EM-112)**
12. **INSTALL VANE PUMP ASSEMBLY (See page EM-113)**
13. **INSTALL ENGINE ASSEMBLY WITH TRANSAXLE (See page EM-114)**
14. **INSTALL STEERING SLIDING YOKE (See page PS-65)**
15. **INSTALL FRONT AXLE ASSEMBLY LH (See page DS-21)**
16. **INSTALL FRONT AXLE ASSEMBLY RH**
    HINT:
    Use the same procedures described for the LH side.
17. **INSTALL FRONT SUSPENSION LOWER NO. 1 ARM LH (See page DS-21)**
18. **INSTALL FRONT SUSPENSION LOWER NO. 1 ARM RH**
    HINT:
    Use the same procedures described for the LH side.
19. **INSTALL TIE ROD ASSEMBLY LH (See page DS-21)**
20. **INSTALL TIE ROD ASSEMBLY RH**
    HINT:
    Use the same procedures described for the LH side.
21. **INSTALL FRONT SPEED SENSOR LH (See page DS-21)**

22. **INSTALL FRONT SPEED SENSOR RH**
HINT:
Use the same procedures described for the LH side.

23. **INSTALL FRONT STABILIZER LINK ASSEMBLY LH (See page DS-22)**

24. **INSTALL FRONT STABILIZER LINK ASSEMBLY RH**
HINT:
Use the same procedures described for the LH side.

25. **INSTALL FRONT AXLE HUB NUT LH (See page DS-7)**

26. **INSTALL FRONT AXLE HUB NUT RH**
HINT:
Use the same procedures described for the LH side.

27. **INSTALL FRONT EXHAUST PIPE ASSEMBLY**
See page EX-3.

28. **INSTALL COMPRESSOR AND MAGNETIC CLUTCH (See page EM-115)**

29. **INSTALL GENERATOR ASSEMBLY (See page CH-19)**

30. **CONNECT FUEL TUBE SUB-ASSEMBLY (See page EM-115)**

31. **INSTALL CLUTCH RELEASE CYLINDER ASSEMBLY**
See page CL-25.

32. **INSTALL CLUTCH ACCUMULATOR ASSEMBLY**
See page CL-29.

33. **CONNECT RETURN TUBE SUB-ASSEMBLY (See page EM-116)**

34. **CONNECT NO. 1 OIL RESERVOIR TO PUMP HOSE (See page EM-116)**

35. **INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY (See page EM-116)**

36. **CONNECT ENGINE WIRE (See page EM-117)**

37. **INSTALL ECM**
See page ES-433.

38. **CONNECT HEATER INLET WATER HOSE (See page EM-117)**

39. **CONNECT HEATER OUTLET WATER HOSE (See page EM-118)**

40. **CONNECT OIL COOLER INLET HOSE (See page CO-30)**

41. **CONNECT OIL COOLER OUTLET HOSE (See page CO-30)**

42. **CONNECT RADIATOR HOSE INLET (See page EM-118)**

43. **CONNECT RADIATOR HOSE OUTLET (See page EM-118)**

44. **CONNECT NO. 1 VACUUM HOSE CONNECTOR (See page EM-118)**
45. **INSTALL NO. 2 ENGINE MOUNTING BRACKET RH (See page EM-118)**
46. **INSTALL ENGINE MOVING CONTROL ROD SUB-ASSEMBLY (See page EM-119)**
47. **INSTALL NO. 2 ENGINE MOUNTING STAY RH (See page EM-119)**
48. **INSTALL BATTERY (See page EM-119)**
49. **INSTALL AIR CLEANER CASE SUB-ASSEMBLY (See page EM-120)**
50. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-419)**
51. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-120)**
52. **INSTALL V-RIBBED BELT (See page EM-6)**
53. **INSTALL COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-426)**
54. **INSTALL WINDSHIELD WIPER LINK ASSEMBLY** See page WW-13.
55. **INSTALL FRONT WHEEL (See page EM-120)**
56. **ADD ENGINE OIL**
57. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (See page EM-120)**
58. **BLEED CLUTCH LINE (See page CL-25)**
59. **ADD ENGINE COOLANT (See page CO-5)**
60. **ADD MANUAL TRANSAXLE OIL (See page MX-6)**
61. **ADD POWER STEERING FLUID**
62. **BLEED POWER STEERING FLUID (See page PS-7)**

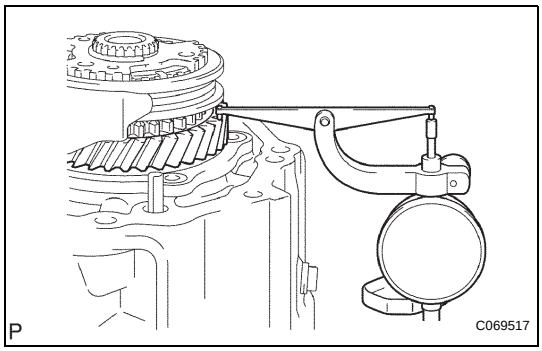
INSPECTION



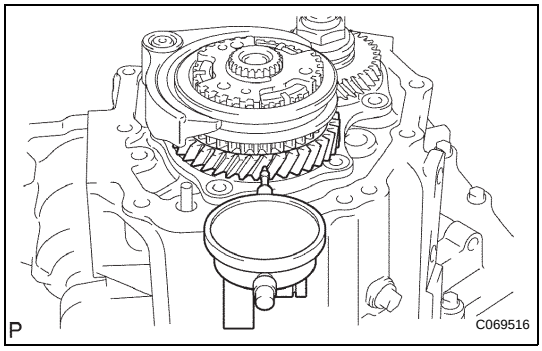
1. INSPECT 5TH GEAR THRUST CLEARANCE

(a) Using a dial indicator, inspect the 5th gear thrust clearance.

Standard clearance:

0.10 to 0.65 mm (0.0039 to 0.0256 in.)

If clearance is out of specification, replace the No. 3 transmission clutch hub, 5th gear, or input shaft rear radial ball bearing.



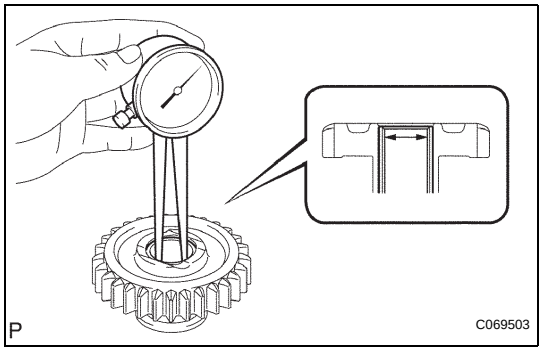
2. INSPECT 5TH GEAR RADIAL CLEARANCE

(a) Using a dial indicator, inspect the 5th gear radial clearance.

Standard clearance:

0.009 to 0.050 mm (0.0004 to 0.0020 in.)

If clearance is out of specification, replace the 5th gear, 5th gear needle roller bearing, or input shaft.



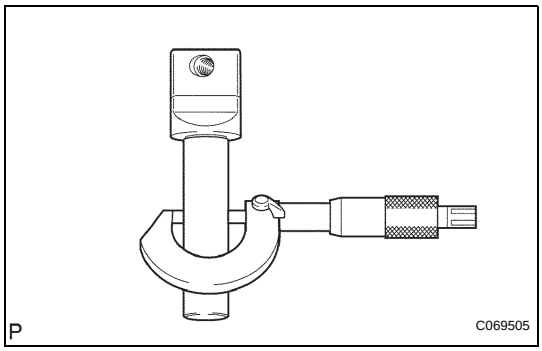
3. INSPECT REVERSE IDLER GEAR SUB-ASSEMBLY

(a) Using a caliper gauge, measure the inside diameter of the reverse idler gear.

Inside diameter: mm (in.)

Standard inside diameter	Maximum inside diameter
20.056 to 20.074 (0.7896 to 0.7903)	20.074 (0.7903)

If the inside diameter exceeds the maximum, replace the reverse idler gear.

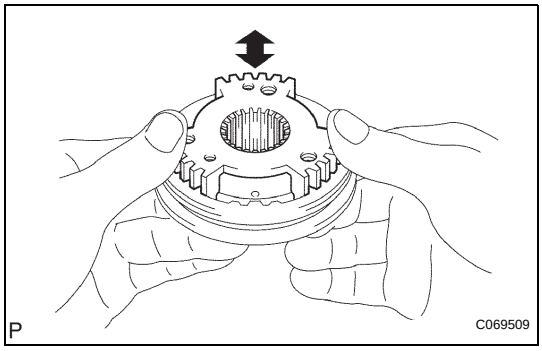


(b) Using a micrometer, measure the outside diameter of the reverse idler gear shaft.

Outside diameter: mm (in.)

Standard outside diameter	Minimum outside diameter
19.984 to 20.000 (0.7868 to 0.7874)	19.984 (0.7868)

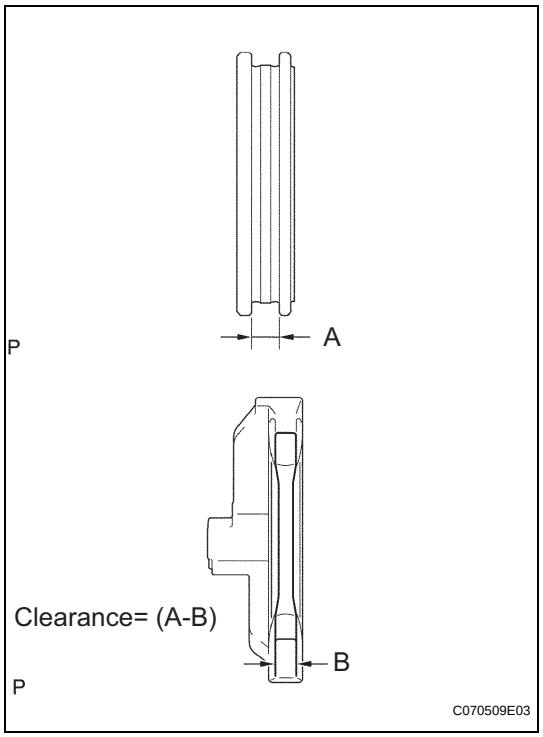
If the outside diameter is less than the minimum, replace the reverse idler gear shaft.



4. INSPECT NO. 3 TRANSMISSION CLUTCH HUB

(a) Inspect the sliding condition between the No. 3 transmission clutch hub and the No. 3 transmission hub sleeve.

(b) Inspect the tip of the spline gear on the No. 3 transmission hub sleeve for wear.



5. INSPECT NO. 3 TRANSMISSION HUB SLEEVE

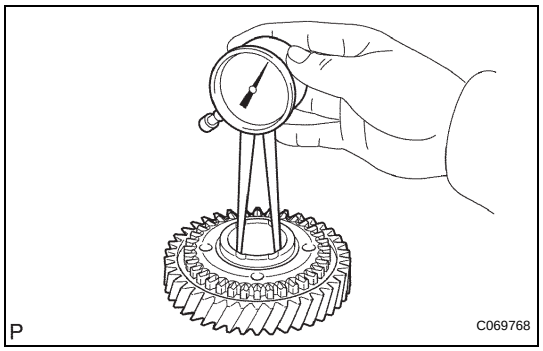
(a) Using vernier calipers, measure the width of the No. 3 transmission hub sleeve groove and the thickness of the claw part on the No. 3 gear shift fork, and calculate the clearance.

Standard clearance:

0.15 to 0.35 mm (0.0059 to 0.0138 in.) {A - B}

If clearance is out of specification, replace the No. 3 transmission hub sleeve and No. 3 gear shift fork with new ones.

MX



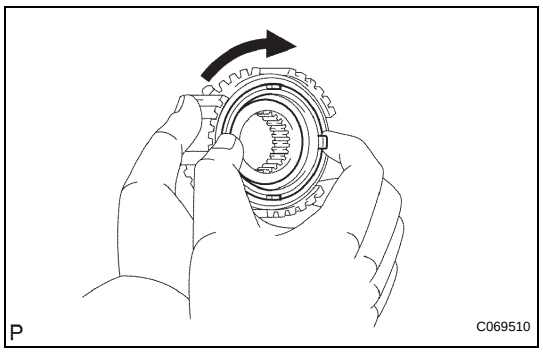
6. INSPECT 5TH GEAR

(a) Using a caliper gauge, measure the inside diameter of the 5th gear.

Inside diameter mm (in.)

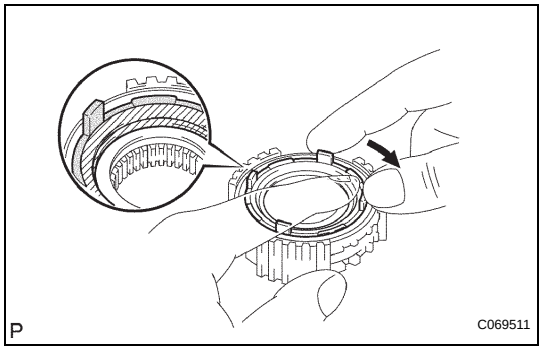
Standard inside diameter	Maximum inside diameter
34.981 to 34.997 (1.3772 to 1.3778)	34.997 (1.3778)

If the inside diameter exceeds the maximum, replace the 5th gear.



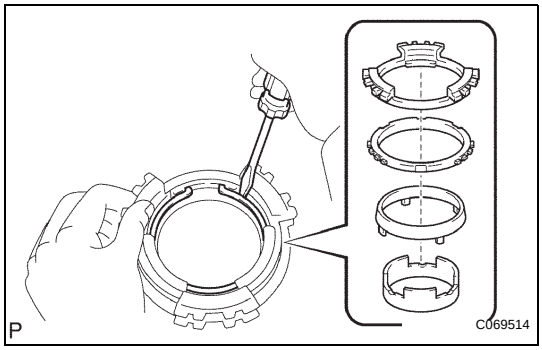
7. INSPECT NO. 5 SYNCHRONIZER RING MIDDLE

(a) Check that the No. 5 synchronizer ring middle rotates smoothly.



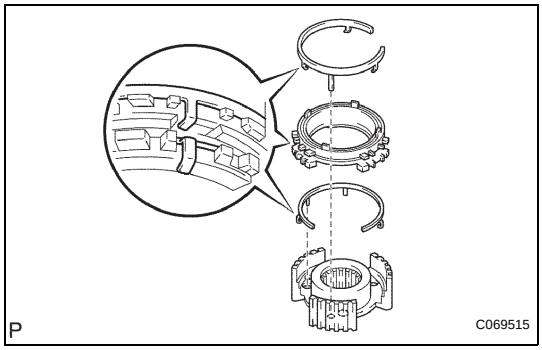
(b) Check that the No. 5 synchronizer ring middle does not rotate while being pushed against the No. 3 clutch hub.

REASSEMBLY



1. INSTALL SYNCHRONIZER PULL RING

(a) Install the No. 5 synchronizer middle ring, No. 5 synchronizer ring outer, and synchronizer pull ring to the No. 5 synchronizer ring inner. Using a screwdriver, fix them with the snap ring.



2. INSTALL NO. 3 SYNCHROMESH SHIFTING KEY SPRING

(a) Install the No. 3 synchromesh shifting key spring to the No. 3 transmission clutch hub.

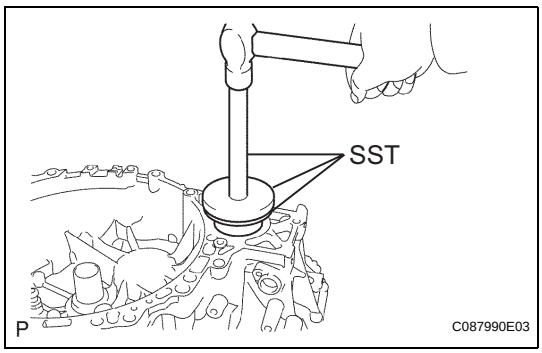
NOTICE:

Align the projection of the shifting key spring with the No. 3 hole of the clutch hub.

(b) Install the synchronizer ring set and No. 3 synchromesh shifting key spring to the No. 3 transmission clutch hub.

NOTICE:

- **Engage the shifting key spring claw to the center of the teeth of the synchronizer ring.**
- **Align the projection of the shifting key spring with the hole of the No. 3 clutch hub.**



3. INSTALL FRONT TRANSAXLE CASE COVER OIL SEAL

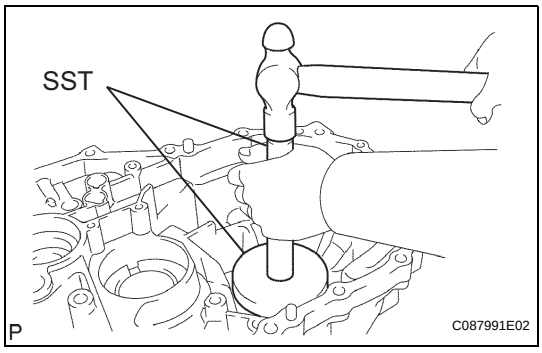
(a) Using SST and a hammer, install a new front transaxle case cover oil seal.

SST 09316-20011, 09950-60020 (09951-00910), 09950-70010 (09951-07150)

Oil seal installation depth:

- 0.5 to 0.5 mm (- 0.020 to 0.020 in.)

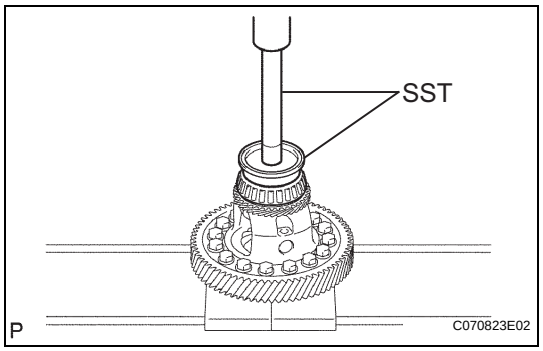
(b) Coat the front transaxle case cover oil seal lip with MP grease.



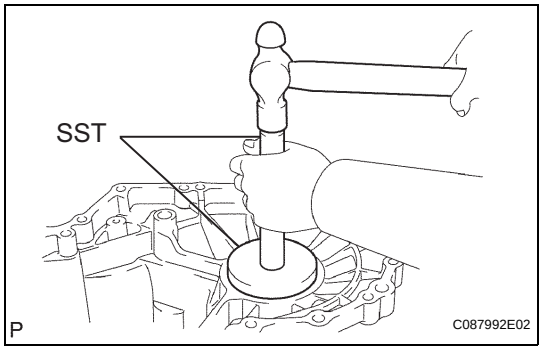
4. INSTALL FRONT DIFFERENTIAL CASE FRONT TAPERED ROLLER BEARING

(a) Using SST and a hammer, install the front differential case front tapered roller bearing (outer race) to the front transaxle case.

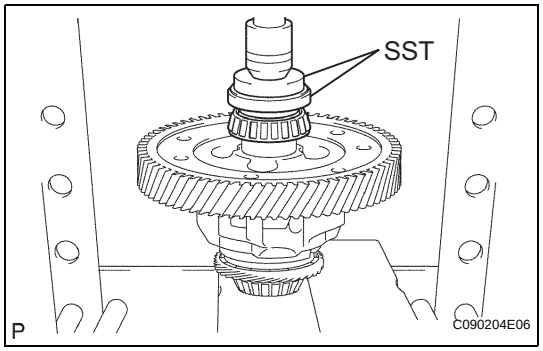
SST 09950-60020 (09951-00910), 09950-70010 (09951-07100)



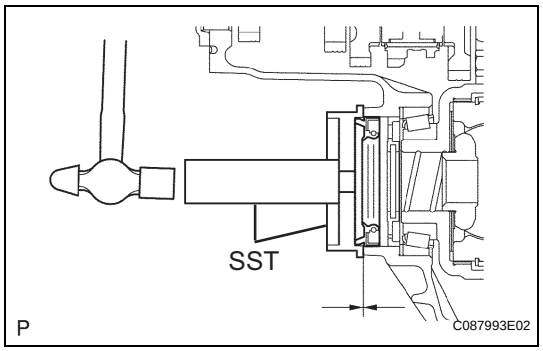
(b) Using SST and a press, install the front differential case front tapered roller bearing (inner race) to the front differential case.
SST 09950-70010 (09951-07100, 09951-07150), 09608-10010



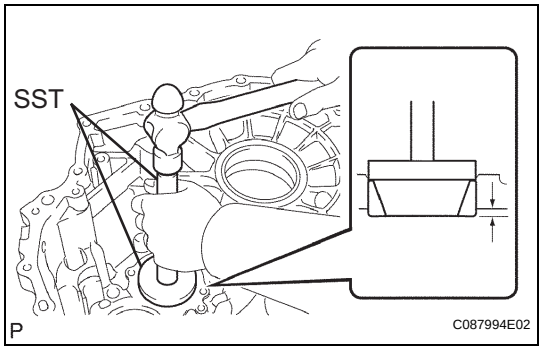
5. INSTALL FRONT DIFFERENTIAL CASE REAR TAPERED ROLLER BEARING
(a) Install the front differential case shim rear.
(b) Using SST and a hammer, install the front differential case rear tapered roller bearing (outer race).
SST 09950-60020 (09951-00890), 09950-70010 (09951-07100)



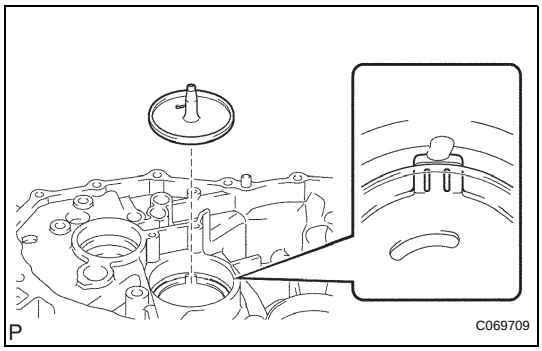
(c) Using SST and a press, install the front differential case rear tapered roller bearing (inner race).
SST 09631-12090, 09950-60010 (09951-00600), 09950-70010 (09951-07100)



6. INSTALL TRANSMISSION CASE OIL SEAL
(a) Using SST and a hammer, install a transmission case oil seal to the manual transmission case.
SST 09608-32010, 09950-70010 (09951-07150)
Oil seal installation depth:
3.0 to 4.0 mm (0.1181 to 0.1575 in.)
(b) Coat the transmission case oil seal lip with MP grease.

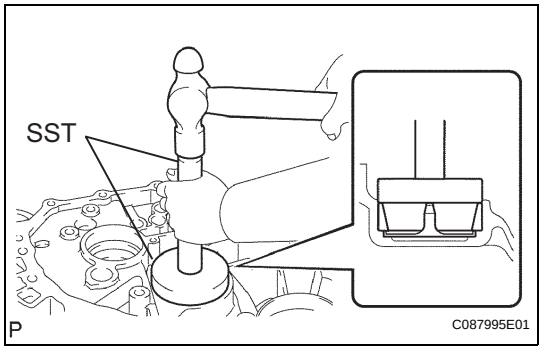


7. INSTALL OUTPUT SHAFT REAR BEARING
(a) Using SST and a hammer, install the output shaft rear bearing (outer race) to the manual transmission case.
SST 09950-60020 (09951-00680), 09950-70010 (09951-07100)
Clearance:
3.8 to 4.4 mm (0.150 to 0.173 in.)



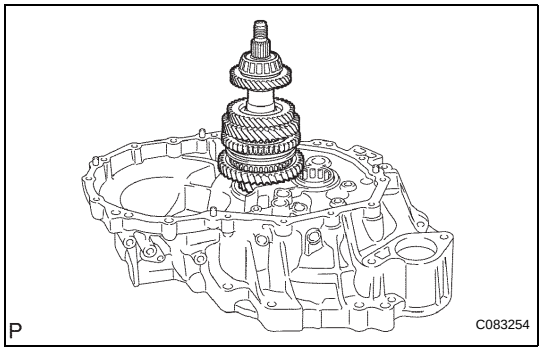
8. INSTALL OUTPUT SHAFT COVER

(a) Coat the output shaft cover with MP grease, and install it to the manual transaxle case.
NOTICE:
Align the projection of the output shaft with the transmission groove.



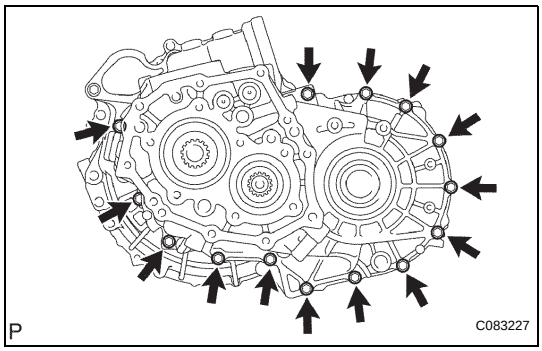
9. INSTALL OUTPUT SHAFT FRONT BEARING

(a) Using SST and a hammer, install the output shaft front bearing (outer race).
SST 09950-60020 (09951-00730), 09950-70010 (09951-07100)

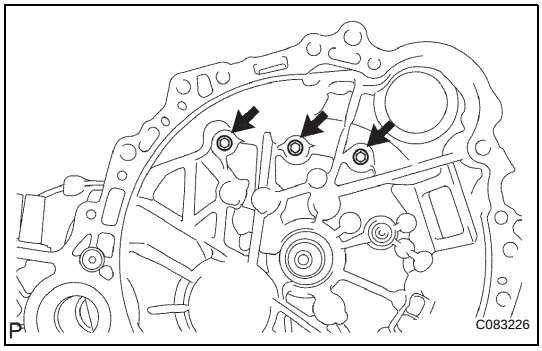


10. ADJUST OUTPUT SHAFT BEARING PRELOAD

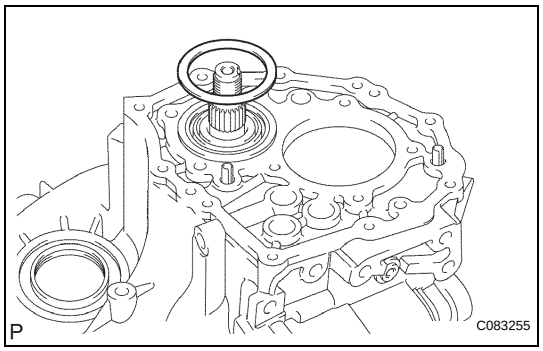
(a) Install the output shaft to the manual transaxle case.



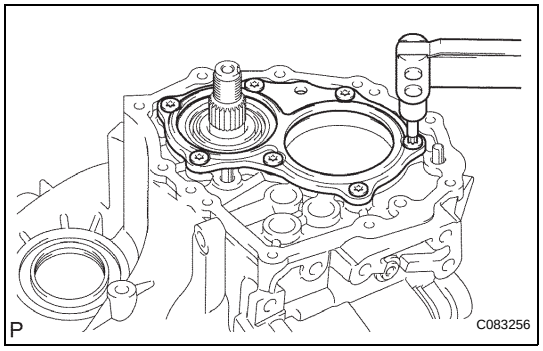
(b) Install the transmission case to the manual transaxle case with the 14 bolts.
Torque: 29 N*m (296 kgf*cm, 21 ft.*lbf)



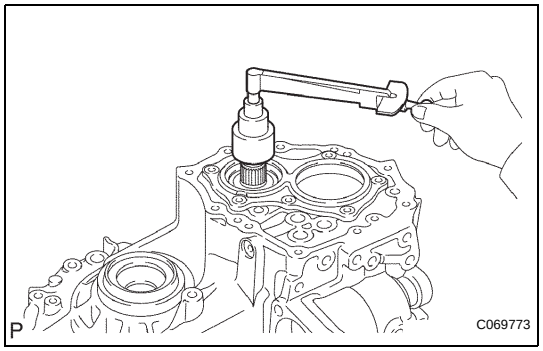
(c) Install the 3 bolts to the manual transaxle case.
Torque: 29 N*m (296 kgf*cm, 21 ft.*lbf)



(d) Install the output shaft rear bearing case shim to the output shaft.



(e) Using a "TORX" socket wrench (T45), install the bearing retainer rear to the manual transmission case with the 7 screws.
Torque: 43 N*m (438 kgf*cm, 32 ft.*lbf)



(f) Turn the output shaft in both directions to make sure that it starts to turn smoothly.

(g) Using a socket wrench and torque wrench, inspect the preload.
Preload: N*m (kgf*cm, in.*lbf)

Bearing	Preload
New	0.8 to 1.6 (8.16 to 16.32, 7.1 to 14.2)
Used	0.5 to 1.0 (5.10 to 10.20, 4.4 to 8.9)

(h) If preload is out of specification, select a proper output shaft rear bearing shim and adjust it.
HINT:
The preload of all the output shaft rear bearing shim varies in torque from about 0.04 to 0.06 N*m (0.408 to 0.612 kgf*cm, 0.35 to 0.53 in.*lbf).
Shim

Part No.	Thickness: mm (in.)	Mark
90564-59001	1.30 (0.0512)	0
90564-59002	1.35 (0.0531)	1
90564-59003	1.40 (0.0551)	2

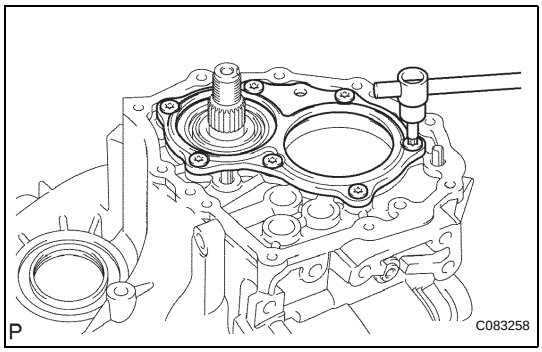
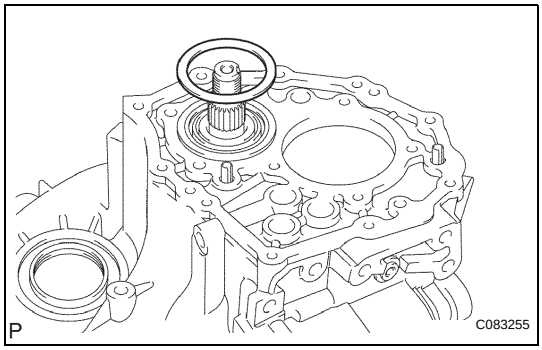
90564-59024	2.45 (0.0965)	P
90564-59025	2.50 (0.0984)	Q

(i) Remove the output shaft rear set nut from the output shaft.

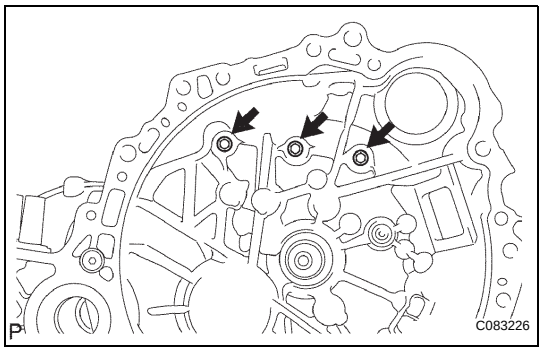
(j) Using a "TORX" socket wrench (T45), remove the 7 screws and bearing retainer rear from the manual transmission case.

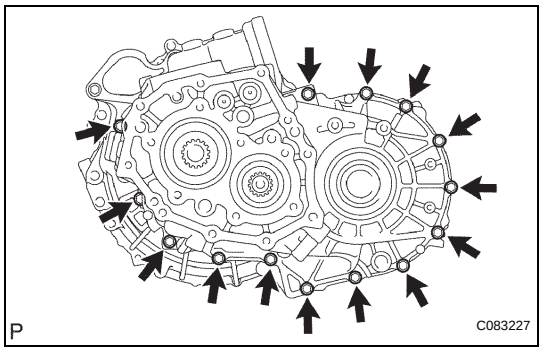


(k) Remove the output shaft rear bearing shim from the output shaft.

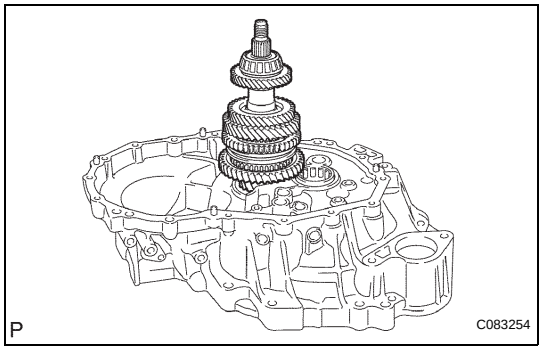


(l) Remove the 3 bolts.

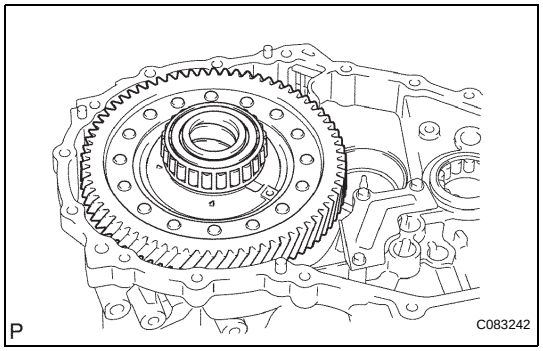




(m) Remove the 14 bolts and manual transmission case from the manual transaxle case.

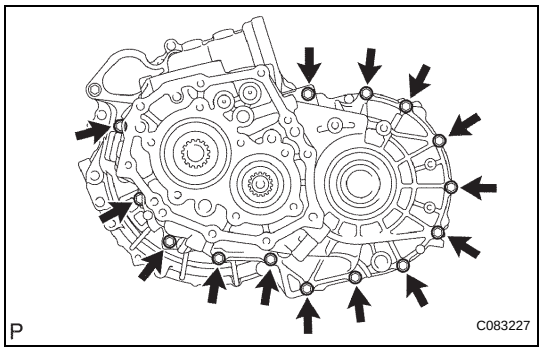


(n) Remove the output shaft assembly from the front manual transaxle case.

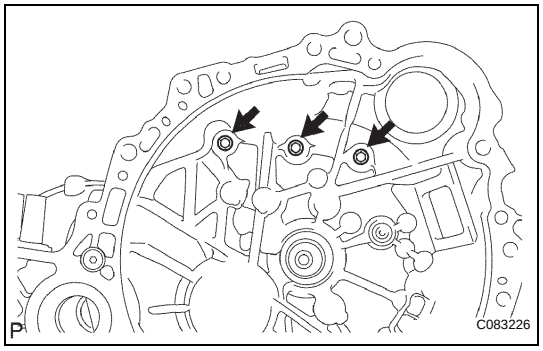


11. ADJUST TAPERED ROLLER BEARING PRELOAD

(a) Install the differential case assembly to the manual transaxle case.

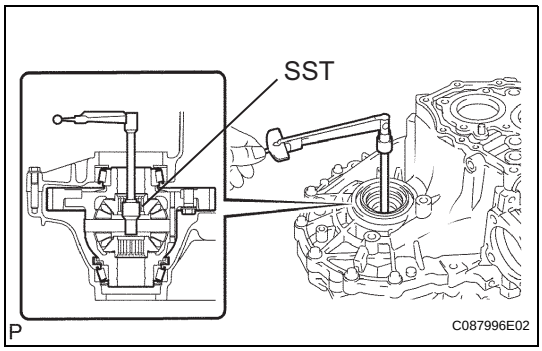


(b) Install the 14 bolts and manual transmission case to the manual transaxle case.
Torque: 29 N*m (296 kgf*cm, 21 ft.*lbf)



(c) Install the 3 bolts to the front manual transaxle case.
Torque: 29 N*m (296 kgf*cm, 21 ft.*lbf)

(d) Turn the differential case in both directions to make sure that it starts to turn smoothly.



(e) Using SST and a torque wrench, inspect preload.
SST 09564-32011
Preload: N*m (kgf*cm, in.*lbf)

Bearing	Preload
New	0.8 to 1.6 (8.16 to 16.32, 7.1 to 14.2)
Used	0.5 to 1.0 (5.10 to 10.2, 4.4 to 8.9)

If preload is out of specification, select a proper front differential case rear shim and adjust it.
HINT:
The preload of all the front differential case rear shims varies in torque from about 0.04 to 0.06 N*m (0.408 to 0.612 kgf*cm, 0.35 to 0.53 in.*lbf).
Shim

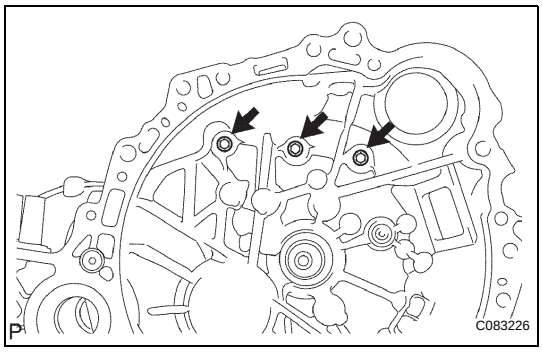
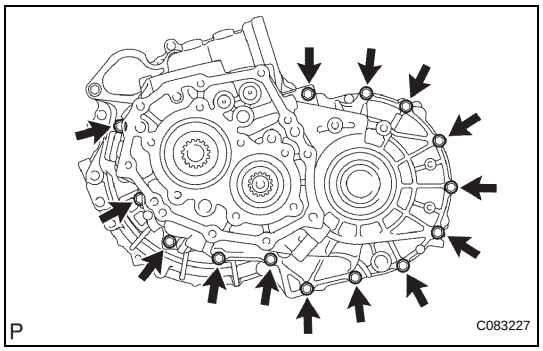
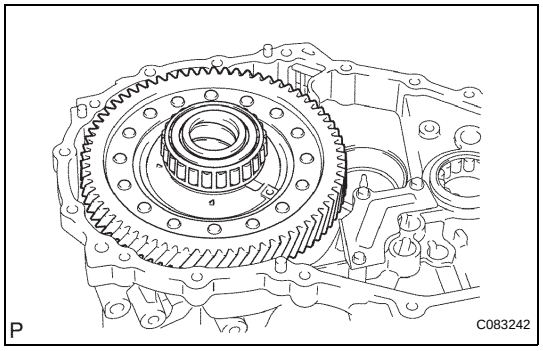
90564-56066	2.55 (0.1004)	B
90564-56067	2.60 (0.1024)	C
90564-56068	2.65 (0.1043)	D
90564-56069	2.70 (0.1063)	E
90564-56070	2.75 (0.1083)	F
90564-56071	2.80 (0.1102)	G
90564-56072	2.85 (0.1122)	H



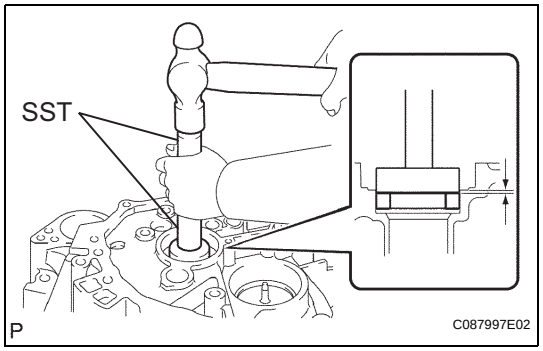
(f) Remove the 3 bolts.



(g) Remove the 14 bolts and manual transmission case from the manual transaxle case.



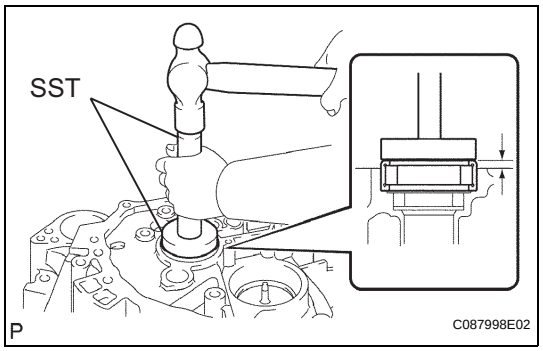
(h) Remove the differential case assembly from the manual transaxle case.



12. INSTALL FRONT TRANSAXLE CASE OIL SEAL

(a) Using SST and a hammer, install a new front transaxle case oil seal to the manual transaxle case.
SST 09950-60010 (09951-00420), 09950-70010 (09951-07150)

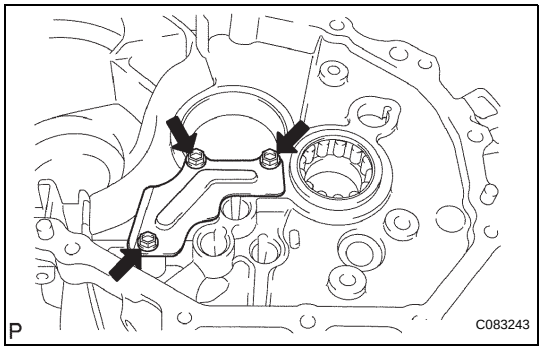
(b) Coat the lip of the front transaxle case oil seal with MP grease.
Clearance:
1.0 to 2.0 mm (0.0394 to 0.0787 in.)



13. INSTALL INPUT SHAFT FRONT BEARING

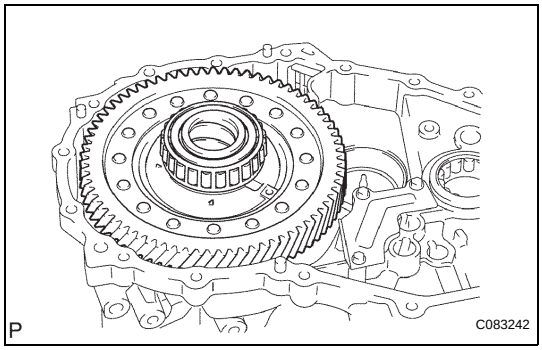
(a) Coat the input shaft front bearing with gear oil.

(b) Using SST and a hammer, install the oil seal to the manual transaxle case.
SST 09950-60010 (09951-00570), 09950-70010 (09951-07150)
Clearance:
4.28 to 4.60 mm (0.1685 to 0.1811 in.)



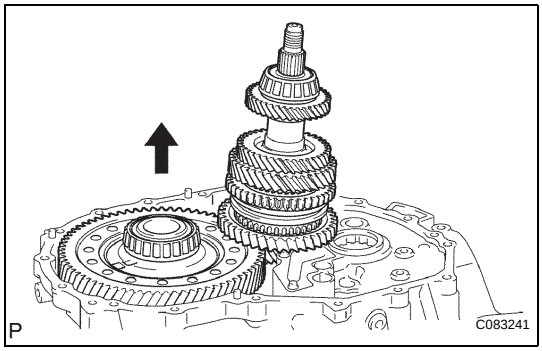
14. INSTALL MANUAL TRANSAXLE CASE RECEIVER

(a) Install the manual transaxle case receiver to the manual transaxle case with the 3 bolts.
Torque: 7.0 N*m (71 kgf*cm, 62 in.*lbf)



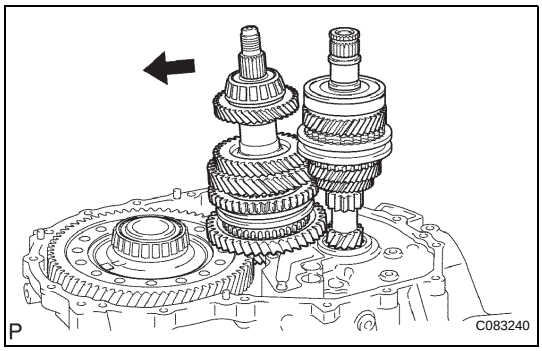
15. INSTALL DIFFERENTIAL CASE ASSEMBLY

(a) Coat the differential case tapered roller bearing with gear oil, and install the differential case assembly to the manual transaxle case.



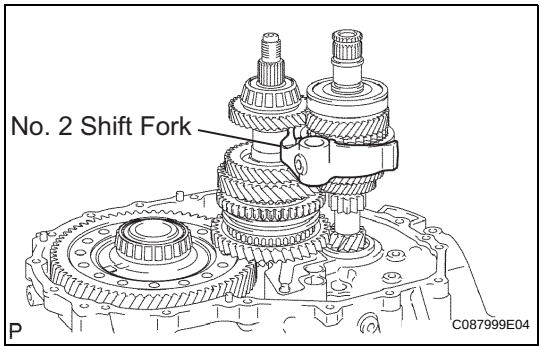
16. INSTALL OUTPUT SHAFT ASSEMBLY

(a) Apply gear oil to each sliding part of the output shaft assembly.
(b) Lift the differential case assembly with the output shaft assembly leaned, and install it to the manual transaxle case.



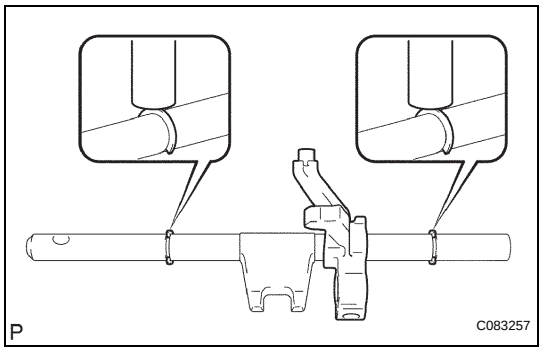
17. INSTALL INPUT SHAFT ASSEMBLY

(a) Apply gear oil to each sliding part of the input shaft assembly.
(b) Install the input shaft assembly to the manual transaxle case while tilting the output shaft assembly.



18. INSTALL NO. 2 GEAR SHIFT FORK

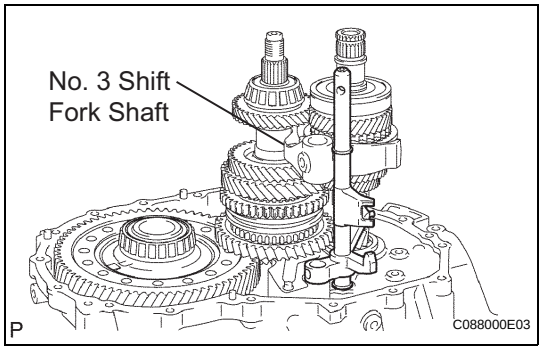
(a) Coat the No. 2 gear shift fork with gear oil, and install it to the input shaft assembly.



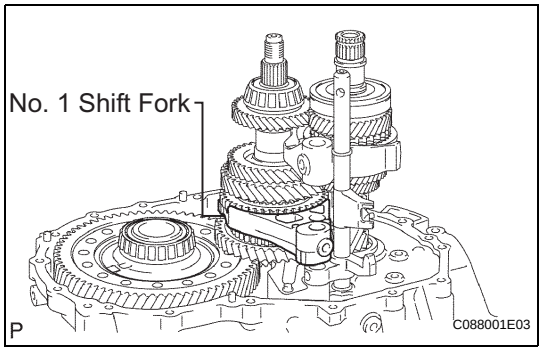
19. INSTALL NO. 3 GEAR SHIFT FORK

(a) Install the No. 3 gear shift fork to the No. 3 gear shift fork shaft.

(b) Using a brass bar and hammer, install the 2 shift fork shaft snap rings to the gear shift fork shaft.

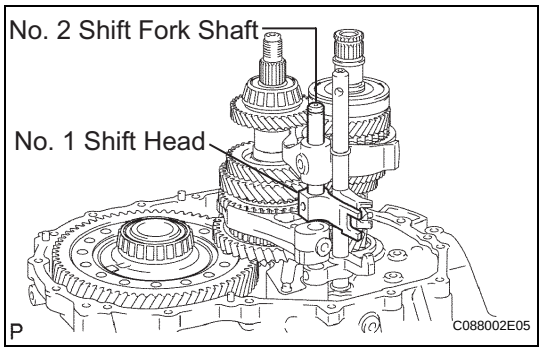


(c) Apply gear oil to each sliding part of the No. 3 gear shift fork shaft, and install it to the manual transaxle case.



20. INSTALL NO. 1 GEAR SHIFT FORK

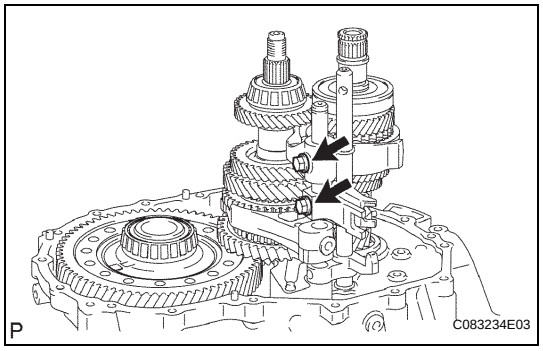
(a) Apply gear oil to each sliding part of the No. 1 gear shift fork, and install it to the output shaft assembly.



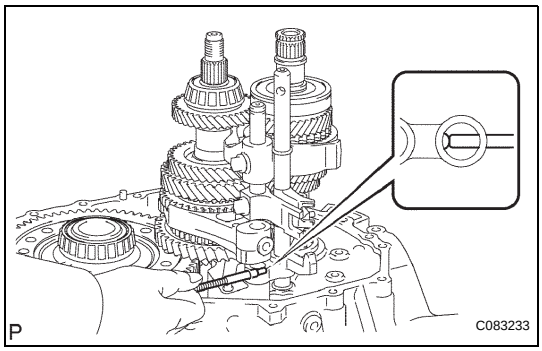
21. INSTALL NO. 2 GEAR SHIFT FORK SHAFT

(a) Install the No. 1 gear shift head to the No. 2 gear shift fork shaft.

(b) Apply gear oil to each sliding part of the No. 2 gear shift fork shaft, and install it to the manual transaxle case.

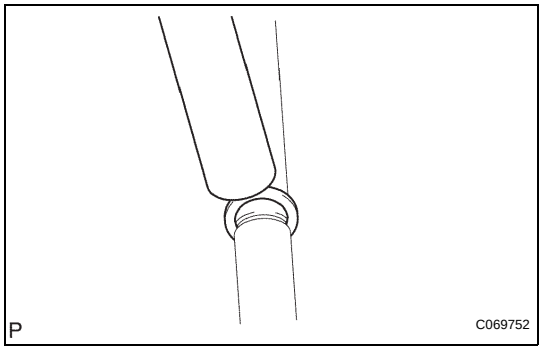


(c) Install the shift fork set bolt and shift head set bolt to the No. 1 gear shift head.
Torque: 24 N*m (245 kgf*cm, 18 ft.*lbf)



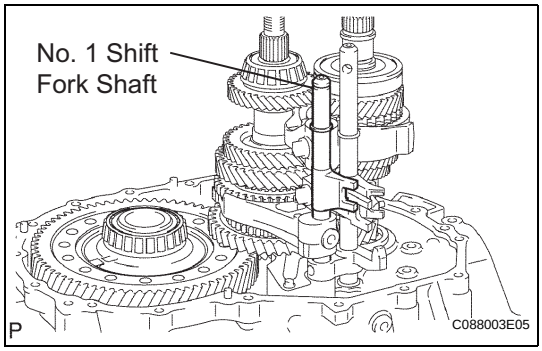
22. INSTALL REVERSE SHIFT FORK ROLLER

(a) Using a magnetic finger, install the reverse shift fork roller to the reverse shift fork.

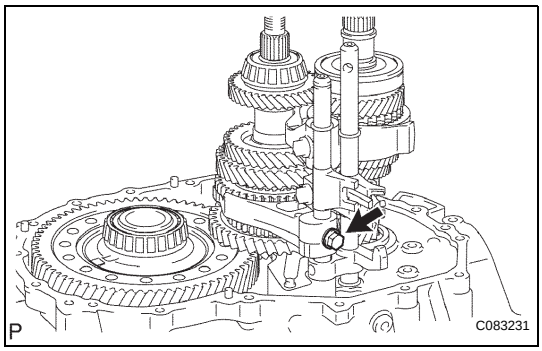


23. INSTALL NO. 1 GEAR SHIFT FORK SHAFT

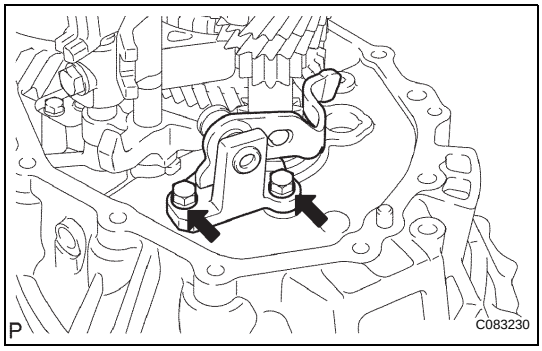
(a) Using a brass bar and hammer, install the shift fork shaft snap ring to the No. 1 shift fork shaft.



(b) Install the No. 1 gear shift fork shaft to the manual transaxle case.

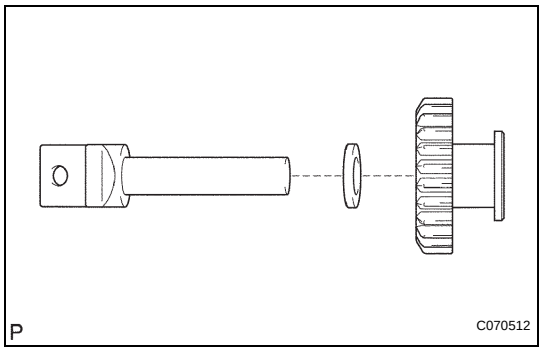


(c) Install the shift fork set bolt to the No. 1 gear shift fork.
Torque: 24 N*m (245 kgf*cm, 18 ft.*lbf)



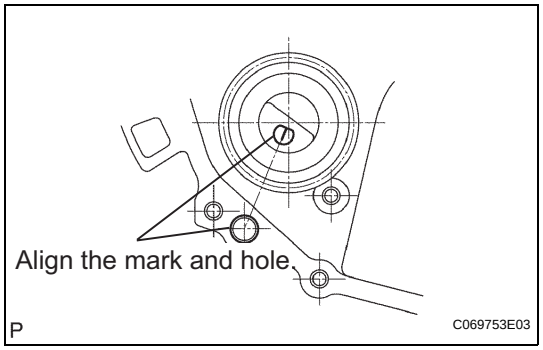
24. INSTALL REVERSE SHIFT ARM BRACKET ASSEMBLY

(a) Install the reverse shift arm bracket assembly to the manual transaxle case with the 2 bolts.
Torque: 17 N*m (173 kgf*cm, 13 ft.*lbf)

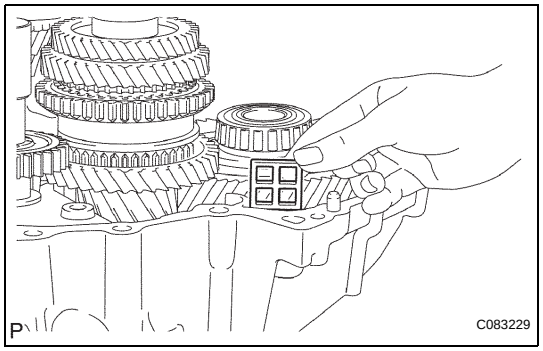


25. INSTALL REVERSE IDLER GEAR SUB-ASSEMBLY

(a) Coat the reverse idler gear and reverse idler thrust washer with MP grease, and install them to the reverse idler gear shaft.

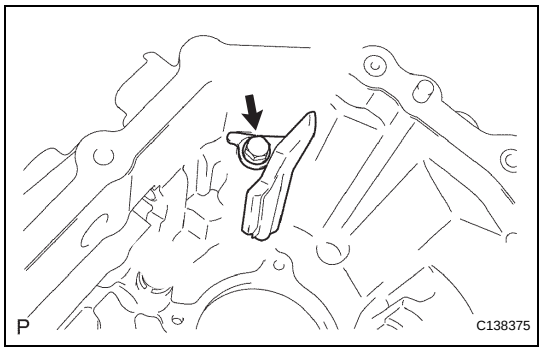


(b) Install the reverse idler gear to the manual transaxle case.
HINT:
Align the mark of the reverse idler gear shaft with the hole of the bolt.



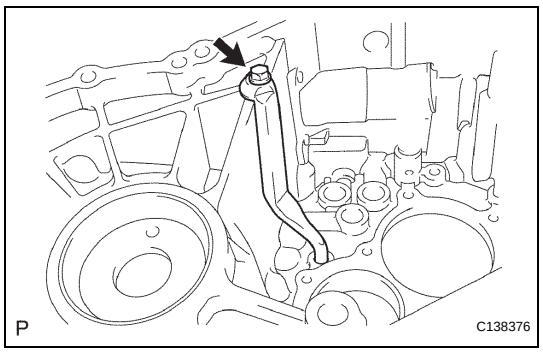
26. INSTALL TRANSMISSION MAGNET

(a) Clean the transmission magnet and install it to the manual transaxle case.



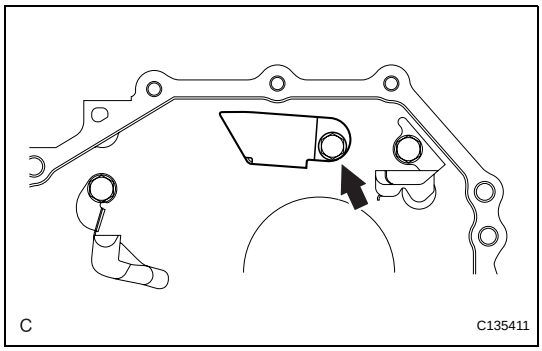
27. INSTALL NO. 1 OIL RECEIVER PIPE

(a) Install the No. 1 oil receiver pipe to the manual transmission case with the bolt.
Torque: 17 N*m (173 kgf*cm, 13 ft.*lbf)
NOTICE:
Do not damage the pipe.



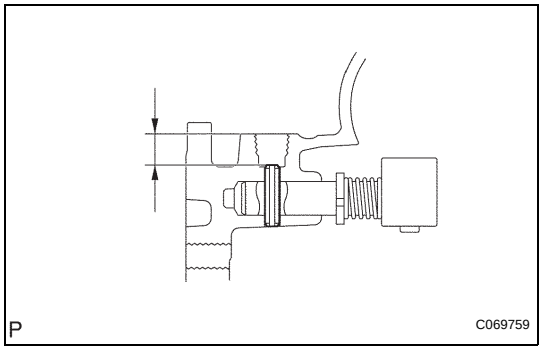
28. INSTALL NO. 2 OIL RECEIVER PIPE

(a) Install the No. 2 oil receiver pipe to the manual transmission case with the bolt.
Torque: 17 N*m (173 kgf*cm, 13 ft.*lbf)
NOTICE:
Do not damage the pipe.

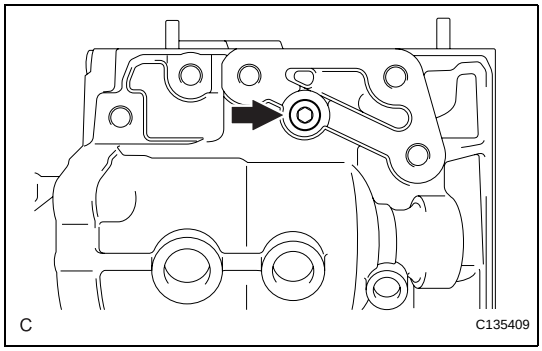


29. INSTALL REVERSE RESTRICT PIN ASSEMBLY

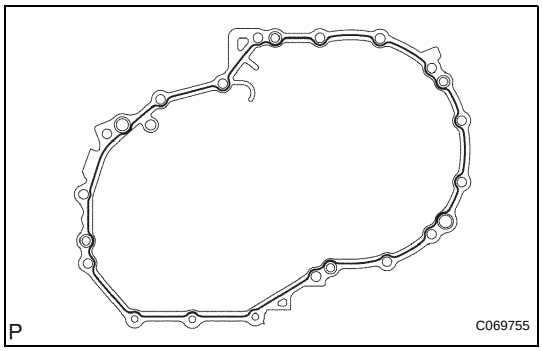
(a) Install the transmission oil baffle and reverse restrict pin with the bolt.
Torque: 17 N*m (173 kgf*cm, 13 ft.*lbf)



(b) Using a pin punch (ϕ 5 mm), install the slotted pin to the reverse restrict pin assembly.
Clearance:
12.5 to 13.5 mm (0.492 to 0.531 in.)

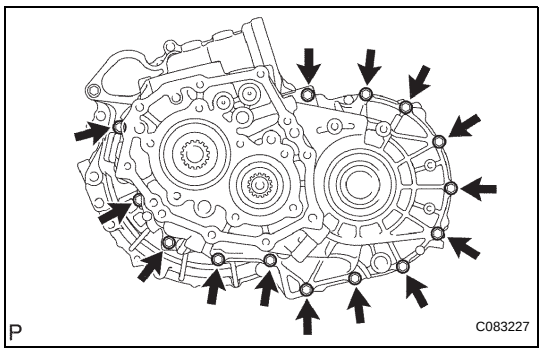


(c) Coat the reverse restrict pin plug with adhesive. Using a hexagon wrench (6 mm), install the manual transmission case.
Torque: 13 N*m (133 kgf*cm, 9.6 ft.*lbf)
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent

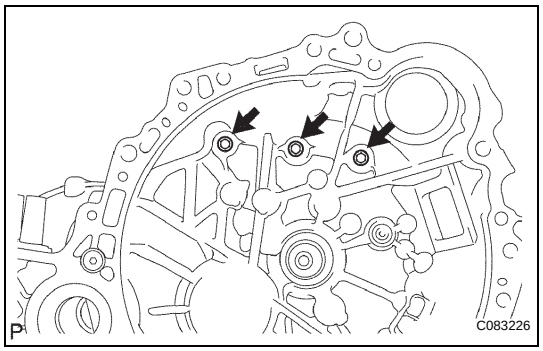


30. INSTALL MANUAL TRANSMISSION CASE

(a) Apply a bead of FIPG to the manual transmission case as shown in the illustration.
HINT:
Install the manual transmission case within 10 minutes after applying FIPG.



(b) Install the manual transmission case to the manual transaxle case with the 14 bolts.
Torque: 29 N*m (296 kgf*cm, 21 ft.*lbf)

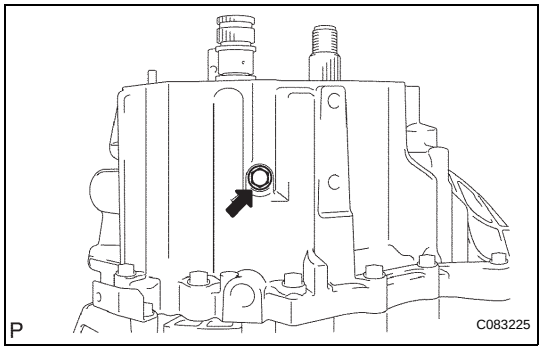


(c) Coat the 3 bolts with adhesive.
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent

(d) Install the 3 bolts to the manual transaxle case.
Torque: 29 N*m (296 kgf*cm, 21 ft.*lbf)

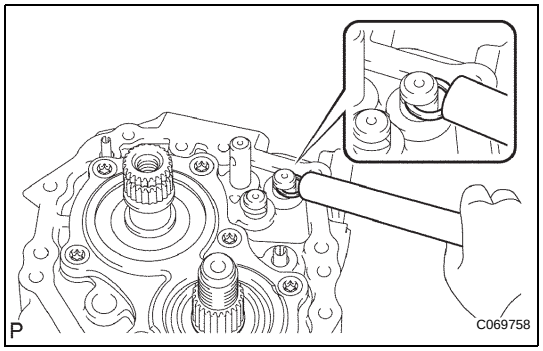
31. INSTALL NO. 1 CLUTCH TUBE BRACKET

(a) Install the clutch tube bracket with the bolt.
Torque: 17 N*m (173 kgf*cm, 13 ft.*lbf)



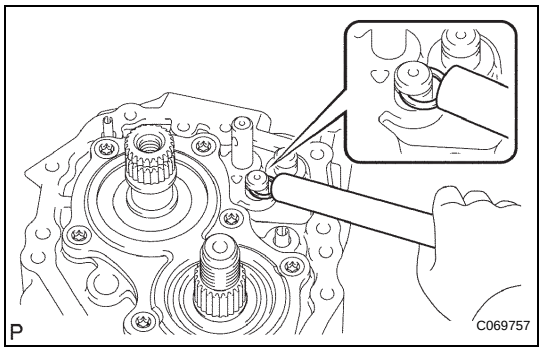
32. INSTALL REVERSE IDLER GEAR SHAFT BOLT

(a) Coat the bolt with adhesive. Install a new gasket to the manual transmission case with the bolt.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)
Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

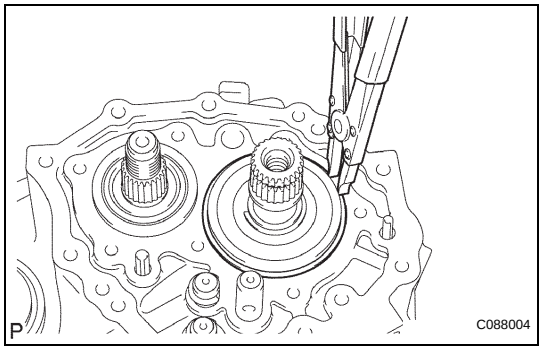


33. INSTALL SHIFT FORK SHAFT SHAFT SNAP RING

(a) Using a brass bar and hammer, install the shift fork shaft snap ring to the No. 1 gear shift fork shaft.

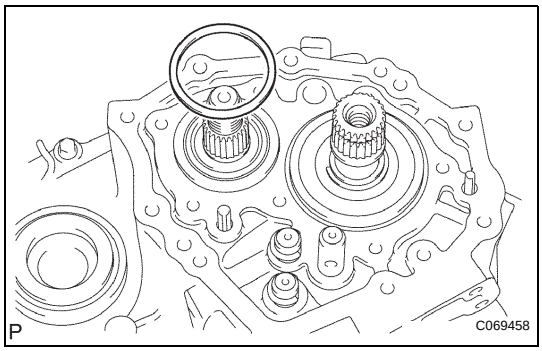


(b) Using a brass bar and hammer, install the shift fork shaft snap ring to the No. 2 gear shift fork shaft.



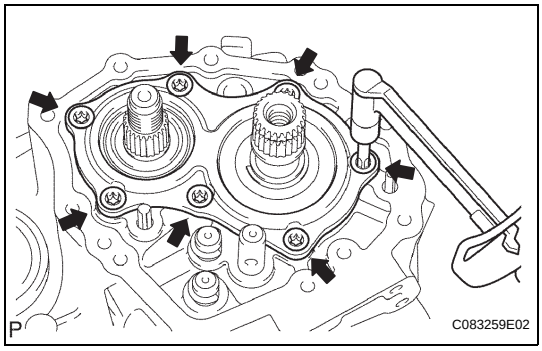
34. INSTALL INPUT SHAFT REAR BEARING SHAFT SNAP RING

(a) Using a snap ring expander, install the input shaft rear bearing shaft snap ring.



35. INSTALL OUTPUT SHAFT REAR BEARING SHIM

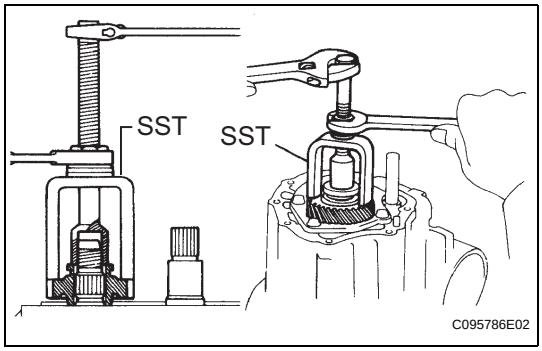
(a) Install the output shaft rear bearing shim to the output shaft.



36. INSTALL REAR BEARING RETAINER

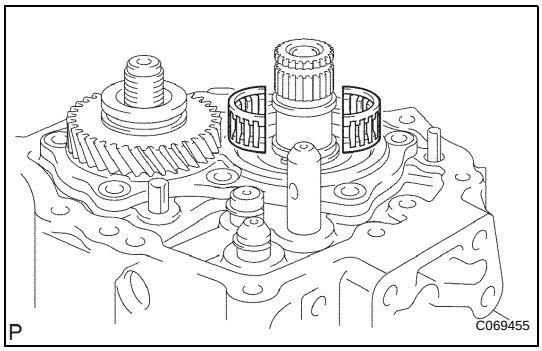
(a) Coat the rear bearing retainer with sealant and install it with a "TORX" wrench (T45).

(b) Install a new output rear set nut to the output shaft.
Torque: 43 N*m (438 kgf*cm, 32 ft.*lbf)



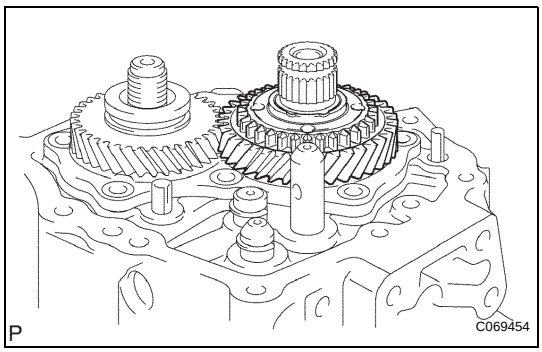
37. INSTALL 5TH DRIVEN GEAR

(a) Using SST, install the 5th driven gear to the output shaft.
SST 09309-12020



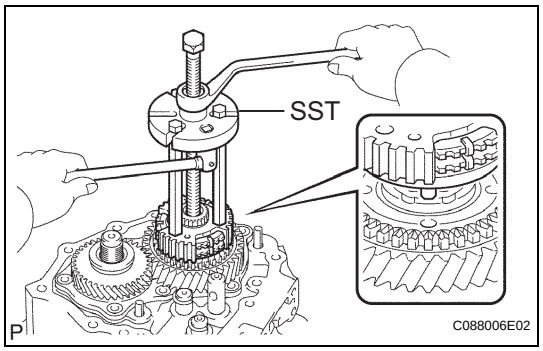
38. INSTALL 5TH GEAR NEEDLE ROLLER BEARING

(a) Coat the 5th gear needle roller bearing with gear oil and install it to the input shaft.



39. INSTALL 5TH GEAR

(a) Coat the 5th gear with gear oil and install it to the input shaft.



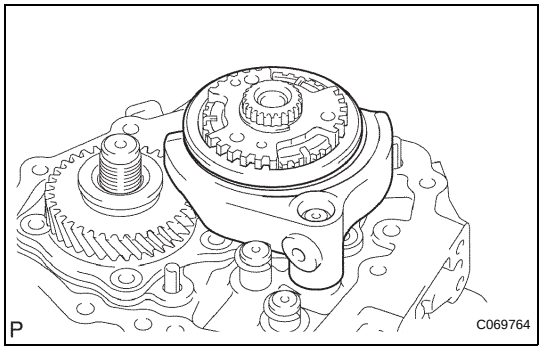
40. INSTALL NO. 3 TRANSMISSION CLUTCH HUB

(a) Using SST, install the No. 3 transmission clutch hub to the input shaft.

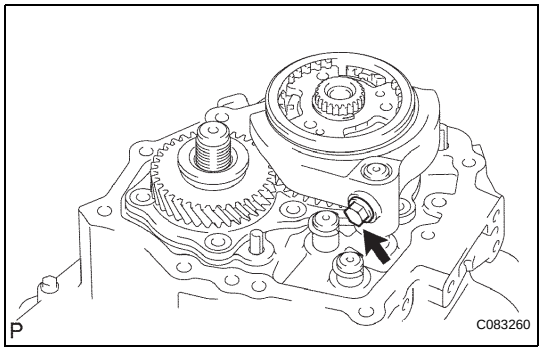
SST 09950-30012 (09951-03010, 09953-03010, 09954-03010)

NOTICE:

Align the projection of the synchronizer ring with the hole of the 5th gear.



(b) Install the No. 3 transmission hub sleeve and No. 3 gear shift fork to the No. 3 transmission clutch hub.

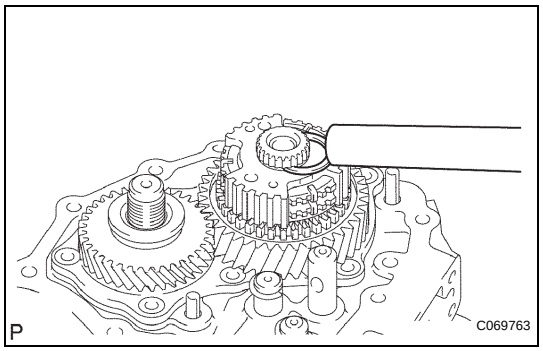


(c) Coat the shift fork set bolt with adhesive and install it to the No. 3 gear shift fork.

Torque: 24 N*m (245 kgf*cm, 18 ft.*lbf)

Adhesive:

Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent



(d) Select a snap ring that will allow minimum axial play. Using a brass bar and a hammer, install the shaft snap ring.

Clearance:

0.1 mm (0.004 in.) or less

Snap ring

Part No.	Thickness: mm (in.)	Mark
90520-27061	1.75 to 1.80 (0.0689 to 0.0709)	a

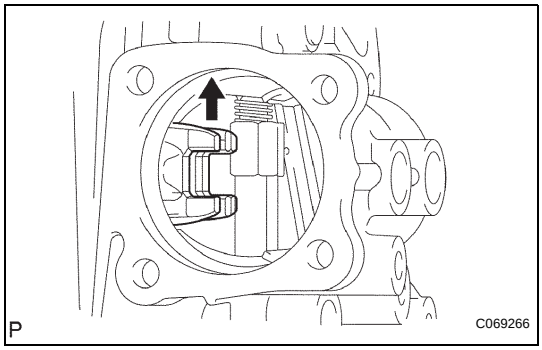
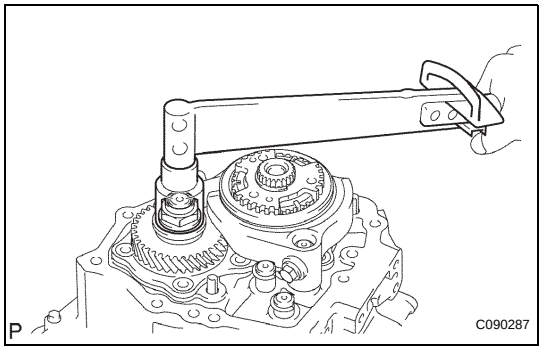
90520-27066	2.00 to 2.05 (0.0787 to 0.0807)	f
90520-27067	2.05 to 2.10 (0.0807 to 0.0827)	g
90520-27068	2.10 to 2.15 (0.0827 to 0.0846)	h

Part No.	Thickness: mm (in.)	Mark
90520-27069	2.15 to 2.20 (0.0846 to 0.0866)	j

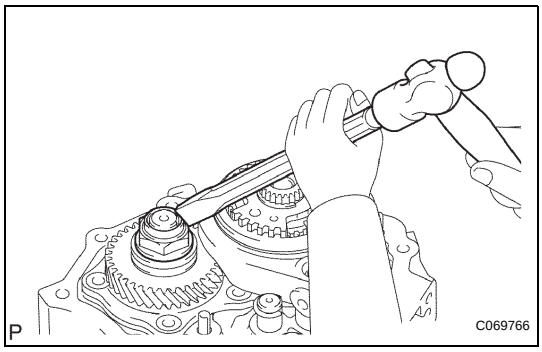


41. INSTALL MANUAL TRANSMISSION OUTPUT SHAFT REAR SET NUT

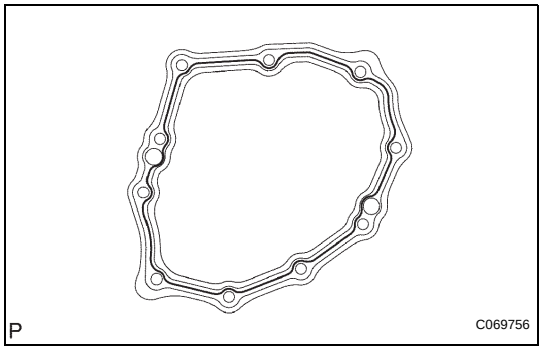
(a) Engage the 1st and 2nd gears simultaneously.



(b) Install a new manual transmission output shaft rear set nut.
Torque: 123 N*m (1,254 kgf*cm, 90 ft.*lbf)

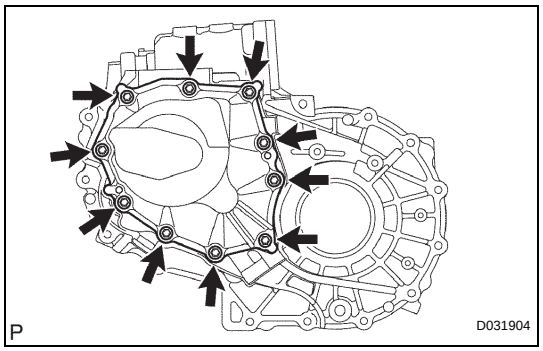


(c) Using a chisel and a hammer, stake the manual transmission output shaft rear set nut.
(d) Disengage the gears.

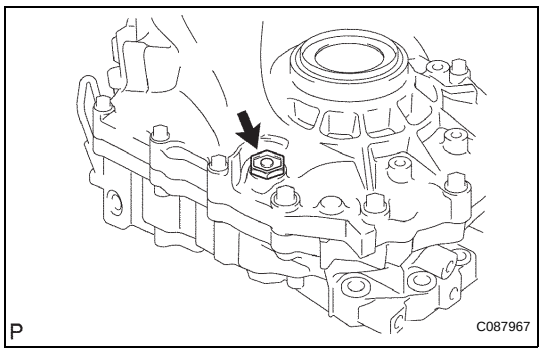


42. INSTALL MANUAL TRANSMISSION CASE COVER SUB-ASSEMBLY

(a) Apply FIPG to the transaxle case cover sub-assembly as shown in the installation.
FIPG:
Toyota Genuine Seal Packing 1281, Three Bond 1281 or equivalent
NOTICE:
Install the part within 10 minutes after applying the packing material (FIPG).

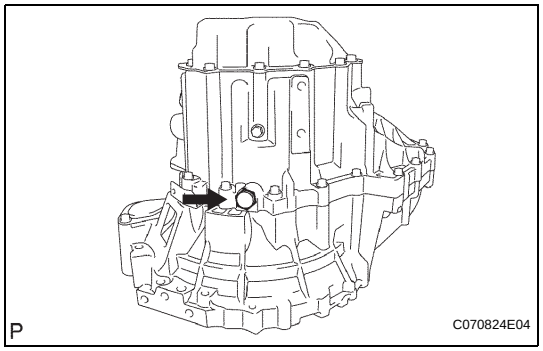


(b) Install the transmission case cover sub-assembly to the manual transaxle case with the 10 bolts.



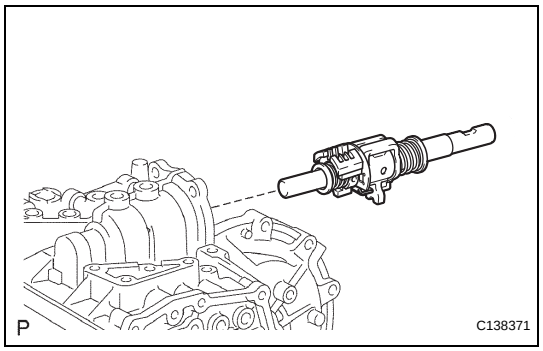
43. INSTALL DRAIN PLUG SUB-ASSEMBLY

(a) Install the drain plug sub-assembly to the manual transmission case with a new gasket.
Torque: 49 N*m (500 kgf*cm, 36 ft.*lbf)



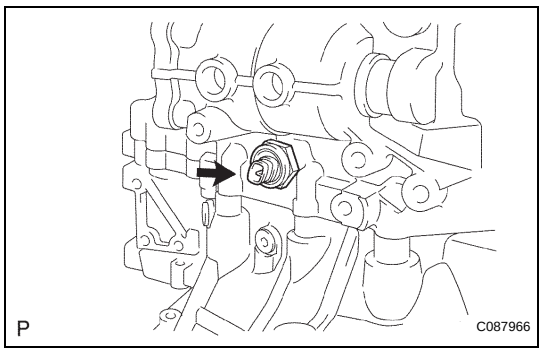
44. INSTALL MANUAL TRANSMISSION FILLER PLUG

(a) Install the manual transmission filler plug to the transaxle case with a new gasket.
Torque: 49 N*m (500 kgf*cm, 36 ft.*lbf)



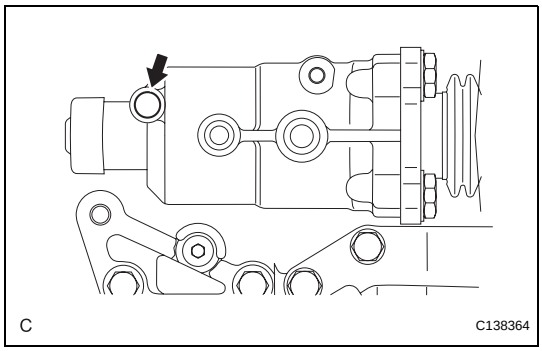
45. INSTALL SHIFT AND SELECT LEVER SHAFT ASSEMBLY

(a) Coat the shift and select lever shaft assembly with gear oil, and install it to the manual transmission case.



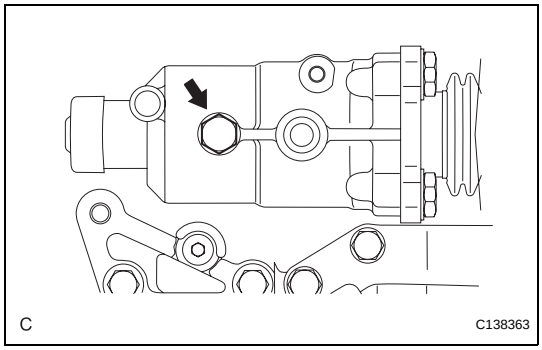
46. INSTALL BACK-UP LIGHT SWITCH ASSEMBLY

(a) Install the back-up light switch assembly to the manual transmission case with a new gasket.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)



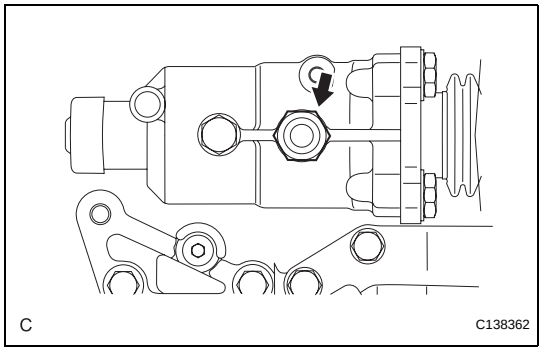
47. INSTALL MANUAL TRANSMISSION BREATHER PLUG

(a) Install the manual transmission breather plug to the manual transmission case.



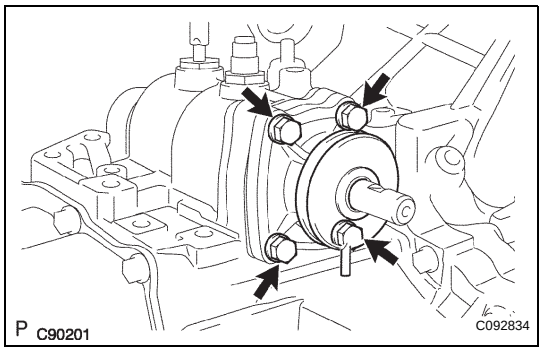
48. INSTALL SHIFT GATE PIN

(a) Install the shift gate pin to the manual transmission case.
Torque: 29 N*m (296 kgf*cm, 21 ft.*lbf)



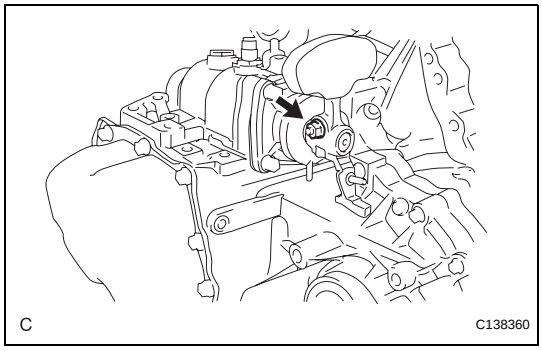
49. INSTALL NO. 1 LOCK BALL ASSEMBLY

(a) Install the lock ball assembly No. 1 to the manual transmission case.
Torque: 29 N*m (296 kgf*cm, 21 ft.*lbf)



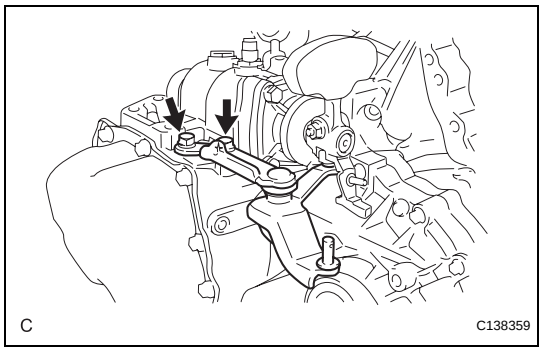
50. INSTALL CONTROL SHAFT COVER

(a) Coat the 4 bolts with adhesive. Install a new gasket and the control shaft cover with the bolts.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)
Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent



51. INSTALL CONTROL SHIFT LEVER

(a) Install the control shift lever with the shift outer lever lock pin to the shift and select lever shaft.
(b) Install the spring washer with the nut.
Torque: 6.4 N*m (65 kgf*cm, 57 in.*lbf)



52. INSTALL SELECTING BELLCRANK ASSEMBLY

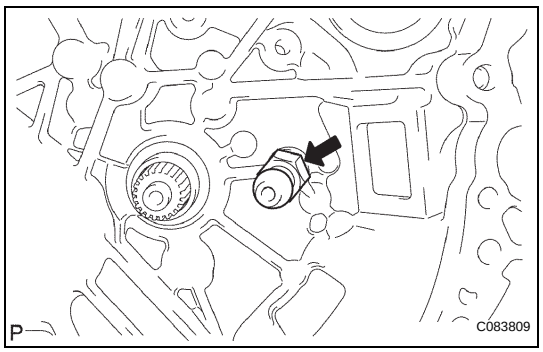
(a) Coat the 2 bolts with adhesive. Install the selecting bellcrank assembly to the manual transmission case with the bolts.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)
Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

53. INSTALL SPEEDOMETER DRIVEN HOLE COVER SUB-ASSEMBLY

(a) Install a new O-ring and the speedometer driven hole cover sub-assembly to the transmission case with the bolt.
Torque: 5.5 N*m (56 kgf*cm, 48 in.*lbf)

54. INSTALL CLUTCH RELEASE FORK BOOT

(a) Install the clutch release fork boot to the manual transaxle case.



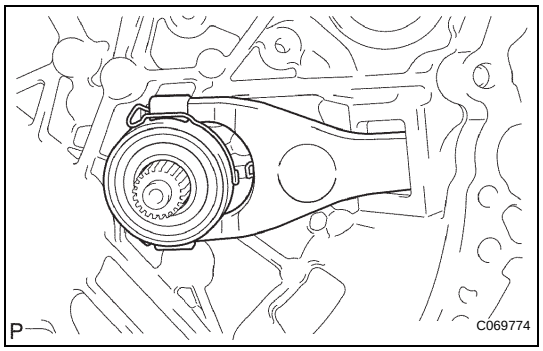
55. INSTALL RELEASE FORK SUPPORT

(a) Using a deep socket wrench, install the release fork support to the manual transaxle case.
Torque: 47 N*m (480 kgf*cm, 36 ft.*lbf)

56. INSTALL CLUTCH RELEASE BEARING ASSEMBLY

(a) Coat the clutch release bearing assembly with release hub grease, and install it to the clutch release fork sub-assembly.
Sealant:
Part No. 08887-01806, Release Hub Grease or equivalent

(b) Apply clutch spline grease to the input shaft spline.

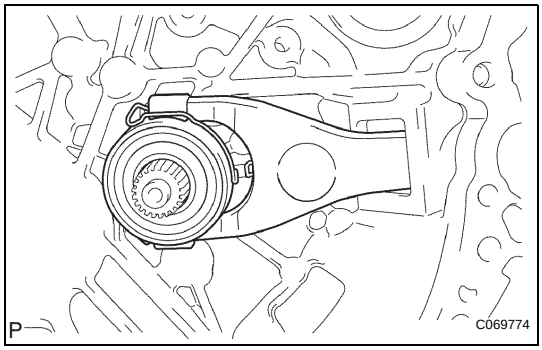


57. INSTALL CLUTCH RELEASE FORK SUB-ASSEMBLY

(a) Install the clutch release fork sub-assembly to the input shaft.

MX

DISASSEMBLY

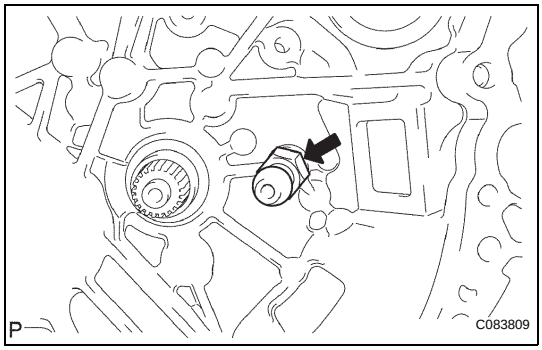


1. REMOVE CLUTCH RELEASE FORK SUB-ASSEMBLY

(a) Remove the clutch release fork sub-assembly together with the clutch release bearing assembly from the manual transaxle case.

2. REMOVE CLUTCH RELEASE BEARING ASSEMBLY

(a) Remove the clutch release bearing assembly and release bearing hub clip from the clutch release fork sub-assembly.



3. REMOVE RELEASE FORK SUPPORT

(a) Remove the release fork support from the manual transaxle case.

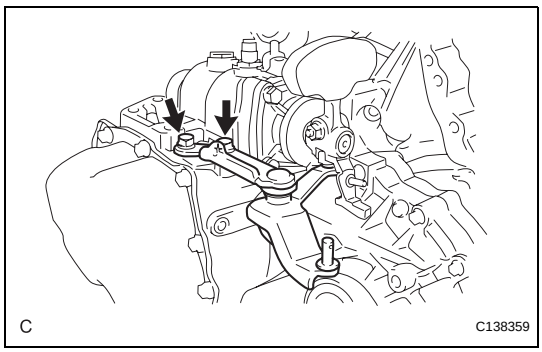
4. REMOVE CLUTCH RELEASE FORK BOOT

(a) Remove the clutch release fork boot from the manual transaxle case.

5. REMOVE SPEEDOMETER DRIVEN HOLE COVER SUB-ASSEMBLY

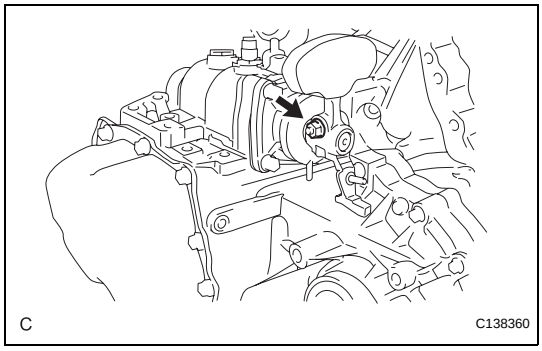
(a) Remove the bolt and speedometer driven hole cover sub-assembly.

(b) Remove the O-ring.



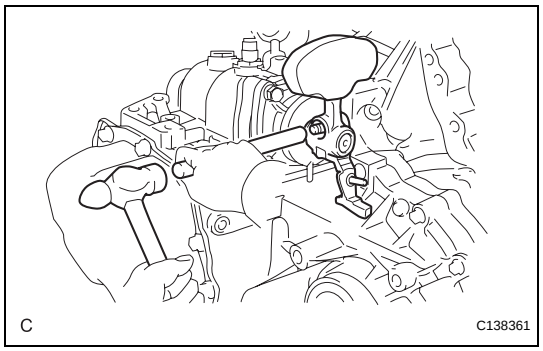
6. REMOVE SELECTING BELLCRANK ASSEMBLY

(a) Remove the 2 bolts and selecting bellcrank assembly from the manual transmission case.

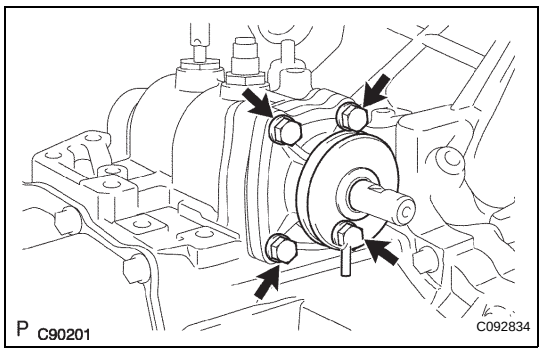


7. REMOVE CONTROL SHIFT LEVER

(a) Remove the nut and spring washer.

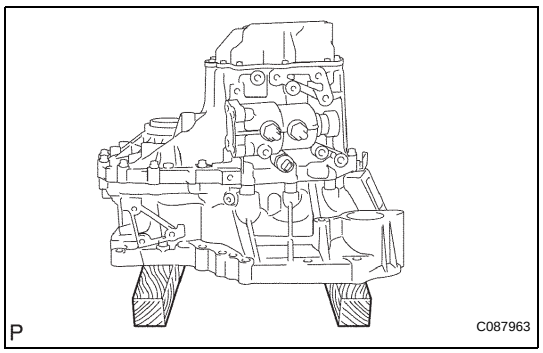


(b) Using a brass bar and hammer, remove the shift outer lever lock pin.
(c) Remove the control shift lever.



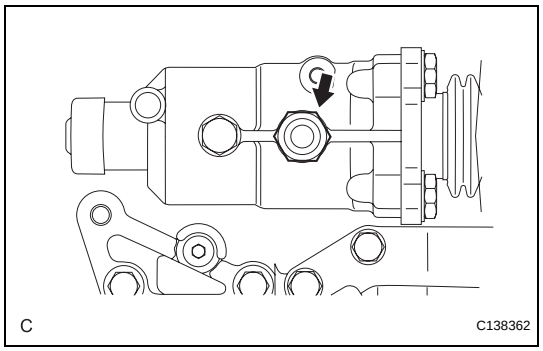
8. REMOVE CONTROL SHAFT COVER

(a) Remove the 4 bolts and control shaft cover from the manual transmission case.



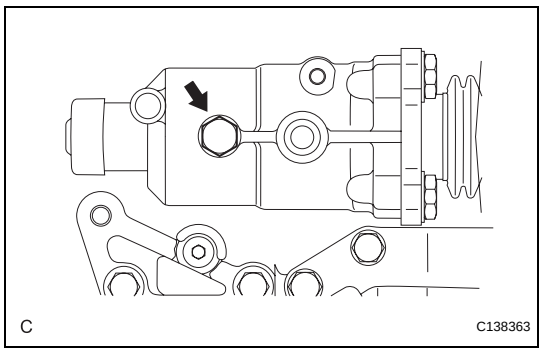
9. SECURE MANUAL TRANSAXLE ASSEMBLY

(a) Place the manual transaxle assembly on wooden blocks.



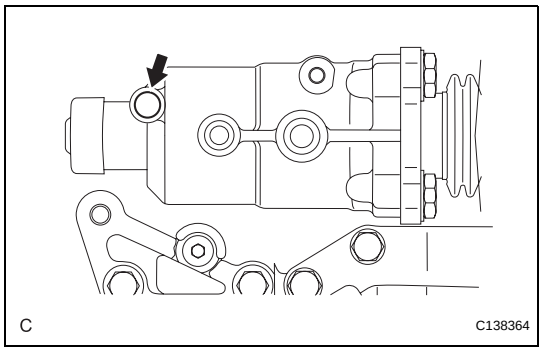
10. REMOVE NO. 1 LOCK BALL ASSEMBLY

(a) Remove the No. 1 lock ball assembly from the manual transmission case.



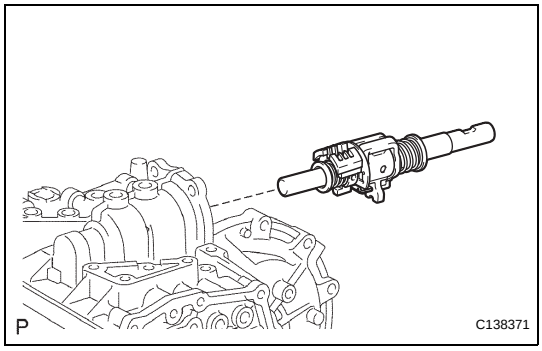
11. REMOVE SHIFT GATE PIN

(a) Remove the shift gate pin from the manual transmission case.



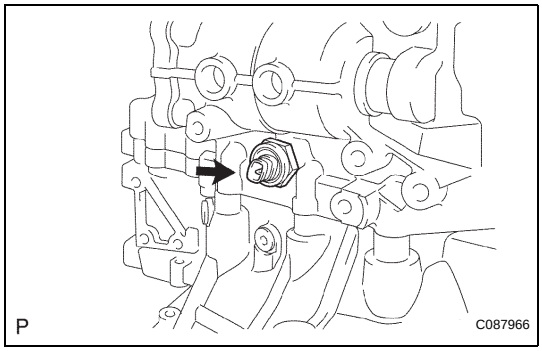
12. REMOVE MANUAL TRANSMISSION BREATHER PLUG

(a) Remove the manual transmission breather plug.



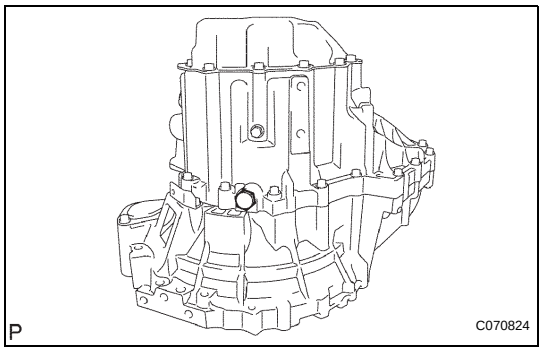
13. REMOVE SHIFT AND SELECT LEVER SHAFT ASSEMBLY

(a) Remove the shift and select lever shaft assembly from the manual transmission case.



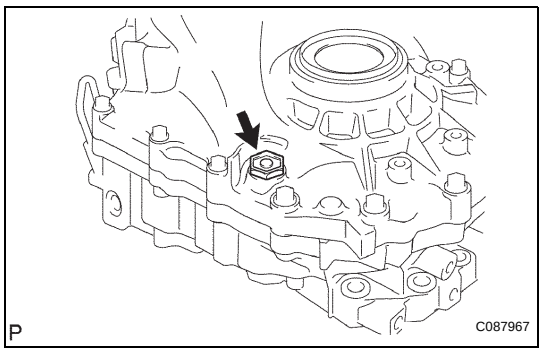
14. REMOVE BACK-UP LIGHT SWITCH ASSEMBLY

(a) Remove the back-up light switch assembly and gasket from the manual transmission case.



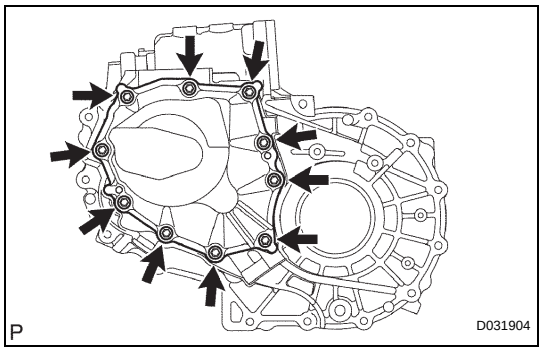
15. REMOVE MANUAL TRANSMISSION FILLER PLUG

(a) Remove the manual transmission filler plug and gasket from the manual transmission case.



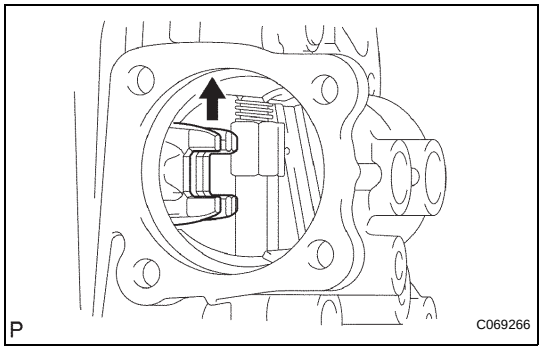
16. REMOVE DRAIN PLUG SUB-ASSEMBLY

(a) Remove the drain plug sub-assembly and gasket from the manual transmission case.



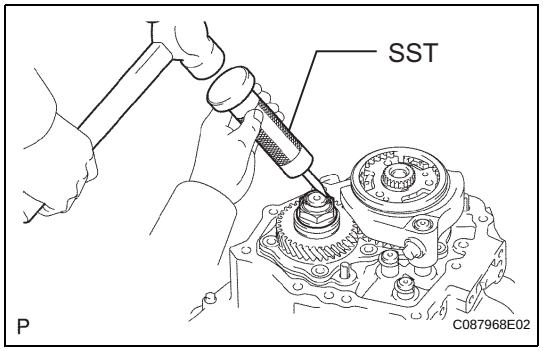
17. REMOVE MANUAL TRANSMISSION CASE COVER SUB-ASSEMBLY

(a) Remove the 10 bolts and manual transmission case cover from the manual transmission case.

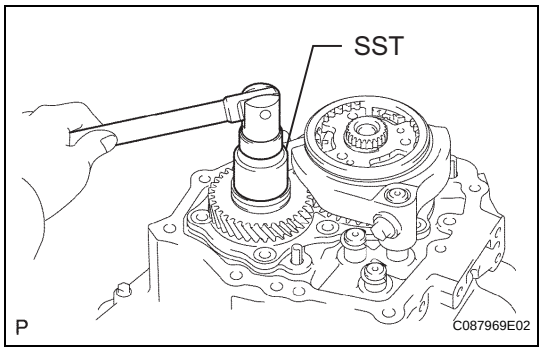


18. REMOVE MANUAL TRANSMISSION OUTPUT SHAFT REAR SET NUT

(a) Engage the 1st and 2nd gears simultaneously.

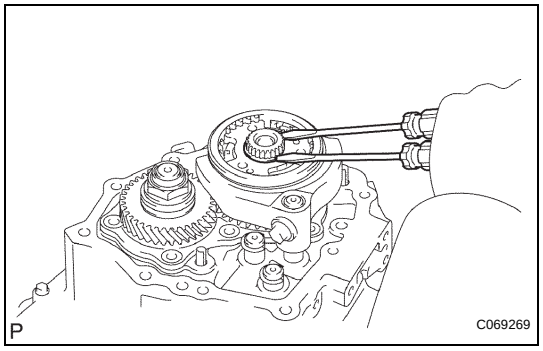


(b) Using SST and a hammer, unstake the manual transmission output shaft rear set nut.
SST 09930-00010



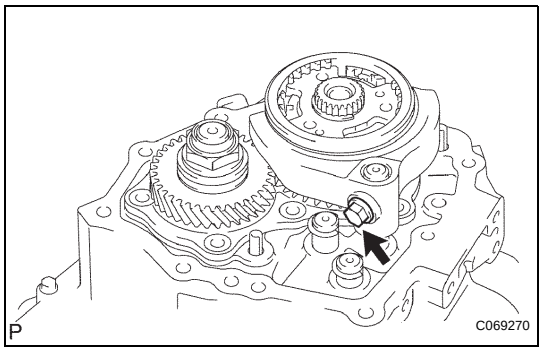
(c) Using SST, remove the manual transmission output shaft rear set nut from the output shaft.
SST 09229-55010

(d) Disengage the gears.

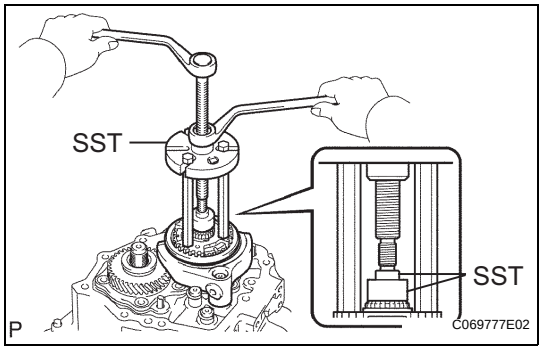


19. REMOVE NO. 3 TRANSMISSION CLUTCH HUB

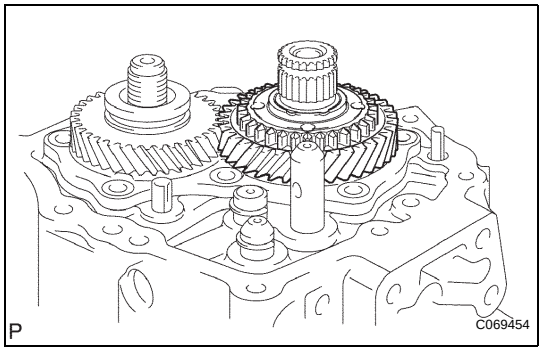
(a) Using 2 screwdrivers and a hammer, remove the transmission clutch hub No. 3 shaft snap ring from the input shaft.
HINT:
Use a shop rag or a piece of cloth to keep the snap ring from flying.



(b) Remove the shift fork set bolt from the No. 3 gear shift fork.

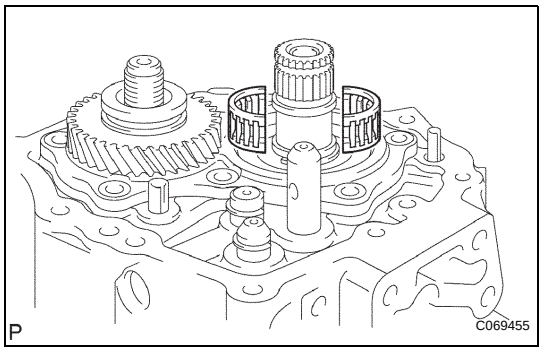


(c) Using SST, remove the No. 3 transmission clutch hub and No. 3 gear shift fork from the input shaft.
SST 09950-30012 (09951-03010, 09953-03010, 09954-03010), 09950-50013 (09957-04010), 09950-60010 (09951-00280)



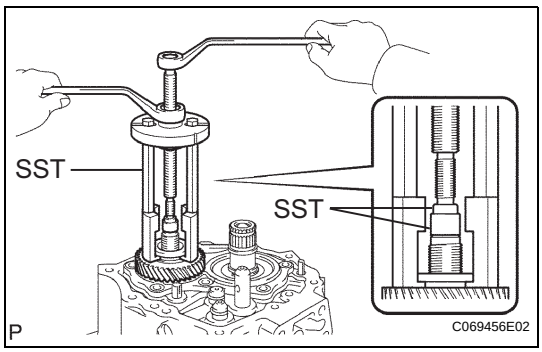
20. REMOVE 5TH GEAR

(a) Remove the 5th gear from the input shaft.



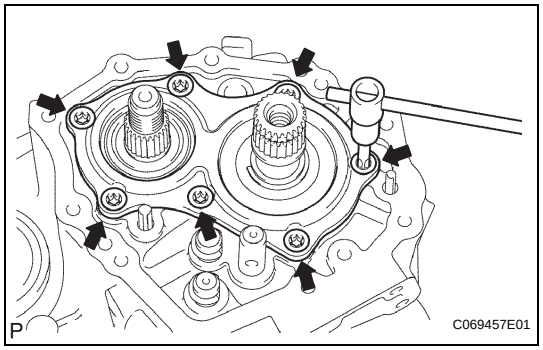
21. REMOVE 5TH GEAR NEEDLE ROLLER BEARING

(a) Remove the 5th gear needle roller bearing from the input shaft.



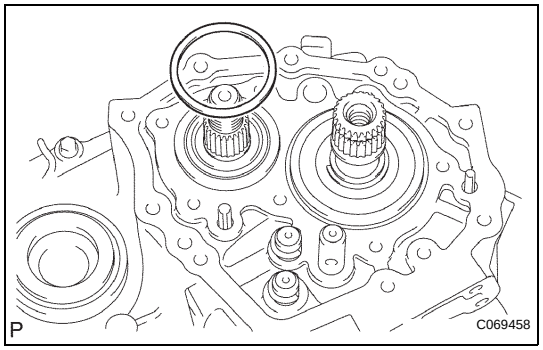
22. REMOVE 5TH DRIVEN GEAR

(a) Using SST, remove the 5th driven gear from the output shaft.
SST 09950-30012 (09951-03010, 09953-03010, 09954-03010, 09957-04010), 09950-60010 (09951-00180, 09955-03011), 09950-50013



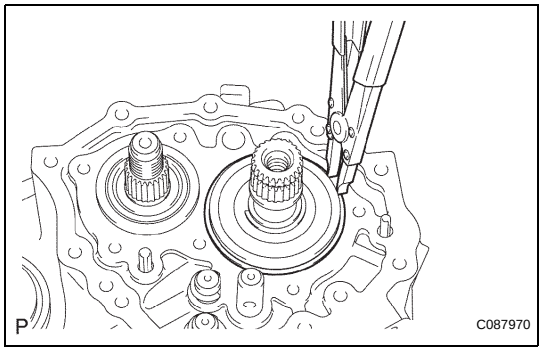
23. REMOVE REAR BEARING RETAINER

(a) Using a "TORX" socket wrench (T45), remove the 7 "TORX" screws and rear bearing retainer from the manual transmission case.



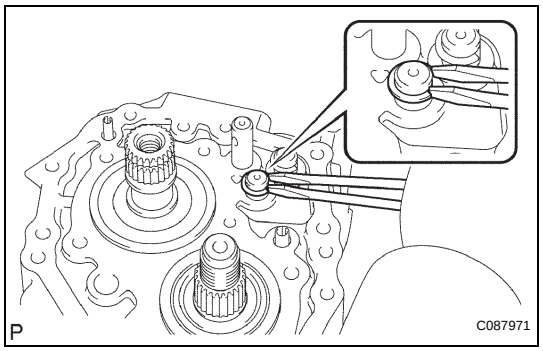
24. REMOVE OUTPUT SHAFT REAR BEARING SHIM

(a) Remove the output shaft rear bearing shim from the output shaft.



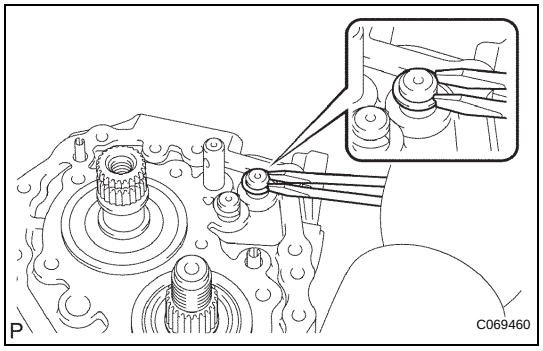
25. REMOVE INPUT SHAFT REAR BEARING SHAFT SNAP RING

(a) Using a snap ring expander, remove the input shaft rear bearing shaft snap ring from the input shaft.

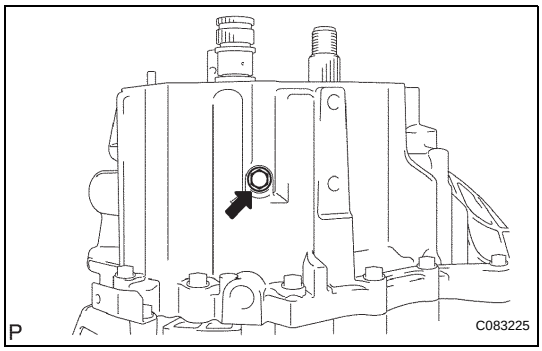


26. REMOVE SHIFT FORK SHAFT SHAFT SNAP RING

(a) Using 2 screwdrivers and a hammer, remove the shift fork shaft shaft snap ring from the No. 1 gear shift fork shaft.
HINT:
Use a shop rag or a piece of cloth to keep the snap ring from flying.



(b) Using 2 screwdrivers and a hammer, remove the shift fork shaft shaft snap ring from the No. 2 gear shift fork shaft.
HINT:
Use a shop rag or a piece of cloth to keep the snap ring from flying.

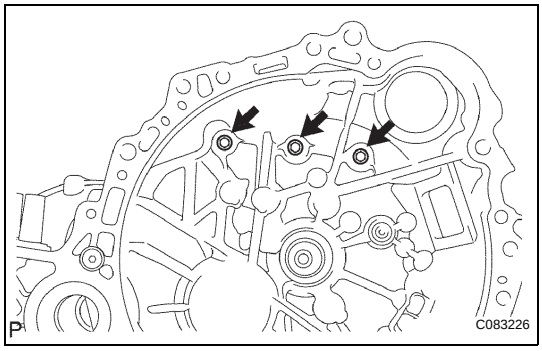


27. REMOVE REVERSE IDLER GEAR SHAFT BOLT

(a) Remove the reverse idler gear shaft bolt and gasket.

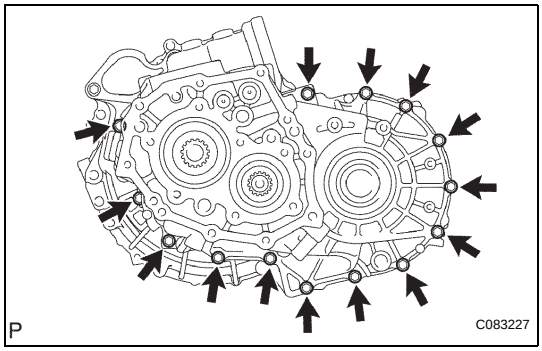
28. REMOVE NO. 1 CLUTCH TUBE BRACKET

(a) Remove the bolt and clutch tube bracket.



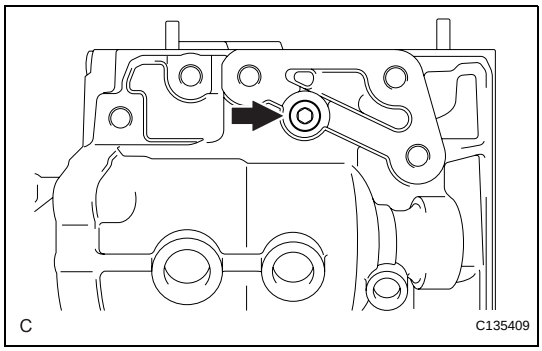
29. REMOVE MANUAL TRANSMISSION CASE

(a) Remove the 3 bolts from the manual transaxle case.



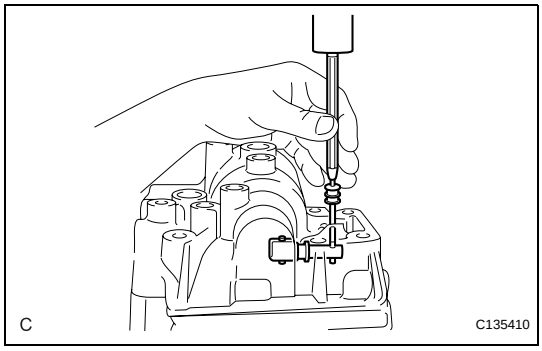
(b) Remove the 14 bolts from the manual transmission case.

(c) Tapping with a plastic hammer, remove the manual transmission case.

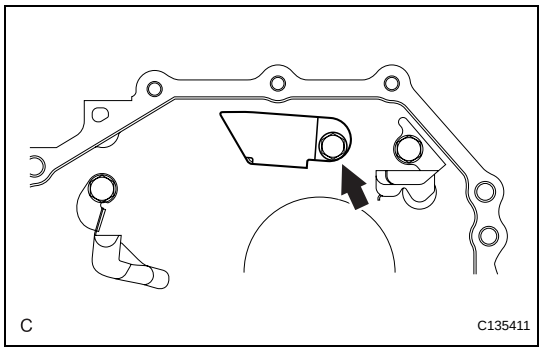


30. REMOVE REVERSE RESTRICT PIN ASSEMBLY

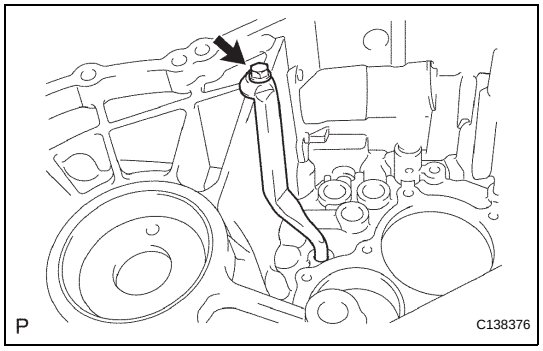
(a) Using a hexagon wrench (6 mm), remove the reverse restrict pin plug from the manual transmission case.



(b) Using a pin punch (ϕ 5 mm) and hammer, remove the slotted pin.

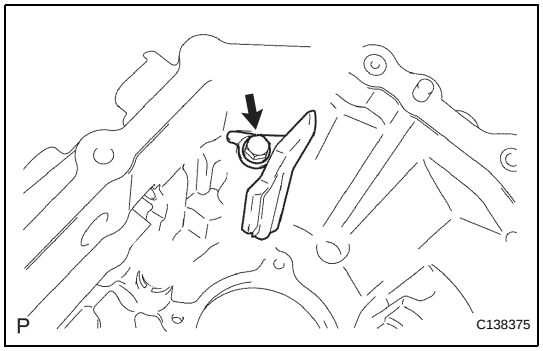


(c) Remove the bolt, transmission oil baffle and reverse restrict pin assembly.



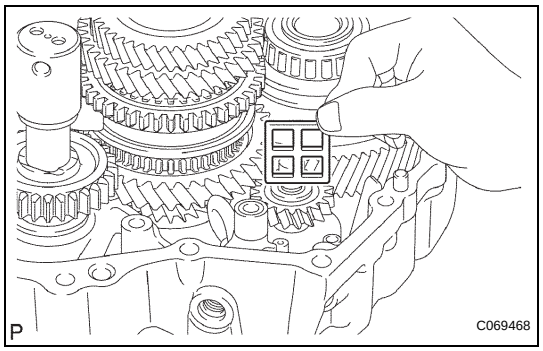
31. REMOVE NO. 2 OIL RECEIVER PIPE

(a) Remove the bolt and No. 2 oil receiver pipe from the manual transmission case.
NOTICE:
Do not damage the pipe.



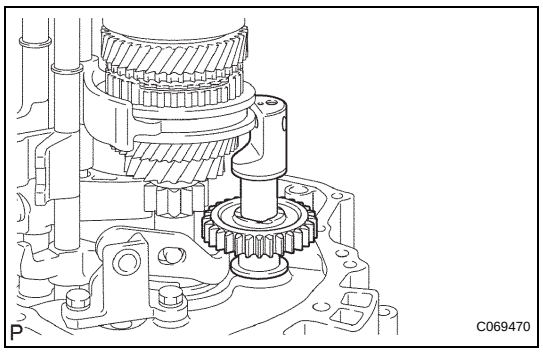
32. REMOVE NO. 1 OIL RECEIVER PIPE

(a) Remove the bolt and No. 1 oil receiver pipe from the manual transmission case.
NOTICE:
Do not damage the pipe.



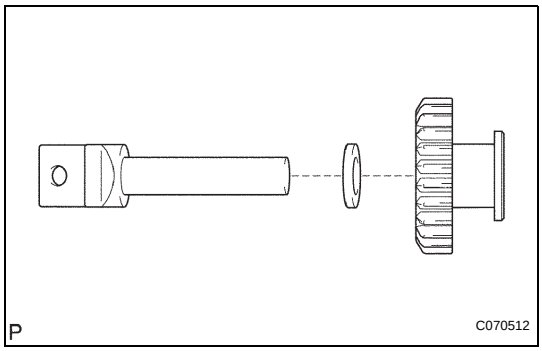
33. REMOVE TRANSMISSION MAGNET

(a) Remove the transmission magnet from the manual transaxle case.

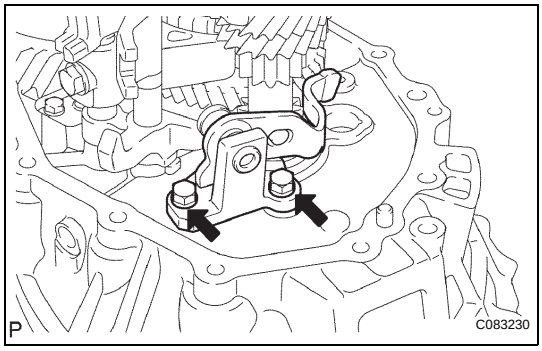


34. REMOVE REVERSE IDLER GEAR SUB-ASSEMBLY

(a) Remove the reverse idler gear sub-assembly from the manual transaxle case.

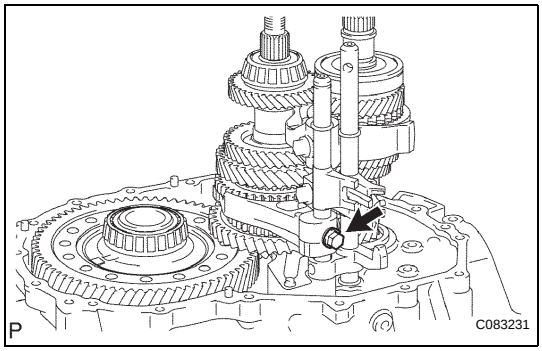


(b) Remove the reverse gear and reverse idler thrust washer from the reverse idler gear shaft.



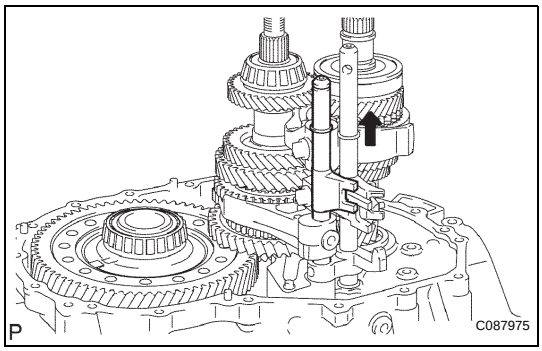
35. REMOVE REVERSE SHIFT ARM BRACKET ASSEMBLY

(a) Remove the 2 bolts and reverse shift arm bracket assembly from the manual transaxle case.

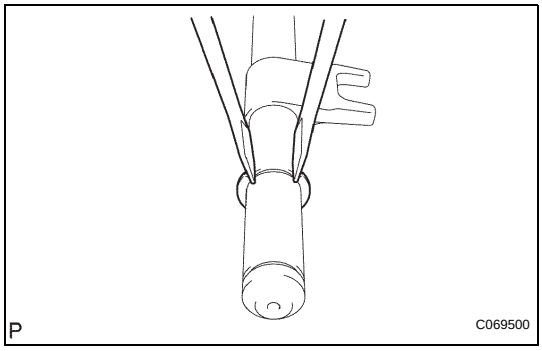


36. REMOVE NO. 1 GEAR SHIFT FORK SHAFT

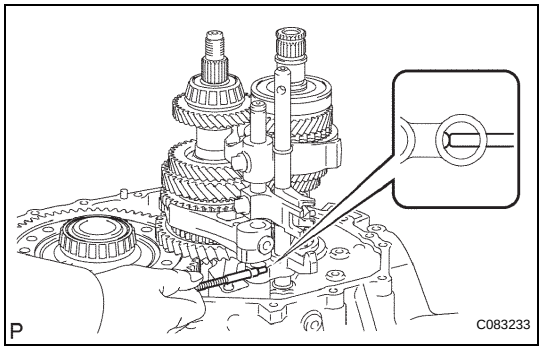
(a) Remove the shift fork set bolt from the No. 1 gear shift fork.



(b) Pull out the No. 1 gear shift fork shaft while the No. 3 gear shift fork shaft is pulled up.

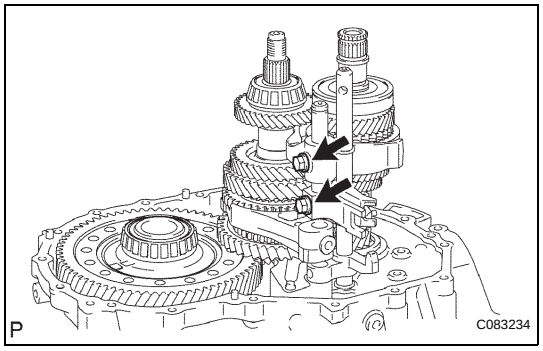


(c) Using 2 screwdrivers and a hammer, remove the shift fork shaft snap ring from the No. 1 gear shift fork shaft.
HINT:
Use a shop rag or a piece of cloth to keep the snap ring from flying.



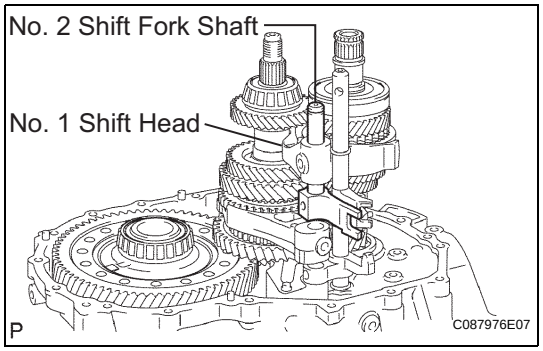
37. REMOVE REVERSE SHIFT FORK ROLLER

(a) Using a magnetic finger, remove the reverse shift fork roller from the reverse shift fork.

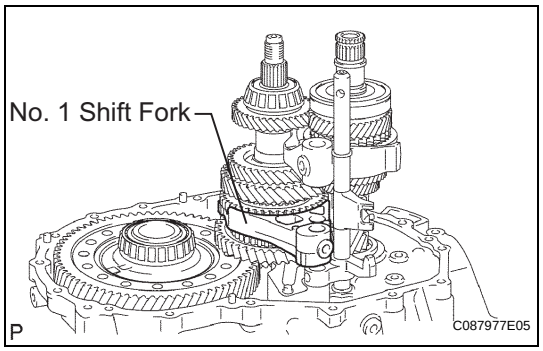


38. REMOVE NO. 2 GEAR SHIFT FORK SHAFT

(a) Remove the shift fork set bolt and shift head set bolt from the No. 2 gear shift fork and No. 1 gear shift head.

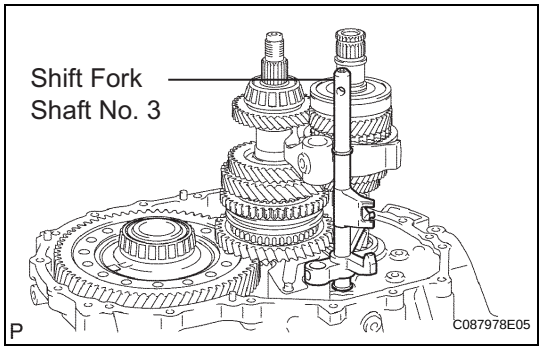


(b) Remove the No. 2 gear shift fork shaft and No. 1 gear shift head from the manual transaxle case.



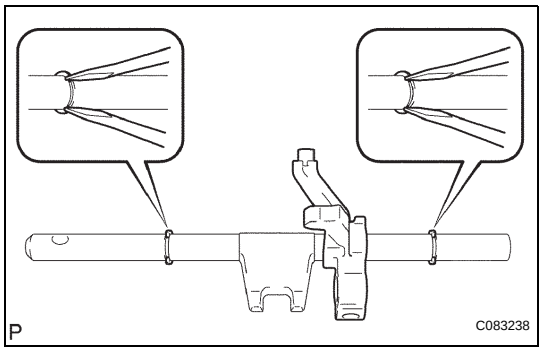
39. REMOVE NO. 1 GEAR SHIFT FORK

(a) Remove the No. 1 gear shift fork.

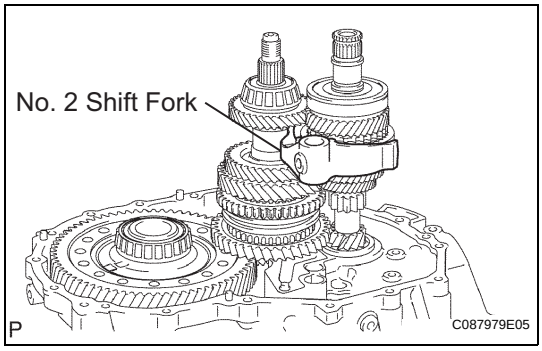


40. REMOVE NO. 3 GEAR SHIFT FORK SHAFT

(a) Remove the No. 3 gear shift fork shaft from the manual transaxle case.

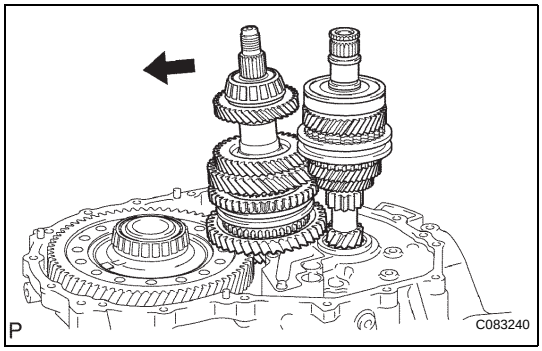


(b) Using 2 screwdrivers and a hammer, remove the 2 shift fork shaft snap rings from the No. 3 gear shift fork shaft.
(c) Remove the reverse shift fork from the No. 3 gear shift fork shaft.



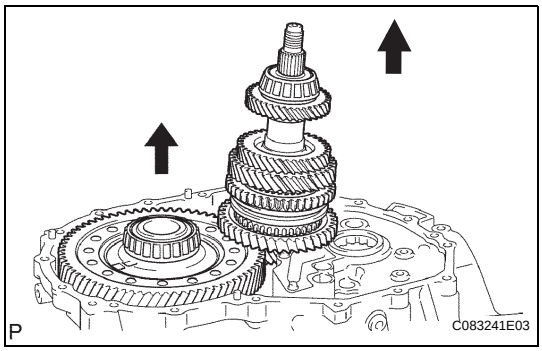
41. REMOVE NO. 2 GEAR SHIFT FORK

(a) Remove the No. 2 gear shift fork from the input shaft assembly.



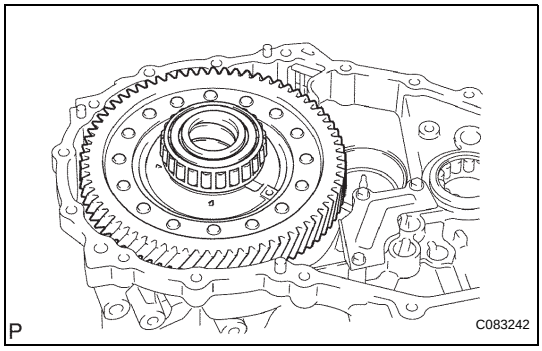
42. REMOVE INPUT SHAFT ASSEMBLY

(a) Tilt the output shaft, then remove the input shaft from the manual transaxle case.



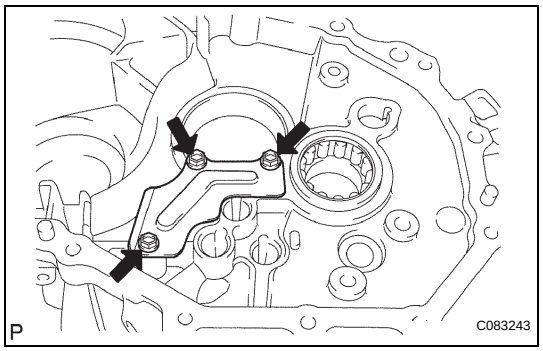
43. REMOVE OUTPUT SHAFT ASSEMBLY

(a) Lift the differential case assembly with the output shaft assembly leaned.
(b) Remove the output shaft assembly from the manual transaxle case.



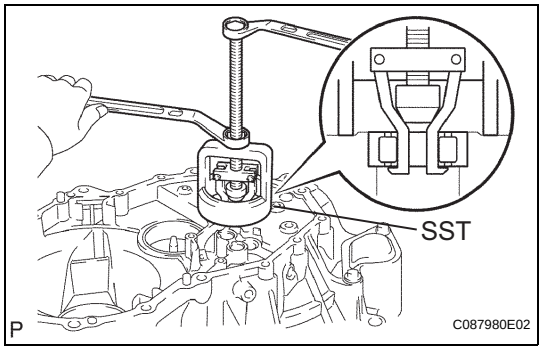
44. REMOVE DIFFERENTIAL CASE ASSEMBLY

(a) Remove the differential case assembly from the manual transaxle case.



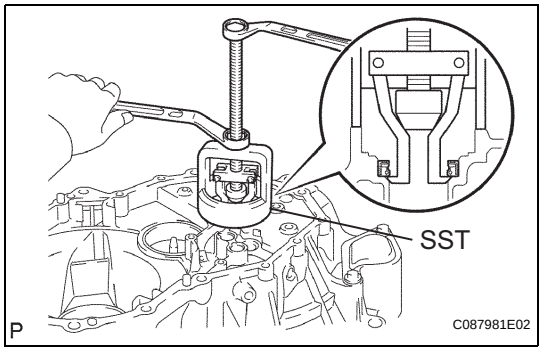
45. REMOVE MANUAL TRANSAXLE CASE RECEIVER

(a) Remove the 3 bolts and manual transaxle case receiver from the manual transaxle case.



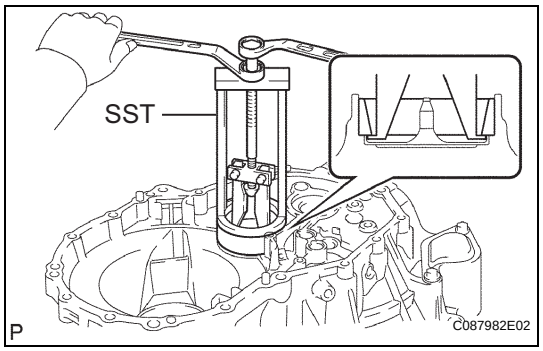
46. REMOVE INPUT SHAFT FRONT BEARING

(a) Using SST, remove the input shaft front bearing (outer race) from the manual transaxle case.
SST 09612-65014 (09612-01040, 09612-01050)



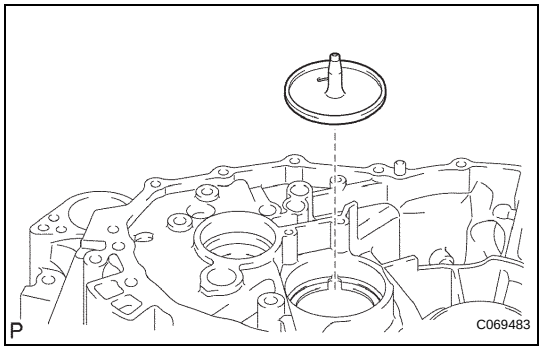
47. REMOVE FRONT TRANSAXLE CASE OIL SEAL

(a) Using SST, remove the manual transaxle case oil seal from the manual transaxle case.
SST 09612-65014 (09612-01040, 09612-01050)



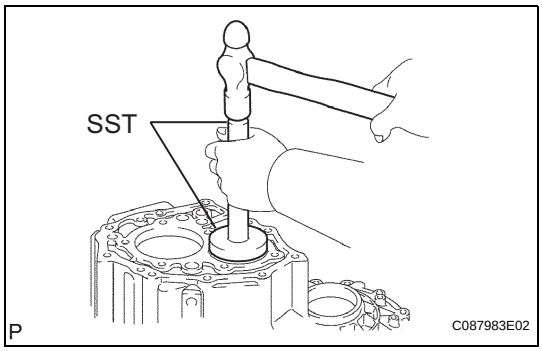
48. REMOVE OUTPUT SHAFT FRONT BEARING

(a) Using SST, remove the output shaft front bearing (outer race) from the manual transaxle case.
SST 09387-00041 (09387-02020, 09387-02010)



49. REMOVE OUTPUT SHAFT COVER

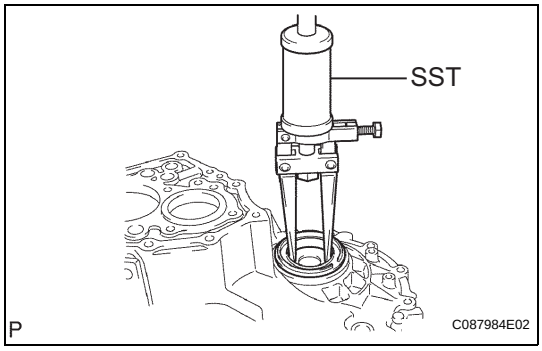
(a) Remove the output shaft cover from the manual transaxle case.



50. REMOVE OUTPUT SHAFT REAR BEARING

(a) Using SST and a hammer, remove the output shaft rear bearing from the manual transmission case (outer race).

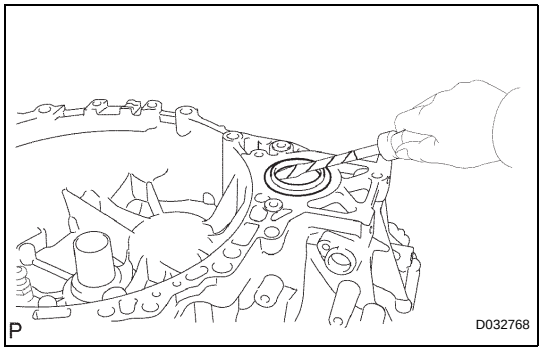
SST 09950-60010 (09951-00680), 09950-70010 (09951-07100)



51. REMOVE TRANSMISSION CASE OIL SEAL

(a) Using SST, remove the transmission case oil seal from the manual transmission case.

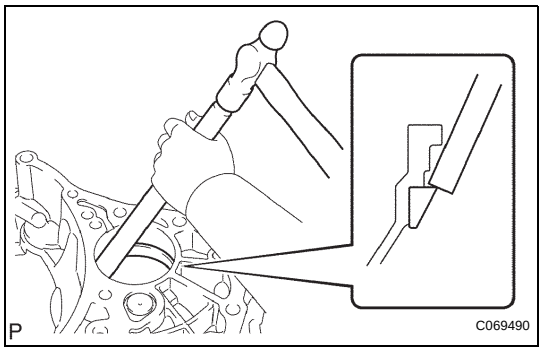
SST 09308-00010



52. REMOVE FRONT TRANSAXLE CASE COVER OIL SEAL

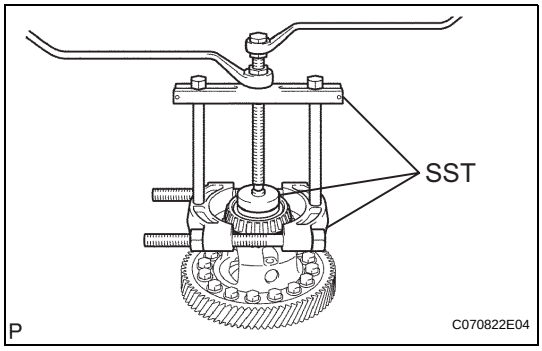
(a) Using a screwdriver, remove the front transaxle case cover oil seal.

HINT:
Tape the screwdriver tip before use to avoid damage.



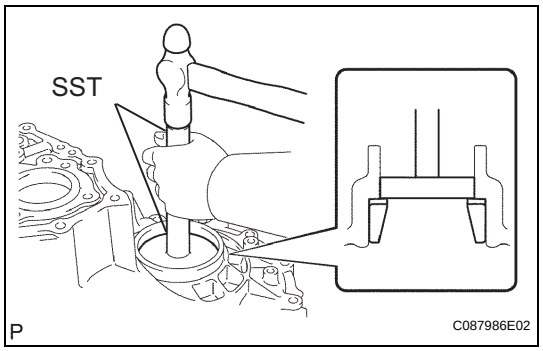
53. REMOVE FRONT DIFFERENTIAL CASE FRONT TAPERED ROLLER BEARING

(a) Using a brass bar and a hammer, remove the front differential case front tapered roller bearing (outer race) from the manual transaxle case.



(b) Using SST, remove the front differential case front tapered roller bearing from the front differential case.

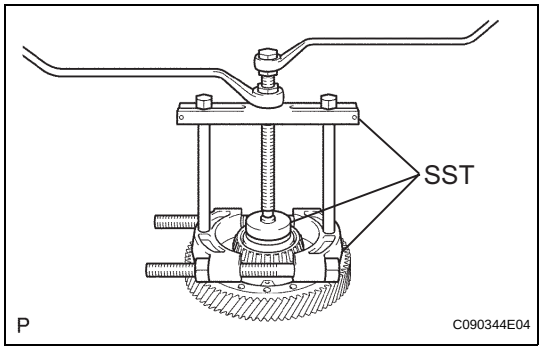
SST 09950-00020, 09950-00030, 09950-40011 (09957-04010), 09950-60010 (09951-00560)



54. REMOVE FRONT DIFFERENTIAL CASE REAR TAPERED ROLLER BEARING

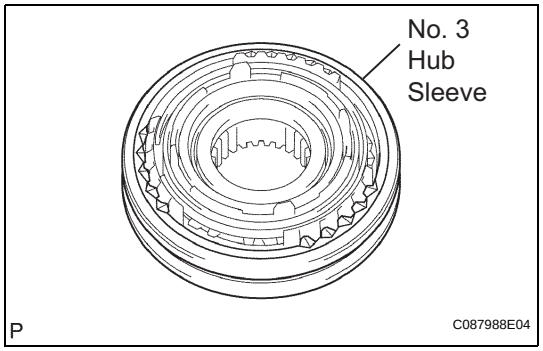
(a) Using SST and a hammer, remove the front differential case rear tapered roller bearing (outer race) and front differential case rear shim from the manual transmission case.

SST 09950-60020 (09951-00790), 09950-70010 (09951-07100)



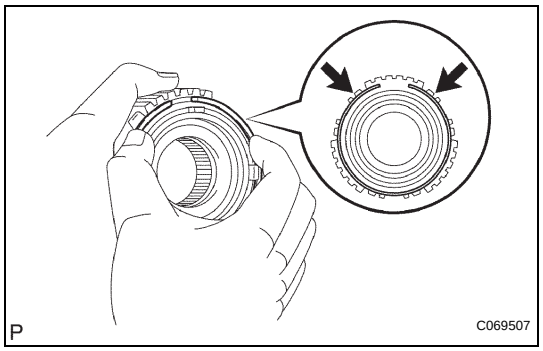
(b) Using SST, remove the front differential case rear tapered roller bearing (inner race) from the front differential case.

SST 09950-60020, 09950-00030, 09950-40011 (09957-04010), 09950-60010 (09951-00490)



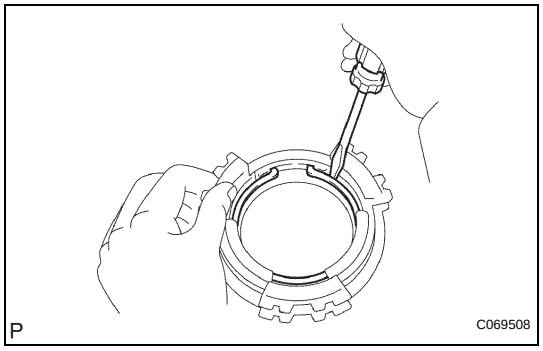
55. REMOVE NO. 3 TRANSMISSION HUB SLEEVE

(a) Remove the No. 3 transmission hub sleeve from the No. 3 transmission clutch hub.



56. REMOVE NO. 3 SYNCHROMESH SHIFTING KEY SPRING

(a) Remove the 2 No. 3 synchromesh shifting key springs from the No. 3 transmission clutch hub while pushing on the No. 3 synchromesh shifting key spring.



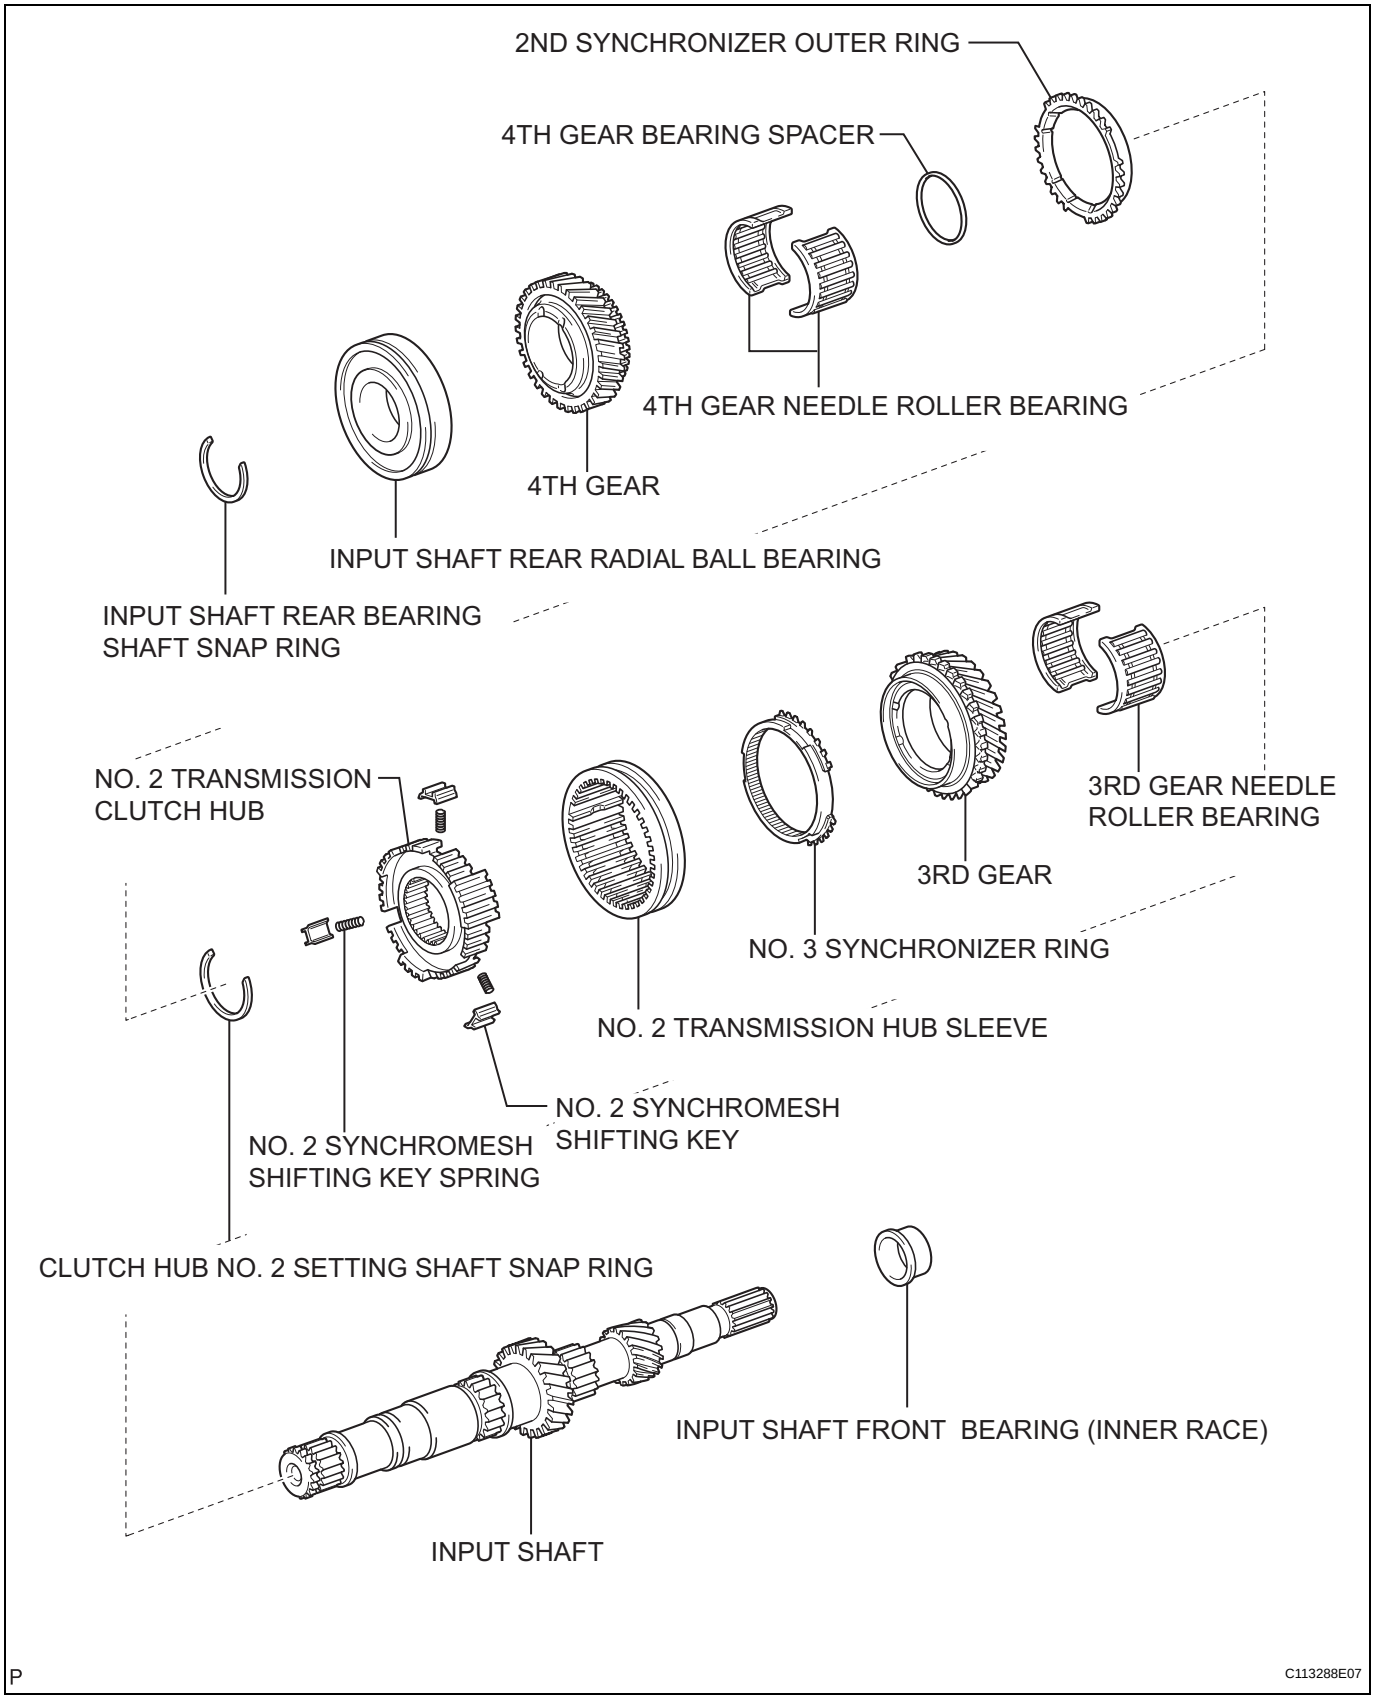
57. REMOVE SYNCHRONIZER PULL RING

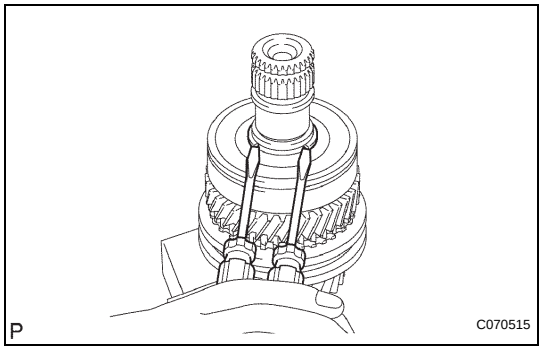
(a) Using a screwdriver, remove the synchronizer pull ring snap ring.

(b) Remove the synchronizer pull ring, No. 5 synchronizer outer ring, No. 5 synchronizer inner ring, and No. 5 synchronizer ring middle from the No. 5 synchronizer ring inner.

INPUT SHAFT

COMPONENTS



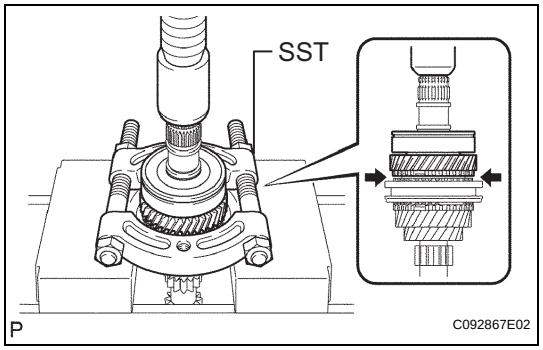


DISASSEMBLY

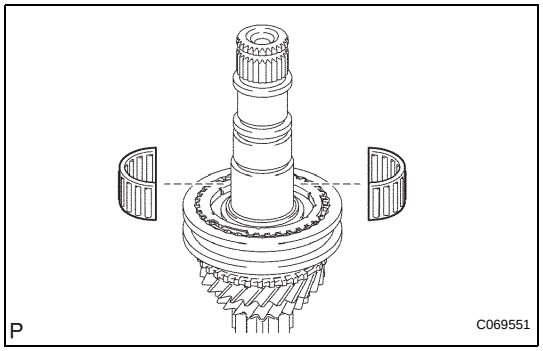
1. REMOVE 4TH GEAR

(a) Hold the input shaft assembly in a vise using aluminum plates.

(b) Using 2 screwdrivers and a hammer, remove the input shaft rear bearing shaft snap ring from the input shaft.
HINT:
Use a shop rag or a piece of cloth to keep the snap ring from flying.

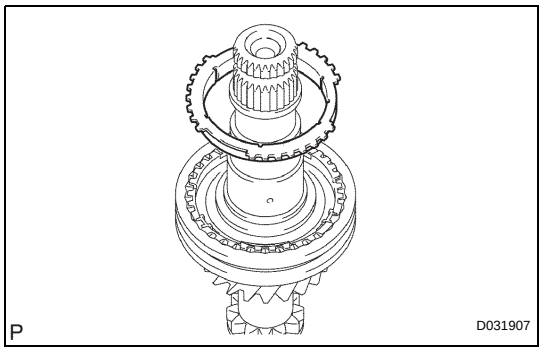


(c) Using SST and a press, remove the input shaft rear bearing and 4th gear.
SST 09950-00020
NOTICE:
Do not overtighten the SST.



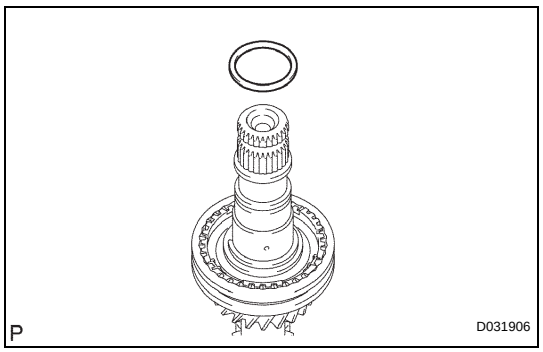
2. REMOVE 4TH GEAR NEEDLE ROLLER BEARING

(a) Remove the 4th gear needle roller bearing from the input shaft.



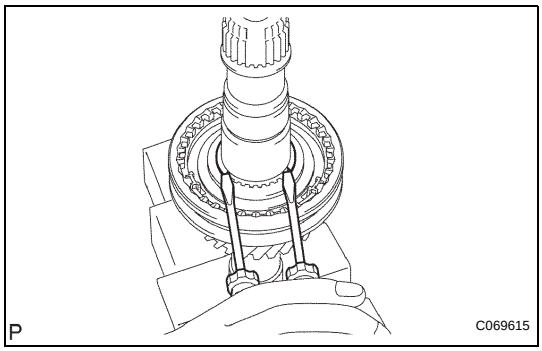
3. REMOVE 2ND SYNCHRONIZER OUTER RING

(a) Remove the 2nd synchronizer outer ring (No. 4 synchronizer ring) from the No. 2 transmission clutch hub.



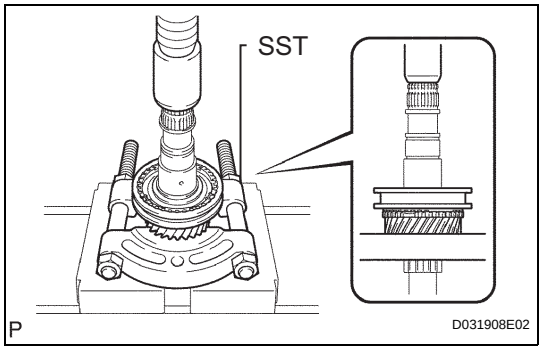
4. REMOVE 4TH GEAR BEARING SPACER

(a) Remove the 4th gear bearing spacer from the No. 2 transmission clutch hub.

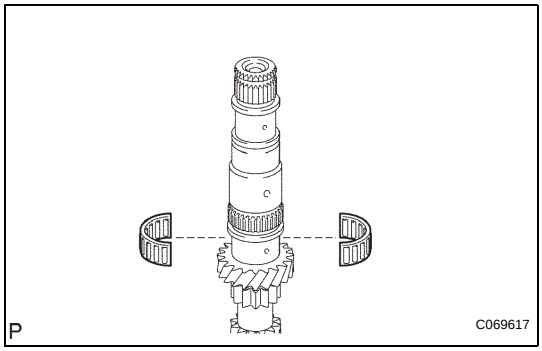


5. REMOVE 3RD GEAR

(a) Using 2 screwdrivers and a hammer, remove the No. 2 clutch hub setting shaft snap ring from the input shaft.
HINT:
Use a shop rag or a piece of cloth to keep the snap ring from flying.

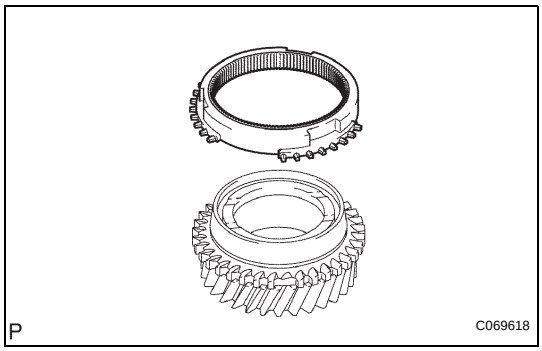


(b) Using SST and a press, remove the No. 2 transmission clutch hub and 3rd gear from the input shaft.
SST 09950-00020
NOTICE:
Do not overtighten the SST.



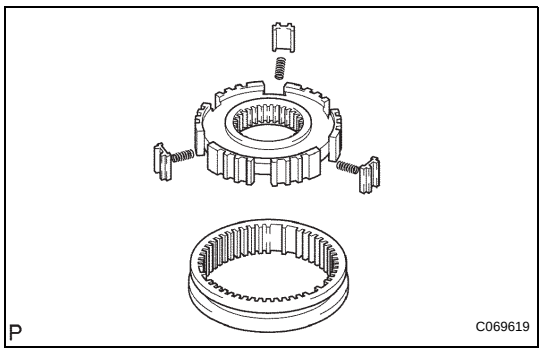
6. REMOVE 3RD GEAR NEEDLE ROLLER BEARING

(a) Remove the 3rd gear needle roller bearing from the input shaft.



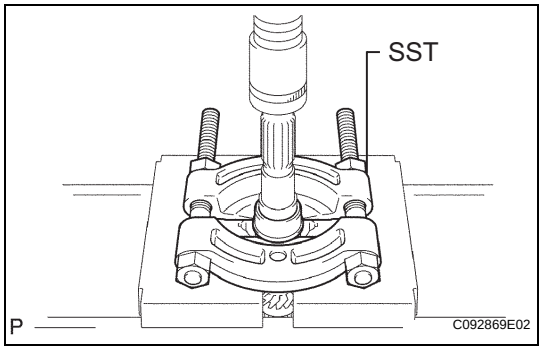
7. REMOVE NO. 3 SYNCHRONIZER RING

(a) Remove the No. 3 synchronizer ring from the 3rd gear.



8. REMOVE NO. 2 TRANSMISSION HUB SLEEVE

(a) Remove the No. 2 transmission hub sleeve, 3 No. 2 synchromesh shifting keys, and 3 No. 2 synchromesh shifting key springs from the No. 2 transmission clutch hub.
HINT:
Use a shop rag or a piece of cloth to keep the shifting keys and shifting key springs from flying.



9. REMOVE INPUT SHAFT FRONT BEARING

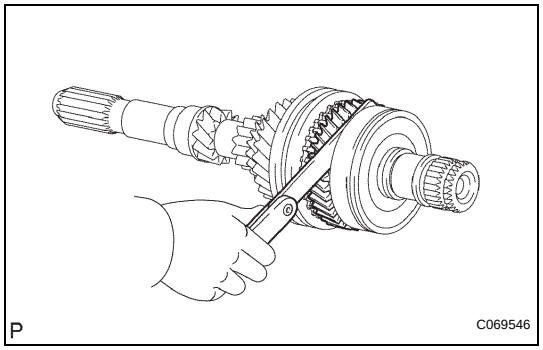
(a) Using SST and a press, remove the input shaft front bearing (inner race) from the input shaft.

SST 09950-00020

NOTICE:

Do not overtighten the SST.

INSPECTION



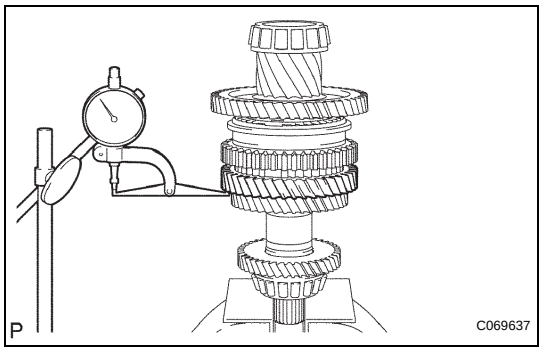
1. INSPECT 4TH GEAR THRUST CLEARANCE

(a) Using a feeler gauge, measure the 4th gear thrust clearance.

Standard clearance:

0.10 to 0.57 mm (0.0039 to 0.0224 in.)

If clearance is out of specification, replace the No. 2 transmission clutch hub, 4th gear, or input shaft rear radial ball bearing.



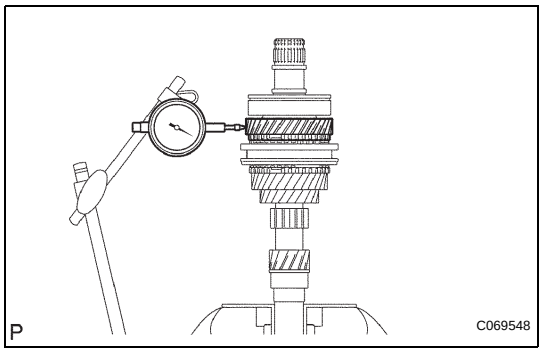
2. INSPECT 3RD GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 3rd gear thrust clearance.

Standard clearance:

0.10 to 0.35 mm (0.0039 to 0.0138 in.)

If clearance is out of specification, replace the No. 2 transmission clutch hub, 3rd gear, or input shaft.



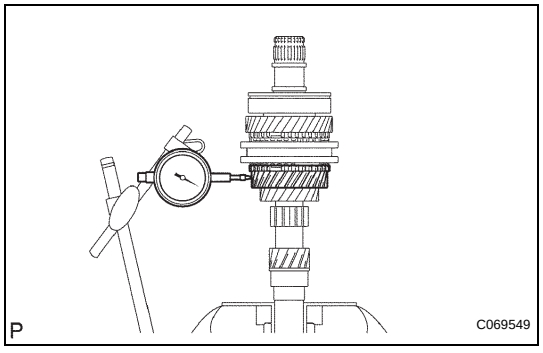
3. INSPECT 4TH GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 4th gear radial clearance.

Standard clearance mm (in.)

Bearing	Standard clearance
KOYO made	0.009 to 0.053 (0.0004 to 0.0021)
NSK made	0.009 to 0.051 (0.0004 to 0.0020)

If clearance is out of specification, replace the 4th gear, needle roller bearing, or input shaft.



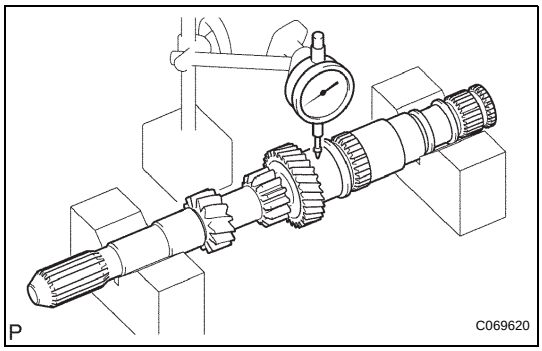
4. INSPECT 3RD GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 3rd gear radial clearance.

Standard clearance mm (in.)

Bearing	Standard clearance
KOYO made	0.009 to 0.053 (0.0004 to 0.0021)
NSK made	0.009 to 0.051 (0.0004 to 0.0020)

If clearance is out of specification, replace the 3rd gear, needle roller bearing, or input shaft.



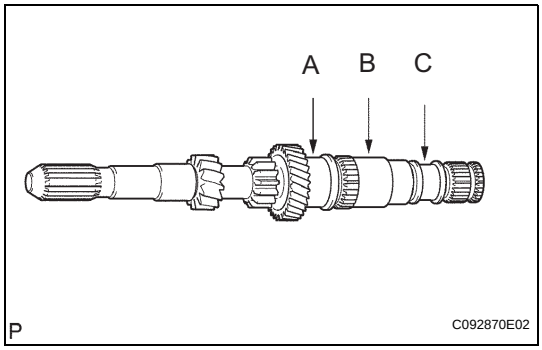
5. INSPECT INPUT SHAFT

(a) Using a V-block and dial indicator, inspect the shaft for runout.

Maximum runout:

0.03 mm (0.0012 in.)

If runout exceeds the maximum, replace the input shaft.

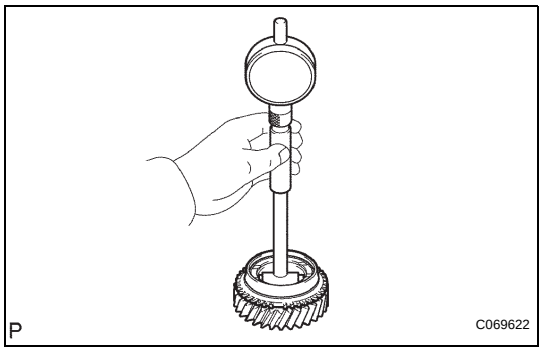


(b) Using a micrometer, measure the outside diameter of the input shaft journal surface.

Outside diameter mm (in.)

Part	Standard outside diameter	Minimum outside diameter
A	35.984 to 36.000 (1.4167 to 1.4173)	35.984 (1.4167)
B	35.984 to 36.000 (1.4167 to 1.4173)	35.984 (1.4167)
C	27.957 to 27.972 (1.1007 to 1.1013)	27.957 (1.1007)

If the outside diameter is less than the minimum, replace the input shaft.



6. INSPECT 4TH GEAR

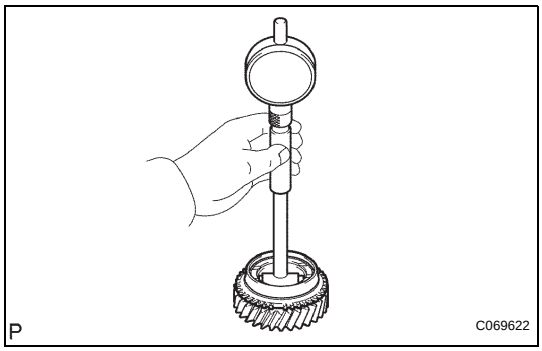
(a) Using a cylinder gauge, measure the inside diameter of the 4th gear.

Inside diameter:

mm (in.)

Standard inside diameter	Maximum inside diameter
42.009 to 42.025 (1.6539 to 1.6545)	42.025 (1.6545)

If the inside diameter exceeds the maximum, replace the 4th gear.



7. INSPECT 3RD GEAR

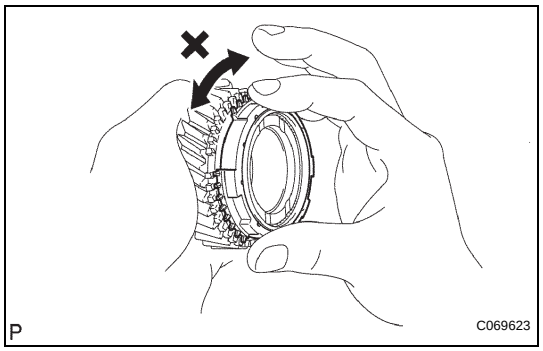
(a) Using a cylinder gauge, measure the inside diameter of the 3rd gear.

Inside diameter:

mm (in.)

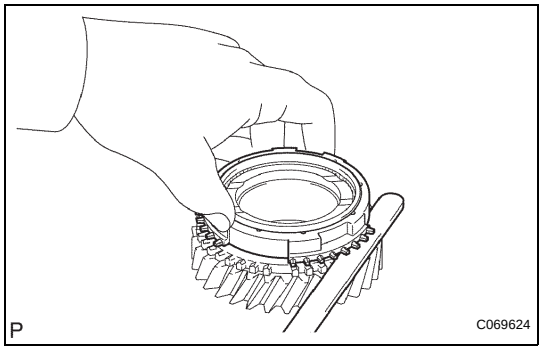
Standard inside diameter	Maximum inside diameter
43.009 to 43.025 (1.6933 to 1.6939)	43.025 (1.6939)

If the inside diameter exceeds the maximum, replace the 3rd gear.

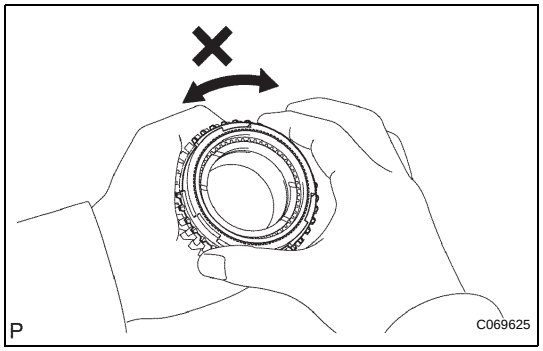


8. INSPECT 2ND SYNCHRONIZER OUTER RING

(a) Coat the 4th gear cone with gear oil. Turn the 2nd synchronizer outer ring (No. 4 synchronizer ring) in one direction while pushing it against the 4th gear cone. Check that the ring locks.
If the 2nd synchronizer outer ring does not lock, replace the ring or the 4th gear.

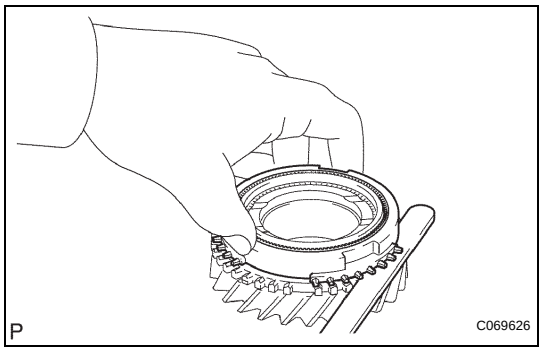


(b) Using a feeler gauge, measure the clearance between the synchronizer outer ring (No. 4 synchronizer ring) back and 4th gear spline end.
Standard clearance:
0.75 to 1.65 mm (0.0295 to 0.0650 in.)
If clearance is out of specification, replace the synchronizer ring.

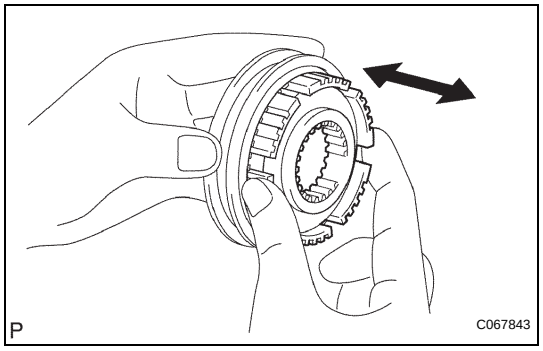


9. INSPECT NO. 3 SYNCHRONIZER RING

(a) Coat the 3rd gear cone with gear oil. Turn the synchronizer outer ring in one direction while pushing it against the 3rd gear cone. Check that the ring locks.
If the synchronizer outer ring does not lock, replace the ring or the 3rd gear.



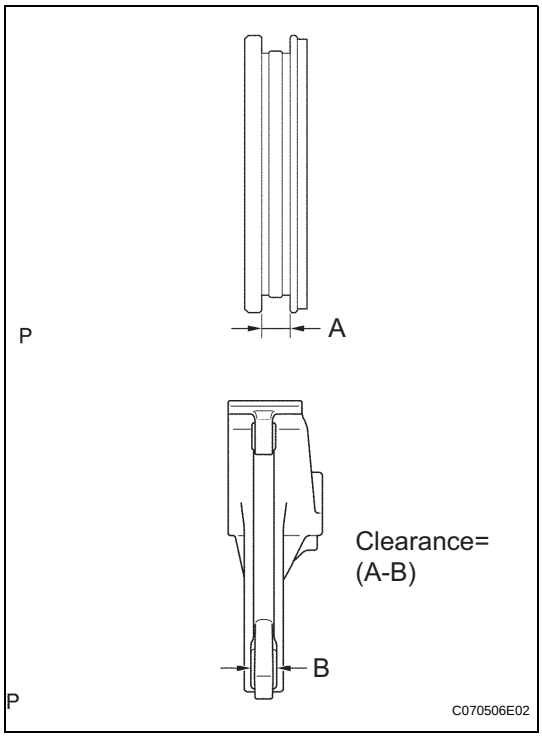
(b) Using a feeler gauge, measure the clearance between the No. 3 synchronizer ring back and 3rd gear spline end.
Standard clearance:
0.65 to 1.75 mm (0.0256 to 0.0689 in.)
If clearance is out of specification, replace the No. 3 synchronizer ring.



10. INSPECT NO. 2 TRANSMISSION HUB SLEEVE

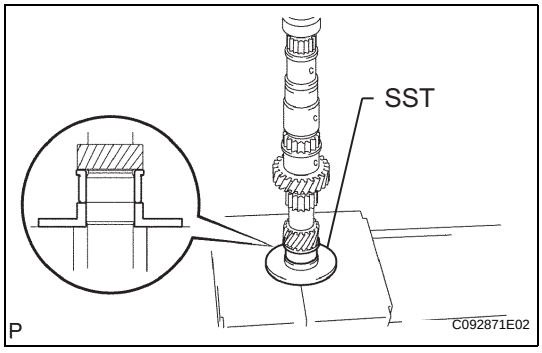
(a) Inspect the sliding condition between the No. 2 transmission hub sleeve and No. 2 transmission clutch hub.

(b) Inspect the tip of the spline gear on the No. 2 transmission hub sleeve for wear.
If any defects are found, replace the transmission hub sleeve or the transmission clutch hub.



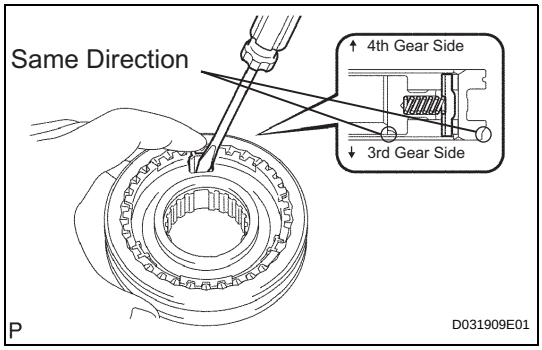
(c) Using vernier calipers, measure the width of the No. 3 transmission hub sleeve groove and the thickness of the claw part on the No. 1 gear shift fork, and calculate the clearance.
Standard clearance:
0.11 to 0.69 mm (0.0043 to 0.0272 in.) {A - B}
If clearance is out of specification, replace the No. 2 transmission hub sleeve and No. 2 gear shift fork with new ones.

REASSEMBLY



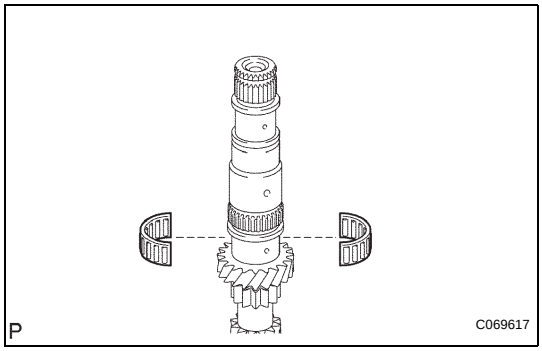
1. INSTALL INPUT SHAFT FRONT BEARING

(a) Using SST and a press, install the input shaft front bearing (inner race).
SST 09608-00071



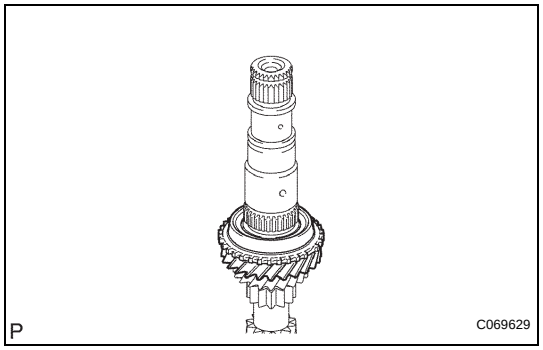
2. INSTALL NO. 2 TRANSMISSION HUB SLEEVE

(a) Coat the transmission No. 2 hub sleeve with gear oil.
(b) Install the 3 synchromesh key springs with the No. 2 transmission hub sleeve.
NOTICE:
Install the No. 2 transmission clutch hub sleeve and the No. 2 transmission clutch hub in the correct direction.
(c) Using a screwdriver, install the synchromesh shifting key to the input shaft.



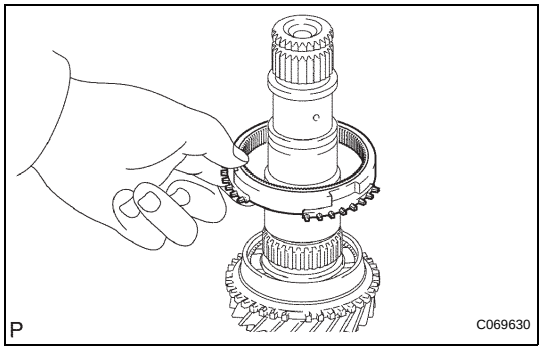
3. INSTALL 3RD GEAR NEEDLE ROLLER BEARING

(a) Coat the 3rd gear bearing with gear oil and install it to the input shaft.



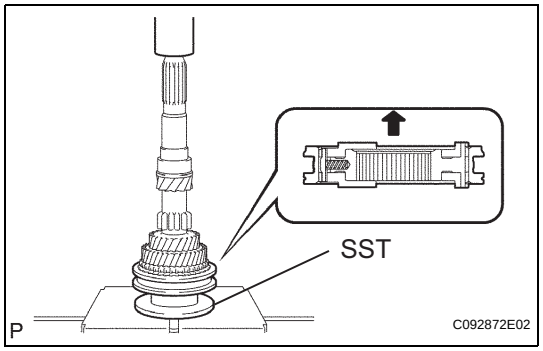
4. INSTALL 3RD GEAR

(a) Coat the 3rd gear with gear oil and install it to the input shaft.



5. INSTALL NO. 3 SYNCHRONIZER RING

(a) Coat the No. 3 synchronizer ring with gear oil and install it to the 3rd gear.



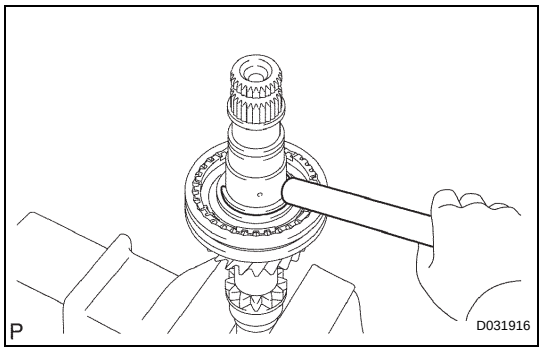
6. INSTALL NO. 2 TRANSMISSION CLUTCH HUB

(a) Using SST and a press, install the No. 2 transmission clutch hub to the input shaft.

SST 09316-60011 (09316-00041)

NOTICE:

- **Align the claw of the clutch hub No. 2 with the notch of the synchronizer ring No. 3.**
- **Make sure that the 3rd gear can rotate.**



(b) Select a snap ring so that clearance between the No. 2 transmission clutch hub and the No. 2 clutch hub shaft snap ring will be within the specified range. Using a brass bar and a hammer, install the snap ring.

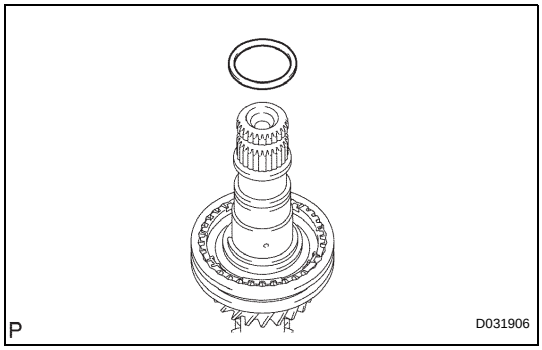
Standard clearance:

0.1 mm or less (0.0039 in.) or less

Snap ring thickness

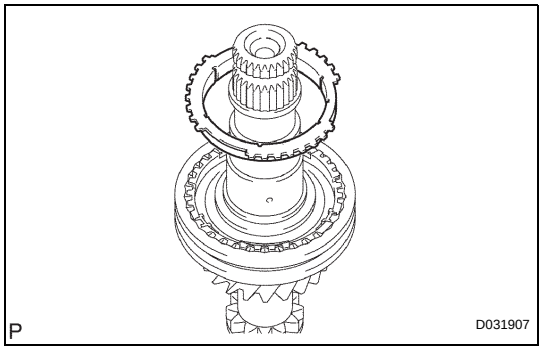
Part No.	Thickness: mm (in.)	Mark
90520-34003	2.30 to 2.35 (0.0906 to 0.0925)	H
90520-34004	2.35 to 2.40 (0.0925 to 0.0945)	J
90520-34005	2.40 to 2.45 (0.0945 to 0.0965)	K
90520-34006	2.45 to 2.50 (0.0965 to 0.0984)	L
90520-34007	2.50 to 2.55 (0.0984 to 0.1004)	M
90520-34008	2.55 to 2.60 (0.1004 to 0.1024)	N

Part No.	Thickness: mm (in.)	Mark
90520-34009	2.60 to 2.65 (0.1024 to 0.1043)	P



7. INSTALL 4TH GEAR BEARING SPACER

(a) Coat the 4th gear bearing spacer with gear oil and install it to the input shaft.

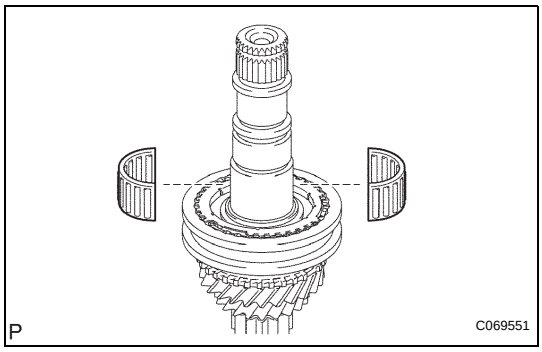


8. INSTALL 2ND SYNCHRONIZER OUTER RING

(a) Coat the 2nd synchronizer outer ring (No. 4 synchronizer ring) with gear oil and install it to the No. 2 transmission clutch hub.

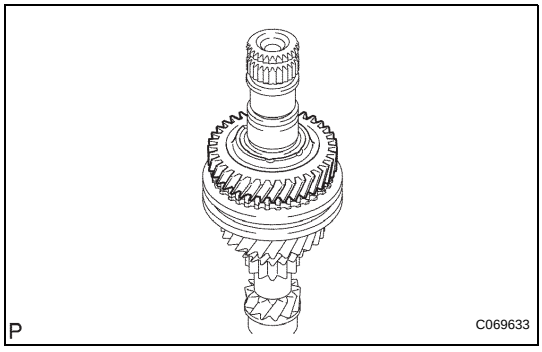
NOTICE:

Align the claw of the No. 2 clutch hub with the notch of the 2nd synchronizer outer ring (No. 4 synchronizer ring).



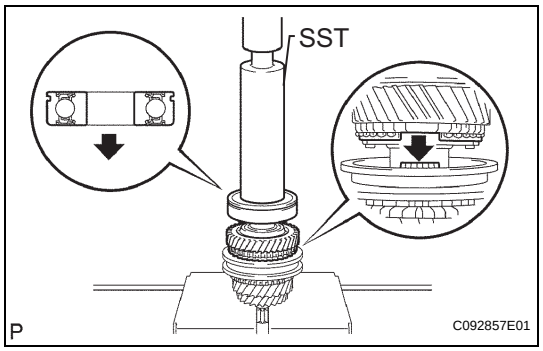
9. INSTALL 4TH GEAR NEEDLE ROLLER BEARING

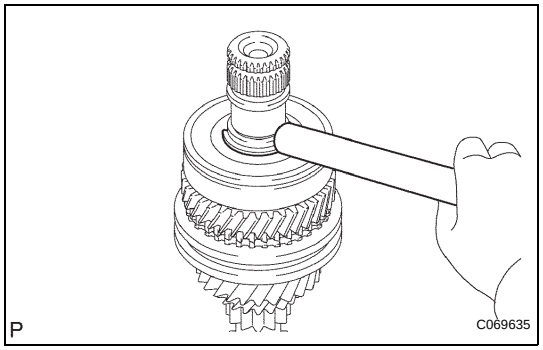
(a) Coat the 4th gear needle roller bearing with gear oil and install it to the input shaft.



10. INSTALL 4TH GEAR

(a) Coat the 4th gear with gear oil and install it to the input shaft.





11. INSTALL INPUT SHAFT REAR RADIAL BALL BEARING

(a) Using SST and a press, install the input shaft rear radial ball bearing to the input shaft.

SST 09608-06041

NOTICE:

- **Install the bearing with its groove facing rearward.**
- **Make sure that the 3rd gear rotates.**

(b) Select a snap ring so that the clearance between the input shaft radial ball rear bearing and the input shaft rear bearing snap ring will be within the specified range. Using a brass bar and a hammer, install the snap ring.

Standard clearance:

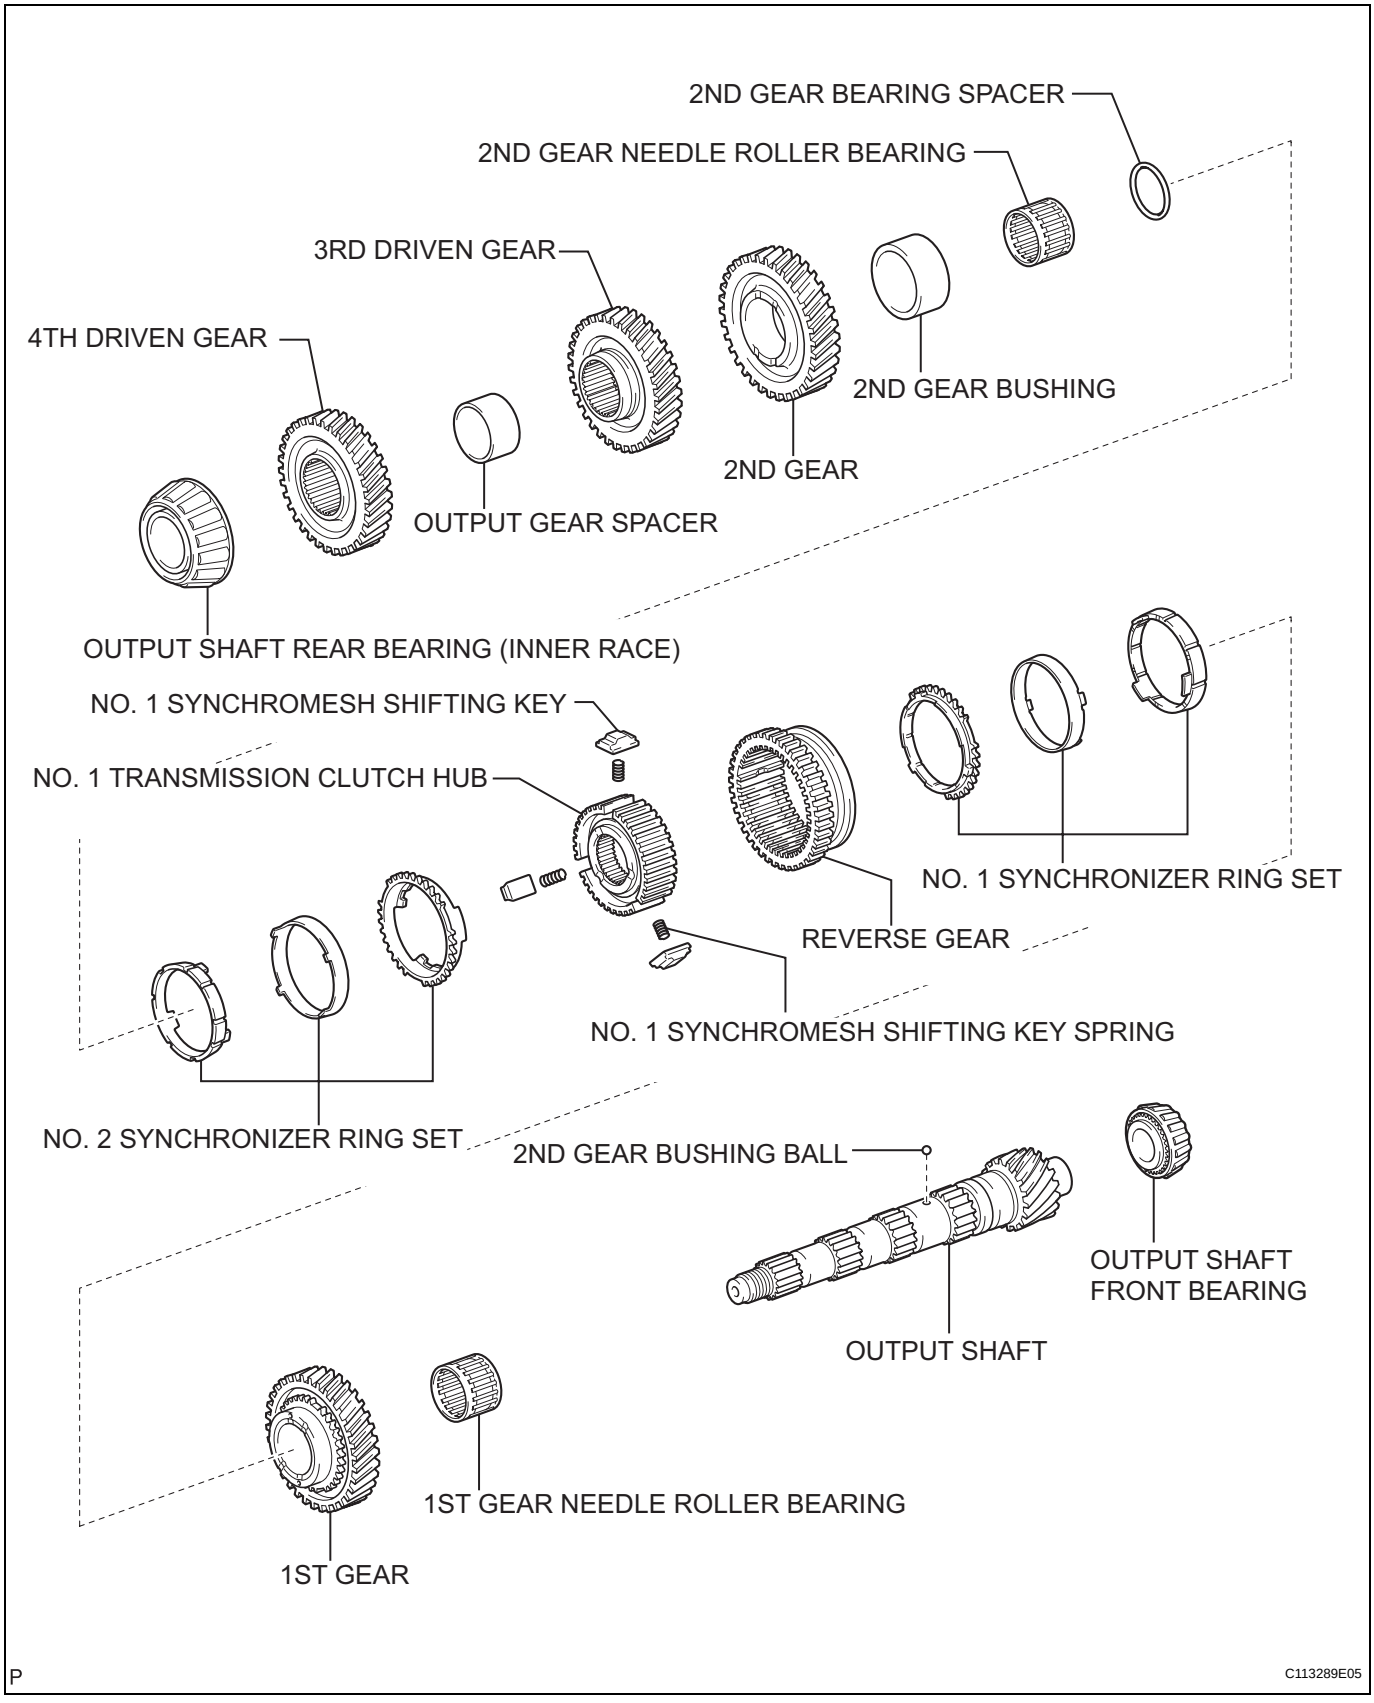
0.1 mm (0.004 in.) or less

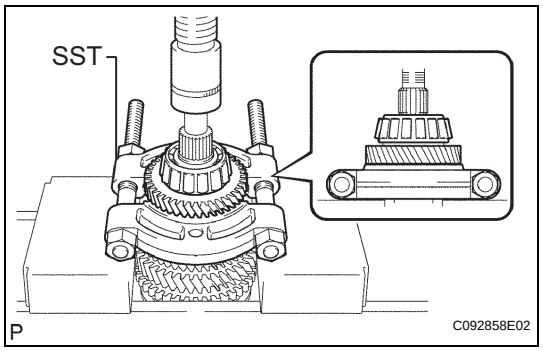
Snap ring

Part No.	Thickness: mm (in.)	Mark
90520-30008	2.35 to 2.40 (0.0925 to 0.0945)	1
90520-30009	2.40 to 2.45 (0.0945 to 0.0965)	2
90520-30010	2.45 to 2.50 (0.0965 to 0.0984)	3
90520-30011	2.50 to 2.55 (0.0984 to 0.1004)	4
90520-30012	2.55 to 2.60 (0.1004 to 0.1024)	5
90520-30013	2.60 to 2.65 (0.1024 to 0.1043)	6
90520-30021	2.65 to 2.70 (0.1043 to 0.1063)	7
90520-30022	2.70 to 2.75 (0.1063 to 0.1083)	8

OUTPUT SHAFT

COMPONENTS

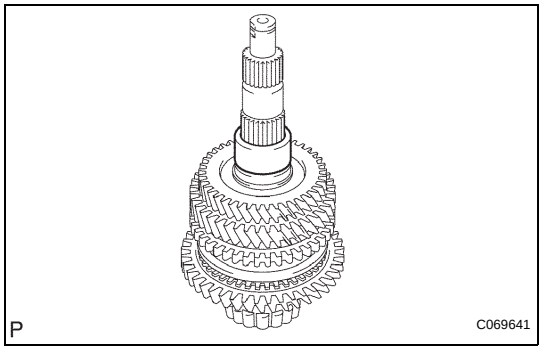




DISASSEMBLY

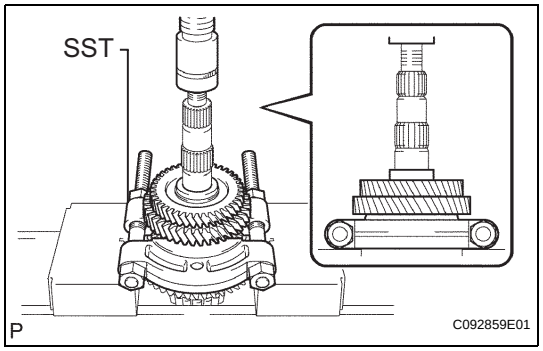
1. REMOVE 4TH DRIVEN GEAR

(a) Using SST and a press, remove the output shaft rear bearing (inner race) and 4th driven gear.
SST 09950-00020



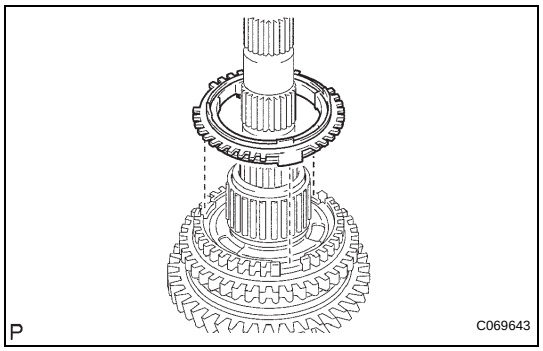
2. REMOVE OUTPUT GEAR SPACER

(a) Remove the output gear spacer from the output shaft.



