CHARGING SYSTEM

PRECAUTION

1. **Check that the battery cables are connected to the correct terminals.**
2. **Disconnect the battery cables when the battery is given a quick charge.**
3. **Do not perform tests with a high voltage insulation resistance tester.**
4. **Never disconnect the battery while the engine is running.**
5. **Check that the charging cable nut is tightened on terminal B of the generator and the engine room R/B.**

PROBLEM SYMPTOMS TABLE

Result

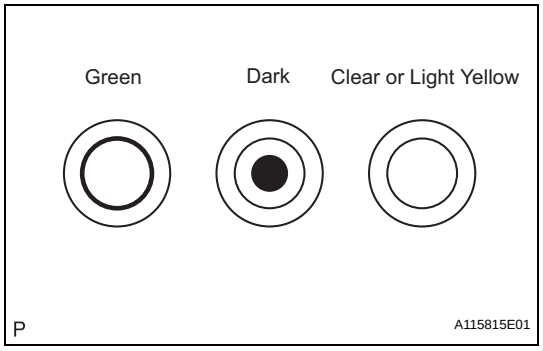
Symptom	Suspected area	See page
Charge Warning Light Comes ON while Driving	1. Clutch pulley	CH-7
	2. Generator assembly	
Noise Occurs from Generator while Engine is Running	1. V-ribbed belt	CH-8
	2. Clutch pulley	
	3. Generator assembly	

ON-VEHICLE INSPECTION

1. CHECK BATTERY ELECTROLYTE LEVEL

(a) Check the electrolyte level.

(1) If the electrolyte level is low, replace the battery (or add distilled water) and check the charging system.



2. CHECK BATTERY SPECIFIC GRAVITY

(a) Check the color of the indicator.

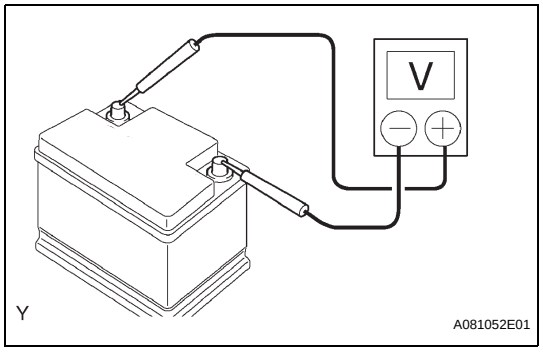
Result

Indicator color	Condition
Green	Good
Dark	Charging necessary
Clear or light yellow	Replacement necessary

3. CHECK BATTERY VOLTAGE

(a) If it has not been 20 minutes since you drove the vehicle or since the engine was stopped, turn the ignition switch to the ON position and turn on the electrical systems (headlight, blower motor, rear defogger, etc.) for 60 seconds. This will remove the surface charge from the battery.

(b) Turn off the ignition switch and the electrical systems.



(c) Measure the battery voltage between the negative (-) and positive (+) terminals of the battery.

Standard voltage:

12.5 to 12.9 V at 20°C (68°F)

HINT:

If the voltage is below the specification, charge the battery.

4. CHECK BATTERY TERMINAL

(a) Check that the battery terminals are not loose or corroded.

If the terminals are corroded, clean them.

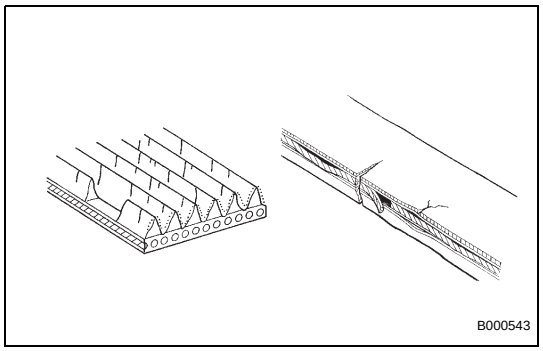
5. CHECK FUSES

(a) Measure the resistance of the ALT fuse, ALT-S fuse, GAUGE No. 1 fuse and GAUGE No. 2 fuse.

Standard resistance:

Below 1 Ω

If the result is not as specified, replace the fuses as necessary.

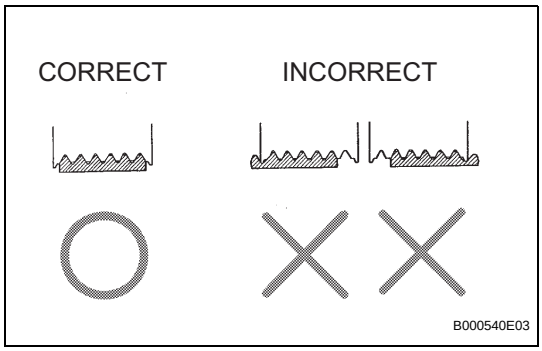


6. CHECK V-RIBBED BELT

(a) Check the belt for wear, cracks or other signs of damage.

If any of the following defects is found, replace the V-ribbed belt.

- The belt is worn out, cracked, or the cords are exposed.
- The cracks reach the cords in more than one place.
- The belt has chunks missing from the ribs.



(b) Check that the belt fits properly in the ribbed grooves.
HINT:
Check with your hand to confirm that the belt has not slipped out of the groove on the bottom of the pulley.
If it has slipped out, replace the V-ribbed belt. Install a new V-ribbed belt correctly.

7. VISUALLY CHECK GENERATOR WIRING

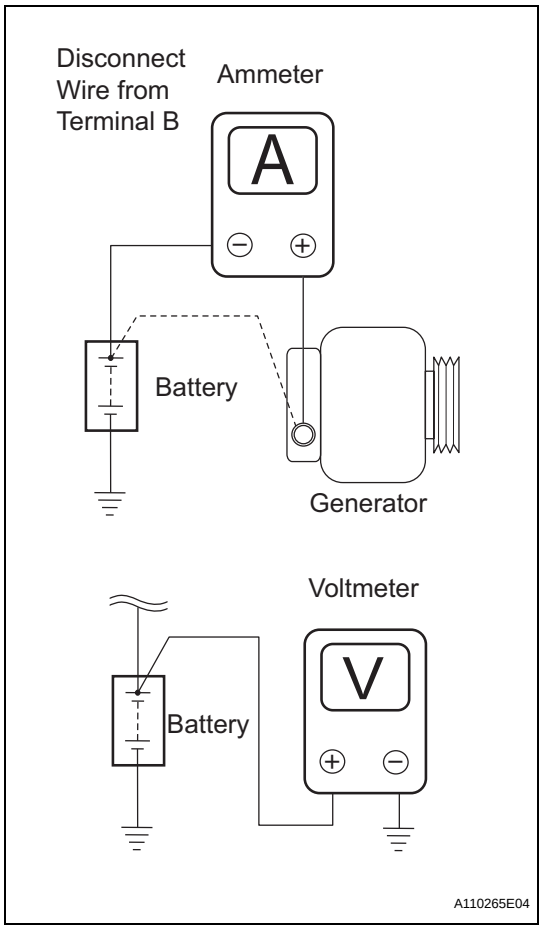
(a) Check that the generator wiring is in good condition.
If the condition is not good, repair or replace the generator wire.

8. LISTEN FOR ABNORMAL NOISES FROM GENERATOR

(a) Check that there is no abnormal noise from the generator while the engine is running.
If there is abnormal noise, replace the pulley or generator.

9. CHECK CHARGE WARNING LIGHT CIRCUIT

(a) Turn the ignition switch to the ON position. Check that the charge warning light comes on.
(b) Start the engine and check that the light goes off.
If the light does not operate as specified, troubleshoot the charge warning light circuit.



10. CHECK CHARGING CIRCUIT WITHOUT LOAD

(a) According to the following procedure, connect an ammeter and voltmeter as shown in the illustration.
(1) Disconnect the wire from terminal B of the generator and connect it to the negative (-) lead of the ammeter.
(2) Connect the positive (+) lead of the ammeter to terminal B of the generator.
(3) Connect the positive (+) lead of the voltmeter to positive (+) terminal of the battery.
(4) Ground the negative (-) lead of the voltmeter.
(b) Check the charging circuit.
(1) While keeping the engine speed at 2,000 rpm, check the readings on the ammeter and voltmeter.
Standard amperage:
10 A or less
Standard voltage:
13.2 to 14.8 V
If the results are not as specified, replace the generator assembly.
HINT:
- If the battery is not fully charged, the ammeter reading may be more than the standard amperage. In this case, increase electrical load by operating devices such as the wiper motor and rear window defogger. Then, recheck the reading on the ammeter.

11. CHECK CHARGING CIRCUIT WITH LOAD

(a) Keep the engine speed at 2,000 rpm, turn on the high beam headlights, and turn the heater blower switch to the "HI" position.

(b) Check the reading on the ammeter.

Standard amperage:

30 A or more

If the ammeter reading is less than the standard amperage, replace the generator assembly.

HINT:

- If the battery is fully charged, the ammeter reading may be less than the standard amperage. In this case, increase electrical load by operating devices such as the wiper motor and rear window defogger. Then, recheck the reading on the ammeter.

Charge Warning Light Comes ON while Driving

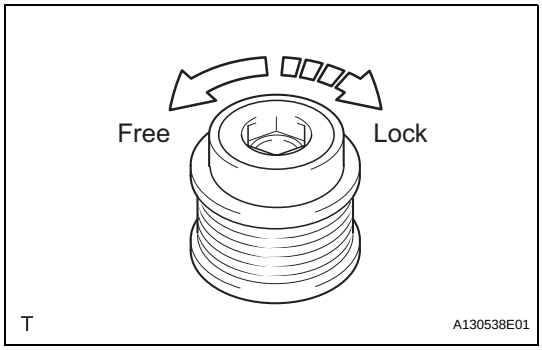
INSPECTION PROCEDURE

1	CHECK LOCK FUNCTION OF CLUTCH PULLEY

(a) Check the lock function with the pulley installed in the vehicle.
  (1) Visually check that the rotor in the generator operates with the engine started.

(b) Check the lock function with the pulley removed from the vehicle.
  (1) Remove the generator pulley cap. Using SST, hold the generator rotor.
  (2) Turn the clutch pulley clockwise and check that the outer ring locks.
  OK:
  The outer ring locks.

SST 09820-63020



NG → **REPLACE CLUTCH PULLEY**

OK

2	CHECK LOCK OF CLUTCH PULLEY

(a) Start the engine and visually check looseness of the clutch pulley.
  OK:
  The clutch pulley is not loose.

NG → **TIGHTEN CLUTCH PULLEY TO THE SPECIFIED TORQUE**

OK

REPLACE GENERATOR ASSEMBLY

Noise Occurs from Generator while Engine is Running

INSPECTION PROCEDURE

1 CHECK LOOSENESS OF V-RIBBED BELT

(a) Check the tension of the belt by pushing it down with a finger.
OK:
The tension of the belt is enough.

NG → **REPLACE V-RIBBED BELT TENSIONER ASSEMBLY**

OK ↓

2 CHECK V-RIBBED BELT FOR WEAR

(a) Check the V-ribbed belt for wear.
OK:
The V-ribbed belt is not worn.

NG → **REPLACE V-RIBBED BELT**

OK ↓

3 CHECK CLUTCH PULLEY FOR WEAR

(a) Check the clutch pulley groove for wear or other defects.
OK:
The clutch pulley groove is not damaged.

NG → **REPLACE CLUTCH PULLEY**

OK ↓

4 CHECK FOR NOISE WHILE CLUTCH PULLEY IS OPERATING

(a) Perform a driving test and check if noise occurs when decelerating.
OK:
Noise does not occur.

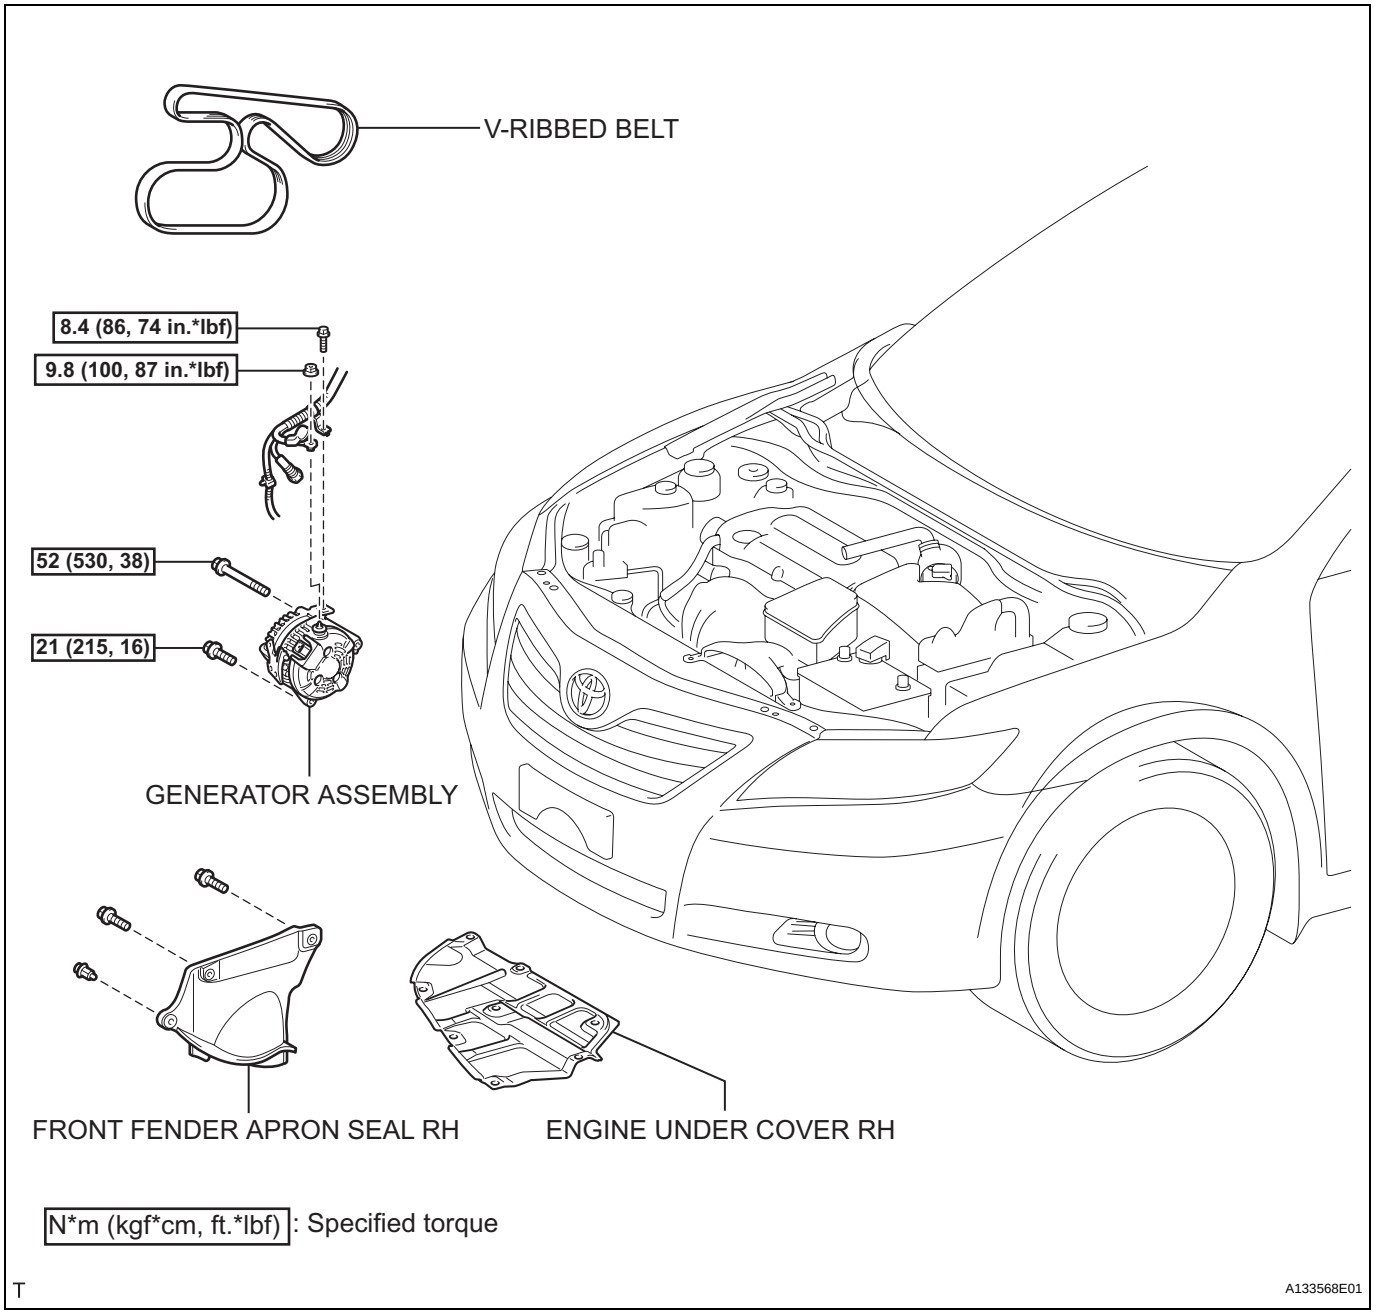
NG → **REPLACE CLUTCH PULLEY**

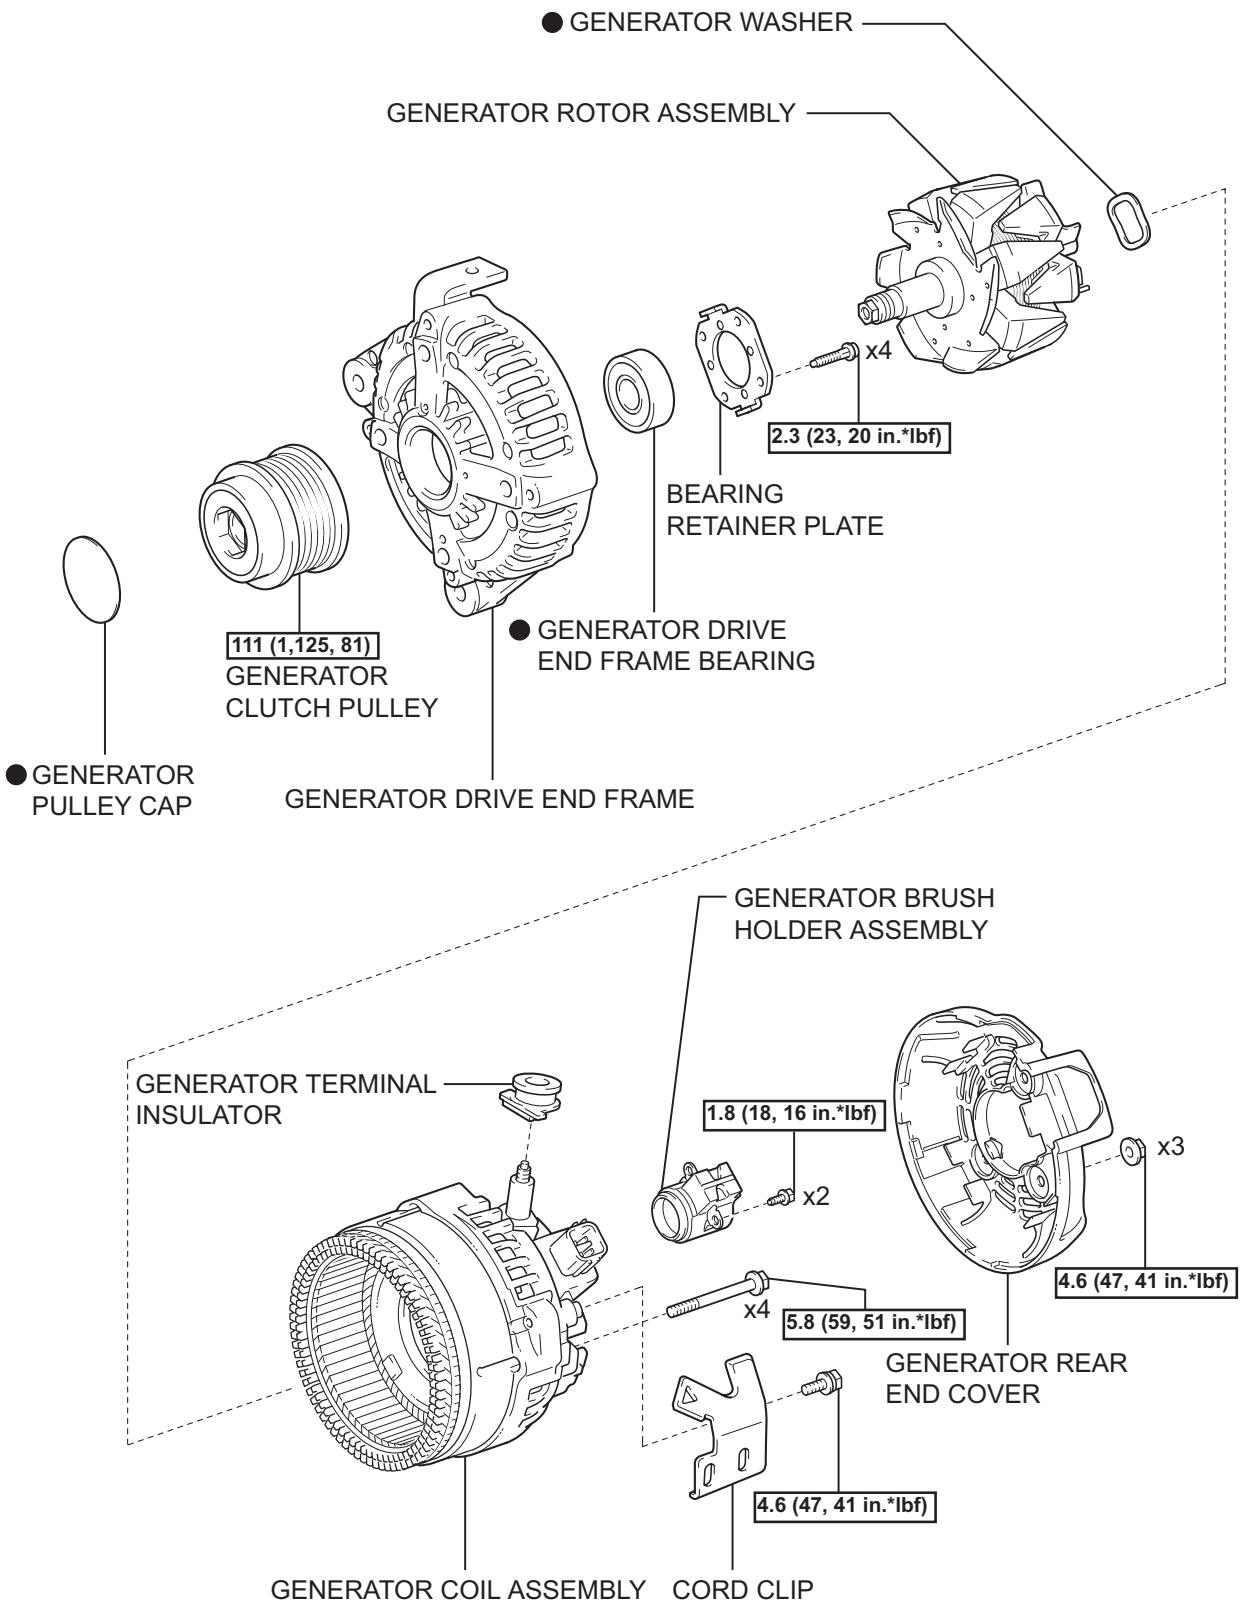
OK ↓

REPLACE GENERATOR ASSEMBLY

GENERATOR

COMPONENTS





CH

N*m (kgf*cm, ft.*lbf) : Specified torque

● Non-reusable part

P

A135515E01

REMOVAL

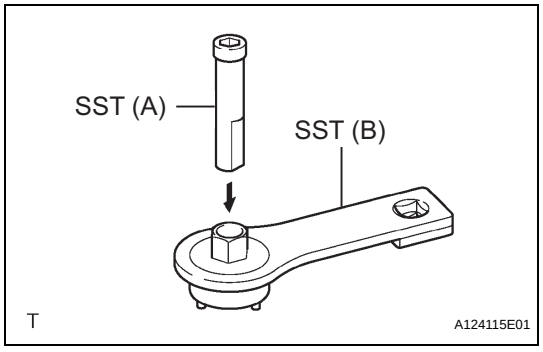
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT WHEEL RH**
3. **REMOVE ENGINE UNDER COVER RH**
4. **REMOVE FRONT FENDER APRON SEAL RH**
5. **REMOVE V-RIBBED BELT (See page EM-6)**
6. **REMOVE GENERATOR ASSEMBLY**
   (a) Disconnect the generator connector.
   (b) Remove the nut and disconnect the wire harness from terminal B.
   (c) Remove the bolt and wire harness clamp bracket.
   (d) Remove the wire harness clamps.

   (e) Remove the 2 bolts and generator assembly.

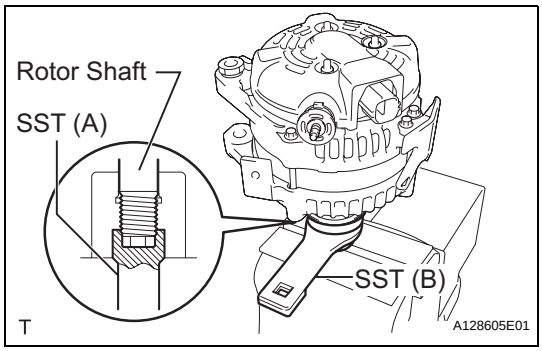
DISASSEMBLY

1. **REMOVE GENERATOR CLUTCH PULLEY**
   (a) Using a screwdriver, puncture the center of the generator pulley cap and pry it off.
   NOTICE:
   Do not reuse the generator pulley cap.

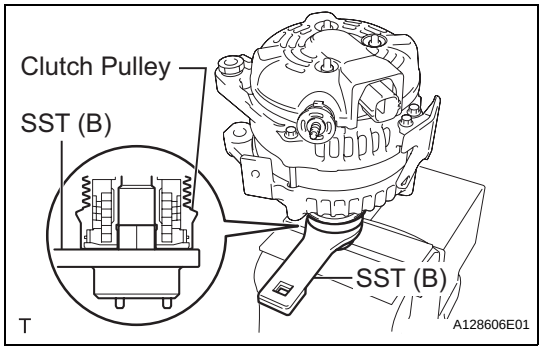
   (b) Set SST (A) and (B).
   SST 09820-63020
   (c) Clamp SST (A) in a vise.



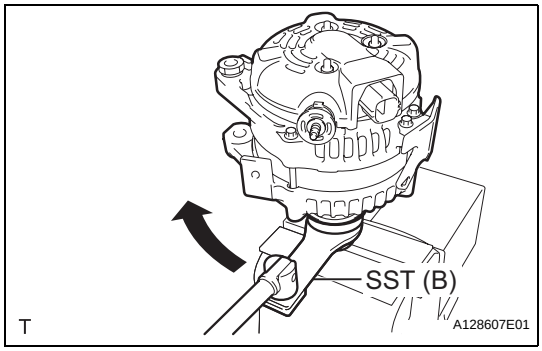
CH



(d) Place the rotor shaft end into SST (A).

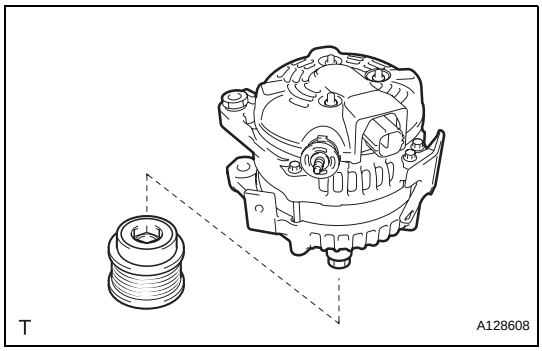


(e) Fit SST (B) to the clutch pulley.

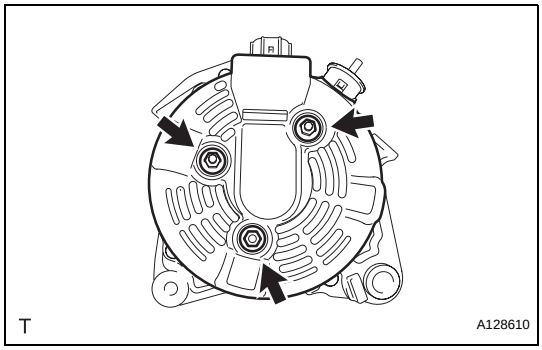


(f) Loosen the pulley by turning SST (B) in the direction shown in the illustration.
(g) Remove the generator assembly from the SST.
(h) Remove the clutch pulley from the rotor shaft.

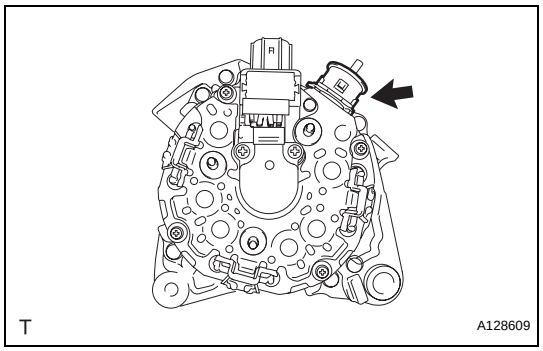
2. REMOVE GENERATOR BRUSH HOLDER ASSEMBLY



(a) Place the generator assembly on the clutch pulley.

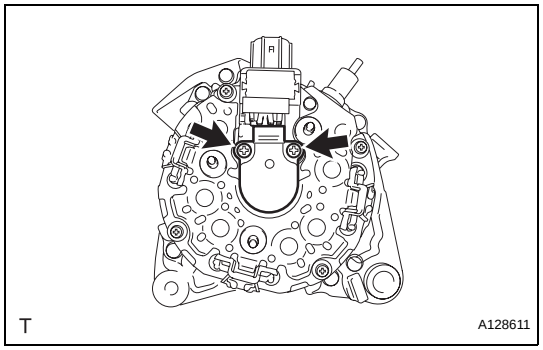


(b) Remove the 3 nuts and generator rear end cover.



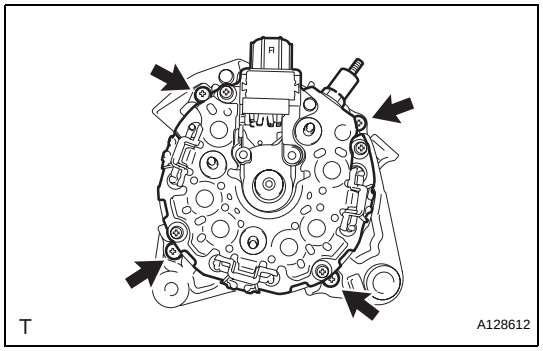
3. REMOVE GENERATOR TERMINAL INSULATOR

(a) Remove the terminal insulator.



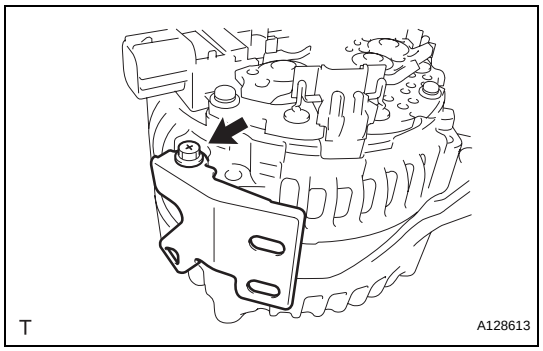
4. REMOVE GENERATOR BRUSH HOLDER ASSEMBLY

(a) Remove the 2 screws and generator brush holder.

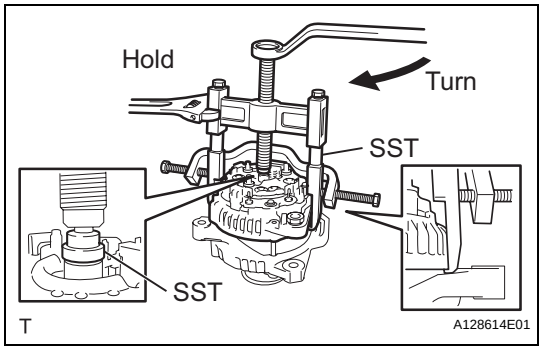


5. REMOVE GENERATOR ROTOR ASSEMBLY

(a) Remove the 4 bolts.



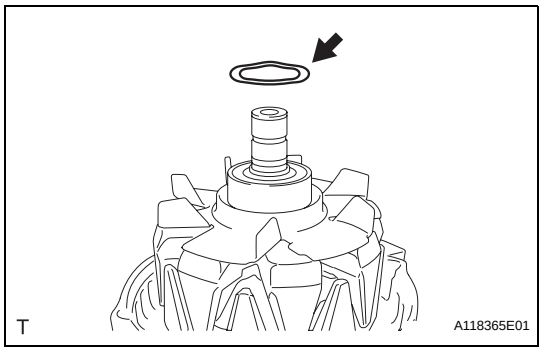
(b) Remove the bolt and cord clip.



(c) Using SST, remove the coil.

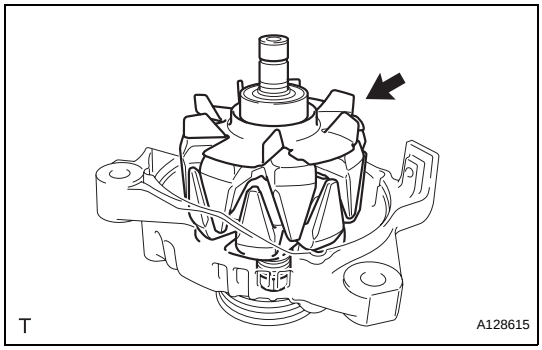
SST 09950-40011 (09951-04020, 09952-04010, 09953-04020, 09954-04010, 09955-04071, 09957-04010, 09958-04011)

CH

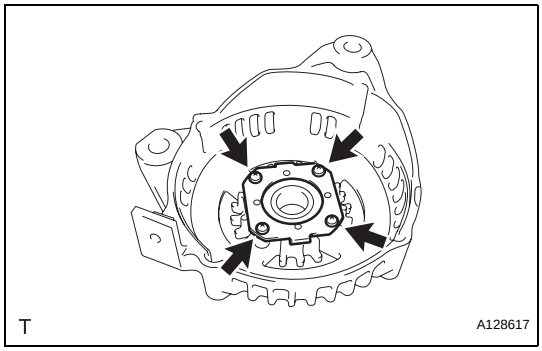


6. REMOVE GENERATOR ROTOR ASSEMBLY

(a) Remove the washer.

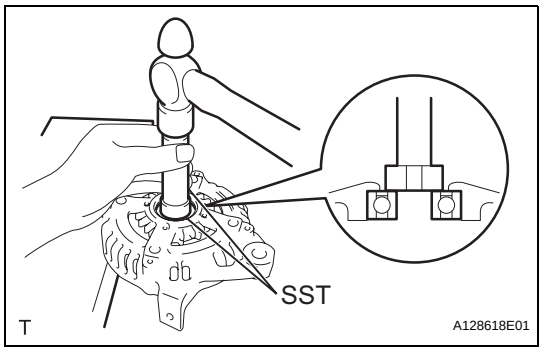


(b) Remove the generator rotor.



7. REMOVE GENERATOR DRIVE END FRAME BEARING

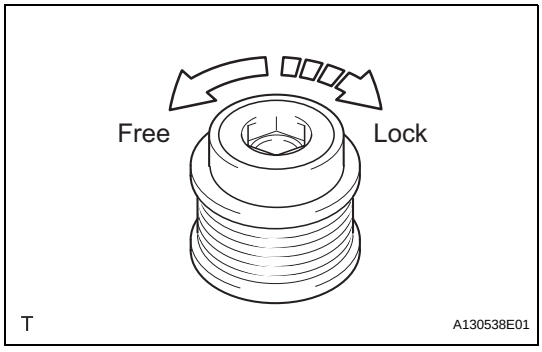
(a) Remove the 4 screws and bearing retainer.



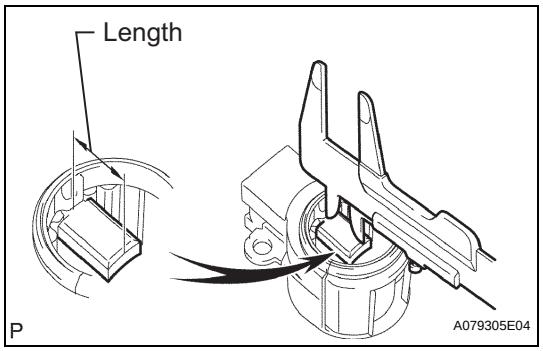
(b) Using SST and a hammer, tap out the bearing.
SST 09950-60010 (09951-00250), 09950-70010 (09951-07100)

INSPECTION

1. INSPECT GENERATOR CLUTCH PULLEY



(a) Hold the center of the pulley, and confirm that the outer ring turns counterclockwise and does not turn clockwise.
If the result is not as specified, replace the generator pulley with clutch.



2. INSPECT GENERATOR BRUSH HOLDER ASSEMBLY

(a) Using vernier calipers, measure the brush length.

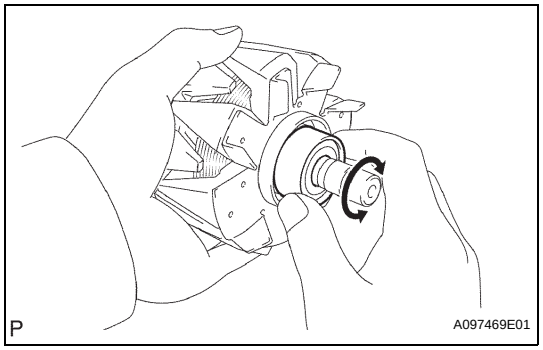
Standard length:

9.5 to 11.5 mm (0.374 to 0.453 in.)

Minimum length:

4.5 mm (0.177 in.)

If the brush length is less than the minimum, replace the generator brush holder assembly.



3. INSPECT GENERATOR ROTOR ASSEMBLY

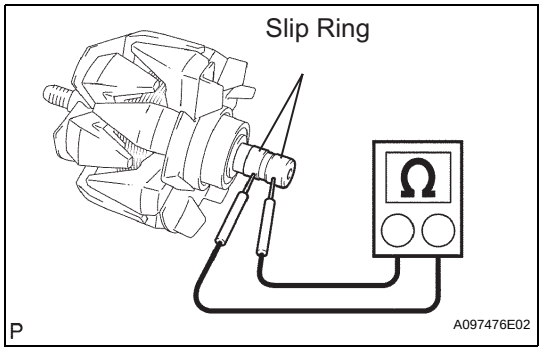
(a) Check the appearance.

(1) Check that the bearing is not rough or worn.

OK:

The bearing rotates smoothly.

If the result is not as specified, replace the generator rotor assembly.



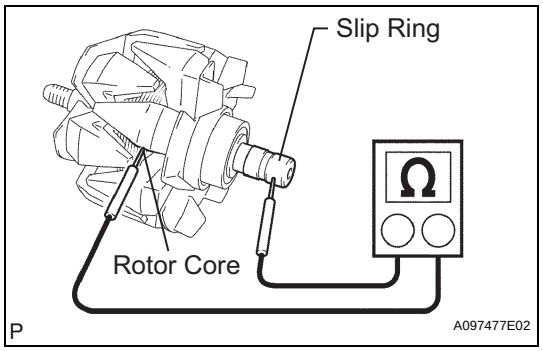
(b) Check the resistance.

(1) Measure the resistance between the slip rings.

Standard resistance

Condition	Specified condition
Approx. 20°C (68°F)	2.3 to 2.7 Ω

If the result is not as specified, replace the generator rotor assembly.

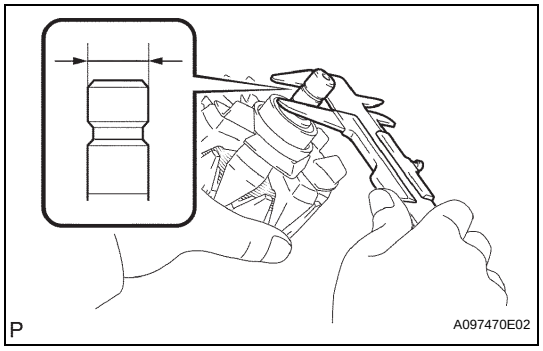


(2) Measure the resistance between the slip ring and rotor core.

Standard resistance

Tester condition	Specified condition
Slip ring - Rotor core	1 MΩ or higher

If the result is not as specified, replace the generator rotor assembly.



(c) Check the slip ring diameter.

(1) Using vernier calipers, measure the slip ring diameter.

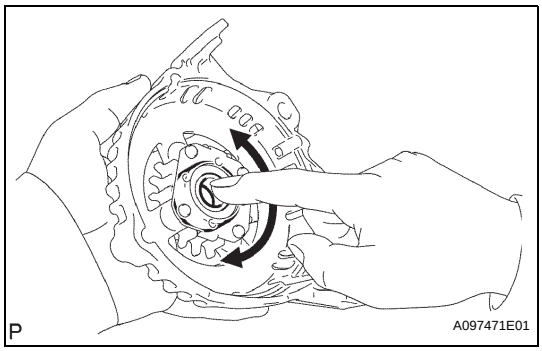
Standard diameter:

14.2 to 14.4 mm (0.559 to 0.567 in.)

Minimum diameter:

14 mm (0.551 in.)

If the diameter is less than the minimum, replace the generator rotor assembly.



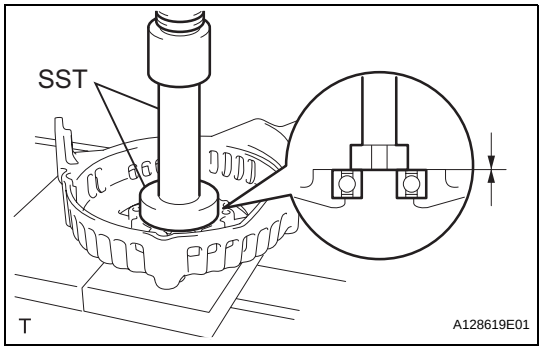
4. INSPECT GENERATOR DRIVE END FRAME BEARING

(a) Check that the bearing is not rough or worn.
OK:
The bearing rotates smoothly.
If the bearing does not rotate smoothly, replace the bearing.

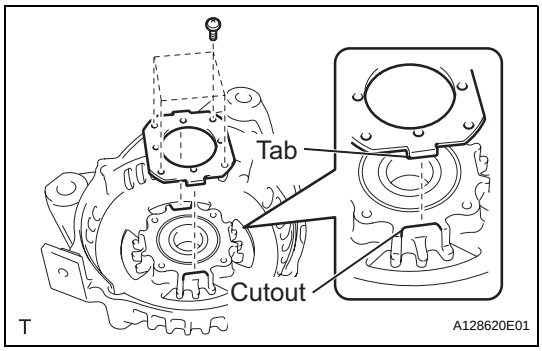
REASSEMBLY

1. INSTALL GENERATOR DRIVE END FRAME BEARING

(a) Using SST and a press, press in a new generator drive end frame bearing.
SST 09950-60010 (09951-00250), 09950-70010 (09951-07100)



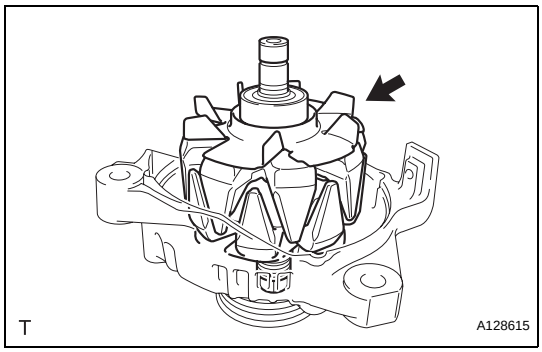
(b) Fit the tabs on the retainer plate into the cutouts on the drive end frame to install the retainer plate.
(c) Install the 4 screws.
Torque: 2.3 N*m (23 kgf*cm, 20 in.*lbf)



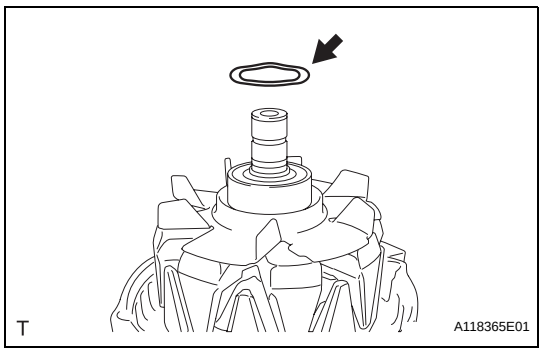
2. INSTALL GENERATOR ROTOR ASSEMBLY

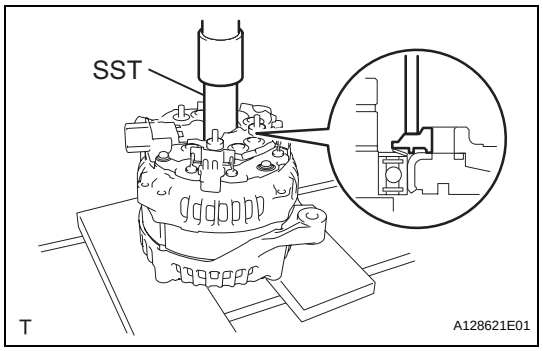
(a) Place the drive end frame on the clutch pulley.

(b) Install the generator rotor onto the generator rectifier end frame.



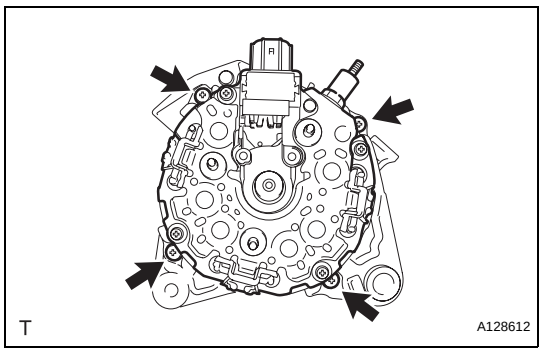
(c) Place a new generator washer on the generator rotor.



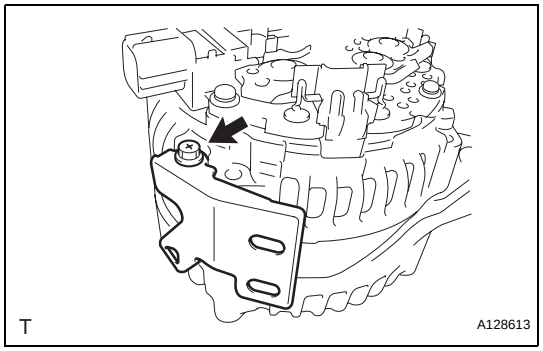


3. INSTALL GENERATOR COIL ASSEMBLY

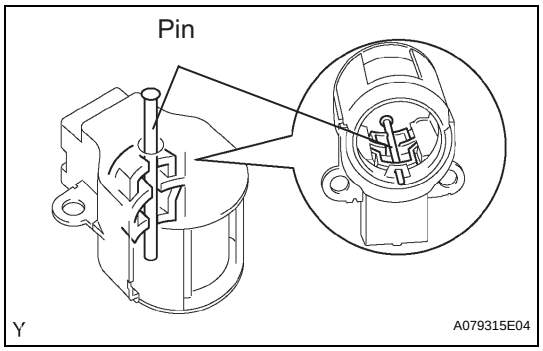
(a) Using SST and a press, press in the generator coil assembly to the drive end frame.
SST 09612-70100 (09612-07240)



(b) Tighten the 4 bolts.
Torque: 5.8 N*m (59 kgf*cm, 51 in.*lbf)

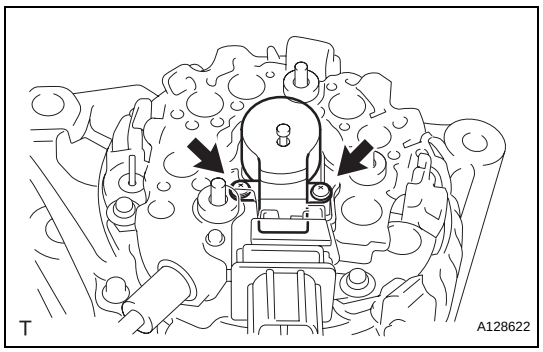


(c) Install the cord clip with the bolt.
Torque: 4.6 N*m (47 kgf*cm, 41 in.*lbf)

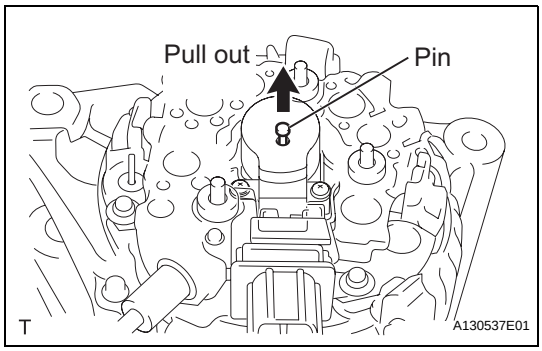


4. INSTALL GENERATOR BRUSH HOLDER ASSEMBLY

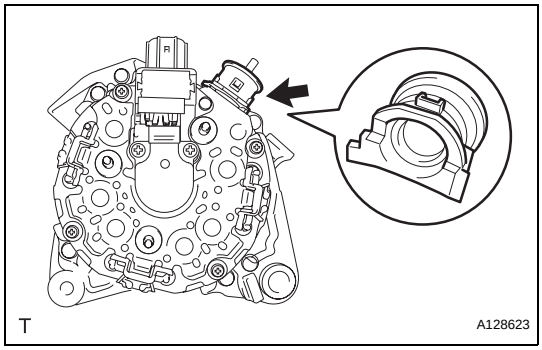
(a) While pushing the 2 brushes into the generator brush holder, insert a 1.0 mm (0.039 in.) pin into the generator brush holder.



(b) Install the generator brush holder with the 2 screws.
Torque: 1.8 N*m (18 kgf*cm, 16 in.*lbf)

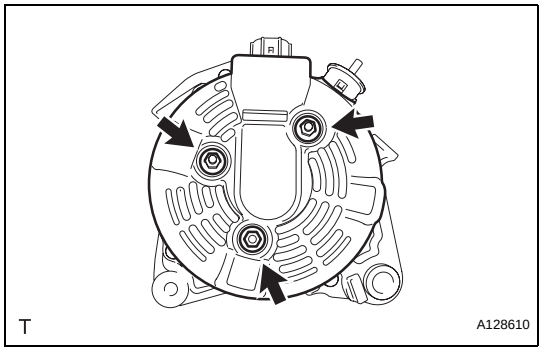


(c) Pull the pin out of the generator brush holder.



5. INSTALL GENERATOR TERMINAL INSULATOR

(a) Install the terminal insulator onto the generator rectifier end frame.

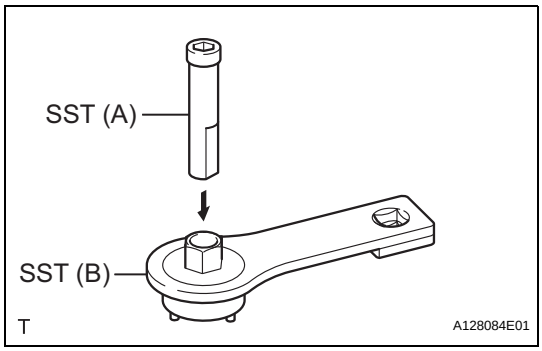


6. INSTALL GENERATOR REAR END COVER

(a) Install the generator rear end cover with the 3 nuts.
Torque: 4.6 N*m (47 kgf*cm, 41 in.*lbf)

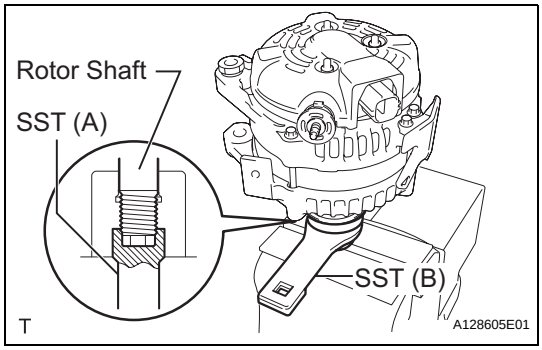
7. INSTALL GENERATOR CLUTCH PULLEY

(a) Temporarily install the clutch pulley onto the rotor shaft.



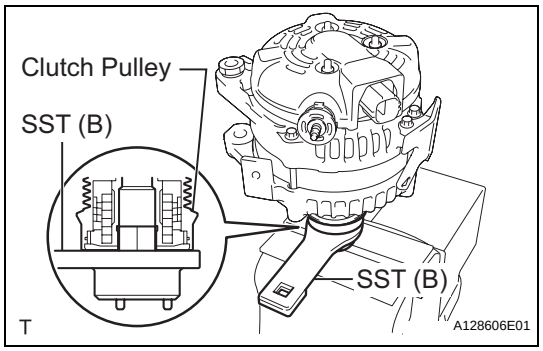
(b) Set SST (A) and (B).
SST 09820-63020

(c) Clamp SST (A) in a vise.

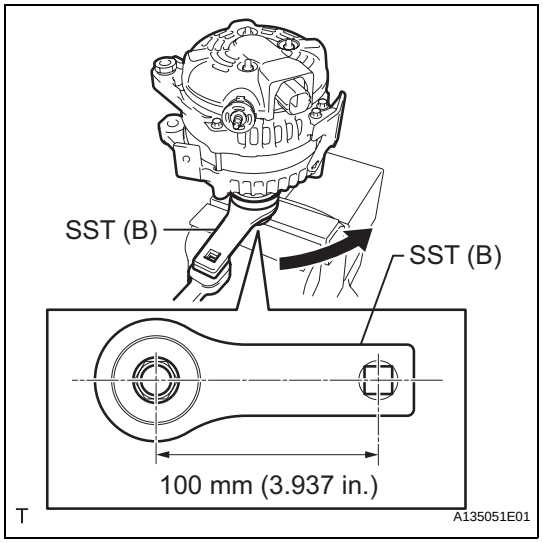


(d) Place the rotor shaft end into SST (A).

CH



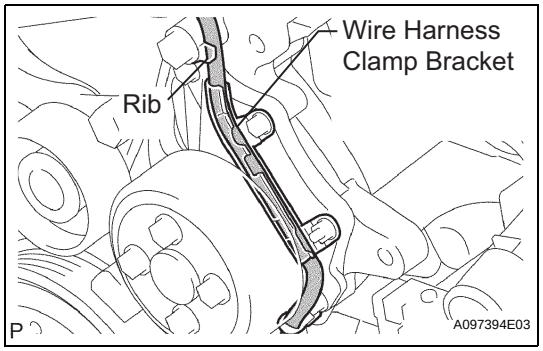
(e) Fit SST (B) to the clutch pulley.



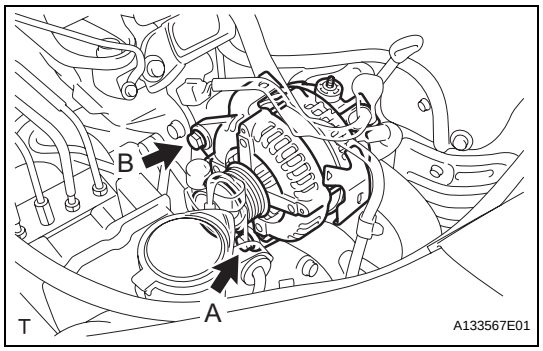
(f) Tighten the pulley by turning SST (B) in the direction shown in the illustration.
Torque: 111 N*m (1,125 kgf*cm, 81 ft.*lbf)
NOTICE:
The torque shown above should be used for tightening without using the SST. When the SST is used for tightening, the torque should be calculated based on the length of the SST (See page IN-6).
(g) Remove the generator assembly from the SST.
(h) Check that the clutch pulley rotates smoothly.
(i) Install a new clutch pulley cap to the clutch pulley.

INSTALLATION

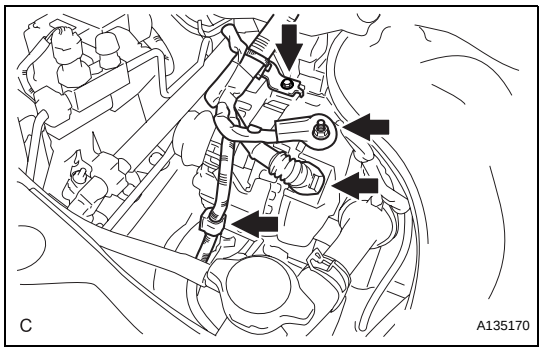
1. INSTALL GENERATOR ASSEMBLY



(a) Confirm that the wire harness of the crankshaft position sensor is secured to the wire harness clamp bracket through the back of the rib of the timing chain cover.

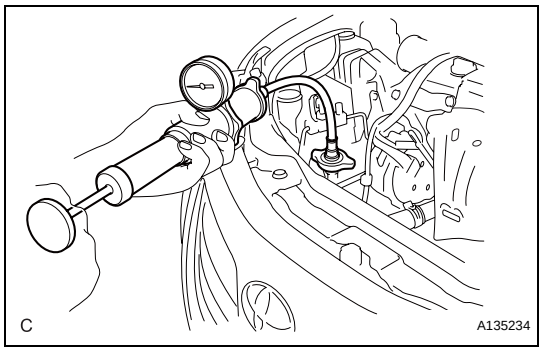


(b) Install the generator assembly with the 2 bolts.
Torque: Bolt A
21 N*m (215 kgf*cm, 16 ft.*lbf)
Bolt B
52 N*m (530 kgf*cm, 38 ft.*lbf)



(c) Install the generator wire to terminal B with the nut.
Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)
(d) Install the clamp bracket with the bolt.
Torque: 8.4 N*m (86 kgf*cm, 74 in.*lbf)
(e) Attach the clamp and connect the generator connector to the generator.

2. **INSTALL V-RIBBED BELT (See page EM-6)**
3. **INSTALL FRONT FENDER APRON SEAL RH**
4. **INSTALL ENGINE UNDER COVER RH**
5. **INSTALL FRONT WHEEL RH (See page EM-7)**
6. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (See page EM-120)**



COOLING SYSTEM

ON-VEHICLE INSPECTION

1. CHECK FOR ENGINE COOLANT LEAKS

NOTICE:

Before performing each inspection, turn the A/C switch OFF.

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

(a) Fill the radiator with coolant and attach a radiator cap tester.

(b) Warm up the engine.

(c) Using a radiator cap tester, increase the pressure inside the radiator to 118 kPa (1.2 kgf*cm, 17 psi), and check that the pressure does not drop.

If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and cylinder head.

2. INSPECT ENGINE COOLANT LEVEL IN RESERVOIR

(a) Check that the engine coolant level is between the LOW and FULL lines when the engine is cold.

If the engine coolant level is low, check for leaks and add "TOYOTA Super Long Life Coolant" or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite and non-borate coolant with long-life hybrid organic acid technology to the FULL line.

NOTICE:

Do not substitute plain water for engine coolant.

3. INSPECT ENGINE COOLANT QUALITY

(a) Remove the radiator cap.

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

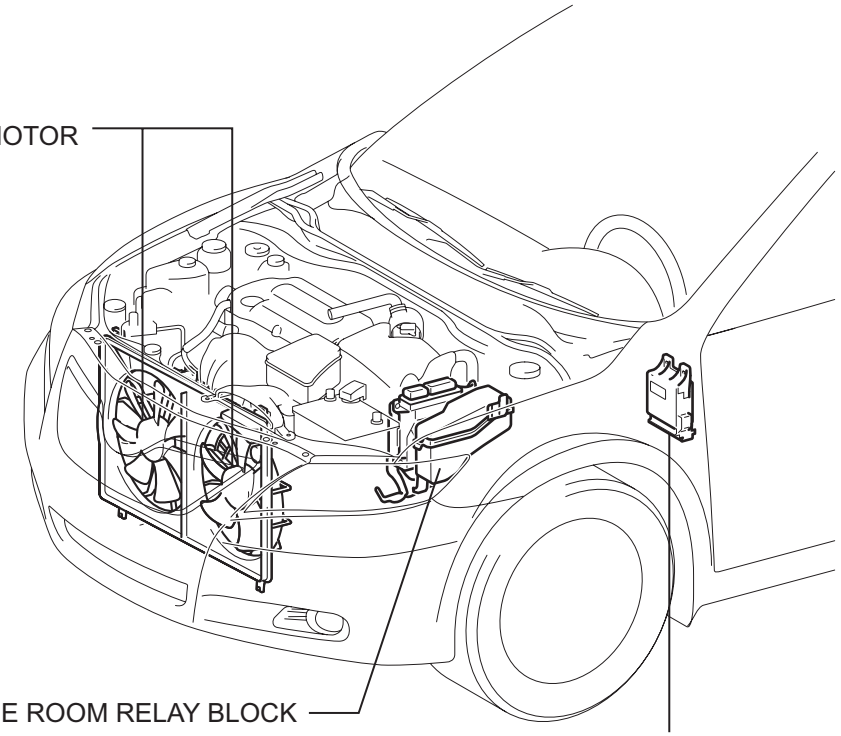
(b) Check if there are any excessive deposits of rust or scales around the radiator cap and radiator filler hole. Also, the coolant should be free of oil.

If excessively dirty, clean the coolant passage and replace the coolant.

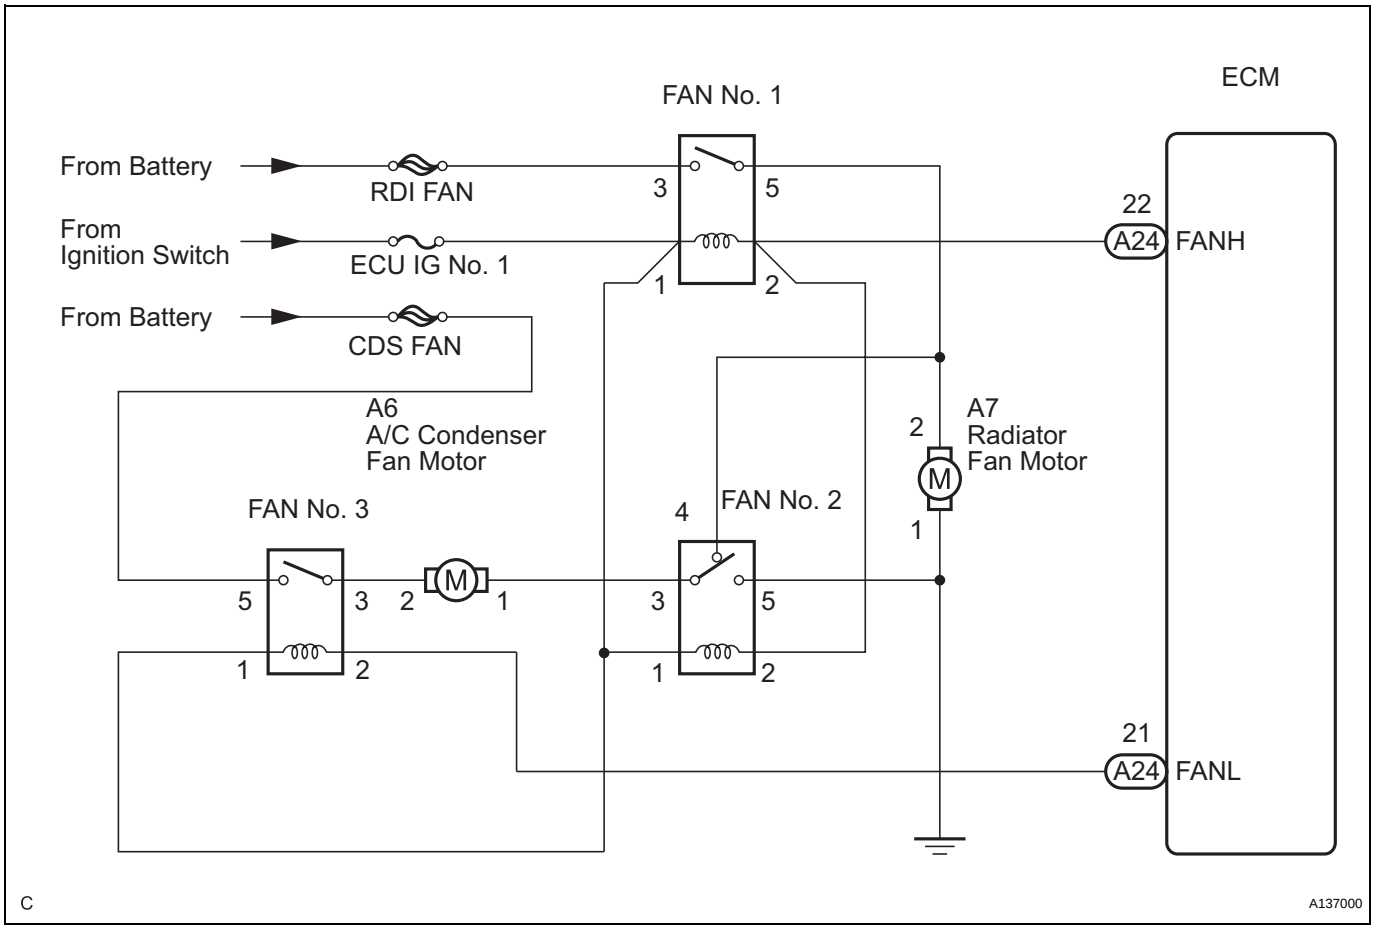
(c) Install the radiator cap.

COOLING FAN SYSTEM

PARTS LOCATION



SYSTEM DIAGRAM



CO

ON-VEHICLE INSPECTION

1. INSPECT COOLING FAN OPERATION AT LOW TEMPERATURES (Below 83°C (181°F))

(a) Turn the ignition switch to the ON position.

(b) Check that the cooling fan stops.
If not, check the cooling fan relay and engine coolant temperature sensor, and check whether there is disconnection or an open circuit between them.

(c) Disconnect the engine coolant temperature sensor connector.

(d) Check that the cooling fan rotates.
If not, check the fuses, cooling fan relay, ECM and cooling fan, and check for a short circuit between the cooing fan relay and engine coolant temperature sensor.

(e) Reconnect the engine coolant temperature sensor connector.

2. INSPECT COOLING FAN OPERATION AT HIGH TEMPERATURES (Above 93°C (199°F))

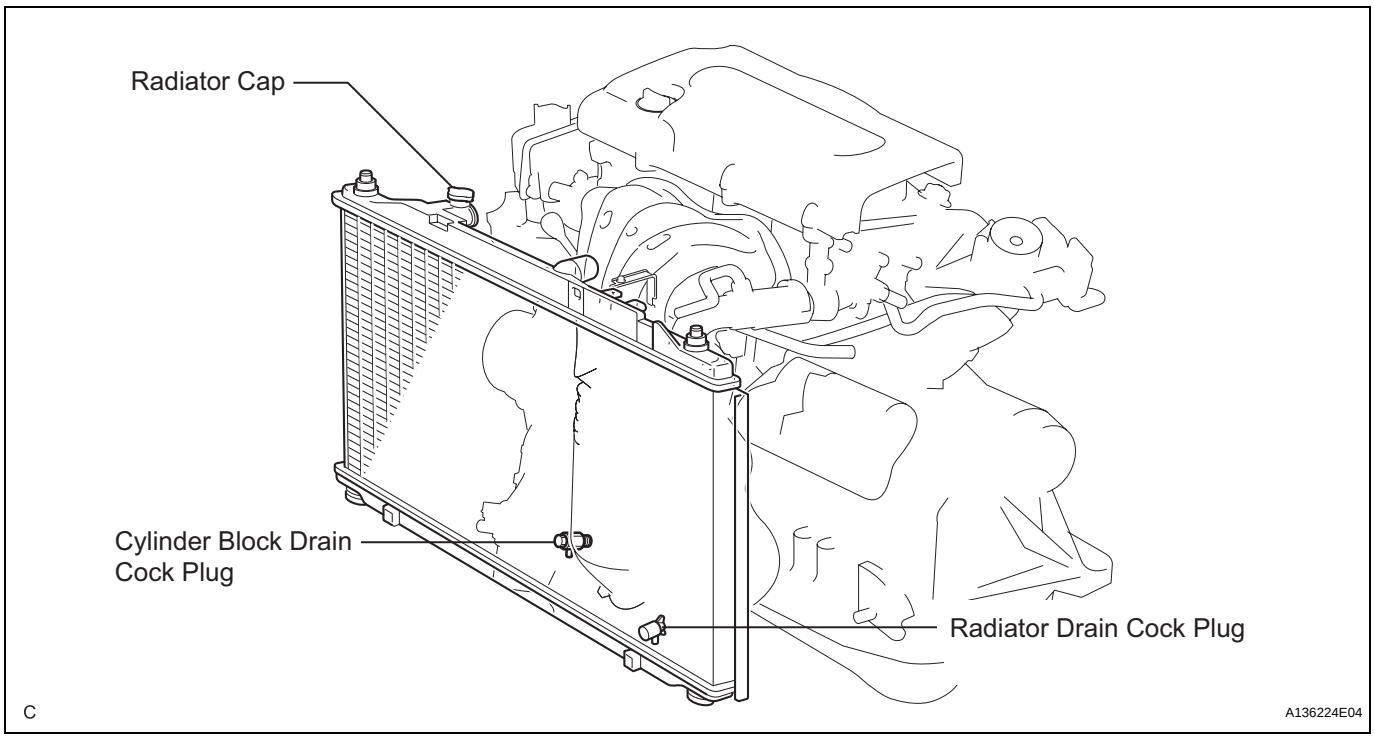
(a) Start the engine, and raise the engine coolant temperature to above 93°C (199°F).
HINT:
Engine coolant temperature is detected by the engine coolant temperature sensor on the water outlet.

(b) Check that the cooling fan rotates.
If not, replace the engine coolant temperature sensor.

COOLANT

ON-VEHICLE INSPECTION

1. **REMOVE FRONT WHEEL OPENING EXTENSION PAD RH**
2. **REMOVE FRONT WHEEL OPENING EXTENSION PAD LH**
3. **REMOVE ENGINE UNDER COVER LH**
4. **REMOVE ENGINE UNDER COVER RH**
5. **DRAIN ENGINE COOLANT**
   NOTICE:
   Do not remove the radiator cap sub-assembly while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.
   (a) Remove the radiator cap sub-assembly from the radiator assembly.
   (b) Loosen the radiator drain cock plug and cylinder block drain cock plug, then drain the coolant.



HINT:
Collect the coolant in a container and dispose of it according to the regulations in your area.

6. **ADD ENGINE COOLANT**
   (a) Close the radiator drain cock plug and 2 cylinder block drain cock plugs.
   Torque: 13 N*m (130 kgf*cm, 9 ft.*lbf) for cylinder block drain cock plug

CO

(b) Slowly fill the radiator with TOYOTA Super Long Life Coolant (SLLC).
Specified capacity:
6.2 liters (6.6 US qts, 5.5 lmp. qts)
HINT:
- TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).
- Contact your TOYOTA dealer for further details.

(c) Slowly pour coolant into the radiator reservoir tank until it reaches the FULL line.

(d) Press the inlet and outlet radiator hoses several times by hand, and then check the level of the coolant.
If the coolant level is low, add coolant.

(e) Install the radiator cap sub-assembly and reservoir tank cap.

(f) Start the engine, and warm it up.
HINT:
Adjust the air conditioner set temperature to MAX (HOT).

(g) Stop the engine, and wait until the engine coolant cools down.

(h) Add engine coolant to the FULL line on the radiator reservoir.

7. CHECK FOR ENGINE COOLANT LEAKS

8. INSTALL ENGINE UNDER COVER RH

9. INSTALL ENGINE UNDER COVER LH

10. INSTALL FRONT WHEEL OPENING EXTENSION PAD LH

11. INSTALL FRONT WHEEL OPENING EXTENSION PAD RH

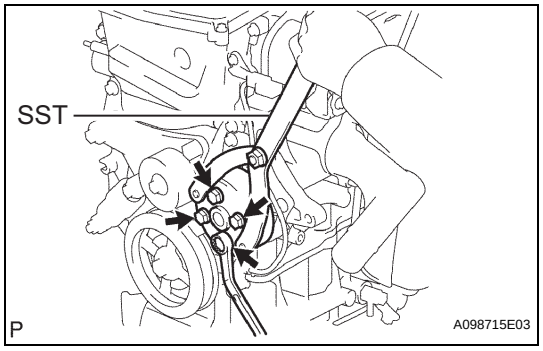
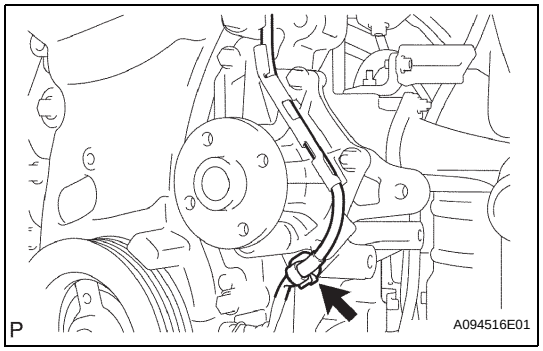
REMOVAL

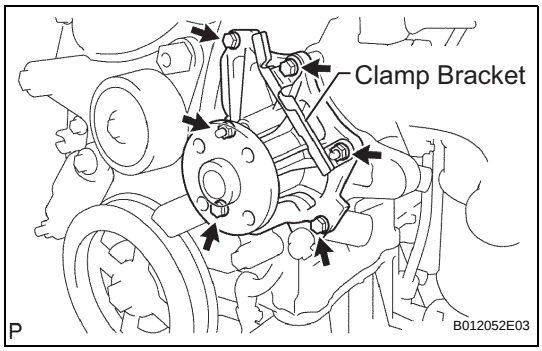
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT WHEEL OPENING EXTENSION PAD RH**
3. **REMOVE FRONT WHEEL OPENING EXTENSION PAD LH**
4. **REMOVE ENGINE UNDER COVER RH**
5. **REMOVE ENGINE UNDER COVER LH**
6. **DRAIN ENGINE COOLANT (See page CO-5)**
7. **REMOVE FRONT FENDER APRON SEAL RH**
8. **REMOVE NO. 2 ENGINE MOUNTING STAY RH (See page EM-95)**
9. **REMOVE ENGINE MOVING CONTROL ROD SUB-ASSEMBLY (See page EM-95)**
10. **REMOVE NO. 2 ENGINE MOUNTING BRACKET RH (See page EM-96)**
11. **REMOVE V-RIBBED BELT (See page EM-6)**
12. **REMOVE GENERATOR ASSEMBLY (See page CH-11)**
13. **REMOVE WATER PUMP PULLEY**
    (a) Using SST, remove the 4 bolts and water pump pulley.
    SST 09960-10010 (09962-01000, 09963-00700)



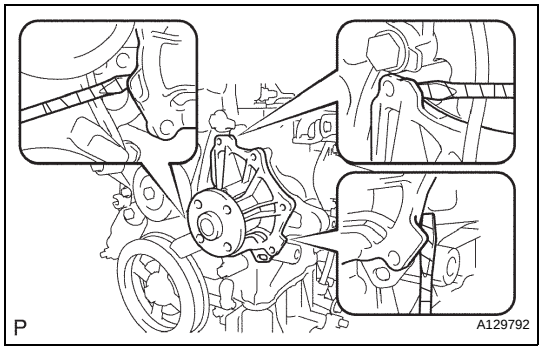
14. **REMOVE WATER PUMP ASSEMBLY**
    (a) Remove the clamp of the crankshaft position sensor from the water pump.
    (b) Disconnect the wire of the crankshaft position sensor from the clamp bracket.



CO



(c) Remove the 4 bolts, 2 nuts and clamp bracket.

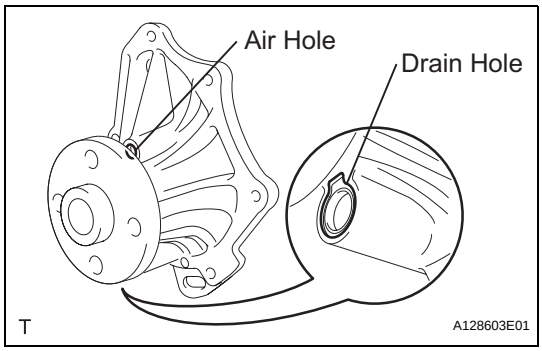


(d) Using a screwdriver, pry between the water pump and cylinder block, and then remove the water pump.
HINT:
Tape the screwdriver tip before use.
NOTICE:
Be careful not to damage the contact surfaces of the water pump and cylinder block.

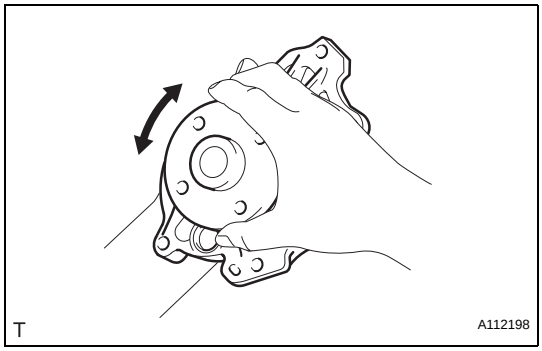
INSPECTION

1. INSPECT WATER PUMP ASSEMBLY

(a) Visually check the drain hole and air hole for coolant leakage.
If leakage is found, replace the water pump assembly.



(b) Turn the pulley, and then check that the water pump bearing moves smoothly without making a "click" sound.
If it does not move smoothly, replace the water pump assembly.



CO

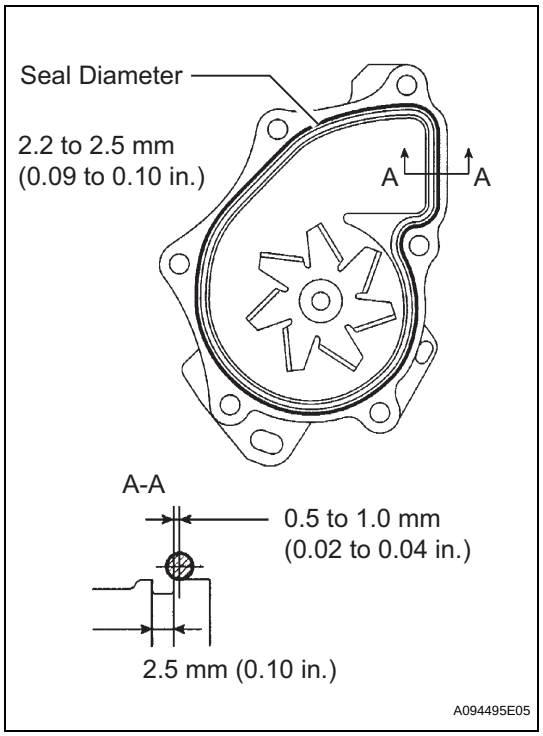
INSTALLATION

1. INSTALL WATER PUMP ASSEMBLY

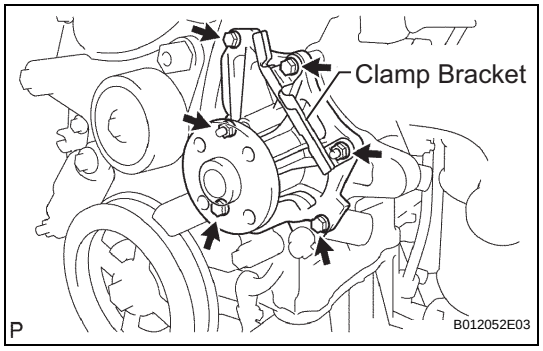
(a) Remove any old seal packing material from the contact surface.

(b) Apply a continuous line of seal packing as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or Equivalent
Standard seal diameter:
2.2 to 2.5 mm (0.09 to 0.10 in.)
NOTICE:
- **Remove any oil from the contact surface.**
- **The parts must be set within 3 minutes after applying seal packing. Otherwise, the material must be removed and reapplied.**

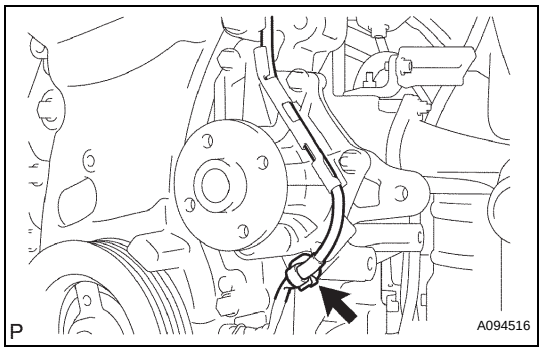


(c) Install the water pump and clamp bracket with the 4 bolts and 2 nuts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

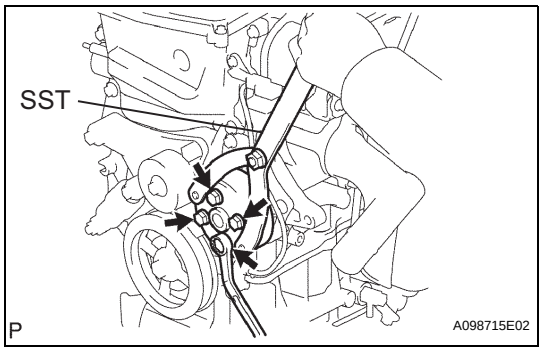


(d) Install the wire of the crankshaft position sensor onto the clamp bracket.

(e) Install the clamp of the crankshaft position sensor onto the water pump.



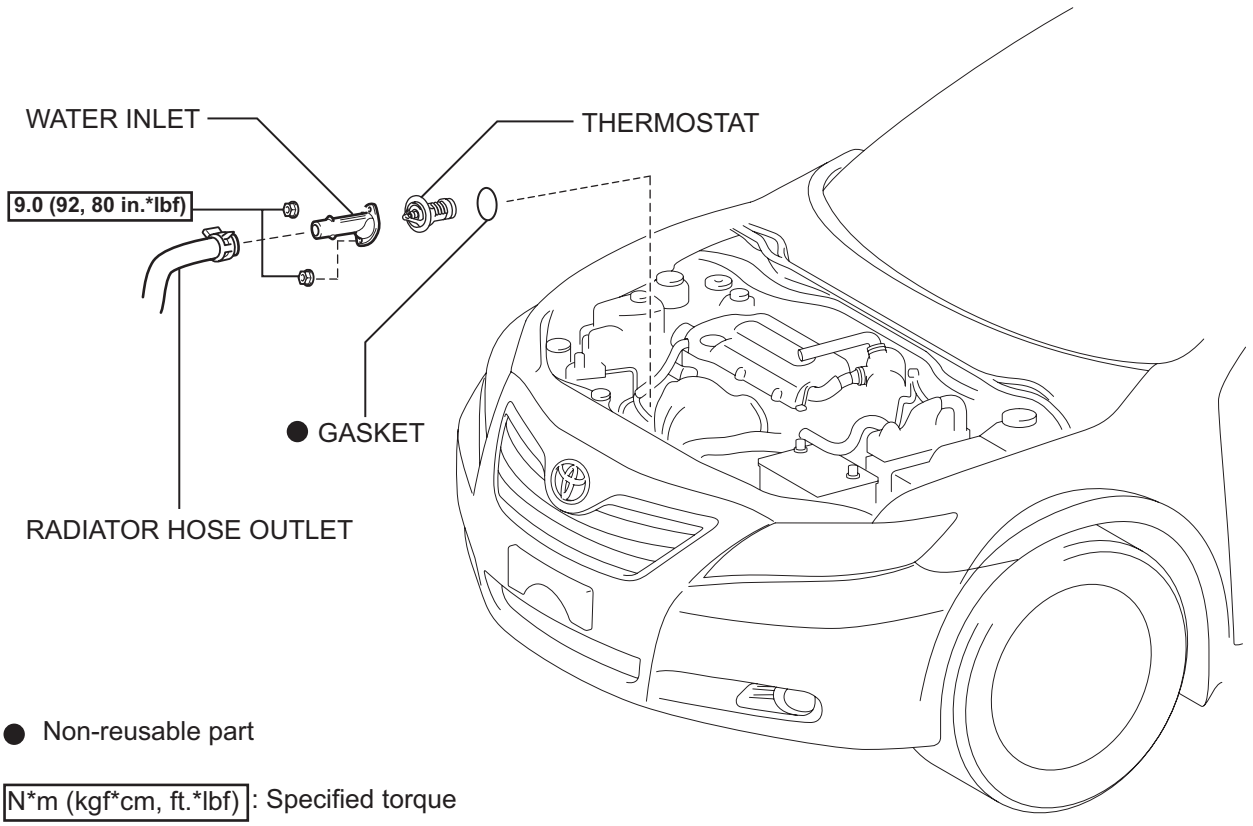
CO



2. **INSTALL WATER PUMP PULLEY**
   (a) Using SST, install the water pump pulley with the 4 bolts.
   SST 09960-10010 (09962-01000, 09963-00700)
   Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)
3. **INSTALL GENERATOR ASSEMBLY (See page CH-19)**
4. **INSTALL V-RIBBED BELT (See page EM-6)**
5. **INSTALL NO. 2 ENGINE MOUNTING BRACKET RH (See page EM-118)**
6. **INSTALL ENGINE MOVING CONTROL ROD SUB-ASSEMBLY (See page EM-119)**
7. **INSTALL NO. 2 ENGINE MOUNTING STAY RH (See page EM-119)**
8. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (See page EM-120)**
9. **ADD ENGINE COOLANT (See page CO-5)**
10. **CHECK FOR ENGINE COOLANT LEAKS (See page CO-1)**
11. **INSTALL ENGINE UNDER COVER LH**
12. **INSTALL ENGINE UNDER COVER RH**
13. **INSTALL FRONT WHEEL OPENING EXTENSION PAD RH**
14. **INSTALL FRONT WHEEL OPENING EXTENSION PAD LH**

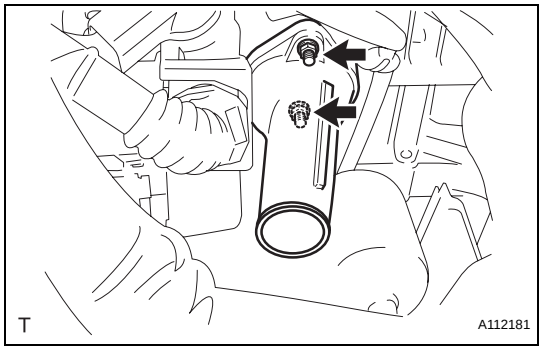
THERMOSTAT

COMPONENTS



REMOVAL

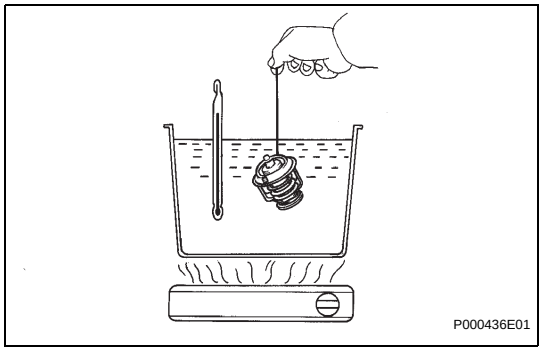
1. **REMOVE FRONT WHEEL OPENING EXTENSION PAD LH**
2. **REMOVE FRONT WHEEL OPENING EXTENSION PAD RH**
3. **REMOVE ENGINE UNDER COVER LH**
4. **REMOVE ENGINE UNDER COVER RH**
5. **DRAIN ENGINE COOLANT (See page CO-5)**
6. **DISCONNECT RADIATOR HOSE OUTLET (See page EM-96)**
7. **REMOVE WATER INLET**
   (a) Remove the 2 nuts and disconnect the water inlet from the cylinder block.
8. **REMOVE THERMOSTAT**
   (a) Remove the gasket from the thermostat.



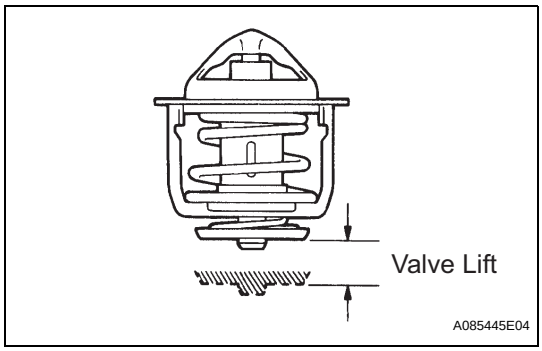
INSPECTION

1. **INSPECT THERMOSTAT**
   (a) The valve opening temperature is inscribed on the thermostat.

   (b) Immerse the thermostat in water, and then gradually heat the water.
   (c) Check the valve opening temperature of the thermostat.
   Standard valve opening temperature:
   80 to 84°C (176 to 183°F)
   If the valve opening temperature is not as specified, replace the thermostat.



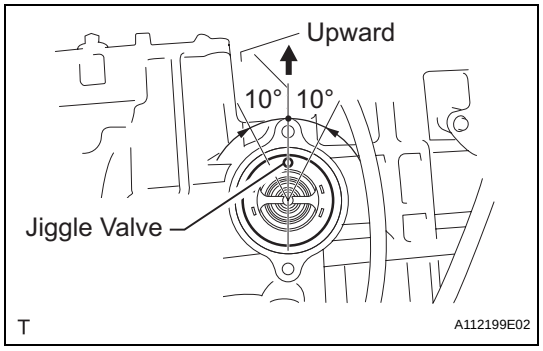
CO



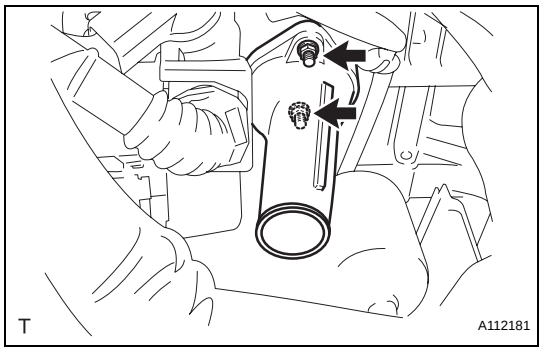
(d) Check the valve lift.
Standard valve lift:
10 mm (0.39 in.) or more at 95°C (203°F)
If the valve lift is not as specified, replace the thermostat.

(e) Check that the valve is fully closed when the thermostat is at low temperatures (below 77°C (171°F)).
If it is not fully closed, replace the thermostat.

INSTALLATION

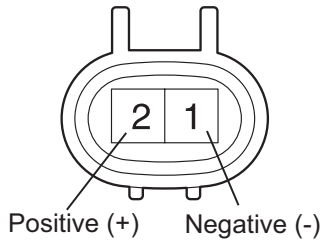


1. **INSTALL THERMOSTAT**
   (a) Install a new gasket onto the thermostat.
   (b) Install the thermostat with the jiggle valve upward.
   HINT:
   The jiggle valve may be set to within 10° on either side of the prescribed position.



2. **INSTALL WATER INLET**
   (a) Install the water inlet with the 2 nuts.
   Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
3. **CONNECT RADIATOR HOSE OUTLET (See page EM-118)**
4. **ADD ENGINE COOLANT (See page CO-5)**
5. **CHECK FOR ENGINE COOLANT LEAKS (See page CO-1)**
6. **INSTALL ENGINE UNDER COVER LH**
7. **INSTALL ENGINE UNDER COVER RH**
8. **INSTALL FRONT WHEEL OPENING EXTENSION PAD LH**
9. **INSTALL FRONT WHEEL OPENING EXTENSION PAD RH**

Cooling Fan Motor Side Connector:



T A103699E02

COOLING FAN MOTOR

ON-VEHICLE INSPECTION

1. COOLING FAN MOTOR

(a) Check that the motor turns smoothly when the battery is connected to the fan motor connector.

(b) Measure the current while the motor is turning.

Standard current:

With trailer hitch:

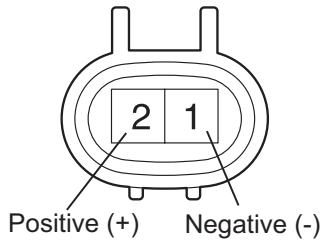
11.8 to 14.8 A at 20°C (68°F)

Without trailer hitch:

7.9 to 10.9 A at 20°C (68°F)

If the result is not as specified, replace the cooling fan motor.

Cooling Fan Motor Side Connector:



T A103699E02

2. NO. 2 COOLING FAN MOTOR

(a) Check that the motor turns smoothly when the battery is connected to the fan motor connector.

(b) Measure the current while the motor is turning.

Standard current:

With trailer hitch:

7.9 to 10.9 A at 20°C (68°F)

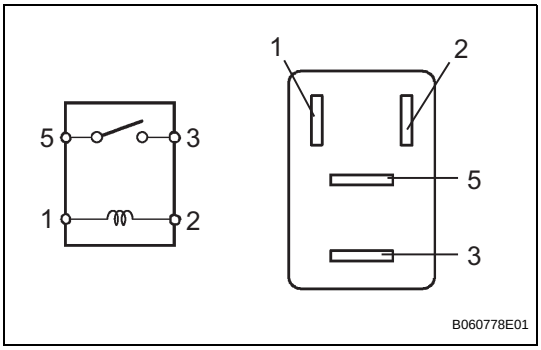
Without trailer hitch:

7.9 to 10.9 A at 20°C (68°F)

If the result is not as specified, replace the cooling fan motor No. 2.

COOLING FAN RELAY

ON-VEHICLE INSPECTION



1. COOLING FAN RELAY

(a) Remove the relay from the engine room No. 2 relay block.

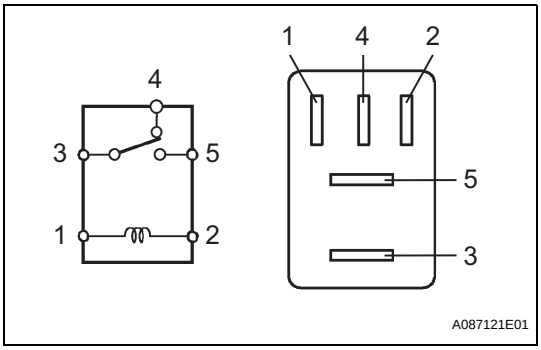
(b) Measure the resistance of the relay.

Standard resistance

Tester Connection	Specified Condition
3 - 5	10 Ω or higher
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

If the result is not as specified, replace the relay.

(c) Install the relay to the engine room relay block No. 2.



2. COOLING FAN RELAY NO. 2

(a) Remove the relay from the engine room No. 2 relay block.

(b) Measure the resistance of the relay.

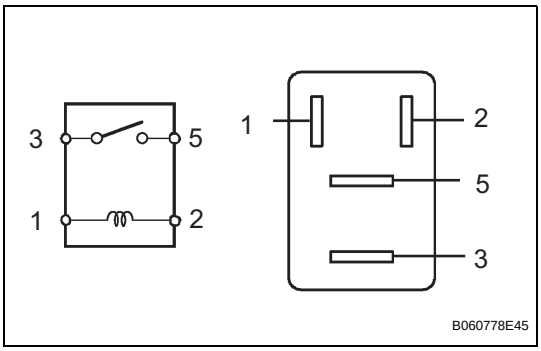
Standard resistance

Tester Connection	Specified Condition
3 - 4	Below 1 Ω
3 - 5	10 Ω or higher
3 - 4	10 Ω or higher (when battery voltage is applied to terminals 1 and 2)
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

If the result is not as specified, replace the relay.

(c) Install the relay.

CO



3. COOLING FAN RELAY NO. 3

(a) Remove the relay from the engine room No. 2 relay block.

(b) Measure the resistance of the relay.

Standard resistance

Tester Connection	Specified Condition
3 - 5	10 Ω or higher
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

If the result is not as specified, replace the relay.

(c) Install the relay.

ON-VEHICLE INSPECTION

1. CHECK RADIATOR CAP SUB-ASSEMBLY

(a) Measure the valve opening pressure.

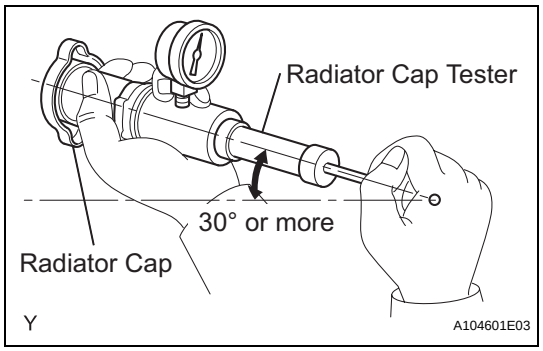
(1) If there are water stains or foreign matter on rubber packings 1, 2 or 3, clean the part(s) with water and finger scouring.

(2) Check that rubber packings 1, 2 and 3 are not deformed, cracked or swollen.

(3) Check that rubber packings 3 and 4 are not stuck together.

(4) Apply engine coolant to rubber packings 2 and 3 before using the radiator cap tester.

(5) When using the cap tester, tilt it to 30° or more above the horizontal.



(6) Pump the cap tester several times, and check the maximum pressure *1.

Pumping speed:

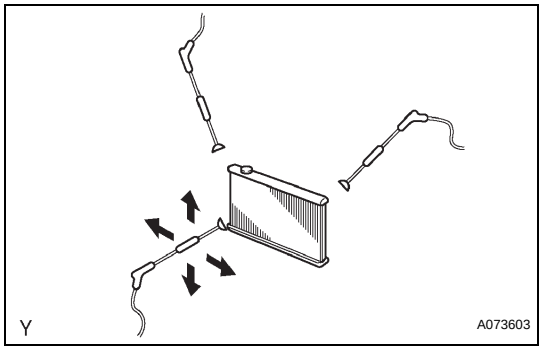
1 pumps every second

*1: Even if the cap cannot maintain the maximum pressure, it is not a defect.

Judgment Criteria

Item	Specified Condition
Standard valve (for brand-new cap)	93.3 to 122.7 kPa (0.95 to 1.25 kgf/cm^2, 13.5 to 17.8 psi)
Minimum standard valve (after using cap)	78.5 kPa (0.8 kgf/cm^2, 11.4 psi)

If the maximum pressure is less than the specified pressure for the minimum standard valve, replace the radiator cap sub-assembly.



ON-VEHICLE CLEANING

1. INSPECT FINS BLOCKAGE

(a) If the fins are clogged, wash them with water or a steam cleaner. Dry with compressed air.

NOTICE:

- **If the distance between the steam cleaner and the core is too close, the fins may become damaged. Keep the following injection distance.**

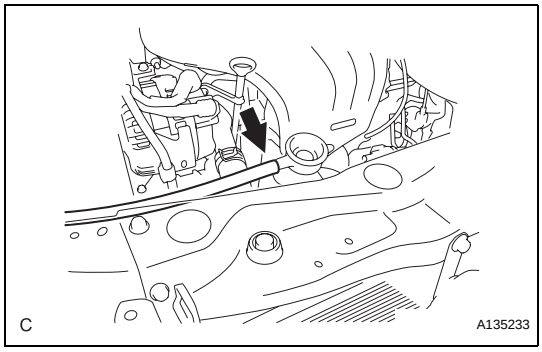
Standard

Injection Distance	Injection Pressure
300 mm (11.81 in.)	2,942 to 4,903 kPa (30 to 50 kg/cm^2, 427 to 711 psi)
500 mm (19.69 in.)	4,903 to 7,845 kPa (50 to 80 kg/cm^2, 711 to 1,138 psi)

- **If the fins are bent, straighten them with a screwdriver or pliers.**
- **Never apply water directly onto the electronic components.**

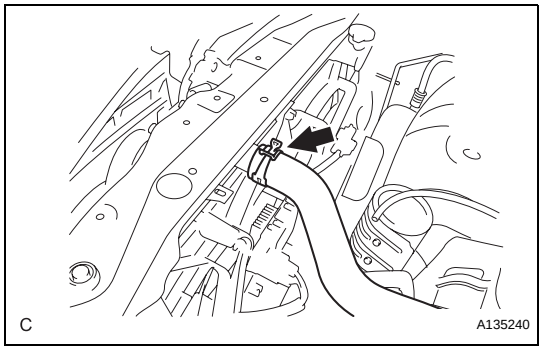
REMOVAL

1. **DRAIN ENGINE COOLANT**
2. **REMOVE FRONT WHEEL OPENING EXTENSION PAD LH**
3. **REMOVE FRONT WHEEL OPENING EXTENSION PAD RH**
4. **REMOVE ENGINE UNDER COVER RH**
5. **REMOVE ENGINE UNDER COVER LH**
6. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-416)**
7. **REMOVE AIR CLEANER INLET ASSEMBLY (See page EM-94)**
8. **REMOVE FRONT BUMPER ASSEMBLY (w/o Fog Light) (See page ET-5)**
9. **REMOVE FRONT BUMPER ASSEMBLY (w/ Fog Light) (See page ET-6)**
10. **REMOVE FRONT BUMPER ENERGY ABSORBER**
11. **SEPARATE RADIATOR RESERVE TANK HOSE**
    (a) Separate the radiator reserve tank hose from the radiator assembly.

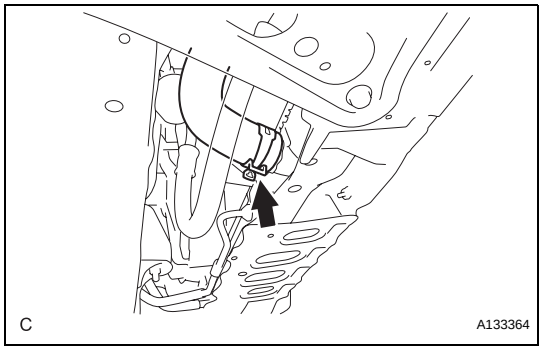


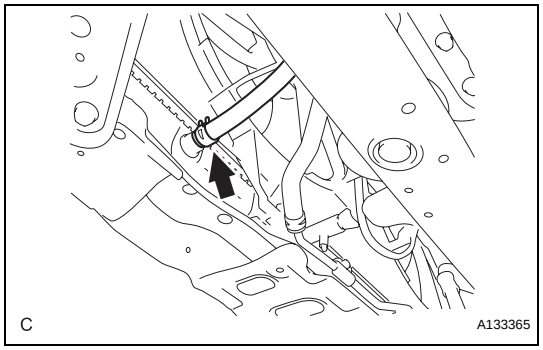
CO

12. **DISCONNECT RADIATOR HOSE INLET**
    (a) Disconnect the radiator hose inlet from the radiator assembly.



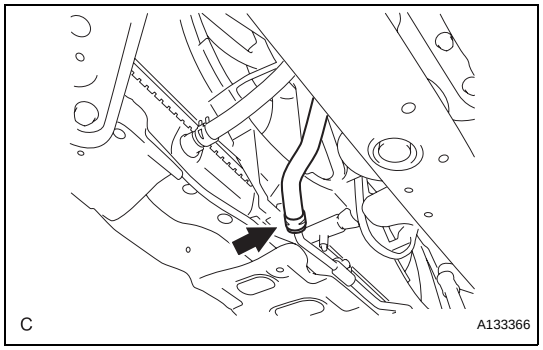
13. **DISCONNECT RADIATOR HOSE OUTLET**
    (a) Disconnect the radiator hose outlet from the radiator assembly.





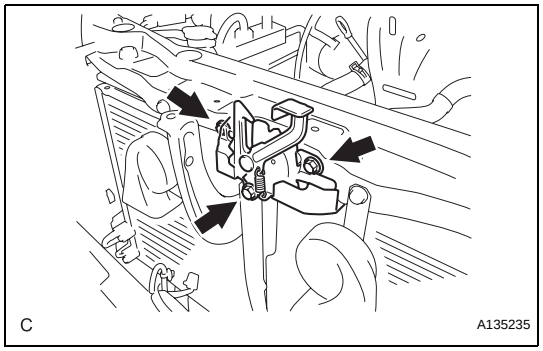
14. DISCONNECT OIL COOLER INLET HOSE (for Automatic Transaxle)

(a) Disconnect the oil cooler inlet hose from the radiator assembly.



15. DISCONNECT OIL COOLER OUTLET HOSE (for Automatic Transaxle)

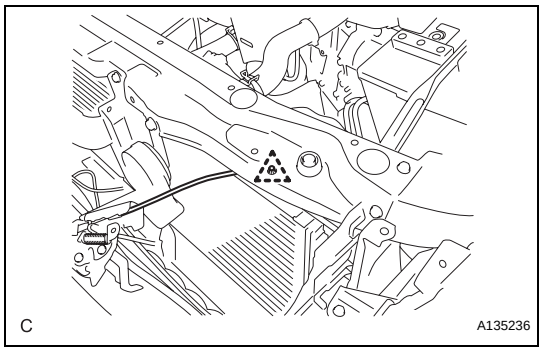
(a) Disconnect the oil cooler outlet hose from the radiator assembly.



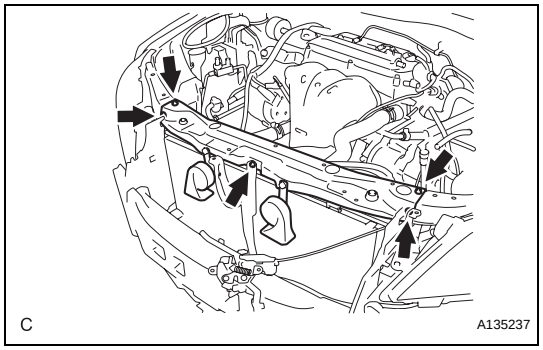
16. REMOVE RADIATOR SUPPORT UPPER

(a) Disconnect the horn connector.

(b) Remove the 3 bolts and separate the hood lock assembly from the radiator support upper.

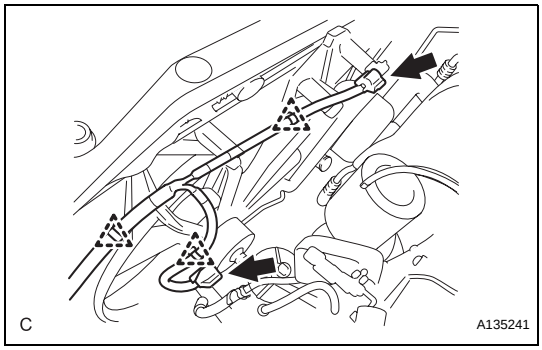


(c) Remove the clamp and separate the hood lock control cable from the radiator support upper.



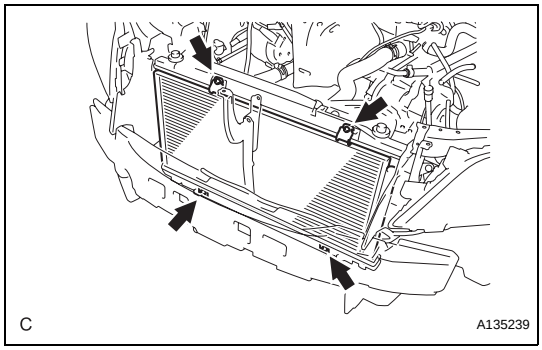
(d) Remove the 5 bolts and radiator support upper.

CO

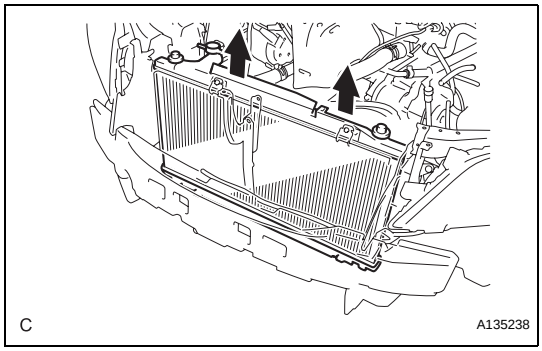


17. REMOVE RADIATOR ASSEMBLY

(a) Remove the 3 clamps and 2 connectors.

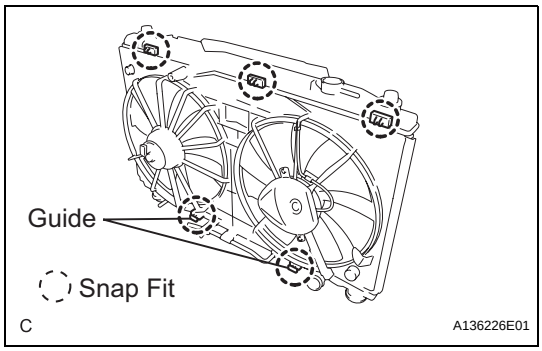


(b) Remove the 4 bolts and separate the condenser assembly from the radiator assembly.



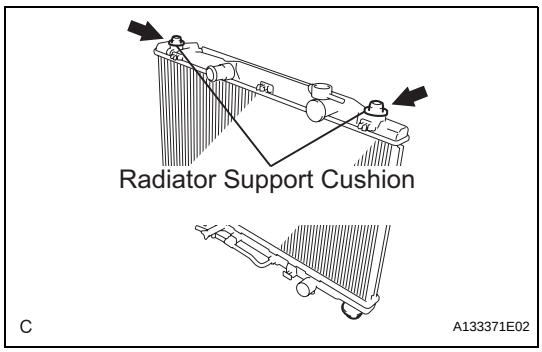
(c) Remove the radiator assembly from the body.

CO



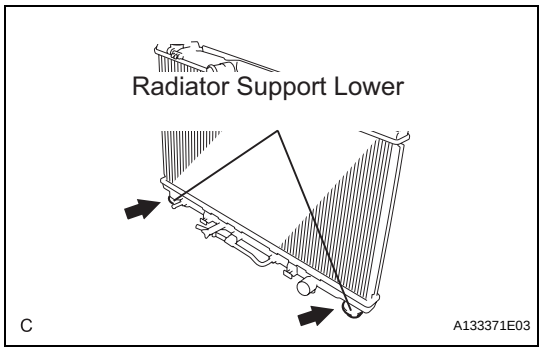
18. REMOVE FAN ASSEMBLY WITH MOTOR

(a) Release the 3 snap fits and lift the fan assembly with motor from the radiator.



19. REMOVE RADIATOR SUPPORT CUSHION

(a) Remove the 2 radiator support cushions from the radiator assembly.



20. REMOVE RADIATOR SUPPORT LOWER

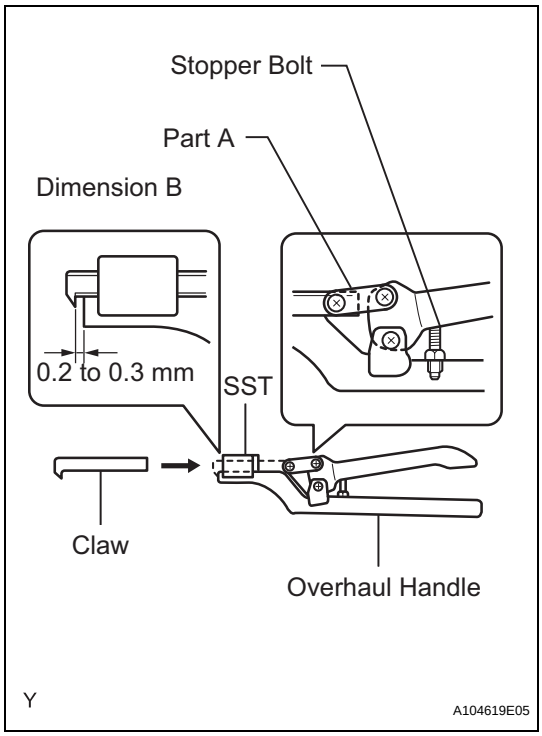
(a) Remove the 2 radiator support lowers from the radiator assembly.

DISASSEMBLY

1. REMOVE DRAIN PLUG

(a) Remove the drain plug.

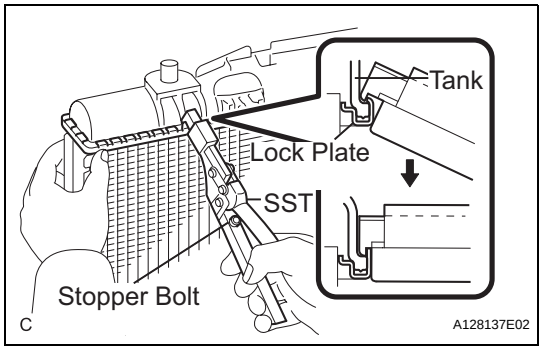
(b) Remove the O-ring.



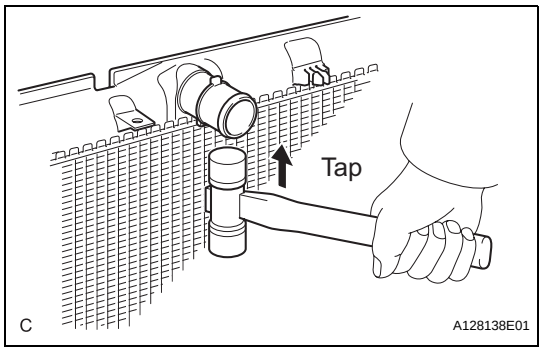
2. REMOVE RADIATOR TANK UPPER

(a) Install the claw to the overhaul handle, inserting it in the hole in part A as shown in the illustration.
SST 09230-01010 (09231-01010, 09231-01030)

(b) While gripping the handle, adjust the stopper bolt so that dimension B is as shown in the illustration.
Dimension B:
0.2 to 0.3 mm (0.008 to 0.012 in.)
NOTICE:
If the stopper bolt is not adjusted, the claw may be damaged.



(c) Using SST to release the caulking, grip the handle until stopped by the stopper bolt.
SST 09230-01010 (09231-01010, 09231-01030)



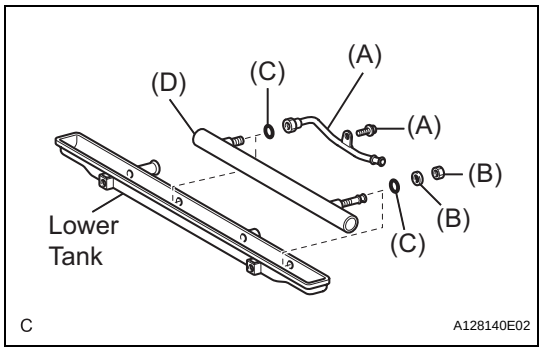
(d) Lightly tap the bracket of the radiator (or radiator hose inlet or outlet) with a soft-faced hammer and remove the tank.

(e) Remove the O-ring.

3. REMOVE RADIATOR TANK LOWER

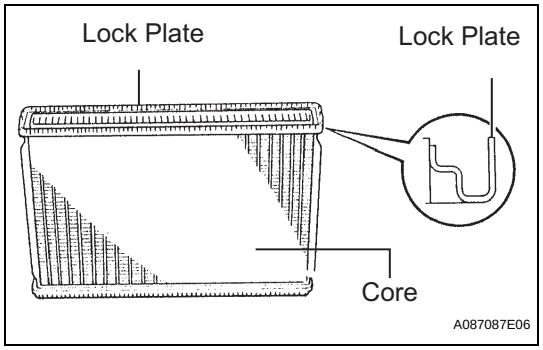
HINT:
Removal procedure of the radiator tank lower is the same as that of the radiator tank upper.

CO



4. REMOVE OIL COOLER ASSEMBLY

(a) Remove the screw and cooler pipe (A).
(b) Remove the nut and plate washer (B).
(c) Remove the oil cooler (C).
(d) Remove the 2 O-rings from the oil cooler (D).

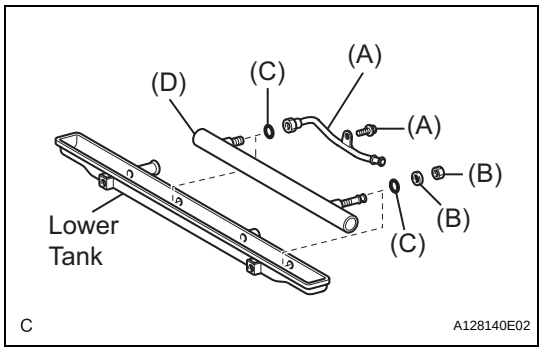


INSPECTION

1. INSPECT LOCK PLATE

(a) Inspect the lock plate for damage.
HINT:
- If the sides of the lock plate groove are deformed, reassembly of the tank will be impossible. Therefore, first correct the shape of the lock plate groove with pliers or a similar object, if necessary.
- Water leakage will result if the bottom of the lock plate groove is damaged or dented. Repair or replace the lock plate if necessary.

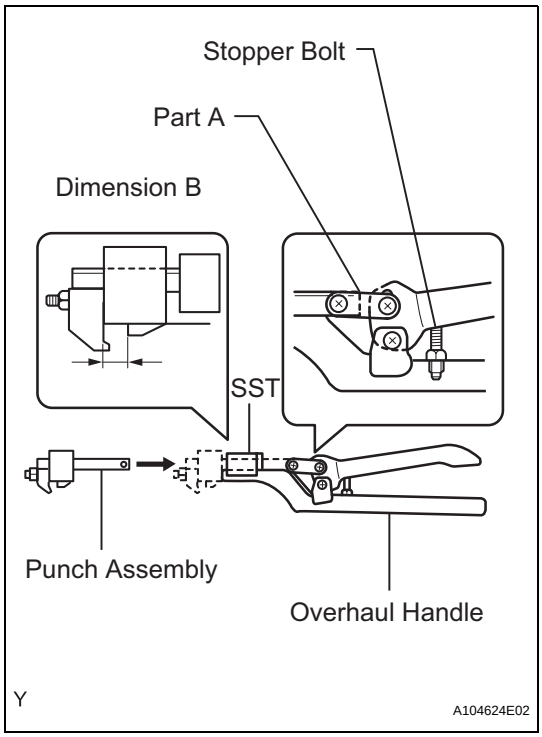
NOTICE:
The radiator can only be recaulked 2 times, After recaulking 2 times, the radiator core must be replaced.



REASSEMBLY

1. INSTALL OIL COOLER ASSEMBLY

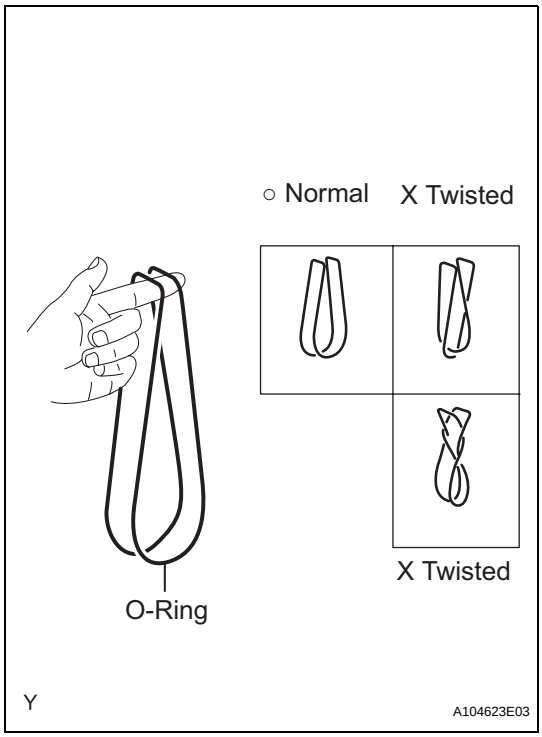
(a) Clean the O-ring contact surfaces of the lower tank and oil cooler (D).
(b) Install 2 new O-rings to the oil cooler (C).
(c) Install the oil cooler to the lower tank.
(d) Install the plate washer and nut (B).
Torque: 8.3 N*m (85 kgf*cm, 73 in.*lbf)
(e) Install the cooler pipe (A).
Torque: 15 N*m (150 kgf*cm, 11 ft.*lbf)
(f) Install the screw (A).



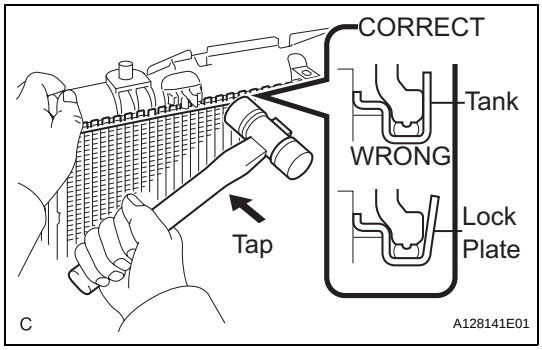
2. INSTALL RADIATOR TANK UPPER

(a) Install the punch assembly to the overhaul handle, inserting it in the hole in part A as shown in the illustration.
SST 09230-01010, 09231-14010

(b) While gripping the handle, adjust the stopper bolt so that dimension B is as shown in the illustration.
Dimension B:
8.4 mm (0.331 in.)



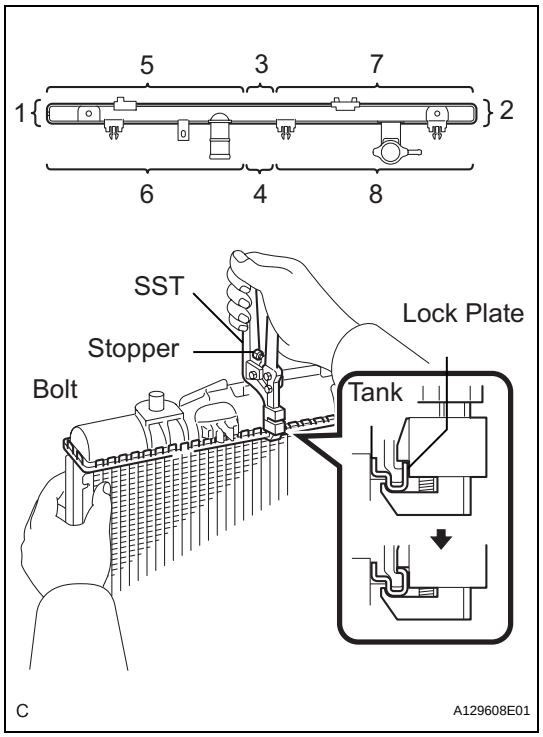
(c) After checking that there are no foreign objects in the lock plate groove, install a new O-ring without twisting it.
HINT:
When cleaning the lock plate groove, lightly rub it with sand paper without scratching it.



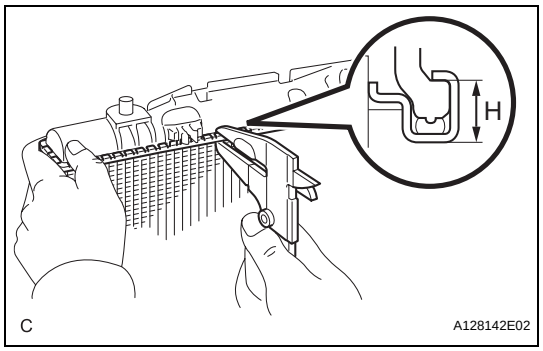
(d) Install the tank without damaging the O-ring.

(e) Tap the lock plate with a soft-faced hammer so that there is no gap between the lock plate and the tank.

CO



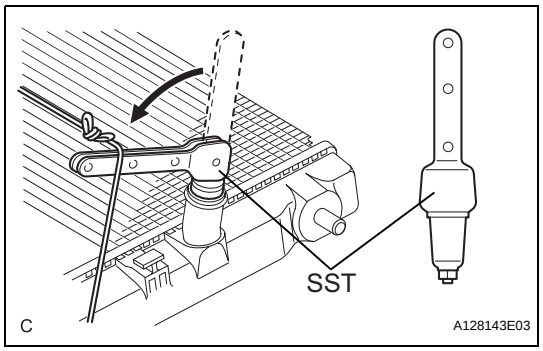
(f) Lightly press SST against the lock plate in the order shown in the illustration. After repeating this a few times, fully caulk the lock plate by gripping the handle until stopped by the stopper plate.
HINT:
- Do not tap the areas protruding around the pipes, brackets or tank ribs.
- The dotted circles shown in the illustration and parts of the oil cooler near the dotted circles cannot be tapped with the SST. Use pliers or similar objects and be careful not to damage the core plates.



(g) Check the lock plate height (H) after completing caulking.
Plate height (H):
7.40 to 7.80 mm (0.2913 to 0.3071 in.)
If not within the specified height range, adjust the stopper bolt of the handle and caulk again.

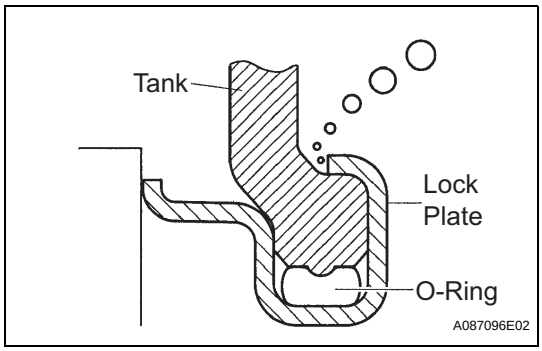
3. INSTALL RADIATOR TANK LOWER
SST 09230-01010, 09231-14010
HINT:
Removal procedure of the lower radiator tank is the same as that of the upper radiator tank.

4. INSTALL DRAIN PLUG
(a) Install a new O-ring to the drain plug.
(b) Install the drain plug.



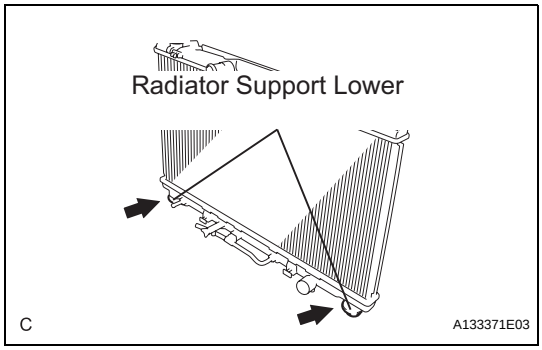
5. INSPECT FOR WATER LEAKS
(a) Plug the inlet and outlet pipes of the radiator with SST.
SST 09230-01010
(b) Using the radiator cap tester, apply pressure to the radiator.
Test pressure:
177 kPa (1.8 kgf/cm^2, 26 psi)
(c) Submerge the radiator in water.

CO



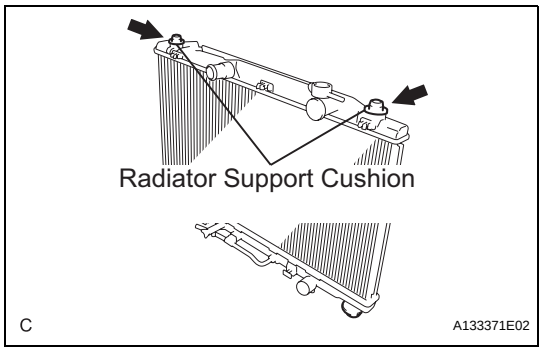
(d) Inspect for leaks.
HINT:
On radiators with resin tanks, there is clearance between the tank and lock plate where a minute amount of air will remain, giving the appearance of an air leak when the radiator is submerged in water. Therefore, before doing the water leak test, first swish the radiator around in the water until all air bubbles disappear.

INSTALLATION



1. INSTALL RADIATOR SUPPORT LOWER

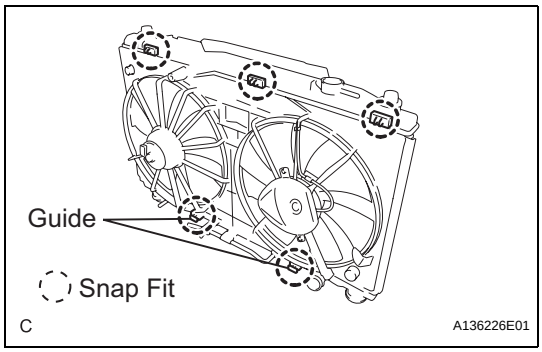
(a) Install the 2 radiator support lowers to the radiator assembly.



2. INSTALL RADIATOR SUPPORT CUSHION

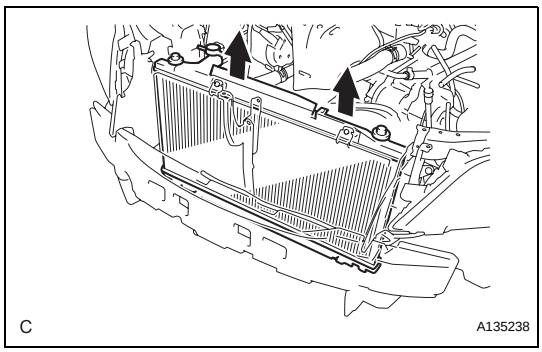
(a) Install the 2 radiator support cushions to the radiator assembly.

CO



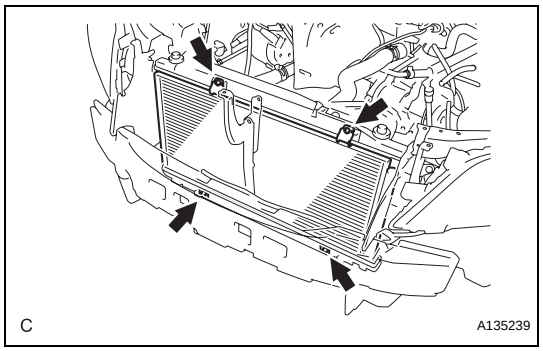
3. INSTALL FAN ASSEMBLY WITH MOTOR

(a) Install the fan assembly with motor to the radiator with the 2 guides at the bottom and 3 snap fits on the top.

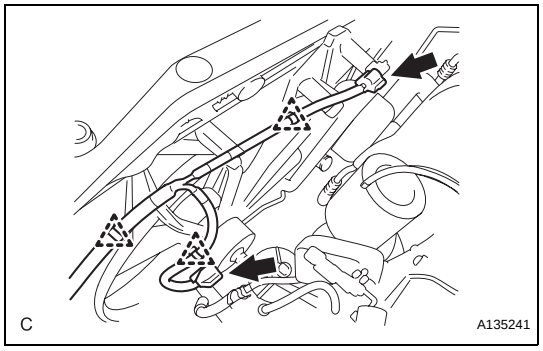


4. INSTALL RADIATOR ASSEMBLY

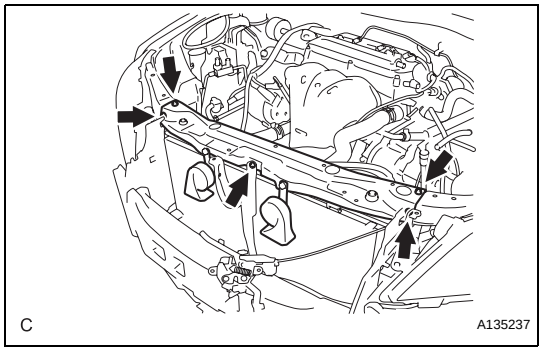
(a) Install the radiator to the body.



(b) Install the condenser assembly with the 4 bolts.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

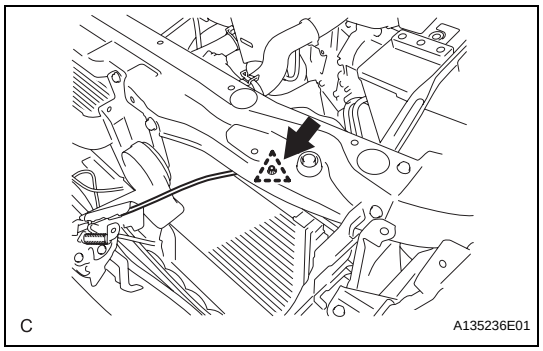


(c) Connect the 2 fan motor connectors and the 3 clamps.

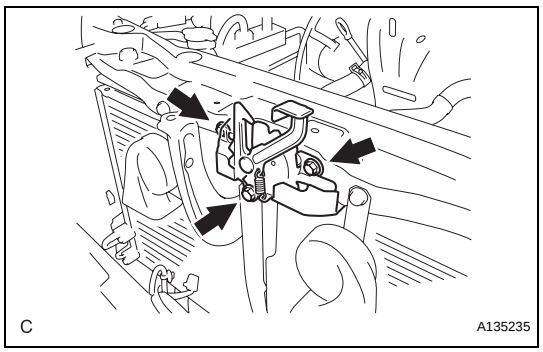


5. INSTALL RADIATOR SUPPORT UPPER

(a) Install the radiator support upper with the 5 bolts.
Torque: 7.0 N*m (71 kgf*cm, 62 in.*lbf)



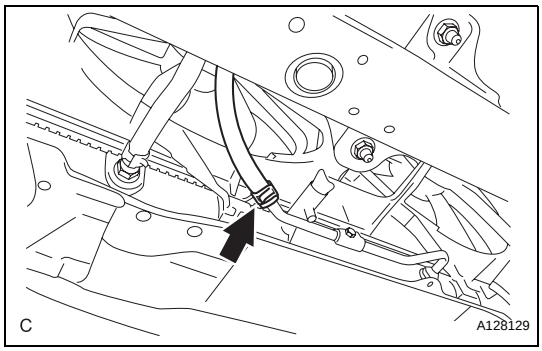
(b) Install the hood lock control cable assembly to the radiator support upper with the clamp.



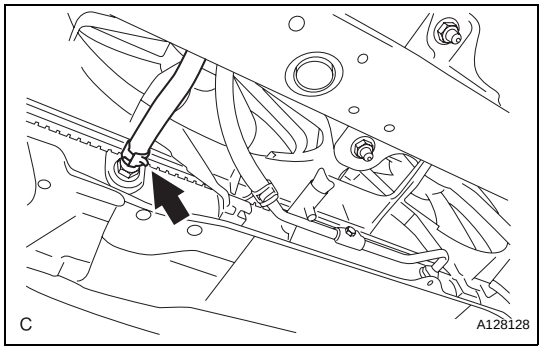
(c) Install the hood lock assembly to the radiator support upper with the 3 bolts.
Torque: 7.5 N*m (77 kgf*cm, 66 in.*lbf)

(d) Connect the horn connector.

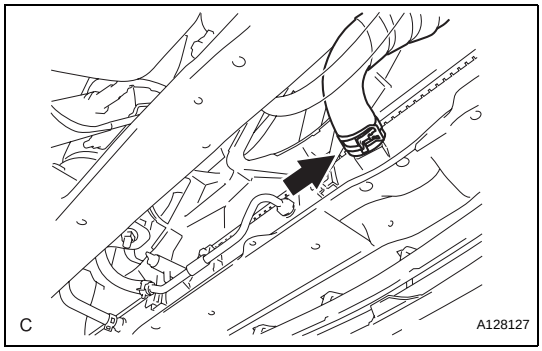
CO



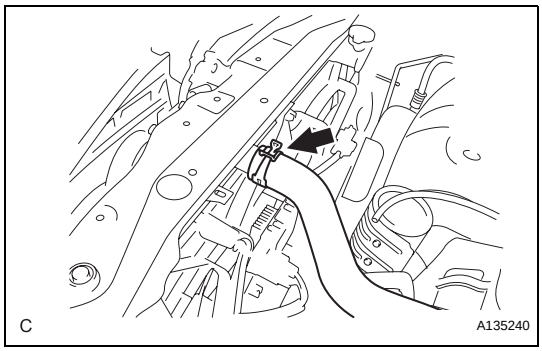
6. **CONNECT OIL COOLER OUTLET HOSE (for Automatic Transaxle)**
   (a) Connect the oil cooler outlet hose to the radiator assembly.



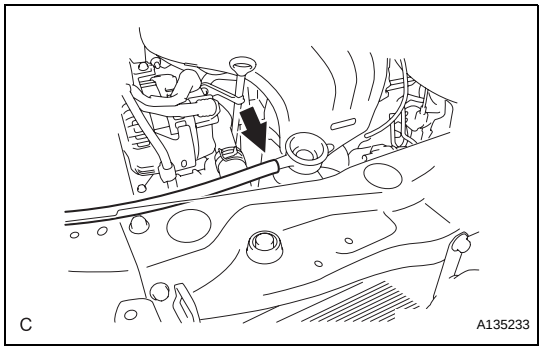
7. **CONNECT OIL COOLER INLET HOSE (for Automatic Transaxle)**
   (a) Connect the oil cooler inlet hose to the radiator assembly.



8. **CONNECT RADIATOR HOSE OUTLET**
   (a) Connect the radiator hose outlet to the radiator assembly.



9. **CONNECT RADIATOR HOSE INLET**
   (a) Connect the radiator hose inlet to the radiator assembly.



10. **CONNECT RADIATOR RESERVOIR TANK HOSE**
    (a) Connect the radiator reservoir tank hose to the radiator assembly.

11. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-120)**

12. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-419)**

13. **ADD ENGINE COOLANT (See page CO-5)**

CO

14. **CHECK FOR ENGINE COOLANT LEAKS (See page CO-1)**
15. **INSTALL ENGINE UNDER COVER LH**
16. **INSTALL ENGINE UNDER COVER RH**
17. **INSTALL FRONT WHEEL OPENING EXTENSION PAD RH**
18. **INSTALL FRONT WHEEL OPENING EXTENSION PAD LH**

ON-VEHICLE INSPECTION

1. VISUALLY INSPECT HOSE, CONNECTIONS AND GASKETS

(a) Check that there are no cracks, leaks or damage.
HINT:
- Detachment or other problems with the engine oil dipstick, filler cap, PCV hose and other components may cause the engine to run improperly.
- Disconnection, looseness or cracks in the parts of the air induction system between the throttle body and cylinder head will allow air suction and cause an engine failure or engine malfunctions.

If the result is not as specified, replace the parts as necessary.

2. INSPECT FUEL CUT RPM

(a) Start and warm up the engine.
(b) Open the throttle valve and keep the engine speed at 3,000 rpm.
(c) Use a sound scope to check for injector operating sounds.
(d) Check that when the accelerator pedal is released, injector operating sounds stop momentarily (at 2,500 rpm) and then resume (at 1400 rpm).

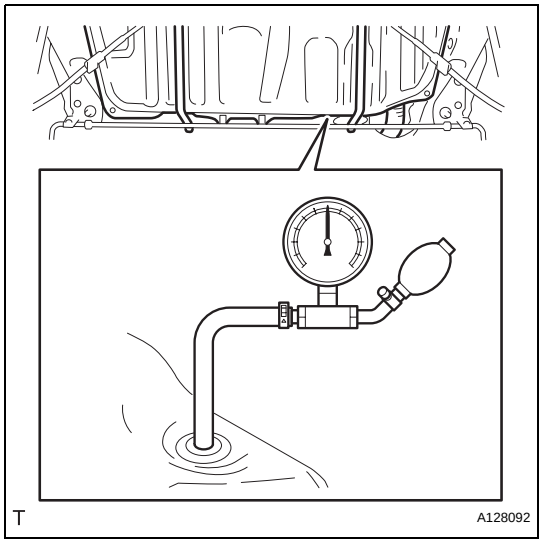
Standard

Item	Specified condition
Fuel cut off rpm	2,500 rpm
Fuel return rpm	1,400 rpm

If the result is not specified, check the injectors, wiring and ECM.

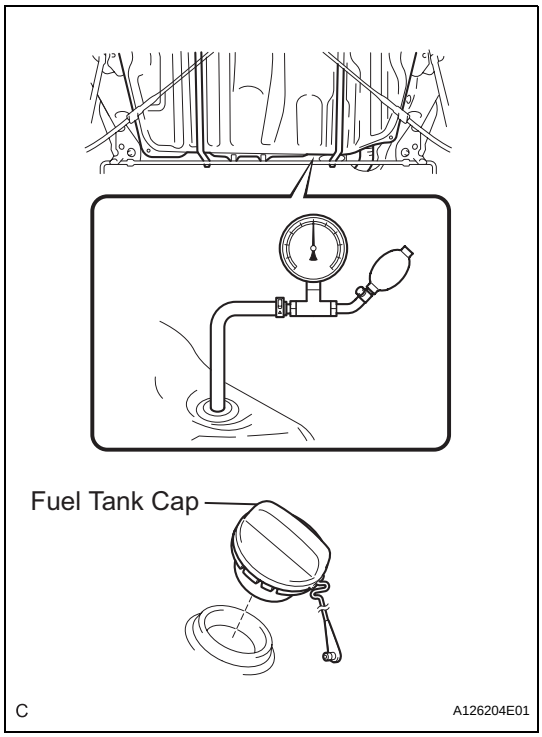
3. INSPECT LINE AND CONNECTORS

(a) Visually check for loose connections, sharp bends or damage.



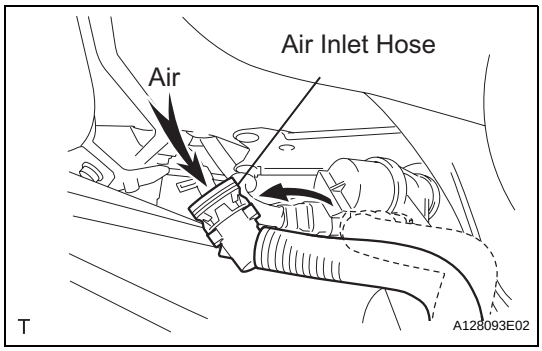
4. CHECK AIR TIGHTNESS IN FUEL TANK AND FILLER PIPE

(a) Disconnect the vent line hose from the fuel tank.
(b) Connect the pressure gauge to the fuel tank.
(c) Apply pressure to the fuel tank to create an internal pressure of 4 kPa (41 gf/cm^2, 0.58 psi).
(d) Check that the internal pressure of the fuel tank is maintained for 1 minute.
(e) Check the connected portions of each hose and pipe.
(f) Check the installed parts on the fuel tank.
If any malfunctions, damage or other problems are found, replace the fuel tank and filler pipe.
(g) Reconnect the vent line hose to the fuel tank.



5. REMOVE FUEL TANK ASSEMBLY

(a) Disconnect the vent line hose from the fuel tank.
(b) Connect the pressure gauge to the fuel tank.
(c) Fill the fuel tank with fuel.
(d) Apply pressure of 4 kPa (41 gf/cm^2, 0.58 psi) to the vent port of the fuel tank.
HINT:
Check the amount of fuel in the fuel tank. When the fuel tank is full, the float valve of the fill check valve is closed and no air can pass through.
(e) Remove the fuel tank cap, and check that the pressure drops.
If the pressure does not drop, replace the fuel tank assembly.
(f) Reconnect the vent line hose to the fuel tank.



EC

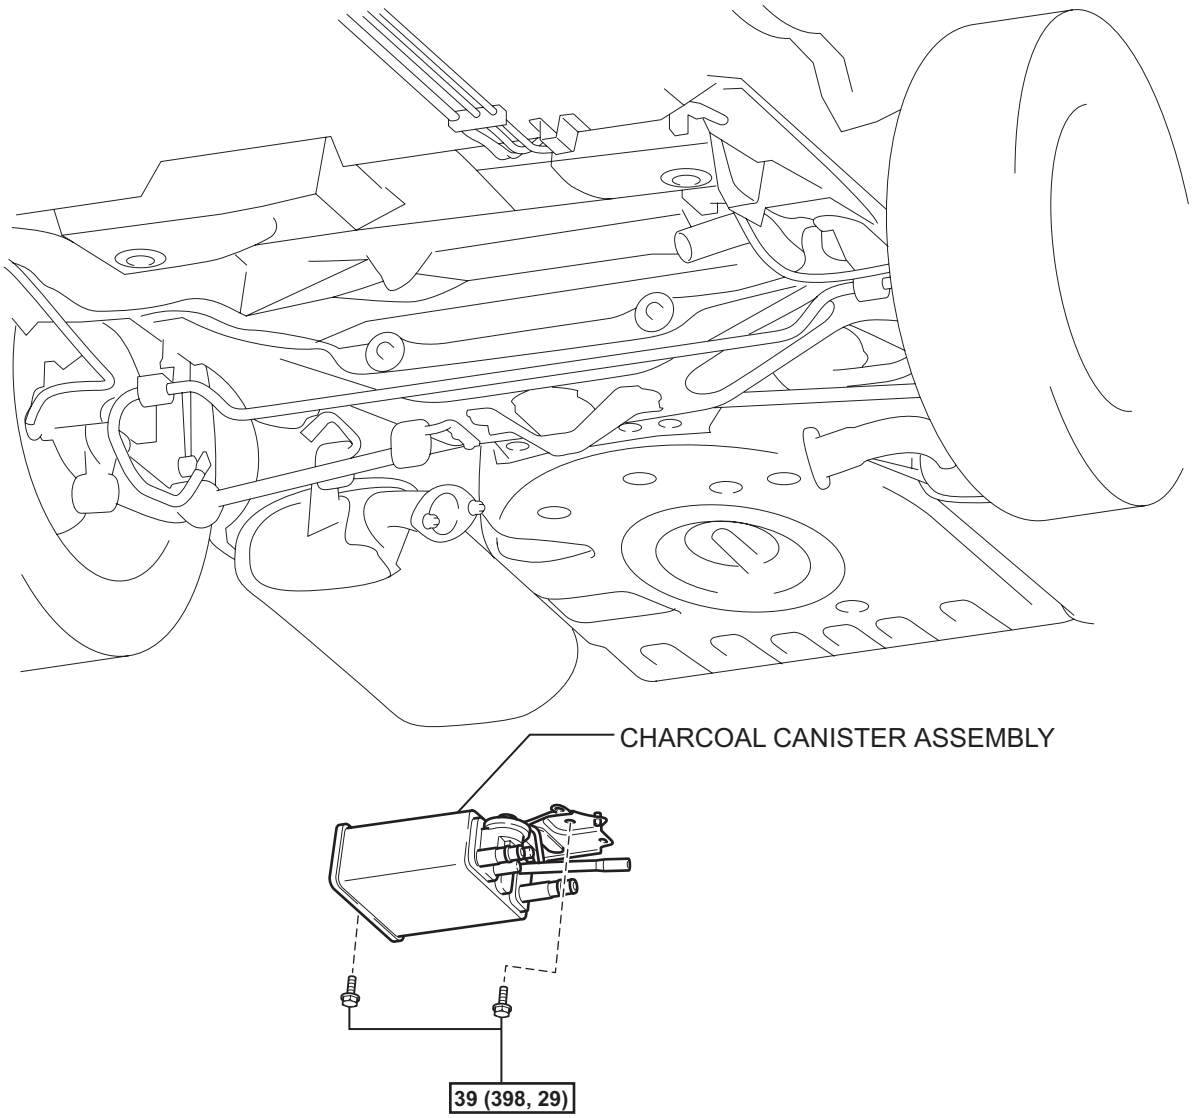
6. REMOVE AIR INLET LINE

(a) Disconnect the air inlet line hose from the charcoal canister.
(b) Check that air can flow freely into the air inlet line.
If air cannot flow freely into the air inlet line, repair or replace it.
(c) Reconnect the air inlet line hose to the charcoal canister.

CANISTER

COMPONENTS

for PZEV:



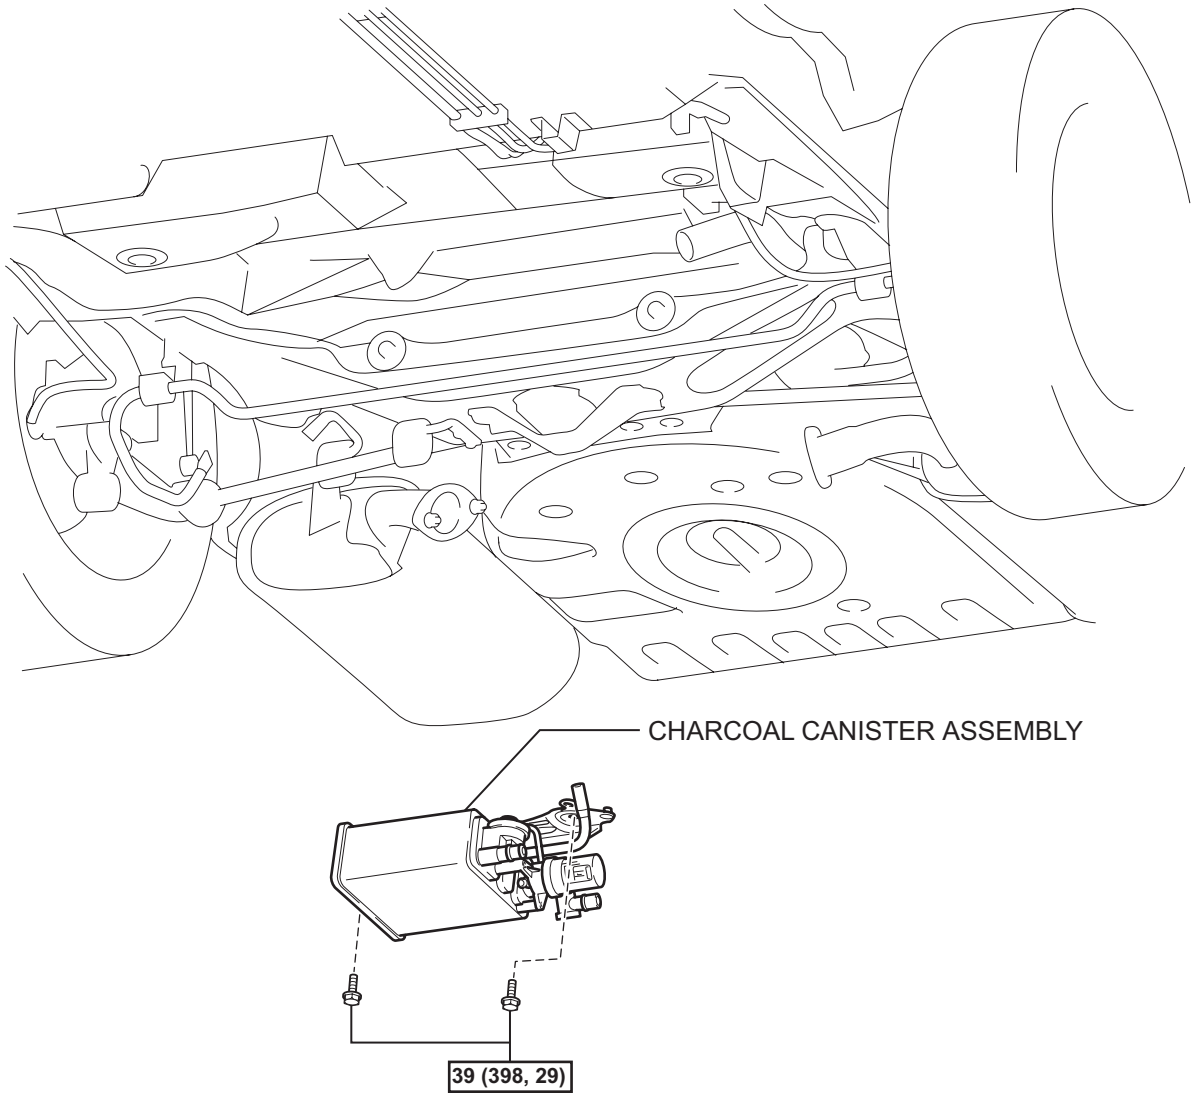
N*m (kgf*cm, ft.*lbf) : Specified torque

T

A135649E03

EC

except PZEV:



N*m (kgf*cm, ft.*lbf) : Specified torque

T

A135648E06

REMOVAL

1. REMOVE FUEL TANK ASSEMBLY

HINT:

(See page FU-34)

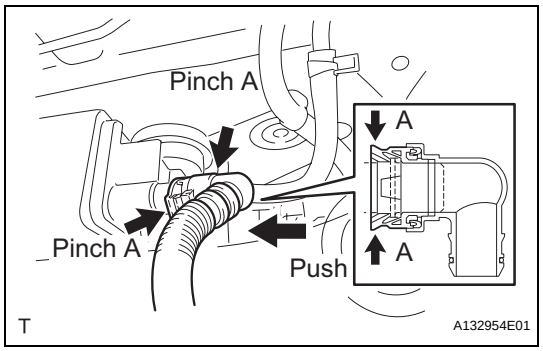
2. REMOVE CHARCOAL CANISTER ASSEMBLY

(a) Disconnect the fuel tank vent hose from the charcoal canister.

(1) Push the connector deep inside.

(2) Pinch portion A.

(3) Pull out the connector.



(b) Disconnect the charcoal canister filter sub-assembly from the charcoal canister.

(1) Push the connector deep inside.

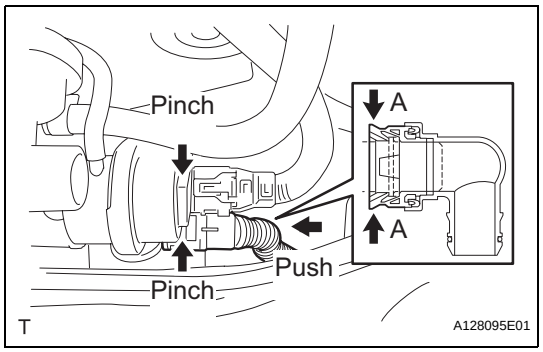
(2) Pinch portion A.

(3) Pull out the connector.

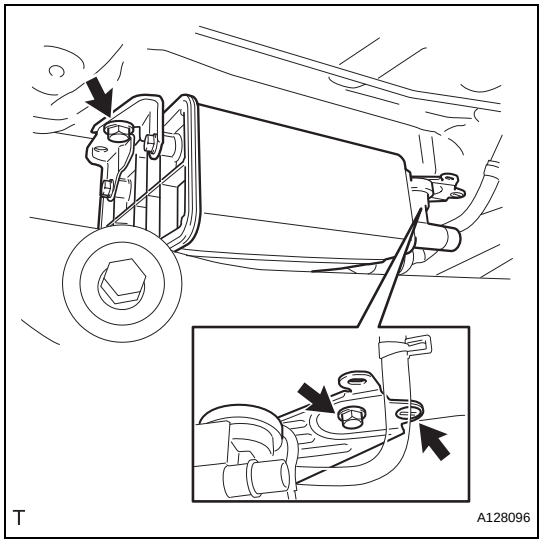
(c) Disconnect the vapor pressure sensor connector.

(d) Disconnect the wire harness clamp.

(e) Disconnect the purge line hose from the charcoal canister.



(f) Remove the 2 bolts, clip and charcoal canister.

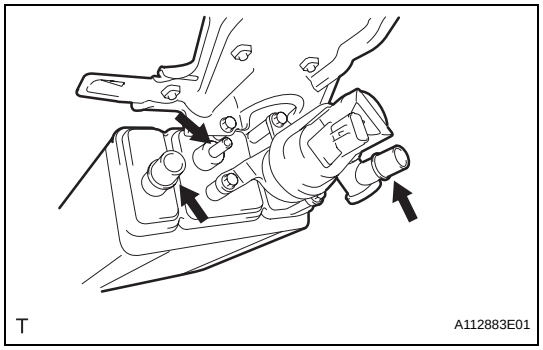


INSPECTION

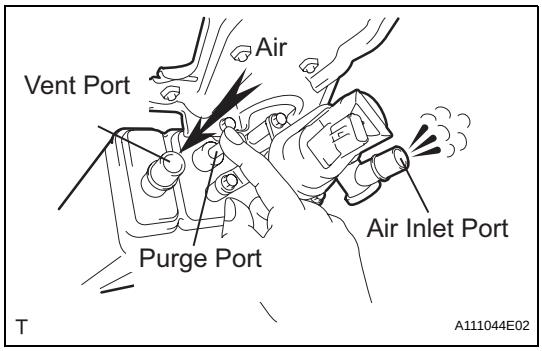
1. INSPECT CHARCOAL CANISTER ASSEMBLY

(a) Visually check the charcoal canister for cracks or damage.

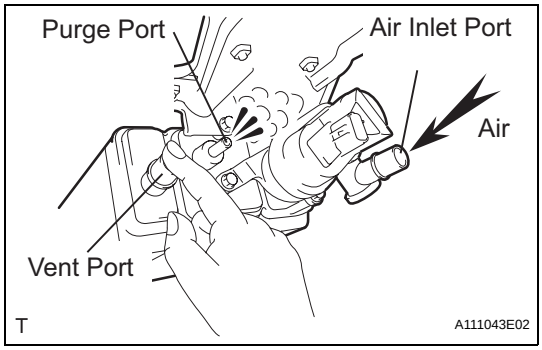
If cracks or damage are found, replace the charcoal canister assembly.



EC

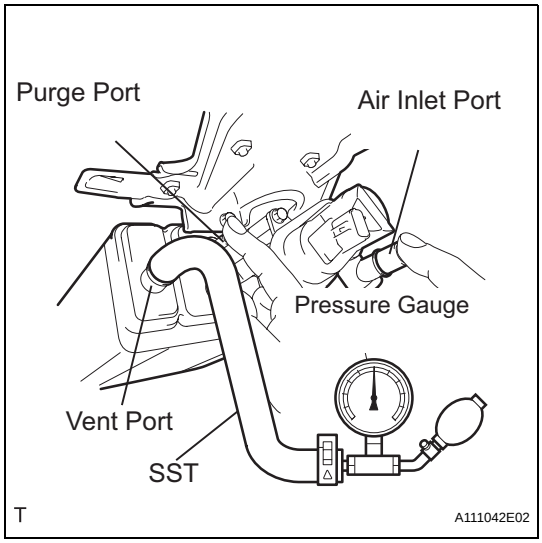


(b) Check charcoal canister operation.
(1) With the purge port closed, blow 1.10 kPa (11.2 gf/cm^2, 0.16 psi) of air into the vent port, and check that air flows from the air inlet port.
If the result is not as specified, replace the charcoal canister assembly.

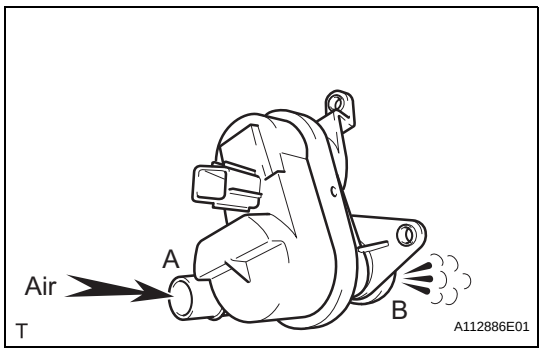


(2) With the vent port closed, blow 1.10 kPa (11.2 gf/cm^2, 0.16 psi) of air into the air inlet port, and check that air flows from the purge port.
If the result is not as specified, replace the charcoal canister assembly.

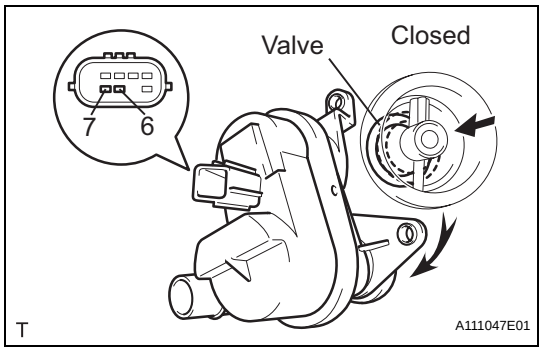
EC

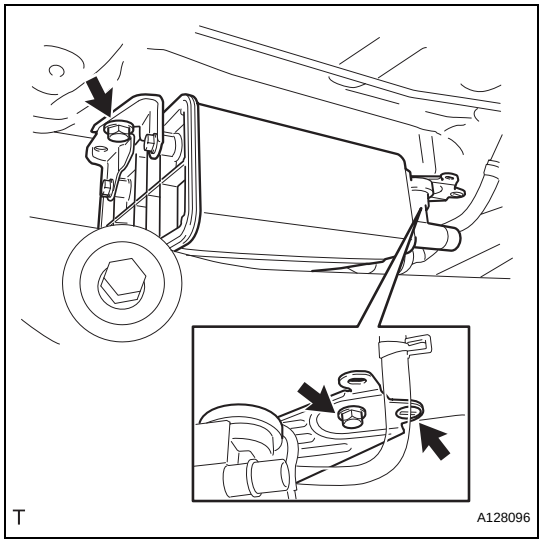


(c) Check for air leakage.
(1) With the purge port and air inlet port closed, apply 19.6 kPa (0.2 kgf/cm^2, 2.81 psi) of pressurized air into the vent port, then confirm that pressure is retained for 1 minute.
If the result is not as specified, replace the charcoal canister assembly.



(d) Check the leak detection pump.
(1) Remove the detection pump from the charcoal canister.
(2) Check that air flows from port A to B.
If the result is not as specified, replace the charcoal canister assembly.





(3) Connect the positive (+) lead of the battery to terminal 7 and the negative (-) lead to terminal 6.
(4) Check that the valve is closed.
If the result is not as specified, replace the charcoal canister assembly.
(5) Install the detection pump.

INSTALLATION

1. INSTALL CHARCOAL CANISTER ASSEMBLY

(a) Install the 2 bolts, clip and charcoal canister.
Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)
(b) Connect the purge line hose to the charcoal canister.
(c) Connect the wire harness clamp.
(d) Connect the vapor pressure sensor connector.
(e) Connect the charcoal canister filter sub-assembly to the charcoal canister.
(f) Connect the fuel tank vent hose to the charcoal canister.

2. INSTALL FUEL TANK ASSEMBLY

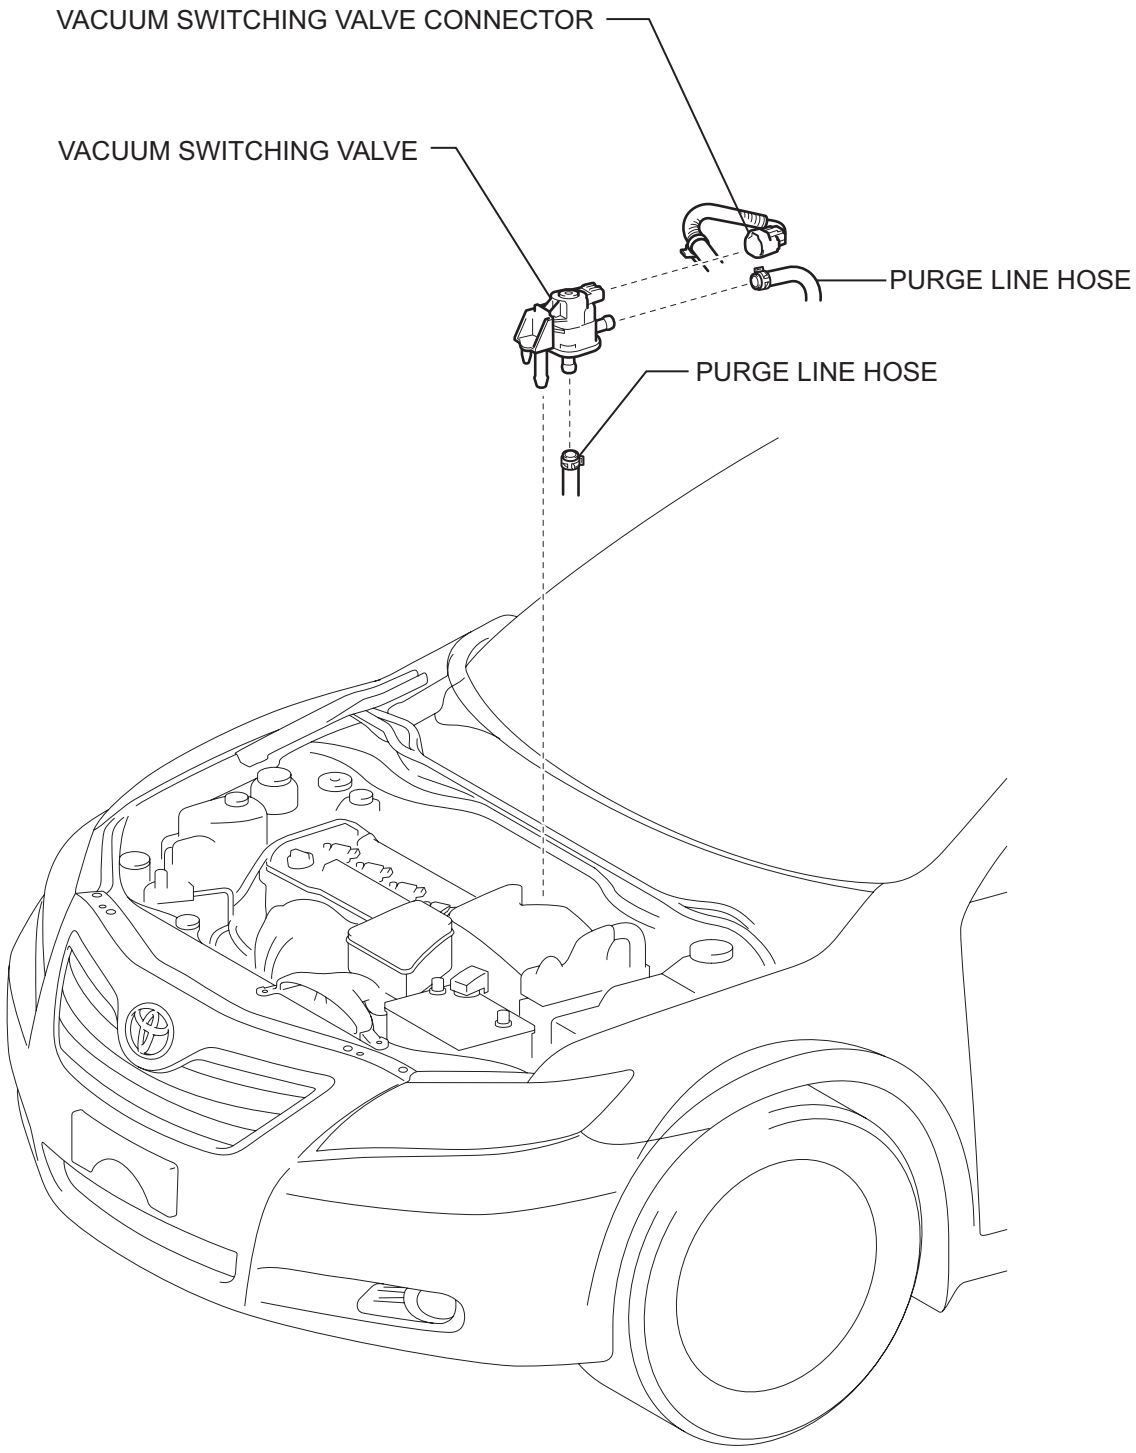
HINT:
(See page FU-39)

3. CHECK FOR EXHAUST GAS LEAKS

EC

VACUUM SWITCHING VALVE

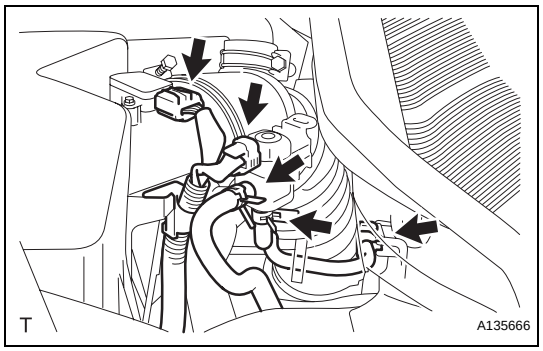
COMPONENTS



EC

T

A135652E03



REMOVAL

1. REMOVE VACUUM SWITCHING VALVE

(a) Disconnect the vacuum switching valve connector.
(b) Disconnect the wire harness clamp.
(c) Disconnect the 2 purge line hoses from the purge VSV.
(d) Remove the vacuum switching valve.

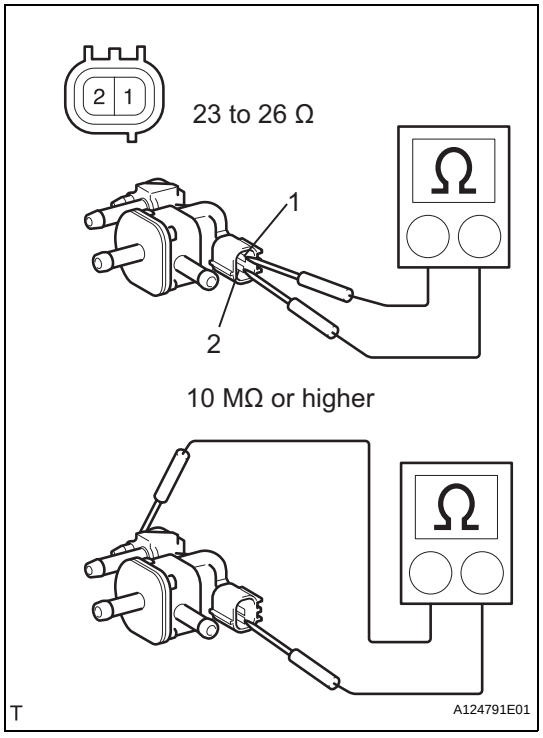
INSPECTION

1. INSPECT VACUUM SWITCHING VALVE

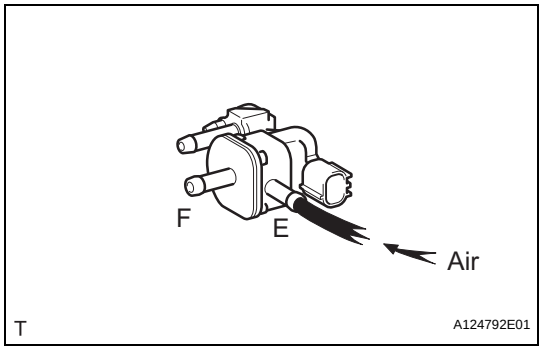
(a) Measure the resistance of the purge VSV.
Standard resistance

Tester Connection	Specified Condition
1 - 2	23 to 26 Ω at 20°C (68°F)
1 - Body ground 2 - Body ground	10 MΩ or higher

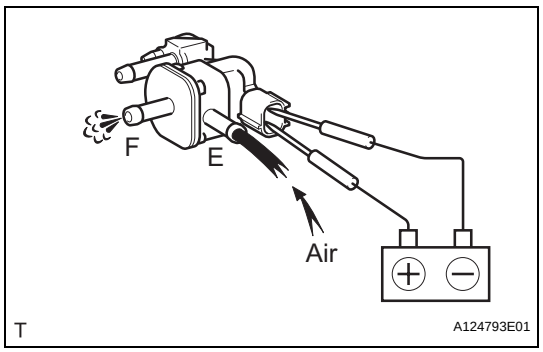
If the result is not as specified, replace the purge VSV.



(b) Check the operation of the purge VSV.
(1) Check that air does not flow from port E to port F.



(2) Apply battery voltage across the terminals.
(3) Check that air flows from port E to port F.
If the result is not as specified, replace the purge VSV.



EC

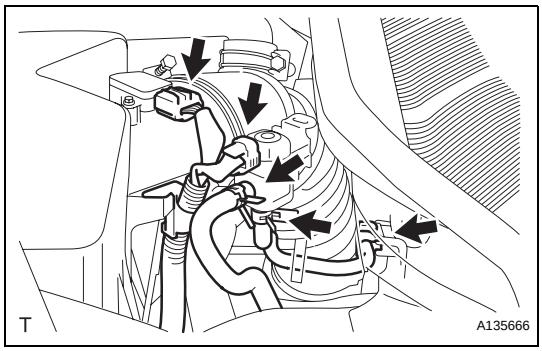
INSTALLATION

1. REMOVE VACUUM SWITCHING VALVE

(a) Install the vacuum switching valve onto the air cleaner hose.

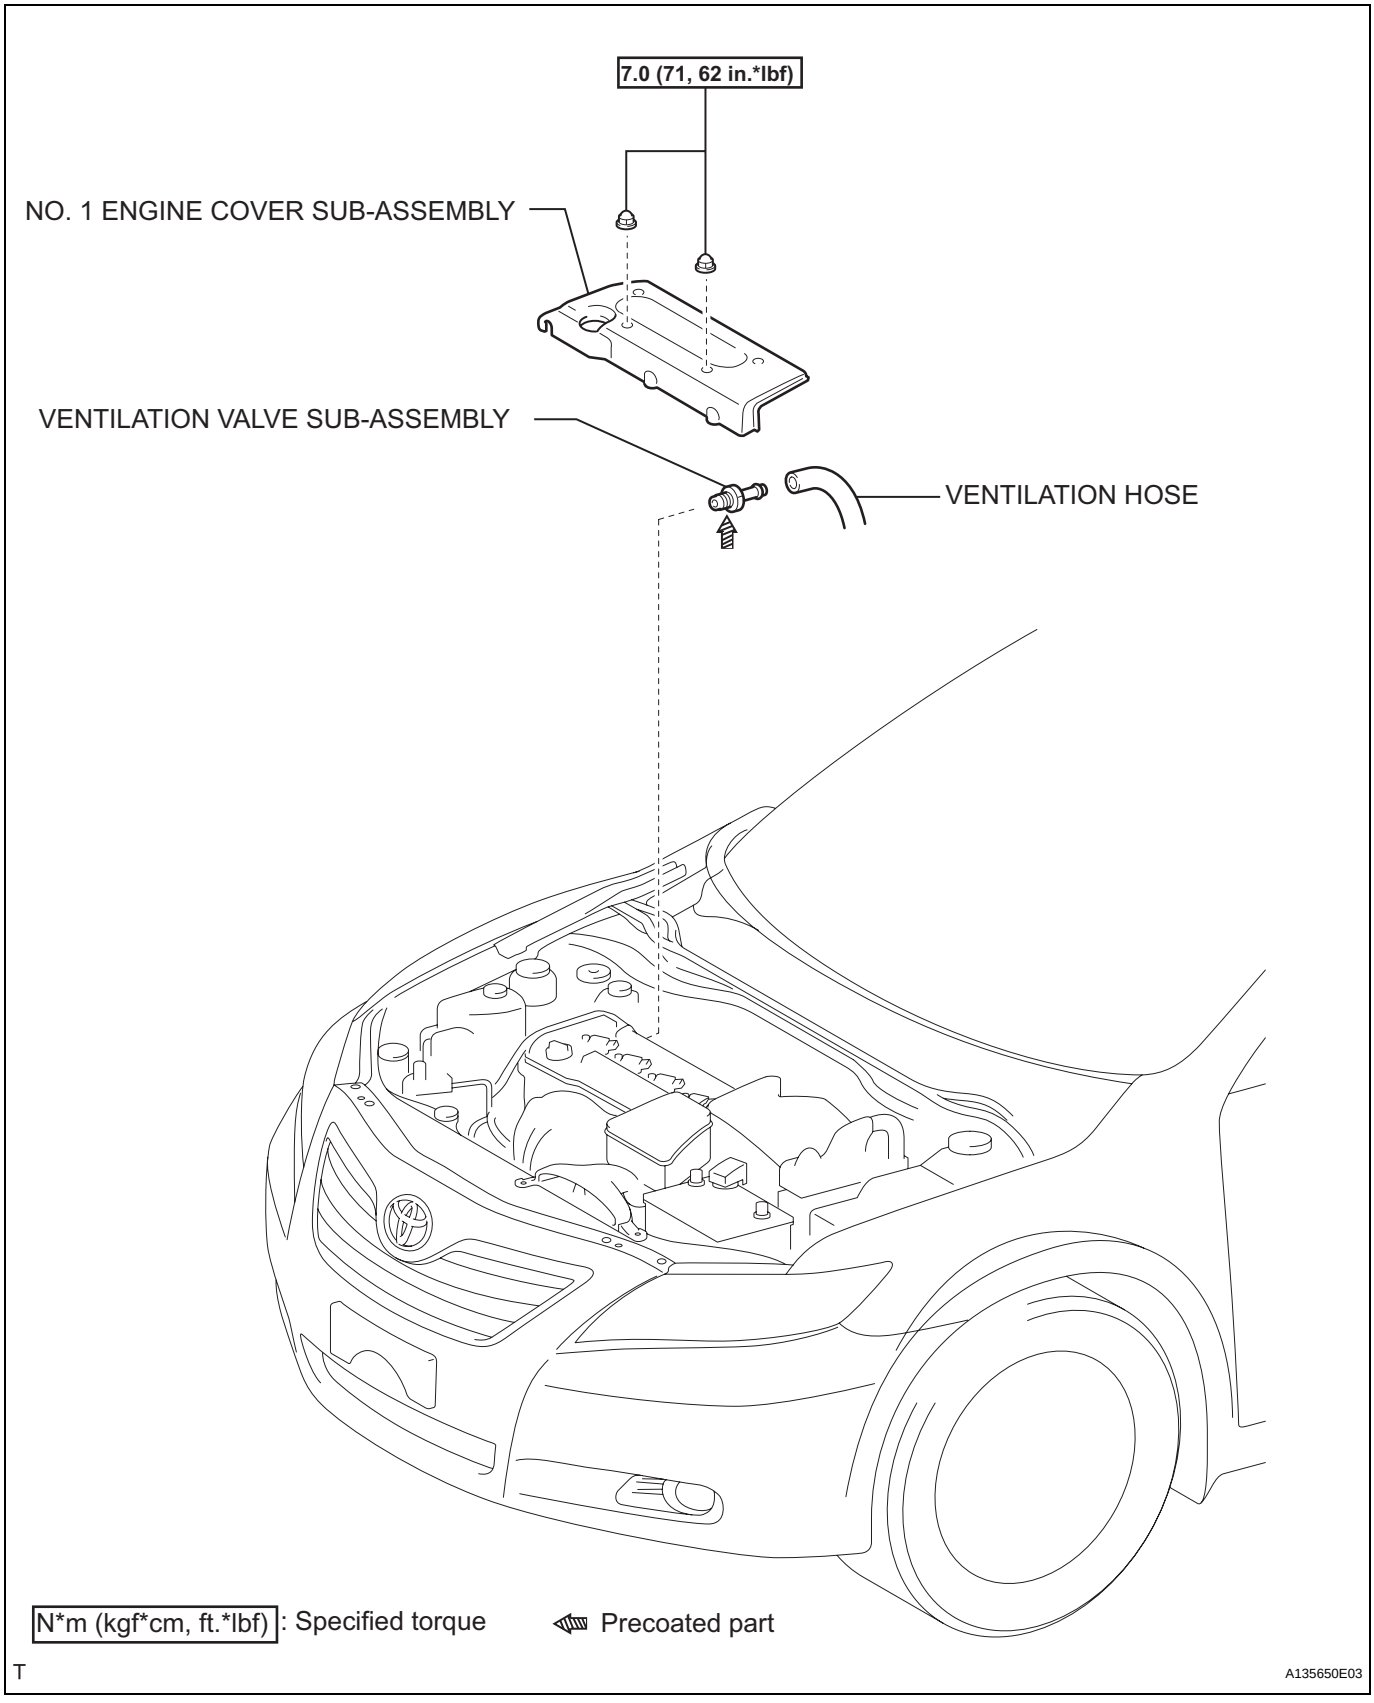
(b) Connect the 2 purge line hoses to the vacuum switching valve.

(c) Connect the vacuum switching valve connector.



VENTILATION VALVE

COMPONENTS



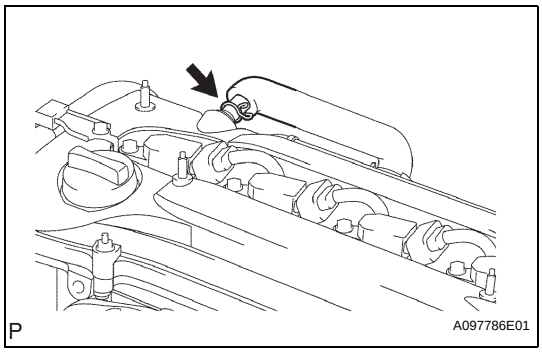
EC

REMOVAL

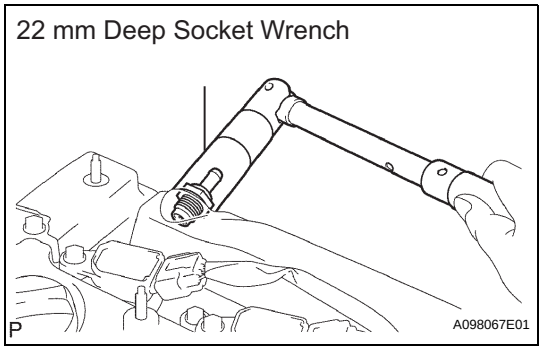
1. REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY

2. REMOVE VENTILATION VALVE SUB-ASSEMBLY

(a) Disconnect the ventilation hose from the ventilation valve sub-assmbly.



(b) Using a 22 mm deep socket wrench, remove the ventilation valve sub-assembly.



EC

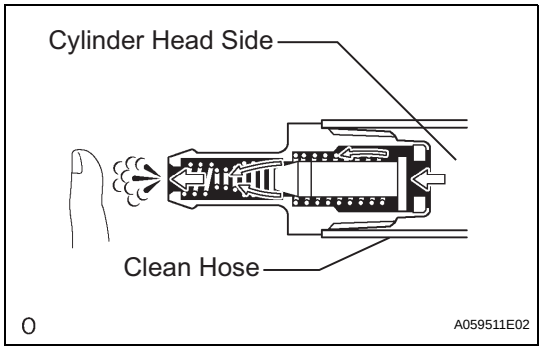
INSPECTION

1. INSPECT VENTILATION VALVE SUB-ASSEMBLY

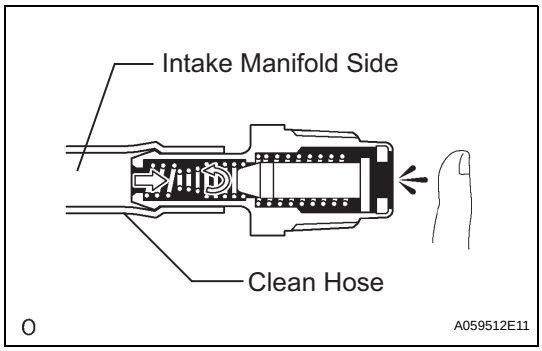
(a) Install a clean hose to the ventilation valve.

(b) Inspect the ventilation valve operation.

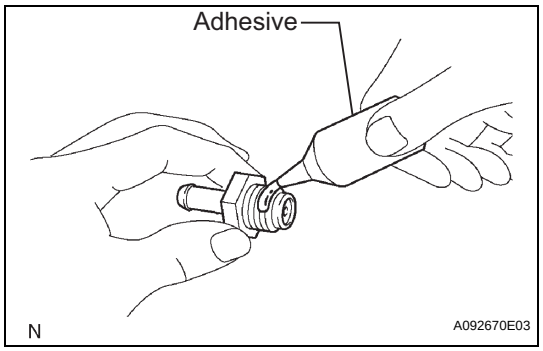
(1) Blow air into the cylinder head side, and check that air passes through easily.
NOTICE:
Do not suck air through the valve.
Petroleum substances inside the valve are hazardous to your health.



(2) Blow air into the intake manifold side, and check that air passes through with difficulty.
If the result is not as specified, replace the ventilation valve.



(c) Remove the clean hose from the ventilation valve.



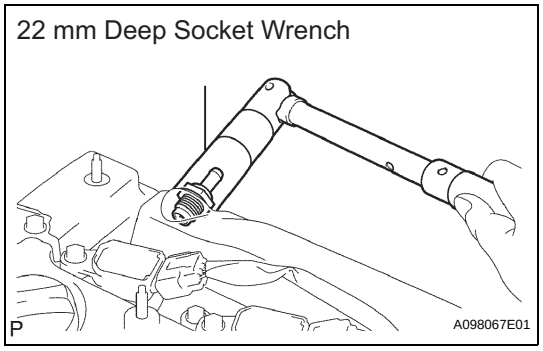
INSTALLATION

1. INSTALL VENTILATION VALVE SUB-ASSEMBLY

(a) Apply adhesive to 2 or 3 threads of the ventilation valve.

Adhesive:

Toyota genuine adhesive 1324, three bond 1324 or equivalent



(b) Using a 22 mm deep socket wrench, install the ventilation valve.

Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)

(c) Connect the ventilation hose.

2. INSTALL ENGINE COVER SUB-ASSEMBLY

3. CHECK FOR ENGINE OIL LEAKS

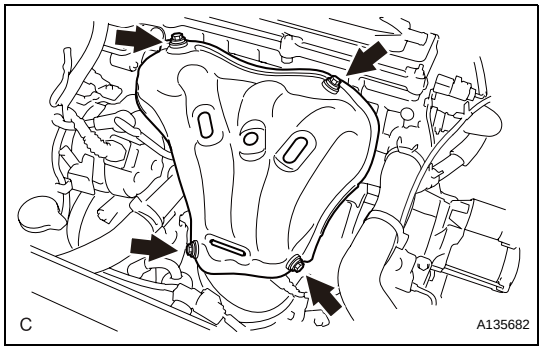
T

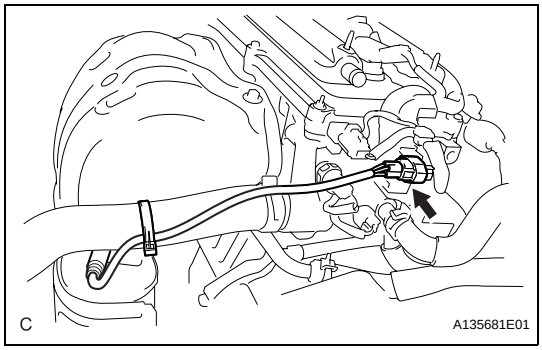
A132950E02



REMOVAL

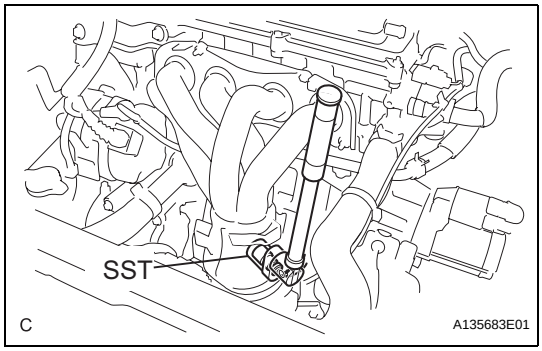
1. REMOVE NO. 1 EXHAUST MANIFOLD HEAT INSULATOR (except PZEV)

(a) Remove the 4 bolts and No. 1 exhaust manifold heat insulator.



2. REMOVE AIR FUEL RATIO SENSOR (except PZEV)

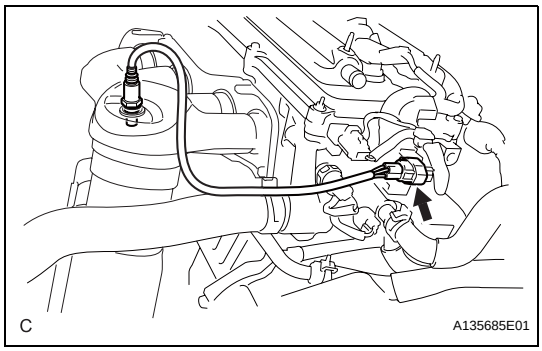
(a) Disconnect the air fuel ratio sensor connector and clamp.



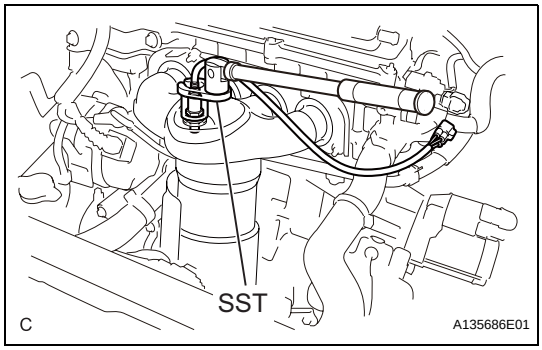
(b) Using SST, remove the air fuel ratio sensor from the exhaust manifold converter sub-assembly No. 2.
SST 09224-00010
NOTICE:
Do not damage the air fuel ratio sensor.

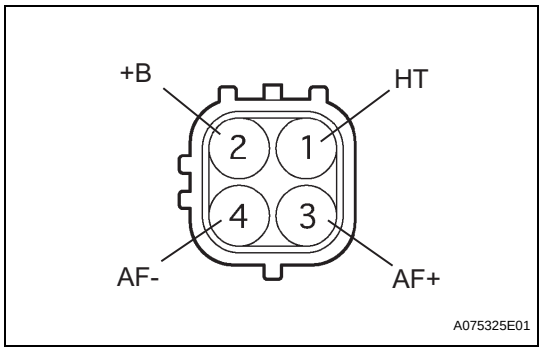
3. REMOVE AIR FUEL RATIO SENSOR (for PZEV)

(a) Disconnect the air fuel ratio sensor connector.



(b) Using SST, remove the air fuel ratio sensor.
SST 09224-00010
NOTICE:
Do not damage the air fuel ratio sensor.





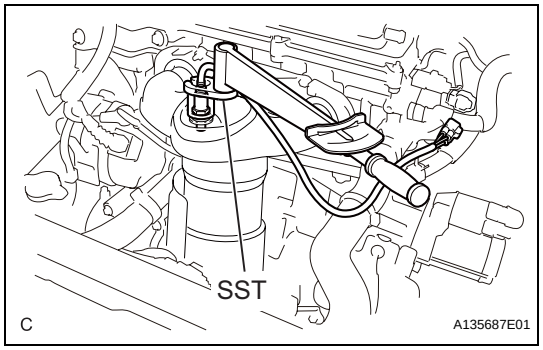
INSPECTION

1. INSPECT AIR FUEL RATIO SENSOR

(a) Using an ohmmeter, measure the resistance between terminals 1 (HT) and 2 (+B).
Standard resistance

Condition	Specified Condition
20°C (68°F)	1.8 to 3.4 Ω

If the result is not as specified, replace the sensor.

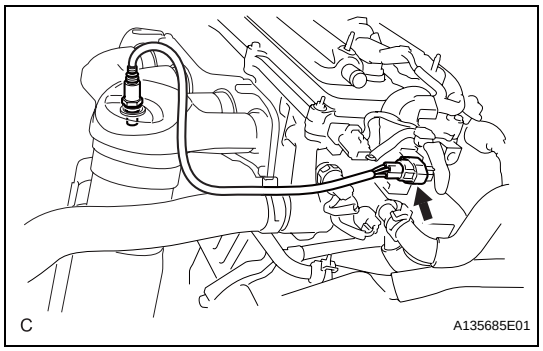


INSTALLATION

1. INSTALL AIR FUEL RATIO SENSOR (for PZEV)

(a) Temporarily tighten the air fuel ratio sensor.
NOTICE:
Do not damage the air fuel ratio sensor.

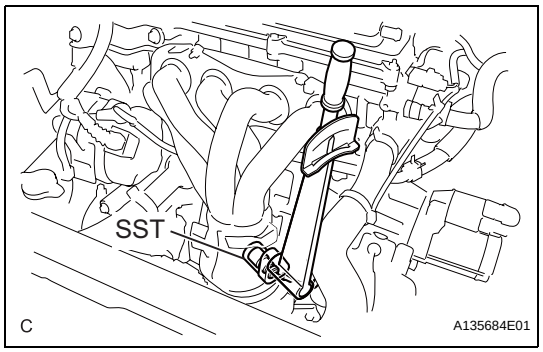
(b) Using SST, fully tighten the air fuel ratio sensor.
SST 09224-00010
Torque: 44 N*m (449 kgf*cm, 32 ft.*lbf)



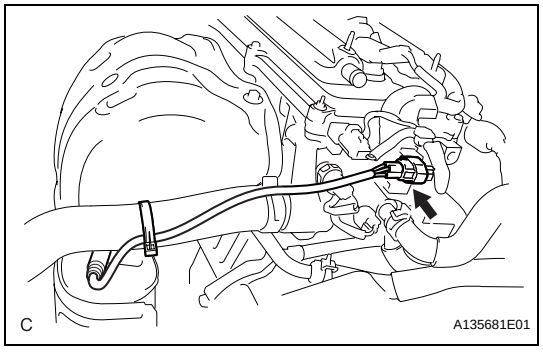
(c) Connect the air fuel ratio sensor connector and clamp.

2. INSTALL AIR FUEL RATIO SENSOR (except PZEV)

(a) Temporarily tighten the air fuel ratio sensor.
NOTICE:
Do not damage the air fuel ratio sensor.

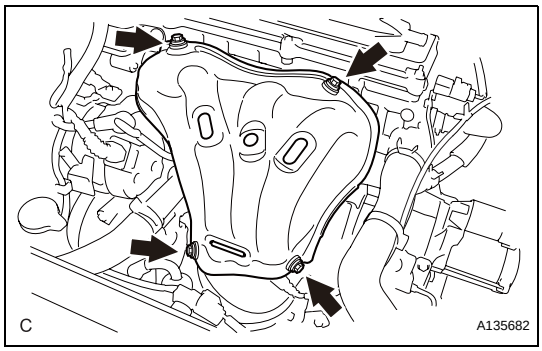


(b) Using SST, fully tighten the air fuel ratio sensor.
SST 09224-00010
Torque: 44 N*m (449 kgf*cm, 32 ft.*lbf)



(c) Connect the air fuel ratio sensor connector and clamp.

EC

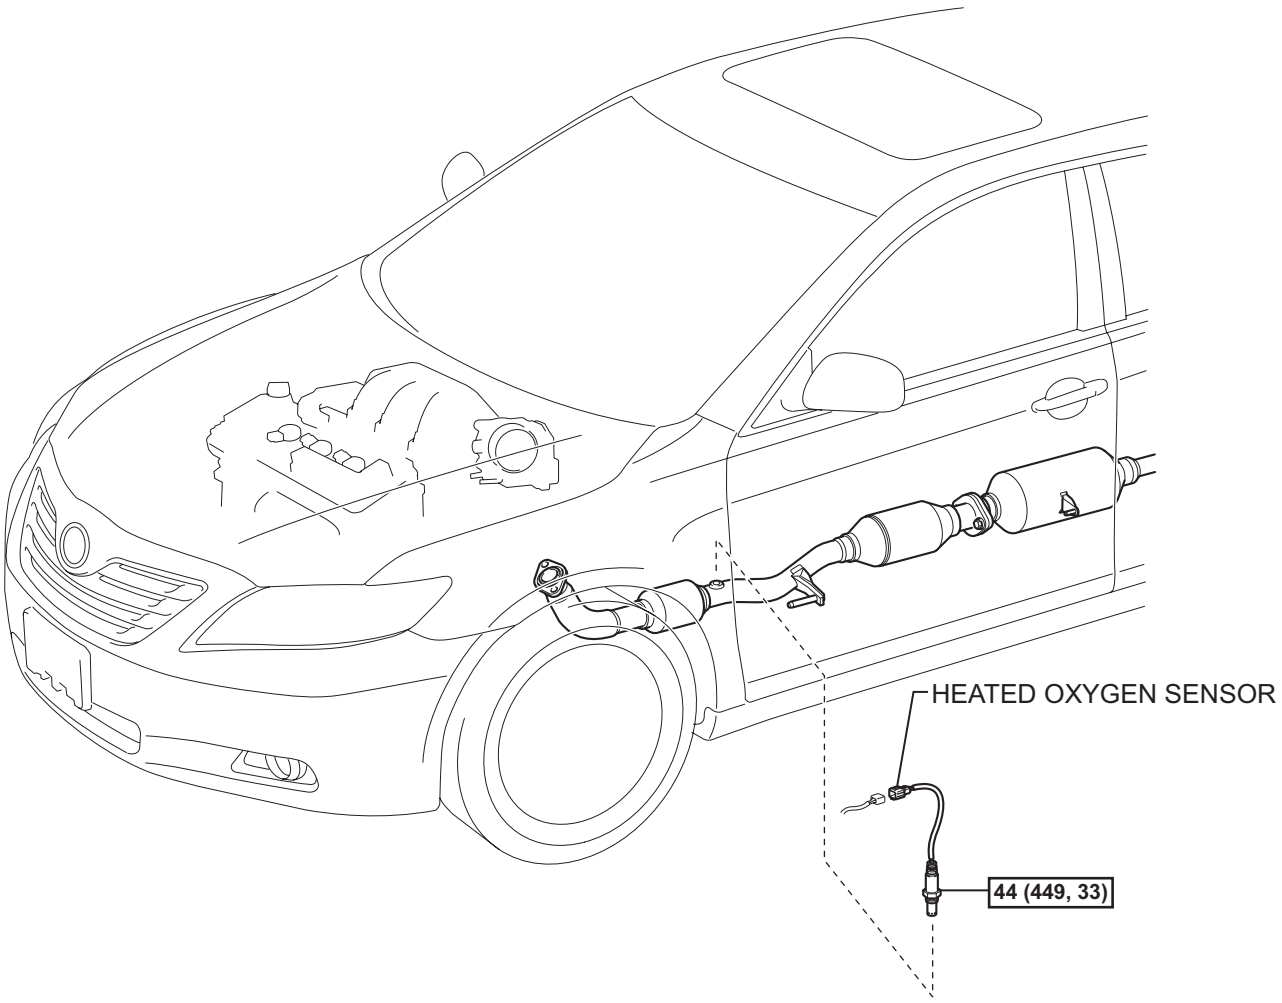


3. INSTALL NO. 1 EXHAUST MANIFOLD HEAT INSULATOR (except PZEV)

(a) Install the exhaust manifold heat insulator with the 4 bolts.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)

HEATED OXYGEN SENSOR

COMPONENTS

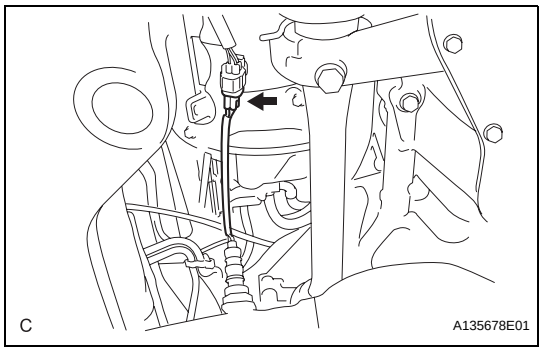


N*m (kgf*cm, ft.*lbf): Specified torque

C

A135656E02

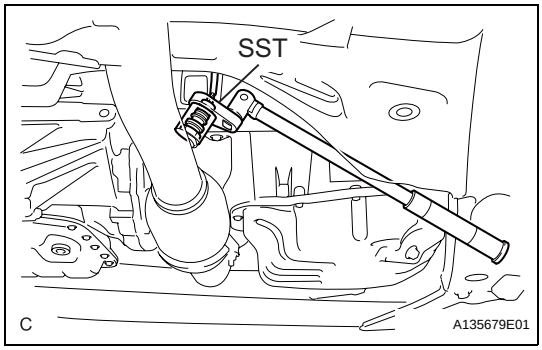
EC



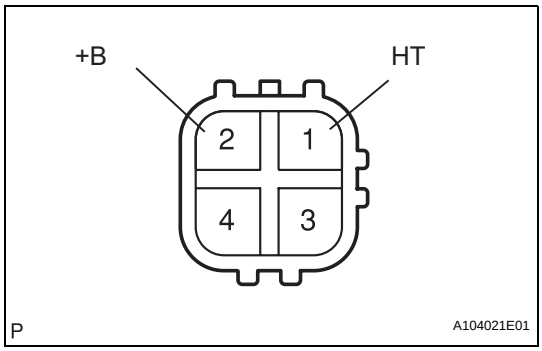
REMOVAL

1. REMOVE HEATED OXYGEN SENSOR

(a) Disconnect the heated oxygen sensor connector.



(b) Using SST, remove the heated oxygen sensor from the exhaust pipe assembly front No. 3.
SST 09224-00010
NOTICE:
Do not damage the heated oxygen sensor.



INSPECTION

1. INSPECT HEATED OXYGEN SENSOR

(a) Measure the resistance between terminals 1 (HT) and 2 (+B).
Standard resistance

Condition	Specified Condition
20°C (68°F)	11 to 16 Ω

If the resistance is not as specified, replace the sensor.

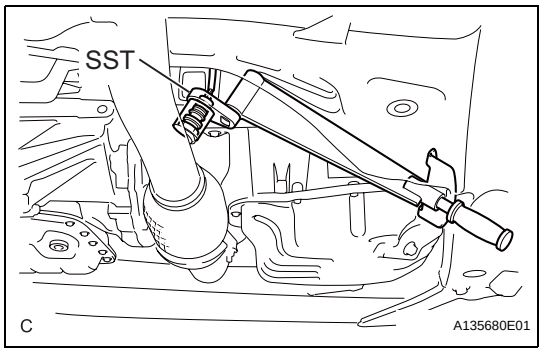
EC

INSTALLATION

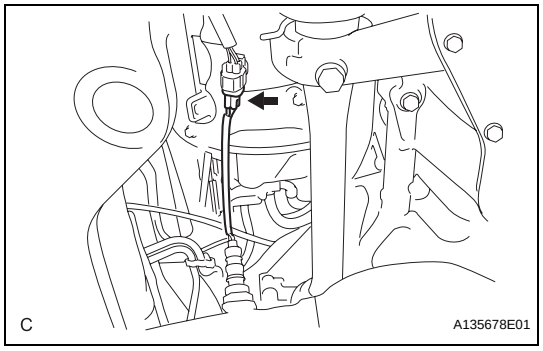
1. INSTALL HEATED OXYGEN SENSOR

(a) Temporarily tighten the heated oxygen sensor.
NOTICE:
Do not damage the heated oxygen sensor.

(b) Using SST, fully tighten the heated oxygen sensor.
SST 09224-00010
Torque: 44 N*m (449 kgf*cm, 32 ft.*lbf)



(c) Connect the heated oxygen sensor connector.



EC

SFI SYSTEM

PRECAUTION

NOTICE:

- **Perform RESET MEMORY (AT initialization) when replacing the automatic transmission assembly, engine assembly or ECM (See page AX-16).**
- **Perform REGISTRATION (VIN registration) when replacing the ECM (See page ES-16).**

HINT:

Initialization cannot be completed by removing the battery.

DEFINITION OF TERMS

Terms	Definition
Monitor Description	Description of what ECM monitors and how detects malfunctions (monitoring purpose and details).
Related DTCs	Group of diagnostic trouble codes that are output by ECM based on the same malfunction detection logic.
Typical Enabling Condition	Preconditions that allow ECM to detect malfunctions. With all preconditions satisfied, ECM sets DTC when monitored value(s) exceeds malfunction threshold(s).
Sequence of Operation	Order of monitor priority, applied if multiple sensors and components involved in single malfunction detection process. Each sensor and component monitored in turn, when previous detection operation is completed.
Required Sensor/Components	Sensors and components used by ECM to detect each malfunction.
Frequency of Operation	Number of times ECM checks for each malfunction during each driving cycle. "Once per driving cycle" means ECM only performs checks for that malfunction once in single driving cycle. "Continuous" means ECM performs checks for that malfunction whenever enabling conditions are met.
Duration	Minimum time for which ECM must detect continuous deviation in monitored value(s) in order to set DTC. Timing begins when Typical Enabling Conditions are met.
Malfunction Thresholds	Value, beyond which, ECM determines malfunctions exist and sets DTCs.
MIL Operation	Timing of MIL illumination after malfunction is detected. "Immediate" means ECM illuminates MIL as soon as malfunction is detected. "2 driving cycle" means ECM illuminates MIL if the same malfunction is detected second time in the next sequential driving cycle.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
*: Use the intelligent tester.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

ES

2	CUSTOMER PROBLEM ANALYSIS

NEXT

3	CONNECT INTELLIGENT TESTER TO DLC3*

HINT:
If the display indicates a communication fault in the tester, inspect the DLC3.

NEXT

4	CHECK FOR DTC AND FREEZE FRAME DATA*

HINT:
Record or print DTCs and freeze frame data, if necessary.

NEXT

5	CLEAR DTC AND FREEZE FRAME DATA*

NEXT

6	CONDUCT VISUAL INSPECTION

NEXT

7	SET CHECK MODE DIAGNOSIS*

NEXT

8 **CONFIRM PROBLEM SYMPTOMS**

HINT:
If the engine does not start, first perform the "CHECK DTC" procedures and "CONDUCT BASIC INSPECTION" procedures below.

CHECK FOR INTERMITTENT PROBLEMS

HINT:
Inspect the vehicle's ECM using check mode. Intermittent problems are easier to detect with the intelligent tester when the ECM is in check mode. In check mode, the ECM uses 1 trip detection logic, which is more sensitive to malfunctions than normal mode (default), which uses 2 trip detection logic.

1. Clear the DTCs (See page ES-38).
2. Switch the ECM from normal mode to check mode using the intelligent tester (See page ES-41).
3. Perform a simulation test.
4. Check and wiggle the harness(es), connector(s) and terminal(s).

BASIC INSPECTION

When a malfunction is not confirmed by the DTC check, troubleshooting should be carried out in all circuits considered to be possible causes of the problem. In many cases, by carrying out the basic engine check shown in the following flowchart, the location of the problem can be found quickly and efficiently. Therefore, using this check is essential when engine troubleshooting.

1 CHECK BATTERY VOLTAGE

NOTICE:
Conduct this check with the engine stopped and ignition switch off.
Result

Result	Proceed to
11 V or more	OK
Below 11 V	NG

NG → **CHARGE OR REPLACE BATTERY**

OK

2 CHECK WHETHER ENGINE WILL CRANK

NG → **PROCEED TO PROBLEM SYMPTOMS TABLE**

OK

3 CHECK WHETHER ENGINE STARTS

NG → **GO TO STEP 6**

OK

4 CHECK AIR FILTER

(a) Visually check that the air filter is not excessively contaminated with dirt or oil.

NG → **REPLACE AIR FILTER**

OK

5 CHECK IDLING SPEED

NG → **TROUBLESHOOT IDLING SPEED AND PROCEED TO NEXT STEP**

OK

6	CHECK FUEL PRESSURE

NG → TROUBLESHOOT FUEL PRESSURE AND PROCEED TO NEXT STEP

OK

7	CHECK FOR SPARKS

NG → TROUBLESHOOT SPARK AND PROCEED TO NEXT STEP

OK

PROCEED TO PROBLEM SYMPTOMS TABLE

REGISTRATION

NOTICE:
The Vehicle Identification Number (VIN) must be input into the replacement ECM.
HINT:
The VIN is a 17-digit alphanumeric number. The intelligent tester is required to register the VIN.

1. DESCRIPTION

This registration section consists of 3 parts: Input Instructions, Read VIN and Write VIN.

(a) Input Instructions: Explains the general VIN input instructions when using the intelligent tester.

(b) Read VIN: Explains the VIN reading process in a flowchart. This process allows the VIN stored in the ECM to be read in order to confirm that the two VINs, provided with the vehicle and stored in the vehicle's ECM, are the same.

(c) Write VIN: Explains the VIN writing process in a flowchart. This process allows the VIN to be input into the ECM. If the ECM is changed, or the vehicle VIN and ECM VIN do not match, the VIN can be registered or overwritten in the ECM by following this procedure.

2. INPUT INSTRUCTIONS

(a) Intelligent tester
The arrow buttons (UP, DOWN, RIGHT and LEFT) and numerical buttons (0 to 9) are used to input the VIN.

(b) Cursor Operation
To move the cursor around the tester screen, press the RIGHT and LEFT buttons.

(c) Alphabetical Character Input
(1) Press the UP and DOWN buttons to select the desired alphabetical character.
(2) After selection, the cursor should move.

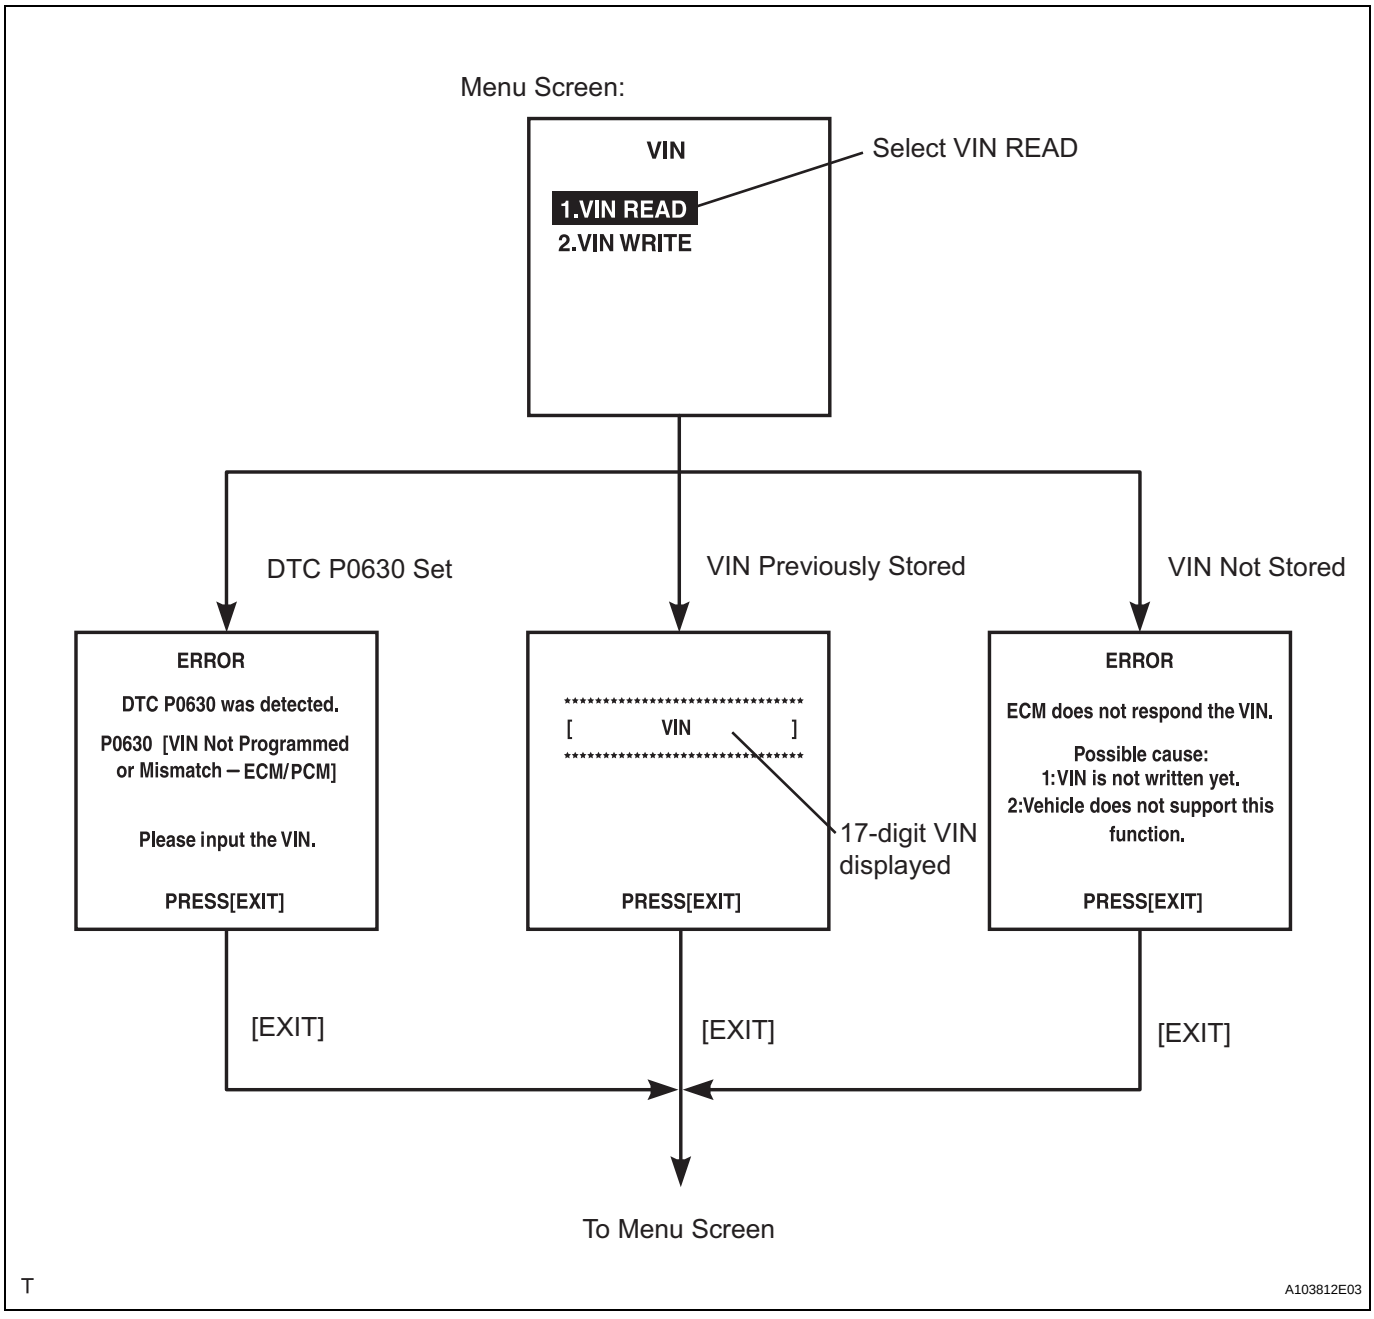
(d) Numeric Character Input
(1) Press the numerical button corresponding to the number that you want to input.
(2) After input, the cursor should move.
HINT:
Numerical characters can also be selected by using the UP and DOWN buttons.

(e) Correction
(1) When correcting the input character(s), put the cursor onto the character using the RIGHT and LEFT buttons.
(2) Select or input the correct character using the UP/DOWN buttons, or the numerical buttons.

(f) Finishing Input Operation
(1) Make sure that the input VIN matches the vehicle VIN after input.
(2) Press the ENTER button on the tester.

3. READ VIN

(a) Confirm the vehicle VIN.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the ON position.
(d) Turn the tester on.
(e) Select the following menu items: DIAGNOSIS / ENHANCED OBD II/ VIN.



4. WRITE VIN

(a) Confirm the vehicle VIN.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the ON position.
(d) Turn the tester on.

(e) Select the following menu items: DIAGNOSIS / ENHANCED OBD II/ VIN.

CHECKING MONITOR STATUS

The purpose of the monitor result (mode 06) is to allow access to the results of on-board diagnostic monitoring tests of specific components/systems that are not continuously monitored. Examples are catalysts and evaporative emissions (EVAP).

The monitor result allows the OBD II scan tool to display the monitor status, test value, minimum test limit and maximum test limit. These data are displayed after the vehicle has been driven to run the monitor.

When the test value is not between the minimum test limit and maximum test limit, the ECM (PCM) interprets this as a malfunction. If the test value is on the borderline of the test limits, the component is likely to malfunction in the near future.

Perform the following instructions to view the monitor status. Although this instruction refers to the Lexus/Toyota diagnostic tester, it can be checked using a generic OBD II scan tool. Refer to your scan tool operator's manual for specific procedural information.

1. PERFORM MONITOR DRIVE PATTERN

(a) Connect the intelligent tester to the DLC3.

(b) Turn the ignition switch to the ON position and turn the tester on.

(c) Clear the DTCs (See page ES-38).

(d) Run the vehicle in accordance with the applicable drive pattern described in READINESS MONITOR DRIVE PATTERN (See page ES-23). Do not turn the ignition switch off.

NOTE:

The test results will be lost if the ignition switch is turned off.

2. ACCESS MONITOR RESULT

(a) Select the following items from the intelligent tester menus: DIAGNOSIS / ENHANCED OBD II / MONITOR INFO and MONITOR RESULT. The monitor status appears after the component name.

- INCMP: The component has not been monitored yet.
- PASS: The component is functioning normally.
- FAIL: The component is malfunctioning.

(b) Confirm that the component is either PASS or FAIL.

(c) Select the component and press ENTER. The accuracy test value appears if the monitor status is either PASS or FAIL.

3. CHECK COMPONENT STATUS

(a) Compare the test value with the minimum test limit (MIN LIMIT) and maximum test limit (MAX LIMIT).

(b) If the test value is between the minimum test limits and maximum test limits, the component is functioning normally. If not, the component is malfunctioning. The test value is usually not near the test limit. If the test value is on the borderline of the test limits, the component is likely to malfunction in the near future.
HINT:
The monitor result might be PASS on rare occasions even if the malfunction indicator lamp (MIL) is illuminated. This indicates the system malfunctioned on a previous driving cycle. This might be caused by an intermittent problem.

4. MONITOR RESULT INFORMATION

If you use a generic scan tool, multiply the test value by the scaling value listed below.

A/F Sensor (Sensor 1):

Monitor ID	Test ID	Scaling	Unit	Description
$01	$8E	Multiply by 0.001	V	A/F sensor deterioration level
$01	$91	Multiply by 0.004	mA	A/F sensor current

HO2 Sensor (Sensor 2):

Monitor ID	Test ID	Scaling	Unit	Description
$02	$07	Multiply by 0.001	V	Minimum sensor voltage
$02	$08	Multiply by 0.001	V	Maximum sensor voltage
$02	$8F	Multiply by 0.0003	g	Maximum oxygen storage capacity

Catalyst:

Monitor ID	Test ID	Scaling	Unit	Description
$21	$A9	Multiply by 0.0003	No dimension	Oxygen storage capacity of catalyst

EVAP:

Monitor ID	Test ID	Scaling	Unit	Description
$3D	$C9	Multiply by 0.001	kPa	Test value for small leak (P0456)
$3D	$CA	Multiply by 0.001	kPa	Test value for gross leak (P0455)
$3D	$CB	Multiply by 0.001	kPa	Test value for leak detection pump stuck OFF (P2401)
$3D	$CD	Multiply by 0.001	kPa	Test value for leak detection pump stuck ON (P2402)
$3D	$CE	Multiply by 0.001	kPa	Test value for vent valve stuck OFF (P2420)
$3D	$CF	Multiply by 0.001	kPa	Test value for vent valve stuck ON (P2419)
$3D	$D0	Multiply by 0.001	kPa	Test value for reference orifice low flow (P043E)
$3D	$D1	Multiply by 0.001	kPa	Test value for reference orifice high flow (P043F)
$3D	$D4	Multiply by 0.001	kPa	Test value for purge VSV stuck closed (P0441)
$3D	$D5	Multiply by 0.001	kPa	Test value for purge VSV stuck open (P0441)
$3D	$D7	Multiply by 0.001	kPa	Test value for purge flow insufficient (P0441)

Rear Oxygen Sensor Heater:

Monitor ID	Test ID	Scaling	Unit	Description
$42	$91	Multiply by 0.001	Ohm	Oxygen sensor resistance bank 1 sensor 2

Misfire:

Monitor ID	Test ID	Scaling	Unit	Description
$A1	$0B	Multiply by 1	Time	Exponential Weighted Moving Average (EWMA) misfire for all cylinders: EWMA = Total misfire counts for last driving cycle * 0.1 + Last EWMA * 0.9 Misfire counts for last 10 driving cycles - Total
$A1	$0C	Multiply by 1	Time	Ignition switch to the ON position: Total misfire counts for last driving cycle Engine running: Total misfire counts for current driving cycle Misfire counts for last or current driving cycle - all cylinders
$A2	$0B	Multiply by 1	Time	Exponential Weighted Moving Average (EWMA) misfire for cylinder 1: EWMA = Total misfire counts for last driving cycle * 0.1 + Last EWMA * 0.9 Misfire counts for last 10 driving cycles - Total
$A2	$0C	Multiply by 1	Time	Ignition switch to the ON position: Total misfire counts for last driving cycle Engine running: Total misfire counts for current driving cycle Misfire counts for last or current driving cycle - cylinder 1
$A3	$0B	Multiply by 1	Time	Exponential Weighted Moving Average (EWMA) misfire for cylinder 2: EWMA = Total misfire counts for last driving cycle * 0.1 + Last EWMA * 0.9 Misfire counts for last 10 driving cycles - Total
$A3	$0C	Multiply by 1	Time	Ignition switch to the ON position: Total misfire counts for last driving cycle Engine running: Total misfire counts for current driving cycle Misfire counts for last or current driving cycle - cylinder 2
$A4	$0B	Multiply by 1	Time	Exponential Weighted Moving Average (EWMA) misfire for cylinder 3: EWMA = Total misfire counts for last driving cycle * 0.1 + Last EWMA * 0.9 Misfire counts for last 10 driving cycles - Total
$A4	$0C	Multiply by 1	Time	Ignition switch to the ON position: Total misfire counts for last driving cycle Engine running: Total misfire counts for current driving cycle Misfire counts for last or current driving cycle - cylinder 3
$A5	$0B	Multiply by 1	Time	Exponential Weighted Moving Average (EWMA) misfire for cylinder 4: EWMA = Total misfire counts for last driving cycle * 0.1 + Last EWMA * 0.9 Misfire counts for last 10 driving cycles - Total
$A5	$0C	Multiply by 1	Time	Ignition switch to the ON position: Total misfire counts for last driving cycle Engine running: Total misfire counts for current driving cycle Misfire counts for last or current driving cycle - cylinder 4

READINESS MONITOR DRIVE PATTERN

1. PURPOSE OF READINESS TESTS

- The On-Board Diagnostic (OBD II) system is designed to monitor the performance of emission related components, and indicate any detected abnormalities with DTCs (Diagnostic Trouble Codes). Since various components need to be monitored during different driving conditions, the OBD II system is designed to run separate monitoring programs called Readiness Monitors.
- The intelligent tester's software must be version 9.0 or newer to view the Readiness Monitor Status. To view the status, select the following menu items: DIAGNOSIS / ENHANCED OBD II / MONITOR INFO / MONITOR STATUS.
- When the Readiness Monitor status reads COMPL (complete), the necessary conditions have been met for running the performance tests for that Readiness Monitor.
- A generic OBD II scan tool can also be used to view the Readiness Monitor status.

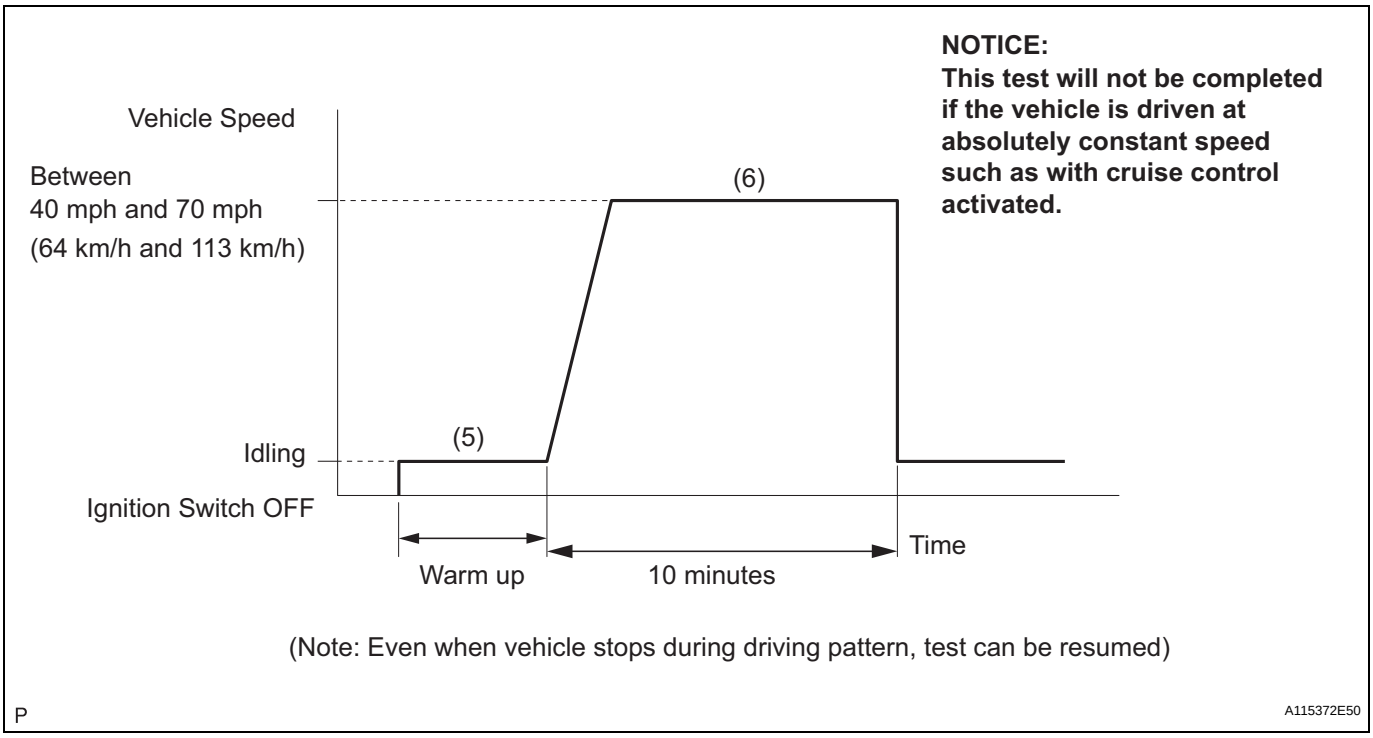
HINT:
Many state Inspection and Maintenance (I/M) programs require a vehicle's Readiness Monitor status to show COMPL before beginning emission tests.
The Readiness Monitor will be reset to INCMPL (incomplete) if:

- The ECM has lost battery power or blown a fuse.
- DTCs have been cleared.
- The conditions for running the Readiness Monitor have not been met.

If the Readiness Monitor status shows INCMPL, follow the appropriate Readiness Monitor Drive Pattern to change the status to COMPL.

CAUTION:
Strictly observe posted speed limits, traffic laws, and road conditions when performing these drive patterns.
NOTICE:
These drive patterns represent the fastest method of satisfying all conditions necessary to achieve complete status for each specific Readiness Monitor.
In the event of a drive pattern being interrupted (possibly due to factors such as traffic conditions), the drive pattern can be resumed. In most cases, the Readiness Monitor will still achieve complete status upon completion of the drive pattern.
To ensure completion of the Readiness Monitors, avoid sudden changes in vehicle load and speed (driving up and down hills and/or sudden acceleration).

2. CATALYST MONITOR (ACTIVE AIR-FUEL RATIO CONTROL TYPE)



(a) Preconditions
The monitor will not run unless:
- The MIL is OFF.

(b) Drive Pattern
(1) Connect the intelligent tester to the DLC3.
(2) Turn the ignition switch to the ON position.
(3) Turn the tester on.
(4) Clear the DTCs (if set) (See page ES-38).
(5) Start the engine and warm it up.
(6) Drive the vehicle at between 40 mph and 70 mph (64 km/h and 113 km/h) for at least 10 minutes.

(c) Monitor Status
Check the Readiness Monitor status displayed on the tester.
If the status does not switch to COMPL (complete), extend the driving time.

3. EVAP SYSTEM MONITOR (KEY OFF TYPE)

(a) Preconditions
The monitor will not run unless:
– The fuel tank is less than 90% full.
– The altitude is less than 8,000 ft. (2,450 m).
– The vehicle is stationary.
– The engine coolant temperature is between 4.4°C and 35°C (40°F and 95°F).
– The intake air temperature is between 4.4°C and 35°C (40°F and 95°F).
– Vehicle was driven in a city area (or on free-way) for 10 minutes or more.

(b) Monitor Conditions
(1) Turn the ignition switch off and wait for 6 hours.
HINT:
Do not start the engine until checking Readiness Monitor status. If the engine is started, the step described above must be repeated.

(c) Monitor Status
(1) Connect the intelligent tester to the DLC3.
(2) Turn the ignition switch to the ON position.
(3) Turn the tester on.
(4) Check the Readiness Monitor status displayed on the tester.

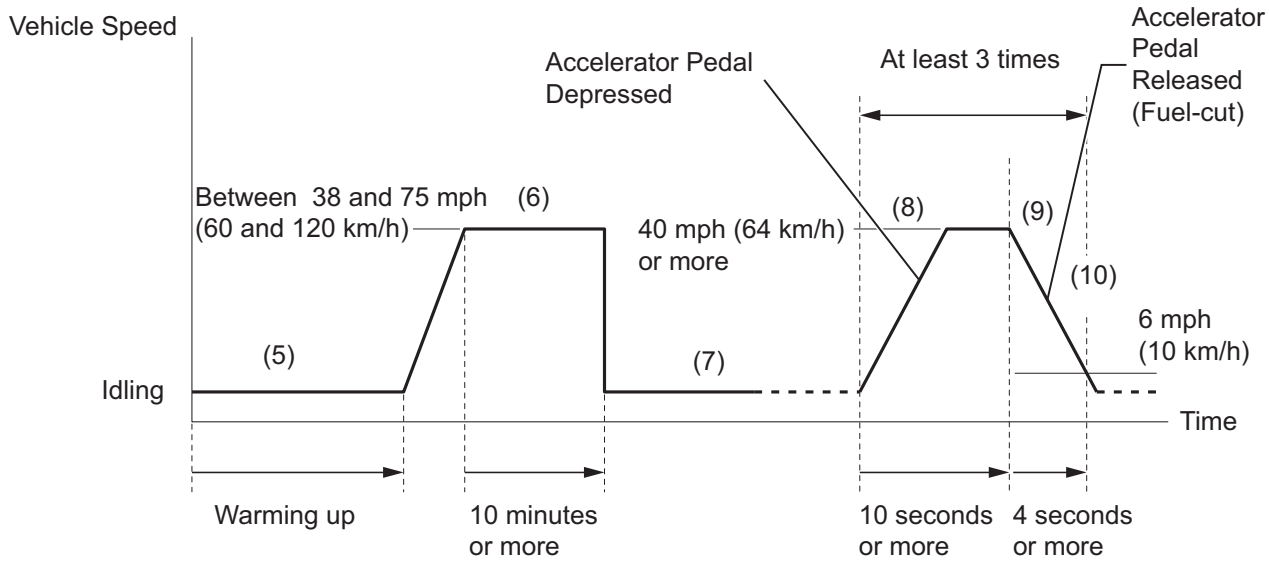
If the status does not switch to COMPL (complete), restart the engine, make sure that the preconditions have been met, and then perform the Monitor Conditions again.

ES

4. AIR-FUEL RATIO (A/F) AND HEATED OXYGEN (HO2) SENSOR MONITORS (ACTIVE AIR-FUEL RATIO CONTROL TYPE)

Monitor Drive Pattern

ECT: 75°C (167°F) or more



P

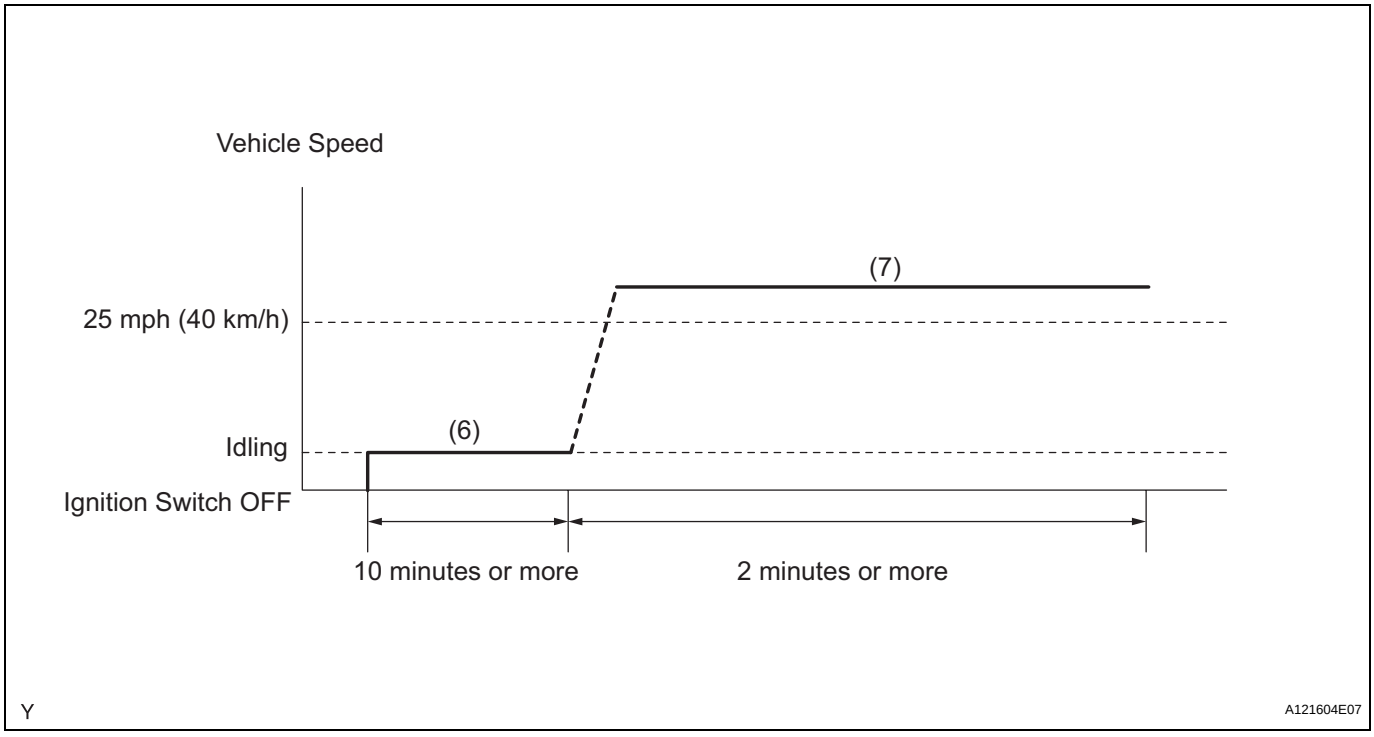
A115374E09

(a) Preconditions
The monitor will not run unless:
– 2 minutes or more have elapsed since the engine was started.
– The Engine Coolant Temperature (ECT) is 75°C (167°F) or more.
– Cumulative driving time at a vehicle speed of 30 mph (48 km/h) or more exceeds 6 minutes.
– Air-fuel ratio feedback control is performed.

(b) Drive Pattern for front A/F sensor and HO2 sensor
(1) Connect the intelligent tester to the DLC3.
(2) Turn the ignition switch to the ON position.
(3) Turn the tester on.
(4) Clear the DTCs (See page ES-38).
(5) Start the engine, and warm it up until the ECT reaches 75°C (167°F) or higher
(6) Drive the vehicle at between 38 mph (60 km/h) and 75 mph (120 km/h) for at least 10 minutes.
(7) Change the transmission to the 2nd gear.
(8) Accelerate the vehicle to 40 mph (64 km/h) or more by depressing the accelerator pedal for at least 10 seconds.
(9) Soon after performing step (8) above, release the accelerator pedal for at least 4 seconds without depressing the brake pedal, in order to execute fuel-cut control.
(10) Allow the vehicle to decelerate until the vehicle speed declines to less than 6 mph (10 km/h).
(11) Repeat steps from (8) through (10) above at least 3 times in one driving cycle.

(c) Monitor Status
(1) Check the Readiness Monitor status displayed on the tester.
(2) If the status does not switch to COMPL (complete), make sure that the preconditions have been met, and then perform steps from (5) through (11) in the Drive Pattern above.

5. AIR-FUEL RATIO (A/F) AND HEATED OXYGEN (HO2) SENSOR HEATER MONITORS (FRONT A/F AND REAR HO2 SENSOR TYPE)



(a) Preconditions
The monitor will not run unless:
– The MIL is OFF.

(b) Drive Pattern
(1) Connect the intelligent tester to the DLC3.
(2) Turn the ignition switch to the ON position.
(3) Turn the tester on.
(4) Clear the DTCs (if set) (See page ES-38).
(5) Start the engine.
(6) Allow the engine to idle for 10 minutes or more.
(7) Drive the vehicle at 25 mph (40 km/h) or more for at least 2 minutes.

(c) Monitor Status
(1) Check the Readiness Monitor status displayed on the tester.
If the status does not switch to COMPL (complete), make sure that the preconditions have been met, and repeat steps from (5) to (7) described in the Drive Pattern above.

PROBLEM SYMPTOMS TABLE

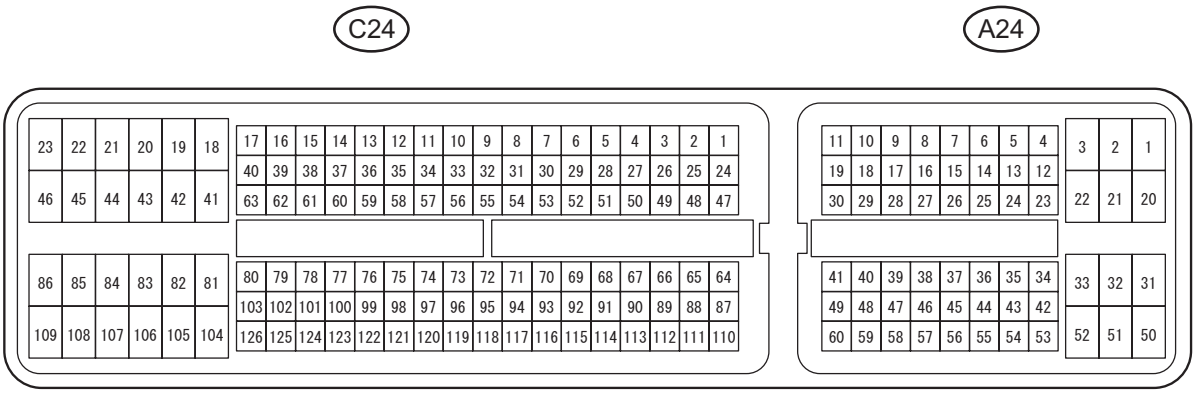
HINT:
Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

SFI system:

Symptom	Suspected area	See page
Engine does not crank (Does not start)	1. Battery	CH-4
	2. Starter	ST-7
	3. Starter relay	ST-14
	4. Park / neutral position switch (Automatic transaxle)	AX-130
	5. Clutch start switch (Manual transaxle)	CL-37
	6. Immobiliser system	EI-55
No initial combustion (Does not start)	1. ECM power source circuit	ES-380
	2. Crankshaft position sensor	ES-411
	3. Camshaft position sensor	ES-409
	4. Ignition system	IG-3
	5. Fuel pump control circuit	ES-392
	6. ECM	ES-29
	7. VC output circuit	ES-387
Engine cranks normally but difficult to start	1. Fuel pump control circuit	ES-392
	2. Compression	EM-3
Difficult to start with cold engine	1. Ignition system	IG-3
	2. Spark plug	IG-5
	3. Fuel pump control circuit	ES-392
	4. Injector	FU-14
Difficult to start with warm engine	1. Injector	FU-14
	2. Ignition system	IG-3
	3. Spark plug	IG-5
	4. Fuel pump control circuit	ES-392
High engine idle speed	1. Electronic throttle control system	ES-280
	2. A/C signal circuit	-
	3. ECM power source circuit	ES-380
Low engine idle speed (Poor idling)	1. Electronic throttle control system	ES-280
	2. A/C signal circuit	-
	3. Fuel pump control circuit	ES-392
	4. Air induction system	EC-5
	5. PCV hose	EC-5
Rough idling	1. Compression	EM-3
	2. Spark plug	IG-5
	3. Injector	FU-14
	4. Ignition system	IG-3
	5. Fuel pump control circuit	ES-392
	6. Electronic throttle control system	ES-280
	7. Air induction system	EC-5
	8. PCV hose	EC-5
	9. Mass air flow meter	ES-402

Symptom	Suspected area	See page
Idle hunting	1. Electronic throttle control system	ES-280
	2. Air induction system	EC-5
	3. ECM power source circuit	ES-380
Hesitation/Poor acceleration	1. Fuel pump control circuit	ES-392
	2. Spark plug	IG-5
	3. Ignition system	IG-3
	4. Injector	FU-14
	5. Mass air flow meter	ES-402
	6. Electronic throttle control system	ES-280
	7. Air induction system	EC-5
	8. Compression	EM-3
Surging (Poor driveability)	1. Spark plug	IG-5
	2. Fuel pump control circuit	ES-392
	3. Ignition system	IG-3
	4. Injector	FU-14
	5. Mass air flow meter	ES-402
	6. Variable valve timing system	ES-69
	7. Compression	EM-3
Engine stalls soon after starting	1. Fuel pump control circuit	ES-392
	2. Spark plug	IG-5
	3. Ignition system	IG-3
	4. Injector	FU-14
	5. Variable valve timing system	ES-69
	6. Electronic throttle control system	ES-280
	7. Air induction system	EC-5
	8. PCV hose	EC-5
	9. Compression	EM-3
Engine stalls only during A/C operation	1. A/C signal circuit	-
	2. ECM	ES-29
Unable/difficult to refuel	1. Refueling valve (canister)	-

TERMINALS OF ECM



A107881E12

ES

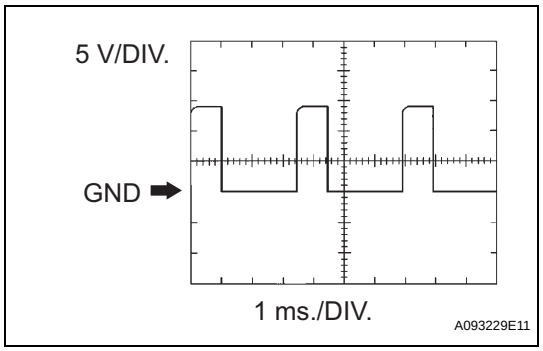
HINT:
The standard normal voltage between each pair of the ECM terminals is shown in the table below. The appropriate conditions for checking each pair of the terminals are also indicated. The result of checks should be compared with the standard normal voltage for that pair of the terminals, displayed in the Specified Condition column. The illustration above can be used as a reference to identify the ECM terminal locations.

Symbols (Terminal No.)	Wiring Colors	Terminal Descriptions	Conditions	Specified Conditions
BATT (A24-20) - E1 (C24-104)	Y - W-B	Battery (for measuring battery voltage and for ECM memory)	Always	9 to 14 V
+BM (A24-3) - E1 (C24-104)	LG - W-B	Power source of throttle actuator	Always	9 to 14 V
IGSW (A24-28) - E1 (C24-104)	Y - W-B	Ignition switch	Ignition switch to the ON position	9 to 14 V
+B (A24-2) - E1 (C24-104)	R - W-B	Power source of ECM	Ignition switch to the ON position	9 to 14 V
+B2 (A24-1) - E1 (C24-104)	R - W-B	Power source of ECM	Ignition switch to the ON position	9 to 14 V
OC1+ (C24-100) - OC1- (C24-123)	W - B	Camshaft timing oil control valve (OCV)	Idling	Pulse generation (see waveform 1)
MREL (A24-44) - E1 (C24-104)	O - W-B	EFI relay	Ignition switch to the ON position	9 to 14 V
VG (C24-118) - E2G (C24-116)	SB - W	Mass air flow meter	Idling, Shift lever position P or N, A/C switch OFF	0.5 to 3.0 V
THA (C24-65) - ETHA (C24-88)	P - Y	Intake air temperature sensor	Idling, Intake air temperature 20°C (68°F)	0.5 to 3.4 V
THW (C24-97) - ETHW (C24-96)	B - P	Engine coolant temperature sensor	Idling, Engine coolant temperature 80°C (176°F)	0.2 to 1.0 V
VCTA (C24-67) - ETA (C24-91)	B - P	Power source of throttle position sensor (specific voltage)	Ignition switch to the ON position	4.5 to 5.5 V
VTA1 (C24-115) - ETA (C24-91)	Y - P	Throttle position sensor (for engine control)	Ignition switch to the ON position, Throttle valve fully closed	0.5 to 1.1 V
			Ignition switch to the ON position, Throttle valve fully open	3.3 to 4.9 V

Symbols (Terminal No.)	Wiring Colors	Terminal Descriptions	Conditions	Specified Conditions
VTA2 (C24-114) - ETA (C24-91)	W-L - P	Throttle position sensor (for sensor malfunction detection)	Ignition switch to the ON position, Throttle valve fully closed	2.1 to 3.1 V
			Ignition switch to the ON position, Throttle valve fully open	4.6 to 5.0 V
VPA (A24-55) - EPA (A24-59)	G - Y	Accelerator pedal position sensor (for engine control)	Ignition switch to the ON position, Accelerator pedal released	0.5 to 1.1 V
			Ignition switch to the ON position, Accelerator pedal fully depressed	2.6 to 4.5 V
VPA2 (A24-56) - EPA2 (A24-60)	R - O	Accelerator pedal position sensor (for sensor malfunctioning detection)	Ignition switch to the ON position, Accelerator pedal released	1.2 to 2.0 V
			Ignition switch to the ON position, Accelerator pedal fully depressed	3.4 to 5.0 V
VCPA (A24-57) - EPA (A24-59)	B - Y	Power source of accelerator pedal position sensor (for VPA)	Ignition switch to the ON position	4.5 to 5.5 V
VCP2 (A24-58) - EPA2 (A24-60)	L - O	Power source of accelerator pedal position sensor (for VPA2)	Ignition switch to the ON position	4.5 to 5.5 V
HA1A (C24-109) - E04 (C24-46)	G - W	A/F sensor heater	Idling	Below 3.0 V
			Ignition switch to the ON position	9 to 14 V
A1A+ (C24-112) - E1 (C24-104)	L -W-B	A/F sensor	Ignition switch to the ON position	3.3 V*1
A1A- (C24-113) - E1 (C24-104)	P - W-B	A/F sensor	Ignition switch to the ON position	3.0 V*1
HT1B (C24-47) - E03 (C24-86)	LG - B	Heated oxygen sensor heater	Idling	Below 3.0 V
			Ignition switch to the ON position	9 to 14 V
OX1B (C24-64) - EX1B (C24-87)	W - BR	Heated oxygen sensor	Engine speed maintained at 2,500 rpm for 2 minutes after warming up sensor	Pulse generation (see waveform 2)
#10 (C24-108) - E01 (C24-45) #20 (C24-107) - E01 (C24-45) #30 (C24-106) - E01 (C24-45) #40 (C24-105) - E01 (C24-45)	B - W-B R - W-B Y - W-B L - W-B	Injector	Ignition switch to the ON position	9 to 14 V
			Idling	Pulse generation (see waveform 3)
KNK1 (C24-110) - EKNK (C24-111)	G - R	Knock sensor	Engine speed maintained at 4,000 after warming up engine	Pulse generation (see waveform 4)
G2+ (C24-99) - G2- (C24-98)	Y - BR	Camshaft position sensor	Idling	Pulse generation (see waveform 5)
NE+ (C24-122) - NE- (C24-121)	G - R	Crankshaft position sensor	Idling	Pulse generation (see waveform 5)
IGT1 (C24-85) - E1 (C24-104) IGT2 (C24-84) - E1 (C24-104) IGT3 (C24-83) - E1 (C24-104) IGT4 (C24-82) - E1 (C24-104)	W - W-B G-R - W-B G - W-B LG - W-B	Ignition coil (ignition signal)	Idling	Pulse generation (see waveform 6)
IGF1 (C24-81) - E1 (C24-104)	BR - W-B	Ignition coil (ignition confirmation signal)	Ignition switch to the ON position	4.5 to 5.5 V
			Idling	Pulse generation (see waveform 6)
PRG (C24-49) - E1 (C24-104)	O - W-B	Purge VSV	Ignition switch to the ON position	9 to 14 V
			Idling	Pulse generation (see waveform 7)
SPD (A24-8) - E1 (C24-104)	L - W-B	Speed signal from combination meter	Driving at 12 mph (20 km/h)	Pulse generation (see waveform 8)
STA (A24-48) - E1 (C24-104)	V - W-B	Starter signal	Cranking	5.5 V or more
NSW (C24-52)*2 - E1 (C24-104)	SB - W-B	Starter relay control	Ignition switch to the ON position	Below 1.5 V
			Cranking	5.5 V or more
STP (A24-36) - E1 (C24-104)	W - W-B	Stop light switch	Brake pedal depressed	7.5 to 14 V
			Brake pedal released	Below 1.5 V

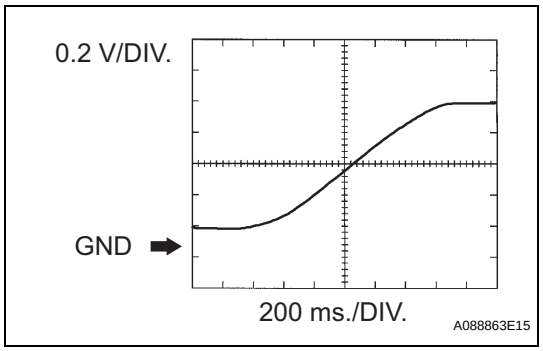
Symbols (Terminal No.)	Wiring Colors	Terminal Descriptions	Conditions	Specified Conditions
ST1- (A24-35) - E1 (C24-104)	GR - W-B	Stop light switch (opposite to STP terminal)	Ignition switch to the ON position, Brake pedal depressed	Below 1.5 V
			Ignition switch to the ON position, Brake pedal released	7.5 to 14 V
M+ (C24-42) - ME01 (C24-43)	G - B	Throttle actuator	Idling with warm engine	Pulse generation (see waveform 9)
M- (C24-41) - ME01 (C24-43)	R - B	Throttle actuator	Idling with warm engine	Pulse generation (see waveform 10)
FC (A24-7) - E1 (C24-104)	Y - W-B	Fuel pump control	Ignition switch to the ON position	9 to 14 V
			Idling	Below 1.5 V
W (A24-24) - E1 (C24-104)	BR - W-B	MIL	Ignition switch to the ON position	Below 1.5 V
			Idling	9 to 14 V
TC (A24-27) - E1 (C24-104)	P - W-B	Terminal TC of DLC3	Ignition switch to the ON position	9 to 14 V
TACH (A24-15) - E1 (C24-104)	B - W-B	Engine speed	Idling	Pulse generation (see waveform 11)
VPMP (A24-42) - E1 (C24-104)	W - W-B	Vent valve (built into canister pump module)	Ignition switch to the ON position	9 to 14 V
MPMP (A24-34) - E1 (C24-104)	G - W-B	Leak detection pump (built into canister pump module)	Leak detection pump OFF	Below 3 V
			Leak detection pump ON	9 to 14 V
VCPP (C24-70) - EPPM (C24-94)	R - G	Power source for canister pressure sensor (specific voltage)	Ignition switch to the ON position	4.5 to 5.5 V
PPMP (C24-71) - EPPM (C24-94)	L - G	Canister pressure sensor (built into canister pump module)	Ignition switch to the ON position	3 to 3.6 V
FANL (A24-21) - E1 (C24-104)	R - W-B	Fan No. 1 relay	Ignition switch to the ON position	9 to 14 V
			Idling with A/C ON, or high engine coolant temperature	Below 1.5 V
FANH (A24-22) - E1 (C24-104)	W - W-B	Fan No. 2, 3 relay	Idling with high engine coolant temperature	Below 1.5 V
ALT (C24-50) - E1 (C24-104)	L - W-B	Generator	Ignition switch to the ON position	9 to 14 V
CANH (A24-41) - E1 (C24-104)	B - W-B	CAN communication line	Ignition switch to the ON position	Pulse generation (see waveform 12)
CANL (A24-49) - E1 (C24-104)	W - W-B	CAN communication line	Ignition switch to the ON position	Pulse generation (see waveform 13)
IAC+ (A24-33)*3 - E1 (C24-104)	L - W-B	Intake manifold runner valve motor	Ignition switch to the ON position	Pulse generation
IAC- (A24-52)*3 - E1 (C24-104)	W - W-B	Intake manifold runner valve motor	Ignition switch to the ON position	Pulse generation
VCIA (C24-103)*3 - EIA (C24-126)*3	B - L	Power source of intake manifold runner valve position sensor (Specific voltage)	Ignition switch to the ON position	4.5 to 5.5 V
IACA (C24-93)*3 - EIA (C24-126)*3	B-W - L	Intake manifold runner valve position sensor	Ignition switch to the ON position, intake manifold runner valve fully closed.	0.2 to 1.0 V
			Ignition switch to the ON position, intake manifold runner valve fully opened.	3.2 to 4.8 V

HINT:
*1: The ECM terminal voltage is constant regardless of the output voltage from the sensor.
*2: Automatic transaxle only
*3: PZEV only



1. WAVEFORM 1
Camshaft timing oil control valve (OCV):

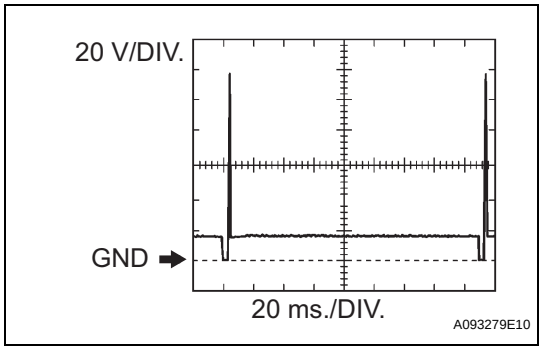
ECM Terminal Names	Between OC1+ and OC1-
Tester Ranges	5 V/DIV., 1 ms./DIV.
Conditions	Idling



2. WAVEFORM 2
Heated oxygen sensor:

ECM Terminal Names	Between OX1B and EX1B
Tester Ranges	0.2 V/DIV., 200 ms./DIV.
Conditions	Engine speed maintained at 2,500 rpm for 2 minutes after warming up sensor

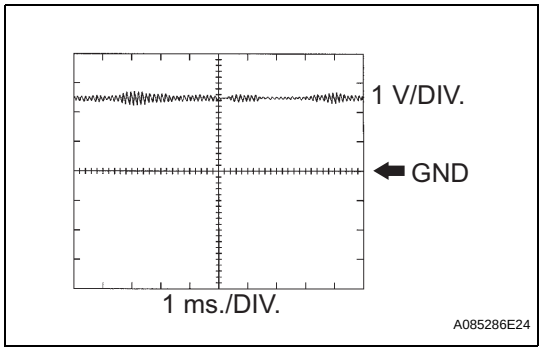
HINT:
In DATA LIST, item O2S B1 S2 shows the ECM input values from the heated oxygen sensor.



3. WAVEFORM 3
Injector No. 1 (to No. 4) injection signal:

ECM Terminal Names	Between #10 (to #40) and E01
Tester Ranges	20 V/DIV., 20 ms./DIV.
Conditions	Idling

HINT:
The wavelength becomes shorter as the engine rpm increases.

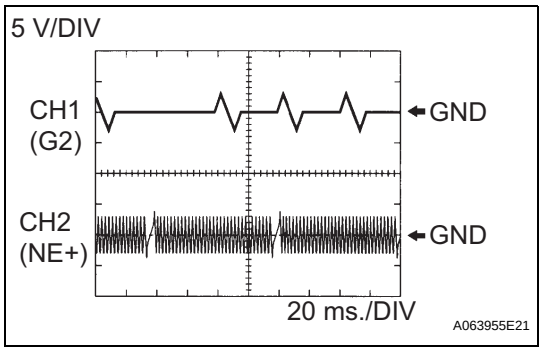


4. WAVEFORM 4
Knock sensor:

ECM Terminal Names	Between KNK1 and EKNK
Tester Ranges	1 V/DIV., 1 ms./DIV.
Conditions	Engine speed maintained at 4,000 rpm after warming up engine

HINT:
- The wavelength becomes shorter as the engine rpm increases.
- The waveforms and amplitudes displayed differ slightly depending on the vehicle.

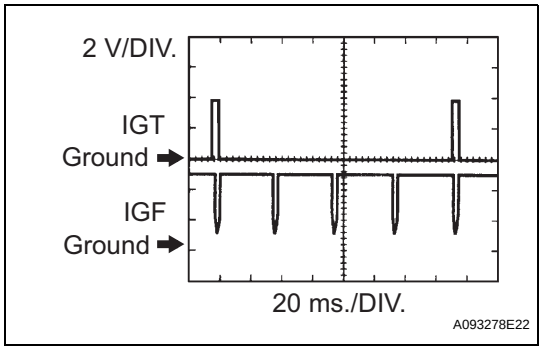
ES



5. WAVEFORM 5
Crankshaft position sensor and Camshaft position sensor:

ECM Terminal Names	CH1: Between G2+ and G2- CH2: Between NE+ and NE-
Tester Ranges	5 V/DIV., 20 ms./DIV.
Conditions	Idling

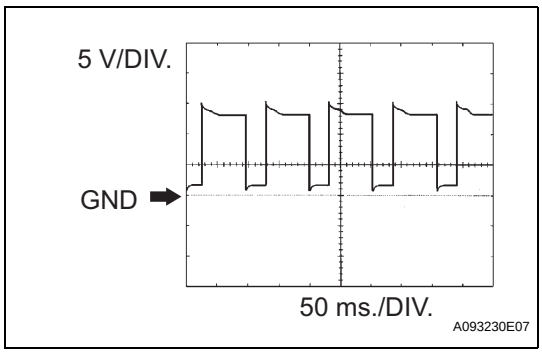
HINT:
The wavelength becomes shorter as the engine rpm increases.



6. WAVEFORM 6
Igniter IGT signal (from ECM to igniter) and Igniter IGF signal (from igniter to ECM):

ECM Terminal Names	Between IGT (1 to 4) and E1 Between IGF1 and E1
Tester Ranges	2 V/DIV., 20 ms./DIV.
Conditions	Idling

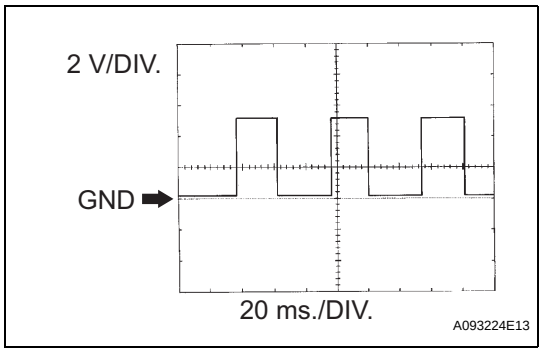
HINT:
The wavelength becomes shorter as the engine rpm increases.



7. WAVEFORM 7
Purge VSV:

ECM Terminal Names	Between PRG and E1
Tester Ranges	5 V/DIV., 50 ms./DIV.
Conditions	Idling

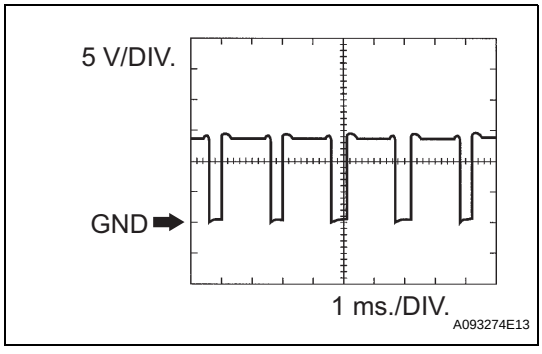
HINT:
If the waveform is not similar to the illustration, check the waveform again after idling for 10 minutes or more.



8. WAVEFORM 8
Vehicle speed signal:

ECM Terminal Names	Between SPD and E1
Tester Ranges	2 V/DIV., 20 ms./DIV.
Conditions	Driving at 12 mph (20 km/h)

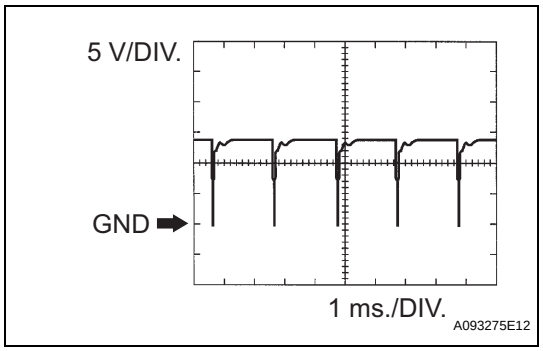
HINT:
The wavelength becomes shorter as the vehicle speed increases.



9. WAVEFORM 9
Throttle actuator positive terminal:

ECM Terminal Names	Between M+ and ME01
Tester Ranges	5 V/DIV., 1 ms./DIV.
Conditions	Idling with warm engine

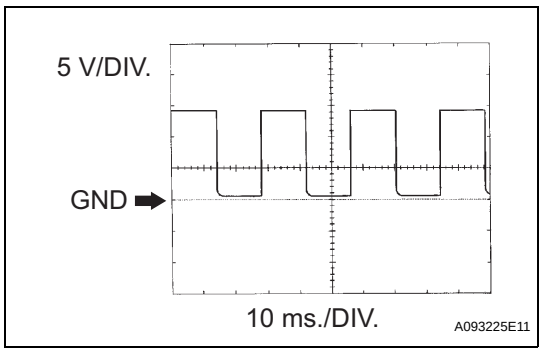
HINT:
The duty ratio varies depending on the throttle actuator operation.



10. WAVEFORM 10
Throttle actuator negative terminal:

ECM Terminal Names	Between M- and ME01
Tester Ranges	5 V/DIV., 1 ms./DIV.
Conditions	Idling with warm engine

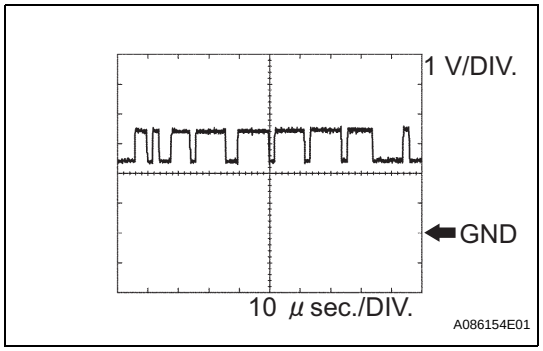
HINT:
The duty ratio varies depending on the throttle actuator operation.



11. WAVEFORM 11
Engine speed signal:

ECM Terminal Names	Between TACH and E1
Tester Ranges	5 V/DIV., 10 ms./DIV.
Conditions	Idling

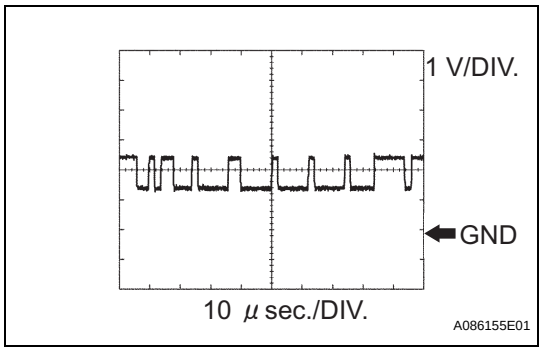
HINT:
The wavelength becomes shorter as the engine rpm increases.



12. WAVEFORM 12
CAN communication signal:

ECM Terminal Names	Between CANH and E1
Tester Ranges	1 V/DIV., 10 μsec./DIV.
Conditions	Engine stops and ignition switch to the ON position

HINT:
The waveform varies depending on the CAN communication signal.



13. WAVEFORM 13
CAN communication signal:

ECM Terminal Names	Between CANL and E1
Tester Ranges	1 V/DIV., 10 μsec./DIV.
Conditions	Engine stops and ignition switch to the ON position

HINT:
The waveform varies depending on the CAN communication signal.

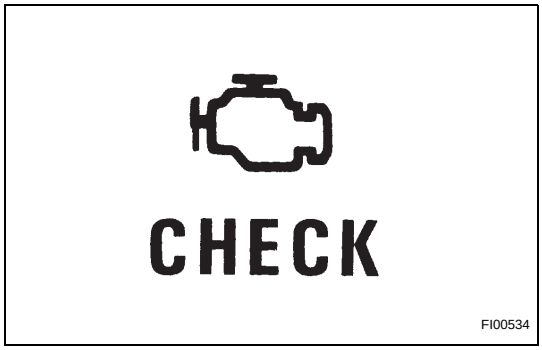
DIAGNOSIS SYSTEM

1. DESCRIPTION



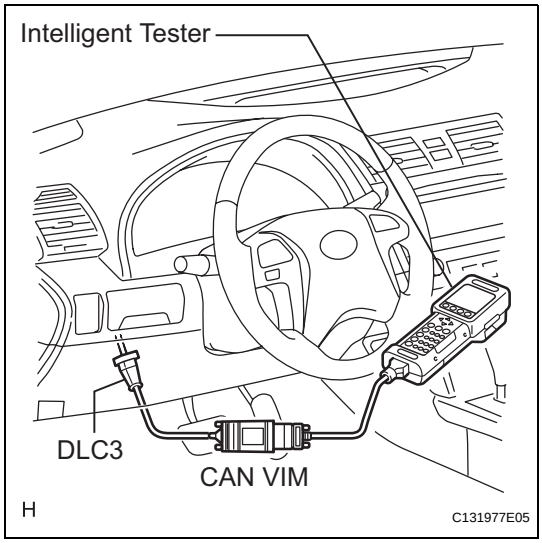
When troubleshooting OBD II (On-Board Diagnostics) vehicles, the intelligent tester (complying with SAE J1987) must be connected to the DLC3 (Data Link Connector 3) of the vehicle. Various data in the vehicle's ECM (Engine Control Module) can be then read.

OBD II regulations require that the vehicle's on-board computer illuminates the MIL (Malfunction Indicator Lamp) on the instrument panel when the computer detects a malfunction in:

(a) The emission control system components.
(b) The powertrain control components (which affect vehicle emissions).
(c) The computer itself.

In addition, if the applicable DTCs (Diagnostic Trouble Codes) prescribed by SAE J2012 are not recorded on 3 consecutive trips, the MIL turns off automatically but the DTCs remain recorded in the ECM memory.

To check DTCs, connect the intelligent tester to the DLC3. The tester displays DTCs, freeze frame data, and a variety of the engine data. The DTCs and freeze frame data can be erased with the tester (See page ES-38).



In order to enhance OBD function on vehicles and develop the Off-Board diagnosis system, CAN (Controller Area Network) communication is introduced in this system. It minimizes the gap between technician skills and vehicle technology. CAN is a network, which uses a pair of data transmission lines, spanning multiple computers and sensors. It allows high speed communication between the systems and simplifies the wire harness connection.

Since this system is equipped with the CAN communication, connecting the CAN VIM (Vehicle Interface Module) to the intelligent tester is necessary to display any information from the ECM. (Also the communication between the intelligent tester and the ECM uses CAN communication signals.) When confirming the DTCs and any data of the ECM, connect the CAN VIM between the DLC3 and the intelligent tester.

2. NORMAL MODE AND CHECK MODE

The diagnosis system operates in normal mode during normal vehicle use. In normal mode, "2 trip detection logic" is used to ensure accurate detection of malfunctions. "Check mode" is also available as an option for technicians. In check mode, "1 trip detection logic" is used for simulating malfunction symptoms and increasing the system's ability to detect malfunctions, including intermittent problems (intelligent tester only) (See page ES-41).

3. 2 TRIP DETECTION LOGIC

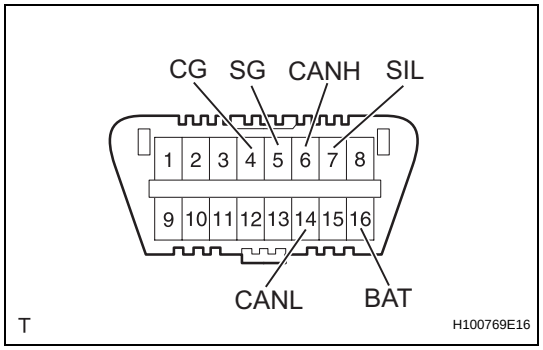
When a malfunction is first detected, the malfunction is temporarily stored in the ECM memory (1st trip). If the same malfunction is detected during the next subsequent drive cycle, the MIL is illuminated (2nd trip).

4. FREEZE FRAME DATA

The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

5. DLC3 (Data Link Connector 3)

The vehicle's ECM uses the ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.



Symbols	Terminal No.	Names	Reference terminal	Results	Condition
SIL	7	Bus "+" line	5 - Signal ground	Pulse generation	During transmission
CG	4	Chassis ground	Body ground	1 Ω or less	Always
SG	5	Signal ground	Body ground	1 Ω or less	Always
BAT	16	Battery positive	Body ground	9 to 14 V	Always
CANH	6	CAN "High" line	14 - CANL	54 to 69 Ω	Ignition switch OFF*
			Battery positive	6 kΩ or higher	Ignition switch OFF*
			4 - CG	200 Ω or higher	Ignition switch OFF*
CANL	14	CAN "Low" line	Battery positive	6 kΩ or higher	Ignition switch OFF*
			4 - CG	200 Ω or higher	Ignition switch OFF*

CAUTION:

***: Before measuring the resistance, leave the vehicle as it is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

The DLC3 is the interface prepared for reading various data from the vehicle's ECM. After connecting the cable of the intelligent tester to the CAN VIM, turn the ignition switch to the ON position and turn the tester on. If a communication failure message is displayed on the tester screen (on the tester: UNABLE TO CONNECT TO VEHICLE), a problem exists in either the vehicle or tester. In order to identify the location of the problem, connect the tester to another vehicle.

If communication is normal: Inspect the DLC3 on the original vehicle.

If communication is still not possible: The problem is probably in the tester itself. Consult the Service Department listed in the instruction manual.

6. **BATTERY VOLTAGE**
   Standard voltage:
   11 to 14 V
   If the voltage is below 11 V, replace or recharge the battery before proceeding to the next step.

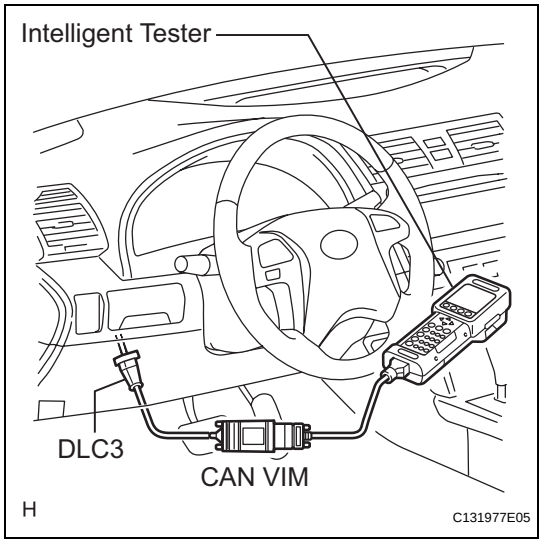
7. **MIL (Malfunction Indicator Lamp)**
   (a) The MIL is illuminated when the ignition switch is first turned ON position (the engine is not running).
   (b) The MIL should turn OFF when the engine is started. If the MIL remains illuminated, the diagnosis system has detected a malfunction or abnormality in the system.
   HINT:
   If the MIL is not illuminated when the ignition switch is first turned ON position, check the MIL circuit (See page ES-397).

8. **ALL READINESS**
   For the vehicle, using the intelligent tester allows readiness codes corresponding to all DTCs to be read. When diagnosis (normal or malfunctioning) has been complete, readiness codes are set. Select the following menu items on the intelligent tester: ENHANCED OBD II / MONITOR STATUS.

DTC CHECK / CLEAR

NOTICE:
When the diagnosis system is changed from normal mode to check mode or vice versa, all DTCs and freeze frame data recorded in normal mode are erased. Before changing modes, always check and make a note of any DTCs and freeze frame data.
HINT:

- DTCs which are stored in the ECM can be displayed on the intelligent tester. The intelligent tester can display current and pending DTCs.
- Some DTCs are not set if the ECM does not detect the same malfunction again during a second consecutive driving cycle. However, such malfunctions, detected on only one occasion, are stored as pending DTCs.



1. CHECK FOR DTC (Using intelligent tester)
(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES or PENDING CODES.
(e) Check the DTC(s) and freeze frame data, and then write them down.
(f) Check the details of the DTC(s) (See page ES-53).

2. CLEAR DTC (Using intelligent tester)
(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CLEAR CODES.
(e) Press the YES button.

3. CLEAR DTC (Without using intelligent tester)
(a) Perform either of the following operations:
(1) Disconnect the cable from the negative (-) battery terminal for more than 1 minute.
(2) Remove the EFI No. 1 and ETCS fuses from the engine room R/B (located inside the engine compartment) for more than 1 minute.

FREEZE FRAME DATA

1. DESCRIPTION

The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

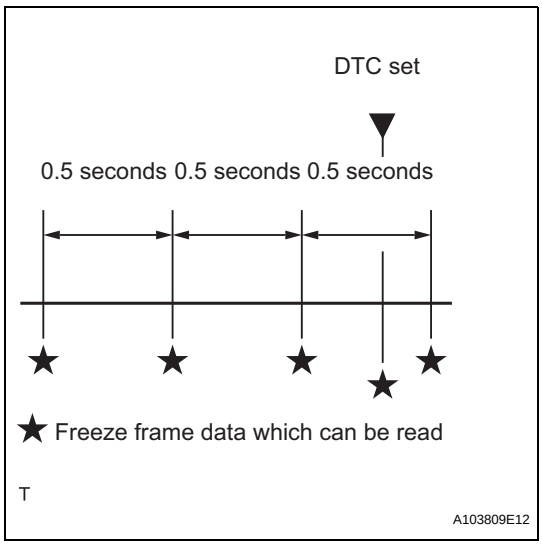
HINT:

If it is impossible to duplicate the problem even though a DTC is detected, confirm the freeze frame data.

The ECM records engine conditions in the form of freeze frame data every 0.5 seconds. Using the intelligent tester, 5 separate sets of freeze frame data can be checked.

– 3 data set before the DTC was set.
– 1 data set when the DTC was set.
– 1 data set after the DTC was set.

These data sets can be used to simulate the condition of the vehicle around the time of the occurrence of the malfunction. The data may assist in identifying the cause of the malfunction, and in judging whether it was temporary or not.



2. LIST OF FREEZE FRAME DATA

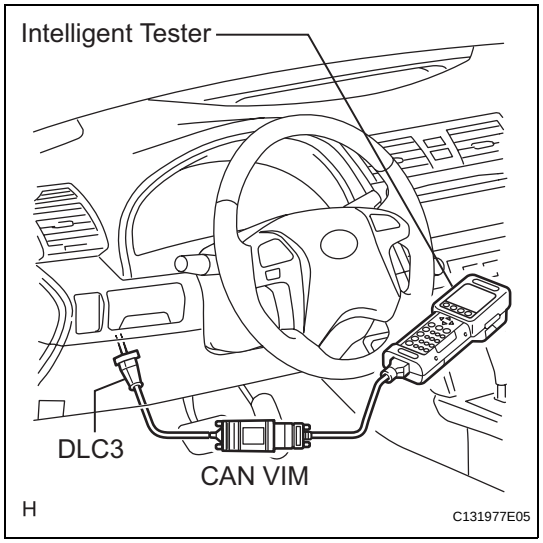
LABEL (Intelligent Tester Display)	Measurement Item	Diagnostic Note
INJECTOR	Injection period of No. 1 cylinder	-
IGN ADVANCE	Ignition advance	-
CALC LOAD	Calculated load	Calculated load by ECM
VEHICLE LOAD	Vehicle load	-
MAF	Mass air flow volume	If approximately 0.0 g/sec.: • Mass air flow meter power source circuit open or short • VG circuit open or short If 160.0 g/sec. or more: • E2G circuit open
ENGINE SPD	Engine speed	-
VEHICLE SPD	Vehicle speed	Speed indicated on speedometer
COOLANT TEMP	Engine coolant temperature	If -40°C (-40°F), sensor circuit open If 140°C (284°F) or more, sensor circuit shorted
INTAKE AIR	Intake air temperature	If -40°C (-40°F), sensor circuit open If 140°C (284°F) or more, sensor circuit shorted
AIR-FUEL RATIO	Ratio compared to stoichiometric level	-
PURGE DENSITY	Learning value of purge density	-
EVAP PURGE FLOW	Ratio of evaporative purge flow to intake air volume	-
EVAP PURGE VSV	EVAP purge VSV duty ratio	-
KNOCK CRRT VAL	Correction learning value of knocking	-
KNOCK FB VAL	Feedback value of knocking	-

LABEL (Intelligent Tester Display)	Measurement Item	Diagnostic Note
ACCEL POS #1	Absolute Accelerator Pedal Position (APP) No. 1	-
ACCEL POS #2	Absolute APP No. 2	-
THROTTLE POS	Throttle position	-
THROTTLE POS	Throttle sensor positioning	-
THROTTLE POS #2	Throttle sensor positioning #2	-
THROTTLE MOT	Throttle motor	-
O2S B1 S2	Heated oxygen sensor output	Performing INJ VOL or A/F CONTROL function of ACTIVE TEST enables technician to check output voltage of sensor
AFS B1 S1	A/F sensor output	Performing INJ VOL or A/F CONTROL function of ACTIVE TEST enables technician to check output voltage of sensor
TOTAL FT #1	Total fuel trim	-
SHORT FT #1	Short-term fuel trim	Short-term fuel compensation used to maintain air-fuel ratio at stoichiometric air-fuel ratio
LONG FT #1	Long-term fuel trim	Overall fuel compensation carried out in long-term to compensate for a continual deviation of short-term fuel trim from central valve
FUEL SYS #1	Fuel system status	• OL (Open Loop): Has not yet satisfied conditions to go closed loop • CL (Closed Loop): Using A/F sensor as feedback for fuel control • OL DRIVE: Open loop due to driving conditions (fuel enrichment) • OL FAULT: Open loop due to detected system fault • CL FAULT: Closed loop but A/F sensor, which used for fuel control malfunctioning
O2FT B1 S2	Fuel trim at heated oxygen sensor	-
AF FT B1 S1	Fuel trim at A/F sensor	-
AFS B1 S1	A/F sensor current	-
CAT TEMP B1S1	Estimated catalyst temperature (sensor 1)	-
CAT TEMP B1S2	Estimated catalyst temperature (sensor 2)	-
S O2S B1S2	Sub heated oxygen sensor impedance (sensor 2)	-
INI COOL TEMP	Engine coolant temperature at engine start	-
INI INTAKE TEMP	Intake air temperature at engine start	-
INJ VOL	Injection volume	-
STARTER SIG	Starter switch (STSW) signal	-
PS SW	Power steering signal	-
PS SIGNAL	Power steering signal (history)	Signal status usually ON until ignition switch turned OFF
CTP SW	Closed throttle position switch	-
A/C SIGNAL	A/C signal	-
PNP SW (NSW)	Park/Neutral Position (PNP) switch signal	-
ELECT LOAD SIG	Electrical load signal	-
STOP LIGHT SW	Stop light switch	-
BATTERY VOLTAGE	Battery voltage	-
ATM PRESSURE	Atmosphere pressure	-
EVAP (Purge) VSV	EVAP Purge VSV	-
FUEL PUMP/SPD	Fuel pump/speed status	-
VVT CTRL B1	VVT control status	-

LABEL (Intelligent Tester Display)	Measurement Item	Diagnostic Note
VACUUM PUMP	Key-off EVAP system leak detection pump status	(see page ES-344)
EVAP VENT VAL	Key-off EVAP system vent valve status	-
FAN MOTOR	Electric fan motor	-
TC/TE1	TC and CG (TE1) terminals of DLC3	-
ENG SPEED #1	Engine rpm during No. 1 cylinder fuel cut	Output only when FUEL CUT #1 is performed using ACTIVE TEST
ENG SPEED #2	Engine rpm during No. 2 cylinder fuel cut	Output only when FUEL CUT #2 is performed using ACTIVE TEST
ENG SPEED #3	Engine rpm during No. 3 cylinder fuel cut	Output only when FUEL CUT #3 is performed using ACTIVE TEST
ENG SPEED #4	Engine rpm during No. 4 cylinder fuel cut	Output only when FUEL CUT #4 is performed using ACTIVE TEST
ENG SPEED ALL	Average of engine rpm values during fuel cut of No. 1 to No. 4 cylinders	Output only when ACTIVE TEST is performed
VVTL AIM ANGL#1	VVT aim angle	-
VVT CHNG ANGL#1	VVT angle	-
VVT OCV DUTY B1	VVT OCV operation duty	-
FC IDL	Fuel cut idle	ON: when throttle valve fully closed and engine speed over 3,500 rpm
FC TAU	Fuel cut with a very light load	Fuel cut being performed with a very light load to prevent incomplete engine combustion
IGNITION	Ignition counter	-
CYL #1	Cylinder #1 misfire	Displayed only during idling
CYL #2	Cylinder #2 misfire	Displayed only during idling
CYL #3	Cylinder #3 misfire	Displayed only during idling
CYL #4	Cylinder #4 misfire	Displayed only during idling
CYL ALL	All cylinders misfire	Displayed only during idling
MISFIRE RPM	Engine speed when misfire occurred	-
MISFIRE LOAD	Engine load when misfire occurred	-
MISFIRE MARGIN	Margin to detect engine misfire	-
MIL ON RUN DIST	Distance after DTC is detected	-
ENG RUN TIME	Accumulated engine running time	-
TIME DTC CLEAR	Cumulative time after DTC cleared	-
DIST DTC CLEAR	Accumulated distance from DTC cleared	-
WU CYC DTC CLEAR	Warm-up cycle after DTC cleared	-

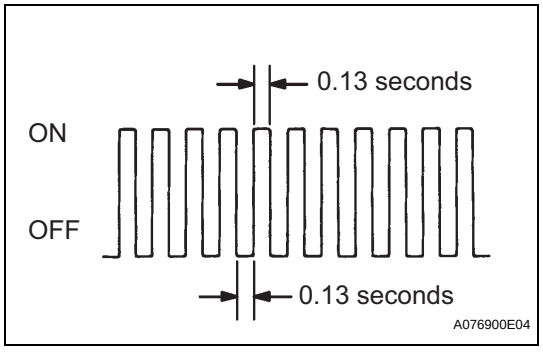
CHECK MODE PROCEDURE

HINT:
Intelligent tester only:
Compared to normal mode, check mode is more sensitive to malfunctions. Therefore, check mode can detect the malfunctions that cannot be detected by normal mode.
NOTICE:
All the stored DTCs and freeze frame data are erased if: 1) the ECM is changed from normal mode to check mode or vice versa; or 2) the ignition switch is turned from ON position to ACC position or off while in check mode. Before changing modes, always check and make a note of any DTCs and freeze frame data.



1. CHECK MODE PROCEDURE (Using intelligent tester)

(a) Check and ensure the following conditions:
  (1) Battery positive voltage 11 V or more.
  (2) Throttle valve fully closed.
  (3) Transmission in the P or N position.
  (4) A/C switch OFF.
(b) Turn the ignition switch off.
(c) Connect the intelligent tester to the DLC3.
(d) Turn the ignition switch to the ON position.
(e) Turn the tester on.
(f) Select the following menu items: DIAGNOSIS / ENHANCED OBD II/ CHECK MODE.
(g) Switch the ECM from normal mode to check mode.



(h) Make sure that the MIL flashes as shown in the illustration.
(i) Start the engine.
(j) Make sure that the MIL turns off.
(k) Simulate the conditions of the malfunction described by the customer.
(l) Check for DTCs and freeze frame data using the tester.

FAIL-SAFE CHART

If any of the following DTCs are set, the ECM enters fail-safe mode to allow the vehicle to be driven temporarily.

DTCs	Components	Fail-Safe Operations	Fail-Safe Deactivation Conditions
P0031 and P0032	Air-Fuel Ratio (A/F) Sensor Heater	ECM turns off A/F sensor heater.	Ignition switch OFF
P0037 and P0038	Heated Oxygen (HO2) Sensor Heater	ECM turns off HO2 sensor heater.	Ignition switch OFF
P0100, P0102 and P0103	Mass Air Flow (MAF) Meter	ECM calculates ignition timing according to engine speed and throttle valve position.	Pass condition detected
P0110, P0112 and P0113	Intake Air Temperature (IAT) Sensor	ECM estimates IAT to be 20°C (68°F).	Pass condition detected
P0115, P0117 and P0118	Engine Coolant Temperature (ECT) Sensor	ECM estimates ECT to be 80°C (176°F).	Pass condition detected
P0120, P0121, P0122, P0123, P0220, P0222, P0223, P0604, P0606, P0607, P0657, P2102, P2103, P2111, P2112, P2118, P2119 and P2135	Electronic Throttle Control System (ETCS)	ECM cuts off throttle actuator current and throttle valve is returned to 6° throttle position by return spring. ECM then adjusts engine output by controlling fuel injection (intermittent fuel-cut) and ignition timing in accordance with accelerator pedal opening angle to allow vehicle to continue at minimal speed*.	Pass condition detected and then ignition switch turned off
P0327 and P0328	Knock Sensor	ECM sets ignition timing to maximum retard.	Ignition switch off
P0351 to P0354	Igniter	ECM cuts fuel.	Pass condition detected
P2120, P2121, P2122, P2123, P2125, P2127, P2128 and P2138	Accelerator Pedal Position (APP) Sensor	APP sensor has 2 sensor circuits: Main and Sub. If either circuit malfunctions, ECM controls engine using the other circuit. If both circuits malfunction, ECM regards accelerator pedal as being released. As a result, throttle valve is closed and engine idles.	Pass condition detected and then ignition switch turned off

HINT:

*: The vehicle can be driven slowly when the accelerator pedal is depressed firmly and slowly. If the accelerator pedal is depressed quickly, the vehicle may speed up and slow down erratically.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

By reading the DATA LIST displayed on an intelligent tester, values can be checked, including those of the switches, sensors, and actuators, without removing any parts. Reading the DATA LIST as the first step in troubleshooting is one method to shorten diagnostic time.

NOTICE:

In the table below, the values listed under Normal Condition are for reference only. Do not depend solely on these values when determining whether or not a part is faulty.

(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the intelligent tester to the DLC3.
(d) Turn the ignition switch to the ON position.
(e) Turn the tester on.
(f) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST.
(g) Check the values by referring to the table below.