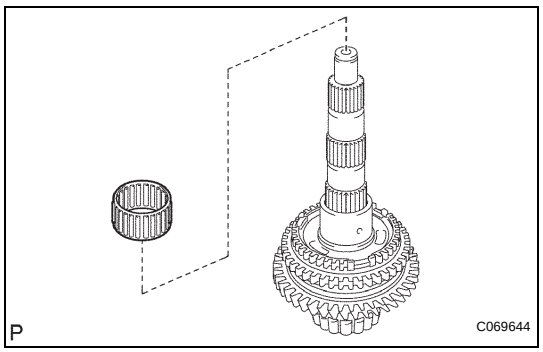
3. REMOVE 2ND GEAR

(a) Using SST and a press, remove the 3rd driven gear and 2nd gear from the output shaft.
SST 09950-00020



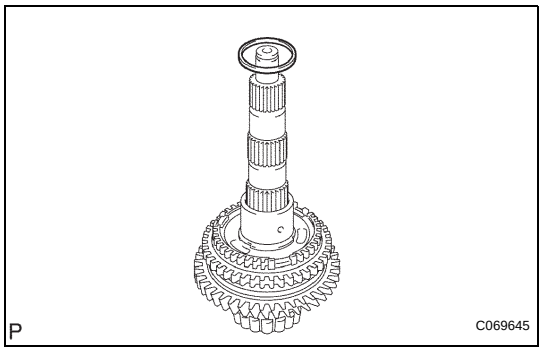
4. REMOVE NO. 2 SYNCHRONIZER RING SET

(a) Remove the No. 2 synchronizer ring set from the No. 1 transmission clutch hub.



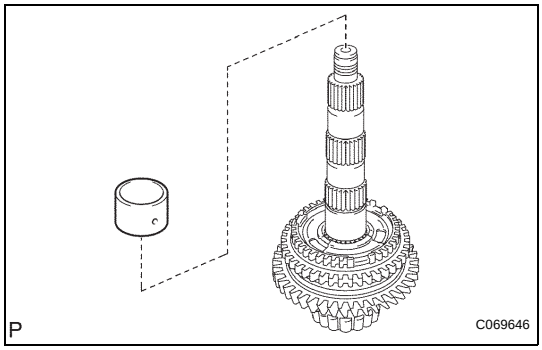
5. REMOVE 2ND GEAR NEEDLE ROLLER BEARING

(a) Remove the 2nd gear needle roller bearing from the output shaft.



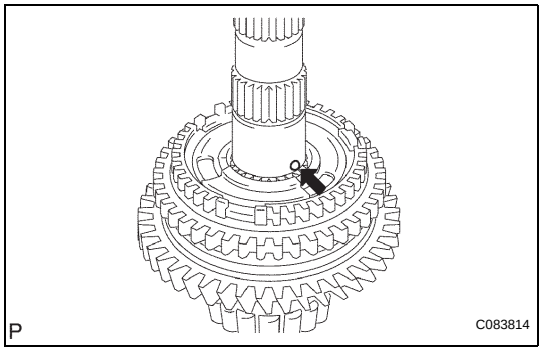
6. REMOVE 2ND GEAR BEARING SPACER

(a) Remove the 2nd gear bearing spacer from the output shaft.



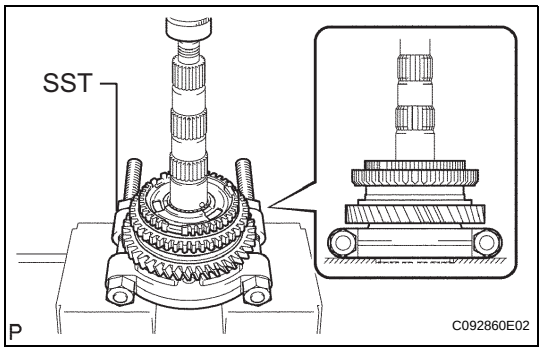
7. REMOVE 2ND GEAR BUSHING

(a) Remove the 2nd gear bushing from the output shaft.



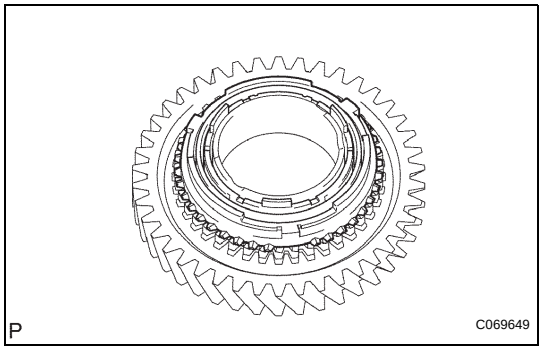
8. REMOVE 2ND GEAR BUSHING BALL

(a) Using a magnetic finger, remove the 2nd gear bush ball from the output shaft.



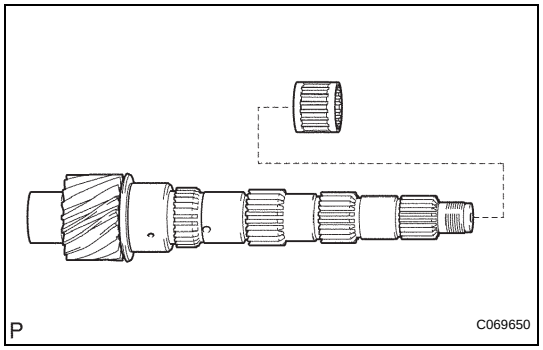
9. REMOVE 1ST GEAR

(a) Using SST and a press, remove the No. 1 transmission clutch hub and 1st gear from the output shaft.
SST 09950-00020



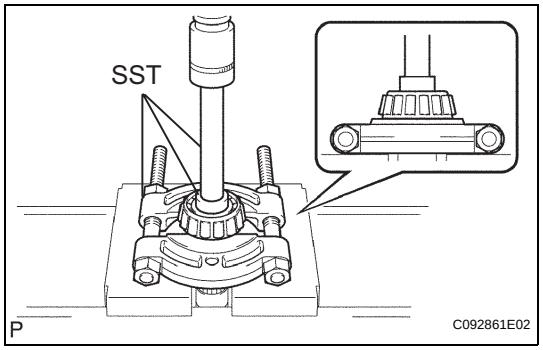
10. REMOVE NO. 1 SYNCHRONIZER RING SET

(a) Remove the No. 1 synchronizer ring set from the 1st gear.



11. REMOVE 1ST GEAR NEEDLE ROLLER BEARING

(a) Remove the 1st gear needle roller bearing from the output shaft.



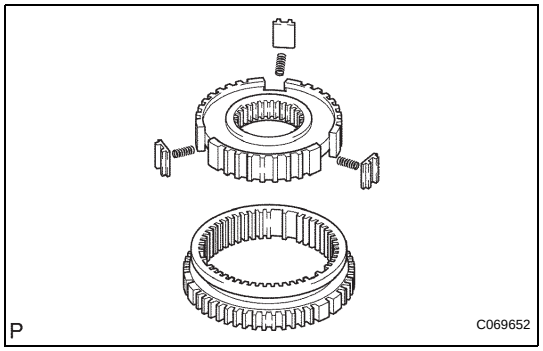
12. REMOVE OUTPUT SHAFT FRONT BEARING

(a) Using SST and a press, remove the output shaft front bearing (inner race) from the output shaft.

SST 09950-00020, 09950-60010 (09951-00320), 09950-70010 (09951-07150)

NOTICE:

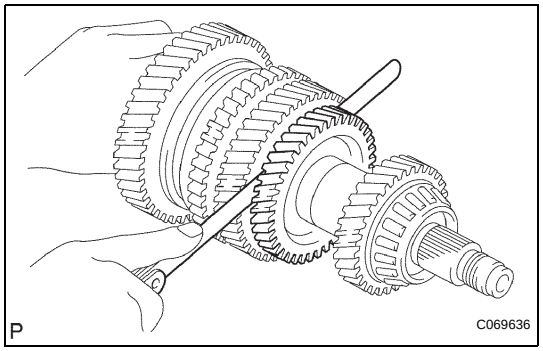
Do not overtighten the SST.



13. REMOVE REVERSE GEAR

(a) Remove the No. 1 transmission clutch hub, 3 No. 1 synchromesh shifting keys, and 3 No. 1 synchromesh shifting key springs from the reverse gear.

INSPECTION



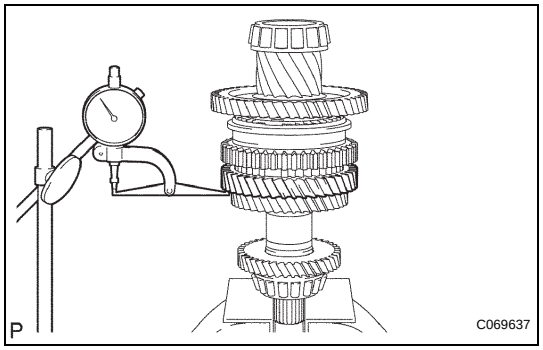
1. INSPECT 1ST GEAR THRUST CLEARANCE

(a) Using a feeler gauge, measure the 1st gear thrust clearance.

Standard clearance:

0.25 to 0.40 mm (0.0098 to 0.0157 in.)

If clearance is out of specification, replace the 1st gear, thrust washer, 1st gear, or No. 1 transmission clutch hub.



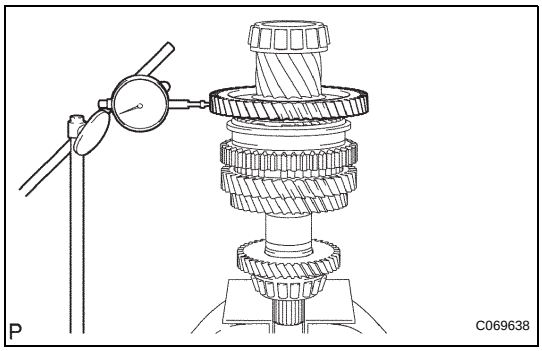
2. INSPECT 2ND GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 2nd gear thrust clearance.

Standard clearance:

0.10 to 0.35 mm (0.0039 to 0.0138 in.)

If clearance is out of specification, replace the No. 1 transmission clutch hub, 2nd gear, or 3rd driven gear.



MX

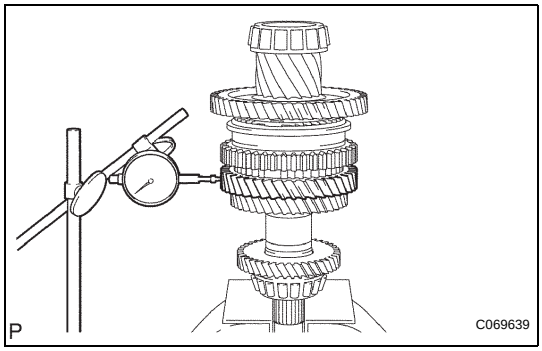
3. INSPECT 1ST GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 1st gear radial clearance.

Standard clearance mm (in.)

Bearing	Standard clearance
KOYO made	0.009 to 0.053 (0.0004 to 0.0021)
NSK made	0.009 to 0.051 (0.0004 to 0.0020)

If clearance is out of specification, replace the 1st gear and 1st gear needle roller bearing.



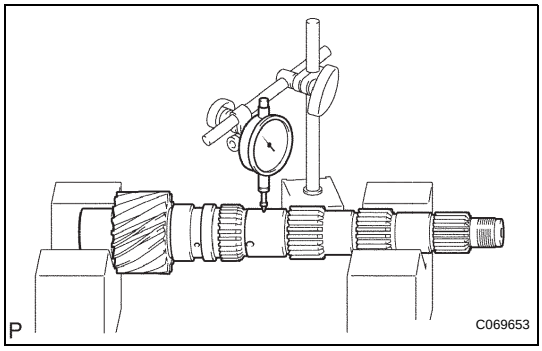
4. INSPECT 2ND GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 2nd gear radial clearance.

Standard clearance mm (in.)

Bearing	Standard clearance
KOYO made	0.009 to 0.053 (0.0004 to 0.0021)
NSK made	0.009 to 0.051 (0.0004 to 0.0020)

If clearance is out of specification, replace the 2nd gear and 2nd gear needle roller bearing.



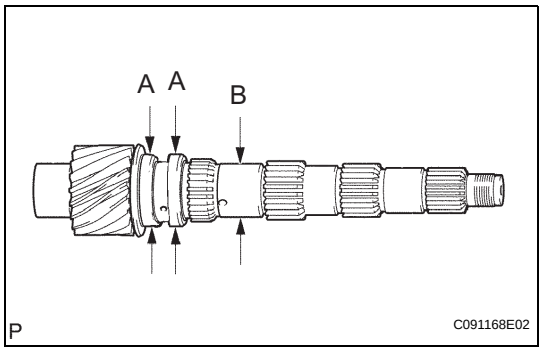
5. INSPECT OUTPUT SHAFT

(a) Using a V-block and a dial indicator, inspect the shaft for runout.

Maximum runout:

0.03 mm (0.0012 in.)

If runout exceeds the maximum, replace the input shaft.

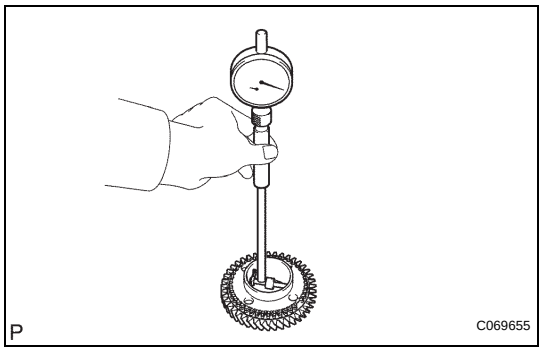


(b) Using a micrometer, measure the outside diameter of the output shaft journal surface.

Outside diameter mm (in.)

Part	Standard outside diameter	Minimum outside diameter
A	37.610 to 37.626 (1.4807 to 1.4813)	37.610 (1.4807)
B	34.502 to 34.512 (1.3583 to 1.3587)	34.502 (1.3583)

If the outside diameter is less than the minimum, replace the input shaft.

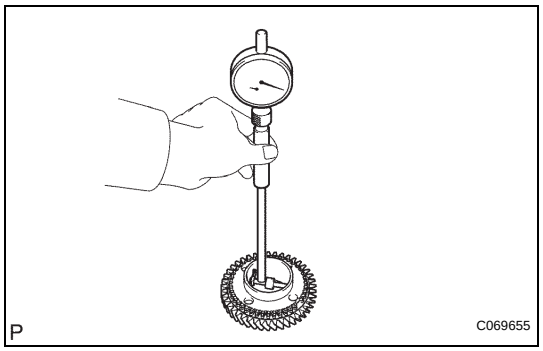


6. INSPECT 2ND GEAR

(a) Using a cylinder gauge, measure the inside diameter of the 2nd gear.
Inside diameter:
mm (in.)

Standard inside diameter	Maximum inside diameter
50.009 to 50.025 (1.9689 to 1.9695)	50.025 (1.9695)

If the inside diameter exceeds the maximum, replace the 2nd gear.

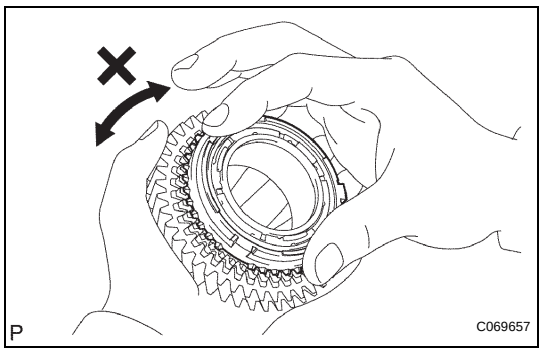


7. INSPECT 1ST GEAR

(a) Using a cylinder gauge, measure the inside diameter of the 1st gear.
Inside diameter mm (in.)

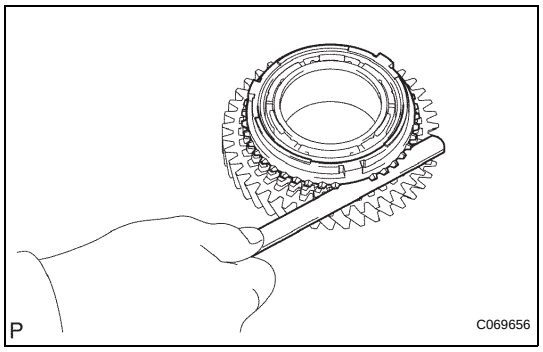
Standard inside diameter	Maximum inside diameter
51.009 to 51.025 (2.0082 to 2.0089)	51.025 (2.0089)

If the inside diameter exceeds the maximum, replace the 1st gear.

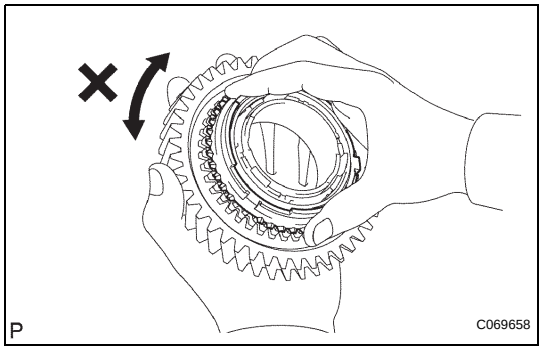


8. INSPECT NO. 2 SYNCHRONIZER RING SET

(a) Coat the 2nd gear cone with gear oil. Turn the No. 2 synchronizer ring set in one direction while pushing it against the No. 2 synchronizer ring. Check that the ring locks.
If the No. 2 synchronizer ring set does not lock, replace the ring or 2nd gear.



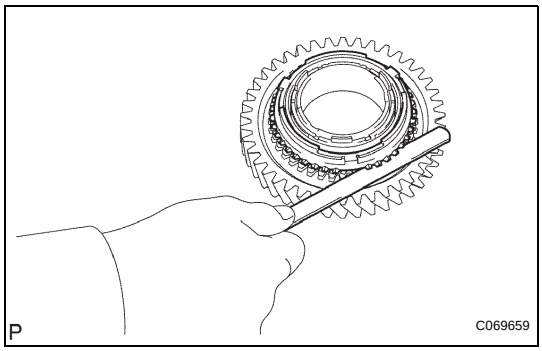
(b) Check the clearance between the No. 2 synchronizer ring and 2nd gear while pushing the 2nd gear against the No. 2 synchronizer ring.
Standard clearance:
0.70 to 1.45 mm (0.0276 to 0.0571 in.)
If clearance is out of specification, replace the No. 2 synchronizer ring set with a new one.



9. INSPECT NO. 1 SYNCHRONIZER RING SET

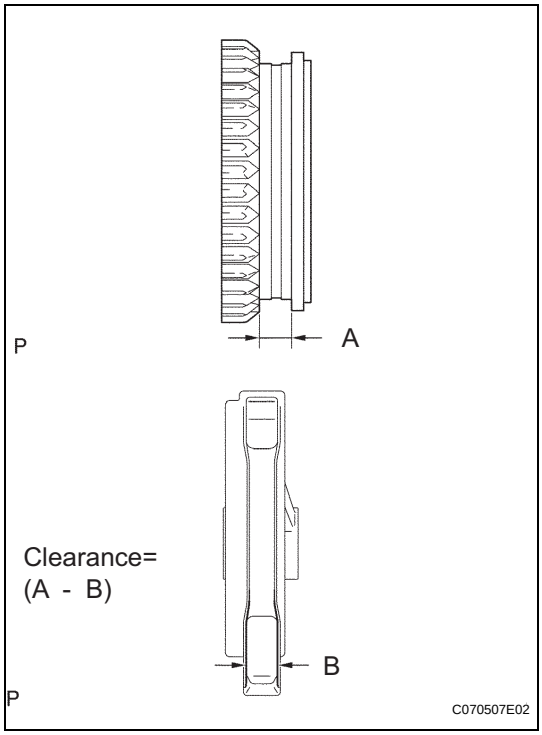
(a) Coat the 1st gear cone with gear oil. Turn the No. 1 synchronizer ring set in one direction while pushing it against the 1st gear cone. Check that the ring locks.
If the No. 1 synchronizer ring set does not lock, replace the No. 1 synchronizer ring set with a new one.

MX

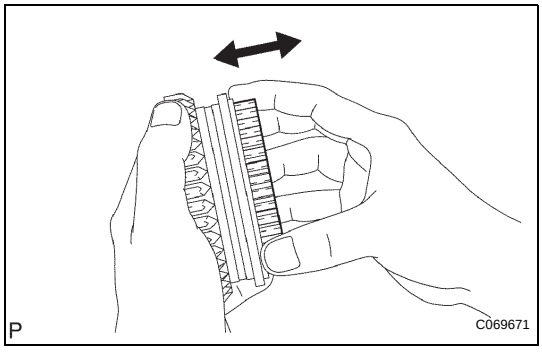


(b) Check the clearance between the No. 1 synchronizer ring set and 1st gear while pushing the 1st gear against the cone of the No. 1 synchronizer ring set.
Standard clearance:
0.70 to 1.45 mm (0.0276 to 0.0571 in.)
If clearance is out of specification, replace the No. 1 synchronizer ring set with a new one.

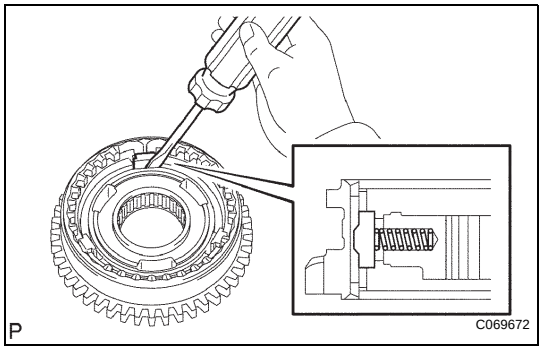
MX



10. INSPECT REVERSE GEAR
(a) Using vernier calipers, measure the width of the reverse gear groove and thickness of the claw part on the No. 1 gear shift fork, and calculate the clearance.
Standard clearance:
0.15 to 0.35 mm (0.0059 to 0.0138 in.) {A - B}
If clearance is out of specification, replace the reverse gear and No. 1 gear shift fork with new ones.



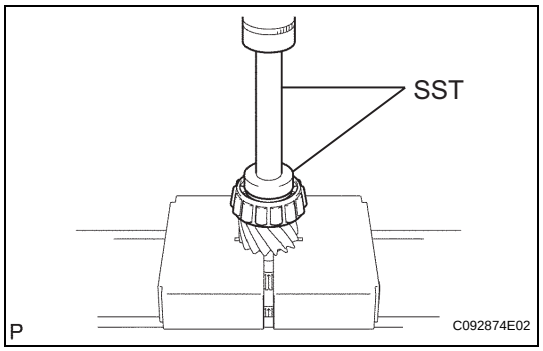
11. INSPECT NO. 1 TRANSMISSION CLUTCH HUB
(a) Check the sliding condition between the No. 1 transmission clutch hub and the reverse gear.
(b) Check the tip of the spline gear on the sleeve of the reverse gear for wear.
If any defects are found, replace the transmission hub sleeve or the transmission clutch hub.



REASSEMBLY

1. INSTALL REVERSE GEAR
(a) Coat the reverse gear with gear oil.
(b) Install the 3 No. 1 synchromesh shifting key springs and No. 1 transmission clutch hub to the reverse gear.
NOTICE:
Assemble the reverse gear and the No. 1 transmission clutch hub in the correct direction.

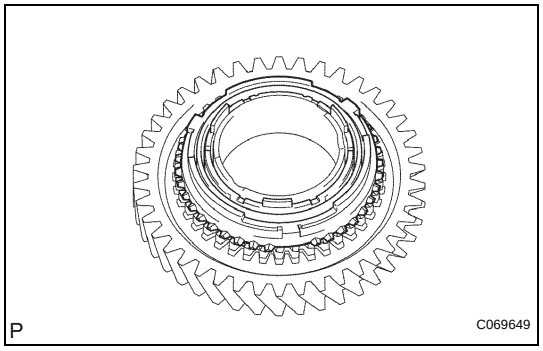
(c) Using a screwdriver, install the 3 No. 1 synchromesh shifting keys to the reverse gear.



2. INSTALL OUTPUT SHAFT FRONT BEARING

(a) Using SST and a press, install the output shaft front bearing (inner race) to the output shaft.

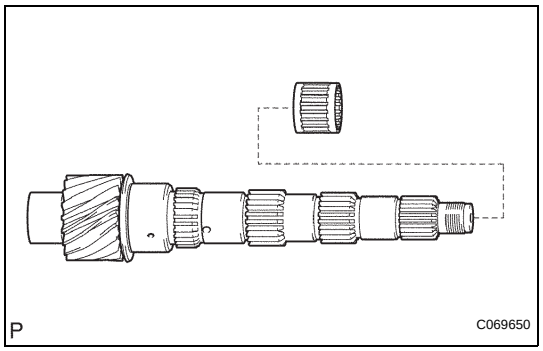
SST 09950-60010 (09951-00430), 09950-70010 (09951-07150)



3. INSTALL NO. 1 SYNCHRONIZER RING SET

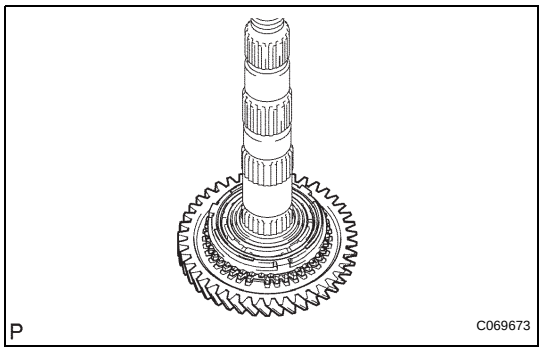
(a) Coat the No. 1 synchronizer ring set with gear oil and install it to the 1st gear.

NOTICE:
Align the No. 1 synchronizer ring set with the hole of the 1st gear.



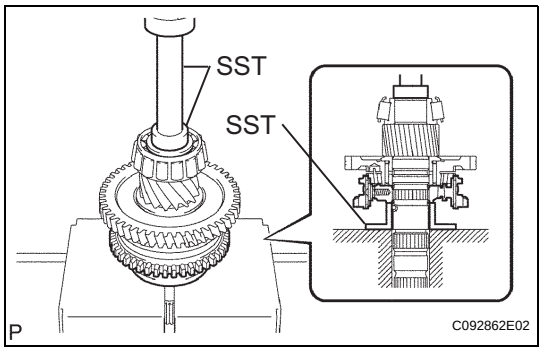
4. INSTALL 1ST GEAR NEEDLE ROLLER BEARING

(a) Coat the 1st gear needle roller bearing with gear oil and install it to the output shaft.



5. INSTALL 1ST GEAR

(a) Coat the 1st gear with gear oil and install it to the output shaft.



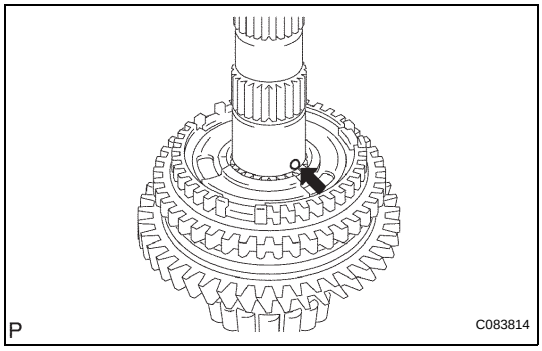
6. INSTALL NO. 1 TRANSMISSION CLUTCH HUB

(a) Using SST and a press, install the No. 1 transmission clutch hub to the output shaft.

SST 09316-60011 (09316-00031), 09950-60010 (09951-00320), 09950-70010 (09951-07100)

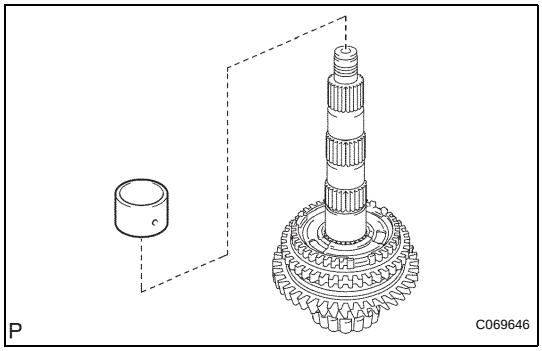
NOTICE:

- **Align the No. 1 synchronizer ring with the No. 1 synchromesh shifting key.**
- **Make sure that the 1st gear rotates.**



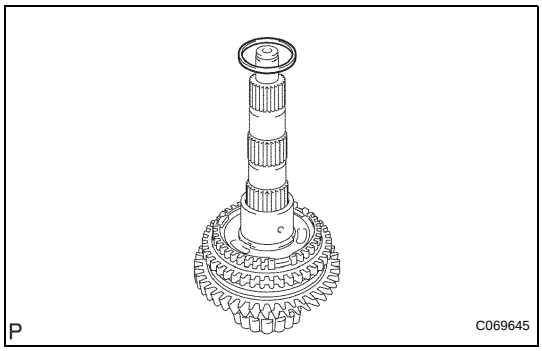
7. INSTALL 2ND GEAR BUSHING BALL

(a) Coat the gear bushing with MP grease, and install it to the output shaft.



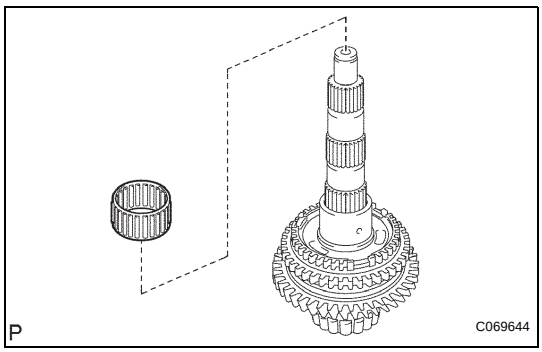
8. INSTALL 2ND GEAR BUSHING

(a) Coat the 2nd gear bushing with gear oil and install it to the output shaft.



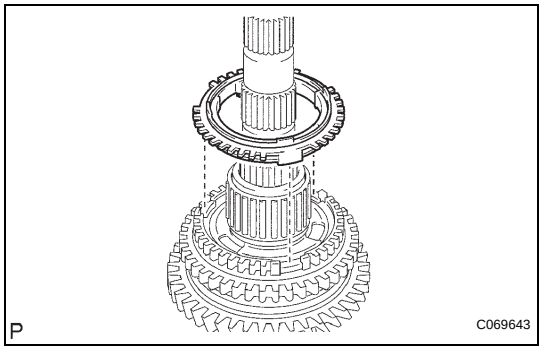
9. INSTALL 2ND GEAR BEARING SPACER

(a) Coat the 2nd gear bearing spacer with gear oil and install it to the output shaft.



10. INSTALL 2ND GEAR NEEDLE ROLLER BEARING

(a) Coat the 2nd gear needle roller bearing with gear oil and install it to the output shaft.

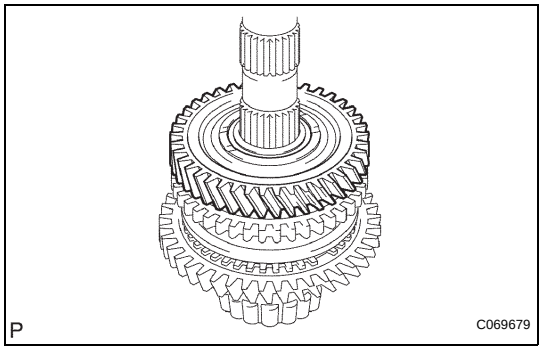


11. INSTALL NO. 2 SYNCHRONIZER RING SET

(a) Coat the No. 2 synchronizer ring set with gear oil and install it to the No. 1 transmission clutch hub.

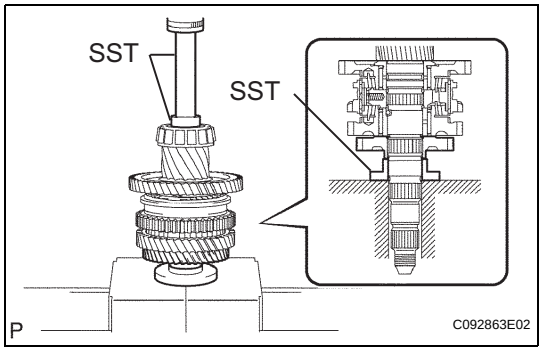
NOTICE:

Align the key groove on the No. 2 synchronizer ring set with the No. 1 synchromesh shifting key.



12. INSTALL 2ND GEAR

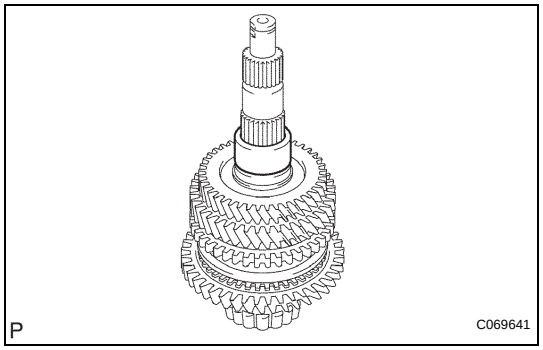
(a) Coat the 2nd gear with gear oil and install it to the output shaft.



13. INSTALL 3RD DRIVEN GEAR

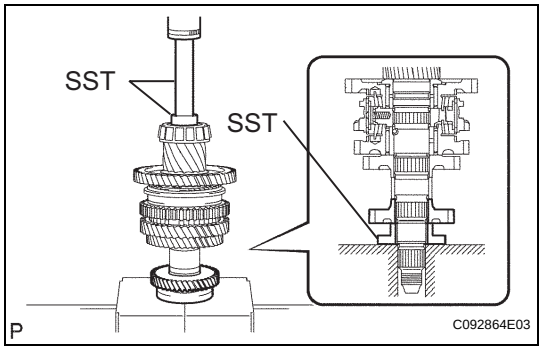
(a) Using SST and a press, install the 3rd driven gear to the output shaft.

SST 09608-00071, 09950-60010 (09951-00320), 09950-70010 (09951-07100)



14. INSTALL OUTPUT GEAR SPACER

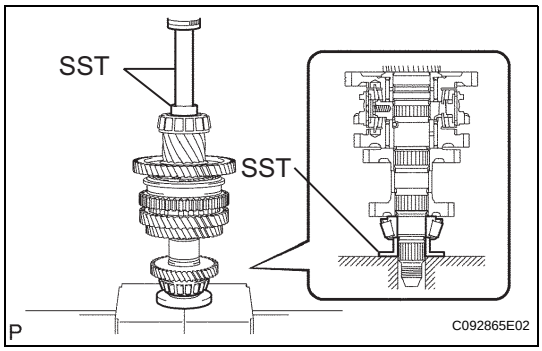
(a) Install the output gear spacer to the output shaft.



15. INSTALL 4TH DRIVEN GEAR

(a) Using SST and a press, install the 4th driven gear to the output shaft.

SST 09608-00071, 09950-60010 (09951-00320), 09950-70010 (09951-07100)



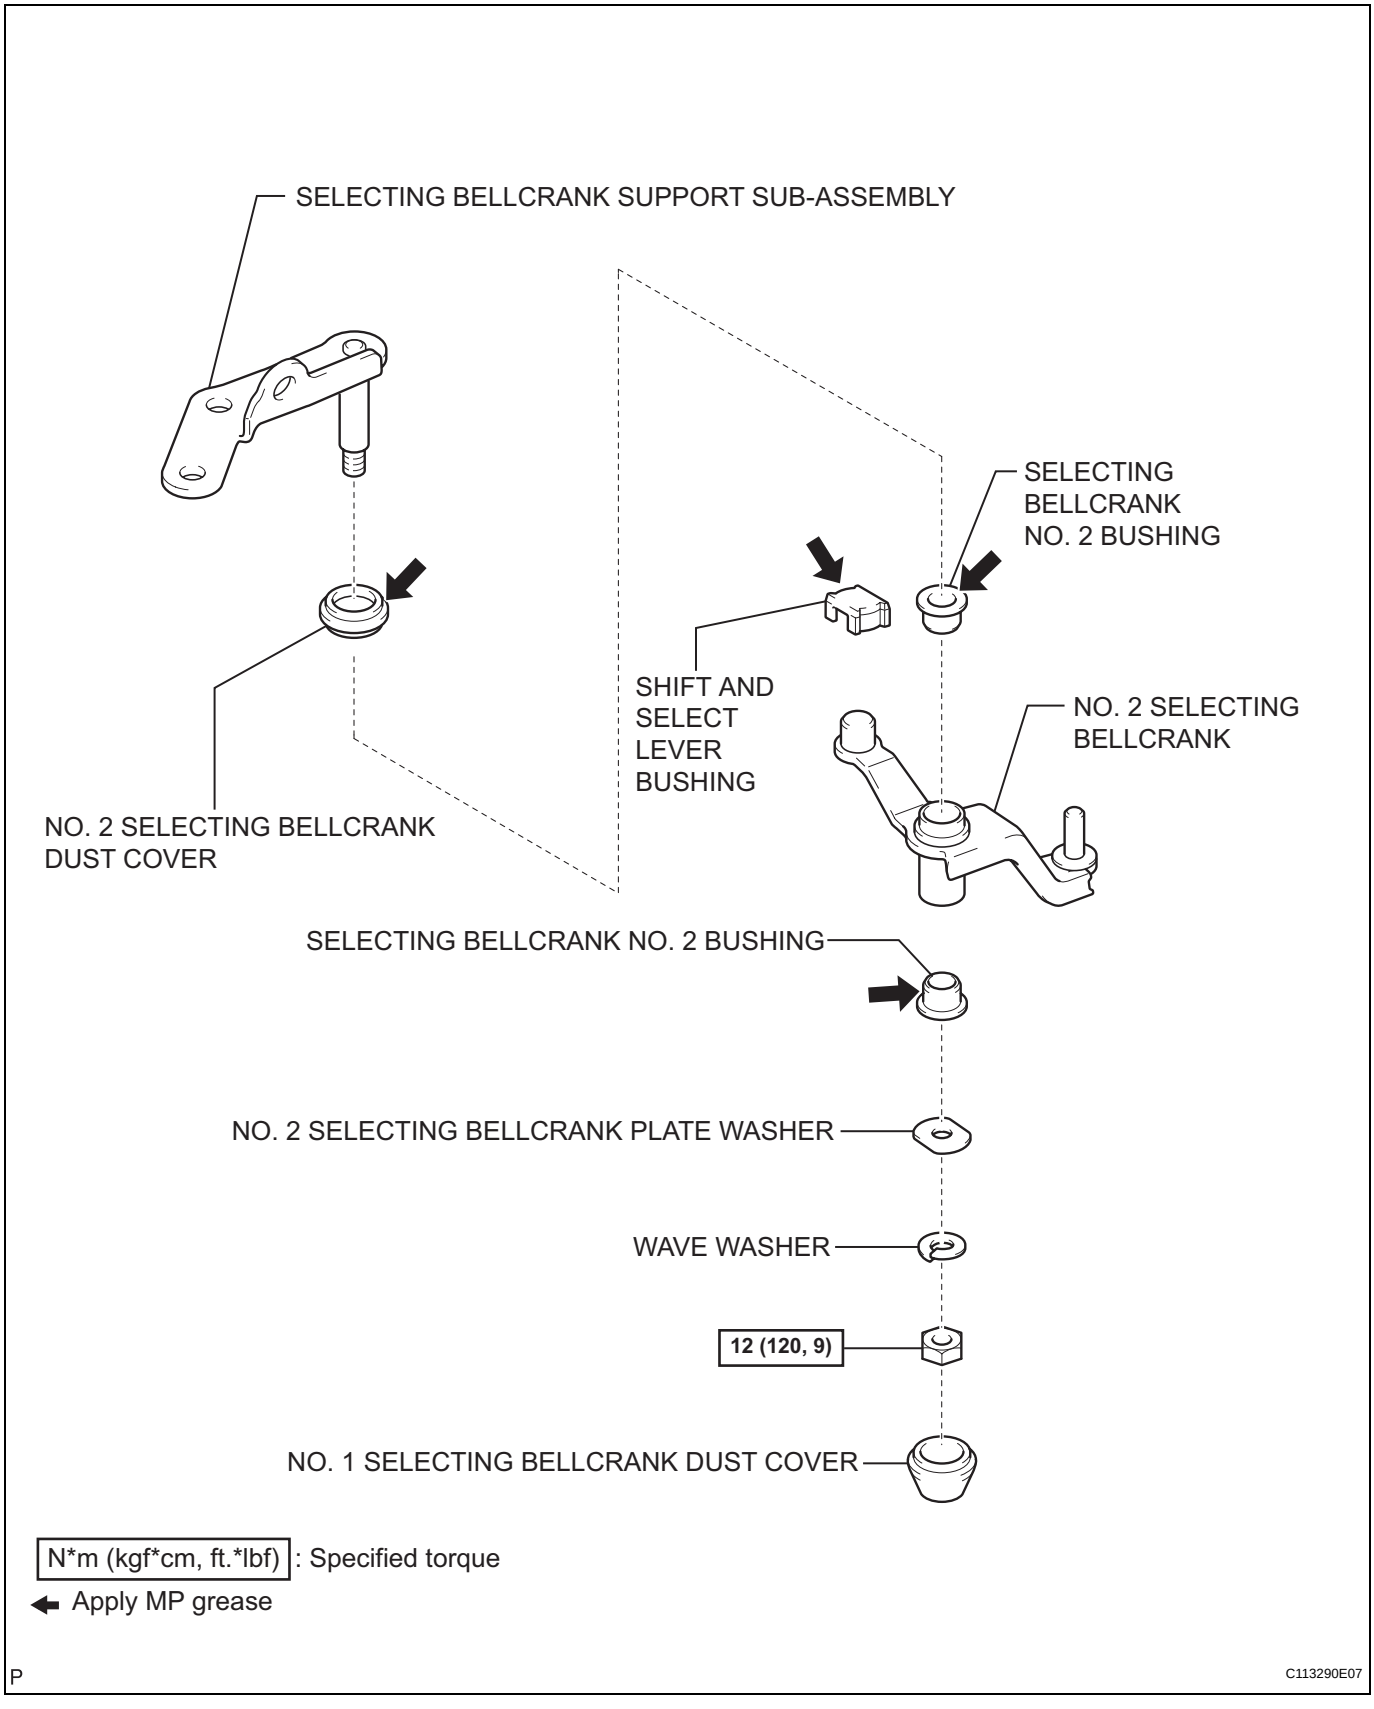
16. INSTALL OUTPUT SHAFT FRONT BEARING

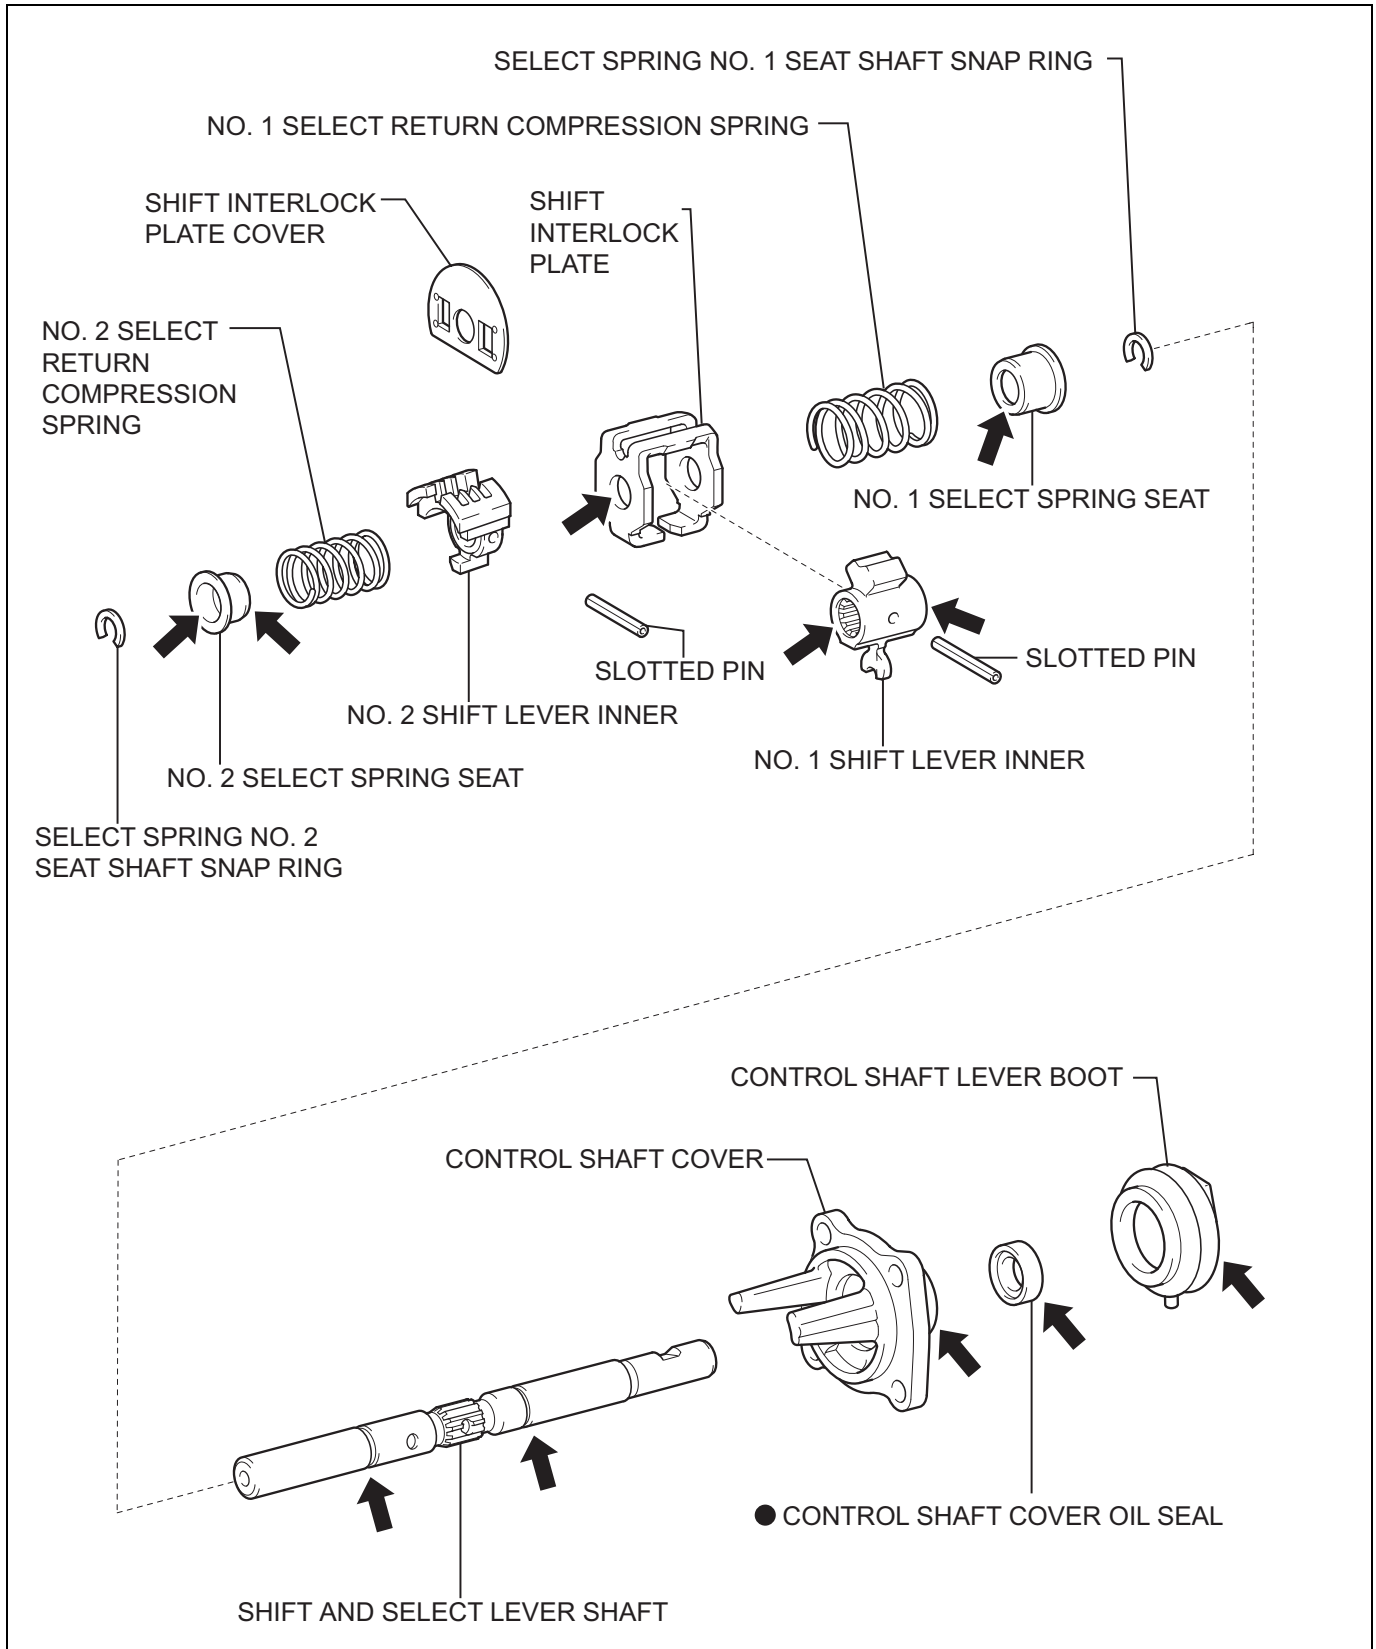
(a) Using SST and a press, install the output shaft front bearing (inner race) to the output shaft.

SST 09506-30012, 09950-60010 (09951-00320), 09950-70010 (09951-07100)

SHIFT AND SELECT LEVER SHAFT

COMPONENTS

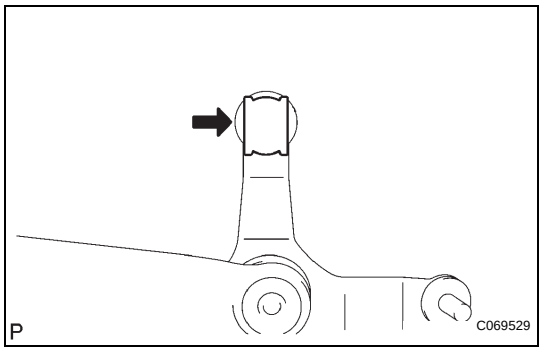




● Non-reusable part ⬅ Apply MP grease

P

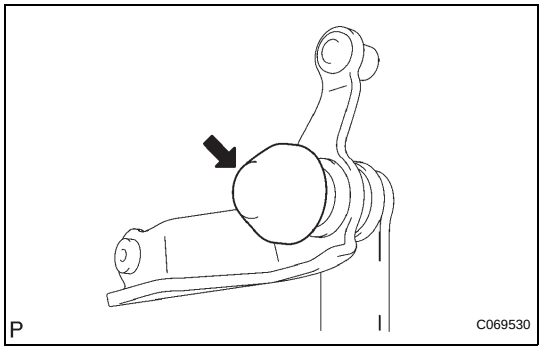
C135404E01



DISASSEMBLY

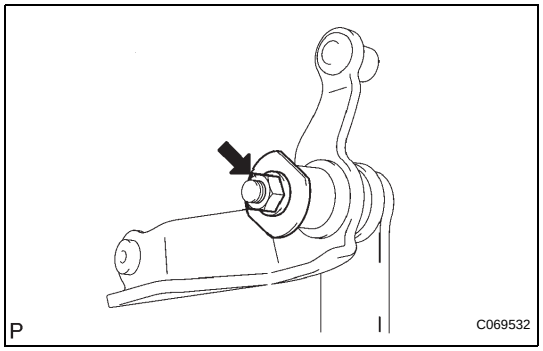
1. REMOVE CONTROL SHIFT LEVER BUSHING

(a) Remove the control shift lever bushing from the No. 2 selecting bellcrank.



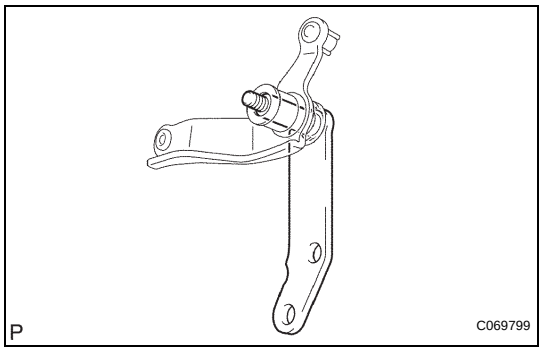
2. REMOVE NO. 1 SELECTING BELLCRANK DUST COVER

(a) Remove the No. 1 selecting bellcrank dust cover from the No. 2 selecting bellcrank.

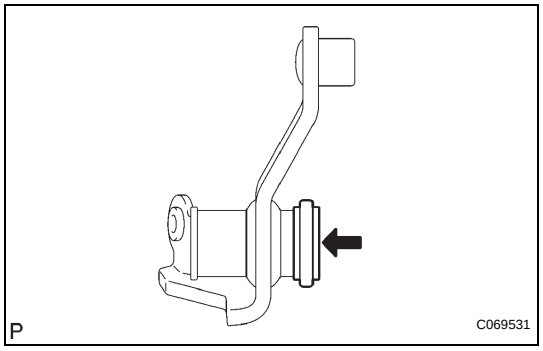


3. REMOVE SELECTING BELLCRANK SUPPORT SUB-ASSEMBLY

(a) Remove the nut, wave washer, and selecting bellcrank No. 2 plate washer from the No. 2 selecting bellcrank.

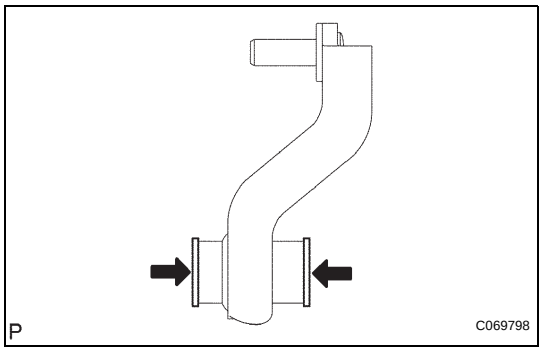


(b) Remove the selecting bellcrank support sub-assembly from the No. 2 selecting bellcrank.



4. REMOVE NO. 2 SELECTING BELLCRANK DUST COVER

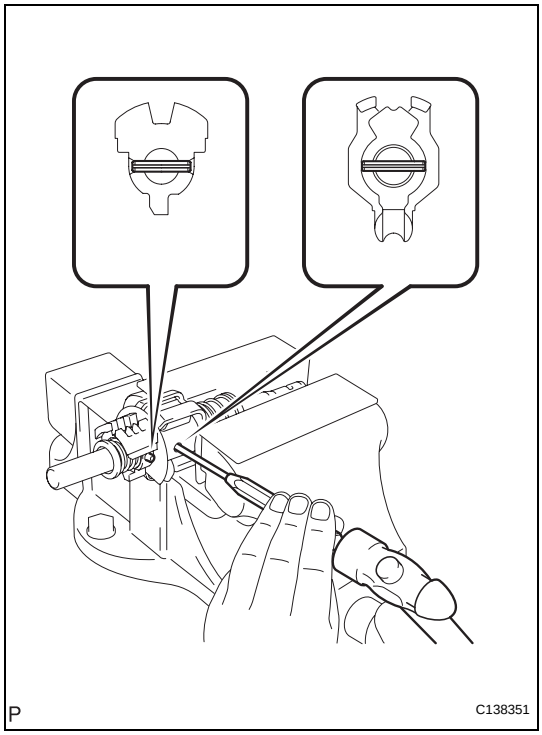
(a) Remove the No. 2 selecting bellcrank dust cover from the No. 2 selecting bellcrank.



5. REMOVE SELECTING BELLCRANK NO. 2 BUSHING

(a) Remove the selecting bellcrank bushing from the No. 2 selecting bellcrank.

MX

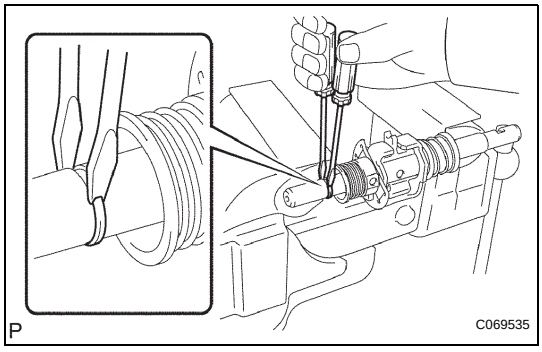


6. REMOVE NO. 2 SHIFT LEVER INNER

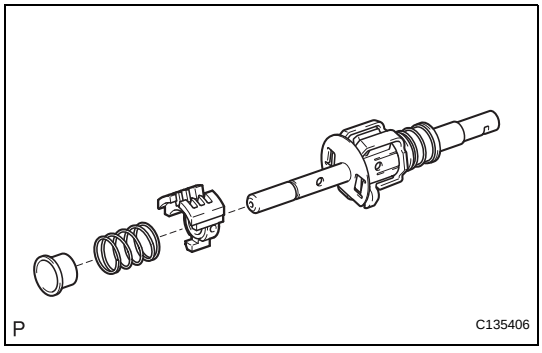
(a) Hold the shift and select lever in a vise using aluminum plates.
NOTICE:
Do not damage the shift and select lever shaft.

(b) Using a pin punch (ϕ 5 mm), remove the 2 shift inner lever slotted pins.
NOTICE:
Do not damage the shift and select lever shaft.

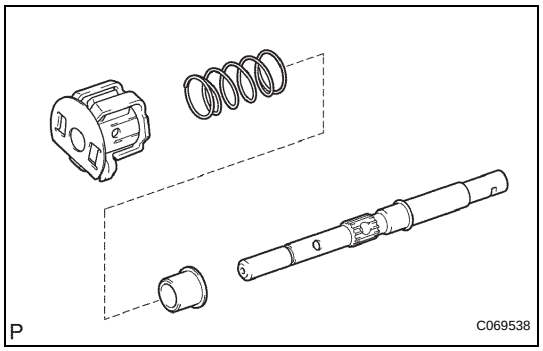
(c) Apply force to the No. 1 select return compression spring and No. 2 select return compression spring, then hold them in a vise using aluminum plates.



(d) Using 2 screwdrivers and a hammer, remove the select spring No. 2 seat snap ring from the shift and select lever shaft.
NOTICE:
Do not damage the shift and select lever shaft.

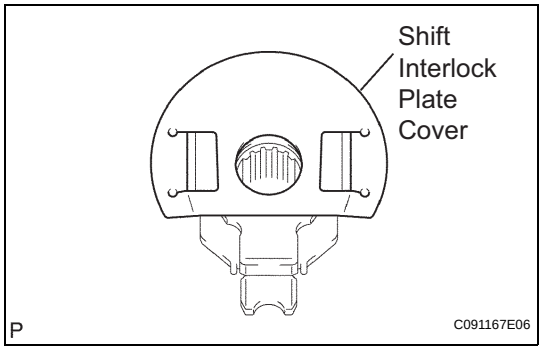


(e) Remove the No. 2 select spring seat, No. 2 select return compression spring, and No. 2 shift lever inner from the shift and select lever shaft.



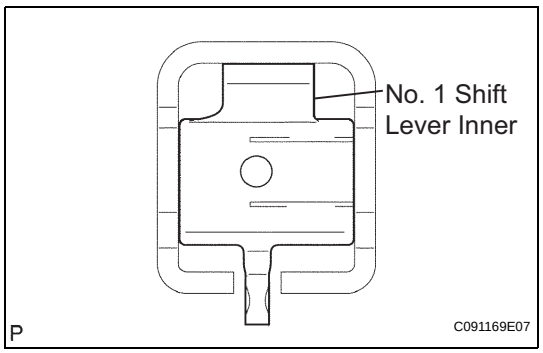
7. REMOVE NO. 1 SELECT SPRING SEAT

(a) Remove the shift inter lock plate, No. 1 select return compression spring and No. 1 select spring seat from the shift and select lever shaft.



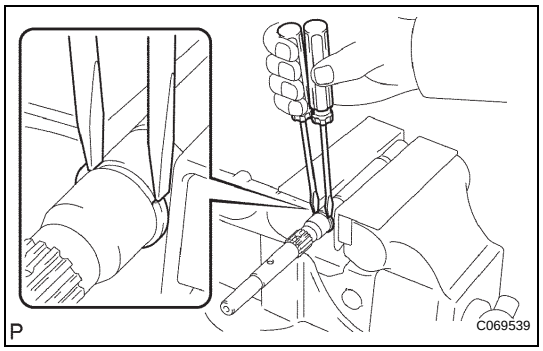
8. REMOVE SHIFT INTERLOCK PLATE COVER

(a) Remove the shift interlock plate cover from the shift interlock plate.



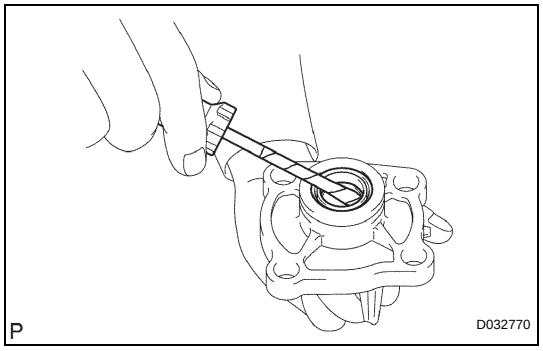
9. REMOVE NO. 1 SHIFT LEVER INNER

(a) Remove the No. 1 shift lever inner from the shift interlock plate.



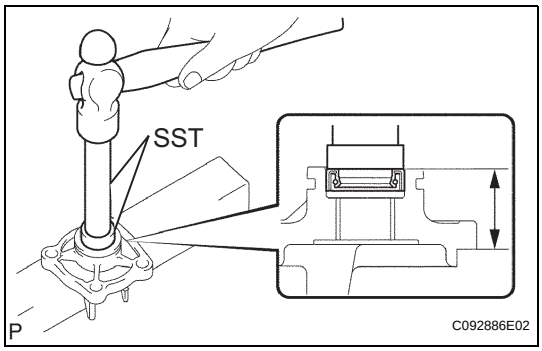
10. REMOVE SELECT SPRING NO. 1 SEAT SHAFT SNAP RING

(a) Using 2 screwdrivers and a hammer, remove the select spring No. 1 seat shaft snap ring.
NOTICE:
Do not damage the shaft.



11. REMOVE CONTROL SHAFT COVER OIL SEAL

(a) Using a screwdriver, remove the control shaft cover oil seal from the control shaft cover.
HINT:
Tape the screwdriver tip before use to avoid damage.



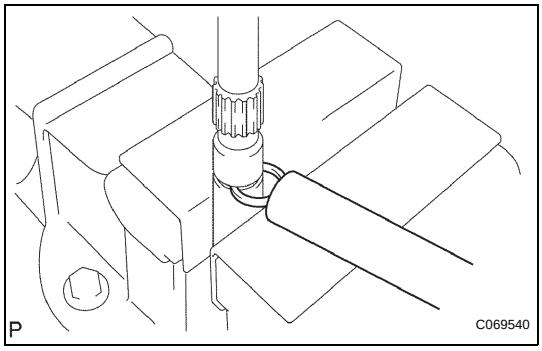
REASSEMBLY

1. INSTALL CONTROL SHAFT COVER OIL SEAL

(a) Using SST and a hammer, install a new control shaft cover oil seal to the control shaft cover.

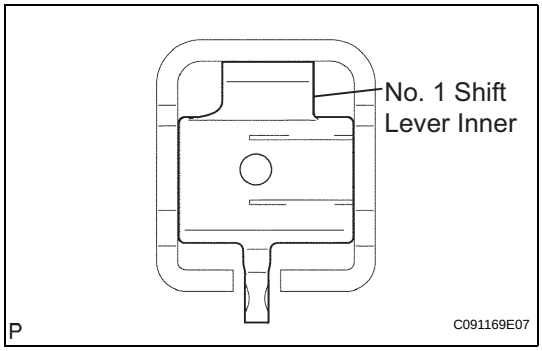
SST 09950-60010 (09951-00280), 09950-70010 (09951-07100)

Oil seal installation depth:
28.0 to 29.0 mm (1.1022 to 1.142 in.)



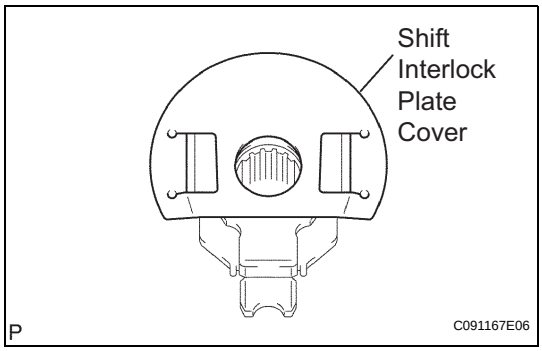
2. INSTALL SELECT SPRING NO. 1 SEAT SHAFT SNAP RING

(a) Using a brass bar and a hammer, install the select spring No. 1 seat shaft snap ring.



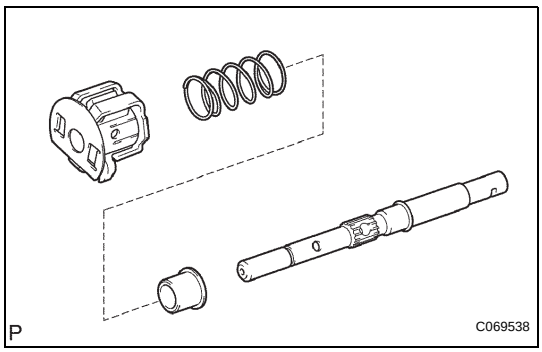
3. INSTALL NO. 1 SHIFT LEVER INNER

(a) Install the No. 1 shift lever inner to the shift interlock plate.



4. INSTALL SHIFT INTERLOCK PLATE COVER

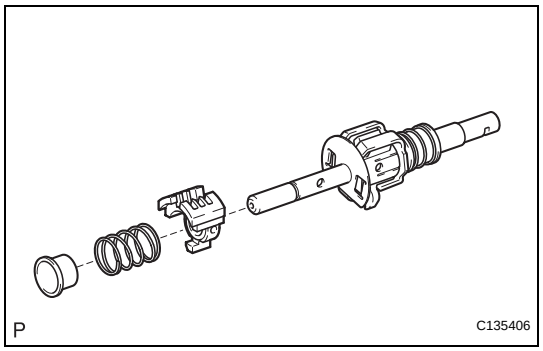
(a) Install the shift interlock plate cover to the shift interlock plate.



5. INSTALL NO. 1 SELECT SPRING SEAT

(a) Install the No. 1 select spring seat, No. 1 select return compression spring, and shift interlock plate to the shift and select lever shaft.

MX

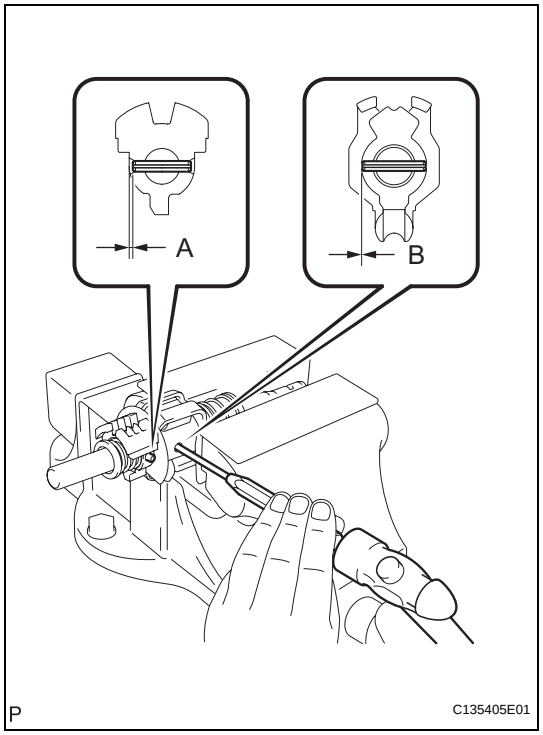


6. INSTALL NO. 2 SHIFT LEVER INNER

(a) Install the No. 2 shift lever inner, No. 2 select return compression spring and No. 2 select return spring seat to the shift and select lever shaft.

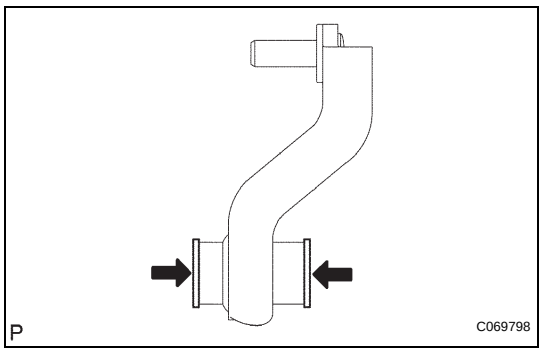
(b) Hold the shift and select lever in a vise using aluminum plates.

(c) Using a brass bar and a hammer, install the select seat snap ring to the shift and select lever shaft.



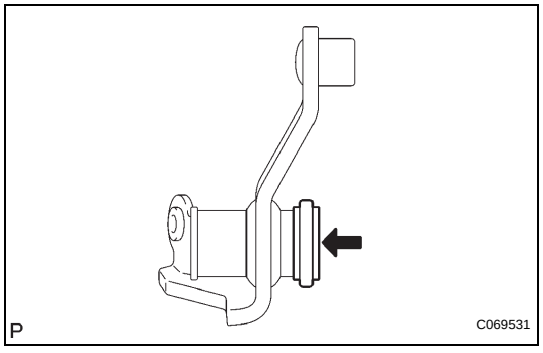
(d) Using a pin punch (ϕ 5 mm) and a hammer, install the 2 shift inner lever slotted pins to the shift and select lever shaft.

Clearance A:
0.7 to 1.7 mm (0.0276 to 0.0669 in.)
Clearance B:
-0.4 to 0.5 mm (-0.0157 to 0.0197 in.)



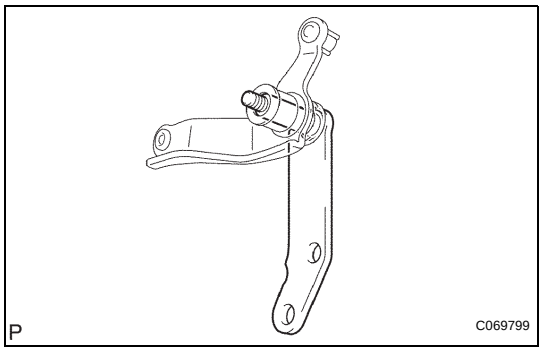
7. INSTALL SELECTING BELLCRANK NO. 2 BUSHING

(a) Coat the 2 selecting bellcrank No. 2 bushings with MP grease and install them to the No. 2 selecting bellcrank.



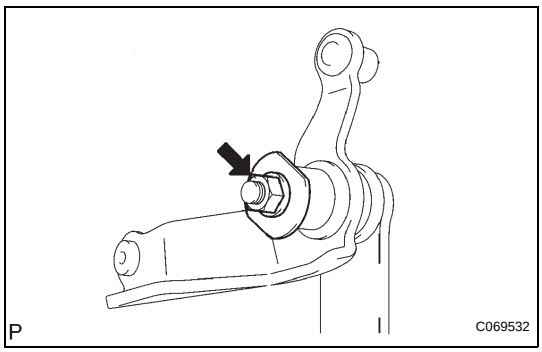
8. INSTALL NO. 2 SELECTING BELLCRANK DUST COVER

(a) Coat the No. 2 selecting bellcrank dust cover with MP grease and install it to the No. 2 selecting bellcrank.

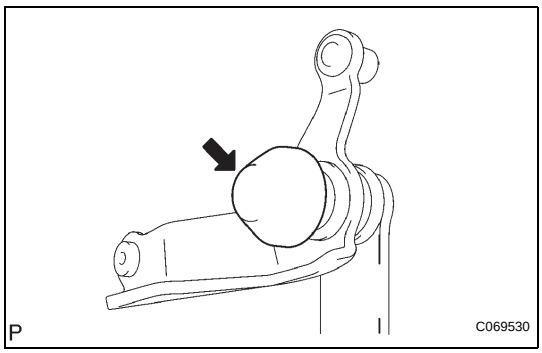


9. INSTALL SELECTING BELLCRANK SUPPORT SUB-ASSEMBLY

(a) Install the selecting bellcrank support sub-assembly to the No. 2 selecting bellcrank.

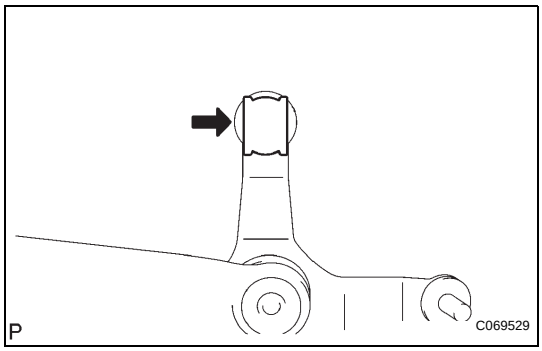


(b) Install the No. 2 selecting bellcrank plate washer, washer, and nut.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)



10. INSTALL NO. 1 SELECTING BELLCRANK DUST COVER

(a) Install the No. 1 selecting bellcrank dust cover to the No. 2 selecting bellcrank.

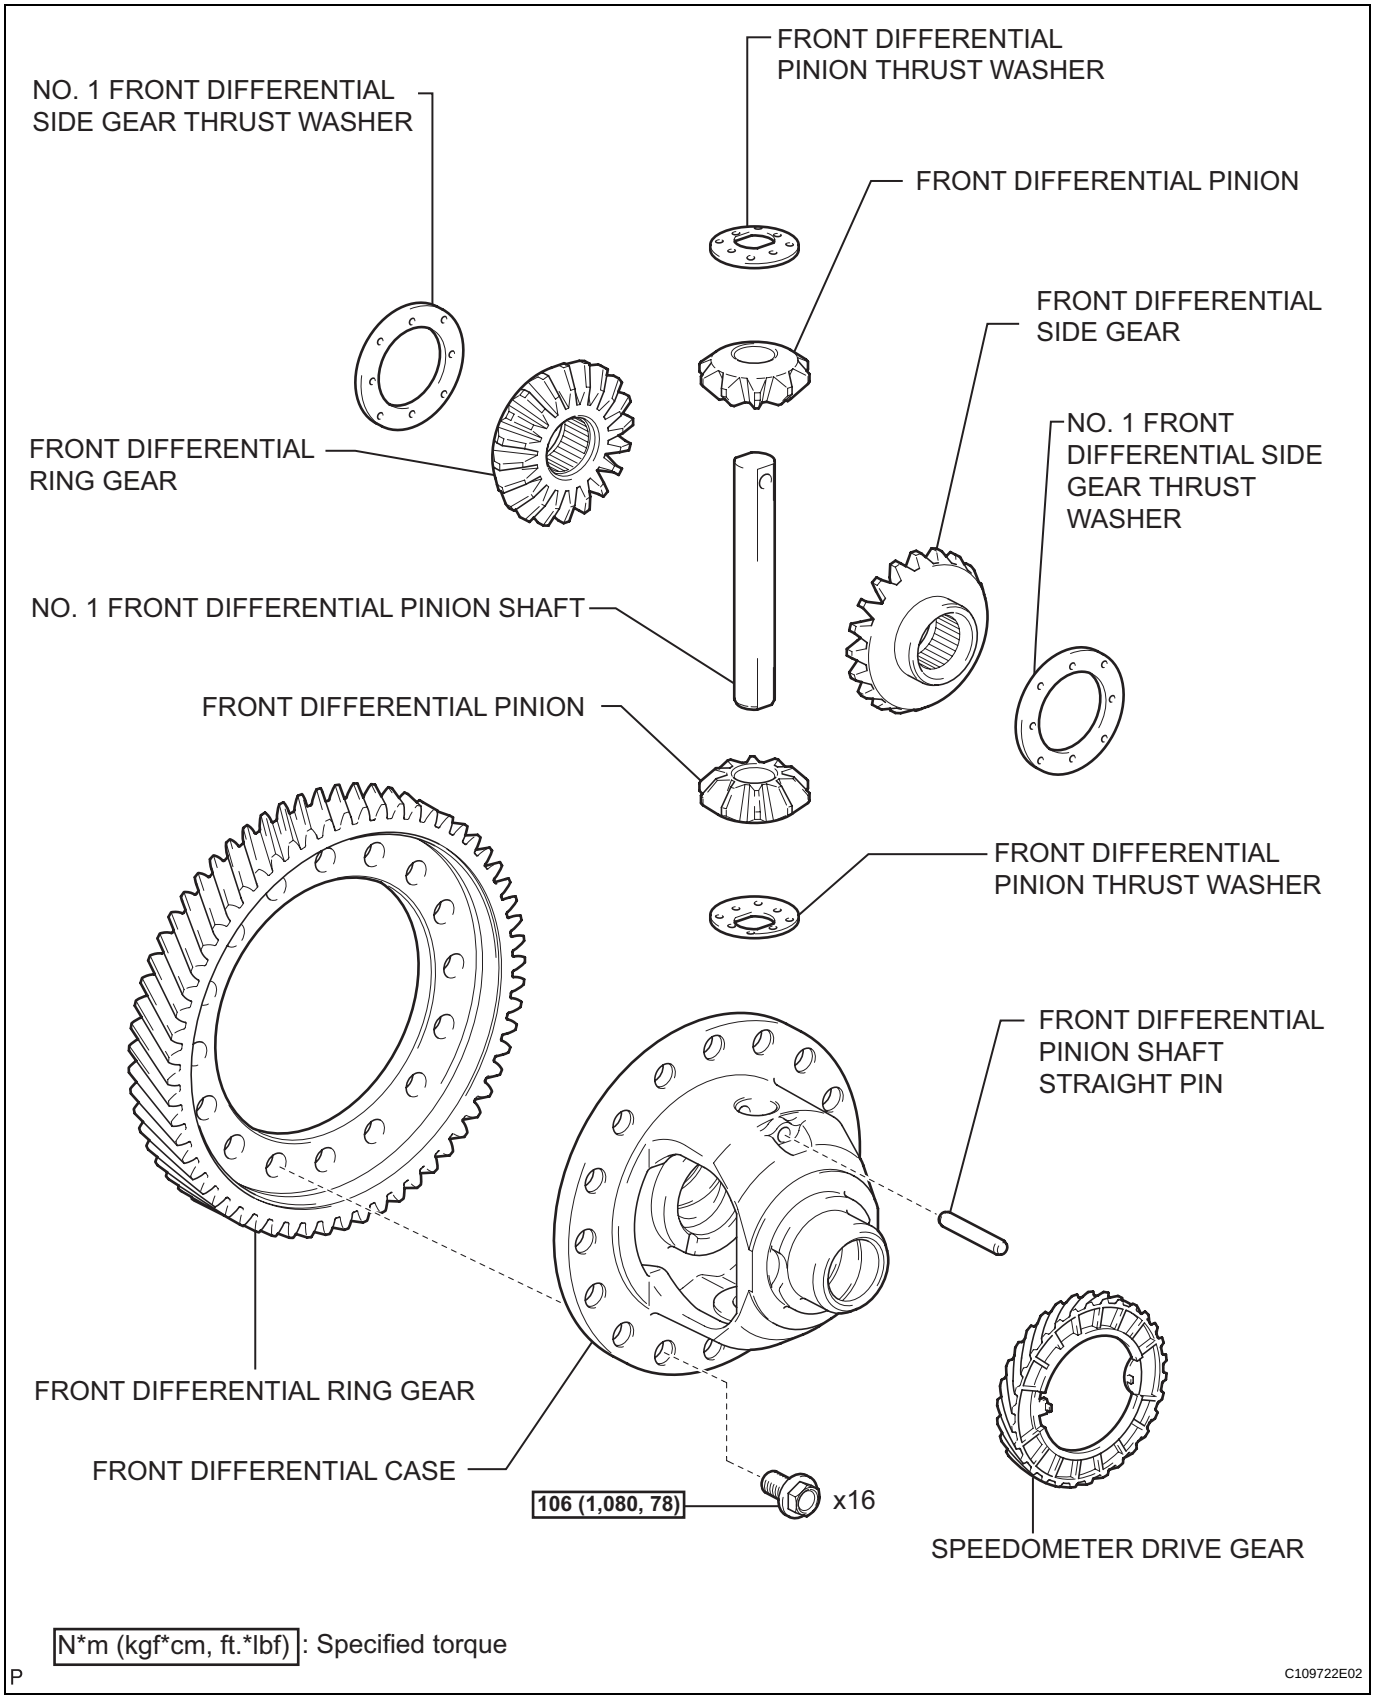


11. INSTALL CONTROL SHIFT LEVER BUSHING

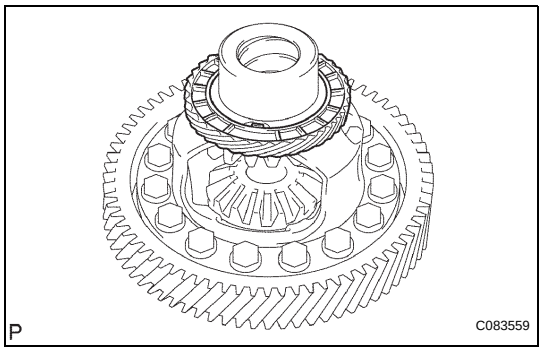
(a) Install the control shift lever bushing to the No. 2 selecting bellcrank.

DIFFERENTIAL CASE

COMPONENTS

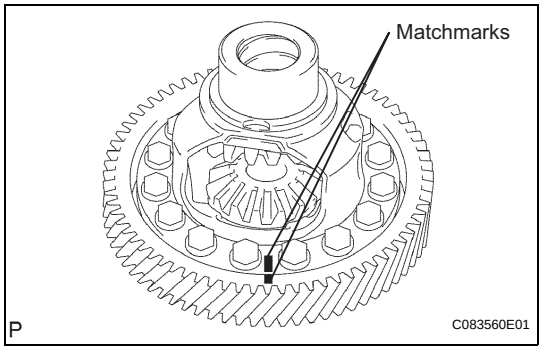


DISASSEMBLY



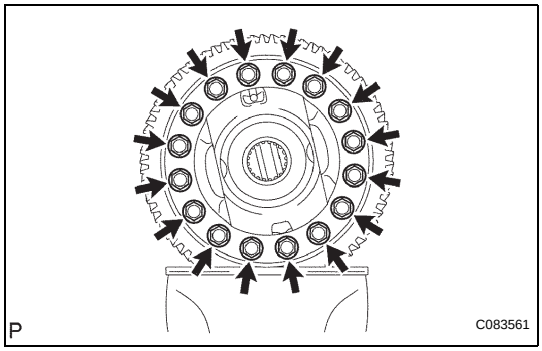
1. REMOVE SPEEDOMETER DRIVE GEAR

(a) Remove the speedometer drive gear from the front differential case assembly.



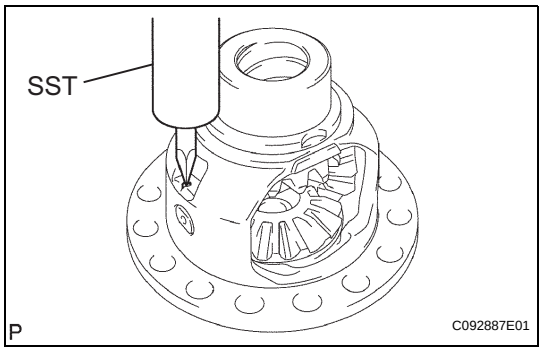
2. REMOVE FRONT DIFFERENTIAL RING GEAR

(a) Put matchmarks on the front differential ring gear and the front differential case.



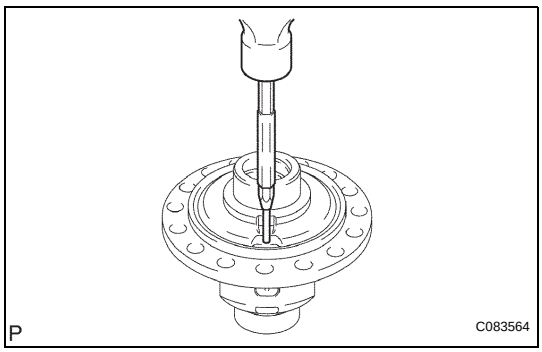
(b) Remove the 16 bolts.

(c) Using a plastic hammer, remove the front differential case.

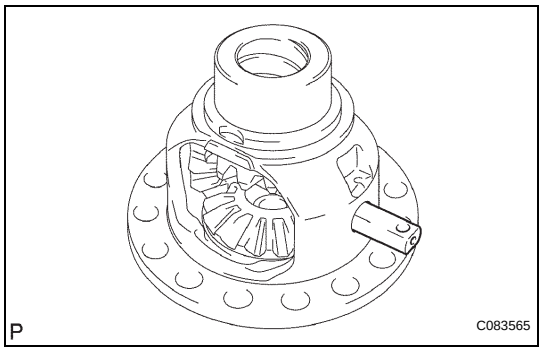


3. REMOVE FRONT DIFFERENTIAL PINION SHAFT STRAIGHT PIN

(a) Using SST and a hammer, unstake the staked part of the front differential case.
SST 09930-00010

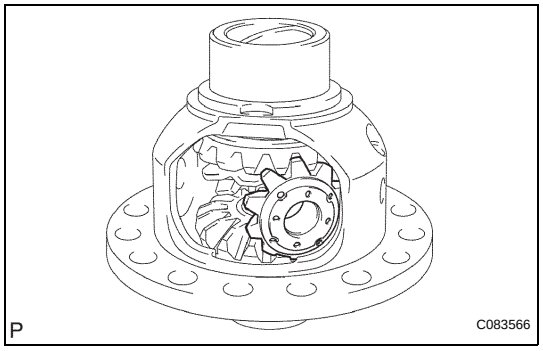


(b) Using a pin punch and a hammer, remove the front differential pinion shaft straight pin from the front differential case.



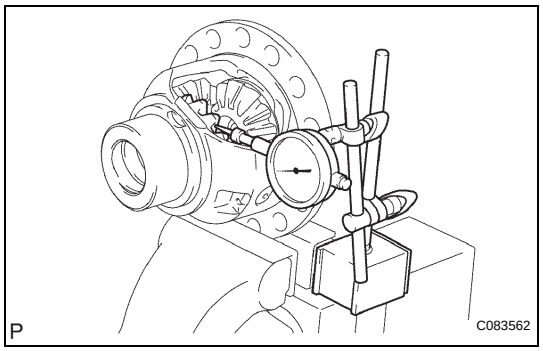
4. REMOVE NO. 1 FRONT DIFFERENTIAL PINION SHAFT

(a) Remove the No. 1 front differential pinion shaft from the front differential case.



5. REMOVE FRONT DIFFERENTIAL SIDE GEAR

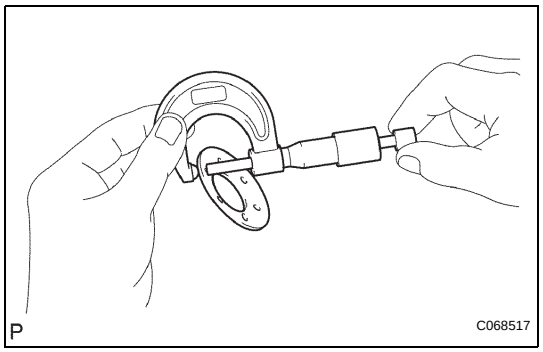
(a) Remove the 2 front differential pinions, 2 front differential pinion thrust washers, 2 front differential side gears, and 2 front differential side gear thrust washers from the front differential case.
HINT:
Remove the 2 pinion thrust washers and side gear thrust washers while turning the front differential pinion.



INSPECTION

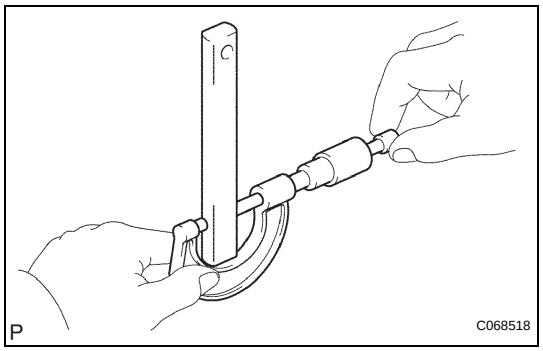
1. INSPECT FRONT DIFFERENTIAL SIDE GEAR BACKLASH

(a) Hold the front differential pinion to the front differential case side. Using a dial indicator, measure the front differential side gear backlash.
Standard backlash:
0.05 to 0.20 mm (0.002 to 0.0079 in.)
If backlash is out of specification, install proper side gear thrust washers.



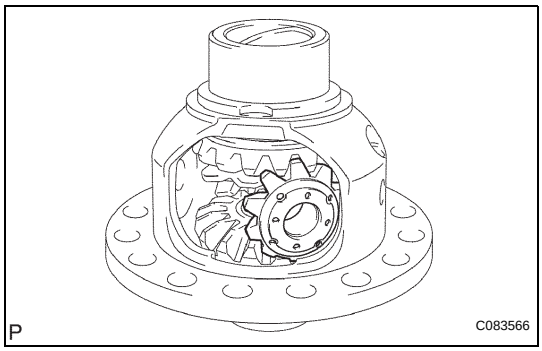
2. INSPECT FRONT DIFFERENTIAL PINION THRUST WASHER

(a) Using a micrometer, measure the thickness of the front differential pinion thrust washer.
Minimum thickness:
0.9 mm (0.035 in.)
If the thickness is less than the minimum, replace the front differential pinion thrust washer.



3. INSPECT NO. 1 FRONT DIFFERENTIAL PINION SHAFT

(a) Using a micrometer, measure the outside diameter of the No. 1 front differential pinion shaft.
Minimum diameter:
17.975 mm (0.70768 in.)
If the outer diameter is less than the minimum, replace the No. 1 front differential pinion shaft.



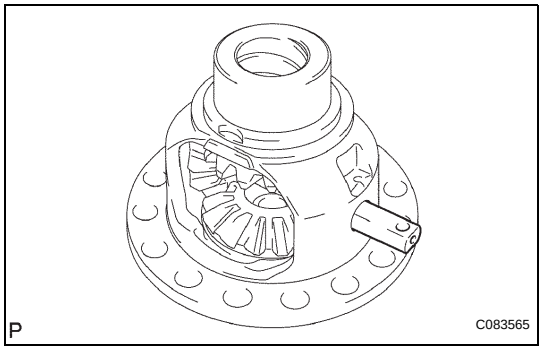
REASSEMBLY

1. INSTALL FRONT DIFFERENTIAL SIDE GEAR

(a) Coat the rotating surface of the front differential side gear with gear oil.

(b) Install the 2 front differential side gear thrust washers to the 2 front differential side gears.

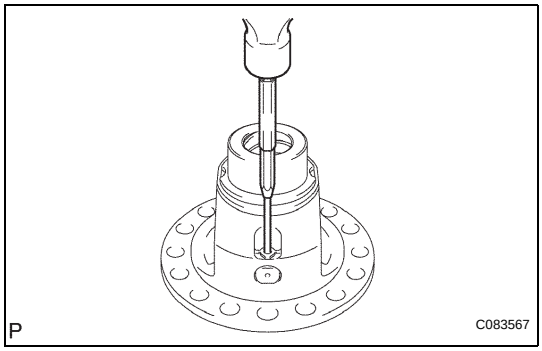
(c) Install the 2 front differential side gears, 2 front differential pinions, and 2 front differential side gear thrust washers to the front differential case.
HINT:
Install the 2 front differential pinions with the front differential washers while turning the front differential pinion.



2. REMOVE NO. 1 FRONT DIFFERENTIAL PINION SHAFT

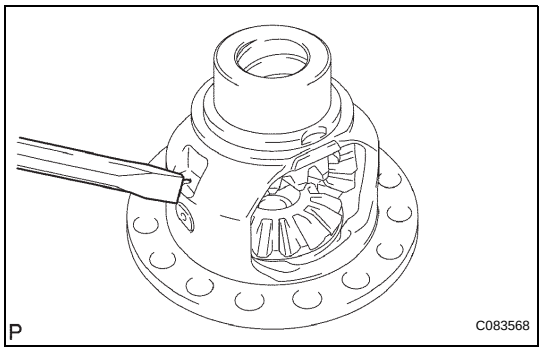
(a) Coat the rotating surface of the No. 1 front differential pinion shaft with gear oil.

(b) Install the No. 1 front differential pinion shaft to the front differential case so that the hole for the front differential pinion shaft straight pin is aligned with the hole in the front differential case.

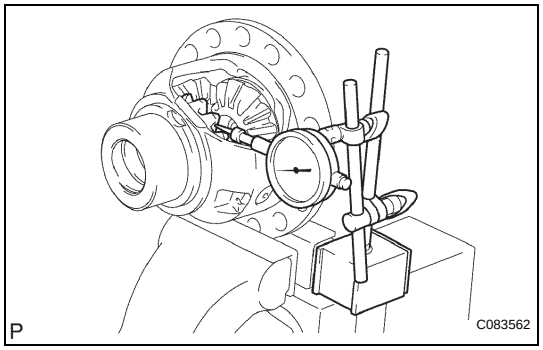


3. INSTALL FRONT DIFFERENTIAL PINION SHAFT STRAIGHT PIN

(a) Using a pin punch and a hammer, install the front differential pinion shaft straight pin to the front differential case.



(b) Using a chisel and hammer, stake the front differential case hole.

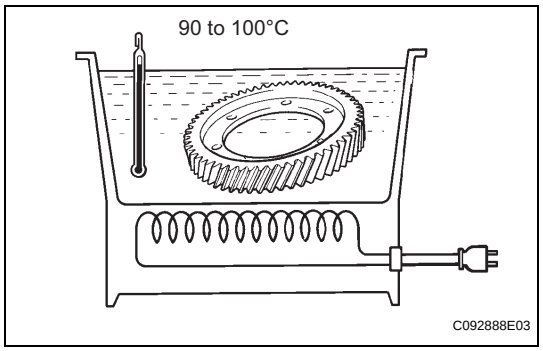


4. ADJUST FRONT DIFFERENTIAL SIDE GEAR BACKLASH

(a) Hold the front differential pinion to the front differential case side. Using a dial indicator, measure the front differential side gear backlash.
Standard backlash:
0.05 to 0.20 mm (0.002 to 0.0079 in.)

(b) If backlash is out of specification, select another front differential side gear thrust washer and adjust backlash.
Thrust washer

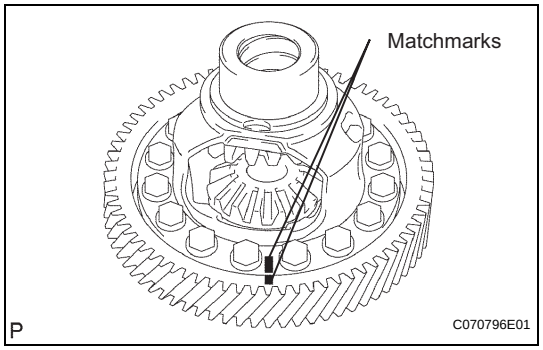
Part No.	Thickness: mm (in.)	Mark
41361-28230	1.00 (0.0394)	1
41361-28240	1.10 (0.0433)	2
41361-28250	1.20 (0.0472)	3
41361-28260	1.30 (0.0512)	4



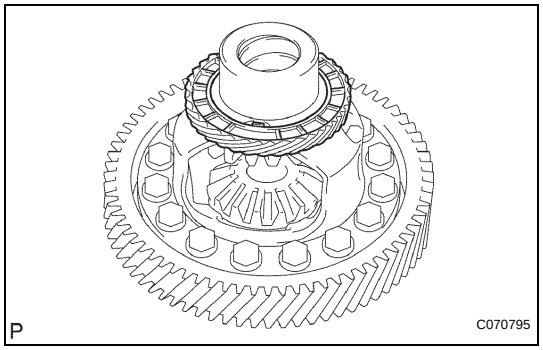
5. INSTALL FRONT DIFFERENTIAL RING GEAR

(a) Using a heater, heat the front differential ring gear to 90 to 100°C (194.0 to 212.0°F).

(b) Clean the surface that contacts the differential case.



(c) Aligning the matchmarks, quickly install the front differential ring gear to the front differential case.
Torque: 106 N*m (1,081 kgf*cm, 78 ft.*lbf)



6. INSTALL SPEEDOMETER DRIVE GEAR

(a) Install the speedometer drive gear to the front differential case.

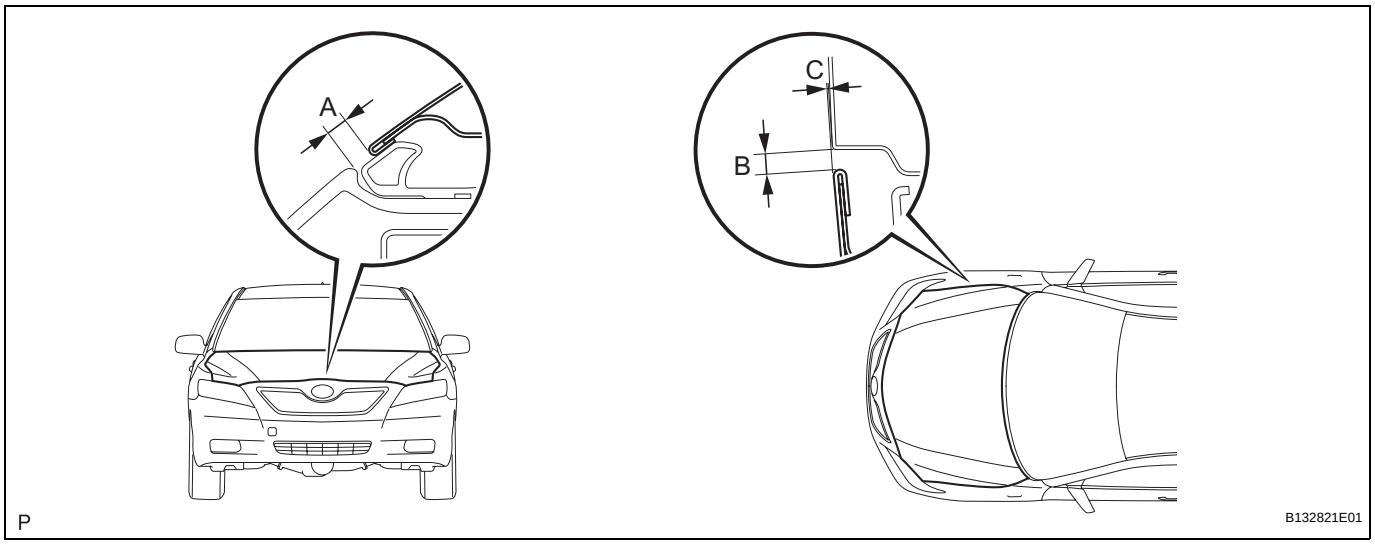
MX

HOOD

ON-VEHICLE INSPECTION

1. INSPECT HOOD SUB-ASSEMBLY

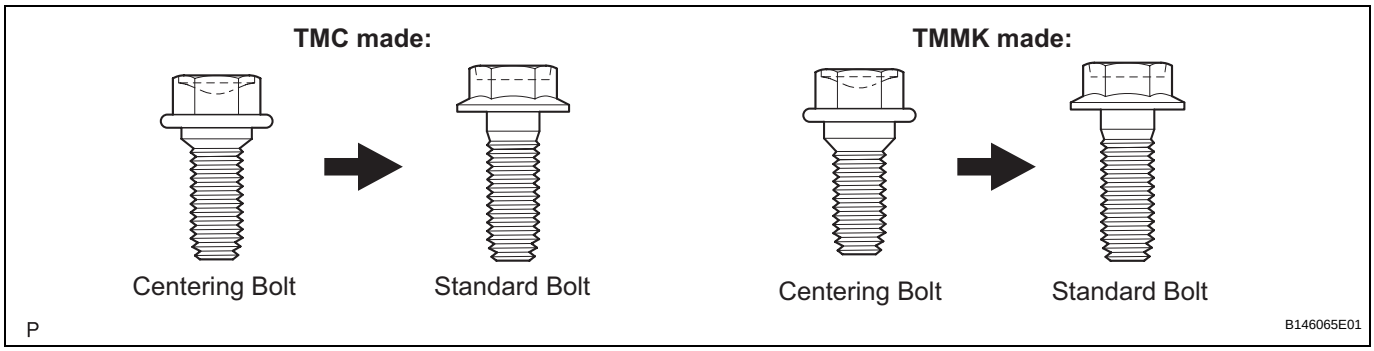
(a) Check that the clearance measurements of areas A to C are within each standard range.



Standard clearance

Area	Measurement
A	2.3 to 5.3 mm (0.091 to 0.209 in.)
B	2.0 to 5.0 mm (0.079 to 0.197 in.)
C	-1.4 to 1.6 mm (-0.055 to 0.063 in.)

ADJUSTMENT



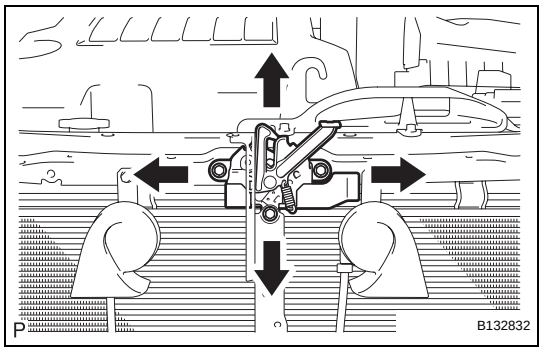
ED

HINT:

- Centering bolts are used to mount the hood hinge and hood lock. The hood and hood lock cannot be adjusted with the centering bolts on. Substitute the centering bolts with standard bolts (with washers) when making adjustments.
- A bolt without a torque specification is shown in the standard bolt chart (See page SS-2).

1. **REMOVE COOL AIR INTAKE DUCT SEAL (for 2GR-FE) (See page ET-4)**
2. **REMOVE FRONT BUMPER ASSEMBLY (w/o Fog Light) (See page ET-5)**
3. **REMOVE FRONT BUMPER ASSEMBLY (w/ Fog Light) (See page ET-6)**
4. **ADJUST HOOD SUB-ASSEMBLY**
   (a) Horizontally and vertically adjust the hood.
   (1) Loosen the hood's 4 hinge bolts.
   (2) Move the hood and adjust the clearance between the hood and front fender.
   (3) Tighten the hood's 4 hinge bolts after the adjustment.
   Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)

   (b) Adjust the height of the hood front end using the cushion rubber.
   (1) Adjust the cushion rubber so that the height of the hood and fender are aligned.
   HINT:
   Raise or lower the hood's front end by turning the cushion rubber.

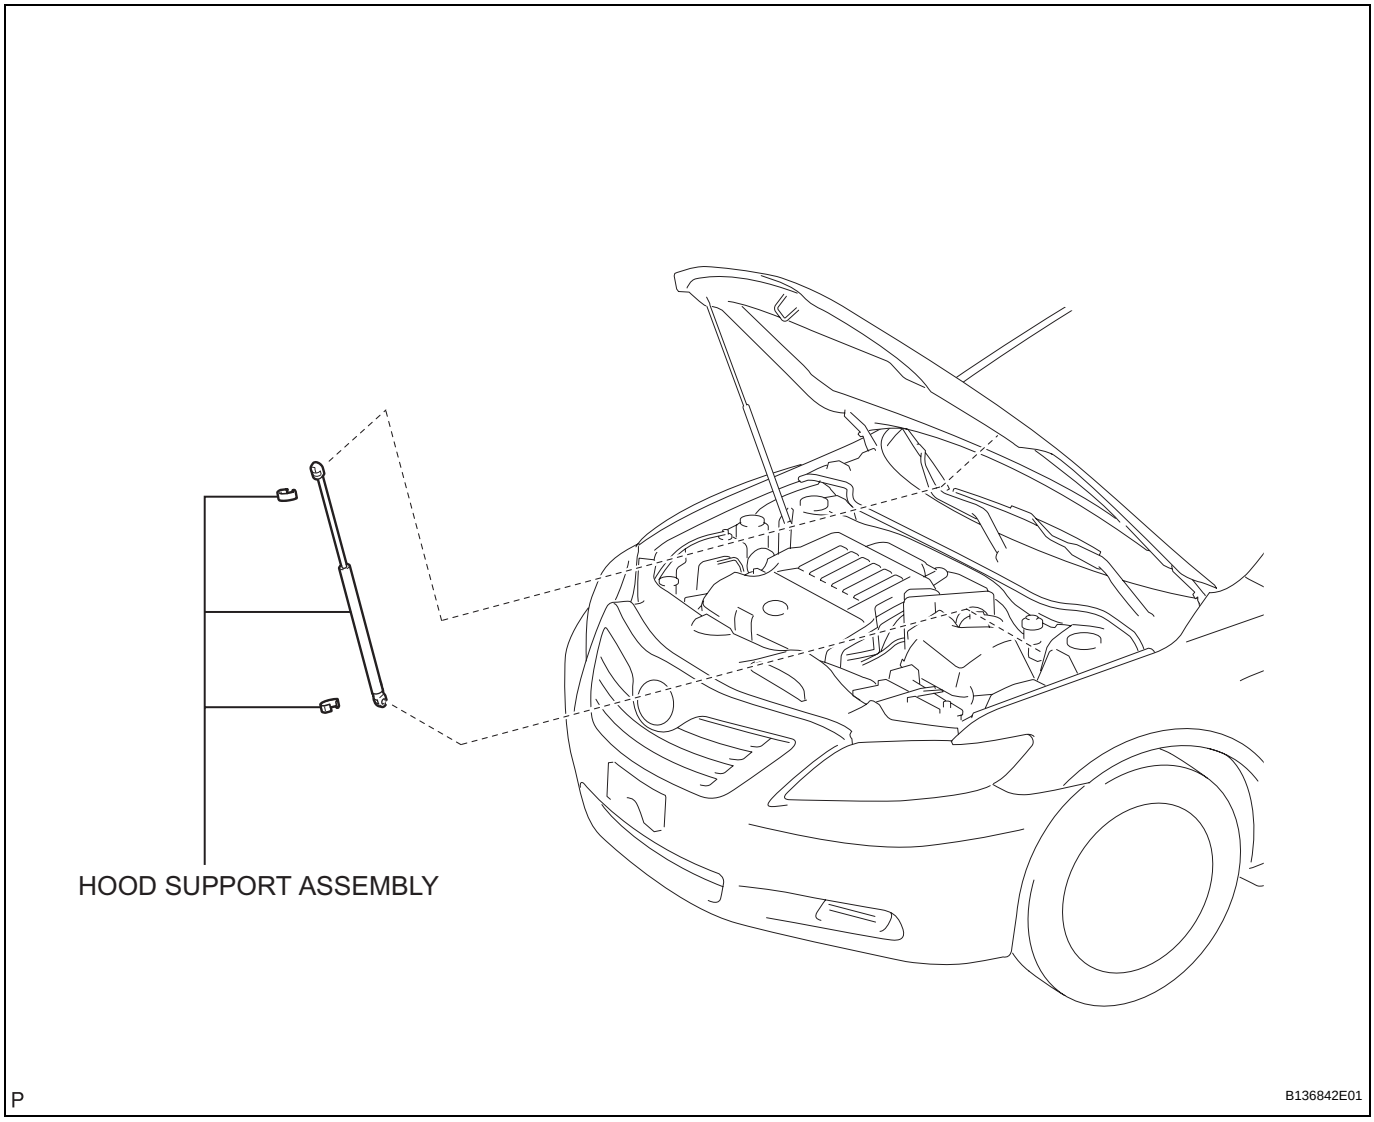


(c) Adjust the hood lock.
(1) Loosen the 3 bolts.
(2) Tighten the bolts after the adjustment.
Torque: 7.5 N*m (77 kgf*cm, 66 in.*lbf)
(3) Adjust the hood lock position so that the striker can enter it smoothly.

5. **INSTALL FRONT BUMPER ASSEMBLY (w/o Fog Light) (See page ET-13)**
6. **INSTALL FRONT BUMPER ASSEMBLY (w/ Fog Light) (See page ET-14)**
7. **INSTALL COOL AIR INTAKE DUCT SEAL (for 2GR-FE) (See page ET-14)**
8. **VEHICLE PREPARATION FOR FOG LIGHT AIM (w/ Fog Light) (See page LI-79)**
9. **PREPARATION FOR FOG LIGHT AIMING (w/ Fog Light) (See page LI-80)**
10. **FOG LIGHT AIMING INSPECTION (w/ Fog Light) (See page LI-81)**
11. **FOG LIGHT AIMING ADJUSTMENT (w/ Fog Light) (See page LI-82)**

HOOD SUPPORT ROD

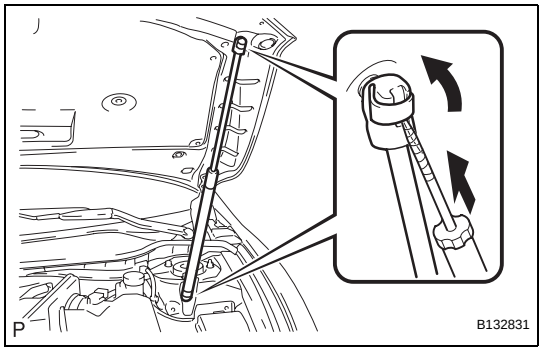
COMPONENTS



REMOVAL

NOTICE:

- **Avoid touching the stroke portions of the rod as much as possible to prevent foreign matter from attaching to it. Be sure to hold the cylinders while servicing.**
- **Do not wear cotton gloves or other similar materials when handling the rod. Fibers may attach to the rod and result in gas leaks.**
- **Do not apply any load to the cylinders in the horizontal direction in order to prevent the rod from being deformed.**



1. REMOVE HOOD SUPPORT ASSEMBLY

(a) Using a screwdriver, remove the hood support assembly while releasing the 2 clips.

NOTICE:

Remove the hood support assembly while supporting the hood with hand.

INSTALLATION

NOTICE:

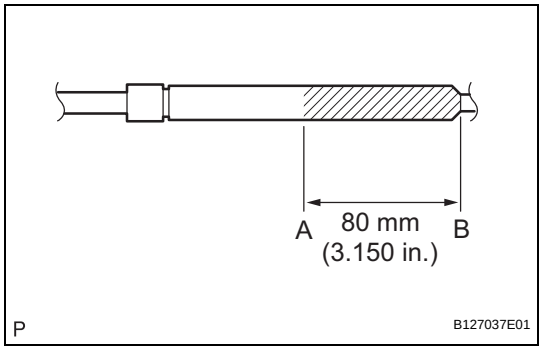
- **Avoid touching the stroke portions of the rod as much as possible to prevent foreign matter from attaching to it. Be sure to hold the cylinders while servicing.**
- **Do not wear cotton gloves or other similar materials when handling the rod. Fibers may attach to the rod and result in gas leaks.**
- **Do not apply any load to the cylinders in the horizontal direction in order to prevent the rod from being deformed.**

1. INSTALL HOOD SUPPORT ASSEMBLY

(a) Install the hood support assembly.

NOTICE:

- **Install the hood support assembly while supporting the hood with hand.**
- **Check that the hood support assembly is engaged in the ball joint and it cannot be pulled out.**



DISPOSAL

1. DISPOSE OF HOOD SUPPORT ASSEMBLY

(a) Horizontally fix the hood support in a vise with the piston-rod pulled out.

(b) Wear safety glasses. Gradually cut a part between A and B shown in the illustration using a metal saw and gradually release the gas.

NOTICE:

Although the gas inside the hood support is colorless, odorless and harmless, there is a possibility that metal debris could scatter. Therefore, cover it with a piece of cloth or other material.

HOOD LOCK CONTROL CABLE ASSEMBLY

COMPONENTS

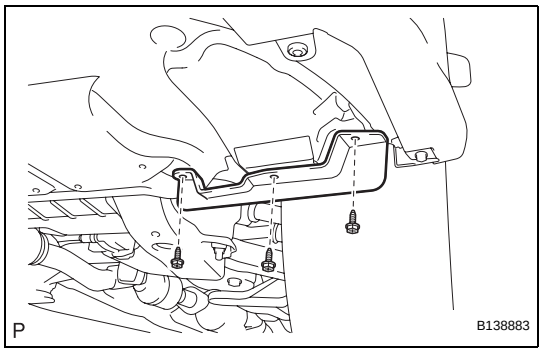
ED

REMOVAL

1. **REMOVE FRONT WHEEL**

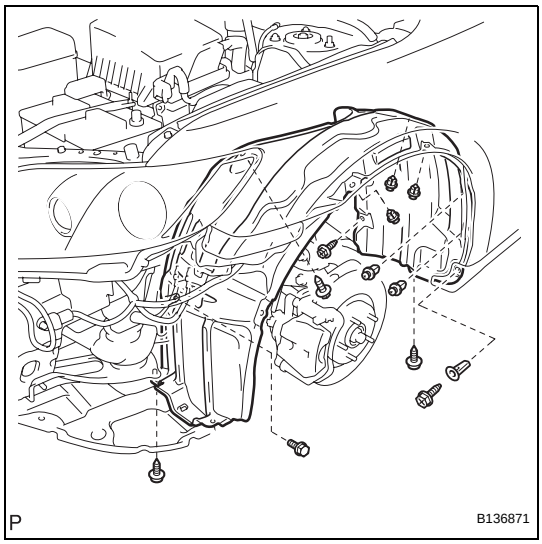


2. **REMOVE FRONT WHEEL OPENING EXTENSION PAD**
   (a) Remove the 3 screws and the front wheel opening extension pad.

3. **REMOVE COOL AIR INTAKE DUCT SEAL (for 2GR-FE) (See page ET-4)**

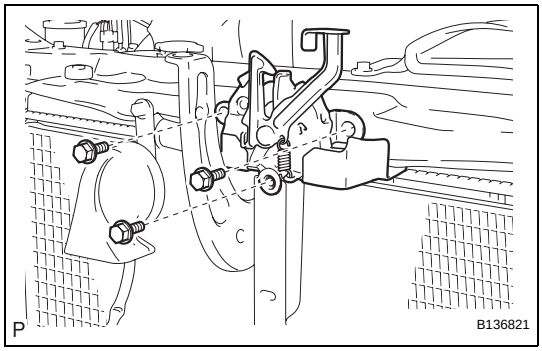
4. **REMOVE FRONT BUMPER ASSEMBLY (w/o Fog Light) (See page ET-5)**

5. **REMOVE FRONT BUMPER ASSEMBLY (w/ Fog Light) (See page ET-6)**



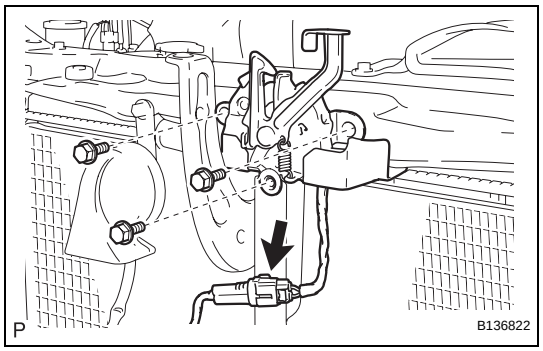
6. **REMOVE FRONT FENDER LINER**
   (a) Remove the 5 clips and bolt.
   (b) Remove the 4 screws, grommet and the front fender liner.

7. **REMOVE HIGH PITCHED HORN ASSEMBLY (See page HO-7)**



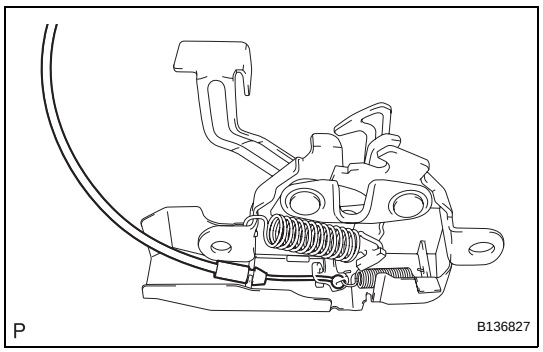
8. **REMOVE HOOD LOCK ASSEMBLY (w/o Engine Hood Courtesy Switch)**
   (a) Remove the 3 bolts.

   (b) Disconnect the hood lock control cable.
   (c) Remove the hood lock assembly.

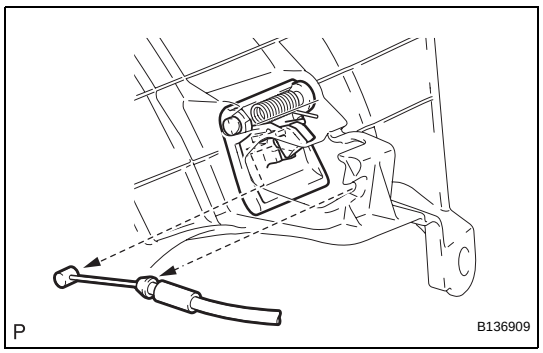


9. REMOVE HOOD LOCK ASSEMBLY (w/ Engine Hood Courtesy Switch)

(a) Disconnect the connector.
(b) Remove the 3 bolts.



(c) Disconnect the hood lock control cable.
(d) Remove the hood lock assembly.

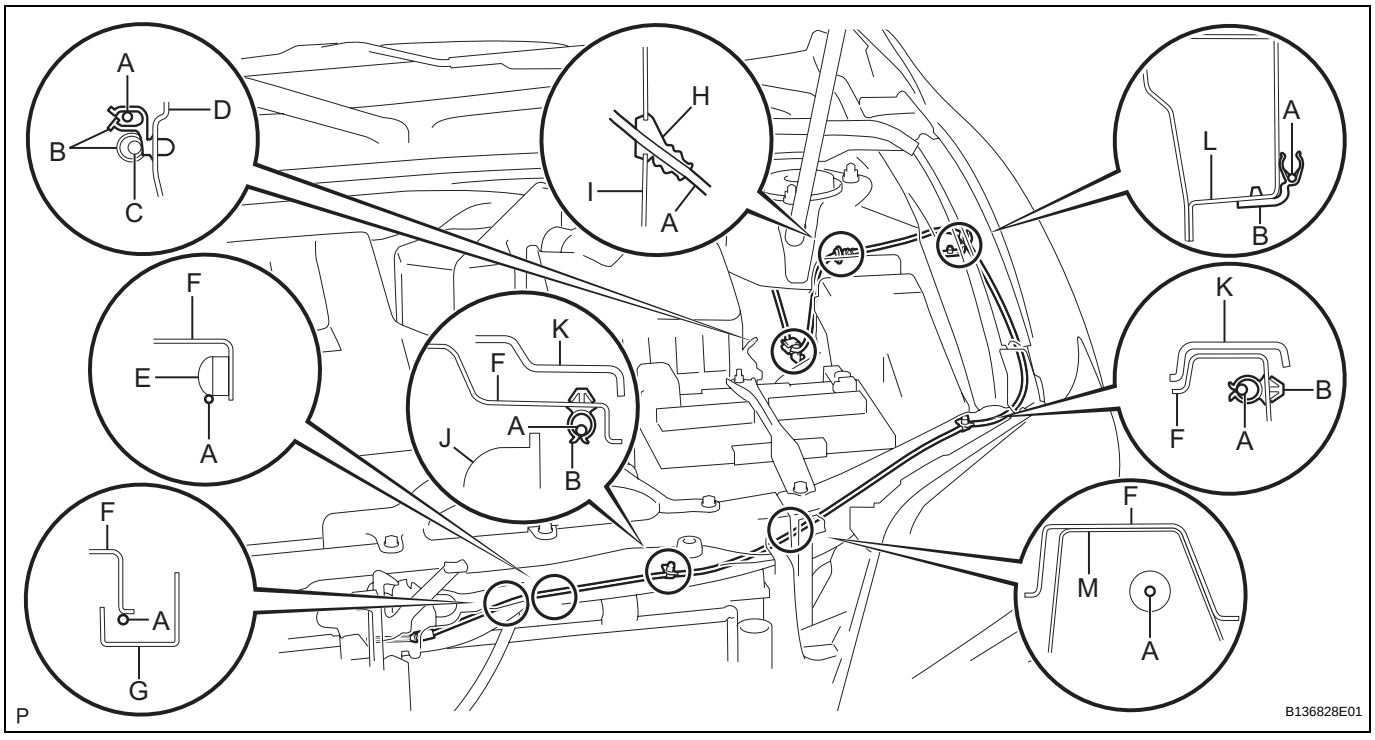


10. REMOVE HOOD LOCK CONTROL LEVER SUB-ASSEMBLY

(a) Disconnect the hood lock control cable and remove the hood lock control lever.

11. REMOVE HOOD LOCK CONTROL CABLE ASSEMBLY

(a) Using a screwdriver, disconnect the clamps shown in the illustration.



Area	Part Name	Area	Part Name
A	Hood lock control cable	H	Grommet
B	Clamp	I	Side member outer
C	Wire harness	J	Radiator
D	Pillar	K	Radiator support cover
E	Nut	L	Front fender apron
F	Radiator support upper	M	Brace
G	Hood lock protector	-	-

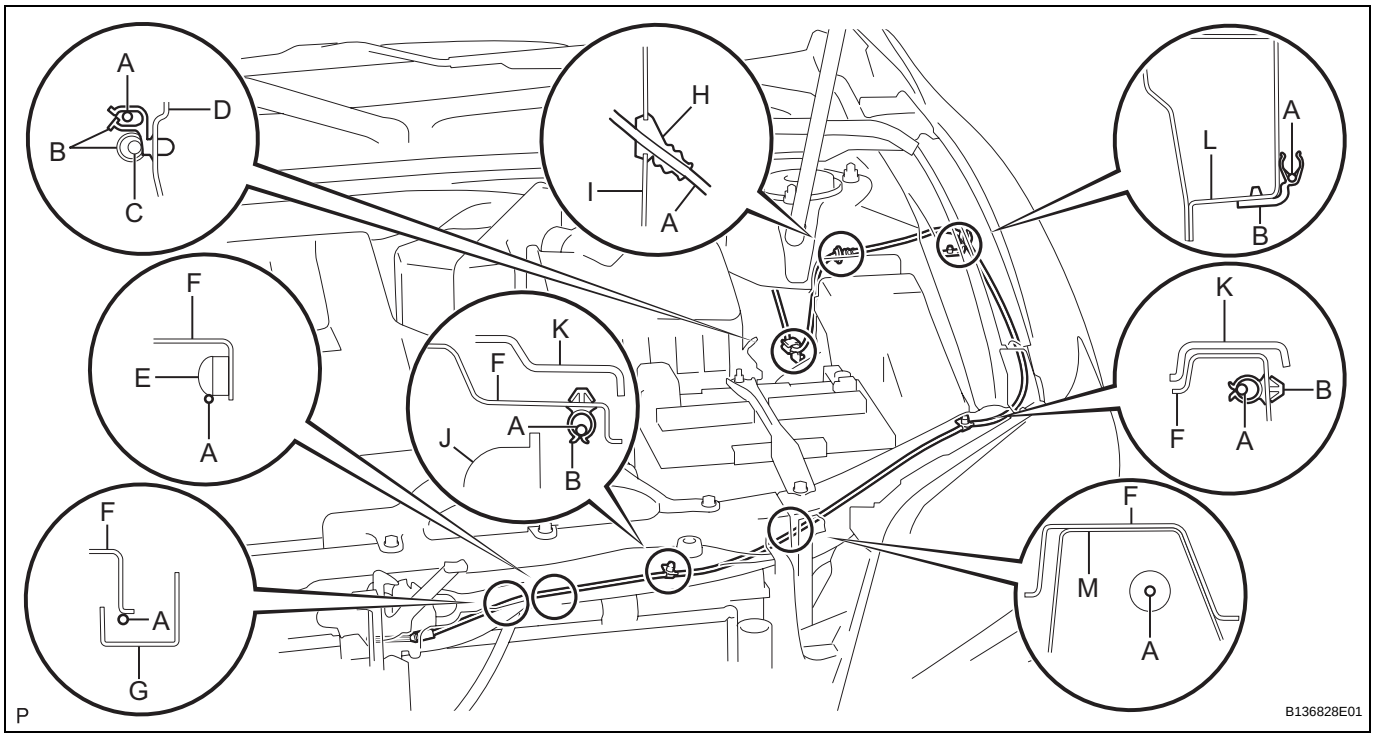
HINT:
Tape the screwdriver tip before use.

(b) Pull the cable from the engine compartment and remove it.

INSTALLATION

1. INSTALL HOOD LOCK CONTROL CABLE ASSEMBLY

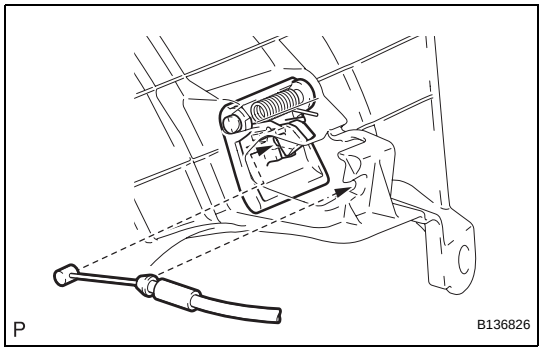
(a) Pass the hood lock control cable assembly into the engine compartment.



Area	Part Name	Area	Part Name
A	Hood lock control cable	H	Grommet
B	Clamp	I	Side member outer
C	Wire harness	J	Radiator
D	Pillar	K	Radiator support cover
E	Nut	L	Front fender apron
F	Radiator support upper	M	Brace
G	Hood lock protector	-	-

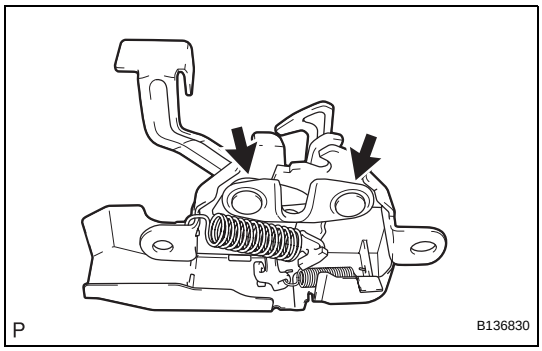
(b) Pass the cable front side through the upper radiator support.

(c) Connect the clamps as shown in the illustration.



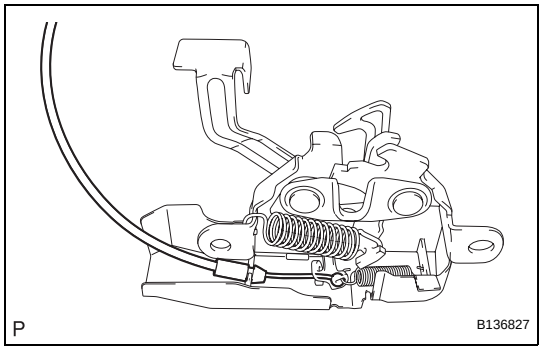
2. INSTALL HOOD LOCK CONTROL LEVER SUB-ASSEMBLY

(a) Install the hood lock control lever and connect the hood lock control cable.

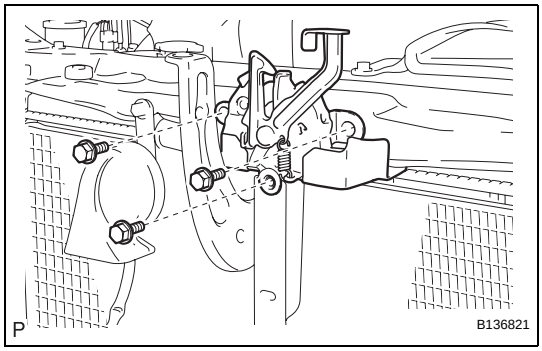


3. INSTALL HOOD LOCK ASSEMBLY (w/o Engine Hood Courtesy Switch)

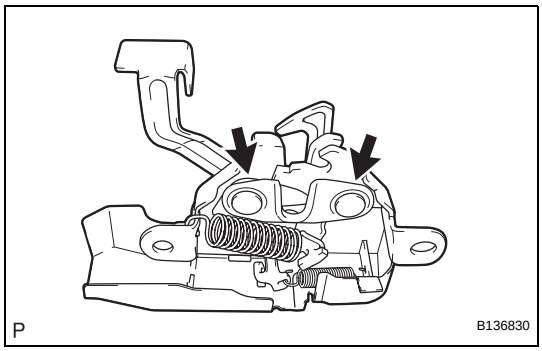
(a) Apply MP grease to the sliding areas of the lock.



(b) Connect the hood lock control cable.

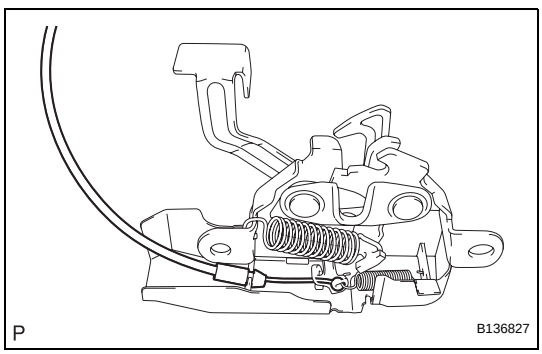


(c) Install the hood lock assembly with the 3 bolts.
Torque: 7.5 N*m (77 kgf*cm, 66 in.*lbf)

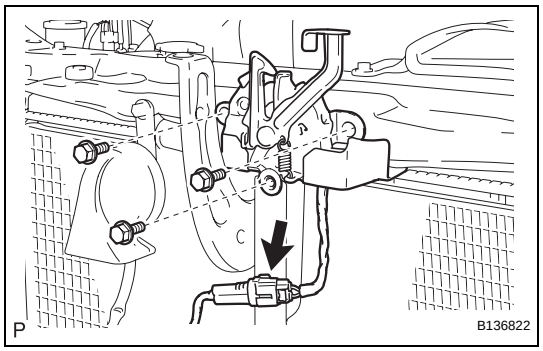


4. INSTALL HOOD LOCK ASSEMBLY (w/ Engine Hood Courtesy Switch)

(a) Apply MP grease to the sliding areas of the lock.

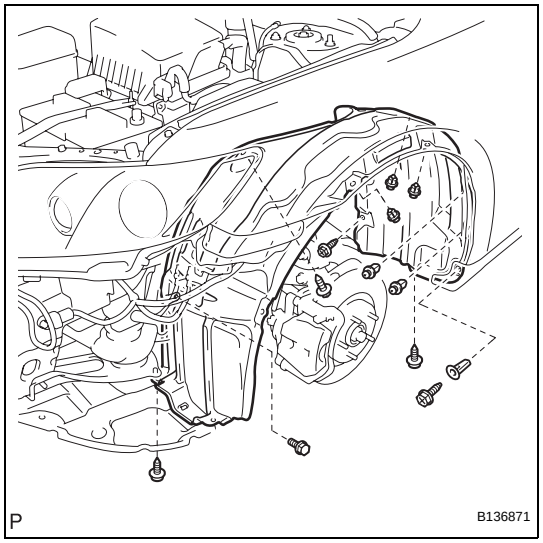


(b) Connect the hood lock control cable.

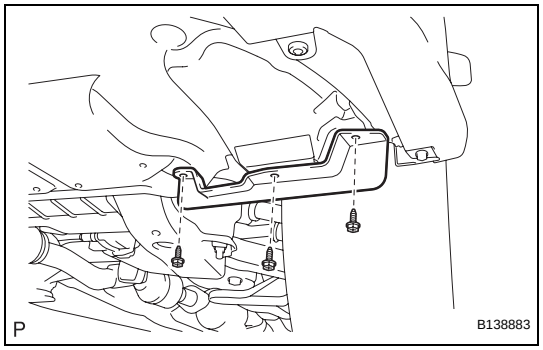


(c) Install the hood lock assembly with the 3 bolts.
Torque: 7.5 N*m (77 kgf*cm, 66 in.*lbf)
(d) Connect the connector.

5. **INSTALL HIGH PITCHED HORN ASSEMBLY (See page HO-7)**



6. **INSTALL FRONT FENDER LINER**
(a) Install the front fender liner with the grommet and 4 screws.
(b) Install the bolt and 5 clips.
7. **INSPECT HOOD SUB-ASSEMBLY (See page ED-1)**
8. **ADJUST HOOD SUB-ASSEMBLY (See page ED-2)**
9. **INSTALL FRONT BUMPER ASSEMBLY (w/o Fog Light) (See page ET-13)**
10. **INSTALL FRONT BUMPER ASSEMBLY (w/ Fog Light) (See page ET-14)**
11. **INSTALL COOL AIR INTAKE DUCT SEAL (for 2GR-FE) (See page ET-14)**



12. **INSTALL FRONT WHEEL OPENING EXTENSION PAD**
(a) Install the front wheel opening extension pad with the 3 screws.
13. **INSTALL FRONT WHEEL (See page SP-22)**
14. **VEHICLE PREPARATION FOR FOG LIGHT AIM (w/ Fog Light) (See page LI-79)**
15. **PREPARATION FOR FOG LIGHT AIMING (w/ Fog Light) (See page LI-80)**
16. **FOG LIGHT AIMING INSPECTION (w/ Fog Light) (See page LI-81)**
17. **FOG LIGHT AIMING ADJUSTMENT (w/ Fog Light) (See page LI-82)**

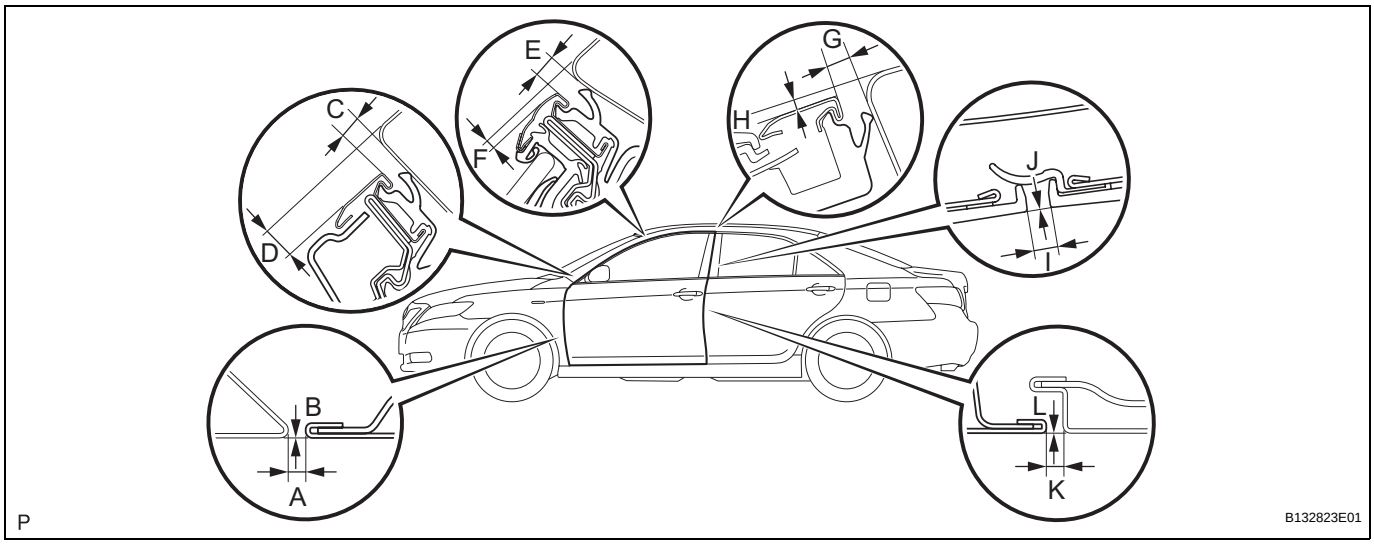
ON-VEHICLE INSPECTION

1. INSPECT FRONT DOOR PANEL SUB-ASSEMBLY

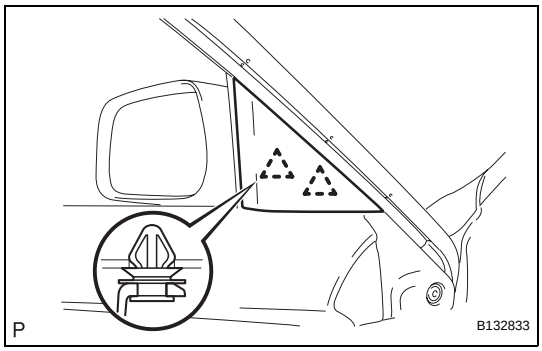
(a) Check that the clearance measurements of areas A to L are within each standard range.



Standard clearance

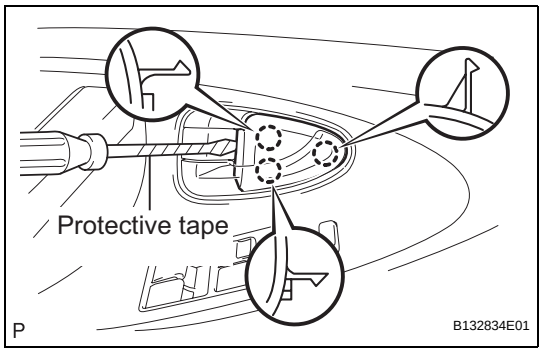
Area	Measurement	Area	Measurement
A	2.7 to 5.7 mm (0.106 to 0.224 in.)	G	3.3 to 6.3 mm (0.130 to 0.248 in.)
B	-1.5 to 1.5 mm (-0.059 to 0.059 in.)	H	-0.3 to 2.7 mm (-0.012 to 0.106 in.)
C	3.3 to 6.3 mm (0.130 to 0.248 in.)	I	2.3 to 6.3 mm (0.091 to 0.248 in.)
D	6.4 to 9.4 mm (0.252 to 0.370 in.)	J	-2.0 to 2.0 mm (-0.079 to 0.079 in.)
E	3.3 to 6.3 mm (0.130 to 0.248 in.)	K	2.7 to 5.7 mm (0.106 to 0.224 in.)
F	0.9 to 3.9 mm (0.035 to 0.154 in.)	L	-1.5 to 1.5 mm (-0.059 to 0.059 in.)

DISASSEMBLY



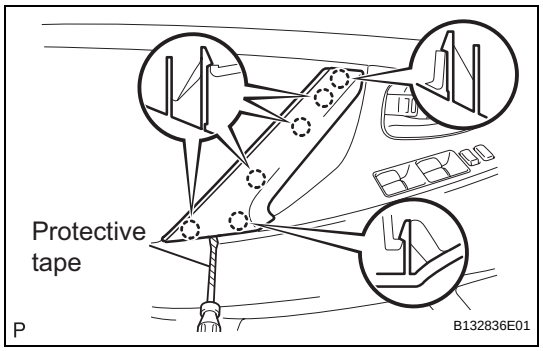
1. REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH

(a) Disengage the 2 clips and remove the front door lower frame bracket garnish.



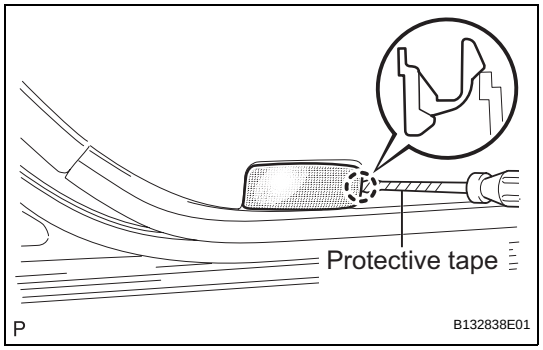
2. REMOVE FRONT DOOR INSIDE HANDLE BEZEL PLUG

(a) Using a screwdriver wrapped with protective tape, disengage the 3 claws, and remove the front door inside handle bezel plug.



3. REMOVE ASSIST GRIP COVER

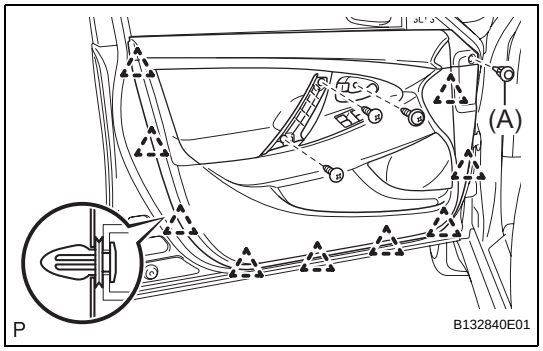
(a) Using a screwdriver wrapped with protective tape, disengage the 6 claws and remove the assist grip cover.



4. REMOVE COURTESY LIGHT ASSEMBLY

(a) Using a screwdriver wrapped with protective tape, disengage the claw and remove the courtesy light assembly.

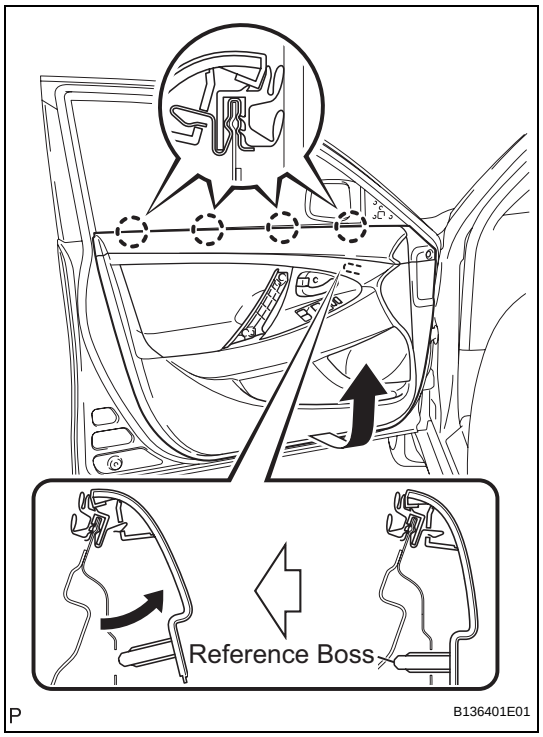
(b) Disconnect the connector.



5. REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY

(a) Remove the 3 screws and clip (A).

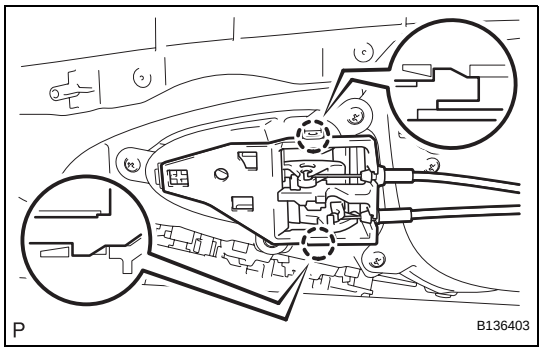
(b) Using the clip remover, disengage the 9 clips.



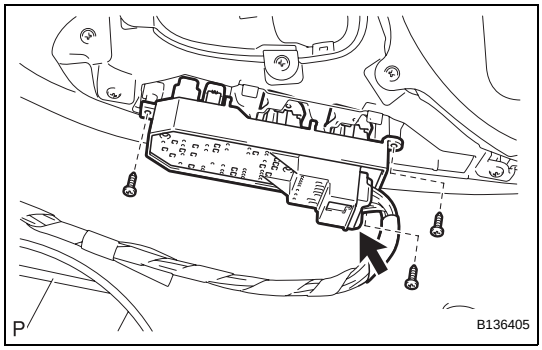
(c) Pull out the front door trim board in the direction indicated by the arrow.

(d) Remove the reference bosses from the front door panel.

(e) Raise the front door trim board to disengage the 4 claws and remove the front door trim board together with the front door inner glass weatherstrip.

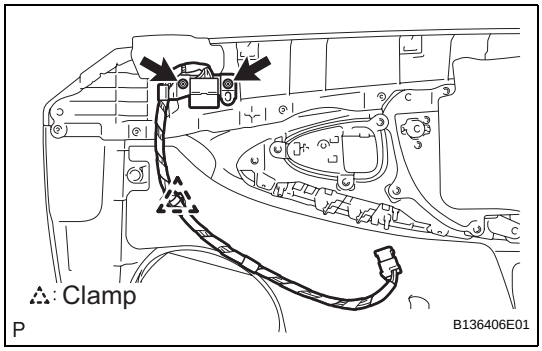


(f) Disengage the 2 claws and disconnect the front door inside handle sub-assembly.



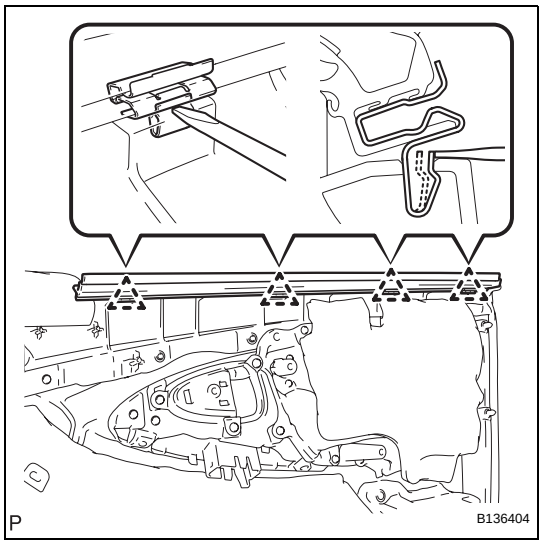
6. REMOVE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY

(a) Disconnect the connector.
(b) Remove the 3 screws and the power window regulator master switch assembly.



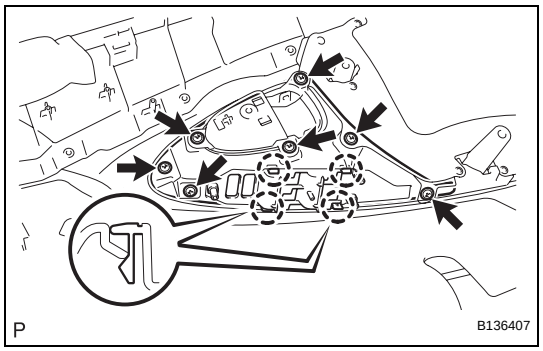
7. REMOVE FRONT DOOR WIRE (for Driver Side)

(a) Disengage the clamp and remove the 2 screws and front door wire.



8. REMOVE FRONT DOOR INNER GLASS WEATHERSTRIP

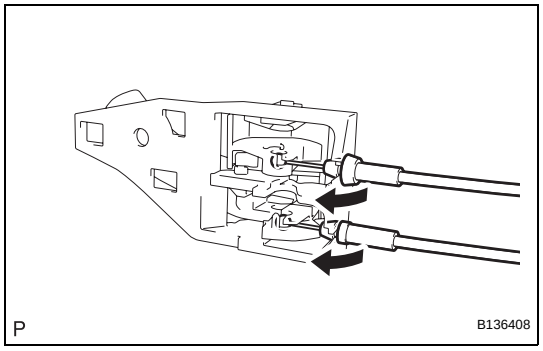
(a) Using a screwdriver, disengage the 4 clips as shown in the illustration and remove the front door inner glass weatherstrip from the front door trim board.



9. REMOVE FRONT ARMREST BASE PANEL UPPER

(a) Remove the 7 screws.

(b) Disengage the 4 claws and remove the front armrest base panel upper.

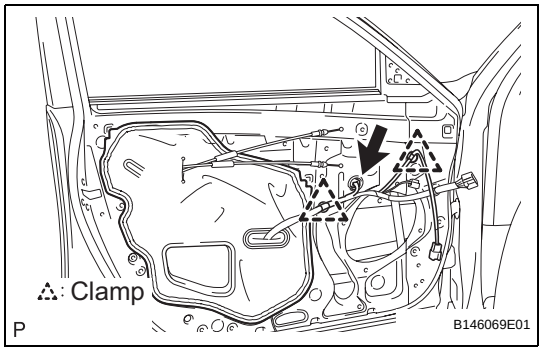


10. REMOVE FRONT DOOR INSIDE HANDLE SUB-ASSEMBLY

(a) Disconnect the front door lock remote control cable and front door inside locking cable and remove the front door inside handle sub-assembly.

11. REMOVE FRONT NO. 1 SPEAKER ASSEMBLY (See page AV-155)

12. REMOVE OUTER REAR VIEW MIRROR ASSEMBLY (See page MI-15)



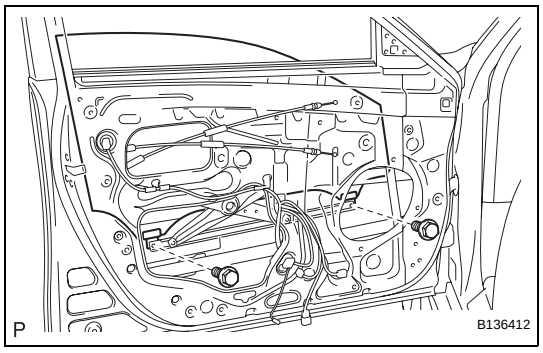
13. REMOVE FRONT DOOR SERVICE HOLE COVER

(a) Disconnect the connector and each clamp, and remove the front door service hole cover.
HINT:
Remove the remaining butyl tape on the door side.

14. REMOVE FRONT DOOR GLASS SUB-ASSEMBLY

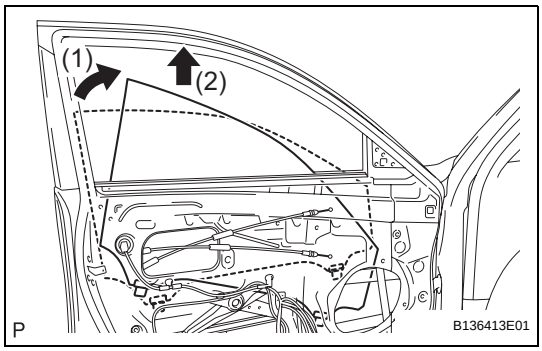
(a) Connect the front power window regulator motor assembly connector.

(b) Connect the power window regulator master switch assembly and move the front door glass sub-assembly so that the door glass bolts can be seen.

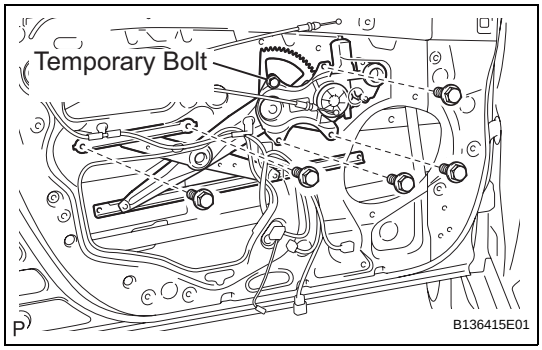


(c) Remove the 2 bolts.
NOTICE:
After the bolts are removed, the door glass may fall and become deformed.

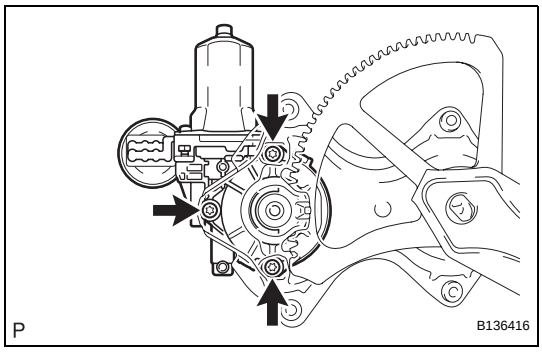
ED



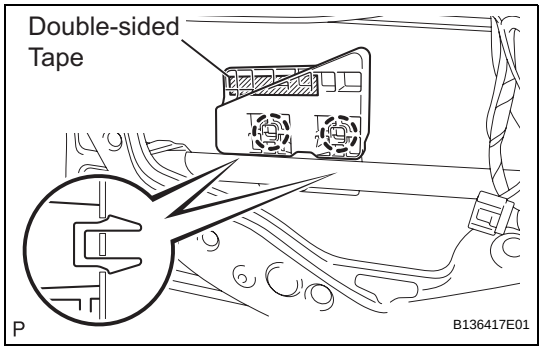
(d) Remove the front door glass sub-assembly as shown in the illustration.
NOTICE:
Do not damage the door glass.
(e) Disconnect the power window regulator master switch assembly and front power window regulator motor assembly connector.



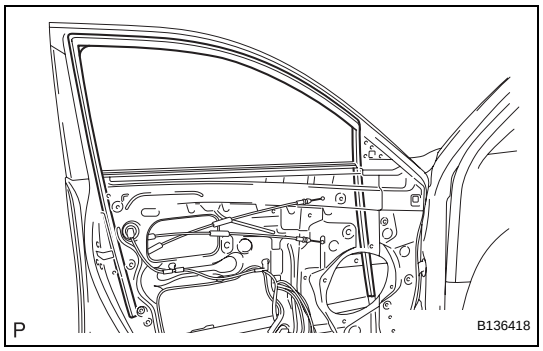
15. REMOVE FRONT DOOR WINDOW REGULATOR SUB-ASSEMBLY
(a) Loosen the temporary bolt.
NOTICE:
If the temporary bolt is removed, the front door window regulator may fall and become deformed.
(b) Remove the 5 bolts.
(c) Remove the front door window regulator sub-assembly and the power window regulator motor assembly front as a unit.
(d) Remove the temporary bolt from the front door window regulator sub-assembly.



16. REMOVE FRONT POWER WINDOW REGULATOR MOTOR ASSEMBLY
(a) Using a "torx" driver (T25), remove the 3 screws and the front power window regulator motor assembly.

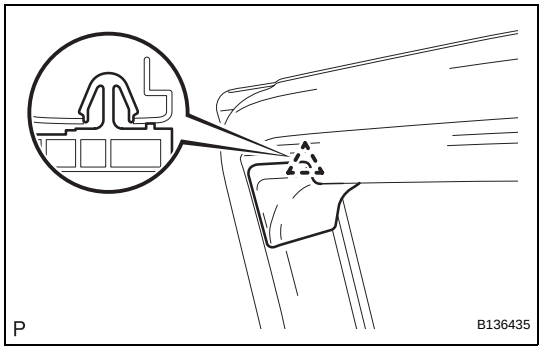


17. REMOVE FRONT NO. 1 DOOR STIFFENER CUSHION
(a) Disengage the 2 claws.
(b) Remove the double-sided tape and the front No. 1 door stiffener cushion.



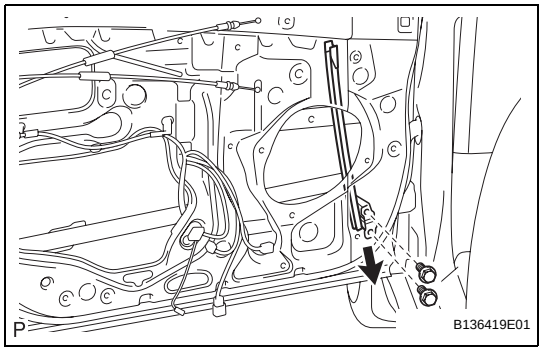
18. REMOVE FRONT DOOR GLASS RUN

(a) Remove the front door glass run.



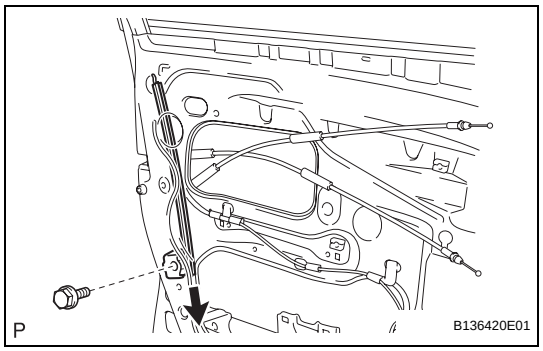
19. REMOVE DOOR FRAME GARNISH

(a) Disengage the clip and remove the door frame garnish.



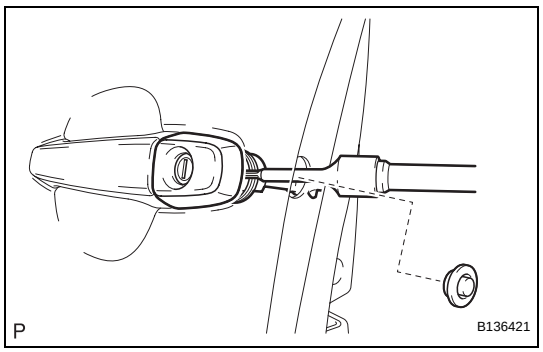
20. REMOVE FRONT DOOR FRONT LOWER FRAME SUB-ASSEMBLY

(a) Remove the 2 bolts and the front door front lower frame sub-assembly as shown in the illustration.



21. REMOVE FRONT DOOR REAR LOWER FRAME SUB-ASSEMBLY

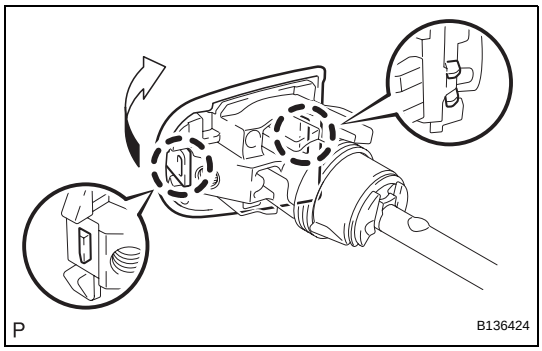
(a) Remove the bolt and the front door rear lower frame sub-assembly as shown in the illustration.



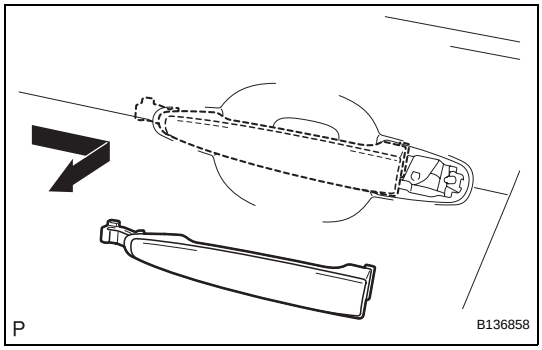
22. REMOVE FRONT DOOR OUTSIDE HANDLE COVER

(a) Remove the hole plug.

(b) Using a "torx" socket wrench (T30), loosen the screw and remove the front door outside handle cover and the door lock key cylinder as a unit.
HINT:
The screw cannot be removed because it is integrated into the front door outside handle frame sub-assembly.

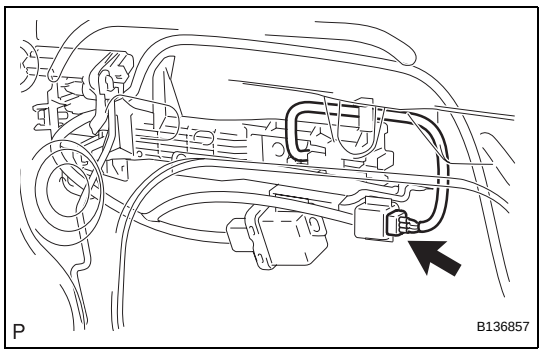


(c) Using a screwdriver, disengage the 2 claws and remove the front door outside handle cover.



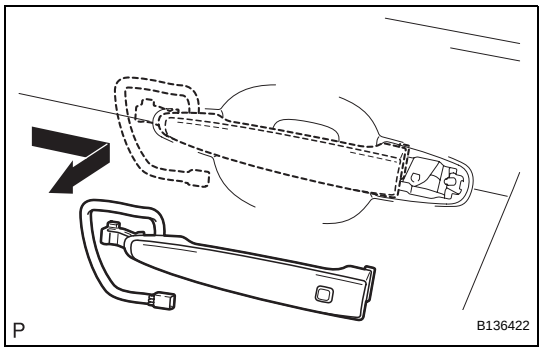
23. REMOVE FRONT DOOR OUTSIDE HANDLE ASSEMBLY (w/o Smart Key System)

(a) Remove the front door outside handle assembly as shown in the illustration.

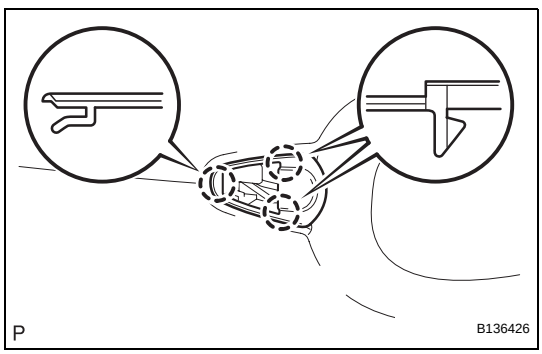


24. REMOVE FRONT DOOR OUTSIDE HANDLE ASSEMBLY (w/ Smart Key System)

(a) Disconnect the connector.

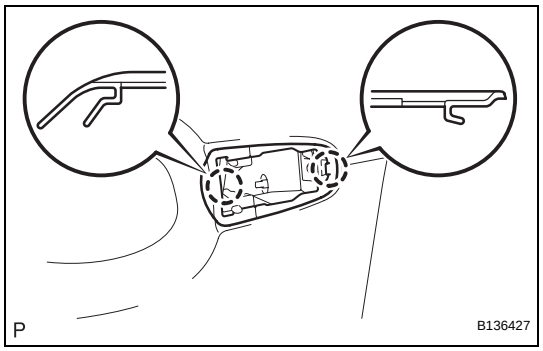


(b) Remove the front door outside handle assembly as shown in the illustration.



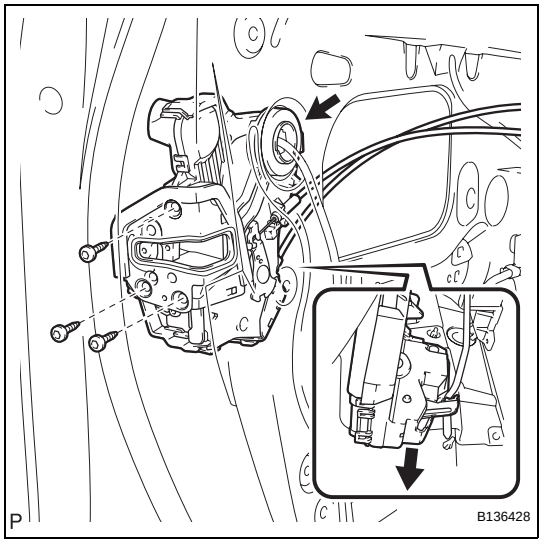
25. REMOVE FRONT DOOR FRONT OUTSIDE HANDLE PAD

(a) Disengage the 3 claws and remove the front door front outside handle pad.



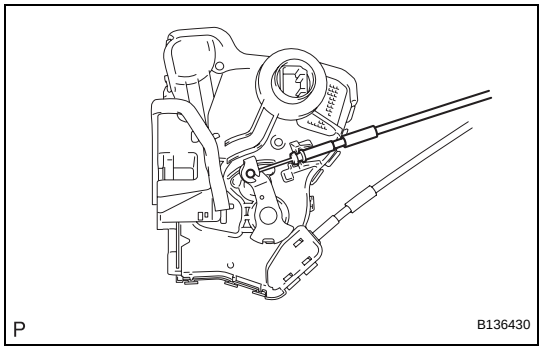
26. REMOVE FRONT DOOR REAR OUTSIDE HANDLE PAD

(a) Disengage the 2 claws and remove the front door rear outside handle pad.



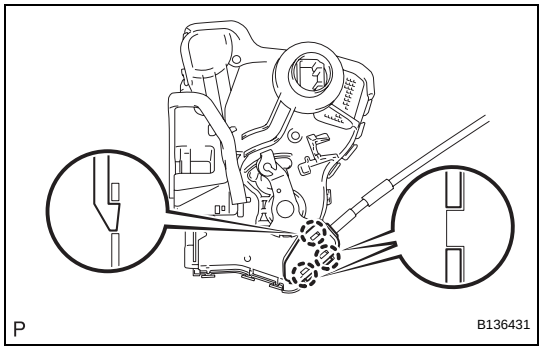
27. REMOVE FRONT DOOR LOCK ASSEMBLY

(a) Disconnect the connector.
(b) Using a "torx" socket wrench (T30), remove the 3 screws.
(c) Slide the front door lock assembly downward, pull out the front door lock open rod from the outside handle frame, and remove the front door lock assembly and cables as a unit.
(d) Remove the front door lock open rod from the front door lock assembly.
(e) Remove the door lock wiring harness sealing from the front door lock assembly.



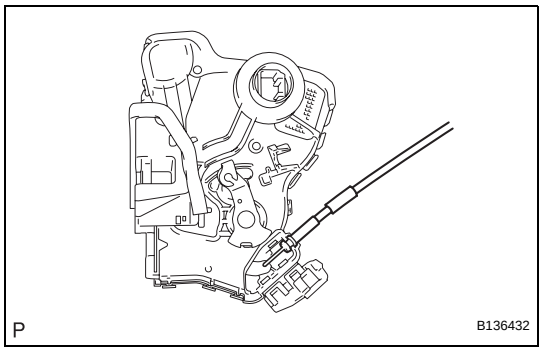
28. REMOVE FRONT DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY

(a) Remove the front door lock remote control cable assembly.

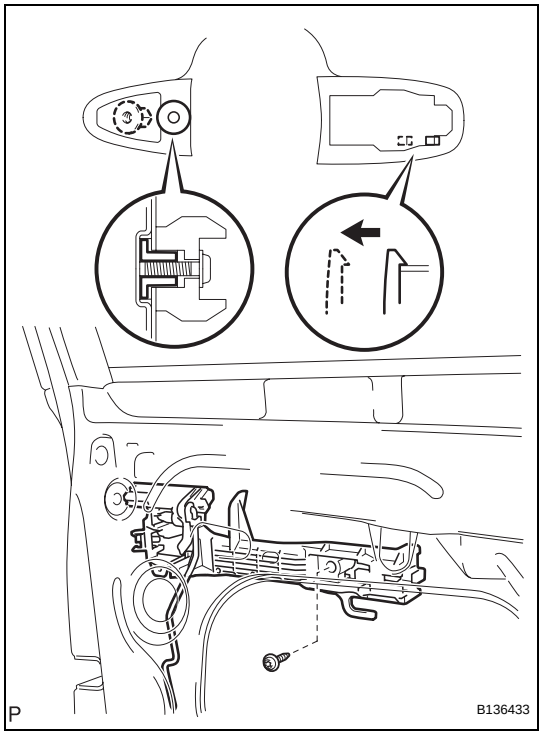


29. REMOVE FRONT DOOR INSIDE LOCKING CABLE ASSEMBLY

(a) Using a screwdriver, disengage the 3 claws.
HINT:
Tape the screwdriver tip before use.

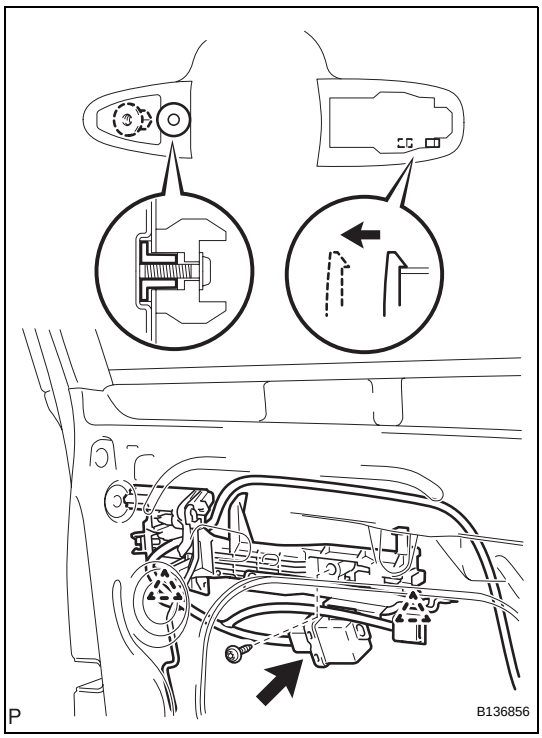


(b) Remove the front door inside locking cable assembly.



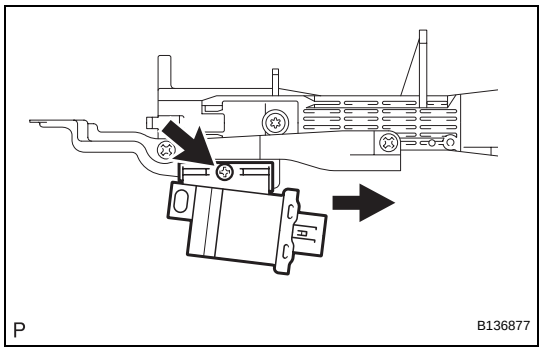
30. REMOVE FRONT DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY (w/o Smart Key System)

(a) Using a "torx" socket wrench (T30), remove the screw.
(b) Disengage the claws and remove the front door outside handle frame sub-assembly.



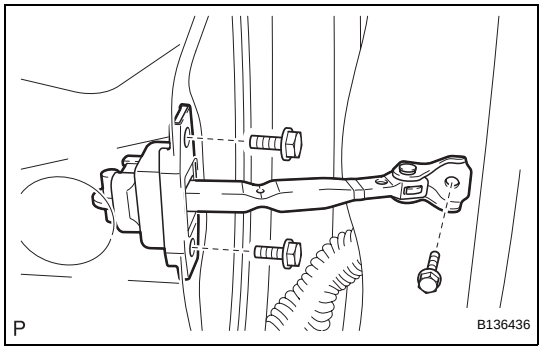
31. REMOVE FRONT DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY (w/ Smart Key System)

(a) Using a "torx" socket wrench (T30), remove the screw.
(b) Disconnect the connector.
(c) Disengage the 2 clamps.
(d) Disengage the claws and remove the front door outside handle frame sub-assembly.



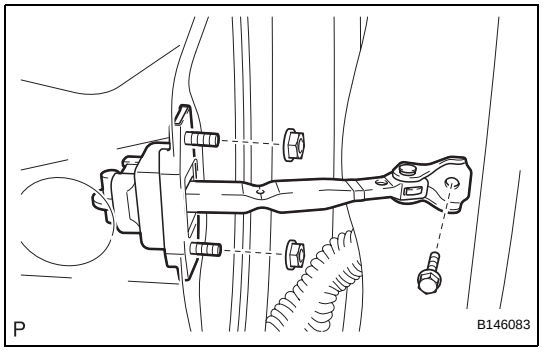
32. REMOVE DOOR ELECTRICAL KEY OSCILLATOR (w/ Smart Key System)

(a) Remove the screw and door electrical key oscillator.



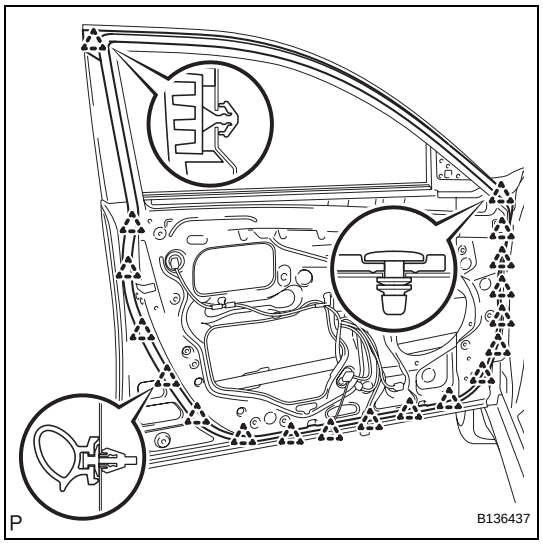
33. REMOVE FRONT DOOR CHECK ASSEMBLY (for TMC Made)

(a) Remove the 3 bolts and the front door check assembly.



34. REMOVE FRONT DOOR CHECK ASSEMBLY (for TMMK Made)

(a) Remove the bolt, 2 nuts, and the front door check assembly.



35. REMOVE FRONT DOOR WEATHERSTRIP

(a) Using the clip remover, disengage the 19 clips and remove the front door weatherstrip.

36. REMOVE FRONT DOOR BELT MOULDING ASSEMBLY (See page ET-34)

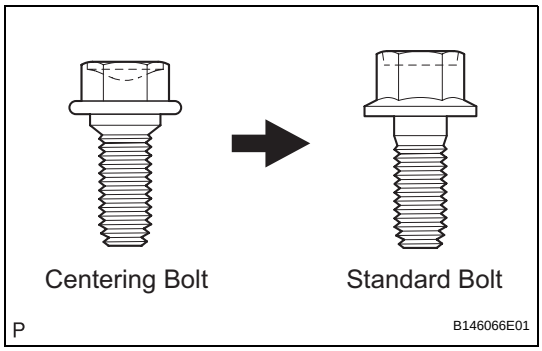
37. REMOVE FRONT DOOR REAR WINDOW FRAME MOULDING (See page ET-48)

38. REMOVE FRONT DOOR UPPER WINDOW FRAME MOULDING (See page ET-49)

39. REMOVE FRONT DOOR STRIPE (See page ET-67)

40. REMOVE FRONT DOOR LOWER OUTSIDE STRIPE (See page ET-67)

ED



ADJUSTMENT

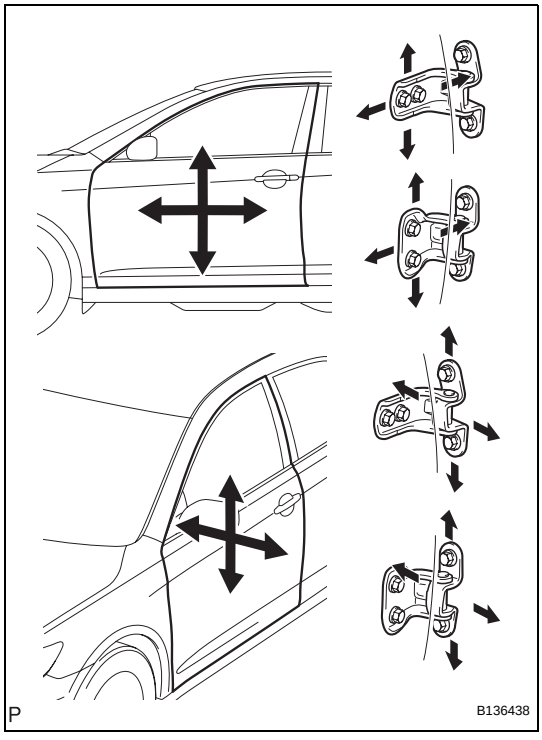
HINT:

- Before adjusting the door position for vehicles equipped with side airbags and curtain shield airbags, be sure to disconnect the battery. After adjustment, inspect the SRS warning light, the side airbag system, and the curtain shield airbag system for normal operation. Then initialize both airbag systems.
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.
- Centering bolts are used to mount the door hinge to the vehicle body and door. The door cannot be adjusted with the centering bolts on. Substitute the centering bolts with standard bolts (with washers) when making adjustment.
- A bolt without a torque specification is shown in the standard bolt chart (See page SS-2).

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait for 90 seconds after disconnecting the cable to prevent airbag deployment (See page IR-22).



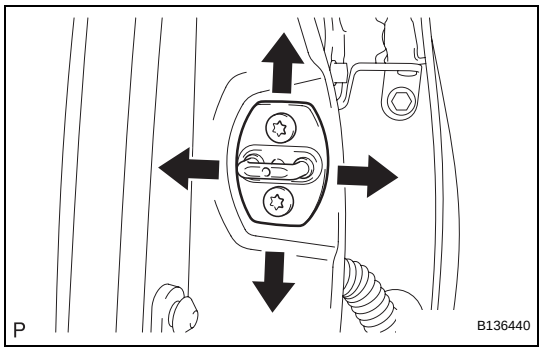
2. ADJUST FRONT DOOR

(a) Using SST, loosen the body's hinge bolts and adjust the door position.
SST 09812-00010

(b) Tighten the body's hinge bolts after the adjustment.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)

(c) Loosen the door's hinge bolts and adjust the door position.

(d) Tighten the door's hinge bolts after the adjustment.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)



(e) Using a "torx" socket wrench (T40), adjust the striker position by slightly loosening the striker mounting screws and hitting the striker with a plastic hammer.
(f) Using a "torx" socket wrench (T40), tighten the striker mounting screws after the adjustment.
Torque: 23 N*m (235 kgf*cm, 17 ft.*lbf)

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

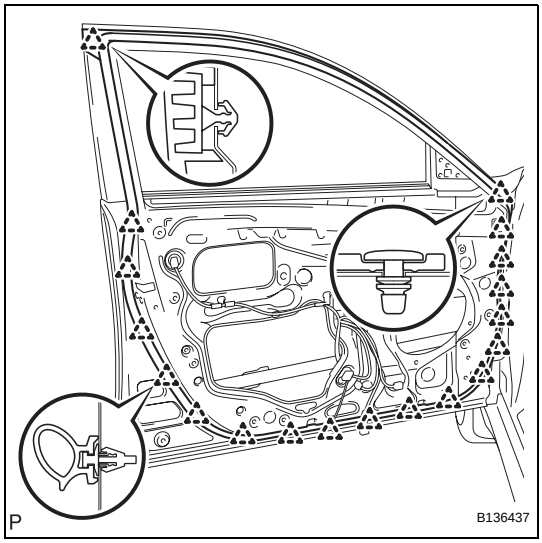
4. INSPECT SRS WARNING LIGHT
(See page IR-58)

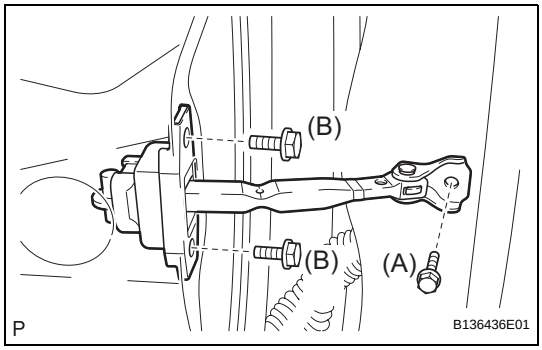
ED

ED

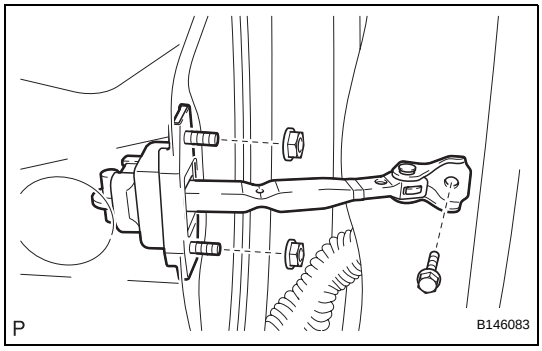
REASSEMBLY

1. **REPAIR INSTRUCTION (See page ET-68)**
2. **INSTALL FRONT DOOR LOWER OUTSIDE STRIPE (See page ET-71)**
3. **INSTALL FRONT DOOR STRIPE (See page ET-71)**
4. **INSTALL FRONT DOOR UPPER WINDOW FRAME MOULDING (See page ET-49)**
5. **INSTALL FRONT DOOR REAR WINDOW FRAME MOULDING (See page ET-50)**
6. **INSTALL FRONT DOOR BELT MOULDING ASSEMBLY (See page ET-34)**
7. **INSTALL FRONT DOOR WEATHERSTRIP**
   (a) Engage the 19 clips to install a new front door weatherstrip.

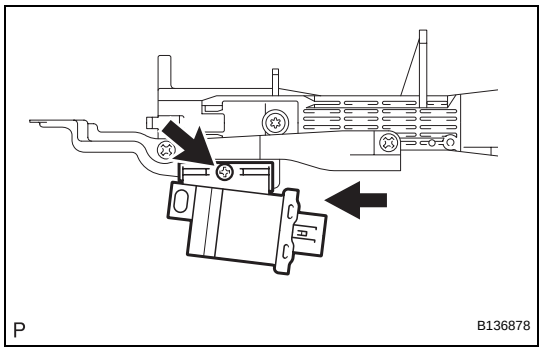




8. **INSTALL FRONT DOOR CHECK ASSEMBLY (for TMC Made)**
   (a) Install the front door check assembly with the 3 bolts.
   Torque: Bolt (A)
   26 N*m (265 kgf*cm, 19 ft.*lbf)
   Torque: Bolt (B)
   8.0 N*m (82 kgf*cm, 71 in.*lbf)



9. **INSTALL FRONT DOOR CHECK ASSEMBLY (for TMMK Made)**
   (a) Install the front door check assembly with the bolt and 2 nuts.
   Torque: Bolt
   26 N*m (265 kgf*cm, 19 ft.*lbf)
   Torque: Nut
   8.0 N*m (82 kgf*cm, 71 in.*lbf)

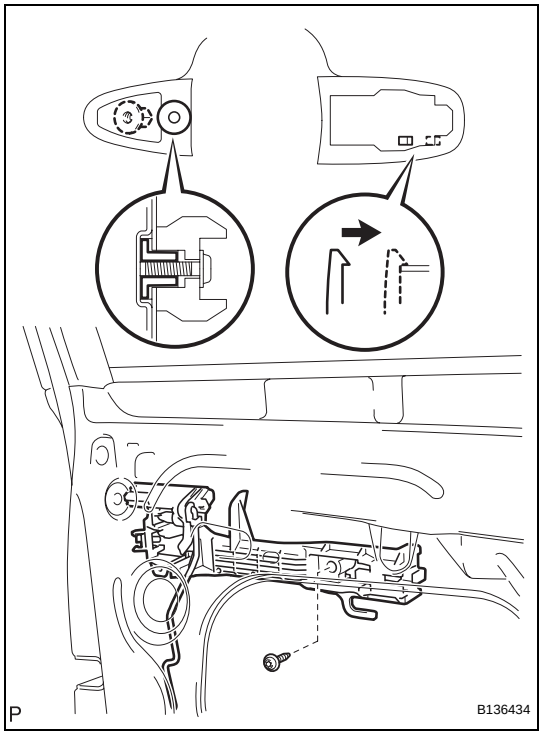


10. INSTALL DOOR ELECTRICAL KEY OSCILLATOR (w/ Smart Key System)

(a) Install the door electrical key oscillator with the screw.

11. INSTALL FRONT DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY (w/o Smart Key System)

(a) Apply MP grease to the sliding parts on the front door outside handle frame sub-assembly.



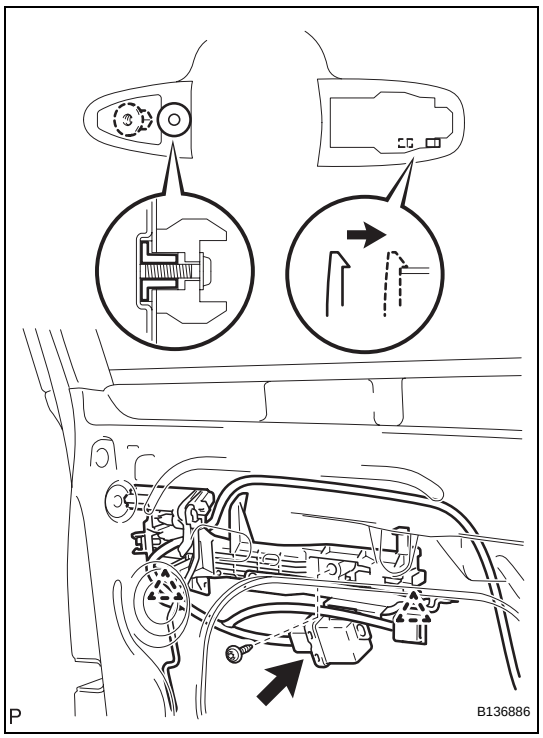
(b) Install the front door outside handle frame sub-assembly with the claw.

(c) Using a "torx" socket wrench (T30), install the front door outside handle frame sub-assembly with the screw.

Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)

12. INSTALL FRONT DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY (w/ Smart Key System)

(a) Apply MP grease to the sliding parts on the front door outside handle frame sub-assembly.



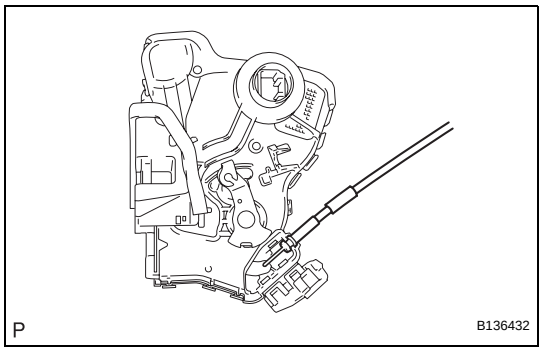
(b) Install the front door outside handle frame sub-assembly with the claw.

(c) Using a "torx" socket wrench (T30), install the front door outside handle frame sub-assembly with the screw.

Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)

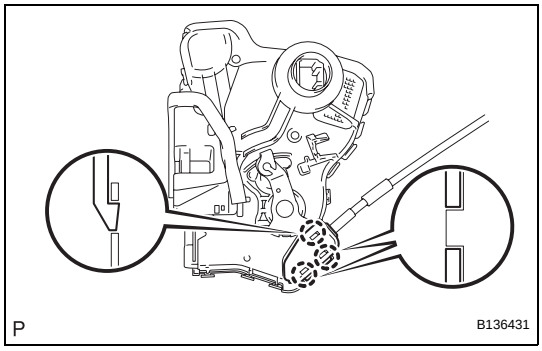
(d) Engage the 2 clamps.

(e) Connect the connector.

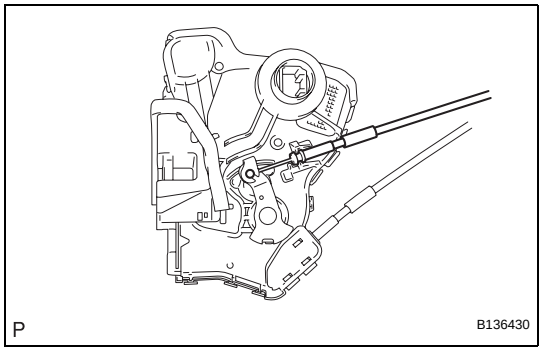


13. INSTALL FRONT DOOR INSIDE LOCKING CABLE ASSEMBLY

(a) Install the front door inside locking cable assembly.



(b) Engage the 3 claws.



14. INSTALL FRONT DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY

(a) Install the front door lock remote control cable assembly.