ECM:

Intelligent Tester Display	Measurement Item: Range (Display)	Normal Condition*1	Diagnostic Note
INJECTOR	Injection period of No. 1 cylinder: Min.: 0 ms, Max.: 32.64 ms	1.0 to 3.0 ms: Idling	-
IGN ADVANCE	Ignition timing advance for No. 1 cylinder: Min.: -64 deg, Max.: 63.5 deg	BTDC 8 to 12 deg: Idling	-
CALC LOAD	Calculated load by ECM: Min.: 0 %, Max.: 100 %	• 10 to 30 %: Idling • 10 to 30 %: Running without load at 2,500 rpm	Load value
VEHICLE LOAD	Vehicle load: Min.: 0 %, Max.: 25,700 %	Actual vehicle load	Load percentage in terms of maximum intake air flow amount
MAF	Air flow rate from Mass Air Flow (MAF) meter: Min.: 0 g/sec., Max.: 655.35 g/sec.	1 to 3 g/sec.: Idling 2 to 6 g/sec.: Running without load at 2,500 rpm	If value is approximately 0.0 g/sec.: • MAF meter power source circuit open • VG circuit open or shorted If value is 160.0 g/sec. or more: • E2G circuit open
ENGINE SPD	Engine speed: Min.: 0 rpm, Max.: 16,383.75 rpm	650 to 750 rpm: Idling (Manual transaxle) 610 to 710 rpm: Idling (Automatic transaxle)	-
VEHICLE SPD	Vehicle speed: Min.: 0 km/h, Max.: 255 km/h	Actual vehicle speed	Speed indicated on speedometer
COOLANT TEMP	Engine coolant temperature: Min.: -40°C, Max.: 140°C	80 to 100°C (176 to 212°F): After warming up	• If -40°C (-40°F): sensor circuit open • If 140°C (284°F) or more: sensor circuit shorted
INTAKE AIR	Intake air temperature: Min.: -40°C, Max.: 140°C	Equivalent to ambient air temperature	• If -40°C (-40°F): sensor circuit open • If 140°C (284°F) or more: sensor circuit shorted

Intelligent Tester Display	Measurement Item: Range (Display)	Normal Condition*1	Diagnostic Note
AIR-FUEL RATIO	Ratio compared to stoichiometric level: Min.: 0, Max.: 1.999	0.8 to 1.2: Idling	• Less than 1 (0 to 0.999) = Lean • Stoichiometric air-fuel ratio = 1 • Greater than 1 (1.001 to 1.999) = Rich
PURGE DENSITY	Learning value of purge density: Min.: -50, Max.: 350	-40 to 10: Idling	-
EVAP PURGE FLOW	Ratio of evaporative purge flow to intake air volume: Min.: 0 %, Max.: 102.4 %	0 to 10 %: Idling	-
EVAP PURGE VSV	EVAP (PURGE) VSV control duty: Min.: 0 %, Max.: 100 %	10 to 50 %: Idling	Order signal from ECM
VAPOR PRES PUMP	Vapor pressure: Min.: 33.853 kPa, Max.: 125.596 kPa	Approximately 100 kPa: Ignition switch to the ON position	EVAP system pressure monitored by canister pressure sensor
VAPOR PRES CALC	Vapor pressure (calculated): Min.: -5.632 kPa, Max.: 715.264 kPa	Approximately 100 kPa: Ignition switch to the ON position	EVAP system pressure monitored by canister pressure sensor
KNOCK CRRT VAL	Knock correction learning value: Min: -64°CA, Max.: 1,984°CA	0 to 20°CA: Driving at 44 mph (70 km/h)	Service data
KNOCK FB VAL	Knock feedback value: Min: -64°CA, Max.: 1,984°CA	-20 to 0°CA: Driving at 44 mph (70 km/h)	Service data
ACCEL POS #1	Absolute Accelerator Pedal Position (APP) No. 1: Min.: 0 %, Max.: 100 %	10 to 22 %: Accelerator pedal released 52 to 90 %: Accelerator pedal fully depressed	Read value with ignition switch to the ON position (Do not start engine)
ACCEL POS #2	Absolute APP No. 2: Min.: 0 %, Max.: 100 %	24 to 40 %: Accelerator pedal released 68 to 100 %: Accelerator pedal fully depressed	Read value with ignition switch to the ON position (Do not start engine)
ACCEL POS #1	APP sensor No. 1 voltage: Min.: 0 V, Max.: 5 V	0.5 to 1.1 V: Accelerator pedal released 2.6 to 4.5 V: Accelerator pedal fully depressed	Read value with ignition switch to the ON position (Do not start engine)
ACCEL POS #2	APP sensor No. 2 voltage: Min.: 0 V, Max.: 5 V	1.2 to 2.0 V: Accelerator pedal released 3.4 to 5.0 V: Accelerator pedal fully depressed	Read value with ignition switch to the ON position (Do not start engine)
ACCEL IDL POS	Whether or not accelerator pedal position sensor detecting idle: ON or OFF	ON: Idling	-
THRTL LEARN VAL	Throttle valve fully closed (learned value): Min.: 0 V, Max.: 5 V	0.4 to 0.8 V	-
ACCEL SSR #1 AD	APP sensor No. 1 voltage (AD): Min.: 0 V, Max.: 4.9804 V	-	ETCS service data
ACCEL LRN VAL#1	Accelerator fully closed learning value No. 1: Min.: 0 deg, Max.: 124.512 deg	-	ETCS service data
ACCEL LRN VAL#2	Accelerator fully closed learning value No. 2: Min.: 0 deg, Max.: 124.512 deg	-	ETCS service data
FAIL #1	Whether or not fail safe function executed: ON or OFF	ON: ETCS has failed	-
FAIL #2	Whether or not fail safe function executed: ON or OFF	ON: ETCS has failed	-
ST1	Brake pedal signal: ON or OFF	ON: Brake pedal depressed	-

Intelligent Tester Display	Measurement Item: Range (Display)	Normal Condition*1	Diagnostic Note
SYS GUARD JUDGE	System guard: ON or OFF	-	ETCS service data
OPN MALFUNCTION	Open side malfunction: ON or OFF	-	ETCS service data
THROTTLE POS	Throttle position sensor: Min.: 0%, Max.: 100 %	• 10 to 22 %: Throttle fully closed • 66 to 98 %: Throttle fully open	• Calculated value based on VTA1 • Read value with ignition switch to the ON position (Do not start engine)
THROTTL IDL POS	Whether or not throttle position sensor detecting idle: ON or OFF	ON: Idling	-
THRTL REQ POS	Throttle requirement position: Min.: 0 V, Max.: 5 V	0.5 to 1.0 V: Idling	-
THROTTLE POS	Throttle position: Min.: 0 %, Max.: 100 %	• 0 %: Throttle fully closed • 50 to 80 %: Throttle fully open	• Recognition value for throttle opening angle on ECM • Read value with ignition switch to the ON position (Do not start engine)
THROTTLE POS #2	Throttle position No. 2 sensor: Min.: 0 %, Max.: 100 %	• 42 to 62 %: Throttle fully closed • 92 to 100 %: Throttle fully open	• Calculated value based on VTA2 • Read value with ignition switch to the ON position (Do not start engine)
THROTTLE POS #1	Throttle position sensor No. 1 output voltage: Min.: 0 V, Max.: 5 V	• 0.5 to 1.1 V: Throttle fully closed • 3.3 to 4.9 V: Throttle fully open	Read value with ignition switch to the ON position (Do not start engine)
THROTTLE POS #2	Throttle position sensor No. 2 output voltage: Min.: 0 V, Max.: 5 V	• 2.1 to 3.1 V: Throttle fully closed • 4.6 to 5.0 V: Throttle fully open	Read value with ignition switch to the ON position (Do not start engine)
THRTL COMND VAL	Throttle position command value: Min.: 0 V, Max.: 4.9804 V	0.5 to 4.9 V	Read value with ignition switch to the ON position (Do not start engine)
THROTTLE SSR #1	Throttle sensor opener position No. 1: Min.: 0 V, Max.: 4.9804 V	-	ETCS service data
THROTTLE SSR #2	Throttle sensor opener position No. 2: Min.: 0 V, Max.: 4.9804 V	-	ETCS service data
THRTL SSR #1 AD	Throttle position sensor No. 1 output voltage (AD): Min.: 0 V, Max.: 4.9804 V	0.5 to 4.9 V	Read value with ignition switch to the ON position (Do not start engine)
THROTTLE MOT	Whether or not throttle actuator control permitted: ON or OFF	ON: Idling	Read value with ignition switch to the ON position (Do not start engine)
THROTTLE MOT	Throttle actuator current: Min.: 0 A, Max.: 80 A	0 to 3.0 A: Idling	-
THROTTLE MOT	Throttle actuator: Min.: 0 %, Max.: 100 %	0.5 to 40 %: Idling	-
THRTL MOT (OPN)	Throttle actuator duty ratio (open): Min.: 0 %, Max.: 100 %	0 to 40 %: Idling	ETCS service data
THRTL MOT (CLS)	Throttle actuator duty ratio (closed): Min.: 0 %, Max.: 100 %	0 to 40 %: Idling	ETCS service data
O2S B1 S2	Heated oxygen sensor output voltage for sensor 2: Min.: 0 V Max.: 1.275 V	0.1 to 0.9 V: Driving at 44 mph (70 km/h)	Performing INJ VOL or A/F CONTROL function of ACTIVE TEST enables technician to check output voltage of sensor

ES

Intelligent Tester Display	Measurement Item: Range (Display)	Normal Condition*1	Diagnostic Note
AFS B1 S1	A/F sensor output voltage for sensor 1: Min.: 0 V Max.: 7.999 V	2.8 to 3.8 V: Idling	Performing INJ VOL or A/F CONTROL function of ACTIVE TEST enables technician to check output voltage of sensor
TOTAL FT #1	Total fuel trim value for fuel system: Min.: -0.5, Max.: 0.496	-0.2 to 0.2	-
SHORT FT #1	Short-term fuel trim: Min.: -100 %, Max.: 99.2 %	-20 to 20 %	Short-term fuel compensation used to maintain air-fuel ratio at stoichiometric air-fuel ratio
LONG FT #1	Long-term fuel trim: Min.: -100 %, Max.: 99.2 %	-20 to 20 %	Overall fuel compensation carried out in long-term to compensate for a continual deviation of short-term fuel trim from central value
FUEL SYS #1	Fuel system status: OL or CL or OL DRIVE or OL FAULT or CL FAULT	CL: Idling after warming up	• OL (Open Loop): Has not yet satisfied conditions to go closed loop • CL (Closed Loop): Using A/F sensor as feedback for fuel control • OL DRIVE: Open loop due to driving conditions (fuel enrichment) • OL FAULT: Open loop due to detected system fault • CL FAULT: Closed loop but A/F sensor, which used for fuel control malfunctioning
O2FT B1 S2	Short-term fuel trim associated with sensor 2: Min.: -100 %, Max.: 99.2 %	-	-
AF FT B1 S1	Short-term fuel trim associated with sensor 1: Min.: 0, Max.: 1.999	• Value less than 1 (0.000 to 0.999) =Lean • Stoichiometric air-fuel ratio=1 • Value greater than 1 (1.001 to 1.999) = Rich	-
AFS B1 S1	A/F sensor current: Min.: -128 mA, Max.: 127.99 mA	-	-
CAT TEMP B1S1	Estimated catalyst temperature (sensor 1): Min.: -40°C, Max.: 6,513.5°C	-	-
CAT TEMP B1S2	Estimated catalyst temperature (sensor 2): Min.: -40°C, Max.: 6,513.5°C	-	-
S O2S B1S2	Sub heated oxygen sensor impedance (sensor 2): Min.: 0 Ω, Max.: 21247.68 Ω	-	-
INI COOL TEMP	Engine coolant temperature at engine start: Min.: -40°C, Max.: 120°C	Close to ambient air temperature	-
INI INTAKE TEMP	Intake air temperature at engine start: Min.: -40°C, Max.: 120°C	Close to ambient air temperature	-
INJ VOL	Injection volume (Cylinder 1): Min.: 0 ml, Max.: 2.048 ml	0 to 0.15 ml: Idling	Quantity of fuel injection volume for 10 times
STARTER SIG	Starter switch (STSW) signal: ON or OFF	ON: Cranking	-
PS SW	Power steering signal: ON or OFF	ON: Power steering operation	-

ES

Intelligent Tester Display	Measurement Item: Range (Display)	Normal Condition*1	Diagnostic Note
PS SIGNAL	Power steering signal (history): ON or OFF	ON: When steering wheel first turned after battery terminals connected	Signal status usually ON until battery terminals disconnected
CTP SW	Closed throttle position switch: ON or OFF	• ON: Throttle fully closed • OFF: Throttle open	-
A/C SIGNAL	A/C signal: ON or OFF	ON: A/C ON	-
PNP SW [NSW]	PNP switch status: ON or OFF	ON: P or N position	-
ELECT LOAD SIG	Electrical load signal: ON or OFF	ON: Headlights or defogger turned ON	-
STOP LIGHT SW	Stop light switch: ON or OFF	ON: Brake pedal depressed	-
+BM	Whether or not electric throttle control system power inputted: ON or OFF	ON: Ignition switch to the ON position and system normal	-
+BM VOLTAGE	+BM voltage: Min.: 0, Max.: 19.2182	9 to 14 (V): Ignition switch to the ON position and system normal	ETCS service data
BATTERY VOLTAGE	Battery voltage: Min.: 0 V, Max.: 65.535 V	9 to 14 V: Ignition switch to the ON position	-
ACTUATOR POWER	Actuator power supply: ON or OFF	ON: Idling	ETCS service data
ATM PRESSURE	Atmospheric pressure: Min.: 0 kPa, Max.: 255 kPa	Approximately 100 kPa: Ignition switch to the ON position	-
EVAP (Purge) VSV	Purge VSV status: ON or OFF	-	-
FUEL PUMP / SPD	Fuel pump status: ON or OFF	ON: Engine running	Active Test support data
VVT CTRL B1	VVT control (bank 1) status: ON or OFF	-	-
VACUUM PUMP	Key-off EVAP system leak detection pump status: ON or OFF	-	Active Test support data
EVAP VENT VAL	Key-off EVAP system vent valve status: ON or OFF	-	Active Test support data
FAN MOTOR	Electric fan motor: ON or OFF	ON: Electric fan motor operating	-
TC/TE1	TC and CG (TE1) terminals of DLC3: ON or OFF	-	Active Test support data
ENG SPEED #1	Engine rpm during No. 1 cylinder fuel cut: Min.: 0 rpm, Max.: 25,600 rpm	-	Output only when FUEL CUT #1 is performed using ACTIVE TEST
ENG SPEED #2	Engine rpm during No. 2 cylinder fuel cut: Min.: 0 rpm, Max.: 25,600 rpm	-	Output only when FUEL CUT #2 is performed using ACTIVE TEST
ENG SPEED #3	Engine rpm during No. 3 cylinder fuel cut: Min.: 0 rpm, Max.: 25,600 rpm	-	Output only when FUEL CUT #3 is performed using ACTIVE TEST
ENG SPEED #4	Engine rpm during No. 4 cylinder fuel cut: Min.: 0 rpm, Max.: 25,600 rpm	-	Output only when FUEL CUT #4 is performed using ACTIVE TEST
ENG SPEED ALL	Average of engine rpm values during fuel cut of No. 1 to No. 4 cylinders: Min.: 0 rpm, Max.: 25,600 rpm	-	Output only when ACTIVE TEST is performed
VVTL AIM ANGL#1*2	VVT aim angle: Min.: 0 %, Max.: 100 %	0 to 100 %	VVT duty signal value during intrusive operation

Intelligent Tester Display	Measurement Item: Range (Display)	Normal Condition*1	Diagnostic Note
VVT CHNG ANGL#1*2	VVT angle: Min.: 0°FR, Max.: 60°FR	0 to 56°FR	Displacement angle during intrusive operation
VVT OCV DUTY B1*2	VVT OCV operation duty: Min.: 0 %, Max.: 100 %	0 to 100 %	Requested duty value for intrusive operation
FC IDL	Fuel cut idle: ON or OFF	ON: Fuel cut operation	FC IDL = "ON" when throttle valve fully closed and engine speed over 3,500 rpm
FC TAU	Fuel cut TAU (Fuel cut with a very light load): ON or OFF	ON: Fuel cut operating	Fuel cut being performed with a very light load to prevent incomplete engine combustion
IGNITION	Ignition counter: Min.: 0, Max.: 800	0 to 800	-
CYL #1, #2, #3, #4	Misfire of cylinder 1 to 4: Min.: 0, Max.: 255	0	-
CYL ALL	All cylinders misfire: Min.: 0, Max.: 255	0	-
MISFIRE RPM	Engine speed when misfire occurs: Min.: 0 rpm, Max.: 6,375 rpm	-	-
MISFIRE LOAD	Engine load when misfire occurs: Min.: 0 g/rev, Max.: 3.98 g/rev	-	-
MISFIRE MARGIN	Margin to detect engine misfire: Min.: -100 %, Max.: 99.22 %	-100 to 99.22 %	Misfire detecting margin
#CODES	Number of codes: Min.: 0, Max.: 255	-	Number of detected DTCs
CHECK MODE	Check mode: ON or OFF	ON: Check mode ON	(See page ES-41)
SPD TEST	Check mode result for vehicle speed sensor: COMPL or INCMPL	-	-
MISFIRE TEST	Check mode result for misfire monitor: COMPL or INCMPL	-	-
OXS1 TEST	Check mode result for HO2 sensor: COMPL or INCMPL	-	-
A/F SSR TEST B1	Check mode result for air-fuel ratio sensor: COMPL or INCMPL	-	-
MIL	MIL status: ON or OFF	ON: MIL ON	-
MIL ON RUN DIST	MIL ON run distance: Min.: 0 km, Max.: 65,535 km	Distance after DTC detected	-
MIL ON RUN TIME	Running time from MIL ON: Min.: 0 minutes, Max.: 65,535 minutes	Equivalent to running time after MIL ON	-
ENG RUN TIME	Engine run time: Min.: 0 seconds, Max.: 65,535 seconds	Time after engine start	-
TIME DTC CLEAR	Time after DTC cleared: Min.: 0 minutes, Max.: 65,535 minutes	Equivalent to time after DTCs erased	-
DIST DTC CLEAR	Distance after DTC cleared: Min.: 0 km, Max.: 65,535 km	Equivalent to drive distance after DTCs erased	-
WU CYC DTC CLEAR	Warm-up cycle after DTC cleared: Min.: 0, Max.: 255	-	Number of warm-up cycles after DTC cleared
OBD CERT	OBD requirement	OBD2	-

Intelligent Tester Display	Measurement Item: Range (Display)	Normal Condition*1	Diagnostic Note
COMP MON	Comprehensive component monitor: NOT AVL or AVAIL	-	-
FUEL MON	Fuel system monitor: NOT AVL or AVAIL	-	-
MISFIRE MON	Misfire monitor: NOT AVL or AVAIL	-	-
O2S (A/FS) HTR	O2S (A/FS) heater monitor: NOT AVL or AVAIL	-	-
O2S (A/FS) MON	O2S (A/FS) monitor: NOT AVL or AVAIL	-	-
EVAP MON	EVAP monitor: NOT AVL or AVAIL	-	-
CAT MON	Catalyst monitor: NOT AVL or AVAIL	-	-
EGR ENA	EGR monitor: UNABLE or ENABLE	UNABLE	-
EGR CMPL	EGR monitor: COMPL or INCMPL	INCMPL	-
HTR ENA	O2S (A/FS) heater monitor: UNABLE or ENABLE	ENABLE	-
HTR CMPL	O2S (A/FS) heater monitor: COMPL or INCMPL	INCMPL	-
O2S (A/FS) ENA	O2S (A/FS) monitor: UNABLE or ENABLE	ENABLE	-
O2S (A/FS) CMPL	O2S (A/FS) monitor: COMPL or INCMPL	INCMPL	-
ACRF ENA	A/C monitor: UNABLE or ENABLE	UNABLE	-
ACRF CMPL	A/C monitor: COMPL or INCMPL	INCMPL	-
AIR ENA	Secondary air injection system monitor: UNABLE or ENABLE	UNABLE	-
AIR CMPL	Secondary air injection system monitor: COMPL or INCMPL	INCMPL	-
EVAP ENA	EVAP monitor: UNABLE or ENABLE	ENABLE	-
EVAP CMPL	EVAP monitor: COMPL or INCMPL	INCMPL	-
HCAT ENA	Heated catalyst monitor: UNABLE or ENABLE	UNABLE	-
HCAT CMPL	Heated catalyst monitor: COMPL or INCMPL	INCMPL	-
CAT ENA	Catalyst monitor: UNABLE or ENABLE	ENABLE	-
CAT CMPL	Catalyst monitor: COMPL or INCMPL	COMPL	-
MODEL CODE	Identifying model code	ACA3#	-
ENGINE TYPE	Identifying engine type	2AZFE	-
CYLINDER NUMBER	Identifying cylinder number: Min.: 0, Max.: 255	4	-
TRANSMISSION	Identifying transmission type	5AT or M/T	-
DESTINATION	Identifying destination	A (America)	-
MODEL YEAR	Identifying model year: Min.: 1,900, Max.: 2,155	2007	-

Intelligent Tester Display	Measurement Item: Range (Display)	Normal Condition*1	Diagnostic Note
SYSTEM	Identifying engine system	GASLIN (gasoline engine)	-

HINT:

- *1: If no idling conditions are specified, the transmission gear selector lever should be in the N or P position, and the A/C switch and all accessory switches should be OFF.
- *2: DATA LIST values are only displayed when performing the following ACTIVE TEST: VVT B1. For other ACTIVE TESTs, the DATA LIST value will be 0.

2. ACTIVE TEST

HINT:

Performing an ACTIVE TEST enables components including the relays, VSV (Vacuum Switching Valve) and actuators, to be operated without removing any parts. The ACTIVE TEST can be performed with the intelligent tester. Performing the ACTIVE TEST as the first step in troubleshooting is one method to shorten diagnostic time.

DATA LIST can be displayed during ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST.
(e) Perform the ACTIVE TEST by referring to the table below.

ECM:

Intelligent Tester Displays	Test Details	Control Ranges	Diagnostic Notes
INJ VOL	Change injection volume	Between -12.5 and 24.8 %	• All injectors tested at same time • Perform test at less than 3,000 rpm • Injection volume can be changed in 0.1 % graduations within control range
A/F CONTROL	Change injection volume	Decrease by 12.5 % or increase by 24.8 %	• Perform test at less than 3,000 rpm • A/F CONTROL enables checking and graphing of A/F (Air-Fuel Ratio) sensor and Heated Oxygen (HO2) sensor voltage outputs • To conduct test, select following menu items: ACTIVE TEST / A/F CONTROL / USER DATA / AFS B1S1 and O2S B1S2; then press YES and ENTER followed by F4.
EVAP VSV (ALONE)	Activate purge VSV control	ON/OFF	-
FUEL PUMP / SPD	Activate fuel pump (C/OPN Relay)	ON/OFF	Test is possible when engine stopped
TC/TE1	Turn on and off TC and TE1 connection	ON/OFF	• ON: TC and TE1 connected • OFF: TC and TE1 disconnected
FC IDL PROHBT	Prohibit idling fuel cut control	ON/OFF	-
COOLING FAN	Control electric cooling fan	ON/OFF	-

Intelligent Tester Displays	Test Details	Control Ranges	Diagnostic Notes
ETCS OPEN SLOW	Throttle actuator	ON: Throttle valve opens slowly	Test is possible when following conditions met: • Engine stopped • Shift position in P • Fully depressing accelerator pedal (APP: 59° or more)
ETCS CLOSE SLOW	Throttle actuator	ON: Throttle valve closes slowly	
ETCS OPEN FAST	Throttle actuator	ON: Throttle valve opens fast	
ETCS CLOSE FAST	Throttle actuator	ON: Throttle valve closes fast	
VVT LINEAR B1	Control VVT (bank 1)	-128 to 127 % This value added to present OCV control duty 100 %: Maximum advance -100 %: Maximum retard	• Engine stall or rough idle when VVT actuator operated by 100 %. • Test is possible while vehicle stopped and engine idling
VVT CTRL B1	Control VVT (bank 1)	-128 to 127 %	Test is possible while vehicle stopped and engine idling
VACUUM PUMP	Leak detection pump	ON/OFF	-
VENT VALVE	Vent valve	ON/OFF	-
IAC DUTY RATIO	Active IMRV (Intake Manifold Runner Valve) motor	-100% to 100%	• When the duty ratio is -100% IMRV closes • When the duty ratio is 100% IMRV opens
FUEL CUT #1	Cylinder #1 injector fuel cut	ON/OFF	• Test is possible while vehicle stopped and engine idling • ON: All cylinder injector fuel cut and ignition stop
FUEL CUT #2	Cylinder #2 injector fuel cut	ON/OFF	
FUEL CUT #3	Cylinder #3 injector fuel cut	ON/OFF	
FUEL CUT #4	Cylinder #4 injector fuel cut	ON/OFF	
COMPRESS CHECK	All cylinder injector fuel cut and ignition stop	ON/OFF	*

ES

HINT:

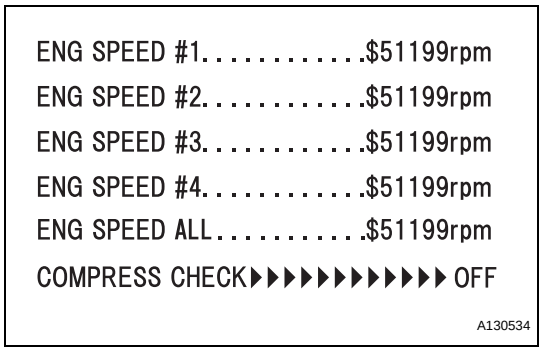
*: When cranking the engine, each cylinder measures the engine rpm.

In this ACTIVE TEST, the fuel and ignition of all cylinders is cut, and cranking occurs for approximately 10 seconds. Then, each cylinder measures the engine rpm. If a cylinder's engine rpm is higher than the others, that cylinder's compression pressure is compared to the others, and whether or not the compression pressure is low can be determined.

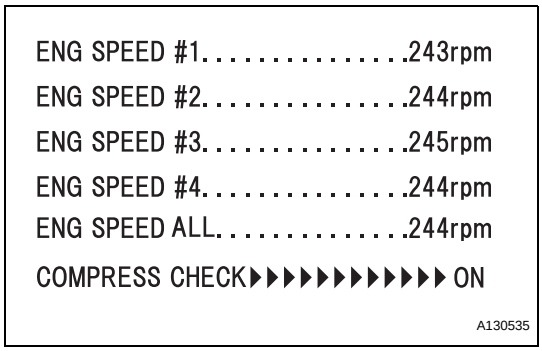
1. Warm up the engine.
2. Turn the ignition switch off.
3. Connect the intelligent tester to the DLC3.
4. Turn the ignition switch to the ON position and turn the intelligent tester on.
5. Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / COMPRESS CHECK.

   HINT:

   If the results are not displayed normally, select the display items from the DATA LIST before performing the ACTIVE TEST. Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / USER DATA / ENG SPEED #1 and ENG SPEED #2, ENG SPEED #3, ENG SPEED #4 (Press the YES button to change the ENG SPEED #1 to #4) and then press the ENTER button.



6. While the engine is not running, press the RIGHT or LEFT button to change the COMPRESS CHECK to ON.
   HINT:
   After performing the above procedure, the ACTIVE TEST's COMPRESS CHECK will start. Fuel injection for all cylinders is prohibited, and each cylinder's engine rpm measurement will enter standby mode.
7. Fully open the throttle.
8. Crank the engine for about 10 seconds.
9. Monitor the engine speed (ENG SPEED #1 to #4) displayed on the tester.
   HINT:
   At first, the tester's display will show each cylinder's engine rpm measurement to be extremely high. After approximately 10 seconds of engine cranking, each cylinder's engine rpm measurement will change to the actual engine rpm.



NOTICE:

- **After the ACTIVE TEST's COMPRESS CHECK is turned ON, it will automatically turn off after 255 seconds.**
- **When the COMPRESS CHECK test is OFF and the engine is cranked, the engine will start.**
- **If the COMPRESS CHECK test needs to be performed after it is turned ON and performed once, press EXIT to return to the ACTIVE TEST menu screen. Then perform the COMPRESS CHECK test again.**
- **Use a fully-charged battery.**

3. SYSTEM CHECK

HINT:
Performing a SYSTEM CHECK enables the system, which consists of multiple actuators, to be operated without removing any parts. In addition, it can show whether or not any DTCs are set, and can detect potential malfunctions in the system. The SYSTEM CHECK can be performed with the intelligent tester.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / SYSTEM CHECK.
(e) Perform the SYSTEM CHECK by referring to the table below.

ECM:

Intelligent Tester Display	Test Detail	Recommended Fuel Temperature	Diagnostic Note
EVAP SYS CHECK (AUTO OPERATION)	Perform 5 steps in order to operate EVAP key-off monitor automatically	35°C (95°F) or less	• If no DTCs in PENDING CODE after performing this test, system functioning normally • Refer to EVAP system
EVAP SYS CHECK (MANUAL OPERATION)	Perform 5 steps in order to operate EVAP key-off monitor manually	35°C (95°F) or less	• Used to detect malfunctioning parts • Refer to EVAP system

DIAGNOSTIC TROUBLE CODE CHART

HINT:
Parameters listed in the chart may be different than your readings depending on the type of instrument and other factors.
If any DTCs are displayed during a check mode DTC check, check the circuit for the DTCs listed in the table below. For details of each DTC, refer to the page indicated.

SFI SYSTEM:

DTC No.	Detection Item	Trouble Area	MIL	Memory	See page
P0010	Camshaft Position "A" Actuator Circuit (Bank 1)	1. Open or short in Oil Control Valve (OCV) circuit 2. OCV 3. ECM	Comes on	DTC stored	ES-65
P0011	Camshaft Position "A" - Timing Over-Advanced or System Performance (Bank 1)	1. Valve timing 2. OCV 3. OCV filter 4. Camshaft timing gear assembly 5. ECM	Comes on	DTC stored	ES-69
P0012	Camshaft Position "A" - Timing Over-Retarded (Bank 1)	Same as DTC P0011	Comes on	DTC stored	ES-69
P0016	Crankshaft Position - Camshaft Position Correlation (Bank 1 Sensor A)	1. Mechanical system (Timing chain has jumped tooth or chain stretched) 2. ECM	Comes on	DTC stored	ES-75
P0031	Oxygen (A/F) Sensor Heater Control Circuit Low (Bank 1 Sensor 1)	1. Open in Air-Fuel Ratio (A/F) sensor heater circuit 2. A/F sensor heater (sensor 1) 3. Engine room J/B (EFI relay) 4. ECM	Comes on	DTC stored	ES-77
P0032	Oxygen (A/F) Sensor Heater Control Circuit High (Bank 1 Sensor 1)	1. Short in A/F sensor heater circuit 2. A/F sensor heater (sensor 1) 3. Engine room J/B (EFI relay) 4. ECM	Comes on	DTC stored	ES-77

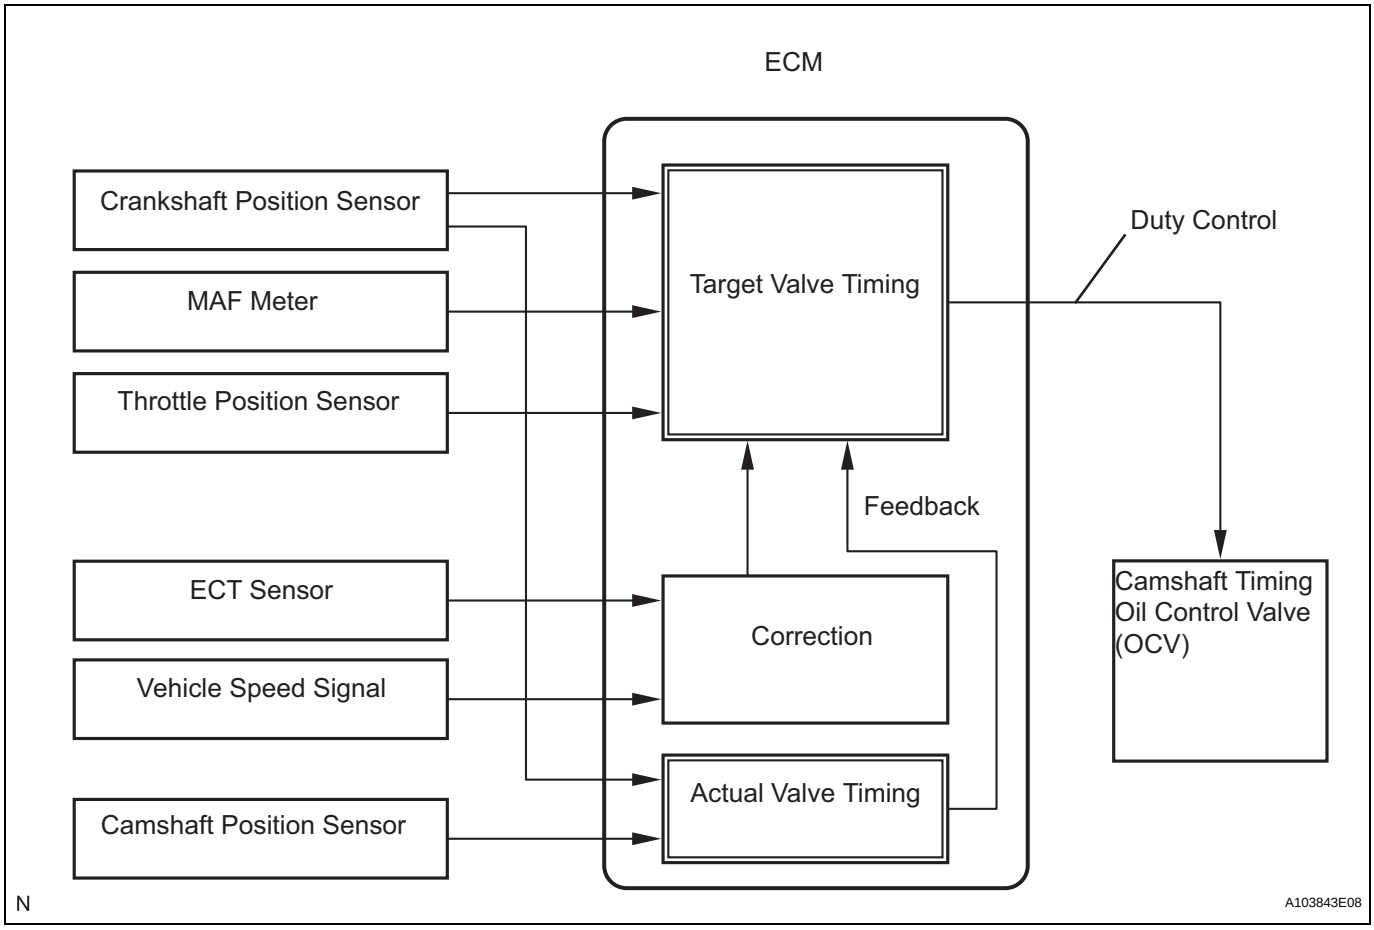
DTC	P0010	Camshaft Position "A" Actuator Circuit (Bank 1)

DESCRIPTION

The Variable Valve Timing (VVT) system includes the ECM, OCV and VVT controller. The ECM sends a target duty-cycle control signal to the OCV. This control signal regulates the oil pressure applied to the VVT controller. Camshaft timing control is performed according to engine operating conditions such as the intake air volume, throttle valve position and engine coolant temperature. The ECM controls the OCV, based on the signals transmitted by several sensors. The VVT controller regulates the intake camshaft angle using oil pressure through the OCV. As a result, the relative positions of the camshaft and crankshaft are optimized, the engine torque and fuel economy improve, and the exhaust emissions decrease under overall driving conditions. The ECM detects the actual intake valve timing using signals from the camshaft and crankshaft position sensors, and performs feedback control. This is how the target intake valve timing is verified by the ECM.

ES



DTC No.	DTC Detection Condition	Trouble Area
P0010	Open or short in OCV circuit (1 trip detection logic)	• Open or short in OCV circuit • OCV • ECM

HINT:
This DTC relates to the Oil Control Valve (OCV).

MONITOR DESCRIPTION

The ECM optimizes the valve timing using the VVT system to control the intake camshaft. The VVT system includes the ECM, the OCV and the VVT controller. The ECM sends a target duty-cycle control signal to the OCV. This control signal regulates the oil pressure supplied to the VVT controller. The VVT controller can advance or retard the intake camshaft.
After the ECM sends the target duty-cycle control signal to the OCV, the ECM monitors the OCV current to establish an actual duty-cycle. The ECM determines the existence of a malfunction and sets the DTC when the actual duty-cycle ratio varies from the target duty-cycle ratio.

MONITOR STRATEGY

Related DTCs	P0010: VVT OCV range check
Required Sensors/Components (Main)	VVT OCV
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	1 second
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None
All of the following conditions are met	-
Starter	OFF
Ignition switch	ON
Time after ignition switch OFF to ON position	0.5 seconds or more

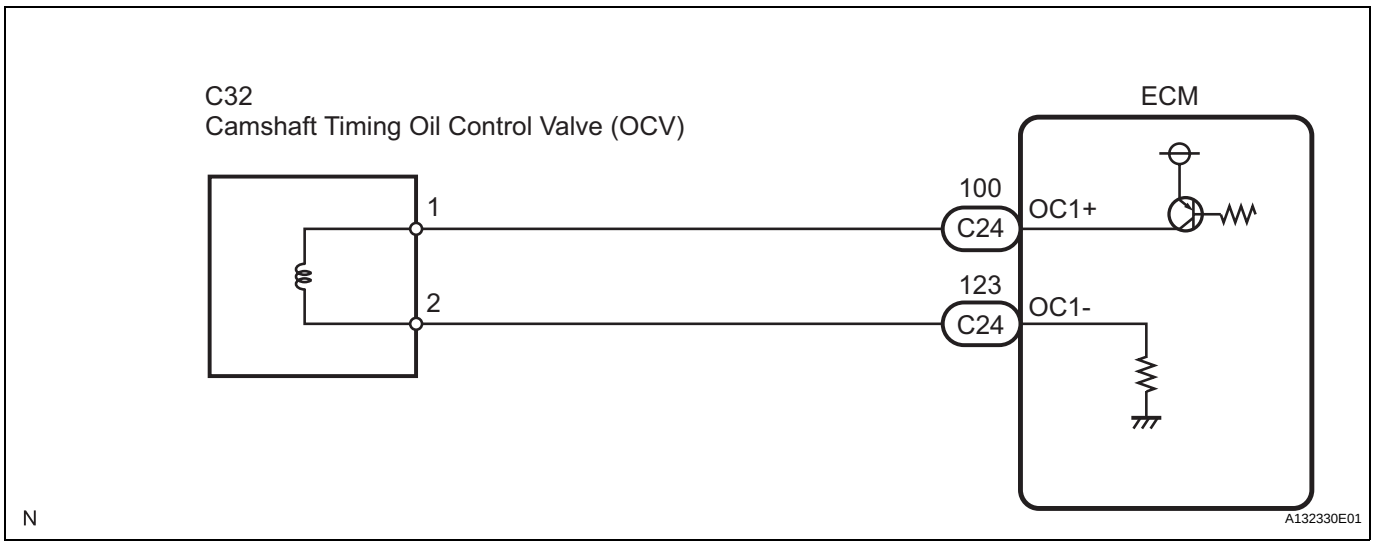
TYPICAL MALFUNCTION THRESHOLDS

One of the following conditions is met	-
A. All of the following conditions are met	-
Battery voltage	11 to 13 V
Target duty ratio	Less than 70 %
Output signal duty ratio	100 %
B. All of the following conditions are met	-
Battery voltage	13 V or more
Target duty ratio	Less than 80 %
Output signal duty ratio	100 %
C. Both of the following conditions is met	-
Current cut status	Not cut
Output signal duty ratio	3 % or less

COMPONENT OPERATING RANGE

VVT OCV duty ratio	3 to 100 %

WIRING DIAGRAM



ES

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (OPERATE OCV)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the tester ON.
(c) Warm up the engine.
(d) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / VVT CTRL B1.
(e) Check the engine speed while operating the Oil Control Valve (OCV) using the tester.

OK

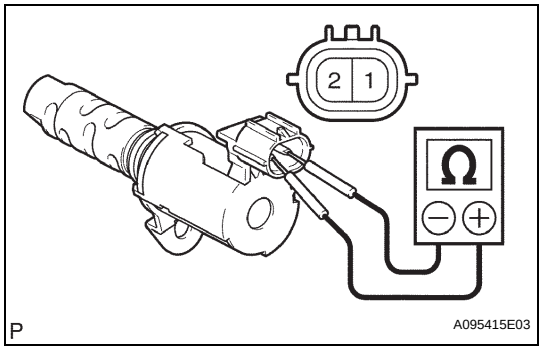
Tester Operation	Specified Condition
OCV OFF	Normal engine speed
OCV ON	Engine idles roughly or stalls (soon after OCV switched from OFF to ON)

NG → **Go to step 2**

OK

CHECK FOR INTERMITTENT PROBLEMS

2 INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

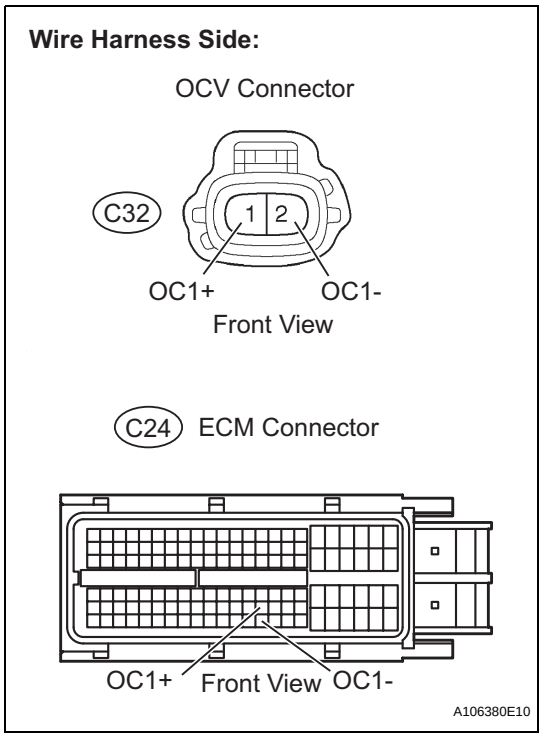


(a) Disconnect the C32 OCV connector.
(b) Measure the resistance between the terminals of the OCV.
Standard resistance:
6.9 to 7.9 Ω at 20°C (68°F)
(c) Reconnect the OCV connector.

NG → **REPLACE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY**

OK

3 CHECK HARNESS AND CONNECTOR (OCV - ECM)



(a) Disconnect the C32 OCV connector.
(b) Disconnect the C24 ECM connector.
(c) Measure the resistance between the terminals of the wire harness side connectors.
Standard resistance (Check for open)

Tester Connection	Specified Condition
C32-1 (OC1+) - C24-100 (OC1+)	Below 1 Ω
C32-2 (OC1-) - C24-123 (OC1-)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
C32-1 (OC1+) or C24-100 (OC1+) - Body ground	10 kΩ or higher
C32-2 (OC1-) or C24-123 (OC1-) - Body ground	10 kΩ or higher

(d) Reconnect the OCV connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

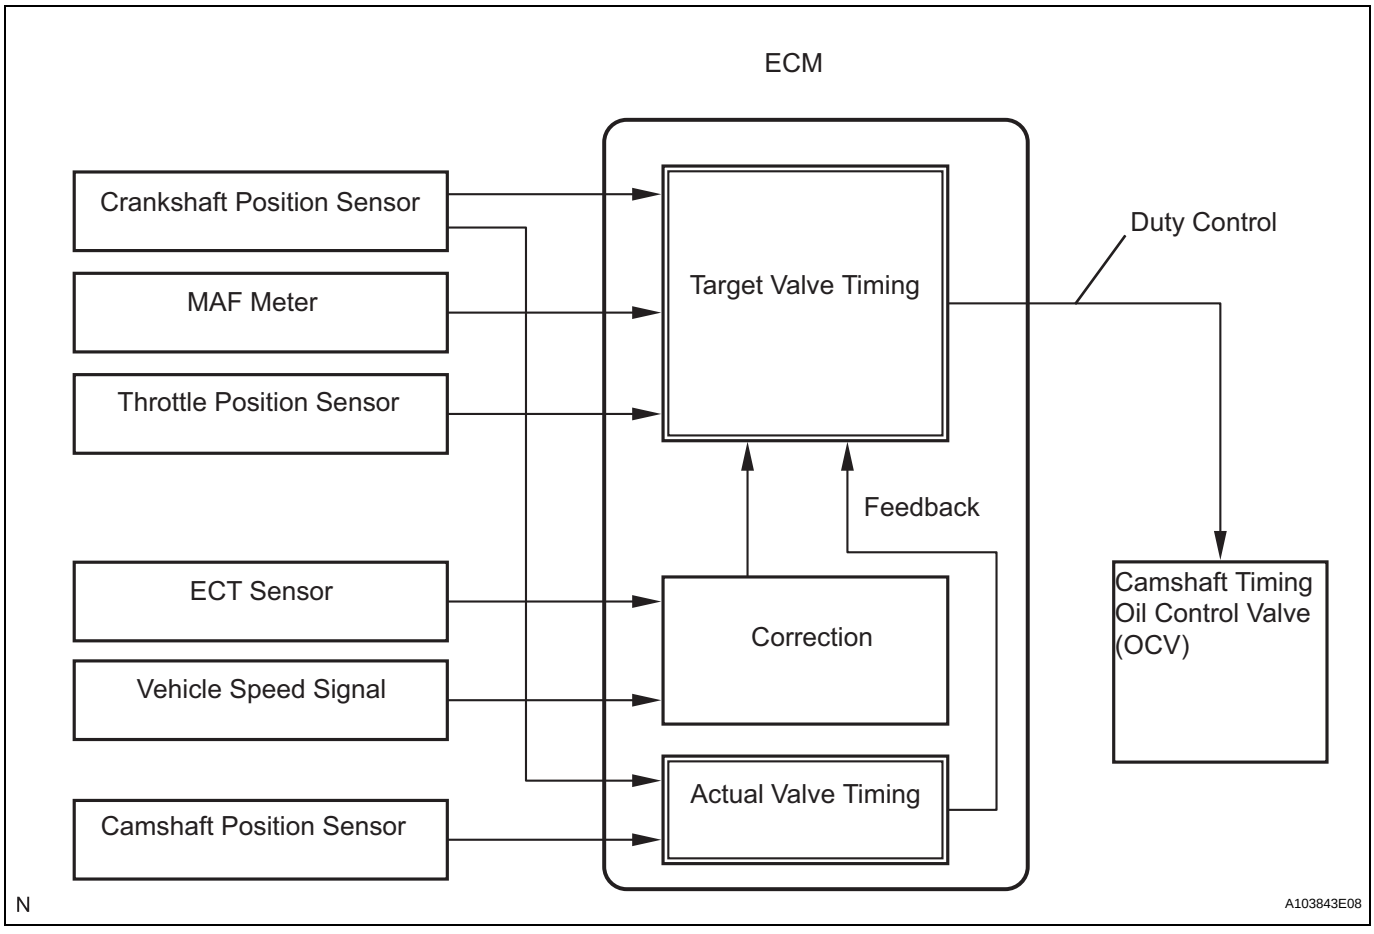
ES

DTC	P0011	Camshaft Position "A" - Timing Over-Advanced or System Performance (Bank 1)

DTC	P0012	Camshaft Position "A" - Timing Over-Retarded (Bank 1)

DESCRIPTION

The VVT system includes the ECM, Oil Control Valve (OCV) and VVT controller. The ECM sends a target duty-cycle control signal to the OCV. This control signal regulates the oil pressure applied to the VVT controller. Camshaft timing control is performed according to engine operating conditions such as the intake air volume, throttle valve position and engine coolant temperature. The ECM controls the OCV, based on the signals transmitted by several sensors. The VVT controller regulates the intake camshaft angle using oil pressure through the OCV. As a result, the relative positions of the camshaft and crankshaft are optimized, the engine torque and fuel economy improve, and the exhaust emissions decrease under overall driving conditions. The ECM detects the actual intake valve timing using signals from the camshaft and crankshaft position sensors, and performs feedback control. This is how the target intake valve timing is verified by the ECM.



DTC No.	DTC Detection Conditions	Trouble Areas
P0011	Advanced camshaft timing: With warm engine and engine speed of between 550 rpm and 4,000 rpm, all conditions (1), (2) and (3) are met (1 trip detection logic): 1. Difference between target and actual intake valve timings more than 5°CA (Crankshaft Angle) for 4.5 seconds 2. Current intake valve timing fixed (timing changes less than 5°CA in 5 seconds) 3. Variations in VVT controller timing more than 19°CA of maximum delayed timing (malfunction in advance timing)	• Valve timing • OCV • OCV filter • Camshaft timing gear assembly • ECM
P0012	Retarded camshaft timing: With warm engine and engine speed of between 550 rpm and 4,000 rpm, all conditions (1), (2) and (3) are met (2 trip detection logic): 1. Difference between target and actual intake valve timings more than 5°CA (Crankshaft Angle) for 4.5 seconds 2. Current intake valve timing fixed (timing changes less than 5°CA in 5 seconds) 3. Variations in VVT controller timing 19°CA or less of maximum delayed timing (malfunction in retarded timing)	• Valve timing • OCV • OCV filter • Camshaft timing gear assembly • ECM

ES

MONITOR DESCRIPTION

The ECM optimizes the intake valve timing using the VVT (Variable Valve Timing) system to control the intake camshaft. The VVT system includes the ECM, the Oil Control Valve (OCV) and the VVT controller. The ECM sends a target duty-cycle control signal to the OCV. This control signal regulates the oil pressure supplied to the VVT controller. The VVT controller can advance or retard the intake camshaft. If the difference between the target and actual intake valve timings is large, and changes in the actual intake valve timing are small, the ECM interprets this as the VVT controller stuck malfunction and sets a DTC.

Example:

A DTC is set when the following conditions 1, 2 and 3 are met:

(a) The difference between the target and actual intake valve timings is more than 5°CA (Crankshaft Angle) and the condition continues for more than 4.5 seconds.

(b) It takes 5 seconds or more to change the valve timing by 5°CA.

(c) After above conditions 1 and 2 are met, the OCV is forcibly activated during 10 seconds.

DTC P0011 (Advanced Cam Timing) is subject to 1 trip detection logic.

DTC P0012 (Retarded Cam Timing) is subject to 2 trip detection logic.

These DTCs indicate that the VVT controller cannot operate properly due to OCV malfunctions or the presence of foreign objects in the OCV.

The monitor will run if all of the following conditions are met:

– The engine is warm (the engine coolant temperature is 75°C (167°F) or more).
– The vehicle has been driven at more than 40 mph (64 km/h) for 3 minutes.
– The engine has idled for 3 minutes.

MONITOR STRATEGY

Related DTCs	P0011: Advanced camshaft timing P0012: Retarded camshaft timing
Required Sensors/Components (Main)	VVT OCV and VVT Actuator
Required Sensors/Components (Related)	Crankshaft position sensor, camshaft position sensor and engine coolant temperature sensor
Frequency of Operation	Once per driving cycle
Duration	Within 10 seconds

MIL Operation	Advanced camshaft timing: Immediate Retarded camshaft timing: 2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	P0100 - P0103 (MAF meter) P0115 - P0118 (ECT sensor) P0125 (Insufficient ECT for closed loop) P0335 (CKP sensor) P0340 (CMP sensor) P0351 - P0354 (Igniter)
Battery voltage	11 V or more
Engine RPM	550 to 4,000 rpm
ECT	75°C (167°F) to 100°C (212°F)

ES

TYPICAL MALFUNCTION THRESHOLDS

Advanced camshaft timing:

All of the following conditions are met	-
Crank angle between reference position and actual intake camshaft angle	67°CA or more
Valve timing	No change at advanced valve timing

Retard camshaft timing:

All of the following conditions are met	-
Crank angle between reference point and actual intake camshaft angle	Less than 67°CA
Valve timing	No change at retarded valve timing

If the difference between the target and actual camshaft timings is greater than the specified value, the ECM operates the VVT actuator.
Then, the ECM monitors the camshaft timing change for 5 seconds.

WIRING DIAGRAM

Refer to DTC P0010 (See page ES-67).

INSPECTION PROCEDURE

NOTICE:
DTC P0011 or P0012 may be set when foreign objects in the engine oil are caught in some parts of the system. The DTC will remain set even if the system returns to normal after a short time. Foreign objects are filtered out by the oil filter.
HINT:

- If DTC P0011 or P0012 is present, check the VVT (Variable Valve Timing) system.
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0011 OR P0012)**

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and turn the tester on.

(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P0011 or P0012	A
P0011 or P0012 and other DTCs	B

HINT:
If any DTCs other than P0011 or P0012 are output, troubleshoot those DTCs first.

B → GO TO DTC CHART

A

2 PERFORM ACTIVE TEST USING INTELLIGENT TESTER (OPERATE OCV)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the tester on.
(c) Warm up the engine.
(d) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / VVT CTRL B1.
(e) Check the engine speed while operating the Oil Control Valve (OCV) using the tester.

OK

Tester Operation	Specified Condition
OCV OFF	Normal engine speed
OCV ON	Engine idles roughly or stalls (soon after OCV switched from OFF to ON)

NG → Go to step 4

OK

3 CHECK WHETHER DTC OUTPUT RECURS (DTC P0011 OR P0012)

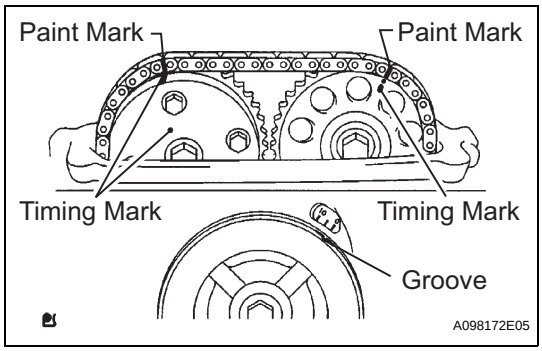
(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and turn the tester on.
(c) Clear the DTCs (See page ES-38).
(d) Start the engine and warm it up.
(e) Switch the ECM from normal mode to check mode using the tester.
(f) Drive the vehicle for more than 10 minutes.
(g) Read the DTCs using the tester.
OK:
No DTC output.

NG → Go to step 4

OK

END

4 CHECK VALVE TIMING (CHECK FOR LOOSE AND JUMPED TEETH ON TIMING CHAIN)

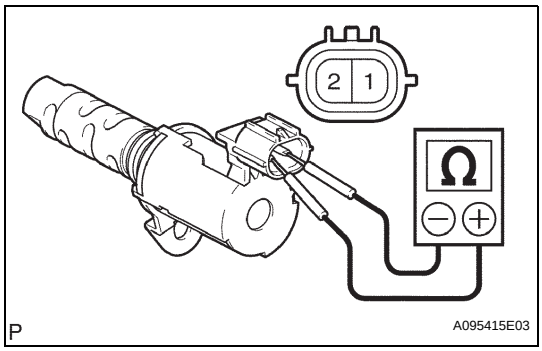


(a) Remove the cylinder head cover.
(b) Turn the crankshaft pulley, and align its groove with the timing mark "0" on the timing chain cover.
(c) Check that the timing marks on the camshaft timing sprocket and camshaft timing gear are facing upward as shown in the illustration.
If not, turn the crankshaft 1 revolution (360°), then align the marks as above.
OK:
Timing marks on camshaft timing gears are aligned as shown in the illustration.
(d) Reinstall the cylinder head cover.

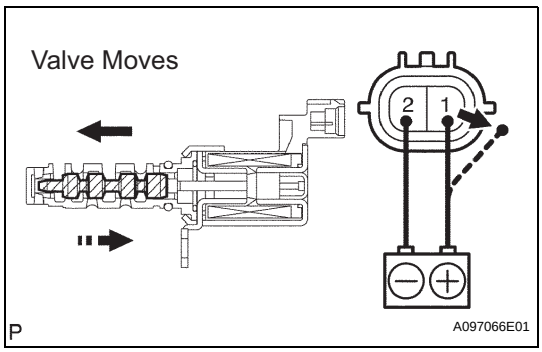
NG → **ADJUST VALVE TIMING**

OK

5 INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (OCV)



(a) Remove the OCV.
(b) Measure the resistance between the terminals of the OCV.
Standard resistance:
6.9 to 7.9 Ω at 20°C (68°F)

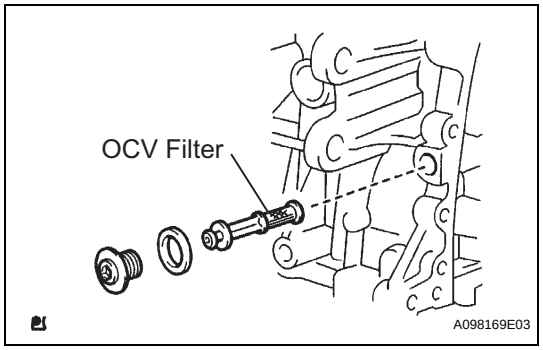


(c) Apply positive battery voltage to terminal 1 and negative battery voltage to terminal 2. Check the valve operation.
OK:
Valve moves quickly.
(d) Reinstall the OCV.

NG → **REPLACE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY**

OK

6	INSPECT OIL CONTROL VALVE FILTER



(a) Remove the generator.
(b) Remove the OCV filter.
(c) Check that the filter is not clogged.
OK:
Filter is not clogged.
(d) Reinstall the OCV filter.
(e) Reinstall the generator.

NG → **CLEAN OIL CONTROL VALVE FILTER**

ES

OK

7	REPLACE CAMSHAFT TIMING GEAR ASSEMBLY

NEXT

8	CHECK WHETHER DTC OUTPUT RECURS

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and turn the tester on.
(c) Clear the DTCs (See page ES-38).
(d) Start the engine and warm it up.
(e) Switch the ECM from normal mode to check mode using the tester.
(f) Drive the vehicle for more than 10 minutes.
(g) Read the output DTCs using the tester.
Standard:
No DTC output.
HINT:
DTC P0011 or P0012 is output when foreign objects in engine oil are caught in some parts of the system. These codes will stay output for a short time even after the system returns to normal. These foreign objects are then captured by the oil filter, thus eliminating the source of the problem.

NG → **REPLACE ECM**

OK

SYSTEM OK

DTC	P0016	Crankshaft Position - Camshaft Position Correlation (Bank 1 Sensor A)

DESCRIPTION

In the VVT (Variable Valve Timing) system, the appropriate intake valve open and close timing is controlled by the ECM. The ECM performs intake valve control by performing the following: 1) controlling the camshaft and camshaft timing oil control valve, and operating the camshaft timing gear; and 2) changing the relative positions of the gaps between the camshaft and crankshaft.

DTC No.	DTC Detection Condition	Trouble Area
P0016	Deviation between crankshaft and camshaft position sensor signals (2 trip detection logic)	• Mechanical system (Timing chain has jumped tooth or chain stretched) • ECM

ES

MONITOR DESCRIPTION

The ECM optimizes the valve timing by using the VVT (Variable Valve Timing) system to control the intake camshaft. The VVT system includes the ECM, the Oil Control Valve (OCV) and the VVT controller.
The ECM sends a target duty-cycle control signal to the OCV. This control signal regulates the oil pressure supplied to the VVT controller. The VVT controller can advance or retard the intake camshaft.
The ECM calibrates the intake valve timing by setting the intake camshaft to the most retarded angle while the engine is idling. The ECM closes the OCV to retard the cam. The ECM stores this value as the VVT learning value. When the difference between the target and actual intake valve timings is 5°CA (Crankshaft Angle) or less, the ECM stores it.
If the VVT learning value matches the following conditions, the ECM determines the existence of a malfunction in the VVT system, and sets the DTC.

- VVT learning value: Less than 27.8°CA, or more than 48°CA.
- Above condition continues for 18 seconds or more.

This DTC indicates that the angle between the intake camshaft and the crankshaft is incorrect due to factors such as the timing chain having a jumped tooth.
This monitor begins to run after the engine has idled for 5 minutes.

MONITOR STRATEGY

Related DTCs	P0016: Camshaft timing misalignment at idling
Required Sensors/Components	VVT actuator
Required Sensors/Components	Camshaft position sensor, Crankshaft position sensor
Frequency of Operation	Once per driving cycle
Duration	Within 1 minute
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	P0011 (VVT system 1 - advance) P0012 (VVT system 1 - retarded) P0115 - P0118 (ECT sensor)
Engine RPM	550 to 1,000 rpm

TYPICAL MALFUNCTION THRESHOLDS

One of the following conditions is met	-
VVT learning value at maximum retarded valve timing	Less than 27.8°CA
VVT learning value at maximum retarded valve timing	More than 48°CA

WIRING DIAGRAM

Refer to DTC P0335 (See page ES-177).

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	**CHECK VALVE TIMING (CHECK FOR LOOSE AND JUMPED TOOTH OF TIMING CHAIN) (See page ES-78)**

NG → **Go to step 3**

OK

2	**REPLACE ECM**

NEXT → **Go to step 4**

3	**ADJUST VALVE TIMING**

NEXT

4	**CHECK WHETHER DTC OUTPUT RECURS**

NOTICE:

After replacing the ECM or adjusting intake valve timing, confirm that the DTC output does not recur.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Clear the DTCs (See page ES-38).
(e) Switch the ECM from normal mode to check mode using the tester (See page ES-41).
(f) Start the engine and warm it up.
(g) Allow the engine to idle for 1 minute or more, and then drive the vehicle for 1 minute or more.
(h) Confirm that no DTC is set using the tester.

OK:

No DTC output

NEXT

END

DTC	P0031	Oxygen (A/F) Sensor Heater Control Circuit Low (Bank 1 Sensor 1)

DTC	P0032	Oxygen (A/F) Sensor Heater Control Circuit High (Bank 1 Sensor 1)

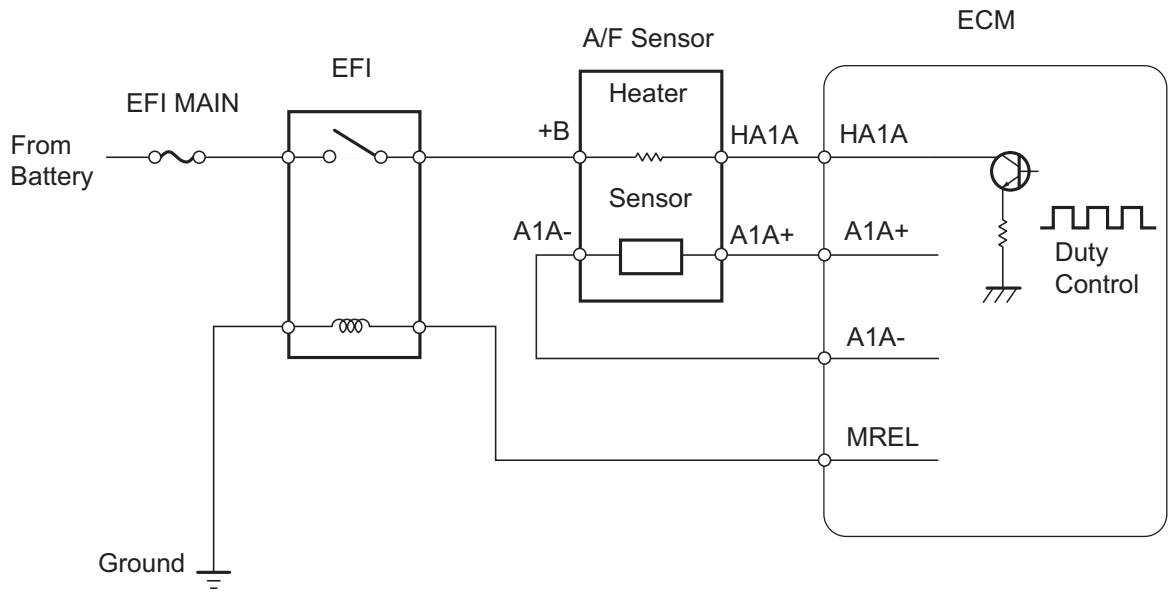
HINT:
- Although the DTC titles say oxygen sensor, these DTCs relate to the Air-Fuel Ratio (A/F) sensor.
- Sensor 1 refers to the sensor mounted in front of the Three-Way Catalytic Converter (TWC) and located near the engine assembly.

ES

DESCRIPTION

Refer to DTC P2195 (See page ES-308).
HINT:
- When either of these DTCs is set, the ECM enters fail-safe mode. The ECM turns off the A/F sensor heater in fail-safe mode. Fail-safe mode continues until the ignition switch is turned off.
- The ECM provides a pulse width modulated control circuit to adjust the current through the heater. The A/F sensor heater circuit uses a relay on the B+ side of the circuit.

Reference (System Diagram of Sensor 1):



A140695E01

DTC No.	DTC Detection Condition	Trouble Area
P0031	Air-Fuel Ratio (A/F) sensor heater current less than 0.8 A (1 trip detection logic)	• Open in A/F sensor heater circuit • A/F sensor heater (sensor 1) • Engine room J/B (EFI relay) • ECM
P0032	Air-Fuel Ratio (A/F) sensor heater current more than 10 A (1 trip detection logic)	• Short in A/F sensor heater circuit • A/F sensor heater (sensor 1) • Engine room J/B (EFI relay) • ECM

MONITOR DESCRIPTION

The ECM uses information from the Air-Fuel Ratio (A/F) sensor to regulate the air-fuel ratio and keep it close to the stoichiometric level. This maximizes the ability of the Three-Way Catalytic Converter (TWC) to purify the exhaust gases.

The A/F sensor detects oxygen levels in the exhaust gas and transmits the information to the ECM. The inner surface of the sensor element is exposed to the outside air. The outer surface of the sensor element is exposed to the exhaust gas. The sensor element is made of platinum coated zirconia and includes an integrated heating element.

The zirconia element generates a small voltage when there is a large difference in the oxygen concentrations between the exhaust gas and outside air. The platinum coating amplifies this voltage generation.

The A/F sensor is more efficient when heated. When the exhaust gas temperature is low, the sensor cannot generate useful voltage signals without supplementary heating. The ECM regulates the supplementary heating using a duty-cycle approach to adjust the average current in the sensor heater element. If the heater current is outside the normal range, the signal transmitted by the A/F sensor becomes inaccurate, as a result, the ECM is unable to regulate air-fuel ratio properly.

When the current in the A/F sensor heater is outside the normal operating range, the ECM interprets this as a malfunction in the sensor heater and sets a DTC.

Example:

The ECM sets DTC P0032 when the current in the A/F sensor heater is more than 10 A. Conversely, when the heater current is less than 0.8 A, DTC P0031 is set.

MONITOR STRATEGY

Related DTCs	P0031: A/F sensor heater open/short (Low electrical current) P0032: A/F sensor heater open/short (High electrical current)
Required Sensors/Components (Main)	A/F sensor heater
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	10 seconds
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

All:

Monitor runs whenever following DTCs are not present	None

P0031:

Battery voltage	10.5 V or more
A/F sensor heater duty-cycle ratio	50 % or more
Time after engine start	10 seconds or more

P0032:

Time after engine start	10 seconds or more

TYPICAL MALFUNCTION THRESHOLDS

P0031:

A/F sensor heater current	Less than 0.8 A

P0032:

A/F sensor heater current	More than 10 A

COMPONENT OPERATING RANGE

A/F sensor heater current	0.9 to 9.9 A

WIRING DIAGRAM

Refer to DTC P2195 (See page ES-312).

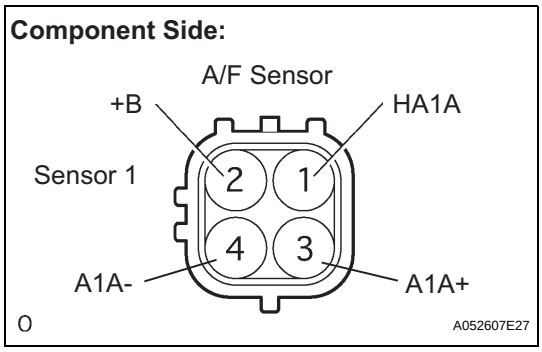
INSPECTION PROCEDURE

HINT:

Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

ES

1 INSPECT AIR-FUEL RATIO SENSOR (HEATER RESISTANCE)



(a) Disconnect the C15 A/F sensor connector.

(b) Measure the resistance between the terminals of the A/F sensor connector.

Standard resistance

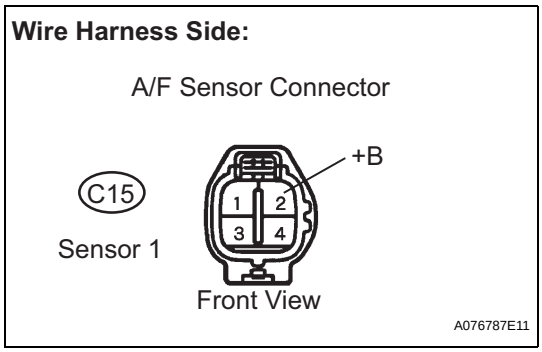
Tester Connection	Specified Condition
1 (HA1A) - 2 (+B)	1.8 Ω to 3.4 Ω at 20°C (68°F)
1 (HA1A) - 4 (A1A-)	10 kΩ or higher

(c) Reconnect the A/F sensor connector.

NG → REPLACE AIR-FUEL RATIO SENSOR

OK

2 CHECK TERMINAL VOLTAGE (+B OF A/F SENSOR)



(a) Disconnect the C15 A/F sensor connector.

(b) Turn the ignition switch to the ON position.

(c) Measure the voltage between the terminal of the A/F sensor connector and body ground.

Standard voltage

Tester Connection	Specified Condition
C15-2 (+B) - Body ground	9 to 14 V

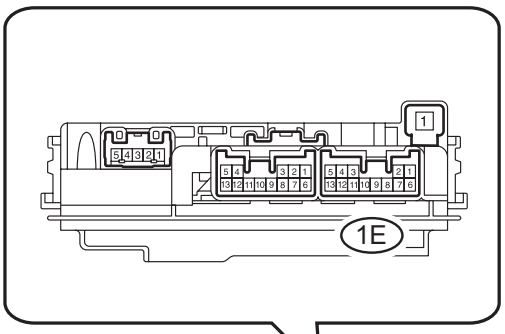
(d) Reconnect the A/F sensor connector.

OK → Go to step 5

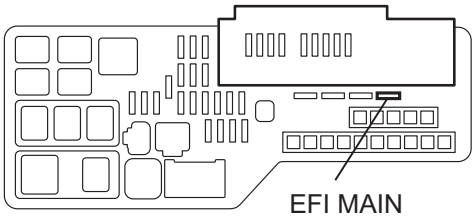
NG

3	INSPECT ENGINE ROOM J/B (EFI RELAY)

Engine Room J/B:



Engine Room R/B:



A138917E01

(a) Inspect the EFI MAIN fuse.
  (1) Remove the EFI MAIN fuse from the engine room R/B.
  (2) Measure the EFI MAIN fuse resistance.
    Standard resistance:
    Below 1 Ω
  (3) Reinstall the EFI MAIN fuse.

(b) Inspect the EFI relay.
  (1) Remove the engine room J/B from the engine room R/B.
  (2) Measure the EFI relay resistance.
    Standard resistance

Tester Connection	Specified Condition
1E-7 - 1E-12	10 kΩ or higher
	Below 1 Ω (Apply battery voltage between terminals 1E-9 and 1E-11)

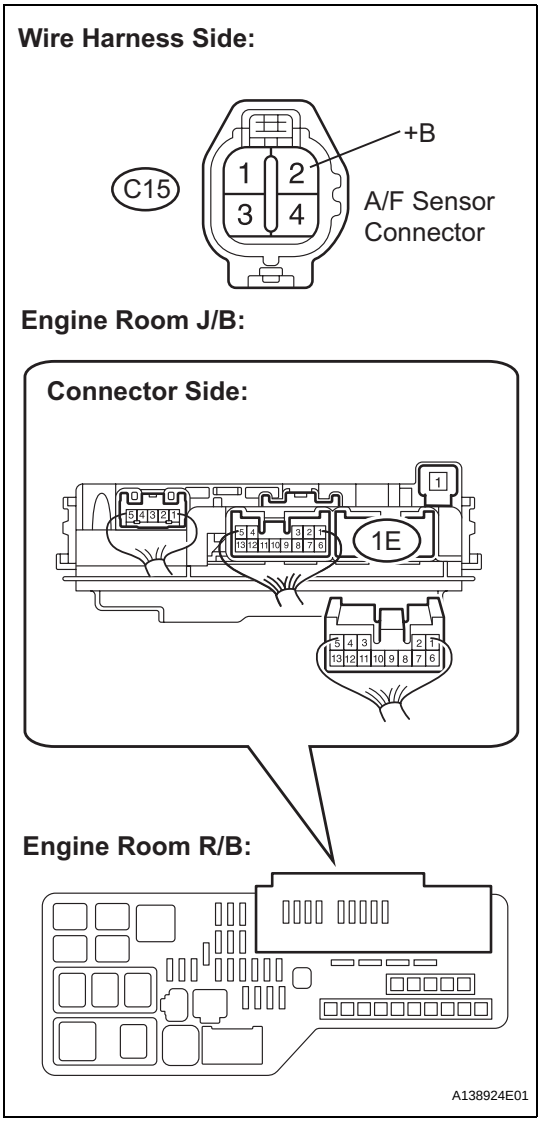
  (3) Reinstall the engine room J/B.

NG → **REPLACE ENGINE ROOM J/B**

OK

ES

4	CHECK HARNESS AND CONNECTOR (A/F SENSOR - EFI RELAY)



(a) Disconnect the C15 A/F sensor connector.
(b) Remove the engine room J/B from the engine room R/B.
(c) Disconnect the 1E engine room J/B connector.
(d) Measure the resistance between the terminals.

Standard resistance (Check for open)

Tester Connection	Specified Condition
C15-2 (+B) - 1E-7 (Engine room J/B)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
C15-2 (+B) or 1E-7 (Engine room J/B) - Body ground	10 kΩ or higher

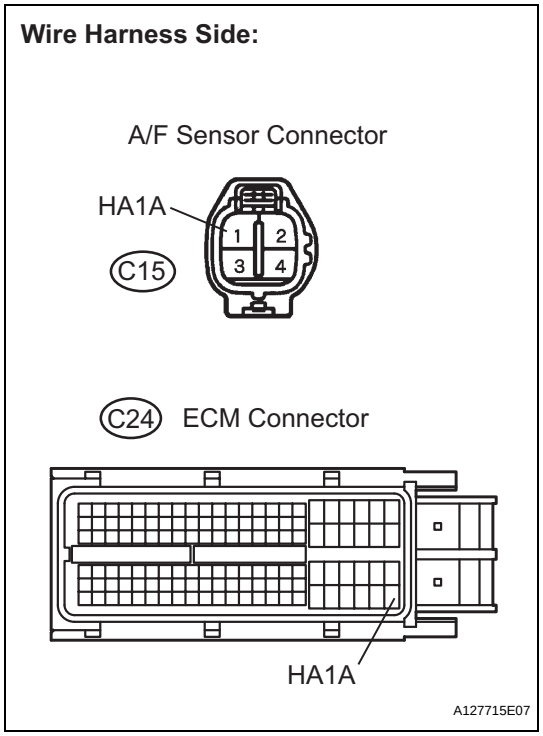
(e) Reconnect the A/F sensor connector.
(f) Reconnect the engine room J/B connector.
(g) Reinstall the engine room J/B.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK ECM POWER SOURCE CIRCUIT

5 CHECK HARNESS AND CONNECTOR (A/F SENSOR - ECM)



(a) Disconnect the C15 A/F sensor connector.
(b) Disconnect the C24 ECM connector.
(c) Measure the resistance between the terminals of the wire harness side connectors.

Standard resistance (Check for open)

Tester Connection	Specified Condition
C15-1 (HA1A) - C24-109 (HA1A)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
C15-1 (HA1A) or C24-109 (HA1A) - Body ground	10 kΩ or higher

(d) Reconnect the A/F sensor connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6 CHECK WHETHER DTC OUTPUT RECURS

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Clear the DTCs (See page ES-38).
(e) Start the engine.
(f) Allow the engine to idle for 1 minute or more.
(g) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(h) Read the DTCs.

Result

Display (DTC Output)	Proceed to
No output	A
P0031 or P0032	B

B → **REPLACE ECM**

A

CHECK FOR INTERMITTENT PROBLEMS

DTC	P0037	Oxygen Sensor Heater Control Circuit Low (Bank 1 Sensor 2)

DTC	P0038	Oxygen Sensor Heater Control Circuit High (Bank 1 Sensor 2)

DTC	P0141	Oxygen Sensor Heater Circuit Malfunction (Bank 1 Sensor 2)

ES

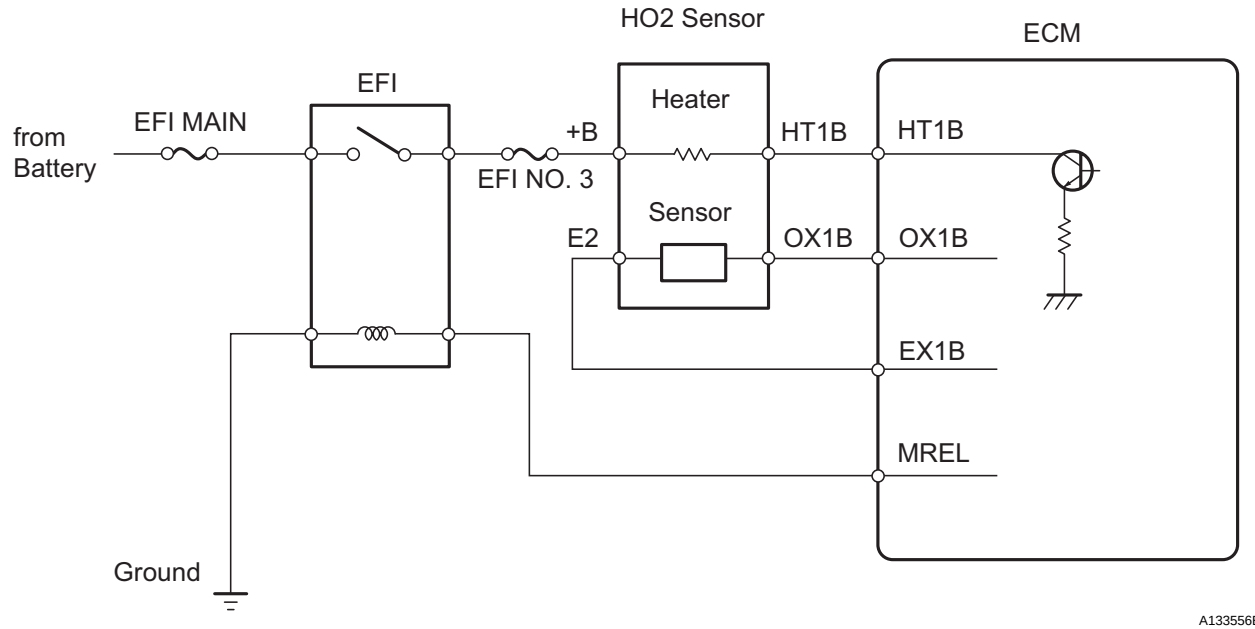
DESCRIPTION

Refer to DTC P0136 (See page ES-132).

HINT:

- When any of these DTCs are set, the ECM enters fail-safe mode. The ECM turns off the Heated Oxygen (HO2) Sensor heater in fail-safe mode. Fail-safe mode continues until the ignition switch is turned off.
- The ECM provides a pulse width modulated control circuit to adjust the current through the heater. The HO2 sensor heater circuit uses a relay on the B+ side of the circuit.

Reference (System Diagram of Sensor 2):



DTC No.	DTC Detection Condition	Trouble Area
P0037	Heated Oxygen (HO2) sensor heater current less than 0.3 A (1 trip detection logic)	• Open in HO2 sensor heater circuit • HO2 sensor heater (sensor 2) • Engine room J/B (EFI relay) • ECM
P0038	Heated Oxygen (HO2) sensor heater current more than 2 A (1 trip detection logic)	• Short in HO2 sensor heater circuit • HO2 sensor heater (sensor 2) • Engine room J/B (EFI relay) • ECM
P0141	Cumulative heater resistance correction value exceeds threshold (2 trip detection logic)	• Open or short in HO2 sensor heater circuit • HO2 sensor heater (sensor 2) • Engine room J/B (EFI relay) • ECM

MONITOR DESCRIPTION

The sensing position of the Heated Oxygen (HO2) sensor has a zirconia element which is used to detect the oxygen concentration in the exhaust gas. If the zirconia element is at the appropriate temperature, and the difference between the oxygen concentrations surrounding the inside and outside surfaces of the sensor is large, the zirconia element generates voltage signals. In order to increase the oxygen concentration detecting capacity of the zirconia element, the ECM supplements the heat from the exhaust with heat from a heating element inside the sensor.

Heated oxygen sensor heater range check (P0037 and P0038):

The ECM monitors the current applied to the O2 sensor heater to check the heater for malfunctions. If the current is below the threshold value, the ECM determines that there is an open circuit in the heater. If the current is above the threshold value, the ECM determines that there is a short circuit in the heater.

The ECM constantly monitors the current applied to the heater. If the ECM detects an open or short circuit, the ECM turns the MIL on and sets a DTC.

If a malfunction is detected, the ECM cuts off the current applied to the heater.

Example:

The ECM sets DTC P0038 when the current in the HO2 sensor heater is more than 2 A. Conversely, when the heater current is less than 0.3 A, DTC P0037 is set.

Heated oxygen sensor heater performance (P0141):

After the accumulated heater ON time exceeds 100 seconds, the ECM calculates the heater resistance using the battery voltage and the current applied to the heater.

If the resistance is above the threshold value, the ECM determines that there is a malfunction in the HO2 sensor heater and sets DTC P0141.

MONITOR STRATEGY

Related DTCs	P0037: Heated oxygen sensor heater range check (Low electrical current) P0038: Heated oxygen sensor heater range check (High electrical current) P0141: Heated oxygen sensor heater performance
Required Sensors/Components (Main)	Heated oxygen sensor heater
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous: P0037 and P0038 Once per driving cycle: P0141
Duration	1 second: P0037 and P0038 10 seconds: P0141
MIL Operation	Immediate: P0037 and P0038 2 driving cycles: P0141
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

All:

Monitor runs whenever following DTCs are not present	None

P0037:

Battery voltage	10.5 to 20 V

P0038 (Condition A):

Battery voltage	10.5 V or more
Engine	Running
Starter	OFF

P0038 (Condition B):

Battery voltage	10.5 to 20 V

P0141:

All of the following conditions are met:	-
Battery voltage	10.5 V or more
Fuel cut	OFF
Time after fuel cut ON to OFF	30 seconds or more
Accumulated heater ON time	100 seconds or more

TYPICAL MALFUNCTION THRESHOLDS

P0037:

Heater current	Less than 0.3 A

P0038:

One of the following conditions A or B is met	-
A. Learned heater OFF current	More than 2 A
B. Heater current	More than 2 A

P0141:

Accumulated heater resistance	Varies with sensor element temperature (Example: More than 23 Ω)

COMPONENT OPERATING RANGE

Heated Oxygen (HO2) sensor heater current	0.4 to 1 A (when engine idles, HO2 sensor warmed up and battery voltage 11 to 14 V)

WIRING DIAGRAM

Refer to DTC P0136 (See page ES-139).

CONFIRMATION DRIVING PATTERN

These DTCs are detected when the engine idles for 110 seconds or more.

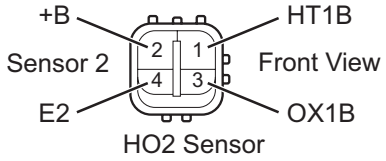
INSPECTION PROCEDURE

HINT:

- Sensor 2 refers to the sensor mounted behind the Three-Way Catalytic Converter (TWC) and located far from the engine assembly.
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	INSPECT HEATED OXYGEN SENSOR (HEATER RESISTANCE)

Component Side :



A115661E02

(a) Disconnect the C22 Heated Oxygen (HO2) sensor connector.

(b) Measure the resistance between the terminals of the HO2 sensor connector.

Standard resistance

Tester Connection	Specified Condition
1 (HT1B) - 2 (+B)	11 to 16 Ω at 20°C (68°F)
1 (HT1B) - 4 (E2)	10 kΩ or higher

(c) Reconnect the HO2 sensor connector.

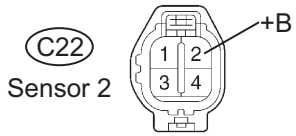
NG → REPLACE HEATED OXYGEN SENSOR

OK

2 CHECK TERMINAL VOLTAGE (+B OF HO2 SENSOR)

Wire Harness Side:

Heated Oxygen Sensor Connector



Front View

A072895E10

(a) Disconnect the C22 HO2 sensor connector.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage between the terminal of the C22 HO2 sensor connector and body ground.

Standard voltage

Tester Connection	Specified Condition
C22-2 (+B) - Body ground	9 to 14 V

(d) Reconnect the HO2 sensor connector.

OK → Go to step 5

NG

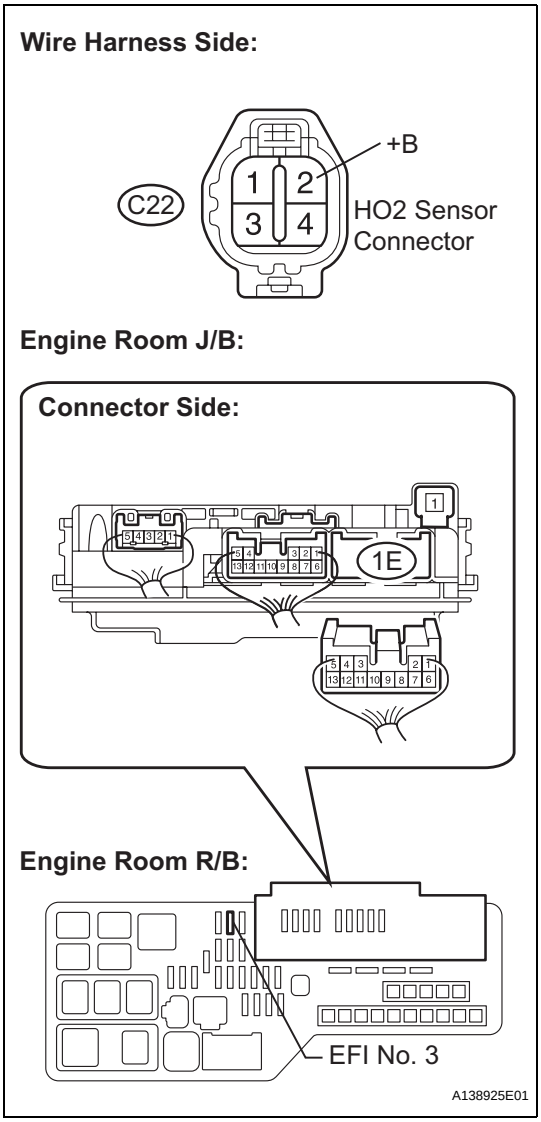
3 INSPECT ENGINE ROOM J/B (EFI RELAY) (See page ES-85)

NG → REPLACE ENGINE ROOM J/B

OK

ES

4	CHECK HARNESS AND CONNECTOR (HO2 SENSOR - EFI RELAY)



(a) Inspect the EFI No. 3 fuse.
  (1) Remove the EFI No. 3 fuse from the engine room R/B.
  (2) Measure the EFI No. 3 fuse resistance.
    Standard resistance:
    Below 1 Ω
  (3) Reinstall the EFI No. 3 fuse.
(b) Disconnect the C22 HO2 sensor connector.
(c) Remove the engine room J/B from the engine room R/B.
(d) Disconnect the 1E engine room J/B connector.
(e) Measure the resistance between the terminals.
  Standard resistance (Check for open)

Tester Connection	Specified Condition
C22-2 (+B) - 1E-6 (Engine room J/B)	Below 1 Ω

  Standard resistance (Check for short)

Tester Connection	Specified Condition
C22-2 (+B) or 1E-6 (Engine room J/B) - Body ground	10 kΩ or higher

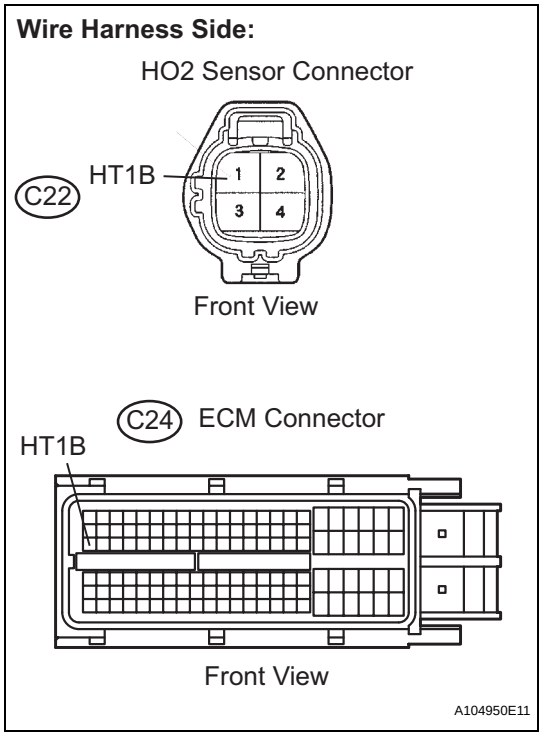
(f) Reconnect the HO2 sensor connector.
(g) Reconnect the engine room J/B connector.
(h) Reinstall the engine room J/B.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK ECM POWER SOURCE CIRCUIT

5 CHECK HARNESS AND CONNECTOR (HO2 SENSOR - ECM)



(a) Disconnect the C22 HO2 sensor connector.
(b) Disconnect the C24 ECM connector.
(c) Measure the resistance between the terminals of the wire harness side connectors.

Standard resistance (Check for open)

Tester Connection	Specified Condition
C22-1 (HT1B) - C24-47 (HT1B)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
C22-1 (HT1B) or C24-47 (HT1B) - Body ground	10 kΩ or higher

(d) Reconnect the HO2 sensor connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6 CHECK WHETHER DTC OUTPUT RECURS

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Clear the DTCs (See page ES-38).
(e) Start the engine.
(f) Allow the engine to idle for 2 minutes or more.
(g) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(h) Read the DTCs.

CHECK FOR INTERMITTENT PROBLEMS

DTC	P0100	Mass or Volume Air Flow Circuit

DTC	P0102	Mass or Volume Air Flow Circuit Low Input

DTC	P0103	Mass or Volume Air Flow Circuit High Input

DESCRIPTION

The Mass Air Flow (MAF) meter is a sensor that measures the amount of air flowing through the throttle valve.

The ECM uses this information to determine the fuel injection time and to provide the appropriate air-fuel ratio.

ES

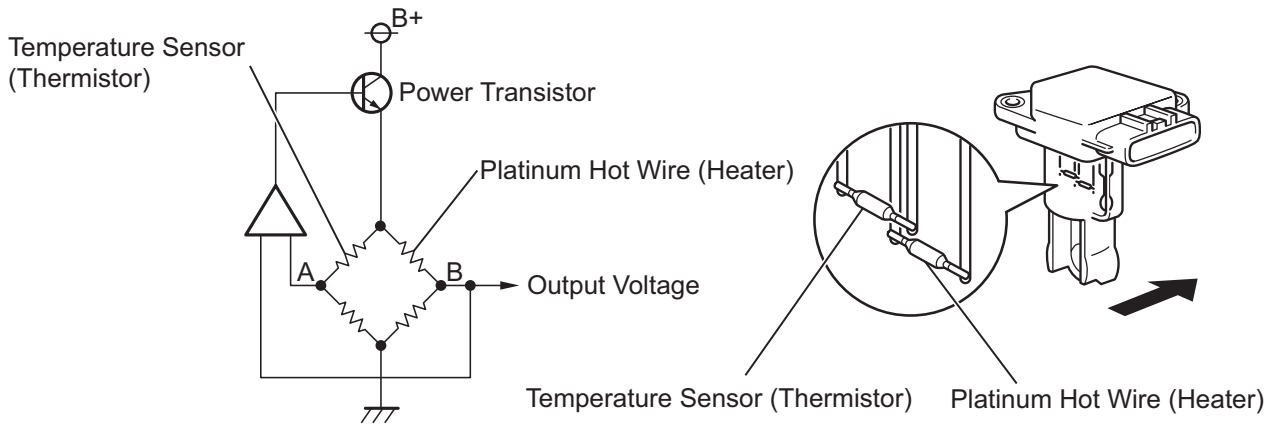
Inside the MAF meter, there is a heated platinum wire which is exposed to the flow of intake air.

By applying a specific electrical current to the wire, the ECM heats it to a given temperature. The flow of incoming air cools both the wire and an internal thermistor, affecting their resistance. To maintain a constant current value, the ECM varies the voltage applied to these components in the MAF meter. The voltage level is proportional to the airflow through the sensor, and the ECM uses it to calculate the intake air volume.

The circuit is constructed so that the platinum hot wire and the temperature sensor create a bridge circuit, and the power transistor is controlled so that the potentials of A and B remain equal to maintain the predetermined temperature.

HINT:

When any of these DTCs are set, the ECM enters fail-safe mode. During fail-safe mode, the ignition timing is calculated by the ECM, according to the engine RPM and throttle valve position. Fail-safe mode continues until a pass condition is detected.



DTC No.	DTC Detection Condition	Trouble Area
P0100	MAF meter voltage less than 0.2 V, or more than 4.9 V for 3 seconds (1 trip detection logic)	• Open or short in MAF meter circuit • MAF meter • ECM
P0102	MAF meter voltage less than 0.2 V for 3 seconds (1 trip detection logic)	• Open or short in MAF meter circuit • MAF meter • ECM
P0103	MAF meter voltage more than 4.9 V for 3 seconds (1 trip detection logic)	• Open or short in MAF meter circuit • MAF meter • ECM

HINT:
When any of these DTCs are set, check the air-flow rate by selecting the following menu items on the intelligent tester: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / MAF.

Mass Air Flow Rate (g/sec.)	Malfunctions
Approximately 0.0	• Open in Mass Air Flow (MAF) meter power source circuit • Open or short in VG circuit
271.0 or more	• Open in E2G circuit

MONITOR DESCRIPTION

If there is a defect in the MAF meter or an open or short circuit, the voltage level deviates from the normal operating range. The ECM interprets this deviation as a malfunction in the MAF meter and sets a DTC.
Example:
When the sensor output voltage remains less than 0.2 V, or more than 4.9 V, for more than 3 seconds, the ECM sets a DTC.
If the malfunction is not repaired successfully, a DTC is set 3 seconds after the engine is next started.

MONITOR STRATEGY

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	READ VALUE USING INTELLIGENT TESTER (MASS AIR FLOW RATE)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / MAF.
(e) Read the values displayed on the tester.

Result

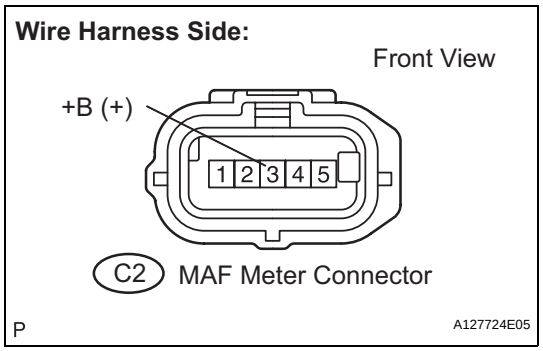
Mass Air Flow Rate (g/sec.)	Proceed to
0.0	A
271.0 or more	B
Between 1.0 and 270.0 (*1)	C

HINT:
*1: The value must change when the throttle valve is open or closed with the engine running.

B	Go to step 6
C	CHECK FOR INTERMITTENT PROBLEMS

A

2 INSPECT MASS AIR FLOW METER (POWER SOURCE VOLTAGE)



(a) Disconnect the C2 Mass Air Flow (MAF) meter connector.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage between the terminal of the wire harness side connector and body ground.
Standard voltage

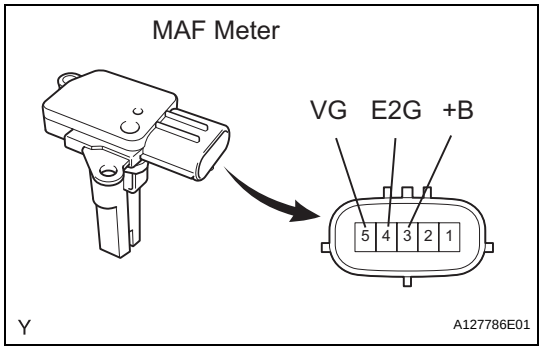
Tester Connection	Specified Condition
C2-3 (+B) - Body ground	9 to 14 V

(d) Reconnect the MAF meter connector.

NG → **Go to step 5**

OK

3 INSPECT MASS AIR FLOW METER (VG VOLTAGE)



(a) Inspect output voltage.
(1) Disconnect the C2 MAF meter connector.
(2) Apply battery voltage across terminals +B and E2G.
(3) Connect the positive (+) tester probe to terminal VG, and the negative (-) tester probe to terminal E2G.
(4) Measure the voltage.
Standard voltage

Tester Connection	Specified Condition
5 (VG) - 4 (E2G)	0.2 to 4.9 V

(5) Reconnect the MAF meter connector.

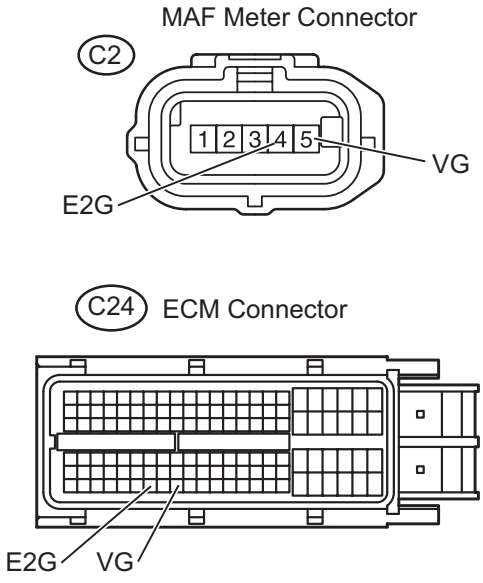
NG → **REPLACE MASS AIR FLOW METER**

OK

ES

4	CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER - ECM)

Wire Harness Side:



(a) Disconnect the C2 MAF meter connector.
(b) Disconnect the C24 ECM connector.
(c) Measure the resistance between the terminals of the wire harness side connectors.

Standard resistance (Check for open)

Tester Connection	Specified Condition
C2-5 (VG) - C24-118 (VG)	Below 1 Ω
C2-4 (E2G) - C24-116 (E2G)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
C2-5 (VG) or C24-118 (VG) - Body ground	10 kΩ or higher

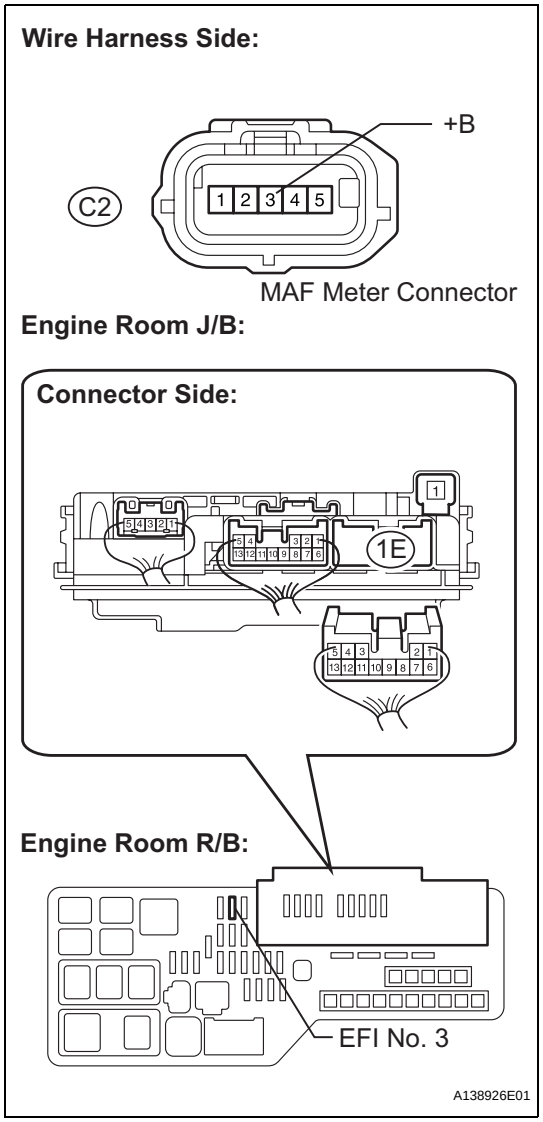
(d) Reconnect the MAF meter connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

5	CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER - ENGINE ROOM J/B)



(a) Inspect the EFI No. 3 fuse.
  (1) Remove the EFI No. 3 fuse from the engine room R/B.
  (2) Measure the EFI No. 3 fuse resistance.
    Standard resistance:
    Below 1 Ω
  (3) Reinstall the EFI No. 3 fuse.
(b) Disconnect the C2 MAF meter connector.
(c) Remove the engine room J/B from the engine room R/B.
(d) Disconnect the 1E engine room J/B connector.
(e) Measure the resistance between the terminals.

Standard resistance (Check for open)

Tester Connection	Specified Condition
C2-3 (+B) - 1E-6	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
C2-3 (+B) or 1E-6 - Body ground	10 kΩ or higher

(f) Reconnect the MAF meter connector.
(g) Reconnect the engine room J/B connector.
(h) Reinstall the engine room J/B.

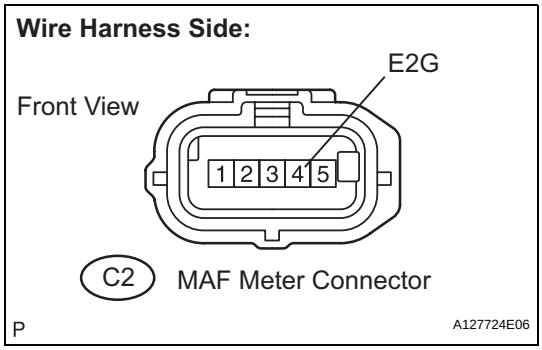
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK ECM POWER SOURCE CIRCUIT

ES

6	CHECK HARNESS AND CONNECTOR (SENSOR GROUND)



(a) Disconnect the C2 MAF meter connector.
(b) Measure the resistance.

Standard resistance

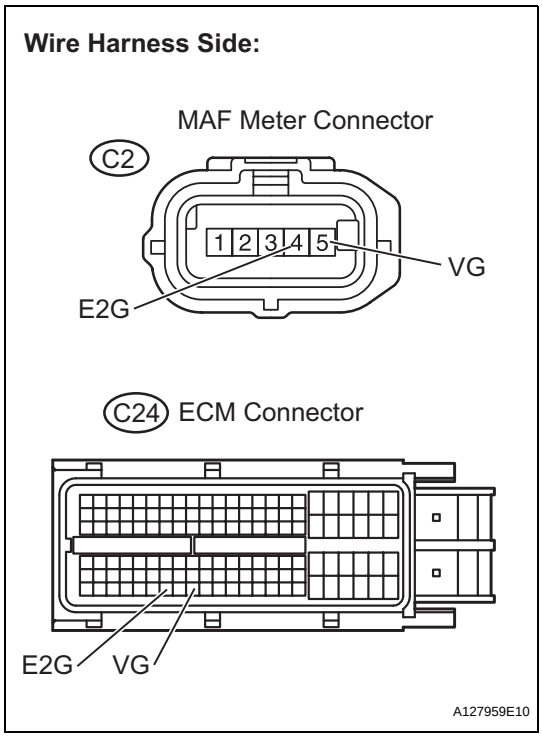
Tester Connection	Specified Condition
C2-4 (E2G) - Body ground	Below 1 Ω

(c) Reconnect the MAF meter connector.

OK → **REPLACE MASS AIR FLOW METER**

NG

7	CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER - ECM)



(a) Disconnect the C2 MAF meter connector.
(b) Disconnect the C24 ECM connector.
(c) Measure the resistance between the terminals of the wire harness side connectors.

Standard resistance (Check for open)

Tester Connection	Specified Condition
C2-5 (VG) - C24-118 (VG)	Below 1 Ω
C2-4 (E2G) - C24-116 (E2G)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
C2-5 (VG) or C24-118 (VG) - Body ground	10 kΩ or higher

(d) Reconnect the MAF meter connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

DTC	P0101	Mass Air Flow Circuit Range / Performance Problem

DESCRIPTION

Refer to DTC P0100 (See page ES-89).

DTC No.	DTC Detection Condition	Trouble Area
P0101	Conditions (a), (b), (c), (d) and (e) continue for more than 10 seconds (2 trip detection logic): (a) Engine running (b) Engine coolant temperature 70°C (158°F) or higher (c) Throttle Position (TP) sensor voltage 0.24 V or more (d) Average engine load value ratio less than 0.85, or more than 1.15 (varies with estimated engine load) Average engine load value ratio = Average engine load based on MAF meter output / Average engine load estimated from driving conditions (e) Average air-fuel ratio less than -20 %, or more than 20 %	• Mass Air Flow (MAF) meter • Air induction system • PCV hose connections

ES

MONITOR DESCRIPTION

The MAF meter is a sensor that measures the amount of air flowing through the throttle valve. The ECM uses this information to determine the fuel injection time and to provide an appropriate air-fuel ratio. Inside the MAF meter, there is a heated platinum wire which is exposed to the flow of intake air. By applying a specific electrical current to the wire, the ECM heats it to a specific temperature. The flow of incoming air cools both the wire and an internal thermistor, affecting their resistance. To maintain a constant current value, the ECM varies the voltage applied to these components of the MAF meter. The voltage level is proportional to the airflow through the sensor, and the ECM uses it to calculate the intake air volume.
The ECM monitors the average engine load value ratio to check the MAF meter for malfunctions. The average engine load value ratio is obtained by comparing the average engine load calculated from the MAF meter output to the average engine load estimated from the driving conditions, such as the engine speed and the throttle opening angle. If the average engine load value ratio is below the threshold value, the ECM determines that the intake air volume is low, and if the average engine load value ratio is above the threshold value, the ECM determines that the intake air volume is high.
If this is detected in 2 consecutive driving cycles, the MIL is illuminated and a DTC is set.

MONITOR STRATEGY

Related DTCs	P0101: Mass air flow meter rationality
Required Sensors/Components (Main)	Mass air flow meter

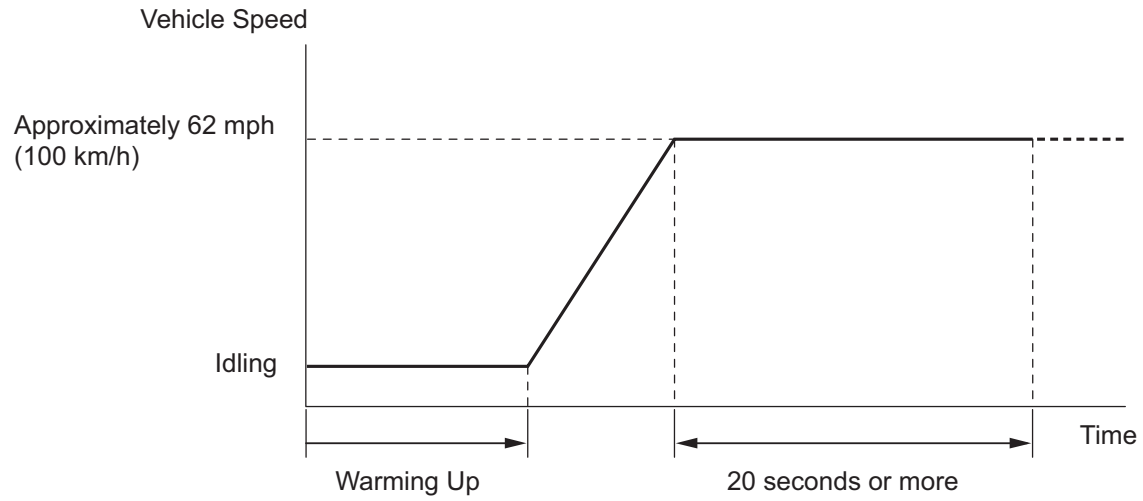
Refer to DTC P0100 (See page ES-91).

CONFIRMATION DRIVING PATTERN

HINT:

Performing this confirmation pattern will activate the mass air flow performance monitor.



1. Connect the intelligent tester to the DLC3.
2. Turn the ignition switch to the ON position.
3. Turn the tester on.
4. Clear the DTCs (See page ES-38).
5. Start the engine, and warm it up until the engine coolant temperature reaches 70°C (158°F) or higher.
6. Drive the vehicle at approximately 62 mph (100 km/h) for 20 seconds or more.
7. On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES and check if any DTCs (any pending DTCs) are set.

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1 CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0101)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P0101	A
P0101 and other DTCs	B

HINT:
If any DTCs other than P0101 are output, troubleshoot those DTCs first.

B → **GO TO DTC CHART**

A

2 CHECK AIR INDUCTION SYSTEM

(a) Check the air induction system for vacuum leakage.
OK:
No leakage from air induction system.

NG → **REPAIR OR REPLACE AIR INDUCTION SYSTEM**

OK

3 CHECK PCV HOSE CONNECTIONS

OK:
PCV hose is connected correctly and is not damaged.

NG → **REPAIR OR REPLACE PCV HOSE**

REPLACE MASS AIR FLOW METER

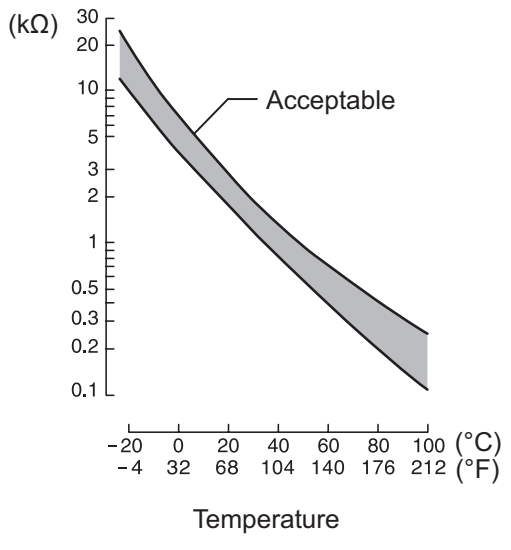
DTC	P0110	Intake Air Temperature Circuit Malfunction

DTC	P0112	Intake Air Temperature Circuit Low Input

DTC	P0113	Intake Air Temperature Circuit High Input

DESCRIPTION

Fig. 1



The Intake Air Temperature (IAT) sensor, mounted on the Mass Air Flow (MAF) meter, monitors the IAT. The IAT sensor has a built-in thermistor with a resistance that varies according to the temperature of the intake air. When the IAT becomes low, the resistance of the thermistor increases. When the temperature becomes high, the resistance drops. These variations in resistance are transmitted to the ECM as voltage changes (see Fig. 1).

The IAT sensor is powered by a 5 V supply from the THA terminal of the ECM, via resistor R.

Resistor R and the IAT sensor are connected in series. When the resistance value of the IAT sensor changes, according to changes in the IAT, the voltage at terminal THA also varies. Based on this signal, the ECM increases the fuel injection volume when the engine is cold to improve driveability.

HINT:

When any of DTCs P0110, P0112 and P0113 are set, the ECM enters fail-safe mode. During fail-safe mode, the IAT is estimated to be 20°C (68°F) by the ECM. Fail-safe mode continues until a pass condition is detected.

DTC No.	DTC Detection Condition	Trouble Area
P0110	Open or short in IAT sensor circuit for 0.5 seconds (1 trip detection logic)	• Open or short in IAT sensor circuit • IAT sensor (built into MAF meter) • ECM
P0112	Short in IAT sensor circuit for 0.5 seconds (1 trip detection logic)	• Short in IAT sensor circuit • IAT sensor (built into MAF meter) • ECM
P0113	Open in IAT sensor circuit for 0.5 seconds (1 trip detection logic)	• Open in IAT sensor circuit • IAT sensor (built into MAF meter) • ECM

HINT:
When any of these DTCs are set, check the IAT by selecting the following menu items on the intelligent tester: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / INTAKE AIR.

Temperature Displayed	Malfunctions
-40°C (-40°F)	Open circuit
140°C (284°F) or higher	Short circuit

MONITOR DESCRIPTION

The ECM monitors the sensor voltage and uses this value to calculate the IAT. When the sensor output voltage deviates from the normal operating range, the ECM interprets this as a malfunction in the IAT sensor and sets a DTC.
Example:
If the sensor output voltage is more than 4.91 V for 0.5 seconds or more, the ECM determines that there is an open in the IAT sensor circuit, and sets DTC P0113. Conversely, if the output voltage is less than 0.18 V for 0.5 seconds or more, the ECM determines that there is a short in the sensor circuit, and sets DTC P0112.
If the malfunction is not repaired successfully, a DTC is set 0.5 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P0110: IAT sensor range check (Fluctuating) P0112: IAT sensor range check (Low voltage) P0113: IAT sensor range check (High voltage)

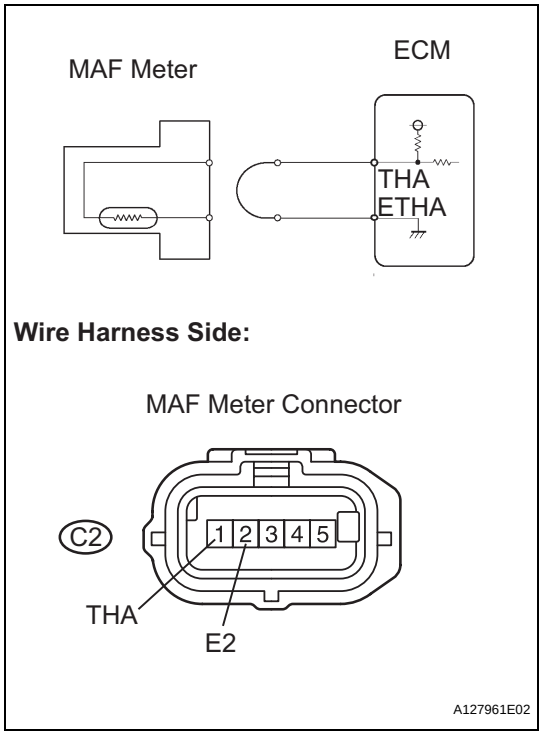
3 READ VALUE USING INTELLIGENT TESTER (CHECK FOR OPEN IN WIRE HARNESS)



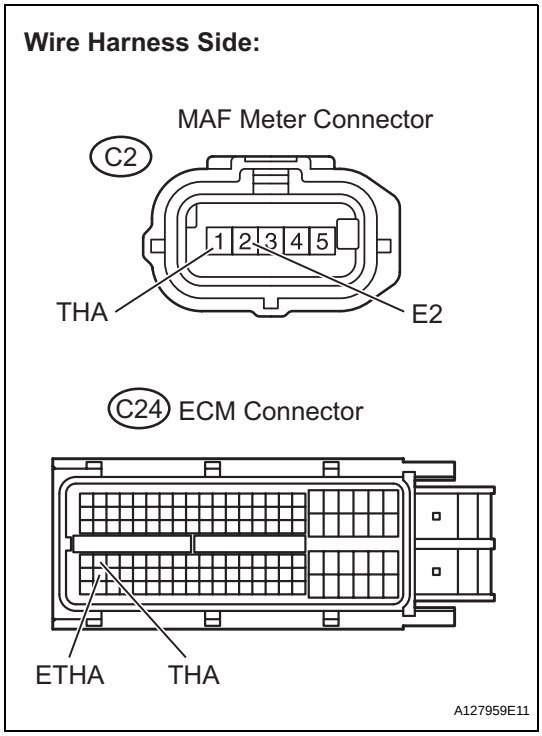
(a) Disconnect the C2 Mass Air Flow (MAF) meter connector.
(b) Connect terminals THA and E2 of the MAF meter wire harness side connector.
(c) Connect the intelligent tester to the DLC3.
(d) Turn the ignition switch to the ON position.
(e) Turn the tester on.
(f) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / INTAKE AIR.
(g) Read the value displayed on the tester.
Standard value:
140°C (284°F) or higher
(h) Reconnect the MAF meter connector.

NG → **Go to step 4**

OK

CONFIRM GOOD CONNECTION TO SENSOR. IF OK, REPLACE MASS AIR FLOW METER

4	CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER - ECM)



(a) Disconnect the C2 MAF meter connector.
(b) Disconnect the C24 ECM connector.
(c) Measure the resistance between the terminals of the wire harness side connector.
Standard resistance

Tester Connection	Specified Condition
C2-1 (THA) - C24-65 (THA)	Below 1 Ω
C2-2 (E2) - C24-88 (ETHA)	Below 1 Ω

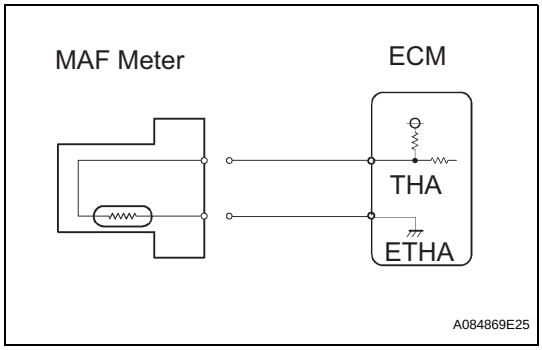
(d) Reconnect the MAF meter connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CONFIRM GOOD CONNECTION TO ECM. IF OK, REPLACE ECM

5	READ VALUE USING INTELLIGENT TESTER (CHECK FOR SHORT IN WIRE HARNESS)



(a) Disconnect the C2 MAF meter connector.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the ON position.
(d) Turn the tester on.
(e) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / INTAKE AIR.
(f) Read the value displayed on the tester.
Standard value:
-40°C (-40°F)
(g) Reconnect the MAF meter connector.

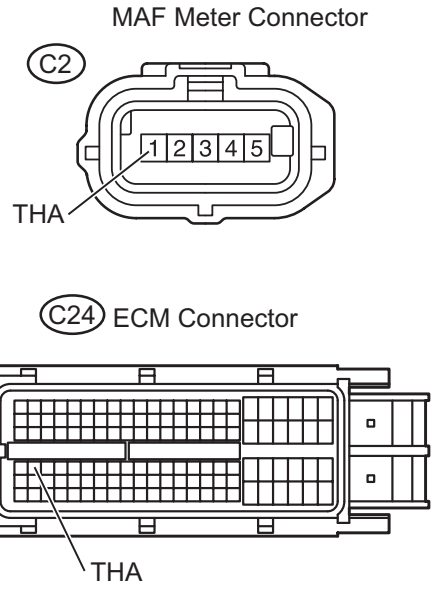
NG → **Go to step 6**

OK

REPLACE MASS AIR FLOW METER

6	CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER - ECM)

Wire Harness Side:



(a) Disconnect the C2 MAF meter connector.
(b) Disconnect the C24 ECM connector.
(c) Measure the resistance between the terminals of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
C2-1 (THA) or C24-65 (THA) - Body ground	10 kΩ or higher

(d) Reconnect the MAF meter connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

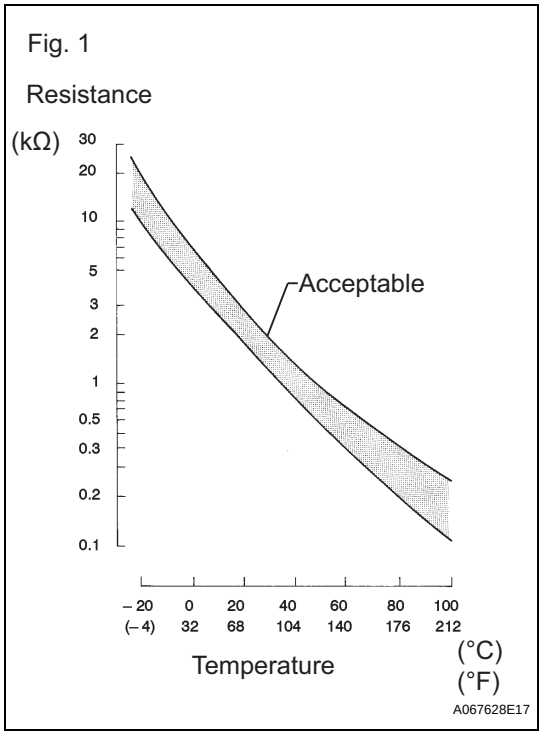
OK

REPLACE ECM

ES

DTC	P0111	Intake Air Temperature Sensor Gradient Too High

DESCRIPTION



The Intake Air Temperature (IAT) sensor, mounted on the Mass Air Flow (MAF) meter, monitors the IAT. The IAT sensor has a built-in thermistor with a resistance that varies according to the temperature of the intake air. When the IAT becomes low, the resistance of the thermistor increases. When the temperature becomes high, the resistance drops. These variations in resistance are transmitted to the ECM as voltage changes (See Fig. 1).
The IAT sensor is powered by a 5 V supply from the THA terminal of the ECM, via resistor R.
Resistor R and the IAT sensor are connected in series. When the resistance value of the IAT sensor changes, according to changes in the IAT, the voltage at terminal THA also varies. Based on this signal, the ECM increases the fuel injection volume when the engine is cold to improve driveability.

DTC No.	DTC Detection Condition	Trouble Area
P0111	When either condition below is met: 1. The intake air temperature rise is large, from the previous trip warm-up to the following trip. (2 trip detection logic). 2. When the change in the intake air temperature after engine start is less than the threshold value.	Mass air flow meter assembly

MONITOR DESCRIPTION

The ECM performs OBD II monitoring based on the values from the intake air temperature sensor. If there is no change of the sensor value within the normal range, the ECM will not be able to perform OBD II monitoring or will misdiagnose that there is a malfunction in the sensor. The ECM detects the stuck intake air temperature sensor value by performing monitoring after the ignition switch is turned off or the engine is started (short soak or long soak).

MONITOR STRATEGY

Related DTCs	P0111: Intake air temperature sensor rationality (After engine stop) P0111: Intake air temperature sensor rationality (After cold engine start)

A

GO TO DTC CHART

DTC	P0115	Engine Coolant Temperature Circuit Malfunction

DTC	P0117	Engine Coolant Temperature Circuit Low Input

DTC	P0118	Engine Coolant Temperature Circuit High Input

DESCRIPTION

A thermistor, whose resistance value varies according to the ECT, is built into the Engine Coolant Temperature (ECT) sensor.

The structure of the sensor and its connection to the ECM are the same as those of the Intake Air Temperature (IAT) sensor.

HINT:

When any of DTCs P0115, P0117 and P0118 are set, the ECM enters fail-safe mode. During fail-safe mode, the ECT is estimated to be 80°C (176°F) by the ECM. Fail-safe mode continues until a pass condition is detected.

DTC No.	DTC Detection Condition	Trouble Area
P0115	Open or short in ECT sensor circuit for 0.5 seconds (1 trip detection logic)	• Open or short in ECT sensor circuit • ECT sensor • ECM
P0117	Short in ECT sensor circuit for 0.5 seconds (1 trip detection logic)	• Short in ECT sensor circuit • ECT sensor • ECM
P0118	Open in ECT sensor circuit for 0.5 seconds (1 trip detection logic)	• Open in ECT sensor circuit • ECT sensor • ECM

HINT:

When any of these DTCs are set, check the ECT by selecting the following menu items on the intelligent tester: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / COOLANT TEMP.

Temperature Displayed	Malfunctions
-40°C (-40°F)	Open circuit
140°C (284°F) or higher	Short circuit

MONITOR DESCRIPTION

The Engine Coolant Temperature (ECT) sensor is used to monitor the ECT. The ECT sensor has a thermistor with a resistance that varies according to the temperature of the engine coolant. When the coolant temperature becomes low, the resistance in the thermistor increases. When the temperature becomes high, the resistance drops. These variations in resistance are reflected in the output voltage from the sensor. The ECM monitors the sensor voltage and uses this value to calculate the ECT. When the sensor output voltage deviates from the normal operating range, the ECM interprets this as a fault in the ECT sensor and sets a DTC.

Example:

If the sensor output voltage is more than 4.91 V for 0.5 seconds or more, the ECM determines that there is an open in the ECT sensor circuit, and sets DTC P0118. Conversely, if the voltage output is less than 0.14 V for 0.5 seconds or more, the ECM determines that there is a short in the sensor circuit, and sets DTC P0117.

If the malfunction is not repaired successfully, a DTC is set 0.5 seconds after the engine is next started.

MONITOR STRATEGY

Monitor runs whenever following DTCs are not present	None

TYPICAL MALFUNCTION THRESHOLDS

P0115:

ECT sensor voltage	Less than 0.14 V, or more than 4.91 V

P0117:

ECT sensor voltage [ECT]	Less than 0.14 V [More than 140°C (284°F)]

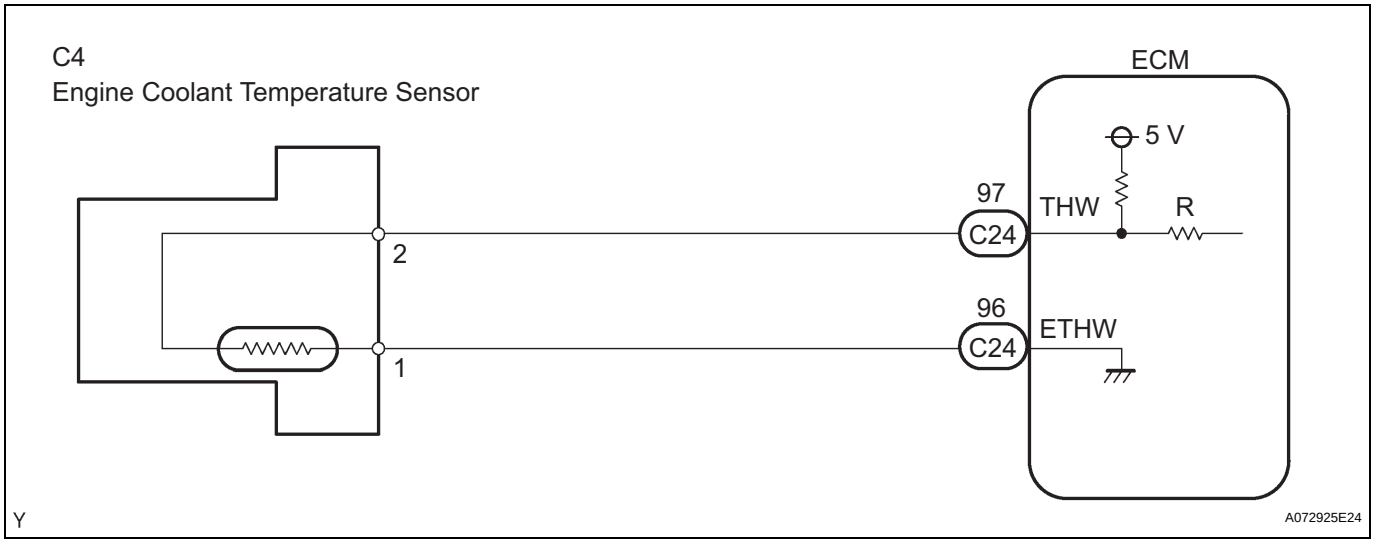
P0118:

ECT sensor voltage [ECT]	More than 4.91 V [Less than -40°C (-40°F)]

COMPONENT OPERATING RANGE

ECT sensor voltage [ECT]	0.14 to 4.91 V [-40°C to 140°C (-40°F to 284°F)]

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1 READ OUTPUT DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and turn the intelligent tester on.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P0115	A
P0117	B
P0118	C

B → **Go to step 5**

C → **Go to step 3**

A

2 READ VALUE USING INTELLIGENT TESTER (ENGINE COOLANT TEMPERATURE)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / COOLANT TEMP.
(e) Read the value displayed on the tester.

Standard value:
Between 80°C and 100°C (176°F and 212°F) with warm engine.

Result

Temperature Displayed	Proceed to
-40°C (-40°F)	A
140°C (284°F) or higher	B
Between 80°C and 100°C (176°F and 212°F)	C

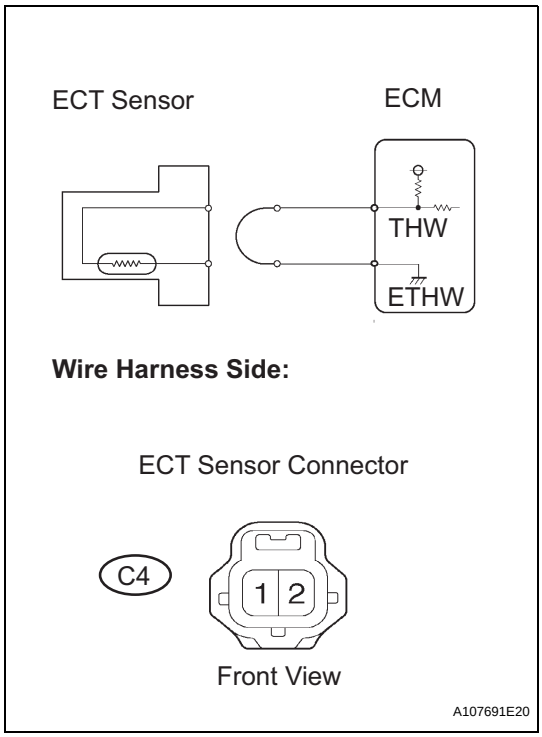
HINT:
- If there is an open circuit, the intelligent tester indicates -40°C (-40°F).
- If there is a short circuit, the intelligent tester indicates 140°C (284°F) or higher.

B → **Go to step 5**

C → CHECK FOR INTERMITTENT PROBLEMS

A

3 READ VALUE USING INTELLIGENT TESTER (CHECK FOR OPEN IN WIRE HARNESS)



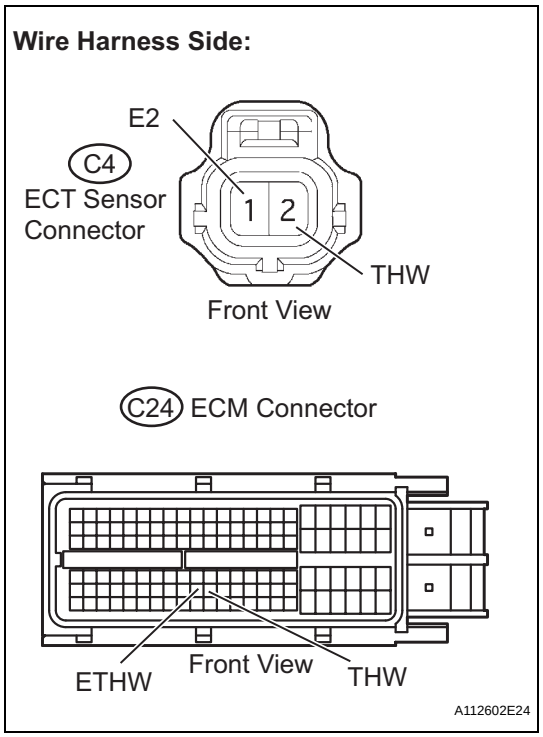
(a) Disconnect the C4 Engine Coolant Temperature (ECT) sensor connector.
(b) Connect terminals 1 and 2 of the ECT sensor connector on the wire harness side.
(c) Connect the intelligent tester to the DLC3.
(d) Turn the ignition switch to the ON position.
(e) Turn the tester on.
(f) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / COOLANT TEMP.
(g) Read the value displayed on the tester.
Standard value:
140°C (284°F) or higher.
(h) Reconnect the ECT sensor connector.

NG → **Go to step 4**

OK

CONFIRM GOOD CONNECTION TO SENSOR. IF OK, REPLACE ENGINE COOLANT TEMPERATURE SENSOR

4	CHECK HARNESS AND CONNECTOR (ENGINE COOLANT TEMPERATURE SENSOR - ECM)



(a) Disconnect the C4 ECT sensor connector.
(b) Disconnect the C24 ECM connector.
(c) Measure the resistance between the terminals of the wire harness side connectors.
Standard resistance

Tester Connection	Specified Condition
C4-2 (THW) - C24-97 (THW)	Below 1 Ω
C4-1 (E2) - C24-96 (ETHW)	Below 1 Ω

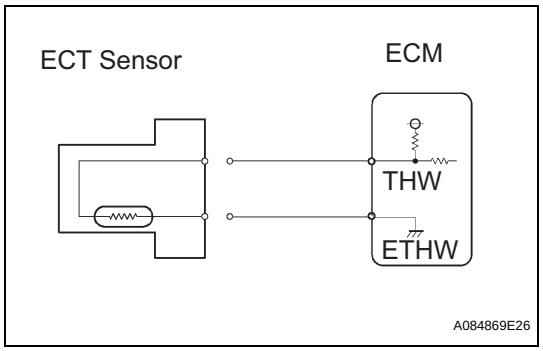
(d) Reconnect the ECT sensor connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CONFIRM GOOD CONNECTION TO ECM. IF OK, REPLACE ECM

5	READ VALUE USING INTELLIGENT TESTER (CHECK FOR SHORT IN WIRE HARNESS)



(a) Disconnect the C4 ECT sensor connector.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the ON position.
(d) Turn the tester on.
(e) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / COOLANT TEMP.
(f) Read the value displayed on the tester.
Standard value:
-40°C (-40°F)
(g) Reconnect the ECT sensor connector.

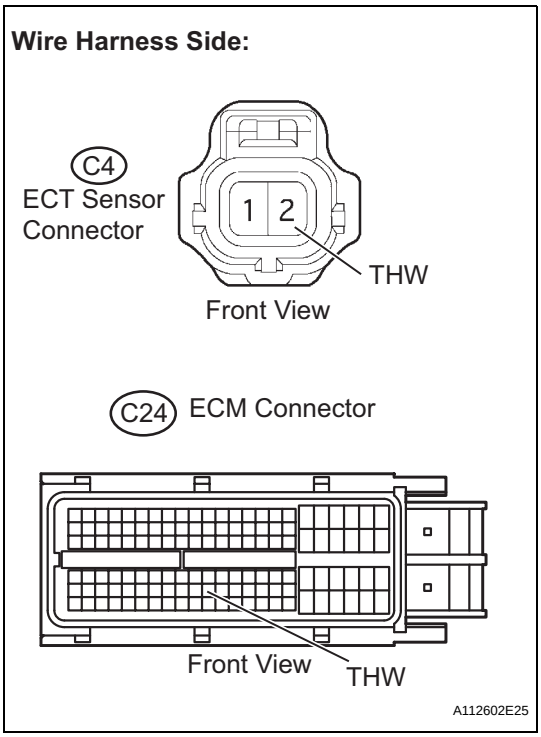
NG → **Go to step 6**

OK

REPLACE ENGINE COOLANT TEMPERATURE SENSOR

ES

6	CHECK HARNESS AND CONNECTOR (ENGINE COOLANT TEMPERATURE SENSOR - ECM)



(a) Disconnect the C4 ECT sensor connector.
(b) Disconnect the C24 ECM connector.
(c) Measure the resistance between the terminals of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
C4-2 (THW) or C24-97 (THW) - Body ground	10 kΩ or higher

(d) Reconnect the ECT sensor connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

ES

DTC	P0116	Engine Coolant Temperature Circuit Range / Performance Problem

DESCRIPTION

Refer to DTC P0115 (See page ES-108).

DTC No.	DTC Detection Condition	Trouble Area
P0116	When either of following conditions is met (2 trip detection logic): • When cold engine started and engine warmed up, Engine Coolant Temperature (ECT) sensor value does not change. • After engine is warmed up, ECT sensor value does not change when engine stopped and then next cold engine start is performed.	• Thermostat • ECT sensor

ES

MONITOR DESCRIPTION

Engine coolant temperature (ECT) sensor cold start monitor

When a cold engine start is performed and then the engine is warmed up, if the ECT sensor value does not change, it is determined that a malfunction has occurred. If this is detected in 2 consecutive driving cycles, the MIL is illuminated and a DTC is set.

ECT sensor soak monitor

After a warmed up engine is started, if the ECT sensor value does not change when the engine is stopped and then the next cold engine start is performed, it is determined that a malfunction has occurred. If this is detected in 2 consecutive driving cycles, the MIL is illuminated and a DTC is set.

MONITOR STRATEGY

Related DTCs	P0116: Engine coolant temperature (ECT) sensor cold start monitor P0116: ECT sensor soak monitor
Required Sensors/Components (Main)	ECT sensor
Required Sensors/Components (Related)	None
Frequency of Operation	Once per driving cycle
Duration	5 hours or more
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

ECT Sensor cold start monitor:

Monitor runs whenever following DTCs are not present	P0100 to P0103: Mass Air Flow (MAF) meter
Battery voltage	10.5 V or more
Time after engine start	1 second or more
ECT at engine start	Less than 60°C (140°F)
IAT sensor circuit	OK
Soak time	5 hours or more
Accumulated MAF	Except PZEV: 621.76 g or more PZEV: 608 g or more
Engine	Running
Fuel cut	OFF
Difference between ECT at engine start and IAT	Less than 40°C (72°F)

ECT Sensor soak monitor:

Monitor runs whenever following DTCs not present	P0100 to P0103: MAF meter P0110 to P0113: IAT sensor

Battery voltage	10.5 V or more
Engine	Running
Soak time	5 hours or more
Either of the following conditions (a) or (b) is met	-
(a) ECT	60°C (140°F) or more
(b) Accumulated MAF	Except PZEV: 1,021.88 g or more PZEV: 947 g or more

TYPICAL MALFUNCTION THRESHOLDS

ECT Sensor cold start monitor:

ECT sensor value change	Less than 5°C (9°F)

ECT Sensor soak monitor:

Difference between current ECT sensor value and previous ECT sensor value when engine stopped	Less than 5°C (9°F)

COMPONENT OPERATING RANGE

ECT	ECT sensor value changes in accordance with actual ECT

INSPECTION PROCEDURE

HINT:

- If any of DTCs P0115, P0117, P0118 or P0125 are set simultaneously with DTC P0116, the ECT sensor may have an open or a short circuit. Troubleshoot those DTCs first.
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0116)**

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P0116	A
P0116 and other DTCs	B

B → **GO TO DTC CHART**

A

2	**INSPECT THERMOSTAT**

(a) Remove the thermostat (See page CO-12).
(b) Measure the valve opening temperature of the thermostat.

Standard value:
80°C to 84°C (176°F to 183°F)
HINT:
In addition to the above check, confirm that the valve is completely closed when the temperature is below the standard.

(c) Reinstall the thermostat (See page CO-13).

NG → **REPLACE THERMOSTAT**

OK

REPLACE ENGINE COOLANT TEMPERATURE SENSOR

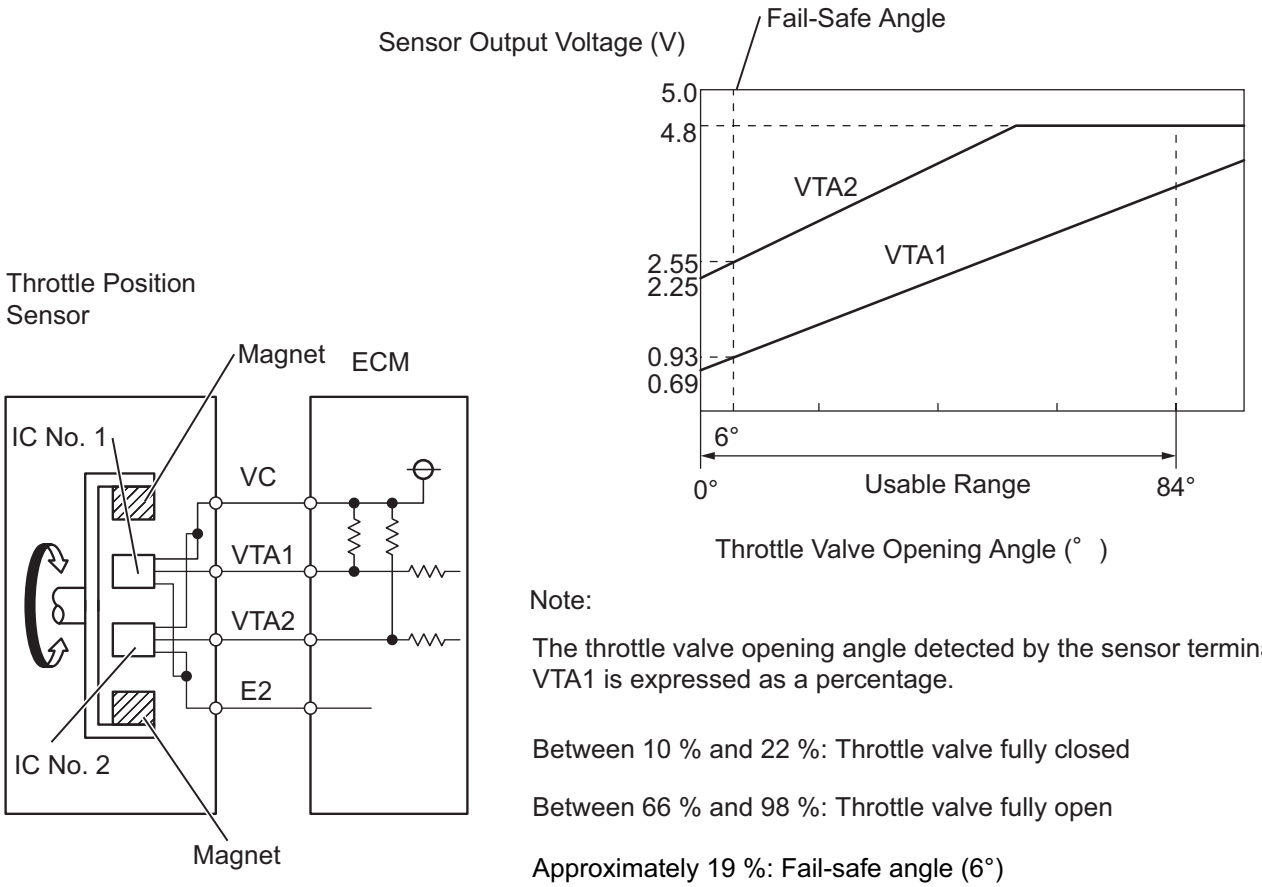
DTC	P0120	Throttle / Pedal Position Sensor / Switch "A" Circuit Malfunction
DTC	P0122	Throttle / Pedal Position Sensor / Switch "A" Circuit Low Input
DTC	P0123	Throttle / Pedal Position Sensor / Switch "A" Circuit High Input
DTC	P0220	Throttle / Pedal Position Sensor / Switch "B" Circuit
DTC	P0222	Throttle / Pedal Position Sensor / Switch "B" Circuit Low Input
DTC	P0223	Throttle / Pedal Position Sensor / Switch "B" Circuit High Input
DTC	P2135	Throttle / Pedal Position Sensor / Switch "A" / "B" Voltage Correlation

ES

HINT:
These DTCs relate to the Throttle Position (TP) sensor.

DESCRIPTION

The TP sensor is mounted on the throttle body, and detects the opening angle of the throttle valve. This sensor is a non-contact type. It uses Hall-effect elements in order to yield accurate signals even in extreme driving conditions, such as at high speeds as well as very low speeds.
The TP sensor has two sensor circuits which each transmits a signal, VTA1 and VTA2. VTA1 is used to detect the throttle valve angle and VTA2 is used to detect malfunctions in VTA1. The sensor signal voltages vary between 0 V and 5 V in proportion to the throttle valve opening angle, and are transmitted to the VTA terminals of the ECM.
As the valve closes, the sensor output voltage decreases and as the valve opens, the sensor output voltage increases. The ECM calculates the throttle valve opening angle according to these signals and controls the throttle actuator in response to driver inputs. These signals are also used in calculations such as air-fuel ratio correction, power increase correction and fuel-cut control.



Note:

The throttle valve opening angle detected by the sensor terminal VTA1 is expressed as a percentage.

Between 10 % and 22 %: Throttle valve fully closed

Between 66 % and 98 %: Throttle valve fully open

Approximately 19 %: Fail-safe angle (6°)

A122493E04

DTC No.	DTC Detection Condition	Trouble Area
P0120	Output voltage of VTA1 quickly fluctuates beyond lower and upper malfunction thresholds for 2 seconds when accelerator pedal depressed (1 trip detection logic)	• Throttle Position (TP) sensor (built into throttle body) • ECM
P0122	Output voltage of VTA1 0.2 V or less for 2 seconds when accelerator pedal depressed (1 trip detection logic)	• TP sensor (built into throttle body) • Short in VTA1 circuit • Open in VC circuit • ECM
P0123	Output voltage of VTA1 4.535 V or more for 2 seconds when accelerator pedal depressed (1 trip detection logic)	• TP sensor (built into throttle body) • Open in VTA1 circuit • Open in E2 circuit • Short between VC and VTA1 circuits • ECM
P0220	Output voltage of VTA2 quickly fluctuates beyond lower and upper malfunction thresholds for 2 seconds when accelerator pedal depressed (1 trip detection logic)	• TP sensor (built into throttle body) • ECM

DTC No.	DTC Detection Condition	Trouble Area
P0222	Output voltage of VTA2 1.75 V or less for 2 seconds when accelerator pedal depressed (1 trip detection logic)	• TP sensor (built into throttle body) • Short in VTA2 circuit • Open in VC circuit • ECM
P0223	Output voltage of VTA2 4.8 V or more, and VTA1 between 0.2 V and 2.02 V for 2 seconds when accelerator pedal depressed (1 trip detection logic)	• TP sensor (built into throttle body) • Open in VTA2 circuit • Open in E2 circuit • Short between VC and VTA2 circuits • ECM
P2135	Either condition (a) or (b) is met (1 trip detection logic): (a) Difference between output voltages of VTA1 and VTA2 0.02 V or less for 0.5 seconds or more (b) Output voltage of VTA1 0.2 V or less, and VTA2 1.75 V or less, for 0.4 seconds or more	• Short between VTA1 and VTA2 circuits • TP sensor (built into throttle body) • ECM

ES

HINT:

- When any of these DTCs are set, check the throttle valve opening angle by selecting the following menu items on the intelligent tester: DIAGNOSIS / ENHANCED OBD II / DATA LIST / ETCS / THROTTLE POS #1 AND THROTTLE POS #2.
- THROTTLE POS #1 denotes the VTA1 signal, and THROTTLE POS #2 denotes the VTA2 signal.

Reference (Normal Condition):

Tester Display	Accelerator Pedal Fully Released	Accelerator Pedal Fully Depressed
THROTTLE POS #1	0.5 to 1.1 V	3.3 to 4.9 V
THROTTLE POS #2	2.1 to 3.1 V	4.6 to 5.0 V

MONITOR DESCRIPTION

The ECM uses the Throttle Position (TP) sensor to monitor the throttle valve opening angle. There are several checks that the ECM performs to confirm the proper operation of the TP sensor.

- A specific voltage difference is expected between the sensor terminals, VTA1 and VTA2, for each throttle valve opening angle. If the difference between VTA1 and VTA2 is incorrect, the ECM interprets this as a malfunction in the sensor, and sets a DTC.
- VTA1 and VTA2 each have a specific voltage range. If VTA1 or VTA2 is outside the normal operating range, the ECM interprets this as a malfunction in the sensor, and sets a DTC.
- VTA1 and VTA2 should never be close to the same voltage level. If VTA1 is within 0.02 V of VTA2, the ECM determines that there is a short circuit in the sensor, and sets a DTC.

If the malfunction is not repaired successfully, a DTC is set 10 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P0120: Throttle position sensor 1 range check (Fluctuating) P0122: Throttle position sensor 1 range check (Low voltage) P0123: Throttle position sensor 1 range check (High voltage) P0220: Throttle position sensor 2 range check (Fluctuating) P0222: Throttle position sensor 2 range check (Low voltage) P0223: Throttle position sensor 2 range check (High voltage) P2135: Throttle position sensor range check (Correlation)

TYPICAL MALFUNCTION THRESHOLDS

P0120:

VTA1 voltage	0.2 V or less, or 4.535 V or more

P0122:

VTA1 voltage	0.2 V or less

P0123:

VTA1 voltage	4.535 V or more

P0220:

VTA2 voltage	1.75 V or less, or 4.8 V or more

P0222:

VTA2 voltage	1.75 V or less

P0223:

VTA2 voltage when VTA1 voltage is 0.2 V or more, and 2.02 V or less	4.8 V or more

P2135 Case 1:

Difference between VTA1 and VTA2 voltages	0.02 V or less

P2135 Case 2:

VTA1 voltage	0.2 V or less
VTA2 voltage	1.75 V or less

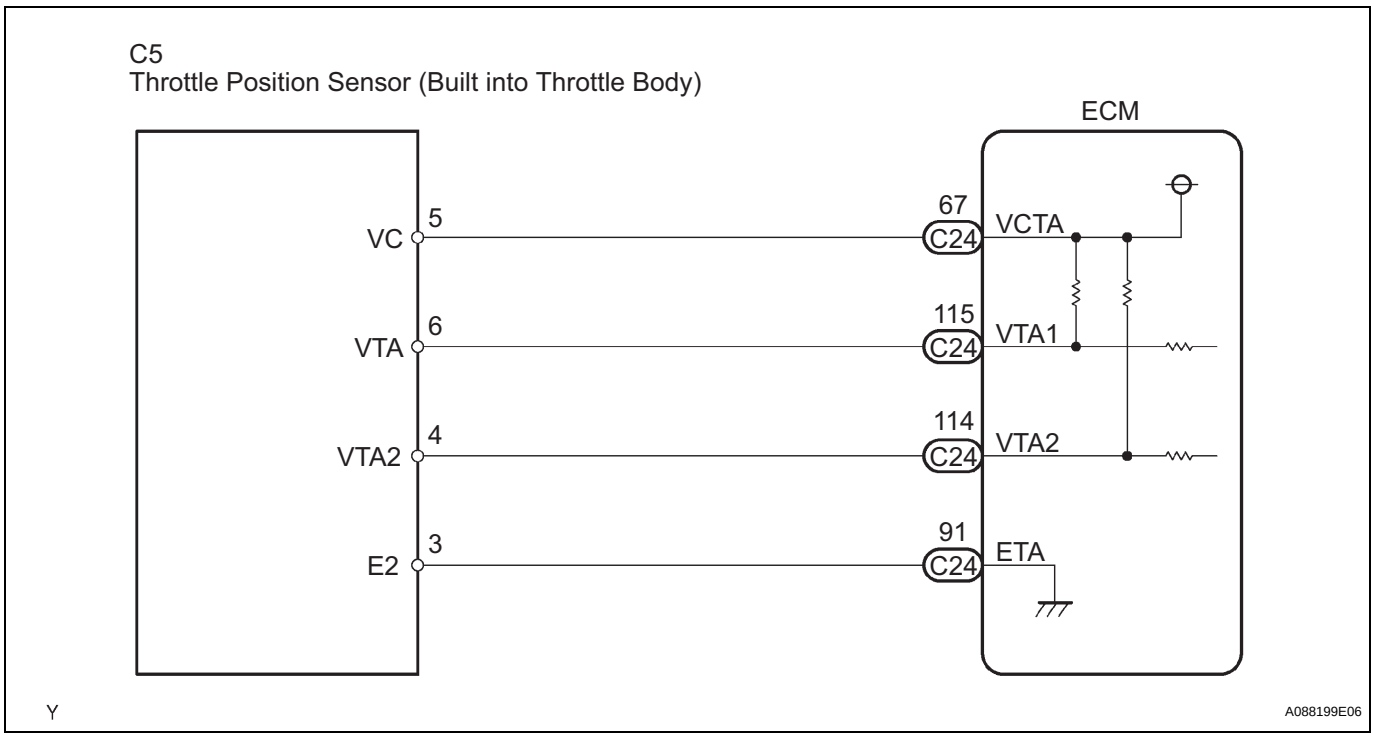
COMPONENT OPERATING RANGE

VTA1 voltage	0.69 to 4.05 V
VTA2 voltage	2.25 to 4.8 V

FAIL-SAFE

When any of these DTCs, as well as other DTCs relating to ETCS (Electronic Throttle Control System) malfunctions, are set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator off, and the throttle valve is returned to a 6° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue at a minimal speed. If the accelerator pedal is depressed gently, the vehicle can be driven slowly.
Fail-safe mode continues until a pass condition is detected, and the ignition switch is then turned off.

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	READ VALUE USING INTELLIGENT TESTER (THROTTLE POS #1 AND THROTTLE POS #2)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and turn the tester on.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / ETCS / THROTTLE POS #1 and THROTTLE POS #2.
(d) Check the values displayed on the tester.

Result

TP#1 (VTA1) When Accelerator Pedal Released	TP#2 (VTA2) When Accelerator Pedal Released	TP#1 (VTA1) When Accelerator Pedal Depressed	TP#2 (VTA2) When Accelerator Pedal Depressed	Trouble Area	Proceed to

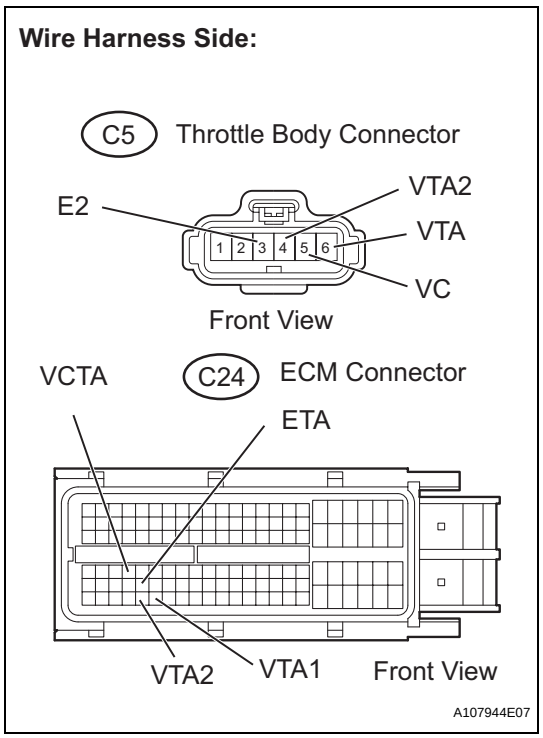
A

2 CHECK HARNESS AND CONNECTOR (THROTTLE POSITION SENSOR - ECM)



(a) Disconnect the C5 throttle body connector.
(b) Disconnect the C24 ECM connector.
(c) Measure the resistance between the terminals of the wire harness side connectors.

Standard resistance (Check for open)

Tester Connection	Specified Condition
C5-5 (VC) - C24-67 (VCTA)	Below 1 Ω
C5-6 (VTA) - C24-115 (VTA1)	Below 1 Ω
C5-4 (VTA2) - C24-114 (VTA2)	Below 1 Ω
C5-3 (E2) - C24-91 (ETA)	Below 1 Ω

Standard resistance (Check for short)

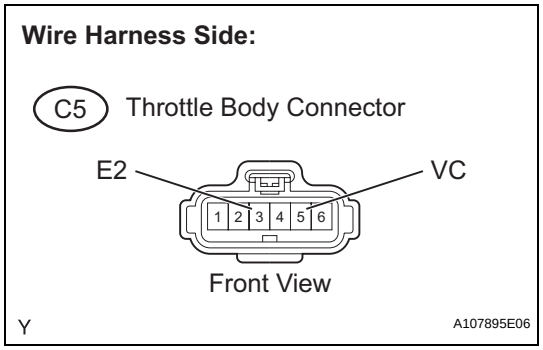
Tester Connection	Specified Condition
C5-5 (VC) or C24-67 (VCTA) - Body ground	10 kΩ or higher
C5-6 (VTA) or C24-115 (VTA1) - Body ground	10 kΩ or higher
C5-4 (VTA2) or C24-114 (VTA2) - Body ground	10 kΩ or higher

(d) Reconnect the throttle body connector.
(e) Reconnect the ECM connector.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3 INSPECT ECM (VC VOLTAGE)



(a) Disconnect the C5 throttle body connector.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage between the terminals of the throttle body connector.

Standard voltage

Tester Connection	Specified Condition
C5-5 (VC) - C5-3 (E2)	4.5 to 5.5 V

(d) Reconnect the throttle body connector.

NG → REPLACE ECM

OK

4	REPLACE THROTTLE BODY ASSEMBLY

NEXT

5	CHECK WHETHER DTC OUTPUT RECURS (THROTTLE POSITION SENSOR DTCS)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and turn the tester on.
(c) Clear the DTCs (See page ES-38).
(d) Start the engine.
(e) Allow the engine to idle for 15 seconds or more.
(f) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(g) Read the DTCs.

ES

Result

Display (DTC Output)	Proceed to

B → SYSTEM OK

A

REPLACE ECM

DTC	P0121	Throttle / Pedal Position Sensor / Switch "A" Circuit Range / Performance Problem

HINT:
This DTC relates to the Throttle Position (TP) sensor.

DESCRIPTION

Refer to DTC P0120 (See page ES-117).

DTC No.	DTC Detection Condition	Trouble Area
P0121	Difference between VTA1 and VTA2 voltages less than 0.8 V, or more than 1.6 V for 2 seconds (1 trip detection logic)	TP sensor (built into throttle body)

ES

MONITOR DESCRIPTION

The ECM uses the TP sensor to monitor the throttle valve opening angle.
This sensor transmits two signals: VTA1 and VTA2. VTA1 is used to detect the throttle opening angle and VTA2 is used to detect malfunctions in VTA1. The ECM performs several checks to confirm the proper operation of the TP sensor and VTA1.
For each throttle opening angle, a specific voltage difference is expected between the outputs of VTA1 and VTA2. If the output voltage difference between the two signals deviates from the normal operating range, the ECM interprets this as a malfunction of the TP sensor. The ECM illuminates the MIL and sets the DTC.
If the malfunction is not repaired successfully, the DTC is set 2 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P0121: TP sensor rationality
Required Sensors/Components (Main)	TP sensor
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	Within 2 seconds
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	P0120 - P0223, P2135 (TP sensor)
Either of the following conditions A or B is met	-
A. Ignition switch	ON
B. Electric throttle motor power	ON
TP sensor malfunction (P0120, P0122, P0123, P0220, P0222, P0223, P2135)	Not detected

TYPICAL MALFUNCTION THRESHOLDS

Either of the following conditions A or B is met	-
Difference of the TP sensor voltage between VTA1 and VTA2 x 0.8	More than 1.6 V
Difference of the TP sensor voltage between VTA1 and VTA2 x 0.8	Less than 0.8 V

FAIL-SAFE

When this DTC, as well as other DTCs relating to ETCS (Electronic Throttle Control System) malfunctions, is set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator off, and the throttle valve is returned to a 6° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue at a minimal speed. If the accelerator pedal is depressed gently, the vehicle can be driven slowly.
Fail-safe mode continues until a pass condition is detected, and the ignition switch is then turned off.

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

ES

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0121)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

P0121 and other DTCs	B

B → GO TO DTC CHART

A → REPLACE THROTTLE BODY ASSEMBLY

DTC	P0125	Insufficient Coolant Temperature for Closed Loop Fuel Control

DESCRIPTION

Refer to DTC P0115 (See page ES-108).

DTC No.	DTC Detection Condition	Trouble Area
P0125	Engine Coolant Temperature (ECT) does not reach closed-loop enabling temperature for 20 minutes (this period varies with engine start ECT) (2 trip detection logic)	• ECT sensor • Cooling system • Thermostat

MONITOR DESCRIPTION

The resistance of the ECT sensor varies in proportion to the actual ECT. The ECT supplies a constant voltage to the sensor and monitors the signal output voltage of the sensor. The signal voltage output varies according to changes in the resistance of the sensor. After the engine is started, the ECT is monitored through this signal. If the ECT sensor indicates that the engine is not yet warm enough for closed-loop fuel control, despite a specified period of time having elapsed since the engine was started, the ECM interprets this as a malfunction in the sensor or cooling system and sets the DTC.
Example:
The ECT is 0°C (32°F) at engine start. After about 1 minute running time, the ECT sensor still indicates that the engine is not warm enough to begin closed-loop fuel (air-fuel ratio feedback) control. The ECM interprets this as a malfunction in the sensor or cooling system and sets the DTC.

MONITOR STRATEGY

Related DTCs	P0125: Insufficient engine coolant temperature for closed-loop fuel control
Required Sensors/Components (Main)	Thermostat, cooling system
Required Sensors/Components (Related)	Engine coolant temperature sensor and mass air flow meter
Frequency of Operation	Once per driving cycle
Duration	Except PZEV: 62.94 seconds or more: Engine coolant temperature at engine start -8.34°C (17°F) or more 135.32 seconds or more: Engine coolant temperature at engine start -8.34 to -19.45°C (17 to -3°F) 20 minutes or more: Engine coolant temperature at engine start less than -19.45°C (-3°F) PZEV: 52.5 seconds or more: Engine coolant temperature at engine start -8.34°C (17°F) or more 97.56 seconds or more: Engine coolant temperature at engine start -8.34 to -19.45°C (17 to -3°F) 20 minutes or more: Engine coolant temperature at engine start less than -19.45°C (-3°F)
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	P0100 - P0103 (MAF meter) P0110 - P0113 (IAT sensor) P0115 - P0118 (ECT sensor)
Thermostat	OK

TYPICAL MALFUNCTION THRESHOLDS

Time until actual engine coolant temperature reaches closed-loop fuel control enabling temperature	Except PZEV: 62.94 seconds or more: Engine coolant temperature at engine start -8.34°C (17°F) or more 135.32 seconds or more: Engine coolant temperature at engine start -8.34 to -19.45°C (17 to -3°F) 20 minutes or more: Engine coolant temperature at engine start less than -19.45°C (-3°F) PZEV: 52.5 seconds or more: Engine coolant temperature at engine start -8.34°C (17°F) or more 97.56 seconds or more: Engine coolant temperature at engine start -8.34 to -19.45°C (17 to -3°F) 20 minutes or more: Engine coolant temperature at engine start less than -19.45°C (-3°F)

ES

WIRING DIAGRAM

Refer to DTC P0115 (See page ES-109).

INSPECTION PROCEDURE

HINT:

- If any of DTCs P0115, P0116, P0117 or P0118 are set simultaneously with DTC P0125, the Engine Coolant Temperature (ECT) sensor may have an open or a short circuit. Troubleshoot those DTCs first.
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0125)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P0125	A
P0125 and other DTCs	B

HINT:
If any DTCs other than P0125 are output, troubleshoot those DTCs first.

B → GO TO DTC CHART

A

2	INSPECT THERMOSTAT

(a) Remove the thermostat (See page CO-12).
(b) Check the valve opening temperature of the thermostat.
Standard value:
80 to 84°C (176 to 183°F)

HINT:
In addition to the above check, confirm that the valve is completely closed when the temperature is below the standard.

(c) Reinstall the thermostat (See page CO-13).

NG → **REPLACE THERMOSTAT**

OK

3	CHECK COOLING SYSTEM

(a) Check for defects in the cooling system that might cause the system to be too cold, such as abnormal radiator fan operation or any modifications.

NG → **REPAIR OR REPLACE COOLING SYSTEM**

OK

REPLACE ENGINE COOLANT TEMPERATURE SENSOR

DTC	P0128	Coolant Thermostat (Coolant Temperature Below Thermostat Regulating Temperature)

HINT:
This DTC relates to the thermostat.

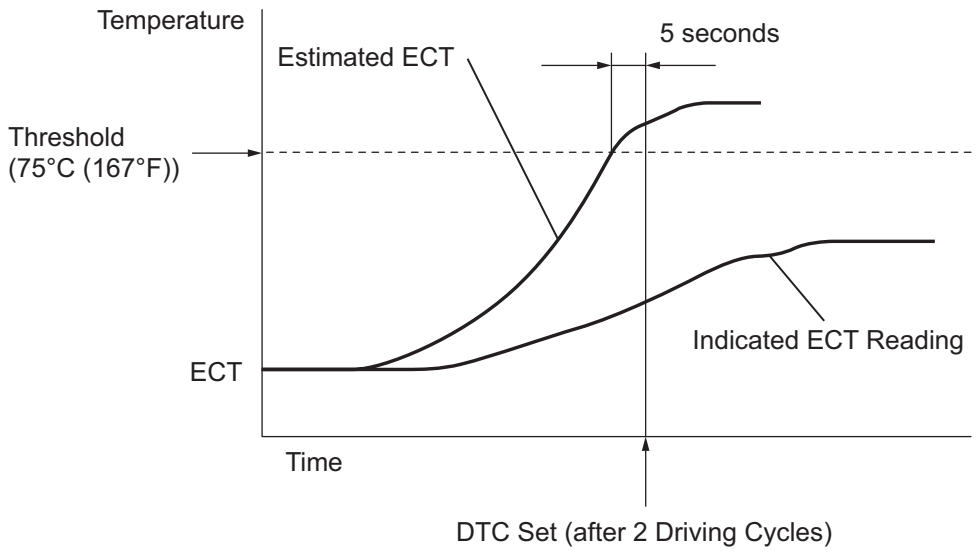
DESCRIPTION

This DTC is set when the Engine Coolant Temperature (ECT) does not reach 75°C (167°F) despite sufficient engine warm-up time having elapsed.

DTC No.	DTC Detection Condition	Trouble Area
P0128	Conditions (a), (b) and (c) are met for 5 seconds (2 trip detection logic): (a) Cold start (b) Engine warmed up (c) ECT less than 75°C (167°F)	• Thermostat • Cooling system • ECT sensor • ECM

ES

MONITOR DESCRIPTION



Y A121605E03

The ECM estimates the ECT based on the starting temperature, engine loads, and engine speeds. The ECM then compares the estimated temperature with the actual ECT. When the estimated ECT reaches 75°C (167°F), the ECM checks the actual ECT. If the actual ECT is less than 75°C (167°F), the ECM interprets this as a malfunction in the thermostat or the engine cooling system and sets the DTC.

MONITOR STRATEGY

Related DTCs	P0128: Coolant Thermostat
Required Sensors/Components (Main)	Thermostat

Required Sensors/Components (Related)	Engine Coolant Temperature (ECT) sensor, Intake Air Temperature (IAT) sensor, Vehicle speed sensor
Frequency of Operation	Once per driving cycle
Duration	450 seconds
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	P0010 (VVT OCV) P0011 (VVT System 1 - Advance) P0012 (VVT System 1 - Retard) P0031, P0032 (A/F sensor heater - Sensor 1) P0100 - P0103 (MAF meter) P0110 - P0113 (IAT sensor) P0115 - P0118 (ECT sensor) P0125 (Insufficient ECT for Closed Loop) P0171, P0172 (Fuel system) P0300 - P0304 (Misfire) P0335 (CKP sensor) P0340 (CMP sensor) P0351 - P0354 (Igniter) P0500 (VSS) P2196 (A/F sensor - rationality) P2A00 (A/F sensor - slow response)
Battery voltage	11 V or more
Either of the following conditions 1 or 2 is met:	-
1. All of the following conditions are met:	-
• ECT at engine start - IAT at engine start	-15 to 7°C (-27 to 12.6°F)
• ECT at engine start	-10 to 56°C (14 to 133°F)
• IAT at engine start	-10 to 56°C (14 to 133°F)
2. All of the following conditions are met:	-
• ECT at engine start - IAT at engine start	More than 7°C (12.6°F)
• ECT at engine start	56°C (133°F) or less
• IAT at engine start	-10°C (14°F) or more
Accumulated time at 80 mph (128 km/h) or more	Less than 20 seconds

TYPICAL MALFUNCTION THRESHOLDS

Duration that both following conditions (a) and (b) are met	5 seconds or more
(a) Estimated ECT	75°C (167°F) or more
(b) ECT sensor output	Below 75°C (167°F)

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0128)**

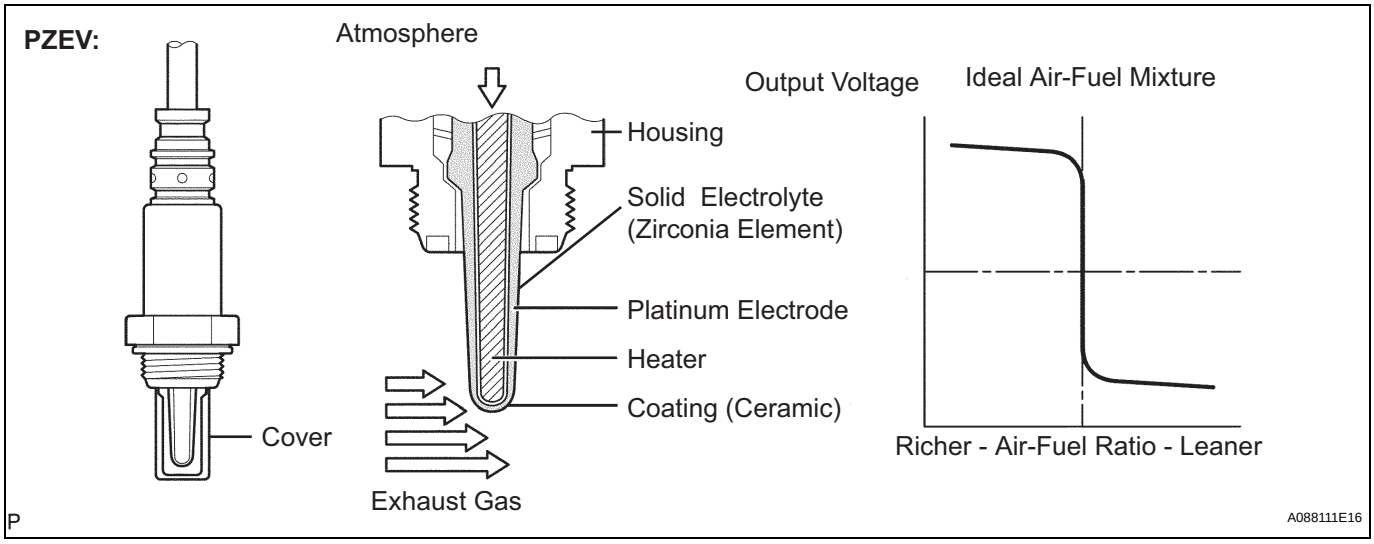
DTC	**P0138**	**Oxygen Sensor Circuit High Voltage (Bank 1 Sensor 2)**

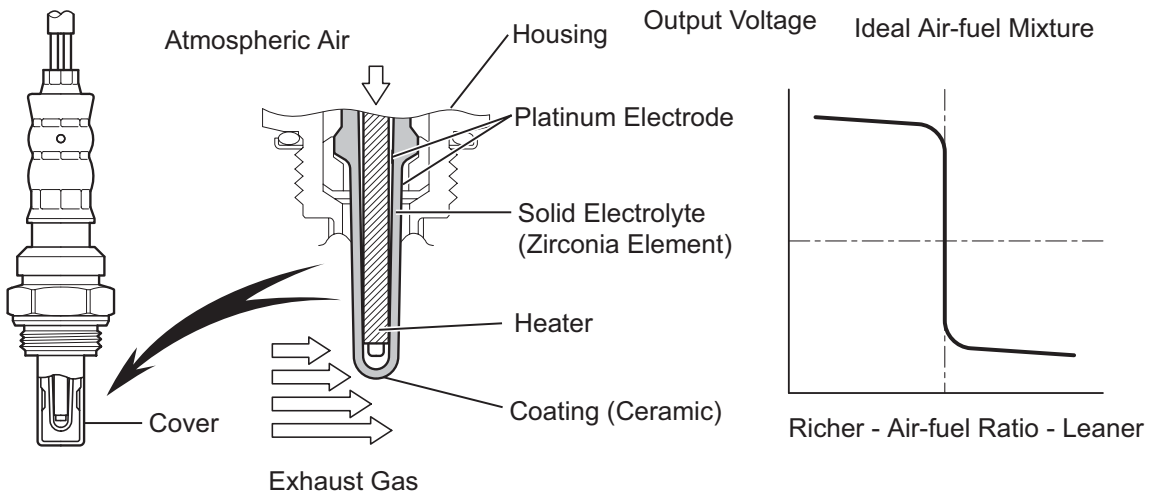
DESCRIPTION

ES

A three-way catalist converter (TWC) is used in order to convert the carbon monoxide (CO), hydrocarbons (HC), and nitrogen oxide (Nox) into less harmful substrances. To allow the TWC to function effectively, it is necessary to keep the air-fuel ratio of the engine near the stoichiometric air-fuel ratio. For the purpose of helping the ECM to deliver accurate air-fuel ratio control, a Heated Oxygen (HO2) sensor is used.
The HO2 sensor is located behind the TWC, and detects the oxygen concentration in the exhaust gas. Since the sensor is integrated with the heater that heats the sensing portion, it is possible to detect the oxygen concentration even when the intake air volume is low (the exhaust gas temperature is low).
When the air-fuel ratio becomes lean, the oxygen concentration in the exhaust gas is rich. The HO2 sensor informs the ECM that the post-TWC air-fuel ratio is lean (low voltage, i.e. less than 0.45 V).
Conversely, when the air-fuel ratio is richer than the stoichiometric air-fuel level, the oxygen concentration in the exhaust gas becomes lean. The HO2 sensor informs the ECM that the post-TWC air-fuel ratio is rich (high voltage, i.e. more than 0.45 V). The HO2 sensor has the property of changing its output voltage drastically when the air-fuel ratio is close to the stoichiometric level.
The ECM uses the supplementary information from the HO2 sensor to determine whether the air-fuel ratio after the TWC is rich or lean, and adjusts the fuel injection time accordingly. Thus, if the HO2 sensor is working improperly due to internal malfunctions, the ECM is unable to compensate for deviations in the primary air-fuel ratio control.



Except PZEV:



P

A131740E06

DTC No.	DTC Detection Condition	Trouble Area
P0136	• Abnormal voltage output: During active air-fuel ratio control, following conditions (a) and (b) are met for a certain period of time (2 trip detection logic): (a) Heated Oxygen (HO2) sensor voltage does not decrease to less than 0.59 V (b) HO2 sensor voltage does not increase to more than 0.21 V • Low impedance: Sensor impedance less than 5 Ω for more than 30 seconds when ECM presumes sensor to be warmed up and operating normally (2 trip detection logic)	• Open or short in HO2 sensor (sensor 2) circuit • HO2 sensor (sensor 2) • HO2 sensor heater (sensor 2) • Air-fuel Ratio (A/F) sensor (sensor 1) • Engine room J/B (EFI relay) • Gas leakage from exhaust system
P0137	• Low voltage (open): During active air-fuel ratio control, following conditions (a) and (b) are met for a certain period of time (2 trip detection logic): (a) HO2 sensor voltage output less than 0.21 V (b) Target air-fuel ratio rich • High impedance: Sensor impedance 15 kΩ or more for more than 90 seconds when ECM presumes sensor to be warmed up and operating normally (2 trip detection logic)	• Open in HO2 sensor (sensor 2) circuit • HO2 sensor (sensor 2) • HO2 sensor heater (sensor 2) • Engine room J/B (EFI relay) • Gas leakage from exhaust system
P0138	• High voltage (short): During active air-fuel ratio control, following conditions (a) and (b) are met for a certain period of time (2 trip detection logic): (a) HO2 sensor voltage output more than 0.59 V (b) Target air-fuel ratio lean • Extremely high voltage (short): HO2 sensor voltage output exceeds 1.2 V for more than 10 seconds (2 trip detection logic)	• Short in HO2 sensor (sensor 2) circuit • HO2 sensor (sensor 2) • ECM internal circuit malfunction

MONITOR DESCRIPTION

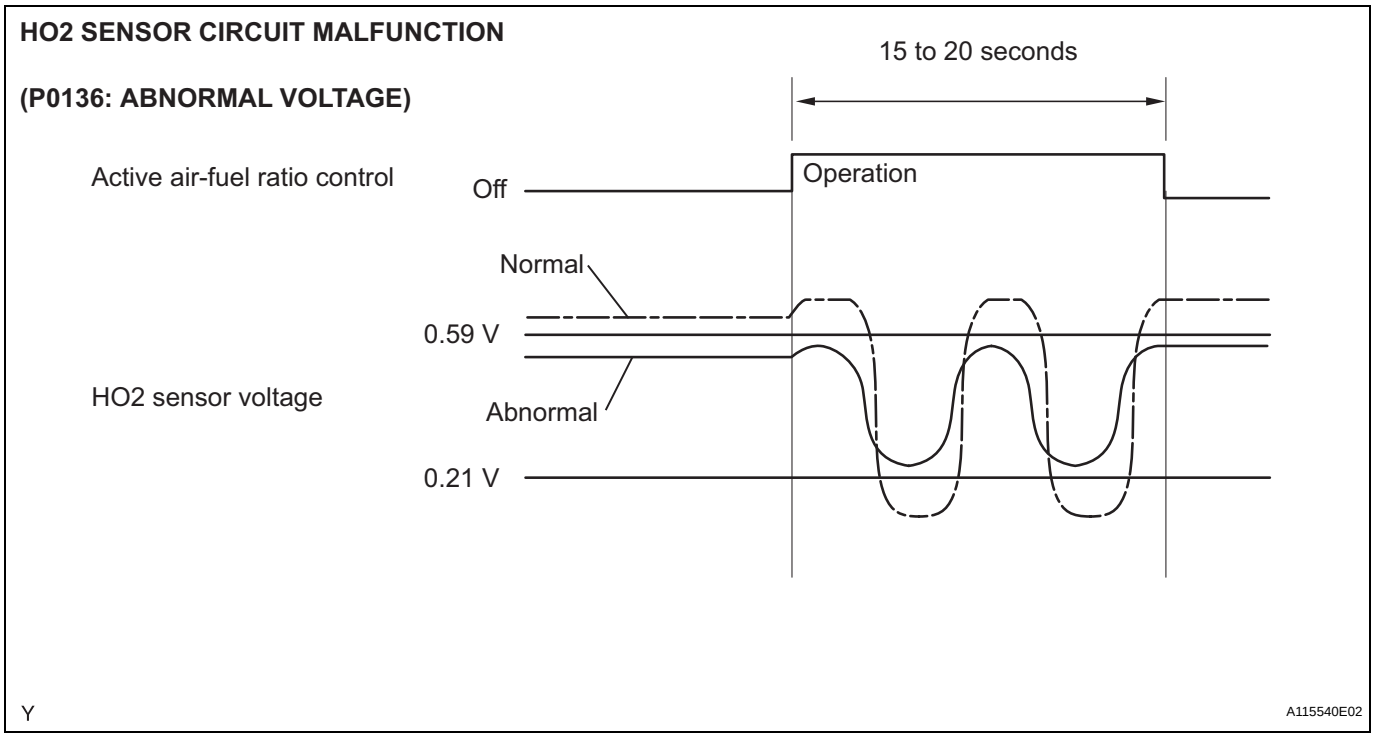
Active Air-Fuel Ratio Control:

The ECM usually performs air-fuel ratio feedback control so that the Air-Fuel Ratio (A/F) sensor output indicates a near stoichiometric air-fuel level. This vehicle includes active air-fuel ratio control in addition to regular air-fuel ratio control. The ECM performs active air-fuel ratio control to detect any deterioration in the Three-Way Catalytic Converter (TWC) and Heated Oxygen (HO2) sensor malfunctions (refer to the diagram below).

Active air-fuel ratio control is performed for approximately 15 to 20 seconds while driving with a warm engine. During active air-fuel ratio control, the air-fuel ratio is forcibly regulated to become lean or rich by the ECM. If the ECM detects a malfunction, one of the following DTCs is set: DTC P0136 (abnormal voltage output), P0137 (open circuit) and P0138 (short circuit).

Abnormal Voltage Output of HO2 Sensor (DTC P0136):

While the ECM is performing active air-fuel ratio control, the air-fuel ratio is forcibly regulated to become rich or lean. If the sensor is not functioning properly, the voltage output variation is small. For example, when the HO2 sensor voltage does not decrease to less than 0.21 V and does not increase to more than 0.59 V during active air-fuel ratio control, the ECM determines that the sensor voltage output is abnormal and sets DTC P0136.



Open or Short in Heated Oxygen (HO2) Sensor Circuit (DTC P0137 or P0138):

During active air-fuel ratio control, the ECM calculates the Oxygen Storage Capacity (OSC)* of the Three-Way Catalytic Converter (TWC) by forcibly regulating the air-fuel ratio to become rich or lean. If the HO2 sensor has an open or short, or the voltage output of the sensor decreases significantly, the OSC indicates an extraordinarily high value. Even if the ECM attempts to continue regulating the air-fuel ratio to become rich or lean, the HO2 sensor output does not change.

While performing active air-fuel ratio control, when the target air-fuel ratio is rich and the HO2 sensor voltage output is 0.21 V or less (lean), the ECM interprets this as an abnormally low sensor output voltage and sets DTC P0137. When the target air-fuel ratio is lean and the voltage output is 0.59 V or more (rich) during active air-fuel ratio control, the ECM determines that the sensor voltage output is abnormally high, and sets DTC P0138.

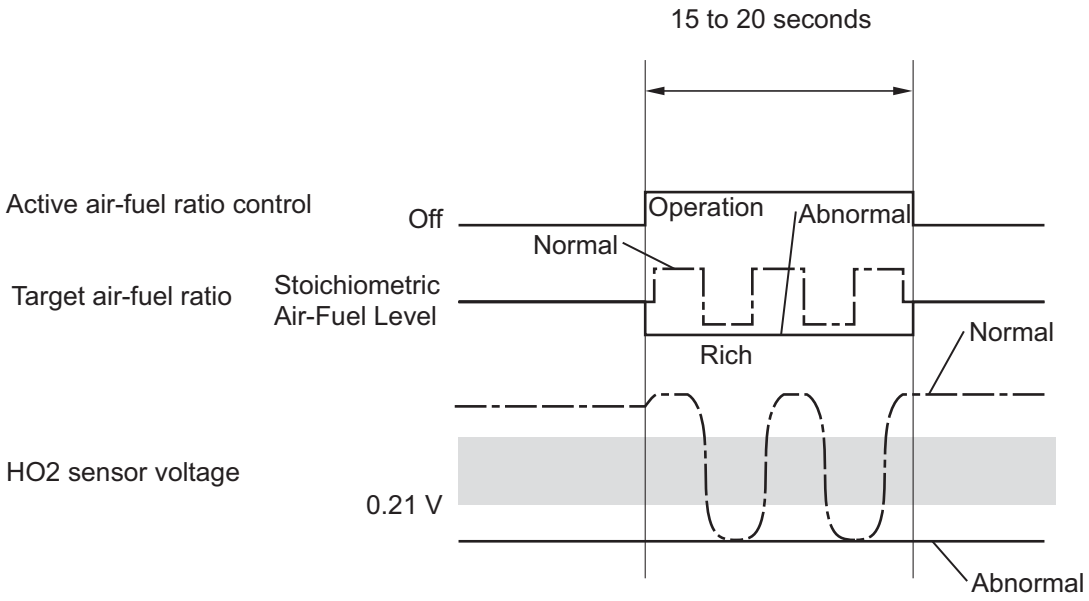
HINT:

DTC P0138 is also set if the HO2 sensor voltage output is more than 1.2 V for 10 seconds or more.

*: The TWC has the capability to store oxygen. The OSC and the emission purification capacity of the TWC are mutually related. The ECM determines whether the catalyst has deteriorated based on the calculated OSC value (See page ES-196).

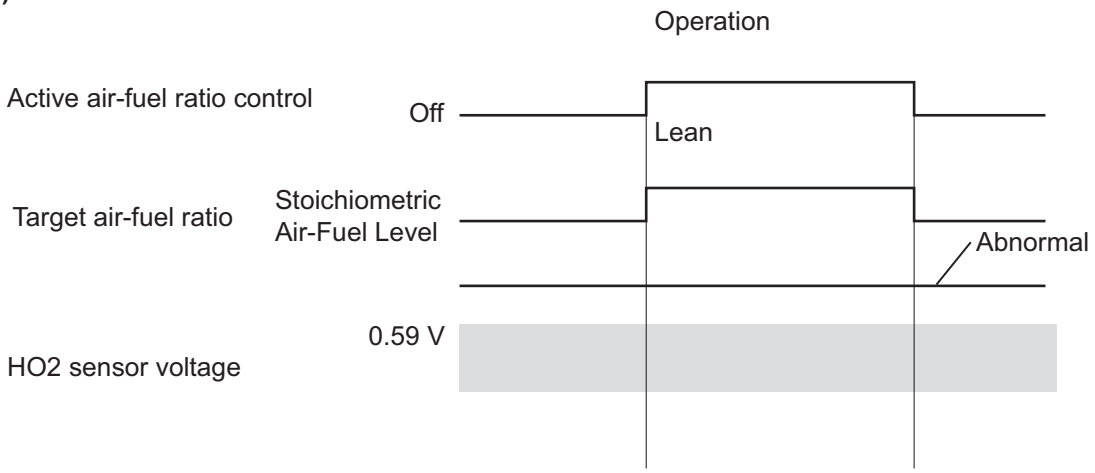
HO2 SENSOR CIRCUIT LOW VOLTAGE

(P0137: OPEN)



HO2 SENSOR CIRCUIT HIGH VOLTAGE

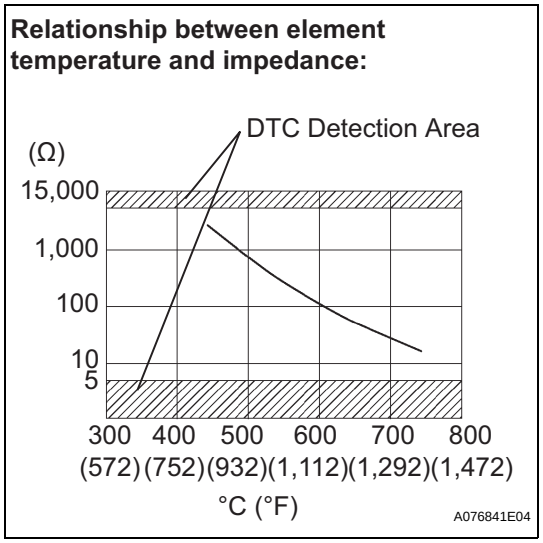
(P0138: SHORT)



Y

A115541E02

High or Low Impedance of Heated Oxygen (HO2) Sensor (DTC P0136 or P0137):



During normal air-fuel ratio feedback control, there are small variations in the exhaust gas oxygen concentration. In order to continuously monitor the slight variations in the HO2 sensor signal while the engine is running, the impedance* of the sensor is measured by the ECM. The ECM determines that there is a malfunction in the sensor when the measured impedance deviates from the standard range.
*: The effective resistance in an alternating current electrical circuit.
HINT:

- The impedance cannot be measured using an ohmmeter.
- DTC P0136 indicates the deterioration of the HO2 sensor. The ECM sets this DTC by calculating the impedance of the sensor when the typical enabling conditions are satisfied (2 driving cycles).
- DTC P0137 indicates an open or short circuit in the HO2 sensor (2 driving cycles). The ECM sets this DTC when the impedance of the sensor exceeds the threshold 15 kΩ.

MONITOR STRATEGY

Related DTCs	P0136: Heated oxygen sensor output voltage (Abnormal voltage output) P0136: Heated oxygen sensor impedance (Low) P0137: Heated oxygen sensor output voltage (Low voltage) P0137: Heated oxygen sensor impedance (High) P0138: Heated oxygen sensor output voltage (High voltage) P0138: Heated oxygen sensor output voltage (Extremely high)

ES

Heated Oxygen Sensor Output Voltage (Abnormal Voltage Output, High Voltage and Low Voltage):

Active air-fuel ratio control	Performing
Active air-fuel ratio control is performed when the following conditions are met:	-
Battery voltage	11 V or more
Engine coolant temperature	75°C (167°F) or more
Idling	OFF
Engine RPM	Less than 4,000 rpm
A/F sensor status	Activated
Fuel system status	Closed loop
Fuel cut	OFF
Engine load	10 to 80 %
Shift position	4th (Automatic Transaxle) 3rd or more (Manual Transaxle)

Heated Oxygen Sensor Impedance (Low):

Battery voltage	11 V or more
Estimated rear HO2 sensor temperature	Less than 700°C (1,292°F)
ECM monitor	Completed
DTC P0606	Not set

Heated Oxygen Sensor Impedance (High):

Battery voltage	11 V or more
Estimated rear HO2 sensor temperature	450°C (842°F) or more
DTC P0606	Not present

Heated Oxygen Sensor Output Voltage (Extremely High):

Battery voltage	11 V or more
Time after engine start	2 seconds or more

TYPICAL MALFUNCTION THRESHOLDS

Heated Oxygen Sensor Output Voltage (Abnormal Voltage Output):

Either of the following conditions is met:	1 or 2
1. All of the following conditions (a), (b) and (c) are met	-
(a) Commanded air-fuel ratio	14.3 or less
(b) Rear HO2 sensor voltage	0.21 to 0.59 V
(c) OSC (Oxygen Storage Capacity of Catalyst)	2 g or more
2. All of the following conditions (d), (e) and (f) are met	-

(d) Commanded air-fuel ratio	14.9 or more
(e) Rear HO2 sensor voltage	0.21 to 0.59 V
(f) OSC	2 g or more

Heated Oxygen Sensor Output Voltage (Low):

All of the following conditions (a), (b) and (c) are met	-
(a) Commanded air-fuel ratio	14.3 or less
(b) Rear HO2 sensor voltage	Less than 0.21 V
(c) OSC	2 g or more

Heated Oxygen Sensor Output Voltage (High):

All of the following conditions (a), (b) and (c) are met	-
(a) Commanded air-fuel ratio	14.9 or more
(b) Rear HO2 sensor voltage	More than 0.59 V
(c) OSC	2 g or more

Heated Oxygen Sensor Impedance (Low):

Duration of the following condition is met	30 seconds or more
Rear HO2 sensor impedance	Less than 5 Ω

Heated Oxygen Sensor Impedance (High):

Duration of the following condition is met	90 seconds or more
Rear HO2 sensor impedance	15 kΩ or more

Heated Oxygen Sensor Output Voltage (Extremely High):

Duration of the following condition is met	10 seconds or more
Rear HO2 sensor voltage	1.2 V or more

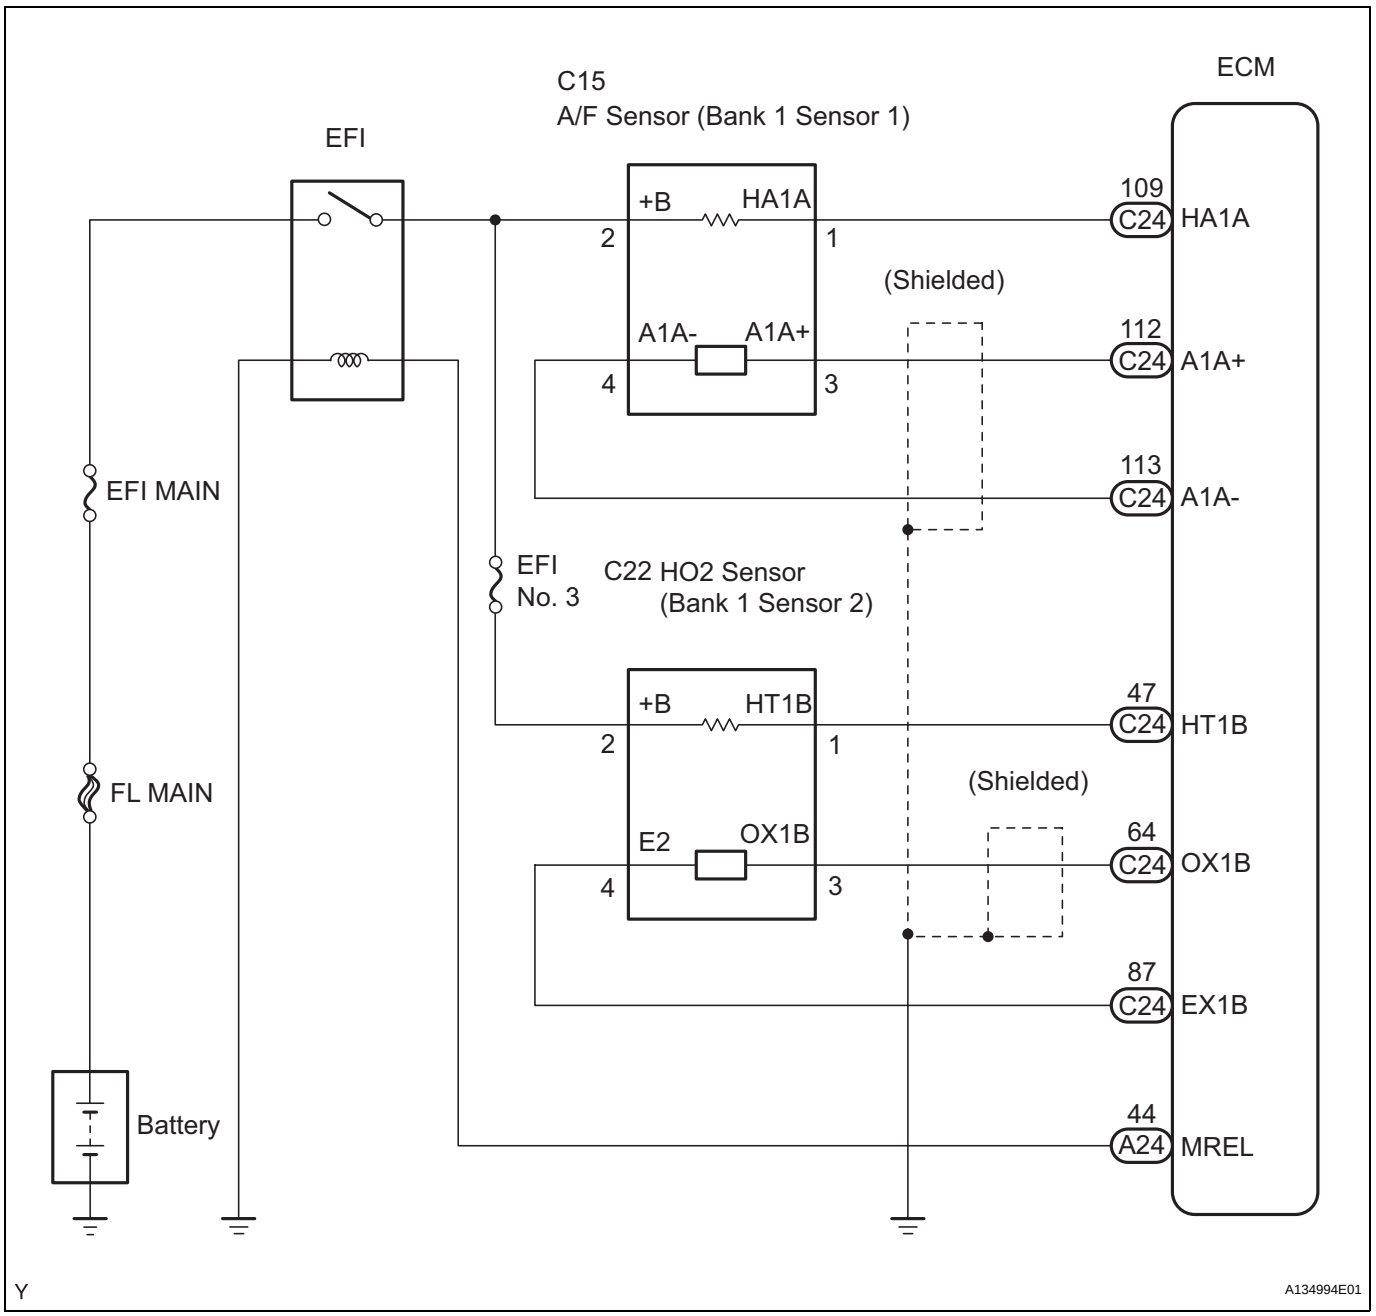
COMPONENT OPERATING RANGE

Duration of the following condition is met	30 seconds or more
Heated oxygen sensor voltage	Varies between 0.1 and 0.9 V

MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-20).

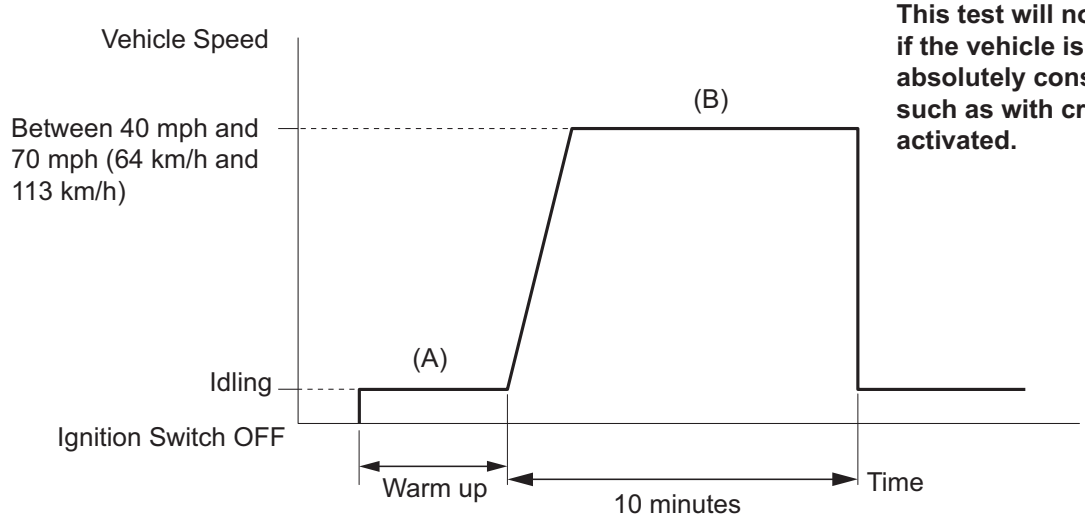
WIRING DIAGRAM



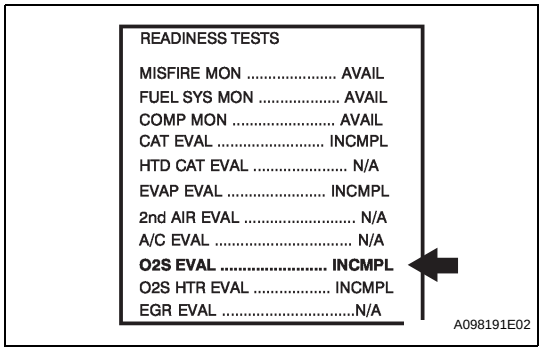
CONFIRMATION DRIVING PATTERN

HINT:

- This confirmation driving pattern is used in the "PERFORM CONFIRMATION DRIVING PATTERN" procedure of the following diagnostic troubleshooting procedure.
- Performing this confirmation pattern will activate the Heated Oxygen (HO2) sensor monitor. (The catalyst monitor is performed simultaneously.) This is very useful for verifying the completion of the repair.



1. Connect the intelligent tester to the DLC3.



2. Turn the ignition switch to the ON position.
3. Turn the tester on.
4. Clear the DTCs (if set) (See page ES-38).
5. Select the following menu items: DIAGNOSIS / CARB OBD II / READINESS TESTS.
6. Check that O2S EVAL is INCMPL (incomplete).
7. Start the engine and warm it up. (Proceed "A")
8. Drive the vehicle at between 40 mph and 70 mph (64 km/h and 113 km/h) for at least 10 minutes. (Proceed "B")
9. Note the state of the Readiness Tests items. Those items will change to COMPL (complete) as the O2S EVAL monitor operates.
10. On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES and check if any DTCs (any pending DTCs) are set.

HINT:
If O2S EVAL does not change to COMPL, and any pending DTCs fail to set, extend the driving time.

INSPECTION PROCEDURE

HINT:
Sensor 2 refers to the sensor mounted behind the Three-Way Catalytic Converter (TWC) and located far from the engine assembly.
HINT:
Intelligent tester only:

Malfunctioning areas can be identified by performing the A/F CONTROL function provided in the ACTIVE TEST. The A/F CONTROL function can help to determine whether the Air-Fuel Ratio (A/F) sensor, Heated Oxygen (HO2) sensor and other potential trouble areas are malfunctioning.
The following instructions describe how to conduct the A/F CONTROL operation using the intelligent tester.
(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the tester on.
(c) Warm up the engine at an engine speed of 2,500 rpm for approximately 90 seconds.
(d) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL.
(e) Perform the A/F CONTROL operation with the engine idling (press the RIGHT or LEFT button to change the fuel injection volume).
(f) Monitor the voltage outputs of the A/F and HO2 sensors (AFS B1 S1 and O2S B1 S2) displayed on the tester.

ES

HINT:
- The A/F CONTROL operation lowers the fuel injection volume by 12.5 % or increases the injection volume by 25 %.
- The sensors react in accordance with increases and decreases in the fuel injection volume.

Standard

Tester Display (Sensor)	Injection Volumes	Status	Voltages
AFS B1 S1 (A/F)	+25 %	Rich	Less than 3.0
	-12.5 %	Lean	More than 3.35
O2S B1 S2 (HO2)	+25 %	Rich	More than 0.5
	-12.5 %	Lean	Less than 0.4

NOTICE:
The A/F sensor has an output delay of a few seconds and the HO2 sensor has a maximum output delay of approximately 20 seconds.

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Areas
1	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		-
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage More than 0.5 V Less than 0.4 V		
2	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• A/F sensor • A/F sensor heater • A/F sensor circuit
	Output Voltage Almost no reaction		Output Voltage More than 0.5 V Less than 0.4 V		
3	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• HO2 sensor • HO2 sensor heater • HO2 sensor circuit
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage Almost no reaction		

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Areas
4	Injection volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• Injector • Fuel pressure • Gas leakage from exhaust system (Air-fuel ratio extremely lean or rich)
	Output Voltage Almost no reaction	NG	Output Voltage Almost no reaction	NG	

Following the A/F CONTROL procedure enables technicians to check and graph the voltage outputs of both the A/F and HO2 sensors.
To display the graph, select the following menu items on the tester: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL / USER DATA / AFS B1 S1 and O2S B1 S2; then press the YES button and then the ENTER button followed by the F4 button.
HINT:

- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- If the OX1B wire from the ECM connector is short-circuited to the +B wire, DTC P0138 will be set.

ES

1	READ OUTPUT DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and turn the tester on.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Read the DTCs.

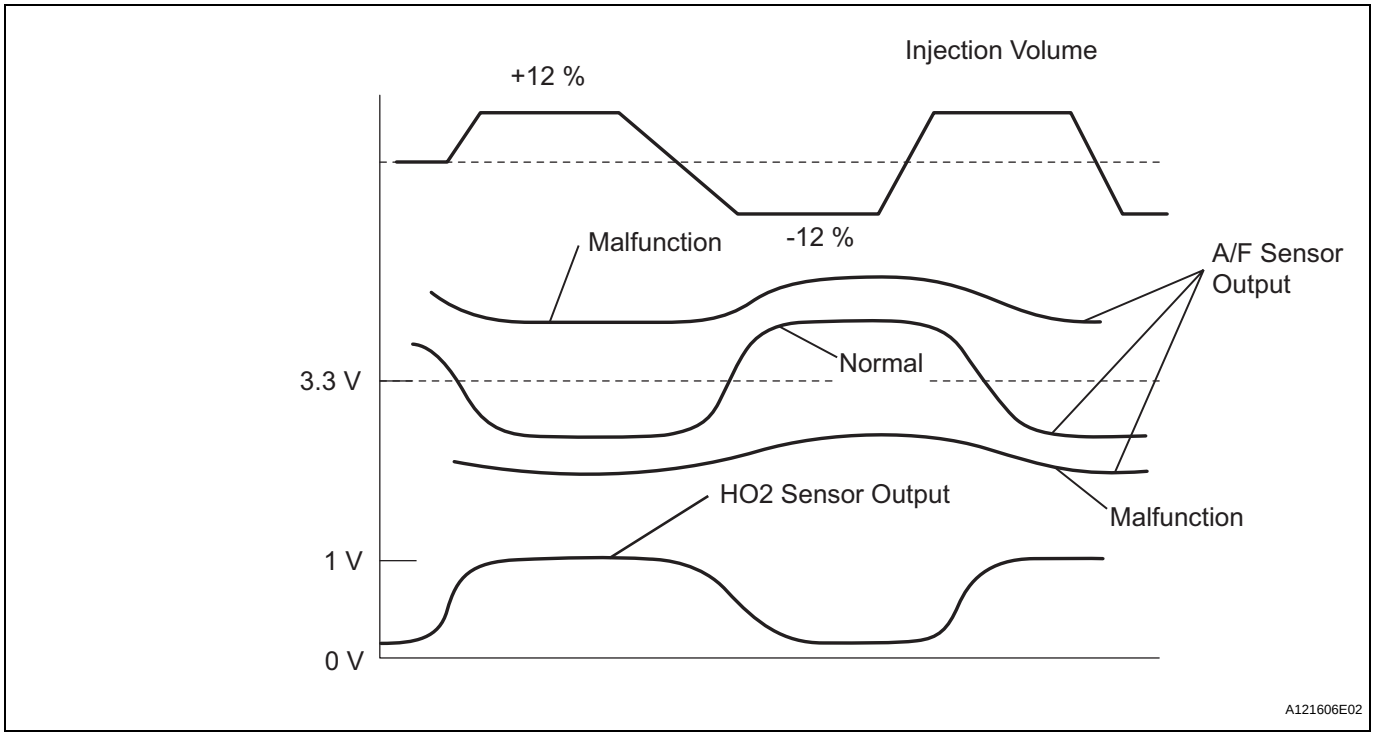
13	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (INJECTION VOLUME)



(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the tester on.
(c) Warm up the engine.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / INJ VOL.
(e) Change the fuel injection volume using the tester, and monitor the voltage output of Air-Fuel Ratio (A/F) and HO2 sensors displayed on the tester.

HINT:

- Change the fuel injection volume within the range of -12 % and +12 %. The injection volume can be changed in 1 % graduations within the range.
- The A/F sensor is displayed as AFS B1 S1, and the HO2 sensor is displayed as O2S B1 S2, on the intelligent tester.

Result

Tester Display (Sensor)	Voltage Variations	Proceed to
AFS B1 S1 (A/F)	Alternates between more and less than 3.3 V	OK
	Remains at more than 3.3 V	NG
	Remains at less than 3.3 V	NG

HINT:
A normal HO2 sensor voltage (O2S B1 S2) reacts in accordance with increases and decreases in fuel injection volumes. When the A/F sensor voltage remains at either less or more than 3.3 V despite the HO2 sensor indicating a normal reaction, the A/F sensor is malfunctioning.

NG → REPLACE AIR-FUEL RATIO SENSOR

OK

CHECK AND REPAIR EXTREMELY RICH OR LEAN ACTUAL AIR-FUEL RATIO (INJECTOR, FUEL PRESSURE, GAS LEAKAGE FROM EXHAUST SYSTEM, ETC.)

14	CHECK FOR EXHAUST GAS LEAKAGE

OK:
No gas leakage.

NG → REPAIR OR REPLACE EXHAUST GAS LEAKAGE POINT

OK

15	INSPECT HEATED OXYGEN SENSOR (HEATER RESISTANCE) (See page ES-90)

NG → REPLACE HEATED OXYGEN SENSOR

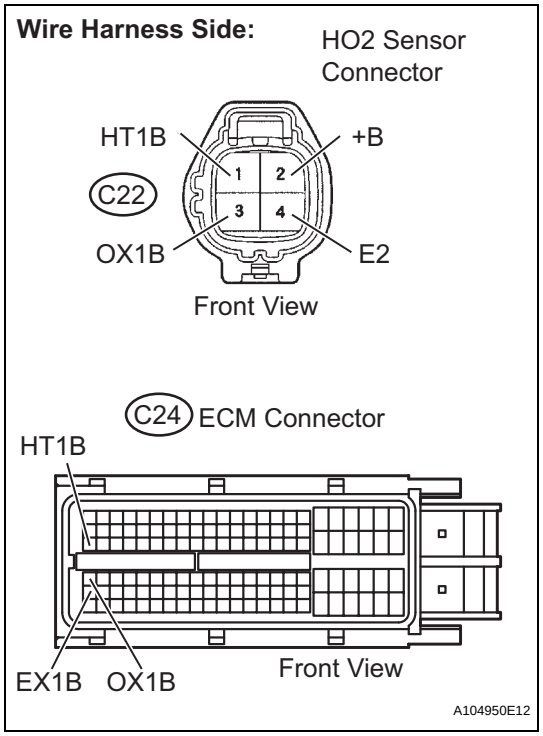
OK

16	INSPECT ENGINE ROOM J/B (EFI RELAY) (See page ES-85)

NG → REPLACE ENGINE ROOM J/B

OK

17 CHECK HARNESS AND CONNECTOR (HEATED OXYGEN SENSOR - ECM)



(a) Disconnect the C22 HO2 sensor connector.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage between the +B terminal of the HO2 sensor connector and body ground.

Standard voltage

Tester Connection	Specified Condition
C22-2 (+B) - Body ground	9 to 14 V

(d) Turn the ignition switch off.
(e) Disconnect the C24 ECM connector.
(f) Measure the resistance between the terminals of the wire harness side connectors.

Standard resistance (Check for open)

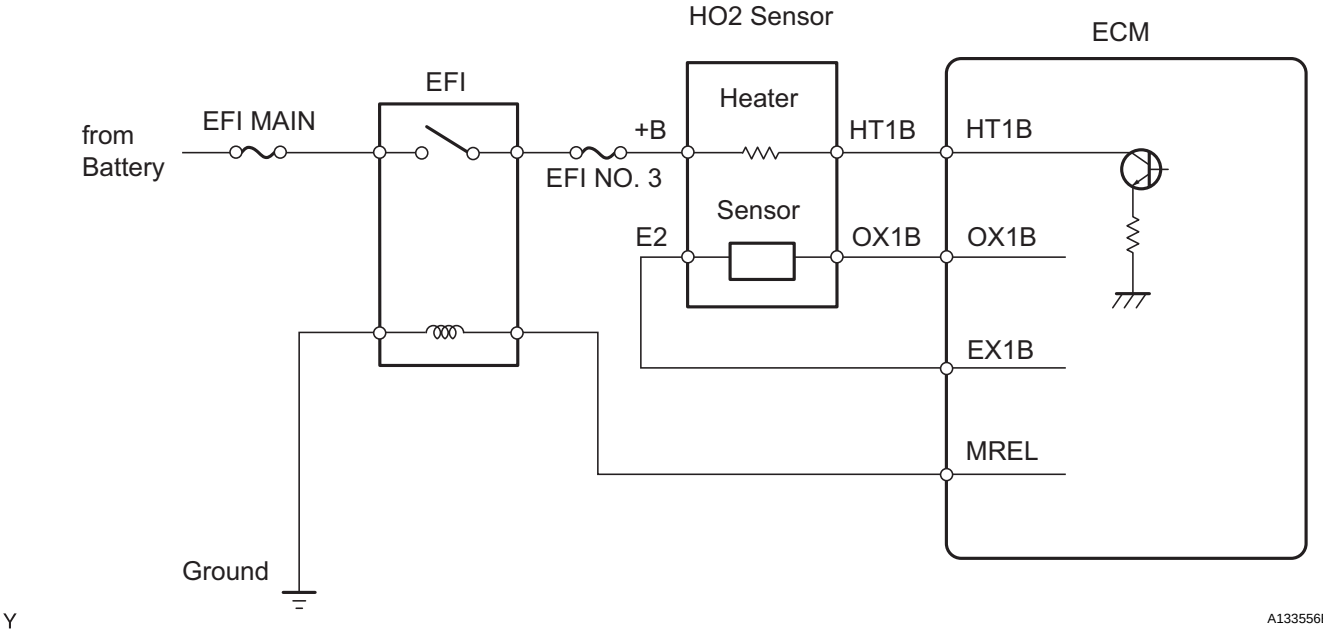
Tester Connection	Specified Condition
C22-1 (HT1B) - C24-47 (HT1B)	Below 1 Ω
C22-3 (OX1B) - C24-64 (OX1B)	Below 1 Ω
C22-4 (E2) - C24-87 (EX1B)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
C22-1 (HT1B) or C24-47 (HT1B) - Body ground	10 kΩ or higher
C22-3 (OX1B) or C24-64 (OX1B) - Body ground	10 kΩ or higher
C22-4 (E2) or C24-87 (EX1B) - Body ground	10 kΩ or higher

(g) Reconnect the HO2 sensor connector.
(h) Reconnect the ECM connector.

Reference (System Diagram of Sensor 2):



NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE HEATED OXYGEN SENSOR

DTC	P0171	System Too Lean (Bank 1)

DTC	P0172	System Too Rich (Bank 1)

DESCRIPTION

The fuel trim is related to the feedback compensation value, not to the basic injection time. The fuel trim consists of both the short-term and the long-term fuel trims.

The short-term fuel trim is fuel compensation that is used to constantly maintain the air-fuel ratio at stoichiometric levels. The signal from the Air-Fuel Ratio (A/F) sensor indicates whether the air-fuel ratio is rich or lean compared to the stoichiometric ratio. This triggers a reduction in the fuel injection volume if the air-fuel ratio is rich and an increase in the fuel injection volume if it is lean.

Factors such as individual engine differences, wear over time and changes in operating environment cause short-term fuel trim to vary from the central value. The long-term fuel trim, which controls overall fuel compensation, compensates for long-term deviations in the fuel trim from the central value caused by the short-term fuel trim compensation.

If both the short-term and long-term fuel trims are lean or rich beyond predetermined values, it is interpreted as a malfunction, and the ECM illuminates the MIL and sets a DTC.

DTC No.	DTC Detection Condition	Trouble Area
P0171	With warm engine and stable air-fuel ratio feedback, fuel trim considerably in error to lean side (2 trip detection logic)	• Air induction system • Injector blockage • Mass Air Flow (MAF) meter • Engine Coolant Temperature (ECT) sensor • Fuel pressure • Gas leakage from exhaust system • Open or short in A/F sensor (sensor 1) circuit • A/F sensor (sensor 1) • A/F sensor heater (sensor 1) • Engine room J/B (EFI relay) • A/F sensor heater and EFI relay circuits • PCV valve and hose • PCV hose connections • ECM
P0172	With warm engine and stable air-fuel ratio feedback, fuel trim considerably in error to rich side (2 trip detection logic)	• Injector leakage or blockage • MAF meter • ECT sensor • Ignition system • Fuel pressure • Gas leakage from exhaust system • Open or short in A/F sensor (sensor 1) circuit • A/F sensor (sensor 1) • A/F sensor heater (sensor 1) • Engine room J/B (EFI relay) • A/F sensor heater and EFI relay circuits • ECM

HINT:

- When DTC P0171 is set, the actual air-fuel ratio is on the lean side. When DTC P0172 is set, the actual air-fuel ratio is on the rich side.
- If the vehicle runs out of fuel, the air-fuel ratio is lean and DTC P0171 may be set. The MIL is then illuminated.
- When the total of the short-term and long-term fuel trim values is within 20 % (and the engine coolant temperature is more than 75°C [167°F]), the system is functioning normally.

MONITOR DESCRIPTION

Under closed-loop fuel control, fuel injection volumes that deviate from those estimated by the ECM cause changes in the long-term fuel trim compensation value. The long-term fuel trim is adjusted when there are persistent deviations in the short-term fuel trim values. Deviations from the ECM's estimated fuel injection volumes also affect the average fuel trim learning value, which is a combination of the average short-term fuel trim (fuel feedback compensation value) and the average long-term fuel trim (learning value of the air-fuel ratio). If the average fuel trim learning value exceeds the malfunction threshold, the ECM interprets this as a fault in the fuel system and sets a DTC.
Example:
The average fuel trim learning value is +35 % or more or -35 % or less, the ECM interprets this as a fuel system malfunction.

2. Average of short-term fuel trim and long-term fuel trim	-35 % or less (varies with ECT)

WIRING DIAGRAM

Refer to DTC P2195 (See page ES-312).

INSPECTION PROCEDURE

HINT:

- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- A low A/F sensor voltage could be caused by a rich air-fuel mixture. Check for conditions that would cause the engine to run rich.
- A high A/F sensor voltage could be caused by a lean air-fuel mixture. Check for conditions that would cause the engine to run lean.

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0171 OR P0172)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and turn the tester on.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P0171 or P0172	A
P0171 or P0172 and other DTCs	B

HINT:
If any DTCs other than P0171 or P0172 are output, troubleshoot those DTCs first.

B → **GO TO DTC CHART**

A

2	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (A/F CONTROL)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the tester on.
(c) Warm up the engine at an engine speed of 2,500 rpm for approximately 90 seconds.
(d) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL.
(e) Perform the A/F CONTROL operation with the engine in an idling condition (press the RIGHT or LEFT button to change the fuel injection volume).
(f) Monitor the output voltages of the A/F and HO2 sensors (AFS B1S1 and O2S B1S2) displayed on the tester.

Result:

The A/F sensor reacts in accordance with increases and decreases in the fuel injection volume:
+25 % = Rich output:
Less than 3.0 V
-12.5 % = Lean output:
More than 3.35 V

NOTICE:

The A/F sensor has an output delay of a few seconds and the HO2 sensor has a maximum output delay of approximately 20 seconds.

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Areas
1	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		-
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage More than 0.5 V Less than 0.4 V		
2	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• A/F sensor • A/F sensor heater • A/F sensor circuit
	Output Voltage Almost no reaction		Output Voltage More than 0.5 V Less than 0.4 V		

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Areas
3	Injection volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		Extremely rich or lean actual air-fuel ratio • Injector leakage or blockage • Gas leakage from exhaust system • Fuel pressure • MAF meter • ECT sensor • Air induction system • PCV hose connections
Output Voltage Almost no reaction ——— NG		Output Voltage Almost no reaction		——— NG	

Following the A/F CONTROL procedure enables technicians to check and graph the voltage outputs of both the A/F and HO2 sensors.

To display the graph, select the following menu items on the tester: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL / USER DATA / AFS B1S1 and O2S B1S2; then press the YES button and then the ENTER button followed by the F4 button.

3	READ VALUE USING INTELLIGENT TESTER (MAF)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and turn the tester on.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / MAF and COOLANT TEMP.
(d) Allow the engine to idle until the COOLANT TEMP reaches 75°C (167°F) or more.
(e) Read the MAF with the engine in an idling condition and at an engine speed of 2,500 rpm.

Standard:

MAF while engine idling:
Between 1 g/sec. and 3 g/sec. (shift position: N, A/C: OFF).

MAF at an engine speed of 2,500 rpm:
Between 2 g/sec. and 6 g/sec. (shift position: N, A/C: OFF).

NG → **REPLACE MASS AIR FLOW METER**

OK

4	READ VALUE USING INTELLIGENT TESTER (COOLANT TEMP)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and turn the tester on.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / COOLANT TEMP.
(d) Read the COOLANT TEMP twice, when the engine is both cold and warmed up.
Standard:
With cold engine:
Same as ambient air temperature.
With warm engine:
Between 75°C and 100°C (167°F and 212°F).

NG → **REPLACE ENGINE COOLANT TEMPERATURE SENSOR**

OK

5	CHECK PCV HOSE CONNECTIONS

(a) Check for PCV hose connections.
OK:
PCV hose is connected correctly and is not damaged.

NG → **REPAIR OR REPLACE PCV HOSE**

OK

6	CHECK AIR INDUCTION SYSTEM

(a) Check the air induction system for vacuum leakage.
OK:
No leakage from air induction system.

NG → **REPAIR OR REPLACE AIR INDUCTION SYSTEM**

OK

7	CHECK FOR SPARKS AND IGNITION (See page ES-172)

NG → **REPAIR OR REPLACE IGNITION SYSTEM**

OK

8	CHECK FOR EXHAUST GAS LEAKAGE

(a) Check for exhaust gas leakage.
OK:
No gas leakage.

NG → **REPAIR OR REPLACE EXHAUST SYSTEM**

OK ↓

9	CHECK FUEL PRESSURE

(a) Check the fuel pressure (See page FU-9).
Standard pressure:
304 to 343 kPa (3.1 to 3.5 kgf/cm^2, 44.1 to 49.7 psi)

NG → **REPAIR OR REPLACE FUEL SYSTEM**

OK ↓

10	INSPECT FUEL INJECTOR (INJECTION AND VOLUME)

(a) Check the injection volume (See page FU-14).
Standard injection volume:
76 to 92 cm^3 (4.6 to 5.6 cu in.) per 15 seconds

NG → **REPLACE FUEL INJECTOR**

OK ↓

11	INSPECT AIR-FUEL RATIO SENSOR (HEATER RESISTANCE) (See page ES-84)

NG → **REPLACE AIR-FUEL RATIO SENSOR**

OK ↓

12	INSPECT ENGINE ROOM J/B (EFI RELAY) (See page ES-85)

NG → **REPLACE ENGINE ROOM J/B**

OK ↓

13	CHECK HARNESS AND CONNECTOR (A/F SENSOR - ECM) (See page ES-325)

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

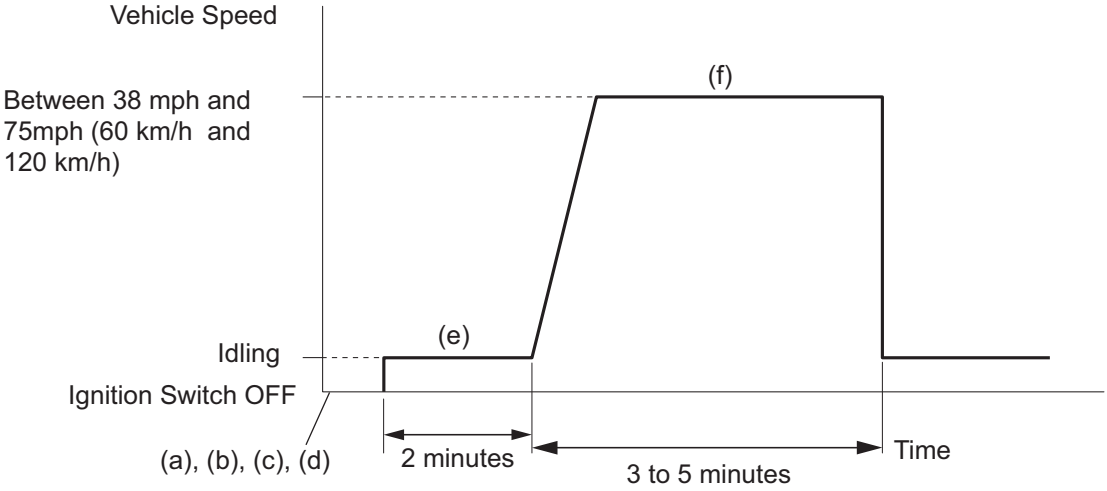
OK ↓

ES

14	REPLACE AIR-FUEL RATIO SENSOR

NEXT

15	PERFORM CONFIRMATION DRIVING PATTERN



(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and turn the tester on.
(c) Clear the DTCs (See page ES-38).
(d) Switch the ECM from normal mode to check mode using the tester (See page ES-41).
(e) Start the engine and warm it up with all the accessories switched OFF.
(f) Drive the vehicle at between 38 mph and 75 mph (60 km/h and 120 km/h) and at an engine speed of between 1,400 rpm and 3,200 rpm for 3 to 5 minutes.

HINT:
If the system is still malfunctioning, the MIL will be illuminated during step (f).

NOTICE:
If the conditions in this test are not strictly followed, no malfunction will be detected.

NEXT

16	CHECK WHETHER DTC OUTPUT RECURS (DTC P0171 OR P0172)

(a) On the intelligent tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(b) Read the DTCs.

Result

Display (DTC Output)	Proceed to
No output	A
P0171 or P0172	B

A → END

DTC	P0300	Random / Multiple Cylinder Misfire Detected

DTC	P0301	Cylinder 1 Misfire Detected

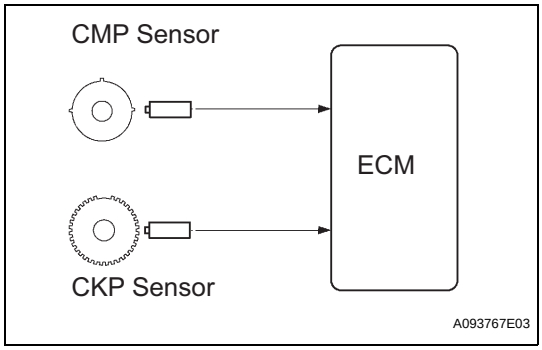
DTC	P0302	Cylinder 2 Misfire Detected

DTC	P0303	Cylinder 3 Misfire Detected

DTC	P0304	Cylinder 4 Misfire Detected

ES

DESCRIPTION



When the engine misfires, high concentrations of hydrocarbons (HC) enter the exhaust gas. Extremely high HC concentration levels can cause increases in exhaust emission levels. High concentrations of HC can also cause increases in the Three-Way Catalytic Converter (TWC) temperature, which may cause damage to the TWC. To prevent these increases in emissions and to limit the possibility of thermal damage, the ECM monitors the misfire rate. When the temperature of the TWC reaches the point of thermal degradation, the ECM blinks the MIL. To monitor misfires, the ECM uses both the Camshaft Position (CMP) sensor and the Crankshaft Position (CKP) sensor. The CMP sensor is used to identify any misfiring cylinders and the CKP sensor is used to measure variations in the crankshaft rotation speed. Misfires are counted as when the crankshaft rotation speed variations exceed predetermined thresholds. If the misfire rate exceeds the threshold level, and could cause emission deterioration, the ECM illuminates the MIL and sets a DTC.

DTC No.	DTC Detection Condition	Trouble Area
P0300	Simultaneous misfiring of several cylinders detected (2 trip detection logic)	• Open or short in engine wire harness • Connector connection • Vacuum hose connections • Ignition system • Injector • Fuel pressure • Mass Air Flow (MAF) meter • Engine Coolant Temperature (ECT) sensor • Compression pressure • Valve clearance • Valve timing • PCV valve and hose • PCV hose connections • Air induction system • ECM
P0301 P0302 P0303 P0304	Misfiring of specific cylinder detected (2 trip detection logic)	

When DTCs for misfiring cylinders are randomly set, but DTC P0300 is not set, it indicates that misfires have been detected in different cylinders at different times. DTC P0300 is only set when several misfiring cylinders are detected at the same time.

MONITOR DESCRIPTION

The ECM illuminates the MIL and sets a DTC when either of the following conditions, which could cause emission deterioration, is detected (2 trip detection logic).

- Within the first 1,000 crankshaft revolutions of the engine starting, an excessive misfiring rate (approximately 20 to 50 misfires per 1,000 crankshaft revolutions) occurs once.
- After the first 1,000 crankshaft revolutions, an excessive misfiring rate (approximately 20 to 50 misfires per 1,000 crankshaft revolutions) occurs 4 times in sequential crankshaft revolutions.

The ECM flashes the MIL and sets a DTC when either of the following conditions, which could cause Three-Way Catalytic Converter (TWC) damage, is detected (2 trip detection logic).

- In every 200 crankshaft revolutions at a high engine rpm, the threshold misfiring percentage is recorded once.
- In every 200 crankshaft revolutions at a normal engine rpm, the threshold misfiring percentage is recorded 3 times.

MONITOR STRATEGY

Related DTCs	P0300: Multiple cylinder misfire P0301: Cylinder 1 misfire P0302: Cylinder 2 misfire P0303: Cylinder 3 misfire P0304: Cylinder 4 misfire
Required Sensors/Components (Main)	Crankshaft position sensor and camshaft position sensor
Required Sensors/Components (Related)	Engine coolant temperature and intake air temperature sensors and mass air flow meter
Frequency of Operation	Continuous
Duration	1,000 crankshaft revolutions: Emission related misfire 200 crankshaft revolutions: Catalyst damaged misfire
MIL Operation	2 driving cycles: Emission related misfire MIL flashes immediately: Catalyst damaged misfire
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Misfire:

Monitor runs whenever following DTCs are not present	P0100 - P0103 (MAF meter) P0110 - P0113 (IAT sensor) P0115 - P0118 (ECT sensor) P0120 - P0223, P2135 (TP sensor) P0125 (Insufficient ECT for Closed Loop) P0327, P0328 (Knock sensor) P0335 (CKP sensor) P0340 (CMP sensor) P0500 (VSS)
Battery voltage	8 V or more
VVT system	Not operated by scan tool
Engine RPM	400 to 6,400 rpm
Either of the following conditions (a) or (b) is met	-
(a) ECT at engine start	More than -7°C (19°F)
(b) ECT	More than 20°C (68°F)
Fuel cut	OFF

Monitor period of emission-related-misfire:

First 1,000 revolutions after engine start, or Check Mode	Crankshaft 1,000 revolutions
Except above	Crankshaft 1,000 revolutions x 4

Monitor period of catalyst-damaged-misfire (MIL blinks):

All of the following conditions 1, 2 and 3 are met	Crankshaft 200 revolutions
1. Driving cycles	1st

2. Check mode	OFF
3. Engine RPM	Less than 2,600 rpm
Except above (MIL blinks immediately)	Crankshaft 200 revolutions x 3

TYPICAL MALFUNCTION THRESHOLDS

Monitor period of emission-related-misfire:

Misfire rate	PZEV: 1.33 % or more Except PZEV: 1.266 % or more

Monitor period of catalyst-damaged-misfire (MIL blinks):

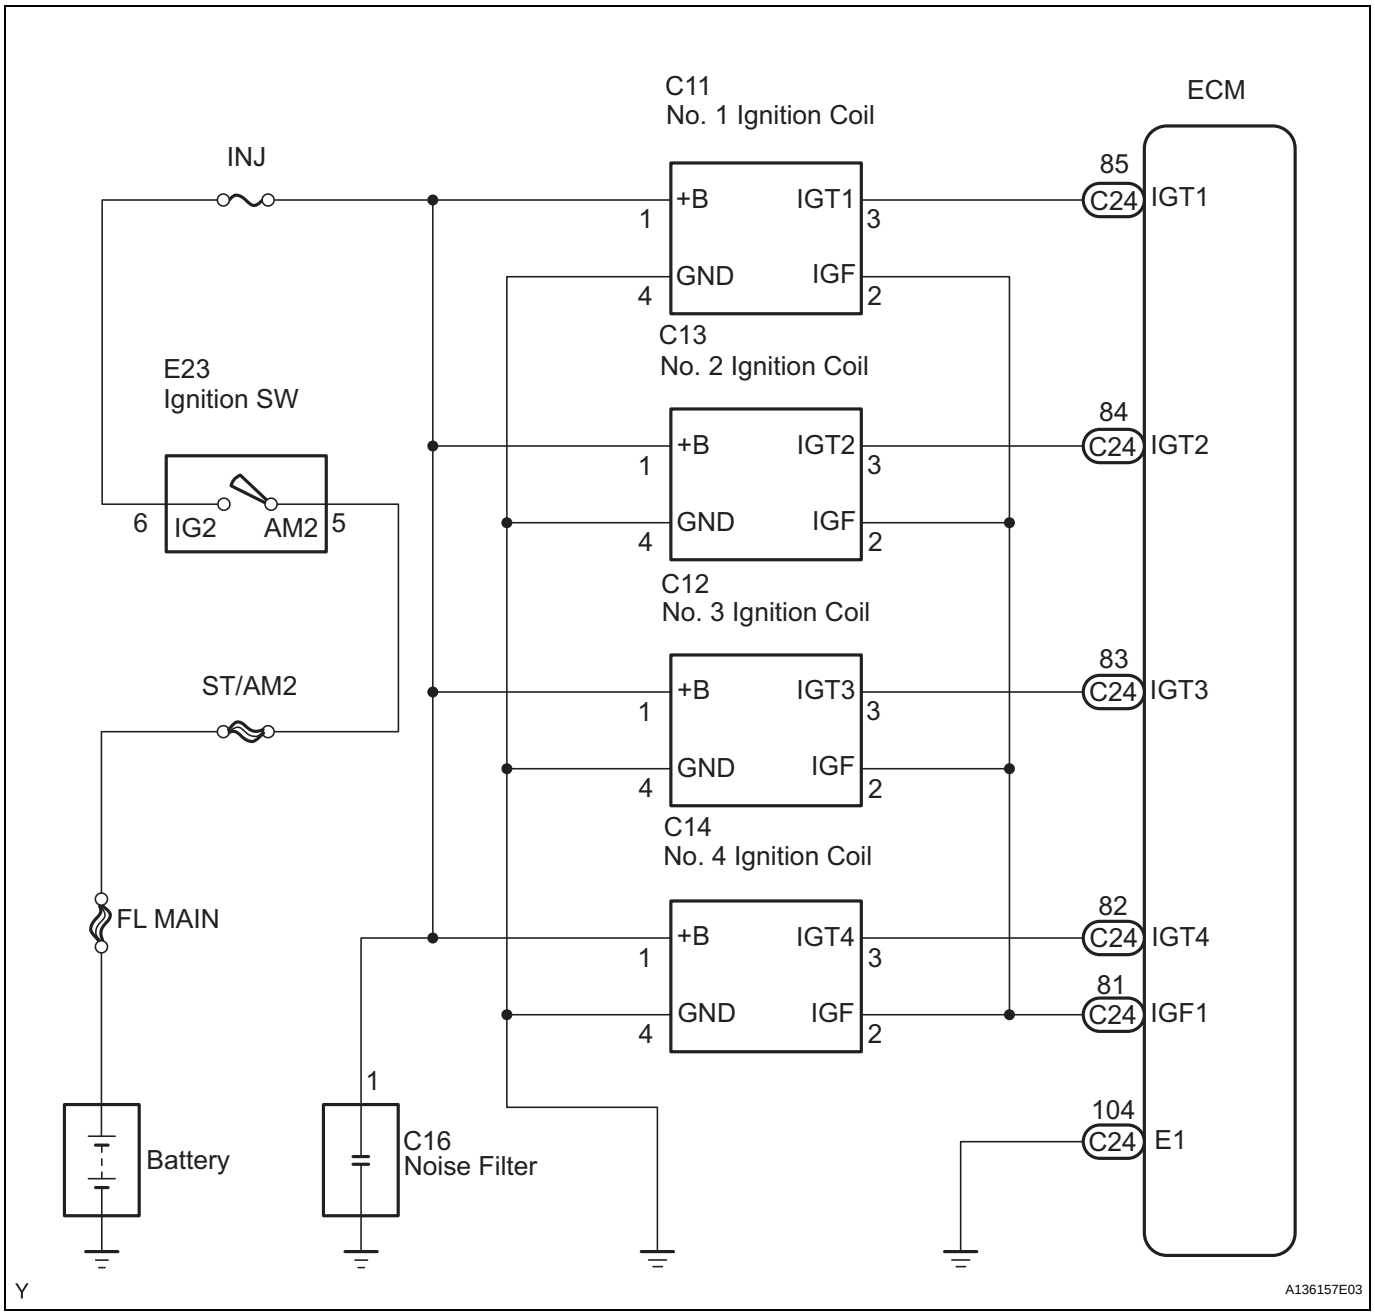
Number of misfire per 200 revolutions	PZEV: 82 or more (varies with intake air amount and RPM) Except PZEV: 118 or more (varies with intake air amount and RPM)

MONITOR RESULT

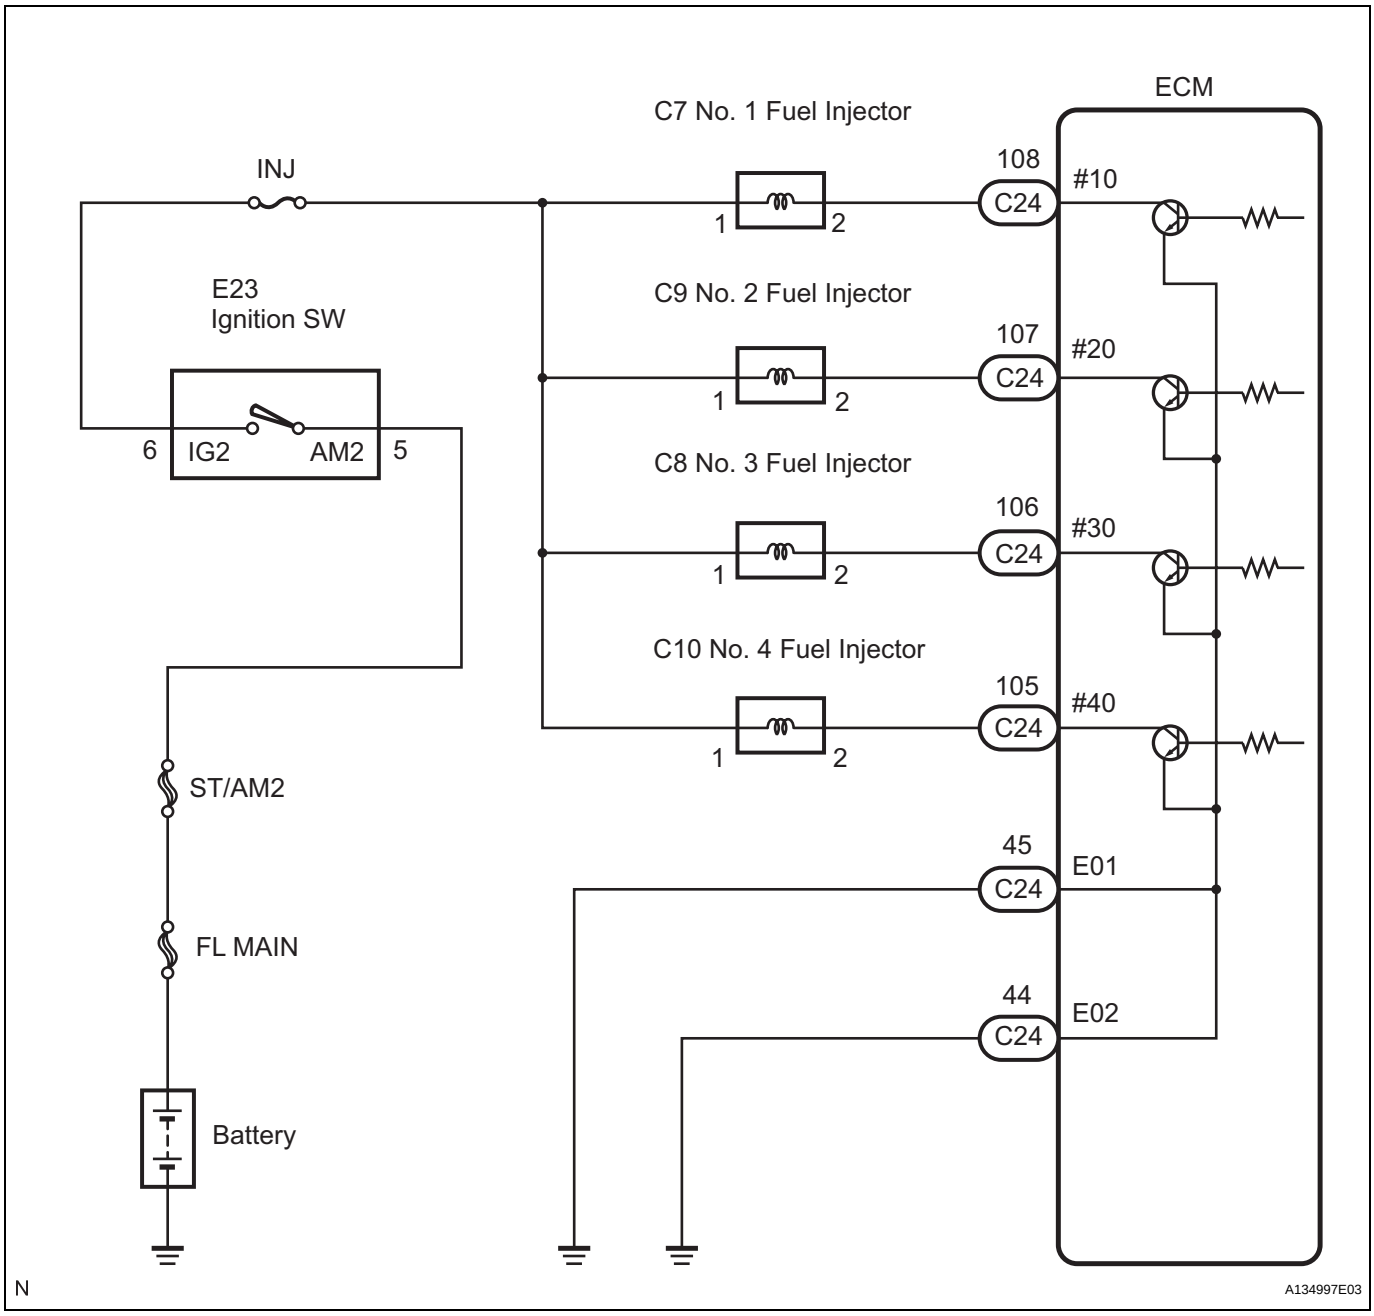
Refer to CHECKING MONITOR STATUS (See page ES-20).

WIRING DIAGRAM

Wiring diagram of the ignition system.



Wiring diagram of the injector circuit.



CONFIRMATION DRIVING PATTERN

1. Connect the intelligent tester to the DLC3.
2. Turn the ignition switch to the ON position.
3. Turn the tester on.
4. Record the DTC(s) and freeze frame data.
5. Using the tester, switch the ECM from normal mode to check mode (See page ES-41).
6. Read the misfire counts of each cylinder (CYL #1 to #4) with the engine in an idling condition. If any misfire count is displayed, skip the following confirmation driving pattern.

7. Drive the vehicle several times with the conditions, such as engine rpm and engine load, shown in MISFIRE RPM and MISFIRE LOAD in the DATA LIST.
   HINT:
   In order to store misfire DTCs, it is necessary to drive the vehicle for the period of time shown in the table below, with the MISFIRE RPM and MISFIRE LOAD in the DATA LIST.

Engine RPM	Duration
Idling	3.5 minutes or more
1,000	3 minutes or more
2,000	1.5 minutes or more
3,000	1 minute or more

8. Check whether misfires have occurred by checking for DTCs and freeze frame data.
   HINT:
   Do not turn the ignition switch off until the stored DTC(s) and freeze frame data have been recorded. When the ECM returns to normal mode (default), the stored DTC(s), freeze frame data and other data will be erased.
9. Record the DTC(s), freeze frame data and misfire counts.
10. Turn the ignition switch off and wait for at least 5 seconds.

ES

INSPECTION PROCEDURE

HINT:

- If any DTCs other than misfire DTCs are output, troubleshoot those DTCs first.
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- If the misfire does not recur when the vehicle is brought to the workshop, reproduce the conditions stored in the freeze frame data.
- If the misfire still cannot be reproduced even though the conditions stored in the freeze frame data have been duplicated, one of the following factors is considered to be a possible cause of the problem:
  (a) The fuel level is low.
  (b) Improper fuel is used.
  (c) The spark plugs are dirty.
  (d) The problem is complex due to multiple factors.
- After finishing repairs, check that no misfires occur in each cylinder (CYL #1, #2, #3 and #4).
- Be sure to confirm that no misfiring cylinder DTCs are set again by conducting the confirmation driving pattern, after the repairs.
- For 6 and 8 cylinder engines, the ECM intentionally does not set the specific misfiring cylinder DTCs at a high engine RPM. If misfires only occur during high engine RPM driving, only DTC P0300 is set.
  In the event of DTC P0300 being present, perform the following operations:
  (a) Clear the DTC (See page ES-38).
  (b) Start the engine and conduct the confirmation driving pattern.
  (c) Read the misfiring rates of each cylinder or DTC(s) using the tester.
  (d) Repair the cylinder(s) that has a high misfiring rate or is indicated by the DTC.
  (e) After finishing repairs, conduct the confirmation driving pattern again, in order to verify that DTC P0300 is not set.
- When either SHORT FT #1 or LONG FT #1 in the freeze frame data is outside the range of +-20 %, the air-fuel ratio may be rich (-20 % or less) or lean (+20 % or more).
- When the COOLANT TEMP in the freeze frame data is less than 75°C (167°F), the misfires occurred only while warming up the engine.

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO MISFIRE DTCS)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P0300, P0301, P0302, P0303 and/or P0304	A
P0300, P0301, P0302, P0303 and/or P0304 and other DTCs	B

HINT:
If any DTCs other than P0300, P0301, P0302, P0303 and P0304 are output, troubleshoot those DTCs first.

B → GO TO DTC CHART

A

2	READ VALUE USING INTELLIGENT TESTER (MISFIRE RPM AND MISFIRE LOAD)

(a) Connect the intelligent tester the DLC3.
(b) Turn the ignition switch to the ON position and turn the tester on.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / MISFIRE / MISFIRE RPM and MISFIRE LOAD.
(d) Read and note the MISFIRE RPM and MISFIRE LOAD (engine load) values.
HINT:
The MISFIRE RPM and MISFIRE LOAD indicate the vehicle conditions under which the misfire occurred.

NEXT

3	CHECK PCV HOSE CONNECTIONS

OK:
PCV hose is connected correctly and is not damaged.

NG → REPAIR OR REPLACE PCV HOSE

OK

4	CHECK MISFIRE COUNT (CYL #1, #2, #3 AND #4)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Clear the DTCs (See page ES-38).

(e) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / MISFIRE / CYL #1, #2, #3 and #4.
(f) Allow the engine to idle.
(g) Read each value for CYL #1 to #4 displayed on the tester. If no misfire counts occur in any cylinders, perform the following procedures:
  (1) Shift the gear selector lever to the D position.
  (2) Check the CYL #1 to #4.
  (3) If misfire counts are still not displayed, perform steps (h) and (i) and then check the misfire counts again.
(h) Drive the vehicle with the MISFIRE RPM and MISFIRE LOAD noted in the "READ VALUE USING INTELLIGENT TESTER (MISFIRE RPM AND MISFIRE LOAD)" procedures above.
(i) Read the CYL #1 to #4 or DTCs displayed on the tester.

Result

Misfire Count	Proceed to
Most misfires occur in only 1 or 2 cylinders	A
3 cylinders or more have equal misfire counts	B

HINT:
- If it is difficult to reproduce misfires for each cylinder, check the DATA LIST item called MISFIRE MARGIN. Try to find vehicle driving conditions that lower the MISFIRE MARGIN value. Values above 30 % are considered normal.
- If the freeze frame data's record of the ECT is below 75°C (167°F), the misfire may be detected only when the engine is cold.
- If the freeze frame data's record of the ENGINE RUN TIME is below 120 seconds, the misfire may be detected immediately after the engine is started.

B → **Go to step 14**

A

5	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (FUEL CUT #1 TO #4)

(a) Allow the engine to idle.
(b) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / FUEL CUT#1 (to #4).
(c) If a cylinder has a high misfire count, cut fuel to that cylinder. Compare the misfire count of the cylinder before fuel cut and after fuel cut.

Result

Misfire Count in Each Cylinder	Proceed to
Misfire count of cylinder before fuel cut and after fuel cut roughly same	A
Misfire count of cylinder before fuel cut lower than after fuel cut	B

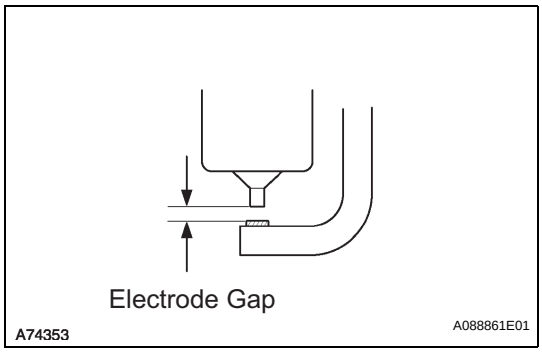
NOTICE:
This ACTIVE TEST cannot be performed while the vehicle is being driven.
HINT:
If the misfire count of the cylinder before and after the fuel cut are roughly the same, the cylinder is misfiring.
If the misfire count of the cylinder before the fuel cut is lower than after the fuel cut, the cylinder misfires sometimes.

B → **Go to step 11**

A

ES

6 CHECK SPARK PLUG



(a) Remove the ignition coil and the spark plug of the misfiring cylinder.
(b) Measure the spark plug electrode gap.
Standard gap:
1.0 to 1.1 mm (0.039 to 0.043 in.)
(c) Check the electrode for carbon deposits.
Recommended spark plug:

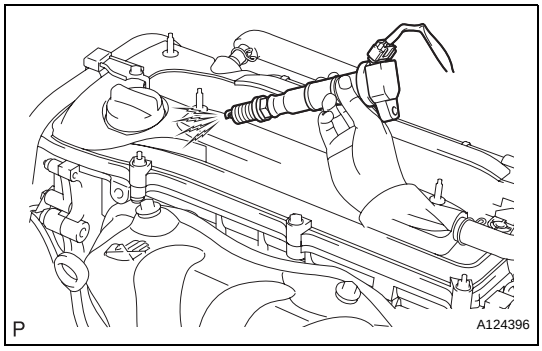
Manufacturers	Products
DENSO	SK20R11
NGK	IFR6A11

NOTICE:
If the electrode gap is larger than standard, replace the spark plug. Do not adjust the electrode gap.

NG → **REPLACE SPARK PLUG**

OK

7 CHECK FOR SPARKS AND IGNITION



(a) Perform a spark test.
CAUTION:
All ways disconnect all fuel injector connectors.
NOTICE:
Do not crank the engine for more than 2 seconds.
(1) Remove the ignition coil from the cylinder head.
(2) Install the spark plug onto the ignition coil.
(3) Disconnect the 4 fuel injector connectors.
(4) Attach the spark plug assembly to the cylinder head.
(5) Crank the engine for less than 2 seconds and check for sparks.
OK:
Sparks jump across electrode gap.
(6) Reconnect the 4 fuel injector connectors.
(7) Install the ignition coil.

NG → **Go to step 9**

OK

8	CHECK CYLINDER COMPRESSION PRESSURE OF MISFIRING CYLINDER

(a) Measure the cylinder compression pressure of the misfiring cylinder (See page EM-3).

OK → **Go to step 10**

NG

CHECK ENGINE TO DETERMINE CAUSE OF LOW COMPRESSION

ES

9	CHANGE NORMAL SPARK PLUG AND CHECK FOR SPARKS OF MISFIRING CYLINDER

(a) Change the installed spark plug with a spark plug that functions normally.

(b) Perform a spark test.

CAUTION:

Always disconnect all fuel injector connectors.

NOTICE:

Do not crank the engine for more than 2 seconds.

(1) Install the spark plug onto the ignition coil.
(2) Disconnect the 4 fuel injector connectors.
(3) Attach the spark plug assembly to the cylinder head.
(4) Crank the engine for less than 2 seconds and check for sparks.

OK:

Sparks jump across electrode gap.

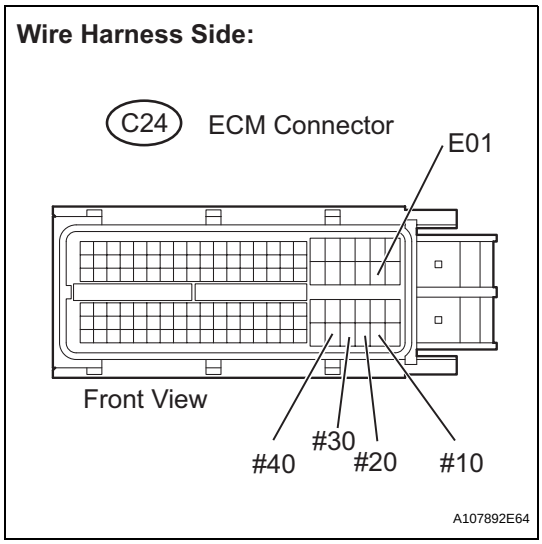
(5) Reconnect the 4 fuel injector connectors.
(6) Install the ignition coil.

NG → **REPLACE IGNITION COIL ASSEMBLY THEN CONFIRM THAT THERE IS NO MISFIRE**

OK

REPLACE SPARK PLUG

10	INSPECT ECM TERMINAL OF MISFIRING CYLINDER (#10, #20, #30, AND /OR #40 VOLTAGE)



(a) Disconnect the C24 ECM connector.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage between the terminals of the ECM connector.

Standard voltage

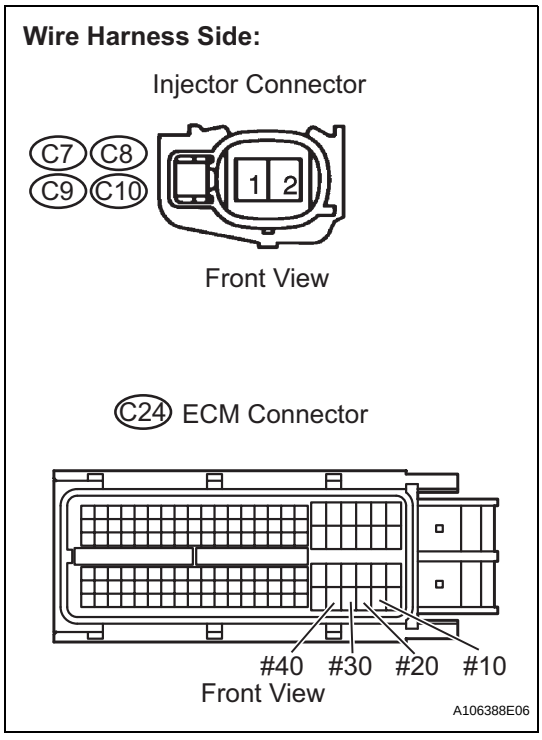
Tester Connection	Specified Condition
C24-108 (#10) - C24-45 (E01)	9 to 14 V
C24-107 (#20) - C24-45 (E01)	9 to 14 V
C24-106 (#30) - C24-45 (E01)	9 to 14 V
C24-105 (#40) - C24-45 (E01)	9 to 14 V

(d) Reconnect the ECM connector.

OK → **Go to step 12**

NG

11	CHECK HARNESS AND CONNECTOR (INJECTOR - ECM)



(a) Disconnect the C7 to C10 injector connectors (of the misfiring cylinder).
(b) Disconnect the C24 ECM connector.
(c) Turn the ignition switch to the ON position.
(d) Measure the resistance and voltage between the injector and the ECM connector terminals.

Standard voltage

Cylinder	Tester Connection	Specified Condition
No. 1	C7-1 - Ground	9 to 14 V
No. 2	C9-1 - Ground	9 to 14 V
No. 3	C8-1 - Ground	9 to 14 V
No. 4	C10-1 - Ground	9 to 14 V

Standard resistance

Cylinder	Tester Connection	Specified Condition
No. 1	C7-2 - Ground	10 kΩ or higher
	C7-2 - C24-108 (#10)	Below 1 Ω
No. 2	C9-2 - Ground	10 kΩ or higher
	C9-2 - C24-107 (#20)	Below 1 Ω
No. 3	C8-2 - Ground	10 kΩ or higher
	C8-2 - C24-106 (#30)	Below 1 Ω
No. 4	C10-2 - Ground	10 kΩ or higher
	C10-2 - C24-105 (#40)	Below 1 Ω

(e) Reconnect the injector connector.
(f) Reconnect the ECM connector.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

12 CHECK FUEL INJECTOR OF MISFIRING CYLINDER

(a) Check the injector injection (whether fuel volume is high or low, and whether injection pattern is poor).

NG → REPLACE FUEL INJECTOR ASSEMBLY

OK

13 CHECK VALVE CLEARANCE OF MISFIRING CYLINDER

NG → ADJUST VALVE CLEARANCE

OK

14 CHECK AIR INDUCTION SYSTEM

(a) Check the air induction system for vacuum leakage.
OK:
No leakage from air induction system.

NG → REPAIR OR REPLACE AIR INDUCTION SYSTEM

OK

15 CHECK VALVE TIMING (See page ES-78)

NG → ADJUST VALVE TIMING

OK

16 CHECK FUEL PRESSURE

(a) Check the fuel pressure (See page FU-9).

NG → CHECK AND REPLACE FUEL PUMP, PRESSURE REGULATOR, FUEL PIPE LINE AND FILTER

OK

17	READ VALUE USING INTELLIGENT TESTER (COOLANT TEMP) (See page ES-160)

NG → REPLACE ENGINE COOLANT TEMPERATURE SENSOR

OK ↓

18	READ VALUE USING INTELLIGENT TESTER (MAF) (See page ES-159)

NG → REPLACE MASS AIR FLOW METER

OK ↓

CHECK FOR INTERMITTENT PROBLEMS

DTC	P0327	Knock Sensor 1 Circuit Low Input (Bank 1 or Single Sensor)

DTC	P0328	Knock Sensor 1 Circuit High Input (Bank 1 or Single Sensor)

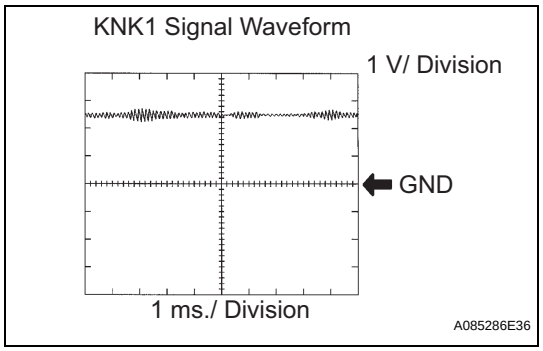
DESCRIPTION

Flat type knock sensors (non-resonant type) have structures that can detect vibrations over a wide band of frequencies: between approximately 6 kHz and 15 kHz.
Knock sensor is fitted onto the engine block to detect engine knocking.
The knock sensor contains a piezoelectric element which generates a voltage when it becomes deformed. The voltage is generated when the engine block vibrates due to knocking. Any occurrence of engine knocking can be suppressed by delaying the ignition timing.

ES

DTC No.	DTC Detection Condition	Trouble Area
P0327	Output voltage of knock sensor less than 0.5 V (1 trip detection logic)	• Short in knock sensor circuit • Knock sensor • ECM
P0328	Output voltage of knock sensor more than 4.5 V (1 trip detection logic)	• Open in knock sensor circuit • Knock sensor • ECM

HINT:
When any of DTCs P0327 and P0328 are set, the ECM enters fail-safe mode. During fail-safe mode, the ignition timing is delayed to its maximum retardation. Fail-safe mode continues until the ignition switch is turned off.
Reference: Inspection using an oscilloscope



The correct waveform is as shown.

Items	Contents
Terminals	KNK1 - EKNK
Equipment Settings	1 V/Division 1 ms./Division
Conditions	Keep engine speed at 4,000 rpm with warm engine

MONITOR DESCRIPTION

If the output voltage transmitted by the knock sensor remains low or high for more than 1 second, the ECM interprets this as a malfunction in the sensor circuit, and sets a DTC.
The monitor for DTCs P0327 and P0328 begins to run when 5 seconds have elapsed since the engine was started.
If the malfunction is not repaired successfully, either DTC P0327 or P0328 is set 5 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P0327: Knock sensor range check (Low voltage) P0328: Knock sensor range check (High voltage)
Required Sensors/Components (Main)	Knock sensor
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	1 second
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

ES

Monitor runs whenever following DTCs are not present	None
Battery voltage	10.5 V or more
Time after engine start	5 seconds or more
Ignition switch	ON
Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS

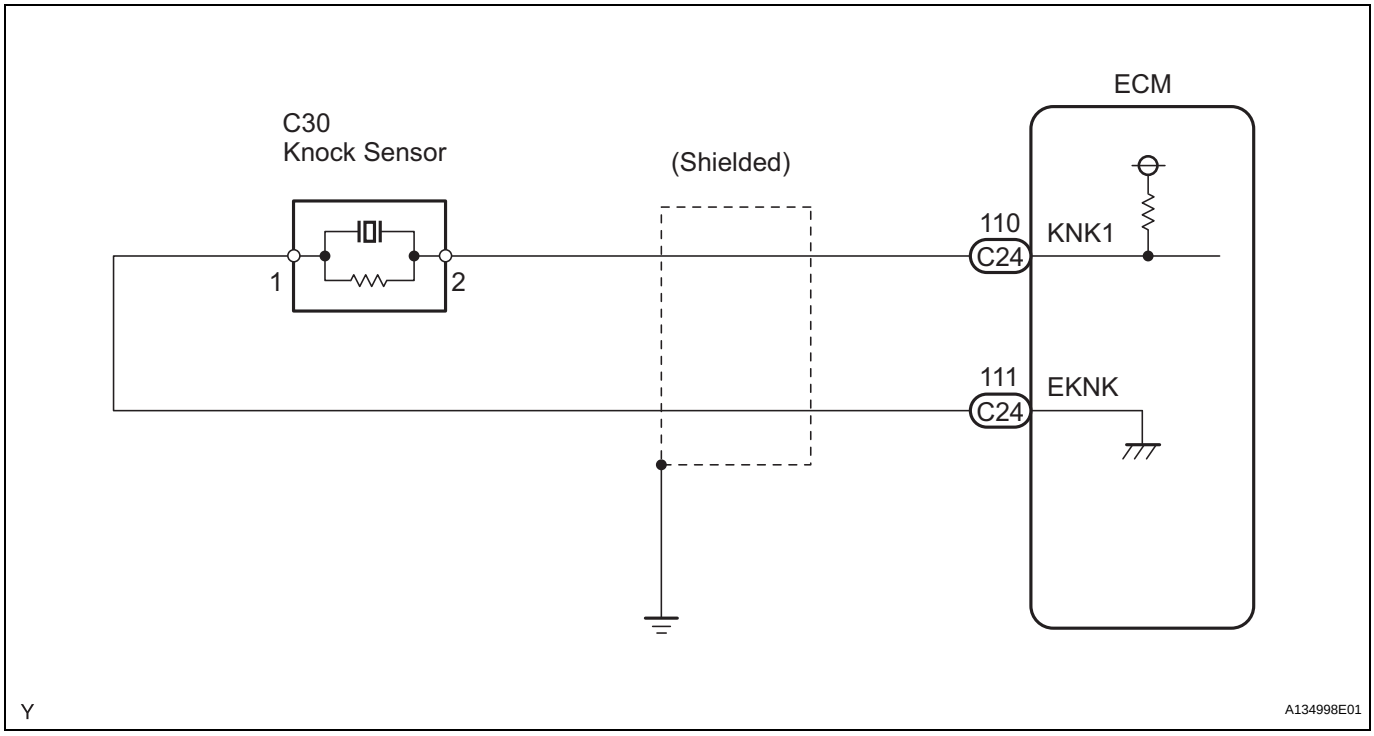
Knock Sensor Range Check (Low voltage) P0327:

Knock sensor voltage	Less than 0.5 V

Knock Sensor Range Check (High voltage) P0328:

Knock sensor voltage	More than 4.5 V

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	READ VALUE USING INTELLIGENT TESTER (KNOCK FB VAL)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the tester on.
(c) Warm up the engine.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / USER DATA / KNOCK FB VAL.
(e) Read the values displayed on the tester while driving the vehicle.
Standard:
The values change.
HINT

Malfunction does not occur	Knock Feedback Values change
Malfunctions occur	Knock Feedback Values do not change

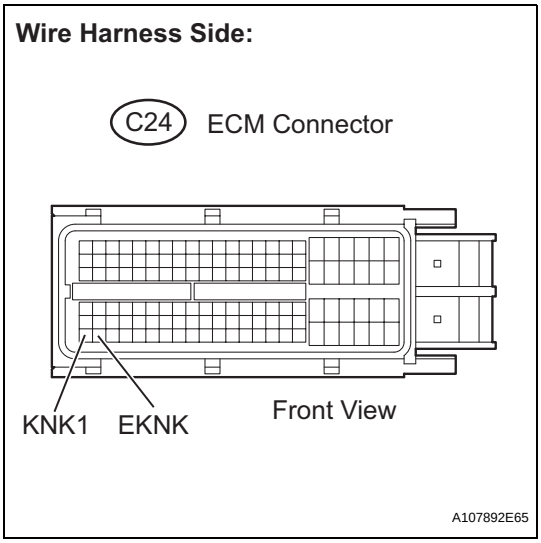
HINT:
The knock feedback value change can be confirmed by running the engine with a high load, for example, by activating the air conditioning system and revving up the engine.

NG → **Go to step 2**

OK

CHECK FOR INTERMITTENT PROBLEMS

2	CHECK HARNESS AND CONNECTOR (ECM - KNOCK SENSOR)



(a) Disconnect the C24 ECM connector.
(b) Measure the resistance between the terminals.
Standard

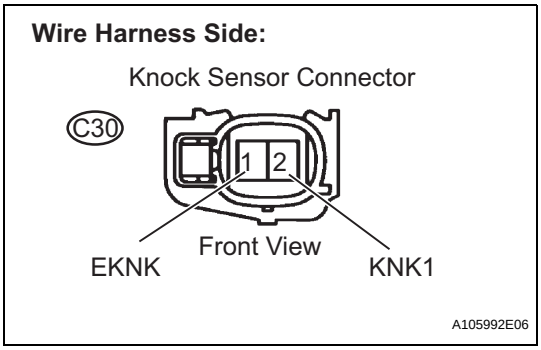
Tester Connection	Specified Condition
C24-110 (KNK1) - C24-111 (EKNK)	120 to 280 kΩ at 20°C (68°F)

(c) Reconnect the ECM connector.

NG → **Go to step 4**

OK

3	INSPECT ECM (KNK1 VOLTAGE)



(a) Disconnect the C30 knock sensor connector.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage between the knock sensor terminals.
Standard voltage

Tester Connection	Specified Condition
C30-2 (KNK1) - C30-1 (EKNK)	4.5 to 5.5 V

(d) Reconnect the knock sensor connector.

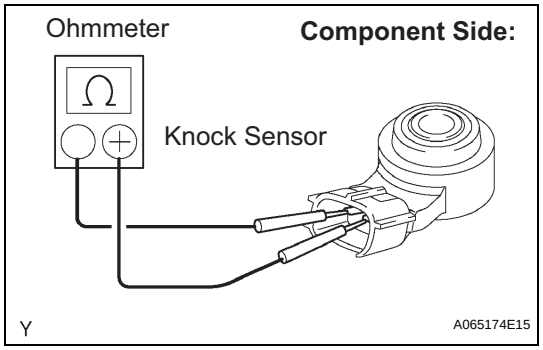
NOTICE:
Fault may be intermittent. Check the wire harness and connectors carefully and retest.

NG → **REPLACE ECM**

OK

CHECK FOR INTERMITTENT PROBLEMS

4	INSPECT KNOCK SENSOR



(a) Remove the knock sensor.
(b) Measure the resistance between the terminals.
Standard resistance

Tester Connection	Specified Condition
2 (KNK1) - 1 (EKNK)	120 to 280 kΩ at 20°C (68°F)

(c) Reinstall the knock sensor.

NG → **REPLACE KNOCK SENSOR**

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR

ES

DTC	P0335	Crankshaft Position Sensor "A" Circuit

DTC	P0339	Crankshaft Position Sensor "A" Circuit Intermittent

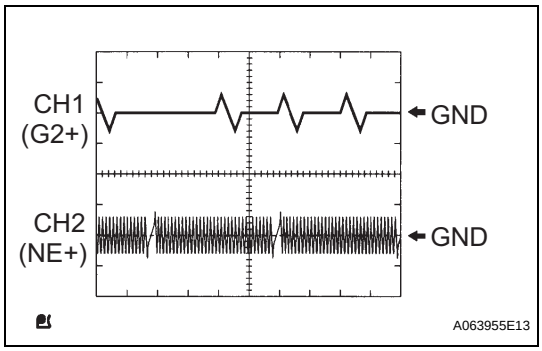
DESCRIPTION

The Crankshaft Position (CKP) sensor system consists of a CKP sensor plate and a pickup coil.
The sensor plate has 34 teeth and is installed on the crankshaft. The pickup coil is made of wound copper wire, an iron core and magnet. The sensor plate rotates and, as each tooth passes through the pickup coil, a pulse signal is created. The pickup coil generates 34 signals per engine revolution. Based on these signals, the ECM calculates the crankshaft position and engine RPM. Using these calculations, the fuel injection time and ignition timing are controlled.

ES

DTC No.	DTC Detection Condition	Trouble Area
P0335	When either condition below is met: • No CKP sensor signal to ECM while cranking (1 trip detection logic) • No CKP sensor signal to ECM at engine speed of 600 rpm or more (1 trip detection logic)	• Open or short in CKP sensor circuit • CKP sensor • CKP sensor plate • ECM
P0339	Under conditions (a), (b) and (c), no CKP sensor signal to ECM for 0.05 seconds or more (1 trip detection logic): (a) Engine speed 1,000 rpm or more (b) Starter signal OFF (c) 3 seconds or more have elapsed since starter signal switched from ON to OFF	• Open or short in CKP sensor circuit • CKP sensor • CKP sensor plate • ECM

Reference: Inspection using an oscilloscope.



HINT:
- The correct waveform is as shown.
- G2+ stands for the Camshaft Position (CMP) sensor signal, and NE+ stands for the CKP sensor signal.
- Grounding failure of the shielded wire may cause noise in waveforms.

Items	Contents
Terminals	CH1: G2+ - G2- CH2: NE+ - NE-
Equipment Settings	5 V/Division, 20 ms./Division
Conditions	Cranking or idling

MONITOR DESCRIPTION

If there is no signal from the CKP sensor despite the engine revolving, the ECM interprets this as a malfunction of the sensor.
If the malfunction is not repaired successfully, a DTC is set 10 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P0335: CKP sensor range check or rationality
Required Sensors/Components (Main)	CKP sensor
Required Sensors/Components (Related)	CMP sensor
Frequency of Operation	Continuous
Duration	3 times
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

All:

Monitor runs whenever following DTCs are not present	None

Case 1:

Time after starter OFF to ON	0.3 seconds or more
Number of CMP sensor signal pulse	6 times
Battery voltage	7 V or more
CMP sensor circuit	OK
Ignition switch	ON

Case 2:

Starter	OFF
Engine speed	600 rpm or more
Time after starter from ON to OFF	3 seconds or more

TYPICAL MALFUNCTION THRESHOLDS

Case 1:

Number of CKP sensor signal pulse	132 or less, and 174 or more

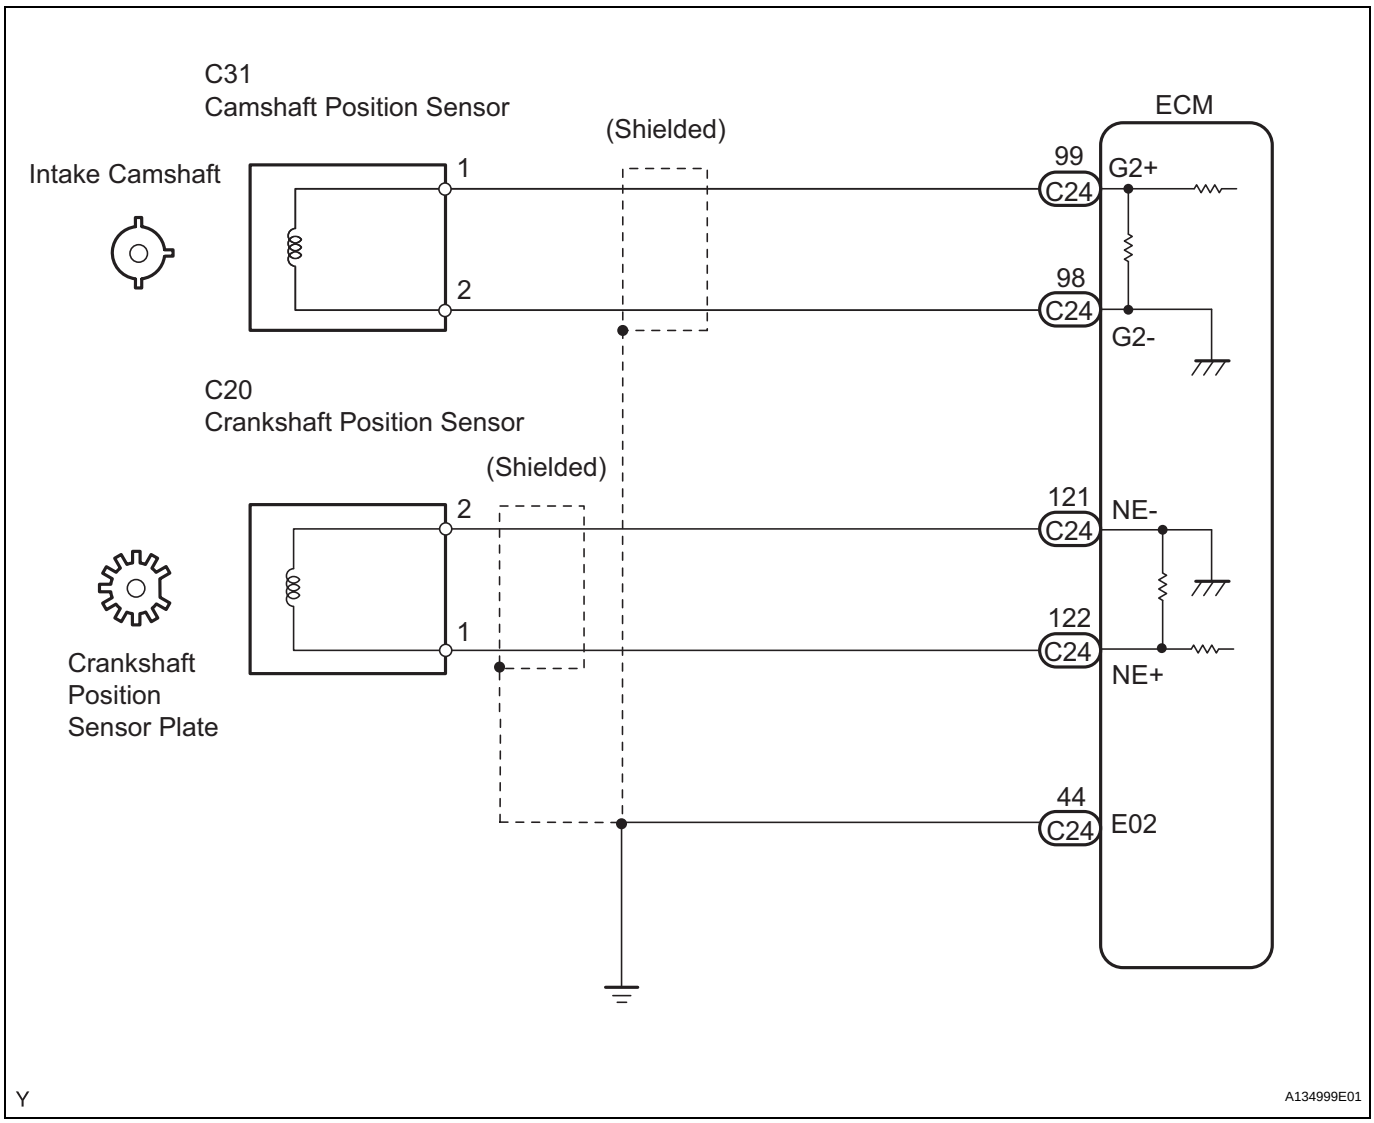
Case 2:

Engine speed signal	No signal

COMPONENT OPERATING RANGE

CKP sensor	• CKP sensor output voltage fluctuates while crankshaft revolving • 34 CKP sensor signals per crankshaft revolution

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

- If no problem is found through this diagnostic troubleshoot procedure, troubleshoot the engine mechanical systems.
- Check the engine speed. The engine speed can be checked by using the intelligent tester. Follow the procedure below:
  (a) Connect the intelligent tester to the DLC3.
  (b) Start the engine.
  (c) Turn the tester on.
  (d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / ENGINE SPD.
  The engine speed may be indicated as zero despite the engine revolving normally. This is caused by a lack of NE signals from the Crankshaft Position (CKP) sensor. Alternatively, the engine speed may be indicated as lower than the actual engine speed if the CKP sensor output voltage is insufficient.
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	READ VALUE USING INTELLIGENT TESTER (ENGINE SPD)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / ENGINE SPD.
(e) Start the engine.
(f) Read the values displayed on the tester while the engine is running.
Standard:
Correct values are displayed.
HINT:
- To check the engine speed change, display the graph on the tester.
- If the engine does not start, check the engine speed while cranking.
- If the engine speed indicated on the tester remains zero (0), there may be an open or short in the Crankshaft Position (CKP) sensor circuit.

ES

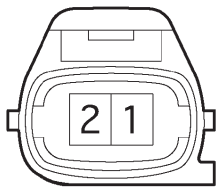
NG → **Go to step 2**

OK

CHECK FOR INTERMITTENT PROBLEMS

2	INSPECT CRANKSHAFT POSITION SENSOR (RESISTANCE)

Component Side:



CKP Sensor

G037727E07

(a) Disconnect the C20 CKP sensor connector.
(b) Measure the resistance between terminals 1 and 2.
Standard resistance

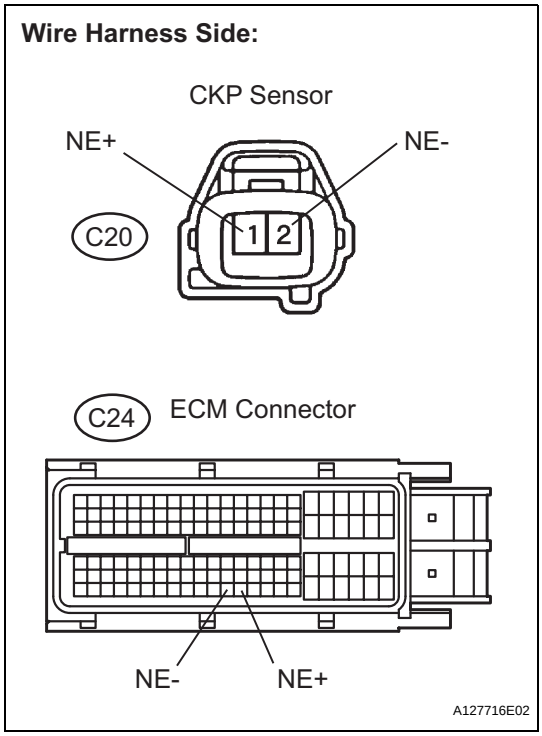
Tester Connection	Specified Condition
1 - 2	1,150 to 1,450 Ω at 20°C (68°F)

(c) Reconnect the CKP sensor connector.

NG → **REPLACE CRANKSHAFT POSITION SENSOR**

OK

3 CHECK HARNESS AND CONNECTOR (CRANKSHAFT POSITION SENSOR - ECM)



(a) Disconnect the C20 CKP sensor connector.
(b) Disconnect the C24 ECM connector.
(c) Measure the resistance between the terminals of the wire harness side connectors.

Standard resistance (Check for open)

Tester Connection	Specified Condition
C20-1 (NE+) - C24-122 (NE+)	Below 1 Ω
C20-2 (NE-) - C24-121 (NE-)	Below 1 Ω

Standard resistance (Check for short)

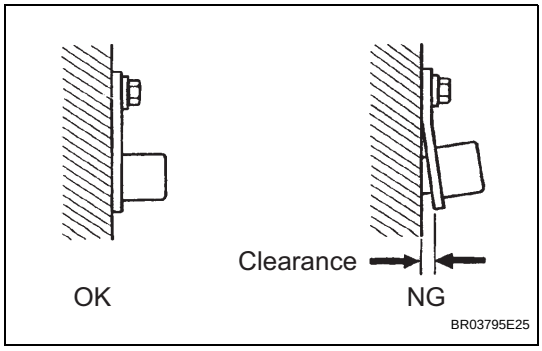
Tester Connection	Specified Condition
C20-1 (NE+) or C24-122 (NE+) - Body ground	10 kΩ or higher
C20-2 (NE-) or C24-121 (NE-) - Body ground	10 kΩ or higher

(d) Reconnect the ECM connector.
(e) Reconnect the CKP sensor connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 CHECK SENSOR INSTALLATION (CRANKSHAFT POSITION SENSOR)



(a) Check the CKP sensor installation condition.

OK:

Sensor is installed correctly.

NG → **SECURELY REINSTALL SENSOR**

OK

5 CHECK CRANKSHAFT POSITION SENSOR PLATE (TEETH OF SENSOR PLATE)

(a) Check the teeth of the sensor plate.

OK:

Sensor plate does not have any cracks or deformation.

NG → **REPLACE CRANKSHAFT POSITION SENSOR PLATE**

OK

6	REPLACE CRANKSHAFT POSITION SENSOR

NEXT

7	CHECK WHETHER DTC OUTPUT RECURS

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Clear the DTCs (See page ES-38).
(e) Start the engine.
(f) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(g) Read the DTCs.

ES

Result

Display (DTC Output)	Proceed to
No output	A
P0335 or P0339	B

HINT:
If the engine does not start, replace the ECM.

B → REPLACE ECM

A

END

DTC	P0340	Camshaft Position Sensor "A" Circuit (Bank 1 or Single Sensor)

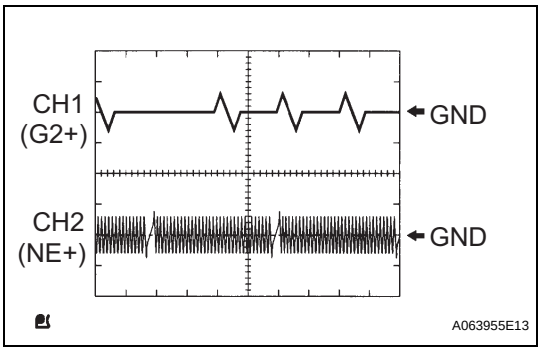
DESCRIPTION

The Camshaft Position (CMP) sensor consists of a magnet and an iron core which is wrapped with copper wire, and is installed onto the cylinder head. When the camshaft rotates, each of 3 teeth on the camshaft passes through the CMP sensor. This activates the internal magnet in the sensor, generating a voltage in the copper wire. The camshaft rotation is synchronized with the crankshaft rotation. When the crankshaft turns twice, the voltage is generated 3 times in the CMP sensor. The generated voltage in the sensor acts as a signal, allowing the ECM to locate the camshaft position. This signal is then used to control ignition timing, fuel injection timing, and the VVT system.

ES

DTC No.	DTC Detection Condition	Trouble Area
P0340	Case 1 • No Camshaft Position (CMP) sensor signal to ECM while cranking (2 trip detection logic) Case 2 • Camshaft/Crankshaft misalignment detected at engine speed of 600 rpm or more (1 trip detection logic)	• Open or short in CMP sensor circuit • CMP sensor • Camshaft • Jumped tooth of timing chain • ECM

HINT:
DTC P0340 indicates a malfunction relating to the CMP sensor (+) circuit (the wire harness between the ECM and CMP sensor, and the CMP sensor itself).
Reference: Inspection using an oscilloscope



HINT:
- The correct waveform is as shown in the illustration.
- G2+ stands for the CMP sensor signal, and NE+ stands for the Crankshaft Position (CKP) sensor signal.
- Grounding failure of the shielded wire may cause noise in waveforms.

Items	Contents
Terminals	CH1: G2+ - G2- CH2: NE+ - NE-
Equipment Settings	5 V/Division, 20 ms./Division
Conditions	Cranking or idling

MONITOR DESCRIPTION

If no signal is transmitted by the CMP sensor despite the engine revolving, or the rotation of the camshaft and the crankshaft is not synchronized, the ECM interprets this as a malfunction of the sensor.
If the malfunction is not repaired successfully, a DTC is set 10 seconds after the engine is next started.

MONITOR STRATEGY

Duration	4 seconds: CMP sensor range check 5 seconds: Camshaft position/crankshaft position misalignment
MIL Operation	2 driving cycles: CMP sensor range check Immediate: Camshaft position/crankshaft position misalignment
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

All:

Monitor runs whenever following DTCs are not present	None

Camshaft Position Sensor Range Check:

Starter	ON
Minimal battery voltage while starter ON	Less than 11 V

Camshaft Position/Crankshaft Position Misalignment:

Engine speed	600 rpm or more
Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS

Camshaft Position Sensor Range Check:

CMP sensor signal	No signal

Camshaft Position/Crankshaft Position Misalignment:

Camshaft position and crankshaft position phase	Misaligned

COMPONENT OPERATING RANGE

CMP sensor	• CMP sensor output voltage fluctuates while camshaft revolving • 3 CMP sensor signals per 2 crankshaft revolutions

WIRING DIAGRAM

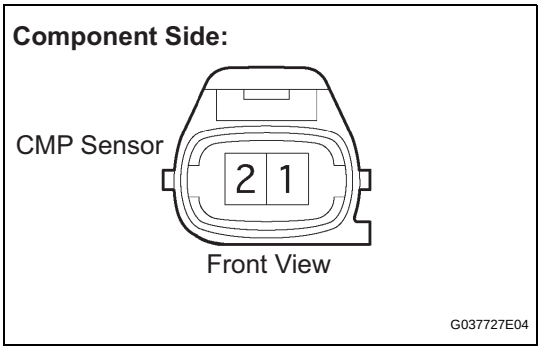
Refer to DTC P0335 (See page ES-179).