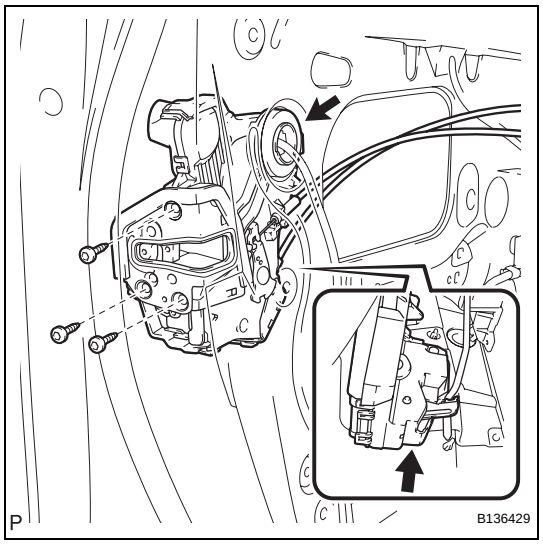
15. INSTALL FRONT DOOR LOCK ASSEMBLY

NOTICE:

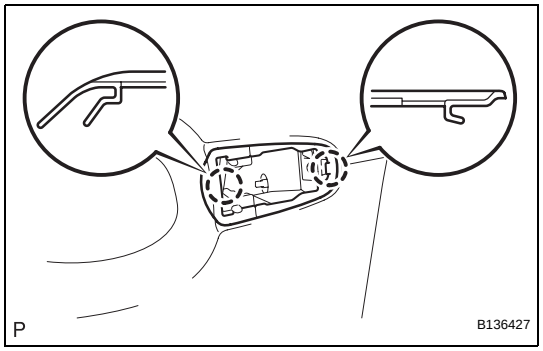
- **When reusing the removed front door lock assembly, replace the door lock wire harness sealing on the connector with a new one.**
- **Do not allow grease or dust to adhere on the door lock wiring harness sealing surface of the connector.**
- **Reusing the door lock wiring harness sealing and/or using damaged door lock wiring harness sealing may cause water intrusion to the connection. This may result in a malfunction in the front door lock assembly.**

(a) Apply MP grease to the sliding parts on the front door lock assembly.

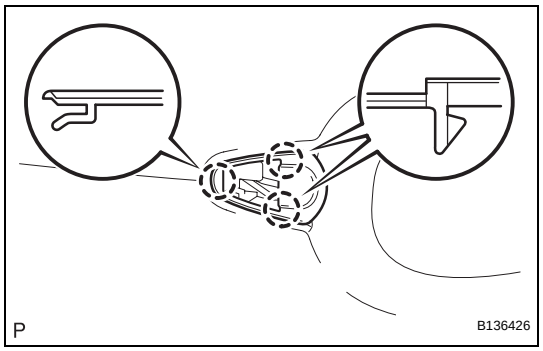
(b) Install a new door lock wiring harness sealing to front door lock assembly.



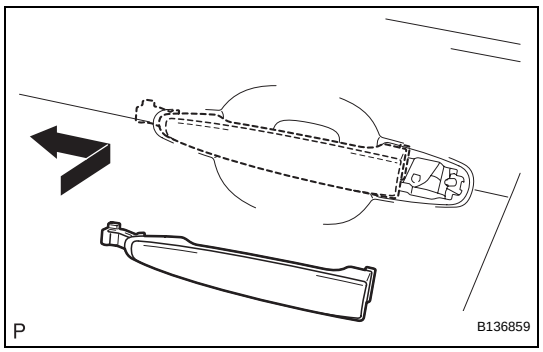
(c) Insert the front door lock open rod to the front door lock assembly, and set it to the front door outside handle frame.
(d) Make sure that the front door lock open rod is securely connected to the front door lock assembly.
(e) Using a "torx" socket wrench (T30), install the front door lock assembly with the 3 screws.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)
(f) Connect the connector.



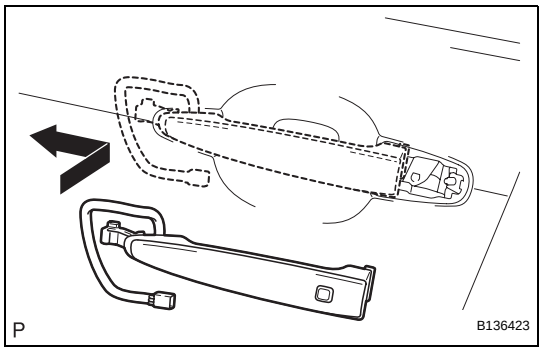
16. INSTALL FRONT DOOR REAR OUTSIDE HANDLE PAD
(a) Attach the 2 claws to install the front door rear outside handle pad.



17. INSTALL FRONT DOOR FRONT OUTSIDE HANDLE PAD
(a) Attach the 3 claws to install the front door front outside handle pad.



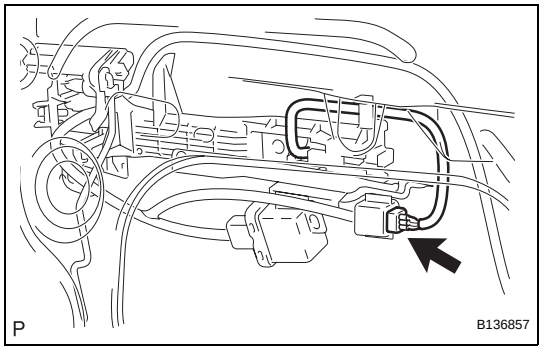
18. INSTALL FRONT DOOR OUTSIDE HANDLE ASSEMBLY (w/o Smart Key System)
(a) Insert the front end of the front door outside handle assembly into the front door outside handle frame.
(b) Insert the rear end of the front door outside handle assembly into the front door outside handle frame. Next slide the front door outside handle assembly to the front of the vehicle to install it.



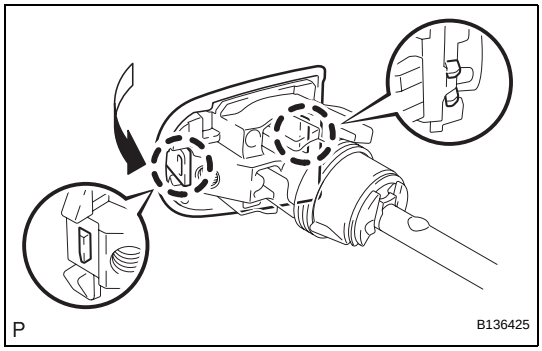
19. INSTALL FRONT DOOR OUTSIDE HANDLE ASSEMBLY (w/ Smart Key System)

(a) Insert the front end of the front door outside handle assembly into the front door outside handle frame.

(b) Insert the rear end of the front door outside handle assembly into the front door outside handle frame. Next slide the front door outside handle assembly to the front of the vehicle to install it.

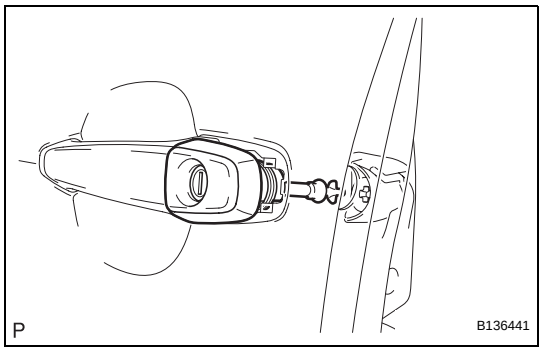


(c) Connect the connector.

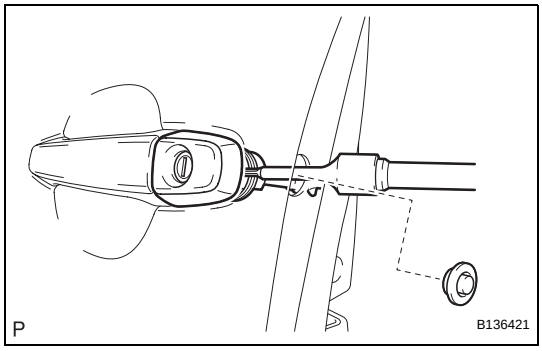


20. INSTALL FRONT DOOR OUTSIDE HANDLE COVER

(a) Engage the 2 claws of the front door outside handle cover to the front door lock cylinder to install the cover.

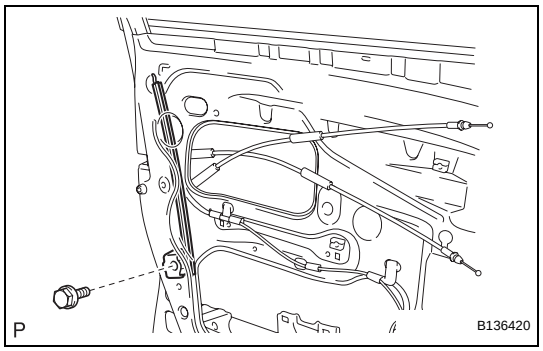


(b) Install the front door lock cylinder.
HINT:
Make sure that the front door lock cylinder rod is inserted into the front door lock assembly.



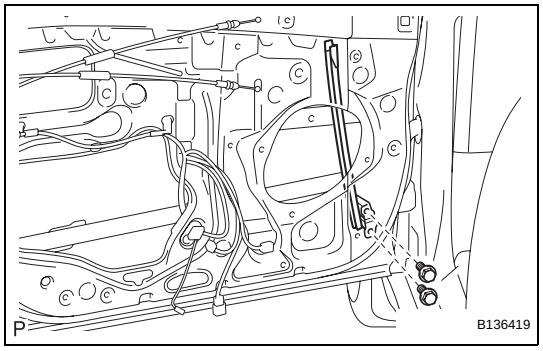
(c) Using a "torx" socket wrench (T30), install the front door lock cylinder with the screw.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)

(d) Install the hole plug.



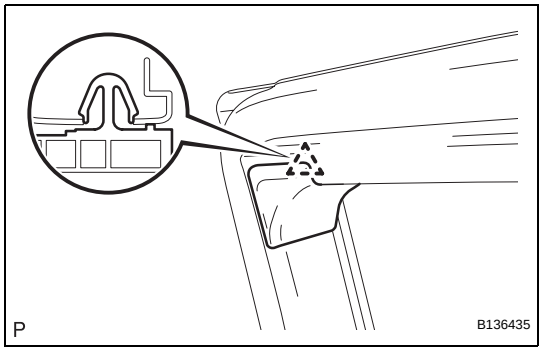
21. INSTALL FRONT DOOR REAR LOWER FRAME SUB-ASSEMBLY

(a) Install the front door rear lower frame sub-assembly with the bolt.



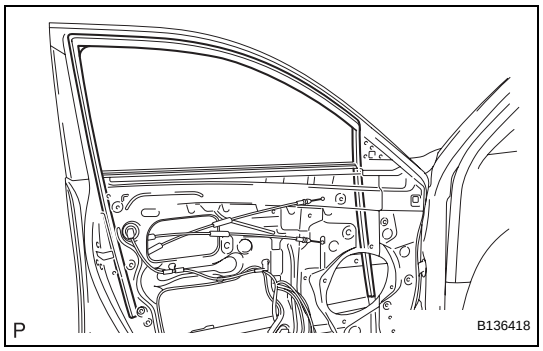
22. INSTALL FRONT DOOR FRONT LOWER FRAME SUB-ASSEMBLY

(a) Install the front door front lower frame sub-assembly with the 2 bolts.



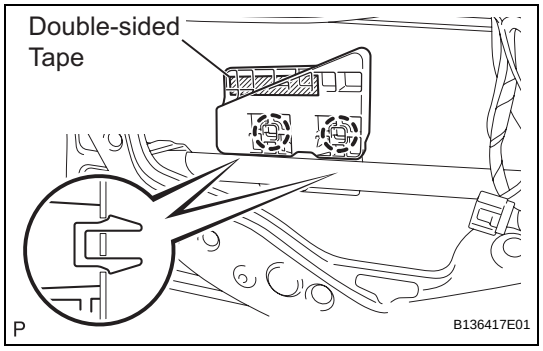
23. INSTALL DOOR FRAME GARNISH

(a) Engage the clip and install a new door frame garnish.



24. INSTALL FRONT DOOR GLASS RUN

(a) Install the front door glass run.



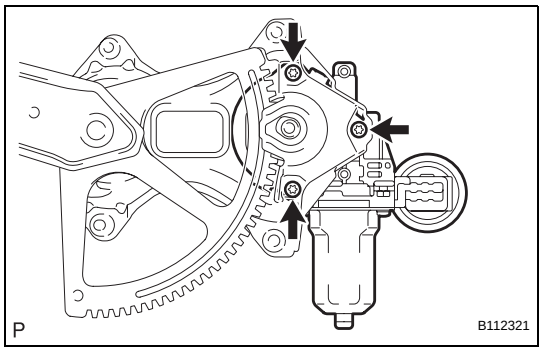
25. INSTALL FRONT NO. 1 DOOR STIFFENER CUSHION

(a) Engage the 2 claws and install a new front No. 1 door stiffener cushion with the double-sided tape.

26. INSTALL FRONT POWER WINDOW REGULATOR MOTOR ASSEMBLY

NOTICE:

The regulator arm must be below the intermediate position when installing the power window regulator motor.



(a) Using a "torx" driver (T25), install the front power window regulator motor sub-assembly with the 3 screws.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
HINT:
A new front window regulator adopts a self-tapping method. The installation position of the regulator will be threaded when the self-tapping screw is inserted.

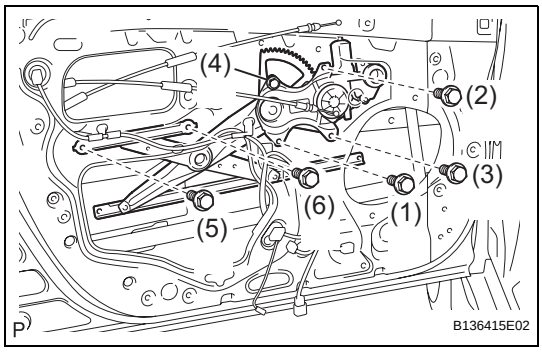
27. INSTALL FRONT DOOR WINDOW REGULATOR SUB-ASSEMBLY

(a) Apply MP grease to the sliding parts on the front door window regulator sub-assembly.

(b) Install the temporary bolt to the front door window regulator sub-assembly.

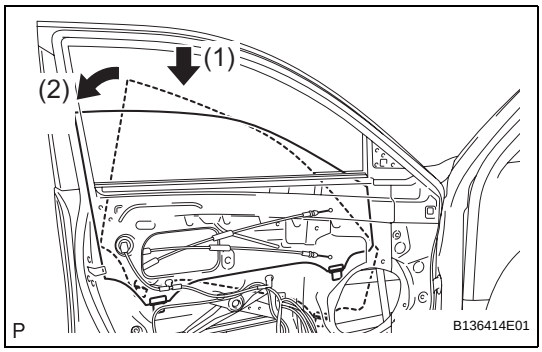
(c) Temporarily install the window regulator.

(d) Tighten the 6 bolts in the order shown in the illustration to install the front window regulator.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

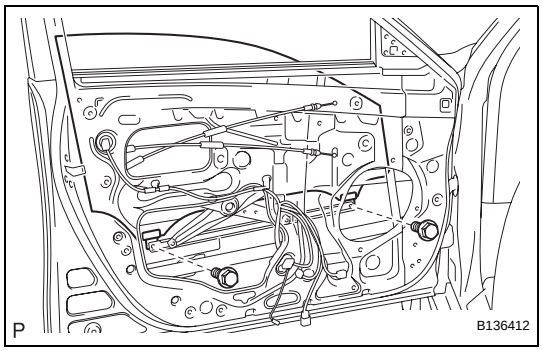


28. INSTALL FRONT DOOR GLASS SUB-ASSEMBLY

(a) Insert the front door glass sub-assembly into the front door panel along the front door glass run as indicated by the arrows in the illustration.



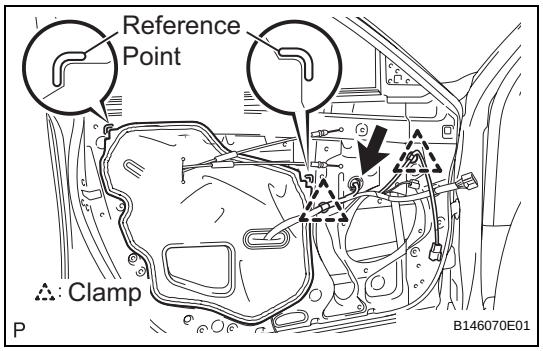
(b) Install the front door glass sub-assembly with the 2 bolts.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)



29. INSTALL FRONT DOOR SERVICE HOLE COVER

(a) Apply butyl tape to the front door panel.

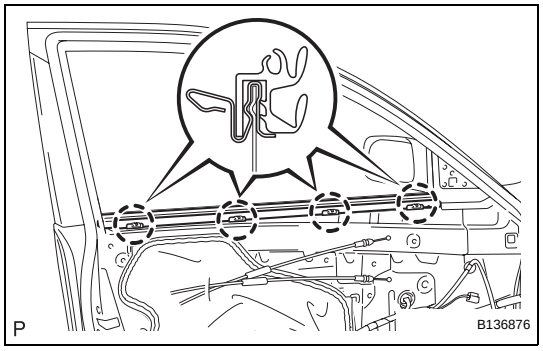
(b) Pass the front door lock remote control cable and rear door inside locking cable through a new front door service hole cover.



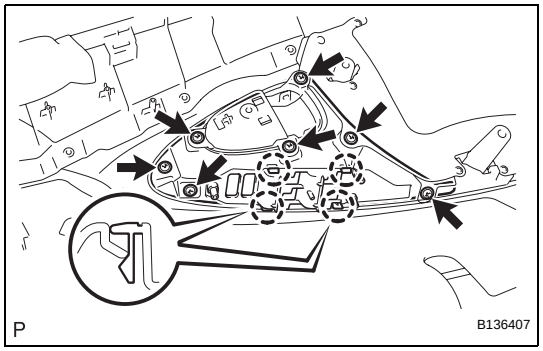
(c) Install a new service hole cover.
NOTICE:
Securely install the front door service hole cover avoiding wrinkles and air bubbles.
(d) Connect each connector and each clamp.

30. INSTALL OUTER REAR VIEW MIRROR ASSEMBLY (See page MI-17)

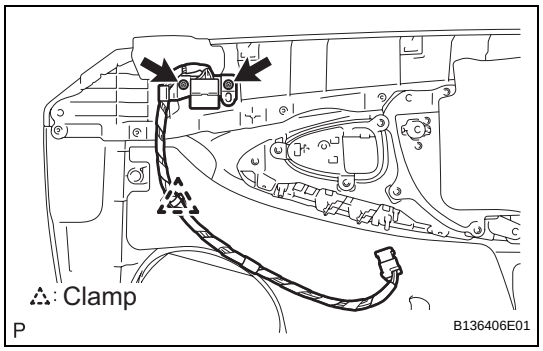
31. INSTALL FRONT NO. 1 SPEAKER ASSEMBLY (See page AV-157)



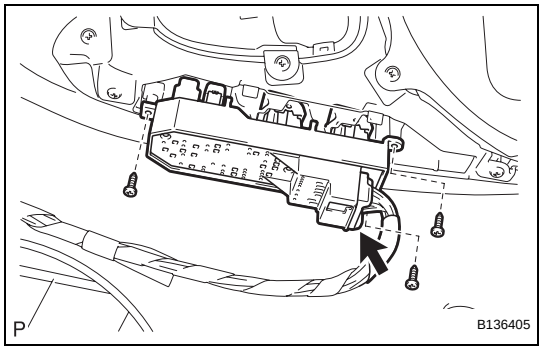
32. INSTALL FRONT DOOR INNER GLASS WEATHERSTRIP
(a) Engage the 4 claws and install the front door inner glass weatherstrip.



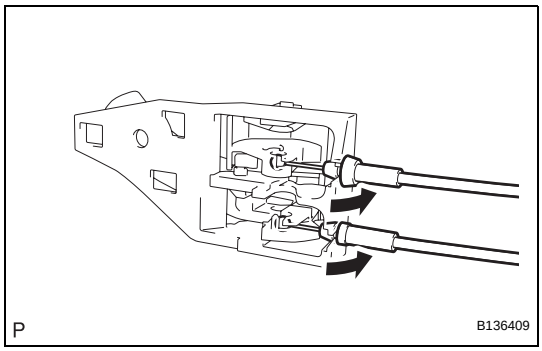
33. INSTALL FRONT ARMREST BASE PANEL UPPER
(a) Engage the 4 claws and install the front armrest base panel upper.
(b) Install the 7 screws.



34. INSTALL FRONT DOOR WIRE (for Driver Side)
(a) Install the front door wire with the 2 screws.
(b) Engage the clamp.

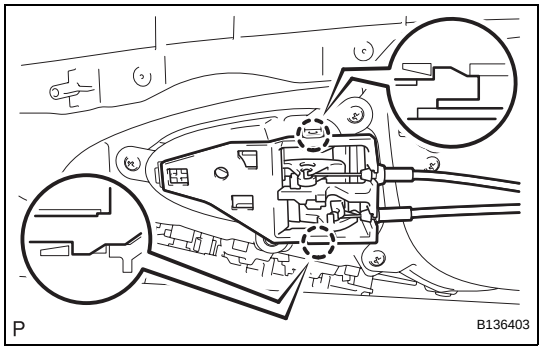


35. INSTALL POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY
(a) Connect the connector.
(b) Install the power window regulator master switch assembly with the 3 screws.



36. INSTALL FRONT DOOR INSIDE HANDLE SUB-ASSEMBLY

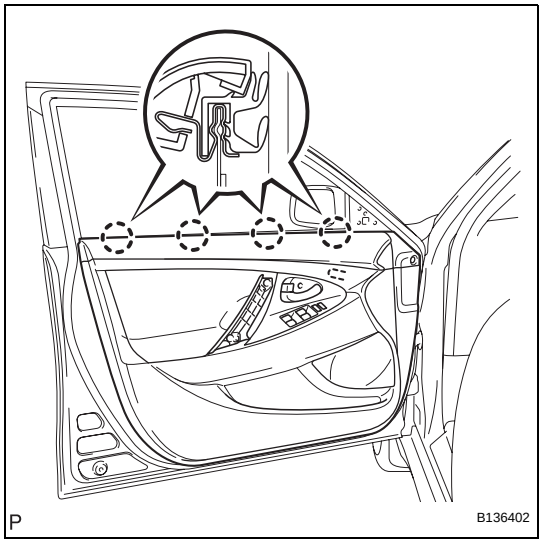
(a) Connect the front door lock remote control cable and front door inside locking cable to the front door inside handle sub-assembly.



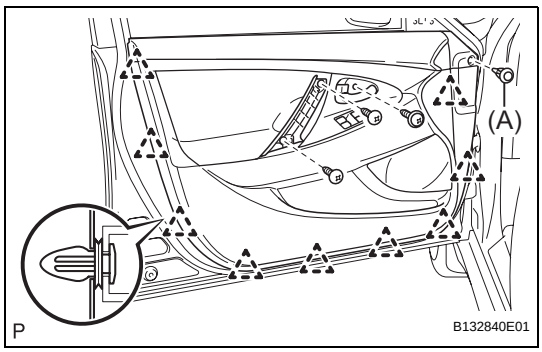
(b) Engage the 2 claws and install the front door inside handle sub-assembly.

37. INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY

(a) Connect each connector.



(b) Engage the front door trim board with the 4 clips of the front door inner glass weatherstrip.

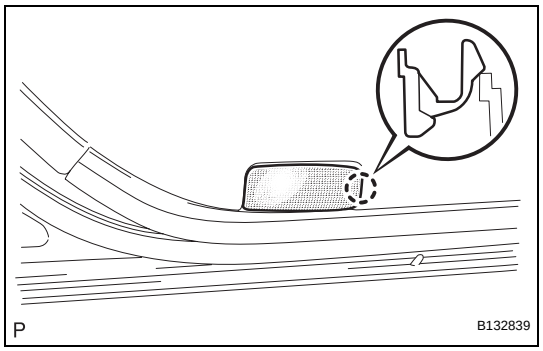


(c) Engage the 9 clips and install the front door trim board to the front door panel.

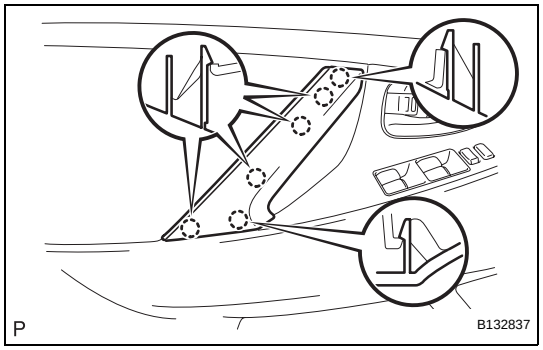
(d) Install the 3 screws and clip (A).

38. INSTALL COURTESY LIGHT ASSEMBLY

(a) Connect the connector.

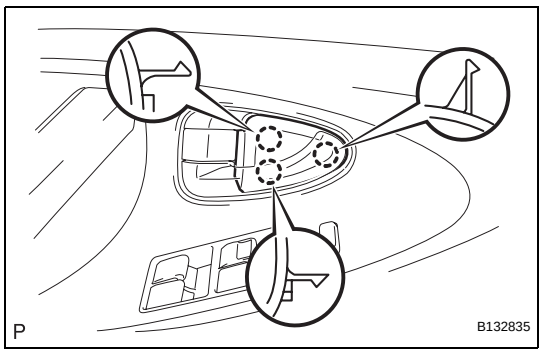


(b) Engage the claw and install the courtesy light assembly.



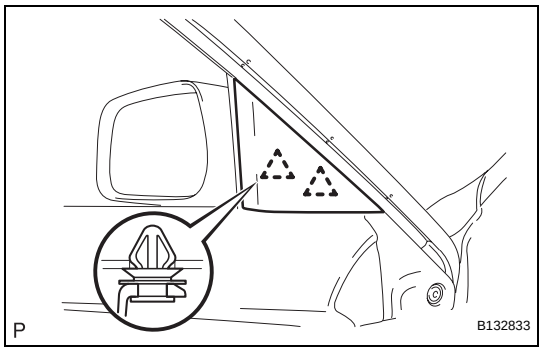
39. INSTALL ASSIST GRIP COVER

(a) Engage the 6 claws and install the assist grip cover.



40. INSTALL FRONT DOOR INSIDE HANDLE BEZEL PLUG

(a) Engage the 3 claws and install the front door inside handle bezel plug.



41. INSTALL FRONT DOOR LOWER FRAME BRACKET GARNISH

(a) Engage the 2 clips and install the front door lower frame bracket garnish.

42. INITIALIZE POWER WINDOW CONTROL SYSTEM

(See page WS-8)

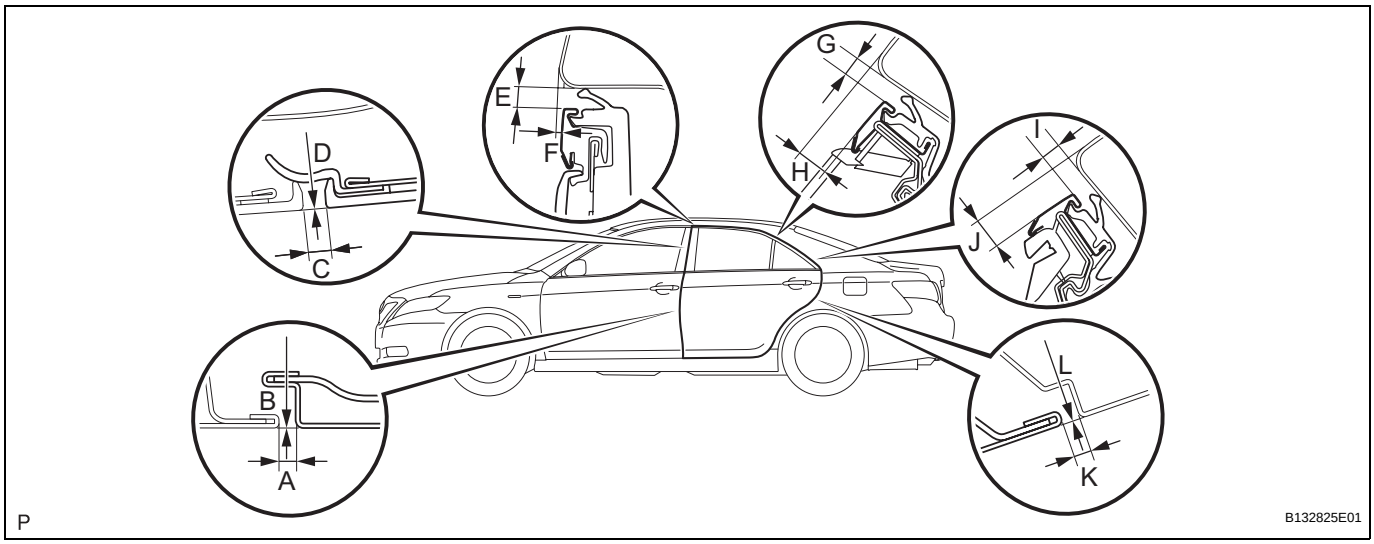
ON-VEHICLE INSPECTION

1. INSPECT REAR DOOR PANEL SUB-ASSEMBLY

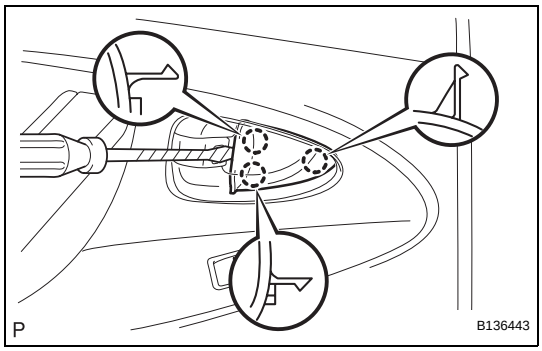
(a) Check that the clearance measurements of areas A to L are within each standard range.



Standard clearance

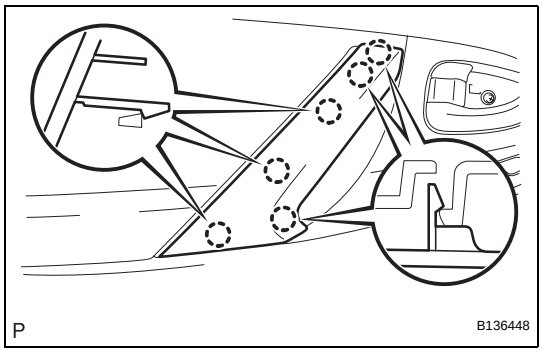
Area	Measurement	Area	Measurement
A	2.7 to 5.7 mm (0.106 to 0.224 in.)	G	3.3 to 6.3 mm (0.130 to 0.248 in.)
B	-1.5 to 1.5 mm (-0.059 to 0.059 in.)	H	0 to 3.0 mm (0 to 0.118 in.)
C	2.3 to 6.3 mm (0.091 to 0.248 in.)	I	3.3 to 6.3 mm (0.130 to 0.248 in.)
D	-2.0 to 2.0 mm (-0.079 to 0.079 in.)	J	5.7 to 8.7 mm (0.224 to 0.343 in.)
E	3.3 to 6.3 mm (0.130 to 0.248 in.)	K	2.7 to 5.7 mm (0.106 to 0.224 in.)
F	-0.3 to 2.7 mm (0.012 to 0.106 in.)	L	-1.5 to 1.5 mm (-0.059 to 0.059 in.)

DISASSEMBLY



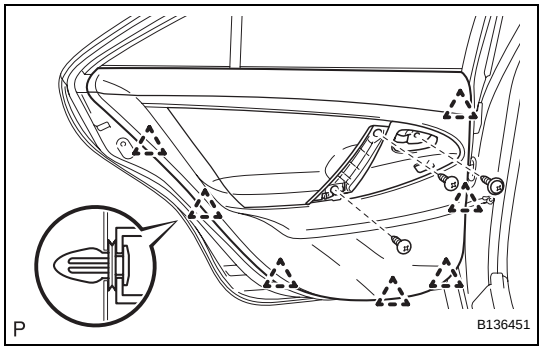
1. REMOVE REAR DOOR INSIDE HANDLE BEZEL PLUG

(a) Using a screwdriver wrapped with protective tape, disengage the 3 claws and remove the rear door inside handle bezel plug.



2. REMOVE DOOR ASSIST GRIP COVER

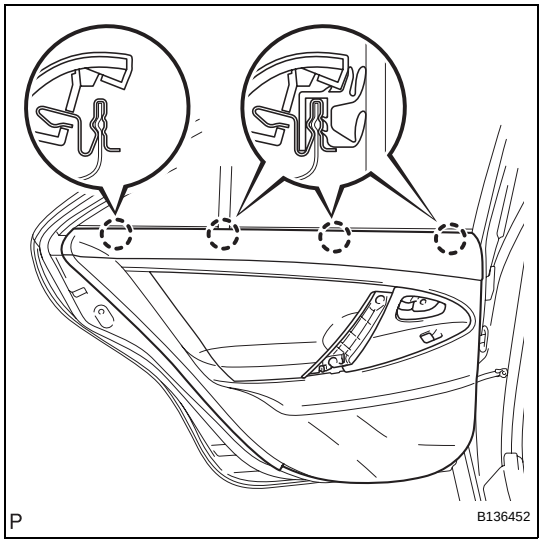
(a) Using a screwdriver wrapped with protective tape, disengage the 6 claws and remove the door assist grip cover.



3. REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY

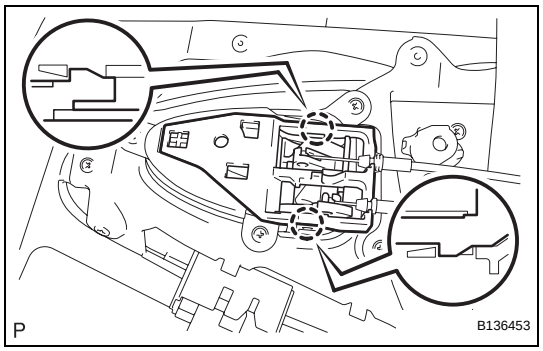
(a) Remove the 3 screws.

(b) Using the clip remover, disengage the 7 clips.

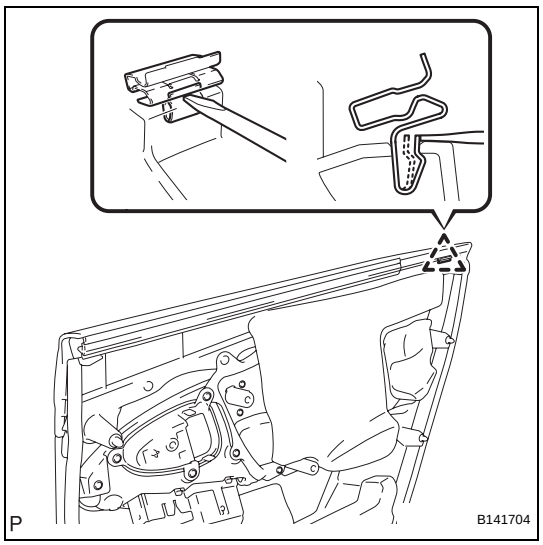


(c) Raise the rear door trim board to disengage the 4 claws and remove the rear door trim board together with the rear door inner glass weatherstrip.

(d) Disconnect the connector.



(e) Disengage the 2 claws and disconnect the rear door inside handle sub-assembly.

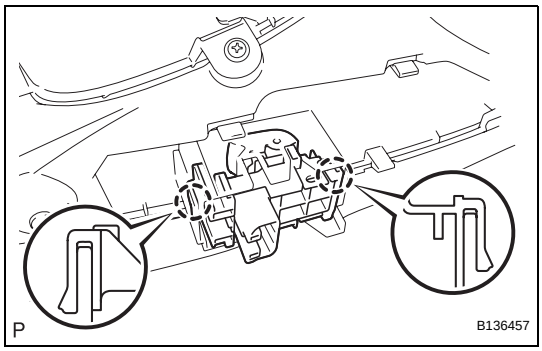


(f) Disengage the clip as shown in the illustration and remove the No. 1 door scuff plate clamp from the rear door trim board.

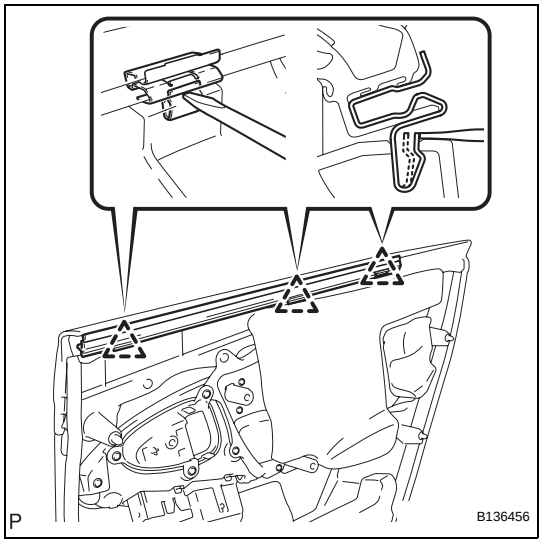
4. REMOVE REAR POWER WINDOW REGULATOR SWITCH ASSEMBLY

(a) Disconnect the connector.

ED

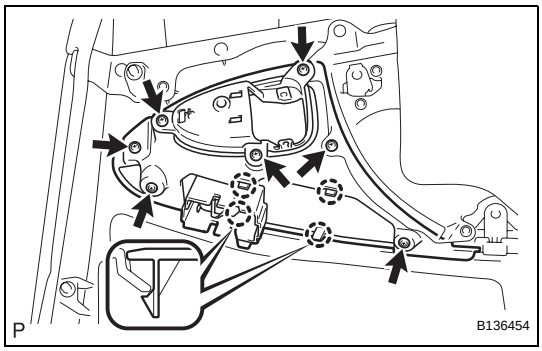


(b) Using a screwdriver wrapped with protective tape, disengage the 2 claws and remove the rear power window regulator switch assembly.



5. REMOVE REAR DOOR INNER GLASS WEATHERSTRIP

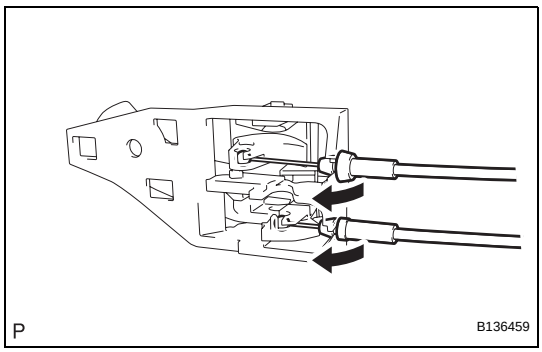
(a) Disengage the 3 clips as shown in the illustration and remove the rear door inner glass weatherstrip from the rear door trim board.



6. REMOVE REAR DOOR ARMREST BASE PANEL UPPER

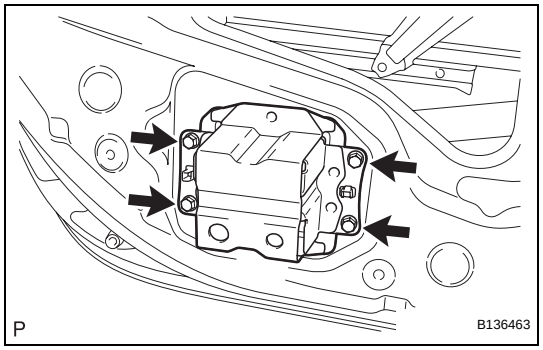
(a) Remove the 7 screws.

(b) Disengage the 4 claws and remove the rear door armrest base panel upper.



7. REMOVE REAR DOOR INSIDE HANDLE SUB-ASSEMBLY

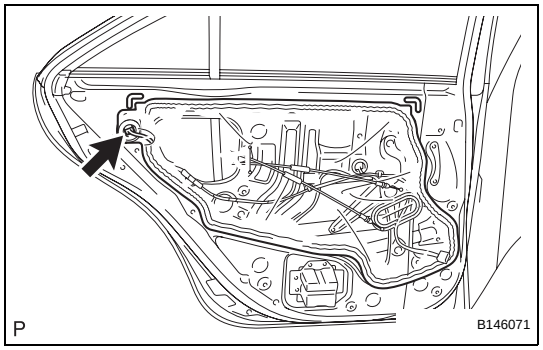
(a) Disconnect the cables and remove the rear door inside handle sub-assembly.



8. REMOVE REAR DOOR INSIDE PANEL REINFORCE

(a) Remove the 4 screws and the rear door inside panel reinforce.

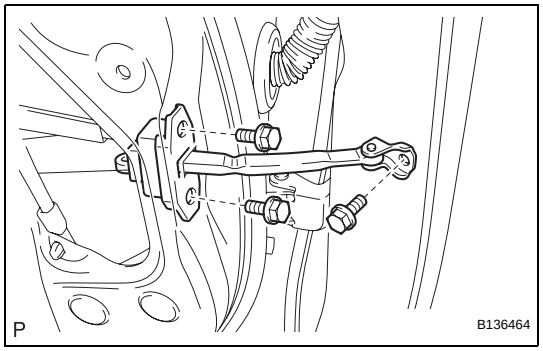
(b) Remove the 4 grommets.



9. REMOVE REAR DOOR SERVICE HOLE COVER

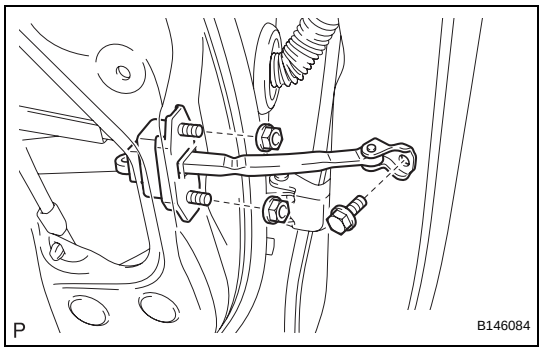
(a) Disconnect the connector.

(b) Remove the rear door service hole cover.
HINT:
Remove the remaining tape on the door side.



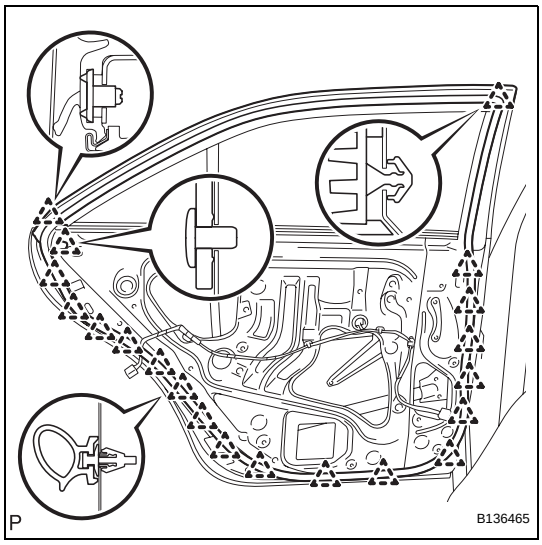
10. REMOVE REAR DOOR CHECK ASSEMBLY (for TMC Made)

(a) Remove the 3 bolts and the rear door check assembly.



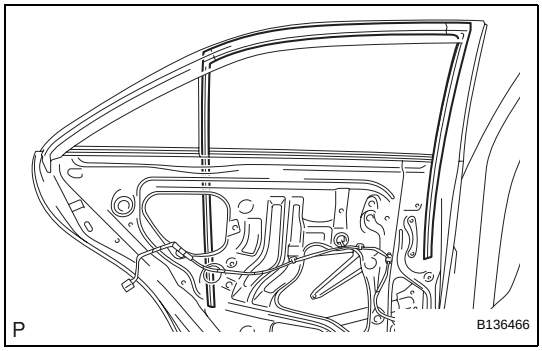
11. REMOVE REAR DOOR CHECK ASSEMBLY (for TMMK Made)

(a) Remove the bolt, 2 nuts, and the rear door check assembly.



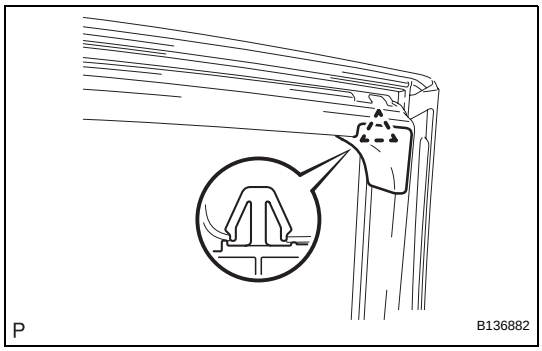
12. REMOVE REAR DOOR WEATHERSTRIP

(a) Using the clip remover, disengage the 20 clips and remove the rear door weatherstrip.



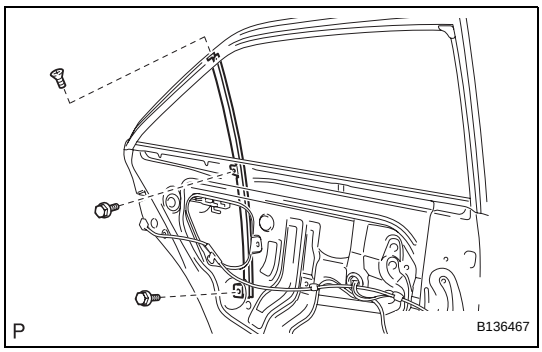
13. REMOVE REAR DOOR GLASS RUN

(a) Remove the rear door glass run.



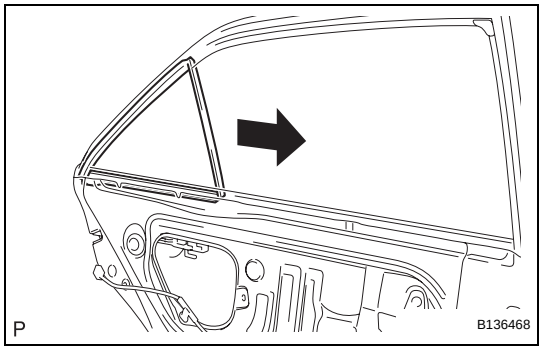
14. REMOVE REAR DOOR FRAME GARNISH

(a) Disengage the clip and remove the rear door frame garnish.



15. REMOVE REAR DOOR LOWER WINDOW FRAME SUB-ASSEMBLY

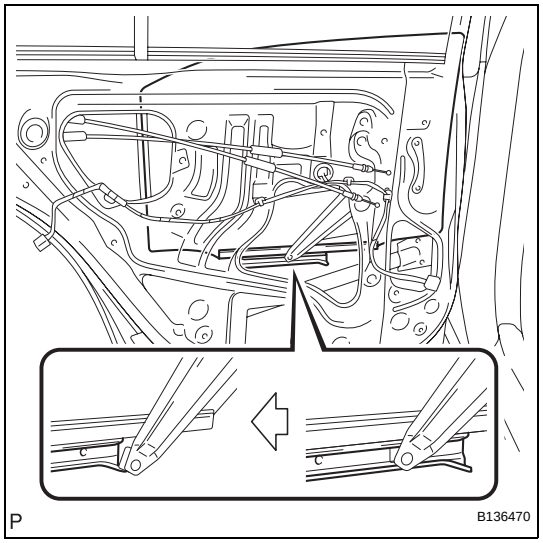
(a) Remove the 2 bolts, the screw, and the rear door lower window frame sub-assembly.



16. REMOVE REAR DOOR QUARTER WINDOW GLASS

(a) Remove the rear door quarter window glass and the rear door quarter window weatherstrip as a unit as shown in the illustration.

(b) Remove the rear door quarter window glass from the rear door quarter window weatherstrip.

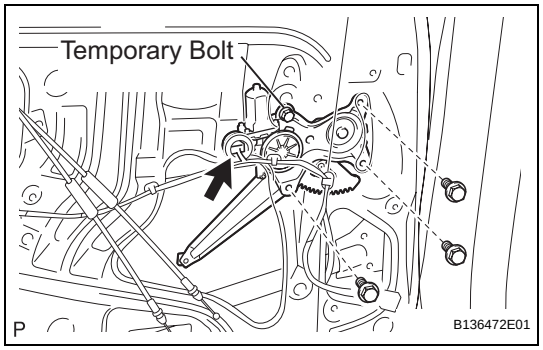


17. REMOVE REAR DOOR GLASS SUB-ASSEMBLY

(a) Remove the rear door glass sub-assembly from the rear door window regulator sub-assembly as shown in the illustration.

NOTICE:

Do not damage the door glass.



18. REMOVE REAR DOOR WINDOW REGULATOR SUB-ASSEMBLY

(a) Disconnect the connector.

(b) Loosen the temporary bolt.

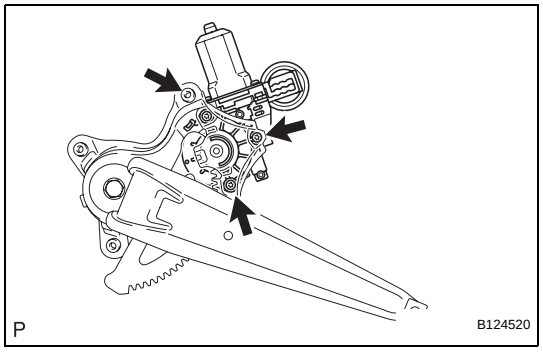
NOTICE:

If the temporary bolt is removed, the rear door window regulator may fall and become deformed.

(c) Remove the 3 bolts.

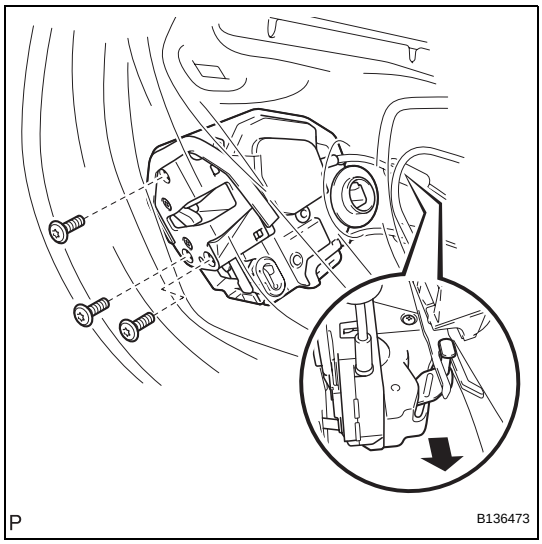
(d) Remove the rear door window regulator sub-assembly and the power window regulator motor assembly rear as a unit.

(e) Remove the temporary bolt from the rear door window regulator.



19. REMOVE REAR POWER WINDOW REGULATOR MOTOR ASSEMBLY

(a) Using a "torx" driver (T25), remove the 3 screws and the rear power window regulator motor assembly.

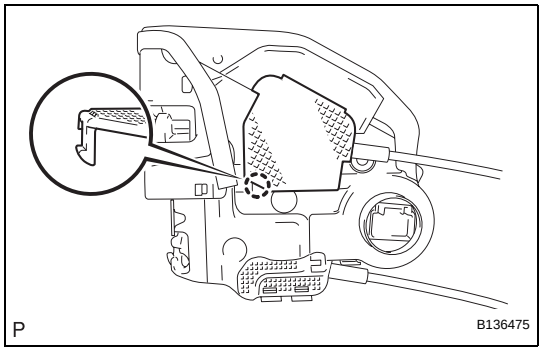


20. REMOVE REAR DOOR LOCK ASSEMBLY

(a) Using a "torx" socket wrench (T30), remove the 3 screws.

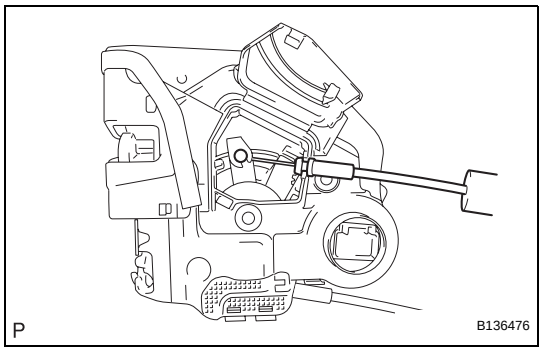
(b) Move the rear door lock assembly downward and pull the release plate out of the rear door outside handle frame.

(c) Remove the door lock wiring harness sealing from the rear door lock assembly.

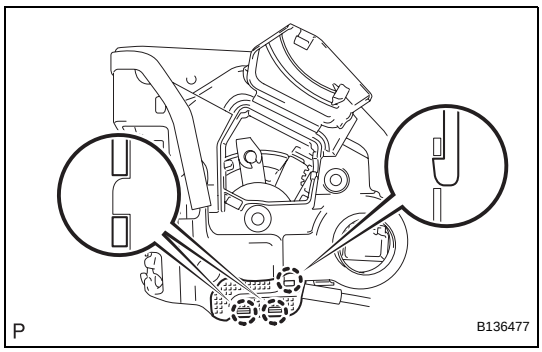


21. REMOVE REAR DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY

(a) Using a screwdriver, disengage the claw.
HINT:
Tape the screwdriver tip before use.

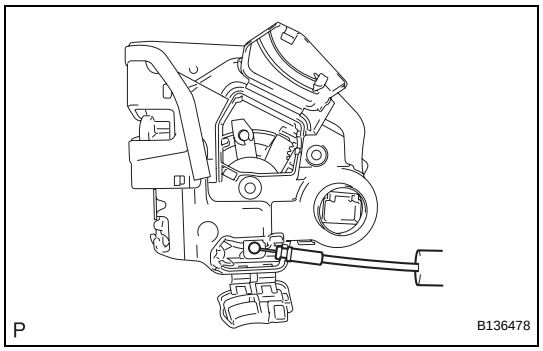


(b) Remove the rear door lock remote control cable assembly.

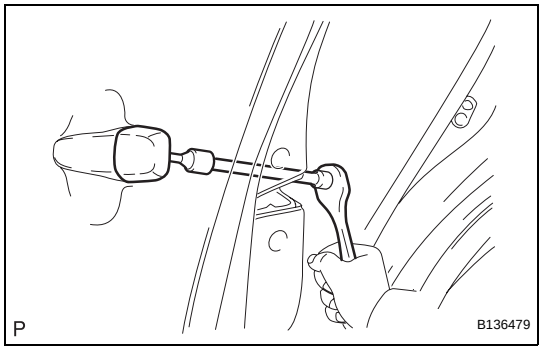


22. REMOVE REAR DOOR INSIDE LOCKING CABLE ASSEMBLY

(a) Using a screwdriver, disengage the 3 claws.
HINT:
Tape the screwdriver tip before use.

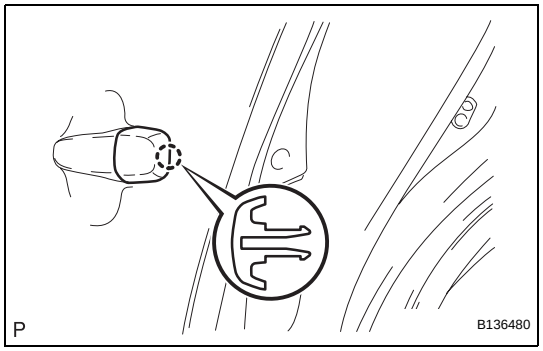


(b) Remove the rear door inside locking cable assembly.

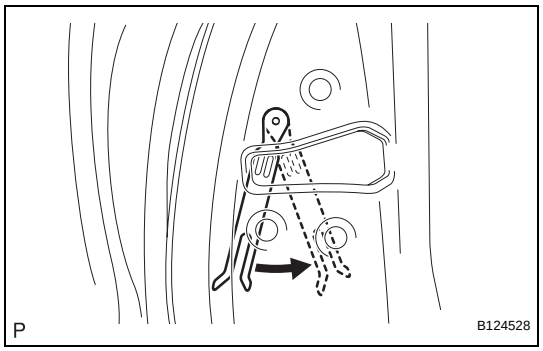


23. REMOVE REAR DOOR OUTSIDE HANDLE COVER

(a) Using a "torx" socket wrench (T30), loosen the screw.
HINT:
The screw cannot be removed because it is integrated into the rear door outside handle frame sub-assembly.

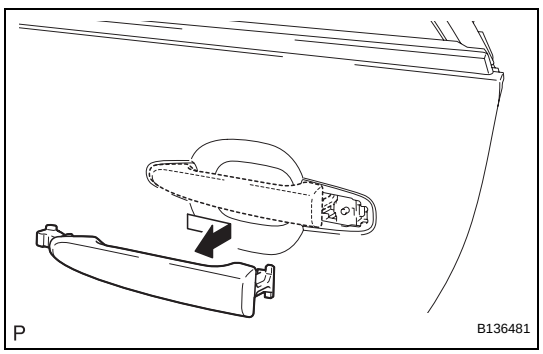


(b) Disengage the 2 claws and remove the rear door outside handle cover.



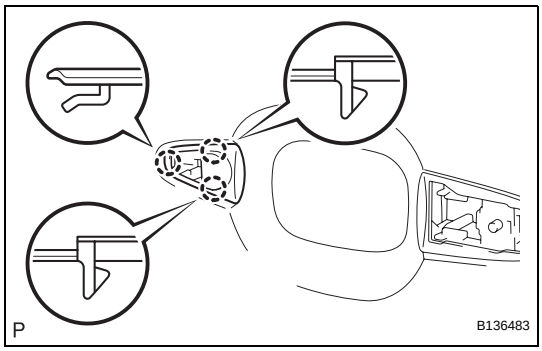
24. REMOVE REAR DOOR OUTSIDE HANDLE ASSEMBLY

(a) Pull and hold the release plate of the outside handle frame as shown in the illustration.
NOTICE:
The release plate may interfere with the outside handle and may be damaged when removing the handle, unless the release plate of the outside handle frame is pulled and held.



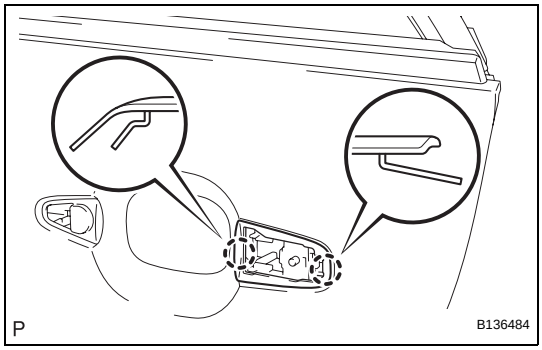
(b) Remove the rear door outside handle assembly as shown in the illustration.

ED



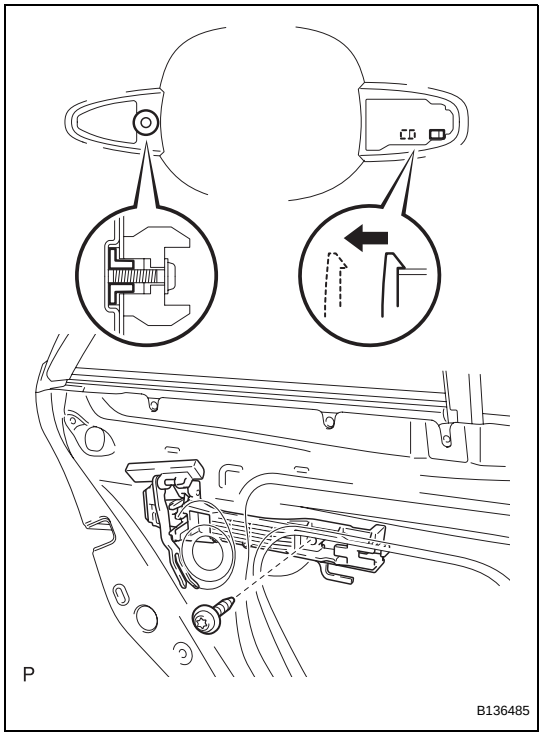
25. REMOVE REAR DOOR FRONT OUTSIDE HANDLE PAD

(a) Disengage the 3 claws and remove the rear door front outside handle pad.



26. REMOVE REAR DOOR REAR OUTSIDE HANDLE PAD

(a) Disengage the 2 claws and remove the rear door rear outside handle pad.



27. REMOVE REAR DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY

(a) Using a "torx" socket wrench (T30), remove the screw.

(b) Disengage the claws and remove the rear door outside handle frame sub-assembly.

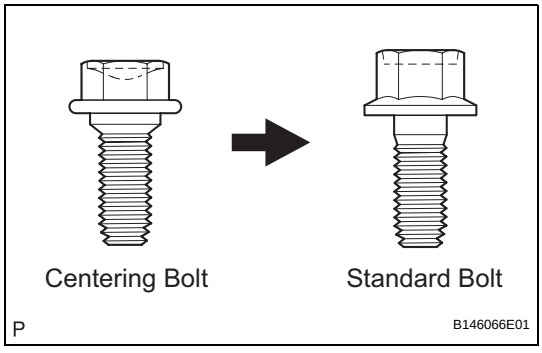
28. REMOVE REAR DOOR BELT MOULDING ASSEMBLY (See page ET-37)

29. REMOVE REAR DOOR FRONT WINDOW FRAME MOULDING (See page ET-55)

30. REMOVE REAR DOOR UPPER WINDOW FRAME MOULDING (See page ET-56)

31. REMOVE REAR DOOR OUTSIDE STRIPE (See page ET-76)

32. REMOVE REAR DOOR LOWER OUTSIDE STRIPE (See page ET-76)



ADJUSTMENT

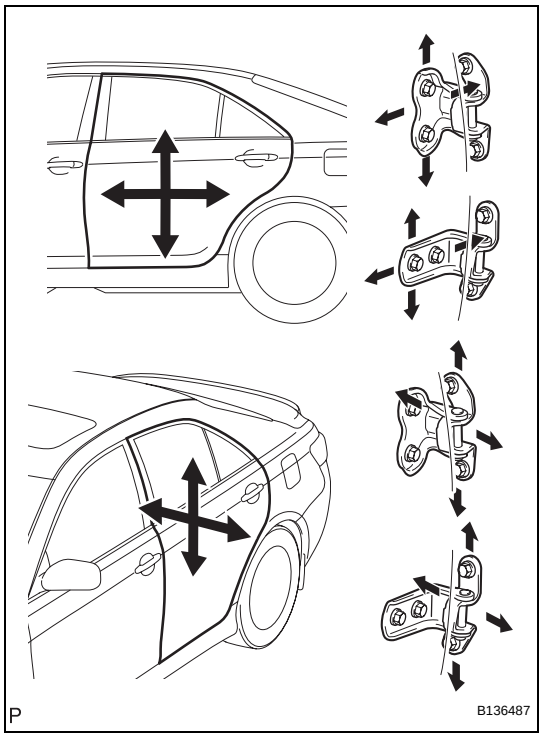
HINT:

- Before adjusting the door position for vehicles equipped with side airbags and curtain shield airbags, be sure to disconnect the battery. After adjustment, inspect the SRS warning light, the side airbag system, and the curtain shield airbag system for normal operation. Then initialize both airbag systems.
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

- Centering bolts are used to mount the door hinge to the vehicle body and door. The door cannot be adjusted with the centering bolts on. Substitute the centering bolts with standard bolts (with washers) when making adjustments.
- A bolt without a torque specification is shown in the standard bolt chart (See page SS-2).

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:
Wait for 90 seconds after disconnecting the cable to prevent airbag deployment (See page RS-363).



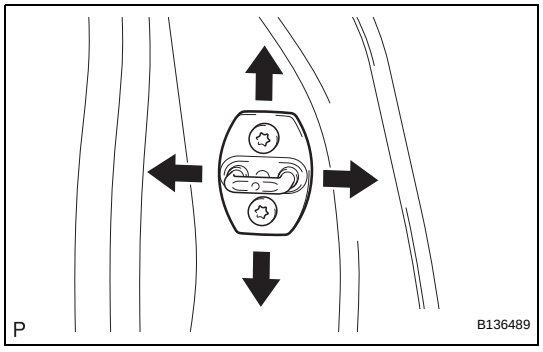
2. ADJUST REAR DOOR

(a) Loosen the body's hinge bolts and adjust the door position.
SST 09812-00010

(b) Tighten the body's hinge bolts after the adjustment.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)

(c) Loosen the door's hinge bolts and adjust the door position.

(d) Tighten the door's hinge bolts after the adjustment.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)



(e) Using a "torx" socket wrench (T40), adjust the striker position by slightly loosening the striker mounting screws and hitting the striker with a plastic hammer.

(f) Using a "torx" socket wrench (T40), tighten the striker mounting screws after the adjustment.
Torque: 23 N*m (235 kgf*cm, 17 ft.*lbf)

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

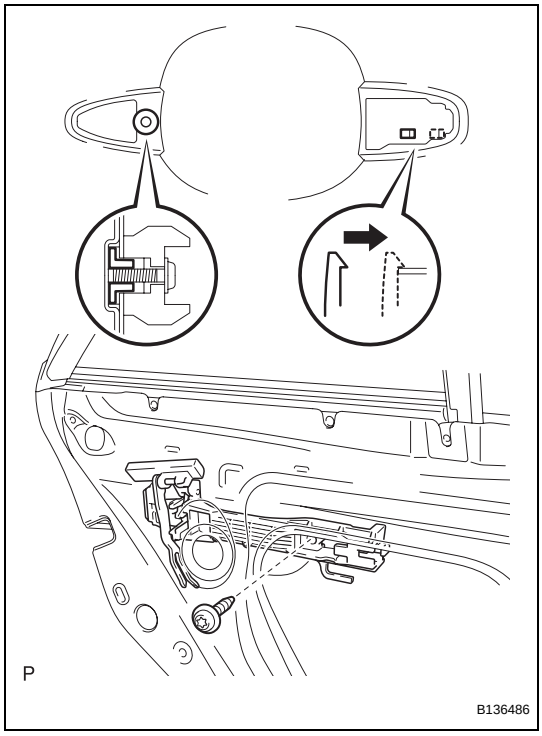
4. INSPECT SRS WARNING LIGHT
(See page ED-25)

ED

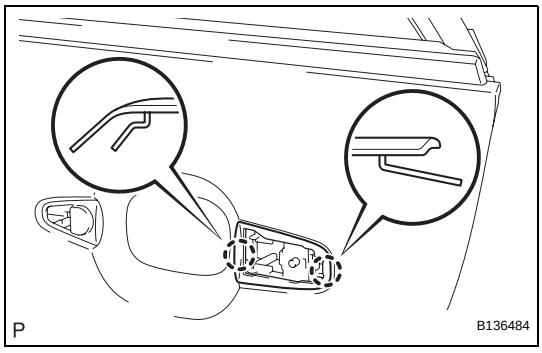
ED

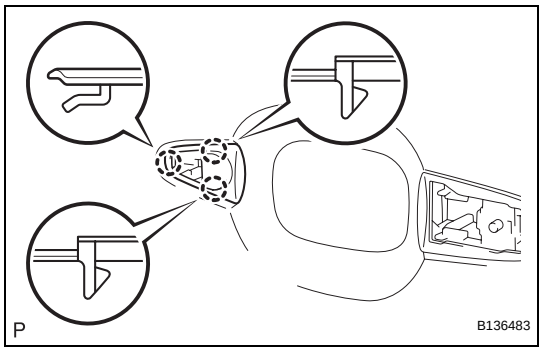
REASSEMBLY

1. **REPAIR INSTRUCTION (See page ET-77)**
2. **INSTALL REAR DOOR LOWER OUTSIDE STRIPE (See page ET-80)**
3. **INSTALL REAR DOOR OUTSIDE STRIPE (See page ET-80)**
4. **INSTALL REAR DOOR UPPER WINDOW FRAME MOULDING (See page ET-56)**
5. **INSTALL REAR DOOR FRONT WINDOW FRAME MOULDING (See page ET-57)**
6. **INSTALL REAR DOOR BELT MOULDING ASSEMBLY (See page ET-37)**
7. **INSTALL REAR DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY**
   (a) Apply MP grease to the sliding parts on the rear door outside handle frame sub-assembly.
   (b) Using a "torx" socket wrench (T30), install the rear door outside handle frame sub-assembly with the screw.



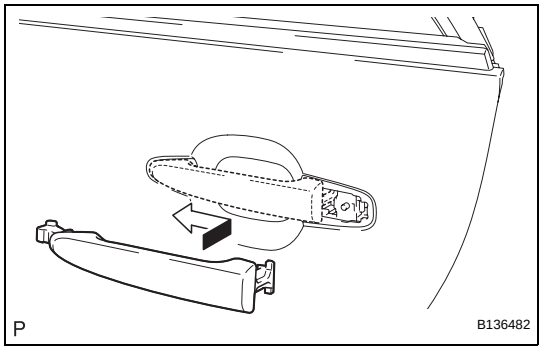
8. **INSTALL REAR DOOR REAR OUTSIDE HANDLE PAD**
   (a) Attach the 2 claws to install the rear door rear outside handle pad.





9. INSTALL REAR DOOR FRONT OUTSIDE HANDLE PAD

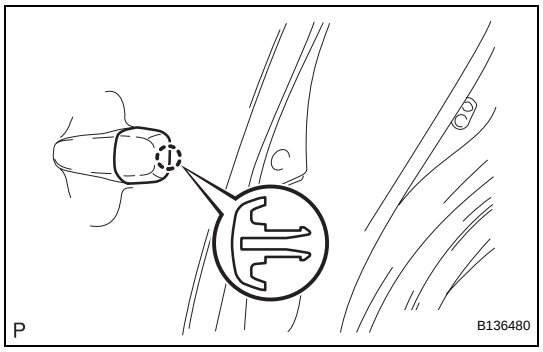
(a) Attach the 3 claws to install the rear door front outside handle pad.



10. INSTALL REAR DOOR OUTSIDE HANDLE ASSEMBLY

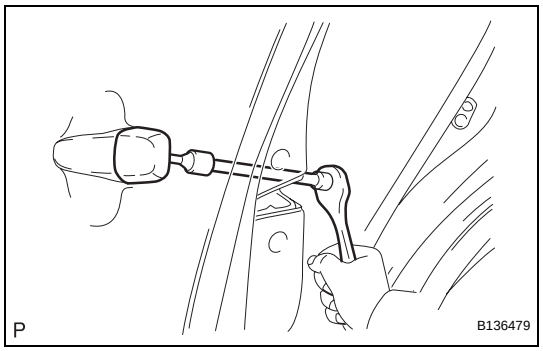
(a) Insert the front end of the rear door outside handle assembly into the rear door outside handle frame.
NOTICE:
If the bellcrank lever is not pulled and held when installing the outside handle, the bellcrank lever will interfere with the outside handle and it will damage the release plate.

(b) Insert the rear end of the rear door outside handle assembly into the rear door outside handle frame. Next slide the rear door outside handle assembly to the front of the vehicle to install it.

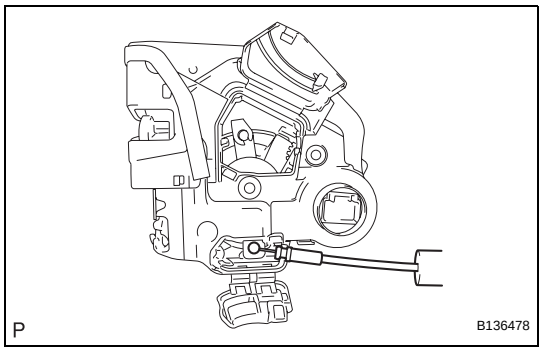


11. INSTALL REAR DOOR OUTSIDE HANDLE COVER

(a) Install the rear door outside handle cover with the claw.

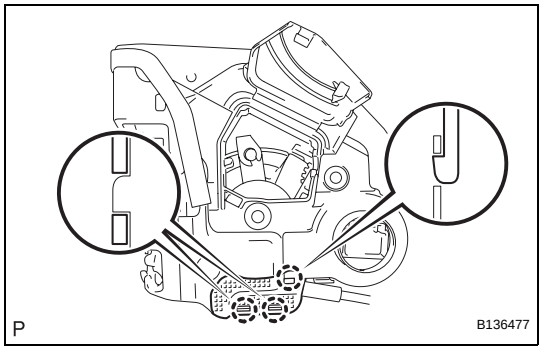


(b) Using a "torx" socket wrench (T30), install the rear door outside handle cover with the screw.

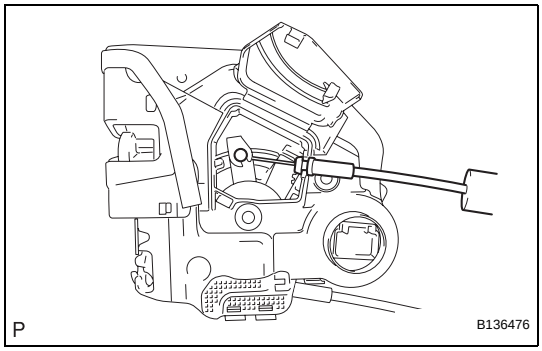


12. INSTALL REAR DOOR INSIDE LOCKING CABLE ASSEMBLY

(a) Install the rear door inside locking cable assembly.

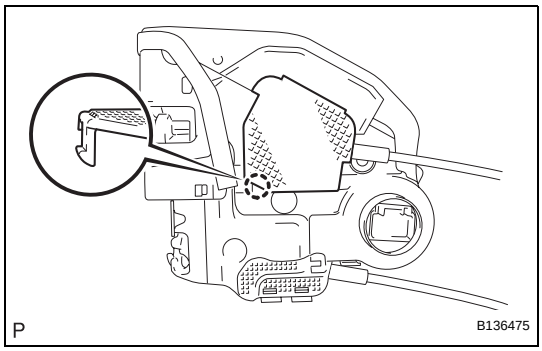


(b) Engage the 3 claws.



13. INSTALL REAR DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY

(a) Install the rear door lock remote control cable assembly.



(b) Engage the claw.

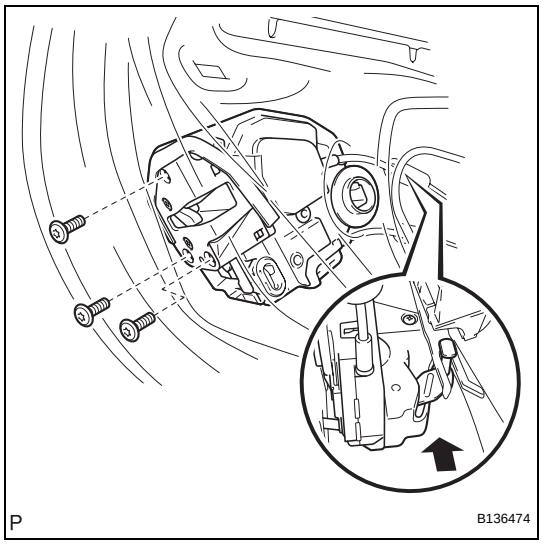
14. INSTALL REAR DOOR LOCK ASSEMBLY

NOTICE:

- **When reusing the removed rear door lock assembly, replace the door lock wire harness sealing on the connector with a new one.**
- **Do not allow grease or dust to adhere on the door lock wiring harness sealing surface of the connector.**
- **Reusing the door lock wiring harness sealing and/or using damaged door lock wiring harness sealing may cause water intrusion to the connection. This may result in a malfunction in the rear door lock assembly.**

(a) Apply MP grease to the sliding parts on the rear door lock assembly.

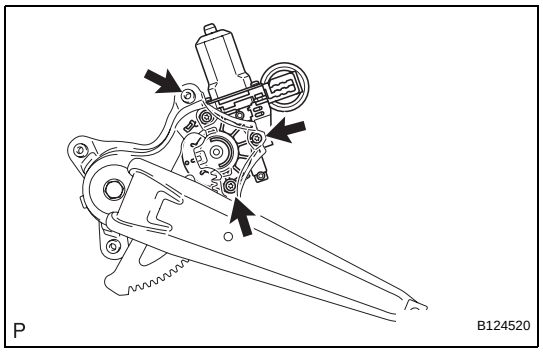
(b) Install a new door lock wiring harness sealing to the rear door lock assembly.



(c) Insert the rear door lock assembly to the rear door outside handle release plate, and set it to the rear door panel.
(d) Make sure that the rear door outside handle frame release plate is securely connected to the rear door lock assembly.
(e) Using a "torx" socket wrench (T30), install the rear door lock assembly with the 3 screws.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)
(f) Connect the connector.

15. INSTALL REAR POWER WINDOW REGULATOR MOTOR ASSEMBLY

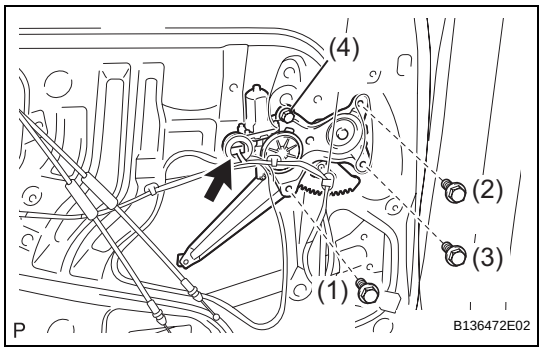
NOTICE:
The regulator arm must be below the intermediate position when installing the power window regulator motor.



(a) Using a "torx" driver (T25), install the power window regulator motor assembly with the 3 screws.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
HINT:
The new rear window regulator adopts a self-tapping method. The installation position of the regulator will be threaded when the self-tapping screw is inserted.

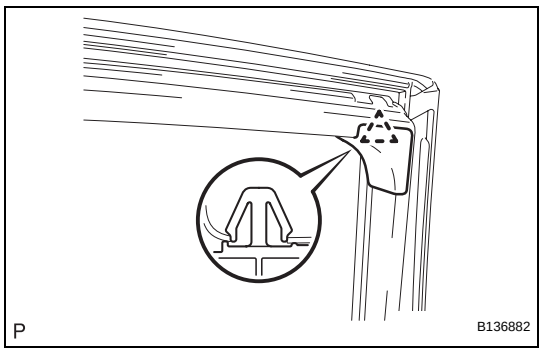
16. INSTALL REAR DOOR WINDOW REGULATOR SUB-ASSEMBLY

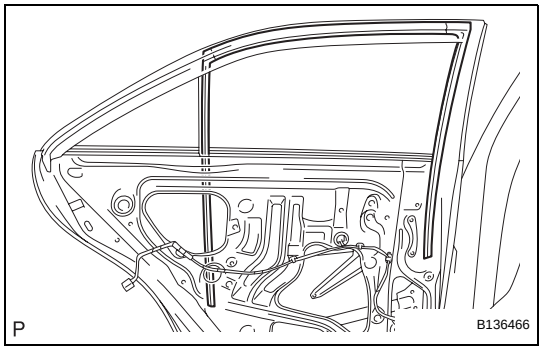
(a) Apply MP grease to the sliding parts on the rear door window regulator sub-assembly.
(b) Install the temporary bolt to the rear door window regulator sub-assembly.
(c) Temporarily install the window regulator.
(d) Tighten the 4 bolts in the order shown in the illustration to install the rear door window regulator.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
(e) Connect the connector.



17. INSTALL REAR DOOR FRAME GARNISH

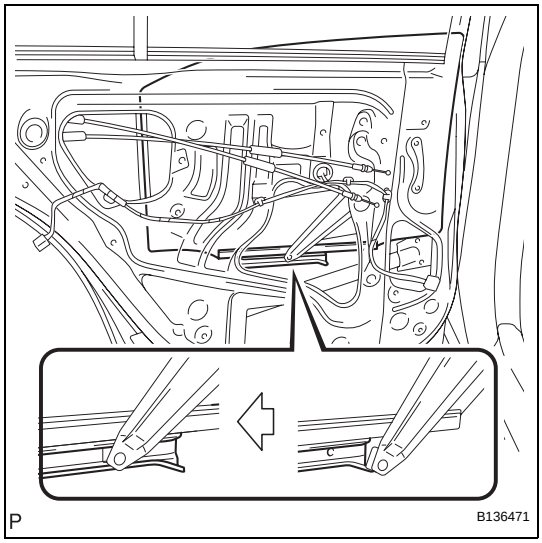
(a) Engage the clip and install a new rear door frame garnish.





18. INSTALL REAR DOOR GLASS RUN

(a) Install the rear door glass run.

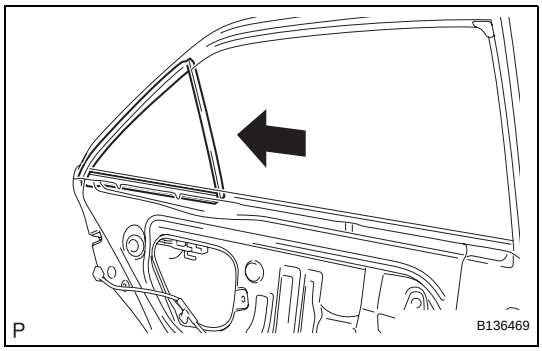


19. INSTALL REAR DOOR GLASS SUB-ASSEMBLY

(a) Slide the rear door glass sub-assembly to install it as shown in the illustration.

20. INSTALL REAR DOOR QUARTER WINDOW GLASS

(a) Install the rear door quarter window glass to the rear door quarter weatherstrip.

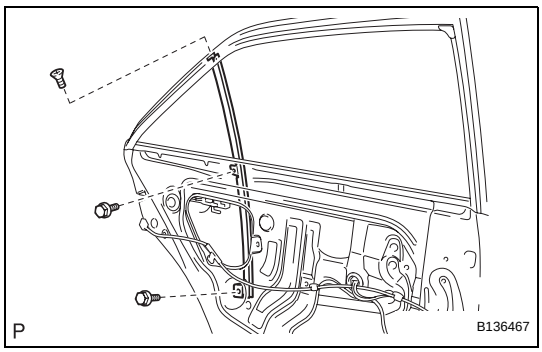


(b) Install the rear door quarter window glass together with the rear door quarter window glass weatherstrip in the direction indicated by the arrow in the illustration.

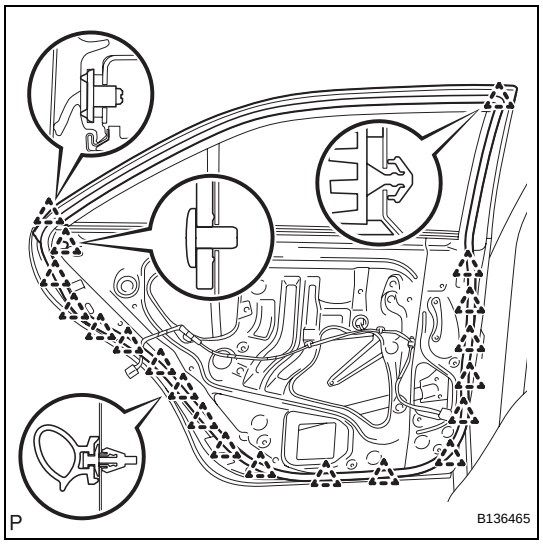
21. INSTALL REAR DOOR LOWER WINDOW FRAME SUB-ASSEMBLY

(a) Insert the rear door lower window frame sub-assembly from up above.

(b) Install the rear door glass run to the rear door lower window frame sub-assembly.

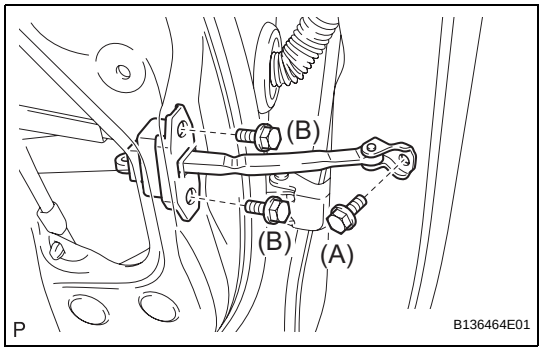


(c) Install the rear door lower window frame sub-assembly with the 2 bolts and screw.



22. INSTALL REAR DOOR WEATHERSTRIP

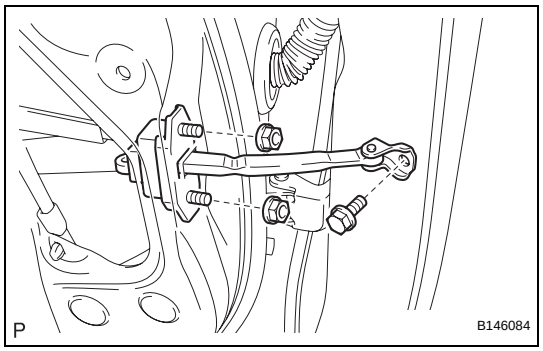
(a) Engage the 20 clips and install the rear door weatherstrip.



23. INSTALL REAR DOOR CHECK ASSEMBLY (for TMC Made)

(a) Install the rear door check assembly with the 3 bolts.

Torque: Bolt (A)
26 N*m (265 kgf*cm, 19 ft.*lbf)
Torque: Bolt (B)
8.0 N*m (82 kgf*cm, 71 in.*lbf)



24. INSTALL REAR DOOR CHECK ASSEMBLY (for TMMK Made)

(a) Install the rear door check assembly with the bolt and 2 nuts.

Torque: Bolt
26 N*m (265 kgf*cm, 19 ft.*lbf)
Torque: Nut
8.0 N*m (82 kgf*cm, 71 in.*lbf)

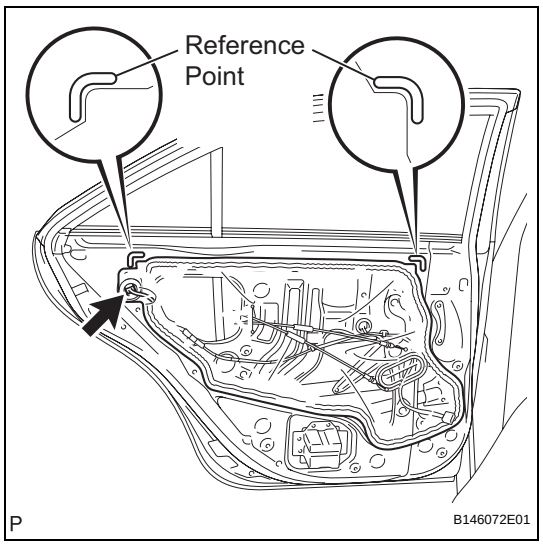
25. INSTALL REAR DOOR SERVICE HOLE COVER

(a) Apply butyl tape to the rear door panel.

(b) Pass the rear door lock remote control cable, rear door inside locking cable and each connector through a new rear door service hole cover.

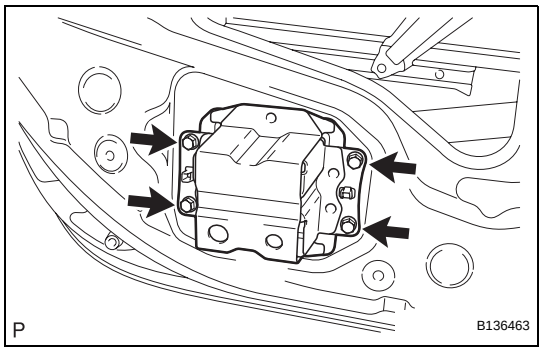
(c) Install a new rear door service hole cover.
NOTICE:
Securely install the rear door service hole cover avoiding wrinkles and air bubbles.

(d) Connect the connector and clamp.

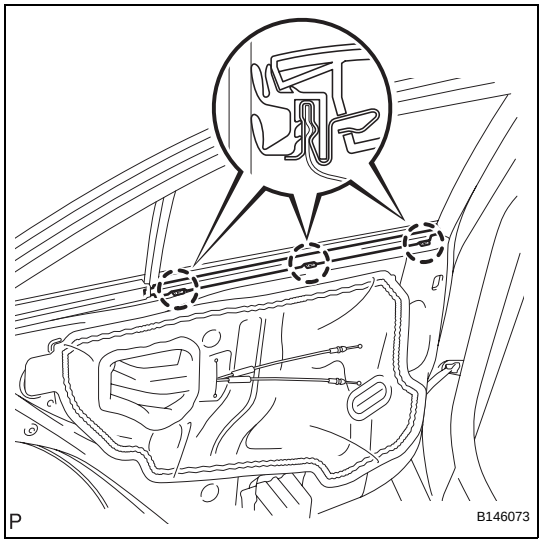


26. INSTALL REAR DOOR INSIDE PANEL REINFORCE

(a) Install 4 new grommets.

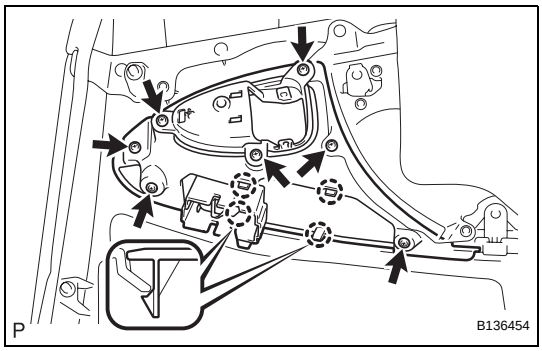


(b) Install a new rear door inside panel reinforce with the 4 screws.



27. INSTALL REAR DOOR INNER GLASS WEATHERSTRIP

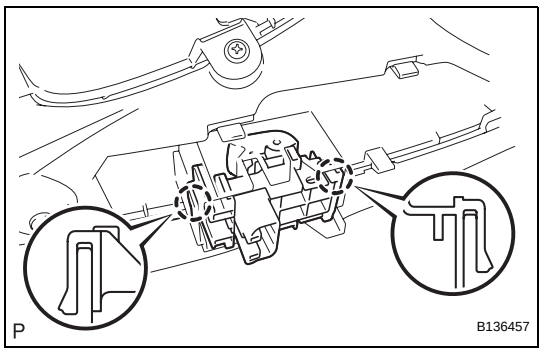
(a) Engage the 3 claws to install the rear door inner glass weatherstrip.



28. INSTALL REAR DOOR ARMREST BASE PANEL UPPER

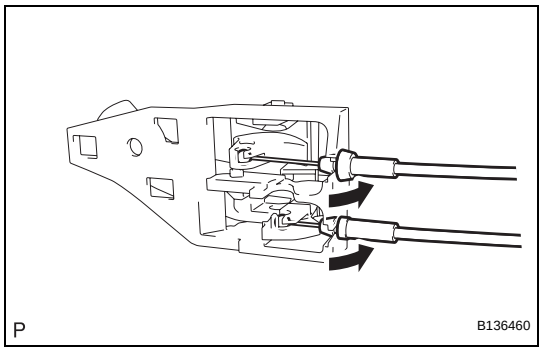
(a) Engage the 4 claws.

(b) Install the rear door armrest base panel upper with the 7 screws.



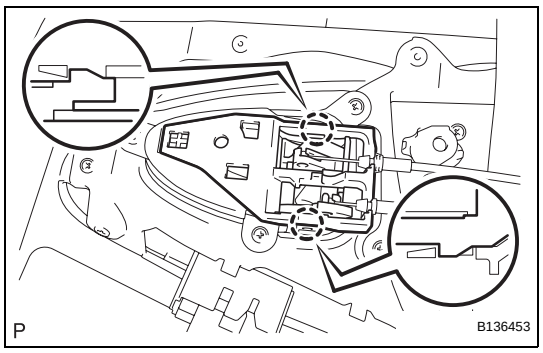
29. INSTALL REAR POWER WINDOW REGULATOR SWITCH ASSEMBLY

(a) Engage the 2 claws and install the rear power window regulator switch assembly.

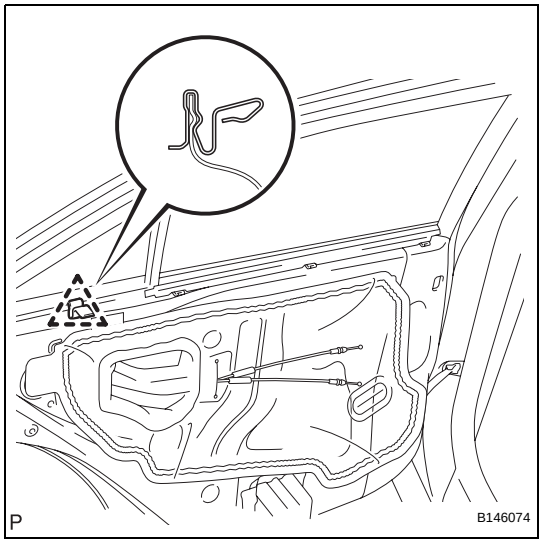


30. INSTALL REAR DOOR INSIDE HANDLE SUB-ASSEMBLY

(a) Connect the rear door lock remote control cable and rear door inside locking cable to the rear inside handle.



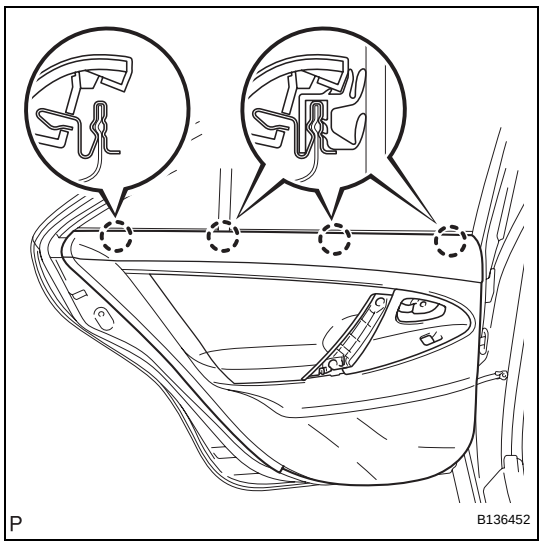
(b) Engage the 2 claws and install the rear door inside handle sub-assembly.



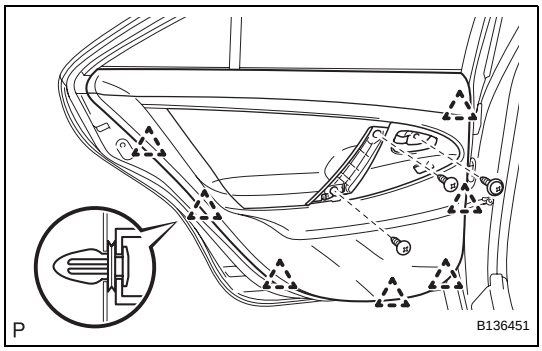
31. INSTALL REAR DOOR TRIM BOARD SUB-ASSEMBLY

(a) Engage the claw to install the No. 1 door scuff plate clamp.

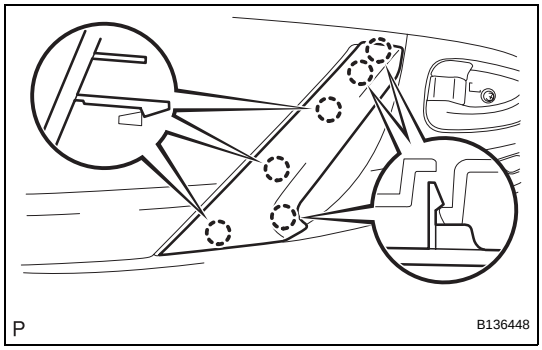
(b) Connect each connector.



(c) Engage the rear door trim board with the 4 clips of the rear door inner glass weatherstrip.

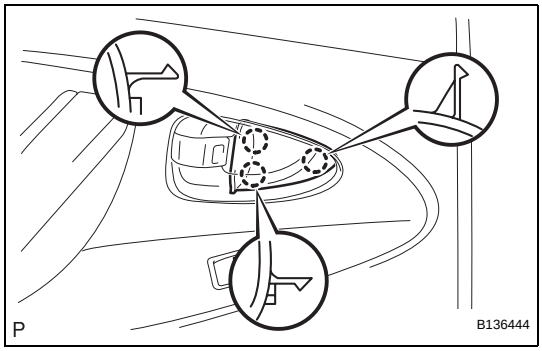


(d) Engage the 7 clips to install the rear door trim board to the rear door panel.
(e) Install the 3 screws.



32. INSTALL DOOR ASSIST GRIP COVER

(a) Engage the 6 claws and install the door assist grip cover.



33. INSTALL REAR DOOR INSIDE HANDLE BEZEL PLUG

(a) Engage the 3 claws to install the rear door inside handle bezel plug.

34. INITIALIZATION POWER WINDOW CONTROL SYSTEM

(See page WS-8)

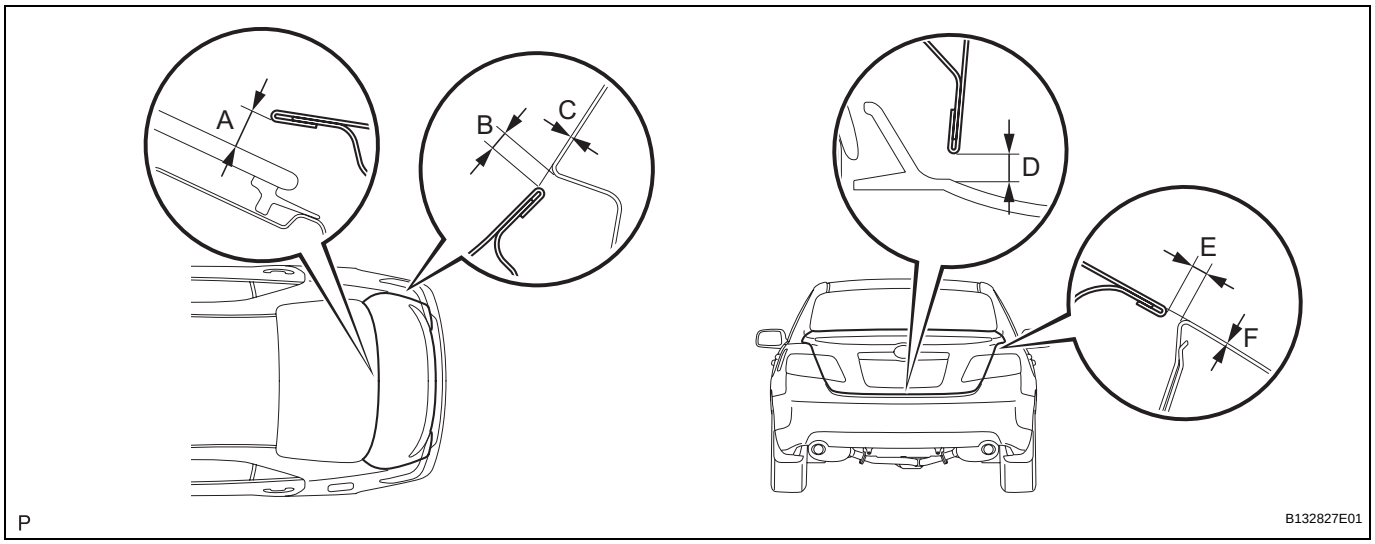
ON-VEHICLE INSPECTION

1. INSPECT LUGGAGE COMPARTMENT DOOR PANEL SUB-ASSEMBLY

(a) Check that the clearance measurements of areas A to F are within each standard range.



Standard clearance

Area	Measurement	Area	Measurement
A	7.6 mm (0.299 in.)	D	3.8 to 7.8 mm (0.146 to 0.307 in.)
B	2.0 to 5.0 mm (0.079 to 0.197 in.)	E	2.0 to 5.0 mm (0.079 to 0.197 in.)
C	-1.5 to 1.5 mm (-0.059 to 0.059 in.)	F	-1.5 to 1.5 mm (-0.059 to 0.059 in.)

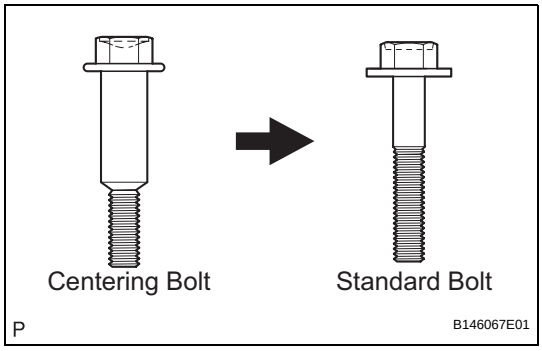
ED

DISASSEMBLY

1. **REMOVE LUGGAGE COMPARTMENT DOOR COVER (See page ET-61)**
2. **REMOVE LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY (See page ED-63)**
3. **REMOVE LUGGAGE COMPARTMENT DOOR LOCK CYLINDER ASSEMBLY**
   (a) Disconnect the cable and connector.

   (b) Remove the 2 nuts and the luggage compartment door lock cylinder assembly.
4. **REMOVE REAR SPOILER (for SE Grade) (See page ET-30)**
5. **REMOVE LUGGAGE DOOR OPENING SWITCH ASSEMBLY (w/ Smart Key System) (See page DL-246)**
6. **REMOVE LUGGAGE COMPARTMENT OUTSIDE DOOR GARNISH SUB-ASSEMBLY (See page ET-61)**
7. **REMOVE REAR LIGHT ASSEMBLY LH (See page LI-87)**
8. **REMOVE REAR LIGHT ASSEMBLY RH**
9. **REMOVE LICENSE PLATE LIGHT ASSEMBLY LH (See page LI-94)**
10. **REMOVE LICENSE PLATE LIGHT ASSEMBLY RH**

ADJUSTMENT



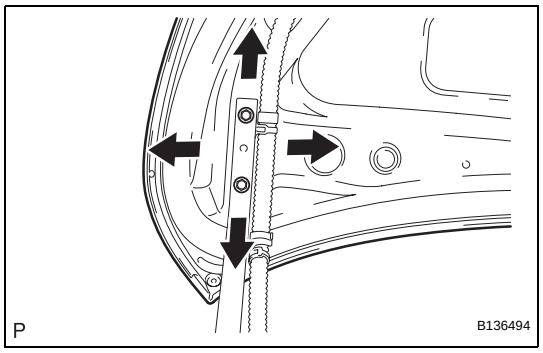
HINT:

- Centering bolts are used to mount the door hinge to the door. The door cannot be adjusted with the centering bolts on. Substitute the centering bolts with standard bolts (with washers) when making adjustments.
- A bolt without a torque specification is shown in the standard bolt chart (See page SS-2).

1. **REMOVE LUGGAGE COMPARTMENT DOOR COVER (See page ET-61)**
2. **REMOVE LUGGAGE COMPARTMENT FLOOR MAT**
3. **REMOVE SPARE WHEEL COVER CLAMP**
4. **REMOVE SPARE WHEEL COVER ASSEMBLY**
5. **REMOVE LUGGAGE COMPARTMENT SIDE TRAY ASSEMBLY (See page ED-66)**

6. **REMOVE NO. 1 LUGGAGE COMPARTMENT TRIM HOOK (See page ED-66)**

7. **REMOVE REAR FLOOR FINISH PLATE (See page ED-66)**



8. **ADJUST LUGGAGE COMPARTMENT DOOR**
   (a) Horizontally and vertically adjust the door by loosening the door side hinge bolts.
   Torque: 7.5 N*m (77 kgf*cm, 66 in.*lbf)

   (b) Adjust the striker position by slightly loosening the striker mounting screws and hitting the striker with a plastic hammer.
   (c) Tighten the striker mounting screws after the adjustment.
   Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

9. **INSTALL REAR FLOOR FINISH PLATE (See page ED-72)**

10. **INSTALL NO. 1 LUGGAGE COMPARTMENT TRIM HOOK (See page ED-72)**

11. **INSTALL LUGGAGE COMPARTMENT SIDE TRAY ASSEMBLY (See page ED-72)**

12. **INSTALL SPARE WHEEL COVER ASSEMBLY**

13. **INSTALL SPARE WHEEL COVER CLAMP**

14. **INSTALL LUGGAGE COMPARTMENT FLOOR MAT**

15. **INSTALL LUGGAGE COMPARTMENT DOOR COVER (See page ET-64)**

REASSEMBLY

1. **INSTALL LICENSE PLATE LIGHT ASSEMBLY LH (See page LI-95)**
2. **INSTALL LICENSE PLATE LIGHT ASSEMBLY RH**
3. **INSTALL REAR LIGHT ASSEMBLY LH (See page LI-91)**
4. **INSTALL REAR LIGHT ASSEMBLY RH**
5. **INSTALL LUGGAGE COMPARTMENT OUTSIDE DOOR GARNISH SUB-ASSEMBLY (See page ET-63)**
6. **INSTALL LUGGAGE DOOR OPENING SWITCH ASSEMBLY (w/ Smart Key System) (See page DL-246)**
7. **INSTALL REAR SPOILER (for SE Grade) (See page ET-31)**
8. **INSTALL LUGGAGE COMPARTMENT DOOR LOCK CYLINDER ASSEMBLY**
   (a) Install the luggage compartment door lock cylinder with the 2 nuts.
   Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

   (b) Connect the cable and connector.
9. **INSTALL LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY (See page ED-64)**
10. **INSTALL LUGGAGE COMPARTMENT DOOR COVER (See page ET-64)**

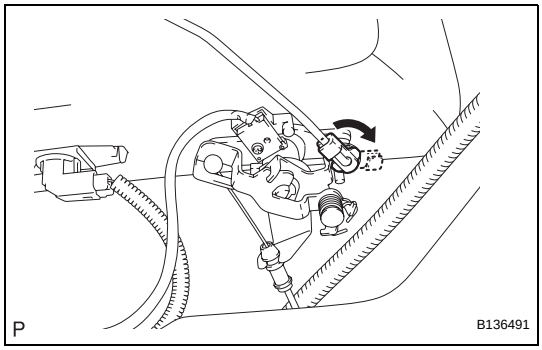
REMOVAL

1. REMOVE LUGGAGE COMPARTMENT DOOR COVER (See page ET-61)

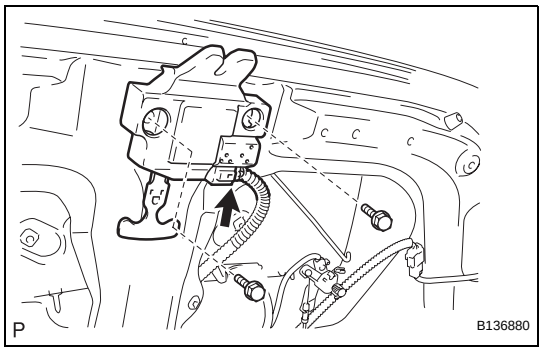
2. REMOVE LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY

(a) Disconnect the rod.



(b) Disconnect the connector.

(c) Remove the 2 bolts and luggage compartment door lock assembly.

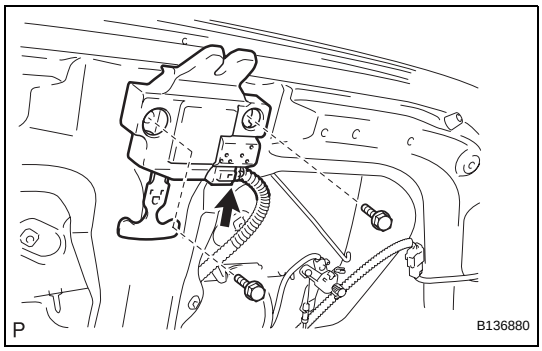


INSTALLATION

1. INSTALL LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY

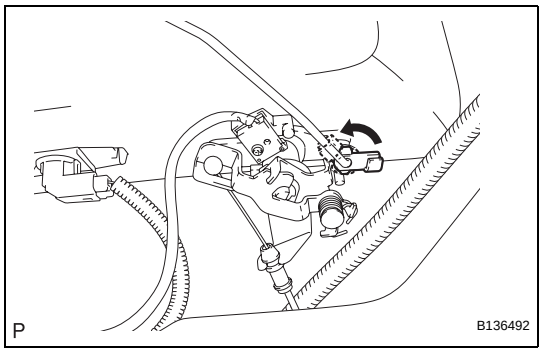
(a) Install the luggage compartment door lock assembly with the 2 bolts.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

(b) Connect the connector.



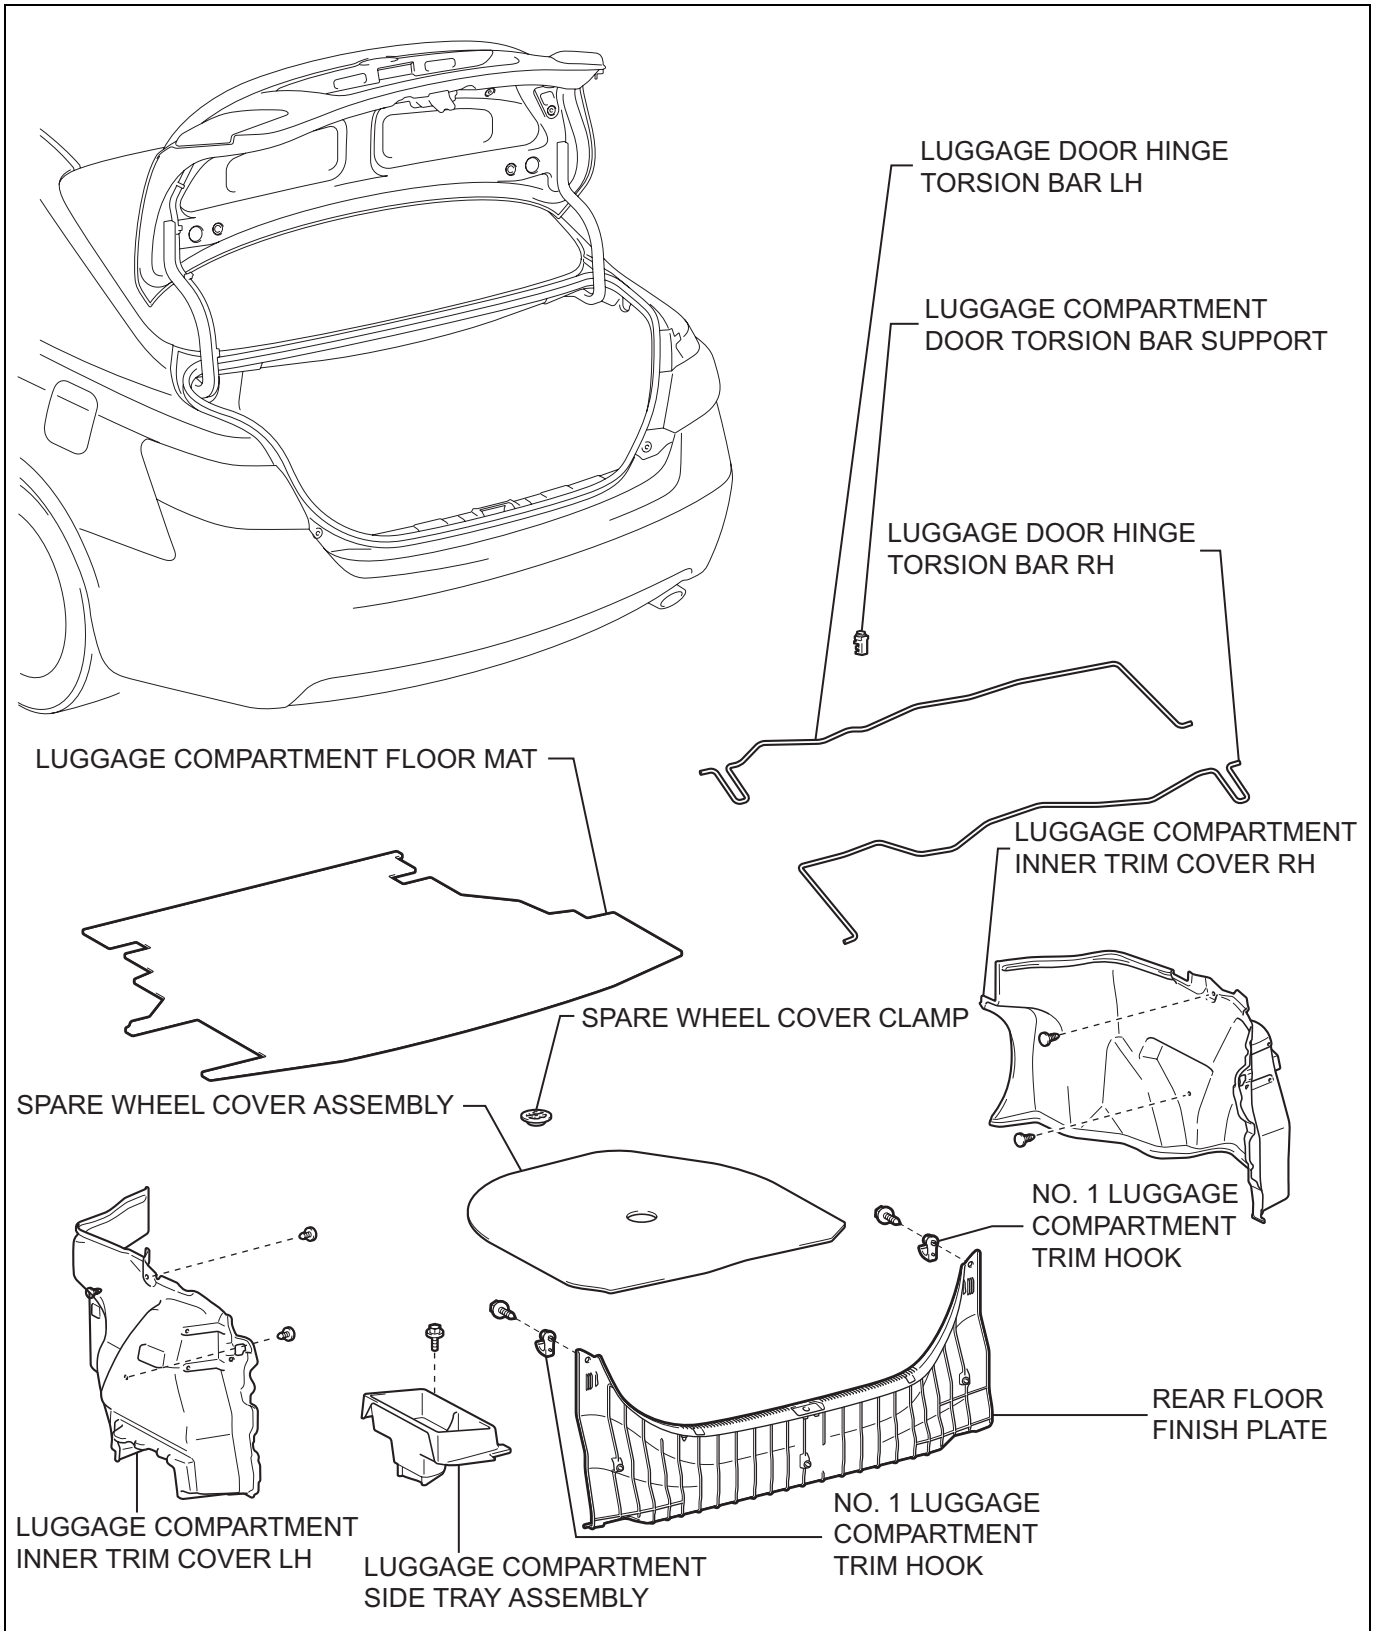
(c) Connect the rod.

2. INSTALL LUGGAGE COMPARTMENT DOOR COVER (See page ET-64)



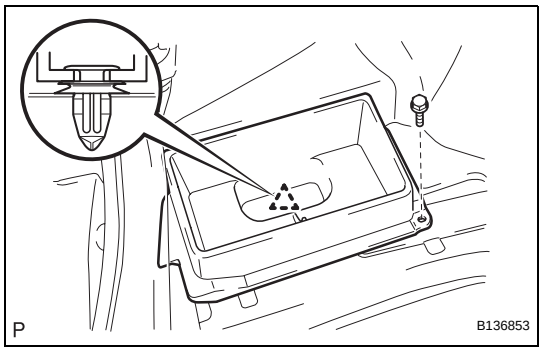
LUGGAGE DOOR HINGE TORSION BAR

COMPONENTS

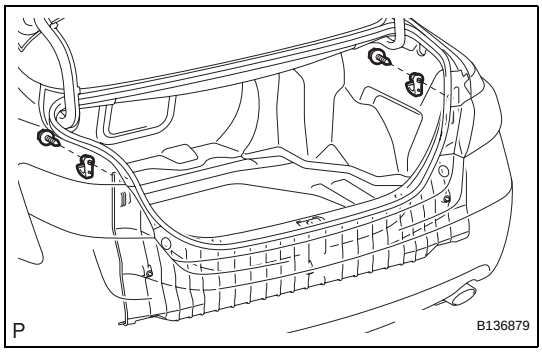


REMOVAL

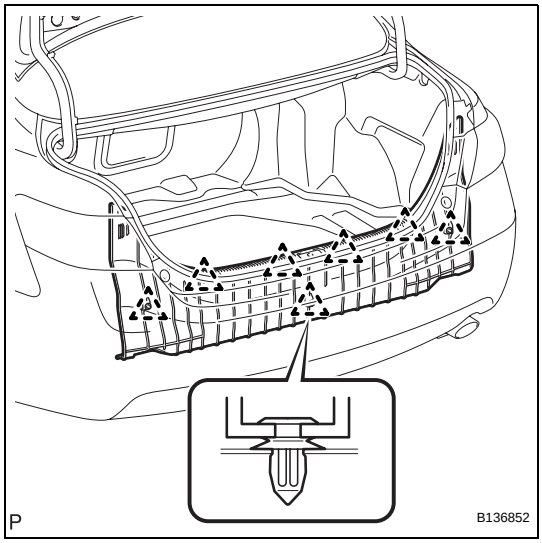
1. **REMOVE LUGGAGE COMPARTMENT FLOOR MAT**
2. **REMOVE SPARE WHEEL COVER CLAMP**
3. **REMOVE SPARE WHEEL COVER ASSEMBLY**
4. **REMOVE LUGGAGE COMPARTMENT SIDE TRAY ASSEMBLY**
   (a) Remove the bolt.
   (b) Disengage the clip and remove the luggage compartment side tray assembly.



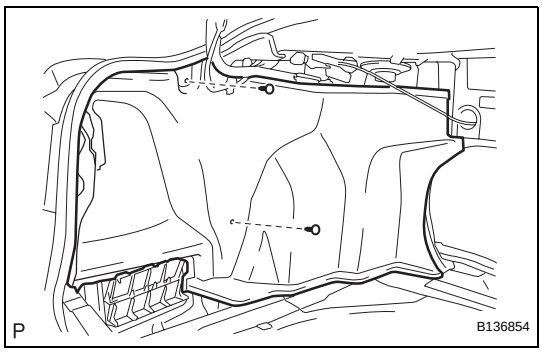
5. **REMOVE NO. 1 LUGGAGE COMPARTMENT TRIM HOOK**
   (a) Remove the 2 screws and the 2 No. 1 luggage compartment trim hooks.

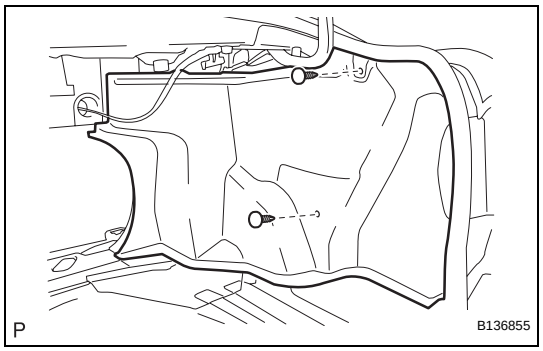


6. **REMOVE REAR FLOOR FINISH PLATE**
   (a) Disengage the 7 clips and remove the rear floor finish plate.



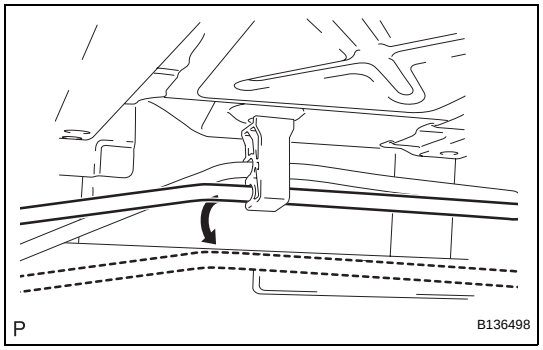
7. **REMOVE LUGGAGE COMPARTMENT INNER TRIM COVER LH**
   (a) Remove the 2 clips and the luggage compartment inner trim cover LH.





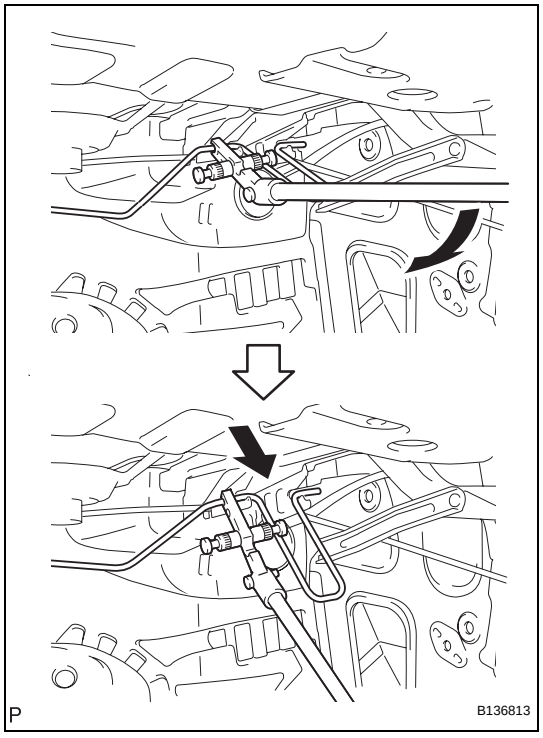
8. REMOVE LUGGAGE COMPARTMENT INNER TRIM COVER RH

(a) Remove the 2 clips and the luggage compartment inner trim cover RH.

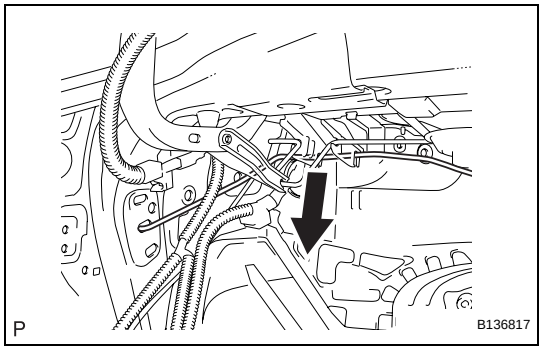


9. REMOVE LUGGAGE DOOR HINGE TORSION BAR RH

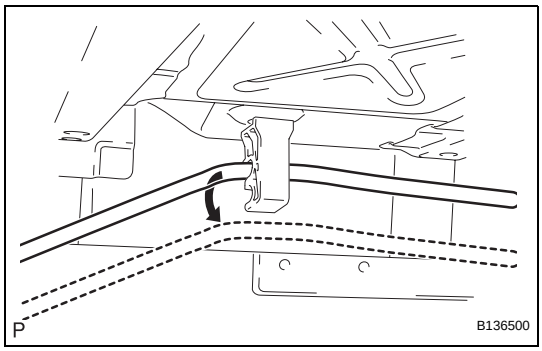
(a) Disconnect the luggage door hinge torsion bar RH from the luggage compartment door torsion bar support as shown in the illustration.



(b) Using SST, disconnect the luggage door hinge torsion bar RH from the luggage door hinge and body RH side as shown in the illustration.
SST 09804-24010

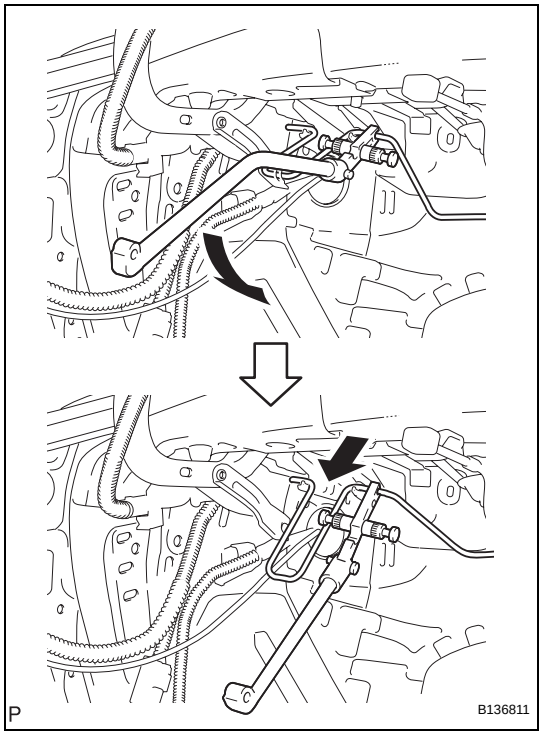


(c) Remove the luggage door hinge torsion bar RH from the body LH side as shown in the illustration.

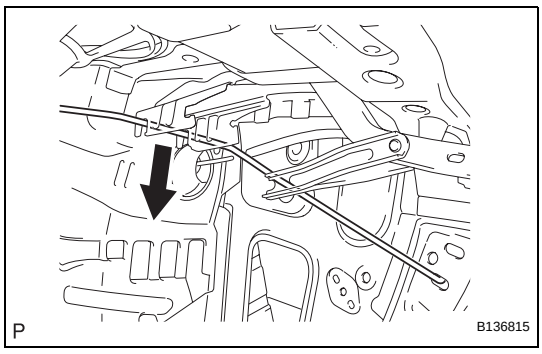


10. REMOVE LUGGAGE DOOR HINGE TORSION BAR LH

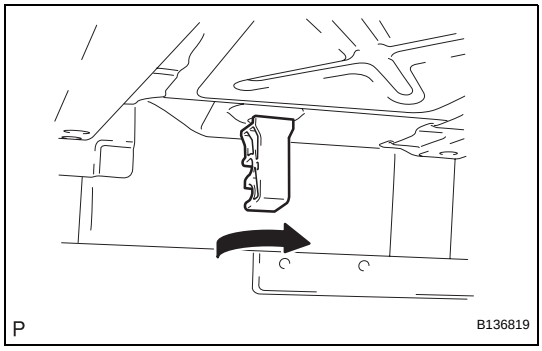
(a) Disconnect the luggage door hinge torsion bar LH from the luggage compartment door torsion bar support as shown in the illustration.



(b) Using SST, disconnect the luggage door hinge torsion bar LH from the luggage door hinge and body LH side as shown in the illustration.
SST 09804-24010



(c) Remove the luggage door hinge torsion bar LH from the body RH side as shown in the illustration.



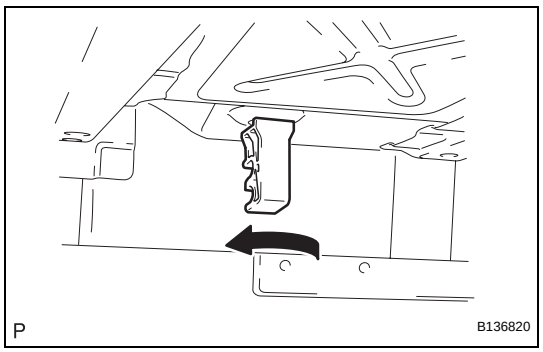
11. REMOVE LUGGAGE COMPARTMENT DOOR TORSION BAR SUPPORT

(a) Remove the luggage compartment door torsion bar support as shown in the illustration.

INSTALLATION

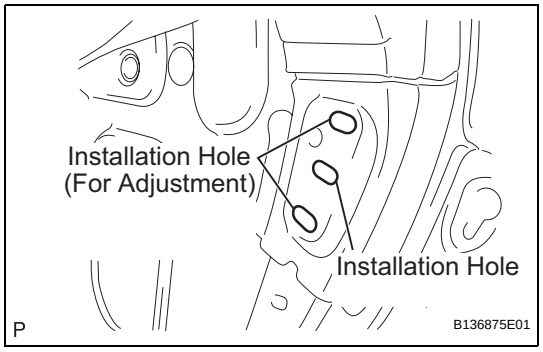
HINT:

- The installation should be performed in the order of LH to RH.
- After installing the torsion bar, use your hand to open and close the luggage door. Make sure the luggage door can open and close smoothly.



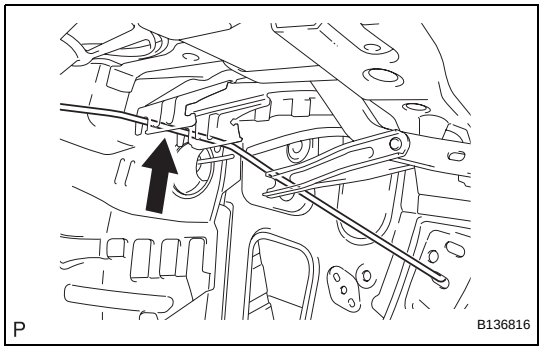
1. INSTALL LUGGAGE COMPARTMENT DOOR TORSION BAR SUPPORT

(a) Install the luggage compartment door torsion bar support as shown in the illustration.

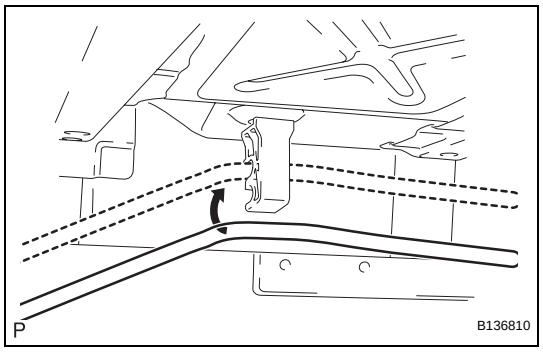


2. INSTALL LUGGAGE DOOR HINGE TORSION BAR LH

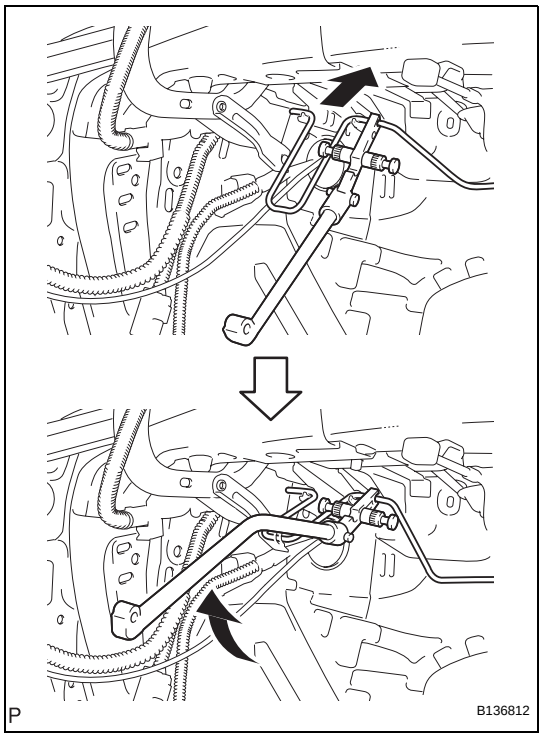
(a) Set the tip of the luggage door hinge torsion bar LH in the installation hole placed in the center part. Holes placed in the upper and lower parts are used for adjustment.



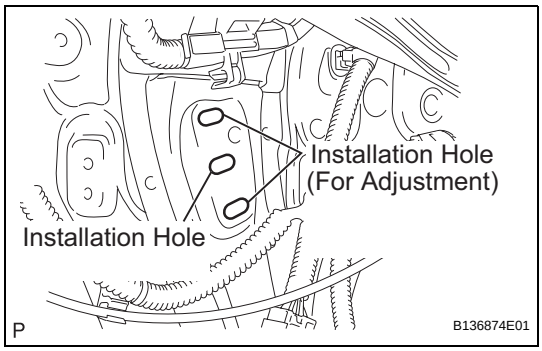
(b) Connect the luggage door hinge torsion bar LH to the body RH side as shown in the illustration.



(c) Connect the luggage door hinge torsion bar LH to the luggage compartment door torsion bar support as shown in the illustration.

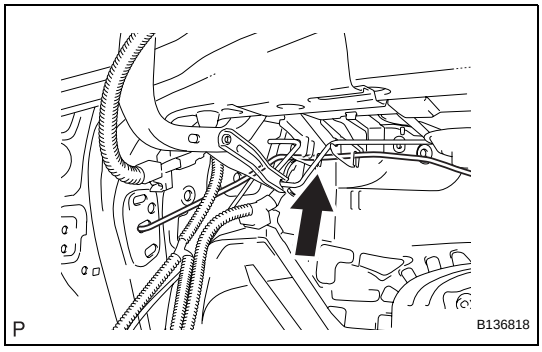


(d) Using SST, install the luggage door hinge torsion bar LH to the luggage door hinge and body LH side as shown in the illustration.
SST 09804-24010

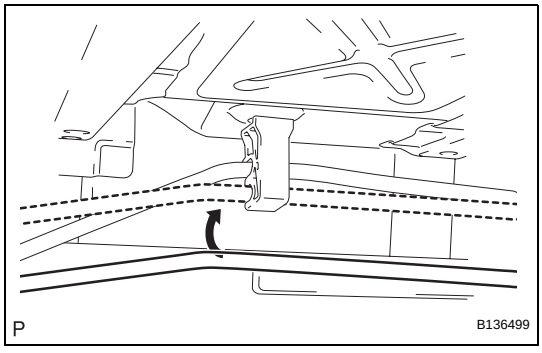


3. INSTALL LUGGAGE DOOR HINGE TORSION BAR RH

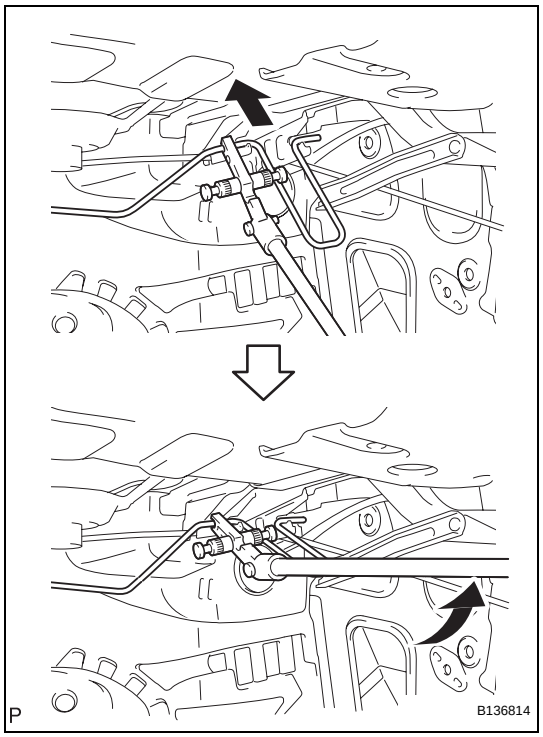
(a) Set the tip of the luggage door hinge torsion bar RH in the installation hole placed in the center part. Holes placed in the upper and lower parts are used for adjustment.



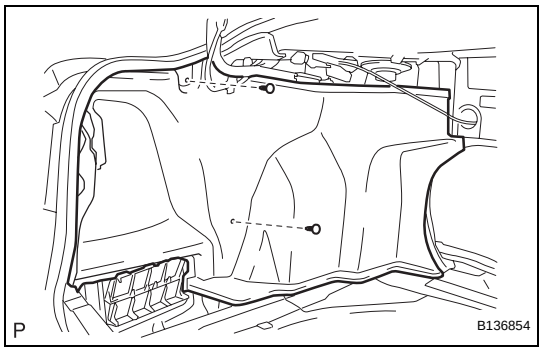
(b) Connect the luggage door hinge torsion bar RH to the body LH side as shown in the illustration.



(c) Connect the luggage door hinge torsion bar RH to the luggage compartment door torsion bar support as shown in the illustration.

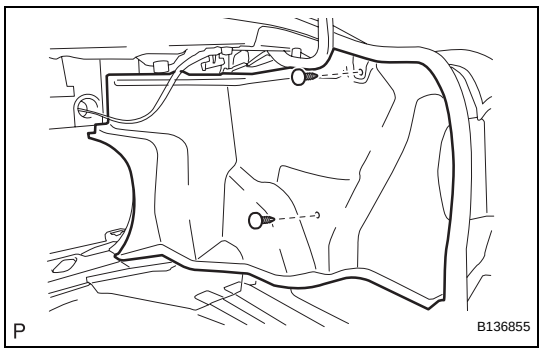


(d) Using SST, install the luggage door hinge torsion bar RH to the luggage door hinge and body LH side as shown in the illustration.
SST 09804-24010



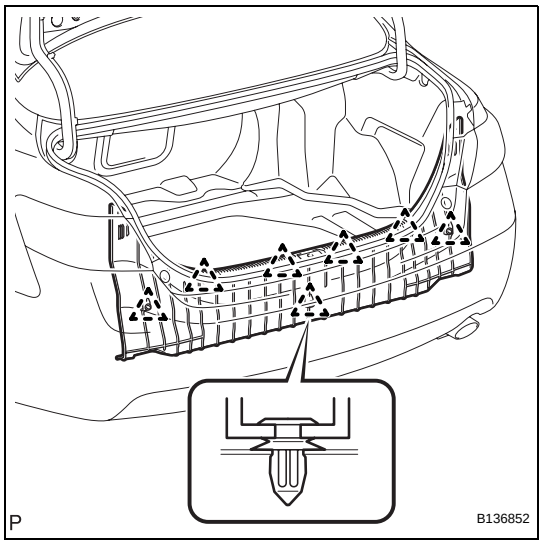
4. INSTALL LUGGAGE COMPARTMENT INNER TRIM COVER LH

(a) Install the luggage compartment inner trim cover LH with the 2 clips.



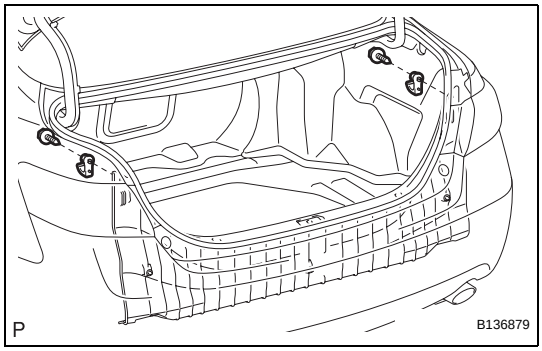
5. INSTALL LUGGAGE COMPARTMENT INNER TRIM COVER RH

(a) Install the luggage compartment inner trim cover RH with the 2 clips.



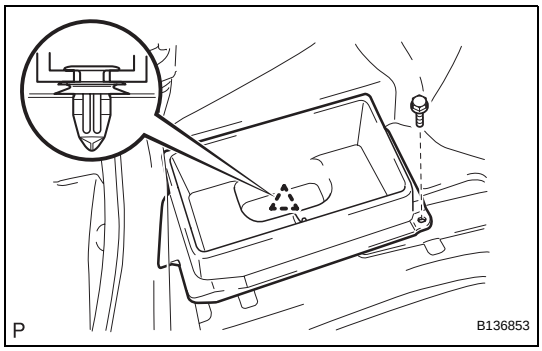
6. INSTALL REAR FLOOR FINISH PLATE

(a) Engage the 7 clips and install the rear floor finish plate.



7. INSTALL NO. 1 LUGGAGE COMPARTMENT TRIM HOOK

(a) Install the 2 No. 1 luggage compartment trim hooks with the 2 screws.



8. INSTALL LUGGAGE COMPARTMENT SIDE TRAY ASSEMBLY

(a) Engage the clip and install the luggage compartment side tray assembly.

(b) Install the bolt.

9. INSTALL SPARE WHEEL COVER ASSEMBLY

10. INSTALL SPARE WHEEL COVER CLAMP

11. INSTALL LUGGAGE COMPARTMENT FLOOR MAT

ENGINE IMMOBILISER SYSTEM (w/ Smart Key System)

PRECAUTION

1. PRECAUTIONS WHEN USING INTELLIGENT TESTER

(a) When using the intelligent tester to troubleshoot the smart access system: Connect the intelligent tester to the DLC3 while the engine switch off, and turn a door courtesy light switch on and off at 1.5-second intervals until communication between the tester and vehicle begins.

2. PRECAUTIONS FOR EACH FUNCTION

(a) Precautions for the electrical key:
The electrical key is a precision instrument. Be sure to observe the following:
(1) Do not drop or strike the electrical key.
(2) Do not allow the electrical key to be kept in a high temperature place for a long time.
(3) Do not use an ultrasonic washing machine to clean the electrical key.
(4) Keep the electrical key away from magnets or magnetized items during use.
(5) Do not attach any stickers to the electrical key.

(b) Precautions for the engine start function:
(1) Before starting the engine, firmly depress the brake pedal until the indicator of the engine switch illuminates in green.
(2) Be sure to turn the engine switch off before disconnecting the negative (-) battery terminal. When the battery terminal is disconnected, the power source mode (off, on (ACC), on (IG)) will remain in memory. When the vehicle's battery becomes discharged, be careful to remember the power source mode.
(3) After the battery is removed and reinstalled, be sure to wait 10 seconds or more before the next engine start. The engine may not start immediately after the battery is reinstalled.

(c) Precautions for the battery built into the electrical key and the vehicle battery:
(1) When the doors are locked (locked state), signals are emitted by the vehicle at a predetermined interval. If the vehicle were to remain parked for a long time, the vehicle battery could become discharged. To prevent this, periodically charge the vehicle battery, or disable the entry and start system.

(2) When the doors are locked (locked state), and the electrical key remains in the door oscillator detection area, the system will maintain periodic communication with the electrical key. If the vehicle remains parked in this state for a long time, the vehicle and key batteries could become discharged. If the vehicle is not being used, keep the electrical key at least 2 m (6.56 ft) from the vehicle.

ID code box	Steering lock ECU	• Steering lock release signal • Matching request random number signal	LIN
ID code box	Certification ECU	Matching request random number signal	LIN

SYSTEM DESCRIPTION

1. ENGINE IMMOBILISER SYSTEM DESCRIPTION

(a) The immobiliser system is a theft deterrent system that determines whether to disable starting of the SFI system based on a comparison of the key's ID codes and the vehicle's pre-registered code. The immobiliser system compares the vehicle certification ECU's pre-registered ID code with the ID of the key-embedded transponder chip. If the ID codes do not match, the immobiliser system activates and the SFI system cannot be started. The certification ECU manages communication with the ECM, main body ECU, steering lock ECU and ID code box. When the ID codes of the transponder chip and certification ECU match, the certification ECU authorizes the SFI system to start.

2. FUNCTION OF MAIN COMPONENT

Component	Outline
Transponder key coil/amplifier (built into engine switch)	Receives key ID code, amplifies ID code and outputs the code to the certification ECU.
Indoor electrical key oscillator	Transmits key detection signals within the detection area in the vehicle interior upon receiving a transmission request signal from the certification ECU. Certification ECU request signal is activated when the key is brought into the vehicle interior and the engine switch is pushed.
Door control receiver	Receives an ID code from the key in the actuation area and transmits it to the certification ECU.
Security indicator	Illuminates or starts flashing. Illumination is controlled by the certification ECU.

3. SYSTEM FUNCTION

(a) Using entry function

(1) When the driver (or passenger) is sitting in the vehicle while carrying the key, and the engine switch is pressed while the brake pedal is depressed, the main body ECU recognizes that the engine start operation has occurred and sends a certification request signal to the certification ECU. Upon receipt of the certification request signal, the certification ECU sends a request signal to the indoor electrical key oscillator. Upon receipt of the request signal, the indoor electrical key oscillator sends a request signal to detect if the key is inside the vehicle. When the key receives this request signal, it answers by sending an ID code containing a response code through the glass antenna to the door control receiver. Upon receipt of the ID code, the certification ECU analyzes the code. If the interior certification passes, then the main body ECU sends a certification pass response signal. When the main body ECU receives this signal, the ACC relay is switched on and the IG1 and IG2 relays are switched on in sequence. At this time, the

engine switch indicator illuminates in green. Then the certification ECU checks that the power source mode has been changed and sends a steering lock command signal to the main body ECU. After receiving this signal, the main body ECU supplies power to the steering lock actuator. Then (via the ID code box) the steering lock ECU confirms that the certification ECU is certified and drives the steering actuator motor until the steering lock is unlocked. After unlocking the steering lock, an unlock completed signal is sent to the certification ECU. Upon receipt of this signal, the certification ECU sends an unset command signal to the ID code box. Once this signal is received, the ID code box confirms that the certification ECU is certified, sends an immobiliser unset command signal to the ECM and sends a security indicator light off signal to the certification ECU.

(b) Not using the entry function (when key battery is depleted)

(1) When the driver is sitting in the vehicle while carrying the key and the brake pedal is depressed, the main body ECU recognizes that the stop light switch is on and sends a key confirmation request signal to the certification ECU. Upon receipt of this signal, the certification ECU drives the immobiliser amplifier built in the engine switch. At this time, the engine switch sends an RF wave communication signal to the immobiliser. If the driver holds the key up to the engine switch at this time, the engine switch receives the immobiliser RF wave signal and responds by sending a radio wave signal. When the engine switch receives the radio wave signal from the key, it duplicates the signal and sends an ID code to the certification ECU. Upon receipt of the ID code, the code is analyzed. If the certification passes, a key certification pass response signal is sent to the main body ECU while simultaneously sending a sound buzzer request signal to the meter ECU. When the main body ECU receives this signal, the ACC relay is switched on and the IG1 and IG2 relays are switched on in sequence. At this time, the engine switch indicator illuminates in green. Then the certification ECU checks that the power source mode has been changed and sends a steering lock command signal to the main body ECU. After receiving this signal, the main body ECU supplies power to the steering lock actuator. Then (via the ID code box) the steering lock ECU confirms that the certification ECU is certified and drives the steering actuator

motor until the steering lock is unlocked. After unlocking the steering lock, an unlock completed signal is sent to the certification ECU. Upon receipt of this signal, the certification ECU sends an unset command signal to the ID code box. Once this signal is received, the ID code box confirms that the certification ECU is certified, sends an immobiliser unset command signal to the ECM and sends a security indicator light off signal to the certification ECU.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedures to troubleshoot the engine immobiliser system.
- The intelligent tester should be used in steps 3 and 5.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 CRANK ENGINE FOR MORE THAN 10 SECONDS

NEXT

3 CHECK FOR DTCS

(a) Check for DTCs and note any codes that are output (see page EI-24).
(b) Delete the DTCs.
(c) Recheck for DTCs. Based on the DTCs output above, try to duplicate the SFI system DTC or engine immobiliser system DTC by simulating the symptoms indicated by the DTC.

Result

Result	Proceed to
DTC output does not reoccur	A
SFI system DTC output reoccurs	B
Engine immobiliser system DTC output reoccurs	C

B → GO TO SFI SYSTEM

C → GO TO DTC CHART

REGISTRATION

1. DESCRIPTION OF CODE REGISTRATION

HINT:

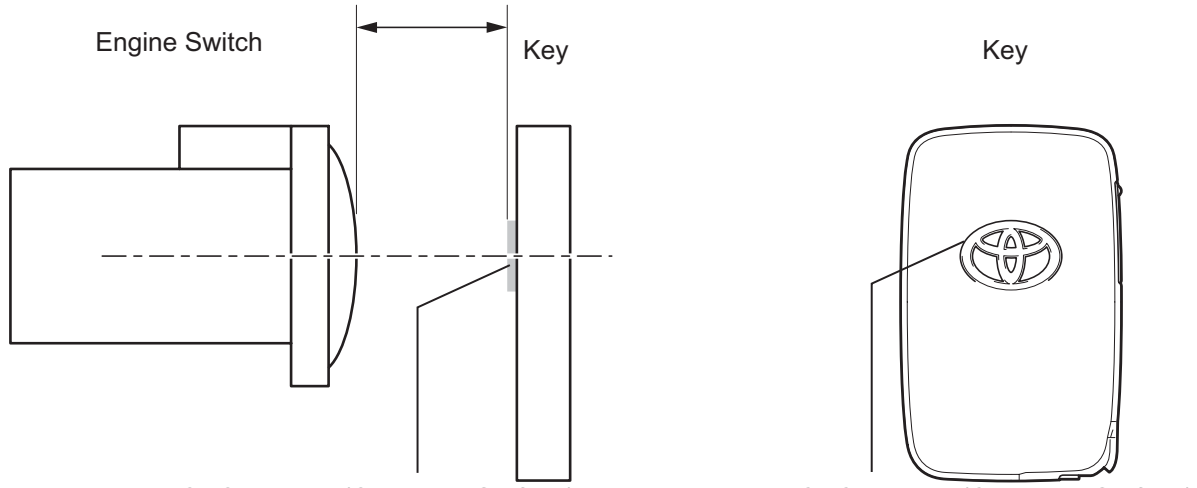
- ID codes are the same as recognition codes for the wireless transmitter and the engine immobiliser function. Registering an ID code enables the smart access system with push-button start, the wireless door lock control function and the engine immobiliser function to be operated.
- Code registration is needed when the certification ECU, ID code box, steering lock ECU or key is replaced with a new one.

(a) PROCEDURE "1"

The vehicle with the smart access system with push-button start system does not have a key slot. Therefore, hold the key close to the engine switch to register the key, as shown in the illustration below.

Hold the key with its ornament surface within a range of 10 mm (0.39 in.) or less from the engine switch.

Communication distance: 10 mm (0.39 in.) or less from the engine switch.



P

B139204E01

EI

2. PART REPLACEMENT KEY REGISTRATION

(a) The following table shows ECU replacement and key registration procedures in case the malfunctioning ECU has been identified after troubleshooting the smart access system with push-button start.

HINT:

- The following procedures indicated in the table below require the use of the intelligent tester:
  - New key ID registration
  - Additional key ID registration
  - Key ID erasure
  - ECU code registration
- If all of the registered keys are not available, replacement of the ID code box is also required.
- A maximum of 7 keys can be registered.

Part to be replaced	Condition		Procedure	Reference
Certification ECU	Customer has brought all keys		1. Replace certification ECU	-
			2. Reregister all keys (new key ID registration)	PROCEDURE "B"
	Some keys are lost	Key ID codes can be registered and erased	1. Erase key codes (key ID erasure)	PROCEDURE "D"
			2. Perform additional key registration procedure (additional key ID registration)	PROCEDURE "C"
			3. Replace certification ECU	-
			4. Reregister all keys (new key ID registration) HINT: If some keys are not registered during above steps, they will be disabled because they cannot be registered later	PROCEDURE "B"
		Key ID codes cannot be either registered or erased	1. Replace certification ECU	-
			2. Replace ID code box	-
			3. Reregister all keys (new key ID registration) HINT: If key codes cannot be erased or additional keys cannot be registered due to a malfunction in certification ECU, replace ID code box and certification ECU. If some keys are not registered during above steps, they will be disabled because they cannot be registered later	PROCEDURE "A"
			4. ECU communication ID registration	PROCEDURE "F"
ID code box	At least 1 key is available		1. Replace ID code box	-
			2. Register recognition codes in ECUs (ECU code registration)	PROCEDURE "E"
			3. ECU communication ID registration	PROCEDURE "F"
	All keys are lost		1. Replace ID code box	-
			2. Replace certification ECU	-
			3. Reregister all keys (new key ID registration) HINT: If some keys are not registered during above steps, they will be disabled because they cannot be registered later	PROCEDURE "A"
			4. ECU communication ID registration	PROCEDURE "F"

EI

Part to be replaced	Condition	Procedure	Reference
Steering lock ECU	Customer has brought at least 1 key	1. Replace steering lock ECU	-
		2. Register recognition codes in ECUs (ECU code registration)	PROCEDURE "E"
	All keys are lost	1. Replace steering lock ECU	-
		2. Replace certification ECU	-
		3. Replace ID code box	-
		4. Reregister all keys (new key ID registration) HINT: If some keys are not registered during above steps, they will be disabled because they cannot be registered later	PROCEDURE "A"
		5. ECU communication ID registration	PROCEDURE "F"
Main body ECU	No condition required	Replace main body ECU	-
ECM	No condition required	1. Replace ECM	-
		2. ECU communication ID registration	PROCEDURE "F"
Key	Customer has brought at least 1 key	1. Using remaining key, erase lost key code (key ID erasure)	PROCEDURE "D"
		2. Register additional keys as necessary (additional key ID registration)	PROCEDURE "E"
	All keys are lost	1. Replace certification ECU	-
		2. Replace ID code box	-
		3. Register all keys (new key ID registration) HINT: If customer brings lost keys at later date, they can be registered using additional key ID registration function	PROCEDURE "A"
		4. ECU communication ID registration	PROCEDURE "F"

3. KEY REGISTRATION

(a) PROCEDURE "A"

New key ID registration (when replacing certification ECU and ID code box, or certification ECU, ID code box and steering lock ECU)

EI

Process	Procedure
1. Start of registration	1. Connect intelligent tester (with CAN VIM) to DLC3 2. Turn engine switch on (IG) 3. Select "SMART ACCESS / ID UTILITY / SMART CODE REG" from tester menu HINT: The engine switch cannot be turned on (IG) more than 10 times. After connecting tester, turn tester on while turning driver's side door courtesy light switch on and off repeatedly at 1.5-second intervals or less to continue key registration procedure
2. Confirmation of ECU code	Perform operation according to prompts on tester screen HINT: The mode is automatically selected by tester, new registration mode or add mode
3. Verification of unregistered key *1	Hold unregistered key close to engine switch (For details, refer to PROCEDURE "1")
	Confirm that wireless door lock buzzer sounds. Place unregistered key on front passenger's side seat
	Confirm that wireless door lock buzzer sounds
4. Registration of ID code	Perform operation according to prompts on tester screen
5. End of registration	Finish new key ID code registration

*1: Repeat this process for each key which is to be registered for the vehicle. Finish the procedure for each key within 30 seconds. If the procedure for any of the keys has not been finished within the specified time, perform registration procedures from process 1 again. Make sure that only 1 key is in the cabin during registration procedures. If 2 or more keys are in the cabin simultaneously, electric waves will interfere with each other, preventing normal registration.

(b) PROCEDURE "B"
New key ID registration (when replacing certification ECU)

Process	Procedure
1. Start of registration	1. Connect intelligent tester (with CAN VIM) to DLC3 2. Turn engine switch on (IG) 3. Select "SMART ACCESS / ID UTILITY / SMART CODE REG" from tester menu HINT: The engine switch cannot be turned on (IG) more than 10 times. After connecting tester, turn tester on while turning driver's side door courtesy light switch on and off repeatedly at 1.5-second intervals or less to continue key registration procedure
2. Confirmation of ECU code	Perform operation according to prompts on tester screen HINT: The mode is automatically selected by tester, new registration mode or add mode
3. Confirmation of all registered keys *1	Hold unregistered key close to engine switch (For details, refer to PROCEDURE "1")
	Confirm that wireless door lock buzzer sounds
4. Confirmation of ECU code	Perform operation according to prompts on tester screen
5. Verification of unregistered key *2	Hold unregistered key close to engine switch (For details, refer to PROCEDURE "1")
	Confirm that wireless door lock buzzer sounds. Place unregistered key on front passenger side seat
	Confirm that wireless door lock buzzer sounds
5. Registration of ID code	Perform operation according to prompts on tester screen
6. End of registration	Finish new key ID code registration

*1: Repeat this process for each key registered for the vehicle. Finish the procedure for each key within 30 seconds. If the procedure for any of the keys has not been finished within the specified time, perform registration procedures from process 1 again. If performing the key confirmation procedure for a key, the security indicator comes on and remains on until all the keys are confirmed.
*2: Repeat this process for each key which is to be registered for the vehicle. Finish the procedure for each key within 30 seconds. If the procedure for any of the keys has not been finished within the specified time, perform registration procedures from 1 again. Make sure that only 1 key is in the cabin during registration procedures. If 2 or more keys are in the cabin simultaneously, electric waves will interfere with each other, preventing normal registration.

(c) PROCEDURE "C"
Additional key ID registration

Process	Procedure
1. Start of registration	1. Connect intelligent tester (with CAN VIM) to DLC3 2. Turn engine switch on (IG) 3. Select "SMART ACCESS / ID UTILITY / SMART CODE REG" from tester menu
2. Confirmation of registered key *1	Perform operation according to prompts on intelligent tester screen HINT: The mode is automatically selected by tester, new registration mode or add mode
	Hold unregistered key close to engine switch (For details, refer to PROCEDURE "1")
	Confirm that wireless door lock buzzer sounds once
3. Confirmation of ECU code	Perform operation according to prompts on tester screen
4. Verification of unregistered key *2	Hold unregistered key close to engine switch (For details, refer to PROCEDURE "1")
	Confirm that wireless door lock buzzer sounds. Place unregistered key on front passenger's side seat
	Confirm that wireless door lock buzzer sounds
5. Registration of ID code	Perform operation according to prompts on tester screen
6. End of registration	Finish key ID code registration

*1: Perform this process for one of the keys registered for the vehicle. Finish the procedure within 30 seconds. If the procedure has not been finished within the specified time, perform registration procedures from process 1 again.
*2: Repeat this process for each key which is to be registered for the vehicle. Finish the procedure for each key within 30 seconds. If the procedure for any of the keys has not been finished within the specified time, perform registration procedures from 1 again. Make sure that only 1 key is in the cabin during registration procedures. If 2 or more keys are in the cabin simultaneously, electric waves will interfere with each other, preventing normal registration.

(d) PROCEDURE "D"
Key ID erasure
HINT:
Erase all registered key codes except one.

Process	Procedure
1. Start of erasure	1. Connect intelligent tester (with CAN VIM) to DLC3 2. Turn engine switch on (IG) 3. Select "SMART ACCESS / ID UTILITY / SMART CODE ERS" from tester menu
2. Confirmation of registered key *1	Perform operation according to prompts on intelligent tester screen
	Hold unregistered key close to engine switch (For details, refer to PROCEDURE "1")
	Confirm that wireless door lock buzzer sounds once
3. Confirmation of ECU code	Perform operation according to prompts on tester screen
4. Erasure of ID code	Perform operation according to prompts on tester screen
5. End of erasure	Finish key ID code erasure

*1: Perform this process for one of the keys registered for the vehicle. Finish the procedure within 30 seconds. If the procedure has not been finished within the specified time, perform erasure procedures from process 1 again.

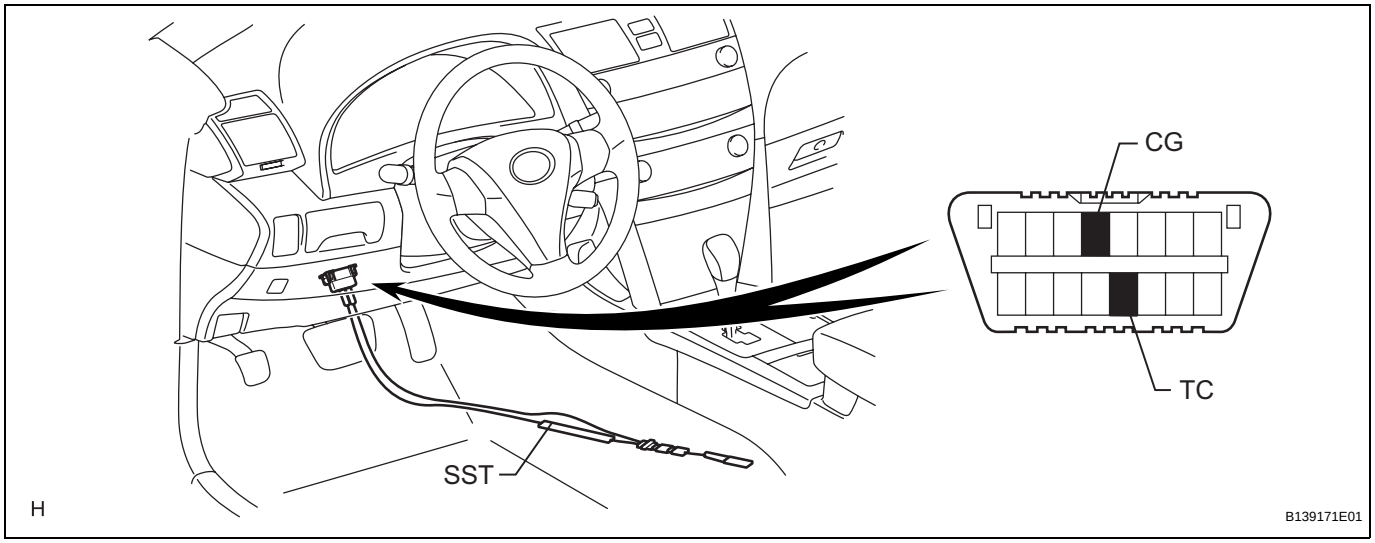
(e) PROCEDURE "E"
ECU code registration

Process	Procedure
1. Start of registration	1. Connect intelligent tester (with CAN VIM) to DLC3 2. Turn engine switch on (IG) 3. Select "SMART ACCESS / ID UTILITY / ECU COMM ID REG / ID Code Box and Steering Lock" from tester menu
2. Confirmation of registered key *1	Hold unregistered key close to engine switch (For details, refer to PROCEDURE "1")
	Confirm that wireless door lock buzzer sounds once
3. Registration of ECU code	Perform operation according to prompts on tester screen
4. End of registration	Finish ECU code registration

*1: Perform this process for one of the keys registered for the vehicle. Finish the procedure within 30 seconds. If the procedure has not been finished within the specified time, perform erasure procedures from process 1 again.

(f) PROCEDURE "F"
ECU communication ID registration
NOTICE:
- **The ECU communication ID should be registered when the ID code box and/or the ECM is replaced in order to match these ECM communication ID.**
- **The engine cannot be started unless the ECM communication ID matches.**

Register the ECU communication ID.



(1) Using SST, connect terminals TC and CG of the DLC3.
SST 09843-18040

(2) Turn the engine switch on (IG) and leave it for 30 minutes.
HINT:
Do not start the engine.
(3) Turn the engine switch off and disconnect terminals TC and CG.
(4) Check that the engine starts.

PROBLEM SYMPTOMS TABLE

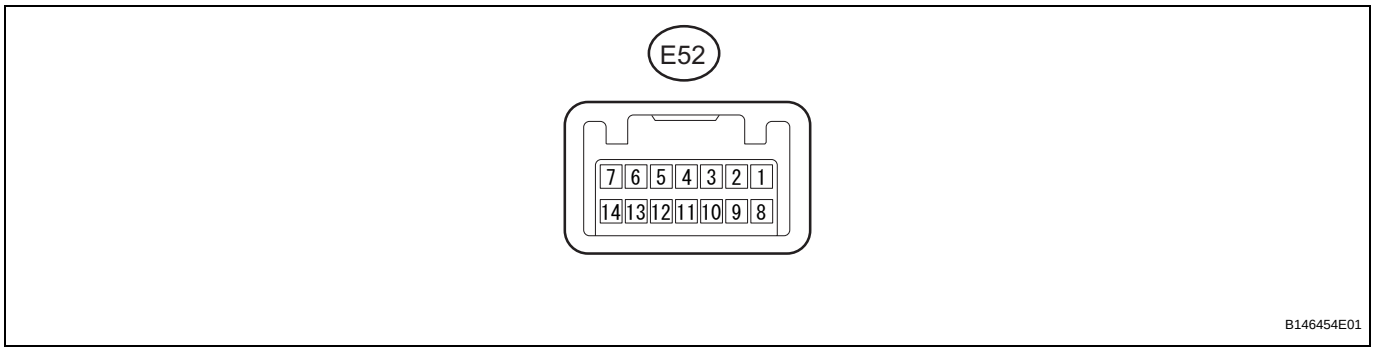
HINT:
Use the table below to help determine the cause of the problem symptom. The potential cases of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected area in the order they are listed. Replace parts as necessary.

Engine Immobiliser System:

Symptom	Suspected area	See page
Engine does not start	1. Key	EI-24
	2. ID code box power source circuit	EI-45
	3. Certification ECU power source circuit	EI-48
	4. Steering lock ECU power source circuit	SR-30
	5. Smart access system	DL-142
	6. SFI system	ES-15

TERMINALS OF ECU

1. CHECK ENGINE SWITCH



(a) Disconnect the E52 switch connector.
(b) Measure the resistance according to the value(s) in the table below.

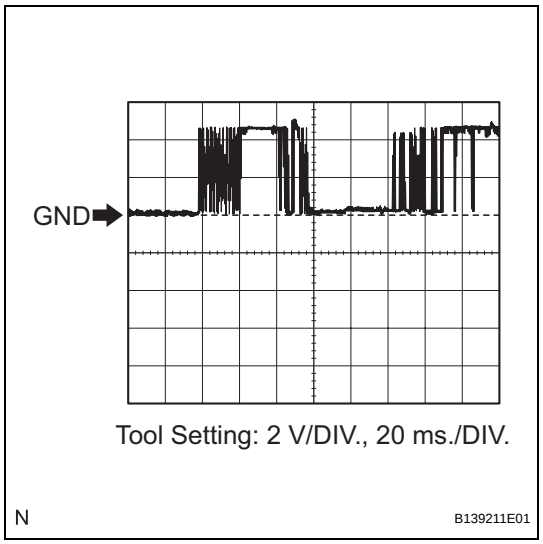
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
AGND (E52-8) - Body ground	G - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.
(c) Reconnect the E52 switch connector.
(d) Measure the resistance and voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
AGND (E52-8) - Body ground	G - Body ground	Ground	Always	Below 1 Ω
VC5 (E52-14) - AGND (E52-8)	R - G	Power supply	Key is not in cabin	Below 1 V
			Press engine switch	4.6 to 5.4 V
CODE (E52-10) - AGND (E52-8)	W - G	Demodulated signal of key code data	Key is not in cabin	Below 1 V
			Press engine switch and hold key close to engine switch*	Pulse generation (see waveform 1)
TXCT (E52-9) - AGND (E52-8)	GR - G	Key code output signal	Key is not in cabin	Below 1 V
			Press engine switch and hold key close to engine switch*	Pulse generation (see waveform 2)

HINT:
*: Remove the key battery before performing this inspection.
If the result is not as specified, the switch may have a malfunction.

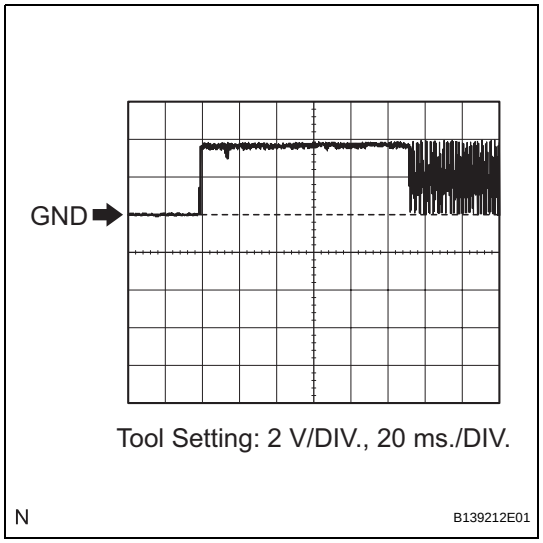
EI



(e) Inspect using an oscilloscope.
(1) Waveform 1 (Reference)

Item	Content
Symbols (Terminal No.)	CODE (E52-10) - AGND (E52-8)
Tool Setting	2 V/DIV., 20 ms./DIV.
Condition	Press engine switch and hold key close to engine switch*

HINT:
*: Remove the key battery before performing this inspection.

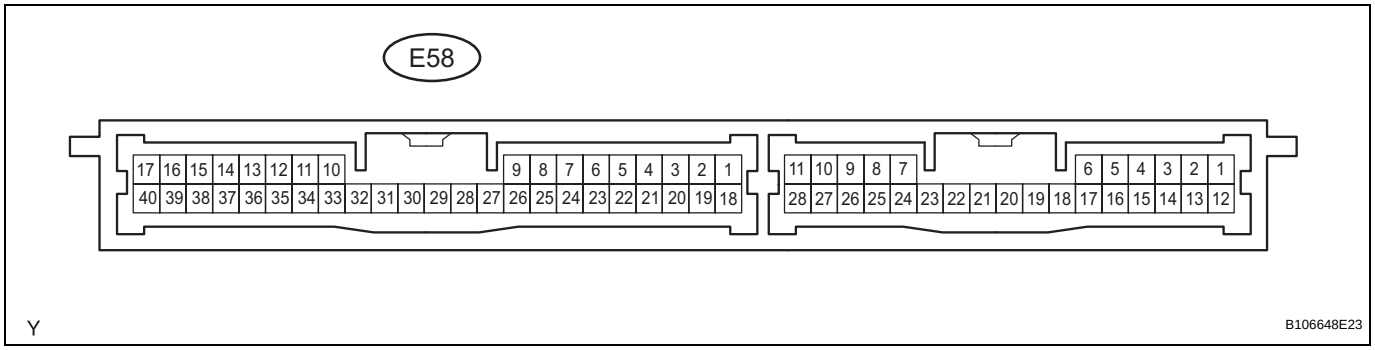


(2) Waveform 2 (Reference)

Item	Content
Symbols (Terminal No.)	TXCT (E52-9) - AGND (E52-8)
Tool Setting	2 V/DIV., 20 ms./DIV.
Condition	Press engine switch and hold key close to engine switch*

HINT:
*: Remove the key battery before performing this inspection.

2. CHECK CERTIFICATION ECU



(a) Disconnect the E58 ECU connector.
(b) Measure the resistance and voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
E (E58-17) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
+B (E58-1) - E (E58-17)	W - W-B	+B power supply	Always	10 to 14 V
IG (E58-18) - E (E58-17)	LG - W-B	Ignition power supply	Engine switch off	Below 1 V

If the result is not as specified, there may be a malfunction on the wire harness side.
(c) Reconnect the E58 ECU connector.

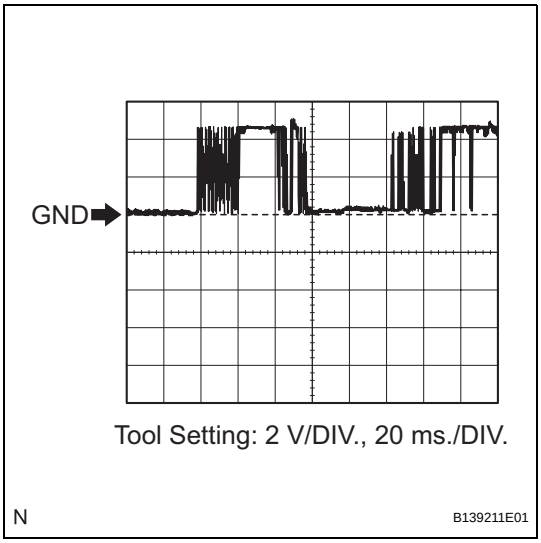
EI

(d) Measure the resistance and voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
AGND (E58-40) - Body ground	G - Body ground	Engine switch ground	Always	Below 1 Ω
VC5 (E58-30) - AGND (E58-40)	R - G	Engine switch power supply	Key is not in cabin	Below 1 V
			Press engine switch*	4.6 to 5.4 V
CODE (E58-9) - AGND (E58-40)	W - G	Engine switch CODE input	Key is not in cabin	Below 1 V
			Press engine switch and hold key close to engine switch*	Pulse generation (see waveform 1)
TXCT (E58-8) - AGND (E58-40)	GR - G	Engine switch TXCT output	Key is not in cabin	Below 1 V
			Press engine switch and hold key close to engine switch*	Pulse generation (see waveform 2)

HINT:
*: Remove the key battery before performing this inspection.
If the result is not as specified, the ECU may have a malfunction.

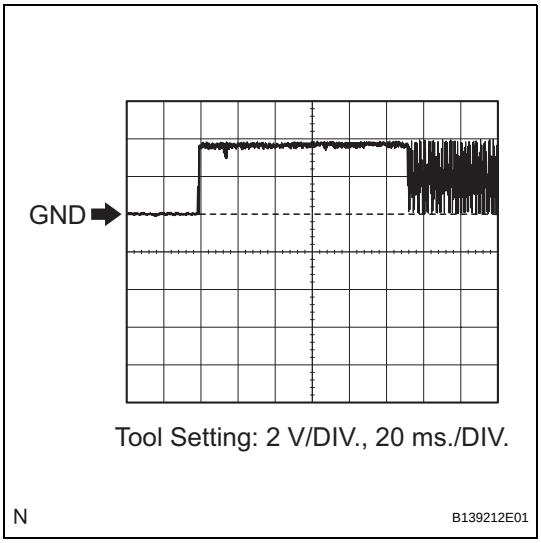
(e) Inspect using an oscilloscope.
(1) Waveform 1 (Reference)



Item	Content
Symbols (Terminal No.)	CODE (E58-9) - AGND (E58-40)
Tool Setting	2 V/DIV., 20 ms./DIV.
Condition	Press engine switch and hold key close to engine switch*

HINT:
*: Remove the key battery before performing this inspection.

(2) Waveform 2 (Reference)

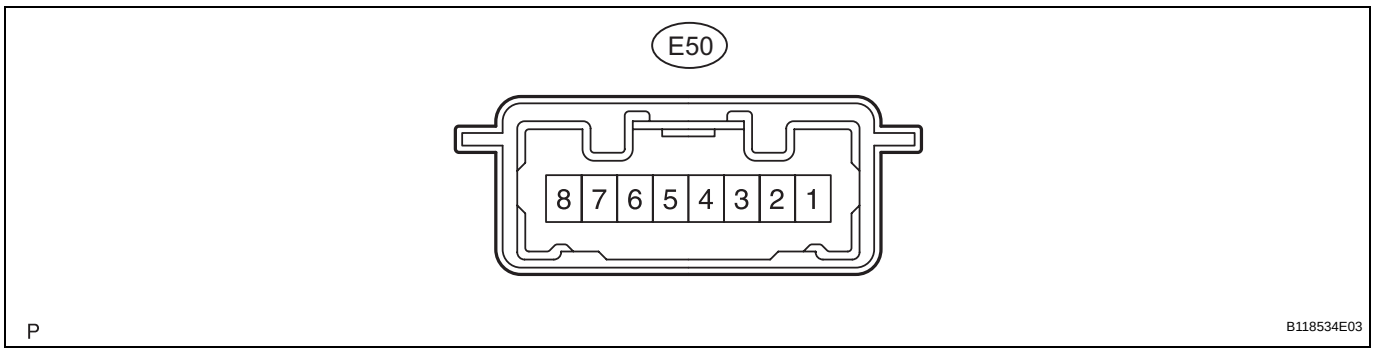


Item	Content
Symbols (Terminal No.)	TXCT (E58-8) - AGND (E58-40)
Tool Setting	2 V/DIV., 20 ms./DIV.
Condition	Press engine switch and hold key close to engine switch*

HINT:
*: Remove the key battery before performing this inspection.

EI

3. CHECK ID CODE BOX



(a) Disconnect the E50 ECU connector.
(b) Measure the resistance and voltage according to the value(s) in the table below.

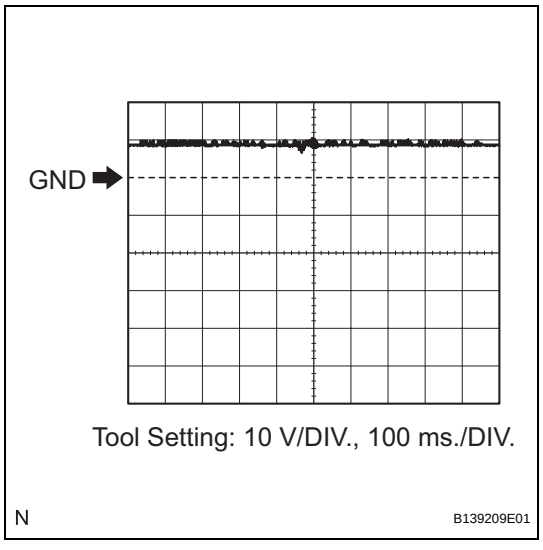
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
GND (E50-8) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
+B (E50-1) - GND (E50-8)	W - W-B	+B power supply	Always	10 to 14 V

If the result is not as specified, there may be a malfunction on the wire harness side.
(c) Reconnect the E50 ECU connector.
(d) Measure the voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
EFII (E50-5) - GND (E50-8)	G - W-B	ECM input signal	Engine switch off	Below 1 V
			Engine switch on (IG)	Pulse generation (see waveform 1)
EFIO (E50-6) - GND (E50-8)	L - W-B	ECM output signal	Engine switch off	Below 1 V
			Engine switch on (IG)	Pulse generation (see waveform 2)

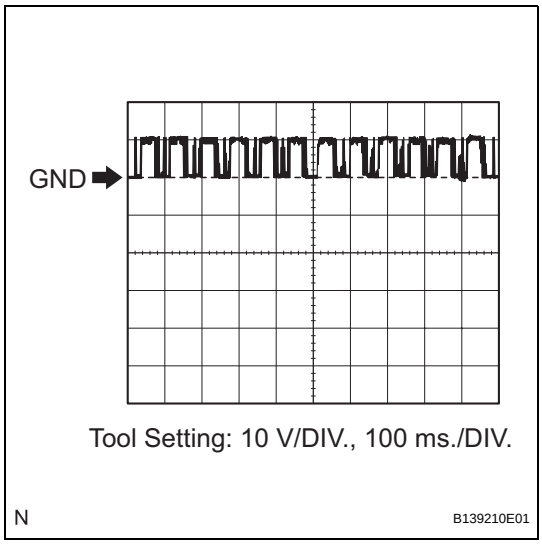
If the result is not as specified, the ECU may have a malfunction.

(e) Inspect using an oscilloscope.
(1) Waveform 1 (Reference)



Item	Content
Symbols (Terminal No.)	EFII (E50-5) - GND (E50-8)
Tool Setting	10 V/DIV., 100 ms./DIV.
Condition	Engine switch on (IG)

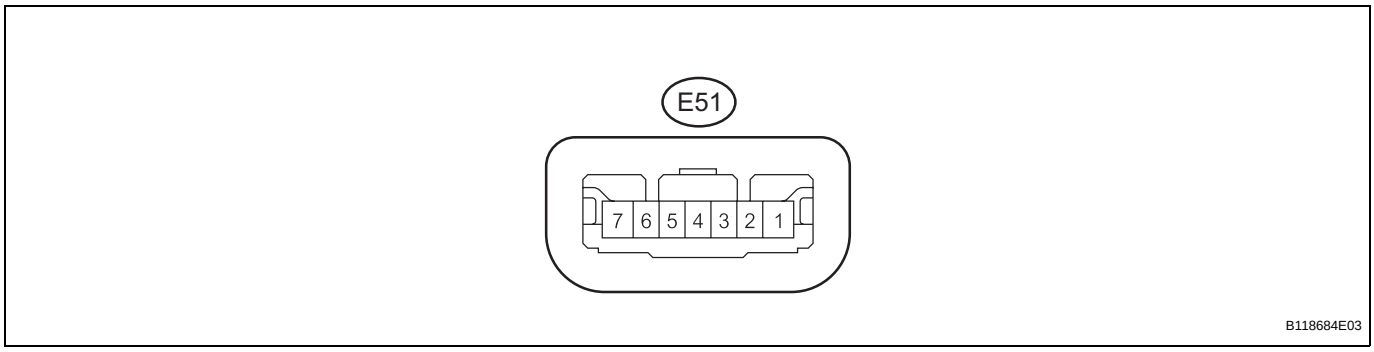
EI



(2) Waveform 2 (Reference)

Item	Content
Symbols (Terminal No.)	EFIO (E50-6) - GND (E50-8)
Tool Setting	10 V/DIV., 100 ms./DIV.
Condition	Engine switch on (IG)

4. CHECK STEERING CONTROL ECU

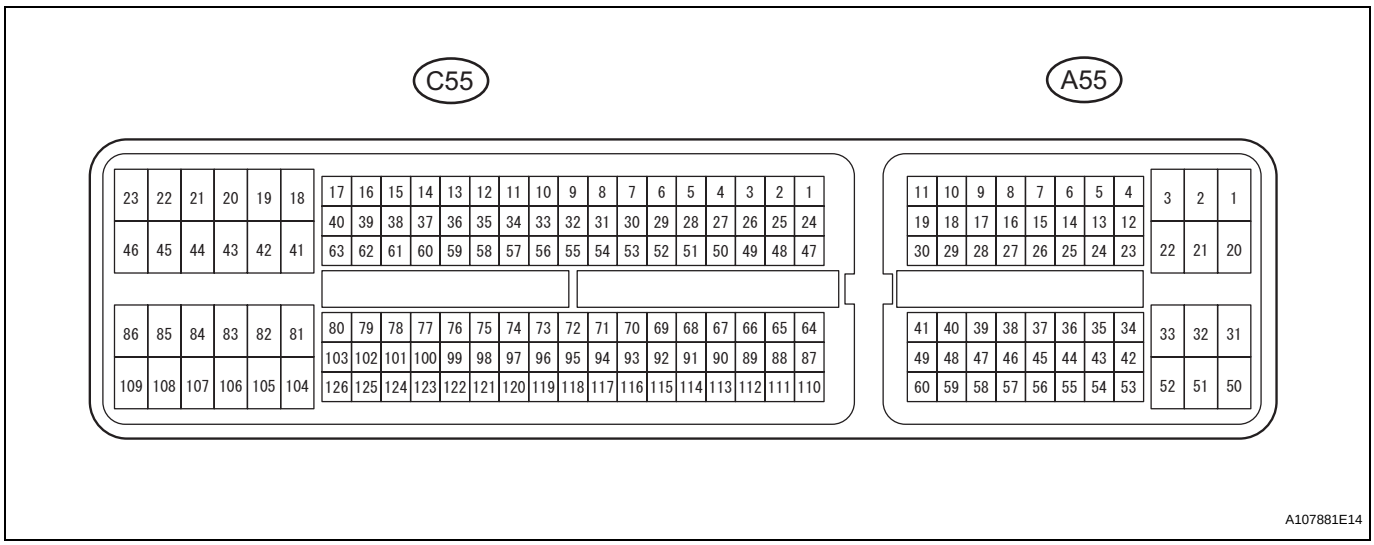


(a) Disconnect the E51 ECU connector.
(b) Measure the resistance and voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
SGND (E51-2) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
GND (E51-1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
B (E51-7) - Body ground	P - Body ground	+B power supply	Always	10 to 14 V
IG2 (E51-6) - Body ground	B - Body ground	Ignition power supply	Engine switch off	0 V
			Engine switch on (IG)	10 to 14 V

If the result is not as specified, there may be a malfunction on the wire harness side.

5. CHECK ECM

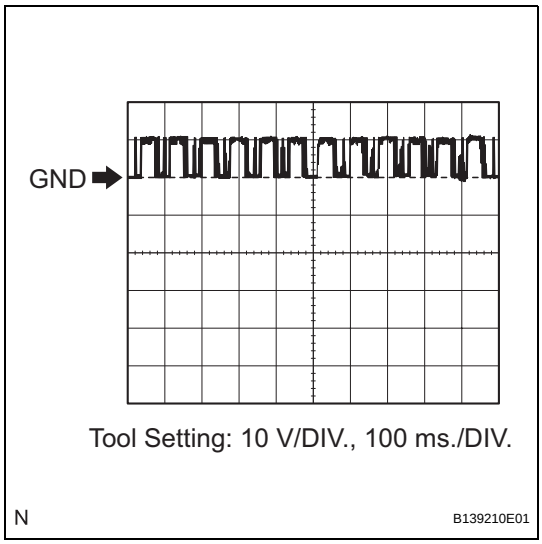


(a) Measure the resistance and voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
E1 (C55-81) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
E01 (C55-22) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
E02 (C55-21) - Body ground	B-W - Body ground	Ground	Always	Below 1 Ω
E03 (C55-104) - Body ground	B - Body ground	Ground	Always	Below 1 Ω
E04 (C55-23) - Body ground	W - Body ground	Ground	Always	Below 1 Ω
E05 (C55-46) - Body ground	W - Body ground	Ground	Always	Below 1 Ω
ME01 (C55-20) - Body ground	B - Body ground	Ground	Always	Below 1 Ω
BATT (A55-20) - E1 (C55-81)	Y - W-B	Battery (for measuring battery voltage and for ECM memory)	Always	10 to 14 V
+B (A55-2) - E1 (C55-81)	R - W-B	Power source of ECM	Engine switch off	Below 1 V
			Engine switch on (IG)	10 to 14 V
IMI (A55-11) - E1 (C55-81)	Y - W-B	Immobiliser code ECU input signal	Engine switch off	Below 1 V
			Engine switch on (IG)	Pulse generation (see waveform 1)
IMO (A55-10) - E1 (C55-81)	G - W-B	Immobiliser code ECU output signal	Engine switch off	Below 1 V
			Engine switch on (IG)	Pulse generation (see waveform 2)

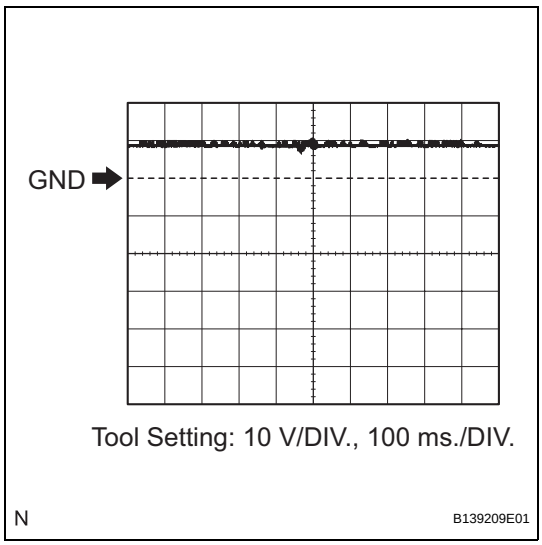
If the result is not as specified, the ECM may have a malfunction.

EI



(b) Inspect using an oscilloscope.
(1) Waveform 1 (Reference)

Item	Content
Symbols (Terminal No.)	IMI (A55-11) - E1 (C55-81)
Tool Setting	10 V/DIV., 100 ms./DIV.
Condition	Engine switch on (IG)



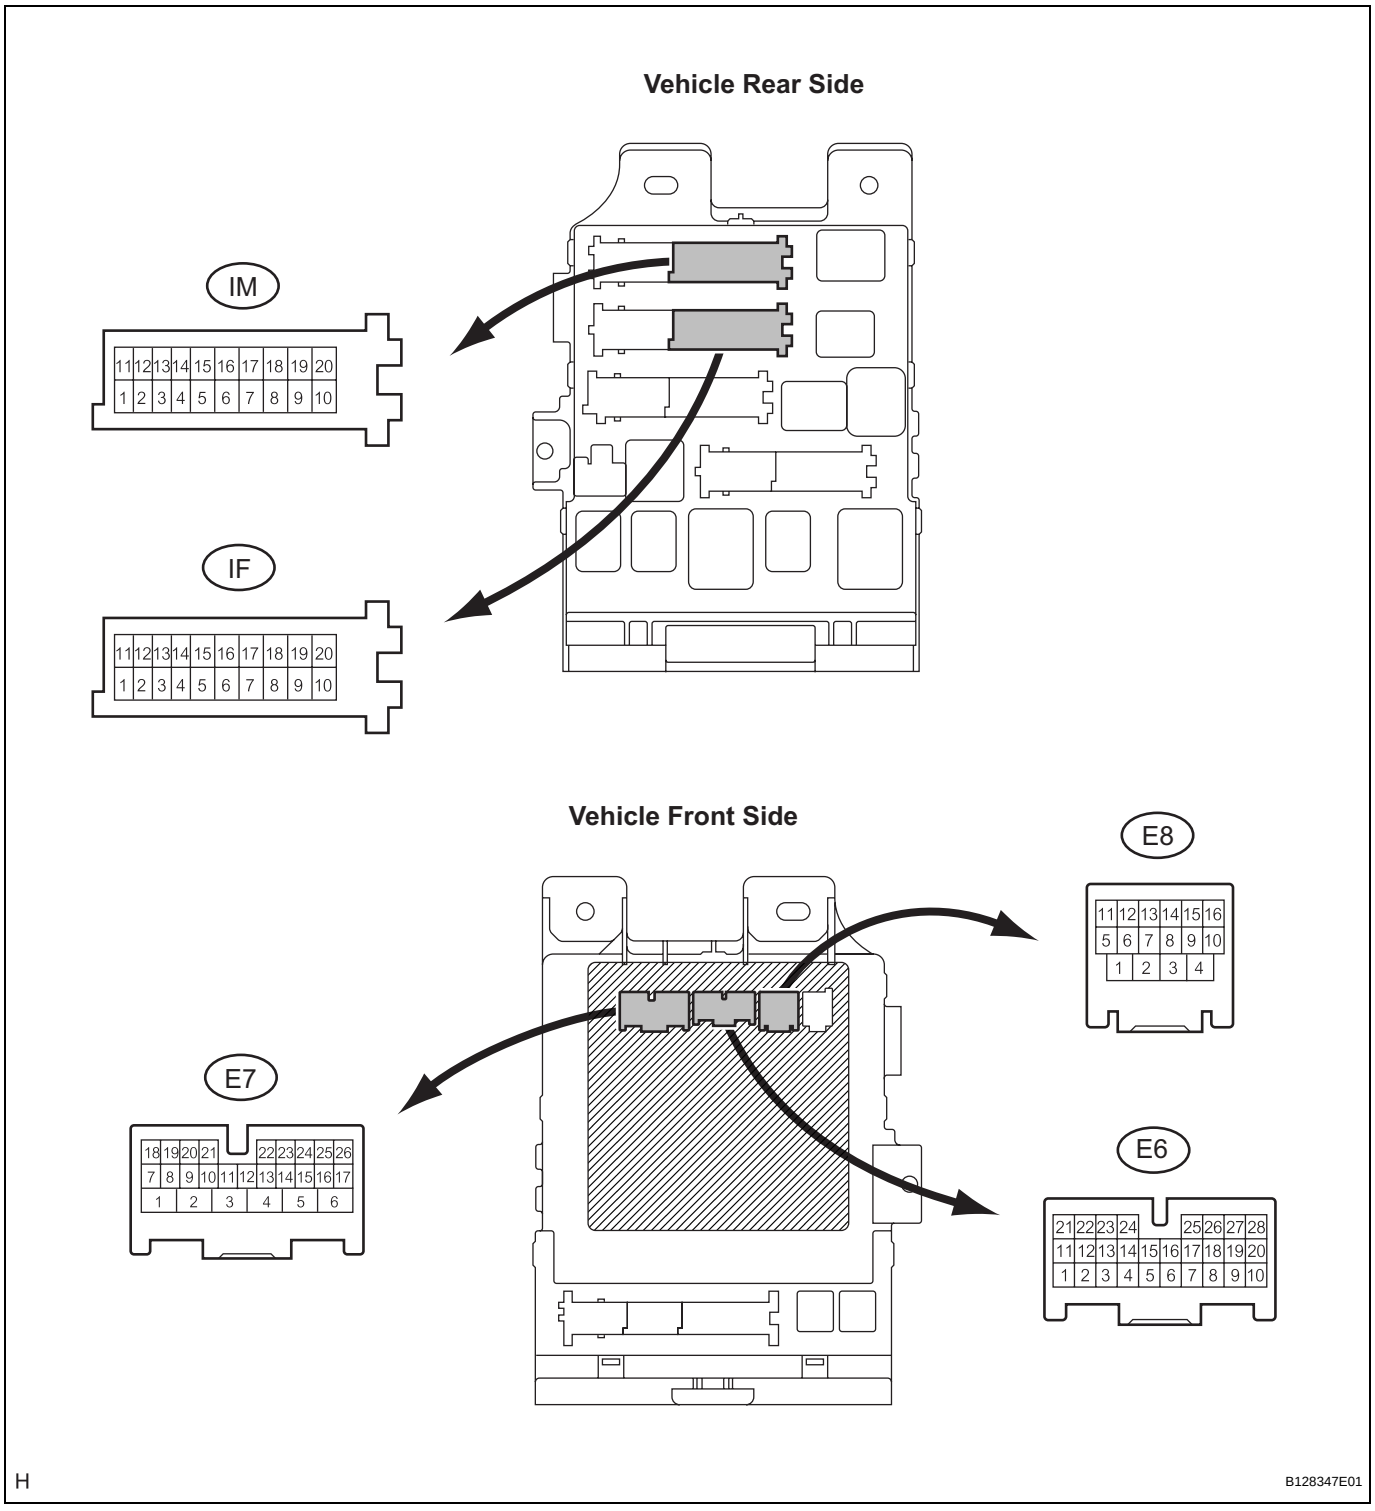
(2) Waveform 2 (Reference)

Item	Content
Symbols (Terminal No.)	IMO (A55-10) - E1 (C55-10)
Tool Setting	10 V/DIV., 100 ms./DIV.
Condition	Engine switch on (IG)

6. CHECK MAIN BODY ECU (INSTRUMENT PANEL J/B)

(a) Disconnect the IF and IM junction block connectors.