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	INSPECT CAMSHAFT POSITION SENSOR (RESISTANCE)



(a) Disconnect the C31 Camshaft Position (CMP) sensor connector.
(b) Measure the resistance between terminals 1 and 2.
Standard resistance

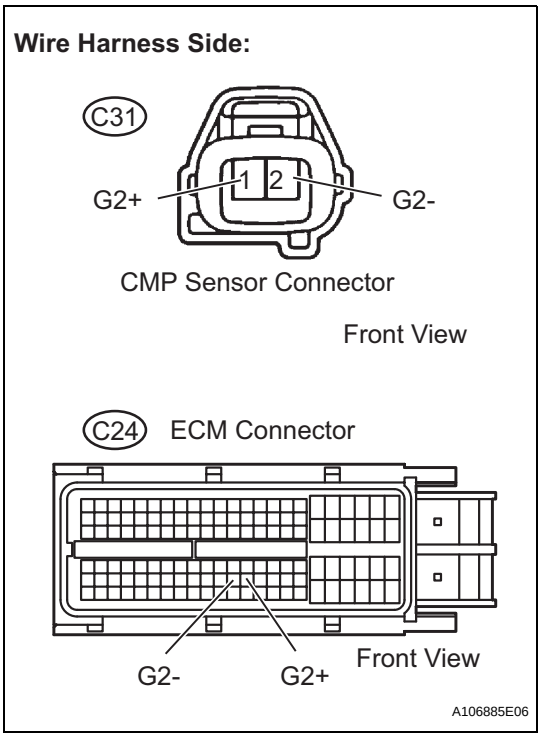
Tester Connection	Specified Condition
1 - 2	950 to 1,250 Ω

(c) Reconnect the CMP sensor connector.

NG → **REPLACE CAMSHAFT POSITION SENSOR**

OK

2	CHECK HARNESS AND CONNECTOR (CAMSHAFT POSITION SENSOR - ECM)



(a) Disconnect the C31 CMP sensor connector.
(b) Disconnect the C24 ECM connector.
(c) Measure the resistance between the terminals of the wire harness side connectors.
Standard resistance (Check for open)

Tester Connection	Specified Condition
C31-1 (G2+) - C24-99 (G2+)	Below 1 Ω
C31-2 (G2-) - C24-98 (G2-)	Below 1 Ω

Standard resistance (Check for short)

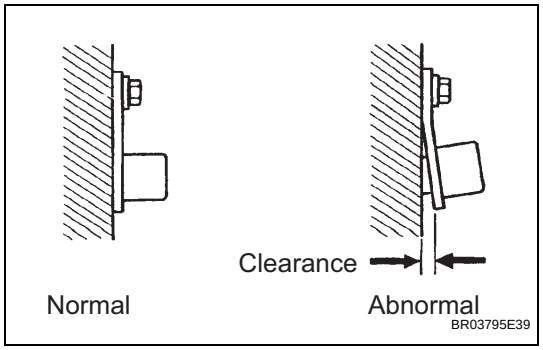
Tester Connection	Specified Condition
C31-1 (G2+) or C24-99 (G2+) - Body ground	10 kΩ or higher
C31-2 (G2-) or C24-98 (G2-) - Body ground	10 kΩ or higher

(d) Reconnect the ECM connector.
(e) Reconnect the CMP sensor connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	CHECK SENSOR INSTALLATION (CAMSHAFT POSITION SENSOR)



(a) Check the CMP sensor installation condition.
OK:
Sensor is installed correctly.

NG → **SECURELY REINSTALL SENSOR**

OK

4	CHECK VALVE TIMING (See page ES-78)

NG → **ADJUST VALVE TIMING**

OK

5	CHECK CAMSHAFT

(a) Check the teeth of the camshaft.
OK:
Camshaft teeth do not have any cracks or deformation.

NG → **REPLACE CAMSHAFT**

OK

6	REPLACE CAMSHAFT POSITION SENSOR

NEXT

7	CHECK WHETHER DTC OUTPUT RECURS

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Clear the DTCs (See page ES-38).
(e) Start the engine.
(f) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES.
(g) Read the DTCs.

Result

Display (DTC Output)	Proceed to
No output	A

A

END

DTC	P0351	Ignition Coil "A" Primary / Secondary Circuit

DTC	P0352	Ignition Coil "B" Primary / Secondary Circuit

DTC	P0353	Ignition Coil "C" Primary / Secondary Circuit

DTC	P0354	Ignition Coil "D" Primary / Secondary Circuit

DESCRIPTION

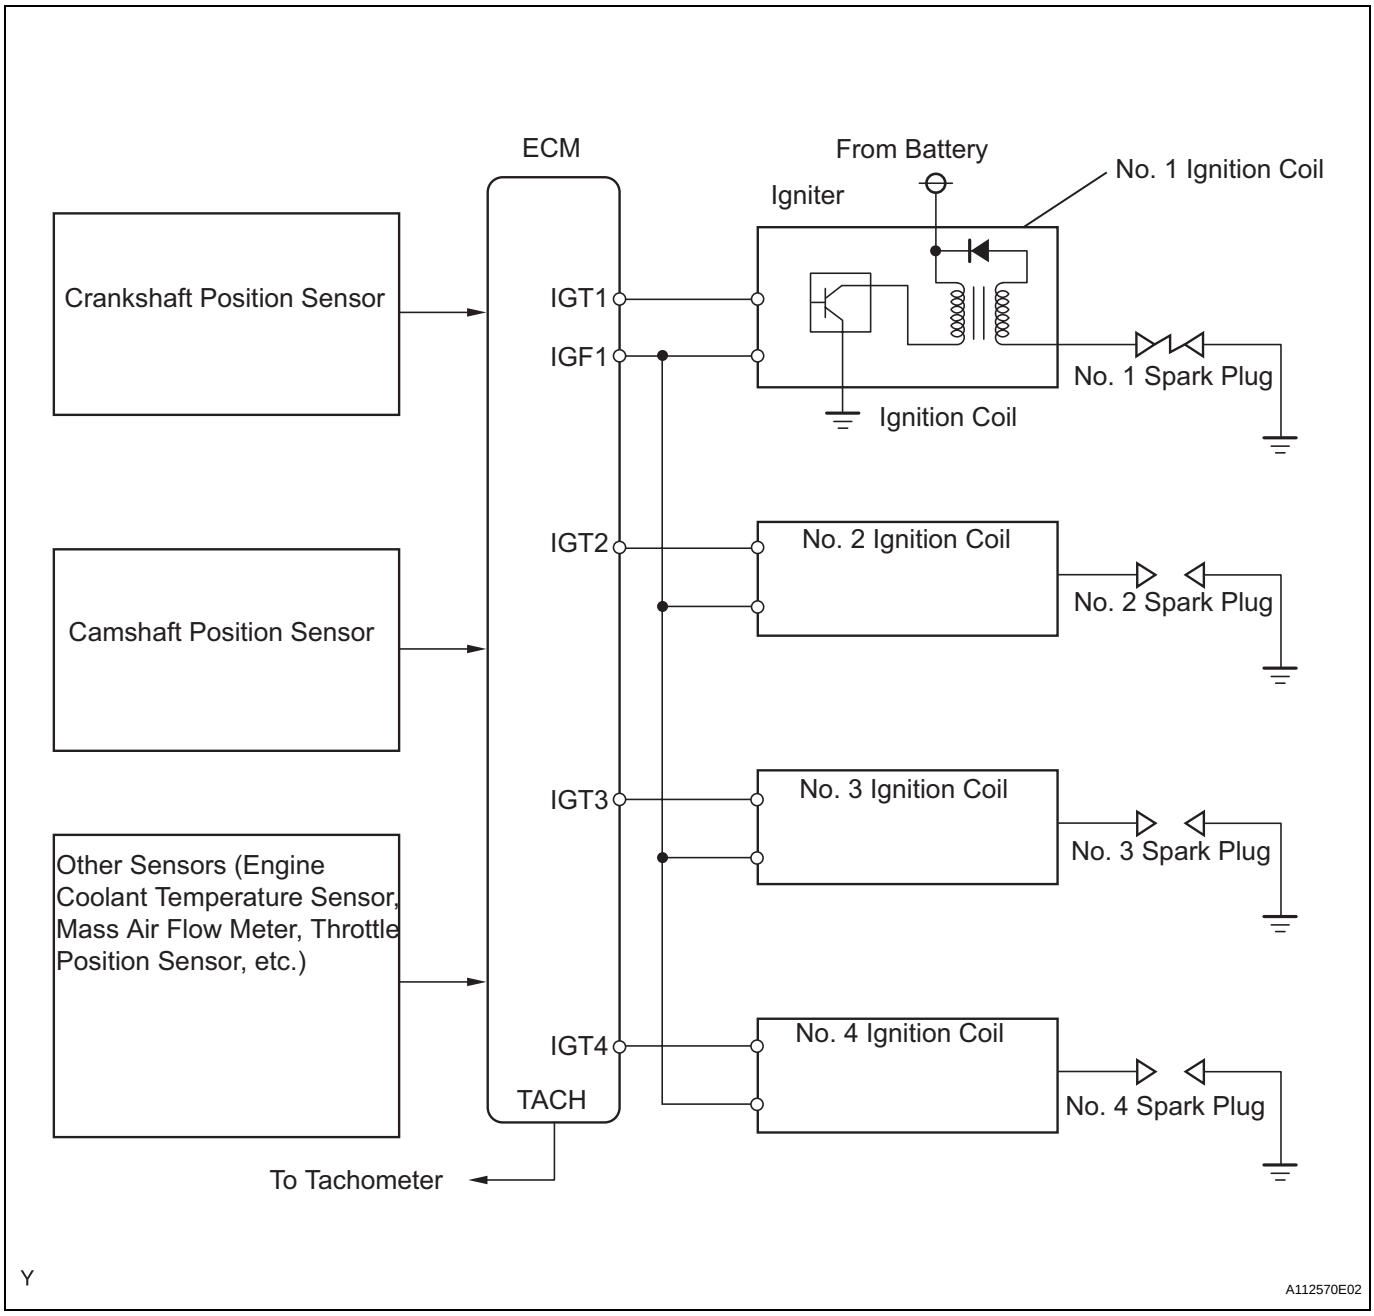
HINT:

- These DTCs indicate malfunctions relating to the primary circuit.
- If DTC P0351 is set, check the No. 1 ignition coil circuit.
- If DTC P0352 is set, check the No. 2 ignition coil circuit.
- If DTC P0353 is set, check the No. 3 ignition coil circuit.
- If DTC P0354 is set, check the No. 4 ignition coil circuit.

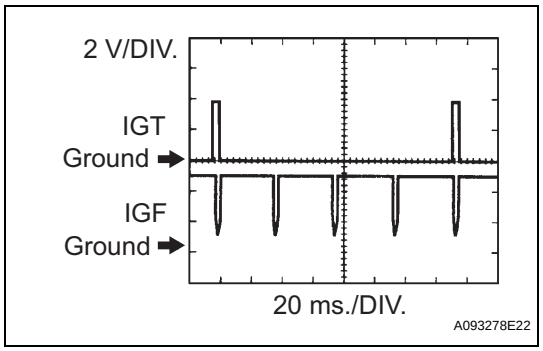
A Direct Ignition System (DIS) is used on this vehicle.

The DIS is a 1-cylinder ignition system in which each cylinder is ignited by one ignition coil and one spark plug is connected to the end of each secondary wiring. A powerful voltage, generated in the secondary wiring, is applied directly to each spark plug. The sparks of the spark plugs pass from the center electrode to the ground electrodes.

The ECM determines the ignition timing and transmits the ignition (IGT) signals to each cylinder. Using the IGT signal, the ECM turns the power transistor inside the igniter on and off. The power transistor, in turn, switches on and off the current to the primary coil. When the current to the primary coil is cut off, a powerful voltage is generated in the secondary coil. This voltage is applied to the spark plugs, causing them to spark inside the cylinders. As the ECM cuts the current to the primary coil off, the igniter sends back an ignition confirmation (IGF) signal to the ECM, for each cylinder ignition.



DTC No.	DTC Detection Condition	Trouble Area
P0351 P0352 P0353 P0354	No IGF signal to ECM while engine running (1 trip detection logic)	• Ignition system • Open or short in IGF1 or IGT circuit (1 to 4) between ignition coil and ECM • No. 1 to No. 4 ignition coils • ECM

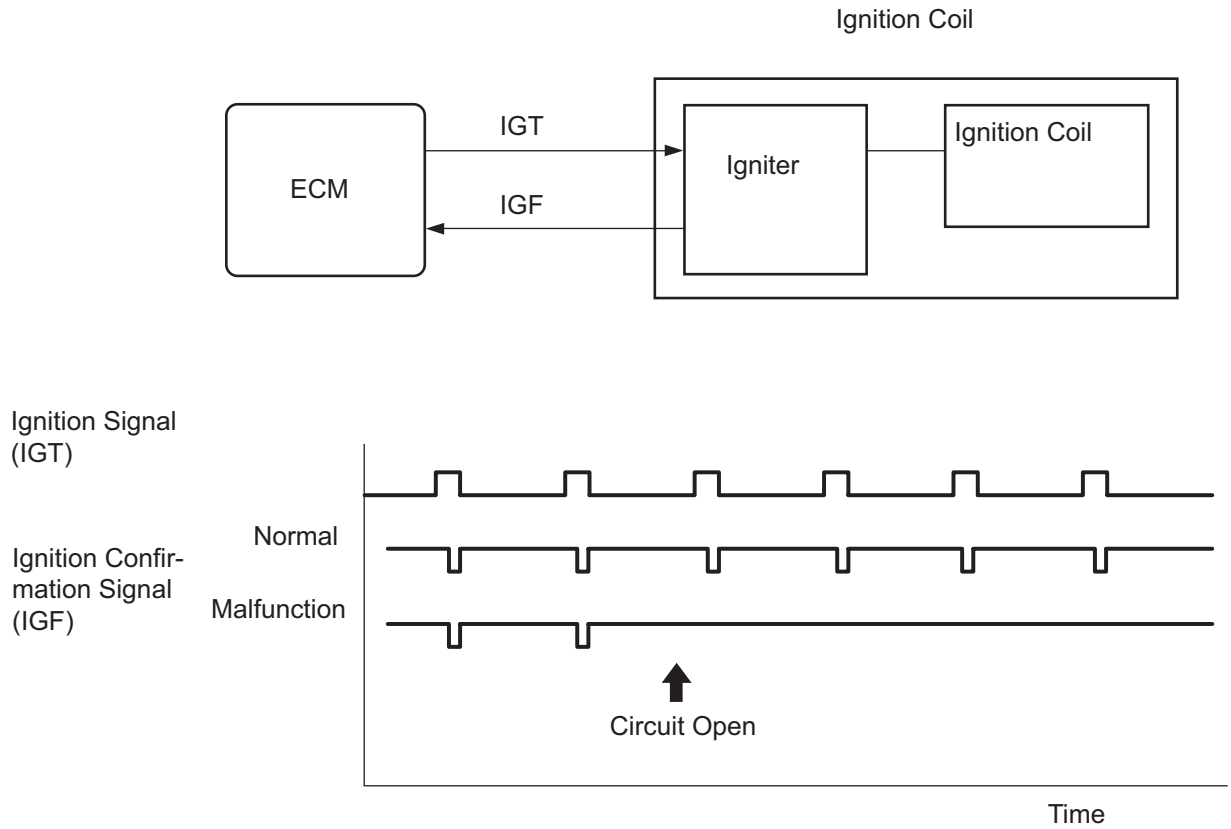


Reference: Inspection using an oscilloscope.
While cranking or idling the engine, check the waveform between terminals IGT (1 to 4) and E1, and IGF1 and E1 of the ECM connector.

ES

Items	Contents
Terminals	CH1: IGT1, IGT2, IGT3, IGT4 - E1 CH2: IGF1 - E1
Equipment Settings	2 V/Division 20 ms./Division
Conditions	Cranking or idling

MONITOR DESCRIPTION



If the ECM does not receive any IGF signals despite transmitting the IGT signal, it interprets this as a fault in the igniter and sets a DTC.
If the malfunction is not repaired successfully, a DTC is set 1 second after the engine is next started.

MONITOR STRATEGY

Related DTCs	P0351: Igniter (cylinder 1) malfunction P0352: Igniter (cylinder 2) malfunction P0353: Igniter (cylinder 3) malfunction P0354: Igniter (cylinder 4) malfunction

Either of the following conditions A or B is met	-

A. Engine RPM	1,500 rpm or less
B. Starter	OFF
Either of the following conditions C or D is met	-
C. Both of the following conditions (a) and (b) are met	-
(a) Engine speed	500 rpm or less
(b) Battery voltage	6 V or more
D. All of the following conditions (a), (b) and (c) are met	-
(a) Engine speed	More than 500 rpm
(b) Battery voltage	10 V or more
(c) Number of sparks after CPU reset	5 sparks or more

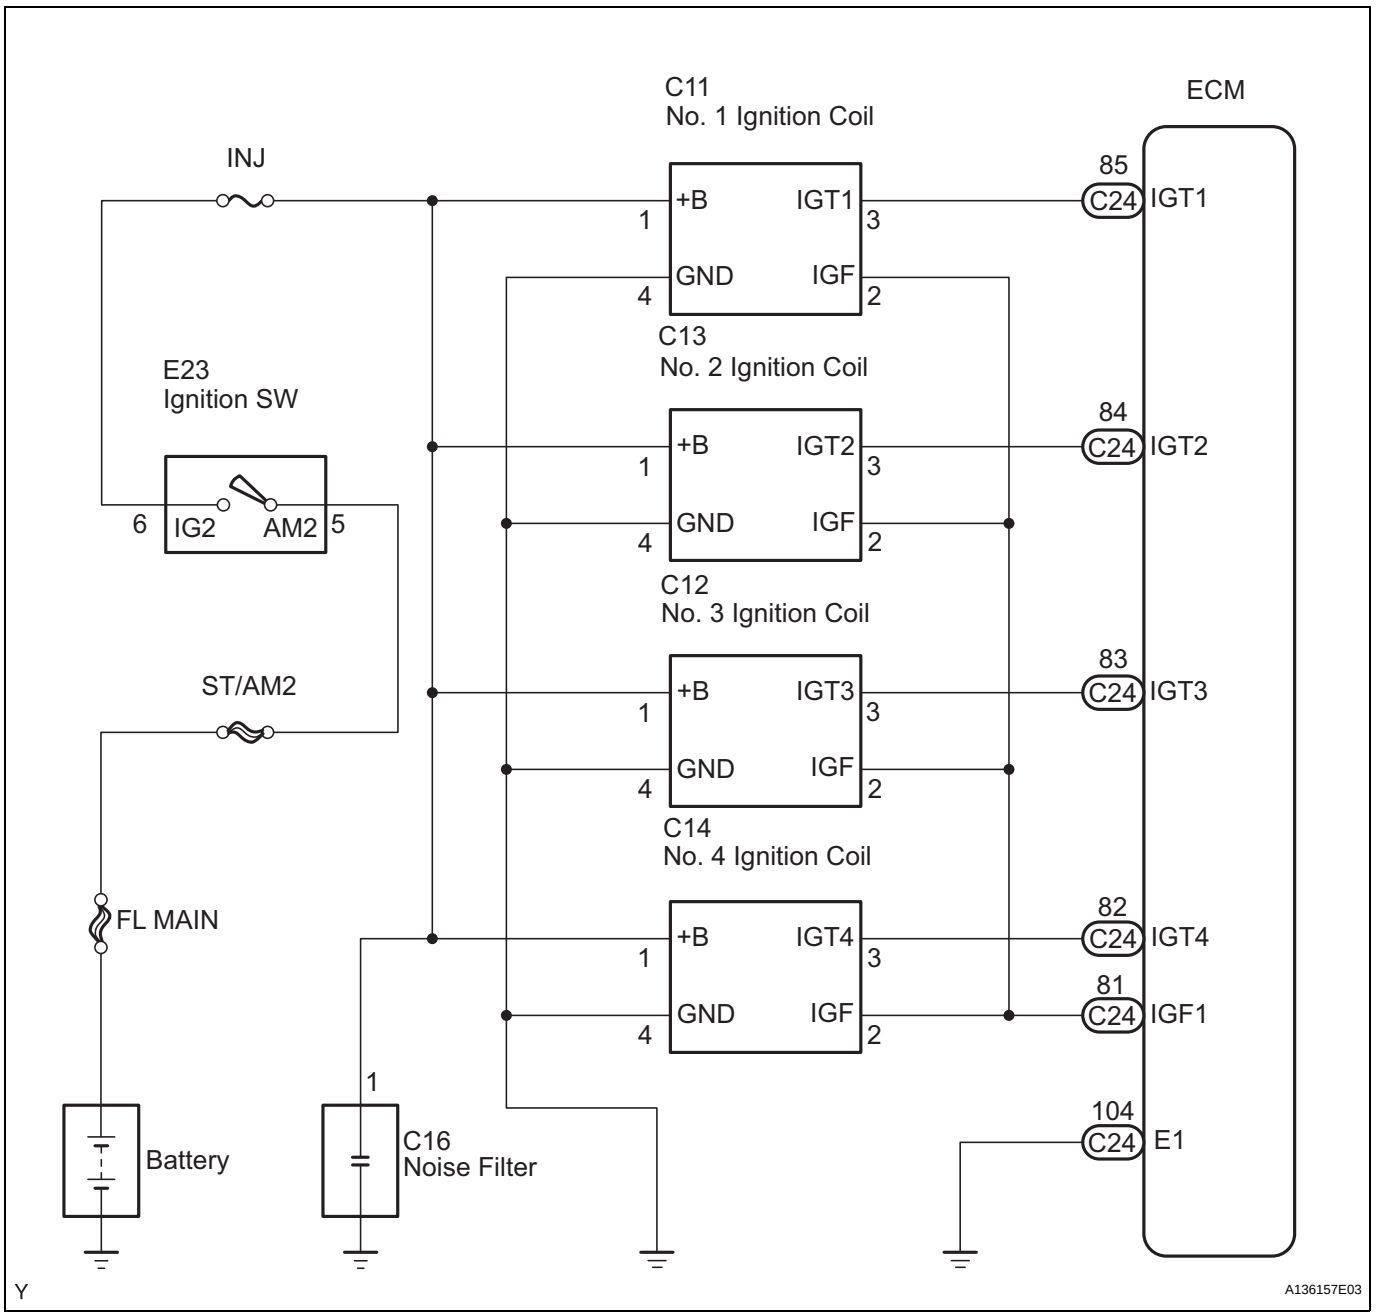
TYPICAL MALFUNCTION THRESHOLDS

IGF signal	ECM does not receive any IGF signal despite ECM sending IGT signal to igniter

COMPONENT OPERATING RANGE

IGF signal	Igniter transmits IGF signal when it receives IGT signal from ECM

WIRING DIAGRAM

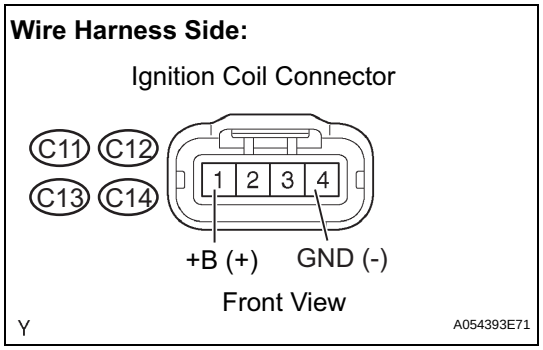


INSPECTION PROCEDURE

HINT:

Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1 INSPECT IGNITION COIL ASSEMBLY (POWER SOURCE)



(a) Disconnect the C11 to C14 ignition coil connectors.
(b) Measure the resistance between the terminals of the wire harness side connectors.

Standard resistance (Check for open)

Tester Connection	Specified Condition
C11-4 (GND) - Body ground	Below 1 Ω
C13-4 (GND) - Body ground	Below 1 Ω
C12-4 (GND) - Body ground	Below 1 Ω
C14-4 (GND) - Body ground	Below 1 Ω

(c) Turn the ignition switch to the ON position.
(d) Measure the voltage between the terminals of the wire harness side connectors.

Standard voltage

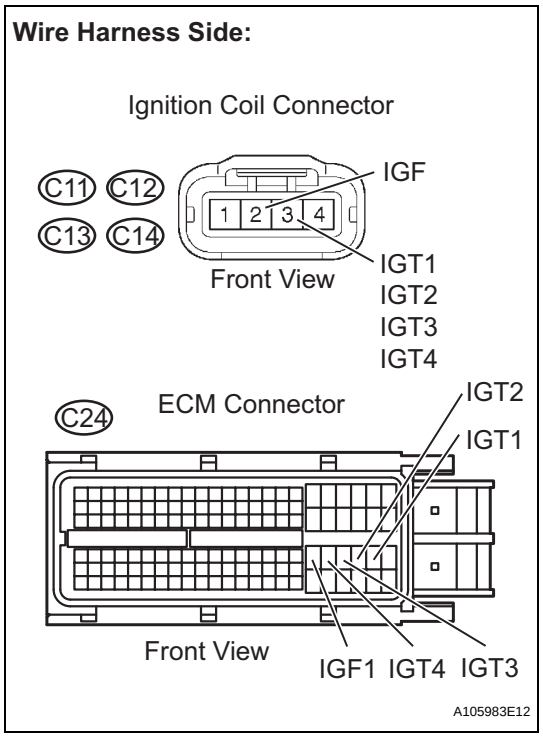
Tester Connection	Specified Condition
C11-1 (+B) - C11-4 (GND)	9 to 14 V
C13-1 (+B) - C13-4 (GND)	9 to 14 V
C12-1 (+B) - C12-4 (GND)	9 to 14 V
C14-1 (+B) - C14-4 (GND)	9 to 14 V

(e) Reconnect the ignition coil connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2 CHECK HARNESS AND CONNECTOR (IGNITION COIL ASSEMBLY - ECM)



(a) Disconnect the ignition coil connectors.
(b) Disconnect the C24 ECM connector.
(c) Measure the resistance between the terminals of the wire harness side connectors.

Standard resistance (Check for open)

Tester Connection	Specified Condition
C11-2 (IGF) - C24-81 (IGF1)	Below 1 Ω
C13-2 (IGF) - C24-81 (IGF1)	Below 1 Ω
C12-2 (IGF) - C24-81 (IGF1)	Below 1 Ω
C14-2 (IGF) - C24-81 (IGF1)	Below 1 Ω

Standard resistance (Check for open)

Tester Connection	Specified Condition
C11-3 (IGT1) - C24-85 (IGT1)	Below 1 Ω
C13-3 (IGT2) - C24-84 (IGT2)	Below 1 Ω
C12-3 (IGT3) - C24-83 (IGT3)	Below 1 Ω
C14-3 (IGT4) - C24-82 (IGT4)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
C11-2 (IGF) or C24-81 (IGF1) - Body ground	10 kΩ or higher
C13-2 (IGF) or C24-81 (IGF1) - Body ground	10 kΩ or higher
C12-2 (IGF) or C24-81 (IGF1) - Body ground	10 kΩ or higher

REPLACE ECM

DTC	P0420	Catalyst System Efficiency Below Threshold (Bank 1)

MONITOR DESCRIPTION

The ECM uses the sensors mounted in front of and behind the Three-Way Catalytic Converter (TWC) to monitor its efficiency.
The first sensor, the Air-Fuel Ratio (A/F) sensor, sends pre-catalyst information to the ECM. The second sensor, the Heated Oxygen (HO2) sensor, sends post-catalyst information to the ECM.
In order to detect any deterioration in the TWC, the ECM calculates the Oxygen Storage Capacity (OSC) of the TWC. This calculation is based on the voltage output of the HO2 sensor while performing active air-fuel ratio control, rather than the conventional detecting method, which uses the locus ratio.
The OSC value is an indication of the oxygen storage capacity of the TWC. When the vehicle is being driven with a warm engine, active air-fuel ratio control is performed for approximately 15 to 20 seconds. When it is performed, the ECM deliberately sets the air-fuel ratio to lean or rich levels. If the rich-lean cycle of the HO2 sensor is long, the OSC becomes greater. There is a direct correlation between the OSCs of the HO2 sensor and the TWC.
The ECM uses the OSC value to determine the state of the TWC. If any deterioration has occurred, it illuminates the MIL and sets the DTC.

DTC No.	DTC Detection Condition	Trouble Area
P0420	OSC value smaller than standard value under active air-fuel ratio control (2 trip detection logic)	• Front exhaust pipe (with TWC) • Gas leakage from exhaust system • Air-Fuel Ratio (A/F) sensor (sensor 1) • Heated Oxygen (HO2) sensor (sensor 2)

MONITOR STRATEGY

Related DTCs	P0420: Catalyst Deterioration
Required Sensors/Components (Main)	A/F sensor and HO2 sensor
Required Sensors/Components (Related)	Intake air temperature sensor, mass air flow meter, crankshaft position sensor and engine coolant temperature sensor
Frequency of Operation	Once per driving cycle
Duration	About 30 seconds
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	P0011 (VVT System 1 - Advance) P0012 (VVT System 1 - Retard) P0031, P0032 (A/F Sensor heater - Sensor 1) P0037, P0038 (O2 Sensor heater - Sensor 2) P0100 - P0103 (MAF meter) P0115 - P0118 (ECT sensor) P0120 - P0223, P2135 (TP sensor) P0125 (Insufficient ECT for Closed Loop) P0136 (O2 Sensor - Sensor 2) P0171, P0172 (Fuel system) P0300 - P0304 (Misfire) P0335 (CKP sensor) P0340 (CMP sensor) P0351 - P0354 (Igniter) P0500 (VSS) P2196 (A/F Sensor - rationality) P2A00 (A/F Sensor - slow response)
Battery voltage	11 V or more
Intake air temperature	-10°C (14°F) or more

Engine coolant temperature	75°C (167°F) or more
Atmospheric pressure	76 kPa (570 mmHg) or more
Idling	OFF
Engine RPM	Less than 4,000 rpm
A/F sensor status	Activated
Fuel system status	Closed loop
Engine load	10 to 80 %
All of the following conditions (a), (b) and (c) are met	-
(a) Mass air flow rate	2.5 to 50 g/sec.
(b) Estimated front catalyst temperature	650 to 840°C (1,202 to 1,544°F)
(c) Estimated rear catalyst temperature	400 to 770°C (752 to 1,418°F)
Rear HO2 sensor heater monitor	Completed
Shift position	4th (Automatic transaxle) 3rd or higher (Manual transaxle)

ES

TYPICAL MALFUNCTION THRESHOLDS

Oxygen Storage Capacity (OSC) of catalytic	Less than 0.07 g

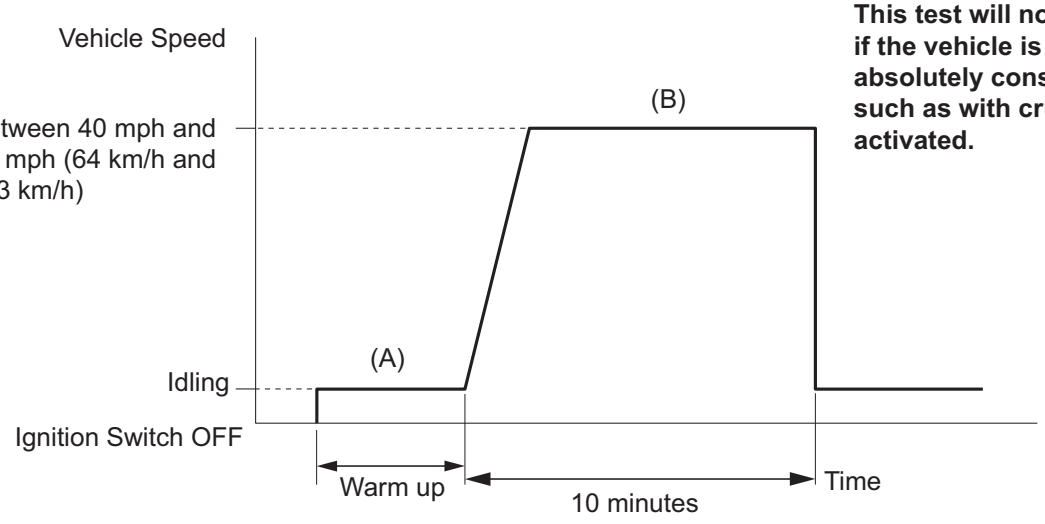
MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-20).

CONFIRMATION DRIVING PATTERN

HINT:

Performing this confirmation pattern will activate the catalyst monitor. This is very useful for verifying completion of a repair.



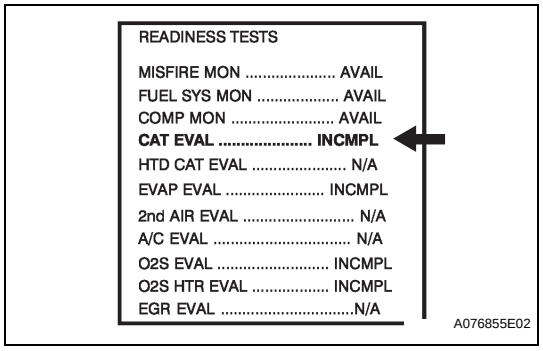
NOTICE:
This test will not be completed if the vehicle is driven at absolutely constant speed such as with cruise control activated.

(Note: Even if vehicle stops during driving pattern, test can be resumed)

P

A115372E53

1. Connect the intelligent tester to the DLC3.

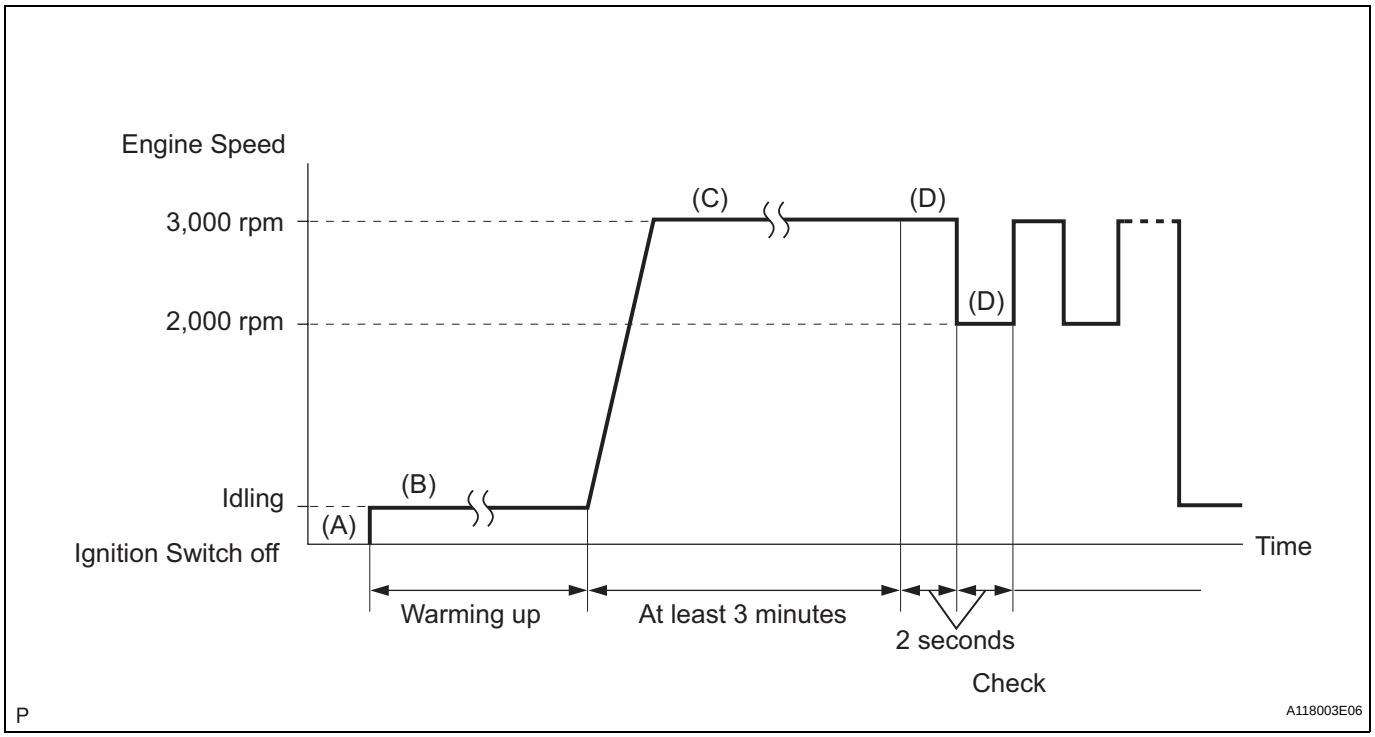


2. Turn the ignition switch to the ON position.
3. Turn the tester on.
4. Clear the DTCs (if set) (See page ES-38).
5. Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / USER DATA / CAT CMPL.
6. Check that CAT CMPL is INCMPL (incomplete).
7. Start the engine and warm it up. (Proceed to "A")
8. Drive the vehicle at between 40 mph and 70 mph (64 km/h and 113 km/h) for at least 10 minutes. (Proceed to "B")
9. Note the state of the Readiness Tests items. Those items will change to COMPL (complete) as CAT CMPL monitor operates.
10. On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES and check if any DTCs (any pending DTCs) are set.

HINT:
If CAT CMPL does not change to COMPL, and any pending DTCs fail to set, extend the driving time.

CONDITIONING FOR SENSOR TESTING

HINT:
Perform the operation with the engine speeds and time durations described below prior to checking the waveforms of the A/F and HO2 sensors. This is in order to activate the sensors sufficiently to obtain the appropriate inspection results.



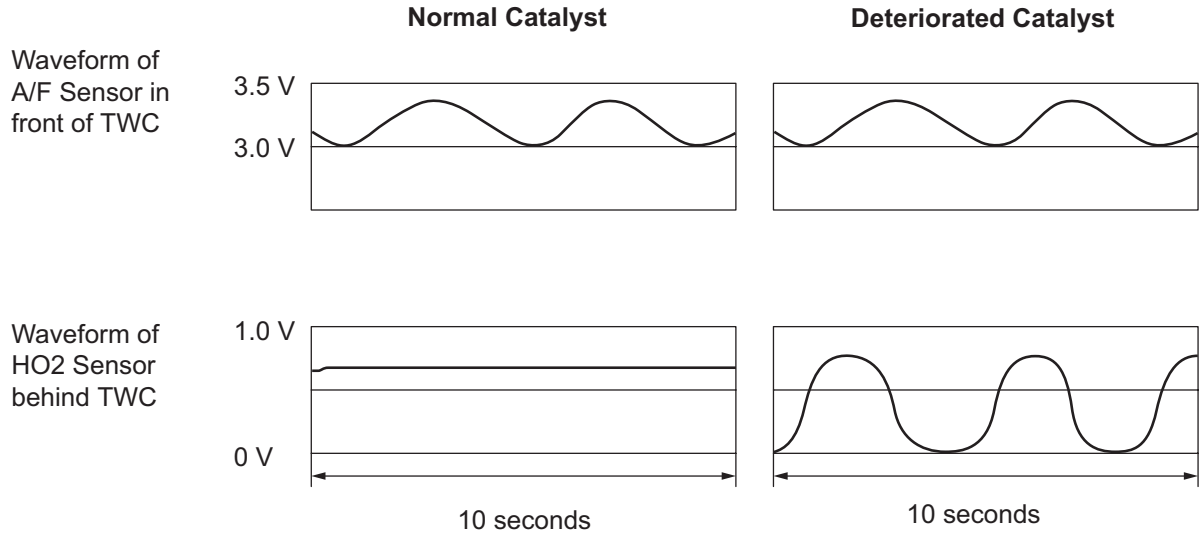
1. Connect the intelligent tester to the DLC3. (Proceed to "A")
2. Start the engine and warm it up with all the accessories switched OFF, until the engine coolant temperature stabilizes. (Proceed to "B")
3. Run the engine at an engine speed of between 2,500 rpm and 3,000 rpm for at least 3 minutes. (Proceed to "C")
4. While running the engine at 3,000 rpm and 2,000 rpm alternating at 2 second intervals, check the waveforms of the A/F and HO2 sensors using the tester. (Proceed to "D")

HINT:

- If either voltage output of the Air-Fuel Ratio (A/F) or Heated Oxygen (HO2) sensor does not fluctuate, or there is a noise in the waveform of either sensor, the sensor may be malfunctioning.
- If the voltage outputs of both the sensors remain lean or rich, the air-fuel ratio may be extremely lean or rich. In such cases, perform the following A/F CONTROL using the intelligent tester.
- If the Three-Way Catalytic Converter (TWC) has deteriorated, the HO2 sensor (located behind the TWC) voltage output fluctuates up and down frequently, even under normal driving conditions (active air-fuel ratio control is not performed).

ES

Voltage output when active air-fuel ratio control not performed:



Y

A121610E02

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0420)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and turn the tester on.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P0420	A
P0420 and other DTCs	B

HINT:
If any DTCs other than P0420 are output, troubleshoot those DTCs first.

B → **GO TO DTC CHART**

A

2 PERFORM ACTIVE TEST USING INTELLIGENT TESTER (A/F CONTROL)

ES

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the tester on.
(c) Warm up the engine at an engine speed of 2,500 rpm for approximately 90 seconds.
(d) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL.
(e) Perform the A/F CONTROL operation with the engine in an idling condition (press the RIGHT or LEFT button to change the fuel injection volume).
(f) Monitor the voltage outputs of the A/F and HO2 sensors (AFS B1 S1 and O2S B1 S2) displayed on the tester.
Result:
A/F sensor reacts in accordance with increases and decreases in fuel injection volume:
+25 % = Rich output:
Less than 3.0 V
-12.5 % = Lean output:
More than 3.35 V

NOTICE:
The A/F sensor has an output delay of a few seconds and the HO2 sensor has a maximum output delay of approximately 20 seconds.

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Areas
1	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• Catalyst • Exhaust gas leakage
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage More than 0.5 V Less than 0.4 V		
2	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• A/F sensor • A/F sensor heater • A/F sensor circuit
	Output Voltage Almost no reaction		Output Voltage More than 0.5 V Less than 0.4 V		

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Areas
3	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• HO2 sensor • HO2 sensor heater • HO2 sensor circuit
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage Almost no reaction		
4	Injection volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		Extremely rich or lean actual air-fuel ratio • Injector • Fuel pressure • Gas leakage from exhaust system
	Output Voltage Almost no reaction		Output Voltage Almost no reaction		

ES

Following the A/F CONTROL procedure enables technicians to check and graph the voltage outputs of both the A/F and HO2 sensors.
To display the graph, select the following menu items on the tester: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL / USER DATA / AFS B1 S1 and O2S B1 S2; then press the YES button and then the ENTER button followed by the F4 button.

DTC	P043F	Evaporative Emission System Reference Orifice High Flow

DTC	P2401	Evaporative Emission Leak Detection Pump Stuck OFF

ES

DTC	P2402	Evaporative Emission Leak Detection Pump Stuck ON

DTC	P2419	Evaporative Emission System Switching Valve Control Circuit Low

DTC SUMMARY

DTCs	Monitoring Item	Malfunction Detection Condition	Trouble Area	Detection Timing	Detection Logic
P043E	Reference orifice clogged	P043E, P043F, P2401, P2402 and P2419 present when one of the following conditions is met during key-off EVAP monitor: • Reference orifice clogged • Reference orifice high-flow • Leak detection pump OFF malfunction • Leak detection pump ON malfunction • Vent valve ON (close) malfunction	• Canister pump module (Reference orifice, leak detection pump, vent valve) • Connector/wire harness (Canister pump module - ECM) • EVAP system hose (pipe from air inlet port to canister pump module, canister filter, fuel tank vent hose) • ECM	While ignition switch off	2 trip detection logic
P043F	Reference orifice high-flow				
P2401	Leak detection pump stuck OFF				
P2402	Leak detection pump stuck ON				
P2419	Vent valve stuck closed				

HINT:
The reference orifice is located inside the canister pump module.

DESCRIPTION

The description can be found in the EVAP (Evaporative Emission) System (See page ES-346).

INSPECTION PROCEDURE

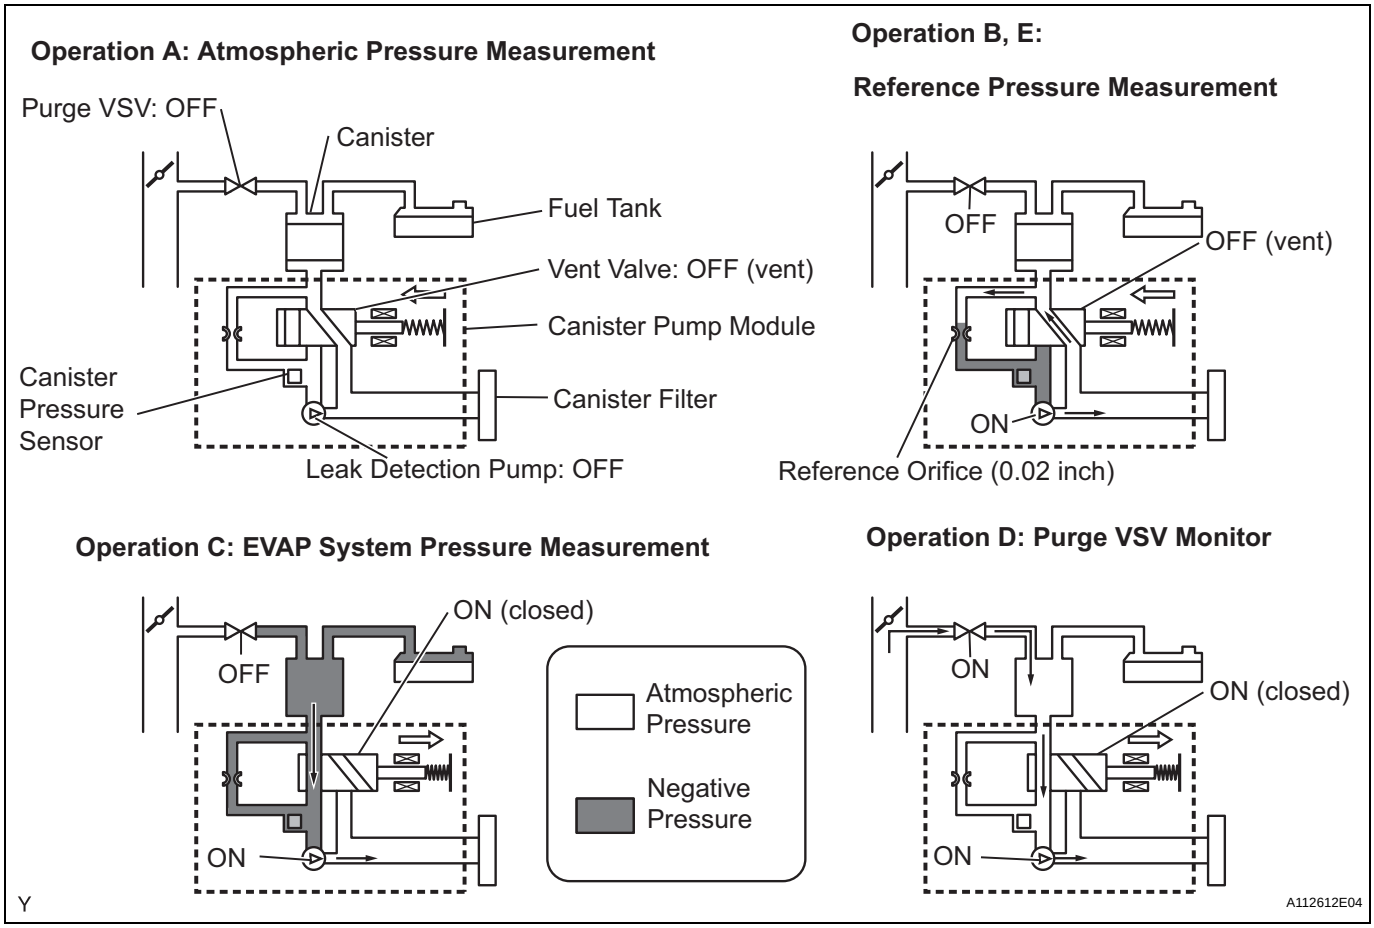
Refer to the EVAP System (See page ES-352).

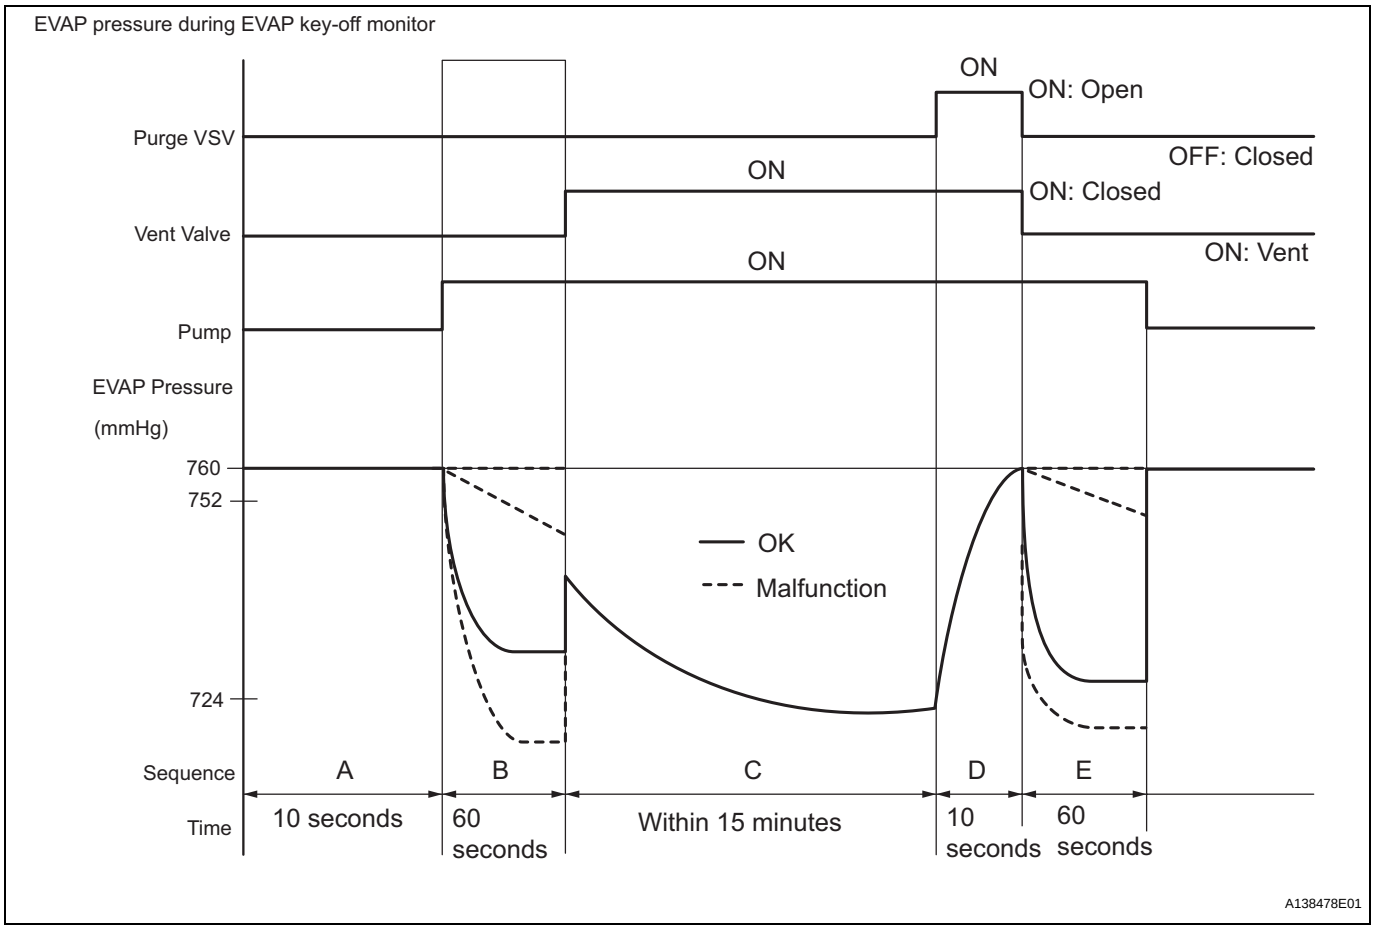
MONITOR DESCRIPTION

5 hours* after the ignition switch is turned off, the leak detection pump creates negative pressure (vacuum) in the EVAP system. The ECM monitors for leaks and actuator malfunctions based on the EVAP pressure.
HINT:
*: If the engine coolant temperature is not below 35°C (95°F) 5 hours after the ignition switch is turned off, the monitor check starts 2 hours later. If it is still not below 35°C (95°F) 7 hours after the ignition switch is turned off, the monitor check starts 2.5 hours later.

Sequence	Operations	Descriptions	Duration
-	ECM activation	Activated by soak timer 5, 7 or 9.5 hours after ignition switch turned off.	-
A	Atmospheric pressure measurement	Vent valve turned OFF (vent) and EVAP system pressure measured by ECM in order to register atmospheric pressure. If pressure in EVAP system not between 76 kPa-a and 110 kPa-a (570 mmHg-a and 825 mmHg-a), ECM cancels EVAP system monitor.	10 seconds
B	First reference pressure measurement	In order to determine reference pressure, leak detection pump creates negative pressure (vacuum) through reference orifice and then ECM checks if leak detection pump and vent valve operate normally.	60 seconds
C	EVAP system pressure measurement	Vent valve turned ON (closed) to shut EVAP system. Negative pressure (vacuum) created in EVAP system, and EVAP system pressure then measured. Write down measured value as it will be used in leak check. If EVAP pressure does not stabilize within 15 minutes, ECM cancels EVAP system monitor.	15 minutes*
D	Purge VSV monitor	Purge VSV opened and then EVAP system pressure measured by ECM. Large increase indicates normality.	10 seconds
E	Second reference pressure measurement	After second reference pressure measurement, leak check performed by comparing first and second reference pressure. If stabilized system pressure higher than second reference pressure, ECM determines that EVAP system leaking.	60 seconds
F	Final check	Atmospheric pressure measured and then monitoring result recorded by ECM.	-

*: If only a small amount of fuel is in the fuel tank, it takes longer for the EVAP pressure to stabilize.





The leak detection pump creates negative pressure through the reference orifice. When the system is normal, the EVAP pressure is in 724 to 752 mmHg* and saturated within a minute.
If not, the ECM interprets this as a malfunction. The ECM will illuminate the MIL and set DTC if this malfunction is detected in consecutive drive cycle.
*: Typical valve

MONITOR STRATEGY

Required Sensors/Components	Purge VSV and canister pump module
Frequency of Operation	Once per driving cycle
Duration	Within 2 minutes (varies with amount of fuel in tank)
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None
EVAP key-off monitor runs when all of the following conditions are met	-
Atmospheric pressure	70 to 110 kPa-a (525 to 825 mmHg-a)
Battery voltage	10.5 V or more
Vehicle speed	Below 2.5 mph (4 km/h)
Ignition switch	off
Time after key off	5, 7 or 9.5 hours
EVAP pressure sensor malfunction (P0450, P0451, P0452 and P0453)	Not detected
EVAP canister purge valve	Not operated by scan tool
EVAP canister vent valve	Not operated by scan tool

EVAP leak detection pump	Not operated by scan tool
Both of the following conditions are met before key off	Conditions 1 and 2
1. Duration that vehicle has been driven	5 minutes or more
2. EVAP purge operation	Performed
ECT	4.4 to 35°C (40 to 95°F)
IAT	4.4 to 35°C (40 to 95°F)

1. Key-off monitor sequence 1 to 8

1. Atmospheric pressure measurement

Next sequence runs if following condition is met	-
Atmospheric pressure change	Less than 0.3 kPa-g (2.25 mmHg-g) in 1 second

2. First reference pressure measurement

Next sequence runs if all of the following conditions are met	Conditions 1, 2 and 3
1. EVAP pressure just after reference pressure measurement start	-1 kPa-g (-7.5 mmHg-g) or less
2. Reference pressure	-4.85 to -1.057 kPa-g (-36.4 to -7.93 mmHg-g)
3. Reference pressure	Saturated within 60 seconds

3. Vent valve stuck closed check

Next sequence runs if following condition is met	-
EVAP pressure change after vent valve is ON	0.3 kPa-g (2.25 mmHg-g) or more

4. Vacuum introduction

Next sequence runs if following condition is met	-
EVAP pressure	Saturated within 15 minutes

5. EVAP canister purge valve close stuck check

Next sequence runs if following condition is met	-
EVAP pressure change after purge valve is open	0.3 kPa-g (2.25 mmHg-g) or more

6. Second reference pressure measurement

Next sequence runs if all of the following conditions are met	Conditions 1, 2, 3 and 4
1. EVAP pressure just after reference pressure measurement start	-1 kPa-g (-7.5 mmHg-g) or less
2. Reference pressure	-4.85 to -1.057 kPa-g (-36.4 to -7.93 mmHg-g)
3. Reference pressure	Saturated within 60 seconds
4. Difference between first reference pressure and second reference pressure	Less than 0.5 kPa-g (3.75 mmHg-g)

7. Leak check

Next sequence runs if following condition is met	-
EVAP pressure when vacuum introduction is complete	Second reference pressure or less

8. Atmospheric pressure measurement

EVAP monitor complete if following condition is met	-
Atmospheric pressure difference between sequence 1 and 8	Within 0.3 kPa-g (2.25 mmHg-g)

TYPICAL MALFUNCTION THRESHOLDS

"Saturated" indicates that the EVAP pressure change is less than 0.286 kPa-g (2.14 mmHg-g) in 60 seconds.

One of the following conditions is met	-
EVAP pressure just after reference pressure measurement start	More than -1 kPa-g (-7.5 mmHg-g)
Reference pressure	Less than -4.85 kPa-g (-36.4 mmHg-g)
Reference pressure	-1.057 kPa-g (-7.93 mmHg-g) or more
Reference pressure	Not saturated within 60 seconds

Difference between first reference pressure and second reference pressure	0.7 kPa-g (5.25 mmHg-g) or more

MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-20).

DTC	P0441	Evaporative Emission Control System Incorrect Purge Flow

DTC SUMMARY

DTC	Monitoring Item	Malfunction Detection Condition	Trouble Area	Detection Timing	Detection Logic
P0441	Purge VSV (Vacuum Switching Valve) stuck open	Leak detection pump creates negative pressure (vacuum) in EVAP system and EVAP system pressure measured. Reference pressure measured at start and at end of leak check. If stabilized pressure higher than [second reference pressure x 0.2], ECM determines that purge VSV stuck open.	• Purge VSV • Connector/wire harness (Purge VSV - ECM) • ECM • Canister pump module • Leakage from EVAP system	While ignition switch off	2 trip detection logic
	Purge VSV stuck closed	After EVAP leak check performed, purge VSV turned ON (open), and atmospheric air introduced into EVAP system. Reference pressure measured at start and at end of check. If pressure does not return to near atmospheric pressure, ECM determines that purge VSV stuck closed.	• Purge VSV • Connector/wire harness (Purge VSV - ECM) • ECM • Canister pump module • Leakage from EVAP system	While ignition switch off	2 trip detection logic
	Purge flow	While engine running, following conditions successively met: • Negative pressure not created in EVAP system when purge VSV turned ON (open) • EVAP system pressure change less than 0.5 kPa-g (3.75 mmHg-g) when vent valve turned ON (closed) • Atmospheric pressure change before and after purge flow monitor less than 0.1 kPa-g (0.75 mmHg-g)	• Purge VSV • Connector/wire harness (Purge VSV - ECM) • Leakage from EVAP line (Purge VSV - Intake manifold) • ECM	While engine running	2 trip detection logic

DESCRIPTION

The description can be found in the EVAP (Evaporative Emission) System (See page ES-346).

INSPECTION PROCEDURE

Refer to the EVAP System (See page ES-352).

MONITOR DESCRIPTION

The two monitors, Key-Off and Purge Flow, are used to detect malfunctions relating to DTC P0441. The Key-Off monitor is initiated by the ECM internal timer, known as the soak timer, 5 hours* after the ignition switch is turned off. The purge flow monitor runs while the engine is running.

1. KEY-OFF MONITOR

   5 hours* after the ignition switch is turned off, the leak detection pump creates negative pressure (vacuum) in the EVAP system. The ECM monitors for leaks and actuator malfunctions based on the EVAP pressure.

   HINT:

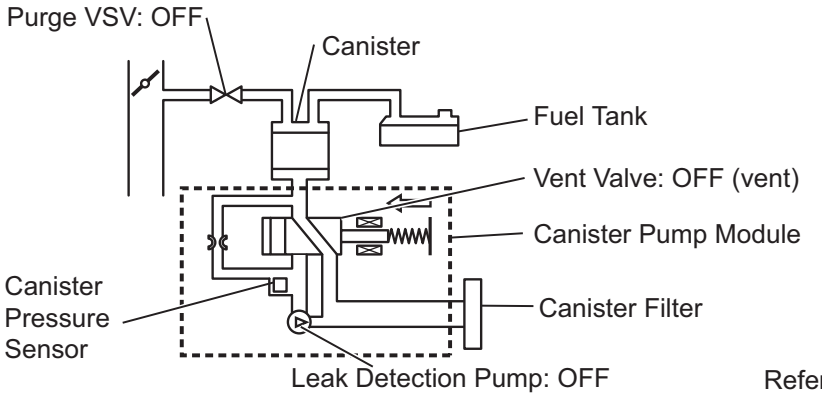
   *: If the engine coolant temperature is not below 35°C (95°F) 5 hours after the ignition switch is turned off, the monitor check starts 2 hours later. If it is still not below 35°C (95°F) 7 hours after the ignition switch is turned off, the monitor check starts 2.5 hours later.

Sequence	Operations	Descriptions	Duration
-	ECM activation	Activated by soak timer 5, 7 or 9.5 hours after ignition switch turned off.	-

Sequence	Operations	Descriptions	Duration
A	Atmospheric pressure measurement	Vent valve turned OFF (vent) and EVAP system pressure measured by ECM in order to register atmospheric pressure. If pressure in EVAP system not between 76 kPa-a and 110 kPa-a (570 mmHg-a and 825 mmHg-a), ECM cancels EVAP system monitor.	10 seconds
B	First reference pressure measurement	In order to determine reference pressure, leak detection pump creates negative pressure (vacuum) through reference orifice and then ECM checks if leak detection pump and vent valve operate normally.	60 seconds
C	EVAP system pressure measurement	Vent valve turned ON (closed) to shut EVAP system. Negative pressure (vacuum) created in EVAP system, and EVAP system pressure then measured. Write down measured value as it will be used in leak check. If EVAP pressure does not stabilize within 15 minutes, ECM cancels EVAP system monitor.	15 minutes*
D	Purge VSV monitor	Purge VSV opened and then EVAP system pressure measured by ECM. Large increase indicates normality.	10 seconds
E	Second reference pressure measurement	After second reference pressure measurement, leak check performed by comparing first and second reference pressure. If stabilized system pressure higher than second reference pressure, ECM determines that EVAP system leaking.	60 seconds
F	Final check	Atmospheric pressure measured and then monitoring result recorded by ECM.	-

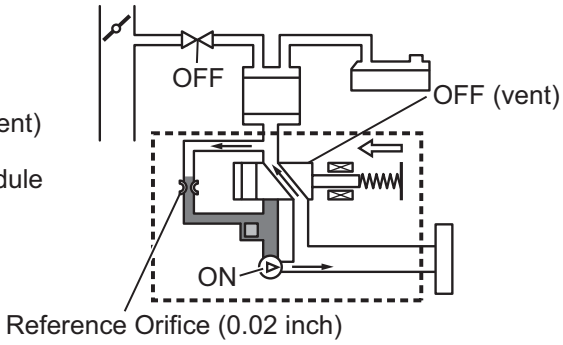
*: If only a small amount of fuel is in the fuel tank, it takes longer for the EVAP pressure to stabilize.

Operation A: Atmospheric Pressure Measurement

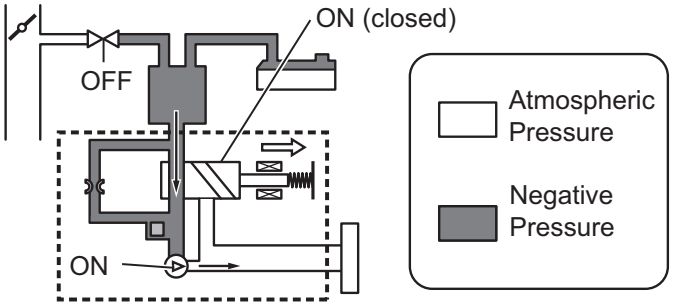


Operation B, E:

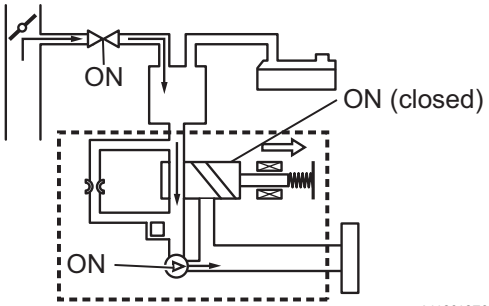
Reference Pressure Measurement



Operation C: EVAP System Pressure Measurement



Operation D: Purge VSV Monitor

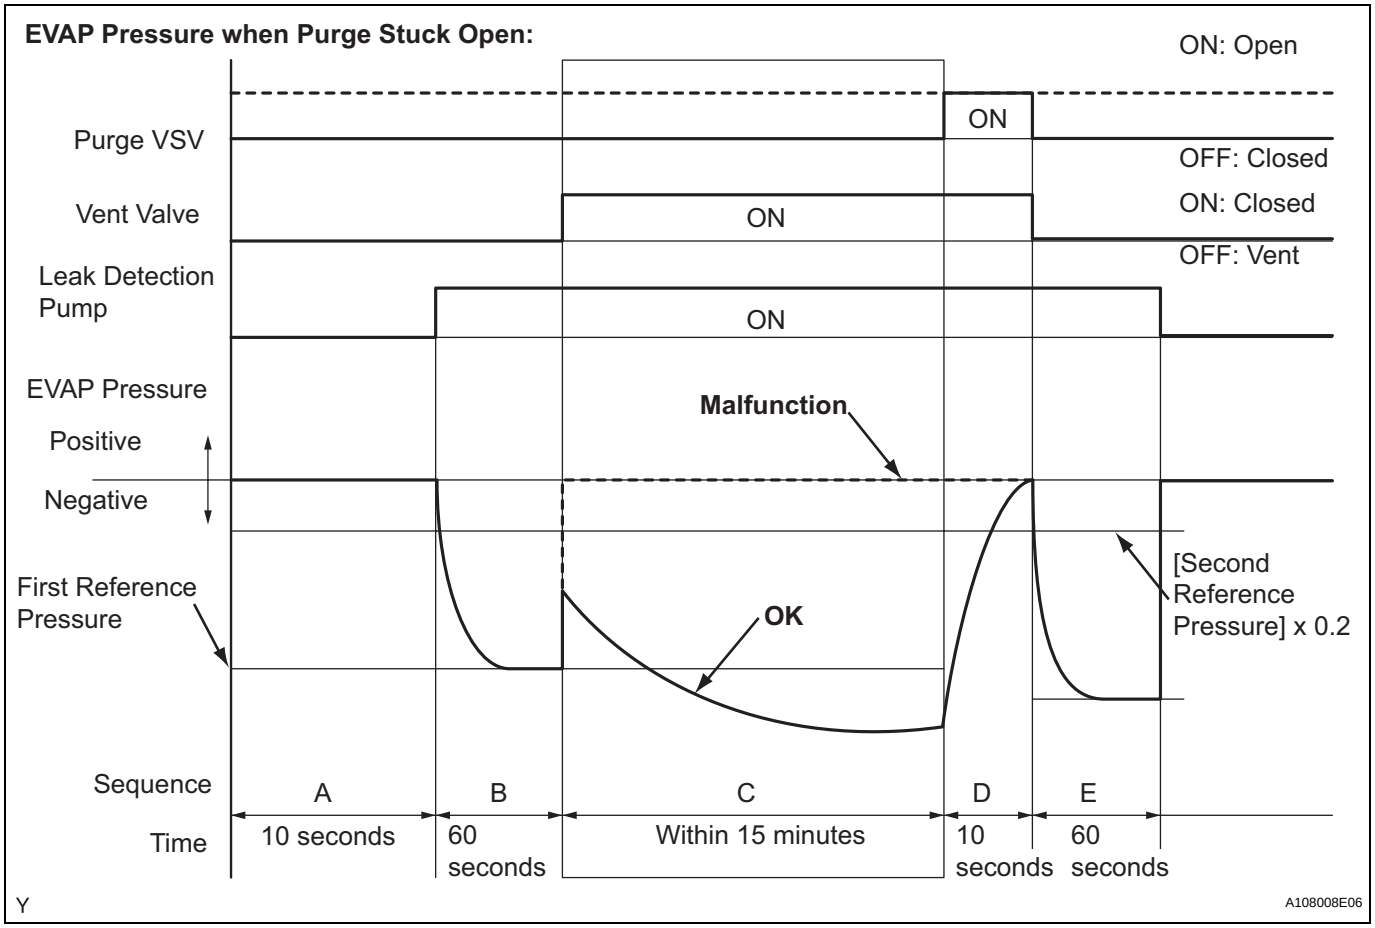


Y

A112612E04

(a) Purge VSV stuck open

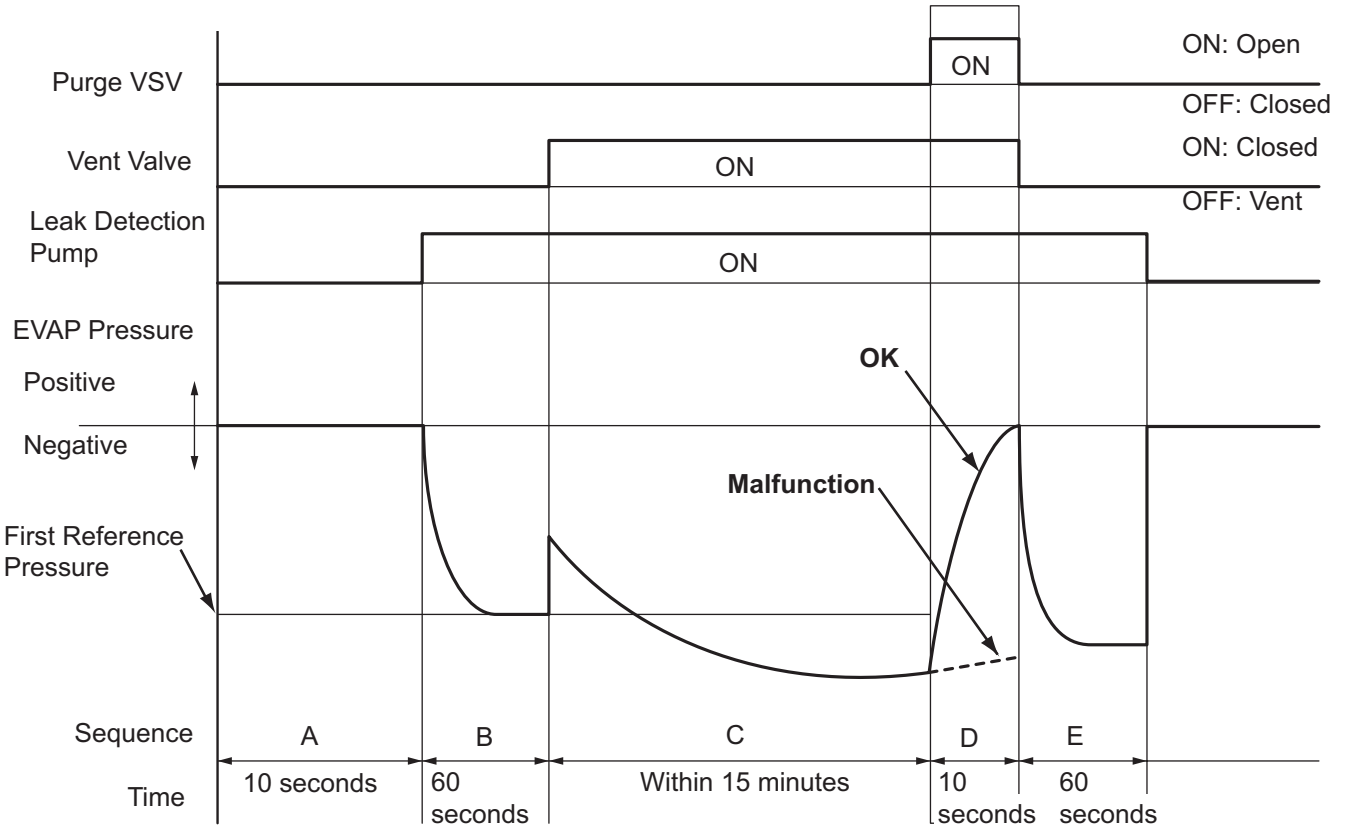
In operation C, the leak detection pump creates negative pressure (vacuum) in the EVAP system. The EVAP system pressure is then measured by the ECM using the canister pressure sensor. If the stabilized system pressure is higher than [second reference pressure x 0.2], the ECM interprets this as the purge VSV (Vacuum Switching Valve) being stuck open. The ECM illuminates the MIL and sets the DTC (2 trip detection logic).



(b) Purge VSV stuck closed

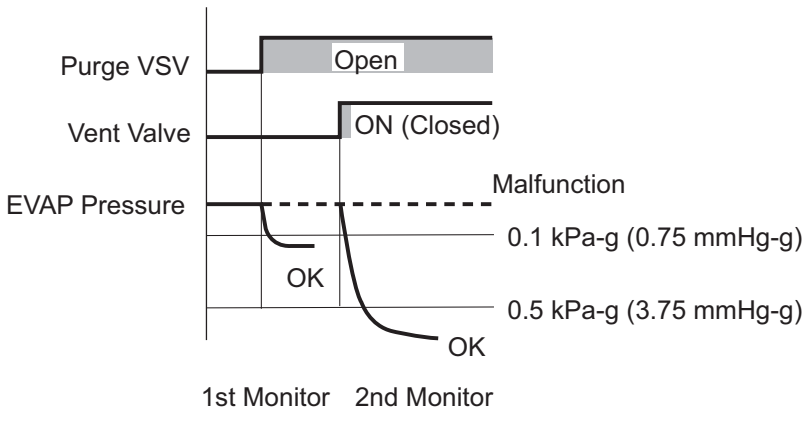
In operation D, the canister pressure sensor measures the EVAP system pressure. The pressure measurement for purge VSV monitor is begun when the purge VSV is turned ON (open) after the EVAP leak check. When the measured pressure indicates an increase of 0.3 kPa-g (2.25 mmHg-g) or more, the purge VSV is functioning normally. If the pressure does not increase, the ECM interprets this as the purge VSV being stuck closed. The ECM illuminates the MIL and sets the DTC (2 trip detection logic).

EVAP Pressure when Purge VSV Stuck Closed:



2. PURGE FLOW MONITOR

EVAP Pressure During Purge Flow Monitor:



The purge flow monitor consists of the two step monitors. The 1st monitor is conducted every time and the 2nd monitor is activated if necessary.

- The 1st monitor
  While the engine is running and the purge VSV is ON (open), the ECM monitors the purge flow by measuring the EVAP pressure change. If negative pressure is not created, the ECM begins the 2nd monitor.
- The 2nd monitor
  The vent valve is turned ON (closed) and the EVAP pressure is then measured. If the variation in the pressure is less than 0.5 kPa-g (3.75 mmHg-g), the ECM interprets this as the purge VSV being stuck closed, and illuminates the MIL and sets DTC P0441 (2 trip detection logic).

Atmospheric pressure check:
In order to ensure reliable malfunction detection, the variation between the atmospheric pressures, before and after conduction of the purge flow monitor, is measured by the ECM.

OBD II MONITOR SPECIFICATIONS

1. Key-off Monitor

Monitor Strategy

Required Sensors/Components	Purge VSV and canister pump module
Frequency of Operation	Once per driving cycle
Duration	Within 15 minutes (varies with fuel in tank)
MIL Operation	2 driving cycles
Sequence of Operation	None

Typical Enabling Conditions

EVAP key-off monitor runs when all of the following conditions are met	-
Atmospheric pressure	70 to 110 kPa-a (525 to 825 mmHg-a)
Battery voltage	10.5 V or more
Vehicle speed	Below 2.5 mph (4 km/h)
Ignition switch	off
Time after key off	5, 7 or 9.5 hours
EVAP pressure sensor malfunction (P0450, P0451, P0452 and P0453)	Not detected
EVAP canister purge valve	Not operated by scan tool
EVAP canister vent valve	Not operated by scan tool
EVAP leak detection pump	Not operated by scan tool
Both of the following conditions are met before key off	Conditions 1 and 2
1. Duration that vehicle has been driven	5 minutes or more
2. EVAP purge operation	Performed
ECT	4.4 to 35°C (40 to 95°F)
IAT	4.4 to 35°C (40 to 95°F)

2. Key-off monitor sequence 1 to 8

1. Atmospheric pressure measurement

Next sequence runs if following condition is met	-
Atmospheric pressure change	Less than 0.3 kPa-g (2.25 mmHg-g) in 1 second

2. First reference pressure measurement

Next sequence runs if all of the following conditions are met	Conditions 1, 2 and 3
1. EVAP pressure just after reference pressure measurement start	-1 kPa-g (-7.5 mmHg-g) or less
2. Reference pressure	-4.85 to -1.057 kPa-g (-36.4 to -7.93 mmHg-g)
3. Reference pressure	Saturated within 60 seconds

3. Vent valve stuck closed check

Next sequence runs if following condition is met	-
EVAP pressure change after vent valve is ON	0.3 kPa-g (2.25 mmHg-g) or more

4. Vacuum introduction

Next sequence runs if following condition is met	-
EVAP pressure	Saturated within 15 minutes

5. EVAP canister purge valve close stuck check

Next sequence runs if following condition is met	-
EVAP pressure change after purge valve is open	0.3 kPa-g (2.25 mmHg-g) or more

6. Second reference pressure measurement

Next sequence runs if all of the following conditions are met	Conditions 1, 2, 3 and 4
1. EVAP pressure just after reference pressure measurement start	-1 kPa-g (-7.5 mmHg-g) or less
2. Reference pressure	-4.85 to -1.057 kPa-g (-36.4 to -7.93 mmHg-g)
3. Reference pressure	Saturated within 60 seconds
4. Difference between first reference pressure and second reference pressure	Less than 0.5 kPa-g (3.75 mmHg-g)

ES

7. Leak check

Next sequence runs if following condition is met	-
EVAP pressure when vacuum introduction is complete	Second reference pressure or less

8. Atmospheric pressure measurement

EVAP monitor complete if following condition is met	-
Atmospheric pressure difference between sequence 1 and 8	Within 0.3 kPa-g (2.25 mmHg-g)

Typical Malfunction Thresholds

EVAP canister purge valve stuck open:	-
EVAP pressure when vacuum introduction is complete	Higher than reference pressure x 0.2

EVAP canister purge valve stuck closed:	-
EVAP pressure change after EVAP canister purge valve is open	Less than 0.3 kPa-g (2.25 mmHg-g)

OBD II MONITOR SPECIFICATIONS

1. Purge Flow Monitor

Monitor Strategy

Required Sensors/Components	Purge VSV and canister pump module
Frequency of Operation	Once per driving cycle
Duration	Within 10 minutes
MIL Operation	2 driving cycles
Sequence of Operation	None

Typical Enabling Conditions

Monitor runs whenever following DTCs are not present	P0011 (VVT System 1 - Advance) P0012 (VVT System 1 - Retard) P0100 - P0103 (MAF meter) P0110 - P0113 (IAT sensor) P0115 - P0118 (ECT sensor) P0120 - P0223, P2135 (TP sensor) P0125 (Insufficient ECT for Closed Loop) P0171, P0172 (Fuel system) P0300 - P0304 (Misfire) P0335 (CKP sensor) P0340 (CMP sensor) P0351 - P0354 (Igniter) P0450 - P0453 (EVAP press sensor) P0500 (VSS)
Engine	Running
ECT	4.4°C (40°F) or more

IAT	4.4°C (40°F) or more
EVAP pressure sensor malfunction	Not detected
EVAP canister purge valve	Not operated by scan tool
EVAP system check	Not operated by scan tool
Battery voltage	10 V or more
Purge duty cycle	8 % or more

Typical Malfunction Thresholds

Both of the following conditions are met	Conditions 1 and 2
1. EVAP pressure change when purge flow is started	Less than 0.1 kPa-g (0.75 mmHg-g)
2. EVAP pressure change during purge flow when EVAP pressure switching valve is ON (closed)	Less than 0.5 kPa-g (3.75 mmHg-g)

MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-20).

DTC	P0450	Evaporative Emission Control System Pressure Sensor / Switch

DTC	P0451	Evaporative Emission Control System Pressure Sensor Range / Performance

DTC	P0452	Evaporative Emission Control System Pressure Sensor / Switch Low Input

ES

DTC	P0453	Evaporative Emission Control System Pressure Sensor / Switch High Input

DTC SUMMARY

DTC	Monitoring Item	Malfunction Detection Condition	Trouble Ares	Detection Timing	Detection Logic
P0450	Canister pressure sensor voltage fluctuation abnormal	Sensor output voltage rapidly fluctuates beyond upper and lower malfunction thresholds for 0.5 seconds.	• Canister pump module • EVAP system hose (pipe from air inlet port to canister pump module, canister filter, fuel tank vent hose) • ECM	• EVAP monitoring (ignition off) • Ignition ON position	1 trip detection logic
P0451	Canister pressure sensor noise	Sensor output voltage fluctuates frequently within certain time period.	• Canister pump module • Connector/wire harness (Canister pump module - ECM) • EVAP system hose (pipe from air inlet port to canister pump module, canister filter, fuel tank vent hose) • ECM	• EVAP monitoring (ignition off) • Engine running	2 trip detection logic
	Canister pressure sensor signal becomes fixed/flat	Sensor output voltage does not vary within certain time period.	• Canister pump module • Connector/wire harness (Canister pump module - ECM) • EVAP system hose (pipe from air inlet port to canister pump module, canister filter, fuel tank vent hose) • ECM	• EVAP monitoring (ignition off)	2 trip detection logic
P0452	Canister pressure sensor low input	EVAP pressure less than 42.1 kPa for 0.5 seconds.	• Canister pump module • Connector/wire harness (Canister pump module - ECM) • EVAP system hose (pipe from air inlet port to canister pump module, canister filter, fuel tank vent hose) • ECM	• Ignition ON position • EVAP monitoring (ignition off)	1 trip detection logic

DTC	Monitoring Item	Malfunction Detection Condition	Trouble Ares	Detection Timing	Detection Logic
P0453	Canister pressure sensor high input	EVAP pressure more than 123.8 kPa for 0.5 seconds.	• Canister pump module • Connector/wire harness (Canister pump module - ECM) • EVAP system hose (pipe from air inlet port to canister pump module, canister filter, fuel tank vent hose) • ECM	• Ignition ON position • EVAP monitoring (ignition off)	1 trip detection logic

HINT:
The canister pressure sensor is built into the canister pump module.

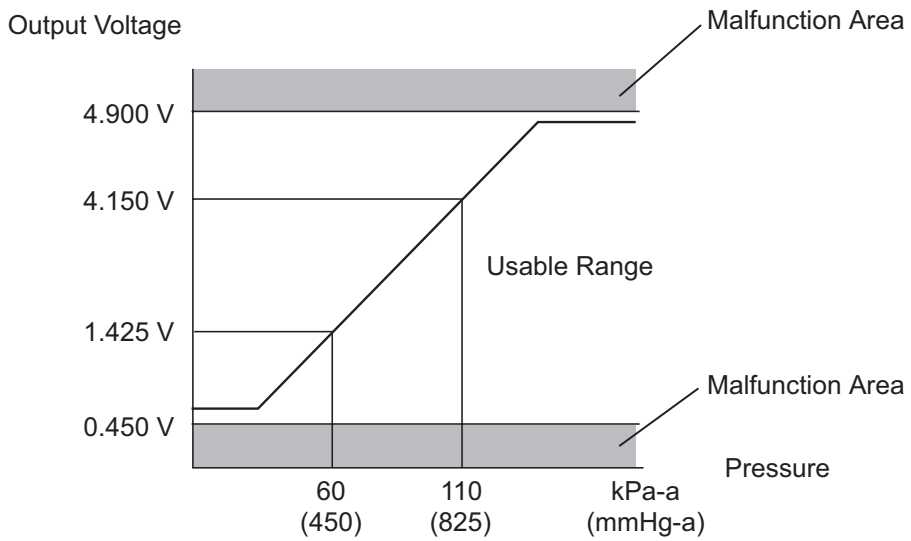
ES

DESCRIPTION

The description can be found in the EVAP (Evaporative Emission) System (See page ES-346).

MONITOR DESCRIPTION

Canister Pressure Sensor Specification:



HINT:

Standard atmospheric pressure is 101.3 kPa-a (760 mmHg-a)

A115543E05

1. DTC P0450: Canister pressure sensor abnormal fluctuation
   If the canister pressure sensor output [pressure] rapidly fluctuates between less than 42.1 kPa-a (315.9 mmHg-a) and more than 123.8 kPa-a (928.4 mmHg-a), the ECM interprets this as an open or short circuit malfunction in the canister pressure sensor or its circuit, and stops the EVAP (Evaporative Emission) system monitor. The ECM then illuminates the MIL and sets the DTC (1 trip detection logic).

2. DTC P0451: Canister pressure sensor noise or fixed/flat
   If the canister pressure sensor voltage output fluctuates rapidly for 10 seconds, the ECM stops the EVAP system monitor. The ECM interprets this as noise from the canister pressure sensor, and stops the EVAP system monitor. The ECM then illuminates the MIL and sets the DTC.
   Alternatively, if the sensor voltage output does not change for 10 seconds, the ECM interprets this as the sensor being fixed/flat, and stops the monitor. The ECM then illuminates the MIL and sets the DTC. (Both the malfunctions are detected by 2 trip detection logic).
3. DTC P0452: Canister pressure sensor voltage low
   If the canister pressure sensor output [pressure] is below 42.1 kPa-a (315.9 mmHg-a), the ECM interprets this as an open or short circuit malfunction in the canister pressure sensor or its circuit, and stops the EVAP system monitor. The ECM then illuminates the MIL and sets the DTC (1 trip detection logic).
4. DTC P0453: Canister pressure sensor voltage high
   If the canister pressure sensor output [pressure] is 123.8 kPa-a (928.4 mmHg-a) or more, the ECM interprets this as an open or short circuit malfunction in the canister pressure sensor or its circuit, and stops the EVAP system monitor. The ECM then illuminates the MIL and sets the DTC (1 trip detection logic).

MONITOR STRATEGY

Required Sensors/Components	Canister pump module
Frequency of Operation	Once per driving cycle: P0451 sensor fixed/flat Continuous: P0451 sensor noise, P0450, P0452 and P0453
Duration	0.5 seconds: P0450, P0452 and P0453 2 minutes: P0451
MIL Operation	Immediate: P0450, P0452 and P0453 2 driving cycles: P0451
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

P0451 (Noise monitor):

Monitor runs whenever following DTCs are not present	None
Atmospheric pressure (absolute pressure)	70 to 110 kPa-a (525 to 825 mmHg-a)
Battery voltage	10.5 V or more
Intake air temperature	4.4 to 35°C (40 to 95°F)
EVAP pressure sensor malfunction (P0450, P0452, 0453)	Not detected
Either of the following conditions A or B is met	-
A. Engine condition	Running
B. Time after key off	5, 7 or 9.5 hours

P0451 (Fixed/flat monitor):

Monitor runs whenever following DTCs are not present	None
Battery voltage	10.5 V or more
Intake air temperature	4.4 to 35°C (40 to 95°F)
EVAP pressure sensor malfunction (P0450, P0452, 0453)	Not detected
Atmospheric pressure (absolute pressure)	70 to 110 kPa-a (525 to 825 mmHg-a)
Time after key off	5, 7 or 9.5 hours

P0450, P0452 and P0453:

Monitor runs whenever following DTCs are not present	None
Either of following conditions is met	(a) or (b)
(a) Ignition switch	ON
(b) Soak timer	ON
Battery voltage	8 V or more

Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS

P0450: Canister pressure sensor chattering

EVAP pressure	Less than 42.1 kPa-a (315.9 mmHg-a), or more than 123.8 kPa-a (928.4 mmHg-a)

P0451: Canister pressure sensor noise

Frequency that EVAP pressure change 0.3 kPa-g (2.25 mmHg-g) or more	10 times or more in 10 seconds

P0451: Canister pressure sensor fixed/flat

EVAP pressure change during reference pressure measurement	Less than 0.65 kPa-g (4.88 mmHg-g)

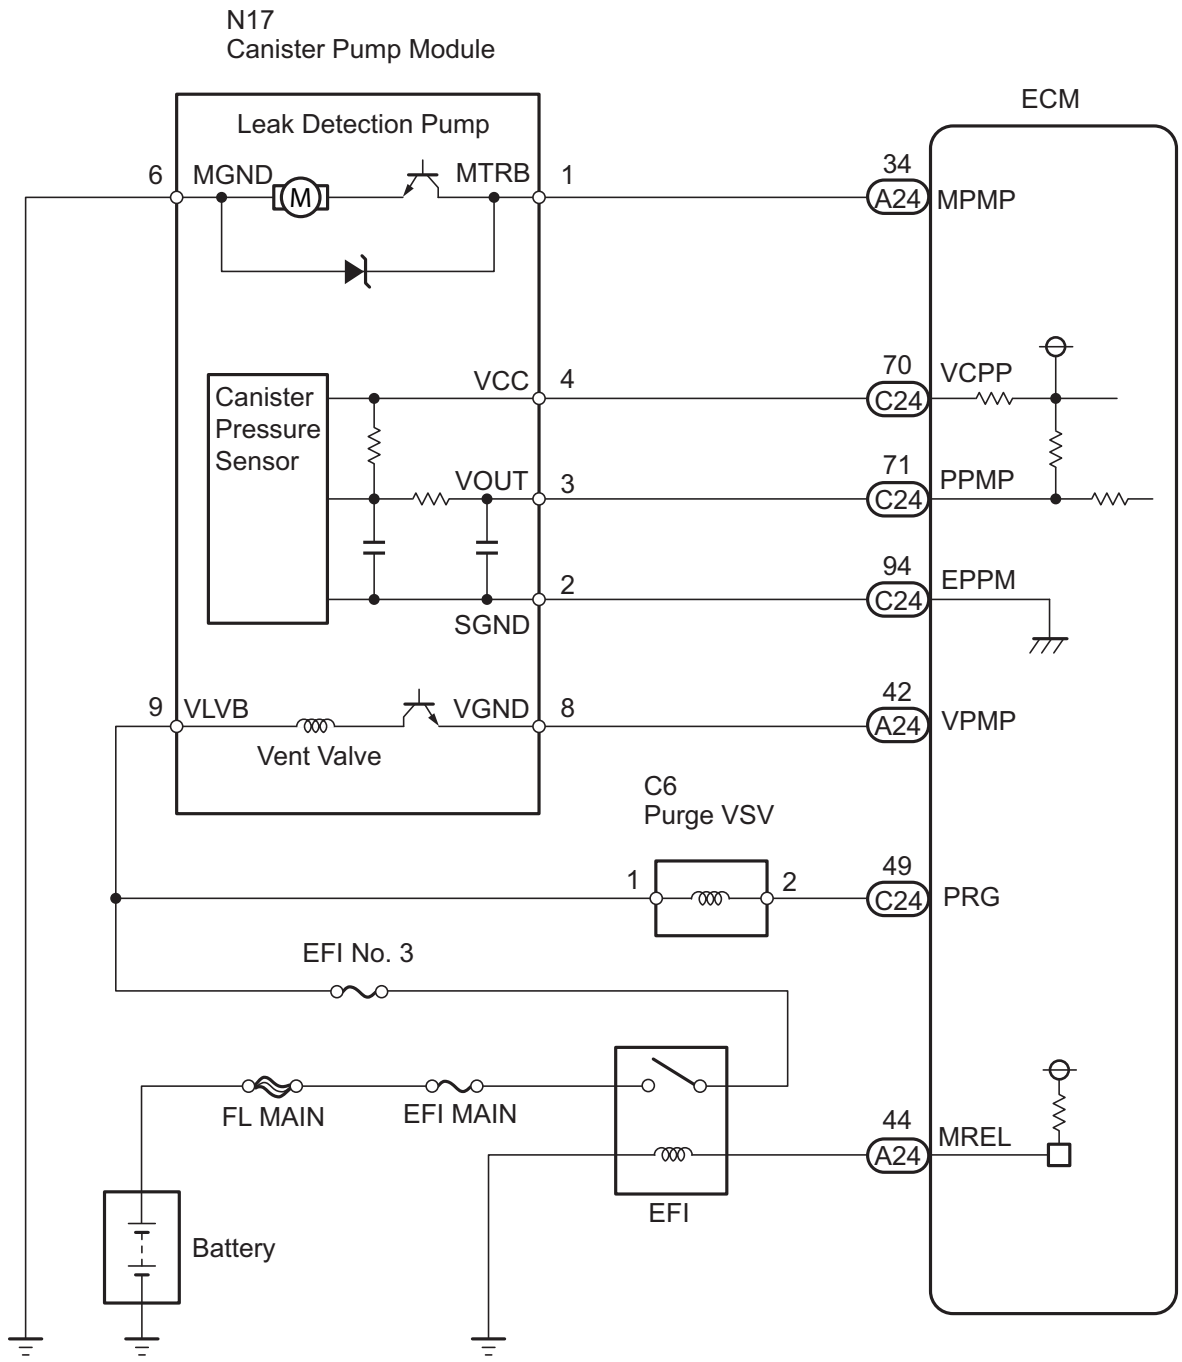
P0452: Canister pressure sensor low voltage

EVAP pressure	Less than 42.1 kPa-a (315.9 mmHg-a)

P0453: Canister pressure sensor high voltage

EVAP pressure	More than 123.8 kPa-a (928.4 mmHg-a)

WIRING DIAGRAM



INSPECTION PROCEDURE

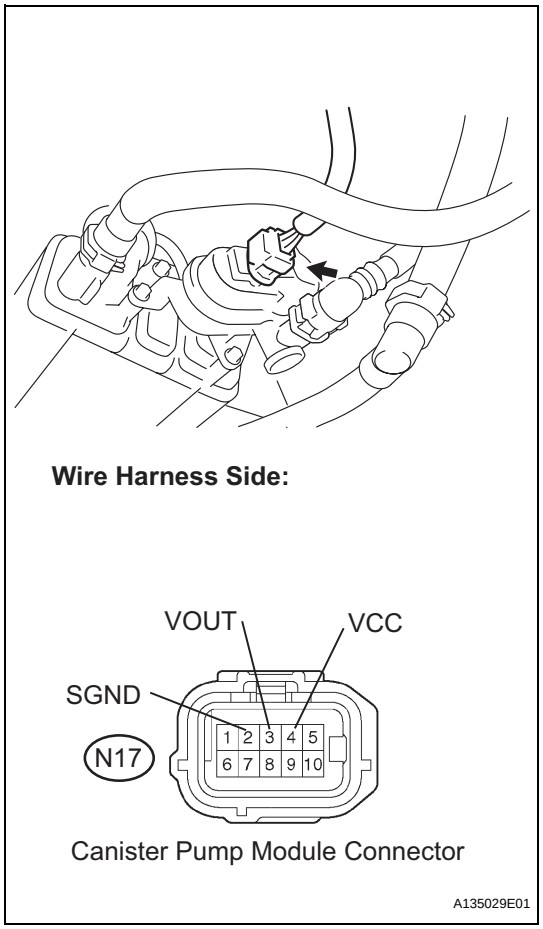
NOTICE:

- **When a vehicle is brought into the workshop, leave it as it is. Do not change the vehicle condition. For example, do not tighten the fuel cap.**
- **Do not disassemble the canister pump module.**
- **An intelligent tester is required to conduct the following diagnostic troubleshooting procedure.**

HINT:

Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK HARNESS AND CONNECTOR (CANISTER PUMP MODULE - ECM)



(a) Disconnect the N17 canister pump module connector.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage and resistance of the canister connector.

Standard

Tester Connection	Specified Condition
N17-4 (VCC) - Body ground	4.5 to 5.5 V
N17-3 (VOUT) - Body ground	4.5 to 5.5 V
N17-2 (SGND) - Body ground	100 Ω or less

Result

Test Result	Proceed to
Voltage and resistance within standard ranges	A
Voltage and resistance outside standard ranges	B

(d) Reconnect the canister pump module connector.

B → Go to step 3

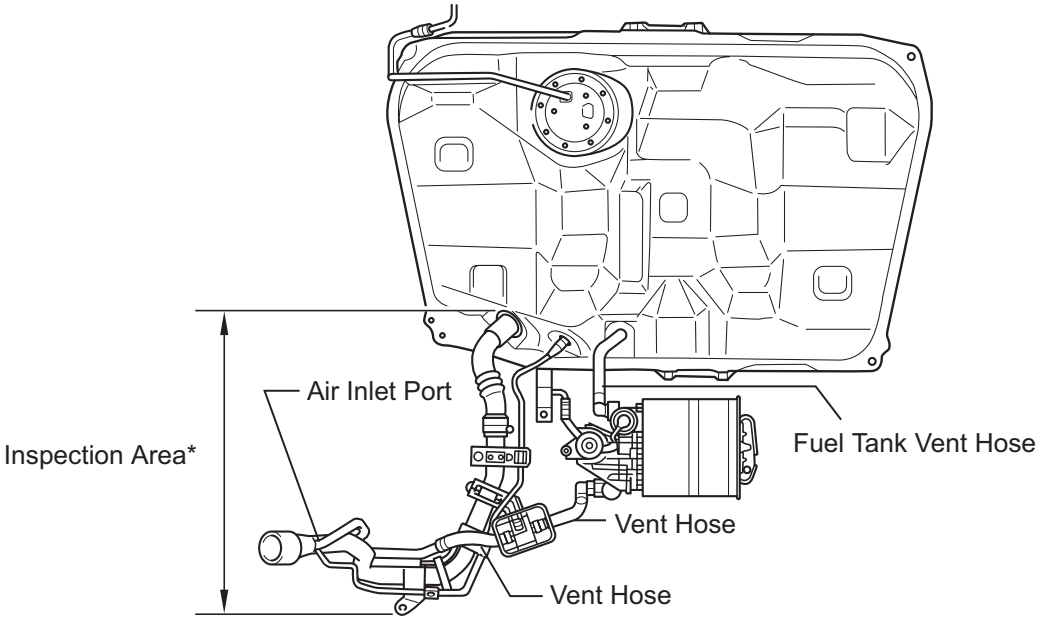
A

2	REPLACE CHARCOAL CANISTER ASSEMBLY

(a) Replace the canister assembly (See page EC-9).

NOTICE:
When replacing the canister, check the canister pump module interior and related pipes for water, fuel and other liquids. If liquids are present, check for disconnections and/or cracks in the following: 1) the pipe from the air inlet port to the canister pump module; 2) the canister filter; and 3) the fuel tank vent hose.

Except PZEV:

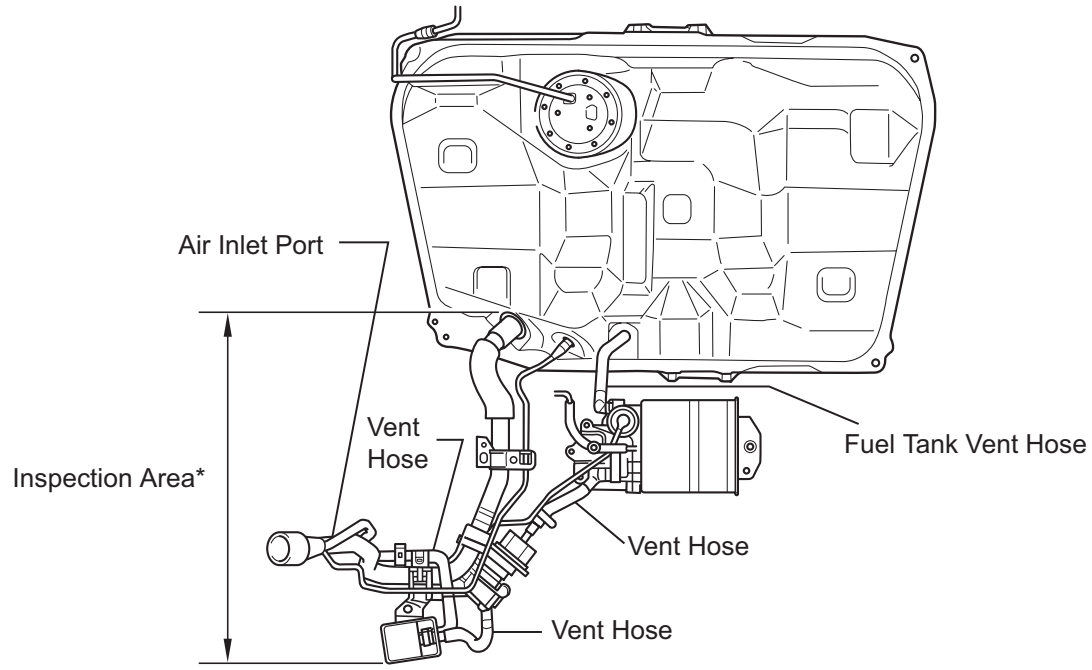


*: Check for disconnection and/or crack

N

A132283E01

PZEV:

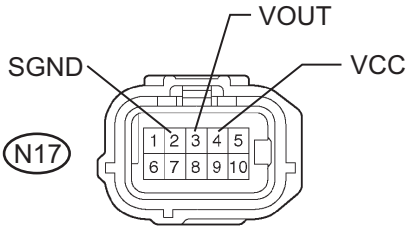


ES

NEXT → **Go to step 5**

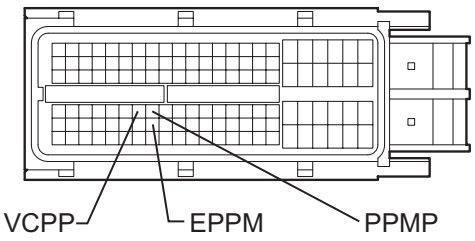
3 CHECK HARNESS AND CONNECTOR (CANISTER PUMP MODULE - ECM)

Wire Harness Side:



Canister Pump Module Connector

C24 ECM Connector



(a) Disconnect the N17 canister pump module connector.
(b) Disconnect the C24 ECM connector.
(c) Measure the resistance between the terminals of the wire harness side connectors.

Standard resistance (Check for open)

Tester Connection	Specified Condition
N17-4 (VCC) - C24-70 (VCPP)	Below 1 Ω
N17-3 (VOUT) - C24-71 (PPMP)	Below 1 Ω
N17-2 (SGND) - C24-94 (EPPM)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
N17-4 (VCC) or C24-70 (VCPP) - Body ground	10 kΩ or higher
N17-3 (VOUT) or C24-71 (PPMP) - Body ground	10 kΩ or higher
N17-2 (SGND) or C24-94 (EPPM) - Body ground	10 kΩ or higher

(d) Reconnect the canister pump module connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR AND GO TO STEP 5**

OK

4	REPLACE ECM

(a) Replace the ECM (See page ES-432).

NEXT → Go to step 5

5	CHECK WHETHER DTC OUTPUT RECURS (AFTER REPAIR)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and turn the tester on.
(c) Wait for at least 60 seconds.
(d) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES.
HINT:
If no pending DTCs are displayed on the tester, the repair has been successfully completed.

NEXT

COMPLETED

DTC	P0455	Evaporative Emission Control System Leak Detected (Gross Leak)

DTC	P0456	Evaporative Emission Control System Leak Detected (Very Small Leak)

DTC SUMMARY

DTCs	Monitoring Item	Malfunction Detection Condition	Trouble Area	Detection Timing	Detection Logic
P0455	EVAP gross leak	Leak detection pump creates negative pressure (vacuum) in EVAP system and EVAP system pressure measured. Reference pressure measured at start and at end of leak check. If stabilized pressure higher than [second reference pressure x 0.2], ECM determines that EVAP system has large leak.	• Fuel cap (loose) • Leakage from EVAP line (Canister - Fuel tank) • Leakage from EVAP line (Purge VSV - Canister) • Canister pump module • Leakage from fuel tank • Leakage from canister	While ignition switch off	2 trip detection logic
P0456	EVAP small leak	Leak detection pump creates negative pressure (vacuum) in EVAP system and EVAP system pressure measured. Reference pressure measured at start and at end of leak check. If stabilized pressure higher than second reference pressure, ECM determines that EVAP system has a small leak.	• Fuel cap (loose) • Leakage from EVAP line (Canister - Fuel tank) • Leakage from EVAP line (Purge VSV - Canister) • Canister pump module • Leakage from fuel tank • Leakage from canister	While ignition switch off	2 trip detection logic

ES

DESCRIPTION

The description can be found in the EVAP (Evaporative Emission) System (See page ES-346).

INSPECTION PROCEDURE

Refer to the EVAP System (See page ES-352).

MONITOR DESCRIPTION

5 hours* after the ignition switch is turned off, the leak detection pump creates negative pressure (vacuum) in the EVAP system. The ECM monitors for leaks and actuator malfunctions based on the EVAP pressure.

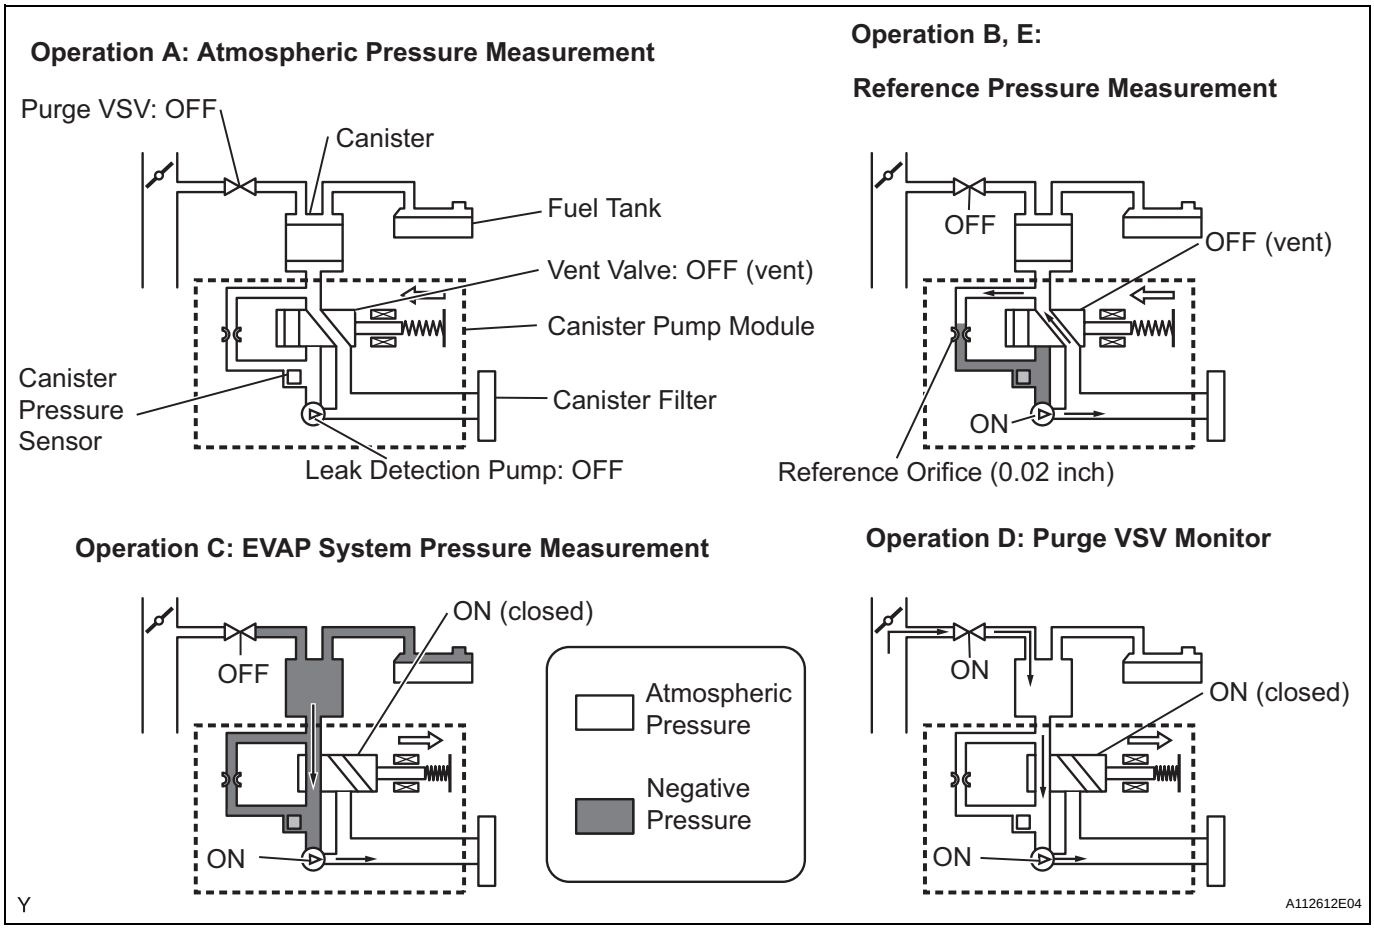
HINT:

*: If the engine coolant temperature is not below 35°C (95°F) 5 hours after the ignition switch is turned off, the monitor check starts 2 hours later. If it is still not below 35°C (95°F) 7 hours after the ignition switch is turned off, the monitor check starts 2.5 hours later.

Sequence	Operations	Descriptions	Duration
-	ECM activation	Activated by soak timer 5, 7 or 9.5 hours after ignition switch turned off.	-
A	Atmospheric pressure measurement	Vent valve turned OFF (vent) and EVAP system pressure measured by ECM in order to register atmospheric pressure. If pressure in EVAP system not between 76 kPa-a and 110 kPa-a (570 mmHg-a and 825 mmHg-a), ECM cancels EVAP system monitor.	10 seconds
B	First reference pressure measurement	In order to determine reference pressure, leak detection pump creates negative pressure (vacuum) through reference orifice and then ECM checks if leak detection pump and vent valve operate normally.	60 seconds
C	EVAP system pressure measurement	Vent valve turned ON (closed) to shut EVAP system. Negative pressure (vacuum) created in EVAP system, and EVAP system pressure then measured. Write down measured value as it will be used in leak check. If EVAP pressure does not stabilize within 15 minutes, ECM cancels EVAP system monitor.	15 minutes*

Sequence	Operations	Descriptions	Duration
D	Purge VSV monitor	Purge VSV opened and then EVAP system pressure measured by ECM. Large increase indicates normality.	10 seconds
E	Second reference pressure measurement	After second reference pressure measurement, leak check performed by comparing first and second reference pressure. If stabilized system pressure higher than second reference pressure, ECM determines that EVAP system leaking.	60 seconds
F	Final check	Atmospheric pressure measured and then monitoring result recorded by ECM.	-

*: If only a small amount of fuel is in the fuel tank, it takes longer for the EVAP pressure to stabilize.

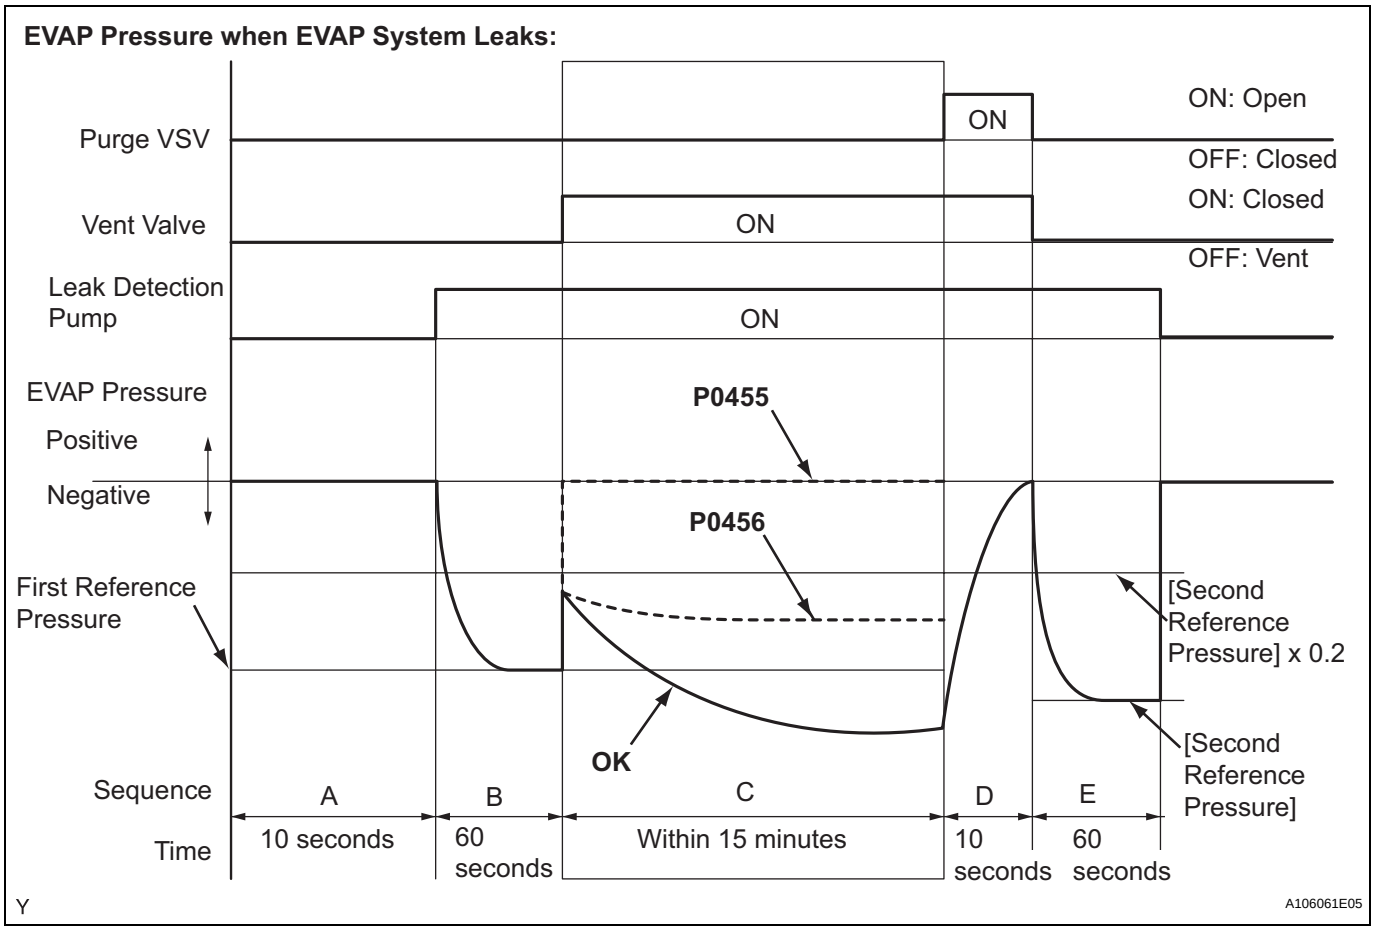


(a) P0455: EVAP gross leak

In operation C, the leak detection pump creates negative pressure (vacuum) in the EVAP system and the EVAP system pressure is measured. If the stabilized system pressure is higher than [second reference pressure x 0.2] (near atmospheric pressure), the ECM determines that the EVAP system has a large leakage, illuminates the MIL and sets the DTC (2 trip detection logic).

(b) P0456: EVAP very small leak

In operation C, the leak detection pump creates negative pressure (vacuum) in the EVAP system and the EVAP system pressure is measured. If the stabilized system pressure is higher than the second reference pressure, the ECM determines that the EVAP system has a small leakage, illuminates the MIL and sets the DTC (2 trip detection logic).



MONITOR STRATEGY

Required Sensors/Components	Purge VSV and canister pump module
Frequency of Operation	Once per driving cycle
Duration	Within 15 minutes (varies with amount of fuel in tank)
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None
EVAP key-off monitor runs when all of the following conditions are met	-
Atmospheric pressure	70 to 110 kPa-a (525 to 825 mmHg-a)
Battery voltage	10.5 V or more
Vehicle speed	Below 2.5 mph (4 km/h)
Ignition switch	off
Time after key off	5, 7 or 9.5 hours
EVAP pressure sensor malfunction (P0450, P0451, P0452 and P0453)	Not detected
EVAP canister purge valve	Not operated by scan tool
EVAP canister vent valve	Not operated by scan tool

EVAP leak detection pump	Not operated by scan tool
Both of the following conditions are met before key off	Conditions 1 and 2
1. Duration that vehicle has been driven	5 minutes or more
2. EVAP purge operation	Performed
ECT	4.4 to 35°C (40 to 95°F)
IAT	4.4 to 35°C (40 to 95°F)

1. Key-off monitor sequence 1 to 8

1. Atmospheric pressure measurement

Next sequence runs if following condition is met	-
Atmospheric pressure change	Less than 0.3 kPa-g (2.25 mmHg-g) in 1 second

2. First reference pressure measurement

Next sequence runs if all of the following conditions are met	Conditions 1, 2 and 3
1. EVAP pressure just after reference pressure measurement start	-1 kPa-g (-7.5 mmHg-g) or less
2. Reference pressure	-4.85 to -1.057 kPa-g (-36.4 to -7.93 mmHg-g)
3. Reference pressure	Saturated within 60 seconds

3. Vent valve stuck closed check

Next sequence runs if following condition is met	-
EVAP pressure change after vent valve is ON	0.3 kPa-g (2.25 mmHg-g) or more

4. Vacuum introduction

Next sequence runs if following condition is met	-
EVAP pressure	Saturated within 15 minutes

5. EVAP canister purge valve close stuck check

Next sequence runs if following condition is met	-
EVAP pressure change after purge valve is open	0.3 kPa-g (2.25 mmHg-g) or more

6. Second reference pressure measurement

Next sequence runs if all of the following conditions are met	Conditions 1, 2, 3 and 4
1. EVAP pressure just after reference pressure measurement start	-1 kPa-g (-7.5 mmHg-g) or less
2. Reference pressure	-4.85 to -1.057 kPa-g (-36.4 to -7.93 mmHg-g)
3. Reference pressure	Saturated within 60 seconds
4. Difference between first reference pressure and second reference pressure	Less than 0.5 kPa-g (3.75 mmHg-g)

7. Leak check

Next sequence runs if following condition is met	-
EVAP pressure when vacuum introduction is complete	Second reference pressure or less

8. Atmospheric pressure measurement

EVAP monitor complete if following condition is met	-
Atmospheric pressure difference between sequence 1 and 8	Within 0.3 kPa-g (2.25 mmHg-g)

TYPICAL MALFUNCTION THRESHOLDS

P0455: EVAP gross leak

EVAP pressure when vacuum introduction is complete	Higher than reference pressure x 0.2

P0456: EVAP small leak

EVAP pressure when vacuum introduction is complete	Between reference pressure and reference pressure x 0.2

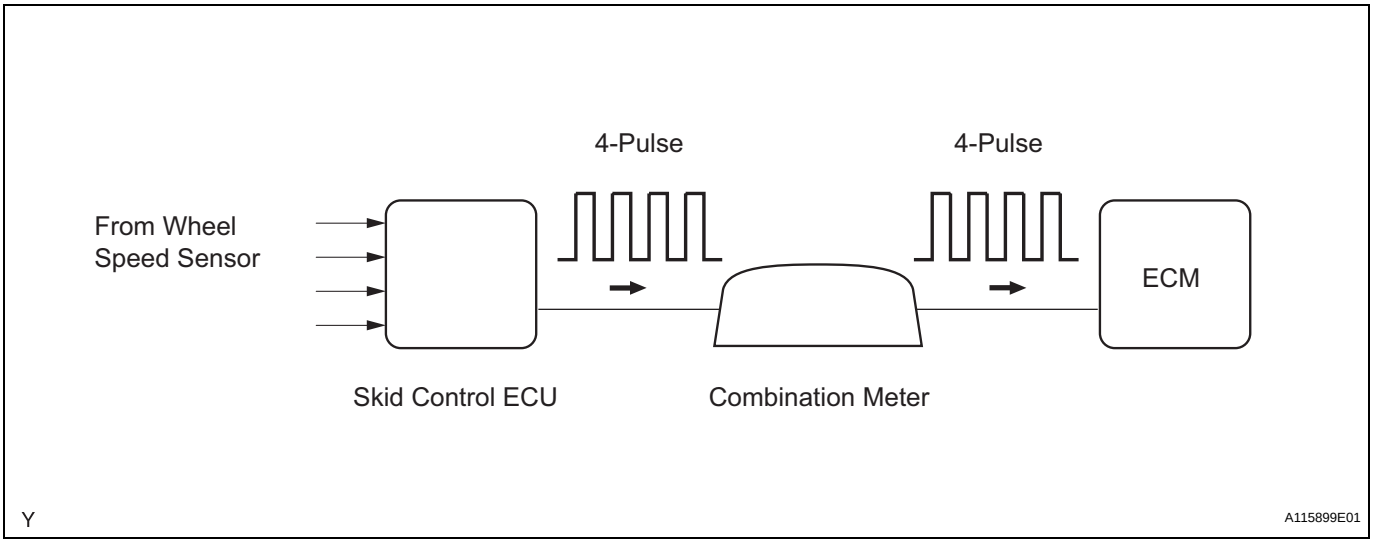
MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-20).

DTC	P0500	Vehicle Speed Sensor "A"

DESCRIPTION

The speed sensor detects the wheel speed and sends the appropriate signals to the skid control ECU. The skid control ECU converts these wheel speed signals into a 4-pulse signal and outputs it to the ECM via the combination meter. The ECM determines the vehicle speed based on the frequency of these pulse signals.



DTC No.	DTC Detection Condition	Trouble Area
P0500	While vehicle being driven, no vehicle speed sensor signal transmitted to ECM (1 trip detection logic: Automatic transaxle) (2 trip detection logic: Manual transaxle)	• Open or short in speed signal circuit • Vehicle speed sensor • Combination meter • ECM • Skid control ECU

MONITOR DESCRIPTION

The ECM assumes that the vehicle is being driven, when the indicated engine speed is more than 2,300 rpm and 30 seconds have elapsed since the Park/Neutral Position (PNP) switch was turned OFF. If there is no speed signal from the combination meter, despite these conditions being met, the ECM interprets this as a malfunction in the speed signal circuit. The ECM then illuminates the MIL and sets the DTC.

MONITOR STRATEGY

Related DTCs	P0500: Vehicle speed sensor "A" pulse input error
Required Sensors/Components (Main)	Vehicle Speed Sensor (VSS), Combination meter and Skid control ECU
Required Sensors/Components (Related)	Park/Neutral Position (PNP) switch, Engine Coolant Temperature (ECT) sensor, Crankshaft Position (CKP) sensor, Throttle Position (TP) sensor and Mass Air Flow (MAF) meter
Frequency of Operation	Continuous
Duration	2 seconds: Automatic Transaxle 8 seconds: Manual Transaxle
MIL Operation	Immediate: Automatic Transaxle 2 driving cycles: Manual Transaxle
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Automatic transmission:

Monitor runs whenever following DTCs are not present	P0120 - P0223, P2135 (TP sensor)
Either of the following conditions (a) or (b) is met:	-
(a) Following conditions 1 and 2 are met:	-
1. ECT and ECT sensor	20°C (68°F) or more, and sensor does not malfunction (P0115 or P0116)
2. Time after PNP switch turned OFF	10 seconds or more
(b) Following conditions 1 and 2 are met:	-
1. ECT and ECT sensor	Less than 20°C (68°F), and sensor malfunction (P0115 or P0116)
2. Time after PNP switch turned OFF	30 seconds or more
Time after ignition switch turned ON position	More than 0.5 seconds
Battery voltage	8 V or more
Ignition switch	ON
Starter	OFF

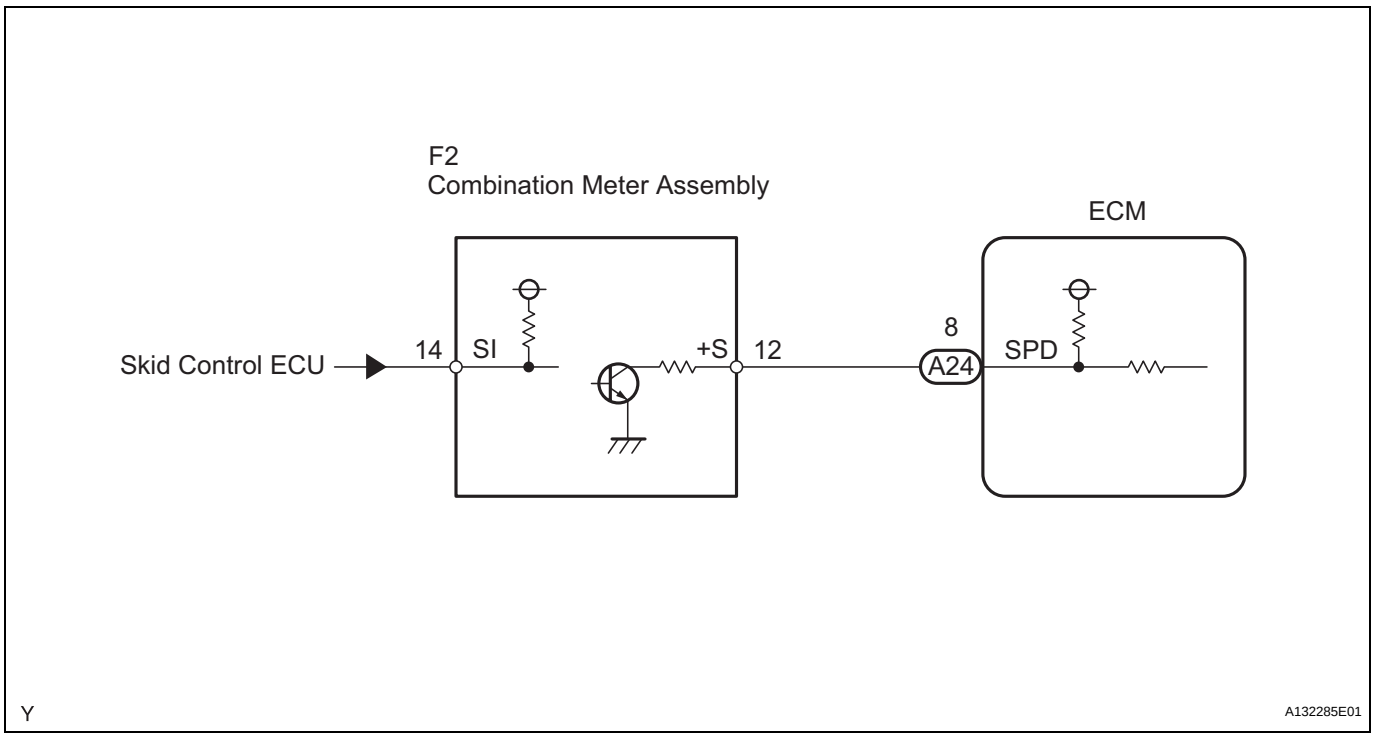
Manual transmission:

Monitor runs whenever following DTCs are not present	P0100 - P0103, (MAF sensor) P0115 - P0118 (ECT sensor) P0125 (Insufficient ECT for closed loop)
ECT	70°C (158°F) or more
Engine PRM	2,000 rpm or more, and less than 4,500 rpm
Engine Load	33.7%
Battery voltage	8 V or more
Starter	OFF
Ignition switch	ON
ECT sensor circuit	OK
MAF sensor circuit	OK

TYPICAL MALFUNCTION THRESHOLDS

Vehicle speed sensor signal	No pulse input

WIRING DIAGRAM



ES

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK OPERATION OF SPEEDOMETER

(a) Drive the vehicle and check whether the operation of the speedometer in the combination meter is normal.
HINT:
- The vehicle speed sensor is operating normally if the speedometer reading is normal.
- If the speedometer does not operate, check it by following the procedure described in speedometer malfunction (See page ME-44).

NG → GO TO MALFUNCTION IN SPEEDOMETER

OK

2	READ VALUE USING INTELLIGENT TESTER (VEHICLE SPD)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.

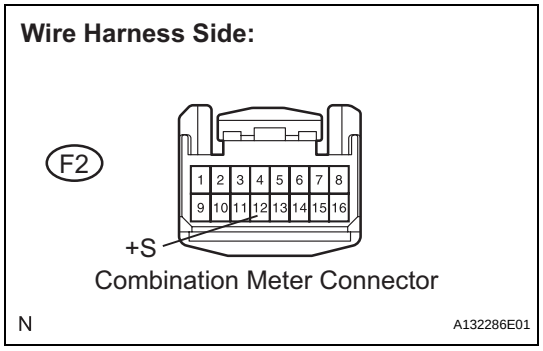
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / VEHICLE SPD.
(e) Drive the vehicle.
(f) Read the value displayed on the tester.
OK:
Vehicle speeds displayed on tester and speedometer display are equal.

OK → **CHECK FOR INTERMITTENT PROBLEMS**

NG

ES

3 CHECK COMBINATION METER ASSEMBLY (+S VOLTAGE)



(a) Disconnect the F2 combination meter connector.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage between the terminal of the combination meter and body ground.
Standard voltage

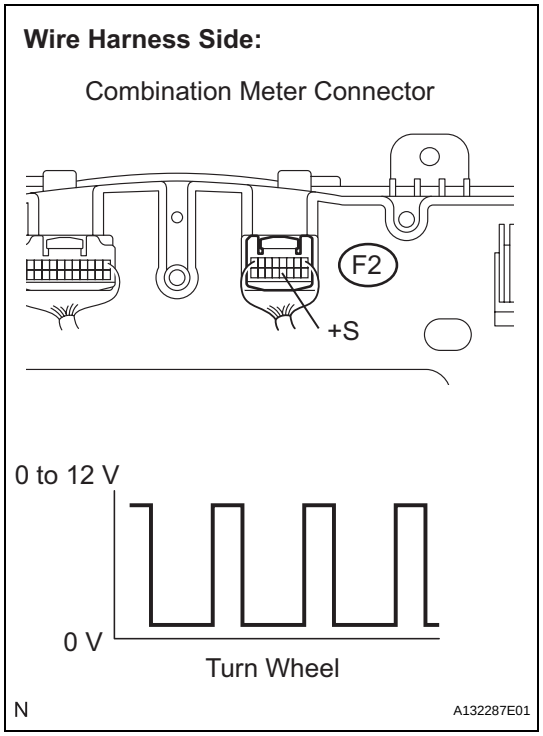
Tester Connection	Specified Condition
F2-12 (+S) - Body ground	4.5 to 5.5 V

(d) Reconnect the combination meter connector.

NG → **Go to step 5**

OK

4 CHECK COMBINATION METER ASSEMBLY (SPD SIGNAL WAVEFORM)



(a) Shift the transmission gear selector lever to the neutral position.
(b) Jack up the vehicle.
(c) Turn the ignition switch to the ON position.
(d) Measure the voltage between the terminal of the combination meter and body ground while the wheel is turned slowly.
Standard voltage

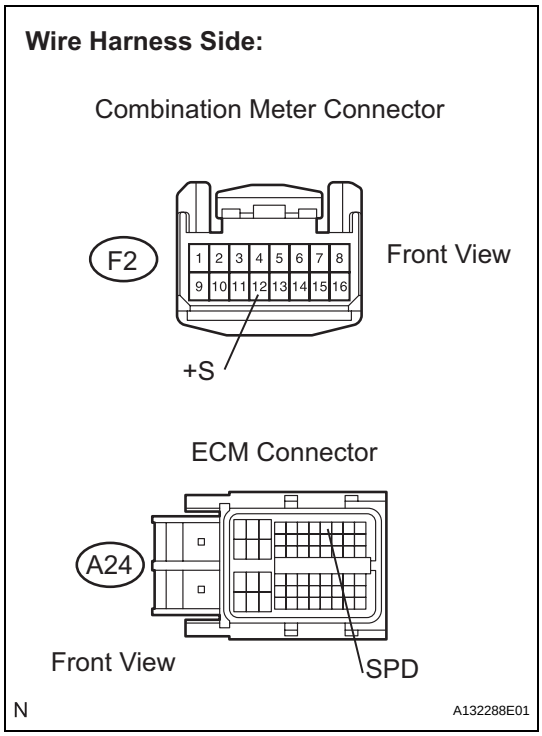
Tester Connection	Specified Condition
F2-12 (+S) - Body ground	Voltage generated intermittently

HINT:
The output voltage should fluctuate up and down, similarly to the diagram, when the wheel is turned slowly.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

5	CHECK HARNESS AND CONNECTOR (COMBINATION METER ASSEMBLY - ECM)



(a) Disconnect the F2 combination meter connector.
(b) Disconnect the A24 ECM connector.
(c) Measure the resistance between the terminals of the wire harness side connectors.

Standard resistance (Check for open)

Tester Connection	Specified Condition
F2-12 (+S) - A24-8 (SPD)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
F2-12 (+S) or A24-8 (SPD) - Body ground	10 kΩ or higher

(d) Reconnect the combination meter connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

DTC	P0504	Brake Switch "A" / "B" Correlation

DESCRIPTION

The stop light switch is a duplex system that transmits two signals: STP and ST1-. These two signals are used by the ECM to monitor whether or not the brake system is working properly. If the signals, which indicate the brake pedal is being depressed and released, are detected simultaneously, the ECM interprets this as a malfunction in the stop light switch and sets the DTC.

HINT:

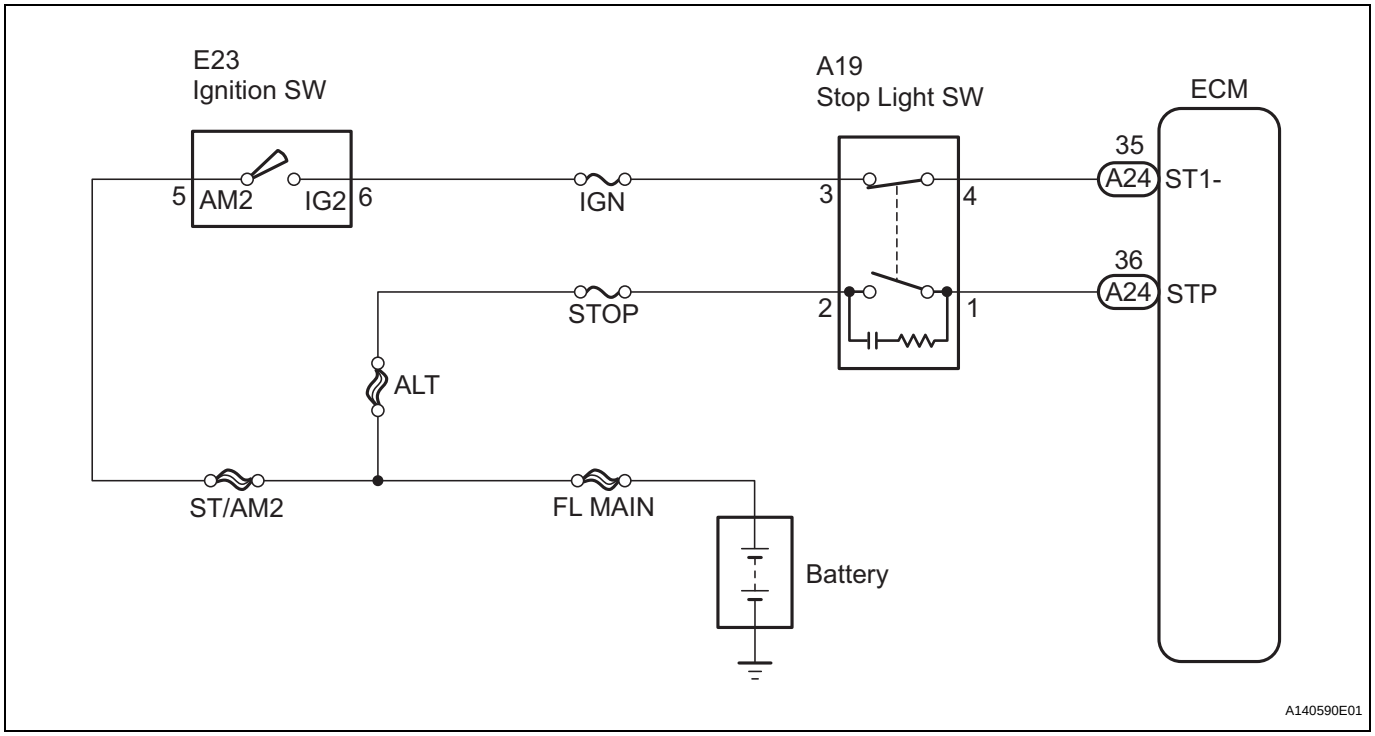
The normal conditions are as shown in the table below. The signals can be read using the intelligent tester.

Signals	Brake Pedal Released	In Transition	Brake Pedal Depressed
STP	OFF	ON	ON
ST1-	ON	ON	OFF

ES

DTC No.	DTC Detection Condition	Trouble Area
P0504	Conditions (a), (b) and (c) continue for 0.5 seconds or more (1 trip detection logic): (a) Ignition switch to the ON position (b) Brake pedal released (c) STP signal OFF when ST1- signal OFF	• Short in stop light switch signal circuit • STOP fuse • IGN fuse • Stop light switch • ECM

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

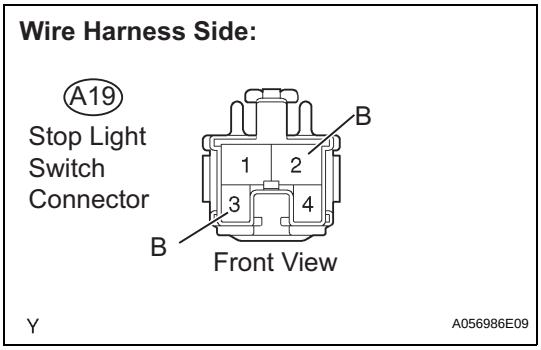
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- STP signal conditions can be checked using the intelligent tester.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / STOP LIGHT SW.
(e) Check the STP signal when the brake pedal is depressed and released.

Brake Pedal Operation	Specified Condition
Depressed	STP signal ON
Released	STP signal OFF

ES

1 CHECK STOP LIGHT SWITCH ASSEMBLY (TERMINAL B VOLTAGE)



(a) Disconnect the A19 stop light switch connector.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage between the terminals of the stop light switch connector and body ground.
Standard voltage

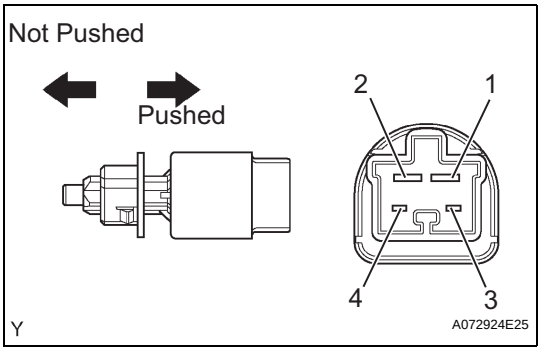
Tester Connection	Specified Condition
A19-2 (B) - Body ground	9 to 14 V
A19-3 (B) - Body ground	9 to 14 V

(d) Reconnect the stop light switch connector.

NG → Go to step 4

OK

2 INSPECT STOP LIGHT SWITCH ASSEMBLY



(a) Remove the stop light switch assembly.
(b) Measure the resistance between the terminals.
Standard resistance

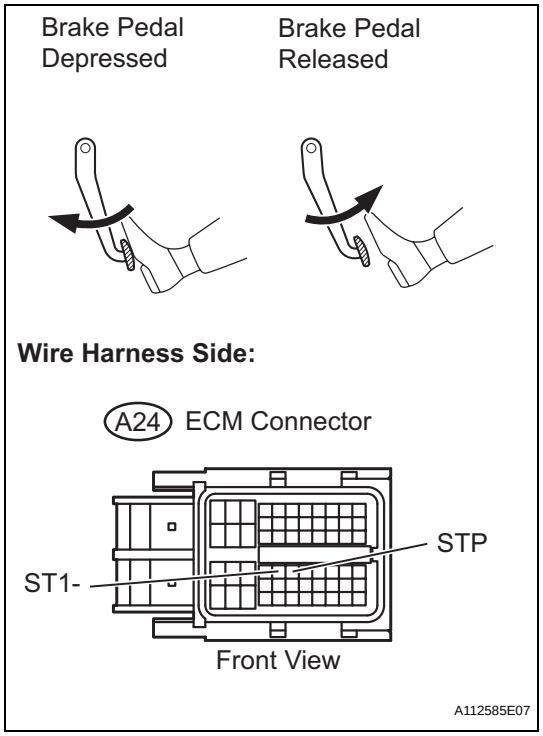
Tester Connection	Switch Position	Specified Condition
1 - 2	Switch pin not pushed	Below 1 Ω
	Switch pin pushed	10 kΩ or higher
3 - 4	Switch pin not pushed	10 kΩ or higher
	Switch pin pushed	Below 1 Ω

(c) Reinstall the stop light switch assembly.

NG → REPLACE STOP LIGHT SWITCH ASSEMBLY

OK

3 CHECK ECM (STP AND ST1 - VOLTAGE)



(a) Disconnect the A24 ECM connector.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage between terminals ST1- and STP of the A24 ECM connector and body ground.
Standard voltage

Tester Connection	Brake Pedal Operation	Specified Condition
A24-35 (ST1-) - Body ground	Released	9 to 14 V
	Depressed	0 to 3 V
A24-36 (STP) - Body ground	Released	0 to 3 V
	Depressed	9 to 14 V

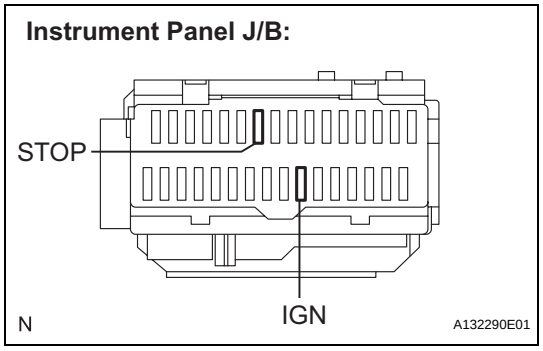
(d) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

4 INSPECT FUSE (STOP AND IGN FUSE)



(a) Remove the STOP and IGN fuses from the instrument panel J/B.
(b) Measure the resistance.
Standard resistance:
Below 1 Ω
(c) Reinstall the STOP and IGN fuses.

DTC	P0505	Idle Control System Malfunction

DESCRIPTION

The idling speed is controlled by the ETCS (Electronic Throttle Control System). The ETCS is comprised of: 1) the one valve type throttle body; 2) the throttle actuator, which operates the throttle valve; 3) the Throttle Position (TP) sensor, which detects the opening angle of the throttle valve; 4) the Accelerator Pedal Position (APP) sensor, which detects the accelerator pedal position; and 5) the ECM, which controls the ETCS. Based on the target idling speed, the ECM controls the throttle actuator to provide the proper throttle valve opening angle.

DTC No.	DTC Detection Condition	Trouble Area
P0505	Idling speed continues to vary greatly from target idling speed (2 trip detection logic)	• ETCS • Air induction system • PCV hose connections • ECM

ES

MONITOR DESCRIPTION

The ECM monitors the idling speed and idling air flow volume to conduct Idle Speed Control (ISC). The ECM determines that the ISC system is malfunctioning if the following conditions are met:

- The learned idling air flow volume remains at the maximum or minimum volume 5 times or more during a driving cycle.
- After driving at 6.25 mph (10 km/h) or more, the actual engine idling speed varies from the target idling speed by between 100 rpm and 200 rpm, 5 times or more during a driving cycle.

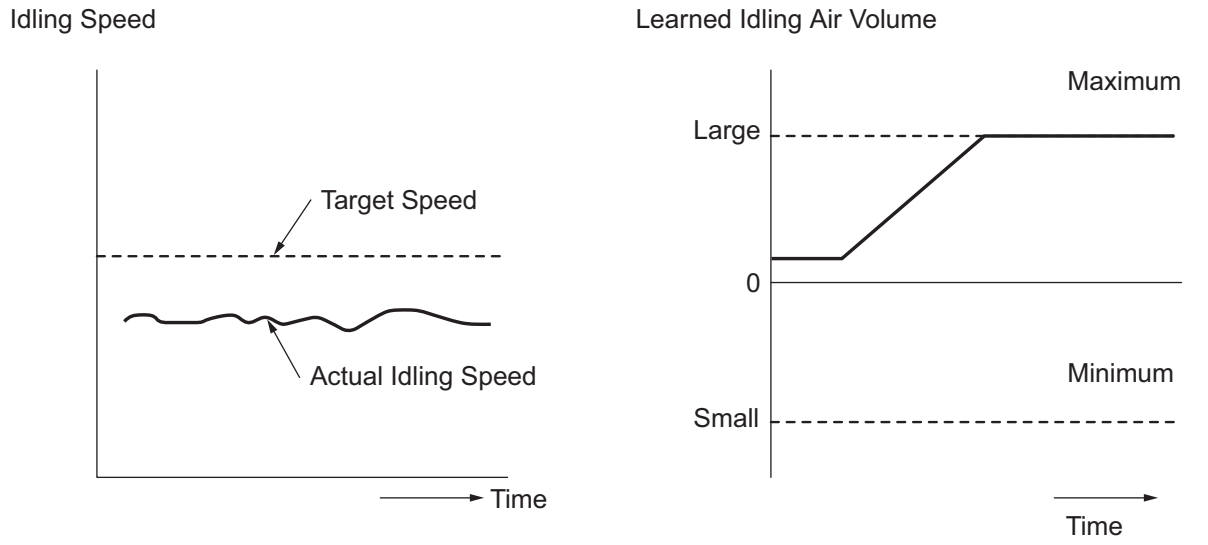
Example:

If the actual idling speed varies from the target idling speed by more than 200 rpm* 5 times during a driving cycle, the ECM illuminates the MIL and sets the DTC.

HINT:

*: Threshold idling speed varies with engine load.

Example:



Y

A121611E02

ES

MONITOR STRATEGY

Related DTCs	P0505: ISC function
Required Sensors/Components (Main)	ETCS
Required Sensors/Components (Related)	Crankshaft position sensor, Engine coolant temperature sensor, and Vehicle speed sensor
Frequency of Operation	Once per driving cycle
Duration	10 minutes
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor will run whenever these DTCs are not present	None
Engine	Running

TYPICAL MALFUNCTION THRESHOLDS

Either of the following conditions 1 or 2 is met	-
1. Frequency that both of the following conditions (a) and (b) are met	5 times or more
(a) Engine rpm - Target engine rpm	Less than -100 rpm, or more than 150 rpm
(b) Vehicle condition	Stop after vehicle was driven by 6.25 mph (10 km/h) or more
2. Frequency that both of the following conditions (c) and (d) are met	Once
(c) Engine rpm - Target engine rpm	Less than -100 rpm, or more than 150 rpm
(d) IAC flow rate learning value	1.3 L/sec. or less, or 6 L/sec. or more

INSPECTION PROCEDURE

HINT:

- The following conditions may also cause DTC P0505 to be set:
  (a) The floor carpet overlapping slightly onto the accelerator pedal, causing the accelerator pedal to be slightly depressed and therefore the throttle valve position to be slightly open.
  (b) The accelerator pedal being not fully released.
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

ES

1 CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0505)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Select the following the menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P0505	A
P0505 and other DTCs	B

HINT:
If any DTCs other than P0505 are output, troubleshoot those DTCs first.

B → **GO TO DTC CHART**

A

2 CHECK PCV HOSE CONNECTIONS

OK:
PCV hose is connected correctly and is not damaged.

NG → **REPAIR OR REPLACE PCV HOSE**

OK

3 CHECK AIR INDUCTION SYSTEM

(a) Check the air induction system for vacuum leakage.
OK:
No leakage from air induction system.

NG → **REPAIR OR REPLACE AIR INDUCTION SYSTEM**

OK

4	CHECK THROTTLE VALVE

(a) Check the throttle valve condition.
OK:
Throttle valve is not contamainated with foreign objects and moves smoothly.

NG → **REPLACE THROTTLE BODY ASSEMBLY**

OK ↓

REPLACE ECM

DTC	P050A	Cold Start Idle Air Control System Performance

DTC	P050B	Cold Start Ignition Timing Performance

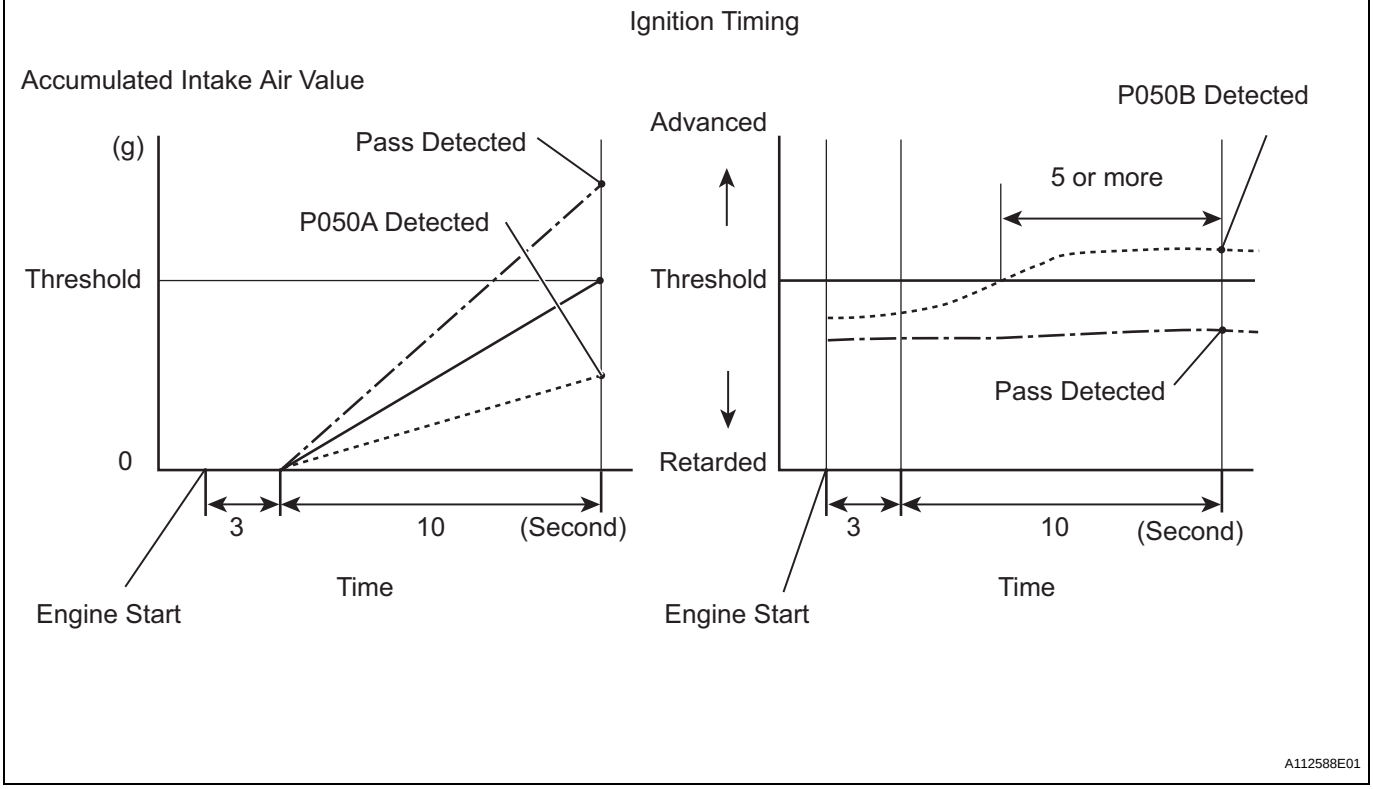
DESCRIPTION

The Electronic Throttle Control System (ETCS) controls the engine idling speed. The ETCS operates the throttle actuator to open and close the throttle valve, and adjusts the intake air amount to achieve the target idling speed.
In addition, the ECM retards the ignition timing and the ETCS increases the intake air amount to quickly increase the catalyst temperature at cold start to reduce emissions.

ES

DTC No.	DTC Detection Condition	Trouble Area
P050A	Accumulated intake air amount during 10 seconds of idling after cold start is less than threshold (2 trip detection logic)	• Throttle body assembly • Mass air flow meter • Air induction system • PCV hose connections • VVT system • Air cleaner filter element • ECM
P050B	Ignition timing retard value insufficient for 5 seconds or more during 10 seconds of P050A monitoring duration at cold start (2 trip detection logic)	• Throttle body assembly • Mass air flow meter • Air induction system • PCV hose connections • VVT system • Air cleaner filter element • ECM

MONITOR DESCRIPTION



The ECM monitors the intake air amount during idling and the ignition timing.
When the Engine Coolant Temperature (ECT) is between -10°C and 50°C (14°F and 122°F), the ECM calculates the idling intake air amount for 10 seconds, beginning 3 seconds after the engine starts.
When the accumulated value is below the threshold, the ECM interprets this as a malfunction in the Idle Speed Control (ISC) system at cold start.
The ECM also monitors the ignition timing at cold start, and judges it to be incorrect when it is advanced to the same value for a warm engine for 5 seconds or more of the 10 second monitoring period.
Example:
P050A is detected when all conditions below are met (2 trip detection logic).
1. The ECT is between -10°C and 50°C (14°F and 122°F) when the engine starts.
2. The engine idles for 13 seconds after engine start.
3. The accumulated intake air amount is below the threshold.

The ECM sets the DTC and illuminates the MIL 13 seconds after the engine is next started.

NOTICE:

When the negative battery terminal is disconnected during inspection or repairs, the ISC learning values are cleared. The ISC learning must be performed by warming up the engine and idling for 5 minutes with the ECT at 75°C (167°F) or more because DTCs cannot be detected with the ISC learning values cleared.

MONITOR STRATEGY

Related DTCs	P050A: Idle speed control problem at cold P050B: Idle ignition timing problem at cold
Required Sensors/Components (Main)	Mass air flow meter
Required Sensors/Components (Related)	Engine Coolant Temperature (ECT) sensor, Throttle position sensor, Vehicle speed sensor
Frequency of Operation	Once per driving cycle
Duration	10 seconds
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

P050A:

Battery voltage	8 V or more
Time after engine start	3 seconds or more
Starter	OFF
ECT at engine start	-10°C (14°F) or more
ECT	-10°C to 50°C (14°F to 122°F)
Engine idling time	3 seconds or more
Fuel-cut	OFF
Vehicle speed	Less than 1.875 mph (3 km/h)
Time after shift position changed (PZEV)	1 second or more
Atmospheric pressure	76 kPa (570 mmHg) or more

P050B:

Battery voltage	8 V or more
Time after engine start	3 seconds or more
Starter	OFF
ECT at engine start	-10°C (14°F) or more
ECT	-10°C to 50°C (14°F to 122°F)
Engine idling time	3 seconds or more
Fuel-cut	OFF
Vehicle speed	Less than 1.875 mph (3 km/h)

TYPICAL MALFUNCTION THRESHOLDS

P050A:

Accumulated mass air flow	Manual transaxle: Less than 14.375 g Automatic transaxle (Except PZEV): Less than 13.75 g Automatic transaxle (PZEV): Less than 21.25 g

P050B:

Accumulated time when ignition timing retard is cut off	5 seconds or more

INSPECTION PROCEDURE

HINT:

ES

Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P050A AND/OR P050B)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Select the following the menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P050A and/or P050B	A
P050A and/or P050B and other DTCs	B

HINT:
If any DTCs other than P050A and P050B are output, troubleshoot those DTCs first.

B → GO TO DTC CHART

A

2	READ VALUE USING INTELLIGENT TESTER (FUEL TRIM)

HINT:
Calculate the total fuel trim values to check the characteristic deviation of the mass air flow meter.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / SHORT FT #1 and LONG FT #1.
(e) Read the values displayed on the tester.
(f) Add together the SHORT FT #1 and LONG FT #1 values to obtain the total FUEL TRIM.

OK:

Total of SHORT FT #1 and LONG FT #1 values is between -20 % and 20 %.

OK → **Go to step 12**

NG

3	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (OPERATE OCV)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the tester on.
(c) Warm up the engine.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / VVT CTRL B1.
(e) Check the engine speed while operating the Oil Control Valve (OCV) using the tester.

ES

OK

Tester Operation	Specified Condition
OCV OFF	Normal engine speed
OCV ON	Engine idles roughly or stalls (soon after OCV switched from OFF to ON)

NG → **Go to step 8**

OK

4	CHECK PCV HOSE CONNECTIONS

OK:

PCV hose is connected correctly and is not damaged.

NG → **Go to step 9**

OK

5	CHECK AIR INDUCTION SYSTEM

(a) Check the air induction system for vacuum leakage.
OK:
No leakage from air induction system.

NG → **Go to step 10**

OK

6	CHECK AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY

(a) Visually check that the air cleaner filter element is not excessively contaminated with dirt or oil.
OK:
Air cleaner filter element is not excessively contaminated with dirt or oil.

NG → Go to step 11

OK

7	REPLACE MASS AIR FLOW METER

NEXT → Go to step 15

8	CHECK AND REPAIR VVT SYSTEM

NEXT → Go to step 15

9	REPAIR OR REPLACE PCV HOSE

NEXT → Go to step 15

10	REPAIR OR REPLACE AIR INDUCTION SYSTEM

NEXT → Go to step 15

11	REPLACE AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY

NEXT → Go to step 15

12	CHECK THROTTLE VALVE

(a) Check for deposits around the throttle valve and throttle valve condition.

OK:

No deposits around throttle valve and throttle valve moves smoothly.

NG → Go to step 14

OK

13	REPLACE ECM

NEXT → Go to step 15

14	REPAIR OR REPLACE THROTTLE BODY ASSEMBLY

NEXT → Go to step 15

15	CHECK WHETHER DTC OUTPUT RECURS (DTC P050A AND/OR P050B)

NOTICE:
In this operation, the engine must be cold (the same level as the engine coolant temperature recorded in the freeze frame data).

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Clear the DTCs (See page ES-38).
(e) Switch the ECM from normal mode to check mode using the tester (See page ES-41).
(f) Start the engine to idle for a minute.
OK:
Stable fast idling.
(g) Read the DTCs.
OK:
No DTC output.

ES

NEXT

END

DTC	P0560	System Voltage

DESCRIPTION

The battery supplies electricity to the ECM even when the ignition switch is off. This power allows the ECM to store data such as DTC history, freeze frame data and fuel trim values. If the battery voltage falls below a minimum level, the memory is cleared and the ECM determines that there is a malfunction in the power supply circuit. When the engine is next started, the ECM illuminates the MIL and set the DTC.

DTC No.	DTC Detection Condition	Trouble Area
P0560	Open in ECM back up power source circuit (1 trip detection logic)	• Open in back up power source circuit • Battery • Battery terminals • EFI No. 1 fuse • ECM

ES

HINT:
If DTC P0560 is set, the ECM does not store other DTCs or the data stored in the ECM are partly erased.

MONITOR STRATEGY

Related DTCs	P0560: ECM system voltage
Required Sensors/Components (Main)	ECM
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	3 seconds
MIL Operation	Immediate (MIL illuminated after next engine start)
Sequence of Operation	None

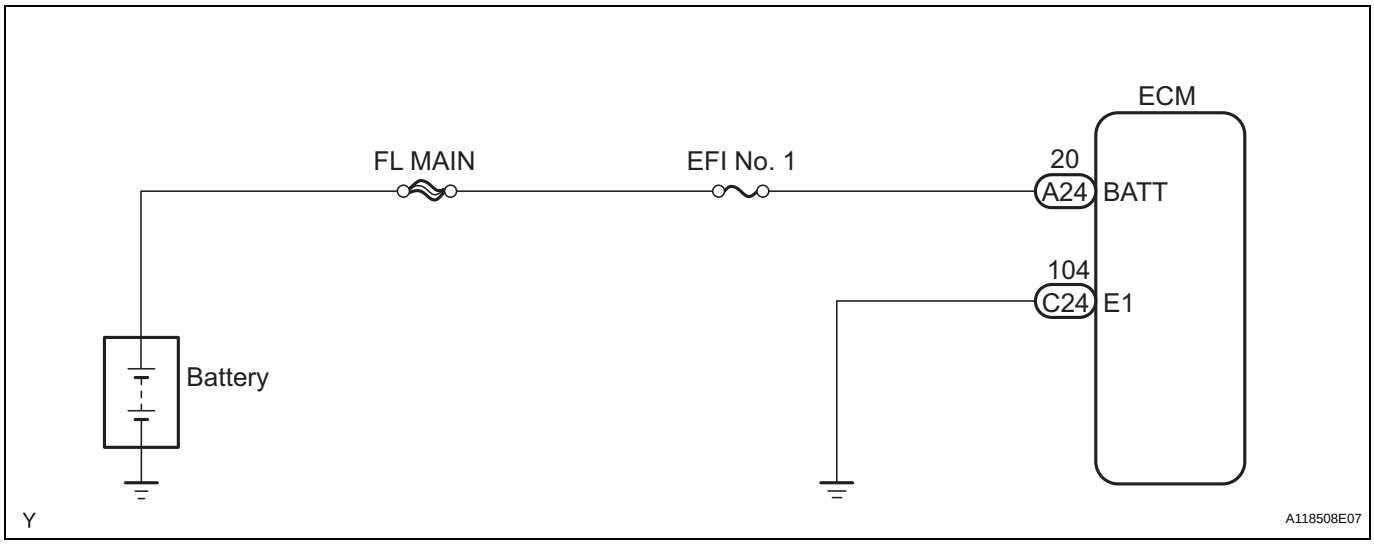
TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None
Stand-by RAM	Initialized

TYPICAL MALFUNCTION THRESHOLDS

ECM power source	Less than 3.5 V

WIRING DIAGRAM

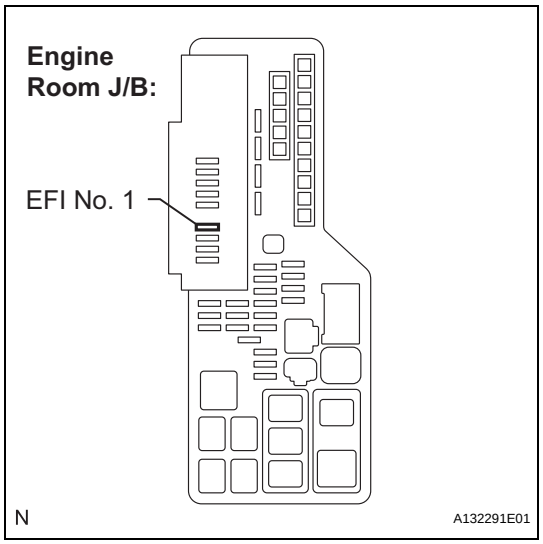


INSPECTION PROCEDURE

HINT:

Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK FUSE (EFI NO. 1 FUSE)



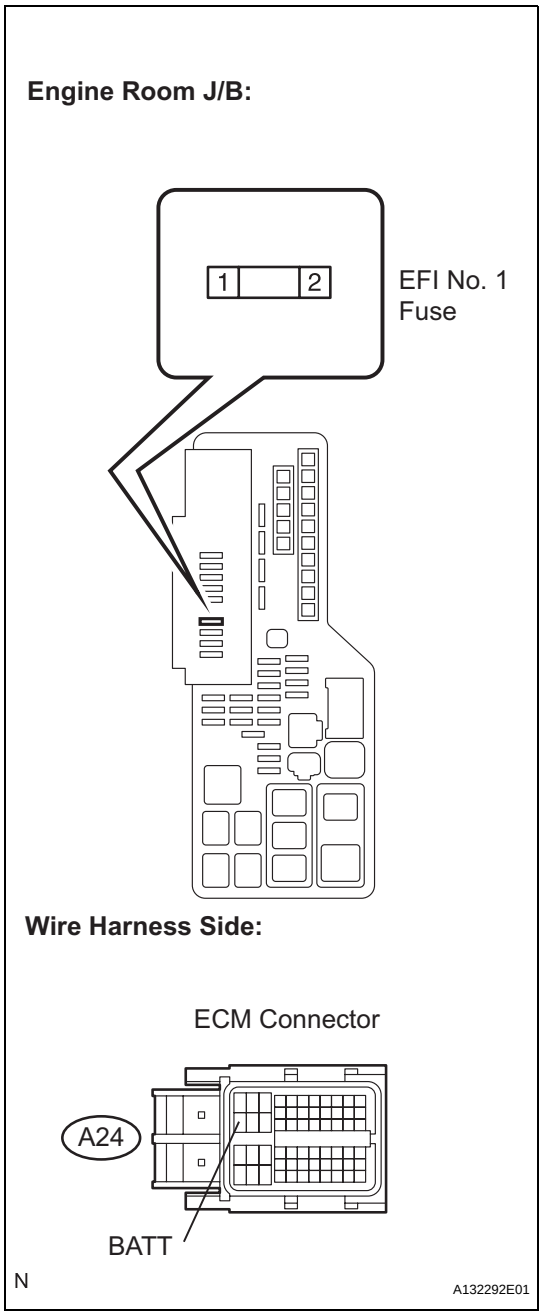
(a) Remove the EFI No. 1 fuse from the engine room J/B.
(b) Measure the resistance of the EFI No. 1 fuse.
Standard resistance:
Below 1 Ω
(c) Reinstall the EFI No. 1 fuse.

NG → **REPLACE FUSE (EFI NO. 1 FUSE)**

OK

ES

2	CHECK HARNESS AND CONNECTOR (ECM - EFI NO. 1 FUSE, EFI NO. 1 FUSE - BATTERY)



(a) Check the harness and the connector between the EFI No. 1 fuse and ECM.
  (1) Remove the EFI No. 1 fuse from the engine room J/B.
  (2) Disconnect the A24 ECM connector.
  (3) Measure the resistance.
  Standard resistance (Check for open)

Tester Connection	Specified Condition
2 (EFI No. 1 fuse) - A24-20 (BATT)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
2 (EFI No. 1 fuse) or A24-20 (BATT) - Body ground	10 kΩ or higher

  (4) Reconnect the ECM connector.
  (5) Reinstall the EFI No. 1 fuse.

(b) Check the harness and the connector between the EFI No. 1 fuse and battery.
  (1) Remove the EFI No. 1 fuse from the engine room J/B.
  (2) Disconnect the negative battery terminal.
  (3) Disconnect the positive battery terminal.
  (4) Measure the resistance.
  Standard resistance (Check for open)

Tester Connection	Specified Condition
Battery positive terminal - 1 (EFI No. 1 fuse)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
Battery positive terminal or 1 (EFI No. 1 fuse) - Body ground	10 kΩ or higher

  (5) Reconnect the positive battery terminal.
  (6) Reconnect the negative battery terminal.
  (7) Reinstall the EFI No. 1 fuse.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	INSPECT BATTERY

(a) Check the battery voltage.
  Standard voltage:
  12.5 to 12.9 V at 20°C (68°F)

NG → **REPLACE BATTERY**

OK

4	CHECK BATTERY TERMINAL

(a) Check that the battery terminals are not loose or corroded.
OK:
Battery terminals are not loose or corroded.

NG → **REPAIR OR REPLACE BATTERY TERMINAL**

OK

ES

5	CHECK WHETHER DTC OUTPUT RECURS

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and turn the tester on.
(c) Clear the DTCs (See page ES-38).
(d) Turn the ignition switch off and turn the tester off.
(e) Start the engine and turn the tester on.
(f) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(g) Read the DTCs.

REPLACE ECM

DTC	P0604	Internal Control Module Random Access Memory (RAM) Error

DTC	P0606	ECM / PCM Processor

DTC	P0607	Control Module Performance

DTC	P0657	Actuator Supply Voltage Circuit / Open

DESCRIPTION

The ECM continuously monitors its own internal memory status, internal circuits, and output signals transmitted to the throttle actuator. This self-check ensures that the ECM is functioning properly. If any malfunction is detected, the ECM sets the appropriate DTC and illuminates the MIL.
The ECM memory status is diagnosed by internal mirroring of the main CPU and the sub CPU to detect Random Access Memory (RAM) errors. The two CPUs also perform continuous mutual monitoring. The ECM illuminates the MIL and sets a DTC if: 1) outputs from the two CPUs are different or deviate from the standards, 2) the signals sent to the throttle actuator deviate from the standards, 3) a malfunction is found in the throttle actuator supply voltage, and 4) any other ECM malfunction is found.

DTC No.	DTC Detection Condition	Trouble Area
P0604 P0606 P0607 P0657	ECM internal error (1 trip detection logic)	ECM

MONITOR STRATEGY

Related DTCs	P0604: ECM RAM error P0606: ECM range check P0607: ECM CPU malfunction P0657: ETCS power supply
Required Sensors/Components (Main)	ECM
Required Sensors/Components (Related)	-
Frequency of Operation	Once per driving cycle: P0657 Continuous: P0604, P0606 and P0607
Duration	Within 1 second
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None

TYPICAL MALFUNCTION THRESHOLDS

ECM RAM errors (P0604):

RAM mirror check	Fail

ECM CPU range check (P0606):

Either of the following conditions is met:	-
Difference between throttle valve position of main CPU and throttle valve position of sub CPU	0.3 V or more
Difference between accelerator pedal position of main CPU and accelerator pedal position of sub CPU	0.3 V or more

ECM CPU malfunction (P0607):

Either of the following conditions A or B is met	-
A. All of the following conditions (a), (b) and (c) are met	-
(a) CPU reset	1 time or more
(b) Learned TP - learned APP	0.4 V or more
(c) Electronic throttle actuator	OFF
B. CPU reset	2 times or more

ETCS power supply (P0657):

ETCS power supply when ignition switch turned ON position	7 V or more

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0604, P0606, P0607 OR P0657)**

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

REPLACE ECM

DTC	P0617	Starter Relay Circuit High

DESCRIPTION

While the engine is being cranked, the positive battery voltage is applied to terminal STA of the ECM. If the ECM detects the Starter Control (STA) signal while the vehicle is being driven, it determines that there is a malfunction in the STA circuit. The ECM then illuminates the MIL and sets the DTC.
This monitor runs when the vehicle is driven at 12.43 mph (20 km/h) for over 20 seconds.

DTC No.	DTC Detection Condition	Trouble Area
P0617	When conditions (a), (b) and (c) are met, positive (+B) battery voltage 10.5 V or more is applied to ECM for 20 seconds (1 trip detection logic) (a) Vehicle speed 12.43 mph (20 km/h) or more (b) Engine speed 1,000 rpm or more (c) STA signal ON	• Park/Neutral Position (PNP) switch • Starter relay circuit • Ignition switch • ECM

ES

MONITOR STRATEGY

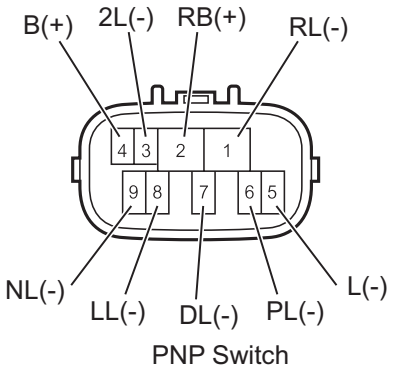
NG → **Go to step 2**

OK

CHECK FOR INTERMITTENT PROBLEMS

2 INSPECT PARK/NEUTRAL POSITION SWITCH ASSEMBLY

Component Side:



HINT:
For vehicles with the manual transaxle, proceed to step 5.
(a) Disconnect the C1 PNP switch connector.
(b) Measure the resistance when the transmission gear selector lever is moved to each position.
Standard resistance

Gear Selector Lever Position	Tester Connection	Specified Condition
P	2 - 6, 4 - 5	Below 1 Ω
R	1 - 2	Below 1 Ω
N	2 - 9, 4 - 5	Below 1 Ω
D	2 - 7	Below 1 Ω
2	2 - 3	Below 1 Ω
L	2 - 8	Below 1 Ω

(c) Reconnect the PNP switch connector.

OK → **Go to step 8**

NG

3 REPLACE PARK/NEUTRAL POSITION SWITCH ASSEMBLY

NEXT

4 READ VALUE USING INTELLIGENT TESTER (STARTER SIGNAL)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and turn the tester on.

(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / STARTER SIG.
(d) Read the value displayed on the tester when turn the ignition switch to the ON and START positions.

OK

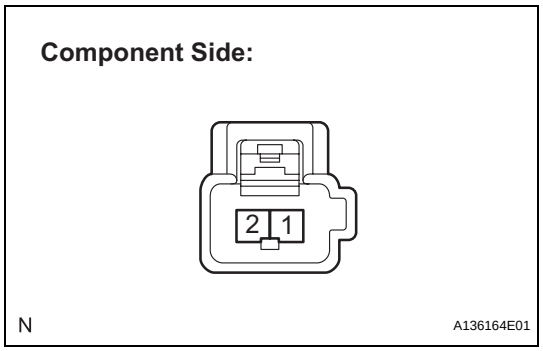
Ignition Switch Positions	STARTER SIG
ON	OFF
START	ON

NG → **Go to step 8**

OK

SYSTEM OK

5 INSPECT CLUTCH START SWITCH ASSEMBLY



(a) Disconnect the A22 clutch start switch connector.
(b) Measure the resistance between the terminals.
Standard resistance

Tester Connection	Switch Condition	Specified Condition
1 - 2	Clutch pedal released	10 kΩ or higher
1 - 2	Clutch pedal depressed	Below 1 Ω

(c) Reconnect the clutch start switch connector.

OK → **Go to step 8**

NG

6 REPLACE CLUTCH START SWITCH ASSEMBLY

NEXT

7 READ VALUE USING INTELLIGENT TESTER (STARTER SIGNAL)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and turn the tester on.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / STARTER SIG.
(d) Check the value displayed on the tester when turn the ignition switch to the ON and START positions.

OK

Ignition Switch Position	STARTER SIG

DTC	P0724	Brake Switch "B" Circuit High

DESCRIPTION

The purpose of this circuit is to prevent the engine from stalling while driving in the lock-up condition when the brakes are suddenly applied.
When the brake pedal is depressed, this switch sends a signal to the ECM. Then the ECM cancels the operation of the lock-up clutch while braking is in progress.

DTC No.	DTC Detection Condition	Trouble Area
P0724	Stop light switch remains ON even when vehicle is driven in GO (18.65 mph (30 km/h) or more) and STOP (less than 1.86 mph (3 km/h)) pattern 5 times (2 trip detection logic)	• Short in stop light switch signal circuit • Stop light switch • ECM

ES

MONITOR DESCRIPTION

This DTC indicates that the stop light switch remains ON. When the stop light switch remains ON during GO and STOP driving, the ECM interprets this as a fault in the stop light switch. Then the MIL illuminates and the ECM stores the DTC. The vehicle must be driven in GO (18.65 mph (30 km/h) or more) and STOP (less than 1.86 mph (3 km/h)) pattern 5 times in 2 driving cycles in order for the DTC to be output.

MONITOR STRATEGY

Related DTCs	P0724: Stop light switch/Range check/Rationality
Required sensors/Components	Stop light switch, Vehicle speed sensor
Frequency of operation	Continuous
Duration	GO and STOP 5 times
MIL operation	2 driving cycles
Sequence of operation	None

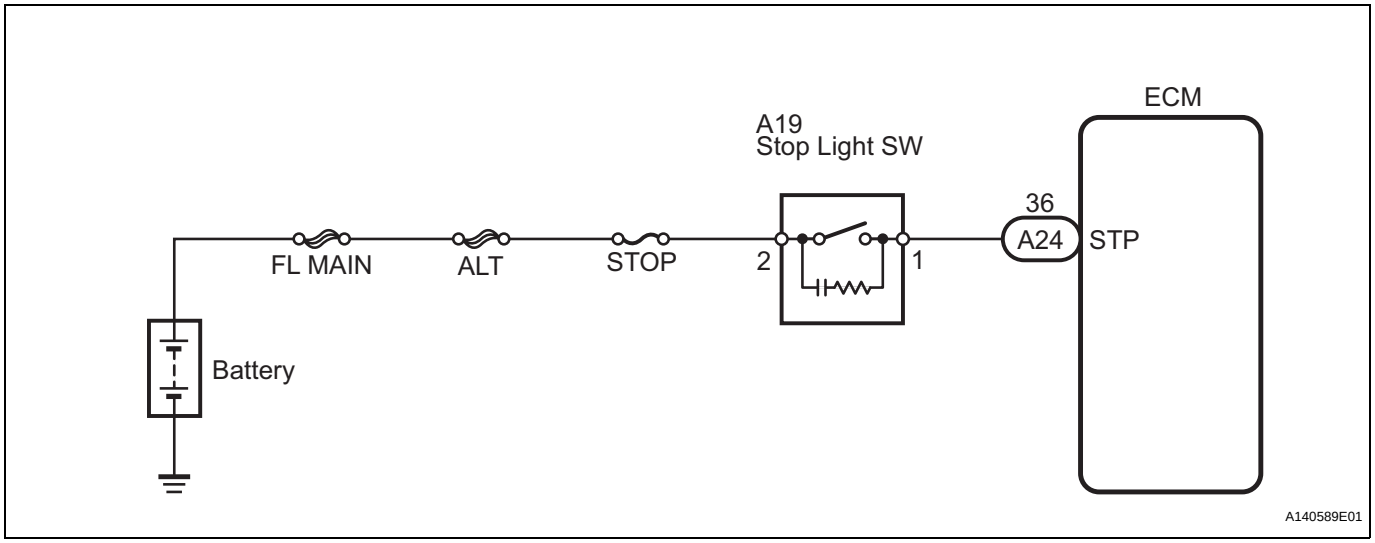
TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None
Battery voltage	8 V or more
Starter	OFF
Ignition switch	ON
GO (Vehicle speed is 18.65 mph (30 km/h) or more)	Once
STOP (Vehicle speed is less than1.86 mph (3 km/h))	Once

TYPICAL MALFUNCTION THRESHOLDS

Brake switch	Stuck ON

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

- Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

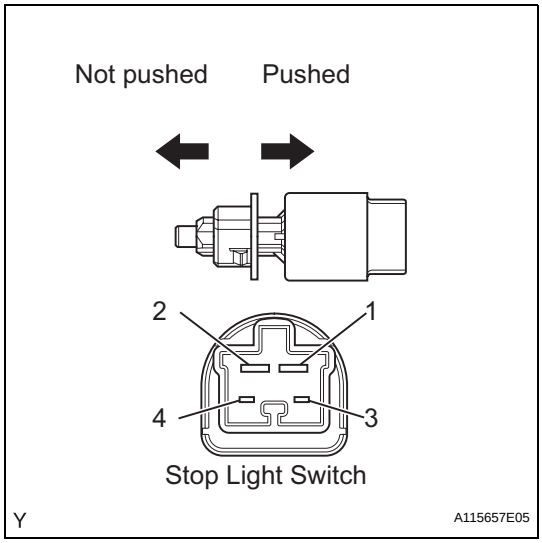
NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

1. Warm up the engine.
2. Turn the ignition switch off.
3. Connect the intelligent tester to the DLC3.
4. Turn the ignition switch to the ON position.
5. Turn the intelligent tester on.
6. Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST.
7. Follow the instructions on the tester and read the DATA LIST.

Item	Measurement Item/ Range (Display)	Normal Condition	Diagnostic Note
STOP LIGHT SW	Stop light switch status/ ON or OFF	• Brake pedal is depressed: ON • Brake pedal is released: OFF	-

1	INSPECT STOP LIGHT SWITCH



(a) Remove the stop light switch.
(b) Measure the resistance between the terminals.
Standard resistance

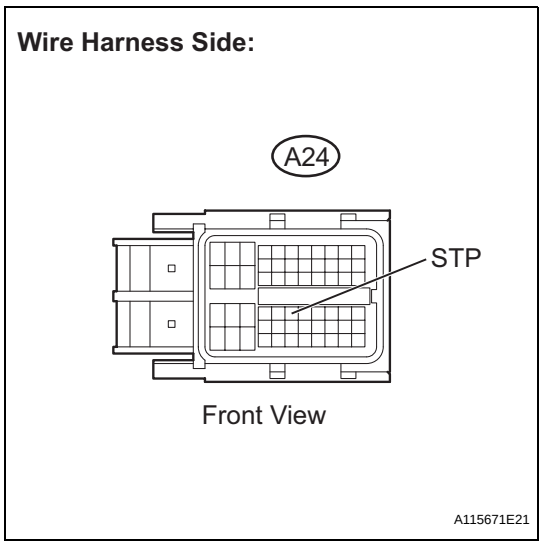
Tester Connection	Switch Condition	Specified Condition
1 - 2	Switch pin released	Below 1 Ω
	Switch pin pushed in	10 kΩ or higher
3 - 4	Switch pin released	10 kΩ or higher
	Switch pin pushed in	Below 1 Ω

(c) Reinstall the stop light switch.

NG → **REPLACE STOP LIGHT SWITCH**

OK

2	CHECK WIRE HARNESS (ECM - BATTERY)



(a) Measure the voltage of the wire harness side connector.
(1) Disconnect the A24 ECM connector.
(2) Measure the voltage.
Standard voltage

Tester Connection	Condition	Specified Condition
A24-36 (STP) - Body ground	Brake pedal is depressed	10 to 14 V
A24-36 (STP) - Body ground	Brake pedal is released	Below 1 V

(3) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

DTC	P2004	Intake Manifold Runner Control Stuck Open (Bank 1)

DTC	P2006	Intake Manifold Runner Control Stuck Closed (Bank 1)

DESCRIPTION

The intake manifold runner valve system is mounted on the intake manifold and consists of the intake manifold runner valve (IMRV), the IMRV motor and the IMRV position sensor. The IMRV motor opens and closes the IMRV using multiple gears (See page ES-270 for details). The valve position sensor detects the opening angle of the IMRV (See page ES-275 for details).

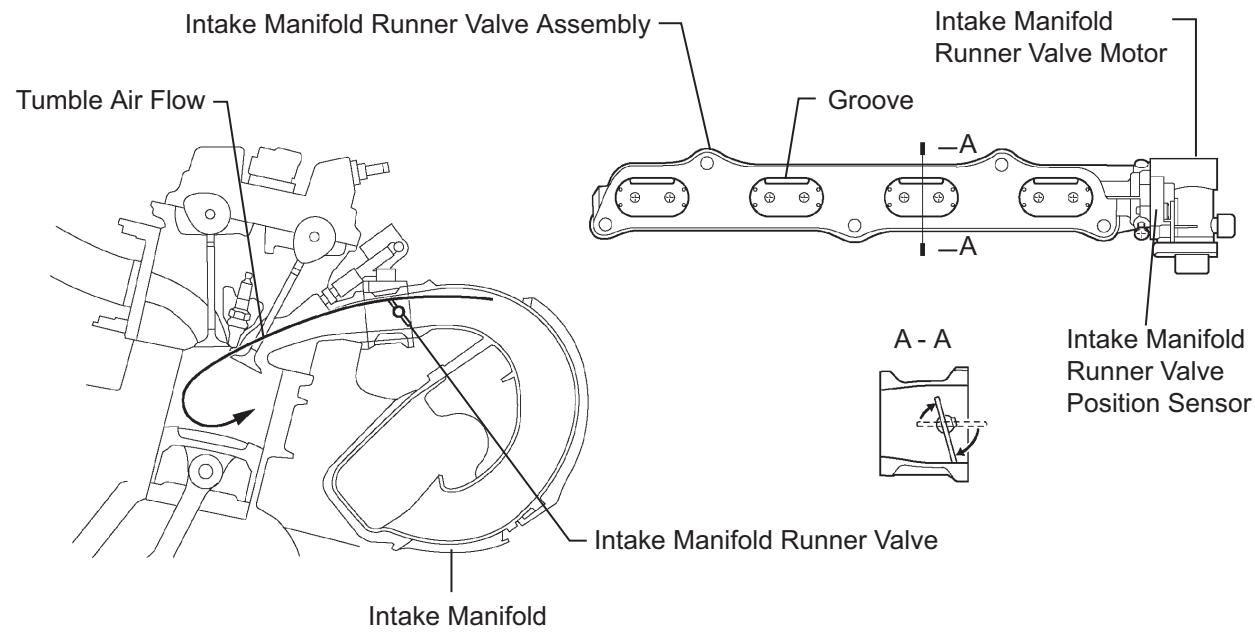
The IMRV has a groove on its upper portion.

When the IMRV is closed, air flows through a groove into the cylinder from the intake manifold, so that a dynamic air flow or "tumble" air flow is generated in the cylinder. The tumble air flow drastically reduces fuel deposits inside the intake air port and the combustion wall surface inside the cylinder. This improves the combustion efficiency by boosting the air-fuel mixture and air flow turbulence.

The related DTCs are P2009 and P2010 (See page ES-270), and P2014, P2016 and P2017 (See page ES-275).

NOTICE:

Do not disassemble the IMRV and the IMRV motor.



The ECM fully closes the IMRV during the first idle with the engine coolant temperature more than -10°C (14°F) and less than 60°C (140°F) and the intake air temperature is more than -10°C (14°F) before the engine is warmed up. In other condition, the ECM fully opens the IMRV.

Open and closed condition for IMRV:

Temperatures of the engine coolant and the intake air when the engine starting up	**Before warming up the engine**	**When one of the following conditions is met:** **(a) Throttle valve opening angle is 1.5° or more.** **(b) Vehicle speed is 3 mph (5 km/h) or more.** **(c) Engine speed is 3,000 rpm or more.** **(d) When the shift lever is in any position other than N.**	**After warming up the engine**
Engine coolant temp. is less than -10°C (14°F) or more than 60°C 140°F) or intake air temp. is less than -10°C (14°F).	OPEN	OPEN	OPEN
Engine coolant temp. is between -10°C (14°F) and 60°C (140°F). Intake air temp. is -10°C (14°F) or more.	CLOSED	OPEN	OPEN

P2006:

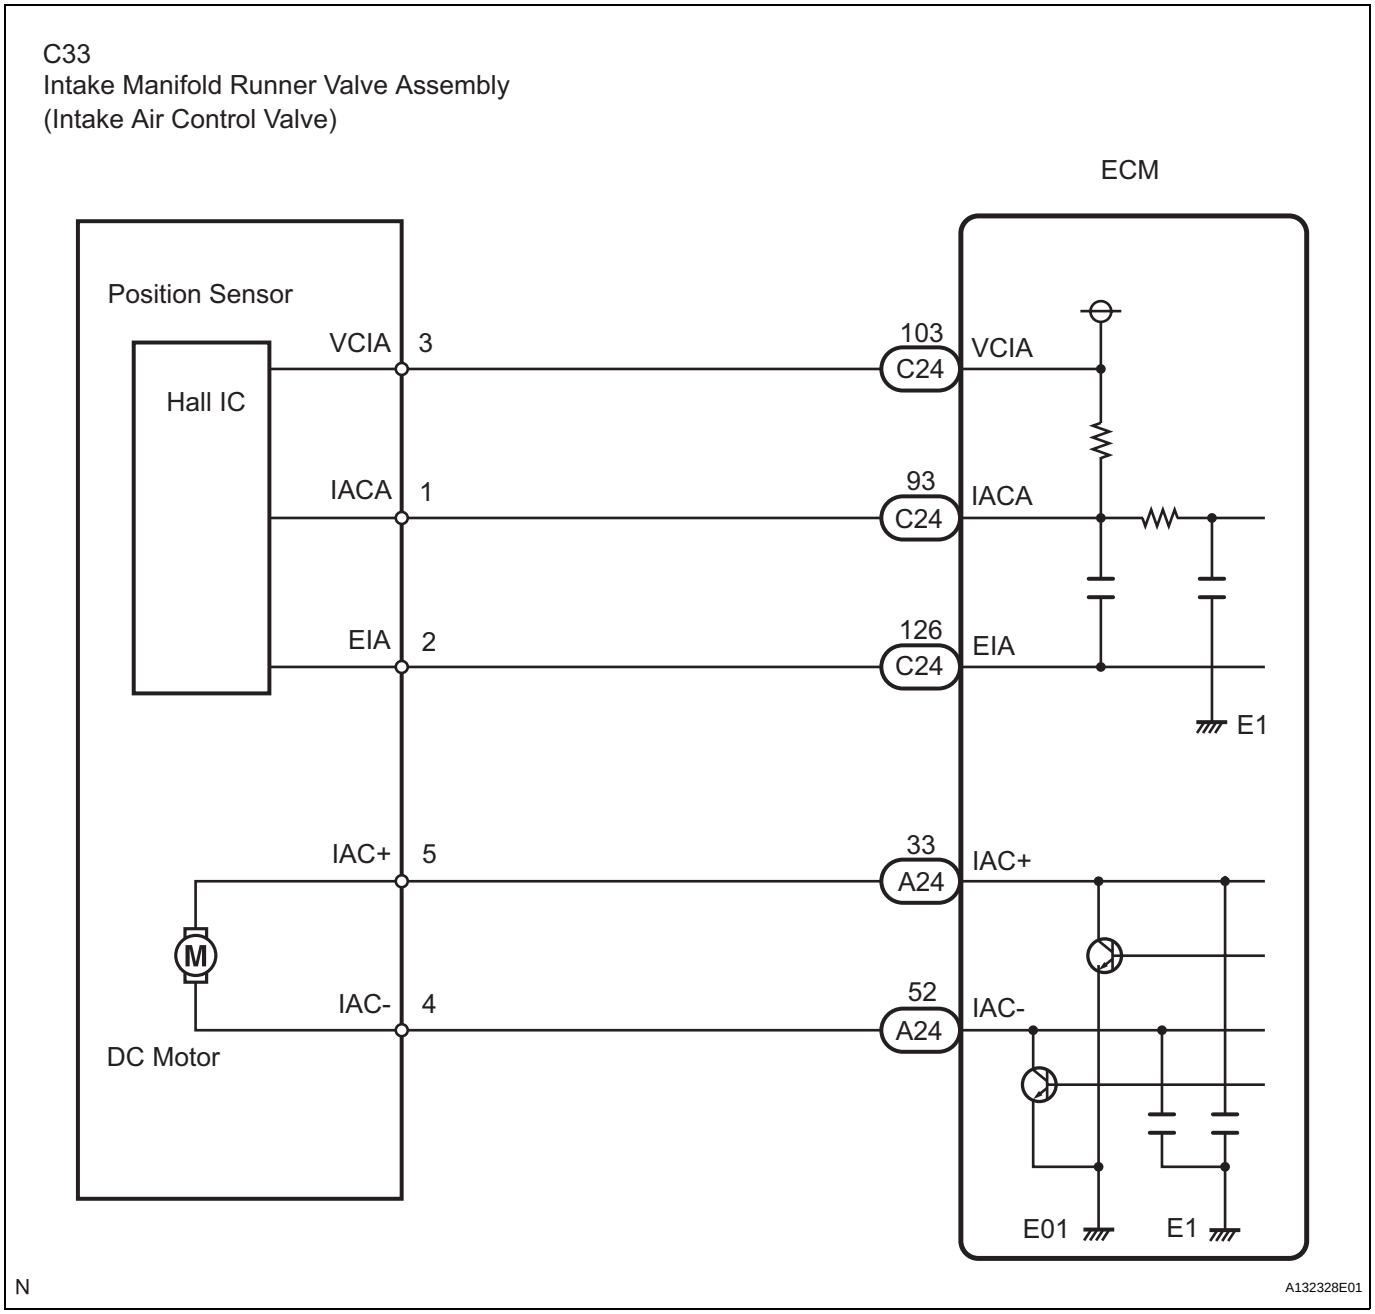
IMRC valve angle	Less than 35°

COMPONENT OPERATING RANGE

IMRC valve position sensor voltage	0.2 and 4.8 V

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK WHETHER DTC OUTPUT RECURS

(a) Clear the DTC (See page ES-38).
(b) Start the engine.

(c) Allow the engine to idle for 20 seconds or more after running the engine at more than 3,000 rpm for 20 seconds.
(d) Turn the ignition switch off. Let the engine remain stopped for 20 seconds.
HINT:
As running the engine to 3,000 rpm, the IMRV usually becomes fully opened. If the ignition switch is turned off under this condition, the IMRV is fully closed and then becomes half-opening angle.
(e) Connect the intelligent tester to the DLC3.
(f) Turn the ignition switch to the ON position.
(g) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.

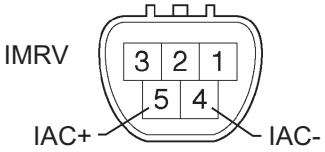
INSPECTION PROCEDURE

HINT:

Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1 INSPECT INTAKE MANIFOLD RUNNER VALVE ASSEMBLY (IMRV MOTOR RESISTANCE)

Component Side:



Y A066037E01

(a) Disconnect the C33 IMRV connector.
(b) Measure the motor resistance between the terminals.

Standard resistance

Tester Connection	Condition	Specified Condition
C33-5 (IAC+) - C33-4 (IAC-)	20°C (68°F)	1 to 19 Ω

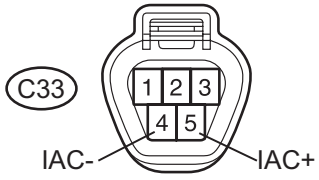
NG → **REPLACE INTAKE MANIFOLD RUNNER VALVE ASSEMBLY**

OK

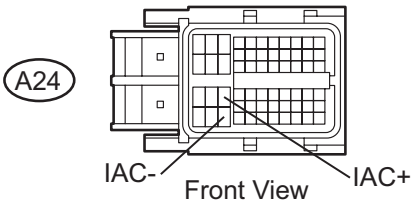
2 CHECK HARNESS AND CONNECTOR (IMRV MOTOR - ECM)

Wire Harness Side:

IMRV Motor Connector



ECM Connector



N A132309E01

(a) Disconnect the A24 ECM connector.
(b) Disconnect the C33 IMRV motor connector.
(c) Measure the resistance between the terminals of the wire harness side connectors.

Standard resistance (Check for open)

Tester Connection	Specified Condition
A24-33 (IAC+) - C33-5 (IAC+)	Below 1 Ω
A24-52 (IAC-) - C33-4 (IAC-)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
A24-33 (IAC+) or C33-5 (IAC+) - Body ground	10 kΩ or more
A24-52 (IAC-) or C33-4 (IAC-) - Body ground	10 kΩ or more

(d) Reconnect the connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 CHECK WHETHER DTC OUTPUT RECURS

(a) Clear the DTC (See page ES-38).
(b) Start the engine.
(c) Run the engine at more than 3,000 rpm.
(d) Turn the ignition switch off.

HINT:
As running the engine to 3,000 rpm, the IMRV usually becomes fully opened. If the ignition switch is turned off under this condition, the IMRV is fully closed and then becomes half-opening angle.

(e) Read the DTC.

DTC	P2017	Intake Manifold Runner Position Sensor / Switch Circuit High (Bank 1)

ES

DESCRIPTION

HINT:

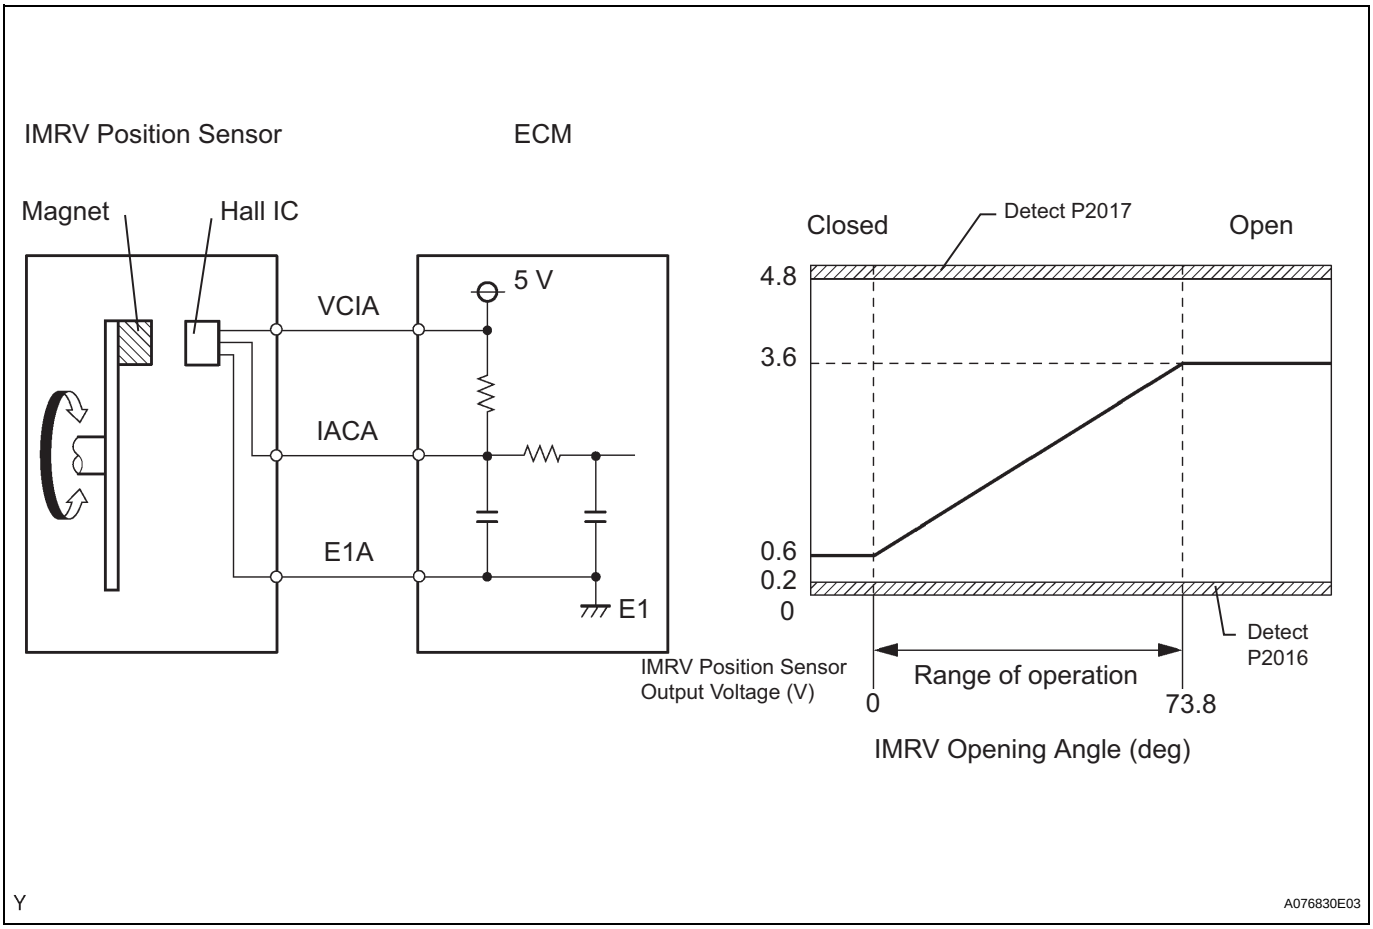
This IMRV position sensor is non-contact type.

The IMRV position sensor is mounted on the valve shaft axis (See page ES-264) and is used to measure the opening angle of the IMRV. Since this sensor is electronically controlled with hall elements, accurate control and reliability can be obtained.

Voltage of approximately 0.6 V is applied to terminal IACA of the ECM when the IMRV is fully closed. The voltage applied to terminal IACA increases in proportion to the IMRV opening angle, approximately 3.6 V is applied to the terminal when it is fully opened.

The ECM detects a malfunction in the IMRV position sensor when its voltage output deviates from the standard range. When a malfunction is detected, the ECM fully opens the IMRV using the IMRV motor until the IMRV position sensor returns to normal.

The related DTCs are P2004 and P2006 (See page ES-264), and P2009 and P2010 (See page ES-270).



DTC No.	DTC Detection Condition	Trouble Area
P2014	Condition (a) continues for 0.5 seconds: (1 trip detection logic) (a) IMRV position sensor output voltage is "0.2 V or less" or "4.8 V or more".	• Open or short in IMRV position sensor circuit • IMRV position sensor • ECM
P2016	Condition (a) continues for 0.5 seconds: (1 trip detection logic) (a) IMRV position sensor output voltage is 0.2 V or less.	Same as DTC No. P2014
P2017	Condition (a) continues for 0.5 seconds: (1 trip detection logic) (a) IMRV position sensor output voltage is 4.8 V or more.	Same as DTC No. P2014

MONITOR STRATEGY

REPLACE ECM

DTC	P2102	Throttle Actuator Control Motor Circuit Low

DTC	P2103	Throttle Actuator Control Motor Circuit High

DESCRIPTION

The throttle actuator is operated by the ECM and opens and closes the throttle valve using gears.
The opening angle of the throttle valve is detected by the Throttle Position (TP) sensor, which is mounted on the throttle body assembly. The TP sensor provides feedback to the ECM. This feedback allows the ECM to appropriately control the throttle actuator and monitor the throttle opening angle as the ECM responds to driver inputs.
HINT:
This ETCS (Electronic Throttle Control System) does not use a throttle cable.

DTC No.	DTC Detection Condition	Trouble Area
P2102	Conditions (a) and (b) continue for 2.0 seconds (1 trip detection logic): (a) Throttle actuator duty ratio 80 % or more (b) Throttle actuator current 0.5 A or less	• Open in throttle actuator circuit • Throttle actuator • ECM
P2103	Either of following conditions is met (1 trip detection logic): • Hybrid IC diagnosis signal failure • Hybrid IC current limiter port failure	• Short in throttle actuator circuit • Throttle actuator • Throttle valve • Throttle body assembly • ECM

MONITOR DESCRIPTION

The ECM monitors the electrical current through the electronic actuator, and detects malfunctions and open circuits in the throttle actuator based on this value. If the current is outside the standard range, the ECM determines that there is a malfunction in the throttle actuator. In addition, if the throttle valve does not function properly (for example, stuck on), the ECM determines that there is a malfunction. The ECM then illuminates the MIL and sets a DTC.
Example:
When the electrical current is less than 0.5 A and the throttle actuator duty ratio exceeds 80 %, the ECM interprets this as the current being outside the standard range, and illuminates the MIL and sets a DTC. If the malfunction is not repaired successfully, a DTC is set when the engine is quickly revved to a high rpm several times after the engine has idled for 5 seconds after engine start.

MONITOR STRATEGY

Related DTCs	P2102: Throttle actuator current (low current) P2103: Throttle actuator current (high current)
Required Sensors/Components (Main)	Throttle actuator (throttle body)
Required Sensors/Components (Related)	None
Frequency of Operation	Continuous
Duration	2 seconds: P2102 25 times or 0.6 seconds: P2103
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None

P2102:

Throttle motor	ON
Duty-cycle ratio to open throttle actuator	80 % or more

Throttle actuator power supply	8 V or more

P2103:

Throttle motor	ON
Throttle actuator power supply	8 V or more
Battery voltage	8 V or more
Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS

P2102:

Throttle actuator current	Less than 0.5 A

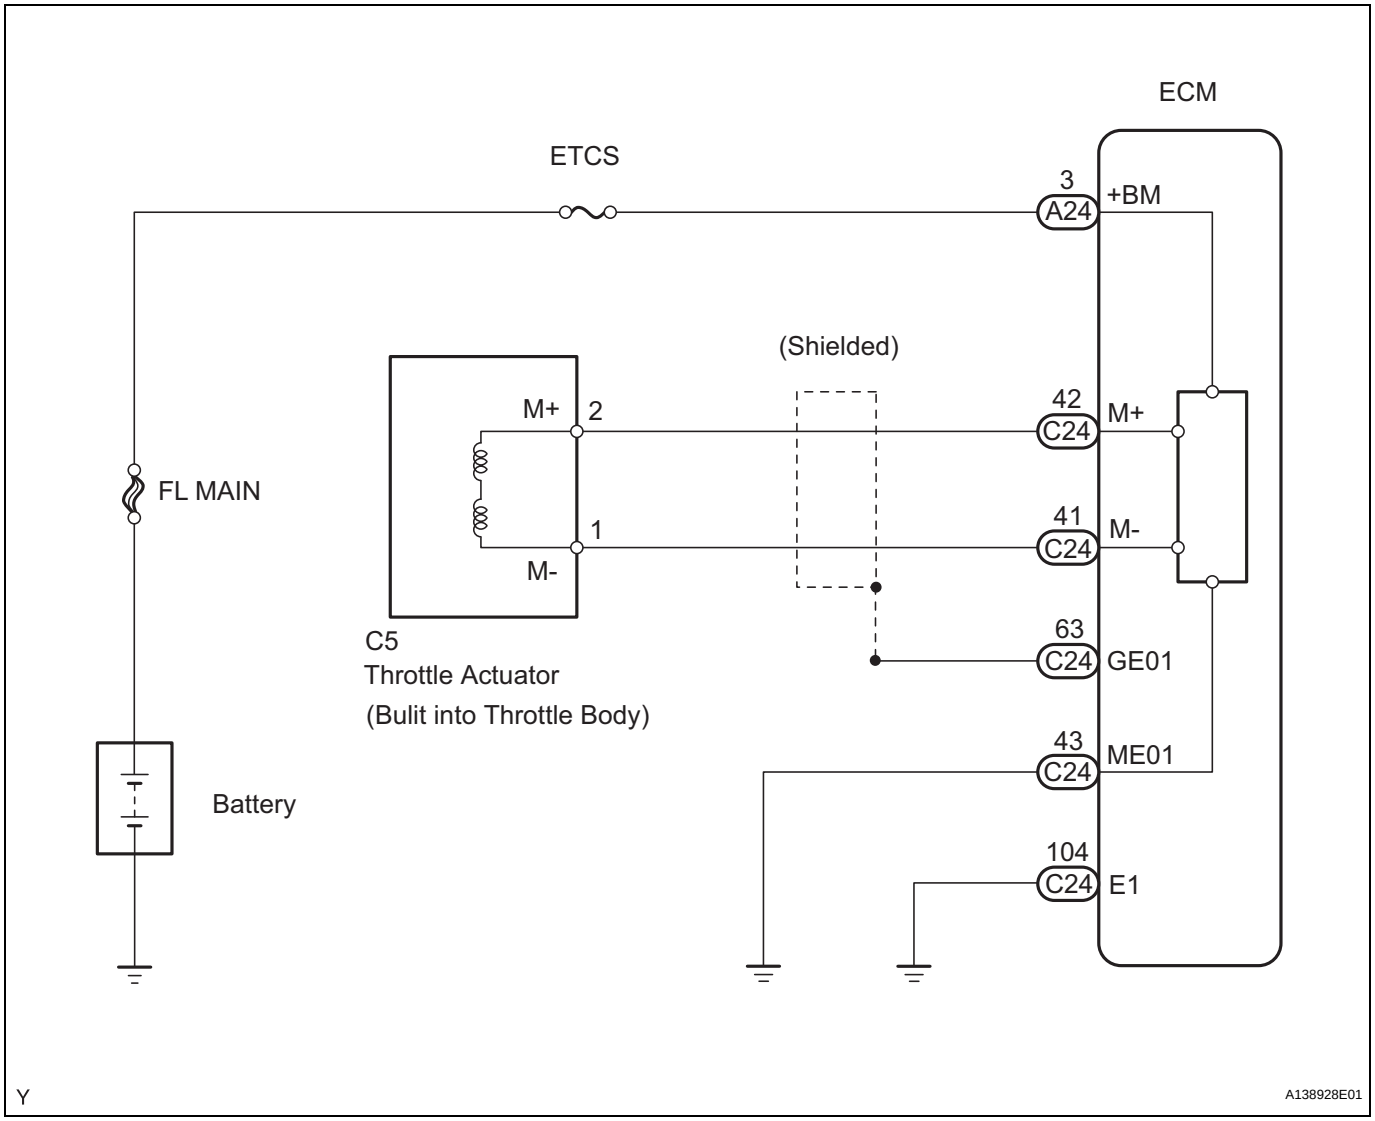
P2103:

Hybrid IC current limiter port	Fail

FAIL-SAFE

When either of these DTCs, or other DTCs relating to ETCS (Electronic Throttle Control System) malfunctions, are set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator off, and the throttle valve is returned to a 6° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue at a minimal speed. If the accelerator pedal is depressed gently, the vehicle can be driven slowly.
Fail-safe mode continues until a pass condition is detected, and the ignition switch is then turned off.

WIRING DIAGRAM



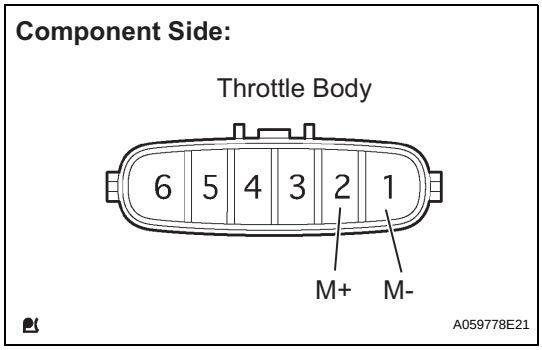
ES

INSPECTION PROCEDURE

HINT:

- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- The throttle actuator current (THROTTLE MOT) and the throttle actuator duty ratio (THROTL OPN DUTY / THROTL CLS DUTY) can be read using the intelligent tester. However, the ECM shuts off the throttle actuator current when the ETCS malfunctions.

1 INSPECT THROTTLE BODY (RESISTANCE OF THROTTLE ACTUATOR)



(a) Disconnect the C5 throttle body connector.
(b) Measure the resistance between terminals of the wire harness side connectors.
Standard resistance

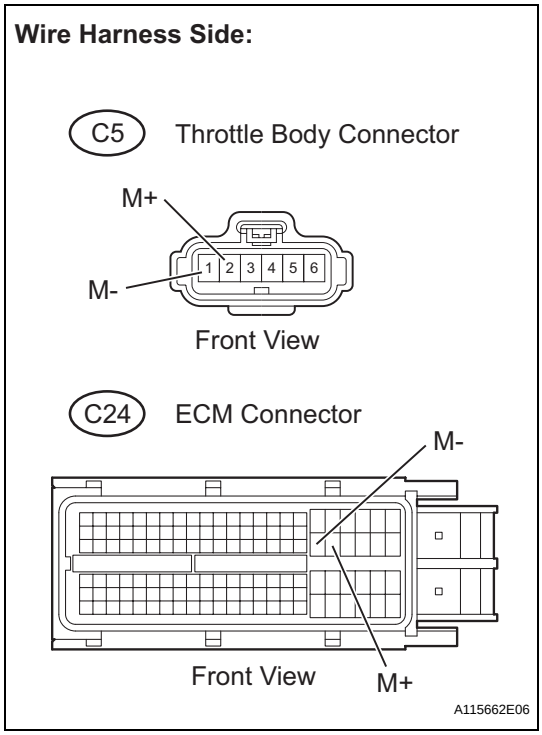
Tester Connection	Specified Condition
2 (M+) - 1 (M-)	0.3 to 100 Ω at 20°C (68°F)

(c) Reconnect the throttle body connector.

NG → **REPLACE THROTTLE BODY ASSEMBLY**

OK

2 CHECK HARNESS AND CONNECTOR (THROTTLE ACTUATOR - ECM)



(a) Disconnect the C5 throttle body connector.
(b) Disconnect the C24 ECM connector.
(c) Measure the resistance between the terminals of the wire harness side connector.
Standard resistance (Check for open)

Tester Connection	Specified Condition
C5-2 (M+) - C24-42 (M+)	Below 1 Ω
C5-1 (M-) - C24-41 (M-)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
C5-2 (M+) or C24-42 (M+) - Body ground	10 kΩ or higher
C5-1 (M-) or C24-41 (M-) - Body ground	10 kΩ or higher

(d) Reconnect the throttle body connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 INSPECT THROTTLE BODY ASSEMBLY

(a) Check for foreign objects between the throttle valve and the housing.
OK:
No foreign objects between throttle valve and housing.

NG → **REMOVE FOREIGN OBJECT AND CLEAN THROTTLE BODY**

OK

4	INSPECT THROTTLE VALVE

(a) Check if the throttle valve opens and closes smoothly.
OK:
Throttle valve opens and closes smoothly.

NG → **REPLACE THROTTLE BODY ASSEMBLY**

OK

REPLACE ECM

DTC	P2111	Throttle Actuator Control System - Stuck Open

DTC	P2112	Throttle Actuator Control System - Stuck Closed

DESCRIPTION

The throttle actuator is operated by the ECM, and opens and closes the throttle valve using gears. The opening angle of the throttle valve is detected by the Throttle Position (TP) sensor, which is mounted on the throttle body assembly. The TP sensor provides feedback to the ECM in order that it can control the throttle actuator, and therefore the throttle valve, appropriately in response to driver inputs.

HINT:

ES

This ETCS (Electronic Throttle Control System) does not use a throttle cable.

DTC No.	DTC Detection Condition	Trouble Area
P2111	Throttle actuator does not close when signaled by ECM (1 trip detection logic)	• Throttle actuator • Throttle body assembly • Throttle valve
P2112	Throttle actuator does not open when signaled by ECM (1 trip detection logic)	• Throttle actuator • Throttle body assembly • Throttle valve

MONITOR DESCRIPTION

The ECM determines that there is a malfunction in the ETCS when the throttle valve remains at a fixed angle despite a high drive current from the ECM. The ECM illuminates the MIL and sets a DTC.

If the malfunction is not repaired successfully, a DTC is set when the accelerator pedal is fully depressed and released quickly (to fully open and close the throttle valve) after the engine is next started.

MONITOR STRATEGY

Related DTCs	P2111: Throttle actuator stuck open P2112: Throttle actuator stuck closed

ES

TYPICAL MALFUNCTION THRESHOLDS

P2111 (Throttle actuator stuck open):

TP sensor voltage change	No change

P2112 (Throttle actuator stuck closed):

TP sensor voltage change	No change

FAIL-SAFE

When either of these DTCs, or other DTCs relating to ETCS (Electronic Throttle Control System) malfunctions, are set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator off, and the throttle valve is returned to a 6° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue at a minimal speed. If the accelerator pedal is depressed gently, the vehicle can be driven slowly.
Fail-safe mode continues until a pass condition is detected, and the ignition switch is then turned off.

WIRING DIAGRAM

Refer to DTC P2102 (See page ES-282).

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P2111 OR P2112)**

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P2111 or P2112	A
P2111 or P2112 and other DTCs	B

HINT:
If any DTCs other than P2111 or P2112 are output, troubleshoot those DTCs first.

B → **GO TO DTC CHART**

A

ES

2 INSPECT THROTTLE BODY ASSEMBLY (VISUALLY CHECK THROTTLE VALVE)

(a) Check for contamination between the throttle valve and the housing. If necessary, clean the throttle body. And check that the throttle valve moves smoothly.
OK:
Throttle valve is not contaminated with foreign objects and moves smoothly.

NG → **REPLACE THROTTLE BODY ASSEMBLY**

OK

3 CHECK WHETHER DTC OUTPUT RECURS (DTC P2111 OR P2112)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Clear the DTCs (See page ES-38).
(e) Start the engine, and fully depress and release the accelerator pedal quickly (to fully open and close the throttle valve).
(f) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(g) Read the DTCs.

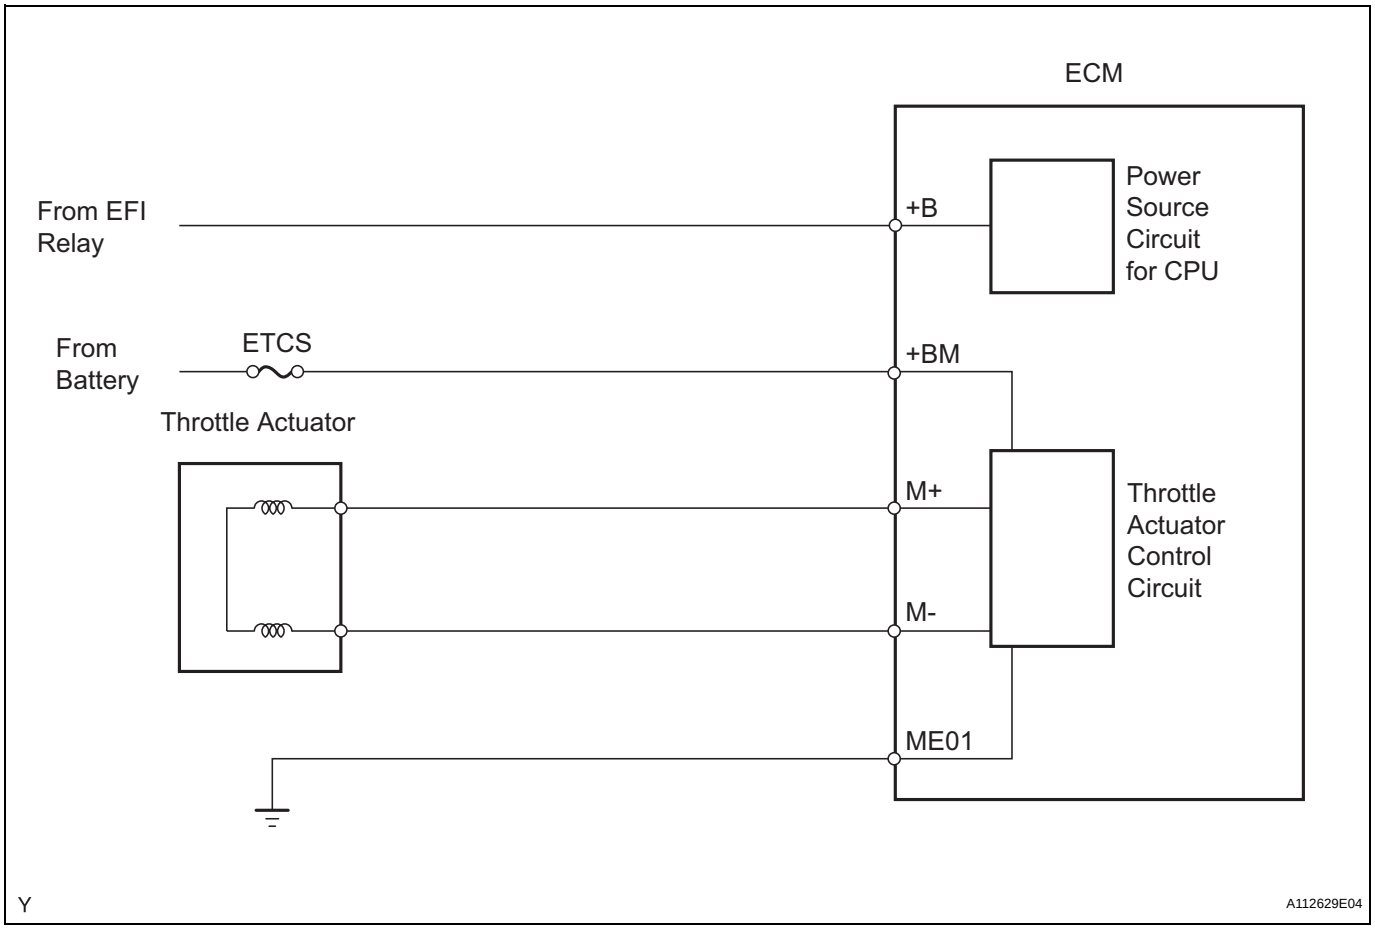
CHECK FOR INTERMITTENT PROBLEMS

DTC	P2118	Throttle Actuator Control Motor Current Range / Performance

DESCRIPTION

The ETCS (Electronic Throttle Control System) has a dedicated power supply circuit. The voltage (+BM) is monitored and when it is low (less than 4 V), the ECM determines that there is a malfunction in the ETCS and cuts off the current to the throttle actuator.
When the voltage becomes unstable, the ETCS itself becomes unstable. For this reason, when the voltage is low, the current to the throttle actuator is cut. If repairs are made and the system returns to normal, turn the ignition switch off. The ECM then allows the current to flow to the throttle actuator so that it can be restarted.
HINT:
The ETCS does not use a throttle cable.



DTC No.	DTC Detection Condition	Trouble Area
P2118	Open in ETCS power source (+BM) circuit (1 trip detection logic)	• Open in ETCS power source circuit • Battery • Battery terminals • ETCS fuse • ECM

MONITOR DESCRIPTION

The ECM monitors the battery supply voltage applied to the throttle actuator.
When the power supply voltage (+BM) drops below 4 V for 0.8 seconds or more, the ECM interprets this as an open in the power supply circuit (+BM). The ECM illuminates the MIL and sets the DTC.
If the malfunction is not repaired successfully, the DTC is set 5 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P2118: Throttle actuator power supply
Required Sensors/Components (Main)	Throttle actuator, throttle valve, ETCS fuse
Required Sensors/Components (Related)	None
Frequency of Operation	Continuous
Duration	0.8 seconds
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None
Battery voltage	8 V or more
Electronic throttle actuator power	ON

TYPICAL MALFUNCTION THRESHOLDS

Throttle actuator power supply voltage (+BM)	Less than 4 V

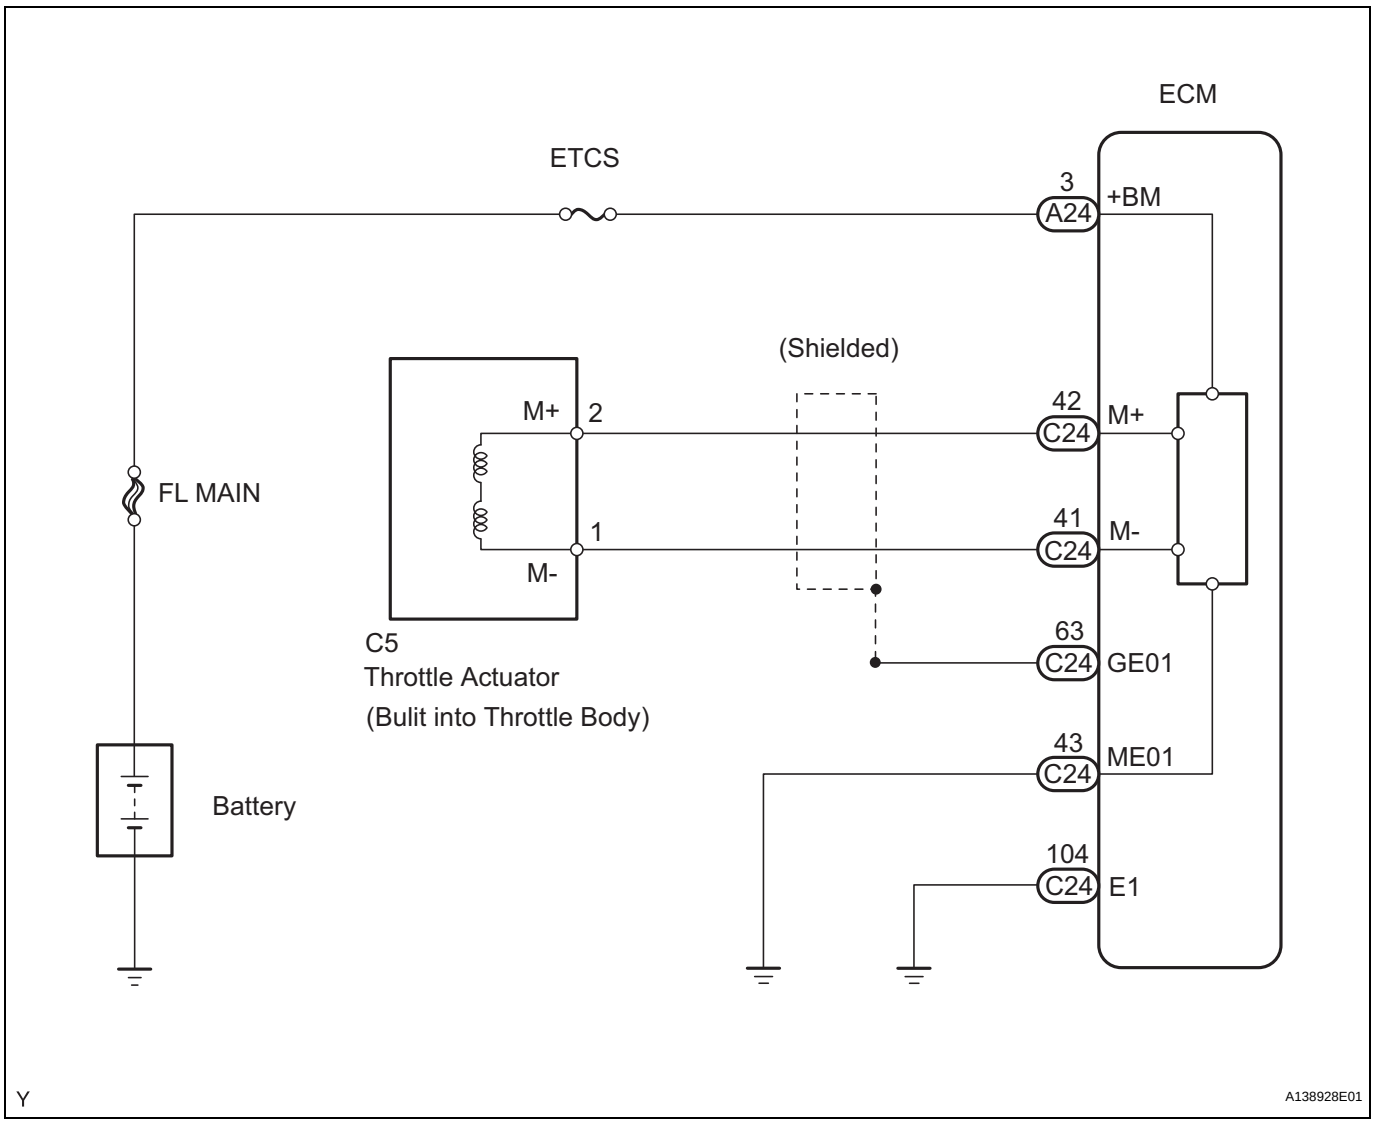
COMPONENT OPERATING RANGE

Throttle actuator power supply voltage (+BM)	9 to 14 V

FAIL-SAFE

When this DTC, or other DTCs relating to ETCS (Electronic Throttle Control System) malfunctions, are set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator off, and the throttle valve is returned to a 6° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue at a minimal speed. If the accelerator pedal is depressed gently, the vehicle can be driven slowly.
Fail-safe mode continues until a pass condition is detected, and the ignition switch is then turned off.

WIRING DIAGRAM



ES

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

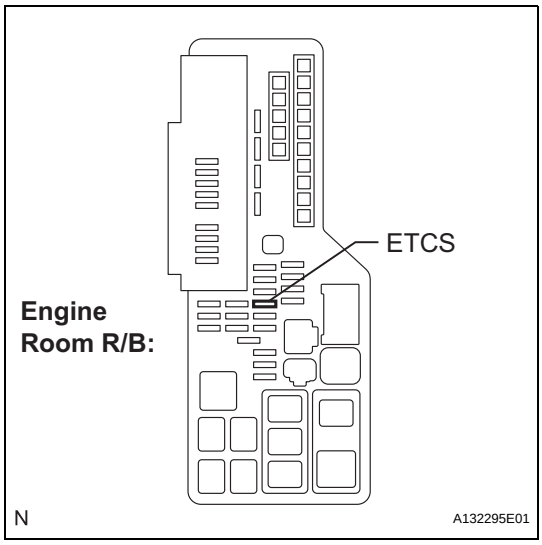
1	READ VALUE USING INTELLIGENT TESTER (+BM VOLTAGE)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / +BM VOLTAGE.
(e) Read the value displayed on the tester.
Standard voltage:
9 to 14 V

OK → Go to step 5

NG

2	CHECK FUSE (ETCS FUSE)



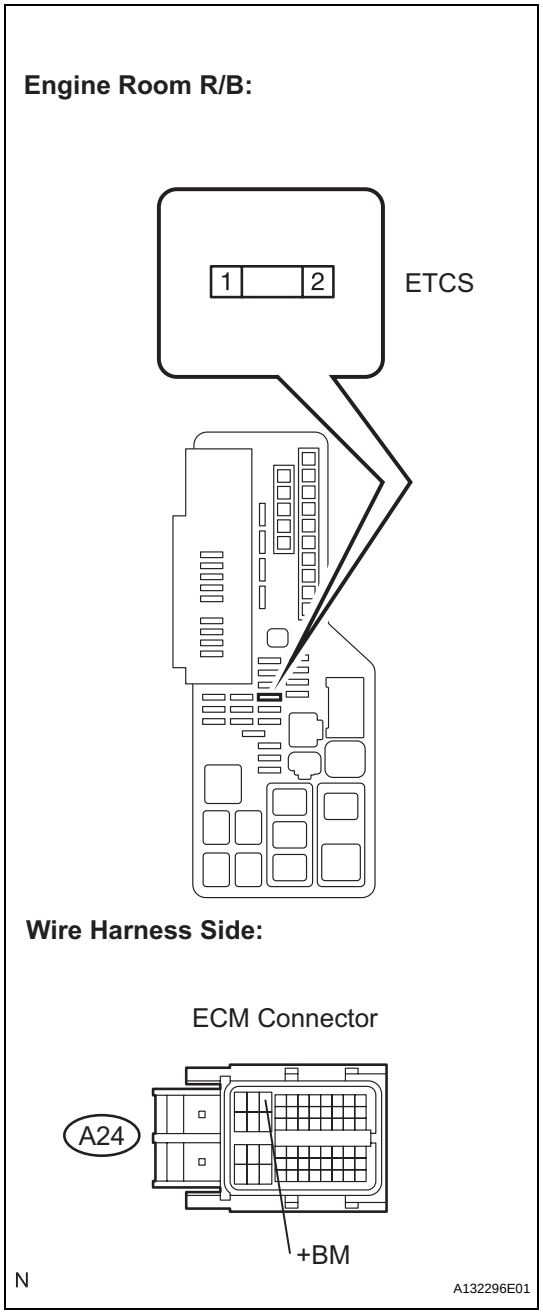
(a) Remove the ETCS fuse from the engine room R/B.
(b) Measure the ETCS fuse resistance.
Standard resistance:
Below 1 Ω
(c) Reinstall the ETCS fuse.

NG → **REPLACE FUSE (ETCS FUSE)**

OK

ES

3	CHECK HARNESS AND CONNECTOR (ECM - ETCS FUSE, ETCS FUSE - BATTERY)



(a) Remove the ETCS fuse from the engine room R/B.
(b) Disconnect the cable from the negative (-) battery terminal.
(c) Disconnect the cable from the negative (+) battery terminal.
(d) Disconnect the A24 ECM connector.
(e) Measure the resistance.

Standard resistance (Check for open)

Tester Connection	Specified Condition
2 (ETCS fuse) - A24-3 (+BM)	Below 1 Ω
Positive battery terminal - 1 (ETCS fuse)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
2 (ETCS fuse) or A24-3 (+BM) - Body ground	10 kΩ or higher
Positive battery terminal or 1 (ETCS fuse) - Body ground	10 kΩ or higher

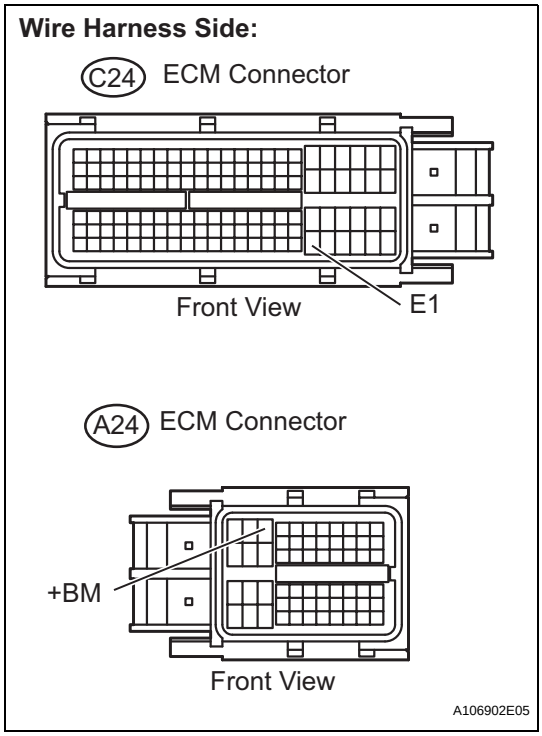
(f) Reinstall the ETCS fuse.
(g) Reconnect the cable to the positive (+) battery terminal.
(h) Reconnect the cable to the negative (-) battery terminal.
(i) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

ES

4	INSPECT ECM (+BM VOLTAGE)



(a) Disconnect the A24 and C24 ECM connectors.
(b) Measure the voltage between the terminals of the A24 and C24 ECM connectors.
Standard voltage

Tester Connection	Specified Condition
A24-3 (+BM) - C24-104 (E1)	9 to 14 V

(c) Reconnect the ECM connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (TERMINAL E1 - BODY GROUND)**

OK

REPLACE ECM

5	INSPECT BATTERY

(a) Check the battery voltage.
Standard voltage:
12.5 to 12.9 V at 20°C (68°F)

NG → **REPLACE BATTERY**

OK

6	CHECK BATTERY TERMINAL

(a) Check that the battery terminals and ECM ground are not loose or corroded.
OK:
Battery terminals and ECM ground are not loose or corroded.

NG → **REPAIR OR REPLACE BATTERY TERMINAL**

OK

CHECK FOR INTERMITTENT PROBLEMS

DTC	P2119	Throttle Actuator Control Throttle Body Range / Performance

DESCRIPTION

The Electronic Throttle Control System (ETCS) is composed of the throttle actuator, Throttle Position (TP) sensor, Accelerator Pedal Position (APP) sensor, and ECM. The ECM operates the throttle actuator to regulate the throttle valve in response to driver inputs. The TP sensor detects the opening angle of the throttle valve, and provides the ECM with feedback so that the throttle valve can be appropriately controlled by the ECM.

DTC No.	DTC Detection Condition	Trouble Area
P2119	Throttle valve opening angle continues to vary greatly from target opening angle (1 trip detection logic)	• ETCS • ECM

ES

MONITOR DESCRIPTION

The ECM determines the actual opening angle of the throttle valve from the TP sensor signal. The actual opening angle is compared to the target opening angle commanded by the ECM. If the difference between these two values is outside the standard range, the ECM interprets this as a malfunction in the ETCS. The ECM then illuminates the MIL and sets the DTC.
If the malfunction is not repaired successfully, the DTC is set when the accelerator pedal is quickly released (to close the throttle valve) after the engine speed reaches 5,000 rpm by the accelerator pedal being fully depressed (fully open the throttle valve).

MONITOR STRATEGY

Related DTCs	P2119: ETCS malfunction
Required Sensors/Components (Main)	Throttle actuator
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	Within 1 second
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None
System guard*	ON
*System guard is ON when the following conditions are met	-
Throttle actuator	ON
Throttle actuator duty calculation	Executing
Throttle position sensor	Fail determined
Throttle actuator current-cut operation	Not executing
Throttle actuator power supply	4 V or more
Throttle actuator	Fail determined

TYPICAL MALFUNCTION THRESHOLDS

Either of the following conditions A or B is met	-
A. Difference between commanded closed throttle position and current closed throttle position	0.3 V or more
B. Difference between commanded open throttle position and current open throttle position	0.3 V or more

FAIL-SAFE

When this DTC, or other DTCs relating to ETCS (Electronic Throttle Control System) malfunctions, are set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator off, and the throttle valve is returned to a 6° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue at a minimal speed. If the accelerator pedal is depressed gently, the vehicle can be driven slowly.
Fail-safe mode continues until a pass condition is detected, and the ignition switch is then turned off.

WIRING DIAGRAM

Refer to DTC P2102 (See page ES-282).

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P2119)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P2119	A
P2119 and other DTCs	B

HINT:
If any DTCs other than P2119 are output, troubleshoot those DTCs first.

B → GO TO DTC CHART

A

2	CHECK WHETHER DTC OUTPUT RECURS (DTC P2119)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Clear the DTCs (See page ES-38).
(e) Allow the engine to idle for 15 seconds.
CAUTION:
Exercise extreme care and take precautions in steps (f) and (g) below. Failure to do so may result in the vehicle unexpectedly rolling away.

(f) Securely apply the parking brake and move the gear selector lever to the D position.
(g) While depressing the brake pedal securely, fully depress the accelerator pedal for 5 seconds.
(h) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(i) Read the DTCs.
HINT:
The output voltage of the throttle position sensor can be checked during step (g) using the intelligent tester. Variations in the output voltage indicate that the throttle actuator is in operation. To check the output voltage using the intelligent tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / ETCS / THROTTLE POS #1.
OK:
No DTC output.

ES

NG → **REPLACE THROTTLE BODY ASSEMBLY**

OK

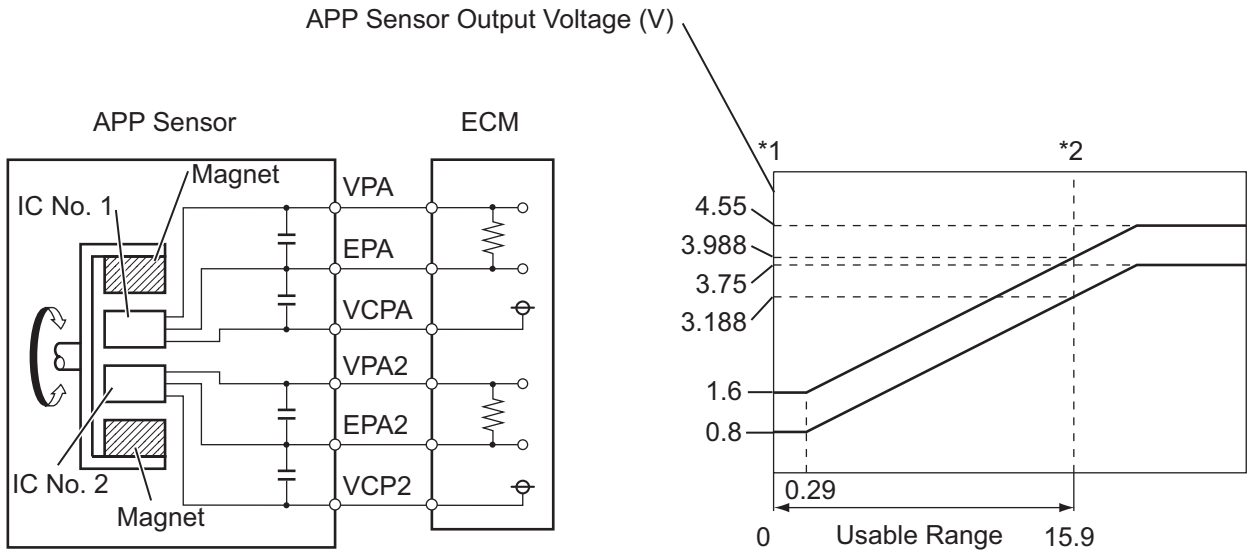
CHECK FOR INTERMITTENT PROBLEMS

DTC	P2120	Throttle / Pedal Position Sensor / Switch "D" Circuit
DTC	P2122	Throttle / Pedal Position Sensor / Switch "D" Circuit Low Input
DTC	P2123	Throttle / Pedal Position Sensor / Switch "D" Circuit High Input
DTC	P2125	Throttle / Pedal Position Sensor / Switch "E" Circuit
DTC	P2127	Throttle / Pedal Position Sensor / Switch "E" Circuit Low Input
DTC	P2128	Throttle / Pedal Position Sensor / Switch "E" Circuit High Input
DTC	P2138	Throttle / Pedal Position Sensor / Switch "D" / "E" Voltage Correlation

HINT:
These DTCs relate to the Accelerator Pedal Position (APP) sensor.

DESCRIPTION

HINT:
This ETCS (Electronic Throttle Control System) does not use a throttle cable.
The APP sensor is mounted on the accelerator pedal bracket and has 2 sensor circuits: VPA (main) and VPA2 (sub). This sensor is a non-contact type It uses Hall-effect elements in order to yield accurate signals even in extreme driving conditions, such as at high speeds as well as very low speeds. The voltage, which is applied to terminals VPA and VPA2 of the ECM, varies between 0 V and 5 V in proportion to the operating angle of the accelerator pedal (throttle valve). A signal from VPA indicates the actual accelerator pedal opening angle (throttle valve opening angle) and is used for engine control. A signal from VPA2 conveys the status of the VPA circuit and is used to check the APP sensor itself.
The ECM monitors the actual accelerator pedal opening angle (throttle valve opening angle) through the signals from VPA and VPA2, and controls the throttle actuator according to these signals.



Y

A112620E03

DTC No.	DTC Detection Condition	Trouble Area
P2120	VPA fluctuates rapidly beyond upper and lower malfunction thresholds for 0.5 seconds or more (1 trip detection logic)	• APP sensor • ECM
P2122	VPA 0.4 V or less for 0.5 seconds or more when accelerator pedal fully released (1 trip detection logic)	• APP sensor • Open in VCP1 circuit • Open or ground short in VPA circuit • ECM
P2123	VPA 4.8 V or more for 2.0 seconds or more (1 trip detection logic)	• APP sensor • Open in EPA circuit • ECM
P2125	VPA2 fluctuates rapidly beyond upper and lower malfunction thresholds for 0.5 seconds or more (1 trip detection logic)	• APP sensor • ECM
P2127	VPA2 1.2 V or less for 0.5 seconds or more when accelerator pedal fully released (1 trip detection logic)	• APP sensor • Open in VCP2 circuit • Open or ground short in VPA2 circuit • ECM
P2128	Conditions (a) and (b) continue for 2.0 seconds or more (1 trip detection logic): (a) VPA2 4.8 V or more (b) VPA between 0.4 V and 3.45 V	• APP sensor • Open in EPA2 circuit • ECM

DTC No.	DTC Detection Condition	Trouble Area
P2138	Condition (a) or (b) continues for 2.0 seconds or more (1 trip detection logic): (a) Difference between VPA and VPA2 0.02 V or less (b) VPA 0.4 V or less and VPA2 1.2 V or less	• Short between VPA and VPA2 circuits • APP sensor • ECM

HINT:
When any of these DTCs are set, check the APP sensor voltage by selecting the following menu items on the intelligent tester: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / ACCEL POS #1 and ACCEL POS #2.

Trouble Areas	ACCEL POS #1 When AP Released	ACCEL POS #2 When AP Released	ACCEL POS #1 When AP Depressed	ACCEL POS #2 When AP Depressed
VCP circuit open	0 to 0.2 V	0 to 0.2 V	0 to 0.2 V	0 to 0.2 V
Open or ground short in VPA circuit	0 to 0.2 V	1.2 to 2.0 V	0 to 0.2 V	3.4 to 5.0 V
Open or ground short in VPA2 circuit	0.5 to 1.1 V	0 to 0.2 V	2.6 to 4.5 V	0 to 0.2 V
EPA circuit open	4.5 to 5.0 V	4.5 to 5.0 V	4.5 to 5.0 V	4.5 to 5.0 V
Normal condition	0.5 to 1.1 V	1.2 to 2.0 V	2.6 to 4.5 V	3.4 to 5.0 V

ES

HINT:
- Accelerator pedal positions are expressed as voltages.
- AP denotes Accelerator Pedal.

MONITOR DESCRIPTION

When either output voltage of VPA or VPA2 deviates from the standard range, or the difference between the output voltages of the 2 sensor circuits is less than the threshold, the ECM determines that there is a malfunction in the APP sensor. The ECM then illuminates the MIL and sets a DTC.
Example:
When the output voltage of VPA drops below 0.4 V for more than 0.5 seconds when the accelerator pedal is fully depressed, DTC P2122 is set.
If the malfunction is not repaired successfully, a DTC is set 2 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P2120: APP sensor 1 range check (fluctuating) P2122: APP sensor 1 range check (low voltage) P2123: APP sensor 1 range check (high voltage) P2125: APP sensor 2 range check (fluctuating) P2127: APP sensor 2 range check (low voltage) P2128: APP sensor 2 range check (high voltage) P2138: APP sensor range check (correlation)
Required Sensors/Components (Main)	APP sensor
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	0.5 seconds: P2120, P2122, P2125 and P2127 2.0 seconds: P2123, P2128 and P2138
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None
Either of the following conditions 1 or 2 is met:	-
1. Ignition switch	ON
2. Throttle actuator power	ON

TYPICAL MALFUNCTION THRESHOLDS

P2120:

Either of the following conditions 1 or 2 is met:	-
1. VPA voltage when VPA2 voltage is 0.04 V or more	0.4 V or less
2. VPA voltage	4.8 V or more

P2122:

VPA voltage when VPA2 voltage is 0.04 V or more	0.4 V or less

P2123:

VPA voltage	4.8 V or more

P2125:

Either of the following conditions 1 or 2 is met:	-
1. VPA2 voltage when VPA voltage is 0.04 V or more	1.2 V or less
2. VPA2 voltage when VPA voltage is 0.4 to 3.45 V	4.8 V or more

P2127:

VPA2 voltage when VPA voltage is 0.04 V or more	1.2 V or less

P2128:

VPA2 voltage when VPA voltage is 0.4 to 3.45 V	4.8 V or more

P2138:

Either of the following conditions A or B is met:	-
Condition A	-
Difference between VPA and VPA 2 voltages	0.02 V or less
Condition B	-
VPA voltage	0.4 V or less
VPA2 voltage	1.2 V or less

COMPONENT OPERATING RANGE

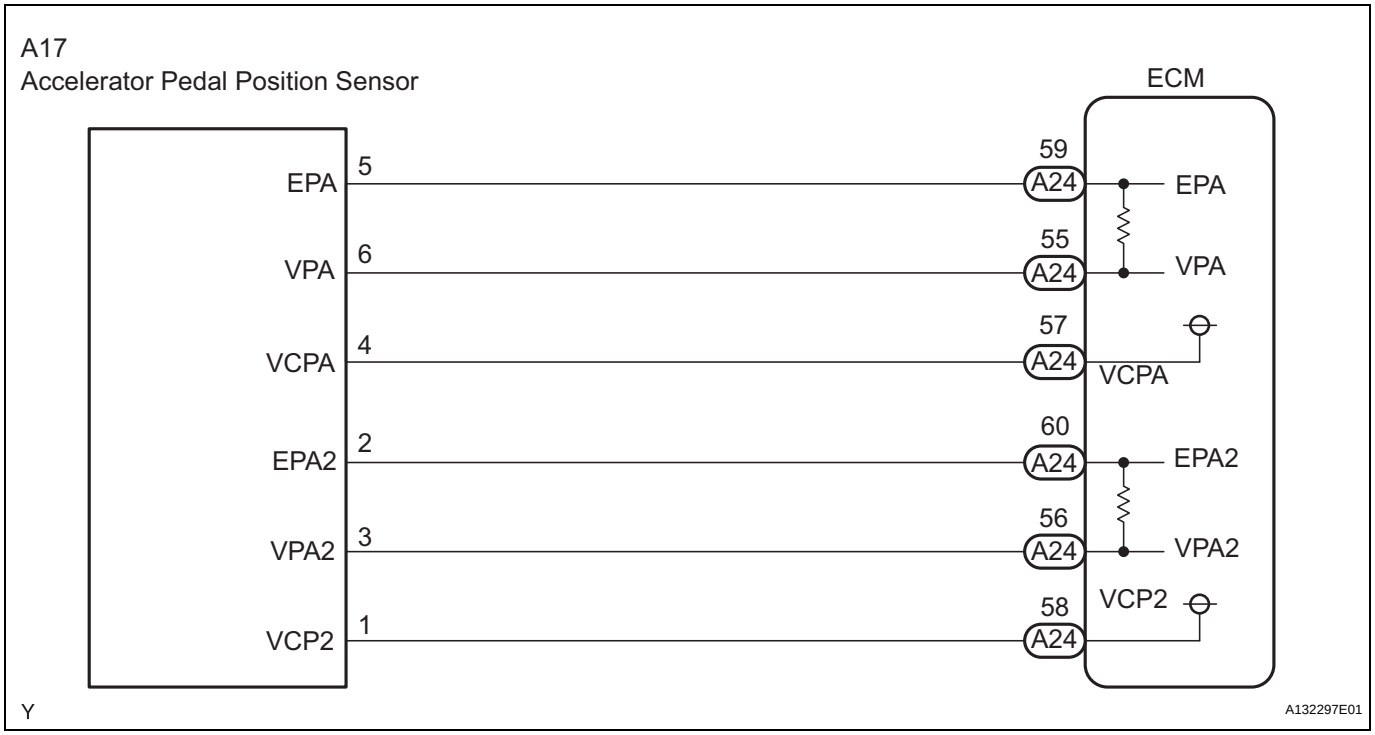
VPA voltage	0.5 V to 4.5 V
VPA2 voltage	1.2 V to 5.0 V
Difference between VPA and VPA2 voltages	More than 0.02 V

FAIL-SAFE

When any of DTCs P2120, P2121, P2122, P2123, P2125, P2127, P2128 and P2138 are set, the ECM enters fail-safe mode. If either of the 2 sensor circuit malfunctions, the ECM uses the remaining circuit to calculate the accelerator pedal position to allow the vehicle to continue driving. If both of the circuits malfunction, the ECM regards the accelerator pedal as being released. As a result, the throttle valve is closed and the engine idles.

Fail-safe mode continues until a pass condition is detected, and the ignition switch is turned off.

WIRING DIAGRAM



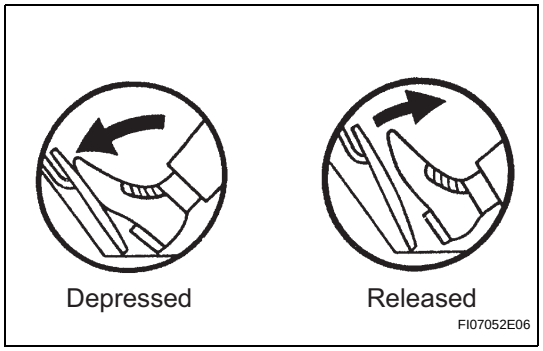
ES

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	READ VALUE USING INTELLIGENT TESTER (ACCEL POS #1 AND ACCEL POS #2)



(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and turn the tester on.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / ETCS / ACCEL POS #1 and ACCEL POS #2.
(d) Read the value displayed on the tester.

Standard voltage

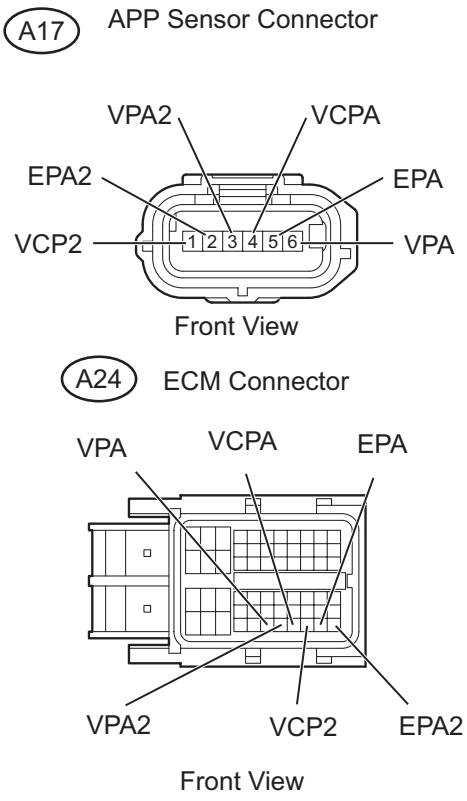
Accelerator Pedal Operations	ACCEL POS #1	ACCEL POS #2
Released → Depressed → Released	0.5 to 4.5 V	1.2 to 5.0 V
	Difference between ACCEL POS #1 and ACCEL POS #2 is greater than 0.02 V	Difference between ACCEL POS #1 and ACCEL POS #2 is greater than 0.02 V

OK → **Go to step 5**

NG

2	CHECK HARNESS AND CONNECTOR (ACCELERATOR PEDAL POSITION SENSOR - ECM)

Wire Harness Side:



(a) Disconnect the A17 Accelerator Pedal Position (APP) sensor connector.
(b) Disconnect the A24 ECM connector.
(c) Measure the resistance between the terminals of the wire harness side connectors.

Standard resistance (Check for open)

Tester Connection	Specified Condition
A17-6 (VPA) - A24-55 (VPA)	Below 1 Ω
A17-5 (EPA) - A24-59 (EPA)	Below 1 Ω
A17-4 (VCPA) - A24-57 (VCPA)	Below 1 Ω
A17-3 (VPA2) - A24-56 (VPA2)	Below 1 Ω
A17-2 (EPA2) - A24-60 (EPA2)	Below 1 Ω
A17-1 (VCP2) - A24-58 (VCP2)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
A17-6 (VPA) or A24-55 (VPA) - body ground	10 kΩ or higher
A17-5 (EPA) or A24-59 (EPA) - body ground	10 kΩ or higher
A17-4 (VCPA) or A24-57 (VCPA) - body ground	10 kΩ or higher
A17-3 (VPA2) or A24-56 (VPA2) - body ground	10 kΩ or higher
A17-2 (EPA2) or A24-60 (EPA2) - body ground	10 kΩ or higher
A17-1 (VCP2) or A24-58 (VCP2) - body ground	10 kΩ or higher

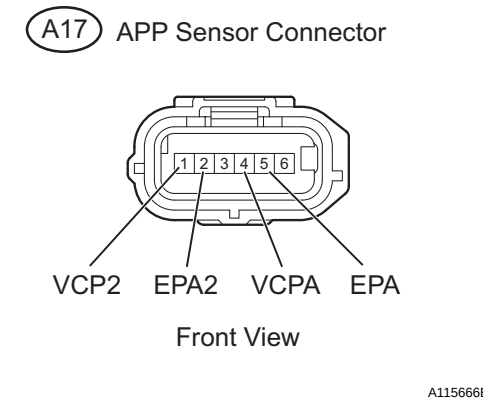
(d) Reconnect the APP sensor connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	CHECK ECM (VCPA AND VCP2 VOLTAGE)

Wire Harness Side:



(a) Disconnect the A17 APP sensor connector.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage between the terminals of the A17 APP sensor connector.

Standard voltage

Tester Connection	Specified Condition
A17-4 (VCPA) - A17-5 (EPA)	4.5 to 5.5 V
A17-1 (VCP2) - A17-2 (EPA2)	4.5 to 5.5 V

(d) Reconnect the APP sensor connector.

NG → **REPLACE ECM**

OK

4	REPLACE ACCELERATOR PEDAL ASSEMBLY

NEXT

5	CHECK WHETHER DTC OUTPUT RECURS (ACCELERATOR PEDAL POSITION SENSOR DTCS)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and turn the tester on.
(c) Clear the DTCs (See page ES-38).
(d) Start the engine.
(e) Allow the engine to idle for 15 seconds.
(f) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(g) Read the DTCs.

ES

Result

REPLACE ECM

DTC	P2121	Throttle / Pedal Position Sensor / Switch "D" Circuit Range / Performance

DESCRIPTION

HINT:

Refer to DTC P2120 (See page ES-298).

DTC No.	DTC Detection Condition	Trouble Area
P2121	Difference between VPA and VPA2 less than 0.4 V, or more than 1.2 V for 0.5 seconds (1 trip detection logic)	• Accelerator Pedal Position (APP) sensor • ECM

ES

MONITOR DESCRIPTION

When the difference between the output voltages of VPA and VPA2 deviates from the standard, the ECM determines that the Accelerator Pedal Position (APP) sensor is malfunctioning. The ECM turns on the MIL and the DTC is set.

MONITOR STRATEGY

Related DTCs	P2121: APP sensor rationality
Required Sensors/Components (Main)	APP sensor
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	0.5 seconds
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None
Either of the following conditions 1 or 2 is met:	-
1. Ignition switch	ON
2. Throttle actuator power	ON

TYPICAL MALFUNCTION THRESHOLDS

Difference between VPA voltage (learned value) and VPA2 voltage (learned value)	Less than 0.4 V, or more than 1.2 V

FAIL-SAFE

The APP sensor has two (main and sub) sensor circuits. If a malfunction occurs in either of the sensor circuits, the ECM detects the abnormal signal voltage difference between the two sensor circuits and switches to limp mode. In limp mode, the functioning circuit is used to calculate the accelerator pedal opening angle to allow the vehicle to continue driving. If both circuits malfunction, the ECM regards the opening angle of the accelerator pedal as being fully closed. In this case, the throttle valve remains closed as if the engine is idling.

If a pass condition is detected and then the ignition switch is turned off, the fail-safe operation stops and the system returns to a normal condition.

WIRING DIAGRAM

Refer to DTC P2120 (See page ES-302).

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1 CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P2121)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.

A

REPLACE ECM

DTC	P2195	Oxygen (A/F) Sensor Signal Stuck Lean (Bank 1 Sensor 1)

DTC	P2196	Oxygen (A/F) Sensor Signal Stuck Rich (Bank 1 Sensor 1)

HINT:
- Although the DTC titles say oxygen sensor, these DTCs relate to the Air-Fuel Ratio (A/F) sensor.
- Sensor 1 refers to the sensor mounted in front of the Three-Way Catalytic Converter (TWC) and located near the engine assembly.

ES

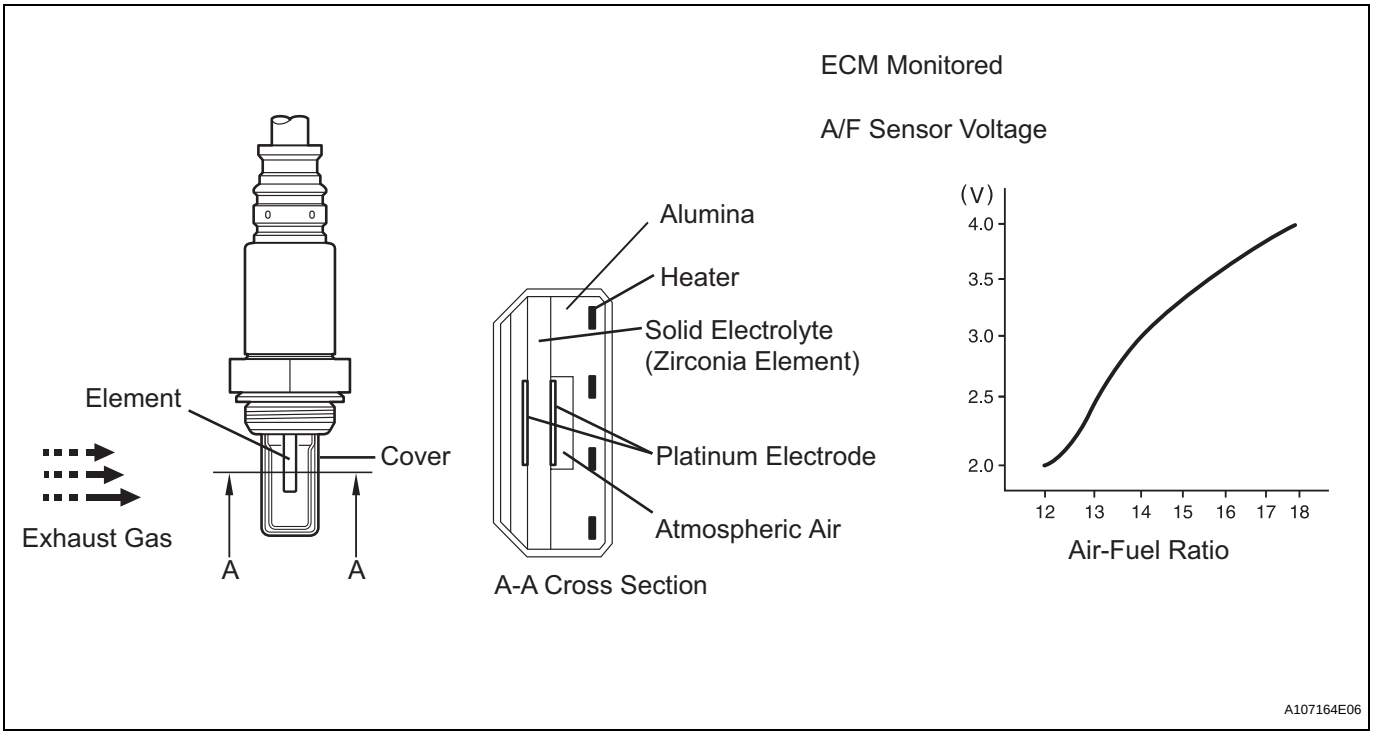
DESCRIPTION

The A/F sensor generates a voltage* that corresponds to the actual air-fuel ratio. This sensor voltage is used to provide the ECM with feedback so that it can control the air-fuel ratio. The ECM determines the deviation from the stoichiometric air-fuel ratio level, and regulates the fuel injection time. If the A/F sensor malfunctions, the ECM is unable to control the air-fuel ratio accurately.

The A/F sensor is of the planar type and is integrated with the heater, which heats the solid electrolyte (zirconia element). This heater is controlled by the ECM. When the intake air volume is low (the exhaust gas temperature is low), a current flows into the heater to heat the sensor, in order to facilitate accurate air-fuel ratio detection. In addition, the sensor and heater portions are narrower than the conventional type. The heat generated by the heater is conducted to the solid electrolyte through the alumina, therefore the sensor activation is accelerated.

A three-way catalytic converter (TWC) is used in order to convert the carbon monxide (CO), hydrocarbons (HC), and nitrogen oxide (NOX) into less harmful substances. To allow the TWC to function effectively, it is necessary to keep the air-fuel ratio of the engine near the stoichiometric air-fuel ratio.

*: Value changes inside the ECM. Since the A/F sensor is the current output element, a current is converted into a voltage inside the ECM. Any measurements taken at the A/F sensor or ECM connectors will show a constant voltage.



DTC No.	DTC Detection Condition	Trouble Area
P2195	Conditions (a) and (b) continue for 10 seconds or more (2 trip detection logic): (a) A/F sensor voltage more than 3.8 V (b) Heated Oxygen (HO2) sensor voltage 0.15 V or more	• Open or short in A/F sensor (sensor 1) circuit • A/F sensor (sensor 1) • A/F sensor heater (sensor 1) • Engine room J/B (EFI relay) • A/F sensor heater and EFI relay circuits • ECM
	While fuel-cut operation is performed (during vehicle deceleration), A/F sensor current 3.6 mA or more for 3 seconds (2 trip detection logic)	• A/F sensor • ECM
P2196	Conditions (a) and (b) continue for 10 seconds or more (2 trip detection logic): (a) A/F sensor voltage less than 2.8 V for 10 seconds (b) HO2 sensor voltage less than 0.6 V	• Open or short in A/F sensor (sensor 1) circuit • A/F sensor (sensor 1) • A/F sensor heater (sensor 1) • Engine room J/B (EFI relay) • A/F sensor heater and EFI relay circuits • ECM
	While fuel-cut operation is performed (during vehicle deceleration), A/F sensor current less than 1.0 mA for 3 seconds (2 trip detection logic)	• A/F sensor • ECM

ES

HINT:

- When either of these DTCs is set, check the A/F sensor output voltage by selecting the following menu items on the intelligent tester: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / AFS B1 S1.
- Short-term fuel trim values can also be read using the intelligent tester.
- The ECM regulates the voltages at the A1A+ and A1A- terminals of the ECM to a constant level. Therefore, the A/F sensor output voltage cannot be confirmed without using the intelligent tester.
- If the A/F sensor is malfunctioning, the ECM sets the DTC P2195 or P2196.

MONITOR DESCRIPTION

Sensor voltage detection monitor

Under the air-fuel ratio feedback control, if the A/F sensor output voltage indicates rich or lean for a certain period of time, the ECM determines that there is a malfunction in the A/F sensor. The ECM illuminates the MIL and sets a DTC.

Example:

If the A/F sensor output voltage is less than 2.8 V (very rich condition) for 10 seconds, despite the rear HO2 sensor output voltage being less than 0.6 V, the ECM sets DTC P2196. Alternatively, if the A/F sensor output voltage is more than 3.8 V (very lean condition) for 10 seconds, despite the rear HO2 sensor output voltage being 0.15 V or more, DTC P2195 is set.

Sensor current detection monitor

A rich air-fuel mixture causes a low A/F sensor current, and a lean air-fuel mixture causes a high A/F sensor current. Therefore, the sensor output becomes low during acceleration, and it becomes high during deceleration with the throttle valve fully closed. The ECM monitors the A/F sensor current during fuel-cut and detects any abnormal current values.

If the A/F sensor output is 3.6 mA or more for more than 3 seconds of cumulative time, the ECM interprets this as a malfunction in the A/F sensor and sets DTC P2195 (high-side stuck). If the A/F sensor output is less than 1.0 mA for more than 3 seconds of cumulative time, the ECM sets DTC P2196 (low-side stuck).

A/F Sensor Current Monitor:

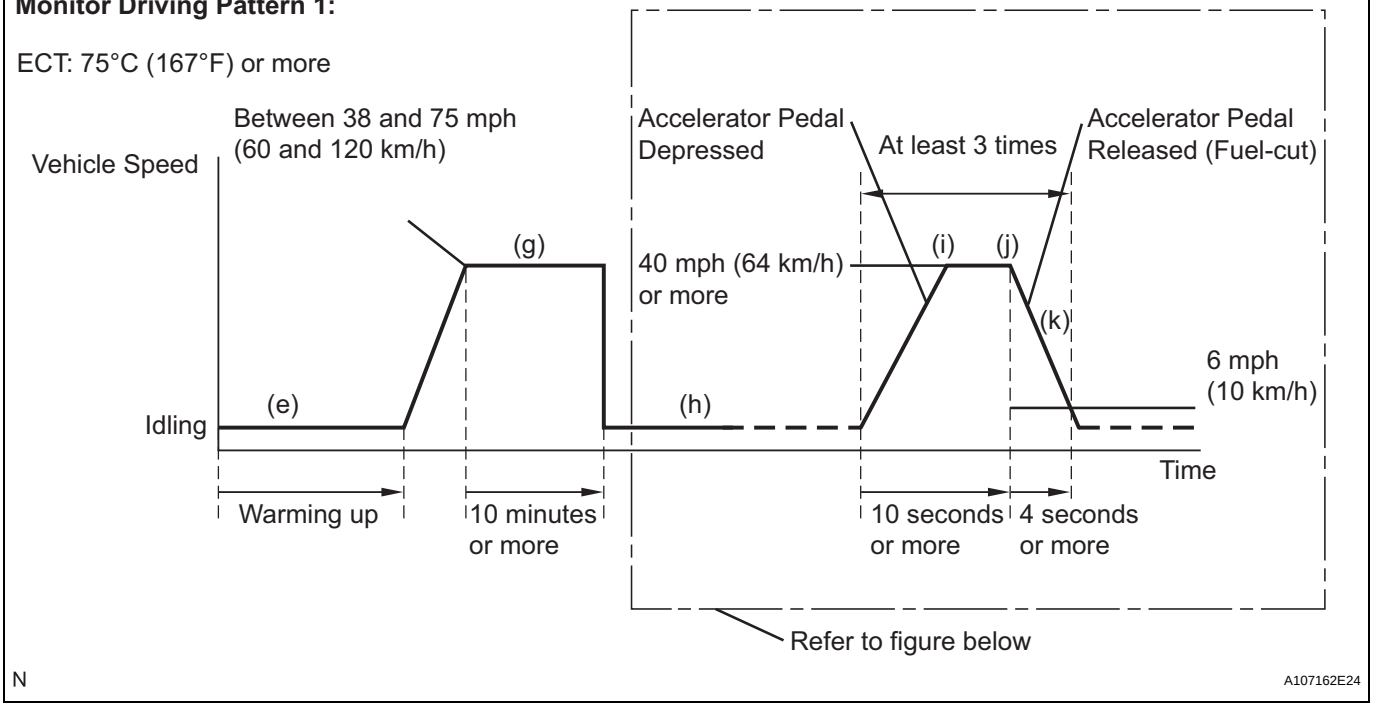
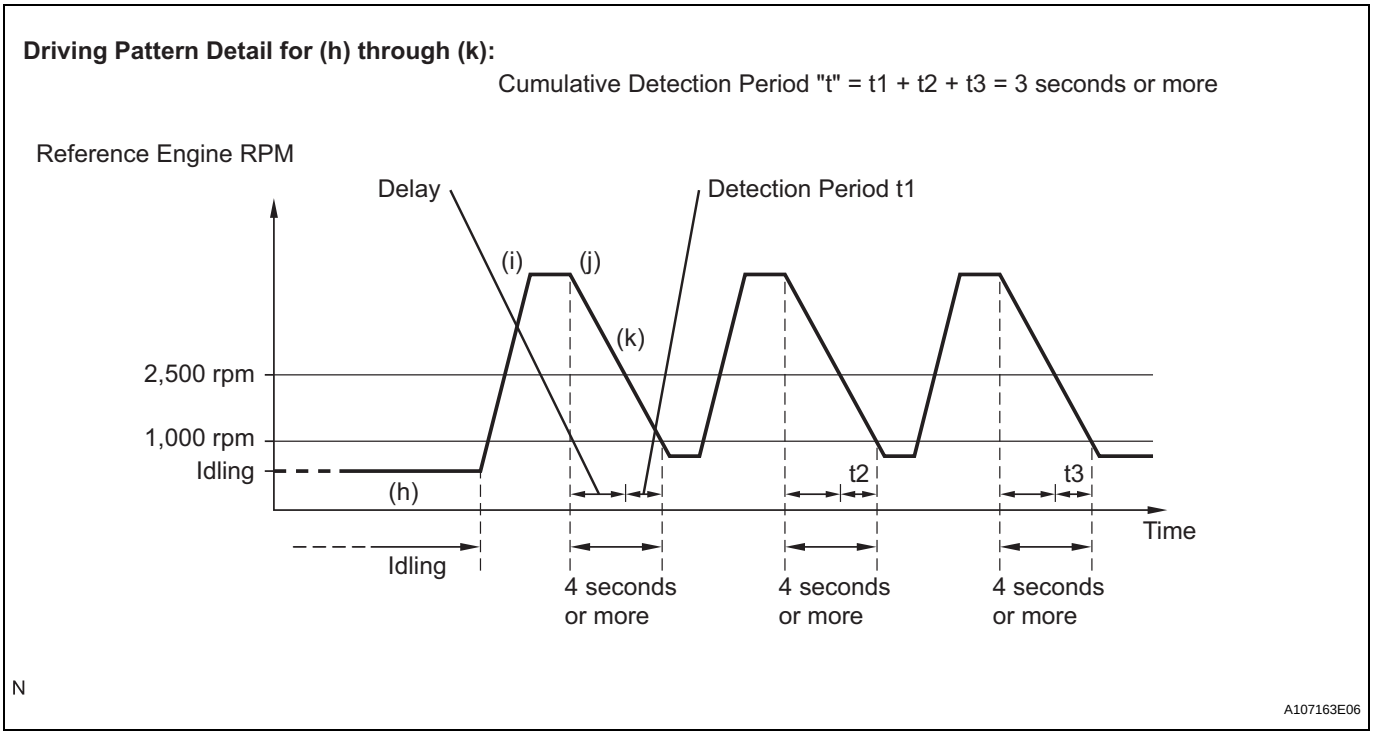
CONFIRMATION DRIVING PATTERN

This confirmation driving pattern is used in the "PERFORM CONFIRMATION DRIVING PATTERN" procedure of the following diagnostic troubleshooting procedure.

Monitor Driving Pattern 1:



Driving Pattern Detail for (h) through (k):



(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Clear the DTCs (See page ES-38).
(e) Start the engine, and warm it up until the ECT reaches 75°C (167°F) or higher.
(f) On the intelligent tester, select the following menu items to check the fuel-cut status: DIAGNOSIS / ENHANCED OBD II / DATA LIST / USER DATA / FC IDL.
(g) Drive the vehicle at between 38 mph (60 km/h) and 75 mph (120 km/h) for at least 10 minutes.

(h) Change the transmission to the 2nd gear.
(i) Drive the vehicle at a proper vehicle speed to perform fuel-cut operation.
(j) Accelerate the vehicle to 40 mph (64 km/h) or more by depressing the accelerator pedal for at least 10 seconds.
HINT:
Fuel-cut is performed when the following conditions are met:
- Accelerator pedal fully is released.
- Engine speed is 2,500 rpm or more (fuel injection resumes at 1,000 rpm).

(k) Soon after performing step (j) above, release the accelerator pedal for at least 4 seconds without depressing the brake pedal, in order to execute fuel-cut control.
(l) Allow the vehicle to decelerate until the vehicle speed declines to less than 6 mph (10 km/h).
(m) Repeat steps from (h) through (k) above at least 3 times in one driving cycle.
HINT:
Completion of all A/F sensor monitors is required to change the value in TEST RESULT.
CAUTION:
Strictly observe posted speed limits, traffic laws, and road conditions when performing these driving patterns.

INSPECTION PROCEDURE

HINT:
Intelligent tester only:
Malfunctioning areas can be identified by performing the A/F CONTROL function provided in the ACTIVE TEST. The A/F CONTROL function can help to determine whether the Air-fuel Ratio (A/F) sensor, Heated Oxygen (HO2) sensor and other potential trouble areas are malfunctioning.
The following instructions describe how to conduct the A/F CONTROL operation using the intelligent tester.

1. Connect the intelligent tester to the DLC3.
2. Start the engine and turn the tester on.
3. Warm up the engine at an engine speed of 2,500 rpm for approximately 90 seconds.
4. On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL.
5. Perform the A/F CONTROL operation with the engine idling (press the RIGHT or LEFT button to change the fuel injection volume).
6. Monitor the output voltages of the A/F and HO2 sensors (AFS B1 S1 and O2S B1 S2) displayed on the tester.

HINT:
- The A/F CONTROL operation lowers the fuel injection volume by 12.5 % or increases the injection volume by 25%.
- The sensors react in accordance with increases and decreases in the fuel injection volume.

Standard

Tester Display (Sensor)	Injection Volume	Status	Voltages
AFS B1 S1 (A/F)	+25%	Rich	Less than 3.0
	-12.5%	Lean	More than 3.35
O2S B1 S2 (HO2)	+25%	Rich	More than 0.5
	-12.5%	Lean	Less than 0.4

NOTICE:
The A/F sensor has an output delay of a few seconds and the HO2 sensor (sensor 2) output has a maximum output delay of approximately of 20 seconds.

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Areas
1	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		-
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage More than 0.5 V Less than 0.4 V		
2	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• A/F sensor • A/F sensor heater • A/F sensor circuit
	Output Voltage Almost no reaction		Output Voltage More than 0.5 V Less than 0.4 V		
3	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• HO2 sensor • HO2 sensor heater • HO2 sensor circuit
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage Almost no reaction		
4	Injection volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• Injector • Fuel pressure • Gas leakage from exhaust system (Air-fuel ratio extremely lean or rich)
	Output Voltage Almost no reaction		Output Voltage Almost no reaction		

ES

Following the A/F CONTROL procedure enables technicians to check and graph the voltage outputs of both the A/F and HO2 sensors.
To display the graph, select the following menu items on the tester: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL / USER DATA / AFS B1 S1 and O2S B1 S2, and press the YES button and then the ENTER button followed by the F4 button.
HINT:

- DTC P2A00 may be set when the air-fuel ratio is stuck rich or lean.
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- A low A/F sensor voltage could be caused by a rich air-fuel mixture. Check for conditions that would cause the engine to run rich.
- A high A/F sensor voltage could be caused by a lean air-fuel mixture. Check for conditions that would cause the engine to run lean.

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO P2195 OR P2196)

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P2195 or P2196	A
P2195 or P2196 and other DTCs	B

HINT:
If any DTCs relating to the A/F sensor (DTCs for the A/F sensor heater or A/F sensor admittance) are output, troubleshoot those DTCs first.

B → GO TO DTC CHART

A

ES

2 READ VALUE USING INTELLIGENT TESTER (TEST VALUE OF A/F SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and turn the tester on.
(c) Clear the DTCs (See page ES-38).
(d) Drive the vehicle in accordance with the drive pattern described in the CONFIRMATION DRIVING PATTERN.
(e) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / MONITOR INFO / MONITOR STATUS.
(f) Check that the status of O2S MON is COMPL.
If the status is still INCMPL, drive the vehicle according to the driving pattern again.
HINT:
- AVAIL indicates that the component has not been monitored yet.
- COMPL indicates that the component is functioning normally.
- INCMPL indicates that the component is malfunctioning.

(g) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / MONITOR INFO / TEST RESULT / RANGE B1 S1; then press the ENTER button.
(h) Check the test value of the A/F sensor output current during fuel-cut.

Result

Test Value	Proceed to
Within normal range (1.0 mA or more, and less than 3.6 mA)	A
Outside normal range (Less than 1.0 mA, or 3.6 mA or more)	B

B → Go to step 12

A

3 READ VALUE USING INTELLIGENT TESTER (OUTPUT VOLTAGE OF A/F SENSOR)

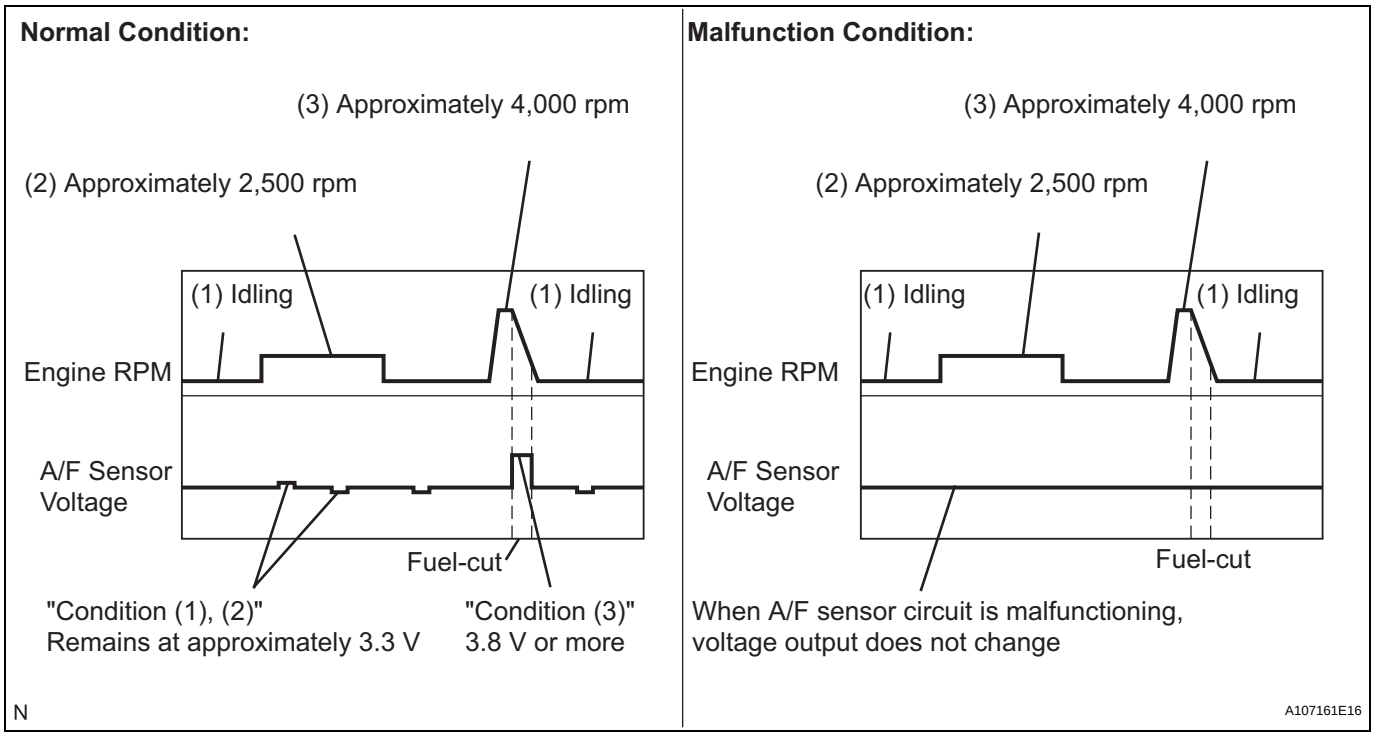
(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.

(c) Turn the tester on.
(d) Warm up the A/F sensor at an engine speed of 2,500 rpm for 90 seconds.
(e) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / SNAPSHOT / MANUAL SNAPSHOT / USER DATA / AFS B1 S1 and ENGINE SPD.
(f) Check the A/F sensor voltage 3 times, when the engine is in each of the following conditions:
  (1) While idling (for at least 30 seconds)
  (2) At an engine speed of approximately 2,500 rpm (without any sudden changes in engine speed)
  (3) Raise the engine speed to 4,000 rpm and then quickly release the accelerator pedal so that the throttle valve is fully closed.

ES

Standard voltage

Conditions	A/F Sensor Voltage Variations	Reference
(1) and (2)	Remains at approximately 3.3 V	Between 3.1 V and 3.5 V
(3)	Increases to 3.8 V or more	This occurs during engine deceleration (when fuel-cut performed)



HINT:
- For more information, see the diagrams below.
- If the output voltage of the A/F sensor remains at approximately 3.3 V (see Malfunction Condition diagram) under any conditions, including those above, the A/F sensor may have an open circuit. (This will also happen if the A/F sensor heater has an open circuit.)

- If the output voltage of the A/F sensor remains at either approximately 3.8 V or more, or 2.8 V or less (see Malfunction Condition diagram) under any conditions, including those above, the A/F sensor may have a short circuit.
- The ECM stops fuel injection (fuel cut) during engine deceleration. This causes a lean condition and results in a momentary increase in the A/F sensor output voltage.
- The ECM must establish a closed throttle valve position learning value to perform fuel cut. If the battery terminal has been reconnected, the vehicle must be driven over 10 mph (16 km/h) to allow the ECM to learn the closed throttle valve position.
- When the vehicle is driven:
  The output voltage of the A/F sensor may be below 2.8 V during fuel enrichment. For the vehicle, this translates to a sudden increase in speed with the accelerator pedal fully depressed when trying to overtake another vehicle. The A/F sensor is functioning normally.
- The A/F sensor is a current output element; therefore, the current is converted into a voltage inside the ECM. Measuring the voltage at the connectors of the A/F sensor or ECM will show a constant voltage result.

DTC	P2252	Oxygen (A/F) Sensor Reference Ground Circuit Low (Bank 1 Sensor 1)
DTC	P2253	Oxygen (A/F) Sensor Reference Ground Circuit High (Bank 1 Sensor 1)

HINT:
- Although the DTC titles say oxygen sensor, these DTCs relate to the Air-Fuel Ratio (A/F) sensor.
- Sensor 1 refers to the sensor mounted in front of the Three-Way Catalytic Converter (TWC) and located near the engine assembly.

DESCRIPTION

These DTCs are set when there is an open or short in the A/F sensor circuit, or if A/F sensor output drops. To detect these problems, the voltage of the A/F sensor is monitored when turn the ignition switch to the ON position, and the admittance (admittance is an electrical term that indicates the ease of flow of current) is checked while driving. If the voltage of the A/F sensor is between 0.6V and 4.5V, it is considered normal. If the voltage is out of the specified range, or the admittance is less than the standard value, the ECM will determine that there is a malfunction in the A/F sensor. If the same malfunction is detected in next driving cycle, the MIL will be illuminated and a DTC will be stored.
The A/F sensor, which is located between the exhaust manifold and catalyst, consists of alloyed metal elements and a heater.
Depending on the engine operating conditions, the heater heats the sensor elements to activate them. Battery voltage is applied to the heater, the sensor ground is controlled by the ECM using a duty ratio. The sensor elements convert the oxygen concentration in the exhaust gas into voltage values to output. Based on the voltage, the ECM determines the air-fuel ratio and regulates the fuel injection volume depending on the air-fuel ratio and engine operating conditions. The voltage changes between 0.6V and 4.5V while the engine is running. If the air-fuel ratio is LEAN, which means the oxygen concentration in the exhaust gas is high, the voltage is high. If the air-fuel ratio is RICH, which means the oxygen concentration in the exhaust gas is low, the voltage is low.