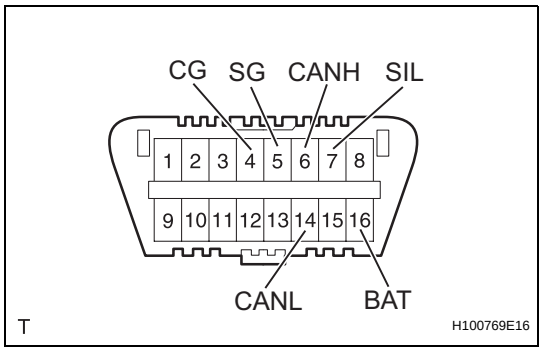
(b) Disconnect the E8, E7 and E6 main body ECU connectors.



(c) Measure the resistance and voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
GND1 (IF-10) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
GND2 (IM-9) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
GND3 (E8-1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
AM1 (E7-6) - Body ground	L - Body ground	+B power supply	Always	10 to 14 V
AM2 (E6-1) - Body ground	L - Body ground	+B power supply	Always	10 to 14 V

If the result is not as specified, there may be a malfunction on the wire harness side.



DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The vehicle's ECU uses ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

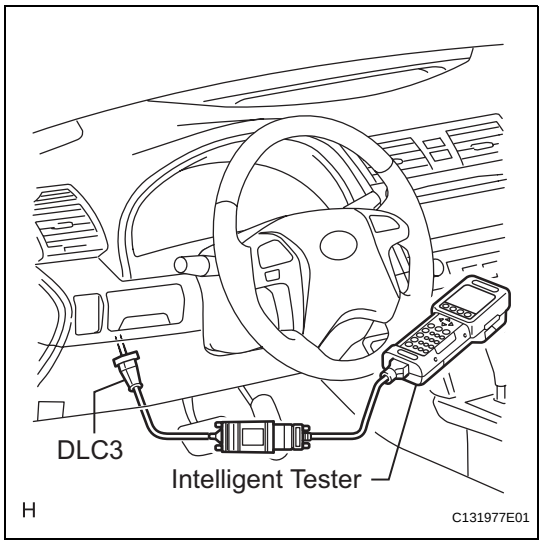
Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Engine switch off*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Engine switch off*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Engine switch off*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Engine switch off*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Engine switch off*	6 kΩ or higher

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the engine switch, any other switches or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

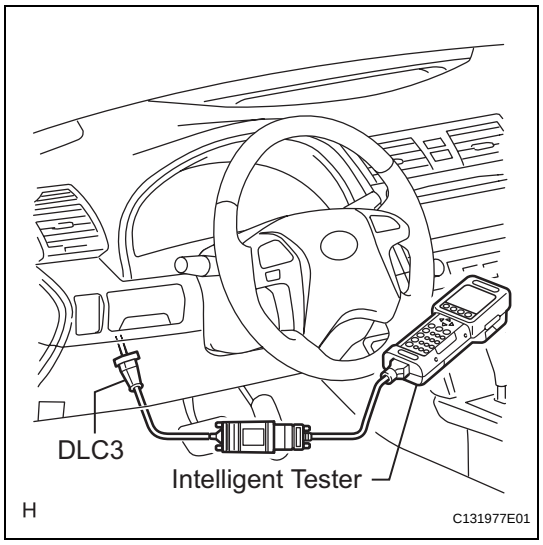
EI



(b) Connect the cable of the intelligent tester (with CAN VIM) to the DLC3, turn the engine switch on (IG) and attempt to use the intelligent tester. If the screen displays a communication error message, a problem exists in the vehicle side or tester side.

HINT:

- If communication is normal when the tool is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still impossible when the tool is connected to another vehicle, the problem is probably in the tool itself. Consult the Service Department listed in the tool's instruction manual.



DTC CHECK / CLEAR

1. CHECK DTC

(a) Connect the intelligent tester to the Controller Area Network Vehicle Interface Module (CAN VIM). Then connect the CAN VIM to the DLC3.

(b) Turn the engine switch on (IG).

(c) Read the DTCs by following the directions on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

2. CLEAR DTC

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the engine switch on (IG).

(c) Erase the DTCs by following the directions on the tester's screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the intelligent tester to read the DATA LIST allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful as intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the DATA LIST information early in troubleshooting is one way to save diagnostic time.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the engine switch on (IG).
(c) Read the DATA LIST.

SMART:

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
IG SW	Engine switch on (IG) signal / ON or OFF	ON: Engine switch on (ACC, IG) or start OFF: Engine switch off	-
ACC SW	Engine switch on (ACC) signal / ON or OFF	ON: Engine switch on (ACC, IG) or start OFF: Engine switch off	-
IMMOBILISER	Immobiliser system status / SET or UNSET	SET: Key is not in cabin UNSET: Key is in cabin	-
MASTER KEY	Master key code signal / MATCH or NO MATCH	MATCH: Master key code is sent NO MATCH: Unmatched master key code is sent	-
SUB KEY	Sub-key (Master key) code signal / MATCH or NO MATCH	MATCH: Sub-key (master key) code is sent NO MATCH: Unmatched sub-key (master key) code is sent	-
BCC	Transponder chip signal / OK or NG	OK: Correct data sent NG: Incorrect data sent	-
STATUS	Transponder chip data / OK or NG	OK: Data OK NG: Data error	-
ENCRYPT CODE	Transponder chip signal / OK or NG	OK: Correct data sent NG: Incorrect data sent	-
SERIAL NUMBER	Transponder chip signal / OK or NG	OK: Correct data sent NG: Incorrect data sent	-
FRAME	Transponder chip signal / OK or NG	OK: Correct data sent NG: Incorrect data sent	-

EI

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows relay, VSV, actuator and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the engine switch on (IG).
(c) Perform the ACTIVE TEST by following the directions on the tester screen.

SMART:

Item	Test Details	Diagnostic Note
SECURITY INDIC	Turn security indicator ON/OFF	-

DIAGNOSTIC TROUBLE CODE CHART

Certification ECU Diagnostic Trouble Code Chart:

DTC No.	Detection Item	Trouble Area	See page
B2784	Antenna Coil Open / Short	1. Wire harness 2. Engine switch 3. Certification ECU	EI-27
B2785	Communication Malfunction between ECUs Connected by LIN	1. Wire harness 2. Certification ECU 3. Main body ECU 4. Steering lock ECU 5. ID code box	EI-29
B2786	No Response from Steering Lock ECU	1. Wire harness 2. Certification ECU 3. Steering lock ECU	EI-32
B2789	No Response from ID BOX	1. Wire harness 2. Certification ECU 3. ID code box	EI-34
B278A	Short to GND in Immobiliser System Power Source Circuit	1. Wire harness 2. Engine switch 3. Certification ECU	EI-36
B2790	ID BOX EEPROM Malfunction	ID code box	EI-39
B2791	Communication Condition Failure between ECM	1. Wire harness 2. ID code box 3. ECM	EI-40

ECM Diagnostic Trouble Code Chart:

DTC No.	Detection Item	Trouble Area	See page
B2799	Engine Immobiliser System	1. Wire harness 2. ECM 3. ID code box	EI-42

HINT:
The DTCs for the engine immobiliser system are specified above. If other codes are output, check the DTC chart for the SFI system.

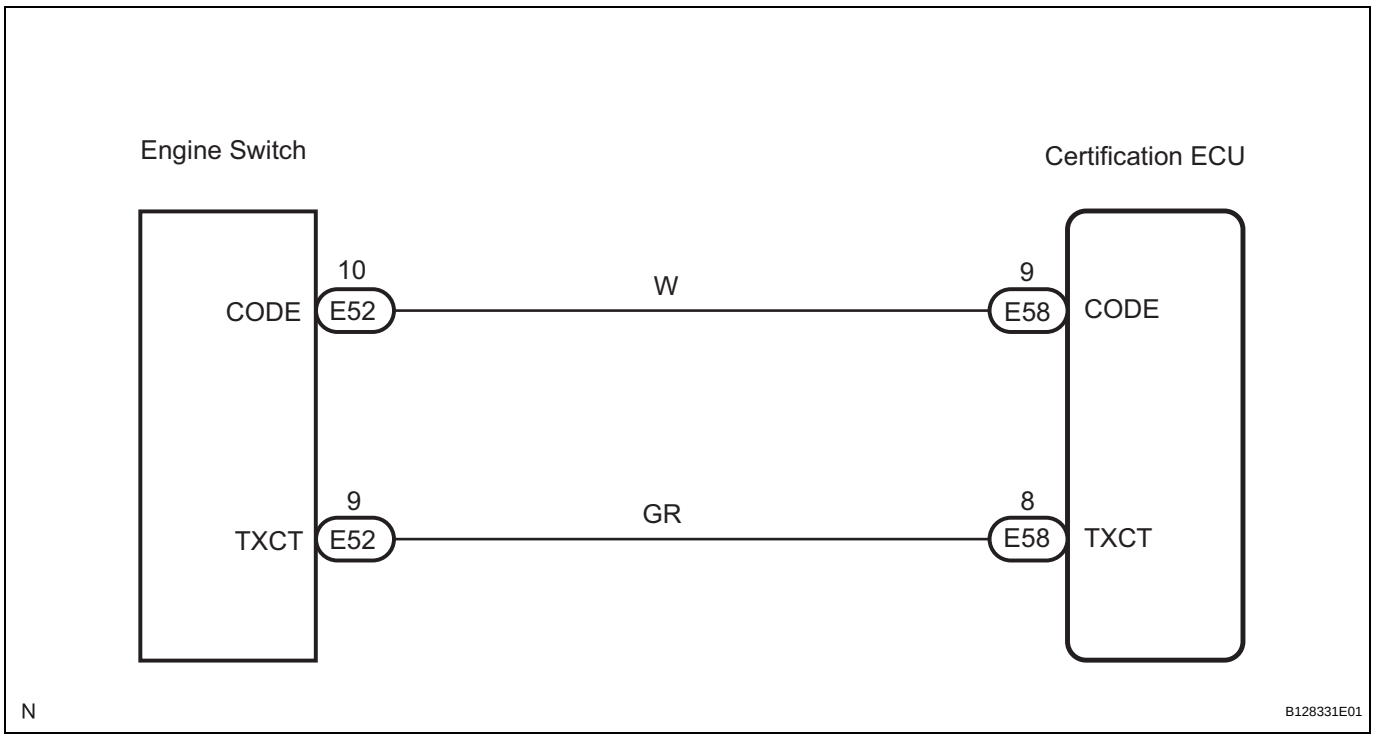
DTC	B2784	Antenna Coil Open / Short

DESCRIPTION

This DTC is output when there is an open or short malfunction in the key coil (built into engine switch).

DTC No.	DTC Detection Condition	Trouble Area
B2784	Antenna coil is open/short	• Wire harness • Engine switch • Certification ECU

WIRING DIAGRAM



EI

INSPECTION PROCEDURE

NOTICE:

If the certification ECU is replaced, register the key and ECU communication ID (See page EI-8).

1	CHECK DTC OUTPUT

(a) Delete the DTCs (See page EI-24).

(b) Recheck for DTCs (See page EI-24).

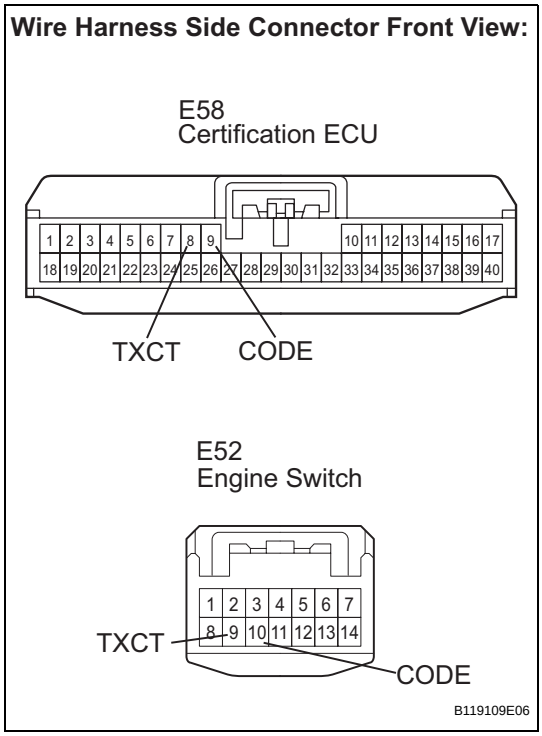
Result

Result	Proceed to
B2784 output reoccurs	A
B2784 output does not reoccur	B

B → END

A

2 CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - ENGINE SWITCH)



(a) Disconnect the E58 ECU and E52 switch connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
E58-9 (CODE) - E52-10 (CODE)	Below 1 Ω
E58-8 (TXCT) - E52-9 (TXCT)	
E58-9 (CODE) - Body ground	10 kΩ or higher
E58-8 (TXCT) - Body ground	

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3 CHECK ENGINE SWITCH

(a) After replacing the engine switch (See page ST-152) with a normal one, check that the engine starts.

OK:

The engine starts.

NG → REPLACE CERTIFICATION ECU

OK

END

EI

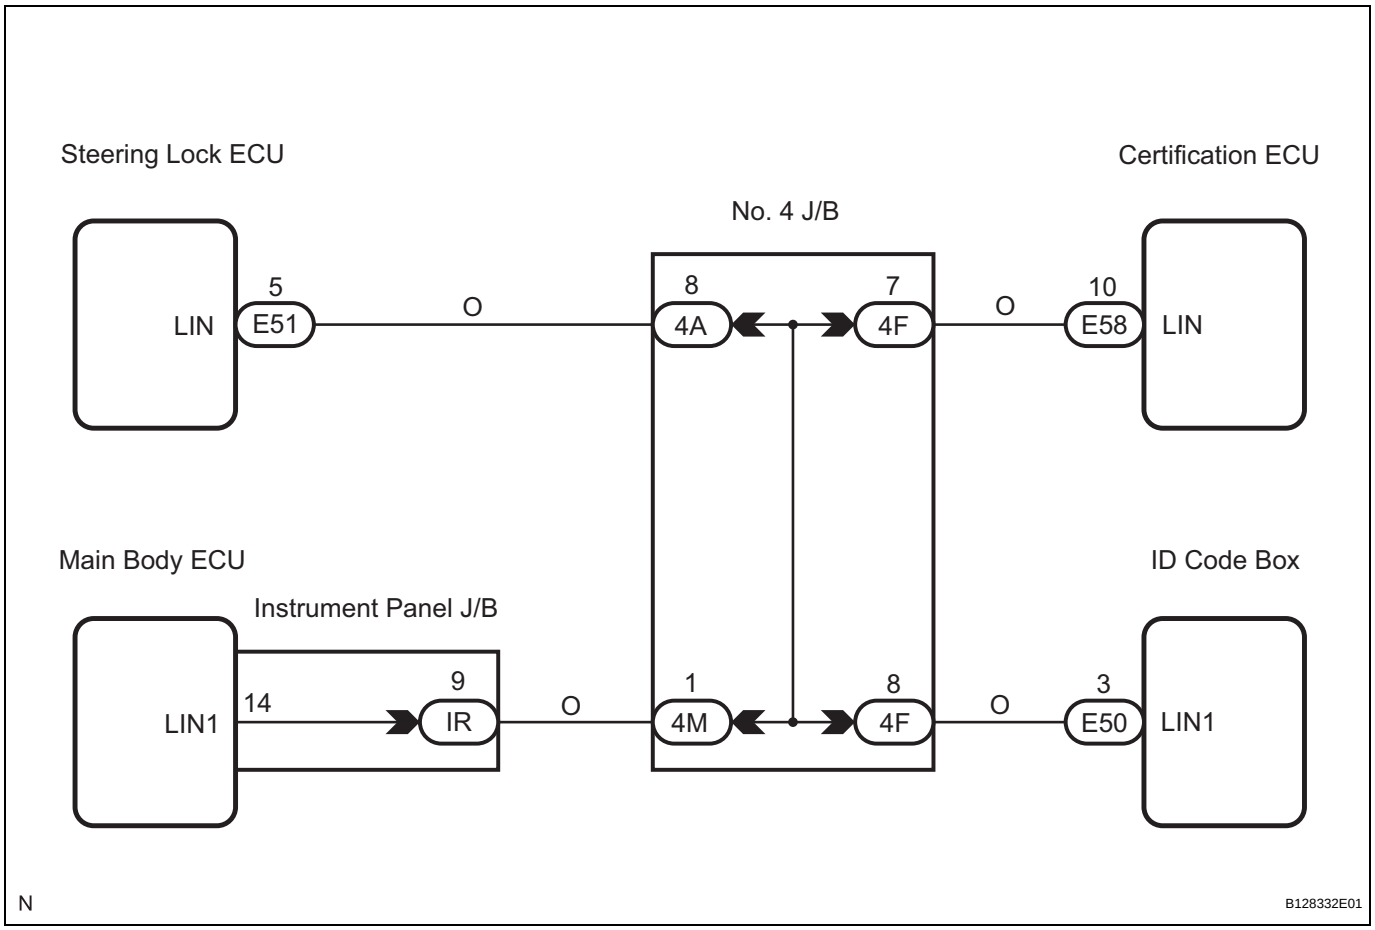
DTC	B2785	Communication Malfunction between ECUs Connected by LIN

DESCRIPTION

This DTC is output when LIN communication from the certification ECU stops for a certain amount of time.

DTC No.	DTC Detection Condition	Trouble Area
B2785	LIN communication from certification ECU stops for a certain amount of time • Open or short in wire harness between ECUs	• Wire harness • Certification ECU • Main body ECU • Steering lock ECU • ID code box

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

- **If the certification ECU or ID code box is replaced, register the key and ECU communication ID (See page EI-8).**
- **If the steering lock ECU or main body ECU is replaced, register the ECU code and ECU communication ID (See page EI-8).**

1	CHECK DTC OUTPUT

(a) Delete the DTCs (See page EI-24).
(b) Recheck for DTCs (See page EI-24).

EI

Result

Result	Proceed to
B2785 output reoccurs	A
B2785 output does not reoccur	B

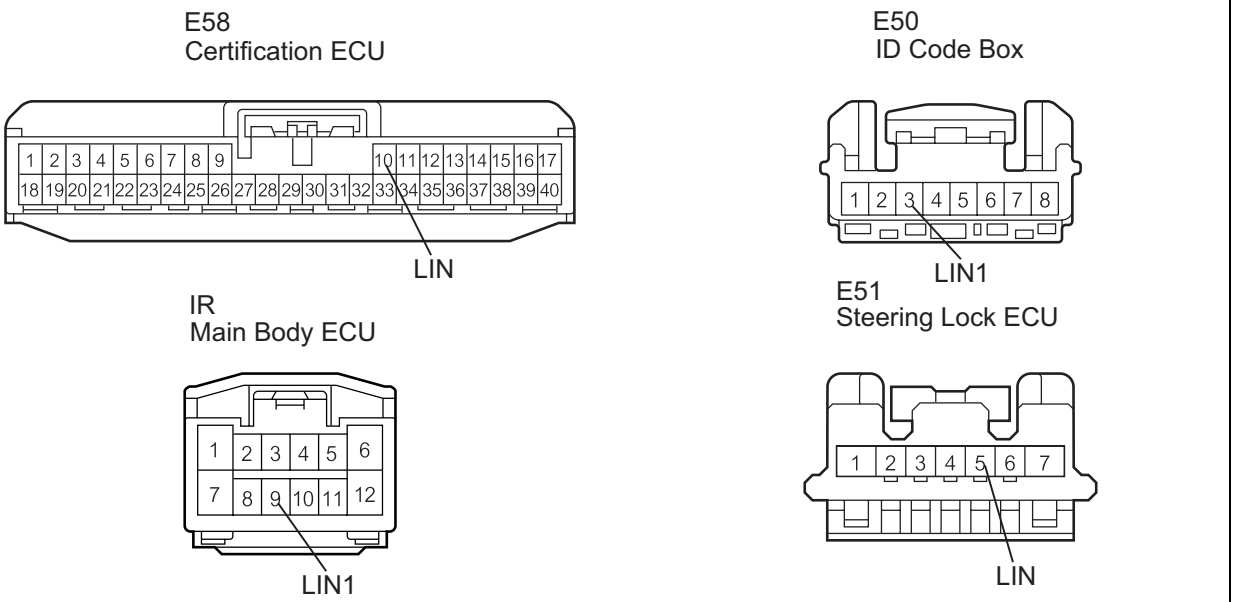
B → END

A

2 CHECK HARNESS AND CONNECTOR (LIN COMMUNICATION LINE)

(a) Disconnect the E58, E51, IR and E50 ECU connectors.

Wire Harness Side Connector Front View:



(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
E58-10 (LIN) - E50-3 (LIN1)	Below 1 Ω
E58-10 (LIN) - IR-9 (LIN1)	
E58-10 (LIN) - E51-5 (LIN)	
E58-10 (LIN) - Body ground	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3 CHECK CERTIFICATION ECU

(a) After replacing the certification ECU with a normal one, check for DTCs (See page EI-24).

Result

Result	Proceed to
B2785 output reoccurs	A
B2785 output does not reoccur	B

B → END

A

4 CHECK MAIN BODY ECU

(a) After replacing the main body ECU with a normal one, check for DTCs (See page EI-24).

Result

Result	Proceed to
B2785 output reoccurs	A
B2785 output does not reoccur	B

B → END

A

5 CHECK STEERING LOCK ECU

(a) After replacing the steering lock ECU with a normal one, check for DTCs (See page EI-24).

Result

Result	Proceed to
B2785 output reoccurs	A
B2785 output does not reoccur	B

B → END

A

REPLACE ID CODE BOX

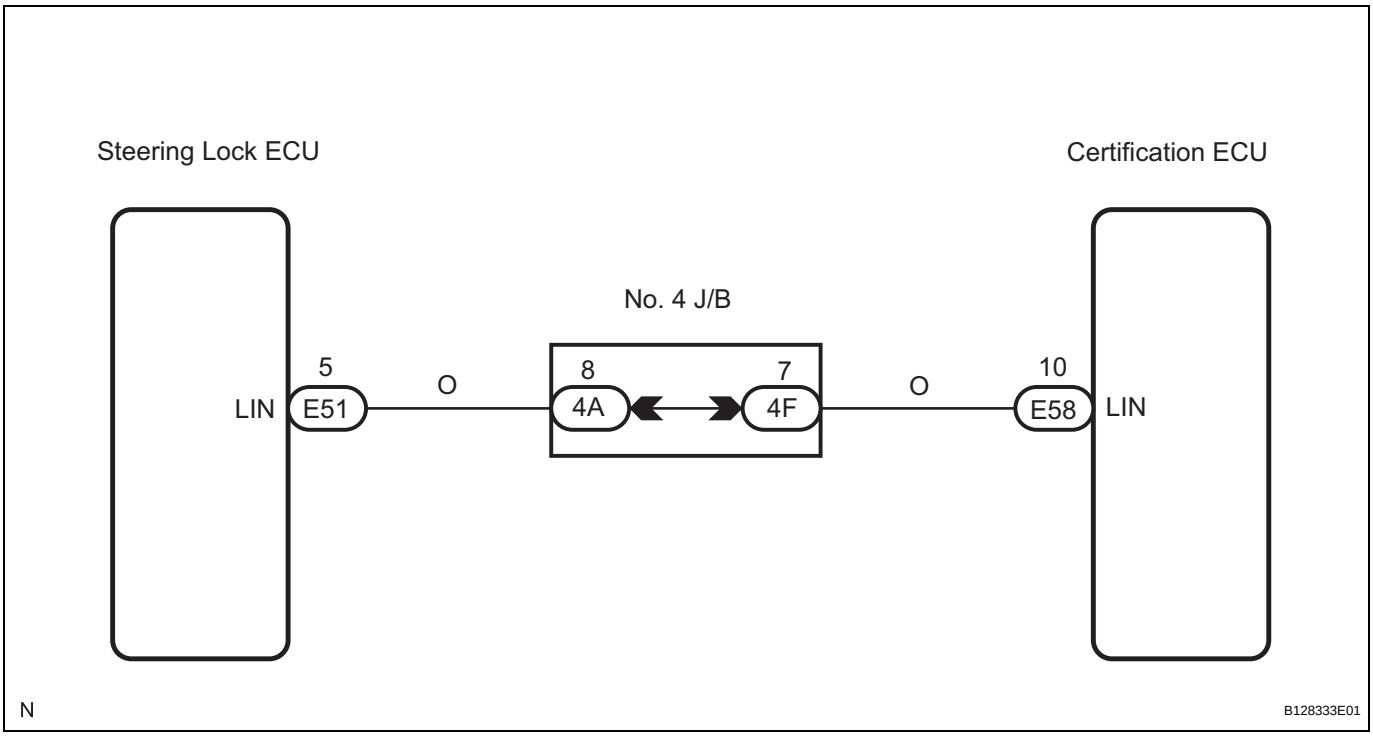
DTC	B2786	No Response from Steering Lock ECU

DESCRIPTION

This DTC is output when the certification ECU does not receive LIN communication from the steering lock ECU for 10 seconds.

DTC No.	DTC Detection Condition	Trouble Area
B2786	Certification ECU does not receive LIN communication from steering lock ECU for 10 seconds	• Wire harness • Certification ECU • Steering lock ECU

WIRING DIAGRAM



EI

INSPECTION PROCEDURE

NOTICE:

- **If the certification ECU is replaced, register the key and ECU communication ID (See page EI-8).**
- **If the steering lock ECU is replaced, register the ECU code and ECU communication ID (See page EI-8).**

EI

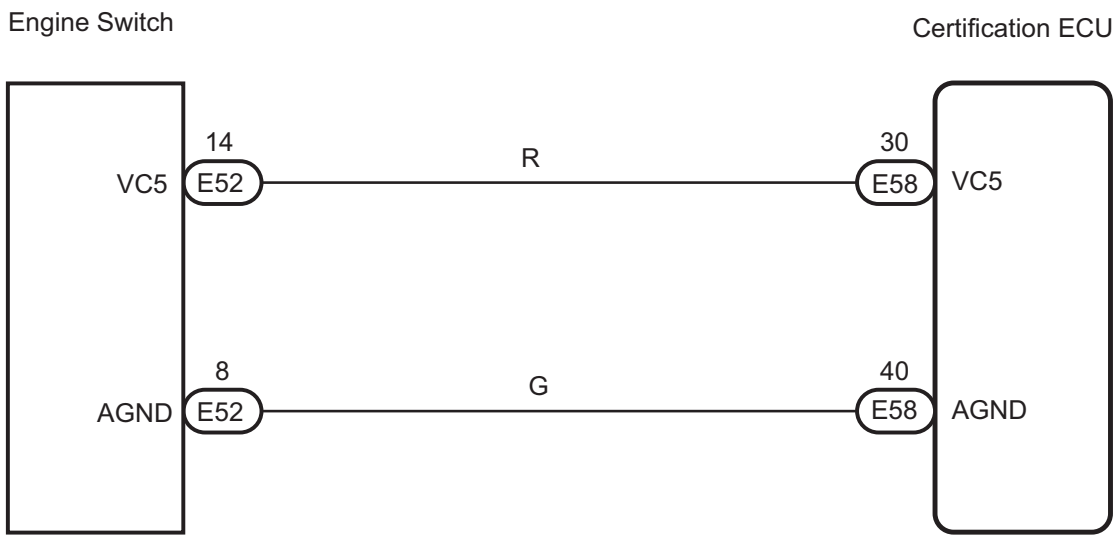
DTC	B278A	Short to GND in Immobiliser System Power Source Circuit

DESCRIPTION

This DTC is output when the engine switch power source supply line is open or shorted.

DTC No.	DTC Detection Condition	Trouble Area
B278A	Engine switch power source supply line is open or shorted	• Wire harness • Engine switch • Certification ECU

WIRING DIAGRAM



EI

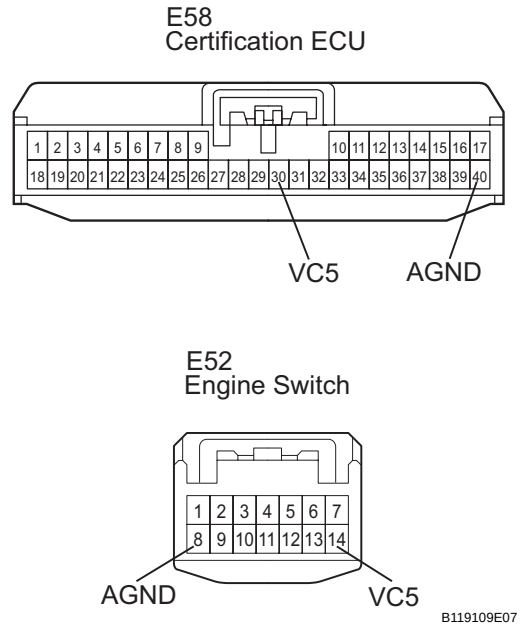
INSPECTION PROCEDURE

NOTICE:

If the certification ECU is replaced, register the key and ECU communication ID (See page EI-8).

1 CHECK WIRE HARNESS (CERTIFICATION ECU - ENGINE SWITCH)

Wire Harness Side Connector Front View:



(a) Disconnect the E58 ECU and E52 switch connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

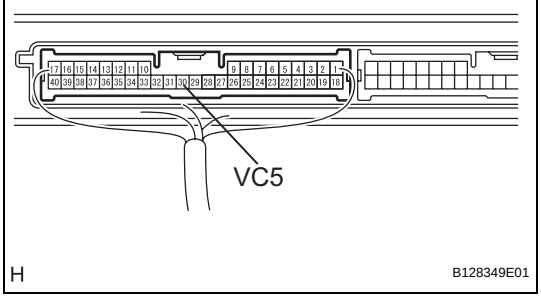
Tester Connection	Specified Condition
E58-30 (VC5) - E52-14 (VC5)	Below 1 Ω
E58-40 (AGND) - E52-8 (AGND)	
E58-30 (VC5) - Body ground	10 kΩ or higher
E58-40 (AGND) - Body ground	

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2 CHECK HARNESS AND CONNECTOR (ENGINE SWITCH POWER SOURCE)

Wire Harness Side Connector Rear View:



(a) Reconnect the E58 ECU and E52 switch connectors.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E58-30 (VC5) - Body ground	Key is not in cabin	Below 1 V
	Press engine switch	4.6 to 5.4 V

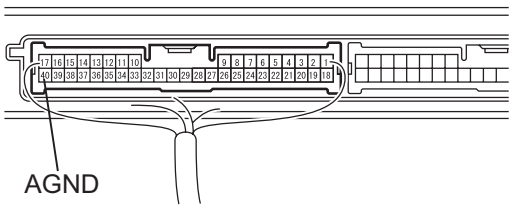
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

EI

3	CHECK HARNESS AND CONNECTOR (ENGINE SWITCH BODY GROUND)

Wire Harness Side Connector Rear View:



(a) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition
E58-40 (AGND) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	CHECK ENGINE SWITCH

(a) After replacing the engine switch (See page ST-152) with a normal one, check that the engine starts.
OK:
The engine starts.

DTC	B2790	ID BOX EEPROM Malfunction

DESCRIPTION

This DTC is output when the ID code box detects an internal malfunction.

DTC No.	DTC Detection Condition	Trouble Area
B2790	ID code box detects internal malfunction	ID code box

INSPECTION PROCEDURE

NOTICE:

If the ID code box is replaced, register the key and ECU communication ID (See page EI-8).

1	REPLACE ID CODE BOX

NEXT

END

DTC	B2791	Communication Condition Failure between ECM

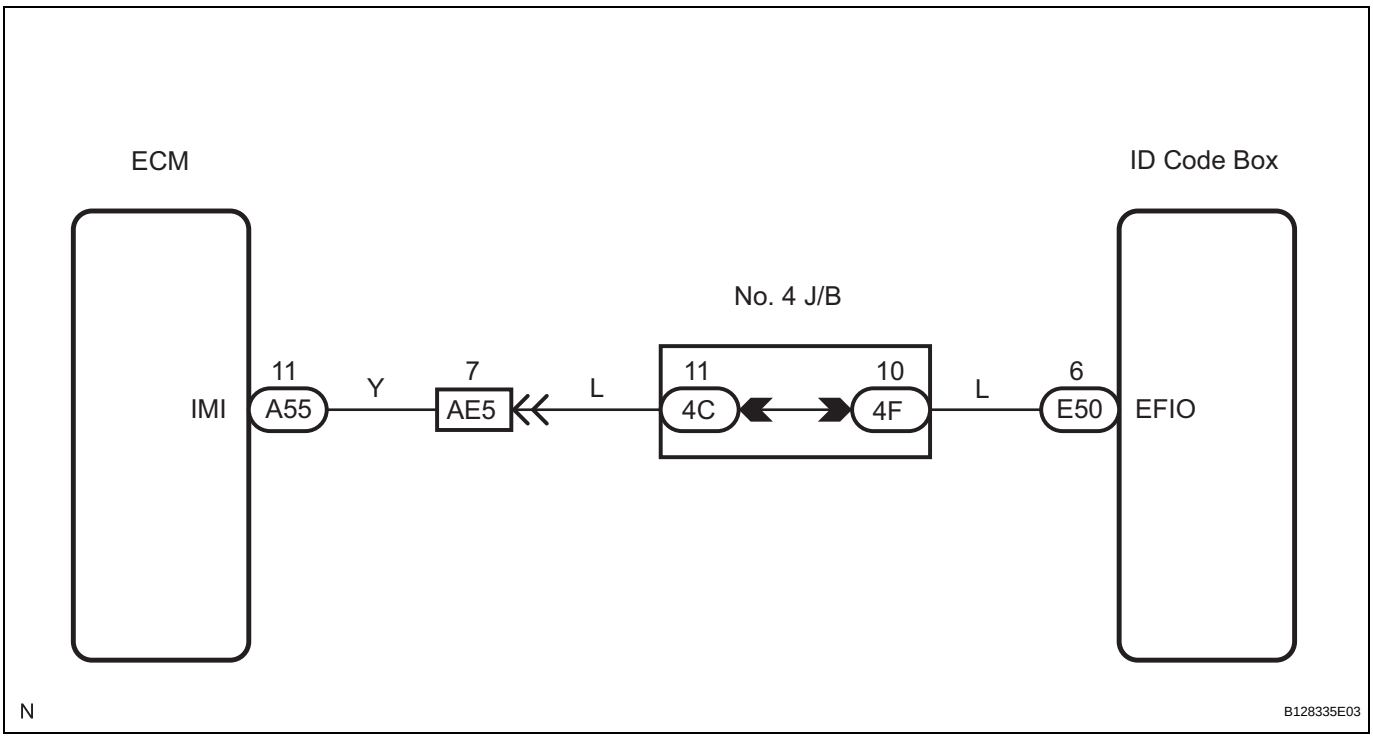
DESCRIPTION

This DTC is output when the ID code box does not respond to a verification request signal from the ECM.
HINT:

- If the engine switch is turned off immediately after an engine start, this DTC is also detected.
- If this DTC is detected simultaneously with DTC B2799, troubleshoot DTC B2799 first.

DTC No.	DTC Detection Condition	Trouble Area
B2791	ID code box does not respond to a verification request signal from ECM	• Wire harness • ID code box • ECM

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

- **If the ID code box is replaced, register the key and ECU communication ID (See page EI-8).**
- **If the ECM is replaced, register the ECU communication ID (See page EI-8).**
- **If the engine can be started even when DTC B2791 is output, the ID code box can be considered normal. Be sure to recheck for DTCs after clearing the DTCs (See page EI-24).**

1	CHECK DTC OUTPUT

(a) Delete the DTCs (See page EI-24).
(b) Recheck for DTCs (See page EI-24).

REPAIR CIRCUITS INDICATED BY OUTPUT DTCS

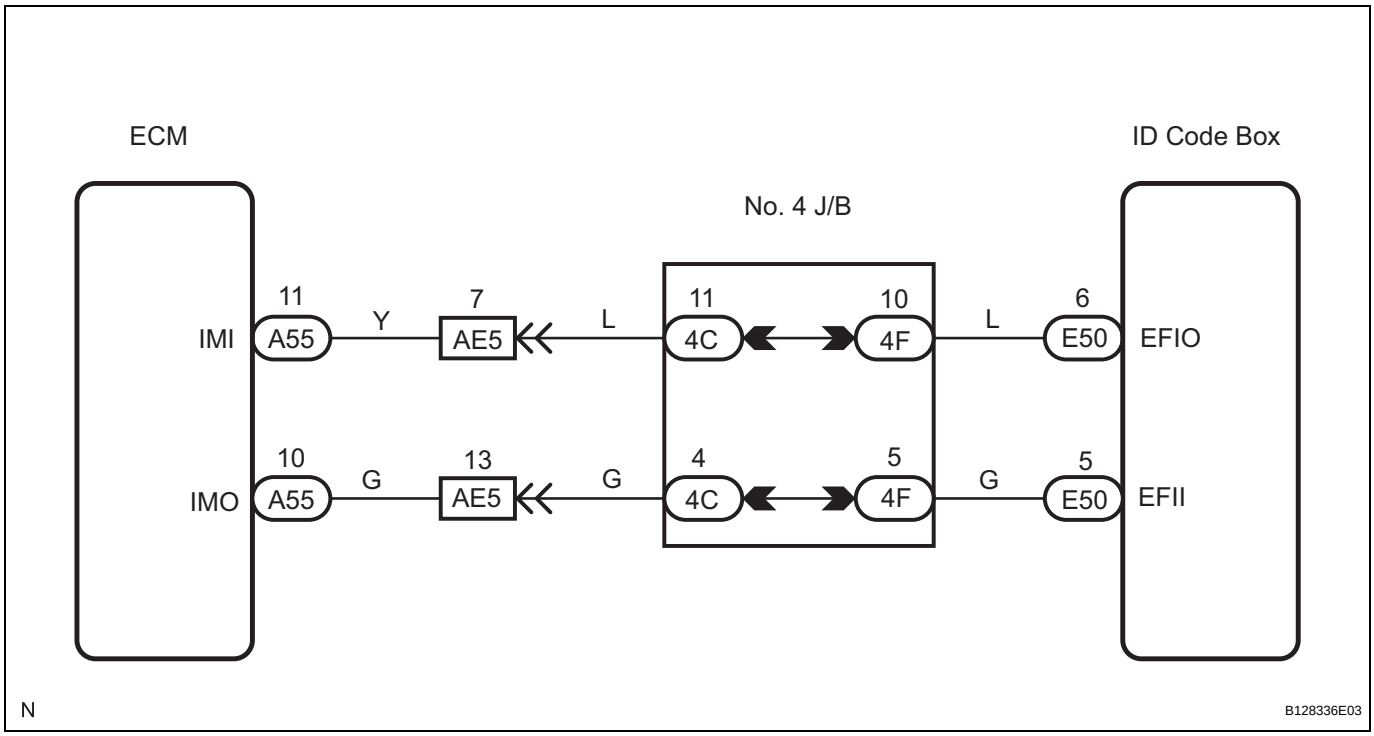
DTC	B2799	Engine Immobiliser System

DESCRIPTION

This DTC is output when one of the following occurs: 1) the ECM detects errors in its own communications with the ID code box; 2) the ECM detects errors in the communication lines; or 3) the ECU communication ID between the ID code box and ECM is different and an engine start is attempted. Before troubleshooting for this DTC, make sure no certification ECU DTCs are present. If present, troubleshoot the certification ECU DTCs first.

DTC No.	DTC Detection Condition	Trouble Area
B2799	One of following conditions is met: • Error in communication between ECM and ID code box • Error in communication lines • Communication ID is different with ID code box during communication	• Wire harness • ECM • ID code box

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

- **If the ID code box is replaced, register the key and ECU communication ID (See page EI-8).**
- **If the ECM is replaced, register the ECU communication ID (See page EI-8).**

1	CHECK DTC OUTPUT

(a) Delete the DTCs (See page EI-24).
(b) Recheck for DTCs (See page EI-24).

Result

Result	Proceed to
B2799 output reoccurs	A

Result	Proceed to
B2799 output does not reoccur	B

B → END

2 RE-REGISTER ECU COMMUNICATION ID

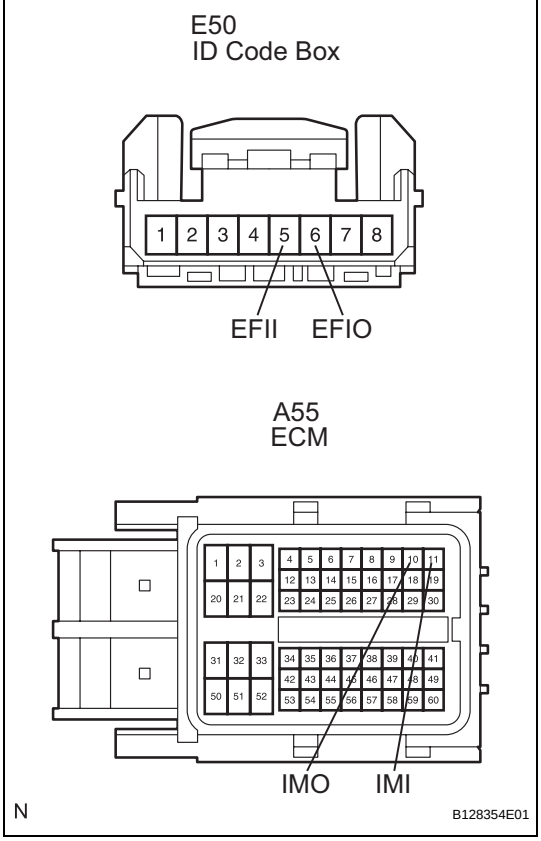
(a) Re-register the ECU communication ID (See page EI-8) between the ID code box and ECM.
(b) Check that the engine starts.
OK:
Engine starts.

OK → END

NG

3 CHECK HARNESS AND CONNECTOR (ID CODE BOX - ECM)

Wire Harness Side Connecter Front View:



(a) Disconnect the E50 ID code box and A55 ECM connectors.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition
E50-5 (EFII) - A55-10 (IMO)	Below 1 Ω
E50-6 (EFIO) - A55-11 (IMI)	
E50-5 (EFII) - Body ground	10 kΩ or higher
E50-6 (EFIO) - Body ground	

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

EI

4	CHECK ECM

(a) After replacing the ECM (See page ES-518) with a normal one, check for DTCs (See page EI-8).

Result

Result	Proceed to
B2799 output reoccurs	A
B2799 output does not reoccur	B

A → REPLACE ID CODE BOX

B

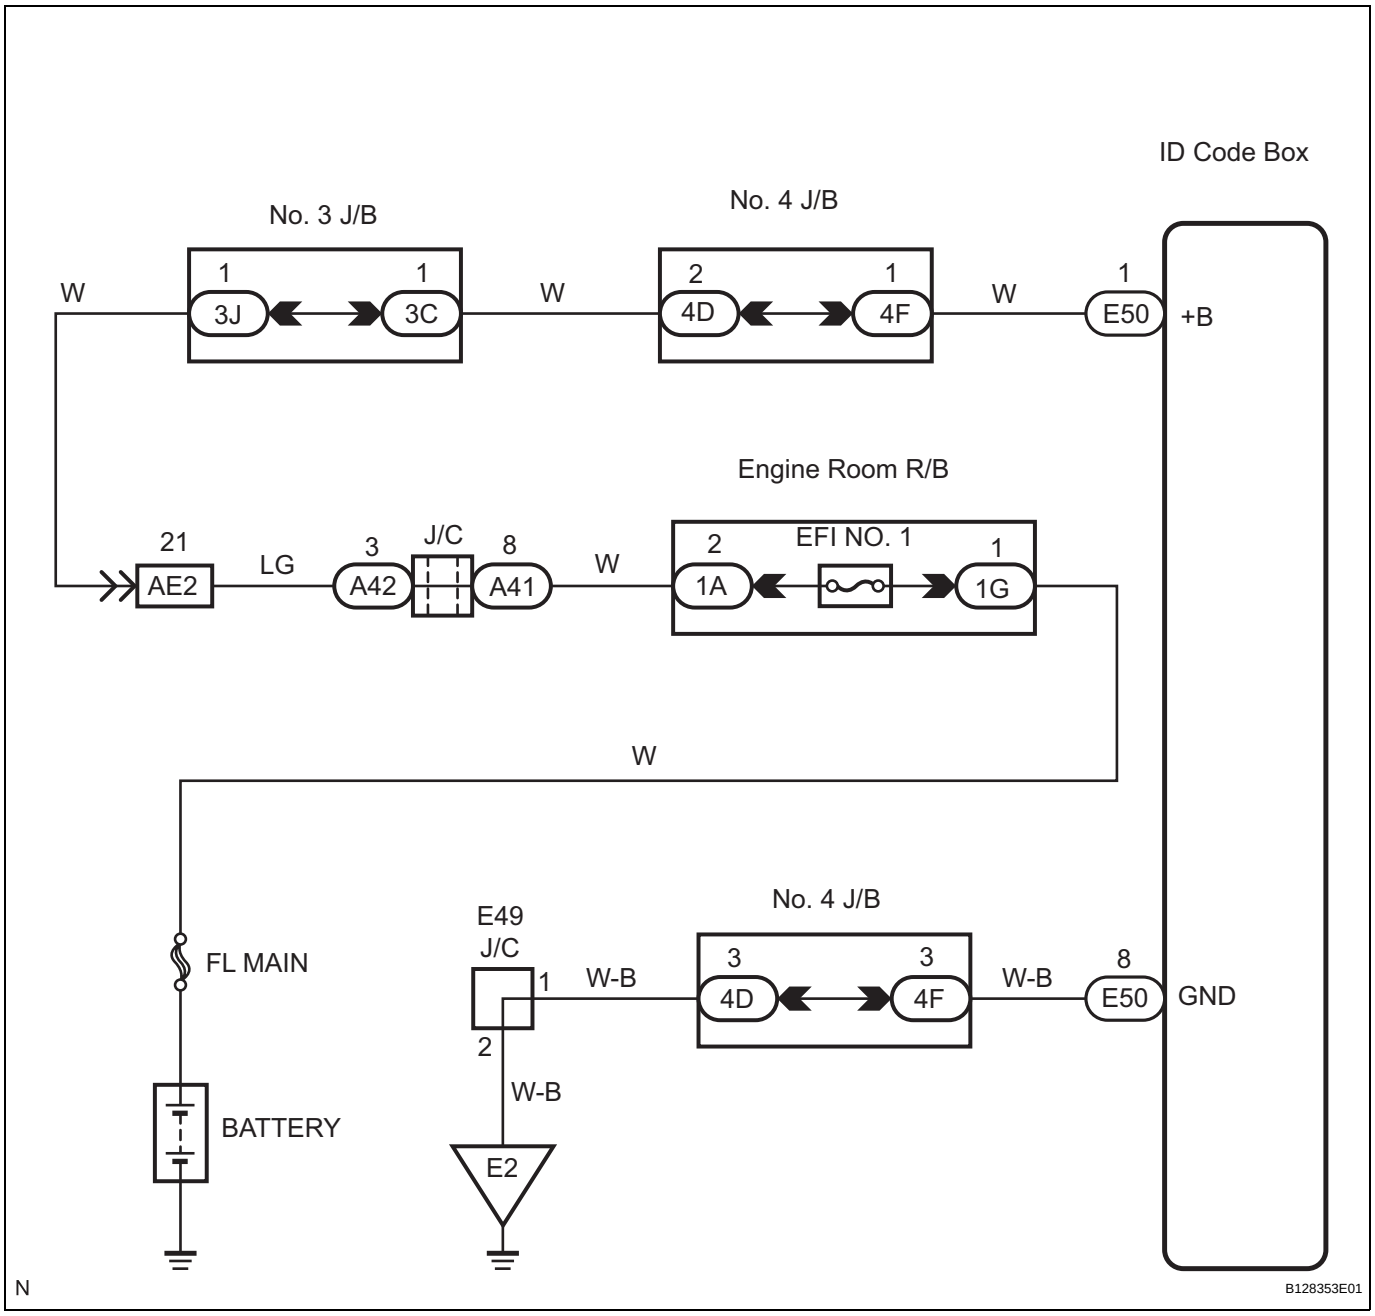
END

ID Code Box Power Source Circuit

DESCRIPTION

This circuit provides power to operate the ID code box.

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

If the ID code box is replaced, register the key and ECU communication ID (See page EI-8).

EI

1	INSPECT FUSE (EFI NO. 1)

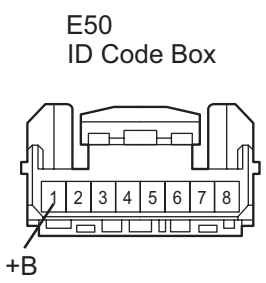
(a) Remove the EFI No. 1 fuse from the No. 1 engine room R/B.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

2	CHECK HARNESS AND CONNECTOR (ID CODE BOX - BATTERY)

Wire Harness Side Connector Front View:



(a) Disconnect the E50 ID code box connector.
(b) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Specified Condition
E50-1 (+B) - Body ground	10 to 14 V

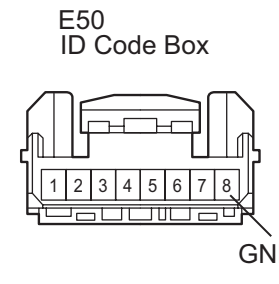
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

EI

3	CHECK HARNESS AND CONNECTOR (ID CODE BOX - BODY GROUND)

Wire Harness Side Connector Front View:



(a) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition
E50-8 (GND) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

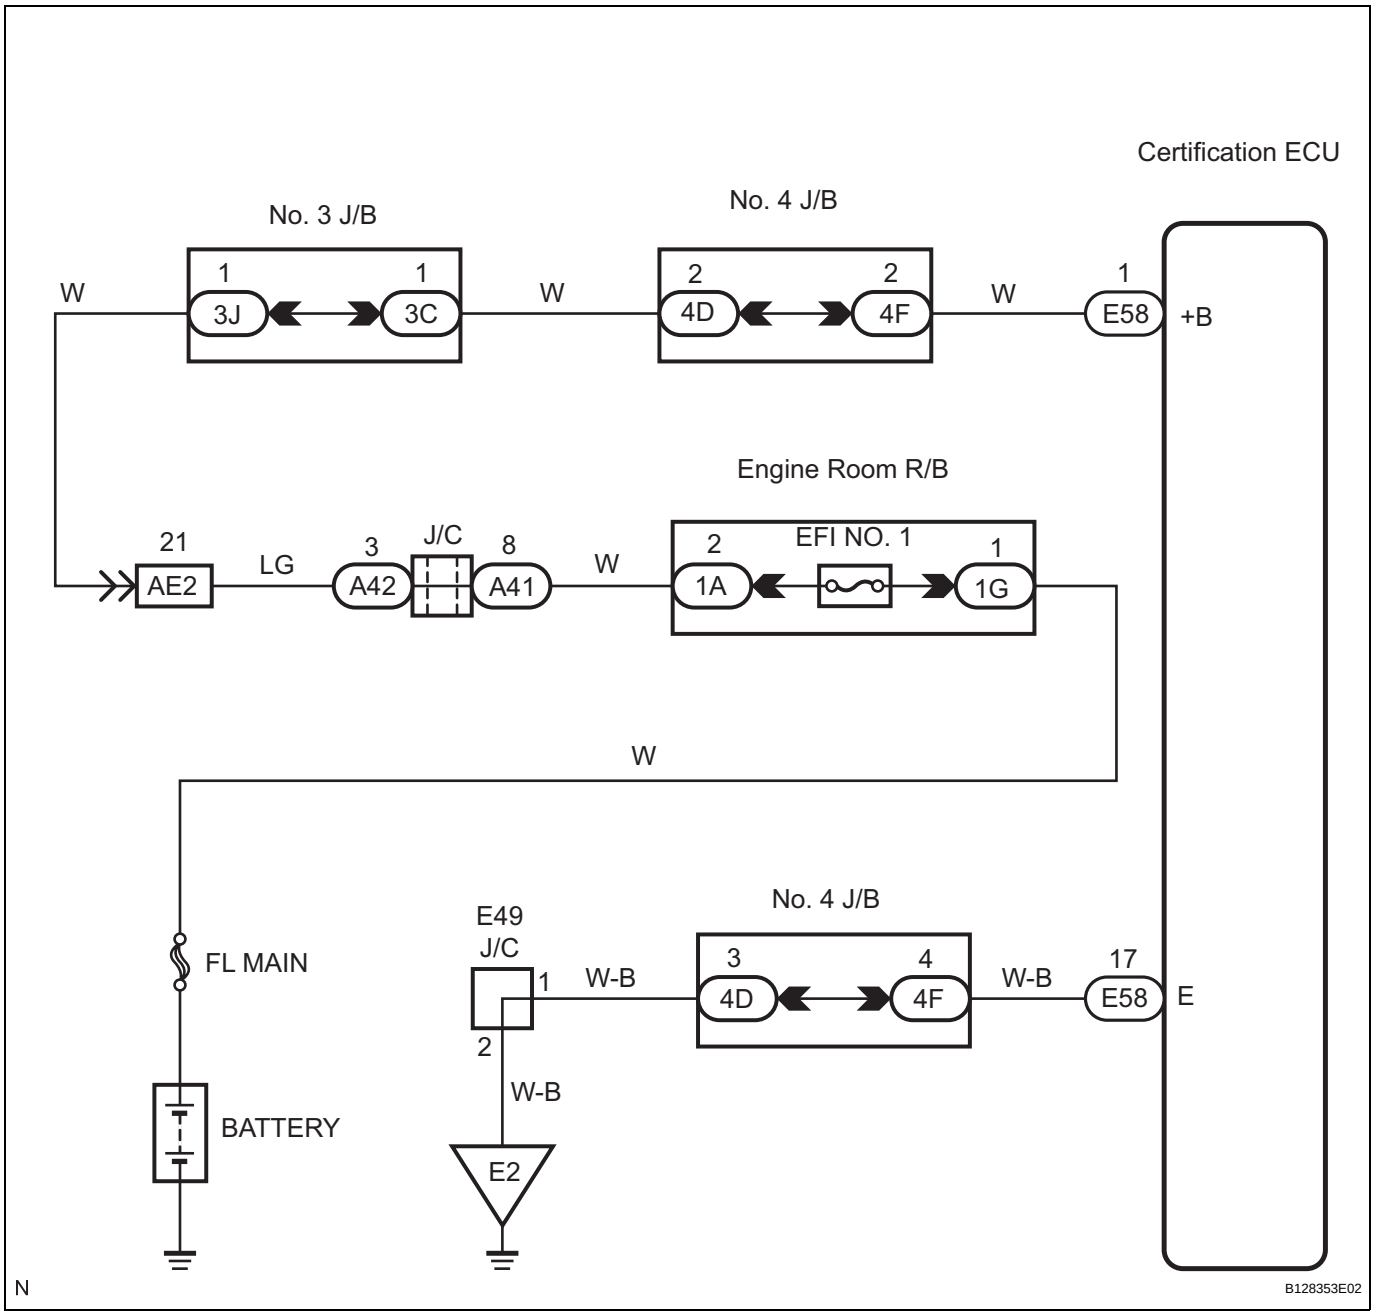
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Certification ECU Power Source Circuit

DESCRIPTION

This circuit provides power to operate the certification ECU.

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

If the certification ECU is replaced, register the key and ECU communication ID (See page EI-8).

1	INSPECT FUSE (EFI NO. 1)

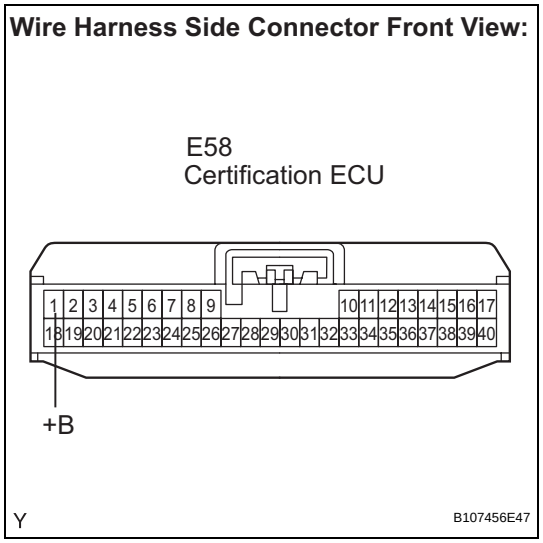
(a) Remove the EFI No. 1 fuse from the No. 1 engine room R/B.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

2	CHECK WIRE HARNESS (CERTIFICATION ECU - BATTERY)

Wire Harness Side Connector Front View:



(a) Disconnect the E58 ECU connector.
(b) Measure the voltage according to the value(s) in the table below.
Standard voltage

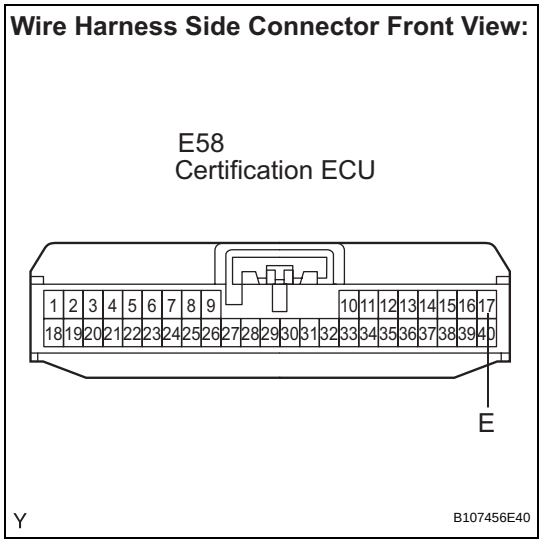
Tester Connection	Specified Condition
E58-1 (+B) - Body ground	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - BODY GROUND)

Wire Harness Side Connector Front View:



(a) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition
E58-17 (E) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

EI

OK

ENGINE IMMOBILISER SYSTEM (w/o Smart Key System)

PRECAUTION

1. PRECAUTIONS FOR THE KEY

(a) The key is a precision instrument. Be sure to observe the following:
  (1) Do not drop or strike the key.
  (2) Do not allow the key to be kept in a high temperature place for a long time.
  (3) Do not use an ultrasonic washing machine to clean the key.
  (4) Keep the key away from magnets or magnetized items during use.
  (5) Do not attach any stickers to the key.

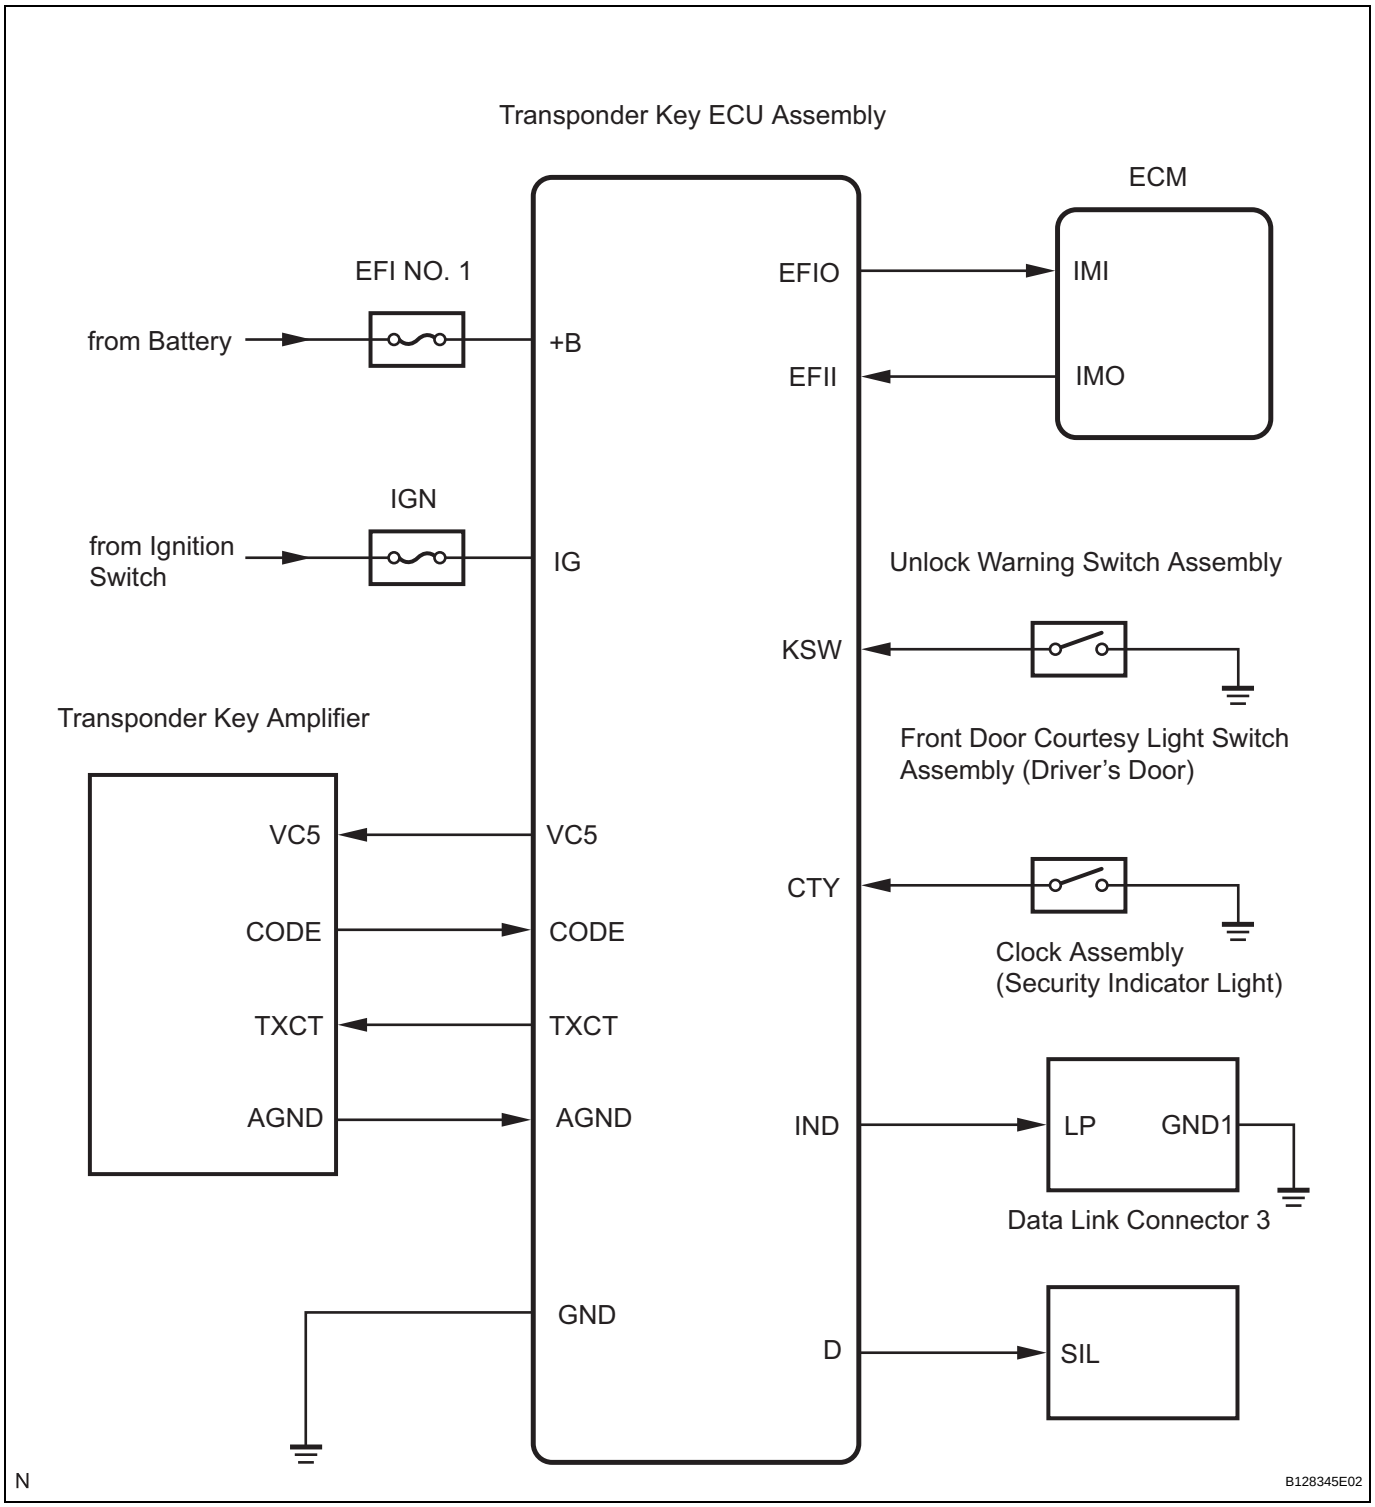
SYSTEM DIAGRAM



EI

SYSTEM DESCRIPTION

1. ENGINE IMMOBILISER SYSTEM DESCRIPTION

The engine immobiliser system is designed to prevent the vehicle from being stolen. This system uses the transponder key ECU assembly that stores the key codes of authorized ignition keys. If an attempt is made to start the engine using an unauthorized key, the ECU sends a signal to the ECM to prohibit fuel delivery and ignition, effectively disabling the engine.

2. FUNCTION OF MAIN COMPONENT

Component	Outline
Transponder key coil/amplifier	When key is inserted in ignition key cylinder, key coil receives key code. Then amplifier amplifies ID code and outputs it to transponder key ECU assembly.
Unlock warning switch assembly	Detects if key is in ignition key cylinder and outputs results to transponder key ECU assembly.
ECM	ECM receives ID verification results from transponder key ECU assembly. ECM also verifies ECUs. Then judgement of whether to immobilise engine is made.
Security indicator	Depending on operation of transponder key ECU assembly, interior security indicator light comes on or starts blinking.

Security Indicator Light:

P B128350E02

3. SYSTEM FUNCTION

(a) When the transponder key ECU assembly detects that the key unlock warning switch is ON, the ECU provides current to the transponder key coil and produces an electric wave. A transponder chip in the key grip receives the electric wave. Upon receiving the electric wave, the transponder chip outputs a key ID code signal. The transponder key coil receives this signal, the signal is amplified by the transponder key amplifier, and the signal is transmitted to the ECU.
The ECU matches the key's ID code with the vehicle's ID code, which was previously registered in the ECU, and communicates the results to the ECM.
After the identification results show that the key's ID code matches the vehicle's ID code and the ECU has confirmed their match: 1) the immobiliser system does not immobilise the engine and the engine starting controls (fuel injection control and ignition control) enter standby mode; and 2) the ECU transmits a security indicator signal that communicates "indicator off" to the clock. Then, the clock turns off the security indicator light.

(b) The security indicator pattern is as shown below (when changing from the immobiliser set status to the unset status):

EI

Security Indicator:

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
Use this procedure to troubleshoot the engine immobiliser system.
The intelligent tester should be used in steps 3, 4, and 6.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CRANK ENGINE FOR MORE THAN 10 SECONDS

NEXT

3	CHECK FOR DTCS

(a) Check for DTCs and note any codes that are output.
(b) Delete the DTCs.
(c) Recheck for DTCs. Try to duplicate the DTC (SFI system and engine immobiliser system) by simulating the symptoms indicated by the DTC.
  (1) If the DTC does not reoccur, proceed to A.
  (2) If the DTC (SFI system) reoccurs, proceed to B.
  (3) If the DTC (engine immobiliser system) reoccurs, proceed to C.

B	GO TO SFI SYSTEM
C	GO TO DTC CHART

EI

A

4	READ VALUE ON INTELLIGENT TESTER

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch to the ON position and turn the intelligent tester on.
(c) Read the DATA LIST according to the display on the tester.

IMMOBILISER:

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
KEY SW	Unlock warning switch signal/ON or OFF	ON: Key is in ignition key cylinder OFF: No key is in ignition key cylinder	-

OK:
ON (Key is in ignition key cylinder) appears on the screen.

NG → **GO TO DTC B2780**

OK

5	PROBLEM SYMPTOMS TABLE

(a) If the fault is not listed on the problem symptoms table, proceed to A.
(b) If the fault is listed on the problem symptoms table, proceed to B.

B → **GO TO STEP 7**

A

6	OVERALL ANALYSIS AND TROUBLESHOOTING

(a) Inspection with the intelligent tester (DATA LIST).
(b) Inspection with the intelligent tester (ACTIVE TEST).
(c) TERMINALS OF ECU (See page EI-63).

REGISTRATION

1. DESCRIPTION OF CODE REGISTRATION

HINT:

The key has 2 codes: The key code (immobiliser code) and the wireless code. Both of these codes need to be registered. Refer to page for the wireless code registration procedures.

(a) When adding master keys or sub keys (Additional registration):

(1) Register key code (immobiliser code) in the transponder key ECU.

Target ECU	See Procedure
Transponder key ECU	Procedure "A"

(b) When replacing the transponder key ECU (New registration):

(1) Register the key code (immobiliser code) in the transponder key ECU.

Target ECU	See Procedure
Transponder key ECU	Procedure "B"

(2) Register the ECU communication ID between the ECM and the transponder key ECU.

Target ECU	See Procedure
Transponder key ECU	Procedure "C"

(c) When replacing the ECM:

(1) Register the ECU communication ID between the ECM and the transponder key ECU.

Target ECU	See Procedure
Transponder key ECU	Procedure "C"

2. KEY REGISTRATION

(a) Automatic registration (Procedure "B"):

The new registration of the key codes (immobiliser codes) is made automatically.

HINT:

- When installing a new transponder key ECU, the key codes (immobiliser codes) must be registered.
- A new transponder key ECU starts in the automatic key code registration mode. In this mode, a maximum of 4 key codes for 3 master keys and 1 sub key can be registered. Since the transponder key ECU can distinguish types of keys, any registration order is acceptable.

Automatic Key Code Registration (New Registration):

Procedure	Security Indicator Condition
1. Start (Procedure "D")	Blinking occurs until the first key is inserted.
2. Insert the key into the ignition key cylinder.	ON
3. Registration begins. HINT: The registration will be completed approx. 1 sec. after the key is inserted.	OFF HINT: Approx. 1 sec.

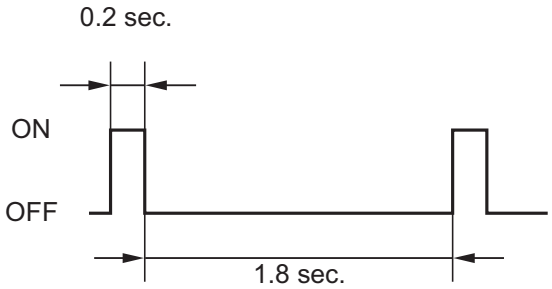
Procedure	Security Indicator Condition
4. Remove the key.	ON HINT: When the maximum number of the key codes is registered, the security indicator remains off until the last key registered is removed. After it is removed, the security indicator starts blinking.
5. Register another key ? Yes: Go to procedure "D" No: Go to procedure "E"	
6. End (Procedure "E")	

HINT:

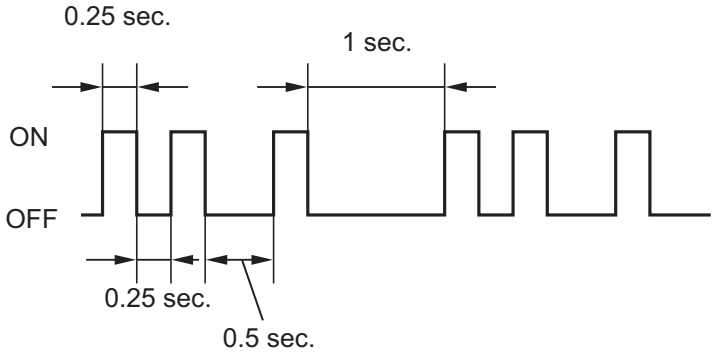
- When no key is inserted in the key cylinder while the system is in automatic key code registration mode, the security indicator remains on.
- When the immobiliser system is operating normally and the key is pulled out, the security indicator blinks continuously.
- If the key code registration has failed in the automatic key code registration mode, code 2-1 will be output from the security indicator. Trying to register an already registered key will cause code 2-2 to be output when the key is inserted. If the number of registered key codes exceeds the limit, code 2-3 will be output from the security indicator. The output details are shown below.

Security Indicator:

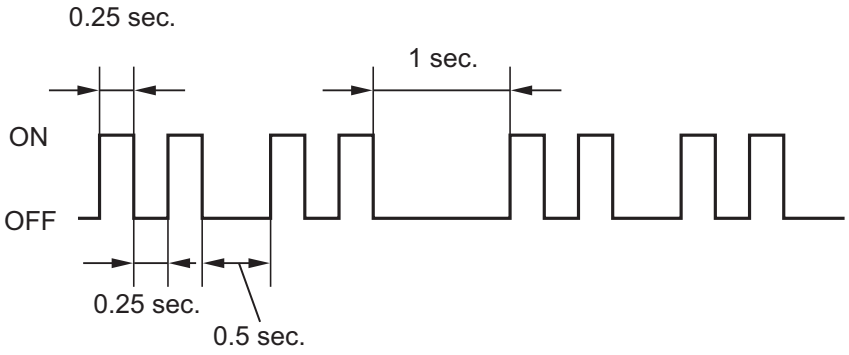
Normal (Immobiliser system is operating normally)



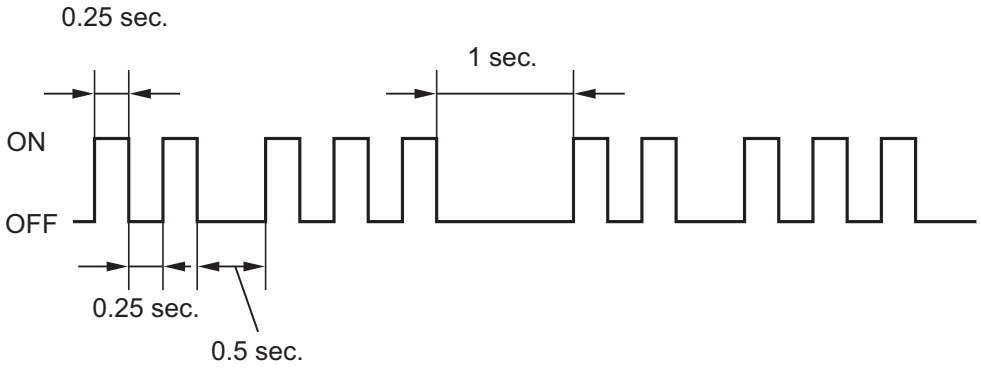
Code 2 - 1



Code 2 - 2



Code 2 - 3



EI

N

B111593E14

(b) Finish the automatic key code registration mode. The automatic key code registration mode can be forced to end, when at least 1 key code (immobiliser code) for the master key has been registered.
(1) Turn the ignition switch on and off 5 times within 10 seconds using the master key that has already been registered.

3. REGISTRATION OF ADDITIONAL KEY

(a) Additional registration (Procedure "A"):
Register an additional key by using the intelligent tester.
HINT:
- A maximum of 5 key codes and 3 sub key codes can be registered.
- Registration mode will end if any step is not completed within the specified time.
- When the ignition cylinder or the key cylinder set is replaced, remove the transmitter module from the original master key. Then install this transmitter module to a new key and use it as the master key. If necessary, use this master key to register other keys.

NOTICE:
When only the ignition key cylinder has been replaced, you can lock or unlock doors by wireless operation using the new key with built in transmitter but not by inserting it in the door key cylinder. Therefore, keep the original key for the door lock or unlock operation in order to avoid malfunctions caused by a dead transmitter battery in the new key.

Additional Registration:

Procedure	Time (Completion of operation)	Security Indicator Condition
1. Start	-	Indicator blinks until the first key is inserted.
2. Insert the already registered master key in the ignition key cylinder and turn the ignition switch on.		
3. Intelligent tester operation (1) Select IMMOBILISER (2) Select ID UTILITY (3) Select IMMOB CODE REG HINT: After completing the above operation, proceed to the next step in accordance with the prompts on the tester screen.	Within 120 sec.	OFF
4. Remove the master key.	Within 20 sec. of the instruction on the tester	ON
5. Insert the key to be registered in the ignition key cylinder.	Within 10 sec.	
6. After 60 sec. the key is registered. HINT: The security indicator goes off.	-	Blinking
7. Next		OFF
8. End		

EI

NOTICE:
If the key code registration has failed in automatic key code registration mode, code 2-1 will be output from the security indicator. Trying to register an already registered key will cause code 2-2 to be output when the key is inserted. If the number of registered key codes exceeds the limit, code 2-3 will be output from the security indicator. The output details are shown in procedure "B".
HINT:
- A brief outline of procedures for key code registration is shown above. For detailed information, refer to the screen of the intelligent tester.
- When the immobiliser system is operating normally and the key is pulled out, the security indicator will blink.

4. ERASURE OF KEY CODE

(a) Erase the key codes by using the intelligent tester.
HINT:
- All key codes will be erased except for the master key which is used for erasing the key codes. In order to use a key for which the code has been erased, it is necessary to register the key code again.
- The registration operation will be cancelled if any step is not completed within the specified time.

Erasing Key Code:

Procedure	Time (Operation Completion Time)	Security Indicator Condition
1. Start	-	Indicator blinks until the first key is inserted.
2. Insert the already registered master key in the ignition key cylinder and turn the ignition switch on.		
3. Intelligent tester operation (1) Select IMMOBILISER (2) Select ID UTILITY (3) Select IMMOB CODE ERA HINT: After completing the above operation, proceed to the next step in accordance with the prompts on the tester screen.	Within 120 sec.	OFF
4. Remove the master key.	Within 10 sec. of the instruction on the tester	ON for 1 sec. then OFF
5. Next	-	Blinking
6. End		

HINT:
- A brief outline of procedures for key code registration is shown above. For detailed information, refer to the screen of the intelligent tester.
- When the immobiliser system is operating normally and the key is pulled out, the security indicator will blink.

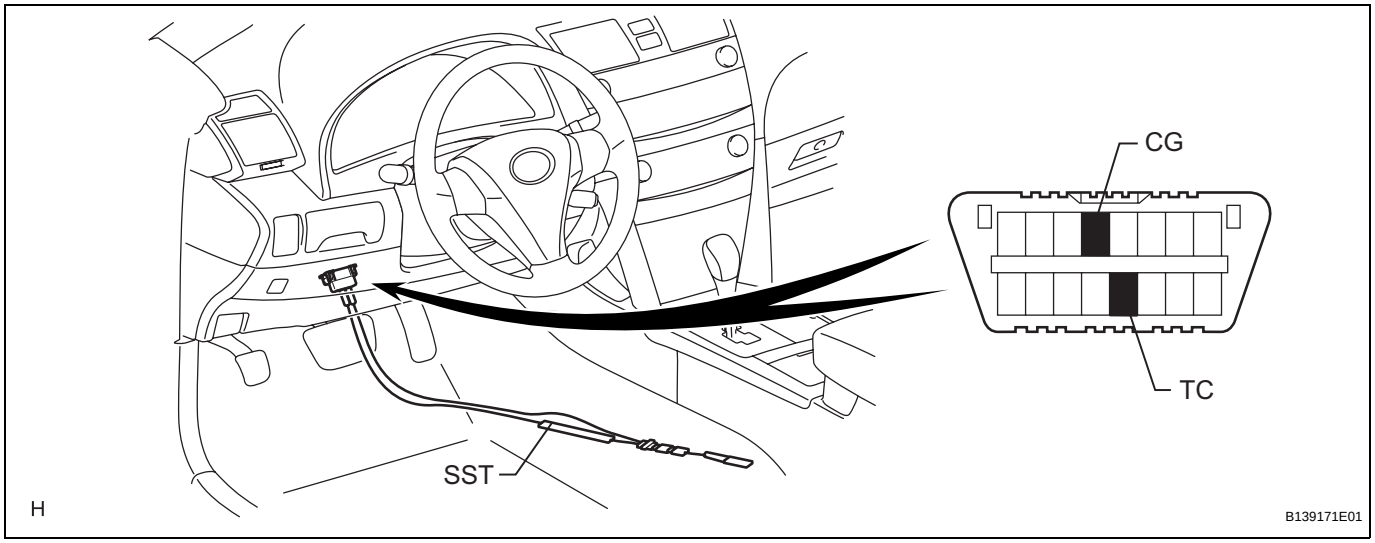
5. ECU COMMUNICATION ID REGISTRATION

NOTICE:

- **The ECU communication ID should be registered when the transponder key ECU and/or the ECM is replaced in order to match it to the ECM communication ID.**
- **The SFI system cannot be started unless the ECM communication ID matches.**

(a) ECU communication ID registration (Procedure "C"):

Register the ECU communication ID, after the transponder key ECU and/or the ECM is replaced.



(1) Using SST, connect terminals TC and CG of the DLC3.

SST 09843-18040

(2) Turn the ignition switch to the ON position and leave the vehicle as is for 30 minutes.

(3) Check that the engine starts.

PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help determine the cause of the problem symptom. The potential cases of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

ENGINE IMMOBILISER SYSTEM:

Symptom	Suspected area	See page
Unable to register the key.	1. Door courtesy switch circuit	EI-92
	2. ECU power source circuit	EI-94
	3. Transponder key ECU assembly	-
Engine does not start.	1. Key	EI-70
	2. ECU power source circuit	EI-94
	3. Transponder key ECU assembly	-
	4. SFI system (2AZ-FE)	ES-11
	5. SFI system (2GR-FE)	ES-15
Security indicator is always ON.	1. Security indicator light circuit	EI-89
	2. ECU power source circuit	EI-94
	3. Transponder key ECU assembly	-
Security indicator is OFF.	1. Security indicator light circuit	EI-89
	2. ECU power source circuit	EI-94
	3. Transponder key ECU assembly	-
Security indicator is blinking abnormally.	Transponder key ECU assembly	-
No code is output.	1. Diagnosis circuit	EI-98
	2. ECU power source circuit	EI-94
	3. Transponder key ECU assembly	-

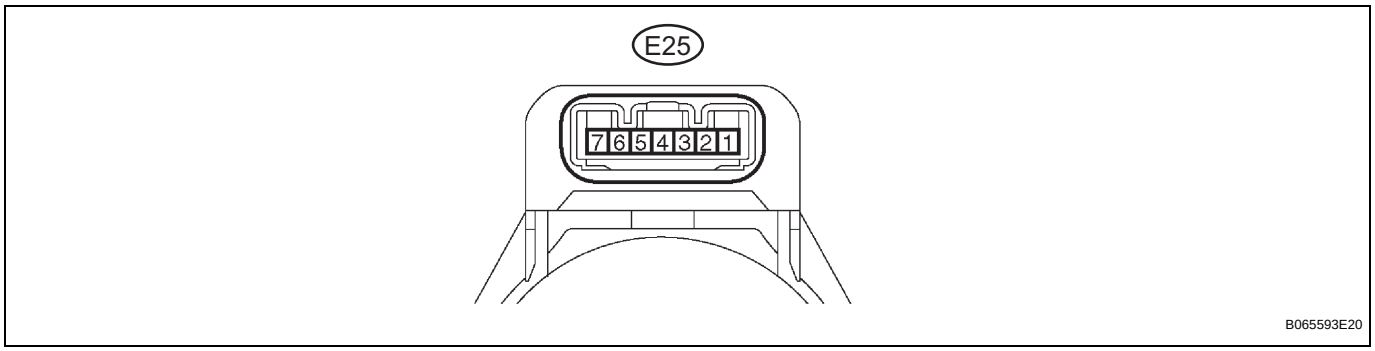
HINT:

- If the engine does not start, check that the key which did not start the engine control system has been registered, and that it is possible to start with another registered key.
- If the security indicator is always ON, finish the automatic registration mode in case the mode still operates.

TERMINALS OF ECU

1. CHECK TRANSPONDER KEY AMPLIFIER

(a) Disconnect the E25 amplifier connector and measure the resistance between the terminal of the wire harness side connector and body ground.



Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
AGND (E25-7) - Body ground	V - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

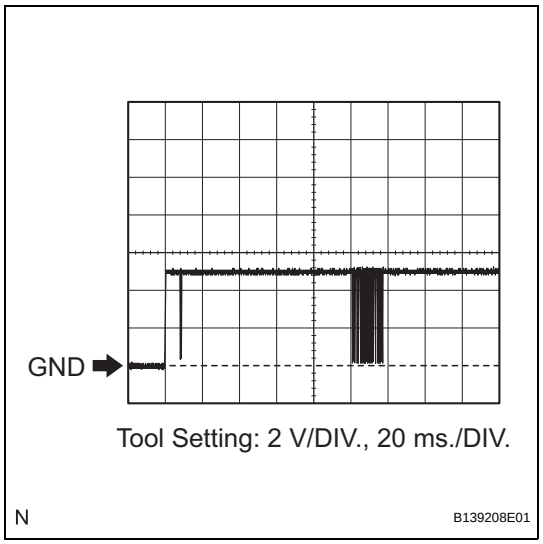
(b) Reconnect the E25 amplifier connector and measure the resistance and voltage of each terminal of the connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
VC5 (E25-1) - AGND (E25-7)	O - V	Power source	No key is in ignition key cylinder	Below 1 V
			Key is in ignition key cylinder	4.6 to 5.4 V
CODE (E25-4) - AGND (E25-7)	BR - V	Demodulated signal of key code data	No key is in ignition key cylinder	Below 1 V
			Key is in ignition key cylinder	Waveform 1
TXCT (E25-5) - AGND (E25-7)	R - V	Key code output signal	No key is in ignition key cylinder	Below 1 V
			Key is in ignition key cylinder	Waveform 2
AGND (E25-7) - Body ground	V - Body ground	Ground	Always	Below 1 Ω

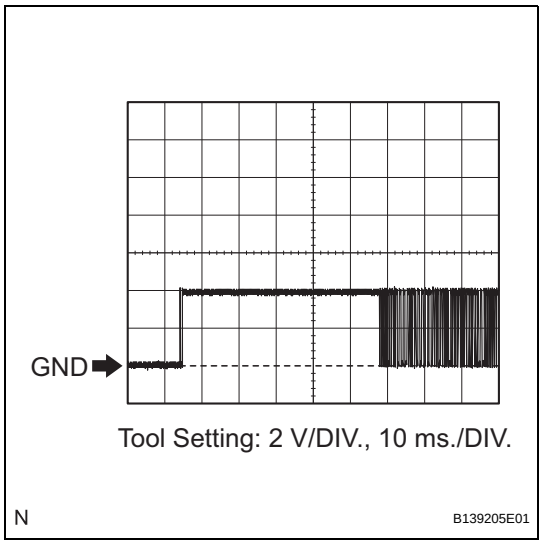
If the result is not as specified, the amplifier may have a malfunction.

(c) Inspect using an oscilloscope.
(1) Waveform 1 (Reference)

Terminal	CODE (E25-4) - AGND (E25-7)
Tool Setting	2 V/DIV., 20 ms./DIV.
Condition	Key is in ignition key cylinder



EI

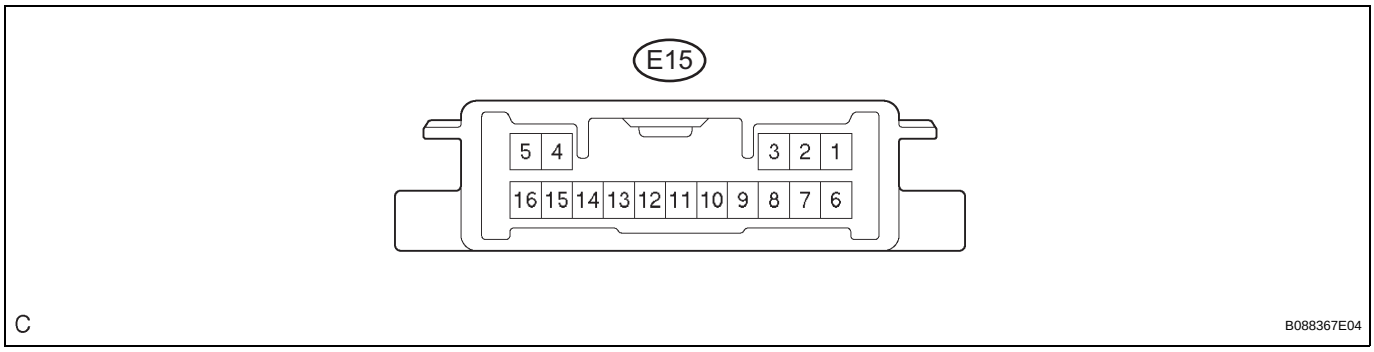


(2) Waveform 2 (Reference)

Terminal	TXCT (E25-5) - AGND (E25-7)
Tool Setting	2 V/DIV., 10 ms./DIV.
Condition	Key is in ignition key cylinder

2. CHECK TRANSPONDER KEY ECU ASSEMBLY

(a) Disconnect the E15 ECU connector and measure the resistance and voltage between each terminal of the wire harness side connector.



Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
GND (E15-16) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
+B (E15-1) - GND (E15-16)	W - W-B	Battery	Always	10 to 14 V
IG (E15-2) - GND (E15-16)	LG - W-B	Ignition switch signal	Ignition switch OFF	Below 1 V
			Ignition switch ON	10 to 14 V
KSW (E15-3) - GND (E15-16)	B - W-B	Unlock warning switch signal	No key is in ignition key cylinder	10 kΩ or higher
			Key is in ignition key cylinder	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

(b) Reconnect the E15 ECU connector and measure the voltage of each terminal of the connector.

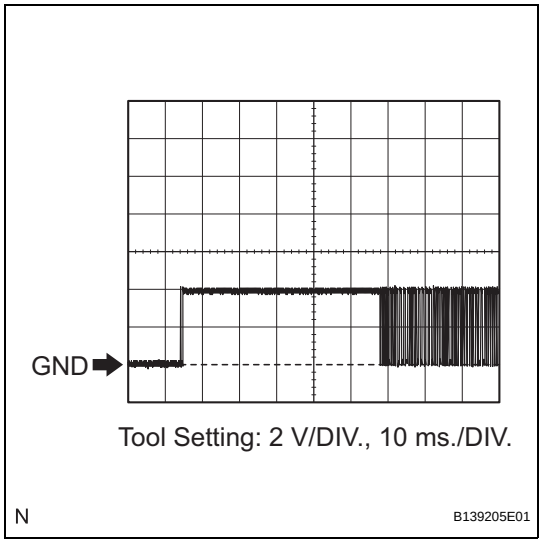
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
AGND (E15-5) - Body ground	V - Body ground	Ground	Always	Below 1 Ω
KSW (E15-3) - GND (E15-16)	B - W-B	Unlock warning switch signal	No key is in ignition key cylinder	10 to 14 V
			Key is in ignition key cylinder	Below 1 V
VC5 (E15-14) - AGND (E15-5)	O - V	Power source	No key is in ignition key cylinder	Below 1 V
			Key is in ignition key cylinder	4.6 to 5.4 V
TXCT (E15-4) - AGND (E15-5)	R - V	Transponder key amplifier communication signal	No key is in ignition key cylinder	Below 1 V
			Key is in ignition key cylinder	Waveform 1
CODE (E15-15) - AGND (E15-5)	BR - V	Transponder key amplifier communication signal	No key is in ignition key cylinder	Below 1 V
			Key is in ignition key cylinder	Waveform 2

EI

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
EFIO (E15-13) - GND (E15-16)	L - W-B	ECM output signal	Ignition switch OFF	Below 1 V
			Ignition switch ON	Waveform 3
EFII (E15-12) - GND (E15-16)	G - W-B	ECM input signal	Ignition switch OFF	Below 1 V
			Ignition switch ON	Waveform 4
D (E15-9) - GND (E15-16)	GR - W-B	Diagnostic tester communication	Without communication	Below 1 V
			During communication	Pules generation
CTY (E15-7) - GND (E15-16)	Y - W-B	Door courtesy signal	Switch pushed	10 to 14 V
			Switch free	Below 1 V
IND (E15-8) - GND (E15-16)	P - W-B	Security indicator signal	Security indicator light is on	10 to 14 V
			Security indicator light is off	Below 1 V

If the result is not as specified, the ECU may have a malfunction.

(c) Inspect using an oscilloscope.
(1) Waveform 1 (Reference)



Terminal	TXCT (E15-4) - AGND (E15-5)
Tool Setting	2 V/DIV., 10 ms./DIV.
Condition	Key is in ignition key cylinder

	IMO (A55-10)*2 - E1 (C55-81)*2
Tool Setting	2 V/DIV., 1 s./DIV.
Condition	Ignition switch ON

*1: for 2AZ-FE
*2: for 2GR-FE

EI

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the DATA LIST displayed on the intelligent tester, the values of the switches, sensors, actuators, etc. can be checked without part removal. Reading the DATA LIST as the first step in troubleshooting is one way to shorten labor time.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch to the ON position.

(c) Read the DATA LIST according to the display on the tester.

IMMOBILISER:

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester ACTIVE TEST allows a relay, VSV, actuator and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to shorten labor time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch to the ON position.

(c) Perform the ACTIVE TEST according to the display on the tester.

IMMOBILISER:

Item	Test Details	Diagnostic Note
SECURITY INDIC	Turn security indicator ON/OFF	-

DIAGNOSTIC TROUBLE CODE CHART

TRANSPONDER KEY ECU DIAGNOSTIC TROUBLE CODE CHART:

DTC No.	Detection Item	Trouble Area	See page
B2780	Push Switch / Key Unlock Warning Switch Malfunction	1. Wire harness 2. Unlock warning switch assembly 3. Transponder key ECU assembly	EI-72
B2784	Antenna Coil Open / Short	1. Wire harness 2. Transponder key amplifier 3. Transponder key ECU assembly	EI-76
B2793	Transponder Chip Malfunction	Key	EI-79
B2794	Unmatched Encryption Code	Key	EI-80
B2795	Unmatched Key Code	Key	EI-81
B2796	No Communication in Immobiliser System	1. Key 2. Transponder key amplifier 3. Transponder key ECU assembly	EI-82
B2797	Communication Malfunction No. 1	1. Key 2. Transponder key amplifier 3. Transponder key ECU assembly	EI-84
B2798	Communication Malfunction No. 2	1. Key 2. Transponder key amplifier 3. Transponder key ECU assembly	EI-82

ECM DIAGNOSTIC TROUBLE CODE CHART:

DTC No.	Detection Item	Trouble Area	See page
B2799	Engine Immobiliser System	1. Wire harness 2. Transponder key ECU assembly 3. ECM	EI-86

HINT:
The DTCs for the engine immobiliser system are specified above. If other codes are output, check the DTC chart for the SFI system.

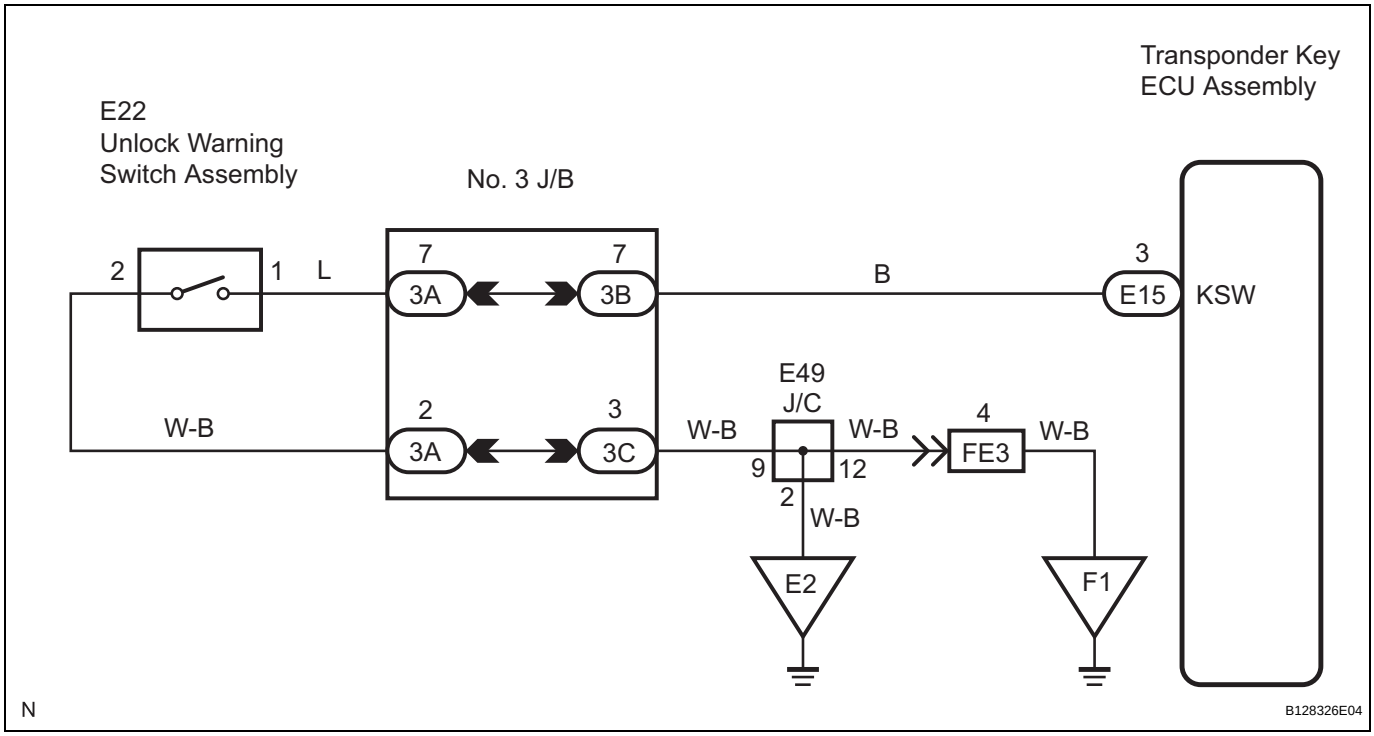
DTC	B2780	Push Switch / Key Unlock Warning Switch Malfunction

DESCRIPTION

This DTC will be output if the transponder key ECU assembly does not detect that the unlock warning switch is ON even when the ignition switch is ON. Under normal conditions, the unlock warning switch assembly is ON when the ignition switch is ON.

DTC No.	DTC Detection Condition	Trouble Area
B2780	"Unlock warning switch ON" is not detected when ignition switch is ON.	• Unlock warning switch assembly • Wire harness • Transponder key ECU assembly

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

If the transponder key ECU assembly is replaced, register the key and ECU communication ID (See page EI-57).

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch to the ON position and turn the intelligent tester main switch on.

(c) Select KEY SW in the DATA LIST and read the value displayed on the tester.

IMMOBILISER:

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
KEY SW	Unlock warning switch signal/ON or OFF	OFF: Key is in ignition key cylinder ON: No key is in ignition key cylinder	-

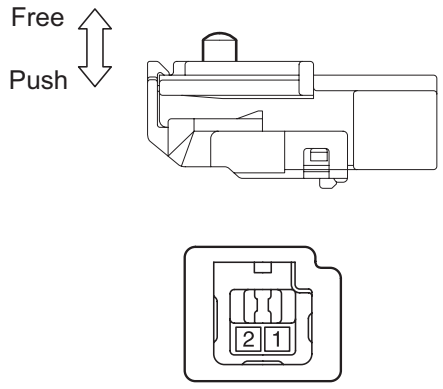
OK:
ON (Key is in ignition key cylinder) appears on the screen.

OK → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

NG

2 INSPECT UNLOCK WARNING SWITCH ASSEMBLY

Unlock Warning Switch Assembly:



(a) Remove the unlock warning switch assembly (See page DL-225).
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Switch Position	Specified Condition
1 - 2	Switch pushed (Key set)	Below 1 Ω
	Switch free (Key removed)	10 kΩ or higher

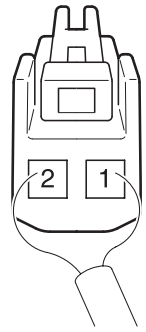
NG → **REPLACE UNLOCK WARNING SWITCH ASSEMBLY**

OK

EI

3 CHECK HARNESS AND CONNECTOR (UNLOCK WARNING SWITCH - BODY GROUND)

Wire Harness Side Connector Rear View:



E22
Unlock Warning Switch Assembly

P B124194E02

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E22-2 - Body ground	Always	Below 1 Ω

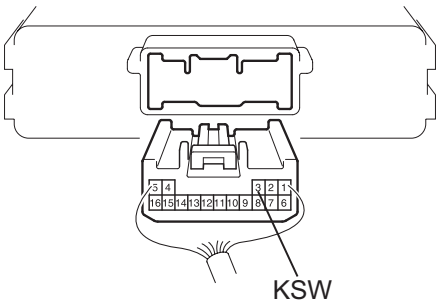
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

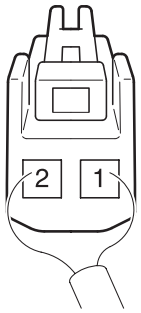
4 CHECK HARNESS AND CONNECTOR (TRANSPONDER KEY ECU - UNLOCK WARNING SWITCH)

Wire Harness Side Connector Rear View:

E15
Transponder Key ECU Assembly



E22
Unlock Warning Switch Assembly



P B128340E02

(a) Disconnect the E15 ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

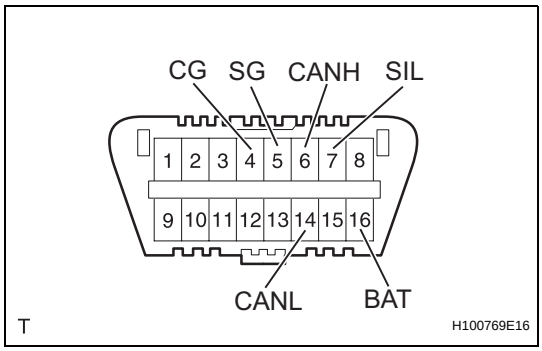
Tester Connection	Condition	Specified Condition
E15-3 (KSW) - E22-1	Always	Below 1 Ω
E22-1 - Body ground		10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

EI

OK

REPLACE TRANSPONDER KEY ECU ASSEMBLY



DIAGNOSIS SYSTEM

1. CHECK DLC3

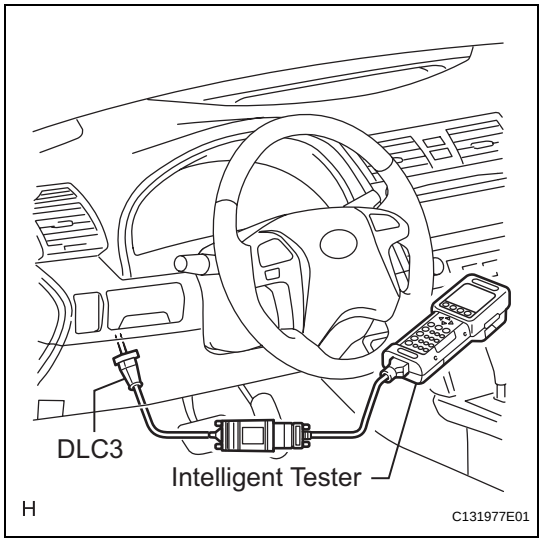
(a) The vehicle's ECU uses ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch OFF*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch OFF*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition switch OFF*	6 kΩ or higher

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

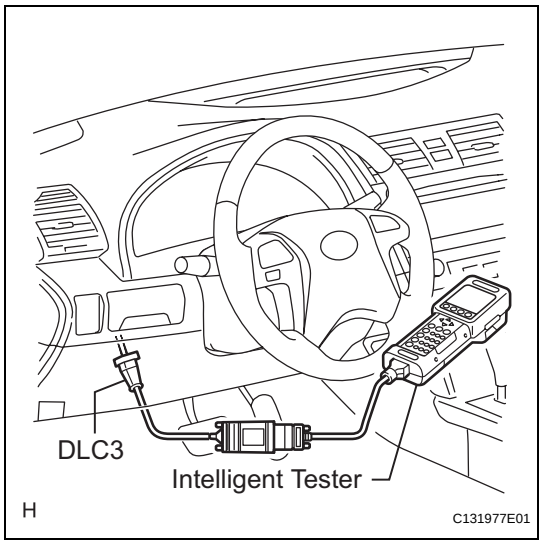


(b) Connect the cable of the intelligent tester (with CAN VIM) to the DLC3, turn the ignition switch to the ON position and attempt to use the intelligent tester. If the screen displays a communication error message, a problem exists in the vehicle side of the tester side.

HINT:

- If communication is normal when the tool is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still impossible when the tool is connected to another vehicle, the problem is probably in the tool itself. Consult the Service Department listed in the tool's instruction manual.

EI



DTC CHECK / CLEAR

1. CHECK DTC

(a) Connect the intelligent tester to the Controller Area Network Vehicle Interface Module (CAN VIM). Then connect the CAN VIM to the DLC3.

(b) Turn the ignition switch to the ON position.

(c) Read the DTCs by following the directions on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

2. CLEAR DTC

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch to the ON position.

(c) Erase the DTCs by following the directions on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

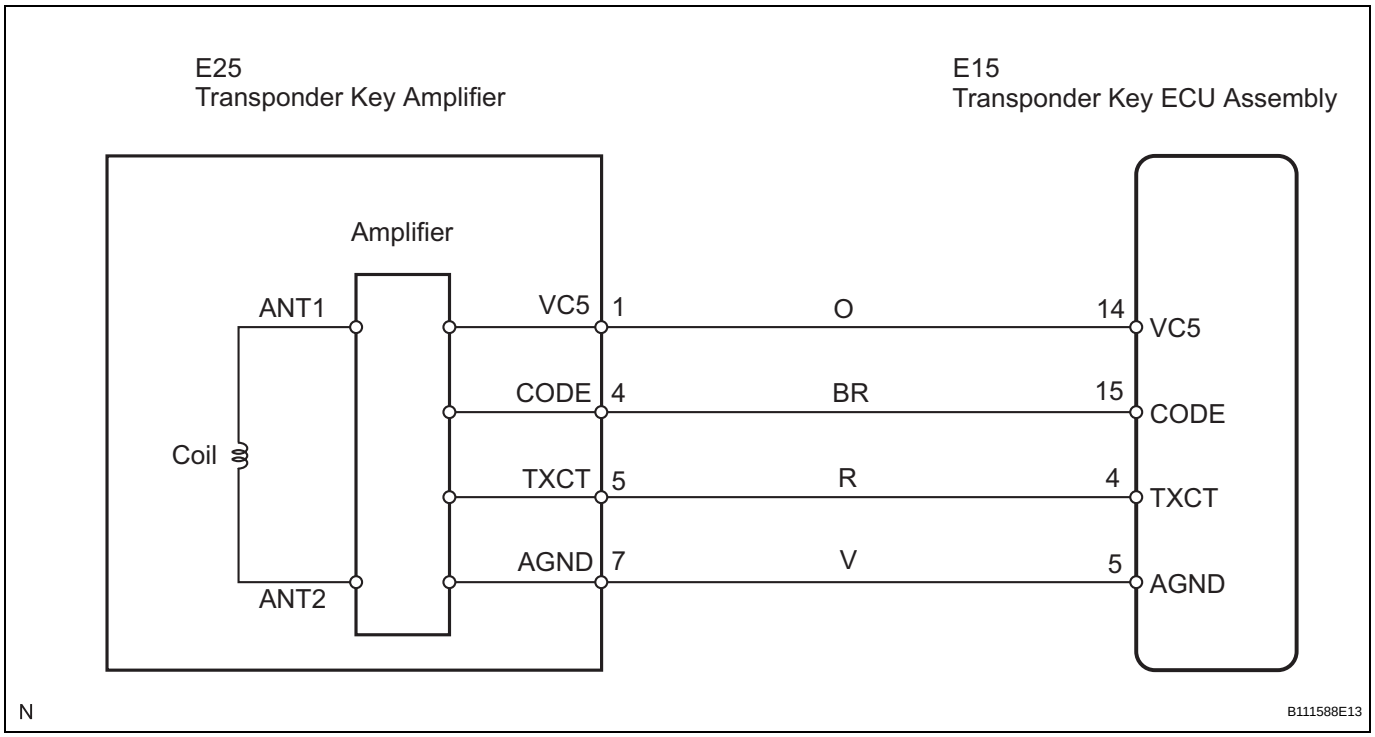
DTC	B2784	Antenna Coil Open / Short

DESCRIPTION

The transponder key coil is built into the transponder key amplifier and receives a key code signal from the transponder chip in the key. This signal is amplified by the amplifier, then it is output to the transponder key ECU assembly.

DTC No.	DTC Detection Condition	Trouble Area
B2784	Antenna coil is open/shorted	• Wire harness • Transponder key amplifier • Transponder key ECU assembly

WIRING DIAGRAM



EI

INSPECTION PROCEDURE

NOTICE:

If the transponder key ECU assembly is replaced, register the key and ECU communication ID (See page EI-57).

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch to the ON position and turn the intelligent tester on.

(c) Select ANTENNA COIL in the DATA LIST and read the value displayed on the intelligent tester.

IMMOBILISER:

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
ANTENNA COIL	Transponder key amplifier coil condition/NORMAL or FAIL	NORMAL: Antenna coil is normal FAIL: Antenna coil is malfunctioning	-

OK:

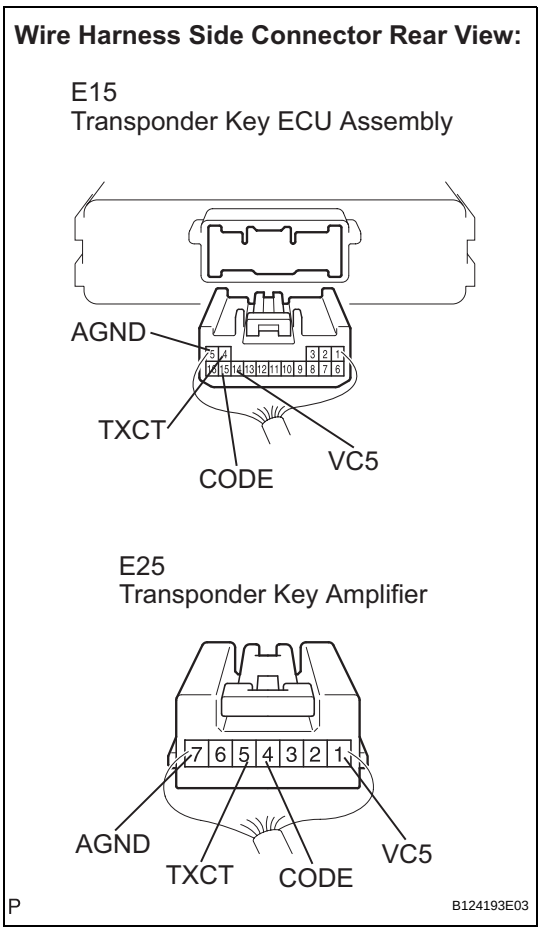
NORMAL (Antenna coil is normal) appears on the screen.

OK → **REPLACE TRANSPONDER KEY ECU ASSEMBLY**

NG

2 CHECK HARNESS AND CONNECTOR (TRANSPONDER KEY ECU - TRANSPONDER KEY AMPLIFIER)

Wire Harness Side Connector Rear View:



(a) Disconnect the E15 ECU and E25 amplifier connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

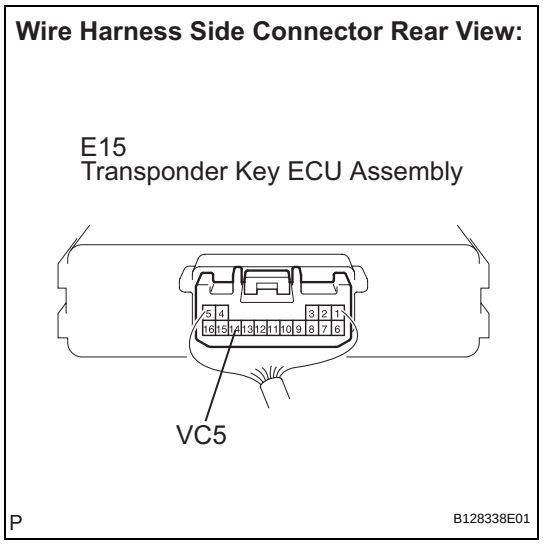
Tester Connection	Condition	Specified Condition
E15-4 (TXCT) - E25-5 (TXCT)	Always	Below 1 Ω
E15-5 (AGND) - E25-7 (AGND)		
E15-14 (VC5) - E25-1 (VC5)		
E15-15 (CODE) - E25-4 (CODE)		
E15-4 (TXCT) - Body ground		10 kΩ or higher
E15-5 (AGND) - Body ground		
E15-14 (VC5) - Body ground		
E15-15 (CODE) - Body ground		

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

EI

3	INSPECT TRANSPONDER KEY ECU ASSEMBLY (TRANSPONDER KEY AMPLIFIER POWER SOURCE)



(a) Reconnect the E15 ECU and E25 amplifier connectors.
(b) Measure the voltage according to the value(s) in the table below.

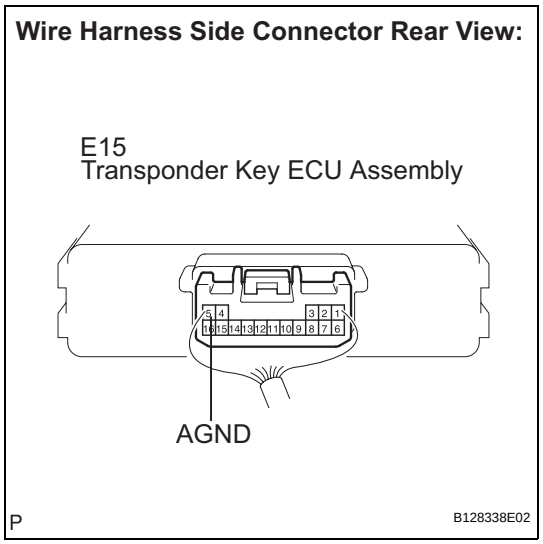
Standard voltage

Tester Connection	Condition	Specified Condition
E15-14 (VC5) - Body ground	No key is in ignition key cylinder	Below 1 V
	Key is in ignition key cylinder	4.6 to 5.4 V

NG → REPLACE TRANSPONDER KEY ECU ASSEMBLY

OK

4	INSPECT TRANSPONDER KEY ECU ASSEMBLY (TRANSPONDER KEY AMPLIFIER GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E15-5 (AGND) - Body ground	Always	Below 1 Ω

NG → REPLACE TRANSPONDER KEY ECU ASSEMBLY

OK

REPLACE TRANSPONDER KEY AMPLIFIER

EI

DTC	B2793	Transponder Chip Malfunction

DESCRIPTION

This DTC is output when a malfunction is found in the key during key code registration or a key code is not registered normally. Replace the key if the key code registration is not performed normally and this DTC is detected.

DTC No.	DTC Detection Condition	Trouble Area
B2793	Transponder chip malfunction	Key

INSPECTION PROCEDURE

NOTICE:
If the key is replaced, register the key (See page EI-57).

1	RE-REGISTER KEY

(a) Delete the DTCs (See page EI-69).
(b) Re-register the key (See page EI-57) and insert this key into the ignition key cylinder. Check that the engine starts with this key.
OK:
The engine starts.

NG → **REPLACE KEY**

OK

END

DTC	B2794	Unmatched Encryption Code

DESCRIPTION

This DTC is output when a key with an incomplete key code is inserted into the ignition key cylinder.

DTC No.	DTC Detection Condition	Trouble Area
B2794	Key with incomplete key code is inserted	Key

INSPECTION PROCEDURE

NOTICE:

If the key is replaced, register the key (See page EI-57).

1	REPLACE KEY

NEXT

END

DTC	B2795	Unmatched Key Code

DESCRIPTION

This DTC is output when a key with a key code that has not been registered in the ECU is inserted into the ignition key cylinder.

DTC No.	DTC Detection Condition	Trouble Area
B2795	Key with unregistered key code is inserted	Key

INSPECTION PROCEDURE

NOTICE:

If the key is replaced, register the key (See page EI-57).

1	RE-REGISTER KEY

(a) Delete the DTCs (See page EI-69).

(b) Re-register the key (See page EI-57) and insert this key into the ignition key cylinder. Check that the engine starts with this key.

OK:

The engine starts.

NG → **REPLACE KEY**

OK ↓

END

DTC	B2796	No Communication in Immobiliser System

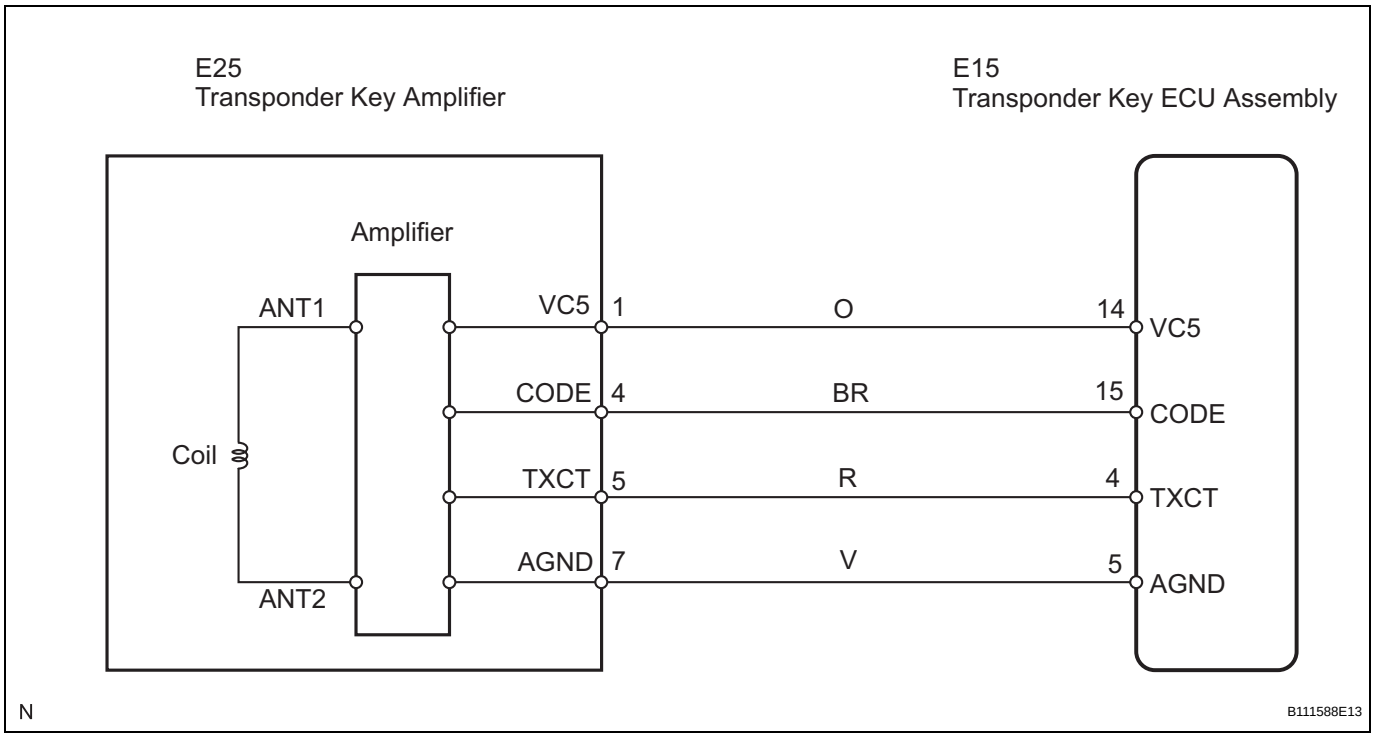
DTC	B2798	Communication Malfunction No. 2

DESCRIPTION

These DTCs are output if a key that does not have a transponder chip is inserted into the ignition key cylinder or if communication between the key and transponder key ECU assembly is impossible.

DTC No.	DTC Detection Condition	Trouble Area
B2796	The key code cannot be transmitted	• Key • Transponder key amplifier • Transponder key ECU assembly
B2798	Key code identification cannot be completed within the specified time	• Key • Transponder key amplifier • Transponder key ECU assembly

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

- **If the transponder key ECU assembly is replaced, register the key and ECU communication ID (See page EI-57).**
- **If the key is replaced, register the key (See page EI-57).**

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch to the ON position and turn the intelligent tester on.

EI

(c) Select IMMOBILISER in the DATA LIST and read the value displayed on the intelligent tester.

IMMOBILISER:

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
IMMOBILISER	Immobiliser system status/SET or UNSET	UNSET: Ignition switch ON SET: Without key	-

OK:

UNSET (Ignition switch ON) appears on the screen.

OK → **REPLACE TRANSPONDER KEY ECU ASSEMBLY**

NG

2 CHECK KEYS

(a) Insert the vehicle's other key into the ignition key cylinder.

(b) Check that the engine starts with this key.

OK:

The engine starts.

OK → **RE-REGISTER OR REPLACE KEY THAT CANNOT START ENGINE**

NG

3 CHECK TRANSPONDER KEY AMPLIFIER

(a) After replacing the transponder key amplifier (See page LI-112) with a normally functioning amplifier, check that the engine starts.

OK:

The engine starts.

NG → **REPLACE TRANSPONDER KEY ECU ASSEMBLY**

OK

END

EI

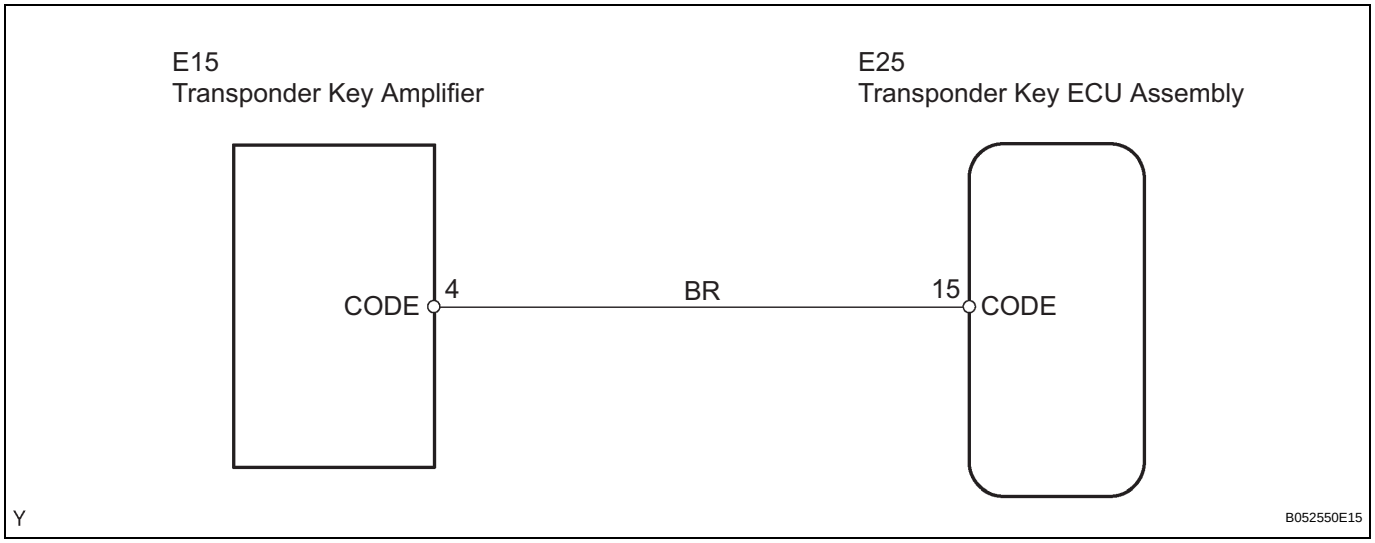
DTC	B2797	Communication Malfunction No. 1

DESCRIPTION

This DTC is output when an error occurs in communication between the transponder key amplifier and the transponder key ECU.
HINT:
Some noise is found in the communication line.

DTC No.	DTC Detection Condition	Trouble Area
B2797	Keys are positioned too close to each other, or noise occurred in communication line	• Key • Transponder key amplifier • Transponder key ECU assembly

WIRING DIAGRAM

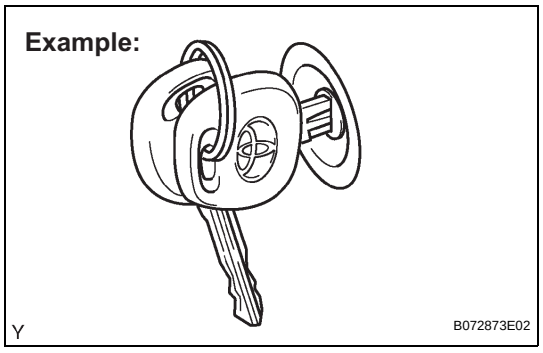


INSPECTION PROCEDURE

NOTICE:
If the transponder key ECU assembly is replaced, register the key and ECU communication ID (See page EI-57).

EI

1	CHECK KEYS



(a) Check whether the ignition key being used is near other ignition keys, as shown in the illustration. Also, check whether the key ring is in contact with the key grip.
Result

Result	Proceed to
Key is near other keys and/or key ring is in contact with key grip.	A
Key is not near other keys and/or key ring is not in contact with key grip.	B

B → **Go to step 3**

A

2	CHECK DTC OUTPUT

(a) Separate the keys from each other, or remove the key ring.
(b) Delete the DTCs (See page EI-69).
(c) Insert a key into the ignition key cylinder and remove the key. Repeat for all the other keys of the vehicle.
OK:
No code is output.

OK → **END**

NG

3	CHECK TRANSPONDER KEY AMPLIFIER

(a) After replacing the transponder key amplifier (See page LI-112) with a normally functioning amplifier, check that the engine starts.
OK:
The engine starts.

NG → **REPLACE TRANSPONDER KEY ECU ASSEMBLY**

OK

END

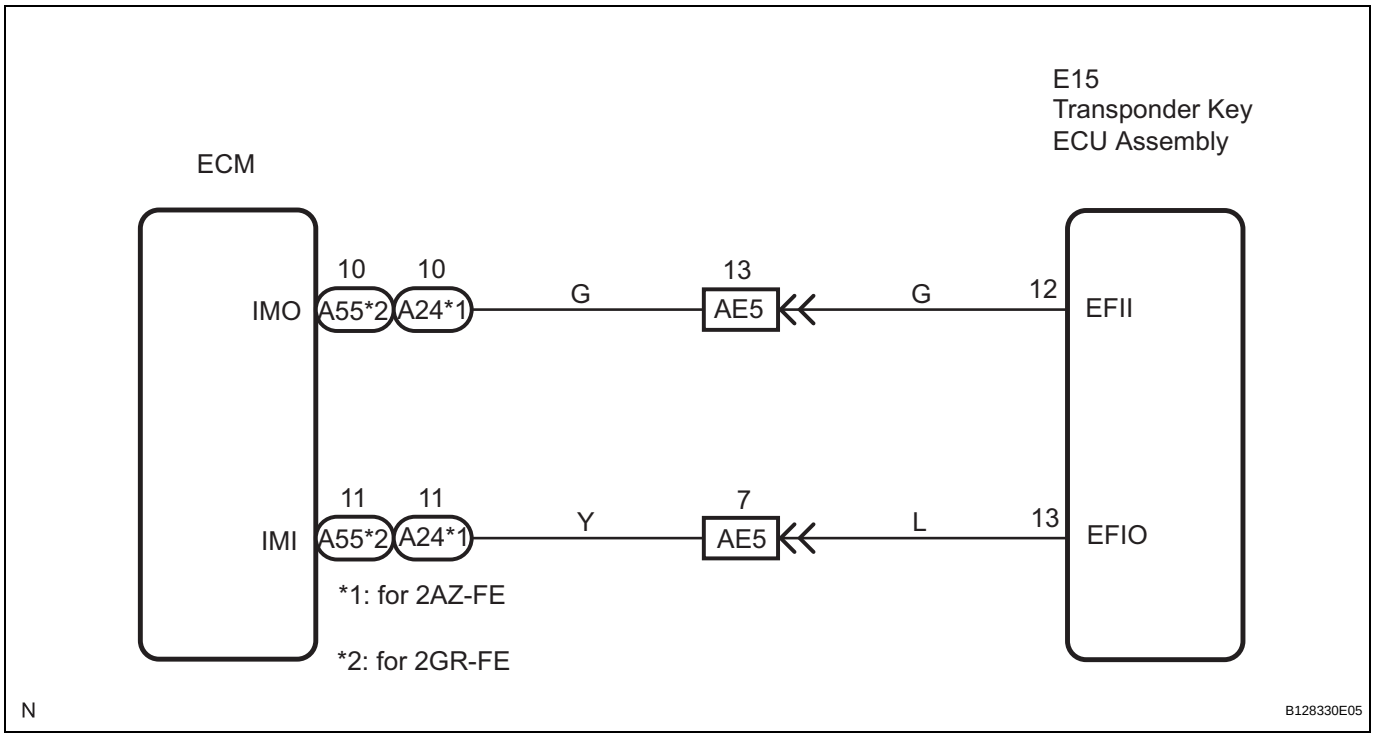
DTC	B2799	Engine Immobiliser System

DESCRIPTION

This DTC is output when the ECM detects errors in communication with the transponder key ECU, and in the communication lines.
This DTC is also output when an engine start is attempted while the ECU communication ID between the transponder key ECU and the ECM is different.
Before troubleshooting for this DTC, make sure that there is no DTC detected in the transponder key ECU. If there is any key code related DTC detected in the transponder key ECU, repair it first.

DTC No.	DTC Detection Condition	Trouble Area
B2799	Error in communication between ECM and transponder key ECU assembly, and in communication line Communication ID is different during communication with transponder key ECU	• Wire harness • Transponder key ECU assembly • ECM

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

- **If the transponder key ECU assembly is replaced, register the key and ECU communication ID (See page EI-57).**
- **If the ECM is replaced, register the ECU communication ID (See page EI-57).**

1	RE-REGISTER ECU COMMUNICATION ID

(a) Re-register the ECU communication ID (See page EI-57) between the transponder key ECU assembly and ECM.
(b) Check that the engine starts.
OK:
The engine starts.

EI

OK → END

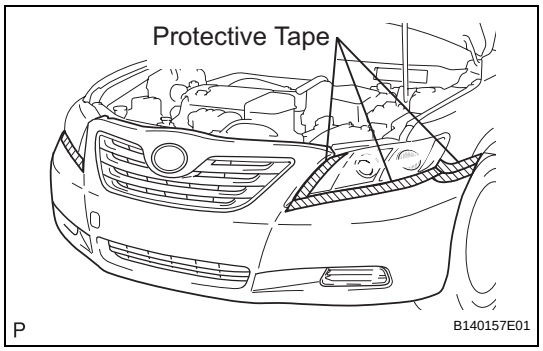
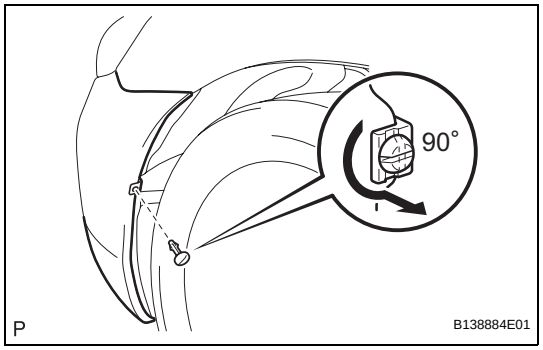
REMOVAL

1. **REMOVE COOL AIR INTAKE DUCT SEAL (for 2GR-FE)**
   (a) Remove the 7 clips and cool air intake duct seal.

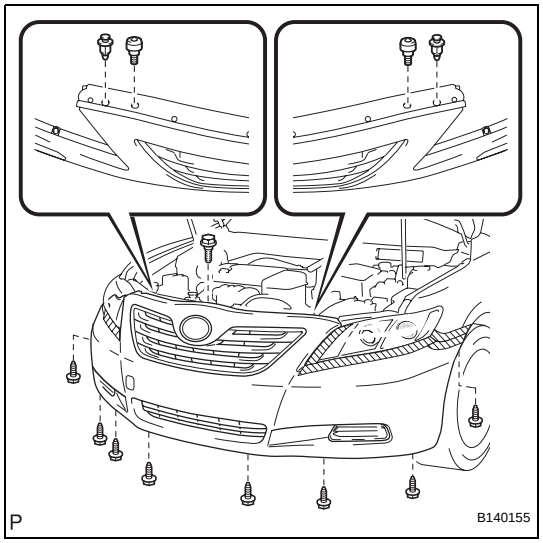


2. REMOVE FRONT BUMPER ASSEMBLY (w/o Fog Light)

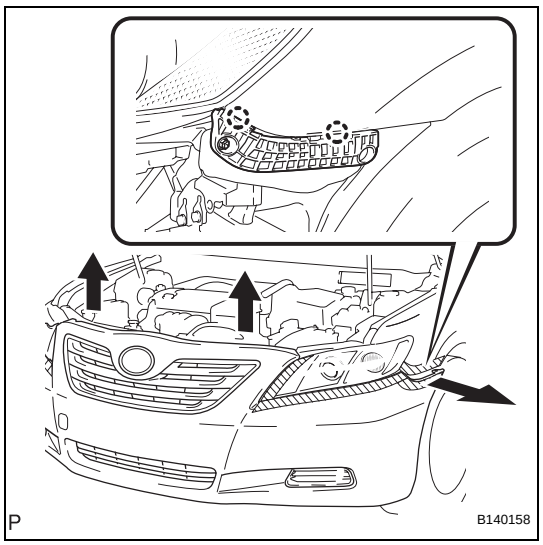
(a) Put protective tape around the front bumper assembly.



(b) Using a screwdriver, turn the pin 90 degrees and remove the pin hold clip.
HINT:
Use the same procedures for the RH side and LH side.

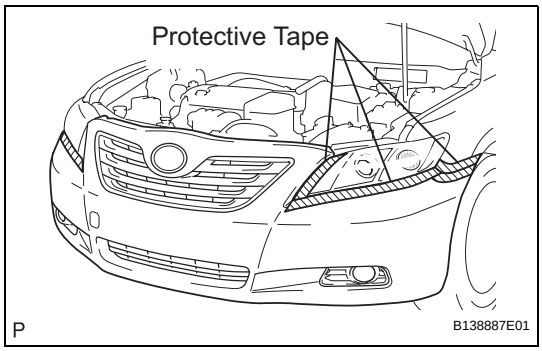


(c) Remove the 8 screws, 2 clips, 2 radiator grille protectors and bolt.



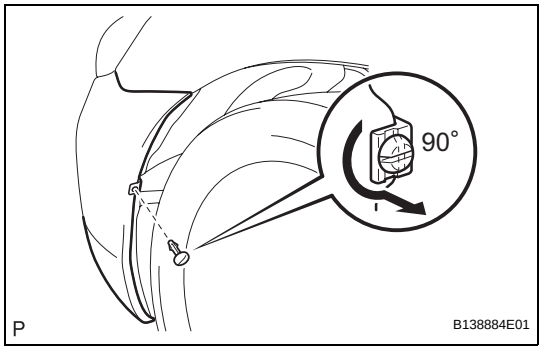
(d) Disengage the 2 claws and disconnect the front bumper assembly as shown in the illustration.
HINT:
Use the same procedures for the RH side and LH side.

(e) Remove the front bumper assembly.

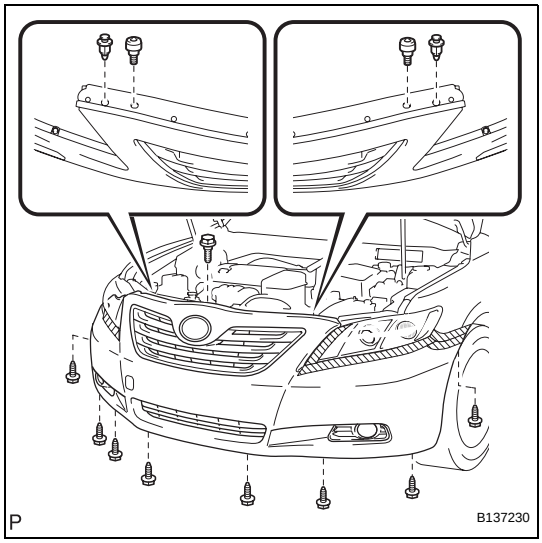


3. REMOVE FRONT BUMPER ASSEMBLY (w/ Fog Light)

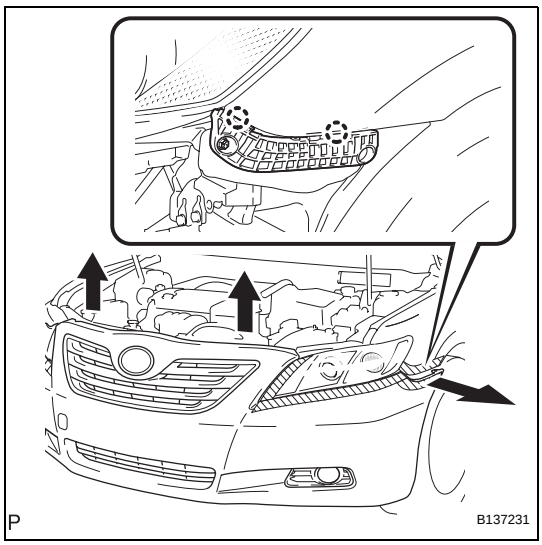
(a) Put protective tape around the front bumper assembly.



(b) Using a screwdriver, turn the pin 90 degrees and remove the pin hold clip.
HINT:
Use the same procedures for the RH side and LH side.



(c) Remove the 8 screws, 2 clips, 2 radiator grille protectors and bolt.



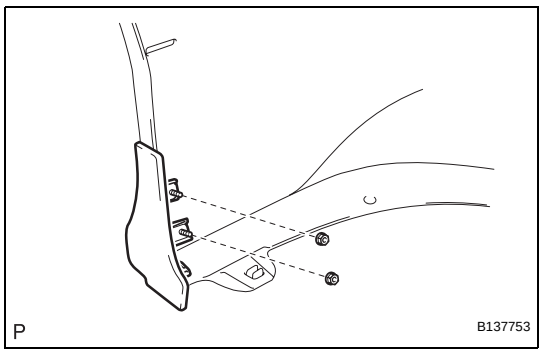
(d) Disengage the 2 claws and disconnect the front bumper assembly as shown in the illustration.
HINT:
Use the same procedures for the RH side and LH side.

(e) Disconnect each connector, and then remove the front bumper assembly.

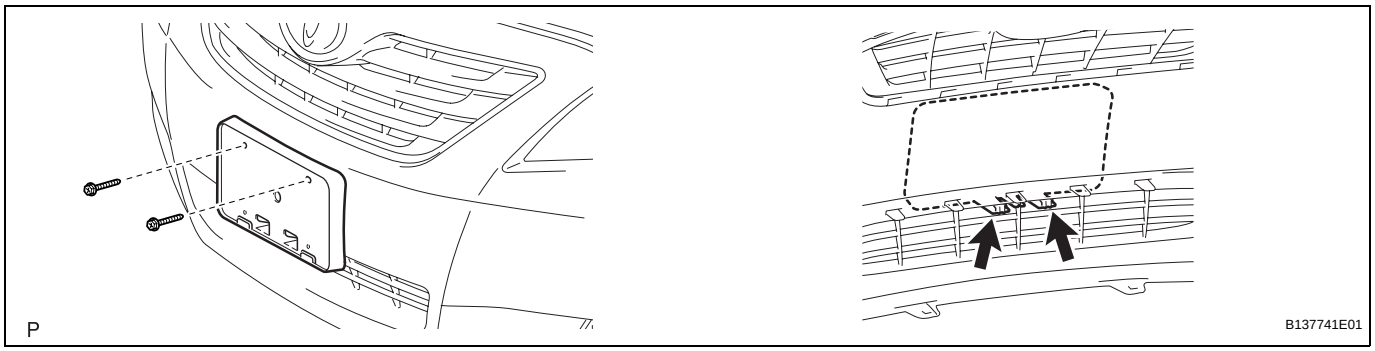
DISASSEMBLY

1. **REMOVE FOG LIGHT ASSEMBLY LH (w/ Fog Light) (See page LI-79)**
2. **REMOVE FOG LIGHT ASSEMBLY RH (w/ Fog Light)**
3. **REMOVE FRONT SPOILER (w/ Front Spoiler)**
   (a) Remove the 2 screws and 25 clips.

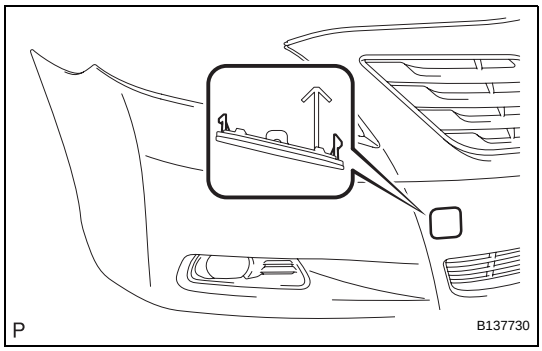
   (b) Disengage the 17 claws and remove the front spoiler.



4. **REMOVE FRONT BUMPER EXTENSION LH (w/ Front Spoiler)**
   (a) Remove the 2 nuts and front bumper extension LH.
5. **REMOVE FRONT BUMPER EXTENSION RH (w/ Front Spoiler)**
6. **REMOVE FRONT BUMPER EXTENSION MOUNTING BRACKET (w/ Bracket)**
   (a) Remove the 2 screws.

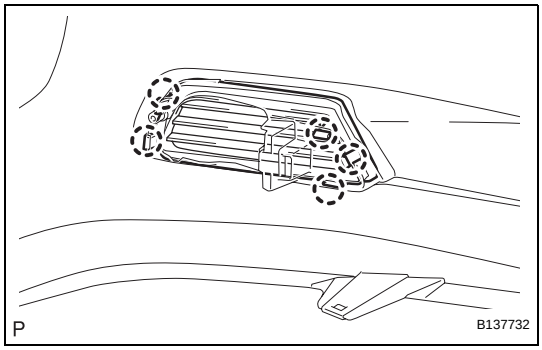


(b) Disengage the 2 claws and remove the front bumper extension mounting bracket.



7. REMOVE FRONT BUMPER LOWER COVER (w/ Cover)

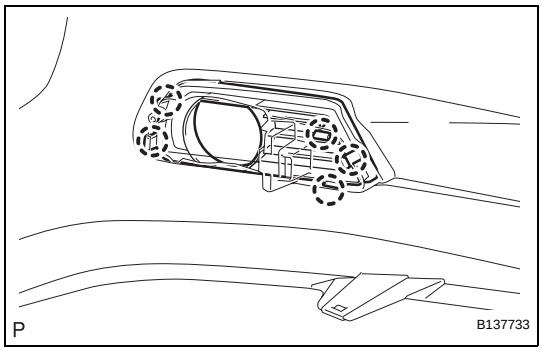
(a) Disengage the 2 claws and remove the front bumper lower cover.



8. REMOVE FRONT BUMPER HOLE COVER LH (w/o Fog Light)

(a) Disengage the 5 claws and remove the front bumper hole cover LH.

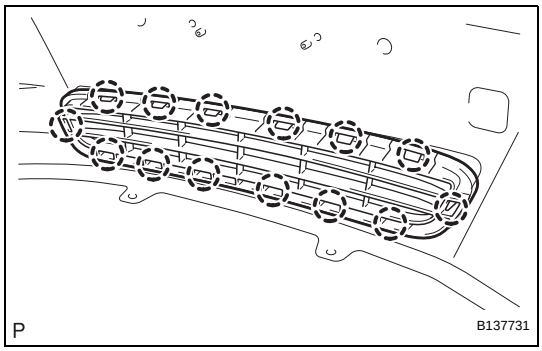
9. REMOVE FRONT BUMPER HOLE COVER RH (w/o Fog Light)



10. REMOVE FRONT BUMPER HOLE COVER LH (w/ Fog Light)

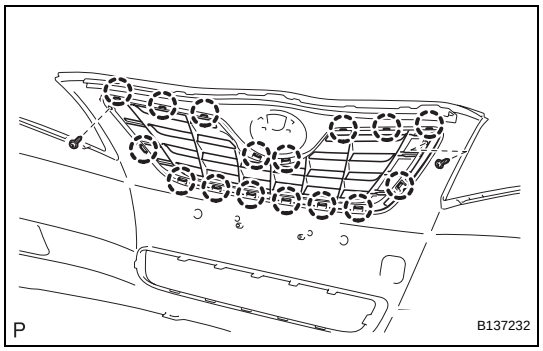
(a) Disengage the 5 claws and remove the front bumper hole cover LH.

11. REMOVE FRONT BUMPER HOLE COVER RH (w/ Fog Light)



12. REMOVE LOWER RADIATOR GRILLE

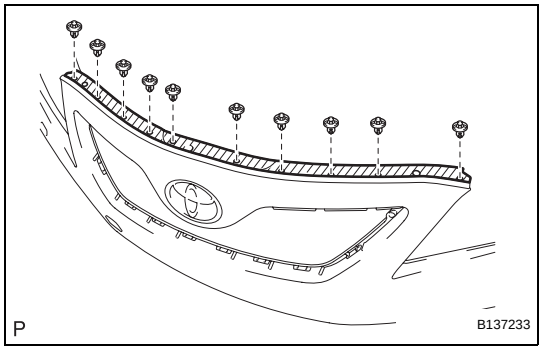
(a) Disengage the 14 claws and remove the lower radiator grille.



13. REMOVE RADIATOR GRILLE

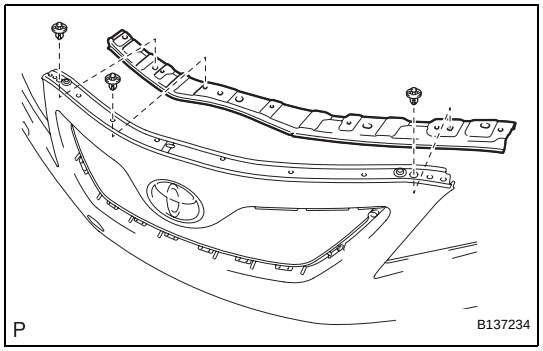
(a) Remove the 2 screws.

(b) Disengage the 16 claws and remove the radiator grille.



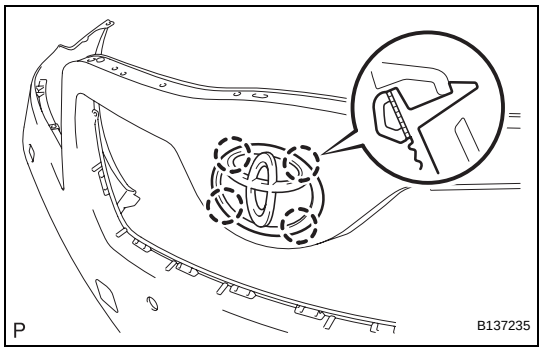
14. REMOVE HOOD TO FRONT END PANEL SEAL

(a) Remove the 10 clips and hood to front end panel seal.



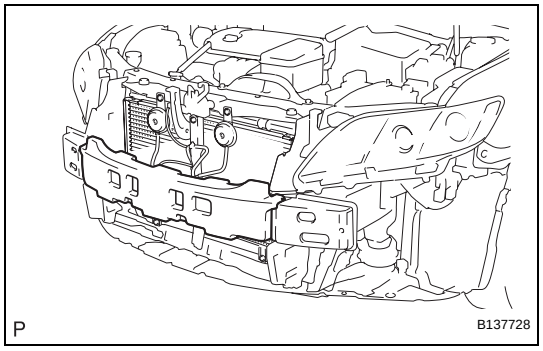
15. REMOVE FRONT BUMPER UPPER RETAINER

(a) Remove the 3 clips and front bumper upper retainer.



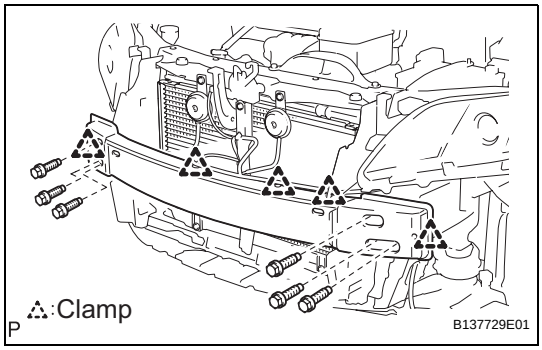
16. REMOVE RADIATOR GRILLE EMBLEM

(a) Disengage the 4 claws and remove the radiator grille emblem.

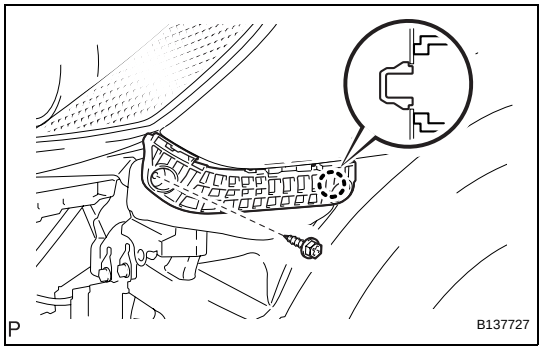


17. REMOVE FRONT BUMPER ENERGY ABSORBER

(a) Remove the front bumper energy absorber from the front bumper reinforcement sub-assembly.



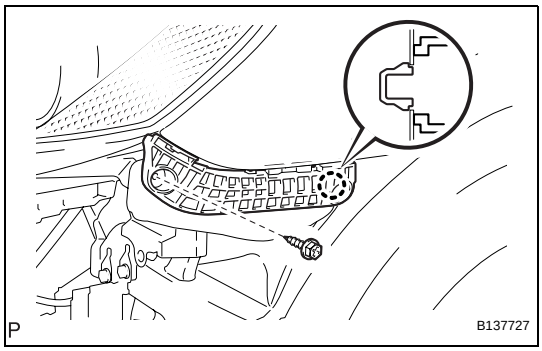
18. REMOVE FRONT BUMPER REINFORCEMENT SUB-ASSEMBLY
(a) Disengage each clamp.
(b) Remove the 6 bolts and front bumper reinforcement sub-assembly.



19. REMOVE FRONT BUMPER SIDE RETAINER LH
(a) Remove the screw.
(b) Disengage the claw and remove the front bumper side retainer LH.

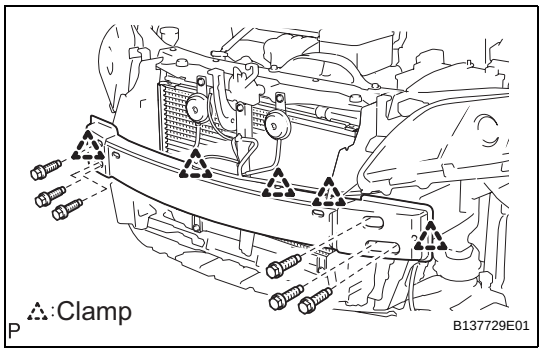
20. REMOVE FRONT BUMPER SIDE RETAINER RH

REASSEMBLY

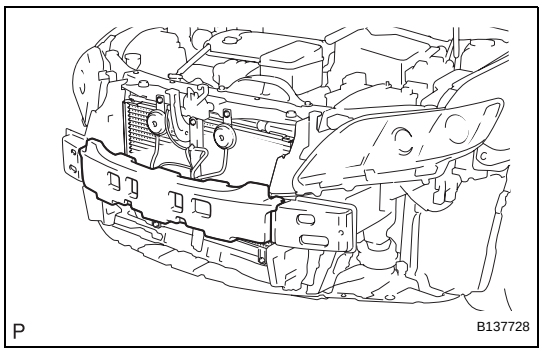


1. INSTALL FRONT BUMPER SIDE RETAINER LH
(a) Engage the claw and install the front bumper side retainer LH.
(b) Install the screw.

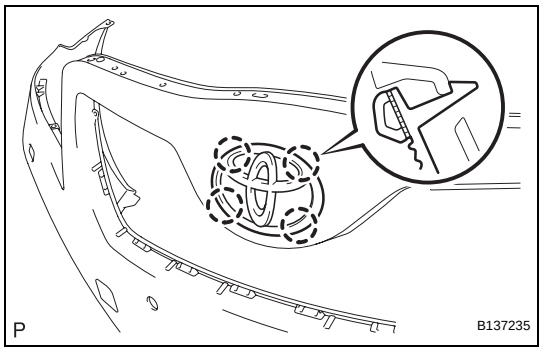
2. INSTALL FRONT BUMPER SIDE RETAINER RH



3. INSTALL FRONT BUMPER REINFORCEMENT SUB-ASSEMBLY
(a) Install the front bumper reinforcement sub-assembly with the 6 bolts.
Torque: 34 N*m (347 kgf*cm, 25 ft.*lbf)
(b) Engage each clamp.

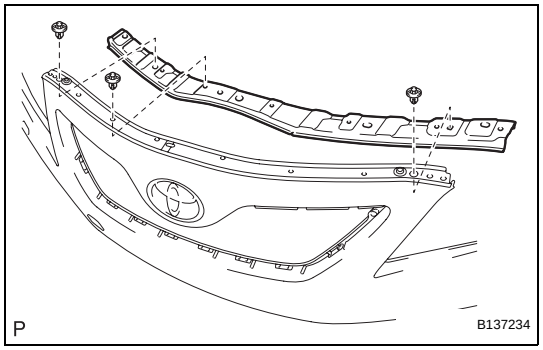


4. INSTALL FRONT BUMPER ENERGY ABSORBER
(a) Install the front bumper energy absorber to the front bumper reinforcement sub-assembly.



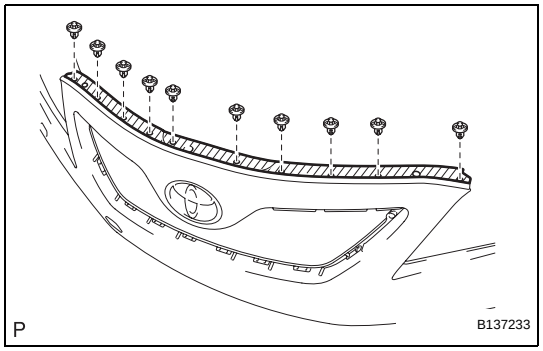
5. INSTALL RADIATOR GRILLE EMBLEM

(a) Engage the 4 claws and install the radiator grille emblem.



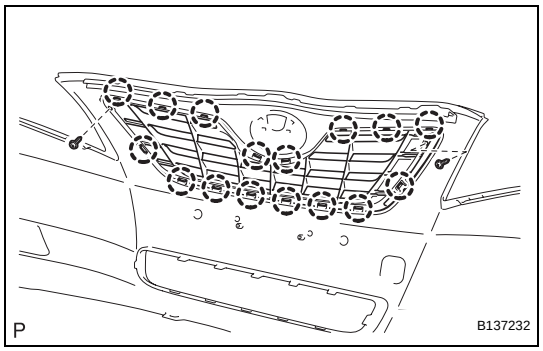
6. INSTALL FRONT BUMPER UPPER RETAINER

(a) Install the front bumper upper retainer with the 3 clips.



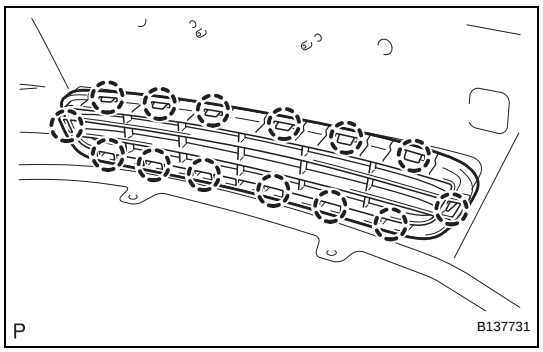
7. INSTALL HOOD TO FRONT END PANEL SEAL

(a) Apply new double-sided tape to the hood to front end panel seal.
(b) Remove the release paper from the hood to front end panel seal.
(c) Install the hood to front end panel seal with the 10 clips.



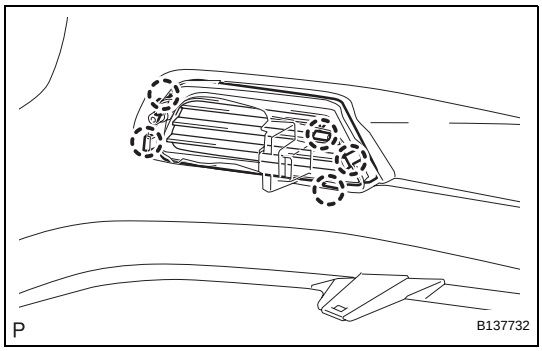
8. INSTALL RADIATOR GRILLE

(a) Engage the 16 claws and install the radiator grille.
(b) Install the 2 screws.



9. INSTALL LOWER RADIATOR GRILLE

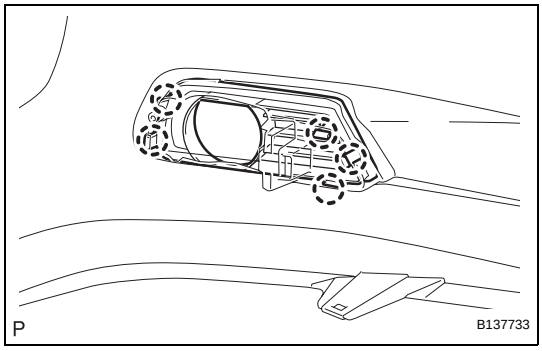
(a) Engage the 14 claws and install the lower radiator grille.



10. INSTALL FRONT BUMPER HOLE COVER LH (w/o Fog Light)

(a) Engage the 5 claws and install the front bumper hole cover LH.

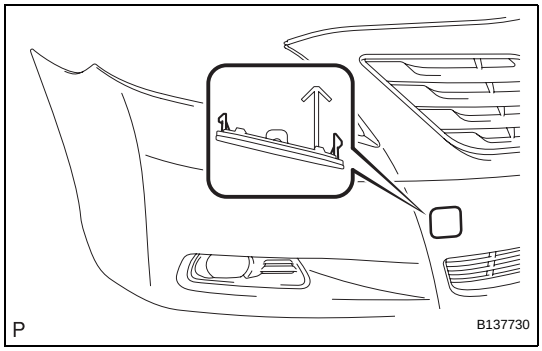
11. INSTALL FRONT BUMPER HOLE COVER RH (w/o Fog Light)



12. INSTALL FRONT BUMPER HOLE COVER LH (w/ Fog Light)

(a) Engage the 5 claws and install the front bumper hole cover LH.

13. INSTALL FRONT BUMPER HOLE COVER RH (w/ Fog Light)

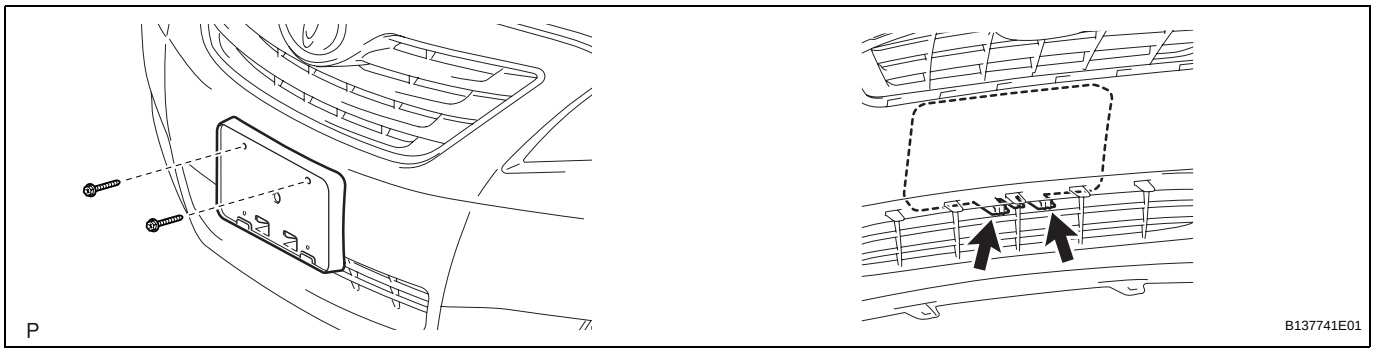


14. INSTALL FRONT BUMPER LOWER COVER (w/ Cover)

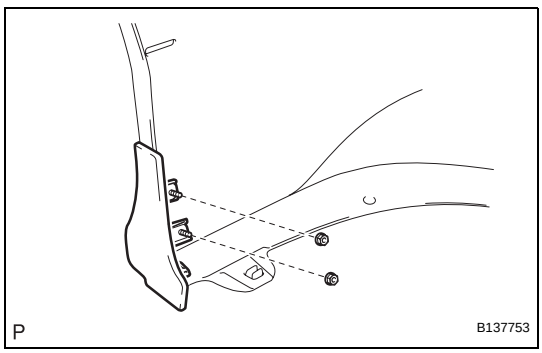
(a) Engage the 2 claws and install the front bumper lower cover.

15. INSTALL FRONT BUMPER EXTENSION MOUNTING BRACKET (w/ Bracket)

(a) Engage the 2 claws and install the front bumper extension mounting bracket.



(b) Install the 2 screws.



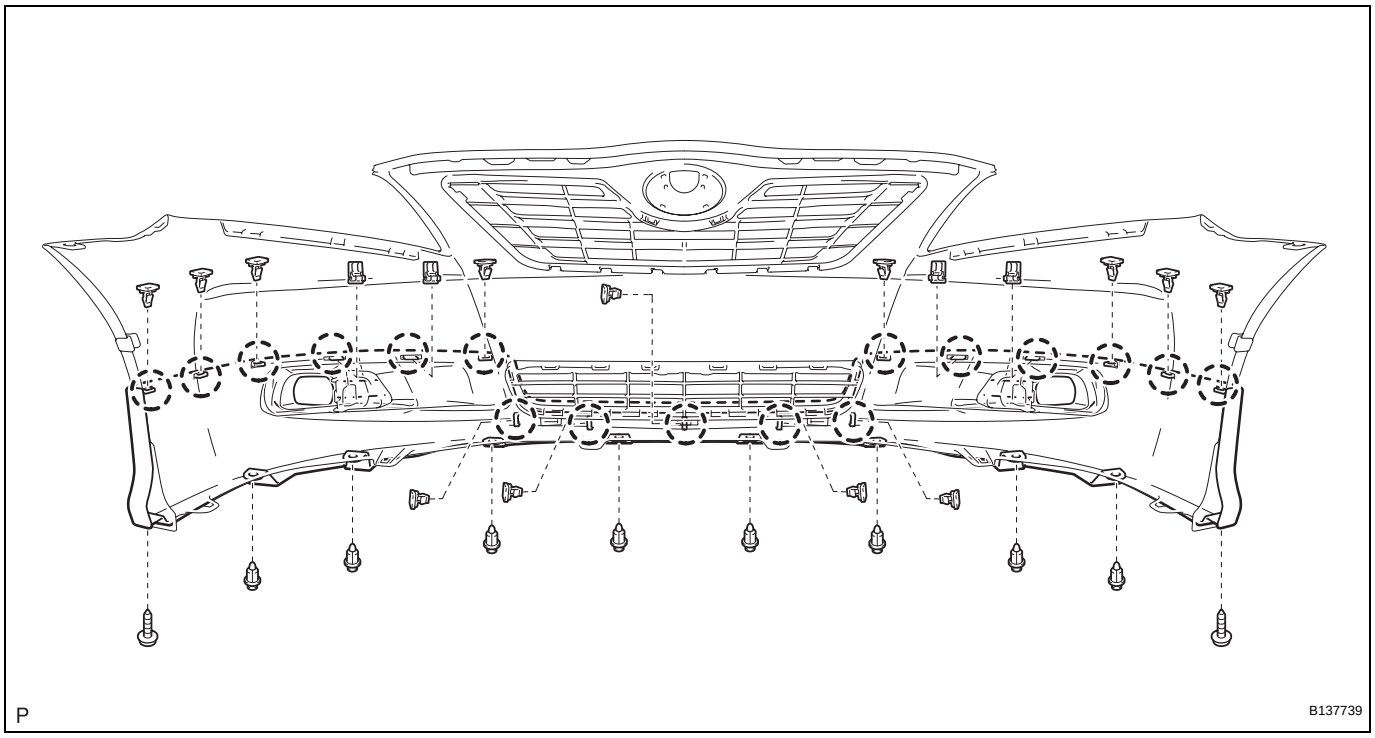
16. INSTALL FRONT BUMPER EXTENSION LH (w/ Front Spoiler)

(a) Install the front bumper extension LH with the 2 nuts.

17. INSTALL FRONT BUMPER EXTENSION RH (w/ Front Spoiler)

18. INSTALL FRONT SPOILER (w/ Front Spoiler)

(a) Engage the 17 claws and install the front spoiler.

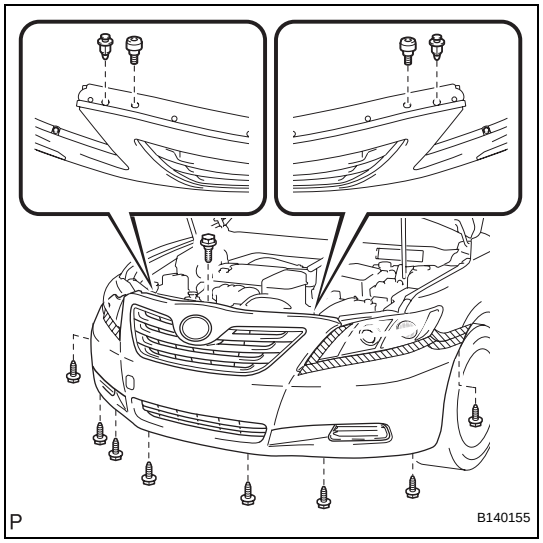


(b) Install the 25 clips and 2 screws.

19. INSTALL FOG LIGHT ASSEMBLY LH (w/ Fog Light) (See page LI-82)

20. INSTALL FOG LIGHT ASSEMBLY RH (w/ Fog Light)

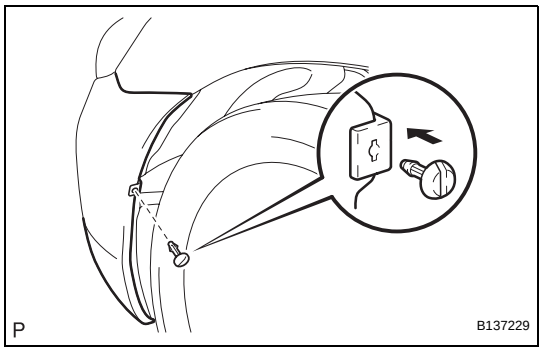
INSTALLATION



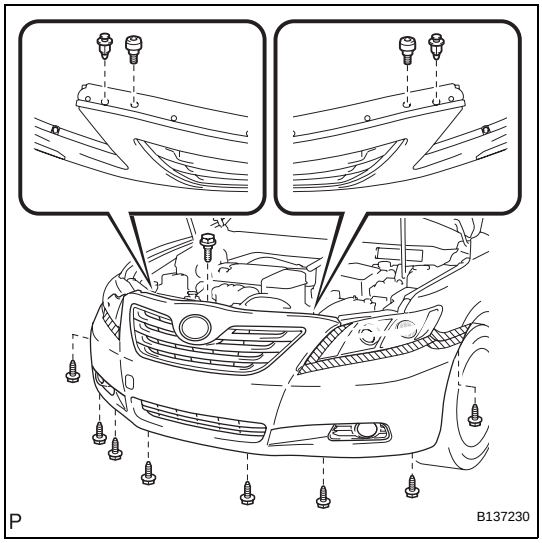
1. INSTALL FRONT BUMPER ASSEMBLY (w/o Fog Light)

(a) Engage each claw.

(b) Install the front bumper assembly with the 8 screws, 2 clips, 2 radiator grille protectors and bolt.

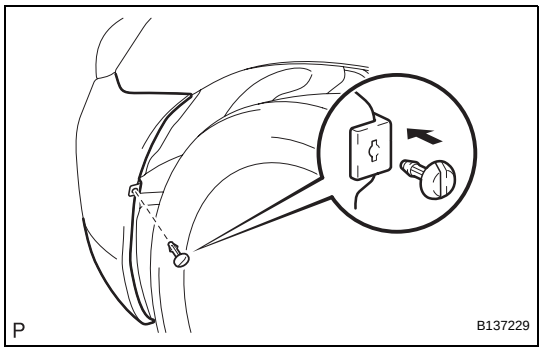


(c) Install the pin hold clip.
HINT:
Use the same procedures for the RH side and LH side.

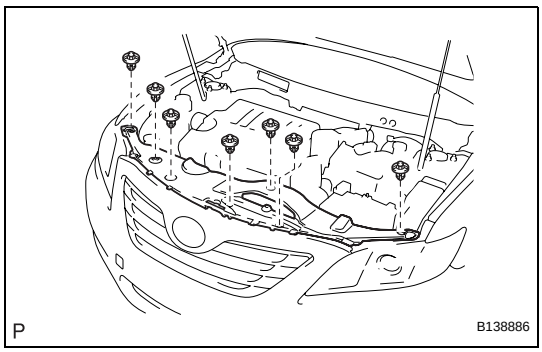


2. INSTALL FRONT BUMPER ASSEMBLY (w/ Fog Light)

(a) Connect each connector.
(b) Engage each claw.
(c) Install the front bumper assembly with the 8 screws, 2 clips, 2 radiator grille protectors and bolt.



(d) Install the pin hold clip.
HINT:
Use the same procedures for the RH side and LH side.



3. INSTALL COOL AIR INTAKE DUCT SEAL (for 2GR-FE)

(a) Install the cool air intake duct seal with the 7 clips.

4. VEHICLE PREPARATION FOR FOG LIGHT AIMING (w/ Fog Light) (See page LI-79)

5. PREPARATION FOR FOG LIGHT AIMING (w/ Fog Light) (See page LI-80)

6. INSPECT FOG LIGHT AIMING (w/ Fog Light) (See page LI-81)

7. ADJUST FOG LIGHT AIMING (w/ Fog Light) (See page LI-82)

REAR BUMPER

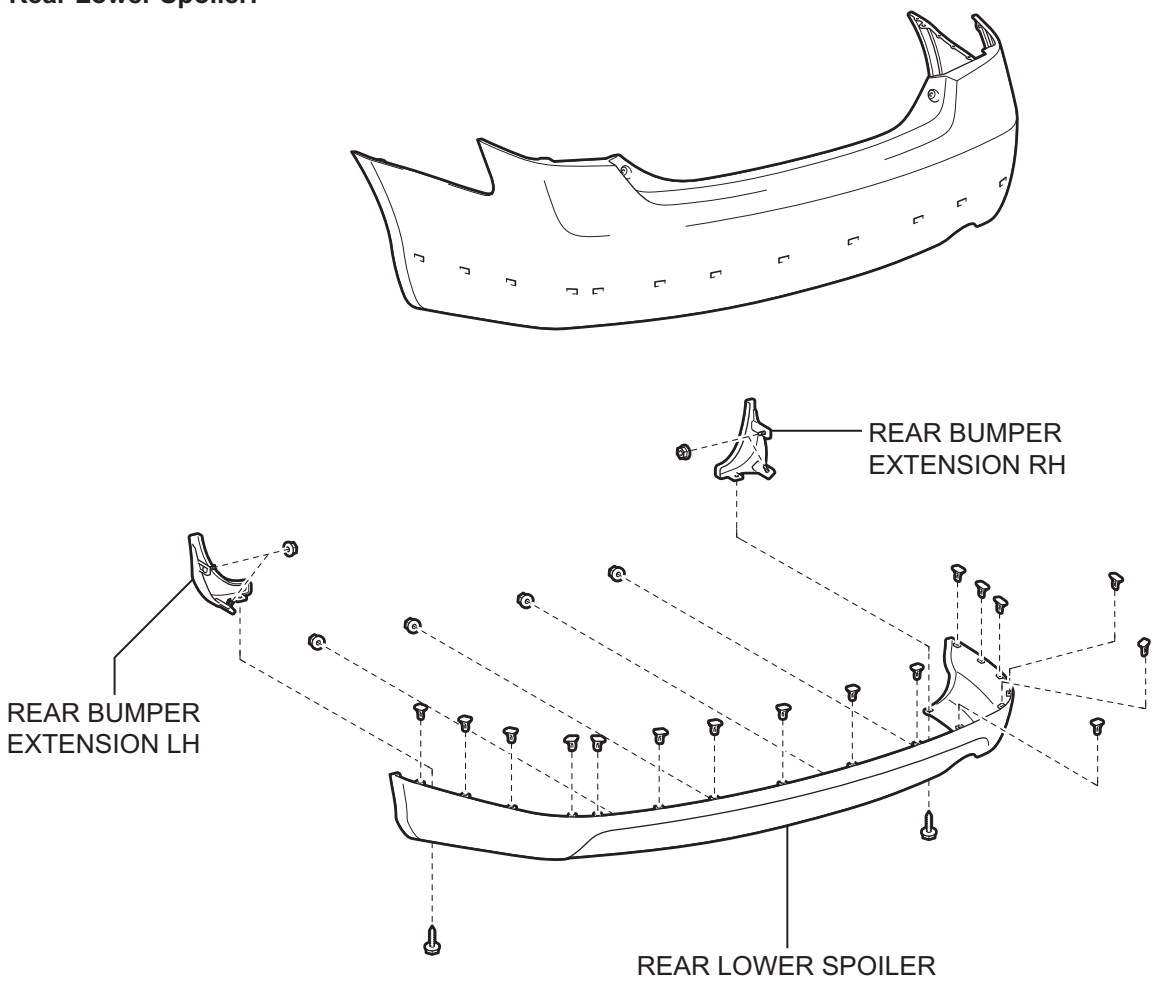
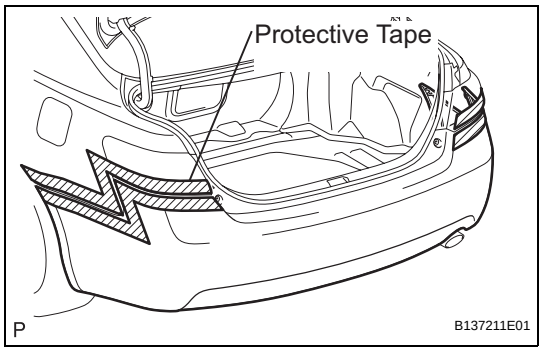
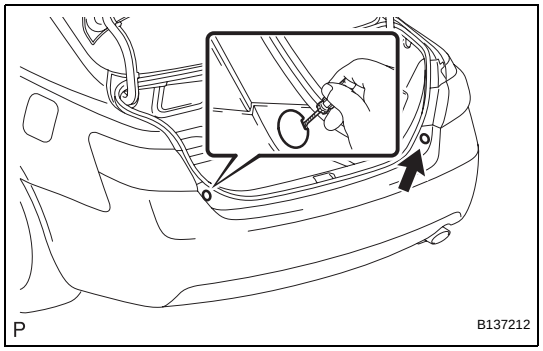
B137225E01

with Rear Lower Spoiler:





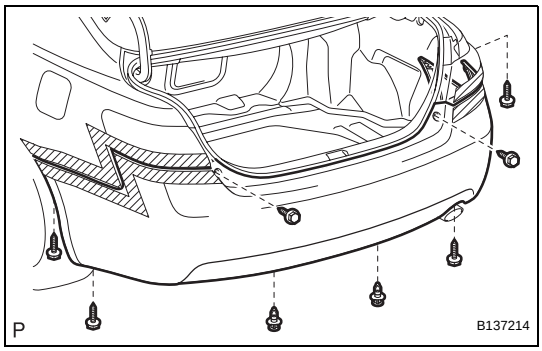


REMOVAL

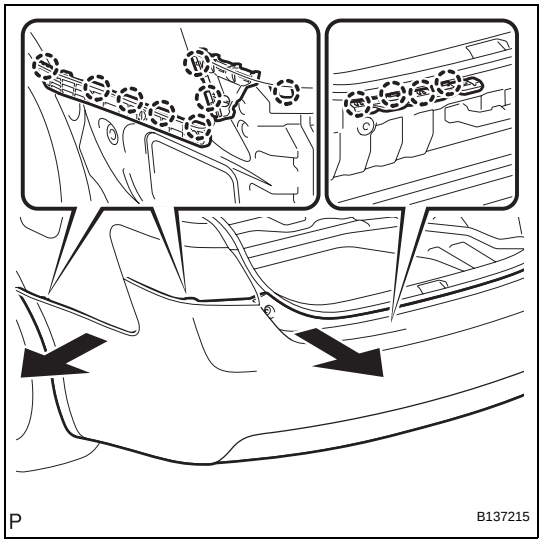
1. REMOVE REAR BUMPER ASSEMBLY (w/o Rear Lower Spoiler)

(a) Put protective tape around the rear bumper assembly.

(b) Using a screwdriver, open the 2 rear bumper plates.
HINT:
Tape the screwdriver tip before use.

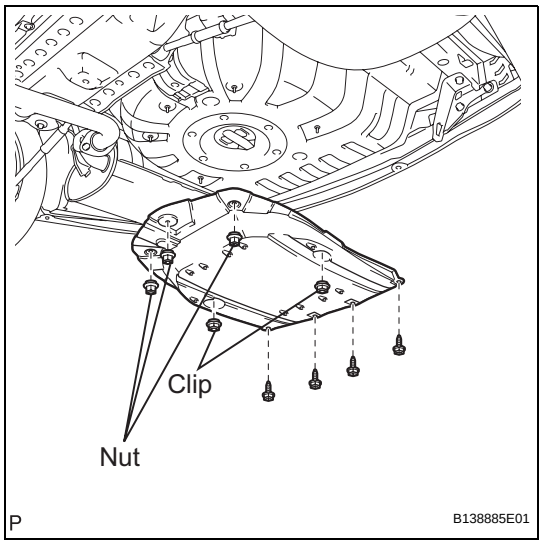


(c) Remove the 6 screws and 2 clips.



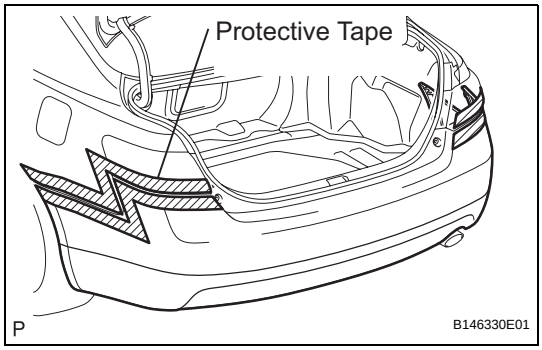
(d) Disengage the 12 claws and disconnect the rear bumper assembly as shown in the illustration.
HINT:
Use the same procedures for the RH side and LH side.

(e) Remove the rear bumper assembly.



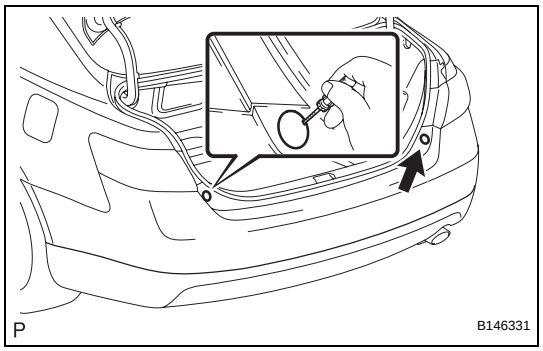
2. REMOVE REAR FLOOR BOARD (w/ Rear Lower Spoiler)

(a) Remove the 4 screws, 2 clips, 3 nuts and rear floor board.

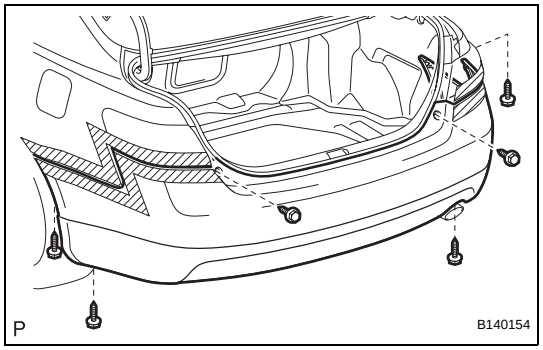


3. REMOVE REAR BUMPER ASSEMBLY (w/ Rear Lower Spoiler)

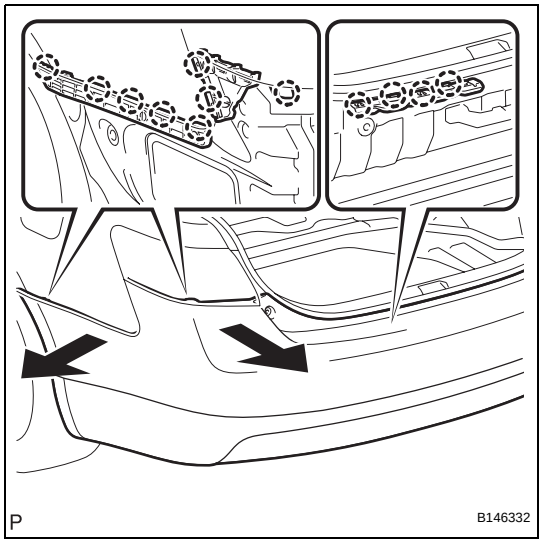
(a) Put protective tape around the rear bumper assembly.



(b) Using a screwdriver, open the 2 rear bumper plates.
HINT:
Tape the screwdriver tip before use.



(c) Remove the 6 screws.



(d) Disengage the 12 claws and disconnect the rear bumper assembly as shown in the illustration.
HINT:
Use the same procedures for the RH side and LH side.

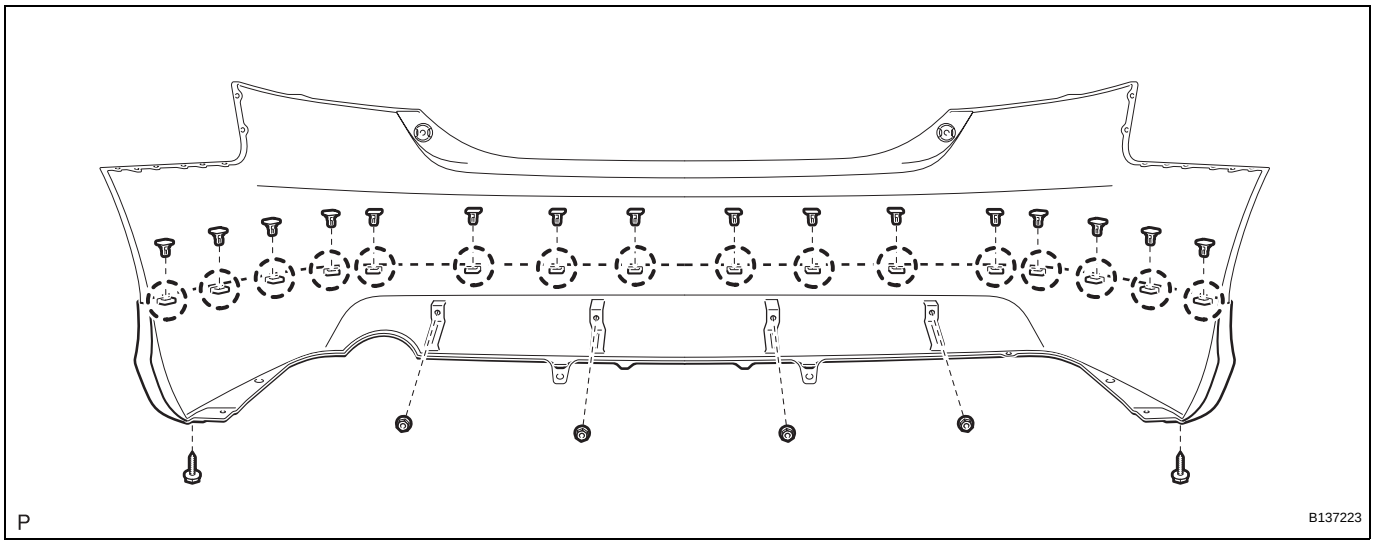
(e) Remove the rear bumper assembly.

ET

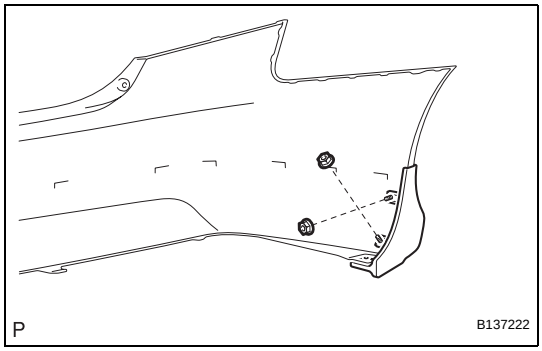
DISASSEMBLY

1. REMOVE REAR LOWER SPOILER (w/ Rear Lower Spoiler)

(a) Remove the 2 screws, 4 nuts and 16 clips.



(b) Disengage the 16 claws and remove the rear lower spoiler.



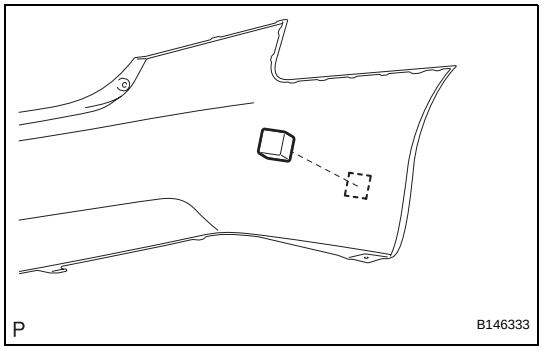
2. REMOVE REAR BUMPER EXTENSION LH (w/ Rear Lower Spoiler)

(a) Remove the 2 nuts and rear bumper extension LH.

3. REMOVE REAR BUMPER EXTENSION RH (w/ Rear Lower Spoiler)

4. REMOVE REAR BUMPER PLATE LH

5. REMOVE REAR BUMPER PLATE RH

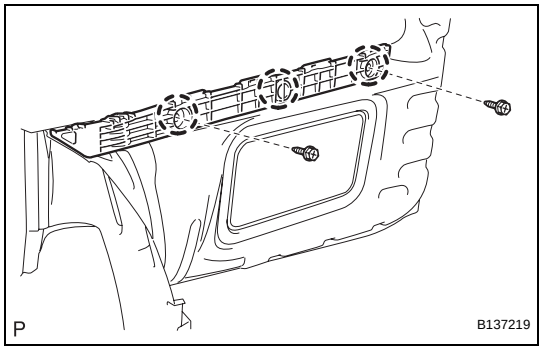


6. REMOVE REAR BUMPER PAD

(a) Remove the rear bumper pad.

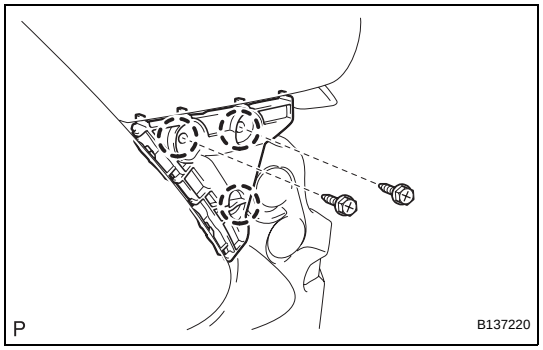
HINT:

Use the same procedures for the RH side and LH side.



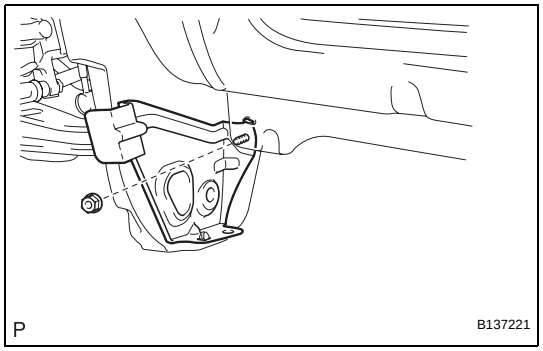
7. REMOVE REAR BUMPER SIDE SUPPORT LH
(a) Remove the 2 screws.
(b) Disengage the 3 claws and remove the rear bumper side support LH.

8. REMOVE REAR BUMPER SIDE SUPPORT RH



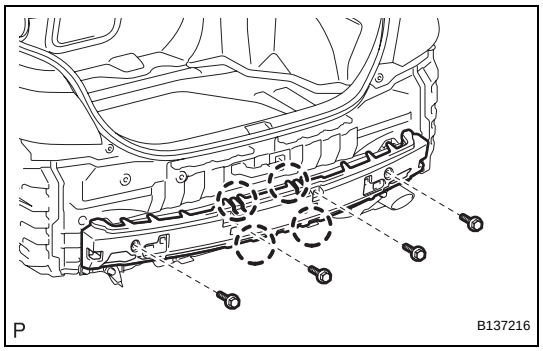
9. REMOVE REAR BUMPER SIDE RETAINER LH
(a) Remove the 2 screws.
(b) Disengage the 3 claws and remove the rear bumper side retainer LH.

10. REMOVE REAR BUMPER SIDE RETAINER RH

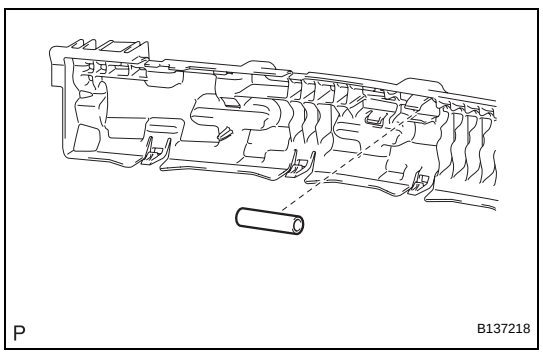


11. REMOVE WHEEL HOUSE REINFORCEMENT LH
(a) Remove the nut and wheel house reinforcement LH.

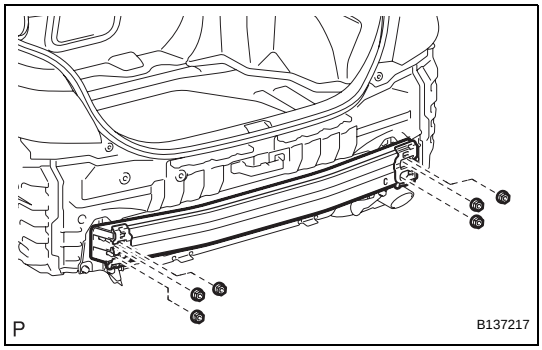
12. REMOVE WHEEL HOUSE REINFORCEMENT RH



13. REMOVE REAR BUMPER ENERGY ABSORBER
(a) Remove the 4 bolts.
(b) Disengage the 4 claws and remove the rear bumper energy absorber.



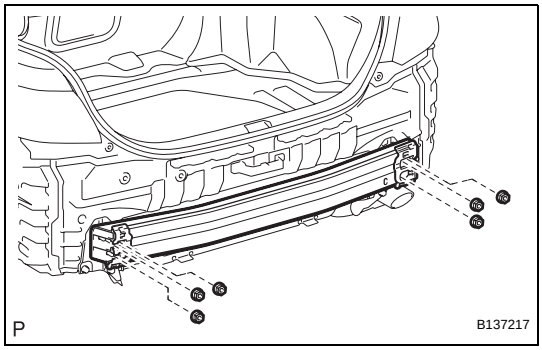
14. REMOVE REAR BUMPER BAR
(a) Remove the rear bumper bar from the rear bumper energy absorber.