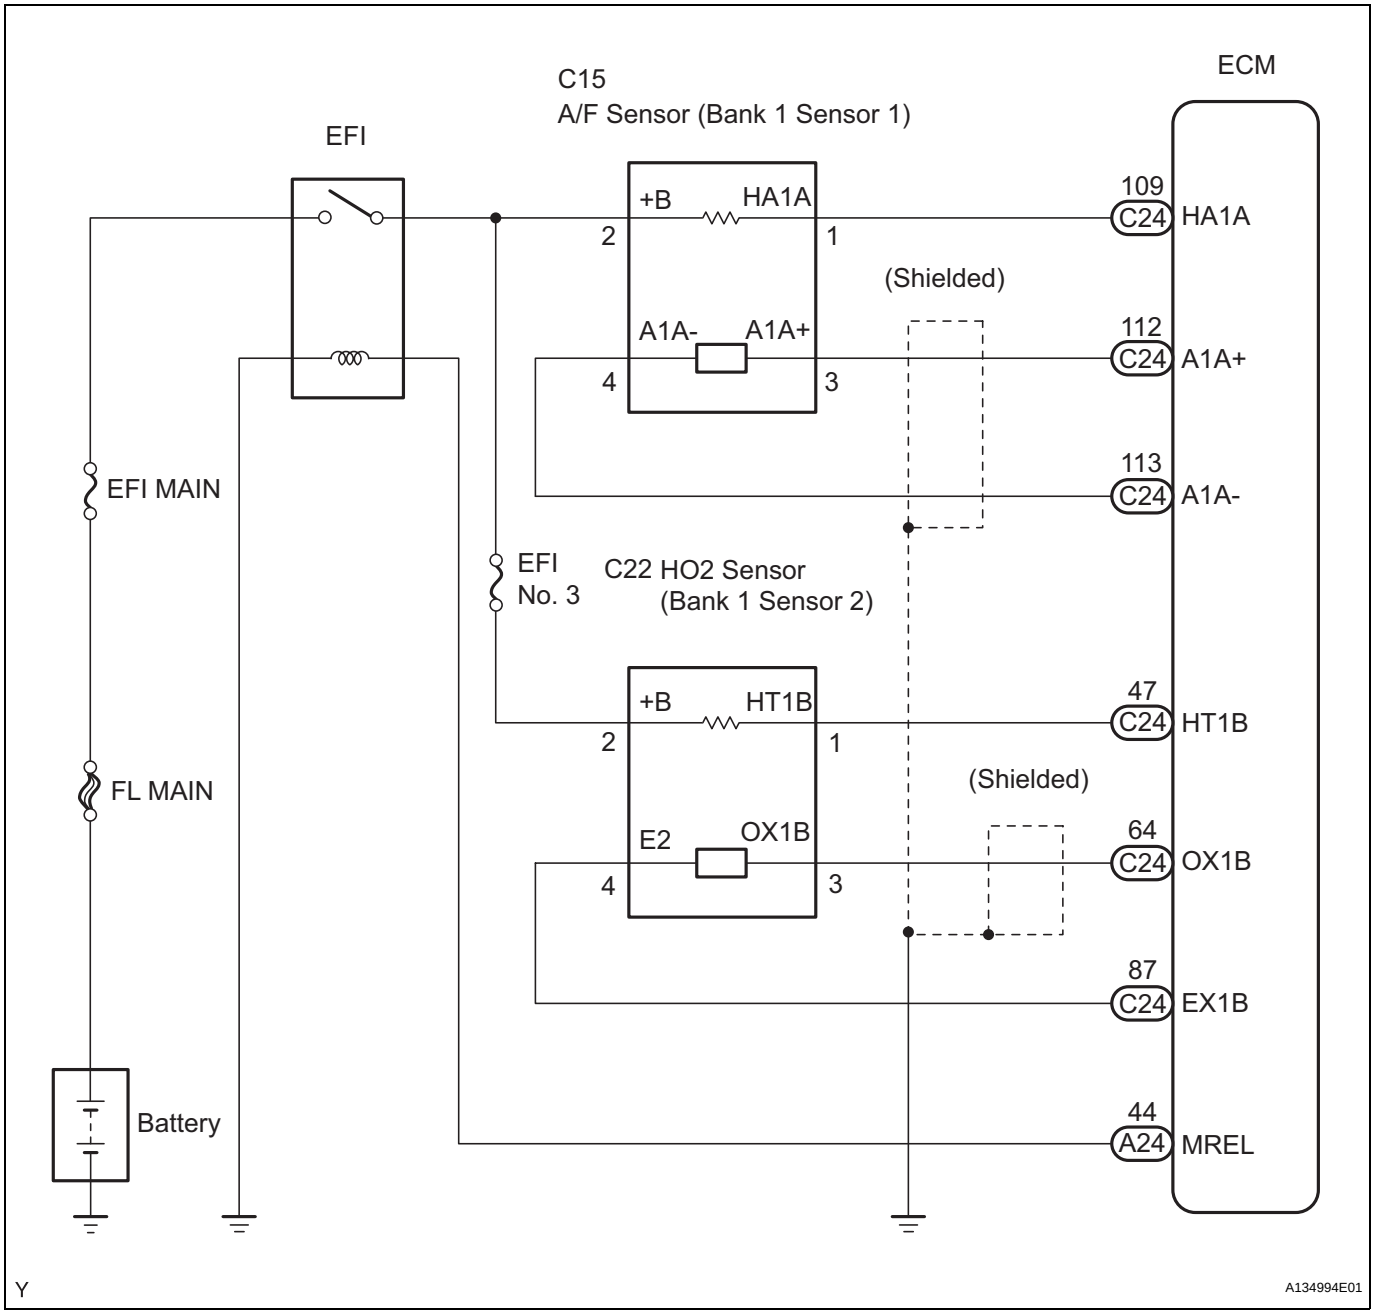
AF- terminal voltage	More than 4.5 V

COMPONENT OPERATING RANGE

A/F sensor admittance	0.022 1/Ω or more
AF+ terminal voltage	0.6 to 4.5 V
AF- terminal voltage	0.6 to 4.5 V
Difference between AF+ and AF- terminal voltages	0.1 to 0.8 V

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

Intelligent tester only:

Malfunctioning areas can be identified by performing the A/F CONTROL function provided in the ACTIVE TEST. The A/F CONTROL function can help to determine whether the Air-Fuel Ratio (A/F) sensor, Heated Oxygen (HO2) sensor and other potential trouble areas are malfunctioning.

The following instructions describe how to conduct the A/F CONTROL operation using the intelligent tester.

1. Connect the intelligent tester to the DLC3.
2. Start the engine and turn the tester on.
3. Warm up the engine at an engine speed of 2,500 rpm for approximately 90 seconds.
4. On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL.

5. Perform the A/F CONTROL operation with the engine idling (press the RIGHT or LEFT button to change the fuel injection volume).
6. Monitor the output voltages of the A/F and HO2 sensors (AFS B1 S1 and O2S B1 S2) displayed on the tester.

HINT:

- The A/F CONTROL operation lowers the fuel injection volume by 12.5 % or increases the injection volume by 25 %.
- The sensors react in accordance with increases and decreases in the fuel injection volume.

Standard

Tester Display (Sensor)	Injection Volume	Status	Voltages
AFS B1 S1 (A/F)	+25 %	Rich	Less than 3.0
	-12.5 %	Lean	More than 3.35
O2S B1 S2 (HO2)	+25 %	Rich	More than 0.5
	-12.5 %	Lean	Less than 0.4

NOTICE:

The A/F sensor has an output delay of a few seconds and the HO2 sensor has a maximum output delay of approximately 20 seconds.

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Areas
1	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		-
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage More than 0.5 V Less than 0.4 V		
2	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• A/F sensor • A/F sensor heater • A/F sensor circuit
	Output Voltage Almost no reaction		Output Voltage More than 0.5 V Less than 0.4 V		
3	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• HO2 sensor • HO2 sensor heater • HO2 sensor circuit
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage Almost no reaction		
4	Injection volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• Injector • Fuel pressure • Gas leakage from exhaust system (Air-fuel ratio extremely lean or rich)
	Output Voltage Almost no reaction		Output Voltage Almost no reaction		

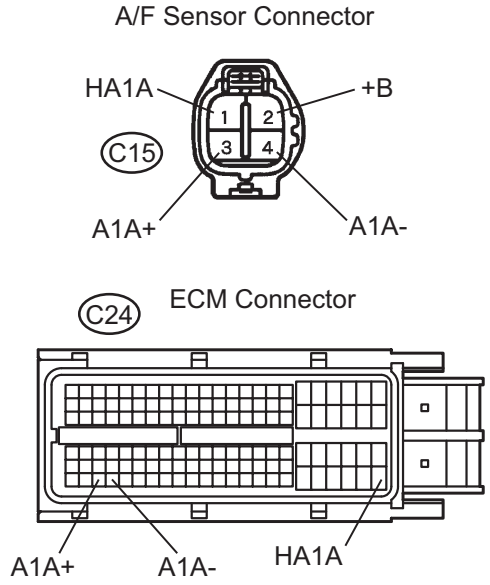
Following the A/F CONTROL procedure enables technicians to check and graph the output voltages of both the A/F and HO2 sensors.

To display the graph, select the following menu items on the tester: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL / USER DATA / AFS B1 S1 and O2S B1 S2; then press the YES button and then the ENTER button followed by the F4 button.

HINT:
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK HARNESS AND CONNECTOR (A/F SENSOR - ECM)

Wire Harness Side:



(a) Disconnect the C15 A/F sensor connector.
(b) Disconnect the C24 ECM connector.
(c) Measure the resistance between the terminals of the wire harness side connectors.

Standard resistance (Check for open)

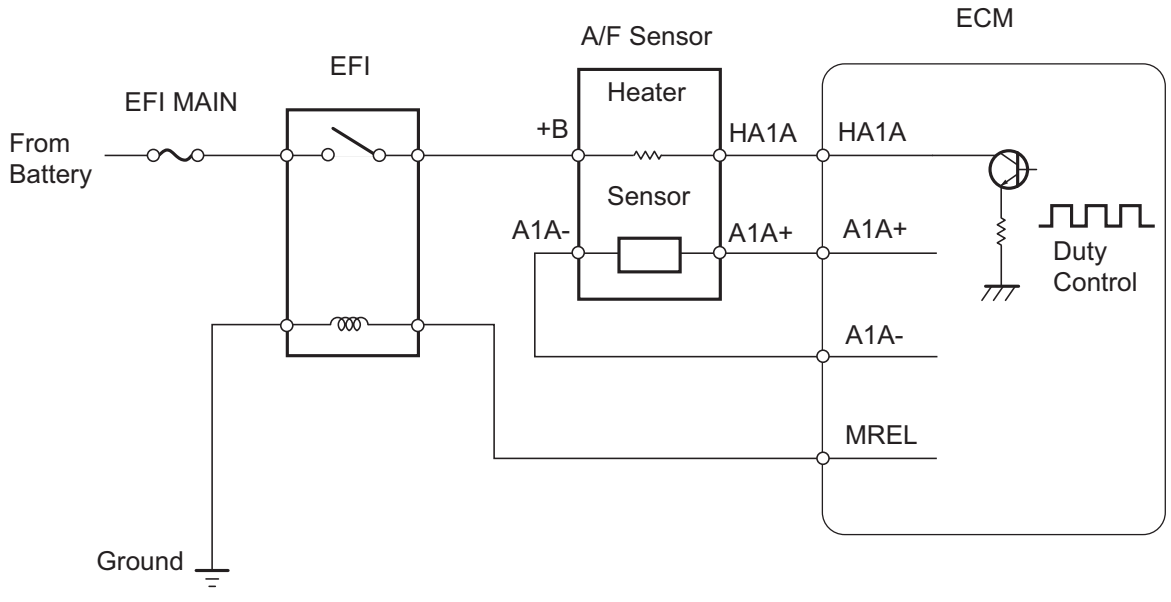
Tester Connection	Specified Condition
C15-3 (A1A+) - C24-112 (A1A+)	Below 1 Ω
C15-4 (A1A-) - C24-113 (A1A-)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
C15-3 (A1A+) or C24-112 (A1A+) - Body ground	10 kΩ or higher
C15-4 (A1A-) or C24-113 (A1A-) - Body ground	10 kΩ or higher

(d) Reconnect the ECM connector.
(e) Reconnect the A/F sensor connector.

Reference (System Diagram of Sensor 1):



NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

DTC	P2420	Evaporative Emission System Switching Valve Control Circuit High

DTC SUMMARY

DTCs	Monitoring Item	Malfunction Detection Condition	Trouble Area	Detection Timing	Detection Logic
P2420	Vent valve stuck open (vent)	Following condition is met during key-off EVAP monitor: • EVAP pressure change when vent valve closed (ON) less than 0.3 kPa-g (2.25 mmHg-g)	• Canister pump module (Reference orifice, leak detection pump, vent valve) • Connector/wire harness (Canister pump module - ECM) • ECM	While ignition switch off	2 trip detection logic

ES

HINT:
The vent valve is built into the canister pump module.

DESCRIPTION

The description can be found in the EVAP (Evaporative Emission) System (See page ES-346).

INSPECTION PROCEDURE

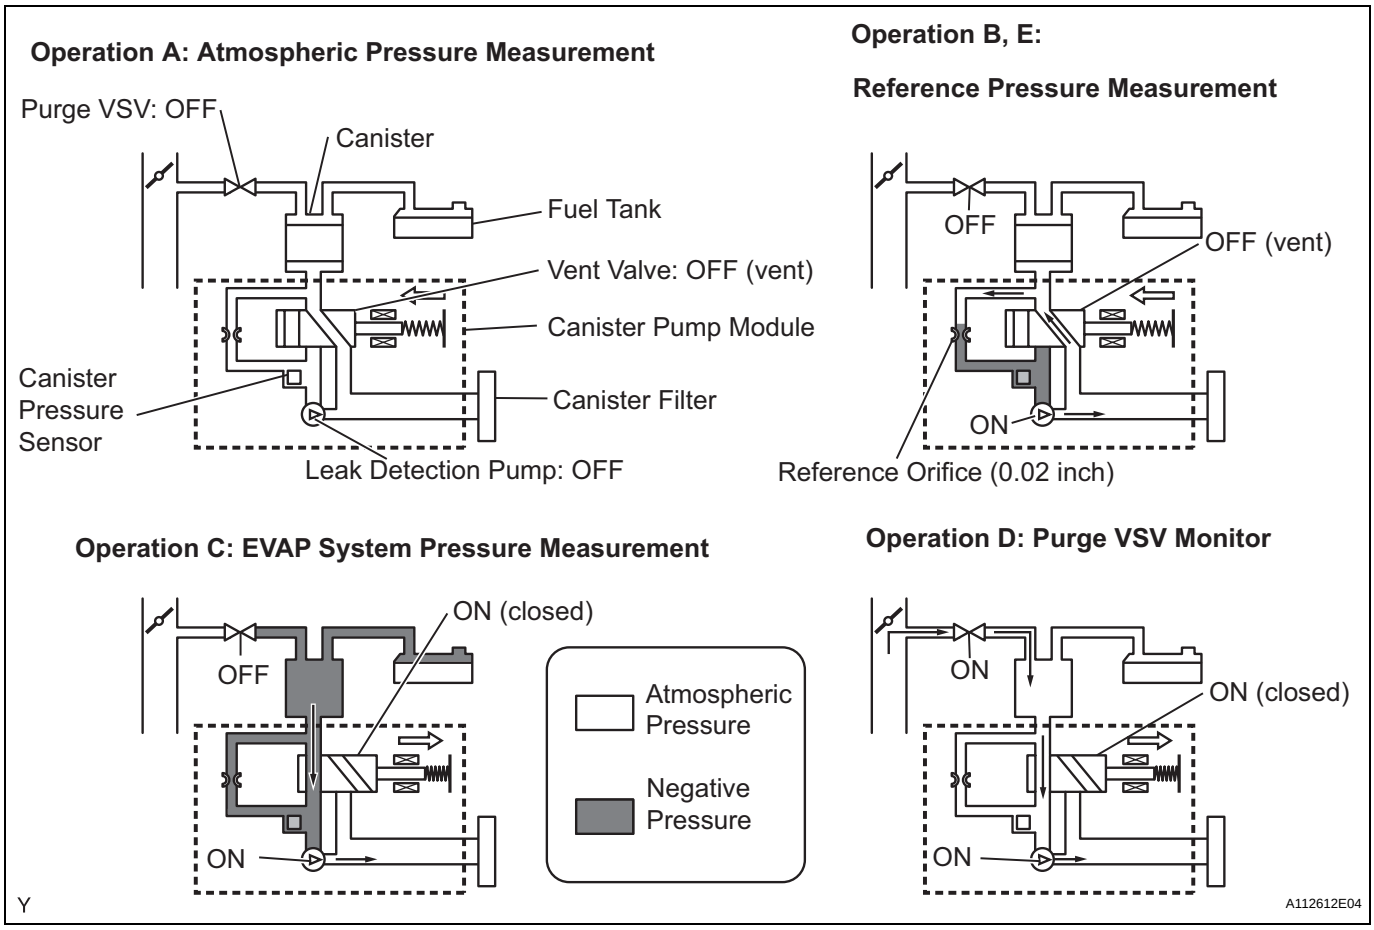
Refer to the EVAP System (See page ES-352).

MONITOR DESCRIPTION

5 hours* after the ignition switch is turned off, the leak detection pump creates negative pressure (vacuum) in the EVAP system. The ECM monitors for leaks and actuator malfunctions based on the EVAP pressure.
HINT:
*: If the engine coolant temperature is not below 35°C (95°F) 5 hours after the ignition switch is turned off, the monitor check starts 2 hours later. If it is still not below 35°C (95°F) 7 hours after the ignition switch is turned off, the monitor check starts 2.5 hours later.

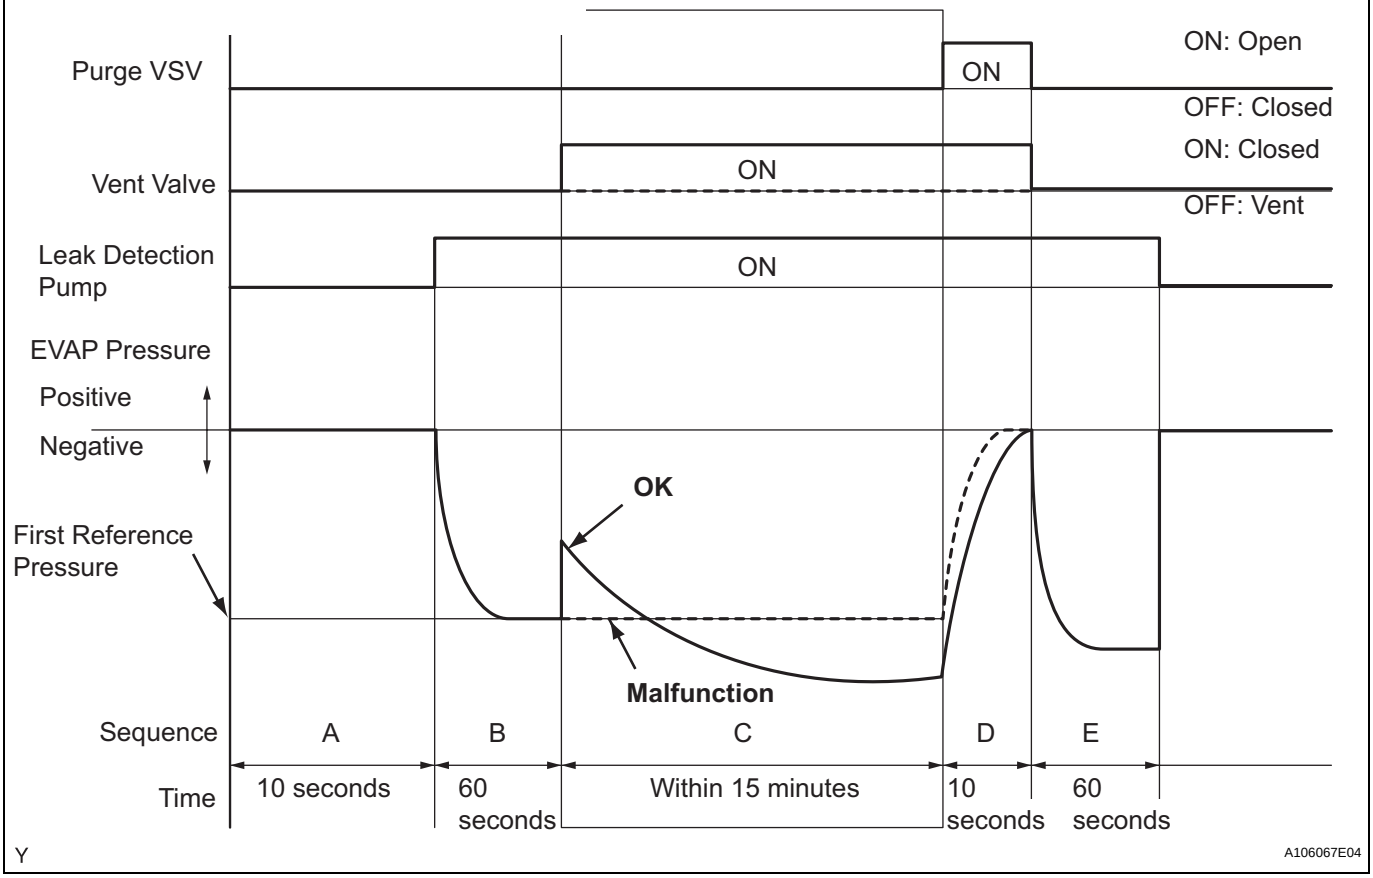
Sequence	Operations	Descriptions	Duration
-	ECM activation	Activated by soak timer 5, 7 or 9.5 hours after ignition switch turned off.	-
A	Atmospheric pressure measurement	Vent valve turned OFF (vent) and EVAP system pressure measured by ECM in order to register atmospheric pressure. If pressure in EVAP system not between 76 kPa-a and 110 kPa-a (570 mmHg-a and 825 mmHg-a), ECM cancels EVAP system monitor.	10 seconds
B	First reference pressure measurement	In order to determine reference pressure, leak detection pump creates negative pressure (vacuum) through reference orifice and then ECM checks if leak detection pump and vent valve operate normally.	60 seconds
C	EVAP system pressure measurement	Vent valve turned ON (closed) to shut EVAP system. Negative pressure (vacuum) created in EVAP system, and EVAP system pressure then measured. Write down measured value as it will be used in leak check. If EVAP pressure does not stabilize within 15 minutes, ECM cancels EVAP system monitor.	15 minutes*
D	Purge VSV monitor	Purge VSV opened and then EVAP system pressure measured by ECM. Large increase indicates normality.	10 seconds
E	Second reference pressure measurement	After second reference pressure measurement, leak check performed by comparing first and second reference pressure. If stabilized system pressure higher than second reference pressure, ECM determines that EVAP system leaking.	60 seconds
F	Final check	Atmospheric pressure measured and then monitoring result recorded by ECM.	-

*: If only a small amount of fuel is in the fuel tank, it takes longer for the EVAP pressure to stabilize.



The vent valve turns ON (closes) and the EVAP system pressure is then measured by the ECM, using the canister pressure sensor, to conduct an EVAP leak check. If the pressure does not increase when the vent valve is open, the ECM interprets this as the vent valve being stuck open. The ECM illuminates the MIL and sets the DTC.

EVAP Pressure when Vent Valve Stuck OFF:



ES

MONITOR STRATEGY

Required Sensors/Components	Purge VSV and canister pump module
Frequency of Operation	Once per driving cycle
Duration	Within 2 minutes (varies with amount of fuel in tank)
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None
EVAP key-off monitor runs when all of the following conditions are met	-
Atmospheric pressure	70 to 110 kPa-a (525 to 825 mmHg-a)
Battery voltage	10.5 V or more
Vehicle speed	Below 2.5 mph (4 km/h)
Ignition switch	off
Time after key off	5, 7 or 9.5 hours
EVAP pressure sensor malfunction (P0450, P0451, P0452 and P0453)	Not detected
EVAP canister purge valve	Not operated by scan tool
EVAP canister vent valve	Not operated by scan tool
EVAP leak detection pump	Not operated by scan tool
Both of the following conditions are met before key off	Conditions 1 and 2
1. Duration that vehicle has been driven	5 minutes or more
2. EVAP purge operation	Performed

ECT	4.4 to 35°C (40 to 95°F)
IAT	4.4 to 35°C (40 to 95°F)

1. Key-off monitor sequence 1 to 8

1. Atmospheric pressure measurement

Next sequence runs if following condition is met	-
Atmospheric pressure change	Less than 0.3 kPa-g (2.25 mmHg-g) in 1 second

2. First reference pressure measurement

Next sequence runs if all of the following conditions are met	Conditions 1, 2 and 3
1. EVAP pressure just after reference pressure measurement start	-1 kPa-g (-7.5 mmHg-g) or less
2. Reference pressure	-4.85 to -1.057 kPa-g (-36.4 to -7.93 mmHg-g)
3. Reference pressure	Saturated within 60 seconds

ES

3. Vent valve stuck closed check

Next sequence runs if following condition is met	-
EVAP pressure change after vent valve is ON	0.3 kPa-g (2.25 mmHg-g) or more

4. Vacuum introduction

Next sequence runs if following condition is met	-
EVAP pressure	Saturated within 15 minutes

5. EVAP canister purge valve close stuck check

Next sequence runs if following condition is met	-
EVAP pressure change after purge valve is open	0.3 kPa-g (2.25 mmHg-g) or more

6. Second reference pressure measurement

Next sequence runs if all of the following conditions are met	Conditions 1, 2, 3 and 4
1. EVAP pressure just after reference pressure measurement start	-1 kPa-g (-7.5 mmHg-g) or less
2. Reference pressure	-4.85 to -1.057 kPa-g (-36.4 to -7.93 mmHg-g)
3. Reference pressure	Saturated within 60 seconds
4. Difference between first reference pressure and second reference pressure	Less than 0.5 kPa-g (3.75 mmHg-g)

7. Leak check

Next sequence runs if following condition is met	-
EVAP pressure when vacuum introduction completes	Second reference pressure or less

8. Atmospheric pressure measurement

EVAP monitor complete if following condition is met	-
Atmospheric pressure difference between sequence 1 and 8	Within 0.3 kPa-g (2.25 mmHg-g)

TYPICAL MALFUNCTION THRESHOLDS

"Saturated" indicates that the EVAP pressure change is less than 0.286 kPa-g (2.14 mmHg-g) in 60 seconds.

EVAP pressure change after EVAP canister vent valve ON	Less than 0.3 kPa-g (2.25 mmHg-g)

MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-20).

DTC	P2610	ECM / PCM Internal Engine Off Timer Performance

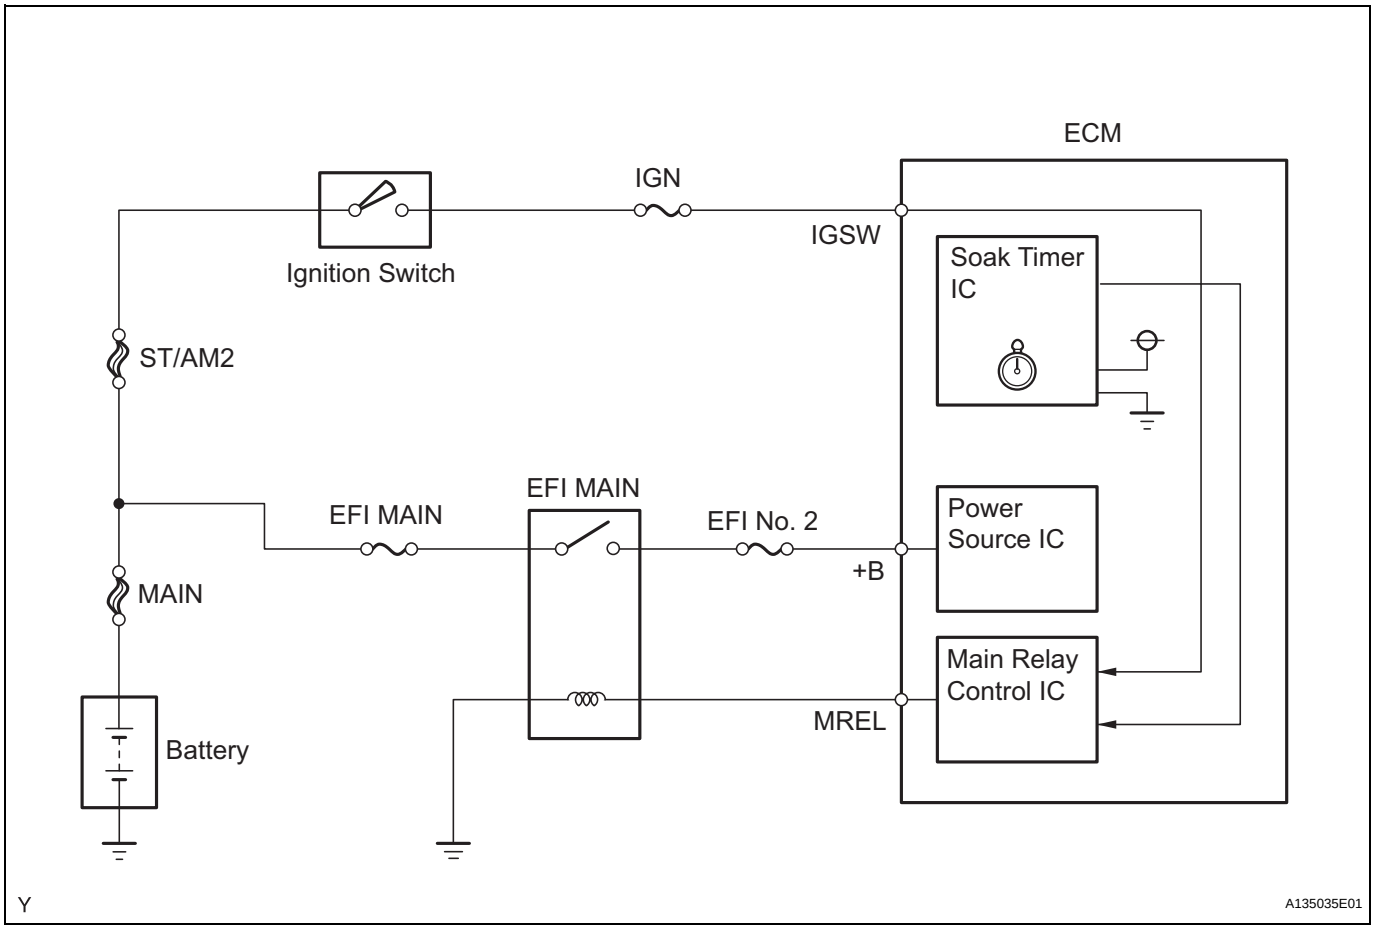
DTC SUMMARY

DTC	Monitoring Item	Malfunction Detection Condition	Trouble Area	Detection Timing	Detection Logic
P2610	Soak timer (built into ECM)	ECM internal malfunction	ECM	Engine running	2 trip detection logic

DESCRIPTION

ES

To ensure the accuracy of the EVAP (Evaporative Emission) monitor values, the soak timer, which is built into the ECM, measures 5 hours (+-15 minutes) from when the ignition switch is turned off, before the monitor is run. This allows the fuel to cool down, which stabilizes the EVAP pressure. When 5 hours have elapsed, the ECM turns on.



MONITOR DESCRIPTION

5 hours after the ignition switch is turned off, the soak timer activates the ECM to begin the EVAP system monitor. While the engine is running, the ECM monitors the synchronization of the soak timer and the CPU clock. If these two are not synchronized, the ECM interprets this as a malfunction, illuminates the MIL and sets the DTC (2 trip detection logic).

MONITOR STRATEGY

Required Sensors/Components	ECM

Frequency of Operation	Once per driving cycle
Duration	10 minutes
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

All:

Monitor runs whenever following DTC are not present	None

Case 1:

Engine	Running
Battery voltage	8 V or more
Ignition switch	ON
Starter	OFF

Case 2:

Internal engine OFF timer (elapsed time from engine stop)	10 to 300 minutes
Battery voltage	8 V or more
Ignition switch	ON
Starter	OFF

Case 3:

Internal engine OFF timer (elapsed time from engine stop)	310 minutes or more
Battery voltage	8 V or more
Ignition switch	ON
Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS

Case 1:

Soak timer measurement when ECM CPU clock counts 10 minutes	Less than 7 minutes, or more than 13 minutes

Case 2:

ECM had the started record by internal engine OFF timer	YES

Case 3:

ECM had the starter record by internal engine OFF timer	NO

INSPECTION PROCEDURE

HINT:

- DTC P2610 is set if an internal ECM problem is detected. Diagnostic procedures are not required. ECM replacement is necessary.
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	**REPLACE ECM**

(a) Replace the ECM (See page ES-432).

NEXT

2	CHECK WHETHER DTC OUTPUT RECURS

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester on.
(d) Clear the DTCs (See page ES-38).
(e) Start the engine and wait for 10 minutes or more.
(f) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES.
(g) If no pending DTC is displayed, the repair has been successfully completed.

NEXT

END

DTC	P2A00	A/F Sensor Circuit Slow Response (Bank 1 Sensor 1)

HINT:
Sensor 1 refers to the sensor mounted in front of the Three-Way Catalytic Converter (TWC) and located near the engine assembly.

DESCRIPTION

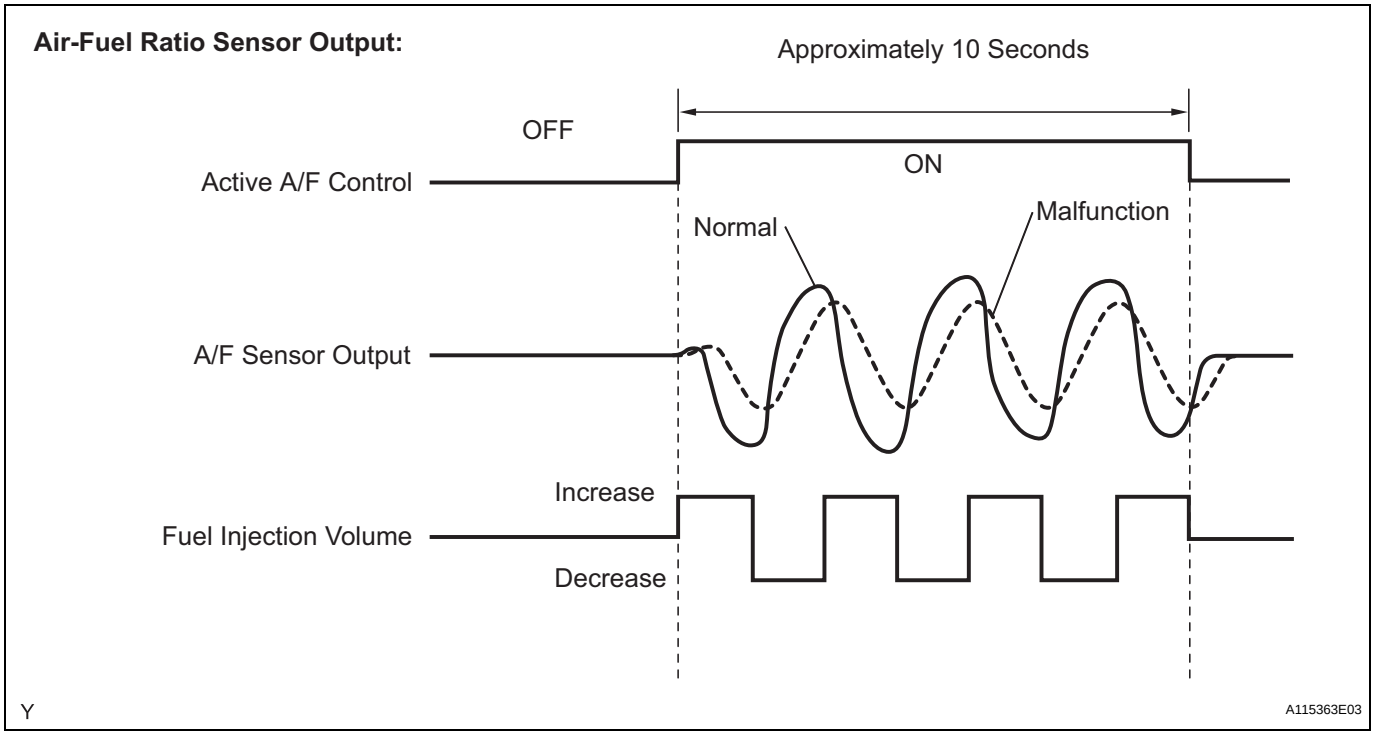
Refer to DTC P2195 (See page ES-308).

DTC No.	DTC Detection Condition	Trouble Area
P2A00	Calculated value of air-fuel ratio (A/F) sensor response rate deterioration level less than threshold (2 trip detection logic)	• Open or short in A/F sensor circuit • A/F sensor • ECM

ES

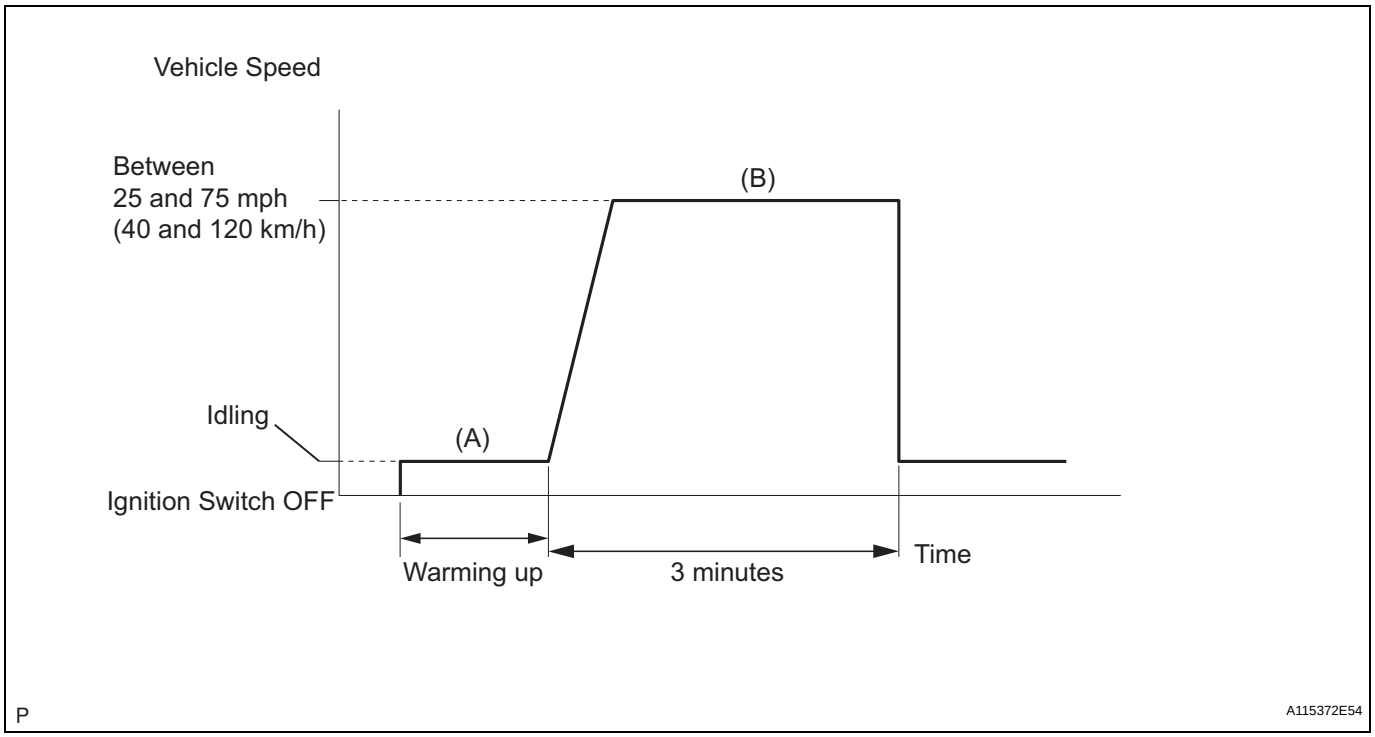
MONITOR DESCRIPTION

After the engine is warmed up, the ECM performs air-fuel ratio feedback control to maintain the air-fuel ratio at the stoichiometric level. In addition, active A/F control is performed for approximately 10 seconds after the preconditions are met in order to measure the A/F sensor response rate. During active A/F control, the ECM forcibly increases and decreases the injection volume by a certain amount, based on the stoichiometric air-fuel ratio learned during normal air-fuel ratio control, and measures the A/F sensor response rate. The ECM receives a signal from the A/F sensor while performing active A/F control and uses it to calculate the A/F sensor response rate deterioration level.
If the A/F sensor response rate deterioration level is less than the threshold, the ECM interprets this as a malfunction and sets the DTC.

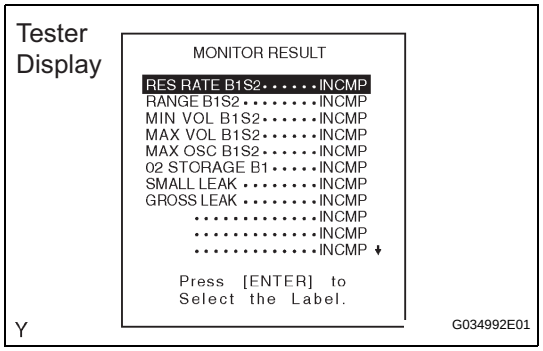


CONFIRMATION DRIVING PATTERN

HINT:
Performing this confirmation pattern will activate the A/F sensor response monitor.



1. Connect the intelligent tester to the DLC3.



2. Turn the ignition switch to the ON position.
3. Turn the tester on.
4. Clear the DTCs (if set) (See page ES-38).
5. Select the following menu items: DIAGNOSIS / ENHANCED OBD II / MONITOR INFO / MONITOR RESULT.
6. Check that RES RATE B1S1 is INCOMP.
7. Start the engine and warm it up. (Proceed "A")
8. Drive the vehicle at a constant speed of between 25 mph and 75 mph (40 km/h and 120 km/h) for 3 minutes. (Proceed "B")
9. Check the monitor result values on the intelligent tester by selecting the following menu items: DIAGNOSIS / ENHANCED OBD II / MONITOR INFO / TEST RESULT.
10. If the values indicated on the tester do not change, perform READINESS MONITOR DRIVE PATTERN for the A/F sensor and the heated oxygen sensor (See page ES-23).
    HINT:
    Completion of all A/F sensor monitors is required to change the value in TEST RESULT.
11. Note the value of the Monitor Result.
12. Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES.
13. Check if any DTCs (any pending DTCs) are set.

MONITOR STRATEGY

Related DTCs	P2A00: Air-Fuel Ratio (A/F) sensor slow response
Required Sensors/Components (Main)	A/F sensor
Required Sensors/Components (Related)	Vehicle speed sensor, Crankshaft position sensor
Frequency of Operation	Once per driving cycle
Duration	10 to 15 seconds
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	P0031, P0032 (A/F Sensor heater - Sensor 1) P0100 - P0103 (MAF meter) P0110 - P0113 (IAT sensor) P0115 - P0118 (ECT sensor) P0120 - P0223, P2135 (TP sensor) P0125 (Insufficient ECT for Closed Loop) P0171, P0172 (Fuel system) P0300 - P0304 (Misfire) P0335 (CKP sensor) P0340 (CMP sensor) P00441 - P0456, P2401 - P2420 (EVAP system) P0500 (VSS) P2196 (A/F Sensor - rationality)
Active A/F control	Performing
Active A/F control performed when the following conditions are met	-
Engine coolant temperature	75°C (167°F) or more
Battery voltage	11 V or more
Idle	OFF
Engine RPM	Less than 4,000 rpm
A/F sensor status	Activated
Fuel-cut	OFF
Engine load	10 to 70 %
Shift position	2 or more
Catalyst monitor	Not yet
Intake air amount	4 to 16 g/sec.

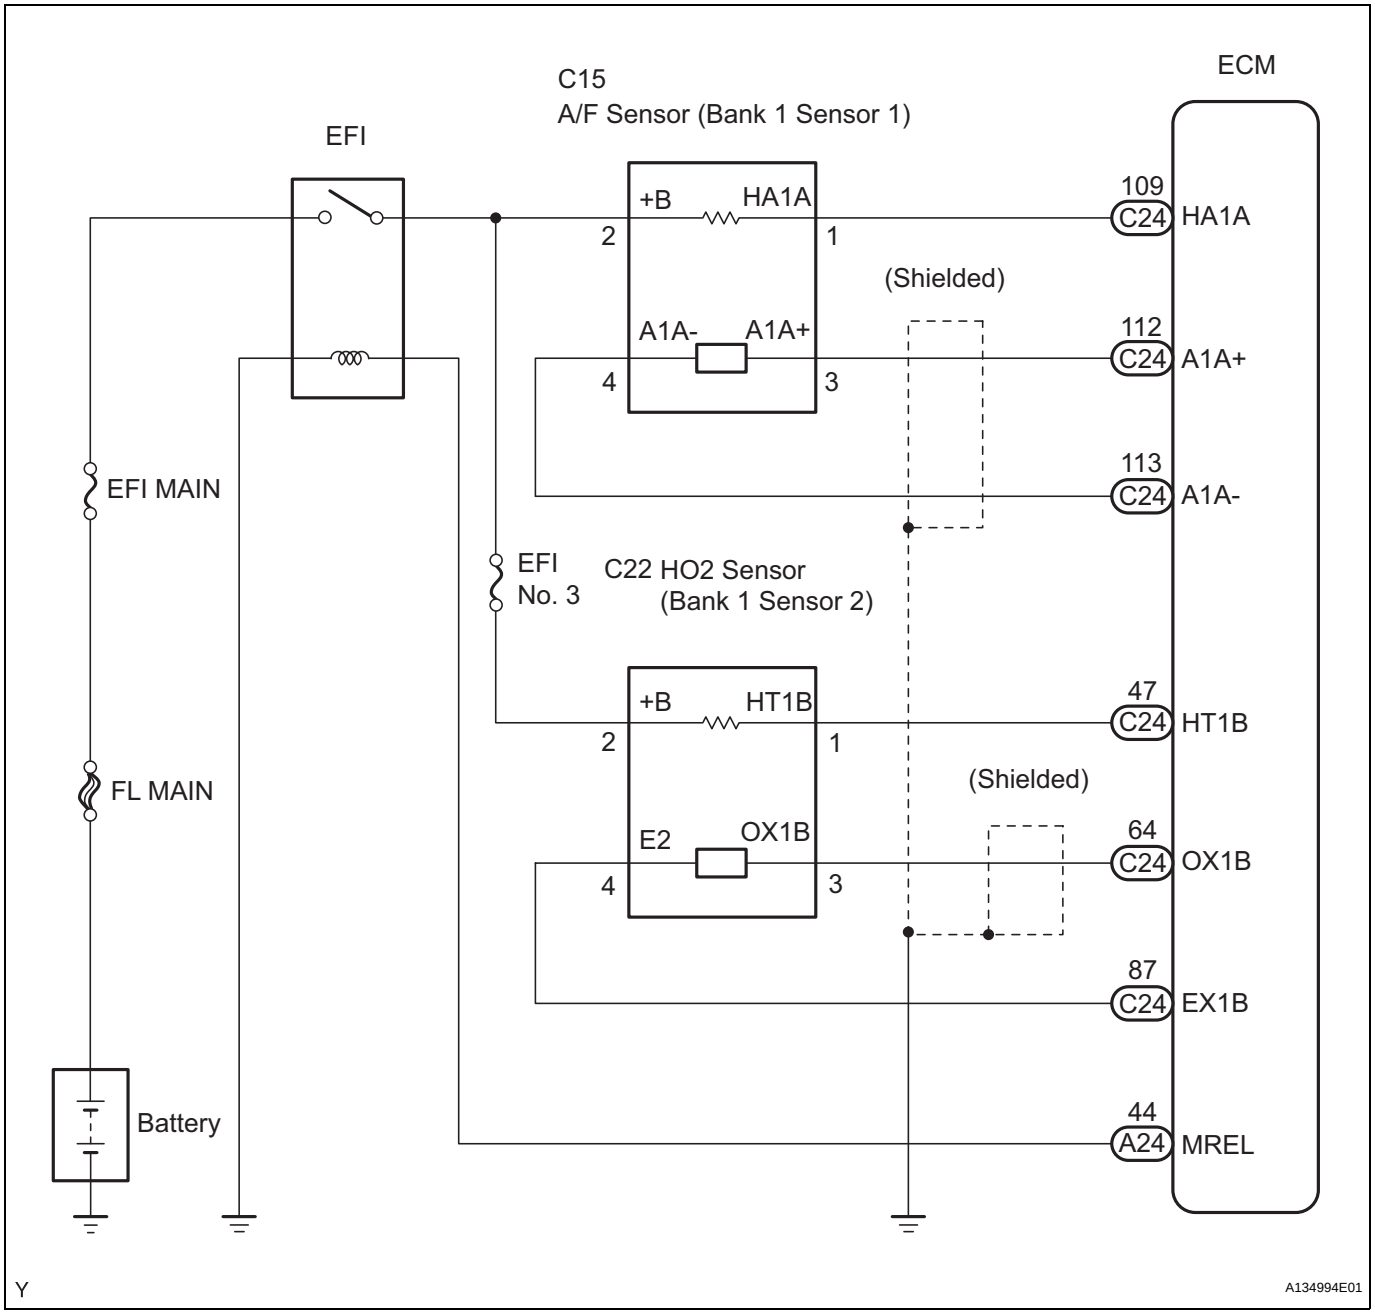
TYPICAL MALFUNCTION THRESHOLDS

Response rate deterioration level	Less than 0.12 V

MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-20).

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

Intelligent tester only:

Malfunctioning areas can be identified by performing the A/F CONTROL function provided in the ACTIVE TEST. The A/F CONTROL function can help to determine whether the Air-Fuel Ratio (A/F) sensor, Heated Oxygen (HO2) sensor and other potential trouble areas are malfunctioning.

The following instructions describe how to conduct the A/F CONTROL operation using the intelligent tester.

1. Connect the intelligent tester to the DLC3.
2. Start the engine and turn the tester on.
3. Warm up the engine at an engine speed of 2,500 rpm for approximately 90 seconds.
4. On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL.

5. Perform the A/F CONTROL operation with the engine idling (press the RIGHT or LEFT button to change the fuel injection volume).
6. Monitor the voltage outputs of the A/F and HO2 sensors (AFS B1 S1 and O2S B1 S2) displayed on the tester.
   HINT:
   - The A/F CONTROL operation lowers the fuel injection volume by 12.5% or increases the injection volume by 25 %.
   - The sensors react in accordance with increases and decreases in the fuel injection volume.

Standard

Tester Display (Sensor)	Injection Volumes	Status	Voltages
AFS B1 S1 (A/F)	+25%	Rich	Less than 3.0
	-12.5%	Lean	More than 3.35
O2S B1 S2 (HO2)	+25%	Rich	More than 0.5
	-12.5%	Lean	Less than 0.4

ES

NOTICE:
The A/F sensor has an output delay of a few seconds and the HO2 sensor has a maximum output delay of approximately 20 seconds.

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Areas
1	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		-
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage More than 0.5 V Less than 0.4 V		
2	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• A/F sensor • A/F sensor heater • A/F sensor circuit
	Output Voltage Almost no reaction		Output Voltage More than 0.5 V Less than 0.4 V		
3	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• HO2 sensor • HO2 sensor heater • HO2 sensor circuit
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage Almost no reaction		
4	Injection volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• Injector • Fuel pressure • Gas leakage from exhaust system (Air-fuel ratio extremely lean or rich)
	Output Voltage Almost no reaction		Output voltage Almost no reaction		

Following the A/F CONTROL procedure enables technicians to check and graph the voltage outputs of both the A/F and HO2 sensors.
To display the graph, select the following menu items on the tester: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL / USER DATA / AFS B1 S1 and O2S B1 S2; and press the YES button and then the ENTER button followed by the F4 button.
HINT:
- DTC P2A00 may be set when the air-fuel ratio is stuck rich or lean.

- A low A/F sensor voltage could be caused by a rich air-fuel mixture. Check for conditions that would cause the engine to run rich.
- A high A/F sensor voltage could be caused by a lean air-fuel mixture. Check for conditions that would cause the engine to run lean.
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1 CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P2A00)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Turn the tester ON.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P2A00	A

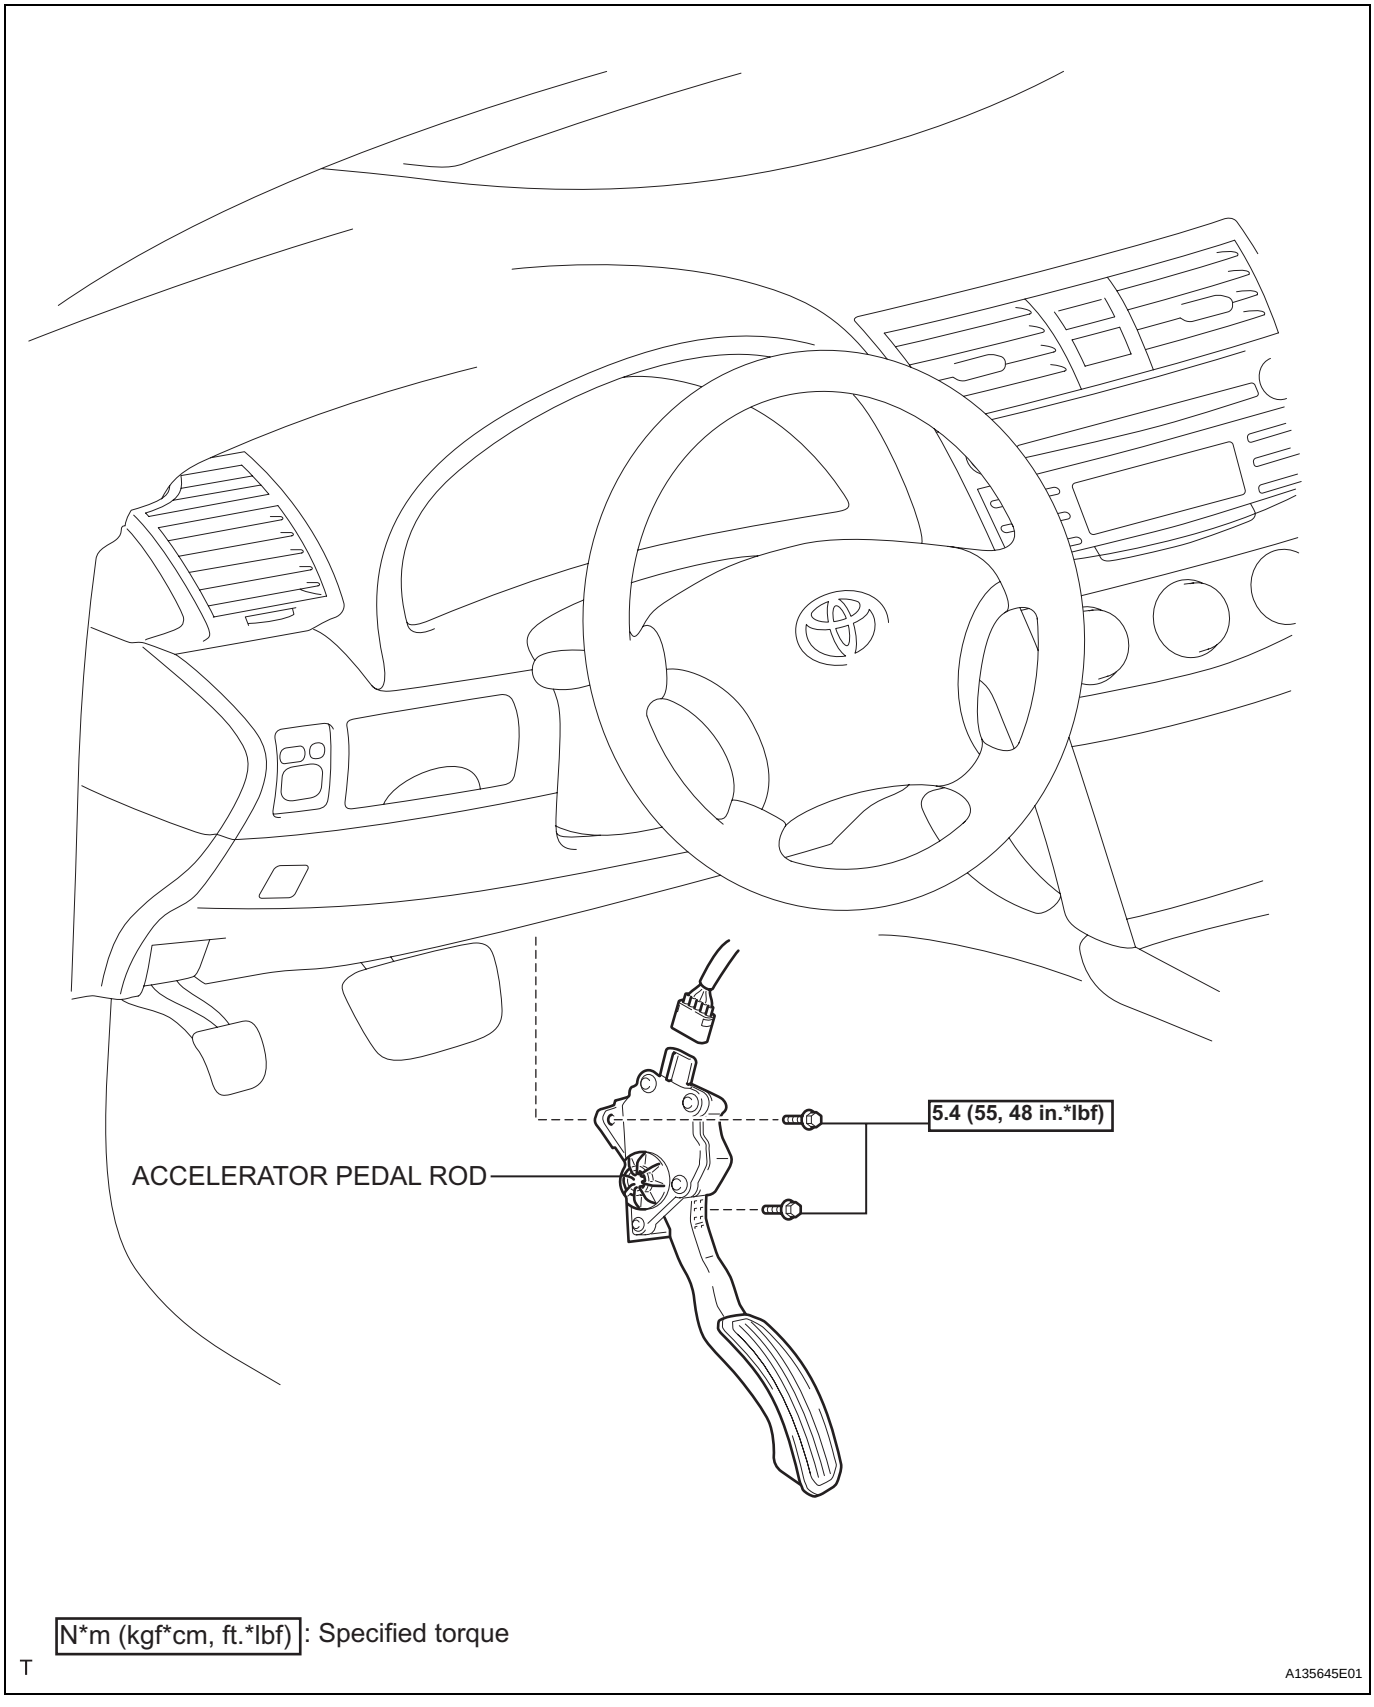
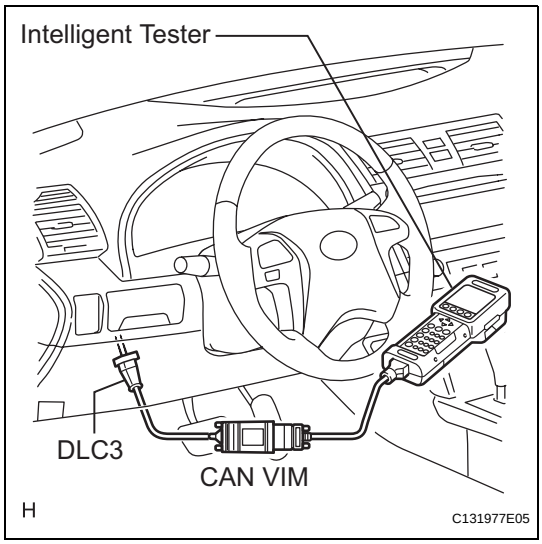
ACCELERATOR PEDAL ROD

COMPONENTS



ES



ON-VEHICLE INSPECTION

1. CHECK ACCELERATOR PEDAL ROD

(a) Measure the voltage.

(1) Connect the intelligent tester to the DLC3.

(2) Turn the ignition switch to the ON position.

(3) Turn the intelligent tester ON.

(4) Select the menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / ALL / ACCEL POS #1, ACCEL POS #2.

(5) Operate the accelerator pedal, and then check that the ACCEL POS #1 and ACCEL POS #2 values are within the specifications.

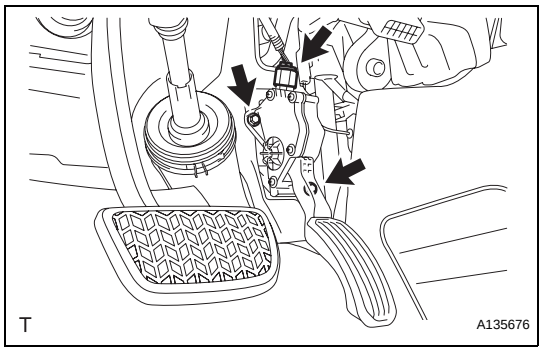
Standard voltage (ACCEL POS #1)

Accelerator Pedal Condition	Specified Condition
Released	0.5 to 1.1 V
Depressed	2.5 to 4.5 V

Standard voltage (ACCEL POS #2)

Accelerator Pedal Condition	Specified Condition
Released	1.2 to 2.0 V
Depressed	3.4 to 5.0 V

If the result is not as specified, check the accelerator pedal rod, wire harness or ECM.



REMOVAL

1. REMOVE ACCELERATOR PEDAL ROD

(a) Disconnect the accelerator pedal position sensor connector.

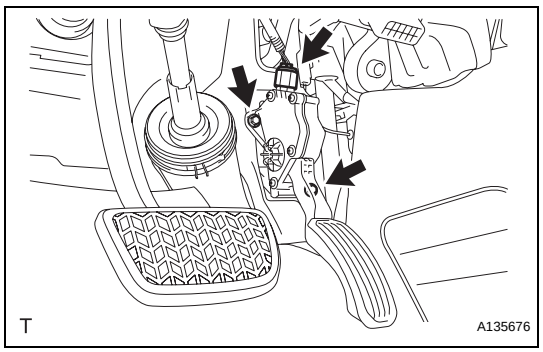
(b) Remove the 2 bolts and accelerator pedal rod.

INSTALLATION

1. INSTALL ACCELERATOR PEDAL ROD

NOTICE:

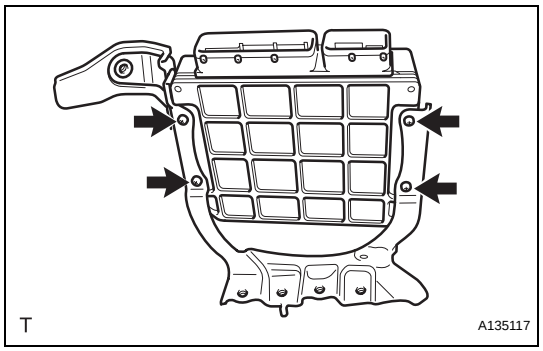
- **Avoid physical shock to the accelerator pedal assembly.**
- **Do not disassemble the accelerator pedal assembly.**



(a) Install the accelerator pedal rod with the 2 bolts.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

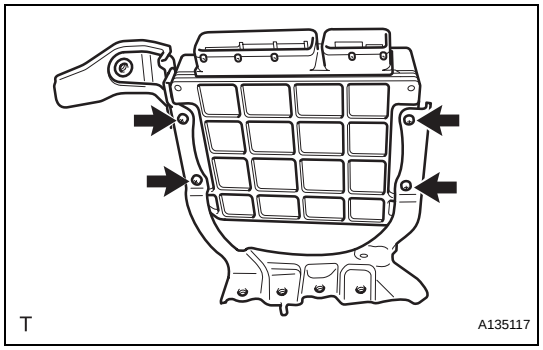
(b) Connect the accelerator pedal position sensor connector.

ES



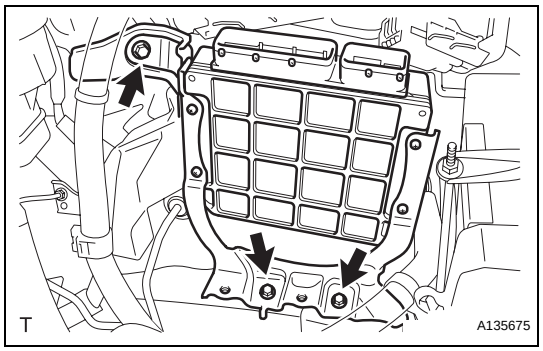
(c) Remove the 4 screws and ECM bracket.

INSTALLATION

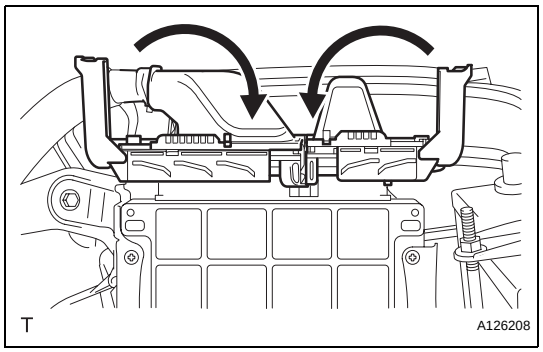


1. INSTALL ECM

(a) Install the bracket to the ECM with the 4 screws.
Torque: 3.0 N*m (30 kgf*cm, 27 in.*lbf)



(b) Install the ECM with the 3 bolts.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)



2. CONNECT CONNECTOR

(a) Connect the 2 ECM connectors.
NOTICE:
When connecting the connector, make sure that dirt, water and other foreign matter does not become stuck between the connector and other part.

(1) Connect the 2 ECM connectors and lower the 2 levers.
NOTICE:
Make sure that the 2 levers are securely lowered.

3. INSTALL AIR CLEANER CASE SUB-ASSEMBLY (See page EM-120)

4. INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-419)

5. INSTALL ENGINE COVER SUB-ASSEMBLY (See page EM-121)

ES

6. RESET MEMORY

(a) When replacing the ECM, perform the RESET MEMORY procedure (A/T initialization) (See page AX-16).

ECM

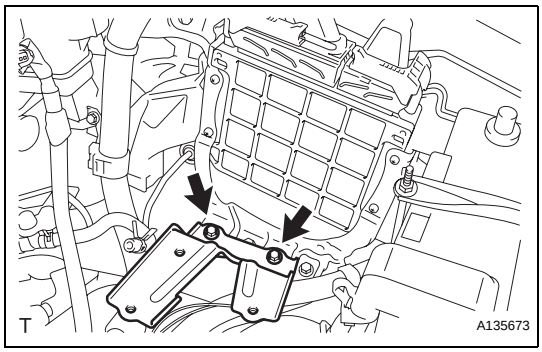
ES

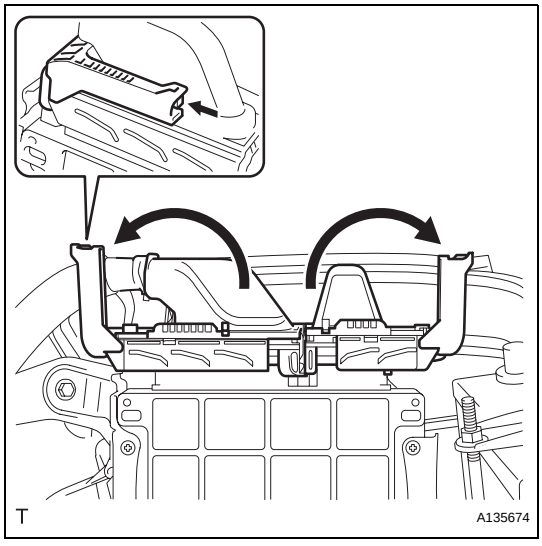
ES

REMOVAL

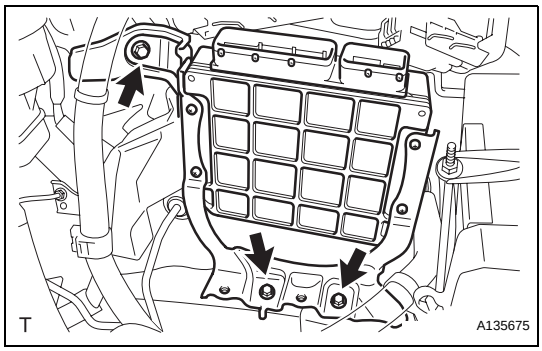
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-94)**
3. **REMOVE AIR CLEANER INLET ASSEMBLY (See page EM-94)**
4. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-416)**
5. **REMOVE AIR CLEANER CASE SUB-ASSEMBLY (See page EM-95)**
6. **REMOVE AIR CLEANER BRACKET**
   (a) Remove the 2 bolts and air cleaner bracket.



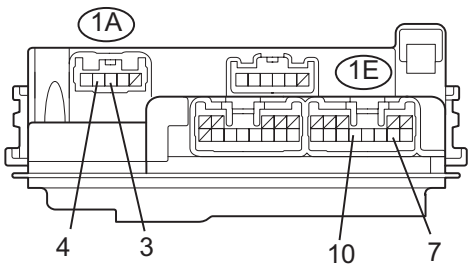
7. **DISCONNECT ECM CONNECTOR**
   (a) Disconnect the 2 ECM connectors.
      (1) Raise the levers while pushing the locks on the levers, and disconnect the 2 ECM connectors.
      NOTICE:
      After disconnecting the connector, make sure that dirt, water and other foreign matter does not contact the connecting part of the connector.



8. **REMOVE ECM**
   (a) Remove the 3 bolts of the ECM with bracket.
   (b) Remove the ECM with bracket.



Engine Room R/B Unit D:



A137364E03

AIR FUEL RATIO SENSOR RELAY

INSPECTION

1. INSPECT AIR FUEL RATIO SENSOR RELAY

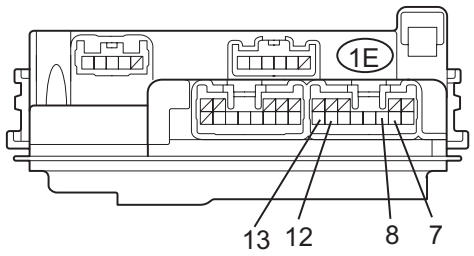
(a) Using an ohmmeter, measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Specified Condition
1E-7 - 1E-10	Below 1 Ω
1A-3 - 1A-4	10 kΩ or higher
1A-3 - 1A-4	Below 1 Ω (Battery voltage applied between terminals 1E-7 and 1E-10)

ES

Engine Room R/B Unit D:



A137364E02

CIRCUIT OPENING RELAY

INSPECTION

1. INSPECT CIRCUIT OPENING RELAY

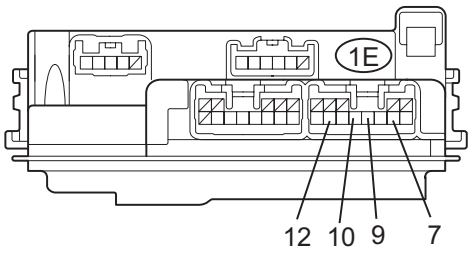
(a) Using an ohmmeter, measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Specified Condition
1E-8 - 1E-12	Below 1 Ω
1E-7 - 1E-13	10 kΩ or higher
1E-7 - 1E-13	Below 1 Ω (Battery voltage applied between terminals 1E-8 and 1E-12)

ES

Engine Room R/B Unit D:



A137364E01

EFI RELAY

INSPECTION

1. INSPECT EFI RELAY

(a) Using an ohmmeter, measure the resistance according to the value(s) in the table below.

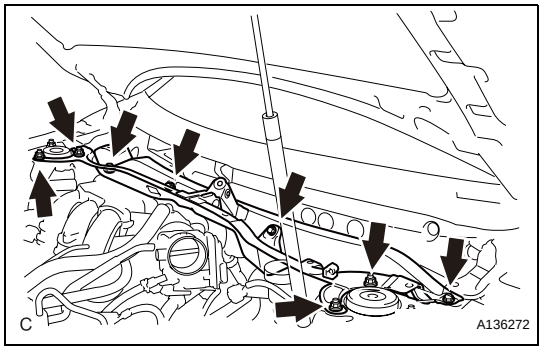
Standard resistance

Tester connection	Specified Condition
1E-9 - 1E-10	Below 1 Ω
1E-7 - 1E-12	10 kΩ or higher
1E-7 - 1E-12	Below 1 Ω (Battery voltage applied between terminals 1E-9 and 1E-10)

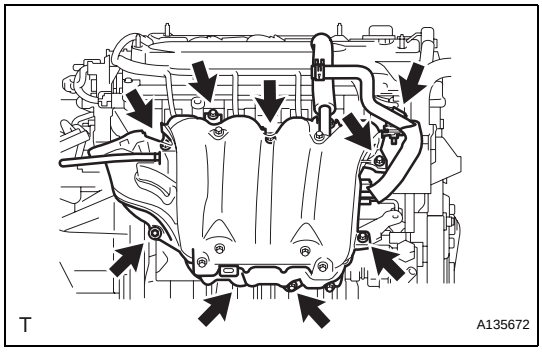
ES

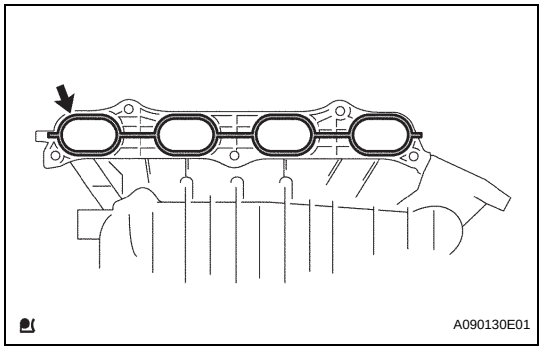
REMOVAL

1. **DISCHARGE FUEL SYSTEM PRESSURE (See page FU-12)**
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **REMOVE NO. 1 ENGINE COVER (See page EM-94)**
4. **DRAIN COOLANT (See page CO-5)**
5. **REMOVE WINDSHIELD WIPER ARM AND BLADE ASSEMBLY LH (See page WW-9)**
6. **REMOVE WINDSHIELD WIPER ARM AND BLADE ASSEMBLY RH (See page WW-9)**
7. **REMOVE FRONT FENDER TO COWL SIDE SEAL LH (See page WW-9)**
8. **REMOVE FRONT FENDER TO COWL SIDE SEAL RH (See page WW-9)**
9. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-10)**
10. **REMOVE WINDSHIELD WIPER MOTOR AND LINK (See page WW-10)**
11. **REMOVE COWL TOP PANEL OUTER SUB-ASSEMBLY**
    (a) Remove the 4 bolts, 4 nuts and cowl top panel outer sub-assembly.

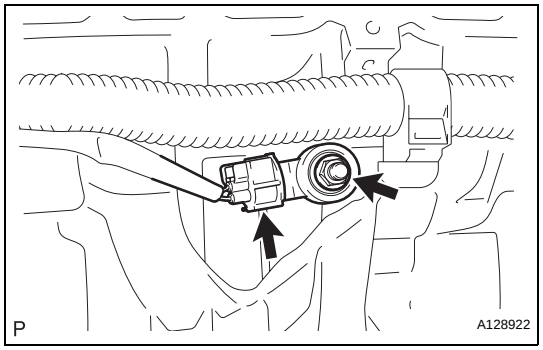


12. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-502)**
13. **REMOVE AIR CLEANER CASE SUB-ASSEMBLY (See page EM-95)**
14. **REMOVE THROTTLE BODY (See page ES-417)**
15. **DISCONNECT FUEL TUBE (See page FU-12)**
16. **REMOVE FUEL DELIVERY PIPE WITH INJECTOR (See page FU-13)**
17. **REMOVE INTAKE MANIFOLD**
    (a) Disconnect the union to check valve hose from the brake booster.
    (b) Disconnect the camshaft timing oil control valve connector.
    (c) Remove the wire harness clamp.
    (d) Remove the union to check valve hose from the vacuum hose clamp.
    (e) Remove the 5 bolts, 2 nuts and intake manifold.





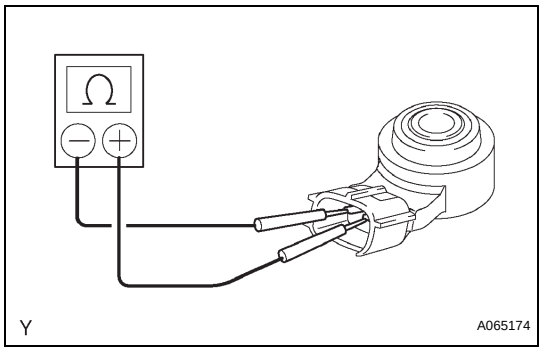
(f) Remove the gasket from the intake manifold.



18. REMOVE KNOCK SENSOR

(a) Disconnect the knock sensor connector.

(b) Remove the nut and knock sensor.



INSPECTION

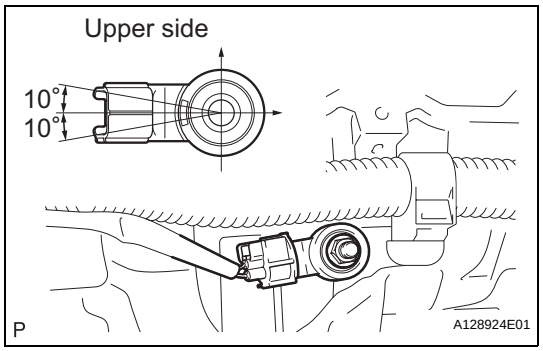
1. KNOCK CONTROL SENSOR

(a) Using an ohmmeter, measure the resistance between the terminals.

Standard resistance:

120 to 280 kΩ at 20°C (68°F)

If the resistance is not specified, replace the sensor.



INSTALLATION

1. INSTALL KNOCK SENSOR

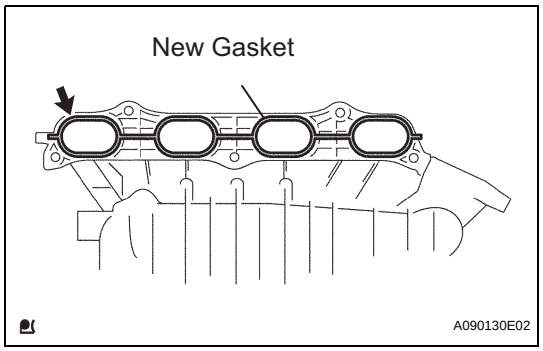
(a) Install the knock sensor with the nut.

Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)

NOTICE:

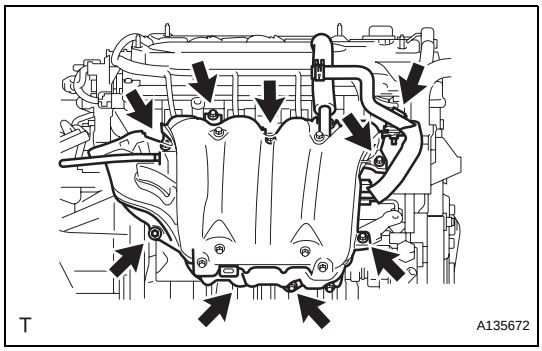
Make sure that the knock sensor is in the correct position.

(b) Connect the knock sensor connector.



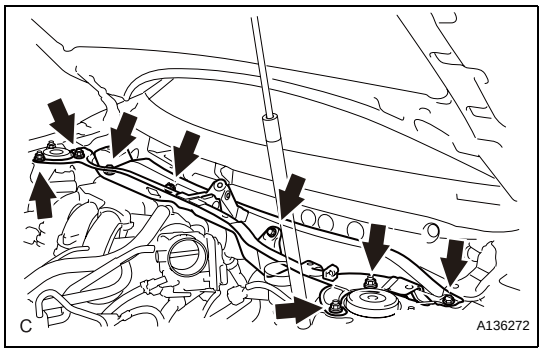
2. INSTALL INTAKE MANIFOLD

(a) Install a new gasket into the intake manifold.



(b) Install the intake manifold with the 5 bolts and 2 nuts.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)
(c) Fit the union to check valve hose into the vacuum hose clamp.
(d) Install the wire harness clamp.
(e) Connect the camshaft timing oil control valve connector.
(f) Connect the union to check valve hose to the brake booster.

3. **INSTALL FUEL DELIVERY PIPE WITH INJECTOR (See page FU-15)**
4. **INSTALL FUEL TUBE (See page FU-16)**
5. **INSTALL THROTTLE BODY (See page ES-418)**
6. **INSTALL AIR CLEANER CASE SUB-ASSEMBLY (See page EM-120)**
7. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-419)**
8. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-120)**
9. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (See page EM-120)**
10. **ADD ENGINE COOLANT (See page CO-5)**
11. **CHECK FOR ENGINE COOLANT LEAKS (See page CO-1)**
12. **CHECK FOR FUEL LEAKS (See page FU-9)**
13. **INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-121)**



14. **INSTALL COWL TOP PANEL OUTER SUB-ASSEMBLY**
(a) Install the outer cowl top panel sub-assembly with the 4 bolts and 4 nuts.
Torque: Bolt
5.0 N*m (51 kgf*cm, 44 in.*lbf)
Nut
85 N*m (867 kgf*cm, 44 ft.*lbf)
15. **INSTALL WINDSHIELD WIPER MOTOR AND LINK (See page WW-14)**
16. **INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-15)**
17. **INSTALL FRONT FENDER TO COWL SIDE SEAL RH (See page WW-15)**
18. **INSTALL FRONT FENDER TO COWL SIDE SEAL LH (See page WW-15)**
19. **INSTALL WINDSHIELD WIPER ARM AND BLADE ASSEMBLY LH (See page WW-15)**

20. **INSTALL WINDSHIELD WIPER ARM AND BLADE ASSEMBLY RH (See page WW-16)**

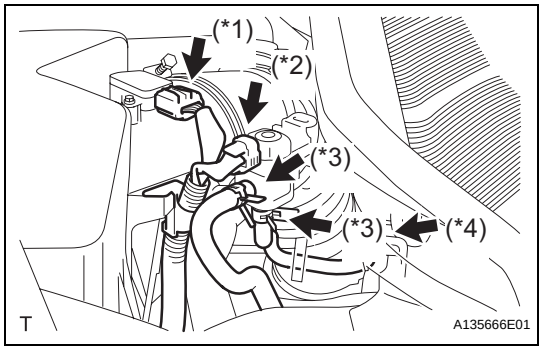
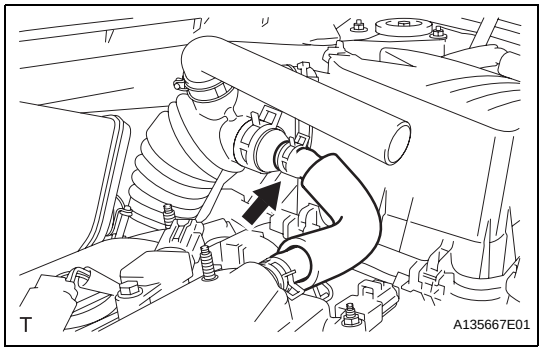
REMOVAL

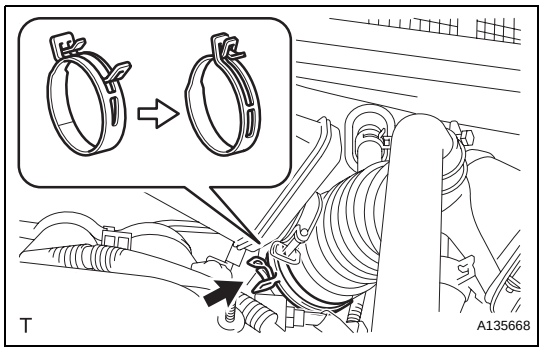
1. **DRAIN ENGINE COOLANT (See page CO-5)**
2. **REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-94)**
3. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY**



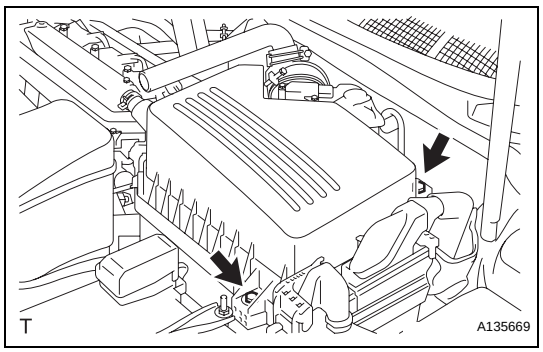
(a) Disconnect the mass air flow meter connector (*1).
(b) Disconnect the purge VSV connector (*2).
(c) Disconnect the 2 purge VSV vacuum hoses (*3).
(d) Disconnect the purge line hose from the clamp (*4).



(e) Disconnect the No. 2 ventilation hose from the air cleaner hose.



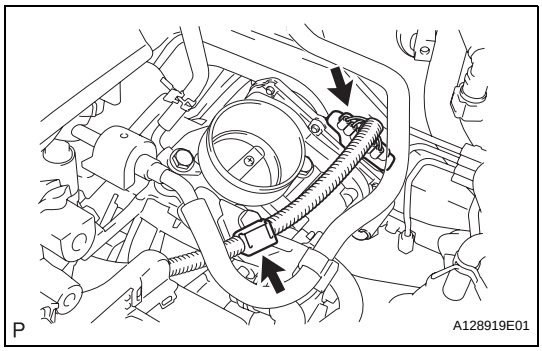
(f) Lock the No. 1 air cleaner hose clamp, and then disconnect the No. 1 air cleaner hose from the throttle body.



(g) Remove the 2 bolts and air cleaner cap.
(h) Remove the air cleaner filter element from the air cleaner case.

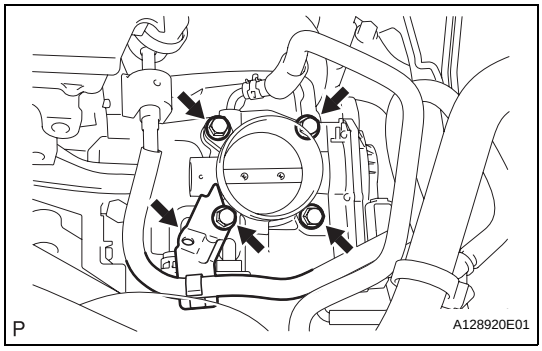
4. **REMOVE AIR CLEANER CASE SUB-ASSEMBLY (See page EM-95)**

ES

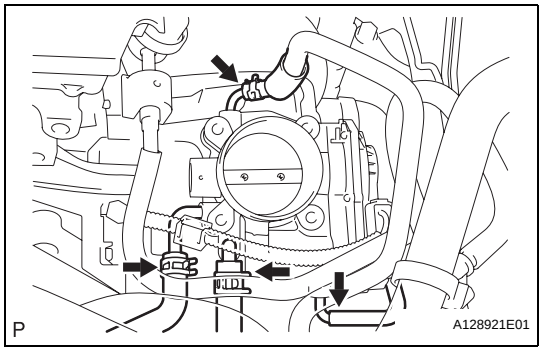


5. REMOVE THROTTLE BODY

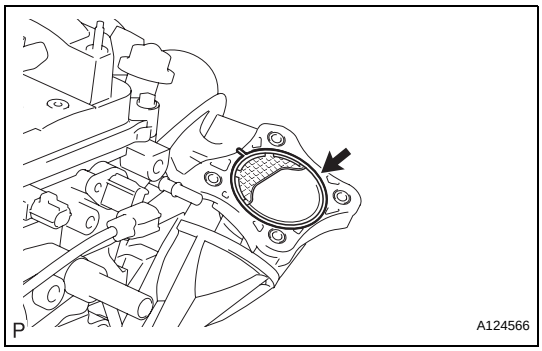
(a) Disconnect the throttle position sensor connector and wire harness clamp.



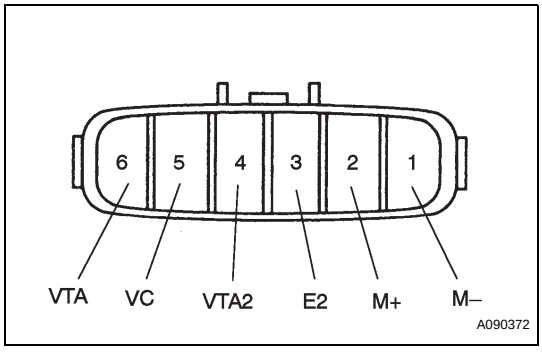
(b) Remove the 4 bolts, and then remove the fuel pipe support and throttle body.



(c) Disconnect the purge line hose from the throttle body.
(d) Disconnect the water by-pass hose from the throttle body.
(e) Disconnect the No. 2 water by-pass hose from the throttle body.
(f) Disconnect the No. 1 throttle body hose from the throttle body.



(g) Remove the gasket from the intake manifold.



INSPECTION

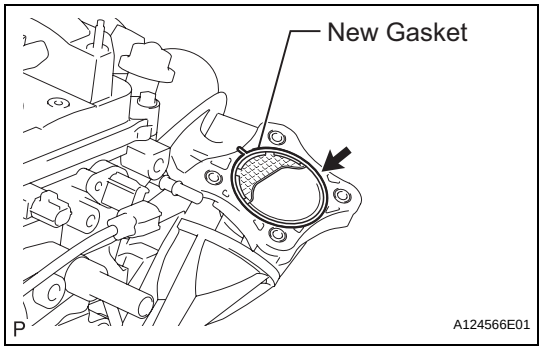
1. INSPECT THROTTLE BODY ASSEMBLY

(a) Using an ohmmeter, measure the resistance between the terminals.

Standard resistance

Symbols (terminal No.)	Resistance	Temperature
M+ (2) - M- (1)	0.3 to 100 Ω	20°C (68°F)

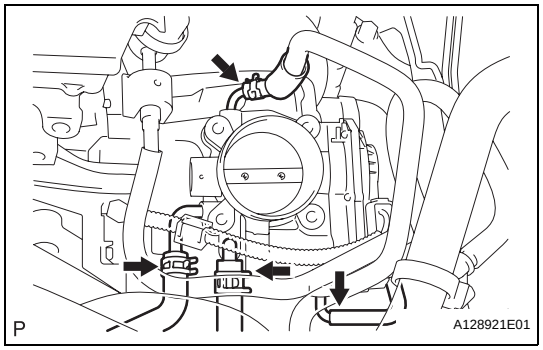
If the result is not as specified, replace the throttle body assembly.



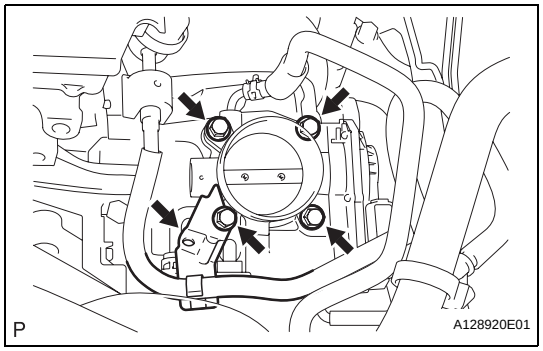
INSTALLATION

1. INSTALL THROTTLE BODY

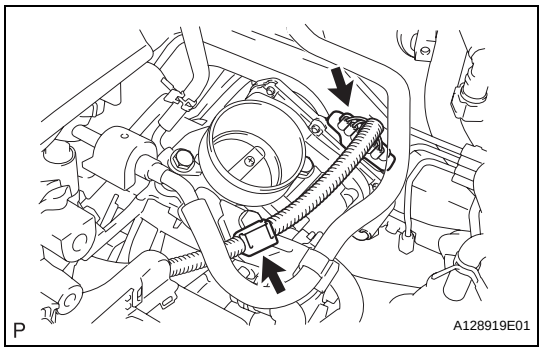
(a) Install a new gasket onto the intake manifold.



(b) Connect the purge line hose to the throttle body.
(c) Connect the water by-pass hose to the throttle body.
(d) Connect the No. 2 water by-pass hose to the throttle body.
(e) Connect the No. 1 throttle body hose to the throttle body.



(f) Install the throttle body and fuel pipe clamp with the 4 bolts.
Torque: 30 N*m (305 kgf*cm, 22 ft.*lbf)
(g) Connect the fuel tube into the clamp.



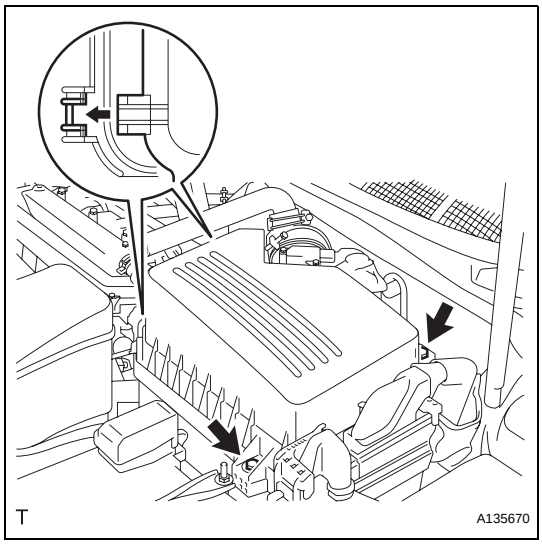
(h) Connect the throttle position sensor connector.
(i) Connect the wire harness clamp.

2. INSTALL AIR CLEANER CASE SUB-ASSEMBLY (See page EM-120)

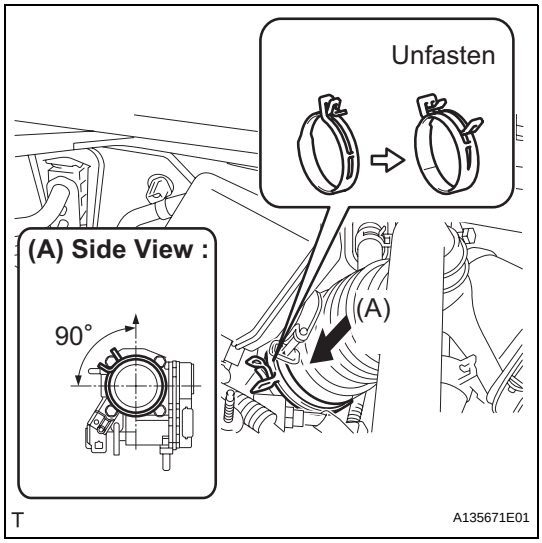
3. INSTALL AIR CLEANER CAP SUB-ASSEMBLY

(a) Install the air cleaner filter element onto the air cleaner case.

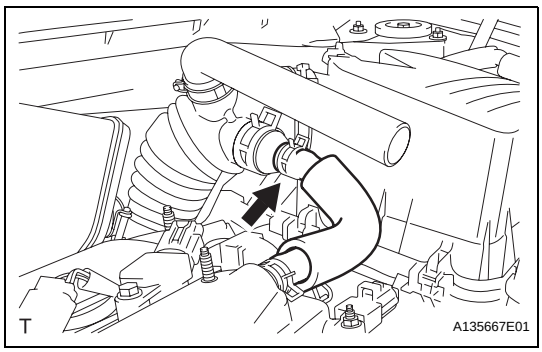
ES



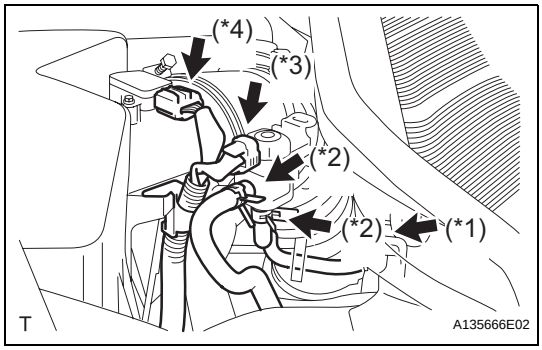
(b) Insert the hinges. Install the air cleaner cap sub-assembly with the 2 bolts.



(c) Align the matchmarks of the No. 1 air cleaner hose and throttle body, and then connect the air cleaner hose No. 1 to the throttle body and unfasten the No. 1 air cleaner hose clamp.
NOTICE:
Make sure that the hose clamp is at the correct angle.



(d) Connect the No. 2 ventilation hose to the air cleaner hose.



(e) Connect the purge line hose to the clamp (*1).
(f) Connect the 2 purge VSV vacuum hoses (*2).
(g) Connect the purge VSV connector (*3).
(h) Connect the mass air flow meter connector (*4).

4. INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-120)

5. ADD ENGINE COOLANT (See page CO-5)

6. **CHECK FOR ENGINE COOLANT LEAKS (See page CO-1)**

7. **INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-121)**

THROTTLE BODY

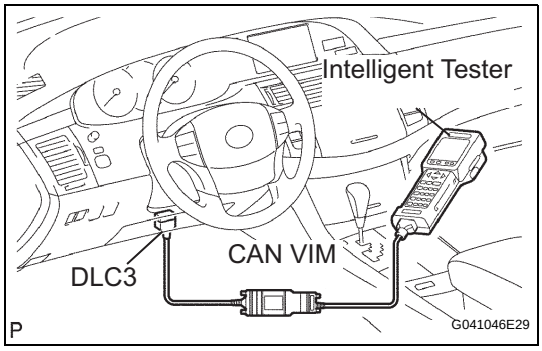
ON-VEHICLE INSPECTION

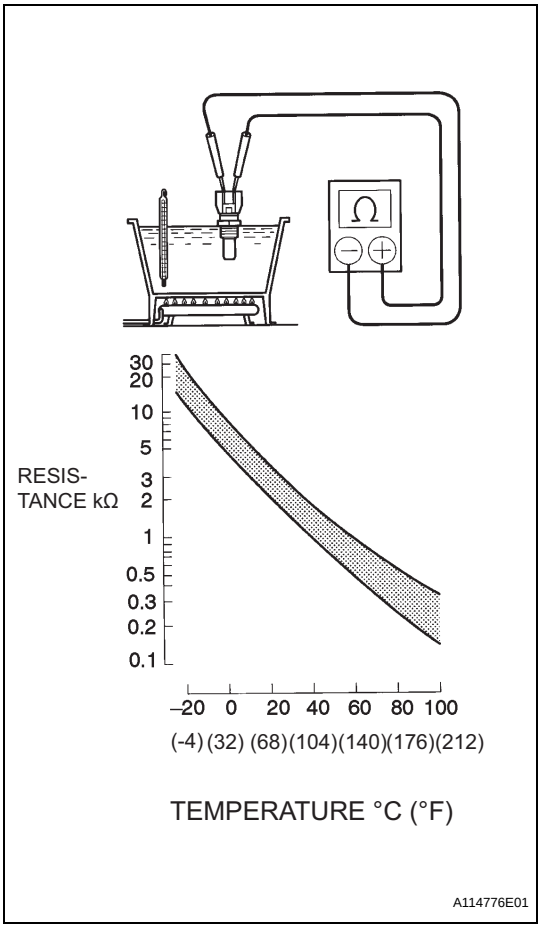
1. INSPECT THROTTLE BODY ASSEMBLY

(a) Listen to the throttle control motor operating sounds.
  (1) Turn the ignition switch to the ON position.
  (2) When pressing the accelerator pedal position sensor lever, listen to the running motor. Make sure that no friction noise comes from the motor.
  If friction noise exists, replace the throttle body assembly.

(b) Inspect the throttle position sensor.
  (1) Connect the intelligent tester to the DLC3.
  (2) Turn the ignition switch to the ON position.
  (3) Check that the MIL turns off.
  (4) Under CURRENT DATA, the throttle valve opening percentage (THROTTLE POS) should be within the standard range below.
  Standard throttle valve opening percentage: 60% or more
  If the percentage is less than 60%, replace the throttle body assembly.
  NOTICE:
  When checking the throttle valve opening percentage, the transmission should be in neutral.



ES

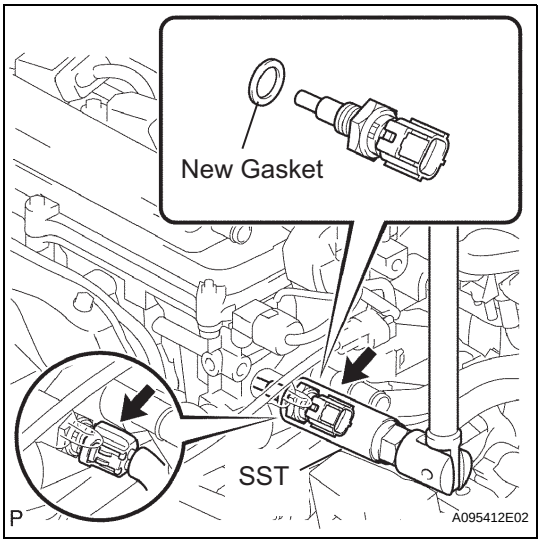


INSPECTION

1. **INSPECT ENGINE COOLANT TEMPERATURE SENSOR**
   (a) Using an ohmmeter, measure the resistance between the terminals.
   Standard resistance

Condition	Specified Condition
20°C (68°F)	2.32 to 2.59 kΩ
80°C (176°F)	0.310 to 0.326 kΩ

If the result is not as specified, replace the sensor.
NOTICE:
In case of checking the water temperature sensor in the water, do not allow water to go into the terminals. After checking, dry the sensor.

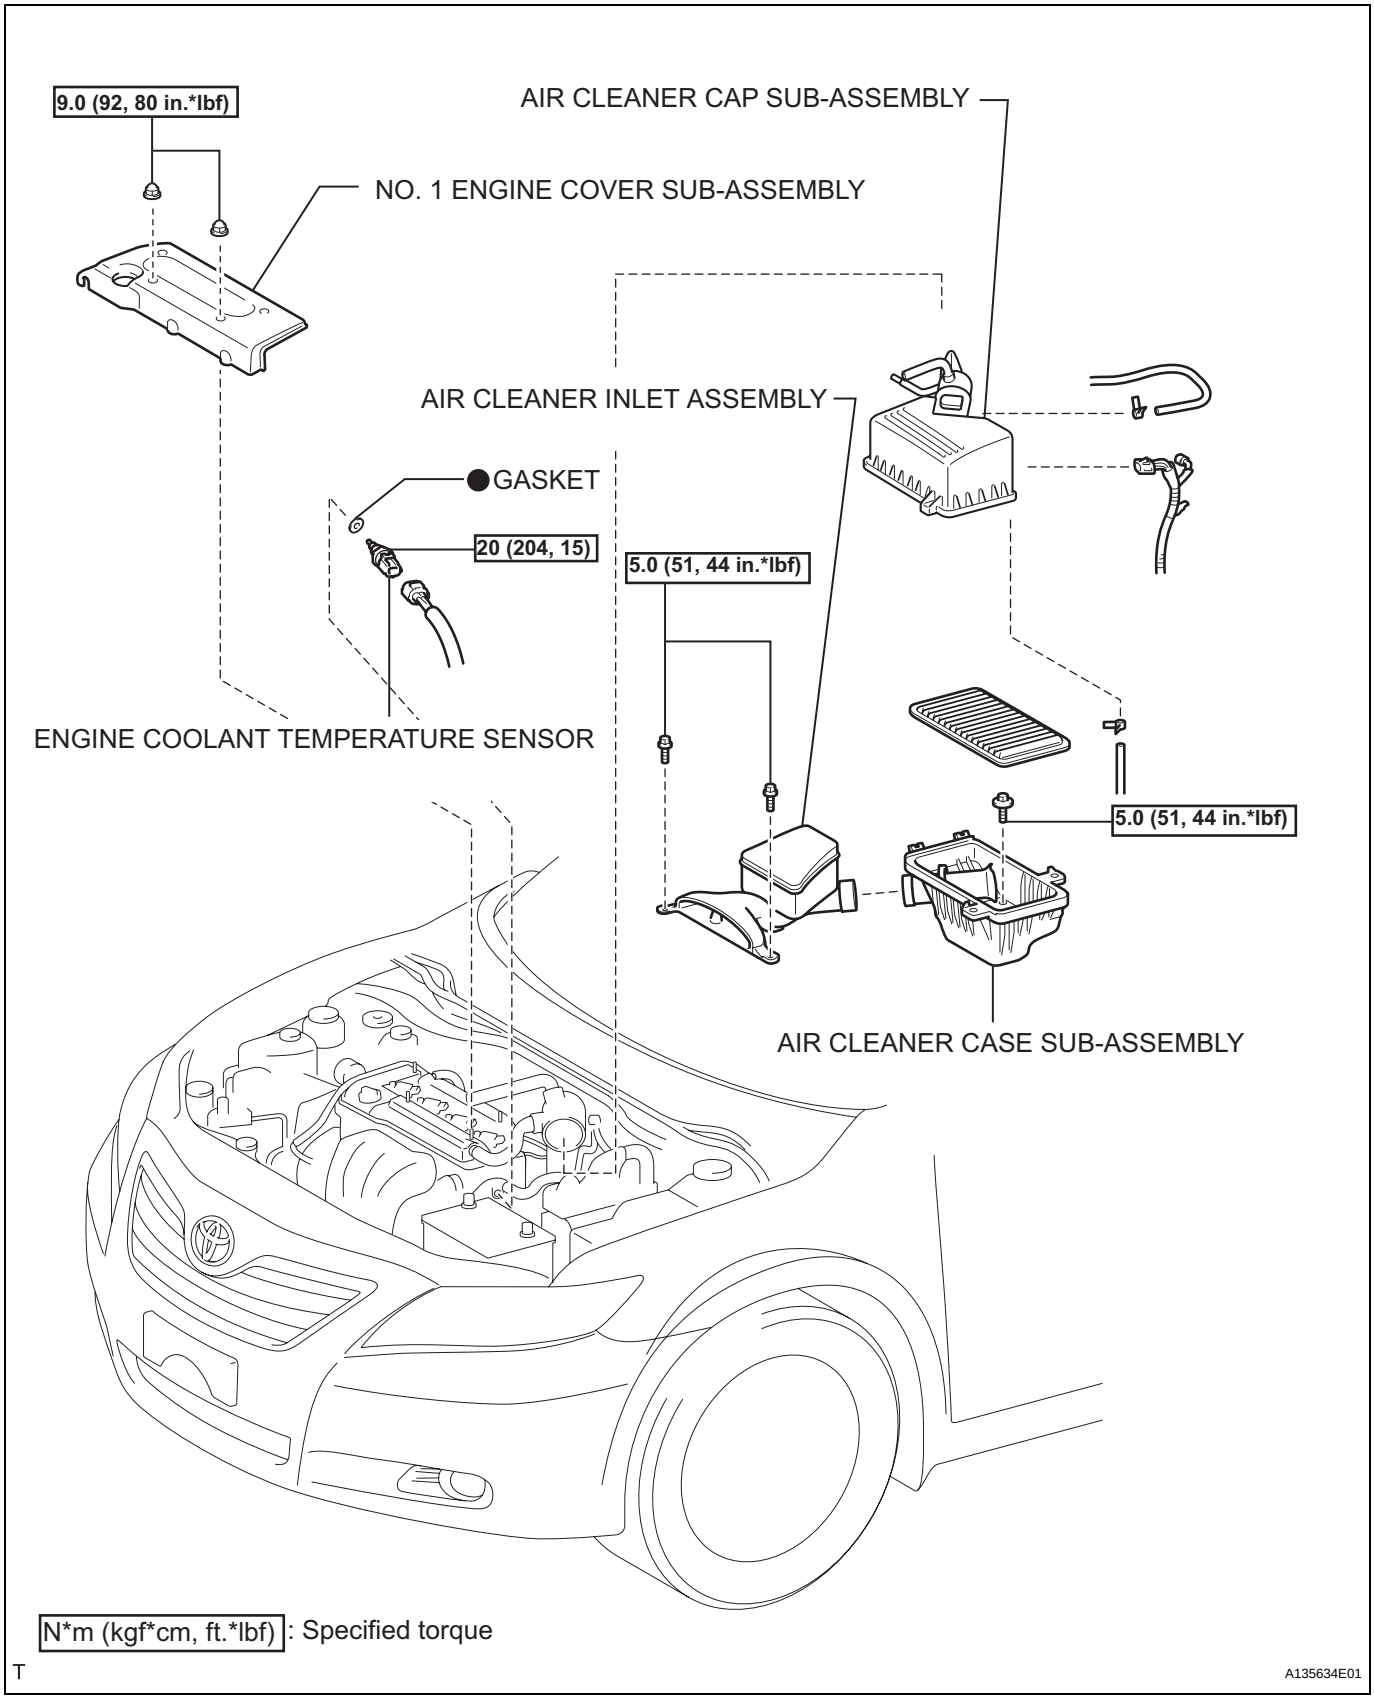


INSTALLATION

1. **INSTALL ENGINE COOLANT TEMPERATURE SENSOR**
   (a) Install a new gasket onto the engine coolant temperature sensor.
   (b) Using SST, install the engine coolant temperature sensor.
   SST 09817-33190
   Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)
   (c) Connect the engine coolant temperature sensor connector.
2. **INSTALL AIR CLEANER CASE SUB-ASSEMBLY (See page EM-120)**
3. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-419)**
4. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-120)**
5. **ADD ENGINE COOLANT (See page CO-5)**
6. **CHECK FOR ENGINE COOLANT LEAKS (See page CO-1)**
7. **INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-121)**

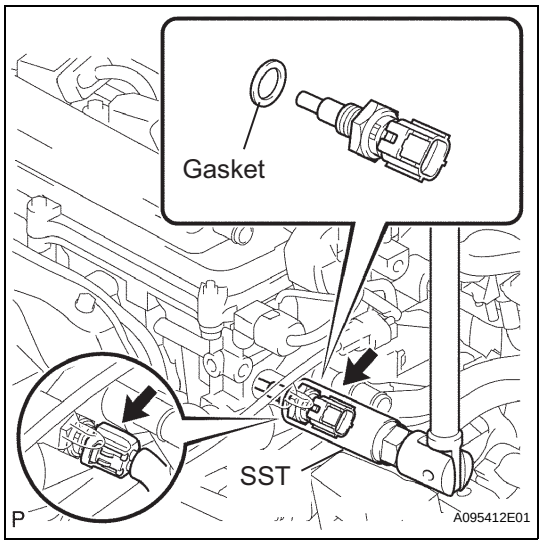
ENGINE COOLANT TEMPERATURE SENSOR

COMPONENTS



REMOVAL

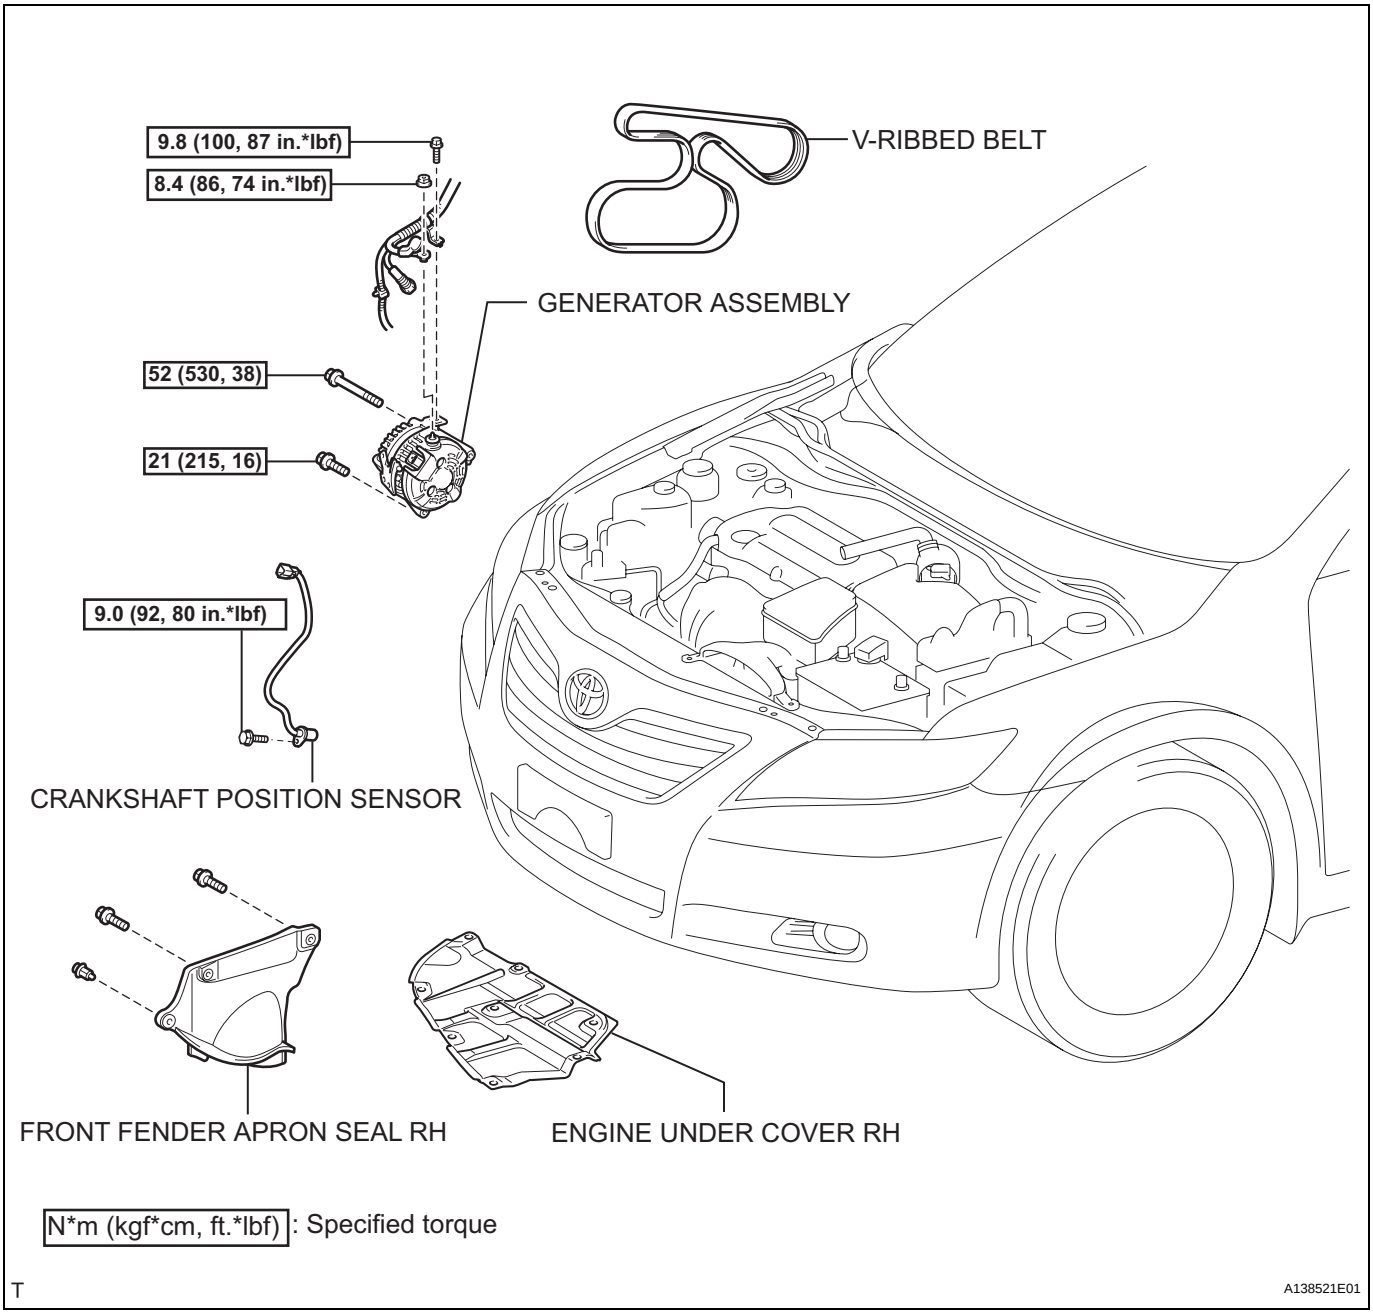
1. **DRAIN ENGINE COOLANT (See page CO-5)**
2. **REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-94)**
3. **REMOVE AIR CLEANER INLET ASSEMBLY (See page EM-94)**
4. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-416)**
5. **REMOVE AIR CLEANER CASE SUB-ASSEMBLY (See page EM-95)**
6. **REMOVE ENGINE COOLANT TEMPERATURE SENSOR**
   (a) Disconnect the engine coolant temperature sensor connector.
   (b) Using SST, remove the engine coolant temperature sensor and gasket.
   SST 09817-33190



ES

CRANKSHAFT POSITION SENSOR

COMPONENTS



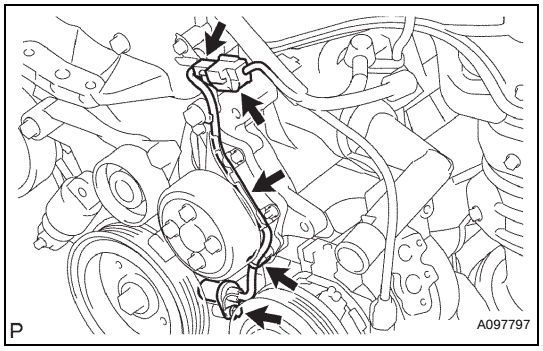
N*m (kgf*cm, ft.*lbf): Specified torque

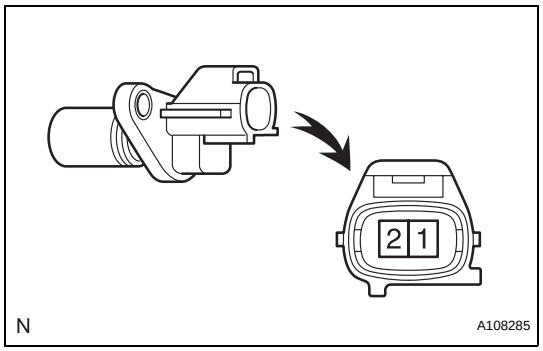
T

A138521E01

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT WHEEL RH**
3. **REMOVE FRONT FENDER APRON RH**
4. **REMOVE V-RIBBED BELT (See page EM-6)**
5. **REMOVE GENERATOR ASSEMBLY (See page CH-11)**
6. **REMOVE CRANKSHAFT POSITION SENSOR**
   (a) Disconnect the crankshaft position sensor connector.
   (b) Remove the connector clamp and wire harness clamp.
   (c) Remove the wire harness clamp bracket from the wire harness.
   (d) Remove the bolt, and then remove the crankshaft position sensor.





INSPECTION

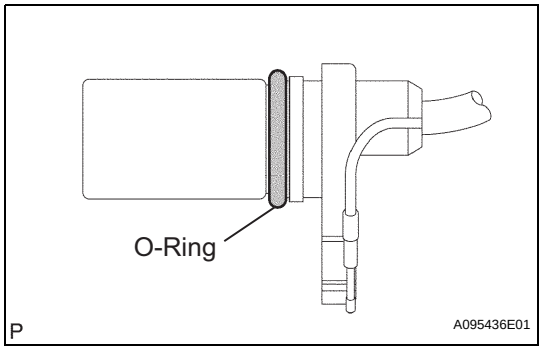
1. **INSPECT CRANKSHAFT POSITION SENSOR**
   (a) Using an ohmmeter, measure the resistance between the terminals.
   Standard resistance

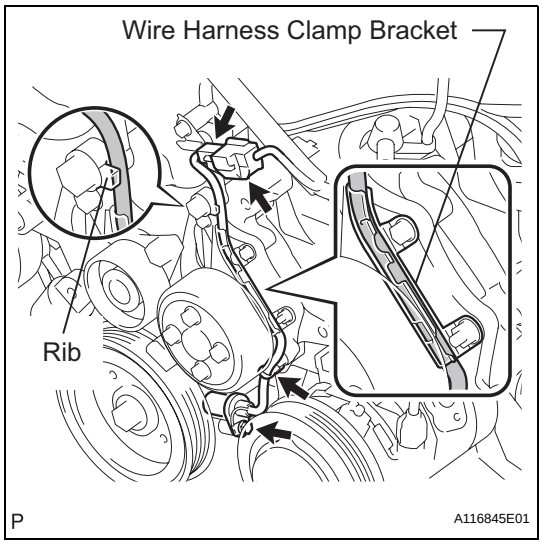
Temperature	Specified Condition
Cold	985 to 1,600 Ω
Hot	1,265 to 1,890 Ω

NOTICE:
"Cold" and "Hot" mean the temperature of the coils themselves. "Cold" is from -10 to 50°C (14 to 122°F) and "Hot" is from 50 to 100°C (122 to 212°F).
If the resistance is not as specified, replace the sensor.

INSTALLATION

1. **INSTALL CRANKSHAFT POSITION SENSOR**
   (a) Apply a light coat of engine oil to the O-ring on the crankshaft position sensor.



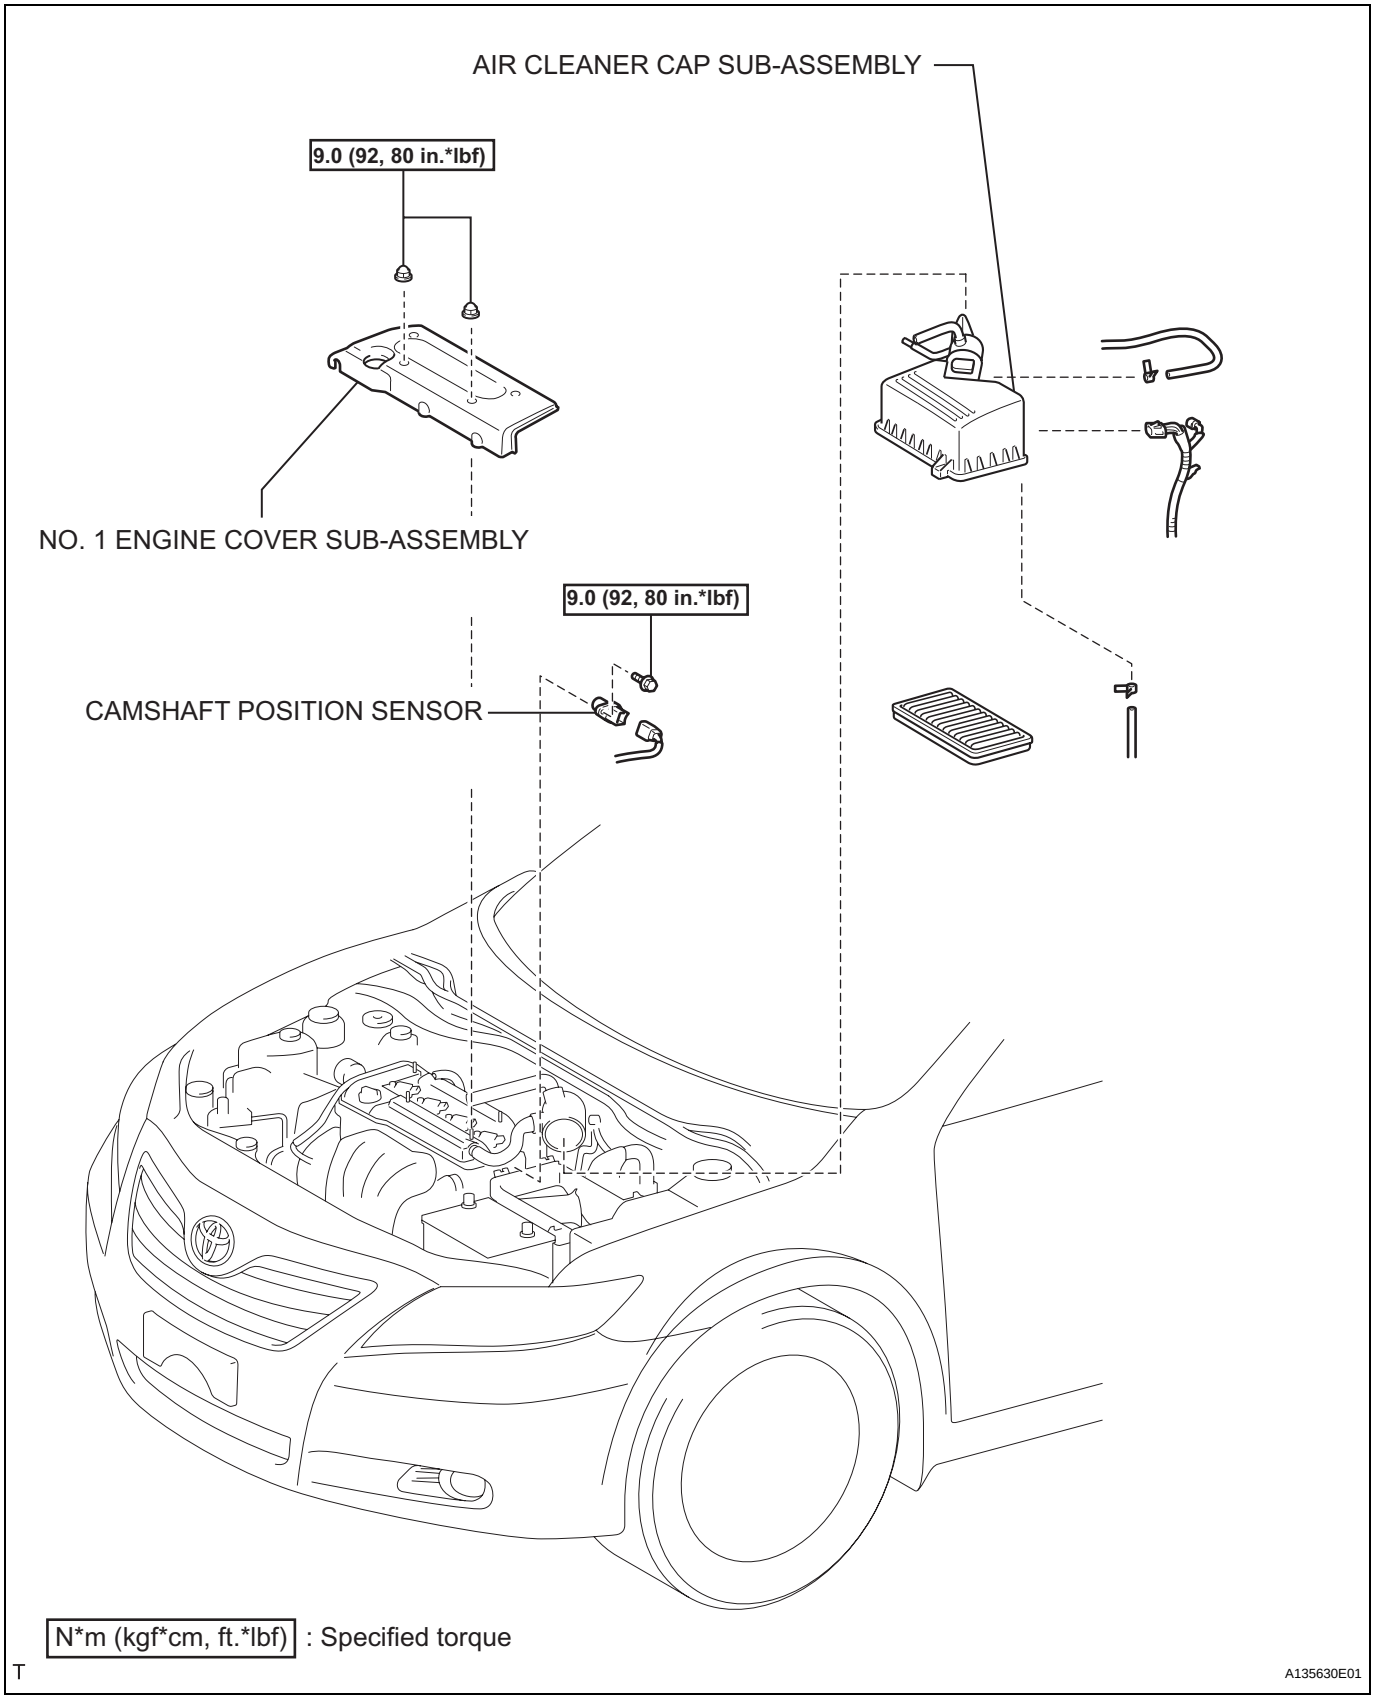


(b) Install the crankshaft position sensor with the bolt.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
(c) Connect the crankshaft position sensor connector.

2. **INSTALL GENERATOR ASSEMBLY (See page CH-19)**
3. **INSTALL V-RIBBED BELT (See page EM-7)**
4. **INSTALL FRONT FENDER APRON SEAL RH**
5. **INSTALL FRONT WHEEL RH**
6. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

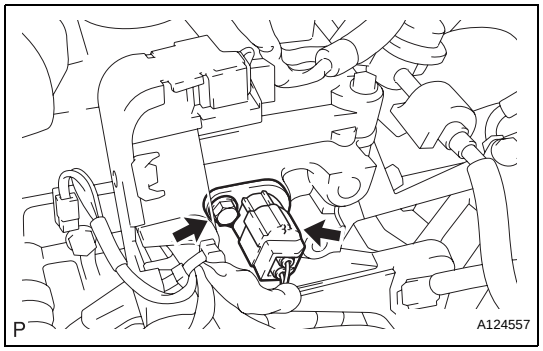
CAMSHAFT POSITION SENSOR

COMPONENTS



REMOVAL

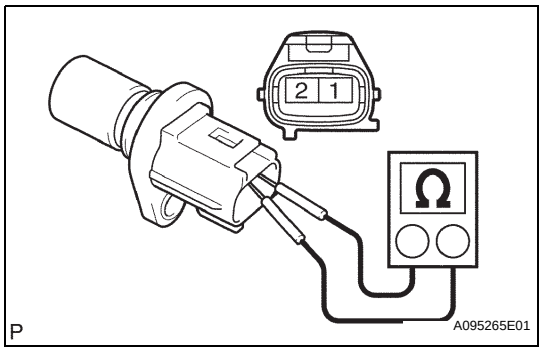
1. **REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-94)**
2. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-416)**
3. **REMOVE CAMSHAFT POSITION SENSOR**
   (a) Disconnect the camshaft position sensor connector.
   (b) Remove the bolt and camshaft position sensor.



INSPECTION

1. **INSPECT CAMSHAFT POSITION SENSOR**
   (a) Measure the resistance of the sensor.
   Standard resistance

Tester Connection	Specified Condition
1 (G+) - 2 (G-)	835 to 1,400 Ω at Cold
1 (G+) - 2 (G-)	1,060 to 1,645 Ω at Hot

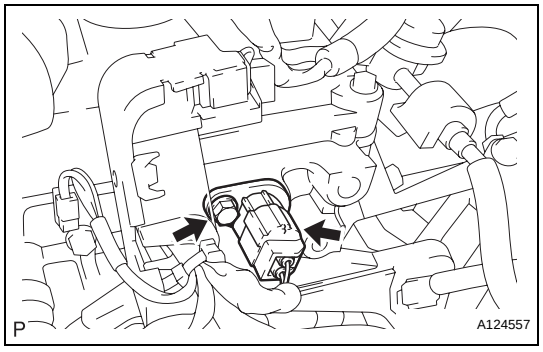


NOTICE:
"Cold" and "Hot" mean the temperature of the coils themselves. "Cold" is from -10 to 50°C (14 to 122 °F) and "Hot" is from 50 to 100°C (122 to 212°F).
If the result is not as specified, replace the camshaft position sensor.

INSTALLATION

1. **INSTALL CAMSHAFT POSITION SENSOR**
   (a) Apply a light coat of engine oil to the O-ring of the sensor.
   NOTICE:
   Make sure that the O-ring is not cracked or jammed when installing it.

   (b) Install the camshaft position sensor with the bolt.
   Torque: 9.0 N*m (90 kgf*cm, 80 in.*lbf)
   (c) Connect the camshaft position sensor connector.
2. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-416)**
3. **CHECK FOR ENGINE OIL LEAKS**
4. **INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-121)**

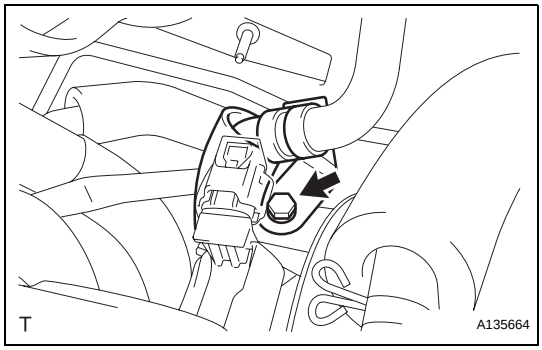


REMOVAL

1. REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-94)

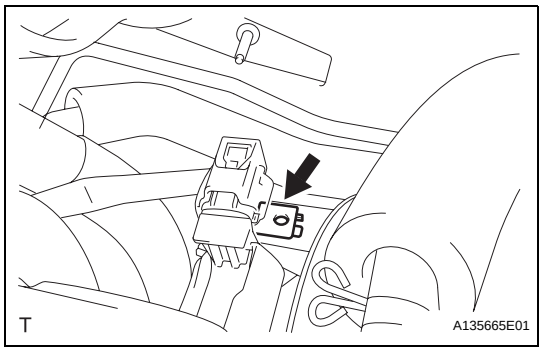
2. REMOVE VACUUM HOSE CLAMP

(a) Remove the bolt and disconnect the vacuum hose clamp.



3. REMOVE CLIP NUT

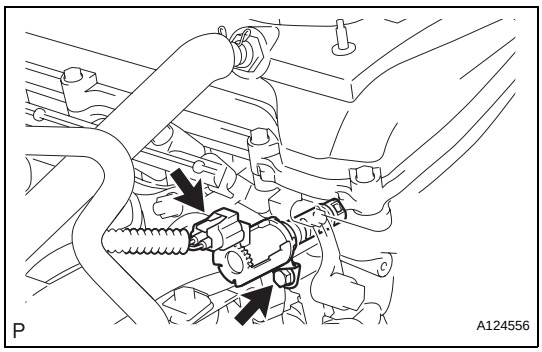
(a) Remove the clip nut.



4. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

(a) Disconnect the camshaft timing oil control valve assembly connector.

(b) Remove the bolt and camshaft timing oil control valve assembly.



INSPECTION

1. INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

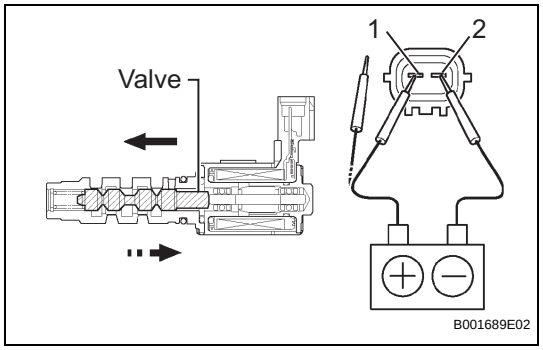
(a) Resistance inspection.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard resistance:

6.9 to 7.9 Ω at 20°C (68°F)

If necessary, replace the camshaft timing oil control valve assembly.



(b) Movement inspection.

(1) Connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 2, and check the movement of the valve.

NOTICE:

Confirm that the valve moves freely and does not stick in any position.

If necessary, replace the camshaft timing oil control valve assembly.

HINT:

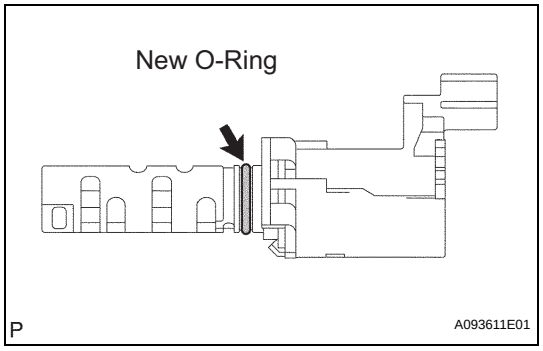
Accumulation of foreign objects causes subtle pressure leaks. The subtle pressure leaks will cause the camshaft to advance, and this will cause a DTC to be set.

ES

INSTALLATION

1. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

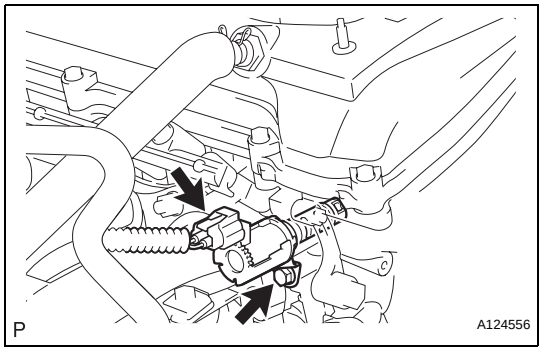
(a) Apply a light coat of engine oil to an O-ring of the camshaft timing oil control valve assembly sensor.

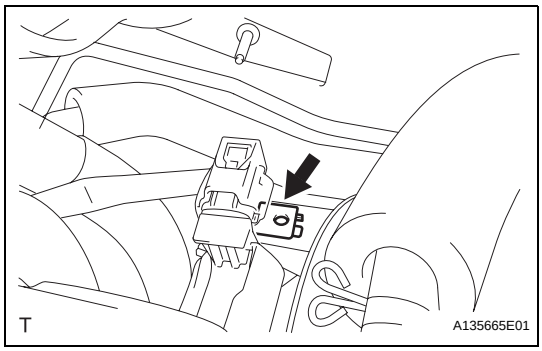


(b) Install the camshaft timing oil control valve assembly with the bolt.

Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

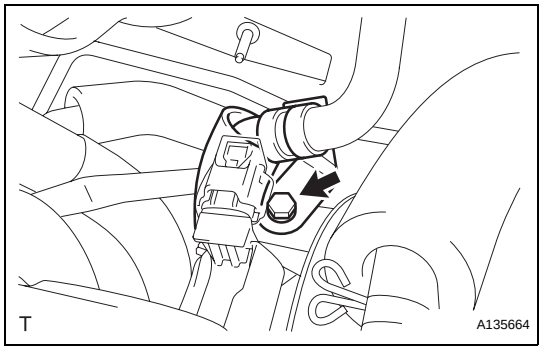
(c) Connect the camshaft timing oil control valve assembly connector.





2. INSTALL CLIP NUT

(a) Install the clip nut.



3. INSTALL VACUUM HOSE CLAMP

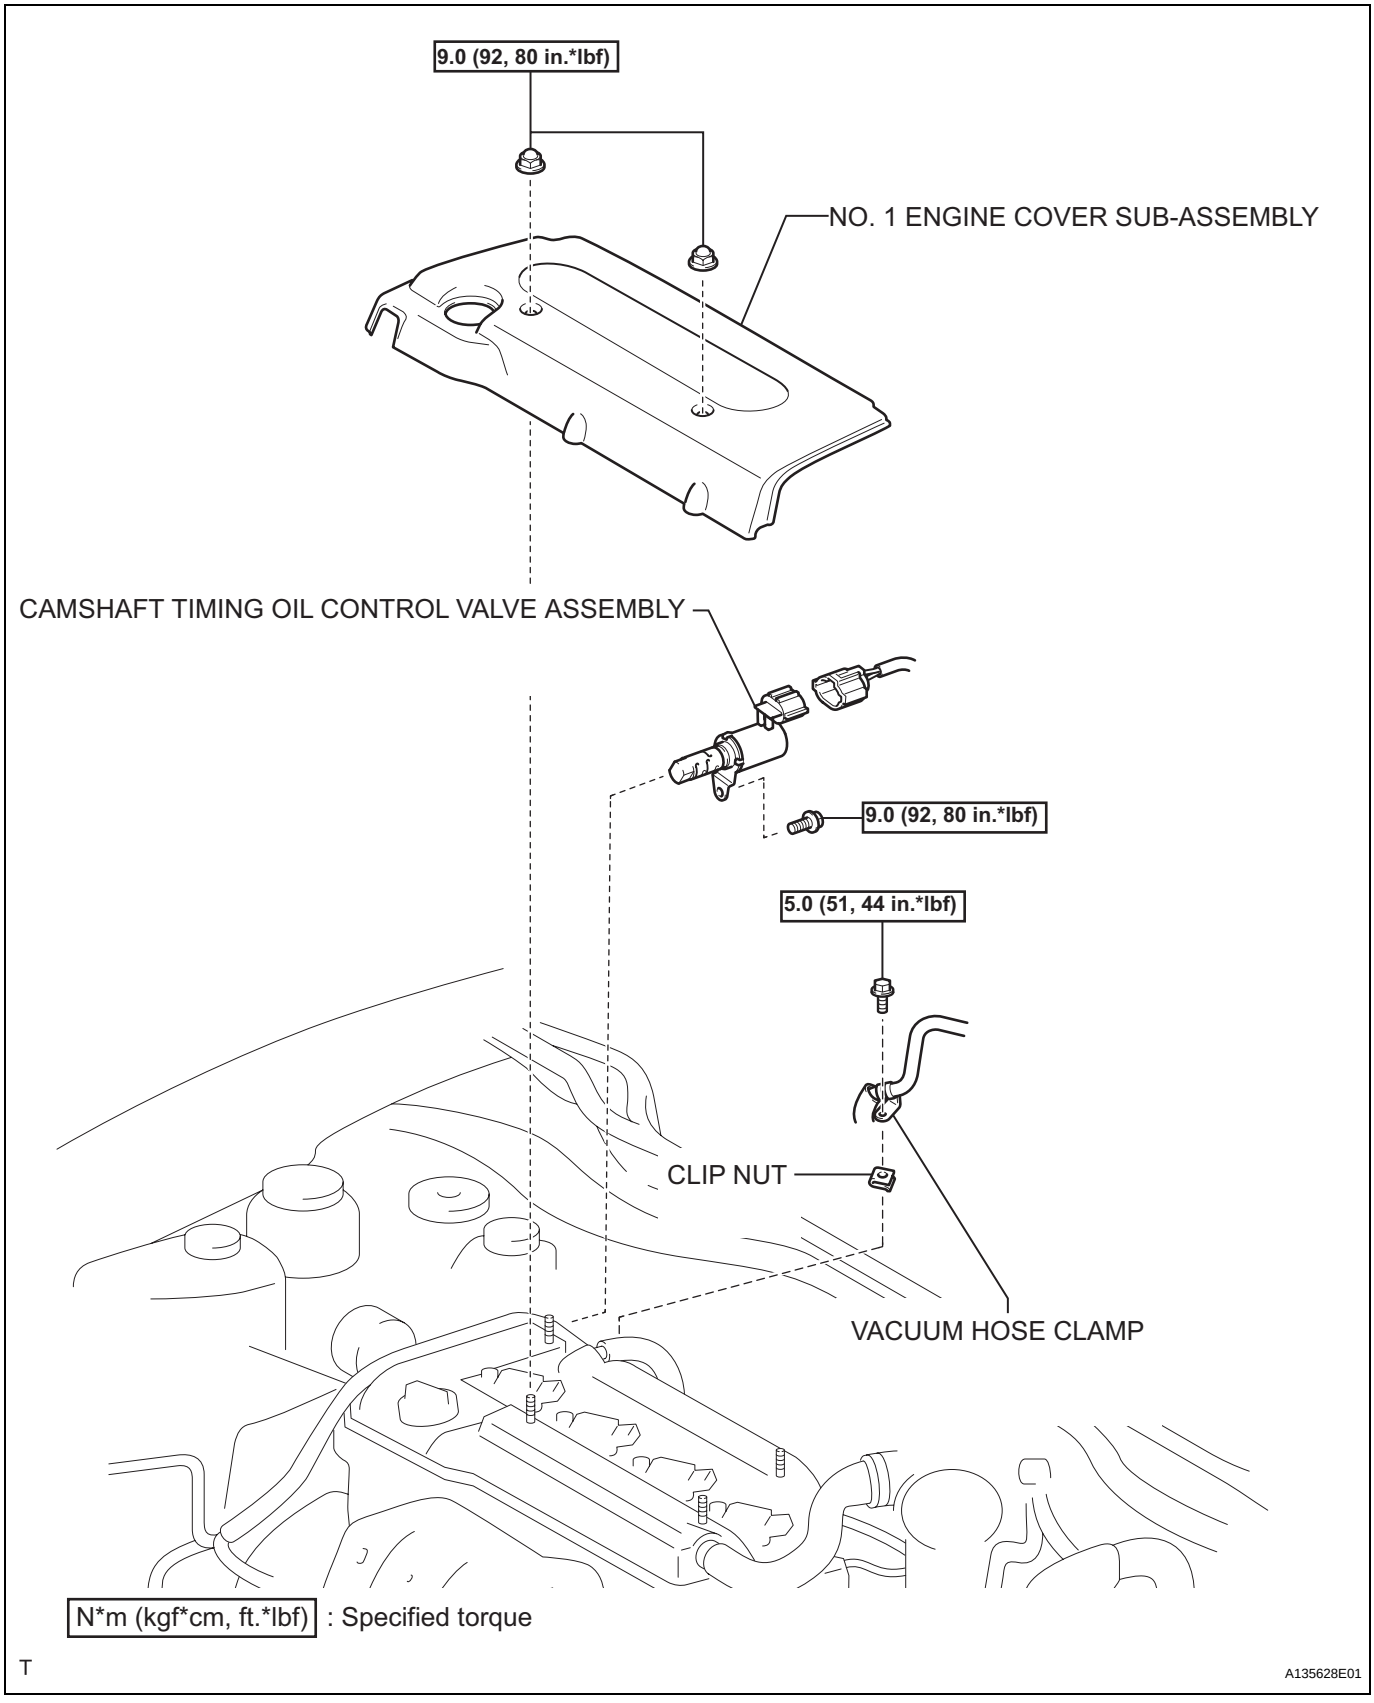
(a) Install the vacuum hose clamp with the bolt.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)

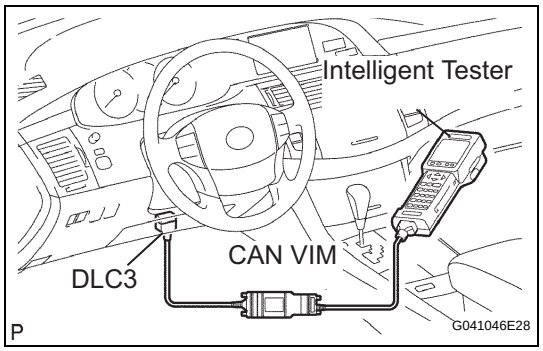
4. INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY
(See page EM-94)

ES

CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

COMPONENTS





ON-VEHICLE INSPECTION

1. INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

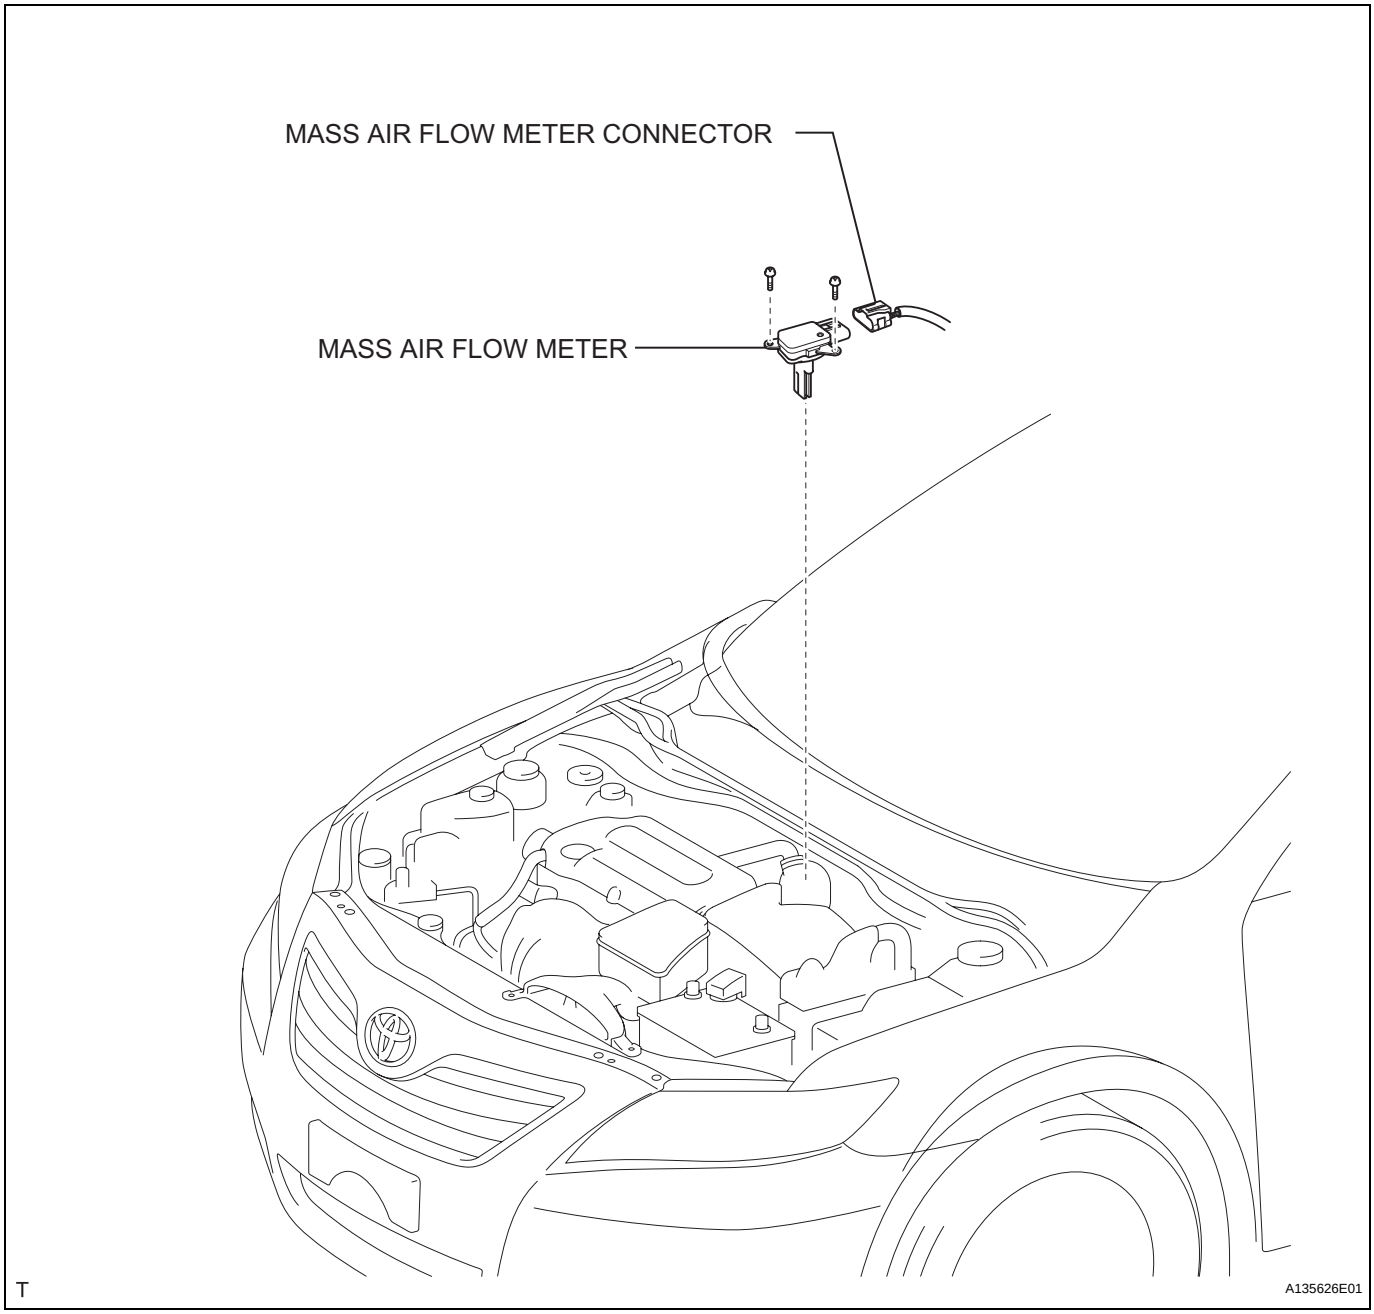
(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position.
(c) Start the engine and warm it up.
(d) Select the intelligent tester from the ACTIVE TEST menu.
(e) Check the engine speed when the OCV is operated by the intelligent tester.

Standard

Condition	Specified Condition
VVT system is OFF (OCV is OFF)	Normal engine speed
VVT system is ON (OCV is ON)	Rough idle or engine stalled

MASS AIR FLOW METER

COMPONENTS



ON-VEHICLE INSPECTION

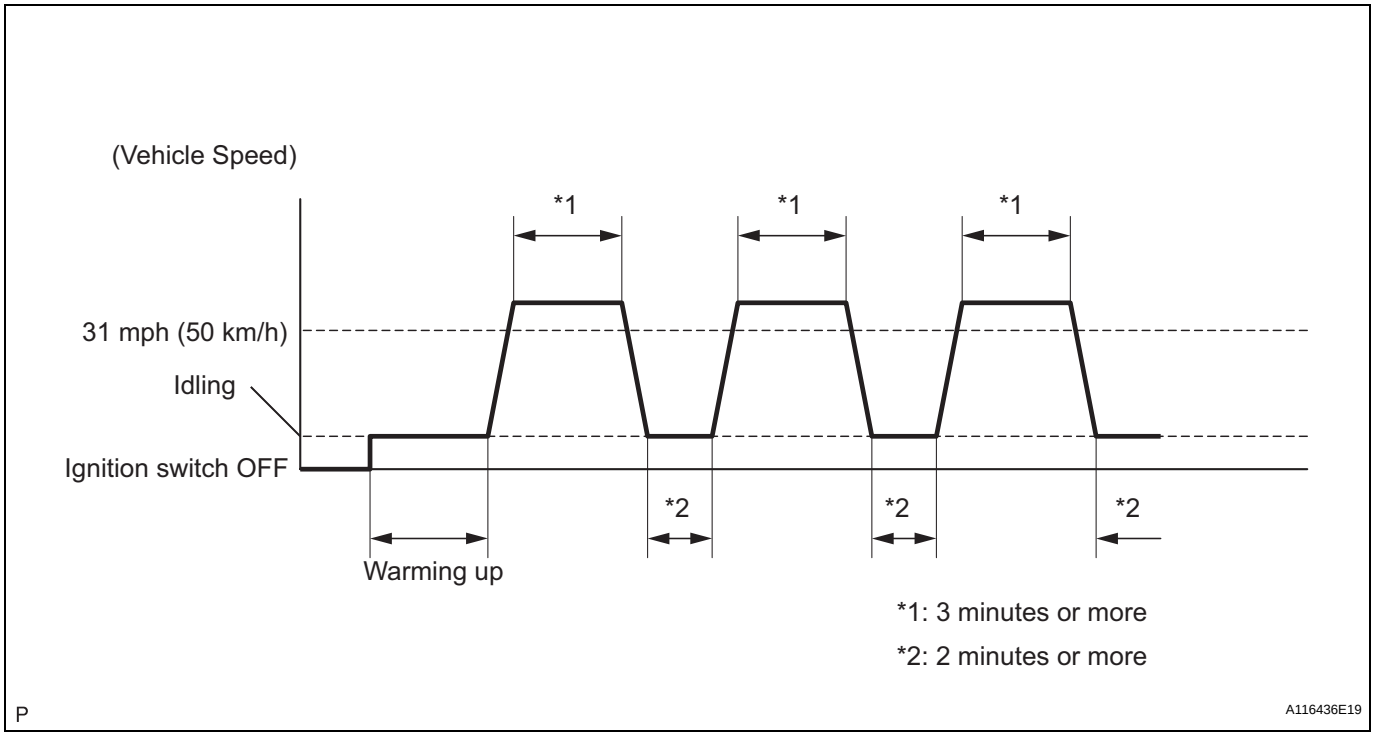
NOTICE:

- **Perform the MAF meter inspection according to the procedures below.**
- **Only replace the MAF meter when both the LONG FT#1 value and MAF value in the DATA LIST (with the engine stopped) are not within the normal operating range.**

1. INSPECT MASS AIR FLOW METER

(a) Perform confirmation driving pattern.

(1) Connect the intelligent tester to the DLC3.
(2) Turn the ignition switch to the ON position.
(3) Turn the tester ON.
(4) Clear the DTCs (See page ES-38).
(5) Start the engine and warm it up with all accessory switches OFF (until the engine coolant temperature is 75°C (167°F) or more).
(6) Drive the vehicle at 50 km/h (31 mph) or more for 3 to 5 minutes (*1).
(7) Allow the engine to idle for 2 minutes (*2).
(8) Perform steps (*1) and (*2) at least 3 times.

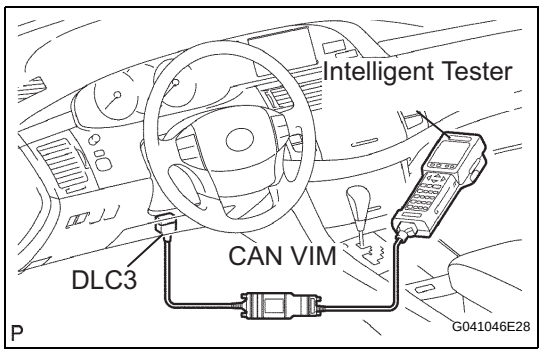


(b) Read values using the intelligent tester (LONG FT#1).

(1) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / LONG FT#1.
(2) Read the values displayed on the tester.
Standard value:
Within -15 to +15 %
If the result is not within the specified range, perform the inspection below.

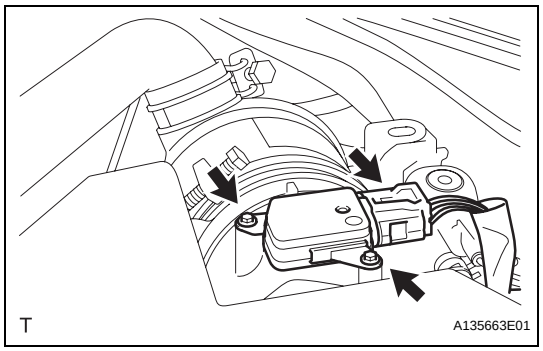
(c) Read values using the intelligent tester (MAF).
NOTICE:
- **Turn off the engine.**
- **Perform the inspection with the vehicle indoors and on a level surface.**
- **Perform the inspection of the MAF meter while it is installed to the air cleaner case (installed to the vehicle).**
- **During the test, do not use the exhaust air duct to perform suction on the exhaust pipe.**

(1) Turn the ignition switch to the ACC position.
(2) Turn the ignition switch to the ON position (do not run the engine).



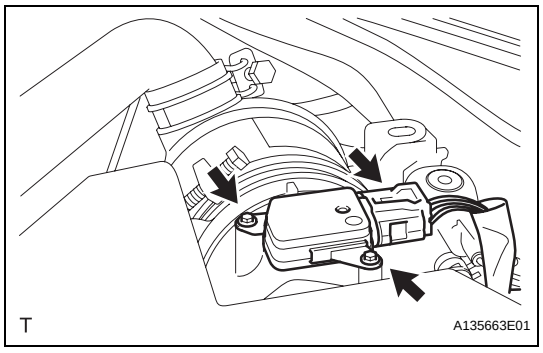
(3) Turn the intelligent tester ON.
(4) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / MAF.
(5) Wait 30 seconds, and read the values on the intelligent tester.
Standard condition:
Less than 0.50 g/sec.
- If the result is not as specified, replace the MAF meter.
- If the result is within the specified range, inspect the cause of the extremely rich or lean air fuel ratio (See page EC-20).

REMOVAL



1. REMOVE MASS AIR FLOW METER
(a) Disconnect the mass air flow meter connector.
(b) Remove the 2 screws and mass air flow meter.

INSTALLATION



1. INSTALL MASS AIR FLOW METER
(a) Install the mass air flow meter with the 2 screws.
(b) Connect the mass air flow meter connector.

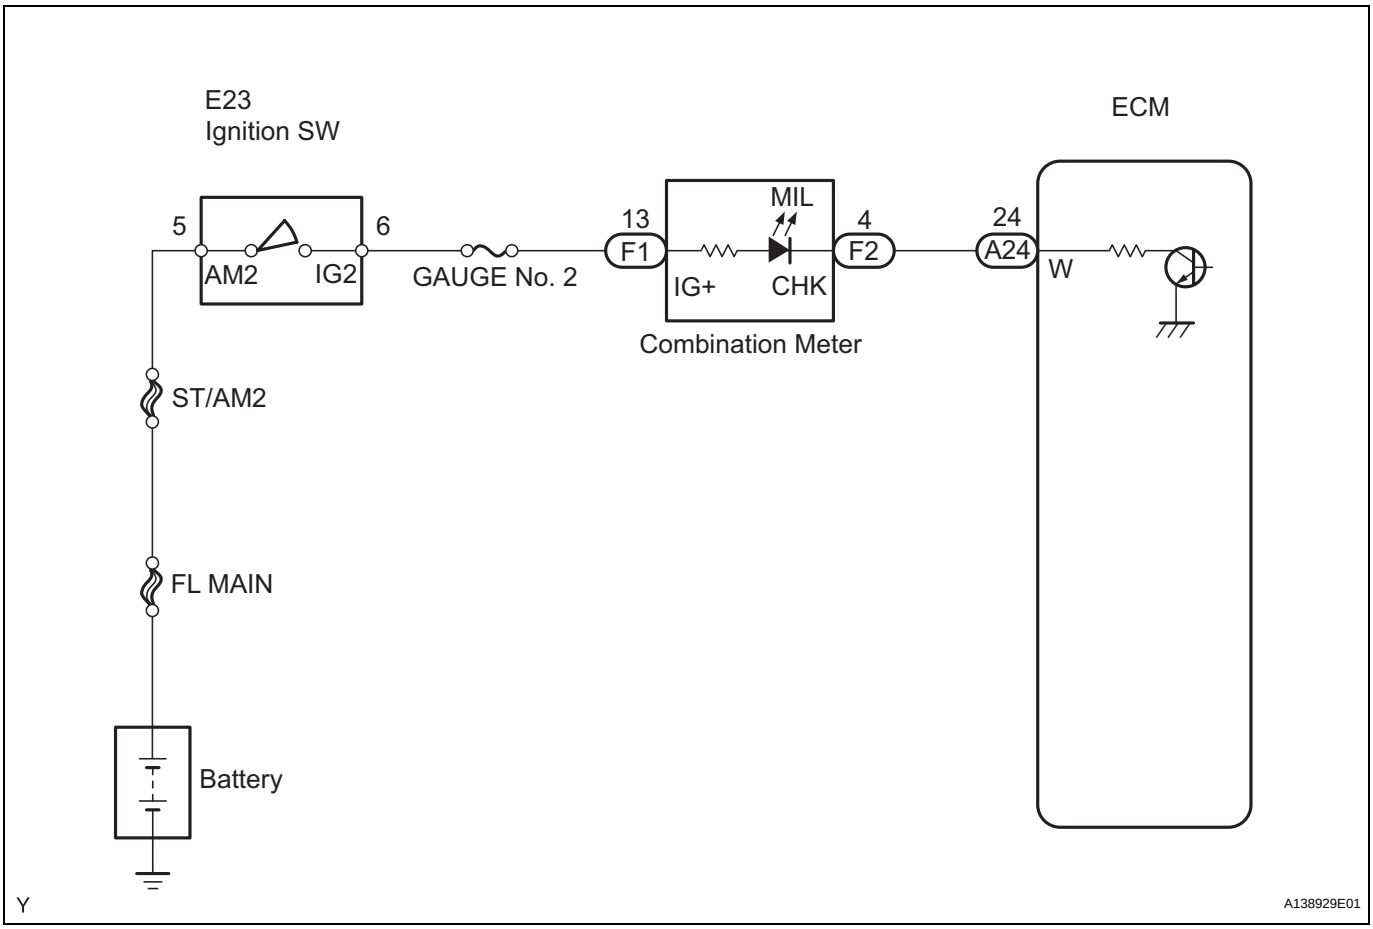
MIL Circuit

DESCRIPTION

The MIL (Malfunction Indicator Lamp) is used to indicate vehicle malfunction detected by the ECM. When the ignition switch is turned ON position, power is supplied to the MIL circuit, and the ECM provides the circuit ground which illuminates the MIL.
The MIL operation can be checked visually: When the ignition switch is first turned ON position, the MIL should be illuminated and should then turn off. If the MIL remains illuminated or is not illuminated, conduct the following troubleshooting procedure using the intelligent tester.

WIRING DIAGRAM

ES



INSPECTION PROCEDURE

1	CHECK THAT MIL IS ILLUMINATED

(a) Perform troubleshooting in accordance with the table below.
Result

Condition	Proceed to
MIL remains ON	A
MIL does not illuminate	B

B	Go to step 5

A

2	CHECK WHETHER MIL TURNS OFF

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and turn the tester on.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Check if any DTCs have been stored. Note down any DTCs.
(e) Clear the DTCs (See page ES-38).
(f) Check if the MIL goes off.
Standard:
MIL goes off.

ES

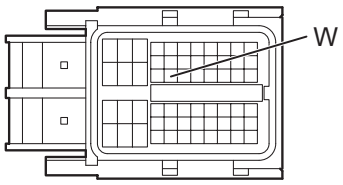
OK → **REPAIR CIRCUITS INDICATED BY OUTPUT DTCS**

NG

3	CHECK HARNESS AND CONNECTOR (CHECK FOR SHORT IN WIRE HARNESS)

Wire Harness Side:

A24 ECM Connector



Front View

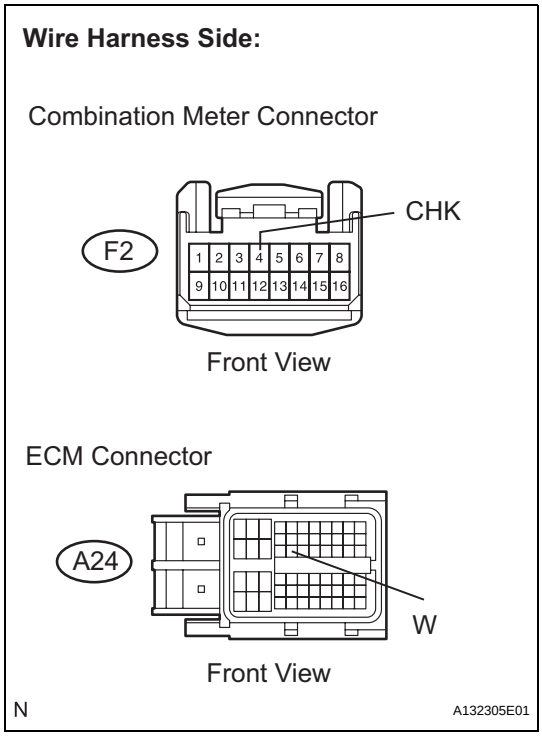
A115671E23

(a) Disconnect the A24 ECM connector.
(b) Turn the ignition switch to the ON position.
(c) Check that the MIL is not illuminated.
OK:
MIL is not illuminated.
(d) Reconnect the ECM connector.

OK → **REPLACE ECM**

NG

4	CHECK HARNESS AND CONNECTOR (COMBINATION METER - ECM)



(a) Disconnect the A24 ECM connector.
(b) Disconnect the F2 combination meter connector.
(c) Measure the resistance between the terminals of the wire harness side connectors.
Standard resistance (Check for short)

Tester Connection	Specified Condition
A24-24 (W) or F2-4 (CHK) - Body ground	10 kΩ or higher

(d) Reconnect the ECM connector.
(e) Reconnect the combination meter connector.

OK → **REPAIR OR REPLACE COMBINATION METER ASSEMBLY**

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

5	CHECK THAT MIL IS ILLUMINATED

(a) Check if the MIL is illuminated when the ignition switch is turned ON position.
OK:
MIL is illuminated.

OK → **SYSTEM OK**

NG

6	CHECK THAT ENGINE STARTS

(a) Turn the ignition switch to the ON position.
(b) Start the engine.
Result

Result	Proceed to
Engine starts	A
Engine does not start*	B

HINT:
*: The intelligent tester cannot communicate with the ECM.

B → GO TO VC OUTPUT CIRCUIT

A

7 INSPECT COMBINATION METER ASSEMBLY (MIL CIRCUIT)

(a) Check the MIL circuit (See page ME-19).

NG → REPAIR OR REPLACE COMBINATION METER ASSEMBLY

OK

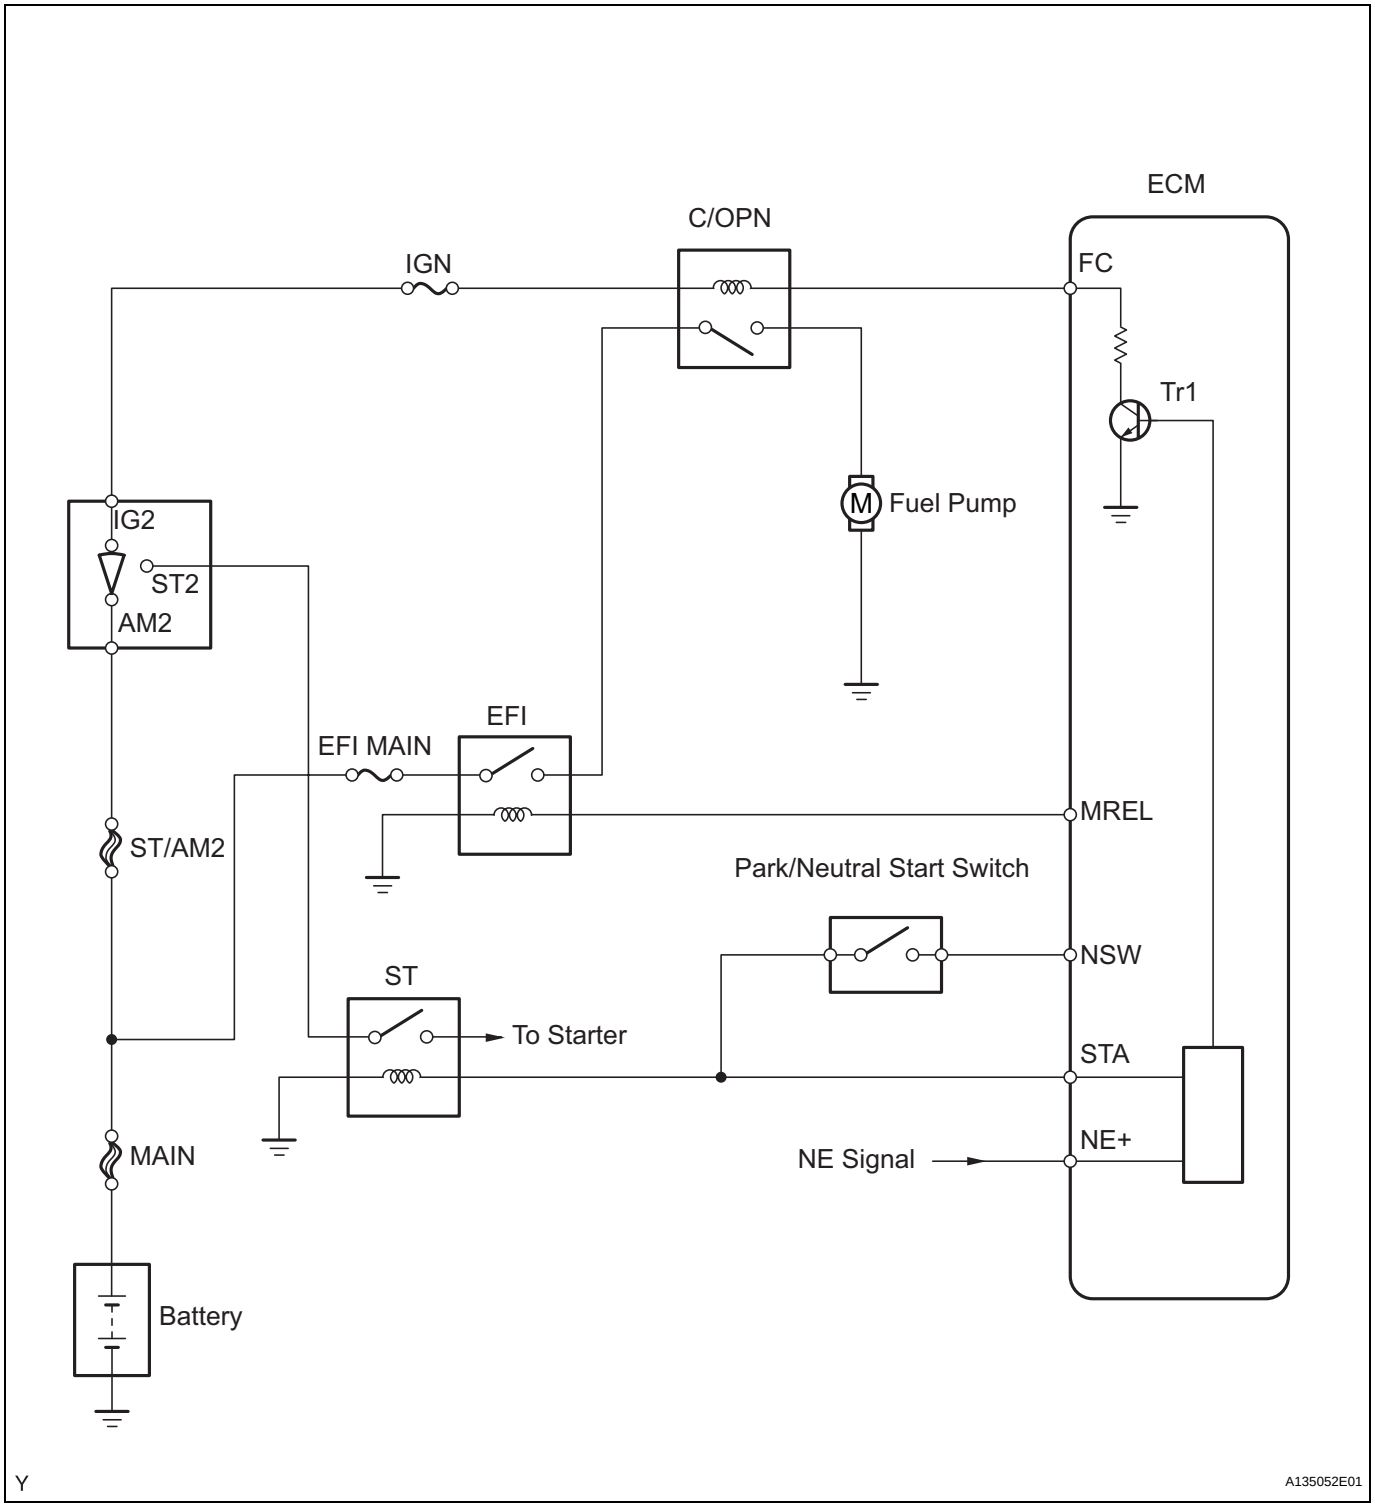
CHECK AND REPLACE HARNESS AND CONNECTOR (COMBINATION METER - ECM)

Fuel Pump Control Circuit

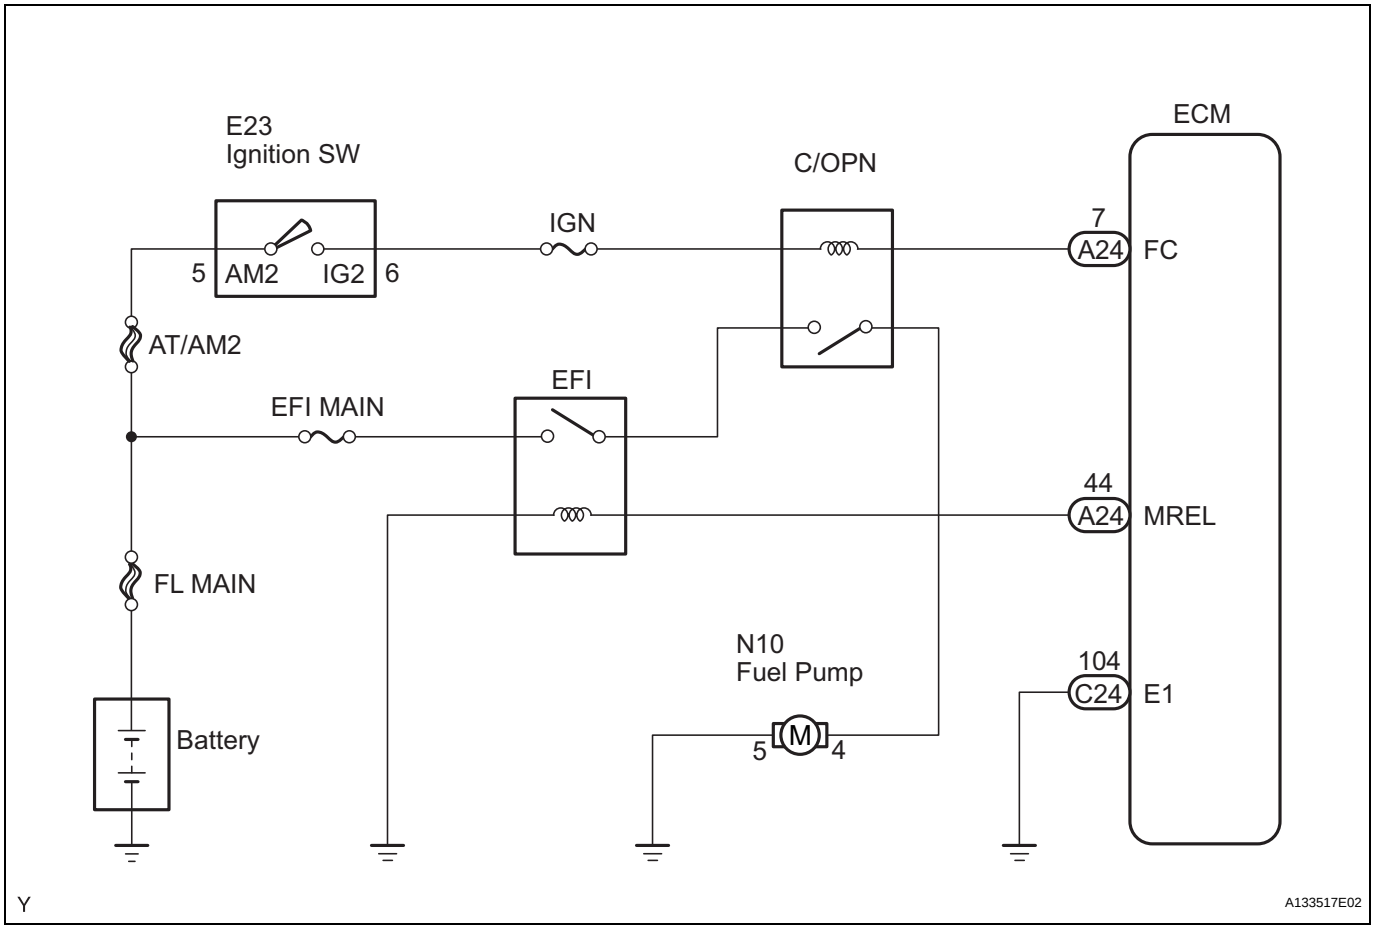
DESCRIPTION

When the engine is cranked, the starter relay drive signal output from the STAR terminal of the ECM is input into the STA terminal of the ECM, and NE signal generated by the crankshaft position sensor is also input into the NE+ terminal. Thus, the ECM interprets that the engine is cranked, and turns the transistor Tr1 in the ECM internal circuit ON. The current flows to the C/OPN (Circuit Opening) relay by turning the Tr1 ON. Then, the fuel pump operates.

While the NE signal is input into the ECM, when the engine is running, the ECM turns the Tr1 on continuously.



WIRING DIAGRAM



INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (OPERATE C/OPN RELAY)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and turn the tester on.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / FUEL PUMP / SPD.
(d) Check whether the fuel pump operation sound occurs when performing the Active Test on the tester.
OK:
Fuel pump operating sound occurs.

NG	Go to step 2

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

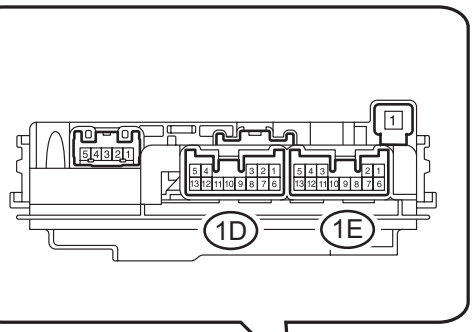
2	CHECK ECM POWER SOURCE CIRCUIT

NG → REPAIR OR REPLACE ECM POWER SOURCE CIRCUIT

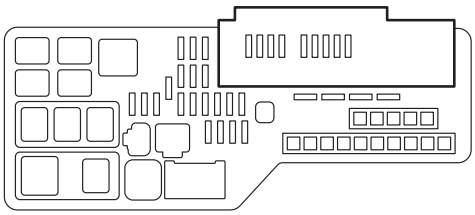
OK

3	INSPECT ENGINE ROOM J/B (C/OPN RELAY)

Engine Room J/B:



Engine Room R/B:



A138918E02

(a) Remove the engine room J/B from the engine room R/B.
(b) Inspect the C/OPN relay.
(1) Measure the C/OPN relay resistance.

Standard resistance

Tester Connection	Specified Condition
1E-7 - 1E-13	10 kΩ or higher
	Below 1 Ω (Apply battery voltage between terminals 1D-12 and 1E-8)

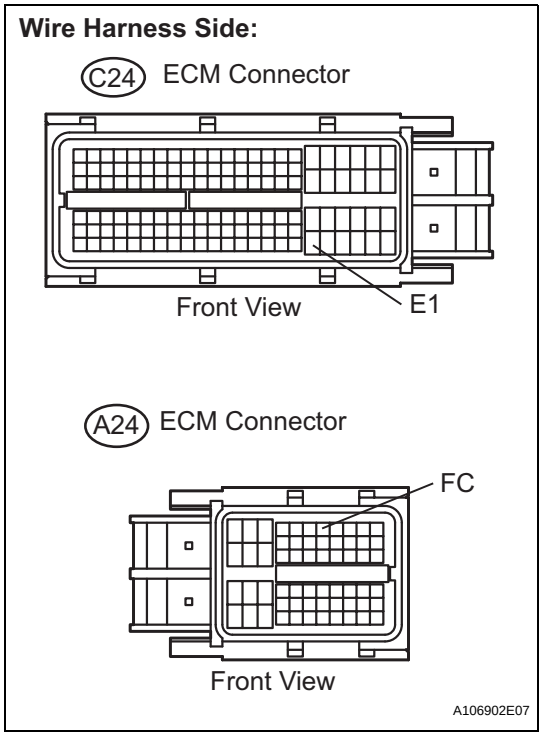
(c) Reinstall the engine room J/B.

NG → REPLACE ENGINE ROOM J/B

OK

ES

4	INSPECT ECM (FC VOLTAGE)



(a) Disconnect the A24 and C24 ECM connectors.
(b) Measure the voltage between the terminals of the A24 and C24 ECM connectors.
Standard voltage

Tester Connection	Specified Condition
A24-7 (FC) - C24-104 (E1)	9 to 14 V

(c) Reconnect the ECM connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (ECM - BATTERY)**

OK

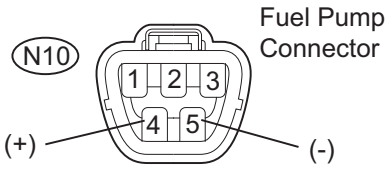
5	INSPECT FUEL PUMP

NG → **REPLACE FUEL PUMP**

OK

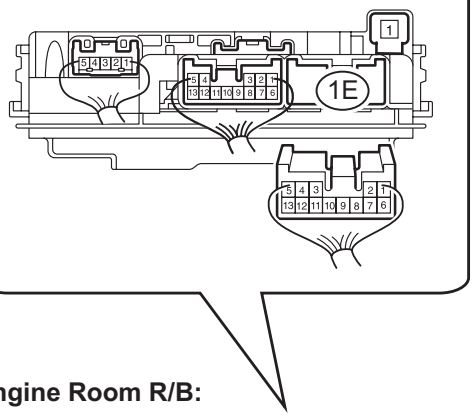
6	CHECK HARNESS AND CONNECTOR (C/OPN RELAY - FUEL PUMP - BODY GROUND)

Wire Harness Side:

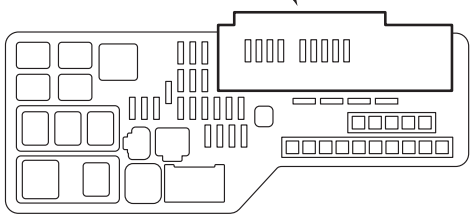


Engine Room J/B:

Component Side:



Engine Room R/B:



A138923E01

(a) Check the harness and the connectors between the engine room J/B and the fuel pump.
  (1) Remove the engine room J/B from the engine room R/B.
  (2) Disconnect the 1E engine room J/B connector.
  (3) Disconnect the N10 fuel pump connector.
  (4) Measure the resistance between the terminals.

Standard resistance (Check for open)

Tester Connection	Specified Condition
1E-13 - N10-4 (Fuel pump)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
1E-13 or N10-4 (Fuel pump) - Body ground	10 kΩ or higher

(b) Check the harness and the connectors between the fuel pump and body ground.
  (1) Disconnect the N10 fuel pump connector.
  (2) Measure the resistance.

Standard resistance (Check for open)

Tester Connection	Specified Condition
N10-5 (Fuel pump) - Body ground	Below 1 Ω

(c) Reconnect the engine room J/B connector.
(d) Reconnect the fuel pump connector.
(e) Reinstall the engine room J/B.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

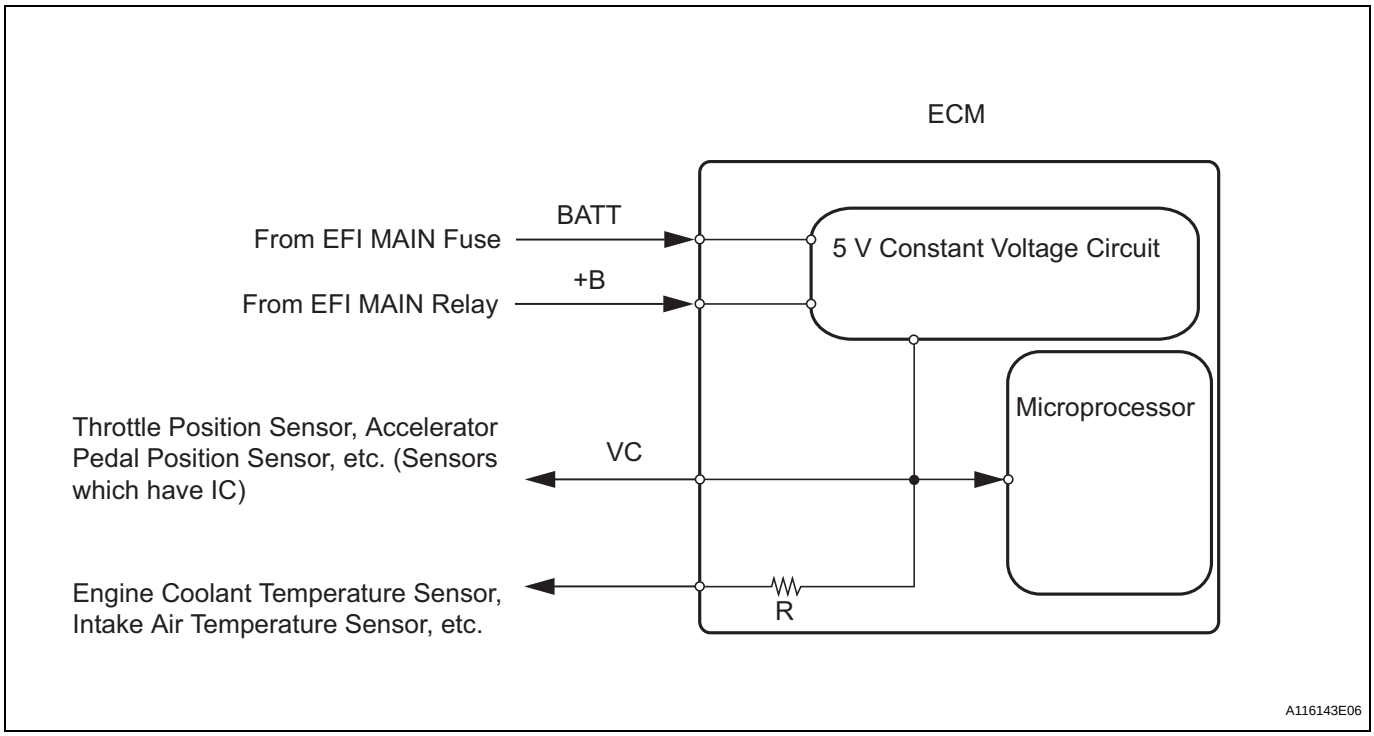
REPLACE ECM

ES

VC Output Circuit

DESCRIPTION

The ECM constantly generates 5 V power from the battery voltages supplied to the +B (BATT) terminal to operate the microprocessor. The ECM also provides this power to the sensors through the VC output circuit.

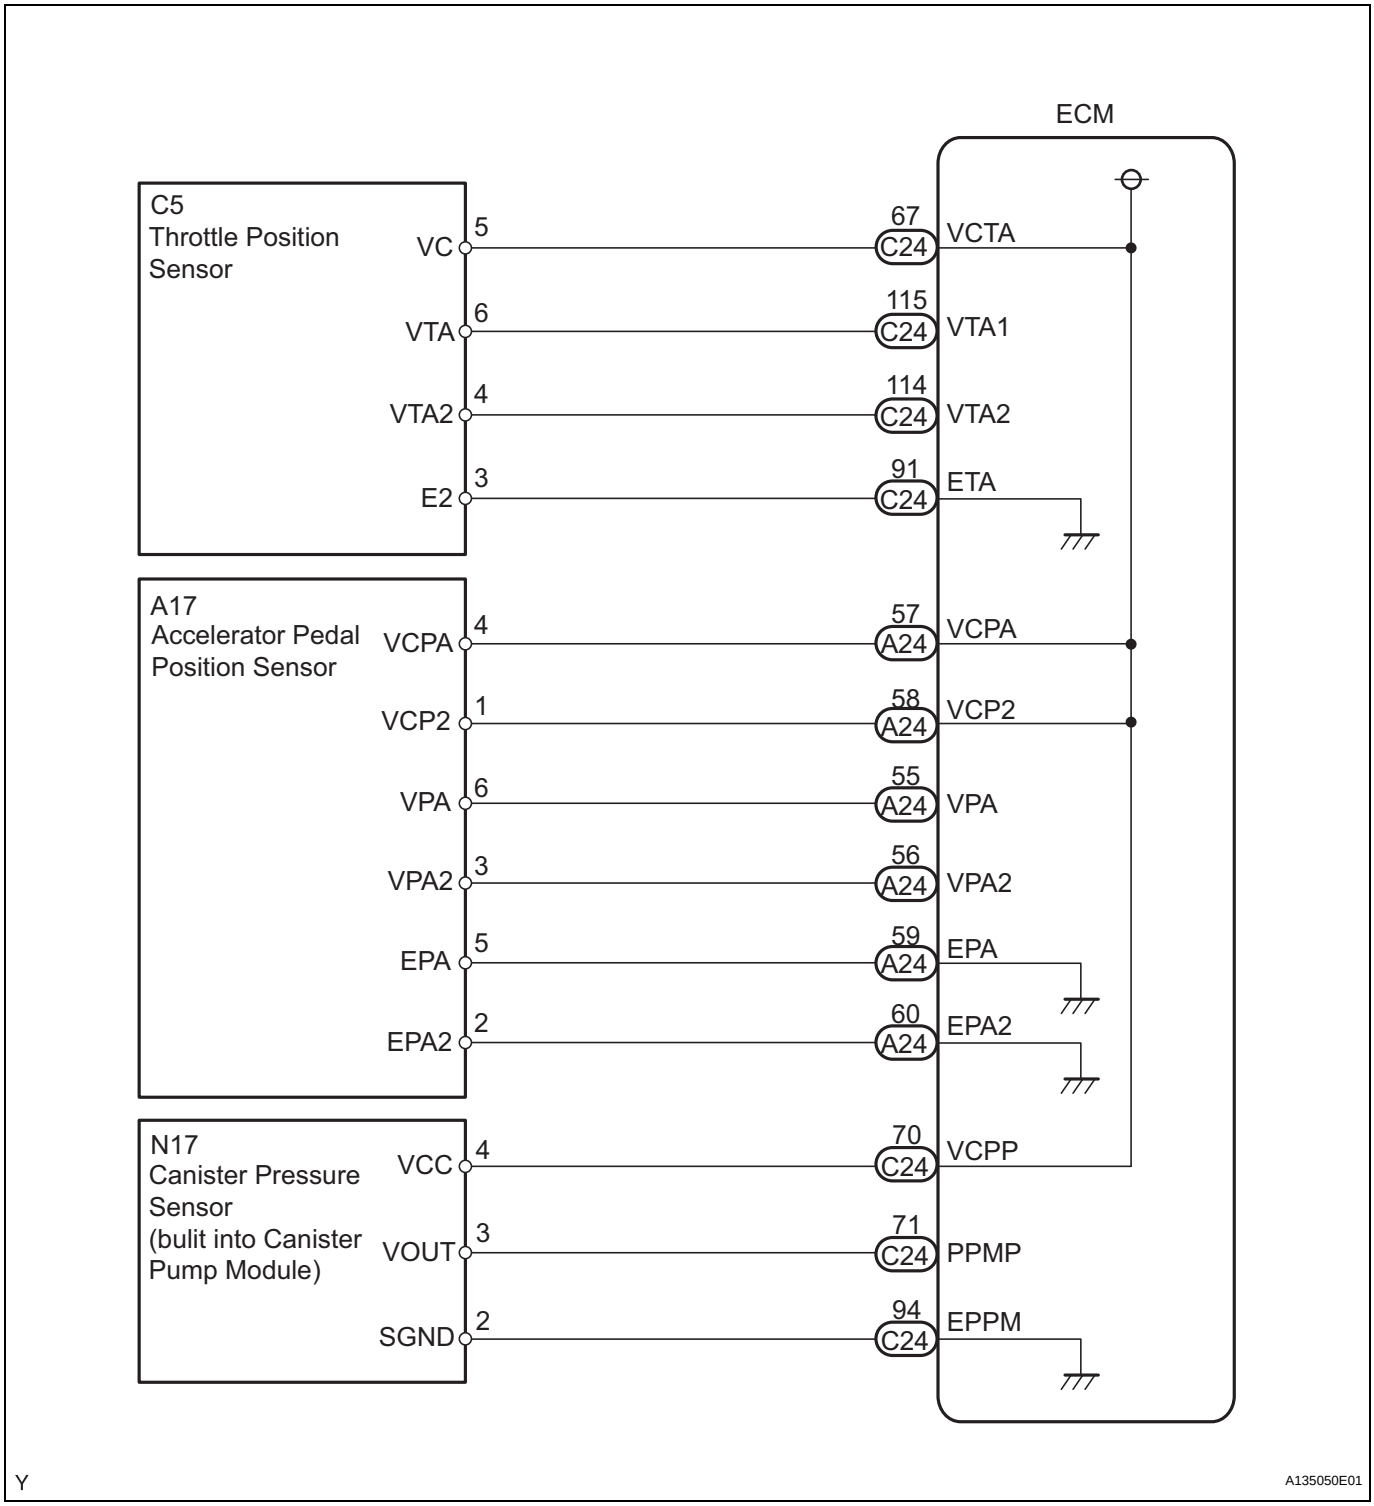


When the VC circuit is short-circuited, the microprocessor in the ECM and sensors that are supplied with power through the VC circuit are inactivated because the power is not supplied from the VC circuit. Under this condition, the system does not start up and the MIL does not illuminate even if the system malfunctions.

HINT:

Under normal conditions, the MIL is illuminated for several seconds when the ignition switch is first turned ON position. The MIL goes off when the engine is started.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK MIL CONDITION

(a) Check that the Malfunction Indicator Lamp (MIL) lights up when turning the ignition switch to the ON position.
OK:
MIL lights up.

OK → SYSTEM OK

NG

2	CHECK COMMUNICATION BETWEEN INTELLIGENT TESTER AND ECM

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to the ON position and turn the tester on.
(c) Check for communication between the tester and ECM.

Result

Result	Proceed to
Communication is possible	A
Communication is not possible	B

A → GO TO MIL CIRCUIT

B

3	CHECK MIL (THROTTLE POSITION SENSOR)

(a) Disconnect the C5 throttle body connector.
(b) Turn the ignition switch to the ON position.
(c) Check the MIL.

Result

Result	Proceed to
MIL illuminates	A
MIL does not illuminate	B

(d) Reconnect the throttle body connector.

A → REPLACE THROTTLE BODY ASSEMBLY

B

4	CHECK MIL (ACCELERATOR PEDAL POSITION SENSOR)

(a) Disconnect the A17 accelerator pedal position sensor connector.
(b) Turn the ignition switch to the ON position.
(c) Check the MIL.

Result

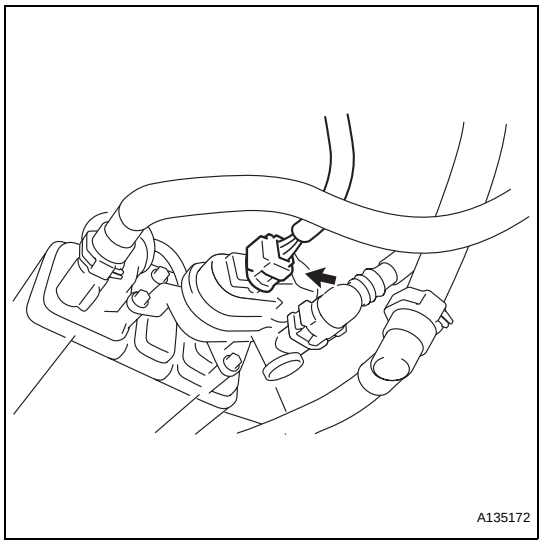
Result	Proceed to
MIL illuminates	A
MIL does not illuminate	B

(d) Reconnect the accelerator pedal position sensor connector.

A → REPLACE ACCELERATOR PEDAL ASSEMBLY

B

5 CHECK MIL (CANISTER PUMP MODULE)



(a) Disconnect the N17 canister pump module connector.
(b) Turn the ignition switch to the ON position.
(c) Check the MIL.

Result

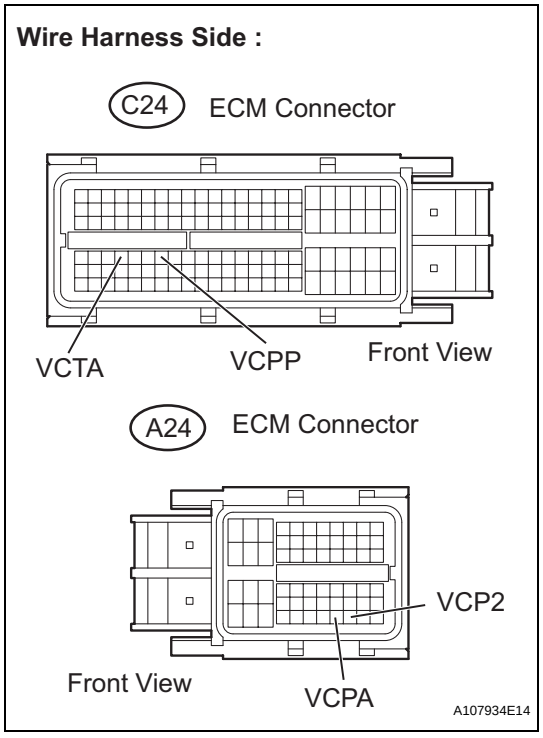
Result	Proceed to
MIL illuminates	A
MIL does not illuminate	B

(d) Reconnect the canister pump module connector.

A → **REPLACE CHARCOAL CANISTER ASSEMBLY**

B

6 CHECK HARNESS AND CONNECTOR



(a) Disconnect the C5 throttle body connector.
(b) Disconnect the A17 accelerator pedal position sensor connector.
(c) Disconnect the N17 canister pump module connector.
(d) Disconnect the A24 and C24 ECM connectors.
(e) Measure the resistance between the terminals of the wire harness side connectors.

Standard resistance (Check for short)

Tester Connection	Specified Condition
C24-67 (VCTA) - Body ground	10 kΩ or higher
A24-57 (VCPA) - Body ground	10 kΩ or higher
A24-58 (VCP2) - Body ground	10 kΩ or higher
C24-70 (VCPP) - Body ground	10 kΩ or higher

(f) Reconnect the throttle body connector.
(g) Reconnect the accelerator pedal position sensor connector.
(h) Reconnect the canister pump module connector.
(i) Reconnect the ECM connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

ES

OK

Leak detection pump stuck ON	●								●	●	
Vent valve stuck closed	●								●	●	
Vent valve stuck open (vent)											●

Y

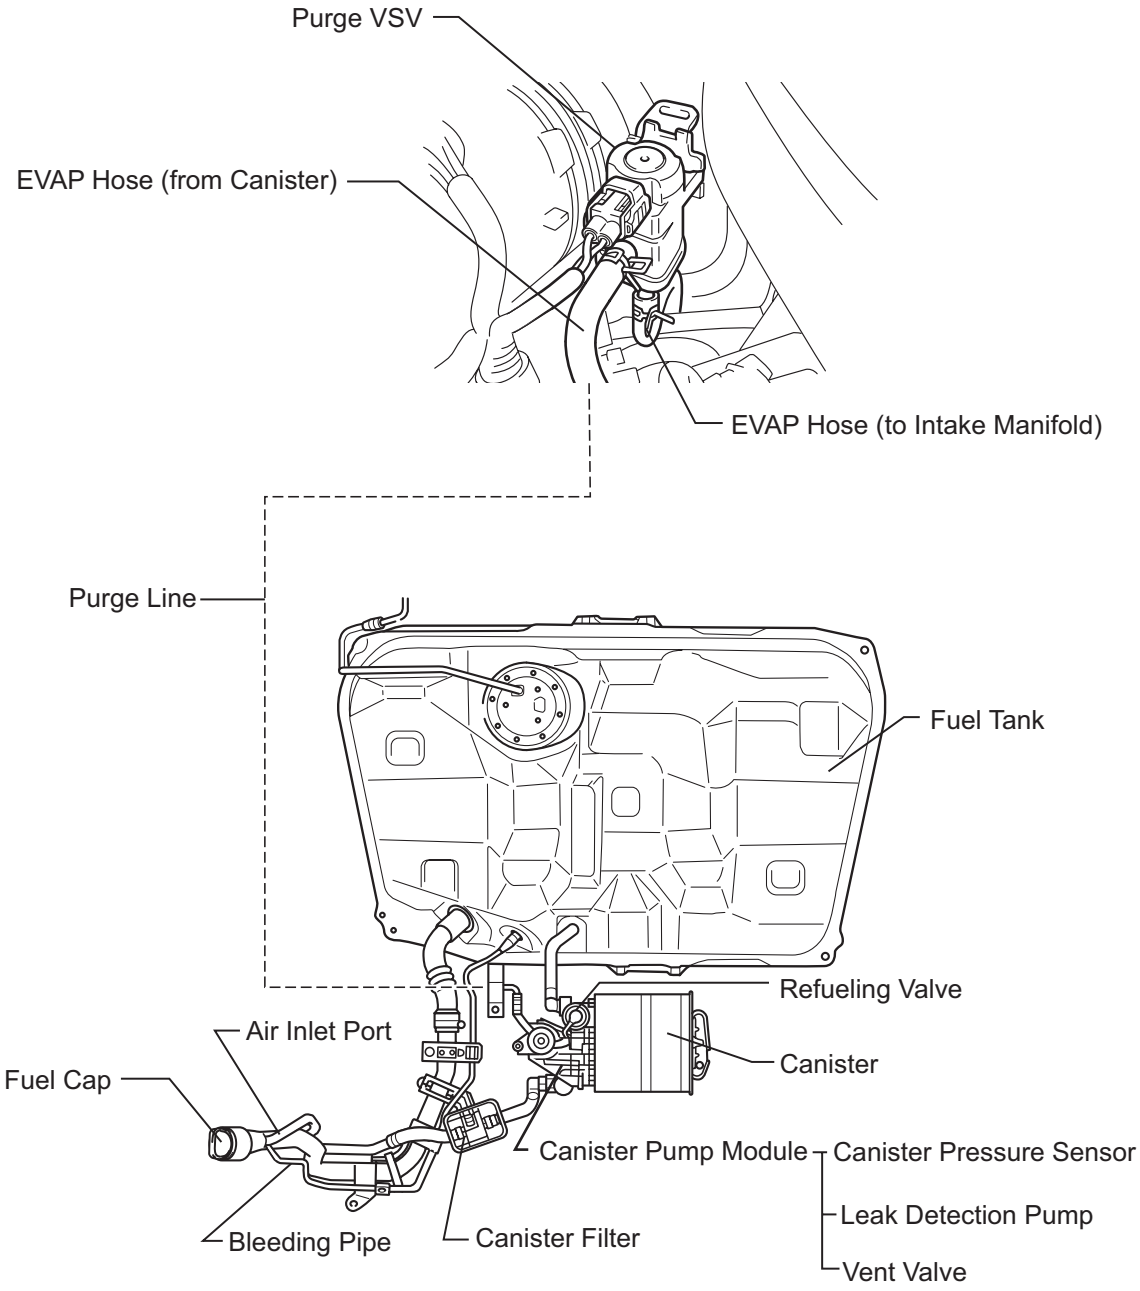
A106731E11

NOTICE:
If the reference pressure difference between the first and second checks is greater than the specification, all the DTCs relating to the reference pressure (P043E, P043F, P2401, P2402 and P2419) are stored.

DESCRIPTION

Location of EVAP (Evaporative Emission) System:

Except PZEV



Note:

The canister is located near the fuel tank, underneath the body.

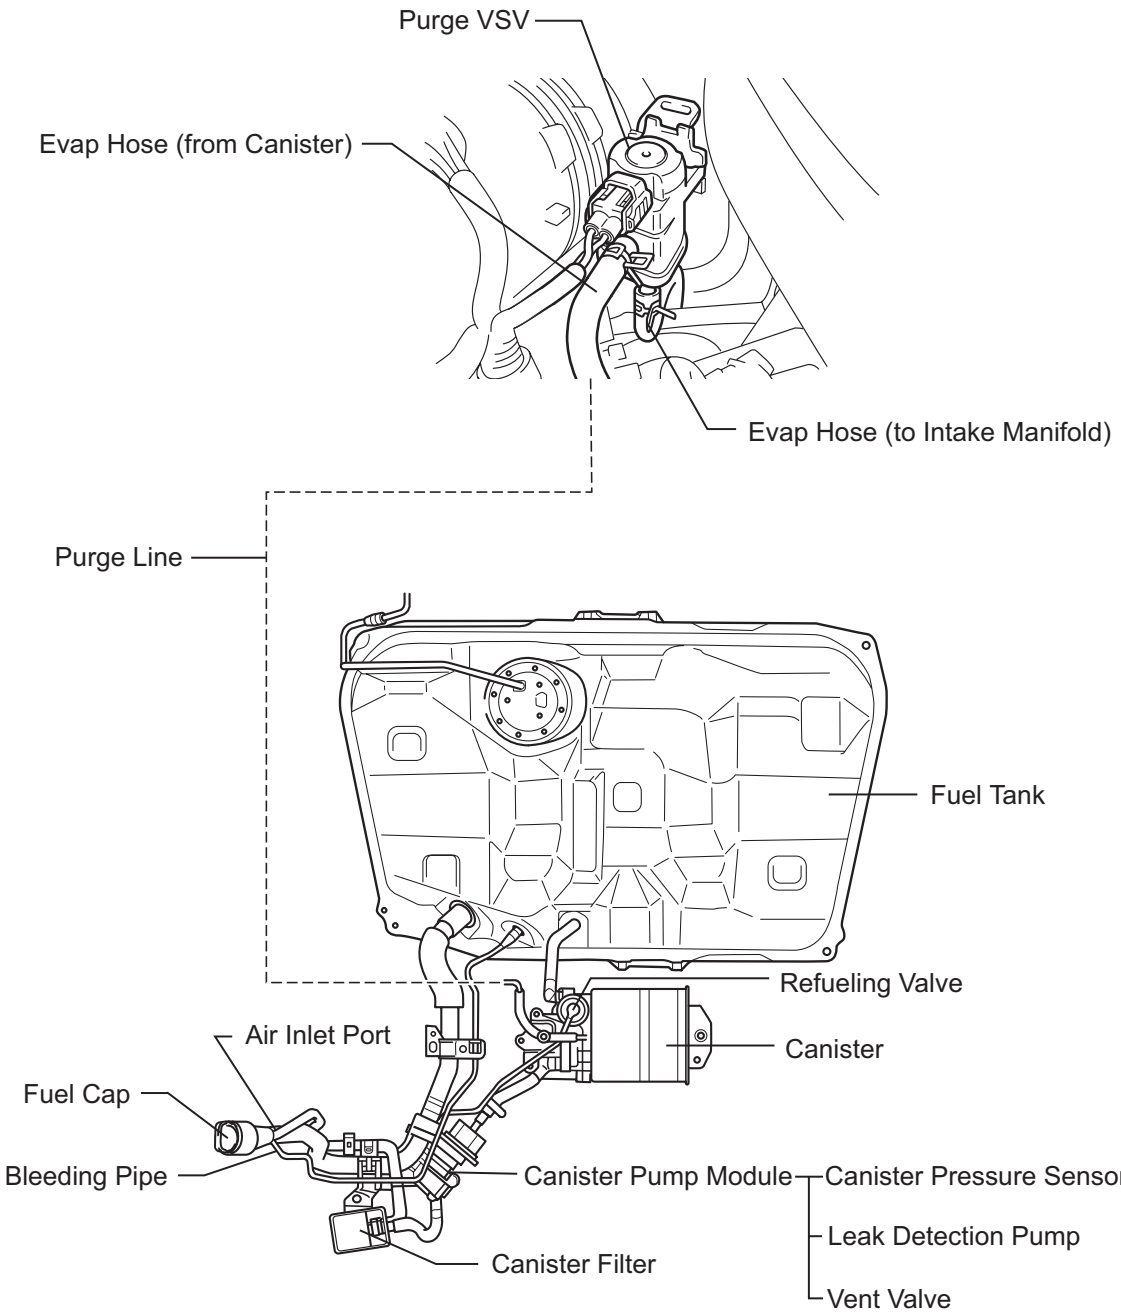
N

A135200E01

ES

Location of EVAP (Evaporative Emission) System:

PZEV



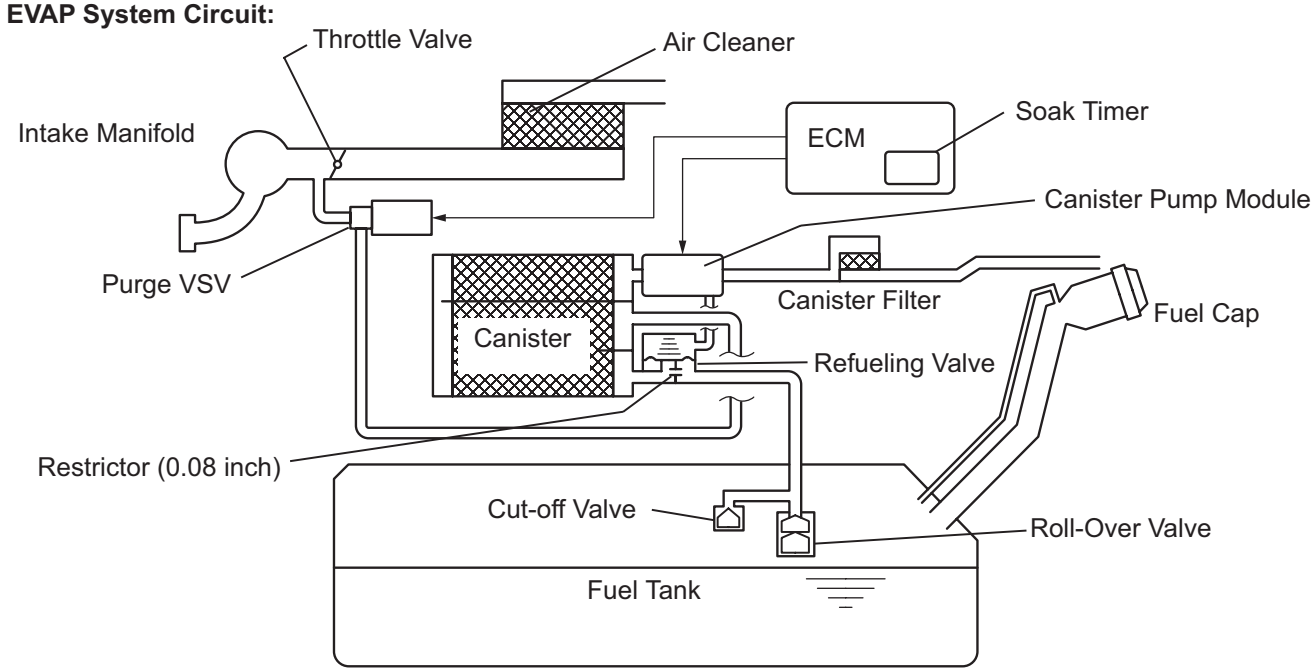
Note:

The canister is lecated near the fuel tank, underneath the body.

N

A135201E01

EVAP System Circuit:



NOTICE:

In this vehicle's EVAP system, turning ON the vent valve does not seal off the EVAP system. To check for leaks in the EVAP system, disconnect the air inlet vent hose and apply pressure from the atmospheric side of the canister.

While the engine is running, if a predetermined condition (closed-loop, etc.) is met, the purge VSV is opened by the ECM and stored fuel vapors in the canister are purged into the intake manifold. The ECM changes the duty cycle ratio of the purge VSV to control purge flow volume.

The purge flow volume is also determined by the intake manifold pressure. Atmospheric pressure is allowed into the canister through the vent valve to ensure that the purge flow is maintained when the negative pressure (vacuum) is applied to the canister.

The following two monitors run to confirm the appropriate EVAP system operation.

1. Key-off monitor

This monitor checks for EVAP (Evaporative Emission) system leaks and canister pump module malfunctions. The monitor starts 5 hours* after the ignition switch is turned off. At least 5 hours are required for the fuel to cool down to stabilize the EVAP pressure, thus making the EVAP system monitor more accurate.

The leak detection pump creates negative pressure (vacuum) in the EVAP system and the pressure is measured. Finally, the ECM monitors for leaks from the EVAP system, and malfunctions in both the canister pump module and purge VSV, based on the EVAP pressure.

HINT:

*: If the engine coolant temperature is not below 35°C (95°F) 5 hours after the ignition switch is turned off, the monitor check starts 2 hours later. If it is still not below 35°C (95°F) 7 hours after the ignition switch is turned off, the monitor check starts 2.5 hours later.

2. Purge flow monitor

The purge flow monitor consists of the two monitors. The 1st monitor is conducted every time and the 2nd monitor is activated if necessary.

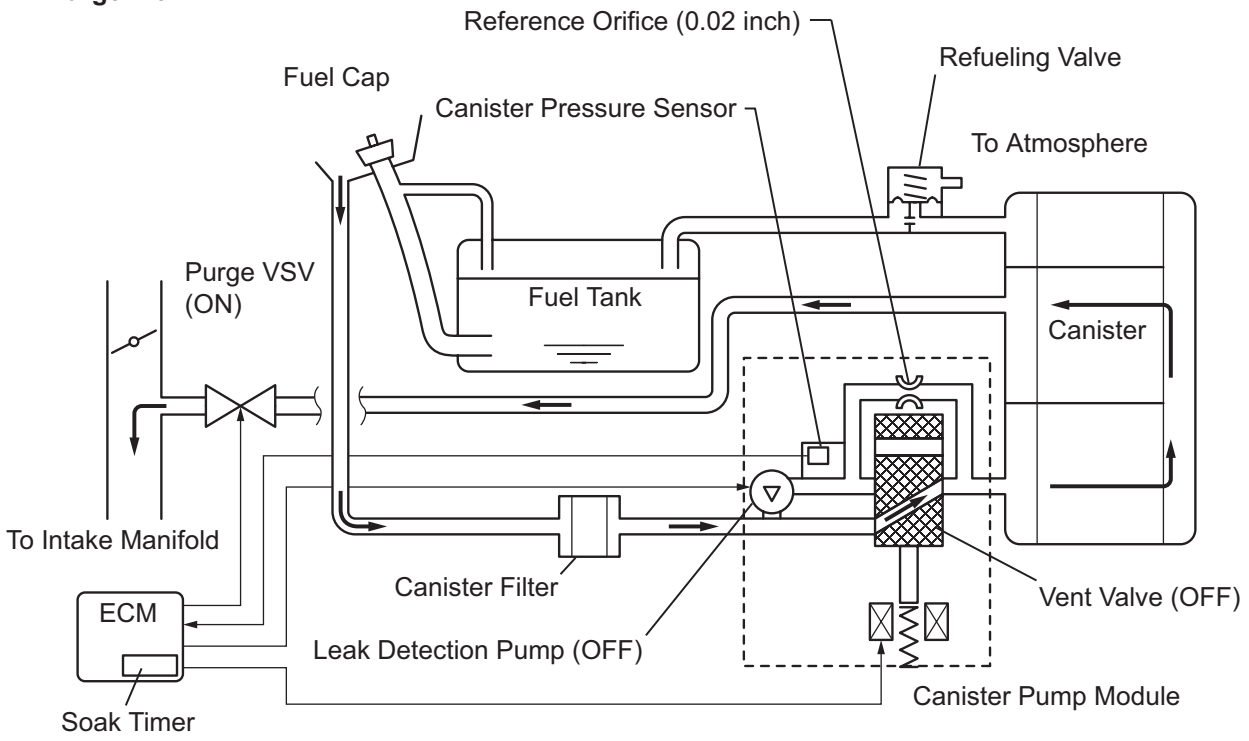
- The 1st monitor

  While the engine is running and the purge VSV (Vacuum Switching Valve) is ON (open), the ECM monitors the purge flow by measuring the EVAP pressure change. If negative pressure is not created, the ECM begins the 2nd monitor.

- The 2nd monitor
  The vent valve is turned OFF (open) and the EVAP pressure is measured. If the variation in the pressure is less than 0.5 kPa-g (3.75 mmHg-g), the ECM interprets this as the purge VSV being stuck closed, and illuminates the MIL and sets DTC P0441 (2 trip detection logic).

Atmospheric pressure check:
In order to ensure reliable malfunction detection, the variation between the atmospheric pressures, before and after conduction of the purge flow monitor, is measured by the ECM.

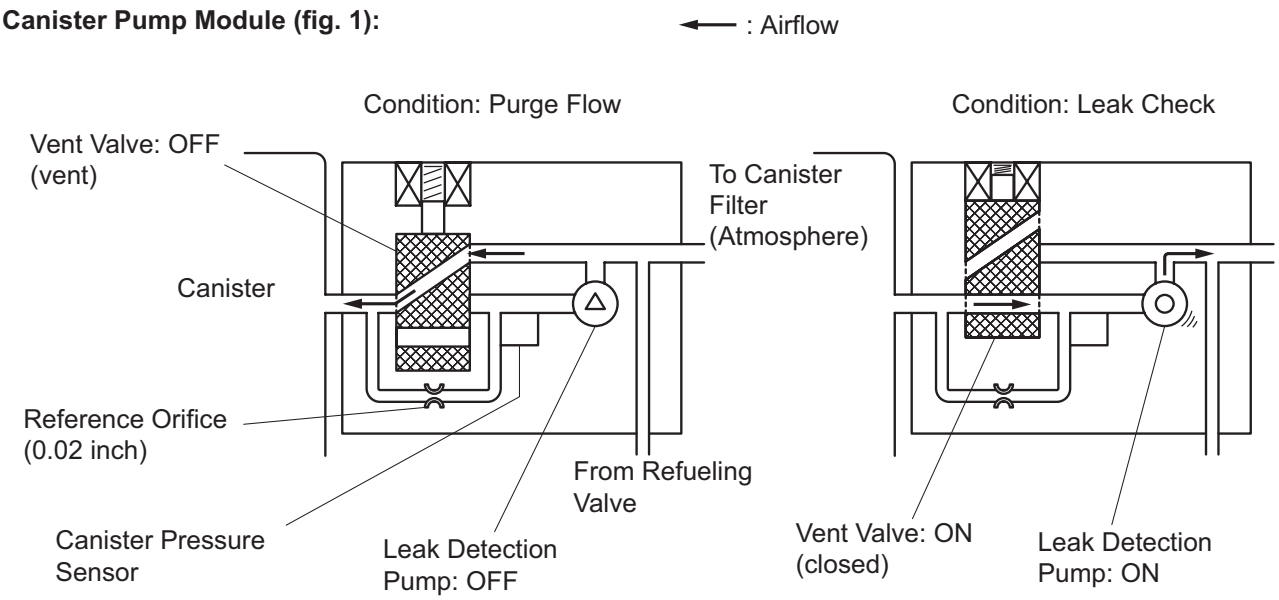
EVAP Purge Flow:



Components	Operations
Canister	Contains activated charcoal to absorb EVAP (Evaporative Emissions) generated in fuel tank.
Cut-off valve	Located in fuel tank. Valve floats and closes when fuel tank 100 % full.
Purge VSV (Vacuum Switching Valve)	Opens or closes line between canister and intake manifold. ECM uses purge VSV to control EVAP purge flow. In order to discharge EVAP absorbed by canister to intake manifold, ECM opens purge VSV. EVAP discharge volume to intake manifold controlled by purge VSV duty cycle ratio (current-carrying time) (Open: ON; Closed: OFF).
Refueling valve	Controls EVAP pressure from fuel tank to canister. Valve consists of diaphragm, spring and restrictor (diameter: 0.08 inch). When fuel vapor and pressure inside fuel tank increase, valve opens. While EVAP purged, valve closes and restrictor prevents large amount of vacuum from affecting pressure in fuel tank. Valve opened while refueling.
Roll-over valve	Located in fuel tank. Valve closed by its own weight when vehicle overturns to prevent fuel from spilling out.
Soak timer	Built into ECM. To ensure accurate EVAP monitor, measures 5 hours (+-15 min) after ignition switch turned off. This allows fuel to cool down, stabilizing EVAP pressure. When approximately 5 hours elapsed, ECM activates (refer to fig. 3).
Canister pump module	Consists of (a) to (d) below. Canister pump module cannot be disassembled.
(a) Vent valve	Vents and closes EVAP system. When ECM turns valve ON, EVAP system closed. When ECM turns valve OFF, EVAP system vented. Negative pressure (vacuum) created in EVAP system to check for EVAP leaks by closing purge VSV, turning on vent valve (closed) and operating leak detection pump (refer to fig. 1).
(b) Canister pressure sensor	Indicates pressure as voltages. ECM supplies regulated 5 V to canister pressure sensor, and uses feedback from sensor to monitor EVAP system pressure (refer to fig. 2).

Components	Operations
(c) Leak detection pump	Creates negative pressure (vacuum) in EVAP system for leak check.
(d) Reference orifice	Has opening with 0.02 inch diameter. Vacuum produced through orifice by closing purge VSV, turning off vent valve and operating leak detection pump, to monitor reference pressure. Reference pressure indicates small leak of EVAP.

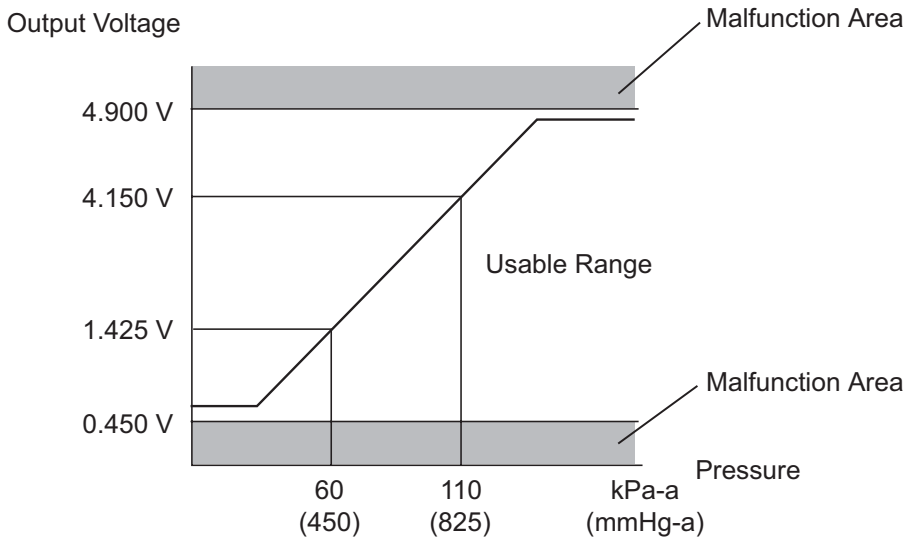
Canister Pump Module (fig. 1):



Y

A115902E04

Canister Pressure Sensor Specification (fig. 2):

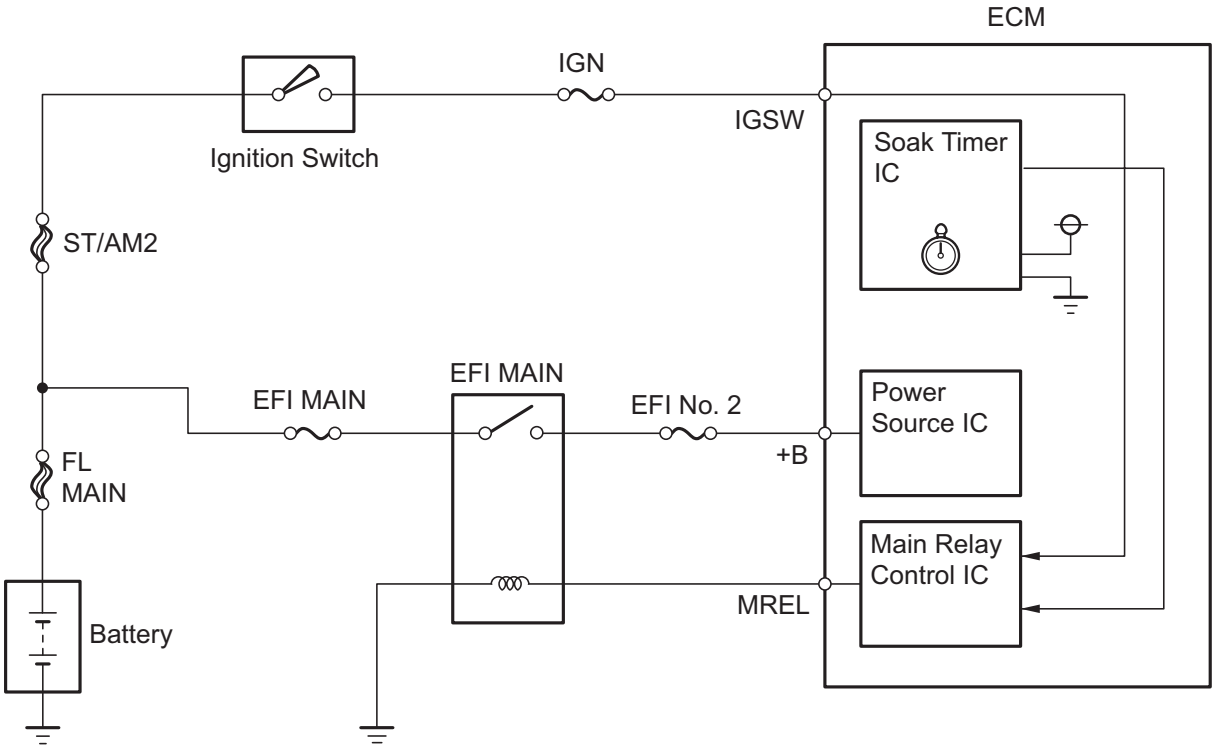


HINT:

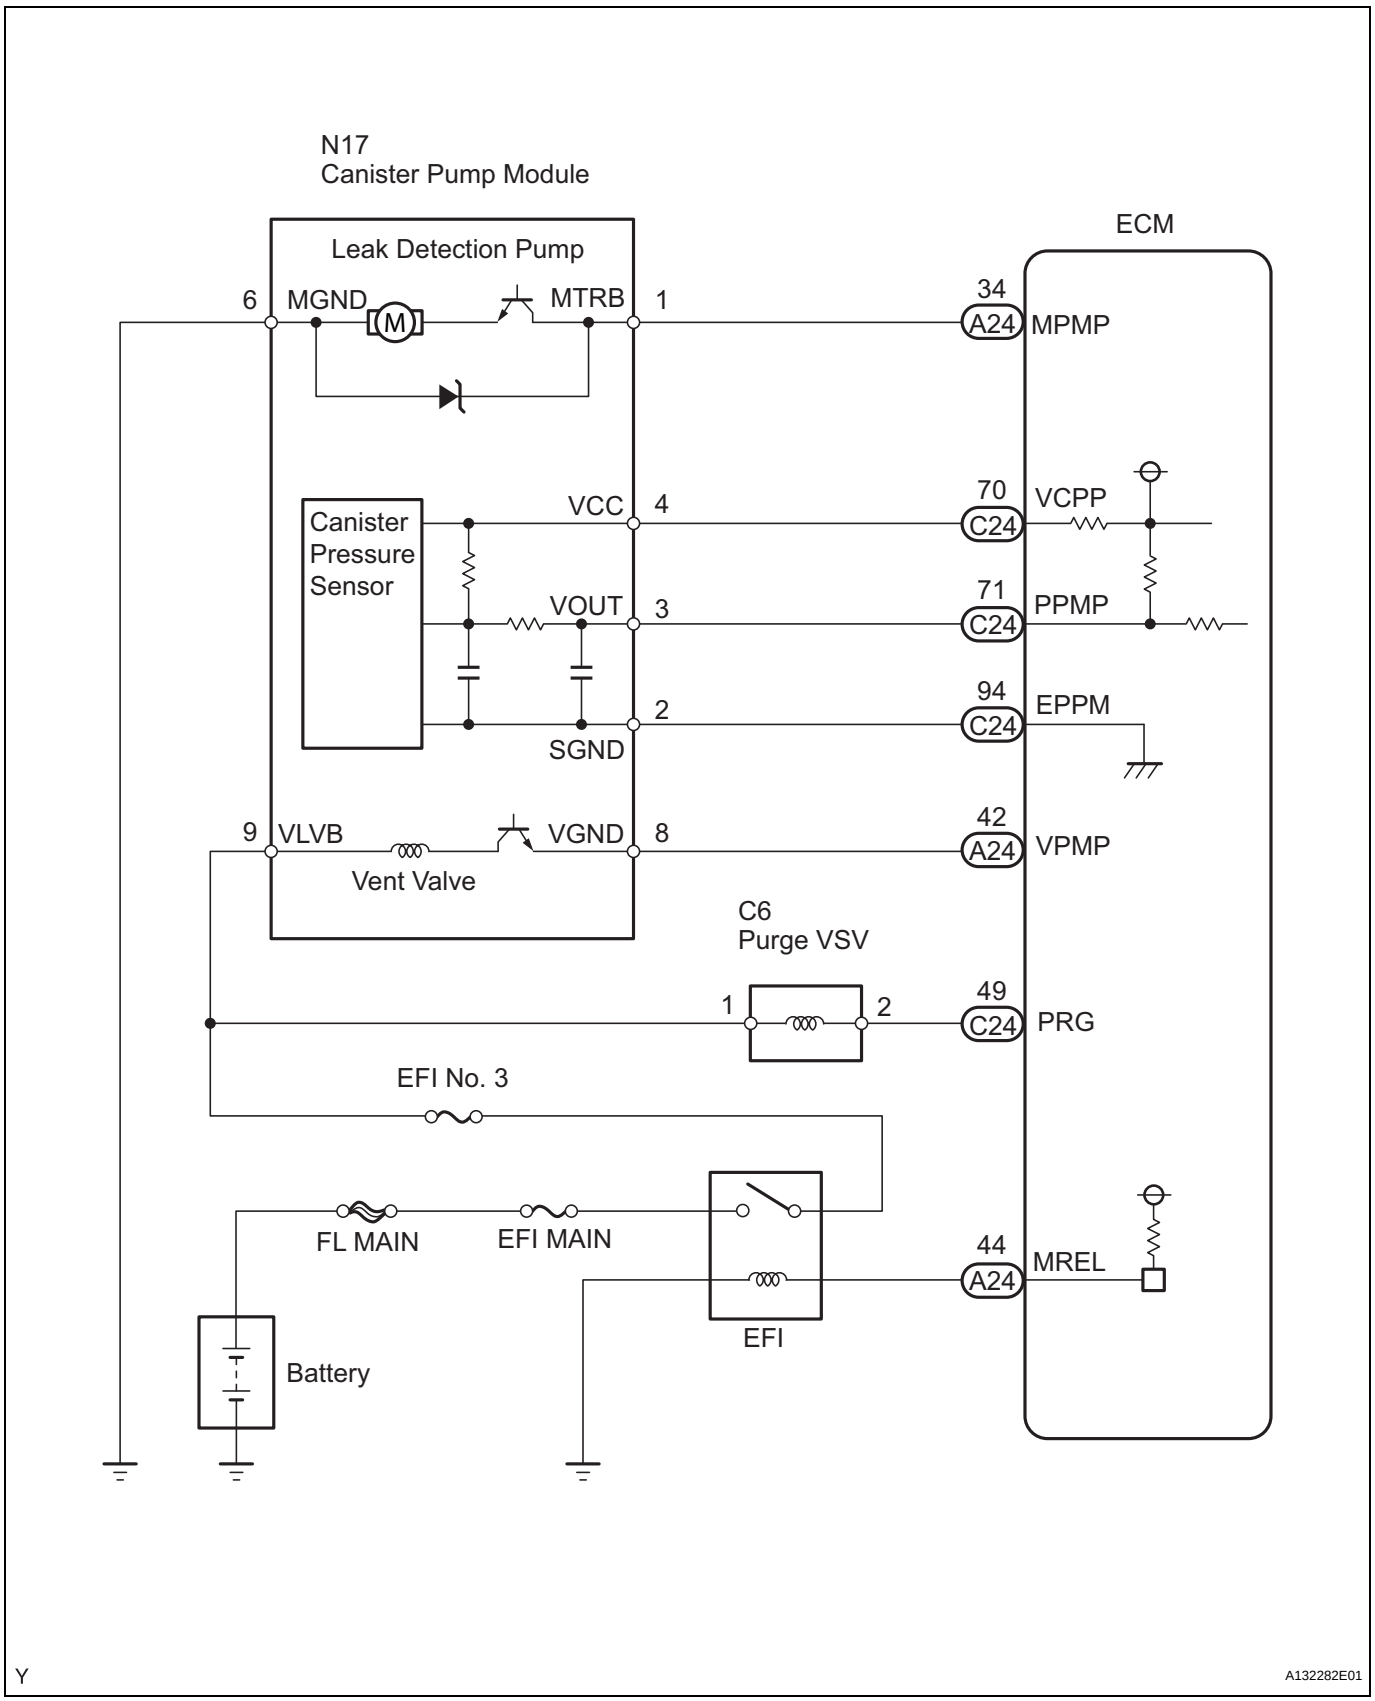
Standard atmospheric pressure is 101.3 kPa-a (760 mmHg-a)

A115543E06

Soak Timer Circuit (fig. 3):



WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

The intelligent tester is required to conduct the following diagnostic troubleshooting procedure.

HINT:

- Using intelligent tester monitor results enables the EVAP (Evaporative Emission) system to be confirmed.
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	**CONFIRM DTC**

(a) Turn the ignition switch off and wait for 10 seconds.
(b) Turn the ignition switch to the ON position.
(c) Turn the ignition switch off and wait for 10 seconds.
(d) Connect an intelligent tester to the DLC3.
(e) Turn the ignition switch to the ON position and turn the tester on.
(f) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(g) Confirm DTCs and freeze frame data.
If any EVAP system DTCs are set, the malfunctioning area can be determined using the table below.
NOTICE:
If the reference pressure difference between the first and second checks is greater than the specification, all the DTCs relating to the reference pressure (P043E, P043F, P2401, P2402 and P2419) are stored.

DTCs / Malfunctioning Areas	P043E P043F	P0441	P0450	P0451	P0452	P0453	P0455	P0456	P2401 P2402	P2419	P2420

2	PERFORM EVAP SYSTEM CHECK (AUTO OPERATION)

NOTICE:

- **The EVAP SYSTEM CHECK (AUTO OPERATION) consists of 5 steps performed automatically by the intelligent tester. It takes a maximum of approximately 18 minutes.**
- **Do not perform the EVAP SYSTEM CHECK when the fuel tank is more than 90% full because the cut-off valve may be closed, making the fuel tank leak check unavailable.**
- **Do not run the engine during this operation.**
- **When the temperature of the fuel is 35°C (95°F) or more, a large amount of vapor forms and any check results become inaccurate. When performing the EVAP SYSTEM CHECK, keep the temperature below 35°C (95°F).**

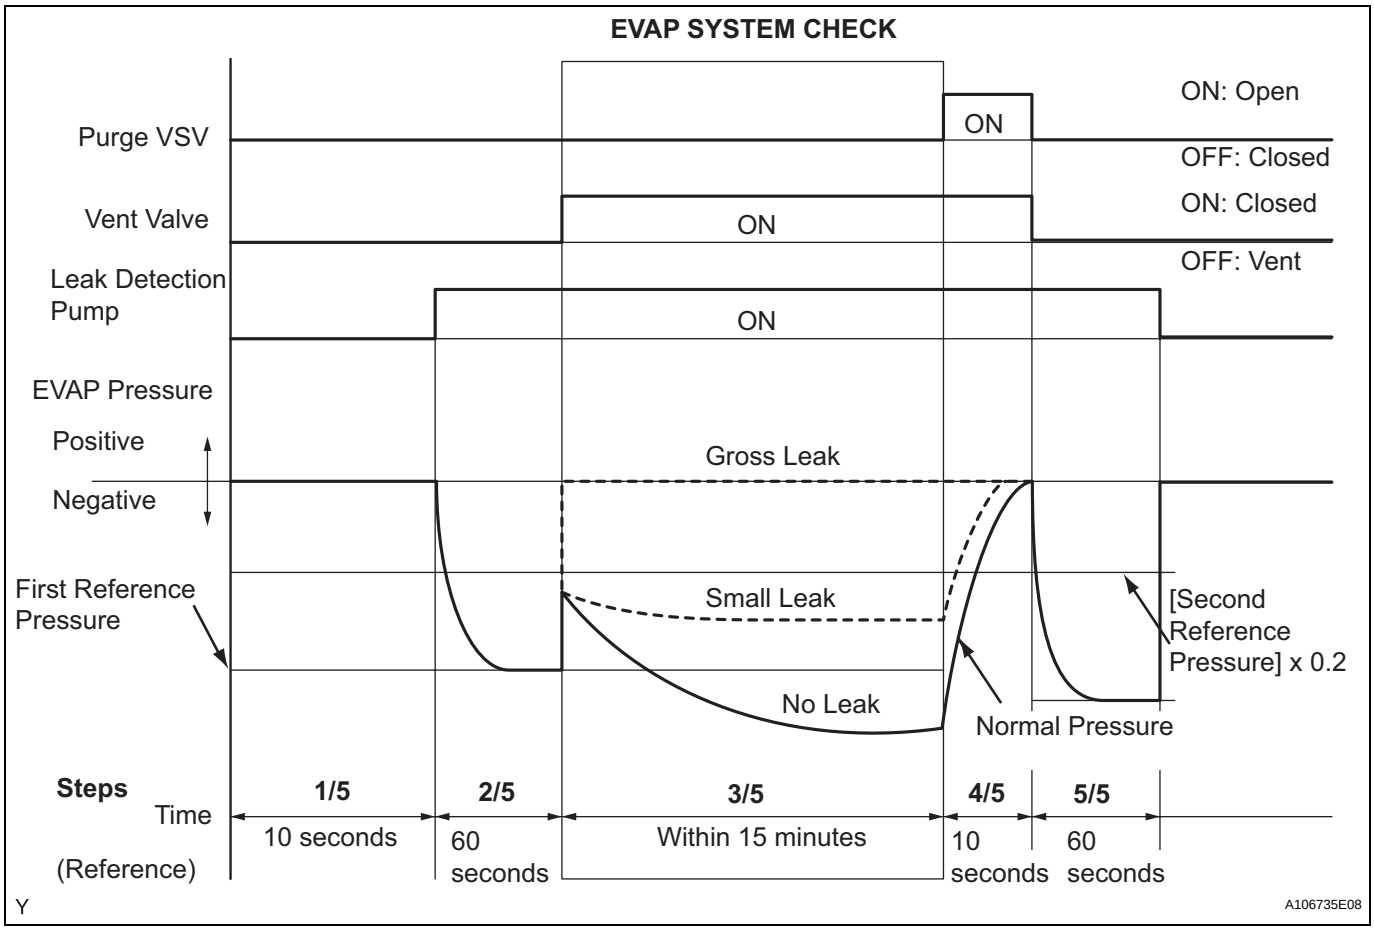
(a) Clear the DTCs (See page ES-38).

(b) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / SYSTEM CHECK / EVAP SYS CHECK / AUTO OPERATION.
(c) After the EVAP SYSTEM CHECK is completed, check for pending DTCs by selecting the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES.
HINT:
If no pending DTCs are displayed, perform MONITOR CONFIRMATION (see "Diagnostic Help" menu). After this confirmation, check for pending DTCs. If no DTCs are displayed, the EVAP system is normal.

ES

NEXT

3	PERFORM EVAP SYSTEM CHECK (MANUAL OPERATION)



NOTICE:

- **In the EVAP SYSTEM CHECK (MANUAL OPERATION), perform the series of 5 EVAP SYSTEM CHECK steps manually using the intelligent tester.**
- **Do not perform the EVAP SYSTEM CHECK when the fuel tank is more than 90% full because the cut-off valve may be closed, making the fuel tank leak check unavailable.**
- **Do not run the engine during this operation.**

- **When the temperature of the fuel is 35°C (95°F) or more, a large amount of vapor forms and any check results become inaccurate. When performing the EVAP SYSTEM CHECK, keep the temperature below 35°C (95°F).**

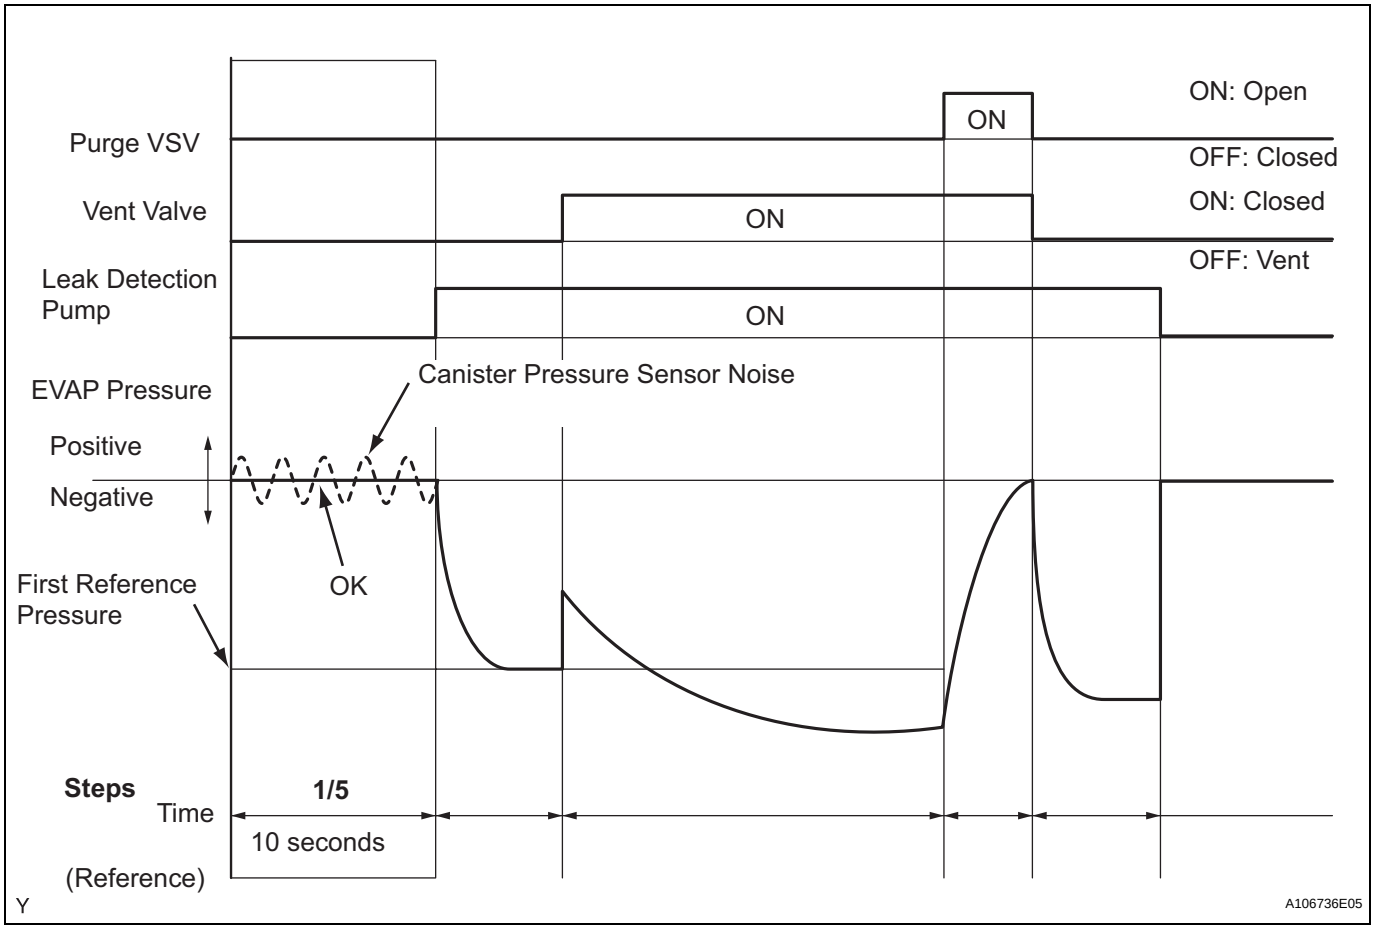
(a) Clear the DTCs (See page ES-38).

(b) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / SYSTEM CHECK / EVAP SYS CHECK / MANUAL OPERATION.

NEXT

4	PERFORM EVAP SYSTEM CHECK (STEP 1/5)

ES



(a) Check the EVAP pressure in step 1/5.

Result

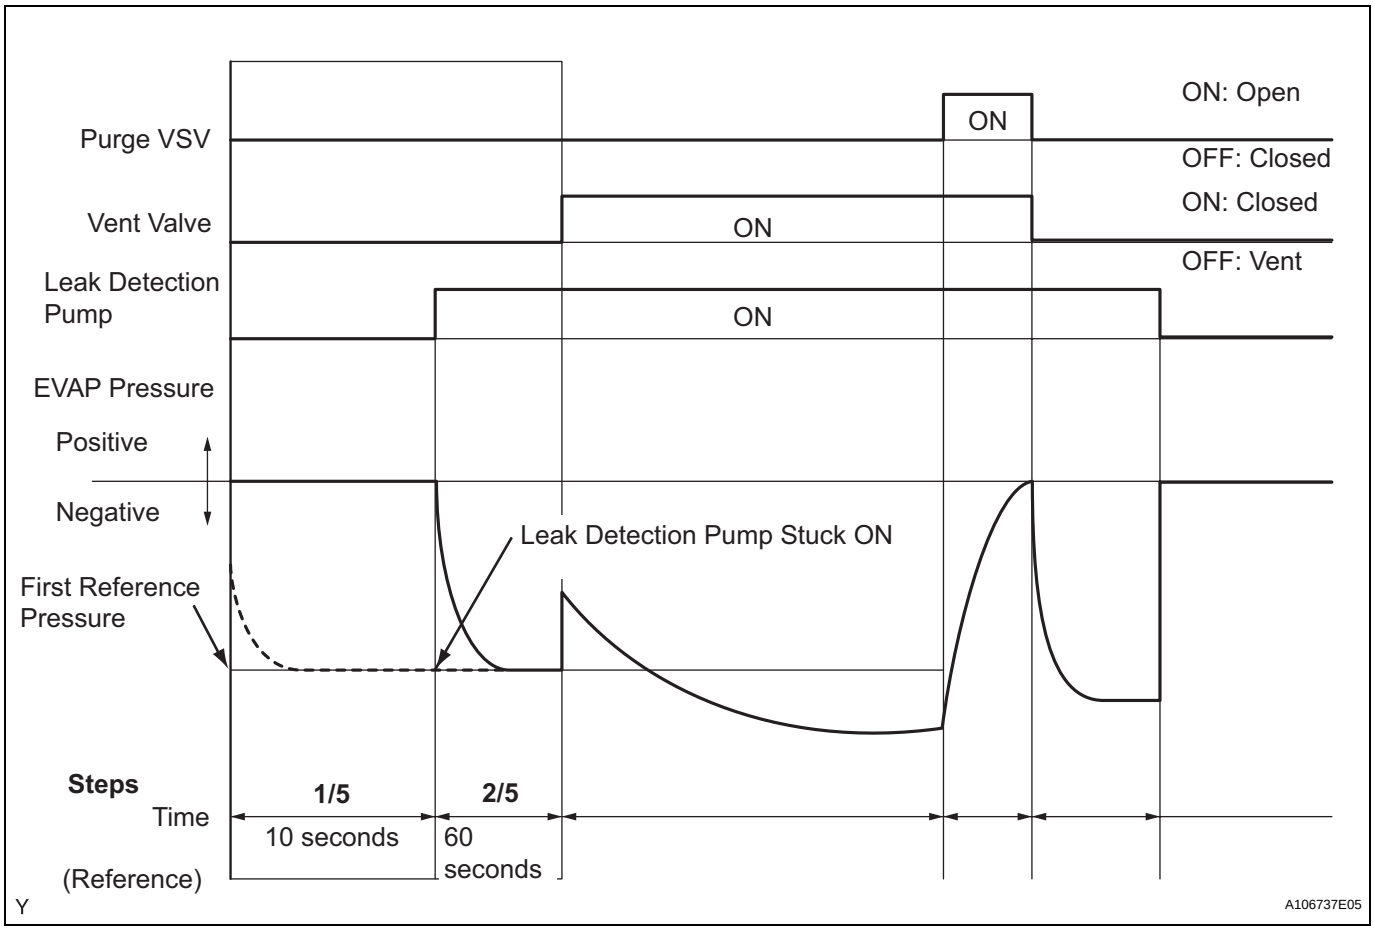
DTCs*	Test Result	Suspected Trouble Area	Proceed to
-	Virtually no variation in EVAP pressure	Not yet determined	A
P0451	EVAP pressure fluctuates by +-0.3 kPa-g (2.25 mmHg-g) or more	Canister pressure sensor noise	B

*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "CONFIRM DTC" procedures above.

B → **Go to step 29**

A

5	PERFORM EVAP SYSTEM CHECK (STEP 1/5 TO 2/5)



(a) Check the EVAP pressure in steps 1/5 and 2/5.

Result

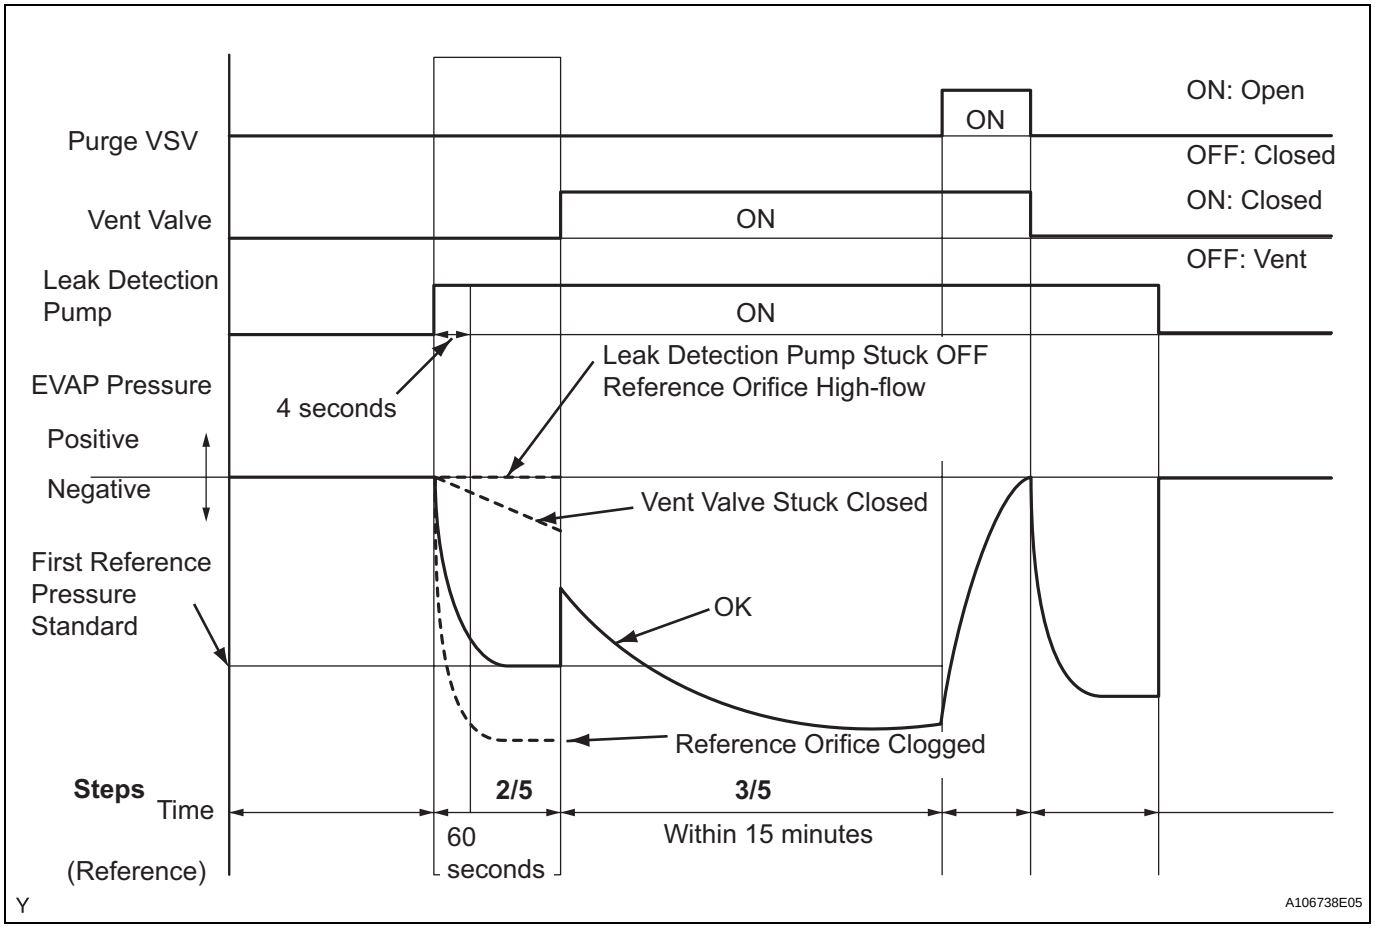
DTCs*	Test Results	Suspected Trouble Area	Proceed to
-	Virtually no variation in EVAP pressure during step 1/5. Then decreases to reference pressure	Not yet determined	A
P2402	Small difference between EVAP pressures during steps 1/5 and 2/5	Leak detection pump stuck ON	B

*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "CONFIRM DTC" procedures above.
HINT:
The first reference pressure is the value determined in step 2/5.

B → Go to step 22

A

6	PERFORM EVAP SYSTEM CHECK (STEP 2/5)



HINT:
Make a note of the pressures checked in steps (a) and (b) below.

(a) Check the EVAP pressure 4 seconds after the leak detection pump is activated*.
HINT:
*: The leak detection pump begins to operate as step 1/5 finishes and step 2/5 starts.

(b) Check the EVAP pressure again when it has stabilized. This pressure is the reference pressure.

Result

DTCs*	Test Result	Suspected Trouble Area	Proceed to
-	EVAP pressure in step (b) between -4.85 kPa-g and -1.057 kPa-g (-36.4 mmHg-g and -7.93 mmHg-g)	Not yet determined	A
P043F and P2401	EVAP pressure in step (b) -1.057 kPa-g (-7.93 mmHg-g) or more	• Reference orifice high-flow • Leak detection pump stuck OFF	B
P043E	EVAP pressure in step (b) below -4.85 kPa-g (-36.4 mmHg-g)	Reference orifice clogged	C
P2419	EVAP pressure in step (a) more than -1.057 kPa-g (-7.93 mmHg-g)	Vent valve stuck closed	D

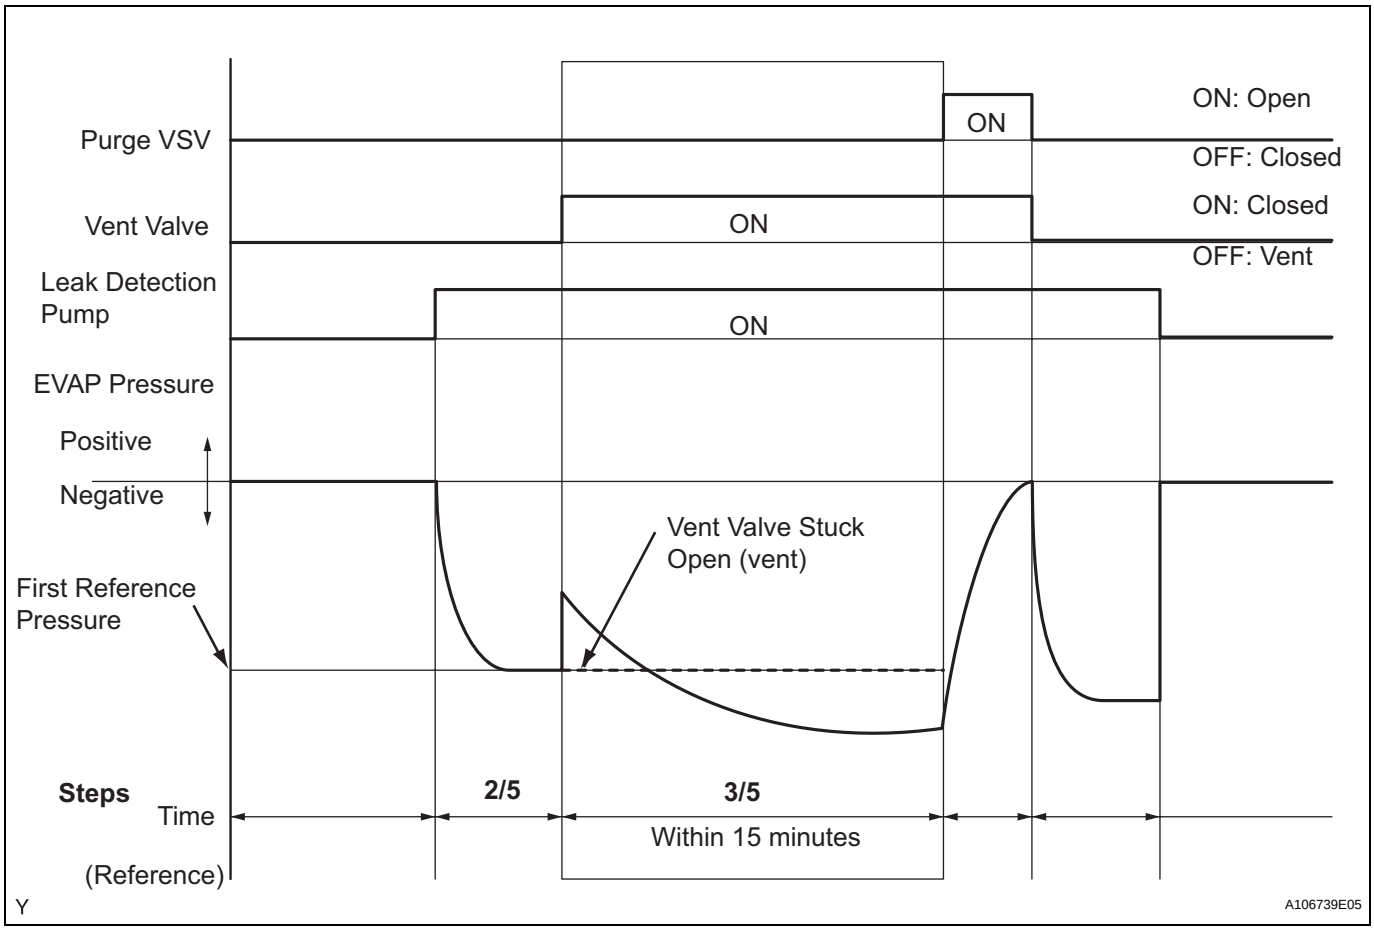
*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "CONFIRM DTC" procedures above.

B	Go to step 11
C	Go to step 29
D	Go to step 20

A

ES

7	PERFORM EVAP SYSTEM CHECK (STEP 2/5 TO 3/5)



(a) Check the EVAP pressure increases in step 3/5.

Result

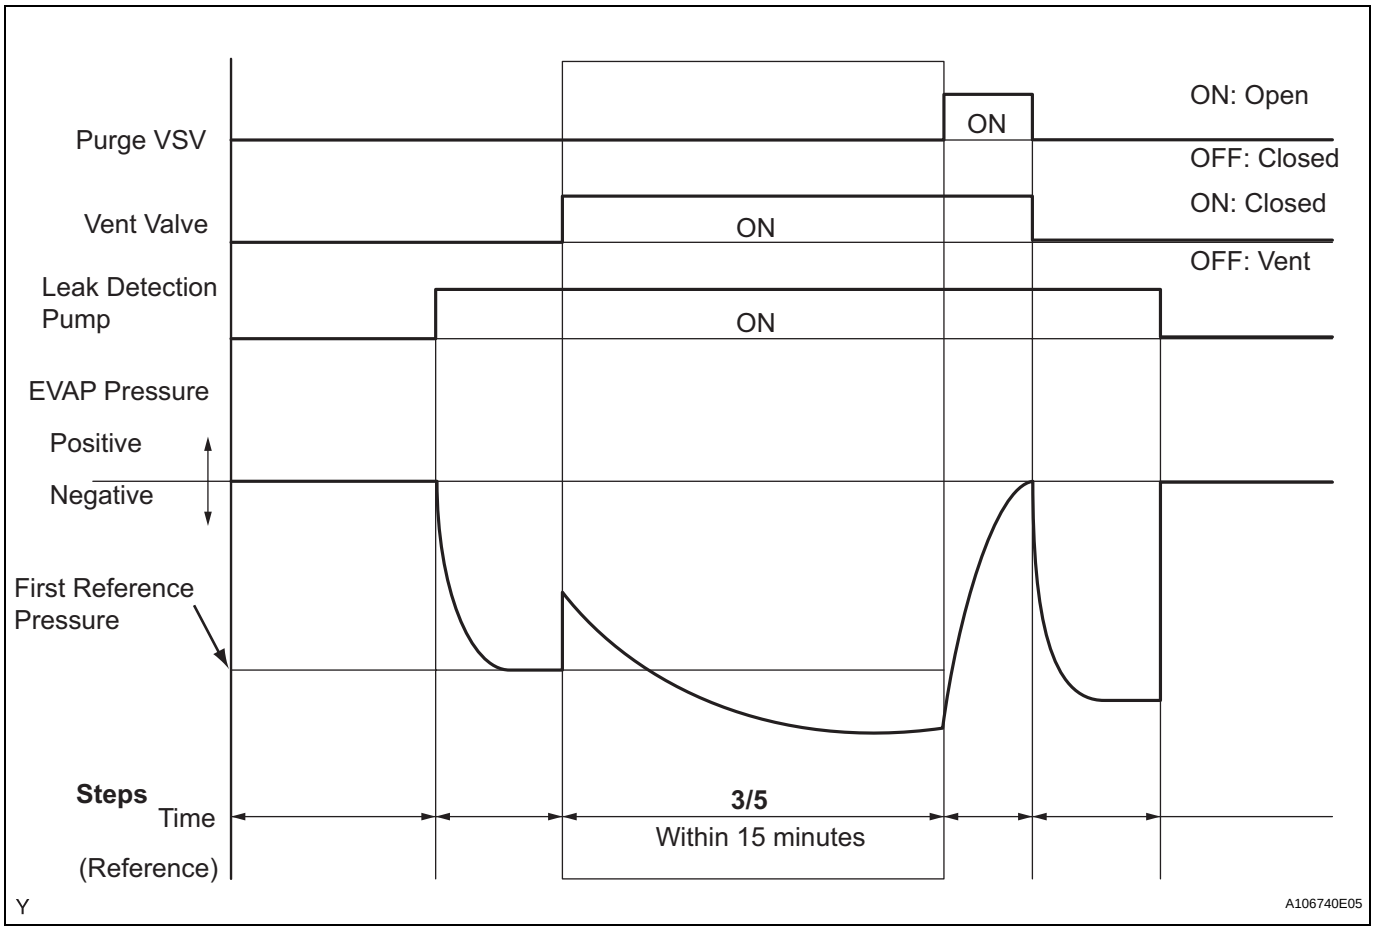
DTCs*	Test Result	Suspected Trouble Area	Proceed to
-	EVAP pressure increases by 0.3 kPa-g (2.25 mmHg-g) or more within 10 seconds of proceeding from step 2/5 to step 3/5	Not yet determined	A
P2420	No variation in EVAP pressure despite proceeding from step 2/5 to step 3/5	Vent valve stuck open (vent)	B
P0451	No variation in EVAP pressure during steps 1/5 through 3/5	Canister pressure sensor malfunction fixed	C

*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "CONFIRM DTC" procedures above.

B	Go to step 19
C	Go to step 29

A

8	PERFORM EVAP SYSTEM CHECK (STEP 3/5)

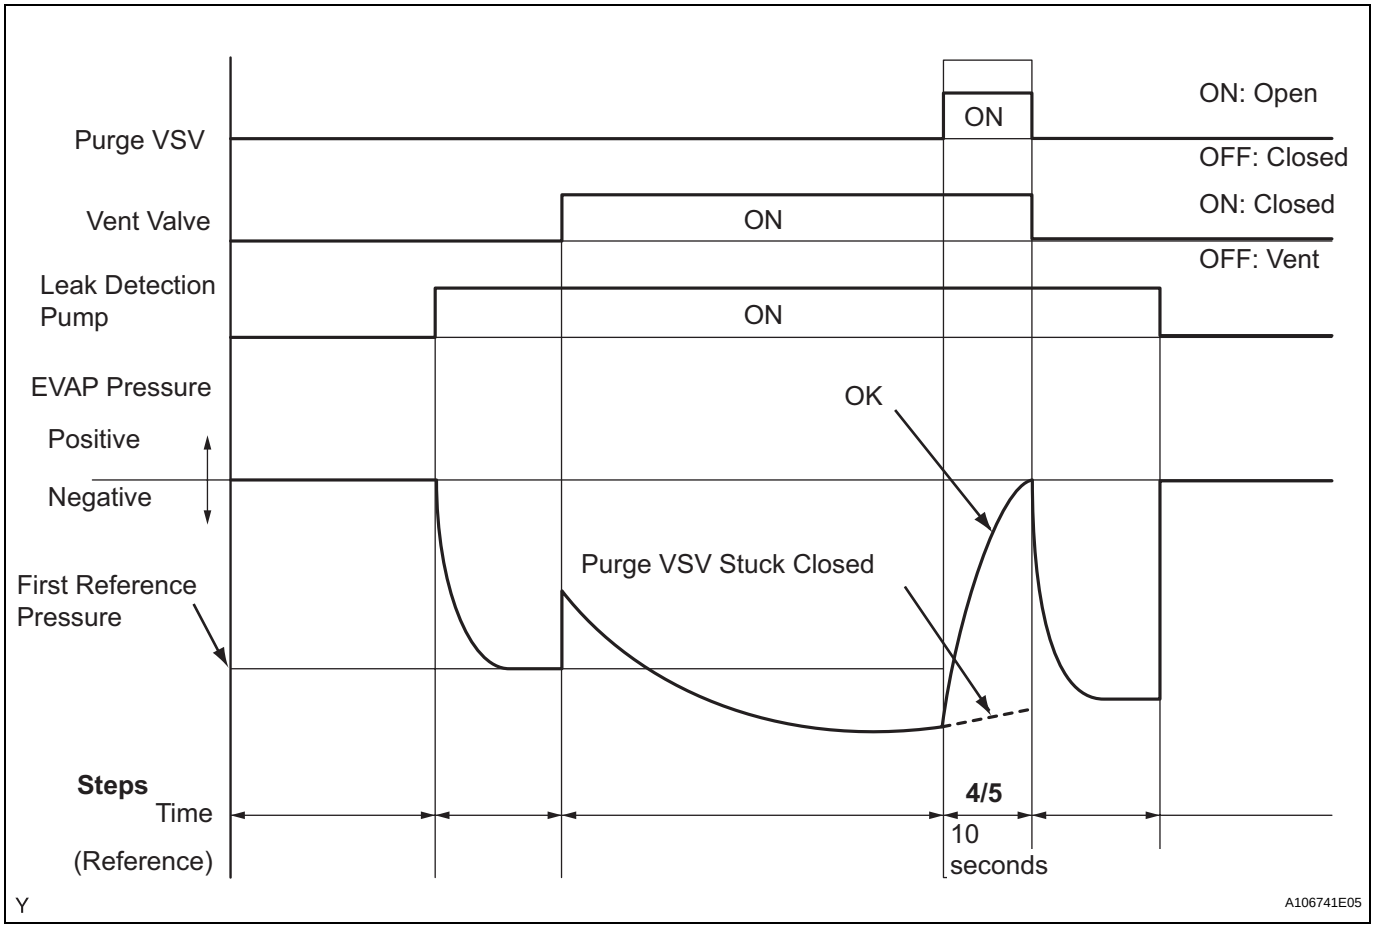


(a) Wait until the EVAP pressure change is less than 0.1 kPa-g (0.75 mmHg-g) for 30 seconds.
(b) Measure the EVAP pressure and record it.
HINT:
A few minutes are required for the EVAP pressure to become saturated. When there is little fuel in the fuel tank, it takes up to 15 minutes.

NEXT

ES

9	PERFORM EVAP SYSTEM CHECK (STEP 4/5)



(a) Check the EVAP pressure in step 4/5.

Result

DTCs*	Test Result	Suspected Trouble Area	Proceed to
-	EVAP pressure increases by 0.3 kPa-g (2.25 mmHg-g) or more within 10 seconds of proceeding from step 3/5 to step 4/5	Not yet determined	A
P0441	EVAP pressure increases by 0.3 kPa-g (2.25 mmHg-g) or more within 10 seconds of proceeding from step 3/5 to step 4/5	Problems in EVAP hose between purge VSV and intake manifold	B
P0441	Variation in EVAP pressure less than 0.3 kPa-g (2.25 mmHg-g) for 10 seconds, after proceeding from step 3/5 to step 4/5	Purge VSV stuck closed	C

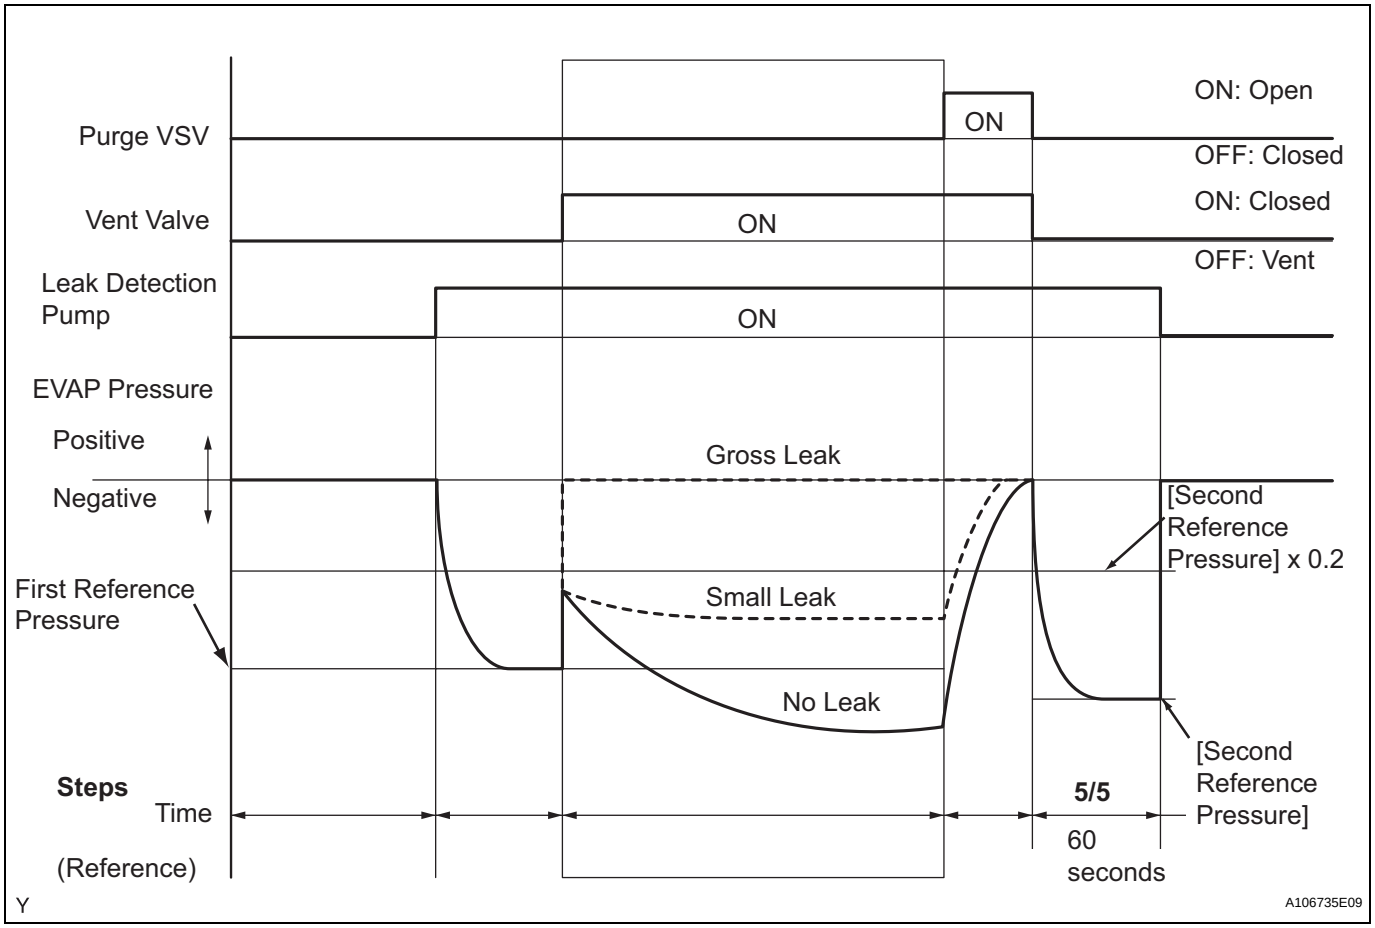
*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "CONFIRM DTC" procedures above.

B → Go to step 15

C → Go to step 12

A

10	PERFORM EVAP SYSTEM CHECK (STEP 5/5)



(a) Check the EVAP pressure in step 5/5.
(b) Compare the EVAP pressure in step 3/5 and the second reference pressure (step 5/5).

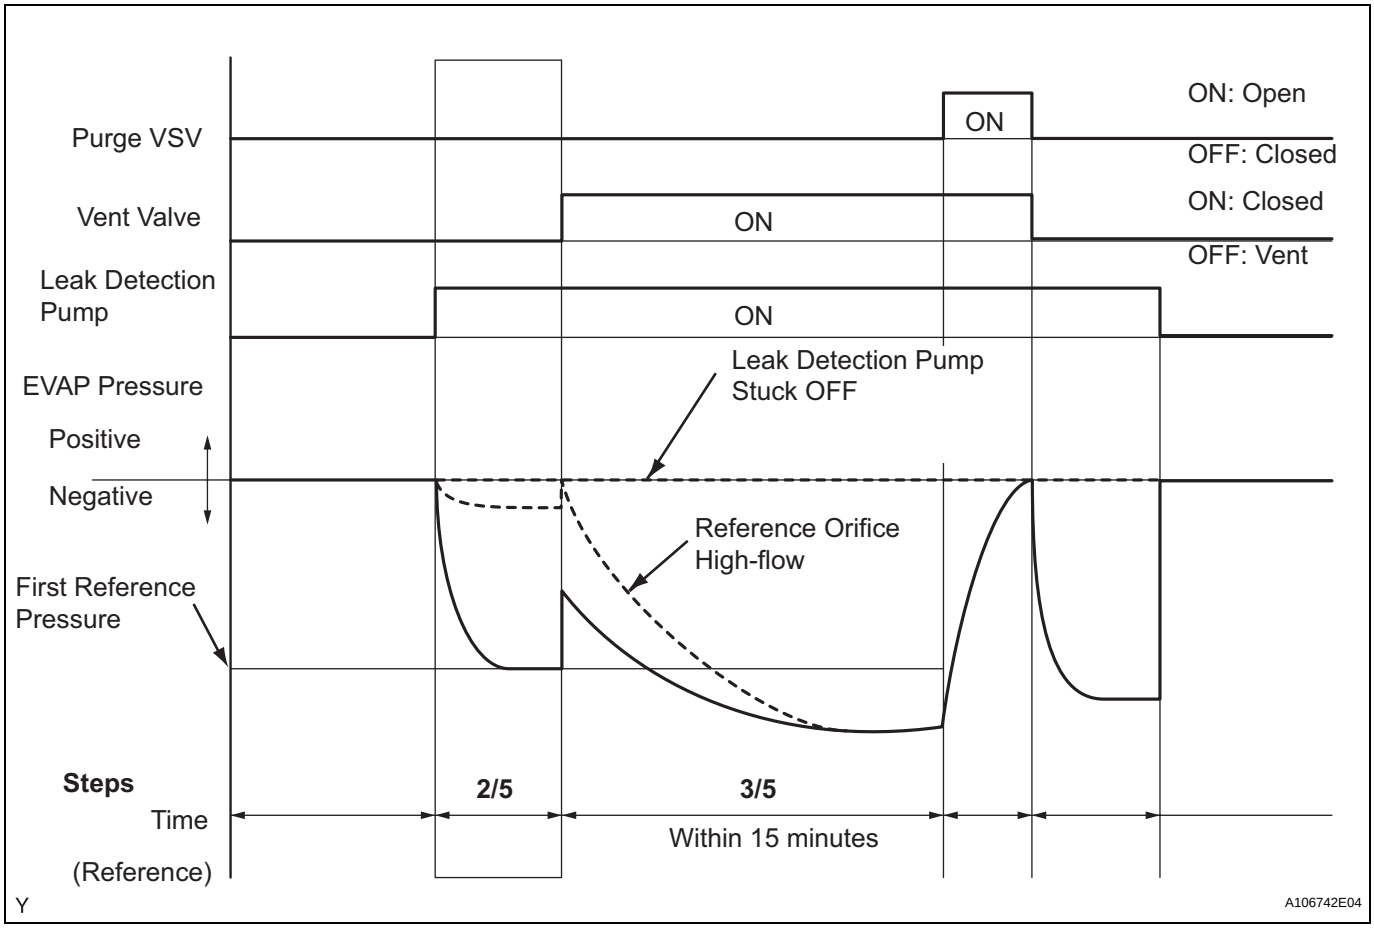
Result

DTCs*	Test Result	Suspected Trouble Area	Proceed to
-	EVAP pressure (step 3/5) lower than second reference pressure (step 5/5)	Not yet determined (no leakage from EVAP system)	A
P0441 and P0455	EVAP pressure (step 3/5) higher than [second reference pressure (step 5/5) x 0.2]	• Purge VSV stuck open • EVAP gross leak	B
P0456	EVAP pressure (step 3/5) higher than second reference pressure (step 5/5)	EVAP small leak	B

*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "CONFIRM DTC" procedures above.

A	Go to step 35
B	Go to step 12

11	PERFORM EVAP SYSTEM CHECK (STEP 3/5)



(a) Check the EVAP pressure in step 3/5.

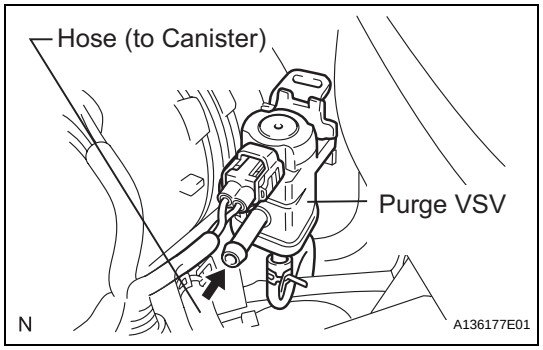
Result

DTCs*	Test Result	Suspected Trouble Area	Proceed to
P043F	EVAP pressure less than [reference pressure] measured at 2/5	Reference orifice high-flow	A
P2401	EVAP pressure almost same as [reference pressure] measured at 2/5	Leak detection pump stuck OFF	B

*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "CONFIRM DTC" procedures above.
HINT:
The first reference pressure is the value determined in step 2/5.

A	Go to step 29
B	Go to step 22

12 PERFORM ACTIVE TEST USING INTELLIGENT TESTER (PURGE VSV)



(a) On the intelligent tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / EVAP VSV (ALONE).
(b) Disconnect the hose (connected to the canister) from the purge VSV.
(c) Start the engine.
(d) Using the tester, turn off the purge VSV (EVAP VSV: OFF).
(e) Use your finger to confirm that the purge VSV has no suction.
(f) Using the tester, turn on the purge VSV (EVAP VSV: ON).
(g) Use your finger to confirm that the purge VSV has suction.

ES

Result

Test Result	Suspected Trouble Area	Proceed to
No suction when purge VSV turned OFF, and suction applied when turned ON	Purge VSV normal	A
Suction applied when purge VSV turned OFF	Purge VSV stuck open	B
No suction when purge VSV turned ON	• Purge VSV stuck closed • Problems with EVAP hose between purge VSV and intake manifold	C

(h) Reconnect the hose.

B → **Go to step 14**

C → **Go to step 15**

A

13 CHECK FUEL CAP

(a) Check that the fuel cap is correctly installed and confirm the fuel cap meets OEM specifications.
(b) Tighten the fuel cap until a few click sounds are heard.
HINT:
If an EVAP tester is available, check the fuel cap using the tester.
1. Remove the fuel cap and install it onto a fuel cap adapter.
2. Connect an EVAP tester pump hose to the adapter, and pressurize the cap to 3.2 to 3.7 kPa (24 to 28 mmHg) using an EVAP tester pump.
3. Seal the adapter and wait for 2 minutes.
4. Check the pressure. If the pressure is 2 kPa (15 mmHg) or more, the fuel cap is normal.

Result

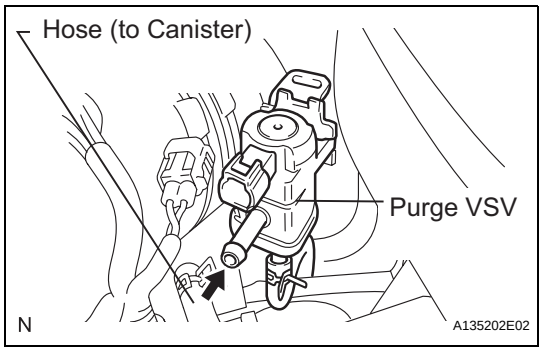
Test Result	Suspected Trouble Area	Proceed to
Fuel cap correctly installed	-	A

Test Result	Suspected Trouble Area	Proceed to
Fuel cap loose	• Fuel cap improperly installed • Defective fuel cap • Fuel cap does not meet OEM specifications	B
Defective fuel cap	-	B
No fuel cap	-	C

(c) Reinstall the fuel cap.

A	Go to step 28
B	Go to step 26
C	Go to step 27

14 INSPECT DUTY VACUUM SWITCHING VALVE (PURGE VSV)



(a) Turn the ignition switch off.
(b) Disconnect the C6 purge VSV connector.
(c) Disconnect the hose (connected to the canister) from the purge VSV.
(d) Start the engine.
(e) Use your finger to confirm that the purge VSV has no suction.

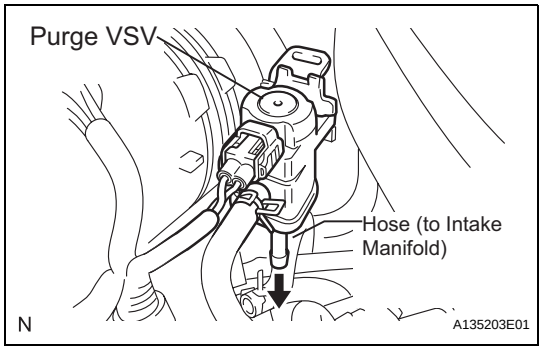
Result

Test Result	Suspected Trouble Area	Proceed to
No suction	ECM	A
Suction applied	Purge VSV	B

(f) Reconnect the purge VSV connector.
(g) Reconnect the hose.