15. REMOVE REAR BUMPER REINFORCEMENT SUB-ASSEMBLY

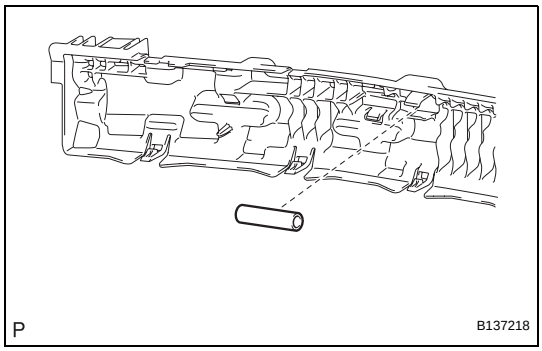
(a) Remove the 6 nuts and rear bumper reinforcement sub-assembly.

REASSEMBLY



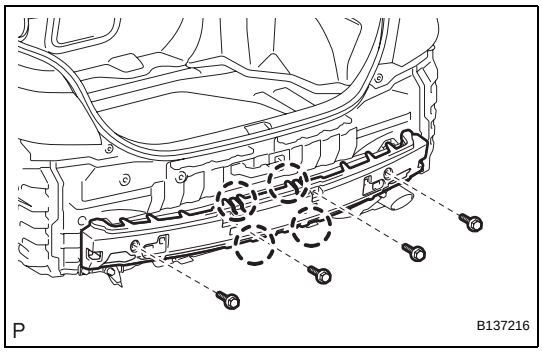
1. INSTALL REAR BUMPER REINFORCEMENT SUB-ASSEMBLY

(a) Install the rear bumper reinforcement sub-assembly with the 6 nuts.
Torque: 68 N*m (693 kgf*cm, 50 ft.*lbf)



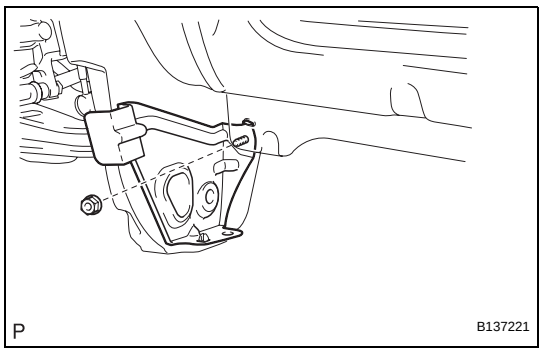
2. INSTALL REAR BUMPER BAR

(a) Install the rear bumper bar on the rear bumper energy absorber.



3. INSTALL REAR BUMPER ENERGY ABSORBER

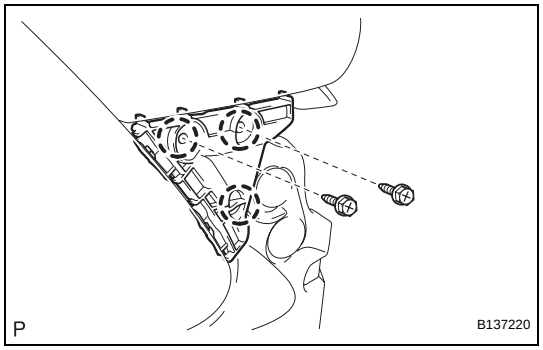
(a) Engage the 4 claws and install the rear bumper energy absorber.
(b) Install the 4 bolts.



4. INSTALL WHEEL HOUSE REINFORCEMENT LH

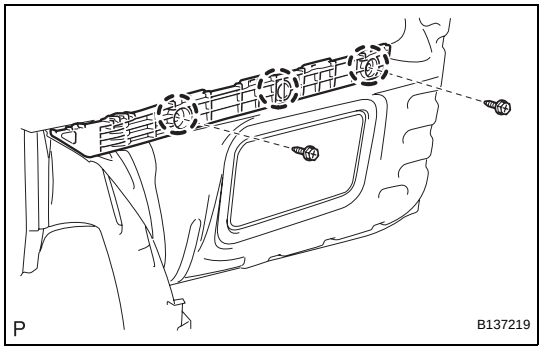
(a) Install the wheel house reinforcement LH with the nut.

5. INSTALL WHEEL HOUSE REINFORCEMENT RH



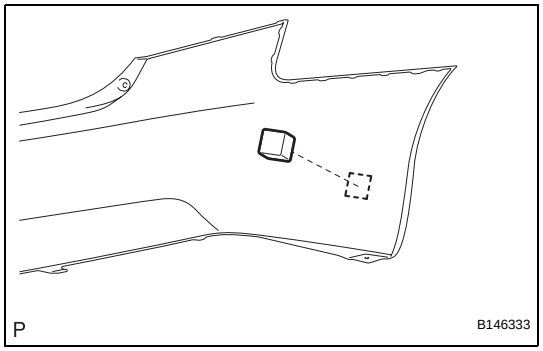
6. INSTALL REAR BUMPER SIDE RETAINER LH
(a) Engage the 3 claws and install the rear bumper side retainer LH.
(b) Install the 2 screws.

7. INSTALL REAR BUMPER SIDE RETAINER RH



8. INSTALL REAR BUMPER SIDE SUPPORT LH
(a) Engage the 3 claws and install the rear bumper side support LH.
(b) Install the 2 screws.

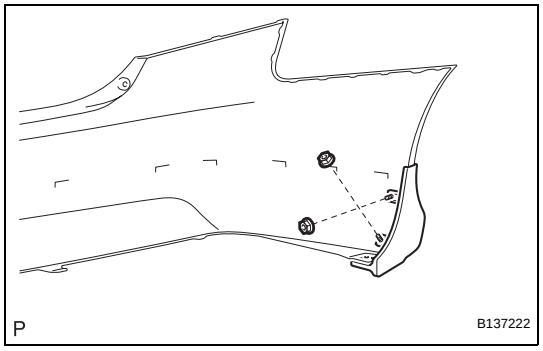
9. INSTALL REAR BUMPER SIDE SUPPORT RH



10. INSTALL REAR BUMPER PAD
(a) Apply new double-sided tape to the rear bumper pad.
(b) Remove the release paper from the rear bumper pad.
(c) Install the rear bumper pad.
HINT:
Use the same procedures for the RH side and LH side.

11. INSTALL REAR BUMPER PLATE LH

12. INSTALL REAR BUMPER PLATE RH

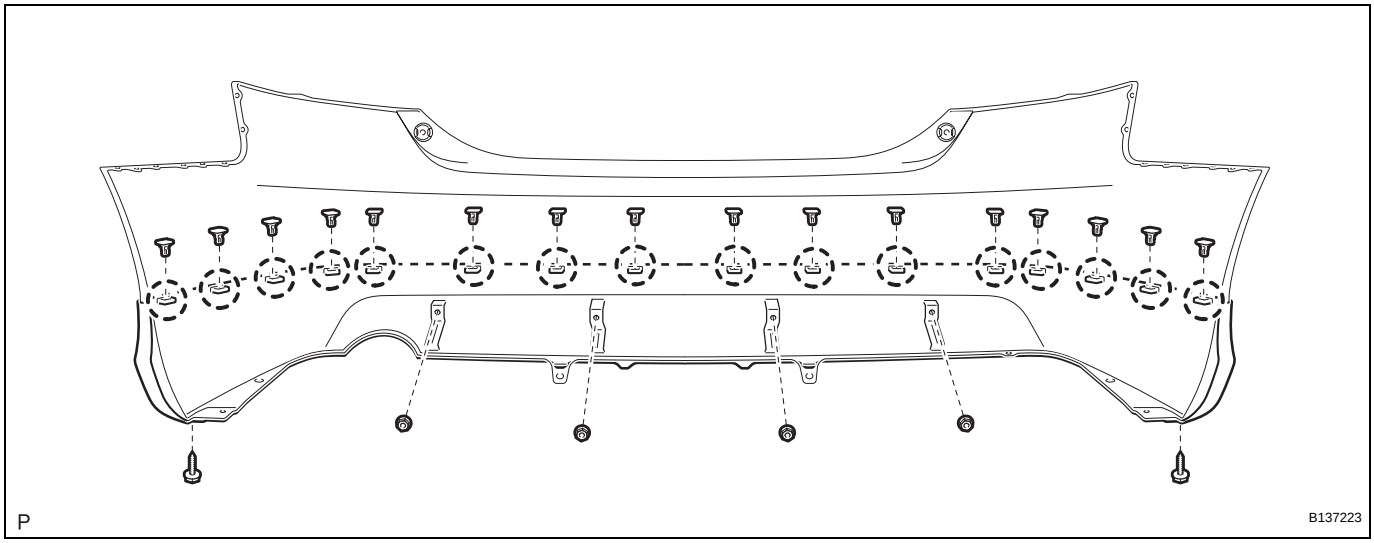


13. INSTALL REAR BUMPER EXTENSION LH (w/ Rear Lower Spoiler)
(a) Install the rear bumper extension LH with the 2 nuts.

14. INSTALL REAR BUMPER EXTENSION RH (w/ Rear Lower Spoiler)

15. INSTALL REAR LOWER SPOILER (w/ Rear Lower Spoiler)

(a) Engage the 16 claws and install the rear lower spoiler.



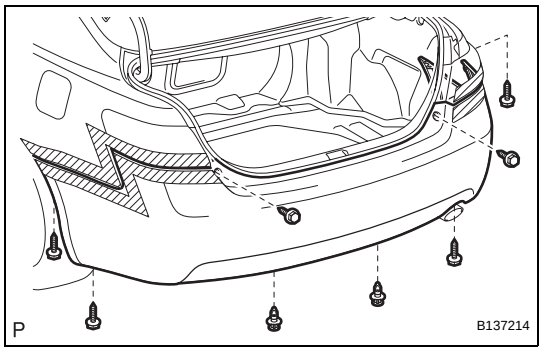
(b) Install the 16 clips, 4 nuts and 2 screws.

INSTALLATION

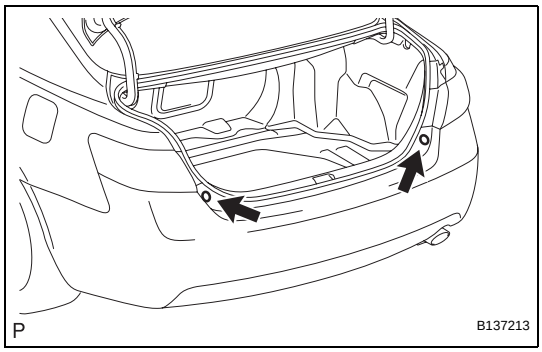
1. INSTALL REAR BUMPER ASSEMBLY (w/o Rear Lower Spoiler)

(a) Engage each claw.

(b) Install the rear bumper assembly with the 6 screws and 2 clips.



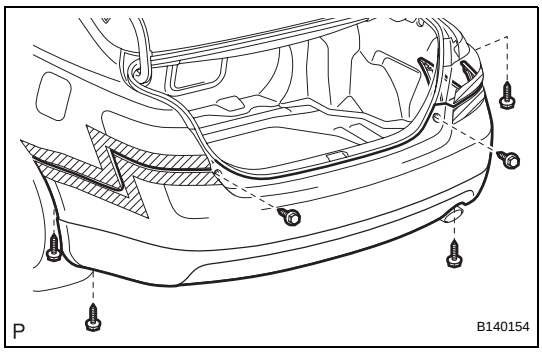
(c) Install the 2 rear bumper plates.

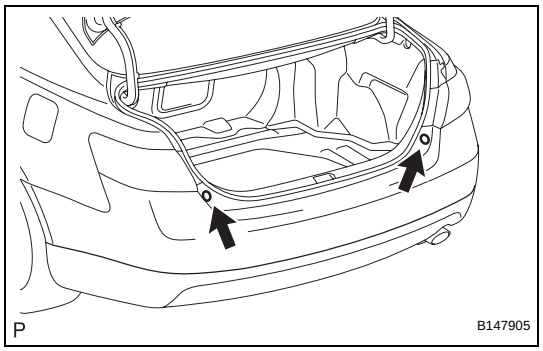


2. INSTALL REAR BUMPER ASSEMBLY (w/ Rear Lower Spoiler)

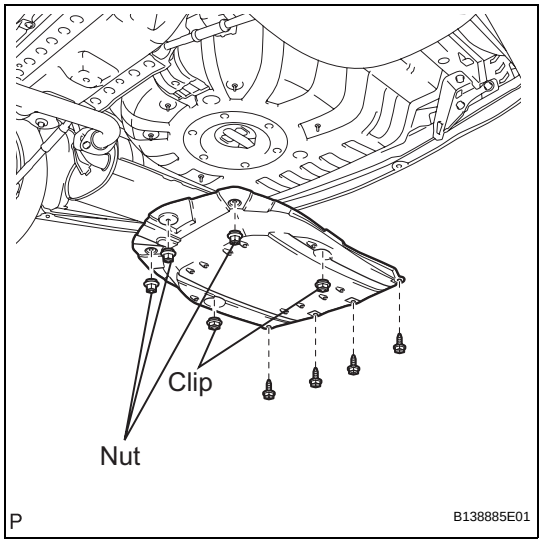
(a) Engage each claw.

(b) Install the rear bumper assembly with the 6 screws.





(c) Install the 2 rear bumper plates.

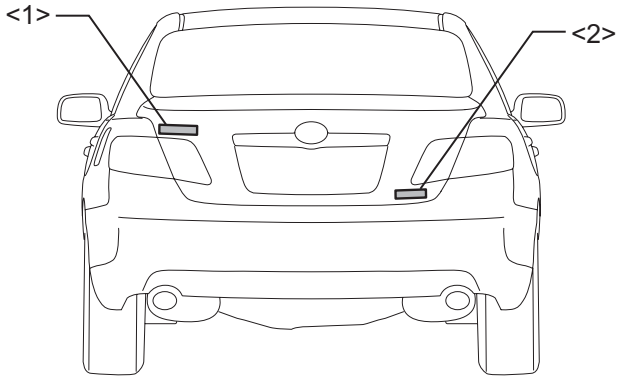


3. INSTALL REAR FLOOR BOARD (w/ Rear Lower Spoiler)

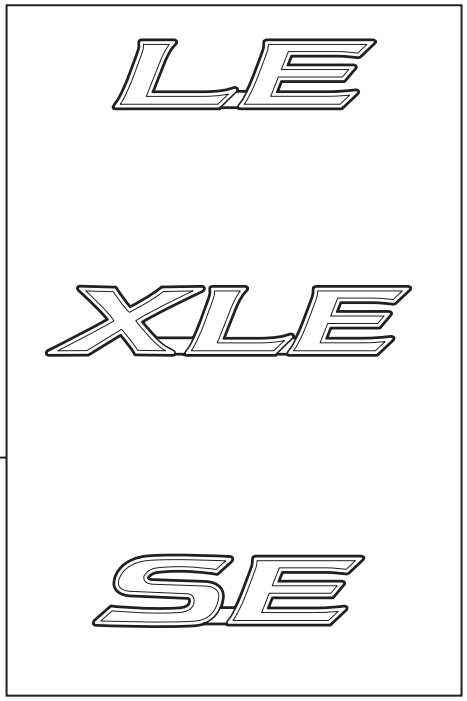
(a) Install the rear floor board with the 3 nuts, 2 clips and 4 screws.

NAME PLATE

COMPONENTS



<1> NO. 2 LUGGAGE COMPARTMENT DOOR NAME PLATE



<2> NO. 3 LUGGAGE COMPARTMENT DOOR NAME PLATE

P

B137020E01

ET

ET

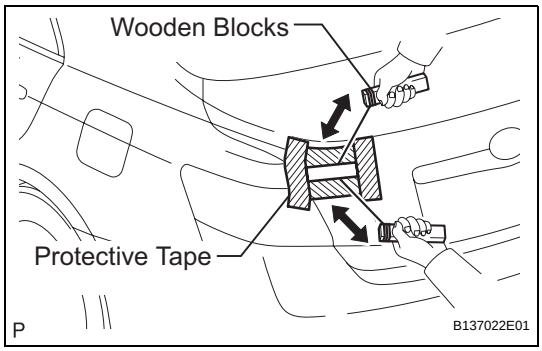
REMOVAL

HINT:
When removing the name plate, heat the vehicle body and name plate using a heat light.

Heating temperature

Item	Temperature
Vehicle Body	**40 to 60°C (104 to 140°F)**
Name Plate	**20 to 30°C (68 to 86°F)**

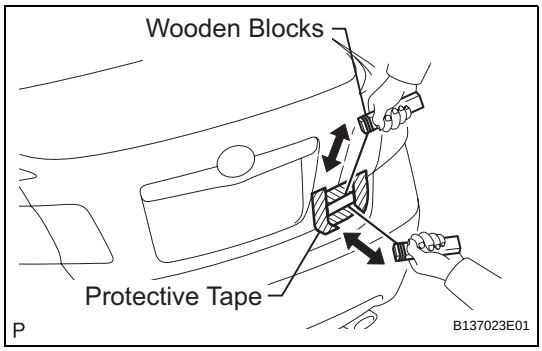
NOTICE:
Do not heat the vehicle body and name plate excessively.



1. REMOVE NO. 2 LUGGAGE COMPARTMENT DOOR NAME PLATE

(a) Put protective tape around the name plate.
(b) Insert a piano wire between the vehicle body and name plate.
(c) Tie objects that can serve as handles (for example, wooden blocks) to both wire ends.
(d) Pull the piano wire and scrape off the double-sided tape that holds the name plate to the vehicle body.
NOTICE:
- **If reusing the name plate, take care not to damage the name plate.**
- **Be careful not to damage the vehicle body.**

(e) Remove the name plate.



2. REMOVE NO. 3 LUGGAGE COMPARTMENT DOOR NAME PLATE

(a) Put protective tape around the name plate.
(b) Insert a piano wire between the vehicle body and name plate.
(c) Tie objects that can serve as handles (for example, wooden blocks) to both wire ends.
(d) Pull the piano wire and scrape off the double-sided tape that holds the name plate to the vehicle body.
NOTICE:
- **If reusing the name plate, take care not to damage the name plate.**
- **Be careful not to damage the vehicle body.**

(e) Remove the name plate.

INSTALLATION

HINT:
When installing the name plate, heat the vehicle body and name plate using a heat light.

Heating temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)
Name Plate	20 to 30°C (68 to 86°F)

NOTICE:
Do not heat the vehicle body and name plate excessively.

1. INSTALL NO. 2 LUGGAGE COMPARTMENT DOOR NAME PLATE

(a) Clean the vehicle body surface.
  (1) Using a heat light, heat the vehicle body surface.
  (2) Remove the double-sided tape from the vehicle body.
  (3) Wipe off any tape adhesive residue with cleaner.

(b) Clean the name plate. (If reusing the name plate)
  (1) Using a heat light, heat the name plate.
  (2) Remove the double-sided tape from the name plate.
  (3) Wipe off any tape adhesive residue with cleaner.
  (4) Apply new double-sided tape to the name plate.

(c) Install the name plate.

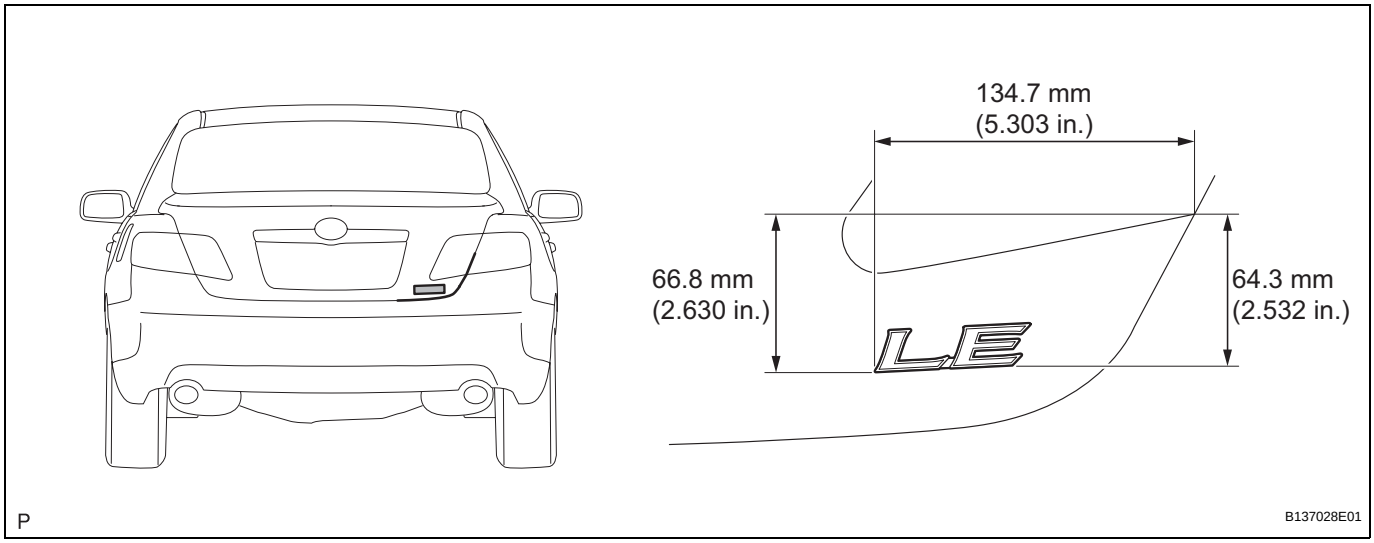
  (1) Using a heat light, heat the vehicle body and name plate.
  (2) Remove the release paper from the name plate.
  HINT:
  After removing the release paper, keep the exposed adhesive free from foreign matter.
  (3) Install the name plate.

2. INSTALL NO. 3 LUGGAGE COMPARTMENT DOOR NAME PLATE

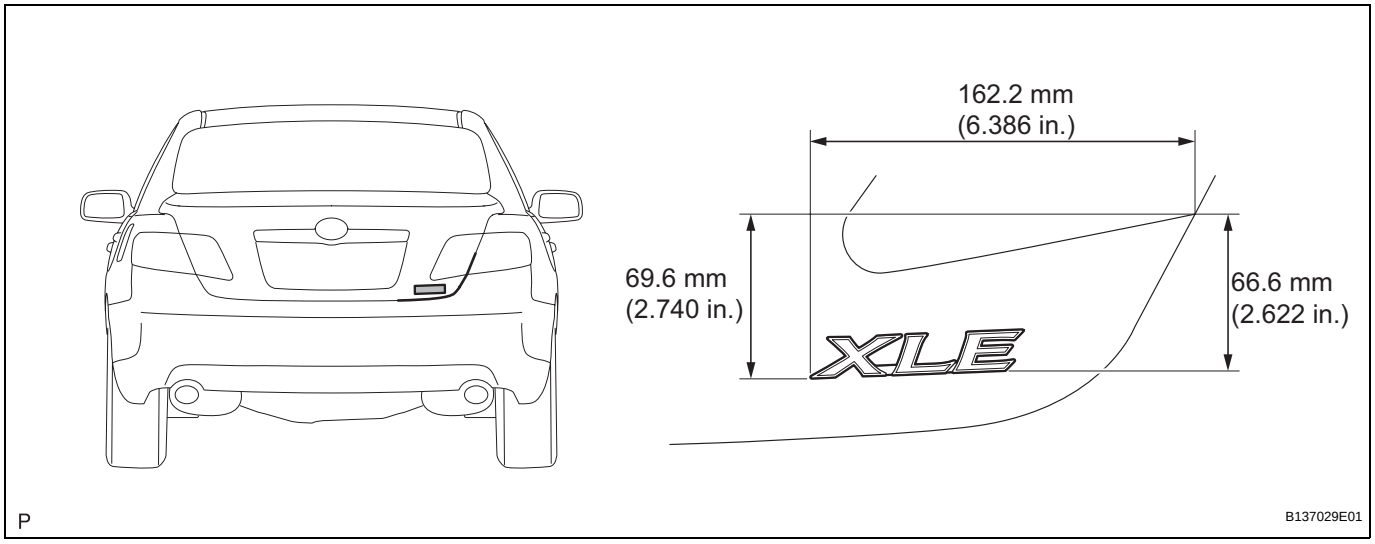
(a) Clean the vehicle body surface.
  (1) Using a heat light, heat the vehicle body surface.
  (2) Remove the double-sided tape from the vehicle body.
  (3) Wipe off any tape adhesive residue with cleaner.

(b) Clean the name plate. (If reusing the name plate)
  (1) Using a heat light, heat the name plate.
  (2) Remove the double-sided tape from the name plate.
  (3) Wipe off any tape adhesive residue with cleaner.
  (4) Apply new double-sided tape to the name plate.

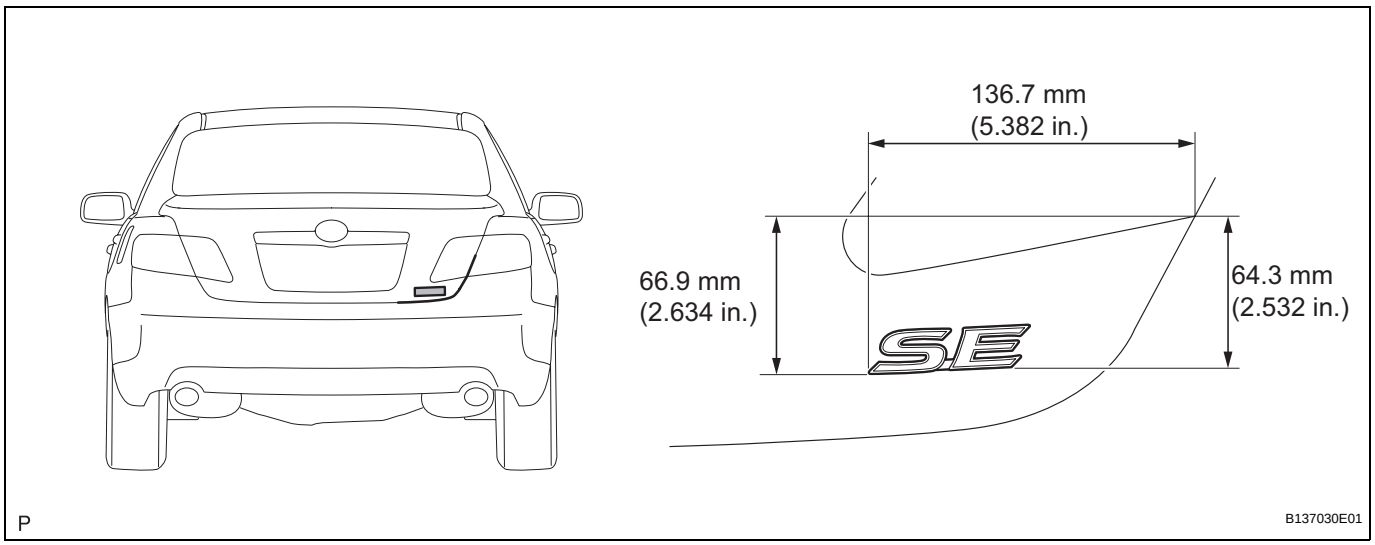
(c) Install the name plate.
  (1) Using a heat light, heat the vehicle body and name plate.
  (2) Remove the release paper from the name plate.
  HINT:
  After removing the release paper, keep the exposed adhesive free from foreign matter.
  (3) Install the name plate.
  For name plate LE:



For name plate XLE:

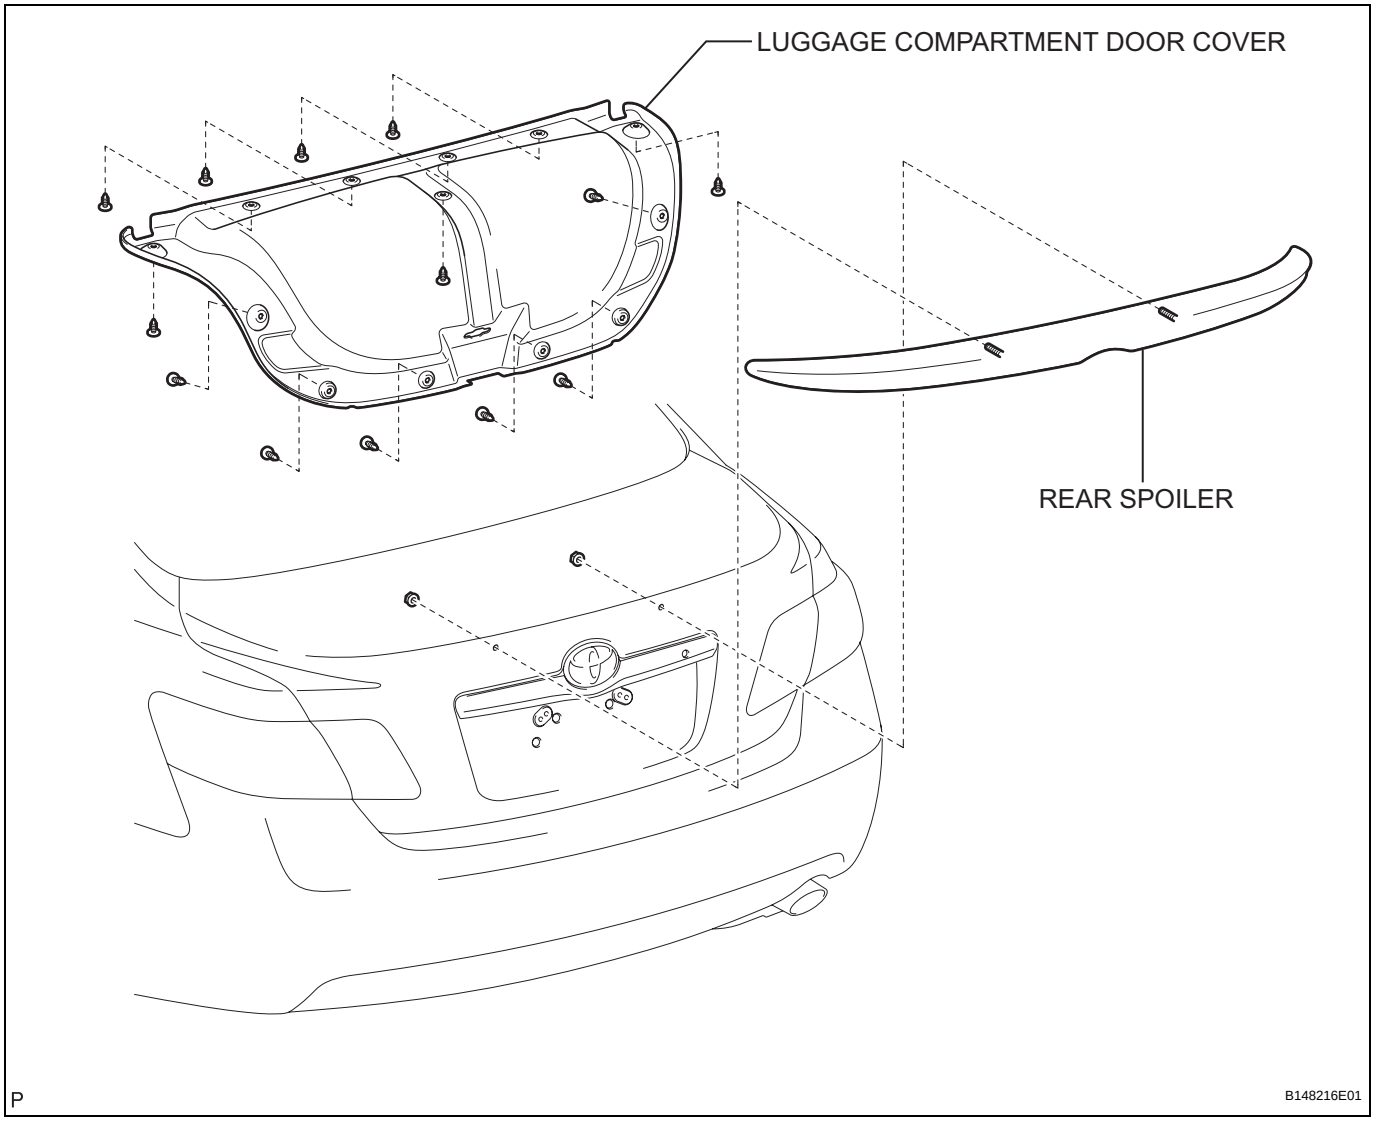


For name plate SE:



REAR SPOILER

COMPONENTS



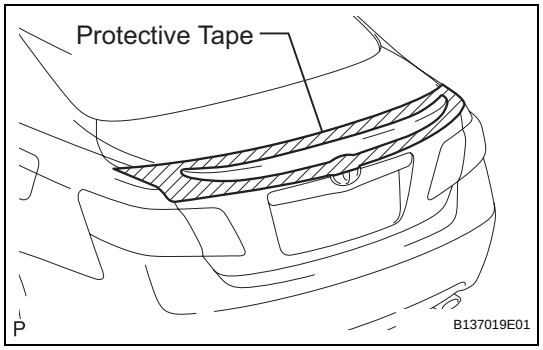
REMOVAL

1. **REMOVE LUGGAGE COMPARTMENT DOOR COVER (See page ET-61)**

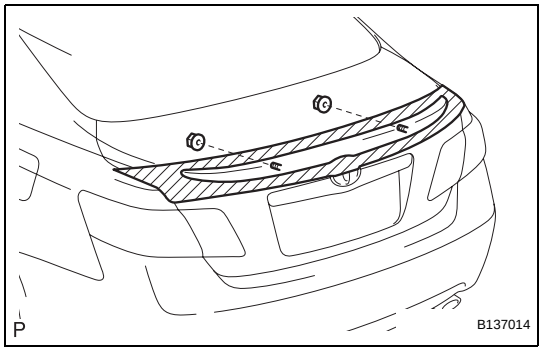
2. **REMOVE REAR SPOILER**
   HINT:
   When removing the rear spoiler, heat the vehicle body and rear spoiler using a heat light.
   Heating temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)
Spoiler	20 to 30°C (68 to 86°F)

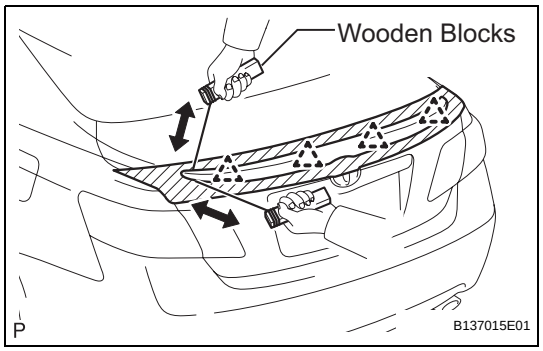
NOTICE:
Do not heat the vehicle body and spoiler excessively.



(a) Put protective tape around the rear spoiler.

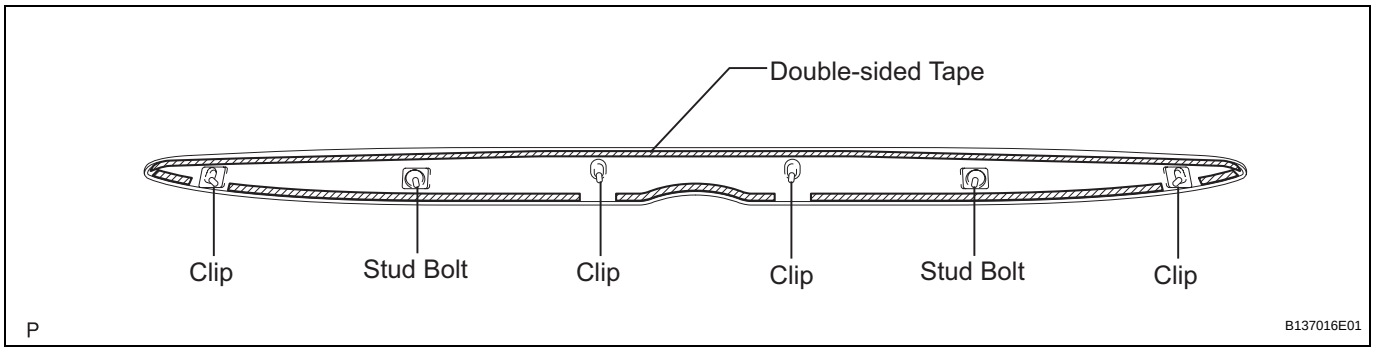


(b) Remove the 2 nuts.



(c) Insert a piano wire between the vehicle body and rear spoiler.
(d) Tie objects that can serve as handles (for example, wooden blocks) to both wire ends.

(e) Pull the piano wire and scrape off the double-sided tape that holds the spoiler to the vehicle body.



ET

NOTICE:

- **If reusing the spoiler, take care not to damage the spoiler.**
- **Be careful not to damage the vehicle body.**

(f) Disengage the 4 clips and remove the rear spoiler.

INSTALLATION

1. INSTALL REAR SPOILER

HINT:

When installing the spoiler, heat the vehicle body and spoiler using a heat light.

Heating temperature

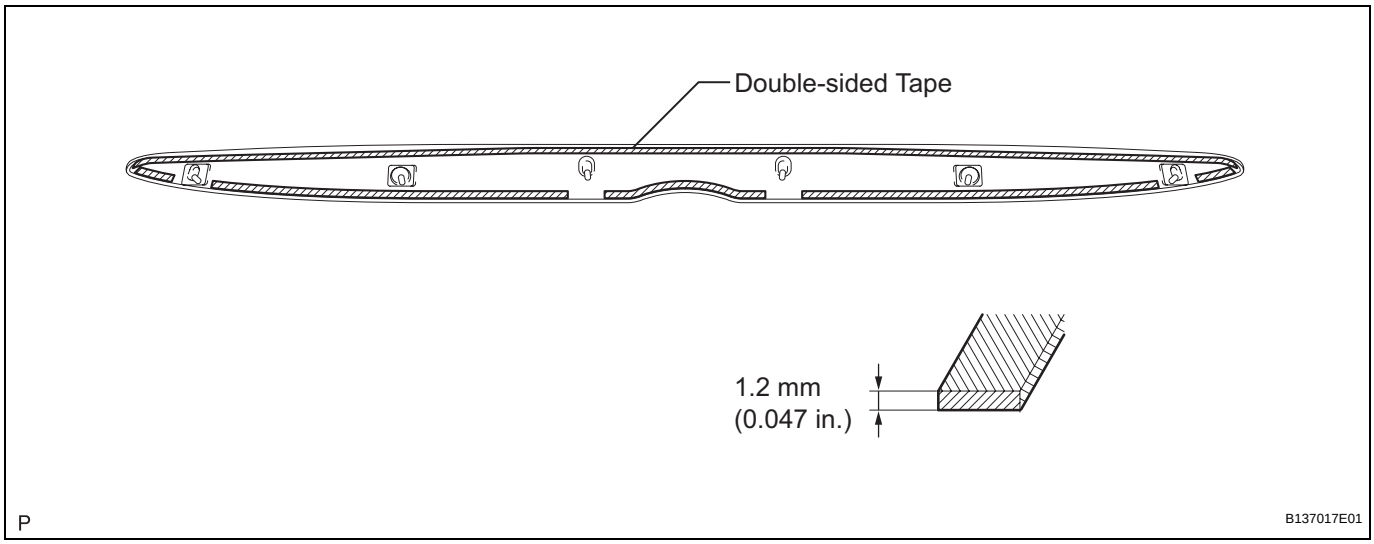
Item	Temperature
Vehicle Body	**40 to 60°C (104 to 140°F)**
Spoiler	**20 to 30°C (68 to 86°F)**

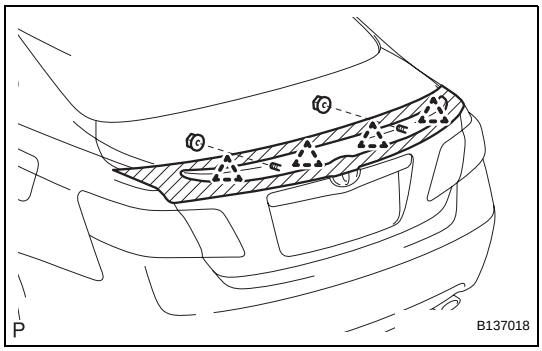
NOTICE:

Do not heat the vehicle body and rear spoiler excessively.

(a) Clean the vehicle body surface.
  (1) Using a heat light, heat the vehicle body surface.
  (2) Remove the double-sided tape from the vehicle body.
  (3) Wipe off any tape adhesive residue with cleaner.

(b) Clean the rear spoiler. (If reusing the rear spoiler)
  (1) Using a heat light, heat the rear spoiler.
  (2) Remove the double-sided tape from the rear spoiler.
  (3) Wipe off any tape adhesive residue with cleaner.
  (4) Apply new double-sided tape to the rear spoiler.





(c) Install the rear spoiler.
  (1) Using a heat light, heat the vehicle body and rear spoiler.
  (2) Remove the release paper from the rear spoiler.
  HINT:
  After removing the release paper, keep the exposed adhesive free from foreign matter.
  (3) Engage the 4 clips and install the rear spoiler with the 2 nuts.

2. INSTALL LUGGAGE COMPARTMENT DOOR COVER (See page ET-64)

FRONT DOOR BELT MOULDING

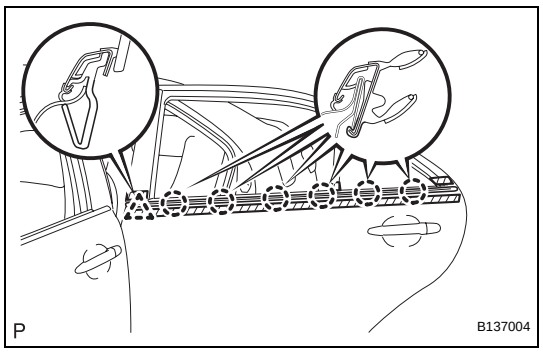
3. **REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-39)**
4. **REMOVE REAR DOOR INNER GLASS WEATHERSTRIP (See page ED-40)**
5. **REMOVE REAR DOOR BELT MOULDING ASSEMBLY**
   (a) Fully open the rear door glass.
   (b) Put protective tape around the rear door belt moulding assembly.

   (c) Using a moulding remover, disengage the clip and 6 claws, and remove the rear door belt moulding assembly.
   HINT:
   Tape the remover tip before use.
   NOTICE:
   Be careful when removing the moulding as there are claws attached to the front end of the moulding.

INSTALLATION

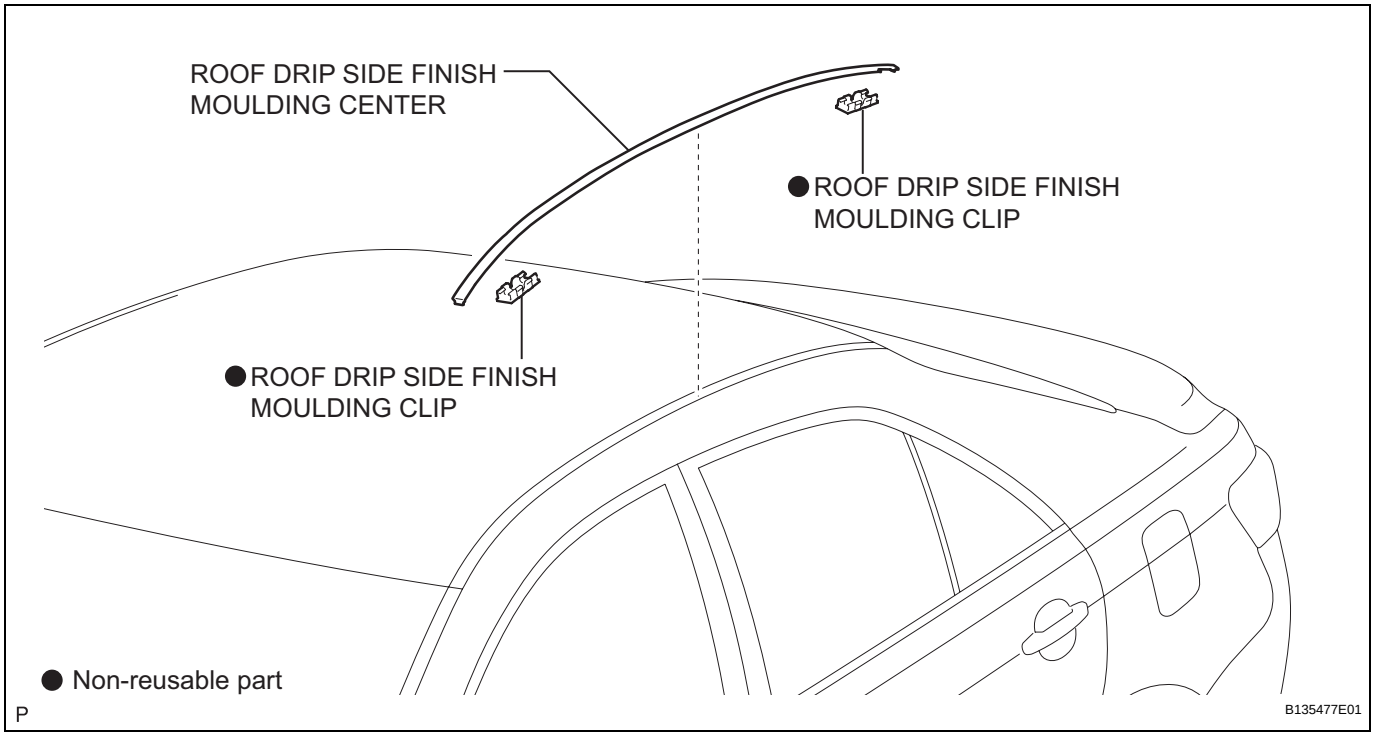
1. **INSTALL REAR DOOR BELT MOULDING ASSEMBLY**
   (a) Engage the clip and 6 claws, and install the rear door belt moulding assembly.
2. **INSTALL REAR DOOR INNER GLASS WEATHERSTRIP (See page ED-54)**
3. **INSTALL REAR DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-55)**
4. **INSTALL DOOR ASSIST GRIP COVER (See page ED-56)**
5. **INSTALL REAR DOOR INSIDE HANDLE BEZEL PLUG (See page ED-56)**



ET

ROOF DRIP SIDE FINISH MOULDING

COMPONENTS



REMOVAL

1. REMOVE ROOF DRIP SIDE FINISH MOULDING CENTER

HINT:

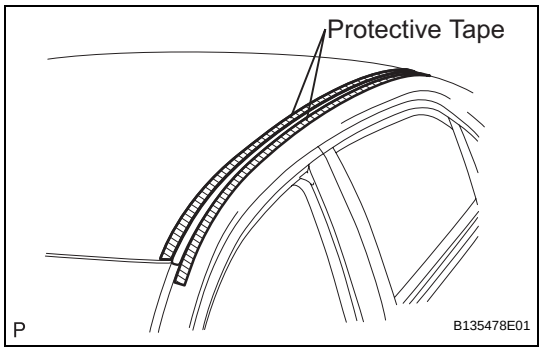
When removing the roof drip side finish moulding center, heat the body and roof drip side finish moulding center using a heat light.

Heating temperature

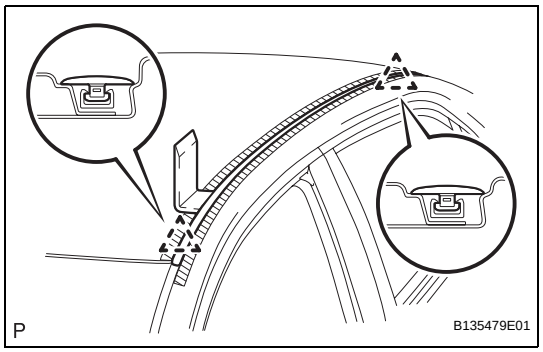
Item	Temperature
Vehicle Body	**40 to 60°C (104 to 140°F)**
Moulding	**20 to 30°C (68 to 86°F)**

NOTICE:

Do not heat the vehicle body and moulding excessively.



(a) Put protective tape around the roof drip side finish moulding center.



(b) Using a moulding remover, disengage the 2 clips and remove the roof drip side finish moulding center.

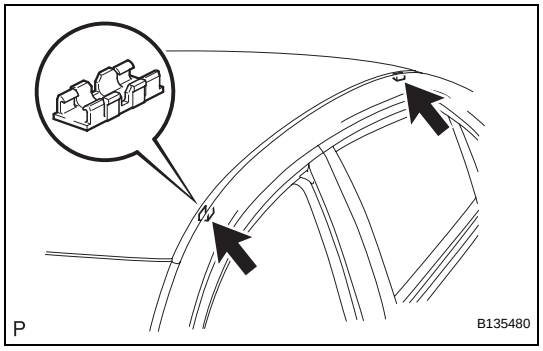
NOTICE:

- **Do not remove the clips.**
- **If the clips are damaged or dropped off, replace them with new ones.**

2. REMOVE ROOF DRIP SIDE FINISH MOULDING CLIP

HINT:

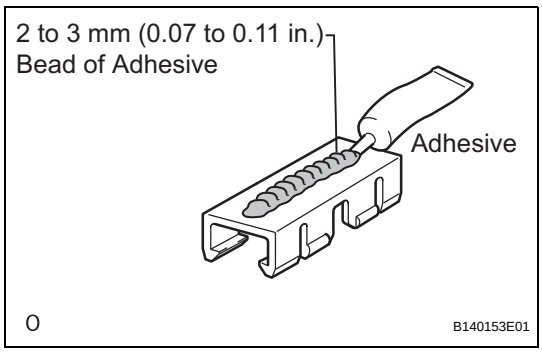
Perform the following procedure if replacing the roof drip side finish moulding clips.



(a) Remove the 2 roof drip side finish moulding clips.

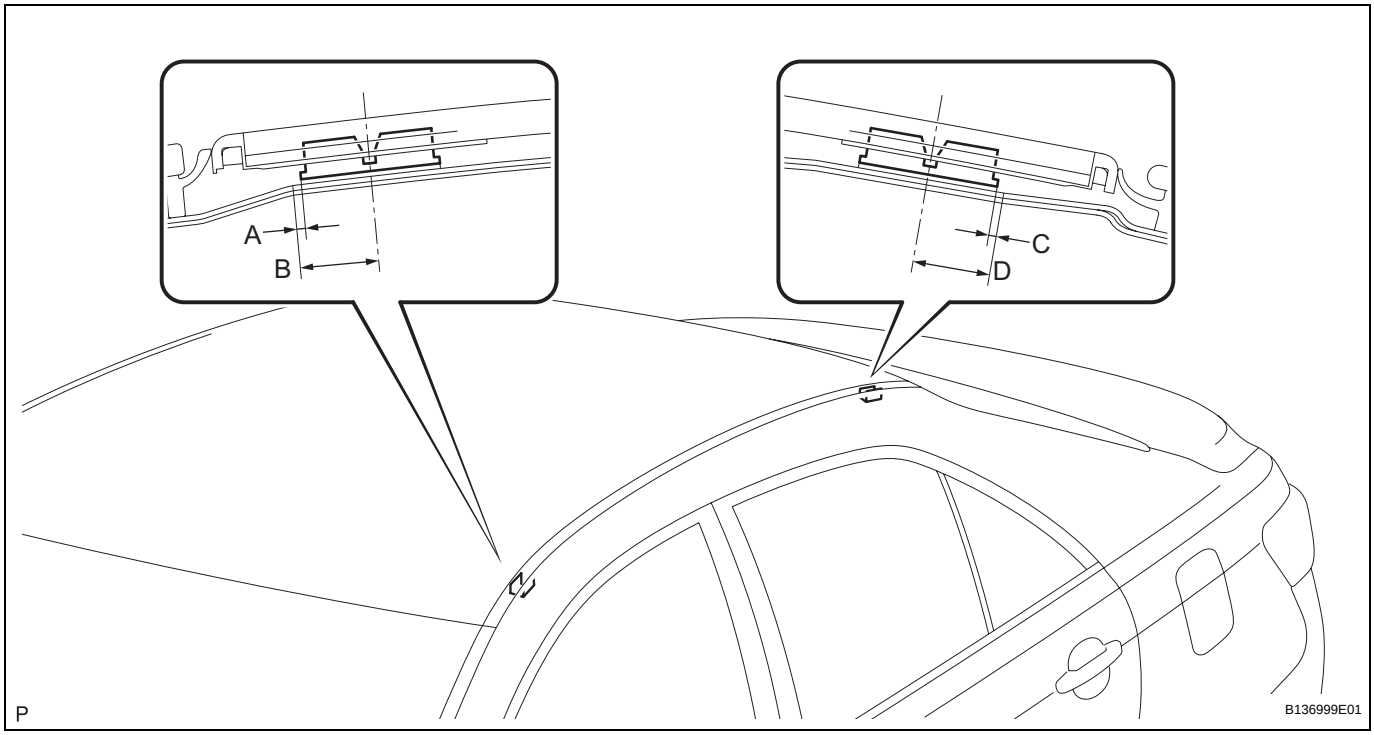
INSTALLATION

1. INSTALL ROOF DRIP SIDE FINISH MOULDING CLIP
NOTICE:
If installing new clips, remove the double-sided tape remaining where the clips will be installed on the body and clean the body with a non-residue type solvent.



(a) Apply a 2 to 3 mm (0.07 to 0.11 in.) bead of adhesive (3M DP-105 or equivalent) to new roof drip side finish moulding clips.
HINT:
Adhesive strength (tensile strength): 13.7 MPa (140 kgf/cm^2) or more (when the temperature is 23°C)

(b) Install the roof drip side finish moulding clips to the positions on the roof panel shown in the illustration. Determine the locations and firmly press and install the roof drip side finish moulding clips after lightly rubbing up adhesive (3M DP-105 or equivalent).



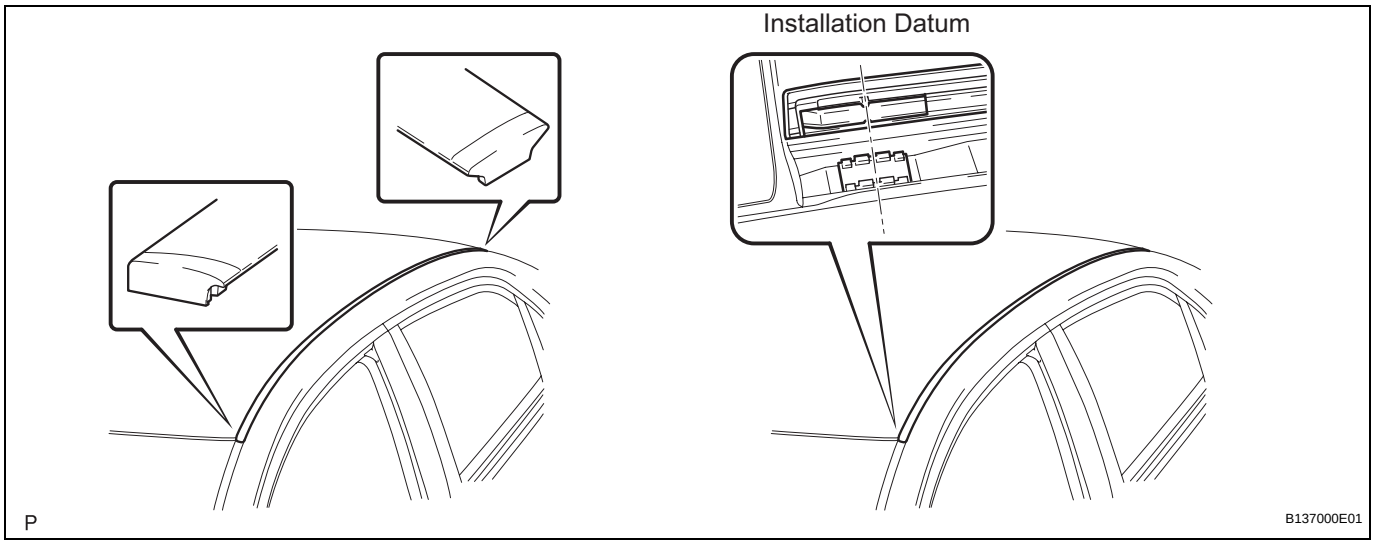
Standard dimension

Area	Dimension
A	1.4 mm (0.055 in.)
B	12.4 mm (0.488 in.)
C	1.1 mm (0.043 in.)
D	12.1 mm (0.476 in.)

HINT:
- Initial hardening time: 20 minutes
- Complete hardening time: 48 hours

2. INSTALL ROOF DRIP SIDE FINISH MOULDING CENTER

(a) Install the roof drip side finish moulding center when 20 minutes or more have elapsed after pressing and installing the roof drip side finish moulding clips.

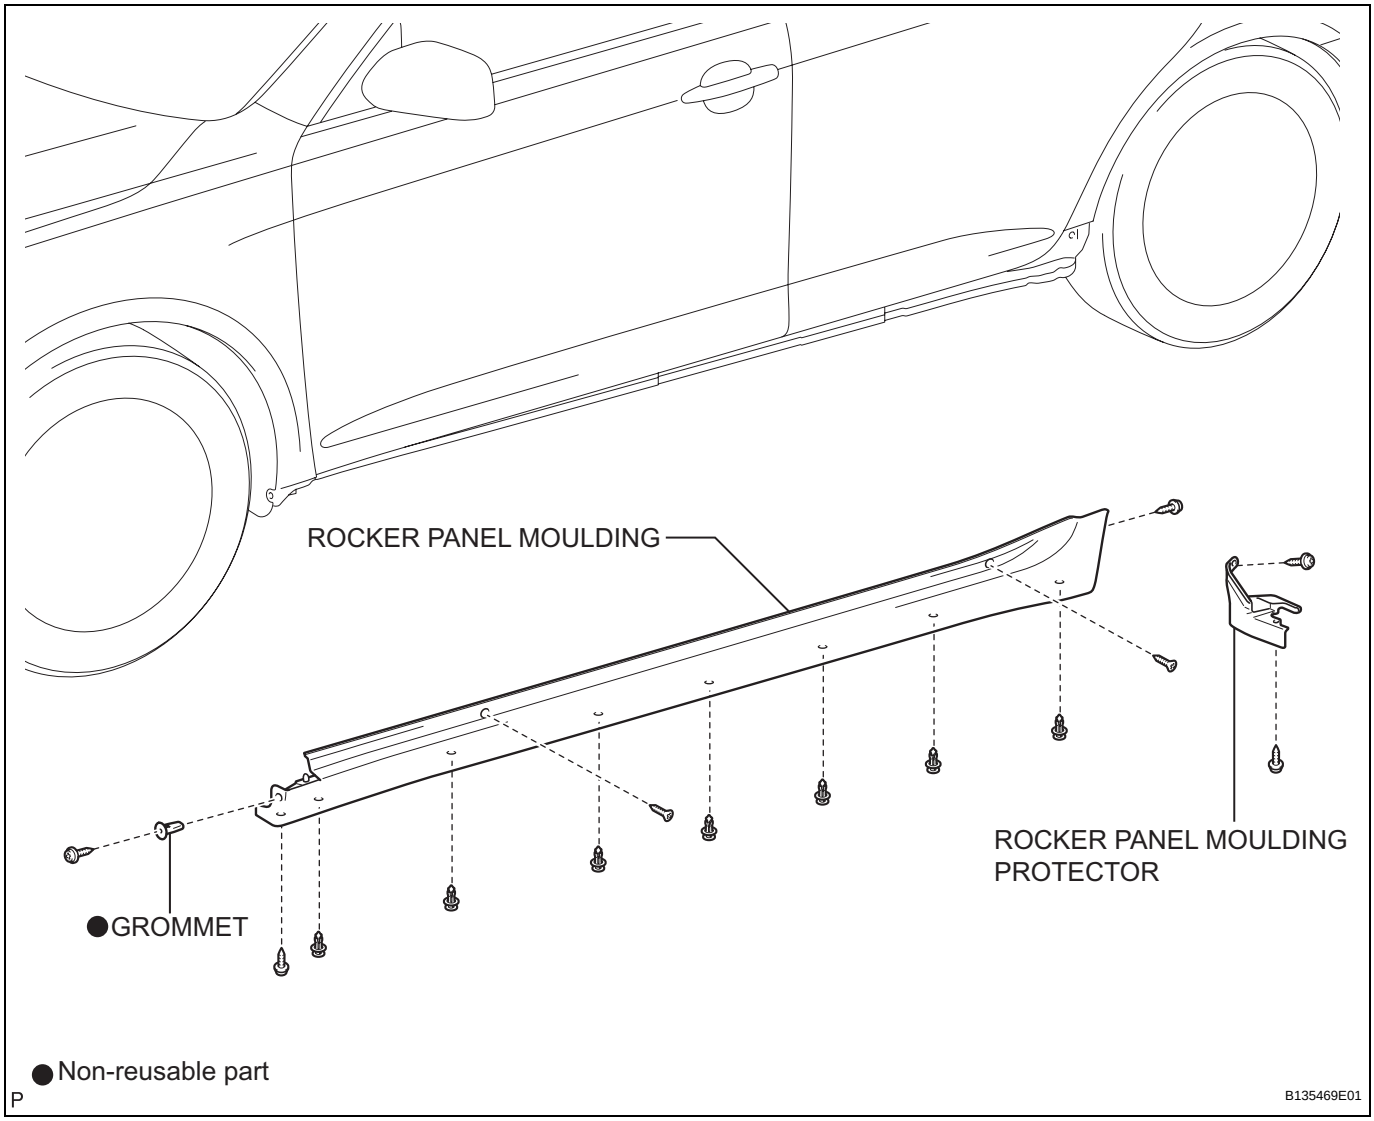


NOTICE:

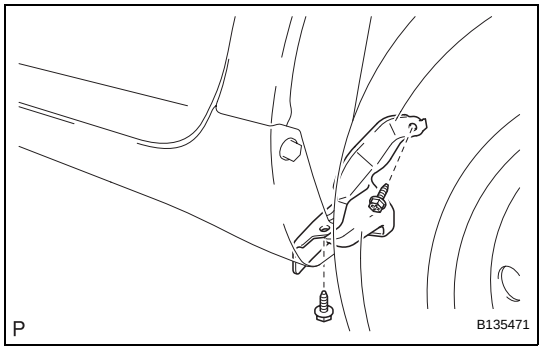
- **Install the roof drip side finish moulding center in the proper direction.**
- **Set the front clip to the installation datum. Make sure that the front clip and roof drip side finish moulding center are fit each other.**

ROCKER PANEL MOULDING

COMPONENTS



REMOVAL

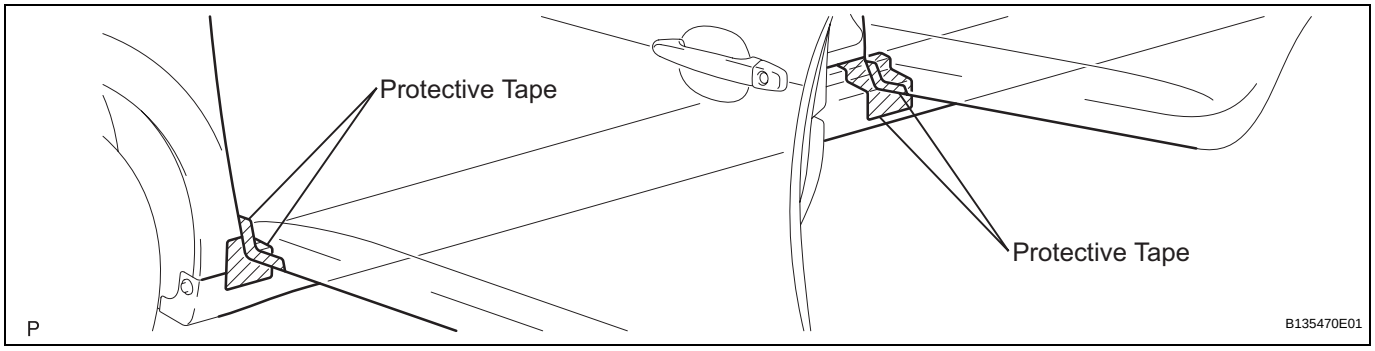


1. REMOVE ROCKER PANEL MOULDING PROTECTOR

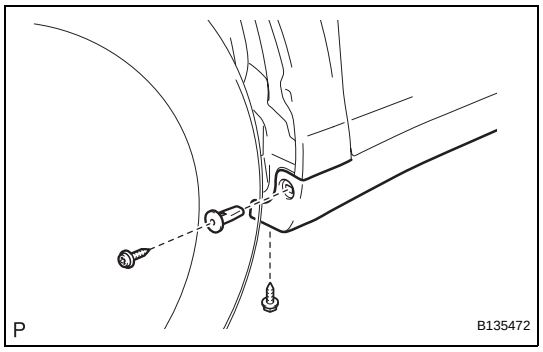
(a) Remove the 2 screws and rocker panel moulding protector.

2. REMOVE ROCKER PANEL MOULDING

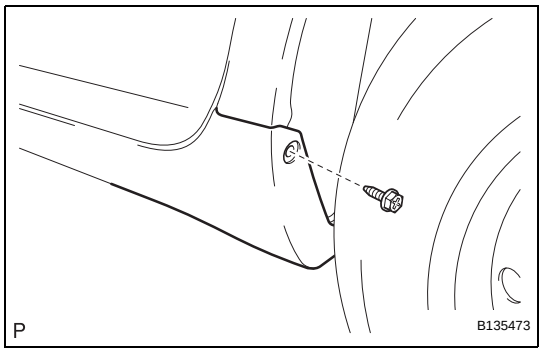
(a) Put protective tape around the rocker panel moulding.



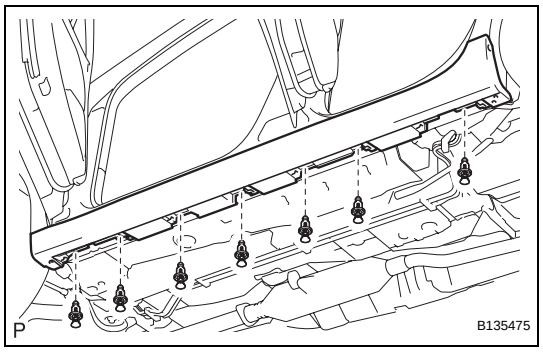
(b) Remove the 2 screws and grommet.



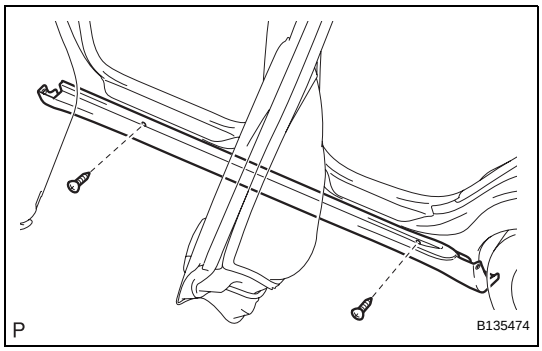
(c) Remove the screw.



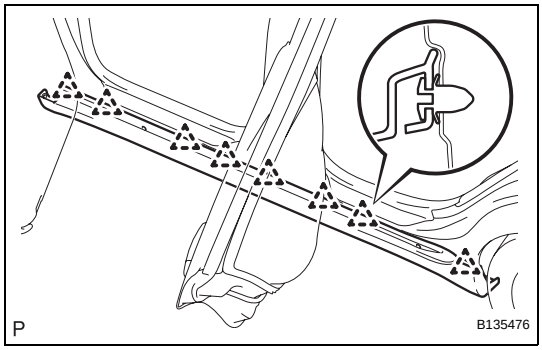
(d) Remove the 7 clips.



ET



(e) Remove the 2 screws.



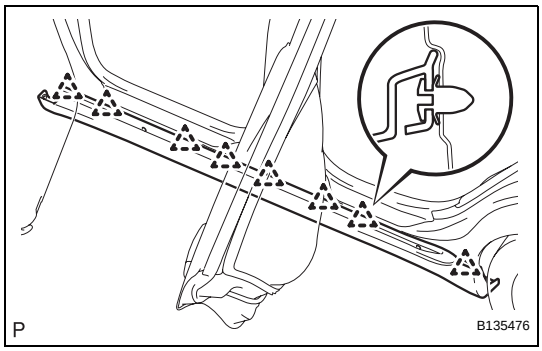
(f) Disengage the 8 clips and remove the rocker panel moulding.

ET

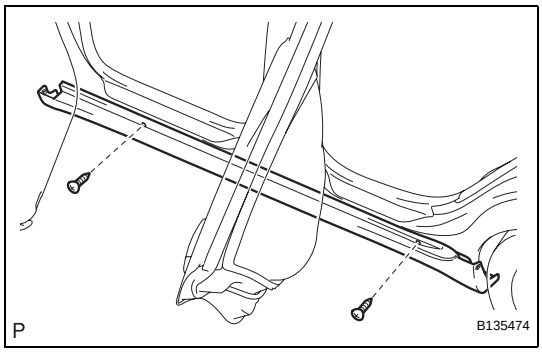
INSTALLATION

1. INSTALL ROCKER PANEL MOULDING

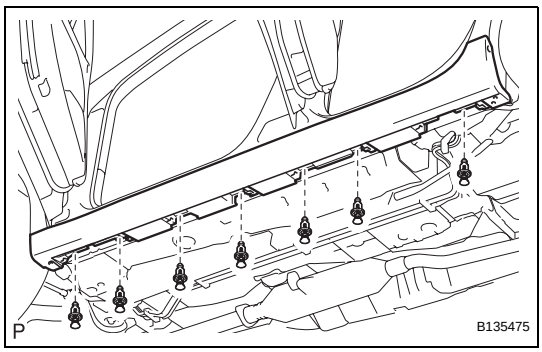
(a) Engage the 8 clips and install the rocker panel moulding.

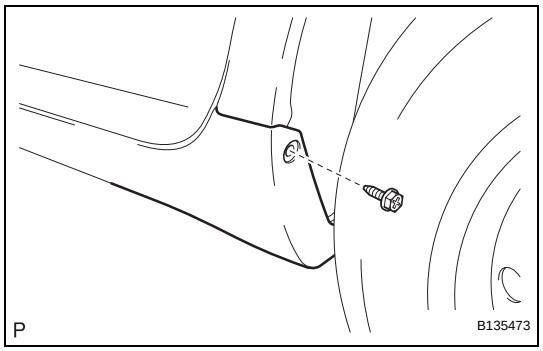


(b) Install the 2 screws.

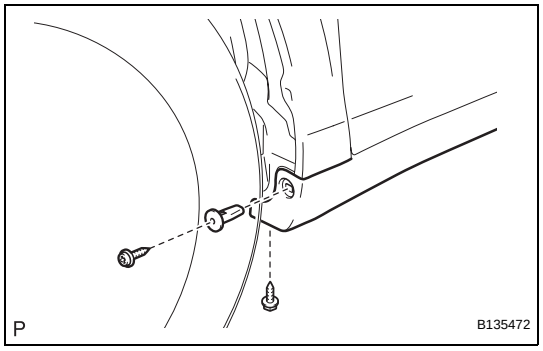


(c) Install the 7 clips.

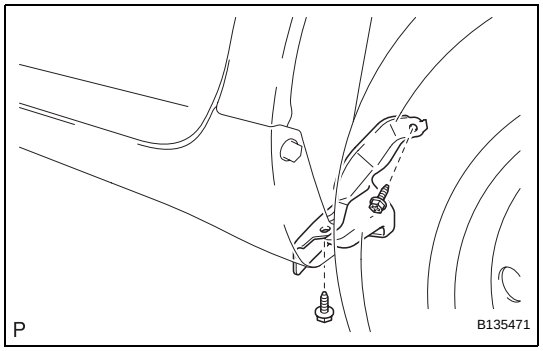




(d) Install the screw.



(e) Install a new grommet and 2 screws.



2. INSTALL ROCKER PANEL MOULDING PROTECTOR

(a) Install the rocker panel moulding protector with the 2 screws.

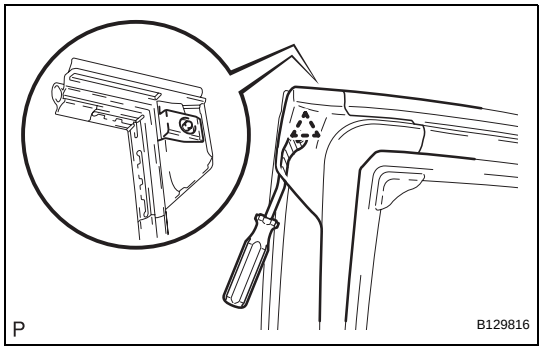
REMOVAL

1. **REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH (See page ED-14)**
2. **REMOVE FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-14)**
3. **REMOVE ASSIST GRIP COVER (See page ED-15)**
4. **REMOVE COURTESY LIGHT ASSEMBLY (See page ED-15)**
5. **REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-15)**
6. **REMOVE FRONT DOOR INNER GLASS WEATHERSTRIP (See page ED-16)**
7. **REMOVE FRONT DOOR INSIDE HANDLE SUB-ASSEMBLY (See page ED-17)**
8. **REMOVE FRONT NO. 1 SPEAKER ASSEMBLY (See page AV-155)**
9. **REMOVE OUTER REAR VIEW MIRROR ASSEMBLY (See page MI-15)**
10. **REMOVE FRONT DOOR SERVICE HOLE COVER (See page ED-17)**
11. **REMOVE FRONT DOOR GLASS SUB-ASSEMBLY (See page ED-17)**
12. **REMOVE FRONT DOOR GLASS RUN (See page ED-19)**
13. **REMOVE FRONT DOOR WEATHERSTRIP**
    (a) Using a clip remover, disengage the clip and remove the front door weatherstrip.

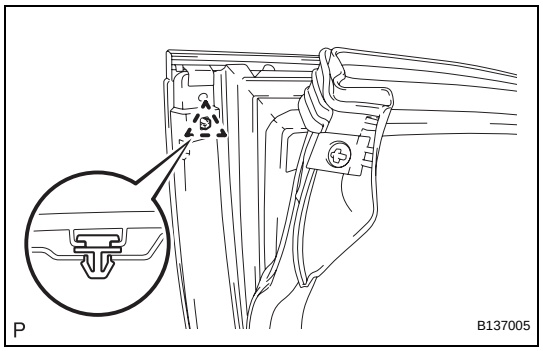


14. **REMOVE FRONT DOOR REAR WINDOW FRAME MOULDING**
    HINT:
    When removing the front door rear window frame moulding, heat the vehicle body and front door rear window frame moulding using a heat light.
    Heating temperature

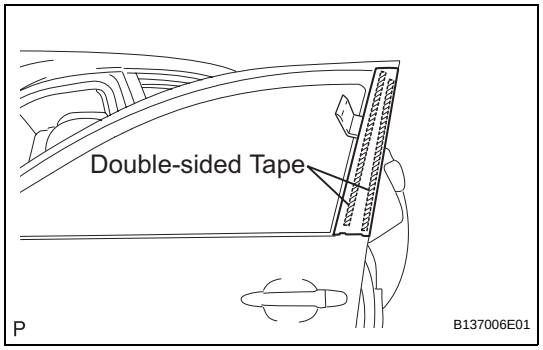
Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)
Moulding	20 to 30°C (68 to 86°F)

NOTICE:
Do not heat the vehicle body and moulding excessively.

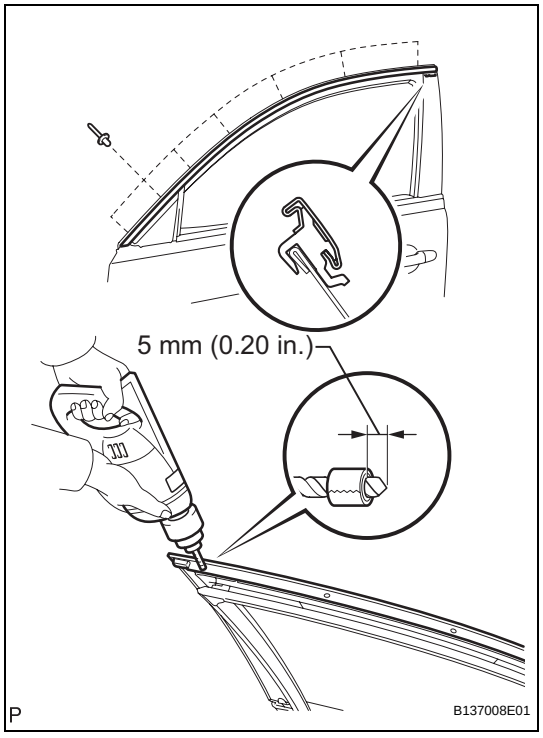
(a) Using a heat light, heat the front door rear window frame moulding.



(b) Disengage the clip.



(c) Using a moulding remover, remove the front door rear window frame moulding.



15. REMOVE FRONT DOOR UPPER WINDOW FRAME MOULDING

(a) Put a 4 mm (0.16 in.) drill bit into a drill.

(b) Tape the drill bit without the portion of 5 mm (0.20 in.) from the tip covered.
HINT:
Tape the drill bit to prevent the drill bit from going too deep.

(c) Lightly press the drill against the rivets, drill off the flanges of the rivets, and remove the 7 rivets.
NOTICE:
- **Pressing the drill too firmly will cause the rivet to turn and result in the rivet not being drilled through.**
- **Do not pry the rivets with the drill, because this may cause damage to the installation holes of the rivets or the drill bit.**
- **Be careful when touching the drilled rivets as they may become hot.**

(d) Using a vacuum cleaner, remove the rivet fragments and shavings from the drilled areas.

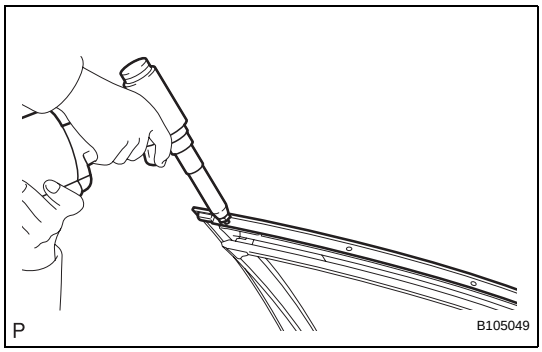
(e) Remove the front door upper window frame moulding from the door frame.

INSTALLATION

1. INSTALL FRONT DOOR UPPER WINDOW FRAME MOULDING

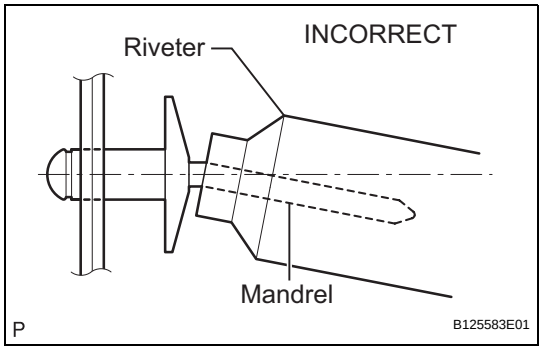
(a) Install the front door upper window frame moulding to the door frame.

(b) Using an air riveter or hand riveter with a nose piece, install the front door upper window frame moulding with 7 new rivets.
HINT:
If the rivet cannot be cut, pull it once and cut it.

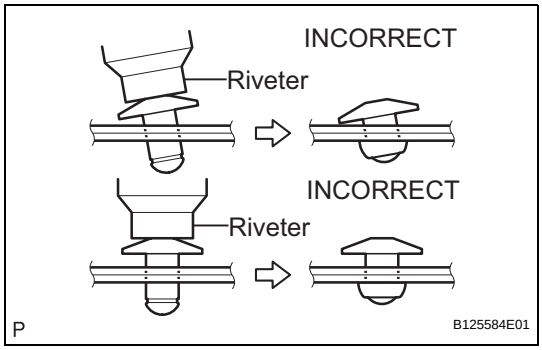


NOTICE:

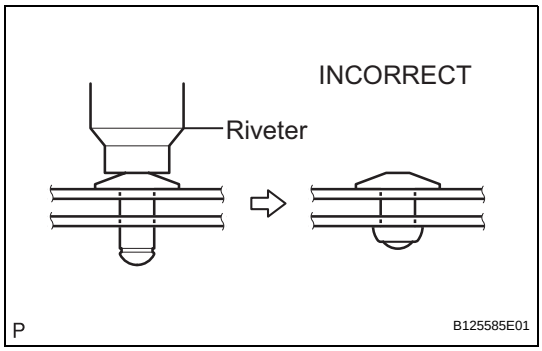
- **Do not pry the rivet with the riveter, as this will cause damage to the riveter and mandrel.**



- **Confirm that the rivets are seated properly against the moulding. Do not tilt the riveter when installing the rivet to the moulding. Do not leave any space between the rivet head and moulding.**



- **Do not leave any space between the moulding and door frame. Firmly hold together the 2 items while installing the rivet.**



2. INSTALL FRONT DOOR REAR WINDOW FRAME MOULDING

HINT:
When installing the front door rear window frame moulding, heat the vehicle body and front door rear window frame moulding using a heat light.

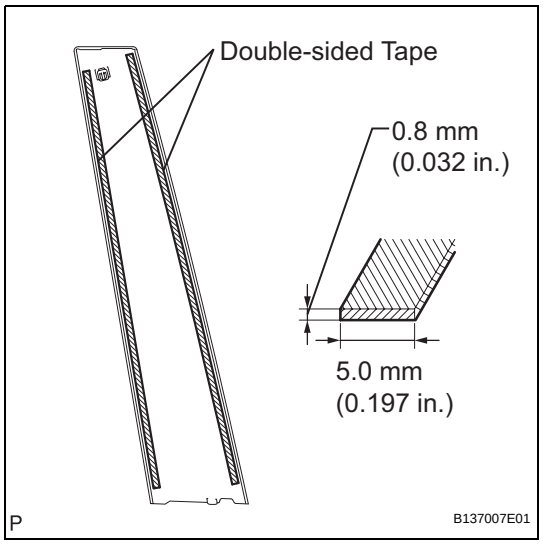
Heating temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)
Moulding	20 to 30°C (68 to 86°F)

NOTICE:
Do not heat the vehicle body and front door window frame moulding excessively.

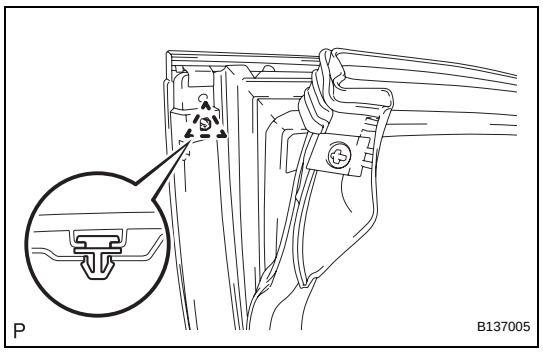
(a) Clean the vehicle body surface.
  (1) Using a heat light, heat the vehicle body surface.
  (2) Remove the double-sided tape from the vehicle body.
  (3) Wipe off any tape adhesive residue with cleaner.

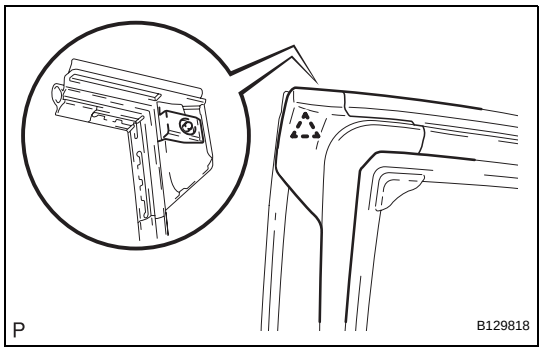
(b) Clean the front door rear window frame moulding. (If reusing the front door rear window frame moulding)
  (1) Using a heat light, heat the front door rear window frame moulding.
  (2) Remove the double-sided tape from the front door rear window frame moulding.
  (3) Wipe off any tape adhesive residue with cleaner.
  (4) Apply new double-sided tape to the front door rear window frame moulding.



(c) Install the front door rear window frame moulding.
  (1) Using a heat light, heat the vehicle body and front door rear window frame moulding.
  (2) Remove the release paper from the front door rear window frame moulding.
  HINT:
  After removing the release paper, keep the exposed adhesive free from foreign matter.

  (3) Engage the clip and install the front door rear window frame moulding.





3. **INSTALL FRONT DOOR WEATHERSTRIP**
   (a) Engage the clip and install the front door weatherstrip.
4. **INSTALL FRONT DOOR GLASS RUN (See page ED-30)**
5. **INSTALL FRONT DOOR GLASS SUB-ASSEMBLY (See page ED-31)**
6. **INSTALL FRONT DOOR SERVICE HOLE COVER (See page ED-32)**
7. **INSTALL OUTER REAR VIEW MIRROR ASSEMBLY (See page MI-17)**

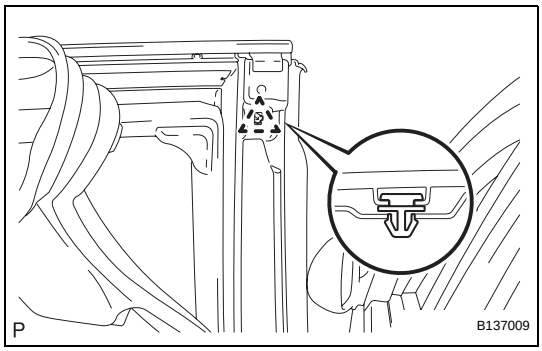
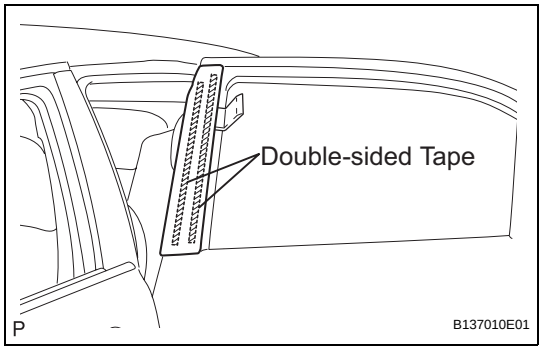
NOTICE:
Do not heat the vehicle body and moulding excessively.

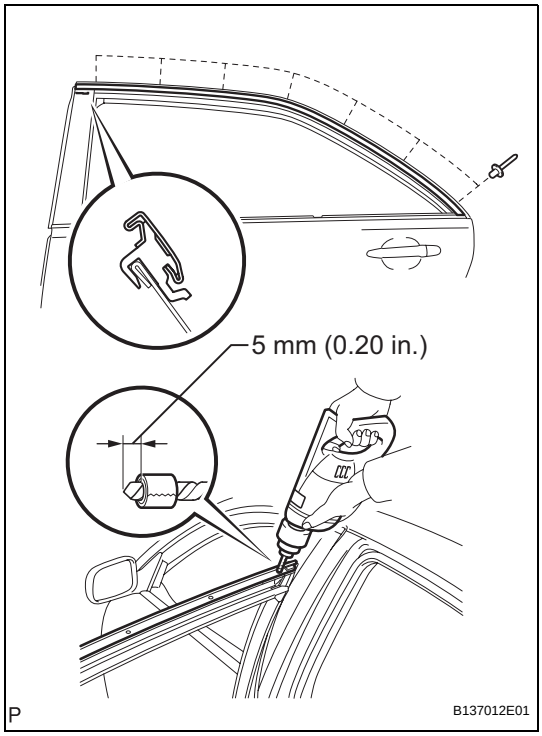
(a) Using a heat light, heat the rear door front window frame moulding.



(b) Disengage the clip.



(c) Using a moulding remover, remove the rear door front window frame moulding.



13. REMOVE REAR DOOR UPPER WINDOW FRAME MOULDING

(a) Put a 4 mm (0.16 in.) drill bit into a drill.

(b) Tape the drill bit without the portion of 5 mm (0.20 in.) from the tip covered.
HINT:
Tape the drill bit to prevent the drill bit from going too deep.

(c) Lightly press the drill bit against the rivets, drill off the flanges of the rivets, and remove the 7 rivets.
NOTICE:
- **Pressing the drill too firmly will cause the rivet to turn and result in the rivet not being drilled through.**
- **Do not pry the rivets with the drill, as this may cause damage to the installation holes of the rivets or the drill bit.**
- **Be careful when touching the drilled rivets, as they may become hot.**

(d) Using a vacuum cleaner, remove the rivet fragments and shavings from the drilled areas.

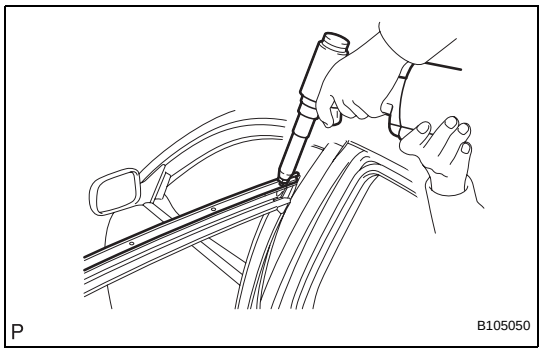
(e) Remove the rear door upper window frame moulding from the door frame.

INSTALLATION

1. INSTALL REAR DOOR UPPER WINDOW FRAME MOULDING

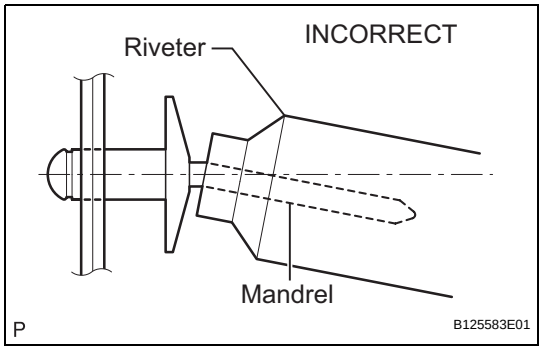
(a) Install the rear door upper window frame moulding to the door frame.

(b) Using an air riveter or hand riveter with a nose piece, install the rear door upper window frame moulding with 7 new rivets.
HINT:
If the rivet cannot be cut, pull it once and cut it.

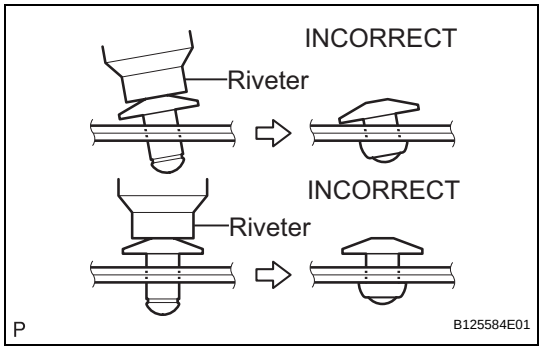


NOTICE:

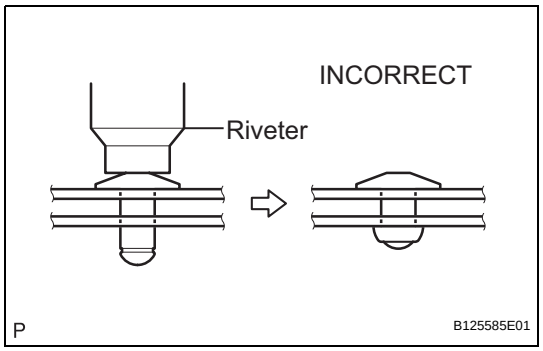
- **Do not pry the rivet with the riveter, as this will cause damage to the riveter and mandrel.**



- **Confirm that the rivets are seated properly against the moulding. Do not tilt the riveter when installing the rivet to the moulding. Do not leave any space between the rivet head and moulding.**



- **Do not leave any space between the moulding and door frame. Firmly hold together the 2 items while installing the rivet.**



2. INSTALL REAR DOOR FRONT WINDOW FRAME MOULDING

HINT:
When installing the rear door front window frame moulding, heat the vehicle body and rear door front window frame using a heat light.

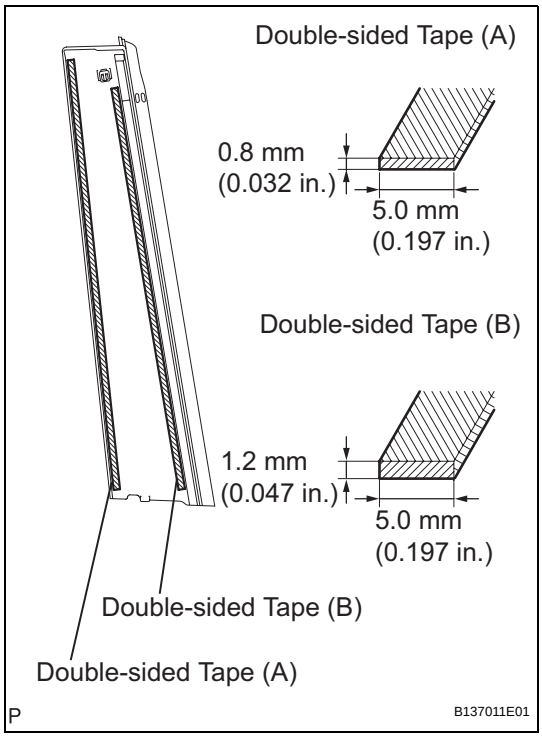
Heating temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)
Moulding	20 to 30°C (68 to 86°F)

NOTICE:
Do not heat the vehicle body and rear door window frame moulding excessively.

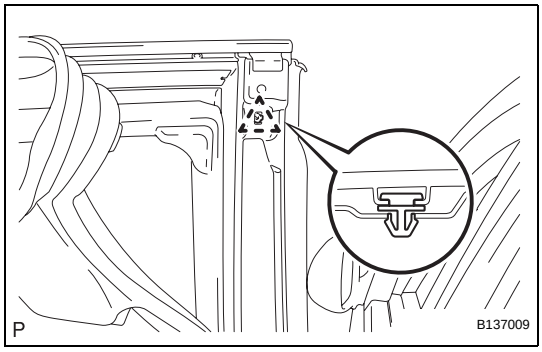
(a) Clean the vehicle body surface.
  (1) Using a heat light, heat the vehicle body surface.
  (2) Remove the double-sided tape from the vehicle body.
  (3) Wipe off any tape adhesive residue with cleaner.

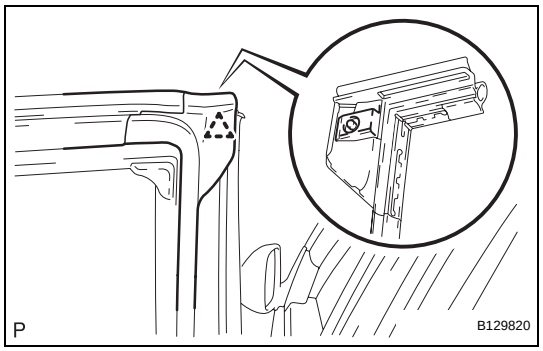
(b) Clean the rear door front window frame moulding. (If reusing the rear door front window frame moulding)
  (1) Using a heat light, heat the rear door front window frame moulding.
  (2) Remove the double-sided tape from the rear door front window frame moulding.
  (3) Wipe off any tape adhesive residue with cleaner.
  (4) Apply new double-sided tape to the rear door front window frame moulding.



(c) Install the rear door front window frame moulding.
  (1) Using a heat light, heat the vehicle body and rear door front window frame moulding.
  (2) Remove the release paper from the rear door front window frame moulding.
  HINT:
  After removing the release paper, keep the exposed adhesive free from foreign matter.

  (3) Engage the clip and install the rear door front window frame moulding.

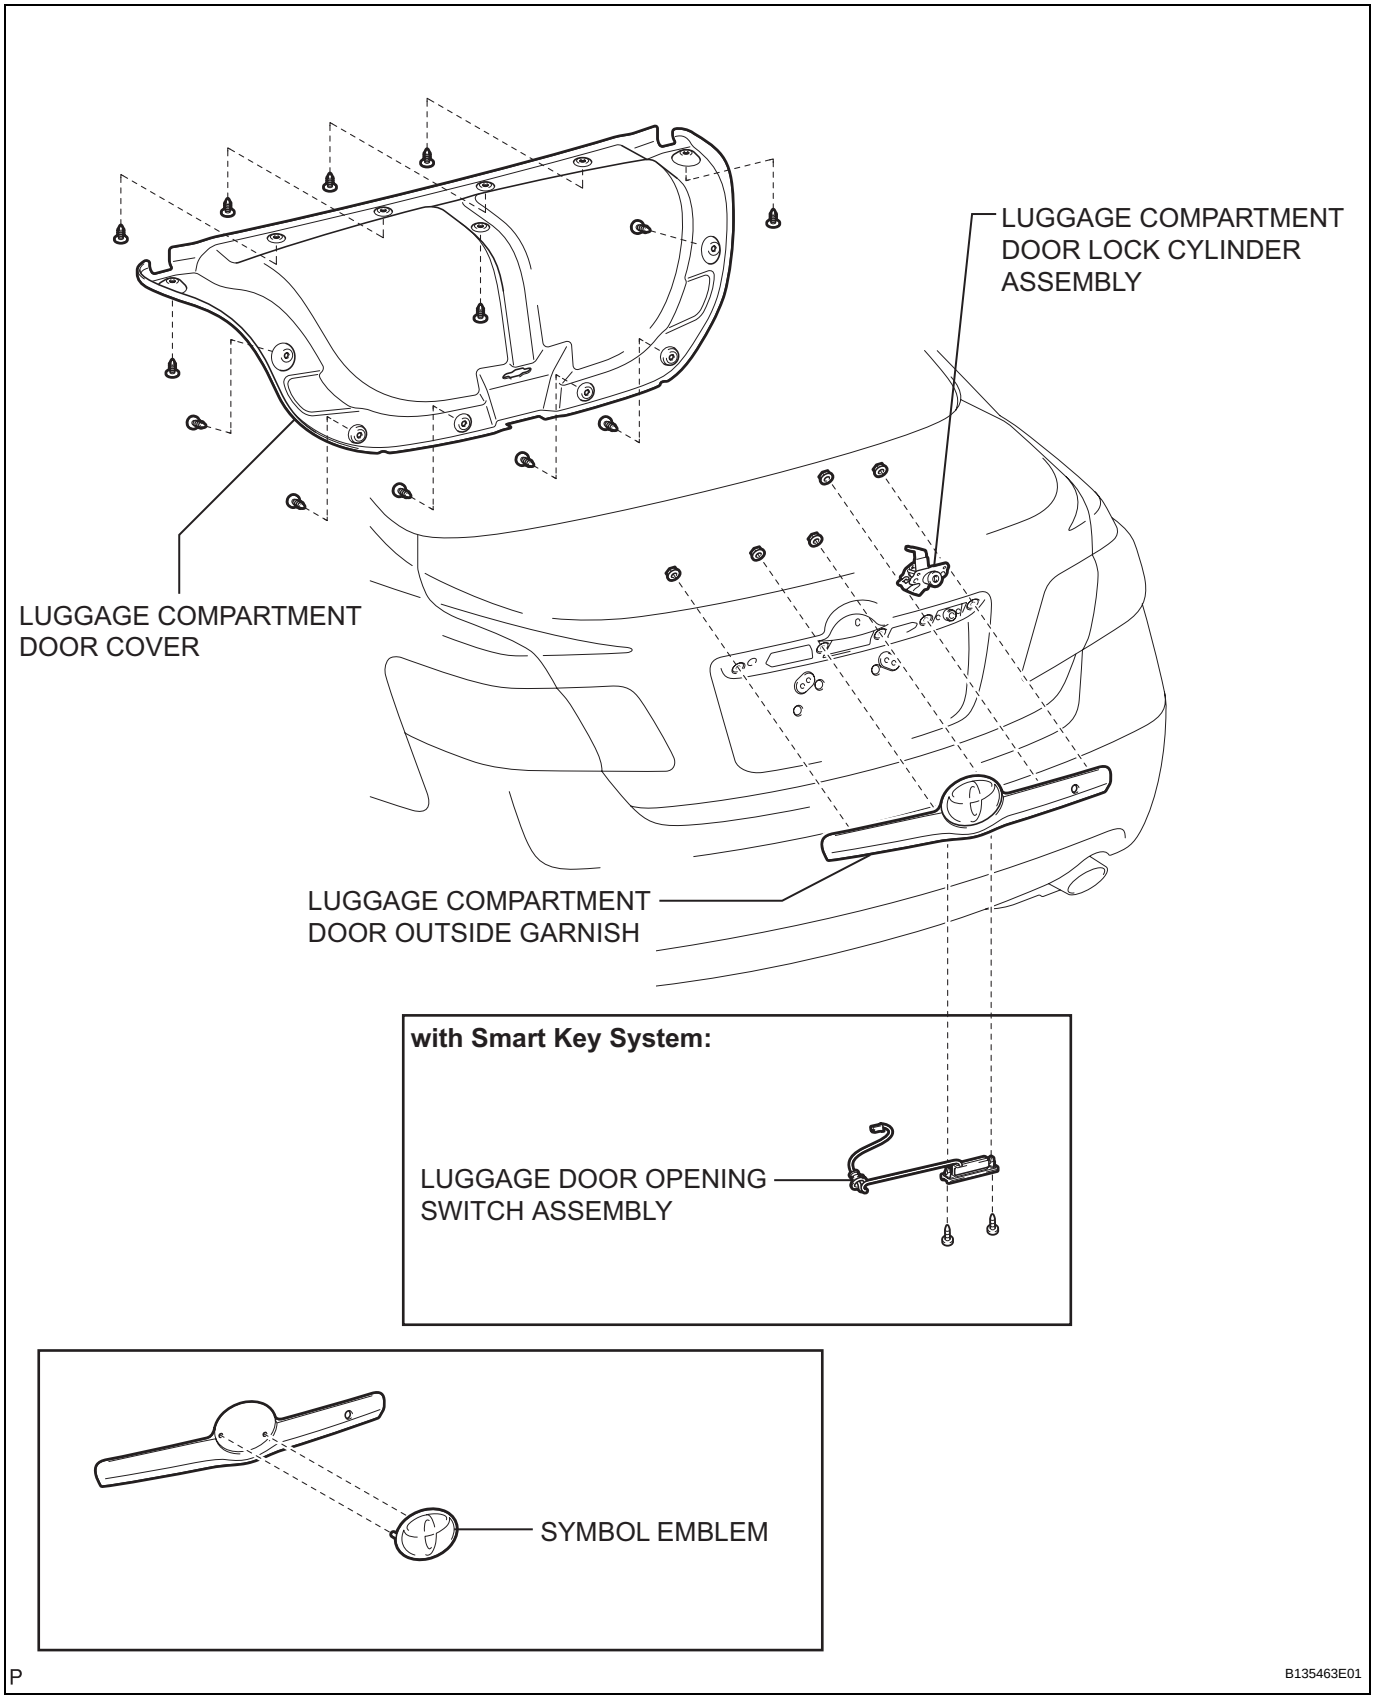


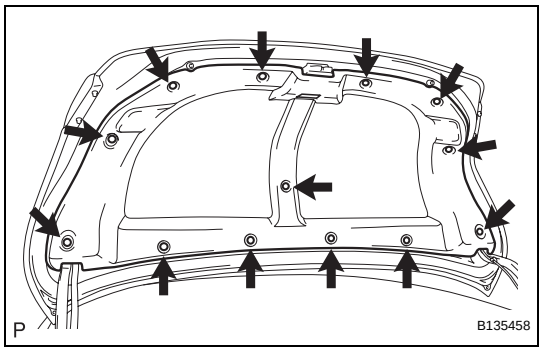


3. **INSTALL REAR DOOR WEATHERSTRIP**
   (a) Engage the clip and install the rear door weatherstrip.
4. **INSTALL REAR DOOR GLASS SUB-ASSEMBLY (See page ED-52)**
5. **INSTALL REAR DOOR QUARTER WINDOW GLASS (See page ED-52)**
6. **INSTALL REAR DOOR LOWER WINDOW FRAME SUB-ASSEMBLY (See page ED-52)**
7. **INSTALL REAR DOOR GLASS RUN (See page ED-52)**
8. **INSTALL REAR DOOR SERVICE HOLE COVER (See page ED-53)**
9. **INSTALL REAR DOOR INSIDE HANDLE SUB-ASSEMBLY (See page ED-55)**
10. **INSTALL REAR DOOR INNER GLASS WEATHERSTRIP (See page ED-54)**
11. **INSTALL REAR DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-55)**
12. **INSTALL DOOR ASSIST GRIP COVER (See page ED-56)**
13. **INSTALL REAR DOOR INSIDE HANDLE BEZEL PLUG (See page ED-56)**

LUGGAGE COMPARTMENT DOOR GARNISH

COMPONENTS



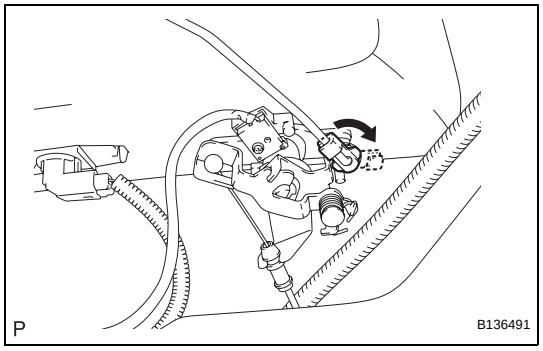


REMOVAL

1. REMOVE LUGGAGE COMPARTMENT DOOR COVER

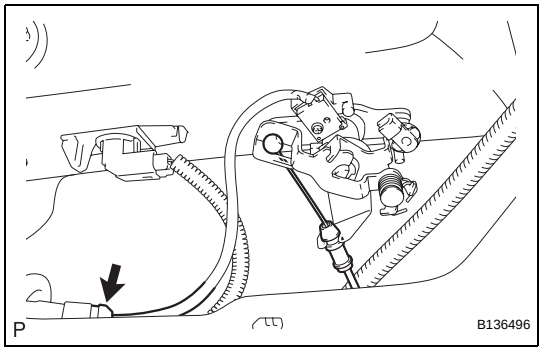
(a) Using a clip remover, remove the 13 clips and luggage compartment door cover.

2. REMOVE LUGGAGE DOOR OPENING SWITCH ASSEMBLY (w/ Smart Key System) (See page DL-246)

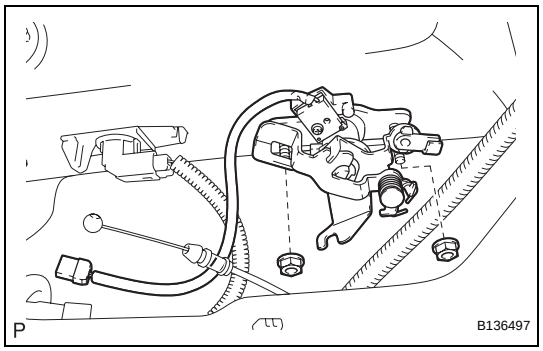


3. REMOVE LUGGAGE COMPARTMENT DOOR LOCK CYLINDER ASSEMBLY

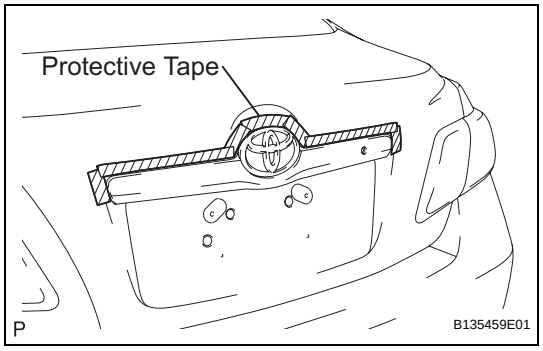
(a) Disconnect the rod.



(b) Disconnect the cable and connector.

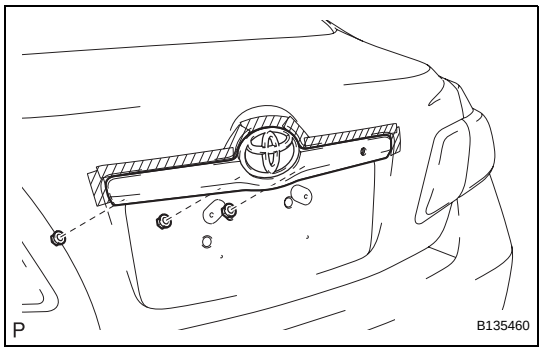


(c) Remove the 2 nuts and luggage compartment door lock cylinder assembly.

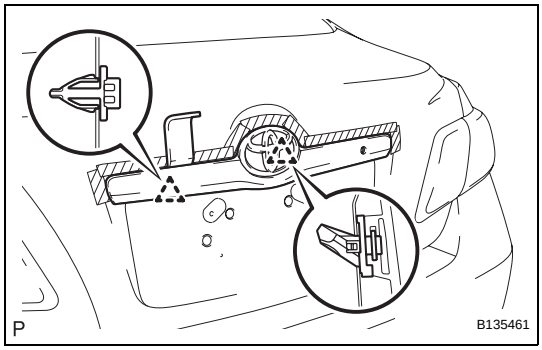


4. REMOVE LUGGAGE COMPARTMENT DOOR OUTSIDE GARNISH

(a) Put protective tape around the luggage compartment door outside garnish.



(b) Remove the 3 nuts.



(c) Using a moulding remover, disengage the 2 clips and remove the luggage compartment door outside garnish.

5. REMOVE SYMBOL EMBLEM

HINT:

When removing the symbol emblem, heat the luggage compartment door outside garnish and symbol emblem using a heat light.

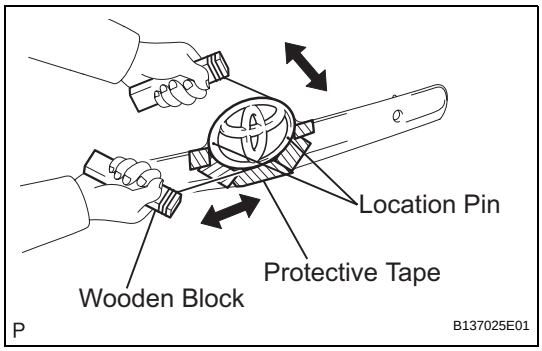
Heating temperature

Item	Temperature
Luggage compartment door outside garnish	**40 to 60°C (104 to 140°F)**
Symbol emblem	**20 to 30°C (68 to 86°F)**

NOTICE:

Do not heat the luggage compartment door outside garnish and symbol emblem excessively.

(a) Put protective tape around the symbol emblem.



(b) Insert a piano wire between the luggage compartment door outside garnish and symbol emblem.

(c) Tie objects that can serve as handles (for example, wooden blocks) to both wire ends.

(d) Pull the piano wire and scrape off the double-sided tape that holds the symbol emblem to the luggage compartment door outside garnish.

NOTICE:

- **If reusing the symbol emblem, take care not to damage the symbol emblem.**
- **Be careful not to damage the luggage compartment door outside garnish.**

(e) Remove the symbol emblem.

INSTALLATION

1. INSTALL SYMBOL EMBLEM

HINT:

When installing the symbol emblem, heat the luggage compartment door outside garnish and symbol emblem using a heat light.

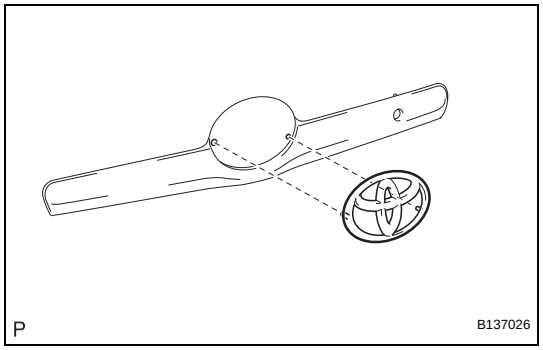
Heating temperature

Item	Temperature
Luggage compartment door outside garnish	**40 to 60°C (104 to 140°F)**
Symbol emblem	**20 to 30°C (68 to 86°F)**

NOTICE:

Do not heat the luggage compartment door outside garnish and symbol emblem excessively.

(a) Clean the luggage compartment door outside garnish surface.
  (1) Using a heat light, heat the luggage compartment door outside garnish surface.
  (2) Remove the double-sided tape from the luggage compartment door outside garnish.
  (3) Wipe off any tape adhesive residue with cleaner.



(b) Clean the symbol emblem. (If reusing the symbol emblem)
  (1) Using a heat light, heat the symbol emblem.
  (2) Remove the double-sided tape from the symbol emblem.
  (3) Wipe off any tape adhesive residue with cleaner.
  (4) Apply new double-sided tape to the symbol emblem.

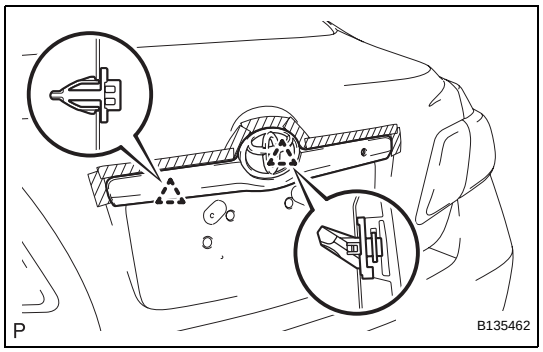
(c) Install the symbol emblem.
  (1) Using a heat light, heat the luggage compartment door outside garnish and symbol emblem.
  (2) Remove the release paper from the symbol emblem.

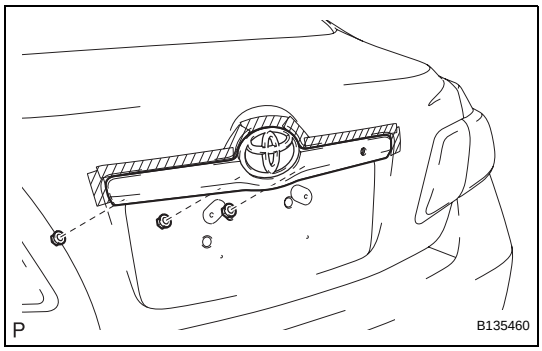
  HINT:

  After removing the release paper, keep the exposed adhesive free from foreign matter.
  (3) Install the symbol emblem.

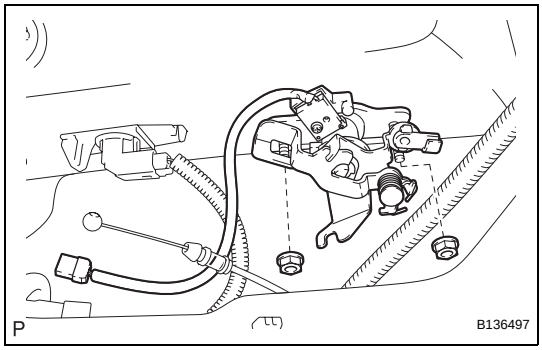
2. INSTALL LUGGAGE COMPARTMENT DOOR OUTSIDE GARNISH

(a) Engage the 2 clips and install the luggage compartment door outside garnish.



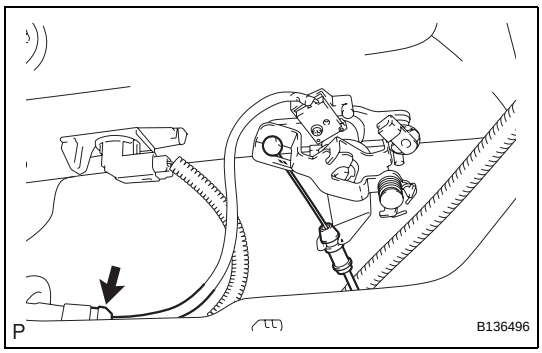


(b) Install the 3 nuts.

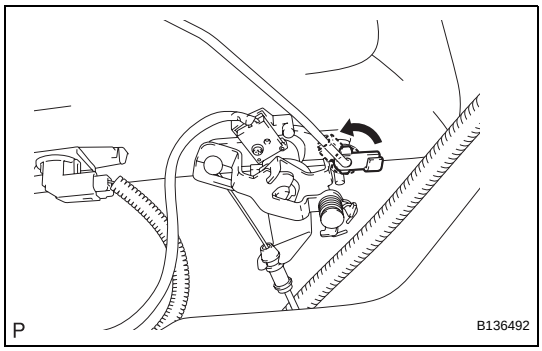


3. INSTALL LUGGAGE COMPARTMENT DOOR LOCK CYLINDER ASSEMBLY

(a) Install the luggage compartment door lock cylinder with the 2 nuts.

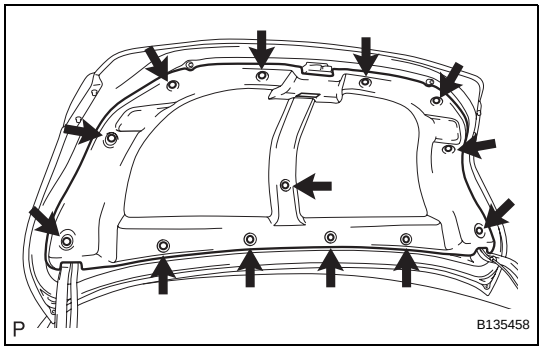


(b) Connect the cable and connector.



(c) Connect the rod.

4. INSTALL LUGGAGE DOOR OPENING SWITCH ASSEMBLY (w/ Smart Key System) (See page DL-246)



5. INSTALL LUGGAGE COMPARTMENT DOOR COVER

(a) Install the luggage compartment door cover with the 13 clips.

FRONT DOOR BLACK OUT TAPE

REMOVAL

1. **REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH (See page ED-14)**
2. **REMOVE FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-14)**
3. **REMOVE ASSIST GRIP COVER (See page ED-15)**
4. **REMOVE COURTESY LIGHT ASSEMBLY (See page ED-15)**
5. **REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-15)**
6. **REMOVE FRONT DOOR INNER GLASS WEATHERSTRIP (See page ED-16)**
7. **REMOVE FRONT DOOR INSIDE HANDLE SUB-ASSEMBLY (See page ED-17)**
8. **REMOVE FRONT NO. 1 SPEAKER ASSEMBLY (See page AV-155)**
9. **REMOVE OUTER REAR VIEW MIRROR ASSEMBLY (See page MI-15)**
10. **REMOVE FRONT DOOR SERVICE HOLE COVER (See page ED-17)**
11. **REMOVE FRONT DOOR GLASS SUB-ASSEMBLY (See page ED-17)**
12. **REMOVE FRONT DOOR GLASS RUN (See page ED-19)**
13. **REMOVE FRONT DOOR WEATHERSTRIP (See page ET-48)**
14. **REMOVE DOOR FRAME GARNISH (See page ED-19)**
15. **REMOVE FRONT DOOR STRIPE**
    (a) Using a heat light, heat the front door stripe.
    Heating temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)

    NOTICE:
    Do not heat the vehicle body excessively.
    (b) Pull back an edge of the front door stripe and pull it parallel to the vehicle body to pull it off.
16. **REMOVE FRONT DOOR LOWER OUTSIDE STRIPE**
    (a) Using a heat light, heat the front door lower outside stripe.
    Heating temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)

    NOTICE:
    Do not heat the vehicle body excessively.

(b) Pull back an edge of the front door lower outside stripe and pull it parallel to the vehicle body to pull it off.

INSTALLATION

1. REPAIR INSTRUCTION

(a) Clean the vehicle body surface.

(1) Using a heat light, heat the vehicle body surface.

Heating temperature

Item	Temperature
Vehicle Body	**40 to 60°C (104 to 140°F)**

NOTICE:

Do not heat the vehicle body excessively.

(2) Wipe off any tape adhesive residue with cleaner.

(b) Installation temperature

(1) When ambient temperature is below 15°C, perform the installation procedure after warming the vehicle body surface (installation surface of the door frame) and tape up to between 20 to 30°C using a heat light. When ambient temperature is above 35°C, cool the vehicle body surface (installation surface of the door frame) and tape down to between 20 to 30°C prior to installation.

HINT:

- The most appropriate temperature for installing the tape is 25°C.
- When the temperature is low, the tape turns stiff and comes off easily. When the temperature is high, the tape looses elasticity.

(c) Before installation

(1) Remove any roughness of coating and dirt on and around the vehicle body surface where the tape will be installed (installation surface of the door frame). If any roughness or dirt remains when pressing the tape onto the surface, air will be trapped under the tape and result in a poor appearance.

HINT:

Spray water on the shop floor to settle any dust.

(d) Key points for handling the tape

(1) The tape bends and rolls up easily. Store the tape between flat pieces of cardboard or other similar objects and keep it dry and level.

NOTICE:

Do not bend the tape or leave it in high temperature places.

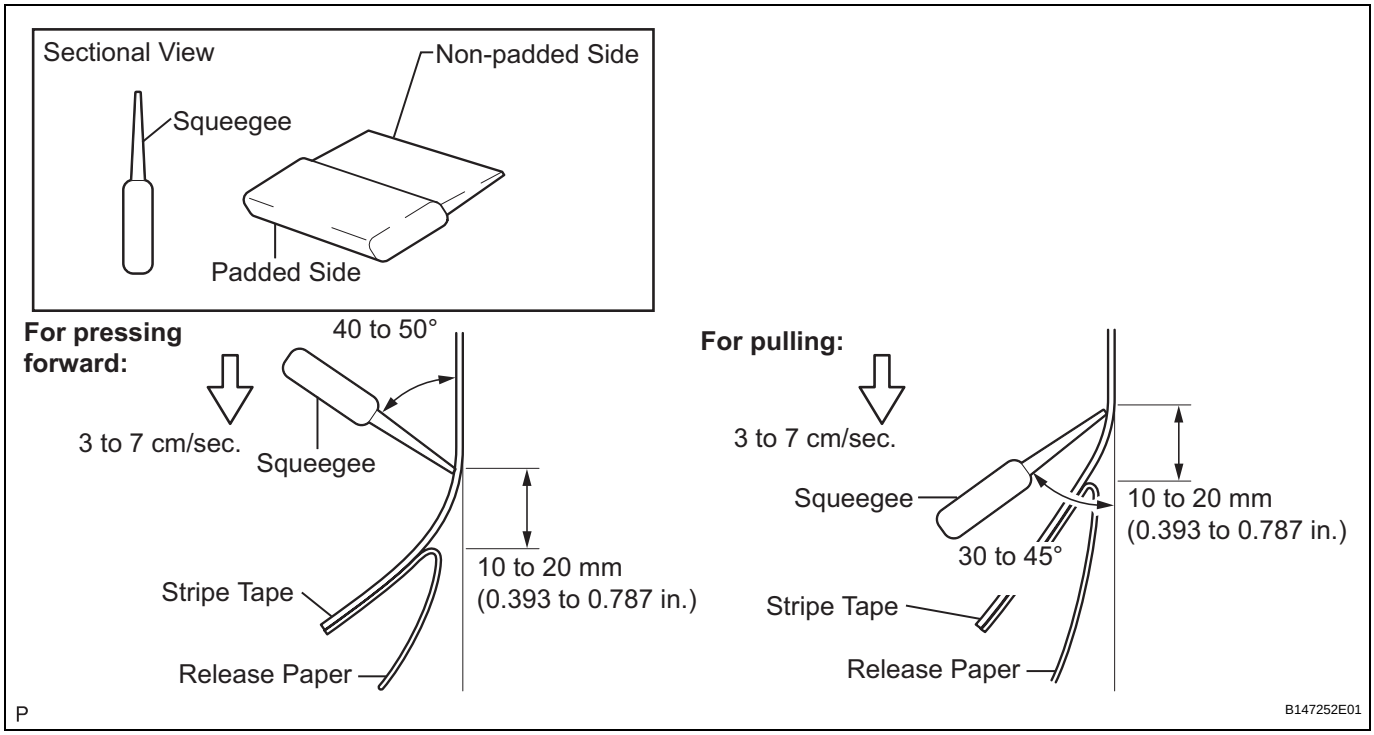
(e) Key points for installation of the tape (how to use a squeegee and installation procedure for flat surfaces)

NOTICE:

- **Conduct positioning of the tape with a high accuracy to achieve a neat finish and to avoid peeling.**

- **The tape cannot be reused because it deforms or does not fit any more after being removed.**

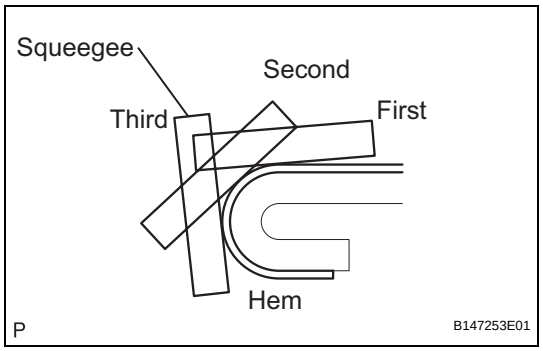
(1) To avoid air bubbles, slightly raise the part of the tape that are going to be applied so that its adhesive surface does not touch the vehicle body while applying the tape. Tilt the squeegee at a 40 to 50° (for pressing forward) or 30 to 45° (for pulling) to the vehicle body surface and press the tape onto the vehicle body surface with a force of 20 to 30 N (2 to 3 kgf) at a constant slow speed of 3 to 7 cm per second.



NOTICE:
Be sure to observe the specified pressing speed, force, and angle of the squeegee to avoid wrinkles or air bubbles.

HINT:

- Either angle of the squeegee (for pressing forward or for pulling) is acceptable.
- Be sure to apply the tape while removing the release paper 10 to 20 mm from the edge of the squeegee.



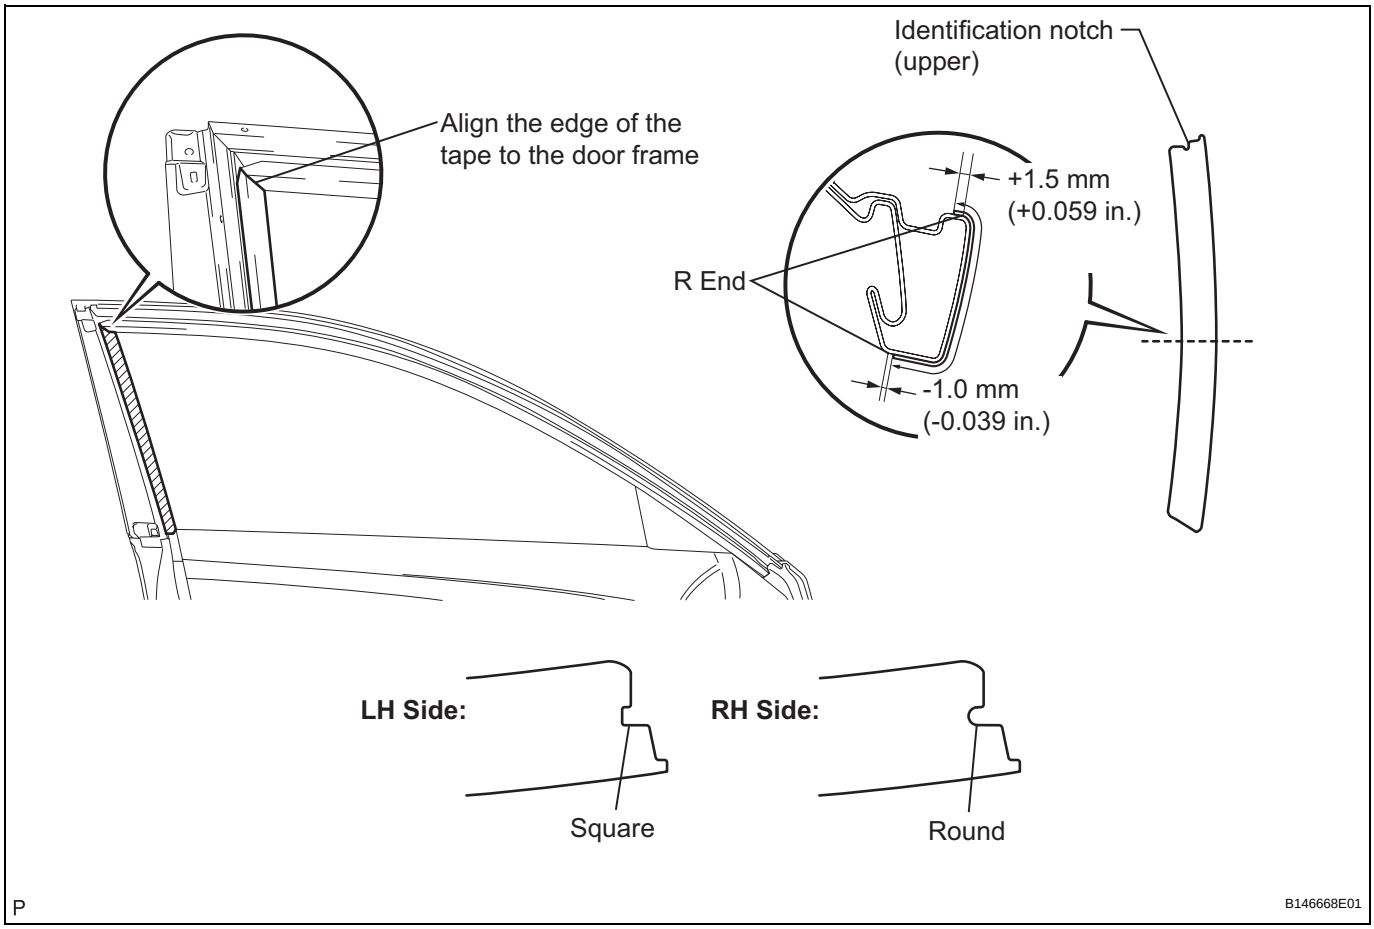
(f) Key points for installation of the tape (how to use a squeegee and installation procedure for hemming surfaces)
  (1) If it is difficult to press the tape, press it in several steps as shown in the illustration. Use your fingers or the padded surface of a squeegee to slowly apply the tape to the hem of the vehicle, especially for a small hem.
  HINT:
  When applying the tape to the backside of a hem, remove the release paper and use your fingers or the padded surface of a squeegee.

(g) Key points for installation of the tape (how to use a squeegee and installation procedure for corners)
  (1) Remove the release paper and apply the tape carefully with your fingers.
  (2) Before applying the tape to each corner, heat the tape using a heat light and gradually apply it, to avoid wrinkles on the tape and achieve a neat finish.

(h) Check after installation
  (1) After completing the application, check if the tape is applied neatly. If the tape is not applied neatly, reapply using new tape.
  NOTICE:
  Do not reuse the tape.

2. INSTALL FRONT DOOR LOWER OUTSIDE STRIPE

(a) Refer to the illustration to position the front door lower outside stripe.



(b) Remove the release paper and apply the stripe.

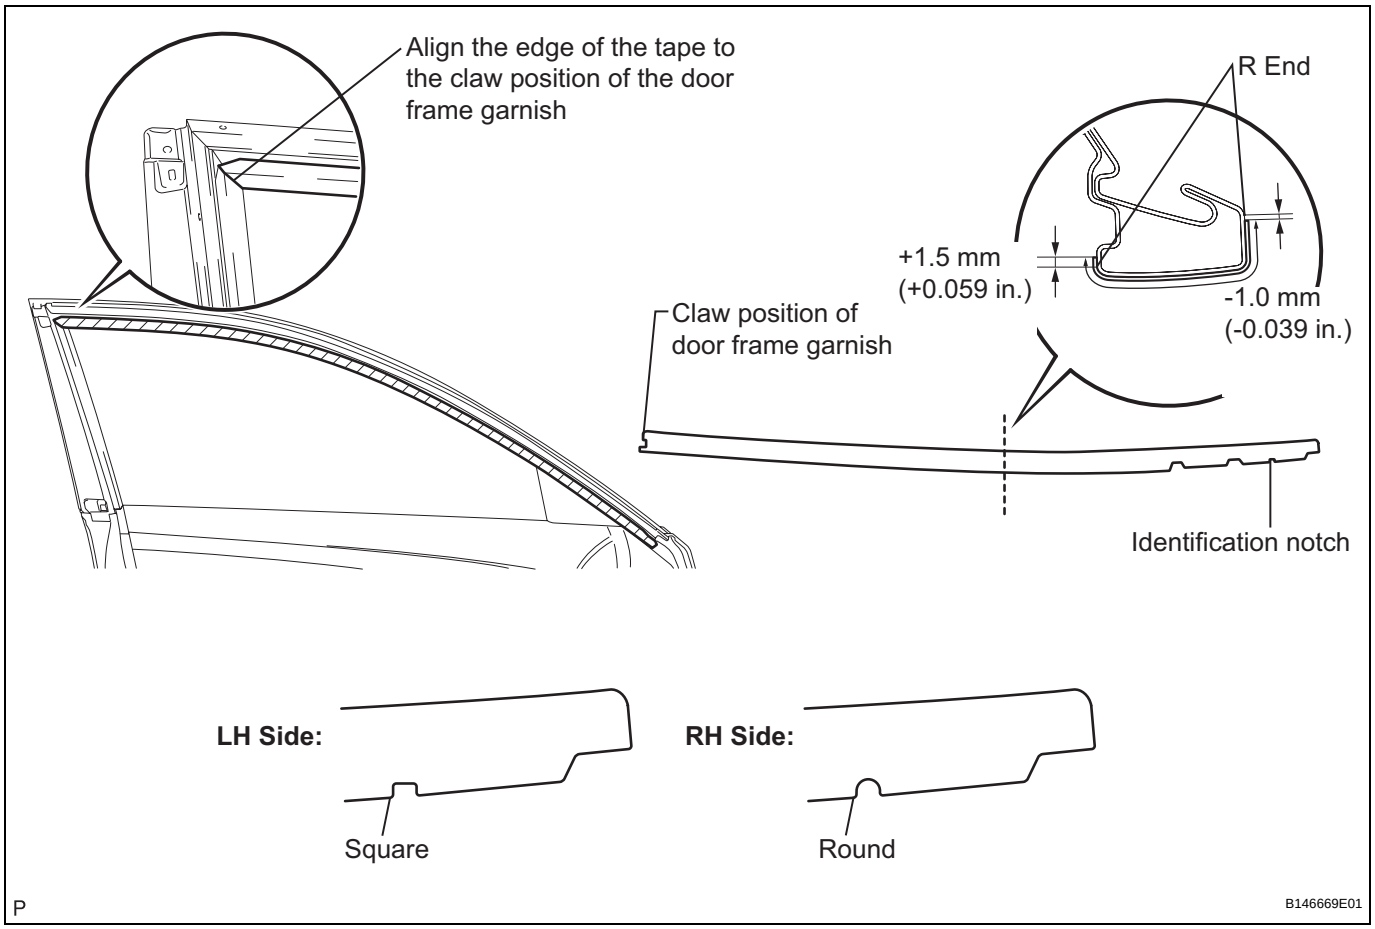
3. INSTALL FRONT DOOR STRIPE

NOTICE:

Be sure to install the front door stripe after applying the front door lower outside stripe.

ET

(a) Refer to the illustration to position the front door stripe.



(b) Remove the release paper and apply the stripe.

4. **INSTALL DOOR FRAME GARNISH (See page ED-30)**
5. **INSTALL FRONT DOOR WEATHERSTRIP (See page ET-51)**
6. **INSTALL FRONT DOOR GLASS RUN (See page ED-30)**
7. **INSTALL FRONT DOOR GLASS SUB-ASSEMBLY (See page ED-31)**
8. **INSTALL FRONT DOOR SERVICE HOLE COVER (See page ED-32)**
9. **INSTALL OUTER REAR VIEW MIRROR ASSEMBLY (See page MI-17)**
10. **INSTALL FRONT NO. 1 SPEAKER ASSEMBLY (See page AV-157)**
11. **INSTALL FRONT DOOR INSIDE HANDLE SUB-ASSEMBLY (See page ED-33)**
12. **INSTALL FRONT DOOR INNER GLASS WEATHERSTRIP (See page ED-32)**
13. **INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-33)**

14. **INSTALL COURTESY LIGHT ASSEMBLY (See page ED-34)**
15. **INSTALL ASSIST GRIP COVER (See page ED-34)**
16. **INSTALL FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-34)**
17. **INSTALL FRONT DOOR LOWER FRAME BRACKET GARNISH (See page ED-34)**

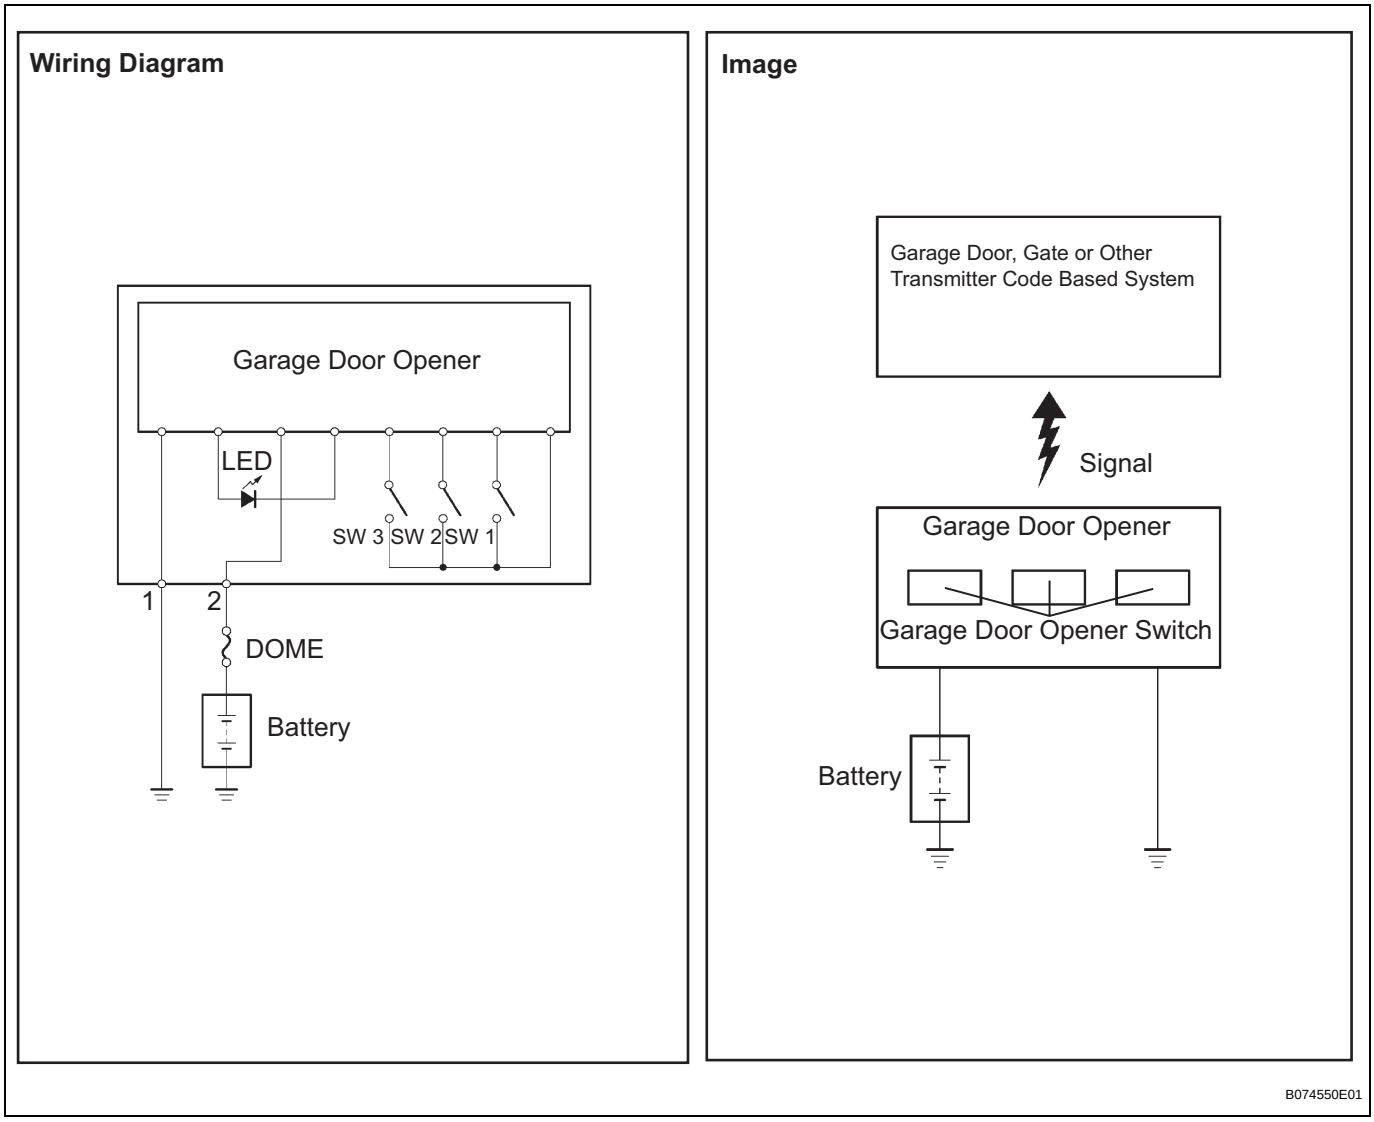
GARAGE DOOR OPENER SYSTEM

SYSTEM DIAGRAM



1. DESCRIPTION

(a) A maximum of three codes for transmitter code based systems such as garage doors, gates, and entry gates can be registered to the vehicle's garage door opener system. These stored codes can then be used to activate the transmitter controlled systems. It will not be necessary to keep the original handheld transmitters in the vehicle.

REGISTRATION

1. RESISTER TRANSMITTER CODE

HINT:

- The vehicle's garage door opener system records transmitter codes for systems such as garage doors, gates, door locks, home lighting systems, security systems, or other transmitter-code based systems.
- The garage door opener system is built into the roof console box assembly. If the roof console box assembly is replaced, transmitter codes previously registered in the garage door opener system must be re-registered.
- Ensure that the customer is aware that existing codes may be cleared from the garage door opener system while performing diagnosis of the system. All remotes required to reprogram the system should be made available at the time of inspection or repair of the garage door opener system.

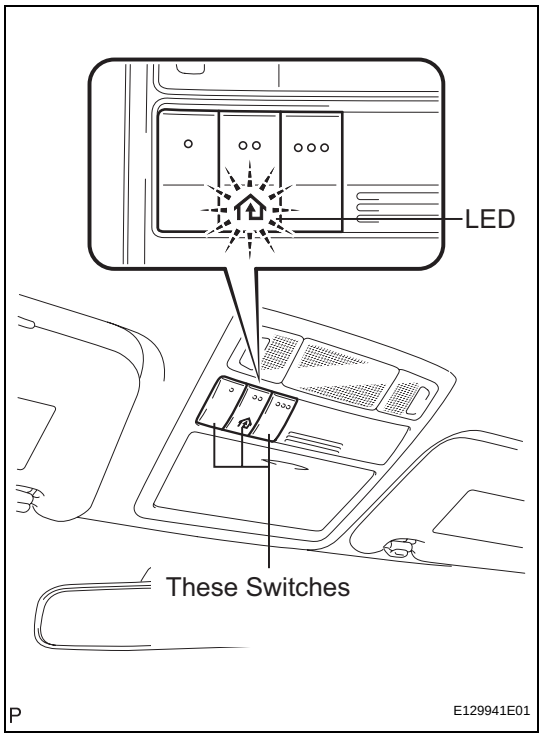
(a) Re-registration of codes in the garage door opener system. (registration mode)

NOTICE:

- **When programming a garage door opener system, you may operate a garage door or other device. To prevent injury, it is necessary to make sure that people and objects are out of the way of the garage door or other device.**
- **Before beginning programming of the garage door opener system, turn off the engine and remove the key from the ignition key cylinder.**
- **The garage door opener system cannot be used with openers that:**
  (1) Were manufactured before April 1, 1982.
  (2) Do not meet Federal Safety Standards (for example, garage doors without a jam protection function).

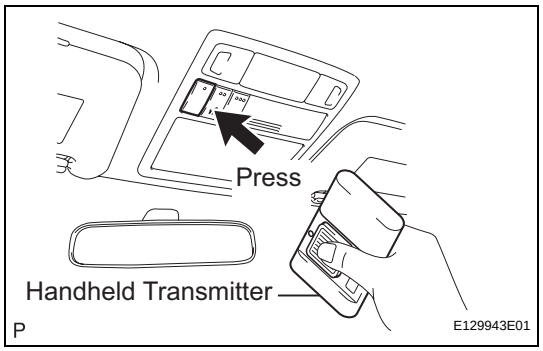
HINT:

- 3 transmitter codes can be registered with the garage door opener system. It is possible to register one handheld transmitter code (original transmitter) for each of the three garage door opener system switches.
- Disconnecting the vehicle's battery will not erase the transmitter codes registered in the garage door opener system.
- An attempt to overwrite a previously registered code may fail. In this case, the previously registered handheld transmitter code will not be erased.
- To successfully program the garage door opener system, it may be necessary to replace the handheld transmitter battery before programming.

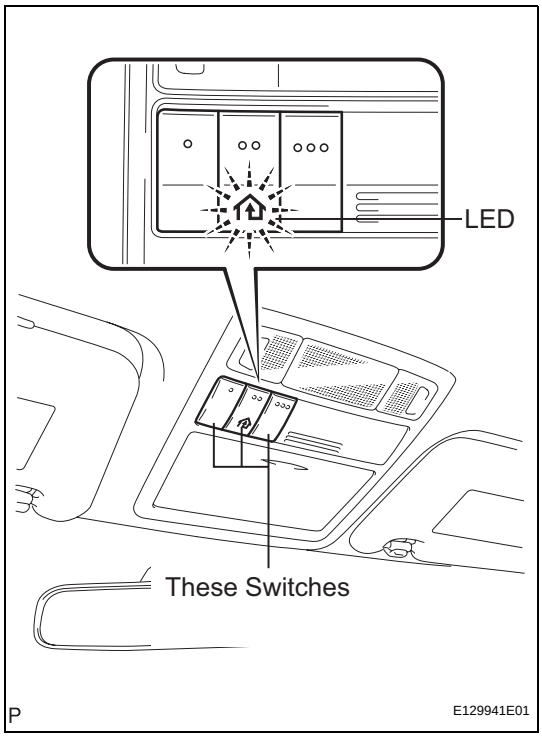


(1) Select one of the garage door opener system switches to program.

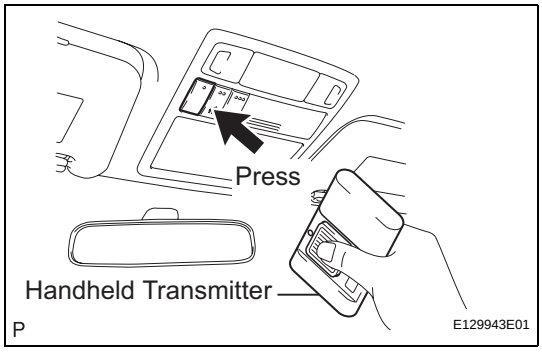
(2) Press and hold the selected switch for 20 seconds. The garage door opener system will enter registration mode. Continue to hold this switch during steps 3 and 4.
HINT:
The garage door opener system LED should stay on while holding the selected switch for the 20 second period. After entering registration mode, the LED will flash approximately 1 time per second (1 Hz). This indicates that the garage door opener system has entered registration mode and is listening for a code from a handheld transmitter.



(3) After the garage door opener system has entered registration mode, bring the original handheld transmitter within 2 to 9 cm (1 to 3 in.) of the garage door opener system. Press and hold the switch on the handheld transmitter. If the flashing speed of the garage door indicator light changes from the slow speed to a faster speed, proceed to step 4.
HINT:
Some handheld transmitters stop transmitting after 1 to 2 seconds. In this case, continue to hold the selected garage door opener system switch while pressing the handheld transmitter switch for two seconds at a time. Repeat the cycle of pressing and releasing the transmitter switch while monitoring for a change of the flashing speed of the indicator LED.

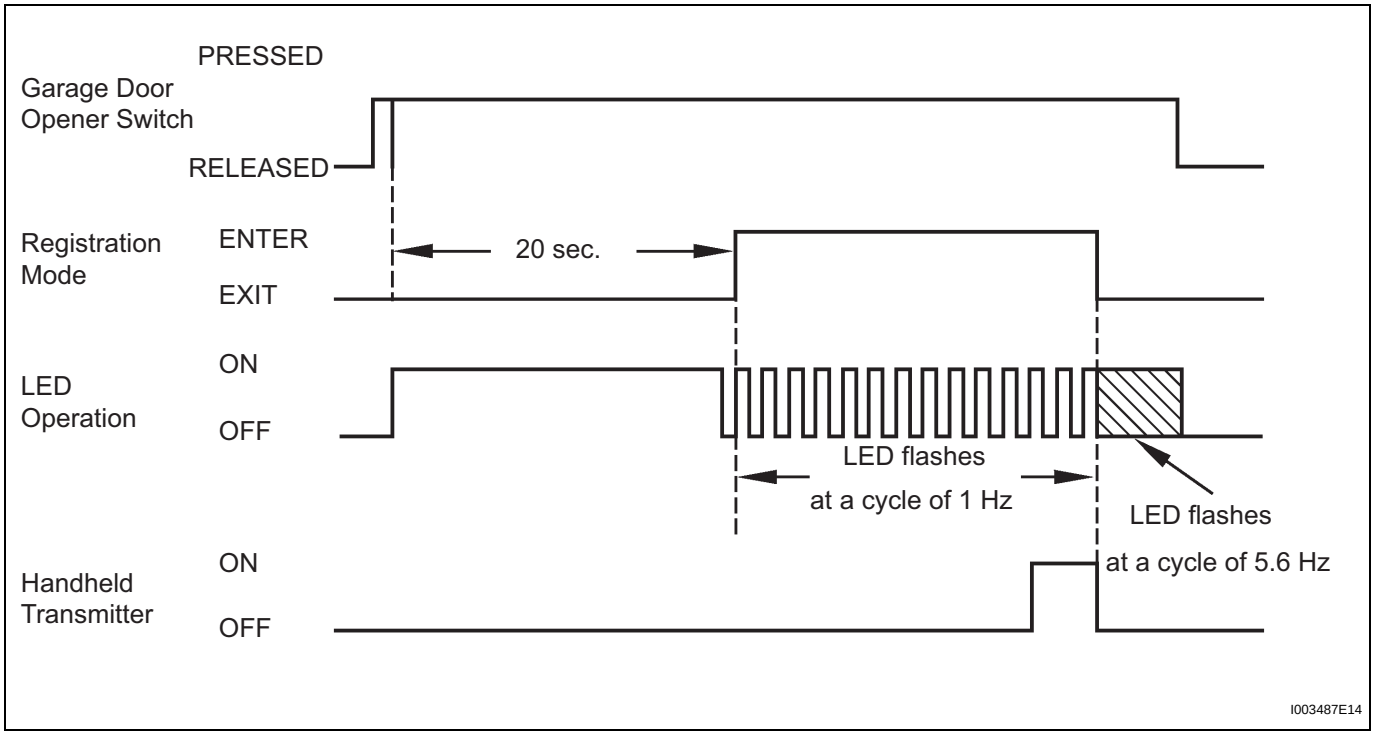


(4) When the indicator light begins to flash more rapidly, release both switches. This indicates that the garage door opener system has been successfully programmed. If the garage door opener system fails to program, review all hints before trying the programming process again.



HINT:

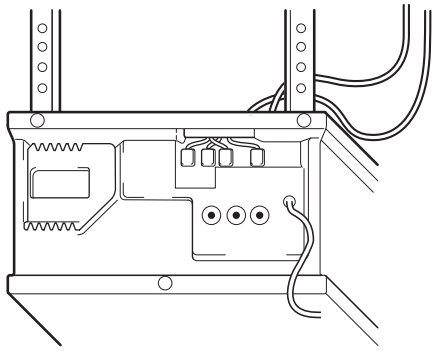
- If transmitter registration fails:
  (1) The battery in the handheld transmitter may be weak or need to be replaced.
  (2) The handheld transmitter and opener device to be registered may not be compatible with the vehicle's garage door opener system.
- After entering the garage door opener system registration mode, registration of the handheld transmitter code must be completed within 90 seconds. If 90 seconds have elapsed, the garage door opener system will enter low power mode.
- For first time programming it may be necessary to press and hold the two outside switches until the indicator light begins to flash rapidly. The length of time that it is necessary to hold the switches for in this case should be approximately 20 seconds.
- In some cases, the garage door indicator light may flash slowly (1 time per second (1 Hz)) as soon as the selected garage door opener system switch is pressed. This indicates that the system is ready or "listening" for a code from a handheld transmitter. Continue to hold the switch and proceed from step 3.



(b) Erasure of transmitter codes in the garage door opener system. (clear mode)
HINT:
All three codes registered in the garage door opener system will be erased. No option exists for erasing only one transmitter code.
(1) Press and hold the left and right switches of the garage door opener system for 20 seconds. The LED will begin to flash approximately 5 times per second (5.6 Hz.) This indicates that the codes contained in the vehicle garage door opener system have been erased. Releasing the switches ends clear mode.
HINT:
- If the switches are released within 10 seconds after the transmitter codes have been erased, the system will enter registration mode immediately the next time a garage door opener system switch is pressed.
- If the switches are held for 10 seconds or more after the transmitter codes have been erased, default codes will be set to the three switches of the garage door opener system. These default codes may in some cases be used for training an opener device that uses rolling codes.

(c) Low power mode:
(1) If the garage door opener switch is stuck or held for 100 seconds or more, the garage door opener will enter low power mode to economize on power consumption. When the garage door opener has entered low power mode, the LED turns off. When the garage door opener switch is released, low power mode will end.

Example:



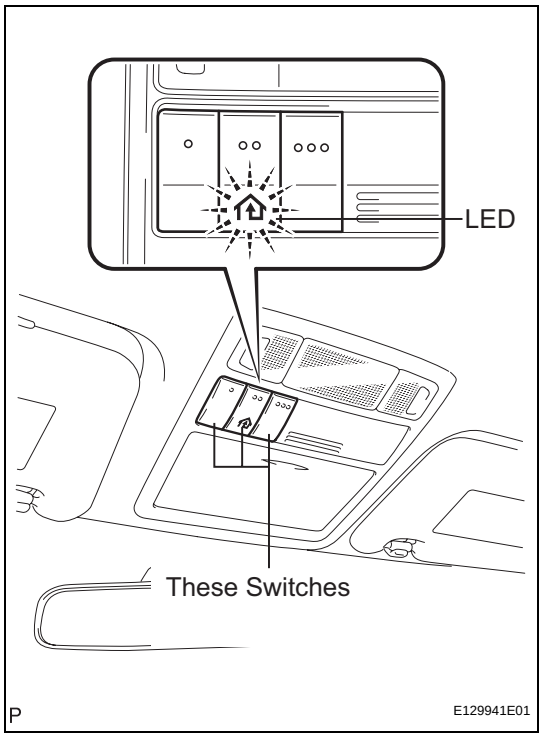
P

E129942E01

2. ROLLING CODE SYSTEMS

(a) If the handheld transmitter for the opener device (customer's garage door) being programmed uses a rolling code, it may be necessary to "train" the garage door opener device.
HINT:
- "Train" refers to causing the opener device (customer's ceiling mounted garage door opener) to recognize a non-rolling code.
- The steps required to "train" an opener device may vary depending on the model, type, age, and manufacturer of the device.

(1) Locate the "training" button on the opener device.
(2) Press the training button.
(3) Within 30 seconds press and release the vehicle's programmed "HomeLink" switch twice. Some opener devices may require the vehicle's switch to be pressed three times.
(4) The vehicle's garage door opener system should now operate the opener device.
HINT:
Opener device refers to a device such as a ceiling mounted garage door opener, which is located at the customer's residence. It is necessary to read the instructions for the customer's opener device, to allow the above procedure to be performed safely and successfully. The customer should be aware that performing this procedure will result in a lowered level of security for the customer's opener device.



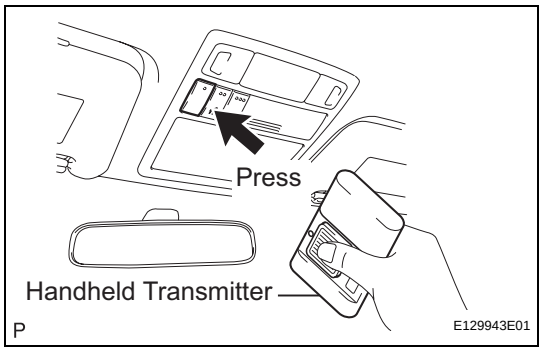
INSPECTION

1. INSPECT GARAGE DOOR OPENER

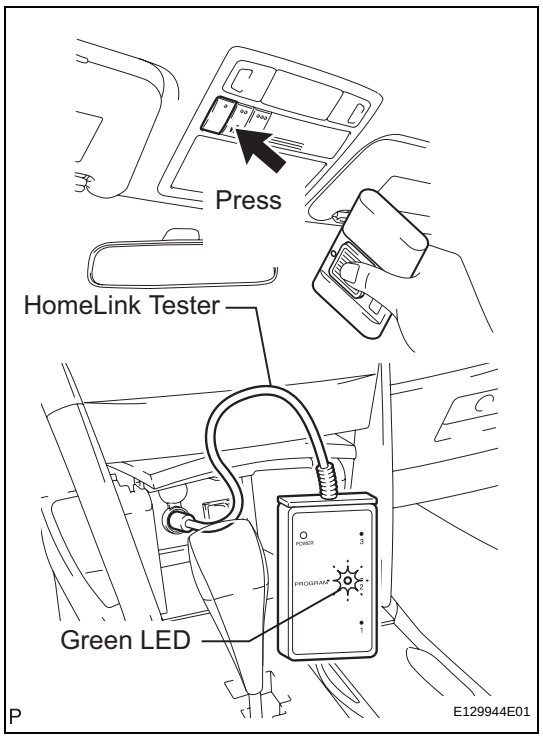
(a) To inspect the garage door opener system, press each switch and check that the LED in the "HomeLink" logo illuminates as illustrated. If one or more of the switches do not cause the LED to illuminate, confirm that the fuse and the wiring to the garage door opener system unit is normal. If the fuse and wiring are normal, and the LED does not work, replace the garage door opener system unit located in the roof console box assembly.

2. INSPECT GARAGE DOOR OPENER REGISTRATION AND TRANSMITTIMG OPERATION

HINT:
Use the KENT-MOORE "HomeLink" tester, and the KENT-MOORE handheld transmitter for this test. First erase the customer's transmitter codes, and then register the tester's handheld transmitter code to the garage door opener system.



(a) Check if the tester's handheld transmitter code was successfully registered.
HINT:
If the handheld transmitter's code cannot be registered, replace the garage door opener system unit.

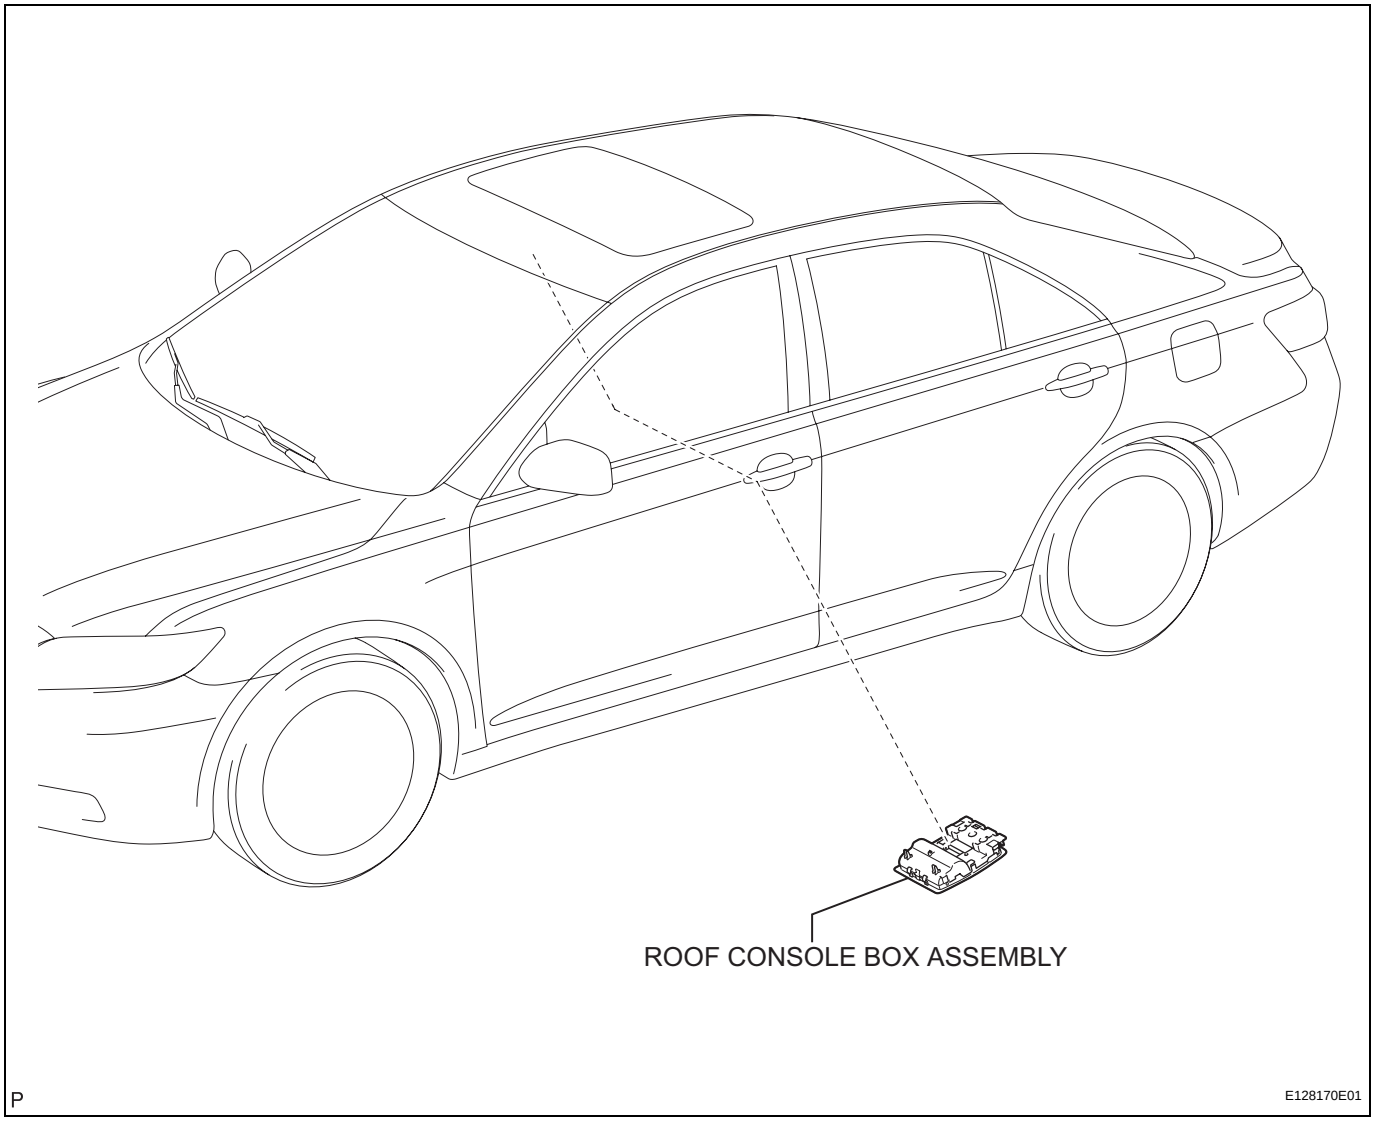


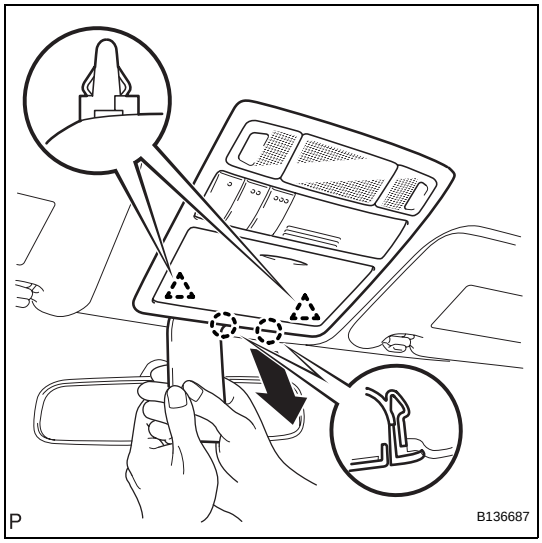
(b) Press the garage door opener switch that was used to copy the signal from the handheld transmitter. Check if the "HomeLink" tester's green LED illuminates.
HINT:
If the green LED does not illuminate, replace the garage door opener system unit that is located in the dome light No. 1.

(c) When the inspection is complete, re-register the customer's handheld transmitter codes.

GARAGE DOOR OPENER SWITCH

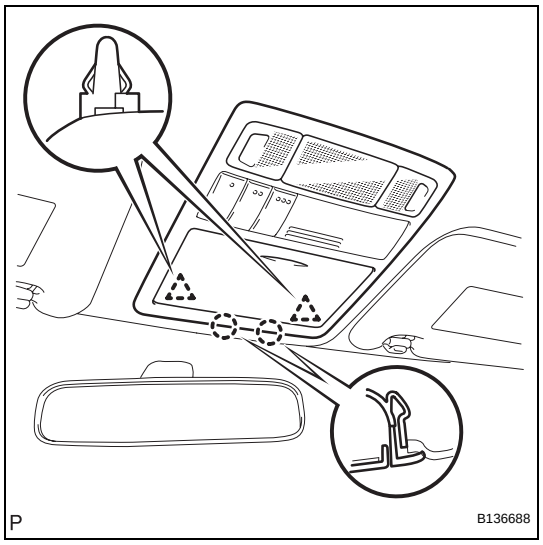
COMPONENTS





REMOVAL

1. **REMOVE ROOF CONSOLE BOX ASSEMBLY**
   (a) Using a moulding remover, disengage the 2 clips and the 2 claws.
   (b) Disconnect the connectors and remove the roof console box assembly.



INSTALLATION

1. INSTALL ROOF CONSOLE BOX ASSEMBLY

(a) Connect the connectors .

(b) Engage the 2 claws and the 2 clips to install the roof console box assembly.

Symptom	Suspected area	See page
Horn does not sound	1. HORN fuse	HO-3
	2. Horn relay	HO-3
	3. Steering pad switch	RS-347
	4. Spiral cable	RS-364
	5. Wire harness	-
Horn blows all the time	1. Horn relay	HO-3
	2. Steering pad switch	RS-347
	3. Wire harness	-
Low pitched horn operates but high pitched horn does not operate	1. High pitched horn	HO-7
	2. Wire harness	-
High pitched horn operates but low pitched horn does not operate	1. Low pitched horn	HO-5
	2. Wire harness	-

HORN RELAY

INSPECTION

1. INSPECT FUSE (HORN)

(a) Check the resistance of the HORN fuse.

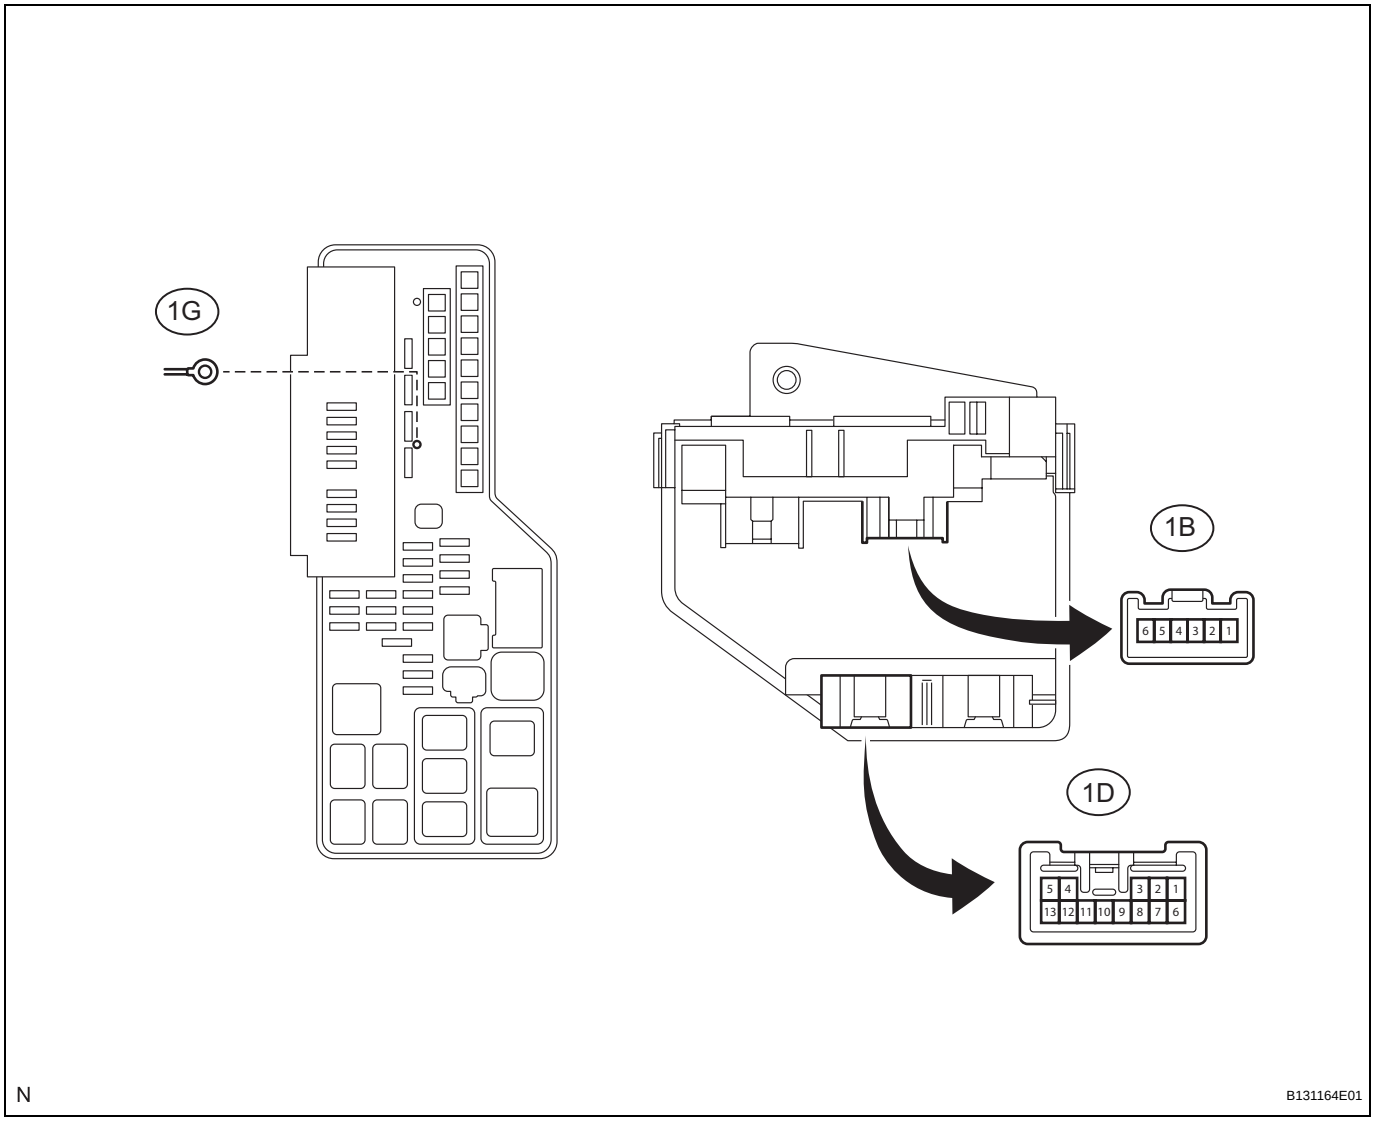
Standard:

Below 1 Ω

2. INSPECT HORN RELAY

(a) Remove the engine room R/B and J/B (horn relay).

(b) Measure the resistance according to the value(s) in the table below.

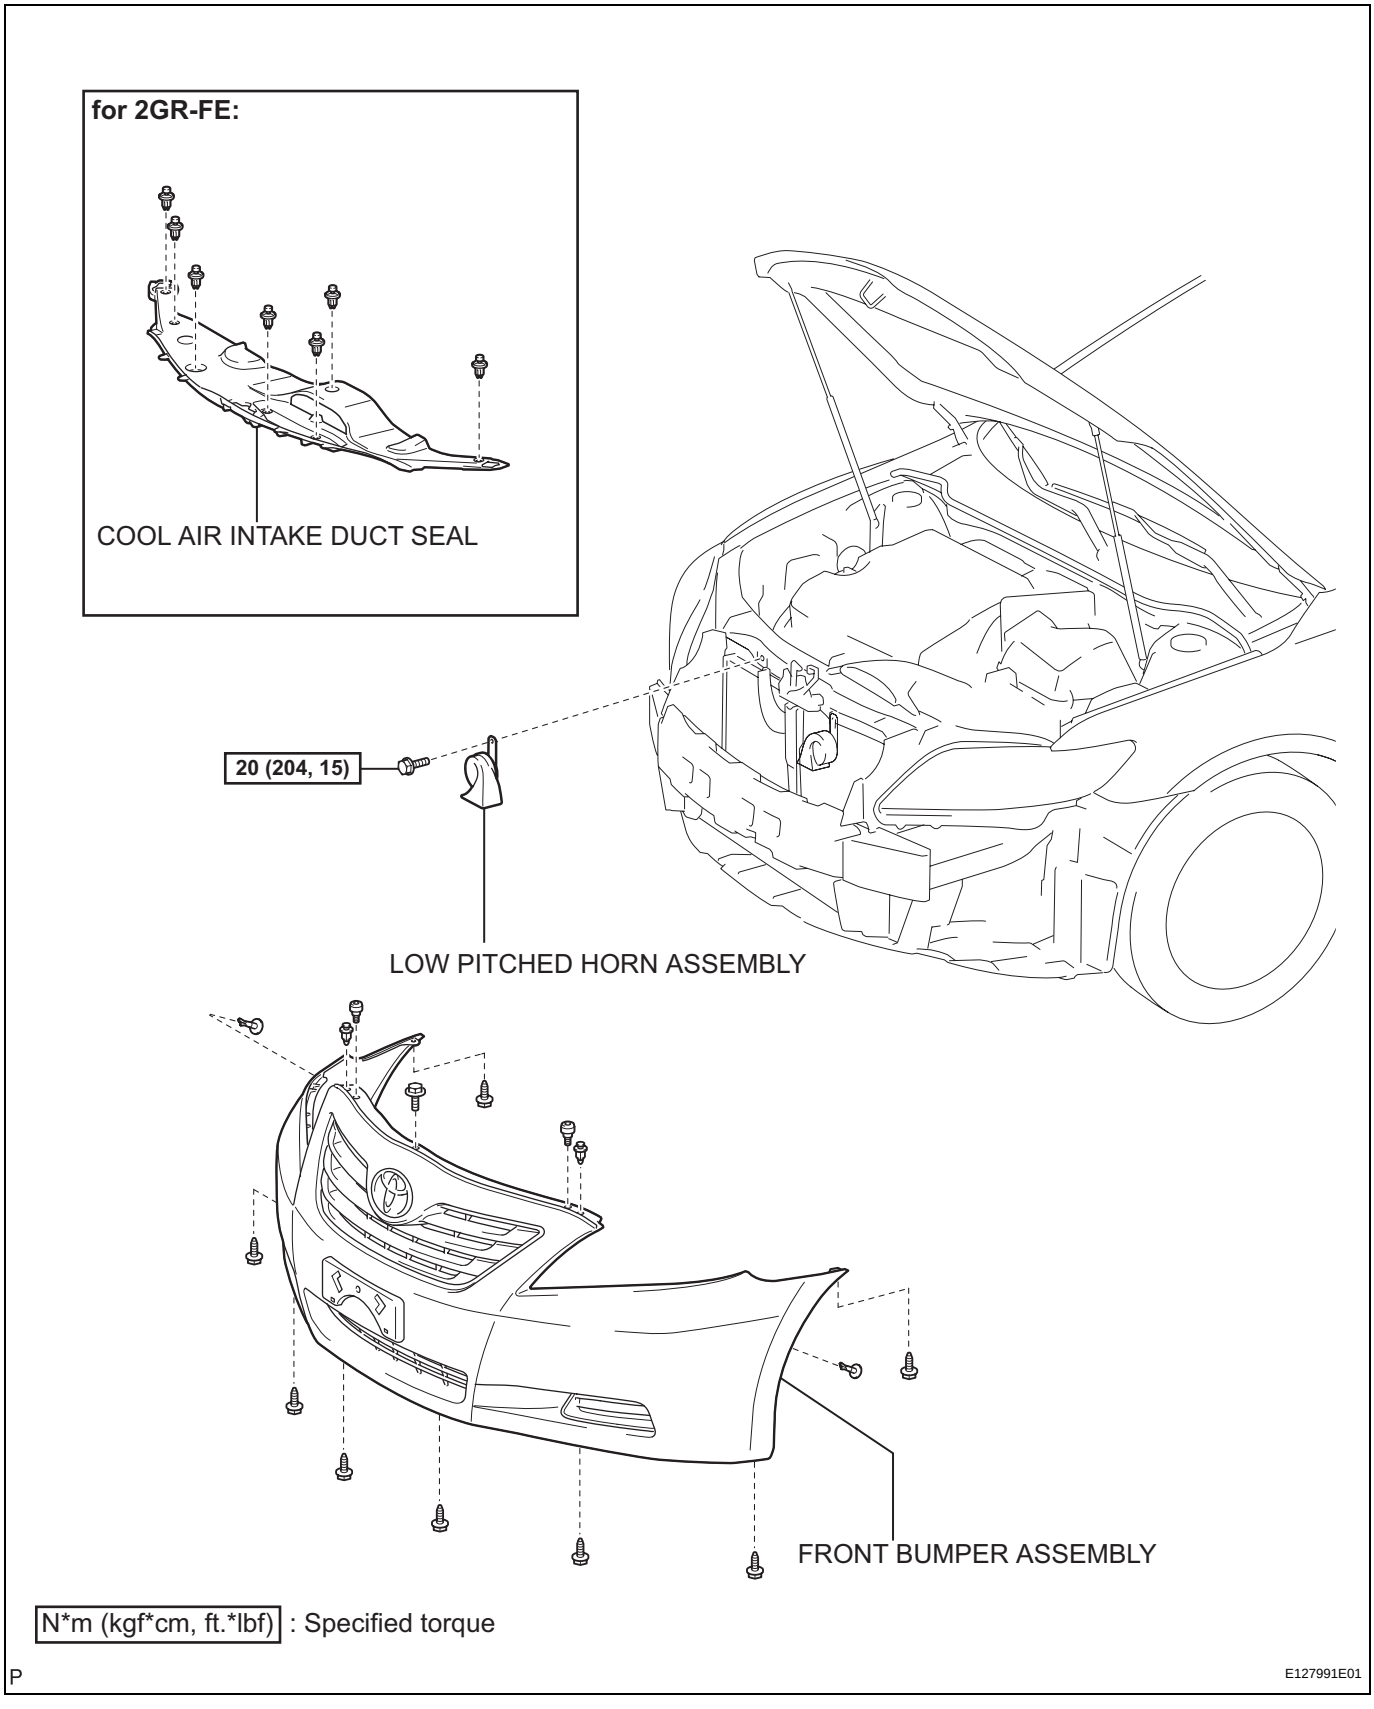


Standard resistance

Tester Connection	Condition	Specified Condition
1G-1 - 1B-6	Always	10 kΩ or higher
1G-1 - 1B-6	When battery voltage is applied to terminals 1G-1 and 1D-10	Below 1 Ω

LOW PITCHED HORN

COMPONENTS



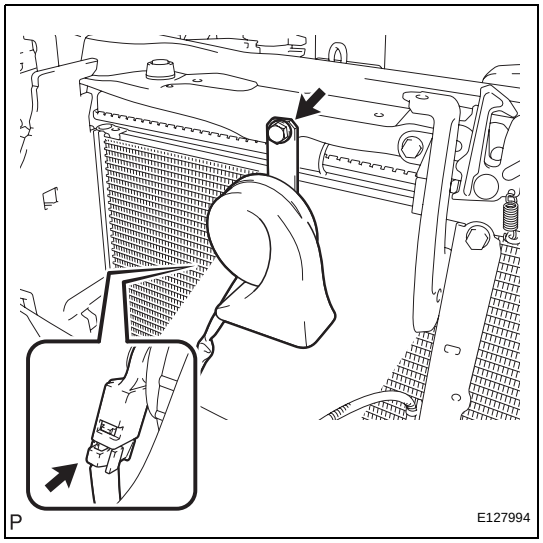
N*m (kgf*cm, ft.*lbf) : Specified torque

P

E127991E01

REMOVAL

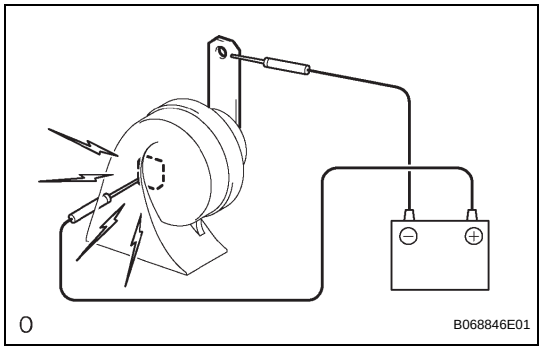
1. **REMOVE COOL AIR INTAKE DUCT SEAL (for 2GR-FE) (See page ET-4)**
2. **REMOVE FRONT BUMPER ASSEMBLY (See page ET-5)**
3. **REMOVE LOW PITCHED HORN ASSEMBLY**
   (a) Disconnect the connector.
   (b) Remove the bolt and the low pitched horn assembly.



INSPECTION

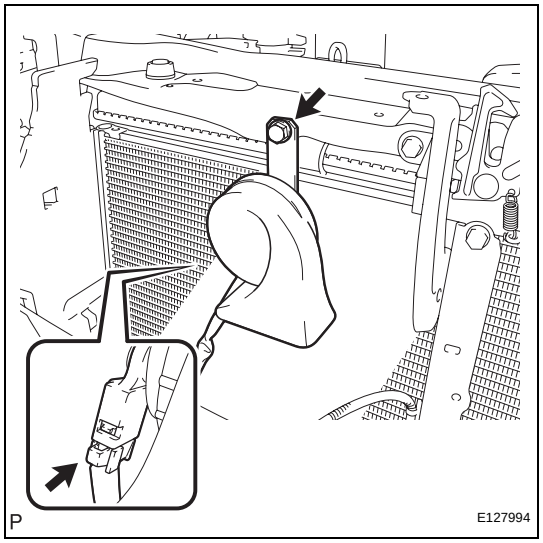
1. **INSPECT LOW PITCHED HORN**
   (a) Apply battery voltage and check operation of the horn, as shown in the table below.
   Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Body ground	Horn sounds



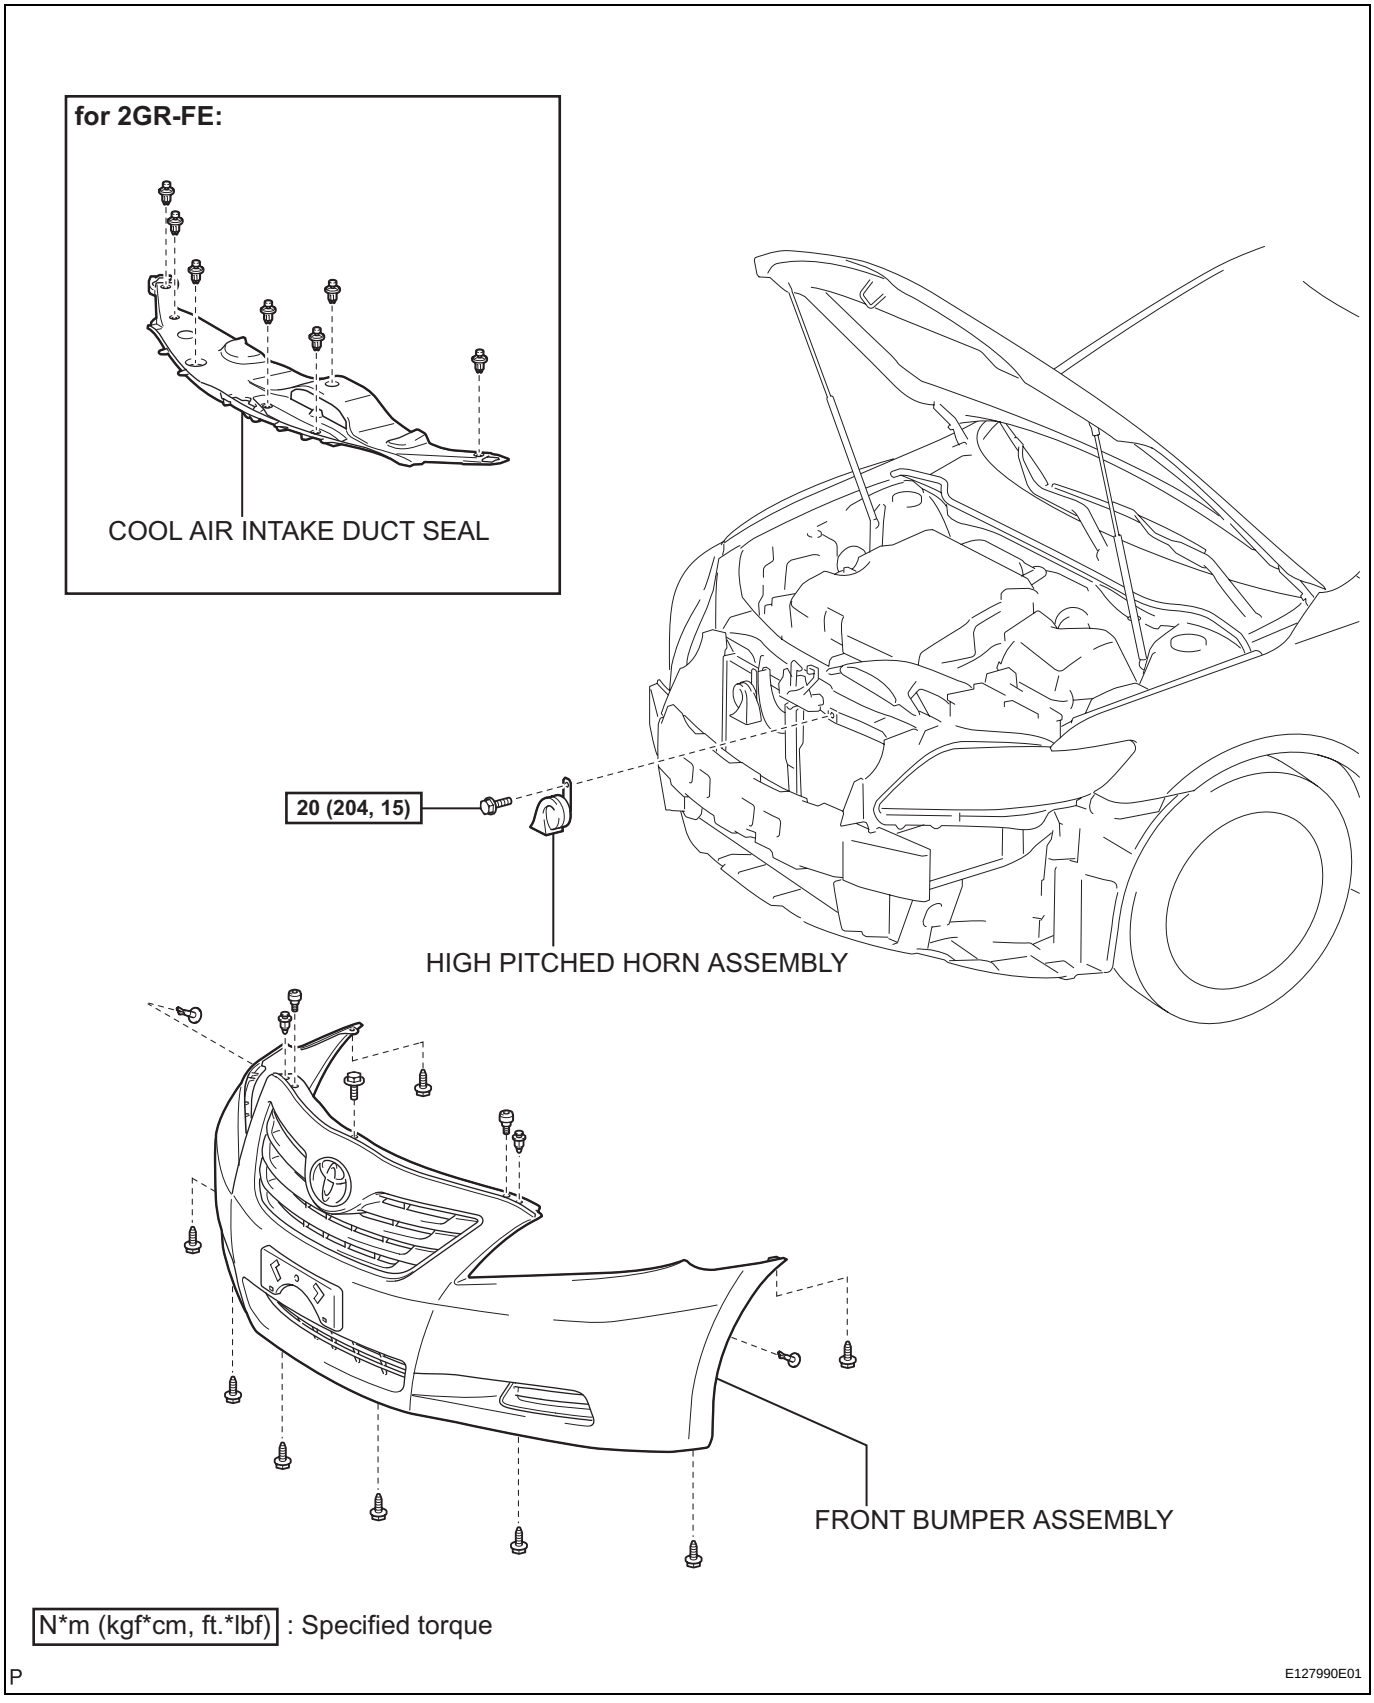
INSTALLATION

1. **INSTALL LOW PITCHED HORN ASSEMBLY**
   (a) Install the low pitched horn assembly with the bolt.
   Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)
   (b) Connect the connector.
2. **INSTALL FRONT BUMPER ASSEMBLY (See page ET-13)**
3. **INSTALL COOL AIR INTAKE DUCT SEAL (for 2GR-FE) (See page ET-14)**



HIGH PITCHED HORN

COMPONENTS



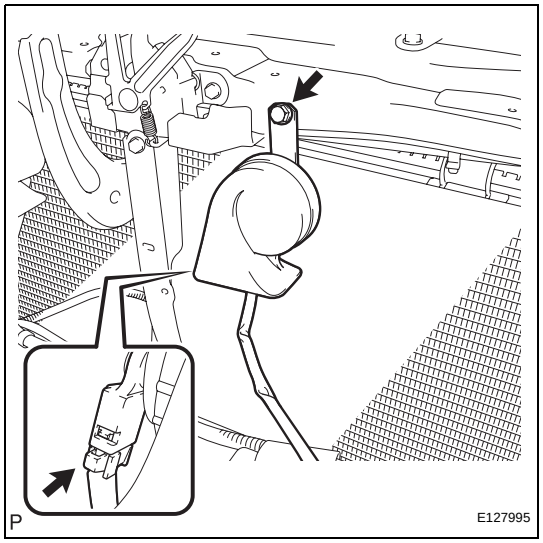
N*m (kgf*cm, ft.*lbf) : Specified torque

P

E127990E01

REMOVAL

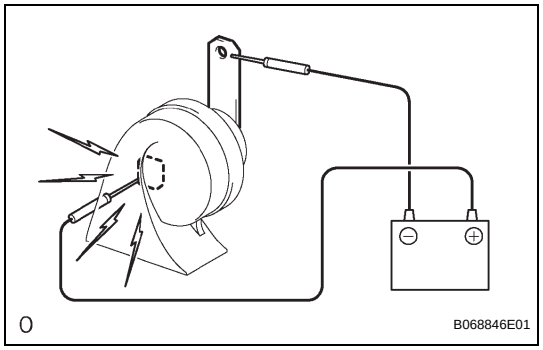
1. **REMOVE COOL AIR INTAKE DUCT SEAL (for 2GR-FE) (See page ET-4)**
2. **REMOVE FRONT BUMPER ASSEMBLY (See page ET-5)**
3. **REMOVE HIGH PITCHED HORN ASSEMBLY**
   (a) Disconnect the connector.
   (b) Remove the bolt and the high pitched horn assembly.



INSPECTION

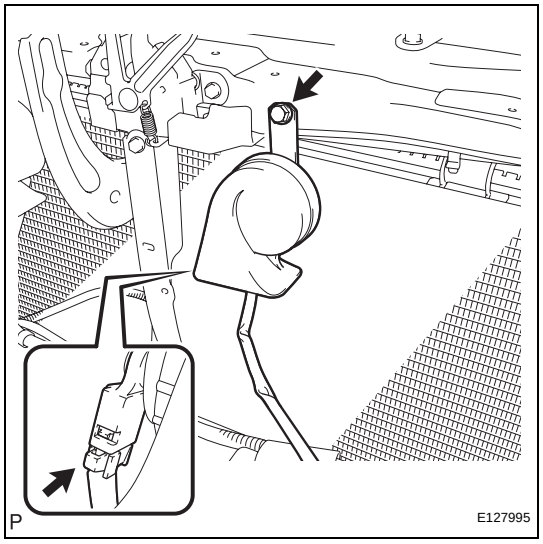
1. **INSPECT HIGH PITCHED HORN**
   (a) Apply battery voltage and check operation of the horn, as shown in the table below.
   Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Body ground	Horn sounds



INSTALLATION

1. **INSTALL HIGH PITCHED HORN ASSEMBLY**
   (a) Install the high pitched horn assembly with the bolt.
   Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)
   (b) Connect the connector.
2. **INSTALL FRONT BUMPER ASSEMBLY (See page ET-13)**
3. **INSTALL COOL AIR INTAKE DUCT SEAL (for 2GR-FE) (See page ET-14)**



INSTRUMENT PANEL SAFETY PAD

PRECAUTION

1. PRECAUTION FOR VEHICLE WITH SRS AIRBAG AND SEAT BELT PRETENSIONER

(a) Some operations in this section may affect the SRS airbags. Prior to performing the corresponding operations, read the SRS airbag NOTICE.

2. TABLE OF BOLT, SCREW AND NUT

Code	Shape	Size	Parts No.

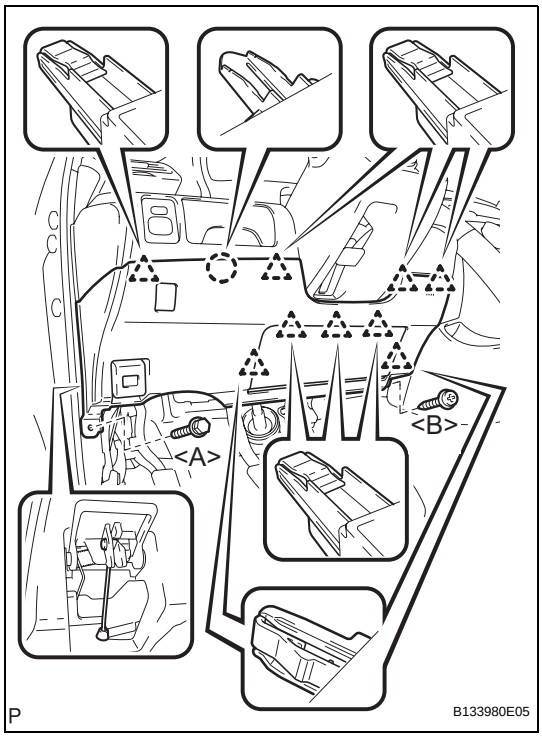
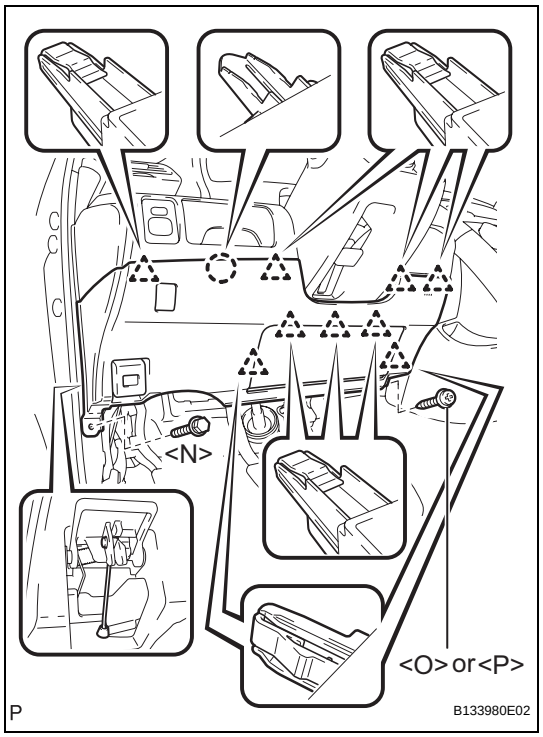
REMOVAL

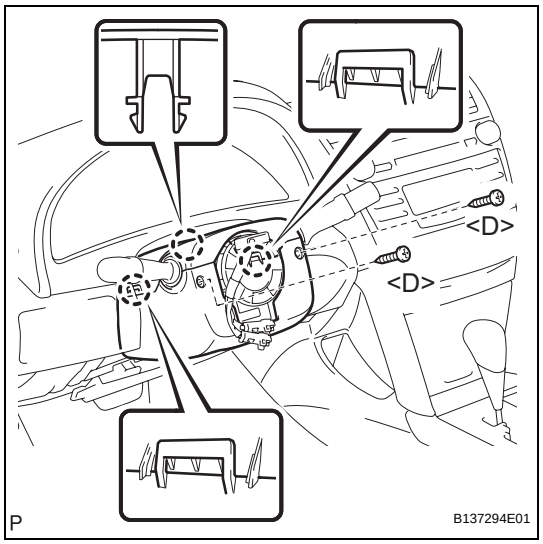
1. **PRECAUTION**
   (See page IP-1)
2. **ALIGN FRONT WHEELS FACING STRAIGHT AHEAD**
3. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment (See page RS-1).
4. **REMOVE LOWER NO. 3 STEERING WHEEL COVER (See page RS-349)**
5. **REMOVE LOWER NO. 2 STEERING WHEEL COVER (See page RS-349)**
6. **REMOVE STEERING PAD (See page RS-350)**
7. **REMOVE STEERING WHEEL ASSEMBLY (See page SR-38)**
8. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-24)**
9. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-25)**
10. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made)**
    (a) Remove the bolt <A> and the screw <B>.
    (b) Disconnect the hood lock control cable assembly.
    (c) Disengage the claw and the 9 clips.
    (d) Remove the air hose, disconnect the connector, and then remove the lower instrument panel finish panel LH.





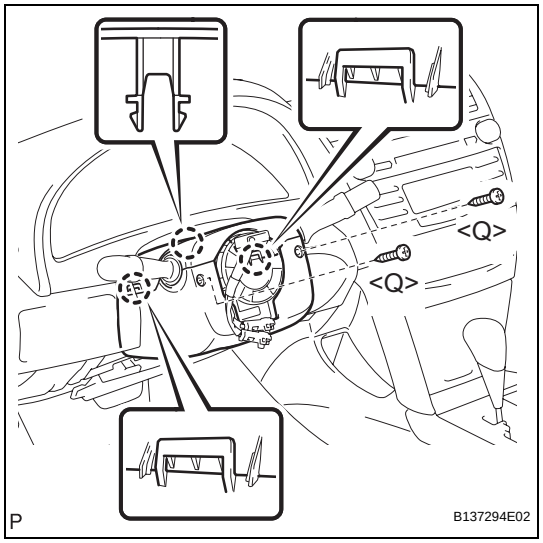
11. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made)

(a) Remove the bolt <N> and the screw <O> or <P>.
(b) Disconnect the hood lock control cable assembly.
(c) Disengage the claw and the 9 clips.
(d) Remove the air hose, disconnect the connector, and then remove the lower instrument panel finish panel LH.



12. REMOVE STEERING COLUMN COVER (for TMC Made)

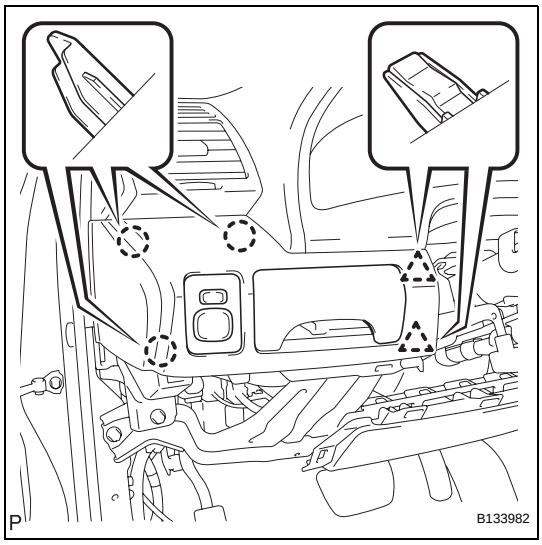
(a) Remove the 2 screws <D>.
(b) Disengage the 2 claws and remove the lower steering column cover.
(c) Disengage the claw and remove the upper steering column cover.



13. REMOVE STEERING COLUMN COVER (for TMMK Made)

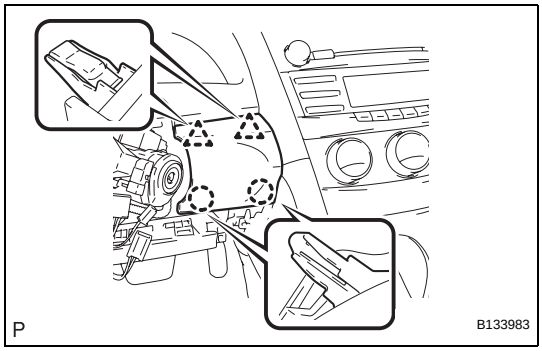
(a) Remove the 2 screws <Q>.
(b) Disengage the 2 claws and remove the lower steering column cover.
(c) Disengage the claw and remove the upper steering column cover.

14. REMOVE TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (See page SR-39)



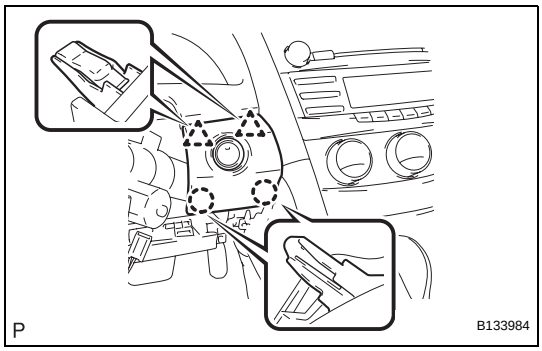
15. REMOVE NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY

(a) Disengage the 3 claws and the 2 clips.
(b) Disconnect the connector and remove the instrument panel sub-assembly.



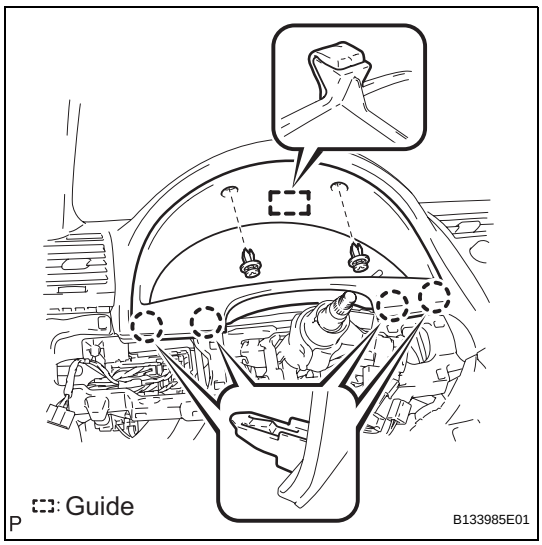
16. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/o Smart Key System)

(a) Disengage the 2 claws and 2 clips, and then remove the lower instrument panel finish panel.



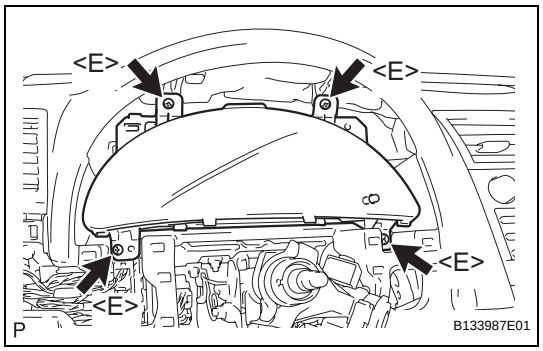
17. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/ Smart Key System)

(a) Disengage the 2 claws and 2 clips.
(b) Disconnect the connector and remove the lower instrument panel finish panel.



18. REMOVE INSTRUMENT CLUSTER FINISH PANEL

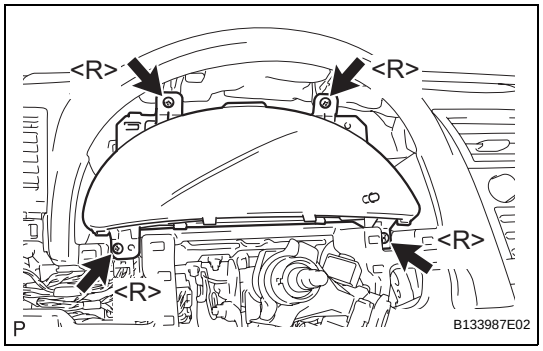
(a) Remove the 2 clips.
(b) Disengage the guide and 4 claws, and then remove the instrument cluster finish panel.



19. REMOVE COMBINATION METER ASSEMBLY (for TMC Made)

(a) Remove the 4 screws <E>.

(b) Disconnect each connector and remove the combination meter assembly.



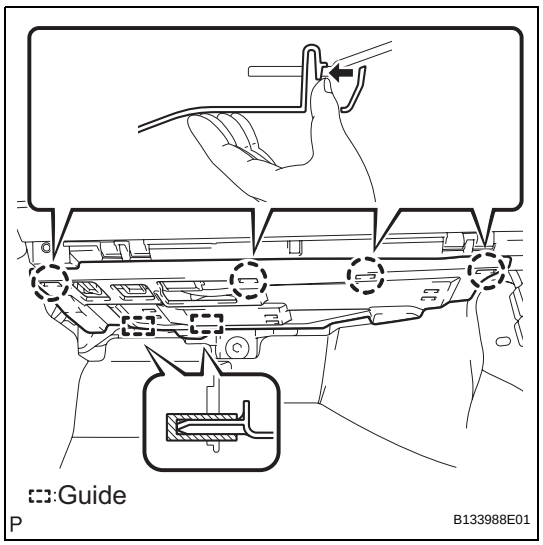
20. REMOVE COMBINATION METER ASSEMBLY (for TMMK Made)

(a) Remove the 4 screws <R>.

(b) Disconnect each connector and remove the combination meter assembly.

21. REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-26)

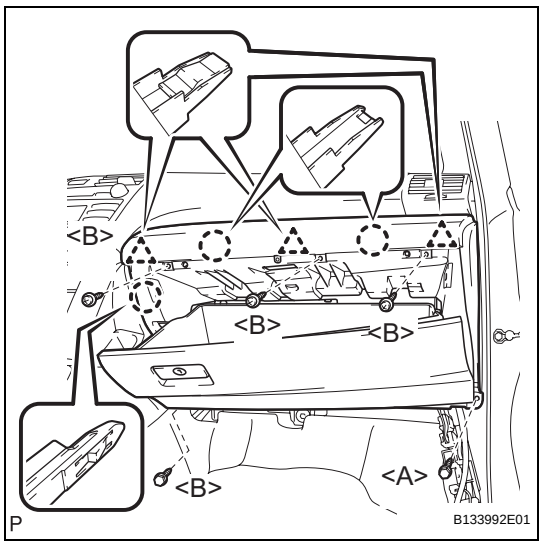
22. REMOVE COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-26)



23. REMOVE INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY

(a) Disengage the 4 claws.

(b) Disengage the 2 guides and remove the No. 2 under cover sub-assembly.



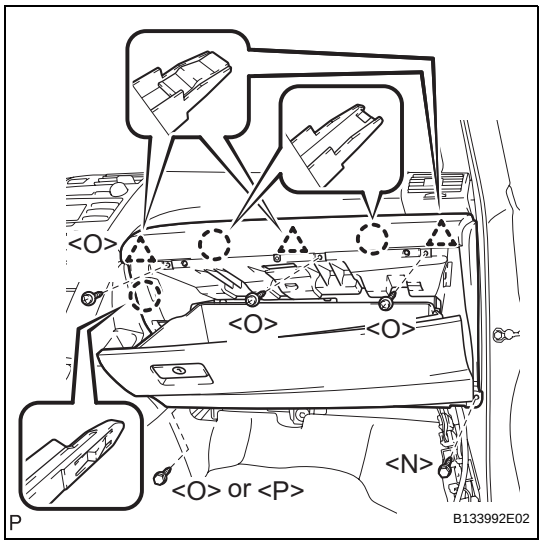
24. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMC Made)

(a) Remove the bolt <A>.

(b) Remove the 4 screws <B>.

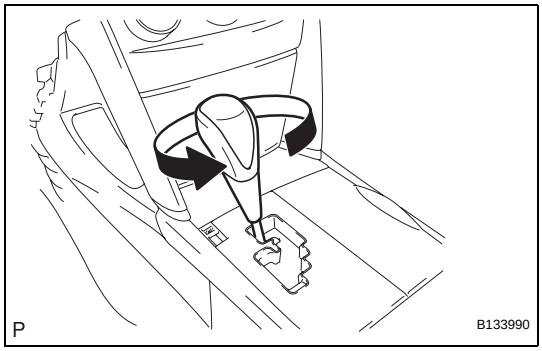
(c) Disengage the 3 claws and the 3 clips.

(d) Disconnect the connector and remove the lower instrument panel sub-assembly.



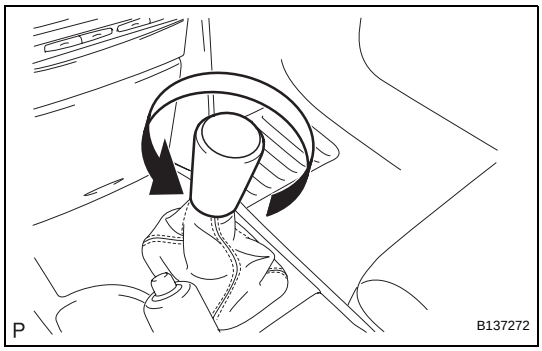
25. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMMK Made)

(a) Remove the bolt <N>.
(b) Remove the screw <O> or <P> and the 3 screws <O>.
(c) Disengage the 3 claws and the 3 clips.
(d) Disconnect the connector and remove the lower instrument panel sub-assembly.



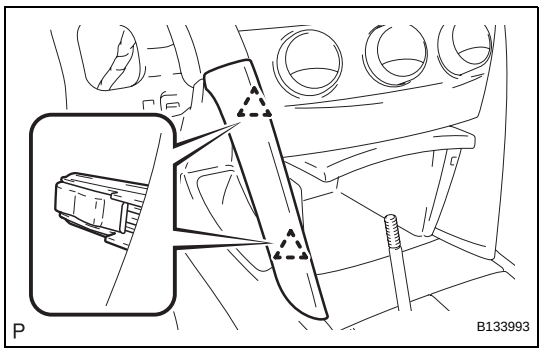
26. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transaxle)

(a) Turn the shift lever knob counterclockwise and remove the shift lever knob sub-assembly.



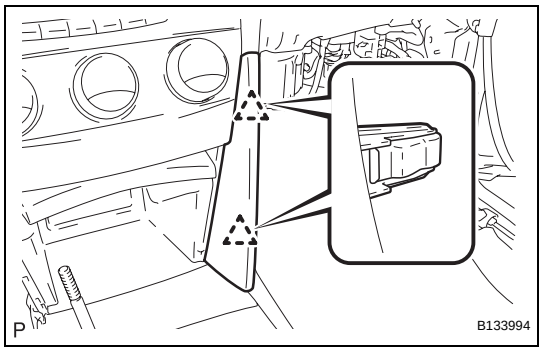
27. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle)

(a) Turn the shift lever knob counterclockwise and remove the shift lever knob sub-assembly.



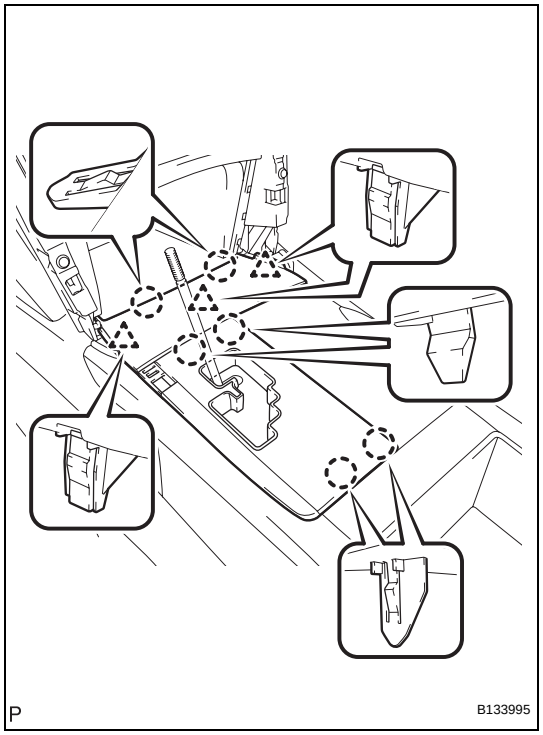
28. REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH

(a) Disengage the 2 clips and remove the No. 1 instrument cluster finish panel garnish.



29. REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH

(a) Disengage the 2 clips and remove the No. 2 instrument cluster finish panel garnish.

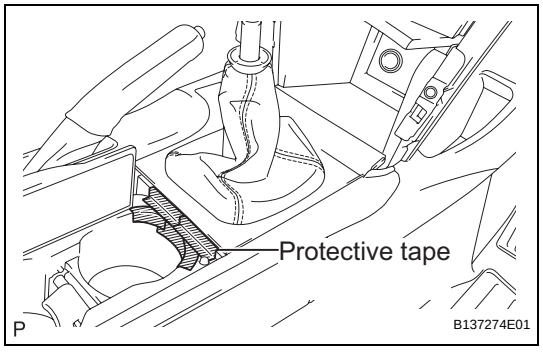


30. REMOVE FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (for Automatic Transaxle)

(a) Disengage the 6 claws and the 3 clips, and then remove the floor shift position indicator housing sub-assembly.

(b) with Seat Heater System:

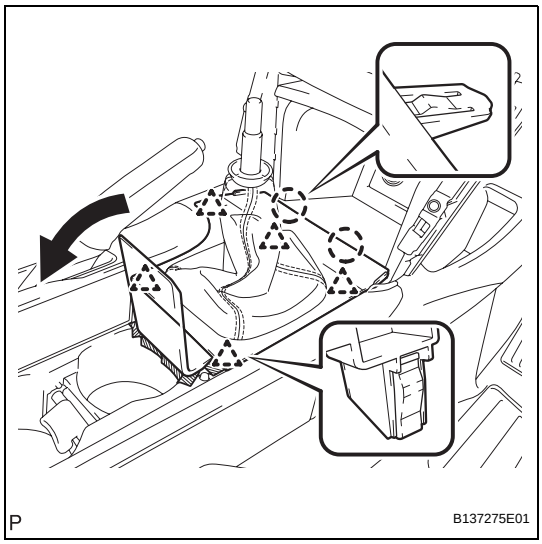
(1) Disconnect each connector.



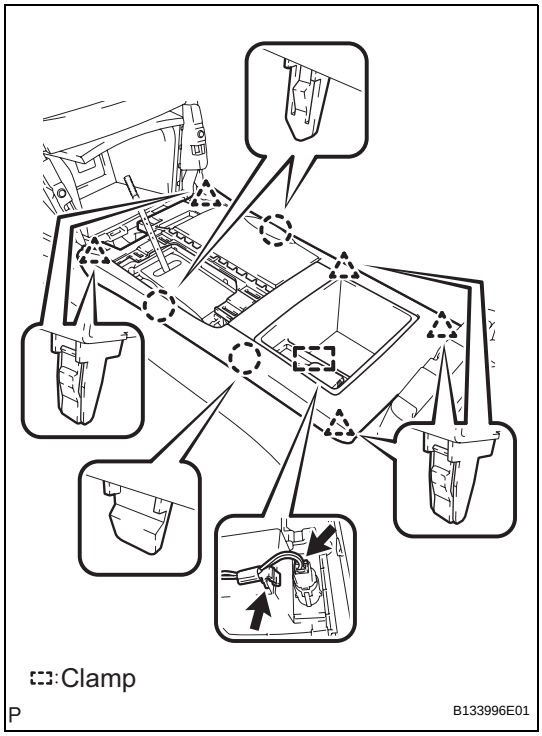
31. REMOVE UPPER CONSOLE PANEL (for Manual Transaxle)

(a) Open the lid of the upper console panel.

(b) Apply protective tape to the area shown in the illustration.

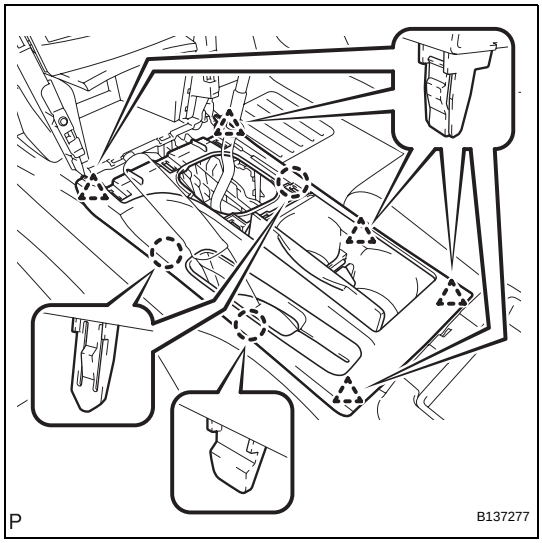


(c) Using a moulding remover, disengage the 2 claws and the 5 clips, and then remove the upper console panel as shown in the illustration.



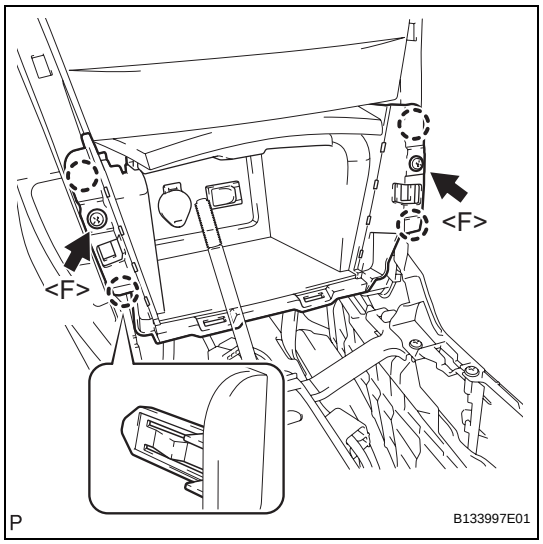
32. REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Automatic Transaxle)

(a) Disengage the 3 claws and the 5 clips.
(b) Disengage the clamp.
(c) Disconnect the connector and remove the upper console rear panel sub-assembly.



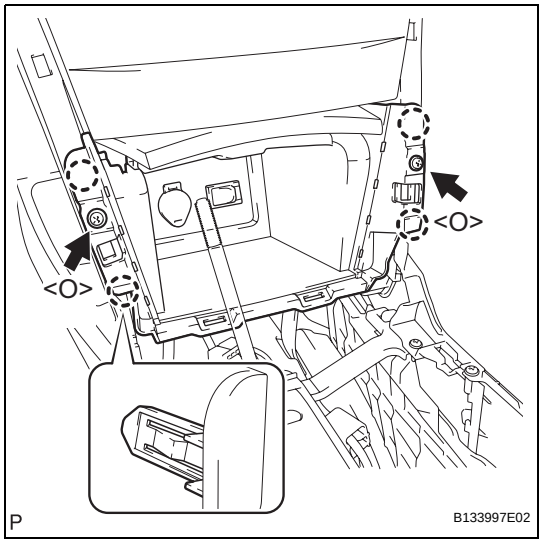
33. REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Manual Transaxle)

(a) Disengage the 3 claws and the 5 clips.
(b) Disconnect the connector and remove the upper console rear panel sub-assembly.



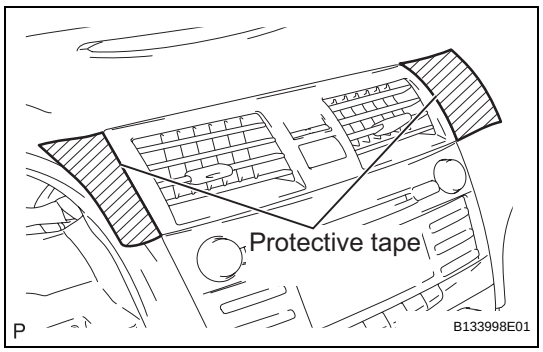
34. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMC Made)

(a) Remove the 2 screws <F>.
(b) Disengage the 4 claws.
(c) Disconnect each connector and remove the upper console panel sub-assembly.



35. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMMK Made)

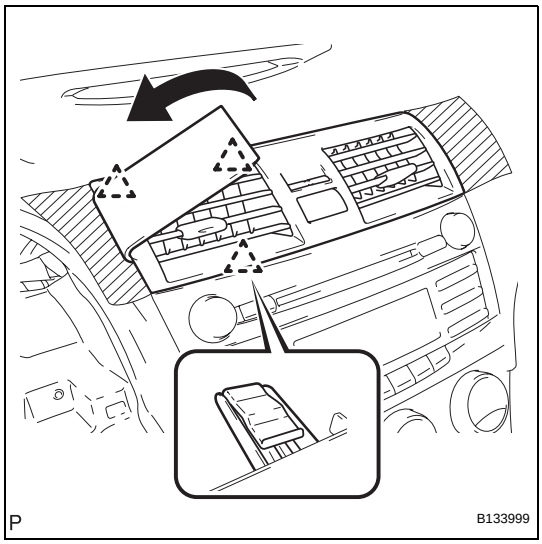
(a) Remove the 2 screws <O>.
(b) Disengage the 4 claws.
(c) Disconnect each connector and remove the upper console panel sub-assembly.



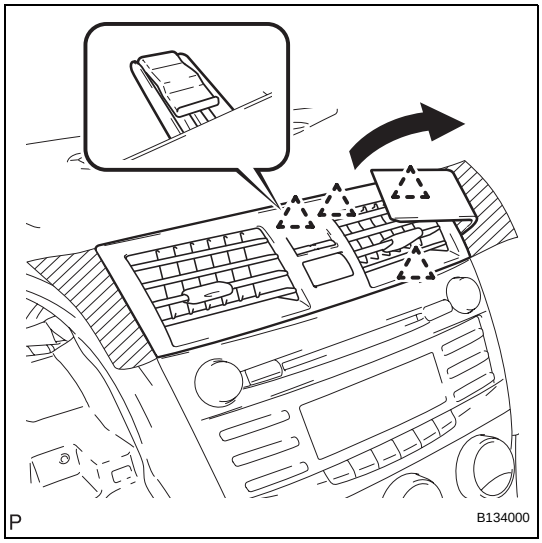
36. REMOVE INSTRUMENT PANEL NO. 2 REGISTER ASSEMBLY

(a) Apply protective tape to the areas shown in the illustration.

IP



(b) Using a moulding remover, disengage the 3 clips.

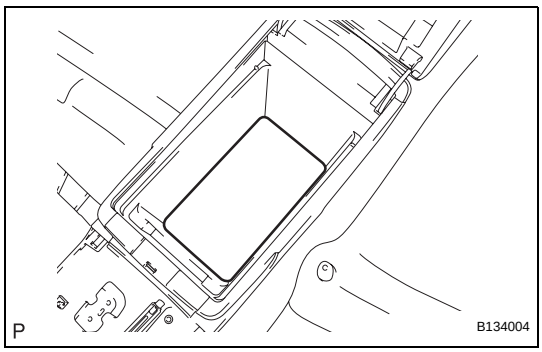


(c) Using a moulding remover, disengage the 4 clips.
(d) Disconnect the connector and remove the instrument panel No. 2 register assembly.

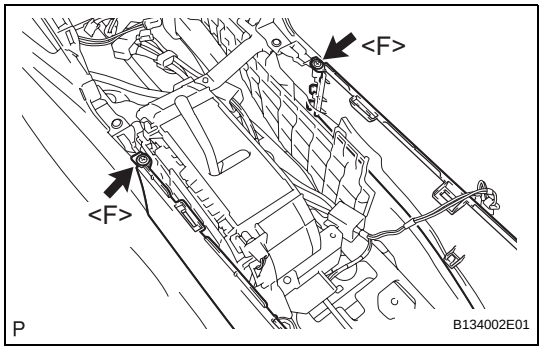
37. REMOVE RADIO RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/o Navigation System) (See page AV-146)

38. REMOVE NAVIGATION RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (See page NS-195)

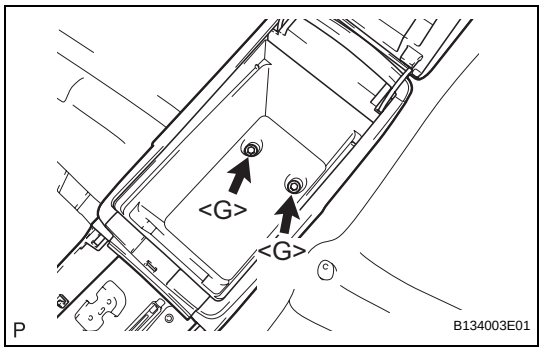
39. REMOVE CONSOLE BOX POCKET
(a) Remove the console box pocket.



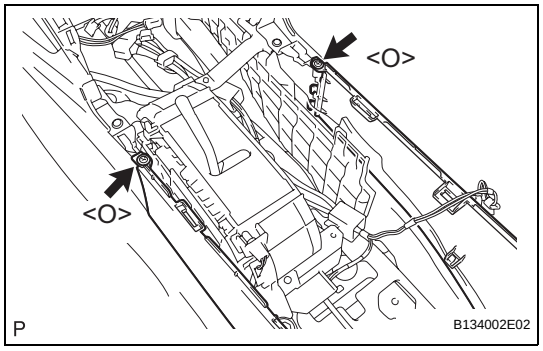
40. REMOVE CONSOLE BOX CARPET
(a) Remove the console box carpet.



41. REMOVE CONSOLE BOX ASSEMBLY (for TMC Made)
(a) Remove the 2 screws <F>.

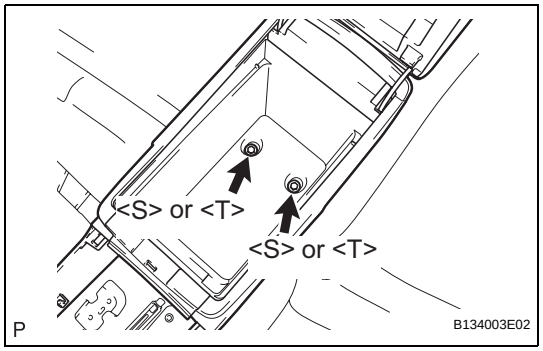


(b) Remove the 2 bolts <G> and the console box assembly.

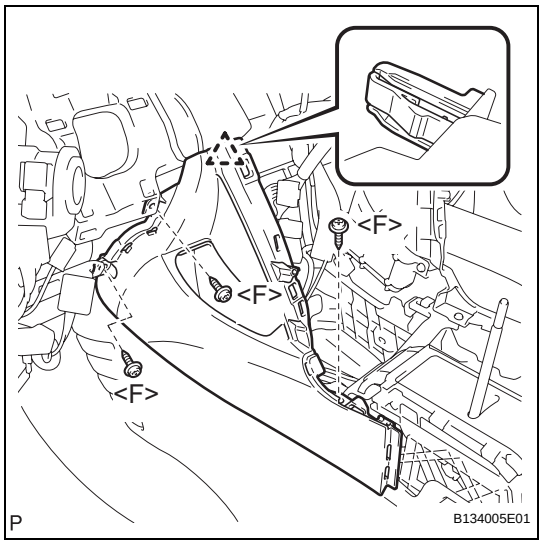


42. REMOVE CONSOLE BOX ASSEMBLY (for TMMK Made)

(a) Remove the 2 screws <O>.



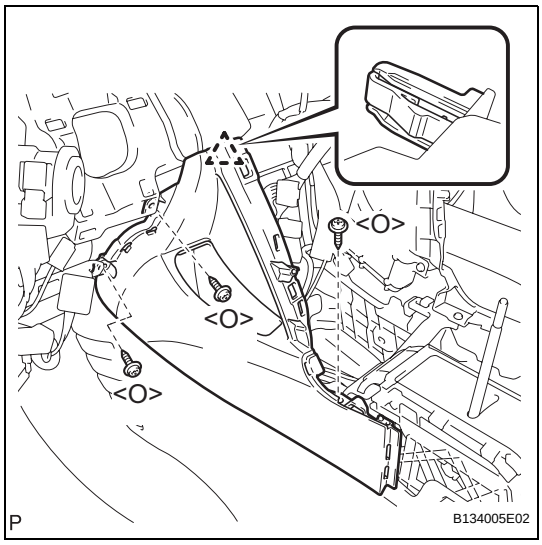
(b) Remove the 2 bolts <S> or <T> and the console box assembly.



43. REMOVE NO. 2 CONSOLE BOX INSERT FRONT (for TMC Made)

(a) Remove the 3 screws <F>.

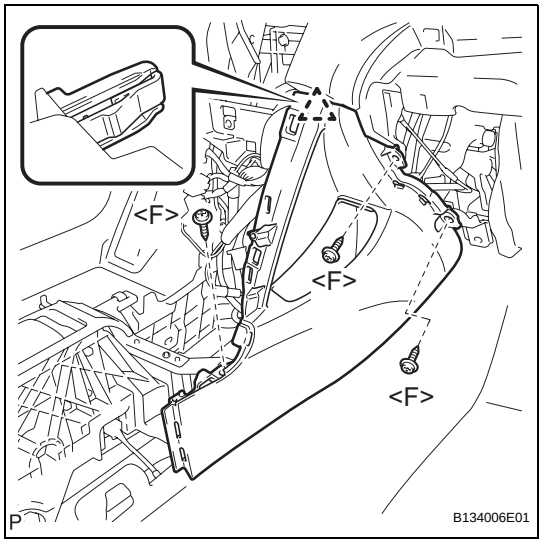
(b) Disengage the clip and remove the No. 2 console box insert front.



44. REMOVE NO. 2 CONSOLE BOX INSERT FRONT (for TMMK Made)

(a) Remove the 3 screws <O>.

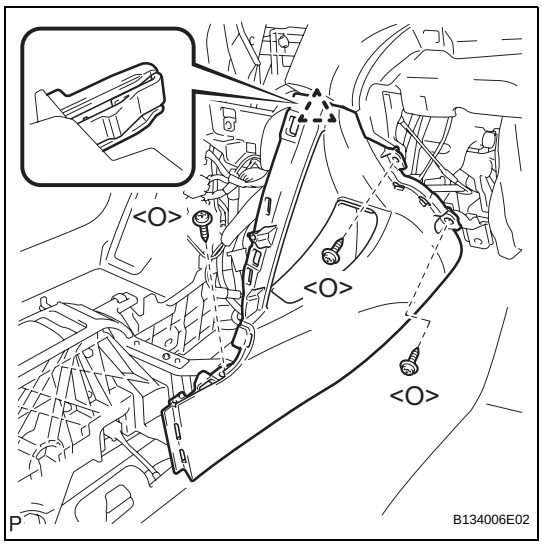
(b) Disengage the clip and remove the No. 2 console box insert front.



45. REMOVE NO. 1 CONSOLE BOX INSERT FRONT (for TMC Made)

(a) Remove the 3 screws <F>.

(b) Disengage the clip and remove the No. 1 console box insert front.

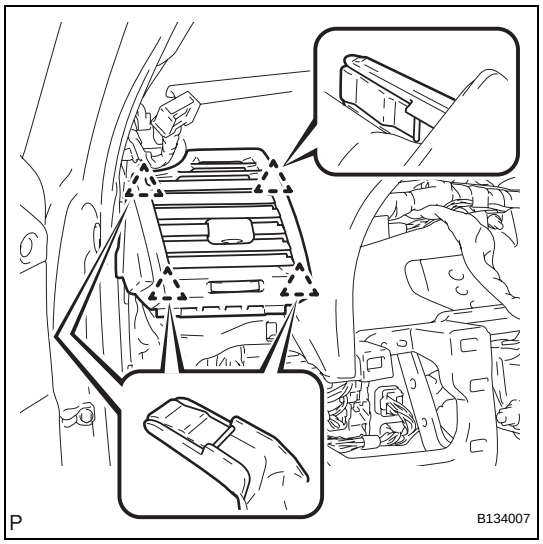


46. REMOVE NO. 1 CONSOLE BOX INSERT FRONT (for TMMK Made)

(a) Remove the 3 screws <O>.

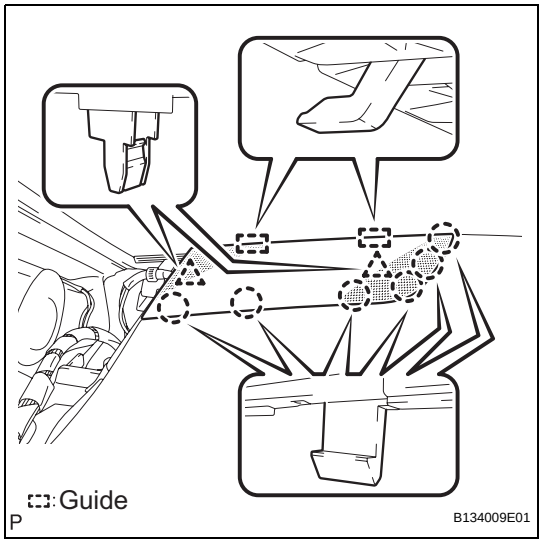
(b) Disengage the clip and remove the No. 1 console box insert front.

47. REMOVE FRONT PILLAR GARNISH LH (See page IR-27)



48. REMOVE INSTRUMENT PANEL NO. 1 REGISTER ASSEMBLY

(a) Disengage the 4 clips and remove the instrument panel No. 1 register assembly.



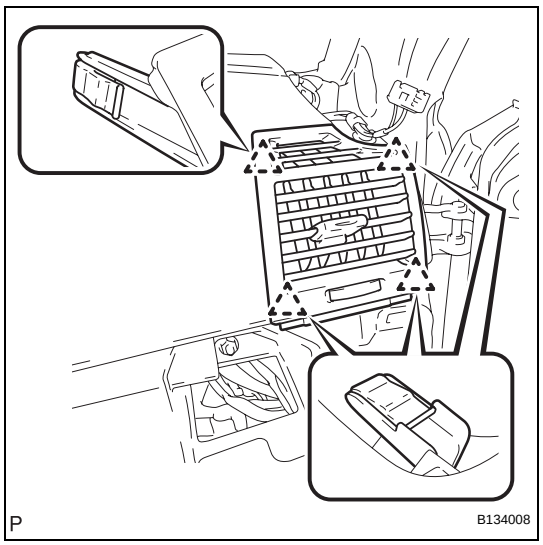
49. REMOVE INSTRUMENT PANEL NO. 1 SPEAKER PANEL SUB-ASSEMBLY

(a) Disengage the 6 claws and the 2 clips.

(b) Disengage the 2 guides and remove the instrument panel No. 1 speaker panel sub-assembly.

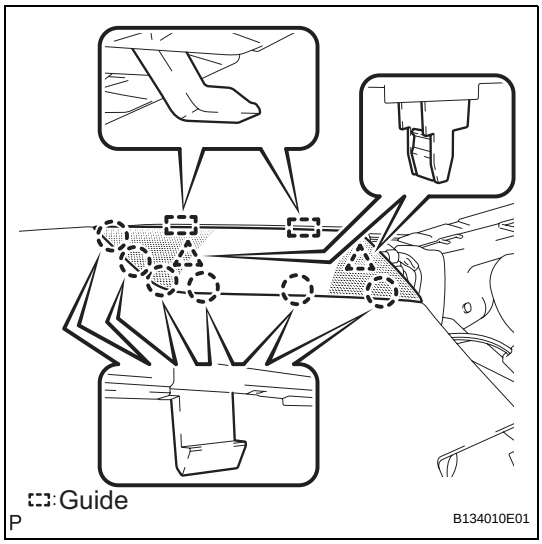
50. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) (See page AV-156)

51. REMOVE FRONT PILLAR GARNISH RH (See page IR-27)



52. REMOVE INSTRUMENT PANEL NO. 3 REGISTER ASSEMBLY

(a) Disengage the 4 clips and remove the instrument panel No. 3 register assembly.

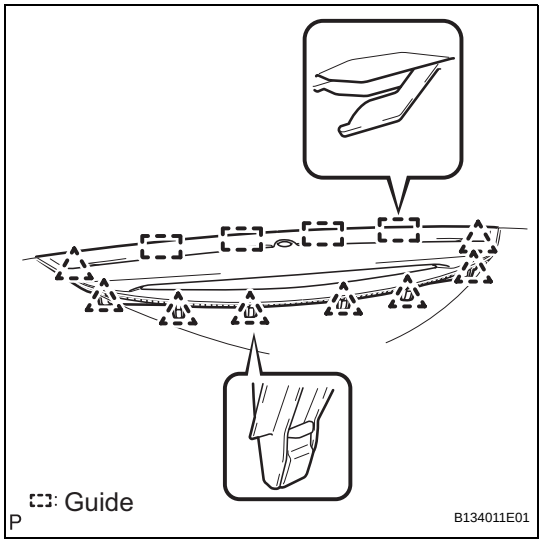


53. REMOVE INSTRUMENT PANEL NO. 2 SPEAKER PANEL SUB-ASSEMBLY

(a) Disengage the 6 claws and the 2 clips.
(b) Disengage the 2 guides and remove the instrument panel No. 2 speaker panel sub-assembly.

54. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side)

HINT:
Use the same procedures for the RH side and the LH side (See page AV-156).



55. REMOVE NO. 1 DEFROSTER NOZZLE GARNISH

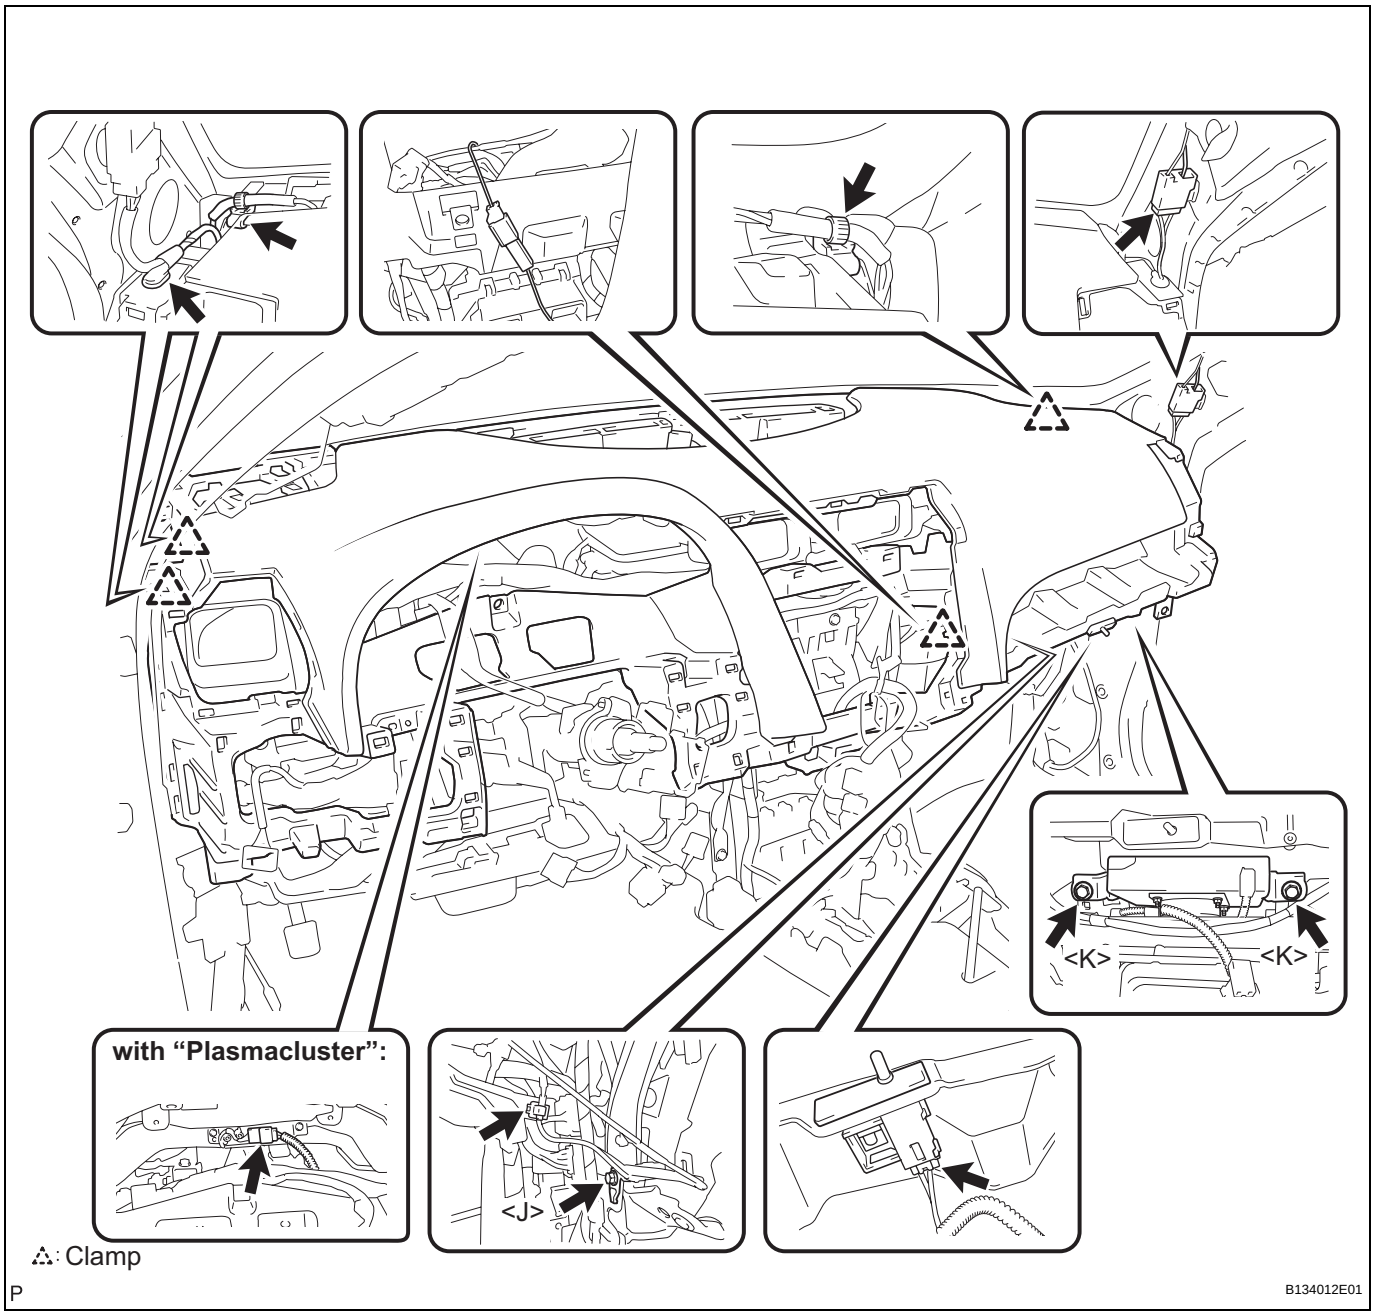
(a) Disengage the 8 clips and the 4 guides.
(b) Disengage each connector and remove the No. 1 defroster nozzle garnish.

56. DISCONNECT INSTRUMENT PANEL WIRE ASSEMBLY (See page RS-393)

57. REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for TMC Made)

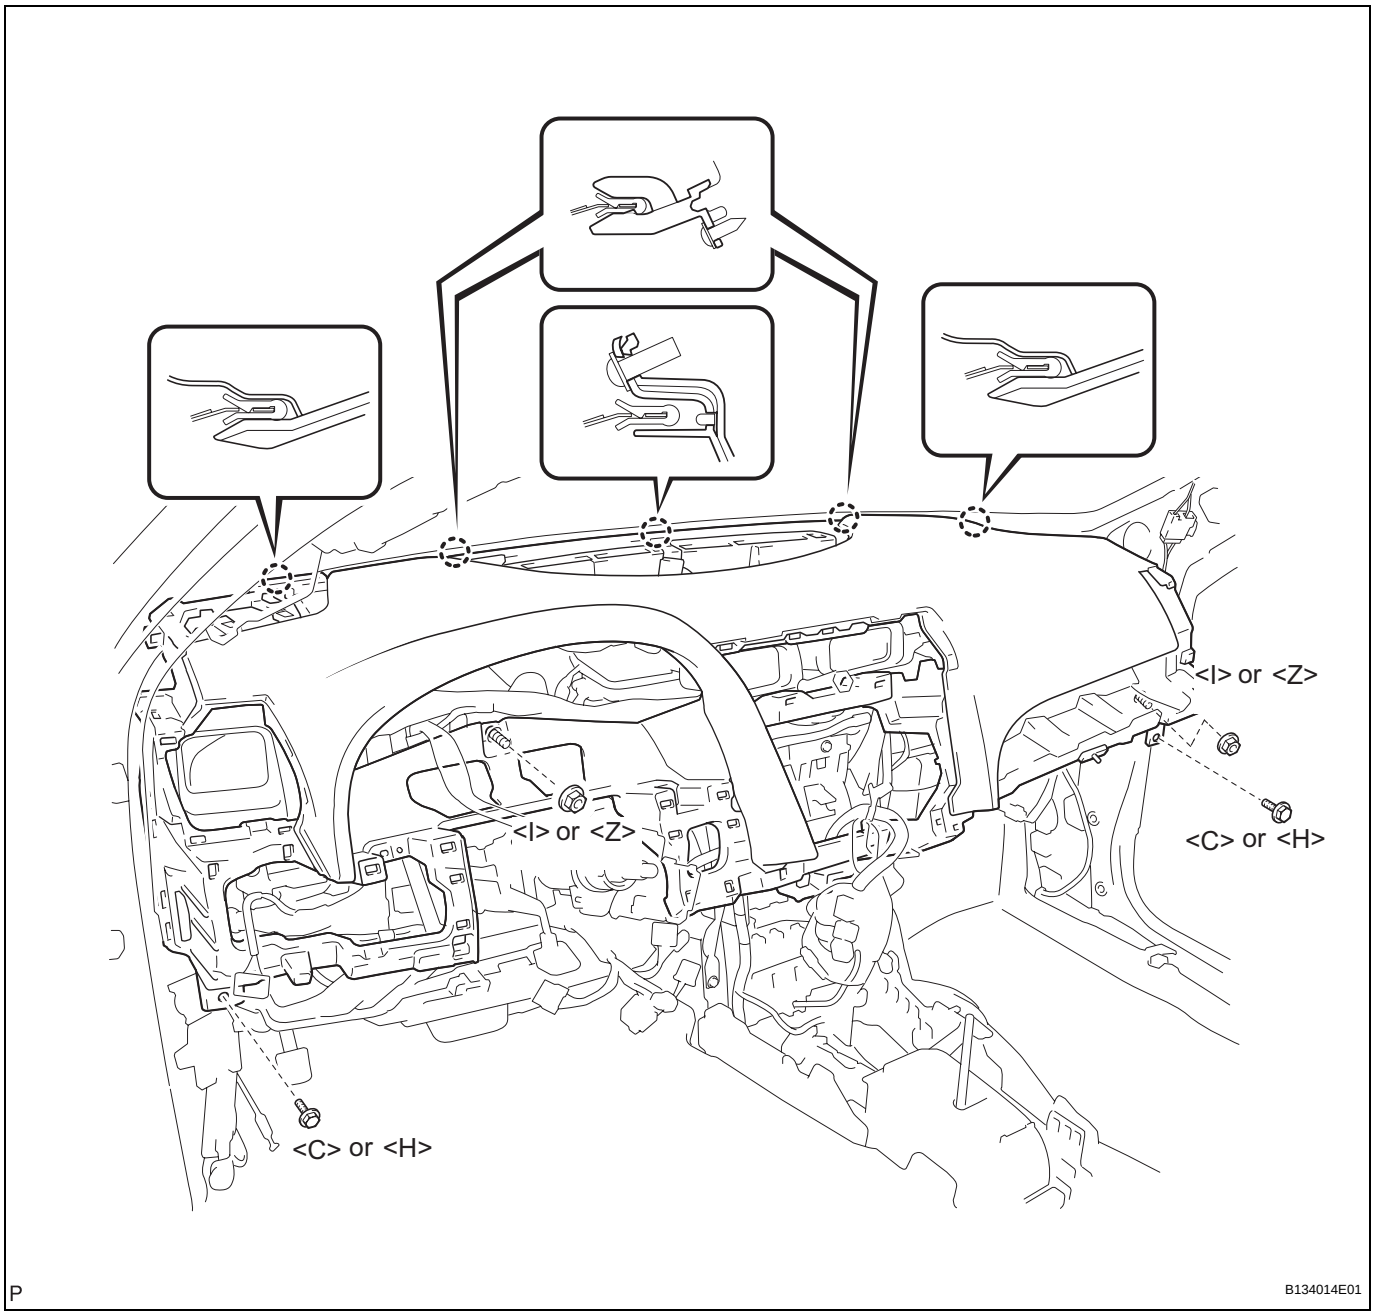
(a) Disengage each clamp.
(b) Disconnect each connector.
(c) Remove the bolt <J>.
(d) Remove the 2 passenger airbag bolts <K>.

(e) with "Plasmacluster":
(1) Disconnect the connector.



(f) Remove the 2 bolts <C> or <H>.
(g) Remove the 2 nuts <I> or <Z>.

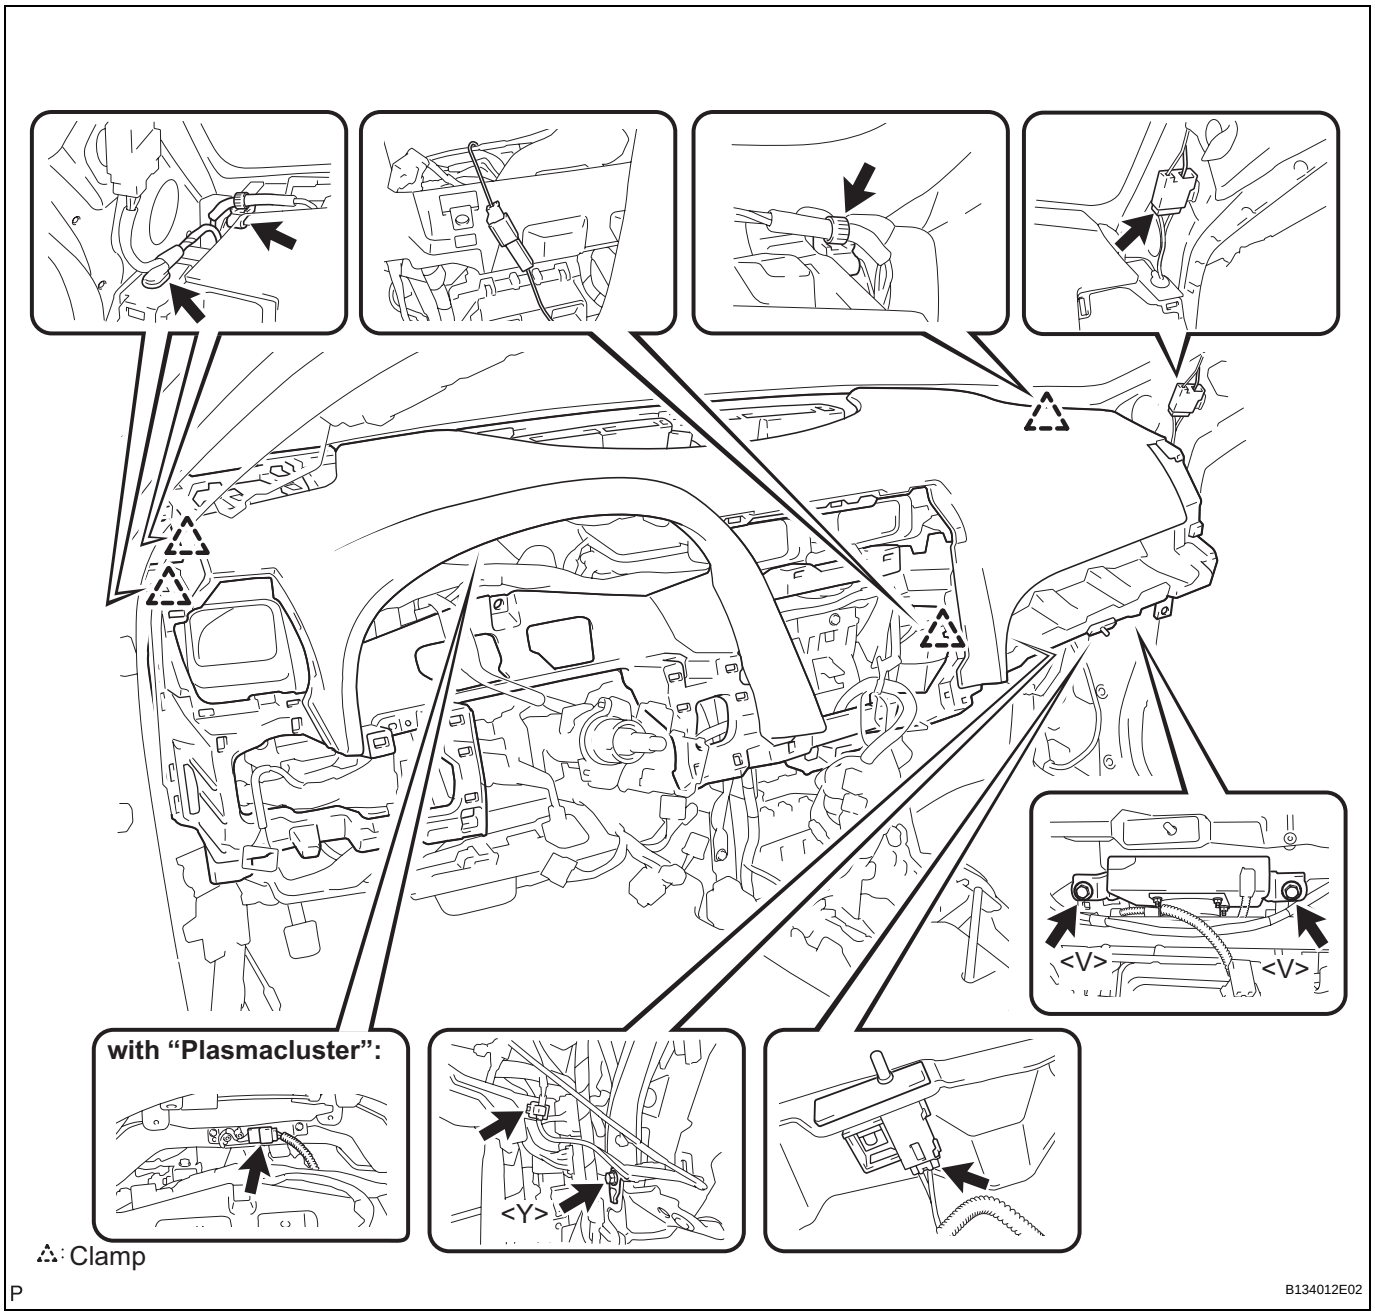
(h) Disengage the 5 claws and remove the instrument panel safety pad assembly.



58. REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for TMMK Made)

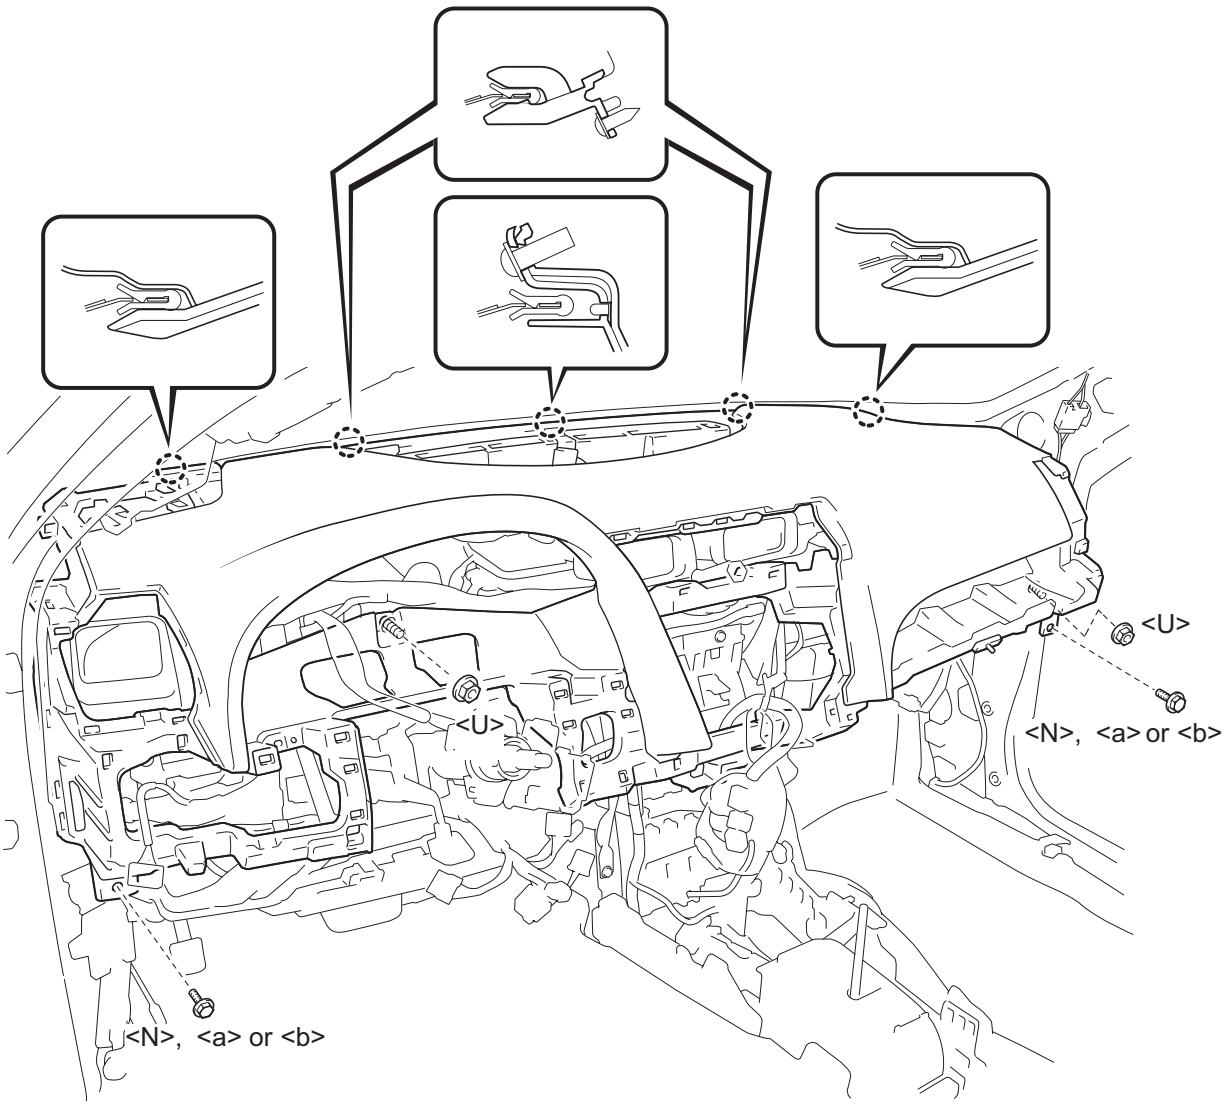
(a) Disengage each clamp.
(b) Disconnect each connector.
(c) Remove the bolt <Y>.
(d) Remove the 2 passenger airbag bolts <V>.

(e) with "Plasmacluster":
(1) Disconnect the connector.



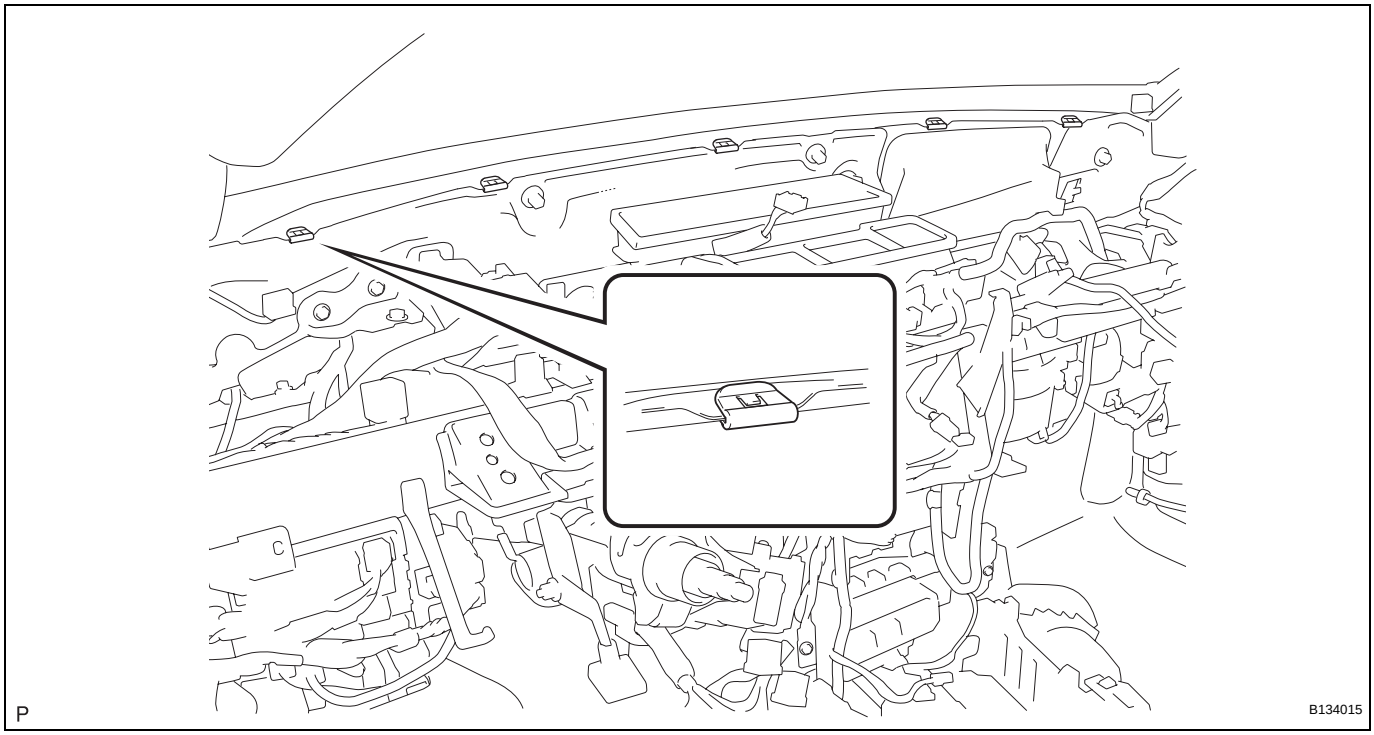
(f) Remove the 2 bolts <N>, <a> or <b>.
(g) Remove the 2 nuts <U>.

(h) Disengage the 5 claws and remove the instrument panel safety pad assembly.

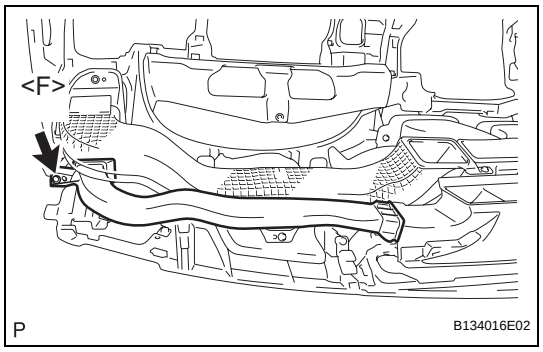


59. REMOVE NO. 3 INSTRUMENT PANEL STAY

(a) Disengage the claw and remove the 5 No. 3 instrument panel stays.

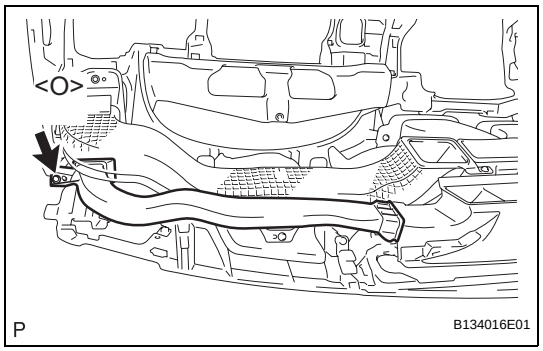


DISASSEMBLY



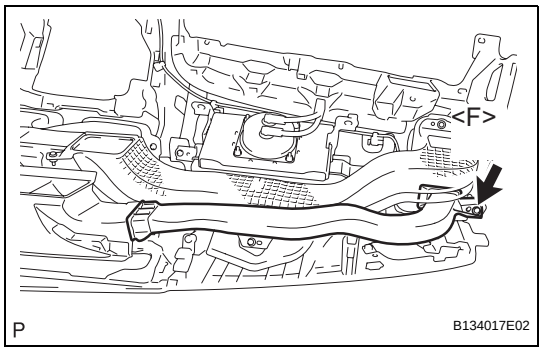
1. REMOVE SIDE NO. 1 DEFROSTER NOZZLE DUCT (for TMC Made)

(a) Remove the screw <F> and the side No. 1 defroster nozzle duct.



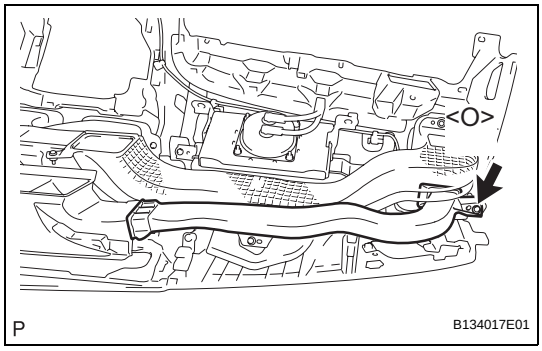
2. REMOVE SIDE NO. 1 DEFROSTER NOZZLE DUCT (for TMMK Made)

(a) Remove the screw <O> and the side No. 1 defroster nozzle duct.



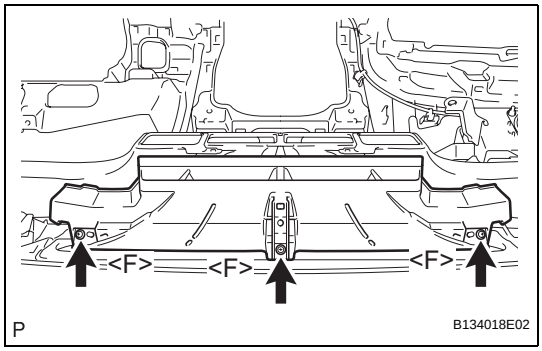
3. REMOVE SIDE NO. 2 DEFROSTER NOZZLE DUCT (for TMC Made)

(a) Remove the screw <F> and the side No. 2 defroster nozzle duct.



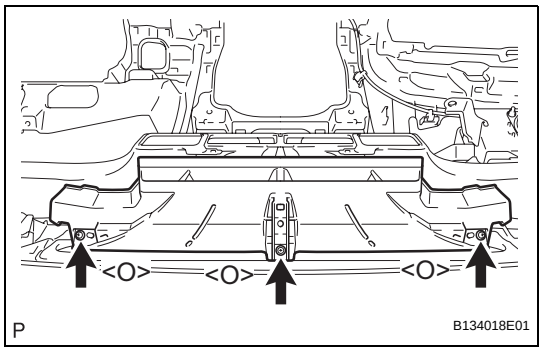
4. REMOVE SIDE NO. 2 DEFROSTER NOZZLE DUCT (for TMMK Made)

(a) Remove the screw <O> and the side No. 2 defroster nozzle duct.



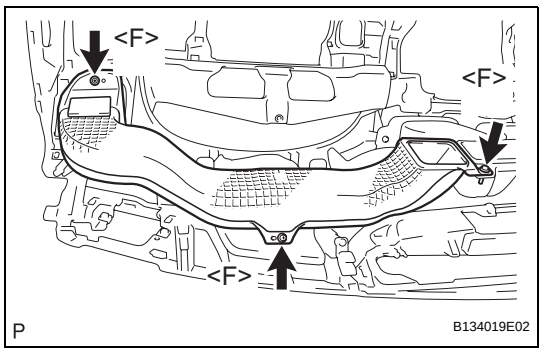
5. REMOVE DEFROSTER NOZZLE ASSEMBLY (for TMC Made)

(a) Remove the 3 screws <F> and the defroster nozzle assembly.



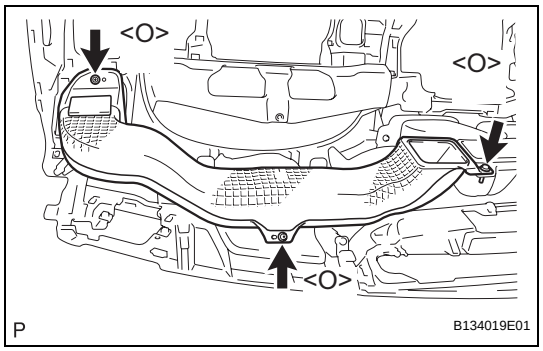
6. REMOVE DEFROSTER NOZZLE ASSEMBLY (for TMMK Made)

(a) Remove the 3 screws <O> and the defroster nozzle assembly.



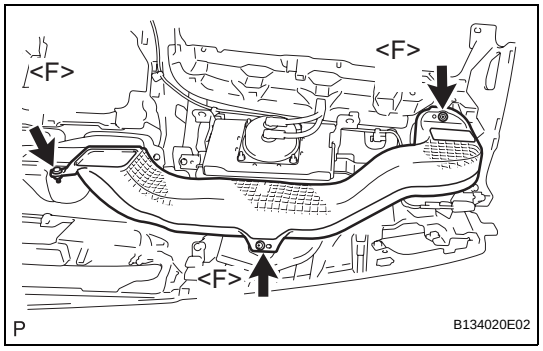
7. REMOVE NO. 1 HEATER TO REGISTER DUCT (for TMC Made)

(a) Remove the 3 screws <F> and the No. 1 heater to register duct.



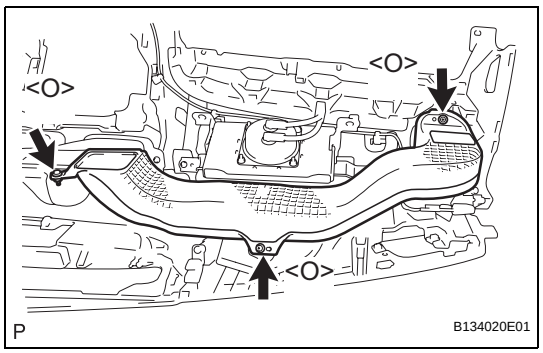
8. REMOVE NO. 1 HEATER TO REGISTER DUCT (for TMMK Made)

(a) Remove the 3 screws <O> and the No. 1 heater to register duct.



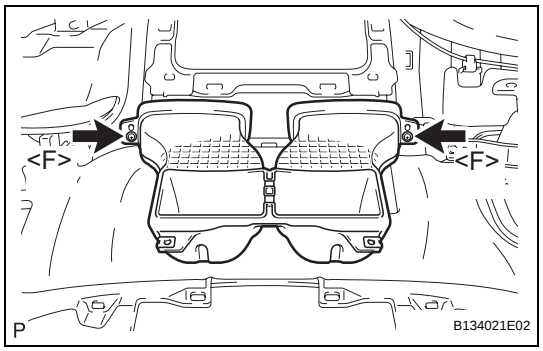
9. REMOVE NO. 3 HEATER TO REGISTER DUCT (for TMC Made)

(a) Remove the 3 screws <F> and the No. 3 heater to register duct.



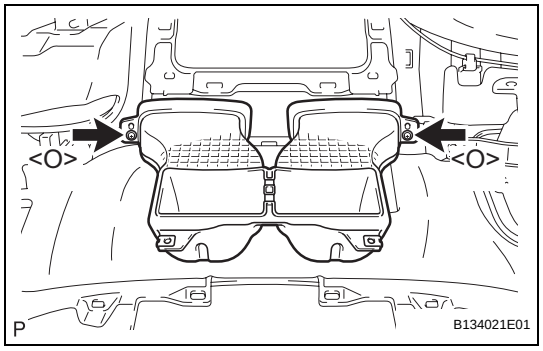
10. REMOVE NO. 3 HEATER TO REGISTER DUCT (for TMMK Made)

(a) Remove the 3 screws <O> and the No. 3 heater to register duct.



11. REMOVE NO. 2 HEATER TO REGISTER DUCT (for TMC Made)

(a) Remove the 2 screws <F> and the No. 2 heater to register duct.



12. REMOVE NO. 2 HEATER TO REGISTER DUCT (for TMMK Made)

(a) Remove the 2 screws <O> and the No. 2 heater to register duct.

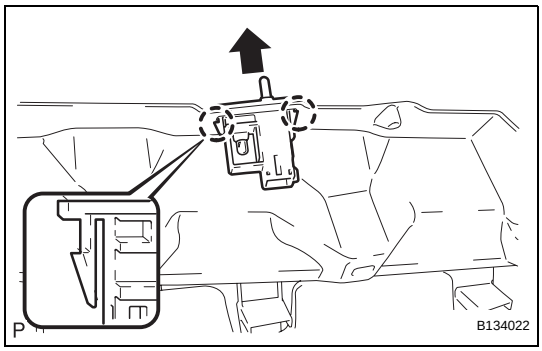
13. REMOVE NO. 2 ANTENNA CORD SUB-ASSEMBLY (See page AV-196)

14. REMOVE NAVIGATION ANTENNA ASSEMBLY (See page NS-214)

15. REMOVE FRONT PASSENGER AIRBAG ASSEMBLY (See page RS-395)

16. REMOVE GLOVE BOX LIGHT ASSEMBLY

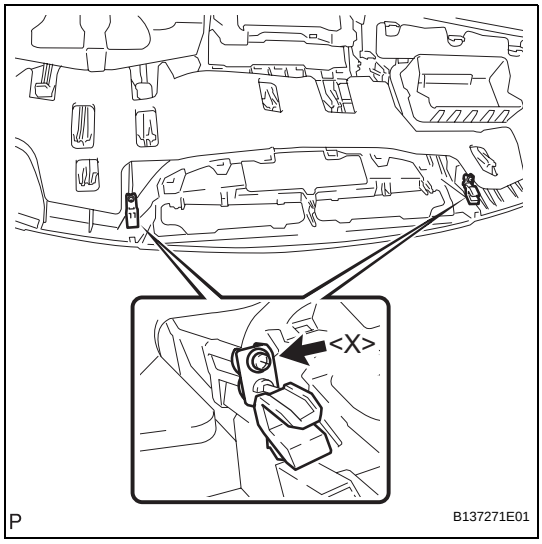
(a) Disengage the 2 claws and remove the glove box light assembly.



17. REMOVE PLASMACLUSTER (w/ Plasmacluster) (See page AC-276)

18. REMOVE NO. 1 INSTRUMENT PANEL PIN (for TMMK Made)

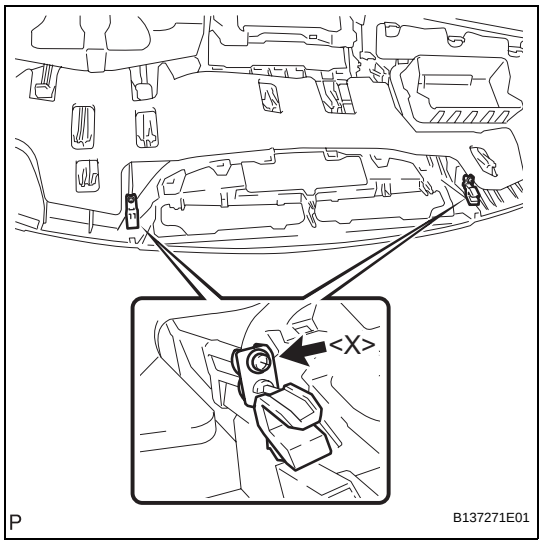
(a) Remove the 2 screws <X> and 2 No. 1 instrument panel pins.



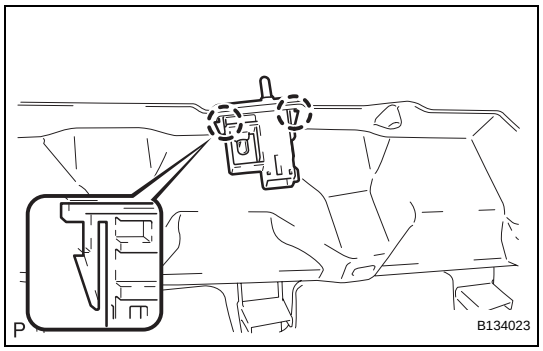
REASSEMBLY

1. INSTALL NO. 1 INSTRUMENT PANEL PIN (for TMMK Made)

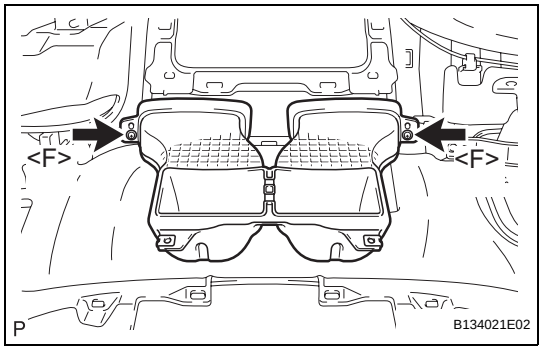
(a) Install the 2 No. 1 instrument panel pins with the 2 screws <X>.



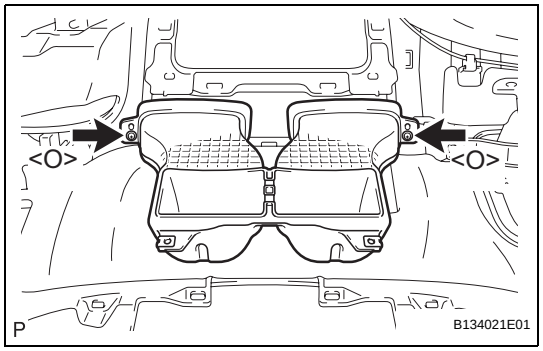
2. INSTALL PLASMACLUSTER (w/ Plasmacluster) (See page AC-276)



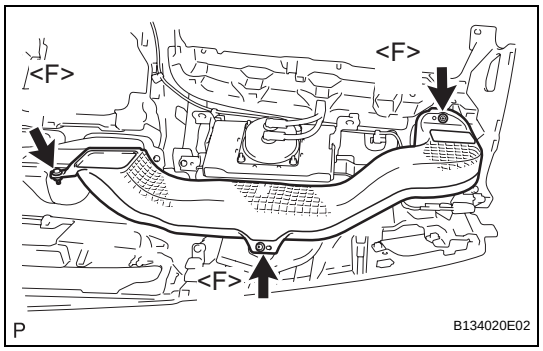
3. **INSTALL GLOVE BOX LIGHT ASSEMBLY**
   (a) Engage the 2 claws and install the glove box light.
4. **INSTALL NAVIGATION ANTENNA ASSEMBLY (See page NS-214)**
5. **INSTALL NO. 2 ANTENNA CORD SUB-ASSEMBLY (See page AV-210)**



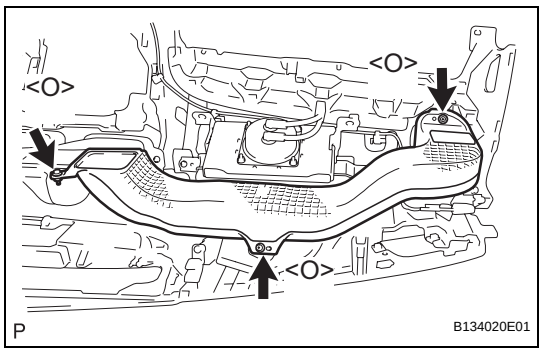
6. **INSTALL NO. 2 HEATER TO REGISTER DUCT (for TMC Made)**
   (a) Install the No. 2 heater to register duct with the 2 screws <F>.



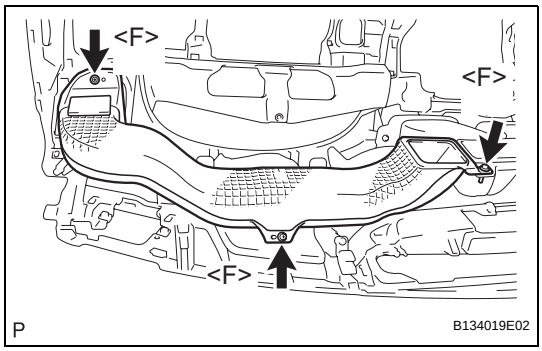
7. **INSTALL NO. 2 HEATER TO REGISTER DUCT (for TMMK Made)**
   (a) Install the No. 2 heater to register duct with the 2 screws <O>.



8. **INSTALL NO. 3 HEATER TO REGISTER DUCT (for TMC Made)**
   (a) Install the No. 3 heater to register duct with the 3 screws <F>.

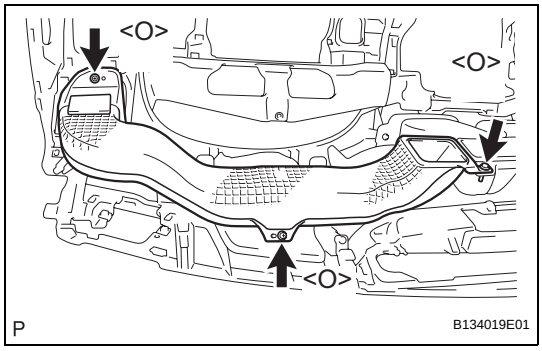


9. **INSTALL NO. 3 HEATER TO REGISTER DUCT (for TMMK Made)**
   (a) Install the No. 3 heater to register duct with the 3 screws <O>.



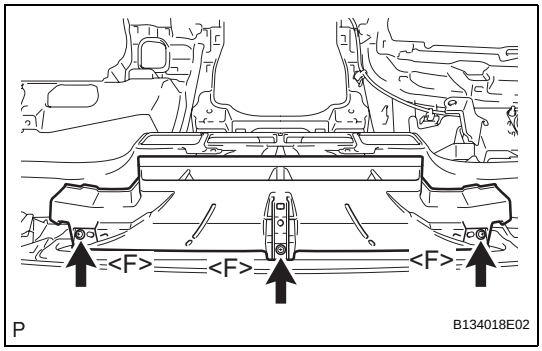
10. INSTALL NO. 1 HEATER TO REGISTER DUCT (for TMC Made)

(a) Install the No. 1 heater to register duct with the 3 screws <F>.



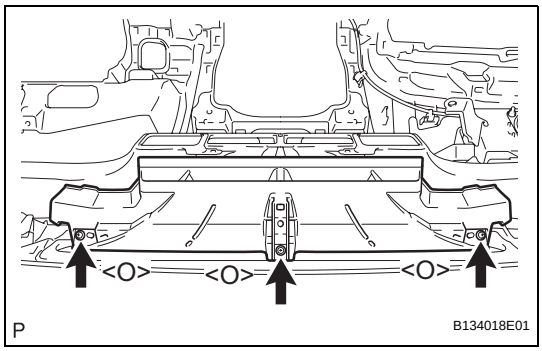
11. INSTALL NO. 1 HEATER TO REGISTER DUCT (for TMMK Made)

(a) Install the No. 1 heater to register duct with the 3 screws <O>.



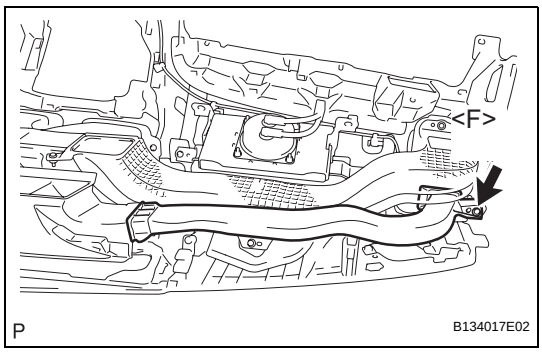
12. INSTALL DEFROSTER NOZZLE ASSEMBLY (for TMC Made)

(a) Install the defroster nozzle assembly with the 3 screws <F>.



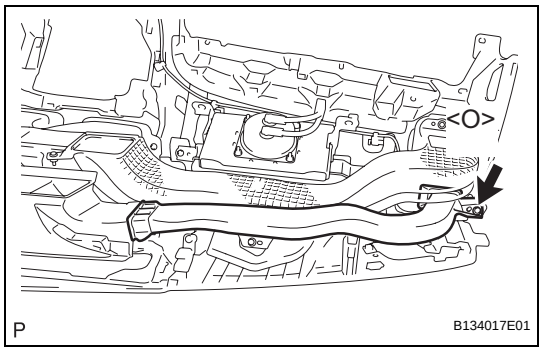
13. INSTALL DEFROSTER NOZZLE ASSEMBLY (for TMMK Made)

(a) Install the defroster nozzle assembly with the 3 screws <O>.



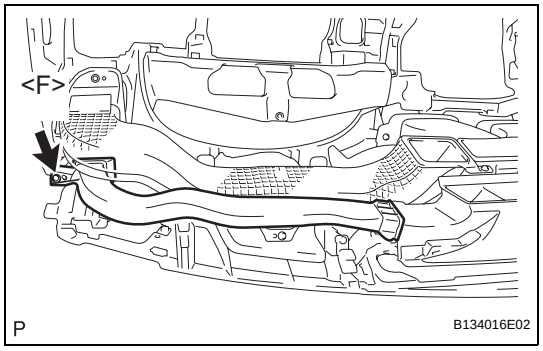
14. INSTALL SIDE NO. 2 DEFROSTER NOZZLE DUCT (for TMC Made)

(a) Install the side No. 2 defroster nozzle duct with the screw <F>.



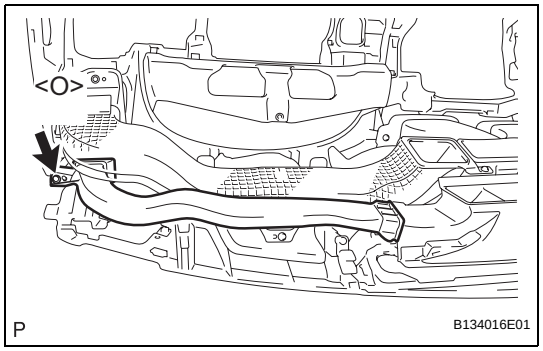
15. INSTALL SIDE NO. 2 DEFROSTER NOZZLE DUCT (for TMMK Made)

(a) Install the side No. 2 defroster nozzle duct with the screw <O>.



16. INSTALL SIDE NO. 1 DEFROSTER NOZZLE DUCT (for TMC Made)

(a) Install the side No. 1 defroster nozzle duct with the screw <F>.



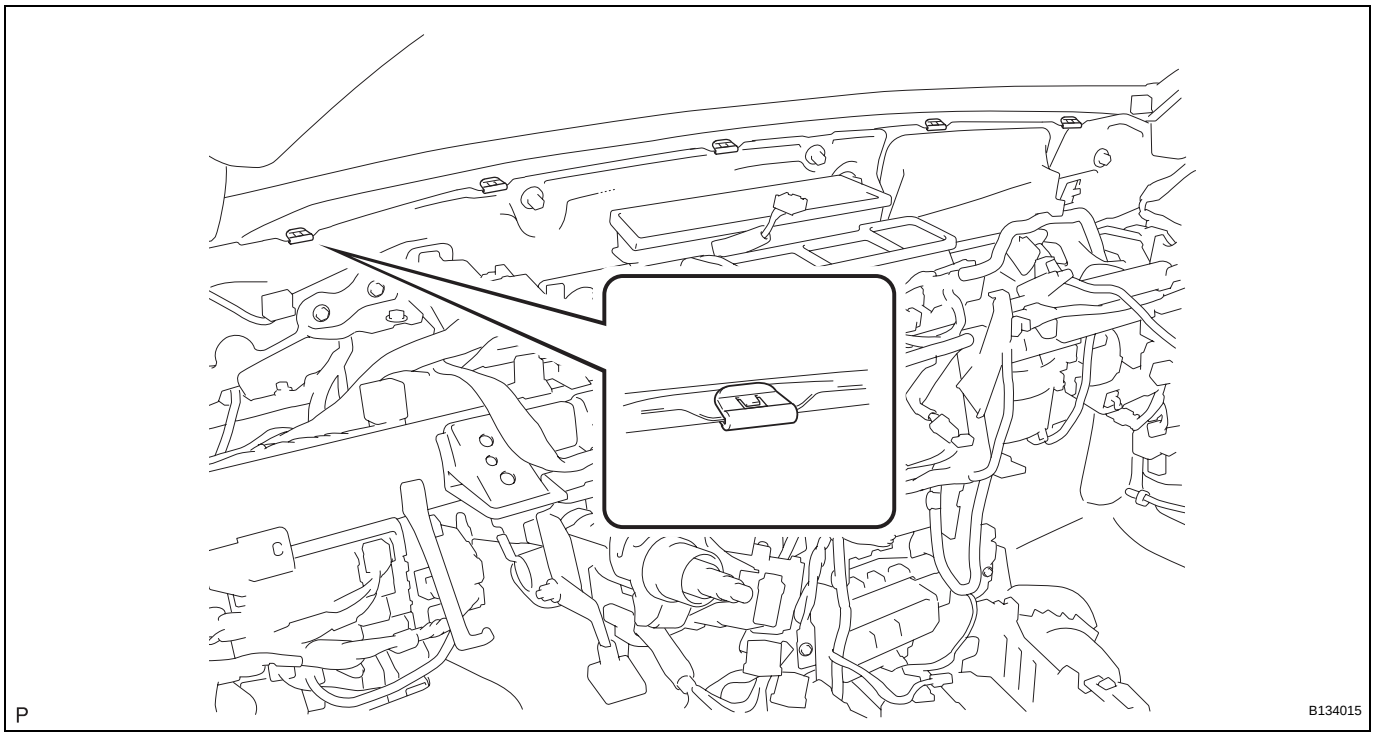
17. INSTALL SIDE NO. 1 DEFROSTER NOZZLE DUCT (for TMMK Made)

(a) Install the side No. 1 defroster nozzle duct with the screw <O>.

INSTALLATION

1. INSTALL NO. 3 INSTRUMENT PANEL STAY

(a) Engage the claw and install the 5 No. 3 instrument panel stays.

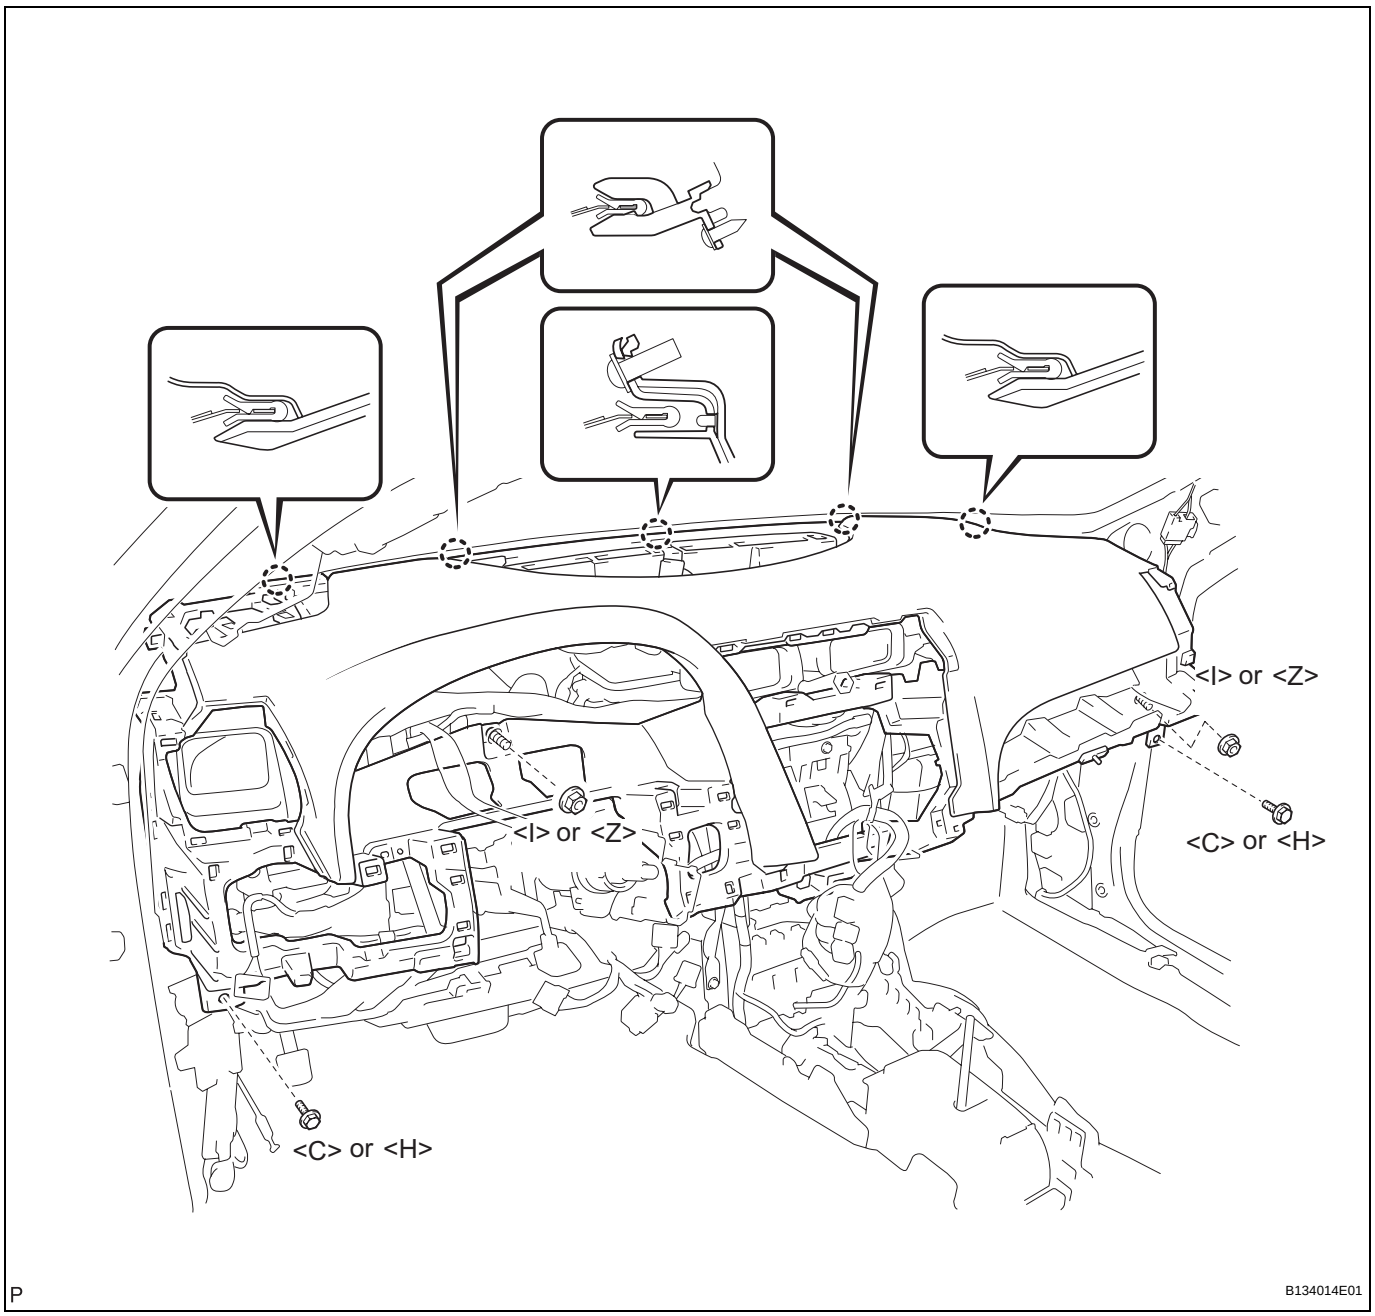


2. INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for TMC Made)

(a) Engage the 5 claws.

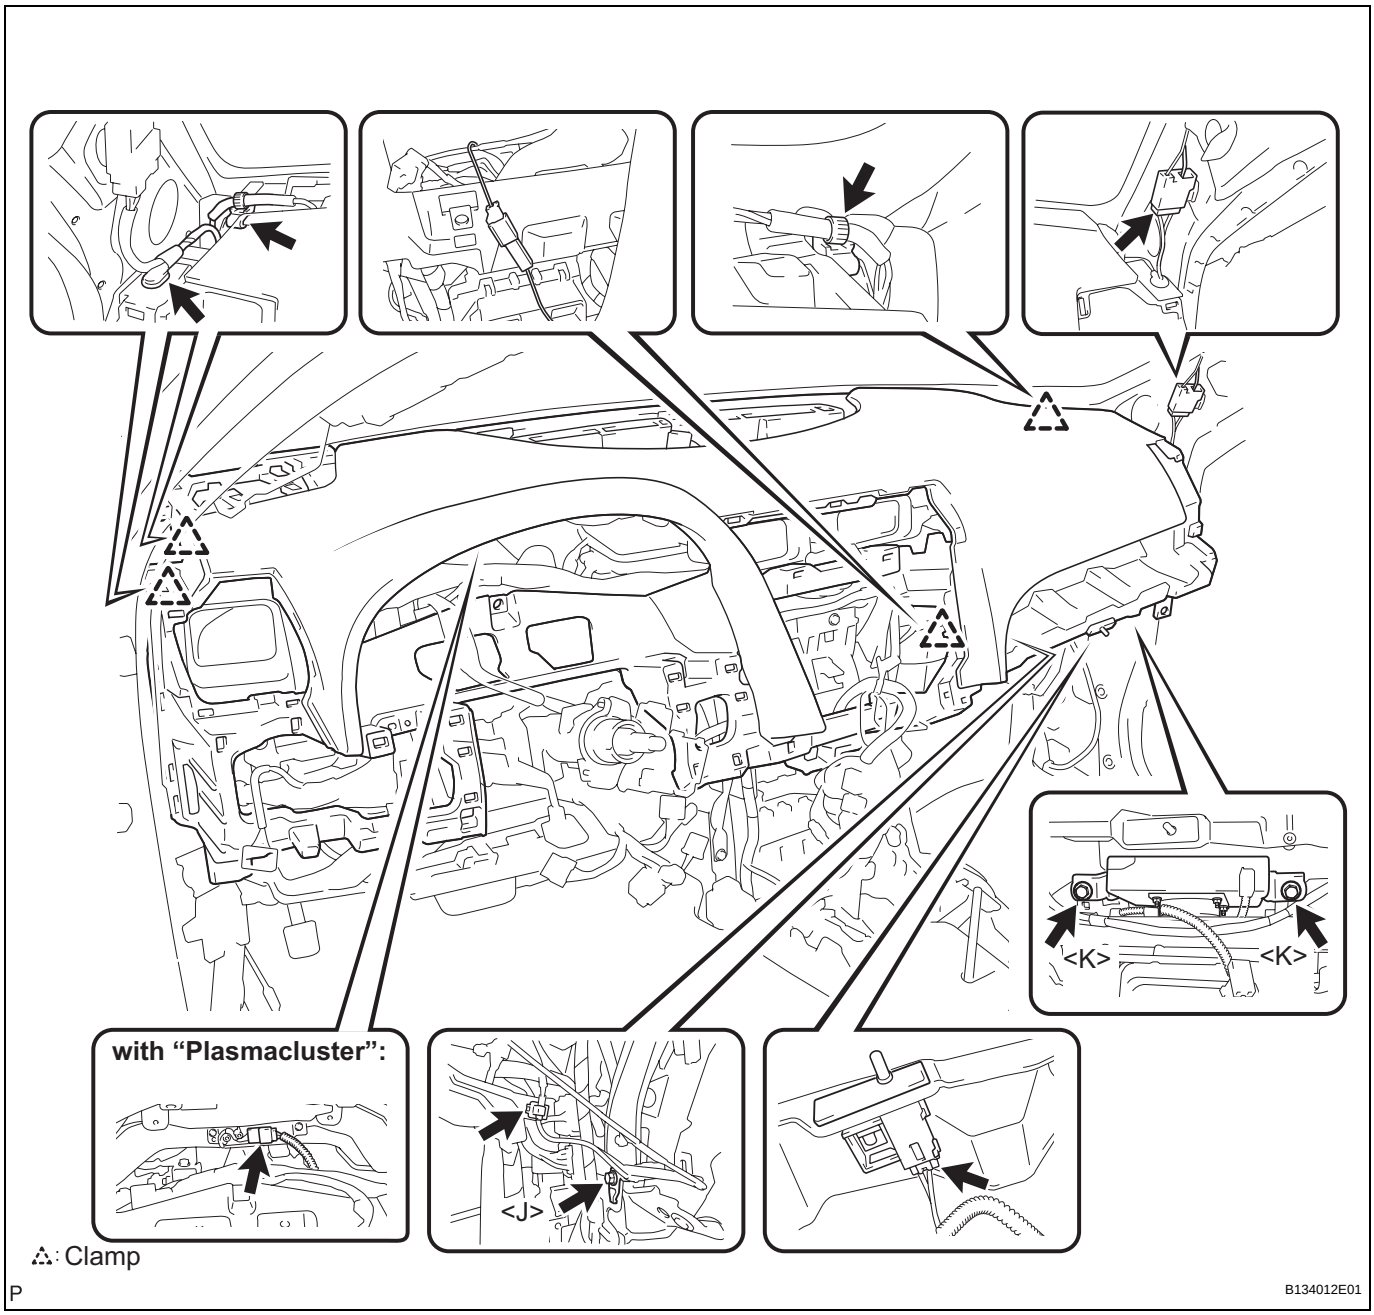
NOTICE:
Do not allow the wire harness to get caught in the claws.

(b) Install the 2 bolts <C> or <H> and 2 nuts <I> or <Z>.



(c) Engage each clamp.
(d) Install the bolt <J>.
Torque: 7.0 N*m (71 kgf*cm, 62 in.*lbf)
(e) Install the 2 passenger airbag bolts <K>.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)
(f) Connect each connector and install the instrument panel safety pad assembly.

(g) with "Plasmacluster":
(1) Connect the connector.

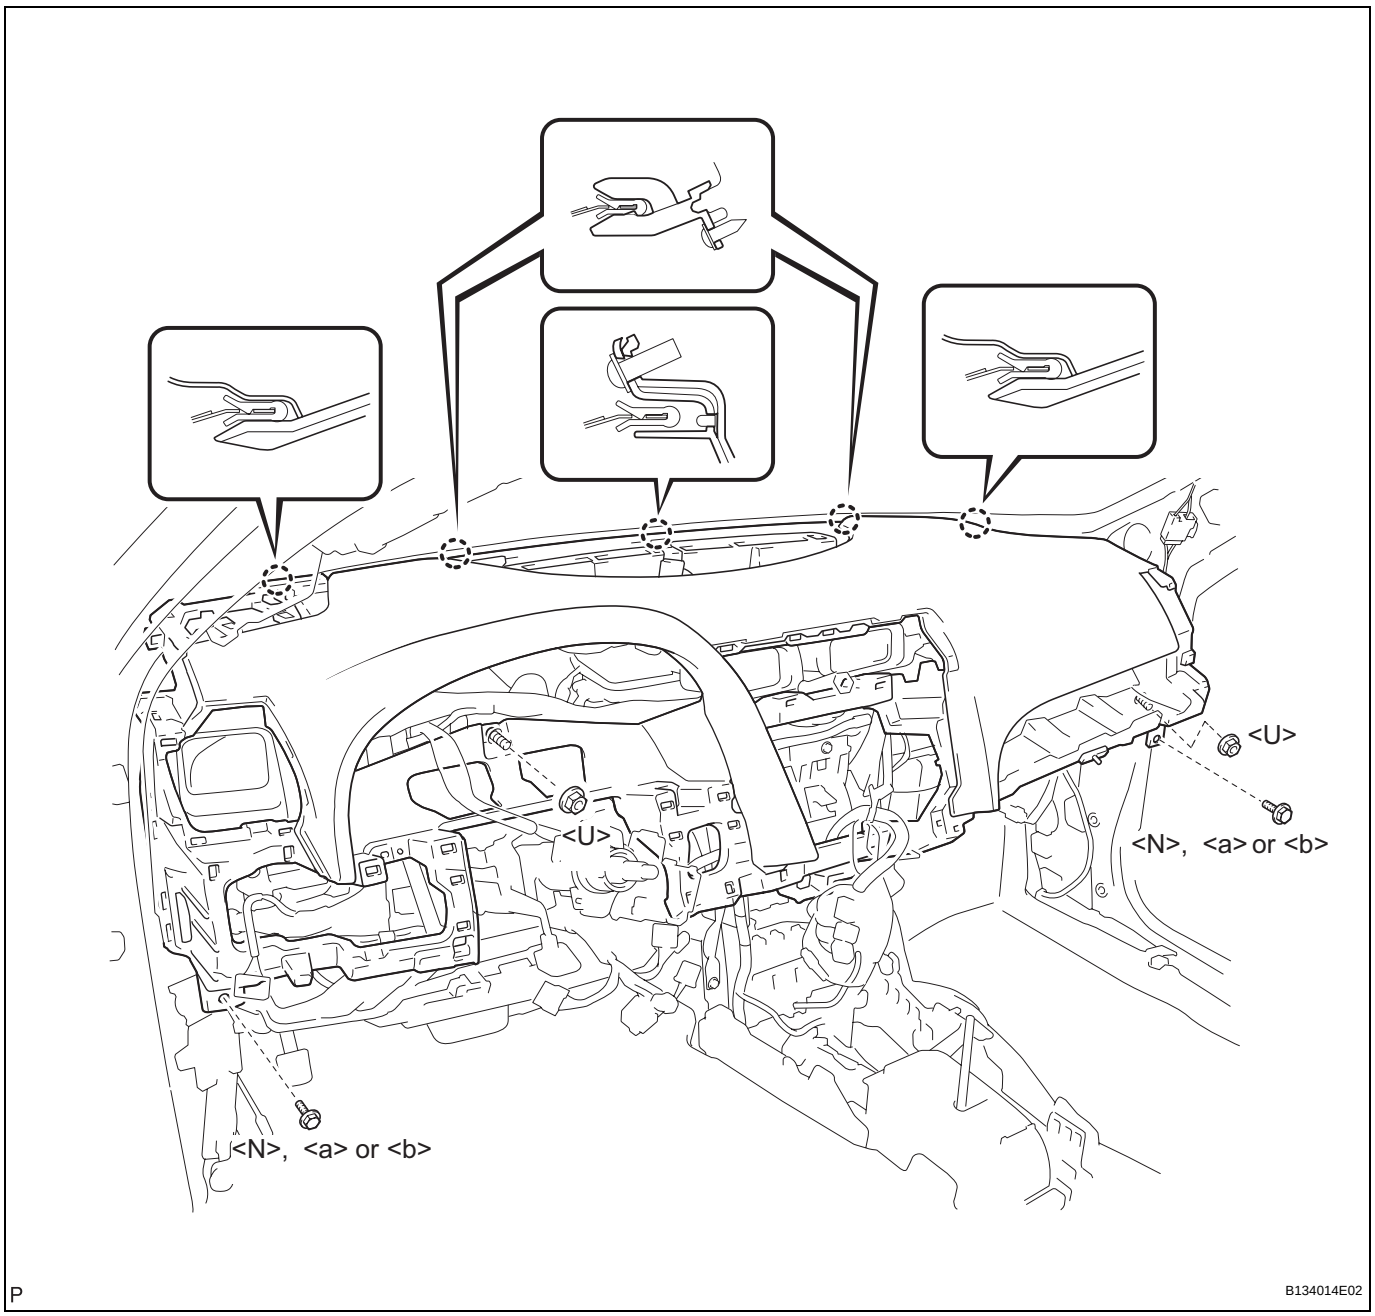


3. INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for TMMK Made)

(a) Engage the 5 claws.

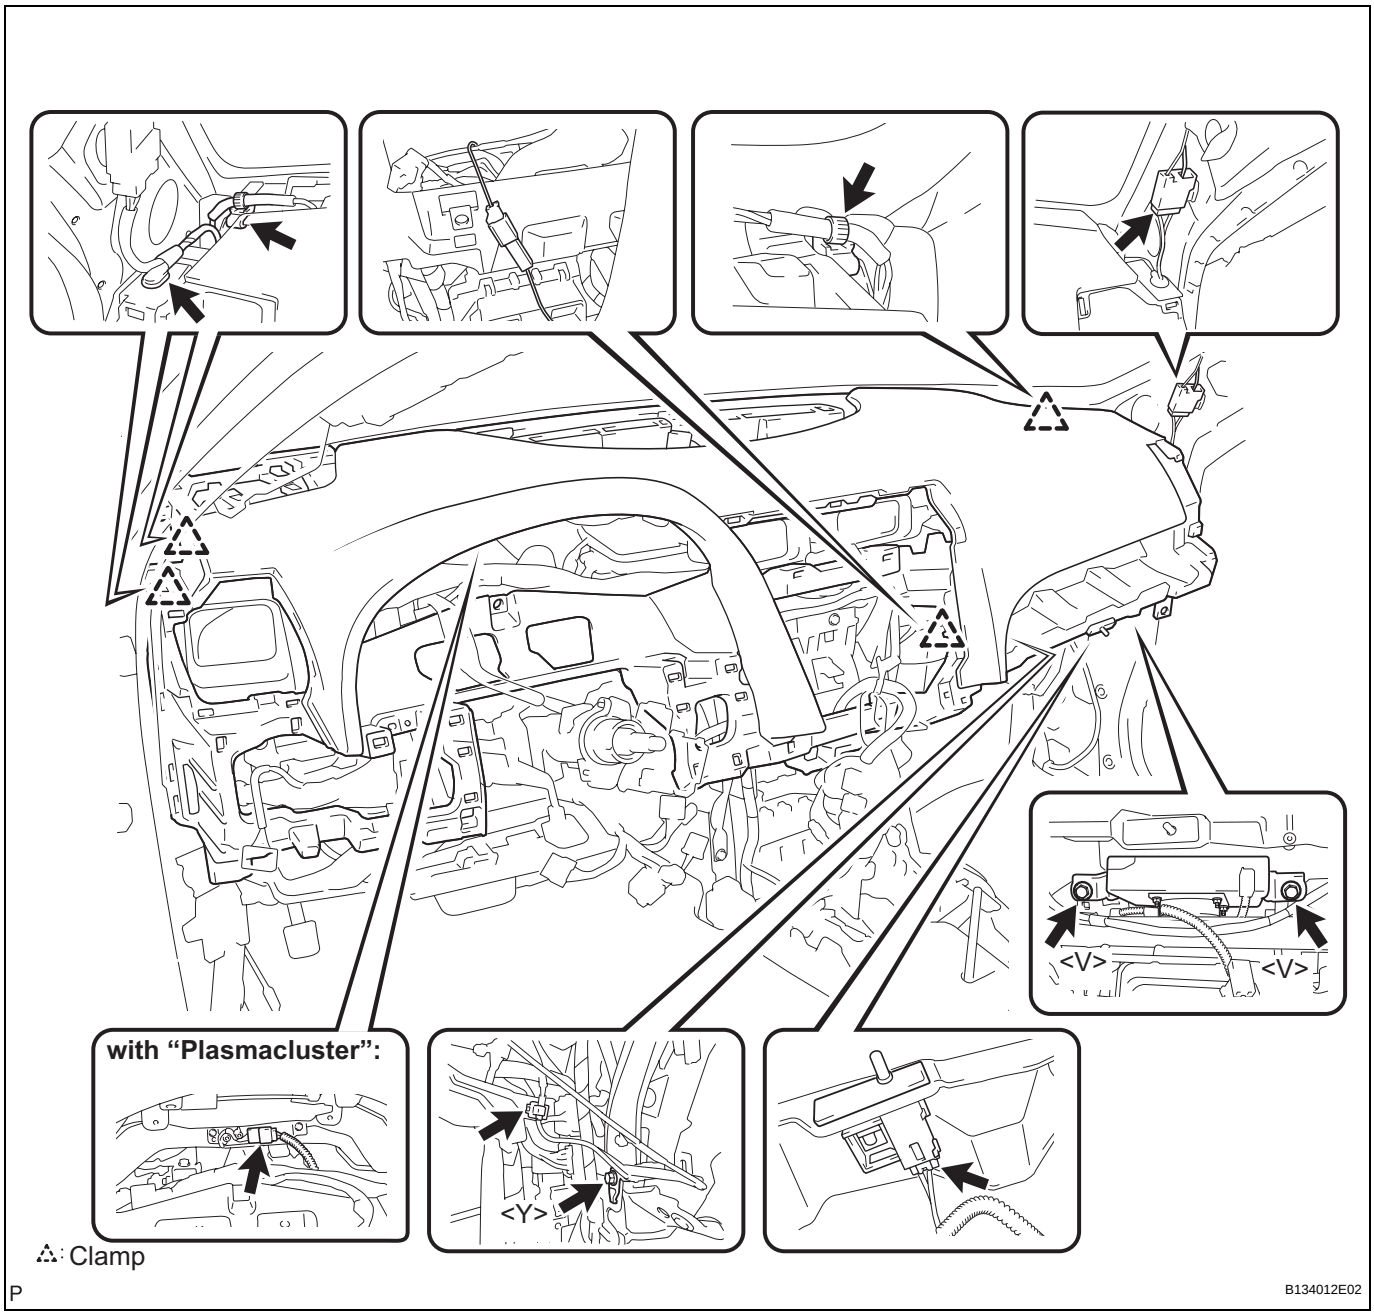
NOTICE:
Do not allow the wire harness to get caught in the claws.

(b) Install the 2 bolts <N>, <a> or <b> and 2 nuts <U>.

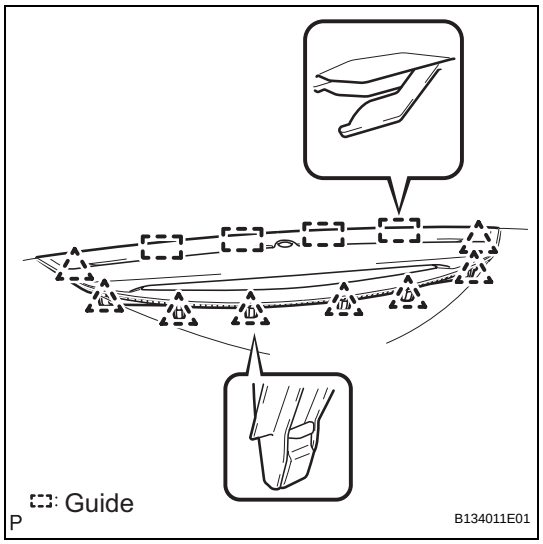


(c) Engage each clamp.
(d) Install the bolt <Y>.
Torque: 7.0 N*m (71 kgf*cm, 62 in.*lbf)
(e) Install the 2 passenger airbag bolts <V>.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)
(f) Connect each connector and install the instrument panel safety pad assembly.

(g) with "Plasmacluster":
(1) Connect the connector.

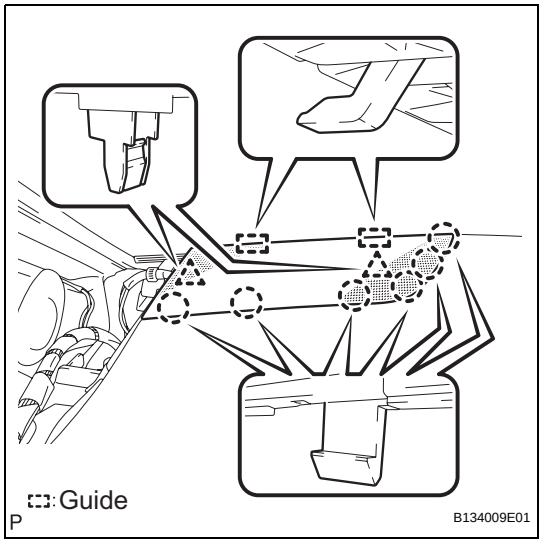


4. CONNECT INSTRUMENT PANEL WIRE ASSEMBLY (See page RS-398)

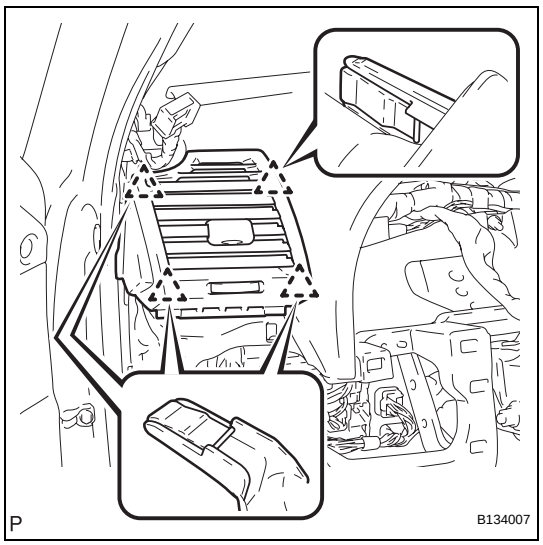


5. **INSTALL NO. 1 DEFROSTER NOZZLE GARNISH**
   (a) Connect each connector.
   (b) Engage the 4 guides.
   (c) Engage the 8 clips and install the No. 1 defroster nozzle garnish.

6. **INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) (See page AV-156)**



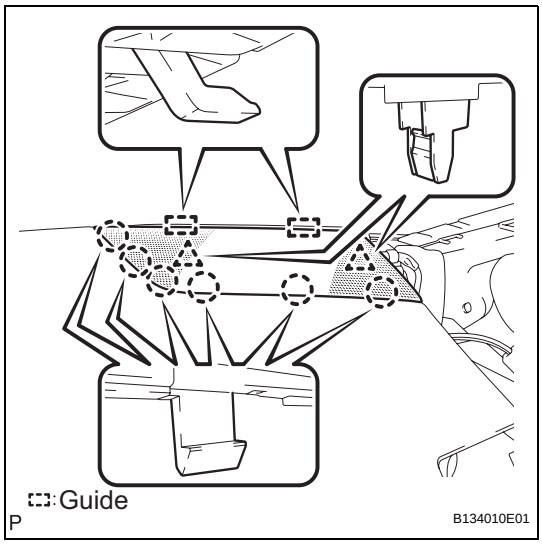
7. **INSTALL INSTRUMENT PANEL NO. 1 SPEAKER PANEL SUB-ASSEMBLY**
   (a) Engage the 2 guides.
   (b) Engage the 6 claws and the 2 clips to install the instrument panel No. 1 speaker panel sub-assembly.



8. **INSTALL INSTRUMENT PANEL NO. 1 REGISTER ASSEMBLY**
   (a) Engage the 4 clips and install the instrument panel No. 1 register assembly.

9. **INSTALL FRONT PILLAR GARNISH LH (See page IR-51)**

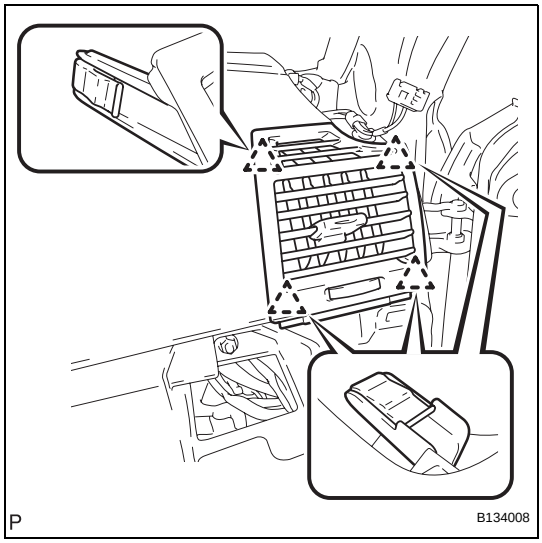
10. **INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side)**
    HINT:
    Use the same procedures for the RH side and the LH side (See page AV-156).



11. INSTALL INSTRUMENT PANEL NO. 2 SPEAKER PANEL SUB-ASSEMBLY

(a) Engage the 2 guides.

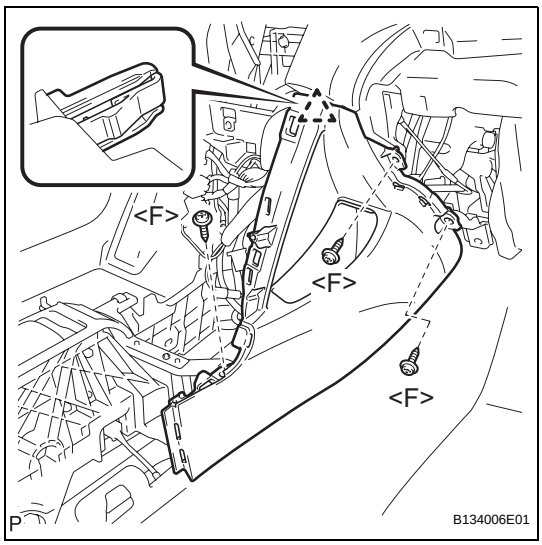
(b) Engage the 6 claws and the 2 clips to install the instrument panel No. 2 speaker panel sub-assembly.



12. INSTALL INSTRUMENT PANEL NO. 3 REGISTER ASSEMBLY

(a) Engage the 4 clips and install the instrument panel No. 3 register assembly.

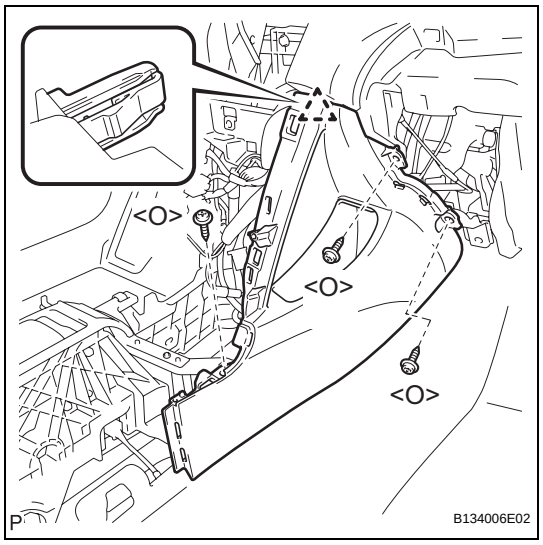
13. INSTALL FRONT PILLAR GARNISH RH (See page IR-52)



14. INSTALL NO. 1 CONSOLE BOX INSERT FRONT (for TMC Made)

(a) Engage the clip.

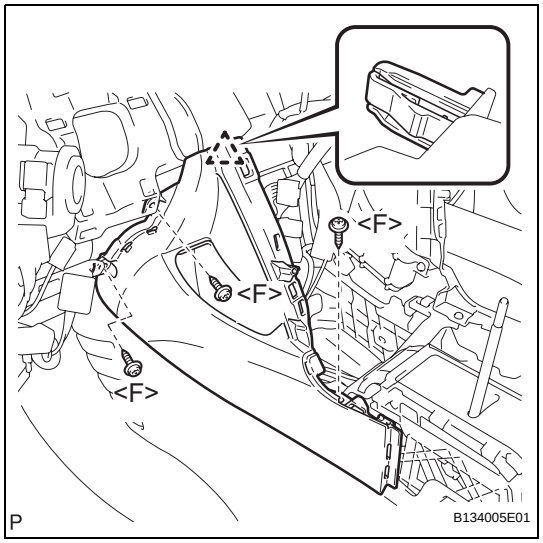
(b) Install the No. 1 console box insert front with the 3 screws <F>.



15. INSTALL NO. 1 CONSOLE BOX INSERT FRONT (for TMMK Made)

(a) Engage the clip.

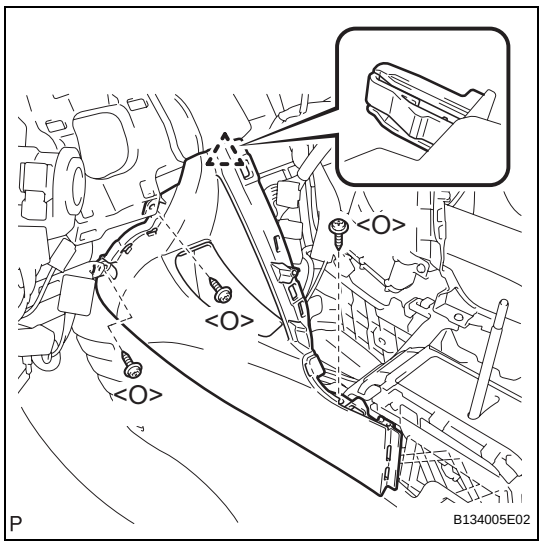
(b) Install the No. 1 console box insert front with the 3 screws <O>.



16. INSTALL NO. 2 CONSOLE BOX INSERT FRONT (for TMC Made)

(a) Engage the clip.

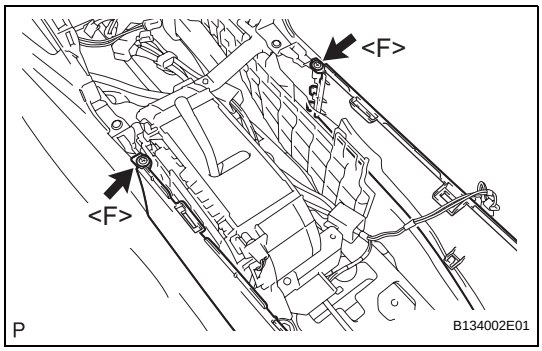
(b) Install the No. 2 console box insert front with the 3 screws <F>.



17. INSTALL NO. 2 CONSOLE BOX INSERT FRONT (for TMMK Made)

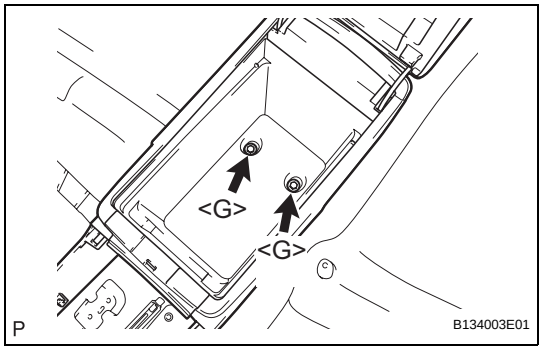
(a) Engage the clip.

(b) Install the No. 2 console box insert front with the 3 screws <O>.

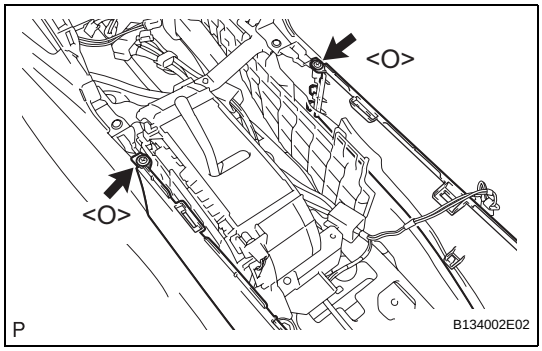


18. INSTALL CONSOLE BOX ASSEMBLY (for TMC Made)

(a) Install the 2 screws <F>.

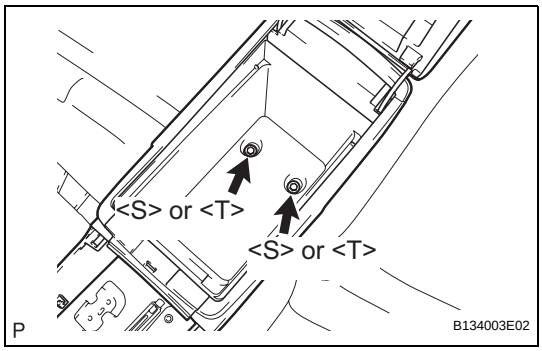


(b) Install the console box assembly with the 2 bolts <G>.

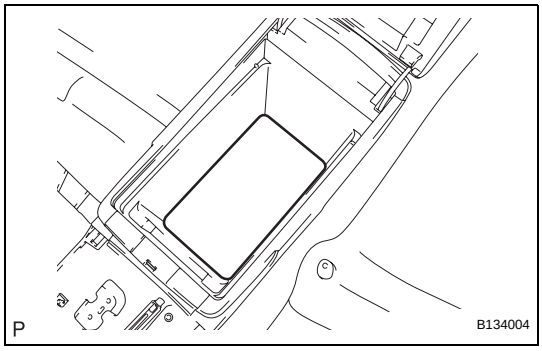


19. INSTALL CONSOLE BOX ASSEMBLY (for TMMK Made)

(a) Install the 2 screws <O>.



(b) Install the console box assembly with the 2 bolts <S> or <T>.



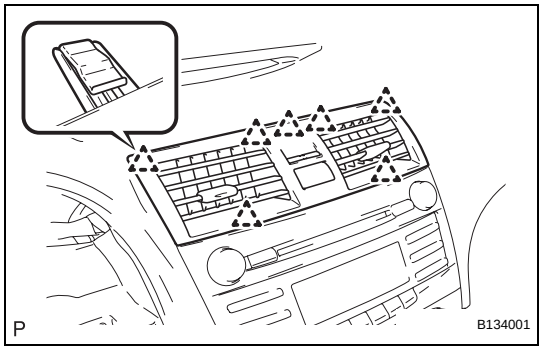
20. INSTALL CONSOLE BOX CARPET

(a) Install the console box carpet.

21. INSTALL CONSOLE BOX POCKET

(a) Install the console box pocket.

22. INSTALL RADIO RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/o Navigation System) (See page AV-147)



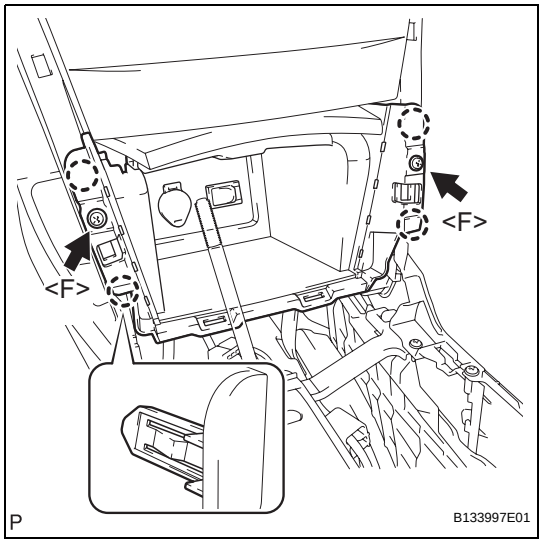
23. INSTALL NAVIGATION RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/ Navigation System) (See page NS-196)

24. INSTALL INSTRUMENT PANEL NO. 2 REGISTER ASSEMBLY

(a) Engage the 7 clips and install the instrument panel No. 2 register assembly.

25. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMC Made)

(a) Connect each connector.

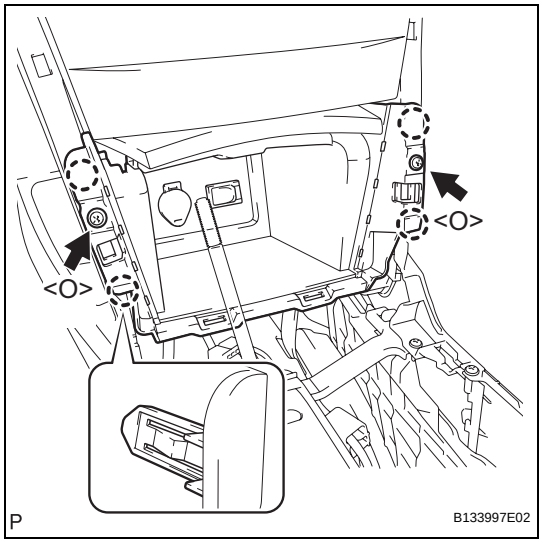


(b) Engage the 4 claws.

(c) Install the upper console panel sub-assembly with the 2 screws <F>.

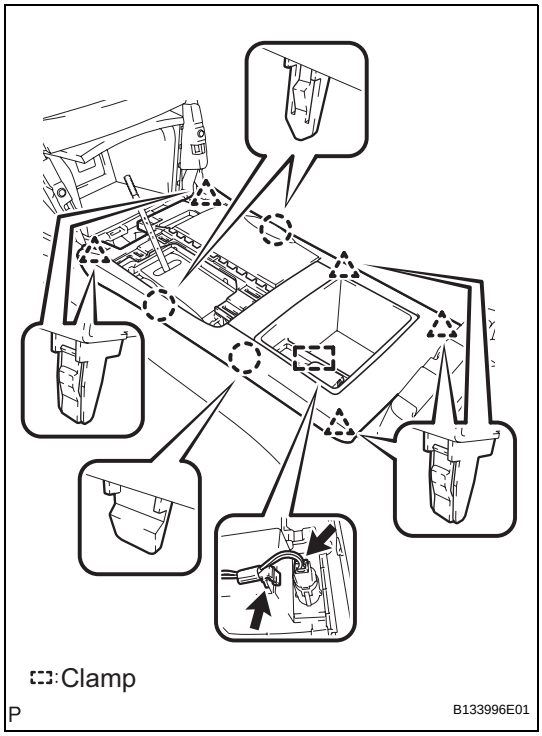
26. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMMK Made)

(a) Connect each connector.



(b) Engage the 4 claws.

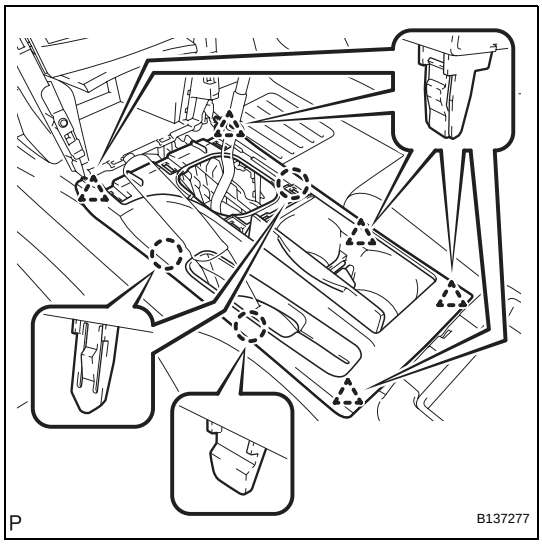
(c) Install the upper console panel sub-assembly with the 2 screws <O>.



27. INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Automatic Transaxle)

(a) Connect the connector and engage the clamp.

(b) Engage the 3 claws and 5 clips to install the upper console rear panel sub-assembly.



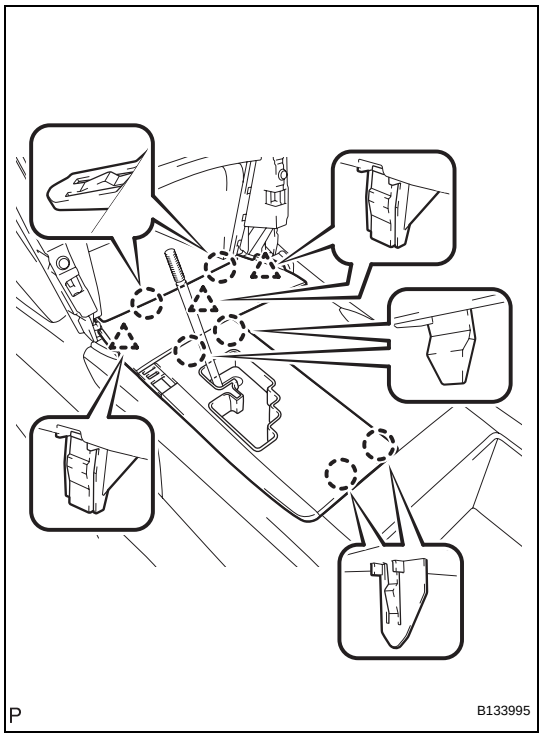
28. INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Manual Transaxle)

(a) Engage the 3 claws and 5 clips to install the upper console rear panel sub-assembly.

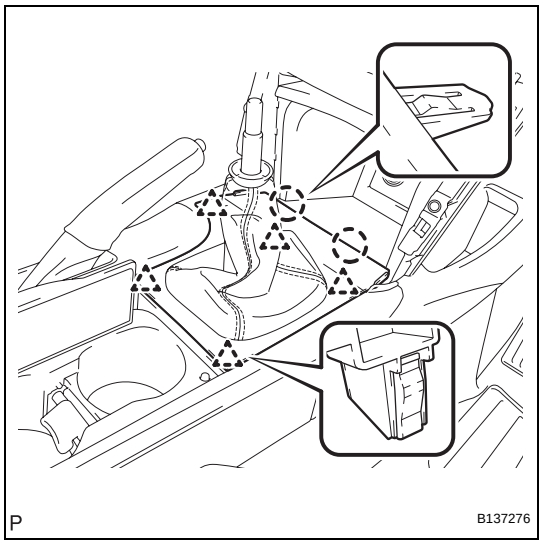
29. INSTALL FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (for Automatic Transaxle)

(a) with Seat Heater System:

(1) Connect each connector.

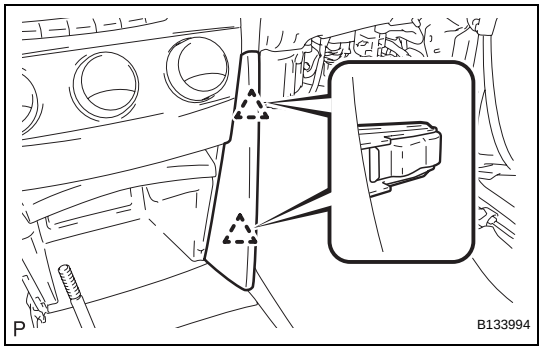


(b) Engage the 6 claws and the 3 clips to install the floor shift position indicator housing sub-assembly.



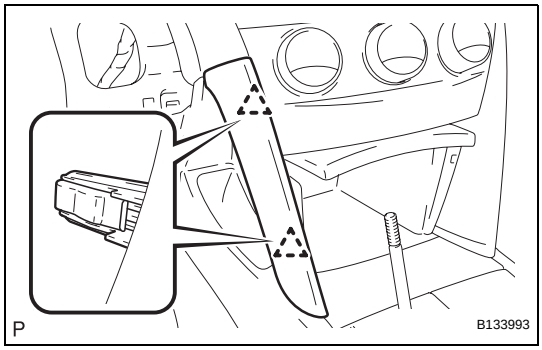
30. INSTALL UPPER CONSOLE PANEL (for Manual Transaxle)

(a) Engage the 2 claws and the 5 clips to install the upper console panel as shown in the illustration.



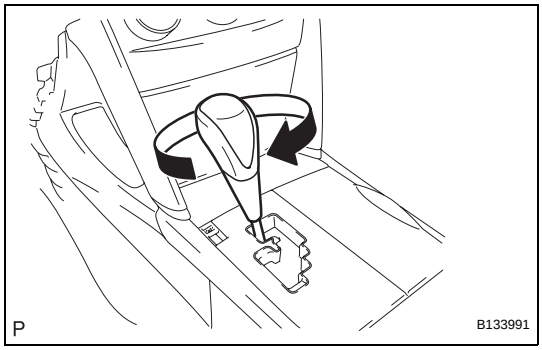
31. INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH

(a) Engage the 2 clips and install the No. 2 instrument cluster finish panel garnish.



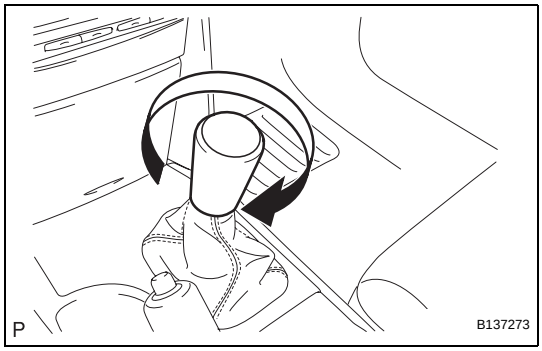
32. INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH

(a) Engage the 2 clips and install the No. 1 instrument cluster finish panel garnish.



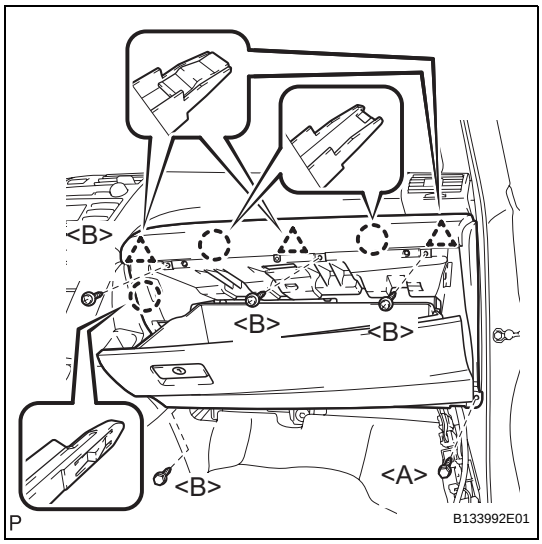
33. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transaxle)

(a) Install the shift lever knob sub-assembly.



34. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle)

(a) Install the shift lever knob sub-assembly.

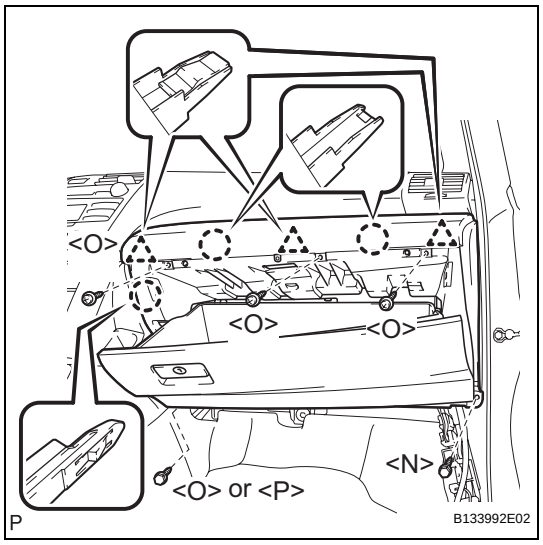


35. INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMC Made)

(a) Engage the 3 claws and 3 clips.

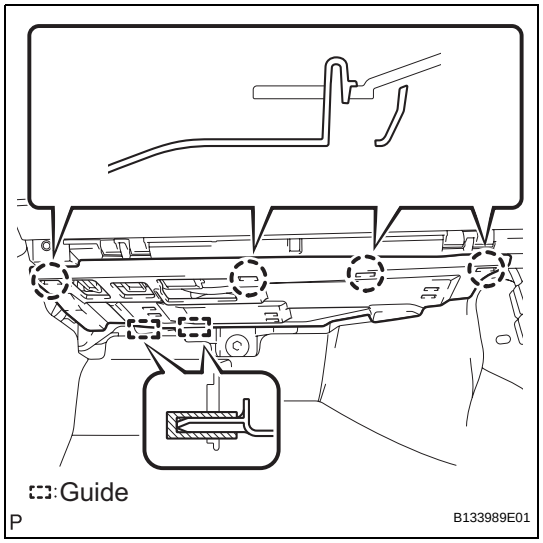
(b) Install the 4 screws <B>.

(c) Install the lower instrument panel sub-assembly with the bolt <A>.



36. INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMMK Made)

(a) Engage the 3 claws and 3 clips.
(b) Install the screw <O> or <P> and 3 screws <O>.
(c) Install the lower instrument panel sub-assembly with the bolt <N>.

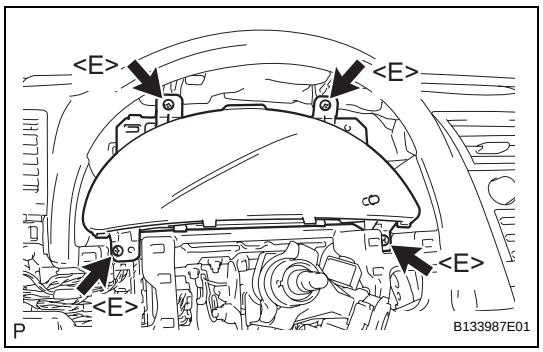


37. INSTALL INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY

(a) Engage the 4 claws and 2 guides and install the instrument panel No. 2 under cover.

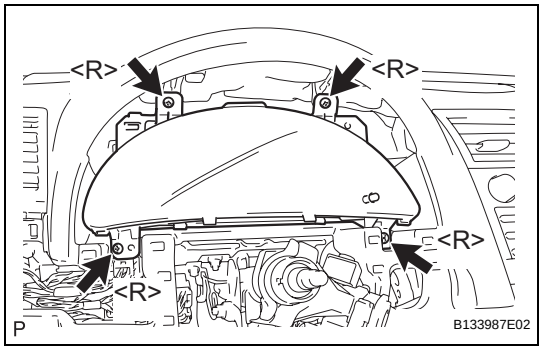
38. INSTALL COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-55)

39. INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-55)



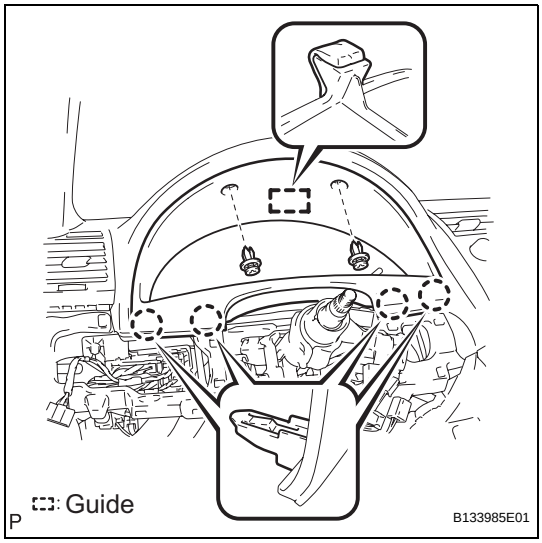
40. INSTALL COMBINATION METER ASSEMBLY (for TMC Made)

(a) Connect each connector.
(b) Install the combination meter assembly with the 4 screws <E>.



41. INSTALL COMBINATION METER ASSEMBLY (for TMMK Made)

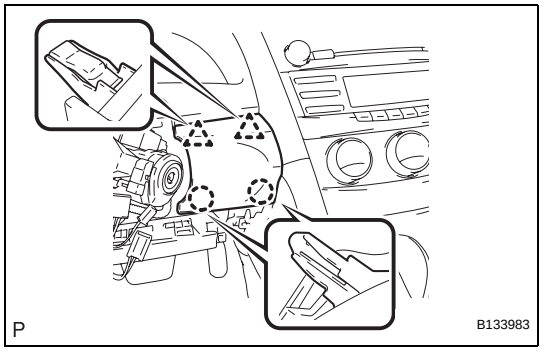
(a) Connect each connector.
(b) Install the combination meter assembly with the 4 screws <R>.



42. INSTALL INSTRUMENT CLUSTER FINISH PANEL

(a) Engage the guide and the 4 claws.

(b) Install the instrument cluster finish panel with the 2 clips.

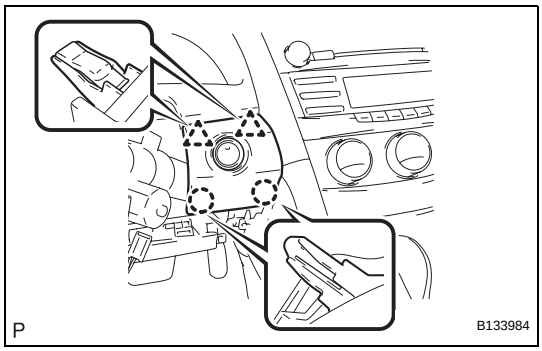


43. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (w/o Smart Key System)

(a) Engage the 2 claws and 2 clips to install the lower instrument panel finish panel.

44. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (w/ Smart Key System)

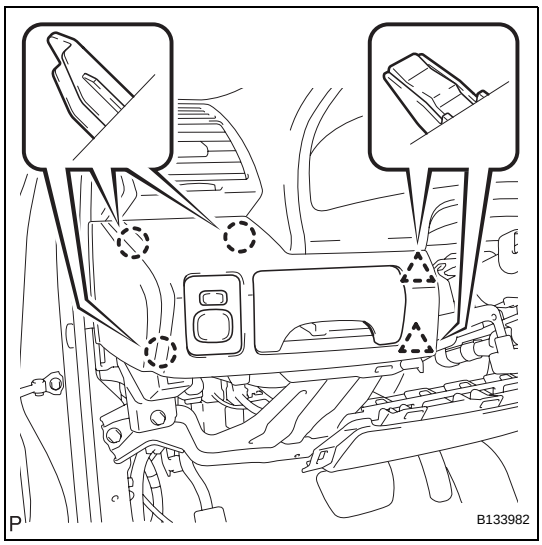
(a) Connect the connector.



(b) Engage the 2 claws and 2 clips to install the lower instrument panel finish panel.

45. INSTALL NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY

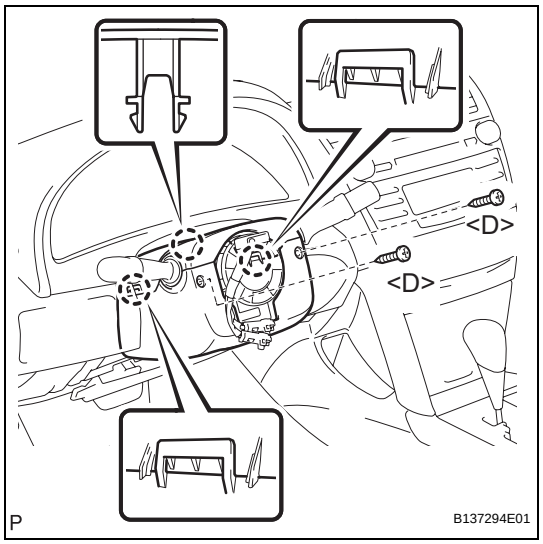
(a) Connect the connector.



(b) Engage the 3 claws and 2 clips to install the No. 1 instrument panel sub-assembly.

46. INSTALL TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (See page SR-50)

47. ADJUST SPIRAL CABLE SUB-ASSEMBLY (See page RS-367)



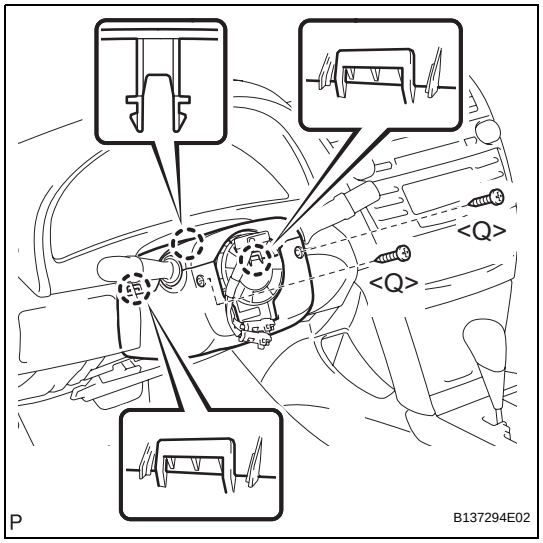
48. INSTALL STEERING COLUMN COVER (for TMC Made)

(a) Engage the claw and install the upper steering column cover.

(b) Engage the 2 claws and install the lower steering column cover.

(c) Install the steering column cover with the 2 screws <D>.

Torque: 2.0 N*m (20 kgf*cm, 18 in.*lbf)



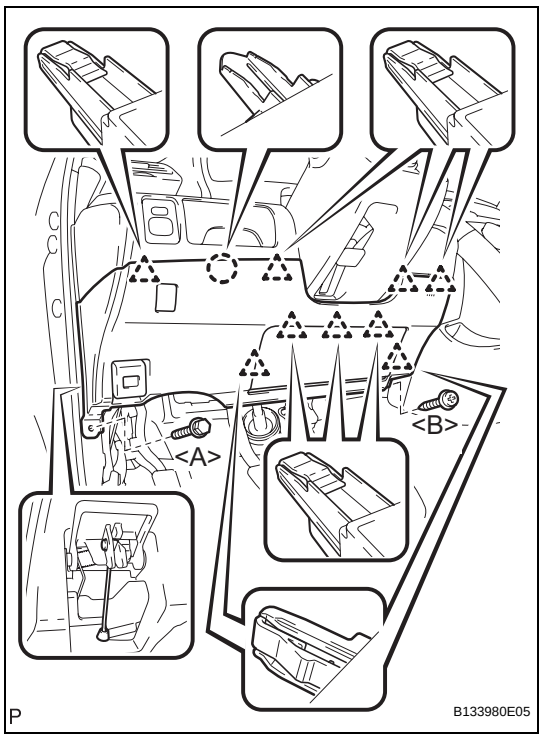
49. INSTALL STEERING COLUMN COVER (for TMMK Made)

(a) Engage the claw and install the upper steering column cover.

(b) Engage the 2 claws and install the lower steering column cover.

(c) Install the steering column cover with the 2 screws <Q>.

Torque: 2.0 N*m (20 kgf*cm, 18 in.*lbf)



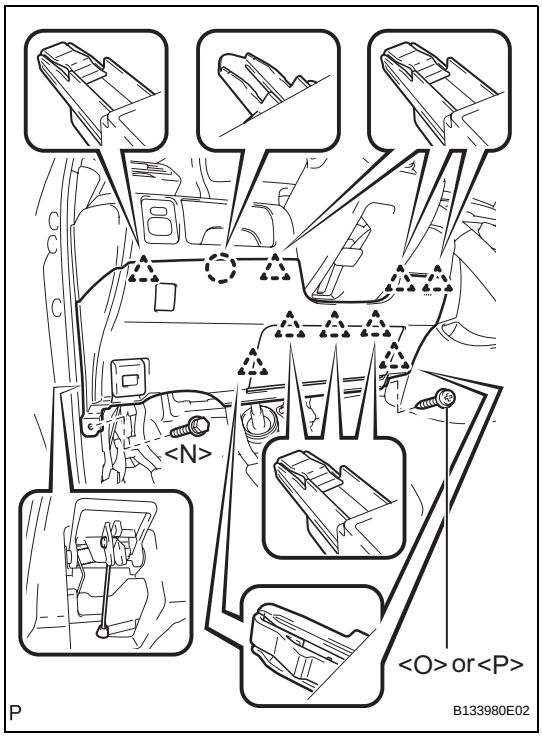
50. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made)

(a) Install the air hose and connect the connector.

(b) Engage the claw and the 9 clips.

(c) Instal the instrument panel finish panel LH with the screw <B> and bolt <A>.

IP



51. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made)
(a) Install the air hose and connect the connector.
(b) Engage the claw and the 9 clips.
(c) Instal the instrument panel finish panel LH with the screw <O> or <P> and bolt <N>.

52. INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-54)

53. INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-54)

54. INSTALL STEERING WHEEL ASSEMBLY (See page SR-51)

55. INSTALL STEERING PAD (See page RS-350)

56. INSTALL LOWER NO. 3 STEERING WHEEL COVER (See page RS-351)

57. INSTALL LOWER NO. 2 STEERING WHEEL COVER (See page RS-352)

58. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

59. INSPECT STEERING PAD (See page RS-352)

60. INSPECT SRS WARNING LIGHT
(RS-32)

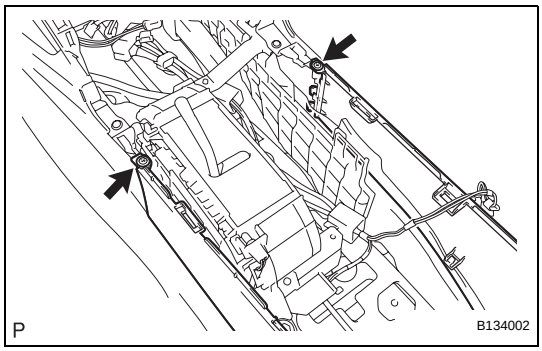
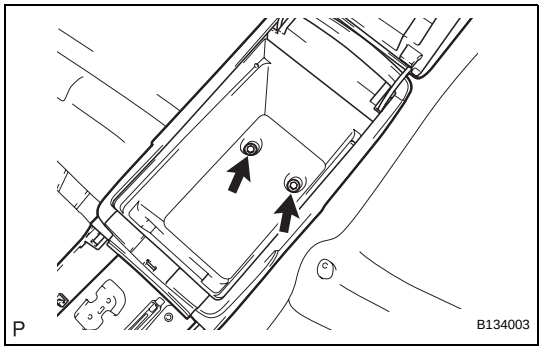
REMOVAL

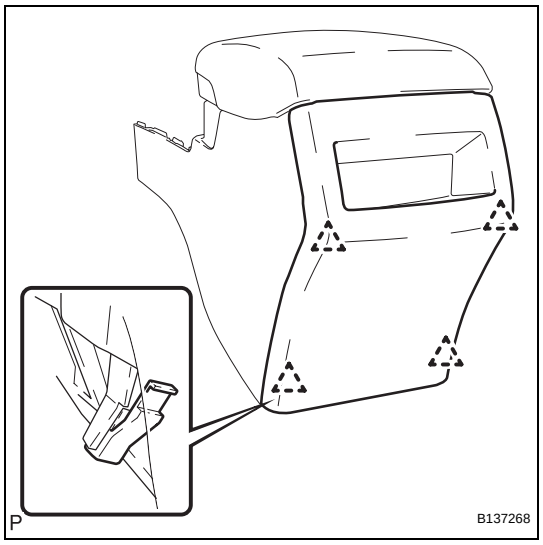
1. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-24)**
2. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-24)**
3. **REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-24)**
4. **REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-25)**
5. **REMOVE FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-25)**
6. **REMOVE UPPER CONSOLE PANEL (for Manual Transaxle) (See page IP-25)**
7. **REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-26)**
8. **REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Manual Transaxle) (See page IP-26)**
9. **REMOVE CONSOLE BOX POCKET (See page IP-28)**
10. **REMOVE CONSOLE BOX CARPET (See page IP-28)**
11. **REMOVE CONSOLE BOX ASSEMBLY**

(a) Remove the 2 screws.



(b) Remove the 2 bolts and the console box assembly.

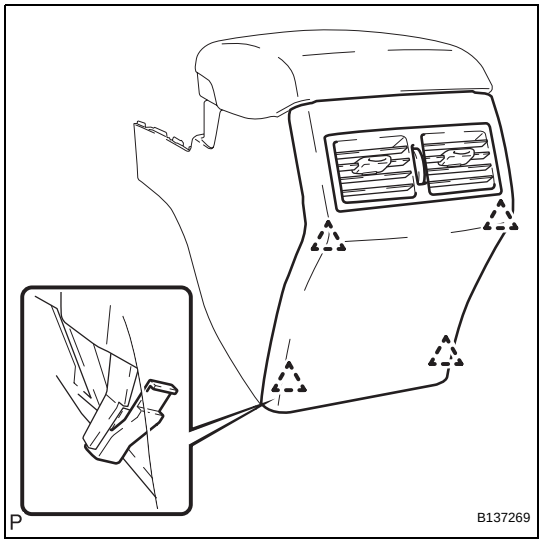




DISASSEMBLY

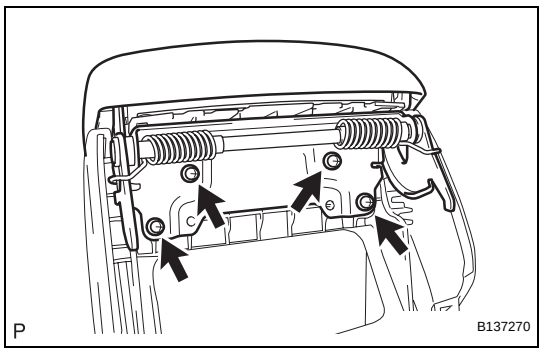
1. REMOVE REAR CONSOLE END PANEL SUB-ASSEMBLY (for Manual Air Conditioning System)

(a) Disengage the 4 clips and remove the rear console end panel sub-assembly.



2. REMOVE REAR CONSOLE END PANEL SUB-ASSEMBLY (for Automatic Air Conditioning System)

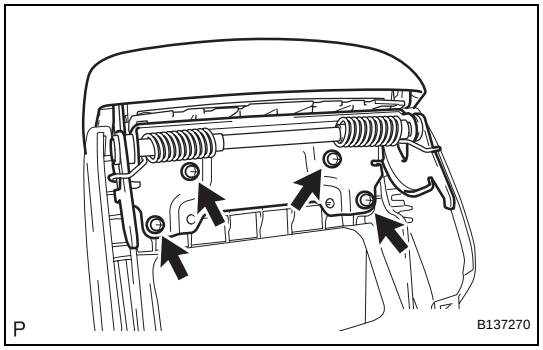
(a) Disengage the 4 clips and remove the rear console end panel sub-assembly.



3. REMOVE CONSOLE COMPARTMENT DOOR SUB-ASSEMBLY

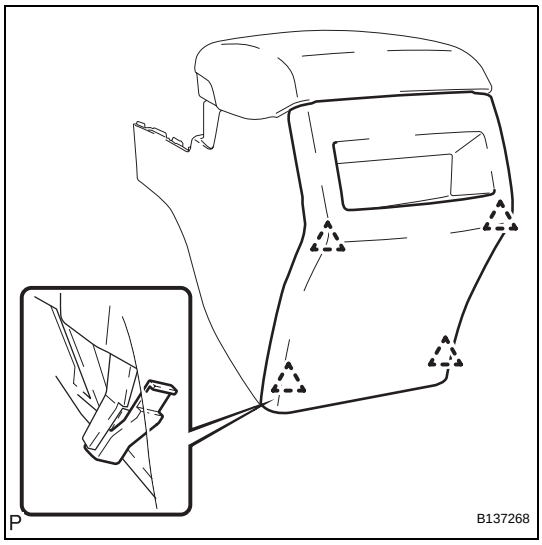
(a) Remove the 4 screws and the console compartment door sub-assembly.

REASSEMBLY

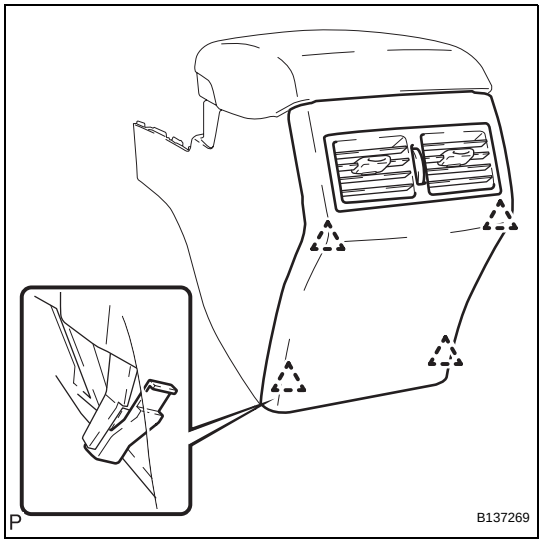


1. INSTALL CONSOLE COMPARTMENT DOOR SUB-ASSEMBLY

(a) Install the console compartment door sub-assembly with the 4 screws.

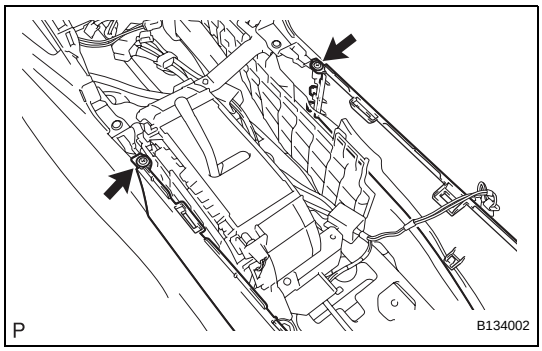


2. **INSTALL REAR CONSOLE END PANEL SUB-ASSEMBLY (for Manual Air Conditioning System)**
   (a) Engage the 4 clips and install the rear console end panel sub-assembly.



3. **INSTALL REAR CONSOLE END PANEL SUB-ASSEMBLY (for Automatic Air Conditioning System)**
   (a) Engage the 4 clips and install the rear console end panel sub-assembly.

INSTALLATION



1. **INSTALL CONSOLE BOX ASSEMBLY**
   (a) Install the 2 screws.

   (b) Install the console box assembly with the 2 bolts.

2. **INSTALL CONSOLE BOX CARPET (See page IP-51)**
3. **INSTALL CONSOLE BOX POCKET (See page IP-51)**
4. **INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-53)**
5. **INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Manual Transaxle) (See page IP-53)**

6. **INSTALL FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-53)**
7. **INSTALL UPPER CONSOLE PANEL (for Manual Transaxle) (See page IP-54)**
8. **INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-54)**
9. **INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-55)**
10. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-55)**
11. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-55)**

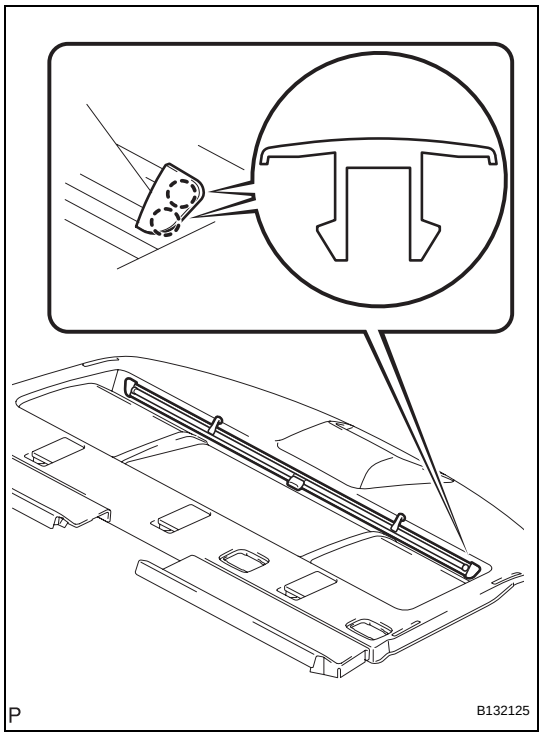
18. **REMOVE ROOF SIDE INNER GARNISH RH (See page IR-26)**
19. **DISCONNECT REAR SEAT OUTER BELT ASSEMBLY (for LH Side) (See page SB-36)**
20. **DISCONNECT REAR SEAT OUTER BELT ASSEMBLY (for RH Side) (See page SB-36)**

21. REMOVE REAR SEAT SHOULDER BELT COVER (See page SB-36)

22. REMOVE REAR SEAT SHOULDER BELT HOLE COVER (See page SB-36)

23. REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page SB-37)



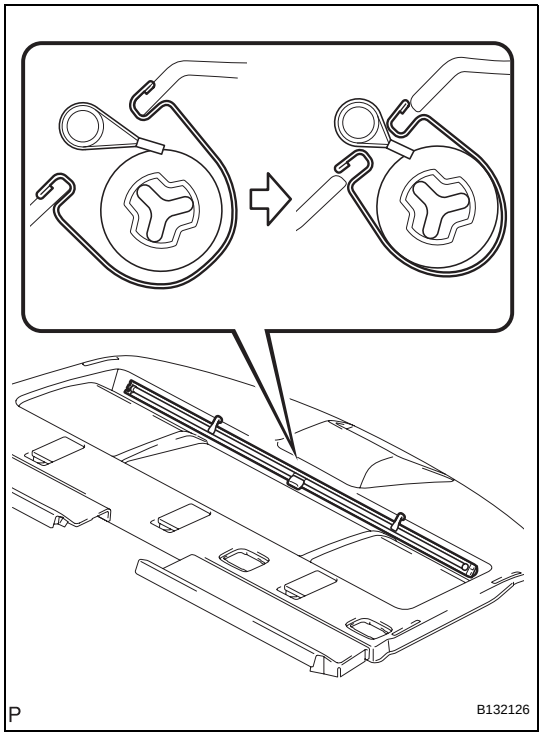
24. REMOVE CURTAIN RAIL END CAP LH

(a) Disengage the 2 claws and remove the curtain rail end cap LH.

25. REMOVE CURTAIN RAIL END CAP RH

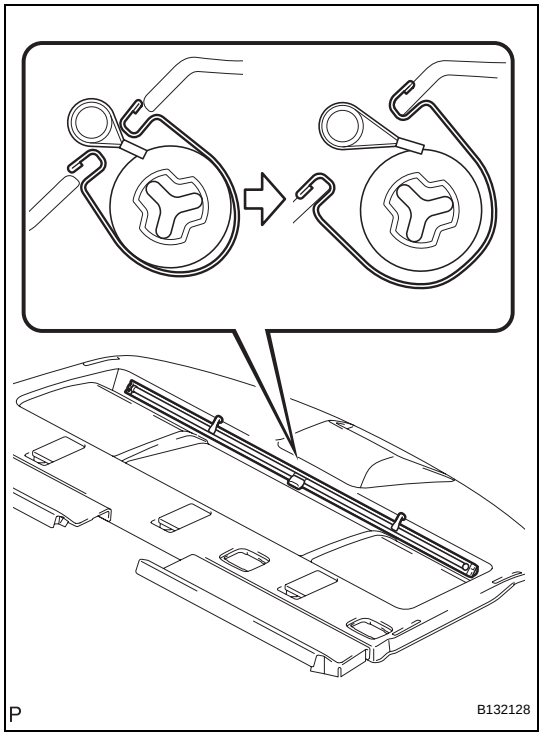
HINT:

Use the same procedures for the RH side and the LH side.



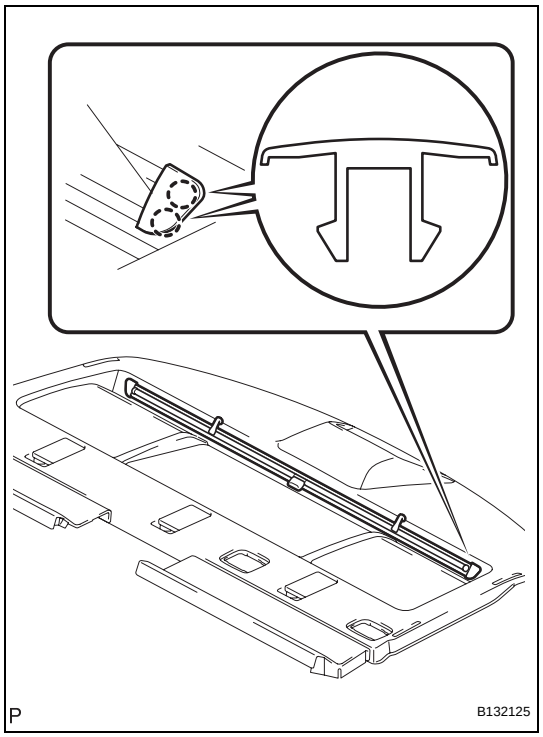
26. REMOVE REAR WINDOW SHADE ASSEMBLY

(a) Remove the rear window shade assembly as shown in the illustration.



INSTALLATION

1. **INSTALL REAR WINDOW SHADE ASSEMBLY**
   (a) Install the rear window shade assembly as shown in the illustration.



2. **INSTALL CURTAIN RAIL END CAP LH**
   (a) Engage the 2 claws and install the curtain rail end cap LH.

3. **INSTALL CURTAIN RAIL END CAP RH**
   HINT:
   Use the same procedures for the RH side and the LH side.

4. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page SB-39)**

5. **INSTALL REAR SEAT SHOULDER BELT HOLE COVER (See page SB-39)**

6. **INSTALL REAR SEAT SHOULDER BELT COVER (See page SB-39)**

7. **CONNECT REAR SEAT OUTER BELT ASSEMBLY (for LH Side) (See page SB-39)**

8. **CONNECT REAR SEAT OUTER BELT ASSEMBLY (for RH Side) (See page SB-40)**

9. **INSTALL ROOF SIDE INNER GARNISH LH (See page IR-52)**

10. **INSTALL ROOF SIDE INNER GARNISH RH (See page IR-52)**

11. **CONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (for TMC Made) (See page SB-40)**

12. **CONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (for TMMK Made) (See page SB-40)**

13. **INSTALL CHILD RESTRAINT SEAT ANCHOR BRACKET SUB-ASSEMBLY LH (See page SB-66)**

14. **INSTALL RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY LH (See page SE-69)**
15. **INSTALL RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY RH**
    HINT:
    Use the same procedures for the RH side and the LH side.
16. **CONNECT REAR DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-55)**
17. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-56)**
18. **CONNECT REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-56)**
19. **INSTALL REAR DOOR SCUFF PLATE RH (See page IR-56)**
20. **INSTALL CENTER SEAT BACK ASSEMBLY (See page SE-71)**
21. **INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (See page SE-72)**
22. **INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (See page SE-71)**
23. **INSTALL REAR SEAT BACK COVER**

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (for Manual Seat)**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment (See page RS-1).
2. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Manual Seat)**
3. **REMOVE SEAT TRACK COVER LH (for Manual Seat) (See page SE-16)**
4. **REMOVE INNER SEAT TRACK BRACKET COVER LH (for Manual Seat) (See page SE-16)**
5. **REMOVE FRONT SEAT ASSEMBLY LH (for Manual Seat) (See page SE-16)**
6. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Power Seat)**
7. **REMOVE SEAT TRACK COVER LH (for Power Seat) (See page SE-30)**
8. **REMOVE INNER SEAT TRACK BRACKET COVER RH (for Power Seat) (See page SE-30)**
9. **REMOVE FRONT SEAT ASSEMBLY LH (for Power Seat) (See page SE-30)**
10. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Manual Seat)**
11. **REMOVE SEAT TRACK COVER RH (for Manual Seat)**
    HINT:
    Use the same procedures for the RH side and the LH side.
12. **REMOVE INNER SEAT TRACK BRACKET COVER RH (for Manual Seat)**
    HINT:
    Use the same procedures for the RH side and the LH side.
13. **REMOVE FRONT SEAT ASSEMBLY RH (for Manual Seat)**
    HINT:
    Use the same procedures for the RH side and the LH side.
14. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Power Seat)**
15. **REMOVE SEAT TRACK COVER RH (for Power Seat)**
    HINT:
    Use the same procedures for the RH side and the LH side.

16. **REMOVE INNER SEAT TRACK BRACKET COVER LH (for Power Seat)**
HINT:
Use the same procedures for the RH side and the LH side.

17. **REMOVE FRONT SEAT ASSEMBLY RH (for Power Seat)**
HINT:
Use the same procedures for the RH side and the LH side.

18. **REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-77)**

19. **REMOVE REAR SEAT HEADREST ASSEMBLY**

20. **REMOVE REAR CENTER SEAT HEADREST ASSEMBLY**

21. **REMOVE REAR SEAT BACK ASSEMBLY (for Fixed Seat Type) (See page SE-77)**

22. **REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-47)**

23. **REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-47)**

24. **REMOVE REAR SIDE SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-48)**

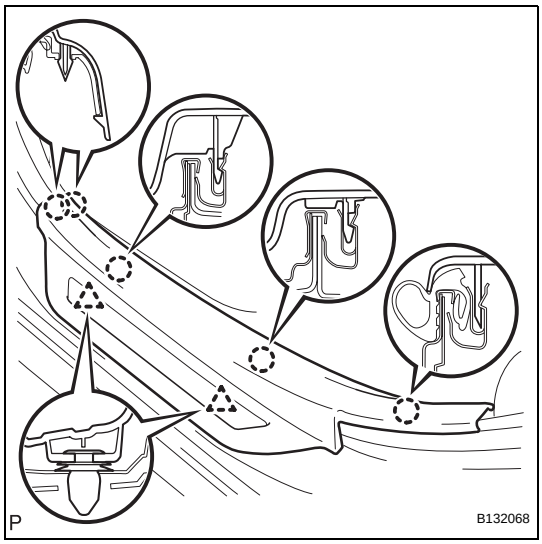
25. **REMOVE REAR SIDE SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-48)**

26. **REMOVE REAR SEAT BACK COVER (for Reclining Seat Type) (See page SE-63)**

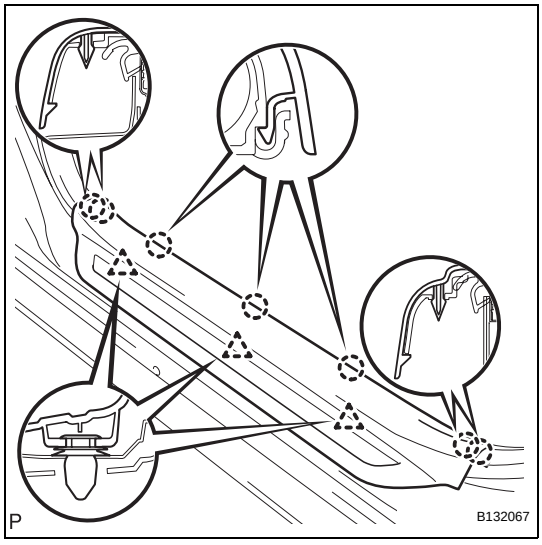
27. **REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Reclining Seat Type) (See page SE-63)**

28. **REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Reclining Seat Type) (See page SE-64)**

29. **REMOVE CENTER SEAT BACK ASSEMBLY (for Reclining Seat Type) (See page SE-64)**

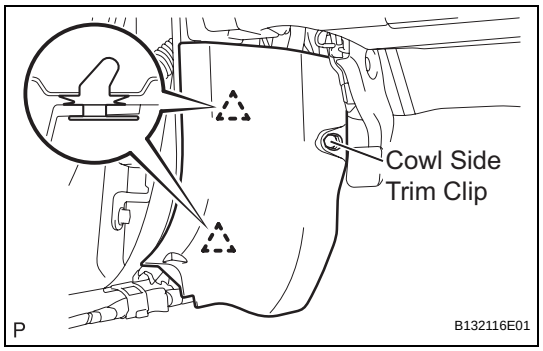


30. **REMOVE REAR DOOR SCUFF PLATE LH**
    (a) Disengage the 5 claws and 2 clips, and remove the rear door scuff plate LH.
31. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH**
32. **REMOVE REAR DOOR SCUFF PLATE RH**
    HINT:
    Use the same procedures for the RH side and the LH side.
33. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH**
34. **REMOVE RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY LH (for Reclining Seat Type) (See page SE-68)**
35. **REMOVE RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY RH (for Reclining Seat Type)**
    HINT:
    Use the same procedures for the RH side and the LH side.
36. **REMOVE REAR DOOR INSIDE HANDLE BEZEL PLUG LH (See page ED-38)**
37. **REMOVE DOOR ASSIST GRIP COVER LH (See page ED-38)**
38. **REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY LH (See page ED-39)**
39. **REMOVE REAR DOOR INNER GLASS WEATHERSTRIP LH (See page ED-40)**



40. **REMOVE FRONT DOOR SCUFF PLATE LH**
    (a) Disengage the 7 claws and 3 clips, and remove the front door scuff plate LH.

IR

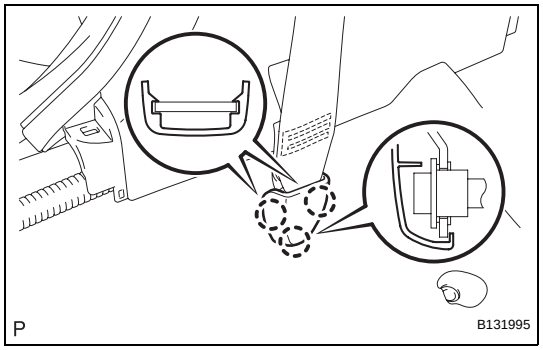


41. REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH

(a) Remove the cowl side trim clip.

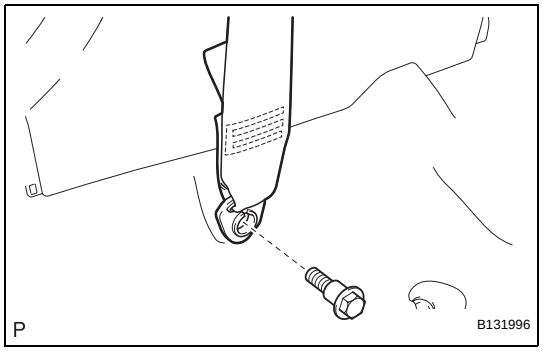
(b) Disengage the 2 clips and remove the cowl side trim sub-assembly LH.

42. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH



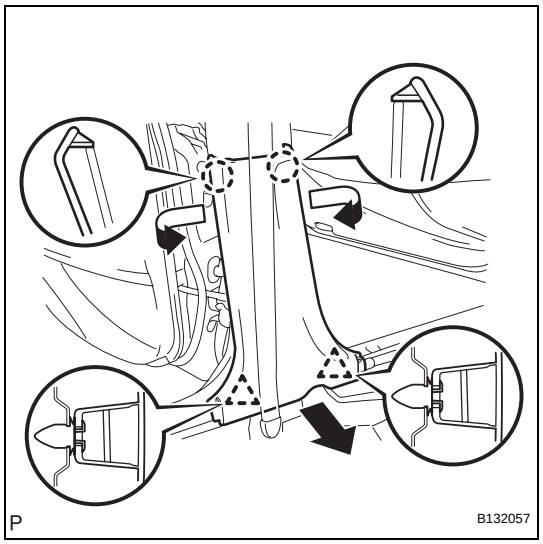
43. REMOVE LAP BELT OUTER ANCHOR COVER (for LH Side)

(a) Disengage the 3 claws and remove the lap belt outer anchor cover.



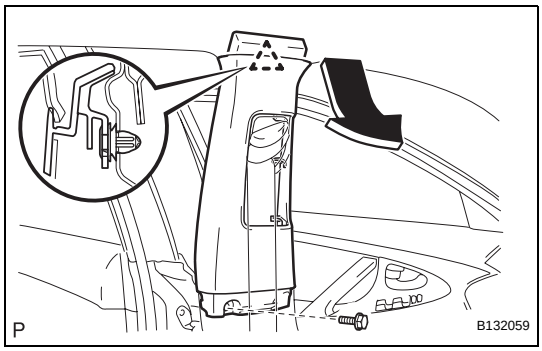
44. DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY LH

(a) Remove the bolt and disconnect the floor end of the front seat outer belt assembly.