A	Go to step 34
B	Go to step 30

15 CHECK EVAP HOSE (PURGE VSV - INTAKE MANIFOLD)



(a) Disconnect the hose (connected to the intake manifold) from the purge VSV.
(b) Start the engine.
(c) Use your finger to confirm that the hose has suction.

Result

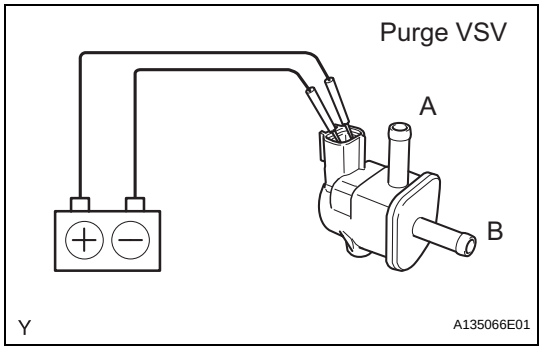
Test Result	Suspected Trouble Area	Proceed to
Suction applied	EVAP hose between purge VSV and intake manifold normal	A
No suction	• Intake manifold port • EVAP hose between purge VSV and intake manifold	B

(d) Reconnect the hose.

B → Go to step 25

A

16 INSPECT DUTY VACUUM SWITCHING VALVE (PURGE VSV)



(a) Remove the purge VSV.
(b) Apply the battery voltage to the terminals of the purge VSV.
(c) Using an air gun, confirm that air flows from port A to port B.

Result

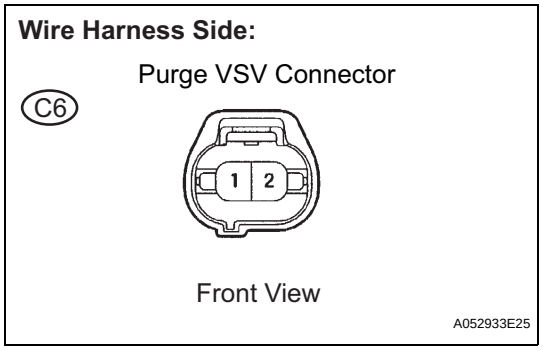
Test Result	Suspected Trouble Area	Proceed to
Air flows	Purge VSV normal	A
No air flow	Purge VSV	B

(d) Install the purge VSV.

B → Go to step 30

A

17 CHECK HARNESS AND CONNECTOR (POWER SOURCE OF PURGE VSV)



(a) Disconnect the C6 purge VSV connector.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage between terminal 1 of the purge VSV connector and body ground.

Result

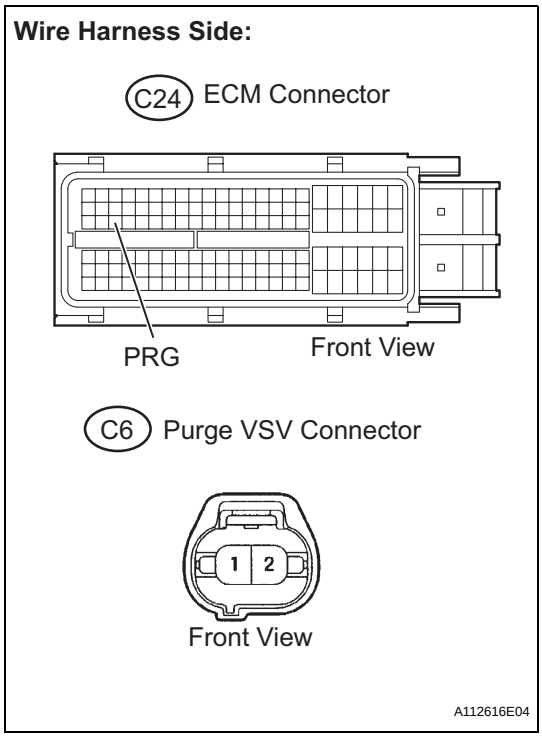
Test Result	Suspected Trouble Area	Proceed to
9 to 14 V	Normal	A
Other than result above	Wire harness or connectors between purge VSV and ECM	B

(d) Reconnect the purge VSV connector.

B	Go to step 31

A

18	CHECK HARNESS AND CONNECTOR (PURGE VSV - ECM)



(a) Disconnect the C24 ECM connector and the C6 purge VSV connector.
(b) Measure the resistance between the terminals of the wire harness side connectors.

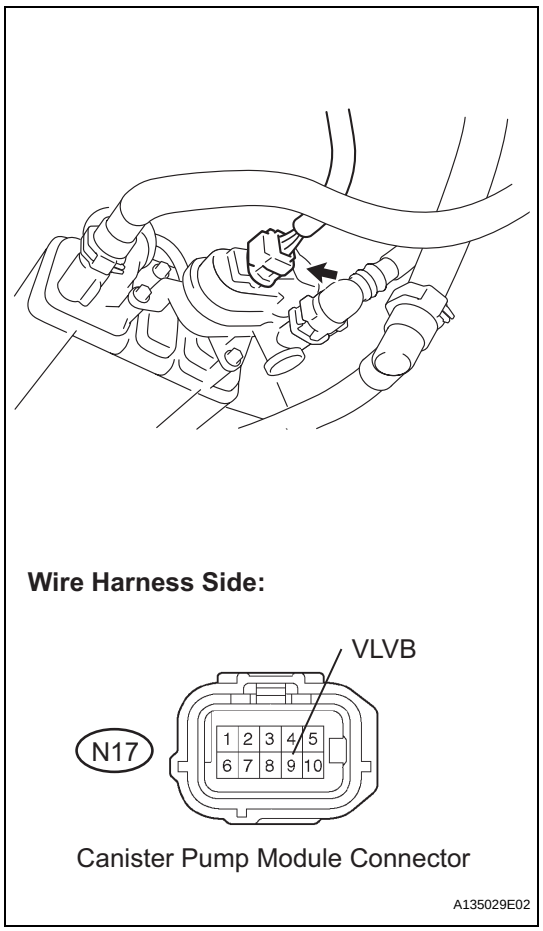
Standard resistance

Tester Connection	Specified Condition
C24-49 (PRG) - C6-2 (Purge VSV)	Below 1 Ω
C24-49 (PRG) - Body ground	10 kΩ or higher
C6-2 (Purge VSV) - Body ground	10 kΩ or higher

(c) Reconnect the purge VSV connector.
(d) Reconnect the ECM connector.

OK	Go to step 34
NG	Go to step 31

19	INSPECT CANISTER PUMP MODULE (POWER SOURCE FOR VENT VALVE)



(a) Turn the ignition switch off.
(b) Disconnect the N17 canister pump module connector.
(c) Turn the ignition switch to the ON position.
(d) Measure the voltage between the VLVB terminal of the canister pump module connector and body ground.

ES

Result

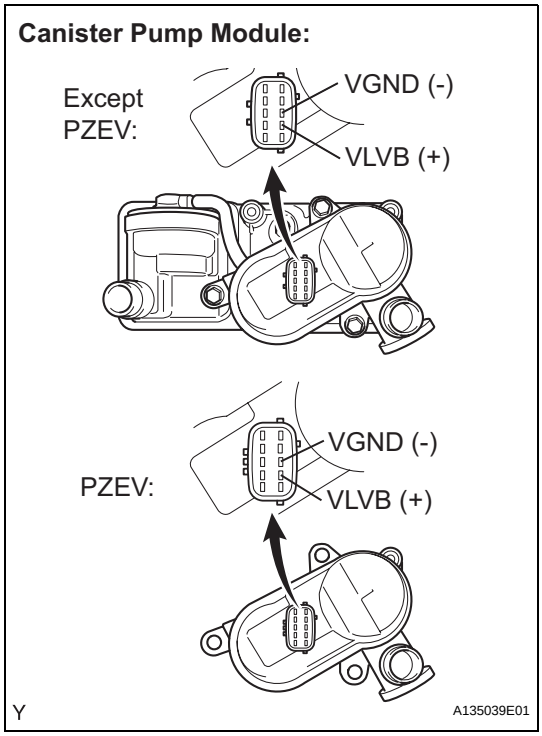
Test Result	Suspected Trouble Area	Proceed to
9 to 14 V	1. Wire harness between vent valve and ECM 2. Vent valve 3. ECM	A
Below 3 V	Power source wire harness of vent valve	B

(e) Reconnect the canister pump module connector.

B → Go to step 31

A

20	INSPECT CANISTER PUMP MODULE (VENT VALVE OPERATION)



(a) Turn the ignition switch off.
(b) Disconnect the N17 canister pump module connector.
(c) Apply the battery voltage to the VLVB and VGND terminals of the canister pump module.
(d) Touch the canister pump module to confirm the vent valve operation.

Result

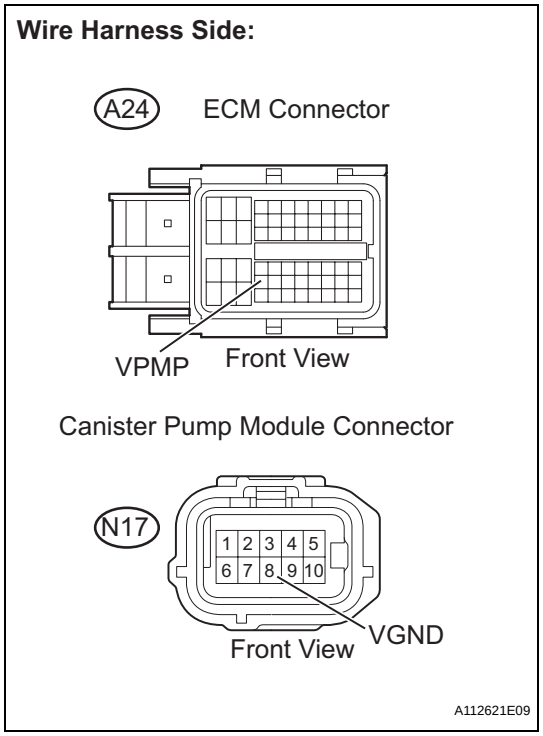
Test Result	Suspected Trouble Areat	Proceed to
Operating	1. Wire harness between vent valve and ECM 2. ECM	A
Not operating	Vent valve	B

(e) Reconnect the canister connector.

B → Go to step 29

A

21	CHECK HARNESS AND CONNECTOR (ECM - CANISTER PUMP MODULE)



(a) Disconnect the A24 ECM connector.
(b) Disconnect the N17 canister pump module connector.
(c) Measure the resistance between the VPMP terminal of the ECM connector and the VGND terminal of the canister pump module connector.

ES

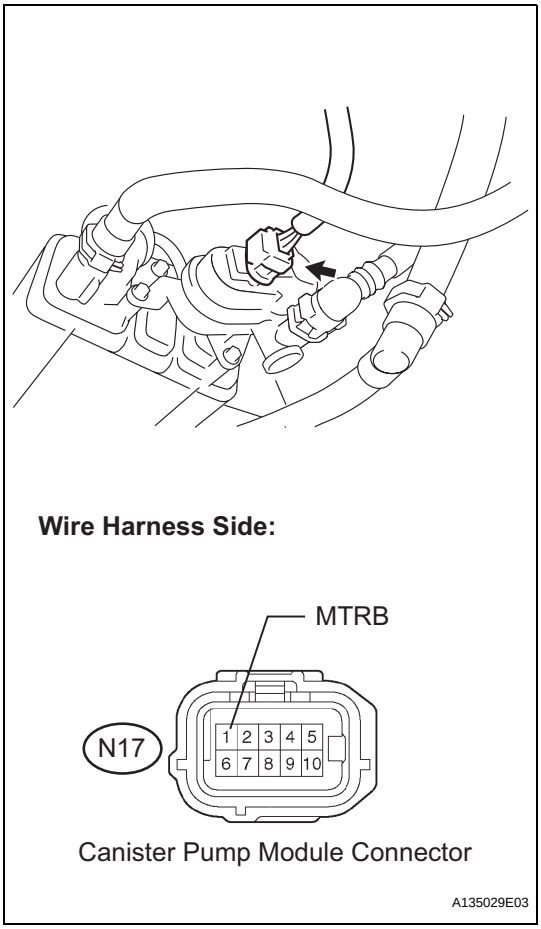
Result

Test Result	Suspected Trouble Area	Proceed to
Below 1 Ω	**ECM**	**A**
10 kΩ or higher	**Wire harness between ECM and canister pump module**	**B**

(d) Reconnect the ECM connector.
(e) Reconnect the canister pump module connector.

A	**Go to step 34**
B	**Go to step 31**

22	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (VACUUM PUMP (ALONE))



(a) Turn the ignition switch off.
(b) Disconnect the N17 canister pump module connector.
(c) Turn the ignition switch to the ON position.
(d) On the intelligent tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / VACUUM PUMP.
(e) Measure the voltage between MTRB terminal 1 of the canister pump module connector and body ground when the leak detection pump is turned ON and OFF using the tester.

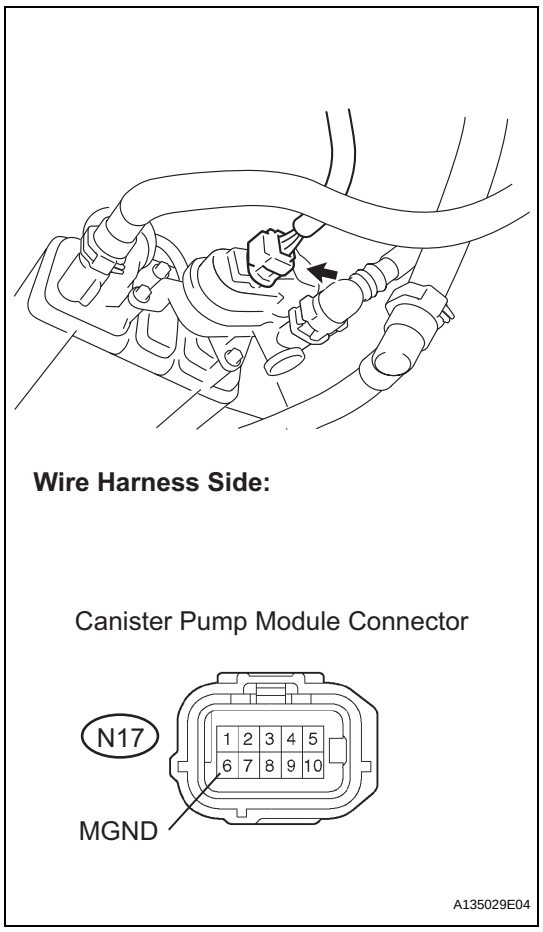
Result

Test Result	Suspected Trouble Area	Proceed to
Below 3 V when OFF 9 to 14 V when ON	1. Wire harness between leak detection pump and body ground 2. Leak detection pump	A
Below 3 V when OFF and ON	1. Wire harness between leak detection pump and ECM 2. ECM	B

B → Go to step 24

A

23	CHECK HARNESS AND CONNECTOR (CANISTER PUMP MODULE - BODY GROUND)



(a) Turn the ignition switch off.
(b) Disconnect the N17 canister pump module connector.
(c) Measure the resistance between the MGND terminal of the canister pump module connector and body ground.

ES

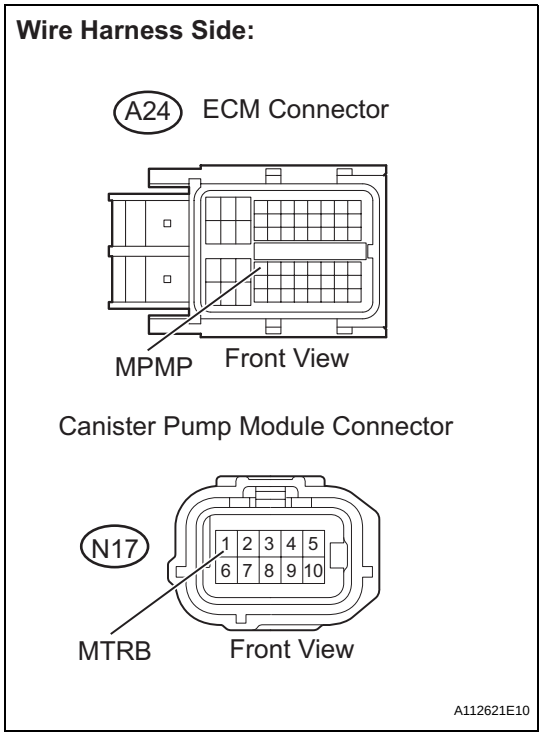
Result

Test Result	Suspected Trouble Area	Proceed to
Below 1 Ω	Leak detection pump	A
10 kΩ or higher	Wire harness between canister pump module and body ground	B

(d) Reconnect the canister pump module connector.

A	Go to step 29
B	Go to step 31

24 CHECK HARNESS AND CONNECTOR (ECM - CANISTER PUMP MODULE)



(a) Turn the ignition switch off.
(b) Disconnect the N17 canister pump module connector.
(c) Disconnect the A24 ECM connector.
(d) Measure the resistance between the MPMP terminal of the ECM connector and the MTRB terminal of the canister pump module connector.

Result

Test Result	Suspected Trouble Area	Proceed to
Below 1 Ω	ECM	A
10 kΩ or higher	Wire harness between ECM and canister pump module	B

(e) Reconnect the canister pump module connector.
(f) Reconnect the ECM connector.

A	Go to step 34
B	Go to step 31

25 INSPECT INTAKE MANIFOLD (EVAP PURGE PORT)

(a) Stop the engine.
(b) Disconnect the EVAP hose from the intake manifold.
(c) Start the engine.
(d) Use your finger to confirm that the port of the intake manifold has suction.

Result

Test Result	Suspected Trouble Area	Proceed to
Suction applied	EVAP hose between intake manifold and purge VSV	A
No suction	Intake manifold	B

(e) Reconnect the EVAP hose.

A	Go to step 32
B	Go to step 33

26	CORRECTLY REINSTALL OR REPLACE FUEL CAP

HINT:
- When reinstalling the fuel cap, tighten it until a few click sounds are heard.
- When replacing the fuel cap, use a fuel cap that meets OEM specifications.

NEXT	Go to step 36

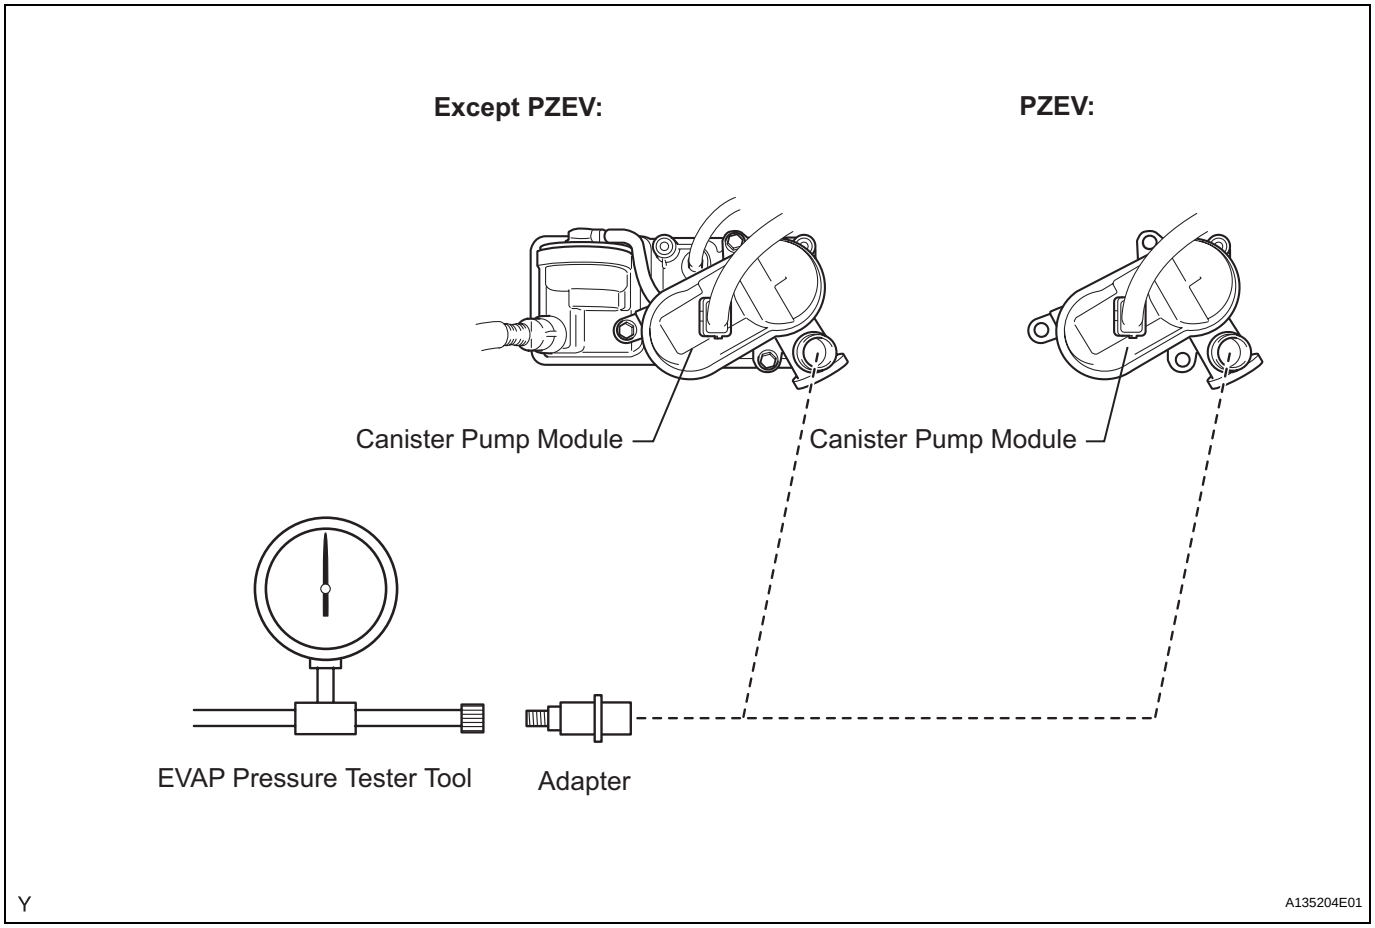
27	REPLACE FUEL CAP

ES

HINT:
When installing the fuel cap, tighten it until a few click sounds are heard.

NEXT	Go to step 36

28	LOCATE EVAP LEAK PART



(a) Disconnect the vent hose.
(b) Connect the EVAP pressure tester tool to the canister pump module with the adapter.

(c) Pressurize the EVAP system to 3.2 to 3.7 kPa (24 to 28 mmHg).
(d) Apply soapy water to the piping and connecting parts of the EVAP system.
(e) Look for areas where bubbles appear. This indicates the leak point.
(f) Repair or replace the leak point.
HINT:
Disconnect the hose between the canister and the fuel tank from the canister. Block the canister side and conduct an inspection. In this way, the fuel tank can be excluded as an area suspected of causing fuel leaks.

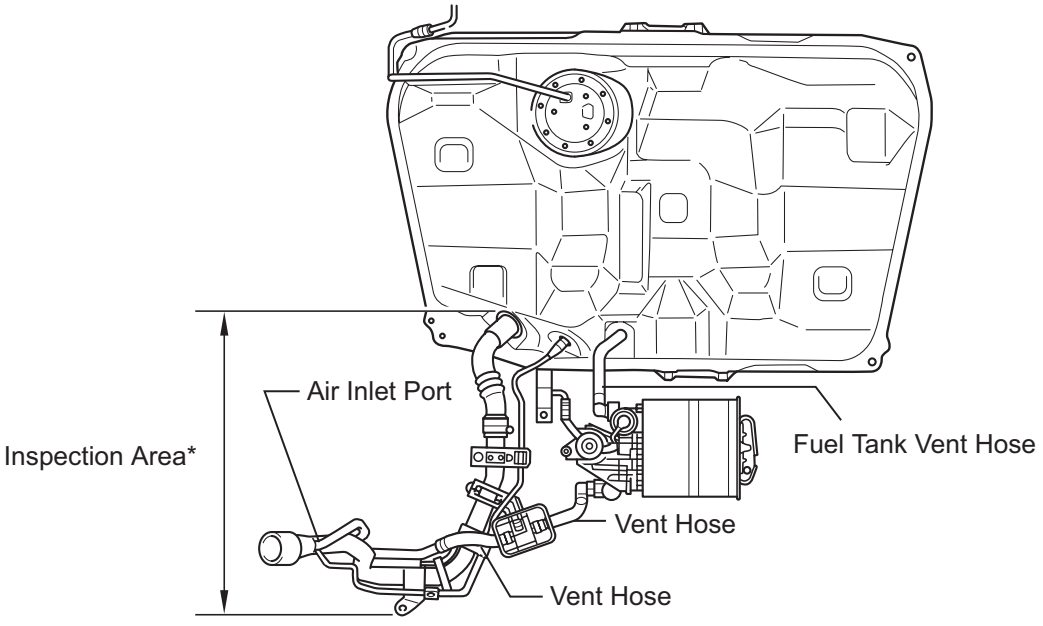
ES

NEXT → Go to step 36

29	REPLACE CHARCOAL CANISTER ASSEMBLY

(a) Replace the canister assembly (See page EC-9).
NOTICE:
When replacing the canister, check the canister pump module interior and related pipes for water, fuel and other liquids. If liquids are present, check for disconnections and/or cracks in the following: 1) the pipe from the air inlet port to the canister pump module; 2) the canister filter; and 3) the fuel tank vent hose.

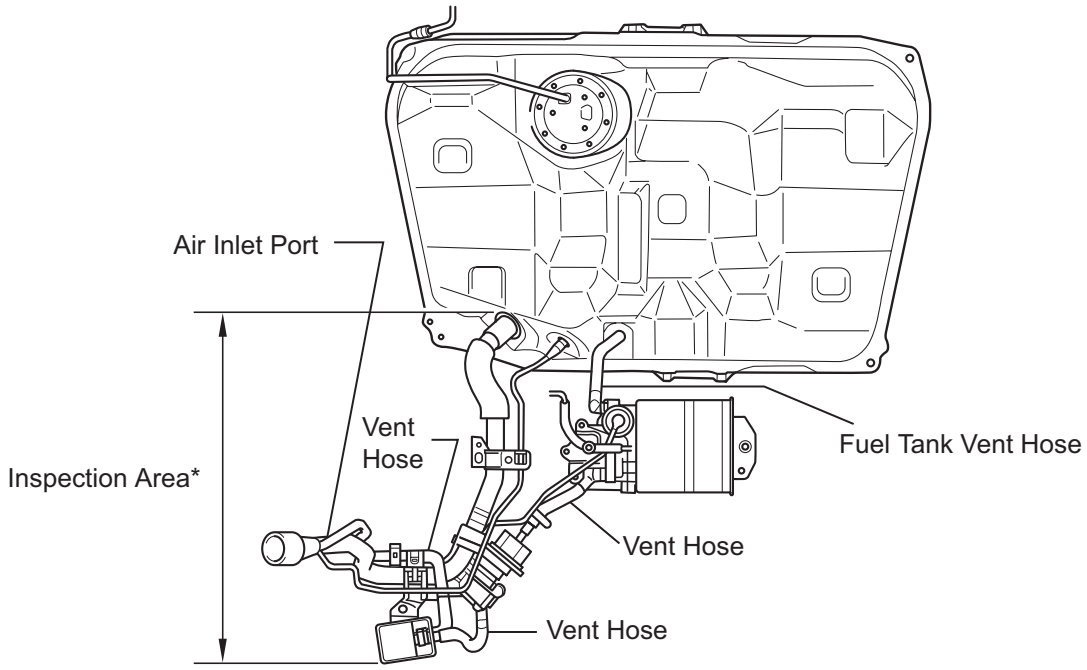
Except PZEV:



*: Check for disconnection and/or crack

N A132283E01

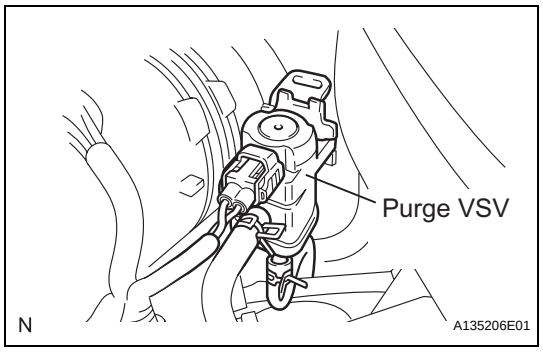
PZEV:



ES

NEXT → Go to step 36

30 REPLACE DUTY VACUUM SWITCHING VALVE (PURGE VSV)



(a) Disconnect the connector and the hoses from the purge VSV.
(b) Remove the purge VSV.
(c) Install a new purge VSV.
(d) Reconnect the connector and hoses.

NEXT → Go to step 36

31 REPAIR OR REPLACE HARNESS OR CONNECTOR

NEXT → Go to step 36

32 REPLACE EVAP HOSE (INTAKE MANIFOLD - PURGE VSV)

NEXT → Go to step 36

33	INSPECT INTAKE MANIFOLD (EVAP PURGE PORT)

(a) Check that the EVAP purge port of the intake manifold is not clogged. If necessary, replace the intake manifold.

NEXT → Go to step 36

34	REPLACE ECM

(a) Replace the ECM (See page ES-432).

NEXT → Go to step 36

35	REPAIR OR REPLACE PARTS AND COMPONENTS INDICATED BY OUTPUT DTCS

(a) Repair the malfunctioning areas indicated by the DTCs that had been confirmed when the vehicle was brought in.

NEXT → Go to step 36

36	PERFORM EVAP SYSTEM CHECK (AUTO OPERATION)

NOTICE:

- **The EVAP SYSTEM CHECK (AUTO OPERATION) consists of 5 steps performed automatically by the intelligent tester. It takes a maximum of approximately 18 minutes.**
- **Do not perform the EVAP SYSTEM CHECK when the fuel tank is more than 90% full because the cut-off valve may be closed, making the fuel tank leak check unavailable.**
- **Do not run the engine in this step.**
- **When the temperature of the fuel is 35°C (95°F) or more, a large amount of vapor forms and any check results become inaccurate. When performing an EVAP SYSTEM CHECK, keep the temperature below 35°C (95°F).**

(a) Clear the DTCs (See page ES-38).

(b) On the intelligent tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / SYSTEM CHECK / EVAP SYS CHECK / AUTO OPERATION.

(c) After the SYSTEM CHECK is completed, check for pending DTCs by selecting the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES.
HINT:
If no pending DTCs are found, the repair has been successfully completed.

NEXT

COMPLETED

CONFIRMATION DRIVING PATTERN

HINT:
After a repair, check Monitor Status by performing the Key-Off Monitor Confirmation and Purge Flow Monitor Confirmation described below.

1. KEY-OFF MONITOR CONFIRMATION

(a) Preconditions
The monitor will not run unless:
- The vehicle has been driven for 10 minutes or more (in a city area or on a freeway)
- The fuel tank is less than 90 % full
- The altitude is less than 8,000 ft (2,400 m)
- The Engine Coolant Temperature (ECT) is between 4.4°C and 35°C (40°F and 95°F)
- The Intake Air Temperature (IAT) is between 4.4°C and 35°C (40°F and 95°F)
- The vehicle remains stationary (the vehicle speed is 0 mph (0 km/h))

(b) Monitor Conditions
1. Allow the engine to idle for at least 5 minutes.
2. Turn the ignition switch off and wait for 6 hours (8 or 10.5 hours).
   HINT:
   Do not start the engine until checking MONITOR STATUS. If the engine is started, the steps described above must be repeated.

(c) Monitor Status
1. Connect the intelligent tester to the DLC3.
2. Turn the ignition switch to the ON position and turn the tester on.
3. Select the following menu items: DIAGNOSIS / ENHANCED OBD II / MONITOR STATUS.
4. Check the Monitor Status displayed on the tester.
   HINT:
   If INCMP is displayed, the monitor is not complete. Make sure that the preconditions have been met, and perform the Monitor Conditions again.

2. PURGE FLOW MONITOR CONFIRMATION (P0441)

HINT:
Perform this monitor confirmation after the Key-Off Monitor Confirmation shows COMPL (complete).

(a) Preconditions
The monitor will not run unless:
- The vehicle has been driven for 10 minutes or more (in a city area or on a freeway)
- The ECT is between 4.4°C and 35°C (40°F and 95°F)
- The IAT is between 4.4°C and 35°C (40°F and 95°F)

(b) Monitor Conditions
1. Release the pressure from the fuel tank by removing and reinstalling the fuel cap.
2. Warm the engine up until the ECT reaches more than 75°C (167°F).
3. Increase the engine speed to 3,000 rpm once.
4. Allow the engine to idle and turn A/C ON for 1 minute.

(c) Monitor Status
1. Turn the ignition switch off (if ON or the engine is running).
2. Connect the intelligent tester to the DLC3.
3. Turn the ignition switch to the ON position and turn the tester on.
4. Select the following menu items: DIAGNOSIS / ENHANCED OBD II / MONITOR STATUS.
5. Check the Monitor Status displayed on the tester.
   HINT:
   If INCMP is displayed, the monitor is not complete. Make sure that the preconditions have been met, and perform the Monitor Conditions again.

MONITOR RESULT

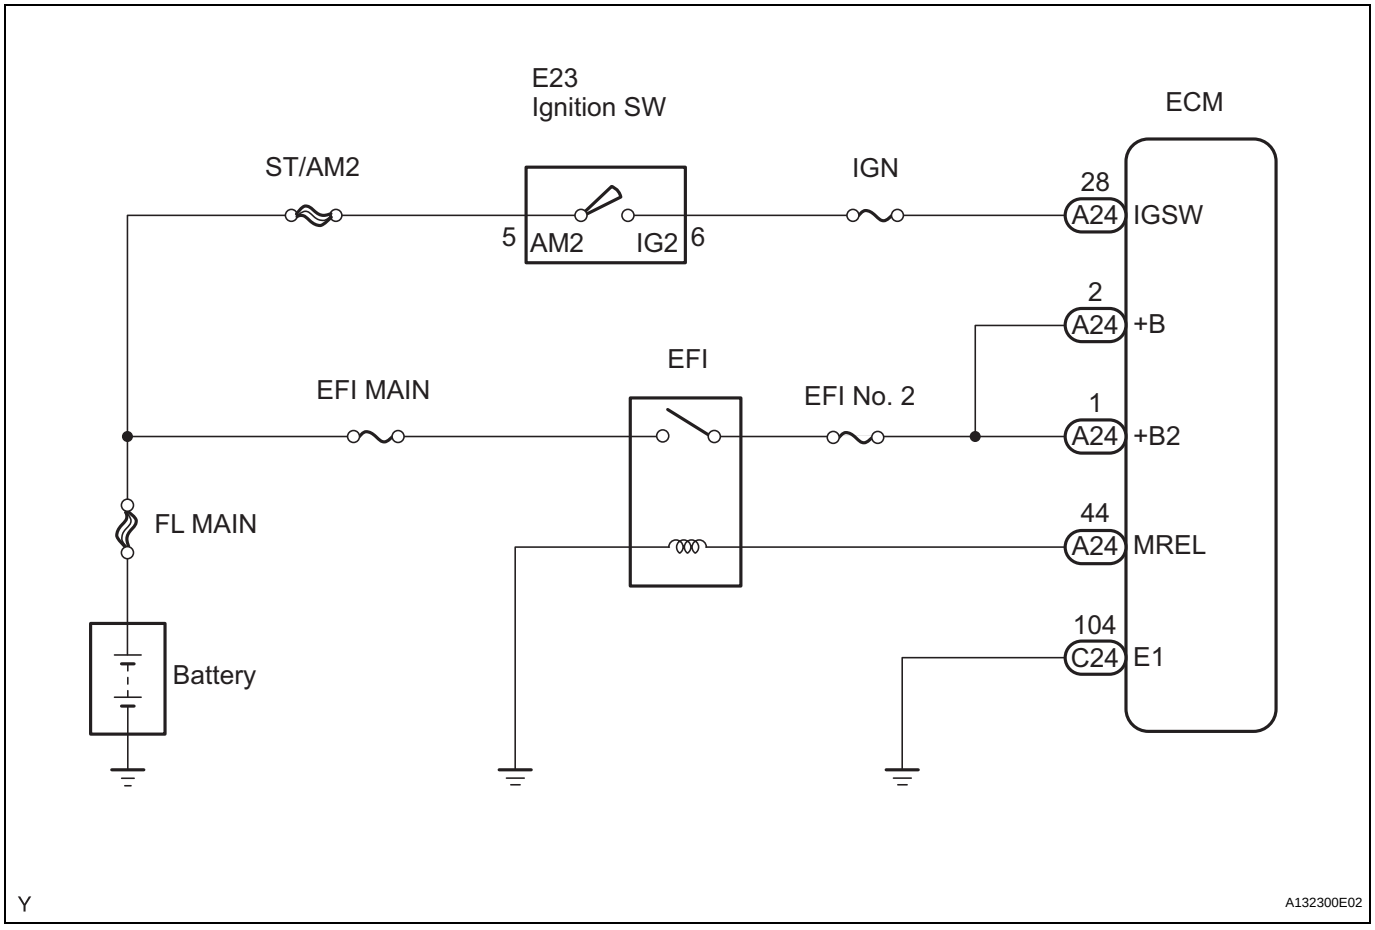
Refer to CHECKING MONITOR STATUS (See page ES-20).

ECM Power Source Circuit

DESCRIPTION

When the ignition switch is turned ON position, the battery voltage is applied to IGSW of the ECM. The output signal from the MREL terminal of the ECM causes a current to flow to the coil, closing the contacts of the engine room J/B (EFI relay) and supplying power to either terminal +B or +B2 of the ECM.

WIRING DIAGRAM

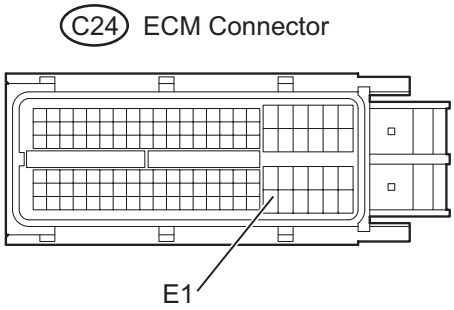


ES

INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR (ECM - BODY GROUND)

Wire Harness Side:



A107892E79

(a) Disconnect the C24 ECM connector.
(b) Measure the resistance.

Standard resistance

Tester Connection	Specified Condition
C24-104 (E1) - Body ground	Below 1 Ω

(c) Reconnect the ECM connector.

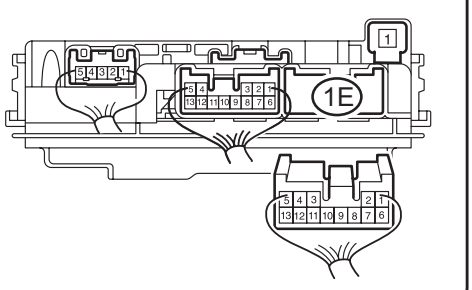
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

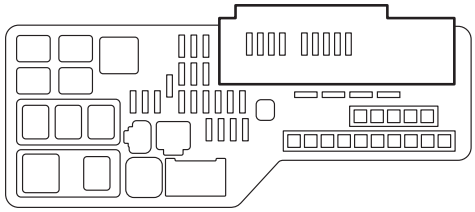
2	INSPECT ENGINE ROOM J/B (EFI RELAY VOLTAGE)

Engine Room J/B:

Connector Side:



Engine Room R/B:



A138922E01

(a) Remove the engine room J/B from the engine room R/B.
(b) Disconnect the 1E engine room J/B connector.
(c) Turn the ignition switch to the ON position.
(d) Measure the voltage between the terminals.

Standard voltage

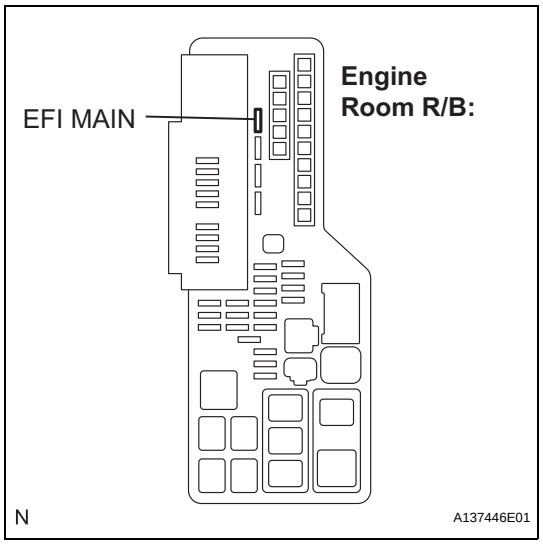
Tester Connection	Specified Condition
1E-12 - Body ground	9 to 14 V

(e) Reconnect the engine room J/B connector.
(f) Reinstall the engine room J/B.

OK → **Go to step 4**

NG

3	INSPECT FUSE (EFI MAIN FUSE)



(a) Inspect the EFI MAIN fuse.
  (1) Remove the EFI MAIN fuse from the engine room R/B.
  (2) Measure the EFI MAIN fuse resistance.
    Standard resistance:
    Below 1 Ω
  (3) Reinstall the EFI MAIN fuse.

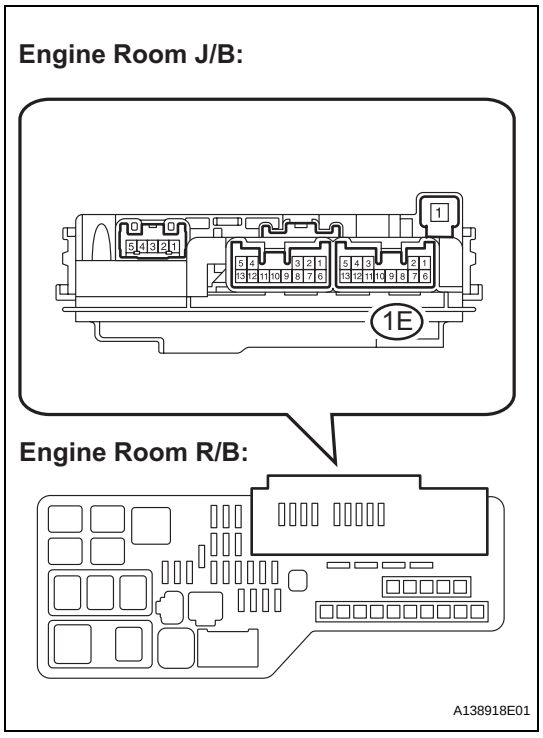
NG	REPLACE FUSE (EFI MAIN FUSE)

ES

OK

CHECK AND REPAIR HARNESS AND CONNECTOR (BATTERY - EFI RELAY)

4	INSPECT ENGINE ROOM J/B (EFI RELAY)



(a) Remove the engine room J/B from the engine room R/B.
(b) Inspect the EFI relay.
  (1) Measure the EFI relay resistance.
    Standard resistance

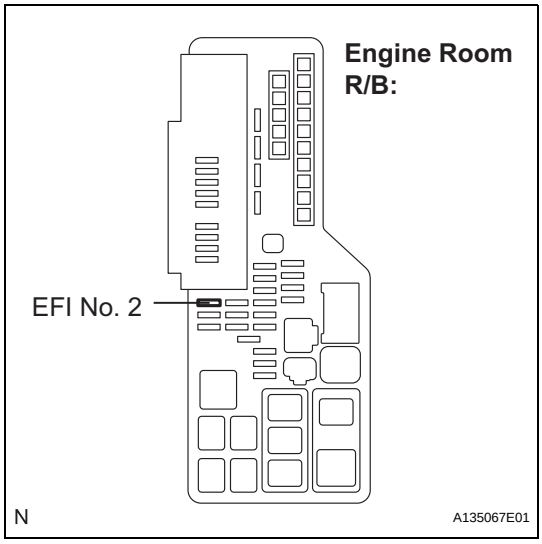
Tester Connection	Specified Condition
1E-6 - 1E-12	10 kΩ or higher
	Below 1 Ω (Apply battery voltage between terminals 1E-9 and 1E-11)

(c) Reinstall the engine room J/B.

NG	REPLACE ENGINE ROOM J/B

OK

5	INSPECT FUSE (EFI NO. 2 FUSE)



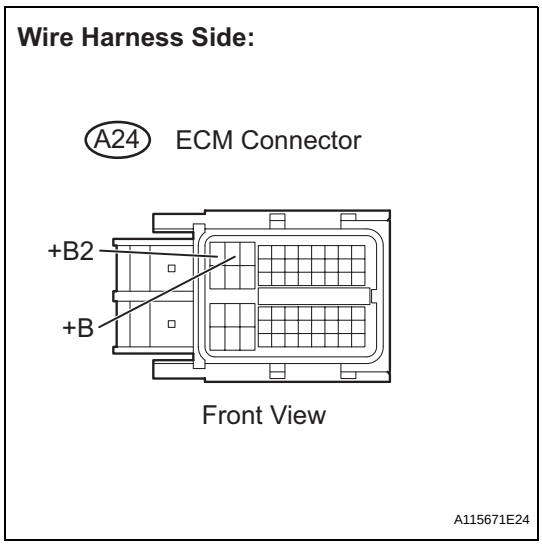
(a) Inspect the EFI No. 2 fuse.
  (1) Remove the EFI No. 2 fuse from the engine room R/B.
  (2) Measure the EFI No. 2 fuse resistance.
    Standard resistance:
      Below 1 Ω
  (3) Reinstall the EFI No. 2 fuse.

NG → **REPLACE FUSE (EFI NO. 2 FUSE)**

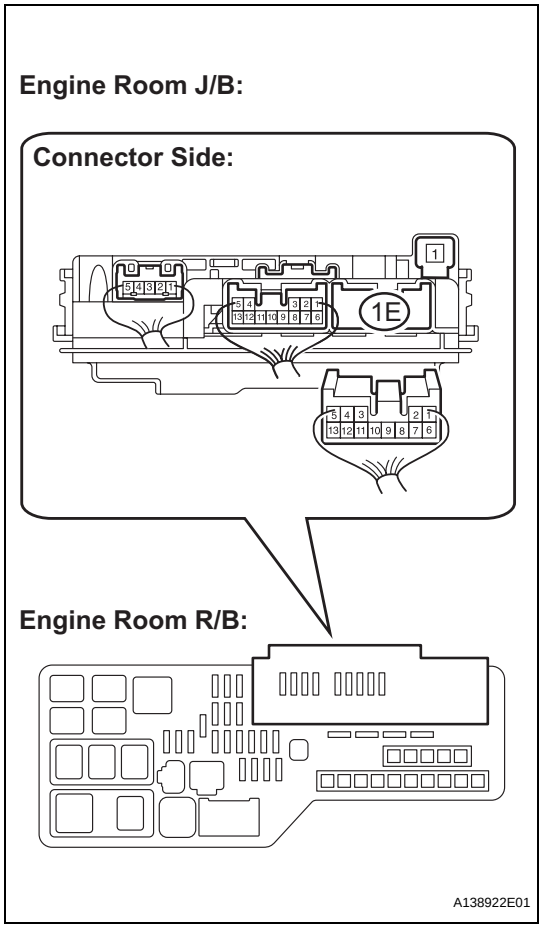
ES

OK

6	CHECK HARNESS AND CONNECTOR (EFI RELAY - ECM)



(a) Disconnect the A24 ECM connector.



(b) Remove the engine room J/B from the engine room R/B.
(c) Disconnect the 1E engine room J/B connector.
(d) Measure the resistance between the terminals.

Standard resistance (Check for open)

Tester Connection	Specified Condition
A24-2 (+B) - 1E-6	Below 1 Ω
A24-1 (+B2) - 1E-6	Below 1 Ω

Standard resistance (Check for short)

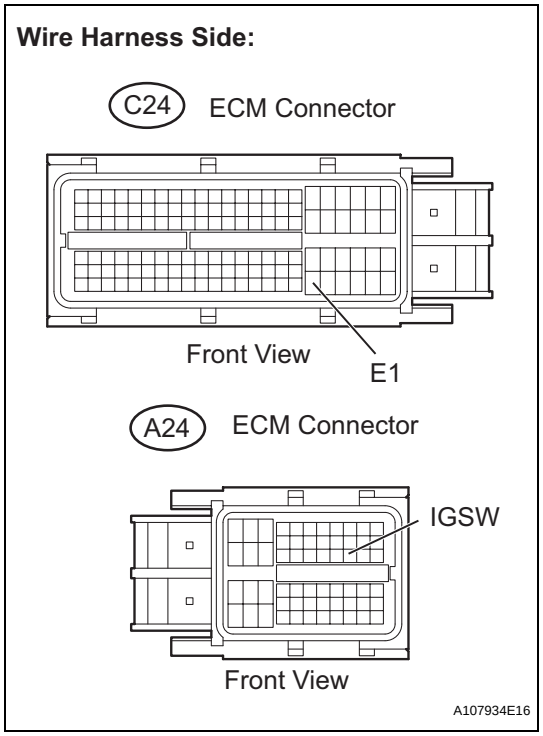
Tester Connection	Specified Condition
A24-2 (+B) or 1E-6 - Body ground	10 kΩ or higher
A24-1 (+B2) or 1E-6 - Body ground	10 kΩ or higher

(e) Reconnect the ECM connector.
(f) Reconnect the engine room J/B connector.
(g) Reinstall the engine room J/B.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

7 INSPECT ECM (IGSW VOLTAGE)



(a) Disconnect the A24 and C24 ECM connectors.
(b) Turn the ignition switch to the ON position.
(c) Measure the voltage between the terminals of the A24 and C24 ECM connectors.

Standard voltage

Tester Connection	Specified Condition
A24-28 (IGSW) - C24-104 (E1)	9 to 14 V

(d) Reconnect the ECM connectors.

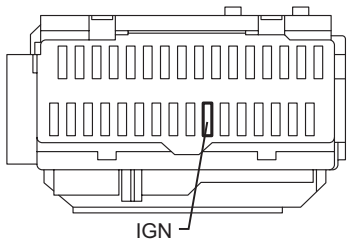
OK → **Go to step 10**

ES

NG

8	INSPECT FUSE (IGN FUSE)

Instrument Panel J/B:



(a) Remove the IGN fuse from the instrument panel J/B.
(b) Measure the fuse resistance.
Standard resistance:
Below 1 Ω
(c) Reinstall the fuse.

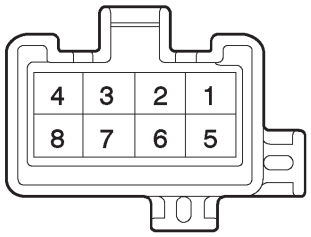
NG → **REPLACE FUSE (IGN FUSE)**

ES

OK

9	INSPECT IGNITION SWITCH ASSEMBLY

Component Side:



(a) Disconnect the E23 ignition switch connector.
(b) Measure the resistance between the terminals.
Standard resistance

Tester Connection	Ignition Switch Position	Specified Condition
All Terminals	LOCK	10 kΩ or higher
2 - 4	ACC	Below 1 Ω
1 - 2 - 4, 5 - 6	ON	
1 - 3 - 4, 5 - 6 - 7	START	

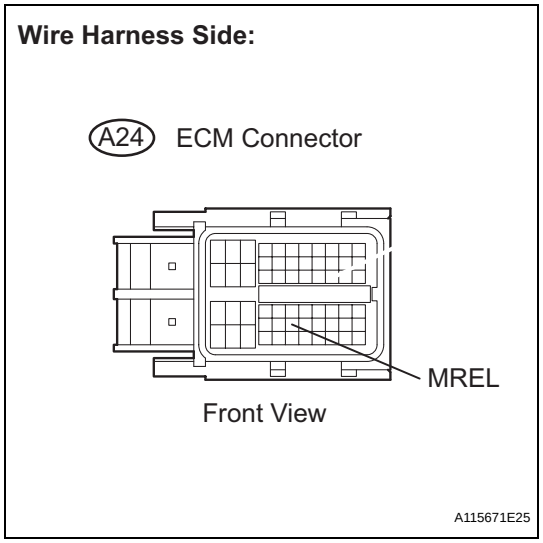
(c) Reconnect the ignition switch connector.

NG → **REPLACE IGNITION SWITCH ASSEMBLY**

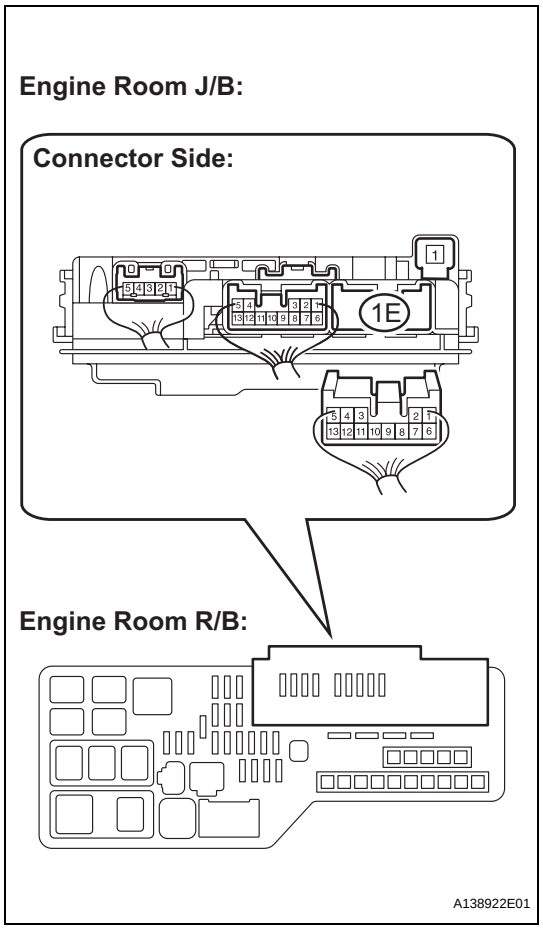
OK

REPAIR OR REPLACE HARNESS OR CONNECTOR

10	CHECK HARNESS AND CONNECTOR (EFI RELAY - ECM, EFI RELAY - BODY GROUND)



(a) Disconnect the A24 ECM connector.



(b) Remove the engine room J/B from the engine room R/B.
(c) Disconnect the 1E engine room J/B connector.
(d) Measure the resistance between the terminals.

Standard resistance (Check for open)

Tester Connection	Specified Condition
A24-44 (MREL) - 1E-9	Below 1 Ω
1E-11 - Body ground	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
A24-44 (MREL) or 1E-9 - Body ground	10 kΩ or higher

(e) Reconnect the ECM connector.
(f) Reconnect the engine room J/B connector.
(g) Reinstall the engine room J/B.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

ENGINE

INSPECTION

1. INSPECT ENGINE COOLANT

(a) Inspect the engine coolant (See page CO-1).

2. INSPECT ENGINE OIL

(a) Inspect the engine oil (See page LU-1).

3. INSPECT BATTERY

(a) Inspect the battery (See page CH-4).

4. INSPECT SPARK PLUGS

(a) Inspect the spark plugs (See page IG-5).

5. INSPECT AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY

(a) Remove the air cleaner filter element sub-assembly.

(b) Visually check that there is no dirt, blockage, and/or damage to the air cleaner filter element.
HINT:
- If there is any dirt or a blockage in the air cleaner filter element, clean it with compressed air.
- If any dirt or a blockage remains even after cleaning the air cleaner filter element with compressed air, replace it.

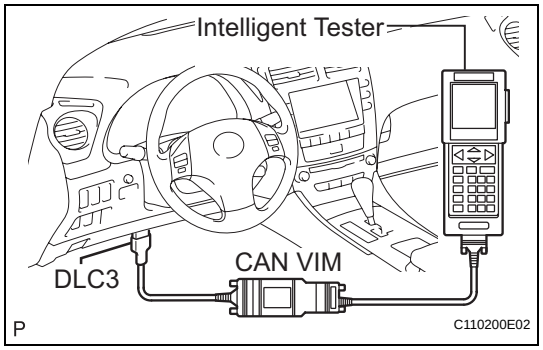
6. INSPECT IGNITION TIMING

(a) Warm up the engine.

(b) When using the intelligent tester:
Check the ignition timing.

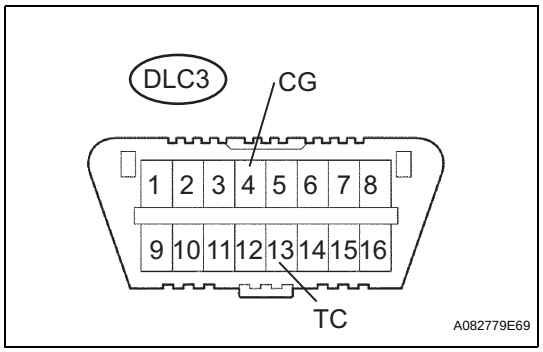
(1) Connect the intelligent tester to the DLC3.

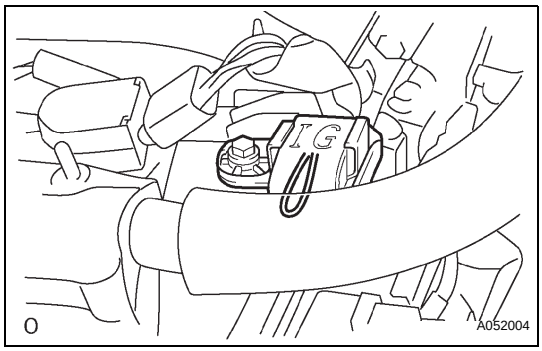
(2) Enter DATA LIST MODE on the intelligent tester.
Ignition timing:
8 to 12° BTDC at idle
HINT:
Refer to the intelligent tester operator's manual for help when selecting the DATA LIST.



(c) When not using the intelligent tester:
Check the ignition timing.

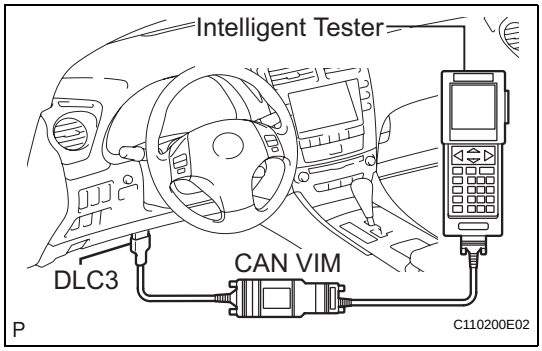
(1) Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.
SST 09843-18040
NOTICE:
- **Confirm the terminal numbers before connecting them. Connection with a wrong terminal can damage the engine.**
- **Turn off all electrical systems before connecting the terminals.**
- **Perform this inspection after the cooling fan motor is turned off.**





(2) Remove the No. 1 engine cover.
(3) Pull out the wire harness as shown in the illustration. Connect the clip of the timing light to the wire harness.
NOTICE:
- **Use a timing light which can detect the first signal.**
- **After checking, be sure to tape the wire harness.**

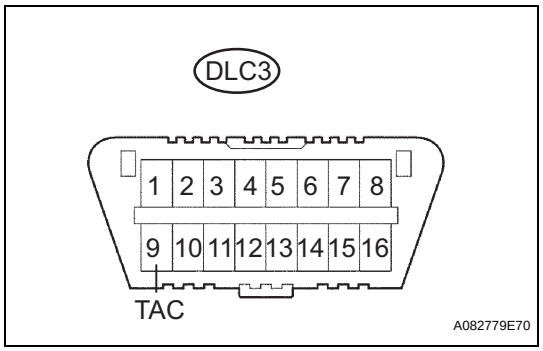
(4) Check the ignition timing at idle.
Ignition timing:
8 to 12° BTDC at idle
NOTICE:
When checking the ignition timing, the transmission should be in neutral.
HINT:
After engine rpm is kept at 1,000 to 1,300 rpm for 5 seconds, check that it returns to idle speed.
(5) Disconnect terminals 13 (TC) and 4 (CG) of the DLC3.
(6) Check the ignition timing at idle.
Ignition timing:
5 to 15° BTDC at idle
(7) Confirm that the ignition timing moves to the advanced angle side when the engine rpm is increased.
(8) Remove the timing light.



7. INSPECT ENGINE IDLE SPEED
(a) Warm up the engine.
(b) When using the intelligent tester:
Check the idle speed.
(1) Connect the intelligent tester to the DLC3.
HINT:
Refer to the intelligent tester operator's manual for further details.
(2) Enter DATA LIST MODE on the intelligent tester.
Idle speed

Item	Specified Condition
M/T	650 to 750 rpm
A/T	610 to 710 rpm

NOTICE:
- **When checking the idle speed, the transmission should be in neutral.**
- **Check the idle speed with the cooling fan off.**
- **Switch off all accessories and air conditioning before connecting the intelligent tester.**

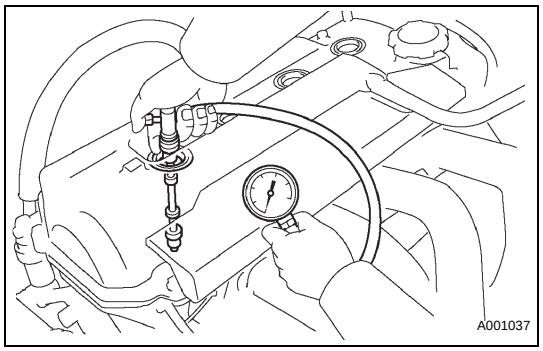


(c) When not using the intelligent tester:
Check the idle speed.
(1) Using SST, connect the tachometer tester probe to terminal 9 (TAC) of the DLC3.
SST 09843-18030
(2) Check the idle speed.
Idle speed

Item	Specified Condition
M/T	650 to 750 rpm
A/T	610 to 710 rpm

8. INSPECT COMPRESSION

(a) Warm up and stop the engine.
(b) Disconnect the injector connectors.
(c) Remove the ignition coils.
(d) Remove the spark plugs.



(e) Check the cylinder compression pressure.
(1) Insert a compression gauge into the spark plug hole.
(2) Fully open the throttle.
(3) While cranking the engine, measure the compression pressure.
Compression pressure:
1.360 MPa (13.9 kgf/ cm^2, 198 psi)
Minimum pressure:
0.98 MPa (10 kgf/ cm^2, 142 psi)
Difference between each cylinder:
100 kPa (1.0 kgf/ cm^2, 14 psi)
NOTICE:
- **Always use a fully charged battery to obtain an engine speed of 250 rpm or more.**
- **Check the other cylinders' compression pressure in the same way.**
- **This measurement must be done as quickly as possible.**

(4) If the cylinder compression is low, pour a small amount of engine oil into the cylinder through the spark plug hole and inspect again.
HINT:
- If adding oil increases the compression, the piston rings and/or cylinder bore may be worn or damaged.
- If pressure stays low, a valve may be stuck or seated improperly, or there may be leakage in the gasket.

9. INSPECT CO/HC

(a) Start the engine.
(b) Run the engine at 2,500 rpm for approximately 180 seconds.
(c) Insert the CO/HC meter testing probe at least 40 cm (1.3 ft) into the tailpipe during idling.

EM

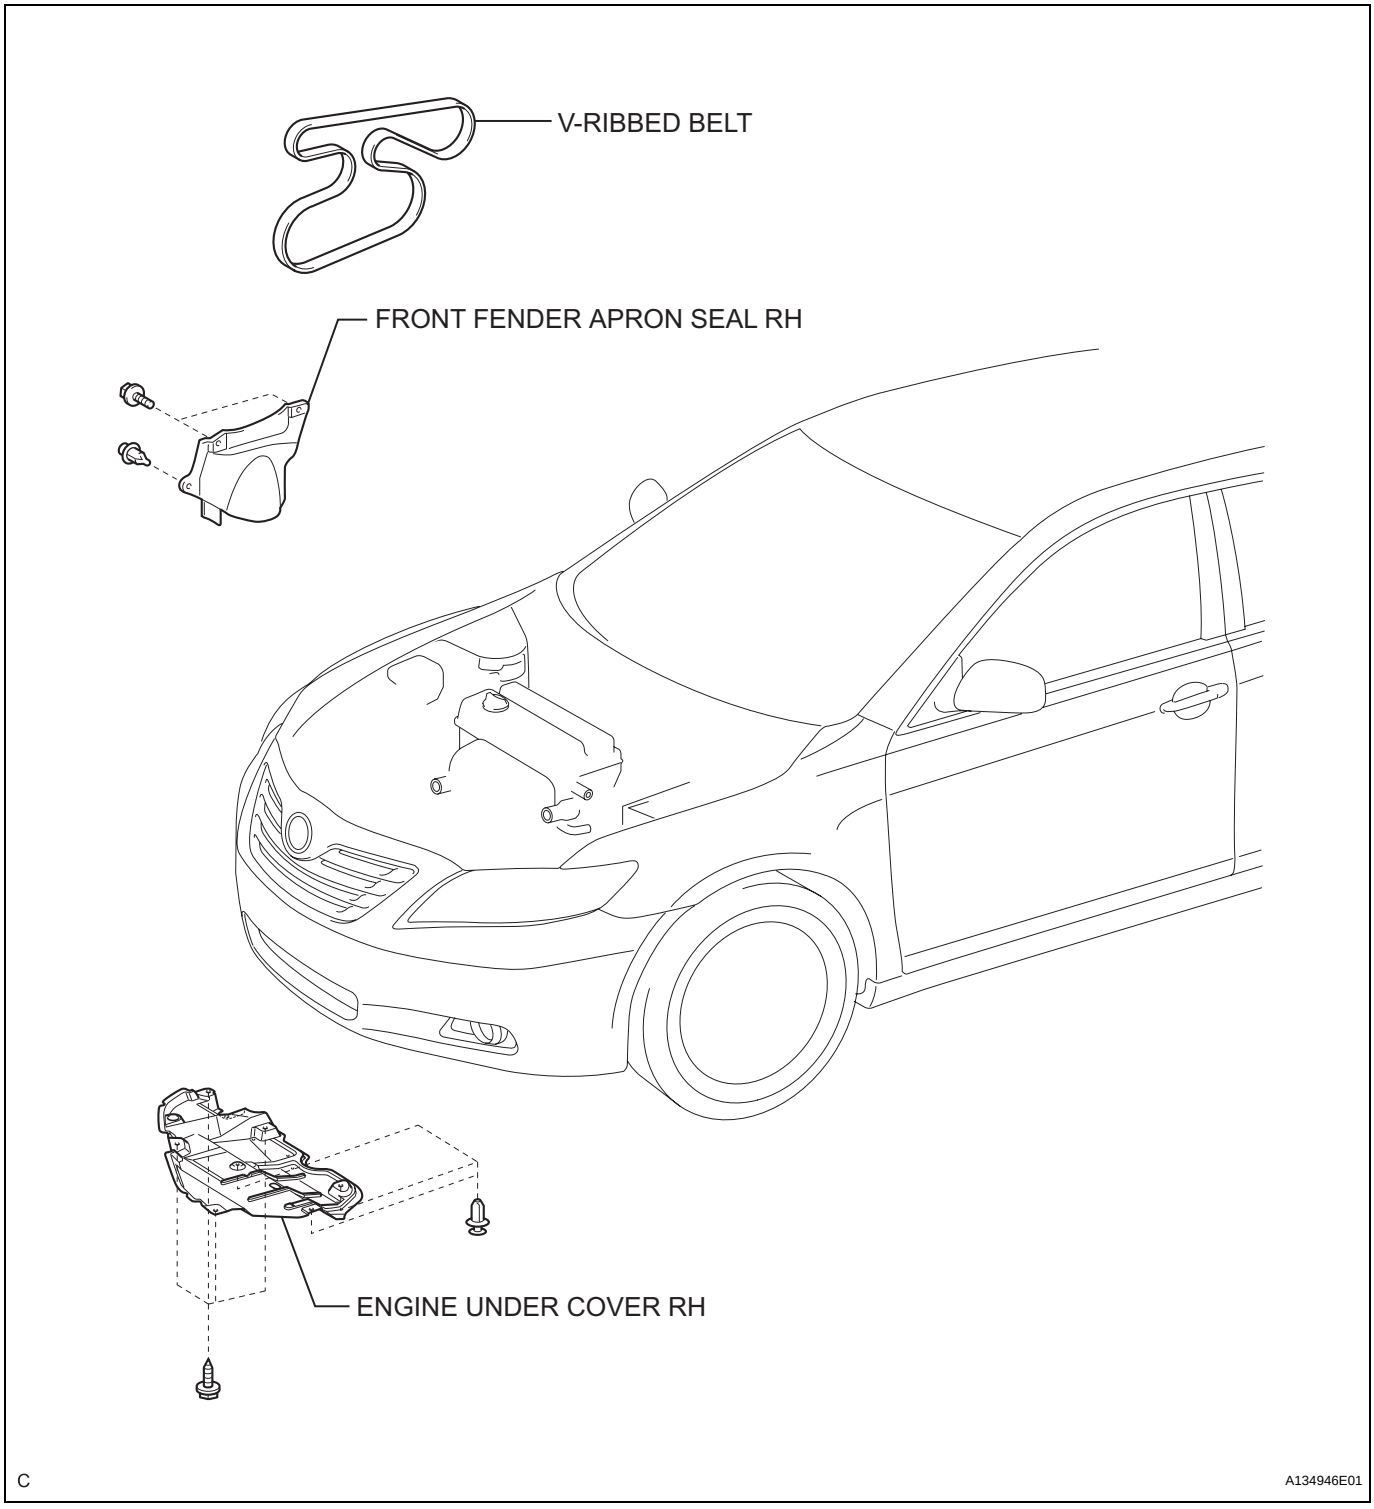
(d) Immediately check CO/HC concentration at idle and/or 2,500 rpm.
HINT:
- Complete the measuring within 3 minutes.
- Check regulations and restrictions in your area when performing 2 mode CO/HC concentration testing (engine check at both idle speed and at 2,500 rpm).

(e) If the CO/HC concentration does not comply with regulations, troubleshoot in the order given below.
(1) Check A/F sensor and heated oxygen sensor operation (See page EC-21).
(2) See the table below for possible causes, and then inspect and repair.

CO	HC	Problems	Causes
Normal	High	Rough idle	1. Faulty ignitions: – Incorrect timing – Fouled, shorted or improperly gapped plugs 2. Incorrect valve clearance 3. Leaky intake and exhaust valves 4. Leaky cylinders
Low	High	Rough idle (fluctuating HC reading)	1. Vacuum leaks: – PCV hoses – Intake manifold – Throttle body – Brake booster line 2. Lean mixture causing misfire
High	High	Rough idle (black smoke from exhaust)	1. Restricted air filter 2. Plugged PCV valve 3. Faulty SFI system: – Faulty pressure regulator – Defective ECT – Defective MAF meter – Faulty ECM – Faulty injectors – Faulty throttle position sensor

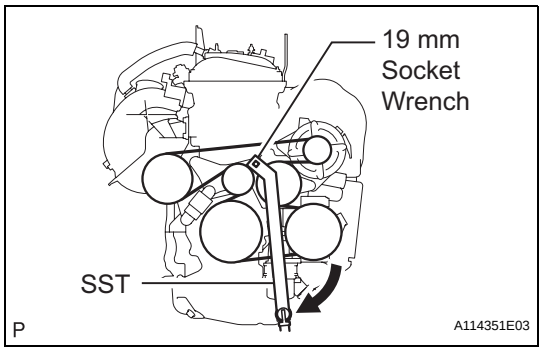
DRIVE BELT

COMPONENTS



REMOVAL

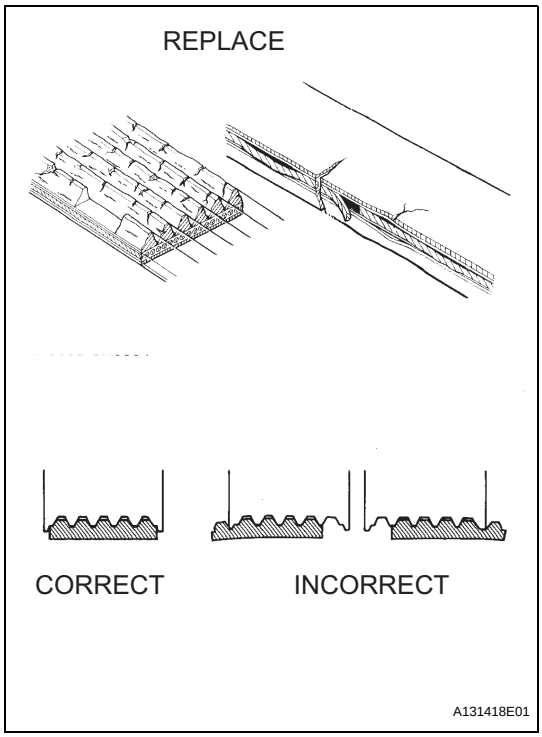
1. **REMOVE FRONT WHEEL RH**
2. **REMOVE ENGINE UNDER COVER RH**
3. **REMOVE FRONT FENDER APRON SEAL RH**
4. **REMOVE V-RIBBED BELT**
   (a) Using SST and 19 mm socket wrench, loosen the V-ribbed belt tensioner arm clockwise, then remove the V-ribbed belt.
   SST 09216-42010
   NOTICE:
   - **Be sure to connect SST and the tools so that they are in line during use.**
   - **When retracting the tensioner, turn it clockwise slowly for 3 seconds or more. Do not apply force rapidly.**
   - **After the tensioner is fully retracted, do not apply force any more than necessary.**



EM

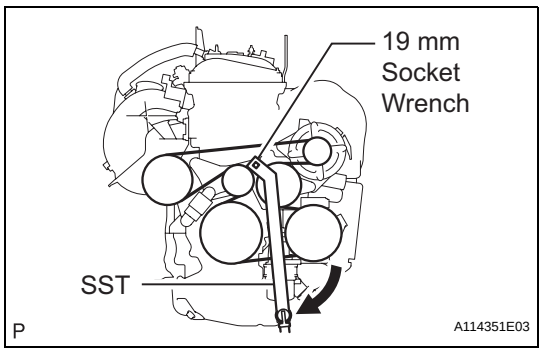
INSPECTION

1. **INSPECT V-RIBBED BELT**
   (a) Visually check the V-ribbed belt for excessive wear, frayed cords, etc. If any defect has been found, replace the V-ribbed belt.
   HINT:
   - Cracks on the rib side of a belt are considered acceptable. If the belt has chunks missing from the ribs, it should be replaced.
   - A "new belt" is a belt which has been used for less than 5 minutes with the engine running.
   - A "used belt" is a belt which has been used for 5 minutes or more with the engine running.



INSTALLATION

1. **INSTALL V-RIBBED BELT**
   (a) Using SST and 19 mm socket wrench, loosen the V-ribbed belt tensioner arm clockwise, then install the V-ribbed belt.
   SST 09216-42010
   NOTICE:
   - **Be sure to connect SST and the tools so that they are in line during use.**
   - **When retracting the tensioner, turn it clockwise slowly for 3 seconds or more. Do not apply force rapidly.**



- **After the tensioner is fully retracted, do not apply force any more than necessary.**

(b) After installing the V-ribbed belt, check that it fits properly in the ribbed grooves. Check to confirm that the belt has not slipped out of the grooves on the bottom of the crank pulley by hand.

2. INSTALL FRONT FENDER APRON SEAL RH

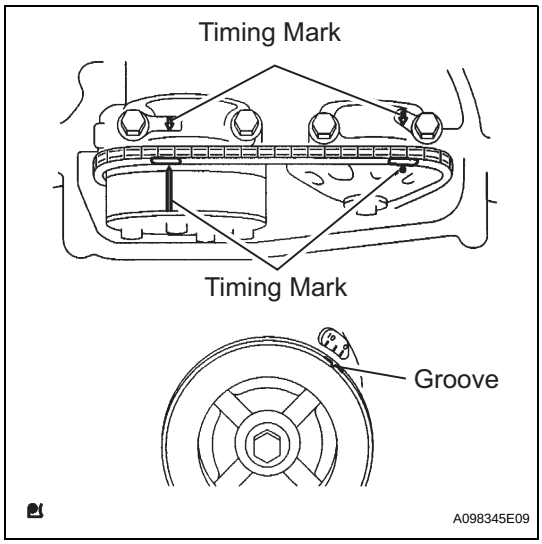
3. INSTALL ENGINE UNDER COVER RH

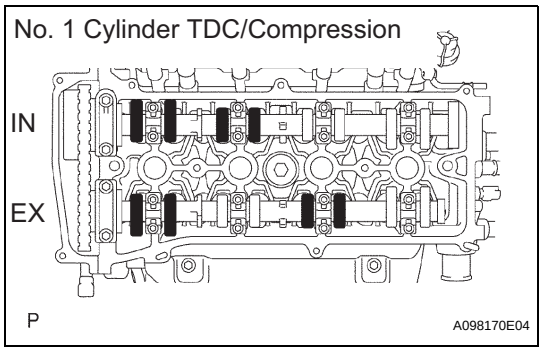
4. INSTALL FRONT WHEEL RH
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

VALVE CLEARANCE

ADJUSTMENT

1. **REMOVE FRONT WHEEL RH**
2. **REMOVE ENGINE UNDER COVER LH**
3. **REMOVE ENGINE UNDER COVER RH**
4. **REMOVE FRONT FENDER APRON SUB-ASSEMBLY RH**
5. **REMOVE NO. 1 ENGINE COVER (See page EM-94)**
6. **REMOVE IGNITION COIL ASSEMBLY (See page EM-106)**
7. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-21)**
8. **SET NO. 1 CYLINDER TO TDC/COMPRESSION**
   (a) Turn the crankshaft pulley until its groove and the timing mark "0" of the timing chain cover are aligned.
   (b) Check that each timing mark of the camshaft timing gear and sprocket is aligned with each timing mark located on the No. 1 and No. 2 bearing caps as shown in the illustration. If not, turn the crankshaft by 1 revolution (360°) to align the timing marks as above.

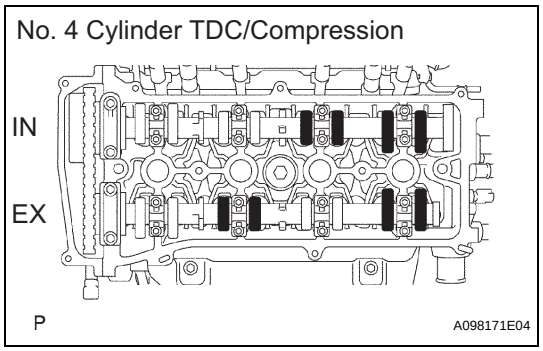




9. **CHECK VALVE CLEARANCE**
   (a) Check only the valves indicated.
      (1) Using a feeler gauge, measure the clearance between the valve lifter and camshaft.
      Standard valve clearance (cold)

Item	Standard Condition
Intake	0.19 to 0.29 mm (0.0075 to 0.0114 in.)
Exhaust	0.38 to 0.48 mm (0.0150 to 0.0189 in.)

      (2) Record any out-of-specification valve clearance measurements. They will be used later to determine the required replacement valve clearance lifters.
   (b) Turn the crankshaft 1 revolution (360°) and set the No. 4 cylinder to the TDC/compression.



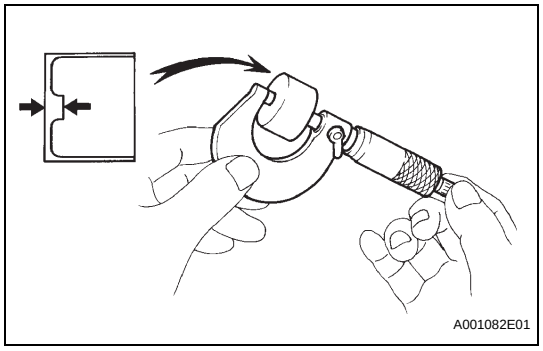
(c) Check only the valves indicated.
(1) Using a feeler gauge, measure the clearance between the valve lifter and camshaft.
Standard valve clearance (cold)

Item	Standard Condition
Intake	0.19 to 0.29 mm (0.0075 to 0.0114 in.)
Exhaust	0.38 to 0.48 mm (0.0150 to 0.0189 in.)

(2) Record any out-of-specification valve clearance measurements. They will be used later to determine the required replacement valve lifters.

10. ADJUST VALVE CLEARANCE

(a) Remove the No. 2 camshaft (see page EM-38).
(b) Remove the camshaft (see page EM-38).
(c) Remove the valve lifters.



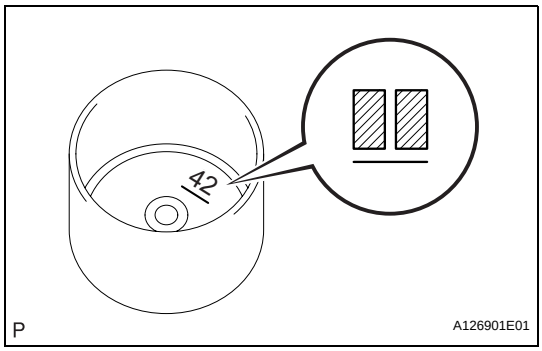
(d) Using a micrometer, measure the thickness of the removed valve lifters.
(e) Calculate the thickness of a new lifter so that the valve clearance comes within the specified values.
New lifter thickness

Item	Specification
Intake	A = B + (C - 0.24 mm (0.0095 in.))
Exhaust	A = B + (C - 0.43 mm (0.0169 in.))

A	New lifter thickness
B	Used lifter thickness
C	Measured valve clearance

CALCULATION EXAMPLE (Intake):
1. Measured intake valve clearance = 0.40 mm (0.0158 in.)
(Measured - Specification = Excess clearance)
(a) 0.40 mm (0.0158 in.) - 0.24 mm (0.0095 in.) = 0.16 mm (0.0063 in.)
2. Measured used lifter measurement = 5.250 mm (0.2067 in.)
3. New lifter thickness = 5.410 mm (0.2130 in.)
(Excess clearance + Used lifter thickness = Ideal new lifter)
(a) 0.16 mm (0.0063 in.) + 5.250 mm (0.2067 in.) = 5.410 mm (0.2130 in.)
4. Closest new lifter = 5.420 mm (0.2134 in.)
– Select No. 42 lifter

EM



(f) Select a new lifter with a thickness as close as possible to the calculated values.
HINT:
- Lifters are available in 35 sizes in increments of 0.020 mm (0.0008 in.), from 5.060 to 5.740 mm (0.1992 to 0.2260 in.).
- The identification number inside the valve lifters shows the value to 2 decimal places. (The illustration shows 5.420 mm (0.2134 in.)

(g) Valve lifter selection chart (intake).

Installed lifter thickness mm (in.) \ Measured clearance mm (in.)	0.000 - 0.030 (0.0000 - 0.0012)	0.031 - 0.050 (0.0012 - 0.0020)	0.051 - 0.070 (0.0020 - 0.0028)	0.071 - 0.090 (0.0028 - 0.0035)	0.091 - 0.110 (0.0036 - 0.0043)	0.111 - 0.130 (0.0044 - 0.0051)	0.131 - 0.150 (0.0052 - 0.0059)	0.151 - 0.170 (0.0059 - 0.0067)	0.171 - 0.189 (0.0067 - 0.0074)	0.190 - 0.290 (0.0075 - 0.0114)

Standard intake valve clearance (cold):
0.19 to 0.29 mm (0.0075 to 0.0114 in.)

EM

EXAMPLE:

The 5.250 mm (0.2067 in.) lifter is installed, and the measured clearance is 0.400 mm (0.0157 in.). Replace the 5.250 mm (0.2067 in.) lifter with a new No. 42 lifter.

(h) Valve lifter selection chart (exhaust).

EM

Standard exhaust valve clearance (cold):
0.38 to 0.48 mm (0.0150 to 0.0189 in.)

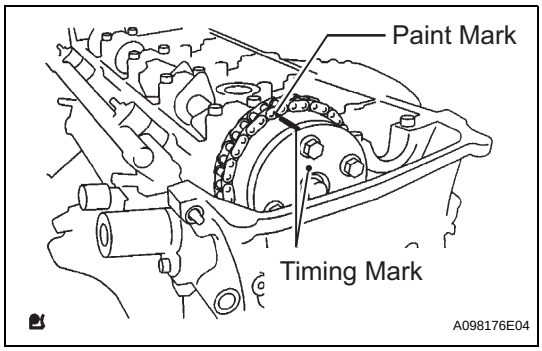
EXAMPLE:
The 5.340 mm (0.2102 in.) lifter is installed, and the measured clearance is 0.430 mm (0.0169 in.).
Replace the 5.340 mm (0.2102 in.) lifter with a new No. 42 lifter.

(i) Install the selected valve lifter.

11. INSTALL CAMSHAFT

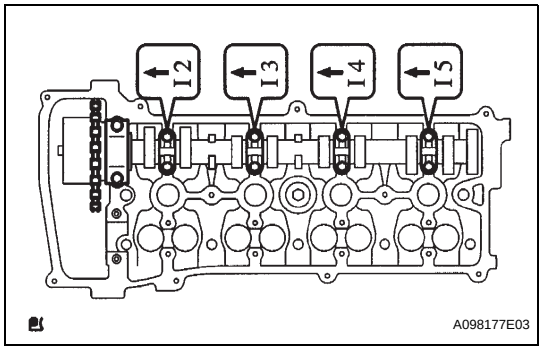
(a) Apply a light coat of engine oil to the journal portion of the camshaft.

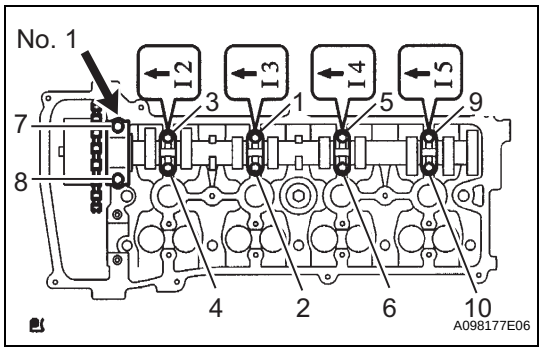
(b) Install the timing chain onto the camshaft timing gear with the paint mark aligned with the timing mark on the camshaft timing gear as shown in the illustration.



(c) Examine the front marks and numbers, and check that the order is as shown in the illustration. Then install the bearing caps into the cylinder head.

(d) Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.



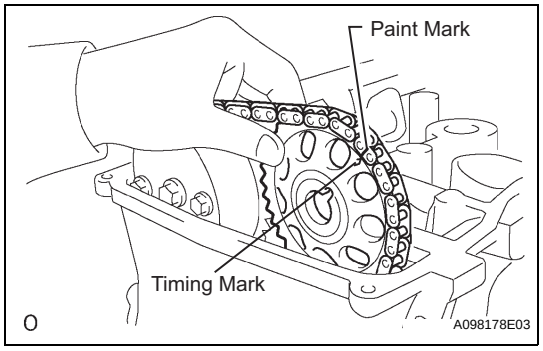


(e) Using several steps, uniformly tighten the 10 bearing cap bolts in the sequence shown in the illustration.

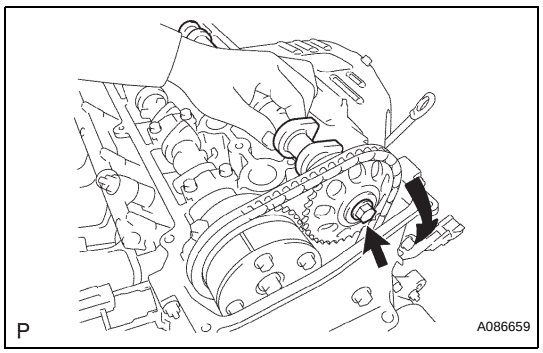
Torque: No. 1 bearing cap
30 N*m (301 kgf*cm, 22 ft.*lbf)
No. 3 bearing cap
9.0 N*m (92 kgf*cm, 80 in.*lbf)

12. INSTALL NO. 2 CAMSHAFT

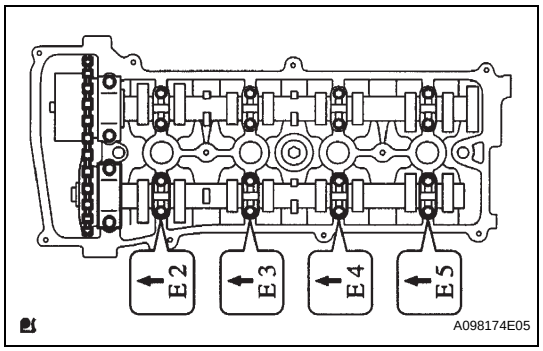
(a) Apply a light coat of engine oil to the journal portion of the No. 2 camshaft.



(b) Put the No. 2 camshaft on the cylinder head with the paint mark of the chain aligned with the timing mark on the camshaft timing sprocket.

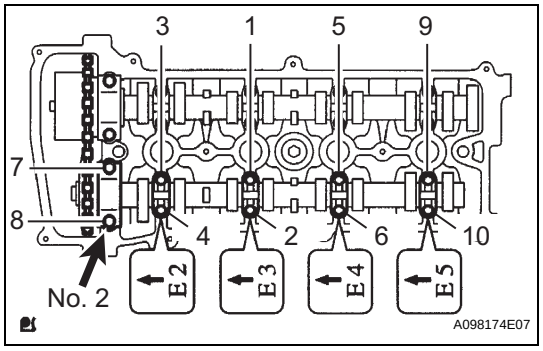


(c) While holding the No. 2 camshaft by hand, temporarily tighten the camshaft timing sprocket set bolt.



(d) Examine the front marks and numbers, and check that the order is as shown in the illustration. Then install the bearing caps onto the cylinder head.

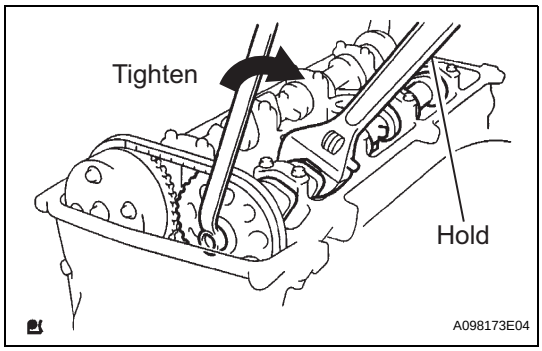
(e) Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.



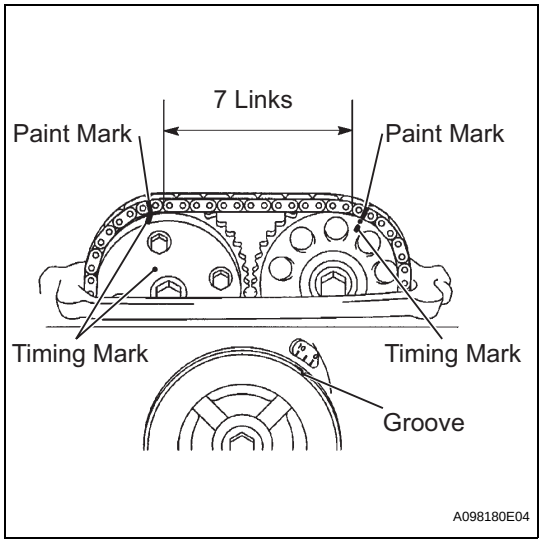
(f) Using several steps, uniformly tighten the 10 bearing cap bolts in the sequence shown in the illustration.

Torque: No. 2 bearing cap
30 N*m (301 kgf*cm, 22 ft.*lbf)
No. 3 bearing cap
9.0 N*m (92 kgf*cm, 80 in.*lbf)

EM



(g) While holding the camshaft with a wrench, tighten the camshaft timing sprocket set bolt.
Torque: 54 N*m (551 kgf*cm, 40 ft.*lbf)
NOTICE:
Be careful not to damage the valve lifter.



(h) Check that the paint marks on the chain are aligned with the timing marks on the camshaft timing gear and camshaft timing sprocket. Also, check that the crankshaft pulley groove is aligned with the timing mark "0" of the timing chain cover.

13. **INSTALL NO. 1 CHAIN TENSIONER (See page EM-32)**
14. **INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-33)**
15. **INSTALL IGNITION COIL ASSEMBLY (See page EM-33)**
16. **CHECK FOR ENGINE OIL LEAKS**
17. **INSTALL NO. 1 ENGINE COVER (See page EM-121)**
18. **INSTALL FRONT FENDER APRON RH**
19. **INSTALL ENGINE UNDER COVER LH**
20. **INSTALL ENGINE UNDER COVER RH**
21. **INSTALL FRONT WHEEL RH**

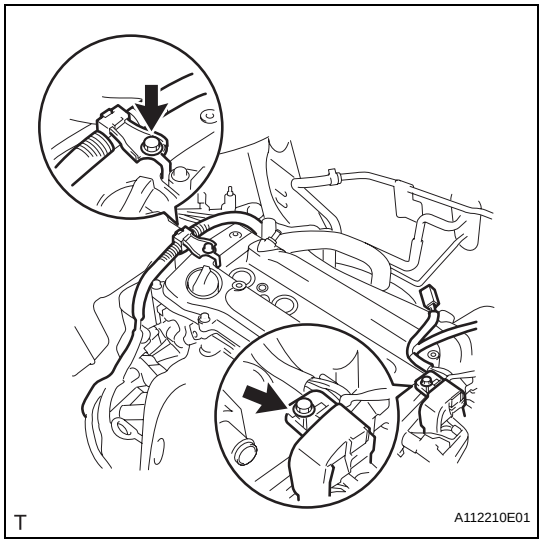
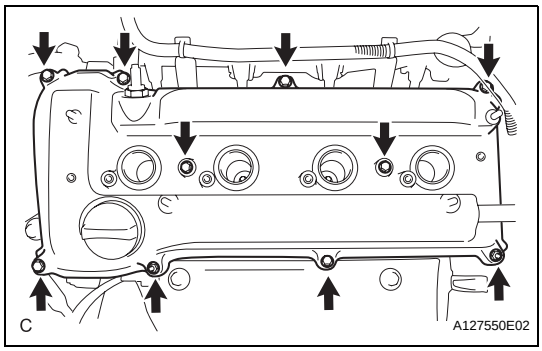
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-94)**
3. **REMOVE FRONT WHEEL RH**
4. **REMOVE ENGINE UNDER COVER LH**
5. **REMOVE ENGINE UNDER COVER RH**
6. **REMOVE FRONT FENDER APRON SEAL RH**
7. **DRAIN ENGINE OIL (See page LU-4)**
8. **REMOVE FRONT EXHAUST PIPE ASSEMBLY**
   HINT:
   See page EX-2.
9. **REMOVE NO. 2 ENGINE MOUNTING STAY RH (See page EM-95)**
10. **REMOVE ENGINE MOVING CONTROL ROD SUB-ASSEMBLY (See page EM-95)**
11. **REMOVE NO. 2 ENGINE MOUNTING BRACKET RH (See page EM-96)**
12. **REMOVE V-RIBBED BELT (See page EM-6)**
13. **REMOVE GENERATOR ASSEMBLY (See page CH-11)**
14. **REMOVE VANE PUMP ASSEMBLY (See page EM-101)**
15. **REMOVE IGNITION COIL ASSEMBLY (See page EM-106)**
16. **DISCONNECT VENTILATION HOSE**
17. **DISCONNECT NO. 2 VENTILATION HOSE**
18. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY**
    (a) Remove the 2 bolts and disconnect the 2 engine wires.



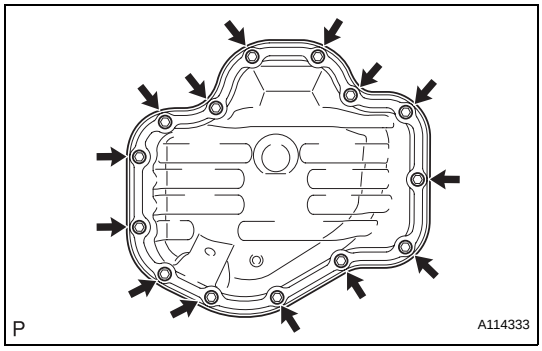


(b) Remove the 8 bolts, 2 nuts, and the cylinder head cover.

19. SET NO. 1 CYLINDER TO TDC/COMPRESSION (See page EM-8)

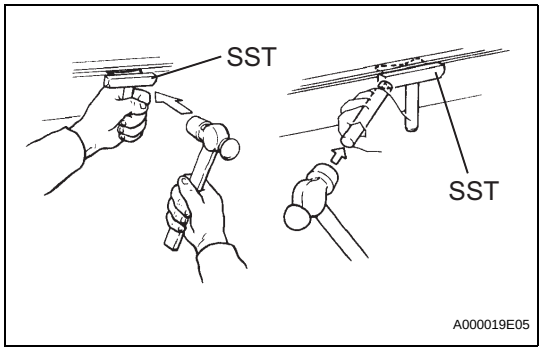
20. REMOVE CRANKSHAFT PULLEY (See page EM-75)

21. REMOVE CRANK POSITION SENSOR (See page ES-411)



22. REMOVE OIL PAN SUB-ASSEMBLY

(a) Remove the 12 bolts and 2 nuts.

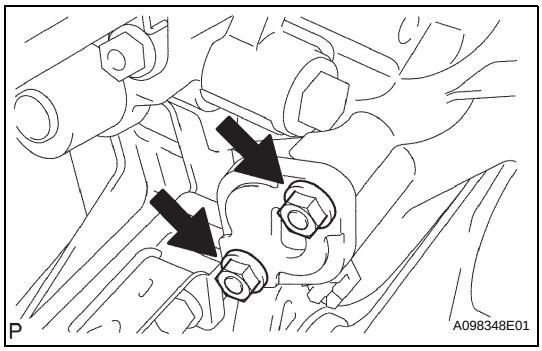


(b) Insert the blade of SST between the crankcase and oil pan. Cut through the sealer and remove the oil pan.

SST 09032-00100

NOTICE:

Be careful not to damage the contact surfaces of the crankcase, chain cover and oil pan.

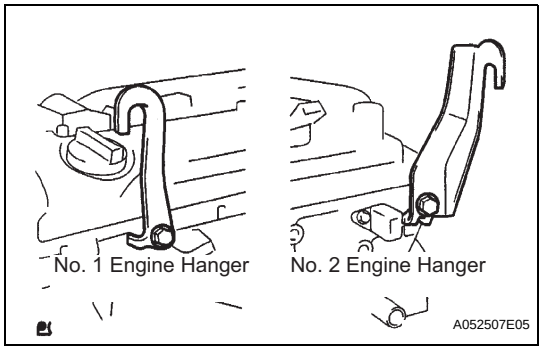


23. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY

(a) Remove the 2 nuts, tensioner and gasket.

NOTICE:

Do not turn the crankshaft without the chain tensioner.



24. INSTALL ENGINE HANGERS

(a) Install the No. 1 engine hanger and No. 2 engine hanger with the bolts as shown in the illustration.

Parts No.:

No. 1 Engine hanger	12281-28010
No. 2 Engine hanger	12282-28010
Bolt	91512-61020

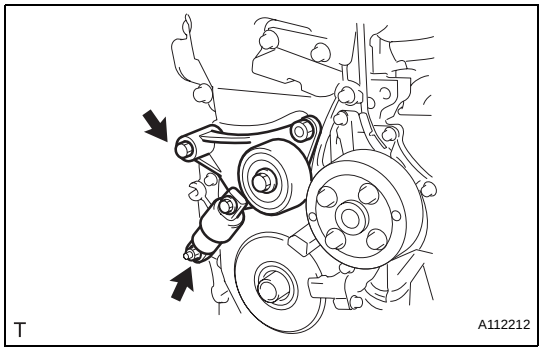
Torque: 38 N*m (387 kgf*cm, 28 ft.*lbf)

(b) Attach the sling device to the engine hangers and chain block.

25. REMOVE V-RIBBED BELT TENSIONER ASSEMBLY

(a) Lift the engine upward using the chain block.
NOTICE:
Do not lift the engine more than necessary.

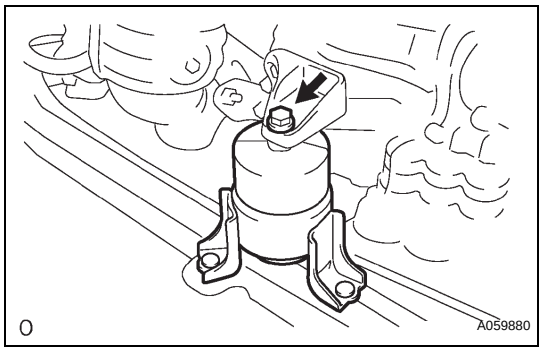
(b) Remove the bolt, nut and V-ribbed belt tensioner.



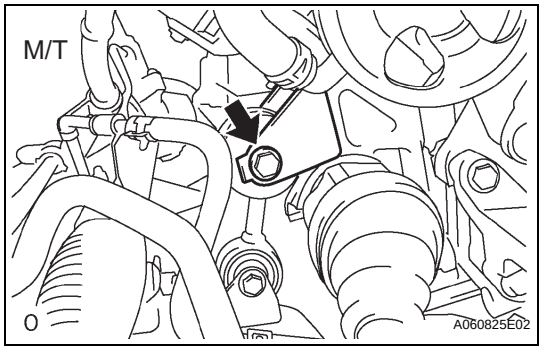
26. REMOVE ENGINE MOUNTING INSULATOR

(a) Attach the engine chain hoist to the engine hangers.
CAUTION:
Do do not attempt to hang the engine by hooking the chain to any other part.

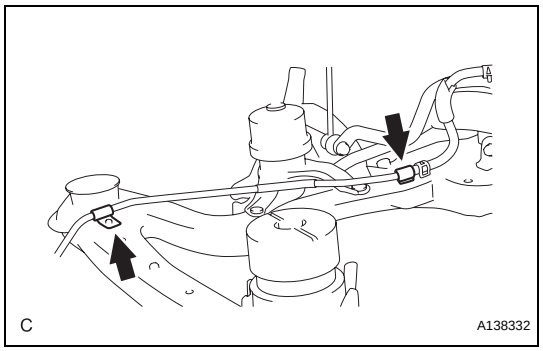
(b) Remove the bolt and disconnect the engine mounting insulator FR.



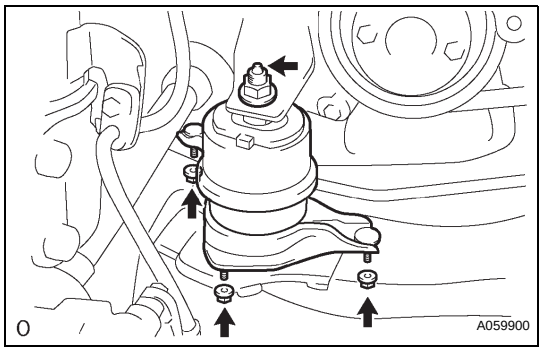
(c) M/T:
Remove the bolt and disconnect the engine lateral control rod.



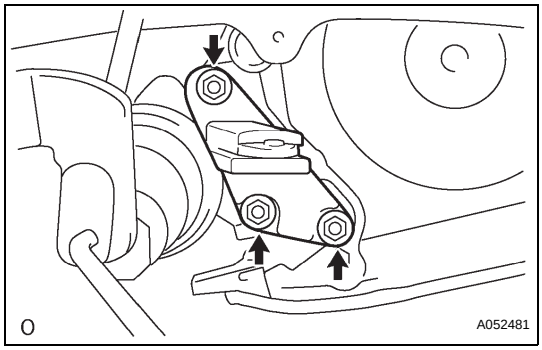
(d) Remove the 2 bolts and disconnect the steering gear return tube clamps from the frame.



EM



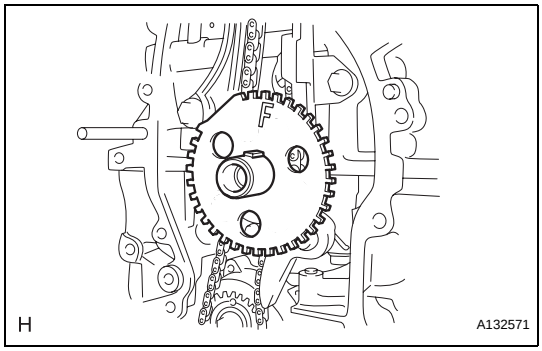
(e) Remove the 4 nuts from the engine mounting insulator RH.
(f) Raise the engine and remove the engine mounting insulator RH.



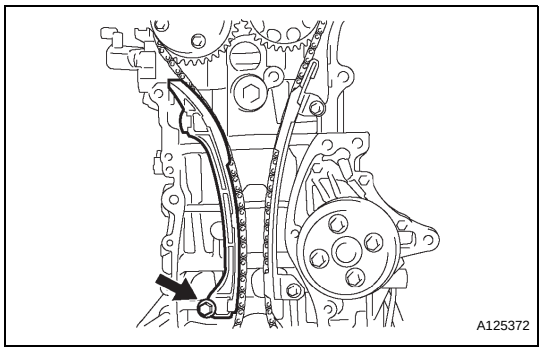
27. REMOVE ENGINE MOUNTING BRACKET RH
(a) Remove the 3 bolts and engine mounting bracket.

28. REMOVE TIMING CHAIN COVER SUB-ASSEMBLY (See page LU-11)

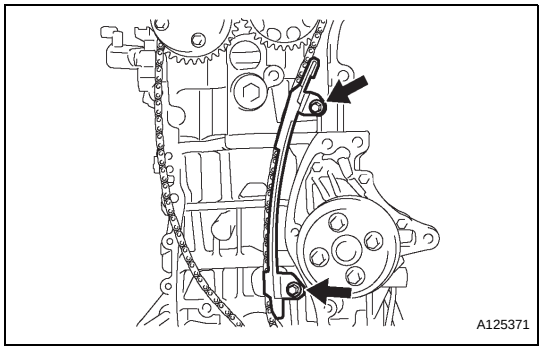
29. REMOVE TIMING CHAIN CASE OIL SEAL (See page LU-12)



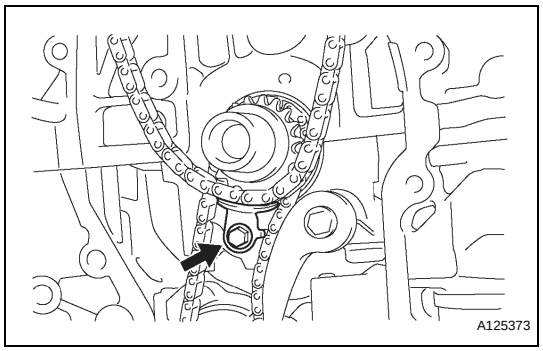
30. REMOVE NO. 1 CRANKSHAFT POSITION SENSOR PLATE
(a) Remove the crankshaft position sensor plate.



31. REMOVE CHAIN TENSIONER SLIPPER
(a) Remove the bolt and chain tensioner slipper.

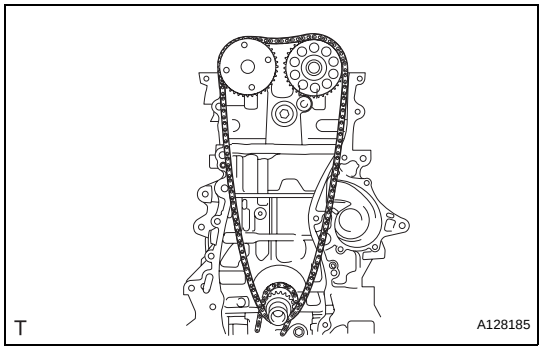


32. REMOVE NO. 1 CHAIN VIBRATION DAMPER
(a) Remove the 2 bolts and chain vibration damper.



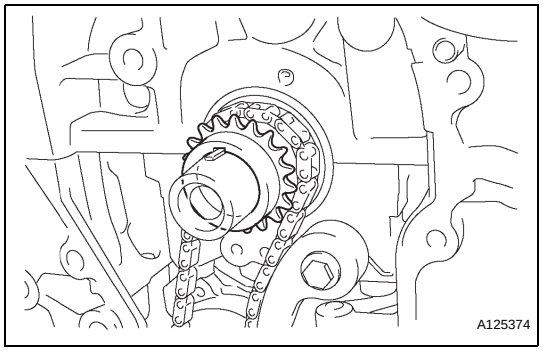
33. REMOVE TIMING CHAIN GUIDE

(a) Remove the bolt and timing chain guide.



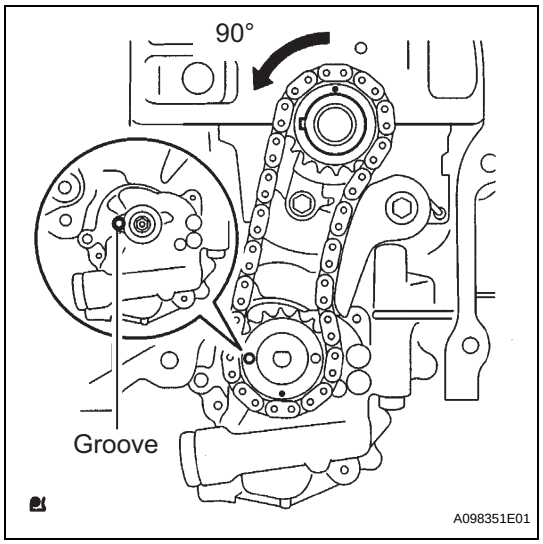
34. REMOVE CHAIN SUB-ASSEMBLY

(a) Remove the chain sub-assembly.



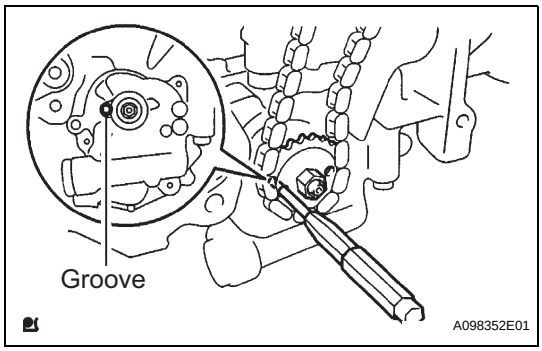
35. REMOVE CRANKSHAFT TIMING SPROCKET

(a) Remove the crankshaft timing sprocket.

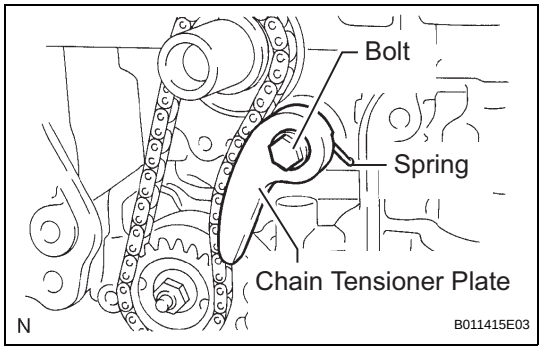


36. REMOVE NO. 2 CHAIN SUB-ASSEMBLY

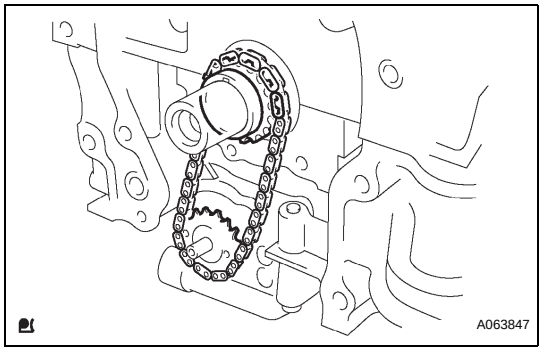
(a) Turn the crankshaft by 90° counterclockwise to align the adjusting hole of the oil pump drive shaft sprocket with the groove of the oil pump.



(b) Insert a 4 mm diameter bar into the adjusting hole of the oil pump drive shaft sprocket to lock the gear in position, and then remove the nut.



(c) Remove the bolt, chain tensioner plate and spring.



(d) Remove the chain tensioner, oil pump driven sprocket and chain.

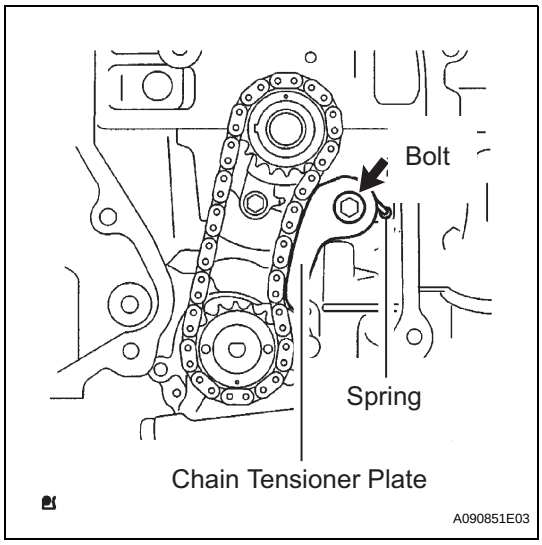
INSPECTION

1. **INSPECT CHAIN SUB-ASSEMBLY (See page EM-138)**
2. **INSPECT NO. 2 CHAIN SUB-ASSEMBLY (See page EM-138)**
3. **INSPECT OIL PUMP DRIVE SPROCKET (See page EM-138)**
4. **INSPECT OIL PUMP DRIVE SHAFT SPROCKET (See page EM-139)**
5. **INSPECT CHAIN TENSIONER SLIPPER (See page EM-140)**
6. **INSPECT NO. 1 CHAIN VIBRATION DAMPER (See page EM-140)**
7. **INSPECT CHAIN TENSIONER PLATE (See page EM-140)**
8. **INSPECT NO. 1 CHAIN TENSIONER (See page EM-140)**

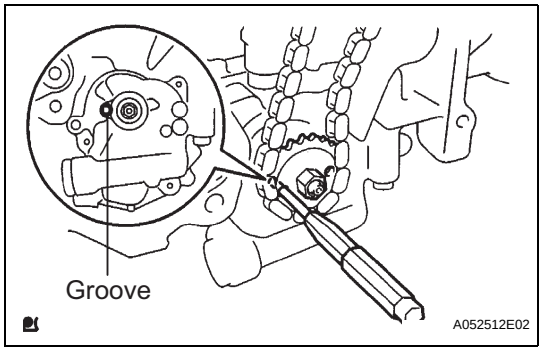
INSTALLATION

1. **INSTALL NO. 2 CHAIN SUB-ASSEMBLY**
   (a) Set the crankshaft key into the left horizontal position.
   (b) Turn the drive shaft so that the cutout faces upward.

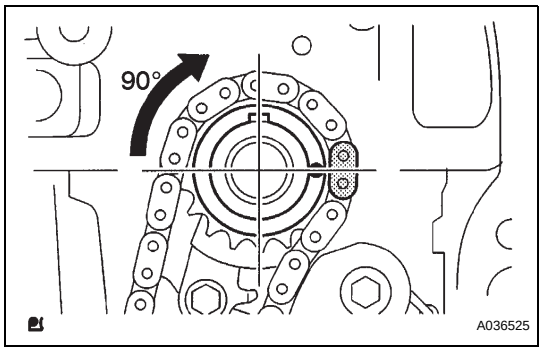
   (c) Align the yellow mark links with the timing marks of each gear as shown in the illustration.
   (d) Install the sprockets onto the crankshaft and oil pump shaft with the chain wrapped on the gears.
   (e) Temporarily tighten the oil pump drive shaft sprocket with the nut.



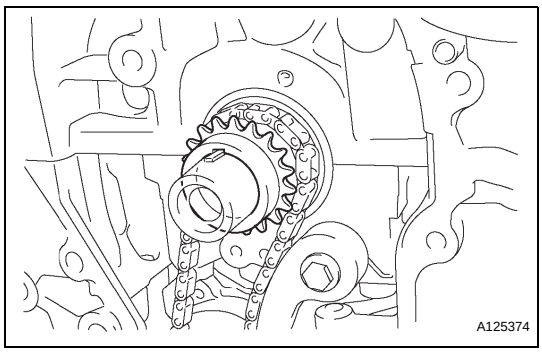
(f) Insert the damper spring into the adjusting hole, and then install the chain tensioner plate with the bolt.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)



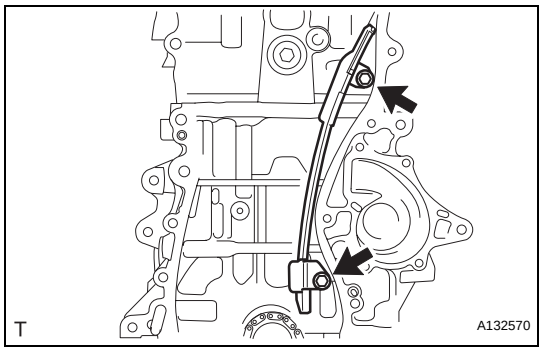
(g) Align the adjusting hole of the oil pump drive shaft sprocket with the groove of the oil pump.
(h) Insert a 4 mm diameter bar into the adjusting hole of the oil pump drive shaft gear to lock the gear in position, and then tighten the nut.
Torque: 30 N*m (301 kgf*cm, 22 ft.*lbf)



(i) Rotate the crankshaft clockwise by 90°, and align the crankshaft key to the top.

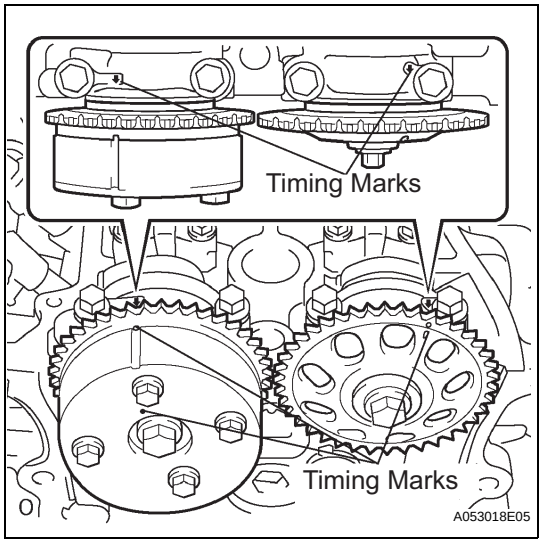


2. INSTALL CRANKSHAFT TIMING SPROCKET
(a) Install the crankshaft timing sprocket.



3. INSTALL NO. 1 CHAIN VIBRATION DAMPER

(a) Install the chain vibration damper with the 2 bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

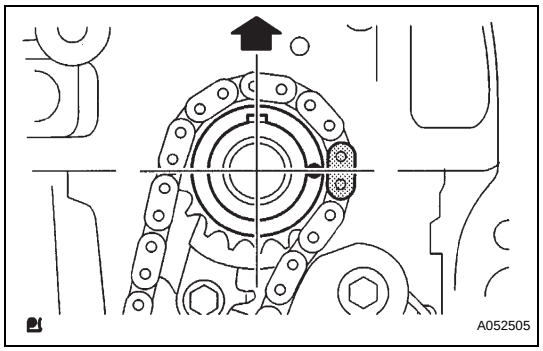


4. INSTALL CHAIN SUB-ASSEMBLY

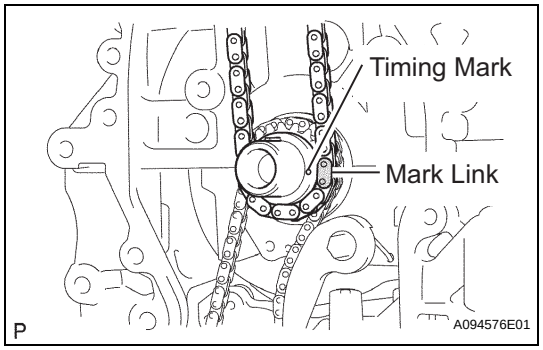
(a) Set the No. 1 cylinder to TDC/compression.

(1) Turn the camshafts with a wrench (using the hexagonal lobe) to align the timing marks of the camshaft timing gear with each timing mark located on the No. 1 and No. 2 bearing caps as shown in the illustration.

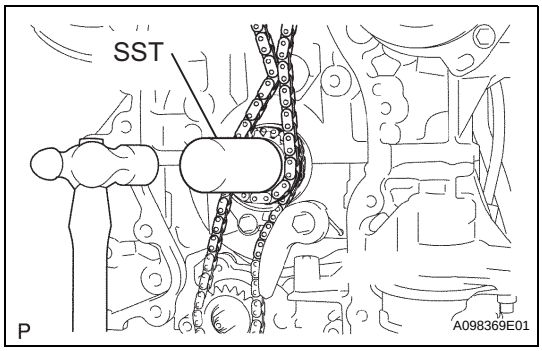
EM



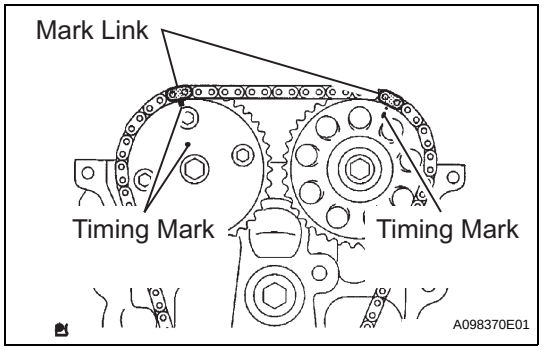
(2) Using the crankshaft pulley bolt, turn the crankshaft to position with the key on the crankshaft upward.



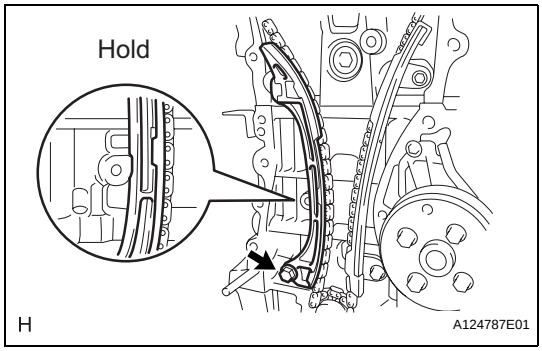
(b) Install the chain onto the crankshaft timing sprocket with the gold or pink mark link aligned with the timing mark on the crankshaft.



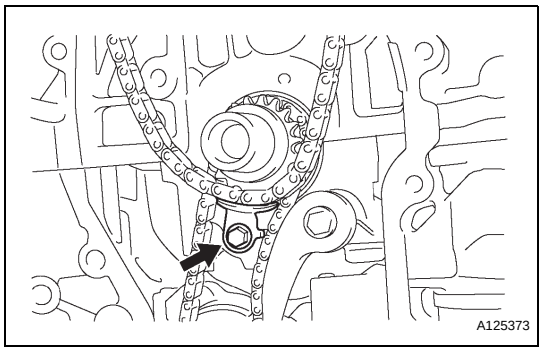
(c) Using SST and a hammer, tap in the crankshaft timing sprocket.
SST 09309-37010



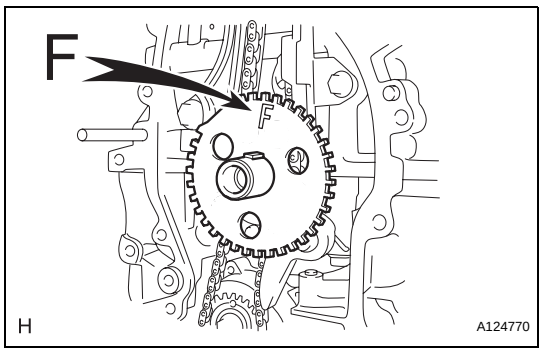
(d) Align the gold or yellow link with each timing mark located on the camshaft timing gear and sprocket, then install the chain.



5. INSTALL CHAIN TENSIONER SLIPPER
(a) Install the chain tensioner slipper with the bolt.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)



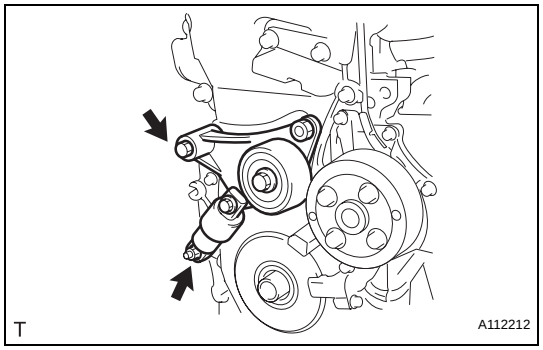
6. INSTALL TIMING CHAIN GUIDE
(a) Install the timing chain guide with the bolt.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)



7. INSTALL NO. 1 CRANKSHAFT POSITION SENSOR PLATE
(a) Install the sensor plate with the "F" mark facing forward.

8. INSTALL TIMING CHAIN CASE OIL SEAL (See page LU-15)

9. INSTALL TIMING CHAIN COVER SUB-ASSEMBLY (See page LU-15)



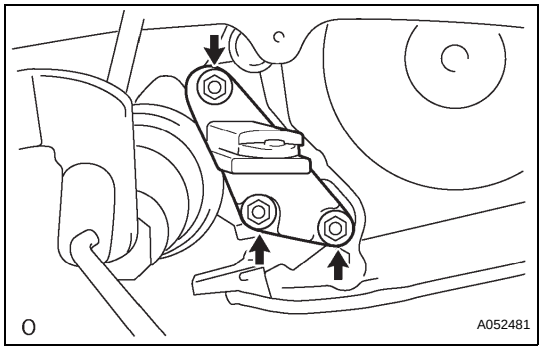
10. INSTALL V-RIBBED BELT TENSIONER ASSEMBLY

(a) Install the V-ribbed belt tensioner with the bolt and nut.

Torque: 60 N*m (607 kgf*cm, 44 ft.*lbf)

NOTICE:

Do not lift the engine more than necessary.

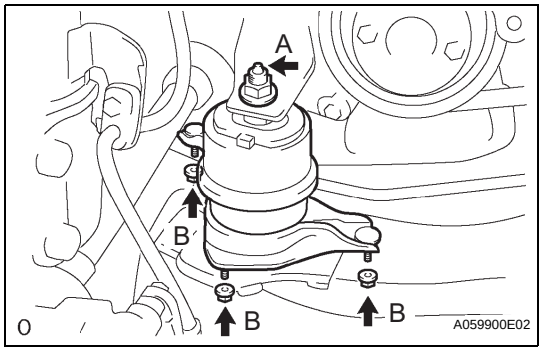


11. INSTALL ENGINE MOUNTING BRACKET RH

(a) Install the engine mounting bracket with the 3 bolts.

Torque: 54 N*m (551 kgf*cm, 40 ft.*lbf)

EM



12. INSTALL ENGINE MOUNTING INSULATOR

(a) Raise the engine and install the engine mounting insulator RH.

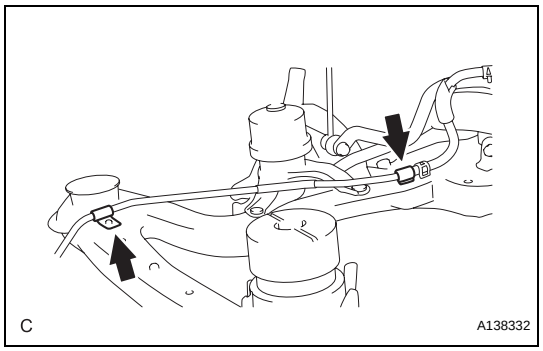
(b) Install the engine mounting insulator RH with the 4 nuts.

Torque: Nut A

95 N*m (969 kgf*cm, 70 ft.*lbf)

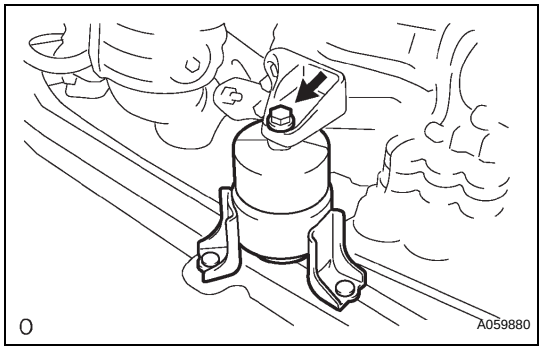
Nut B

87 N*m (888 kgf*cm, 64 ft.*lbf)



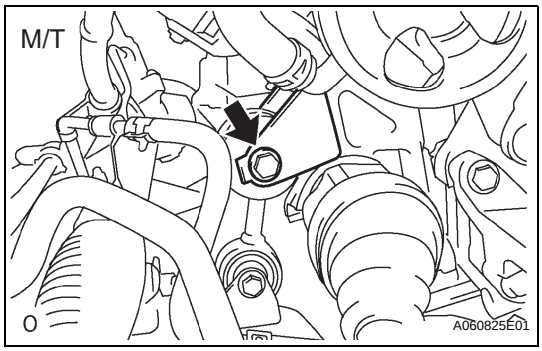
(c) Install the steering gear return tube clamps to the frame with the 2 bolts.

Torque: 8.0 N*m (80 kgf*cm, 69 in.*lbf)

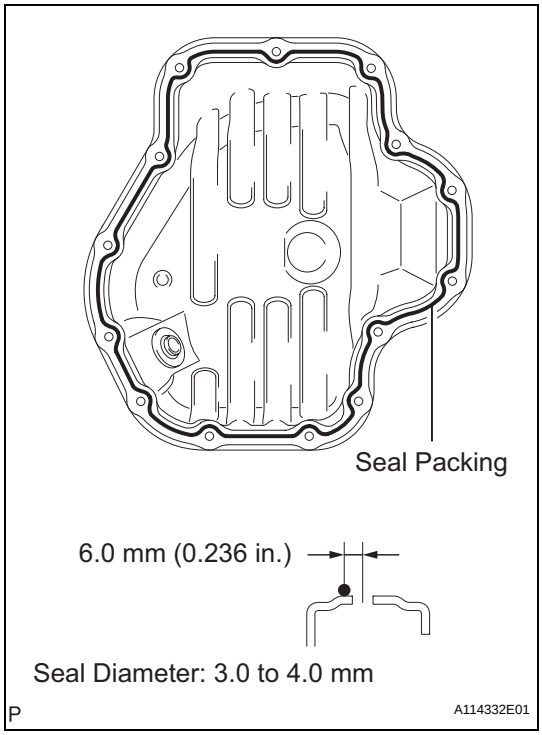


(d) Install the engine mounting insulator FR with the bolt.

Torque: 87 N*m (888 kgf*cm, 64 ft.*lbf)



(e) M/T:
Install the engine lateral control rod with the bolt.
Torque: 89 N*m (910 kgf*cm, 66 ft.*lbf)

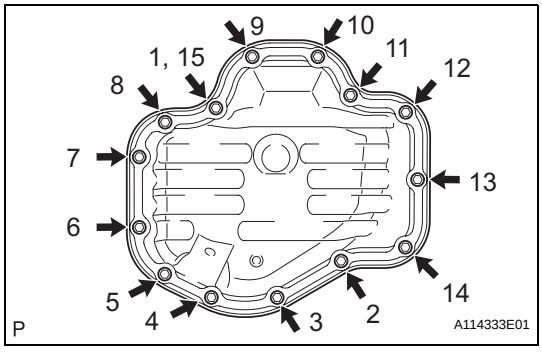


13. INSTALL OIL PAN SUB-ASSEMBLY

(a) Remove any old packing material and be careful not to drop any oil on the contact surfaces of the cylinder block and oil pan.

(b) Apply a continuous bead of seal packing (Diameter 3.0 to 4.0 mm (0.118 to 0.157 in.)) as shown in the illustration.
Seal packing:
Toyota Genuine Seal Packing Block, Three Bond 1207B or Equivalent
NOTICE:
- **Remove any oil from the contact surfaces.**
- **Install the oil pan within 3 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after installing.**

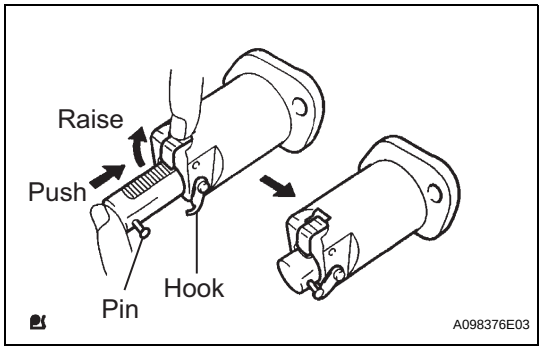
(c) Install the oil pan to the cylinder block.



(d) Uniformly tighten the 12 bolts and 2 nuts in the sequence shown in the illustration.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

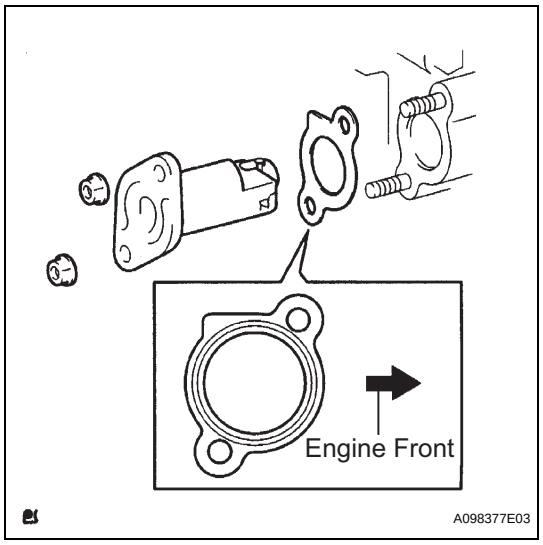
14. INSTALL CRANK POSITION SENSOR (See page ES-411)

15. INSTALL CRANKSHAFT PULLEY (See page EM-76)

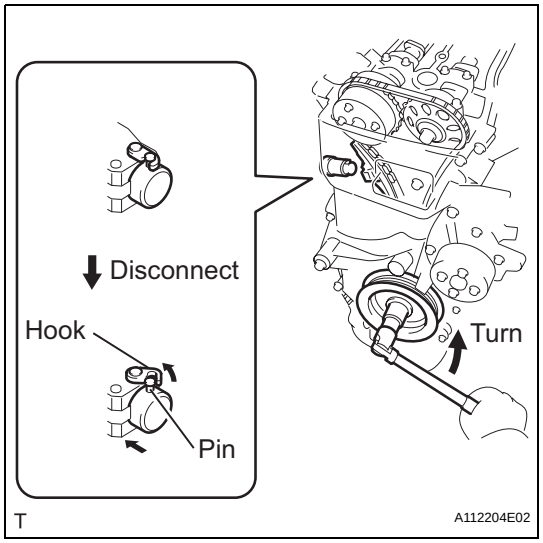


16. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY

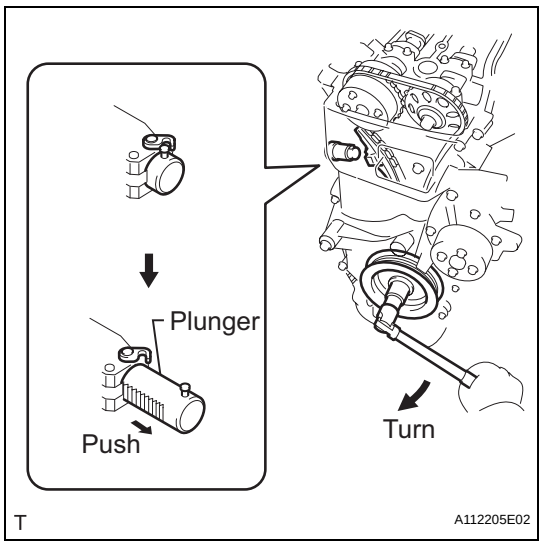
(a) Release the ratchet pawl, then fully push in the plunger and hook the hook to the pin so that the plunger is in the position shown in the illustration.



(b) Install a new gasket and the chain tensioner with the 2 nuts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
NOTICE:
If the hook releases the plunger while the chain tensioner is being installed, set the hook again.



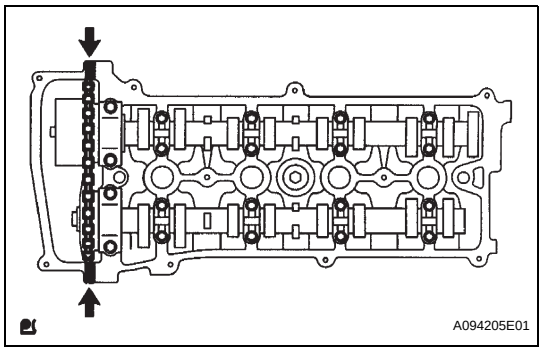
(c) Turn the crankshaft counterclockwise, then disconnect the plunger knock pin from the hook.



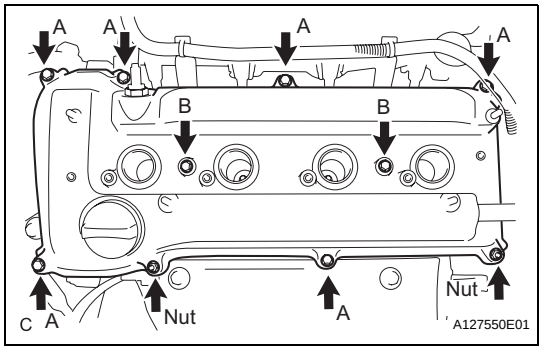
(d) Turn the crankshaft clockwise, then check that the plunger is extended.

17. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY

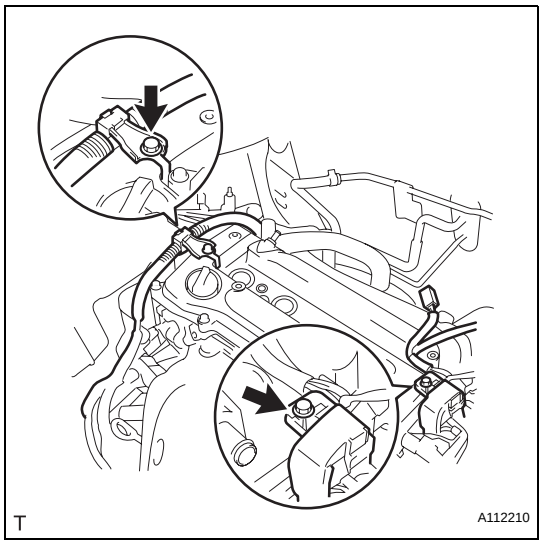
(a) Remove any old packing material from the contact surface.



(b) Apply seal packing to the 2 locations shown in the illustration.
Seal packing:
Toyota Genuine Seal Packing Block, Three Bond 1207B or Equivalent
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes of applying seal packing.**
- **Do not add engine oil for at least 2 hours after installing the cylinder head cover.**



(c) Install the cylinder head cover with the 8 bolts and 2 nuts.
Torque: Bolt A
11 N*m (112 kgf*cm, 8 ft.*lbf)
Bolt B
14 N*m (143 kgf*cm, 10 ft.*lbf)
Nut
11 N*m (112 kgf*cm, 8 ft.*lbf)



(d) Install the 2 engine wires with the 2 bolts.
Torque: 8.4 N*m (86 kgf*cm, 74 in.*lbf)

18. **INSTALL NO. 2 VENTILATION HOSE**
19. **INSTALL VENTILATION HOSE**
20. **INSTALL IGNITION COIL ASSEMBLY**
    (a) Install the 4 ignition coils with the 4 bolts.
    Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
21. **INSTALL VANE PUMP ASSEMBLY (See page EM-113)**
22. **INSTALL GENERATOR ASSEMBLY (See page CH-19)**
23. **INSTALL V-RIBBED BELT (See page EM-6)**
24. **INSTALL NO. 2 ENGINE MOUNTING BRACKET RH (See page EM-118)**
25. **INSTALL ENGINE MOVING CONTROL ROD SUB-ASSEMBLY (See page EM-119)**
26. **INSTALL NO. 2 ENGINE MOUNTING STAY RH (See page EM-119)**
27. **INSTALL FRONT EXHAUST PIPE ASSEMBLY**
    HINT:
    See page EX-3.
28. **ADD ENGINE OIL**
29. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (See page EM-120)**
30. **CHECK FOR ENGINE OIL LEAKS**
31. **CHECK FOR EXHAUST GAS LEAKS**
32. **CHECK IGNITION TIMING (See page EM-1)**

33. **INSTALL FRONT FENDER APRON SEAL RH**
34. **INSTALL ENGINE UNDER COVER LH**
35. **INSTALL ENGINE UNDER COVER RH**
36. **INSTALL FRONT WHEEL RH**
37. **INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-121)**

EM

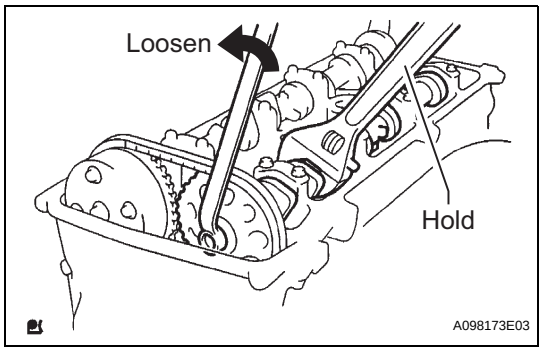
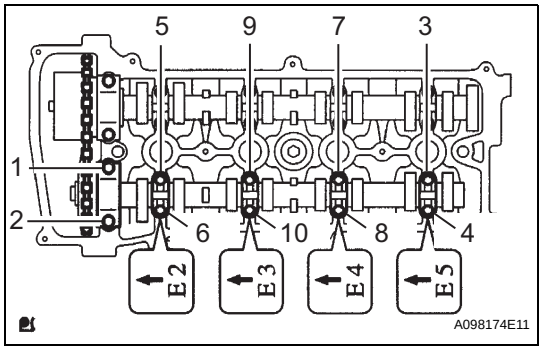
REMOVAL

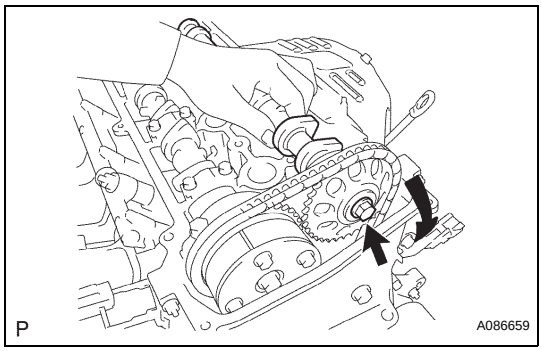
1. **REMOVE FRONT WHEEL RH**
2. **REMOVE ENGINE UNDER COVER LH**
3. **REMOVE ENGINE UNDER COVER RH**
4. **REMOVE FRONT FENDER APRON SEAL RH**
5. **REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-94)**
6. **REMOVE IGNITION COIL ASSEMBLY (See page EM-106)**
7. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-21)**
8. **SET NO. 1 CYLINDER TO TDC/COMPRESSION (See page EM-8)**
9. **REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY (See page EM-22)**
10. **REMOVE NO. 2 CAMSHAFT**



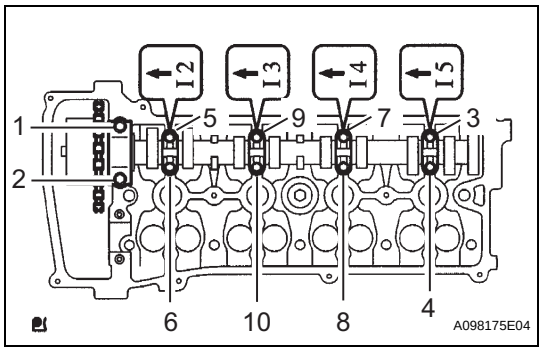
(a) While holding the camshaft with a wrench, loosen the camshaft timing set bolt.



(b) Using several steps, uniformly loosen and remove the 10 bearing cap bolts in the sequence shown in the illustration.
(c) Remove the 5 bearing caps.



(d) While holding the No. 2 camshaft by hand, remove the camshaft timing sprocket set bolt.
(e) Remove the camshaft timing sprocket from the No. 2 camshaft with the timing chain wrapped on the sprocket.
(f) Remove the camshaft timing sprocket from the timing chain.

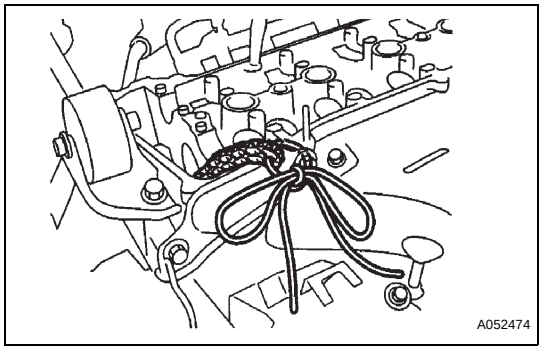


11. REMOVE CAMSHAFT

(a) Using several steps, uniformly loosen and remove the 10 bearing cap bolts in the sequence shown in the illustration.

(b) Remove the 5 bearing caps.

(c) Remove the camshaft and camshaft timing gear while holding the timing chain by hand.

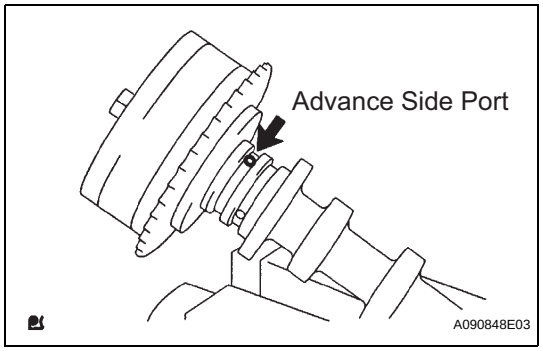


(d) Tie the timing chain with a string as shown in the illustration.

NOTICE:

Be careful not to drop anything inside the timing chain cover.

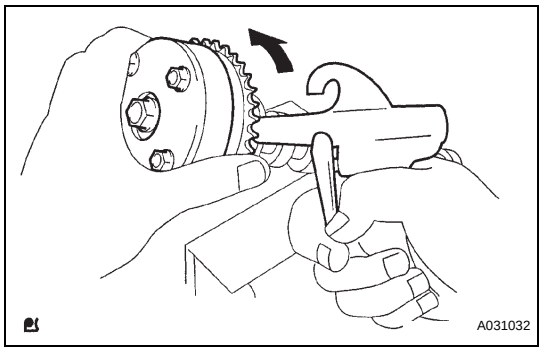
EM



12. REMOVE CAMSHAFT TIMING GEAR ASSEMBLY

(a) Clamp the camshaft in a vise, and make sure that the camshaft timing gear does not rotate.

(b) Cover all the oil ports except the advance side port shown in the illustration with vinyl tape.



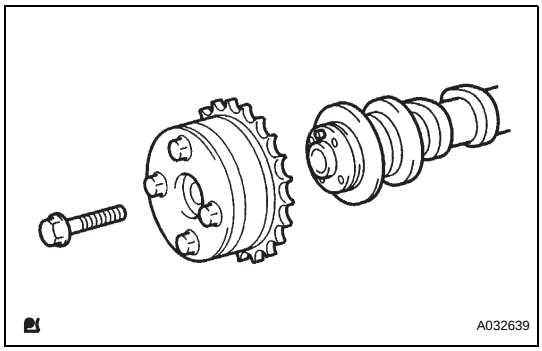
(c) Apply air pressure of 100 kPa (1.0 kgf/cm^2, 14 psi) to the oil path, then turn the camshaft timing gear in the advance direction (counterclockwise) by hand.

CAUTION:

Cover the paths with a shop rag or piece of cloth to avoid oil splashes.

HINT:

Depending on the air pressure, the camshaft timing gear will turn to the advance angle side without applying force by hand. Also, if the pressure is difficult to apply because of air leakage from the port, the lock may be difficult to release.



(d) Remove the flange bolt of the camshaft timing gear.
NOTICE:
- **Be sure not to remove the other 4 bolts.**
- **If planning to reuse the gear, be sure to release the straight pin lock before installing the gear.**

INSPECTION

1. INSPECT CAMSHAFT TIMING GEAR ASSEMBLY

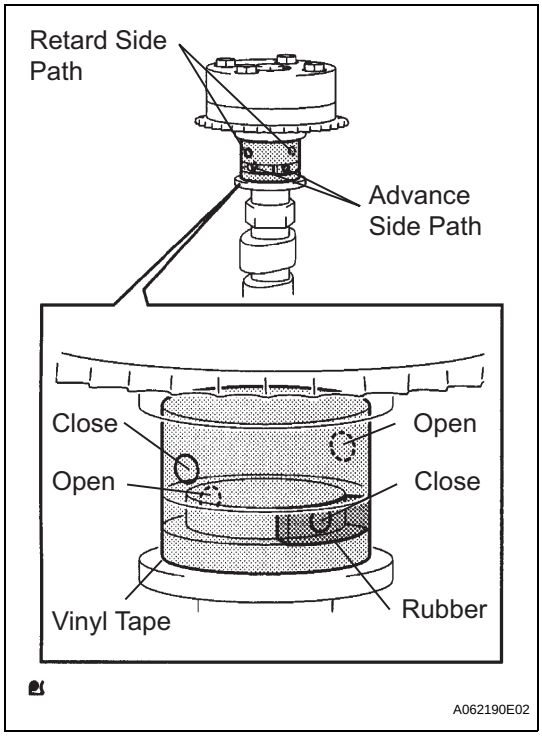
(a) Check the lock of the camshaft timing gear.

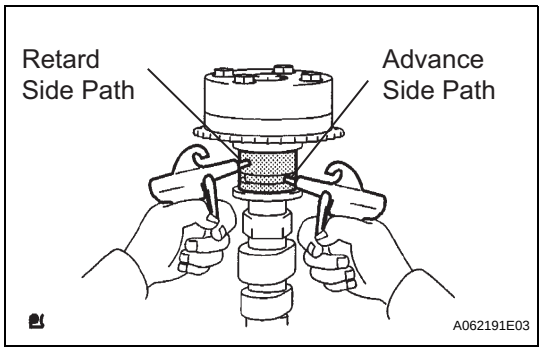
(1) Clamp the camshaft in a vise, and confirm that the camshaft timing gear is locked.
NOTICE:
Be careful not to damage the camshaft.

(b) Release the lock pin.

(1) Cover the 4 oil paths of the cam journal with vinyl tape as shown in the illustration.
HINT:
The 2 advance side paths are provided in the groove of the camshaft. Plug one of the paths with a rubber piece.

(2) Break through the tape of the advance side path and the retard side path on the opposite side to the hole of the advance side path, as shown in the illustration.





(3) Apply approximately 200 kPa (2.0 kgf/cm^2, 28 psi) of air pressure to the two broken paths.
CAUTION:
Cover the paths with a piece of cloth when applying pressure to keep oil from splashing.

(4) Check that the camshaft timing gear revolves in the advance direction when reducing the air pressure of the retard side path.
OK:
Gear rotates in the advance direction.
HINT:
This operation releases the lock pin for the most retarded position.

(5) When the camshaft timing gear reaches the most advanced position, remove the air gun from the retard side path and advance side path, in that order.

NOTICE:

Do not remove the air gun from the advance side path first. The gear may abruptly shift in the retard direction and break the lock pin.

(c) Check for smooth rotation.

(1) Rotate the camshaft timing gear within its movable range several times, but do not turn it to the most retarded position. Check that the gear rotates smoothly.

OK:

Gear rotates smoothly.

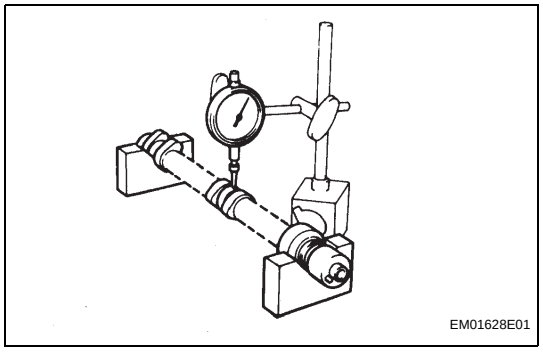
NOTICE:

Do not use an air gun to check for smooth operation.

(d) Check the lock in the most retarded position.

(1) Confirm that the camshaft timing gear is locked at the most retarded position.

2. INSPECT CAMSHAFT



EM01628E01

(a) Inspect the camshaft for runout.

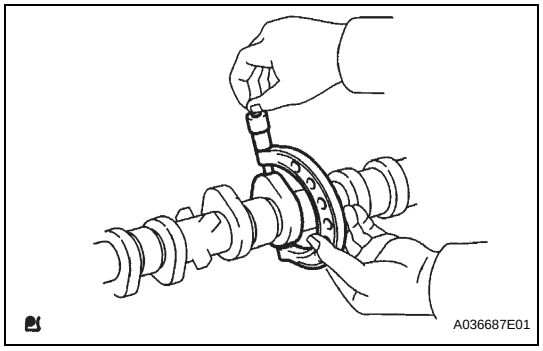
(1) Place the camshaft on V-blocks.

(2) Using a dial indicator, measure the circle runout at the center journal.

Maximum circle runout:

0.03 mm (0.0012 in.)

If the circle runout is greater than the maximum, replace the camshaft.



A036687E01

(b) Inspect the cam lobes.

(1) Using a micrometer, measure the cam lobe height.

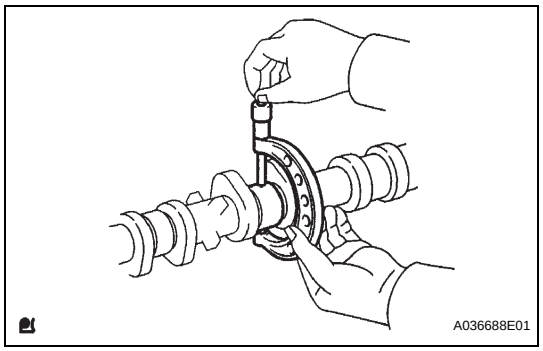
Standard cam lobe height:

47.306 to 47.406 mm (1.8624 to 1.8664 in.)

Minimum cam lobe height:

47.196 mm (1.8581 in.)

If the cam lobe height is less than the minimum, replace the camshaft.



A036688E01

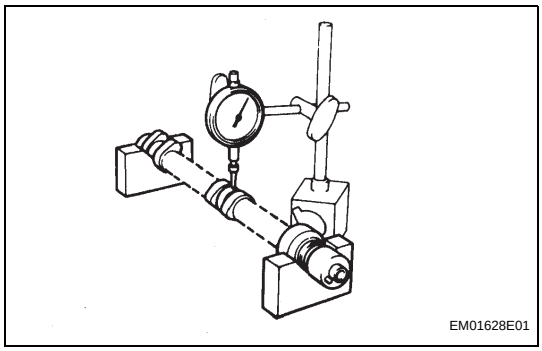
(c) Inspect the camshaft journals.

(1) Using a micrometer, measure the journal diameter.

Standard journal diameter

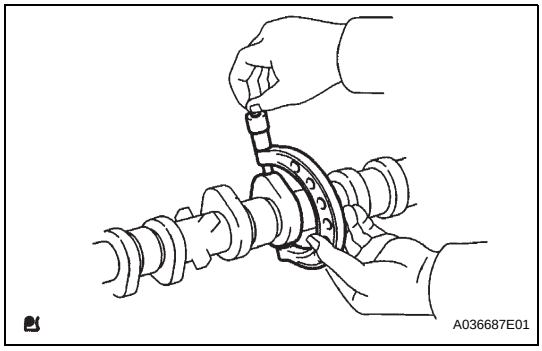
Journal Position	Specified Condition
No. 1	35.971 to 35.985 mm (1.4162 to 1.4167 in.)
Other	22.959 to 22.975 mm (0.9039 to 0.9045 in.)

If the journal diameter is not as specified, check the oil clearance.

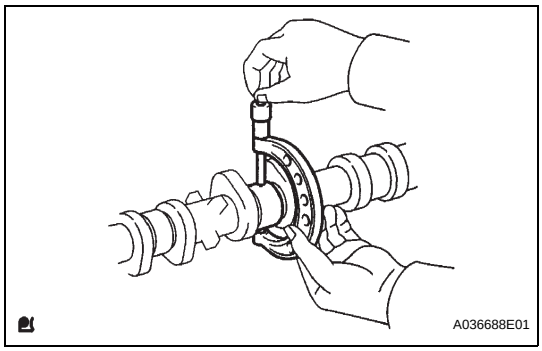


3. INSPECT NO. 2 CAMSHAFT

(a) Inspect the camshaft for runout.
(1) Place the camshaft on V-blocks.
(2) Using a dial indicator, measure the circle runout at the center journal.
Maximum circle runout:
0.03 mm (0.0012 in.)
If the circle runout is greater than the maximum, replace the No. 2 camshaft.



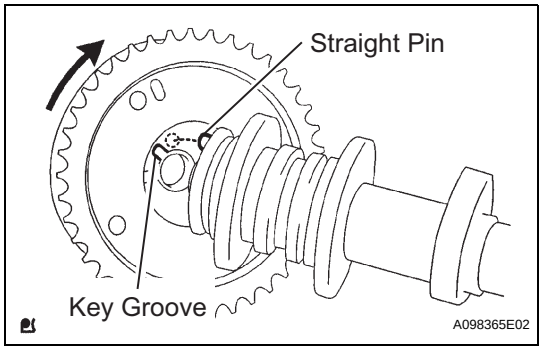
(b) Inspect the cam lobes.
(1) Using a micrometer, measure the cam lobe height.
Standard cam lobe height:
45.983 to 46.083 mm (1.8104 to 1.8143 in.)
Minimum cam lobe height:
45.873 mm (1.8060 in.)
If the cam lobe height is less than the minimum, replace the No. 2 camshaft.



(c) Inspect the camshaft journals.
(1) Using a micrometer, measure the journal diameter.
Standard journal diameter

Journal Position	Specified Condition
No. 1	35.971 to 35.985 mm (1.4162 to 1.4167 in.)
Other	22.959 to 22.975 mm (0.9039 to 0.9045 in.)

If the journal diameter is not as specified, check the oil clearance.



INSTALLATION

1. INSTALL CAMSHAFT TIMING GEAR ASSEMBLY

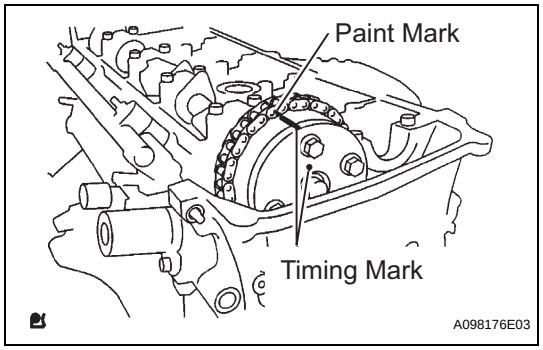
(a) Put the camshaft timing gear and camshaft together with the straight pin and key groove misaligned, as shown in the illustration.
(b) Turn the camshaft timing gear as shown in the illustration while pushing it gently against the camshaft. Push further at the position where the pin fits into the groove.
NOTICE:
Be sure not to turn the camshaft timing gear to the retard angle side (the right angle).
(c) Check that there is no clearance between the gear and camshaft.
(d) Tighten the flange bolt with the camshaft timing gear fixed in place.
Torque: 54 N*m (551 kgf*cm, 40 ft.*lbf)

(e) Check that the camshaft timing gear can move to the retard angle side (the right direction) and is locked in the most retarded position.

2. INSTALL CAMSHAFT

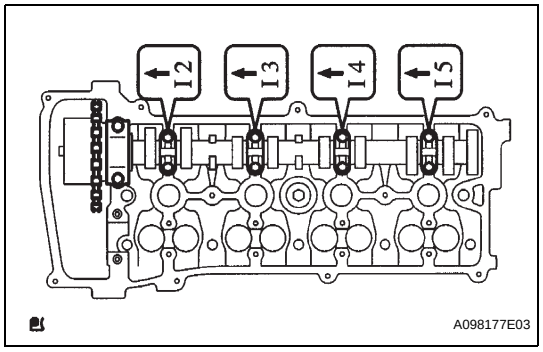
(a) Apply a light coat of engine oil to the journal portion of the camshaft.

(b) Install the timing chain onto the camshaft timing gear with the paint mark aligned with the timing mark in the camshaft timing gear as shown in the illustration.



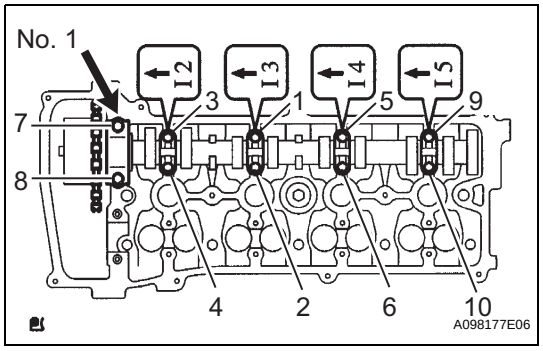
(c) Examine the front marks and numbers, and check that the order is as shown in the illustration. Then install the bearing caps into the cylinder head.

(d) Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.



(e) Using several steps, uniformly tighten the 10 bearing cap bolts in the sequence shown in the illustration.

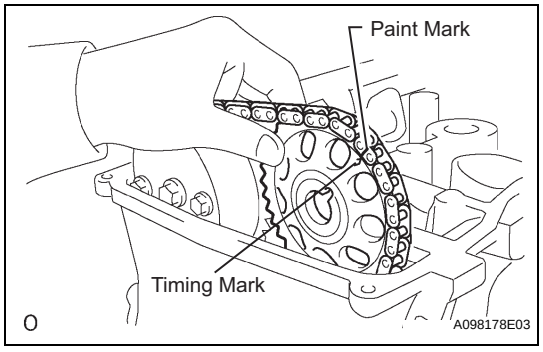
Torque: No. 1 Bearing cap
30 N*m (301 kgf*cm, 22 ft.*lbf)
No. 3 Bearing cap
9.0 N*m (92 kgf*cm, 80 in.*lbf)

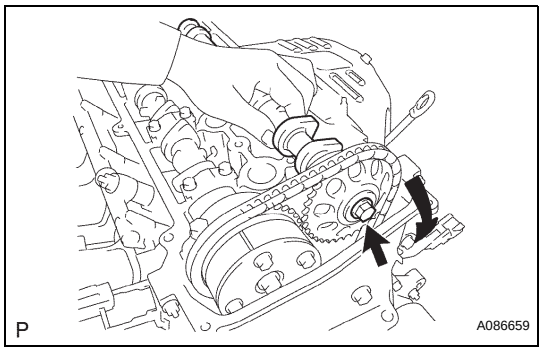


3. INSTALL NO. 2 CAMSHAFT

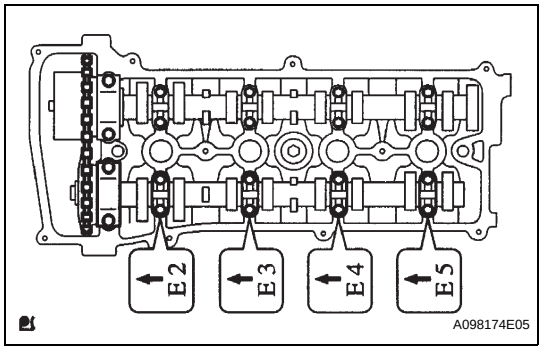
(a) Apply a light coat of engine oil to the journal portion of the No. 2 camshaft.

(b) Put the No. 2 camshaft on the cylinder head with the paint mark of the chain aligned with the timing mark on the camshaft timing sprocket.



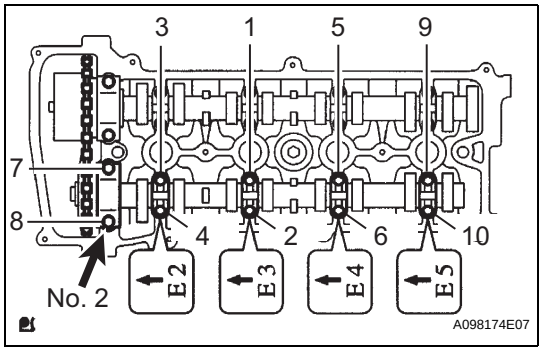


(c) While holding the No. 2 camshaft by hand, temporarily tighten the camshaft timing sprocket set bolt.



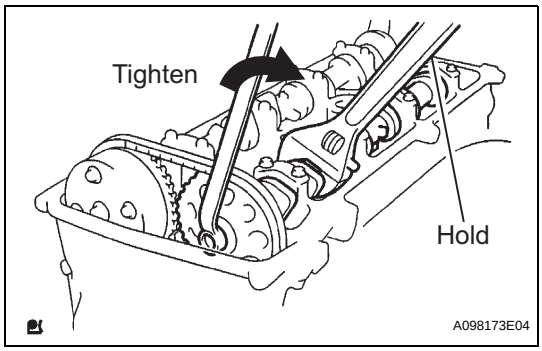
(d) Examine the front marks and numbers, and check that the order is as shown in the illustration. Then install the bearing caps onto the cylinder head.

(e) Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.



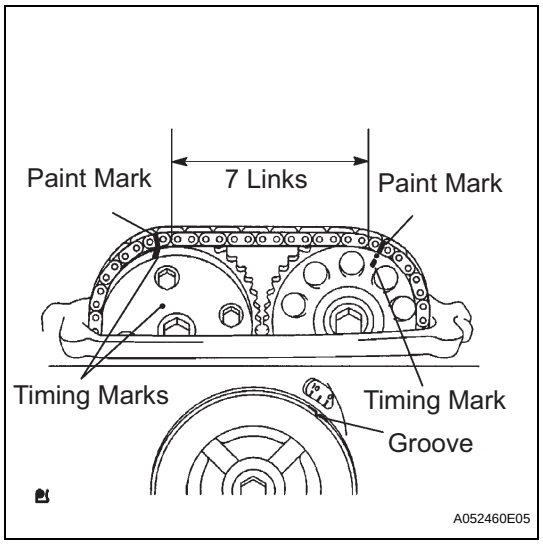
(f) Using several steps, uniformly tighten the 10 bearing cap bolts in the sequence shown in the illustration.

Torque: No. 2 Bearing cap
30 N*m (301 kgf*cm, 22 ft.*lbf)
No. 3 Bearing cap
9.0 N*m (92 kgf*cm, 80 in.*lbf)



(g) While holding the camshaft with a wrench, tighten the camshaft timing sprocket set bolt.

Torque: 54 N*m (551 kgf*cm, 40 ft.*lbf)



(h) Check that the paint marks on the chain are aligned with the timing marks on the camshaft timing gear and camshaft timing sprocket. Also, check that the crankshaft pulley groove is aligned with the timing mark "0" of the timing chain cover.

4. **INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY (See page EM-32)**
5. **CHECK VALVE CLEARANCE (See page EM-8)**
6. **INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-33)**
7. **INSTALL IGNITION COIL ASSEMBLY (See page EM-33)**
8. **INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-121)**
9. **INSTALL FRONT FENDER APRON SEAL RH**
10. **INSTALL ENGINE UNDER COVER LH**
11. **INSTALL ENGINE UNDER COVER RH**

REMOVAL

1. **DISCHARGE FUEL SYSTEM PRESSURE**
   HINT:
   See page FU-1.
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **REMOVE ENGINE UNDER COVER LH**
4. **REMOVE ENGINE UNDER COVER RH**
5. **REMOVE FRONT FENDER APRON SEAL RH**
6. **REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-94)**
7. **DRAIN ENGINE COOLANT (See page CO-5)**
8. **DRAIN ENGINE OIL (See page LU-4)**
9. **REMOVE WINDSHIELD WIPER LINK ASSEMBLY**
   HINT:
   See page WW-9.
10. **REMOVE COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-424)**
11. **REMOVE AIR CLEANER INLET ASSEMBLY (See page EM-94)**
12. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-416)**
13. **REMOVE AIR CLEANER CASE SUB-ASSEMBLY (See page EM-95)**
14. **REMOVE BATTERY (See page EM-95)**
15. **REMOVE THROTTLE BODY ASSEMBLY (See page ES-417)**
16. **DISCONNECT FUEL TUBE SUB-ASSEMBLY (See page FU-12)**
17. **REMOVE FUEL DELIVERY PIPE WITH INJECTOR (See page FU-13)**
18. **REMOVE INTAKE MANIFOLD (See page ES-424)**
19. **REMOVE INTAKE AIR CONTROL VALVE (For PZEV) (See page IT-7)**
20. **REMOVE NO. 1 INTAKE MANIFOLD INSULATOR (See page EM-103)**
21. **REMOVE FRONT EXHAUST PIPE ASSEMBLY**
    HINT:
    See page EX-2.
22. **REMOVE NO. 2 ENGINE MOUNTING STAY RH (See page EM-95)**
23. **REMOVE ENGINE MOVING CONTROL ROD SUB-ASSEMBLY (See page EM-95)**

24. REMOVE NO. 2 ENGINE MOUNTING BRACKET RH (See page EM-96)

25. REMOVE V-RIBBED BELT (See page EM-6)

26. REMOVE GENERATOR ASSEMBLY (See page CH-11)

27. REMOVE OIL LEVEL GAUGE SUB-ASSEMBLY

28. REMOVE OIL LEVEL GAUGE GUIDE (See page EM-104)

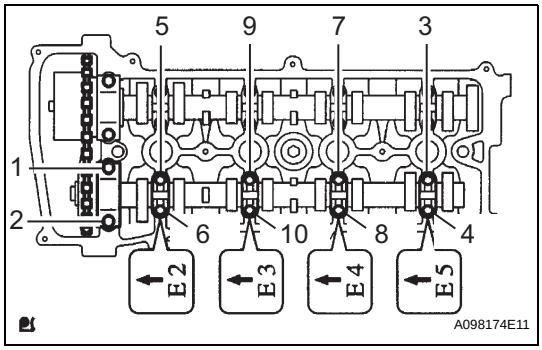
29. REMOVE MANIFOLD STAY (See page EM-104)

30. REMOVE NO. 2 MANIFOLD STAY (See page EM-104)

31. REMOVE EXHAUST MANIFOLD CONVERTER SUB-ASSEMBLY (See page EM-104)

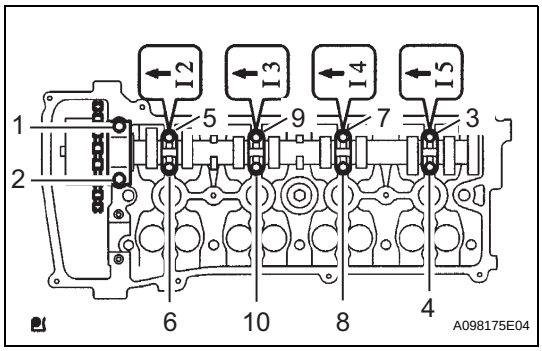
32. REMOVE CHAIN SUB-ASSEMBLY

HINT:
See page EM-21.



33. REMOVE NO. 2 CAMSHAFT

(a) Using several steps, uniformly loosen and remove the 10 bearing cap bolts in the sequence shown in the illustration.
(b) Remove the 5 bearing caps and No. 2 camshaft.

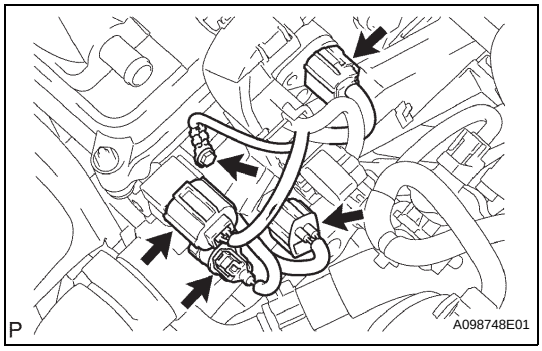


34. REMOVE CAMSHAFT

(a) Using several steps, uniformly loosen and remove the 10 bearing cap bolts in the sequence shown in the illustration.
(b) Remove the 5 bearing caps and camshaft.

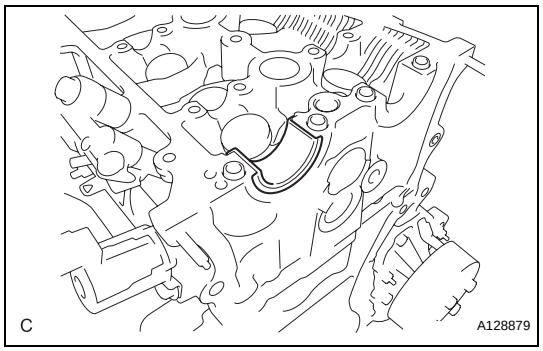
35. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-405)

36. DISCONNECT RADIATOR HOSE INLET (See page EM-96)



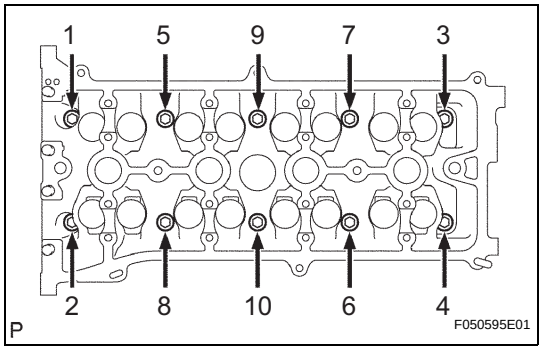
37. DISCONNECT ENGINE WIRE

(a) Disconnect the radio setting condenser connector.
(b) Disconnect the engine oil pressure switch connector.
(c) Disconnect the engine coolant temperature sensor connector.
(d) Disconnect the camshaft position sensor connector.
(e) Remove the bolt and ground cable.



38. REMOVE NO. 2 CAMSHAFT BEARING

(a) Remove the No. 2 camshaft bearing.



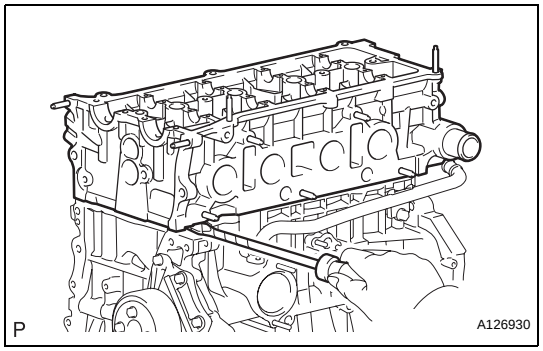
39. REMOVE CYLINDER HEAD SUB-ASSEMBLY

(a) Using several steps, uniformly loosen and remove the 10 cylinder head bolts and 10 plate washers with a 10 mm bi-hexagon wrench in the sequence shown in the illustration.

NOTICE:

Head warpage or cracking could result from removing the bolts in the wrong order.

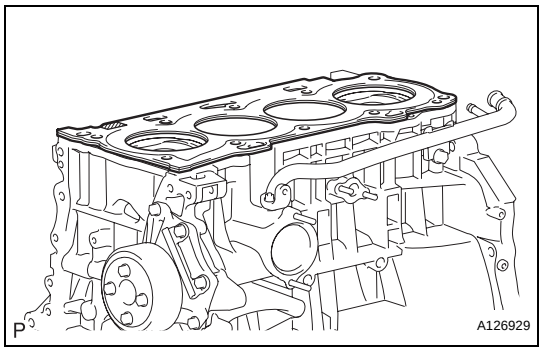
EM



(b) Using a screwdriver with its tip wrapped with tape, pry between the cylinder head and cylinder block, and remove the cylinder head.

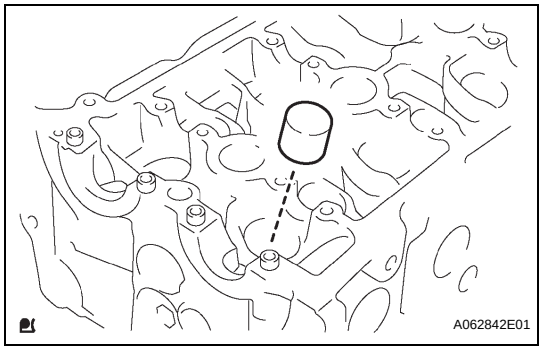
NOTICE:

Be careful not to damage the contact surfaces of the cylinder head and cylinder block.



40. REMOVE CYLINDER HEAD GASKET

(a) Remove the cylinder head gasket.



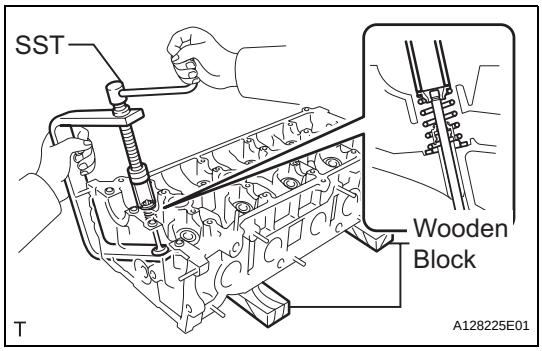
DISASSEMBLY

1. REMOVE VALVE LIFTER

(a) Remove the valve lifters.

HINT:

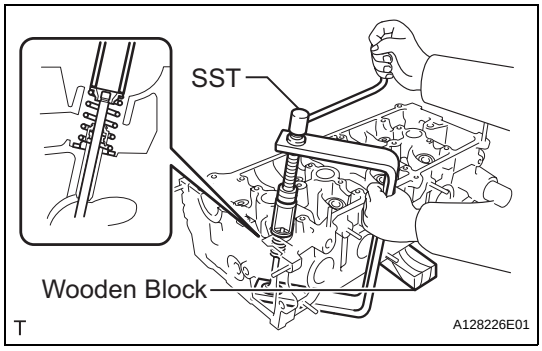
Arrange the valve lifters in the correct order.



2. REMOVE INTAKE VALVE

(a) Using SST and wooden blocks, compress and remove the valve retainer locks.
SST 09202-70020 (09202-00010)

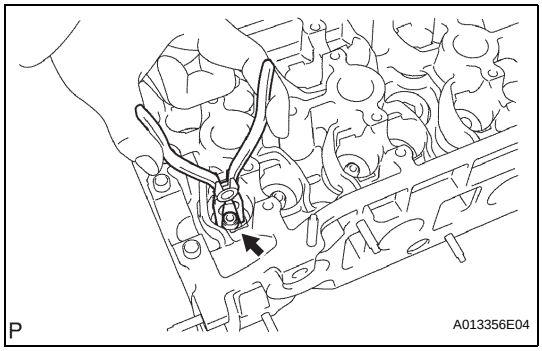
(b) Remove the retainer, valve spring and valve.
HINT:
Arrange the removed parts in the correct order.



3. REMOVE EXHAUST VALVE

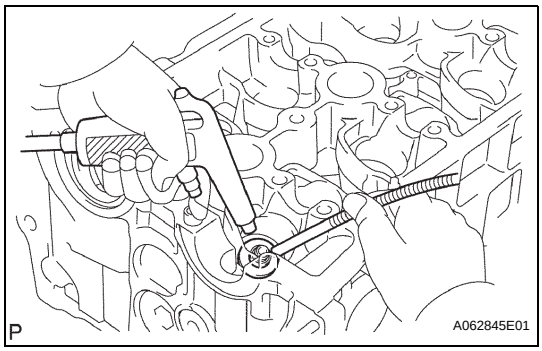
(a) Using SST and wooden blocks, compress and remove the valve retainer locks.
SST 09202-70020 (09202-00010)

(b) Remove the retainer, valve spring and valve.
HINT:
Arrange the removed parts in the correct order.



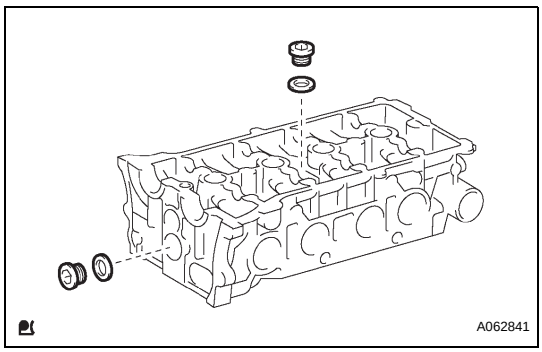
4. REMOVE VALVE STEM OIL SEAL

(a) Using needle-nose pliers, remove the oil seals.



5. REMOVE VALVE SPRING SEAT

(a) Using compressed air and a magnetic finger, remove the valve spring seats by blowing air onto them.



6. REMOVE NO. 1 STRAIGHT SCREW PLUG

(a) Using a 14 mm straight hexagon wrench, remove the 2 screw plugs and 2 gaskets.
NOTICE:
If water leaks from the straight screw plug or the plug corrodes, replace it.

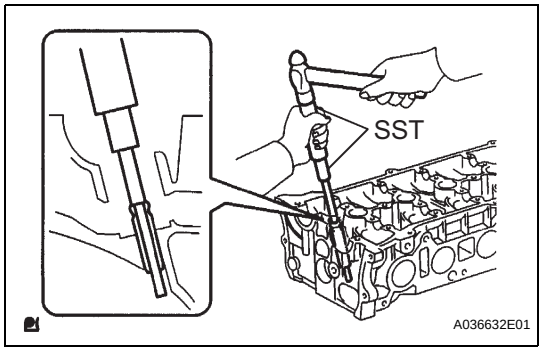
7. REMOVE STUD BOLT

8. REMOVE RING PIN

9. REMOVE INTAKE VALVE GUIDE BUSH

(a) Heat the cylinder head to 80 to 100°C (176 to 212°F).

(b) Place the cylinder head on wooden blocks.

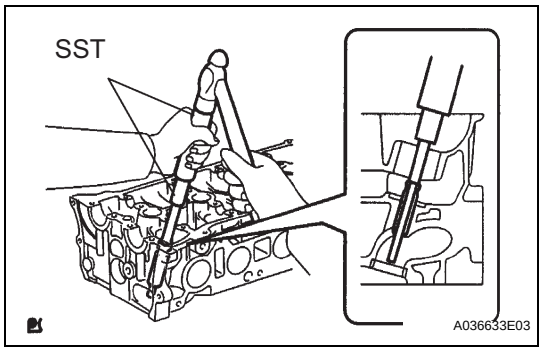


(c) Using SST and a hammer, tap out the guide bush.
SST 09201-10000 (09201-01050), 09950-70010 (09951-07100)

10. REMOVE EXHAUST VALVE GUIDE BUSH

(a) Heat the cylinder head to 80 to 100°C (176 to 212°F).

(b) Place the cylinder head on wooden blocks.



(c) Using SST and a hammer, tap out the guide bush.
SST 09201-10000 (09201-01050), 09950-70010 (09951-07100)

EM

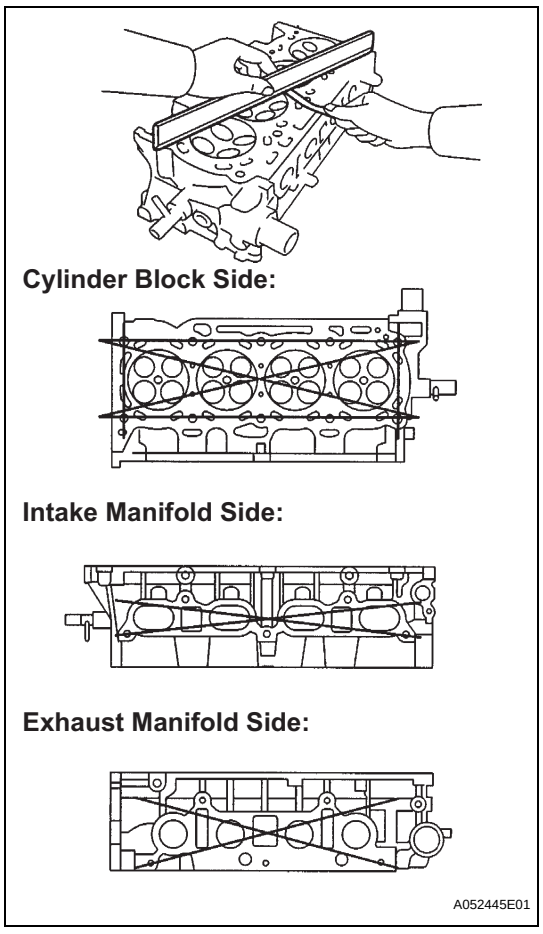
INSPECTION

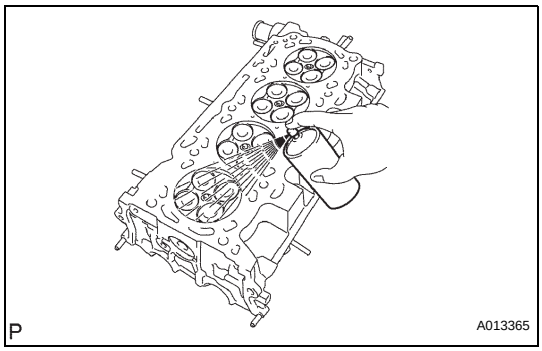
1. INSPECT CYLINDER HEAD FOR FLATNESS

(a) Using a precision straight edge and a feeler gauge, measure the surface contacting the cylinder block and the manifolds for warpage.
Maximum warpage

Item	Specified Condition
Cylinder block side	0.05 mm (0.0020 in.)
Intake manifold side	0.08 mm (0.0031 in.)
Exhaust manifold side	0.08 mm (0.0031 in.)

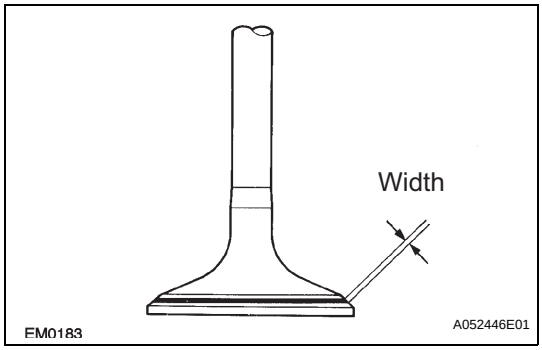
If the warpage is greater than the maximum, replace the cylinder head.





2. INSPECT CYLINDER HEAD FOR CRACKS

(a) Using a dye penetrant, check the intake ports, exhaust ports and cylinder surface for cracks. If cracked, replace the cylinder head.



3. INSPECT VALVE SEATS

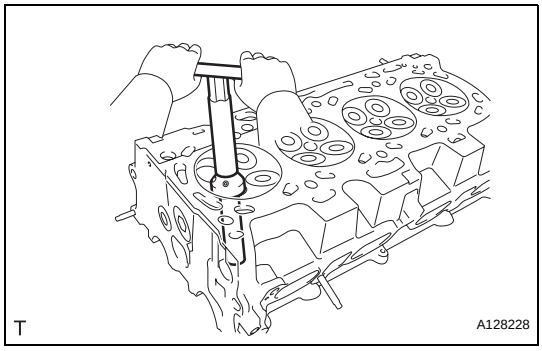
(a) Apply a light coat of prussian blue to the valve face.
(b) Lightly press the valve face against the valve seat.
(c) Check the valve face and valve seat according to the following procedure:
  (1) If prussian blue appears 360° around the valve face, the valve face is concentric. If not, replace the valve.
  (2) If prussian blue appears 360° around the valve seat, the guide and valve face are concentric. If not, resurface the valve seat.
  (3) Check that the valve seat contact is in the middle of the valve face with the width between 1.0 to 1.4 mm (Intake side (0.039 to 0.055 in.)).
  (4) Check that the valve seat contact is in the middle of the valve face with the width between 1.2 to 1.6 mm (Exhaust side (0.047 to 0.063 in.)).

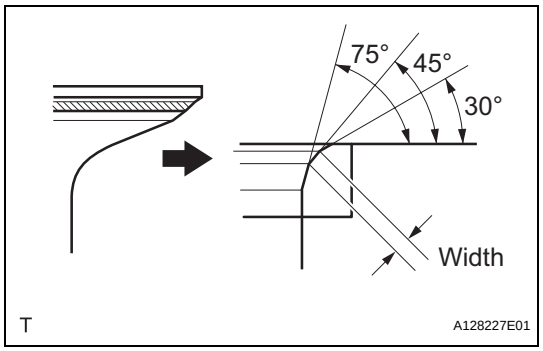
4. REPAIR VALVE SEATS

NOTICE:

- **Repair the seat while checking the seating position.**
- **Keep the lip free from foreign matter.**

(a) Using a 45° cutter, resurface the valve seat so that the valve seat width is more than the specification.





(b) Using 30° and 75° cutters, correct the valve seat so that the valve contacts the entire circumference of the seat. The contact should be in the center of the valve seat, and the valve seat width should be maintained within the specified range around the entire circumference of the seat.

Valve Seat Width

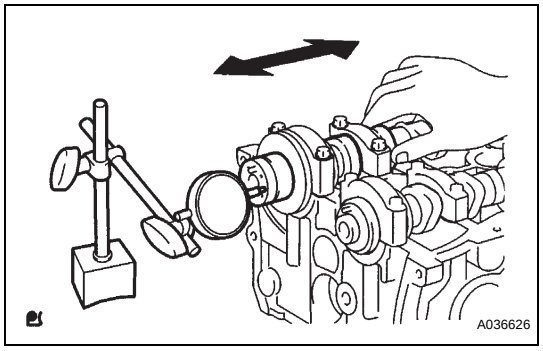
Item	Specified Condition
Intake Side	1.0 to 1.4 mm (0.039 to 0.055 in.)
Exhaust Side	1.2 to 1.6 mm (0.047 to 0.063 in.)

(c) Handrub the valve and valve seat with an abrasive compound.

(d) Check the valve seating position.

5. INSPECT CAMSHAFT THRUST CLEARANCE

(a) Install the camshafts (See page EM-70).



(b) Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.

Standard thrust clearance

Item	Specified Condition
Intake	0.040 to 0.095 mm (0.0016 to 0.0037 in.)
Exhaust	0.080 to 0.135 mm (0.0032 to 0.0053 in.)

Maximum thrust clearance

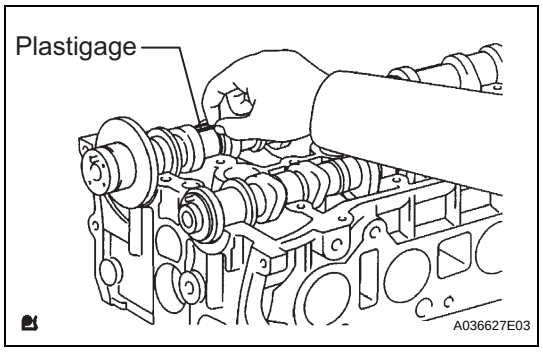
Item	Specified Condition
Intake	0.110 mm (0.0043 in.)
Exhaust	0.150 mm (0.0059 in.)

If the thrust clearance is greater than the maximum, replace the cylinder head. If the thrust surface is damaged, replace the camshaft.

6. INSPECT CAMSHAFT OIL CLEARANCE

(a) Clean the bearing caps and camshaft journals.

(b) Place the camshafts on the cylinder head.



(c) Lay a strip of Plastigage across each of the camshaft journals.

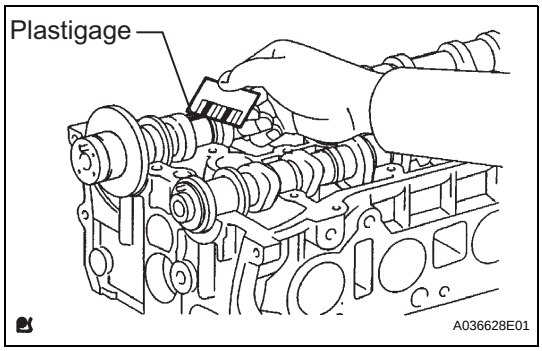
(d) Install the bearing caps (See page EM-70).

NOTICE:

Do not turn the camshaft.

(e) Remove the bearing caps (See page EM-53).

EM



(f) Measure the Plastigage at its widest point.

Standard oil clearance

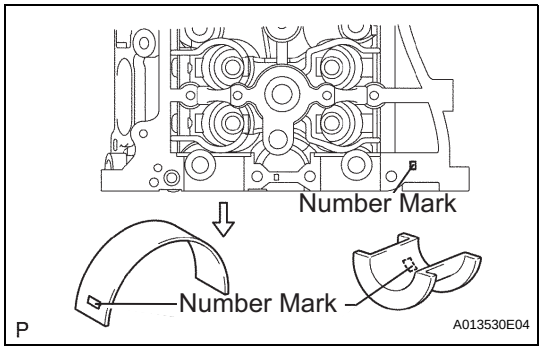
Item	Specified Condition
Camshaft No. 1 journal bearing mark 1	0.007 to 0.038 mm (0.0003 to 0.0015 in.)
Camshaft No. 1 journal bearing mark 2	0.008 to 0.038 mm (0.0003 to 0.0015 in.)
Camshaft No. 1 journal bearing mark 3	0.008 to 0.038 mm (0.0003 to 0.0015 in.)
Camshaft other journals	0.025 to 0.062 mm (0.0010 to 0.0024 in.)
No. 2 camshaft No. 1 journal	0.015 to 0.054 mm (0.0006 to 0.0021 in.)
No. 2 camshaft other journals	0.025 to 0.062 mm (0.0010 to 0.0024 in.)

Maximum oil clearance

Item	Specified Condition
Intake	0.070 mm (0.0028 in.)
Exhaust	0.100 mm (0.0039 in.)

NOTICE:
Completely remove the Plastigage after the inspection.

- If the oil clearance is greater than the maximum, replace the camshaft. If necessary, replace the cylinder head.
- If the oil clearance on the camshaft No. 1 journal is greater than the maximum, choose a new bearing and install it.



(1) Check the number mark shown in the illustration.

Cylinder head journal bore diameter

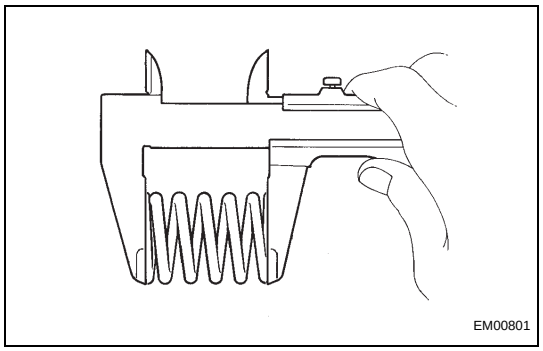
Mark 1	Mark 2	Mark 3
40.000 to 40.008 mm (1.5748 to 1.5752 in.)	40.009 to 40.017 mm (1.5752 to 1.5755 in.)	40.018 to 40.025 mm (1.5755 to 1.5758 in.)

Standard bearing center wall thickness

Mark 1	Mark 2	Mark 3
2.000 to 2.004 mm (0.0787 to 0.0789 in.)	2.005 to 2.008 mm (0.0789 to 0.0791 in.)	2.009 to 2.012 mm (0.0791 to 0.0792 in.)

Camshaft journal diameter

Mark 1	Mark 2	Mark 3
35.971 to 35.985 mm (1.4162 to 1.4167 in.)	35.971 to 35.985 mm (1.4162 to 1.4167 in.)	35.971 to 35.985 mm (1.4162 to 1.4167 in.)



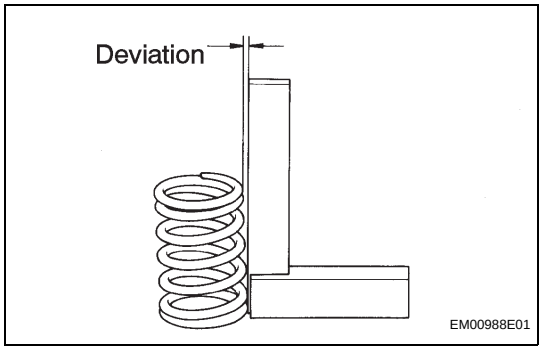
7. INSPECT INNER COMPRESSION SPRING

(a) Using vernier calipers, measure the free length of the valve spring.

Free length:

47.43 mm (1.867 in.)

If the free length is not as specified, replace the valve spring.



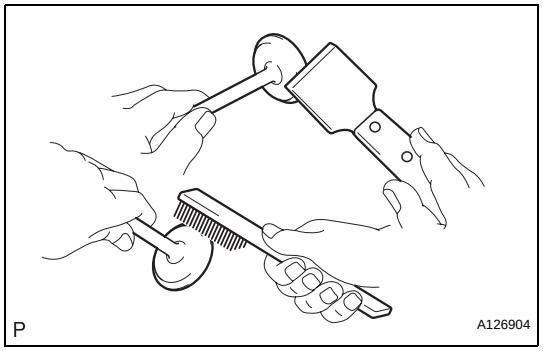
(b) Using steel squares, measure the deviation of the valve spring.

Maximum deviation:

1.6 mm (0.063 in.)

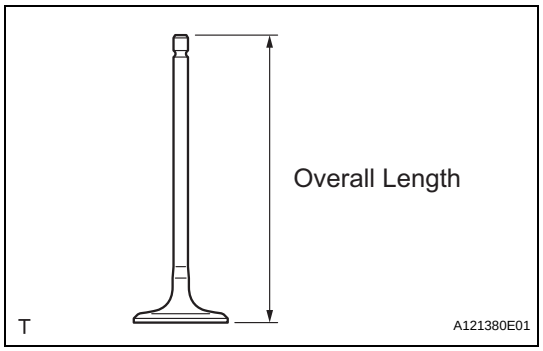
If the deviation is greater than the maximum, replace the valve spring.

EM



8. INSPECT INTAKE VALVE

(a) Using a gasket scraper, scrape off any carbon on the valve head.



(b) Using vernier calipers, measure the overall length of the valve.

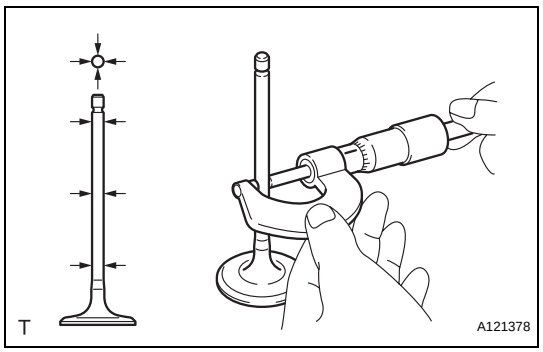
Standard overall length:

101.71 mm (4.0043 in.)

Minimum overall length:

101.21 mm (3.9846 in.)

If the overall length is less than the minimum, replace the valve.

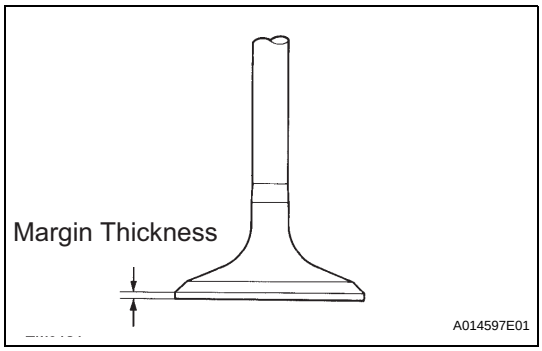


(c) Using a micrometer, measure the diameter of the valve stem.

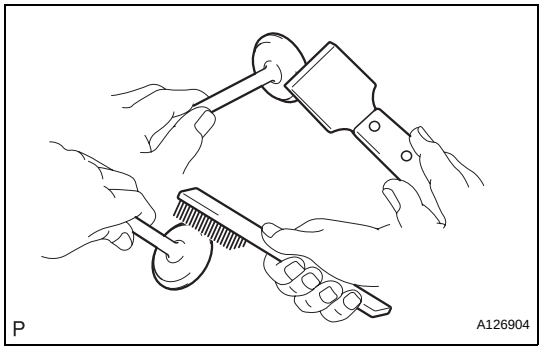
Valve stem diameter:

5.470 to 5.485 mm (0.2154 to 0.2159 in.)

If the valve stem is not as specified, check the oil clearance.

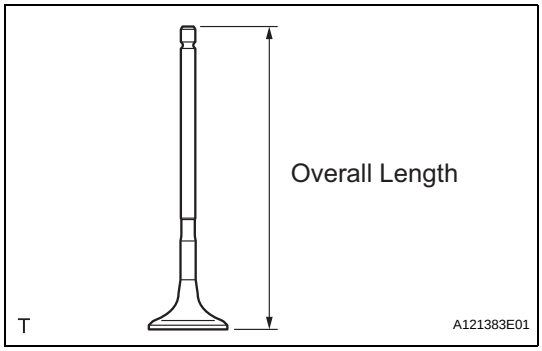


(d) Using vernier calipers, measure the valve head margin thickness.
Standard margin thickness:
1.05 to 1.45 mm (0.0413 to 0.0571 in.)
Minimum margin thickness:
0.50 mm (0.0197 in.)
If the margin thickness is less than the minimum, replace the valve.

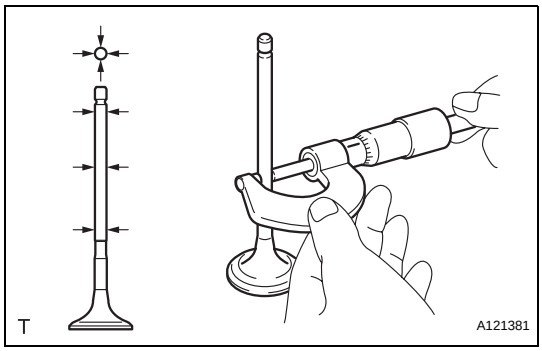


9. INSPECT EXHAUST VALVE

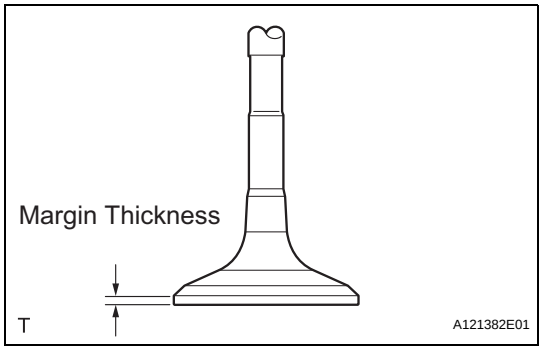
(a) Using a gasket scraper, scrape off any carbon on the valve head.



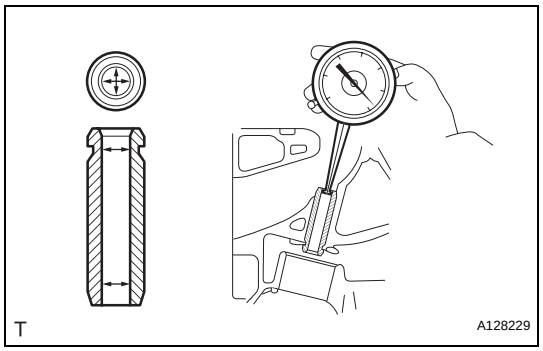
(b) Using vernier calipers, measure the overall length of the valve.
Standard overall length:
101.15 mm (3.9823 in.)
Minimum overall length:
100.70 mm (3.9646 in.)
If the overall length is less than the minimum, replace the valve.



(c) Using a micrometer, measure the diameter of the valve stem.
Valve stem diameter:
5.465 to 5.480 mm (0.2152 to 0.2157 in.)
If the valve stem is not as specified, check the oil clearance.



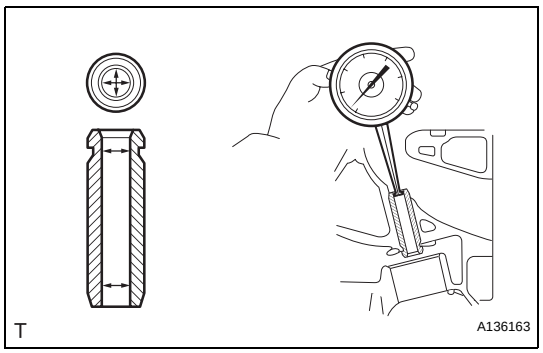
(d) Using vernier calipers, measure the valve head margin thickness.
Standard margin thickness:
1.20 to 1.60 mm (0.0472 to 0.0630 in.)
Minimum margin thickness:
0.50 mm (0.0197 in.)
If the margin thickness is less than the minimum, replace the valve.



10. INSPECT INTAKE VALVE GUIDE BUSH

(a) Using a caliper gauge, measure the inside diameter of the guide bush.
Bushing inside diameter:
5.510 to 5.530 mm (0.2169 to 0.2177 in.)

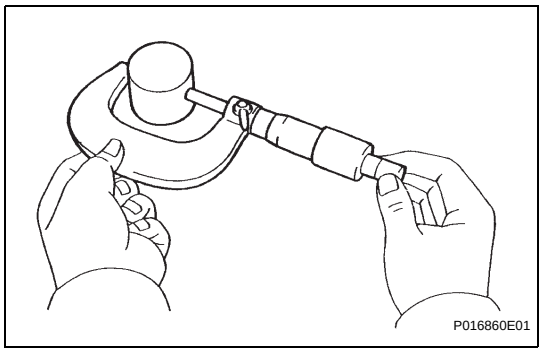
(b) Subtract the valve stem diameter measurement from the guide bush inside diameter measurement.
Standard oil clearance:
0.025 to 0.060 mm (0.0010 to 0.0024 in.)
Maximum oil clearance:
0.080 mm (0.0031 in.)
If the clearance is greater than the maximum, replace the valve and guide bush.



11. INSPECT EXHAUST VALVE GUIDE BUSH

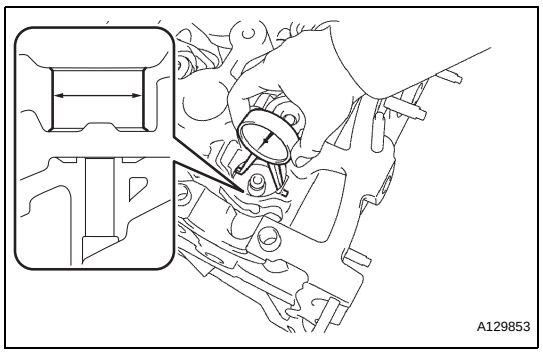
(a) Using a caliper gauge, measure the inside diameter of the guide bush.
Bushing inside diameter:
5.510 to 5.530 mm (0.2169 to 0.2177 in.)

(b) Subtract the valve stem diameter measurement from the guide bushing inside diameter measurement.
Standard oil clearance:
0.030 to 0.065 mm (0.0012 to 0.0026 in.)
Maximum oil clearance:
0.100 mm (0.0039 in.)
If the clearance is greater than the maximum, replace the valve and guide bush.



12. INSPECT VALVE LIFTER

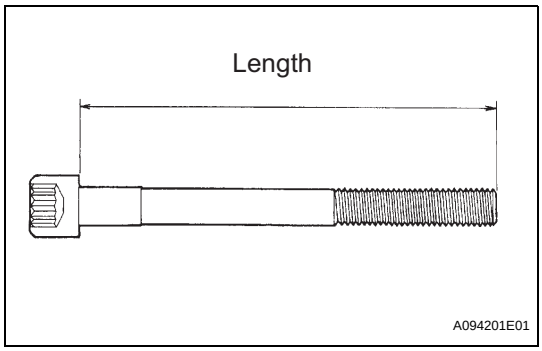
(a) Using a micrometer, measure the lifter diameter.
Lifter diameter:
30.966 to 30.976 mm (1.2191 to 1.2195 in.)



(b) Using a caliper gauge, measure the lifter bore diameter of the cylinder head.
Standard lifter bore diameter:
31.009 to 31.025 mm (1.2208 to 1.2215 in.)

(c) Subtract the lifter diameter measurement from the lifter bore diameter measurement.
Standard oil clearance:
0.033 to 0.059 mm (0.0013 to 0.0023 in.)
Maximum oil clearance:
0.070 mm (0.0028 in.)
If the oil clearance is greater than the maximum, replace the lifter. If necessary, replace the cylinder head.

EM



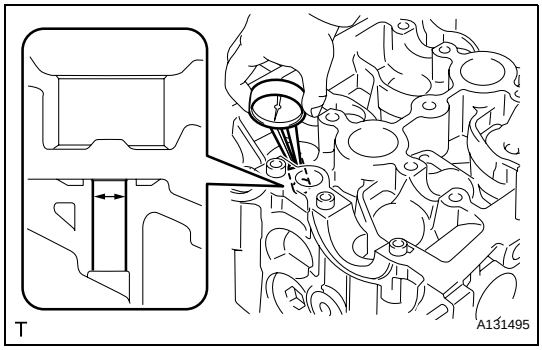
13. INSPECT CYLINDER HEAD SET BOLT

(a) Using vernier calipers, measure the length of the head bolts from the seat to the end.

Standard bolt length:
141.3 to 142.7 mm (5.563 to 5.618 in.)
Maximum bolt length:
144.2 mm (5.677 in.)

If the bolt length is greater than the maximum, replace the cylinder head set bolt.

REASSEMBLY



1. INSTALL INTAKE VALVE GUIDE BUSH

(a) Using a caliper gauge, measure the bush bore diameter of the cylinder head.

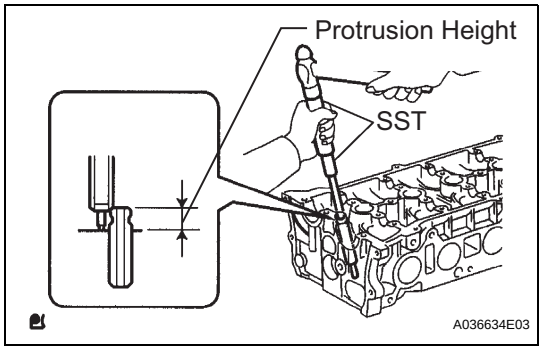
Cylinder bore diameter:
10.285 to 10.306 mm (0.4049 to 0.4057 in.)
Select a new guide bush (STD or O/S 0.05)

Bush size	Bush bore diameter
Use STD	10.285 to 10.306 mm (0.4049 to 0.4057 in.)
Use O/S 0.05	10.335 to 10.356 mm (0.4069 to 0.4077 in.)

If the bush bore diameter of the cylinder head is greater than 10.306 mm (0.4057 in.), machine the bush bore to the dimension of 10.335 to 10.356 mm (0.4069 to 0.4077 in.) to install a O/S 0.05 valve guide bush. If the bush bore diameter of the cylinder head is greater than 10.356 mm (0.4077 in.), replace the cylinder head.

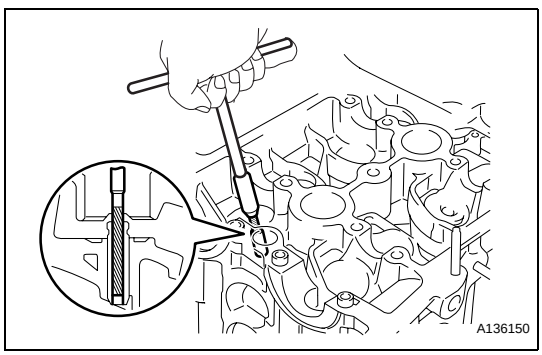
(b) Heat the cylinder head to 80 to 100°C (176 to 212°F).

(c) Place the cylinder head on wooden blocks.



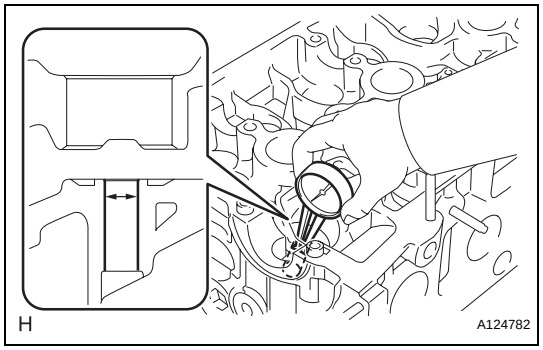
(d) Using SST and a hammer, tap in a new guide bush to the specified protrusion height.

SST 09201-10000 (09201-01050), 09950-70010 (09951-07100)
Protrusion height:
9.6 to 10.0 mm (0.3779 to 0.3937 in.)



(e) Using a sharp 5.5 mm reamer, ream the guide bush to obtain the standard specified clearance between the guide bush and valve stem.

Standard oil clearance:
0.025 to 0.060 mm (0.0010 to 0.0024 in.)



2. INSTALL EXHAUST VALVE GUIDE BUSH

(a) Using a caliper gauge, measure the bush bore diameter of the cylinder head.

Diameter:

10.285 to 10.306 mm (0.4049 to 0.4057 in.)

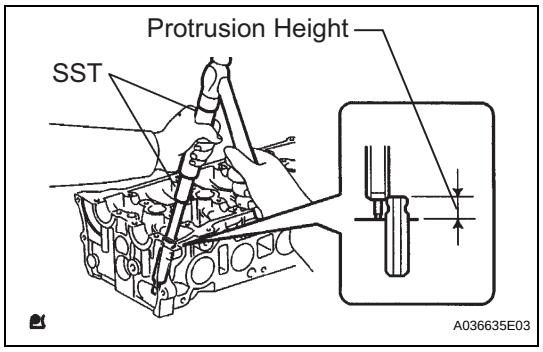
Select a new guide bush (STD or O/S 0.05)

Bush size	Bush bore diameter
Use STD	10.285 to 10.306 mm (0.4049 to 0.4057 in.)
Use O/S 0.05	10.335 to 10.356 mm (0.4069 to 0.4077 in.)

If the bush bore diameter of the cylinder head is greater than 10.306 mm (0.4057 in.), machine the bush bore to the dimension of 10.335 to 10.356 mm (0.4069 to 0.4077 in.) to install a O/S 0.05 valve guide bush. If the bush bore diameter of the cylinder head is greater than 10.356 mm (0.4077 in.), replace the cylinder head.

(b) Heat the cylinder head to 80 to 100°C (176 to 212°F).

(c) Place the cylinder head on wooden blocks.

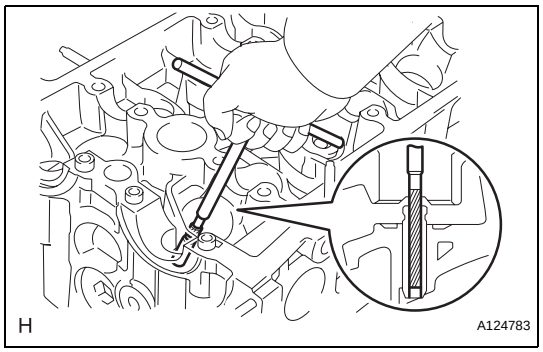


(d) Using SST and a hammer, tap in a new guide bush to the specified protrusion height.

SST 09201-10000 (09201-01050), 09950-70010 (09951-07100)

Protrusion height:

9.6 to 10.0 mm (0.3779 to 0.3937 in.)

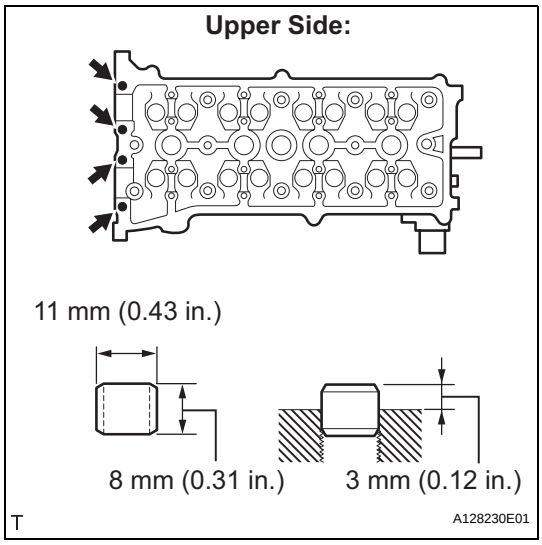


(e) Using a sharp 5.5 mm reamer, ream the guide bush to obtain the standard specified clearance between the guide bush and valve stem.

Standard oil clearance:

0.030 to 0.065 mm (0.0012 to 0.0026 in.)

EM



3. INSTALL RING W/HEAD PIN

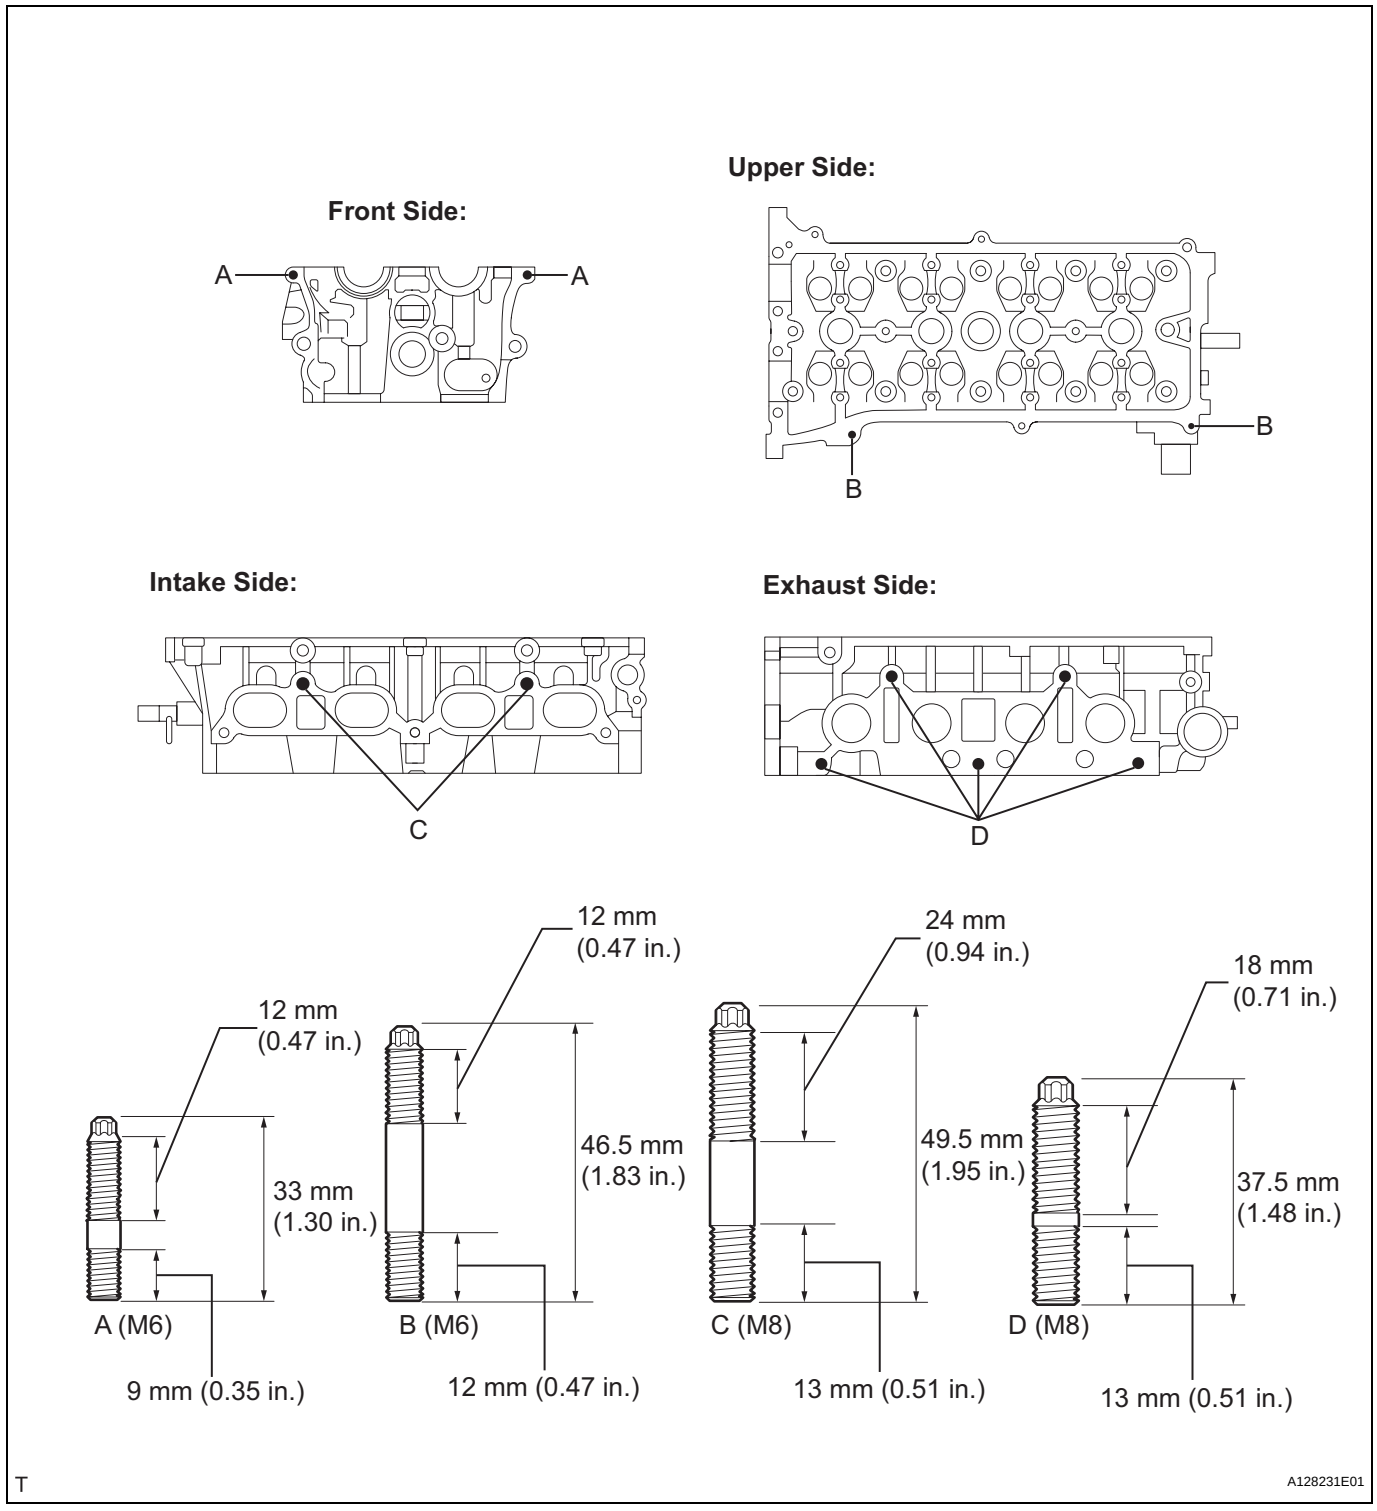
(a) Using a plastic-faced hammer, tap in a new ring pin to the specified protrusion height.

Protrusion height:
3 mm (0.12 in.)

4. INSTALL STUD BOLT

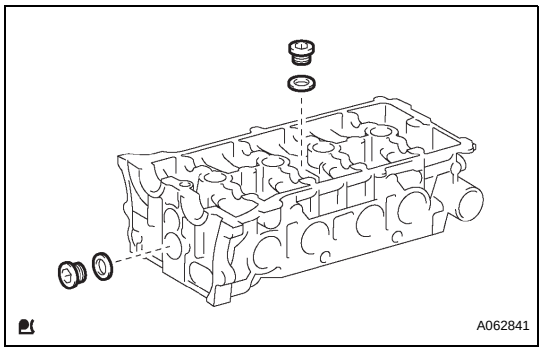
NOTICE:
If the stud bolt is deformed or the threads are damaged, replace it.

(a) Using E5 and E7 "torx" sockets, install the stud bolts.



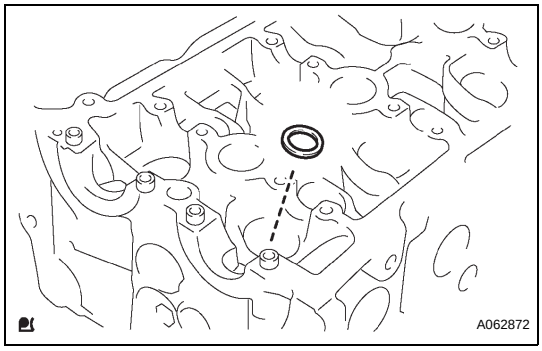
Torque: Bolt A
5.0 N*m (51 kgf*cm, 44 in.*lbf)
Bolt B
5.0 N*m (51 kgf*cm, 44 in.*lbf)
Bolt C
9.5 N*m (97 kgf*cm, 84 in.*lbf)
Bolt D
9.5 N*m (97 kgf*cm, 84 in.*lbf)

EM



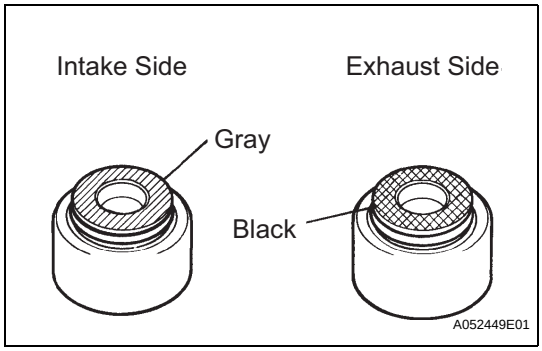
5. INSTALL NO. 1 STRAIGHT SCREW PLUG

(a) Using a 14 mm straight hexagon wrench, install 2 new gaskets and the 2 straight screw plugs.



6. INSTALL VALVE SPRING SEAT

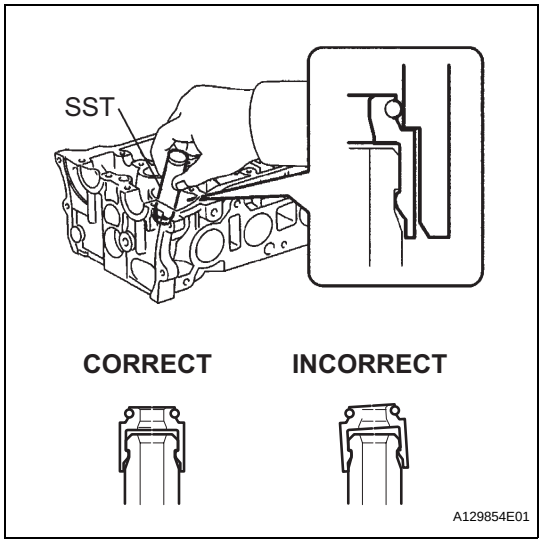
(a) Install the valve spring seats to the cylinder head.

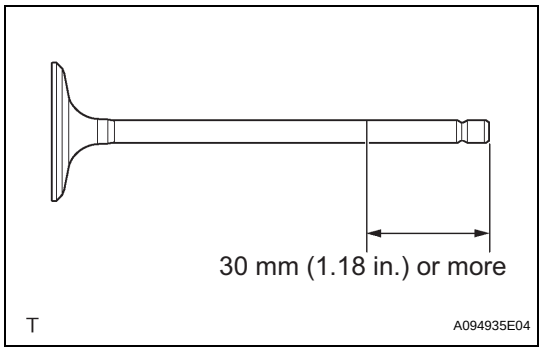


7. INSTALL VALVE STEM OIL SEAL

(a) Apply a light coat of engine oil to a new oil seal.
NOTICE:
Pay close attention when installing the intake and exhaust oil seals. For example, installing the intake oil seal into the exhaust side or installing the exhaust oil seal to the intake side can cause installation problems later.
HINT:
The intake valve oil seal is gray and the exhaust valve oil seal is black.

(b) Using SST, push in the oil seal.
SST 09201-41020
NOTICE:
Failure to use SST will cause the seal to be damaged or improperly seated.

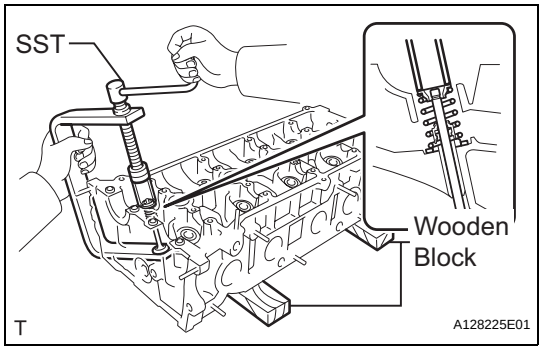




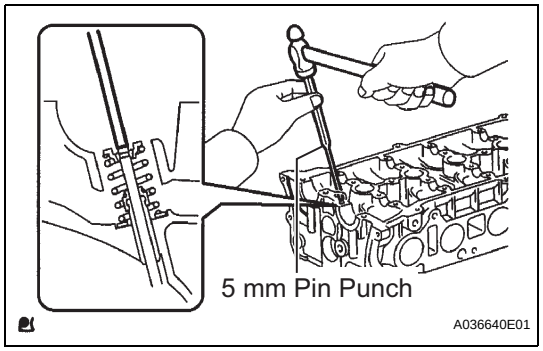
8. INSTALL INTAKE VALVE

(a) Apply a sufficient coat of engine oil to the tip area of the intake valve shown in the illustration.

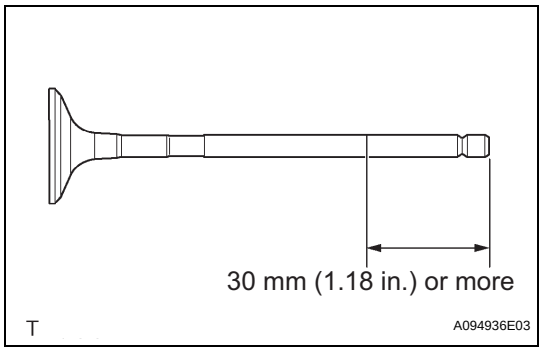
(b) Install the valve, compression spring and spring retainer to the cylinder head.
NOTICE:
Install the same parts in the same combination to the original locations.



(c) Using SST and wooden blocks, compress the spring and install the 2 retainer locks.
SST 09202-70020 (09202-00010)



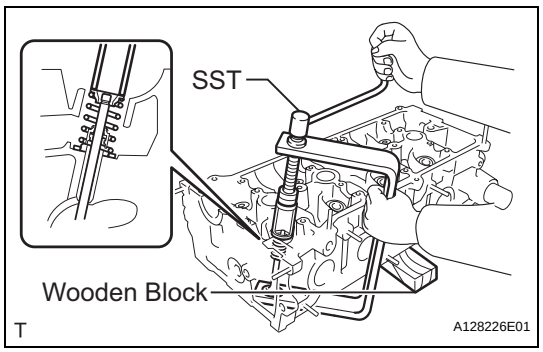
(d) Using a 5 mm pin punch and plastic hammer, lightly tap the valve stem tip to ensure a proper fit.
NOTICE:
Be careful not to damage the valve stem tip.



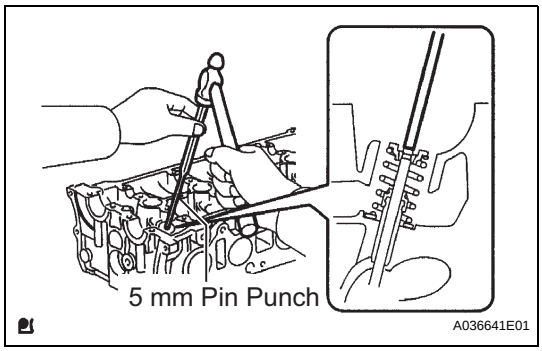
9. INSTALL EXHAUST VALVE

(a) Apply a sufficient coat of engine oil to the tip area of the exhaust valve shown in the illustration.

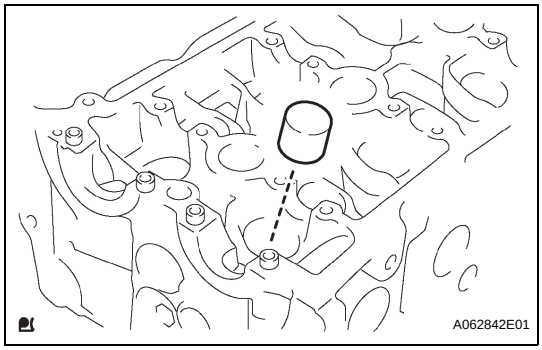
(b) Install the valve, compression spring and spring retainer to the cylinder head.
NOTICE:
Install the same parts in the same combination to the original locations.



(c) Using SST and wooden blocks, compress the spring and install the 2 retainer locks.
SST 09202-70020 (09202-00010)



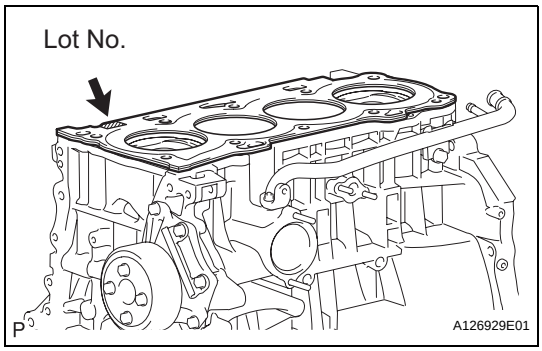
(d) Using a 5 mm pin punch and plastic hammer, lightly tap the valve stem tip to ensure a proper fit.
NOTICE:
Be careful not to damage the valve stem tip.



10. INSTALL VALVE LIFTER

(a) Assemble the valve lifter and the tip of the valve stem with a light coat of engine oil applied.
NOTICE:
Install the valve lifters in their original places.

INSTALLATION



1. INSTALL CYLINDER HEAD GASKET

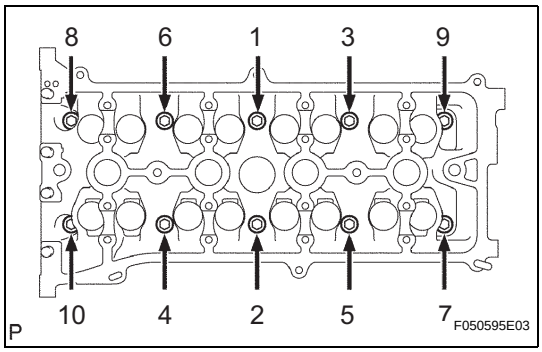
(a) Place a new gasket on the cylinder block surface with the Lot No. stamp facing upward.
NOTICE:
- **Remove any oil from the contact surface.**
- **Make sure that the gasket is installed in the correct direction.**

2. INSTALL CYLINDER HEAD SUB-ASSEMBLY

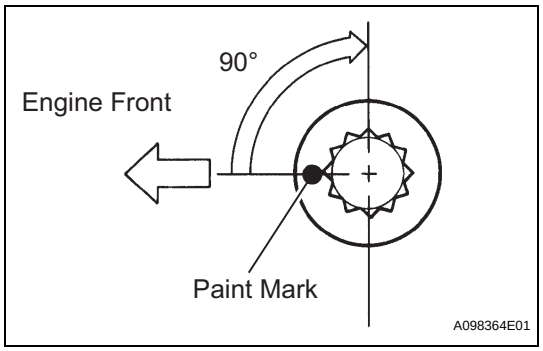
HINT:
The cylinder head bolts are tightened in 2 progressive steps.

(a) Apply a light coat of engine oil to the bolt threads and the area beneath the bolt heads that come in contact with the washers.

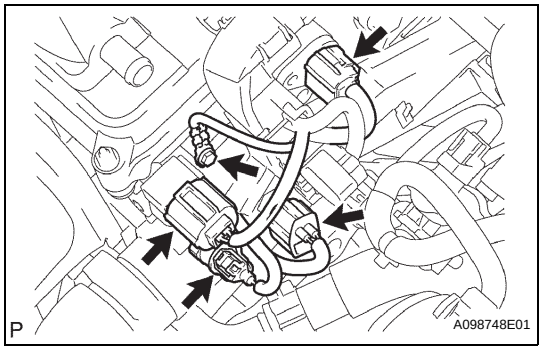
(b) Install the bolts and plate washers to the cylinder head.
NOTICE:
Do not drop the washers into the cylinder head.



(c) Using several steps, uniformly install and tighten the 10 cylinder head set bolts and plate washers with a 10 mm bi-hexagon wrench in the order shown in the illustration.
Torque: 70 N*m (714 kgf*cm, 52 ft.*lbf)



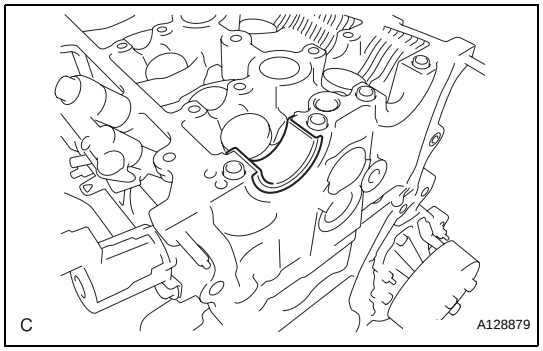
(d) Mark the front side of the cylinder head bolt with paint.
(e) Retighten the cylinder head bolts 90° in the sequence shown in the illustration.
(f) Check that the paint mark is now at a 90° angle to the front.



3. CONNECT ENGINE WIRE

(a) Connect the ground cable with the bolt.
Torque: 8.4 N*m (86 kgf*cm, 74 in.*lbf)
(b) Connect the camshaft position sensor connector.
(c) Connect the engine coolant temperature sensor connector.
(d) Connect the engine oil pressure switch connector.
(e) Connect the radio setting condenser connector.

4. CONNECT RADIATOR HOSE INLET (See page EM-118)



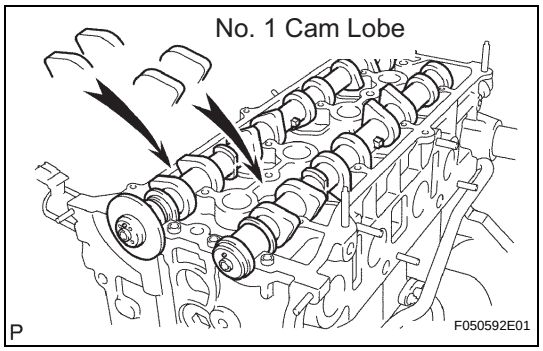
5. INSTALL NO. 2 CAMSHAFT BEARING

(a) Install the No. 2 camshaft bearing.

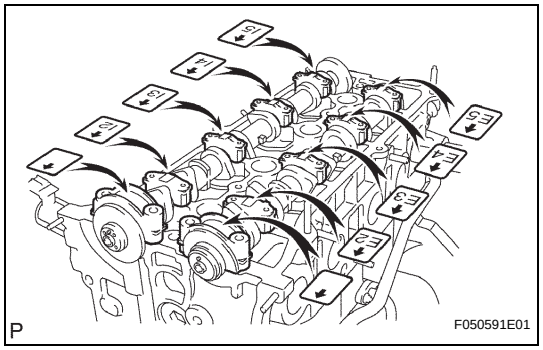
6. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-406)

7. INSTALL CAMSHAFTS

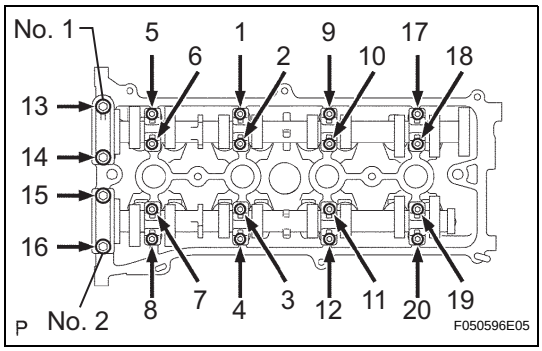
(a) Apply a light coat of engine oil to the journal portion of the camshaft.



(b) Place the 2 camshafts on the cylinder head with the No. 1 cam lobes facing the directions shown in the illustration.



(c) Examine the front marks and numbers, and check that the order is as shown in the illustration. Then install the bearing caps onto the cylinder head.
(d) Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.



(e) Using several steps, uniformly tighten the 20 bearing cap bolts in the sequence shown in the illustration.
Torque: No. 1 and No. 2 bearing cap
30 N*m (301 kgf*cm, 22 ft.*lbf)
No. 3 bearing cap
9.0 N*m (92 kgf*cm, 80 in.*lbf)

8. **INSTALL CHAIN SUB-ASSEMBLY**
HINT:
See page EM-27.
9. **INSTALL EXHAUST MANIFOLD CONVERTER SUB-ASSEMBLY (See page EM-109)**
10. **INSTALL NO. 2 MANIFOLD STAY (See page EM-110)**
11. **INSTALL MANIFOLD STAY (See page EM-111)**
12. **INSTALL OIL LEVEL GAUGE GUIDE (See page EM-111)**
13. **INSTALL OIL LEVEL GAUGE SUB-ASSEMBLY**
14. **INSTALL GENERATOR ASSEMBLY (See page CH-19)**
15. **INSTALL V-RIBBED BELT (See page EM-6)**
16. **INSTALL NO. 2 ENGINE MOUNTING BRACKET RH (See page EM-118)**
17. **INSTALL ENGINE MOVING CONTROL ROD SUB-ASSEMBLY (See page EM-119)**
18. **INSTALL NO. 2 ENGINE MOUNTING STAY RH (See page EM-119)**
19. **INSTALL FRONT EXHAUST PIPE ASSEMBLY**
HINT:
See page EX-3.
20. **INSTALL NO. 1 INTAKE MANIFOLD INSULATOR (See page EM-111)**
21. **INSTALL INTAKE AIR CONTROL VALVE (For PZEV) (See page IT-7)**
22. **INSTALL INTAKE MANIFOLD (See page ES-425)**
23. **INSTALL FUEL DELIVERY PIPE WITH INJECTOR (See page FU-15)**
24. **CONNECT FUEL TUBE SUB-ASSEMBLY (See page FU-16)**
25. **INSTALL THROTTLE BODY ASSEMBLY (See page ES-418)**
26. **INSTALL BATTERY (See page EM-119)**

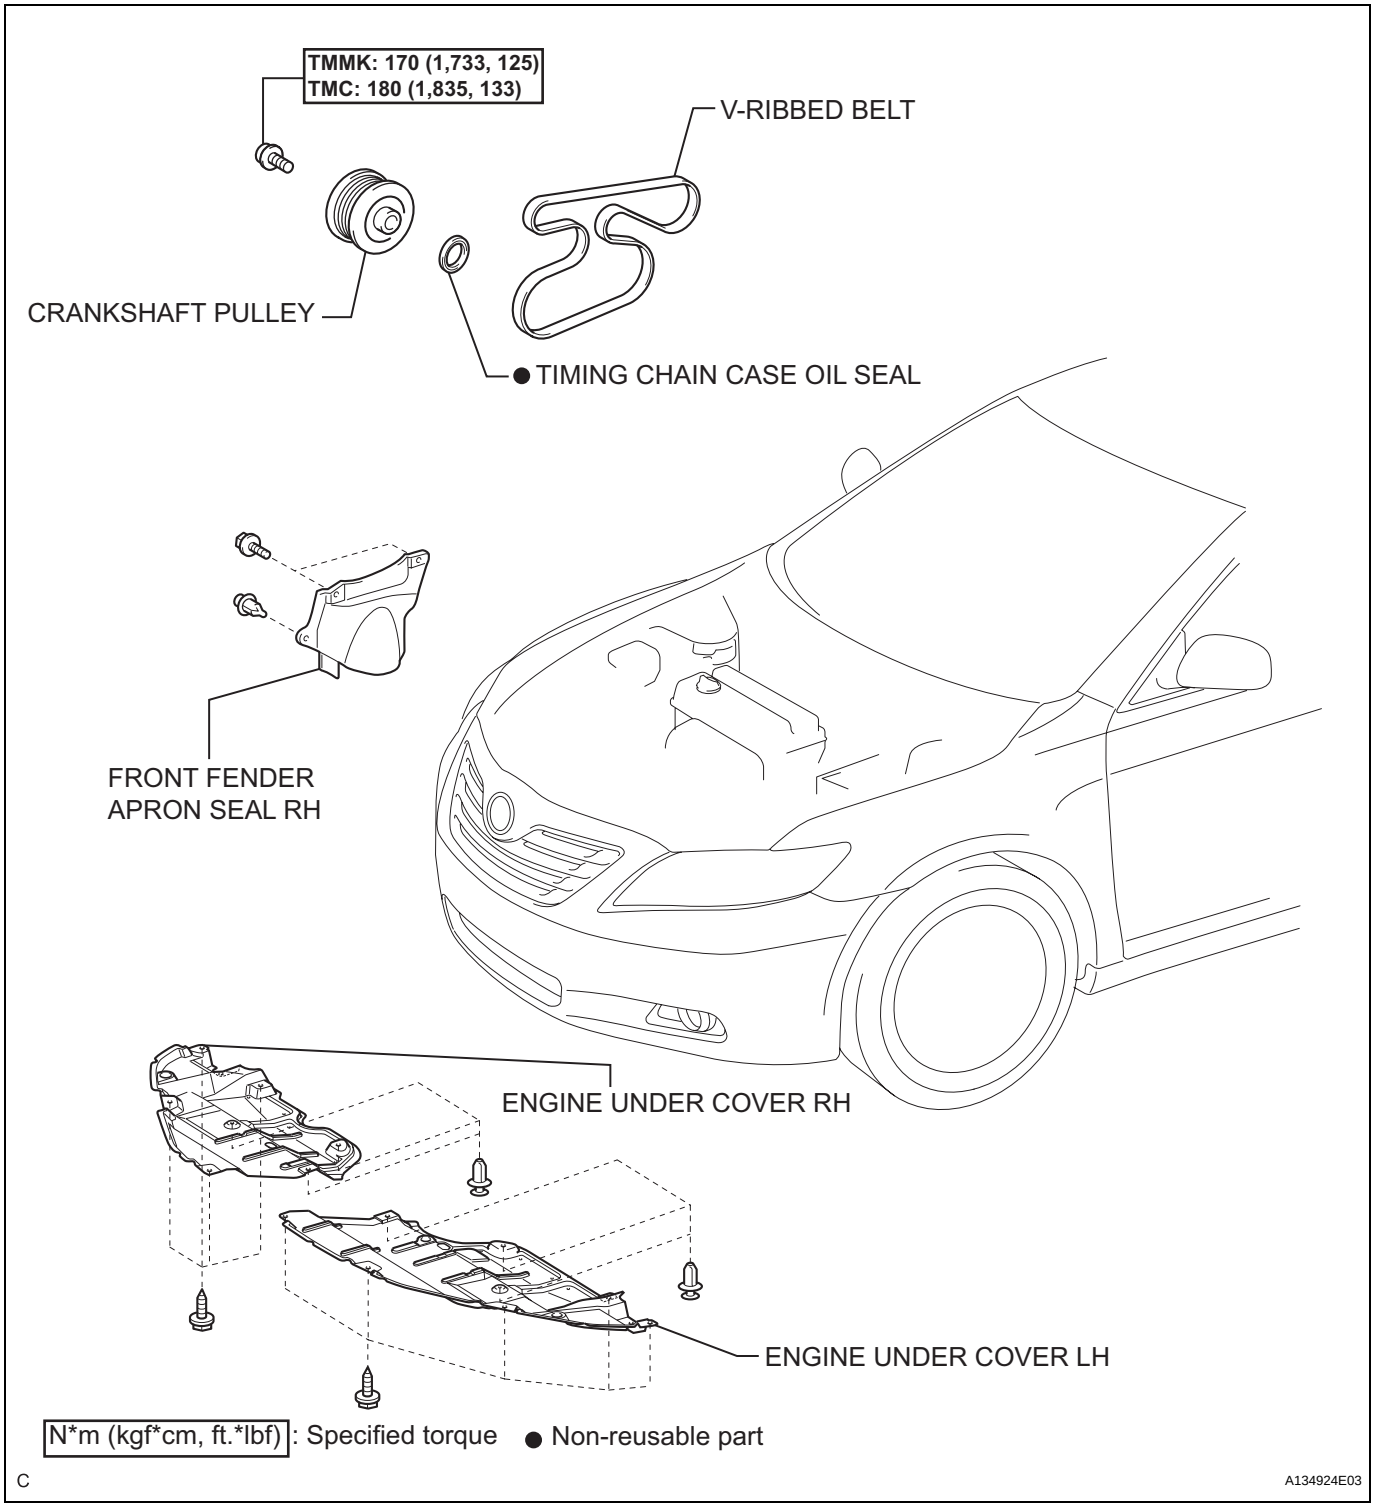
45. **INSTALL ENGINE UNDER COVER LH**
46. **INSTALL ENGINE UNDER COVER RH**
47. **INSTALL FRONT WHEEL RH (See page EM-120)**

ENGINE FRONT OIL SEAL

COMPONENTS



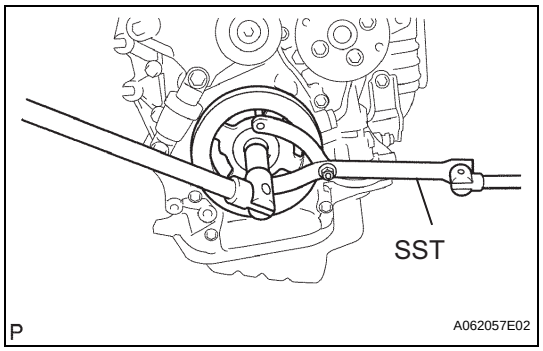
REMOVAL

1. **REMOVE FRONT WHEEL RH**
2. **REMOVE FRONT FENDER APRON SEAL RH**
3. **REMOVE ENGINE UNDER COVER LH**
4. **REMOVE ENGINE UNDER COVER RH**
5. **REMOVE V-RIBBED BELT (See page EM-6)**
6. **REMOVE CRANKSHAFT PULLEY**

(a) TMMK made:

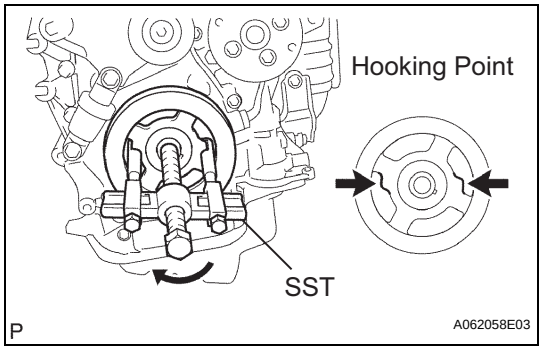
(1) Using SST, fix the pulley in place and loosen the pulley bolt.

SST 09960-10010 (09962-01000, 09963-01000)



(2) Using SST, remove the pulley bolt and pulley.

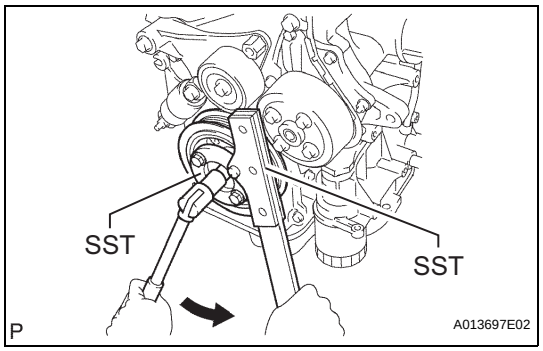
SST 09950-40011 (09951-04010, 09952-04010, 09953-04030, 09955-04041, 09957-04010, 09954-04010, 91111-51014)



(b) TMC made:

(1) Using SST, fix the pulley in place and loosen the pulley bolt.

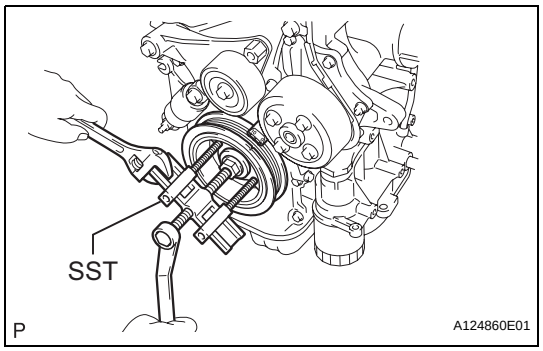
SST 09213-54015 (91651-60855), 09330-00021

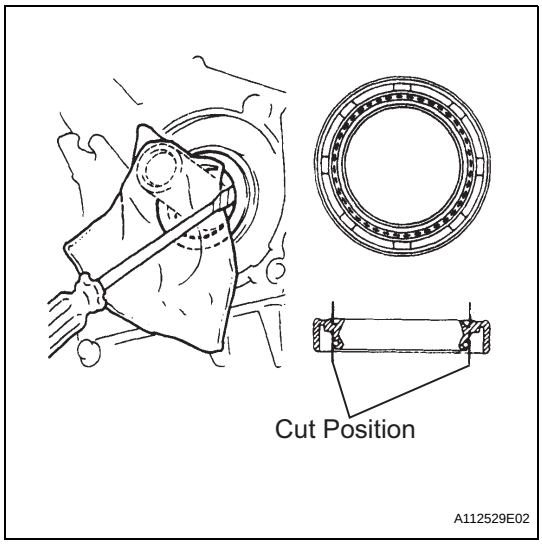


(2) Using SST, remove the pulley bolt and pulley.

SST 09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05021), 09950-40011 (09957-04010)

HINT:
If necessary, remove the pulley and pulley bolt using SST.





7. REMOVE TIMING CHAIN CASE OIL SEAL

(a) Using a knife, cut off the oil seal lip.

(b) Using a screwdriver with the tip taped, pry out the oil seal.

NOTICE:

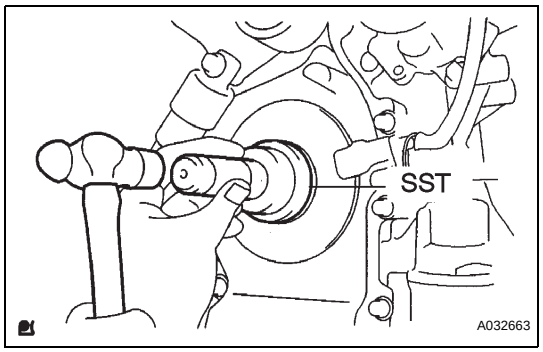
After the removal, check the crankshaft for damage. If it is damaged, smooth the surface with 400-grit sandpaper.

INSTALLATION

1. INSTALL TIMING CHAIN CASE OIL SEAL

(a) Apply MP grease to a new oil seal lip.
NOTICE:
Keep the lip free from foreign matter.

(b) Using SST and a hammer, tap in the oil seal until its surface is flush with the rear oil seal retainer edge.
SST 09223-22010
NOTICE:
Wipe off extra grease from the crankshaft.

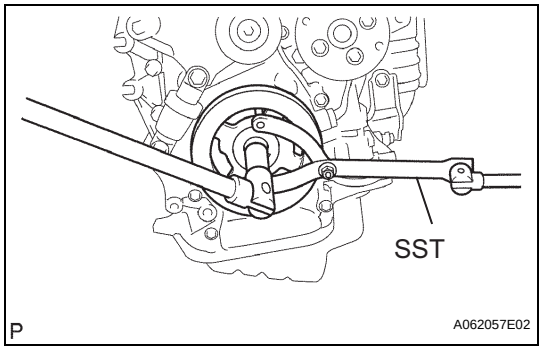


2. INSTALL CRANKSHAFT PULLEY

(a) TMMK made:

(1) Align the pulley set key with the key groove of the pulley.

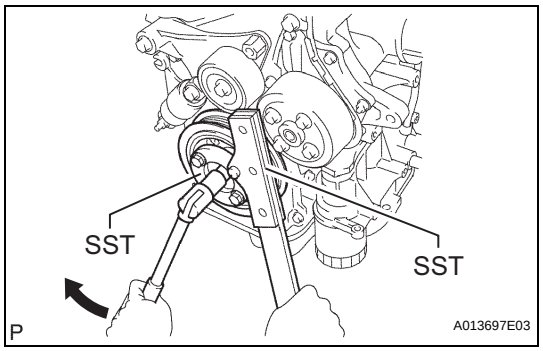
(2) Using SST, fix the pulley in place and tighten the bolt.
SST 09960-10010 (09962-01000, 09963-01000)
Torque: 170 N*m (1,733 kgf*cm, 125 ft.*lbf)



(b) TMC made:

(1) Align the pulley set key with the key groove of the pulley.

(2) Using SST, fix the pulley in place and tighten the bolt.
SST 09213-54015 (91651-60855), 09330-00021
Torque: 180 N*m (1,835 kgf*cm, 133 ft.*lbf)



3. INSTALL V-RIBBED BELT (See page EM-6)

4. INSTALL ENGINE UNDER COVER LH

5. INSTALL ENGINE UNDER COVER RH

6. INSTALL FRONT FENDER APRON SEAL RH

7. INSTALL FRONT WHEEL RH

8. CHECK FOR ENGINE OIL LEAKS

EM

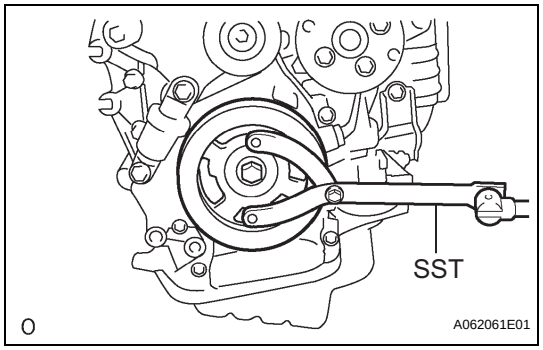
REMOVAL

1. **SEPARATE AUTOMATIC TRANSAXLE ASSEMBLY (for Automatic Transaxle)**
   HINT:
   See page AX-162.

2. **SEPARATE MANUAL TRANSAXLE ASSEMBLY (for Manual Transaxle)**
   HINT:
   See page MX-24.



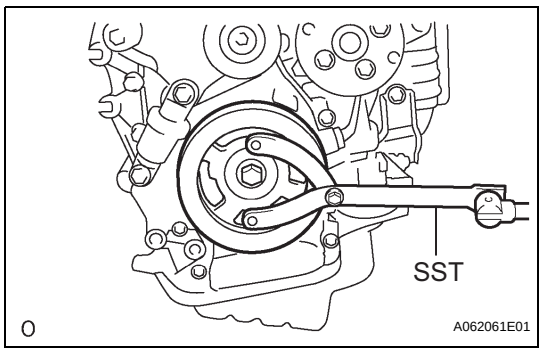
3. **REMOVE DRIVE PLATE & RING GEAR SUB-ASSEMBLY (for Automatic Transaxle)**
   (a) TMMK made:
   (1) Using SST, hold the crankshaft.
   SST 09960-10010 (09962-01000, 09963-01000)

   (b) TMC made:
   (1) Using SST, hold the crankshaft.
   SST 09213-54015 (91651-60855), 09330-00021

   (c) Remove the 8 bolts, rear spacer, drive plate and front spacer.

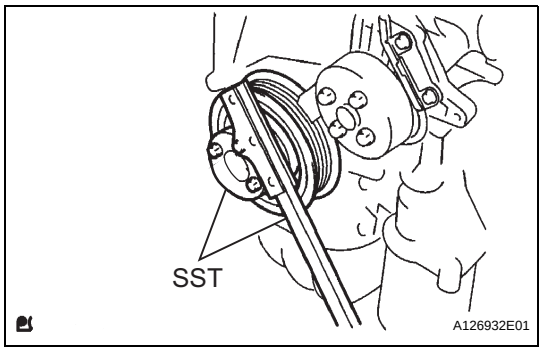
4. **REMOVE CLUTCH COVER ASSEMBLY (for Manual Transaxle) (See page CL-32)**

5. **REMOVE CLUTCH DISC ASSEMBLY (for Manual Transaxle) (See page CL-32)**

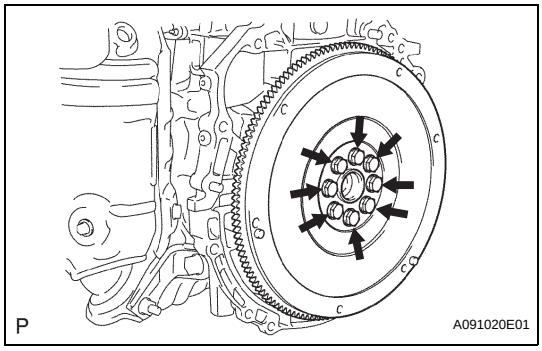


6. **REMOVE FLYWHEEL SUB-ASSEMBLY (for Manual Transaxle)**
   (a) TMMK made:
   (1) Using SST, hold the crankshaft.
   SST 09960-10010 (09962-01000, 09963-01000)

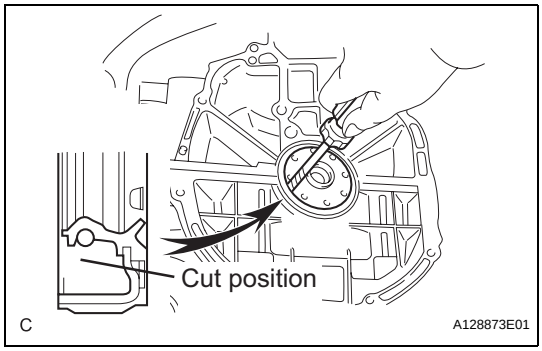
EM



(b) TMC made:
(1) Using SST, hold the crankshaft.
SST 09213-54015 (91651-60855), 09330-00021



(c) Remove the 8 bolts and flywheel.



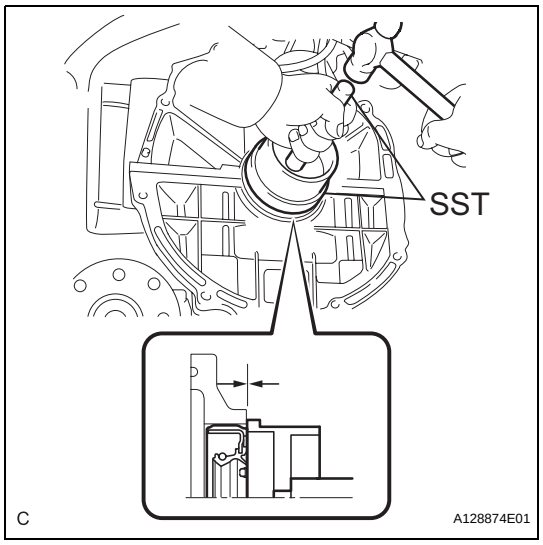
7. REMOVE ENGINE REAR OIL SEAL
(a) Using a knife, cut through the oil seal lip.
(b) Using a screwdriver with its tip taped, pry out the oil seal.
NOTICE:
After the removal, check the crankshaft for damage. If it is damaged, smooth the surface with 400-grit sandpaper.

INSTALLATION

1. INSTALL ENGINE REAR OIL SEAL

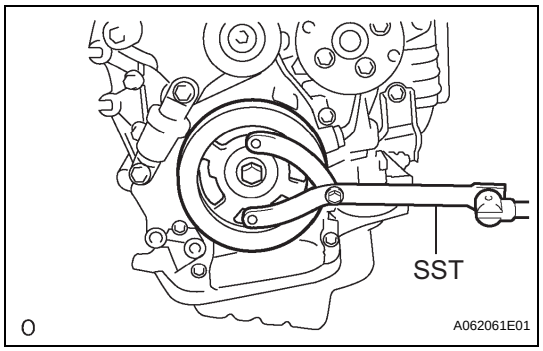
(a) Apply MP grease to a new oil seal lip.
NOTICE:
Keep the lip free from foreign matter.

(b) Using SST and a hammer, tap in the oil seal until its surface is flush with the rear oil seal retainer edge.
SST 09223-15030, 09950-70010 (09951-07100)
NOTICE:
Wipe off extra grease from the crankshaft.

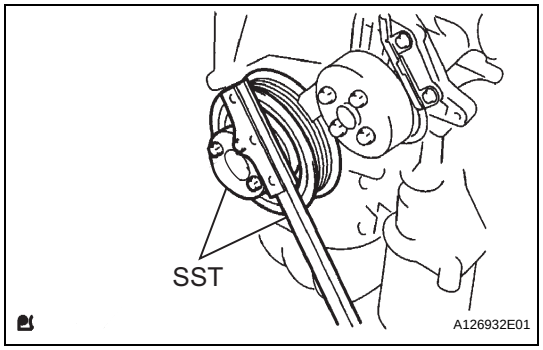


2. INSTALL FLYWHEEL SUB-ASSEMBLY (for Manual Transaxle)

(a) TMMK made:
(1) Using SST, hold the crankshaft.
SST 09960-10010 (09962-01000, 09963-01000)

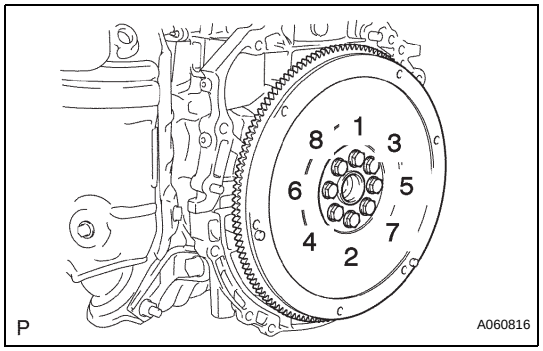


(b) TMC made:
(1) Using SST, hold the crankshaft.
SST 09213-54015 (91651-60855), 09330-00021



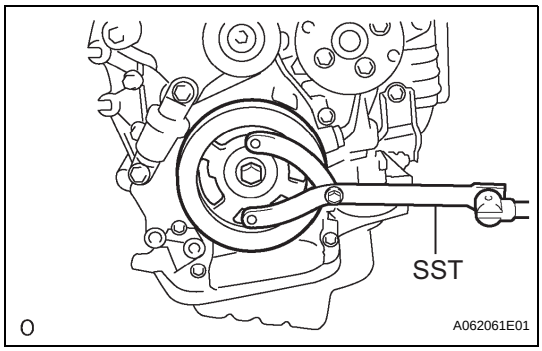
(c) Clean the bolt and the bolt hole.
(d) Apply adhesive to 2 or 3 threads of the bolt end.
Adhesive:
Part No. 08833-00070, THREE BOND or equivalent

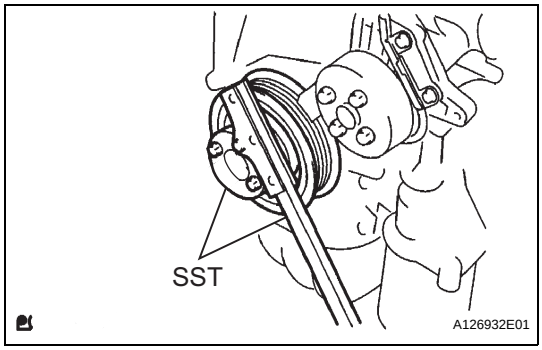
(e) Install the flywheel with the 8 bolts. Uniformly tighten the 8 bolts in the sequence shown in the illustration.
Torque: 130 N*m (1,330 kgf*cm, 96 ft.*lbf)

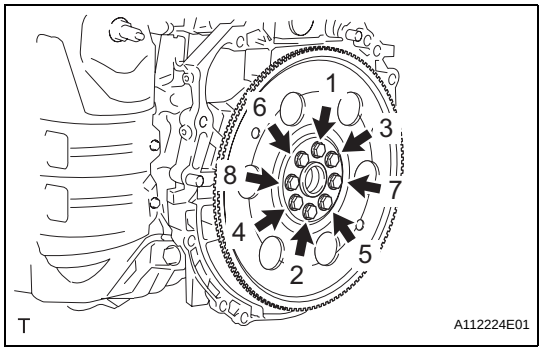


3. INSTALL CLUTCH DISC ASSEMBLY (for Manual Transaxle) (See page CL-34)

4. INSTALL CLUTCH COVER ASSEMBLY (for Manual Transaxle) (See page CL-34)







5. INSTALL DRIVE PLATE & RING GEAR SUB-ASSEMBLY (for Automatic Transaxle)

(a) TMMK made:

(1) Using SST, hold the crankshaft.

SST 09960-10010 (09962-01000, 09963-01000)

(b) TMC made:

(1) Using SST, hold the crankshaft.

SST 09213-54015 (91651-60855), 09330-00021

(c) Clean the bolt and the bolt hole.

(d) Apply adhesive to 2 or 3 threads of the bolt end.

Adhesive:

Part No. 08833-00070, THREE BOND or equivalent

(e) Install the front spacer, drive plate and rear spacer with the 8 bolts. Uniformly tighten the 8 bolts in the sequence shown in the illustration.

Torque: 98 N*m (1,000 kgf*cm, 72 ft.*lbf)

6. INSTALL MANUAL TRANSAXLE ASSEMBLY (for Manual Transaxle)

HINT:

See page MX-27.

7. INSTALL AUTOMATIC TRANSAXLE ASSEMBLY (for Automatic Transaxle)

HINT:

See page AX-168.

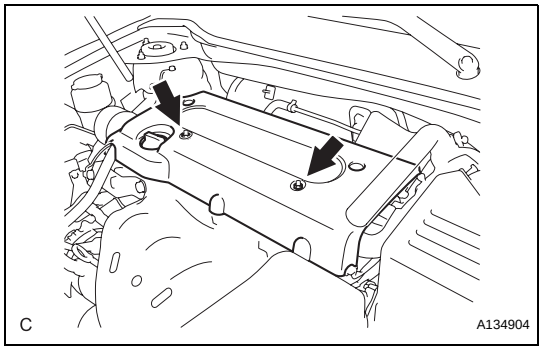
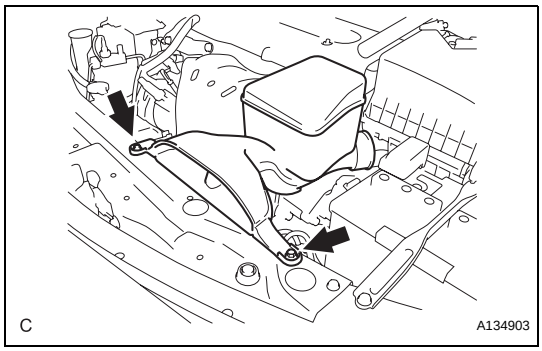
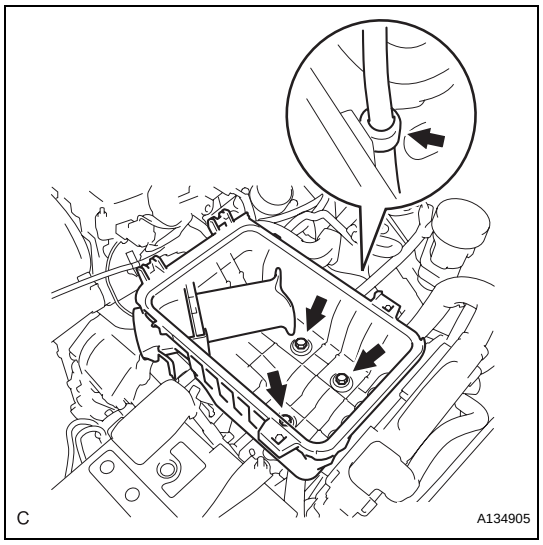
REMOVAL

1. **DISCHARGE FUEL SYSTEM PRESSURE**
   HINT:
   See page FU-1.
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**
4. **REMOVE FRONT WHEELS**
5. **REMOVE ENGINE UNDER COVER LH**
6. **REMOVE ENGINE UNDER COVER RH**
7. **REMOVE FRONT FENDER APRON SEAL RH**
8. **DRAIN ENGINE OIL (See page LU-4)**
9. **DRAIN ENGINE COOLANT (See page CO-5)**
10. **DRAIN AUTOMATIC TRANSAXLE FLUID (for Automatic Transaxle) (See page AX-162)**
11. **DRAIN MANUAL TRANSAXLE OIL (for Manual Transaxle) (See page MX-5)**
12. **DRAIN BRAKE FLUID (for Manual Transaxle) (See page BR-28)**
13. **REMOVE WINDSHIELD WIPER LINK ASSEMBLY**
    HINT:
    See page WW-9.
14. **REMOVE COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-424)**
15. **REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY**
    (a) Remove the 2 nuts and cover.



16. **REMOVE V-RIBBED BELT (See page EM-6)**
17. **REMOVE AIR CLEANER INLET ASSEMBLY**
    (a) Remove the 2 bolts, clamp and air cleaner inlet.
18. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-416)**

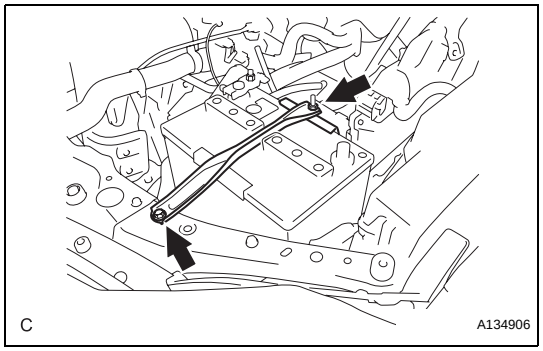




19. REMOVE AIR CLEANER CASE SUB-ASSEMBLY

(a) Disconnect the hose clamp.

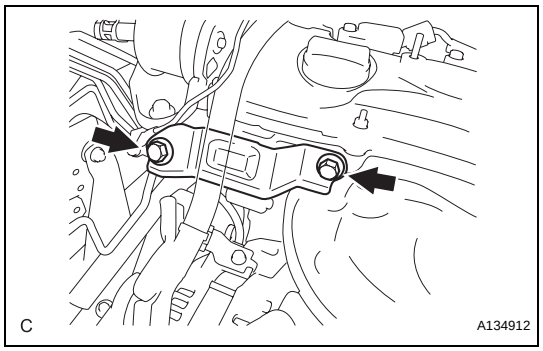
(b) Remove the 3 bolts and air cleaner case.



20. REMOVE BATTERY

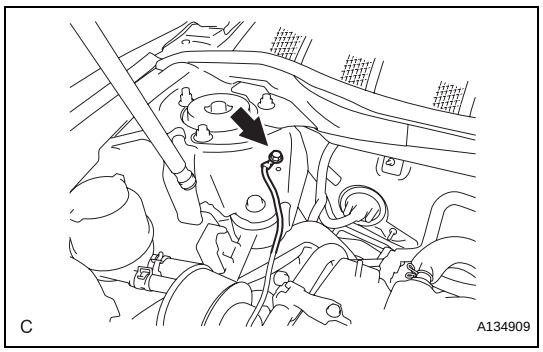
(a) Loosen the bolt and nut, and remove the battery clamp.

(b) Remove the battery and battery tray.



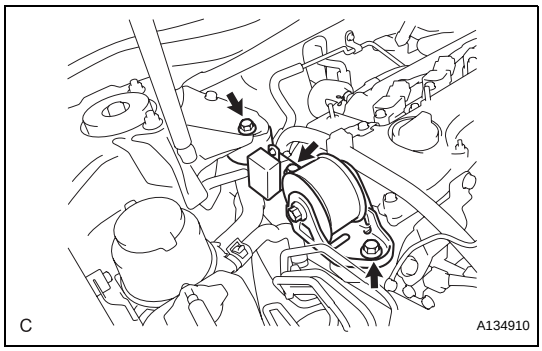
21. REMOVE NO. 2 ENGINE MOUNTING STAY RH

(a) Remove the 2 bolts and No. 2 mounting stay RH.

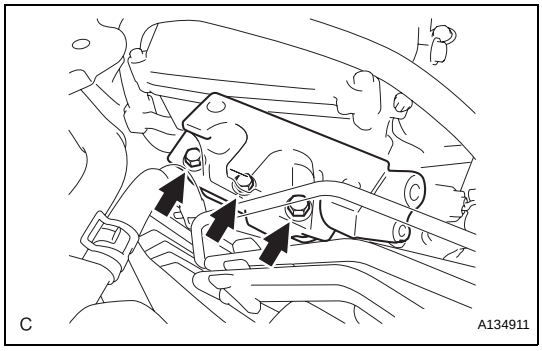


22. REMOVE ENGINE MOVING CONTROL ROD SUB-ASSEMBLY

(a) Remove the bolt and disconnect the ground cable.

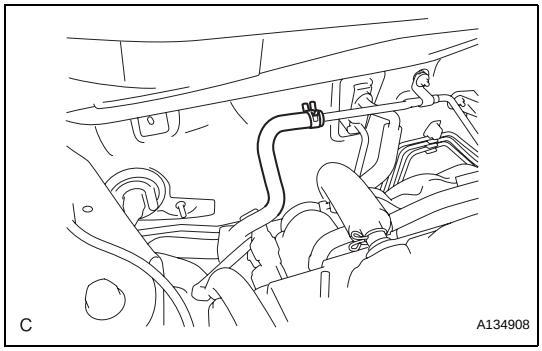


(b) Remove the 3 bolts and the engine moving control rod with bracket.



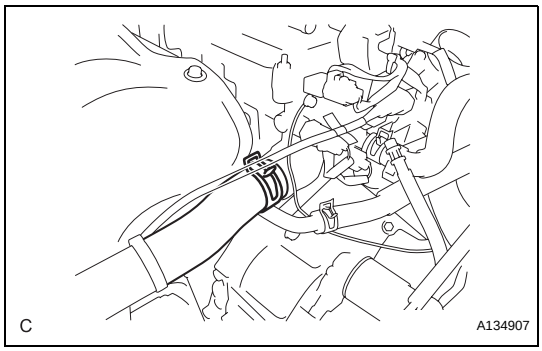
23. REMOVE NO. 2 ENGINE MOUNTING BRACKET RH

(a) Remove the 3 bolts and No. 2 mounting bracket RH.



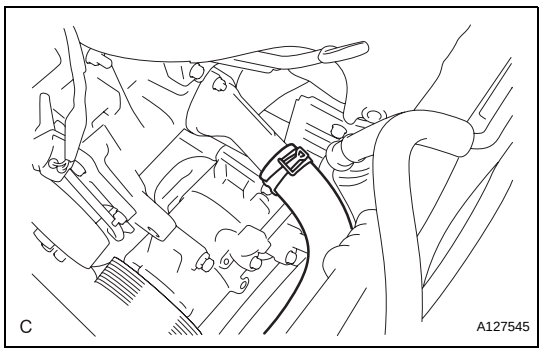
24. DISCONNECT NO. 1 VACUUM HOSE CONNECTOR

(a) Remove the clamp and disconnect the vacuum hose connector.



25. DISCONNECT RADIATOR HOSE INLET

(a) Remove the clamp and disconnect the radiator hose inlet.

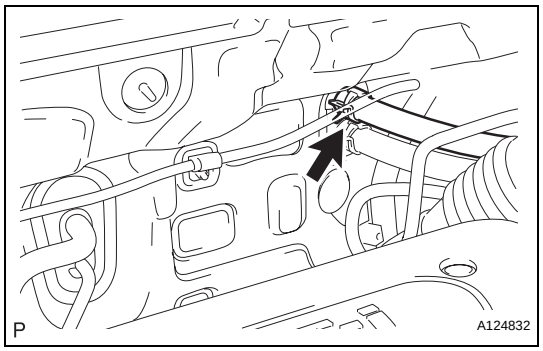


26. DISCONNECT RADIATOR HOSE OUTLET

(a) Remove the clamp and disconnect the radiator hose outlet.

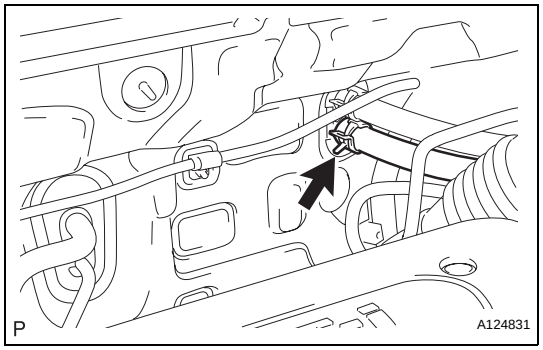
27. DISCONNECT OIL COOLER INLET HOSE (for Automatic Transaxle) (See page CO-22)

28. DISCONNECT OIL COOLER OUTLET HOSE (for Automatic Transaxle) (See page CO-23)



29. DISCONNECT HEATER INLET WATER HOSE

(a) Disconnect the heater inlet water hose.



30. DISCONNECT HEATER OUTLET WATER HOSE

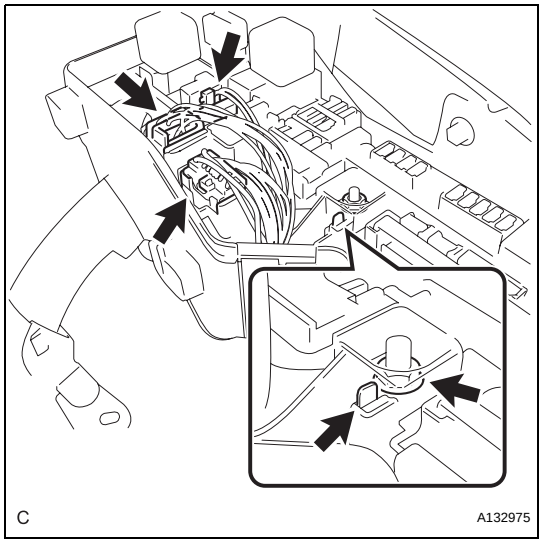
(a) Disconnect the heater outlet water hose.

31. REMOVE ECM

HINT:

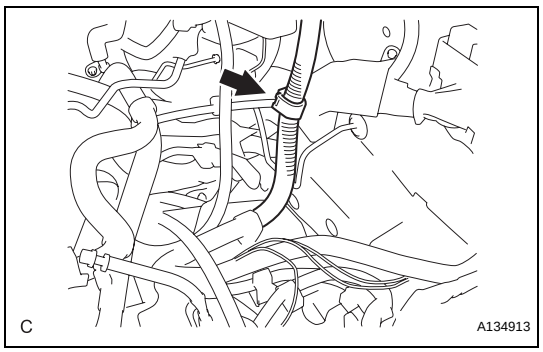
See page ES-432.

EM

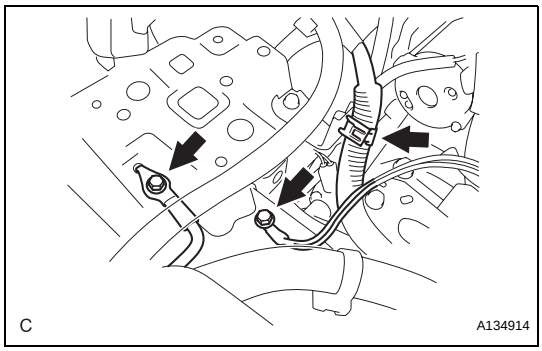


32. DISCONNECT ENGINE WIRE

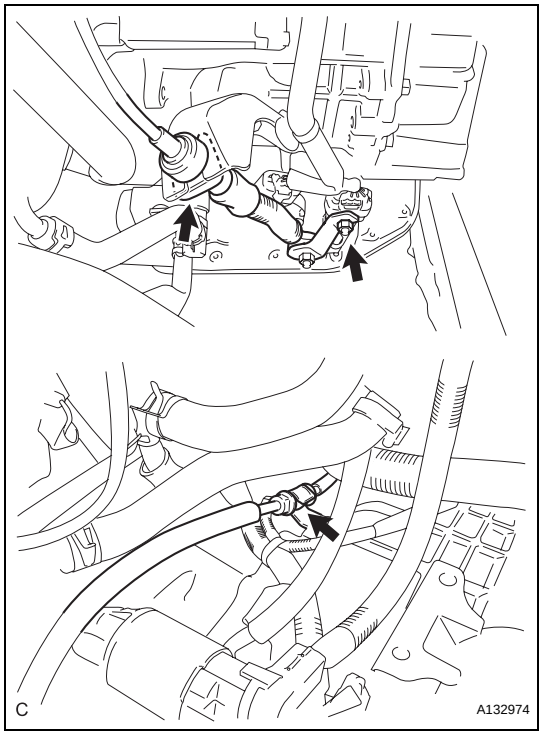
(a) Disconnect the engine wire from the engine room relay block.
  (1) Remove the nut and separate the wire harness.
  (2) Using a screwdriver, unlock the engine room R/B. Pull the engine room R/B upward.
  (3) Disconnect the engine wire connectors.



(b) Remove the clamp from the bracket.



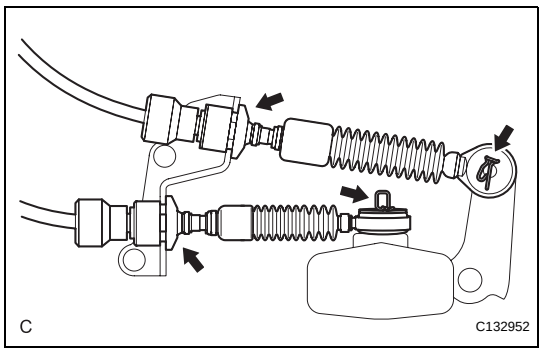
(c) Remove the 2 bolts and clamp from the body.



33. DISCONNECT TRANSMISSION CONTROL CABLE ASSEMBLY (for Automatic Transaxle)

(a) Remove the clip and nut, and separate the control lever.

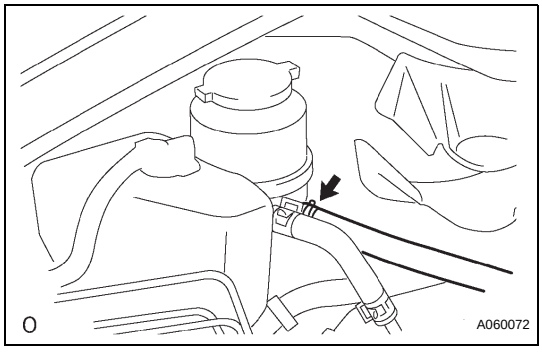
(b) Separate the clamp and separate the cable from the transaxle.