45. REMOVE LOWER CENTER PILLAR GARNISH LH

(a) Disengage the 2 claws and 2 clips, and remove the lower center pillar garnish LH.



46. REMOVE UPPER CENTER PILLAR GARNISH LH
(a) Remove the bolt.
(b) Disengage the clip and remove the upper center pillar garnish LH.

47. REMOVE FRONT DOOR SCUFF PLATE RH
HINT:
Use the same procedures for the RH side and the LH side.

48. REMOVE COWL SIDE TRIM SUB-ASSEMBLY RH
HINT:
Use the same procedures for the RH side and the LH side.

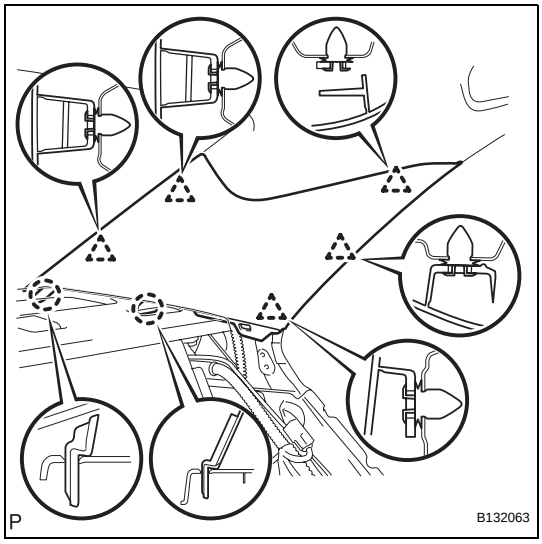
49. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH

50. REMOVE LAP BELT OUTER ANCHOR COVER (for RH Side)
HINT:
Use the same procedures for the RH side and the LH side.

51. DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY RH
HINT:
Use the same procedures for the RH side and the LH side.

52. REMOVE LOWER CENTER PILLAR GARNISH RH
HINT:
Use the same procedures for the RH side and the LH side.

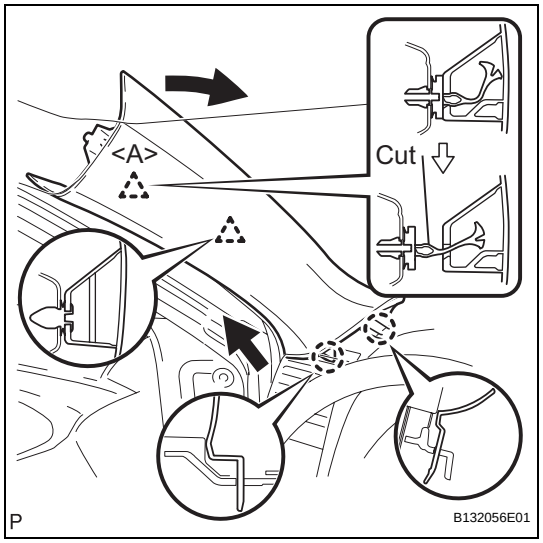
53. REMOVE UPPER CENTER PILLAR GARNISH RH
HINT:
Use the same procedures for the RH side and the LH side.



54. REMOVE ROOF SIDE INNER GARNISH LH
(a) Disengage the 5 clips and 2 claws, and remove the roof side inner garnish LH.

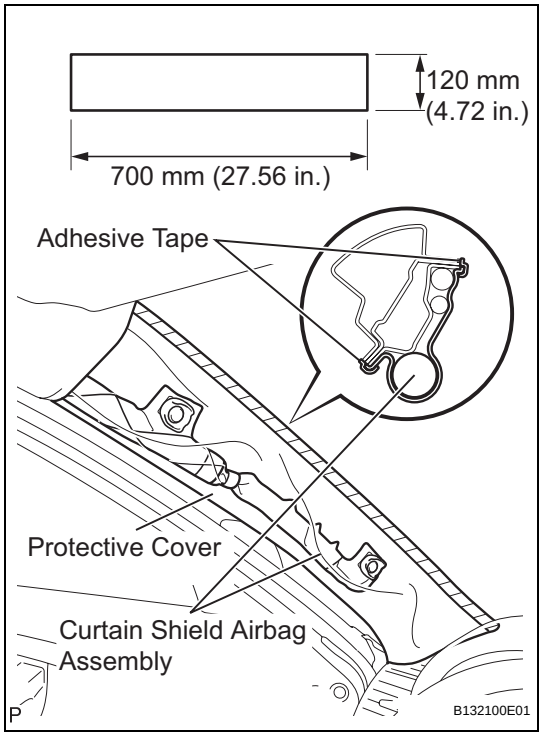
55. REMOVE ROOF SIDE INNER GARNISH RH
HINT:
Use the same procedures for the RH side and the LH side.

IR

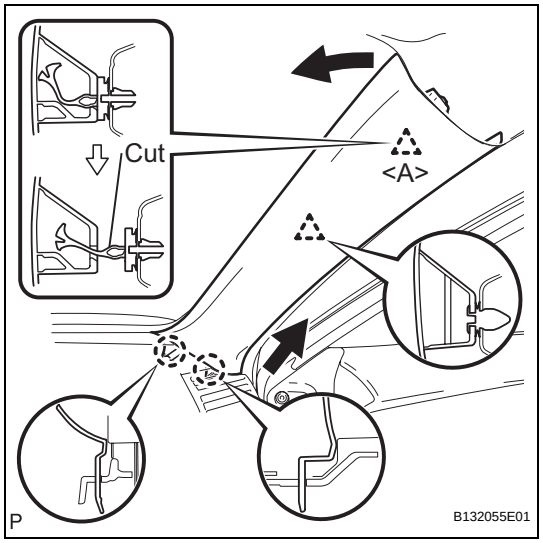


56. REMOVE FRONT PILLAR GARNISH LH

(a) Pull the upper part of the garnish toward the inside of the cabin and disengage the 2 clips.
(b) Cut off the clip <A>.
(c) Disengage the 2 claws and remove the front pillar garnish LH.
(d) Remove the clip <A> from the vehicle body.

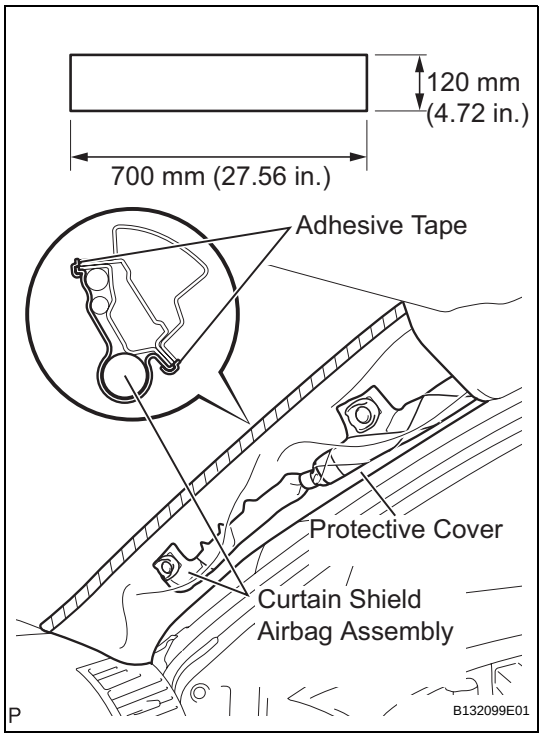


(e) Protect the curtain shield airbag assembly.
(1) Cover the airbag with a 700 mm (27.56 in.) x 120 mm (4.72 in.) cloth or piece of nylon and fix the ends of the cover with tape, as shown in the illustration.
NOTICE:
Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.

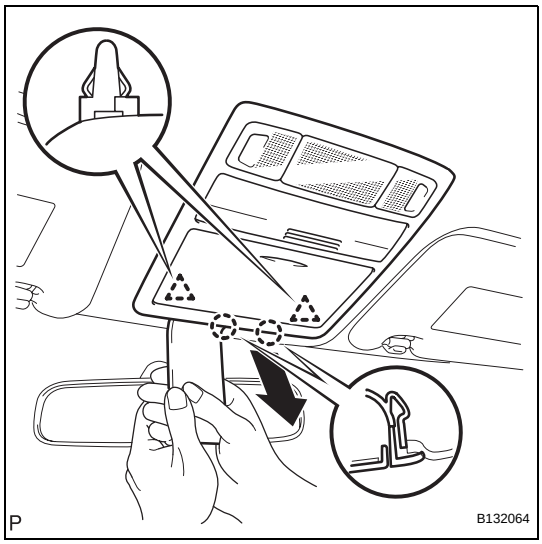


57. REMOVE FRONT PILLAR GARNISH RH

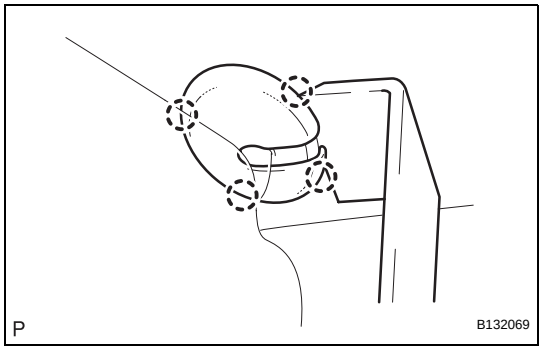
(a) Pull the upper part of the garnish toward the inside of the cabin and disengage the 2 clips.
(b) Cut off the clip <A>.
(c) Disengage the 2 claws and remove the front pillar garnish RH.
(d) Remove the clip <A> from the vehicle body.



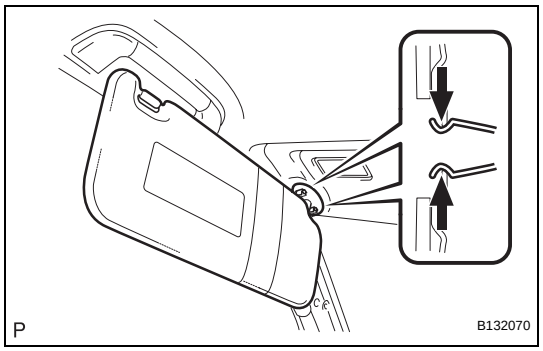
(e) Protect the curtain shield airbag assembly.
(1) Cover the airbag with a 700 mm (27.56 in.) x 120 mm (4.72 in.) cloth or piece of nylon and fix the ends of the cover with tape, as shown in the illustration.
NOTICE:
Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.



58. REMOVE ROOF CONSOLE BOX ASSEMBLY
(a) Using a moulding remover, disengage the 2 clips and 2 claws.
(b) Disconnect the connectors and remove the roof console box assembly.



59. REMOVE VISOR ASSEMBLY LH
(a) Using a moulding remover, disengage the 4 claws and remove the visor bracket cover.



(b) Disengage the 2 clips and remove the visor assembly LH.

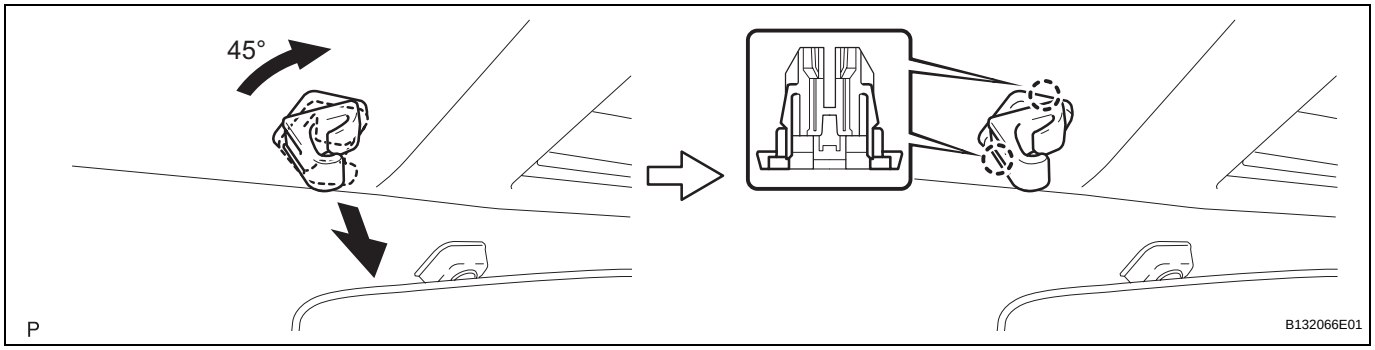
60. REMOVE VISOR ASSEMBLY RH

HINT:
Use the same procedures for the RH side and the LH side.

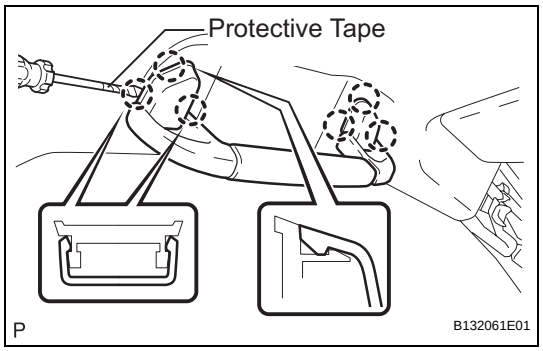
61. REMOVE VISOR HOLDER

(a) Turn the visor holder approximately 45° and pull it out as shown in the illustration.

(b) Disengage the 2 claws and remove the visor holder.

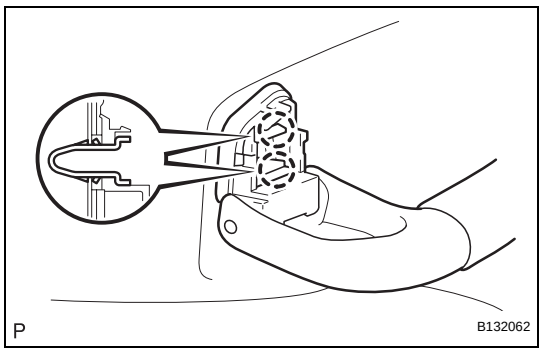


HINT:
Use the same procedures for the RH side and the LH side.



62. REMOVE FRONT ASSIST GRIP SUB-ASSEMBLY

(a) Using a screwdriver, disengage the 6 claws and remove the 2 assist grip covers.
HINT:
Tape the screwdriver tip before use.

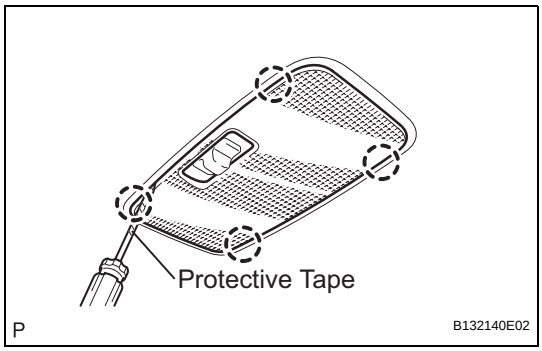


(b) Disengage the 2 clips and remove the front assist grip sub-assembly.
HINT:
Use the same procedures for the RH side and the LH side.

63. REMOVE REAR ASSIST GRIP SUB-ASSEMBLY

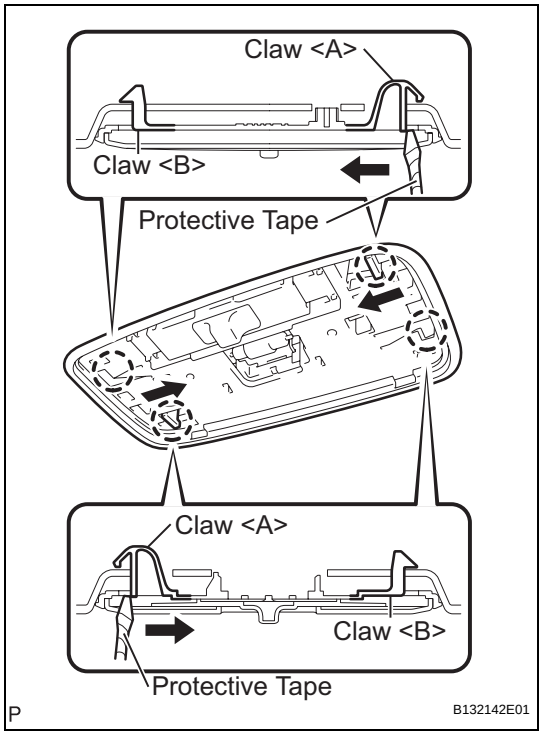
HINT:
Use the same procedures for the rear side and the front side.

IR



64. REMOVE NO. 1 ROOM LIGHT ASSEMBLY (w/o Sliding Roof)

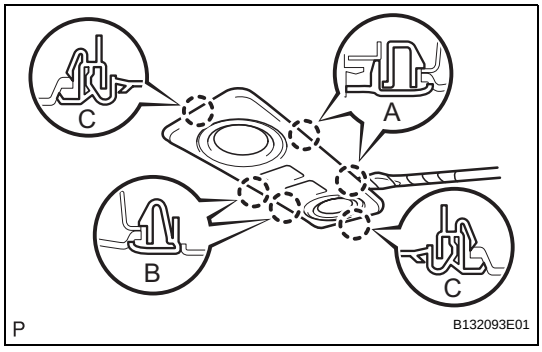
(a) Using a screwdriver, disengage the 4 claws and remove the lens cover.
HINT:
Tape the screwdriver tip before use.



(b) Using a screwdriver, disengage the 2 claws <A> as shown in the illustration.
HINT:
Tape the screwdriver tip before use.

(c) Disengage the 2 claws <B> and remove the No. 1 room light assembly.

(d) Disconnect the room light connector.

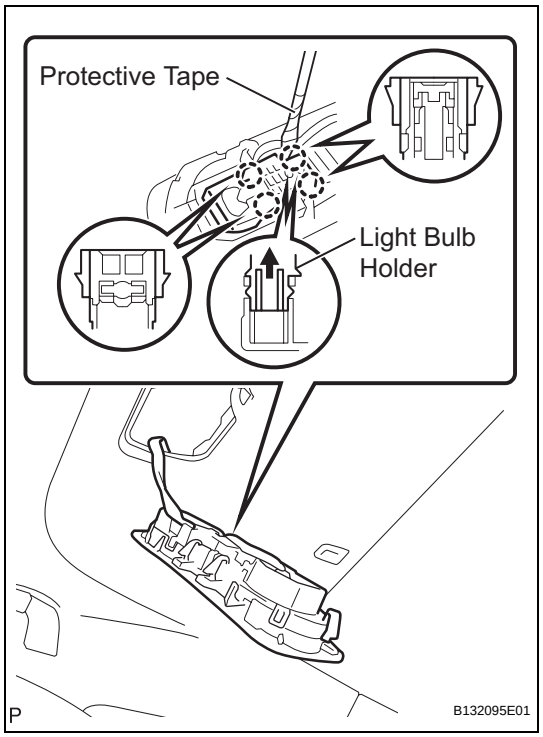


65. REMOVE SPOT LIGHT ASSEMBLY (w/ Sliding Roof)

(a) Using a screwdriver, disengage the 2 claws labeled A and 2 claws labeled B from the vehicle body.
HINT:
Tape the screwdriver tip before use.

(b) Using a screwdriver, disengage the 2 claws labeled C and remove the spot light assembly from the headlining.
HINT:
Tape the screwdriver tip before use.

IR

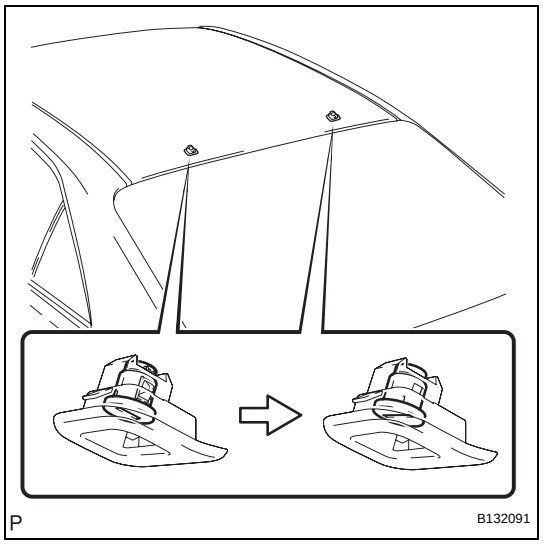


(c) Using a screwdriver, disengage the 4 claws.
HINT:
Tape the screwdriver tip before use.

(d) Pull the light bulb holder in the direction indicated by the arrow in the illustration to detach the claw. Then remove the spot light assembly from the light bulb holder.

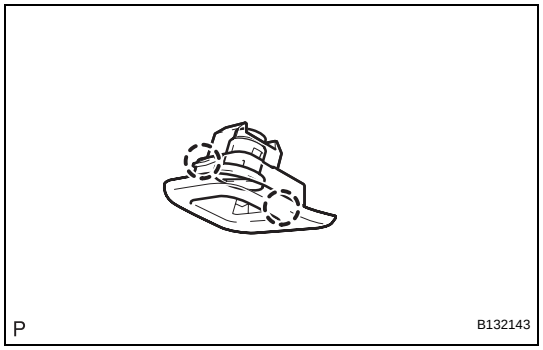
66. REMOVE SUN ROOF OPENING TRIM MOULDING (w/ Sliding Roof)

(a) Remove the sun roof opening trim moulding.



67. REMOVE SUNSHADE TRIM HOLDER (w/ Rear Sunshade)

(a) Using a screwdriver, turn the pin of each sunshade trim holder 90°.



(b) Disengage the 2 claws and remove the sunshade trim holder.

68. REMOVE ROOF HEADLINING ASSEMBLY (w/o Sliding Roof)

(a) Disconnect the No. 1 roof wire connector and disengage each clamp from the front pillar LH.

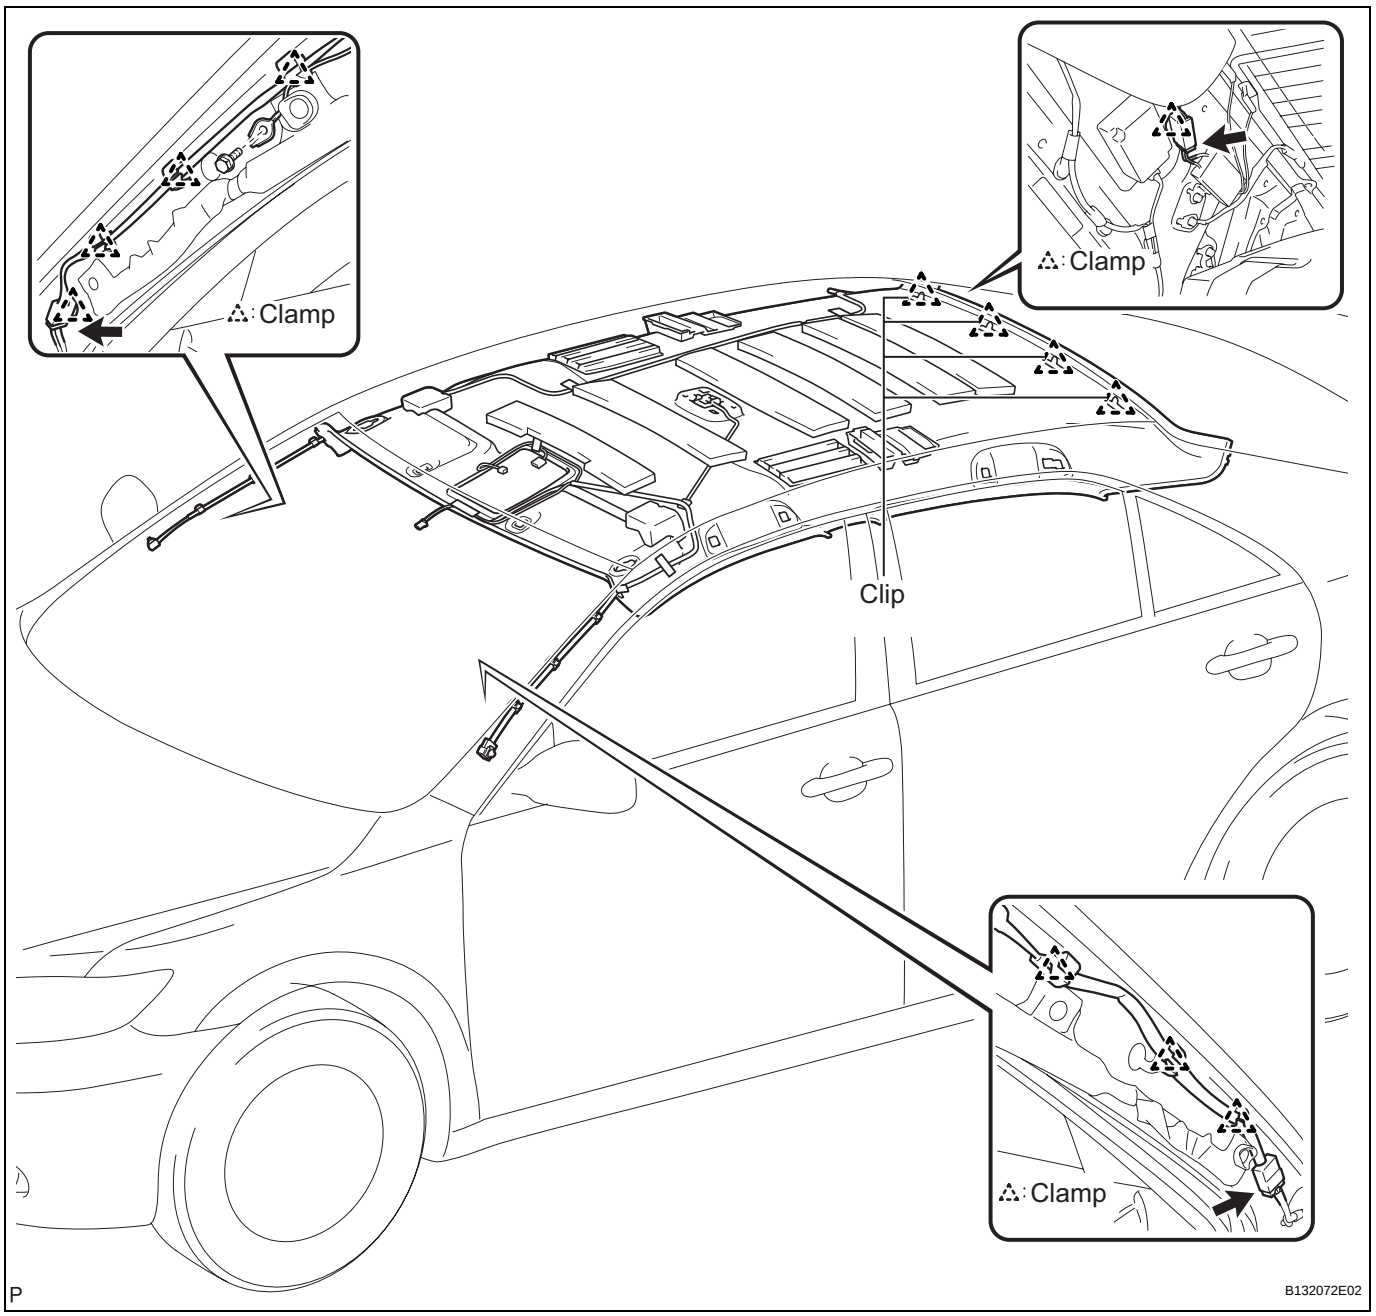
(b) Remove the bolt and disconnect the radio setting condenser from the front pillar RH.

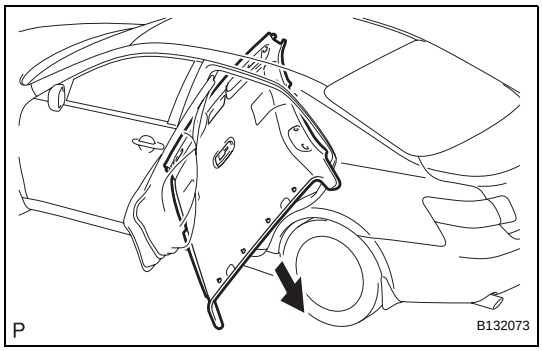
(c) Disconnect the antenna cord sub-assembly connector and disengage each clamp from the front pillar RH.

(d) Disconnect the antenna cord sub-assembly connector and disengage the clamp from the rear pillar RH.

IR

(e) Disengage the 4 clips.



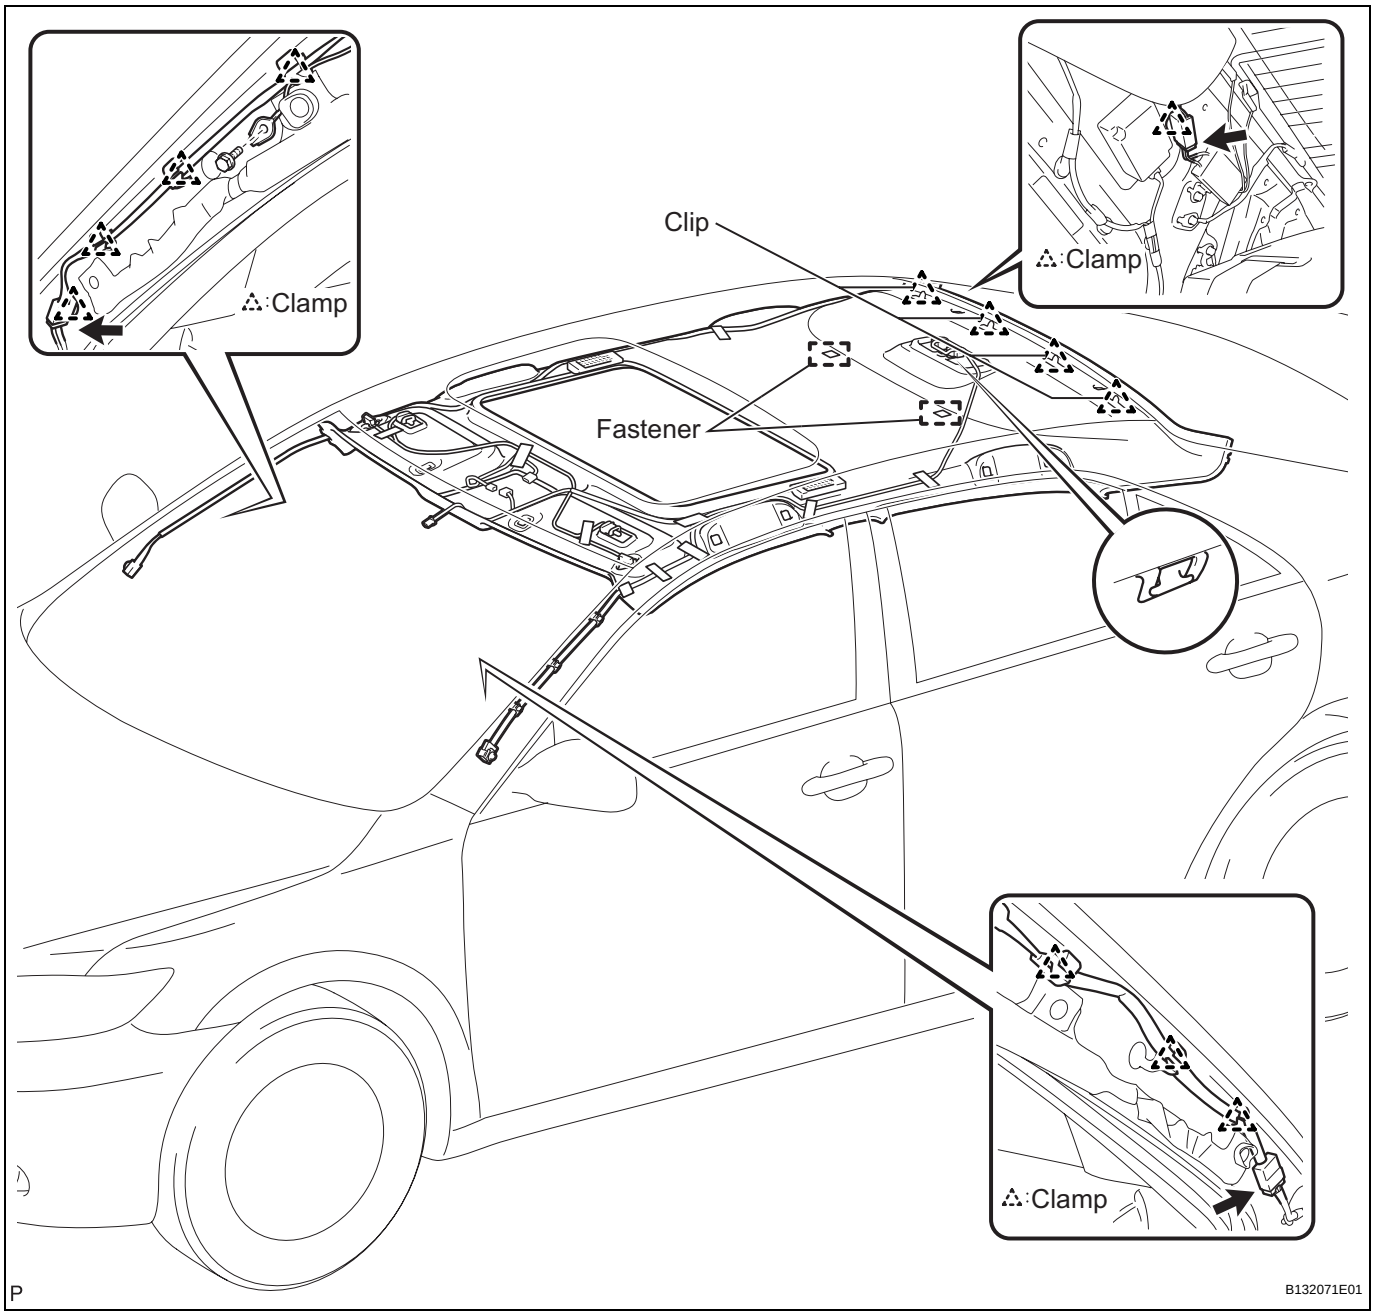


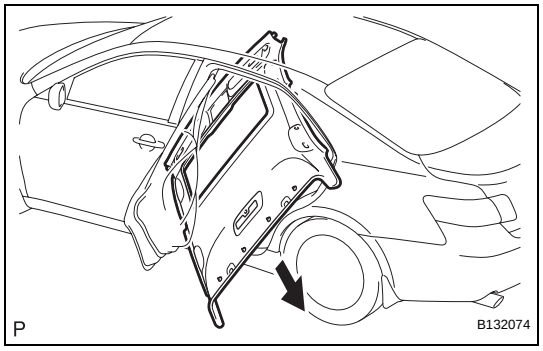
(f) Remove the roof headlining assembly from the vehicle through the rear left door.

69. REMOVE ROOF HEADLINING ASSEMBLY (w/ Sliding Roof)

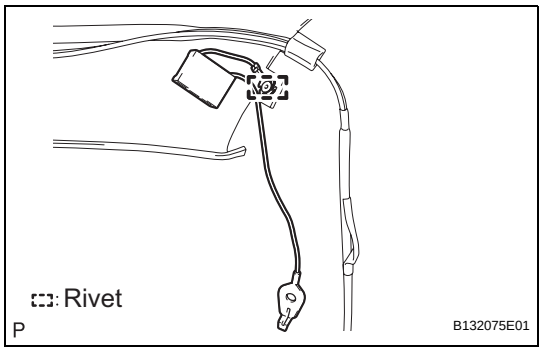
(a) Disconnect the No. 1 roof wire connector and disengage each clamp from the front pillar LH.
(b) Remove the bolt and disconnect the radio setting condenser from the front pillar RH.
(c) Disconnect the antenna cord sub-assembly connector and disengage each clamp from the front pillar RH.
(d) Disconnect the antenna cord sub-assembly connector and disengage the clamp from the rear pillar RH.

(e) Disconnect the sliding roof drive gear connector.
(f) Disengage the hook, 4 clips, and 2 fasteners.

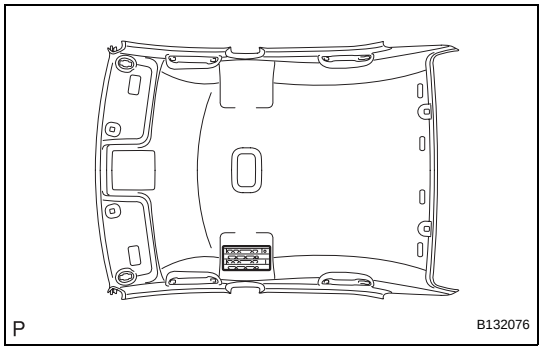




(g) Remove the roof headlining assembly from the vehicle through the rear left door.

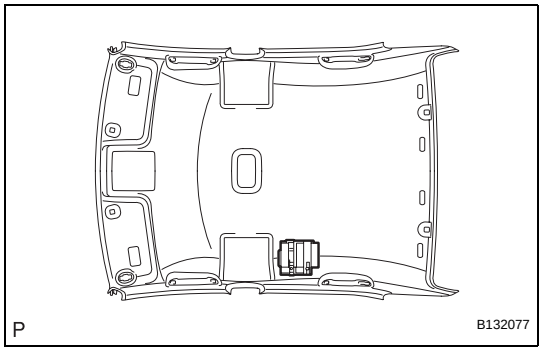


70. REMOVE RADIO SETTING CONDENSER
(a) Remove the rivet and radio setting condenser.



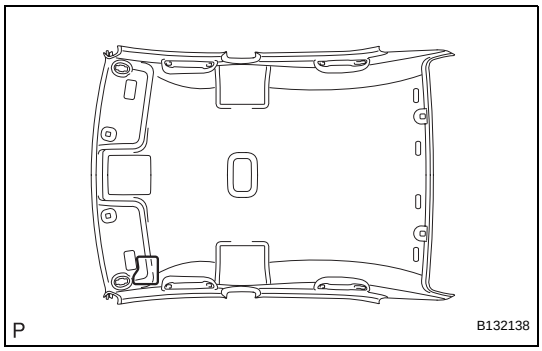
71. REMOVE NO. 2 REAR SIDE RAIL SPACER LH (w/o Sliding Roof)
(a) Remove the No. 2 rear side rail spacer LH.

72. REMOVE NO. 2 REAR SIDE RAIL SPACER RH (w/o Sliding Roof)
HINT:
Use the same procedures for the RH side and the LH side.



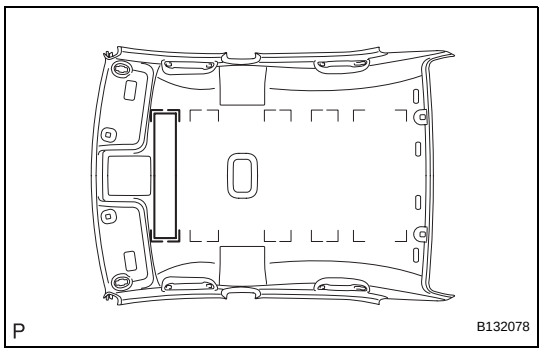
73. REMOVE NO. 3 REAR SIDE RAIL SPACER LH (w/o Sliding Roof)
(a) Remove the No. 3 rear side rail spacer LH.

74. REMOVE NO. 3 REAR SIDE RAIL SPACER RH (w/o Sliding Roof)
HINT:
Use the same procedures for the RH side and the LH side.



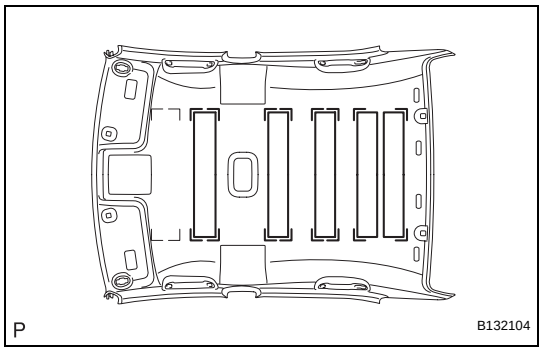
75. REMOVE ROOF SIDE RAIL SILENCER PAD LH (w/o Sliding Roof)
(a) Remove the roof side rail silencer pad LH.

76. REMOVE ROOF SIDE RAIL SILENCER PAD RH (w/o Sliding Roof)
HINT:
Use the same procedures for the RH side and the LH side.



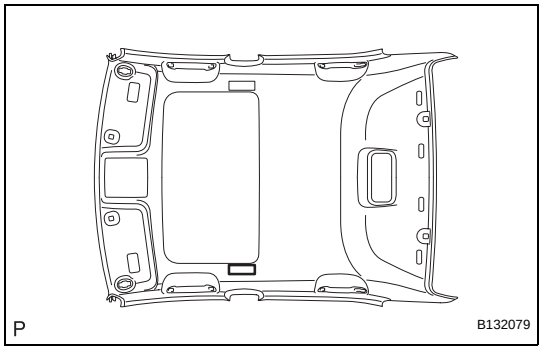
77. REMOVE NO. 2 ROOF SILENCER PAD (w/o Sliding Roof)
(a) Remove the No. 2 roof silencer pad.

IR



78. REMOVE NO. 4 ROOF SILENCER PAD (w/o Sliding Roof)

(a) Remove the 5 No. 4 roof silencer pads.



79. REMOVE NO. 2 REAR SIDE RAIL SPACER LH (w/ Sliding Roof)

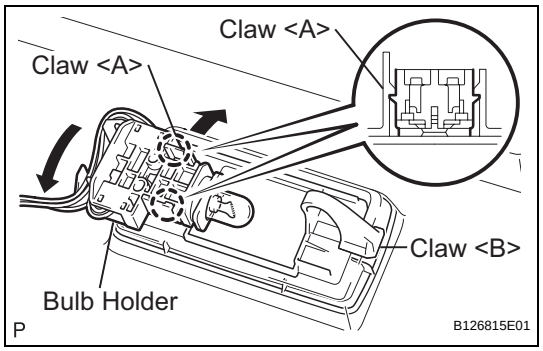
(a) Remove the No. 2 rear side rail spacer LH.

80. REMOVE NO. 2 REAR SIDE RAIL SPACER RH (w/ Sliding Roof)

HINT:
Use the same procedures for the RH side and the LH side.

81. REMOVE FASTENER HOOK (w/ Sliding Roof)

82. REMOVE ANTENNA CORD SUB-ASSEMBLY (See page AV-199)



83. REMOVE VANITY LIGHT ASSEMBLY (w/ Sliding Roof)

(a) Disengage the 2 claws <A> and separate the bulb holder from the vanity light assembly as shown in the illustration.

(b) Disengage the claw <B> and remove the vanity light assembly.
HINT:
Use the same procedure to remove the light on the other side.

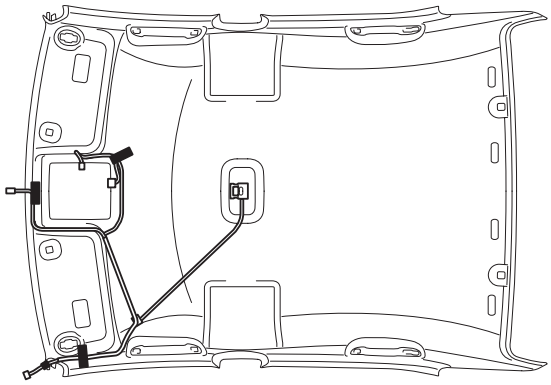
84. REMOVE NO. 1 ROOF WIRE (w/o Sliding Roof)

(a) Remove the adhesive tape from the roof headlining assembly.

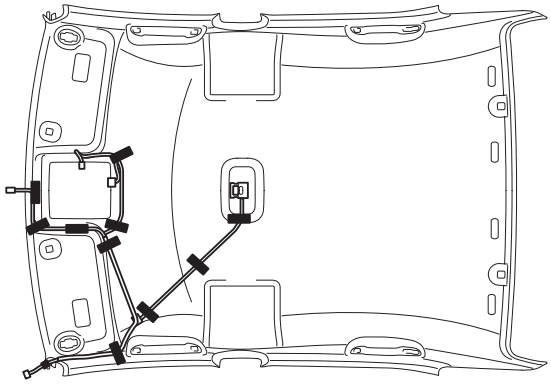
(b) Remove the No. 1 roof wire from the roof headlining assembly.

(c) Remove the double-sided tape from the roof headlining assembly.

for TMC made:



for TMMK made:



: Adhesive Tape

P

B132085E01

85. REMOVE NO. 1 ROOF WIRE (w/ Sliding Roof)

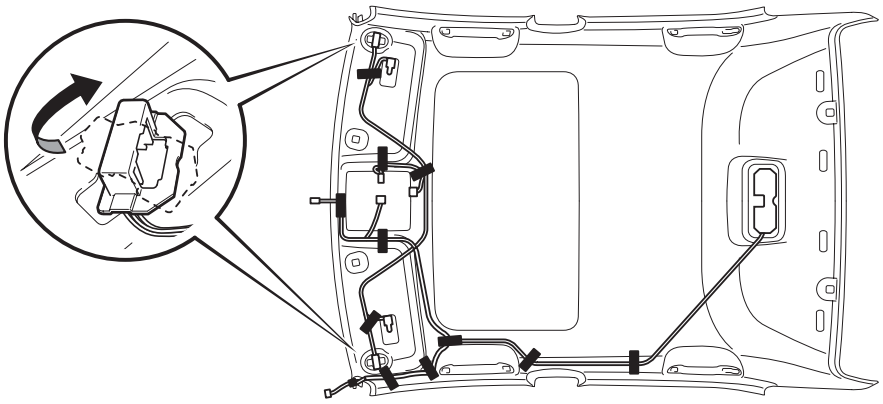
(a) Turn the visor connectors clockwise approximately 90° and separate the connectors from the roof headlining assembly.

(b) Remove the adhesive tape from the roof headlining assembly.

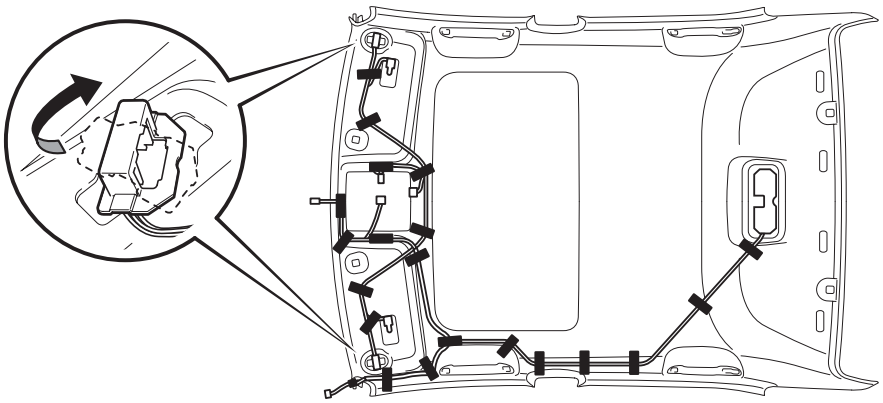
(c) Remove the No. 1 roof wire from the roof headlining assembly.

(d) Remove the double-sided tape from the roof headlining assembly.

for TMC made:



for TMMK made:



■ : Adhesive Tape

P

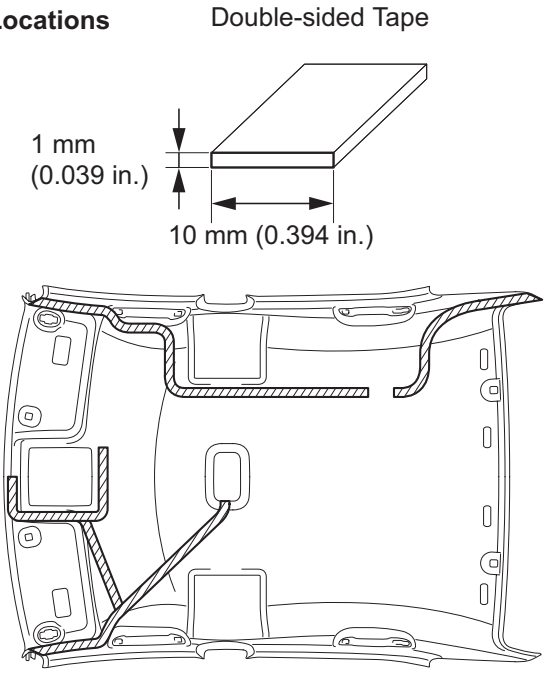
B132086E04

INSTALLATION

1. INSTALL NO. 1 ROOF WIRE (w/o Sliding Roof)

(a) Apply new double-sided tape to locations shown in the illustration while aligning the tape with the markings on the roof headlining.

Reference: Tape Attachment Locations



NOTICE:
Securely apply the double-sided tape to prevent it from being out of alignment and peeling off.

(b) Peel off the release paper from the double-sided tape.

(c) Attach the No. 1 roof wire along the double-sided tape so that the marking surface of the wire harness faces downward.

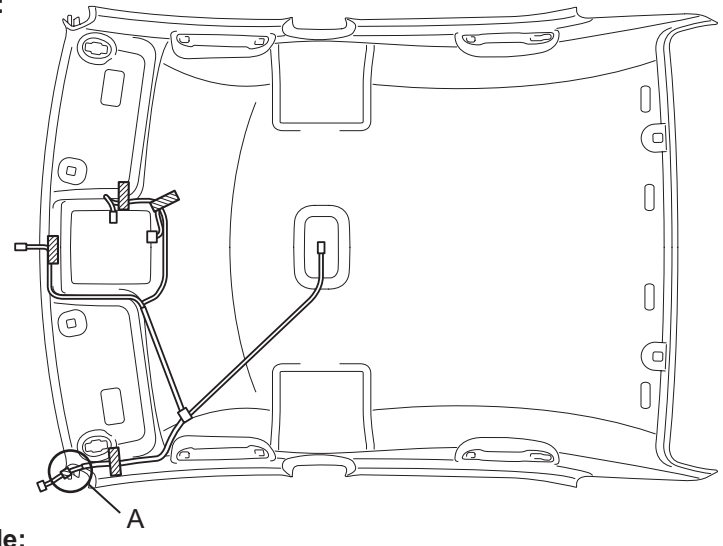
NOTICE:
- **Securely attach the No. 1 roof wire.**
- **Failure to do so may cause abnormal noise.**

IR

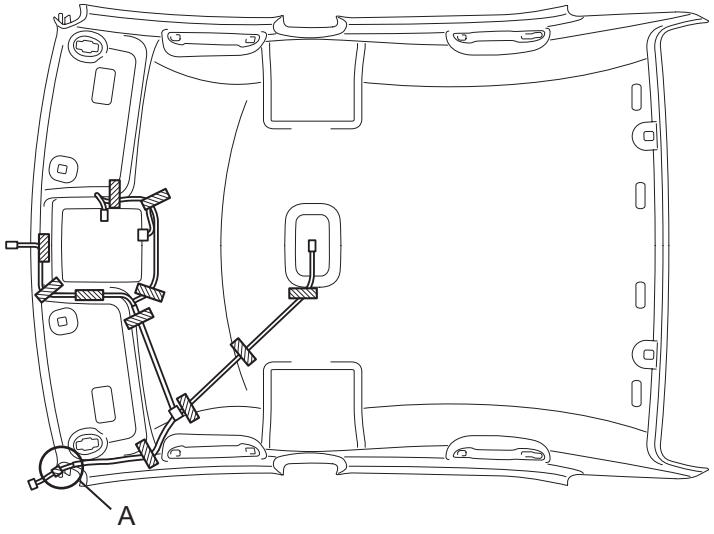
(d) Apply adhesive tape to locations shown in the illustration.

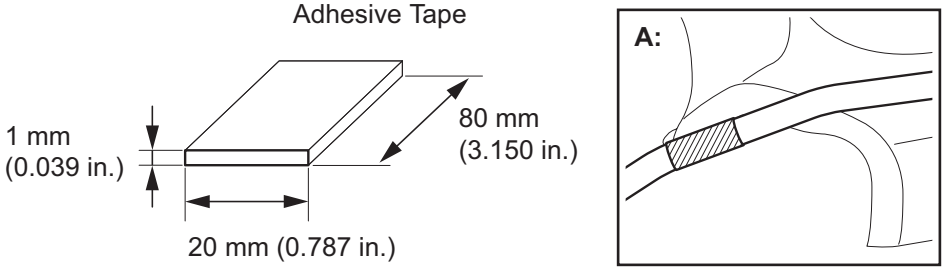
Reference: Tape Attachment Locations

for TMC made:



for TMMK made:





P

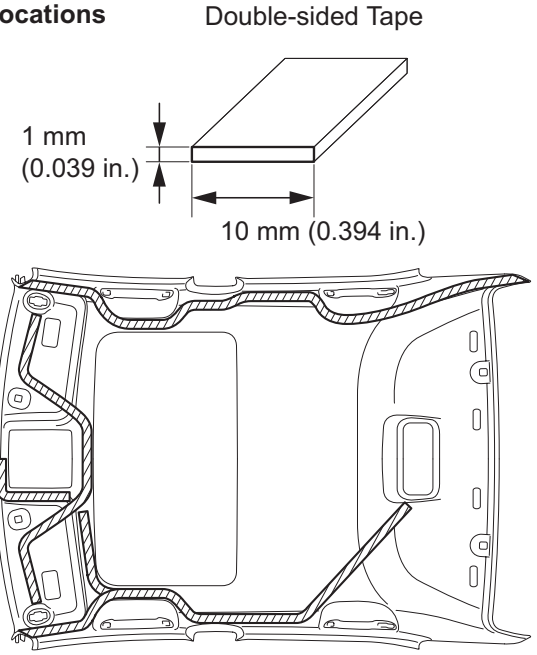
B132089E01

HINT:
As shown at point A in the illustration, line up and secure the reference tape of the wire harness to the tip of the roof headlining assembly.

2. INSTALL NO. 1 ROOF WIRE (w/ Sliding Roof)

(a) Apply new double-sided tape to locations shown in the illustration while aligning the tape with the markings on the roof headlining.

Reference: Tape Attachment Locations



NOTICE:
Securely apply the double-sided tape to prevent it from being out of alignment and peeling off.

(b) Peel off the release paper from the double-sided tape.

(c) Attach the No. 1 roof wire along the double-sided tape so that the marking surface of the wire harness faces downward.

NOTICE:
- **Securely attach the No. 1 roof wire.**
- **Failure to do so may cause abnormal noise.**

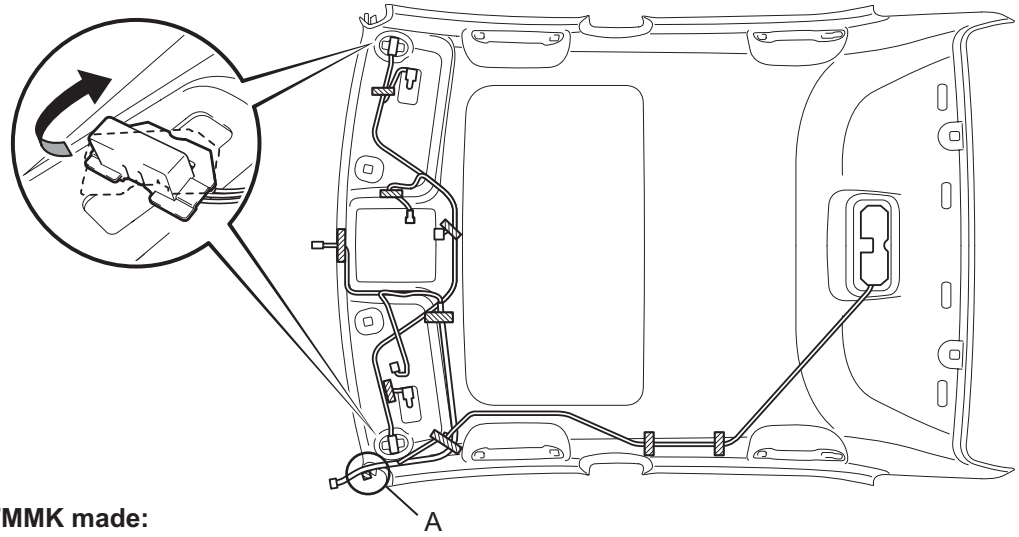
(d) Turn the visor connectors clockwise approximately 90° to install the connectors to the roof headlining.

IR

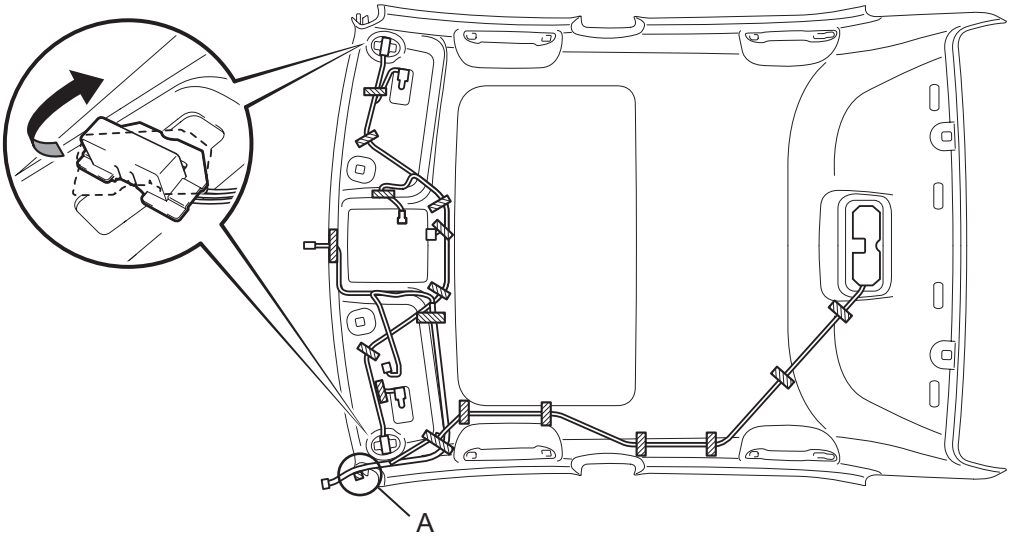
(e) Apply adhesive tape to locations shown in the illustration.

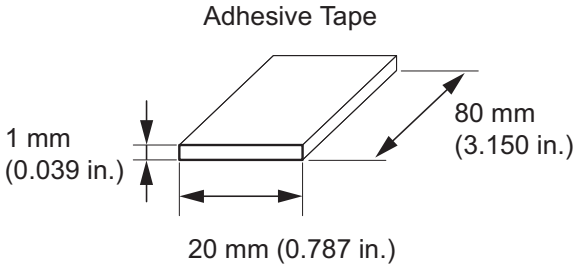
Reference: Tape Attachment Locations

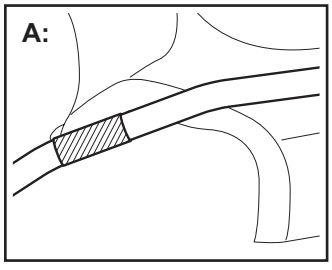
for TMC made:



for TMMK made:







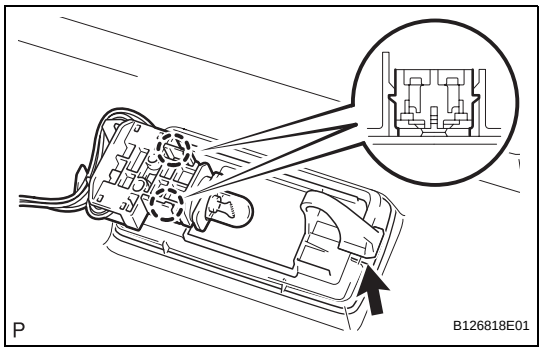
P

B132090E01

HINT:
As shown at point A in the illustration, line up and secure the reference tape of the wire harness to the tip of the roof headlining assembly.

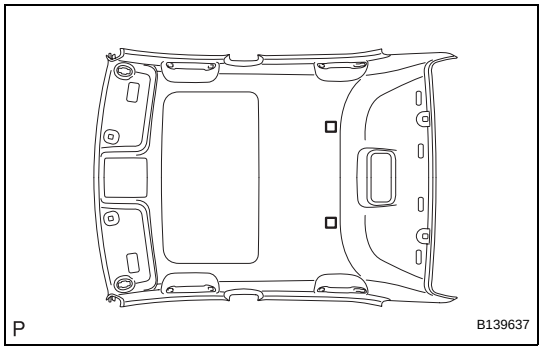
3. **INSTALL ANTENNA CORD SUB-ASSEMBLY (See page AV-202)**

IR



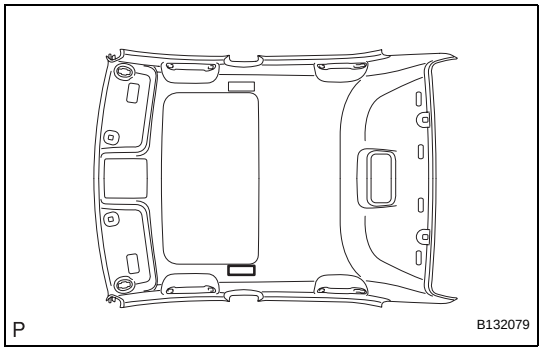
4. INSTALL VANITY LIGHT ASSEMBLY (w/ Sliding Roof)

(a) Engage the 3 claws and install the vanity light assembly.
HINT:
Use the same procedure to install the light on the other side.



5. INSTALL FASTENER HOOK (w/ Sliding Roof)

(a) Align the markings on the roof headlining assembly with the fastener hooks and install the fastener hooks using hot melt glue as shown in the illustration.

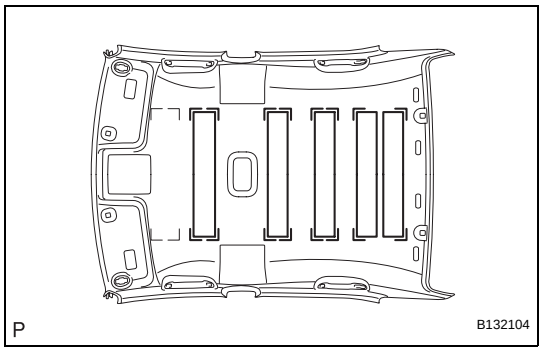


6. INSTALL NO. 2 REAR SIDE RAIL SPACER LH (w/ Sliding Roof)

(a) Align the markings on the roof headlining assembly with the No. 2 rear side rail spacer LH and install the spacer using hot melt glue as shown in the illustration.

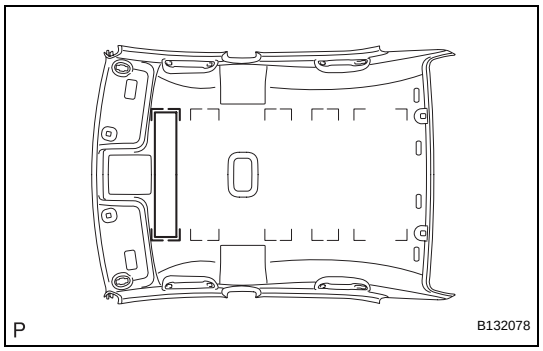
7. INSTALL NO. 2 REAR SIDE RAIL SPACER RH (w/ Sliding Roof)

HINT:
Use the same procedures for the RH side and the LH side.



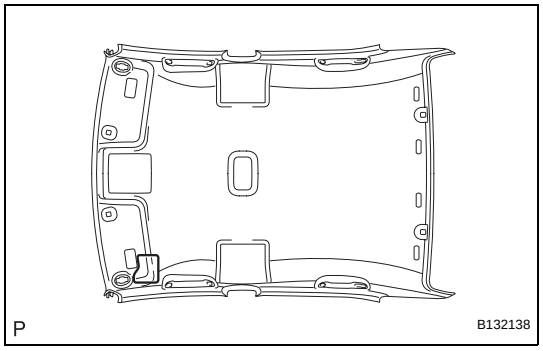
8. INSTALL NO. 4 ROOF SILENCER PAD (w/o Sliding Roof)

(a) Align the markings on the roof headlining assembly with the No. 4 roof silencer pads and install the silencer pads using hot melt glue or double-sided tape as shown in the illustration.



9. INSTALL NO. 2 ROOF SILENCER PAD (w/o Sliding Roof)

(a) Align the markings on the roof headlining assembly with the No. 2 roof silencer pad and install the silencer pad using hot melt glue or double-sided tape as shown in the illustration.



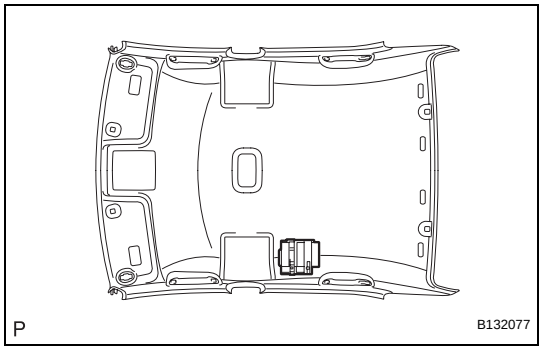
10. INSTALL ROOF SIDE RAIL SILENCER PAD LH (w/o Sliding Roof)

(a) Align the markings on the roof headlining assembly with the roof side rail silencer pad LH and install the silencer pad using hot melt glue as shown in the illustration.

11. INSTALL ROOF SIDE RAIL SILENCER PAD RH (w/o Sliding Roof)

HINT:

Use the same procedures for the RH side and the LH side.



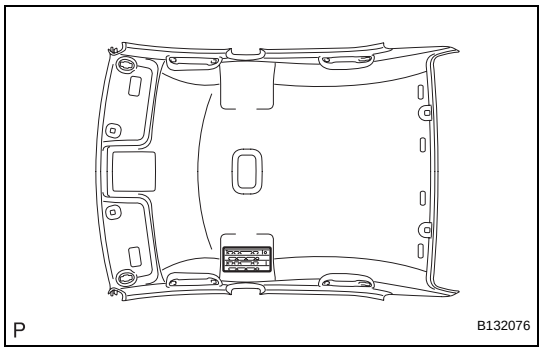
12. INSTALL NO. 3 REAR SIDE RAIL SPACER LH (w/o Sliding Roof)

(a) Align the markings on the roof headlining assembly with the No. 3 rear side rail spacer LH and install the spacer using hot melt glue as shown in the illustration.

13. INSTALL NO. 3 REAR SIDE RAIL SPACER RH (w/o Sliding Roof)

HINT:

Use the same procedures for the RH side and the LH side.



14. INSTALL NO. 2 REAR SIDE RAIL SPACER LH (w/o Sliding Roof)

(a) Align the markings on the roof headlining assembly with the No. 2 rear side rail spacer LH and install the spacer using hot melt glue as shown in the illustration.

15. INSTALL NO. 2 REAR SIDE RAIL SPACER RH (w/o Sliding Roof)

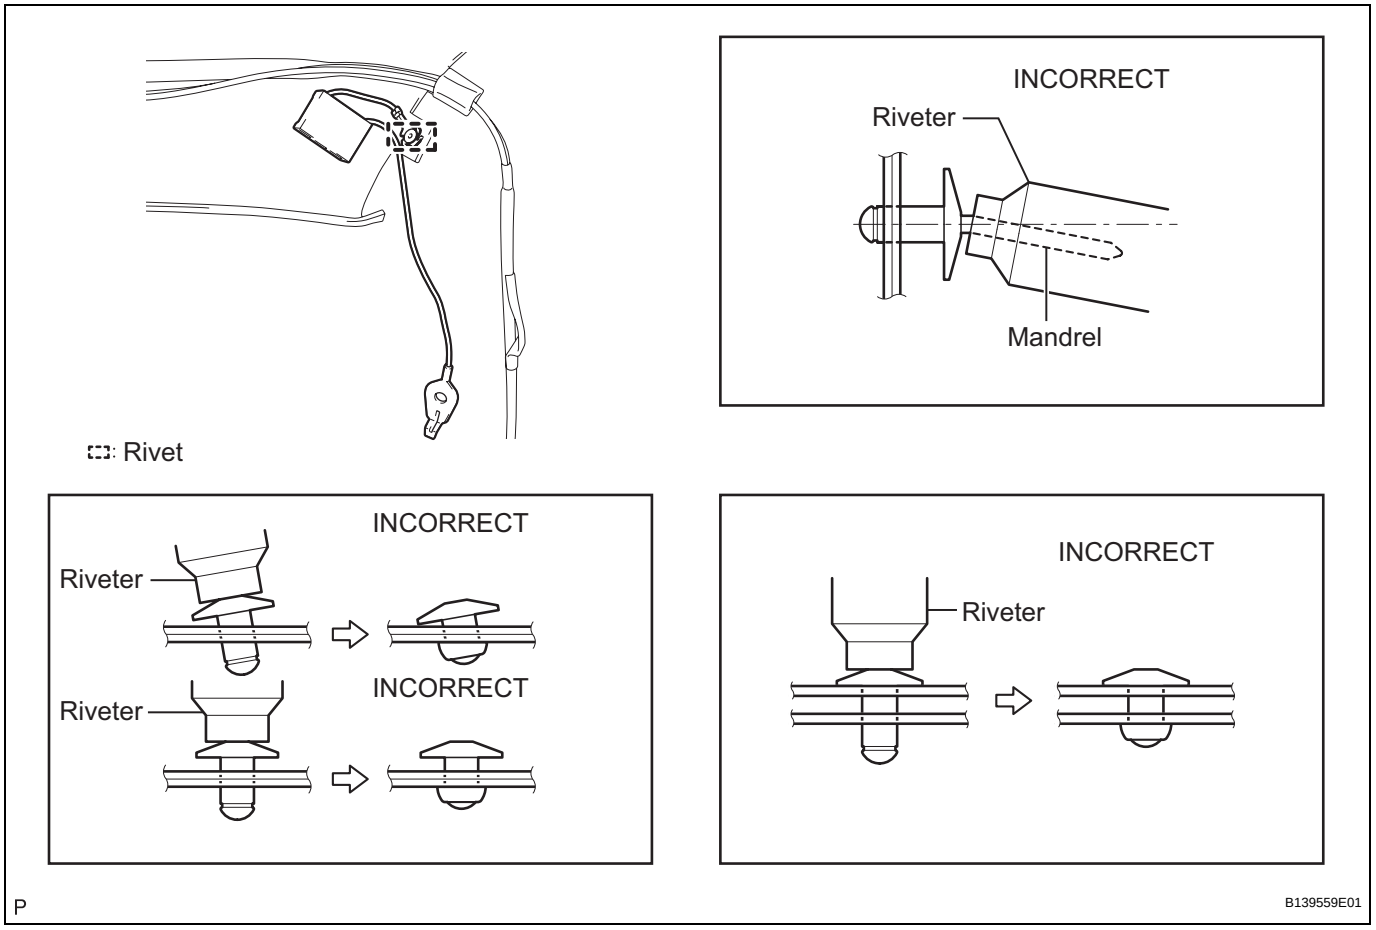
HINT:

Use the same procedures for the RH side and the LH side.

IR

16. INSTALL RADIO SETTING CONDENSER

(a) Using an air riveter or hand riveter with a nose piece, install the radio setting condenser with a new rivet.

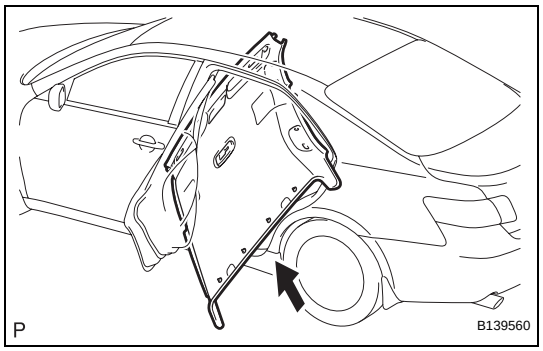


NOTICE:

- **Do not pry the rivet with the riveter, as this will cause damage to the riveter and mandrel.**
- **Confirm that the rivet is seated properly against the moulding. Do not tilt the riveter when installing the rivet to the moulding. Do not leave any space between the rivet head and moulding.**
- **Do not leave any space between the moulding and door frame. Firmly hold the 2 items together while installing the rivet.**

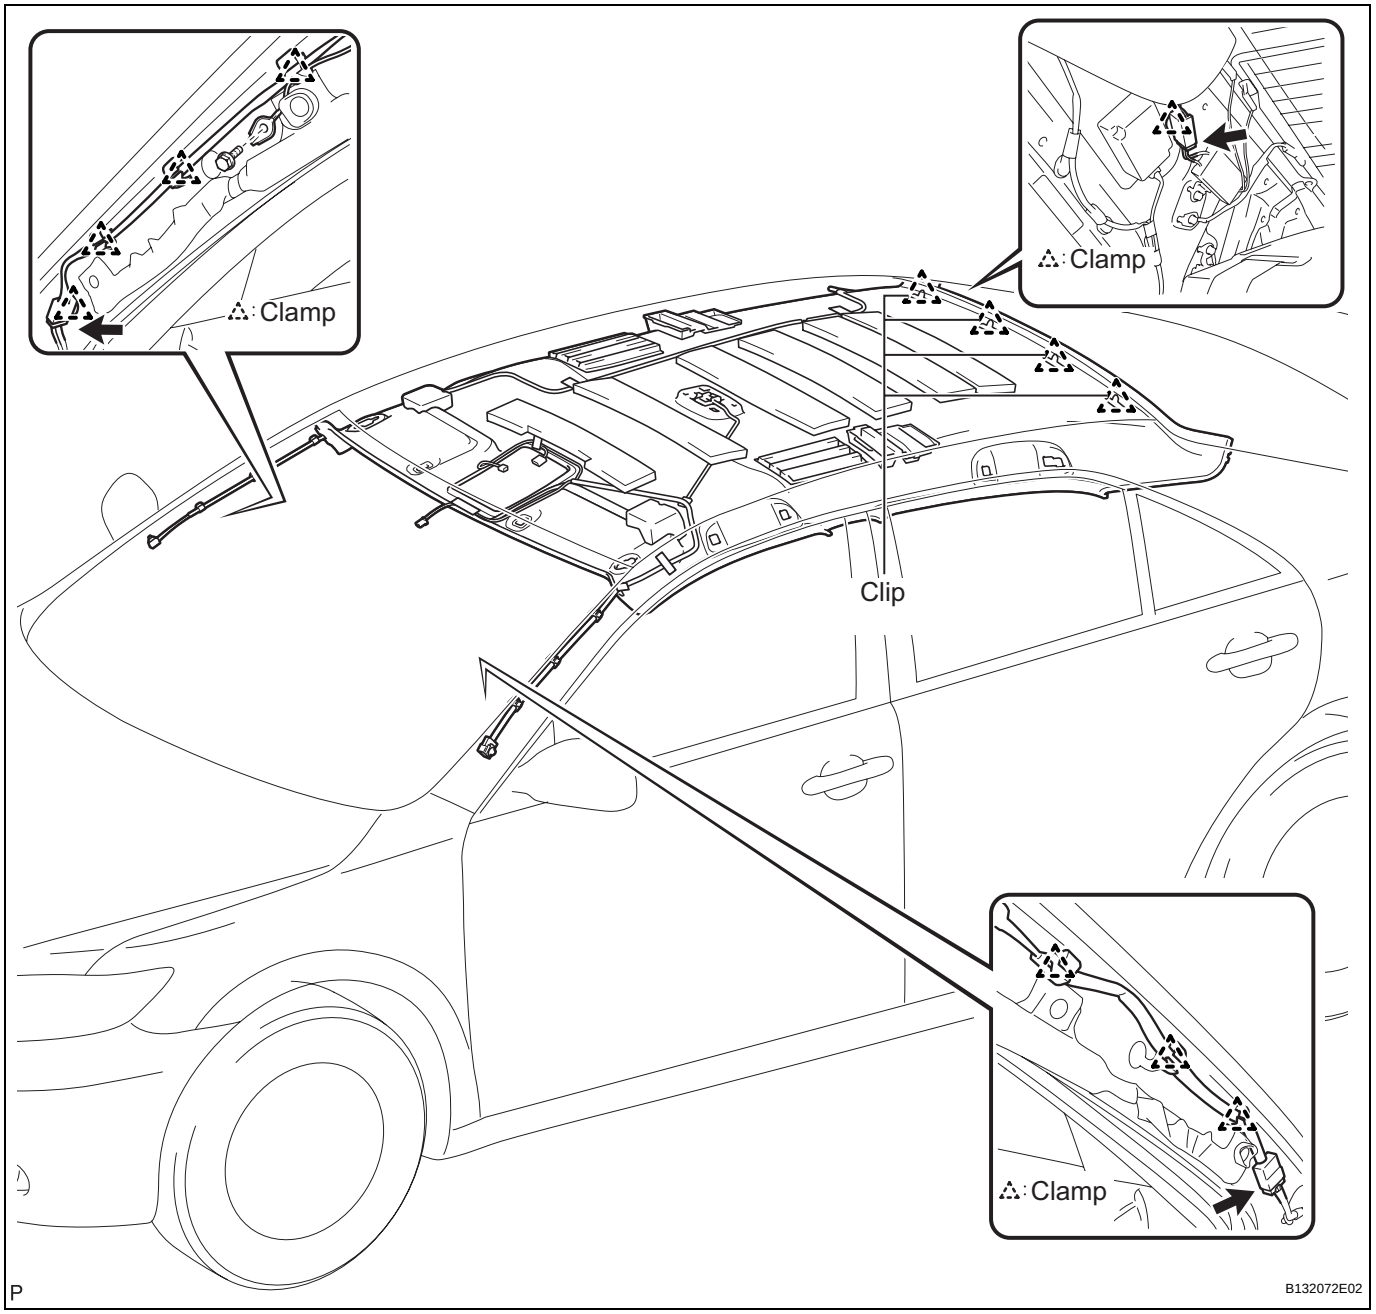
HINT:

If the rivet cannot be cut, pull it once and cut it.

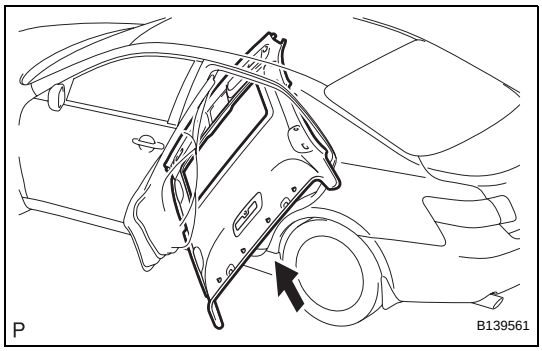


17. INSTALL ROOF HEADLINING ASSEMBLY (w/o Sliding Roof)

(a) Pull the roof headlining assembly into the vehicle through the rear left door.
(b) Engage the 4 clips.
(c) Connect the antenna cord sub-assembly connector and engage the clamp to the rear pillar RH.
(d) Connect the antenna cord sub-assembly connector and engage each clamp to the front pillar RH.
(e) Install the radio setting condenser to the front pillar RH with the bolt.
(f) Connect the No. 1 roof wire connector and engage each clamp to the front pillar LH.

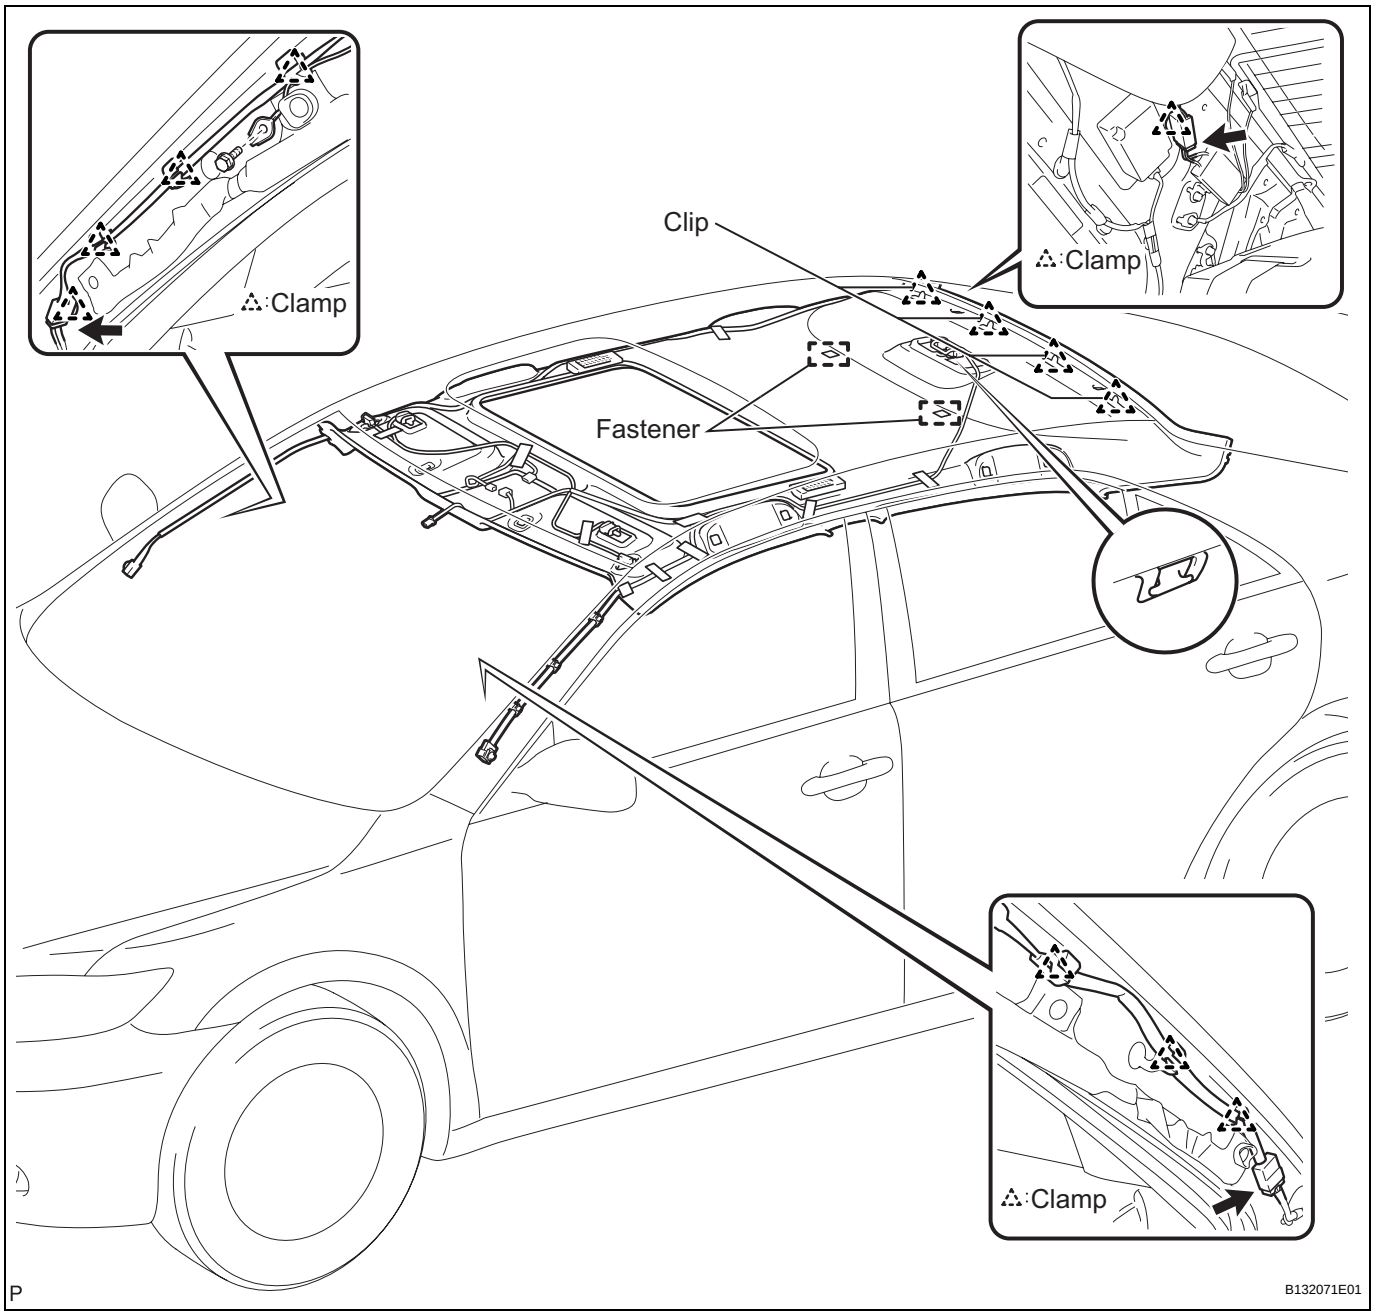


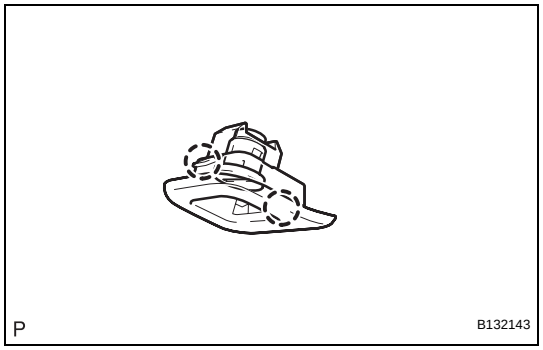
IR



18. INSTALL ROOF HEADLINING ASSEMBLY (w/ Sliding Roof)

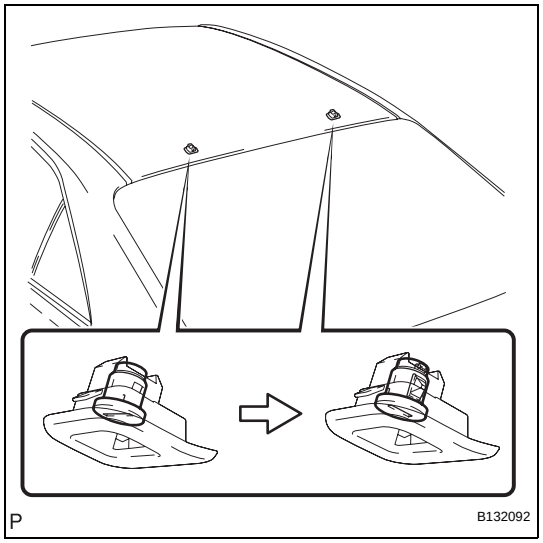
(a) Pull the roof headlining assembly into the vehicle through the rear left door.
(b) Engage the hook, 4 clips, and 2 fasteners.
(c) Connect the sliding roof drive gear connector.
(d) Connect the antenna cord sub-assembly connector and engage the clamp to the rear pillar RH.
(e) Connect the antenna cord sub-assembly connector and engage each clamp to the front pillar RH.
(f) Install the radio setting condenser to the front pillar RH with the bolt.
(g) Connect the No. 1 roof wire connector and engage each clamp to the front pillar LH.



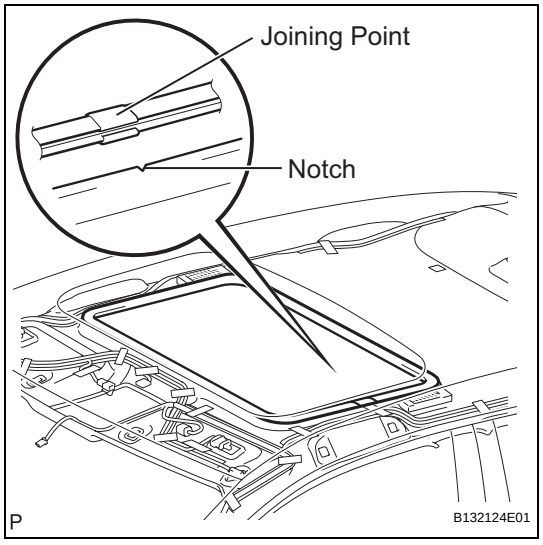


19. INSTALL SUNSHADE TRIM HOLDER (w/ Rear Sunshade)

(a) Engage the 2 claws.



(b) Using a screwdriver, turn the pin of each sunshade trim holder 90° to install the sunshade trim holders.

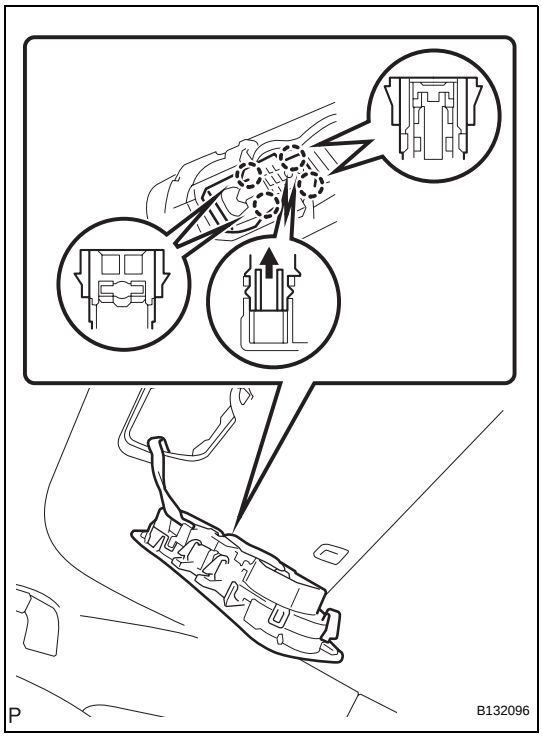


20. INSTALL SUN ROOF OPENING TRIM MOULDING (w/ Sliding Roof)

(a) Align the joining point of the moulding with the notch of the roof headlining assembly, and install the sun roof opening trim moulding.

NOTICE:

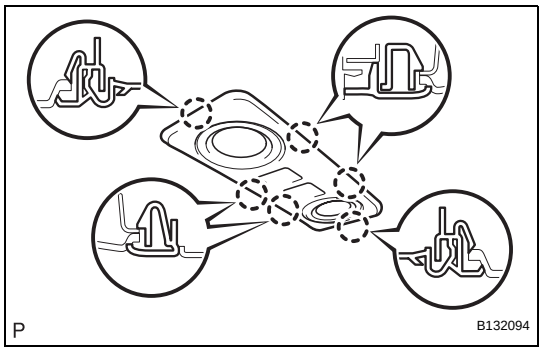
After installation, check that the corners fit correctly.



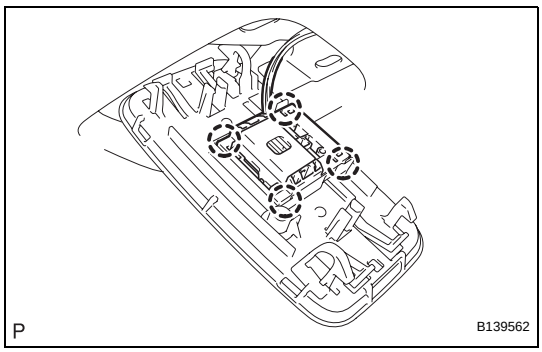
21. INSTALL SPOT LIGHT ASSEMBLY (w/ Sliding Roof)

(a) Push the light bulb holder in the direction indicated by the arrow in the illustration to engage the claw.

(b) Engage the 4 claws.

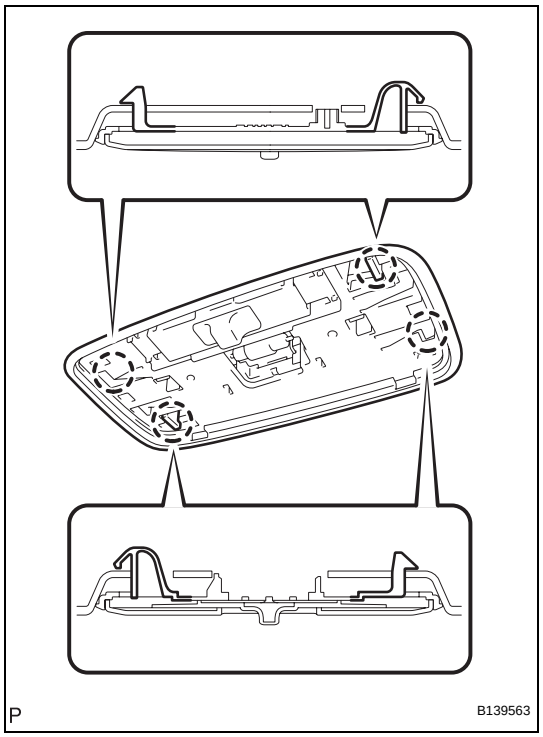


(c) Engage the 6 claws and install the spot light assembly.

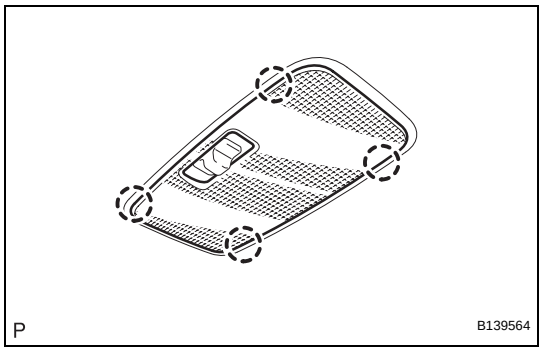


22. INSTALL NO. 1 ROOM LIGHT ASSEMBLY (w/o Sliding Roof)

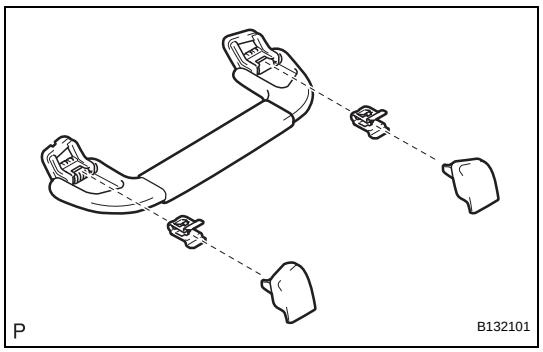
(a) Engage the 4 claws and install the room light switch base to the No. 1 room light assembly.



(b) Engage the 4 claws.

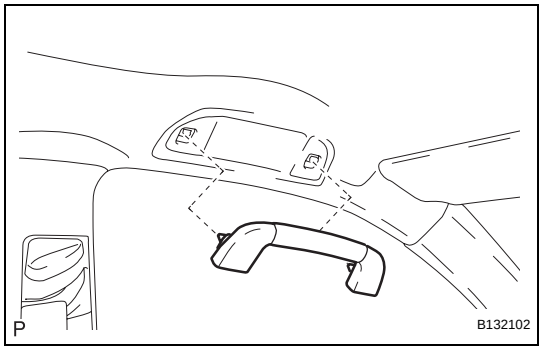


(c) Engage the 4 claws and install the lens cover.



23. INSTALL FRONT ASSIST GRIP SUB-ASSEMBLY

(a) Assemble the front assist grip sub-assembly as shown in the illustration.



(b) Install the front assist grip sub-assembly.
HINT:
Use the same procedures for the RH side and the LH side.

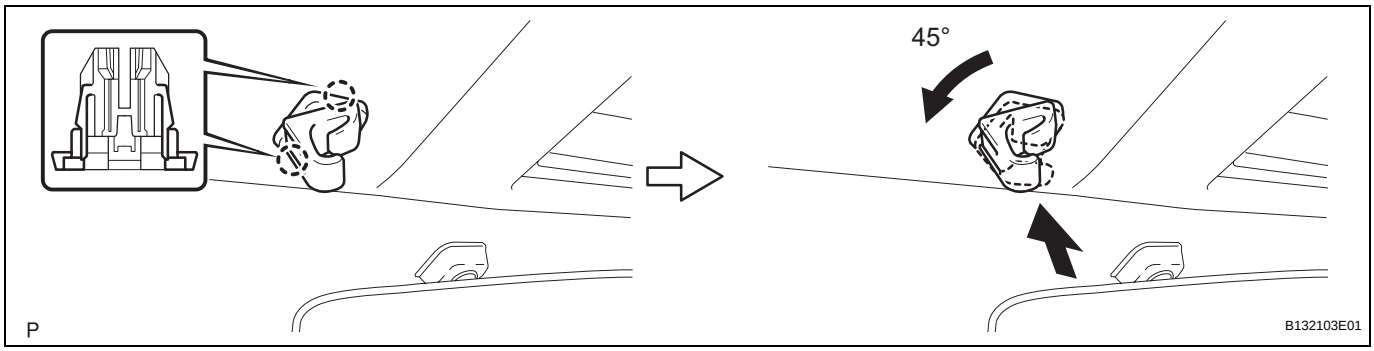
24. INSTALL REAR ASSIST GRIP SUB-ASSEMBLY

HINT:
Use the same procedures for the rear side and the front side.

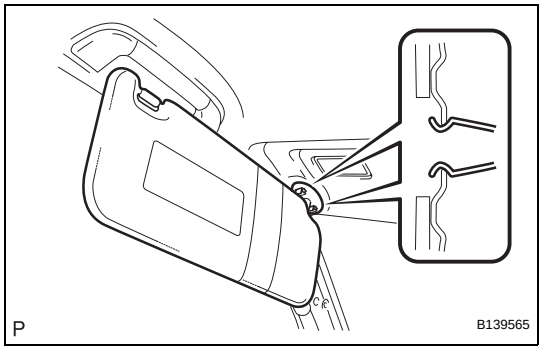
25. INSTALL VISOR HOLDER

(a) Engage the 2 claws.

(b) Push in the visor holder and turn it approximately 45°as shown in the illustration.

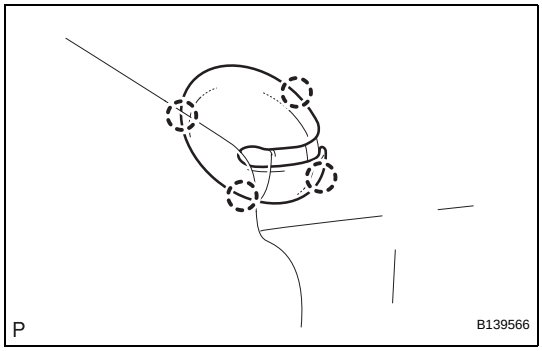


HINT:
Use the same procedures for the RH side and the LH side.



26. INSTALL VISOR ASSEMBLY LH

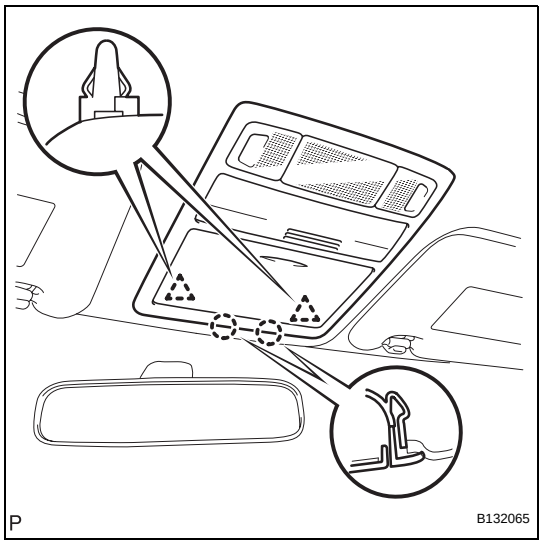
(a) Engage the 2 clips and install the visor assembly LH.



(b) Engage the 4 claws and install the visor bracket cover.

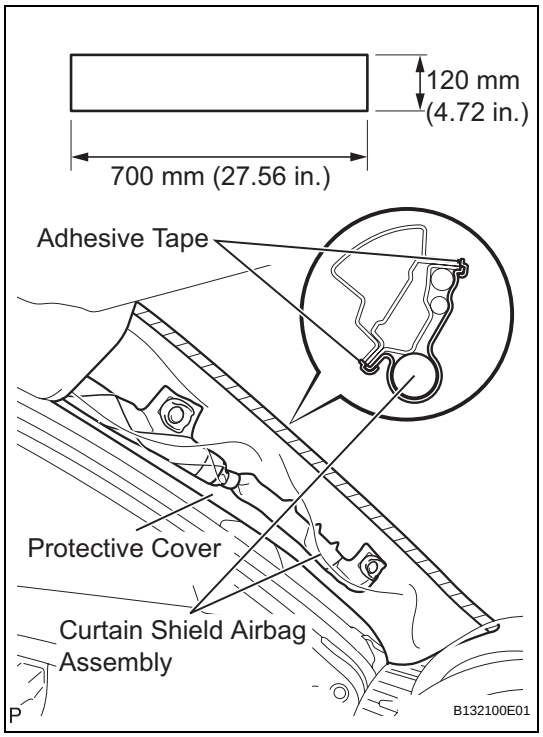
27. INSTALL VISOR ASSEMBLY RH

HINT:
Use the same procedures for the RH side and the LH side.



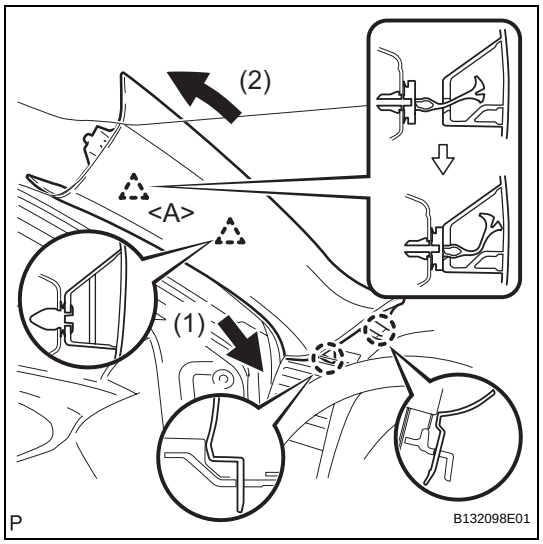
28. INSTALL ROOF CONSOLE BOX ASSEMBLY

(a) Connect the connectors.
(b) Engage the 2 claws and 2 clips, and then install the roof console box assembly.



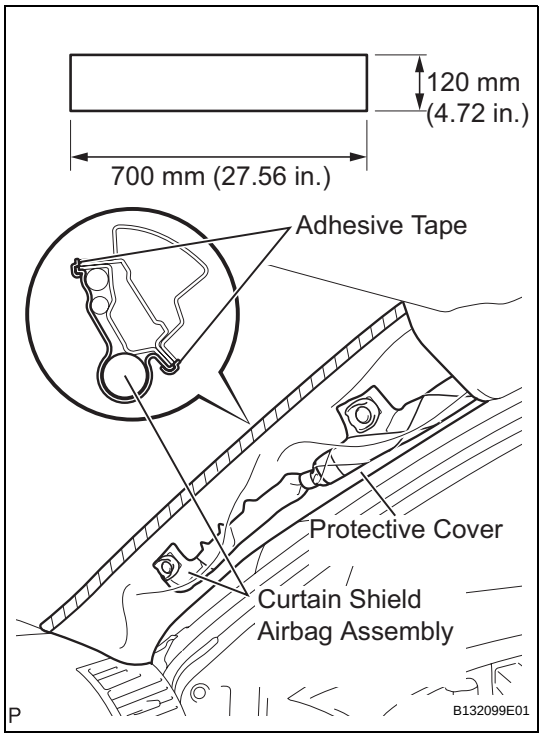
29. INSTALL FRONT PILLAR GARNISH LH

(a) Remove the protective cover.



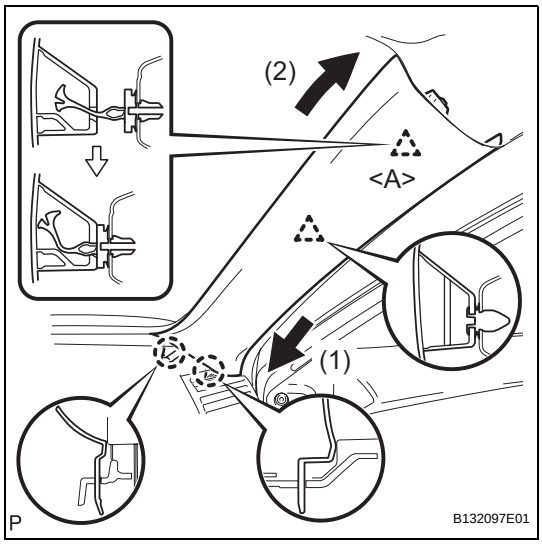
(b) Install a new clip <A> on the front pillar garnish LH.

(c) Engage the 2 claws and 2 clips, then install the front pillar garnish LH.



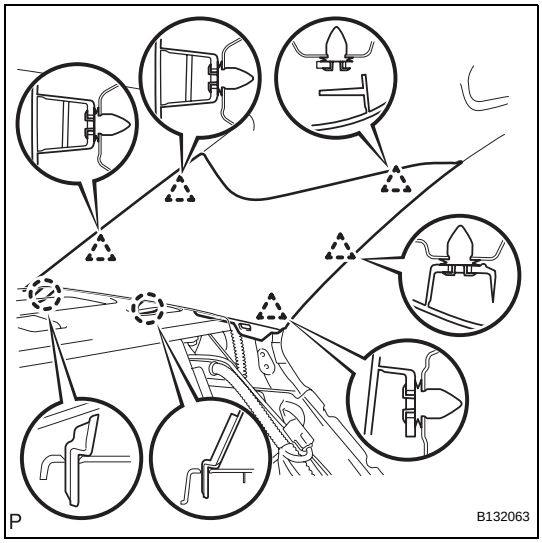
30. INSTALL FRONT PILLAR GARNISH RH

(a) Remove the protective cover.



(b) Install a new clip <A> on the front pillar garnish RH.

(c) Engage the 2 claws and 2 clips, then install the front pillar garnish RH.



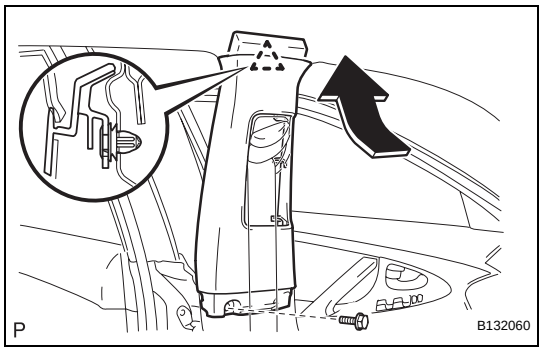
31. INSTALL ROOF SIDE INNER GARNISH LH

(a) Engage the 5 clips and 2 claws, then install the roof side inner garnish LH.

32. INSTALL ROOF SIDE INNER GARNISH RH

HINT:

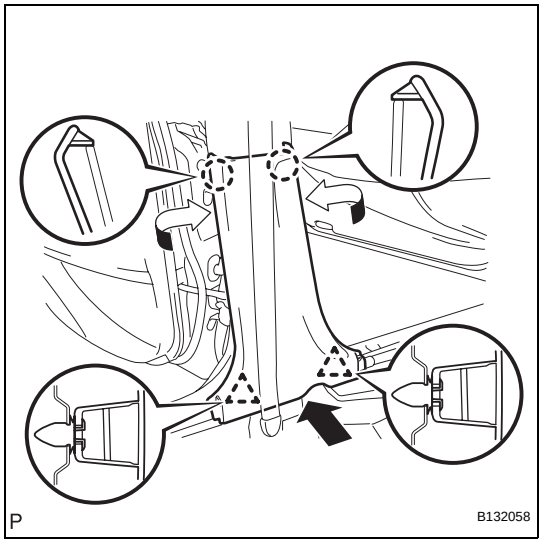
Use the same procedures for the RH side and the LH side.



33. INSTALL UPPER CENTER PILLAR GARNISH LH

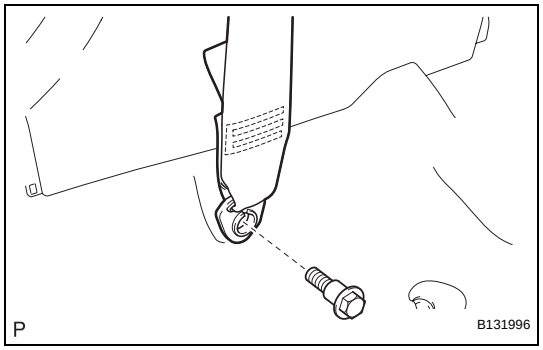
(a) Engage the clip.

(b) Install the upper center pillar garnish LH with the bolt.



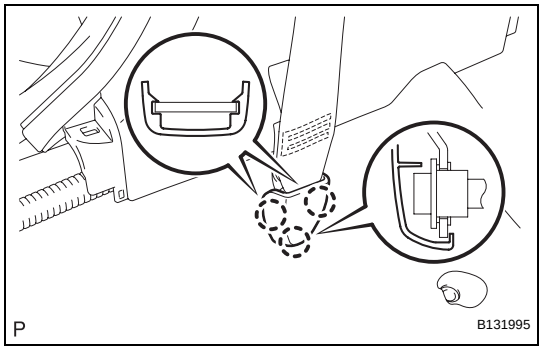
34. INSTALL LOWER CENTER PILLAR GARNISH LH

(a) Engage the 2 claws and 2 clips, then install the lower center pillar garnish LH.



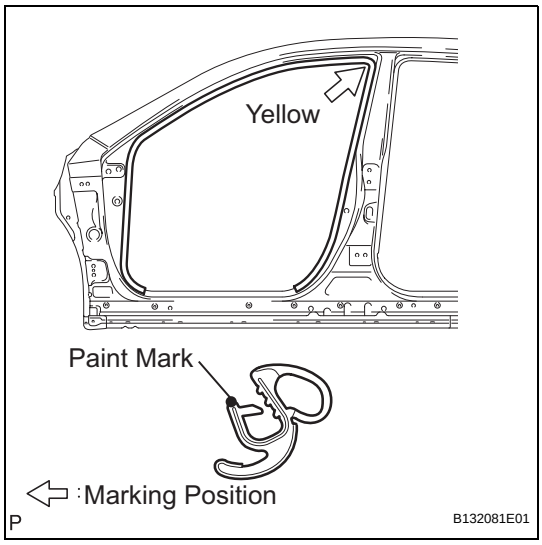
35. CONNECT FRONT SEAT OUTER BELT ASSEMBLY LH

(a) Install the floor end of the front seat outer belt assembly with the bolt.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)



36. INSTALL LAP BELT OUTER ANCHOR COVER (for LH Side)

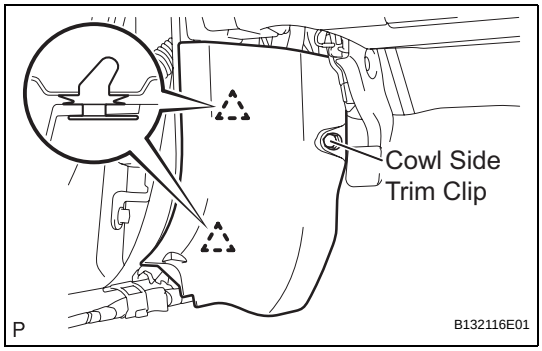
(a) Engage the 3 claws and install the lap belt outer anchor cover.



37. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH

(a) Install the front door opening trim weatherstrip LH as shown in the illustration.

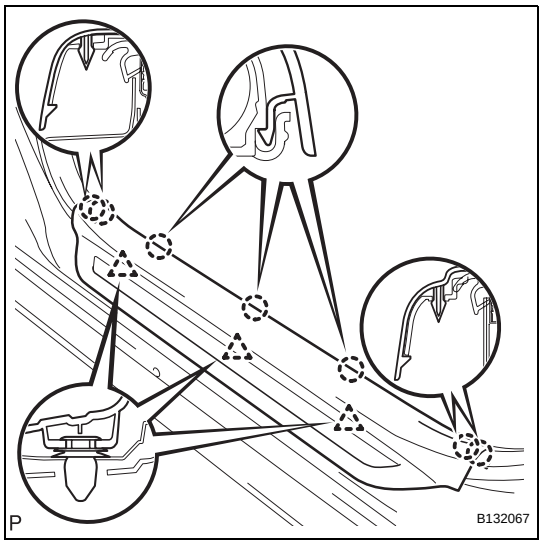
NOTICE:
After installation, check that the corners fit correctly.



38. INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH

(a) Engage the 2 clips.

(b) Install the cowl side trim sub-assembly LH with the cowl side trim clip.



39. INSTALL FRONT DOOR SCUFF PLATE LH

(a) Engage the 7 claws and 3 clips, then install the front door scuff plate LH.

40. INSTALL UPPER CENTER PILLAR GARNISH RH

HINT:
Use the same procedures for the RH side and the LH side.

41. INSTALL LOWER CENTER PILLAR GARNISH RH

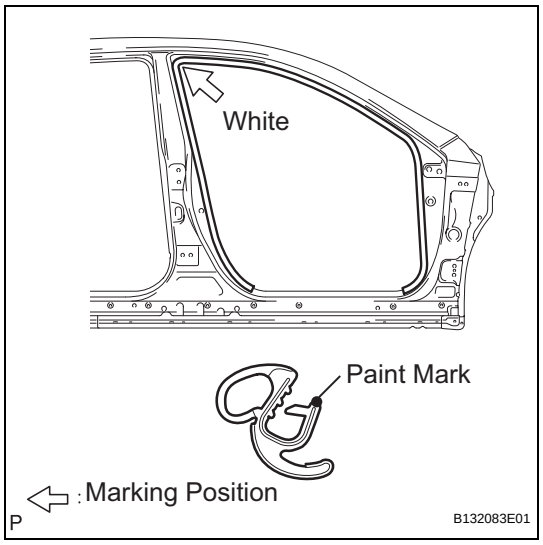
HINT:
Use the same procedures for the RH side and the LH side.

42. CONNECT FRONT SEAT OUTER BELT ASSEMBLY RH

HINT:
Use the same procedures for the RH side and the LH side.

43. INSTALL LAP BELT OUTER ANCHOR COVER (for RH Side)

HINT:
Use the same procedures for the RH side and the LH side.



44. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH**
    (a) Install the front door opening trim weatherstrip RH as shown in the illustration.
    NOTICE:
    After installation, check that the corners fit correctly.

45. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY RH**
    HINT:
    Use the same procedures for the RH side and the LH side.

46. **INSTALL FRONT DOOR SCUFF PLATE RH**
    HINT:
    Use the same procedures for the RH side and the LH side.

47. **INSTALL REAR DOOR INNER GLASS WEATHERSTRIP LH (See page ED-54)**

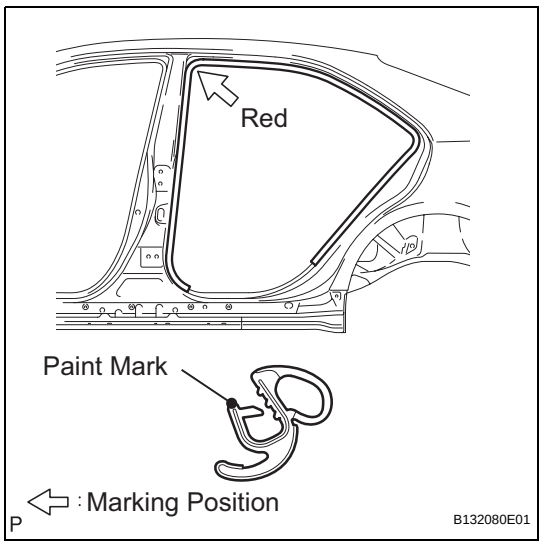
48. **INSTALL REAR DOOR TRIM BOARD SUB-ASSEMBLY LH (See page ED-55)**

49. **INSTALL DOOR ASSIST GRIP COVER LH (See page ED-56)**

50. **INSTALL REAR DOOR INSIDE HANDLE BEZEL PLUG LH (See page ED-56)**

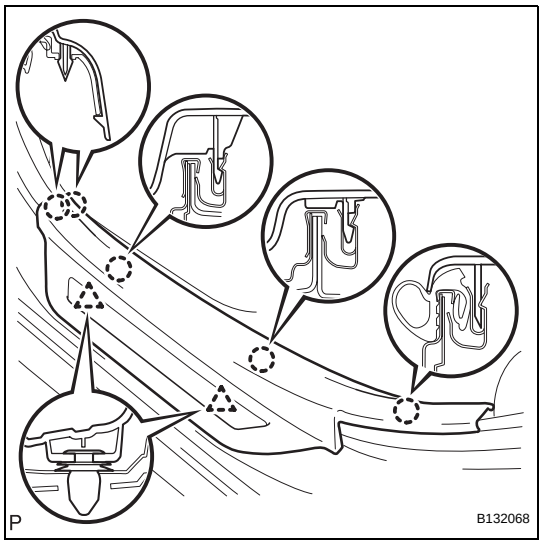
51. **INSTALL RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY LH (for Reclining Seat Type) (See page SE-69)**

52. **INSTALL RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY RH (for Reclining Seat Type)**
    HINT:
    Use the same procedures for the RH side and the LH side.

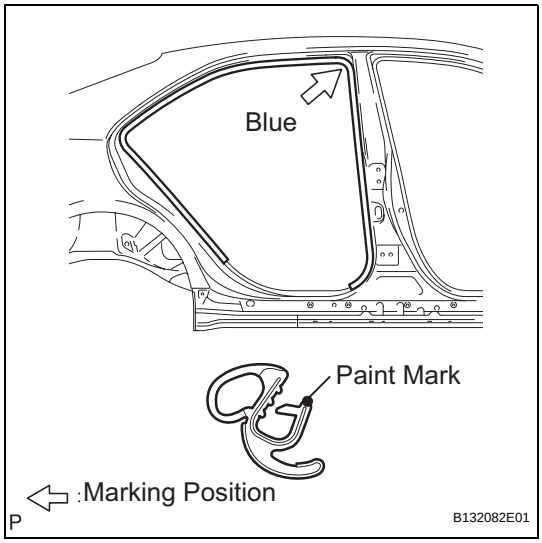


53. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH**
    (a) Install the rear door opening trim weatherstrip LH as shown in the illustration.
    NOTICE:
    After installation, check that the corners fit correctly.

IR



54. **INSTALL REAR DOOR SCUFF PLATE LH**
    (a) Engage the 5 claws and 2 clips, then install the rear door scuff plate LH.



55. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH**
    (a) Install the rear door opening trim weatherstrip RH as shown in the illustration.
    NOTICE:
    After installation, check that the corners fit correctly.

56. **INSTALL REAR DOOR SCUFF PLATE RH**
    HINT:
    Use the same procedures for the RH side and the LH side.

57. **INSTALL CENTER SEAT BACK ASSEMBLY (for Reclining Seat Type) (See page SE-71)**

58. **INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Reclining Seat Type) (See page SE-72)**

59. **INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Reclining Seat Type) (See page SE-71)**

60. **INSTALL REAR SEAT BACK COVER (for Reclining Seat Type)**

61. **INSTALL REAR SIDE SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-57)**

62. **INSTALL REAR SIDE SEAT BACK ASSEMBLY RH (for Fold Down Seat Type)**
    HINT:
    Use the same procedures for the RH side and the LH side.

63. **INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-57)**

64. **INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-57)**

65. **INSTALL REAR SEAT BACK ASSEMBLY (for Fixed Seat Type) (See page SE-84)**

66. **INSTALL REAR CENTER SEAT HEADREST ASSEMBLY**

67. **INSTALL REAR SEAT HEADREST ASSEMBLY**

68. **INSTALL REAR SEAT CUSHION ASSEMBLY (See page SE-84)**

69. **INSTALL FRONT SEAT ASSEMBLY LH (for Power Seat) (See page SE-41)**

70. **INSTALL INNER SEAT TRACK BRACKET COVER RH (for Power Seat) (See page SE-42)**

71. **INSTALL SEAT TRACK COVER LH (for Power Seat) (See page SE-42)**

72. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Power Seat)**

73. **INSTALL FRONT SEAT ASSEMBLY LH (for Manual Seat) (See page SE-24)**

74. **INSTALL INNER SEAT TRACK BRACKET COVER LH (for Manual Seat) (See page SE-25)**

75. **INSTALL SEAT TRACK COVER LH (for Manual Seat) (See page SE-25)**

76. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Manual Seat)**

77. **INSTALL FRONT SEAT ASSEMBLY RH (for Power Seat)**
HINT:
Use the same procedures for the RH side and the LH side.

78. **INSTALL INNER SEAT TRACK BRACKET COVER LH (for Power Seat)**
HINT:
Use the same procedures for the RH side and the LH side.

79. **INSTALL SEAT TRACK COVER RH (for Power Seat)**
HINT:
Use the same procedures for the RH side and the LH side.

80. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Power Seat)**

81. **INSTALL FRONT SEAT ASSEMBLY RH (for Manual Seat)**
HINT:
Use the same procedures for the RH side and the LH side.

82. **INSTALL INNER SEAT TRACK BRACKET COVER RH (for Manual Seat)**
HINT:
Use the same procedures for the RH side and the LH side.

83. **INSTALL SEAT TRACK COVER RH (for Manual Seat)**
HINT:
Use the same procedures for the RH side and the LH side.

84. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Manual Seat)**

85. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (for Manual Seat)**

86. **PERFORM ZERO POINT CALIBRATION AND SENSITIVITY CHECK (for Front Passenger Seat)**
(See page RS-242)

87. **INSPECT SRS WARNING LIGHT**
(See page RS-32)

88. **INSPECT FRONT SEAT ASSEMBLY (for Power Seat)**
(See page SE-42)

89. **INSPECT SLIDE ADJUSTER LOCK (for Manual Seat)**

HOW TO USE THIS MANUAL

GENERAL INFORMATION

1. GENERAL DESCRIPTION

(a) This manual is written in accordance with SAE J2008.
  (1) Diagnosis
  (2) Removing / Installing, Replacing, Disassembling / Reassembling, Checking and Adjusting
  (3) Final Inspection

(b) The following procedures are omitted from this manual. However, these procedures must be performed.
  (1) Use a jack or lift to perform operations
  (2) Clean all removed parts
  (3) Perform a visual check

2. INDEX

(a) An alphabetical INDEX section is provided at the end of the manual as a reference to help you find the item to be repaired.

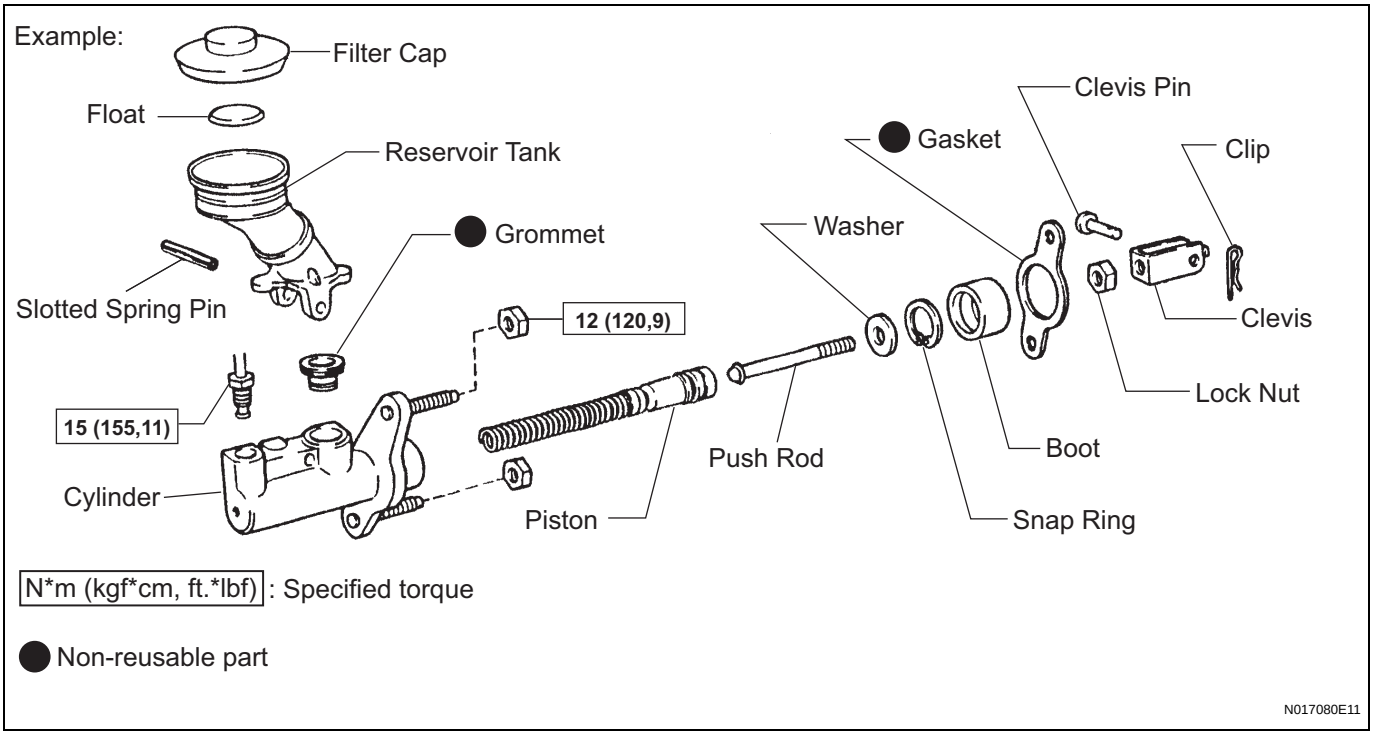
3. PREPARATION

(a) Use of Special Service Tools (SST) and Special Service Materials (SSM) may be required, depending on the repair procedure. Be sure to use SST and SSM when they are required and follow the working procedure properly. A list of SST and SSM is in the "Preparation" section of this manual.

4. REPAIR PROCEDURES

(a) A component illustration is placed under the title where necessary.

(b) Non-reusable parts, grease application areas, precoated parts and torque specifications are noted in the component illustrations.
The following illustration is an example.



(c) Torque specifications, grease application areas and non-reusable parts are emphasized in the procedures.
HINT:
There are cases where such information can only be explained by using an illustration. In these cases, torque, oil and other information are described in the illustration.

(d) Only items with key points are described in the text. What to do and other details are explained using illustrations next to the text. Both the text and illustrations are accompanied by standard values and notices.

Illustration	What to do and where to do it
Task heading	What work will be performed
Explanation text	How to perform the task Also has information such as specifications and warnings, which are written in boldface text

(e) Illustrations of similar vehicle models are sometimes used. In these cases, minor details may be different from the actual vehicle.

(f) Procedures are presented in a step-by-step format.

5. SERVICE SPECIFICATIONS

(a) SPECIFICATIONS are presented in boldface text throughout the manual. The specifications are also found in the "Service Specifications" section for reference.

6. TERM DEFINITIONS

CAUTION	Possibility of injury to you or other people.
NOTICE	Possibility of damage to components being repaired.
HINT	Provides additional information to help you perform repairs.

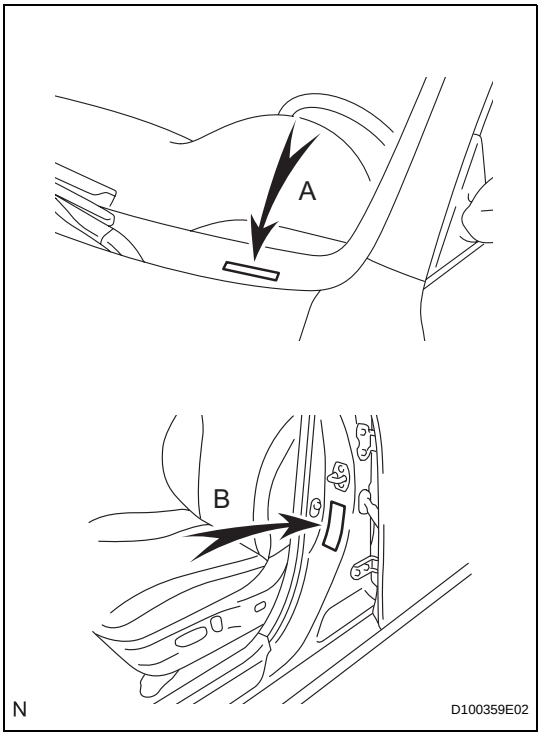
7. INTERNATIONAL SYSTEM OF UNITS

(a) The units used in this manual comply with the International System of Units (SI UNIT) standard. Units from the metric system and the English systems are also provided.
Example:
Torque: 30 N*m (310 kgf*cm, 22 ft.*lbf)

IN

IDENTIFICATION INFORMATION

VEHICLE IDENTIFICATION AND SERIAL NUMBERS

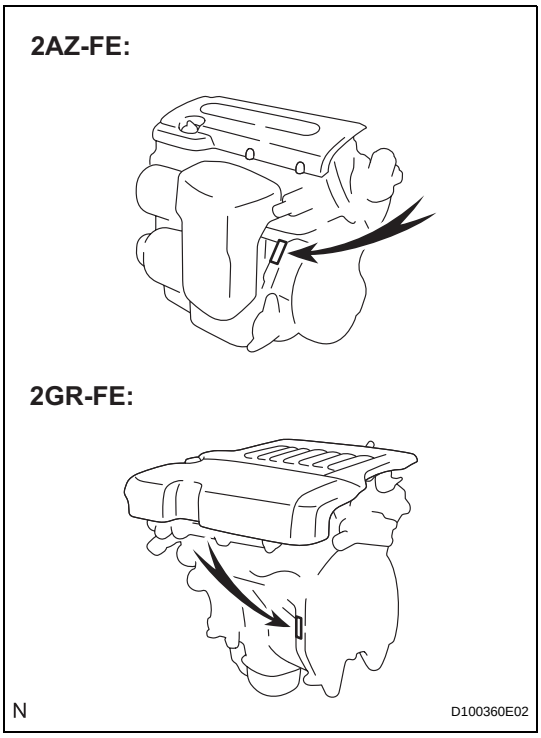


1. VEHICLE IDENTIFICATION NUMBER

(a) The vehicle identification number is stamped on the vehicle body and on the certification label, as shown in the illustration.

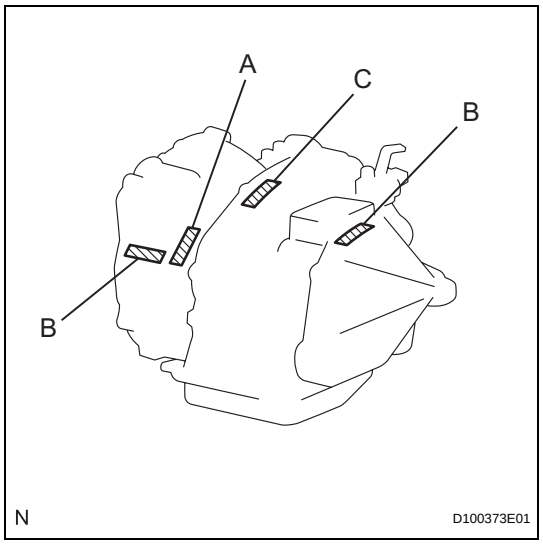
A:
Vehicle Identification Number

B:
Certification Label



2. ENGINE SERIAL NUMBER AND TRANSAXLE SERIAL NUMBER

(a) The engine serial number is stamped on the cylinder block of the engine as shown in the illustration.



(b) The transaxle serial number is stamped on the housing as shown in the illustration.

A:
E351E Transaxle Serial Number

B:
U250E Transaxle Serial Number

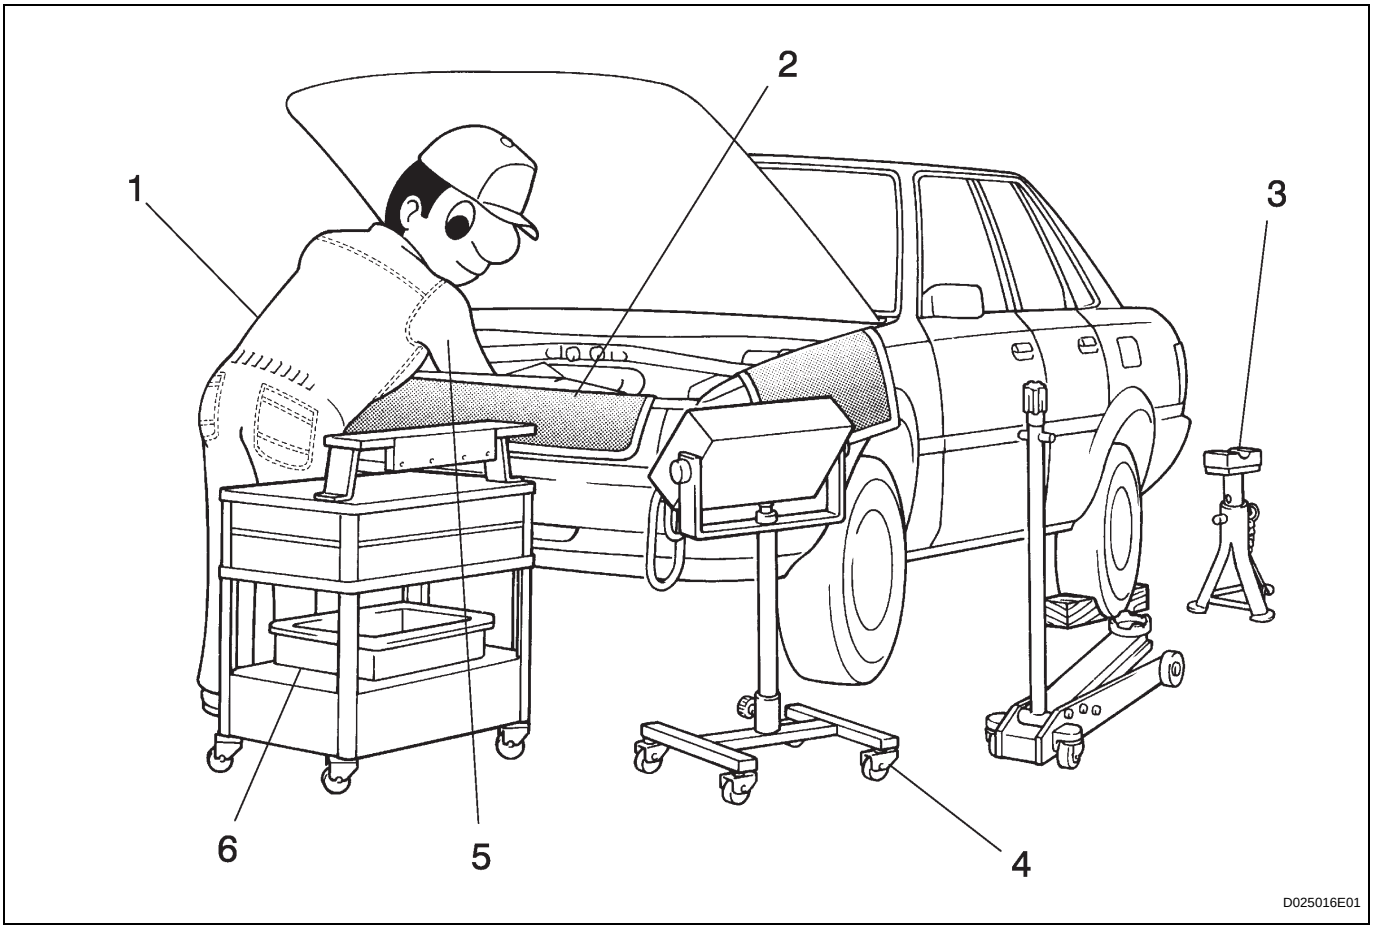
C:
U660E Transaxle Serial Number

REPAIR INSTRUCTION

PRECAUTION

1. BASIC REPAIR HINT

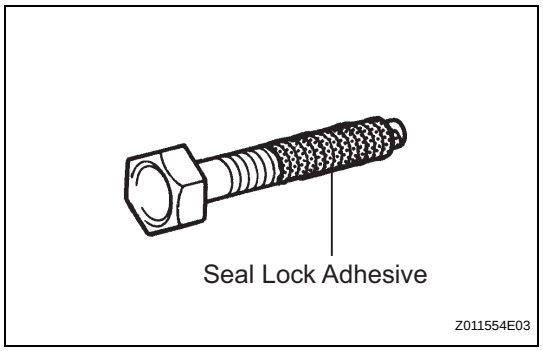
(a) HINTS ON OPERATIONS



1	Attire	• Always wear a clean uniform. • Hat and safety shoes must be worn.
2	Vehicle protection	Prepare a grille cover, fender cover, seat cover and floor mat before starting the operation.
3	Safety operation	• When working with 2 or more persons, be sure to check safety for one another. • When working with the engine running, make sure to provide ventilation for exhaust fumes in the workshop. • If working on high temperature, high pressure, rotating, moving, or vibrating parts, wear appropriate safety equipment and take extra care not to injure yourself or others. • When jacking up the vehicle, be sure to support the specified location with a safety stand. • When lifting up the vehicle, use appropriate safety equipment.
4	Preparation of tools and measuring gauge	Before starting operation, prepare a tool stand, SST, gauge, oil and parts for replacement.
5	Removal and installation, disassembly and assembly operations	• Diagnose with a thorough understanding of proper procedures and of the reported problem. • Before removing the parts, check the general condition of the assembly and for deformation and damage. • When the assembly is complicated, take notes. For example, note the total number of electrical connections, bolts, or hoses removed. Add matchmarks to insure reassembly of components in the original positions. Temporarily mark hoses and their fittings if needed. • Clean and wash the removed parts if necessary and assemble them after a thorough check.

6	Removed parts	• Place the removed parts in a separate box to avoid mixing them up with the new parts or contaminating the new parts. • For non-reusable parts such as gaskets, O-rings, and self-locking nuts, replace them with new ones as instructed in this manual. • Retain the removed parts for customer inspection, if requested.

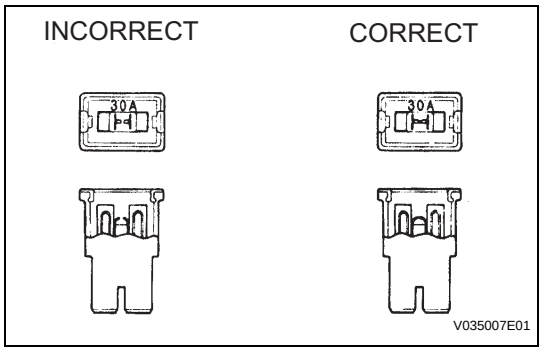
(b) JACKING UP AND SUPPORTING VEHICLE
(1) Care must be taken when jacking up and supporting the vehicle. Be sure to lift and support the vehicle at the proper locations.



(c) PRECOATED PARTS
(1) Precoated parts are bolts and nuts that are coated with a seal lock adhesive at the factory.
(2) If a precoated part is retightened, loosened or moved in any way, it must be recoated with the specified adhesive.
(3) When reusing a precoated part, clean off the old adhesive and dry the part with compressed air. Then apply new seal lock adhesive appropriate to that part.
(4) Some seal lock agents harden slowly. You may have to wait for the seal lock adhesive to harden.

(d) GASKETS
(1) When necessary, use a sealer on gaskets to prevent leaks.

(e) BOLTS, NUTS AND SCREWS
(1) Carefully follow all the specifications for tightening torques. Always use a torque wrench.



(f) FUSES
(1) When inspecting a fuse, check that the wire of the fuse is not broken.
(2) When replacing fuses, be sure that the new fuse has the correct amperage rating. Do not exceed the rating or use one with a lower rating.

Illustration	Symbol	Part Name	Abbreviation
 N	N	FUSE	FUSE

Illustration	Symbol	Part Name	Abbreviation
 N	N	MEDIUM CURRENT FUSE	M-FUSE
 N	 N	HIGH CURRENT FUSE	H-FUSE
 N	 N	FUSIBLE LINK	FL
 N	 N	CIRCUIT BREAKER	CB

(g) CLIPS

(1) The removal and installation methods of typical clips used for vehicle body parts are shown in the table below.

HINT:

If clips are damaged during work, always replace the damaged clip with a new one.

Shape (Example)	Removal/Installation
 N	Remove clips with clip remover or pliers.  N
 N	Remove fasteners with clip remover or screwdriver.  N
 N	Remove clips with wide scraper to prevent panel damage.  N
 N	Remove clips by pushing center pin through and prying out shell.  N

IN

Shape (Example)	Removal/Installation
 N	Remove clips by unscrewing center pin and prying out shell.  N
 N	Remove clips by prying out pin and then prying out shell.  N

(h) CLAWS

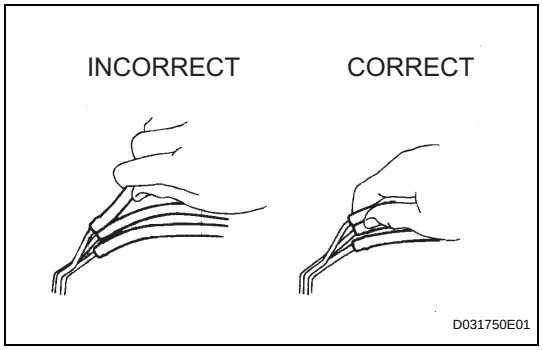
(1) The removal and installation methods of typical claws used for vehicle body parts are shown in the table below.

HINT:

If claws are damaged during a procedure, always replace the damaged claws with a new caps or covers.

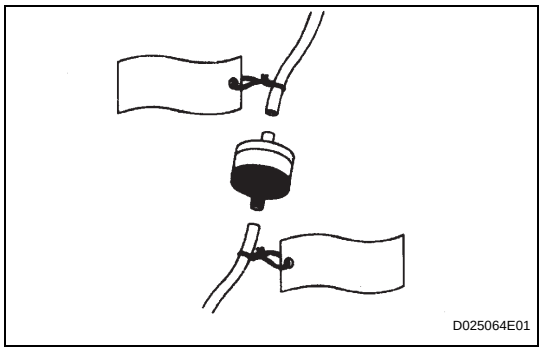
Shape (Example)	Illustration	Procedures
		1. Using a screwdriver, detach the claws and remove the cap or covers.
		1. Using a screwdriver, detach the claws and remove the cap or covers.

Shape (Example)	Illustration	Procedures
		1. Using a screwdriver, detach the claws and remove the cap or covers.



(i) REMOVAL AND INSTALLATION OF VACUUM HOSES

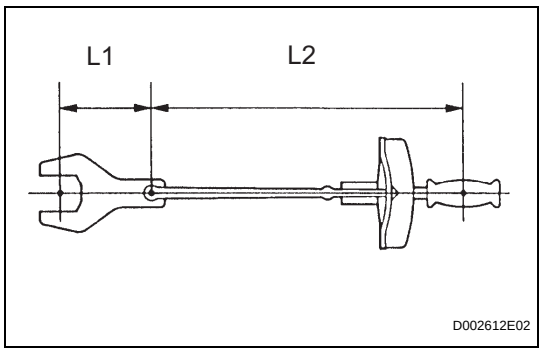
(1) To disconnect a vacuum hose, pull and twist from the end of the hose. Do not pull from the middle of the hose as this may damage the hose.



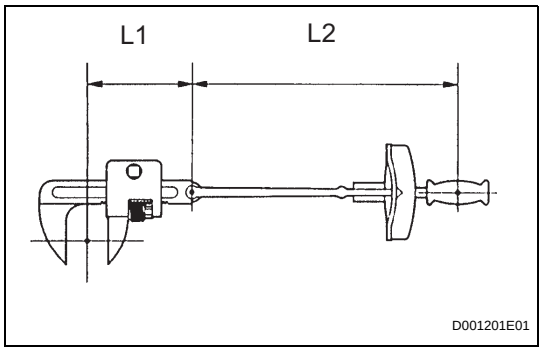
(2) When disconnecting vacuum hoses, use tags to identify where they should be reconnected.

(3) After completing any hose related repairs, double check that the vacuum hoses are properly connected. The label under the hood shows the proper layout.

(4) When using a vacuum gauge, never force the hose onto a connector that is too large. If a hose has been stretched, air may leak. Use a step-down adapter if necessary.



(j) TORQUE WHEN USING TORQUE WRENCH WITH EXTENSION TOOL



(1) Use the formula below to calculate special torque values for situations where SST or an extension tool is combined with the torque wrench.

Formula:

T' = L2/(L1 + L2) * T

T'	**Reading of torque wrench {N*m (kgf*cm, ft.*lbf)}**
T	**Torque {N*m (kgf*cm, ft.*lbf)}**
L1	**Length of SST or extension tool {cm (in.)}**
L2	**Length of torque wrench {cm (in.)}**

NOTICE:

If an extension tool or SST is combined with a torque wrench and the wrench is used to tighten to a torque specification in this manual, the actual torque will be excessive and parts will be damaged.

2. FOR VEHICLES EQUIPPED WITH SRS AIRBAG AND SEAT BELT PRETENSIONER

The CAMRY is equipped with a Supplemental Restraint System (SRS).

CAUTION:

Failure to carry out the service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing and lead to serious injury. Furthermore, if a mistake is made when servicing SRS, it is possible that the SRS may fail to operate properly. Before servicing (including removal or installation of parts, inspection or replacement), be sure to read the following section carefully.

(a) GENERAL NOTICE

(1) As malfunctions of the SRS are difficult to confirm, the Diagnostic Trouble Codes (DTCs) become the most important source of information when troubleshooting. When troubleshooting the SRS, always check the DTCs before disconnecting the battery.

(2) Work must be started at least 90 seconds after the ignition switch is turned off and after the cable is disconnected from the negative (-) battery terminal.
The SRS is equipped with a back-up power source. If work is started within 90 seconds after turning the ignition switch off and disconnecting the cable from the negative (-) battery terminal, the SRS may deploy.
When the cable is disconnected from the negative (-) battery terminal, clock and audio system memory is erased. Before starting work, make a note of the settings of each memory system. When work is finished, reset the clock and audio system as before.
CAUTION:
Never use a back-up power source (battery or other) to avoid erasing the system memory. The back-up power source may inadvertently power the SRS and cause it to deploy.

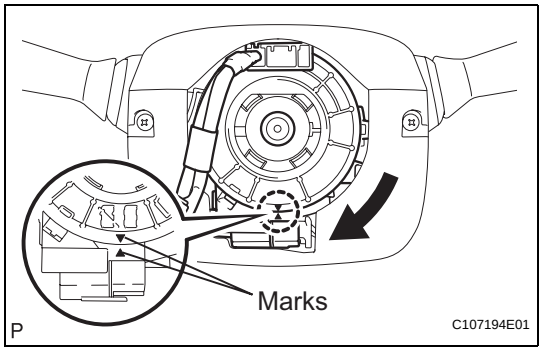
(3) In minor collisions where the SRS does not deploy, the steering pad, front passenger airbag assembly, driver side knee airbag assembly, front seat side airbag assembly, curtain shield airbag assembly and front seat outer belt assembly should be inspected before further use of the vehicle.
(See page RS-352 for steering pad)
(See page RS-399 for front passenger airbag assembly)
(See page RS-371 for driver side knee airbag assembly)
(See page RS-432 for front seat side airbag assembly)
(See page RS-426 for curtain shield airbag assembly)
(See page SB-23 for front seat outer belt assembly)

(4) Never use SRS parts from another vehicle. When replacing parts, use new parts.

(5) Before repairs, remove the airbag sensor assemblies if impacts are likely to be applied to the sensor during repairs.

(6) Never disassemble and attempt to repair all airbag sensor assemblies and all airbag assemblies.
1. Steering pad
2. Front passenger airbag assembly
3. Driver side knee airbag assembly
4. Front seat side airbag assembly
5. Curtain shield airbag assembly
6. Front seat outer belt assembly

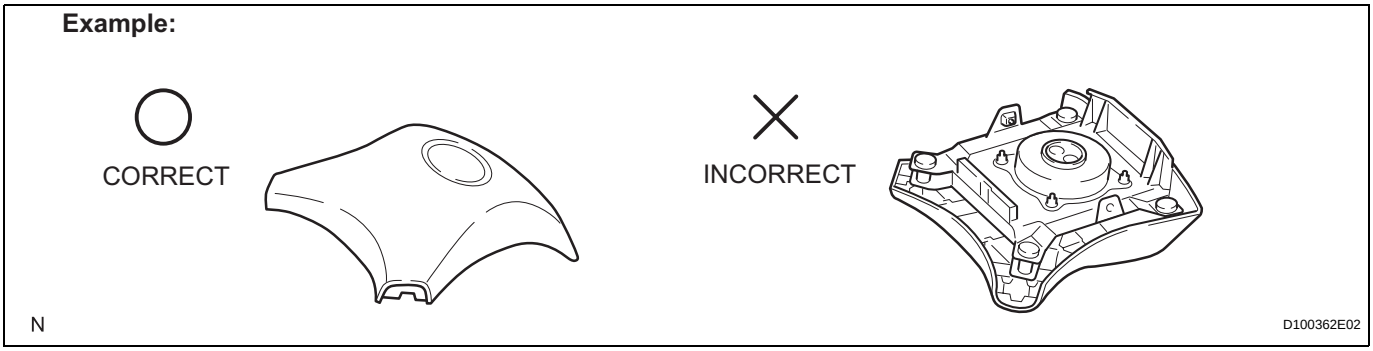
(7) Replace the airbag sensor assemblies and the airbag assemblies if: 1) damage has occurred from being dropped, or 2) cracks, dents or other defects in the case, bracket or connector are present.
(8) Do not directly expose the airbag sensor assembly or airbag assembly to hot air or flames.
(9) Use a voltmeter/ohmmeter with high impedance (minimum=10 kΩ) for troubleshooting electrical circuits.
(10) Information labels are attached to the SRS components. Follow the instructions on the labels.
(11) After work on the SRS is completed, check the SRS warning light.



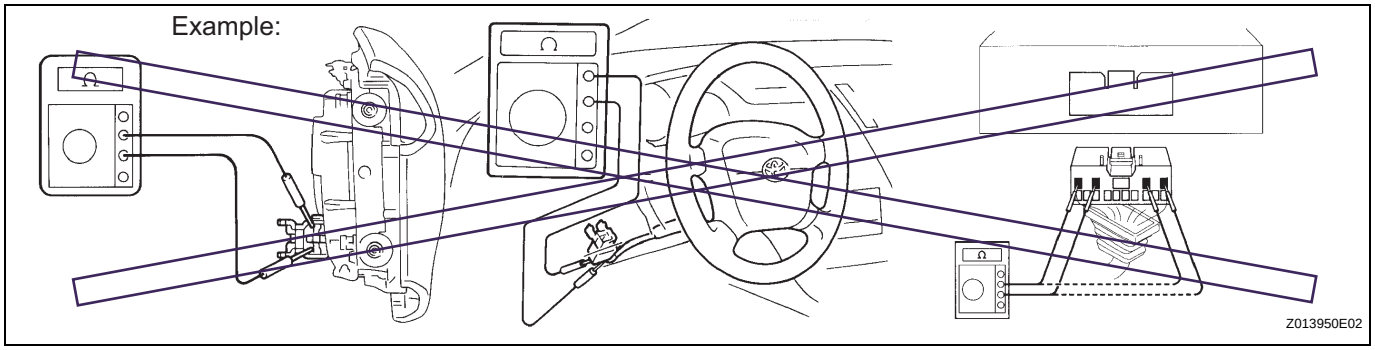
(b) SPIRAL CABLE
(1) The steering wheel must be fitted correctly to the steering column with the spiral cable at the neutral position, as cable disconnection and other problems may occur. Refer to the information about correct installation of the steering wheel (See page RS-366).

(c) STEERING PAD
(1) Always place a removed or new steering pad surface upward as shown in the illustration. Placing the horn button with the pad surface facing down could cause a serious accident if the airbag inflates. Also, do not place anything on top of the horn button.

Example:



(2) Never measure the resistance of the airbag squib. This may cause the airbag to inflate, which could cause serious injury.



(3) Grease or detergents of any kind should not be applied to the horn button.

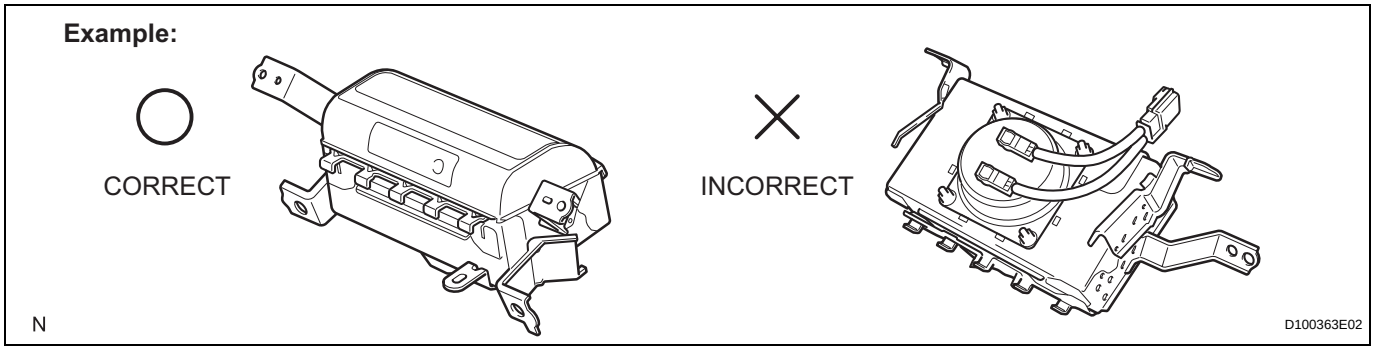
(4) Store the horn button assembly in an area where the ambient temperature is below 93°C (200°F), the humidity is not high and there is no electrical noise.

(5) When using electric welding anywhere on the vehicle, disconnect the airbag ECU connectors (4 pins). These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to current entering the squib wiring.

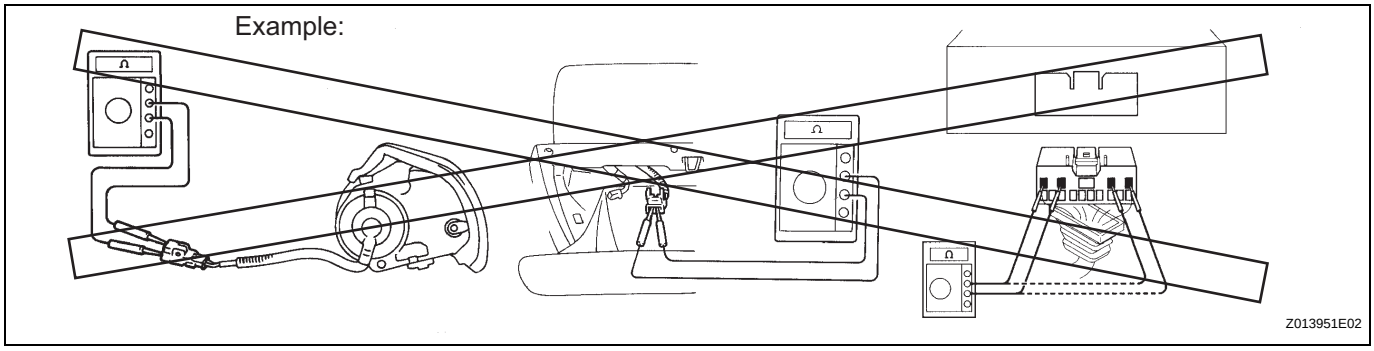
(6) When disposing of the vehicle or the horn button assembly by itself, the airbag should be deployed using SST before disposal (See page RS-352). Activate the airbag in a safe place away from electrical noise.

(d) FRONT PASSENGER AIRBAG ASSEMBLY

(1) Always place a removed or new front passenger airbag assembly with the pad surface facing upward as shown in the illustration. Placing the airbag assembly with the airbag inflation direction facing down could cause a serious accident if the airbag inflates.

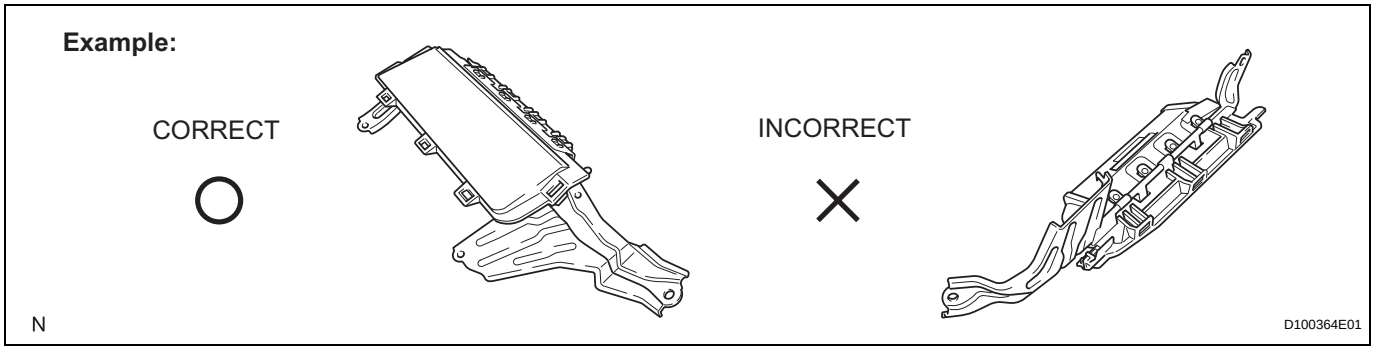


(2) Never measure the resistance of the airbag squib. This may cause the airbag to inflate, which could cause serious injury.

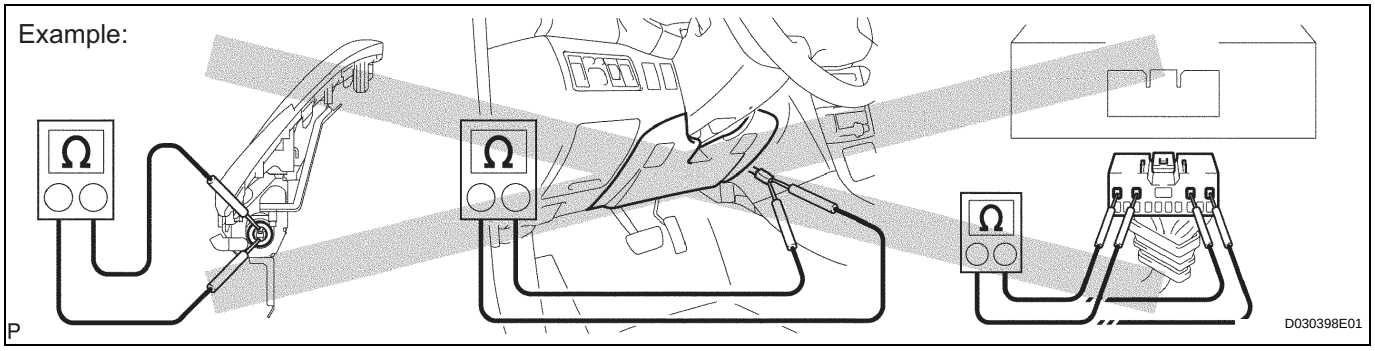


(3) Grease or detergents of any kind should not be applied to the front passenger airbag assembly.
(4) Store the airbag assembly in an area where the ambient temperature is below 93°C (200°F), the humidity is not high and there is no electrical noise.
(5) When using electric welding anywhere on the vehicle, disconnect the airbag ECU connectors (4 pins). These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to current entering the squib wiring.
(6) When disposing of the vehicle or the airbag assembly unit by itself, the airbag should be deployed using SST before disposal (See page RS-399). Activate the airbag in a safe place away from electrical noise.

(e) DRIVER SIDE KNEE AIRBAG ASSEMBLY
(1) Always place a removed or new knee airbag assembly with the airbag inflation direction facing upward. Placing the airbag assembly with the airbag inflation direction facing downward could cause a serious accident if the airbag inflates.

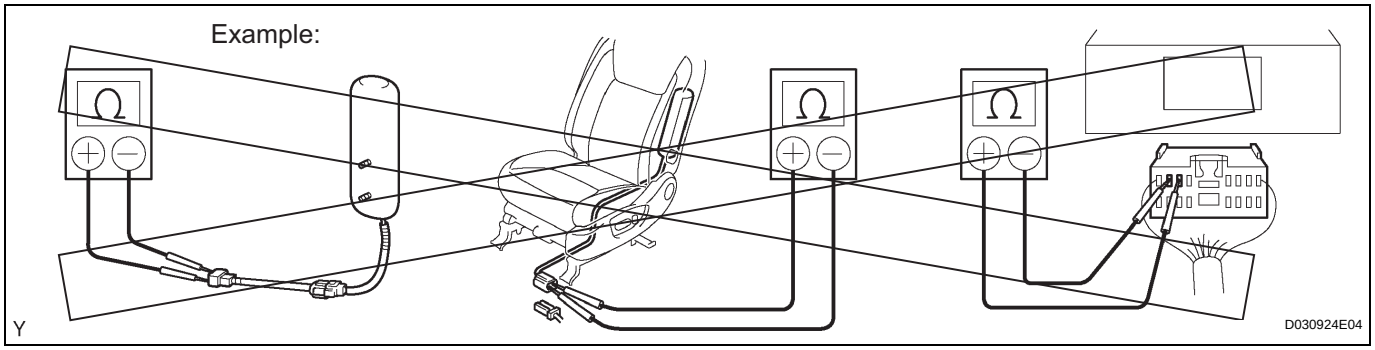


(2) Never measure the resistance of the airbag squib. This may cause the airbag to inflate, which could cause serious injury.



(3) Grease or detergents of any kind should not be applied to the knee airbag assembly.
(4) Store the knee airbag assembly where the ambient temperature is below 93°C (200°F), the humidity is not high and there is no electrical noise.
(5) When using electric welding anywhere on the vehicle, disconnect the airbag ECU connectors (2 pins). These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to current entering the squib wiring.
(6) When disposing of a vehicle or knee airbag assembly unit by itself, the airbag should be inflated using SST before disposal (See page RS-371). Activate the airbag in a safe place away from electrical noise.

(f) FRONT SEAT SIDE AIRBAG ASSEMBLY
(1) Always place a removed or new front seat side airbag assembly with the airbag inflation direction facing up.
(2) Never measure the resistance of the airbag squib. This may cause the airbag to inflate, which could cause serious injury.



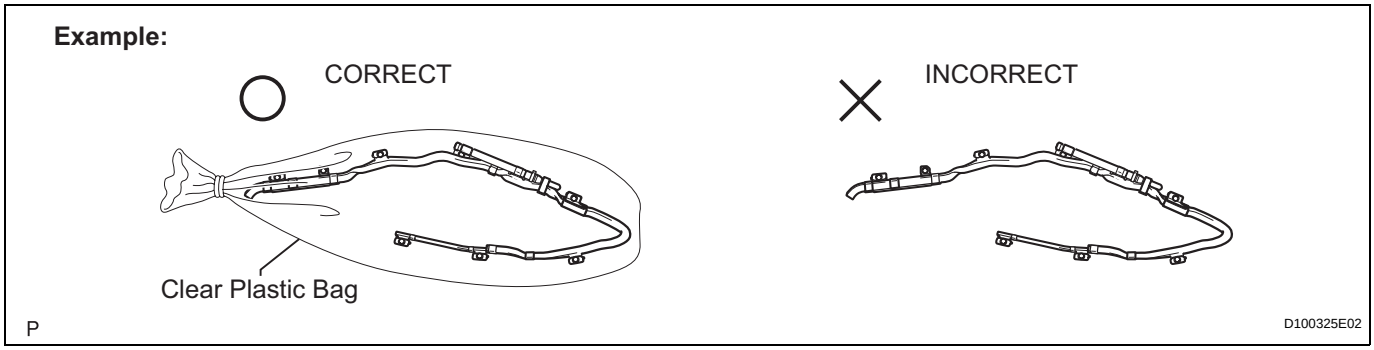
(3) Grease or detergents of any kind should not be applied to the front seat side airbag assembly.
(4) Store the airbag assembly in an area where the ambient temperature is below 93°C (200°F), the humidity is not high and there is no electrical noise.

(5) When using electric welding anywhere on the vehicle, disconnect the airbag ECU connectors (2 pins). These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to current entering the squib wiring.

(6) When disposing of a vehicle or the airbag assembly unit by itself, the airbag should be deployed using SST before disposal (See page RS-432). Activate the airbag in a safe place away from electrical noise.

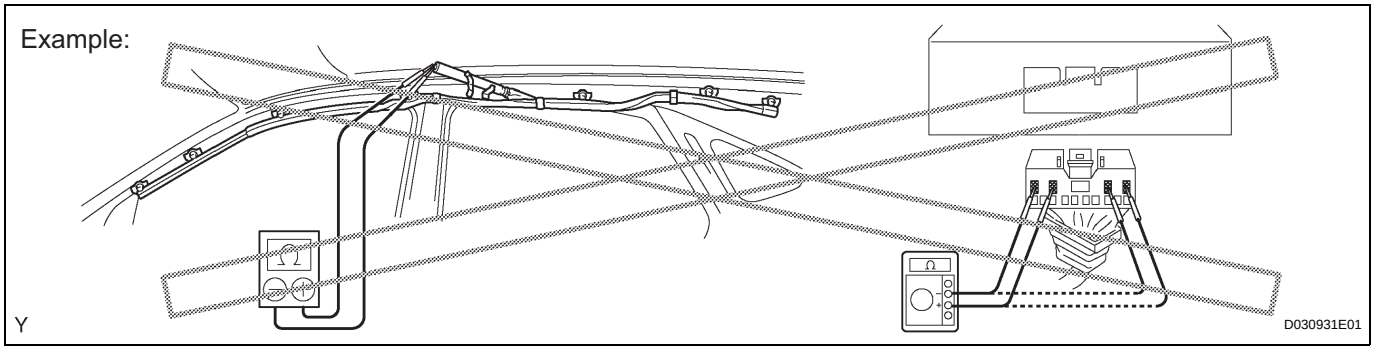
(g) CURTAIN SHIELD AIRBAG ASSEMBLY

(1) Always place a removed or new curtain shield airbag assembly in a clear plastic bag, and keep it in a safe place.



CAUTION:
The plastic bag is not reusable.
NOTICE:
Never disassemble the curtain shield airbag assembly.

(2) Never measure the resistance of the airbag squib. This may cause the airbag to inflate, which could cause serious injury.



(3) Grease or detergents of any kind should not be applied to the curtain shield airbag assembly.

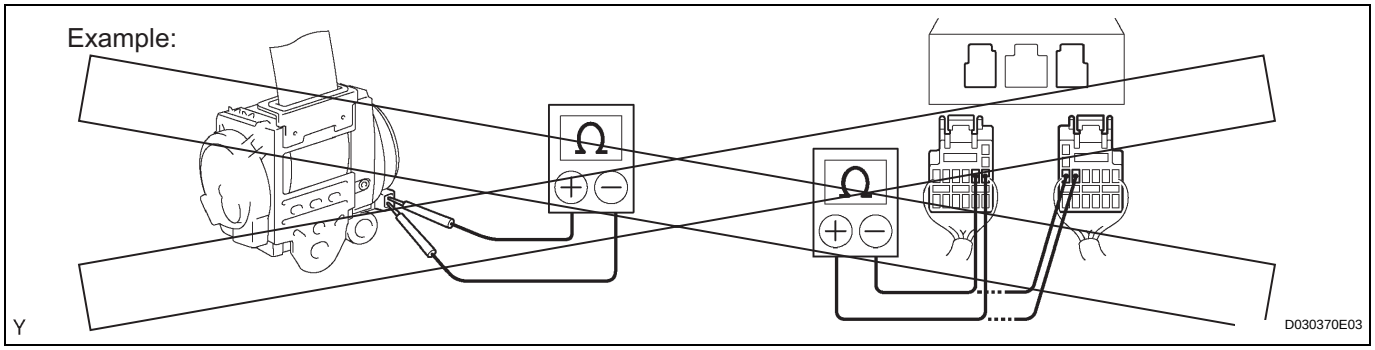
(4) Store the airbag assembly in an area where the ambient temperature is below 93°C (200°F), the humidity is not high and there is no electrical noise.

(5) When using electric welding anywhere on the vehicle, disconnect the airbag ECU connectors (4 pins). These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to current entering the squib wiring.

(6) When disposing of a vehicle or the airbag assembly unit by itself, the airbag should be deployed using SST before disposal (See page RS-426). Activate the airbag in a safe place away from electrical noise.

(h) FRONT SEAT OUTER BELT ASSEMBLY AND REAR SEAT OUTER BELT ASSEMBLY (SEAT BELT PRETENSIONER)

(1) Never measure the resistance of the seat outer belt. This may cause the pretensioner of the seat belt to activate, which could cause serious injury.



(2) Never disassemble the seat outer belt.

(3) Never install the seat outer belt on another vehicle.

(4) Store the seat outer belt in an area where the ambient temperature is below 80°C (176°F), the humidity is not high and there is no electrical noise.

(5) When using electric welding anywhere on the vehicle, disconnect the airbag ECU connectors (2 pins). These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to current entering the squib wiring.

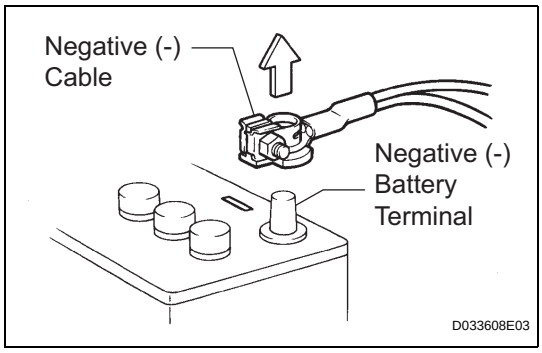
(6) When disposing of a vehicle or the seat outer belt unit by itself, the seat outer belt should be activated before disposal (See page SB-23). Activate the seat outer belt in a safe place away from electrical noise.

(7) As the seat outer belt is hot after being activated, allow some time for it to cool down sufficiently before disposal. Never apply water to cool down the seat outer belt.

(8) Grease, detergents, oil or water should not be applied to the front seat outer belt.

(i) AIRBAG SENSOR ASSEMBLY
(1) Never reuse an airbag sensor assembly that has been involved in a collision where the SRS has deployed.
(2) The connectors to the airbag sensor assembly should be connected or disconnected with the sensor placed on the floor. If the connectors are connected or disconnected while the airbag sensor assembly is not placed on the floor, the SRS may activate.
(3) Work must be started at least 90 seconds after the ignition switch is turned off and the cable is disconnected from the negative (-) battery terminal, even if only loosening the set bolts of the airbag sensor assembly.

(j) WIRE HARNESS AND CONNECTOR
(1) The SRS wire harness is integrated with the instrument panel wire harness assembly. All the connectors in the system are a standard yellow color. If the SRS wire harness becomes disconnected or the connector becomes broken, repair or replace it.



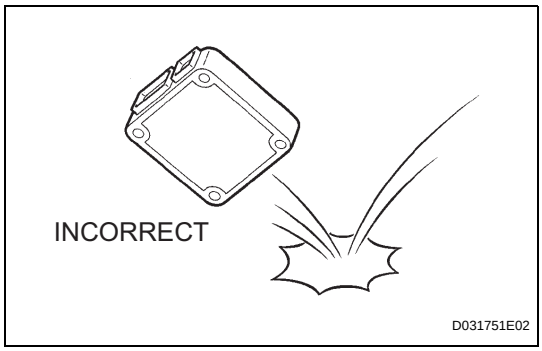
3. ELECTRONIC CONTROL

(a) REMOVAL AND INSTALLATION OF BATTERY TERMINAL

NOTICE:

Certain systems need to be initialized after reconnecting the cable to the negative (-) battery terminal.

(1) Before performing electronic work, disconnect the cable from the negative (-) battery terminal to prevent component and wire damage caused by accidental short circuits.
(2) When disconnecting the cable, turn the ignition switch and headlight dimmer switch off and loosen the cable nut completely. Perform these operations without twisting or prying the cable. Then disconnect the cable.
(3) Clock settings, radio settings, audio system memory, DTCs and other data are erased when the cable is disconnected from the negative (-) battery terminal. Write down any necessary data before disconnecting the cable.

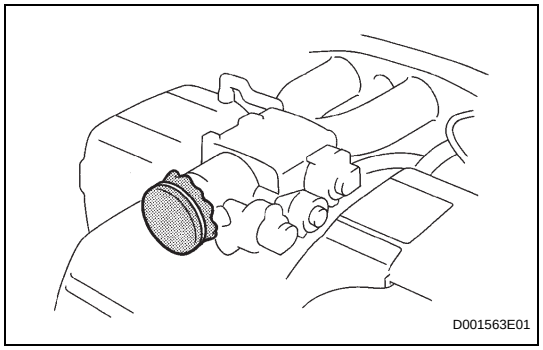


(b) HANDLING OF ELECTRONIC PARTS
(1) Do not open the cover or case of the ECU unless absolutely necessary. If the IC terminals are touched, the IC may be rendered inoperative by static electricity.
(2) Do not pull the wires when disconnecting electronic connectors. Pull the connector itself.
(3) Do not drop electronic components, such as sensors or relays. If they are dropped on a hard surface, they should be replaced.

(4) When cleaning the engine with steam, protect the electronic components, air filter and emission-related components from water.
(5) Never use an impact wrench to remove or install temperature switches or temperature sensors.
(6) When measuring the resistance between terminals of a wire connector, insert the tester probe carefully to prevent terminals from bending.

4. REMOVAL AND INSTALLATION OF FUEL CONTROL PARTS

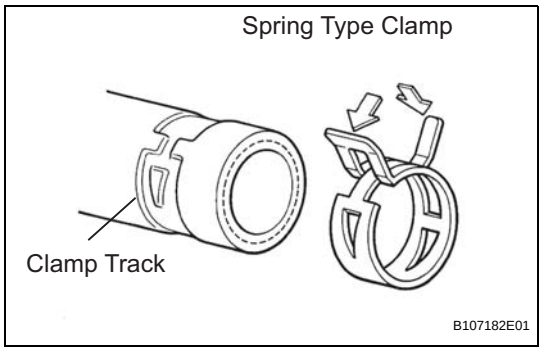
(a) PLACE FOR REMOVING AND INSTALLING FUEL SYSTEM PARTS
(1) Work in a location with good air ventilation that does not have welders, grinders, drills, electric motors, stoves, or any other ignition sources.
(2) Never work in a pit or near a pit as vaporized fuel will collect in those places.
(b) REMOVING AND INSTALLING FUEL SYSTEM PARTS
(1) Prepare a fire extinguisher before starting the operation.
(2) To prevent static electricity, install a ground wire to the fuel changer, vehicle and fuel tank, do not spray the surrounding area with water. Be careful when performing work in this area, as the work surface will become slippery. Do not clean up gasoline spills with water, as this may cause the gasoline to spread, and possibly create a fire hazard.
(3) Avoid using electric motors, working lights and other electric equipments that can cause sparks or high temperatures.
(4) Avoid using iron hammers as they may create sparks.
(5) Dispose of fuel-contaminated cloth separately using a fire resistant container.



D001563E01

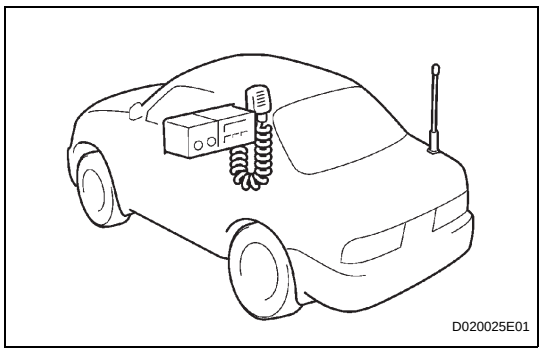
5. REMOVAL AND INSTALLATION OF ENGINE INTAKE PARTS

(a) If any metal particles enter inlet system parts, this may damage the engine.
(b) When removing and installing inlet system parts, cover the openings of the removed parts and engine openings. Use gummed tape or other suitable materials.
(c) When installing inlet system parts, check that no metal particles have entered the engine or the installed parts.



6. HANDLING OF HOSE CLAMPS

(a) Before removing the hose, check the clamp position so that it can be reinstalled in the same position.
(b) Replace any deformed or dented clamps with new ones.
(c) When reusing a hose, attach the clamp on the clamp track portion of the hose.
(d) For a spring type clamp, you may want to spread the tabs slightly after installation by pushing in the direction of the arrows as shown in the illustration.



7. FOR VEHICLES EQUIPPED WITH MOBILE COMMUNICATION SYSTEMS

(a) Install the antenna far away from the ECU and sensors of the vehicle electronic systems as possible.
(b) Install an antenna feeder at least 20 cm (7.87 in.) away from the ECU and sensors of the vehicle electronic systems. For details about ECU and sensors locations, refer to the section on the applicable components.
(c) Keep the antenna and feeder separate from other wirings as much as possible. This will prevent signals sent from the communication equipment from affecting vehicle equipment and vice-versa.
(d) Check that the antenna and feeder are correctly adjusted.
(e) Do not install any high-powered mobile communication system.

8. FOR VEHICLES EQUIPPED WITH TRACTION CONTROL (TRAC) AND VEHICLE STABILITY CONTROL (VSC) SYSTEMS

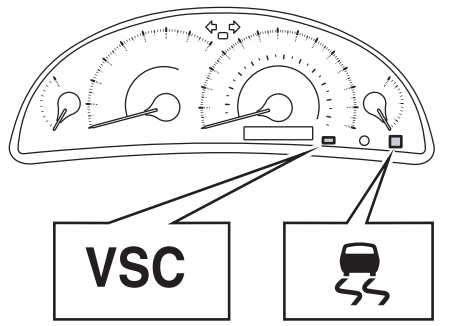
When testing with a 2-wheel drum tester such as a speedometer tester, a combination tester for the speedometer and brake, a chassis dynamometer, or when jacking up the front wheels and turning the wheels, perform the following procedure to enter the inspection mode and stop the TRAC and VSC systems.

(a) Activating inspection mode (Not using the intelligent tester)
HINT:
- Perform procedures "D" to "J" within 30 seconds.
- Perform procedures "G" and "H" within 15 seconds each.

(1) Ensure that the ignition switch is off and the engine is stopped (Procedure "A").
(2) Make sure that the shift lever is in the P position (Procedure "B").
(3) Start the engine (Procedure "C").
(4) Parking Brake Lever Type:
Apply the parking brake by pulling the parking brake lever (Procedure "D").

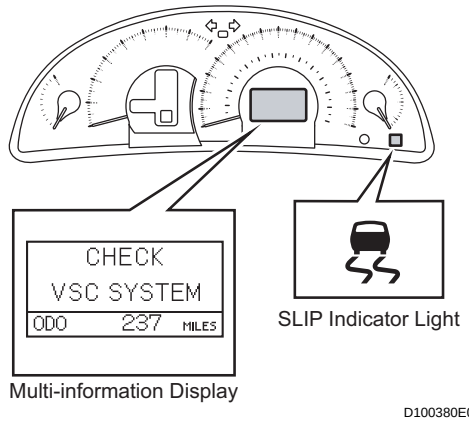
(5) Parking Brake Pedal Type:
Apply the parking brake by depressing the parking brake pedal (Procedure "E").
(6) Depress and release the brake pedal twice (Procedure "F").
(7) While holding the brake pedal down, release and apply the parking brake twice (Procedure "G").
(8) With the parking brake applied, depress and release the brake pedal twice (Procedure "H").
(9) without Multi-information Display:
Check that the VSC warning light and SLIP indicator light come on (Procedure "I").
HINT:
- If the VSC warning light and SLIP indicator light do not come on in procedure "I", repeat the procedures from "A" to "I".
- Turning the ignition switch off ends inspection mode.

without Multi-information Display:



H D100379E01

with Multi-information Display:

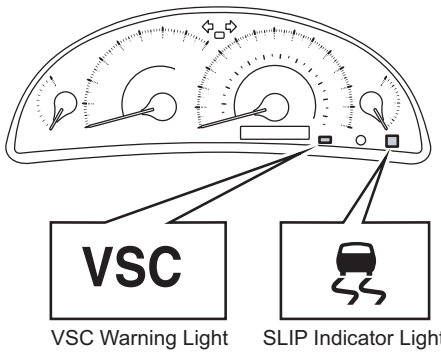


H D100380E02

(10) with Multi-information Display:
Check that the "CHECK VSC SYSTEM" message appears on the multi-information display and SLIP indicator light come on (Procedure "J").
HINT:
- If the "CHECK VSC SYSTEM" message appears on the multi-information display and SLIP indicator light do not come on in procedure "J", repeat the procedures from "A" to "J".
- Turning the ignition switch off ends inspection mode.

(b) Activating inspection mode (Using the intelligent tester)
(1) Ensure that the ignition switch is off and the engine is stopped (Procedure "A").
(2) Make sure that the shift lever is in the P position (Procedure "B").
(3) Connect the intelligent tester to the DLC3 (Procedure "C").
(4) Start the engine (Procedure "D").
(5) Turn the intelligent tester main switch on (Procedure "E").
(6) Select the following menu items: ABS/ INSPECTION MODE (Procedure "F").

without Multi-information Display:

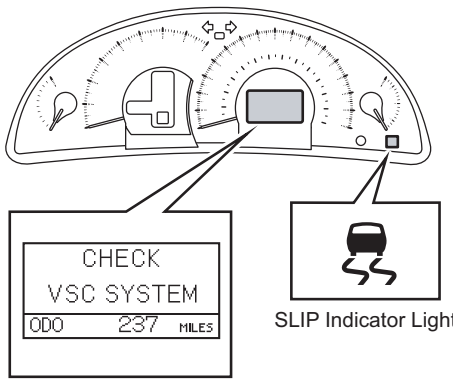


H

D100379E01

(7) without Multi-information Display:
Check that the VSC warning light and SLIP indicator light come on (Procedure "G").
HINT:
- If the VSC warning light and SLIP indicator light do not come on in procedure "G", repeat the procedures from "A" to "G".
- Turning the ignition switch off ends inspection mode.

with Multi-information Display:



H

D100380E02

(8) with Multi-information Display:
Check that the "CHECK VSC SYSTEM" message appears on the multi-information display and SLIP indicator light come on (Procedure "H").
HINT:
- If the "CHECK VSC SYSTEM" message appears on the multi-information display and SLIP indicator light do not come on in procedure "H", repeat the procedures from "A" to "H".
- Turning the ignition switch off ends inspection mode.

9. FOR VEHICLES EQUIPPED WITH CATALYTIC CONVERTER

CAUTION:

If a large amount of unburned gasoline or gasoline vapors flow into the converter, it may cause overheating and create a fire hazard. To prevent this, observe the following precautions.

(a) Use only unleaded gasoline.
(b) Avoid idling the engine for more than 20 minutes.
(c) Avoid performing unnecessary spark jump tests.
  (1) Perform a spark jump test only when absolutely necessary. Perform this test as rapidly as possible.
  (2) While testing, never race the engine.
(d) Avoid a prolonged engine compression measurement. Engine compression measurements must be performed as rapidly as possible.
(e) Do not run the engine when the fuel tank is nearly empty. This may cause the engine to misfire and create an extra load on the converter.

VEHICLE LIFT AND SUPPORT LOCATIONS

1. NOTICE ABOUT VEHICLE CONDITION WHEN JACKING UP

(a) As a rule, the vehicle must be unloaded when jacking up. Never jack up or lift up the vehicle loaded with things of heavy weight.

(b) When removing any parts of heavy weight like the engine and transaxle, the center of gravity of the vehicle moves. Place a balance weight so as to keep it from rolling, or hold the jacking support location using the mission jack.

2. NOTICE FOR USING 4 POST LIFT

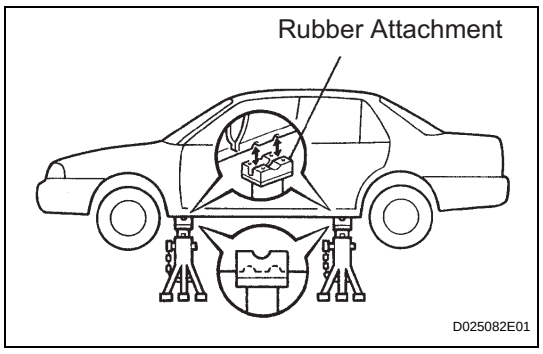
(a) Follow the instruction manual for a safety operation.

(b) Do not damage tires or wheels with a free wheel beam.

(c) Using a wheel stopper, fix the vehicle.

3. NOTICE FOR USING JACK AND SAFETY STAND

(a) Work in the flat place using a wheel stopper at all times.



(b) Use a safety stand with a rubber attachment, as shown in the illustration.

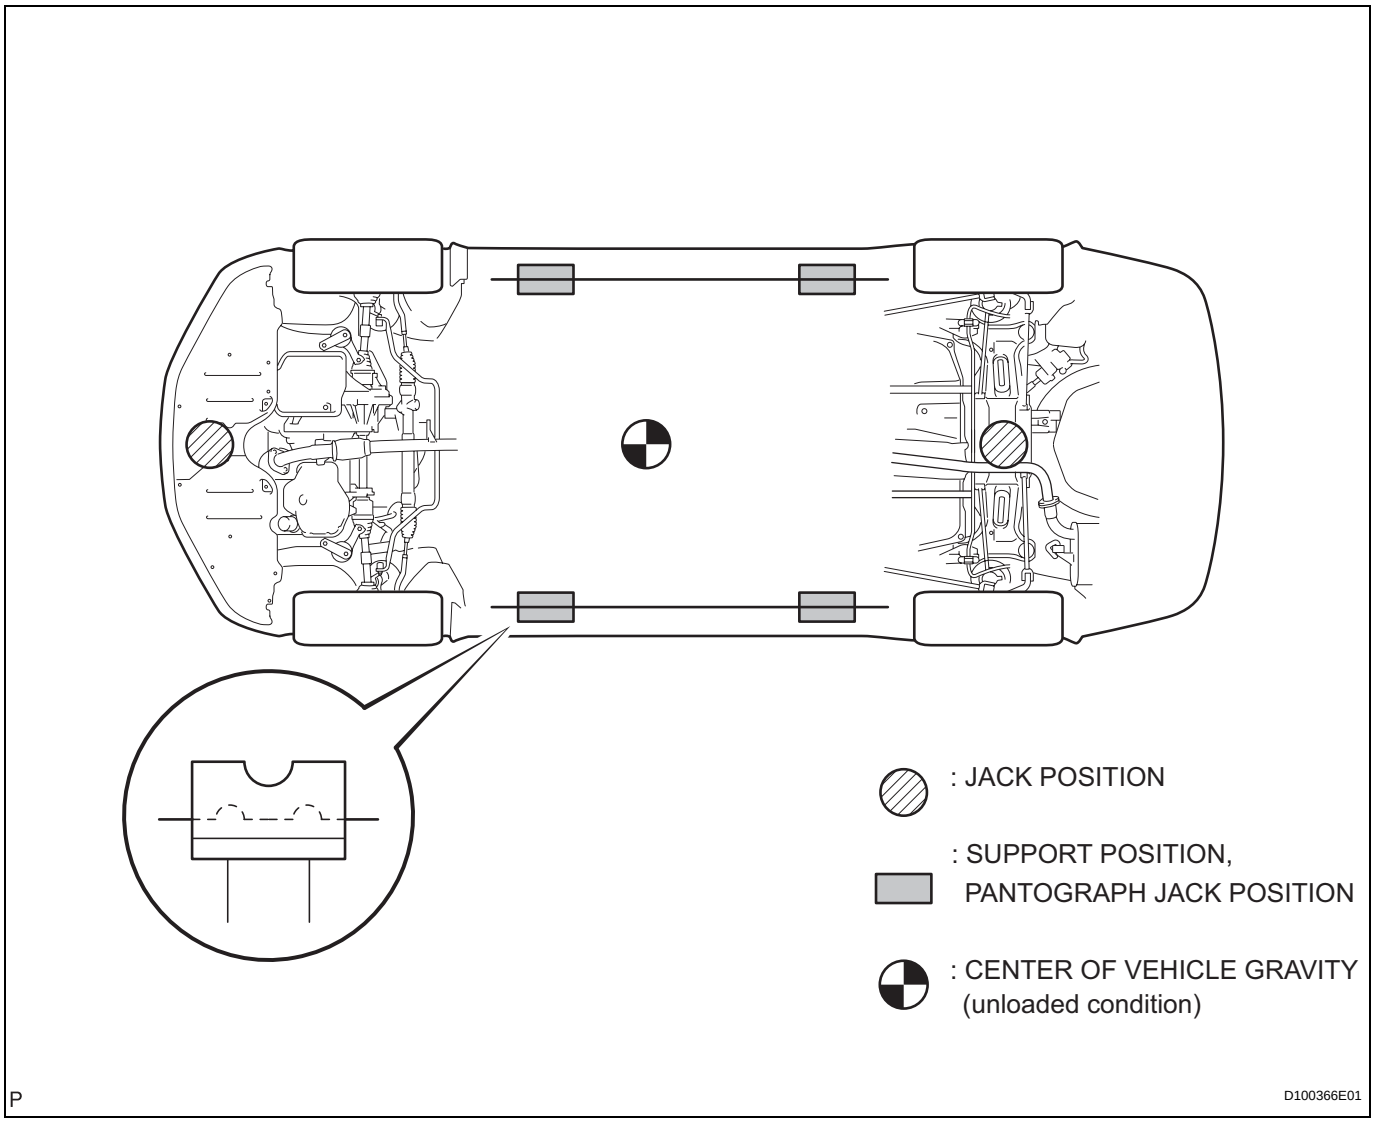
(c) Support the specified location with a jack and safety stand accurately.

(d) When jacking up the front wheels, release the parking brake and place wheel stoppers only behind the rear wheels. When jacking up the rear wheels, place wheel stoppers only in front of the front wheels.

(e) Do not work or leave the vehicle supported only by a jack. Be sure to support the vehicle with a safety stand.

(f) When jacking up only the front wheels or only the rear wheels, place wheel stoppers to both sides of the wheels that contact ground.

(g) When jacking down the vehicle with its front wheels jacked up, release the parking brake and place wheel stoppers only in front of the rear wheels. When jacking down the vehicle with its rear wheels jacked up, place wheel stoppers only behind the front wheels.



4. NOTICE FOR USING SWING ARM TYPE LIFT

(a) Follow the instruction manual of the lift for a safety operation.
(b) Use a cradle with a rubber attachment, as shown in the illustration.
(c) Set in the vehicle so as to make its center of gravity as close as possible to the center of the lift.
(d) Place the vehicle horizontally by adjusting the height of the cradle, and match the groove of the cradle and the safety stand support location accurately.
(e) Be sure to lock the swing arm during the operation.
(f) Lift the vehicle up until the tires float, and shake the vehicle to make sure that the vehicle is stable.

5. NOTICE FOR USING PLATE TYPE LIFT

(a) Follow the instruction manual of the lift for a safety operation.

(b) Use a plate lift attachment.

(c) Be sure to set the vehicle to the specified position.

Right and left set position	• Place the vehicle over the center of the lift.
Front and rear set position	• Align the cushion gum ends of the plate with the attachment lower ends (A and C). • Align the attachment upper end (B) with the rocker flange front side notch.

(d) Lift the vehicle up until the tires float a bit, and shake the vehicle to make sure that the vehicle is stable.

CUSTOMIZE PARAMETERS

1. AIR CONDITIONING SYSTEM

HINT:

The following items can be customized.