34. DISCONNECT TRANSMISSION CONTROL CABLE ASSEMBLY (for Manual Transaxle)

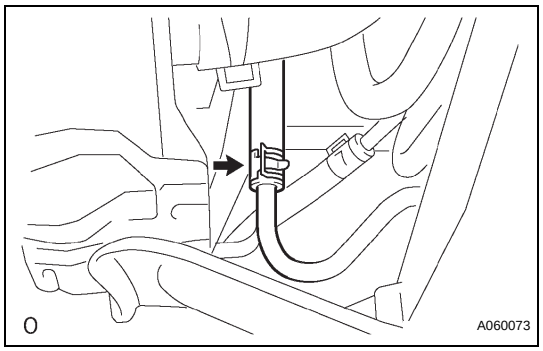
(a) Remove the 2 clips and 2 washers and disconnect the 2 cables from the transaxle.

(b) Remove the 2 clips and disconnect the 2 cables from the control cable bracket.



35. DISCONNECT NO. 1 OIL RESERVOIR TO PUMP HOSE

(a) Disconnect the No. 1 oil reservoir to pump hose.



36. DISCONNECT RETURN TUBE SUB-ASSEMBLY

(a) Disconnect the return tube sub-assembly.

37. REMOVE CLUTCH ACCUMULATOR ASSEMBLY (for Manual Transaxle)

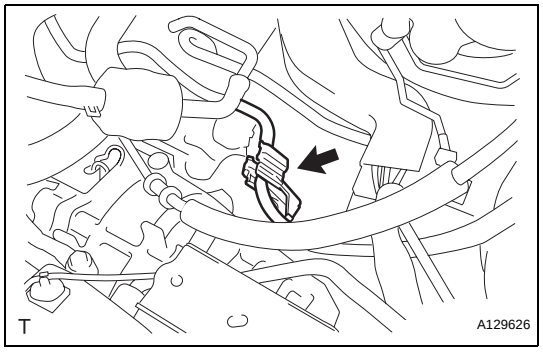
HINT:

See page CL-27.

38. REMOVE CLUTCH RELEASE CYLINDER ASSEMBLY (for Manual Transaxle)

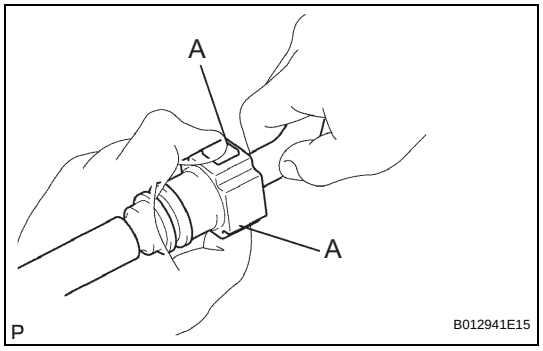
HINT:

See page CL-24.



39. DISCONNECT FUEL TUBE SUB-ASSEMBLY

(a) Remove the No. 1 fuel pipe clamp.

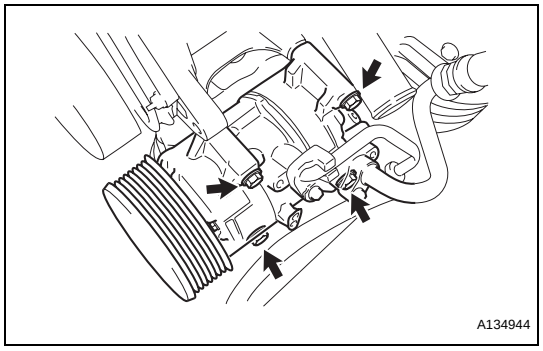


(b) Disconnect the connector from the tube while pinching part A with your fingers as shown in the illustration.

NOTICE:

- **Check for contamination in the pipe and around the connector. Clean if necessary and then disconnect the connector.**
- **Disconnect the connector by hand.**
- **Do not bend, fold or rotate the nylon tube.**
- **If the pipe and connector are stuck together, push and pull the connector until it becomes free.**
- **Put the pipe and connector ends in vinyl bags to prevent damage and contamination.**

40. REMOVE GENERATOR ASSEMBLY (See page CH-11)



41. SEPARATE COMPRESSOR AND MAGNETIC CLUTCH

(a) Disconnect the connector.

(b) Remove the 4 bolts and separate the compressor.

HINT:

Hang up the hoses instead of detaching them.

42. REMOVE FRONT EXHAUST PIPE ASSEMBLY

HINT:

See page EX-2.

43. REMOVE FRONT AXLE HUB NUT LH (See page DS-7)

44. REMOVE FRONT AXLE HUB NUT RH

HINT:

Use the same procedures described for the LH side.

45. REMOVE FRONT STABILIZER LINK ASSEMBLY LH (See page DS-7)

46. REMOVE FRONT STABILIZER LINK ASSEMBLY RH
HINT:
Use the same procedures described for the LH side.

47. REMOVE FRONT SPEED SENSOR LH (See page DS-7)

48. REMOVE FRONT SPEED SENSOR RH
HINT:
Use the same procedures described for the LH side.

49. DISCONNECT TIE ROD ASSEMBLY LH (See page DS-8)

50. DISCONNECT TIE ROD ASSEMBLY RH
HINT:
Use the same procedures described for the LH side.

EM

51. DISCONNECT FRONT SUSPENSION LOWER NO. 1 ARM LH (See page DS-8)

52. DISCONNECT FRONT SUSPENSION LOWER NO. 1 ARM RH
HINT:
Use the same procedures described for the LH side.

53. SEPARATE FRONT AXLE ASSEMBLY LH (See page DS-8)

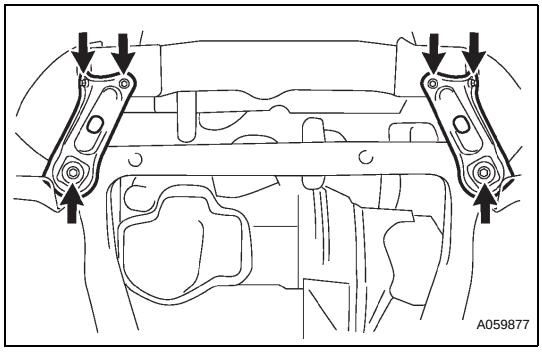
54. SEPARATE FRONT AXLE ASSEMBLY RH
HINT:
Use the same procedures described for the LH side.

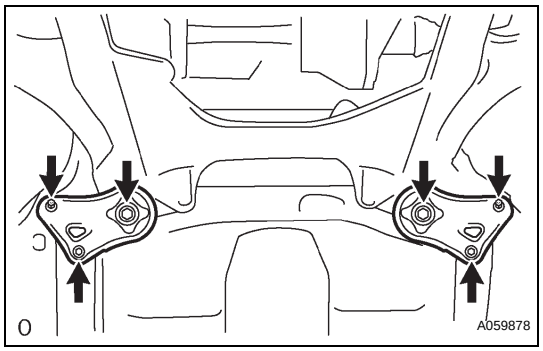
55. REMOVE DRIVE PLATE & TORQUE CONVERTER CLUTCH SETTING BOLT (for Automatic Transaxle) (See page AX-164)

56. REMOVE NO. 1 EXHAUST PIPE SUPPORT BRACKET
(a) Remove the 2 bolts and exhaust pipe support bracket.

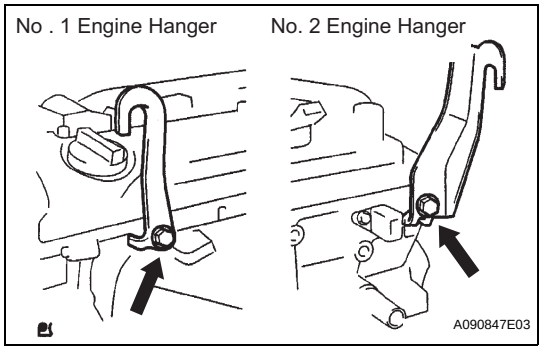
57. SEPARATE STEERING SLIDING YOKE (See page PS-40)

58. REMOVE ENGINE ASSEMBLY WITH TRANSAXLE
(a) Set the engine lifter.
(b) Remove the 4 bolts, 2 nuts and frame side rail plate RH and LH.





(c) Remove the 4 bolts, 2 nuts and front suspension member brace rear RH and LH.
(d) Carefully remove the engine assembly from the vehicle.

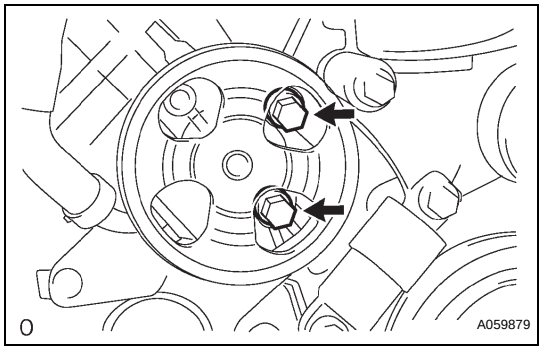


(e) Install the 2 engine hangers as shown in the illustration.
Parts No.:

Parts	Parts No.
No. 1 Engine hanger	12281-28010
No. 2 Engine hanger	12282-28010
Bolt	91512-61020

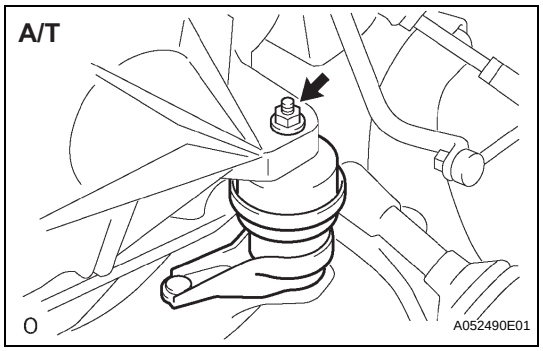
Torque: 38 N*m (387 kgf*cm, 28 ft.*lbf)

(f) Using a chain block and an engine sling device, hang the engine assembly.



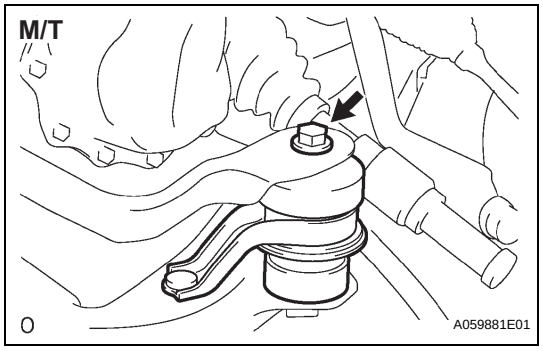
59. REMOVE VANE PUMP ASSEMBLY

(a) Disconnect the oil pressure switch connector.
(b) Loosen the 2 bolts and remove the vane pump from the engine.

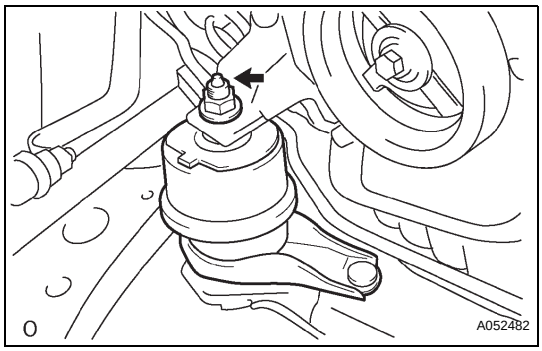


60. REMOVE FRONT FRAME ASSEMBLY

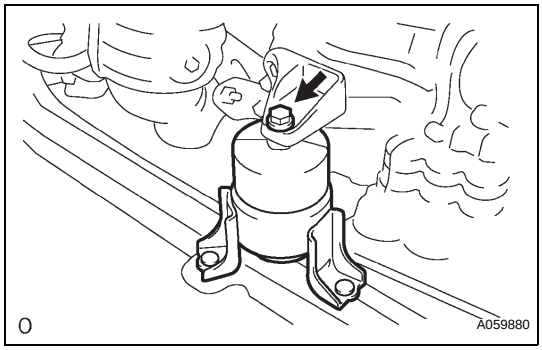
(a) A/T:
Remove the nut from the engine mounting insulator LH.



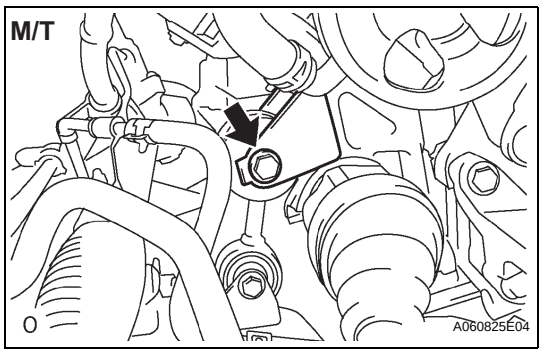
(b) M/T:
Remove the bolt from the engine mounting insulator LH.



(c) Remove the nut from the engine mounting insulator RH.



(d) Remove the bolt from the engine mounting insulator FR.



(e) M/T:
Remove the bolt from the engine lateral control rod.

(f) Raise the engine assembly and separate the front frame.

61. REMOVE FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-9)

62. REMOVE FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-9)

63. REMOVE ENGINE WIRE

64. REMOVE STARTER ASSEMBLY (for Manual Transaxle) (See page ST-5)

65. REMOVE STARTER ASSEMBLY (for Automatic Transaxle) (See page ST-5)

66. SEPARATE AUTOMATIC TRANSAXLE ASSEMBLY (for Automatic Transaxle)
HINT:
See page AX-162.

67. SEPARATE MANUAL TRANSAXLE ASSEMBLY (for Manual Transaxle)
HINT:
See page MX-24.

68. REMOVE DRIVE PLATE & RING GEAR SUB-ASSEMBLY (for Automatic Transaxle) (See page EM-79)

69. REMOVE CLUTCH COVER ASSEMBLY (for Manual Transaxle) (See page CL-32)

70. REMOVE CLUTCH DISC ASSEMBLY (for Manual Transaxle) (See page CL-32)

71. REMOVE FLYWHEEL SUB-ASSEMBLY (for Manual Transaxle) (See page EM-79)

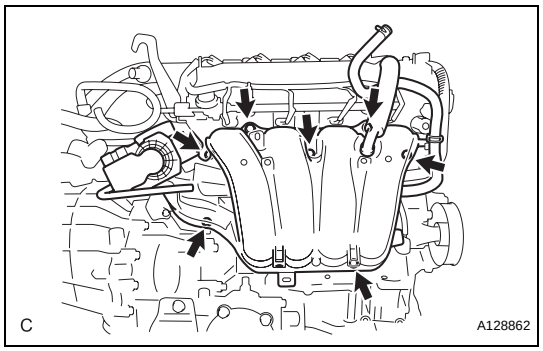
72. INSTALL ENGINE STAND

(a) Fix the engine onto a engine stand with the bolts.

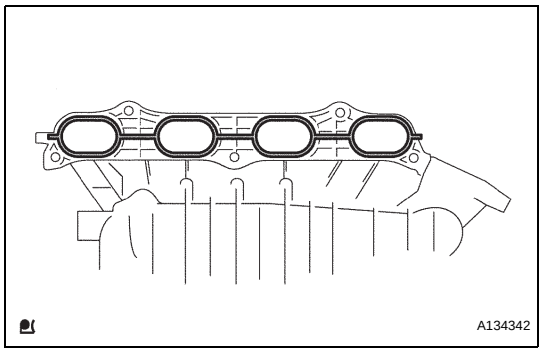
73. REMOVE FUEL DELIVERY PIPE WITH INJECTOR (See page FU-13)

74. REMOVE INTAKE MANIFOLD

(a) Remove the 5 bolts, 2 nuts, and intake manifold.

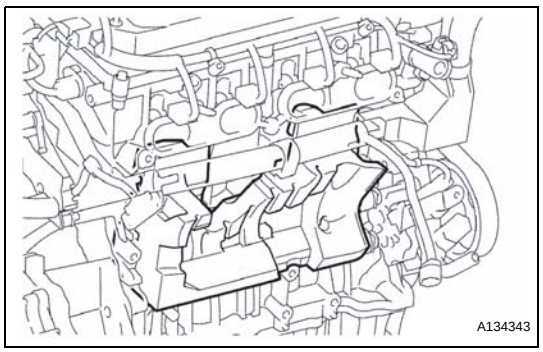


(b) Remove the gasket from the intake manifold.



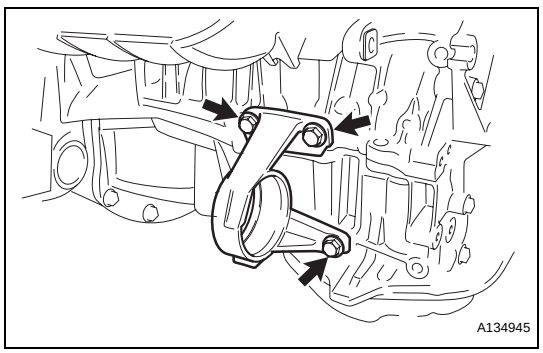
75. REMOVE INTAKE AIR CONTROL VALVE (for PZEV) (See page IT-7)

76. REMOVE NO. 2 VENTILATION HOSE



77. REMOVE NO. 1 INTAKE MANIFOLD INSULATOR

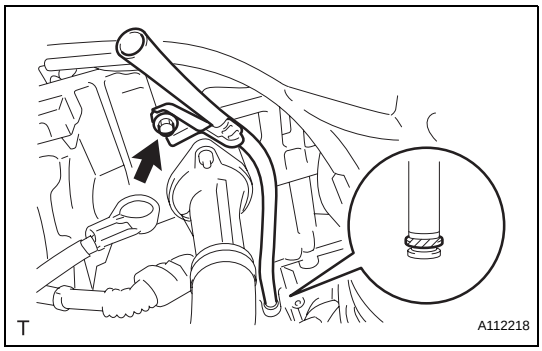
(a) Remove the intake manifold insulator from the cylinder block.



78. REMOVE DRIVE SHAFT BEARING BRACKET

(a) Remove the 3 bolts and drive shaft bearing bracket.

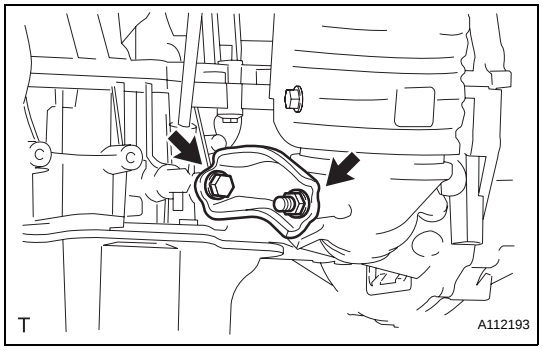
79. REMOVE OIL LEVEL GAUGE SUB-ASSEMBLY



80. REMOVE OIL LEVEL GAUGE GUIDE

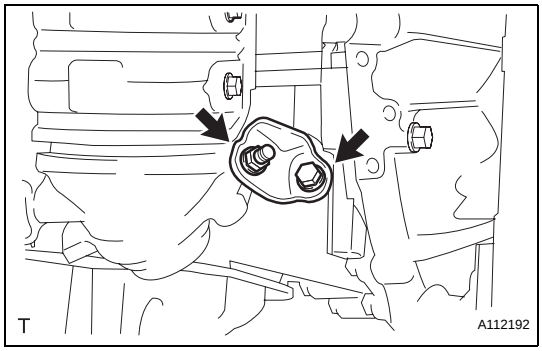
(a) Remove the bolt and oil level gauge guide.

(b) Remove the O-ring from the oil level gauge guide.



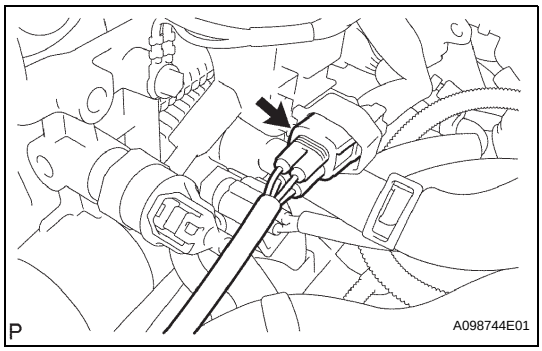
81. REMOVE MANIFOLD STAY

(a) Remove the bolt, nut and stay.



82. REMOVE NO. 2 MANIFOLD STAY

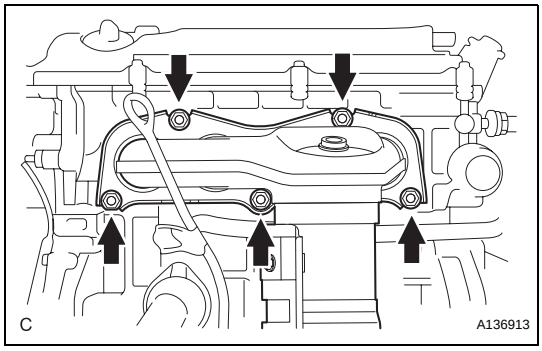
(a) Remove the bolt, nut and stay.



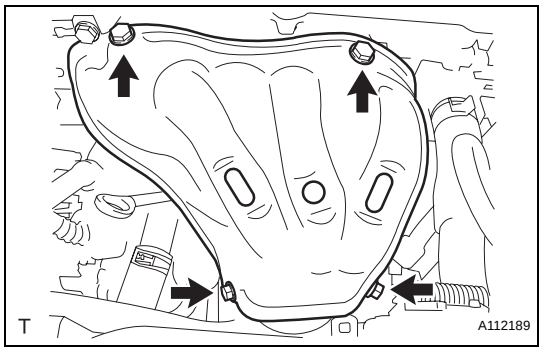
83. REMOVE EXHAUST MANIFOLD CONVERTER SUB-ASSEMBLY

(a) For PZEV:

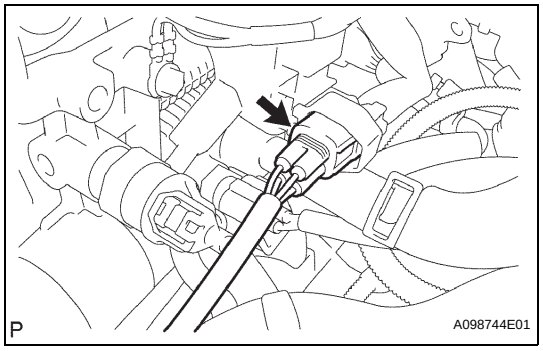
(1) Disconnect the air-fuel ratio sensor connector.



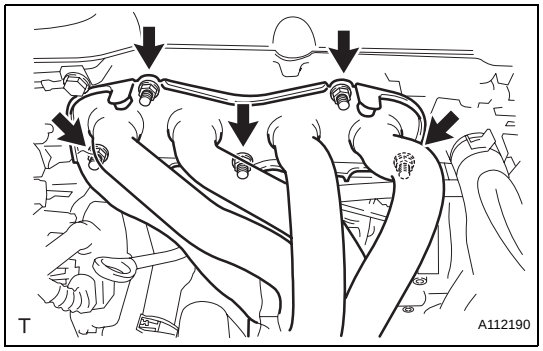
(2) Remove the 5 nuts, manifold converter and gasket.



(b) Except for PZEV:
(1) Remove the 4 bolts and No. 1 insulator.



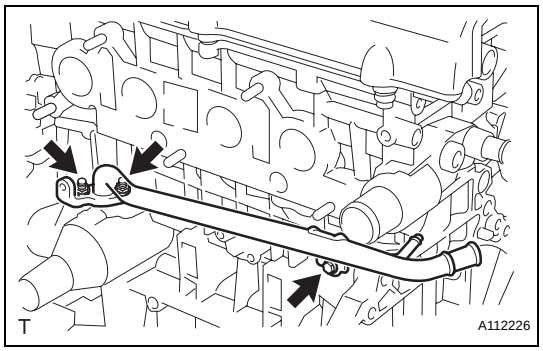
(2) Disconnect the air-fuel ratio sensor connector.



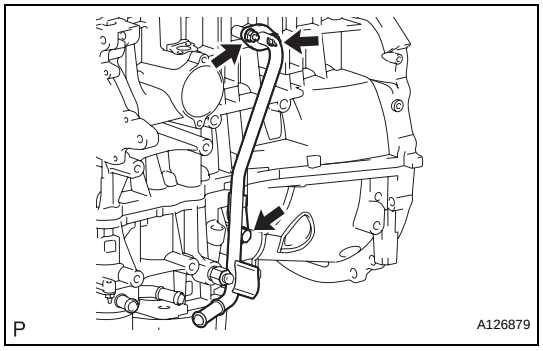
(3) Remove the 5 nuts, manifold converter and gasket.

84. REMOVE WATER INLET (See page CO-13)

85. REMOVE THERMOSTAT (See page CO-13)

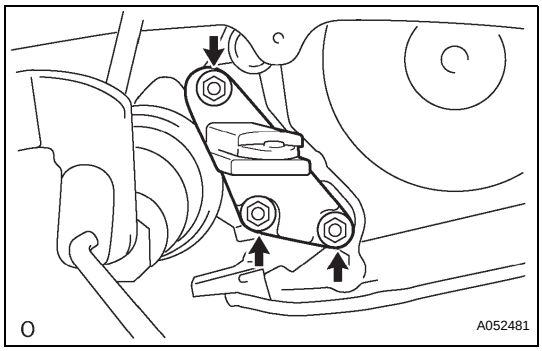


86. REMOVE NO. 1 WATER BY-PASS PIPE
(a) Remove the bolt, 2 nuts and No. 1 water by-pass pipe with the gasket.



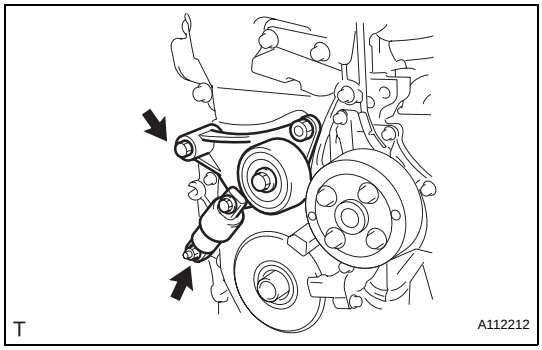
87. REMOVE OIL COOLER PIPE (w/ Oil Cooler)
(a) Remove the bolt, 2 nuts and oil cooler pipe with the gasket.

EM



88. REMOVE ENGINE MOUNTING BRACKET RH

(a) Remove the 3 bolts and engine mounting bracket RH.



89. REMOVE V-RIBBED BELT TENSIONER ASSEMBLY

(a) Remove the bolt, nut and belt tensioner.

90. REMOVE IGNITION COIL ASSEMBLY

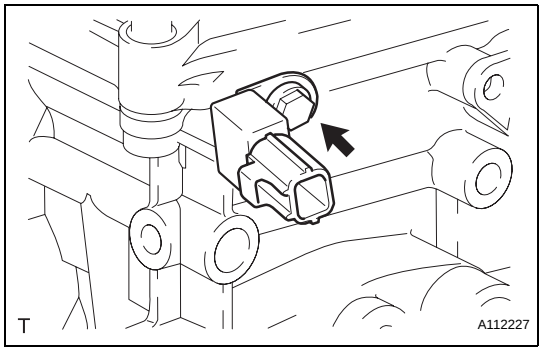
(a) Remove the 4 bolts and 4 ignition coils.

91. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-405)

92. REMOVE KNOCK SENSOR

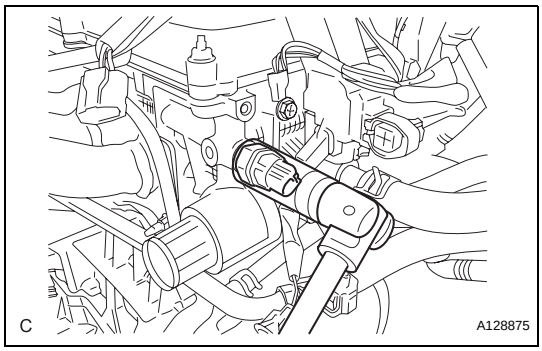
(a) Disconnect the sensor connector.

(b) Remove the nut and sensor.



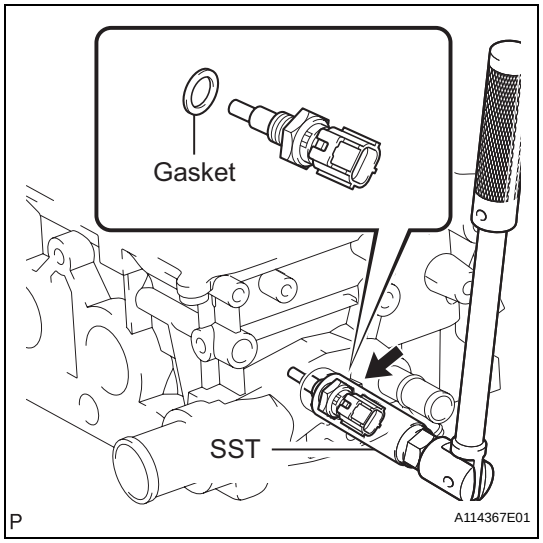
93. REMOVE RADIO SETTING CONDENSER

(a) Remove the bolt and radio setting condenser.



94. REMOVE ENGINE OIL PRESSURE SWITCH ASSEMBLY

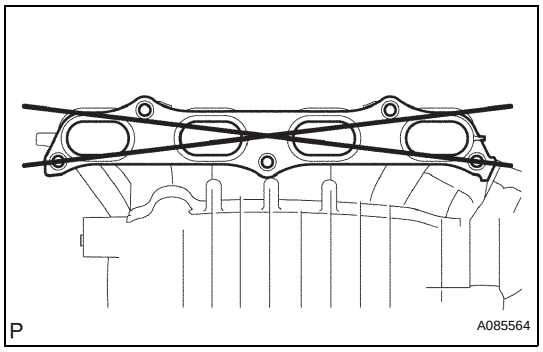
(a) Using a 24 mm deep socket wrench, remove the engine oil pressure switch assembly.



95. REMOVE ENGINE COOLANT TEMPERATURE SENSOR

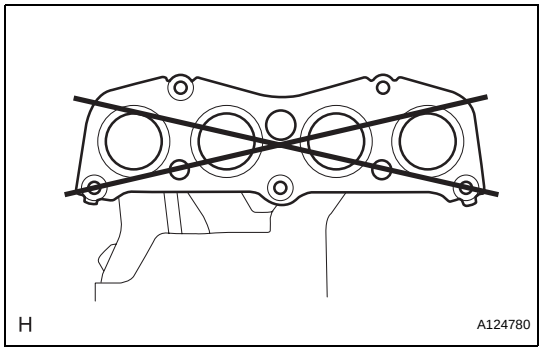
(a) Using SST, remove the sensor and gasket.
SST 09817-33190

INSPECTION



1. INSPECT INTAKE MANIFOLD

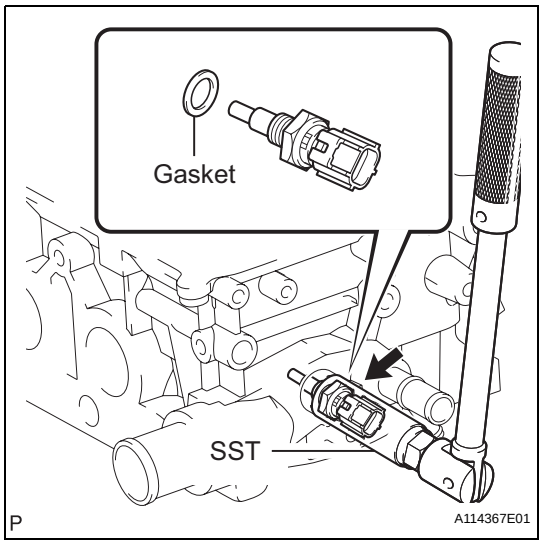
(a) Using a precision straight edge and feeler gauge, measure the surface contacting the cylinder head for warpage.
Maximum warpage:
0.20 mm (0.0079 in.)
If the warpage is greater than maximum, replace the manifold.



2. INSPECT EXHAUST MANIFOLD CONVERTER SUB-ASSEMBLY

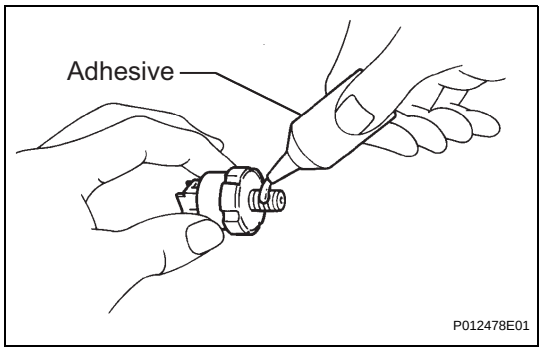
(a) Using a precision straight edge and feeler gauge, measure the surface contacting the cylinder head for warpage.
Maximum warpage:
0.70 mm (0.0276 in.)
If the warpage is greater than the maximum, replace the manifold.

INSTALLATION



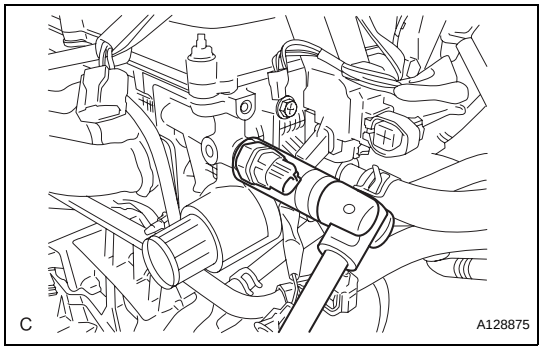
1. INSTALL ENGINE COOLANT TEMPERATURE SENSOR

(a) Using SST, install a new gasket and the ECT sensor.
SST 09817-33190
Torque: 20 N*m (208 kgf*cm, 15 ft.*lbf)

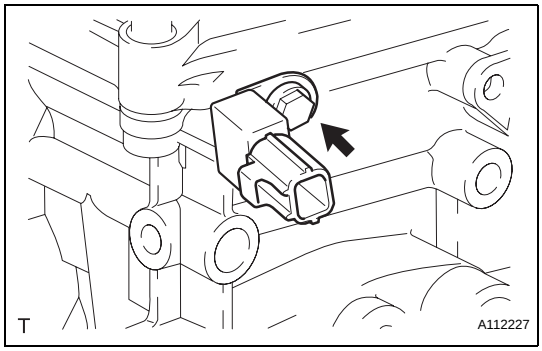


2. INSTALL ENGINE OIL PRESSURE SWITCH ASSEMBLY

(a) Clean the threads of the oil pressure switch. Apply adhesive to 2 or 3 threads of the oil.
Adhesive:
Part No. 08833-00080 THREE BOND 1344 or equivalent

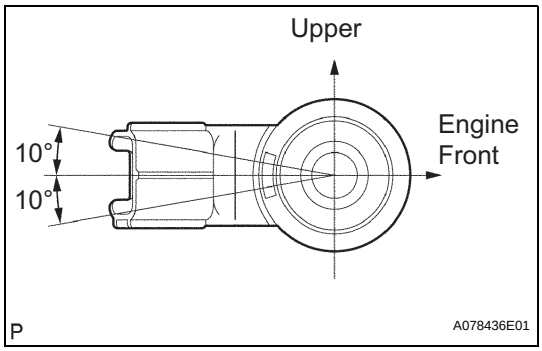


(b) Using a 24 mm deep socket wrench, install the oil pressure switch.
Torque: 15 N*m (153 kgf*cm, 11 ft.*lbf)



3. INSTALL RADIO SETTING CONDENSER

(a) Install the condenser with the bolt.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)



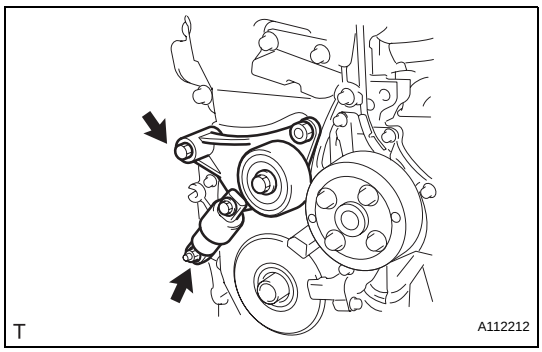
4. INSTALL KNOCK SENSOR

(a) Install the sensor with the nut as shown in the illustration.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)

5. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-406)

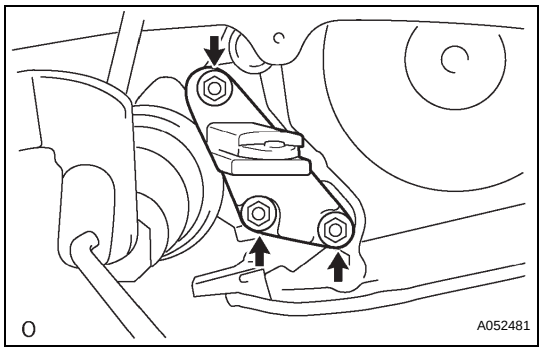
6. INSTALL IGNITION COIL ASSEMBLY

(a) Install the 4 ignition coils with the 4 bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)



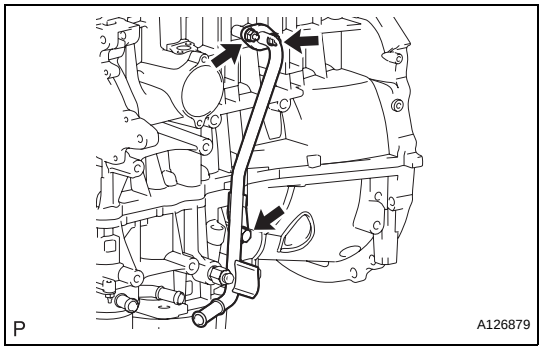
7. INSTALL V-RIBBED BELT TENSIONER ASSEMBLY

(a) Install the V-ribbed belt tensioner with the bolt and nut.
Torque: 60 N*m (607 kgf*cm, 44 ft.*lbf)



8. INSTALL ENGINE MOUNTING BRACKET RH

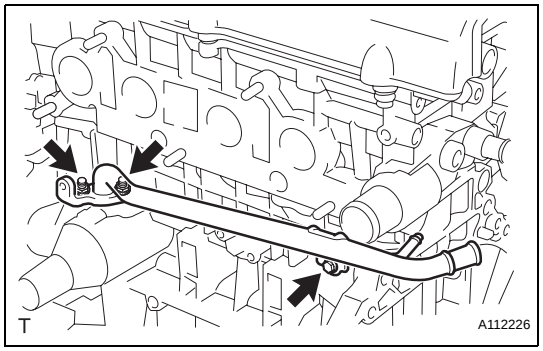
(a) Remove the engine mounting bracket RH with the 3 bolts.
Torque: 54 N*m (551 kgf*cm, 40 ft.*lbf)



9. INSTALL OIL COOLER PIPE (w/ Oil Cooler)

(a) Install a new gasket and the pipe with the bolt and 2 nuts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

EM



10. INSTALL NO. 1 WATER BY-PASS PIPE

(a) Install a new gasket and the pipe with the bolt and 2 nuts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

11. INSTALL THERMOSTAT (See page CO-13)

12. INSTALL WATER INLET (See page CO-14)

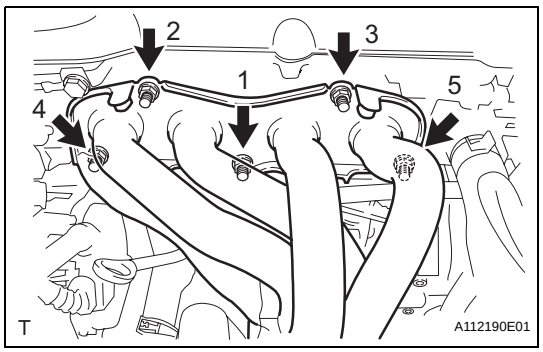
13. INSTALL EXHAUST MANIFOLD CONVERTER SUB-ASSEMBLY

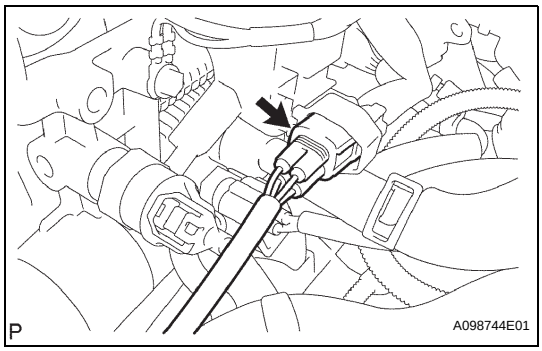
(a) Except for PZEV:

(1) Install a new gasket onto the cylinder head.

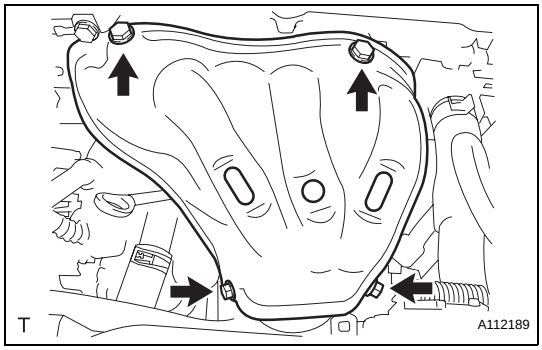
(2) Temporarily tighten the exhaust manifold converter with the 5 nuts.

(3) Tighten the 5 nuts in the sequence shown in the illustration.
Torque: 37 N*m (378 kgf*cm, 27 ft.*lbf)



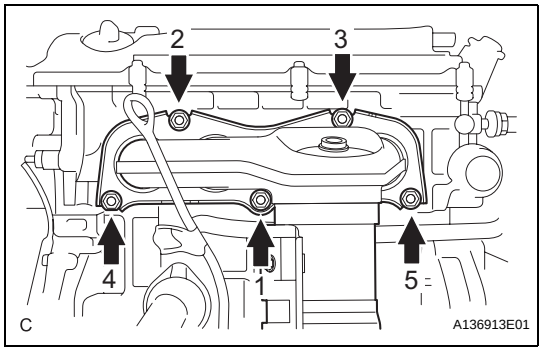


(4) Connect the air-fuel ratio sensor connector.

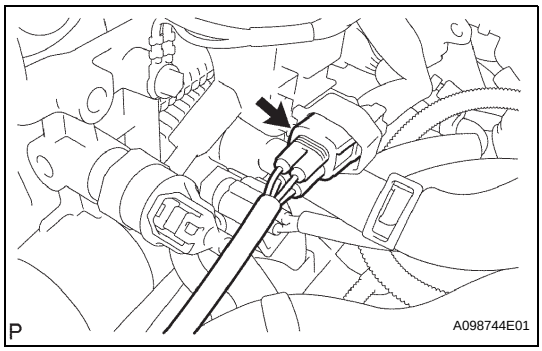


(5) Install the exhaust manifold heat insulator with the 4 bolts.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)

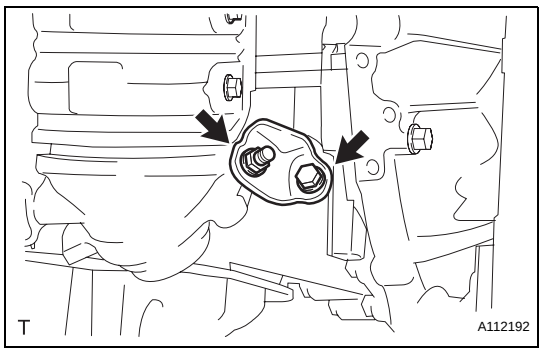
(b) For PZEV:
(1) Install a new gasket onto the cylinder head.
(2) Temporarily tighten the exhaust manifold converter with the 5 nuts.



(3) Tighten the 5 nuts in the sequence shown in the illustration.
Torque: 37 N*m (378 kgf*cm, 27 ft.*lbf)

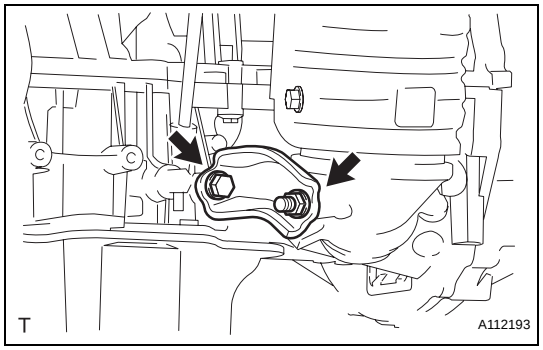


(4) Connect the air-fuel ratio sensor connector.



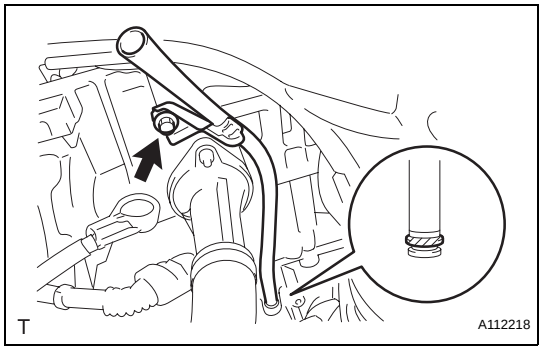
14. INSTALL NO. 2 MANIFOLD STAY

(a) Install the stay with the bolt and nut.
Torque: 44 N*m (449 kgf*cm, 32 ft.*lbf)



15. INSTALL MANIFOLD STAY

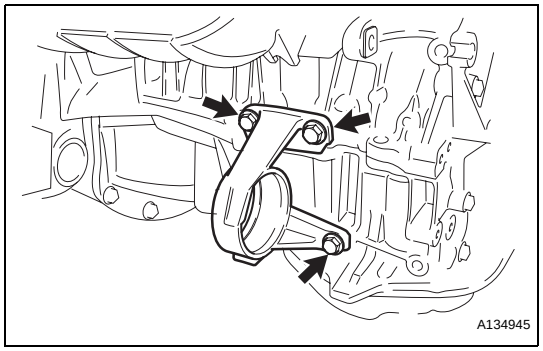
(a) Install the stay with the bolt and nut.
Torque: 44 N*m (449 kgf*cm, 32 ft.*lbf)



16. INSTALL OIL LEVEL GAUGE GUIDE

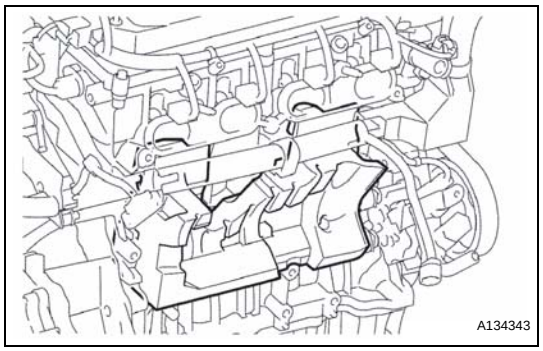
(a) Apply a light coat of engine oil to a new O-ring and install it to the guide.
(b) Install the oil level gauge guide with the bolt.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

17. INSTALL OIL LEVEL GAUGE SUB-ASSEMBLY



18. INSTALL DRIVE SHAFT BEARING BRACKET

(a) Install the bracket with the 3 bolts.
Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)

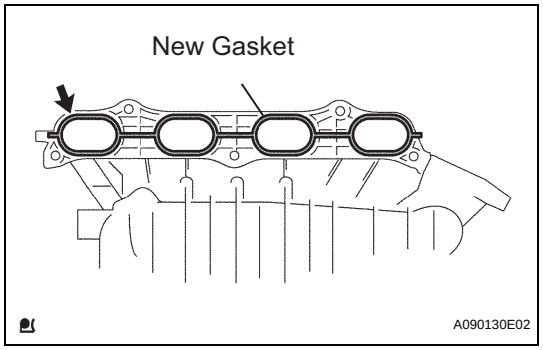


19. INSTALL NO. 1 INTAKE MANIFOLD INSULATOR

(a) Install the intake manifold insulator onto the cylinder block.

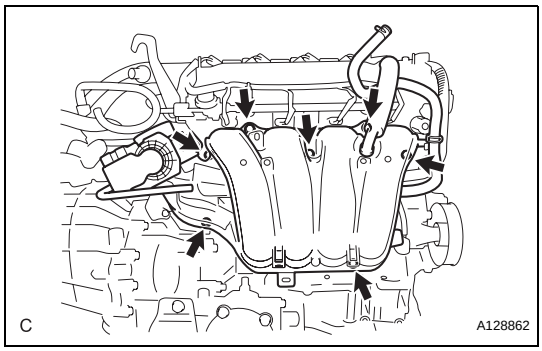
20. INSTALL NO. 2 VENTILATION HOSE

21. INSTALL INTAKE AIR CONTROL VALVE (for PZEV)
(See page IT-7)



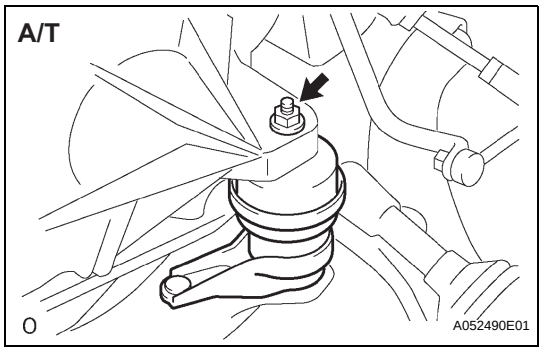
22. INSTALL INTAKE MANIFOLD

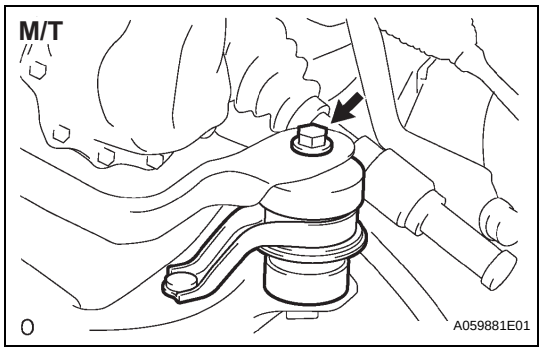
(a) Install a new gasket into the intake manifold.



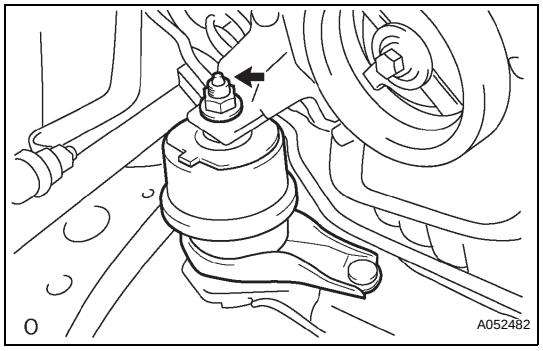
(b) Install the intake manifold with the 5 bolts and 2 nuts.
Torque: 30 N*m (305 kgf*cm, 22 ft.*lbf)

23. **INSTALL FUEL DELIVERY PIPE WITH INJECTOR (See page FU-15)**
24. **REMOVE ENGINE STAND**
25. **INSTALL FLYWHEEL SUB-ASSEMBLY (for Manual Transaxle) (See page EM-80)**
26. **INSTALL CLUTCH DISC ASSEMBLY (for Manual Transaxle) (See page CL-34)**
27. **INSTALL CLUTCH COVER ASSEMBLY (for Manual Transaxle) (See page CL-34)**
28. **INSTALL DRIVE PLATE & RING GEAR SUB-ASSEMBLY (for Automatic Transaxle) (See page EM-81)**
29. **INSTALL MANUAL TRANSAXLE ASSEMBLY (for Manual Transaxle)**
HINT:
See page MX-27.
30. **INSTALL AUTOMATIC TRANSAXLE ASSEMBLY (for Automatic Transaxle)**
HINT:
See page AX-168.
31. **INSTALL STARTER ASSEMBLY (for Manual Transaxle) (See page ST-13)**
32. **INSTALL STARTER ASSEMBLY (for Automatic Transaxle) (See page ST-13)**
33. **INSTALL ENGINE WIRE**
34. **INSTALL FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-20)**
35. **INSTALL FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-21)**
36. **INSTALL FRONT FRAME ASSEMBLY**
(a) A/T:
Install the engine mounting insulator LH with the nut.
Torque: 95 N*m (969 kgf*cm, 70 ft.*lbf)

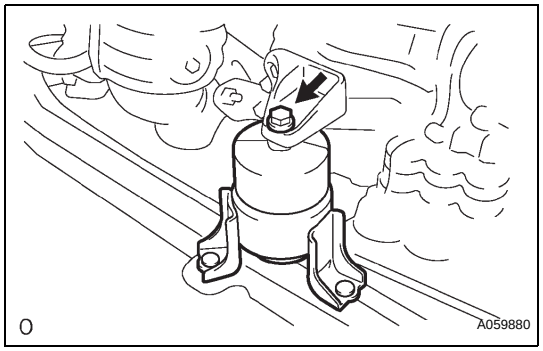




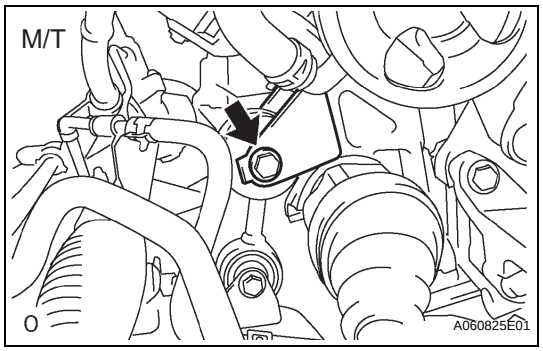
(b) M/T:
Install the engine mounting insulator LH with the bolt.
Torque: 143 N*m (1,459 kgf*cm, 105 ft.*lbf)



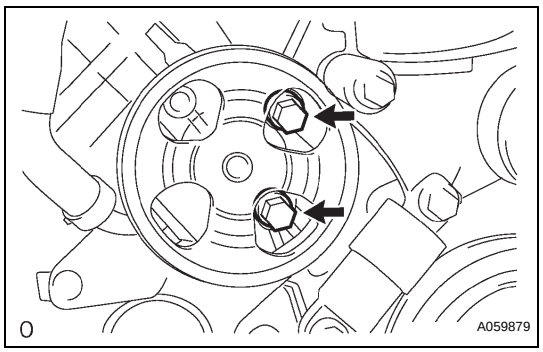
(c) Install the engine mounting insulator RH with the nut.
Torque: 95 N*m (969 kgf*cm, 70 ft.*lbf)



(d) Install the engine mounting insulator FR with the bolt.
Torque: 87 N*m (888 kgf*cm, 64 ft.*lbf)



(e) M/T:
Install the engine lateral control rod with the bolt.
Torque: 89 N*m (910 kgf*cm, 66 ft.*lbf)

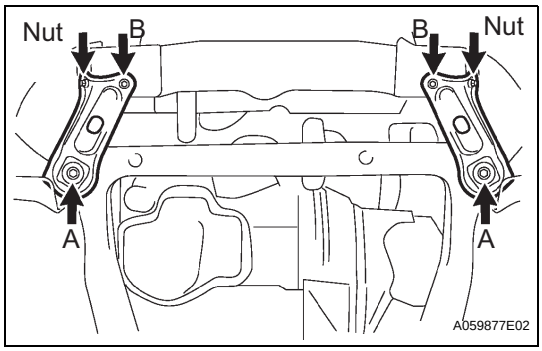


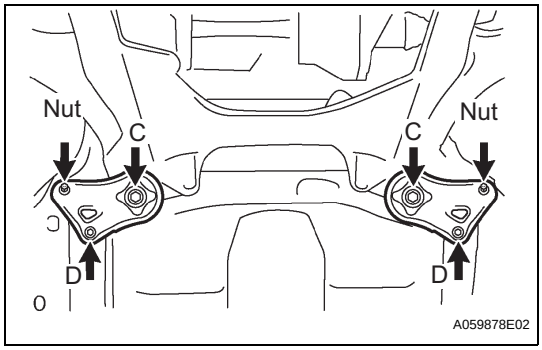
37. INSTALL VANE PUMP ASSEMBLY

(a) Install the vane pump to the engine with the 2 bolts.
Torque: 43 N*m (439 kgf*cm, 32 ft.*lbf)

(b) Connect the oil pressure switch connector.

EM





38. INSTALL ENGINE ASSEMBLY WITH TRANSAXLE

(a) Set the engine assembly with transaxle on the engine lifter.

(b) Install the engine assembly to the vehicle.

(c) Install the frame side plate LH and RH with the 4 bolts and 2 nuts.

Torque: Bolt A
85 N*m (867 kgf*cm, 63 ft.*lbf)
Bolt B and nut
32 N*m (326 kgf*cm, 24 ft.*lbf)

(d) Install the front suspension member brace rear RH and LH with the 4 bolts and 2 nuts.

Torque: Bolt C
85 N*m (867 kgf*cm, 63 ft.*lbf)
Bolt D and nut
32 N*m (326 kgf*cm, 24 ft.*lbf)

39. INSTALL STEERING SLIDING YOKE (See page PS-65)

40. INSTALL NO. 1 EXHAUST PIPE SUPPORT BRACKET

(a) Install the exhaust pipe support bracket with the 2 bolts.

Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)

41. INSTALL DRIVE PLATE & TORQUE CONVERTER CLUTCH SETTING BOLT (for Automatic Transaxle) (See page AX-172)

42. INSTALL FRONT AXLE ASSEMBLY LH (See page DS-21)

43. INSTALL FRONT AXLE ASSEMBLY RH

HINT:
Use the same procedures described for the LH side.

44. INSTALL FRONT SUSPENSION LOWER NO. 1 ARM LH (See page DS-21)

45. INSTALL FRONT SUSPENSION LOWER NO. 1 ARM RH

HINT:
Use the same procedures described for the LH side.

46. INSTALL TIE ROD ASSEMBLY LH (See page DS-21)

47. INSTALL TIE ROD ASSEMBLY RH

HINT:
Use the same procedures described for the LH side.

48. INSTALL FRONT SPEED SENSOR LH (See page DS-21)

49. INSTALL FRONT SPEED SENSOR RH
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

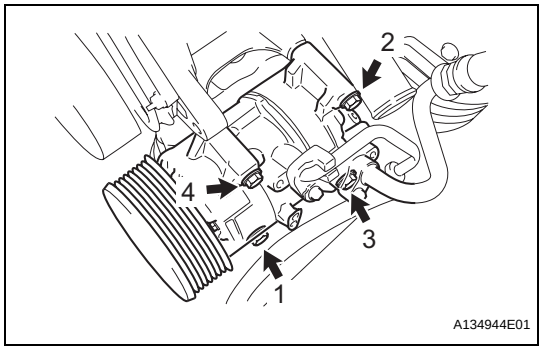
50. INSTALL FRONT STABILIZER LINK ASSEMBLY LH (See page DS-22)

51. INSTALL FRONT STABILIZER LINK ASSEMBLY RH
HINT:
Use the same procedures described for the LH side.

52. INSTALL FRONT AXLE HUB NUT LH (See page DS-22)

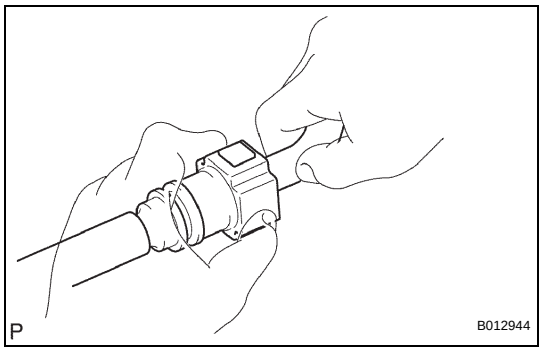
53. INSTALL FRONT AXLE HUB NUT RH
HINT:
Use the same procedures described for the LH side.

54. INSTALL FRONT EXHAUST PIPE ASSEMBLY
HINT:
See page EX-3.



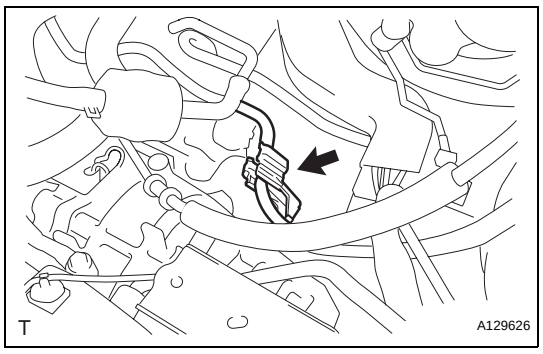
55. INSTALL COMPRESSOR AND MAGNETIC CLUTCH
(a) Install the cooler compressor with the 4 bolts.
Torque: 25 N*m (250 kgf*cm, 18 ft.*lbf)
NOTICE:
Tighten the bolts in the order shown in the illustration to install the cooler compressor.

56. INSTALL GENERATOR ASSEMBLY (See page CH-19)



57. CONNECT FUEL TUBE SUB-ASSEMBLY
(a) Push in the fuel tube connector to the fuel pipe until the connector makes a "click" sound.
NOTICE:
- **Check for damage or contamination on the connected part of the pipe.**
- **Check if the pipe and the connector are securely connected by trying to pull them apart.**

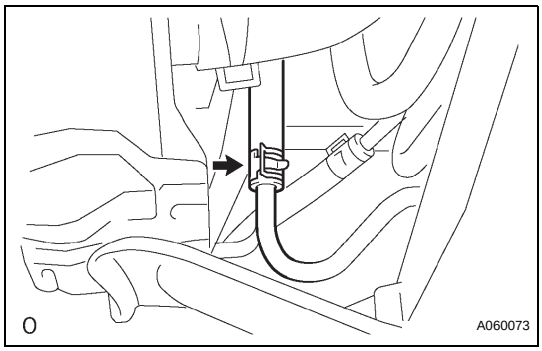
(b) Install the No. 1 fuel pipe clamp.



58. INSTALL CLUTCH RELEASE CYLINDER ASSEMBLY (for Manual Transaxle)
HINT:
See page CL-25.

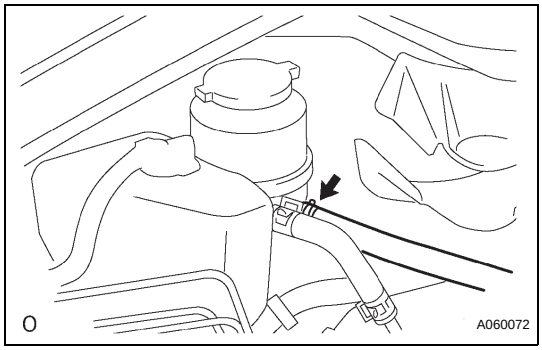
59. REMOVE CLUTCH ACCUMULATOR ASSEMBLY (for Manual Transaxle)
HINT:
See page CL-29.

EM



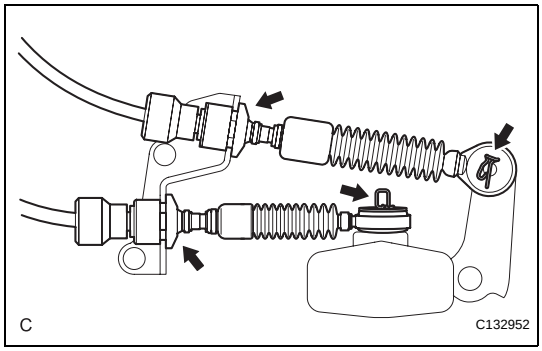
60. CONNECT RETURN TUBE SUB-ASSEMBLY

(a) Connect the return tube sub-assembly.



61. CONNECT NO. 1 OIL RESERVOIR TO PUMP HOSE

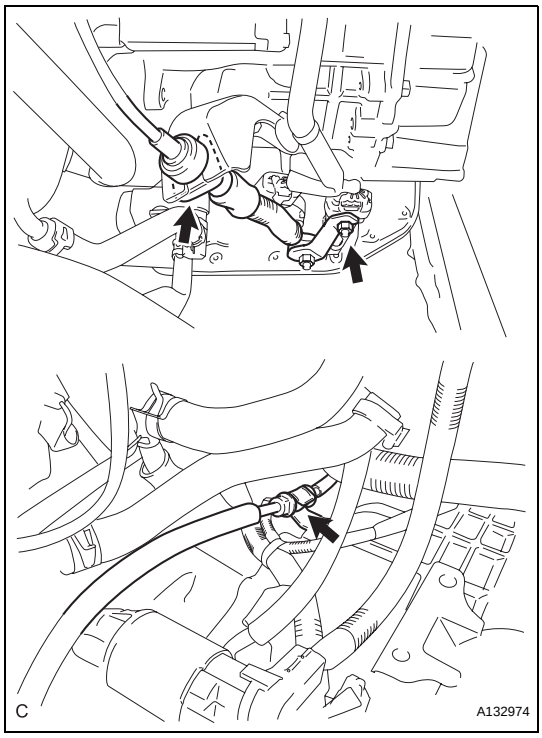
(a) Connect the No. 1 oil reservoir to pump hose.



62. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY (for Manual Transaxle)

(a) Connect the ends of the 2 cables and install the 2 washers and 2 clips.

(b) Install 2 new clips to the control cable bracket.

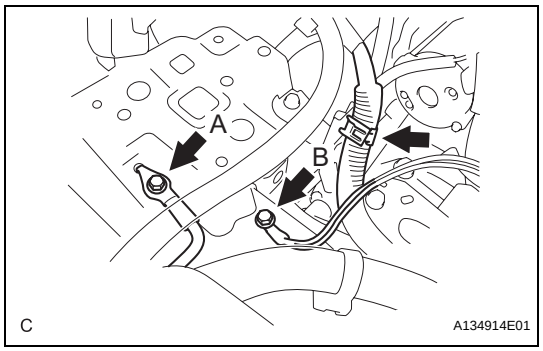


63. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY (for Automatic Transaxle)

(a) Install a new clip and nut, and connect the control lever.

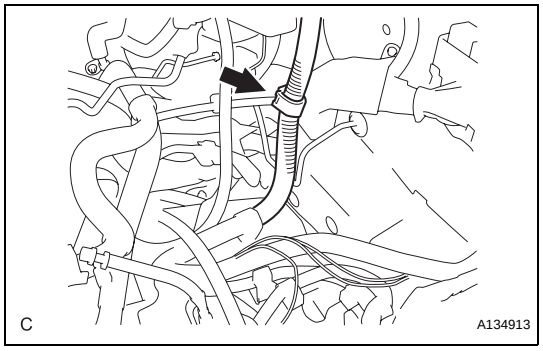
Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)

(b) Connect the clamp with the cable to the transaxle.

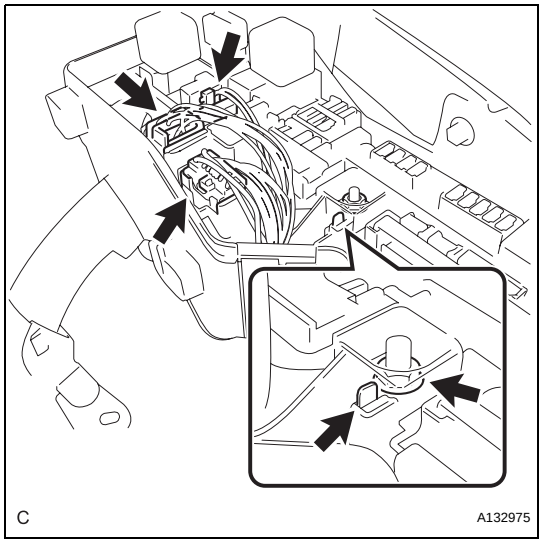


64. CONNECT ENGINE WIRE

(a) Install the 2 bolts and clamp to the body.
Torque: Bolt A
8.4 N*m (85 kgf*cm, 74 in.*lbf)
Bolt B
12 N*m (123 kgf*cm, 9 ft.*lbf)



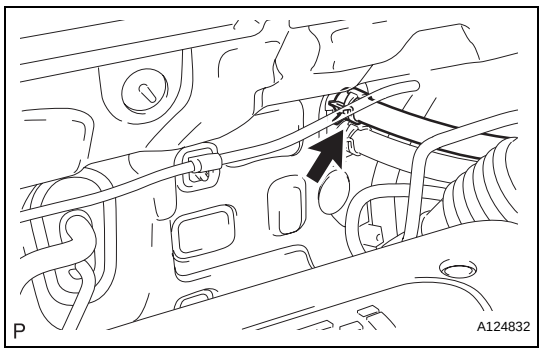
(b) Connect the clamp to the bracket.



(c) Connect the wire to the engine room junction block. Then, install it with the nut and 3 connectors.
Torque: 8.4 N*m (85 kgf*cm, 74 in.*lbf)

65. INSTALL ECM

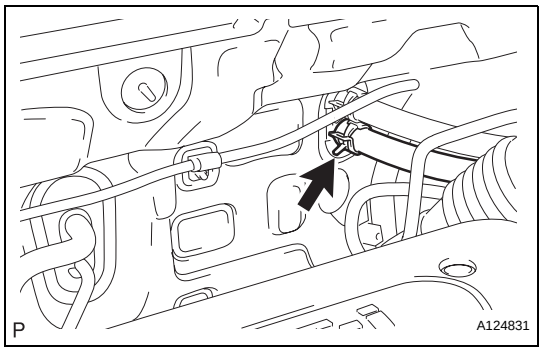
HINT:
See page ES-433.



66. CONNECT HEATER INLET WATER HOSE

(a) Connect the heater inlet water hose.

EM

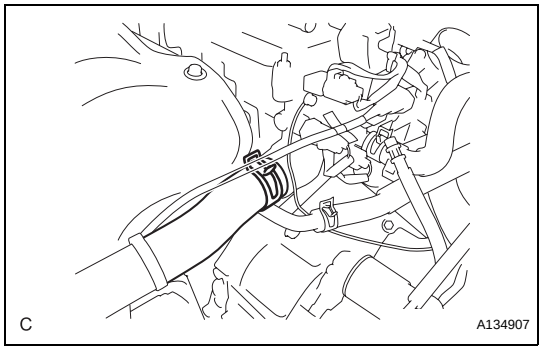


67. CONNECT HEATER OUTLET WATER HOSE

(a) Connect the heater outlet water hose.

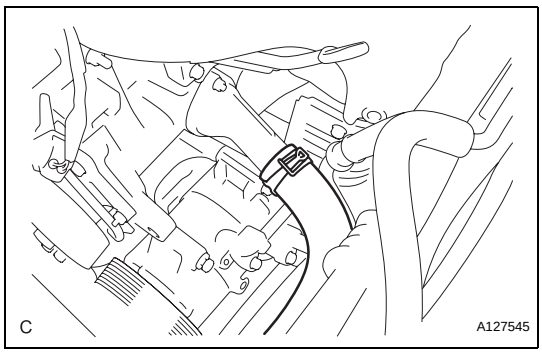
68. CONNECT OIL COOLER INLET HOSE (See page CO-30)

69. CONNECT OIL COOLER OUTLET HOSE (See page CO-30)



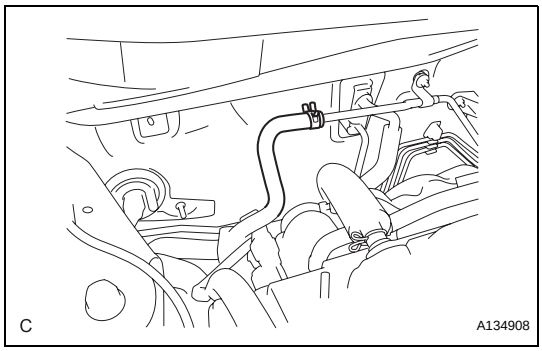
70. CONNECT RADIATOR HOSE INLET

(a) Install the clamp and connect the radiator hose inlet.



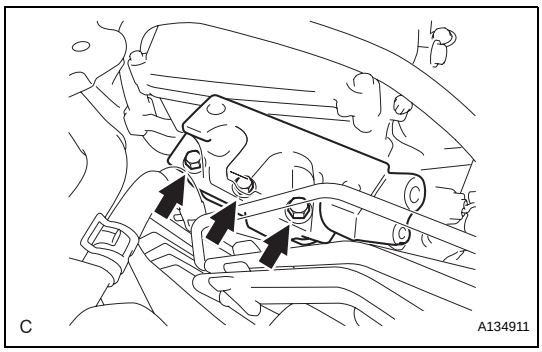
71. CONNECT RADIATOR HOSE OUTLET

(a) Install the clamp and connect the radiator hose outlet.



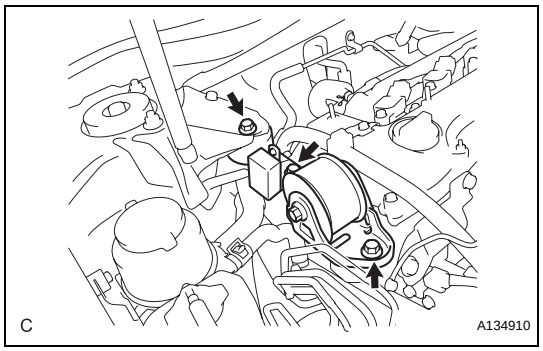
72. CONNECT NO. 1 VACUUM HOSE CONNECTOR

(a) Install the clamp and connect the vacuum hose connector.



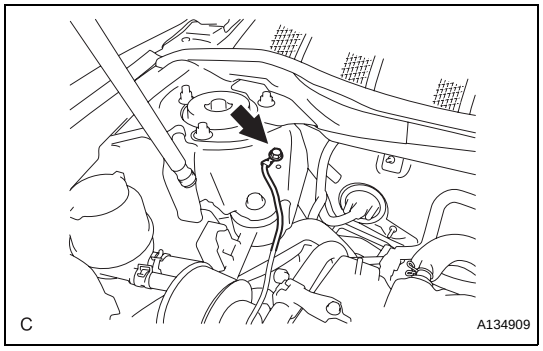
73. INSTALL NO. 2 ENGINE MOUNTING BRACKET RH

(a) Install the 3 bolts and No. 2 mounting bracket RH.
Torque: 52 N*m (531 kgf*cm, 38 ft.*lbf)



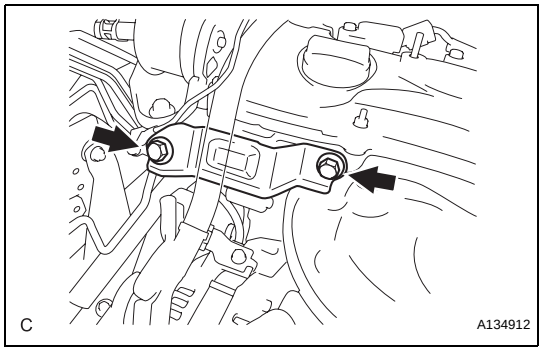
74. INSTALL ENGINE MOVING CONTROL ROD SUB-ASSEMBLY

(a) Install the engine moving control rod with the 3 bolts.
Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)



(b) Install the ground cable with the bolt.
Torque: 8.4 N*m (85 kgf*cm, 74 in.*lbf)

EM

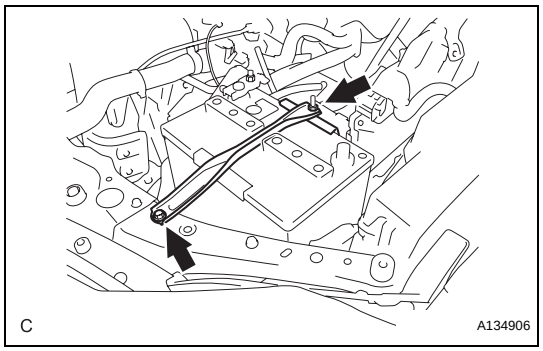


75. INSTALL NO. 2 ENGINE MOUNTING STAY RH

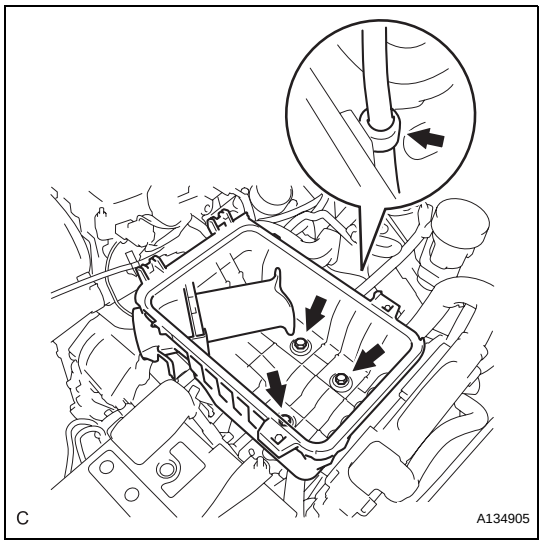
(a) Install the No. 2 mounting stay RH with the 2 bolts.
Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)

76. INSTALL BATTERY

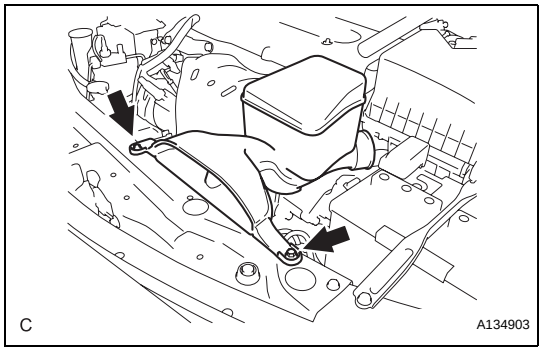
(a) Install the battery and battery tray.



(b) Install the battery clamp with the bolt and nut.
Torque: Bolt
9.0 N*m (92 kgf*cm, 80 in.*lbf)
Nut
3.5 N*m (36 kgf*cm, 31 in.*lbf)



77. **INSTALL AIR CLEANER CASE SUB-ASSEMBLY**
    (a) Install the air cleaner case with the 3 bolts.
    Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)
    (b) Connect the hose clamp.
78. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-419)**



79. **INSTALL AIR CLEANER INLET ASSEMBLY**
    (a) Install the air cleaner inlet with the 2 bolts.
    Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)
80. **INSTALL V-RIBBED BELT (See page EM-6)**
81. **INSTALL COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-426)**
82. **INSTALL WINDSHIELD WIPER LINK ASSEMBLY**
    HINT:
    See page WW-13.
83. **INSTALL FRONT WHEEL**
    Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
84. **ADD ENGINE OIL**
85. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 6.9 N*m (70 kgf*cm, 61 in.*lbf)
86. **BLEED CLUTCH LINE (for Manual Transaxle) (See page CL-25)**
87. **ADD ENGINE COOLANT (See page CO-5)**
88. **ADD MANUAL TRANSAXLE OIL (for Manual Transaxle) (See page MX-6)**
89. **ADD AUTOMATIC TRANSAXLE FLUID (for Automatic Transaxle) (See page AX-175)**
90. **ADD POWER STEERING FLUID**
91. **BLEED POWER STEERING FLUID (See page PS-7)**
92. **CHECK FOR FUEL LEAKS (See page FU-9)**
93. **CHECK FOR ENGINE OIL LEAKS**
94. **CHECK FOR ENGINE COOLANT LEAKS (See page CO-1)**
95. **CHECK FOR EXHAUST GAS LEAKS**
96. **CHECK SHIFT LEVER POSITION (See page AX-179)**

97. ADJUST FRONT WHEEL ALIGNMENT
HINT:
See page SP-4.

98. CHECK IGNITION TIMING (See page EM-1)

99. CHECK ENGINE IDLE SPEED (See page EM-2)

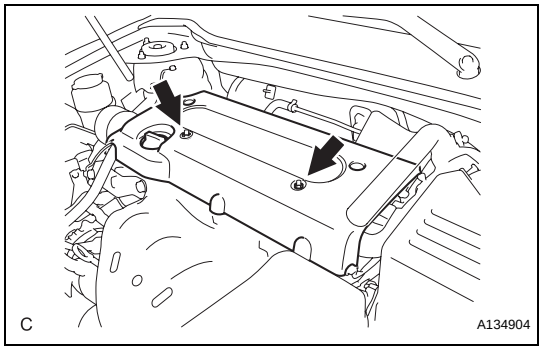
100. INSPECT CO/HC (See page EM-3)

101. INSTALL FRONT FENDER APRON SEAL RH

102. INSTALL ENGINE UNDER COVER LH

103. INSTALL ENGINE UNDER COVER RH

104. INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY
(a) Install the engine cover with the 2 nuts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)



105. CHECK ABS SPEED SENSOR SIGNAL
(a) ABS: See page BC-11.
(b) VSC (for BOSCH): See page BC-123.
(c) VSC (for ADVICS): See page BC-290.

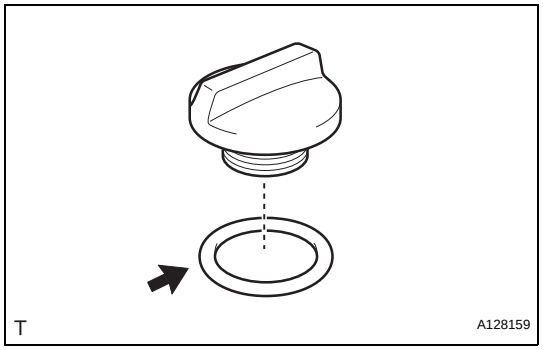
DISASSEMBLY

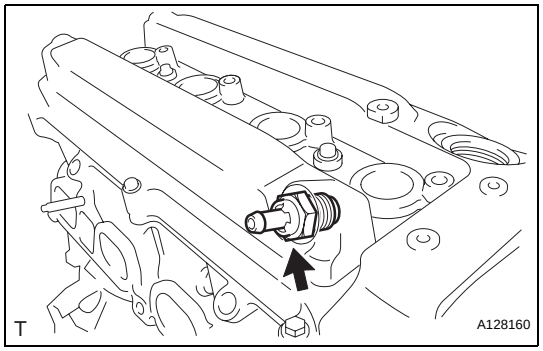
1. REMOVE OIL FILLER CAP SUB-ASSEMBLY

(a) Remove the oil filler cap.



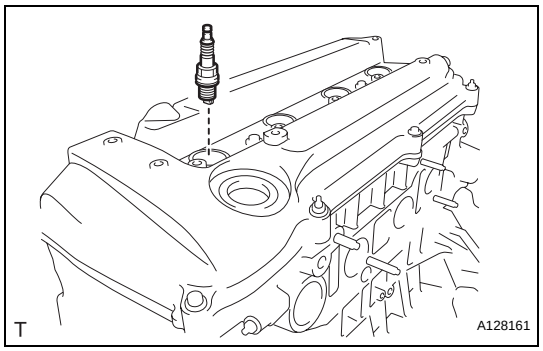
2. REMOVE OIL FILLER CAP GASKET

(a) Remove the oil filler cap gasket.



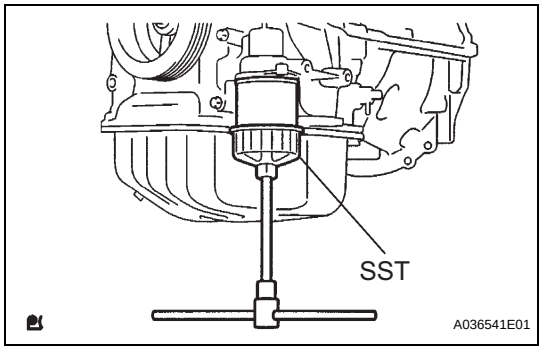
3. REMOVE VENTILATION VALVE SUB-ASSEMBLY

(a) Remove the ventilation valve.



4. REMOVE SPARK PLUG

(a) Remove the spark plugs.



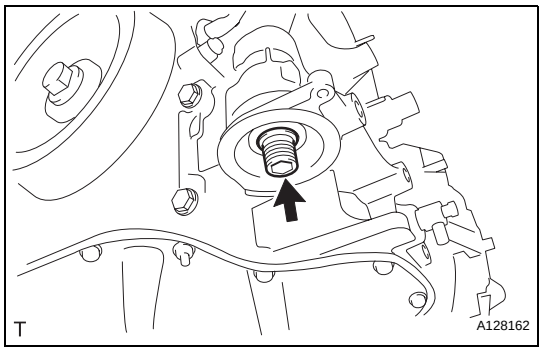
5. REMOVE OIL FILTER SUB-ASSEMBLY

(a) Using SST, remove the oil filter.

SST 09228-06501

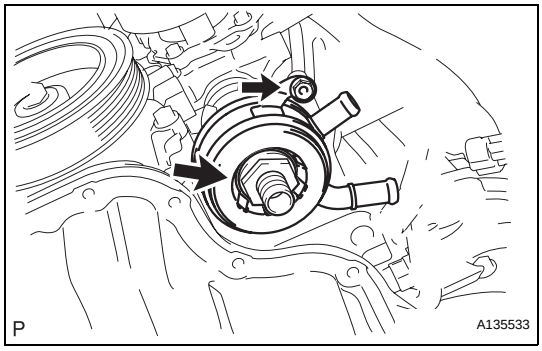
HINT:

Place a container for oil to be drained before removing the oil filter.



6. REMOVE OIL FILTER UNION (w/o Oil Cooler)

(a) Using a 12 mm hexagon wrench, remove the union.

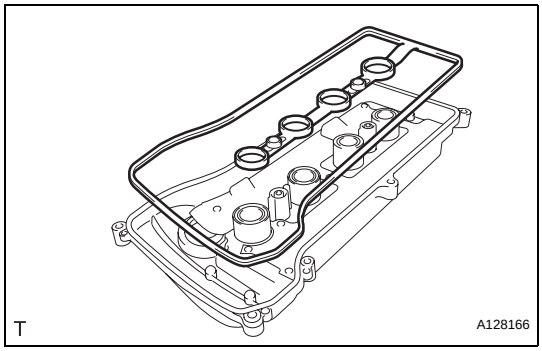


7. REMOVE OIL COOLER ASSEMBLY (w/ Oil Cooler)

(a) Remove the oil filter union, plate washer, nut, oil cooler and O-ring.

(b) Remove the union bolt.

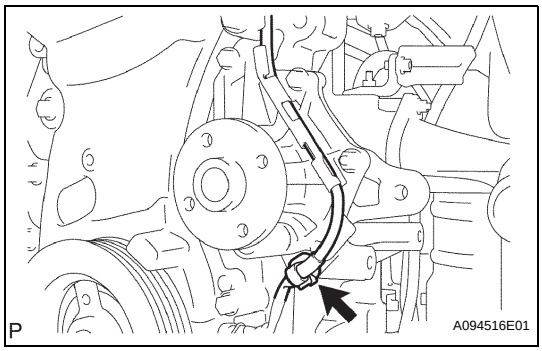
8. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-21)



9. REMOVE CYLINDER HEAD COVER GASKET

(a) Remove the cylinder head cover gasket.

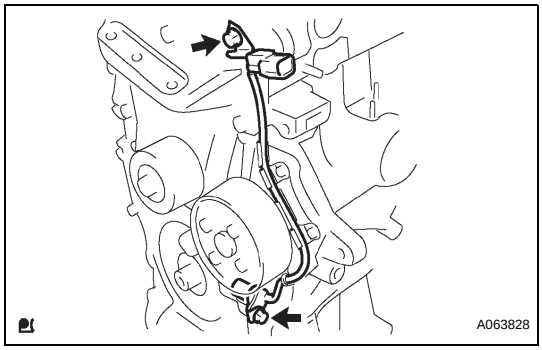
10. REMOVE V-RIBBED BELT TENSIONER ASSEMBLY (See page EM-23)



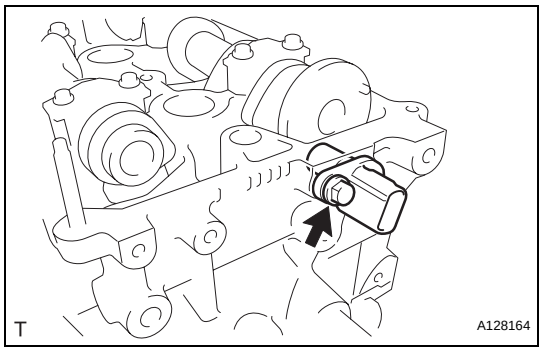
11. REMOVE CRANKSHAFT POSITION SENSOR

(a) Remove the wire harness clamp.

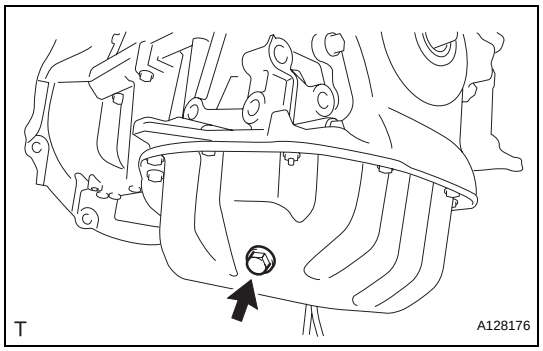
(b) Separate the wire harness from the wire harness clamp bracket.



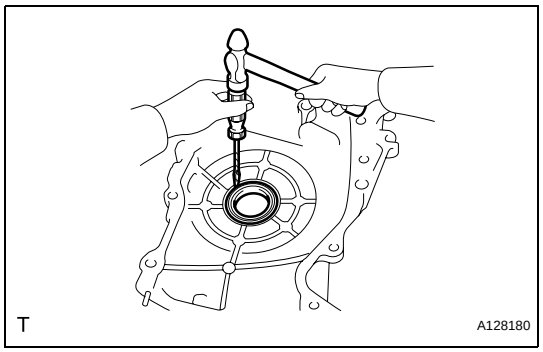
(c) Remove the 2 bolts and sensor.



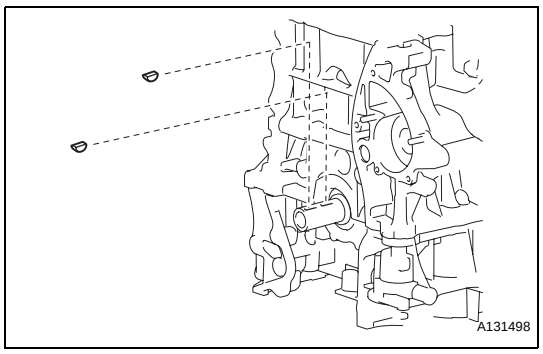
12. **REMOVE CAMSHAFT POSITION SENSOR**
    (a) Remove the bolt and sensor.
13. **REMOVE CRANKSHAFT PULLEY (See page EM-75)**
14. **REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-405)**
15. **REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY (See page EM-22)**
16. **REMOVE WATER PUMP PULLEY (See page CO-9)**
17. **REMOVE WATER PUMP ASSEMBLY (See page CO-9)**



18. **REMOVE OIL PAN DRAIN PLUG**
    (a) Remove the oil pan drain plug and gasket.
19. **REMOVE OIL PAN SUB-ASSEMBLY (See page EM-22)**
20. **REMOVE TIMING CHAIN COVER SUB-ASSEMBLY (See page LU-11)**

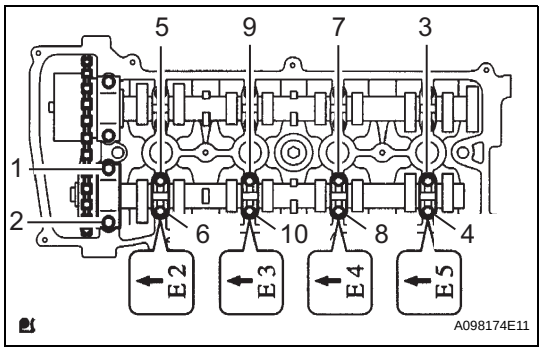


21. **REMOVE TIMING CHAIN CASE OIL SEAL**
    (a) Using a screwdriver and a hammer, remove the oil seal.
22. **REMOVE NO. 1 CRANKSHAFT POSITION SENSOR PLATE (See page EM-24)**
23. **REMOVE TIMING CHAIN GUIDE (See page EM-25)**
24. **REMOVE CHAIN TENSIONER SLIPPER (See page EM-24)**
25. **REMOVE NO. 1 CHAIN VIBRATION DAMPER (See page EM-24)**
26. **REMOVE CHAIN SUB-ASSEMBLY (See page EM-25)**
27. **REMOVE CRANKSHAFT TIMING SPROCKET (See page EM-25)**
28. **REMOVE NO. 2 CHAIN SUB-ASSEMBLY (See page EM-25)**



29. **REMOVE KEYS**
    (a) Remove the 2 pulley set keys from the crankshaft.

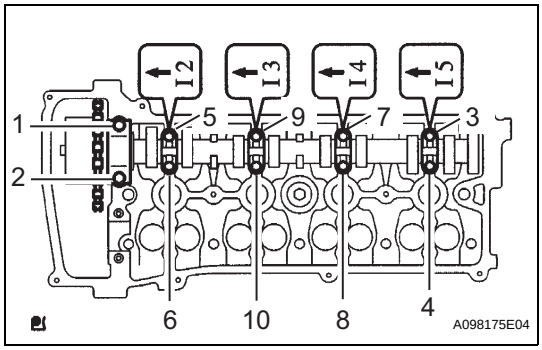
EM



30. REMOVE NO. 2 CAMSHAFT

(a) Using several steps, uniformly loosen and remove the 10 bearing cap bolts in the sequence shown in the illustration.

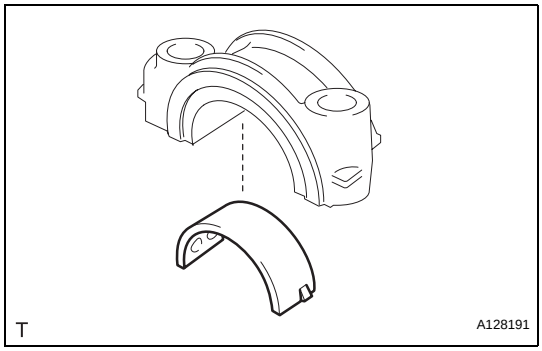
(b) Remove the 5 bearing caps.



31. REMOVE CAMSHAFT

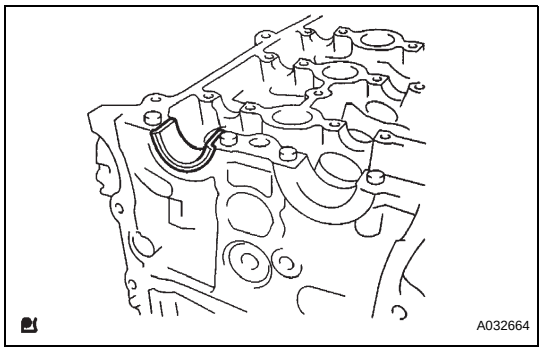
(a) Using several steps, uniformly loosen and remove the 10 bearing cap bolts in the sequence shown in the illustration.

(b) Remove the 5 bearing caps.



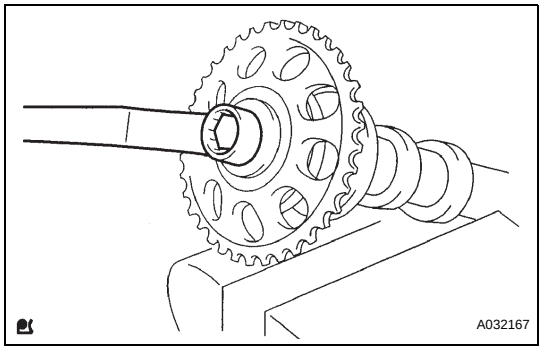
32. REMOVE NO. 1 CAMSHAFT BEARING

Remove the No. 1 camshaft bearing.



33. REMOVE NO. 2 CAMSHAFT BEARING

(a) Remove the No. 2 camshaft bearing.



34. REMOVE CAMSHAFT TIMING SPROCKET

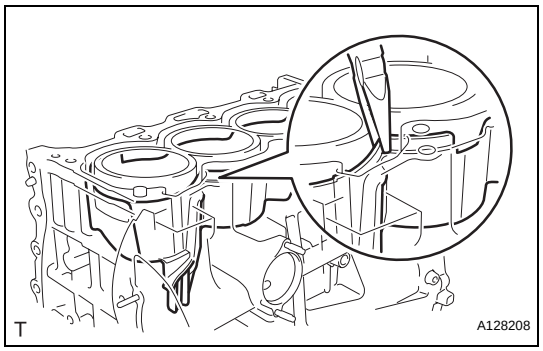
(a) Clamp the camshaft in a vise.

(b) Remove the flange bolt of the camshaft timing sprocket.

35. REMOVE CAMSHAFT TIMING GEAR ASSEMBLY (See page EM-39)

36. REMOVE CYLINDER HEAD SUB-ASSEMBLY (See page EM-55)

37. REMOVE CYLINDER HEAD GASKET (See page EM-55)

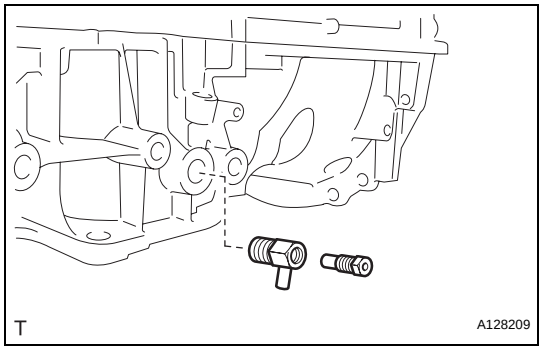


38. REMOVE CYLINDER BLOCK WATER JACKET SPACER

(a) Using needle-nose pliers, remove the cylinder block water jacket spacer.

NOTICE:

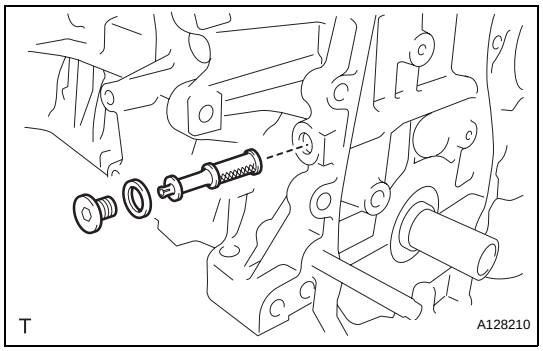
Be sure to remove the water jacket spacer if turning the cylinder block upside down.



39. REMOVE CYLINDER BLOCK WATER DRAIN COCK SUB-ASSEMBLY (w/o Oil Cooler)

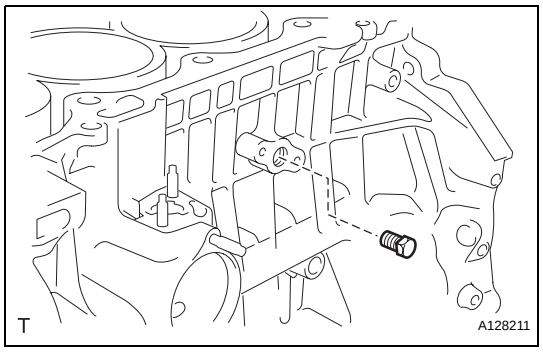
(a) Remove the water drain cock from the stiffening crankcase.

(b) Remove the water drain cock plug from the water drain cocks.



40. REMOVE OIL CONTROL VALVE FILTER

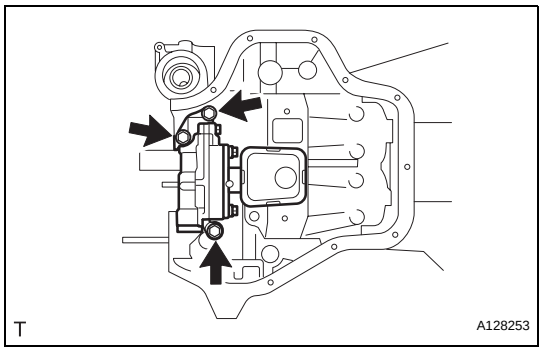
(a) Using an 8 mm socket hexagon wrench, remove the plug and filter.



41. REMOVE NO. 1 TAPER SCREW PLUG (w/o Oil Cooler)

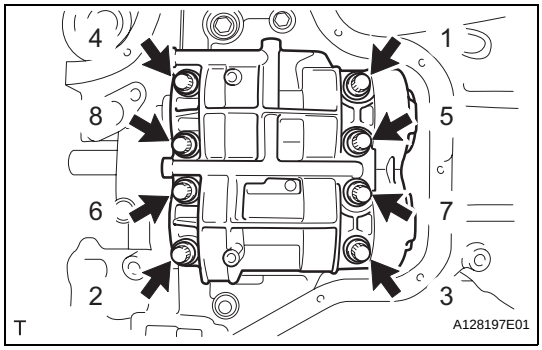
(a) Remove the taper screw plug.

EM



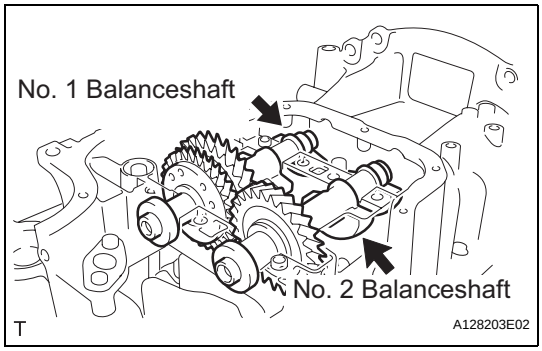
42. REMOVE OIL PUMP ASSEMBLY

(a) Remove the 3 bolts, oil pump and gasket.

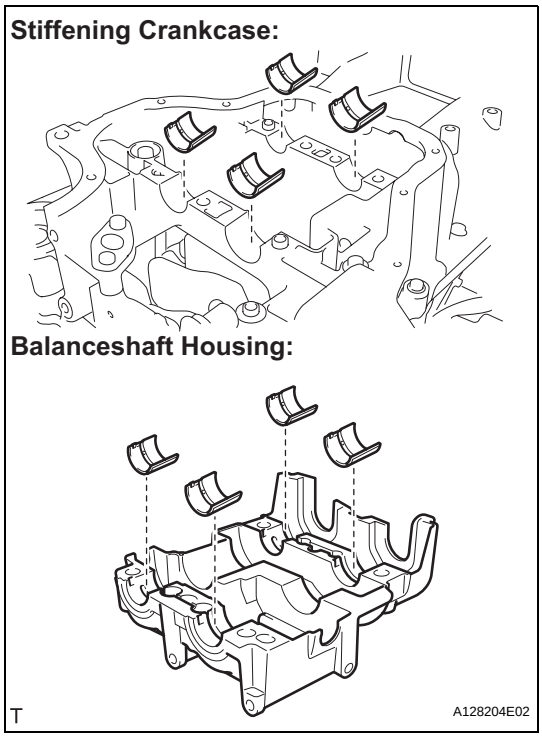


43. REMOVE NO. 1 AND NO. 2 BALANCESHAFT SUB-ASSEMBLY

(a) Uniformly loosen and remove the 8 bolts in the sequence shown in the illustration.

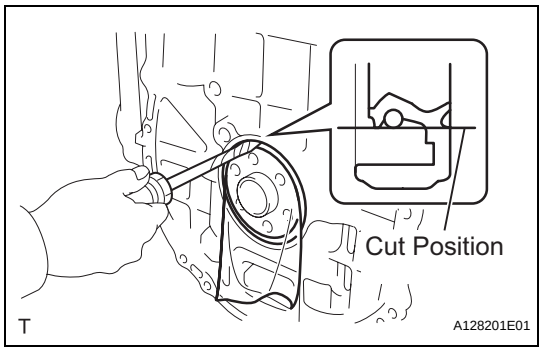


(b) Remove the No. 1 and No. 2 balanceshafts.



44. REMOVE NO. 1 BALANCESHAFT BEARING

(a) Remove the balanceshaft bearings.



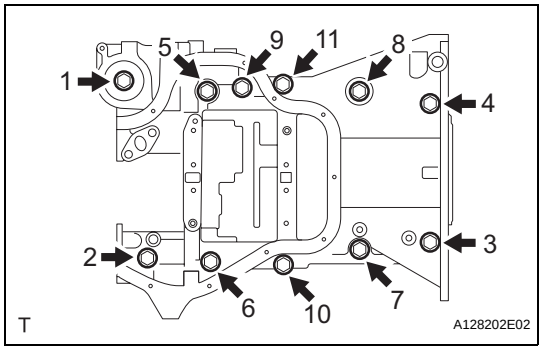
45. REMOVE ENGINE REAR OIL SEAL

(a) Using a knife, cut off the oil seal lip.

(b) Using a screwdriver with its tip taped, pry out the oil seal.

NOTICE:

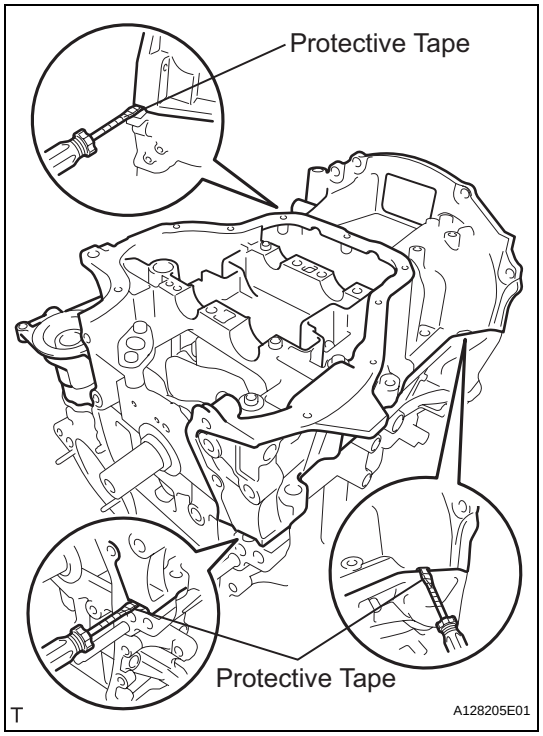
After removing the oil seal, check the crankshaft for damage. If it is damaged, smooth the surface with 400-grit sandpaper.



46. REMOVE STIFFENING CRANKCASE ASSEMBLY

(a) Uniformly loosen and remove the 11 bolts in the sequence shown in the illustration.

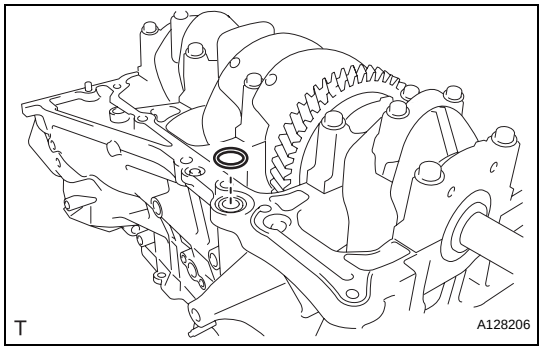
EM



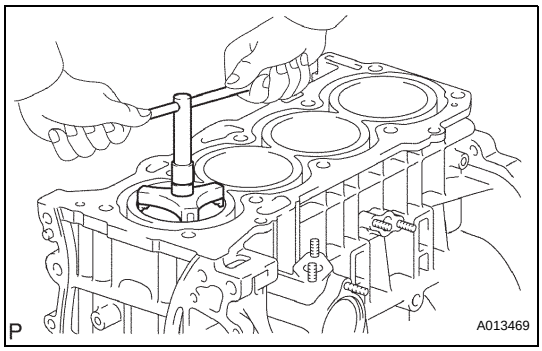
(b) Using a screwdriver, remove the crankcase by prying between the crankcase and cylinder block.

NOTICE:

Be careful not to damage the contact surfaces of the crankcase and cylinder block.

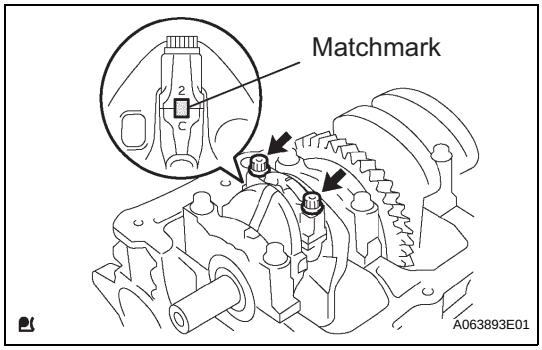


(c) Remove the O-ring from the cylinder block.

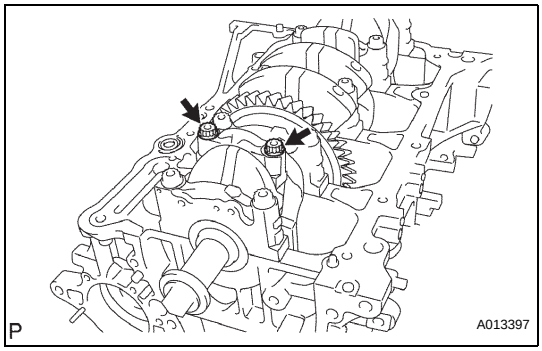


47. REMOVE PISTON SUB-ASSEMBLY WITH CONNECTING ROD

(a) Using a ridge reamer, remove all the carbon from the top of the cylinder.



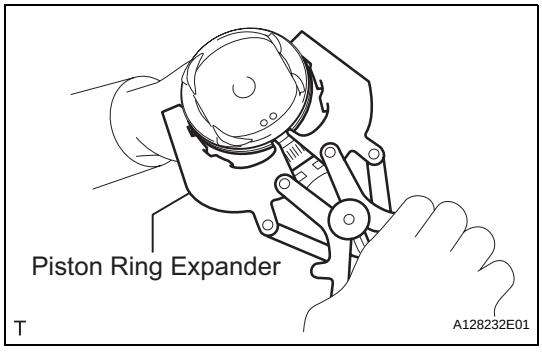
(b) Check that the matchmarks on the connecting rod and cap are aligned to ensure the correct reassembly.
HINT:
The matchmarks on the connecting rods and caps are provided for ensuring the correct reassembly.



(c) Using a 12 mm socket wrench, uniformly loosen the 2 bolts.
(d) Using the 2 removed connecting rod cap bolts, remove the connecting rod cap and lower bearing by wiggling the connecting rod cap right and left.
HINT:
Keep the lower bearing inserted in the connecting rod cap.
(e) Push the piston, connecting rod assembly and upper bearing through the top of the cylinder block.
HINT:
- Keep the bearing, connecting rod and cap together.
- Arrange the piston and connecting rod assemblies in the correct order.

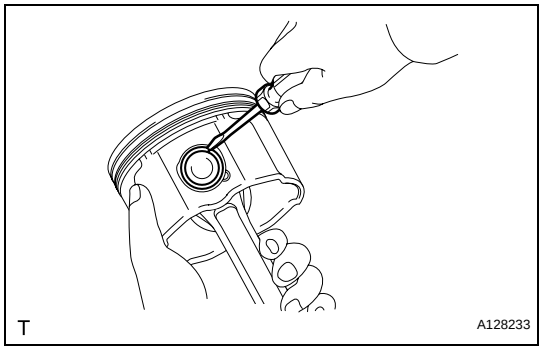
48. REMOVE CONNECTING ROD BEARING

(a) Remove the connecting rod bearings.
HINT:
Arrange the removed parts in the correct order.



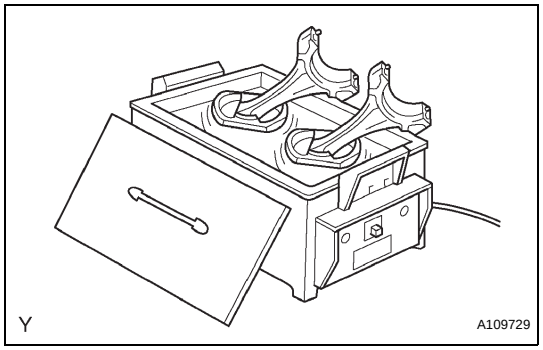
49. REMOVE PISTON RING SET

(a) Using a piston ring expander, remove the 2 compression rings.
(b) Remove the oil ring rail and oil ring expander by hand.
HINT:
Arrange the removed parts in the correct order.



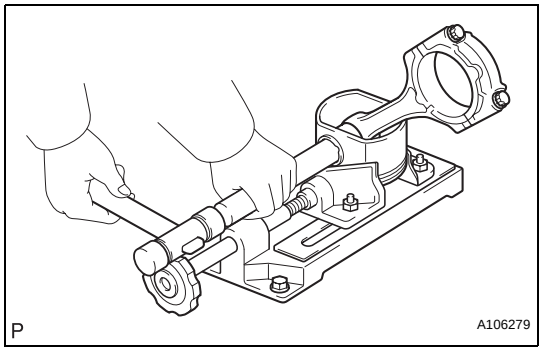
50. REMOVE PISTON PIN HOLE SNAP RING

(a) Using a screwdriver, pry out the 2 snap rings.

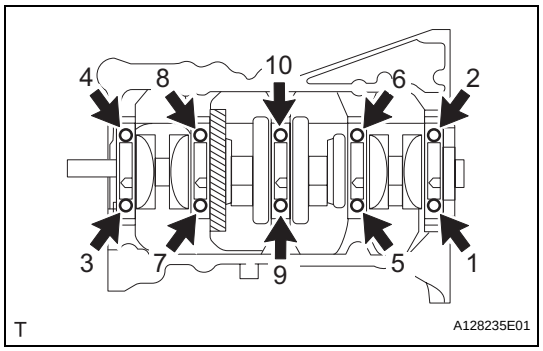


51. REMOVE PISTON

(a) Gradually heat the piston to approximately 80 to 90°C (176 to 194°F).

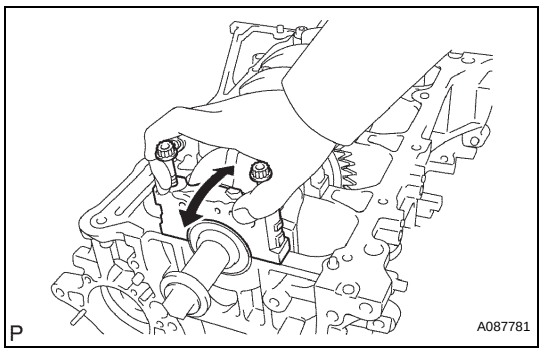


(b) Using a plastic hammer and brass bar, lightly tap out the piston pin and remove the connecting rod.
HINT:
- The piston and pin are a matched set.
- Arrange the pistons, pins, rings, connecting rods and bearings in the correct order.



52. REMOVE CRANKSHAFT

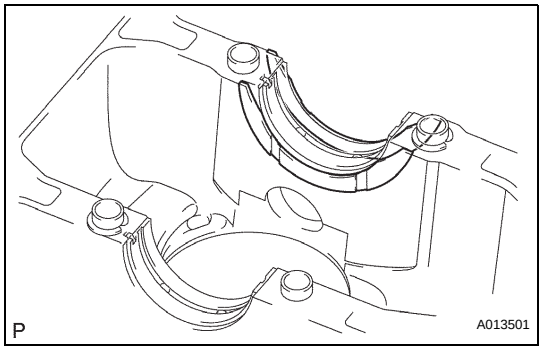
(a) Uniformly loosen and remove the 10 main bearing cap bolts in the sequence shown in the illustration.



(b) Use 2 removed main bearing cap bolts to remove the 5 main bearing caps and 5 lower bearings.
NOTICE:
Insert the bolts into one of the caps. Ease the cap out by gently pulling up and applying force toward the front and back side of the cylinder block, as shown in the illustration. Take care not to damage the contact surfaces of the cap and cylinder block.

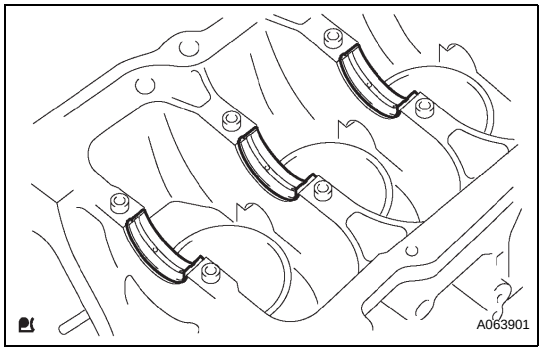
HINT:
- Keep the lower bearing and main bearing cap together.
- Arrange the main bearing caps in the correct order.

(c) Lift out the crankshaft.



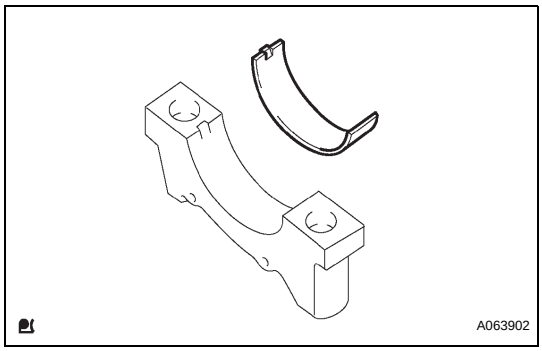
53. REMOVE UPPER CRANKSHAFT THRUST WASHER

(a) Remove the upper thrust washers from the cylinder block.



54. REMOVE CRANKSHAFT BEARING

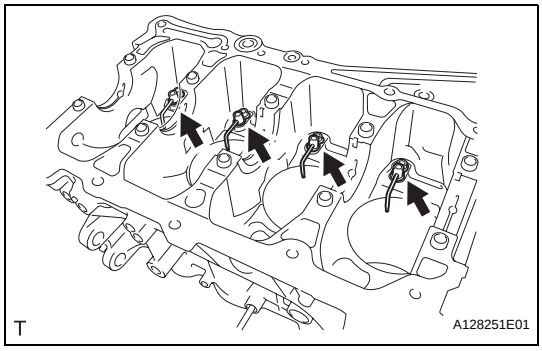
(a) Remove the 5 upper main bearings from the cylinder block.
HINT:
Arrange the bearings in the correct order.



55. REMOVE NO. 2 CRANKSHAFT BEARING

(a) Remove the 5 lower main bearings from the 5 main bearing caps.
HINT:
Arrange the bearings in the correct order.

56. REMOVE STUD BOLT



57. REMOVE NO. 1 OIL NOZZLE SUB-ASSEMBLY

(a) Using a 5 mm hexagon wrench, remove the bolts and oil nozzles.

58. CLEAN CYLINDER BLOCK

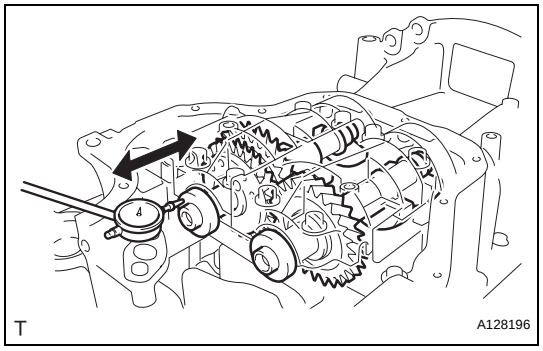
NOTICE:

If the cylinder is washed at high temperatures, the cylinder liner will stick out beyond the cylinder block. Always wash the cylinder block at a temperature of 45°C (113°F) or less.

INSPECTION

1. INSPECT BALANCESHAFT THRUST CLEARANCE

(a) Install the balanceshafts (See page EM-149).



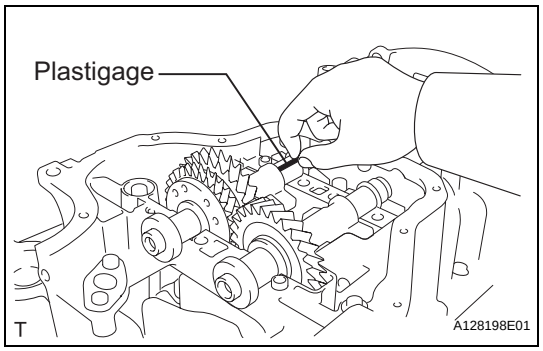
(b) Using a dial indicator, measure the thrust clearance while moving the balanceshaft back and forth.
Standard thrust clearance:
0.05 to 0.09 mm (0.0020 to 0.0035 in.)
Maximum thrust clearance:
0.09 mm (0.0035 in.)
If the thrust clearance is greater than the maximum, replace the balanceshaft housing and bearings. If necessary, replace the balanceshaft.

2. INSPECT BALANCESHAFT OIL CLEARANCE

(a) Clean each bearing and journal.

(b) Check each bearing and journal for pitting and scratches.
If a bearing or journal is damaged, replace the bearings. If necessary, replace the balanceshaft.

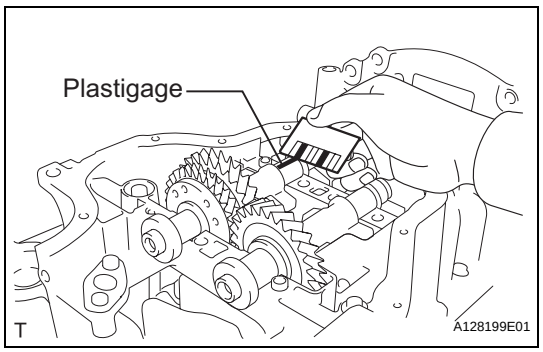
(c) Place the No. 1 and No. 2 balanceshafts onto the crankcase.



(d) Lay a strip of Plastigage across each journal.

(e) Install the balanceshaft housing (See page EM-149).
NOTICE:
Do not turn the balanceshafts.

(f) Remove the balanceshafts (See page EM-127).



(g) Measure the Plastigage at its widest point.
Standard oil clearance:
0.004 to 0.049 mm (0.0002 to 0.0019 in.)
Maximum oil clearance:
0.049 mm (0.0019 in.)
NOTICE:
Remove the Plastigage completely after the measurement.
If the oil clearance is greater than the maximum, replace the bearing. If necessary, replace the balanceshaft.

(h) If replacing a bearing, select a new one with the same number.
Standard balanceshaft housing journal bore diameter

Item	Specified Condition
Mark 1	26.000 to 26.006 mm (1.0236 to 1.0239 in.)
Mark 2	26.007 to 26.012 mm (1.0239 to 1.0241 in.)
Mark 3	26.013 to 26.018 mm (1.0241 to 1.0243 in.)

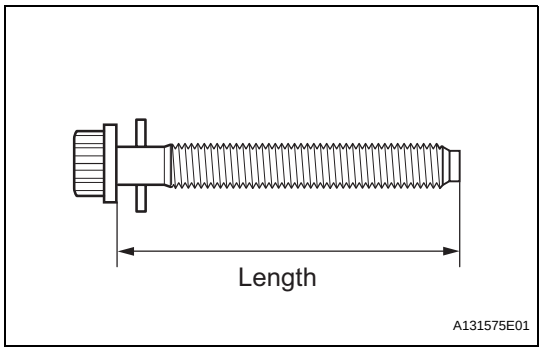
EM

Standard bearing center wall thickness

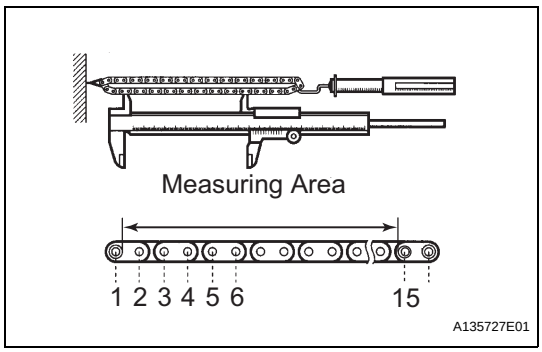
Item	Specified Condition
Mark 1	1.486 to 1.489 mm (0.05850 to 0.05862 in.)
Mark 2	1.490 to 1.492 mm (0.05866 to 0.05874 in.)
Mark 3	1.493 to 1.495 mm (0.0588 to 0.0589 in.)

Standard balanceshaft journal diameter

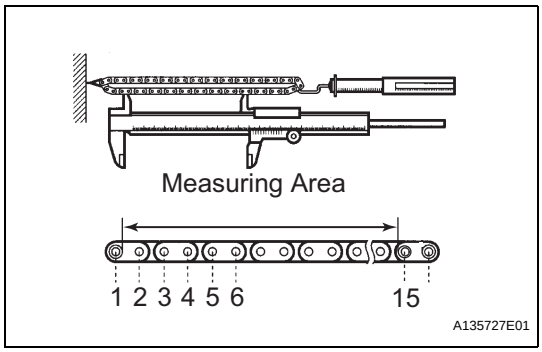
Item	Journal diameter
Mark 1	22.985 to 23.000 mm (0.9049 to 0.9055 in.)
Mark 2	22.985 to 23.000 mm (0.9049 to 0.9055 in.)
Mark 3	22.985 to 23.000 mm (0.9049 to 0.9055 in.)



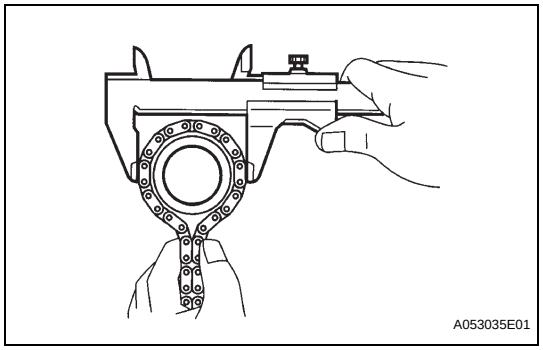
(i) Inspect the balanceshaft housing bolts.
(1) Using vernier calipers, measure the length of the bolts from the seat to the end.
Standard bolt length:
58.3 to 59.7 mm (2.295 to 2.350 in.)
Maximum bolt length:
60.3 mm (2.374 in.)
If the bolt length is greater than the maximum, replace the balanceshaft housing bolt.



3. INSPECT CHAIN SUB-ASSEMBLY
(a) Pull the chain with a force of 140 N (14.3 kgf, 31.5 lbf) as shown in the illustration.
(b) Using vernier calipers, measure the length of 15 links.
Maximum chain elongation:
114.5 mm (4.508 in.)
NOTICE:
Perform the measurement at 3 random places.
Use the average of the measurements.
If the elongation is greater than the maximum, replace the chain.



4. INSPECT NO. 2 CHAIN SUB-ASSEMBLY
(a) Pull the chain with a force of 140 N (14.3 kgf, 31.5 lbf) as shown in the illustration.
(b) Using vernier calipers, measure the length of 15 links.
Maximum chain elongation:
102.2 mm (4.024 in.)
NOTICE:
Perform the measurement at 3 random places.
Use the average of the measurements.
If the elongation is greater than the maximum, replace the No. 2 chain.



5. INSPECT OIL PUMP DRIVE GEAR

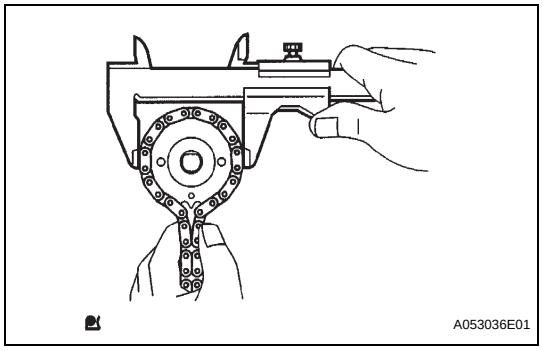
(a) Wrap the chain around the sprocket.

(b) Using vernier calipers, measure the sprocket diameter with the chain wrapped around.

Minimum gear diameter (with chain):
48.2 mm (1.898 in.)

NOTICE:
The vernier calipers must be in contact with the chain rollers when measuring.

If the diameter is less than the minimum, replace the chain and sprocket.



6. INSPECT OIL PUMP DRIVE SHAFT GEAR

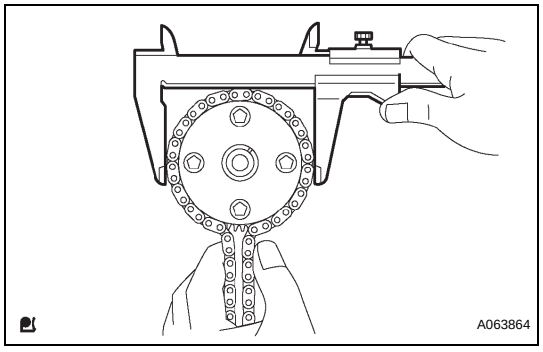
(a) Wrap the chain around the sprocket.

(b) Using vernier calipers, measure the sprocket diameter with the chain wrapped around.

Minimum gear diameter (with chain):
48.2 mm (1.898 in.)

NOTICE:
The vernier calipers must be in contact with the chain rollers when measuring.

If the diameter is less than the minimum, replace the chain and sprocket.



7. INSPECT CAMSHAFT TIMING GEAR ASSEMBLY

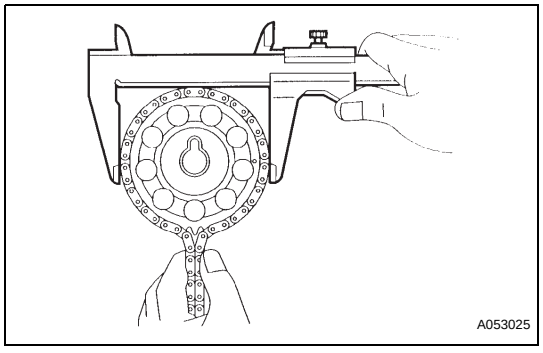
(a) Wrap the chain around the sprocket.

(b) Using vernier calipers, measure the sprocket diameter with the chain wrapped around.

Minimum gear diameter (with chain):
97.3 mm (3.831 in.)

NOTICE:
The vernier calipers must be in contact with the chain rollers when measuring.

If the diameter is less than the minimum, replace the chain and sprocket.



8. INSPECT CAMSHAFT TIMING SPROCKET

(a) Wrap the chain around the sprocket.

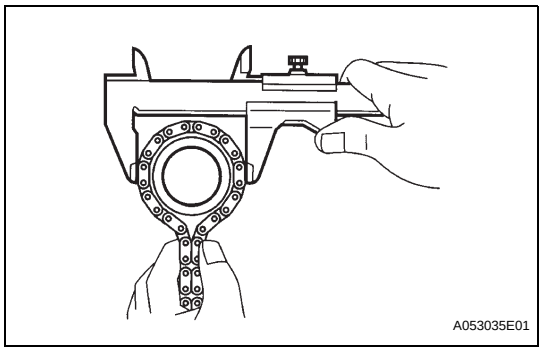
(b) Using vernier calipers, measure the sprocket diameter with the chain wrapped around.

Minimum gear diameter (with chain):
97.3 mm (3.831 in.)

NOTICE:
The vernier calipers must be in contact with the chain rollers when measuring.

If the diameter is less than the minimum, replace the chain and sprocket.

EM



9. INSPECT CRANKSHAFT TIMING GEAR

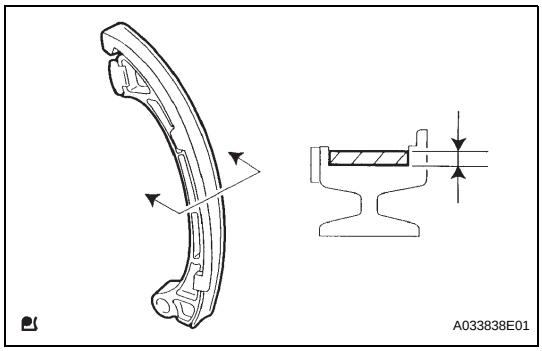
(a) Wrap the chain around the timing sprocket.

(b) Using vernier calipers, measure the timing gear diameter with the chain wrapped around.

Minimum gear diameter (with chain):
51.6 mm (2.031 in.)

NOTICE:
The vernier calipers must be in contact with the chain rollers when measuring.

If the gear diameter is less than the minimum, replace the chain sub-assembly and crankshaft timing sprocket.

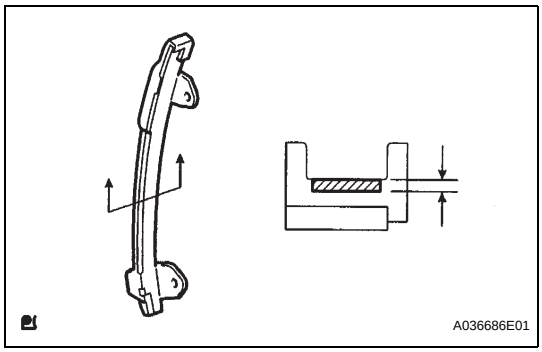


10. INSPECT CHAIN TENSIONER SLIPPER

(a) Using vernier calipers, measure the tensioner slipper wear.

Maximum wear:
1.0 mm (0.039 in.)

If the wear is greater than the maximum, replace the chain tensioner slipper.

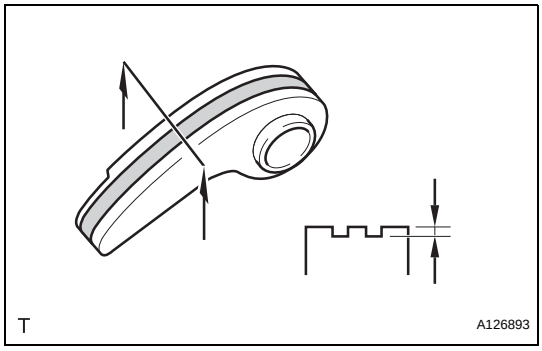


11. INSPECT NO. 1 CHAIN VIBRATION DAMPER

(a) Using vernier calipers, measure the vibration damper wear.

Maximum wear:
1.0 mm (0.039 in.)

If the wear is greater than the maximum, replace the No. 1 chain vibration damper.

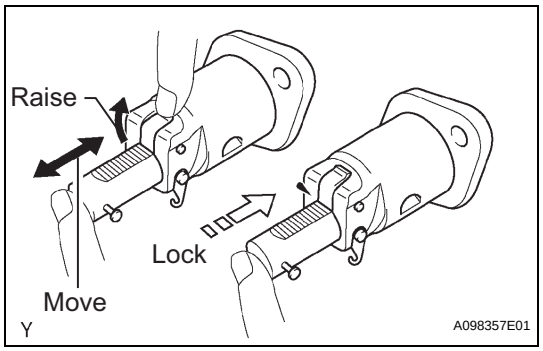


12. INSPECT CHAIN TENSIONER PLATE

(a) Using vernier calipers, measure the vibration damper wear.

Maximum wear:
0.5 mm (0.020 in.)

If the wear is greater than the maximum, replace the chain tensioner plate.



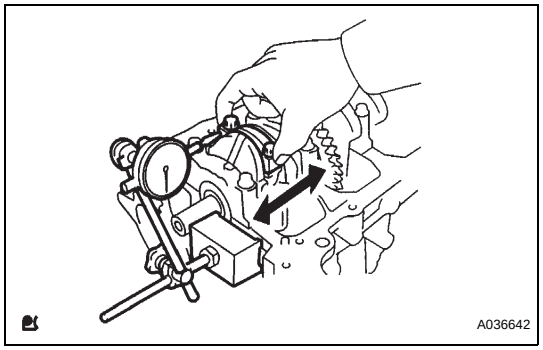
13. INSPECT NO. 1 CHAIN TENSIONER

(a) Check that the plunger moves smoothly when the ratchet pawl is raised with your finger.

(b) Release the ratchet pawl, then check that the plunger is locked in place by the ratchet pawl and does not move when pushed with your finger.

14. INSPECT CONNECTING ROD THRUST CLEARANCE

(a) Install the connecting rod cap (See page EM-149).



(b) Using a dial indicator, measure the thrust clearance while moving the connecting rod back and forth.

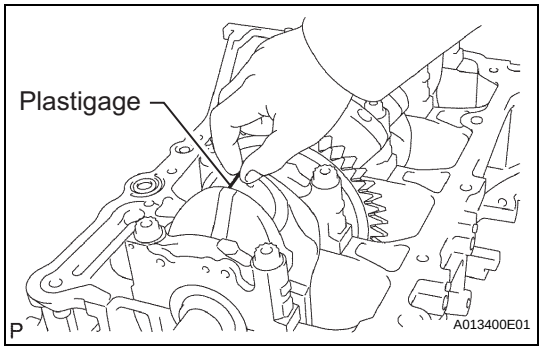
Standard thrust clearance:
0.160 to 0.362 mm (0.0063 to 0.0143 in.)
Maximum thrust clearance:
0.362 mm (0.0143 in.)

If the thrust clearance is greater than the maximum, replace the connecting rod assemblies as necessary. If necessary, replace the crankshaft.

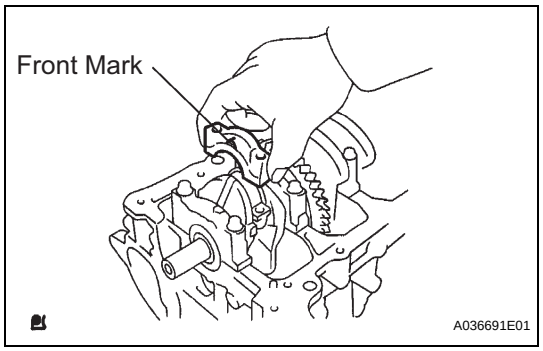
15. INSPECT CONNECTING ROD OIL CLEARANCE

(a) Clean the crank pin and bearing.

(b) Check the crank pin and bearing for pitting and scratches.



(c) Lay a strip of Plastigage on the crank pin.



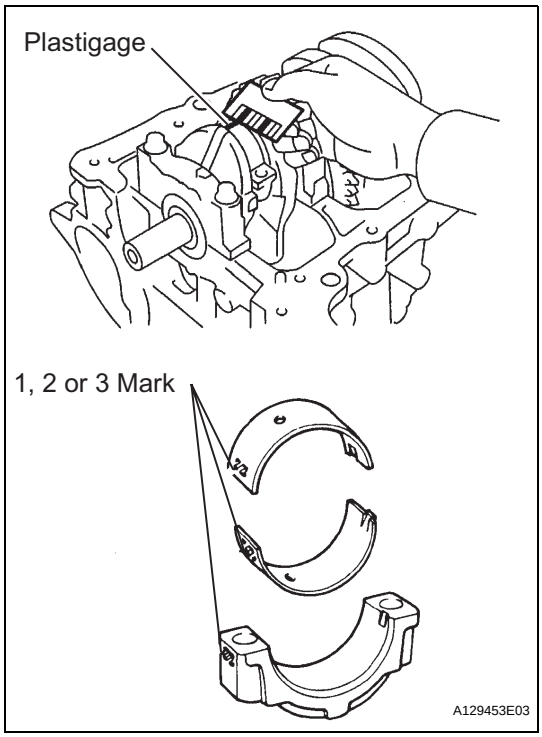
(d) Check that the front mark of the connecting rod cap is facing forward.

(e) Install the connecting rod cap (See page EM-149).

NOTICE:
Do not turn the crankshaft.

(f) Remove the 2 bolts and connecting rod cap (See page EM-127).

EM



(g) Measure the Plastigage at its widest point.

Standard oil clearance:
0.032 to 0.063 mm (0.0013 to 0.0025 in.)
Maximum oil clearance:
0.063 mm (0.0025 in.)
NOTICE:
Completely remove the Plastigage after the measurement.

If the oil clearance is greater than the maximum, replace the connecting rod bearings. If necessary, inspect the crankshaft.

HINT:

If replacing a bearing, replace it with one that has the same number as its respective connecting rod cap. Each bearing's standard thickness is indicated by a 1, 2, or 3 mark on its surface.

Standard connecting rod large end bore diameter

Mark	Specified Condition
Mark 1	51.000 to 51.007 mm (2.0079 to 2.0082 in.)
Mark 2	51.008 to 51.013 mm (2.0082 to 2.0084 in.)
Mark 3	51.014 to 51.020 mm (2.0084 to 2.0087 in.)

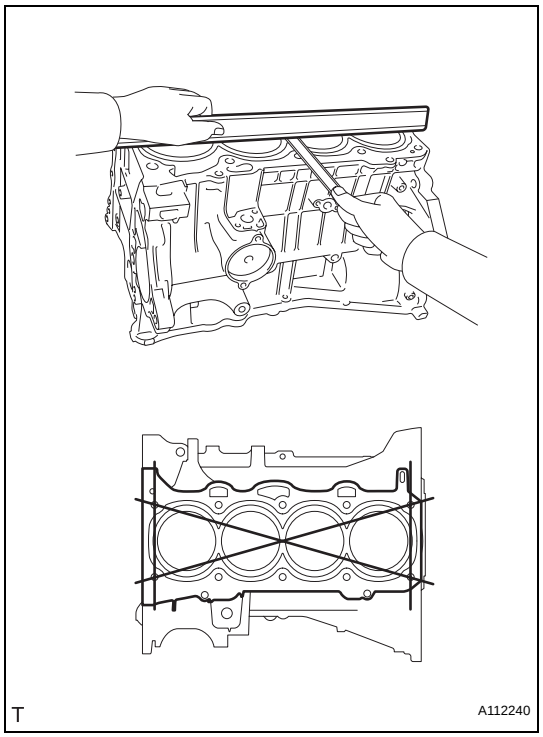
Standard connecting rod bearing thickness

Mark	Specified Condition
Mark 1	1.485 to 1.488 mm (0.0585 to 0.0586 in.)
Mark 2	1.489 to 1.491 mm (0.0586 to 0.0587 in.)
Mark 3	1.492 to 1.494 mm (0.0587 to 0.0588 in.)

Standard crankshaft pin diameter

Mark	Specified Condition
Mark 1	47.990 to 48.000 (1.8894 to 1.8898 in.)
Mark 2	47.990 to 48.000 (1.8894 to 1.8898 in.)
Mark 3	47.990 to 48.000 (1.8894 to 1.8898 in.)

EM



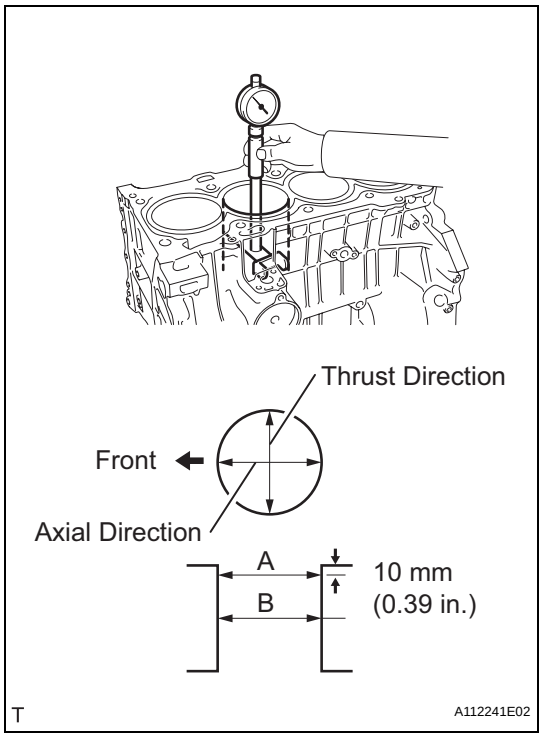
16. INSPECT CYLINDER BLOCK FOR WARPAGE

(a) Using a precision straightedge and feeler gauge, measure the warpage of the surface that is in contact with the cylinder head gasket.

Maximum warpage:

0.05 mm (0.0020 in.)

If the warpage is greater than the maximum, replace the cylinder block.



17. INSPECT CYLINDER BORE

(a) Using a cylinder gauge, measure the cylinder bore diameter at positions A and B in the thrust and axial directions.

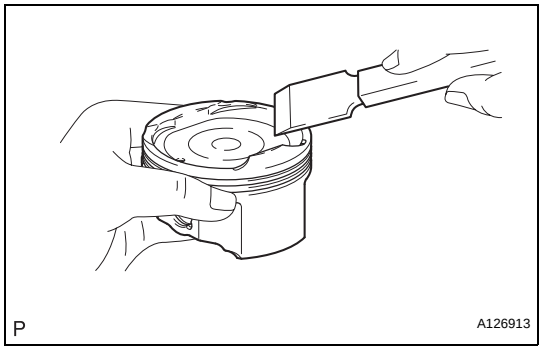
Standard diameter:

88.500 to 88.513 mm (3.4843 to 3.4847 in.)

Maximum diameter:

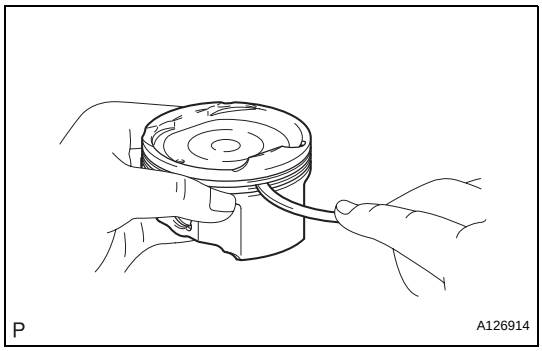
88.633 mm (3.4894 in.)

If the average diameter of the 4 positions is greater than the maximum, replace the cylinder block.

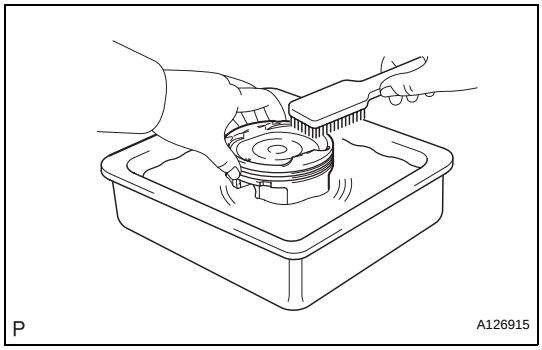


18. INSPECT PISTON

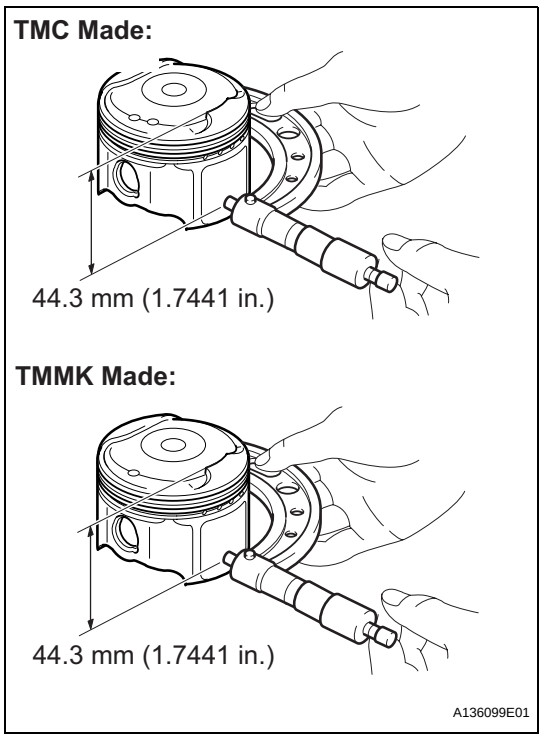
(a) Using a gasket scraper, remove the carbon from the piston top.



(b) Using a groove cleaning tool or a broken ring, clean the piston ring grooves.



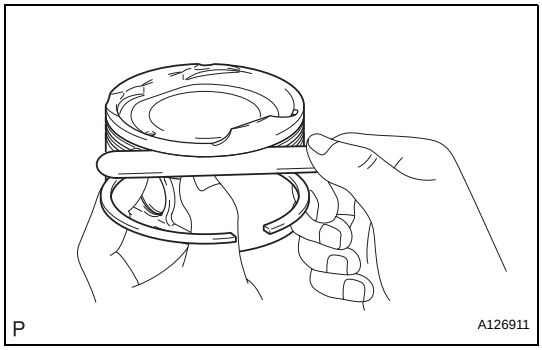
(c) Using a brush and solvent, thoroughly clean the piston.
NOTICE:
Do not use a wire brush.



(d) Using a micrometer, measure the piston diameter at right angles to the piston pin hole, and at the piston 44.3 mm (1.7441 in.) from the piston head.
Standard piston diameter:
88.469 to 88.479 mm (3.4830 to 3.4834 in.)
If the diameter is not as specified, replace the piston.

19. INSPECT PISTON OIL CLEARANCE

(a) Subtract the piston diameter measurement from the cylinder bore diameter measurement.
Standard oil clearance:
0.021 to 0.044 mm (0.0008 to 0.0017 in.)
Maximum oil clearance:
0.10 mm (0.0039 in.)
If the oil clearance is greater than the maximum, replace all the pistons. If necessary, replace the cylinder block.

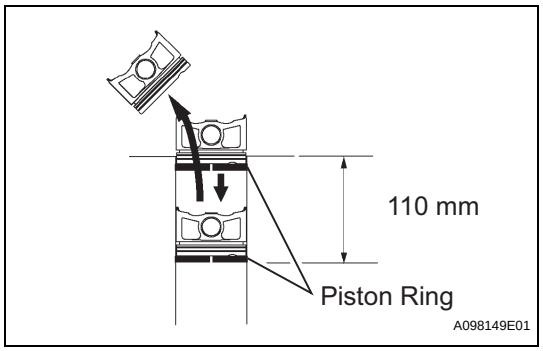


20. INSPECT RING GROOVE CLEARANCE

(a) Using a feeler gauge, measure the clearance between a new piston ring and wall of the ring groove.
Standard ring groove clearance

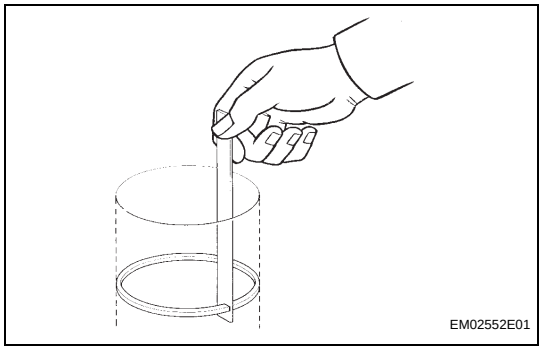
Item	Specified Condition
No. 1 Ring	0.020 to 0.070 mm (0.0008 to 0.0028 in.)
No. 2 Ring	0.020 to 0.060 mm (0.0008 to 0.0024 in.)
Oil Ring	0.020 to 0.070 mm (0.0008 to 0.0028 in.)

If the groove clearance is not as specified, replace the piston.



21. INSPECT PISTON RING END GAP

(a) Using a piston, push the piston ring a little beyond the bottom of the ring travel, 110 mm (4.33 in.) from the top of the cylinder block.



(b) Using a feeler gauge, measure the end gap.

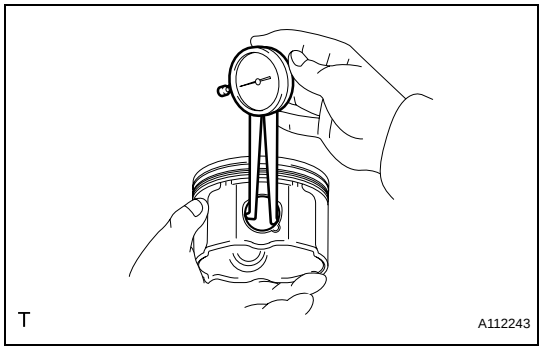
Standard end gap

Item	Specified Condition
No. 1 Ring	0.24 to 0.31 mm (0.0094 to 0.0122 in.)
No. 2 Ring	0.33 to 0.43 mm (0.0130 to 0.0169 in.)
Oil Ring	0.10 to 0.30 mm (0.0040 to 0.0119 in.)

Maximum end gap

Item	Specified Condition
No. 1 Ring	0.89 mm (0.0350 in.)
No. 2 Ring	1.37 mm (0.0539 in.)
Oil Ring	0.73 mm (0.0287 in.)

If the end gap is greater than the maximum, replace the piston ring. If the end gap is greater than the maximum, even with a new piston ring, replace the cylinder block.



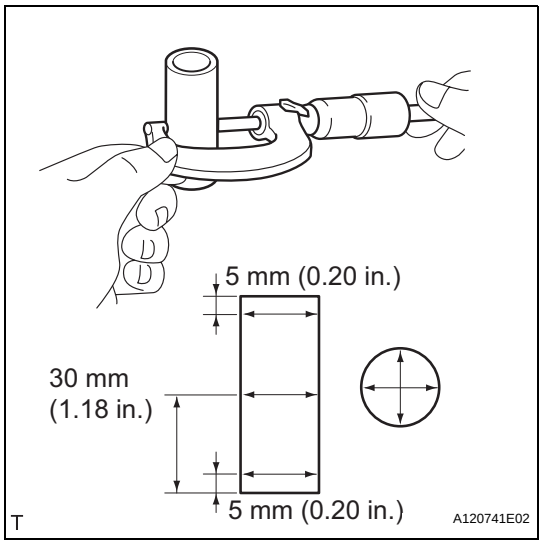
22. INSPECT PISTON PIN OIL CLEARANCE

(a) Using a caliper gauge, measure the piston pin bore diameter.

Standard piston pin bore diameter:
22.001 to 22.010 mm (0.8662 to 0.8665 in.)

Item	Specified Condition
A	22.001 to 22.004 mm (0.8662 to 0.8663 in.)
B	22.005 to 22.007 mm (0.8663 to 0.8664 in.)
C	22.008 to 22.010 mm (0.8665 to 0.8665 in.)

If the diameter is not as specified, replace the piston.

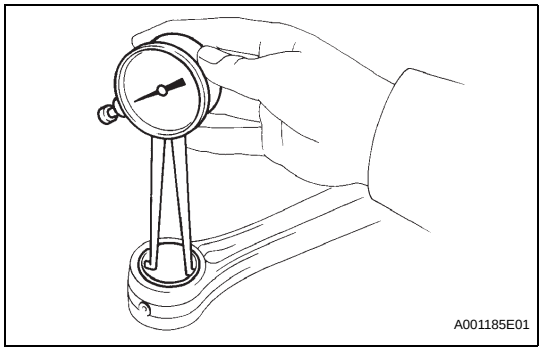


(b) Using a micrometer, measure the piston pin diameter.

Standard piston pin diameter:
21.997 to 22.006 mm (0.8660 to 0.8664 in.)

Item	Specified Condition
A	21.997 to 22.000 mm (0.8660 to 0.8661 in.)
B	22.001 to 22.003 mm (0.8662 to 0.8663 in.)
C	22.004 to 22.006 mm (0.8663 to 0.8664 in.)

If the diameter is not as specified, replace the piston pin.

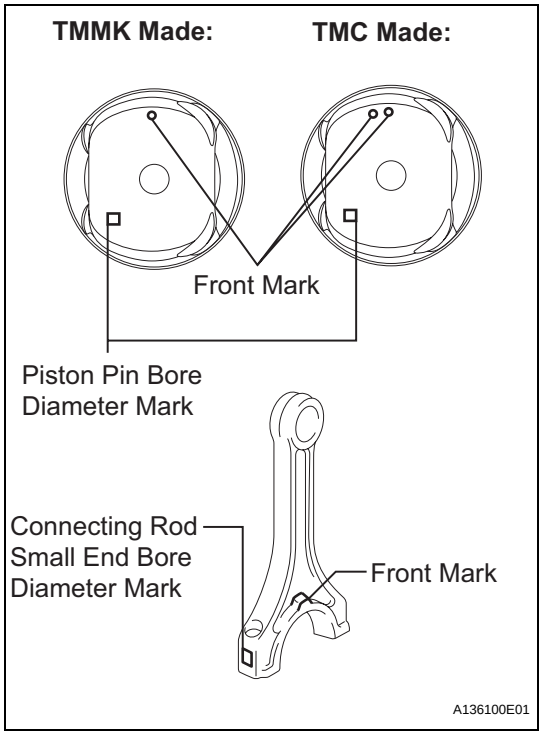


(c) Using a caliper gauge, measure the connecting rod small end bore diameter.

Standard connecting rod small end bore diameter:
22.005 to 22.014 mm (0.8663 to 0.8667 in.)

Item	Specified Condition
A	22.005 to 22.008 mm (0.8663 to 0.8665 in.)
B	22.009 to 22.011 mm (0.8665 to 0.8666 in.)
C	22.012 to 22.014 mm (0.8666 to 0.8667 in.)

If the diameter is not as specified, replace the connecting rod.



(d) Subtract the piston pin diameter measurement from the piston pin bore diameter measurement.

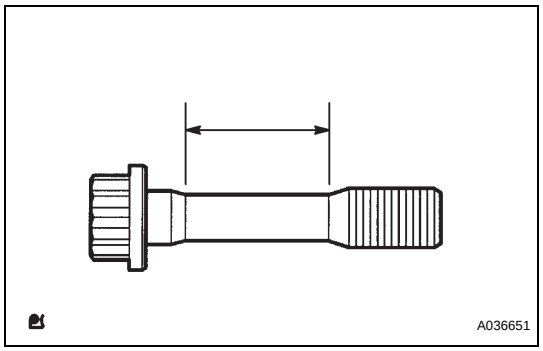
Standard oil clearance:
0.001 to 0.007 mm (0.00004 to 0.0003 in.)
Maximum oil clearance:
0.010 mm (0.0004 in.)

If the oil clearance is greater than the maximum, replace the connecting rod. If necessary, replace the piston and piston pin as a set.

(e) Subtract the piston pin diameter measurement from the connecting rod small end bore diameter measurement.

Standard oil clearance:
0.005 to 0.011 mm (0.0002 to 0.0004 in.)
Maximum oil clearance:
0.011 mm (0.0004 in.)

If the oil clearance is greater than the maximum, replace the connecting rod. If necessary, replace the connecting rod and piston pin as a set.

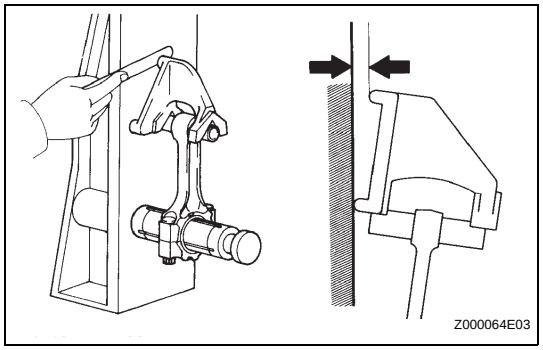


23. INSPECT CONNECTING ROD BOLT

(a) Using vernier calipers, measure the tension portion diameter of the bolt.

Standard diameter:
7.2 to 7.3 mm (0.283 to 0.287 in.)
Minimum diameter:
7.0 mm (0.276 in.)

If the diameter is less than the minimum, replace the connecting rod bolt.



24. INSPECT CONNECTING ROD SUB-ASSEMBLY

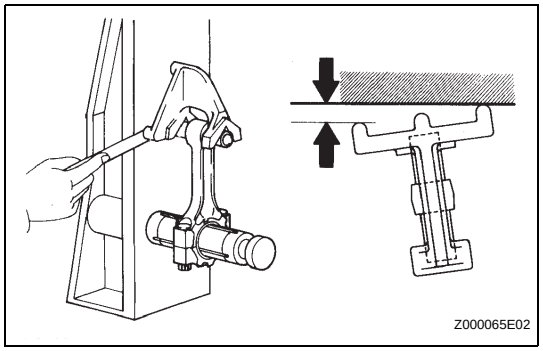
(a) Using a connecting rod aligner and feeler gauge, check the connecting rod alignment.

(1) Check for misalignment.

Maximum misalignment:
0.05 mm (0.0020 in.) per 100 mm (3.94 in.)

If the misalignment is greater than the maximum, replace the connecting rod.

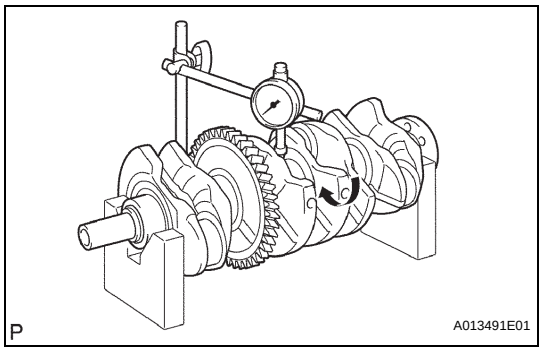
EM



(2) Check for twist.

Maximum twist:
0.15 mm (0.0059 in.) per 100 mm (3.94 in.)

If the twist is greater than the maximum, replace the connecting rod.

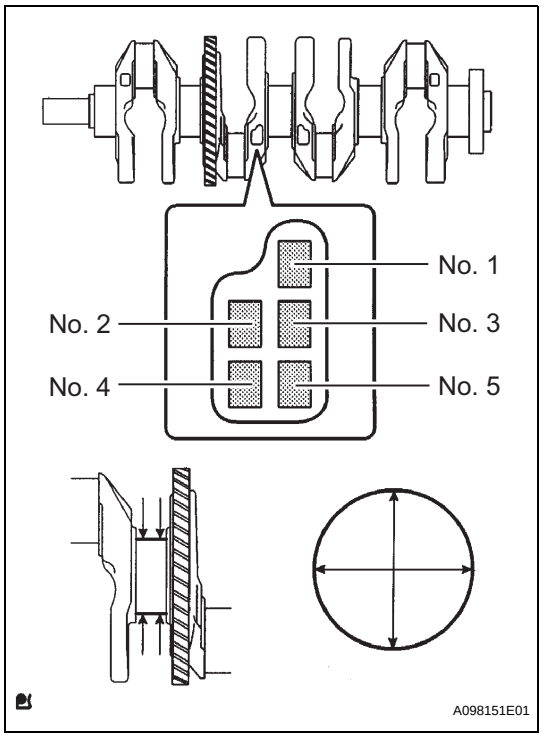


25. INSPECT CRANKSHAFT

(a) Using a dial indicator and V-blocks, measure the circle runout as shown in the illustration.

Maximum circle runout:
0.03 mm (0.0012 in.)

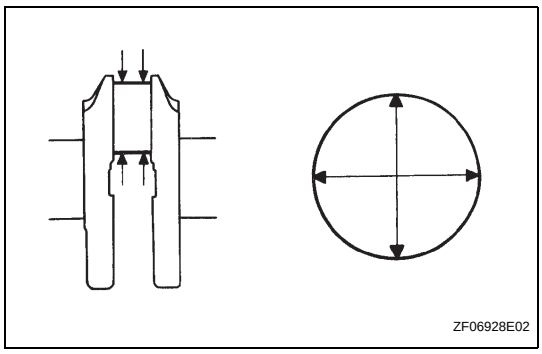
If the taper and distortion are greater than the maximum, replace the crankshaft.



(b) Using a micrometer, measure the diameter of each main journal.
Standard diameter:
54.988 to 55.000 mm (2.1649 to 2.1654 in.)
If the diameter is not as specified, check the crankshaft oil clearance.

(c) Check each main journal for taper and distortion as shown in the illustration.
Maximum taper and distortion:
0.003 mm (0.0001 in.)
If the taper and distortion are greater than the maximum, replace the crankshaft.
Standard diameter (Reference)

Mark	Specified Condition
0	54.999 to 55.000 mm (2.1653 to 2.1654 in.)
1	54.997 to 54.998 mm (2.1652 to 2.1653 in.)
2	54.995 to 54.996 mm (2.1652 to 2.1652 in.)
3	54.993 to 54.994 mm (2.1651 to 2.1651 in.)
4	54.991 to 54.992 mm (2.1650 to 2.1650 in.)
5	54.988 to 54.990 mm (2.1649 to 2.1650 in.)

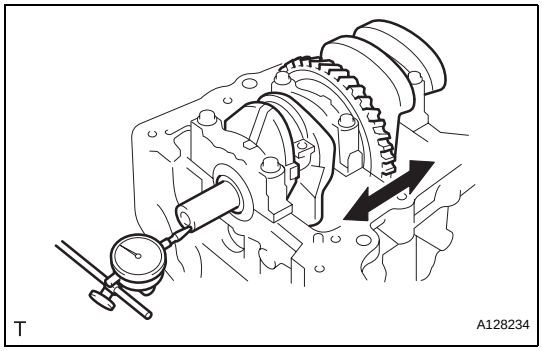


(d) Using a micrometer, measure the diameter of each crank pin.
Standard diameter:
47.990 to 48.000 mm (1.8894 to 1.8898 in.)
If the diameter is not as specified, check the connecting rod oil clearance.

(e) Inspect each crank pin for taper and distortion as shown in the illustration.
Maximum taper and distortion:
0.003 mm (0.0001 in.)
If the taper and distortion are greater than the maximum, replace the crankshaft.

26. INSPECT CRANKSHAFT THRUST CLEARANCE

(a) Install the main bearing cap (See page EM-149).



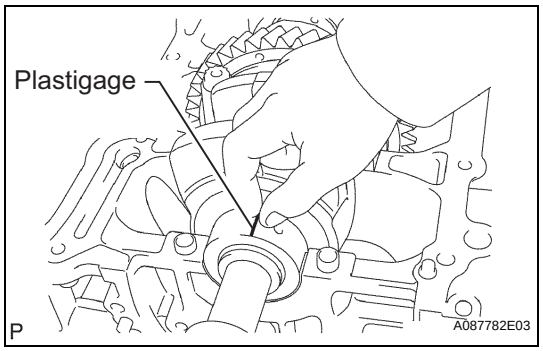
(b) Using a dial indicator, measure the thrust clearance while prying the crankshaft back and forth with a screwdriver.
Standard thrust clearance:
0.04 to 0.24 mm (0.0016 to 0.0095 in.)
Maximum thrust clearance:
0.30 mm (0.0118 in.)
If the thrust clearance is greater than the maximum, replace the thrust washers as a set.
HINT:
The thrust washer thickness is 1.93 to 1.98 mm (0.0760 to 0.0780 in.).

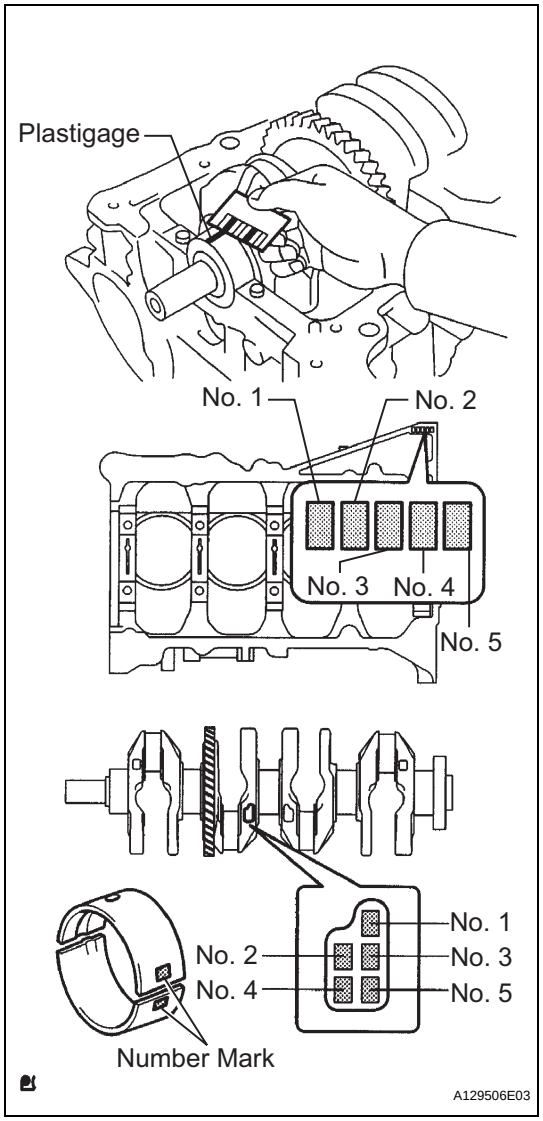
27. INSPECT CRANKSHAFT OIL CLEARANCE

(a) Check the crank journal and bearing for pitting and scratches.

(b) Install the crankshaft bearing (See page EM-149).

(c) Place the crankshaft on the cylinder block.





(d) Lay a strip of Plastigage across each journal.
(e) Examine the front marks and numbers and install the bearing caps on the cylinder block.
HINT:
A number is marked on each main bearing cap to indicate the installation position.
(f) Install the main bearing cap (See page EM-149).
NOTICE:
Do not turn the crankshaft.
(g) Remove the main bearing caps (See page EM-127).

(h) Measure the Plastigage at its widest point.
Standard oil clearance:
0.017 to 0.040 mm (0.0007 to 0.0016 in.)
Maximum oil clearance:
0.060 mm (0.0024 in.)
NOTICE:
Remove the Plastigage completely after the measurement.
If the oil clearance is greater than the maximum, replace the crankshaft bearing. If necessary, replace the crankshaft.
HINT:
- If replacing a bearing, select a new one with the same number. If the number of the bearing cannot be determined, calculate the correct bearing number by adding together the numbers imprinted on the cylinder block and crankshaft. Then select a new bearing with the calculated number. There are 4 sizes of standard bearings, marked "1", "2", "3" and "4" accordingly.
- EXAMPLE: Cylinder block "3" + Crankshaft "5" = Total number 8 (Use bearing "3")

Cylinder block + Crankshaft	0 to 2	3 to 5	6 to 8	9 to 11
Bearing to be used	"1"	"2"	"3"	"4"

Standard cylinder block journal bore diameter

Mark	Specified Condition
0	59.000 to 59.002 mm (2.3228 to 2.3229 in.)
1	59.003 to 59.004 mm (2.3230 to 2.3230 in.)
2	59.005 to 59.006 mm (2.3230 to 2.3231 in.)
3	59.007 to 59.009 mm (2.3231 to 2.3232 in.)
4	59.010 to 59.011 mm (2.3232 to 2.3233 in.)
5	59.012 to 59.013 mm (2.3233 to 2.3234 in.)
6	59.014 to 59.016 mm (2.3234 to 2.3235 in.)

Standard crankshaft journal diameter

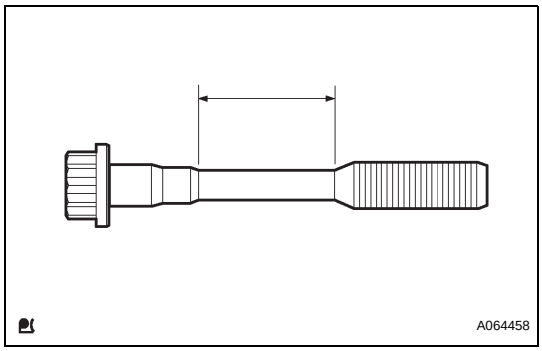
Mark	Specified Condition
0	54.999 to 55.000 mm (2.1653 to 2.1654 in.)
1	54.997 to 54.998 mm (2.1652 to 2.1653 in.)
2	54.995 to 54.996 mm (2.1652 to 2.1652 in.)
3	54.993 to 54.994 mm (2.1651 to 2.1651 in.)
4	54.991 to 54.992 mm (2.1650 to 2.1650 in.)

EM

Mark	Specified Condition
5	54.988 to 54.990 mm (2.1649 to 2.1650 in.)

Standard bearing center wall thickness

Mark	Specified Condition
1	1.993 to 1.996 mm (0.0785 to 0.0786 in.)
2	1.997 to 1.999 mm (0.0786 to 0.0787 in.)
3	2.000 to 2.002 mm (0.0787 to 0.0788 in.)
4	2.003 to 2.005 mm (0.0789 to 0.0789 in.)



28. INSPECT CRANKSHAFT BEARING CAP SET BOLT

(a) Using vernier calipers, measure the tension portion diameter of the bolts.

Standard diameter:

7.3 to 7.5 mm (0.287 to 0.295 in.)

Minimum diameter:

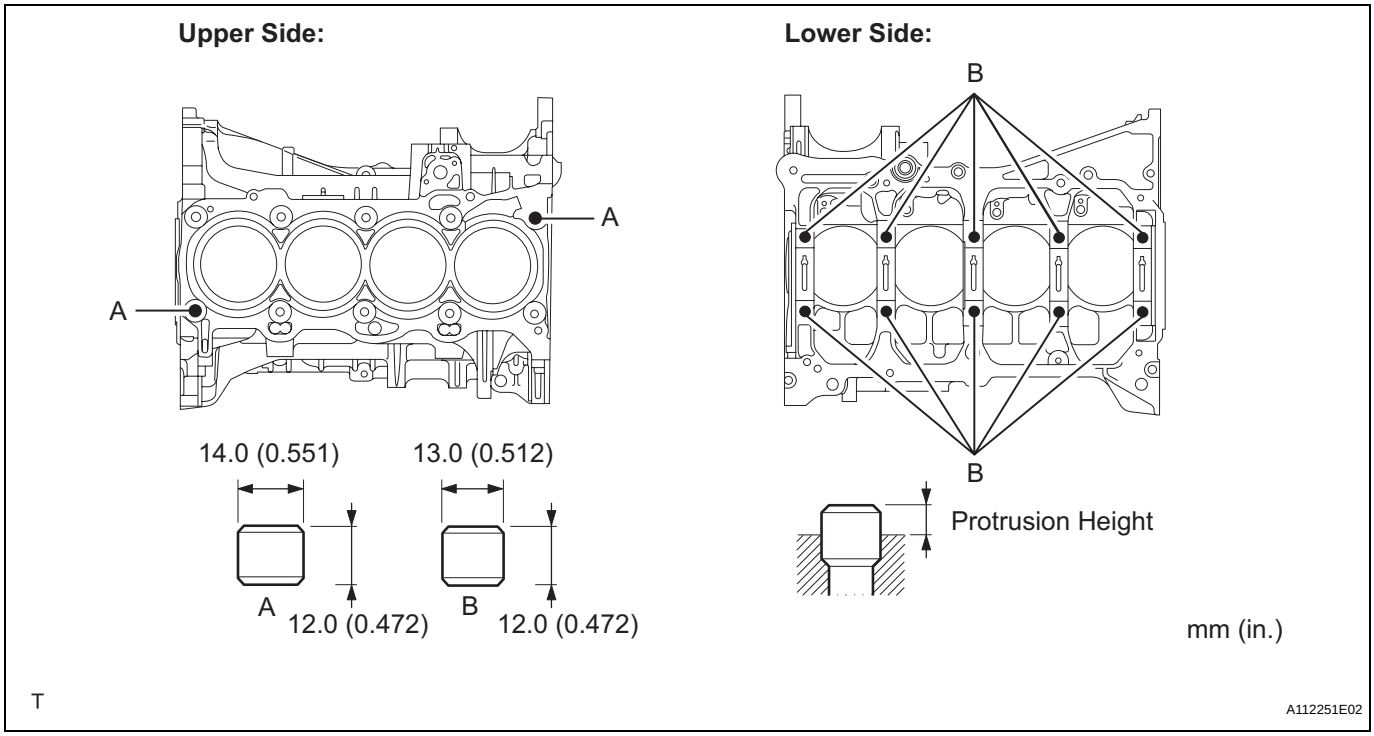
7.2 mm (0.284 in.)

If the diameter is less than the minimum, replace the bolt.

REASSEMBLY

1. INSTALL RING PIN

(a) Using a plastic hammer, tap into the ring pin.



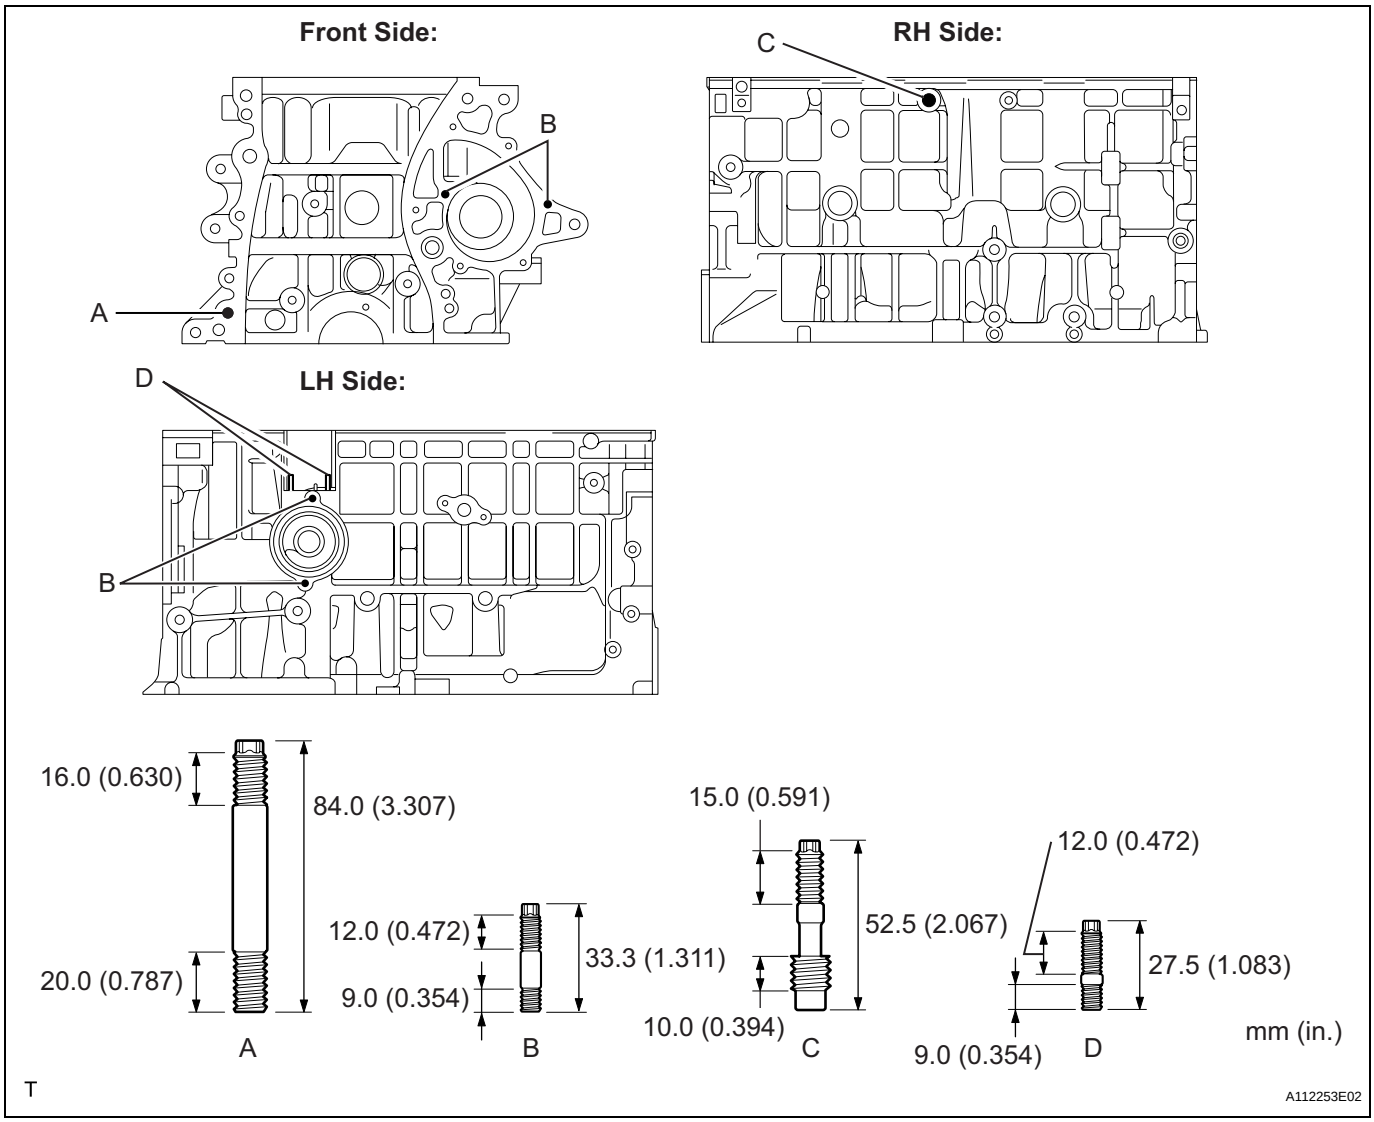
Standard protrusion

Item	Protrusion
Pin A	6 mm (0.236 in.)
Pin B	5 mm (0.197 in.)

EM

2. INSTALL STUD BOLT

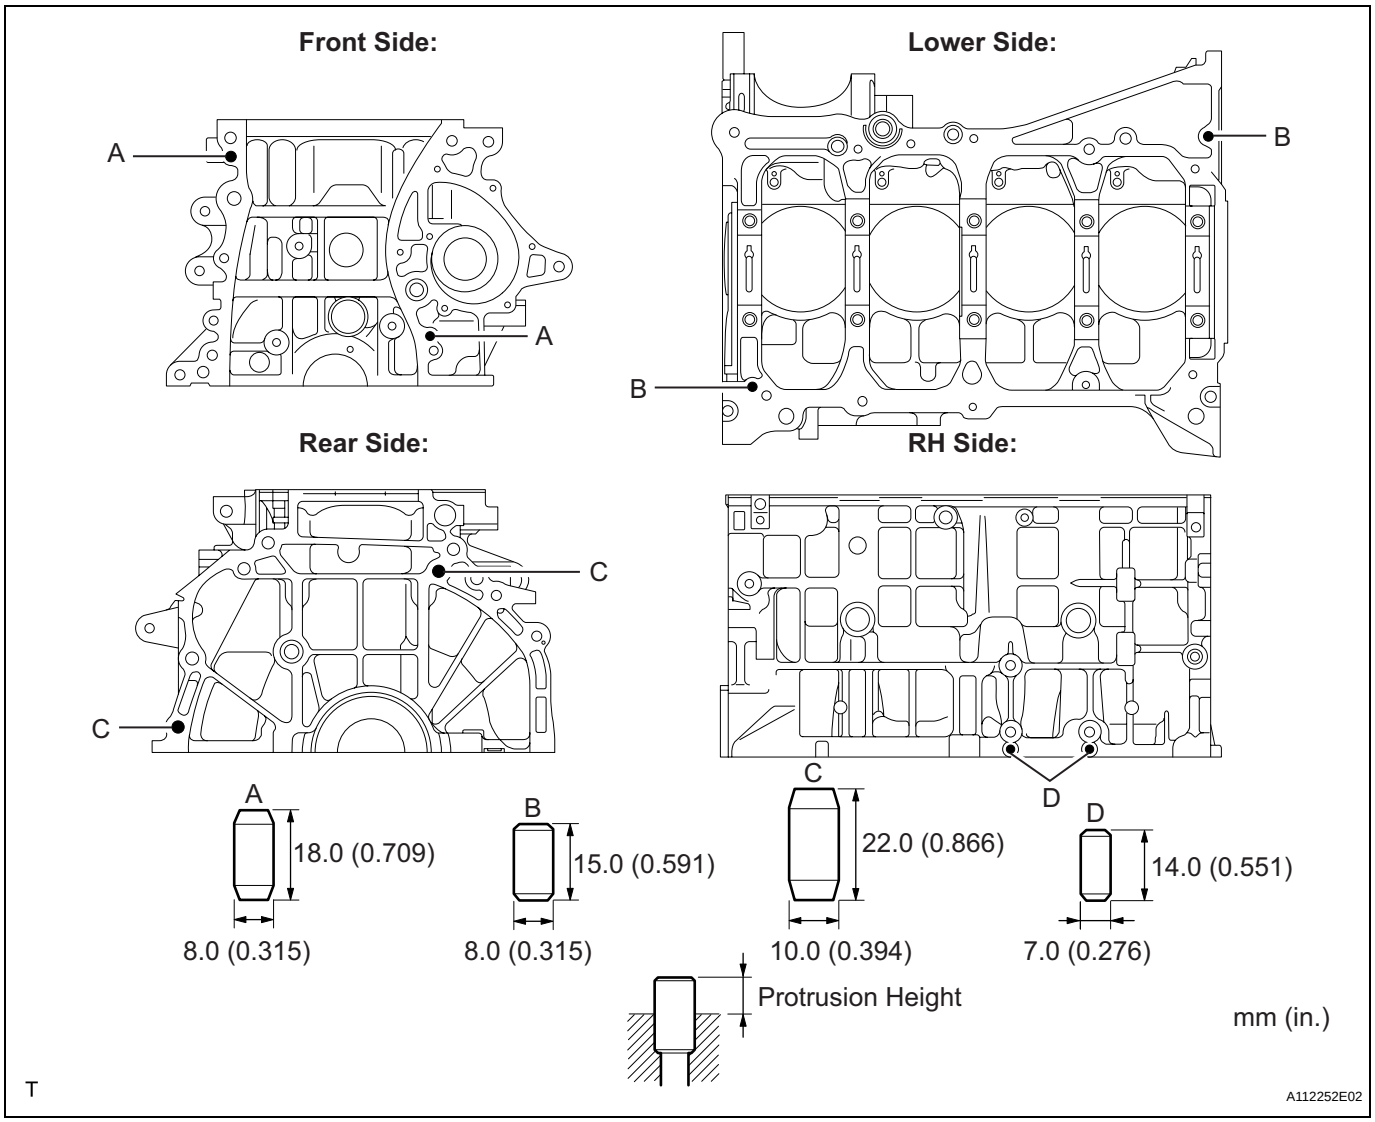
(a) Install the stud bolts as shown in the illustration.



Torque: Stud Bolt A
5.0 N*m (51 kgf*cm, 44 in.*lbf)
Stud Bolt B
22 N*m (220 kgf*cm, 16 ft.*lbf)
Stud Bolt C
9.5 N*m (97 kgf*cm, 84 in.*lbf)
Stud Bolt D
5.0 N*m (51 kgf*cm, 44 in.*lbf)

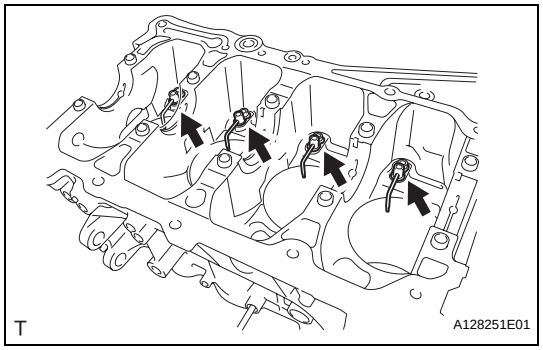
3. INSTALL STRAIGHT PIN

(a) Using a plastic hammer, tap into the straight pin.



Standard protrusion

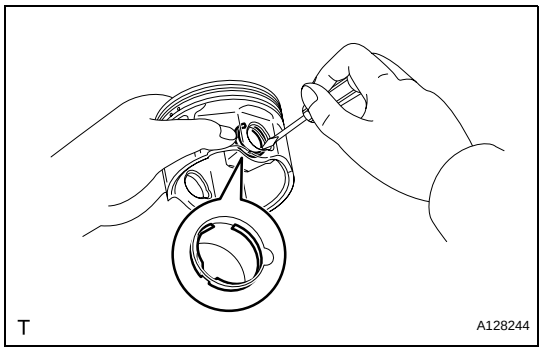
Item	Protrusion
Pin A	8 mm (0.315 in.)
Pin B	7.5 mm (0.295 in.)
Pin C	12 mm (0.472 in.)
Pin D	5 mm (0.197 in.)



4. INSTALL NO. 1 OIL NOZZLE SUB-ASSEMBLY

(a) Using a 5 mm hexagon wrench, install the oil nozzles with the bolts.

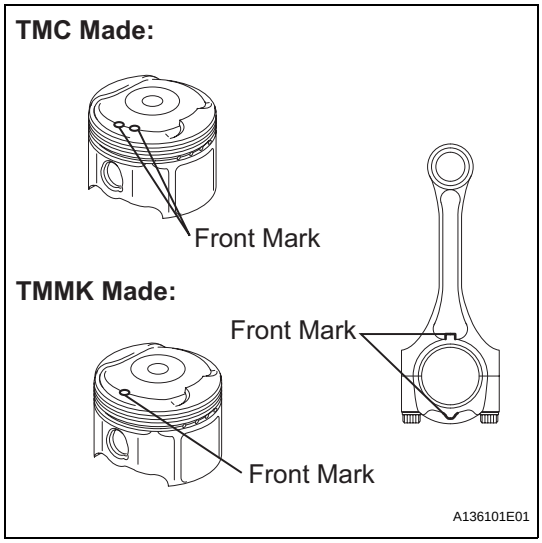
Torque: 7.0 N*m (71 kgf*cm, 62 in.*lbf)



5. INSTALL PISTON

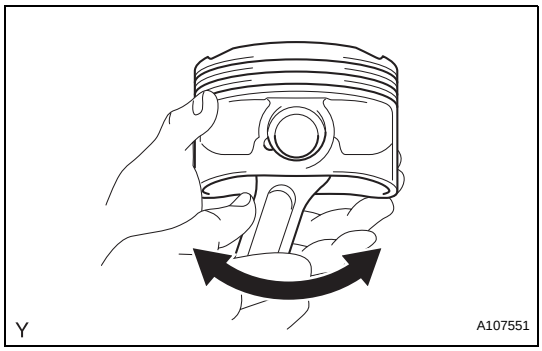
(a) Using a screwdriver, install a new snap ring at one end of the piston pin hole.
HINT:
Make sure that the end gap of the snap ring is not aligned with the pin hole cutout portion of the piston.

(b) Gradually heat the piston to approximately 80 to 90°C (176 to 194°F).

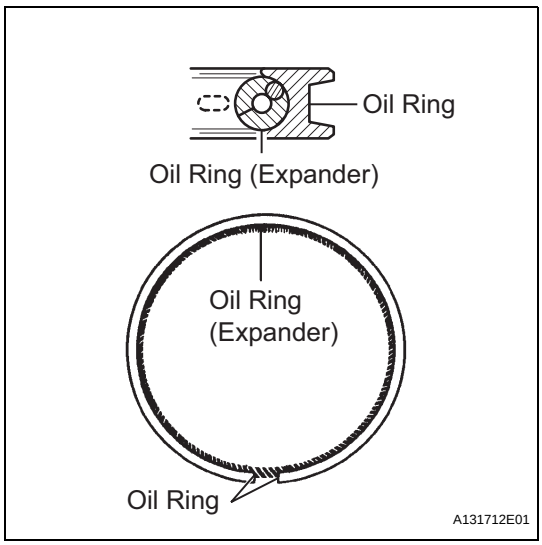


(c) Align the front marks of the piston and connecting rod, and push in the piston with your thumb.

(d) Using a screwdriver, install a new snap ring on the other end of the piston pin hole.
HINT:
Make sure that the end gap of the snap ring is not aligned with the pin hole cutout portion of the piston.

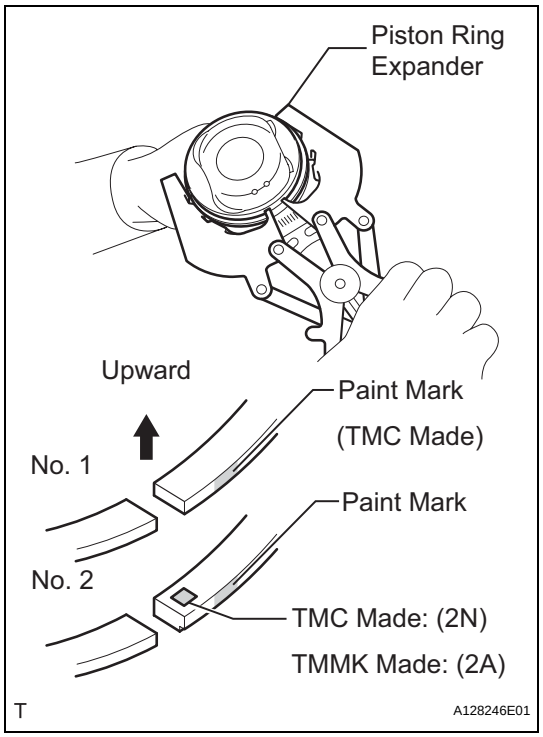


(e) Check the fitting condition between the piston and piston pin by trying to move the piston back and forth on the piston pin.

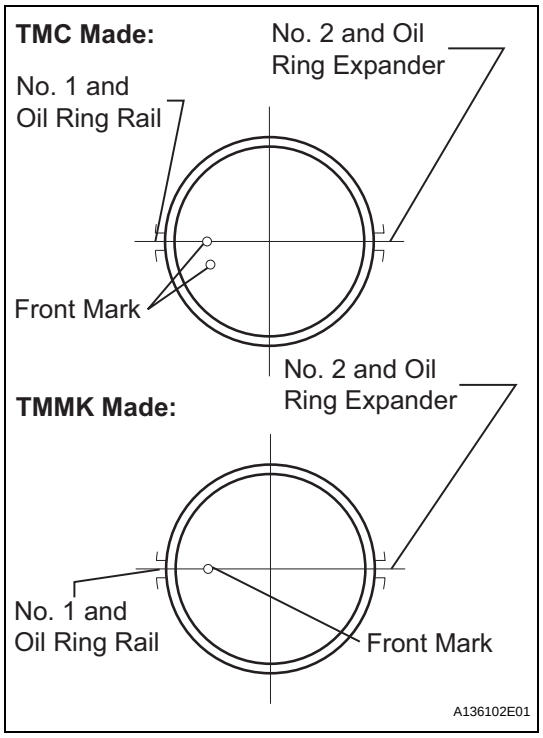


6. INSTALL PISTON RING SET

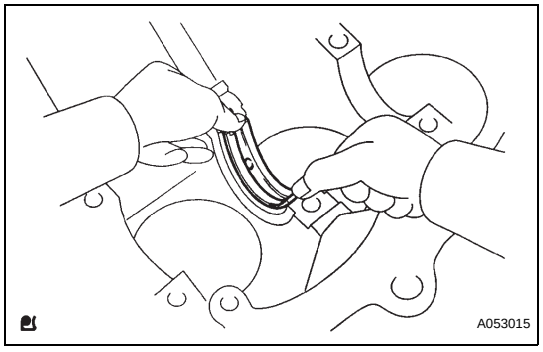
(a) Install the oil ring expander and oil ring rail by hand.
NOTICE:
- **Install the expander and oil ring so that their ring ends are at opposite sides.**
- **Securely install the expander to the inner groove of the oil ring.**



(b) Using a piston ring expander, install the 2 compression rings so that the paint marks are positioned as shown in the illustration.
NOTICE:
Install the compression ring No. 2 with the code mark (2N and 2A) facing upward.



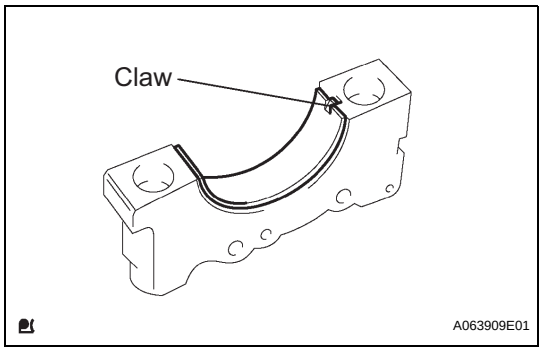
(c) Position the piston rings so that the ring ends are as shown in the illustration.



7. INSTALL CRANKSHAFT BEARING

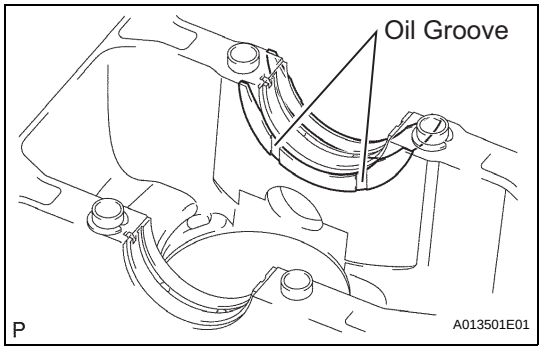
(a) Install the upper bearing with an oil groove on the cylinder block.
NOTICE:
Do not apply engine oil to the bearings and the contact surfaces.

EM



8. INSTALL NO. 2 CRANKSHAFT BEARING

(a) Install the lower bearing on the bearing cap.
NOTICE:
Clean the backside of the bearing and the bearing surface of the connecting rod. The surface should be free of dust and oils.

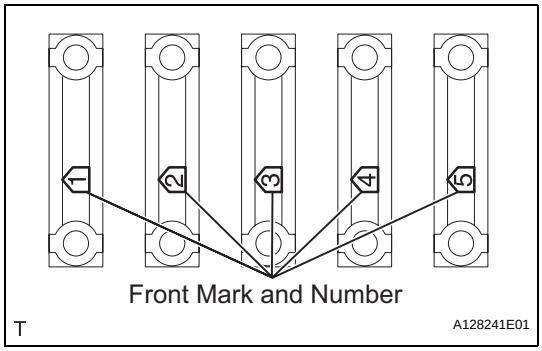


9. INSTALL UPPER CRANKSHAFT THRUST WASHER

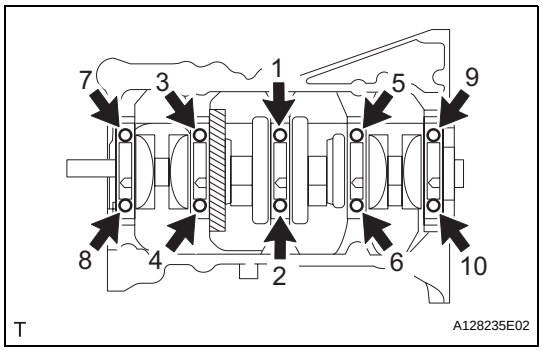
(a) Install the 2 thrust washers under the No. 3 journal of the cylinder block with the oil grooves facing outward.
(b) Apply engine oil to the crankshaft thrust washer.

10. INSTALL CRANKSHAFT

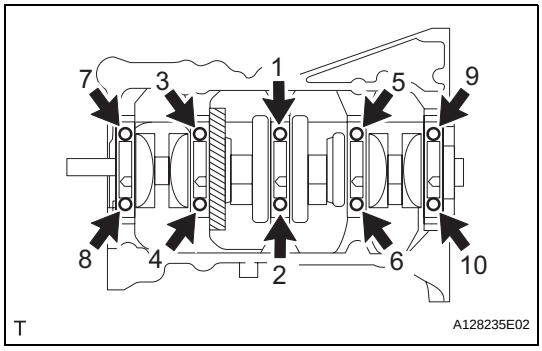
(a) Apply engine oil to the upper bearing and install the crankshaft on the cylinder block.
(b) Apply engine oil to the lower bearing.



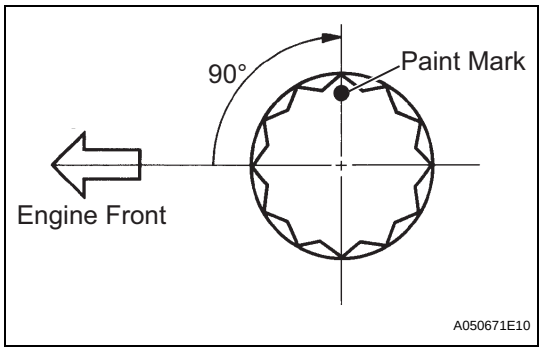
(c) Examine the front marks and install the bearing caps on the cylinder block.
(d) Apply a light coat of engine oil to the threads and under the bearing cap bolts.
(e) Install the crankshaft bearing cap bolts.
NOTICE:
The main bearing cap bolts are tightened in 2 progressive steps.

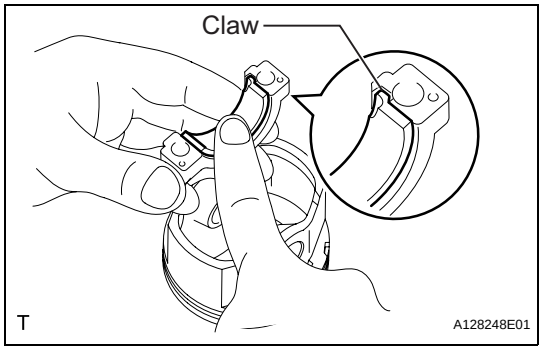


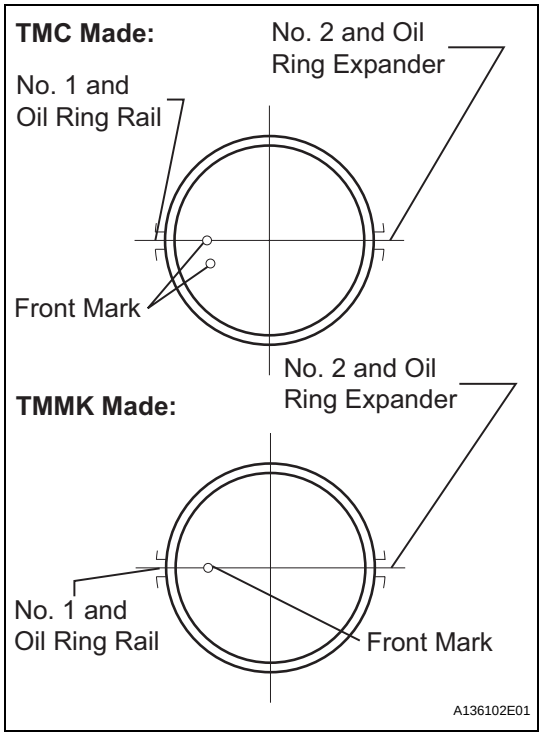
(f) Step 1
(1) Install and uniformly tighten the 10 main bearing cap bolts in the sequence shown in the illustration.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)



(2) Retighten the 10 main bearing cap bolts in the sequence shown in the illustration.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)







(g) Step 2
  (1) Mark the front of the bearing cap bolts with paint.
  (2) Retighten the bearing cap bolts by 90°in the numerical order shown in the illustration.
(h) Check that the paint mark is now at a 90°angle to the front.
(i) Check that the crankshaft turns smoothly.
(j) Check the crankshaft thrust clearance (See page EM-147).

11. INSTALL CONNECTING ROD BEARING

(a) Align the bearing claw with the groove of the connecting rod or connecting cap.
NOTICE:
Do not apply engine oil to the bearings and the contact surfaces.

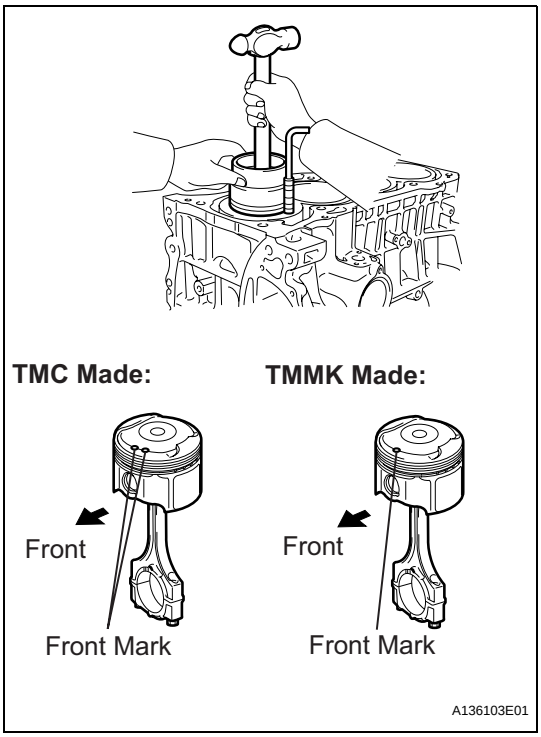
12. INSTALL PISTON SUB-ASSEMBLY WITH CONNECTING ROD

NOTICE:
The connecting rod cap bolts are tightened in 2 progressive steps.

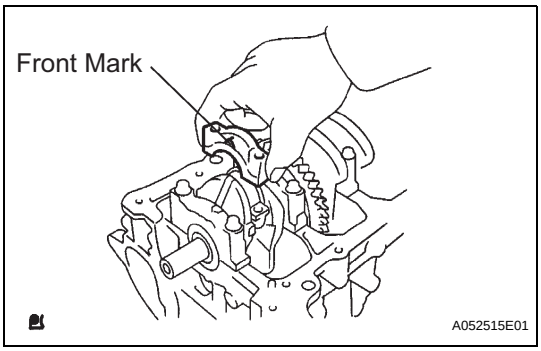
(a) Apply engine oil to the cylinder walls, the pistons, and the surfaces of connecting rod bearings.

(b) Check the position of the piston ring ends.

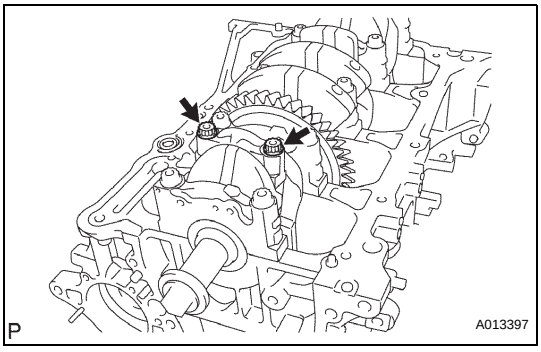
EM



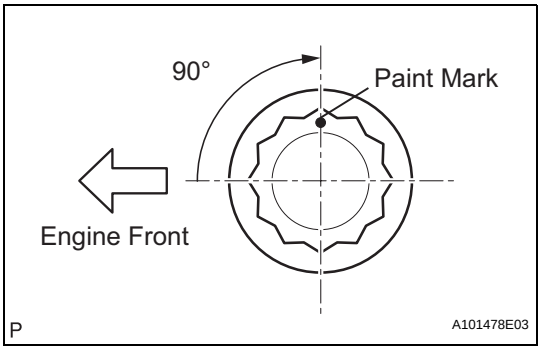
(c) Using a piston ring compressor, push the correctly numbered piston and connecting rod assemblies into each cylinder with the front mark of the piston facing forward.
NOTICE:
Match the numbered connecting rod cap with the connecting rod.



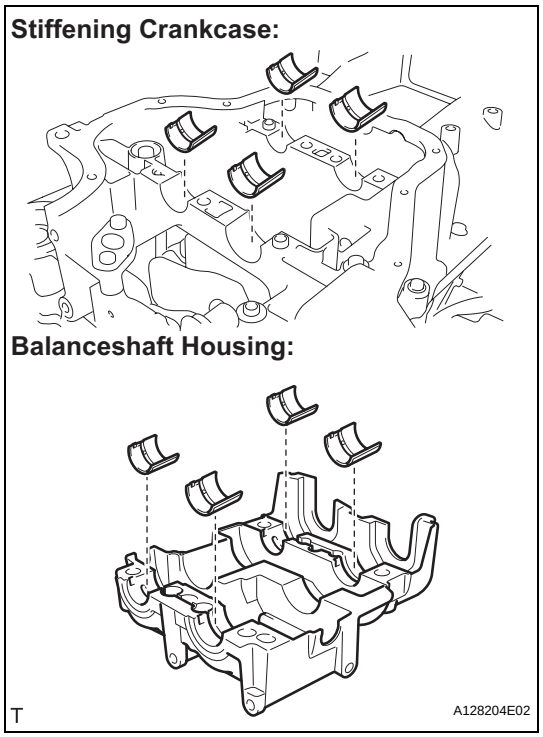
(d) Check that the protrusion of the connecting rod cap is facing in the correct direction.
(e) Apply a light coat of engine oil to the threads and under the heads of the connecting rod cap bolts.
(f) Install the connecting cap bolts.
NOTICE:
The connecting cap bolts should be tightened in 2 progressive steps.



(g) Step 1
(1) Install and alternately tighten the bolts of the connecting rod cap in several steps.
Torque: 25 N*m (250 kgf*cm, 18 ft.*lbf)



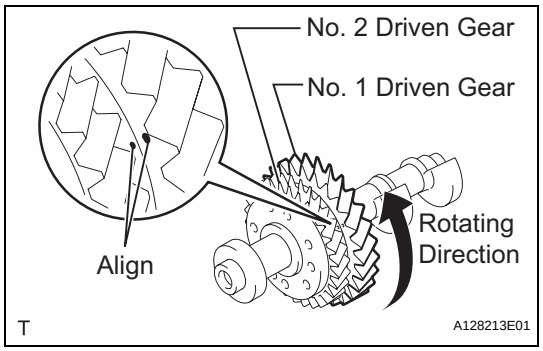
(h) Step 2
(1) Mark the front of the connecting rod cap bolts with paint.
(2) Retighten the cap bolts by 90°as shown in the illustration.
(i) Check that the crankshaft turns smoothly.
(j) Check the connecting rod thrust clearance (See page EM-140).



13. INSTALL NO. 1 BALANCESHAFT BEARING

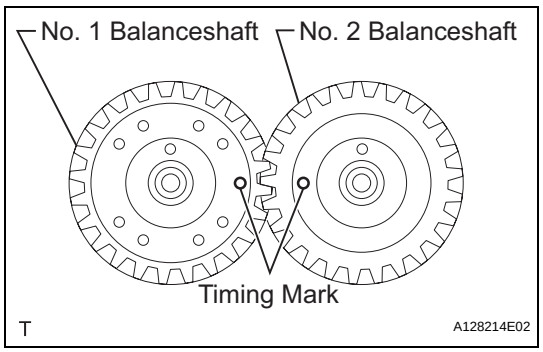
(a) Install the bearings in the crankcase and balanceshaft housing.
NOTICE:
Do not apply engine oil to the bearings and the contact surfaces.

(b) Apply a light coat of engine oil to the bearings.

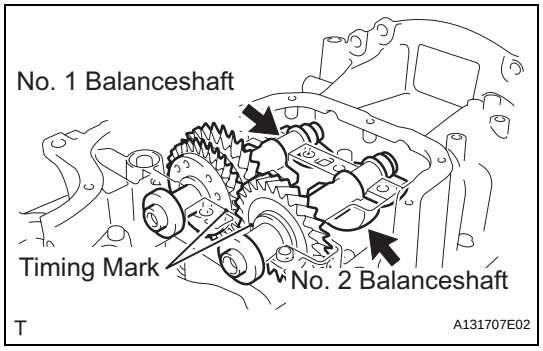


14. INSTALL NO. 1 AND NO. 2 BALANCESHAFT SUB-ASSEMBLY

(a) Rotate the driven gear No. 1 of balanceshaft No. 1 in the rotating direction until it hits the stopper.
NOTICE:
Confirm that the matchmarks on driven gears No. 1 and No. 2 are matched.



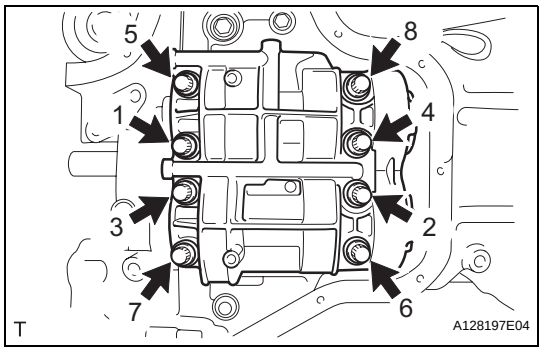
(b) Align the timing marks of the No. 1 and No. 2 balanceshafts as shown in the illustration.



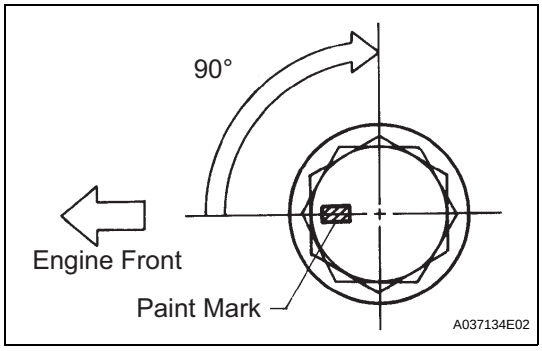
(c) Place the No. 1 and No. 2 balanceshafts on the crankcase.

(d) Apply a light coat of engine oil under the heads of the balanceshaft housing bolts.

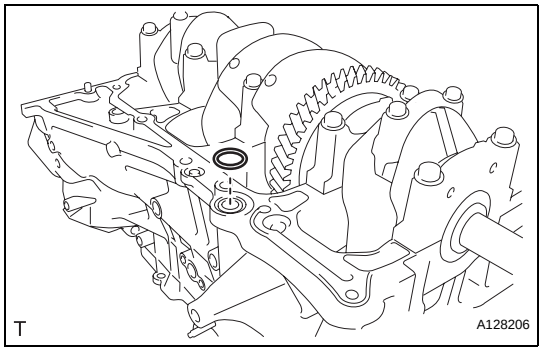
(e) Install the balanceshaft housing bolts.
NOTICE:
The balance shaft housing bolts are tightened in 2 progressive steps.



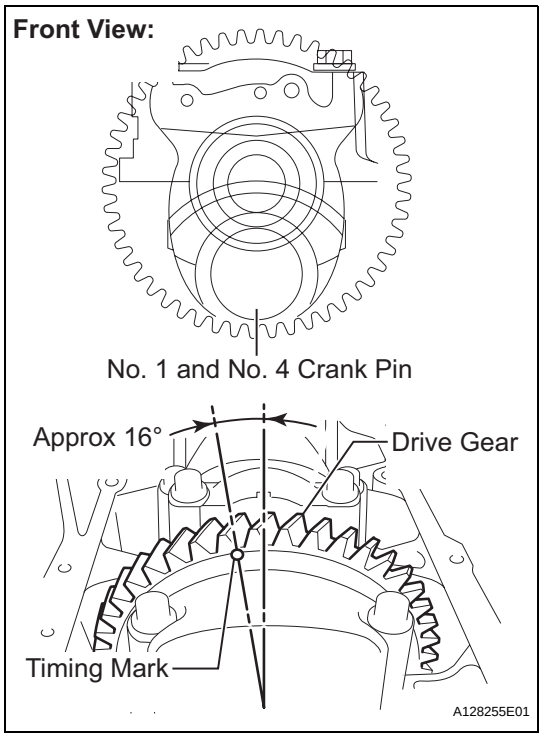
(f) Step 1
(1) Install and uniformly tighten the 8 bolts in the sequence shown in the illustration.
Torque: 22 N*m (220 kgf*cm, 16 ft.*lbf)



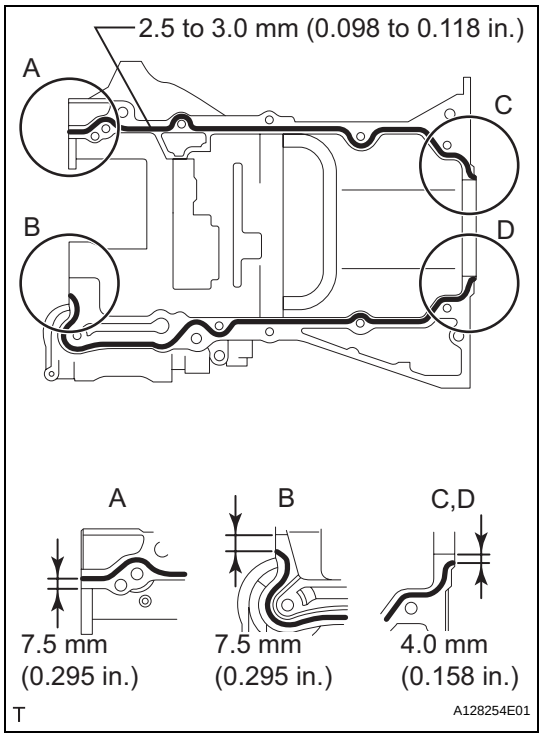
(g) Step 2
(1) Mark the front side of each balanceshaft housing bolt head with paint.
(2) Retighten the bolts by 90°as shown in the illustration.
(3) Check that the paint marks are now at a 90°angle to the front.



15. INSTALL STIFFENING CRANKCASE ASSEMBLY
(a) Place a new O-ring on the cylinder block, as shown in the illustration.
(b) Temporarily tighten the pulley set bolt.



(c) Turn the crankshaft to set the crank pins of the No. 1 and No. 4 cylinders to the bottom.
HINT:
Make sure that the timing mark on the balanceshaft drive gear is positioned as shown in the illustration.



(d) Apply seal packing in a continuous bead (diameter: 2.5 to 3.0 mm (0.098 to 0.118 in.)) to the places shown in the illustration.

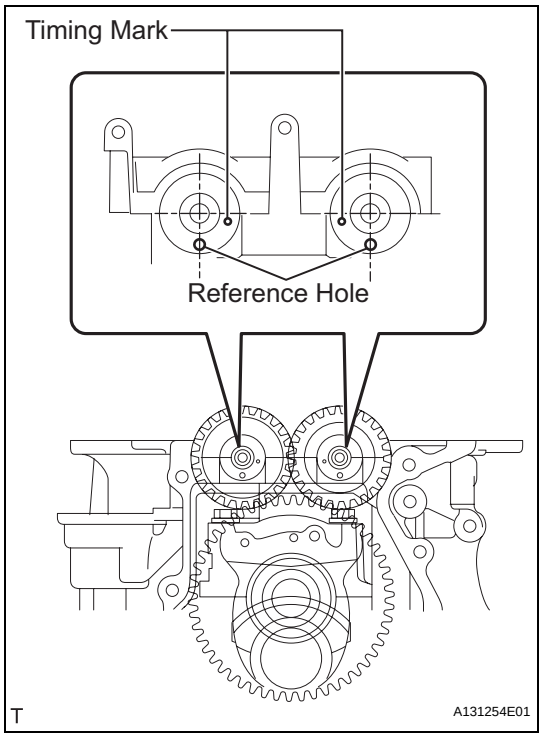
Seal packing:

Toyota Genuine Seal Packing Black, Three bond 1207B or Equivalent

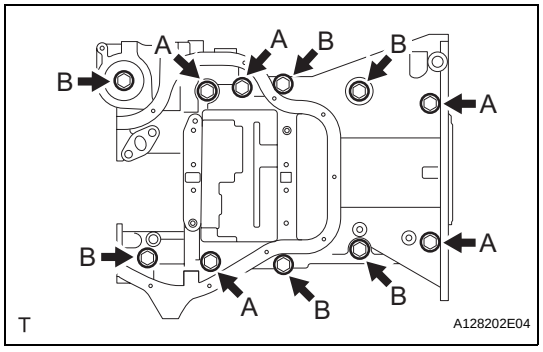
NOTICE:

- **Remove any oil from the contact surface.**
- **Install the crankcase within 3 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after installing the crankcase stiffener.**

EM



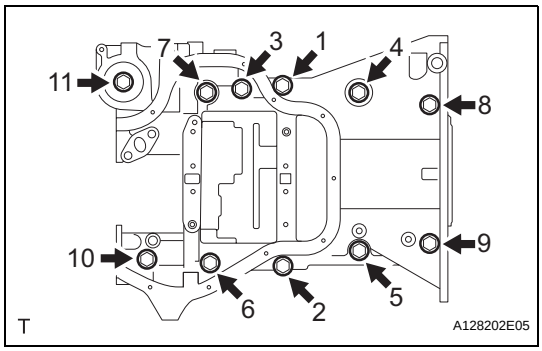
(e) Install the stiffening crankcase so that the reference holes on the balanceshafts are positioned as shown in the illustration.



(f) Temporarily install the crankcase with the 11 bolts.

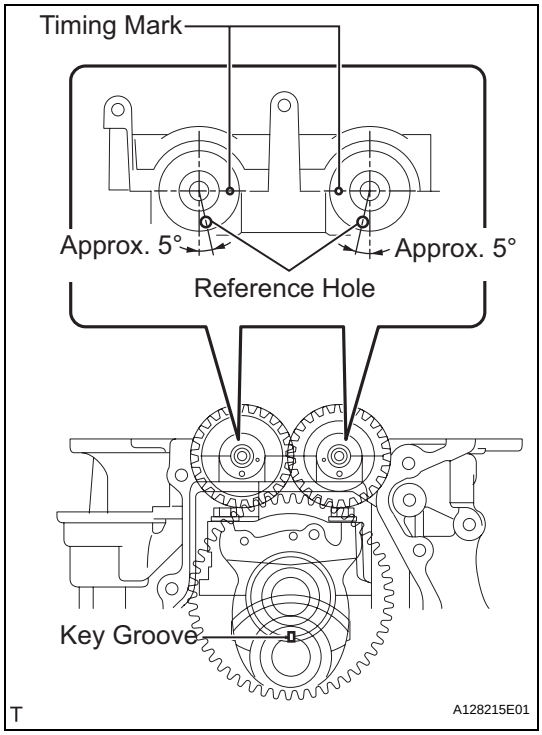
Bolt length

Item	Length
Bolt A	122 mm (4.803 in.)
Bolt B	45 mm (1.772 in.)



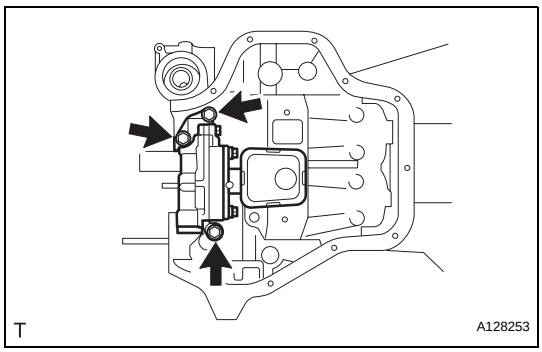
(g) Uniformly tighten the 11 bolts in the sequence shown in the illustration.
Torque: 24 N*m (245 kgf*cm, 18 ft.*lbf)

(h) Wipe off the excess seal packing with a clean piece of cloth.



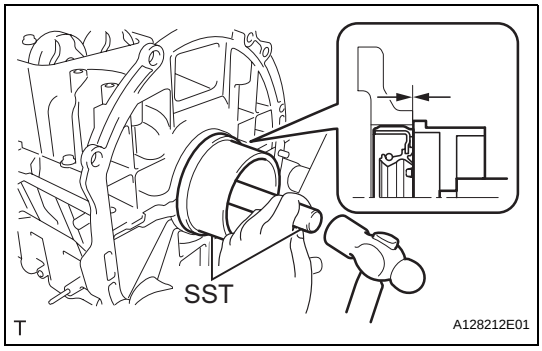
(i) Turn the crankshaft again to set the key groove to the bottom. Make sure that the timing marks are aligned as shown in the illustration.
HINT:
An 'O' is stamped as a timing mark.

(j) Remove the pulley set bolt.



16. INSTALL OIL PUMP ASSEMBLY

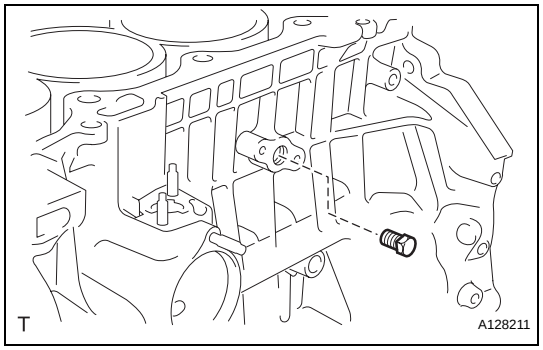
(a) Install a new gasket and oil pump with the 3 bolts.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)



17. INSTALL ENGINE REAR OIL SEAL

(a) Using SST and a hammer, evenly tap the oil seal until its surface is flush with the rear oil seal retainer edge.
SST 09223-15030, 09950-70010 (09951-07100)
NOTICE:
Keep the lip free from foreign materials.

(b) Apply MP grease to a new oil seal lip.
NOTICE:
Wipe off extra grease on the crankshaft.

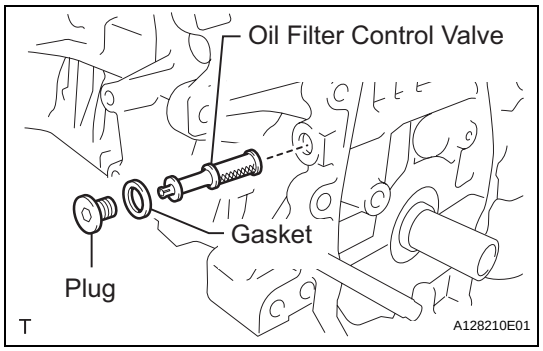


18. INSTALL NO. 1 TAPER SCREW PLUG (w/o Oil Cooler)

(a) Apply adhesive to 2 or 3 threads of the plug, and install the plug.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or Equivalent

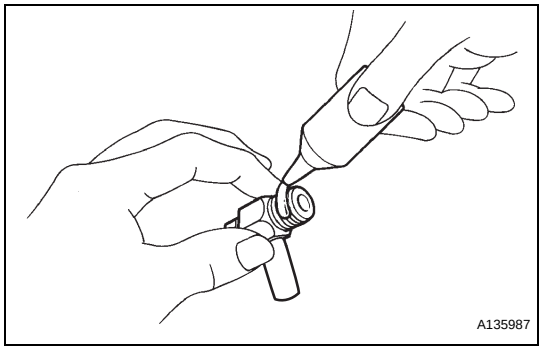
19. INSTALL OIL CONTROL VALVE FILTER

(a) Check that no foreign matter is on the mesh part of the filter.



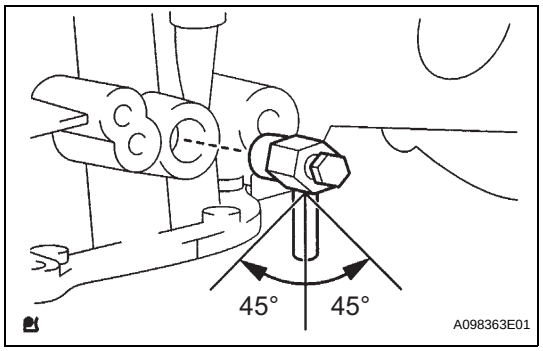
(b) Using an 8 mm socket hexagon wrench, install a new gasket and the oil control valve filter with the screw plug.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)
NOTICE:
Do not touch the mesh when installing the oil control valve filter.

EM



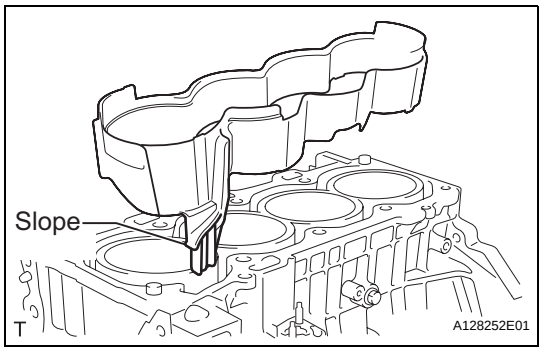
20. INSTALL CYLINDER BLOCK WATER DRAIN COCK SUB-ASSEMBLY (w/o Oil Cooler)

(a) Apply adhesive around the drain cock.
Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or Equivalent



(b) Install the water drain cock within the range shown in the illustration.
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)
NOTICE:
Do not rotate the drain cocks more than 1 revolution (360°) after tightening the drain cocks to the specified torque.

(c) Install the water drain cock plugs to the water drain cocks.
Torque: 13 N*m (130 kgf*cm, 9 ft.*lbf)

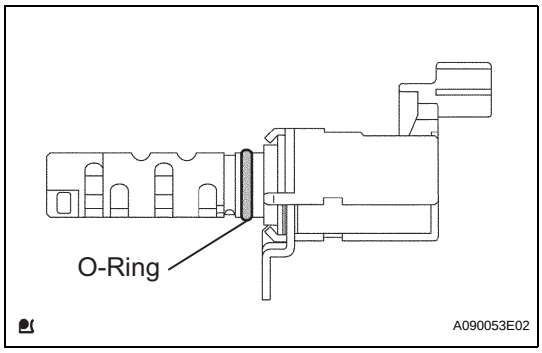


21. **INSTALL CYLINDER BLOCK WATER JACKET SPACER**
    (a) Install the water jacket spacer as shown in the illustration.
    HINT:
    Be sure to face the slope to the front of the engine.

22. **INSTALL CYLINDER HEAD GASKET (See page EM-70)**

23. **INSTALL CYLINDER HEAD SUB-ASSEMBLY (See page EM-70)**

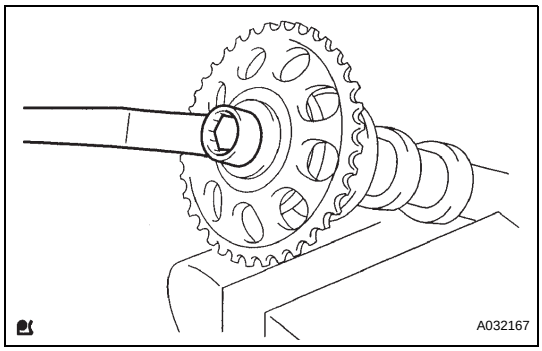
24. **INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY**
    (a) Apply a light coat of engine oil to a new O-ring, then install it onto the camshaft timing oil control valve.



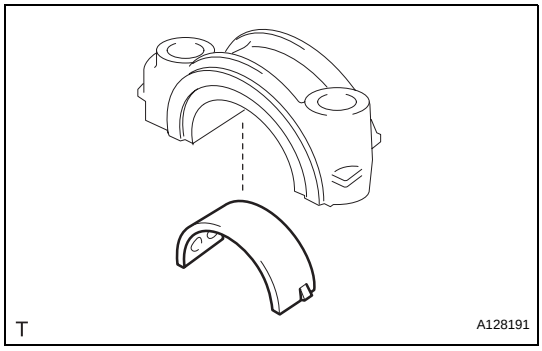
EM

    (b) Install the camshaft timing oil control valve with the bolt.
    Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

25. **INSTALL CAMSHAFT TIMING GEAR ASSEMBLY (See page EM-42)**



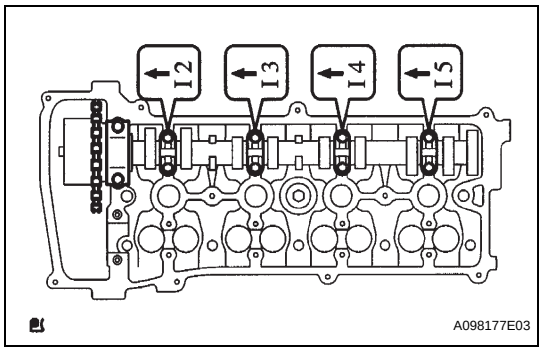
26. **INSTALL CAMSHAFT TIMING SPROCKET**
    (a) Clamp the camshaft in a vise.
    (b) Tighten the flange bolt with the camshaft timing sprocket fixed.
    Torque: 54 N*m (551 kgf*cm, 40 ft.*lbf)



27. **INSTALL NO. 1 CAMSHAFT BEARING**
    (a) Install the No. 1 camshaft bearing.

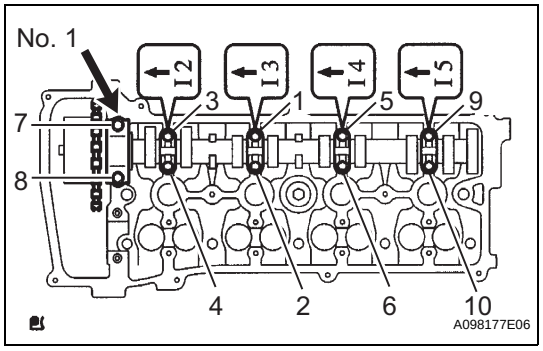
28. **INSTALL NO. 2 CAMSHAFT BEARING (See page EM-71)**

29. **INSTALL CAMSHAFT**
    (a) Apply a light coat of engine oil to the journal portion of the camshaft.



(b) Examine the front marks and numbers, and check that the order is as shown in the illustration. Then install the bearing caps into the cylinder head.

(c) Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.



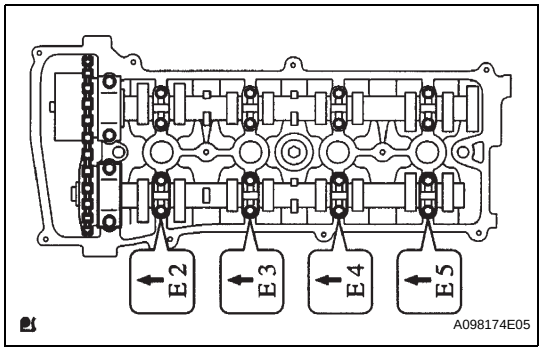
(d) Using several steps, uniformly tighten the 10 bearing cap bolts in the sequence shown in the illustration.

Torque: No. 1 Bearing cap
30 N*m (301 kgf*cm, 22 ft.*lbf)
No. 3 Bearing cap
9.0 N*m (92 kgf*cm, 80 in.*lbf)

EM

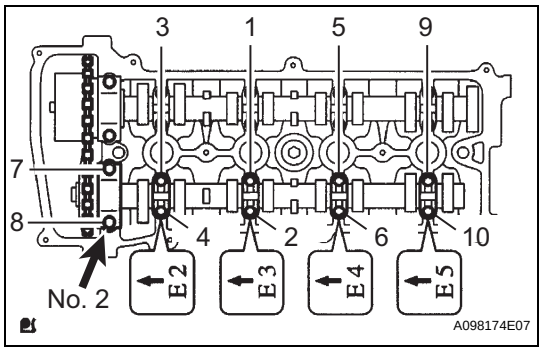
30. INSTALL NO. 2 CAMSHAFT

(a) Apply a light coat of engine oil to the journal portion of the No. 2 camshaft.



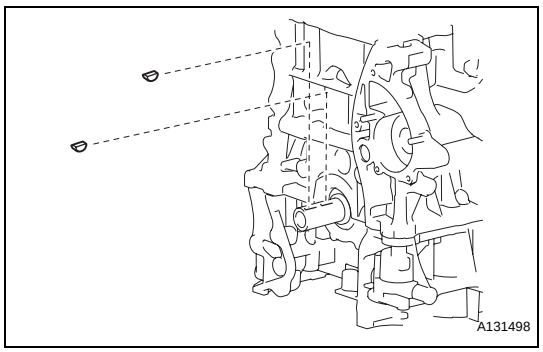
(b) Examine the front marks and numbers, and check that the order is as shown in the illustration. Then install the bearing caps onto the cylinder head.

(c) Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.



(d) Using several steps, uniformly tighten the 10 bearing cap bolts in the sequence shown in the illustration.

Torque: No. 1 Bearing cap
30 N*m (301 kgf*cm, 22 ft.*lbf)
No. 3 Bearing cap
9.0 N*m (92 kgf*cm, 80 in.*lbf)



31. INSTALL KEYS

(a) Install the 2 keys.

32. INSTALL NO. 2 CHAIN SUB-ASSEMBLY (See page EM-27)

33. INSTALL CRANKSHAFT TIMING SPROCKET (See page EM-28)

34. INSTALL NO. 1 CHAIN VIBRATION DAMPER (See page EM-28)

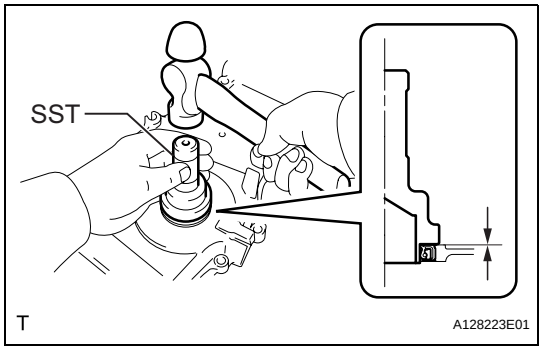
35. INSTALL CHAIN SUB-ASSEMBLY (See page EM-28)

36. **INSTALL CHAIN TENSIONER SLIPPER (See page EM-29)**

37. **INSTALL TIMING CHAIN GUIDE (See page EM-30)**

38. **INSTALL NO. 1 CRANKSHAFT POSITION SENSOR PLATE (See page EM-30)**

39. **INSTALL TIMING CHAIN CASE OIL SEAL**
    (a) Using SST, tap in a new oil seal until its surface is flush with the timing chain cover edge.
    SST 09223-22010
    (b) Apply a light coat of MP grease to the lip of the oil seal.
    NOTICE:
    Keep the gap between the timing chain cover edge and the oil seal free of foreign matter.



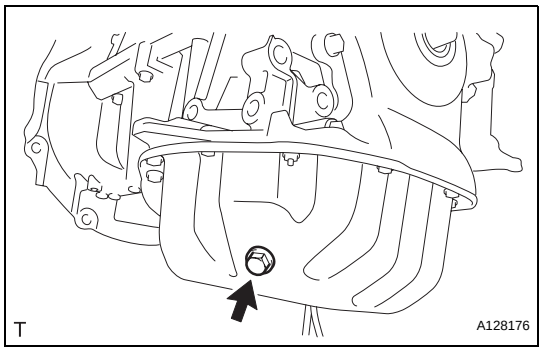
EM

40. **INSTALL TIMING CHAIN COVER SUB-ASSEMBLY (See page LU-15)**

41. **INSTALL V-RIBBED BELT TENSIONER ASSEMBLY (See page EM-30)**

42. **INSTALL OIL PAN SUB-ASSEMBLY (See page EM-31)**

43. **INSTALL OIL PAN DRAIN PLUG**
    (a) Install a new gasket and oil pan drain plug with a new gasket.
    Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)

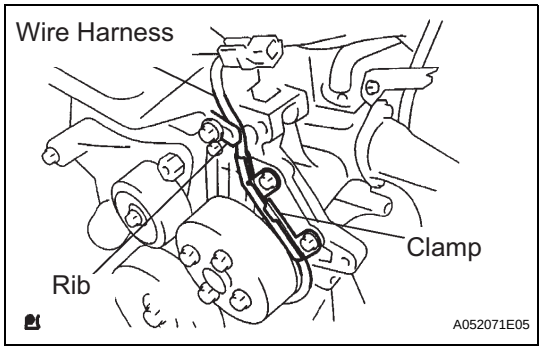


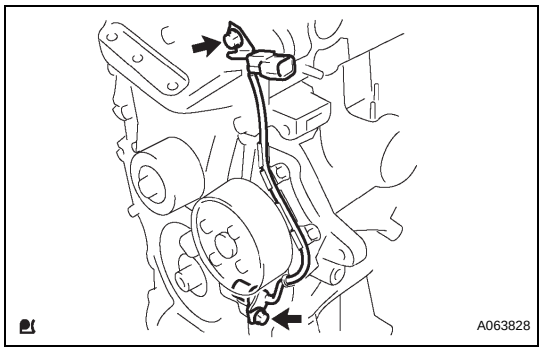
44. **INSTALL WATER PUMP ASSEMBLY (See page CO-10)**

45. **INSTALL WATER PUMP PULLEY (See page CO-11)**

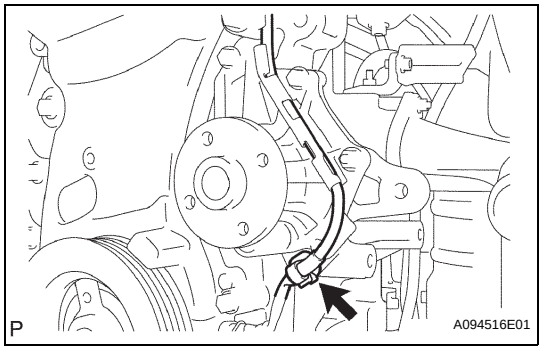
46. **INSTALL CRANKSHAFT POSITION SENSOR**
    (a) Apply a light coat of engine oil to the O-ring of the sensor.

    (b) Confirm that the wire harness of the sensor is placed as shown in the illustration.





(c) Install the sensor with the 2 bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)



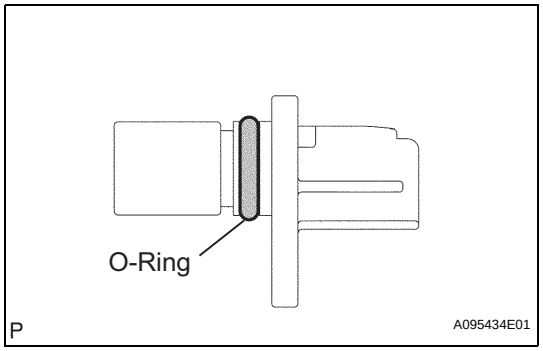
(d) Install the clamp of the crankshaft position sensor onto the water pump.

47. INSTALL CRANKSHAFT PULLEY (See page EM-76)

48. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY (See page EM-32)

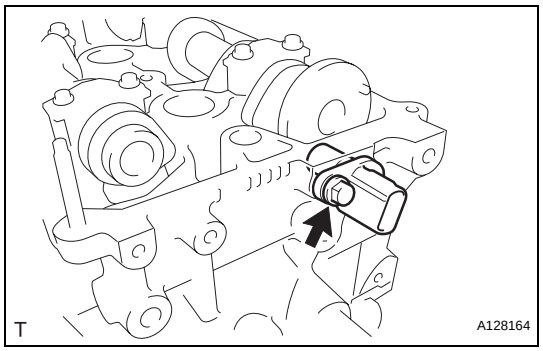
49. INSPECT VALVE CLEARANCE (See page EM-8)

50. ADJUST VALVE CLEARANCE (See page EM-9)

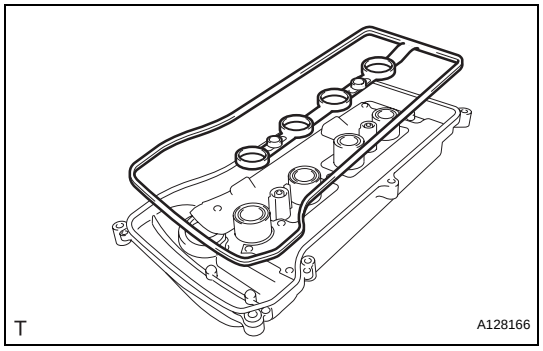


51. INSTALL CAMSHAFT POSITION SENSOR

(a) Apply a light coat of engine oil to the O-ring of the sensor.



(b) Install the sensor with the bolt.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

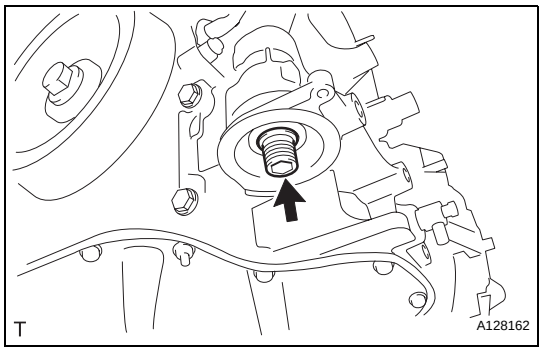


52. INSTALL CYLINDER HEAD COVER GASKET

(a) Install the gasket to the cylinder head cover.
NOTICE:
Remove any oil from the contact surface.

53. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-33)

EM

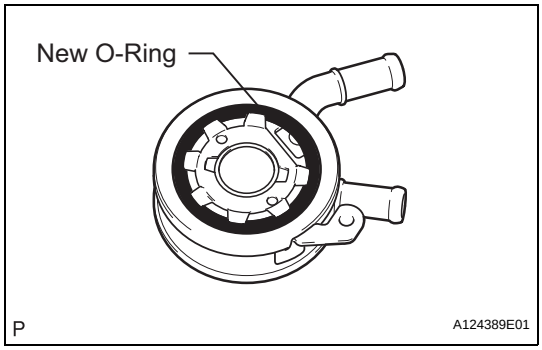


54. INSTALL OIL FILTER UNION (w/o Oil Cooler)

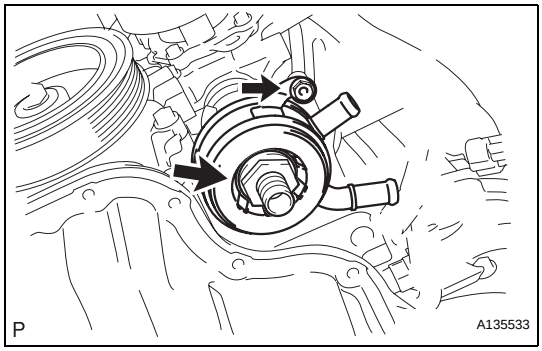
(a) Using a 12 mm hexagon wrench, install the oil filter union.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

55. INSTALL OIL COOLER ASSEMBLY (w/ Oil Cooler)

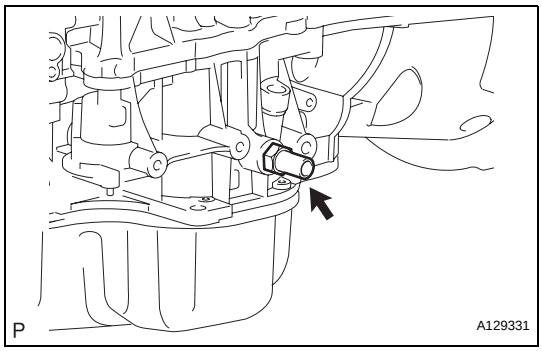
(a) Clean the oil cooler contact surface on the cooler mounting.



(b) Install a new O-ring to the oil cooler.
(c) Apply a light coat of engine oil to the threads and under the head of the union bolt.



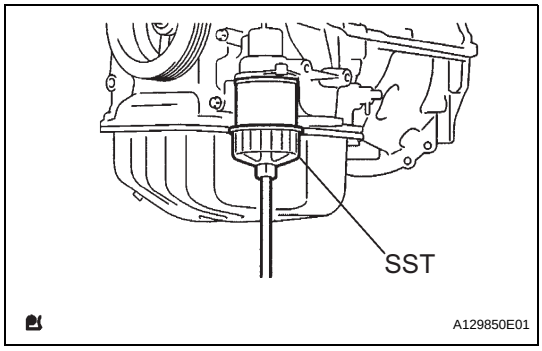
(d) Install the oil cooler with the plate washer, oil filter union and nut.
Torque: Oil Filter Union
79 N*m (806 kgf*cm, 58 ft.*lbf)
Nut
9.0 N*m (92 kgf*cm, 80 in.*lbf)
(e) Apply adhesive to the threads of the oil filter union.
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or Equivalent



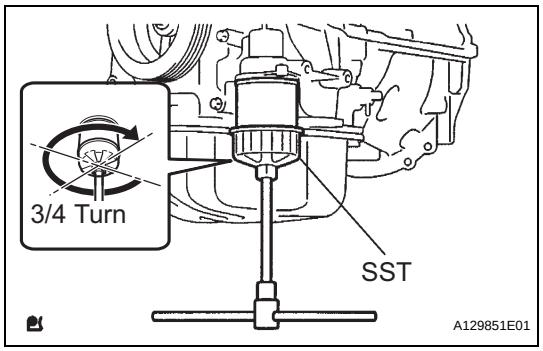
(f) Install the union bolt.
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)

56. INSTALL OIL FILTER SUB-ASSEMBLY

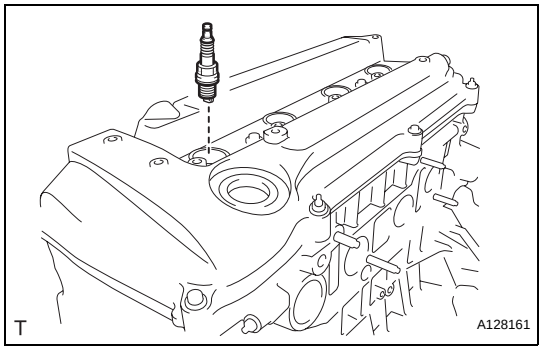
(a) Check and clean the oil filter installation surface.
(b) Apply clean engine oil to the gasket of a new oil filter.
(c) Lightly screw the oil filter into place, and tighten it until the gasket contacts the seat.



(d) When using a torque wrench:
(1) Using SST, tighten the oil filter.
SST 09228-06501
Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)

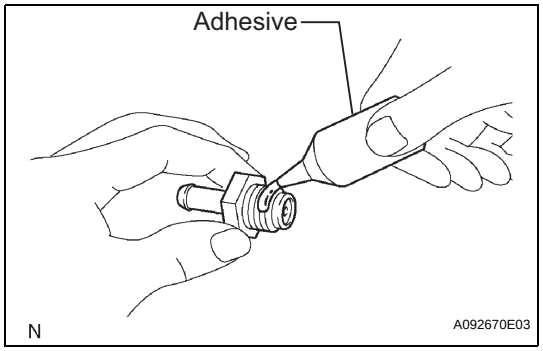


(e) When not using a torque wrench:
(1) Using SST, tighten it an additional 3/4 turn.
SST 09228-06501



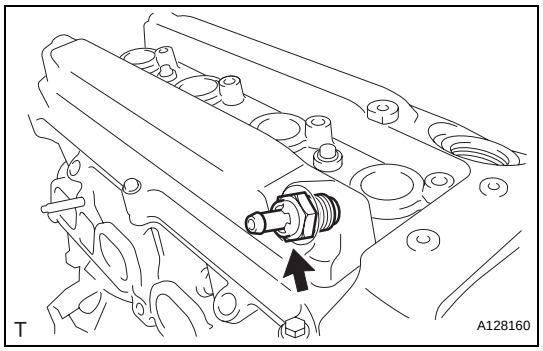
57. INSTALL SPARK PLUG

(a) Install the spark plugs.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)

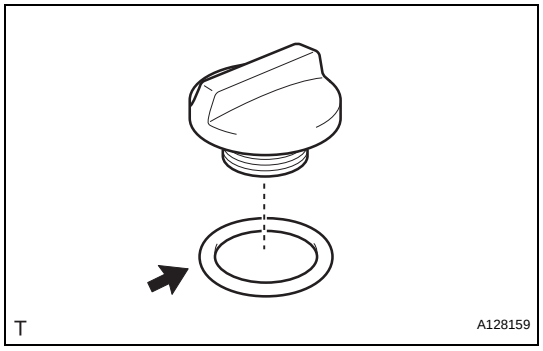


58. INSTALL VENTILATION VALVE SUB-ASSEMBLY

(a) Apply adhesive to the threads of the ventilation valve.

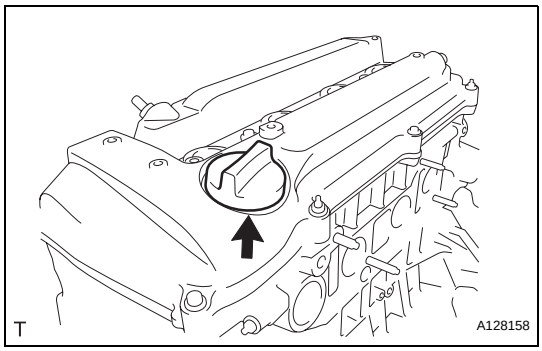


(b) Install the ventilation valve.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or Equivalent



59. INSTALL OIL FILLER CAP GASKET

(a) Install a new gasket to the cap.

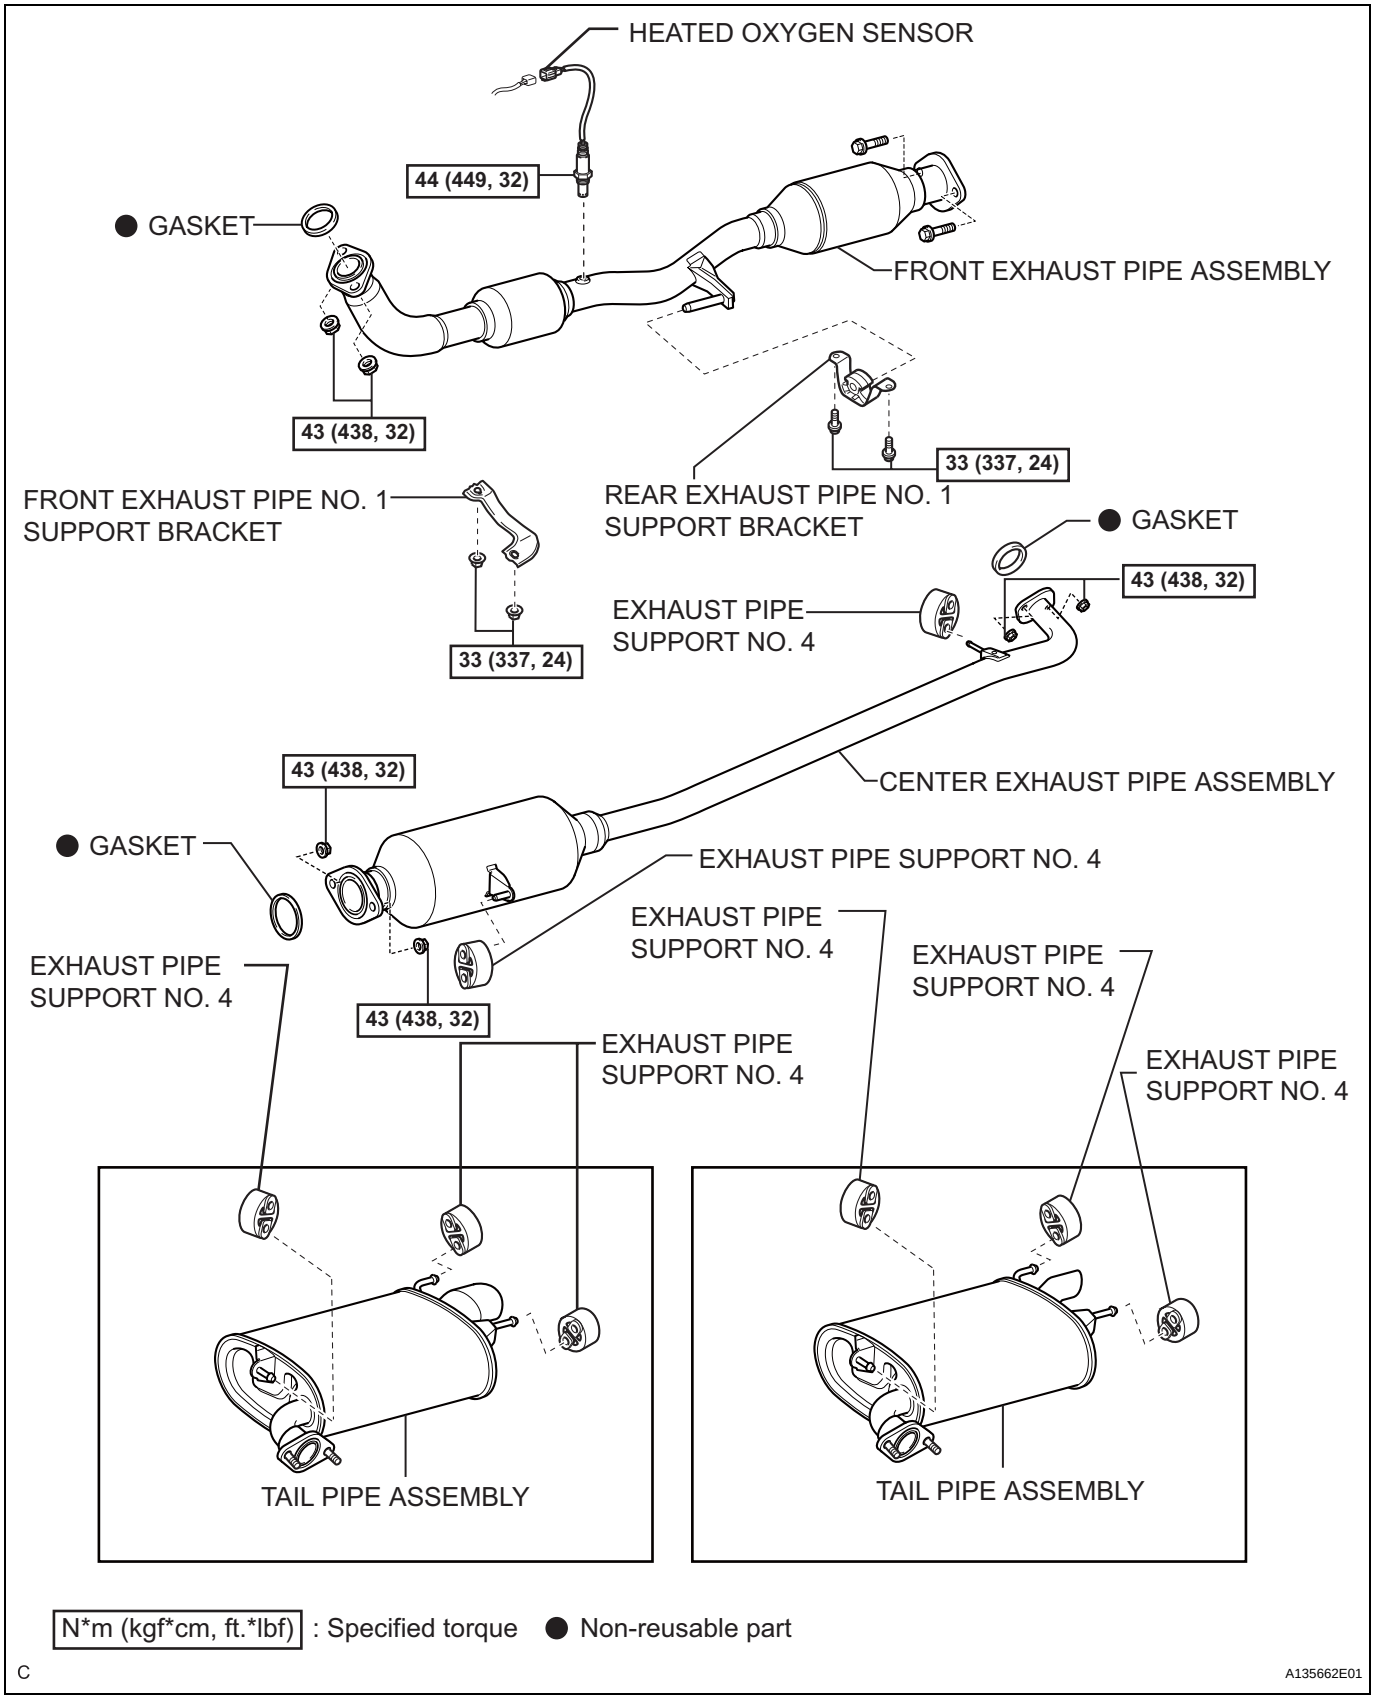


60. INSTALL OIL FILLER CAP SUB-ASSEMBLY

(a) Install the oil filler cap.

EXHAUST PIPE

COMPONENTS



N*m (kgf*cm, ft.*lbf) : Specified torque ● Non-reusable part

C

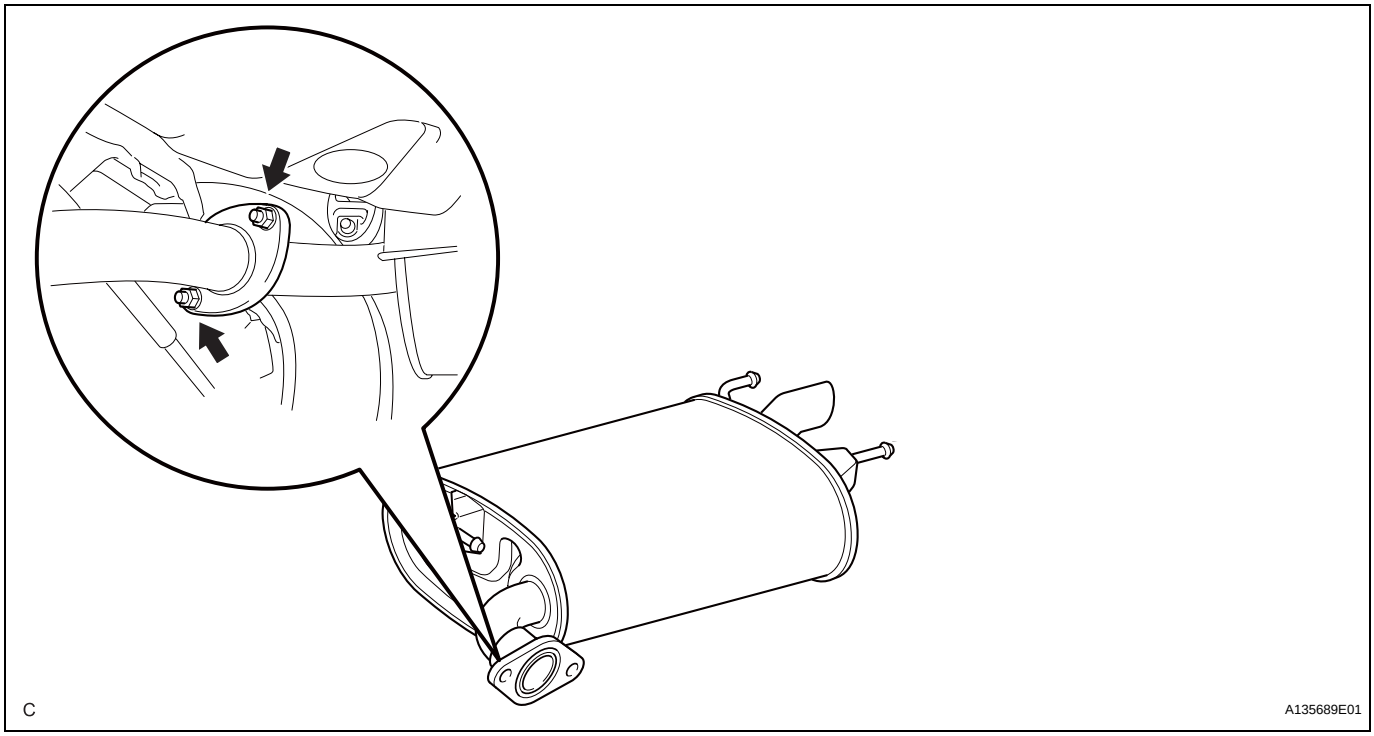
A135662E01

EX

REMOVAL

1. REMOVE TAIL PIPE ASSEMBLY

(a) Remove the 2 nuts and tail pipe assembly.

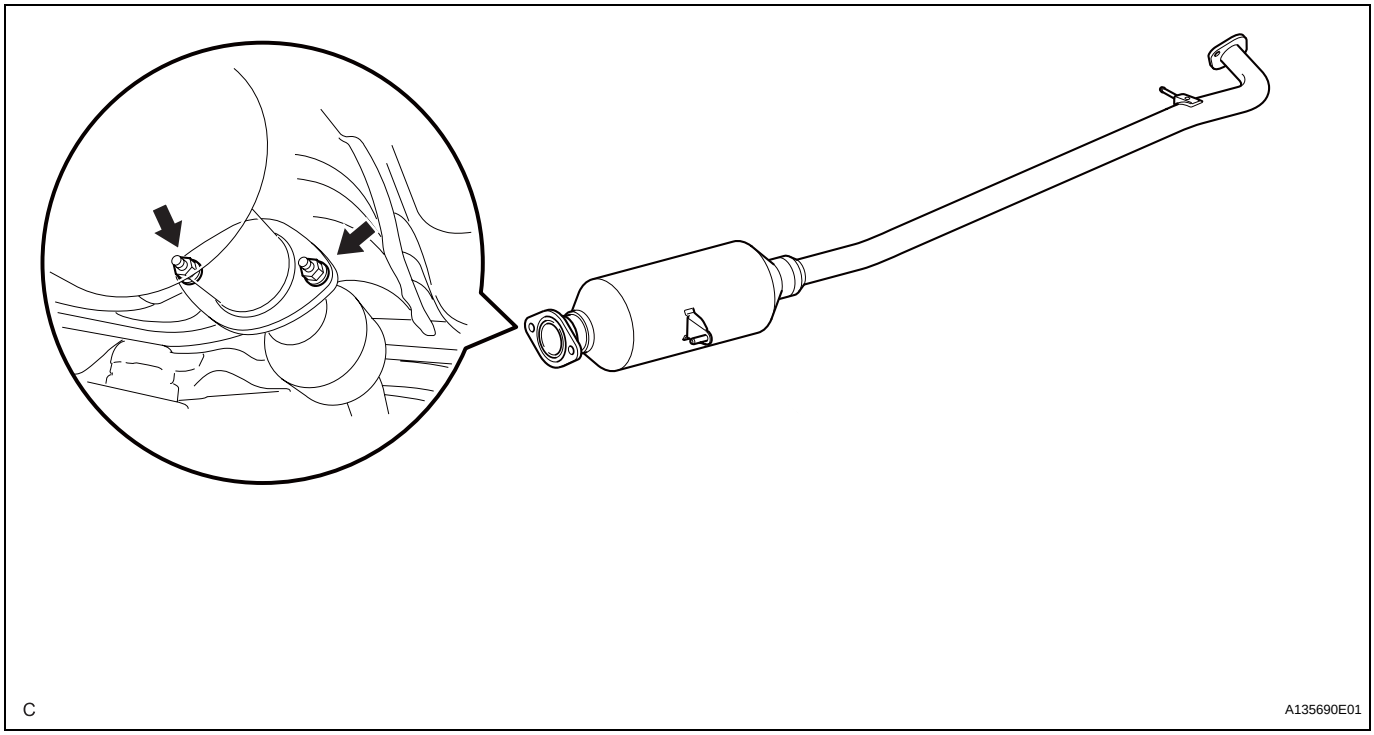


(b) Remove the gasket from the center exhaust pipe.

2. REMOVE CENTER EXHAUST PIPE ASSEMBLY

(a) Remove the 2 bolts, 2 nuts and center exhaust pipe assembly.

EX



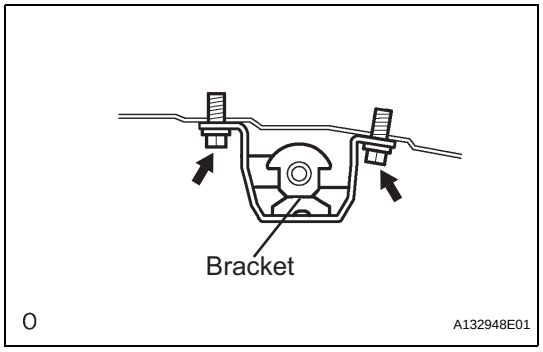
(b) Remove the gasket from the front exhaust pipe.

3. **REMOVE FRONT EXHAUST PIPE ASSEMBLY**
   (a) Remove the 2 nuts.

   (b) Remove the 2 nuts, front exhaust pipe No. 1 support bracket and front exhaust pipe assembly.
   (c) Remove the gasket from the exhaust manifold.

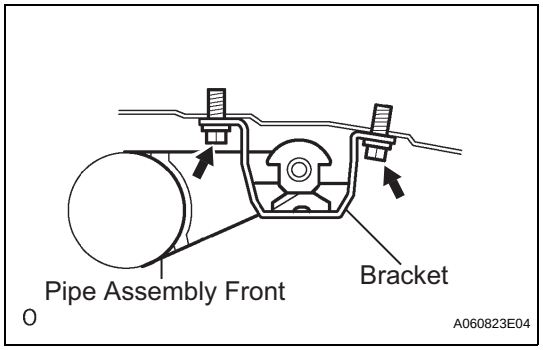
4. **REMOVE HEATED OXYGEN SENSOR (See page EC-24)**

5. **REMOVE REAR EXHAUST PIPE NO. 1 SUPPORT BRACKET**
   (a) Remove the 2 bolts and rear support bracket.



INSTALLATION

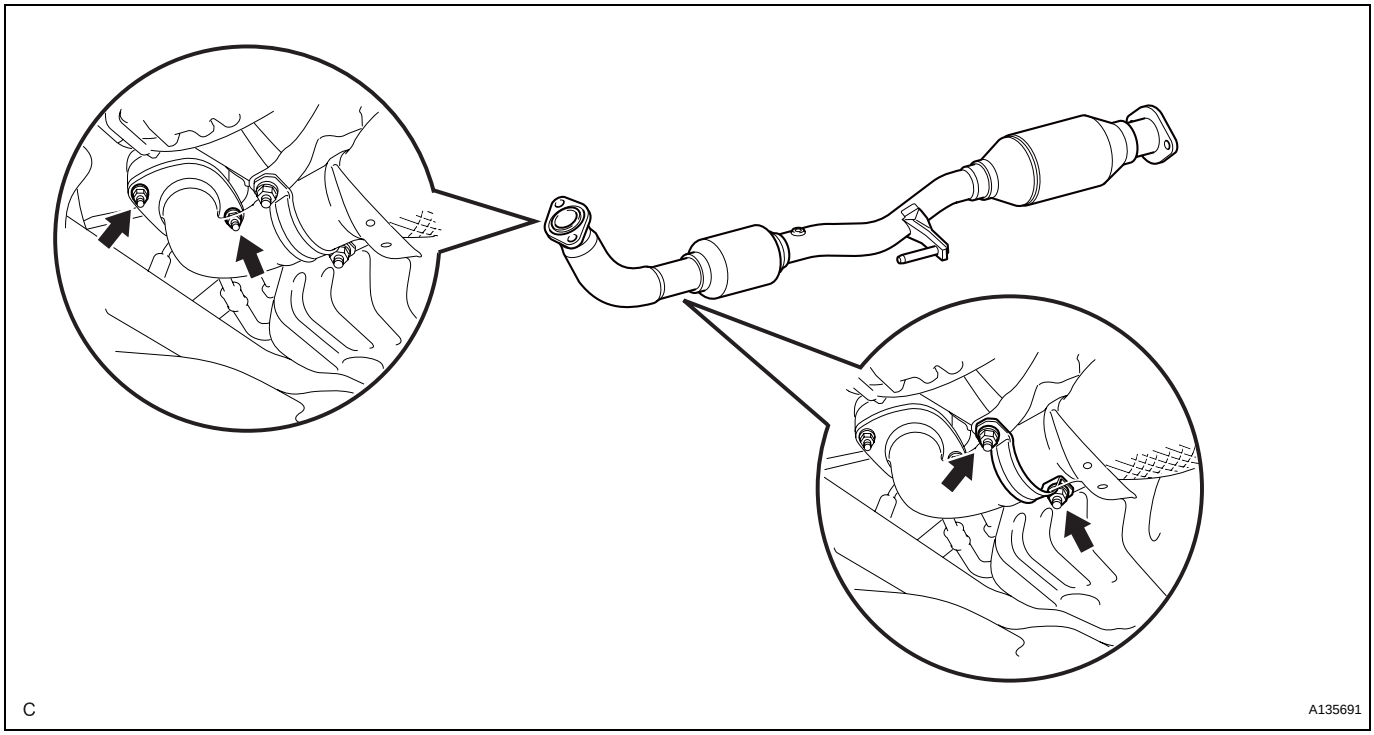
1. **INSTALL REAR EXHAUST PIPE NO. 1 SUPPORT BRACKET**
   (a) Install the rear support bracket with the 2 bolts.
   Torque: 33 N*m (337 kgf*cm, 24 ft.*lbf)
   NOTICE:
   Be sure to install the bracket in the correct direction.



2. **INSTALL HEATED OXYGEN SENSOR (See page EC-24)**

3. **INSTALL FRONT EXHAUST PIPE ASSEMBLY**
   (a) Install a new gasket onto the front exhaust pipe assembly.

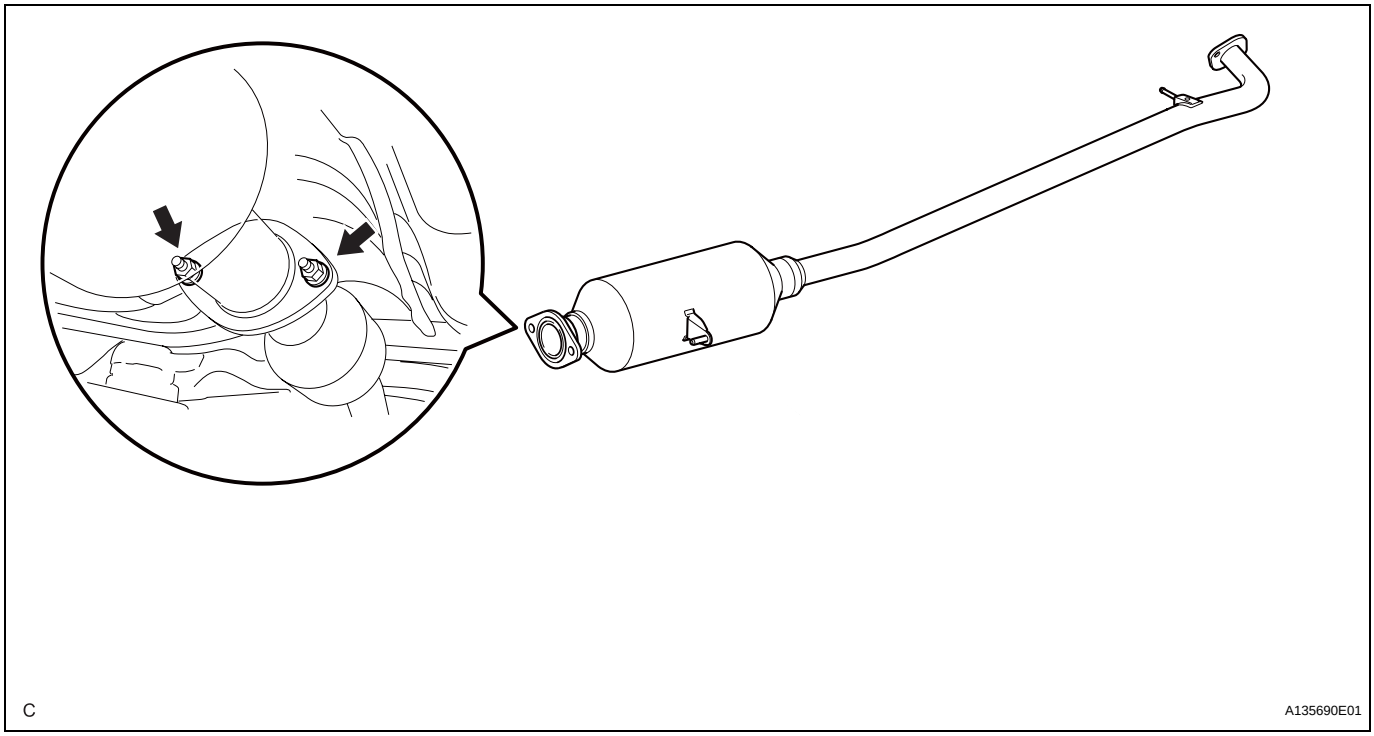
(b) Install the front exhaust pipe assembly with the 2 nuts.
Torque: 43 N*m (438 kgf*cm, 32 ft.*lbf)



(c) Install the front exhaust pipe No. 1 support bracket with the 2 nuts .
Torque: 33 N*m (337 kgf*cm, 24 ft.*lbf)

4. INSTALL CENTER EXHAUST PIPE ASSEMBLY

(a) Install a new gasket onto the front exhaust pipe.
(b) Install the center exhaust pipe assembly with the 2 bolts and 2 nuts.

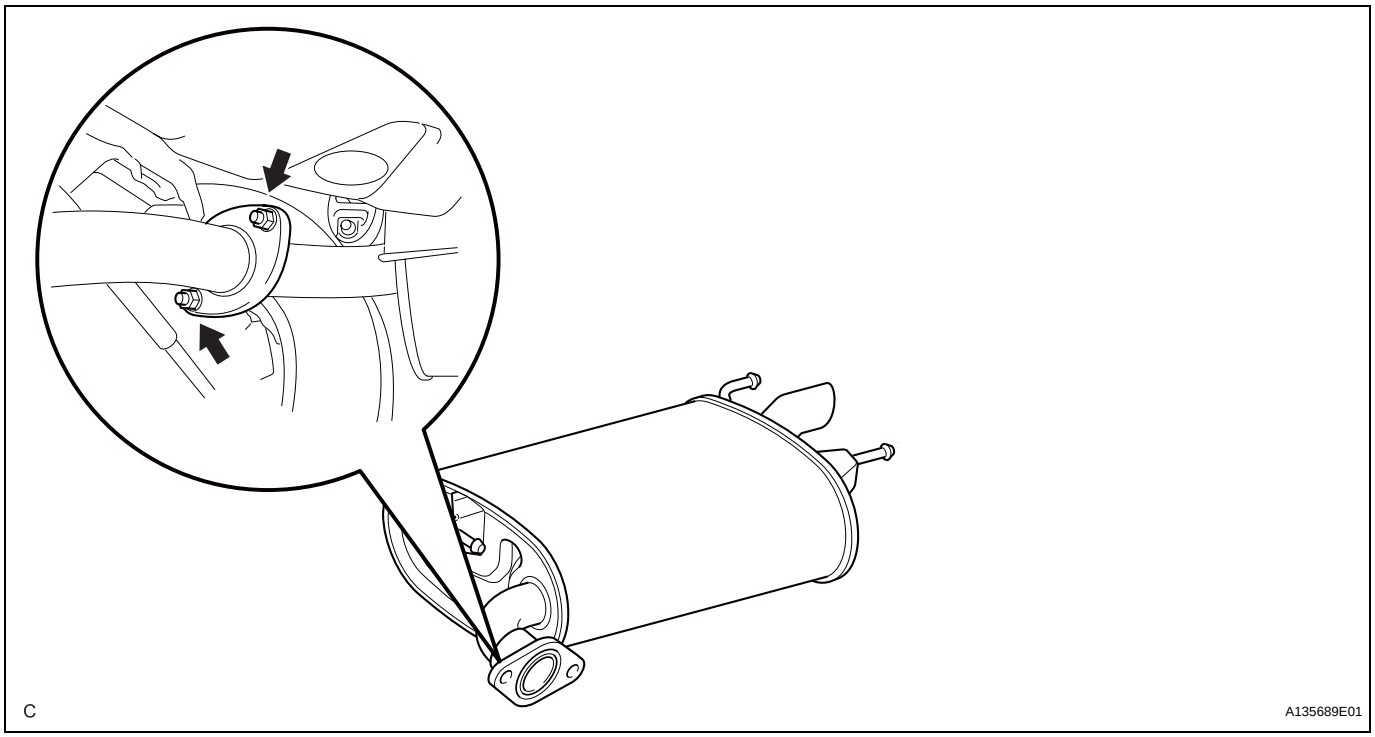


Torque: 43 N*m (438 kgf*cm, 32 ft.*lbf)

5. INSTALL TAIL PIPE ASSEMBLY

(a) Install a new gasket onto the tail pipe assembly.

(b) Install the tail pipe assembly with the 2 nuts.



Torque: 43 N*m (438 kgf*cm, 32 ft.*lbf)

6. CHECK FOR EXHAUST GAS LEAKS

If gas is leaking, tighten the areas necessary to stop the leak. Replace the damaged parts as necessary.

FUEL SYSTEM

PRECAUTION

1. PRECAUTION

(a) Before inspecting and repairing the fuel system, disconnect the negative (-) battery terminal.

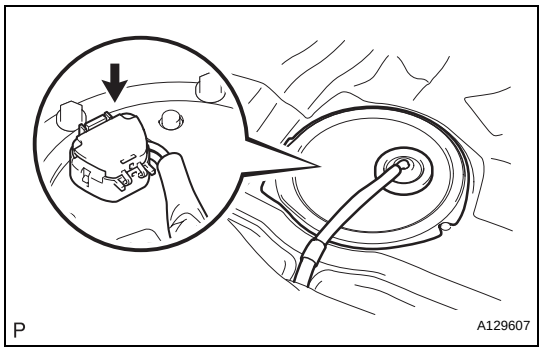
(b) Do not smoke or work near fire when handling the fuel system.

(c) Keep gasoline away from rubber or leather parts.

2. DISCHARGE FUEL SYSTEM PRESSURE

CAUTION:

- **Perform the following procedures to prevent fuel from spilling out before removing any fuel system parts.**
- **Pressure will still remain in the fuel line even after performing the following procedures. When disconnecting the fuel line, cover it with a shop rag or a piece of cloth to prevent fuel from spraying or coming out.**



(a) Disconnect the fuel pump connector.

(1) Remove the rear seat cushion assembly.

(2) Remove the rear floor service hole cover.

(3) Disconnect the fuel pump connector.

(4) Start the engine.

(5) After the engine stops, turn the ignition switch off.

HINT:

DTC P0171/25 (fuel problem) and/or P0191/49 (fuel pressure sensor signal error) may be detected.

(6) Crank the engine again. Check that the engine does not start.

(7) Remove the fuel tank cap to discharge pressure from the fuel tank.

(8) Disconnect the negative (-) battery terminal.

(9) Reconnect the fuel pump connector.

(10) Install the rear floor service hole cover.

(11) Install the rear seat.

3. FUEL SYSTEM

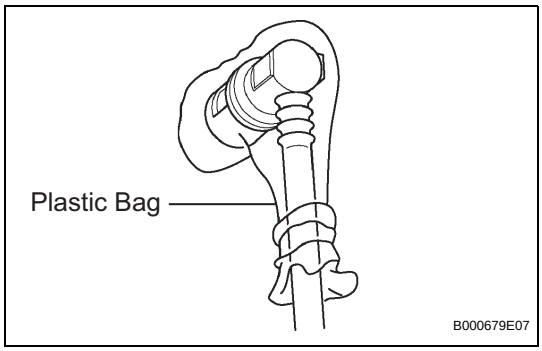
(a) When disconnecting the high fuel pressure line, a large amount of gasoline will spill out, so observe the following procedures:

(1) Discharge the fuel system pressure. (step 2)

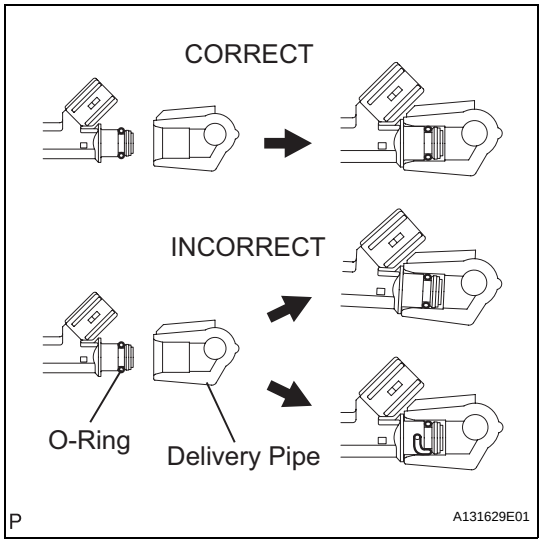
(2) Disconnect the fuel pump tube (See page FU-23).

(3) Drain the fuel that remains inside the fuel pump tube.

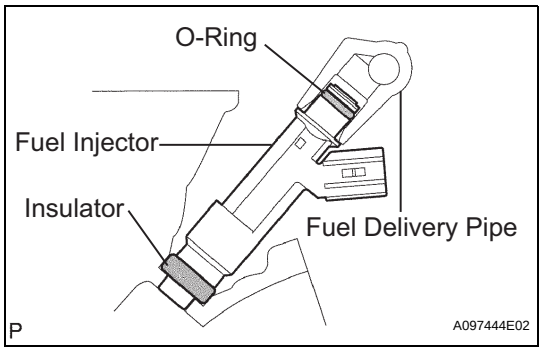
FU



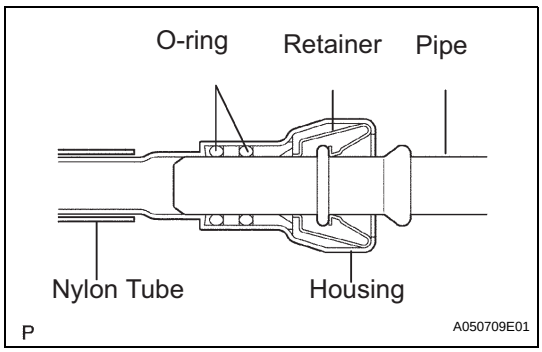
(4) To protect the disconnected fuel pump tube from damage and contamination, cover it with a plastic bag.
(5) Put a container under the connection part.



(b) Observe the following precautions when removing and installing the fuel injectors:
(1) Never reuse an O-ring.
(2) When placing a new O-ring on the injector, do not damage the O-ring.
(3) Coat a new O-ring with gasoline before installing it.
NOTICE:
Do not use engine oil, gear oil or brake fluid.

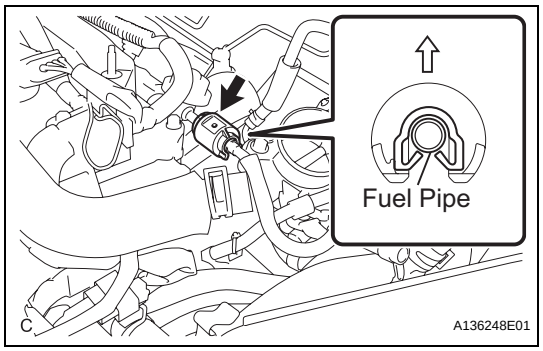


(c) Install the injector to the delivery pipe and cylinder head, as shown in the illustration.
NOTICE:
Before installing the injector, be sure to apply grease or gasoline to the place where the delivery pipe or cylinder head contacts the O-ring of the injector.



(d) Observe the following precautions when disconnecting the fuel delivery pipe (metallic type):
HINT:
The structure of the metallic connector is shown on the left.

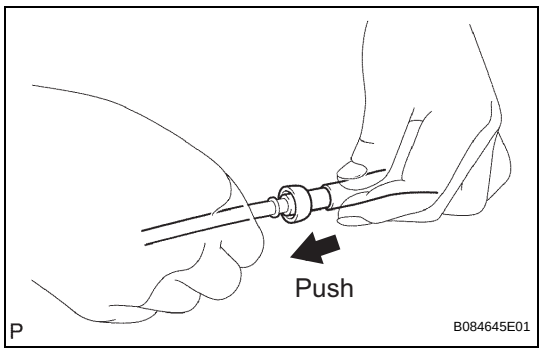
FU



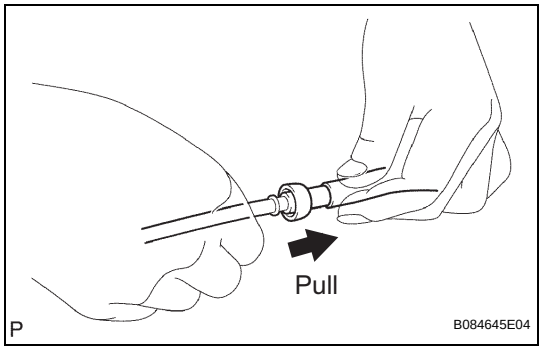
(1) Remove the No. 2 fuel pipe clamp.
HINT:
The No. 2 fuel pipe clamp cannot be reused.

(2) Find the metallic connector of the fuel tube assembly.
(3) Assemble SST to the connection as shown in the illustration.
SST 09268-21010
(4) Turn the SST, align the retainers inside the connector with the SST chamfered parts and insert SST into the connector.
(5) Slide the SST and the connector together towards the fuel tube assembly.

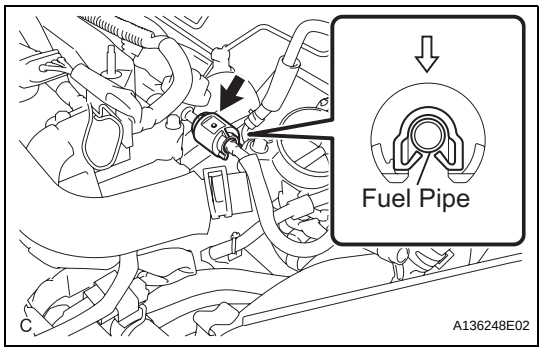
FU



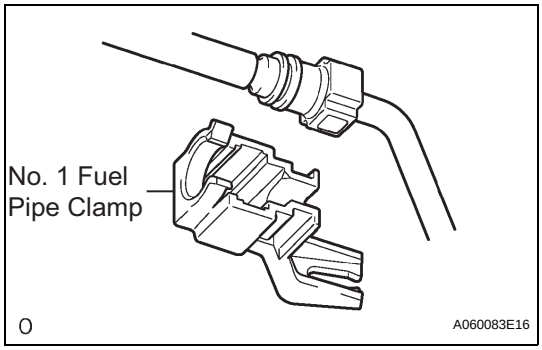
(e) Observe the following precautions when connecting the fuel tube connector (metallic type):
(1) Check if there is any damage or foreign objects on the connecting part of the pipe.
(2) Match the axis of the connector with the axis of the pipe, and push into the connector until the connector makes a "click" sound. If the connection is tight, apply a small amount of fresh engine oil to the tip of the pipe.



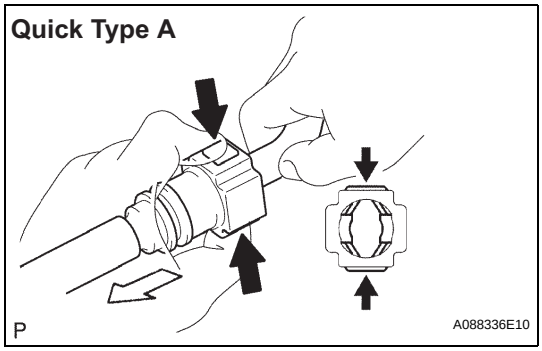
(3) After finishing the connection, check if the pipe and the connector are securely connected by pulling on them.
(4) Check for fuel leaks.



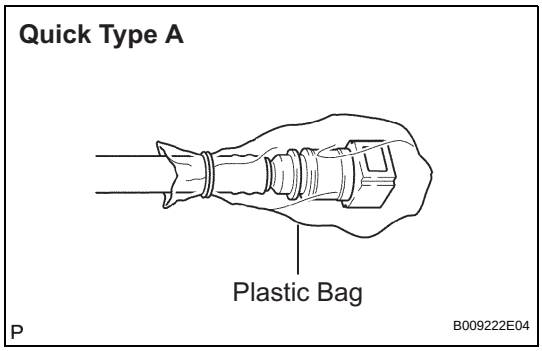
(5) Install a new No. 2 fuel pipe clamp.



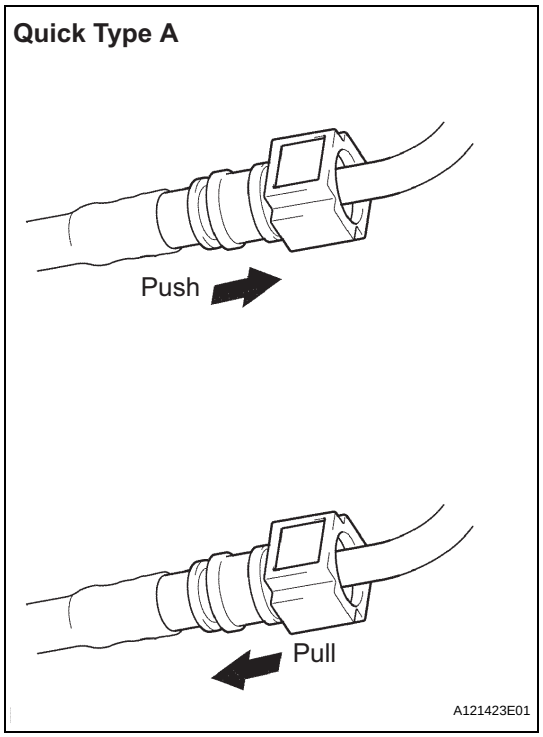
(f) Observe the following precautions when disconnecting the fuel tube connectors (Quick type A):
(1) Remove the No. 1 fuel pipe clamp from the tube connector.
(2) Check that there is no dirt or other foreign objects on the pipe and around the connector before disconnecting them. Clean them if necessary.



(3) Disconnect the connector from the pipe by hand.
(4) When the connector and the pipe are stuck, push in and pull on the connector to release it. Pull the connector out of the pipe carefully.
(5) Check that there is no dirt or other foreign objects on the sealing surface of the disconnected pipe. Clean it away if necessary.

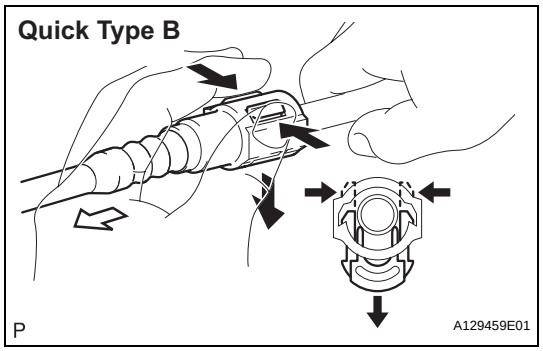


(6) Do not damage the disconnected pipe and connector, and prevent entry of foreign objects by covering them with a plastic bag.

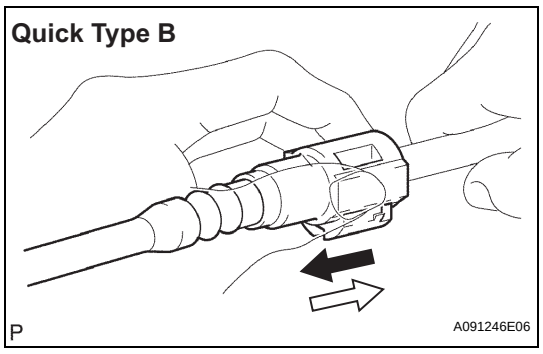


(g) Observe the following precautions when connecting the fuel tube connectors (Quick Type A):
(1) Check if there is any damage or foreign objects on the connecting parts of the pipes.
(2) Line up the two parts of the pipes to be connected, and push them together until the connector makes a "click" sound. If the pipe is difficult to push into the connector, apply a small amount of clean engine oil to the tip of the pipe and reinsert it.
(3) After connecting the pipes, check that the pipe and connector are securely connected by pulling on them.
(4) Check for fuel leaks.

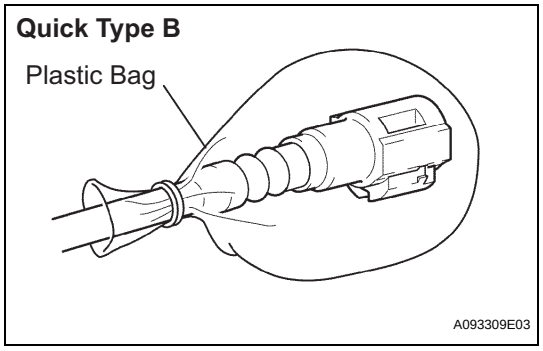
FU



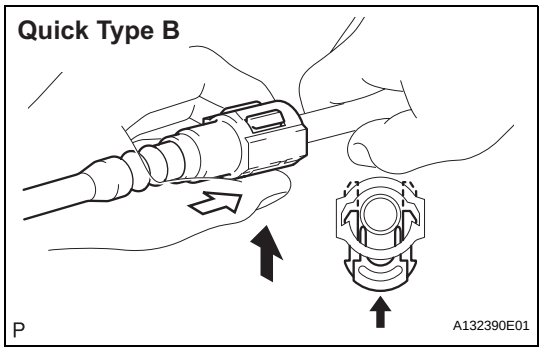
(h) Observe the following precautions when disconnecting the fuel tube connector (Quick type B):
(1) Before disconnecting the connector, clean off any dirt that may be present.
(2) Pinch the tabs of the fuel tube retainer to disengage the 2 claws. Push the retainer down as shown in the illustration.
HINT:
Be sure to disconnect the connector by hand.



(3) If the connector and pipe are stuck, hold the fuel pipe by hand and push and pull on the connector. Pull the two pipes apart to separate the connector.
(4) If there is any dirt or any other foreign objects on the sealing surfaces of the disconnected pipes, clean them if necessary.



(5) Do not damage the disconnected pipe and connector, and prevent entry of foreign objects by covering them with a plastic bag.



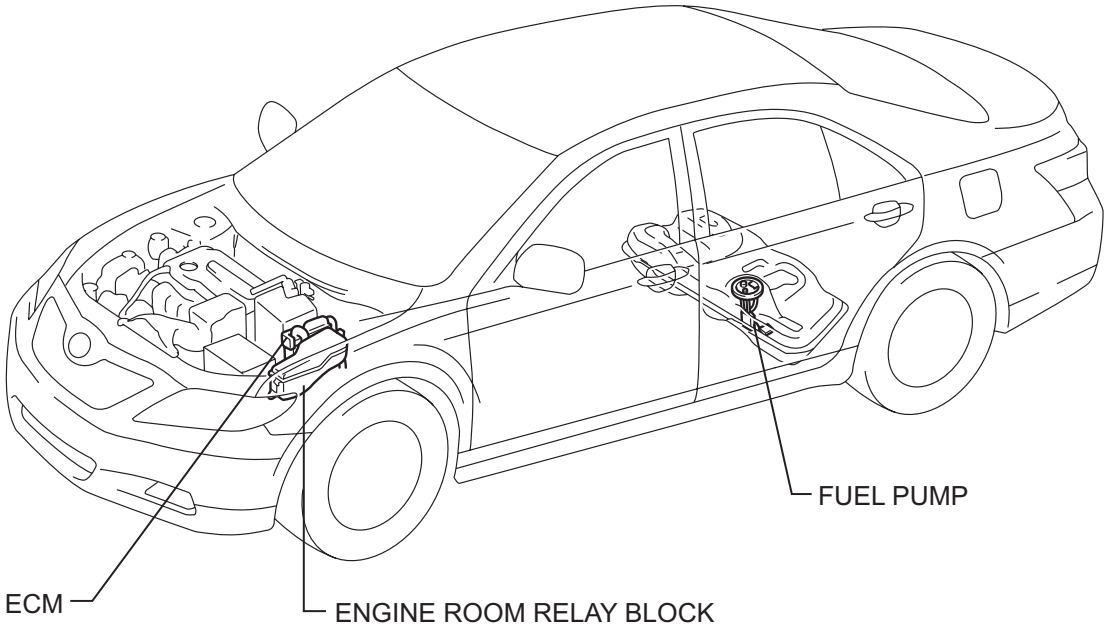
(i) Observe the following precautions when connecting the fuel tube connector (Quick Type B):
(1) Line up the two parts of the pipes to be connected, and fully push the fuel tube connector and pipe together until they are fully seated. Next, push the retainer into the connector until its claws lock. If the pipe is difficult to push in to the connector, apply a small amount of clean engine oil to the tip of the pipe and reinsert it.
(2) After connecting the pipes, check that the pipe and connector are securely connected by pulling on them.
(3) Check for fuel leaks.

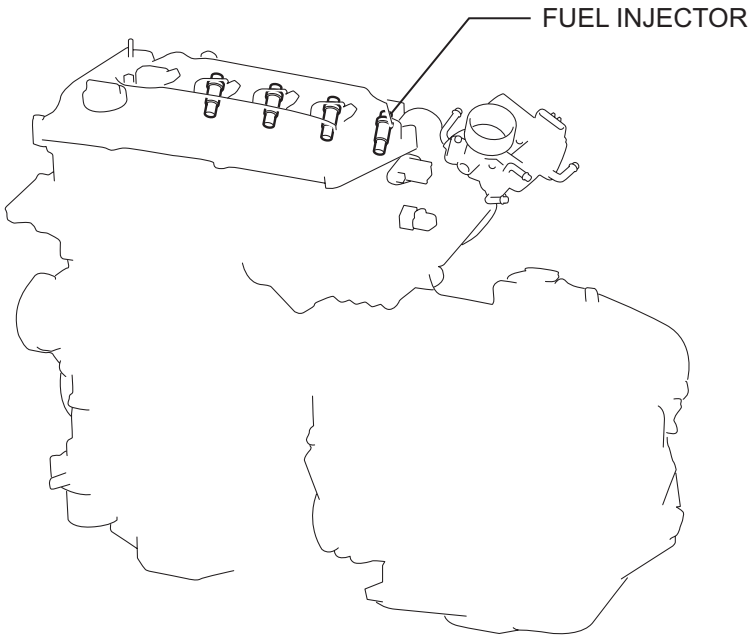
(j) Observe the following precautions when handling a nylon tube:
CAUTION:
- **Do not twist the connection part of the nylon tube and the quick connector when connecting them.**
- **Do not bend or twist the nylon tube.**
- **Do not remove the EPDM protector on the outside of the nylon tube.**
- **Do not close the piping by bending the nylon tube.**

4. CHECK FOR FUEL LEAKS

(a) Check that there are no fuel leaks from the fuel system after doing any maintenance or repairs (See page FU-9).

PARTS LOCATION



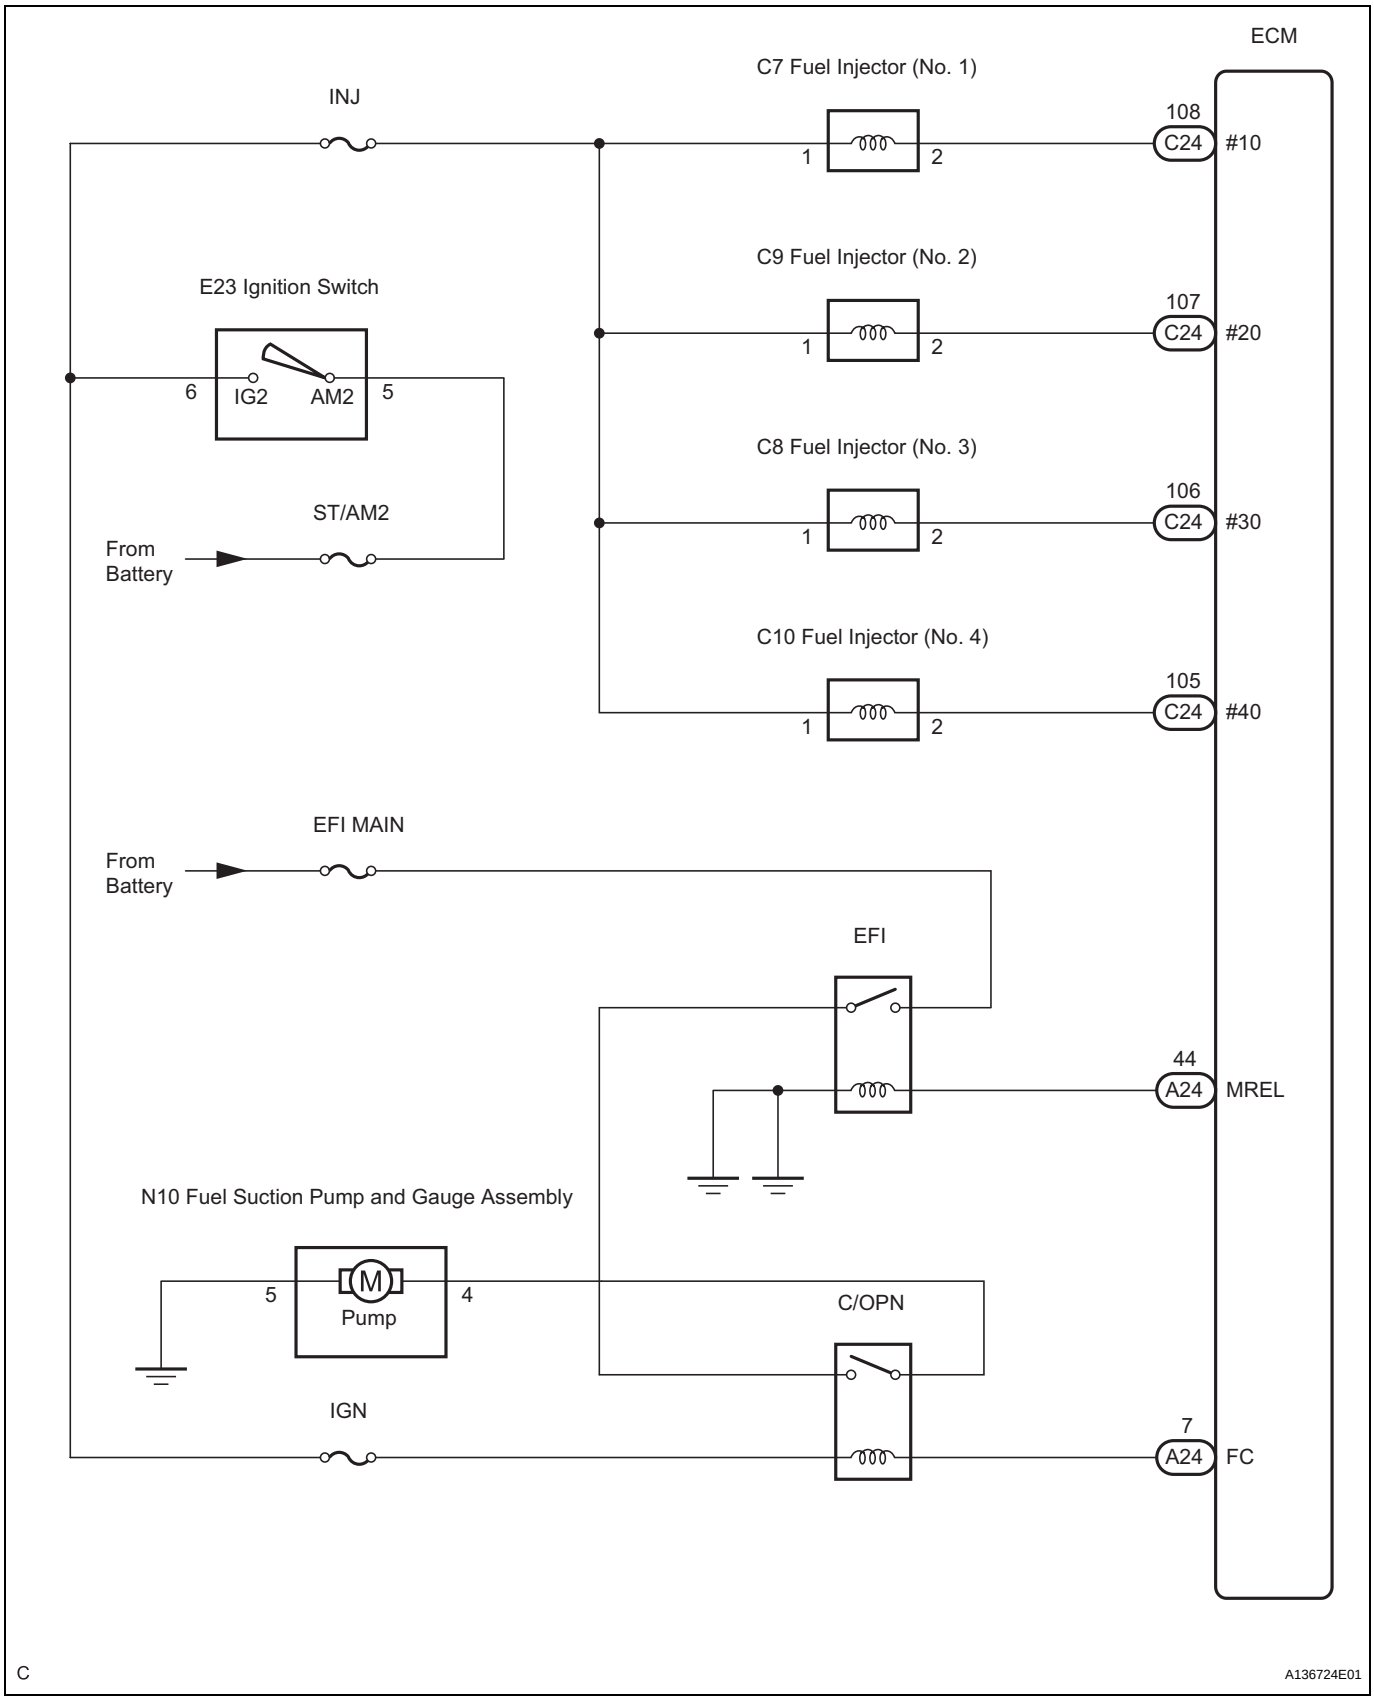


N

A136012E01

FU

SYSTEM DIAGRAM



ON-VEHICLE INSPECTION

1. CHECK FUEL PUMP OPERATION AND FOR FUEL LEAKS

(a) Check fuel pump operation.
  (1) Connect the intelligent tester to the DLC3.
  (2) Turn the ignition switch to the ON position and push the intelligent tester main switch on.
  NOTICE:
  Do not start the engine.
  (3) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / FUEL PUMP / SPD.
  (4) Check for pressure in the fuel inlet tube from the fuel line. Check that sound of fuel flowing in the fuel tank can be heard. If no sound can be heard, check the integration relay, fuel pump, ECM and wiring connector.

(b) Check for fuel leaks.
  (1) Check that there are no fuel leaks anywhere on the system after performing maintenance. If there is a fuel leak, repair or replace parts as necessary.

(c) Turn the ignition switch off.

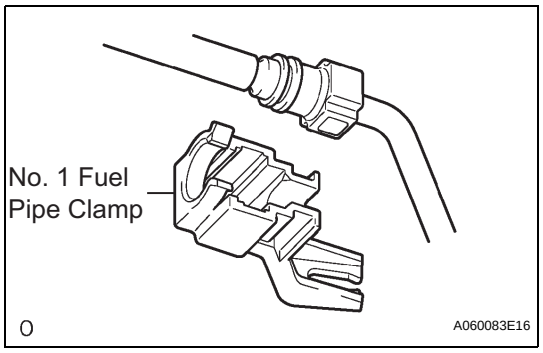
(d) Disconnect the intelligent tester from the DLC3.

2. CHECK FUEL PRESSURE

(a) Using a voltmeter, measure the battery voltage.
  Standard voltage:
  11 to 14 V

(b) Discharge the fuel system pressure (See page FU-1).

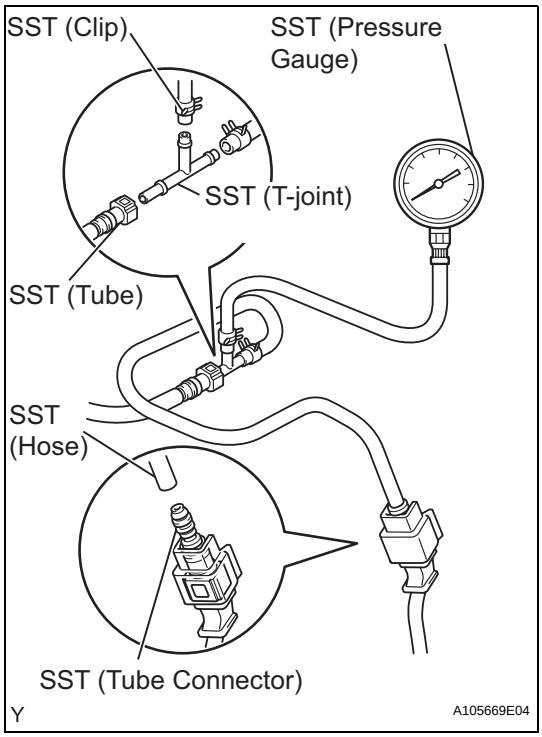
(c) Disconnect the cable from the negative (-) battery terminal.



(d) Remove the No. 1 fuel pipe clamp from the fuel tube connector.

(e) Disconnect the fuel hose from the fuel main tube.
  CAUTION:
  - **Always read the precautions (See page FU-1) before disconnecting the fuel tube connector (quick type).**
  - **The fuel pipe line may spray fuel as a result of retained pressure that remains in it. Do not allow fuel to be sprayed in the engine compartment.**

FU



(f) Install SST (pressure gauge) and the fuel tube connector using SST as shown in the illustration.
SST 09268-31011 (09268-41500, 90467-13001, 95336-08070), 09268-45014 (09268-41200, 09268-41220, 09268-41250)

(g) Wipe up any gasoline.

(h) Reconnect the cable to the negative (-) battery terminal.

(i) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / FUEL PUMP / SPD.

(j) Measure the fuel pressure.
Fuel pressure:

304 to 343 kPa (3.1 to 3.5 kgf/cm^2, 44.1 to 49.7 psi)

If the pressure is high, replace the fuel pressure regulator.

If the pressure is low, check the fuel hoses and connections, fuel pump, fuel filter and fuel pressure regulator.

(k) Disconnect the intelligent tester from the DLC3.

(l) Start the engine.

(m) Measure the fuel pressure at idle.
Fuel pressure:

304 to 343 kPa (3.1 to 3.5 kgf/cm^2, 44.1 to 49.7 psi)

(n) Stop the engine.

(o) Check that the fuel pressure remains as specified for 5 minutes after the engine has stopped.
Fuel pressure:

147 kPa (1.5 kgf/cm^2, 21 psi) or more

If the pressure is not as specified, check the fuel pump, pressure regulator and/or injectors.

(p) After checking the fuel pressure, disconnect the cable from the negative battery terminal and carefully remove the SST to prevent gasoline from splashing.

(q) Reconnect the fuel main tube (fuel tube connector).
CAUTION:
Always read the precautions (See page FU-1) before connecting the fuel tube connector (quick type).

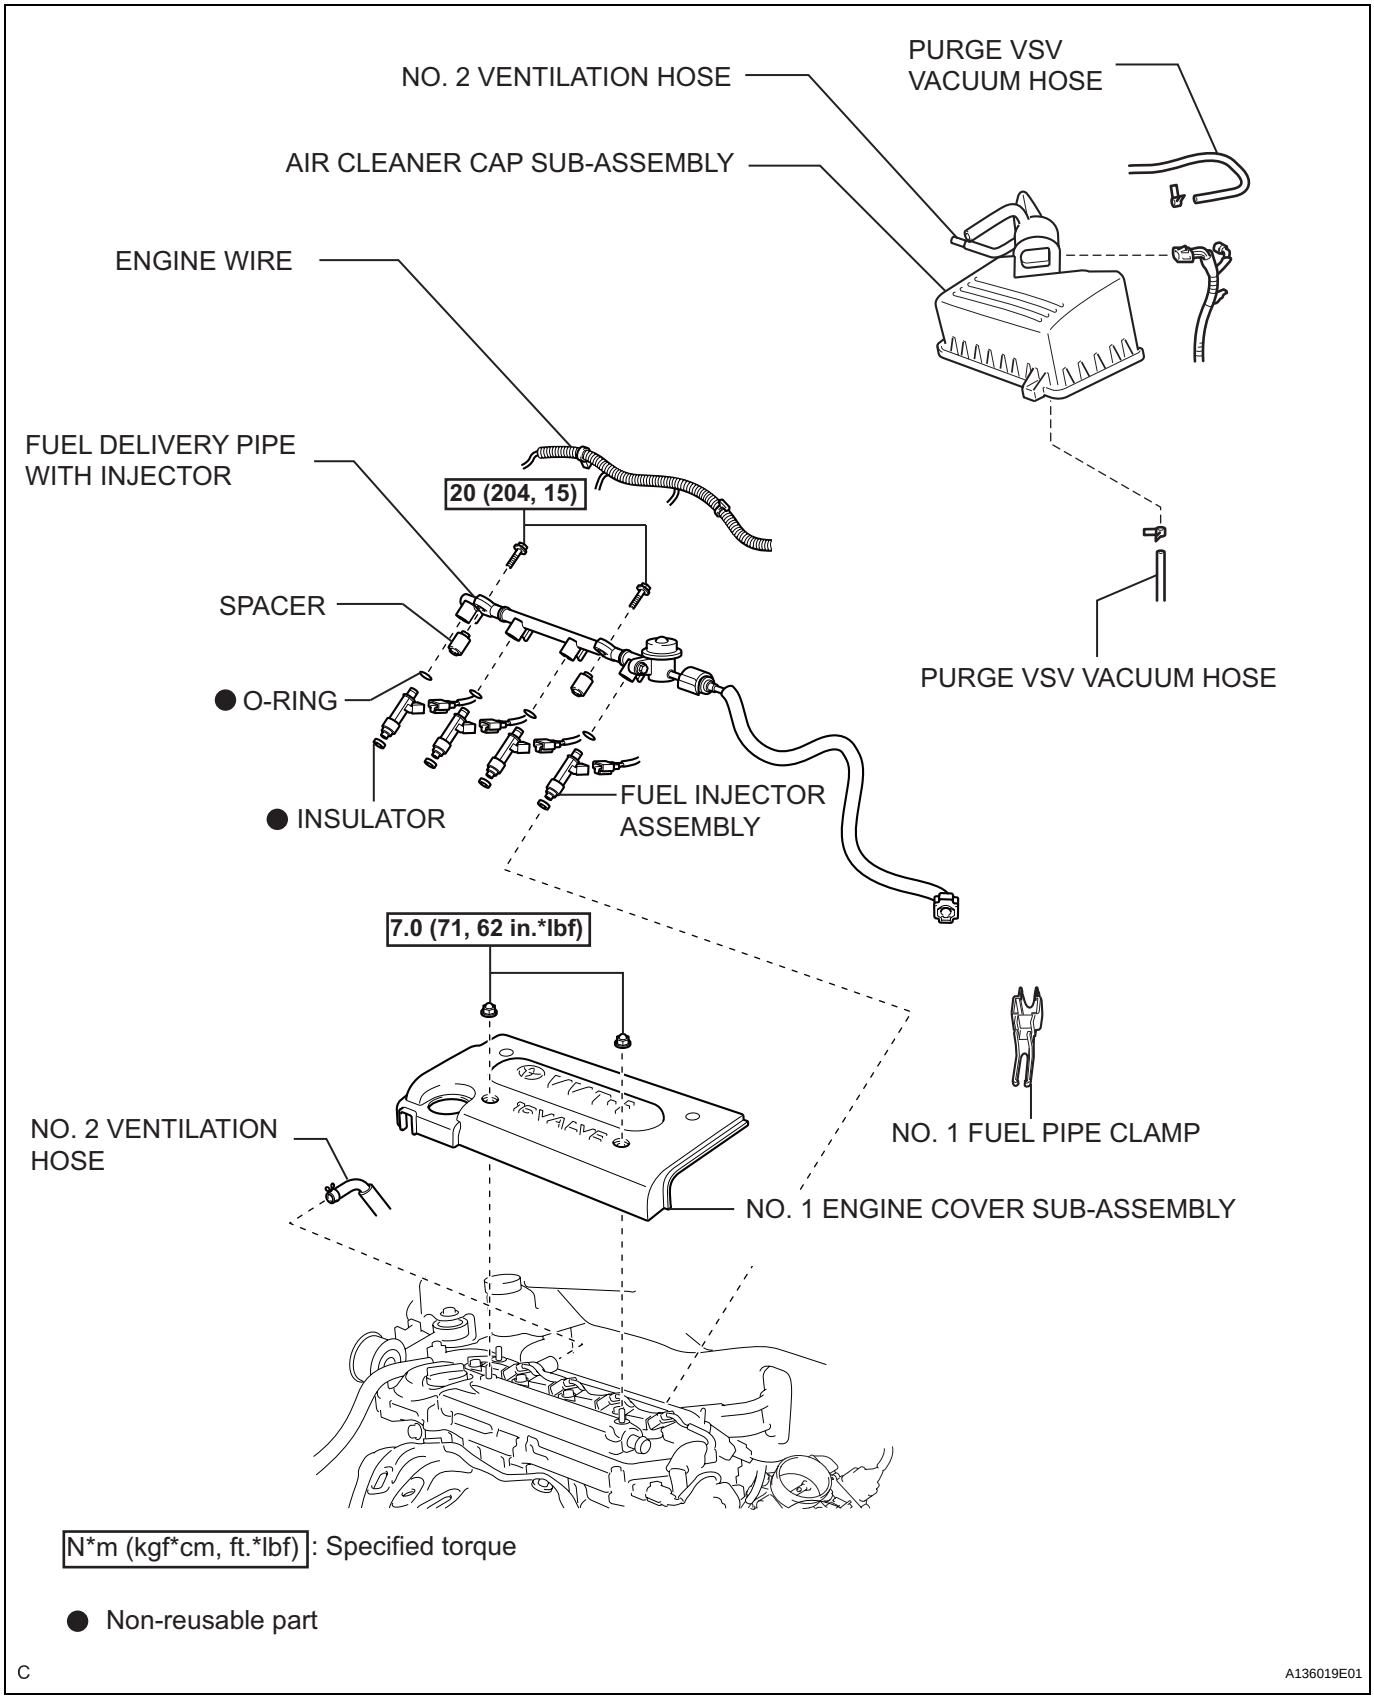
(r) Install the No. 1 fuel pipe clamp to the fuel tube connector.

(s) Check for fuel leaks (Step 1).

FU

FUEL INJECTOR

COMPONENTS



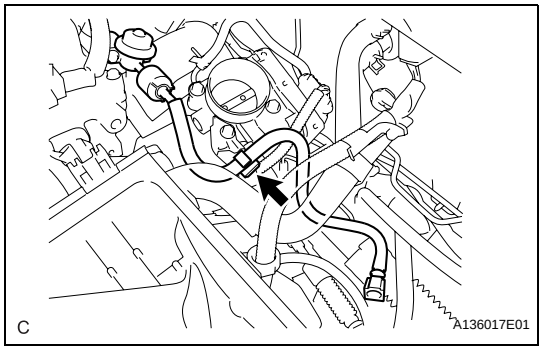
FU

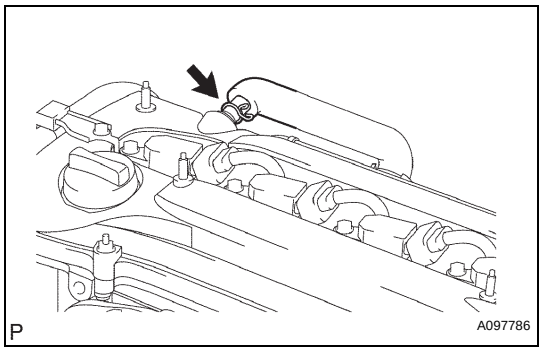
REMOVAL

1. **DISCHARGE FUEL SYSTEM PRESSURE**
   HINT:
   See page FU-1.
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-416)**
4. **REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-94)**
5. **DISCONNECT FUEL TUBE SUB-ASSEMBLY**
   (a) Remove the No. 1 fuel pipe clamp.
   NOTICE:
   Check for foreign matter on the pipe and around the connector before disconnecting the quick connector. Clean the connector if necessary.

   (b) If the connector and pipe are stuck, pinch the connector, and push and pull the pipe to disconnect them.
   NOTICE:
   - **Do not use any tools in this procedure.**
   - **Check for foreign matter on the sealing surface of the disconnected pipe. Clean it if necessary.**

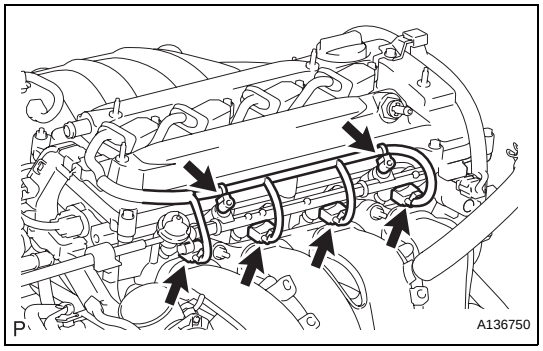
   (c) Separate the fuel tube from the fuel hose clamp.





6. DISCONNECT NO. 2 VENTILATION HOSE

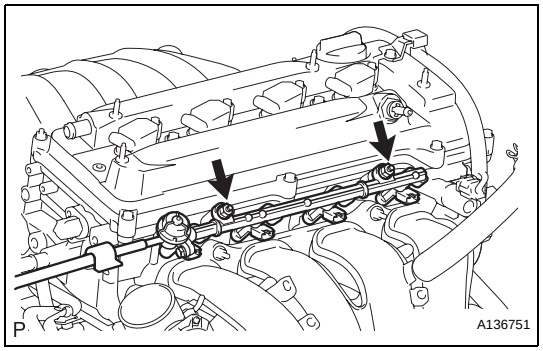
(a) Disconnect the No. 2 ventilation hose from the ventilation valve.



7. REMOVE FUEL DELIVERY PIPE WITH INJECTOR

(a) Remove the 2 wire harness clamps.

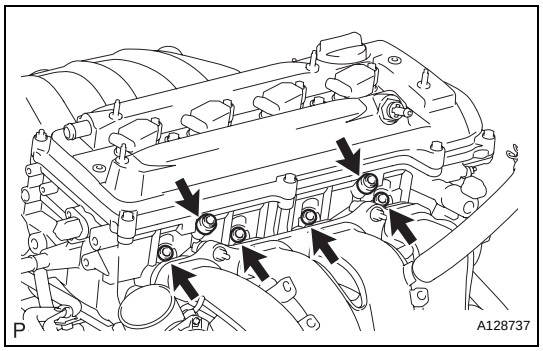
(b) Disconnect the 4 fuel injector connectors.



(c) Remove the 2 bolts, then remove the fuel delivery pipe together with the 4 fuel injectors.

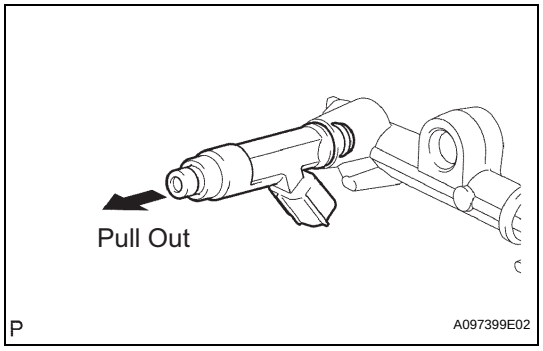
NOTICE:

Be careful not to drop the fuel injectors when removing the fuel delivery pipe.



(d) Remove the 2 delivery pipe spacers from the cylinder head.

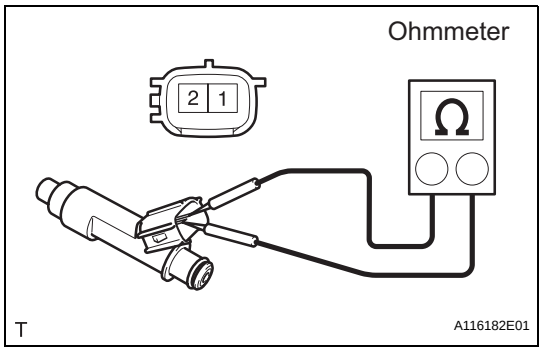
(e) Remove the 4 insulators from the cylinder head.



8. REMOVE FUEL INJECTOR ASSEMBLY

(a) Pull out the 4 injectors from the delivery pipe.

(b) Remove the 4 O-rings from the injectors.



INSPECTION

1. INSPECT FUEL INJECTOR ASSEMBLY

(a) Measure the resistance between the injector terminals.

Standard resistance:

11.6 to 12.4 Ω at 20°C (68°F)

If the result is not as specified, replace the injector.

(b) Inspect the injector injection volume.

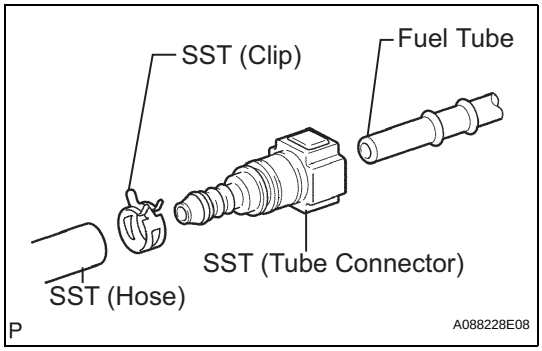
CAUTION:

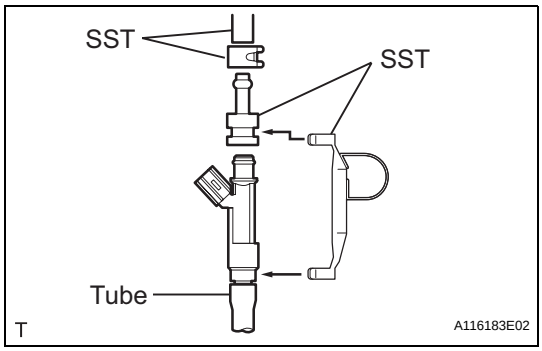
Keep the injector away from sparks during this test.

(1) Connect SST (fuel tube connector) to SST (hose), then connect them to the fuel pipe (vehicle side).

SST 09268-31011 (09268-41500, 90467-13001, 95336-08070)

(2) Install the O-ring to the fuel injector.





(3) Connect SST (adapter and hose) to the injector, and hold the injector and union with SST (clamp).

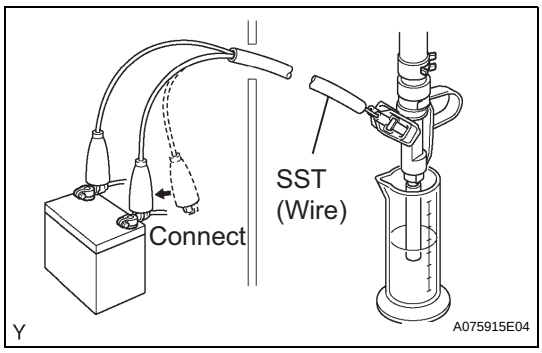
SST 09268-31011 (09268-41110, 09268-41300, 90467-13001)

(4) Put the injector into the graduated cylinder.

CAUTION:

Install a suitable vinyl tube onto the injector to contain gasoline spray.

(5) Operate the fuel pump.



(6) Connect SST (wire) to the injector and the battery for 15 seconds, and measure the injection volume with the graduated cylinder. Test each injector 2 or 3 times.

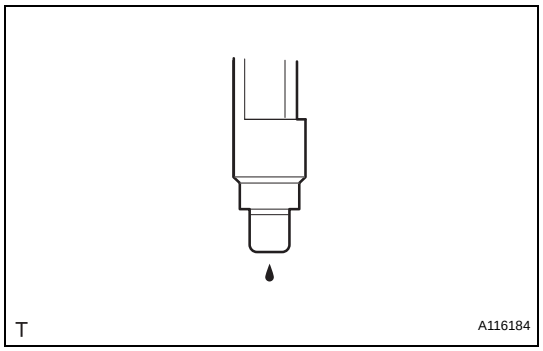
SST 09842-30080

Standard injection volume:

76 to 92 cm^3 (4.6 to 5.6 cu in.) per 15 seconds

Standard difference between each injector:

16 cm^3 (0.98 cu in.) or less

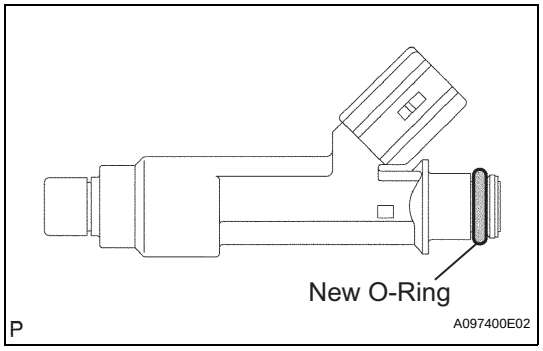


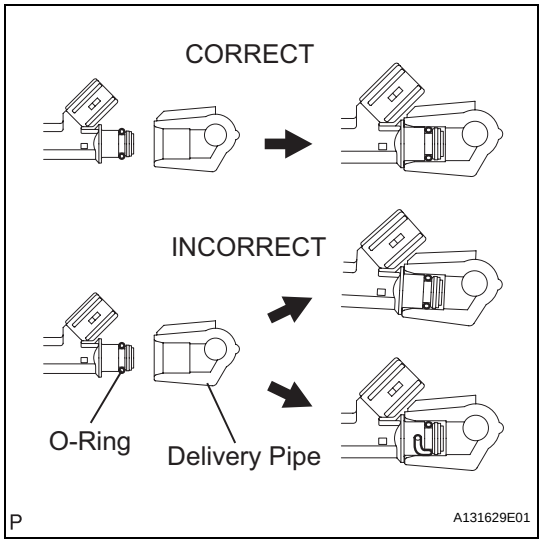
(c) Inspect the fuel leakage.
(1) Disconnect the SST (wire) tester probes from the battery and check the fuel leakage from the injector.
Standard fuel drop:
1 drop or less per 12 minutes
(2) Turn the ignition switch off.
(3) Disconnect the cable from the negative (-) battery terminal.
(4) Remove the SST.
(5) Disconnect the intelligent tester from the DLC3.
(6) Reconnect the fuel inlet hose (rear fuel pipe) to the fuel main tube.

INSTALLATION

1. INSTALL FUEL INJECTOR ASSEMBLY

(a) Apply a light coat of gasoline or spindle oil to new O-rings, then install one onto each fuel injector.

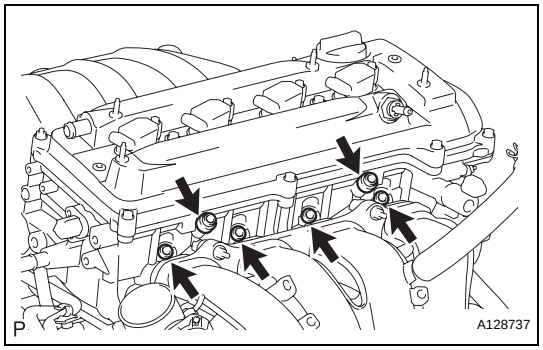


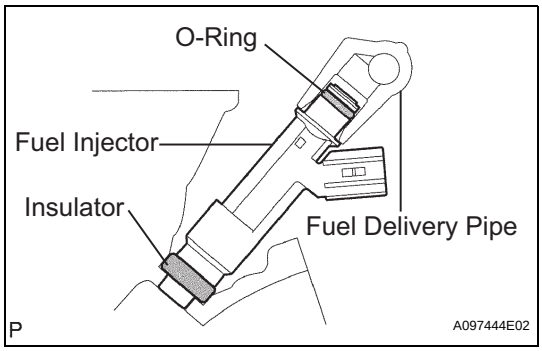


(b) Apply a light coat of gasoline or spindle oil to the part of the fuel delivery pipe which comes into contact with the O-ring of the fuel injector.
(c) Apply a light coat of gasoline or spindle oil to the O-ring again, then install the right and left fuel injectors onto the fuel delivery pipe.
NOTICE:
Make sure that the O-ring is not cracked or jammed before installing the injector.
(d) Check that the fuel injector rotates smoothly. If the fuel injector does not rotate, replace the O-ring.

2. INSTALL FUEL DELIVERY PIPE WITH INJECTOR

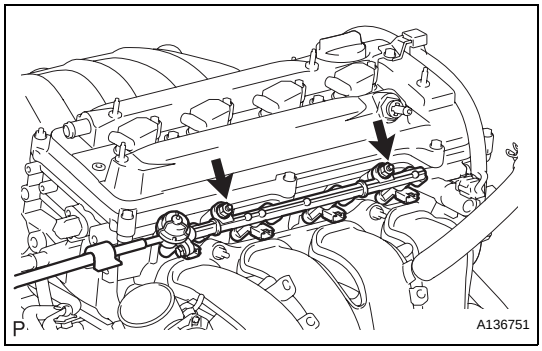
(a) Install 4 new insulators into the cylinder head.
(b) Install the 2 delivery pipe spacers onto the cylinder head.



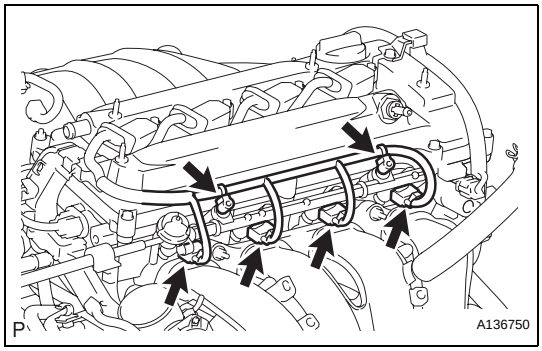


(c) Install the fuel delivery pipe together with the 4 fuel injectors, then temporarily tighten the 2 bolts.
NOTICE:
Be careful not to drop the fuel injectors when installing the fuel delivery pipe.

(d) Check that the fuel injector rotates smoothly.
If the fuel injector does not rotate smoothly, replace the O-ring.

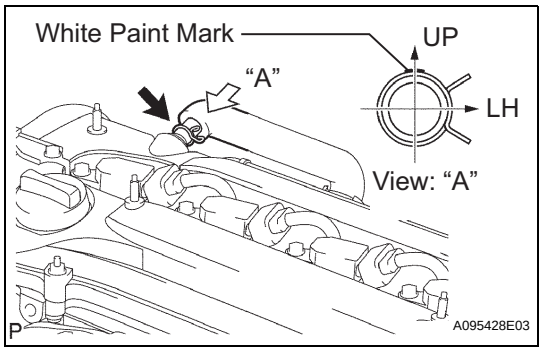


(e) Tighten the 2 bolts to the specified torque.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)



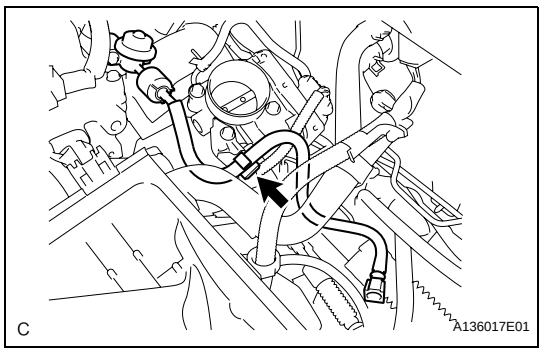
(f) Connect the 4 fuel injector connectors.

(g) Install the 2 wire harness clamps.



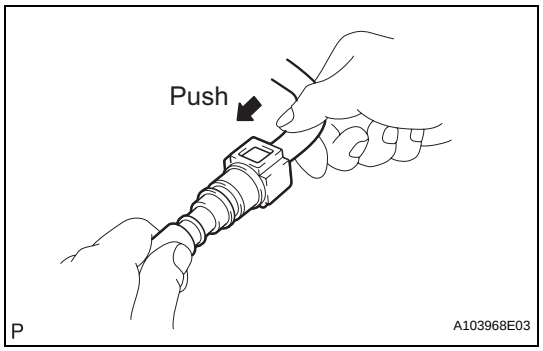
3. INSTALL NO. 2 VENTILATION HOSE

(a) Connect the ventilation hose to the ventilation valve.
NOTICE:
Make sure that the paint mark and hose clamp are positioned as shown in the illustration after connecting the hose.

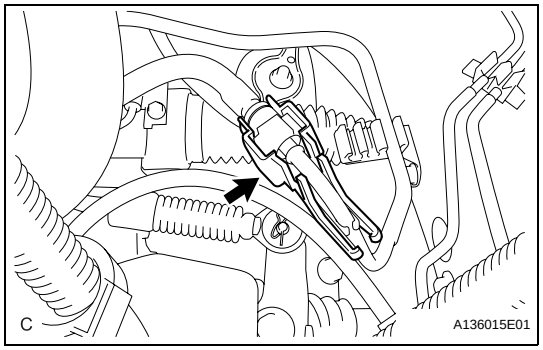


4. CONNECT FUEL TUBE SUB-ASSEMBLY

(a) Install the fuel tube to the fuel hose clamp.



(b) Push the fuel tube connector until it makes a "click" sound.



(c) Install the No. 1 fuel pipe clamp.

5. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-419)**

6. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

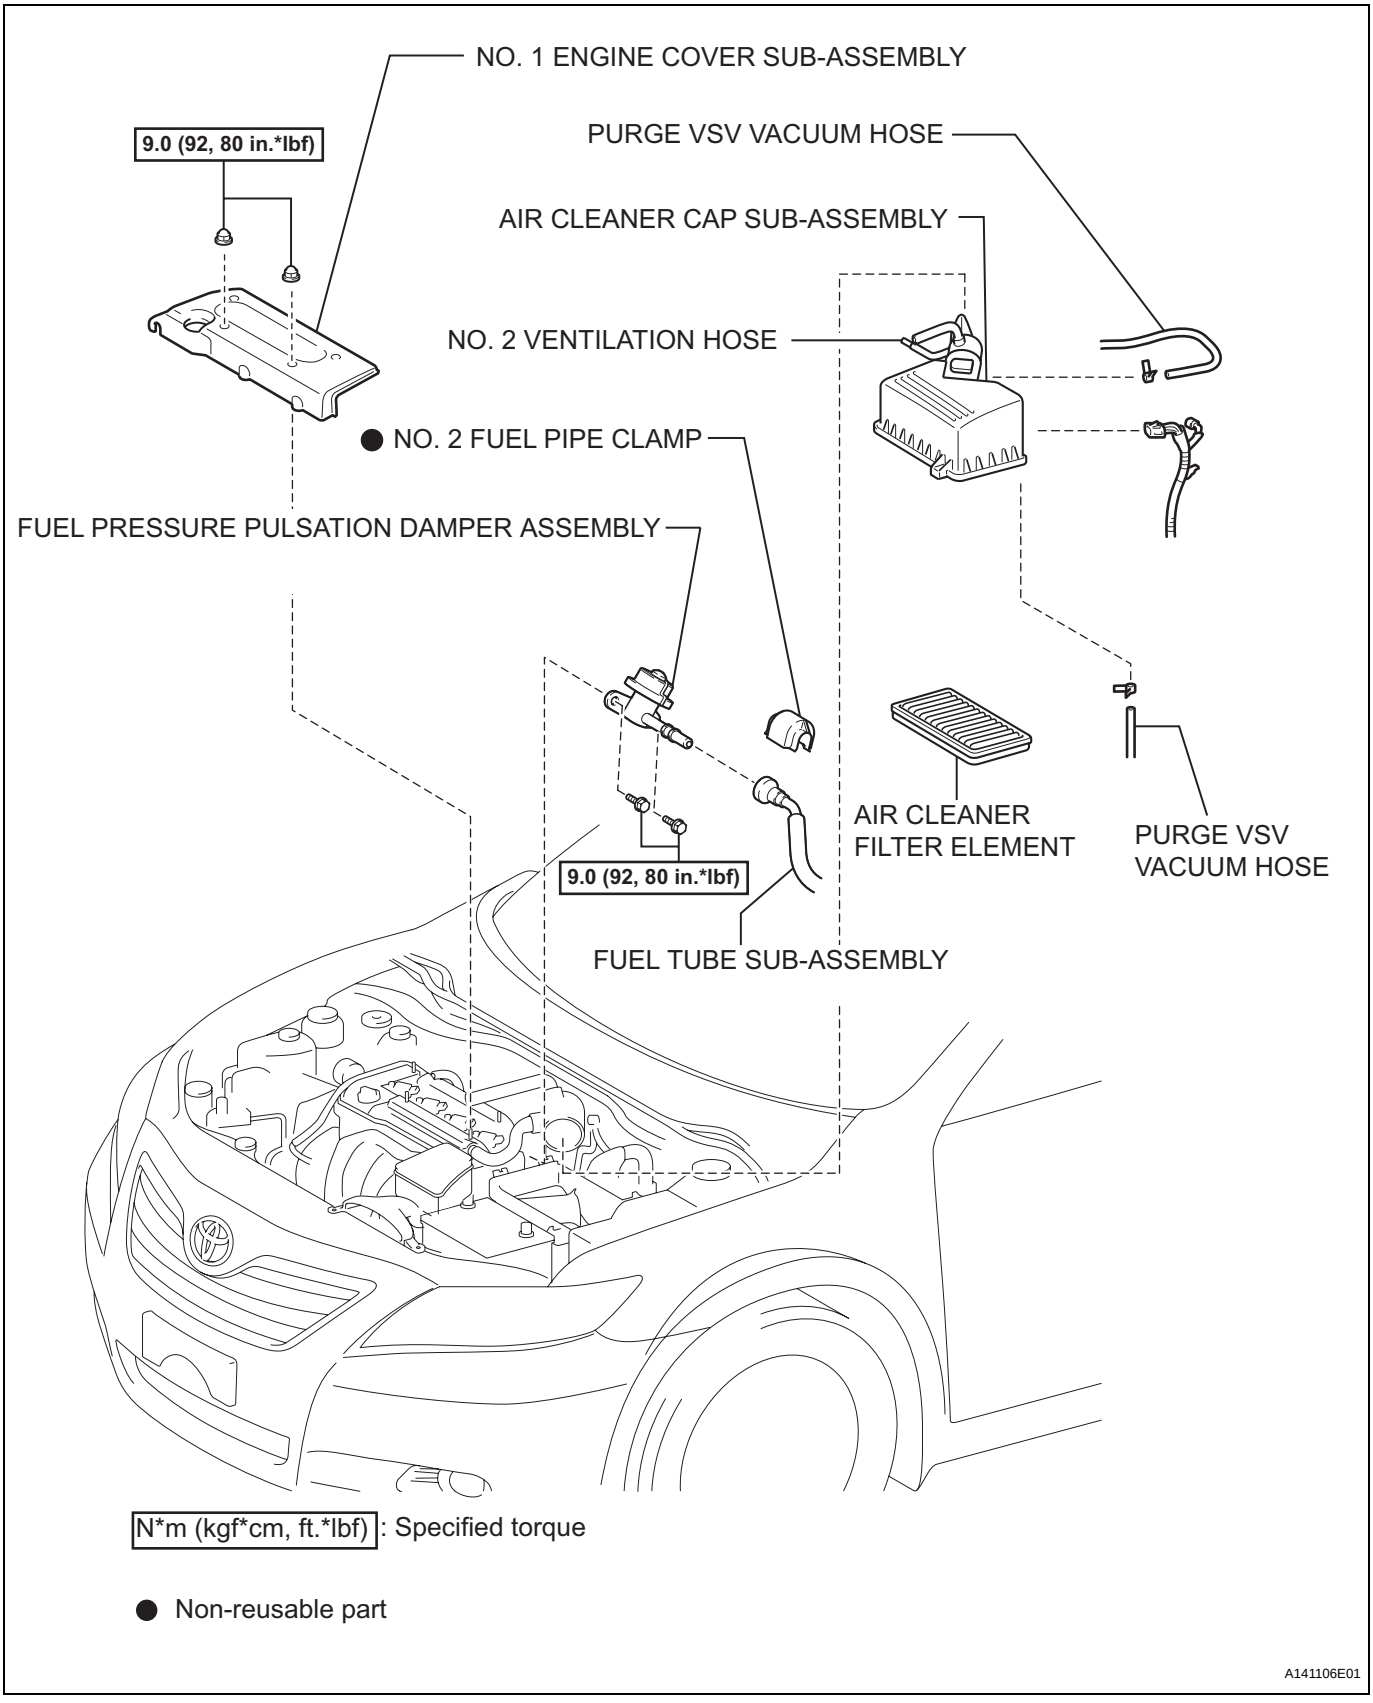
7. **CHECK FOR FUEL LEAKS**
HINT:
See page FU-9.

8. **INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-121)**

FU

FUEL PRESSURE PULSATION DAMPER

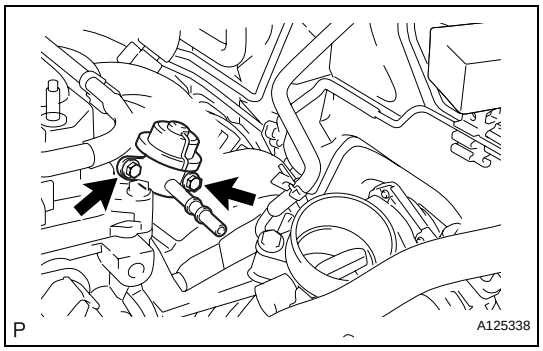
COMPONENTS

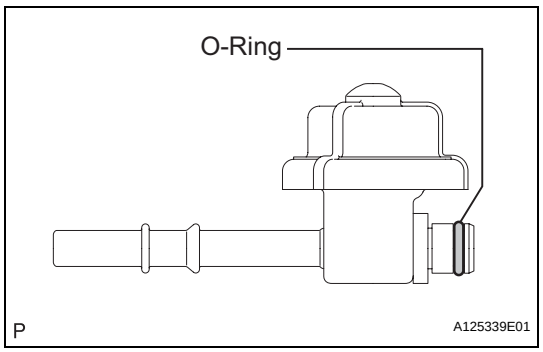


FU

REMOVAL

1. **DISCHARGE FUEL SYSTEM PRESSURE**
   HINT:
   See page FU-1.
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-94)**
4. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-416)**
5. **DISCONNECT FUEL TUBE SUB-ASSEMBLY**
   HINT:
   Disconnect the metallic type connector (See page FU-1).
6. **REMOVE FUEL PRESSURE PULSATION DAMPER ASSEMBLY**
   (a) Remove the 2 bolts and fuel pressure pulsation damper.

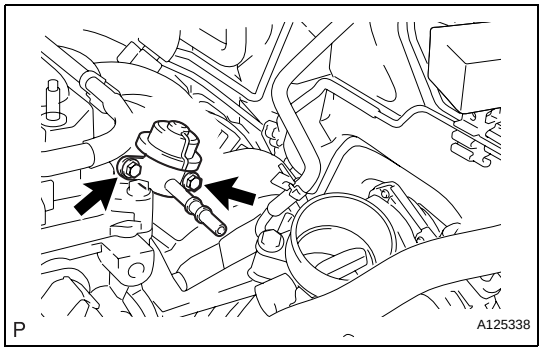




INSTALLATION

1. **INSTALL FUEL PRESSURE PULSATION DAMPER ASSEMBLY**
   (a) Apply a light coat of gasoline or spindle oil to the O-ring of the fuel pressure pulsation damper.

   (b) Install the fuel pressure pulsation damper with the 2 bolts.
   Torque: 9.0 N*m (90 kgf*cm, 80 in.*lbf)
   NOTICE:
   Make sure that the O-ring is not cracked or jammed before installing the damper.
2. **INSTALL FUEL TUBE SUB-ASSEMBLY**
   HINT:
   Connect the metallic type connector (See page FU-1).
3. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-419)**
4. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**



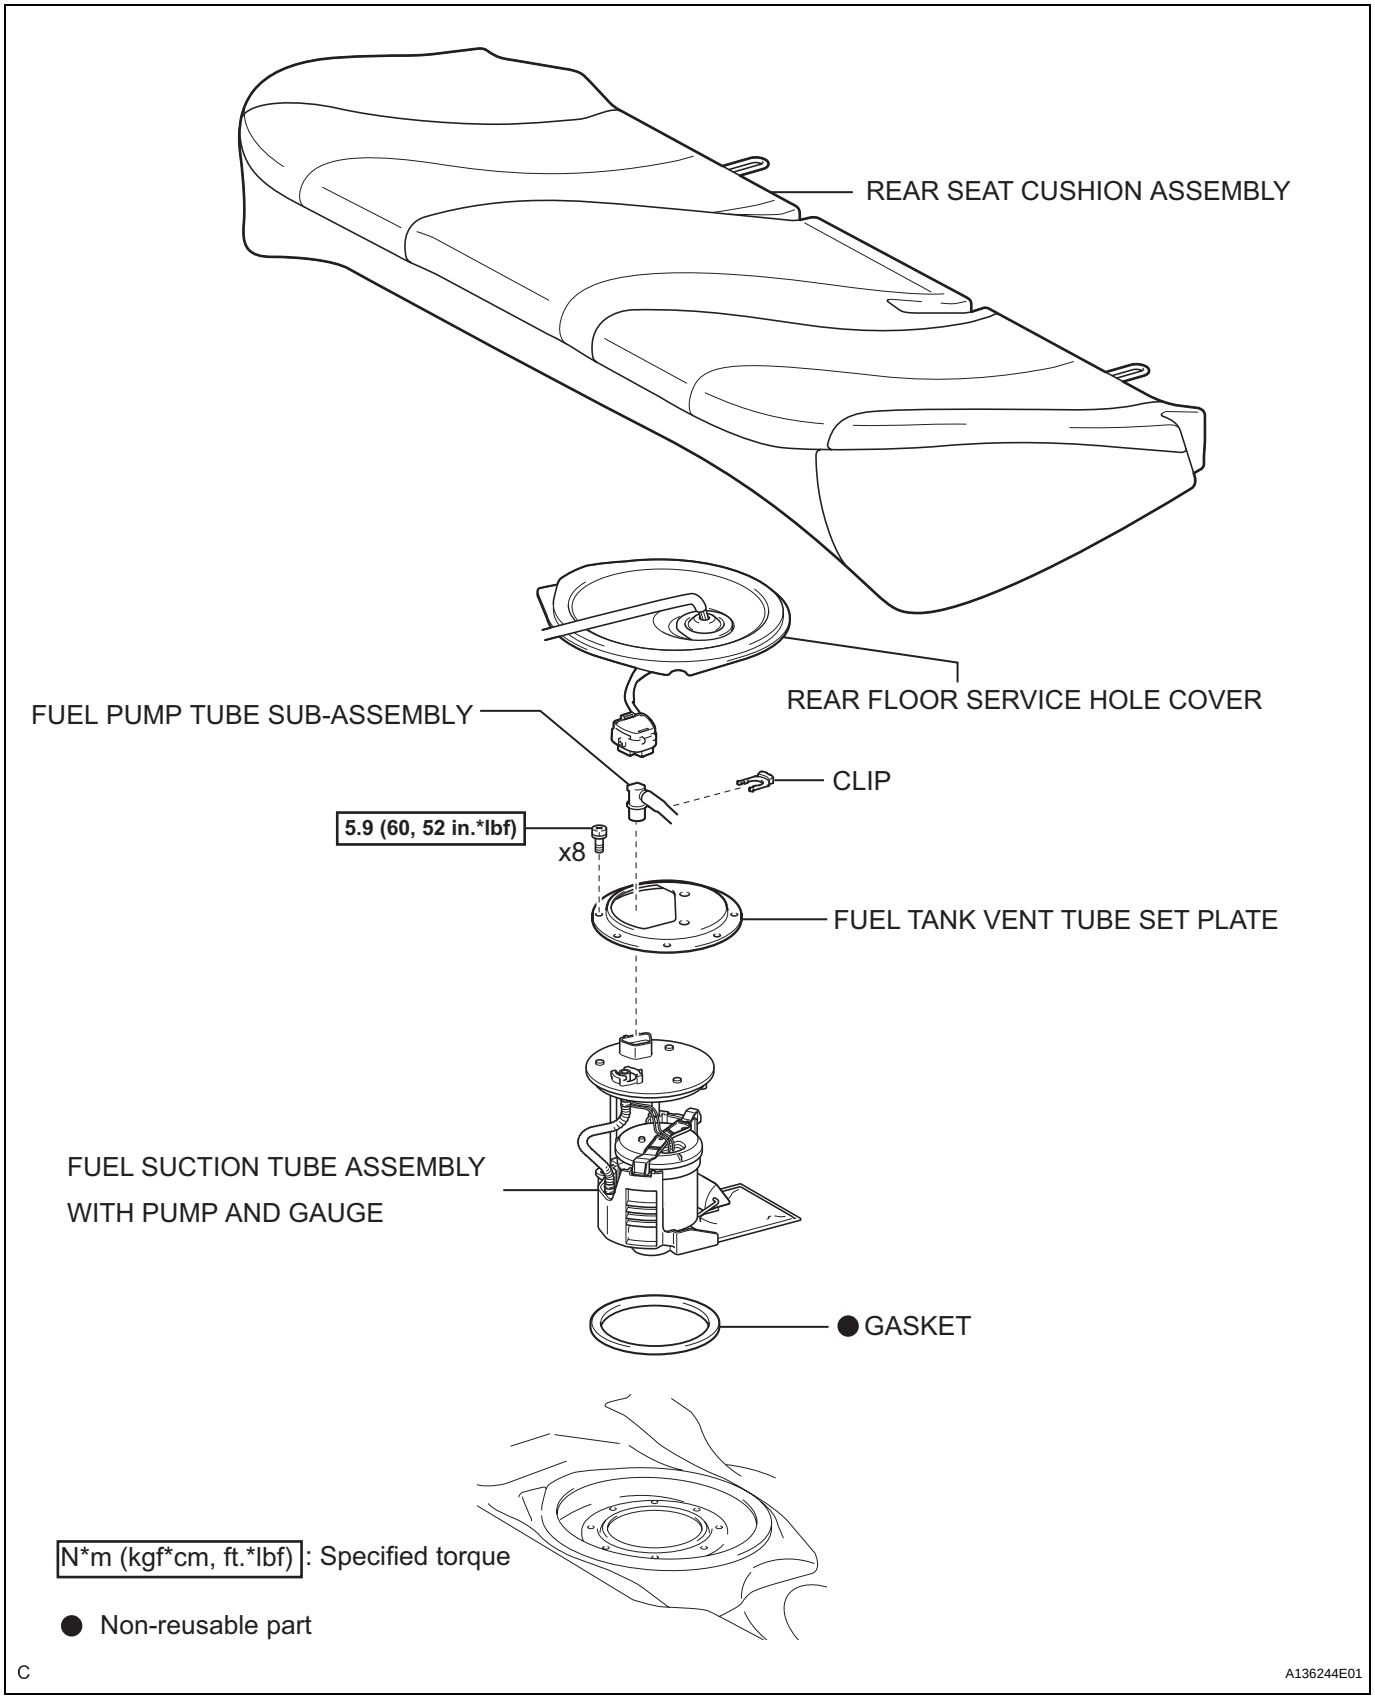
FU

5. **CHECK FOR FUEL LEAKS**
   HINT:
   See page FU-9.

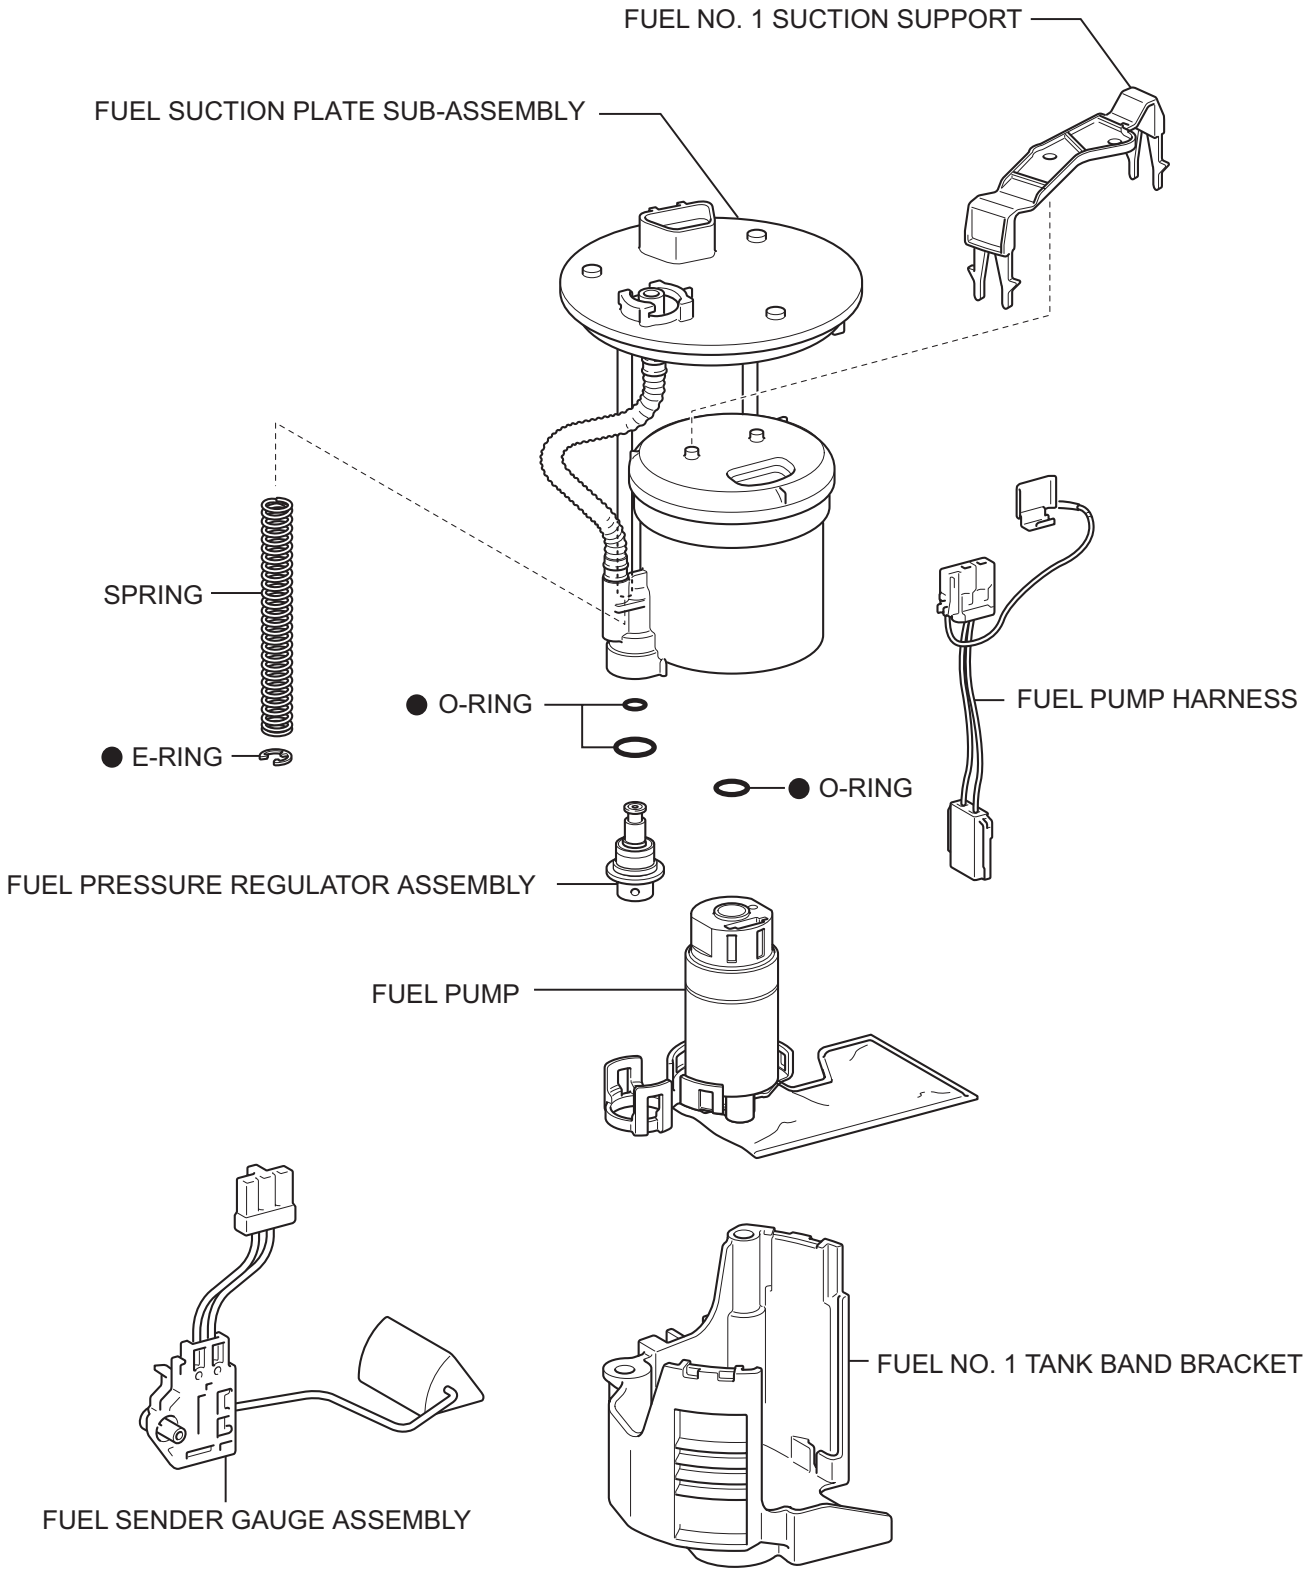
6. **INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY**
   (See page EM-121)

FUEL PUMP

COMPONENTS



FU



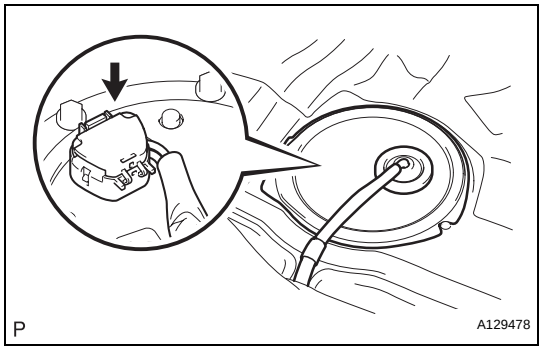
● Non-reusable part

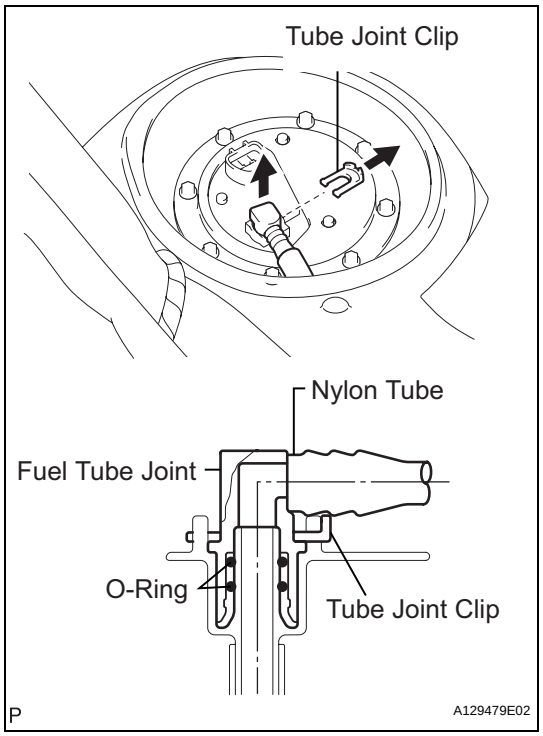
C

A136245E01

REMOVAL

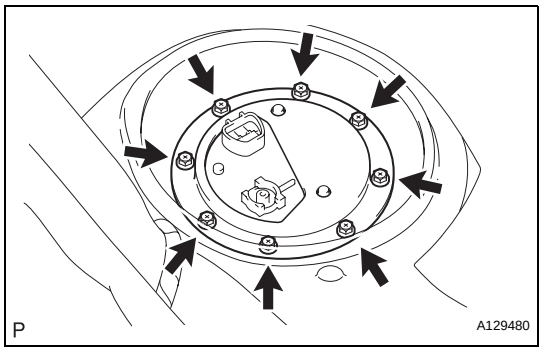
1. **DISCHARGE FUEL SYSTEM PRESSURE**
   HINT:
   See page FU-1.
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **REMOVE REAR SEAT CUSHION ASSEMBLY (for Fixed Seat Type) (See page SE-77)**
4. **REMOVE REAR SEAT CUSHION ASSEMBLY (for Fold Down Seat Type) (See page SE-47)**
5. **REMOVE REAR SEAT CUSHION ASSEMBLY (for Reclining Seat Type) (See page SE-62)**
6. **REMOVE REAR FLOOR SERVICE HOLE COVER**
   (a) Remove the rear floor service hole cover.
   (b) Disconnect the fuel pump connector.





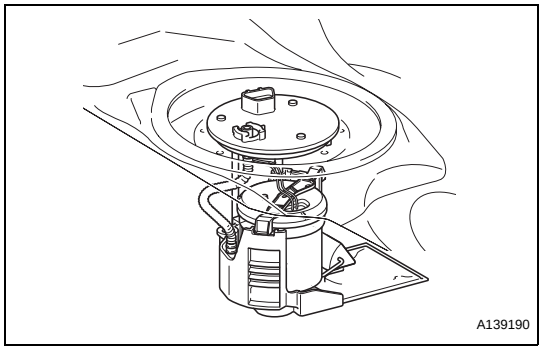
7. **SEPARATE FUEL PUMP TUBE SUB-ASSEMBLY**
   (a) Remove the tube joint clip, and pull out the fuel pump tube.
   NOTICE:
   - **Check that there is no dirt around the fuel tube joint before this work and clean any dirt away.**
   - **It is necessary to prevent mud or dirt from entering the fuel tube joint. If mud enters the joint, the O-rings may not seal the fuel tube connector and fuel suction plate properly.**
   - **Do not use any tools in this work.**
   - **Do not bend or twist the nylon tube.**
   - **After disconnecting, cover the fuel tube joint with a plastic bag.**
   - **If the fuel tube joint and fuel suction plate are stuck, pinch the fuel tank tube between fingers, and turn it carefully to release. Disconnect the fuel tank tube.**

FU



8. REMOVE FUEL TANK VENT TUBE SET PLATE

(a) Remove the 8 bolts and set plate.

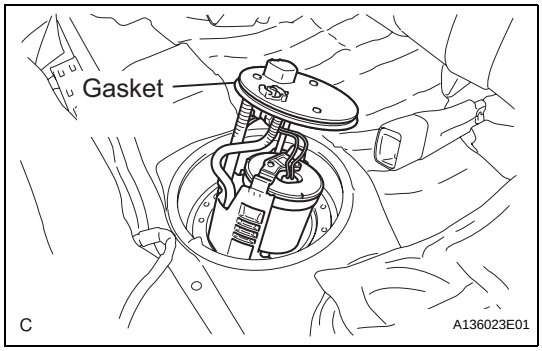


9. REMOVE FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE

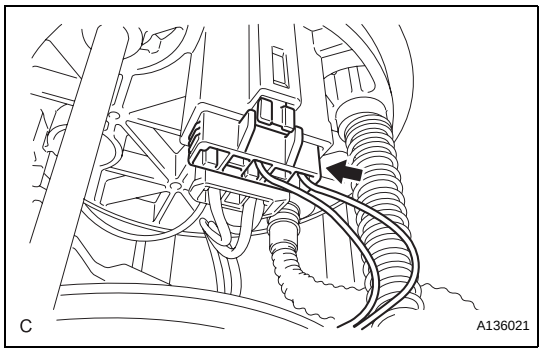
(a) Pull out the fuel suction tube from the fuel tank.

NOTICE:

- **Do not damage the fuel pump filter.**
- **Be careful that the arm of the sender gauge does not bend.**



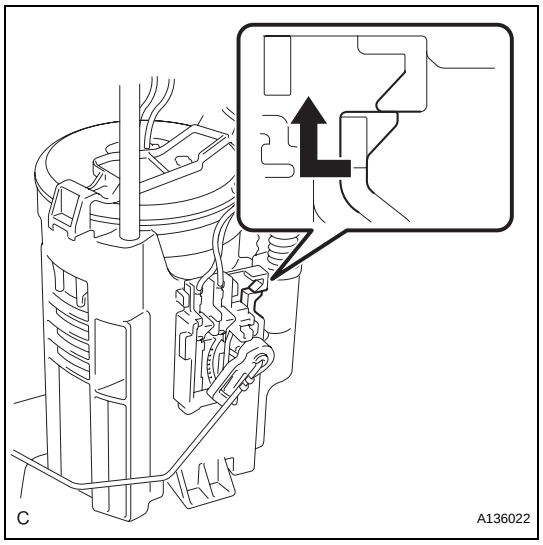
(b) Remove the gasket from the fuel suction tube.



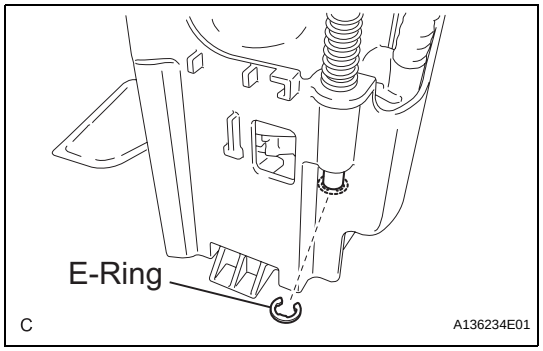
DISASSEMBLY

1. REMOVE FUEL SENDER GAUGE ASSEMBLY

(a) Disconnect the fuel sender gauge connector.

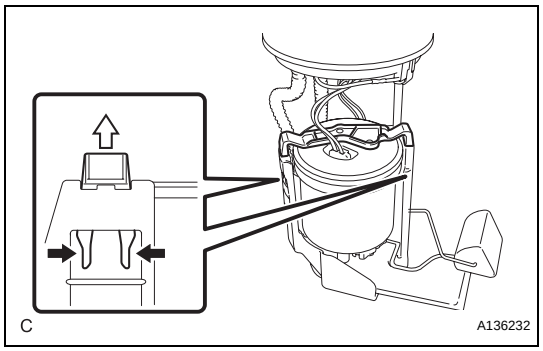


(b) Unlock the fuel sender gauge, and slide it to remove.



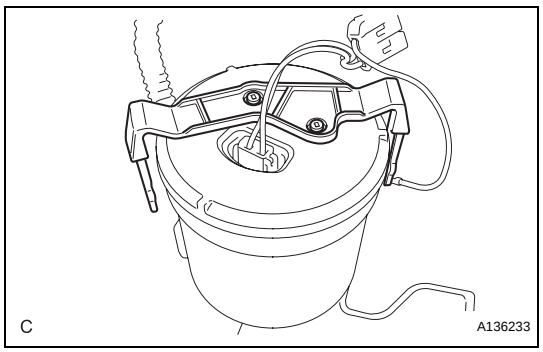
2. REMOVE FUEL NO. 1 TANK BAND BRACKET

(a) Using needle nozzle pliers, remove the E-ring.



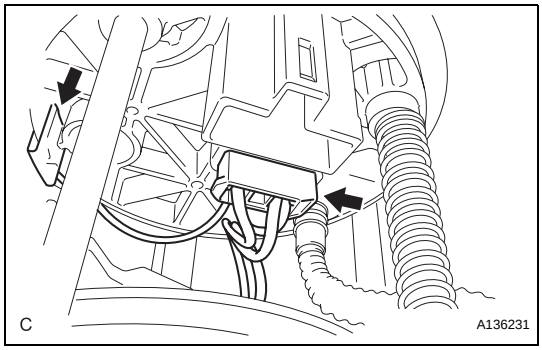
(b) Disengage the 4 claws of the fuel No. 1 suction support and remove the fuel No. 1 tank band bracket from the fuel suction plate with the fuel filter.

(c) Remove the spring from the fuel suction plate.



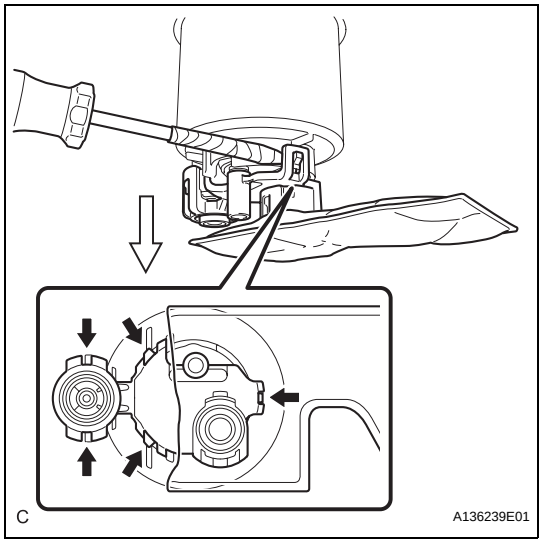
3. REMOVE FUEL NO. 1 SUCTION SUPPORT

(a) Using a screwdriver with the tip taped, disengage the claw and remove the fuel No. 1 suction support.



4. DISCONNECT FUEL PUMP HARNESS

(a) Disconnect the fuel pump harness connector from the fuel suction plate.

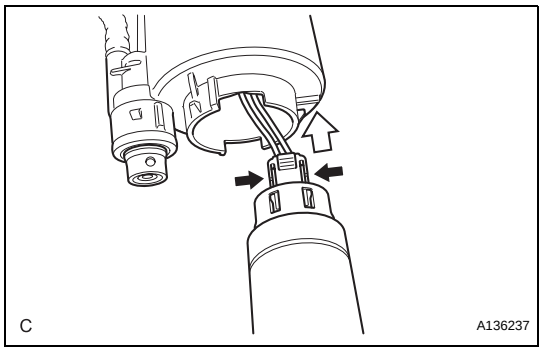


5. REMOVE FUEL PUMP

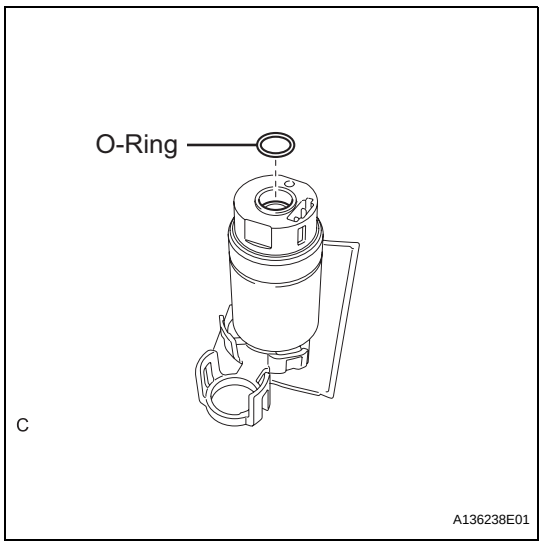
(a) Using a screwdriver with its tip taped, disengage the 5 claws and pull out the fuel pump from the fuel filter assembly.

NOTICE:

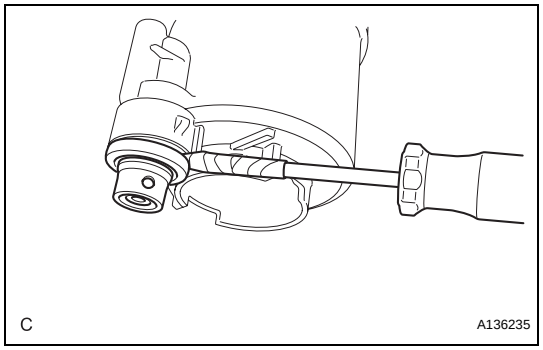
- **Do not damage the fuel pump filter.**
- **Do not remove the suction filter.**



(b) Remove the fuel pump harness connector.

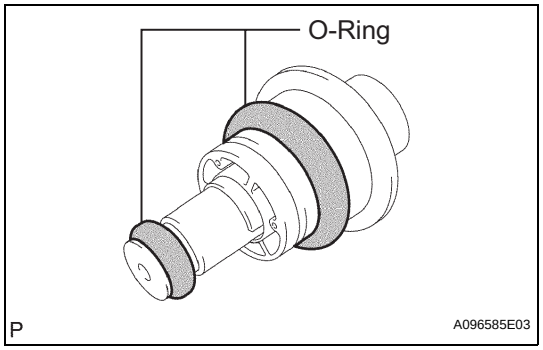


(c) Remove the O-ring from the fuel pump.

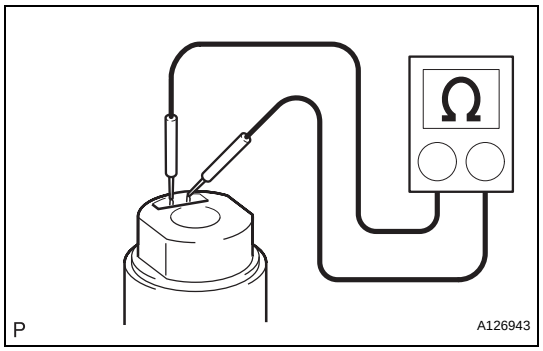


6. REMOVE FUEL PRESSURE REGULATOR ASSEMBLY

(a) Using a screwdriver with its tip taped, remove the fuel pressure regulator from the fuel filter.



(b) Remove the 2 O-rings from the fuel pressure regulator.



INSPECTION

1. INSPECT FUEL PUMP

(a) Check the fuel pump resistance.

(1) Measure the resistance between terminals 1 and 2.

Standard resistance:

0.2 to 3.0 Ω at 20°C (68°F)

If the result is not as specified, replace the fuel pump.

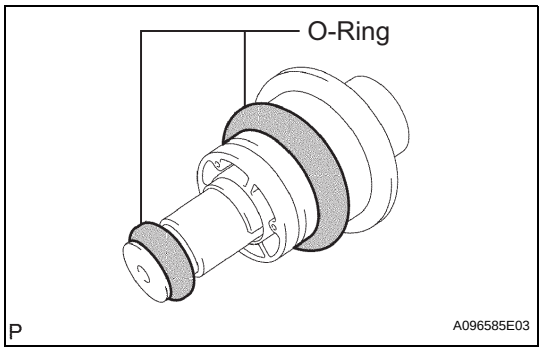
(b) Check fuel pump operation.

(1) Apply battery voltage to terminals 1 and 2. Check that the pump operates.

NOTICE:

- **These tests must be completed within 10 seconds to prevent the coil from burning out.**
- **Keep the fuel pump as far away from the battery as possible.**
- **Always switch the voltage on and off on the battery side, not on the fuel pump side.**

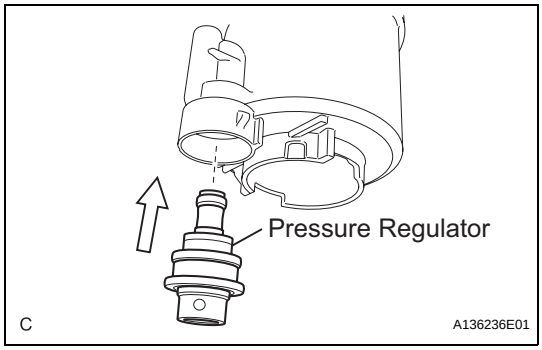
If the pump does not operate, replace the fuel pump.



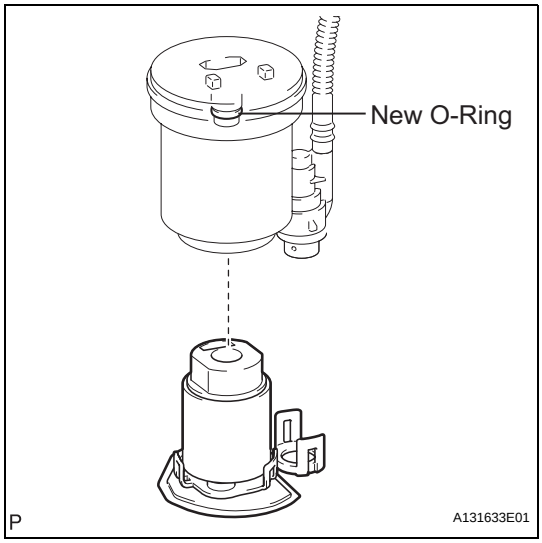
REASSEMBLY

1. INSTALL FUEL PRESSURE REGULATOR ASSEMBLY

(a) Apply a light coat of gasoline to 2 new O-rings, and install them to the fuel pressure regulator.

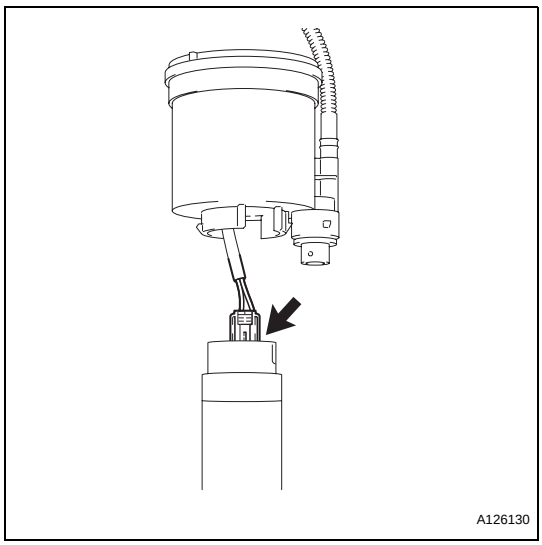


(b) Install the fuel pressure regulator to the fuel filter.

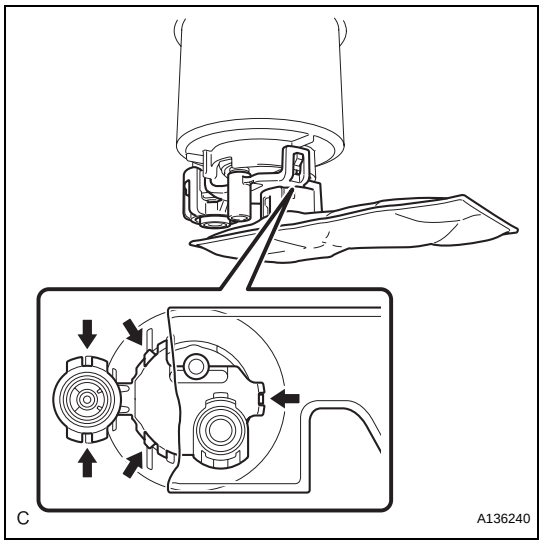


2. INSTALL FUEL PUMP

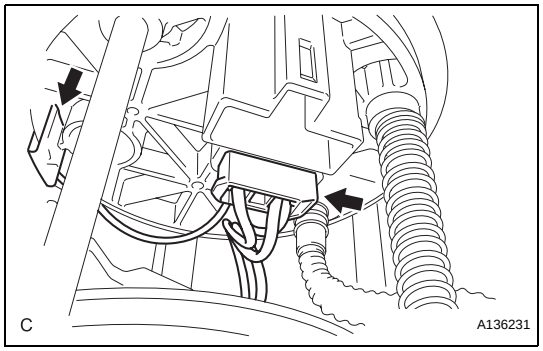
(a) Apply gasoline to a new O-ring and install it to the fuel filter.



(b) Connect the fuel pump harness connector.

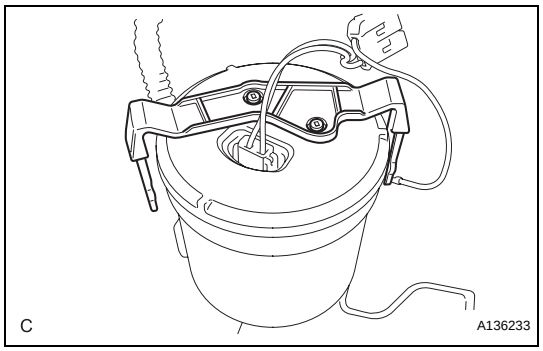


(c) Engage the 5 claws on the fuel filter and install the fuel pump with the pump filter.



3. CONNECT FUEL PUMP HARNESS

(a) Connect the fuel pump harness connector from the fuel suction plate.



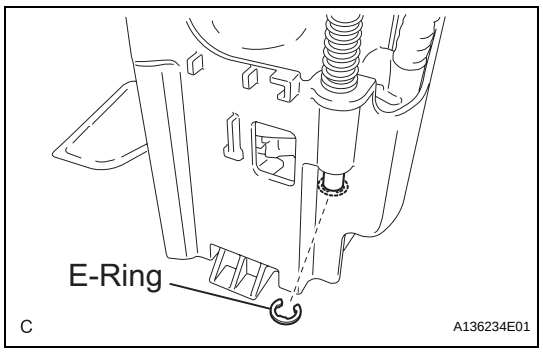
4. INSTALL FUEL NO. 1 SUCTION SUPPORT

(a) Install the fuel No. 1 suction support to the fuel filter.

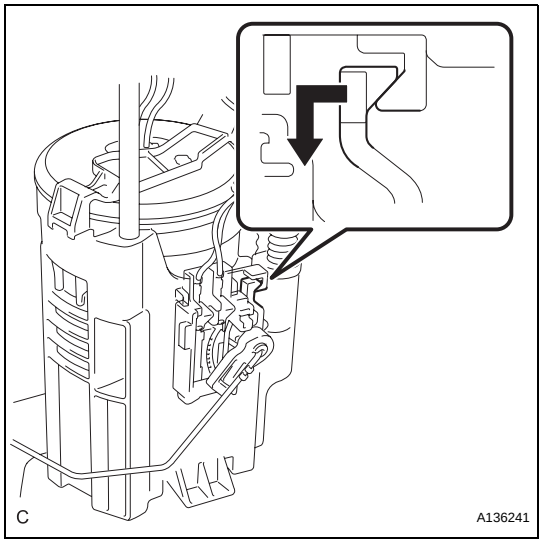
5. INSTALL FUEL NO. 1 TANK BAND BRACKET

(a) Install the spring to the fuel suction plate shaft and install them to the fuel No. 1 tank band bracket.

(b) Engage the 4 claws of the fuel No. 1 suction support and install the fuel No. 1 tank band bracket to the fuel suction plate with the fuel filter.

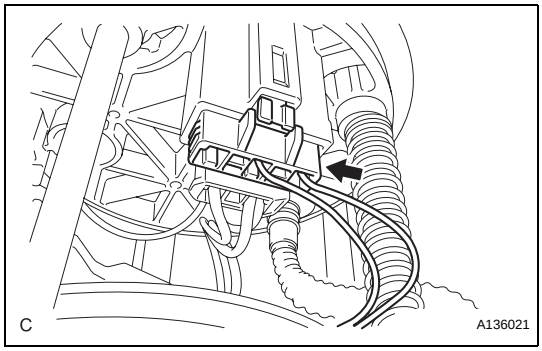


(c) Install a new E-ring.



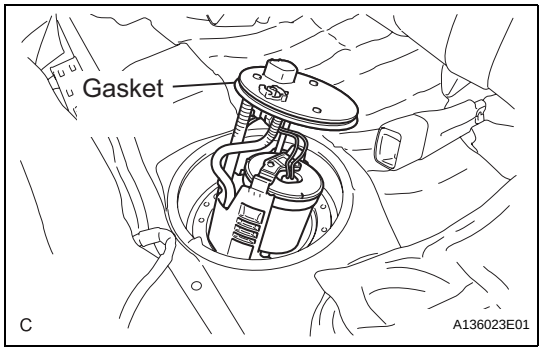
6. INSTALL FUEL SENDER GAUGE ASSEMBLY

(a) Slide the fuel sender gauge to engage the claw.



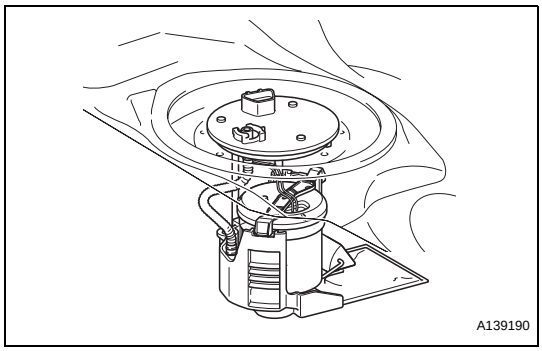
(b) Connect the fuel sender gauge connector.

INSTALLATION



1. INSTALL FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE

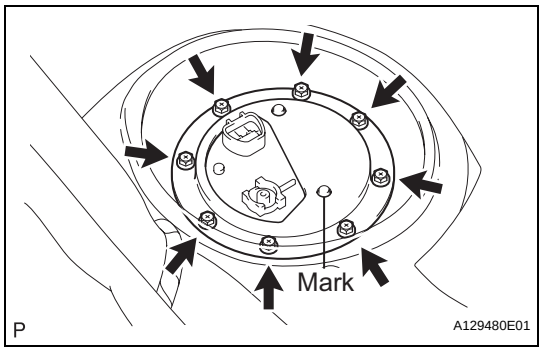
(a) Install a new gasket to the fuel suction tube.



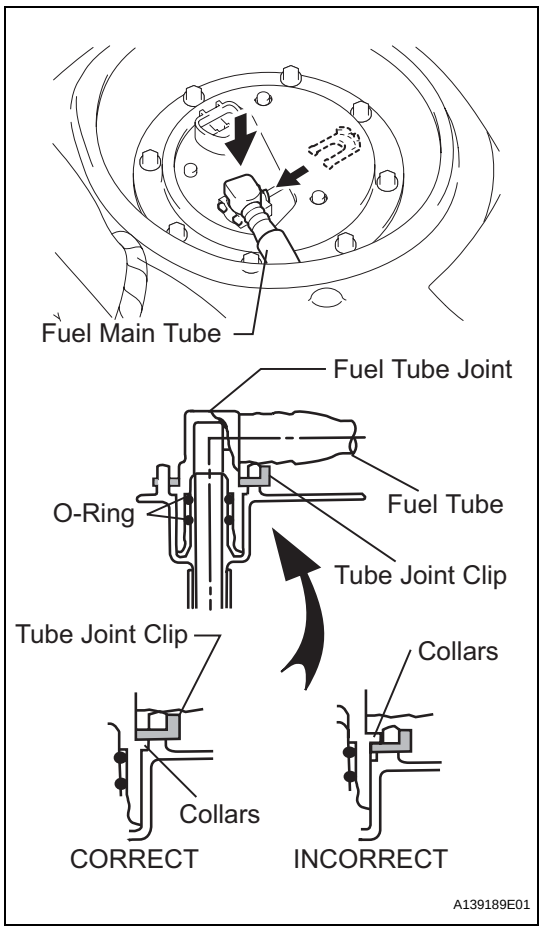
(b) Install the fuel suction tube.

NOTICE:

- **Do not damage the fuel pump filter.**
- **Be careful that the arm of the sender gauge does not bend.**



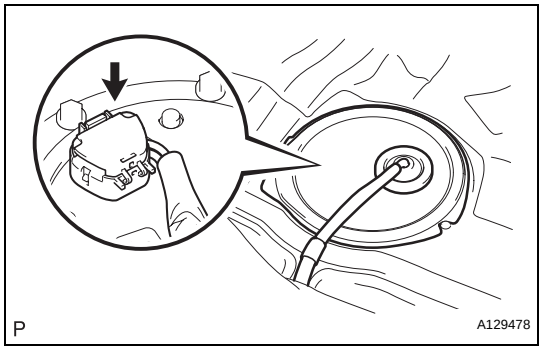
2. **INSTALL FUEL TANK VENT TUBE SET PLATE**
   (a) Align the mark of the set plate with the fuel suction tube.
   (b) Install the set plate with the 8 bolts.
   Torque: 5.9 N*m (60 kgf*cm, 52 in.*lbf)



3. **CONNECT FUEL PUMP TUBE SUB-ASSEMBLY**
   (a) Install the fuel pump tube with the tube joint clip.
   NOTICE:
   - **Check that there are no scratches or foreign objects on the connecting part.**
   - **Check that the fuel tube joint is inserted securely.**
   - **Check that the tube joint clip is on the collar of the fuel tube joint.**
   - **After installing the tube joint clip, check that the fuel tube joint is pulled off.**

4. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

5. **CHECK FOR FUEL LEAKS (See page FU-8)**



6. **INSTALL REAR FLOOR SERVICE HOLE COVER**
   (a) Connect the fuel pump connector.
   (b) Install the rear floor service hole cover with new butyl tape.

7. **INSTALL REAR SEAT CUSHION ASSEMBLY (for Fixed Seat Type) (See page SE-84)**

8. **INSTALL REAR SEAT CUSHION ASSEMBLY (for Fold Down Seat Type) (See page SE-58)**

9. **INSTALL REAR SEAT CUSHION ASSEMBLY (for Reclining Seat Type) (See page SE-73)**

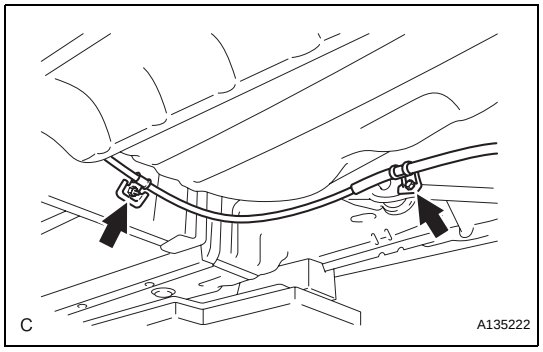
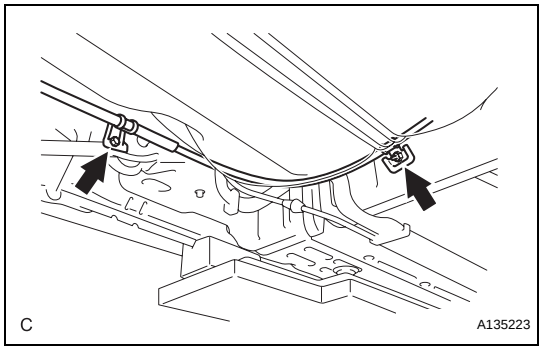
REMOVAL

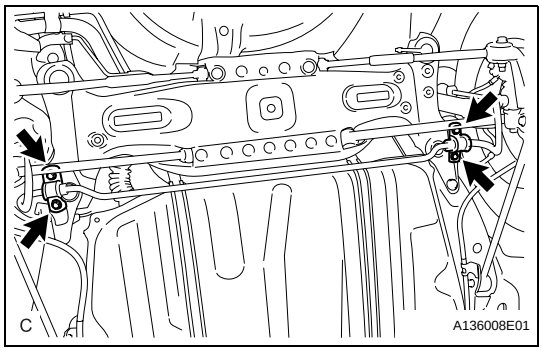
1. **DISCHARGE FUEL SYSTEM PRESSURE**
   HINT:
   See page FU-1.
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **REMOVE REAR SEAT CUSHION ASSEMBLY (for Fixed Seat Type) (See page SE-77)**
4. **REMOVE REAR SEAT CUSHION ASSEMBLY (for Fold Down Seat Type) (See page SE-47)**
5. **REMOVE REAR SEAT CUSHION ASSEMBLY (for Reclining Seat Type) (See page SE-62)**
6. **REMOVE REAR FLOOR SERVICE HOLE COVER (See page FU-27)**
7. **SEPARATE FUEL PUMP TUBE SUB-ASSEMBLY (See page FU-27)**
8. **REMOVE FUEL TANK VENT TUBE SET PLATE (See page FU-28)**
9. **REMOVE FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE (See page FU-28)**
10. **DRAIN FUEL**
11. **REMOVE CENTER EXHAUST PIPE ASSEMBLY (See page EX-2)**
12. **DISCONNECT NO. 2 PARKING BRAKE CABLE ASSEMBLY**
    (a) Remove the set bolt and set nut of the No. 2 parking brake cable assembly.



13. **DISCONNECT NO. 3 PARKING BRAKE CABLE ASSEMBLY**
    (a) Remove the set bolt and set nut of the No. 3 parking brake cable assembly.

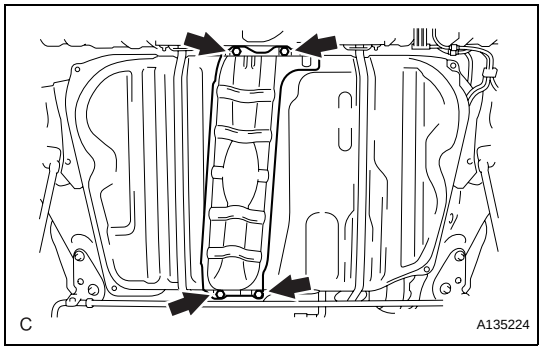


FU



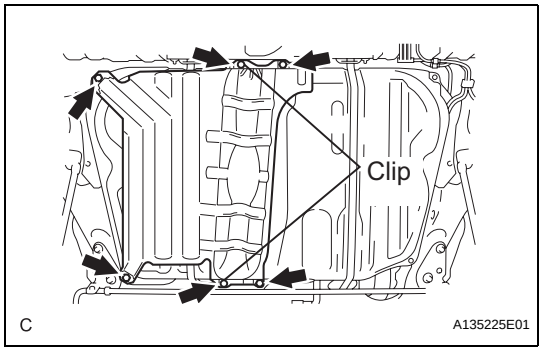
14. REMOVE REAR STABILIZER BAR NO. 1 BRACKET

(a) Remove the 4 bolts and 2 rear stabilizer bar No. 1 brackets.

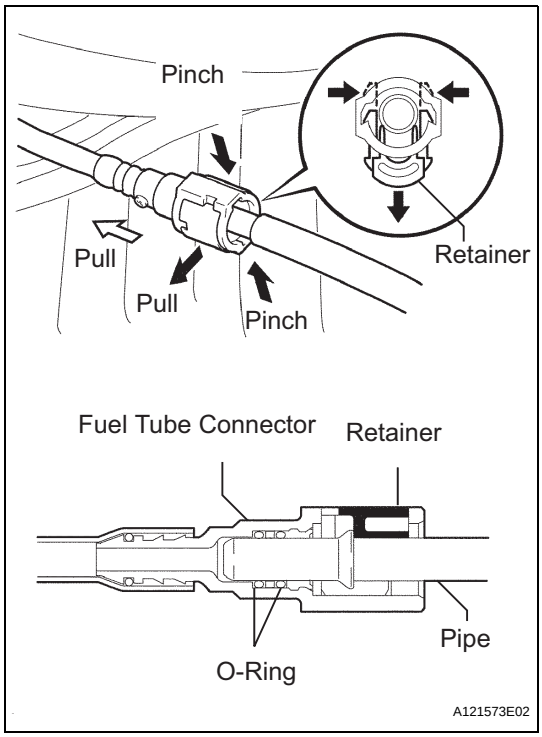


15. REMOVE FUEL TANK PROTECTOR LOWER CENTER

(a) Remove the 4 bolts and fuel tank protector (Except SE Grade).



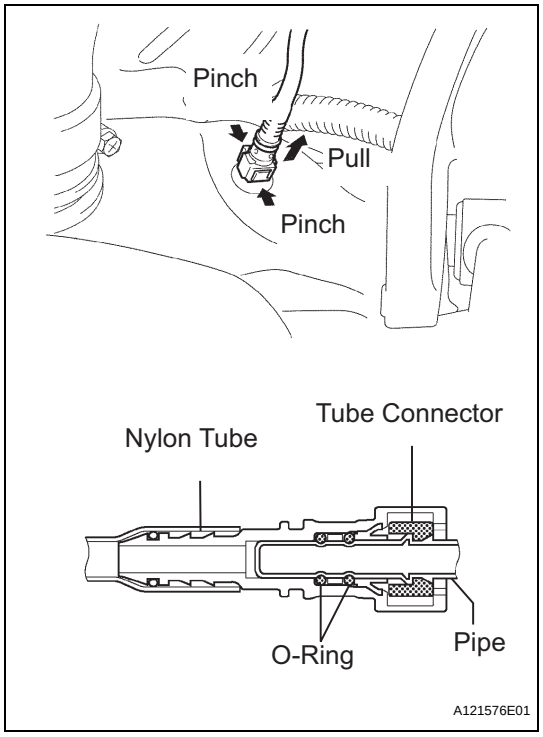
(b) Remove the 4 bolts and 2 clips (for SE Grade).
(c) Remove the fuel tank protector (for SE Grade).



16. REMOVE FUEL TANK ASSEMBLY

(a) Disconnect the fuel pump tube.
  (1) Pinch the tab of the retainer to disengage the lock claws and pull it down as shown in the illustration.
  (2) Pull out the fuel tank main tube.
  NOTICE:
  - **Check that there is no dirt or other foreign objects around the connector before this operation and clean the connector as necessary.**
  - **It is necessary to prevent mud or dirt from entering the quick connector. If mud enters the connector, the O-rings may not seal properly.**
  - **Remove the quick connector by hand.**
  - **Do not bend or twist the nylon tube. Protect the connector by covering it with a plastic bag.**

- **If the pipe and connector are stuck, try wiggling or pushing and pulling the connector to release it and pull the connector off of the pipe carefully.**

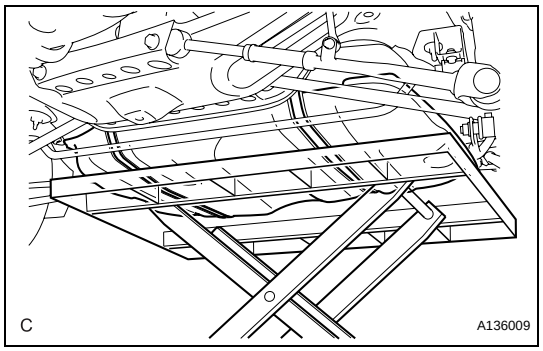


(b) Disconnect the No. 1 fuel tube.

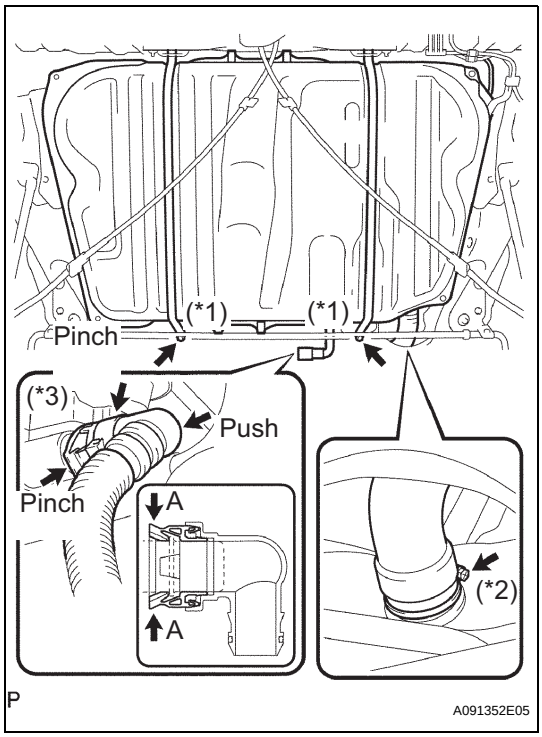
(1) Pinch the tube connector and then pull out the No. 1 fuel tube.

NOTICE:

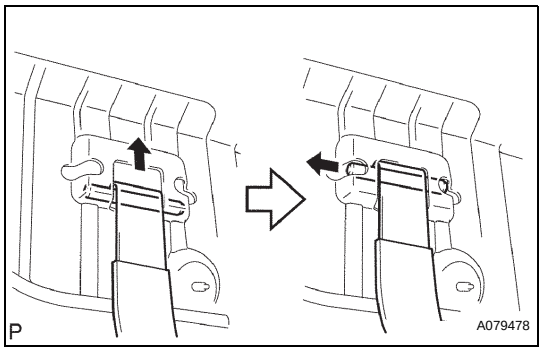
- **Check that there is no dirt or other foreign objects around the connector before this operation and clean the connector if necessary.**
- **It is necessary to prevent mud or dirt from entering the quick connector. If mud enters the connector, the O-rings may not seal properly.**
- **Remove the quick connector by hand.**
- **Do not bend or twist the nylon tube. Protect the connector by covering it with a plastic bag.**
- **If the pipe and connector are stuck, try wiggling or pushing and pulling the connector to release it and pull the connector off of the pipe carefully.**



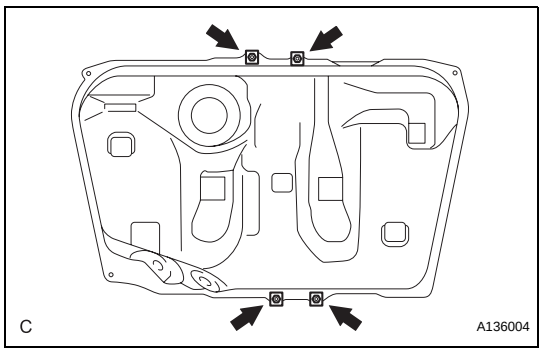
(c) Place a engine lifter under the fuel tank assembly.



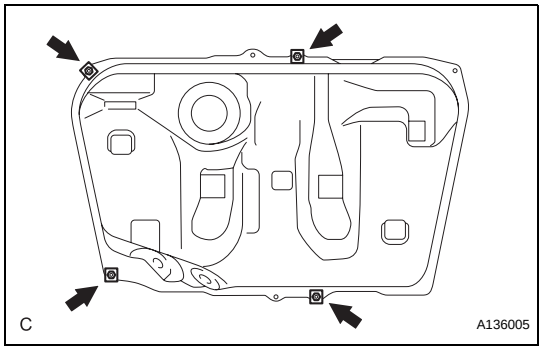
(d) Remove the 2 set bolts of the fuel tank bands. (*1)
(e) Remove the hose clamp and disconnect the fuel tank to filter pipe hose. (*2)
(f) Slightly lower the transmission jack.
(g) Disconnect the fuel tank vent hose from the charcoal canister. (*3)
  (1) Push the connector deep into the charcoal canister to release the locking pin.
  (2) Pinch portion A.
  (3) Pull out the connector.
(h) Remove the fuel tank.



(i) Remove the 2 pins and 2 fuel tank bands as shown in the illustration.

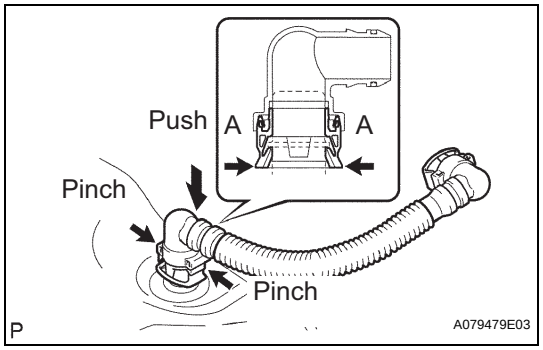


(j) Remove the 4 clip nuts (Except SE Grade).



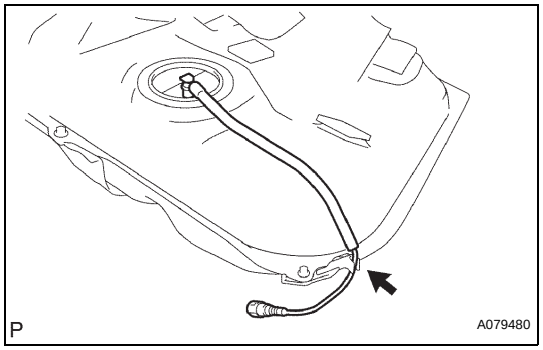
(k) Remove the 4 clip nuts (for SE Grade).

FU



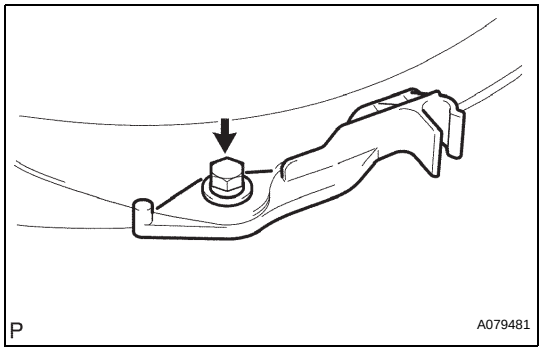
17. REMOVE FUEL TANK VENT HOSE

(a) Push the connector deep into the charcoal canister to release the locking pin.
(b) Pinch portion A.
(c) Pull out the connector.



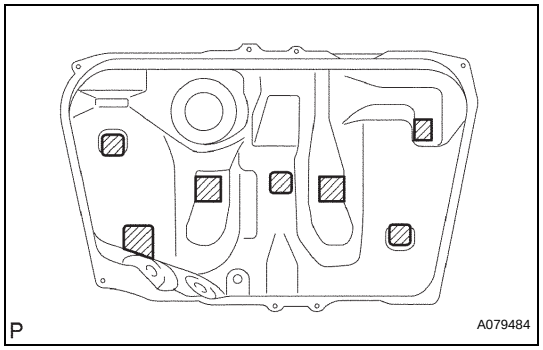
18. REMOVE FUEL PUMP TUBE SUB-ASSEMBLY

(a) Remove the fuel pump tube from the fuel main tube support.



19. REMOVE FUEL MAIN TUBE SUPPORT

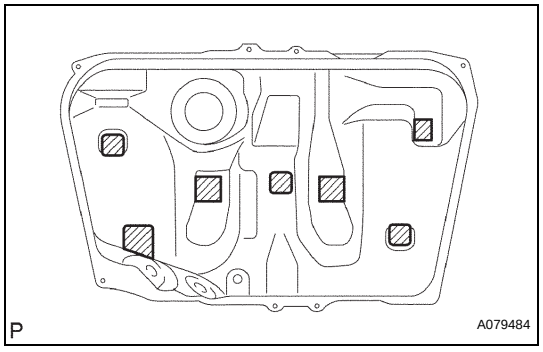
(a) Remove the bolt and tube support.



20. REMOVE NO. 2 FUEL TANK CUSHION

(a) Remove the 7 No. 2 fuel tank cushions.

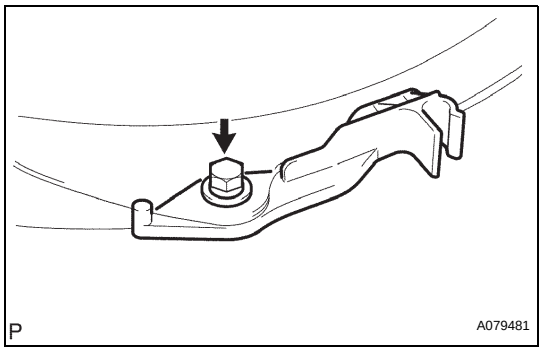
INSTALLATION



1. INSTALL NO. 2 FUEL TANK CUSHION

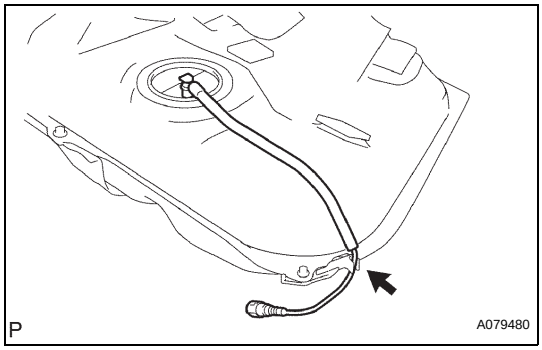
(a) Install 7 new No. 2 fuel tank cushions to the fuel tank.

FU



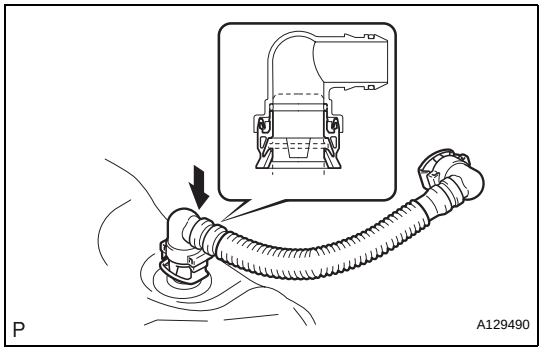
2. INSTALL FUEL MAIN TUBE SUPPORT

(a) Install the fuel main tube support with the bolt.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



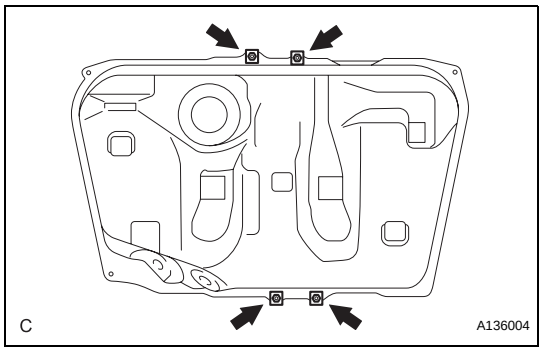
3. INSTALL FUEL PUMP TUBE SUB-ASSEMBLY

(a) Install the fuel pump tube to the fuel main tube support.



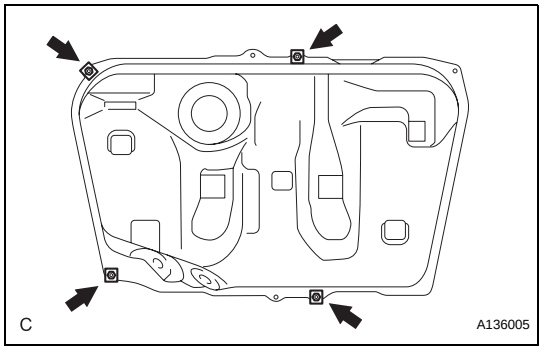
4. INSTALL FUEL TANK VENT HOSE

(a) Install the fuel tank vent hose.

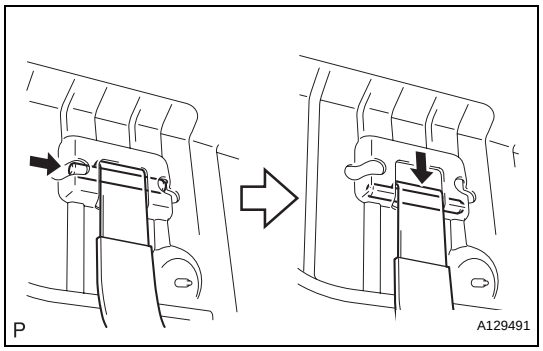


5. INSTALL FUEL TANK ASSEMBLY

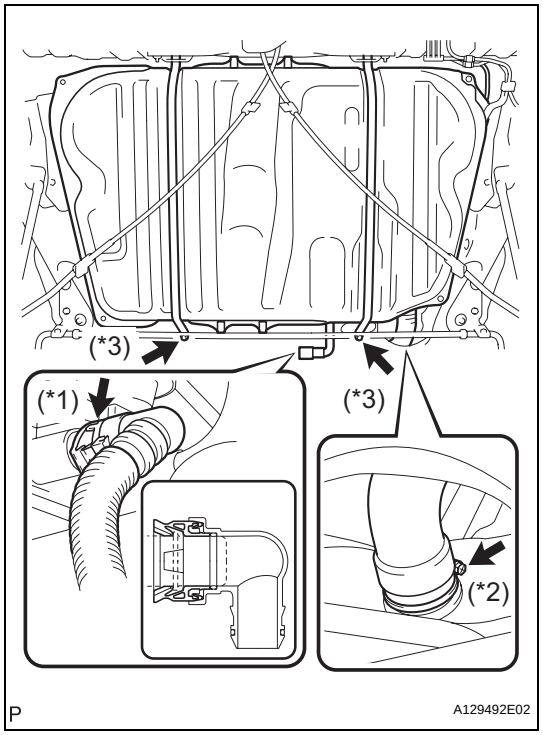
(a) Install the 4 clip nuts (Except SE Grade).



(b) Install the 4 clip nuts (for SE Grade).

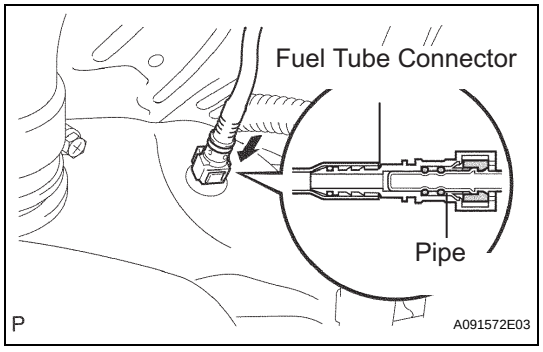


(c) Install the 2 fuel tank bands with the 2 pins.
(d) Set the fuel tank assembly onto the transmission jack.

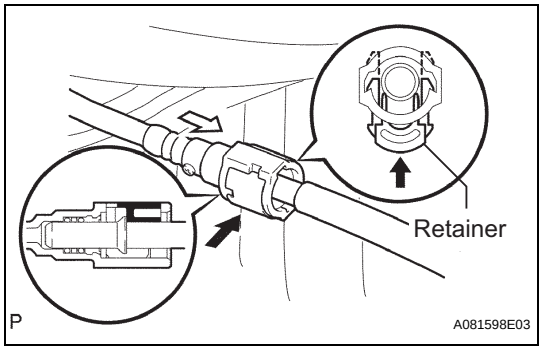


(e) Raise the transmission jack so that the fuel tank vent hose can be connected. (*1)
NOTICE:
Slowly raise the jack to prevent the fuel tank assembly from dropping.
(f) Connect the fuel tank inlet pipe with the fuel filter pipe clamp. (*2)
(g) Tighten the 2 set bolts of the fuel tank bands. (*3)
Torque: 39 N*m (400 kgf*cm, 29 ft.*lbf)

FU

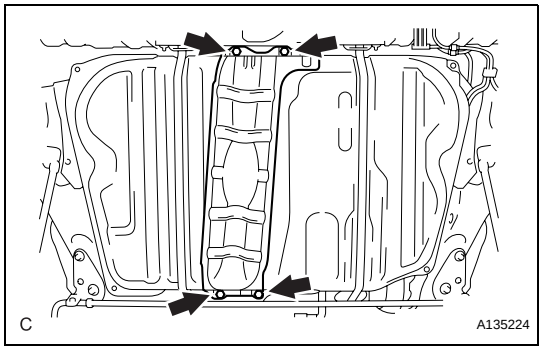


(h) Connect the No. 1 fuel tube.
(1) Push the fuel tube connector into the pipe until the fuel tube connector makes a "click" sound.
NOTICE:
- **Before connecting the tube, make sure that it is not damaged. Make sure that there is no dirt present on the connecting surfaces.**
- **After connecting, check if the fuel tube connector and the pipe are securely connected by pulling on them.**



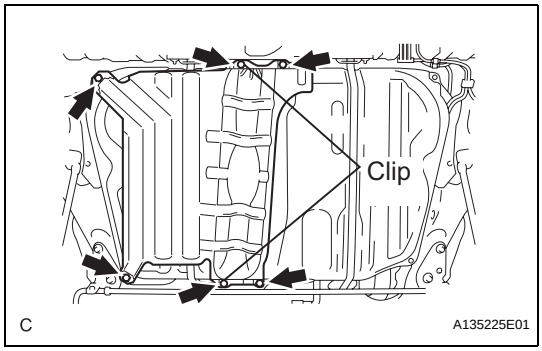
(i) Connect the fuel pump tube.
(1) Push the fuel connector into the pipe and push up the retainer so that the claws engage.
NOTICE:
- **Before connecting the tube, make sure that it is not damaged. Make sure that there is no dirt present on the connecting surfaces.**

- **After connecting, check if the fuel tube connector and the pipe are securely connected by pulling on them.**



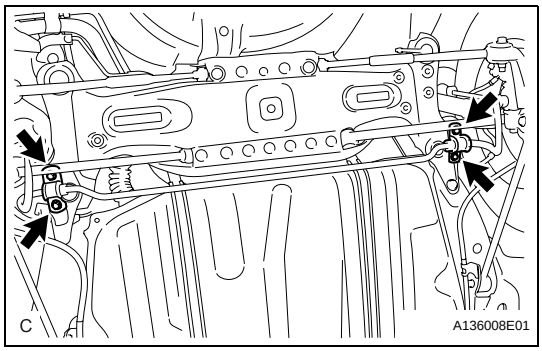
6. INSTALL FUEL TANK PROTECTOR LOWER CENTER

(a) Install the 4 bolts and fuel tank protector (Except SE Grade).
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



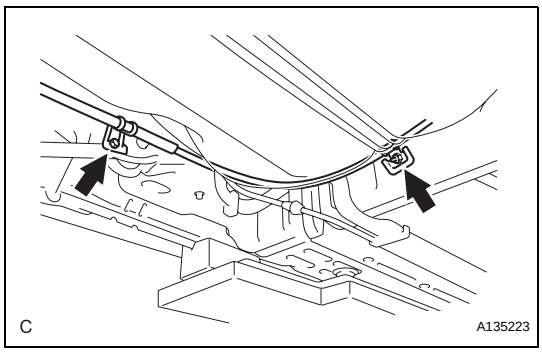
(b) Install the fuel tank protector with the 4 bolts and 2 clips (for SE Grade).
Torque: Bolt
5.4 N*m (55 kgf*cm, 48 in.*lbf)

FU



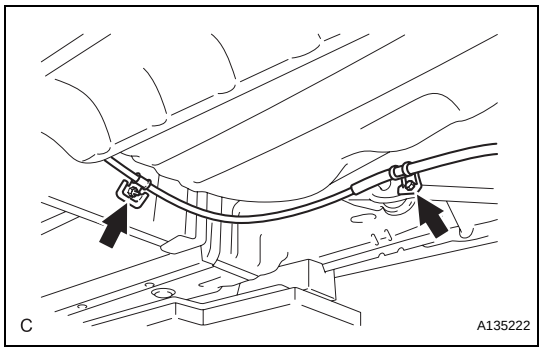
7. INSTALL REAR STABILIZER BAR NO. 1 BRACKET

(a) Install the 2 rear stabilizer bar No. 1 brackets with the 4 bolts.
Torque: 31 N*m (316 kgf*cm, 23 ft.*lbf)



8. INSTALL NO. 3 PARKING BRAKE CABLE ASSEMBLY

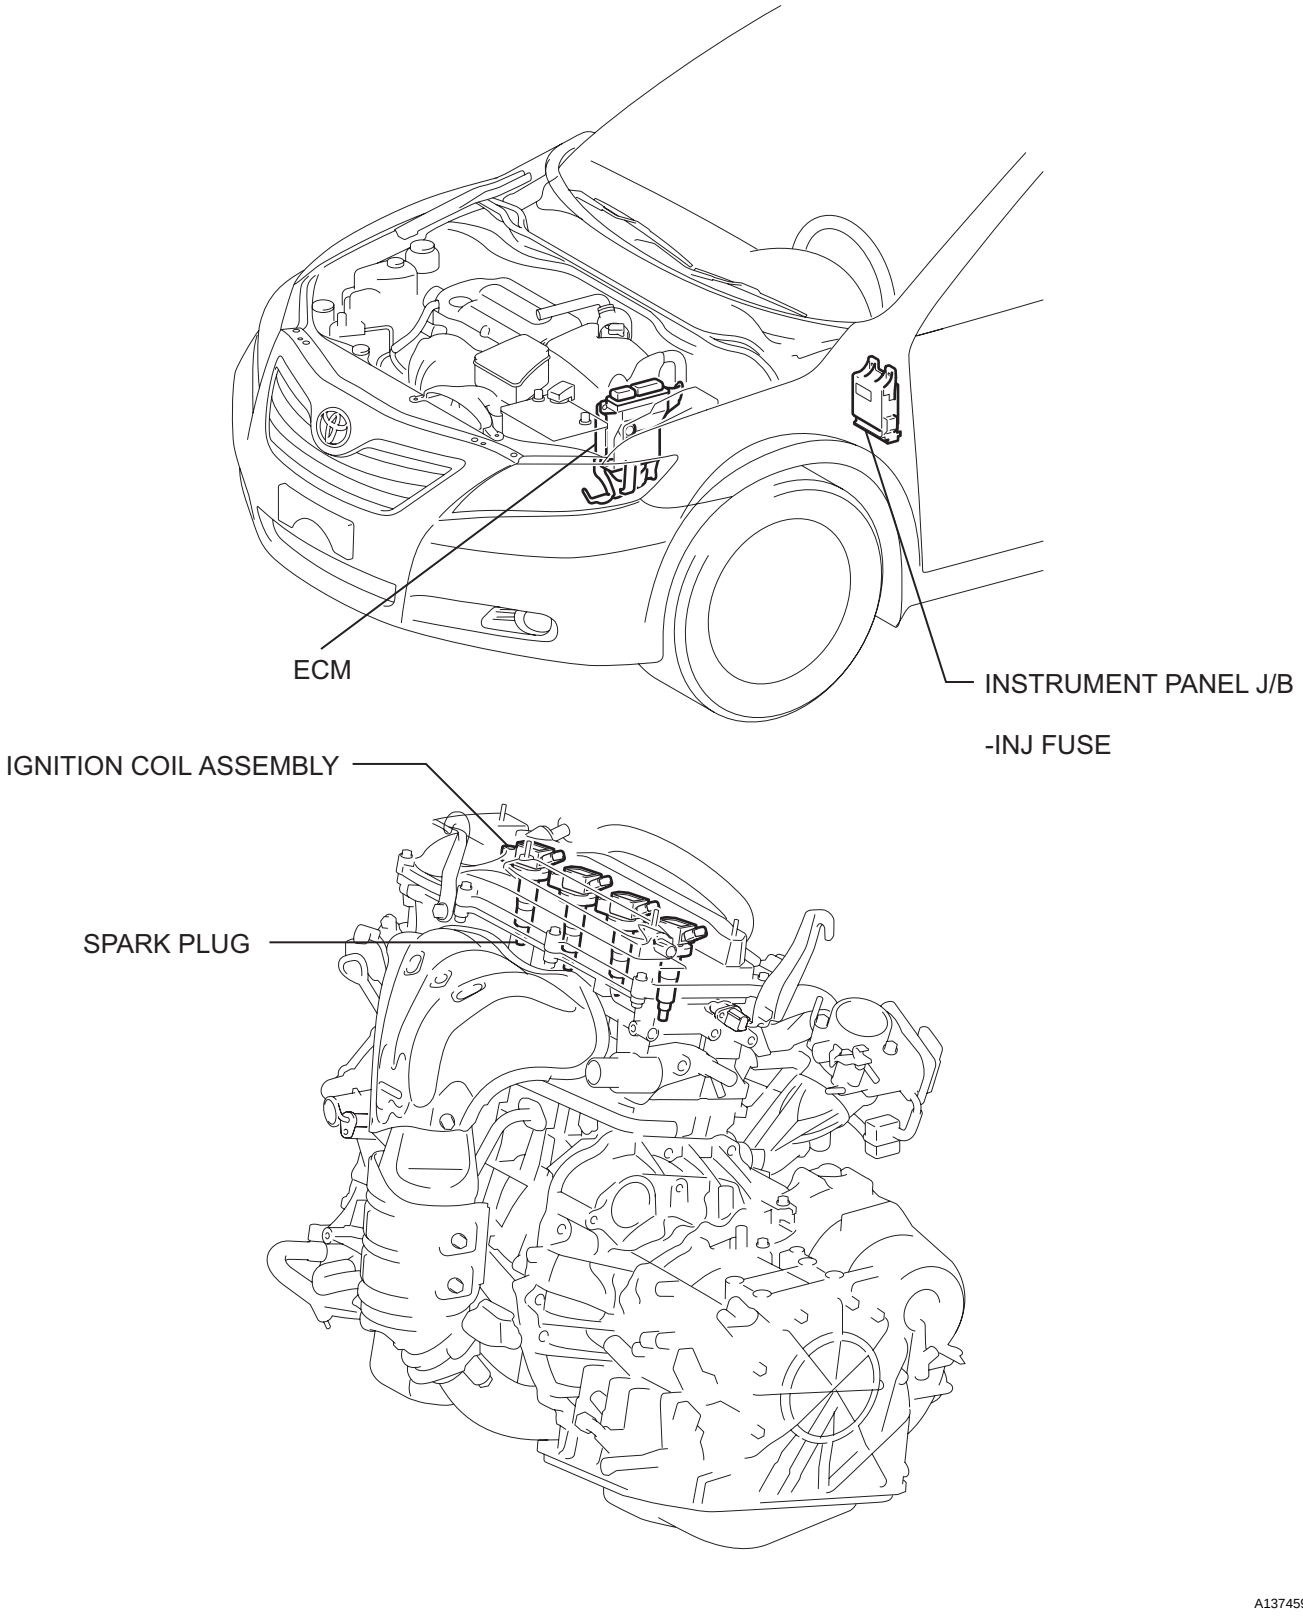
(a) Install the No. 3 parking brake cable assembly with the bolt and nut.
Torque: Bolt
6.0 N*m (61 kgf*cm, 53 in.*lbf)
Nut
8.5 N*m (87 kgf*cm, 75 in.*lbf)



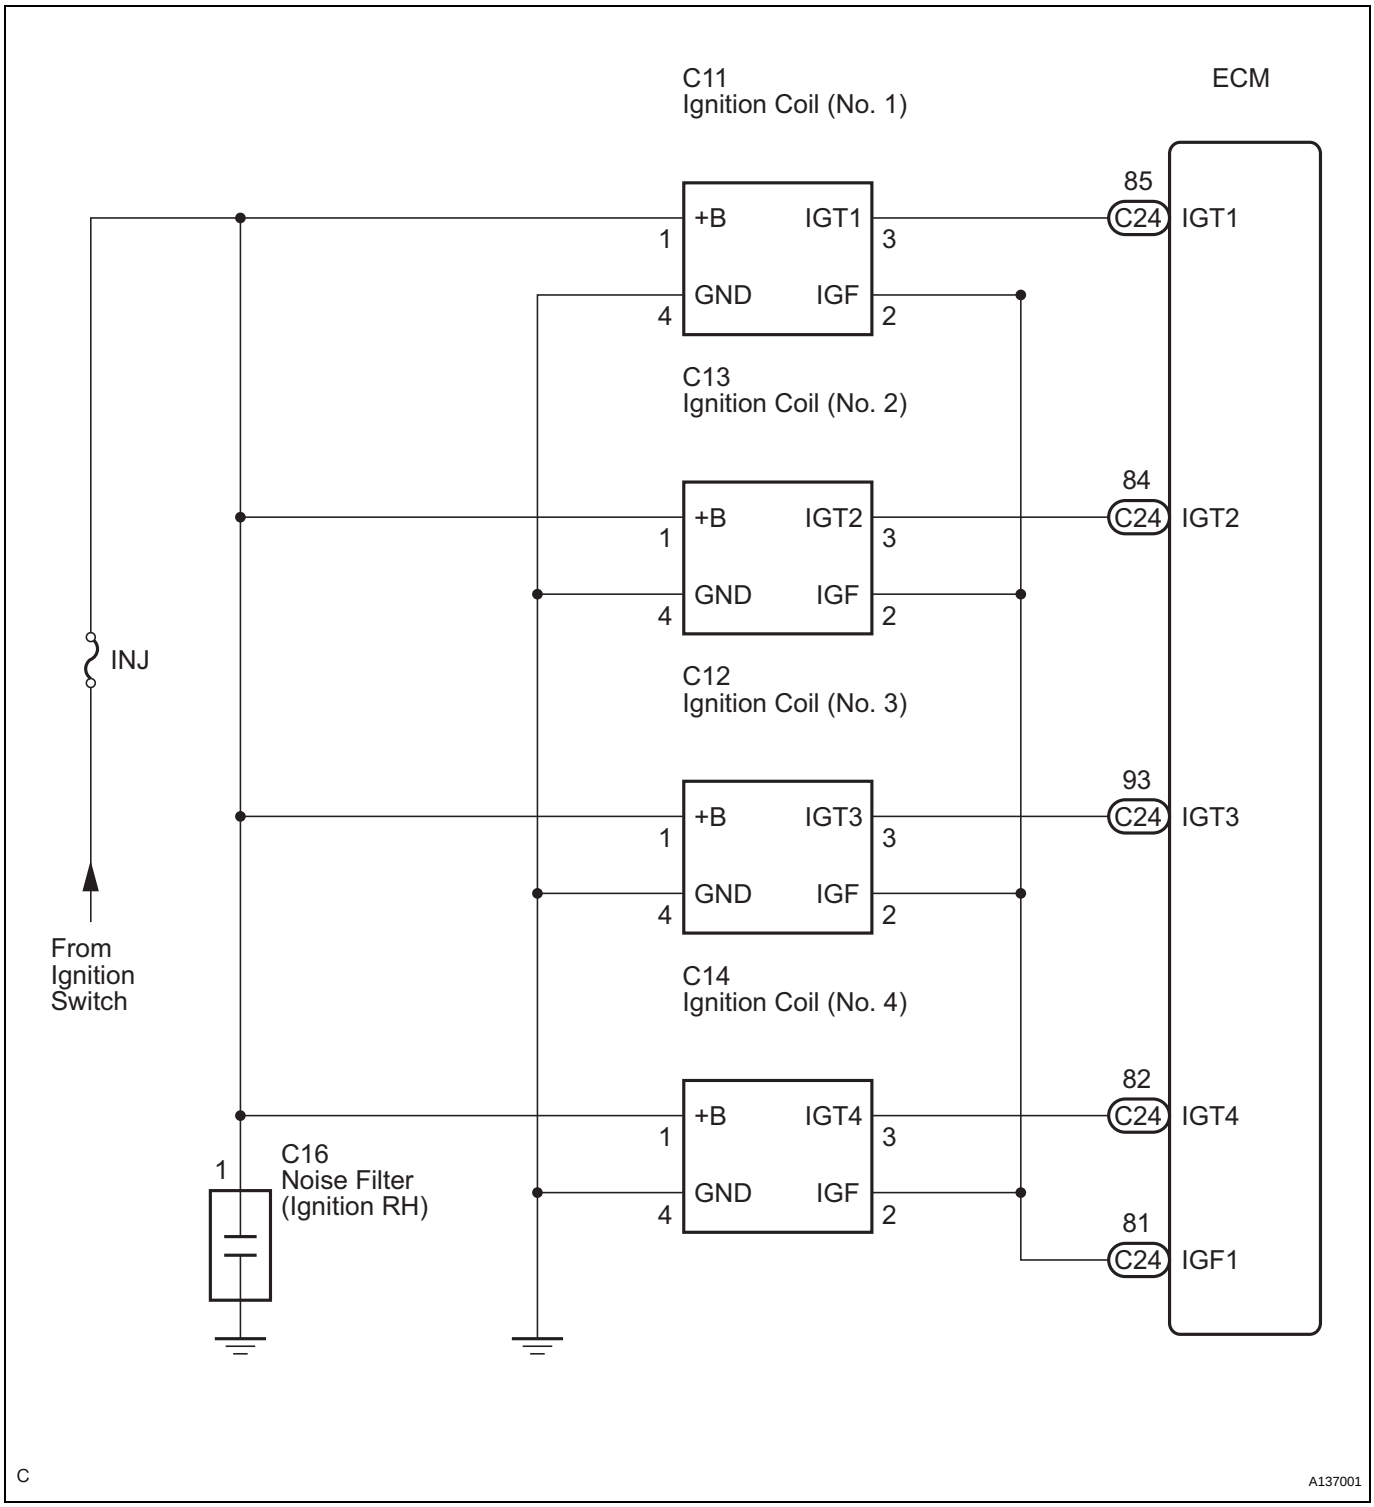
9. **INSTALL NO. 2 PARKING BRAKE CABLE ASSEMBLY**
   (a) Install the No. 2 parking brake cable assembly with the bolt and nut.
   Torque: Bolt
   6.0 N*m (61 kgf*cm, 53 in.*lbf)
   Nut
   8.5 N*m (87 kgf*cm, 75 in.*lbf)
10. **INSTALL CENTER EXHAUST PIPE ASSEMBLY (See page EX-4)**
11. **INSTALL FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE (See page FU-32)**
12. **INSTALL FUEL TANK VENT TUBE SET PLATE (See page FU-32)**
13. **CONNECT FUEL PUMP TUBE SUB-ASSEMBLY (See page FU-33)**
14. **ADD FUEL**
15. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
16. **CHECK FOR FUEL LEAKS (See page FU-8)**
17. **CHECK FOR EXHAUST GAS LEAKS**
18. **INSTALL REAR FLOOR SERVICE HOLE COVER**
19. **INSTALL REAR SEAT CUSHION ASSEMBLY (for Fixed Seat Type) (See page SE-84)**
20. **INSTALL REAR SEAT CUSHION ASSEMBLY (for Fold Down Seat Type) (See page SE-58)**
21. **INSTALL REAR SEAT CUSHION ASSEMBLY (for Reclining Seat Type) (See page SE-73)**

IGNITION SYSTEM

PARTS LOCATION



SYSTEM DIAGRAM



ON-VEHICLE INSPECTION

1. CHECK IGNITION COIL ASSEMBLY AND PERFORM SPARK TEST

NOTICE:

In this section, the terms "cold" and "hot" refer to the temperature of the coils. "Cold" means approximately -10 to 50°C (14 to 122°F). "Hot" means approximately 50 to 100°C (122 to 212°F).

(a) Check for DTCs.

NOTICE:

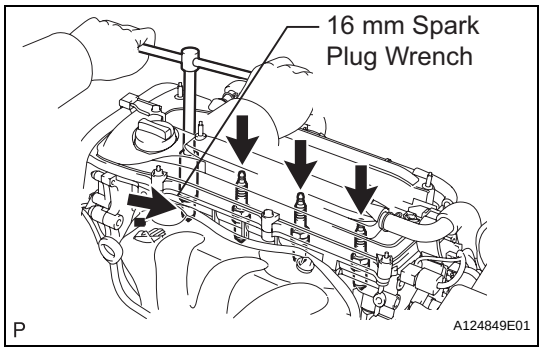
If any DTC is present, perform troubleshooting in accordance with the procedure for that DTC.

(b) Check that sparks occur.

(1) Remove the No. 1 engine cover.

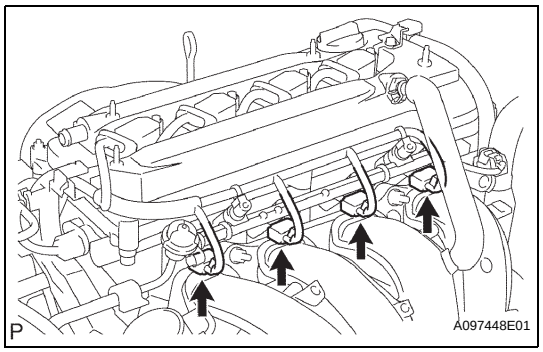
(2) Disconnect the 4 ignition coil connectors and remove the 4 bolts and ignition coils.

(3) Using a 16 mm (0.63 in.) spark plug wrench, remove the 4 spark plugs.



(4) Disconnect the 4 fuel injector connectors.

(5) Install the spark plug to each ignition coil, and connect the ignition coil connectors.

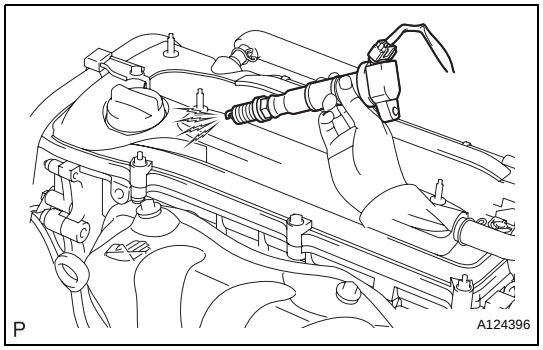


(6) Ground the spark plug.

(7) Check if a spark occurs at each spark plug while the engine is being cranked.

NOTICE:

- **Be sure to ground the spark plugs when checking.**
- **Replace the ignition coil if it receives an impact.**
- **Do not crank the engine for more than 2 seconds.**



IG

(c) Perform the spark test according to the flowchart below.

(1) Check that the ignition coil connector is securely connected.

Result

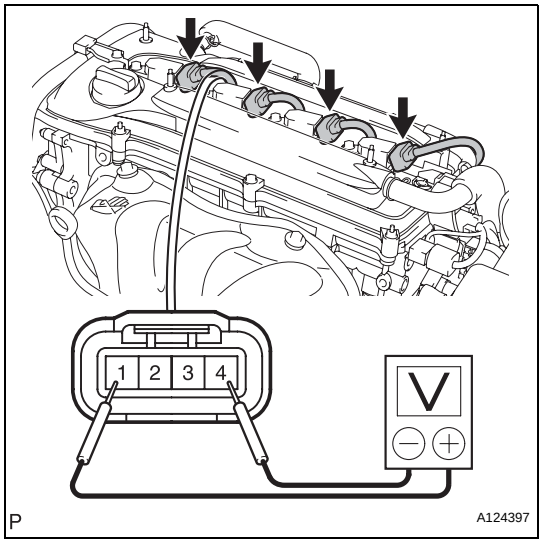
Result	Proceed to
NG	Connect securely
OK	Go to next step

(2) Perform the spark test on each ignition coil.

1. Replace the ignition coil with a normal one.
2. Perform the spark test again.

Result

Result	Proceed to
OK	Replace ignition coil
NG	Go to next step



(3) Check the power supply to the ignition coil.

1. Turn the ignition switch to the ON position.
2. Measure the voltage between the terminals of the wire harness side connector.

Standard voltage

Tester Connection	Specified Condition
1 (+B) - 4 (GND)	9 to 14 V

Result

Result	Proceed to
NG	Check wire harness and connector
OK	Go to next step

(4) Measure the resistance of the camshaft position sensor.

Standard resistance

Temperature	Specified Condition
Cold	835 to 1,400 Ω
Hot	1,060 to 1,645 Ω

Result

Result	Proceed to
NG	Replace camshaft position sensor
OK	Go to next step

(5) Measure the resistance of the crankshaft position sensor.

Standard resistance

Temperature	Specified Condition
Cold	985 to 1,600 Ω
Hot	1,265 to 1,890 Ω

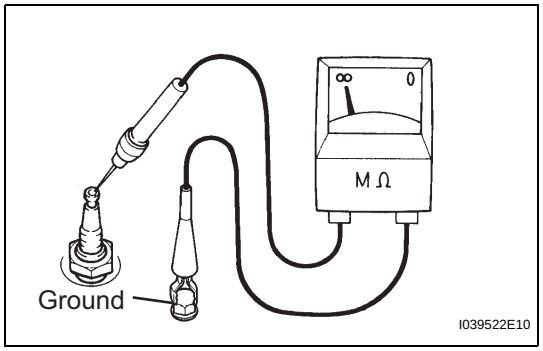
Result

Result	Proceed to
NG	Replace crankshaft position sensor
OK	Go to next step

(6) Check the IGT signal from the ECM.
Result

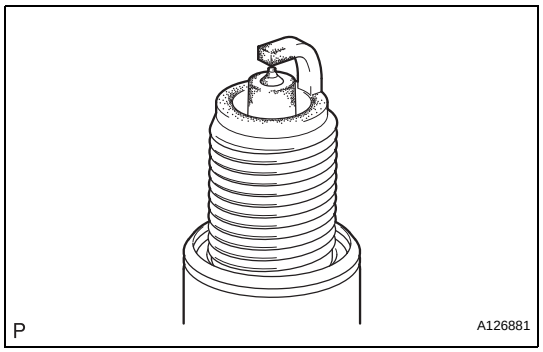
Result	Proceed to
NG	Check ECM (see page ES-188)
OK	Repair wiring between ignition coil and ECM

(7) Using a 16 mm (0.63 in.) plug wrench, install the spark plug.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)
(8) Install the 4 ignition coils with the 4 bolts and connect the 4 ignition coil connectors.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
(9) Connect the 4 fuel injector connectors.
(10) Install the No. 1 engine cover.



2. CHECK SPARK PLUG

(a) Check the electrode.
(1) Using a megohmmeter, measure the insulation resistance.
Standard insulation resistance:
10 MΩ or more
HINT:
- If a megohmmeter is not available, perform the following simple inspection instead.
- If the result is 10 MΩ or less, clean the plug and measure the resistance again.

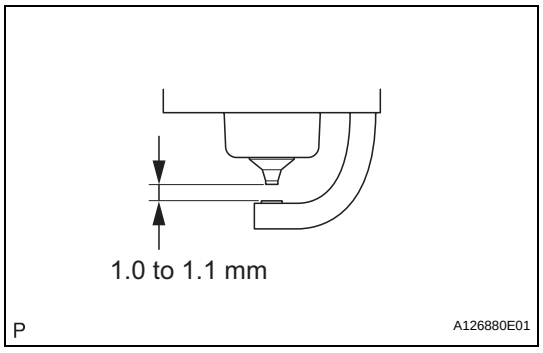


(b) Alternative inspection method:
(1) Quickly accelerate the engine to 4,000 rpm 5 times.
(2) Remove the spark plug.
(3) Visually check the spark plug.
If the electrode is dry, the spark plug is functioning properly. If the electrode is damp, proceed to the next step.

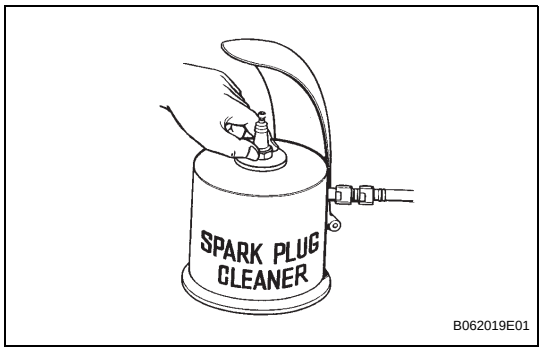
(c) Check the spark plug for any damage to its threads and insulator.
If there is damage, replace the spark plug.
Recommended spark plug

Manufacturer	Spark plug type
DENSO	SK20R11
NGK	IFR6A11

(d) Check the spark plug electrode gap.
Maximum electrode gap for used spark plug:
1.3 mm (0.051 in.)
If the gap is greater than the maximum, replace the spark plug.
Electrode gap for new spark plug:
1.0 to 1.1 mm (0.039 to 0.043 in.)



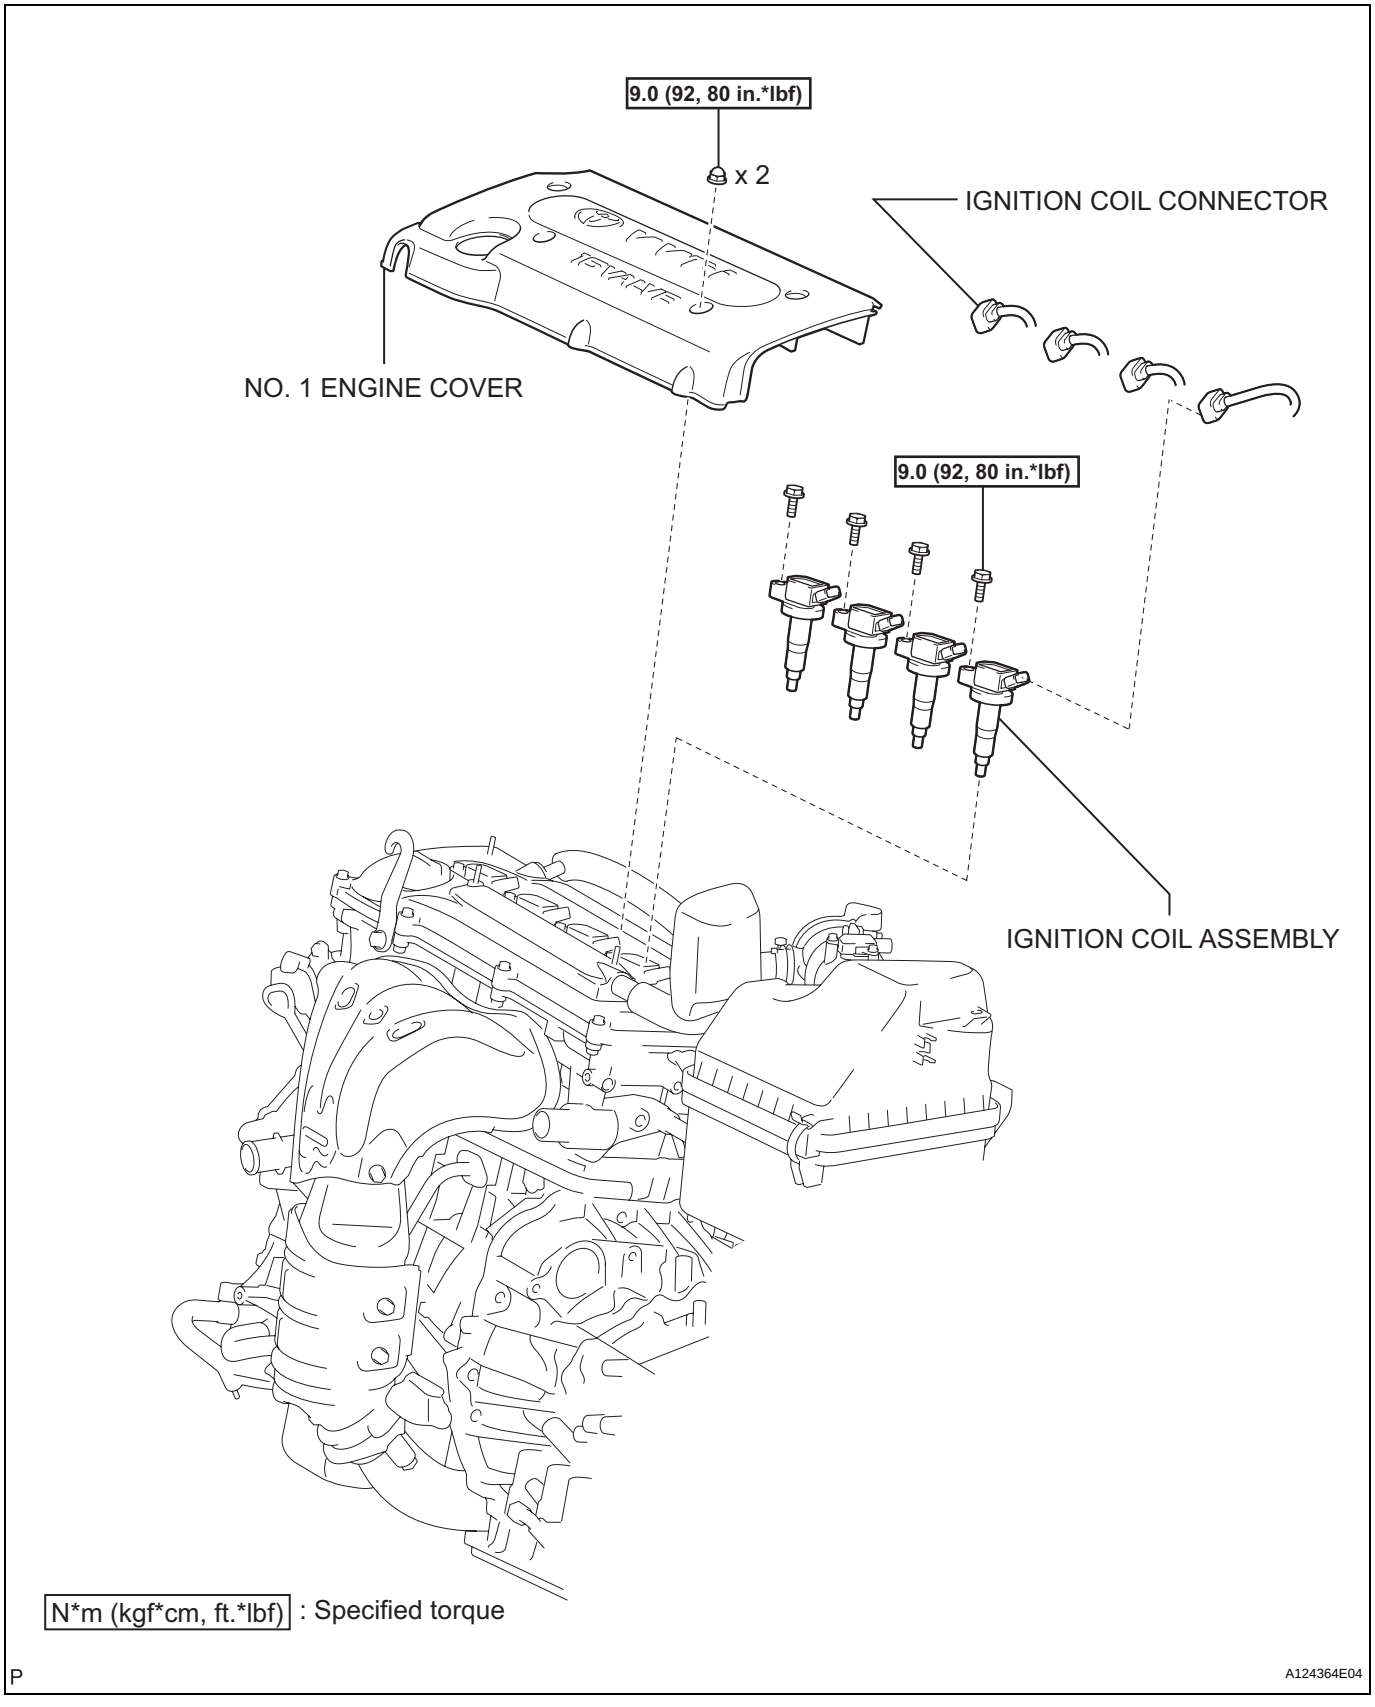
IG



(e) Clean the spark plugs.
If the electrode has traces of wet carbon, clean the electrode with a spark plug cleaner and then dry it.
Standard air pressure:
588 kPa (6 kgf*cm^2, 85 psi)
Standard duration:
20 seconds or less
HINT:
Only use the spark plug cleaner when the electrode is free of oil. If the electrode has traces of oil, use gasoline to clean off the oil before using the spark plug cleaner.

IGNITION COIL

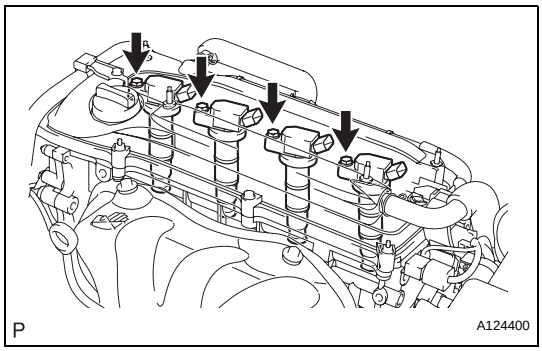
COMPONENTS

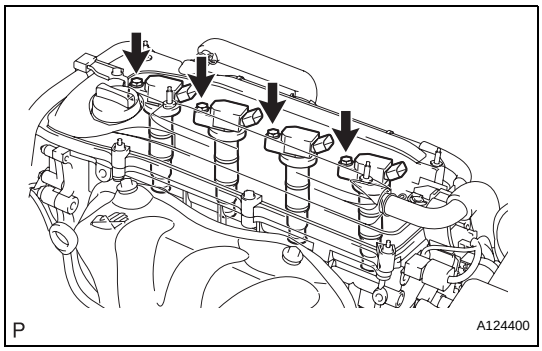


IG

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE NO. 1 ENGINE COVER (See page EM-94)**
3. **REMOVE IGNITION COIL ASSEMBLY**
   (a) Disconnect the 4 ignition coil connectors.
   (b) Remove the 4 bolts and 4 ignition coils.





INSTALLATION

1. **INSTALL IGNITION COIL ASSEMBLY**
   (a) Install the 4 ignition coils with the 4 bolts.
   Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
   (b) Connect the 4 ignition coil connectors.
2. **INSTALL NO. 1 ENGINE COVER (See page EM-121)**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (See page EM-120)**

ON-VEHICLE INSPECTION

1. INSPECT INTAKE AIR CONTROL VALVE ASSEMBLY

(a) Inspection procedure when using the intelligent tester:

(1) Warm up the engine.

(2) Stop the engine.

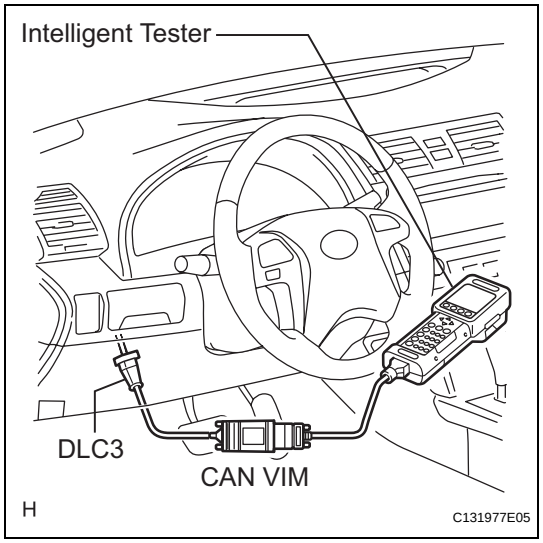
(3) Connect the intelligent tester to the DLC3.

(4) Turn the ignition switch on (IG).

(5) Turn the tester on.

(6) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / INTAKE CTL VSV1. Press the right or left button.

(7) Make sure that a clicking sound is heard from the intake air control valve when current flows. If the result is not as specified, replace the intake air surge tank.



IT

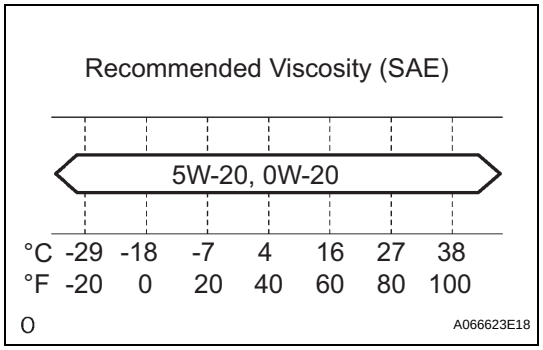
LUBRICATION SYSTEM

ON-VEHICLE INSPECTION

1. CHECK ENGINE OIL LEVEL

(a) Warm up the engine, stop the engine and wait for 5 minutes.

(b) Check that the engine oil level is between the L and F marks of the oil dipstick.
If low, check for leakage and add oil up to the F mark.
NOTICE:
Do not add engine oil above the F mark.



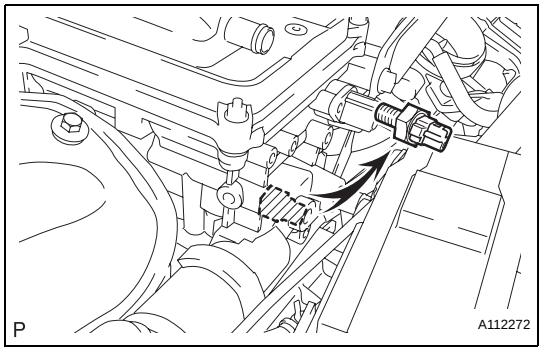
2. CHECK ENGINE OIL QUALITY

(a) Check the oil for deterioration, water intrusion, discoloration or thinning.
If the quality is visibly poor, replace the oil.
Oil grade:
Use ILSAC multigrade engine oil. SAE 5W-20 and SAE 0W-20 engine oil may be used. However, SAE 0W-20 is the best choice for good fuel economy and good starting in cold weather.

3. CHECK OIL PRESSURE

(a) Disconnect the oil pressure switch connector.

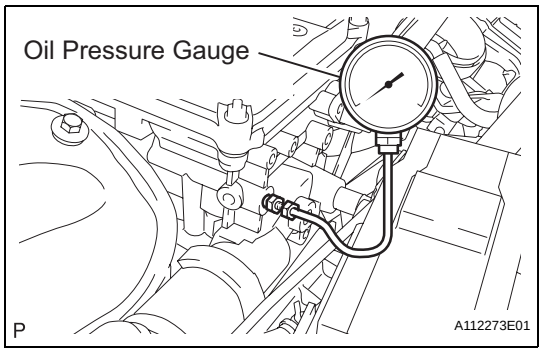
(b) Using a 24 mm deep socket wrench, remove the oil pressure switch.



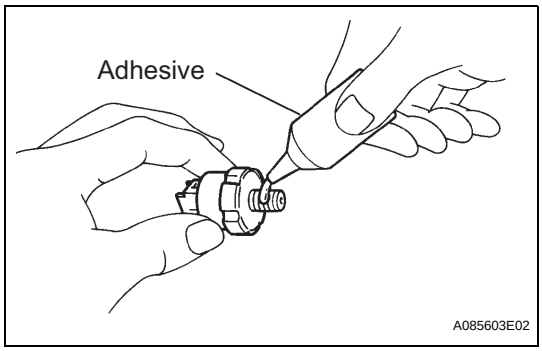
(c) Install the oil pressure gauge.

(d) Warm up the engine.

(e) Measure the oil pressure.
Standard oil pressure



Condition	Specified Condition
Idle	29 kPa (0.3 kgf/cm^2, 4.3 psi) or more
3,000 rpm	170 to 300 kPa (1.7 to 3.1 kgf/cm^2, 24 to 44 psi)



(f) Apply adhesive to 2 or 3 threads of the oil pressure switch.
Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or Equivalent

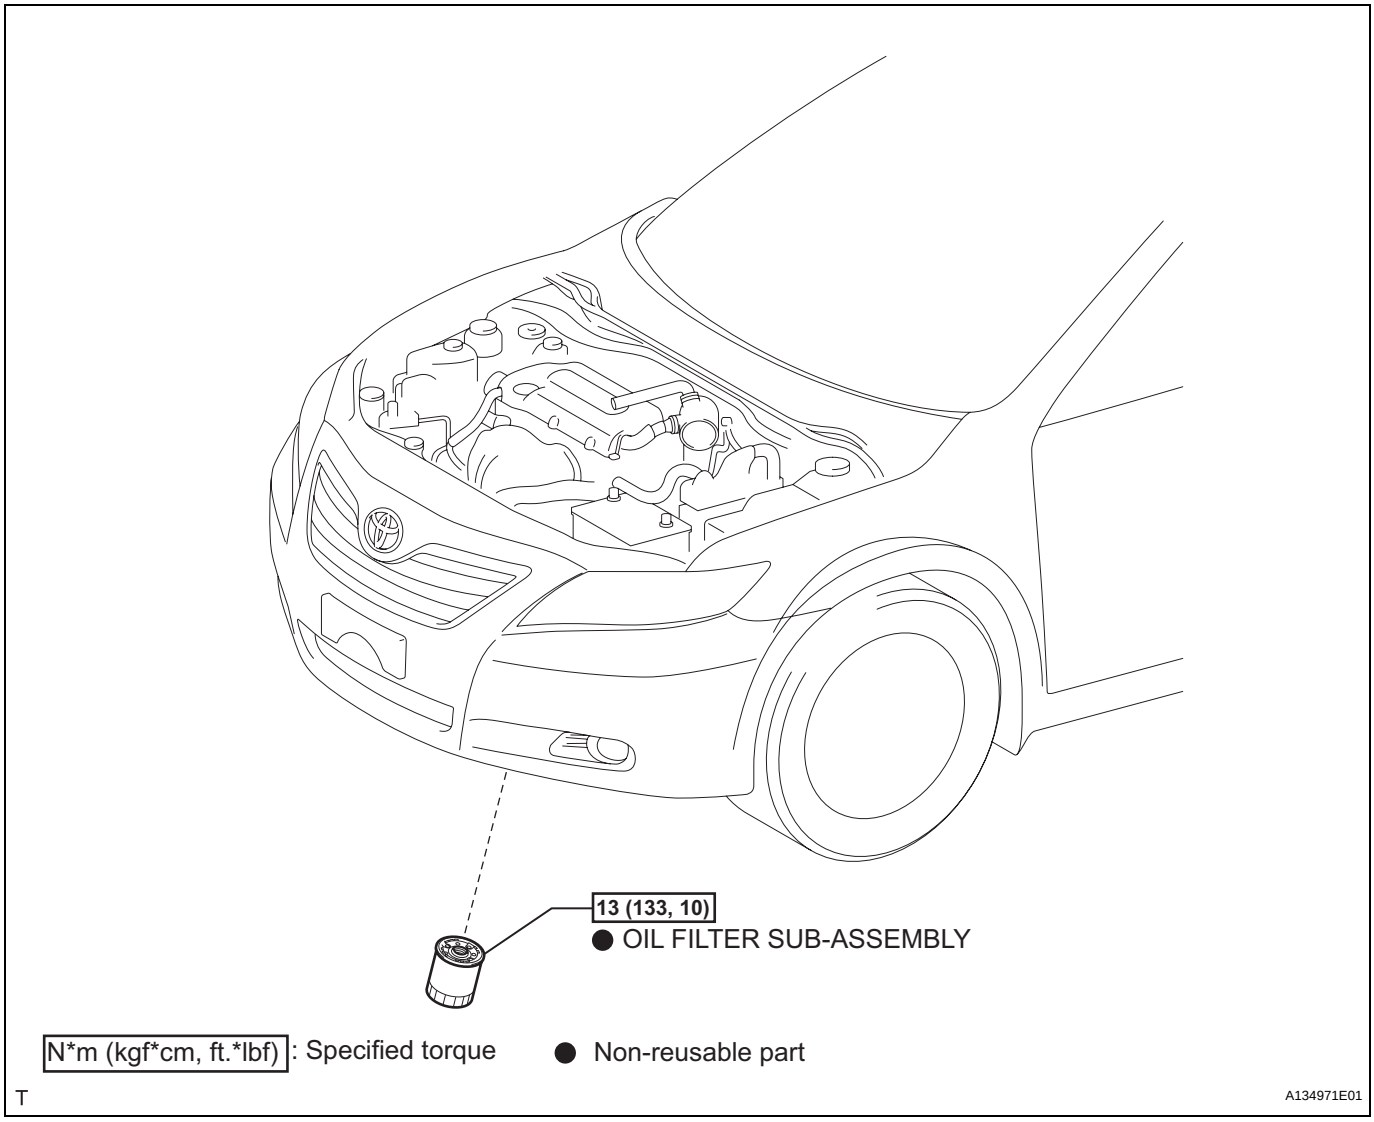
(g) Using a 24 mm deep socket wrench, install the oil pressure switch.
Torque: 15 N*m (153 kgf*cm, 11 ft.*lbf)
NOTICE:
Do not start the engine within 1 hour of installation.

(h) Connect the oil pressure switch connector.

(i) Check for engine oil leaks.

OIL FILTER

COMPONENTS



REPLACEMENT

CAUTION:

- **Prolonged and repeated contact with engine oil will cause the loss of natural oils from the skin, leading to dryness, irritation and dermatitis. In addition, used engine oil contains potentially harmful contaminants which may cause skin cancer.**
- **Precautions should be taken when replacing engine oil to minimize the risk of your skin making contact with used engine oil. Wear protective clothing and gloves. Wash your skin thoroughly with soap and water, or use a waterless hand cleaner to remove any used engine oil. Do not use gasoline, thinners or solvents.**
- **For environmental protection, used oil and used oil filters must be disposed of at designated disposal sites.**

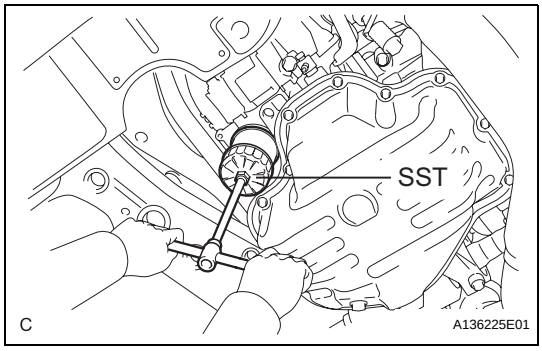
1. DRAIN ENGINE OIL

(a) Remove the oil filler cap.

(b) Remove the oil drain plug and drain the oil into a container.

2. REMOVE OIL FILTER SUB-ASSEMBLY

(a) Using SST, remove the oil filter.
SST 09228-06501



3. INSTALL OIL FILTER SUB-ASSEMBLY

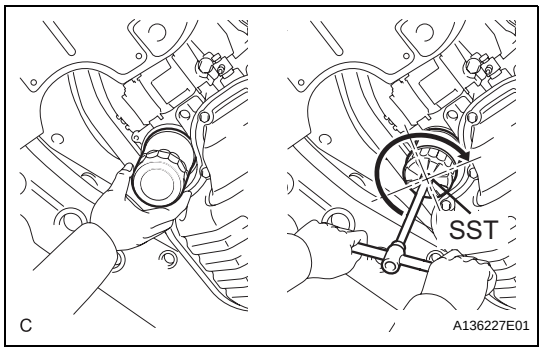
(a) Check and clean the oil filter installation surface.

(b) Apply clean engine oil to the gasket of a new oil filter.

(c) Lightly screw the oil filter into place by hand. Tighten it until the gasket contacts the seat.

(d) Using SST, tighten the oil filter.
SST 09228-06501

(1) Depending on the work space available, choose from the following.
1. If enough space is available, use a torque wrench to tighten the oil filter.
Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)
2. If enough space is not available to use a torque wrench, tighten the oil filter a 3/4 turn by hand or use a common wrench.



LU

4. ADD ENGINE OIL

(a) Clean and install the oil drain plug with a new gasket.
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)

(b) Add new oil.
Standard capacity

Item	Standard Condition
Drain and refill with oil filter change	4.3 liters (4.5 US qts, 3.8 Imp. qts)

Item	Standard Condition
Drain and refill without oil filter change	4.1 liters (4.3 US qts, 3.6 Imp. qts)
Dry fill	5.0 liters (5.3 US qts, 4.4 Imp. qts)

(c) Install the oil filler cap.

5. CHECK FOR ENGINE OIL LEAKS

REMOVAL

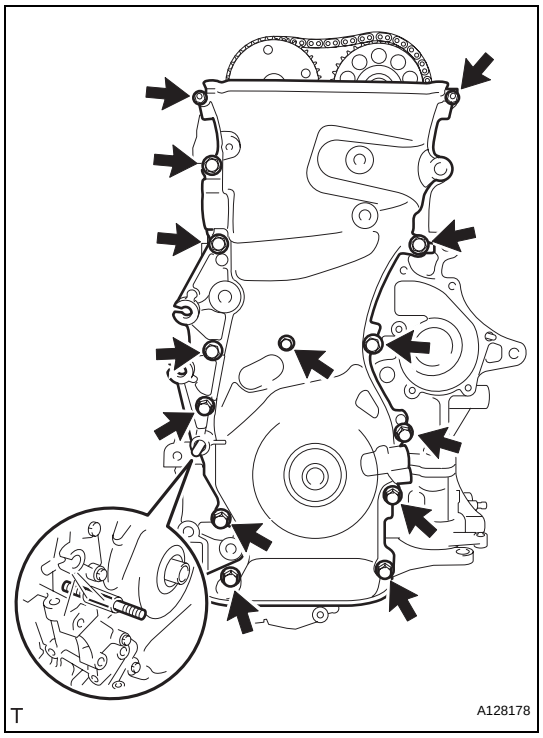
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-94)**
3. **REMOVE FRONT WHEEL RH**
4. **REMOVE ENGINE UNDER COVER LH**
5. **REMOVE ENGINE UNDER COVER RH**
6. **REMOVE FRONT FENDER APRON SEAL RH**
7. **DRAIN ENGINE OIL (See page LU-4)**
8. **REMOVE FRONT EXHAUST PIPE ASSEMBLY** (See page EX-2)
9. **REMOVE NO. 2 ENGINE MOUNTING STAY RH (See page EM-95)**
10. **REMOVE ENGINE MOVING CONTROL ROD SUB-ASSEMBLY (See page EM-95)**
11. **REMOVE NO. 2 ENGINE MOUNTING BRACKET RH (See page EM-96)**
12. **REMOVE V-RIBBED BELT (See page EM-6)**
13. **REMOVE GENERATOR ASSEMBLY (See page CH-11)**
14. **REMOVE VANE PUMP ASSEMBLY (See page EM-101)**
15. **REMOVE IGNITION COIL ASSEMBLY (See page EM-106)**
16. **DISCONNECT VENTILATION HOSE**
17. **DISCONNECT NO. 2 VENTILATION HOSE**
18. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-21)**
19. **SET SET NO. 1 CYLINDER TO TDC/COMPRESSION (See page EM-8)**
20. **REMOVE CRANKSHAFT PULLEY (See page EM-75)**
21. **REMOVE CRANK POSITION SENSOR (See page ES-411)**
22. **REMOVE OIL PAN SUB-ASSEMBLY (See page EM-22)**
23. **REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY (See page EM-22)**
24. **INSTALL ENGINE HANGERS (See page EM-22)**
25. **REMOVE V-RIBBED BELT TENSIONER ASSEMBLY (See page EM-23)**
26. **REMOVE ENGINE MOUNTING INSULATOR (See page EM-23)**

27. **REMOVE ENGINE MOUNTING BRACKET RH (See page EM-24)**

28. **REMOVE TIMING CHAIN COVER SUB-ASSEMBLY**

(a) Using a E10 "torx" socket, remove the stud bolt for the drive belt tensioner from the cylinder block.

(b) Remove the 12 bolts and 2 nuts.



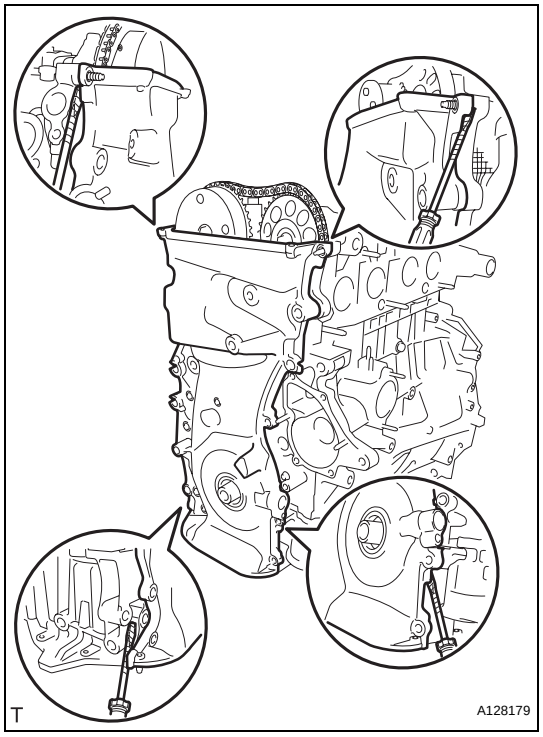
(c) Remove the timing chain cover by prying between the timing chain cover and cylinder head or cylinder block with a screwdriver.

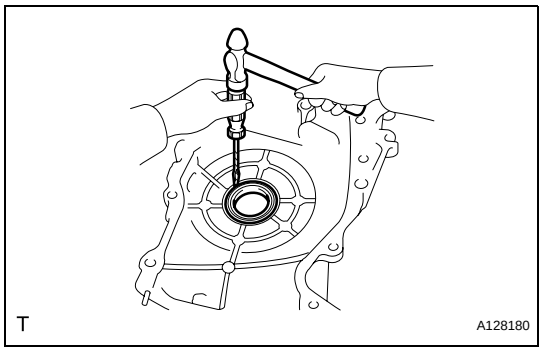
NOTICE:

Be careful not to damage the contact surfaces of the timing chain cover, cylinder block and cylinder head.

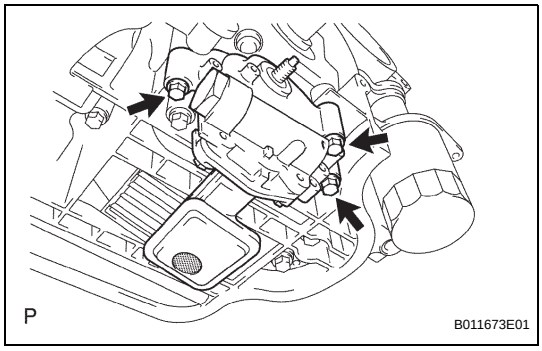
HINT:

Tape the screwdriver tip before use.



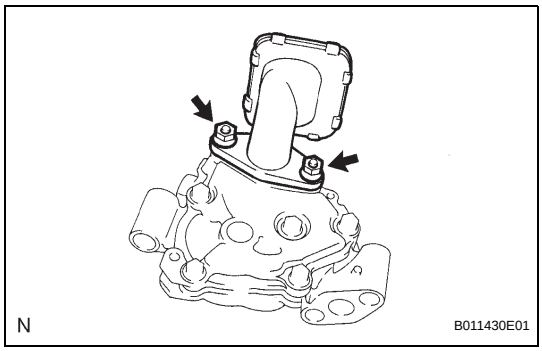


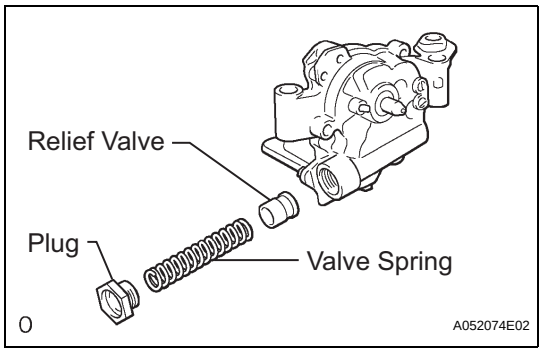
29. **REMOVE TIMING GEAR CASE OR TIMING CHAIN CASE OIL SEAL**
    (a) Using a screwdriver and a hammer, tap out the oil seal.
    HINT:
    Tape the screwdriver tip before use.
30. **REMOVE NO. 1 CRANKSHAFT POSITION SENSOR PLATE (See page EM-24)**
31. **REMOVE CHAIN TENSIONER SLIPPER (See page EM-24)**
32. **REMOVE NO. 1 CHAIN VIBRATION DAMPER (See page EM-24)**
33. **REMOVE TIMING CHAIN GUIDE (See page EM-25)**
34. **REMOVE CHAIN SUB-ASSEMBLY (See page EM-25)**
35. **REMOVE CRANKSHAFT TIMING SPROCKET (See page EM-25)**
36. **REMOVE NO. 2 CHAIN SUB-ASSEMBLY (See page EM-25)**
37. **REMOVE OIL PUMP ASSEMBLY**
    (a) Remove the 3 bolts, oil pump and gasket.



DISASSEMBLY

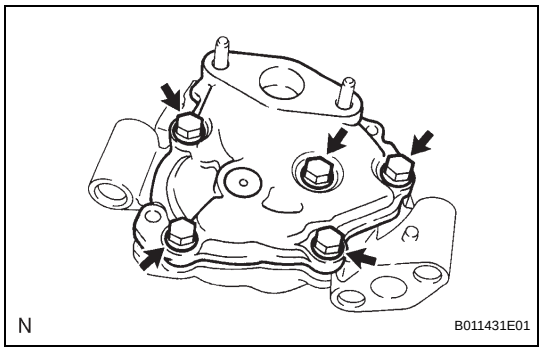
1. **REMOVE OIL PUMP STRAINER**
    (a) Remove the 2 nuts, oil pump strainer and gasket.





2. **REMOVE OIL PUMP RELIEF VALVE**
    (a) Using a 27 mm socket wrench, remove the plug.
    (b) Remove the valve spring and relief valve.

LU

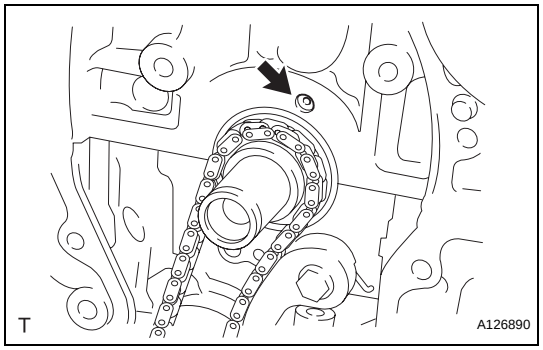


3. REMOVE OIL PUMP COVER

(a) Remove the 5 bolts and oil pump cover.

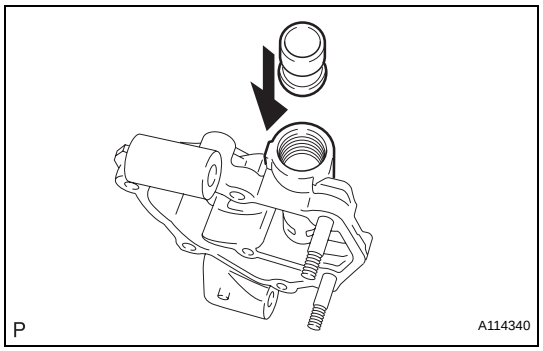
(b) Remove the oil pump rotor.

INSPECTION



1. INSPECT OIL JET

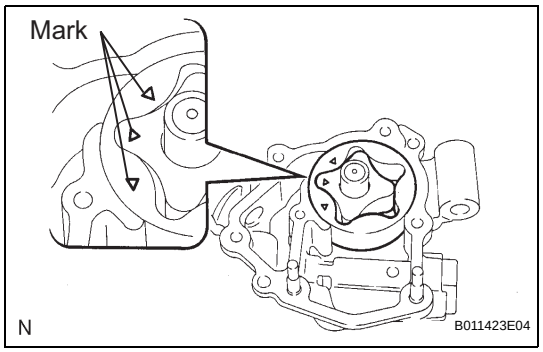
(a) Check the oil jet for damage or clogging.
If necessary, repair the cylinder block.



2. INSPECT OIL PUMP RELIEF VALVE

(a) Check the relief valve.

(1) Coat the valve with engine oil, and then check that the valve falls smoothly into the valve hole under its own weight.
If the valve does not fall smoothly, replace the relief valve. If necessary, replace the oil pump assembly.

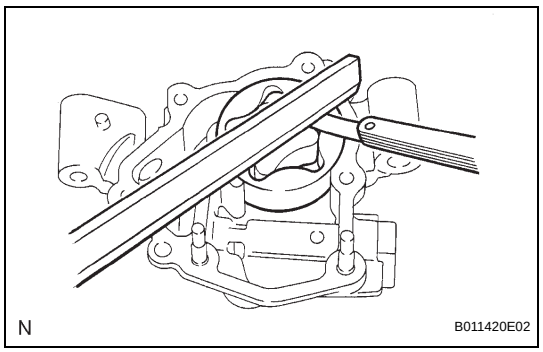


3. INSPECT OIL PUMP ROTOR

(a) Install the oil pump rotor.

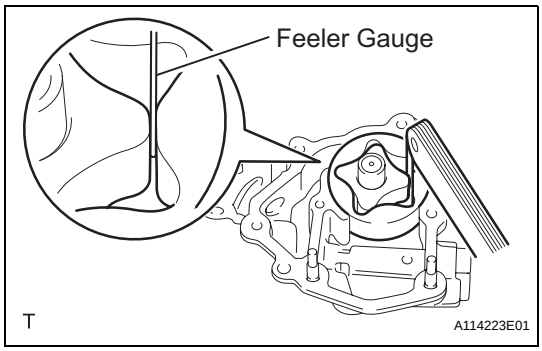
(1) Coat the drive rotor and driven rotor with engine oil.

(2) Place the drive and driven rotors into the oil pump with the marks facing the pump cover side.

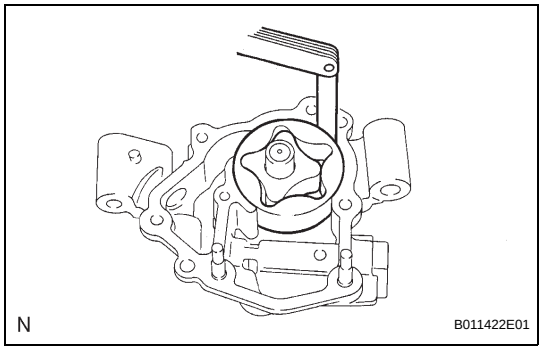


(b) Check the side clearance.

(1) Using a feeler gauge and precision straightedge, measure the clearance between the rotors and precision straightedge.
Standard clearance:
0.030 to 0.085 mm (0.0012 to 0.0033 in.)
Maximum clearance:
0.16 mm (0.0063 in.)
If the side clearance is greater than the maximum, replace the oil pump assembly.



(c) Check the tip clearance.
(1) Using a feeler gauge, measure the clearance between the drive and driven rotor tips.
Standard clearance:
0.080 to 0.160 mm (0.0031 to 0.0063 in.)
Maximum clearance:
0.35 mm (0.0138 in.)
If the tip clearance is greater than the maximum, replace the oil pump assembly.



(d) Check the body clearance.
(1) Using a feeler gauge, measure the clearance between the driven rotor and pump body.
Standard clearance:
0.100 to 0.170 mm (0.0039 to 0.0067 in.)
Maximum clearance:
0.325 mm (0.0128 in.)
If the body clearance is greater than the maximum, replace the oil pump assembly.

4. **INSPECT NO. 2 CHAIN SUB-ASSEMBLY (See page EM-138)**

5. **INSPECT OIL PUMP DRIVE SPROCKET (See page EM-138)**

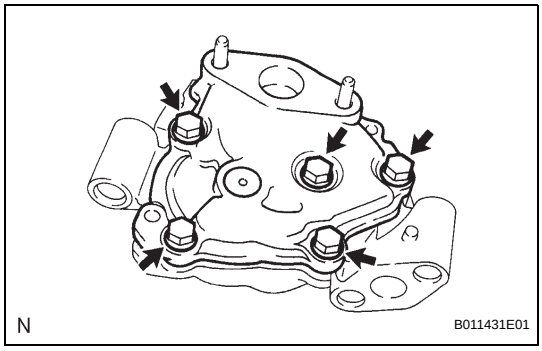
6. **INSPECT OIL PUMP DRIVEN SPROCKET (See page EM-139)**

7. **INSPECT CHAIN TENSIONER PLATE (See page EM-140)**

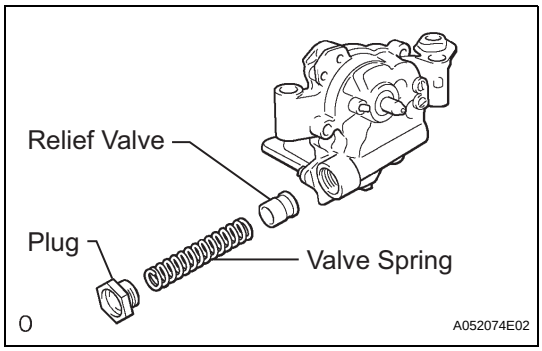
REASSEMBLY

1. **INSTALL OIL PUMP COVER**
(a) Install the oil pump cover with the 5 bolts.
Torque: 8.8 N*m (90 kgf*cm, 78 in.*lbf)

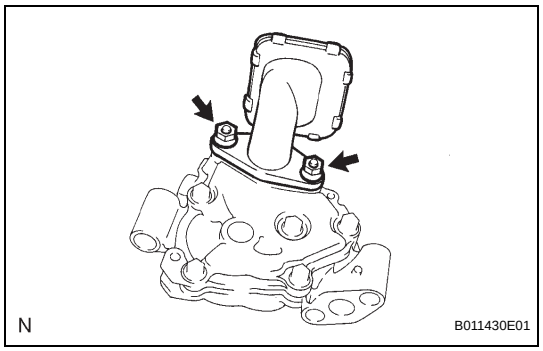
2. **INSTALL OIL PUMP RELIEF VALVE**
(a) Coat the relief valve with engine oil.



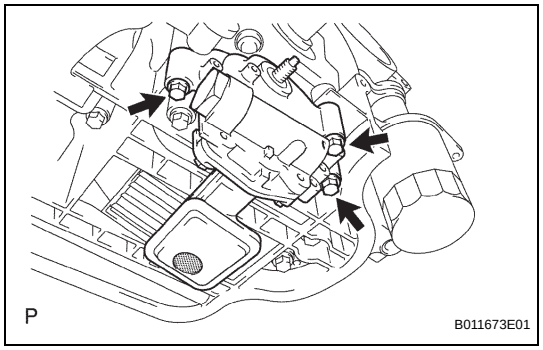
(b) Insert the relief valve and spring into the pump body hole.
(c) Using a 27 mm socket wrench, install the plug.
Torque: 49 N*m (500 kgf*cm, 36 ft.*lbf)



LU

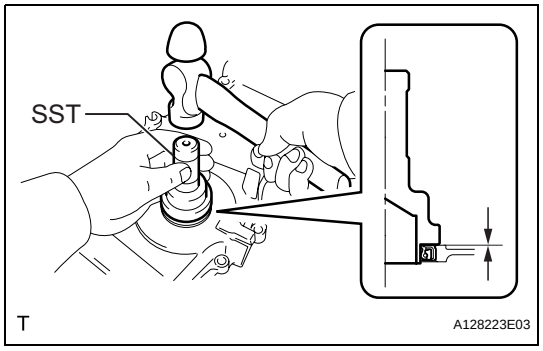


3. **INSTALL OIL PUMP STRAINER**
   (a) Install a new gasket and the oil strainer with the 2 nuts.
   Torque: 8.8 N*m (90 kgf*cm, 78 in.*lbf)

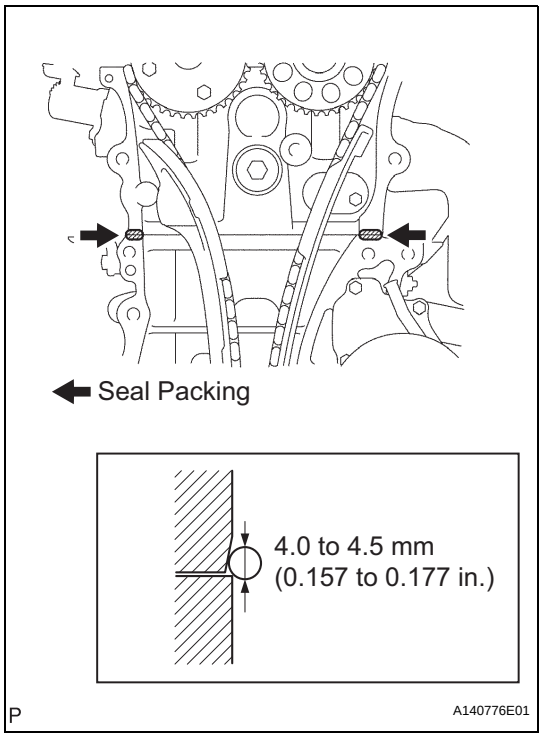


INSTALLATION

1. **INSTALL OIL PUMP ASSEMBLY**
   (a) Install a new gasket and the oil pump with the 3 bolts.
   Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)
2. **INSTALL NO. 2 CHAIN SUB-ASSEMBLY (See page EM-27)**
3. **INSTALL CRANKSHAFT TIMING SPROCKET (See page EM-28)**
4. **INSTALL NO. 1 CHAIN VIBRATION DAMPER (See page EM-28)**
5. **INSTALL CHAIN SUB-ASSEMBLY (See page EM-28)**
6. **INSTALL CHAIN TENSIONER SLIPPER (See page EM-29)**
7. **INSTALL TIMING CHAIN GUIDE (See page EM-30)**
8. **INSTALL NO. 1 CRANKSHAFT POSITION SENSOR PLATE (See page EM-30)**

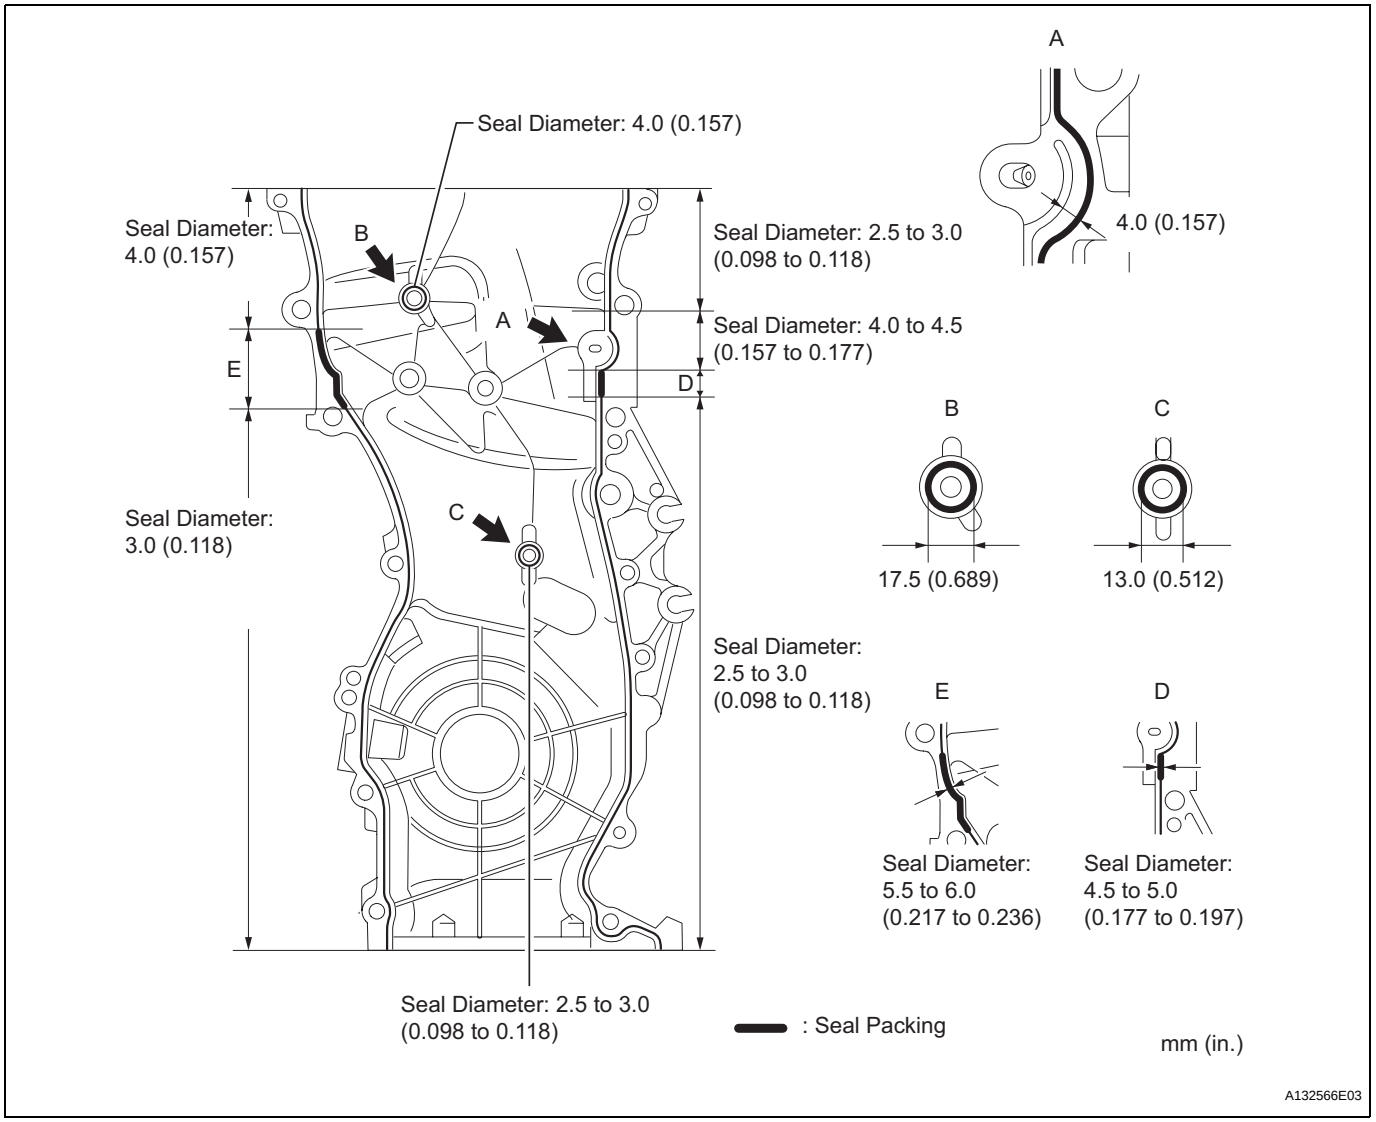


9. **INSTALL TIMING CHAIN CASE OIL SEAL**
   (a) Using SST, tap in a new oil seal until its surface is flush with the timing chain cover edge.
   SST 09223-22010
   (b) Apply a light coat of MP grease to the lip of the oil seal.
   NOTICE:
   Keep the gap between the timing chain cover edge and the oil seal free of foreign matter.
10. **INSTALL TIMING CHAIN COVER SUB-ASSEMBLY**
   (a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the timing chain cover, cylinder head and cylinder block.



(b) Apply seal packing (diameter: 4.0 to 4.5 mm (0.157 to 0.177 in.)) as shown in the illustration.
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or Equivalent

(c) Apply seal packing in a continuous bead as shown in the illustration.



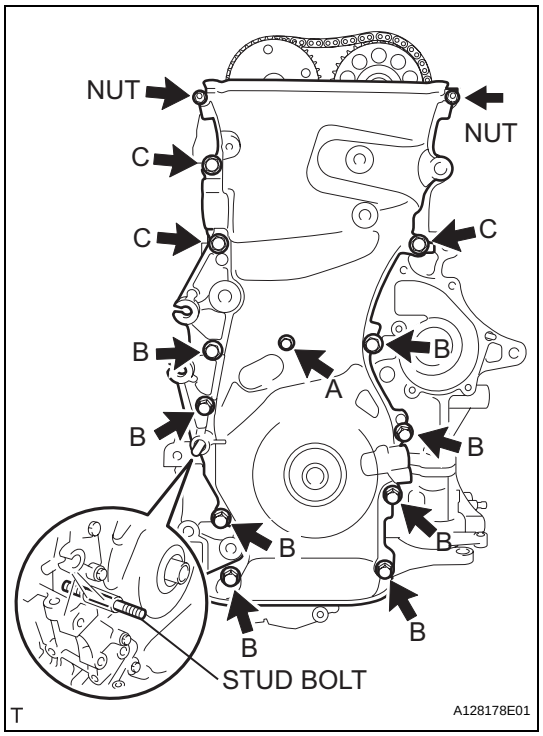
LU

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or Equivalent
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the chain cover within 3 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after installing.**

(d) Install the timing chain cover with the 12 bolts and 2 nuts.
Torque: Bolt A
9.0 N*m (92 kgf*cm, 80 in.*lbf)
Bolt B
25 N*m (255 kgf*cm, 18 ft.*lbf)
Bolt C
55 N*m (561 kgf*cm, 41 ft.*lbf)
Nut
11 N*m (112 kgf*cm, 8 ft.*lbf)

Bolt length

Item	Length
Bolt A	30 mm (1.18 in.) length for 10 mm head
Bolt B	30 mm (1.18 in.) length for 12 mm head
Bolt C	40 mm (1.57 in.) length for 14 mm head



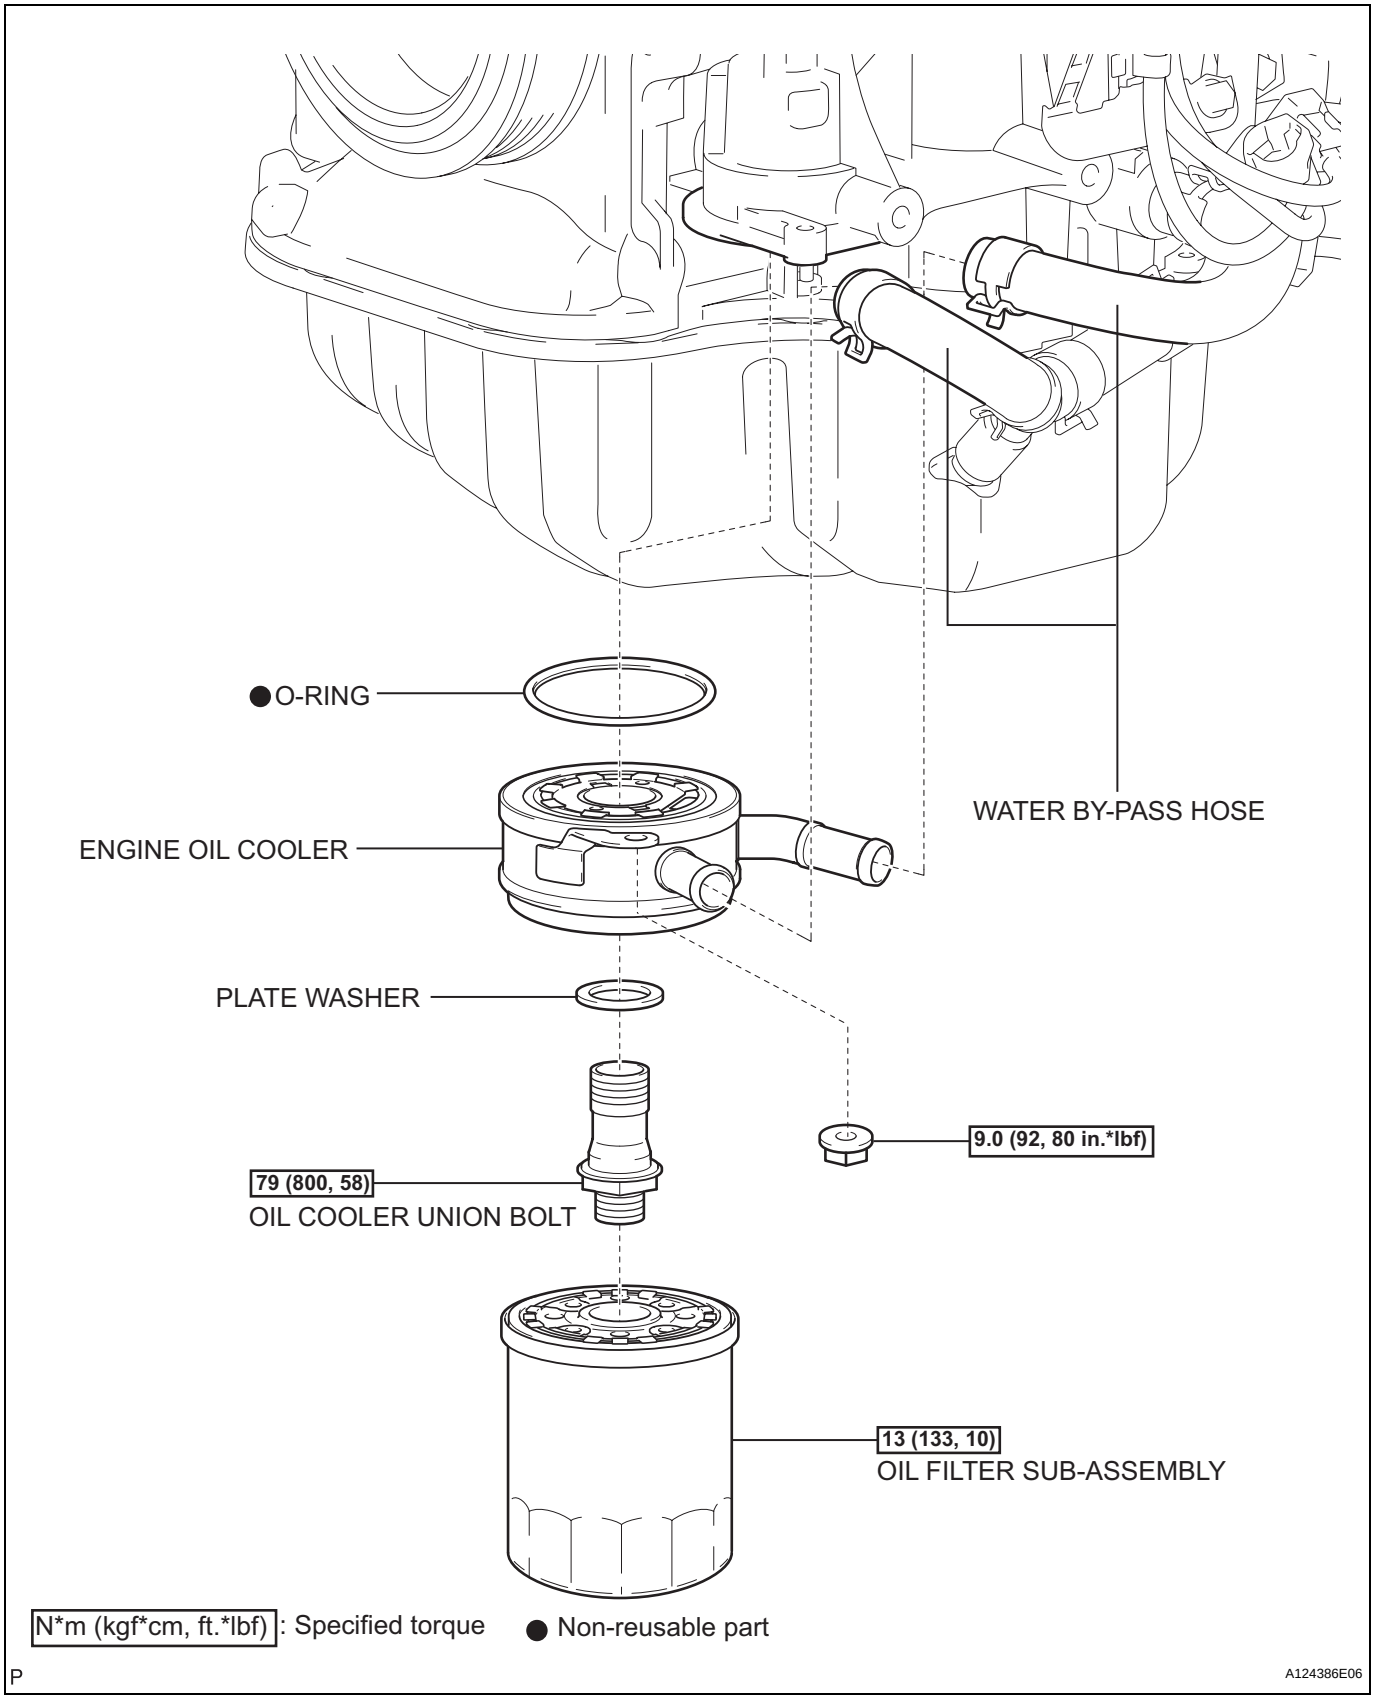
(e) Using a E10 "torx" socket, install the stud bolt to the drive belt tensioner.
Torque: 22 N*m (220 kgf*cm, 16 ft.*lbf)

11. **INSTALL V-RIBBED BELT TENSIONER ASSEMBLY (See page EM-30)**
12. **INSTALL ENGINE MOUNTING BRACKET RH (See page EM-30)**
13. **INSTALL ENGINE MOUNTING INSULATOR (See page EM-30)**
14. **INSTALL OIL PAN SUB-ASSEMBLY (See page EM-31)**
15. **INSTALL CRANK POSITION SENSOR (See page ES-411)**
16. **INSTALL CRANKSHAFT PULLEY (See page EM-76)**
17. **INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY (See page EM-32)**
18. **INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-33)**
19. **INSTALL NO. 2 VENTILATION HOSE**
20. **INSTALL VENTILATION HOSE**
21. **INSTALL IGNITION COIL ASSEMBLY (See page EM-33)**
22. **INSTALL VANE PUMP ASSEMBLY (See page EM-113)**
23. **INSTALL GENERATOR ASSEMBLY (See page CH-19)**

24. **INSTALL V-RIBBED BELT (See page EM-6)**
25. **INSTALL NO. 2 ENGINE MOUNTING BRACKET RH (See page EM-118)**
26. **INSTALL ENGINE MOVING CONTROL ROD SUB-ASSEMBLY (See page EM-119)**
27. **INSTALL NO. 2 ENGINE MOUNTING STAY RH (See page EM-119)**
28. **INSTALL FRONT EXHAUST PIPE ASSEMBLY** (See page EX-3)
29. **ADD ENGINE OIL**
30. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (See page EM-120)**
31. **CHECK ENGINE OIL LEAKS**
32. **CHECK CHECK EXHAUST GAS LEAKS**
33. **CHECK IGNITION TIMING (See page EM-1)**
34. **INSTALL FRONT FENDER APRON SEAL RH**
35. **INSTALL ENGINE UNDER COVER LH**
36. **INSTALL ENGINE UNDER COVER RH**
37. **INSTALL FRONT WHEEL RH**
38. **INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-121)**

ENGINE OIL COOLER (w/ Oil Cooler)

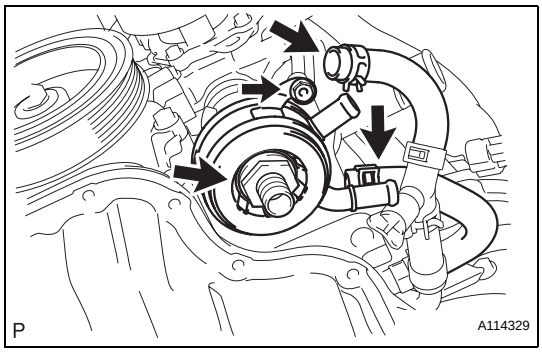
COMPONENTS



LU

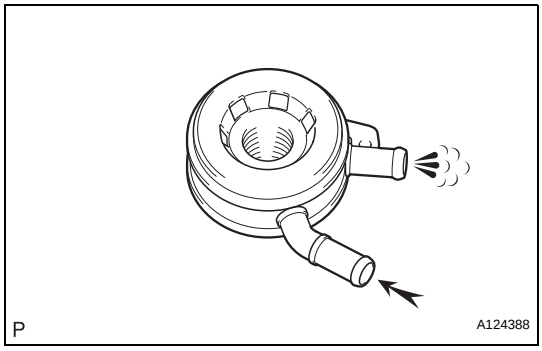
REMOVAL

1. **REMOVE FRONT WHEEL OPENING EXTENSION PAD RH**
2. **REMOVE FRONT WHEEL OPENING EXTENSION PAD LH**
3. **REMOVE ENGINE UNDER COVER RH**
4. **REMOVE ENGINE UNDER COVER LH**
5. **DRAIN ENGINE COOLANT (See page CO-5)**
6. **DRAIN ENGINE OIL (See page LU-4)**
7. **REMOVE OIL FILTER SUB-ASSEMBLY (See page LU-4)**
8. **REMOVE ENGINE OIL COOLER**
   (a) Disconnect the 2 oil cooler hoses from the oil cooler.
   (b) Remove the oil cooler union bolt, plate washer, nut, oil cooler and O-ring.



INSPECTION

1. **INSPECT ENGINE OIL COOLER**
   (a) Check the engine oil cooler for damage or clogging. If necessary, replace the oil cooler.

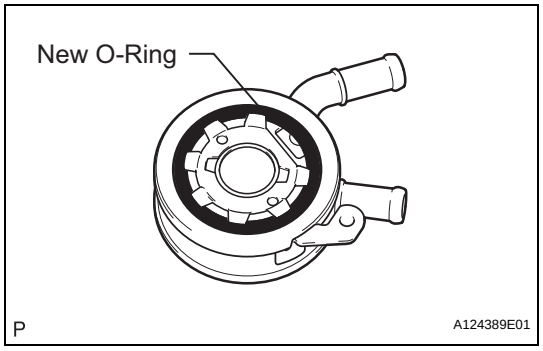


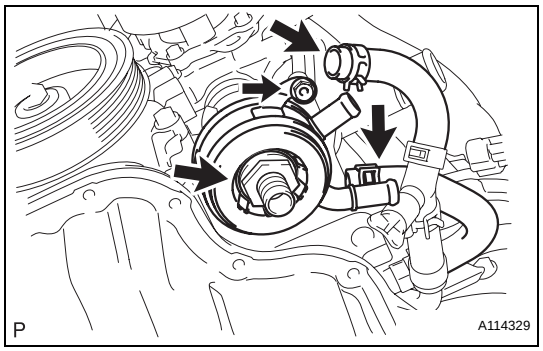
INSTALLATION

1. INSTALL ENGINE OIL COOLER

(a) Clean the oil cooler contact surface.

(b) Install a new O-ring to the oil cooler.





(c) Apply a light coat of engine oil to the threads and under the head of the oil cooler union bolt.

(d) Install the oil cooler with the plate washer, oil cooler union bolt and nut.

Torque: for union bolt
79 N*m (800 kgf*cm, 58 ft.*lbf)
for nut
9.0 N*m (92 kgf*cm, 80 in.*lbf)

(e) Connect the 2 oil cooler hoses.

2. INSTALL OIL FILTER SUB-ASSEMBLY (See page LU-4)

3. ADD ENGINE OIL (See page LU-4)

4. ADD ENGINE COOLANT (See page CO-5)

5. CHECK FOR ENGINE OIL LEAKS

6. CHECK FOR ENGINE COOLANT LEAKS (See page CO-1)

7. CHECK ENGINE OIL LEVEL (See page LU-1)

8. INSTALL ENGINE UNDER COVER RH

9. INSTALL ENGINE UNDER COVER LH

10. INSTALL FRONT WHEEL OPENING EXTENSION PAD LH

11. INSTALL FRONT WHEEL OPENING EXTENSION PAD RH

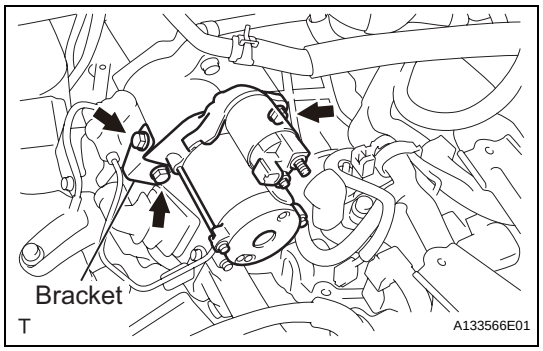
REMOVAL

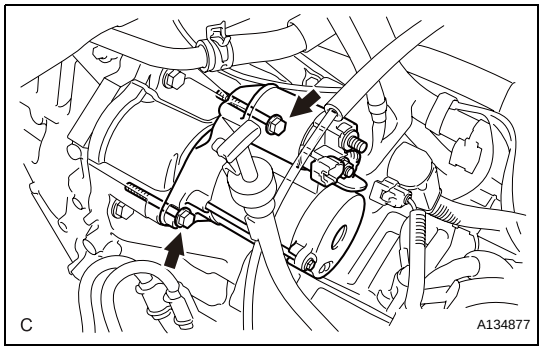
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE AIR CLEANER INLET ASSEMBLY (See page EM-94)**
3. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-416)**
4. **REMOVE AIR CLEANER CASE SUB-ASSEMBLY (See page EM-95)**
5. **REMOVE STARTER ASSEMBLY (for Manual Transaxle)**
   (a) Disconnect the terminal 50 connector from the starter assembly.
   (b) Remove the nut and disconnect the wire harness from terminal 30.

   (c) Remove the 3 bolts, clutch flexible hose bracket and starter assembly.



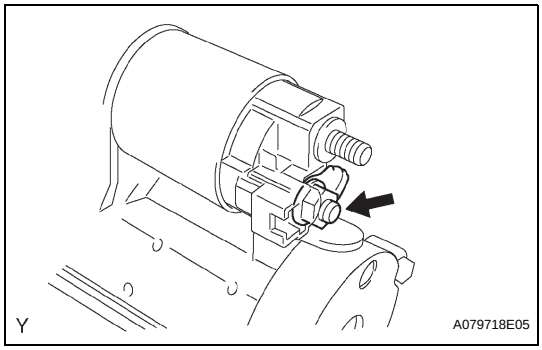
6. **REMOVE STARTER ASSEMBLY (for Automatic Transaxle)**
   (a) Disconnect the terminal 50 connector from the starter assembly.
   (b) Remove the nut and disconnect the wire harness from terminal 30.

   (c) Remove the 2 bolts and starter assembly.



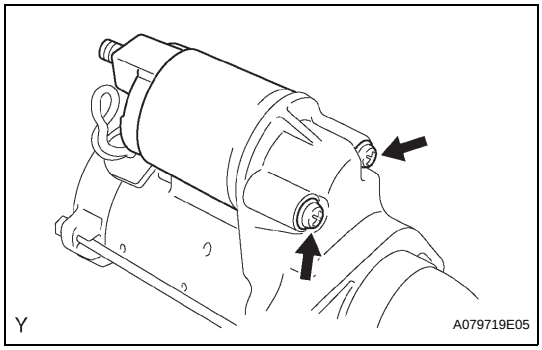
ST

DISASSEMBLY

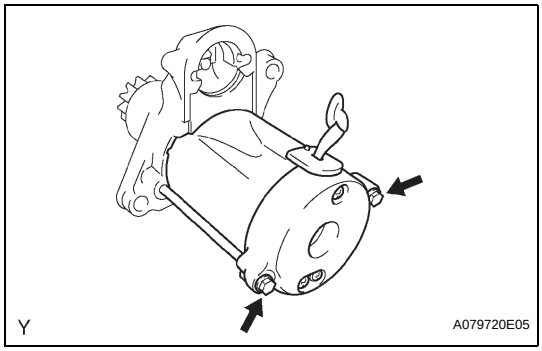


1. REMOVE REPAIR SERVICE STARTER KIT

(a) Remove the nut and disconnect the lead wire from terminal C.

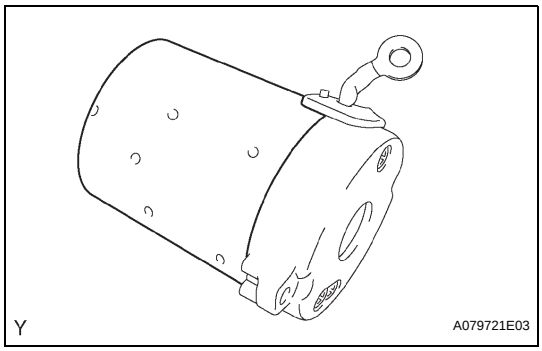


(b) Remove the 2 screws that hold the magnetic switch to the motor terminal starter kit.
(c) Remove the repair service starter kit.
(d) Remove the return spring and the plunger from the repair service starter kit.

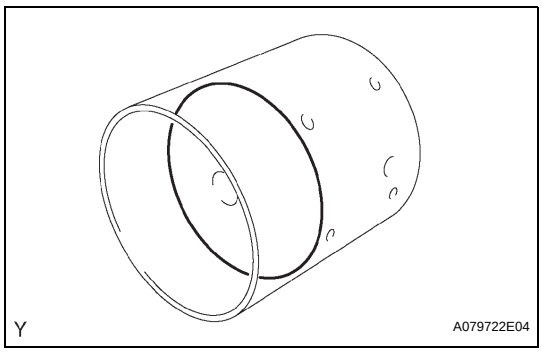


2. REMOVE STARTER YOKE ASSEMBLY

(a) Remove the 2 through bolts and pull out the starter yoke assembly together with the starter commutator end frame assembly.



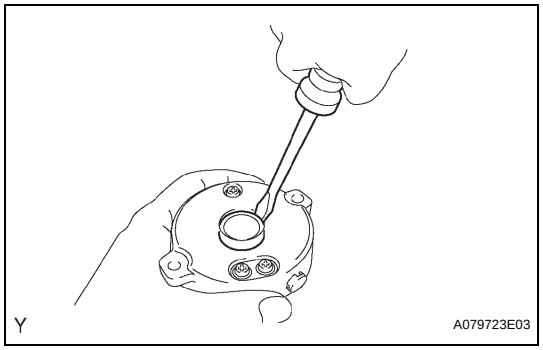
(b) Remove the starter yoke assembly from the starter commutator end frame assembly.



3. REMOVE STARTER ARMATURE PLATE

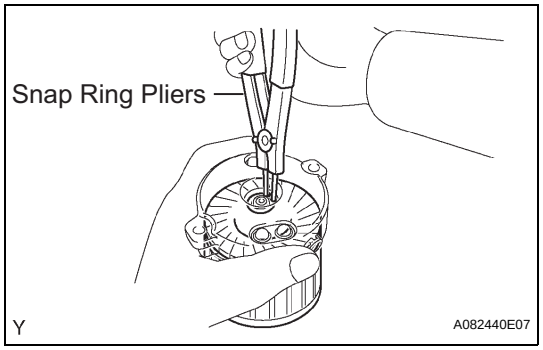
(a) Remove the starter armature plate from the starter yoke assembly.

ST



4. REMOVE STARTER COMMUTATOR END FRAME COVER

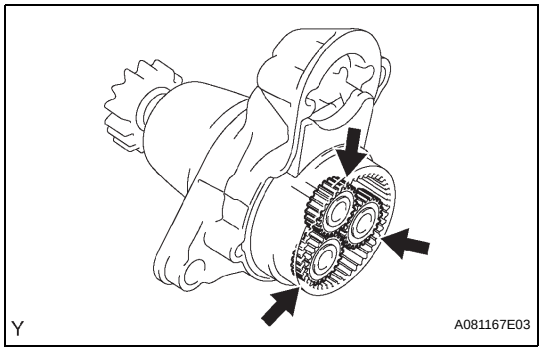
(a) Using a screwdriver, remove the starter commutator end frame cover.



5. REMOVE STARTER ARMATURE ASSEMBLY

(a) Using snap ring pliers, remove the snap ring and plate washer.

(b) Remove the starter armature assembly from the commutator end frame assembly.



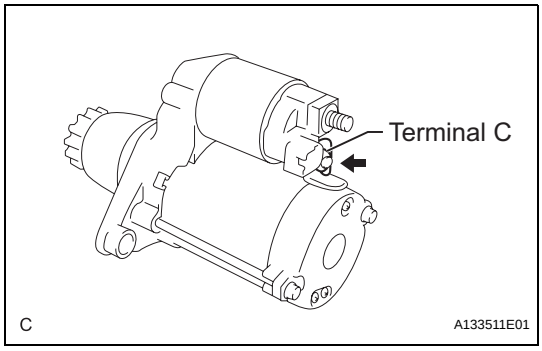
6. REMOVE PLANETARY GEAR

(a) Remove the 3 planetary gears from the motor terminal starter kit.

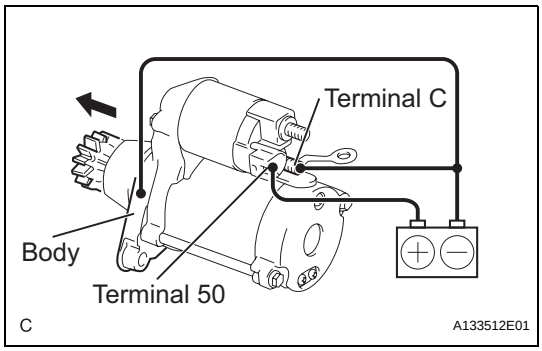
INSPECTION

1. INSPECT STARTER ASSEMBLY

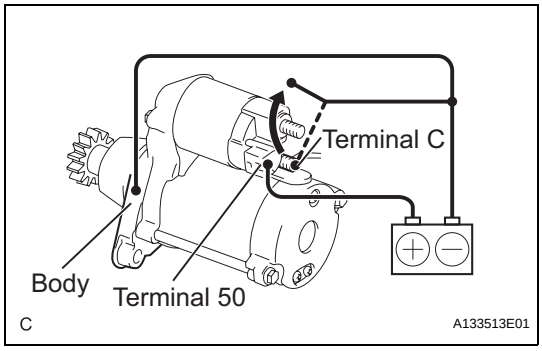
CAUTION:
Make sure to complete each of the following tests within 5 seconds to prevent the coil from burning out.



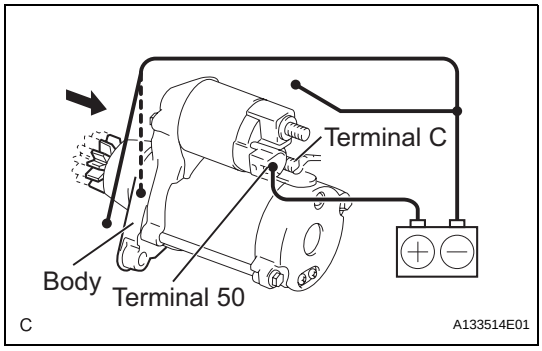
(a) Perform pull-in test:
(1) Disconnect the lead wire from terminal C.



(2) Connect the battery to the magnetic switch as shown in the illustration. Check that the clutch pinion gear moves outward.
If the clutch pinion gear does not move outward, replace the repair service starter kit.

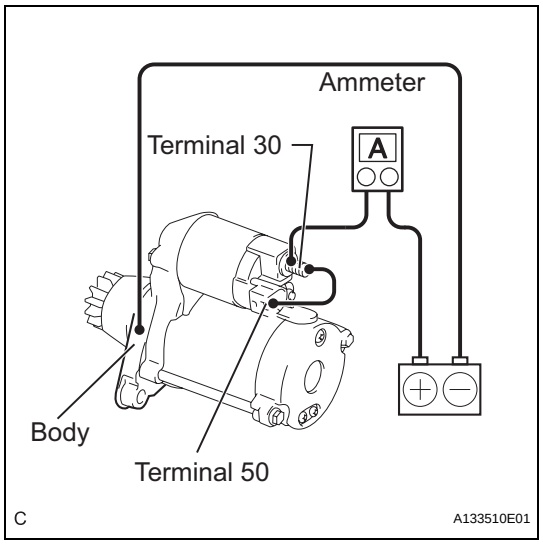


(b) Perform hold-in test:
(1) Disconnect the negative (-) terminal lead from terminal C under the conditions for pull-in test. Check that the pinion gear remains out.
If the clutch pinion gear moves inward, replace the repair service starter kit.



(c) Inspect clutch pinion gear return:
(1) Disconnect the negative (-) lead from the starter body. Check that the clutch pinion gear moves inward.
If the clutch pinion gear does not move inward, replace the repair service starter kit.

(d) Perform no-load performance test:
(1) Connect the field coil wire to terminal C with the nut. Make sure that the lead is not grounded.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)
(2) Clamp the starter in a vise.

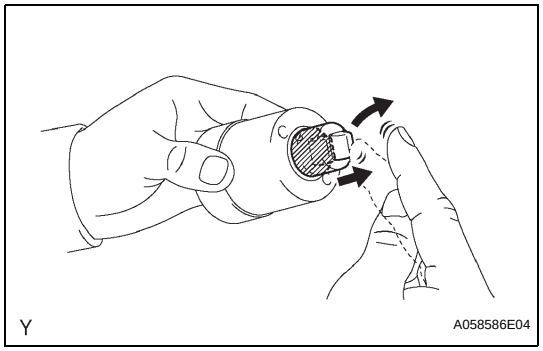


(3) Connect the battery and an ammeter to the starter as shown in the illustration.
(4) Check that the starter rotates smoothly and steadily with the clutch pinion gear extended. Check that the ammeter reads the specified current.

Specified current

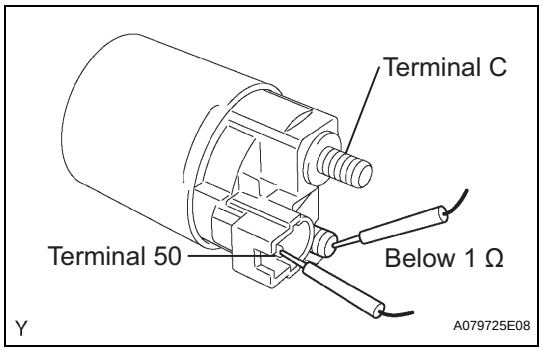
Condition	Specified condition
at 11.5 V	90 A or less

If the result is not as specified, overhaul the starter assembly.



2. INSPECT REPAIR SERVICE STARTER KIT

(a) Check the plunger.
(1) Push in the plunger and check that it returns quickly to its original position.
If necessary, replace the repair service starter kit.

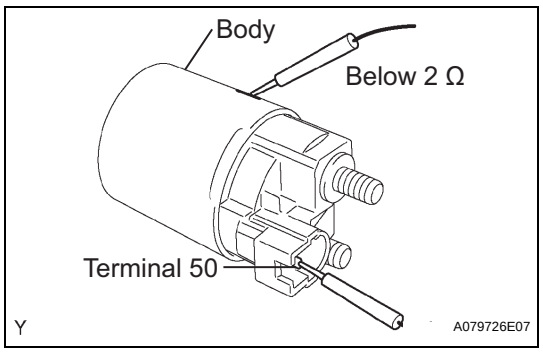


(b) Inspect the resistance of the pull-in coil.
(1) Using an ohmmeter, measure the resistance between terminals 50 and C.

Standard resistance

Tester connection	Specified condition
Terminal 50 - Terminal C	Below 1 Ω

If the resistance is not as specified, replace the repair service starter kit.



(c) Inspect the resistance of the hold-in coil.
(1) Using an ohmmeter, measure the resistance between terminal 50 and the switch body.

Standard resistance

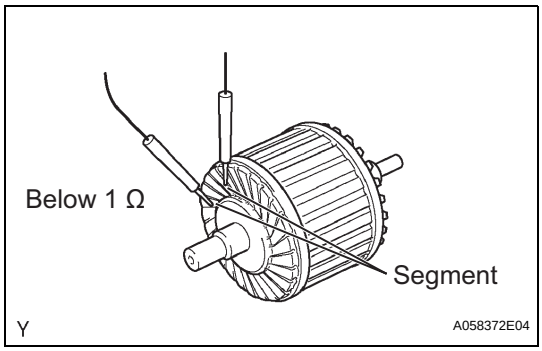
Tester connection	Specified condition
Terminal 50 - Switch body	Below 2 Ω

If the resistance is not as specified, replace the repair service starter kit.

3. INSPECT STARTER ARMATURE ASSEMBLY

(a) Check the commutator surface for dirt or burning.
If the surface is dirty or burnt, smooth the surface with 400-grit sandpaper or leather.

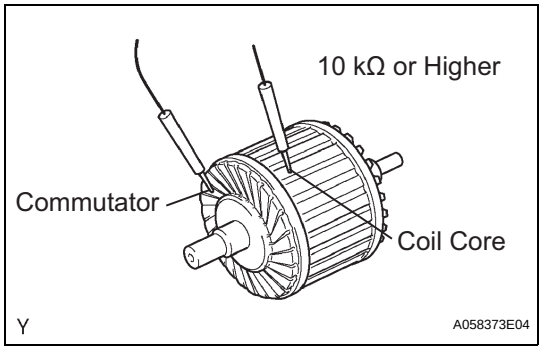
ST



(b) Inspect the resistance of the commutator.
(1) Using an ohmmeter, measure the resistance between the segments of the commutator.
Standard resistance

Tester connection	Specified condition
Segment - Segment	Below 1 Ω

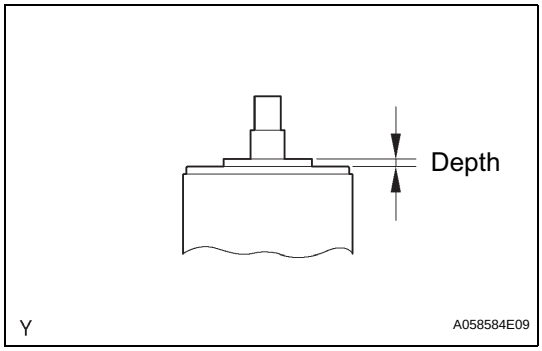
If the resistance is not as specified, replace the starter armature assembly.



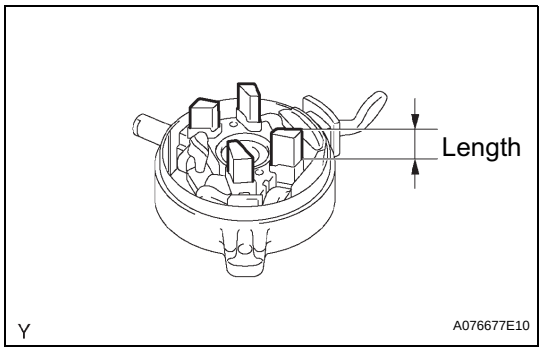
(2) Using an ohmmeter, measure the resistance between the commutator and armature coil core.
Standard resistance

Tester connection	Specified condition
Commutator - Armature coil core	10 kΩ or higher

If the resistance is not as specified, replace the starter armature assembly.

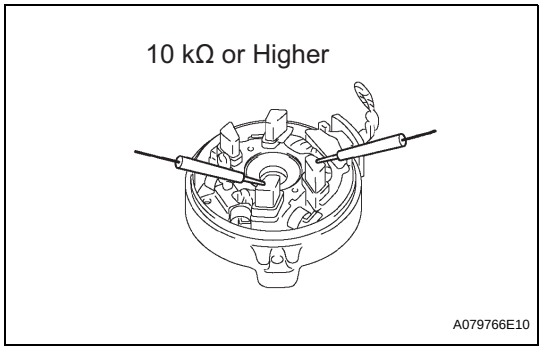


(c) Using vernier calipers, measure the commutator depth.
Specified depth:
3.1 mm (0.122 in.)
Maximum depth:
3.8 mm (0.150 in.)
If the depth is greater than the maximum, replace the starter armature assembly.



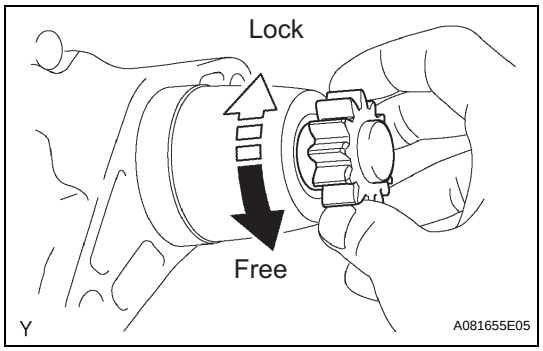
4. INSPECT STARTER COMMUTATOR END FRAME ASSEMBLY

(a) Check the brush length.
(1) Using vernier calipers, measure the brush length.
Specified length:
9.0 mm (0.354 in.)
Maximum length:
4.0 mm (0.157 in.)
If the length is less than the minimum, replace the starter commutator end frame assembly.



(b) Check the resistance.
(1) Using an ohmmeter, measure the resistance between the positive (+) and negative (-) brushes.
Resistance:
10 kΩ or higher
If the resistance is not as specified, repair or replace the starter commutator end frame assembly.

ST



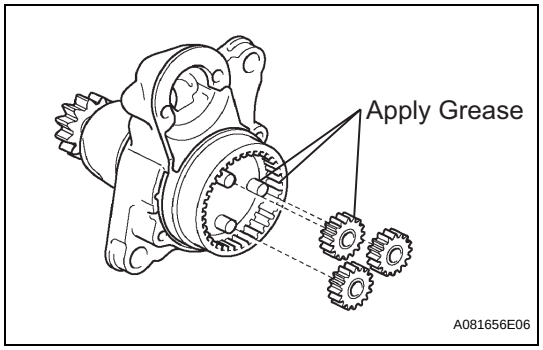
5. INSPECT MOTOR TERMINAL STARTER KIT

(a) Check the starter clutch.

(1) Rotate the clutch pinion gear counterclockwise and check that it turns freely. Try to rotate the clutch pinion gear clockwise and check that it locks.

If necessary, replace the motor terminal starter kit.

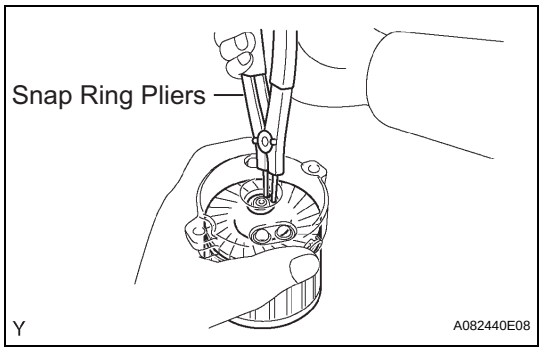
REASSEMBLY



1. INSTALL PLANETARY GEAR

(a) Apply high-temperature grease to the planetary gears and pin parts of the planetary shaft.

(b) Install the 3 planetary gears to the motor terminal starter kit.

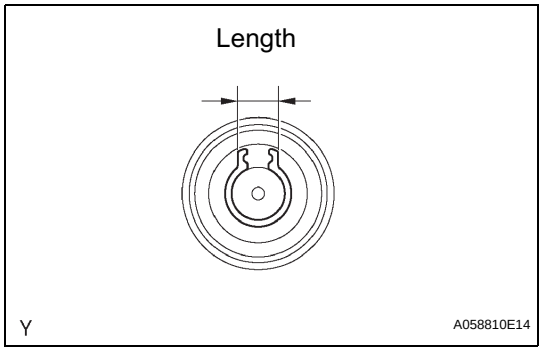


2. INSTALL STARTER ARMATURE ASSEMBLY

(a) Apply high-temperature grease to the plate washer and the armature shaft.

(b) Install the starter armature assembly to the starter commutator end frame assembly.

(c) Using snap ring pliers, install the plate washer and a new snap ring.

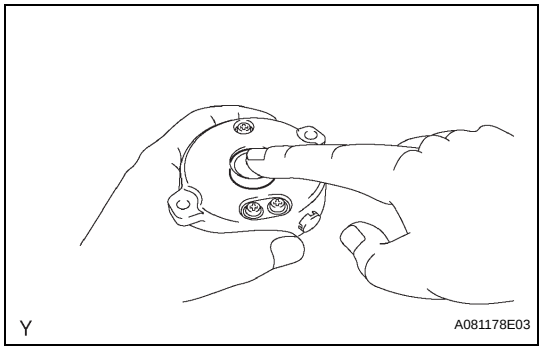


(d) Using vernier calipers, measure the snap ring.

Maximum length:

5.0 mm (0.197 in.)

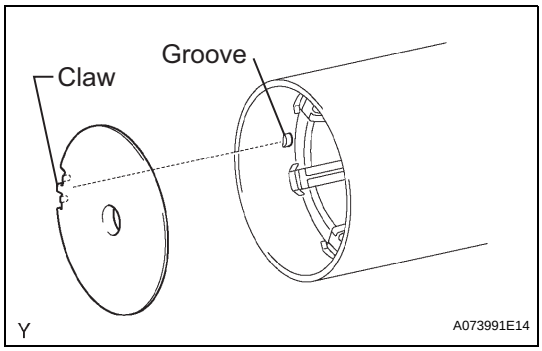
If the length is greater than the maximum, replace the snap ring with a new one.



3. INSTALL STARTER COMMUTATOR END FRAME COVER

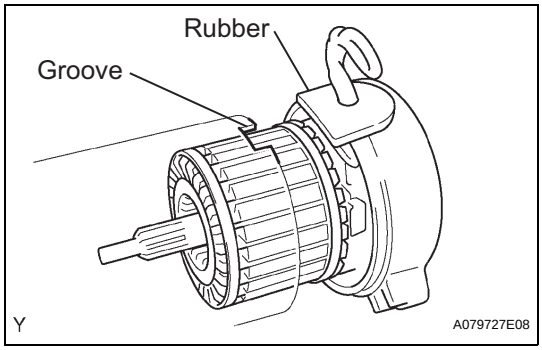
(a) Install the starter commutator end frame cover to the starter commutator end frame assembly.

ST



4. INSTALL STARTER ARMATURE PLATE

(a) Align the claw of the armature plate with the groove inside the starter yoke assembly, and install the starter armature plate.



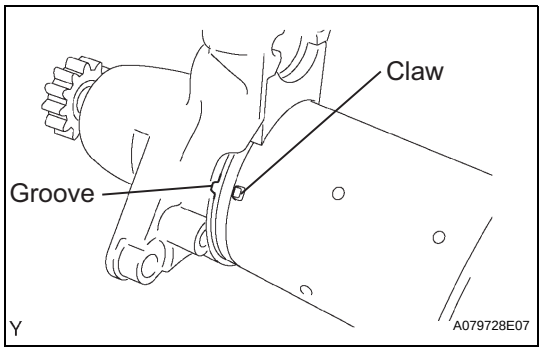
5. INSTALL STARTER COMMUTATOR END FRAME ASSEMBLY

(a) Align the starter commutator end frame rubber with the groove of the starter yoke assembly.

(b) Install the starter commutator end frame assembly to the starter yoke assembly.

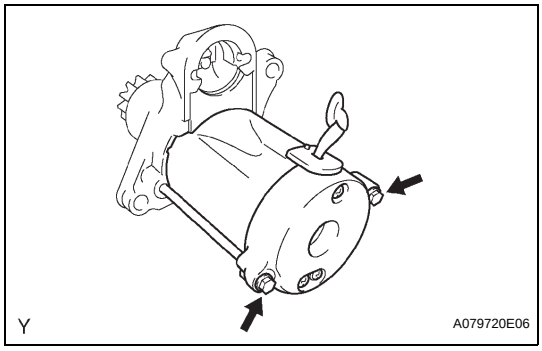
NOTICE:

The magnet of the starter yoke assembly may attract the starter armature assembly when the starter commutator end frame assembly is installed, causing the magnet to break.



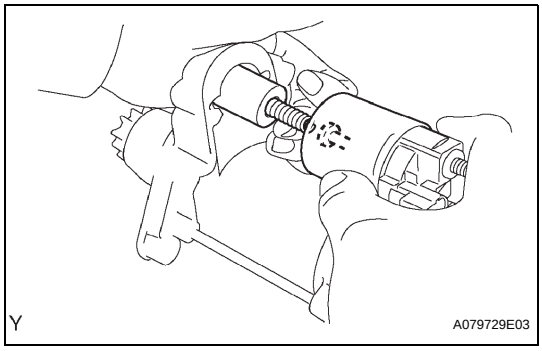
6. INSTALL STARTER YOKE ASSEMBLY

(a) Align the claw of the starter yoke with the groove inside the motor terminal starter kit.



(b) Install the starter yoke with the 2 through bolts.

Torque: 6.0 N*m (61 kgf*cm, 53 in.*lbf)



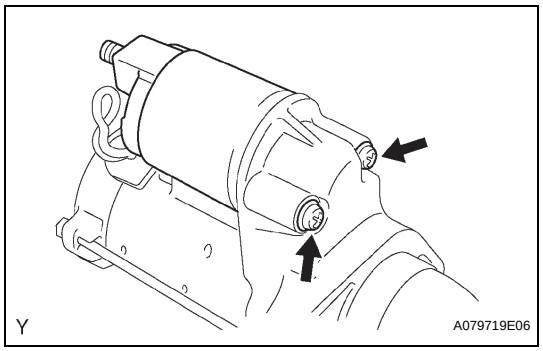
7. INSTALL REPAIR SERVICE STARTER KIT

(a) Apply high-temperature grease to the plunger and the hook.

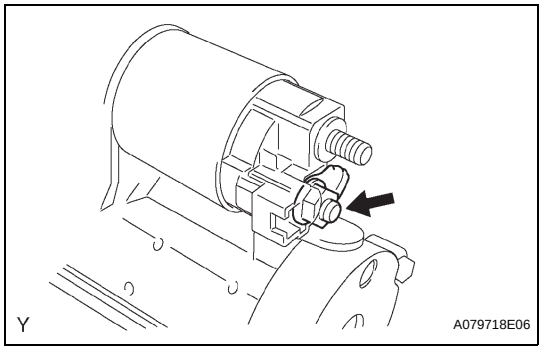
(b) Hang the plunger hook of the repair service starter kit to the drive lever hook.

(c) Install the plunger and the return spring.

ST



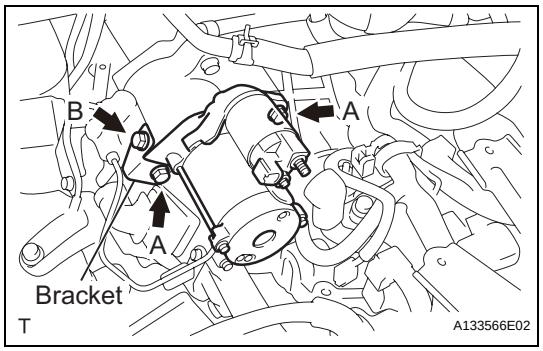
(d) Install the repair service starter kit with the 2 screws.
Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)



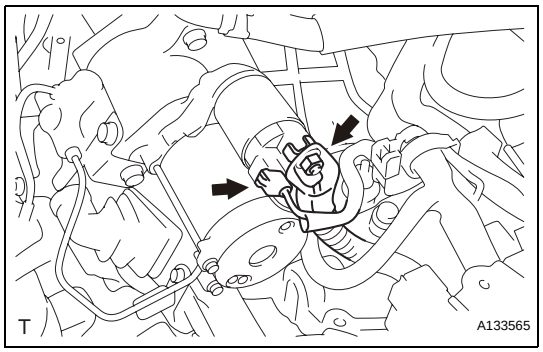
(e) Connect the lead wire to terminal C with the nut.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

INSTALLATION

1. INSTALL STARTER ASSEMBLY (for Manual Transaxle)



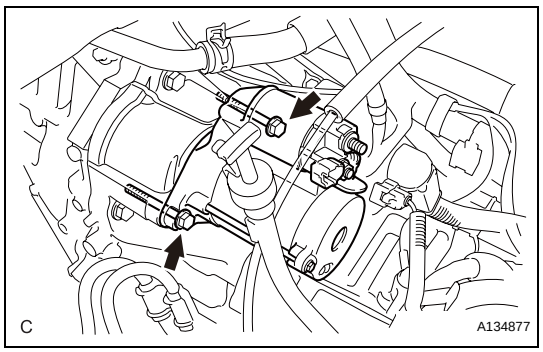
(a) Install the starter assembly and clutch flexible hose bracket with the 3 bolts.
Torque: Bolt A
37 N*m (380 kgf*cm, 28 ft.*lbf)
Bolt B
12 N*m (120 kgf*cm, 9 ft.*lbf)



(b) Connect the wire harness to terminal 30 and install the nut. Then, attach the terminal cap.
Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)

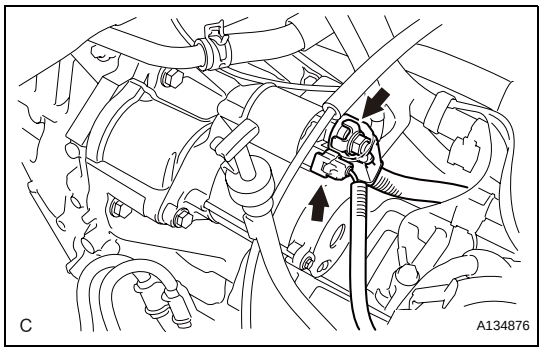
(c) Connect the terminal 50 connector to the starter assembly.

2. INSTALL STARTER ASSEMBLY (for Automatic Transaxle)



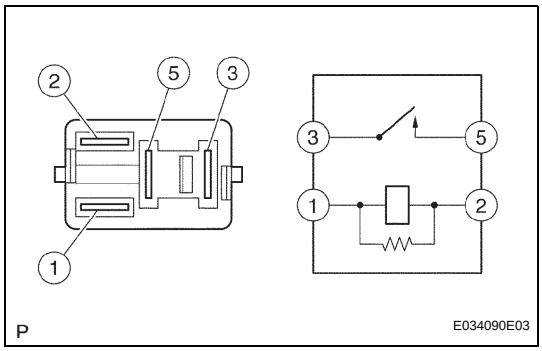
(a) Install the starter assembly with the 2 bolts.
Torque: 37 N*m (380 kgf*cm, 28 ft.*lbf)

ST



(b) Connect the wire harness to terminal 30 and install the nut. Then, attach the terminal cap.
Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)
(c) Connect the terminal 50 connector to the starter assembly.

3. **INSTALL AIR CLEANER CASE SUB-ASSEMBLY (See page EM-120)**
4. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-419)**
5. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-120)**
6. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (See page EM-120)**



STARTER RELAY

ON-VEHICLE INSPECTION

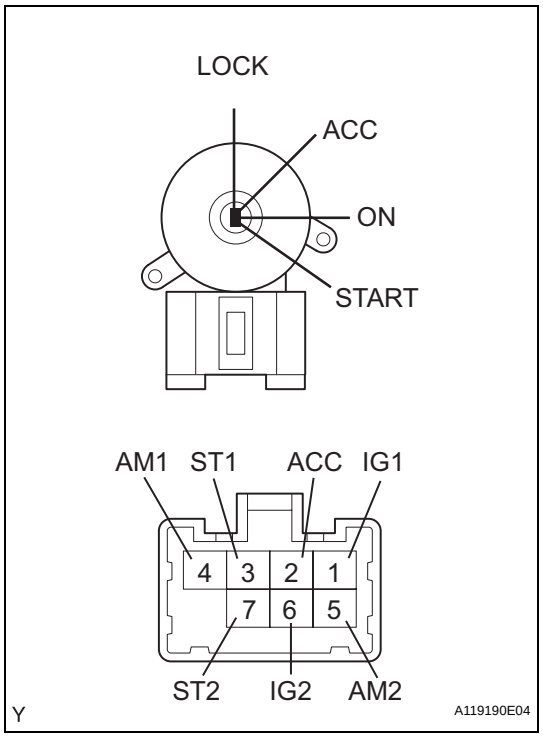
1. INSPECT STARTER RELAY ASSEMBLY

(a) Using an ohmmeter, measure the resistance between each terminal.

Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

If the result is not as specified, replace the starter relay assembly.



IGNITION SWITCH

ON-VEHICLE INSPECTION

1. INSPECT IGNITION OR STARTER SWITCH ASSEMBLY

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard resistance

Condition	Tester Connection	Specified Condition
LOCK	Between all terminals	10 kΩ or higher
ACC	2 - 4	Below 1 Ω
ON	1 - 2 - 4	Below 1 Ω
	5 - 6	
START	1 - 3 - 4	Below 1 Ω
	5 - 6 - 7	

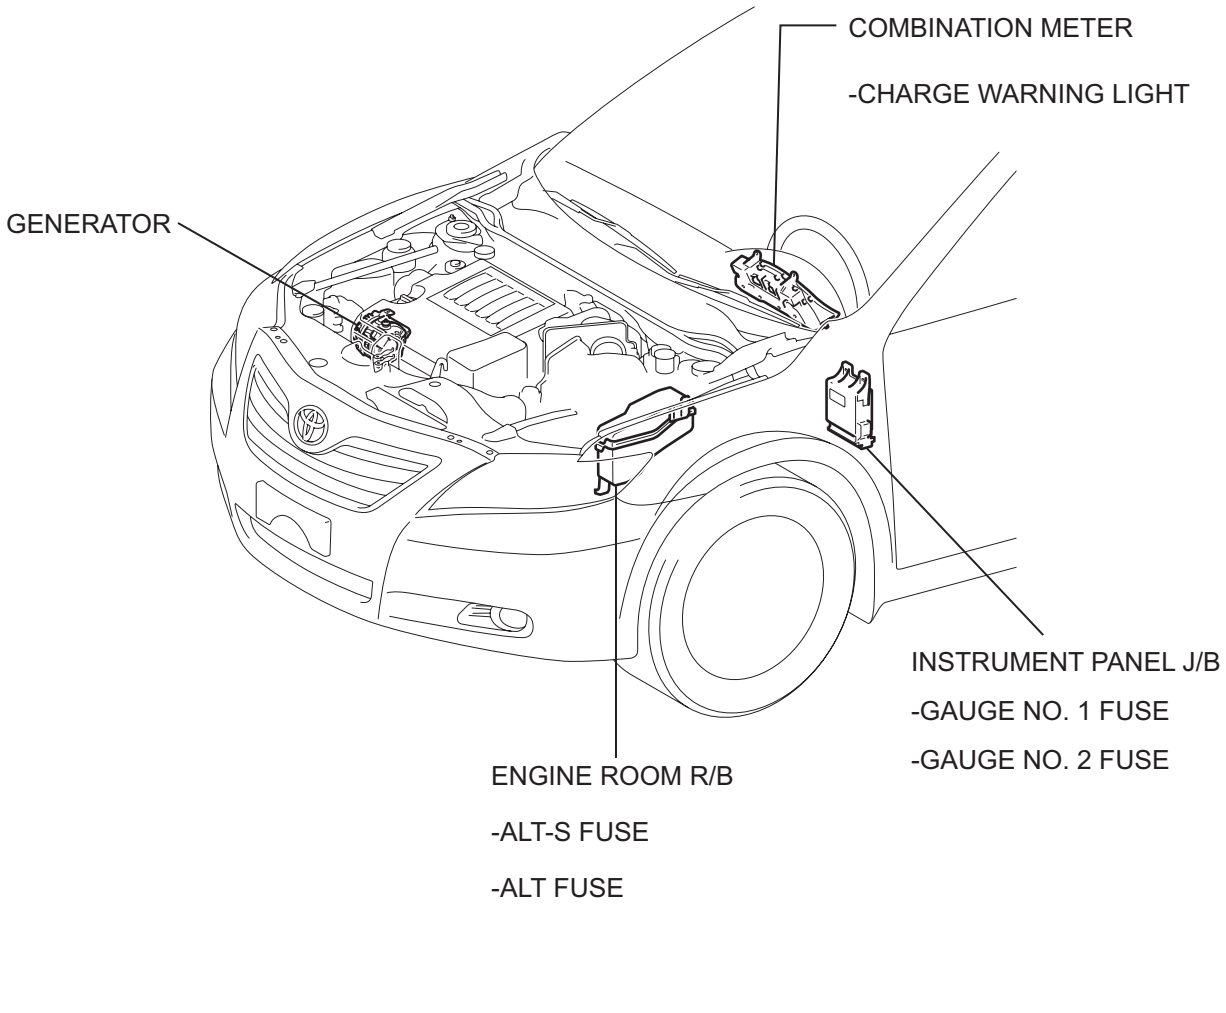
If the result is not as specified, replace the ignition or starter switch.

CHARGING SYSTEM

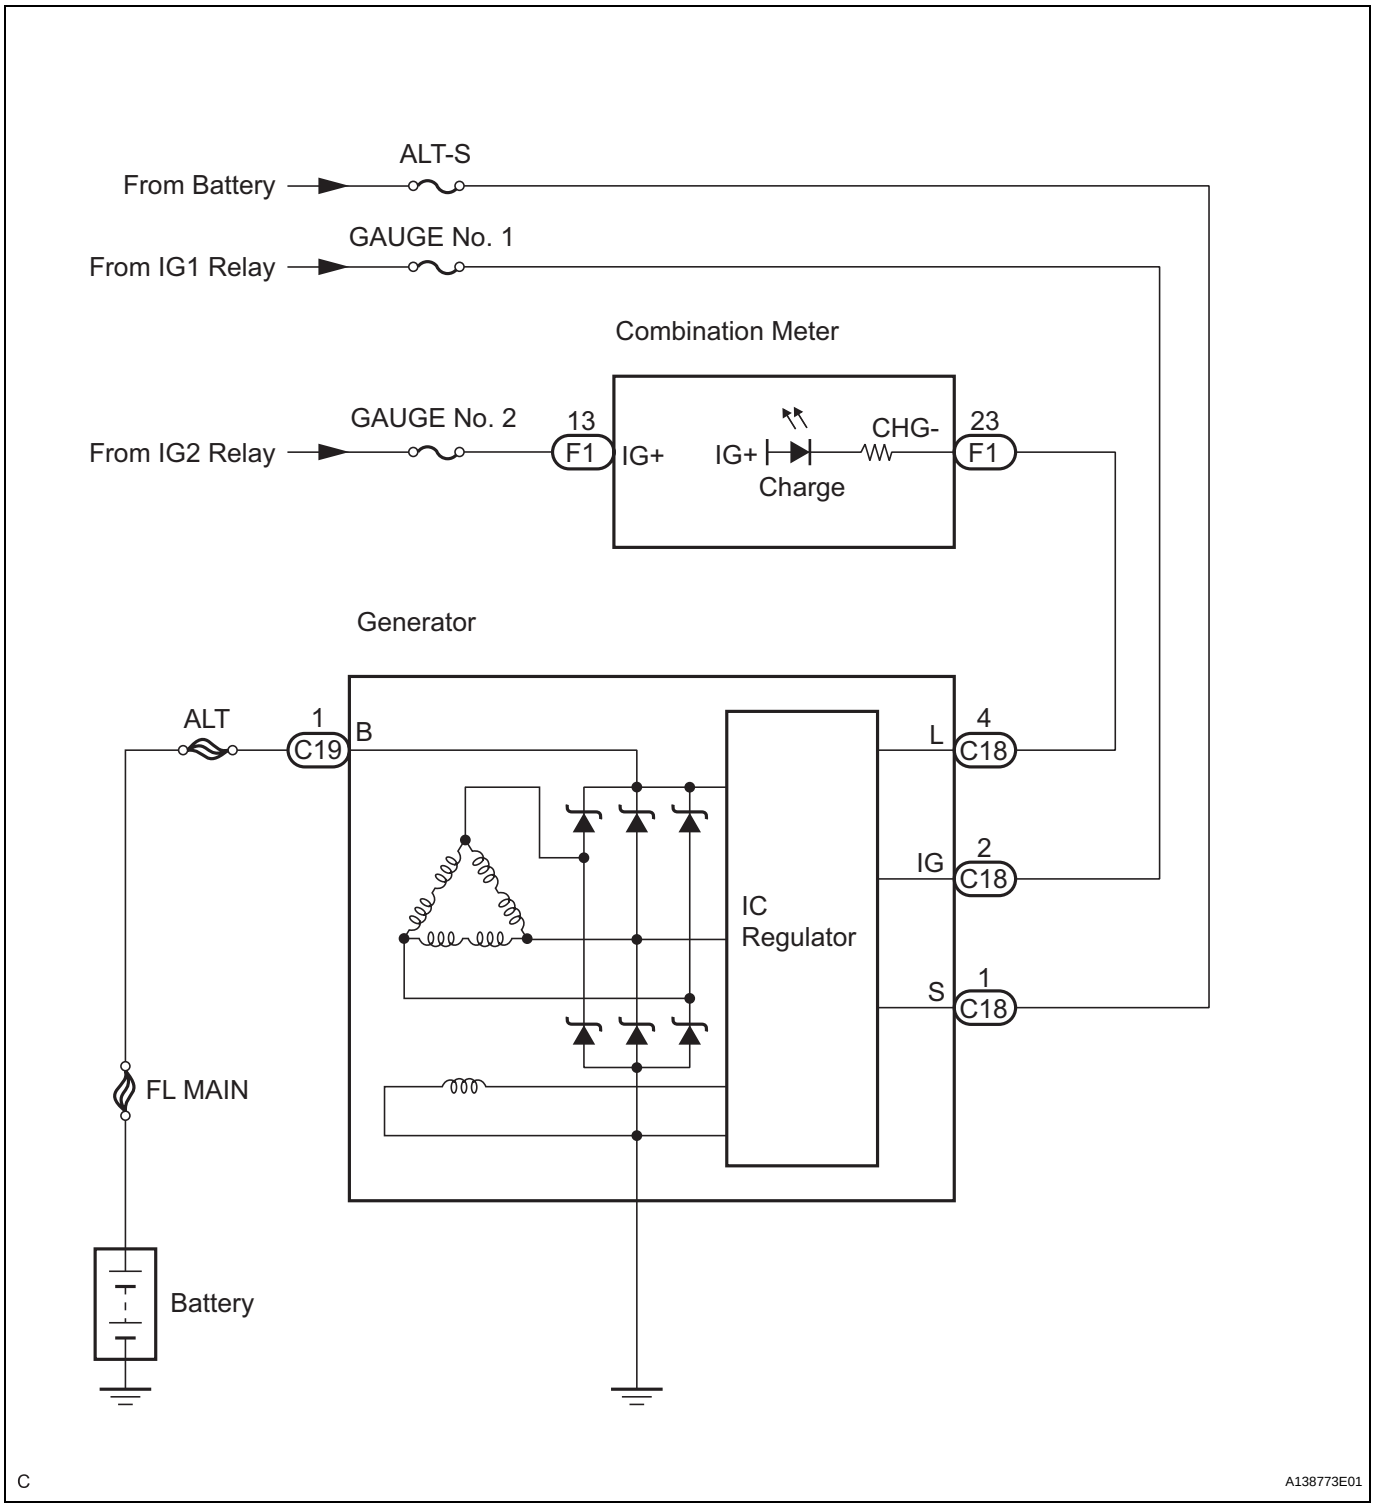
PRECAUTION

1. **Check that the battery cables are connected to the correct terminals.**
2. **Disconnect the battery cables when the battery is given a quick charge.**
3. **Do not perform tests with a high voltage insulation resistance tester.**
4. **Never disconnect the battery while the engine is running.**
5. **Check that the charging cable nut is tightened on terminal B of the generator and the engine room R/B.**

PARTS LOCATION



SYSTEM DIAGRAM



PROBLEM SYMPTOMS TABLE

Result

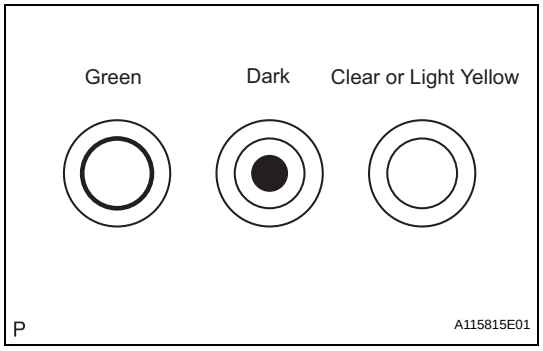
Symptom	Suspected area	See page
Charge Warning Light Comes ON while Driving	1. Clutch pulley	CH-7
	2. Generator assembly	
Noise Occurs from Generator while Engine is Running	1. V-ribbed belt	CH-8
	2. Clutch pulley	
	3. Generator assembly	

ON-VEHICLE INSPECTION

1. CHECK BATTERY ELECTROLYTE LEVEL

(a) Check the electrolyte level.

(1) If the electrolyte level is low, replace the battery (or add distilled water) and check the charging system.



2. CHECK BATTERY SPECIFIC GRAVITY

(a) Check the color of the indicator.

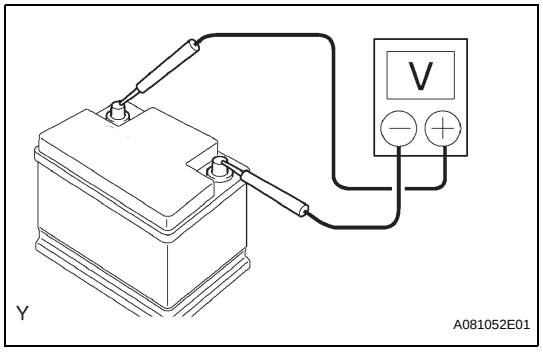
Result

Indicator color	Condition
Green	Good
Dark	Charging necessary
Clear or light yellow	Replacement necessary

3. CHECK BATTERY VOLTAGE

(a) If it has not been 20 minutes since you drove the vehicle or since the engine was stopped, turn the ignition switch on (IG) and turn on the electrical systems (headlight, blower motor, rear defogger, etc.) for 60 seconds. This will remove the surface charge from the battery.

(b) Turn off the ignition switch and the electrical systems.



(c) Measure the battery voltage between the negative (-) and positive (+) terminals of the battery.

Standard voltage:

12.5 to 12.9 V at 20°C (68°F)

HINT:

If the voltage is below the specification, charge the battery.

4. CHECK BATTERY TERMINAL

(a) Check that the battery terminals are not loose or corroded.

If the terminals are corroded, clean them.

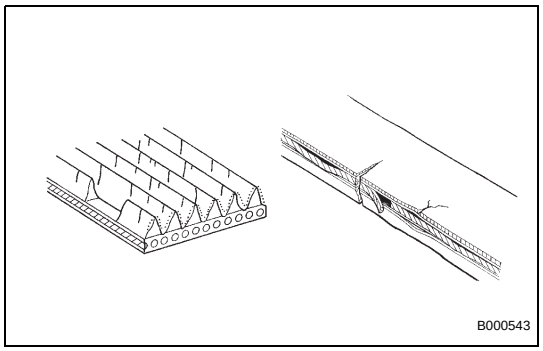
5. CHECK FUSES

(a) Measure the resistance of the ALT fuse, ALT-S fuse, GAUGE No. 1 fuse and GAUGE No. 2 fuse.

Standard resistance:

Below 1 Ω

If the result is not as specified, replace the fuses as necessary.

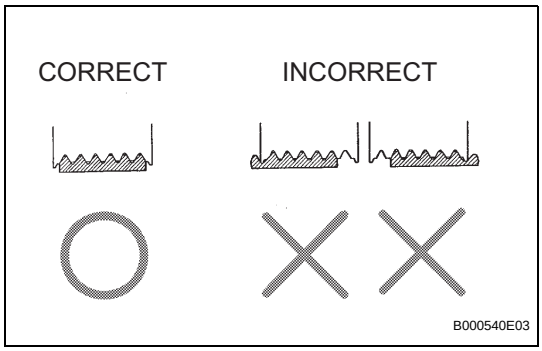


6. CHECK V-RIBBED BELT

(a) Check the belt for wear, cracks or other signs of damage.

If any of the following defects is found, replace the V-ribbed belt.

- The belt is worn out, cracked, or the cords are exposed.
- The cracks reach the cords in more than one place.
- The belt has chunks missing from the ribs.



(b) Check that the belt fits properly in the ribbed grooves.
HINT:
Check with your hand to confirm that the belt has not slipped out of the groove on the bottom of the pulley.
If it has slipped out, replace the V-ribbed belt. Install a new V-ribbed belt correctly.

7. VISUALLY CHECK GENERATOR WIRING

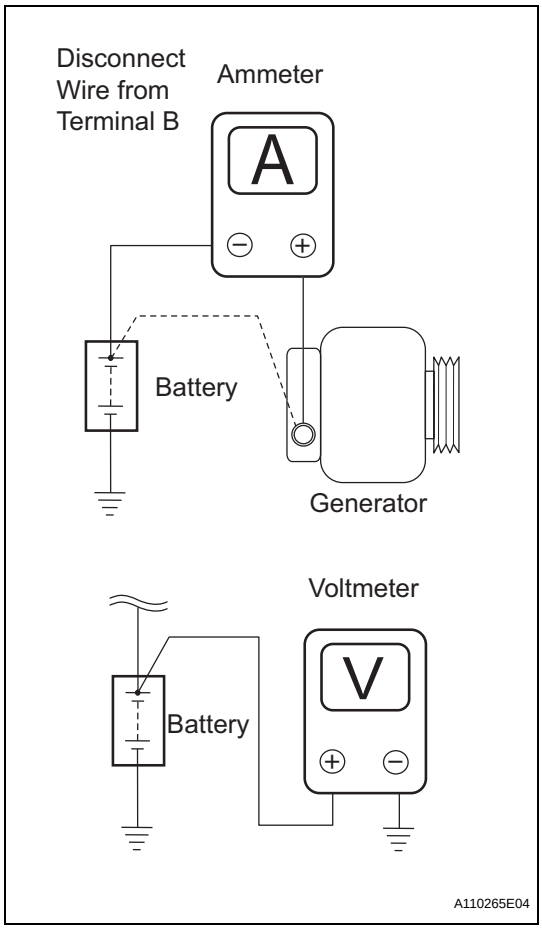
(a) Check that the generator wiring is in good condition.
If the condition is not good, repair or replace the generator wire.

8. LISTEN FOR ABNORMAL NOISES FROM GENERATOR

(a) Check that there is no abnormal noise from the generator while the engine is running.
If there is abnormal noise, replace the pulley or generator.

9. CHECK CHARGE WARNING LIGHT CIRCUIT

(a) Turn the ignition switch on (IG). Check that the charge warning light comes on.
(b) Start the engine and check that the light goes off.
If the light does not operate as specified, troubleshoot the charge warning light circuit.



10. CHECK CHARGING CIRCUIT WITHOUT LOAD

(a) According to the following procedure, connect an ammeter and voltmeter as shown in the illustration.
(1) Disconnect the wire from terminal B of the generator and connect it to the negative (-) lead of the ammeter.
(2) Connect the positive (+) lead of the ammeter to terminal B of the generator.
(3) Connect the positive (+) lead of the voltmeter to positive (+) terminal of the battery.
(4) Ground the negative (-) lead of the voltmeter.
(b) Check the charging circuit.
(1) While keeping the engine speed at 2,000 rpm, check the readings on the ammeter and voltmeter.
Standard amperage:
10 A or less
Standard voltage:
13.2 to 14.8 V
If the results are not as specified, replace the generator assembly.
HINT:
- If the battery is not fully charged, the ammeter reading may be more than the standard amperage. In this case, increase electrical load by operating devices such as the wiper motor and rear window defogger. Then, recheck the reading on the ammeter.

11. CHECK CHARGING CIRCUIT WITH LOAD

(a) Keep the engine speed at 2,000 rpm, turn on the high beam headlights, and turn the heater blower switch to the "HI" position.

(b) Check the reading on the ammeter.

Standard amperage:

30 A or more

If the ammeter reading is less than the standard amperage, replace the generator assembly.

HINT:

- If the battery is fully charged, the ammeter reading may be less than the standard amperage. In this case, increase electrical load by operating devices such as the wiper motor and rear window defogger. Then, recheck the reading on the ammeter.

Charge Warning Light Comes ON while Driving

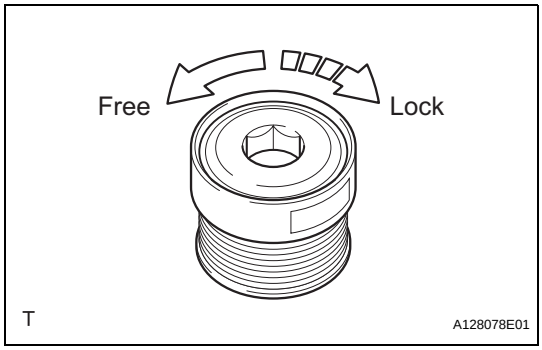
INSPECTION PROCEDURE

1	CHECK LOCK FUNCTION OF CLUTCH PULLEY

(a) Check the lock function with the pulley installed in the vehicle.
  (1) Visually check that the rotor in the generator operates with the engine started.

(b) Check the lock function with the pulley removed from the vehicle.
  (1) Remove the generator pulley cap. Using SST, hold the generator rotor.
  (2) Turn the clutch pulley clockwise and check that the outer ring locks.
  OK:
  The outer ring locks.

SST 09820-63020



NG → **REPLACE CLUTCH PULLEY**

OK

2	CHECK LOCK OF CLUTCH PULLEY

(a) Start the engine and visually check looseness of the clutch pulley.
  OK:
  The clutch pulley is not loose.