NOTICE:

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Be sure to make a note of the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

AIR CONDITIONER (AUTO A/C)

DISPLAY (ITEM)	DEFAULT	CONTENTS	SETTING
SET TEMP SHIFT (Set Temperature Shift)	NORMAL	To shift the temperature against the displayed temperature	+2 C / +1 C / NORMAL / -1 C / -2 C
AIR INLET MODE (Air Inlet Mode)	AUTO	In case of turning the A/C ON when you desire to make the compartment cool down quickly, this is the function to change the mode automatically to RECIRCULATION mode	MANUAL / AUTO
COMPRESSOR MODE (Compressor Mode)	AUTO	Function to turn the A/C ON automatically by pressing the AUTO button when the blower is ON and the A/C is OFF	MANUAL / AUTO
COMPRS / DEF OPER (Compressor / Air Inlet DEF Operation)	LINK	Function to turn the A/C ON automatically linked with the FRONT DEF button when the A/C is OFF	NORMAL / LINK
EVAP CTRL (Evaporator Control)	AUTO	Function to set the evaporator control to the AUTOMATIC position (AUTO) to save power, or to the coldest position (MANUAL) to dehumidify the air and to prevent the windows from fogging up	MANUAL / AUTO
FOOT / DEF MODE (Foot / DEF auto mode)	ON	Function to turn the airflow from FOOT / DEF ON automatically when AUTO MODE is ON	OFF / ON
AUTO BLOW UP (Foot / DEF automatic blower up function)	ON	Function to change the blower level automatically when the defroster is ON	OFF / ON
AMBIENT TMP SFT (Ambient Temperature Shift)	NORMAL	Function to shift the ambient temperature against the displayed ambient temperature	+3 C / +2 C / +1 C / NORMAL / -1 C / -2 C / -3 C

2. THEFT DETERRENT SYSTEM (w/o Smart Key System)

HINT:

The following items can be customized.

NOTICE:

- **After confirming whether the items requested by the customer are applicable or not for customization, perform customizing operations.**
- **Be sure to record the current settings before customization.**
- **When troubleshooting, make sure that the item in question is not set to "OFF" as a result of customization (Example: For the system, "the wireless function does not operate", first check that the wireless function is not set to "OFF", then perform troubleshooting).**

THEFT DETERRENT SYSTEM

DISPLAY (ITEM)	DEFAULT	CONTENTS	SETTING
PASSIVE MODE (Passive Arming Mode)	OFF	PASSIVE MODE is a function that switches theft deterrent system from arming preparation state to armed state 30 seconds after key is not in the key cylinder and all doors, engine hood and luggage compartment door are closed, even if doors are not locked by wireless or door key lock operation In PASSIVE MODE, if you do not perform following operations within 14 seconds after door is opened during armed state, theft deterrent system will judge that condition as a theft and switch to alarm sounding state – Unlock any door by key or wireless operation – Turn the ignition switch ON – Open luggage compartment door by key or wireless operation	ON/OFF
WARN BY HORN (Warning by horn)	ON	Function that makes vehicle horn and theft deterrent horn be able to be used as a warning device	ON/OFF
ENTRY DELAY (Entry delay time)	14 s	Function that changes entry delay time (time before warning starts) for PASSIVE MODE	0 s/14 s/30 s

3. THEFT DETERRENT SYSTEM (w/ Smart Key System)

HINT:

The following items can be customized.

NOTICE:

- **After confirming whether the items requested by the customer are applicable or not for customization, perform customizing operations.**
- **Be sure to record the current settings before customization.**
- **When troubleshooting, make sure that the item in question is not set to "OFF" as a result of customization (Example: For the system, "the wireless function does not operate", first check that the wireless function is not set to "OFF", then perform troubleshooting).**

THEFT DETERRENT SYSTEM

DISPLAY (ITEM)	DEFAULT	CONTENTS	SETTING
PASSIVE MODE (Passive Arming Mode)	OFF	PASSIVE MODE is a function that switches theft deterrent system from arming preparation state to armed state 30 seconds after key is not in the actuation area and all doors, engine hood and luggage compartment door are closed, even if doors are not locked by wireless or door key lock operation In PASSIVE MODE, if you do not perform following operations within 14 seconds after door is opened during armed state, theft deterrent system will judge that condition as a theft and switch to alarm sounding state – Unlock any door by key or wireless operation – Turn the engine switch on (IG) – Open luggage compartment door by key or wireless operation	ON/OFF
WARN BY HORN (Warning by horn)	ON	Function that makes vehicle horn and theft deterrent horn be able to be used as a warning device	ON/OFF
ENTRY DELAY (Entry delay time)	14 s	Function that changes entry delay time (time before warning starts) for PASSIVE MODE	0 s/14 s/30 s

4. LIGHTING SYSTEM

HINT:

The followings are the possible items to be customized.

NOTICE:

- **Before attempting to customize vehicle settings, confirm whether it is possible to make the change that the customer has requested.**
- **Be sure to record the current value before customizing.**
- **In case of performing the troubleshooting, pay attention because there is a possibility that the function has been disabled by customizing. (Example: In case of the symptom in which "The wireless operation does not function", check that the wireless operation has not been disabled by customizing, then perform the troubleshooting.)**

ILLUMINATED ENTRY:

Display	Default	Contents	Setting
LIGHTING TIME	15 s	Changes the lighting time of the interior light and ignition key cylinder light.	7.5 s / 15 s / 30 s
I/L ON / UNLOCK	ON	Lights up the interior light and ignition key cylinder light when a door is unlocked.	ON / OFF
I/L ON / ACC OFF	ON	Lights up the interior light and ignition key cylinder light when the ignition switch is turned from on (ACC) to off	ON / OFF

LIGHT CONTROL:

Display	Default	Contents	Setting
LIGHT OFF DELAY	30 s	Keeps the headlights on for a certain period of time after turning the ignition switch off and closing all the doors with the headlights on.	OFF / 30 s / 60 s / 90 s
SENSITIVITY	NORMAL	Adjusts the sensitivity of the automatic light control system. *1	LIGHT 2 / LIGHT 1 / NORMAL / DARK 1 / DARK 2
DISP EX ON SEN	NORMAL	Changes the ambient brightness level required to dim the clock display illumination. *1	LIGHT 2 / LIGHT 1 / NORMAL / DARK 1 / DARK 2
DISP EX OFF SEN	NORMAL	Changes the ambient brightness level required to cancel the dimming of the clock display illumination.	LIGHT 2 / LIGHT 1 / NORMAL / DARK 1 / DARK 2

HINT:
Sensitivity adjustment can hardly be confirmed. Check by driving the customer's vehicle.

Illustration *1

Ambient Brightness Level	Dark ◄——————————► Bright				
Setting	DARK2	DARK1	NORMAL	LIGHT1	LIGHT2

5. POWER DOOR LOCK CONTROL SYSTEM

CUSTOMIZING FUNCTION WITH INTELLIGENT TESTER

HINT:
The following items can be customized.

NOTICE:

- **Before attempting to customize vehicle settings, confirm whether it is possible to make the change that the customer has requested.**
- **Be sure to record the current settings before customizing.**
- **When troubleshooting, make sure that the item in question has not been disabled using the customizing function.**

DOOR LOCK:

Display (Item)	Default	Contents	Setting
UNLOCK/PARK (Unlock w/ engine switch on (IG), shift P, speed 0 km/h (0 mph))	A/T: ON M/T: OFF (Cannot be changed)	Function that unlocks doors when the shift lever is moved to the P position from any other position while the ignition switch is on (IG)	ON/OFF
ALL UNLK/OPN-CL (All unlock w/ D door open-close)	A/T: OFF M/T: ON	Function that unlocks all other doors when opening driver side door within 10 seconds after turning the ignition switch off from on (IG)	ON/OFF
UNLK/KEY TWICE (Unlock w/ 2 times D key operation)	ON	• Function that unlocks only the driver side door when the driver side door key cylinder is turned to unlock once and unlocks all the doors when it is turned to unlock twice • In the OFF setting, turning it once unlocks all doors	ON/OFF
AUTO LOCK/SHIFT (Auto lock/shift not P)	A/T: ON M/T: OFF (Cannot be changed)	Function that locks doors when the shift lever is moved from the P position to any other position	ON/OFF
AUTO LOCK	OFF	Function that locks doors when vehicle reaches a vehicle speed 20 km/h (13 mph)	ON/OFF

WIRELESS D LOCK:

Display (Item)	Default	Contents	Setting
AUTO LOCK DELAY	60s	Function that selects AUTO LOCK time (30 sec. or 60 sec.)	30s/60s

6. WIRELESS DOOR LOCK CONTROL SYSTEM (w/ Smart Key System)

HINT:

The following items can be customized.

NOTICE:

- **When the customer requests a change in a function, first make sure that customization of the function(s) is possible.**
- **Be sure to record the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is not set to OFF.**

WIRELESS DOOR LOCK CONTROL SYSTEM

Display (item)	Default	Function	Setting
WIRELESS OPER (Wireless door lock control function)	ON	Function that turns wireless door lock function ON/OFF	ON/OFF

Display (item)	Default	Function	Setting
HAZARD ANS BACK (Hazard answer-back for wireless door lock control)	ON	• When the doors are locked by wireless operation, the hazard warning lights flash once. • When the doors are unlocked by wireless operation, the hazard warning lights flash twice.	ON/OFF
OPEN DOOR WARN (Door ajar warning)	ON	The buzzer sounds when LOCK is pressed when any of the doors are ajar.	ON/OFF
AUTO LOCK DELAY (Auto lock time)	60 s	This function regulates the interval between unlocking and automatic relocking of doors.	30 s/60 s
UNLOCK /2OPER (Wireless unlock operated twice)	ON	This function unlocks the driver's door when the UNLOCK switch is pressed once, and unlocks all doors when pressed twice within 3 seconds. If set to OFF, pressing UNLOCK once unlocks all doors.	ON/OFF
ALARM FUNCTION (Panic function)	ON	This function operates the theft deterrent system when PANIC is pressed and held for 0.8 seconds.	ON/OFF
WIRLS BUZZ RESP (Wireless buzzer answer-back)	ON	Wireless door lock buzzer response/ON or OFF	ON/OFF
TRUNK LID OPER (Wireless trunk opener function setting)	0.6 s PR ON	This function changes operation method of transmitter to open luggage compartment door. 1 TIME: Push 1 time 2 TIMES: Push 2 times 0.6 s PR: Push 0.6 seconds OFF: Does not operate	1 TIME/2 TIMES/0.6 s PR/ OFF

7. WIRELESS DOOR LOCK CONTROL SYSTEM (w/o Smart Key System)

HINT:

The following items can be customized.

NOTICE:

- **When the customer requests a change in a function, first make sure that customization of the function(s) is possible.**
- **Be sure to record the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is not set to OFF.**

WIRELESS DOOR LOCK CONTROL SYSTEM:

Display (item)	Default	Function	Setting
WIRELESS OPER (Wireless door lock control function)	ON	Function that turns wireless door lock function ON/OFF	ON/OFF
HAZARD ANS BACK (Hazard answer-back for wireless door lock control)	ON	• When the doors are locked by wireless operation, the hazard warning lights flash once. • When the doors are unlocked by wireless operation, the hazard warning lights flash twice.	ON/OFF
OPEN DOOR WARN (Door ajar warning)	ON	The buzzer sounds when LOCK is pressed when any of the doors are ajar.	ON/OFF
AUTO LOCK DELAY (Auto lock time)	60 s	This function regulates the interval between unlocking and automatic relocking of doors.	30 s/60 s

Display (item)	Default	Function	Setting
UNLOCK /2OPER (Wireless unlock operated twice)	ON	This function unlocks the driver's door when the UNLOCK switch is pressed once, and unlocks all doors when pressed twice within 3 seconds. If set to OFF, pressing UNLOCK once unlocks all doors.	ON/OFF
ALARM FUNCTION (Panic function)	ON	This function operates the theft deterrent system when PANIC is pressed and held for 0.8 seconds.	ON/OFF
WIRLS BUZZ RESP (Wireless buzzer answer-back)	ON	Wireless door lock buzzer response/ON or OFF	ON/OFF
TRUNK LID OPER (Wireless trunk opener function setting)	0.6 s ON	This function changes operation method of transmitter to open luggage compartment door. 1 TIME: Push 1 time 2 TIMES: Push 2 times 0.6 s PR: Push 0.6 seconds OFF: Does not operate	1 TIME/2 TIMES/0.6 s PR/ OFF

8. SMART KEY SYSTEM (Door Lock)

(a) CUSTOMIZING FUNCTION WITH INTELLIGENT TESTER

HINT:

The items in the table below can be customized.

NOTICE:

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Be sure to make a note of the current setting before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

HINT:

The following functions' default settings are ON.

Part of these functions can be customized.

SMART:

Display (Item)	Default	Contents	Setting
PARK WAIT TIME (Wait time to permit opening door after locking)	2.5s	Function that sets waiting time to permit opening door after door is locked with entry lock function.	0.5s / 1.5s / 2.5s / 5.0s
SMART UNLOCK	D_DOOR	Function that switches the entry unlock detection area.	ALL / D_DOOR
SMART IGNITION (SMART ignition available area)	ALL	Function to choose the available area for electrical key to start E/G and cancel the steering lock.	FRONT / ALL
SMART TRUNK (Luggage compartment opening operation)	ON	Function to open a luggage compartment when the driver has the electrical key and presses the luggage open button.	ON / OFF

WIRELESS DOOR LOCK:

Display (Item)	Default	Contents	Setting
ALARM FUNCTION (Panic function)	ON	Function to operate the theft deterrent system by keeping pressing the lock button of the transmitter for 2.5 seconds. If there is a panic button, press the panic button instead of the lock button.	ON / OFF

WARNING:

Display (Item)	Default	Contents	Setting
KEY LOW-BATT WRN	ON	Function to set a warning function for the time when a key battery becomes weak.	ON / OFF

(b) Entry Unlock Mode Switching Function

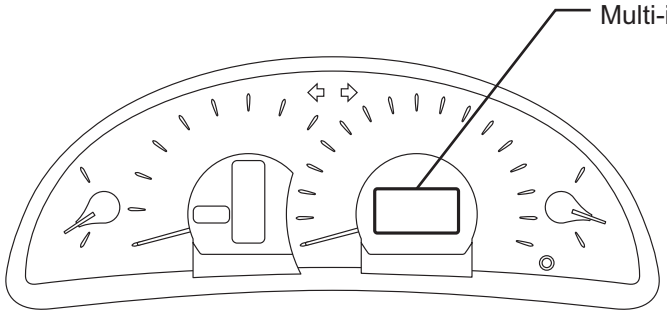
(1) To change the vehicle to entry unlock mode switching function, make sure the vehicle power is off and simultaneously press and hold the electrical key's LOCK switch and another electrical key switch for 4.5 seconds.
When the switches are pressed and held for 4.5seconds, the entry door unlock mode changes in the following order: driver door mode, all door mode.
NOTICE:
After pressing and holding the switches for 4.5 seconds, wait 5 seconds before performing the same procedure again.
- Driver door unlock mode:
  When the driver door's touch sensor is touched, only the driver door unlocks. When another touch sensor is touched, all doors unlock.
- All door unlock mode:
  When the touch sensor is touched, all doors unlock.

(2) The certification ECU receives this signal from the entry door control receiver and changes the smart key system to the entry unlock mode.

(3) The certification ECU sounds the buzzers of the wireless door lock buzzer and combination meter to inform the user that the mode has been switched.

IN

Mode	Wireless Door Lock Buzzer	Combination Meter		
		Multi-information Display		Buzzer
Driver Door (Default)	ON OFF Sounds 3 times	 Displayed for 5 sec.	Passenger, rear LH and RH door “open” indication	Sounds once
All Doors (Customized)	ON OFF Sounds 2 times	 Displayed for 5 sec.	All door “open” indication	Sounds once



N

B137954E01

HINT:
The function only changes the entry unlock mode of the smart key system. It does not switch the unlocking of the wireless door lock control.

(c) Electrical Key Cancel
The electrical key cancel operation disables the following functions:
- Entry Ignition
- Entry Unlock/Lock
- Entry Luggage Compartment Open
- Electrical Key Lock-in Prevention
- Warning

- Memory Call

(1) The operation procedures are as follows:
Precondition:
Engine switch off, driver side door closed and unlocked.
1. Unlock the driver side door once with the UNLOCK switch of the electrical key.
2. Open the driver door within 5 seconds.
3. Unlock the driver side door twice with the UNLOCK switch of the electrical key within 5 seconds.
4. Repeat open → close twice for the driver door within 30 seconds, and open again.
(Driver door: Open → Close → Open → Close → Open)
5. Unlock the driver side door twice with the UNLOCK switch of the electrical key within 5 seconds.
6. Repeat open → close once for the driver door within 30 seconds, and open again.
(Driver door: Open → Close → Open)
7. Close the driver door within 5 seconds.
When electrical key cancel is activated, the wireless door lock buzzer sounds twice.
To return to the original condition, perform the procedures again. When the original condition is returned, the wireless door lock buzzer sounds once.

9. KEY REMINDER WARNING SYSTEM

PARAMETERS (USING INTELLIGENT TESTER)
HINT:
The following items can be customized.
NOTICE:
- **Be sure to record current values before customizing.**
- **When performing troubleshooting, be aware that the functions may be set to OFF by customizing. (Example: In case of the symptom in which "The wireless operation does not function", check that the wireless operation is not set to OFF by customizing, then perform the troubleshooting.)**

METER:

Display (Item)	Default	Contents	Setting
KEY REMND VOLUM	LARGE	Function to change volume of the key reminder warning buzzer.	LARGE/MEDIUM/SMALL
KEY REMND SOUND	NORMAL	Function to change cycle of the key reminder warning buzzer.	FAST/NORMAL/SLOW

10. METER/GAUGE SYSTEM

COMBINATION METER ASSEMBLY
NOTICE:
Be sure to record the current value before customizing.

HINT:
The following items can be customized using intelligent tester.

METER:

Display (Item)	Default	Contents	Setting
KEY REMND VOLUM	LARGE	Function to change the volume of the key remind warning buzzer	LARGE, MEDIUM, SMALL
KEY REMND SOUND	NORMAL	Function to change the cycle of the key remind warning buzzer	FAST, NORMAL, SLOW
SEAT-BELT WARN	D/P ON	Function to change the setting of the seat belt buzzer.	D/P on, D ON, P on, D/P off

HINT:
This setting is only valid for the buzzer which sounds at the 5 km/h (3 mph) or more.

(a) SEAT BELT BUZZER ON/OFF SETTING (Procedure "A")
The seat belt buzzer ON/OFF setting, which is a setting of the buzzer function of the combination meter, can disable the driver and front passenger side seat belt buzzers.

NOTICE:

- **These buzzers should be on for safe driving. Perform these procedures only if it is necessary to set the buzzer off (disabled).**
- **When either the battery cable or the combination meter connector is disconnected, these buzzers are set on (enabled).**
- **Odometer returns to 0 after starting this procedure, although it is not displayed.**

HINT:
"b-oFF" indicates that the buzzer is OFF. "b-on" indicates that the buzzer is ON. The seat belt buzzer ON/OFF setting will be finished (the odometer will display "ODO") if the ODO/TRIP switch is not operated for 10 seconds or more. In this case, perform step 11 to check that the buzzer ON/OFF setting is complete. If it is not complete, start from step 1 again.

(1) Driver and front passenger side seat belt buzzers
1. Turn the ignition switch on (IG).
2. Press the ODO/TRIP switch until the odometer displays "ODO".
3. Ignition switch off.
4. Turn the ignition switch on (IG).
5. Press the ODO/TRIP switch immediately (within 6 seconds) and hold it down for 10 seconds or more.
6. Continue holding down the ODO/TRIP switch and fasten the driver side seat belt.
7. Check that the odometer displays either "b-on" or "b-oFF".
8. Press the ODO/TRIP switch to change the display to "b-oFF".

9. Ignition switch off.
10. Turn the ignition switch on (IG).
11. Check that no buzzer sounds.

(2) Front passenger side seat belt buzzer

1. Turn the ignition switch on (IG).
2. Press the ODO/TRIP switch until the odometer displays "ODO".
3. Ignition switch off.
4. Turn the ignition switch on (IG).
5. Sit in the front passenger seat. Press the ODO/TRIP switch immediately (within 6 seconds) and hold it down for 10 seconds or more.
6. Sit in the front passenger seat. Continue holding down the ODO/TRIP switch and fasten the front passenger side seat belt.
7. Check that the odometer displays either "b-on" or "b-oFF".
8. Press the ODO/TRIP switch to change the display to "b-oFF".
9. Ignition switch off.
10. Turn the ignition switch on (IG).
11. Check that no buzzer sounds.

HOW TO TROUBLESHOOT ECU CONTROLLED SYSTEMS

GENERAL INFORMATION

A large number of ECU controlled systems are used in the CAMRY. In general, ECU controlled systems are considered to be very intricate, requiring a high level of technical knowledge to troubleshoot. However, most problem checking procedures only involve inspecting the ECU controlled system's circuits one by one. An adequate understanding of the system and a basic knowledge of electricity is enough to perform effective troubleshooting, accurate diagnoses and necessary repairs.

FOR USING INTELLIGENT TESTER

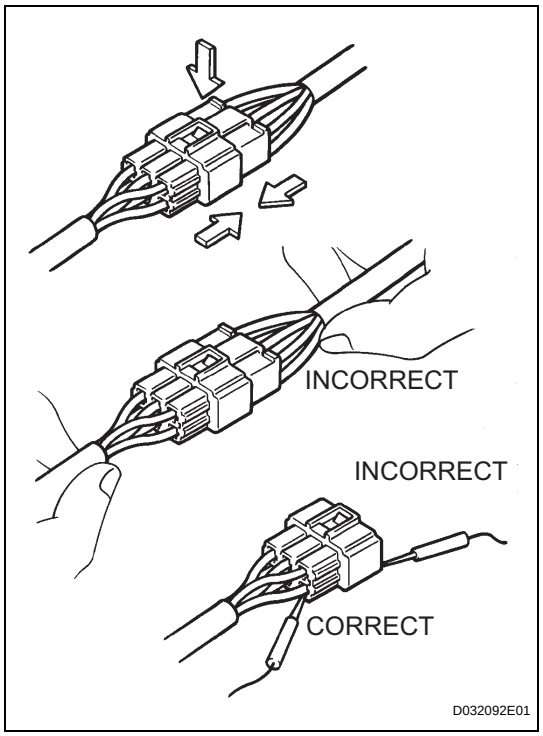
– Before using the intelligent tester, read the tester operator's manual thoroughly.
– If the tester cannot communicate with the ECU controlled systems when the tester is connected to the DLC3 with the ignition switch on and the tester turned on, there is a problem on the vehicle side or tester side.
  (1) If communication is normal when the tester is connected to another vehicle, inspect the diagnosis data link line (Bus (+) line) or ECU power circuit of the vehicle.
  (2) If communication is still not possible when the tester is connected to another vehicle, the problem is probably in the tester itself. Perform the Self Test procedures outlined in the tester operator's manual.

ELECTRONIC CIRCUIT INSPECTION PROCEDURE

1. BASIC INSPECTION

(a) WHEN MEASURING RESISTANCE OF ELECTRONIC PARTS

(1) Unless otherwise stated, all resistance measurements should be made at an ambient temperature of 20°C (68°F). Resistance measurements may be inaccurate if measured at high temperatures, i.e. immediately after the vehicle has been running. Measurements should be made after the engine has cooled down.



(b) HANDLING CONNECTORS

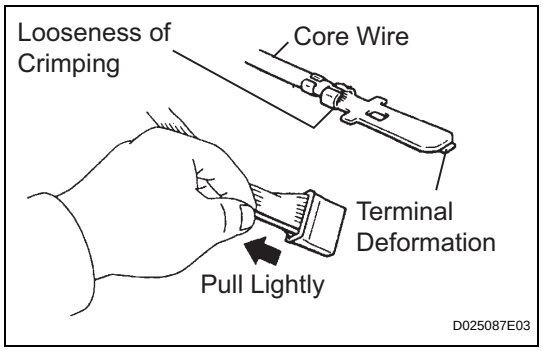
(1) When disconnecting a connector, first squeeze the mating connector housing halves tightly together to release the lock, and then press the lock claw and separate the connector.

(2) When disconnecting a connector, do not pull on the harnesses. Grasp the connector directly and separate it.

(3) Before connecting a connector, check that there are no deformations, damage, looseness or missing terminals.

(4) When connecting a connector, press firmly until it locks with a "click" sound.

(5) If checking a connector with a TOYOTA electrical tester, check the connector from the backside (harness side) using a mini test lead.
NOTICE:
- **As a waterproof connector cannot be checked from the backside, check it by connecting a sub-harness.**
- **Do not damage the terminals by moving the inserted tester needle.**

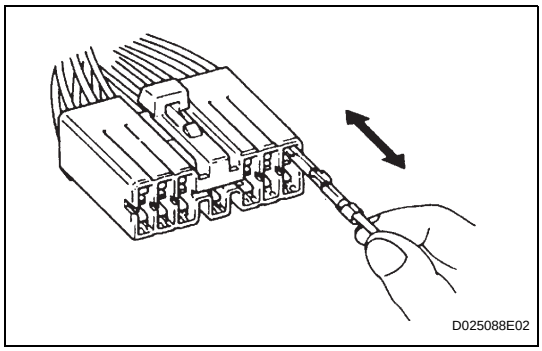


(c) CHECKING CONNECTORS

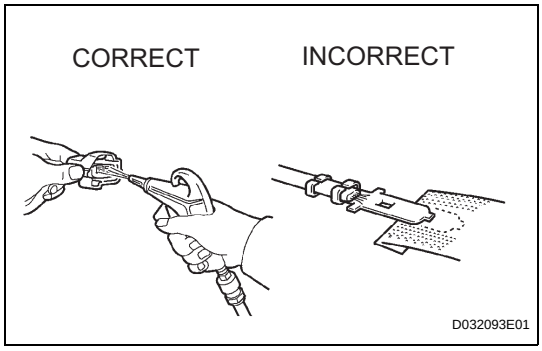
(1) Checking when a connector is disconnected: Squeeze the connector together to confirm that they are fully connected and locked.

(2) Checking when a connector is disconnected: Check by pulling the wire harness lightly from the backside of the connector. Look for unlatched terminals, missing terminals, loose crimps or broken conductor wires. Check visually for corrosion, metallic or foreign matter and water, and bent, rusted, overheated, contaminated, or deformed terminals.

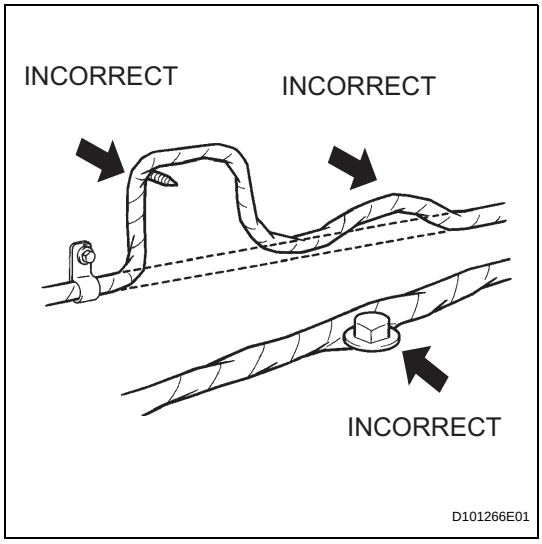
IN



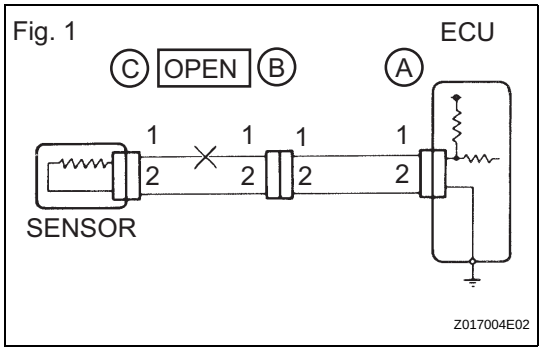
(3) Checking the contact pressure of the terminal:
Prepare a spare male terminal. Insert it into a female terminal, and check for ample tension when inserting and after full engagement.
NOTICE:
When testing a gold-plated female terminal, always use a gold-plated male terminal.



(d) REPAIR METHOD OF CONNECTOR TERMINAL
(1) If there is any foreign matter on the terminal, clean the contact point with compressed air or a cloth. Never rub the contact point using sandpaper as the plating may come off.
(2) If there is abnormal contact pressure, replace the female terminal. If the male terminal is gold-plated (gold color), use a gold-plated female terminal; if it is silver-plated (silver color), use a silver-plated female terminal.
(3) Damaged, deformed, or corroded terminals should be replaced. If the terminal does not lock into the housing, the housing may have to be replaced.



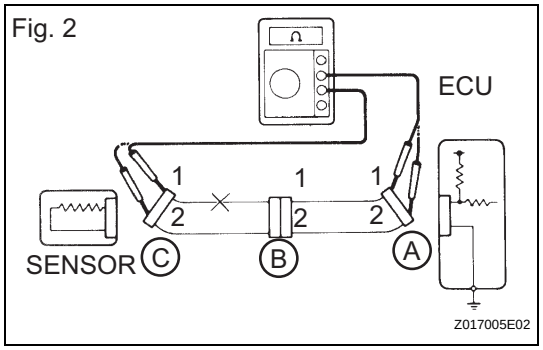
(e) HANDLING OF WIRE HARNESS
(1) If removing a wire harness, check the wiring and clamping before proceeding so that it can be restored in the same way.
(2) Never twist, pull or slacken the wire harness more than necessary.
(3) The wire harness should never come into contact with a high temperature part, or rotating, moving, vibrating or sharp-edged parts. Avoid contact with panel edges, screw tips and other sharp items.
(4) When installing parts, never pinch the wire harness.
(5) Never cut or break the cover of the wire harness. If it is cut or broken, replace it or repair it with vinyl tape.



2. CHECK FOR OPEN CIRCUIT

(a) For an open circuit in the wire harness in Fig. 1, the resistance or voltage, as described below.

Fig. 2



(b) Check the resistance.

(1) Disconnect connectors A and C and measure the resistance between the terminals of the connectors.

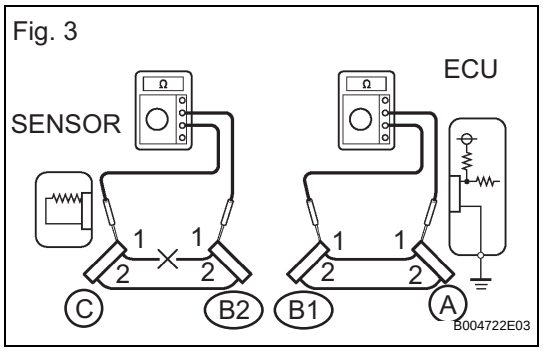
Standard resistance (Fig. 2)

Tester Connection	Specified Condition
Connector A terminal 1 - Connector C terminal 1	10 kΩ or higher
Connector A terminal 2 - Connector C terminal 2	Below 1 Ω

HINT:

Measure the resistance while lightly shaking the wire harness vertically and horizontally. If the results match the examples above, an open circuit exists between terminal 1 of connector A and terminal 1 of connector C.

Fig. 3



(2) Disconnect connector B and measure the resistance between the terminals of the connectors.

Standard resistance (Fig. 3)

Tester Connection	Specified Condition
Connector A terminal 1 - Connector B1 terminal 1	Below 1 Ω
Connector B2 terminal 2 - Connector C terminal 2	10 kΩ or higher

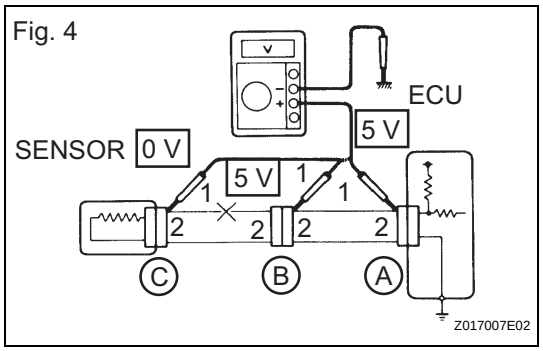
If the results match the examples above, an open circuit exists between terminal 1 of connector B2 and terminal 1 of connector C.

(c) Check the voltage.

(1) In a circuit in which voltage is applied to the ECU connector terminal, an open circuit can be checked by conducting a voltage check.
With each connector still connected, measure the voltage between the body ground and these terminals (in this order): 1) terminal 1 of connector A, 2) terminal 1 of connector B, and 3) terminal 1 of connector C.

Standard voltage (Fig. 4)

Fig. 4



Tester Connection	Specified Condition
Connector A terminal 1 - Body ground	5 V
Connector B terminal 1 - Body ground	5 V
Connector C terminal 1 - Body ground	Below 1 V

If the results match the examples above, an open circuit exists in the wire harness between terminal 1 of connector B and terminal 1 of connector C.

Fig. 5

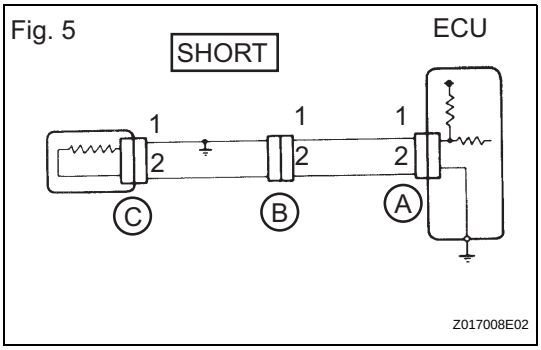


Fig. 6

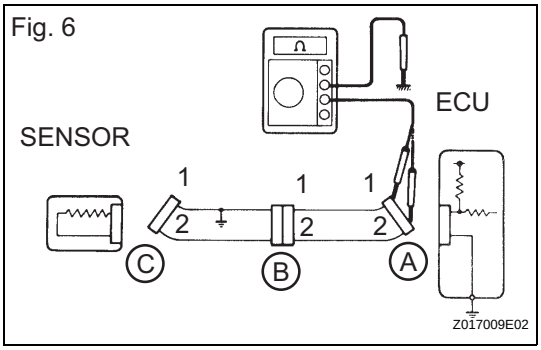

Fig. 7

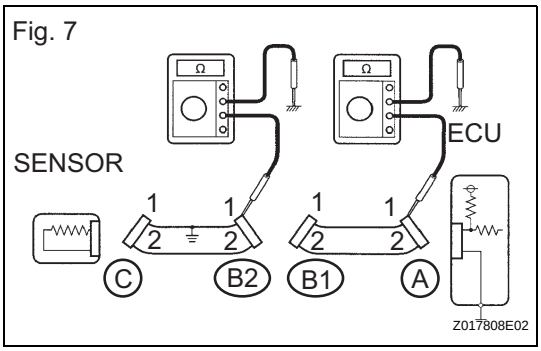


3. CHECK FOR SHORT CIRCUIT

(a) If the wire harness is ground shorted (Fig. 5), locate the section by conducting a resistance check with the body ground (below).

(b) Check the resistance with the body ground.

(1) Disconnect connectors A and C and measure the resistance.

Standard resistance (Fig. 6)

Tester Connection	Specified Condition
Connector A terminal 1 - Body ground	Below 1 Ω
Connector A terminal 2 - Body ground	10 kΩ or higher

HINT:

Measure the resistance while lightly shaking the wire harness vertically and horizontally. If your results match the examples above, an open circuit exists between terminal 1 of connector A and terminal 1 of connector C.

(2) Disconnect connector B and measure the resistance.

Standard resistance (Fig. 7)

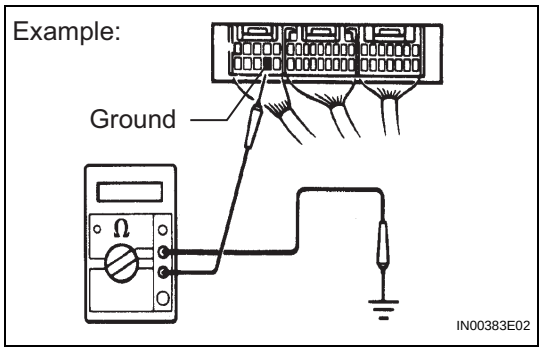
Tester Connection	Specified Condition
Connector A terminal 1 - Body ground	10 kΩ or higher
Connector B2 terminal 2 - Body ground	Below 1 Ω

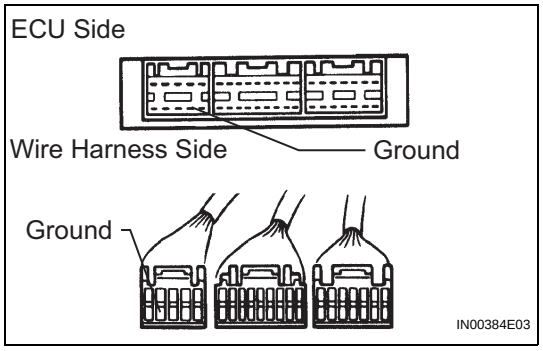
If the results match the examples above, a short circuit exists between terminal 1 of connector B2 and terminal 1 of connector C.

4. CHECK AND REPLACE ECU

NOTICE:

- **The connector should not be disconnected from the ECU. Perform the inspection from the backside of the connector on the wire harness side.**
- **When no measuring condition is specified, perform the inspection with the engine stopped and the ignition switch on.**
- **Check that the connectors are fully seated. Check for loose, corroded or broken wires.**





(a) First, check the ECU ground circuit. If it is faulty, repair it. If it is normal, the ECU could be faulty. Temporarily replace the ECU with a normally functioning one and check if the symptoms occur. If the trouble symptoms disappear, replace the original ECU.

(1) Measure the resistance between the ECU ground terminal and body ground.
Standard resistance:
Below 1 Ω

(2) Disconnect the ECU connector. Check the ground terminal on the ECU side and wire harness side for bending, corrosion or foreign matter. Lastly, check the contact pressure of the female terminals.

IN

HOW TO PROCEED WITH TROUBLESHOOTING

1. OPERATION FLOW

HINT:
Perform troubleshooting in accordance with the procedures below. The following is an outline of basic troubleshooting procedures. Confirm the troubleshooting procedures for the circuit you are working on before beginning troubleshooting.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS

(a) Ask the customer about the conditions and environment when the problem occurred.

NEXT

3	INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V
If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

4	SYMPTOM CONFIRMATION AND DTC (AND FREEZE FRAME DATA) CHECK

(a) Visually check the wire harnesses, connectors and fuses for open and short circuits.
(b) Warm up the engine to the normal operating temperature.
(c) Confirm the problem symptoms and conditions, and check for DTCs

Result

Result	Proceed to
DTC is output	A
DTC is not output	B

B → **Go to step 6**

A

5	DTC CHART

(a) Check the results obtained in step 4. Then find the output DTC in the DTC chart. Look at the "Trouble Area" column for a list of potentially malfunctioning circuits and/or parts.

NEXT → **Go to step 7**

6	PROBLEM SYMPTOMS CHART

(a) Check the results obtained in step 4. Then find the problem symptoms in the problem symptoms table. Look at the "Suspected Area" column for a list of potentially malfunctioning circuits and/or parts.

NEXT

7	CIRCUIT INSPECTION OR PARTS INSPECTION

(a) Identify the malfunctioning circuit or part.

NEXT

8	ADJUST, REPAIR OR REPLACE

(a) Adjust, repair or replace the malfunctioning circuit or parts.

NEXT

9	CONFIRMATION TEST

(a) After the adjustment, repairs or replacement, confirm that the malfunction no longer exists. If the malfunction does not reoccur, perform a confirmation test under the same conditions and in the same environment as when the malfunction occurred the first time.

NEXT

END

2. CUSTOMER PROBLEM ANALYSIS

HINT:

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points in the problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Running conditions, driving conditions, weather conditions
How did it happen?	Problem symptoms

3. SYMPTOM CONFIRMATION AND DIAGNOSTIC TROUBLE CODE

HINT:

The diagnostic system in the CAMRY has various functions.

- The first function is the Diagnostic Trouble Code (DTC) check. A DTC is a code stored in the ECU memory whenever a malfunction in the signal circuits to the ECU occurs. In a DTC check, a previous malfunction's DTC can be checked by a technician during troubleshooting.
- Another function is the Input Signal Check, which checks if the signals from various switches are sent to the ECU correctly.

  By using these functions, the problem areas can be narrowed down and troubleshooting is more effective. Diagnostic functions are incorporated in the following system in the CAMRY.

System	DTC Check (Normal Mode)	DTC Check (Check Mode)	Sensor Check/Test Mode (Input Signal Check)	Data List	Active Test
2AZ-FE SFI System	○	○		○	○
2GR-FE SFI System	○	○		○	○
Smart Key System (Starting)	○			○	○
U250E Automatic Transaxle System	○	○		○	○
U660E Automatic Transaxle System	○	○		○	○
Tire Pressure Warning System	○		○	○	
Anti-lock Brake System	○		○	○	○
Vehicle Stability Control System (for BOSCH made)	○		○	○	○

System	DTC Check (Normal Mode)	DTC Check (Check Mode)	Sensor Check/Test Mode (Input Signal Check)	Data List	Active Test
Vehicle Stability Control System (for ADVICS made)	○		○	○	○
Electric Steering Lock	○			○	○

Meter/Gauge System	○			○	○
Audio and Visual System	○				
Navigation System	○				
Power Window Control System	○			○	○
Window Defogger System					○
Sliding Roof System	○			○	○

- In the DTC check, it is very important to determine whether the problem indicated by the DTC either: 1) still occurs, or 2) occurred in the past but has returned to normal. In addition, the DTC should be compared to the problem symptom to see if they are related. For this reason, DTCs should be checked before and after confirmation of symptoms (i.e., whether or not problem symptoms exist) to determine current system conditions, as shown in the flowchart below.
- Never skip the DTC check. Failing to check DTCs may, depending on the case, result in unnecessary troubleshooting for systems operating normally or lead to repairs not related to the problem. Follow the procedures listed in the flowchart in the correct order.
- The following flowchart shows how to proceed with troubleshooting using the DTC check. Directions from the flowchart will indicate how to proceed either to DTC troubleshooting or to the troubleshooting of each problem symptom.

No symptoms exist	A
Symptoms exist	B

If a DTC was displayed in the initial DTC check, the problem may have occurred in a wire harness or connector in that circuit in the past. Check the wire harness and connectors.

B → **SYSTEM NORMAL**

A

TROUBLESHOOTING OF EACH PROBLEM SYMPTOM

The problem still occurs in a place other than the diagnostic circuit (the DTC displayed first is either for a past problem or a secondary problem).

4. SYMPTOM SIMULATION

HINT:

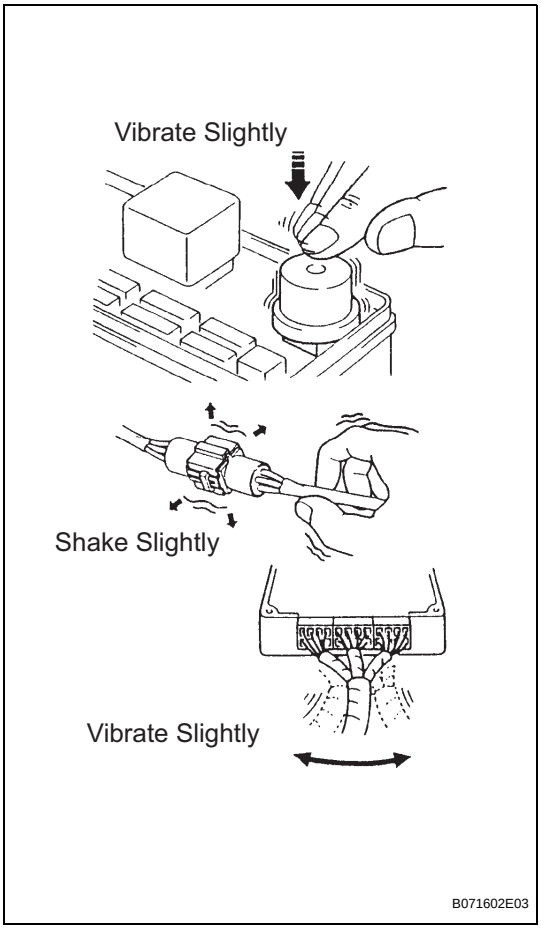
The most difficult case in troubleshooting is when no problem symptoms occur. In such a case, a thorough problem analysis must be carried out. A simulation of the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be carried out. No matter how much skill or experience a technician has, troubleshooting without confirming the problem symptoms will lead to important repairs being overlooked and mistakes or delays.

For example:

With a problem that only occurs when the engine is cold or as a result of vibration caused by the road during driving, the problem can never be determined if the symptoms are being checked on a stationary vehicle or a vehicle with a warmed-up engine. Vibration, heat or water penetration (moisture) are difficult to reproduce. The symptom simulation tests below are effective substitutes for the conditions and can be applied to a stationary vehicle. Important points in the symptom simulation test:

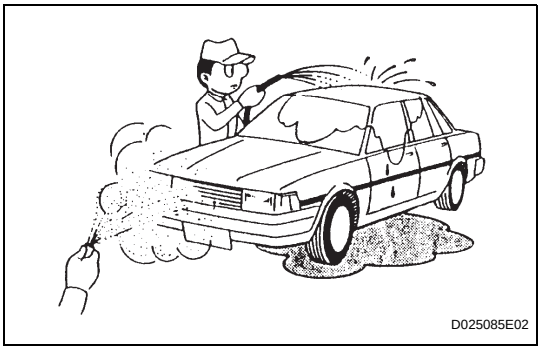
IN

In the symptom simulation test, the problem symptoms as well as the problem area or parts must be confirmed. First, narrow down the possible problem circuits according to the symptoms. Then, connect the tester and carry out the symptom simulation test, judging whether the circuit being tested is defective or normal. Also, confirm the problem symptoms at the same time. Refer to the problem symptoms table for each system to narrow down the possible causes.



(a) VIBRATION METHOD: When a malfunction seems to occur as a result of vibration.
  (1) PART AND SENSOR
  Apply slight vibration with a finger to the part of the sensor suspected to be the cause of the problem, and check whether the malfunction occurs.
  NOTICE:
  Applying strong vibration to relays may open relays.
  (2) CONNECTORS
  Slightly shake the connector vertically and horizontally.
  (3) WIRE HARNESS
  Slightly shake the wire harness vertically and horizontally.
  HINT:
  The connector joint and fulcrum of the vibration are the major areas that should be checked thoroughly.

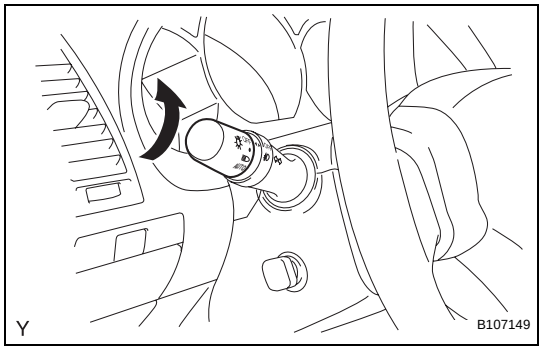
(b) HEAT METHOD: When a malfunction seems to occur when the area in question is heated.
  (1) Heat the component that is the possible cause of the malfunction with a hair dryer or similar device. Check if the malfunction occurs.
  NOTICE:
  - **Do not heat to more than 60°C (140°F). Exceeding this temperature may damage the components.**
  - **Do not apply heat directly to the parts in the ECU.**



(c) WATER SPRINKLING METHOD: When a malfunction seems to occur on a rainy day or in high-humidity.
  (1) Sprinkle water onto the vehicle and check if the malfunction occurs.
  NOTICE:
  - **Never sprinkle water directly into the engine compartment. Indirectly change the temperature and humidity by spraying water onto the front of the radiator.**
  - **Never apply water directly onto the electronic components.**

HINT:
If the vehicle has or had a water leakage problem, the leakage may have damaged the ECU or connections. Look for evidence of corrosion or short circuits. Proceed with caution during water tests.

(d) HIGH ELECTRICAL LOAD METHOD: When a malfunction seems to occur when an electrical load is excessive.
(1) Turn on the heater blower, headlight, rear window defogger and all other electrical loads. Check if the malfunction reoccurs.



5. DIAGNOSTIC TROUBLE CODE CHART

Look for output Diagnostic Trouble Codes (DTCs) (from the DTC checks) in the appropriate section's Diagnostic Trouble Code Chart. Use the chart to determine the trouble area and the proper inspection procedure. A description of each of the chart's columns is shown in the table below.

Item	Description
DTC No.	Indicates the diagnostic trouble code
Detection Item	Indicates the system or details of the problem
Trouble Area	Indicates the suspected areas of the problem
See Page	Indicates the page where the inspection procedures for each circuit is to be found, or gives instruction for checking and repairs.

6. PROBLEM SYMPTOMS TABLE

When a "Normal" code is output during a DTC check but the problem still occurs, use the Problem Symptoms Table. The suspected areas (circuits or parts) for each problem symptoms are in the table. The suspected areas are listed in order of probability. A description of each of the chart's columns is shown in the table below.

HINT:
In some cases, the problem is not detected by the diagnostic system even though a problem symptom occurs. It is possible that the problem occurs outside the detection range of the diagnostic system, or that the problem occurs in a completely different system.

Item	Description
Problem Symptom	-
Circuit Inspection, Inspection Order	Indicates the order in which the circuits need to be checked
Circuit or Part Name	Indicates the circuit or part which needs to be checked
See Page	Indicates the page where the flowchart for each circuit is located

7. CIRCUIT INSPECTION

A description of the main areas of each circuit inspection is shown in the table below.

Item	Description
Circuit Description	The major role, operation of the circuit and its component parts are explained.
Diagnostic Trouble Code No. and Detection Item	Indicates the diagnostic trouble codes, diagnostic trouble code settings and suspected areas for a problem

Item	Description
Wiring Diagram	This shows a wiring diagram of the circuit. Use this diagram together with ELECTRICAL WIRING DIAGRAM to thoroughly understand the circuit. Wire colors are indicated by an alphabetical code. B = Black, L = Blue, R = Red, BR = Brown, LG = Light Green, V = Violet, G = Green, O = Orange, W = White, GR = Gray, P = Pink, Y = Yellow, SB = Sky Blue The first letter indicates the basic wire color and the second letter indicates the color of the stripe.
Inspection Procedures	Use the inspection procedures to determine if the circuit is normal or abnormal. If abnormal, use the inspection procedures to determine whether the problem is located in the sensors, actuators, wire harnesses or ECU.
Indicates the condition of the connector of the ECU during the check	Connector being checked is connected. Connections of tester are indicated by (+) or (-) after the terminal name. Connector being checked is disconnected. The inspections between a connector and body ground, information about the body ground is not shown in the illustration.

TERMS

ABBREVIATIONS USED IN MANUAL

Abbreviations	Meaning
ABS	Anti-Lock Brake System
A/C	Air Conditioner
AC	Alternating Current
ACC	Accessory
ACIS	Acoustic Control Induction System
ACM	Active Control Engine Mount
ACSD	Automatic Cold Start Device
A.D.D	Automatic Disconnecting Differential
A/F	Air-Fuel Ratio
AHC	Active Height Control Suspension
ALR	Automatic Locking Retractor
ALT	Alternator
AMP	Amplifier
ANT	Antenna
APPROX.	Approximately
ASSY	Assembly
A/T, ATM	Automatic Transmission (Transaxle)
ATF	Automatic Transmission Fluid
AUTO	Automatic
AUX	Auxiliary
AVG	Average
AVS	Adaptive Variable Suspension
AWD	All Wheel Drive Vehicle
B+	Battery Voltage
BA	Brake Assist
BACS	Boost Altitude Compensation System
BAT	Battery
BDC	Bottom Dead Center
B/L	Bi-Level
B/S	Bore-Stroke Ratio
BTDC	Before Top Dead Center
BVSV	Bimetallic Vacuum Switching Valve
CAN	Controller Area Network
CB	Circuit Breaker
CCo	Catalytic Converter For Oxidation
CCV	Canister Closed Valve
CD	Compact Disc
CF	Cornering Force
CG	Center of Gravity
CH	Channel
CKD	Complete Knock Down
COMB.	Combination
CPE	Coupe
CPS	Combustion Pressure Sensor
CPU	Central Processing Unit
CRS	Child Restraint System

Abbreviations	Meaning
CTR	Center
C/V	Check Valve
CV	Control Valve
CW	Curb Weight
DC	Direct Current
DEF	Defogger
DFL	Deflector
DIFF.	Differential
DIFF. LOCK	Differential Lock
D/INJ	Direct Injection
DLC	Data Link Connector
DLI	Distributorless Ignition
DOHC	Double Overhead Camshaft
DP	Dash Pot
DS	Dead Soak
DSP	Digital Signal Processor
DTC	Diagnostic Trouble Code
DVD	Digital Versatile Disc
EBD	Electric Brake Force Distribution
EC	Electrochromic
ECAM	Engine Control And Measurement System
ECD	Electronically Controlled Diesel
ECDY	Eddy Current Dynamometer
ECT	Electronic Controlled Automatic Transmission
ECU	Electronic Control Unit
ED	Electro-Deposited Coating
EDU	Electronic Driving Unit
EDIC	Electric Diesel Injection Control
EFI	Electronic Fuel Injection
E/G	Engine
EGR	Exhaust Gas Recirculation
EGR-VM	EGR-Vacuum Modulator
ELR	Emergency Locking Retractor
EPS	Electric Power Steering
ENG	Engine
ES	Easy & Smooth
ESA	Electronic Spark Advance
ETCS-i	Electronic Throttle Control System-intelligent
EVAP	Evaporative Emission Control
EVP	Evaporator
E-VRV	Electric Vacuum Regulating Valve
EX	Exhaust
FE	Fuel Economy
FF	Front-Engine-Front-Wheel-Drive
F/G	Fuel Gauge
FIPG	Formed In Place Gasket
FL	Fusible Link
F/P	Fuel Pump
FPU	Fuel Pressure Up

IN

Abbreviations	Meaning
FR	Front
F/W	Flywheel
FW/D	Flywheel Damper
FWD	Front-Wheel-Drive

GLOSSARY OF SAE AND TOYOTA TERMS

This glossary lists all SAE-J1930 terms and abbreviations used in this manual in compliance with SAE recommendations, as well as their TOYOTA equivalents.

SAE ABBREVIATIONS	SAE TERMS	TOYOTA TERMS ( )-ABBREVIATIONS
A/C	Air Conditioning	Air Conditioner
ACL	Air Cleaner	Air Cleaner, A/CL
AIR	Secondary Air Injection	Air Injection (AI)
AP	Accelerator Pedal	-
B+	Battery Positive Voltage	+B, Battery Voltage
BARO	Barometric Pressure	HAC
CAC	Charge Air Cooler	Intercooler
CARB	Carburetor	Carburetor
CFI	Continuous Fuel Injection	-
CKP	Crankshaft Position	Crank Angle
CL	Closed Loop	Closed Loop
CMP	Camshaft Position	Cam Angle
CPP	Clutch Pedal Position	-
CTOX	Continuous Trap Oxidizer	-
CTP	Closed Throttle Position	LL ON, Idle ON
DFI	Direct Fuel Injection	Direct Injection (DI./INJ)
DI	Distributor Ignition	-
DLC3	Data Link Connector 3	OBD II Diagnostic Connector
DTC	Diagnostic Trouble Code	Diagnostic Trouble Code
DTM	Diagnostic Test Mode	-
ECL	Engine Coolant Level	-
ECM	Engine Control Module	Engine Electronic Control Unit (ECU)
ECT	Engine Coolant Temperature	Coolant Temperature, Water Temperature (THW)
EEPROM	Electrically Erasable Programmable Read Only Memory	Electrically Erasable Programmable Read Only Memory (EEPROM), Erasable Programmable Read Only Memory (EPROM)
EFE	Early Fuel Evaporation	Cold Mixture Heater (CMH), Heat Control Valve (HCV)
EGR	Exhaust Gas Recirculation	Exhaust Gas Recirculation (EGR)
EI	Electronic Ignition	Distributorless Ignition (DLI)
EM	Engine Modification	Engine Modification (EM)
EPROM	Erasable Programmable Read Only Memory	Programmable Read Only Memory (PROM)
EVAP	Evaporative Emission	Evaporative Emission Control (EVAP)
FC	Fan Control	-
FEEPROM	Flash Electrically Erasable Programmable Read Only Memory	-
FEPROM	Flash Erasable Programmable Read Only Memory	-
FF	Flexible Fuel	-
FP	Fuel Pump	Fuel Pump
GEN	Generator	Alternator
GND	Ground	Ground (GND)
HO2S	Heated Oxygen Sensor	Heated Oxygen Sensor (HO_2S)
IAC	Idle Air Control	Idle Speed Control (ISC)
IAT	Intake Air Temperature	Intake or Inlet Air Temperature
ICM	Ignition Control Module	-

SAE ABBREVIATIONS	SAE TERMS	TOYOTA TERMS ( )-ABBREVIATIONS
IFI	Indirect Fuel Injection	Indirect Injection (IDL)
IFS	Inertia Fuel-Shutoff	-
ISC	Idle Speed Control	-
KS	Knock Sensor	Knock Sensor
MAF	Mass Airflow	Air Flow Meter
MAP	Manifold Absolute Pressure	Manifold Pressure Intake Vacuum
MC	Mixture Control	Electric Bleed Air Control Valve (EBCV) Mixture Control Valve (MCV) Electric Air Control Valve (EACV)
MDP	Manifold Differential Pressure	-
MFI	Multiport Fuel Injection	Electronic Fuel Injection (EFI)
MIL	Malfunction Indicator Light	Check Engine Light
MST	Manifold Surface Temperature	-
MVZ	Manifold Vacuum Zone	-
NVRAM	Non-Volatile Random Access Memory	-
O2S	Oxygen Sensor	Oxygen Sensor, O_2 Sensor (O_2S)
OBD	On-Board Diagnostic	On-Board Diagnostic System (OBD)
OC	Oxidation Catalytic Converter	Oxidation Catalytic Convert (OC), CCo
OL	Open Loop	Open Loop
PAIR	Pulsed Secondary Air Injection	Air Suction (AS)
PCM	Powertrain Control Module	-
PNP	Park/Neutral Position	-
PROM	Programmable Read Only Memory	-
PSP	Power Steering Pressure	-
PTOX	Periodic Trap Oxidizer	Diesel Particulate Filter (DPF) Diesel Particulate Trap (DPT)
RAM	Random Access Memory	Random Access Memory (RAM)
RM	Relay Module	-
ROM	Read Only Memory	Read Only Memory (ROM)
RPM	Engine Speed	Engine Speed
SC	Supercharger	Supercharger
SCB	Supercharger Bypass	E-ABV
SFI	Sequential Multiport Fuel Injection	Electronic Fuel Injection (EFI), Sequential Injection
SPL	Smoke Puff Limiter	-
SRI	Service Reminder Indicator	-
SRT	System Readiness Test	-
ST	Scan Tool	-
TB	Throttle Body	Throttle Body
TBI	Throttle Body Fuel Injection	Single Point Injection Central Fuel Injection (Ci)
TC	Turbocharger	Turbocharger
TCC	Torque Converter Clutch	Torque Converter
TCM	Transmission Control Module	Transmission ECU, ECT ECU
TP	Throttle Position	Throttle Position
TR	Transmission Range	-
TVV	Thermal Vacuum Valve	Bimetallic Vacuum Switching Valve (BVSV) Thermostatic Vacuum Switching Valve (TVSV)
TWC	Three-Way Catalytic Converter	Three-Way Catalytic (TWC) Manifold Converter CC_{RO}

SAE ABBREVIATIONS	SAE TERMS	TOYOTA TERMS ( )-ABBREVIATIONS
TWC+OC	Three-Way + Oxidation Catalytic Converter	CC_R + CCo
VAF	Volume Airflow	Air Flow Meter
VR	Voltage Regulator	Voltage Regulator
VSS	Vehicle Speed Sensor	Vehicle Speed Sensor
WOT	Wide Open Throttle	Full Throttle
WU-OC	Warm Up Oxidation Catalytic Converter	-
WU-TWC	Warm Up Three-Way Catalytic Converter	-
3GR	Third Gear	-
4GR	Fourth Gear	-

LIGHTING SYSTEM

PRECAUTION

1. PRECAUTION FOR USING BATTERY DURING INSPECTION

(a) While using the battery during inspection, do not bring the positive and negative tester probes too close to each other as a short circuit may occur.

2. PRECAUTION FOR HEADLIGHT BULB REPLACEMENT

(a) If even a thin film of oil is left on the surface of the halogen light, the bulb may be damaged because the light will burn at a higher temperature.

(b) Handle any halogen light with great care. Dropping, hitting or damaging the bulb, in any way, may result in exploding and shattering because the internal pressure is high.

(c) Always prepare a new bulb for immediate replacement. While replacing the bulb, the lens may attract dust and moisture if removed from the vehicle for too long.

(d) Always use a bulb of the same wattage for replacement.

(e) Firmly reinstall the socket after bulb replacement. The lens may become cloudy or the light cavity may fill with water through the gaps around the socket.

3. EXPRESSIONS OF IGNITION SWITCH

(a) The type of ignition switch used on this model differs according to the specifications of the vehicle. The expressions listed in the table below are used in this section.

Switch Type		Ignition Switch (position)	Engine Switch (condition)
Expression	Ignition switch off	LOCK	Off
	Ignition switch on (IG)	ON	On (IG)
	Ignition switch on (ACC)	ACC	On (ACC)
	Engine start	START	Start

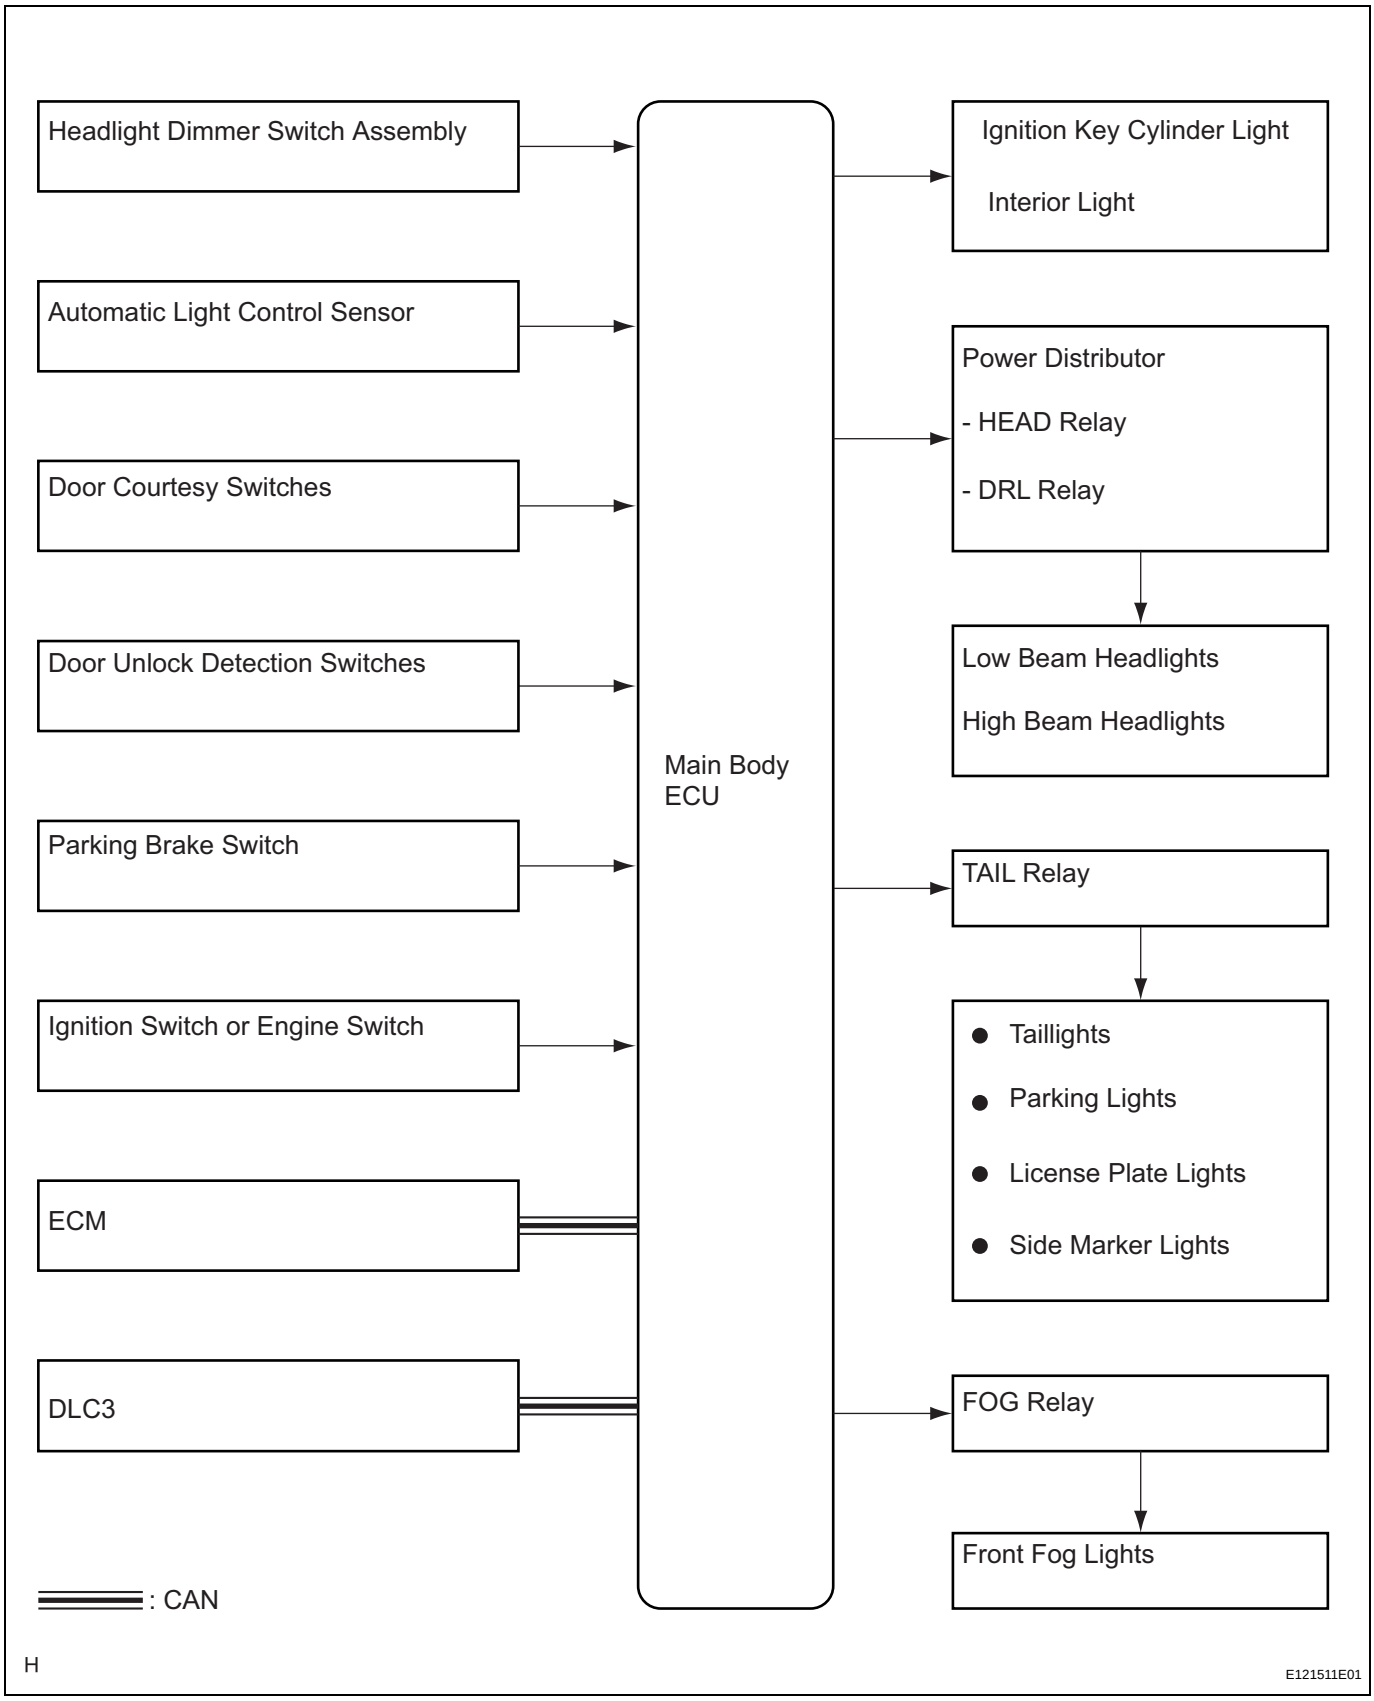
SYSTEM DIAGRAM



SYSTEM DESCRIPTION

1. MANUAL LIGHT CONTROL SYSTEM

This system functions if the lights such as the headlights and taillights come on by manual operation of the light control switch.

(a) The main body ECU controls this system based on the signals listed below.

Input	Output	Lights that illuminate
Light control switch TAIL signal	Taillight relay drive signal	• Taillights • License plate lights • Side marker lights • Parking lights
Light control switch HEAD signal	Headlight relay drive signal	Low beam headlights

2. AUTOMATIC LIGHT CONTROL SYSTEM

When the light control switch is in the AUTO position, the automatic light control sensor detects ambient light, converts it into an electrical signal, and outputs it to the main body ECU. The main body ECU automatically turns the headlights and taillights on or off according to the signal.

(a) The main body ECU controls this system based on the signals listed below.

Input	Output	Lights that illuminate
• Light control switch AUTO signal • Automatic light control sensor signal	• Headlight relay drive signal • Taillight relay drive signal	• Low beam headlights • Taillights • License plate lights • Side marker lights • Parking lights

3. LIGHT AUTO TURN OFF SYSTEM

When the headlights and taillights are on through the operation of the automatic light control system or through the light control switch, if the ignition switch is turned off and all doors are closed, this system continues to illuminate the headlights and taillights for approximately 30 seconds, and then turns off the headlights and taillights.

However, if the ignition switch is turned off and all doors are locked, this system turns off the headlights and taillights immediately.

(a) The main body ECU controls this system based on the signals listed below.

Input	Output	Lights that operate
• Door courtesy switch signal • Ignition switch or engine switch signal	• Headlight relay OFF demand • Taillight relay OFF demand • DRL relay OFF demand • FOG light relay OFF demand	• Low beam headlights • Taillights, license plate lights, parking lights, and side marker lights • High beam headlights • Front fog lights

4. DAYTIME RUNNING LIGHT SYSTEM

The daytime running light system is designed to automatically illuminate the headlights (dimmed HI beams), during the daytime to make the car more visible to other vehicle.

(a) The main body ECU controls this system.
The daytime running light system starts operating when all of the following conditions are met:

Items	Conditions
Ignition switch or engine switch	On (IG)
Engine	Running
Light control switch position	OFF, TAIL or AUTO position (if headlight-on control is not being performed by the automatic light control)
Parking brake switch	Released (OFF)

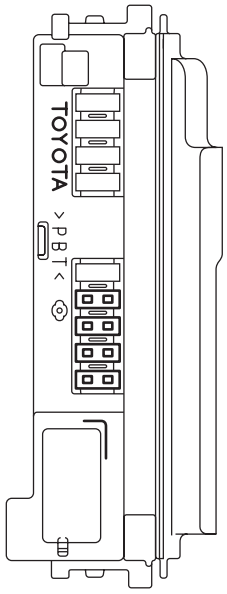
5. ILLUMINATED ENTRY SYSTEM

When a door is unlocked through a key or transmitter operation, or if a door is opened, the illuminated entry system turns on the interior light and the ignition key cylinder light.

(a) The main body ECU controls this system. The operation and condition of the illuminated entry system are described below.

Operation	Condition
Fade in	When any of the following conditions is met, the interior light and ignition key cylinder light fade in. • Any door is opened. • Any door is unlocked when the ignition switch is off and all doors are closed. • Ignition switch is turned from on (ACC) to off when all doors are closed.
Fade out immediately	When either of the following conditions is met, the interior light and ignition key cylinder light fade out immediately. • Ignition switch is turned from off to on (ACC or IG) when all doors are closed. • All doors are locked when the ignition switch is off.
Illuminate for approximately 15 seconds, and then fade out	All doors are closed when the ignition switch is off.
Fade out (Battery saving)	When the following conditions are met, the interior light and ignition key cylinder light fade out. • A key is not in the actuation area (with smart key system). • A key is not inserted in the ignition key cylinder (without smart key system). • There are no changes in the condition of the doors for 20 minutes.

Power Distributor (Engine Room J/B)



H E121471E02

6. POWER DISTRIBUTOR

(a) The power distributor (engine room J/B assembly) is installed in the engine room R/B.

(b) The HEAD relay and DRL relay are installed in the power distributor (engine room J/B assembly).

(c) When a short circuit occurs between the power distributor (engine room J/B assembly) and high beam headlight bulbs, a fail-safe function operates.

(d) When the fail-safe function operates, the power distributor stops the operation of the DRL relay.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedures to troubleshoot the lighting system.
- *: Use the intelligent tester.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 CUSTOMER PROBLEM ANALYSIS CHECK AND SYMPTOM CHECK

NEXT

3 INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

4 INSPECT CAN COMMUNICATION SYSTEM*

(a) Use the intelligent tester to check if the CAN communication system is functioning normally.

Result

Result	Proceed to
CAN communication system DTC is not output	A
CAN communication system DTC is output	B

B → Go to step 8

A

5 CHECK FOR DTC*

Result

Result	Proceed to
DTC is not output	A
DTC is output	B

B → Go to step 8

A

6	PROBLEM SYMPTOMS TABLE

Result

Result	Proceed to
Fault is not listed in problem symptoms table	A
Fault is listed in problem symptoms table	B

END

CUSTOMIZE PARAMETERS

HINT:
The followings are the possible items to be customized.
NOTICE:

- **Before attempting to customize vehicle settings, confirm whether it is possible to make the change that the customer has requested.**
- **Be sure to record the current value before customizing.**
- **In case of performing the troubleshooting, pay attention because there is a possibility that the function has been disabled by customizing. (Example: In case of the symptom in which "The wireless operation does not function", check that the wireless operation has not been disabled by customizing, then perform the troubleshooting.)**

ILLUMINATED ENTRY:

Display	Default	Contents	Setting
LIGHTING TIME	15 s	Changes the lighting time of the interior light and ignition key cylinder light.	7.5 s / 15 s / 30 s
I/L ON / UNLOCK	ON	Lights up the interior light and ignition key cylinder light when a door is unlocked.	ON / OFF
I/L ON / ACC OFF	ON	Lights up the interior light and ignition key cylinder light when the ignition switch is turned from on (ACC) to off	ON / OFF

LIGHT CONTROL:

Display	Default	Contents	Setting
LIGHT OFF DELAY	30 s	Keeps the headlights on for a certain period of time after turning the ignition switch off and closing all the doors with the headlights on.	OFF / 30 s / 60 s / 90 s
SENSITIVITY	NORMAL	Adjusts the sensitivity of the automatic light control system. *1	LIGHT 2 / LIGHT 1 / NORMAL / DARK 1 / DARK 2
DISP EX ON SEN	NORMAL	Changes the ambient brightness level required to dim the clock display illumination, etc. *1	LIGHT 2 / LIGHT 1 / NORMAL / DARK 1 / DARK 2
DISP EX OFF SEN	NORMAL	Changes the ambient brightness level required to cancel the dimming of the clock display illumination, etc.	LIGHT 2 / LIGHT 1 / NORMAL / DARK 1 / DARK 2

HINT:
Sensitivity adjustment can hardly be confirmed. Check by driving the customer's vehicle.

Illustration *1

Ambient Brightness Level	Dark ← → Bright				
Setting	DARK2	DARK1	NORMAL	LIGHT1	LIGHT2

PROBLEM SYMPTOMS TABLE

1. Headlight system:

Symptom	Suspected area	See page
One side LO-beam headlight does not illuminate	1. H-LP RL fuse or H-LP LL fuse	-
	2. Bulb	-
	3. Harness or connector	-
	4. Power distributor (Engine room J/B)	-
Both left and right LO-beam headlights do not illuminate	1. H-LP RL fuse and H-LP LL fuse	-
	2. Bulb	-
	3. Light control switch circuit	LI-48
	4. Headlight relay circuit	LI-35
	5. Main body ECU (Instrument panel J/B)	-
One side HI-beam headlight does not illuminate	1. H-LP RH fuse or H-LP LH fuse	-
	2. Bulb	-
	3. Harness or connector	-
	4. Power distributor (Engine room J/B)	-
Both left and right HI-beam headlights do not illuminate	1. H-LP RH fuse and H-LP LH fuse	-
	2. Bulb	-
	3. Light control switch circuit	LI-48
	4. Headlight (HI-BEAM) circuit	LI-39
	5. Main body ECU (Instrument panel J/B)	-
"Flash" headlights do not illuminate	1. Light control switch circuit	LI-48
	2. Main body ECU (Instrument panel J/B)	-
LO-beam headlights or HI-beam headlights do not go off	1. Headlight dimmer switch assembly	LI-120
	2. Power distributor (Engine room J/B)	-
	3. Harness or connector	-
	4. Main body ECU (Instrument panel J/B)	-

2. Daytime running light system:

Symptom	Suspected area	See page
Day time running light system does not operate	1. Light control switch circuit	LI-48
	2. Parking brake switch circuit	LI-61
	3. Power distributor (Engine room J/B)	-
	4. Main body ECU (Instrument panel J/B)	-
	5. ECM	-

3. Taillight system:

Symptom	Suspected area	See page
Front parking light does not illuminate	1. Bulb	-
	2. Harness or connector	-
Rear taillight does not illuminate	1. Bulb	-
	2. Harness or connector	-
License plate light does not illuminate	1. Bulb	-
	2. Harness or connector	-
Front side marker light does not illuminate	1. Bulb	-
	2. Harness or connector	-
Taillight system does not operate (Taillights, front side marker lights, parking lights, and license plate lights do not illuminate)	1. TAIL fuse	-
	2. Taillight relay	LI-141
	3. Light control switch circuit	LI-48
	4. Taillight relay circuit	LI-65
	5. Main body ECU (Instrument panel J/B)	-

4. Stop light system:

Symptom	Suspected area	See page
Stop light system does not operate	1. Bulb	-
	2. Stop fuse	-
	3. Stop light switch	LI-125
	4. Harness or connector	-
One side stop light does not illuminate	1. Bulb	-
	2. Harness or connector	-
Hi-mounted stop light does not illuminate	1. Bulb	-
	2. Harness or connector	-

5. Front fog light system:

Symptom	Suspected area	See page
One side fog light does not illuminate	1. Bulb	-
	2. Harness or connector	-
Both left and right fog lights do not illuminate (Taillight system is normal)	1. FR FOG fuse	-
	2. FR FOG relay	LI-142
	3. Light control switch circuit	LI-48
	4. Front fog light circuit	LI-44
	5. Main body ECU (Instrument panel J/B)	-

6. Turn signal and hazard warning system:

Symptom	Suspected area	See page
Hazard warning lights do not operate (Turn signal lights are normal)	1. HAZ fuse	-
	2. Hazard warning signal switch	LI-123
	3. Clock assembly	OT-4
	4. Turn signal flasher assembly	LI-138
	5. Harness or connector	-
Turn signal lights do not operate (Hazard warning lights are normal)	1. GAUGE No. 1 fuse	-
	2. Headlight dimmer switch assembly (Turn signal switch)	LI-120
	3. Turn signal flasher assembly	LI-138
	4. Harness or connector	-
"Hazard" and "Turn" do not operate	1. HAZ fuse and GAUGE No. 1 fuse	-
	2. Bulb	-
	3. Turn signal flasher assembly	LI-138
	4. Hazard warning signal switch	LI-123
	5. Headlight dimmer switch assembly (Turn signal switch)	LI-120
	6. Clock assembly	OT-4
	7. Harness or connector	-
Turn signal lights do not operate in one direction	1. Headlight dimmer switch assembly (Turn signal switch)	LI-120
	2. Turn signal flasher assembly	LI-138
	3. Harness or connector	-
Only one bulb does not operate	1. Bulb	-
	2. Harness or connector	-

7. Buck-up light system:

Symptom	Suspected area	See page
One side back-up light does not illuminate	1. Bulb	-
	2. Harness or connector	-

Symptom	Suspected area	See page
Both left and right back-up lights do not illuminate	1. Bulb	-
	2. GAUGE No. 1 fuse	-
	3. Buck-up light switch (for M/T)	LI-127
	4. Park/Neutral position switch (for U250E A/T)	AX-129
	5. Park/Neutral position switch (for U660E A/T)	AX-175
	6. Harness or connector	-

8. Illuminated entry system:

Symptom	Suspected area	See page
Only interior light does not illuminate	1. Bulb	-
	2. Personal light assembly (with sliding roof)	LI-105
	3. Rear room light assembly (without sliding roof)	LI-108
	4. Harness or connector	-
Only ignition key cylinder light does not illuminate	1. Transponder key amplifier (Ignition key cylinder light)	LI-113
	2. Harness or connector	-
Interior light and ignition key cylinder light do not operate normally	1. DOME fuse	-
	2. Personal light assembly	LI-105
	3. Rear room light assembly	LI-108
	4. Transponder key amplifier	LI-113
	5. Door courtesy switch circuit	LI-52
	6. Door lock position switch circuit	LI-55
	7. Ignition switch circuit	LI-28
	8. Interior light circuit	LI-57
	9. Main body ECU (Instrument panel J/B)	-

9. Vanity light system:

Symptom	Suspected area	See page
Vanity light does not illuminate	1. Bulb	-
	2. Vanity light assembly	LI-116
	3. Visor assembly (Vanity light switch)	-
	4. Harness or connector	-

10. Luggage compartment light system:

Symptom	Suspected area	See page
Luggage compartment light does not illuminate	1. Luggage compartment light	LI-111
	2. Luggage compartment door lock assembly (Door courtesy switch)	LI-132
	3. Harness or connector	-

11. Glove box light system:

Symptom	Suspected area	See page
Glove box light does not illuminate	1. Bulb	-
	2. Glove box light assembly	LI-115
	3. Harness or connector	-

12. Door courtesy light system:

Symptom	Suspected area	See page
Door courtesy light does not illuminate	1. Door courtesy light	LI-109
	2. Front door courtesy switch	LI-129
	3. Harness or connector	-

13. Personal light system:

Symptom	Suspected area	See page
Front personal lights do not illuminate	1. Bulb	-
	2. Personal light assembly	LI-105
	3. Harness or connector	-
Rear personal lights do not illuminate	1. Bulb	-
	2. Rear room light assembly	LI-108
	3. Harness or connector	-

14. Automatic light control system:

Symptom	Suspected area	See page
Automatic light control system does not operate normally	1. Light control switch circuit	LI-48
	2. Automatic light control sensor circuit	LI-23
	3. Main body ECU (Instrument panel J/B)	-

15. Light auto turn off system:

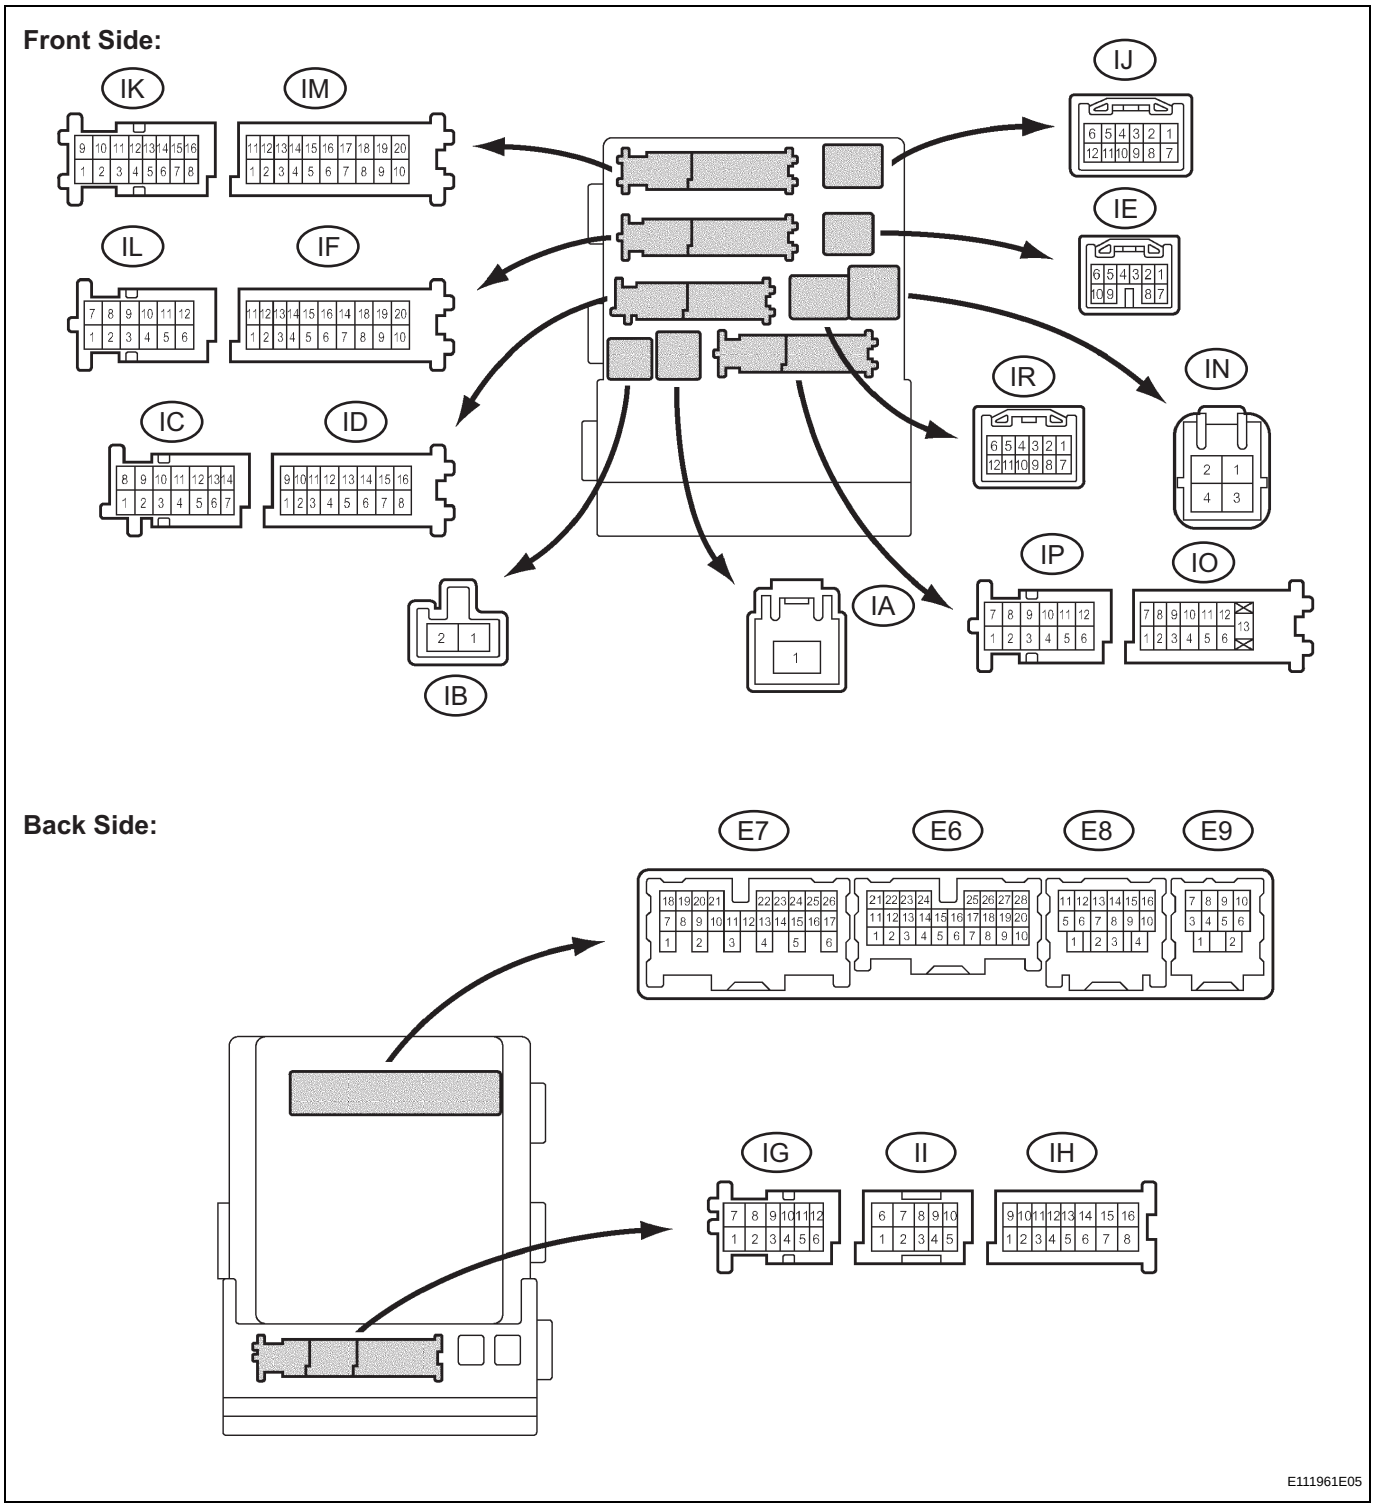
Symptom	Suspected area	See page
Light auto turn off system does not operate normally	1. Light control switch circuit	LI-48
	2. Door courtesy switch circuit	LI-52
	3. Main body ECU (Instrument panel J/B)	-

16. Battery saving system:

Symptom	Suspected area	See page
Battery saving function does not operate	1. Door courtesy switch circuit	LI-52
	2. Main body ECU (Instrument panel J/B)	-

TERMINALS OF ECU

1. CHECK MAIN BODY ECU (INSTRUMENT PANEL J/B)



(a) Disconnect the IA, ID, IF and IM J/B connectors.
(b) Measure the voltage and resistance between the specified terminals of the wire harness side connectors and body ground.

Standard voltage

Symbols	Wiring Color	Terminal Description	Condition	Specified Condition
IA-1 - Body ground	B - Body ground	Battery power supply	Always	10 to 14 V

LI

Symbols	Wiring Color	Terminal Description	Condition	Specified Condition
ALTB (ID-16) - Body ground	W - Body ground	Generator power supply	Always	10 to 14 V

Standard resistance

Symbols	Wiring Color	Terminal Description	Condition	Specified Condition
GND1 (IF-10) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
GND2 (IM-9) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the IA, ID, IF, and IM J/B connectors.

(d) Measure the resistance and voltage between the specified terminals of the J/B connectors and body ground.

Standard resistance

Symbols	Wiring Color	Terminal Description	Condition	Specified Condition
CLTE (E6-18) - Body ground	BR - Body ground	Automatic light control ground	Always	Below 1 Ω

Standard voltage

Symbols	Wiring Color	Terminal Description	Condition	Specified Condition
PKB (IC-14) - Body ground (*3)	L - Body ground	Parking brake switch input	Parking brake switch ON	Below 1 V
			Parking brake switch OFF	10 to 14 V
HRLY (ID-3) - Body ground	P - Body ground	Headlight relay drive output	Light control switch in HEAD	Below 1 V
			Light control switch not in HEAD	10 to 14 V
DRL (ID-9) - Body ground	V - Body ground	High beam headlights drive output	Dimmer switch in HIGH or HIGH FLASH	Below 1 V
			Dimmer switch in LOW	10 to 14 V
HU (IG-5) - Body ground	LG - Body ground	Dimmer switch HIGH input	Dimmer switch in HIGH or HIGH FLASH	10 to 14 V
			Dimmer switch in LOW	Below 1 V
ILE (II-10) - Body ground (*2)	BR - Body ground	Interior light and ignition key cylinder light drive output	Interior light and ignition key cylinder light ON	Below 1 V
			Interior light and ignition key cylinder light OFF	10 to 14 V
PKB (IM-2) - Body ground (*4)	Y - Body ground	Parking brake switch input	Parking brake switch ON	Below 1 V
			Parking brake switch OFF (Released)	10 to 14 V
LCTY (IO-7) - Body ground	LG - Body ground	Rear left door courtesy switch input	Rear left door open	Below 1 V
			Rear left door closed	10 to 14 V
LSR (IP-5) - Body ground (*2)	GR - Body ground	Rear left door lock position switch input	Rear left door locked	10 to 14 V
			Rear left door unlocked	Below 1 V
LSWL (IP-5) - Body ground (*2)	GR - Body ground	Rear left door lock position switch input	Rear left door locked	10 to 14 V
			Rear left door unlocked	Below 1 V
HEAD (E6-17) - Body ground	P - Body ground	Light control switch HEAD input	Light control switch in HEAD	Below 1 V
			Light control switch not in HEAD	10 to 14 V

Symbols	Wiring Color	Terminal Description	Condition	Specified Condition
CLTS (E6-19) - Body ground	G - Body ground	Automatic light control sensor signal input	Ignition switch off	Below 1 V
			Automatic light control system operates	Pulse generation (See waveform 1)
CLTB (E6-20) - Body ground	B - Body ground	Automatic light control sensor power supply output	Ignition switch off	Below 1 V
			Ignition switch on (IG) and light control switch in AUTO	10 to 14 V
PCTY (E6-21) - Body ground	Y - Body ground	Passenger side door courtesy switch input	Passenger side door open	Below 1 V
			Passenger side door closed	10 to 14 V
LGCY (E6-25) - Body ground	W - Body ground	Luggage courtesy switch input	Luggage compartment door open	Below 1 V
			Luggage compartment door closed	10 to 14 V
LSWP (E6-27) - Body ground	LG - Body ground	Passenger side door lock position switch input	Passenger side door locked	10 to 14 V
			Passenger side door unlocked	Below 1 V
FFOG (E6-28) - Body ground	V - Body ground	Front fog light switch input	Front fog light switch ON	Below 1 V
			Front fog light switch OFF	10 to 14 V
LSWR (E6-5) - Body ground (*1)	V - Body ground	Rear right door lock position switch input	Rear right door locked	10 to 14 V
			Rear right door unlocked	Below 1 V
RCTY (E6-5) - Body ground (*2)	GR - Body ground	Rear right door courtesy switch input	Rear right door open	Below 1 V
			Rear right door closed	10 to 14 V
RCTY (E6-7) - Body ground (*1)	GR - Body ground	Rear right door courtesy switch input	Rear right door open	Below 1 V
			Rear right door closed	10 to 14 V
HF (E7-13) - Body ground	R - Body ground	Dimmer switch HIGH FLASH signal input	Dimmer switch in HIGH FLASH position	Below 1 V
			Dimmer switch not in HIGH FLASH position	10 to 14 V
SSW2 (E7-16) - Body ground (*1)	V - Body ground	Engine switch input	Engine switch not pushed	10 to 14 V
			Engine switch pushed	Below 1 V
SSW1 (E7-17) - Body ground (*1)	L - Body ground	Engine switch input	Engine switch not pushed	10 to 14 V
			Engine switch pushed	Below 1 V
A (E7-21) - Body ground	G - Body ground	Light control switch AUTO signal input	Light control switch in AUTO	Below 1 V
			Light control switch not in AUTO	10 to 14 V
ACCD (E7-22) - Body ground (*1)	W - Body ground	Accessory relay drive output	Ignition switch on (ACC)	Below 1 V
			Ignition switch off	10 to 14 V
TAIL (E7-23) - Body ground	B - Body ground	Light control switch TAIL signal input	Light control switch in TAIL or HEAD	Below 1 V
			Light control switch in neither TAIL nor HEAD	10 to 14 V
DCTY (E7-24) - Body ground	L - Body ground	Driver side door courtesy switch input	Driver side door open	Below 1 V
			Driver side door closed	10 to 14 V
IG1D (E7-3) - Body ground (*1)	P - Body ground	Ignition 1 relay drive output	Ignition switch on (IG)	Below 1 V
			Ignition switch off	10 to 14 V

Symbols	Wiring Color	Terminal Description	Condition	Specified Condition
FFGO (E7-4) - Body ground	R - Body ground	Front fog light relay drive output	Light control switch in HEAD and front fog light switch ON	Below 1 V
			Front fog light switch OFF	10 to 14 V
LSWD (E7-9) - Body ground	L - Body ground	Driver side door lock position switch input	Driver side door locked	10 to 14 V
			Driver side door unlocked	Below 1 V
CANH (E8-5) - Body ground	R - Body ground	Control system CAN communication	Ignition switch on (IG)	Pulse generation
			Ignition switch off	Below 1 V
CANL (E8-6) - Body ground	W - Body ground	Control system CAN communication	Ignition switch on (IG)	Pulse generation
			Ignition switch off	Below 1 V

If the result is not as specified, the main body ECU (Instrument panel J/B) may have a malfunction.

HINT:
If the ambient light becomes brighter, width A becomes narrower.

LI

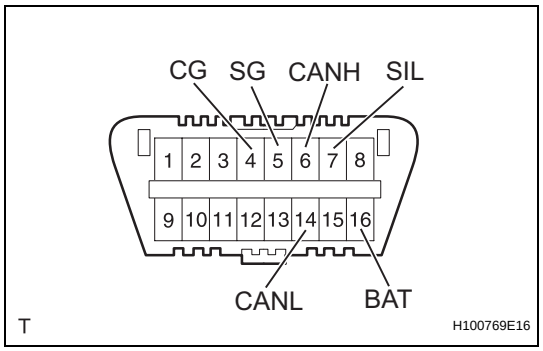
DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) Lighting system data and the Diagnostic Trouble Codes (DTCs) can be read from the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the intelligent tester to check for malfunctions and perform repairs.

2. CHECK DLC3

(a) The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

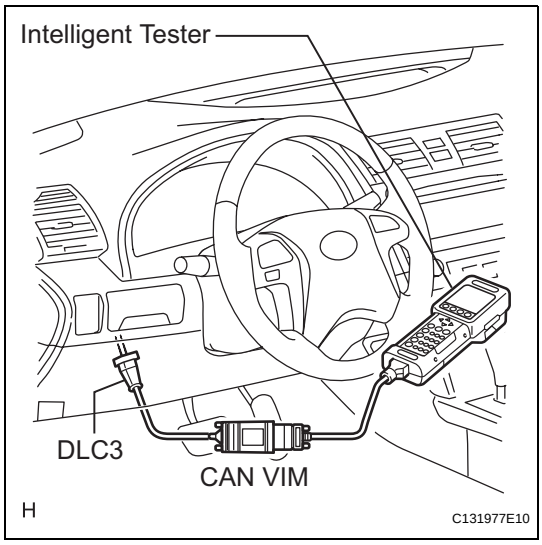


Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch off*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch off*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch off*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch off*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition switch off*	6 kΩ or higher

NOTICE:

***Before measuring the resistance, leave the vehicle as is for at least 1minute and do not operate the ignition switch, any other switches, or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.



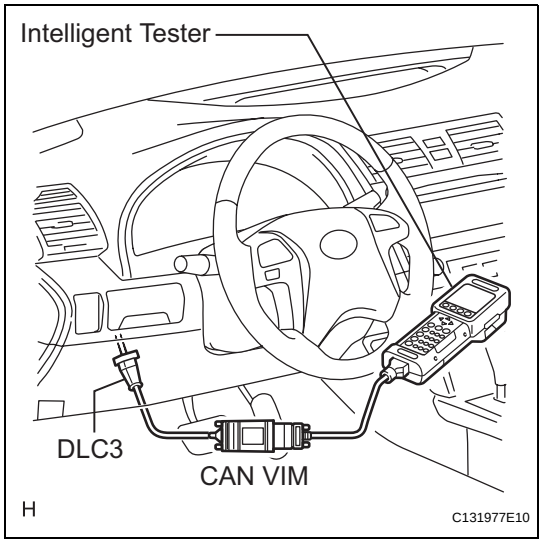
(b) Connect the cable of the intelligent tester to the DLC3, turn the ignition switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.
HINT:
- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.

3. INSPECT BATTERY VOLTAGE

Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.



DTC CHECK / CLEAR

1. CHECK DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Read the DTCs by following the directions on the tester screen.
HINT:
Please refer to the intelligent tester operator's manual for further details.

2. CLEAR DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Erase the DTCs by following the directions on the tester screen.
HINT:
Please refer to the intelligent tester operator's manual for further details.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the intelligent tester DATA LIST allows switch, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Read the DATA LIST according to the display on the tester.

MAIN BODY (MAIN BODY ECU):

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
ACC SW	Ignition switch or engine switch ACC signal / ON or OFF	ON: Ignition switch on (ACC or IG) OFF: Ignition switch off	-

TAIL LIGHT SW	Light control switch TAIL signal / ON or OFF	ON: Light control switch in TAIL or HEAD OFF: Light control switch not in TAIL or HEAD	-

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
ILLUMINATE RATE	Illumination rate information / 0 ms. to 99.99 ms.	0.8 ms. to 22.0 ms. (Value is output according to ambient illuminance)	-
PARKING BRAKE SW	Parking brake switch signal / ON or OFF	ON: Parking brake switch is ON OFF: Parking brake switch is OFF	-

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester ACTIVE TEST allows a relay, VSV, actuator, and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Perform the ACTIVE TEST according to the display on the tester.

MAIN BODY (MAIN BODY ECU):

Item	Test Details	Diagnostic Note
F FOG LIGHT RLY	Front fog light relay ON / OFF	-
HEAD LIGHT	Headlight relay ON / OFF	-
HEAD LIGHT (HI)	High beam headlights ON / OFF	-
TAIL LIGHT	Taillight ON / OFF	-
DIMMER SIG	Dimmer signal ON / OFF	-
ILLUMI OUTPUT	Interior light and ignition key cylinder light ON / OFF (Interior light switch in DOOR position and all doors are closed)	-

DIAGNOSTIC TROUBLE CODE CHART

LIGHTING SYSTEM:

DTC No.	Detection Item	Suspected Area	See page
B1244	Light Sensor Circuit Malfunction	1. Automatic light control sensor 2. Harness or connector 3. Main body ECU (Instrument panel J/B)	LI-23

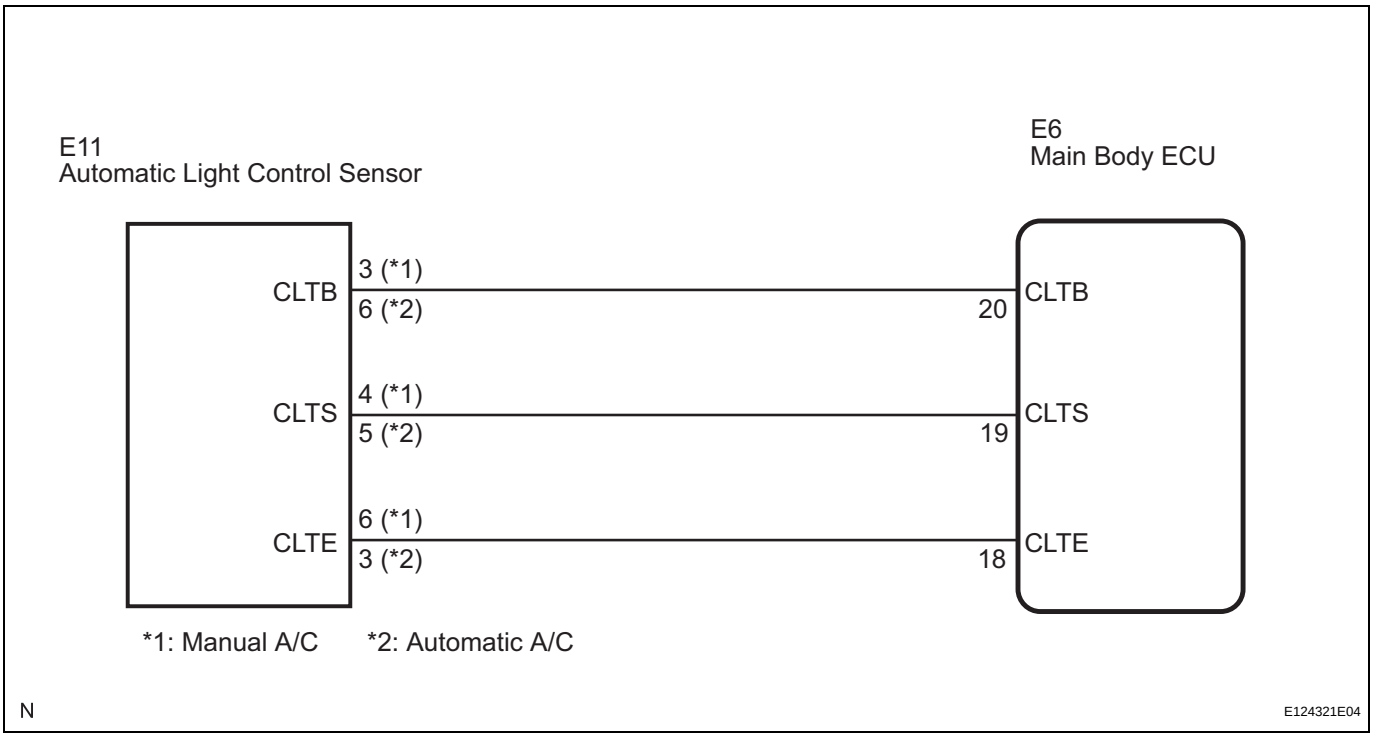
DTC	B1244	Light Sensor Circuit Malfunction

DESCRIPTION

The automatic light control sensor detects ambient light, converts it into an electrical signal, and outputs it to the main body ECU. The main body ECU turns on or off the headlights and taillights according to the signal.

DTC No.	DTC Detecting Condition	Trouble Area
B1244	• Malfunction in automatic light control sensor • Open or short in automatic light control sensor circuit	• Automatic light control sensor • Harness or connector • Main body ECU (Instrument panel J/B)

WIRING DIAGRAM



INSPECTION PROCEDURE

LI

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the intelligent tester main switch on.
(c) Select the item below in the DATA LIST, and read the display on the intelligent tester.

MAIN BODY (MAIN BODY ECU):

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
ILLUMINATE RATE	Illumination rate information / 0 ms to 99.99 ms	0.8 ms to 22.0 ms (Value is output according to ambient illuminance)	-

OK:

Normal condition listed above is displayed.

OK → **REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY**

NG

2 CHECK VEHICLE CONDITION

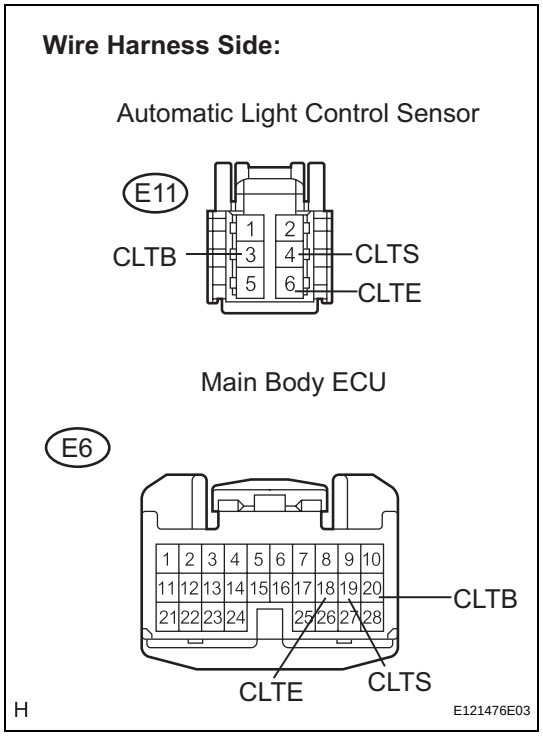
Result

Vehicle Condition	Proceed to
Manual Air Conditioning System	A
Automatic Air Conditioning System	B

B → **Go to step 6**

A

3 CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - AUTOMATIC LIGHT CONTROL SENSOR)



(a) Disconnect the E11 automatic light control sensor connector.
(b) Disconnect the E6 main body ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

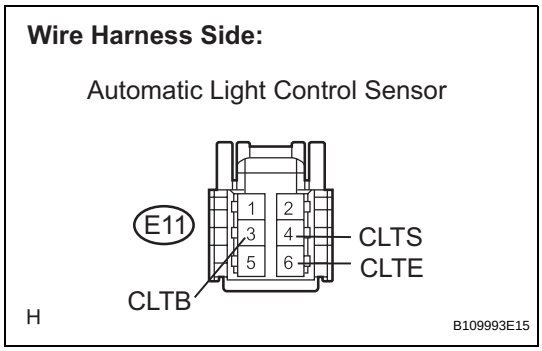
Tester Connection	Condition	Specified Condition
E6-18 (CLTE) - E11-6 (CLTE)	Always	Below 1 Ω
E6-19 (CLTS) - E11-4 (CLTS)	Always	Below 1 Ω
E6-20 (CLTB) - E11-3 (CLTB)	Always	Below 1 Ω
E6-18 (CLTE) - Body ground	Always	10 kΩ or higher
E6-19 (CLTS) - Body ground	Always	10 kΩ or higher
E6-20 (CLTB) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 INSPECT MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY)

(a) Reconnect the main body ECU connector.



(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E11-3 (CLTB) - E11-6 (CLTE)	Ignition switch off	Below 1 V
	Ignition switch on (IG)	10 to 14 V

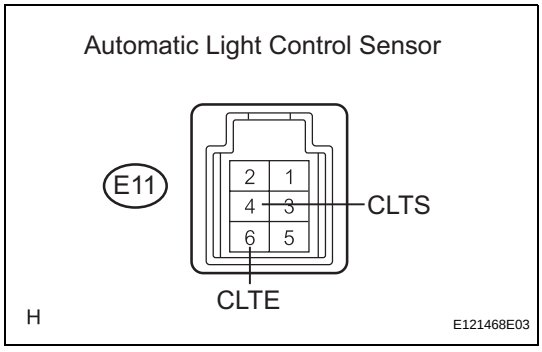
Standard resistance

Tester Connection	Condition	Specified Condition
E11-6 (CLTE) - Body ground	Always	Below 1 Ω

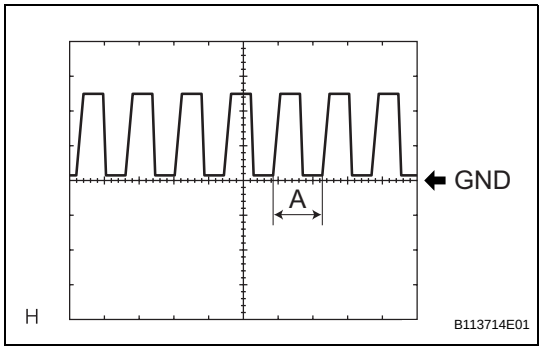
NG → **REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY**

OK

5 INSPECT AUTOMATIC LIGHT CONTROL SENSOR



(a) Reconnect the automatic light control sensor connector.
(b) Connect an oscilloscope to the automatic light control sensor connector.



(c) Check the waveform.

OK

Tester Connection	Tool Setting	Condition	Specified Condition
E11-6 (CLTE) - E11-4 (CLTS)	5 V/DIV., 5 ms./ DIV.	Ignition switch on (IG), light control switch in AUTO	Correct waveform is as shown

HINT:
If the ambient light becomes brighter, width A becomes narrower.

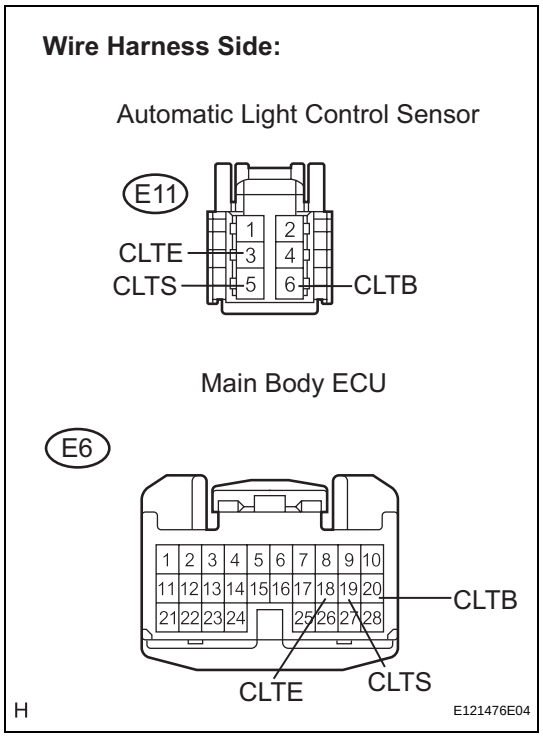
NG → **REPLACE AUTOMATIC LIGHT CONTROL SENSOR**

OK

REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

LI

6 CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - AUTOMATIC LIGHT CONTROL SENSOR)



(a) Disconnect the E11 automatic light control sensor connector.
(b) Disconnect the E6 main body ECU connector.

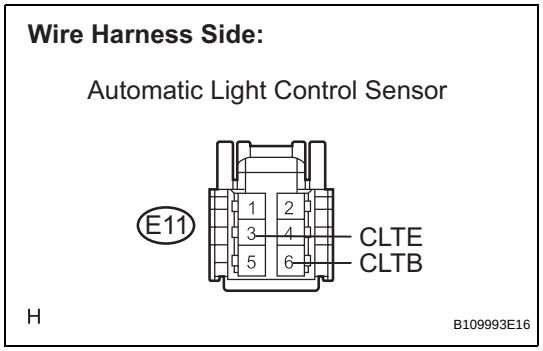
Standard resistance

Tester Connection	Condition	Specified Condition
E6-18 (CLTE) - E11-3 (CLTE)	Always	Below 1 Ω
E6-19 (CLTS) - E11-5 (CLTS)	Always	Below 1 Ω
E6-20 (CLTB) - E11-6 (CLTB)	Always	Below 1 Ω
E6-18 (CLTE) - Body ground	Always	10 kΩ or higher
E6-19 (CLTS) - Body ground	Always	10 kΩ or higher
E6-20 (CLTB) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

7 INSPECT MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY)



(a) Reconnect the main body ECU connector.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E11-6 (CLTB) - E11-3 (CLTE)	Ignition switch off	Below 1 V
E11-6 (CLTB) - E11-3 (CLTE)	Ignition switch on (IG)	10 to 14 V

Standard resistance

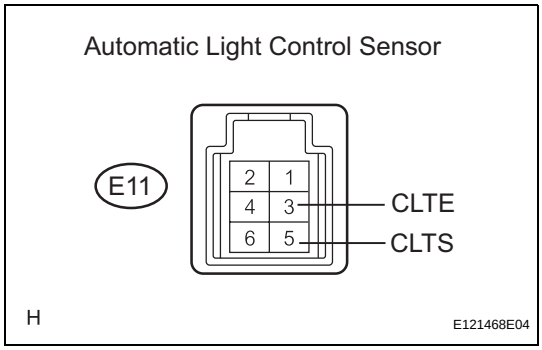
Tester Connection	Condition	Specified Condition
E11-3 (CLTE) - Body ground	Always	Below 1 Ω

NG → **REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY**

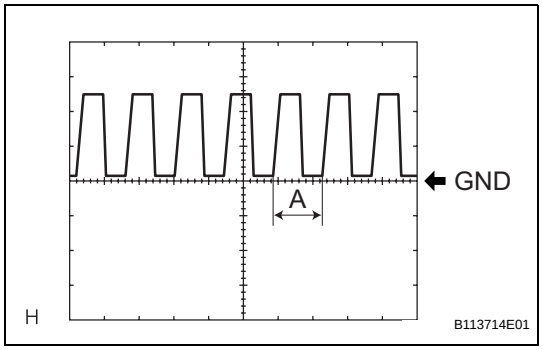
OK

LI

8	**INSPECT AUTOMATIC LIGHT CONTROL SENSOR**



(a) Reconnect the automatic light control sensor connector.
(b) Connect an oscilloscope to the automatic light control sensor connector.



(c) Check the waveform.
OK

Tester Connection	Tool Setting	Condition	Specified Condition
E11-3 (CLTE) - E11-5 (CLTS)	5 V/DIV., 5 ms./ DIV.	Ignition switch on (IG), light control switch in AUTO	Correct waveform is as shown

HINT:
If the ambient light becomes brighter, width A becomes narrower.

NG → **REPLACE AUTOMATIC LIGHT CONTROL SENSOR**

OK

REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

Ignition Switch Circuit

DESCRIPTION

This circuit detects the state of the ignition switch or engine switch, and sends it to the main body ECU.

WIRING DIAGRAM

without Smart Key System:

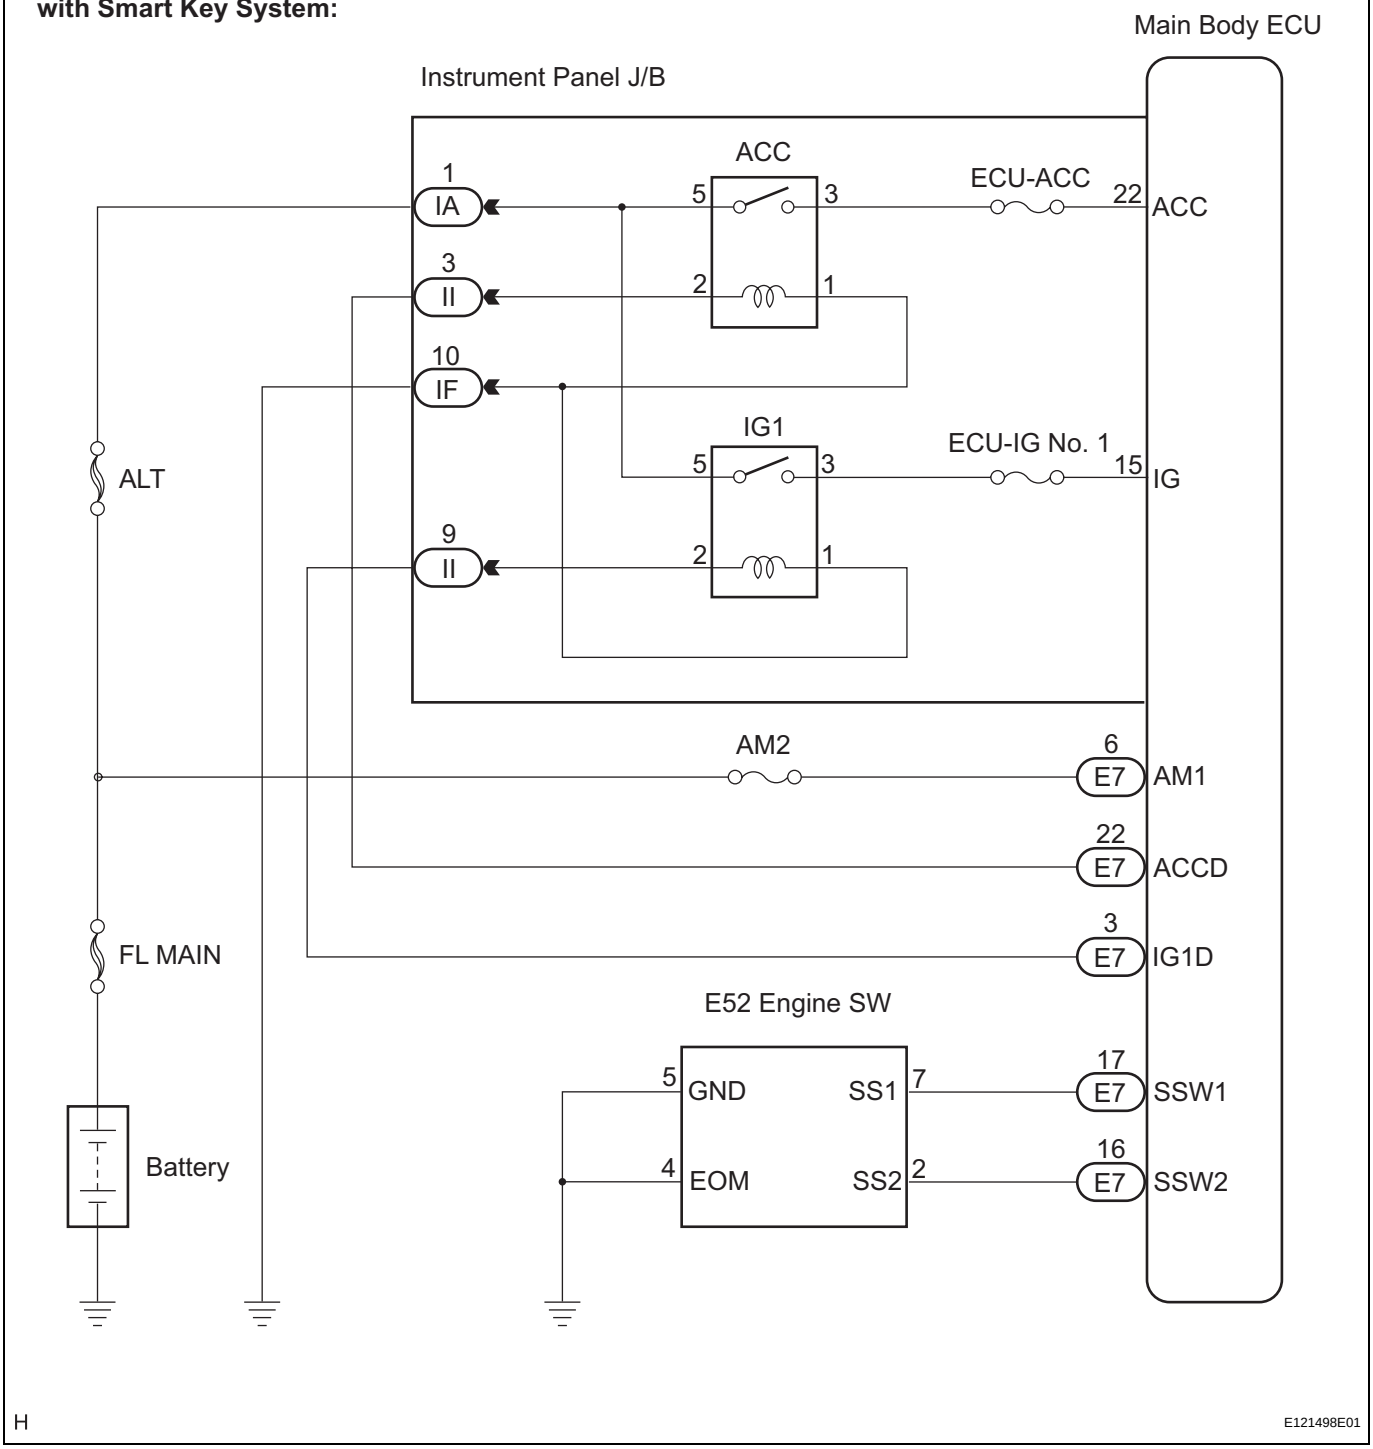
with Smart Key System:



INSPECTION PROCEDURE

1	**READ VALUE OF INTELLIGENT TESTER**

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the intelligent tester main switch on.

LI

(c) Select the items below in the DATA LIST, and read the display on the intelligent tester.

MAIN BODY (MAIN BODY ECU):

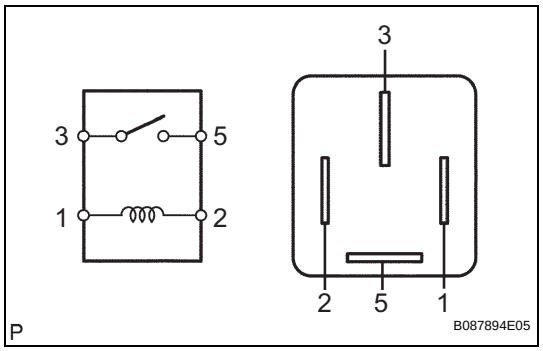
Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
ACC SW	Ignition switch or engine switch ACC signal / ON or OFF	ON: Ignition switch on (IG or ACC) OFF: Ignition switch off	-
IG SW	Ignition switch or engine switch IG signal / ON or OFF	ON: Ignition switch on (IG) OFF: Ignition switch off	-

OK:
Normal conditions listed above are displayed.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

2 INSPECT ACC RELAY



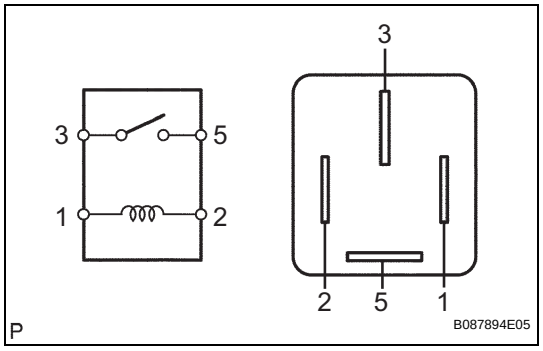
(a) Remove the ACC relay from the instrument panel J/B assembly.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
	Below 1 Ω (When battery voltage is applied to terminals 1 and 2)

NG → **REPLACE ACC RELAY**

OK

3 INSPECT NO. 1 IGNITION RELAY



(a) Remove the No. 1 ignition relay from the instrument panel J/B assembly.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
	Below 1 Ω (When battery voltage is applied to terminals 1 and 2)

NG → **REPLACE NO. 1 IGNITION RELAY**

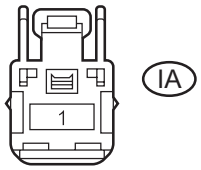
OK

LI

4	CHECK HARNESS AND CONNECTOR (INSTRUMENT PANEL J/B ASSEMBLY - BATTERY AND GROUND)

Wire Harness Side:

Instrument Panel J/B Assembly



H E121505E01

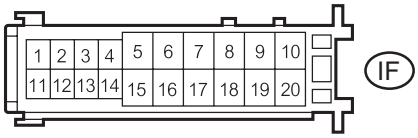
(a) Disconnect the IA instrument panel J/B assembly connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
IA-1 - Body ground	Always	10 to 14 V

Wire Harness Side:

Instrument Panel J/B Assembly



H E121504E01

(c) Disconnect the IF instrument panel J/B assembly connector.
(d) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
IF-10 - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5	CHECK VEHICLE CONDITION

(a) Check the vehicle condition.

Result

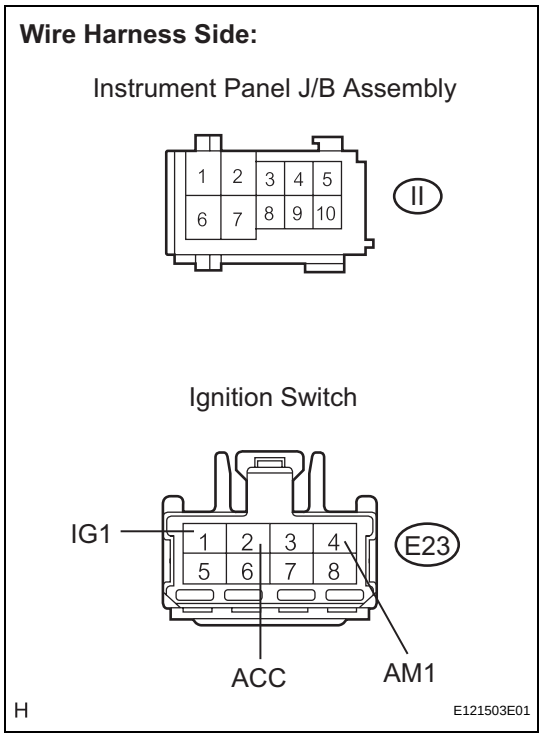
Condition	Proceed to
without Smart Key System	A
with Smart Key System	B

B → **Go to step 8**

A

LI

6	CHECK HARNESS AND CONNECTOR (INSTRUMENT PANEL J/B ASSEMBLY - IGNITION SWITCH)



(a) Disconnect the E23 ignition switch connector.
(b) Disconnect the II instrument panel J/B assembly connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
II-3 - E23-2 (ACC)	Always	Below 1 Ω
II-4 - E23-4 (AM1)	Always	Below 1 Ω
II-9 - E23-1 (IG1)	Always	Below 1 Ω
II-3 - Body ground	Always	10 kΩ or higher
II-4 - Body ground	Always	10 kΩ or higher
II-9 - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

7	INSPECT IGNITION SWITCH

(a) Inspect the ignition switch (See page ST-155)

OK:

Ignition switch is normal.

NG → **REPLACE IGNITION SWITCH**

OK

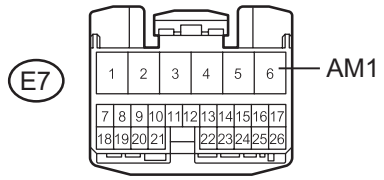
REPLACE INSTRUMENT PANEL J/B ASSEMBLY

LI

8 CHECK HARNESS AND CONNECTOR (BATTERY - MAIN BODY ECU)

Wire Harness Side:

Main Body ECU



H E121506E01

(a) Disconnect the E7 main body ECU connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E7-6 (AM1) - Body ground	Always	10 to 14 V

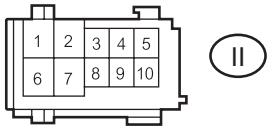
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

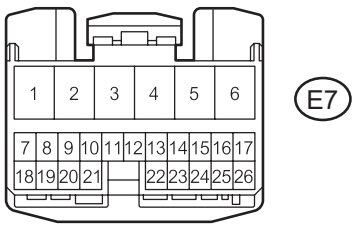
9 CHECK HARNESS AND CONNECTOR (INSTRUMENT PANEL J/B ASSEMBLY - MAIN BODY ECU)

Wire Harness Side:

Instrument Panel J/B Assembly



Main Body ECU



H E121484E02

(a) Disconnect the E7 main body ECU connector.
(b) Disconnect the II instrument panel J/B assembly connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

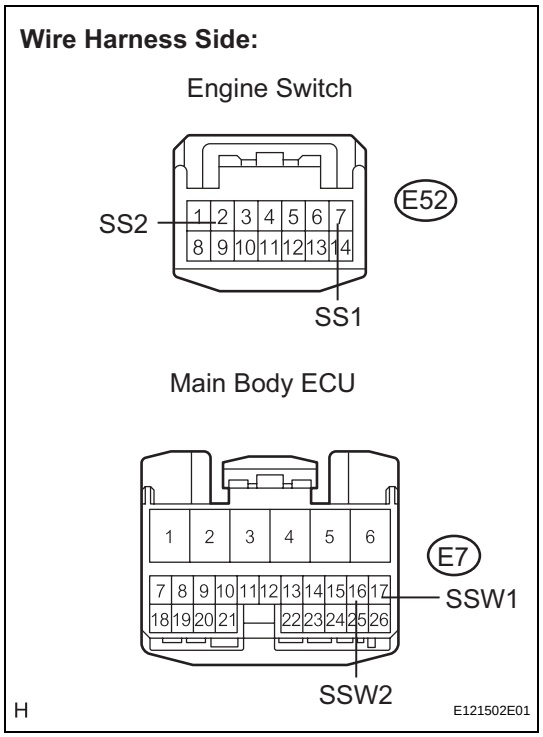
Tester Connection	Condition	Specified Condition
II-3 - E7-22 (ACCD)	Always	Below 1 Ω
II-9 - E7-3 (IG1D)	Always	Below 1 Ω
II-3 - Body ground	Always	10 kΩ or higher
II-9 - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

LI

10	CHECK HARNESS AND CONNECTOR (ENGINE SWITCH - MAIN BODY ECU AND BODY GROUND)



(a) Disconnect the E52 engine switch connector.
(b) Disconnect the E7 main body ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E52-7 (SS1) - E7-17 (SSW1)	Always	Below 1 Ω
E52-2 (SS2) - E7-16 (SSW2)	Always	Below 1 Ω
E52-5 (GND) - Body ground	Always	10 kΩ or higher
E52-4 (EOM) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

11	INSPECT ENGINE SWITCH

(a) Inspect the engine switch (See page ST-153).

OK:

Engine switch is normal.

NG → **REPLACE ENGINE SWITCH**

OK

REPLACE INSTRUMENT PANEL J/B ASSEMBLY

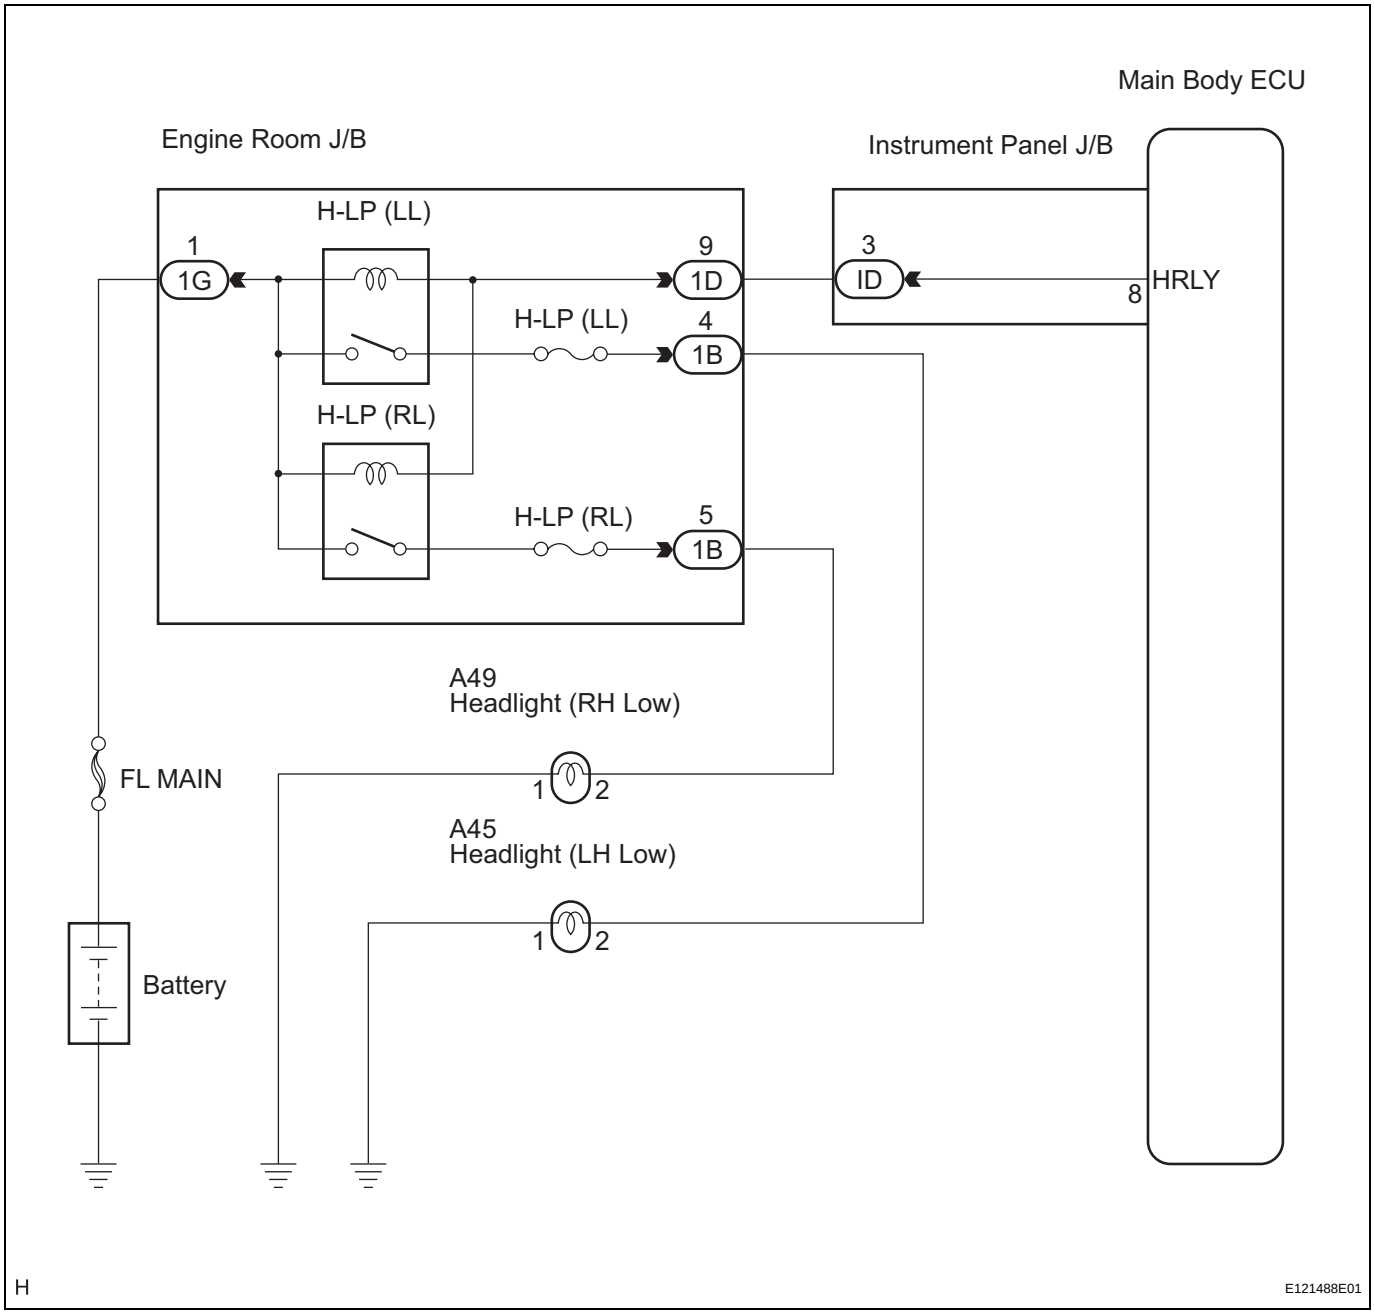
LI

Headlight Relay Circuit

DESCRIPTION

The main body ECU receives a light control switch HEAD signal from the headlight dimmer switch assembly, and turns the low beam headlights on. The headlight relay is installed in the power distributor (engine room J/B assembly).

WIRING DIAGRAM



INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.

(b) Turn the ignition switch on (IG) and turn the intelligent tester main switch on.
(c) Select the item below in the ACTIVE TEST and then check that the relay operates.

MAIN BODY (MAIN BODY ECU):

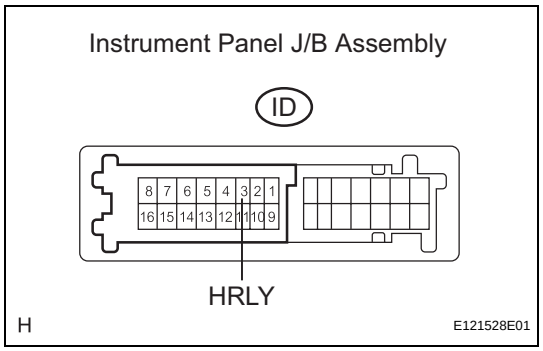
Item	Test Details	Diagnostic Note
HEAD RELAY	Headlight Relay ON / OFF	-

OK:
Headlight relay operates. (Low beam headlights illuminate.)

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

2 INSPECT INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY



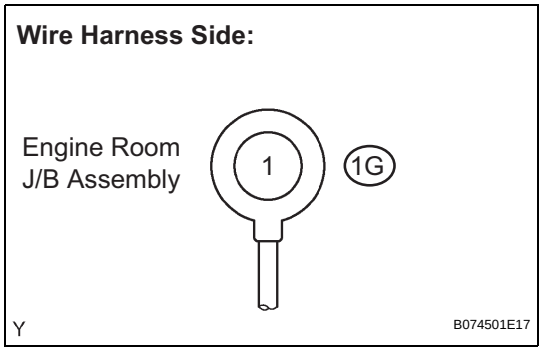
(a) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Condition	Specified Condition
ID-3 (HRLY) - Body ground	Light control switch OFF → HEAD	10 to 14 V → Below 1 V

OK → **Go to step 6**

NG

3 CHECK HARNESS AND CONNECTOR (BATTERY - ENGINE ROOM J/B ASSEMBLY)



(a) Disconnect the 1G engine room J/B assembly connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connector	Condition	Specified Condition
1G - Body ground	Always	10 to 14 V

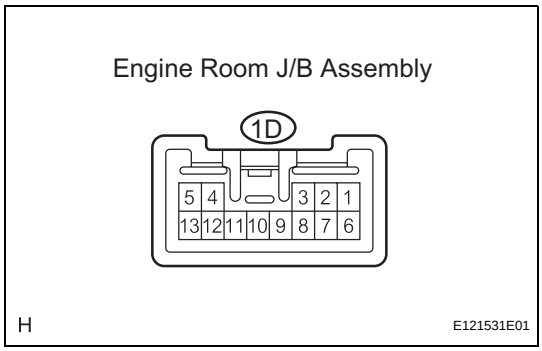
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 INSPECT ENGINE ROOM J/B BLOCK ASSEMBLY

(a) Reconnect the 1G engine room J/B assembly connector.

LI



(b) Disconnect the 1D engine room J/B assembly connector.
(c) Measure the voltage according to the value(s) in the table below.

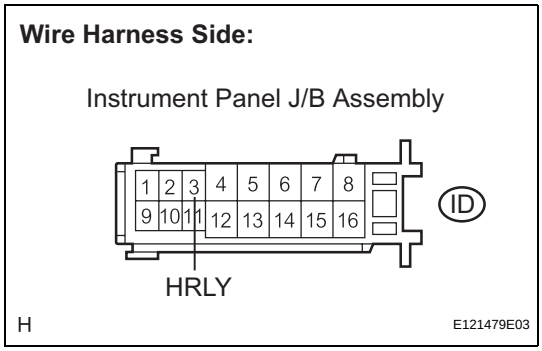
Standard voltage

Tester Connection	Condition	Specified Condition
1D-9 - Body ground	Always	10 to 14 V

NG → **REPLACE ENGINE ROOM JUNCTION BLOCK ASSEMBLY (POWER DISTRIBUTOR)**

OK

5	CHECK HARNESS AND CONNECTOR (ENGINE ROOM J/B ASSEMBLY - INSTRUMENT PANEL J/B ASSEMBLY)



(a) Reconnect the 1D engine room J/B assembly connector.
(b) Disconnect the ID instrument panel J/B assembly connector.
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

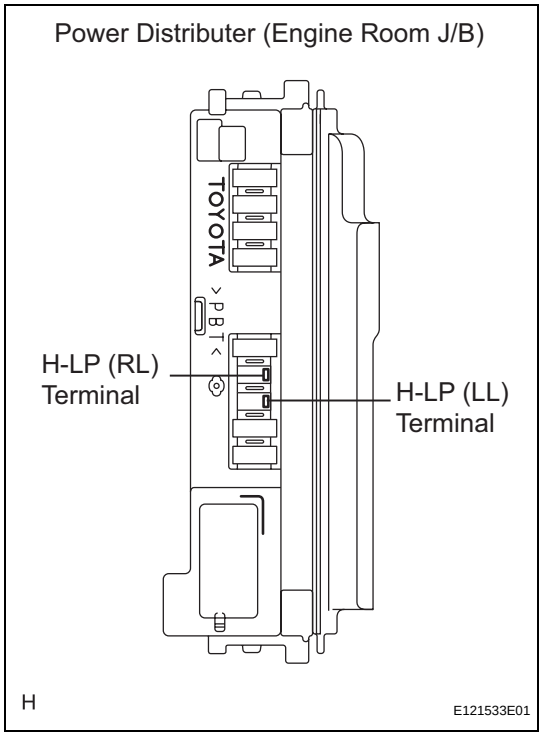
Tester Connection	Condition	Specified Condition
ID-3 (HRLY) - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

6	INSPECT ENGINE ROOM JUNCTION BLOCK ASSEMBLY



(a) Remove the H-LP (RL) fuse and H-LP (LL) fuse from the engine room J/B assembly.
(b) Measure the voltage between the loading slot of each fuse and body ground.

Standard voltage

Tester Connection	Condition	Specified Condition
H-LP (RL) Terminal - Body ground	Light control switch in HEAD	10 to 14 V
H-LP (LL) Terminal - Body ground	Light control switch in HEAD	10 to 14 V

NG → **REPLACE ENGINE ROOM JUNCTION BLOCK ASSEMBLY (POWER DISTRIBUTOR)**

OK

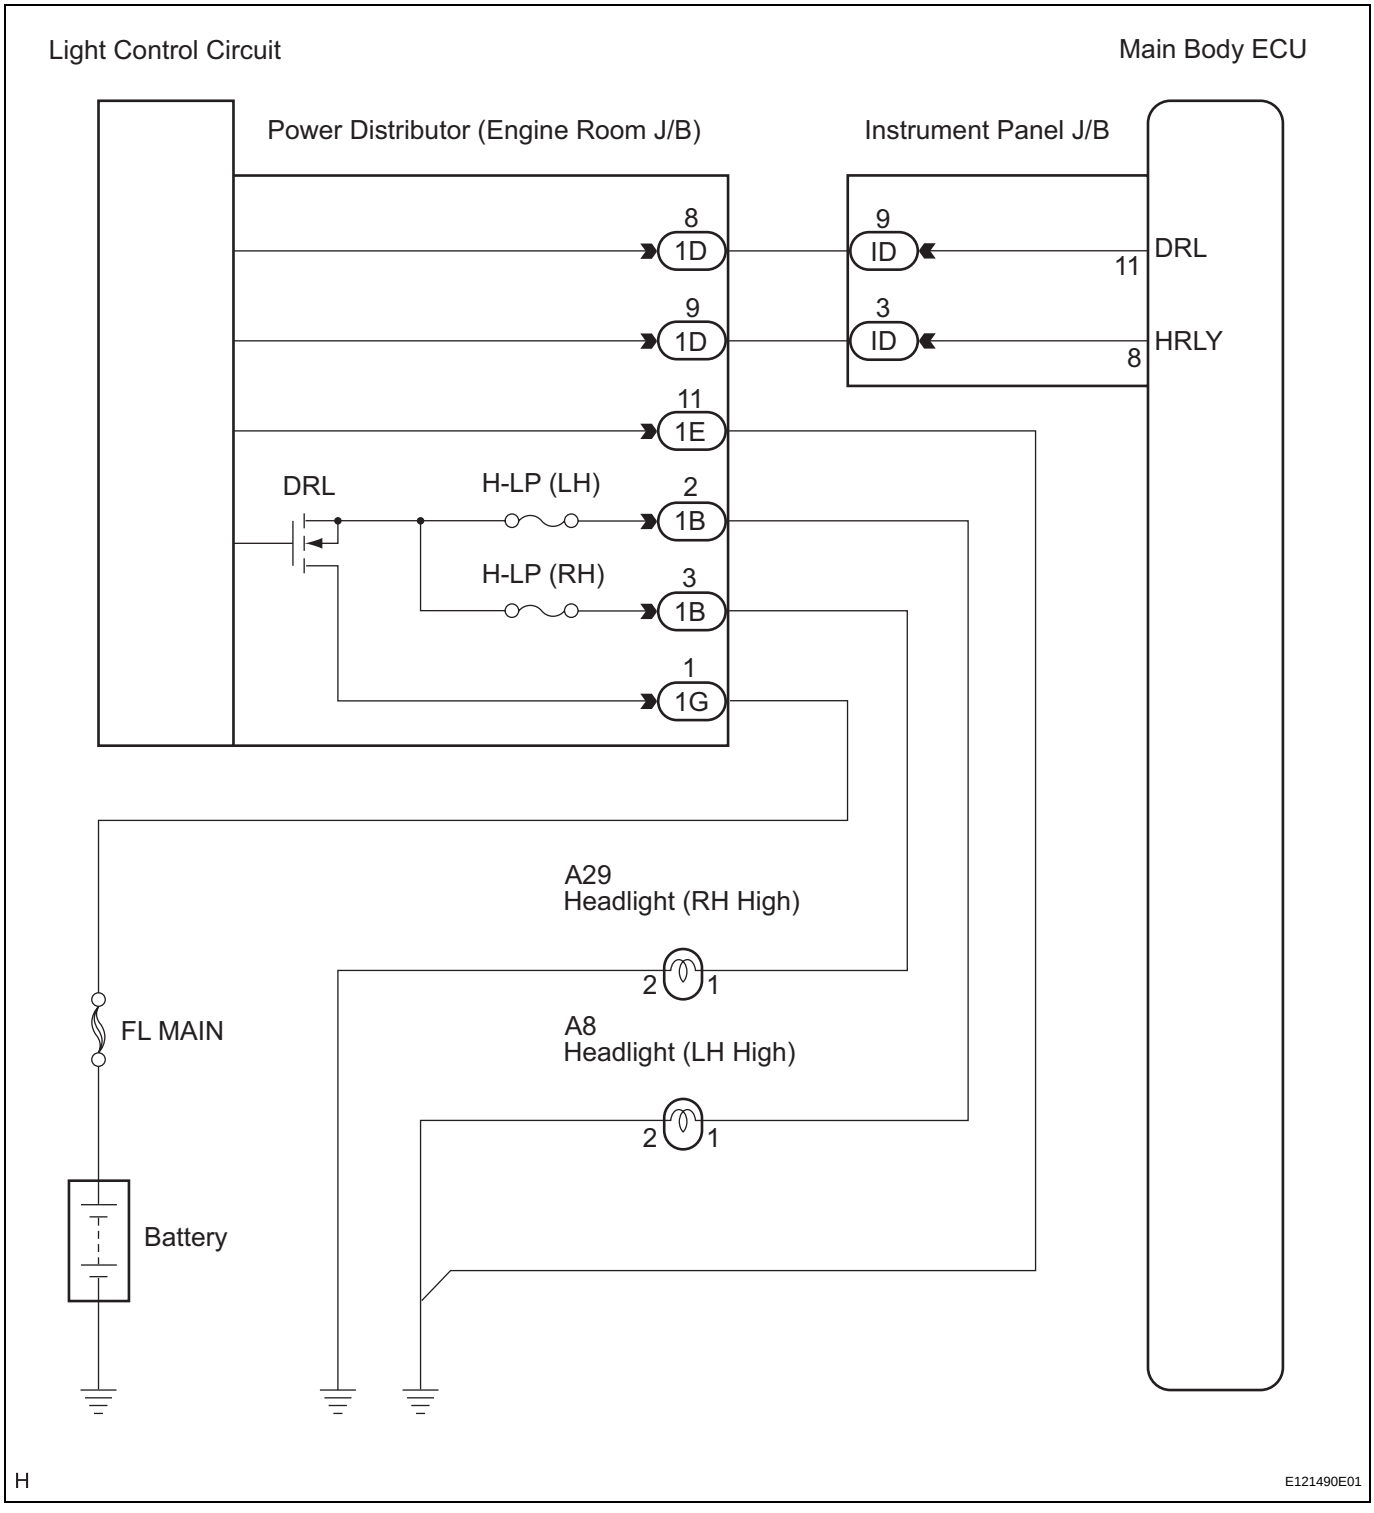
REPAIR OR REPLACE HARNESS OR CONNECTOR (FUSE - BODY GROUND)

Headlight (HI-BEAM) Circuit

DESCRIPTION

The main body ECU receives dimmer switch HIGH signal and light control switch HEAD signal from the headlight dimmer switch assembly, and turns the high beam headlights on.
HINT:
When a short circuit occurs between the power distributor (engine room J/B assembly) and high beam headlight, the power distributor stops the DRL relay operation (Fail-safe function).

WIRING DIAGRAM



LI

INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the intelligent tester main switch on.
(c) Select the item below in the ACTIVE TEST and then check that the relay operates.

MAIN BODY (MAIN BODY ECU):

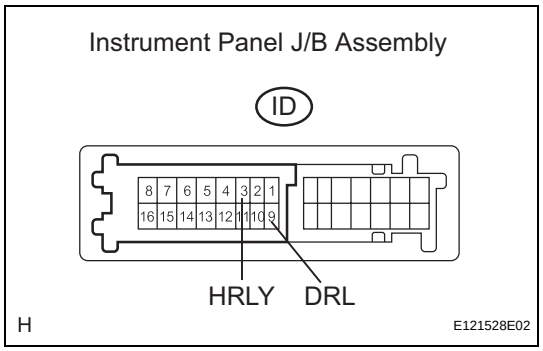
Item	Test Details	Diagnostic Note
HEAD LIGHT (HI)	High beam headlights ON / OFF	-

OK:
Relay operates. (High beam headlights illuminate.)

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

2	INSPECT INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY



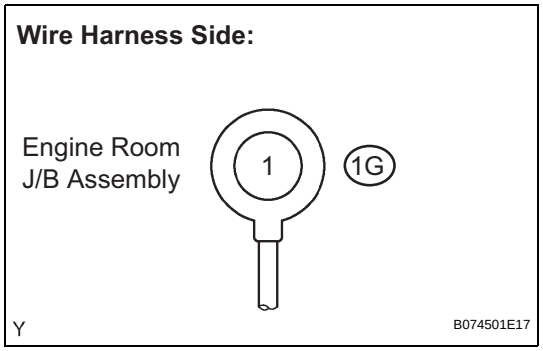
(a) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Condition	Specified Condition
ID-3 (HRLY) - Body ground	Light control switch OFF → HEAD	10 to 14 V → Below 1 V
ID-9 (DRL) - Body ground	Light control switch in HEAD, dimmer switch LOW → HIGH	10 to 14 V → Below 1 V

OK → **Go to step 6**

NG

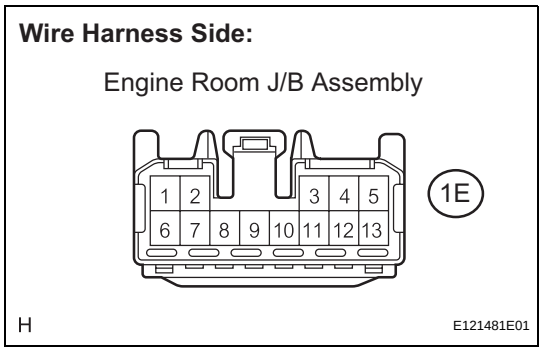
3	CHECK HARNESS AND CONNECTOR (ENGINE ROOM J/B ASSEMBLY - BATTERY AND BODY GROUND)



(a) Disconnect the 1G engine room J/B assembly connector.
(b) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Condition	Specified Condition
1G-1 - Body ground	Always	10 to 14 V

LI



(c) Disconnect the 1E engine room J/B assembly connector.
(d) Measure the resistance according to the value(s) in the table below.

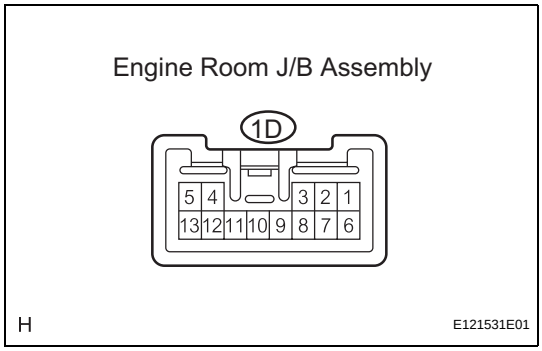
Standard resistance

Tester Connection	Condition	Specified Condition
1E-11 - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 INSPECT ENGINE ROOM JUNCTION BLOCK ASSEMBLY



(a) Reconnect the 1G and 1E engine room J/B assembly connectors.
(b) Disconnect the 1D engine room J/B assembly connector.
(c) Measure the voltage according to the value(s) in the table below.

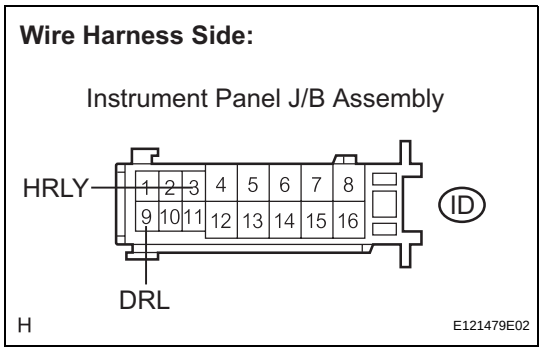
Standard voltage

Tester Connection	Condition	Specified Condition
1D-8 - Body ground	Always	10 to 14 V
1D-9 - Body ground	Always	10 to 14 V

NG → **REPLACE ENGINE ROOM JUNCTION BLOCK ASSEMBLY (POWER DISTRIBUTOR)**

OK

5 CHECK HARNESS AND CONNECTOR (ENGINE ROOM J/B ASSEMBLY - INSTRUMENT PANEL J/B ASSEMBLY)



(a) Reconnect the 1D engine room J/B assembly connector.
(b) Disconnect the ID instrument panel J/B connector.
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
ID-3 (DRL) - Body ground	Always	10 to 14 V
ID-9 (HRLY) - Body ground	Always	10 to 14 V

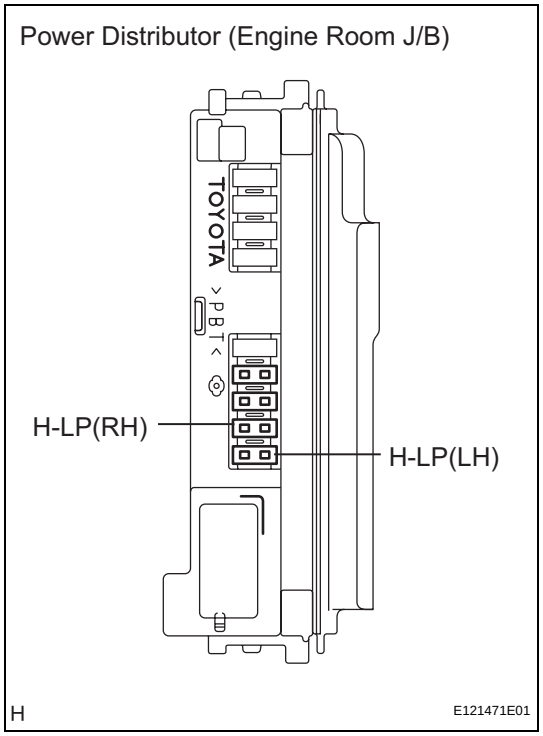
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

LI

6 CHECK HARNESS AND CONNECTOR (SHORT IN RELAY-DRIVEN CIRCUIT)



(a) Remove the H-LP (RH) fuse from the engine room J/B assembly.
(b) Turn the light control switch to the HEAD position and turn the dimmer switch to the HIGH position.
(c) Check if the high beam headlight LH illuminates.
(d) Turn the dimmer switch to the LOW position.
(e) Install the H-LP (RH) fuse and remove the H-LP (LH) fuse.
(f) Turn the dimmer switch to the HIGH position.
(g) Check if the high beam headlight RH illuminates.

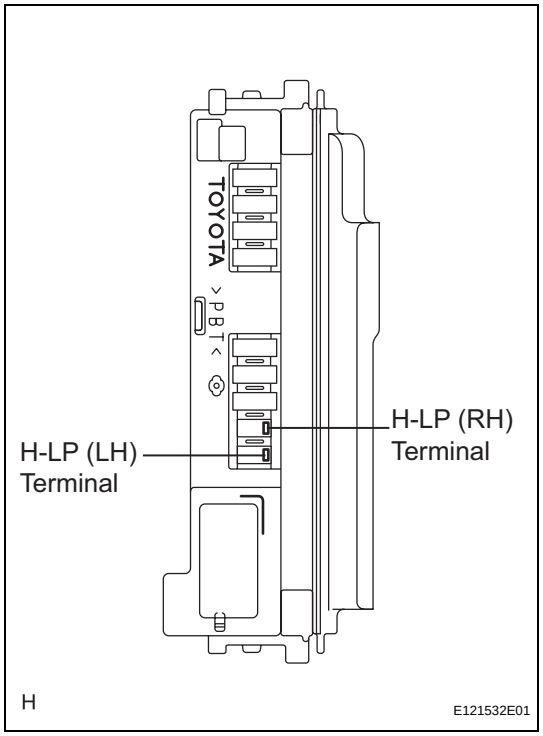
OK:

Either high beam headlight LH or RH illuminates.

OK → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SHORT CIRCUIT BETWEEN FUSE AND BULB)**

NG

7 INSPECT ENGINE ROOM JUNCTION BLOCK ASSEMBLY



(a) Remove the H-LP (RH) fuse and H-LP (LH) fuse from the engine room J/B assembly.
(b) Measure the voltage between the loading slot of each fuse and body ground.

Standard voltage

Tester Connection	Condition	Specified Condition
H-LP (RH) Terminal - Body ground	Light control switch in HEAD and dimmer switch in HIGH	10 to 14 V
H-LP (LH) Terminal - Body ground	Light control switch in HEAD and dimmer switch in HIGH	10 to 14 V

NG → **REPLACE ENGINE ROOM JUNCTION BLOCK ASSEMBLY (POWER DISTRIBUTOR)**

LI

OK

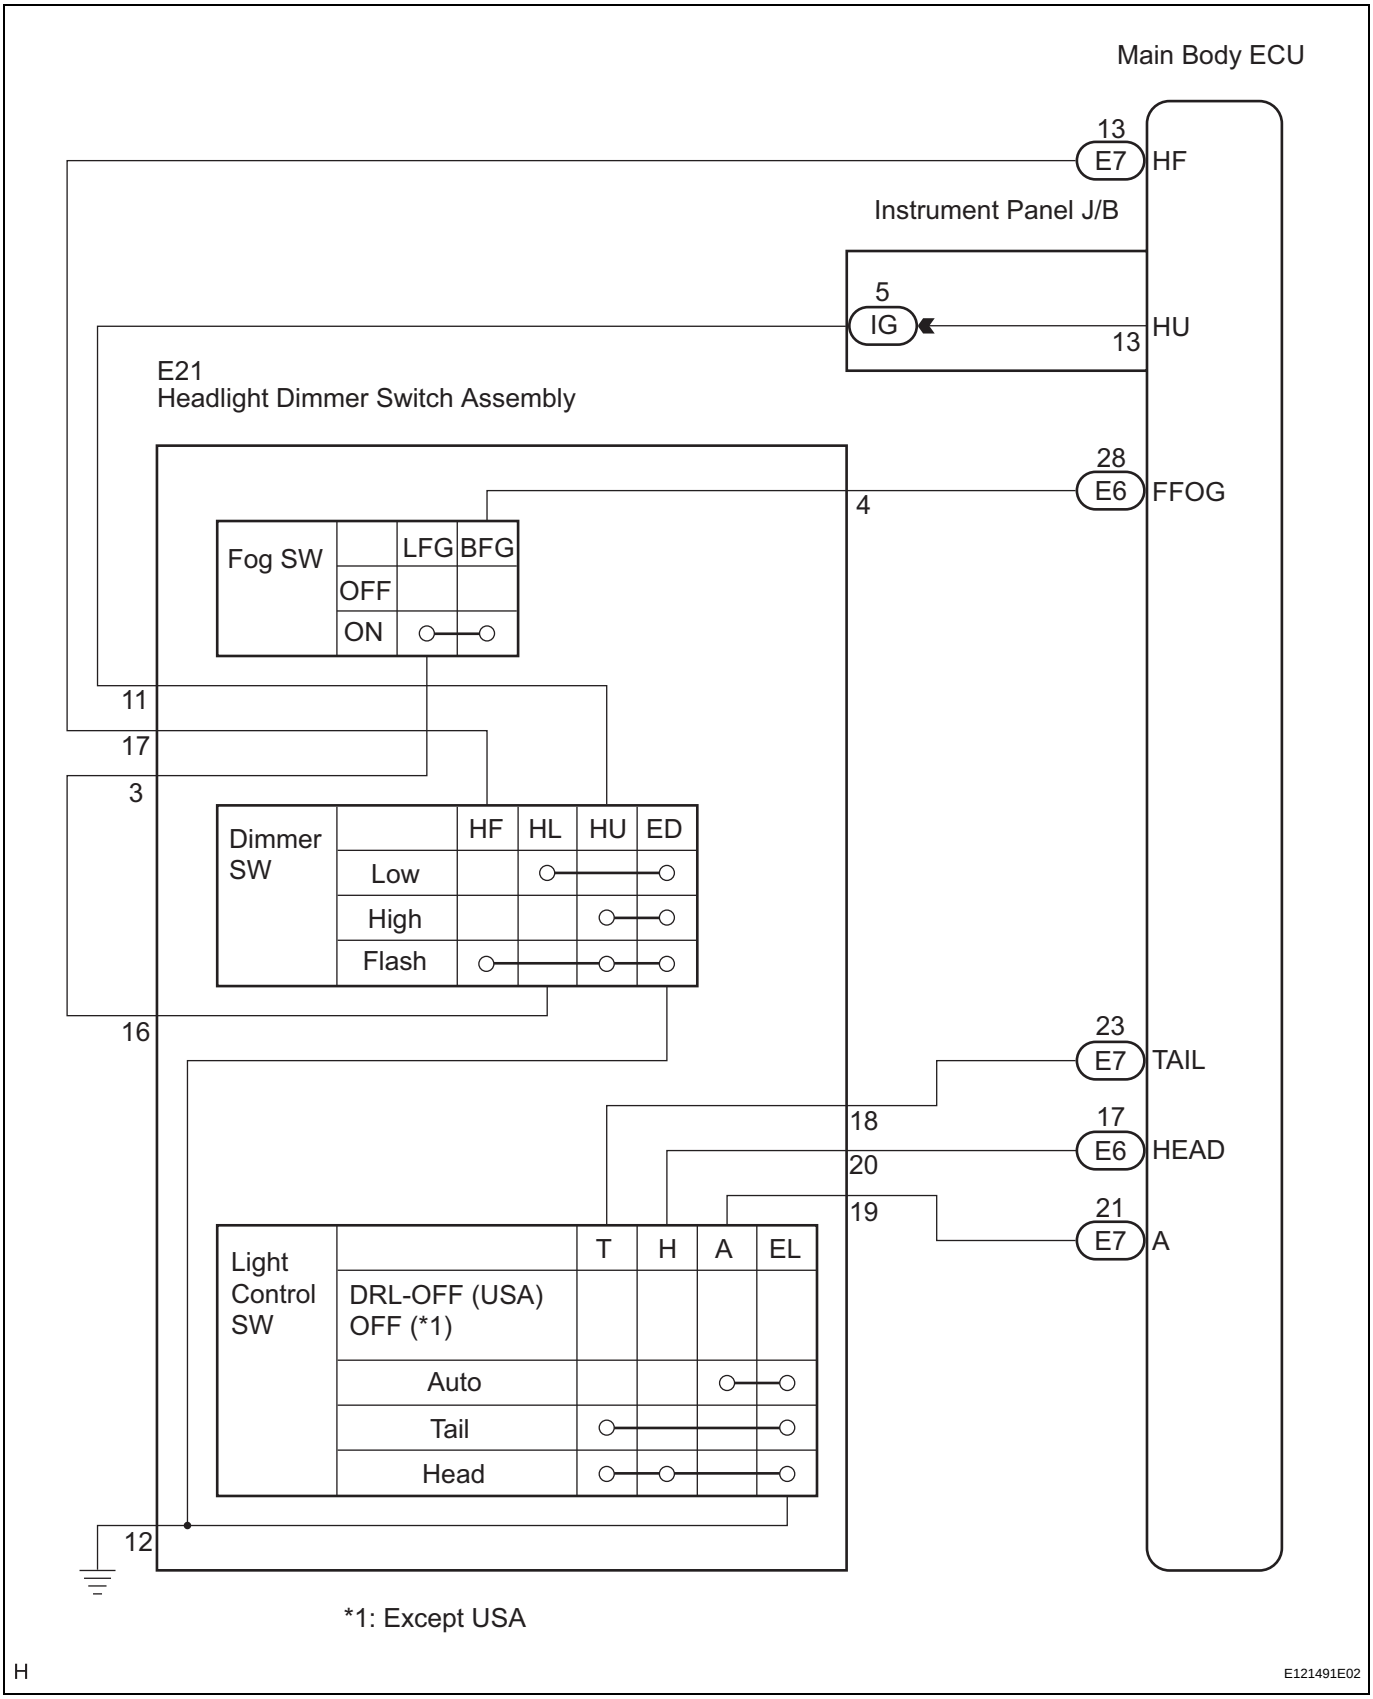
REPAIR OR REPLACE HARNESS OR CONNECTOR (OPEN CIRCUIT BETWEEN FUSE AND BODY GROUND)

Light Control Switch Circuit

DESCRIPTION

This circuit detects the condition of the headlight dimmer switch assembly.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the intelligent tester main switch on.
(c) Select the items below in the DATA LIST, and read the display on the intelligent tester.

MAIN BODY (MAIN BODY ECU):

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
DIMMER SW	Dimmer switch HIGH signal / ON or OFF	ON: Dimmer switch in HIGH or FLASH OFF: Dimmer switch in neither HIGH nor FLASH	-
HIGH FLASHER SW	Dimmer switch FLASH signal / ON or OFF	ON: Dimmer switch in FLASH OFF: Dimmer switch not in FLASH	-
F FOG LIGHT SW	Front fog light switch signal / ON or OFF	ON: Fog light switch ON OFF: Fog light switch OFF	-
AUTO LIGHT SW	Light control switch AUTO signal / ON or OFF	ON: Light control switch in AUTO OFF: Light control switch not in AUTO	-
HEAD LIGHT SW	Light control switch HEAD signal / ON or OFF	ON: Light control switch in HEAD OFF: Light control switch not in HEAD	-
TAIL LIGHT SW	Light control switch TAIL signal / ON or OFF	ON: Light control switch in TAIL or HEAD OFF: Light control switch in neither TAIL nor HEAD	-

OK:
Normal conditions listed above are displayed.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

2	INSPECT HEADLIGHT DIMMER SWITCH ASSEMBLY

(a) Inspect the headlight dimmer switch assembly (See page LI-120).
OK:
Headlight dimmer switch assembly is normal.

NG → **REPLACE HEADLIGHT DIMMER SWITCH ASSEMBLY**

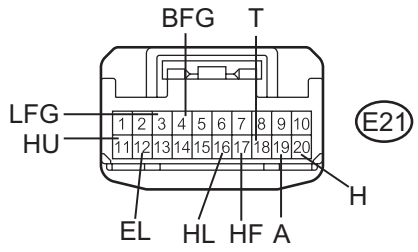
OK

LI

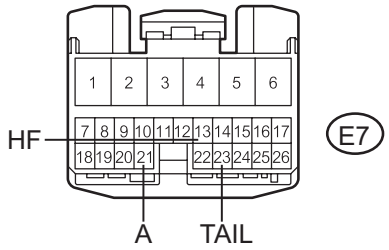
3	CHECK HARNESS AND CONNECTOR (INSTRUMENT PANEL J/B ASSEMBLY - SWITCH ASSEMBLY)

Wire Harness Side:

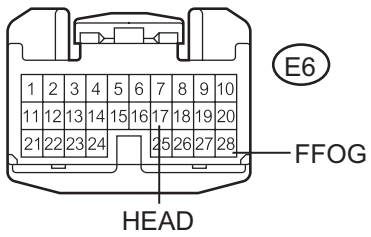
Headlight Dimmer Switch Assembly



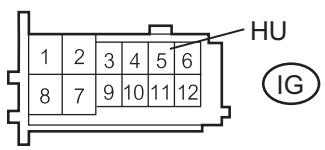
Main Body ECU



Main Body ECU



Instrument Panel J/B Assembly



H

E121507E02

(a) Disconnect the E21 headlight dimmer switch assembly connector.
(b) Disconnect the E6 and E7 main body ECU connectors.
(c) Disconnect the IG instrument panel J/B connector.
(d) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E21-3 (LFG) - E21-16 (HL)	Always	Below 1 Ω
E21-4 (BFG) - E6-28 (FFOG)	Always	Below 1 Ω
E21-11 (HU) - IG-5 (HU)	Always	Below 1 Ω
E21-17 (HF) - E7-13 (HF)	Always	Below 1 Ω
E21-18 (T) - E7-23 (TAIL)	Always	Below 1 Ω
E21-19 (A) - E7-21 (A)	Always	Below 1 Ω
E21-20 (H) - E6-17 (HEAD)	Always	Below 1 Ω
E21-3 (LFG) - Body ground	Always	10 kΩ or higher
E21-4 (BFG) - Body ground	Always	10 kΩ or higher
E21-11 (HU) - Body ground	Always	10 kΩ or higher
E21-17 (HF) - Body ground	Always	10 kΩ or higher
E21-18 (T) - Body ground	Always	10 kΩ or higher
E21-19 (A) - Body ground	Always	10 kΩ or higher
E21-20 (H) - Body ground	Always	10 kΩ or higher
E21-12 (EL) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

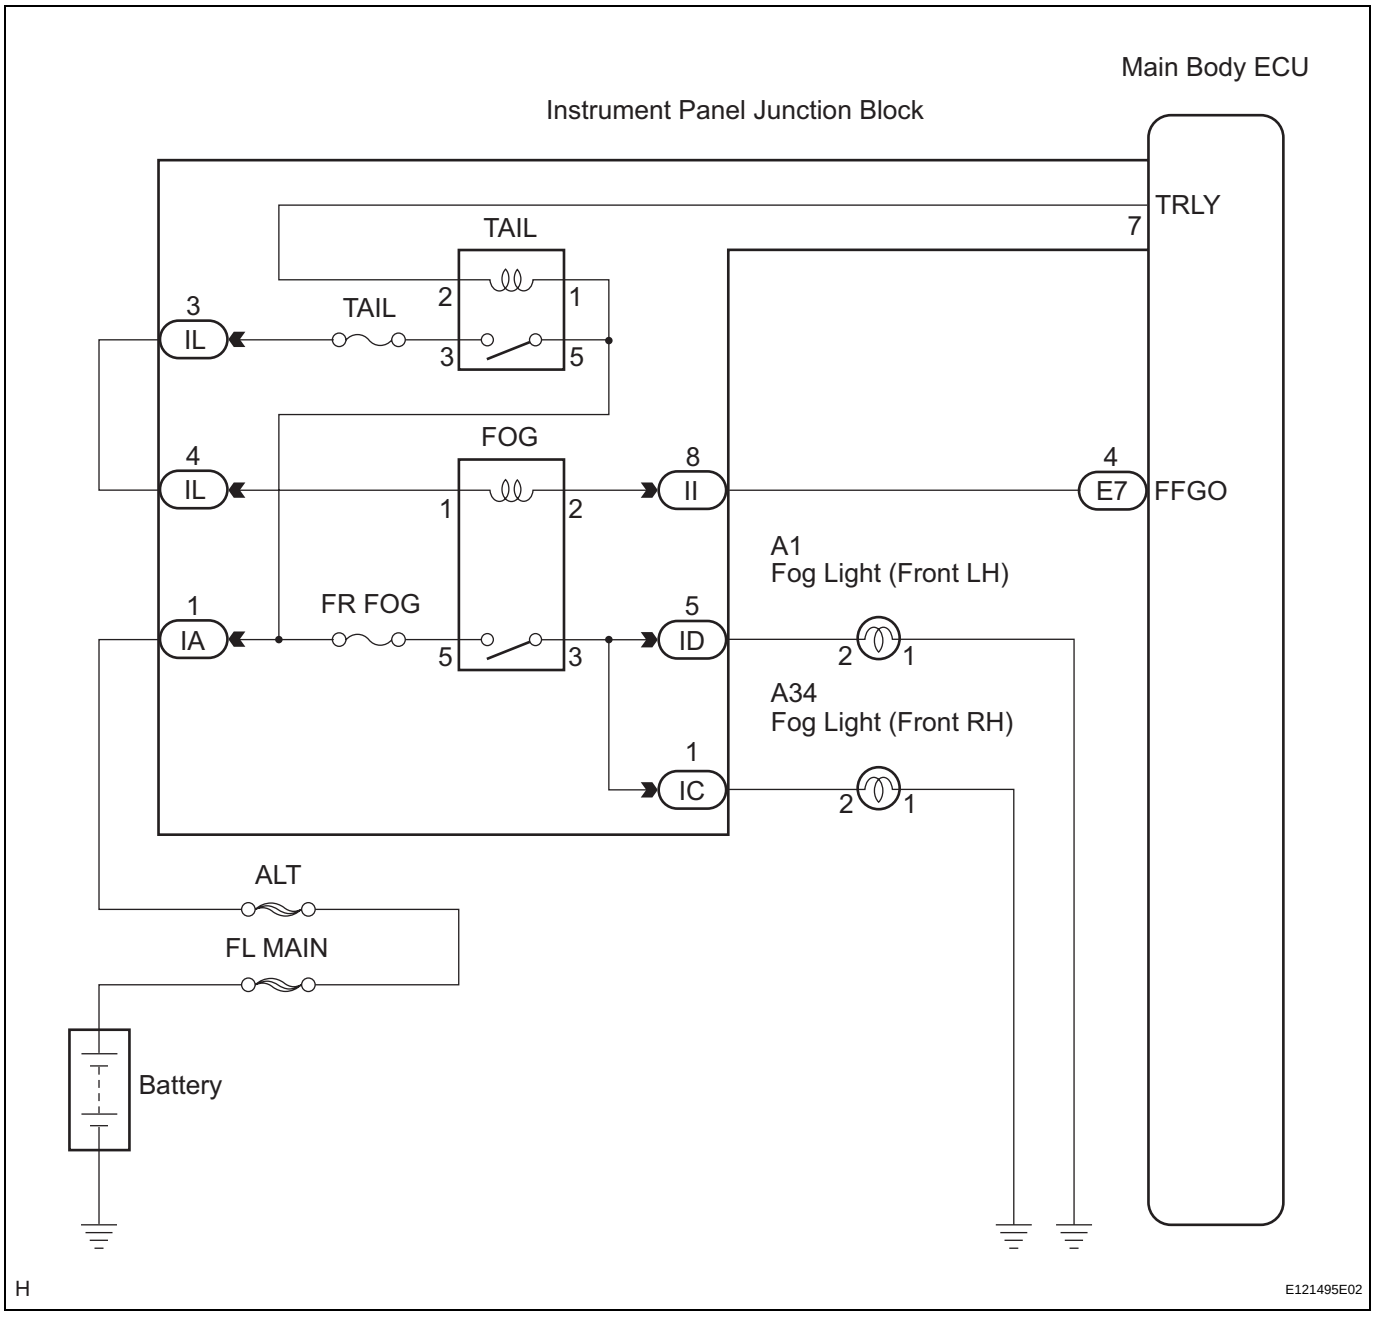
LI

Front Fog Light Circuit

DESCRIPTION

The main body ECU controls the FOG relay when a signal is received from the headlight dimmer switch assembly.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.

(b) Turn the ignition switch on (IG) and turn the intelligent tester main switch on.
(c) Select the item below in the ACTIVE TEST and then check that the relay operates.

MAIN BODY (MAIN BODY ECU):

Item	Test Details	Diagnostic Note
F FOG LIGHT RLY	Front fog light relay ON / OFF	-

OK:
Front fog light relay operates. (Front fog lights come on.)

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

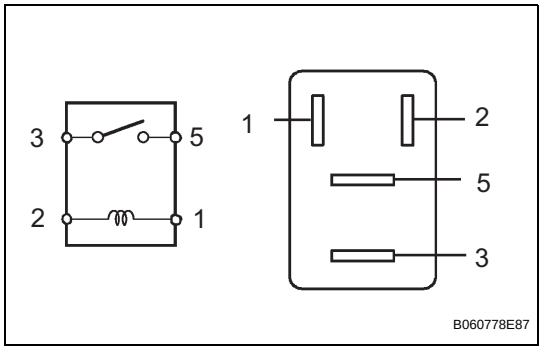
2 INSPECT FUSE (FR FOG)

(a) Remove the FR FOG fuse from the instrument panel J/B assembly.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

3 INSPECT FOG LIGHT RELAY



(a) Remove the front fog light relay from the instrument panel J/B assembly.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

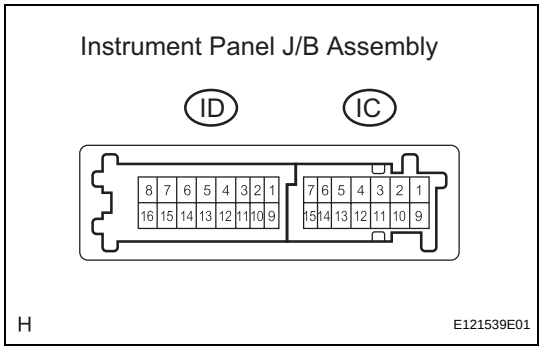
Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
	Below 1 Ω (When battery voltage is applied to terminals 1 and 2)

NG → **REPLACE FOG LIGHT RELAY**

OK

LI

4 INSPECT INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY



(a) Measure the voltage according to the value(s) in the table below.

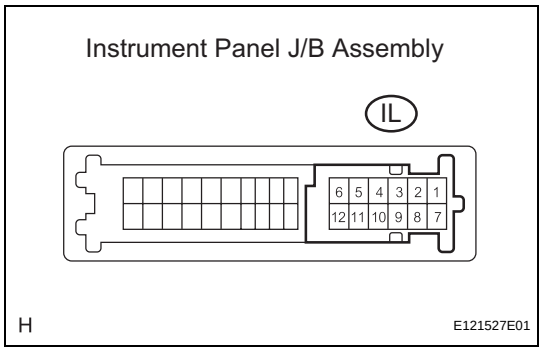
Standard voltage

Tester Connection	Condition	Specified Condition
IC-1 - Body ground	Light control switch in HEAD, front fog light switch OFF → ON	Below 1 V → 10 to 14 V
ID-5 - Body ground	Light control switch in HEAD, front fog light switch OFF → ON	Below 1 V → 10 to 14 V

OK → **REPAIR OR REPLACE HARNESS OR CONNECTOR (INSTRUMENT PANEL J/B ASSEMBLY - BODY GROUND)**

NG

5 INSPECT INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY



(a) Measure the voltage according to the value(s) in the table below.

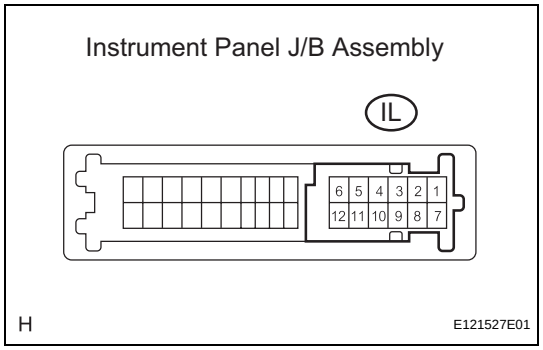
Standard voltage

Tester Connection	Condition	Specified Condition
IL-3 - Body ground	Light control switch OFF → TAIL	Below 1 V → 10 to 14 V

NG → **REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY**

OK

6 CHECK HARNESS AND CONNECTOR (BETWEEN CONNECTOR IL-3 AND CONNECTOR IL-4)



(a) Measure the voltage according to the value(s) in the table below.

Standard voltage

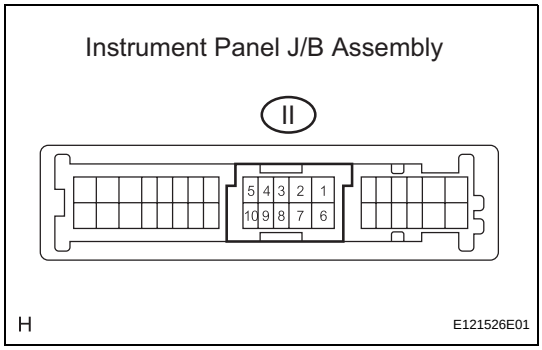
Tester Connection	Condition	Specified Condition
IL-4 - Body ground	Light control switch OFF → TAIL	Below 1 V → 10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

LI

7	**INSPECT INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY**



(a) Disconnect the II instrument panel J/B assembly connector.
(b) Measure the voltage according to the value(s) in the table below.

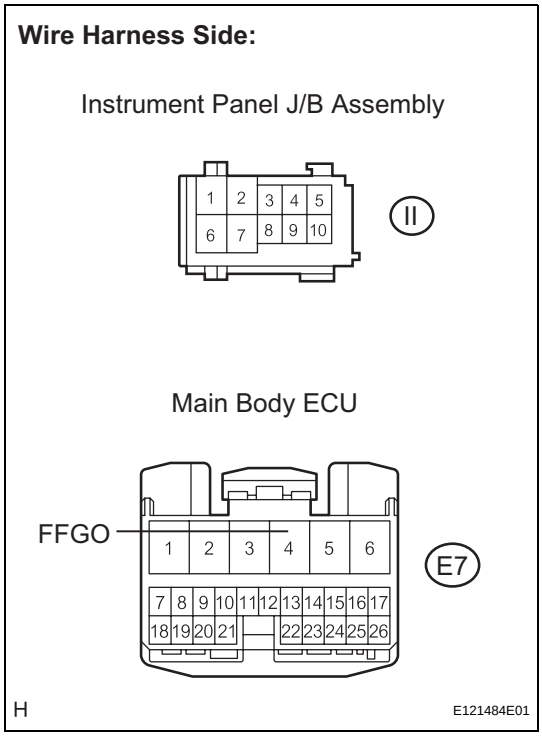
Standard voltage

Tester Connection	Condition	Specified Condition
II-8 - Body ground	Light control switch OFF → TAIL	Below 1 V → 10 to 14 V

NG → **REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY**

OK

8	**CHECK HARNESS AND CONNECTOR (BODY ECU - INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY)**



(a) Disconnect the E7 main body ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E7-4 - II-8	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

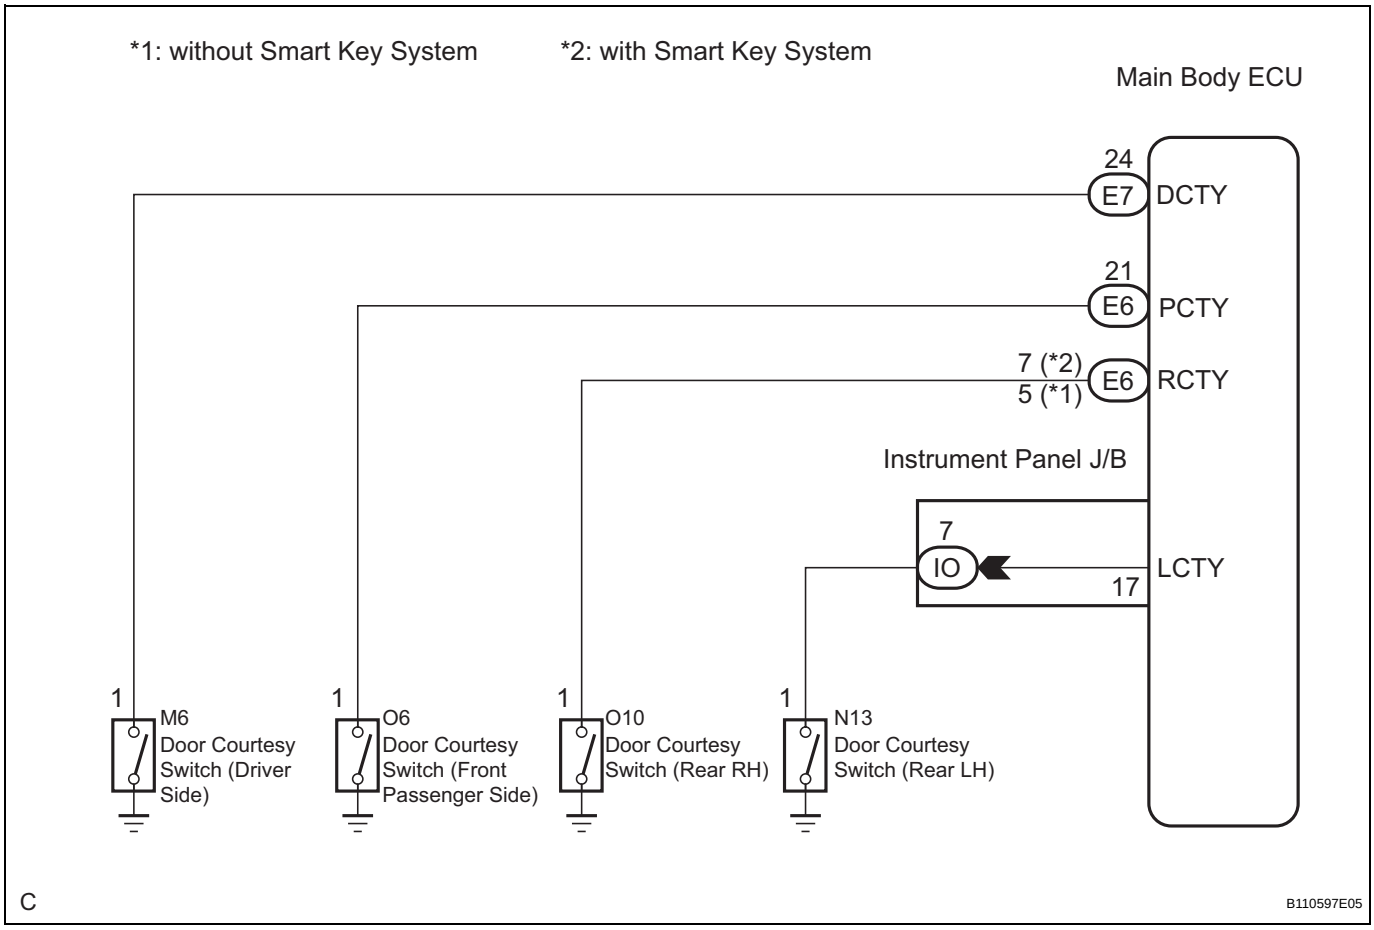
LI

Door Courtesy Switch Circuit

DESCRIPTION

The main body ECU detects the condition of the door courtesy switches.

WIRING DIAGRAM



INSPECTION PROCEDURE

LI

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the intelligent tester main switch on.
(c) Select the items below in the DATA LIST, and read the display on the intelligent tester.

MAIN BODY (MAIN BODY ECU):

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
D DOR CTY SW	Driver side door courtesy switch signal / ON or OFF	ON: Driver side door is open OFF: Driver side door is closed	-
P DOR CTY SW	Passenger side door courtesy switch signal / ON or OFF	ON: Passenger side door is open OFF: Passenger side door is closed	-
RR DOR CTY SW	Rear right door courtesy switch signal / ON or OFF	ON: Rear right door is open OFF: Rear right door is closed	-

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
RL DOR CTY SW	Rear left door courtesy switch signal / ON or OFF	ON: Rear left door is open OFF: Rear left door is closed	-

OK:
Normal conditions listed above are displayed.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

2 INSPECT DOOR COURTESY SWITCH

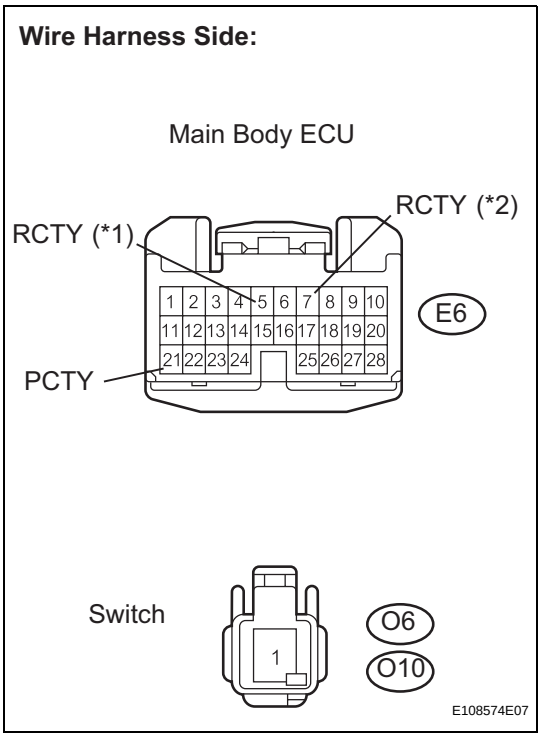
(a) Inspect the front door courtesy switch (See page LI-129).
(b) Inspect the rear door courtesy switch (See page LI-131).

OK:
Door courtesy switches are normal.

NG → **REPLACE DOOR COURTESY SWITCH**

OK

3 CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - DOOR COURTESY SWITCH)



(a) Check the harness and connector between the main body ECU and door courtesy switches (passenger side and rear RH).
(1) Disconnect the E6 main body ECU connector.