NG → **TIGHTEN CLUTCH PULLEY TO THE SPECIFIED TORQUE**

OK

REPLACE GENERATOR ASSEMBLY

Noise Occurs from Generator while Engine is Running

INSPECTION PROCEDURE

1 CHECK LOOSENESS OF V-RIBBED BELT

(a) Check the tension of the belt by pushing it down with a finger.
OK:
The tension of the belt is enough.

NG → **REPLACE V-RIBBED BELT TENSIONER ASSEMBLY**

OK ↓

2 CHECK V-RIBBED BELT FOR WEAR

(a) Check the V-ribbed belt for wear.
OK:
The V-ribbed belt is not worn.

NG → **REPLACE V-RIBBED BELT**

OK ↓

3 CHECK CLUTCH PULLEY FOR WEAR

(a) Check the clutch pulley groove for wear or other defects.
OK:
The clutch pulley groove is not damaged.

NG → **REPLACE CLUTCH PULLEY**

OK ↓

4 CHECK FOR NOISE WHILE CLUTCH PULLEY IS OPERATING

(a) Perform a driving test and check if noise occurs when decelerating.
OK:
Noise does not occur.

NG → **REPLACE CLUTCH PULLEY**

OK ↓

REPLACE GENERATOR ASSEMBLY

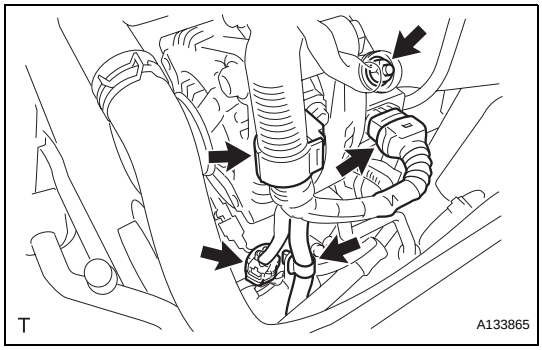
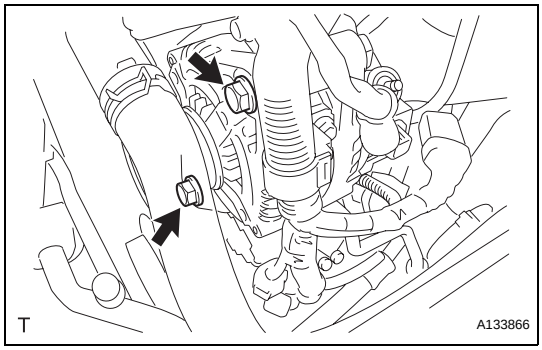
REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL
2. REMOVE FRONT WHEEL RH
3. REMOVE FRONT FENDER APRON SEAL RH
4. REMOVE FRONT WHEEL OPENING EXTENSION PAD RH
5. REMOVE FRONT WHEEL OPENING EXTENSION PAD LH
6. REMOVE ENGINE UNDER COVER RH
7. REMOVE ENGINE UNDER COVER LH
8. DRAIN ENGINE COOLANT (See page CO-5)
9. REMOVE V-BANK COVER SUB-ASSEMBLY (See page EM-23)
10. REMOVE COOL AIR INTAKE DUCT SEAL (See page EM-23)
11. REMOVE AIR CLEANER INLET ASSEMBLY (See page EM-24)
12. REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-503)
13. REMOVE NO. 1 AIR CLEANER INLET (See page EM-24)
14. REMOVE FRONT BUMPER ASSEMBLY (w/o Fog Light) (See page ET-5)
15. REMOVE FRONT BUMPER ASSEMBLY (w/ Fog Light) (See page ET-6)
16. REMOVE FRONT BUMPER ENERGY ABSORBER (See page ET-9)
17. SEPARATE RADIATOR RESERVE TANK HOSE (See page CO-24)
18. SEPARATE RADIATOR INLET HOSE (See page CO-24)
19. SEPARATE RADIATOR OUTLET HOSE (See page CO-24)
20. SEPARATE NO. 1 OIL COOLER INLET HOSE (See page CO-25)
21. SEPARATE NO. 1 OIL COOLER OUTLET HOSE (See page CO-25)
22. REMOVE RADIATOR SUPPORT UPPER (See page CO-25)
23. REMOVE FAN SHROUD (See page CO-26)
24. REMOVE RADIATOR ASSEMBLY (See page CO-26)
25. REMOVE V-RIBBED BELT (See page EM-6)

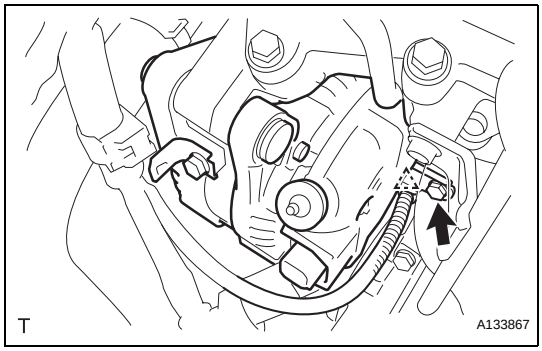


26. REMOVE GENERATOR ASSEMBLY

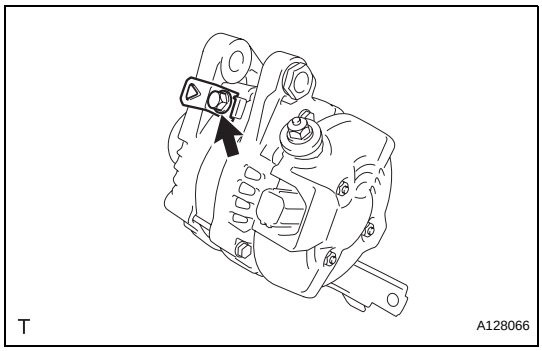
(a) Remove the terminal cap.
(b) Remove the nut and disconnect the wire harness from terminal B.
(c) Disconnect the generator connector from the generator assembly.
(d) Disconnect the connector from the compressor and magnetic clutch.
(e) Disconnect the 2 wire harness clamps.



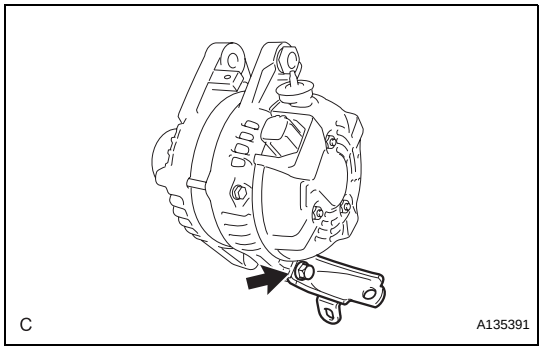
(f) Remove the 2 bolts.



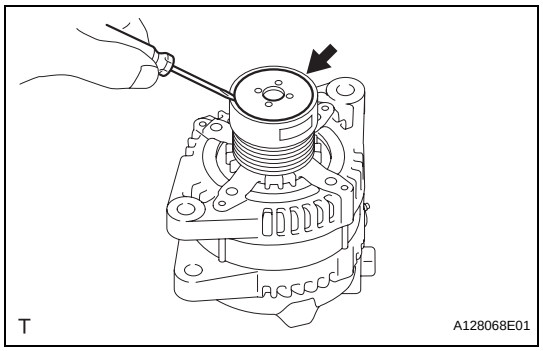
(g) Remove the bolt from the cylinder block.
(h) Disconnect the wire harness clamp and remove the generator assembly.



(i) Remove the bolt and wire harness clamp stay.



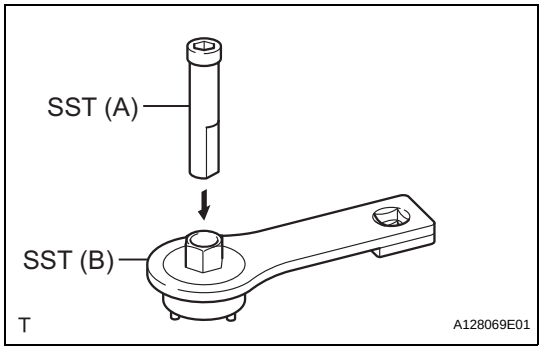
(j) Remove the bolt and bracket.



DISASSEMBLY

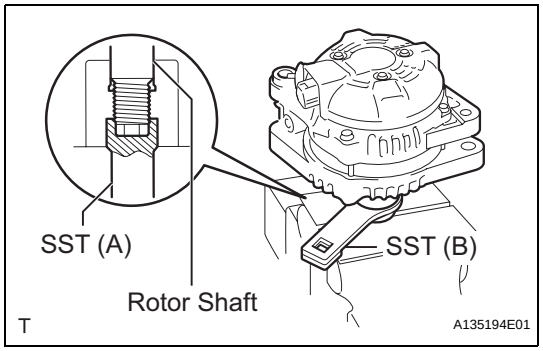
1. REMOVE GENERATOR CLUTCH PULLEY

(a) Using a screwdriver, remove the generator pulley cap.

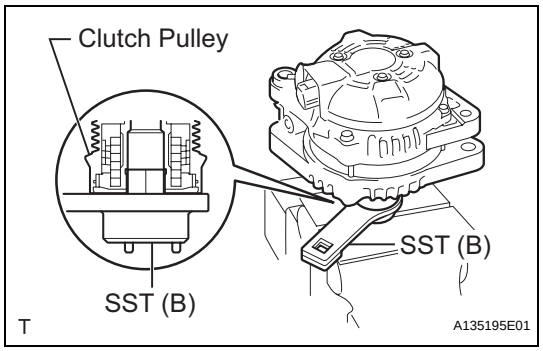


(b) Set SST (A) and (B).
SST 09820-63020

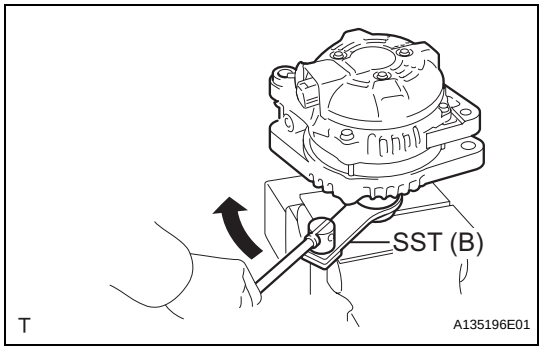
(c) Clamp SST (A) in a vise.



(d) Place the rotor shaft end into SST (A).



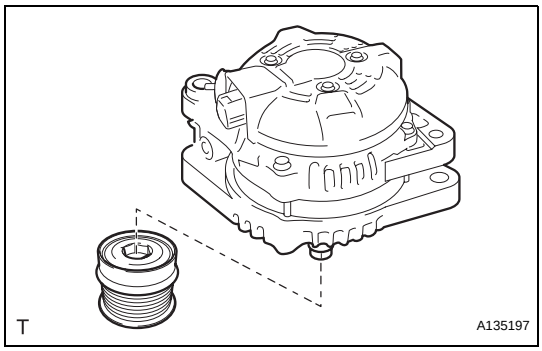
(e) Fit SST (B) to the clutch pulley.



(f) Loosen the pulley by turning SST (B) in the direction shown in the illustration.

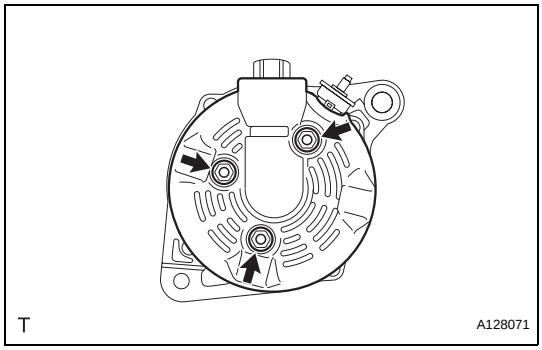
(g) Remove the generator assembly from the SST.

(h) Remove the clutch pulley from the rotor shaft.

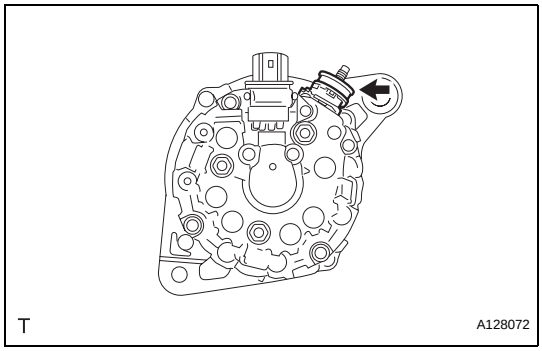


2. REMOVE GENERATOR REAR END COVER

(a) Place the generator assembly on the clutch pulley.

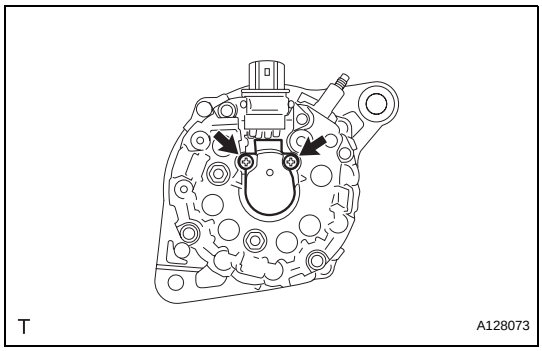


(b) Remove the 3 nuts and generator rear end cover.



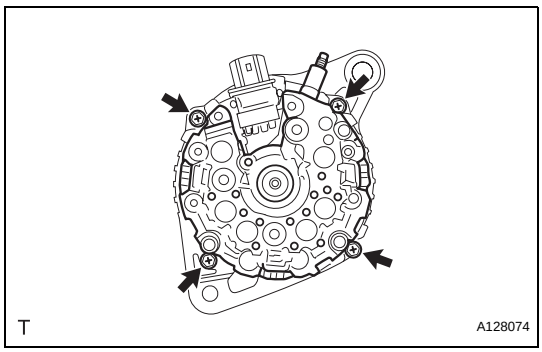
3. REMOVE GENERATOR TERMINAL INSULATOR

(a) Remove the terminal insulator from the generator coil.



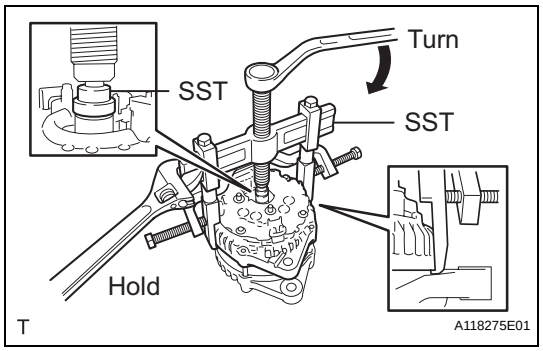
4. REMOVE GENERATOR BRUSH HOLDER ASSEMBLY

(a) Remove the 2 screws and brush holder from the generator coil.

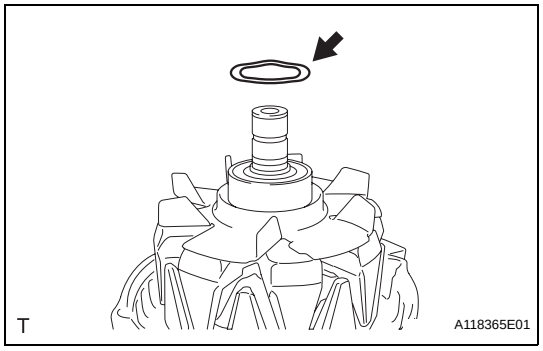


5. REMOVE GENERATOR COIL ASSEMBLY

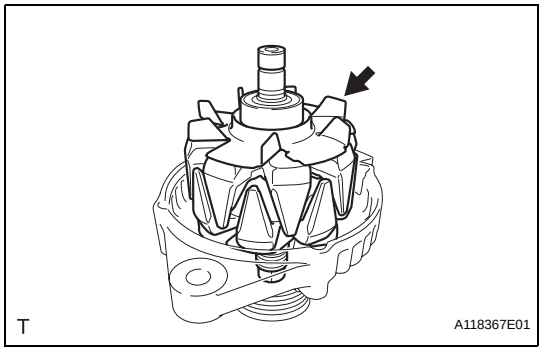
(a) Remove the 4 bolts.



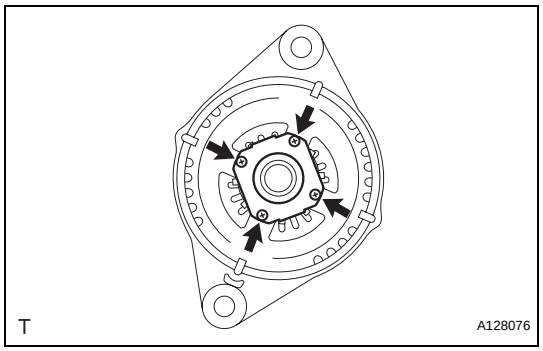
(b) Using SST, remove the generator coil assembly.
SST 09950-40011 (09951-04020, 09952-04010, 09953-04020, 09954-04010, 09955-04071, 09957-04010, 09958-04011)



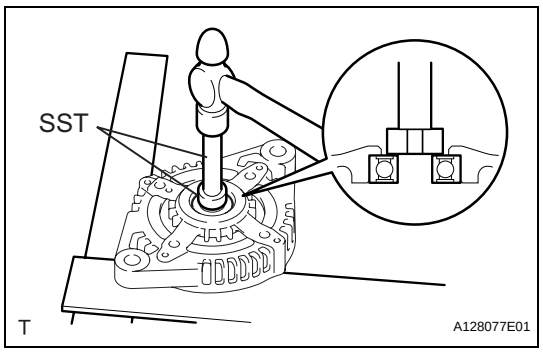
6. REMOVE GENERATOR ROTOR ASSEMBLY
(a) Remove the generator washer.



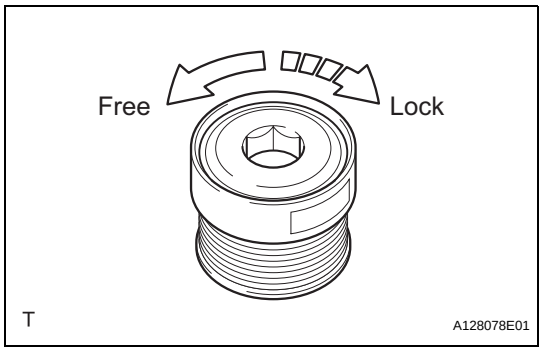
(b) Remove the generator rotor assembly.



7. REMOVE GENERATOR DRIVE END FRAME BEARING
(a) Remove the 4 screws and retainer plate from the drive end frame.



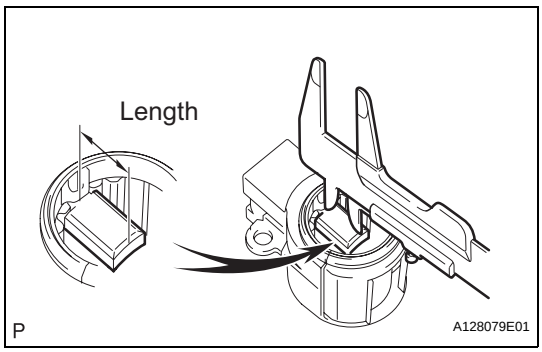
(b) Using SST and a hammer, tap out the drive end frame bearing from the drive end frame.
SST 09950-60010 (09951-00250), 09950-70010 (09951-07100)



INSPECTION

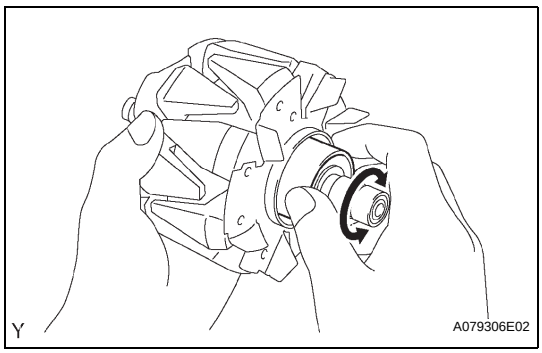
1. INSPECT GENERATOR CLUTCH PULLEY

(a) Hold the center of the pulley, and confirm that the outer ring turns counterclockwise and does not turn clockwise.
If the result is not as specified, replace the clutch pulley.



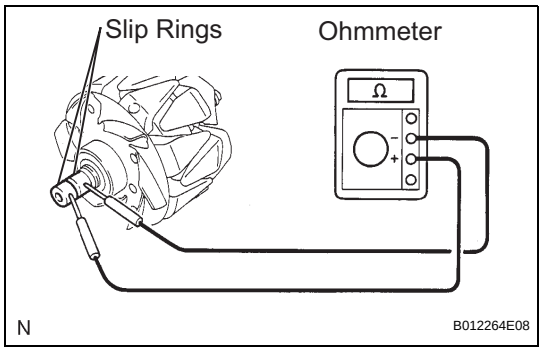
2. INSPECT GENERATOR BRUSH HOLDER ASSEMBLY

(a) Using vernier calipers, measure the length of the exposed brushes.
Standard exposed length:
9.5 to 11.5 mm (0.374 to 0.453 in.)
Minimum exposed length:
4.5 mm (0.177 in.)
If the exposed length is less than the minimum, replace the brush holder assembly.



3. INSPECT GENERATOR ROTOR ASSEMBLY

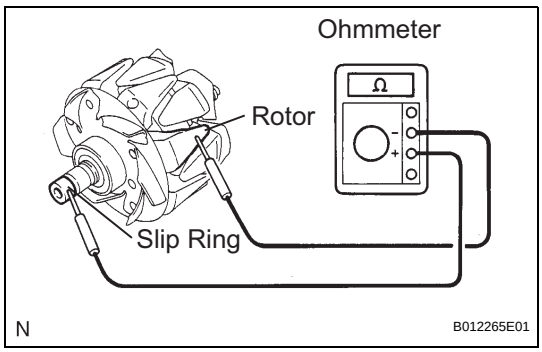
(a) Check that the generator rotor bearing is not rough or worn.
If necessary, replace the generator rotor assembly.



(b) Check the generator rotor for an open circuit.
(1) Using an ohmmeter, measure the resistance between the slip rings.
Standard resistance

Condition	Specified condition
Approx. 20°C (68°F)	2.3 to 2.7 Ω

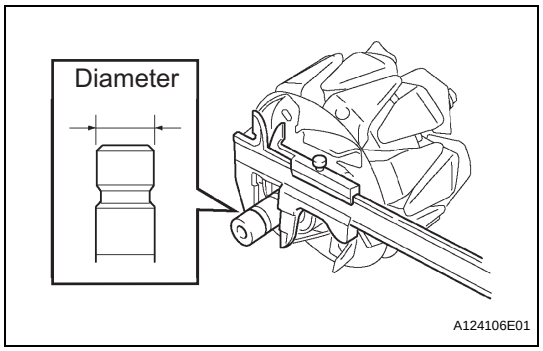
If the result is not as specified, replace the generator rotor assembly.



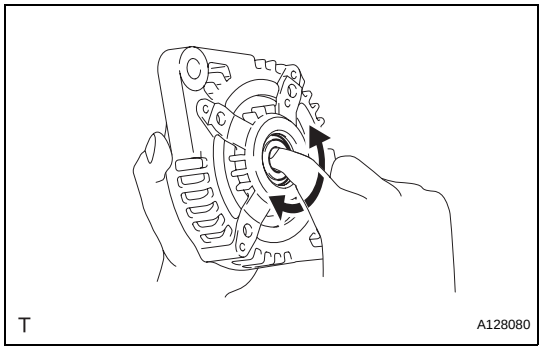
(c) Check the rotor for a short to ground.
(1) Using an ohmmeter, measure the resistance between the slip ring and rotor.
Standard resistance

Tester condition	Specified condition
Slip ring - Rotor	1 MΩ or higher

If the result is not as specified, replace the generator rotor assembly.



(d) Using vernier calipers, measure the slip ring diameter.
Standard diameter:
14.2 to 14.4 mm (0.559 to 0.567 in.)
Minimum diameter:
14.0 mm (0.551 in.)
If the diameter is less than the minimum, replace the generator rotor assembly.



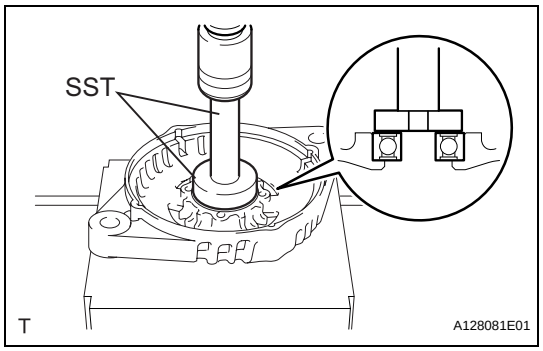
4. INSPECT GENERATOR DRIVE END FRAME BEARING

(a) Check that the drive end frame bearing is not rough or worn.
If necessary, replace the drive end frame bearing.

REASSEMBLY

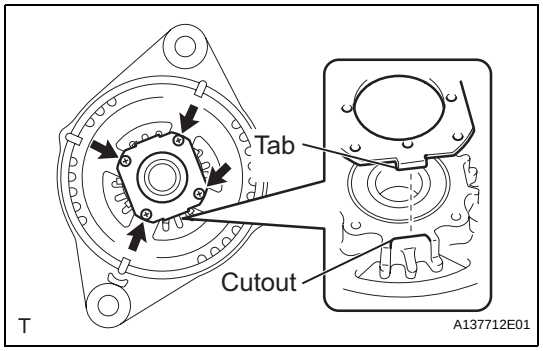
1. INSTALL GENERATOR DRIVE END FRAME BEARING

(a) Using SST and a press, press in a new generator drive end frame bearing.
SST 09950-60010 (09951-00470), 09950-70010 (09951-07100)



(b) Fit the tabs on the retainer plate into the cutouts on the drive end frame to install the retainer plate.

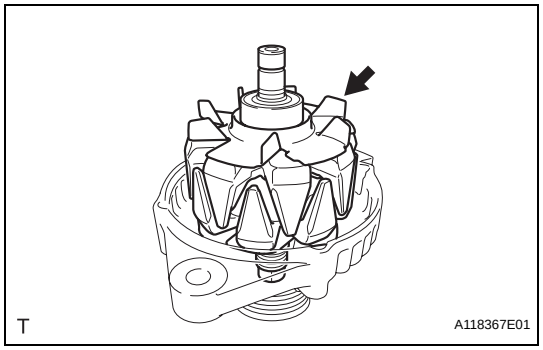
(c) Install the 4 screws.
Torque: 2.3 N*m (23 kgf*cm, 20 in.*lbf)

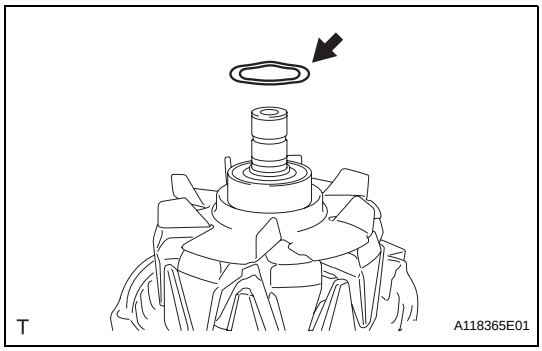


2. INSTALL GENERATOR ROTOR ASSEMBLY

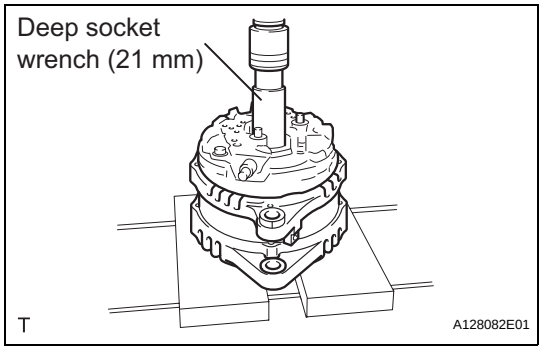
(a) Place the drive end frame on the clutch pulley.

(b) Install the generator rotor assembly to the drive end frame.



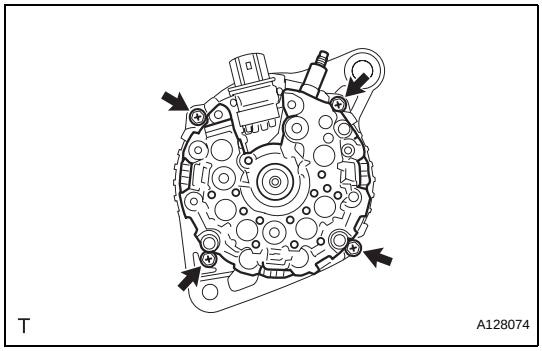


(c) Place a new generator washer on the generator rotor.

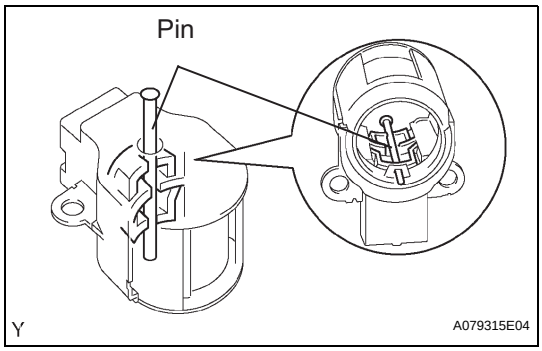


3. INSTALL GENERATOR COIL ASSEMBLY

(a) Using a deep socket wrench (21 mm) and a press, slowly press in the generator coil assembly.

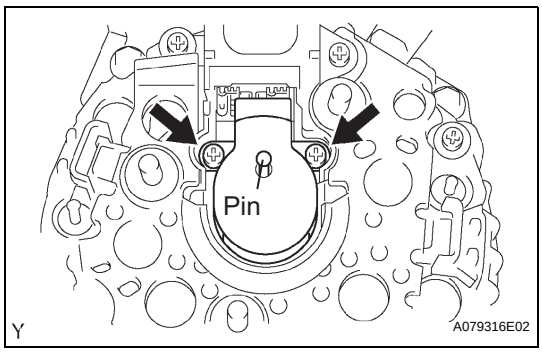


(b) Install the 4 bolts.
Torque: 5.8 N*m (59 kgf*cm, 51 in.*lbf)



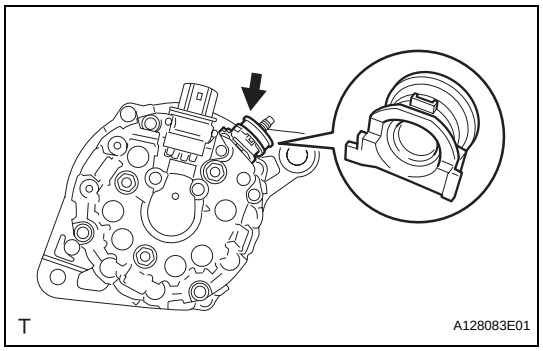
4. INSTALL GENERATOR BRUSH HOLDER ASSEMBLY

(a) While pushing the 2 brushes into the generator brush holder assembly, insert a ϕ1.0 mm (0.039 in.) pin into the brush holder hole.



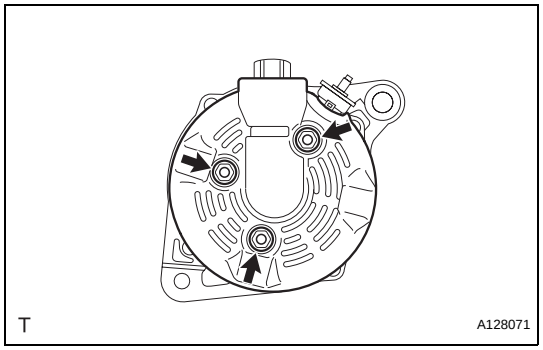
(b) Install the brush holder assembly to the generator coil with the 2 screws.
Torque: 1.8 N*m (18 kgf*cm, 16 in.*lbf)

(c) Pull out the pin from the generator brush holder.



5. INSTALL GENERATOR TERMINAL INSULATOR

(a) Install the terminal insulator to the generator coil.
NOTICE:
Pay attention to installation direction of the terminal insulator.

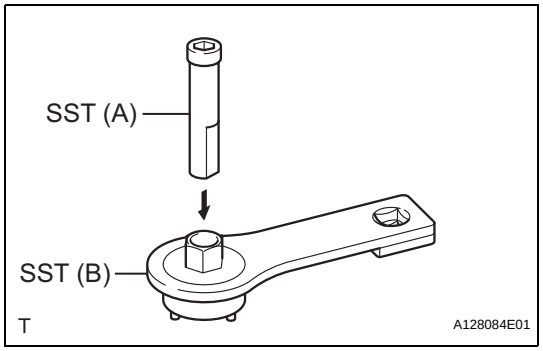


6. INSTALL GENERATOR REAR END COVER

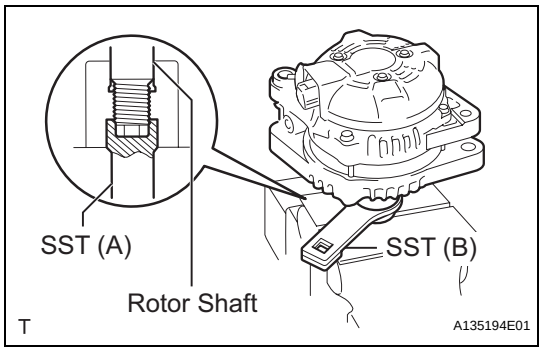
(a) Install the generator rear end cover to the generator coil with the 3 nuts.
Torque: 4.6 N*m (47 kgf*cm, 41 in.*lbf)

7. REMOVE GENERATOR CLUTCH PULLEY

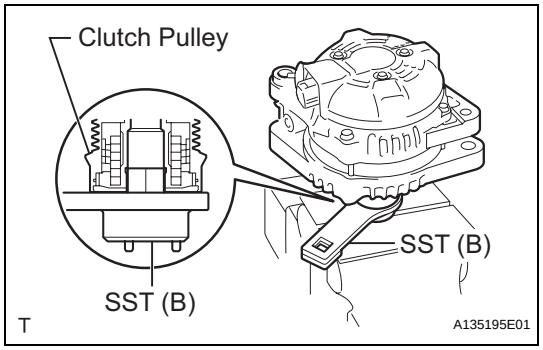
(a) Temporarily install the clutch pulley onto the rotor shaft.



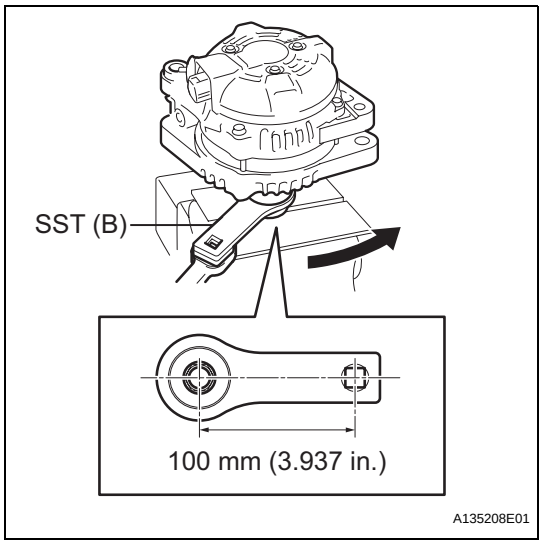
(b) Set SST (A) and (B).
SST 09820-63020



(c) Clamp SST (A) in a vise.
(d) Place the rotor shaft end into SST (A).



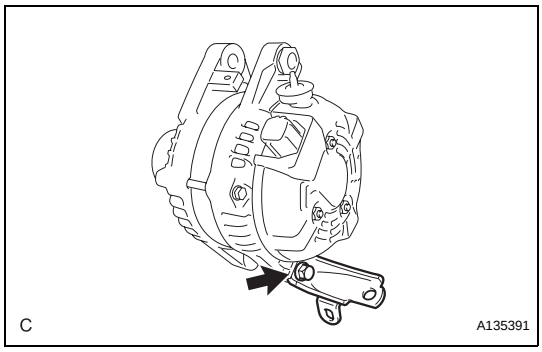
(e) Fit SST (B) to the clutch pulley.



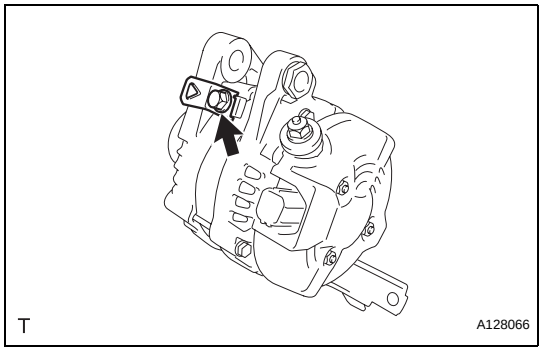
(f) Tighten the pulley by turning SST (B) in the direction shown in the illustration.
Torque: 111 N*m (1,125 kgf*cm, 81 ft.*lbf)
NOTICE:
The torque shown above should be used for tightening without using the SST. When the SST is used for tightening, the torque should be calculated based on the length of the SST (See page IN-6).
(g) Remove the generator assembly from the SST.
(h) Check that the clutch pulley rotates smoothly.
(i) Install a new clutch pulley cap to the clutch pulley.

INSTALLATION

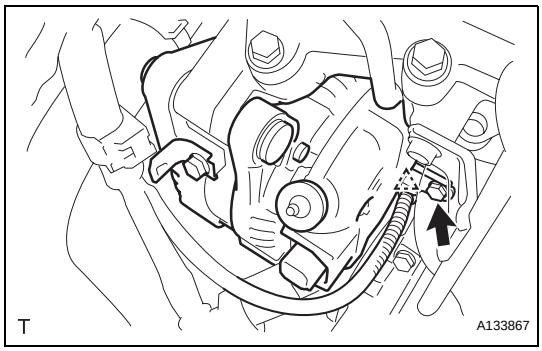
1. INSTALL GENERATOR ASSEMBLY



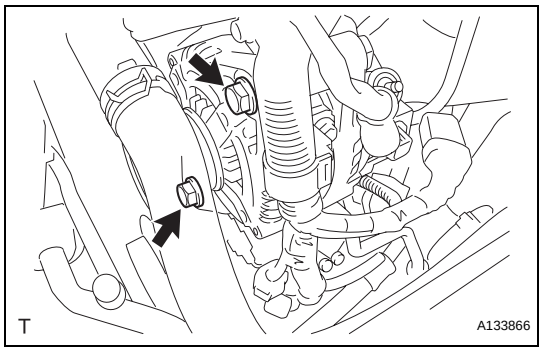
(a) Install the bracket with the bolt.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)



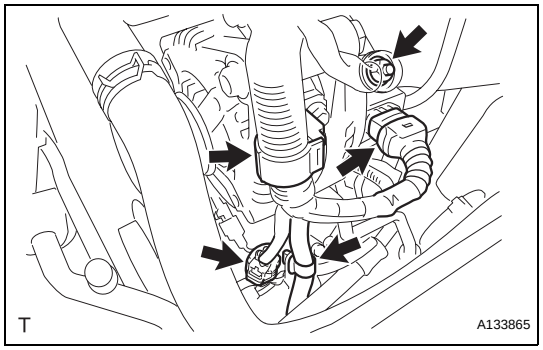
(b) Install the wire harness clamp stay.
Torque: 8.4 N*m (86 kgf*cm, 74 in.*lbf)



(c) Connect the wire harness clamp.
(d) Install the generator assembly to the cylinder block with the bolt.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)



(e) Install the 2 bolts.
Torque: 43 N*m (438 kgf*cm, 32 ft.*lbf)



(f) Connect the generator connector to the generator assembly.
(g) Install the generator wire with the nut.
Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)
(h) Install the terminal cap.
(i) Connect the 2 wire harness clamps.
(j) Connect the magnetic clutch connector to the compressor and magnetic clutch.

2. **INSTALL V-RIBBED BELT (See page EM-7)**
3. **INSTALL RADIATOR ASSEMBLY (See page CO-31)**
4. **INSTALL FAN SHROUD (See page CO-32)**
5. **INSTALL RADIATOR SUPPORT UPPER (See page CO-32)**
6. **CONNECT NO. 1 OIL COOLER OUTLET TUBE (See page CO-33)**
7. **CONNECT NO. 1 OIL COOLER INLET TUBE (See page CO-33)**
8. **CONNECT RADIATOR OUTLET HOSE (See page CO-33)**
9. **CONNECT RADIATOR INLET HOSE (See page CO-33)**
10. **CONNECT RADIATOR RESERVE TANK HOSE (See page CO-34)**
11. **INSTALL FRONT BUMPER ENERGY ABSORBER (See page ET-10)**
12. **INSTALL FRONT BUMPER ASSEMBLY (w/o Fog Light) (See page ET-13)**
13. **INSTALL FRONT BUMPER ASSEMBLY (w/ Fog Light) (See page ET-14)**
14. **INSTALL NO. 1 AIR CLEANER INLET (See page EM-49)**
15. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-506)**
16. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-50)**

17. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (See page EM-51)
18. ADD ENGINE COOLANT (See page CO-6)
19. CHECK FOR ENGINE COOLANT LEAKS (See page CO-1)
20. INSTALL V-BANK COVER SUB-ASSEMBLY (See page EM-52)
21. INSTALL COOL AIR INTAKE DUCT SEAL (See page EM-52)
22. INSTALL FRONT FENDER APRON SEAL RH
23. INSTALL ENGINE UNDER COVER RH
24. INSTALL ENGINE UNDER COVER LH
25. INSTALL FRONT WHEEL OPENING EXTENSION PAD RH
26. REMOVE FRONT WHEEL OPENING EXTENSION PAD LH
27. INSTALL FRONT WHEEL RH (See page EM-7)

COOLING SYSTEM

ON-VEHICLE INSPECTION

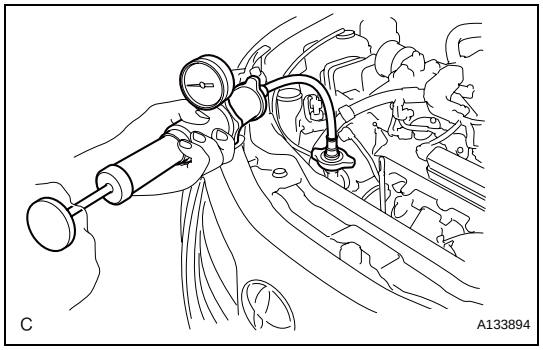
1. CHECK FOR ENGINE COOLANT LEAKS

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

NOTICE:

Before performing each inspection, turn the A/C switch OFF.



(a) Fill the radiator with coolant and attach a radiator cap tester.

(b) Warm up the engine.

(c) Using a radiator cap tester, increase the pressure inside the radiator to 118 kPa (1.2 kgf*cm, 17 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and cylinder head.

2. INSPECT ENGINE COOLANT LEVEL IN RESERVOIR

(a) Check that the engine coolant level is between the LOW and FULL lines when the engine is cold.
If the engine coolant level is low, check for leaks and add "TOYOTA Super Long Life Coolant" or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite and non-borate coolant with long-life hybrid organic acid technology to the FULL line.
NOTICE:
Do not substitute plain water for engine coolant.

3. INSPECT ENGINE COOLANT QUALITY

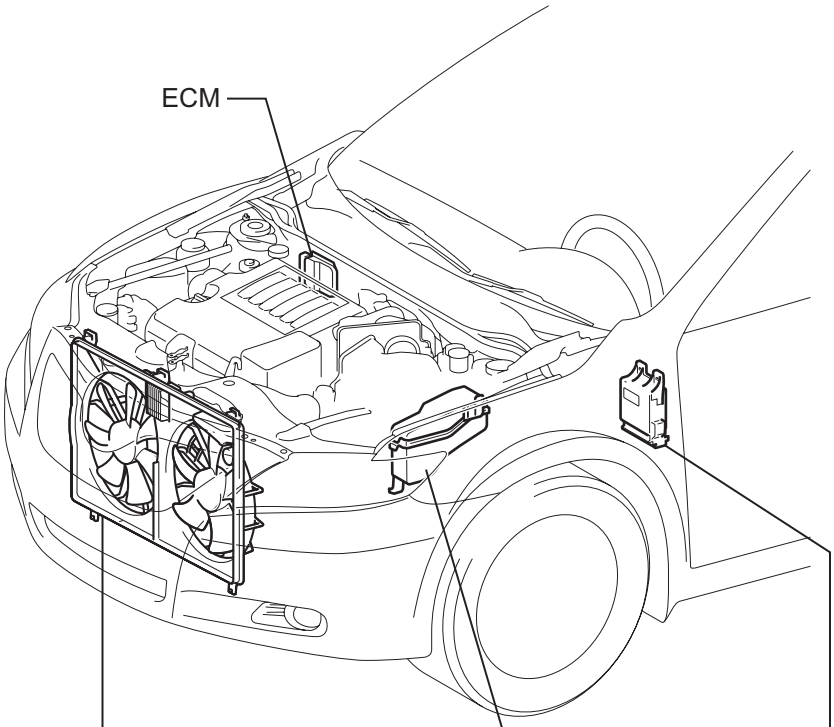
(a) Remove the radiator cap.
CAUTION:
Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

(b) Check if there are any excessive deposits of rust or scales around the radiator cap and radiator filler hole. Also, the coolant should be free of oil.
If excessively dirty, clean the coolant passage and replace the coolant.

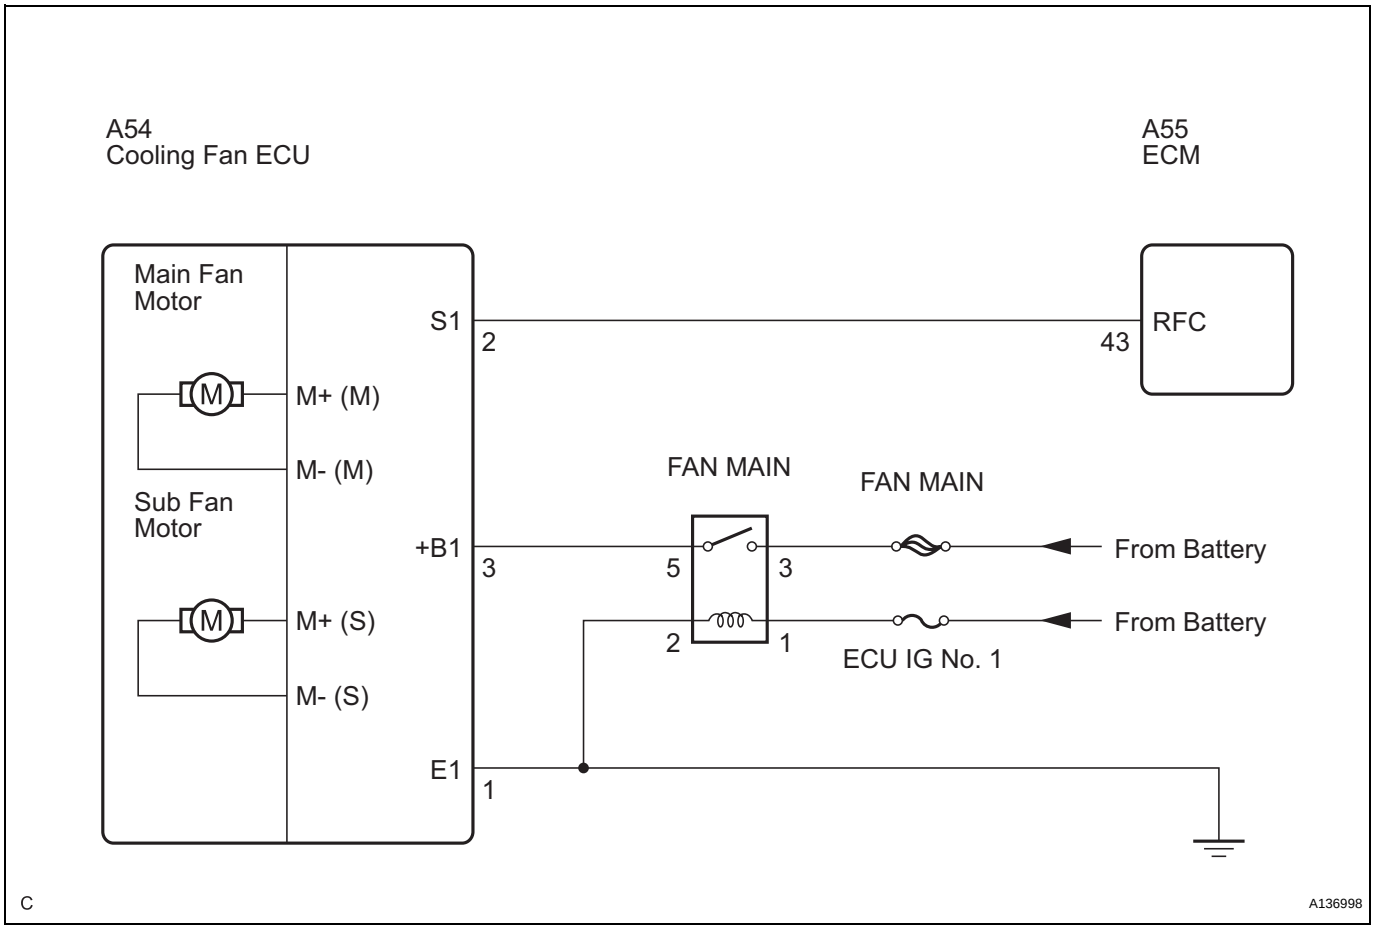
(c) Install the radiator cap.

COOLING FAN SYSTEM

PARTS LOCATION



SYSTEM DIAGRAM



CO

ON-VEHICLE INSPECTION

1. INSPECT COOLING FAN SYSTEM

(a) Put the vehicle in the following conditions:
  (1) The ignition switch is off.
  (2) The coolant temperature is less than 95°C (203°F).
  (3) The battery voltage is between 9 and 14 V.
  (4) The A/C switch is OFF.

(b) Connect the 400 A probe of the ammeter to terminals M+ (M) and M+ (S) of the cooling fan motor.

(c) Turn the ignition switch on (IG) and wait for approximately 10 seconds. Check that the fan stops.

(d) Start the engine. Check that the fan stops with the engine idling.
HINT:
- Make sure that the radiator engine coolant temperature is less than 95°C (203°F).
- Turn the A/C switch OFF.

(e) Check that the fan operates when the A/C switch is turned ON (MAX COOL and the magnet clutch is operating).

Standard current : Without trailer hitch

Item	Specified Condition
Cooling fan motor	2 to 8 A
Cooling fan motor No. 2	2 to 8 A

Standard current : With trailer hitch

Item	Specified Condition
Cooling fan motor	2 to 11 A
Cooling fan motor No. 2	2 to 11 A

HINT:
The coolant temperature is less than 95°C (203°F).

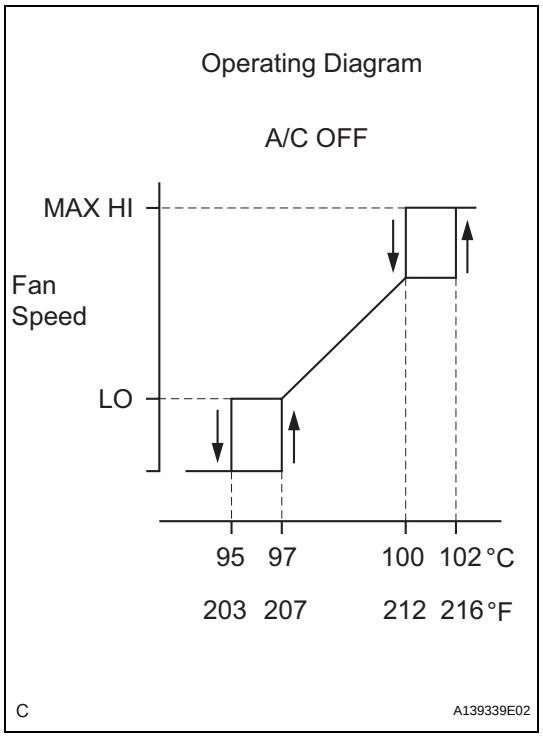
(f) Check that the fan operates when the engine coolant temperature sensor connector is disconnected.

Standard current : Without trailer hitch

Item	Specified Condition
Cooling fan motor	2 to 11 A
Cooling fan motor No. 2	2 to 11 A

Standard current : With trailer hitch

Item	Specified Condition
Cooling fan motor	2 to 15 A
Cooling fan motor No. 2	2 to 15 A

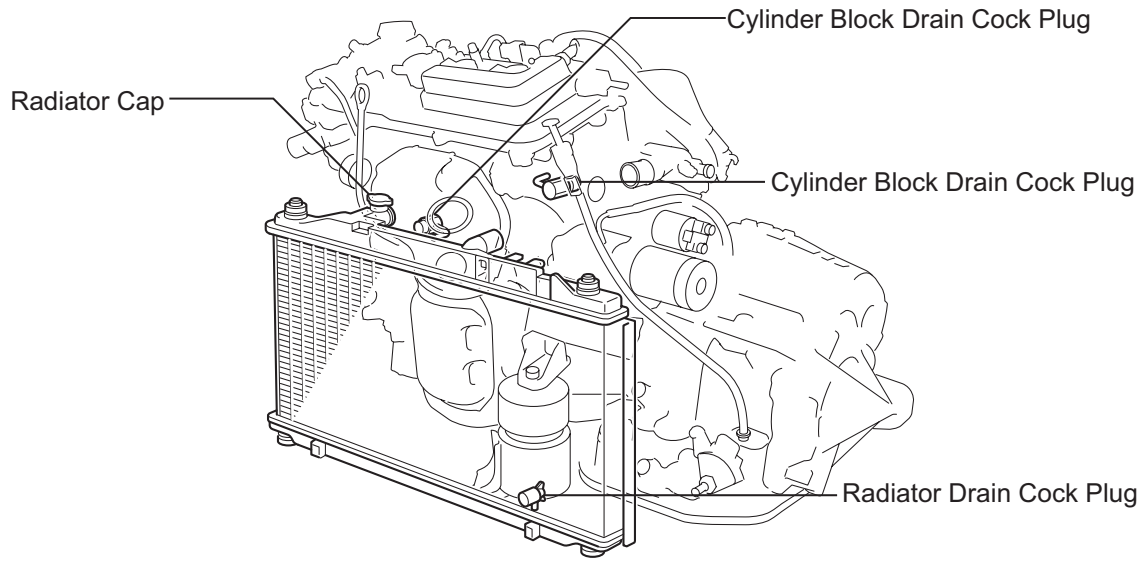


(g) After the engine is warmed up, check that the fan operates as shown in the illustration on the left.
HINT:
- The coolant temperature at which the fan starts operating is approximately 95°C (203°F).
- This system can also be checked using the intelligent tester.
- Select the following menu items: Power train / Engine / Data List / Initial Engine Coolant Temp.

COOLANT

ON-VEHICLE INSPECTION

1. **REMOVE FRONT WHEEL OPENING EXTENSION PAD RH**
2. **REMOVE FRONT WHEEL OPENING EXTENSION PAD LH**
3. **REMOVE ENGINE UNDER COVER RH**
4. **REMOVE ENGINE UNDER COVER LH**
5. **REMOVE V-BANK COVER SUB-ASSEMBLY (See page EM-23)**
6. **REMOVE COOL AIR INTAKE DUCT SEAL (See page EM-23)**
7. **DRAIN ENGINE COOLANT**
   NOTICE:
   Do not remove the radiator cap sub-assembly while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.
   (a) Remove the radiator cap sub-assembly from the radiator assembly.
   (b) Loosen the radiator drain cock plug and 2 cylinder block drain cock plugs, then drain the coolant.



HINT:
Collect the coolant in a container and dispose of it according to the regulations in your area.

CO

8. **ADD ENGINE COOLANT**
   (a) Close the radiator drain cock plug and 2 cylinder block drain cock plugs.
   Torque: 13 N*m (130 kgf*cm, 9 ft.*lbf) for cylinder block drain cock plug
   (b) Slowly fill the radiator with TOYOTA Super Long Life Coolant (SLLC).
   Specified capacity:
   9.0 liters (9.5 US qts, 7.9 lmp. qts)
   HINT:
   - TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).
   - Contact your TOYOTA dealer for further details.

   (c) Slowly pour coolant into the radiator reservoir tank until it reaches the FULL line.
   (d) Press the inlet and outlet radiator hoses several times by hand, and then check the level of the coolant.
   If the coolant level is low, add coolant.
   (e) Install the radiator cap sub-assembly and reservoir tank cap.
   (f) Start the engine, and warm it up.
   HINT:
   Adjust the air conditioner set temperature to MAX (HOT).
   (g) Stop the engine, and wait until the engine coolant cools down.
   (h) Add engine coolant to the FULL line on the radiator reservoir.

9. **CHECK FOR ENGINE COOLANT LEAKS (See page CO-1)**

10. **INSTALL V-BANK COVER SUB-ASSEMBLY (See page EM-52)**

11. **INSTALL ENGINE UNDER COVER RH**

12. **INSTALL ENGINE UNDER COVER LH**

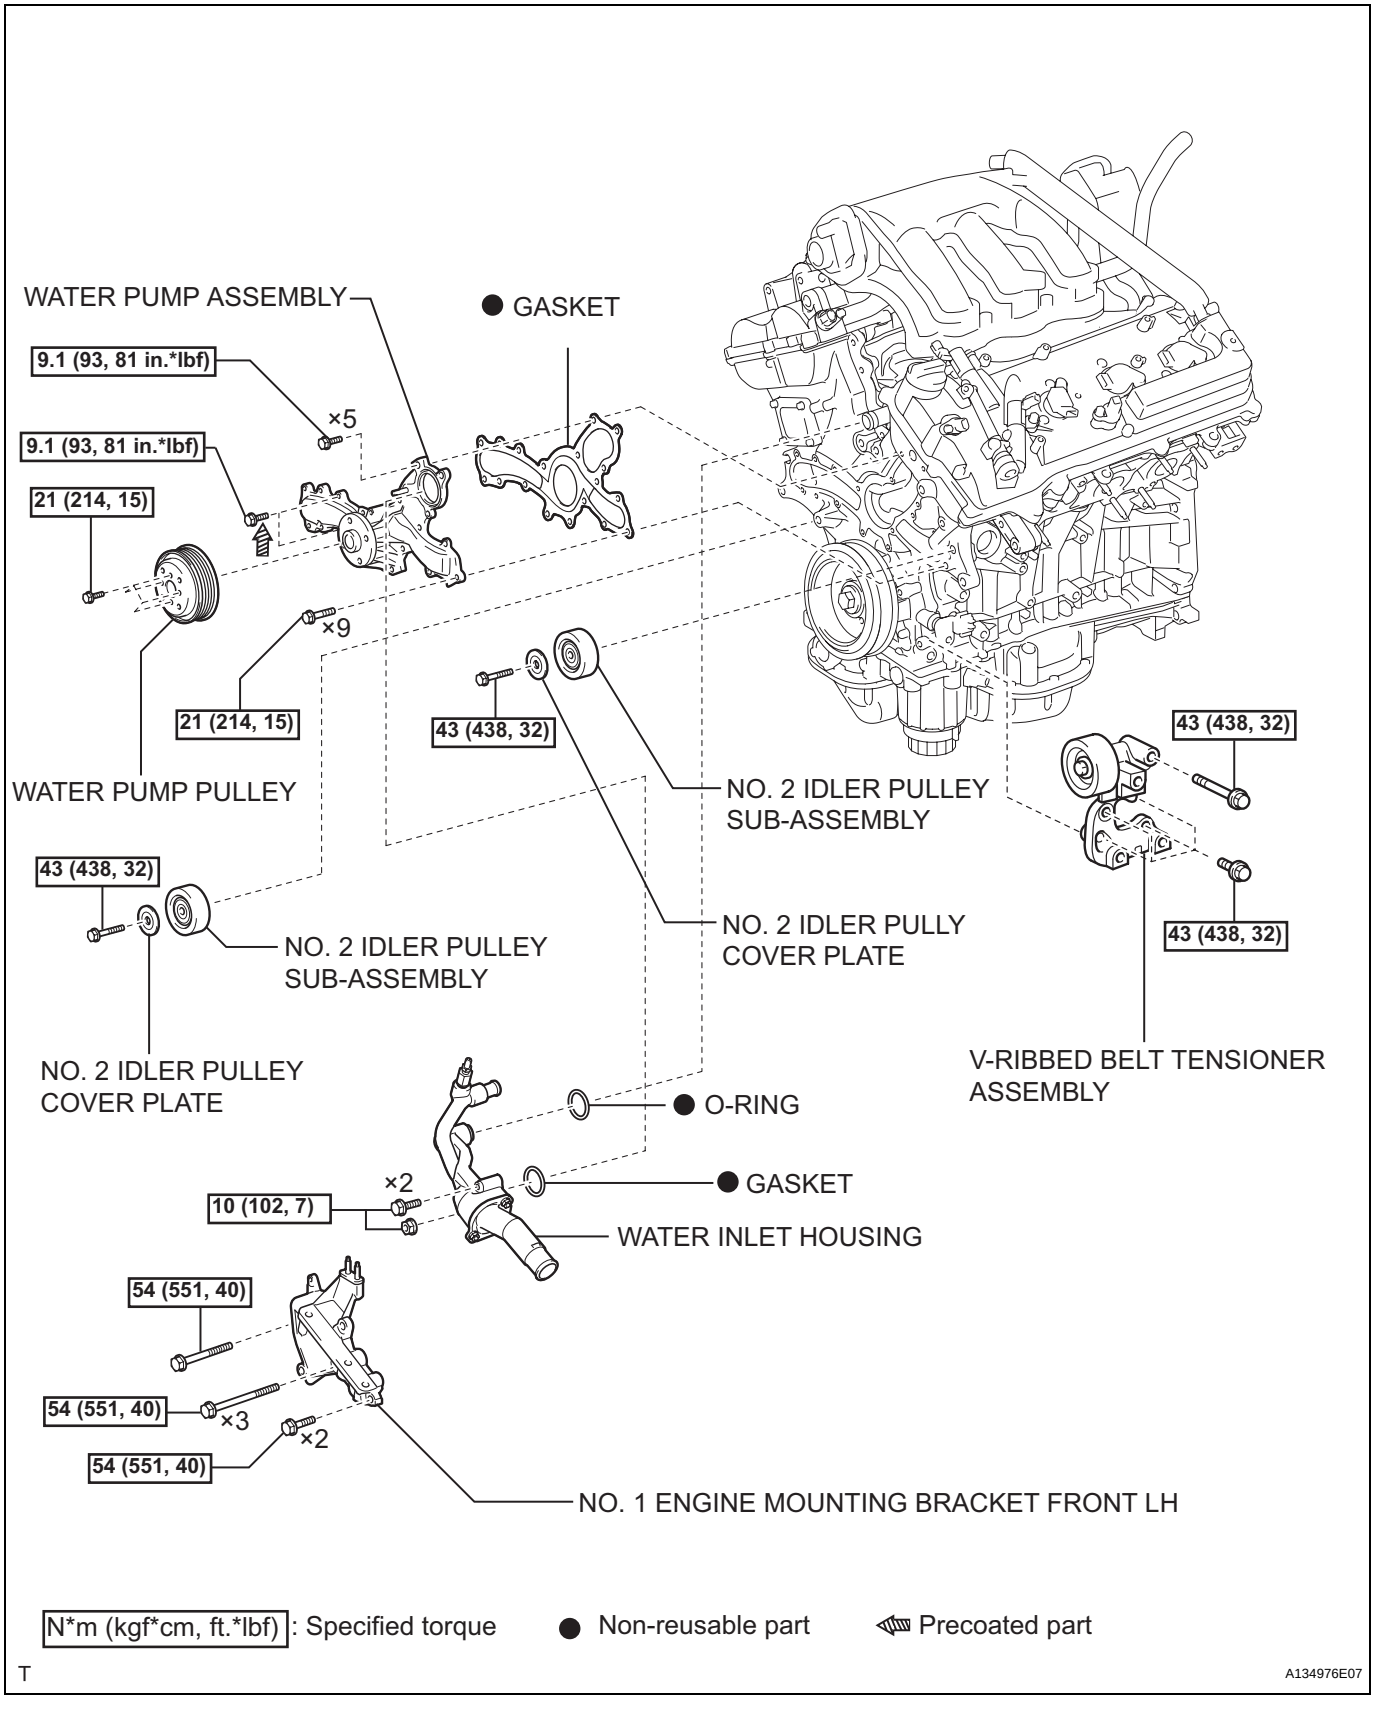
13. **INSTALL FRONT WHEEL OPENING EXTENSION PAD RH**

14. **INSTALL FRONT WHEEL OPENING EXTENSION PAD LH**

15. **INSTALL COOL AIR INTAKE DUCT SEAL (See page EM-52)**

WATER PUMP

COMPONENTS



CO

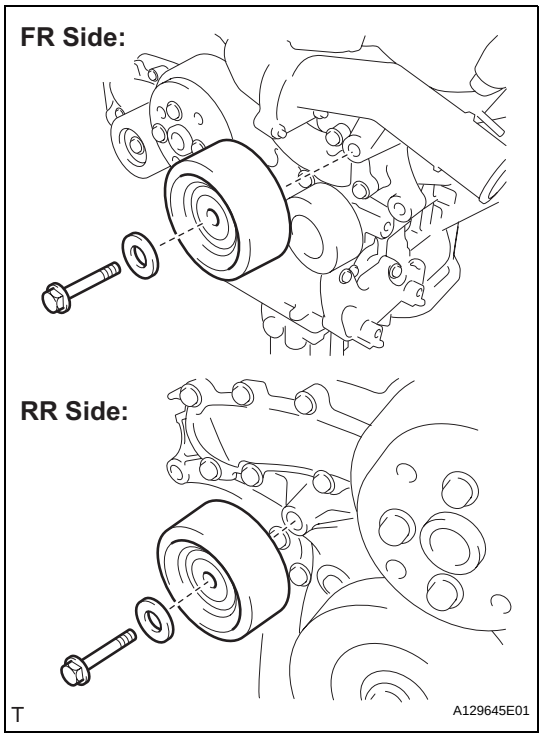
REMOVAL

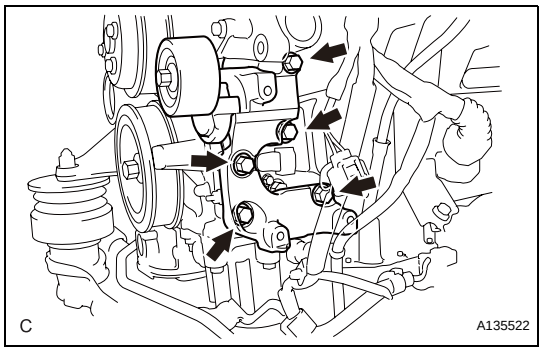
1. **REMOVE ENGINE ASSEMBLY AND TRANSAXLE**
   HINT:
   See page EM-23

2. **SECURE ENGINE STAND**
   HINT:
   See page EM-30

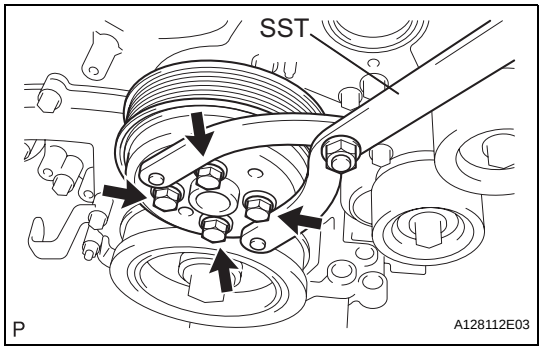
3. **REMOVE NO. 1 ENGINE MOUNTING BRACKET FRONT LH (See page EM-35)**

4. **REMOVE NO. 2 IDLER PULLEY SUB-ASSEMBLY**
   (a) Remove the 2 bolts, 2 idler pulley cover plates and 2 idler pulley sub-assemblies.



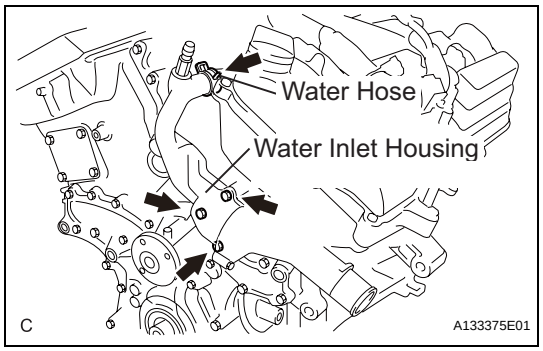


5. **REMOVE V-RIBBED BELT TENSIONER ASSEMBLY**
   (a) Remove the 5 bolts and V-ribbed belt tensioner assembly.



6. **REMOVE WATER PUMP PULLEY**
   (a) Using SST, hold the water pump pulley.
   SST 09960-10010 (09962-01000, 09963-00700)
   (b) Remove the 4 bolts and water pump pulley.

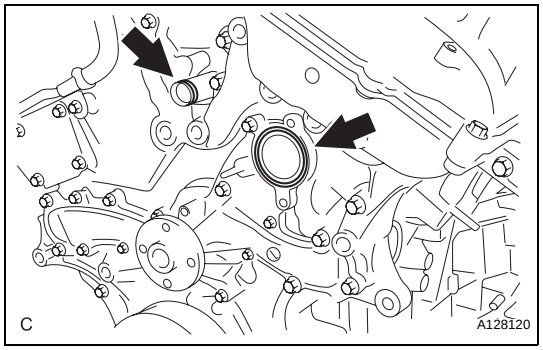
CO



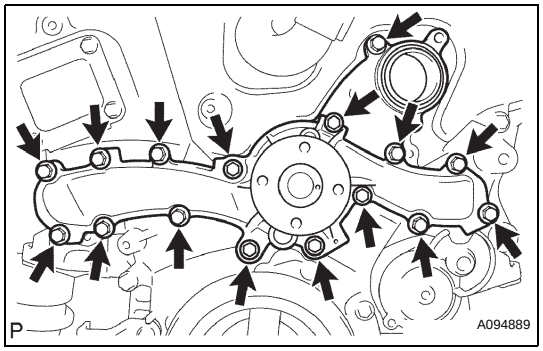
7. REMOVE WATER INLET HOUSING

(a) Disconnect the water hose.

(b) Remove the 2 bolts, nut and water inlet housing.



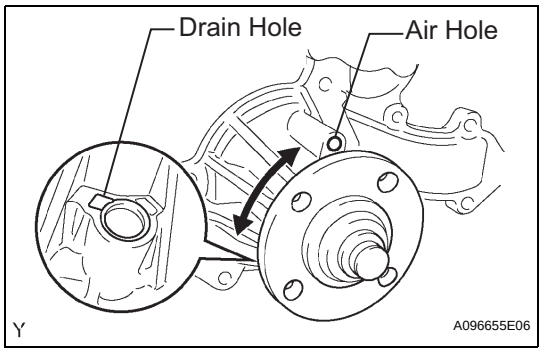
(c) Remove the water inlet housing gasket and water outlet pipe O-ring.



8. REMOVE WATER PUMP ASSEMBLY

(a) Remove the 16 bolts, water pump assembly and water pump gasket.

INSPECTION



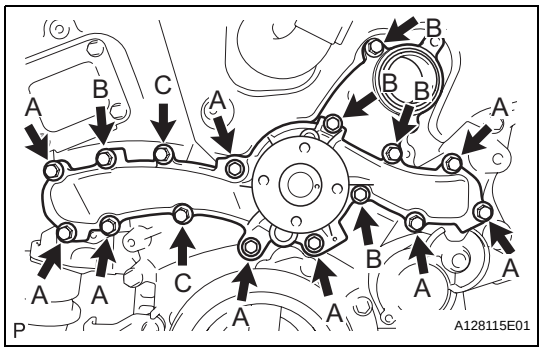
1. INSPECT WATER PUMP ASSEMBLY

(a) Visually check the drain hole and air hole for coolant leakage.

(b) Turn the pulley, and check that the water pump bearing moves smoothly and noiselessly.
If the bearing does not move smoothly and noiselessly, replace the water pump.

CO

INSTALLATION



1. INSTALL WATER PUMP ASSEMBLY

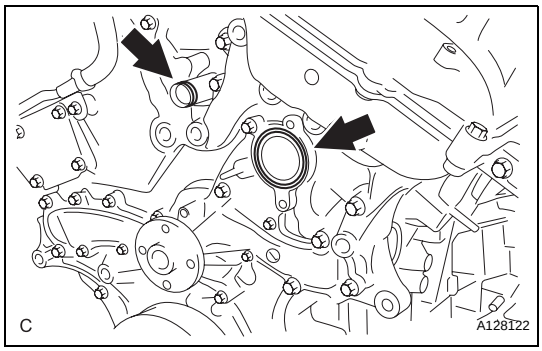
(a) Install a new water pump gasket and the water pump assembly with the 16 bolts.

Torque: Bolt A
21 N*m (214 kgf*cm, 15 ft.*lbf)
Bolts B and C
9.1 N*m (93 kgf*cm, 81 in.*lbf)

NOTICE:

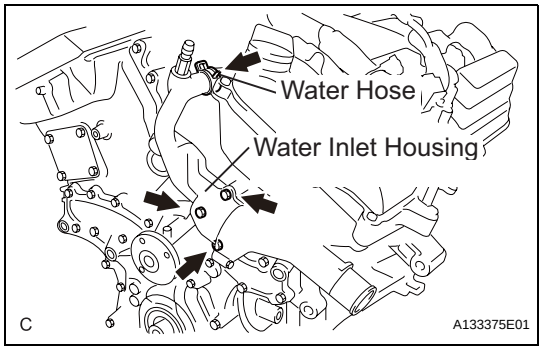
- **Make sure that there is no oil on the threads of bolts A.**

- **Be sure to replace 2 bolts C with new ones or reuse them after applying adhesive 1344.**
  Adhesive:
  Toyota Genuine Adhesive 1344, Three Bond 1344 or Equivalent



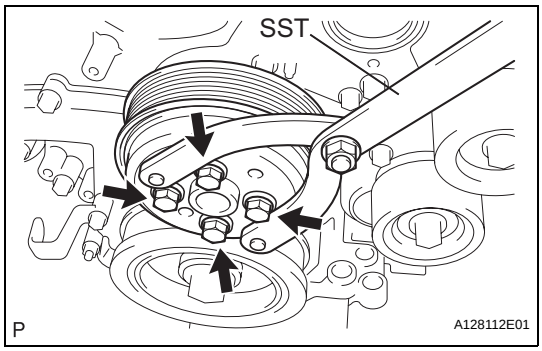
2. INSTALL WATER INLET HOUSING

(a) Install a new water inlet housing No. 1 gasket and water outlet pipe O-ring.



(b) Install the water inlet housing with the 2 bolts and nut.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)
NOTICE:
Be careful not to allow the O-ring to get caught between the parts.

(c) Connect the water hose.

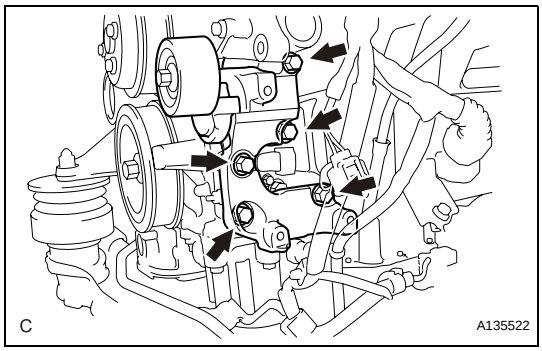


3. INSTALL WATER PUMP PULLEY

(a) Temporarily install the water pump pulley with the 4 bolts.

(b) Using SST, hold the water pump pulley.
SST 09960-10010 (09962-01000, 09963-00700)

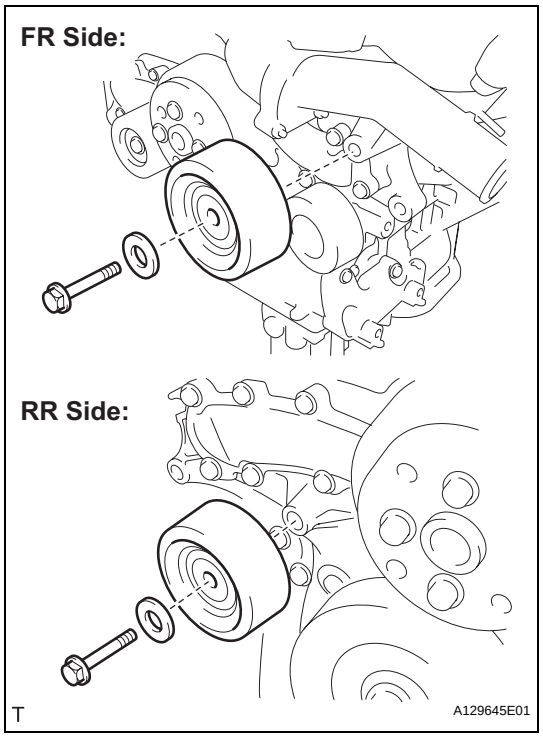
(c) Tighten the 4 bolts.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)



4. INSTALL V-RIBBED BELT TENSIONER ASSEMBLY

(a) Install the V-ribbed belt tensioner assembly with the 5 bolts.
Torque: 43 N*m (438 kgf*cm, 32 ft.*lbf)

CO



5. **INSTALL NO. 2 IDLER PULLEY SUB-ASSEMBLY**
   (a) Install the 2 idler pulley cover plates and idler pulley sub-assemblies with the 2 bolts.
   Torque: 43 N*m (438 kgf*cm, 32 ft.*lbf)

6. **INSTALL NO. 1 ENGINE MOUNTING BRACKET FRONT LH (See page EM-38)**

7. **REMOVE ENGINE STAND**

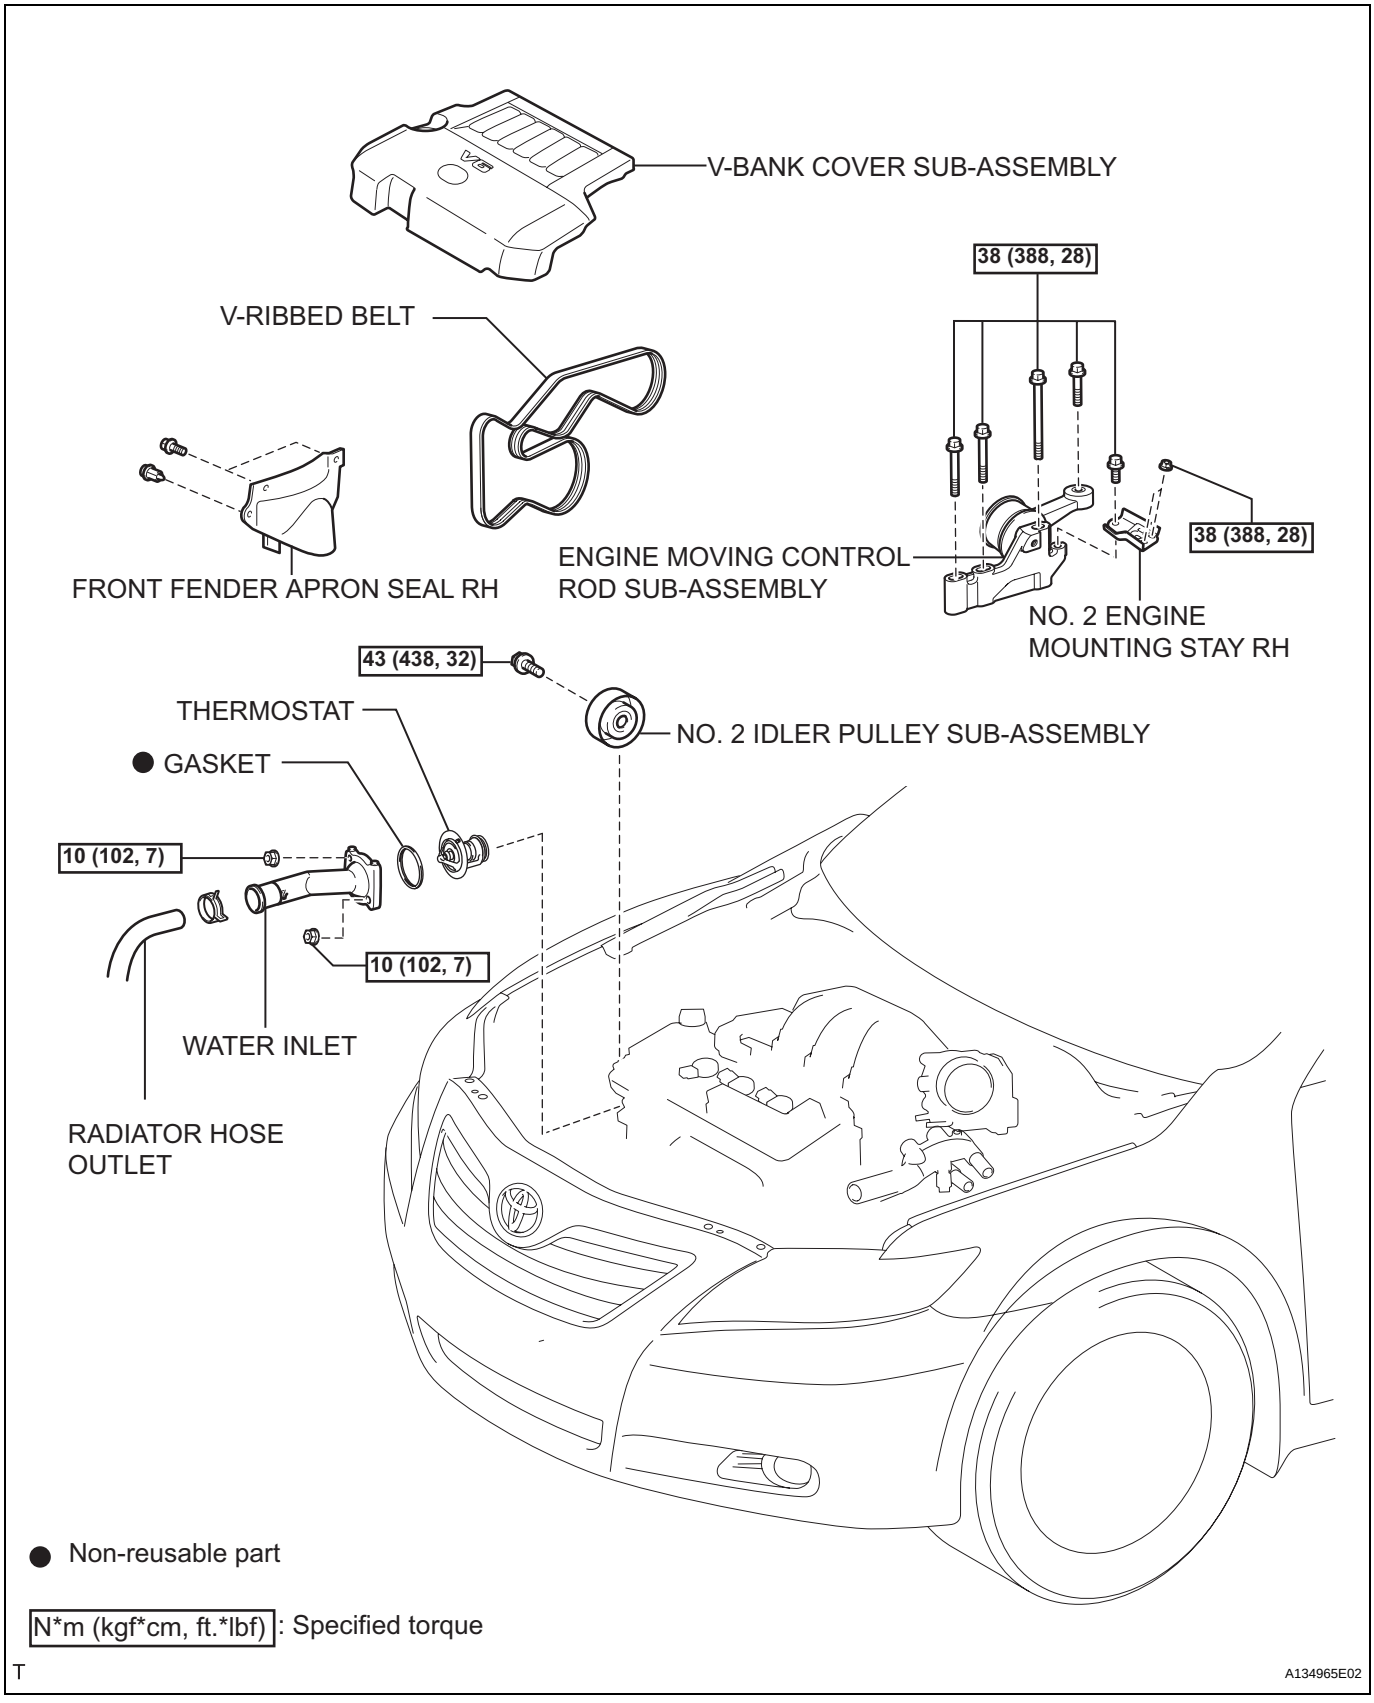
8. **INSTALL ENGINE ASSEMBLY AND TRANSAXLE**
   HINT:
   See page EM-37

9. **ADD ENGINE COOLANT (See page CO-6)**

10. **CHECK FOR ENGINE COOLANT LEAKS (See page CO-1)**

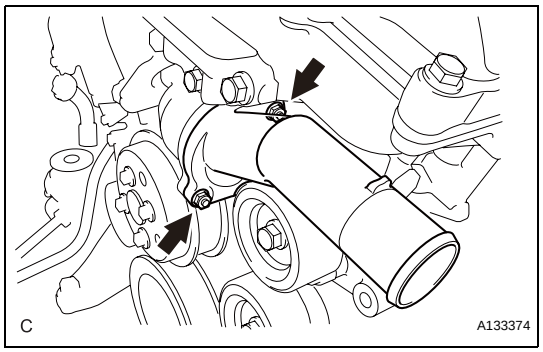
THERMOSTAT

COMPONENTS



REMOVAL

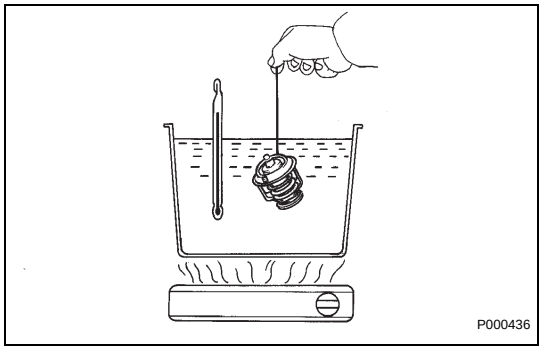
1. **DRAIN ENGINE COOLANT**
2. **REMOVE V-BANK COVER SUB-ASSEMBLY (See page EM-23)**
3. **REMOVE FRONT FENDER APRON SEAL RH**
4. **REMOVE NO. 2 ENGINE MOUNTING STAY RH (See page EM-25)**
5. **REMOVE ENGINE MOVING CONTROL ROD SUB-ASSEMBLY (See page EM-25)**
6. **REMOVE V-RIBBED BELT (See page EM-6)**
7. **REMOVE NO. 2 IDLER PULLEY SUB-ASSEMBLY (See page EM-34)**
8. **DISCONNECT RADIATOR HOSE OUTLET (See page EM-26)**
9. **REMOVE WATER INLET**
   (a) Remove the 2 nuts and water inlet.
10. **REMOVE THERMOSTAT**
    (a) Remove the gasket from the thermostat.



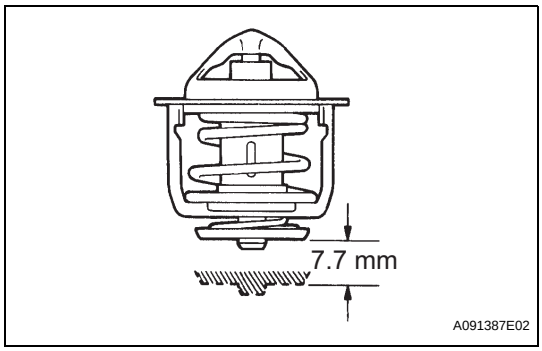
INSPECTION

1. **INSPECT THERMOSTAT**
   (a) Inspect the thermostat.
   HINT:
   The valve opening temperature is inscribed on the thermostat.

   (b) Immerse the thermostat in water and gradually heat the water.
   (c) Check the valve opening temperature.
   Valve opening temperature:
   80 to 84°C (176 to 183°F)
   If the valve opening temperature is not as specified, replace the thermostat.

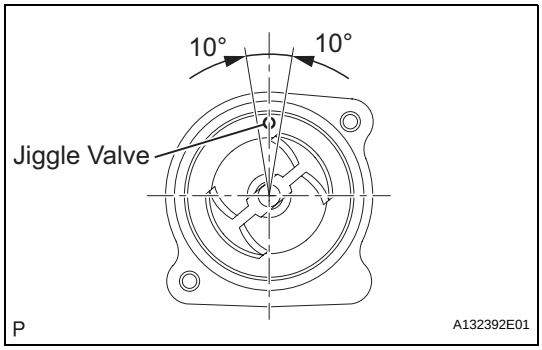


CO



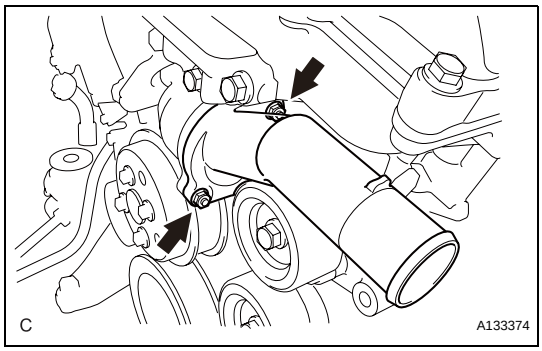
(d) Check the valve lift.
Valve lift:
7.7 mm (0.3031 in.) or more at 95°C (203°F)
If the valve lift is not as specified, replace the thermostat.

(e) Check that the valve is fully closed when the thermostat is at low temperatures (below 40°C (104°F)).
If it is not fully closed, replace the thermostat.

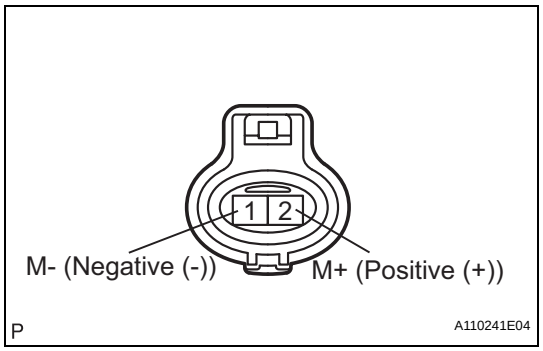


INSTALLATION

1. **INSTALL THERMOSTAT**
   (a) Install a new gasket to the thermostat.
   (b) Install the thermostat with the jiggle valve facing up.
   HINT:
   The jiggle valve may be set within 10°on either side of the prescribed position.



2. **INSTALL WATER INLET**
   (a) Install the water inlet with the 2 nuts .
   Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)
3. **CONNECT RADIATOR HOSE OUTLET (See page EM-48)**
4. **INSTALL NO. 2 IDLER PULLEY SUB-ASSEMBLY (See page EM-39)**
5. **INSTALL V-RIBBED BELT (See page EM-7)**
6. **INSTALL ENGINE MOVING CONTROL ROD SUB-ASSEMBLY (See page EM-49)**
7. **INSTALL NO. 2 ENGINE MOUNTING STAY RH (See page EM-49)**
8. **INSTALL FRONT FENDER APRON SEAL RH**
9. **ADD ENGINE COOLANT (See page CO-6)**
10. **CHECK FOR ENGINE COOLANT LEAKS (See page CO-1)**
11. **INSTALL V-BANK COVER SUB-ASSEMBLY (See page EM-52)**



COOLING FAN MOTOR

ON-VEHICLE INSPECTION

1. COOLING FAN MOTOR

(a) Check that the motor turns smoothly when the battery is connected to the fan motor connector.

(b) Measure the current while the motor is turning.

Standard current:

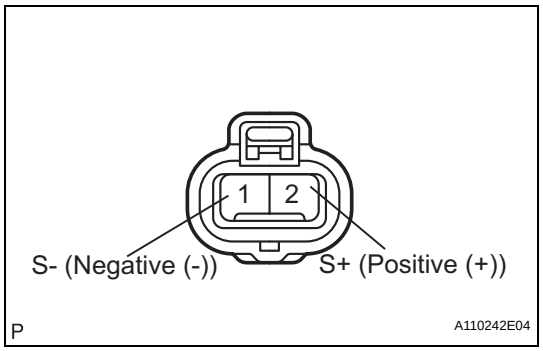
With trailer hitch:

11.8 to 14.8 A at 20°C (68°F)

Without trailer hitch:

6.8 to 9.8 A at 20°C (68°F)

If the result is not as specified, replace the cooling fan motor.



2. NO. 2 COOLING FAN MOTOR

(a) Check that the motor turns smoothly when the battery is connected to the fan motor connector.

(b) Measure the current while the motor is turning.

Standard current:

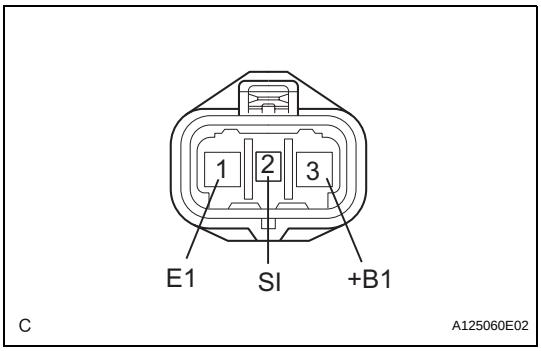
With trailer hitch:

6.8 to 9.8 A at 20°C (68°F)

Without trailer hitch:

6.8 to 9.8 A at 20°C (68°F)

If the result is not as specified, replace the cooling fan motor No. 2.



COOLING FAN ECU

ON-VEHICLE INSPECTION

1. INSPECT COOLING FAN ECU

(a) Inspect the input voltage.

(1) Disconnect the cooling fan ECU connector.

(2) Turn the ignition switch on (IG). Check the voltage of the +B terminal of the disconnected wire harness side connector.

Standard voltage:

9 to 14 V

If the result is not as specified, inspect the power source system (fusible link, fuse, wire harness and relay).

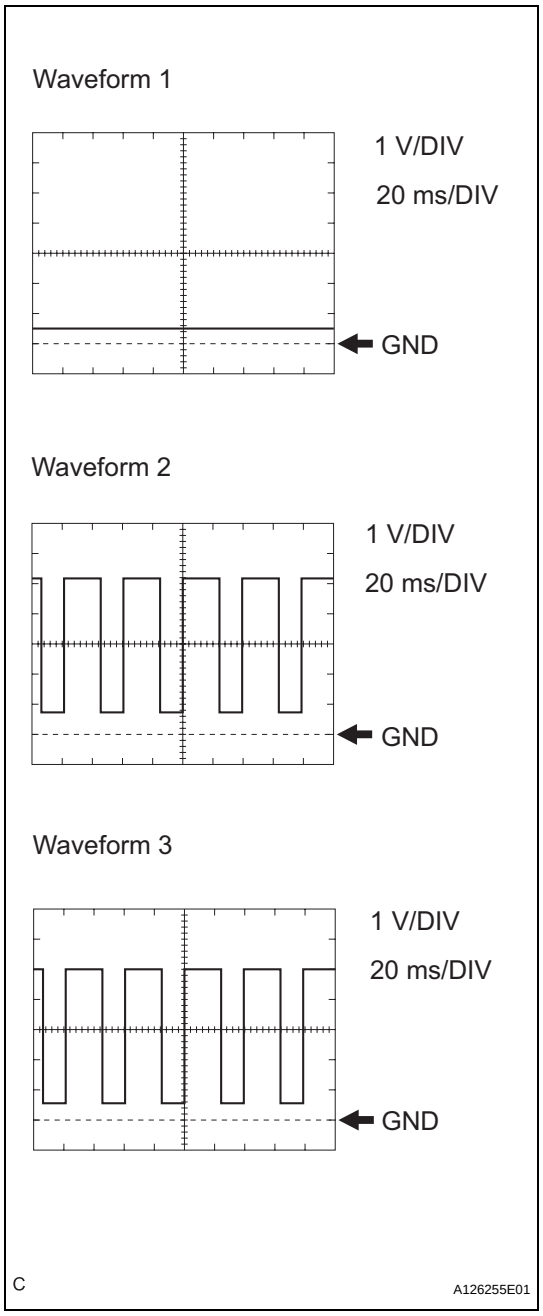
(b) Inspect the cooling fan motor (see page CO-15).

(c) Measure the resistance between terminals RFC (ECM) and SI (cooling fan ECU) of the wire harness side connectors.

HINT:

- If the fan does not operate, there may be a short circuit.
- If the fan remains operating, there may be an open circuit.

(d) Inspect the ECM power source circuit and ground circuit.

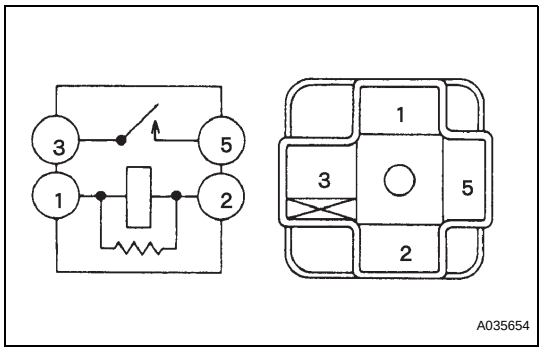


(e) Inspect the input signal and output current.
NOTICE:
Be sure to perform the inspection with the radiator coolant temperature less than 95°C (203 °F).
(1) Connect the 400 A probe of the ammeter to terminal M+ of the cooling fan motor.
(2) Set the intelligent tester to the oscilloscope function.
(3) Using the intelligent tester, check the waveform between terminals RFC and E1 of the ECM.
Standard waveform

Condition	Input Signal	Output Current
Engine stopped (Ignition switch on (IG))	**Waveform 1 (Duty ratio 0 %)**	**(Fan stops)**
Engine idling (A/C OFF)	**Waveform 1 (0 %)**	**(Fan stops)**
Engine idling (A/C ON)	**Waveform 2 (30 to 70 %)**	**2 to 11 A (Fan operates)**
Engine idling (Coolant temperature sensor connector disconnected)	**Waveform 3 (30 to 70 %)**	**2 to 11 A (Fan operates)**

HINT:
- If the input signal is abnormal, there is a malfunction in the ECM or cooling fan ECU.
- If the output current is abnormal even when the input signal is normal, there is a malfunction in the cooling fan ECU (RFC) or motor.

CO



COOLING FAN RELAY

ON-VEHICLE INSPECTION

1. COOLING FAN RELAY

(a) Remove the relay from engine room relay block No. 1.

(b) Measure the resistance of the relay.

Standard resistance

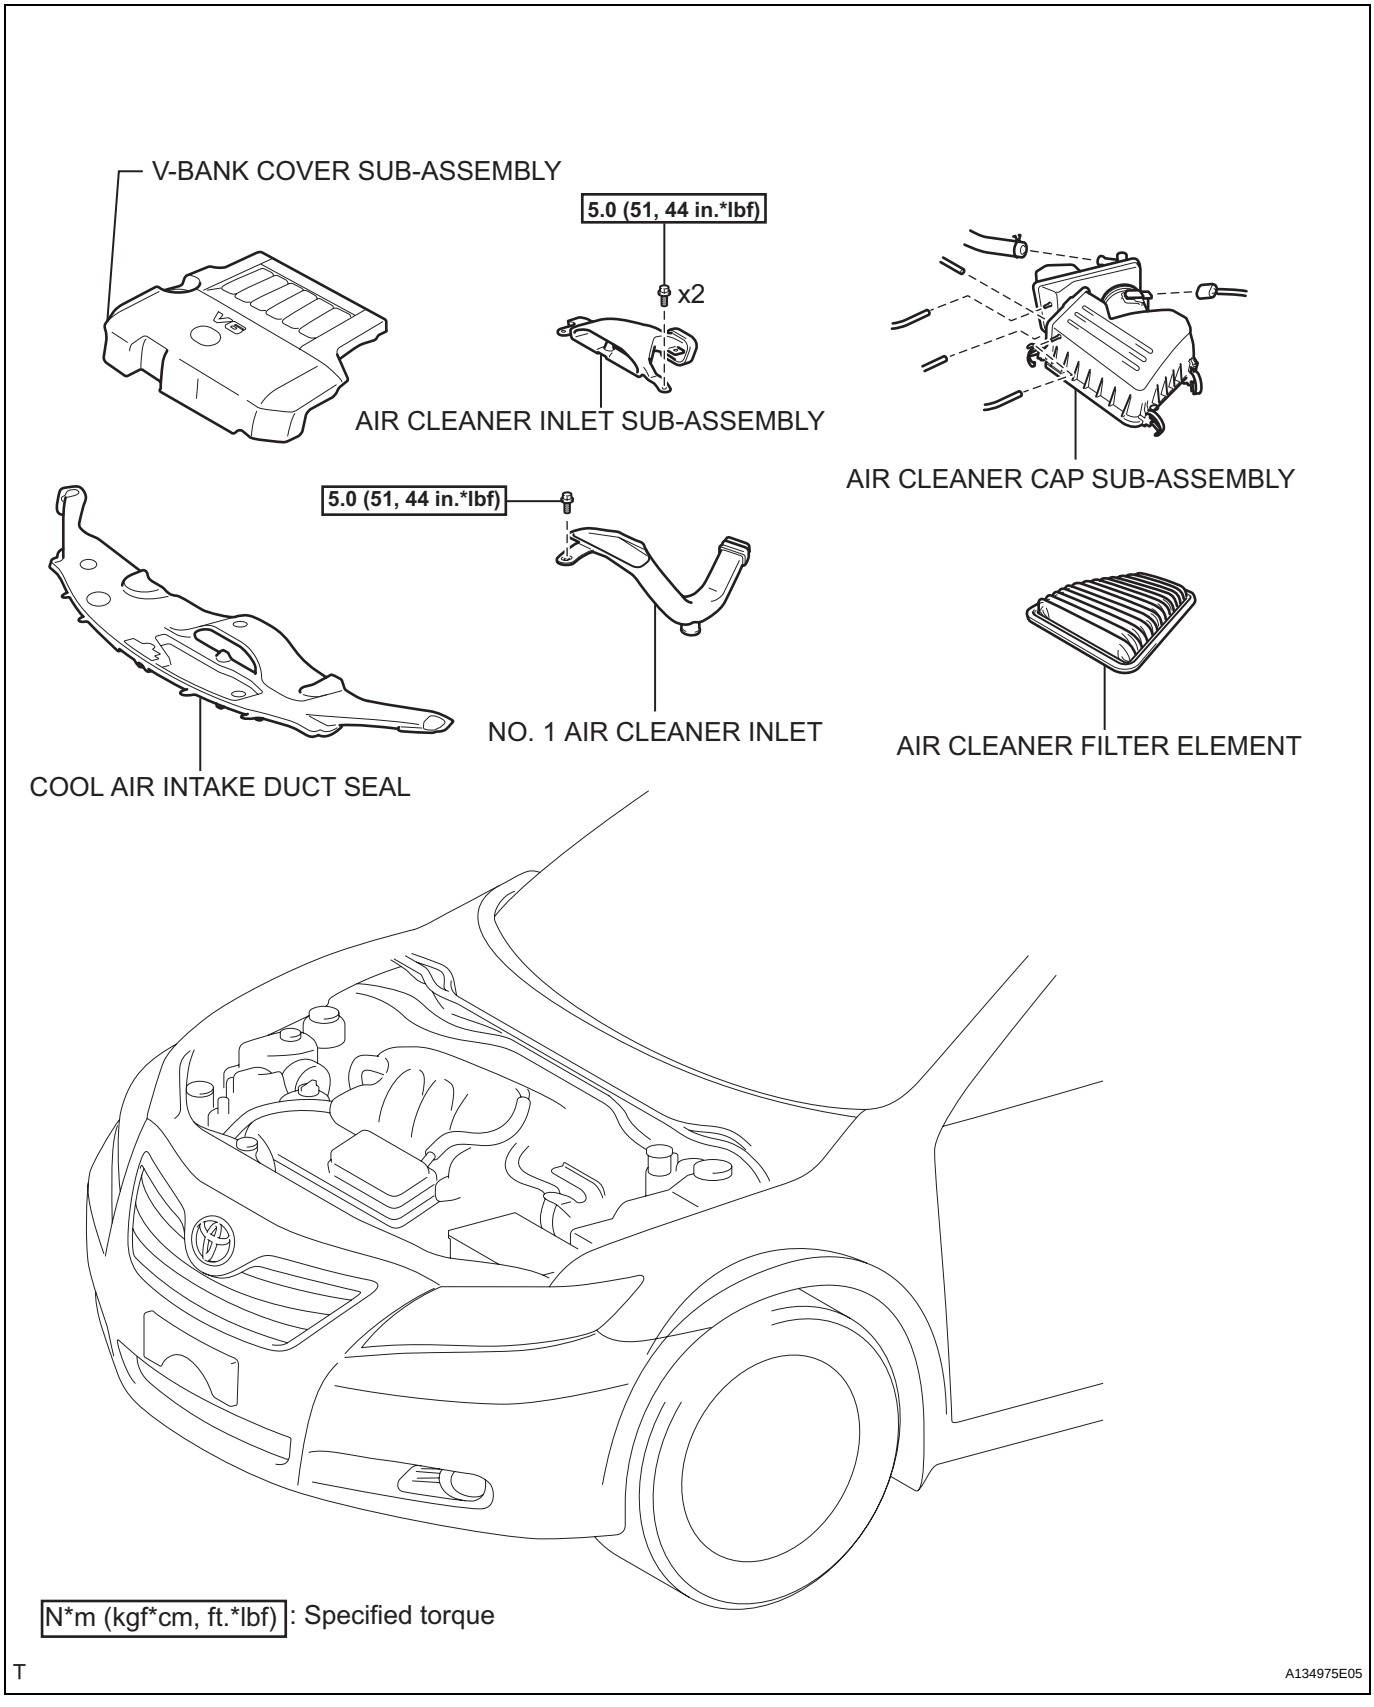
Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

If the result is not as specified, replace the cooling fan relay.

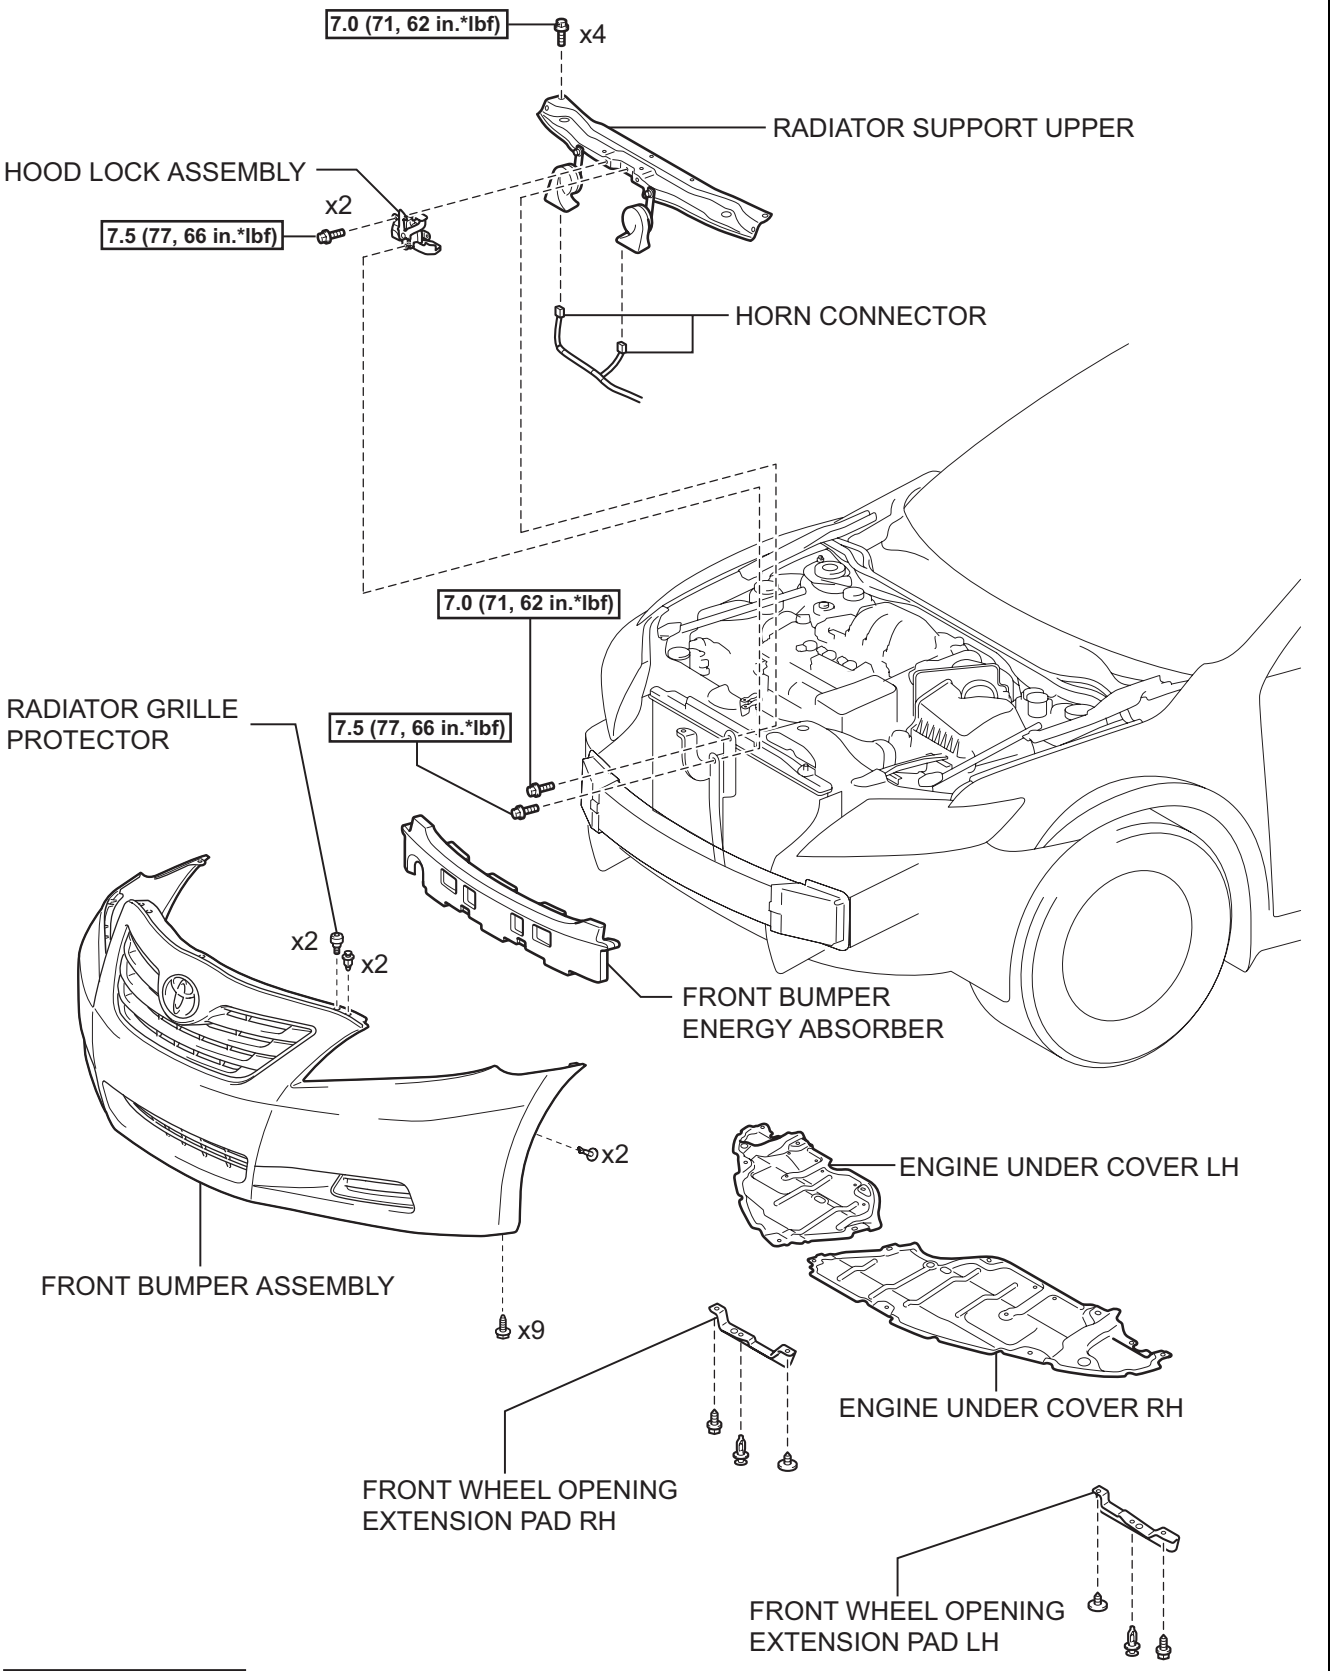
(c) Install the relay to engine room relay block No. 1.

RADIATOR

COMPONENTS



CO

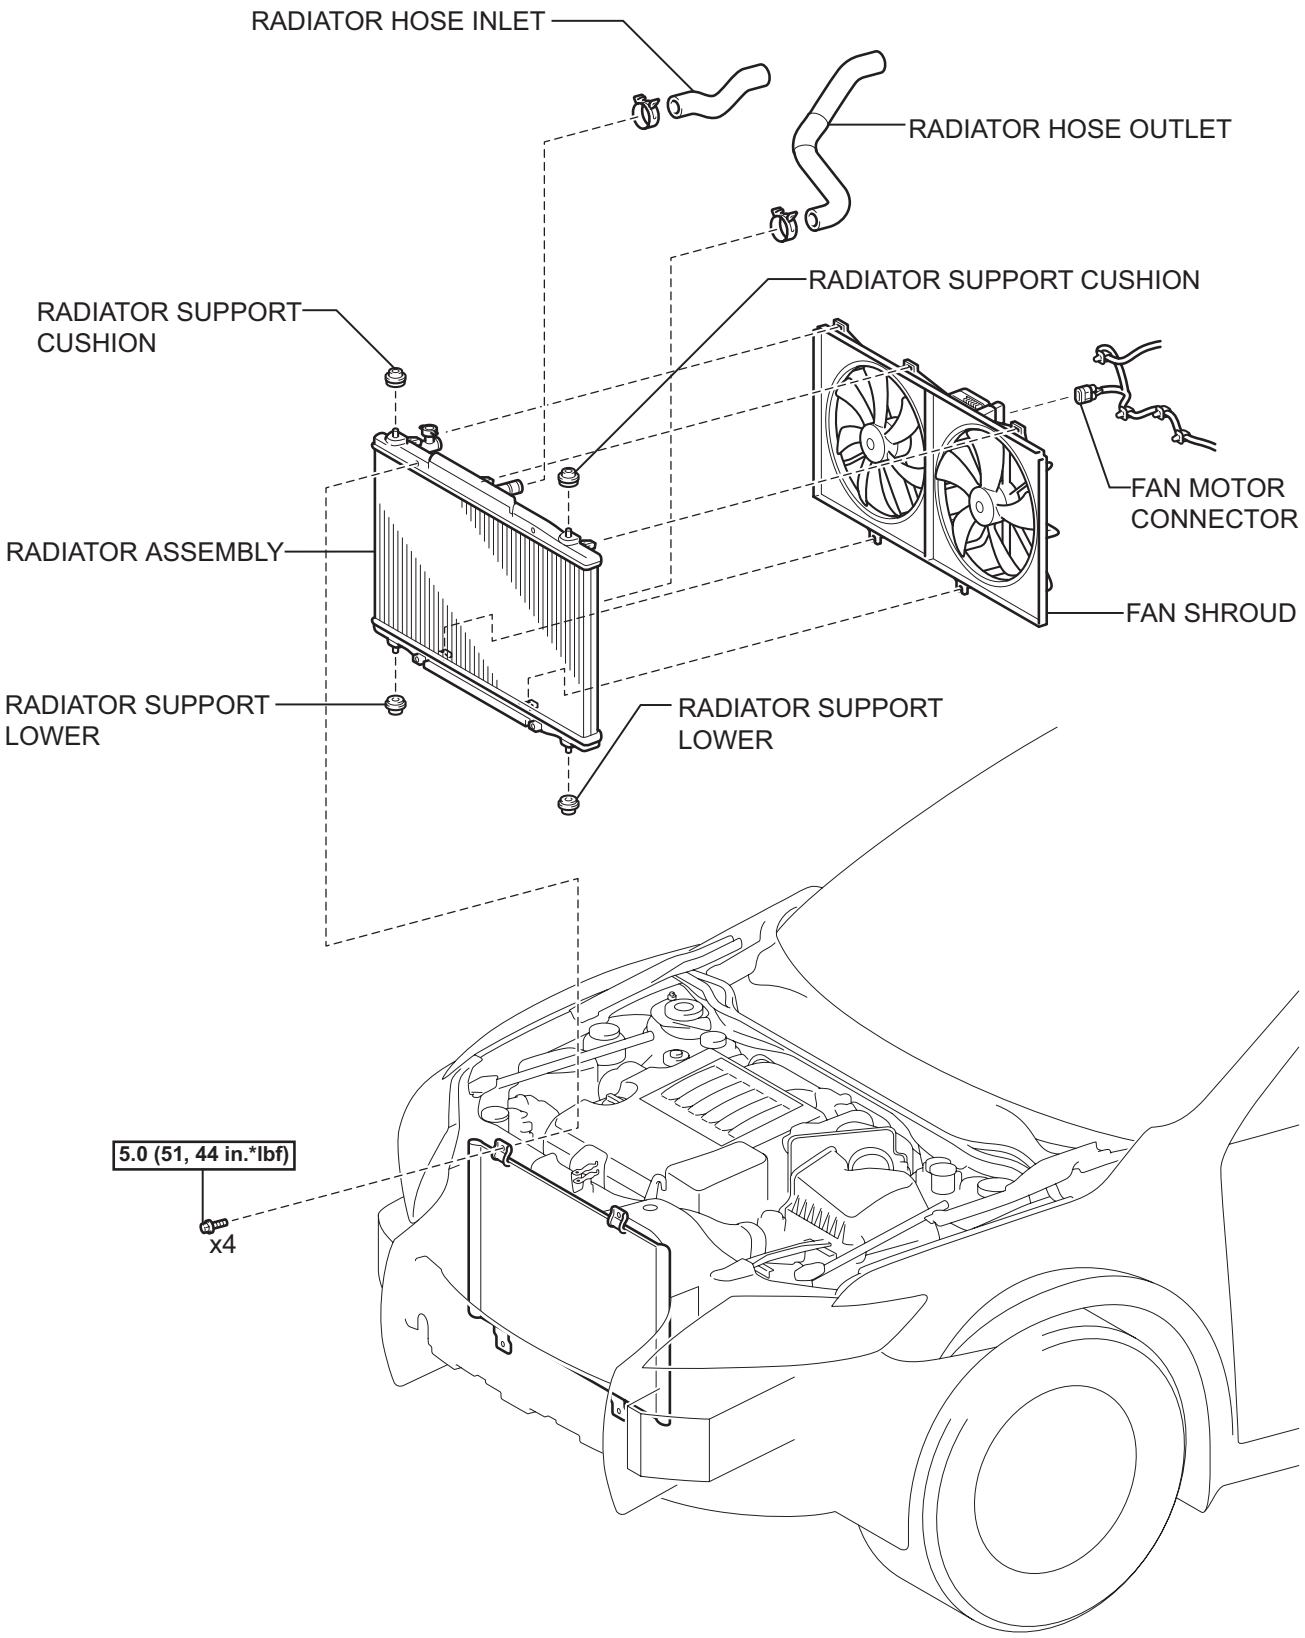


CO

N*m (kgf*cm, ft.*lbf) : Specified torque

T

A133359E05

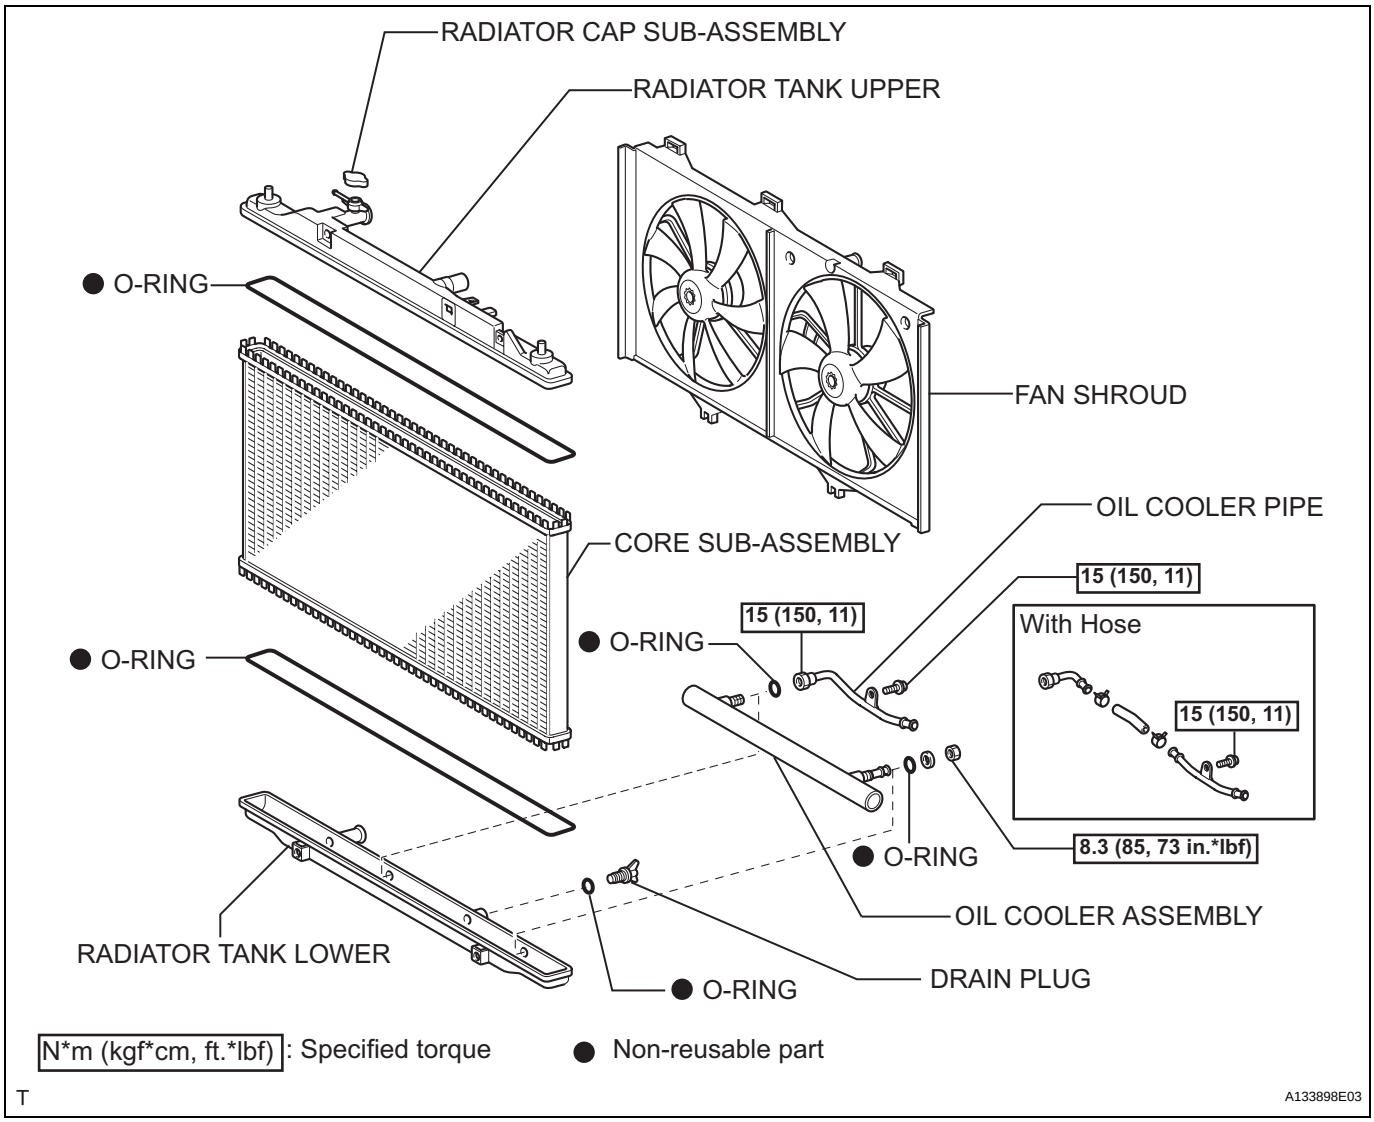


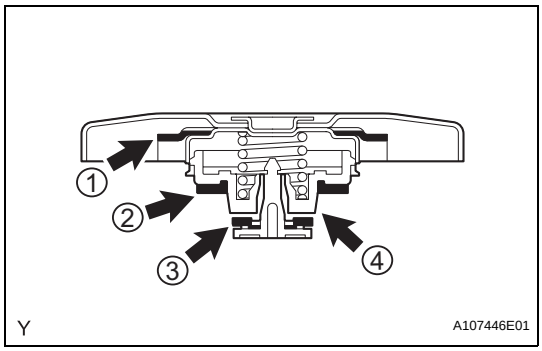
N*m (kgf*cm, ft.*lbf): Specified torque

T

A133360E02

CO





ON-VEHICLE INSPECTION

1. CHECK RADIATOR CAP SUB-ASSEMBLY

(a) Measure the valve opening pressure.

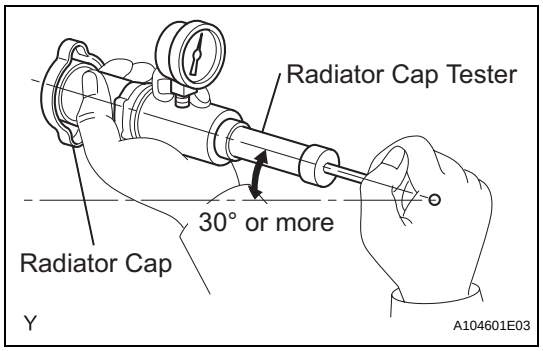
(1) If there are water stains or foreign matter on rubber packings 1, 2 or 3, clean the part(s) with water and finger scouring.

(2) Check that rubber packings 1, 2 and 3 are not deformed, cracked or swollen.

(3) Check that rubber packings 3 and 4 are not stuck together.

(4) Apply engine coolant to rubber packings 2 and 3 before using the radiator cap tester.

(5) When using the cap tester, tilt it to 30° or more above the horizontal.



(6) Pump the cap tester several times, and check the maximum pressure *1.

Pumping speed:

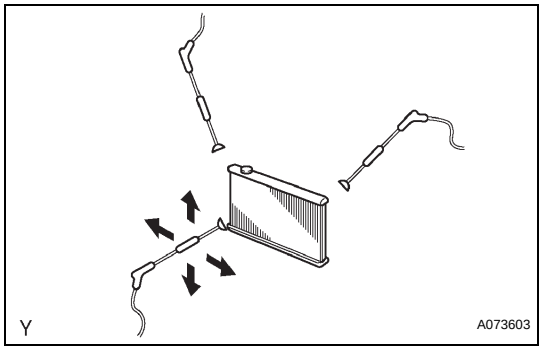
1 pumps every second

*1: Even if the cap cannot maintain the maximum pressure, it is not a defect.

Judgment Criteria

Item	Specified Condition
Standard valve (for brand-new cap)	93.3 to 122.7 kPa (0.95 to 1.25 kgf/cm^2, 13.5 to 17.8 psi)
Minimum standard valve (after using cap)	78.5 kPa (0.8 kgf/cm^2, 11.4 psi)

If the maximum pressure is less than the specified pressure for the minimum standard valve, replace the radiator cap sub-assembly.



ON-VEHICLE CLEANING

1. INSPECT FINS BLOCKAGE

(a) If the fins are clogged, wash them with water or a steam cleaner. Dry with compressed air.

NOTICE:

- **If the distance between the steam cleaner and the core is too close, the fins may become damaged. Keep the following injection distance.**

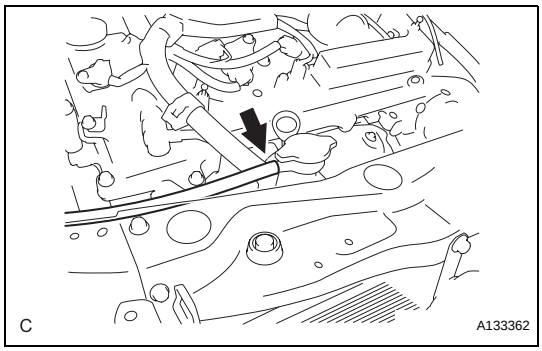
Standard

Injection Distance	Injection Pressure
300 mm (11.81 in.)	2,942 to 4,903 kPa (30 to 50 kg/cm^2, 427 to 711 psi)
500 mm (19.69 in.)	4,903 to 7,845 kPa (50 to 80 kg/cm^2, 711 to 1,138 psi)

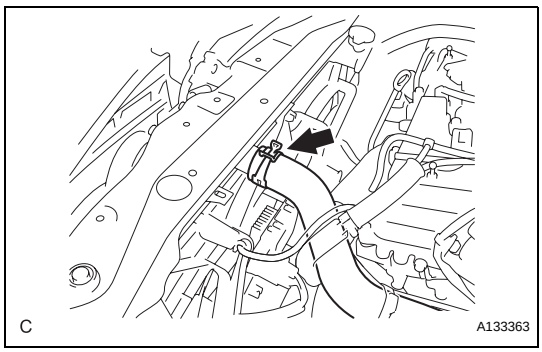
- **If the fins are bent, straighten them with a screwdriver or pliers.**
- **Never apply water directly onto the electronic components.**

REMOVAL

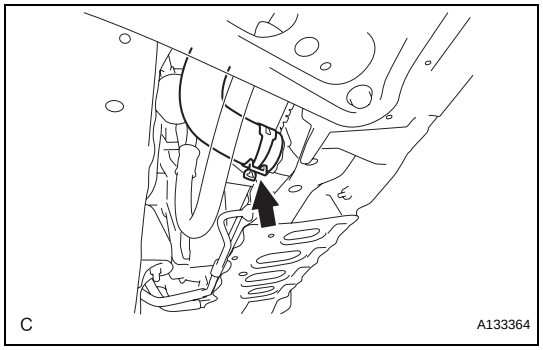
1. **REMOVE FRONT WHEEL OPENING EXTENSION PAD RH**
2. **REMOVE FRONT WHEEL OPENING EXTENSION PAD LH**
3. **REMOVE ENGINE UNDER COVER RH**
4. **REMOVE ENGINE UNDER COVER LH**
5. **DRAIN ENGINE COOLANT (See page CO-5)**
6. **REMOVE V-BANK COVER SUB-ASSEMBLY (See page EM-23)**
7. **REMOVE COOL AIR INTAKE DUCT SEAL (See page EM-23)**
8. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-503)**
9. **REMOVE AIR CLEANER INLET SUB-ASSEMBLY (See page EM-24)**
10. **REMOVE NO. 1 AIR CLEANER INLET (See page EM-24)**
11. **REMOVE FRONT BUMPER ASSEMBLY (w/ Fog Light) (See page ET-6)**
12. **REMOVE FRONT BUMPER ASSEMBLY (w/o Fog Light) (See page ET-6)**
13. **REMOVE FRONT BUMPER ENERGY ABSORBER (See page ET-9)**
14. **SEPARATE RADIATOR RESERVE TANK HOSE**
    (a) Separate the radiator reserve tank hose from the radiator assembly.



15. **DISCONNECT RADIATOR HOSE INLET**
    (a) Separate the radiator inlet hose from the radiator assembly.

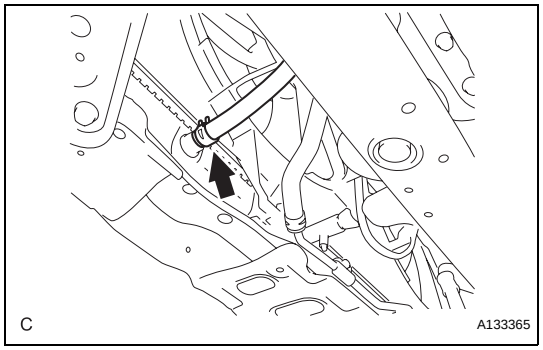


CO



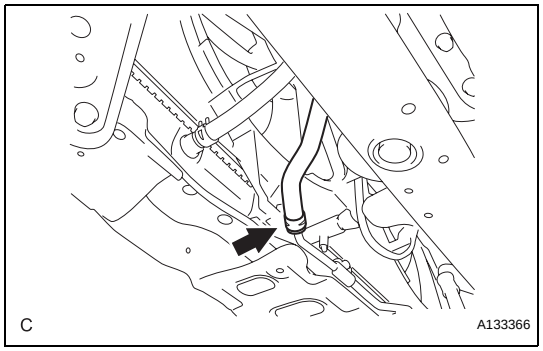
16. DISCONNECT RADIATOR HOSE OUTLET

(a) Separate the radiator outlet hose from the radiator assembly.



17. DISCONNECT NO. 1 OIL COOLER INLET HOSE

(a) Separate the No. 1 oil cooler inlet hose from the radiator assembly.

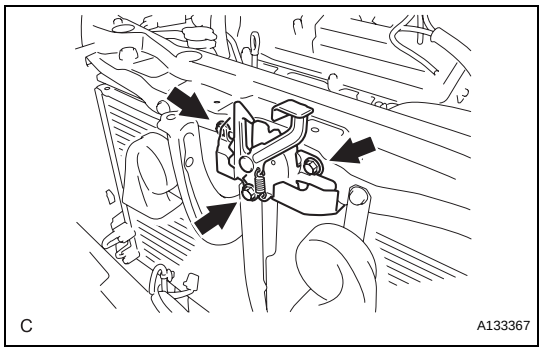


18. DISCONNECT NO. 1 OIL COOLER OUTLET HOSE

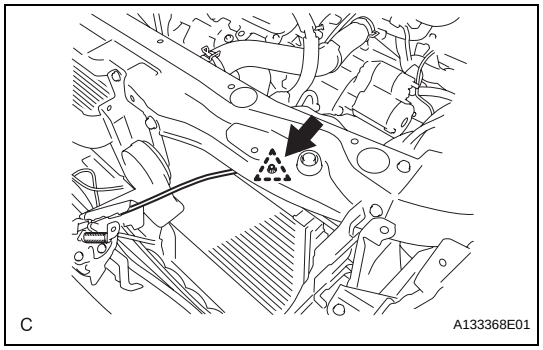
(a) Separate the No. 1 oil cooler outlet hose from the radiator assembly.

19. REMOVE RADIATOR SUPPORT UPPER

(a) Disconnect the horn connector.

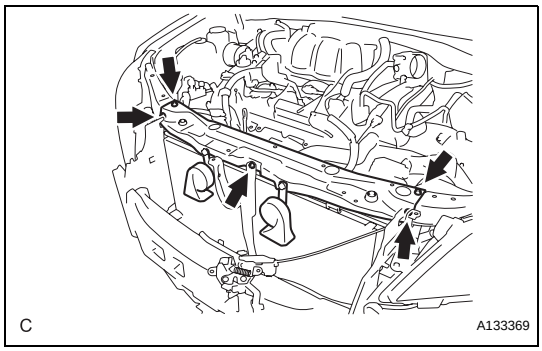


(b) Remove the 3 bolts and separate the hood lock assembly from the radiator support upper.



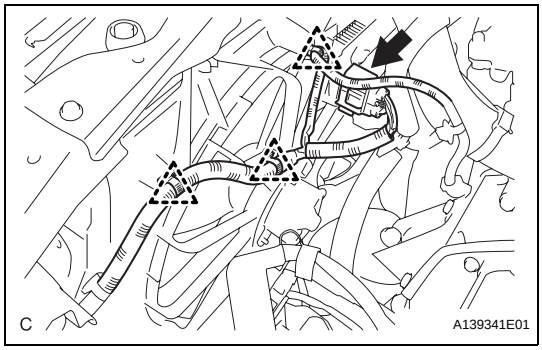
(c) Remove the clamp and separate the hood lock control cable from the radiator support upper.

CO

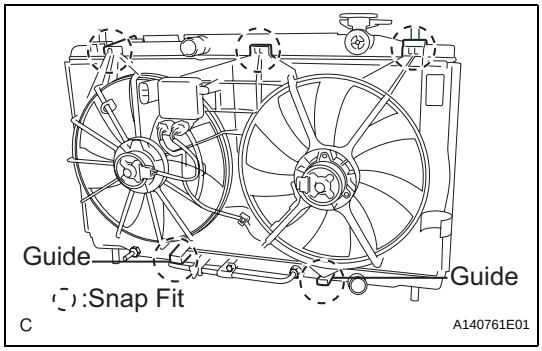


(d) Remove the 5 bolts and radiator support upper.

20. REMOVE FAN SHROUD

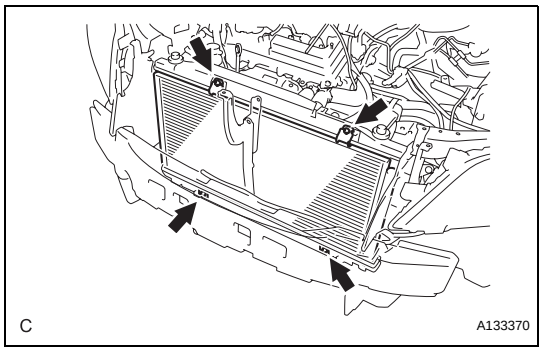


(a) Remove the 3 clamps and connector.

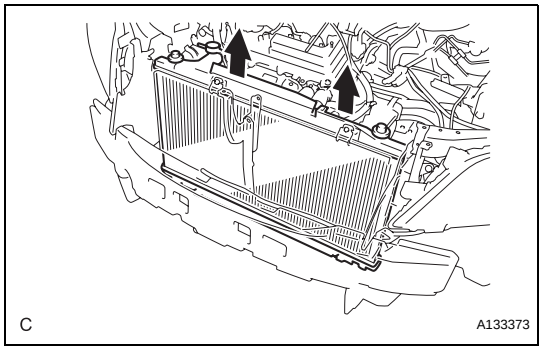


(b) Release the 3 snap fits and lift the fan assembly with motor from the radiator.

21. REMOVE RADIATOR ASSEMBLY

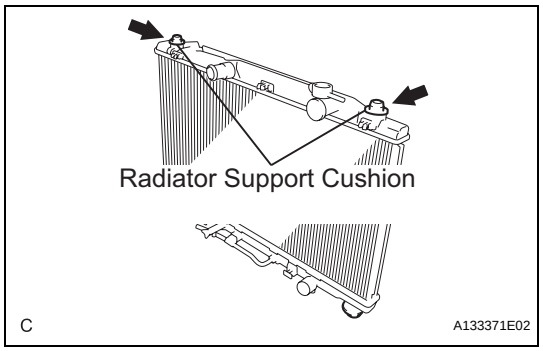


(a) Remove the 4 bolts and separate the condenser assembly from the radiator assembly.



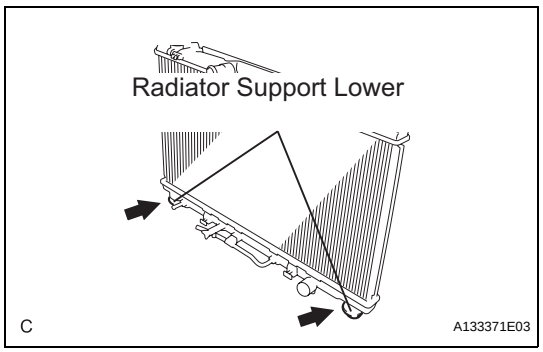
(b) Remove the radiator assembly from the body.

CO



22. REMOVE RADIATOR SUPPORT CUSHION

(a) Remove the 2 radiator support cushions from the radiator assembly.



23. REMOVE RADIATOR SUPPORT LOWER

(a) Remove the 2 radiator support lowers from the radiator assembly.

DISASSEMBLY

1. REMOVE DRAIN PLUG

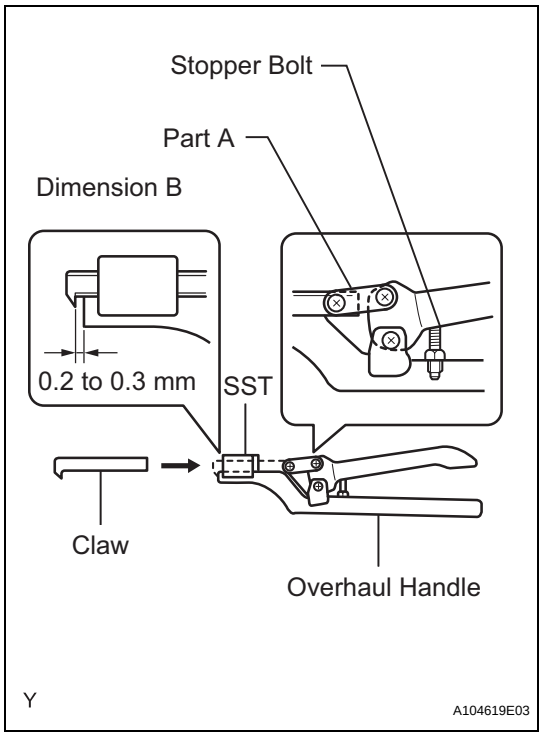
(a) Remove the drain plug.

(b) Remove the O-ring.

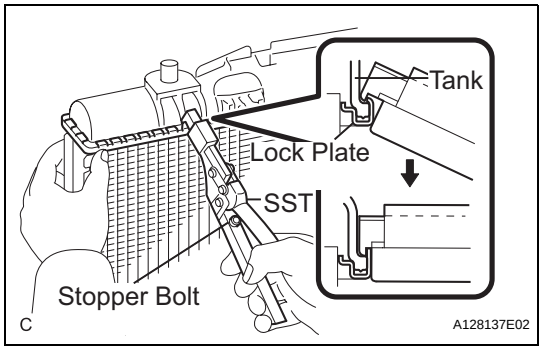
2. REMOVE RADIATOR TANK UPPER

(a) Install the claw to the overhaul handle, inserting it in the hole in part A as shown in the illustration.
SST 09230-01010 (09231-01010, 09231-01030)

(b) While gripping the handle, adjust the stopper bolt so that dimension B is as shown in the illustration.
Dimension B:
0.2 to 0.3 mm (0.008 to 0.012 in.)
NOTICE:
If the stopper bolt is not adjusted, the claw may be damaged.

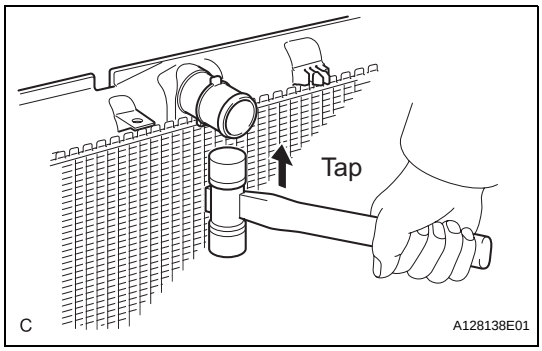


(c) Using SST to release the caulking, grip the handle until stopped by the stopper bolt.
SST 09230-01010 (09231-01010, 09231-01030)

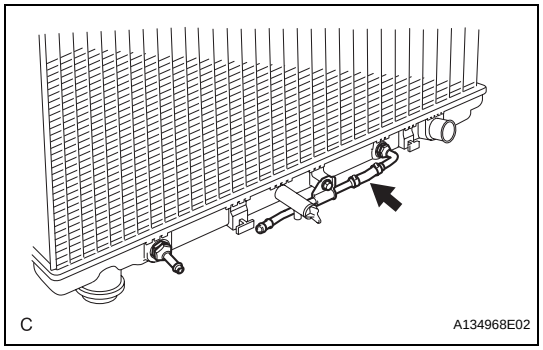


(d) Lightly tap the bracket of the radiator (or radiator hose inlet or outlet) with a soft-faced hammer and remove the tank.

(e) Remove the O-ring.



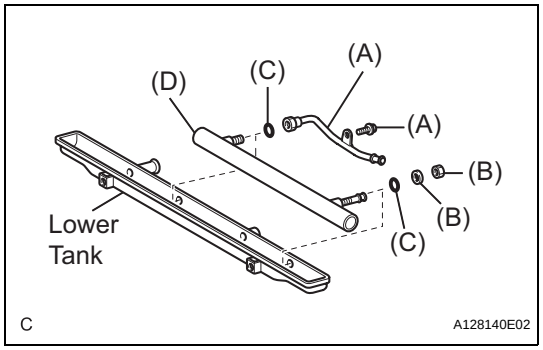
CO



3. REMOVE RADIATOR TANK LOWER

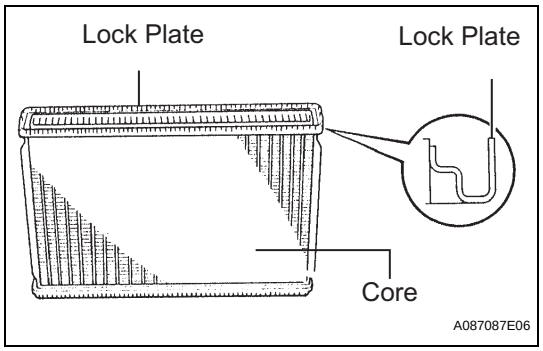
(a) With hose:
  (1) Remove the 2 clips and hose from the radiator assembly.

(b) Removal procedure of the radiator tank lower is the same as that of the radiator tank upper.



4. REMOVE OIL COOLER ASSEMBLY

(a) Without hose:
  (1) Remove the bolt and cooler pipe (A).
  (2) Remove the nut and plate washer (B).
  (3) Remove the oil cooler (C).
  (4) Remove the 2 O-rings from the oil cooler (D).



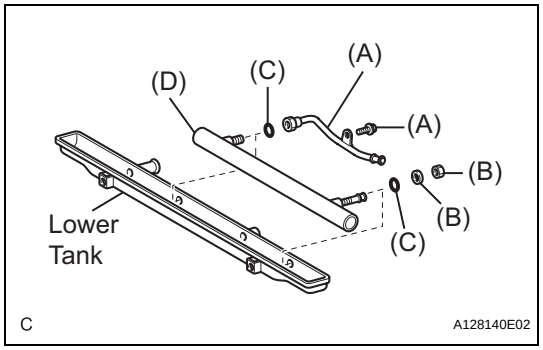
INSPECTION

1. INSPECT LOCK PLATE

(a) Inspect the lock plate for damage.
  HINT:
  - If the sides of the lock plate groove are deformed, reassembly of the tank will be impossible. Therefore, first correct the shape of the lock plate groove with pliers or a similar object, if necessary.
  - Water leakage will result if the bottom of the lock plate groove is damaged or dented. Repair or replace the locking plate if necessary.

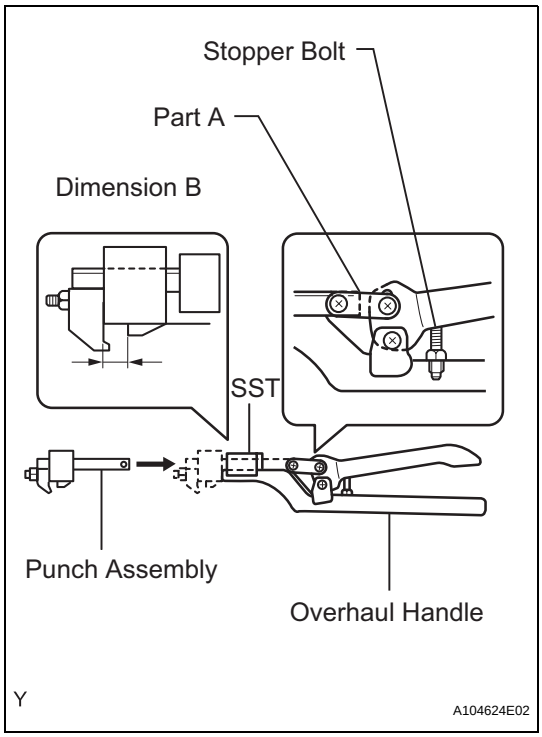
  NOTICE:
  The radiator can only be recaulked 2 times. After recaulking 2 times, the radiator core must be replaced.

REASSEMBLY



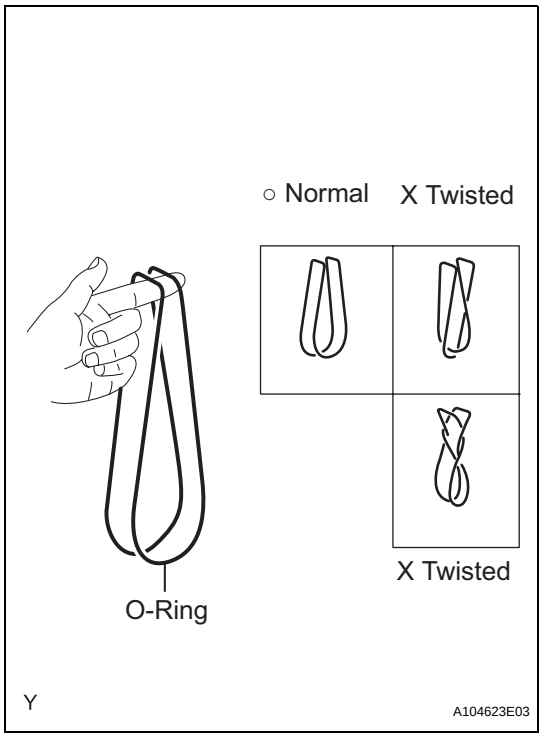
1. INSTALL OIL COOLER ASSEMBLY

(a) Without hose
  (1) Clean the O-ring contact surfaces of the lower tank and oil cooler.
  (2) Install 2 new O-rings to the oil cooler (D).
  (3) Install the oil cooler to the lower tank (C).
  (4) Install the plate washer and nut (B).
    Torque: 8.3 N*m (85 kgf*cm, 73 in.*lbf)
  (5) Install the cooler pipe with the bolt (A).
    Torque: 15 N*m (150 kgf*cm, 11 ft.*lbf)

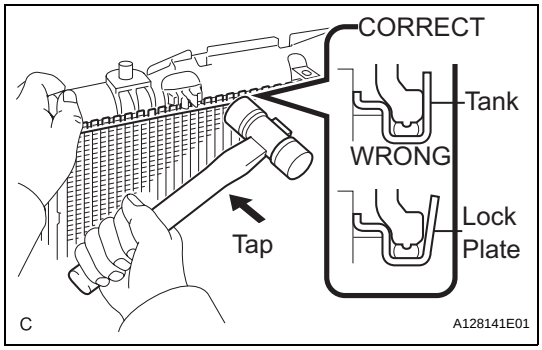


2. INSTALL RADIATOR TANK UPPER

(a) Install the punch assembly to the overhaul handle, inserting it in the hole in part A as shown in the illustration.
SST 09230-01010, 09231-14010

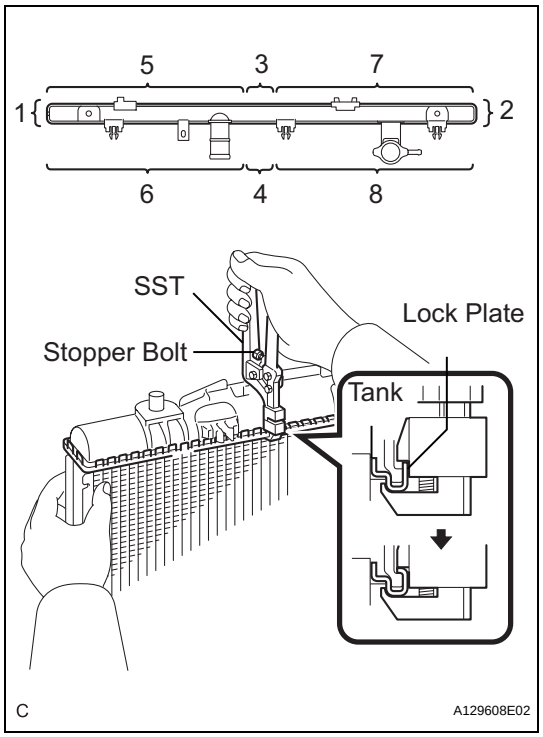


(b) After checking that there are no foreign objects in the lock plate groove, install a new O-ring without twisting it.
HINT:
When cleaning the lock plate groove, lightly rub it with sand paper without scratching it.

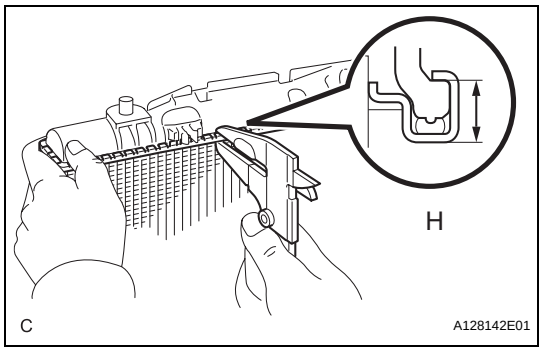


(c) Install the tank without damaging the O-ring.

CO



(d) Lightly press SST against the lock plate in the order shown in the illustration. After repeating this a few times, fully caulk the lock plate by gripping the handle until stopped by the stopper plate.
HINT:
- Do not tap the areas protruding around the pipes, brackets or tank ribs.
- The dotted circles shown in the illustration and parts of the oil cooler near the dotted circles cannot be tapped with the SST. Use pliers or similar objects and be careful not to damage the core plates.



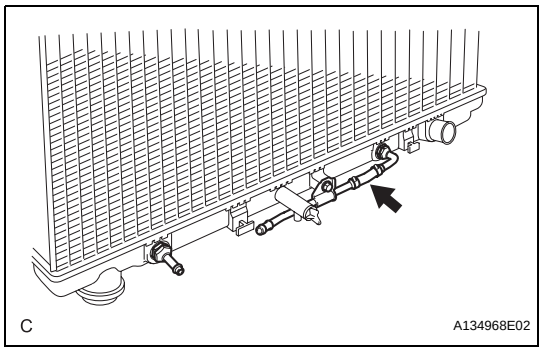
(e) Check the lock plate height (H) after completing caulking.
Plate height (H):
7.40 to 7.80 mm (0.2913 to 0.3071 in.)
If not within the specified height range, adjust the stopper bolt of the handle and caulk again.

(f) Tap the lock plate with a soft-faced hammer so that there is no gap between the lock plate and the tank.

3. INSTALL RADIATOR TANK LOWER

(a) Installation procedure of the radiator tank lower is the same as that of the radiator tank upper.

(b) With hose
(1) Install the hose and 2 clips.

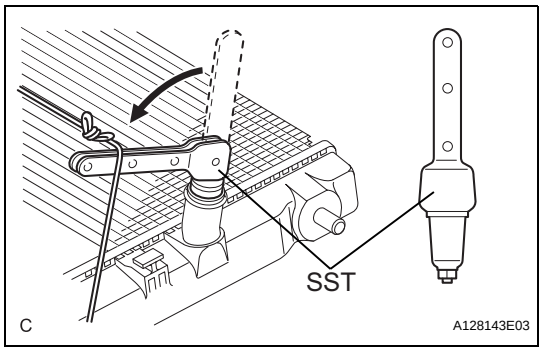


4. INSTALL DRAIN PLUG

(a) Install a new O-ring to the drain plug.

(b) Install the drain plug.

CO

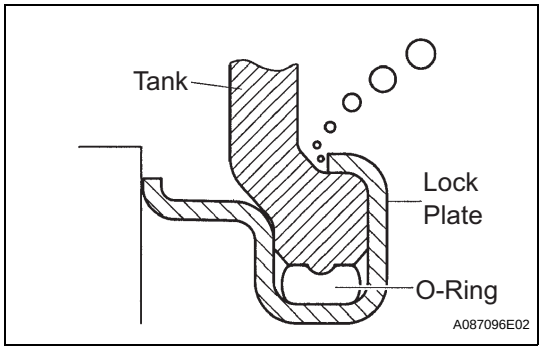


5. INSPECT FOR WATER LEAKS

(a) Plug the inlet and outlet pipes of the radiator with SST.
SST 09230-01010

(b) Using the radiator cap tester, apply pressure to the radiator.
Test pressure:
177 kPa (1.8 kgf/cm^2, 26 psi)

(c) Submerge the radiator in water.

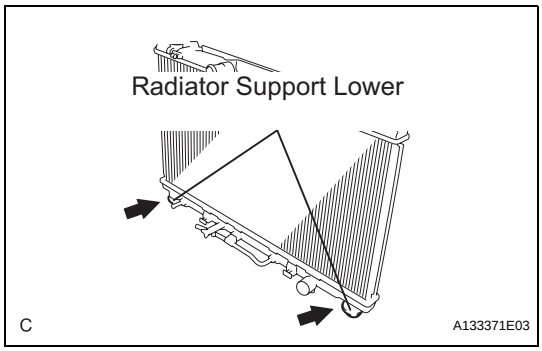


(d) Inspect for leaks.
HINT:
On radiators with resin tanks, there is clearance between the tank and lock plate where a minute amount of air will remain, giving the appearance of an air leak when the radiator is submerged in water. Therefore, before doing the water leak test, first swish the radiator around in the water until all air bubbles disappear.

INSTALLATION

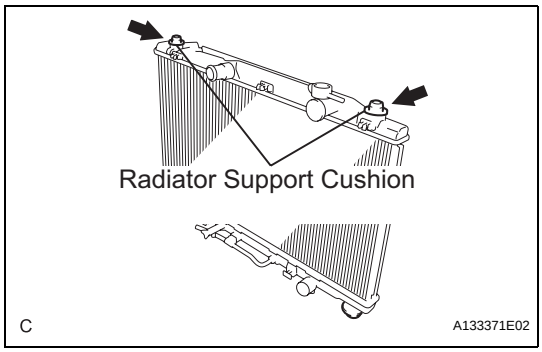
1. INSTALL RADIATOR SUPPORT LOWER

(a) Install the 2 radiator support lowers to the radiator assembly.



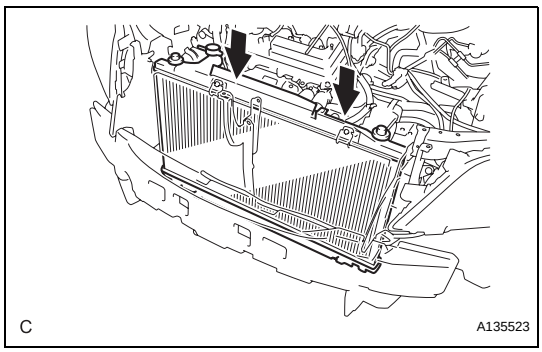
2. INSTALL RADIATOR SUPPORT CUSHION

(a) Install the 2 radiator support cushions to the radiator assembly.

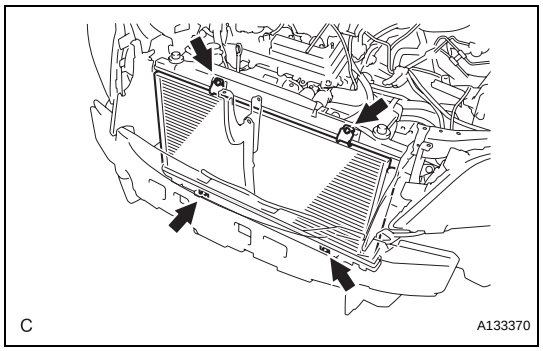


3. INSTALL RADIATOR ASSEMBLY

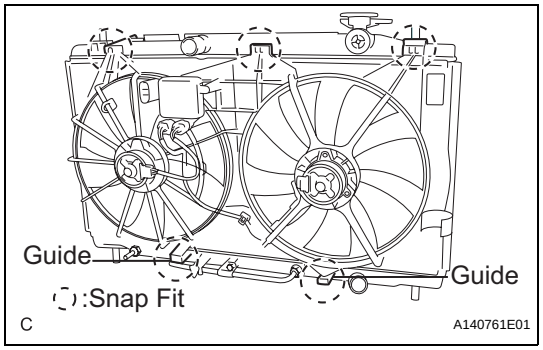
(a) Install the radiator to the body.



CO

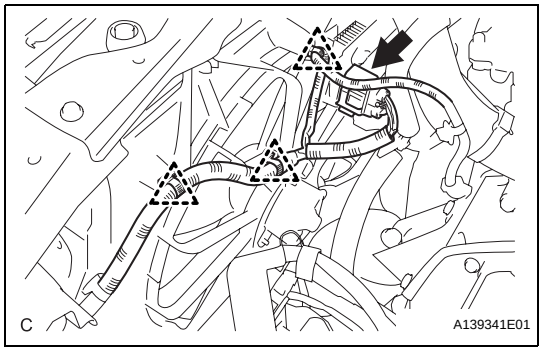


(b) Install the condenser assembly with the 4 bolts.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)

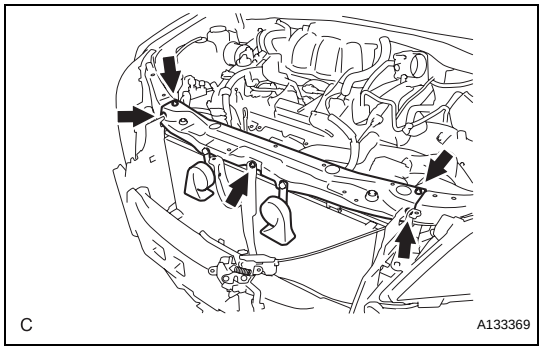


4. INSTALL FAN SHROUD

(a) Install the fan assembly with motor to the radiator with the 2 guides at the bottom and 3 snap fits on the top.

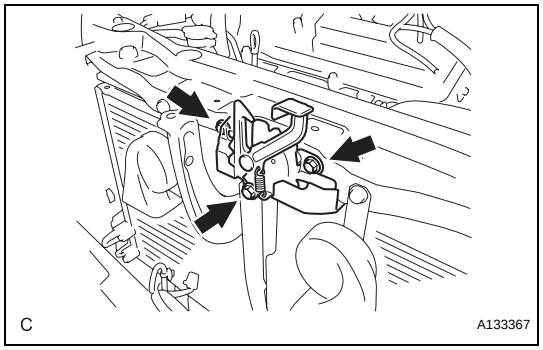


(b) Connect the fan motor connector.



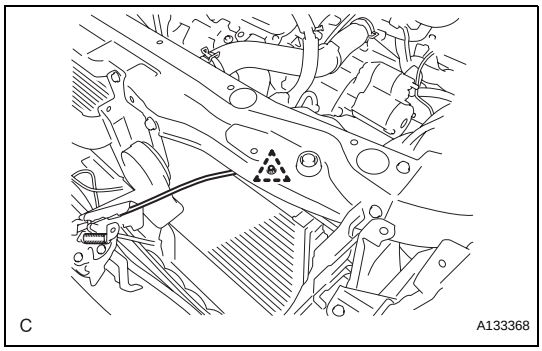
5. INSTALL RADIATOR SUPPORT UPPER

(a) Install the radiator support upper with the 5 bolts.
Torque: 7.0 N*m (71 kgf*cm, 62 in.*lbf)

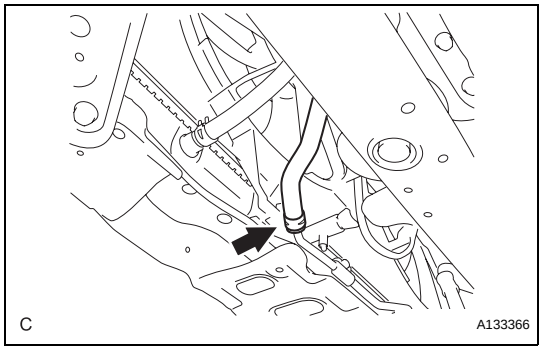


(b) Install the hood lock assembly to the radiator support upper with the 3 bolts.
Torque: 7.5 N*m (77 kgf*cm, 66 in.*lbf)

CO

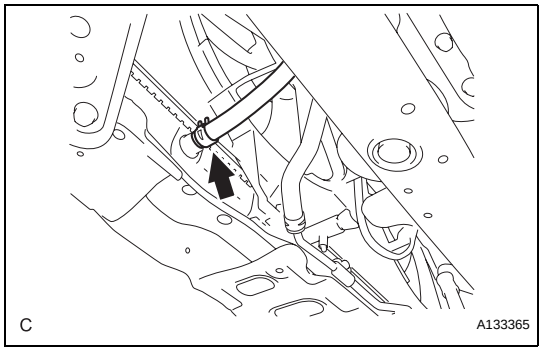


(c) Install the hood lock control cable assembly to the radiator support upper with the clamp.
(d) Connect the 2 horn connectors.



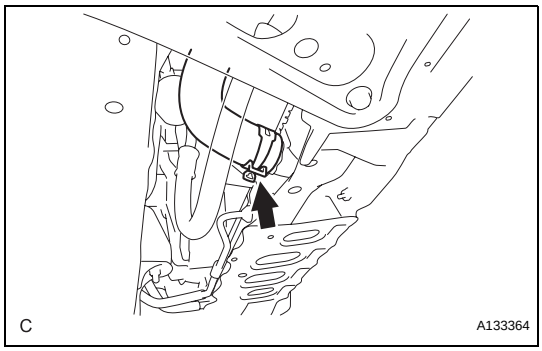
6. CONNECT NO. 1 OIL COOLER OUTLET TUBE

(a) Connect the No. 1 oil cooler outlet tube to the radiator assembly.



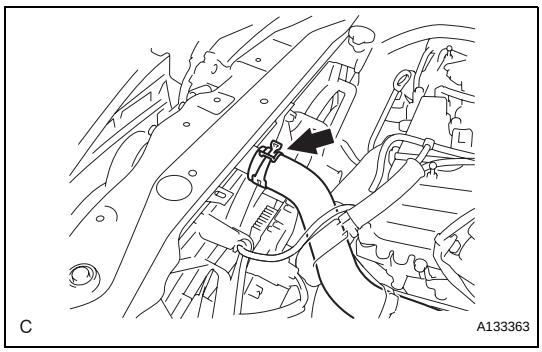
7. CONNECT NO. 1 OIL COOLER INLET TUBE

(a) Connect the No. 1 oil cooler inlet tube to the radiator assembly.



8. CONNECT RADIATOR HOSE OUTLET

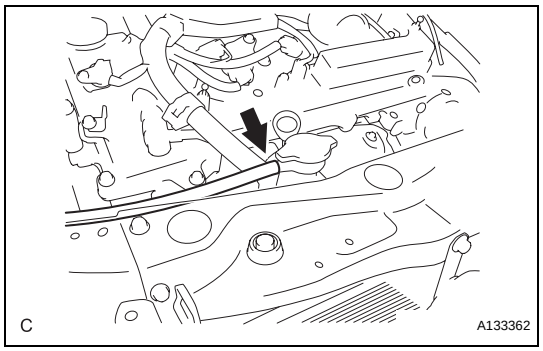
(a) Connect the radiator hose outlet to the radiator assembly.



9. CONNECT RADIATOR HOSE INLET

(a) Connect the radiator hose inlet to the radiator assembly.

CO



10. **CONNECT RADIATOR RESERVOIR TANK HOSE**
    (a) Connect the radiator reservoir tank hose to the radiator assembly.
11. **INSTALL FRONT BUMPER ENERGY ABSORBER (See page ET-10)**
12. **INSTALL FRONT BUMPER ASSEMBLY (w/ Fog Light) (See page ET-14)**
13. **REMOVE FRONT BUMPER ASSEMBLY (w/o Fog Light) (See page ET-13)**
14. **INSTALL NO. 1 AIR CLEANER INLET (See page EM-49)**
15. **INSTALL AIR CLEANER INLET SUB-ASSEMBLY (See page EM-50)**
16. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-506)**
17. **INSTALL COOL AIR INTAKE DUCT SEAL (See page EM-52)**
18. **INSTALL V-BANK COVER SUB-ASSEMBLY (See page EM-52)**
19. **ADD ENGINE COOLANT (See page CO-6)**
20. **CHECK FOR ENGINE COOLANT LEAKS (See page CO-1)**
21. **INSTALL ENGINE UNDER COVER RH**
22. **INSTALL ENGINE UNDER COVER LH**
23. **INSTALL FRONT WHEEL OPENING EXTENSION PAD RH**
24. **INSTALL FRONT WHEEL OPENING EXTENSION PAD LH**

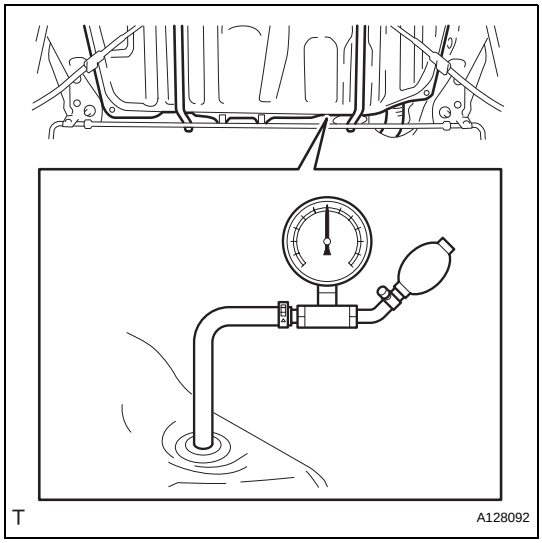
ON-VEHICLE INSPECTION

1. INSPECT FUEL CUT-OFF RPM

(a) Increase the engine speed to at least 3,500 rpm.
(b) Use a sound scope to check for injector operating sounds.
(c) Check that when the throttle lever is released, injector operating sounds stop momentarily (at 2,500 rpm) and then resume (at 1,400 rpm).

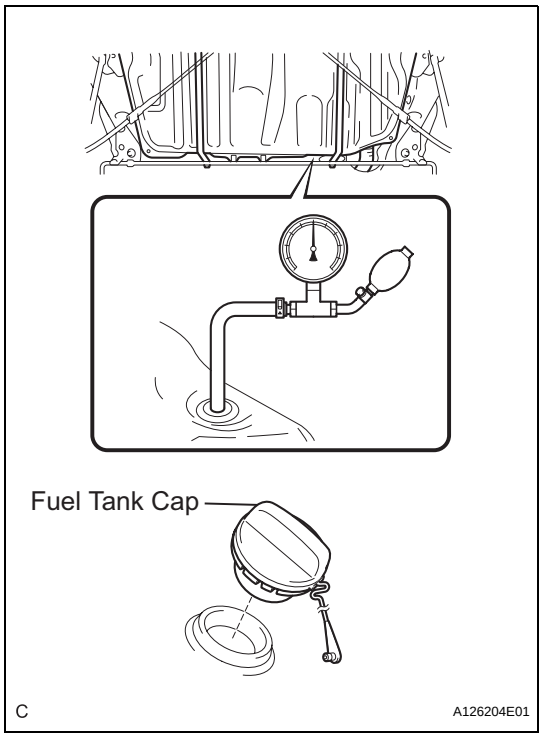
Standard

Item	Specified Condition
Fuel cut off rpm	2,500 rpm
Fuel return rpm	1,400 rpm



2. CHECK AIR TIGHTNESS IN FUEL TANK AND FILLER PIPE

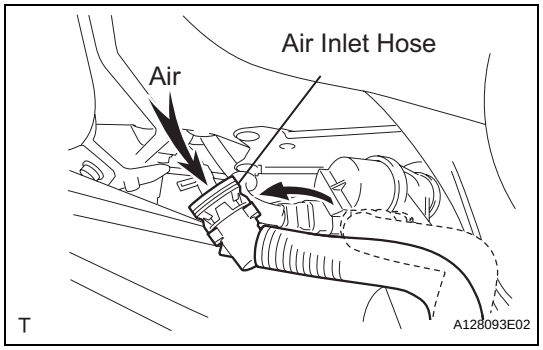
(a) Disconnect the vent line hose from the fuel tank.
(b) Connect the pressure gauge to the fuel tank.
(c) Apply pressure to the fuel tank to create an internal pressure of 4 kPa (41 gf/cm^2, 0.58 psi).
(d) Check that the internal pressure of the fuel tank is maintained for 1 minute.
(e) Check the connected portions of each hose and pipe.
(f) Check the installed parts on the fuel tank.
If any malfunctions, damage or other problems are found, replace the fuel tank and filler pipe.
(g) Reconnect the vent line hose to the fuel tank.



3. INSPECT FUEL CUT OFF VALVE AND FUEL CHECK VALVE

(a) Disconnect the vent line hose from the fuel tank.
(b) Connect the pressure gauge to the fuel tank.
(c) Fill the fuel tank with fuel.
(d) Apply pressure of 4 kPa (41 gf/cm^2, 0.58 psi) to the vent port of the fuel tank.
HINT:
Check the amount of fuel in the fuel tank. When the fuel tank is full, the float valve of the fill check valve is closed and no air can pass through.
(e) Remove the fuel tank cap, and check that the pressure drops.
If the pressure does not drop, replace the fuel tank assembly.
(f) Reconnect the vent line hose to the fuel tank.

EC

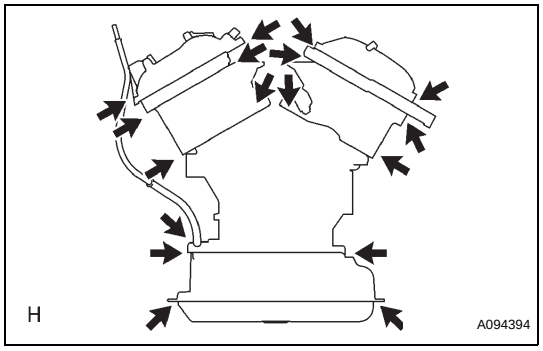


4. CHECK AIR INLET LINE

(a) Disconnect the air inlet line hose from the charcoal canister.

(b) Check that air can flow freely into the air inlet line.
If air cannot flow freely into the air inlet line, repair or replace it.

(c) Reconnect the air inlet line hose to the charcoal canister.



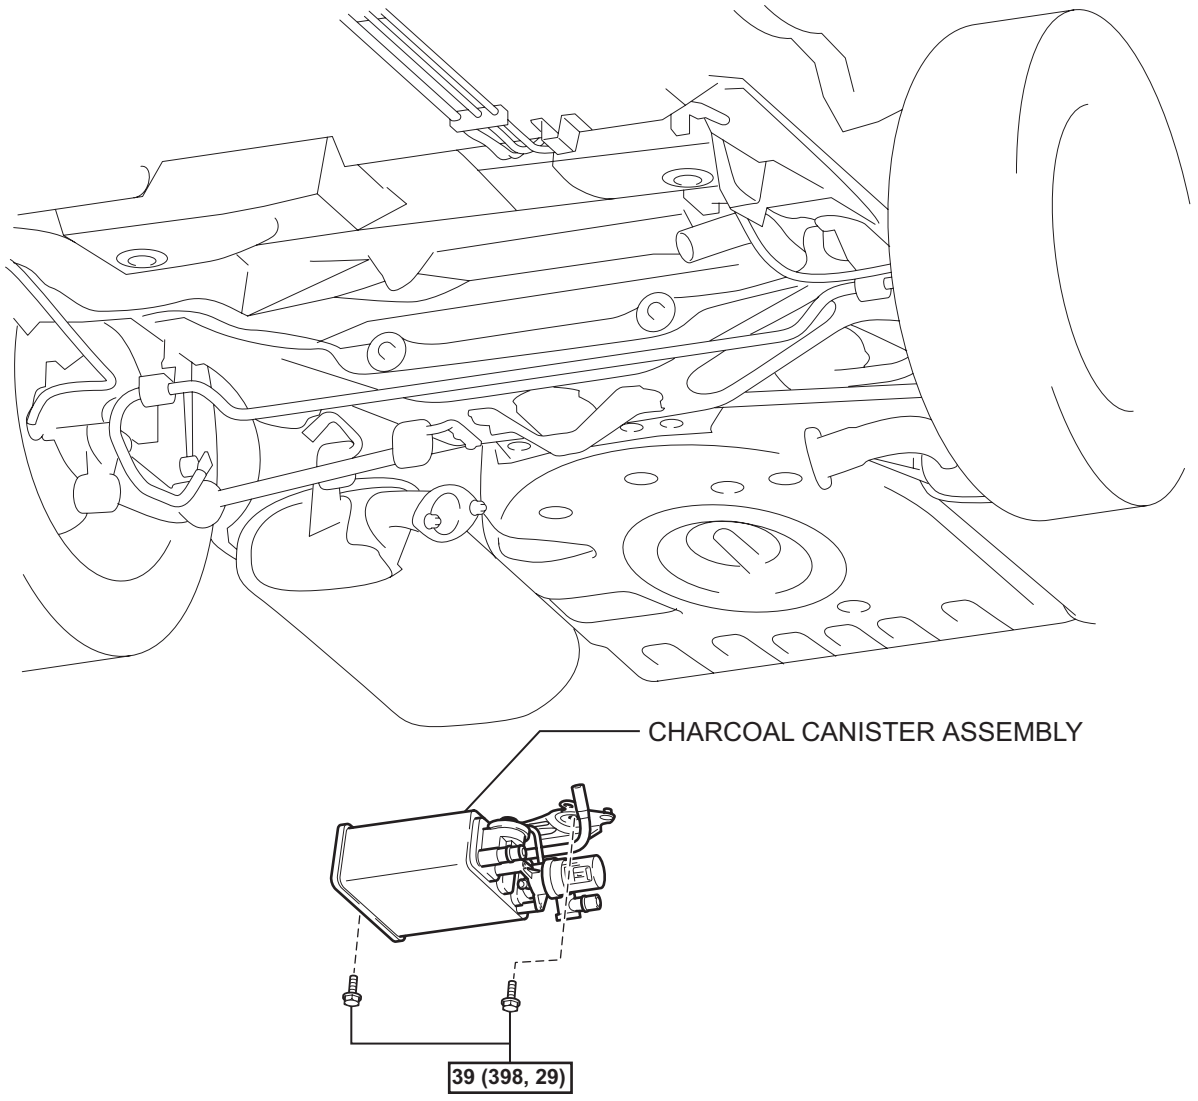
5. VISUALLY INSPECT HOSES, CONNECTIONS AND GASKETS

(a) Check for cracks, leaks or damage.
HINT:
Removal or problems with the engine oil dipstick, oil filler cap, PCV hose and other components may cause the engine to run improperly. Disconnection, looseness or cracks in the parts of the air induction system between the throttle body and cylinder head will allow air suction and cause the engine to run improperly.
If necessary, replace any damaged parts.

EC

CANISTER

COMPONENTS



N*m (kgf*cm, ft.*lbf) : Specified torque

A135648E04

REMOVAL

1. REMOVE FUEL TANK ASSEMBLY

HINT:

(See page FU-36)

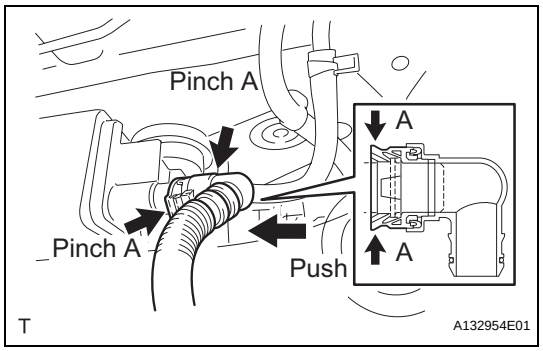
2. REMOVE CHARCOAL CANISTER ASSEMBLY

(a) Disconnect the fuel tank vent hose from the charcoal canister.

(1) Push the connector deep inside.

(2) Pinch portion A.

(3) Pull out the connector.



(b) Disconnect the charcoal canister filter sub-assembly from the charcoal canister.

(1) Push the connector deep inside.

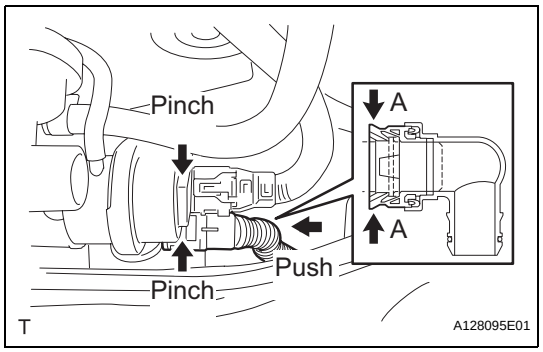
(2) Pinch portion A.

(3) Pull out the connector.

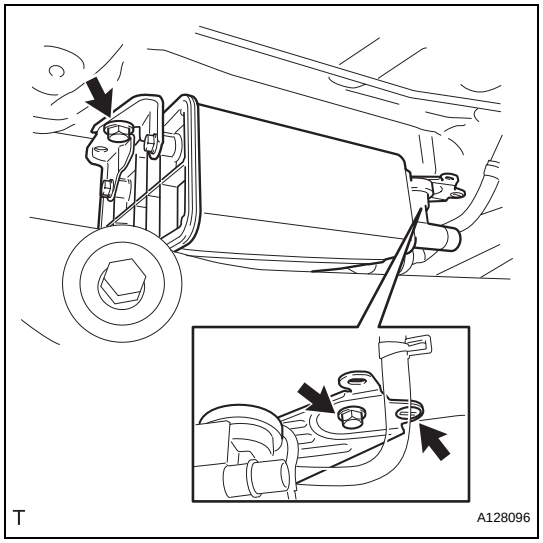
(c) Disconnect the vapor pressure sensor connector.

(d) Disconnect the wire harness clamp.

(e) Disconnect the purge line hose from the charcoal canister.



(f) Remove the 2 bolts, clip and charcoal canister.

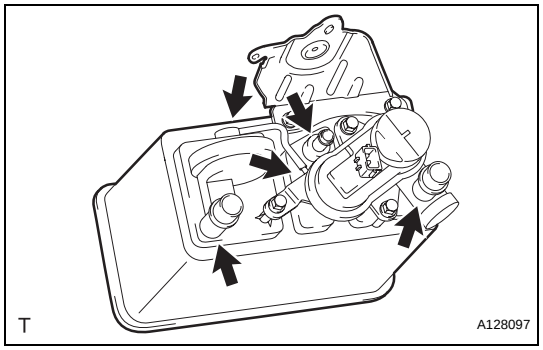


INSPECTION

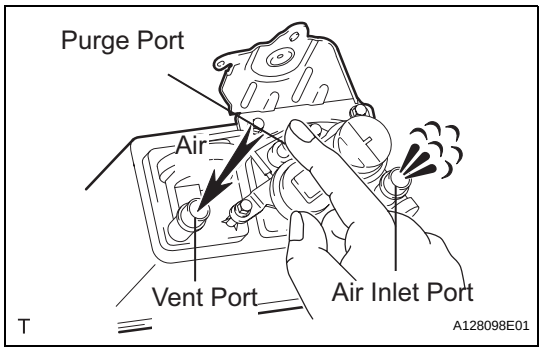
1. INSPECT CHARCOAL CANISTER ASSEMBLY

(a) Visually check the charcoal canister for cracks or damage.

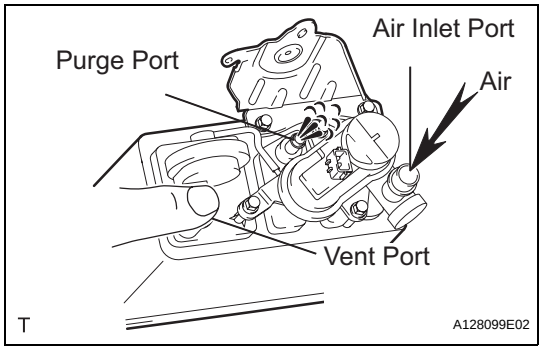
If cracks or damage are found, replace the charcoal canister assembly.



EC

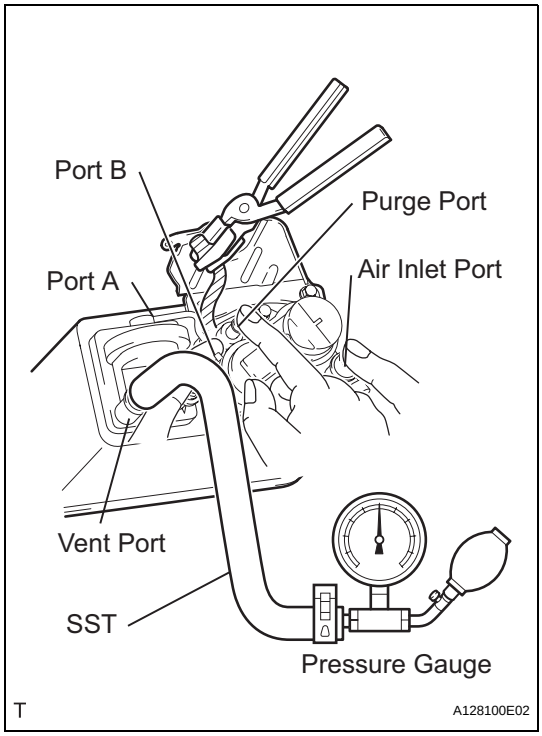


(b) Check charcoal canister operation.
(1) With the purge port closed, blow 1.67 kPa (17.0 gf/cm^2, 0.24 psi) of air into the vent port, and check that air flows from the air inlet port.
If the result is not as specified, replace the charcoal canister assembly.

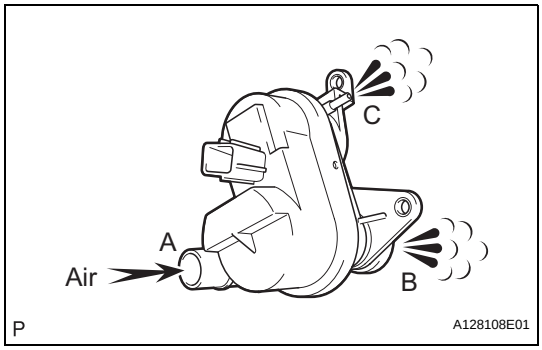


(2) With the vent port closed, blow 1.10 kPa (11.2 gf/cm^2, 0.16 psi) of air to the air inlet port, and check that air flows from the purge port.
If the result is not as specified, replace the charcoal canister assembly.

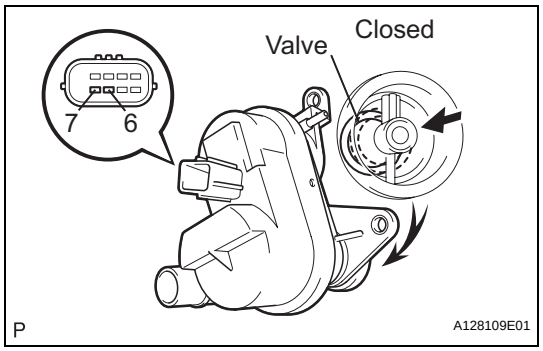
EC



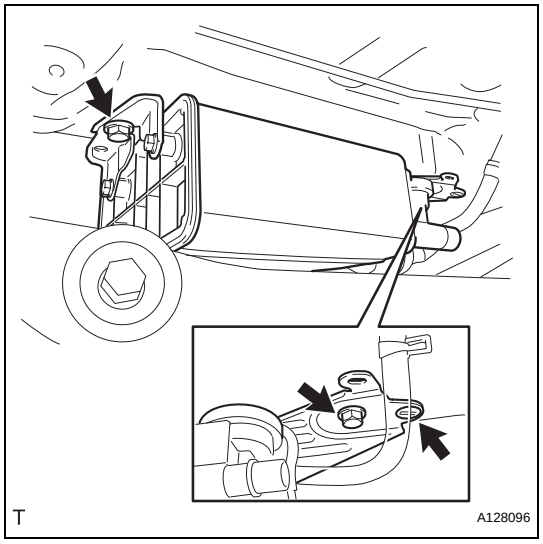
(c) Check for air leakage.
(1) Remove the air hose between ports A and B.
(2) Connect the SST (pressure gauge) to the vent port of the charcoal canister.
SST 09992-00242
(3) While holding port B, with the purge port and the air inlet port closed and port A open, apply 19.6 kPa (0.2 kgf/cm^2, 2.81 psi) of pressurized air into the vent port, then confirm that pressure is retained for 1 minute.
If the result is not as specified, replace the charcoal canister assembly.



(d) Check the leak detection pump.
(1) Remove the detection pump from the charcoal canister.
(2) Check that air flows from port A to B and then C.
If the result is not as specified, replace the charcoal canister assembly.



(3) Connect the positive (+) lead to terminal 7 and the negative (-) lead to terminal 6.
(4) Check that the valve is closed.
If the result is not as specified, replace the charcoal canister assembly.
(5) Install the detection pump.



INSTALLATION

1. INSTALL CHARCOAL CANISTER ASSEMBLY

(a) Install the 2 bolts, clip and charcoal canister.
Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)
(b) Connect the purge line hose to the charcoal canister.
(c) Connect the wire harness clamp.
(d) Connect the vapor pressure sensor connector.
(e) Connect the charcoal canister filter sub-assembly to the charcoal canister.
(f) Connect the fuel tank vent hose to the charcoal canister.

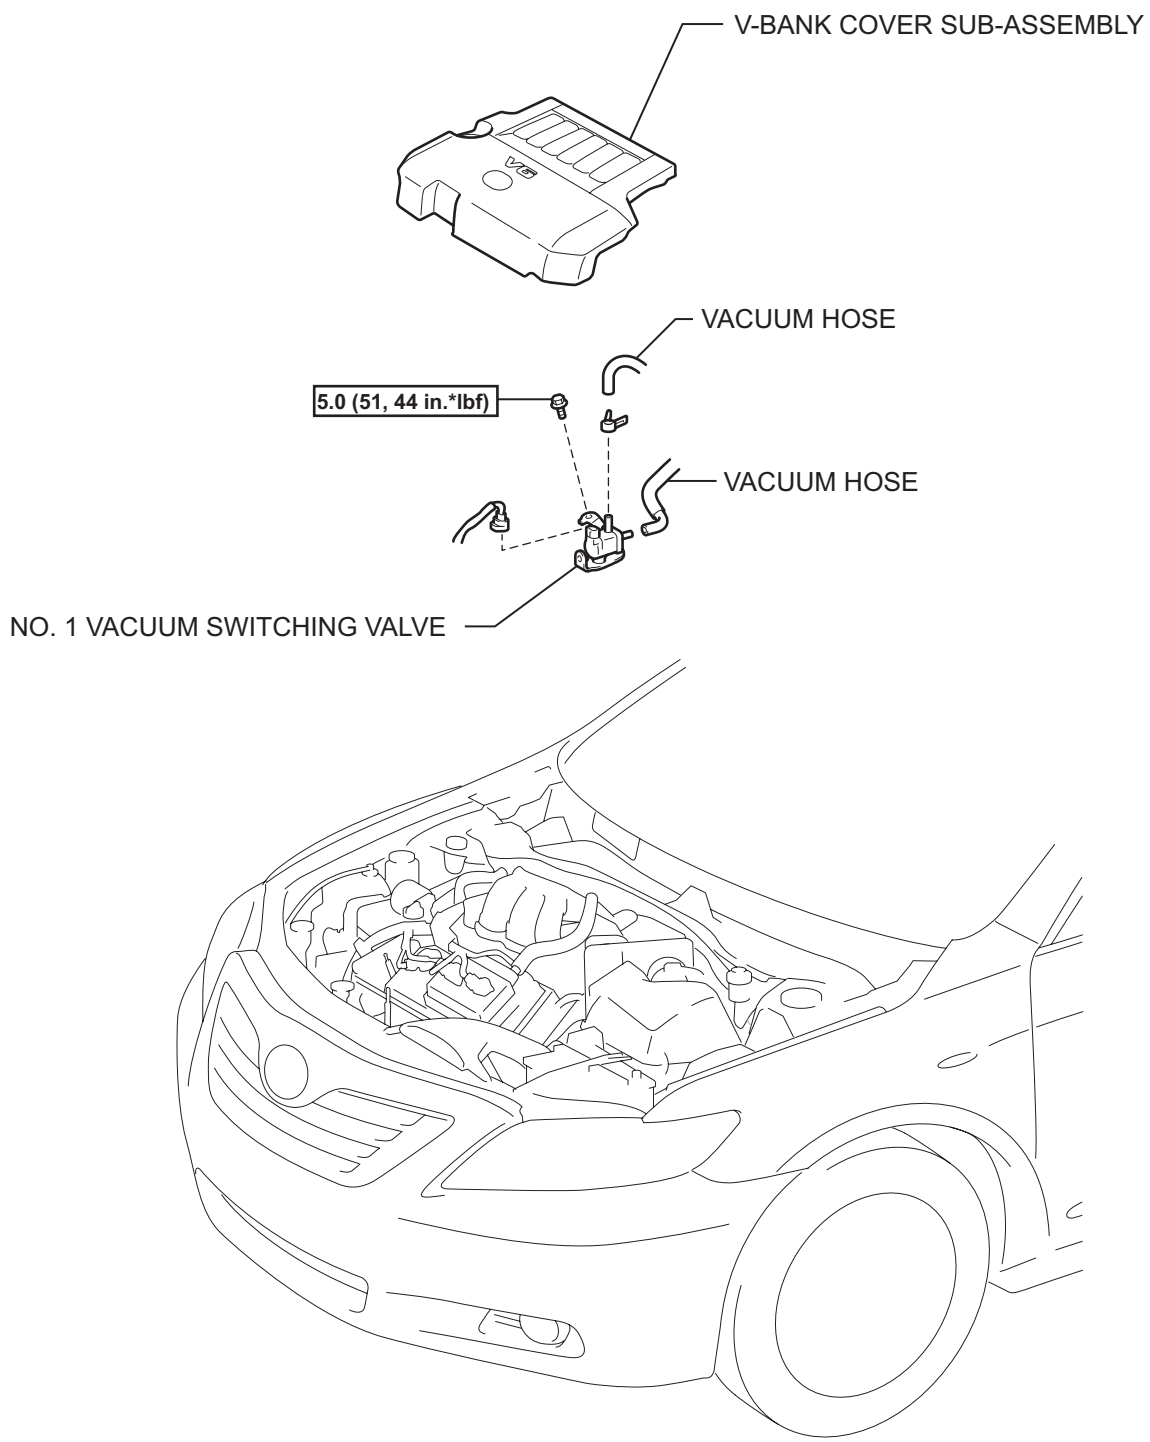
2. INSTALL FUEL TANK ASSEMBLY

HINT:
(See page FU-41)

EC

VACUUM SWITCHING VALVE (for EVAP)

COMPONENTS



EC

N*m (kgf*cm, ft.*lbf): Specified torque

T

A135653E03

REMOVAL

1. **REMOVE V-BANK COVER SUB-ASSEMBLY (See page EM-23)**

2. **REMOVE NO. 1 VACUUM SWITCHING VALVE**
   (a) Disconnect the 2 vacuum hoses and No. 1 vacuum switching valve connector.

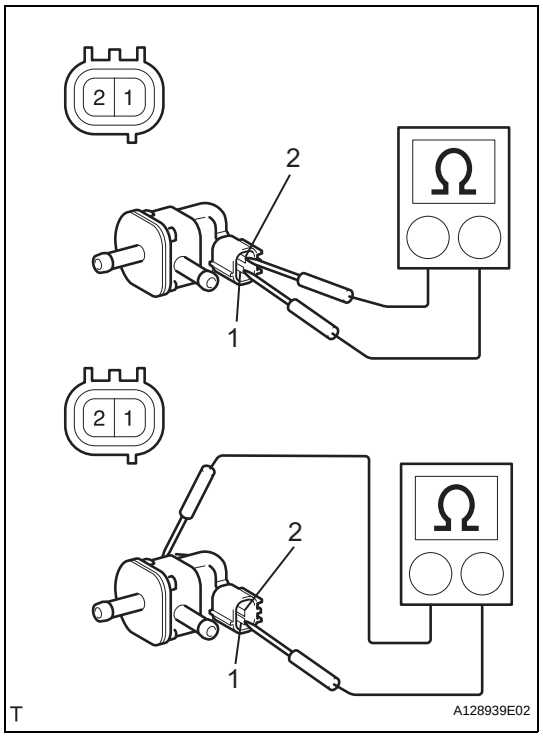
   (b) Remove the bolt and No. 1 vacuum switching valve.

INSPECTION

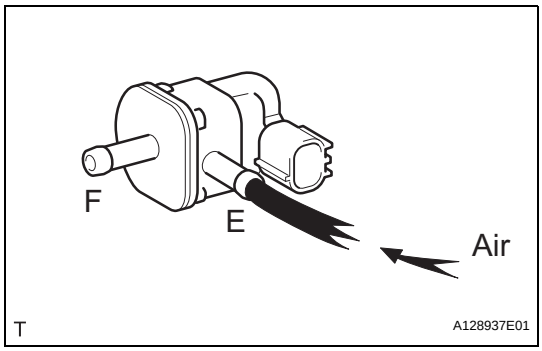
1. **INSPECT EVAP VSV**
   (a) Check the VSV for an open circuit.
      (1) Measure the resistance.
      Standard resistance

Tester Connection	Specified Condition
1 - 2	23 to 26Ω at 20°C (68°F)
1 - Body ground 2 - Body ground	10 kΩ or higher

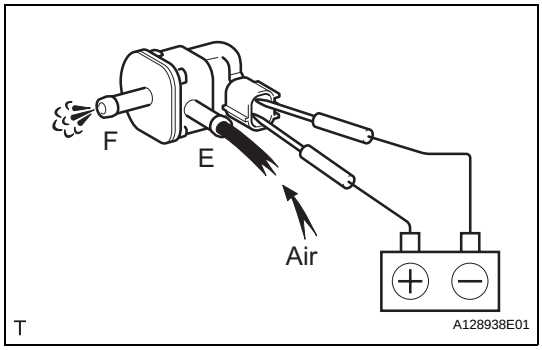
If the resistance is not as specified, replace the VSV assembly.



EC

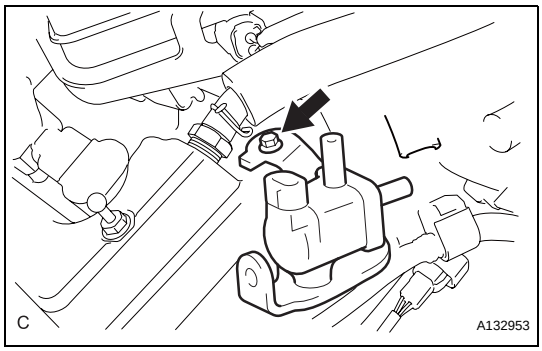


(b) Check VSV operation.
(1) Check that air does not flow from the port as shown in the illustration.

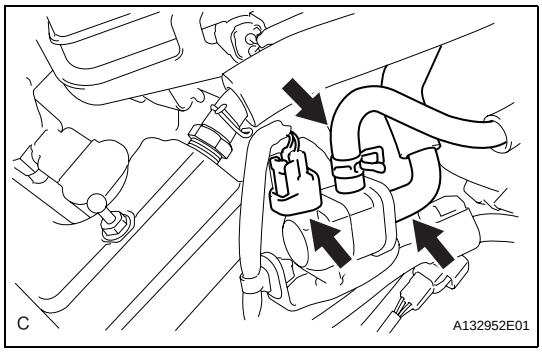


(2) Apply battery positive voltage across the terminals.
(3) Check that air flows from the ports.
If the result is not as specified, replace the VSV assembly.

INSTALLATION



1. INSTALL NO. 1 VACUUM SWITCHING VALVE
(a) Install the No. 1 vacuum switching valve with the bolt.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)



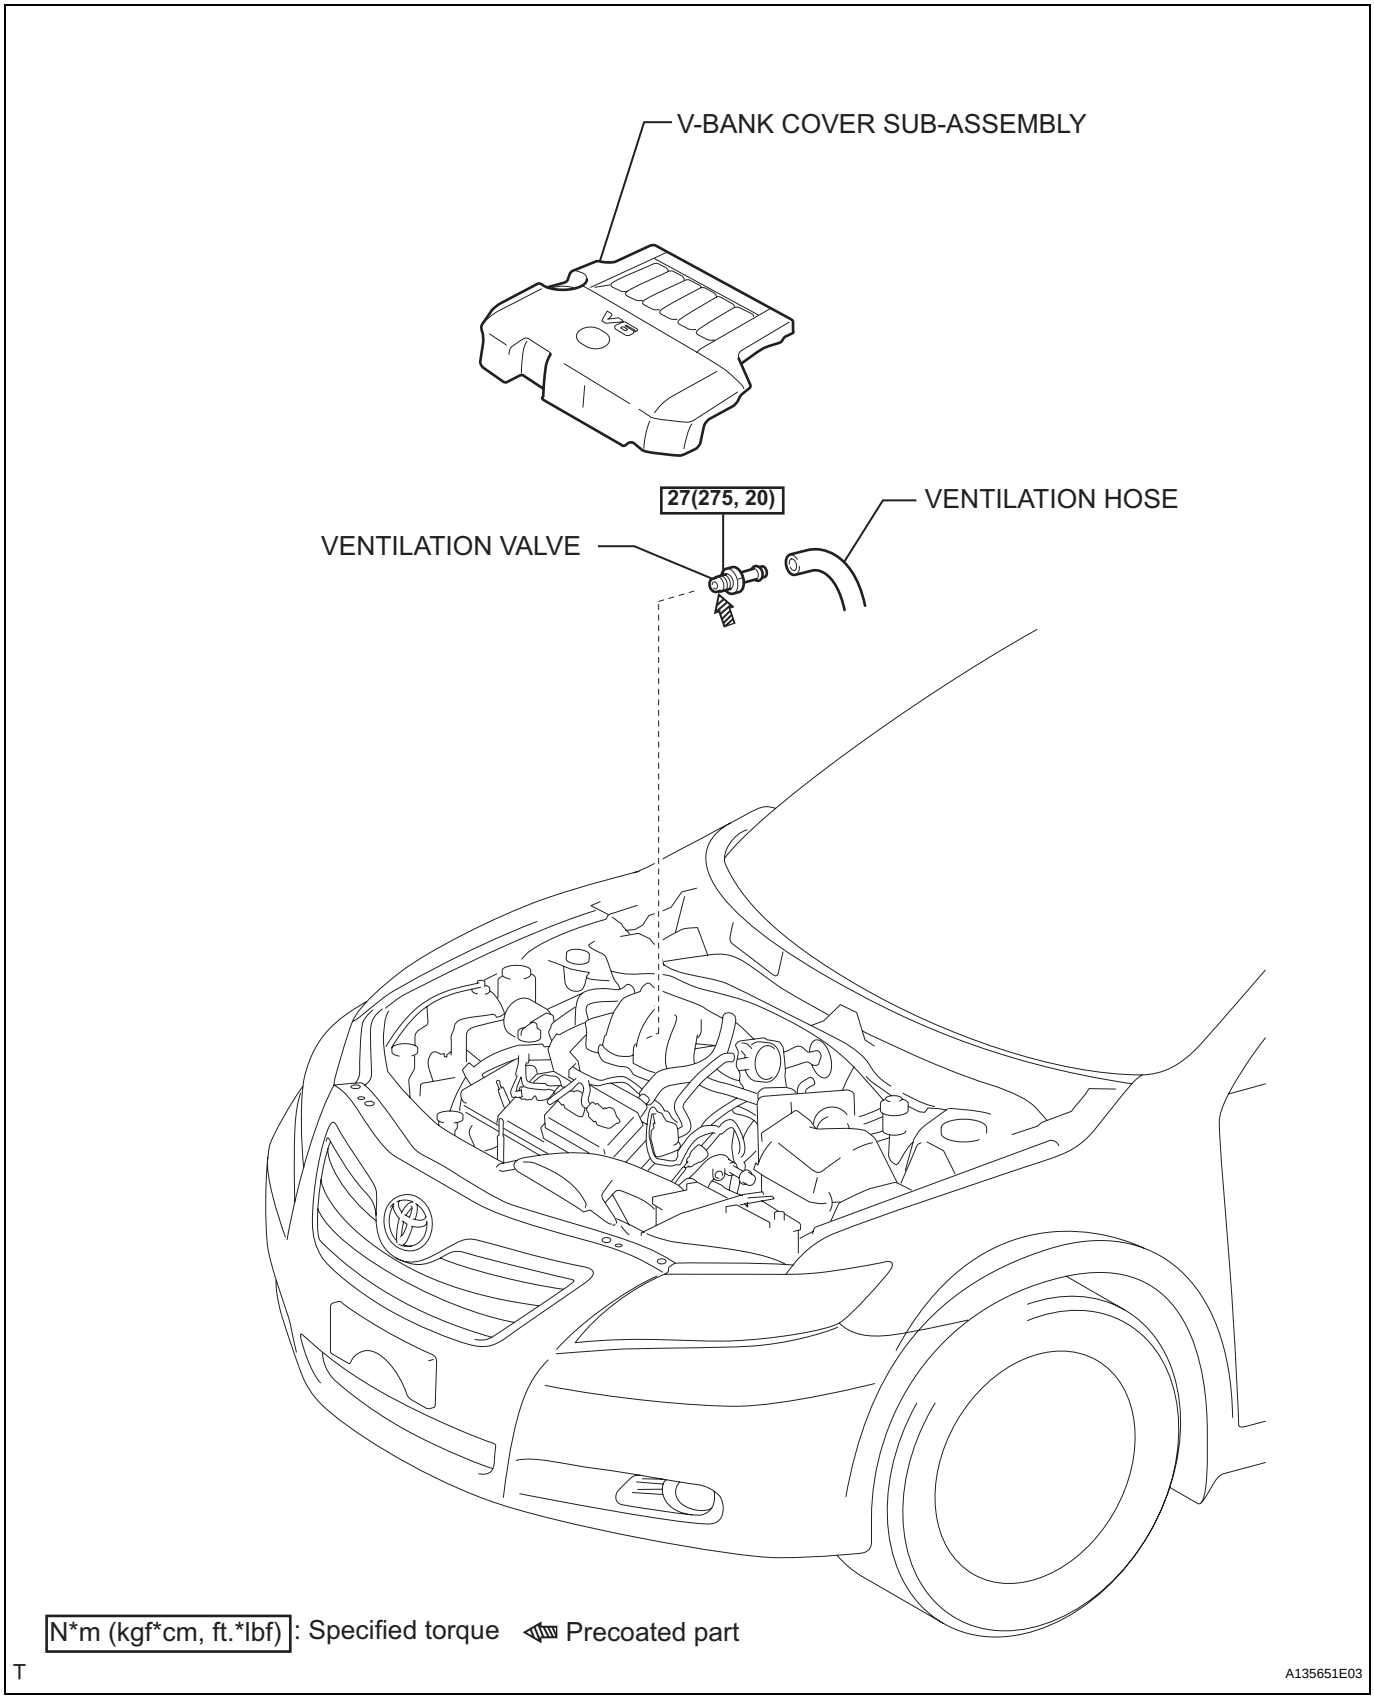
(b) Disconnect the 2 vacuum hoses and No. 1 vacuum switching valve connector.

2. INSTALL V-BANK COVER SUB-ASSEMBLY (See page EM-52)

EC

VENTILATION VALVE

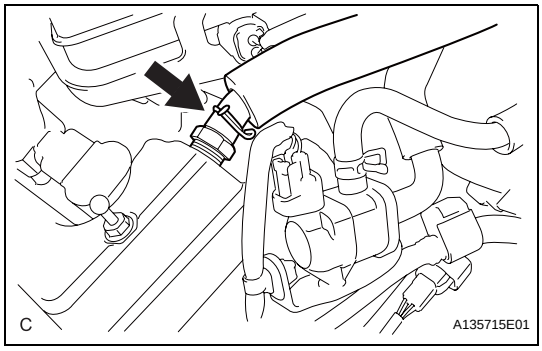
COMPONENTS



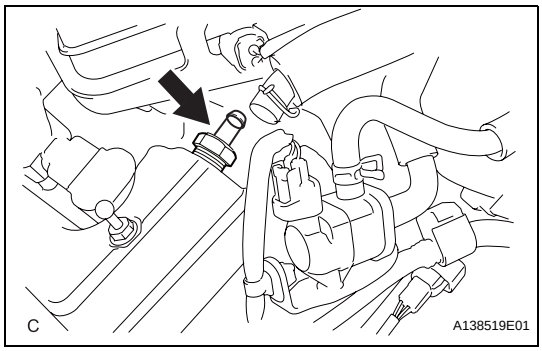
REMOVAL

1. **REMOVE V-BANK COVER SUB-ASSEMBLY (See page EM-23)**

2. **DISCONNECT VENTILATION HOSE**
   (a) Disconnect the ventilation hose from the ventilation valve.



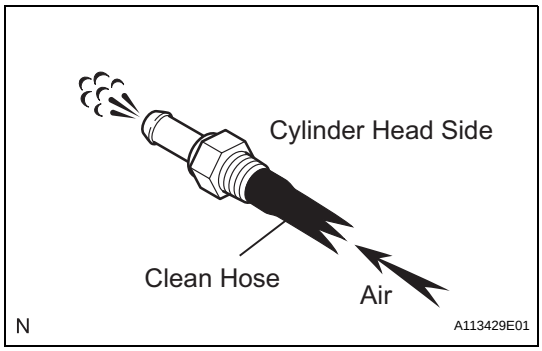
3. **REMOVE VENTILATION VALVE**
   (a) Remove the ventilation valve.

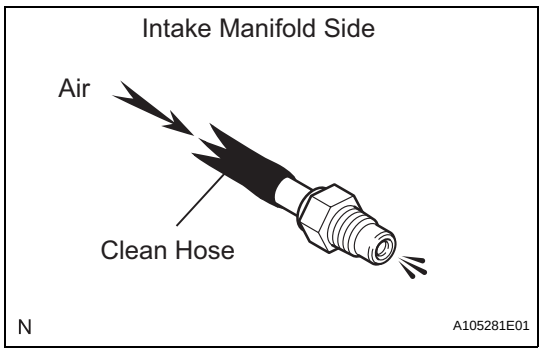


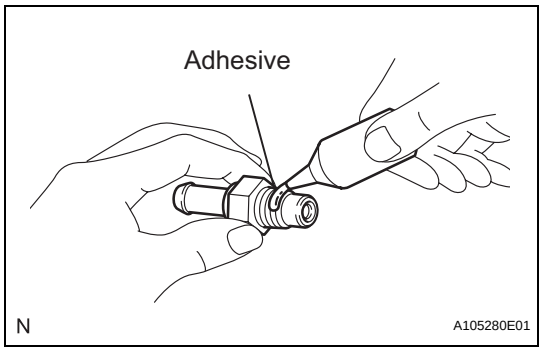
INSPECTION

1. **INSPECT VENTILATION VALVE**
   (a) Install a clean hose to the ventilation valve.
   (b) Check the ventilation valve operation.
      (1) Blow air into the cylinder head side, and check that air passes through easily.
      NOTICE:
      Do not suck air through the valve.
      Petroleum substances inside the valve are hazardous to your health.

      (2) Blow air into the intake manifold side, and check that air passes through with difficulty.
      If the result is not as specified, replace the ventilation valve.
   (c) Remove the clean hose from the ventilation valve.







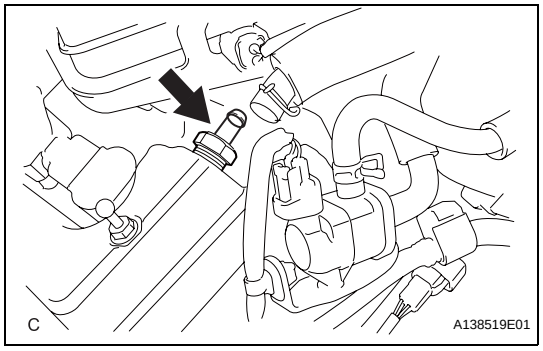
INSTALLATION

1. INSTALL VENTILATION VALVE

(a) Install the ventilation valve.

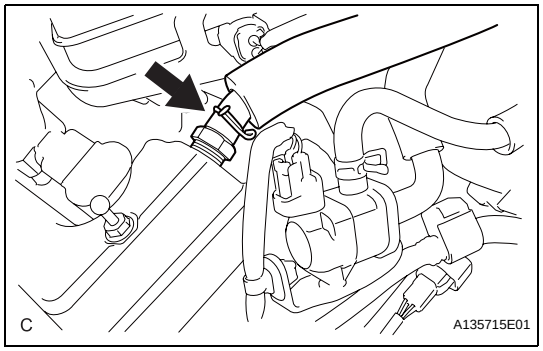
(1) Apply adhesive to 2 or 3 threads.

Adhesive:
Part No. 08833-00070, THREE BOND 1324 or equivalent.



(2) Install the ventilation valve.

Torque: 27 N*m (275 kgf*cm, 20 ft.*lbf)



2. CONNECT VENTILATION HOSE

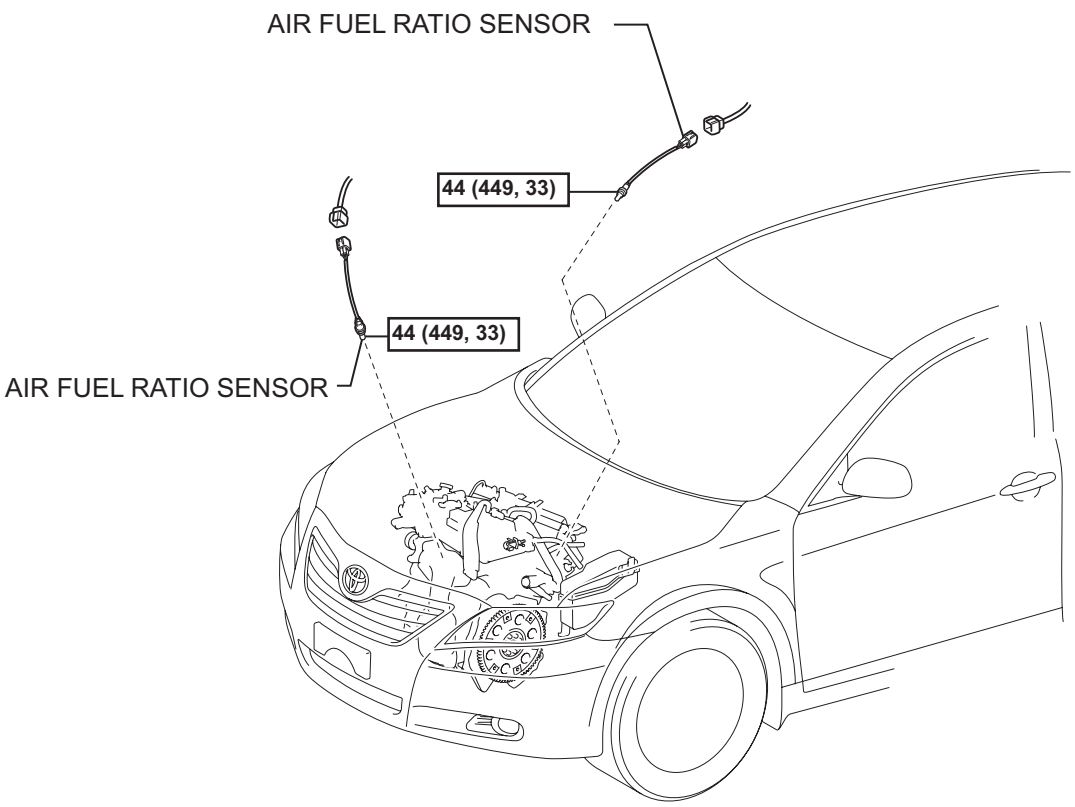
(a) Connect the ventilation hose to the ventilation valve.

3. INSTALL V-BANK COVER SUB-ASSEMBLY (See page EM-52)

EC

AIR FUEL RATIO SENSOR

COMPONENTS

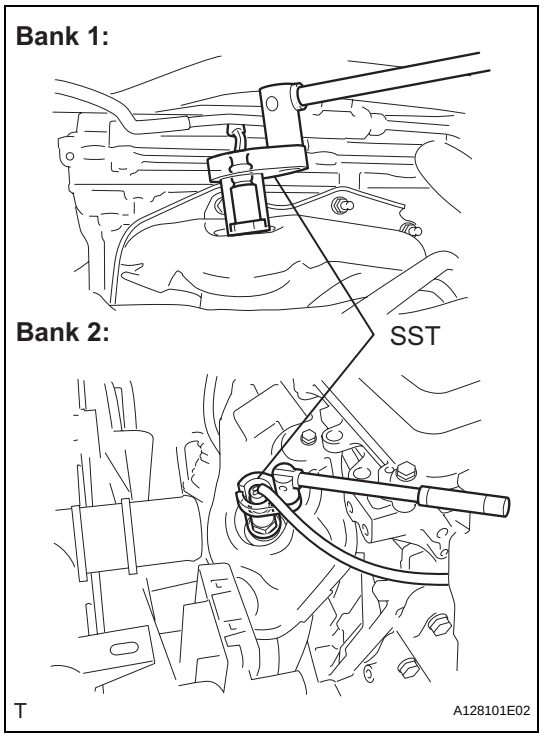


N*m (kgf*cm, ft.*lbf): Specified torque

T

A135655E03

EC



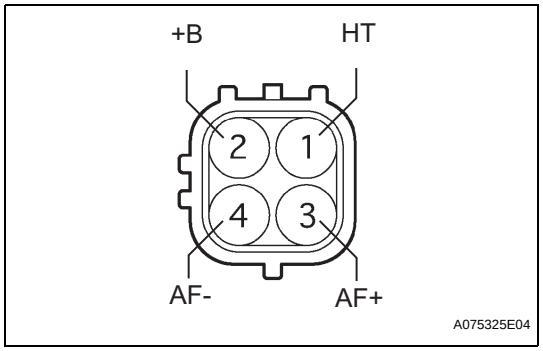
REMOVAL

1. REMOVE AIR FUEL RATIO SENSOR

(a) Disconnect the 2 air fuel ratio sensor connectors.

(b) Using SST, remove the 2 air fuel ratio sensors from the front pipe assembly.

SST 09224-00010



INSPECTION

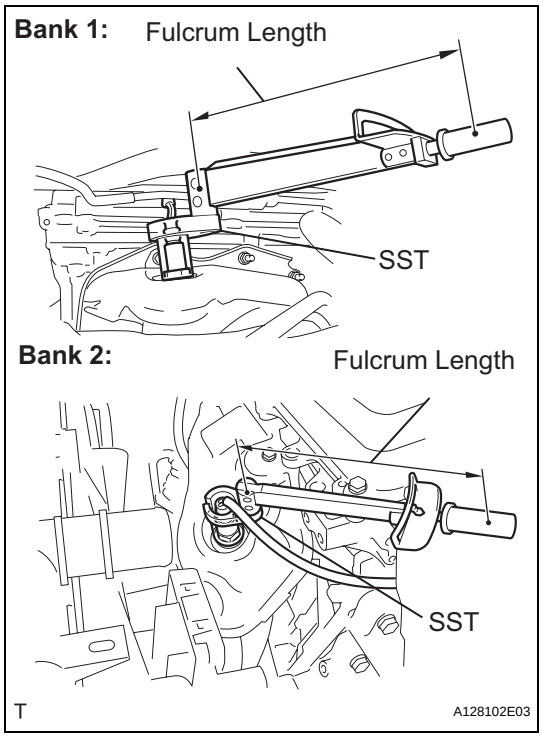
1. INSPECT AIR FUEL RATIO SENSOR

(a) Measure the resistance between terminals 1 (HT) and 2 (+B).

Standard resistance

Condition	Specified Condition
20 °C (68°F)	1.8 to 3.4 Ω

If the result is not as specified, replace the sensor.



INSTALLATION

1. INSTALL AIR FUEL RATIO SENSOR

(a) Using SST, install the 2 air fuel ratio sensors to the front pipe assembly.

SST 09224-00010

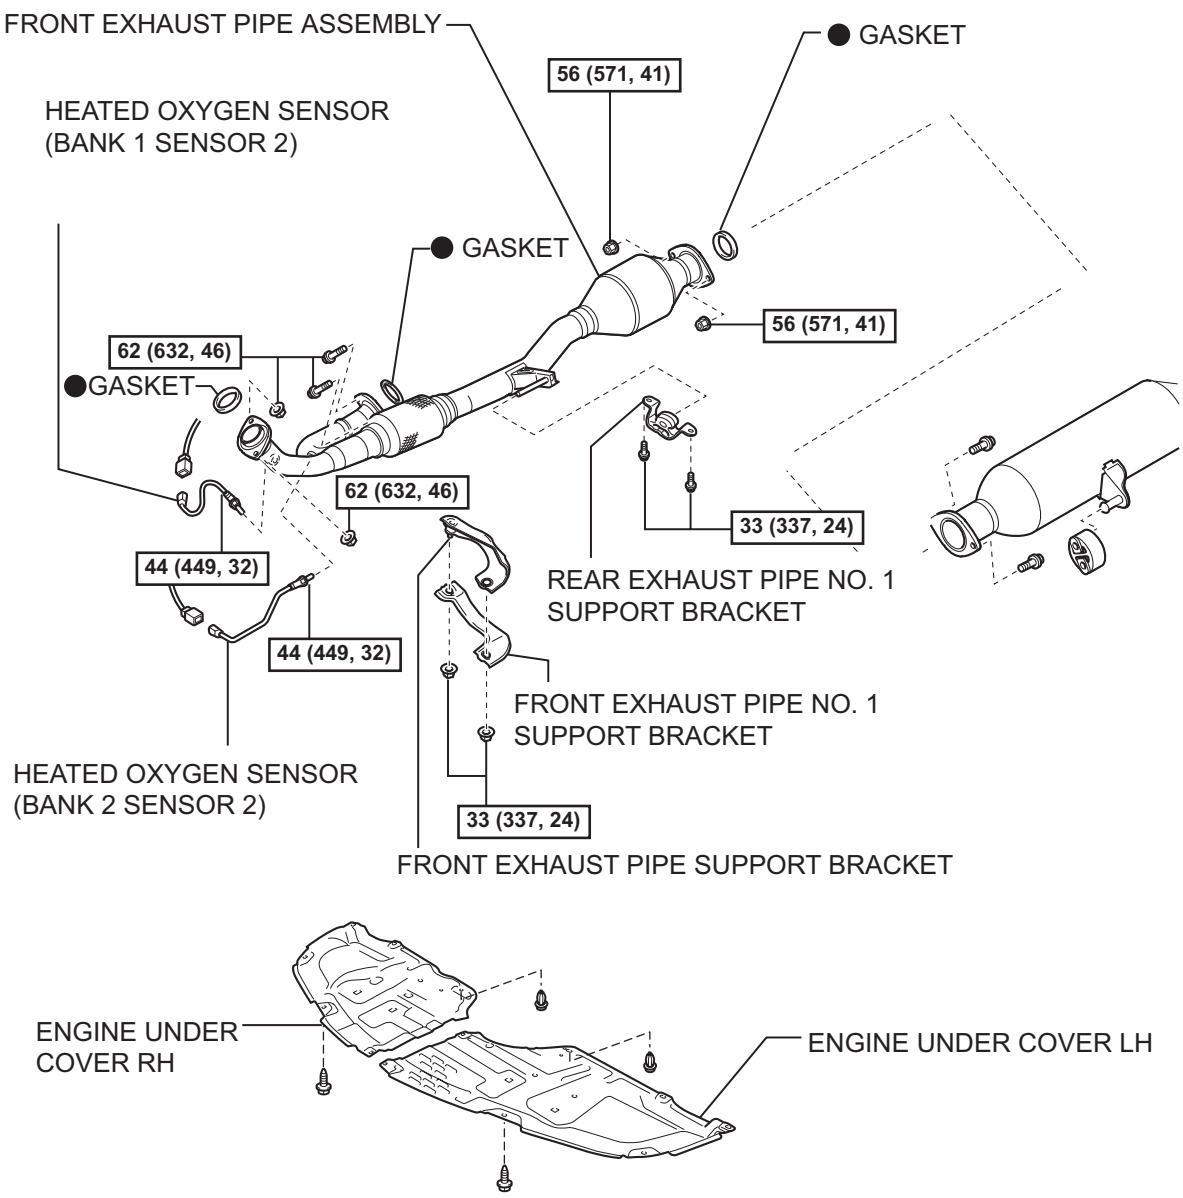
Torque: 44 N*m (449 kgf*cm, 32 ft.*lbf)

(b) Connect the 2 air fuel ratio sensor connectors.

EC

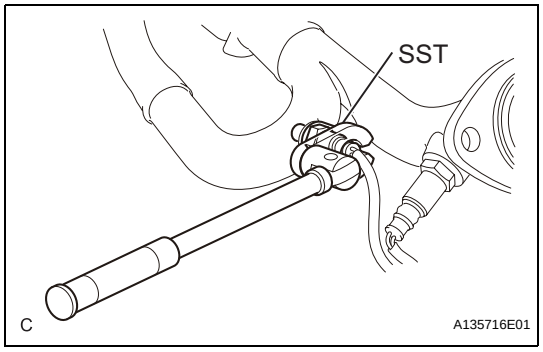
HEATED OXYGEN SENSOR

COMPONENTS

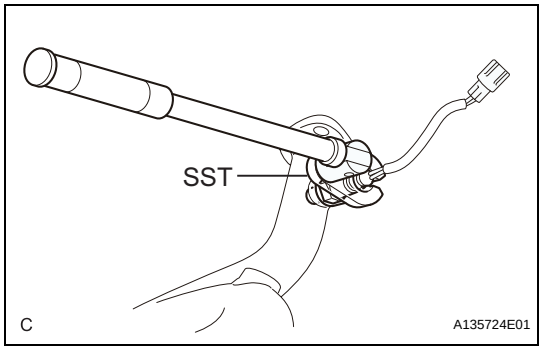


REMOVAL

1. **REMOVE ENGINE UNDER COVER LH**
2. **REMOVE ENGINE UNDER COVER RH**
3. **REMOVE FRONT EXHAUST PIPE ASSEMBLY (See page EX-2)**
4. **REMOVE HEATED OXYGEN SENSOR (for Bank 1)**
   (a) Using SST, remove the oxygen sensor.
   SST 09224-00010

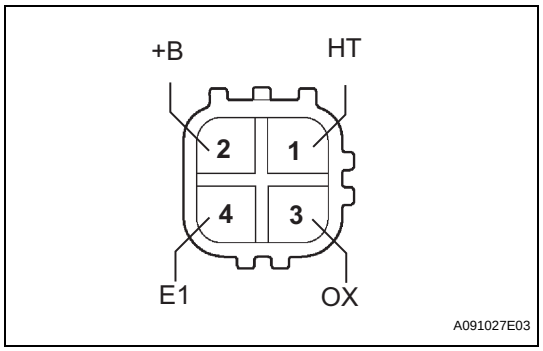


5. **REMOVE HEATED OXYGEN SENSOR (for Bank 2)**
   (a) Using SST, remove the oxygen sensor.
   SST 09224-00010



INSPECTION

1. **INSPECT HEATED OXYGEN SENSOR**
   (a) Measure the resistance between terminals 1 (HT) and 2 (+B).
   Standard resistance

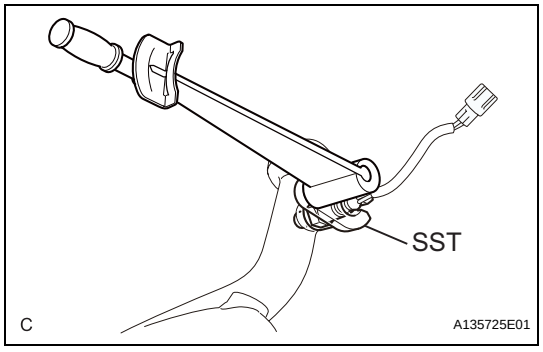


Condition	Specified Condition
20°C (68°F)	11 to 16 Ω

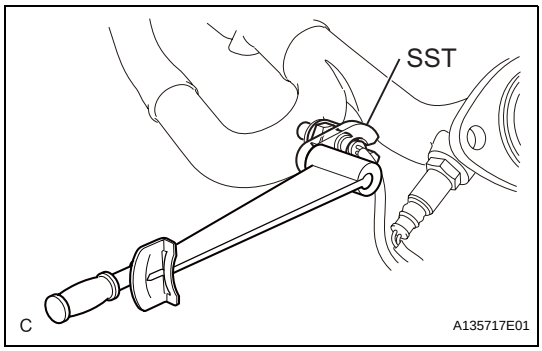
If the result is not as specified, replace the sensor.

INSTALLATION

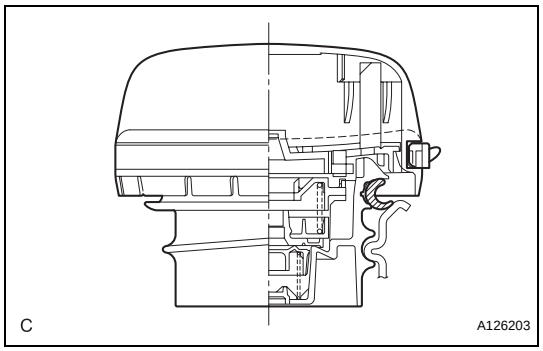
1. **INSTALL HEATED OXYGEN SENSOR (for Bank 2)**
   (a) Using SST, install the heated oxygen sensor.
   SST 09224-00010
   Torque: 44 N*m (449 kgf*cm, 32 ft.*lbf)



EC



2. **INSTALL HEATED OXYGEN SENSOR (for Bank 1)**
   (a) Using SST, install the heated oxygen sensor.
   SST 09224-00010
3. **INSTALL FRONT EXHAUST PIPE ASSEMBLY (See page EX-4)**
4. **INSTALL ENGINE UNDER COVER LH**
5. **INSTALL ENGINE UNDER COVER RH**



FUEL TANK CAP

INSPECTION

1. REMOVE FUEL TANK CAP ASSEMBLY

(a) Visually check if the cap and gasket are deformed or damaged.
If necessary, replace the cap.

SFI SYSTEM

PRECAUTION

NOTICE:

- **Perform the RESET MEMORY (AT) initialization operation after replacing the automatic transmission assembly, engine assembly or ECM (See page AX-25).**
- **Perform REGISTRATION (VIN registration) when replacing the ECM (See page ES-20).**

DEFINITION OF TERMS

Terms	Definition
Monitor Description	Description of what ECM monitors and how to detect malfunctions (monitoring purpose and its details).
Related DTCs	A group of diagnostic trouble codes that are output by ECM based on the same malfunction detection logic.
Typical Enabling Condition	Preconditions that allow ECM to detect malfunctions. With all preconditions satisfied, ECM sets DTC when monitored value(s) exceeds malfunction threshold(s).
Sequence of Operation	Order of monitor priority, applied if multiple sensors and components are involved in single malfunction detection process. Each sensor and component monitored in turn and not monitored until previous detection operation is completed.
Required Sensor/Components	Sensors and components used by ECM to detect each malfunction.
Frequency of Operation	Number of times ECM checks for each malfunction during each driving cycle. "Once per driving cycle" means that ECM checks for malfunctions only once in single driving cycle. "Continuous" means that ECM checks for malfunctions whenever enabling conditions are met.
Duration	Minimum time for which ECM must detect continuous deviation in monitored value(s) in order to set DTC. Timing begins when Typical Enabling Conditions are met.
Malfunction Thresholds	Value, beyond which, ECM determines malfunctions exist and sets DTCs.
MIL Operation	Timing of MIL illumination after a malfunction is detected. "Immediate" means that ECM illuminates MIL as soon as a malfunction is detected. "2 driving cycle" means that ECM illuminates MIL if the same malfunction is detected twice during next sequential driving cycle.

CHECK FOR INTERMITTENT PROBLEMS

HINT:
Inspect the vehicle's ECM using check mode. Intermittent problems are easier to detect with an intelligent tester when the ECM is in check mode. In check mode, the ECM uses 1 trip detection logic, which is more sensitive to malfunctions than normal mode (default), which uses 2 trip detection logic.

1. Clear the DTCs.
2. Switch the ECM from normal mode to check mode using an intelligent tester (See page ES-49).
3. Perform a simulation test (See page IN-40).
4. Check and wiggle the harness(es), connector(s) and terminal(s) (See page IN-45).

BASIC INSPECTION

When the malfunction is not confirmed by the DTC check, troubleshooting should be carried out in all circuits considered to be possible causes of the problem. In many cases, by carrying out the basic engine check shown in the following flowchart, the location of the problem can be found quickly and efficiently. Therefore, using this check is essential when troubleshooting the engine.

1 CHECK BATTERY VOLTAGE

NOTICE:
Carry out this check with the engine stopped and the engine switch off.
Result

Result	Proceed to
11 V or more	OK
Below 11 V	NG

NG → **CHARGE OR REPLACE BATTERY**

OK ↓

2 CHECK WHETHER ENGINE CRANKS

NG → **PROCEED TO PROBLEM SYMPTOMS TABLE**

OK ↓

3 CHECK WHETHER ENGINE STARTS

NG → **GO TO STEP 6**

OK ↓

4 CHECK AIR FILTER

(a) Visually check that the air filter is not excessively contaminated with dirt or oil.

NG → **REPLACE AIR FILTER**

OK ↓

5 CHECK IDLING SPEED

NG → **TROUBLESHOOT IDLING SPEED AND PROCEED TO NEXT STEP**

OK

6	CHECK FUEL PRESSURE

NG → TROUBLESHOOT FUEL PRESSURE AND PROCEED TO NEXT STEP

OK

7	CHECK FOR SPARKS

NG → TROUBLESHOOT SPARK AND PROCEED TO NEXT STEP

OK

PROCEED TO PROBLEM SYMPTOMS TABLE

REGISTRATION

NOTICE:
The Vehicle Identification Number (VIN) must be input into the replacement ECM.
HINT:
The VIN is in the form of a 17-digit alphanumeric vehicle identification number. An intelligent tester is required to register the VIN.

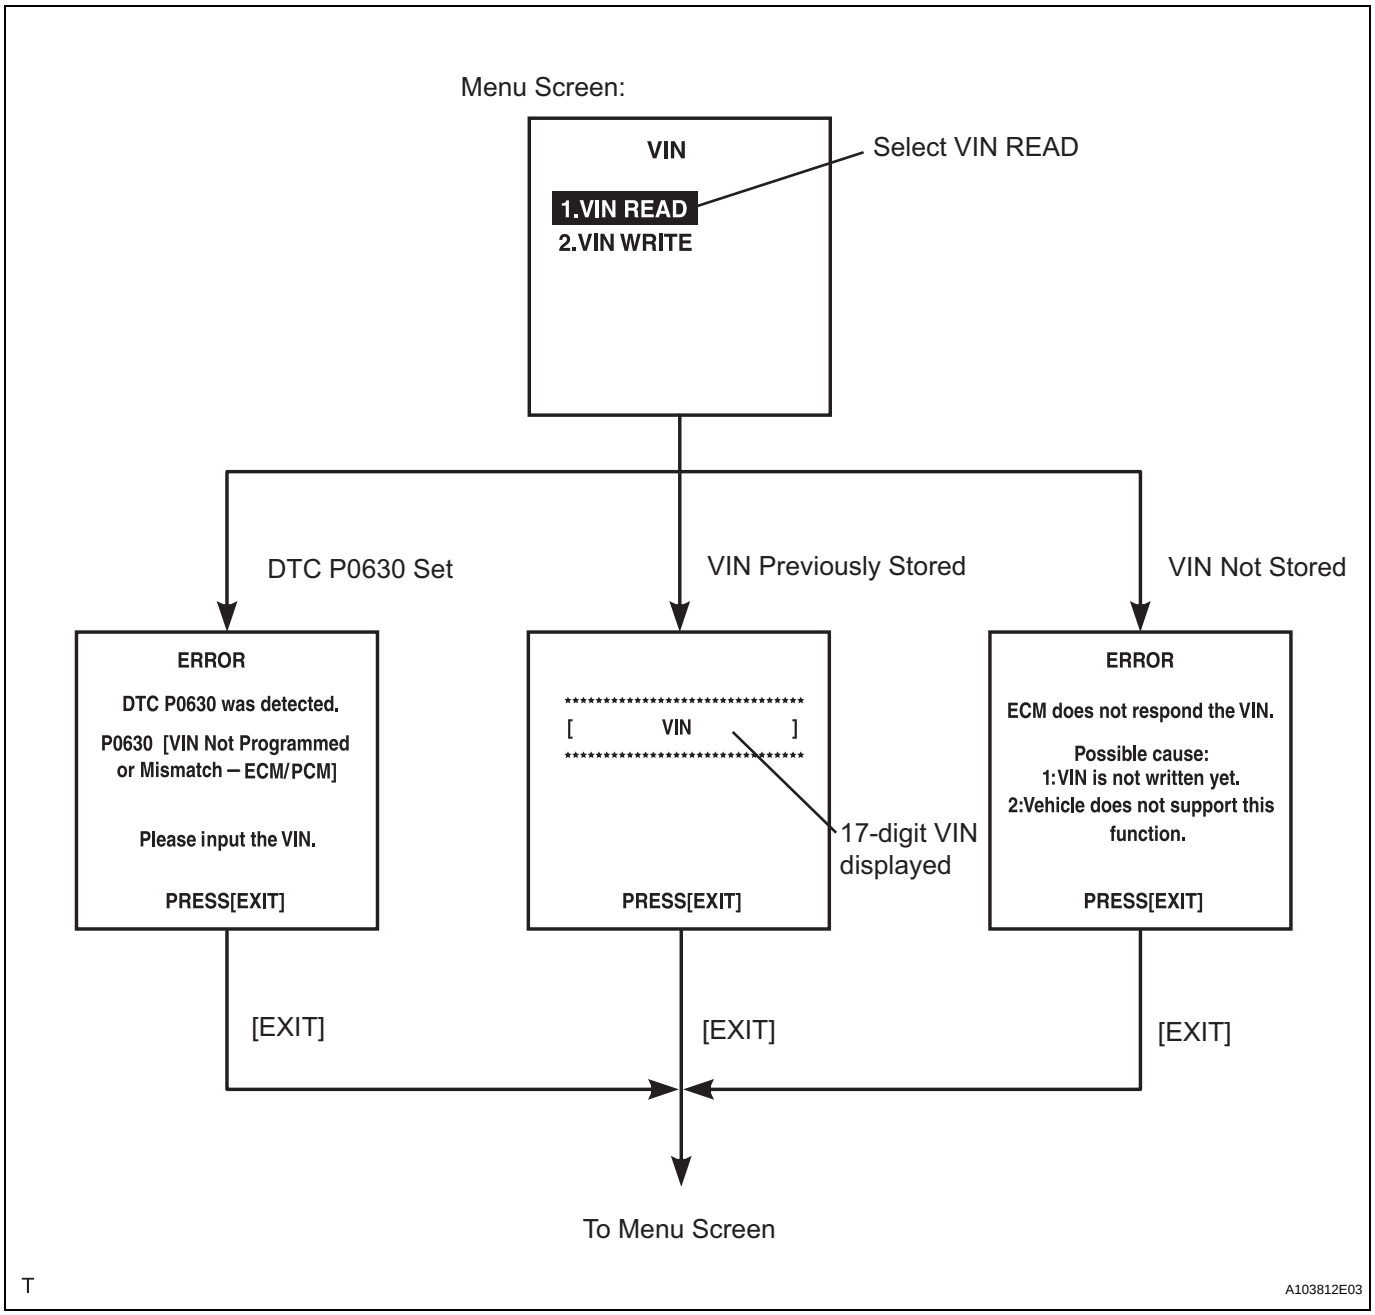
1. INPUT INSTRUCTIONS

(a) The general VIN input instructions using an intelligent tester are explained below:
(b) The arrow buttons (UP, DOWN, RIGHT and LEFT) and numerical buttons (0 to 9) are used, in order to input the VIN.
(c) Cursor Operation
To move the cursor around the tester screen, press the RIGHT and LEFT buttons.
(d) Alphabetical Character Input
(1) Press the UP and DOWN buttons to select the desired alphabetical character.
(e) Numeric Character Input
(1) Press the numerical button corresponding to the number that you want to input.
HINT:
Numerical characters can be selected by using the UP and DOWN buttons.
(f) Correction
(1) When correcting the input character(s), put the cursor onto the character using the RIGHT or LEFT button.
(2) Select or input the correct character using the UP and DOWN buttons, or the numerical buttons.
(g) Finishing Input Operation
(1) Make sure that the input VIN matches the vehicle VIN after input.
(2) Press the ENTER button on the tester.

2. READ VIN (Vehicle Identification Number)

(a) The flowchart of the VIN reading process is shown. This process allows the VIN stored in the ECM to be read, in order to confirm that the two VINs, provided with the vehicle and stored in the vehicle's ECM, are the same.
(b) Read VIN using an intelligent tester.
(c) Check the vehicle's VIN.
(d) Connect the intelligent tester to the DLC3.
(e) Turn the ignition switch on (IG).
(f) Turn the tester on.

(g) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / VIN.



3. WRITE VIN

(a) The flowchart of the VIN writing process is shown. This process allows the VIN to be input into the ECM. If the ECM is changed, or the VINs do not match, the VIN can be registered, or overwritten in the ECM by following this procedure.
(b) Write VIN using the intelligent tester.
(c) Check the vehicle's VIN.
(d) Connect the intelligent tester to the DLC3.
(e) Turn the ignition switch on (IG).
(f) Turn the tester on.

(g) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / VIN.

CHECKING MONITOR STATUS

The purpose of the monitor result (mode 06) is to allow access to the results for on-board diagnostic monitoring tests of specific components/systems that are not continuously monitored. Examples are catalyst, evaporative emission (EVAP) and thermostat.

The monitor result allows the OBD II scan tool to display the monitor status, test value, minimum test limit and maximum test limit. These data are displayed after the vehicle has been driven to run the monitor.

When the test value is not between the minimum test limit and maximum test limit, the ECM (PCM) interprets this as a malfunction. When the component is not malfunctioning, if the difference of the test value and test limit is very small, the component will malfunction in the near future.

Perform the following instructions to view the monitor status. Although the Toyota diagnostic tester is used in the following instructions, it can be checked using a generic OBD II scan tool. Refer to your scan tool operator's manual for specific procedures.

1. PERFORM MONITOR DRIVE PATTERN

The monitor results and test values can be checked with the OBD II scan tool or the intelligent tester. The engine control module (ECM) monitors the emissions-related components such as the thermostat, catalyst converter and evaporative emissions (EVAP), and determines whether they are functioning normally or not. When monitoring is finished, the ECM stores the monitor results and the test values. The monitor result indicates whether the component is functioning normally or not. The test value is the value that was used to determine the monitor result. If the test value is outside of the test limit (malfunction criterion), the ECM determines the component is malfunctioning. Some emissions-related components have multiple test values to determine monitor result. If one of these test values is outside of the test limit, the ECM determines the component is malfunctioning.

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the tester on.
(c) Clear the DTCs.
(d) Run the vehicle in accordance with the applicable drive pattern described in READINESS MONITOR DRIVE PATTERN (See page ES-28). DO NOT turn the engine switch off.

NOTICE:
The test results will be lost if the engine switch is turned off.

2. ACCESS MONITOR RESULT

(a) Select the following menus on the intelligent tester: DIAGNOSIS, ENHANCED OBDII, MONITOR INFO and MONITOR RESULT. The monitor status appears after the component name.
- INCMP: The component has not been monitored yet.
- PASS: The component is functioning normally.
- FAIL: The component is malfunctioning.

(b) Confirm that the component is either PASS or FAIL.

(c) Select the component and press ENTER. The accuracy test value appears if the monitor status is either PASS or FAIL.

HINT:

The monitor result might be PASS on rare occasions even if the Malfunction Indicator Lamp (MIL) is illuminated. This indicates that the system was malfunctioning in the previous driving cycle. This might be caused by an intermittent problem.

3. CHECK COMPONENT STATUS

(a) Compare the test value with the minimum test limit (MIN LIMIT) and maximum test limit (MAX LIMIT).

(b) If the test value is between the minimum test limit and maximum test limit, the component is functioning normally. If not, the component is malfunctioning. The test value is usually significantly higher or lower than the test limit. If the test value is on the borderline of the test limit, the component will malfunction in the near future.

HINT:

The monitor result might be PASS on rare occasions even if the Malfunction Indicator Lamp (MIL) is illuminated. This indicates that the system was malfunctioning in the previous driving cycle. This might be caused by an intermittent problem.

4. MONITOR RESULT INFORMATION

If you use a generic scan tool, multiply the test value by the scaling value listed below.

A/F Sensor Bank 1:

Monitor ID	Test ID	Scaling	Unit	Description
$01	$8E	Multiply by 0.0003	No dimension	A/F sensor deterioration level
$01	$91	Multiply by 0.004	mA	A/F sensor current

HO2S Bank 1 Sensor 2:

Monitor ID	Test ID	Scaling	Unit	Description
$02	$07	Multiply by 0.001	V	Minimum sensor voltage
$02	$08	Multiply by 0.001	V	Maximum sensor voltage
$02	$8F	Multiply by 0.003	g	Maximum oxygen storage capacity

A/F Sensor Bank 2:

Monitor ID	Test ID	Scaling	Unit	Description
$05	$8E	Multiply by 0.0003	No dimension	A/F sensor deterioration level
$05	$91	Multiply by 0.004	mA	A/F sensor current

HO2S Bank 2 Sensor 2:

Monitor ID	Test ID	Scaling	Unit	Description
$06	$07	Multiply by 0.001	V	Minimum sensor voltage
$06	$08	Multiply by 0.001	V	Maximum sensor voltage
$06	$8F	Multiply by 0.003	g	Maximum oxygen storage capacity

Catalyst-Bank 1:

Monitor ID	Test ID	Scaling	Unit	Description
$21	$A9	Multiply by 0.003	No dimension	Oxygen storage capacity of catalyst-bank 1

Catalyst-Bank 2:

Monitor ID	Test ID	Scaling	Unit	Description
$22	$A9	Multiply by 0.003	No dimension	Oxygen storage capacity of catalyst-bank 2

EVAP:

Monitor ID	Test ID	Scaling	Unit	Description
$3D	$C9	Multiply by 0.001	kPa	Test value for small leak (P0456)
$3D	$CA	Multiply by 0.001	kPa	Test value for gross leak (P0455)
$3D	$CB	Multiply by 0.001	kPa	Test value for leak detection pump OFF stuck (P2401)
$3D	$CD	Multiply by 0.001	kPa	Test value for leak detection pump ON stuck (P2402)
$3D	$CE	Multiply by 0.001	kPa	Test value for vent valve OFF stuck (P2420)
$3D	$CF	Multiply by 0.001	kPa	Test value for vent valve ON stuck (P2419)
$3D	$D0	Multiply by 0.001	kPa	Test value for reference orifice low flow (P043E)
$3D	$D1	Multiply by 0.001	kPa	Test value for reference orifice high flow (P043F)
$3D	$D4	Multiply by 0.001	kPa	Test value for purge VSV close stuck (P0441)
$3D	$D5	Multiply by 0.001	kPa	Test value for purge VSV open stuck (P0441)
$3D	$D7	Multiply by 0.001	kPa	Test value for purge flow insufficient (P0441)

Misfire:

Monitor ID	Test ID	Scaling	Unit	Description
$A1	$0B	Multiply by 1	Time	Exponential Weighted Moving Average (EWMA) misfire for all cylinders: Misfire counts for last ten driving cycles-Total
$A1	$0C	Multiply by 1	Time	Misfire rate for all cylinders: Misfire counts for last/current driving cycles-Total
$A2	$0B	Multiply by 1	Time	EWMA misfire for cylinder 1: Misfire counts for last ten driving cycles-Total
$A2	$0C	Multiply by 1	Time	Misfire rate for cylinder 1: Misfire counts for last/current driving cycle-Total
$A3	$0B	Multiply by 1	Time	EWMA misfire for cylinder 2: Misfire counts for last ten driving cycles-Total
$A3	$0C	Multiply by 1	Time	Misfire rate for cylinder 2: Misfire counts for last/current driving cycle-Total
$A4	$0B	Multiply by 1	Time	EWMA misfire for cylinder 3: Misfire counts for last ten driving cycles-Total
$A4	$0C	Multiply by 1	Time	Misfire rate for cylinder 3: Misfire counts for last/current driving cycle-Total
$A5	$0B	Multiply by 1	Time	EWMA misfire for cylinder 4: Misfire counts for last ten driving cycles-Total
$A5	$0C	Multiply by 1	Time	Misfire rate for cylinder 4: Misfire counts for last/current driving cycle-Total
$A6	$0B	Multiply by 1	Time	EWMA misfire for cylinder 5: Misfire counts for last ten driving cycles-Total
$A6	$0C	Multiply by 1	Time	Misfire rate for cylinder 5: Misfire counts for last/current driving cycle-Total
$A7	$0B	Multiply by 1	Time	EWMA misfire for cylinder 6: Misfire counts for last ten driving cycles-Total

Monitor ID	Test ID	Scaling	Unit	Description
$A7	$0C	Multiply by 1	Time	Misfire rate for cylinder 6: Misfire counts for last/current driving cycle-Total

Rear Oxygen Sensor Heater:

Monitor ID	Test ID	Scaling	Unit	Description
$42	$91	Multiply by 0.001	Ohm	Oxygen sensor heater resistance bank 1 sensor 2
$46	$91	Multiply by 0.004	Ohm	Oxygen sensor heater resistance bank 2 sensor 2

READINESS MONITOR DRIVE PATTERN

1. PURPOSE OF READINESS TESTS

- The On-Board Diagnostic (OBD II) system is designed to monitor the performance of emission-related components, and indicate any detected abnormalities with DTCs (Diagnostic Trouble Codes). Since various components need to be monitored in different driving conditions, the OBD II system is designed to run separate monitoring programs called Readiness Monitors.
- The intelligent tester's software must be version 9.0 or newer to view the Readiness Monitor status. To view the status, select the following menu items: DIAGNOSIS / ENHANCED OBD II / MONITOR INFO / MONITOR STATUS.
- When the Readiness Monitor status reads COMPL (complete), the necessary conditions have been met for running the performance tests for that Readiness Monitor.
- A generic OBD II scan tool can also be used to view the Readiness Monitor status.

HINT:

Many Inspection and Maintenance (I/M) programs require a vehicle's Readiness Monitor status to show COMPL before beginning emission tests.

The Readiness Monitor will be reset to INCMPL (incomplete) if:

- The ECM has lost battery power or broken a fuse.
- DTCs have been cleared.
- The conditions for running the Readiness Monitor have not been met.

If the Readiness Monitor status shows INCMPL, follow the appropriate Readiness Monitor Drive Pattern to change the status to COMPL.

CAUTION:

Strictly observe posted speed limits, traffic laws, and road conditions when performing these drive patterns.

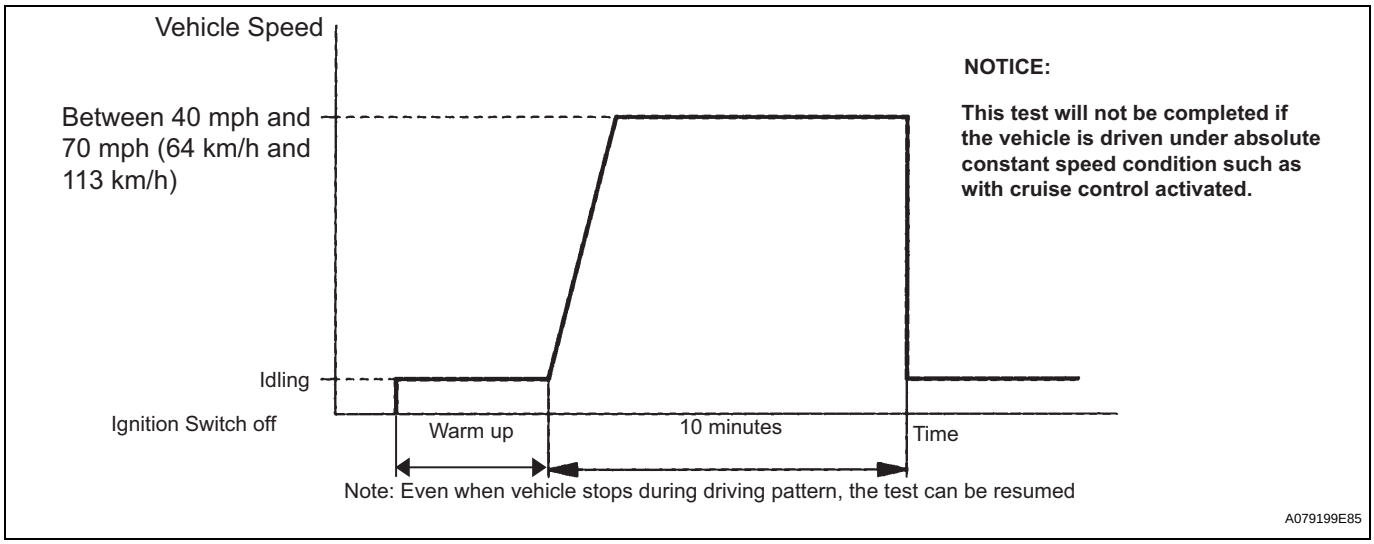
NOTICE:

These drive patterns represent the fastest method of satisfying all conditions necessary to achieve complete status for each specific Readiness Monitor.

In the event of a drive pattern being interrupted (possibly due to factors such as traffic conditions), the drive pattern can be resumed. In most cases, the Readiness Monitor will still achieve complete status upon completion of the drive pattern.

To ensure completion of the Readiness Monitors, avoid sudden changes in vehicle load and speed (driving up and down hills and/or sudden acceleration).

2. CATALYST MONITOR (ACTIVE AIR-FUEL RATIO CONTROL TYPE)



(a) Preconditions

The monitor will not run unless:

- The MIL is OFF.

(b) Drive Pattern

(1) Connect an intelligent tester.
(2) Turn the ignition switch on (IG).
(3) Turn the tester or scan tool ON.
(4) Clear the DTCs.
(5) Start the engine and warm it up.
(6) Drive the vehicle at between 40 mph and 70 mph (64 km/h and 113 km/h) for at least 10 minutes.

(c) Monitor Status

(1) Check the Readiness Monitor status displayed on the tester.
(2) If the status does not switch to COMPL (complete), extend the driving time.

3. EVAP MONITOR (KEY-OFF TYPE)

(a) Preconditions

The monitor will not run unless:

- The fuel tank is less than 90% full.
- The altitude is less than 8,000 ft (2,450 m).
- The vehicle is stationary.
- The engine coolant temperature is between 4.4°C and 35°C (40°F to 95°F).
- The intake air temperature is between 4.4°C and 35°C (40°F to 95°F).
- Vehicle was driven in the city area (or on free-way) for 10 minutes or more.

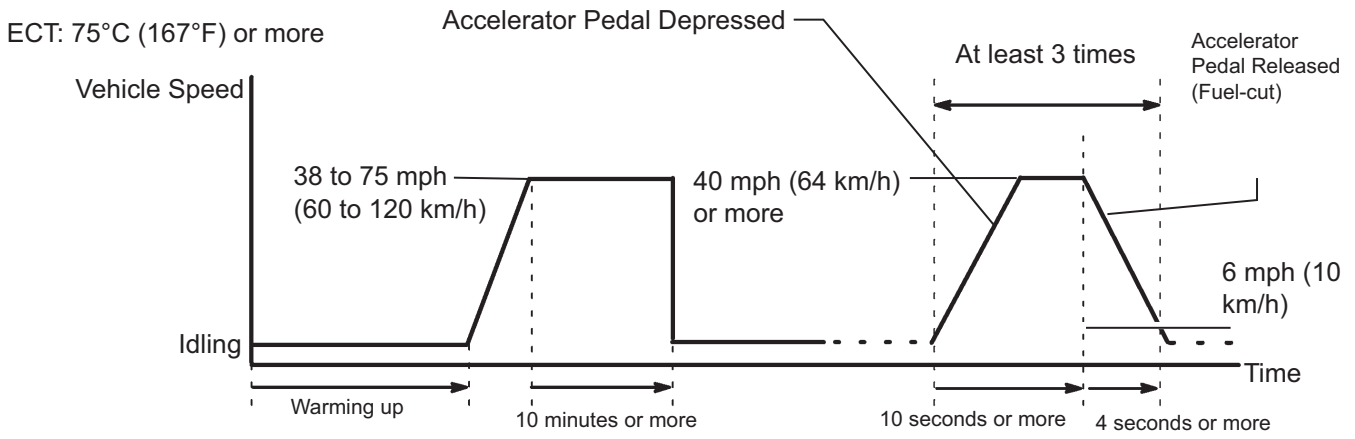
(b) Monitor Conditions

(1) Turn the ignition switch off and wait for 6 hours.
HINT:
Do not start the engine until checking Readiness Monitor status. If the engine is started, the step described above must be repeated.

(c) Monitor Status
(1) Connect an intelligent tester to the DLC3.
(2) Turn the ignition switch on (IG).
(3) Turn the tester or scan tool on.
(4) Check the Readiness Monitor status displayed on the tester or scan tool.
If the status does not switch to COMPL (complete), restart the engine, make sure that the preconditions have been met, and then perform the Monitor Conditions again.

4. A/F SENSOR AND HO2S MONITORS

Monitor Drive Pattern:



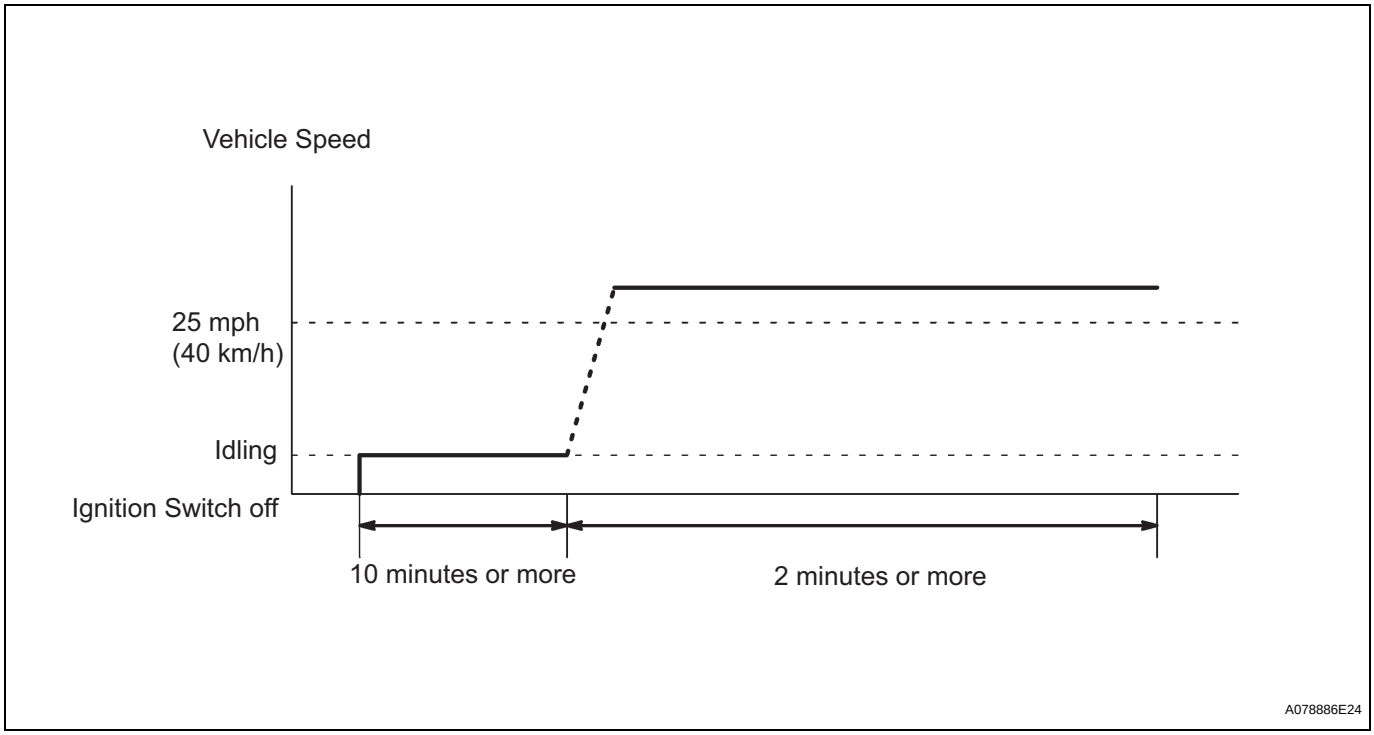
(a) Preconditions
The monitor will not run unless:
- 2 minutes or more have elapsed since the engine was started.
- The Engine Coolant Temperature (ECT) is 75°C (167°F) or more.
- Cumulative driving time at a vehicle speed of 30 mph (48 km/h) or more exceeds 6 minutes.
- Air-fuel ratio feedback control is performed.
- Fuel-cut control is performed for 8 seconds or more (for the Rear HO2 Sensor Monitor).

(b) Drive Pattern for front A/F sensor and HO2 sensor
(1) Connect an intelligent tester to the DLC3.
(2) Turn the ignition switch on (IG).
(3) Turn the tester on.
(4) Clear the DTCs.
(5) Start the engine, and warm it up until the ECT reaches 75°C (167°F) or higher.
(6) Drive the vehicle at 38 mph (60 km/h) or more for at least 10 minutes.
(7) Change the transmission to the 2nd gear.
(8) Accelerate the vehicle to 40 mph (64 km/h) or more by depressing the accelerator pedal for at least 10 seconds (Procedure "A").

(9) Soon after performing procedure "A" above, release the accelerator pedal for at least 4 seconds without depressing the brake pedal, in order to execute fuel-cut control (Procedure "B").
(10) Allow the vehicle to decelerate until the vehicle speed declines to less than 6 mph (10 km/h) (Procedure "C").
(11) Repeat procedures from "A" through "C" above at least 3 times in one driving cycle.

(c) Monitor Status
(1) Check the Readiness Monitor status displayed on the tester.
(2) If the status does not switch to COMPL (complete), make sure that the preconditions have been met and then perform the Drive Pattern again.

5. AIR-FUEL RATIO (A/F) AND HEATED OXYGEN (HO2) SENSOR HEATER MONITORS (FRONT A/F AND REAR HO2 SENSOR TYPE)



(a) Preconditions
The monitor will not run unless:
- The MIL is OFF.

(b) Drive Pattern
(1) Connect an intelligent tester to the DLC3.
(2) Turn the ignition switch on (IG).
(3) Clear the DTCs.
(4) Start the engine.
(5) Allow the engine to idle for 10 minutes or more.
(6) Drive the vehicle at 25 mph (40 km/h) or more for at least 2 minutes.

(c) Monitor Status

(1) Check the Readiness Monitor status displayed on the tester or scan tool.
If the status does not switch to COMPL (complete), make sure that the preconditions have been met, and repeat the Drive Pattern.

PROBLEM SYMPTOMS TABLE

HINT:
When a malfunction is not confirmed by a DTC (Diagnostic Trouble Code) check and the cause of problem cannot be identified through a basic inspection, troubleshoot according to the priority order indicated in the table below.

SFI SYSTEM

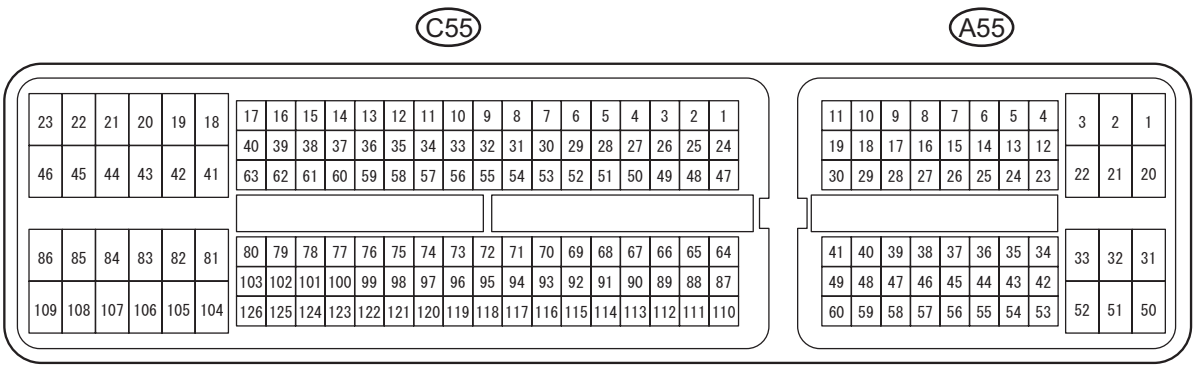
Symptom	Suspected area	See page
Without Smart Key System: Engine does not crank (Does not start)	1. Immobilizer system (with smart key system)	EI-7
	2. Immobilizer system (without smart key system)	EI-55
	3. Starter signal circuit	ES-304
	4. Starter	ST-143
	5. STARTER relay	ST-149
With Smart Key System: Engine does not crank (Does not start)	1. Immobilizer system (with smart key system)	EI-7
	2. Immobilizer system (without smart key system)	EI-55
	3. Cranking holding function circuit	ES-455
	4. Starter signal circuit	ES-304
	5. Starter	ST-143
	6. STARTER relay	ST-149
	7. ECM power source circuit	ES-432
	8. ECM	ES-518
No initial combustion (Does not start)	1. ECM power source circuit	ES-432
	2. Ignition system	IG-3
	3. Fuel pump control circuit	ES-449
	4. Injector	FU-15
	5. Crank angle sensor	ES-497
	6. ECM	ES-518
Engine cranks normally but difficult to start	1. Electronic Throttle Control System (ETCS)	ES-320
	2. Fuel pump control circuit	ES-449
	3. Ignition system	IG-3
	4. Spark plug	IG-5
	5. Compression	EM-3
	6. Injector	FU-15
	7. Crank angle sensor	ES-497
Difficult to start with cold engine	1. Starter signal circuit	ES-304
	2. Electronic Throttle Control System (ETCS)	ES-320
	3. Fuel pump control circuit	ES-449
	4. Spark plug	IG-5
	5. Ignition system	IG-3
	6. Injector	FU-15
	7. Engine coolant temperature sensor	ES-500
Difficult to start with warm engine	1. Starter signal circuit	ES-304
	2. Electronic Throttle Control System (ETCS)	ES-320
	3. Fuel pump control circuit	ES-449
	4. Spark plug	IG-5
	5. Ignition system	IG-3
	6. Injector	FU-15
	7. Engine coolant temperature sensor	ES-500

Symptom	Suspected area	See page
High engine idling speed (Poor idling)	1. Electronic Throttle Control System (ETCS)	ES-320
	2. ECM power source circuit	ES-432
	3. A/C signal circuit (Compressor circuit)	-
	4. Acoustic Control Induction System (ACIS)	ES-462
	5. PCV hose	EC-5
	6. ECM	ES-518
Low engine idling speed (Poor idling)	1. Electronic Throttle Control System (ETCS)	ES-320
	2. ECM power source circuit	ES-432
	3. A/C signal circuit (Compressor circuit)	-
	4. Acoustic Control Induction System (ACIS)	ES-462
	5. PCV hose	EC-5
	6. Injector	FU-15
	7. ECM	ES-518
Rough idling (Poor idling)	1. Electronic Throttle Control System (ETCS)	ES-320
	2. Injector	FU-15
	3. Ignition system	IG-3
	4. Compression	EM-3
	5. Fuel pump control circuit	ES-449
	6. Spark plug	IG-5
	7. Acoustic Control Induction System (ACIS)	ES-462
	8. PCV hose	EC-5
Hunting (Poor idling)	1. Electronic Throttle Control System (ETCS)	ES-320
	2. ECM power source circuit	ES-432
	3. Fuel pump control circuit	ES-449
	4. Spark plug	IG-5
	5. Ignition system	IG-3
	6. Injector	FU-15
	7. Acoustic Control Induction System (ACIS)	ES-462
	8. PCV hose	EC-5
Hesitation/Poor acceleration (Poor driveability)	1. Injector	FU-15
	2. Fuel pump control circuit	ES-449
	3. Ignition system	IG-3
	4. Spark plug	IG-5
	5. Air Intake Control System (AICS)	ES-462
	6. A/T faulty	AX-9
Surging (Poor driveability)	1. Fuel pump control circuit	ES-449
	2. Spark plug	IG-5
	3. Ignition system	IG-3
	4. Injector	FU-15
Engine stalls soon after starting	1. Fuel pump control circuit	ES-449
	2. Electronic Throttle Control System (ETCS)	ES-320
	3. Crank angle sensor	ES-497
	4. Spark plug	IG-5
	5. Ignition system	IG-3
	6. Injector	FU-15
Engine stalls during A/C operation	1. A/C signal circuit	-
	2. ECM	ES-518
Unable/difficult to refuel	Refueling valve (canister)	-
Engine vibrates frequently when idling (Active Control engine Mount (ACM) system does not operate)	Active control engine mount circuit	ES-393

ES

TERMINALS OF ECM

1. SFI SYSTEM



A107881E29

ES

HINT:
The standard normal voltage between each pair of the ECM terminals is shown in the table below. The appropriate conditions for checking each pair of the terminals are also indicated.
The check results should be compared with the standard normal voltage for that pair of terminals, listed in the "STD Voltages" column.
The illustration above can be used as a reference to identify the ECM terminal locations.

Symbols (Terminal No.)	Wiring Colors	Terminal Descriptions	Conditions	STD Voltages
+B (A55-2) - E1 (C55-81)	R - W-B	Power source of ECM	Ignition switch on (IG)	9 to 14 V
+B2 (A55-1) - E1 (C55-81)	R - W-B	Power source of ECM	Ignition switch on (IG)	9 to 14 V
BATT (A55-20) - E1 (C55-81)	Y - W-B	Battery (for measuring the battery voltage and for the ECM memory)	Always	9 to 14 V
VPMP (A55-42) - E1 (C55-81)	W - W-B	Vent valve operation signal (built into pump module)	Ignition switch on (IG)	9 to 14 V
MPMP (A55-34) - E1 (C55-81)	G - W-B	Vacuum pump operation signal (built into pump module)	Vacuum pump OFF	0 to 3 V
MPMP (A55-34) - E1 (C55-81)	G - W-B	Vacuum pump operation signal (built into pump module)	Vacuum pump ON	9 to 14 V
+BM (A55-3) - E1 (C55-81)	LG - W-B	Power source of ETCS throttle motor	Always	9 to 14 V
MREL (A55-44) - E1 (C55-81)	O - W-B	EFI relay operation signal	Ignition switch on (IG)	9 to 14 V
IGSW (A55-28) - E1 (C55-81)	Y - W-B	Ignition switch signal	Ignition switch on (IG)	9 to 14 V
FC (A55-7) - E1 (C55-81)	FC (A55-7) - E1 (C55-81)	C/OPEN relay operation signal (fuel pump control)	Ignition switch on (IG), Engine stopped	9 to 14 V
FC (A55-7) - E1 (C55-81)	FC (A55-7) - E1 (C55-81)	C/OPEN relay operation signal (fuel pump control)	Ignition switch on (IG), Engine idling	0 to 1.5 V
STP (A55-36) - E1 (C55-81)	- W-B	Stop light switch signal	W-Brake pedal depressed	7.5 to 14 V
STP (A55-36) - E1 (C55-81)	- W-B	Stop light switch signal	W-Brake pedal released	Below 1.5 V
ST1- (A55-35) - E1 (C55-81)	GR - W-B	Stop light switch signal (opposite to STP terminal)	Ignition switch on (IG), W-Brake pedal depressed	Below 1.5 V

Symbols (Terminal No.)	Wiring Colors	Terminal Descriptions	Conditions	STD Voltages
ST1- (A55-35) - E1 (C55-81)	GR - W-B	Stop light switch signal (opposite to STP terminal)	Ignition switch on (IG), W-Brake pedal released	7.5 to 14 V
ACCR*2 (A24-17) - E1 (C55-81)	B - W-B	ACC relay control signal	Cranking	Below 1.5 V
VPA (A55-55) - E1 (C55-81)	G - W-B	Accelerator pedal position sensor signal (for engine control)	Ignition switch on (IG), Accelerator pedal fully released	0.5 to 1.1 V
VPA (A55-55) - E1 (C55-81)	G - W-B	Accelerator pedal position sensor signal (for engine control)	Ignition switch on (IG), Accelerator pedal fully depressed	2.6 to 4.5 V
VPA2 (A55-58) - EPA2 (A55-60)	R - O	Accelerator pedal position sensor signal (for sensor malfunction detection)	Ignition switch on (IG), Accelerator pedal fully released	1.2 to 2.0 V
VPA2 (A55-58) - EPA2 (A55-60)	R - O	Accelerator pedal position sensor signal (for sensor malfunction detection)	Ignition switch on (IG), Accelerator pedal fully depressed	3.4 to 5.0 V
EPA (A5-59) - VPA (A55-55)	Y - G	Accelerator pedal position sensor signal (for engine control)	Ignition switch on (IG), Accelerator pedal fully released	0.5 to 1.1 V
EPA (A5-59) - VPA (A55-55)	Y - G	Accelerator pedal position sensor signal (for engine control)	Ignition switch on (IG), Accelerator pedal fully depressed	2.6 to 4.5 V
EPA2 (A55-60) - VPA2 (A55-58)	O - R	Accelerator pedal position sensor signal (for sensor malfunction detection)	Ignition switch on (IG), Accelerator pedal fully released	1.2 to 2.0 V
EPA2 (A55-60) - VPA2 (A55-58)	O - R	Accelerator pedal position sensor signal (for sensor malfunction detection)	Ignition switch on (IG), Accelerator pedal fully depressed	3.4 to 5.0 V
PPMP (C55-77) - E1 (C55-81)	L - W-B	Pressure sensor signal (built into pump module)	Ignition switch on (IG)	3 to 3.6 V
TC (A55-27) - E1 (C55-81)	P - W-B	Terminal TC of DLC3	Ignition switch on (IG)	9 to 14 V
VCPA (A55-57) - EPA (A55-59)	R - Y	Power source of accelerator pedal position sensor (for VPA)	Ignition switch on (IG)	4.5 to 5.0 V
VCP2 (A55-56) - EPA2 (A55-60)	L - O	Power source of accelerator pedal position sensor (for VPA2)	Ignition switch on (IG)	4.5 to 5.0 V
TACH (A55-15) - E1 (C55-81)	B - W-B	Engine speed signal (for combination meter)	Idling	Pulse generation (see waveform 11)
CCS (A55-40) - E1 (C55-81)	W - W-B	Cruise control main switch signal	Ignition switch on (IG) CANCEL switch ON SET/COAST switch ON RES/ACC switch ON Main switch ON	10 to 16 V 6.6 to 10.1 V 4.5 to 7.1 V 2.3 to 4.0 V Below 1 V
SPD (A55-24) - E1 (C55-81)	BR - W-B	Vehicle speed signal from combination meter	Ignition switch on (IG), driving wheel rotated slowly	Pulse generation (see waveform 8)
W (A55-24) - E1 (C55-81)	BR - W-B	Malfunction Indicator Lamp (MIL) operation signal	Ignition switch on (IG)	Below 3.0 V
W (A55-24) - E1 (C55-81)	BR - W-B	Malfunction Indicator Lamp (MIL) operation signal	Idling	9 to 14 V
CANH (A55-41) - CANL (A55-49)	B - W	CAN communication circuit	Ignition switch off	54 to 69 Ω
E1 (C55-81) - Body ground	W-B - -	Earth (ground) circuit of ECM	Always	Below 1 V

Symbols (Terminal No.)	Wiring Colors	Terminal Descriptions	Conditions	STD Voltages

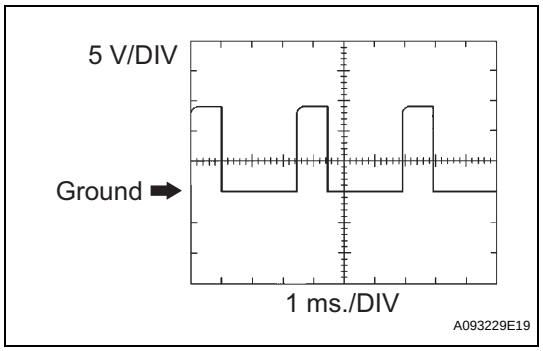
E03 (C55-104) - E1 (C55-81)	B - W-B	Earth (ground) circuit of ECM	Always	Below 1 V
HT2B (C55-47) - E1 (C55-81) HT1B (C55-48) - E1 (C55-81)	Y - W-B LG - W-B	Heated oxygen sensor heater operation signal	Idling	Below 3.0 V
HT2B (C55-47) - E1 (C55-81) HT1B (C55-48) - E1 (C55-81)	Y - W-B LG - W-B	Heated oxygen sensor heater operation signal	Ignition switch on (IG)	9 to 14 V
E05 (C55-46) - E1 (C55-81)	W - W-B	Earth (ground) circuit of ECM	Always	Below 1 V
E04 (C55-23) - E1 (C55-81)	W - W-B	Earth (ground) circuit of ECM	Always	Below 1 V
NSW (C55-62) - E1 (C55-81)	R - W-B	Park/Neutral position switch signal	Ignition switch on (IG), Shift lever position P or N	Below 3.0 V
NSW (C55-62) - E1 (C55-81)	R - W-B	Park/Neutral position switch signal	Ignition switch on (IG), Shift lever position other than P or N	9 to 14 V
EKN2 (C55-117) - KNK2 (C55-118)	W - B	Earth (ground) circuit of knock sensor	With engine speed at 4,000 rpm after warming up	Pulse generation (see waveform 4)
KNK2 (C55-118) - EKN2 (C55-117)	B - W	Knock sensor signal	With engine speed at 4,000 rpm after warming up	Pulse generation (see waveform 4)
A1A+ (C55-93) - E1 (C55-81)	P - W-B	A/F sensor signal	Ignition switch on (IG)	3.3 V*1
A1A+ (C55-93) - E1 (C55-81)	P - W-B	A/F sensor signal	Ignition switch on (IG)	3.0 V*1
A2A+ (C55-120) - E1 (C55-81)	L - W-B	A/F sensor signal	Ignition switch on (IG)	3.3 V*1
A2A+ (C55-120) - E1 (C55-81)	L - W-B	A/F sensor signal	Ignition switch on (IG)	3.0 V*1
EKNK (C55-94) - KNK1 (C55-95)	G - R	Earth (ground) circuit of knock sensor	With engine speed at 4,000 rpm after warming up	Pulse generation (see waveform 4)
KNK1 (C55-95) - EKNK (C55-94)	R - G	Knock sensor signal	With engine speed at 4,000 rpm after warming up	Pulse generation (see waveform 4)
A1A- (C55-116) - E1 (C55-81)	P - W-B	A/F sensor	Ignition switch on (IG)	3.3 V*1

Symbols (Terminal No.)	Wiring Colors	Terminal Descriptions	Conditions	STD Voltages
A1A- (B46-30) - E1 (C55-81)	P - W-B	A/F sensor	Ignition switch on (IG)	3.0 V*1
A2A- (C55-119) - E1 (C55-81)	Y - W-B	A/F sensor	Ignition switch on (IG)	3.3 V*1
A2A- (C55-119) - E1 (C55-81)	Y - W-B	A/F sensor	Ignition switch on (IG)	3.0 V*1
OX2B (C55-87) - EX2B (C55-64) OX1B (C55-88) - EX1B (C55-65)	B - W-R W - BR	Heated oxygen sensor signal	With engine speed at 2,500 rpm for 2 minutes after warming up	Pulse generation (see waveform 2)

*1: The ECM terminal voltage is constant regardless of the output voltage from the sensor.

*2: With Smart Key system

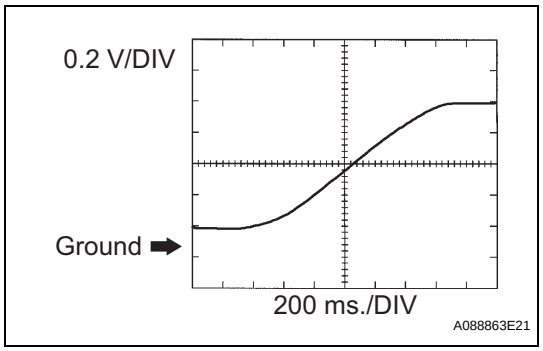


(a) WAVEFORM 1

(1) Camshaft timing Oil Control Valve (OCV) operation signal

ECM Terminal Names	Between OC1+ and OC1- , OC2+ and OC2- , OE1+ and OE1- , or OE2+ and OE2-
Tester Ranges	5 V/DIV, 1 ms./DIV
Conditions	Idling

HINT:
The wavelength becomes shorter as the engine rpm increases.

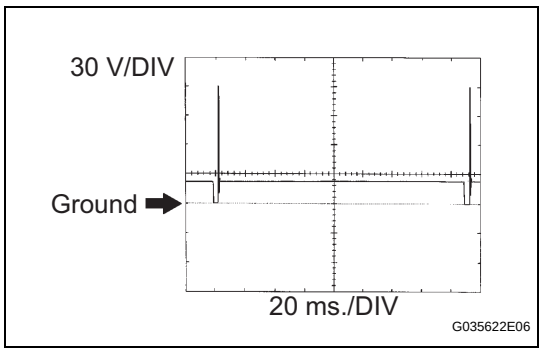


(b) WAVEFORM 2

(1) Heated oxygen sensor signal

ECM Terminal Names	Between OX1B and EX1B, or OX2B and EX2B
Tester Ranges	0.2 V/DIV, 200 ms./DIV
Conditions	Engine speed is maintained at 2,500 rpm for 2 minutes after sensor is warmed up

HINT:
In the DATA LIST, item O2S B1S2 shows the ECM input values from the heated oxygen sensor.



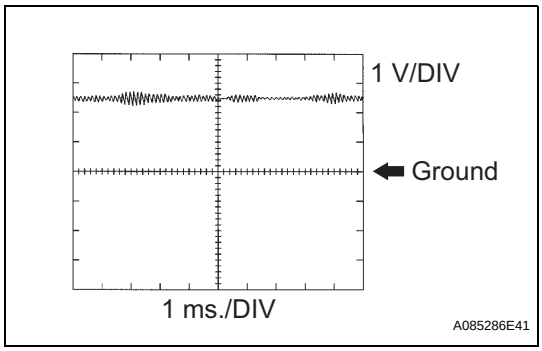
(c) WAVEFORM 3

(1) Fuel injector operation signal

ECM Terminal Names	Between #10 (to 60) and E01
Tester Ranges	30 V/DIV, 20 ms./DIV
Conditions	Idling

HINT:
The wavelength becomes shorter as the engine rpm increases.

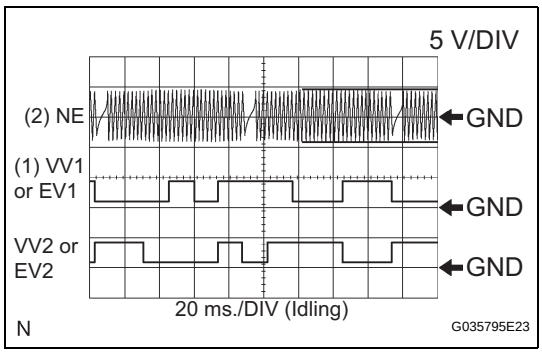
ES



(d) WAVEFORM 4
(1) Knock sensor signal

ECM Terminal Names	Between KNK1 and EKNK, or KNK2 and EKN2
Tester Ranges	0.01 to 10 V/DIV, 0.01 to 10 ms./DIV
Conditions	Engine speed is maintained at 4,000 rpm after engine is warmed up

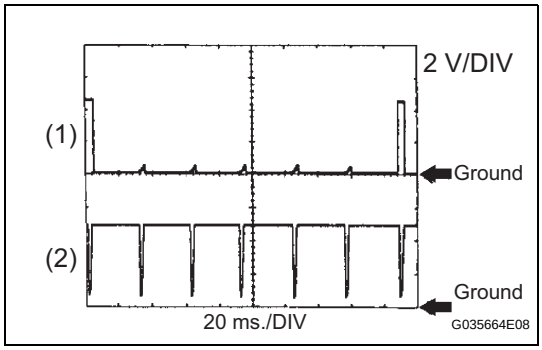
HINT:
- The wavelength becomes shorter as the engine rpm increases.
- The waveforms and amplitudes displayed differ slightly depending on the vehicle.



(e) WAVEFORM 5
(1) Variable Valve Timing (VVT) sensor signal (1)
(2) Crankshaft position sensor signal (2)

ECM Terminal Names	(1) Between VV1+ and VV1- , VV2+ and VV2-, EV1+ and EV1-, or EV2+ and EV2- (2) Between NE+ and NE-
Tester Ranges	5 V/DIV, 20 ms./DIV
Conditions	Idling

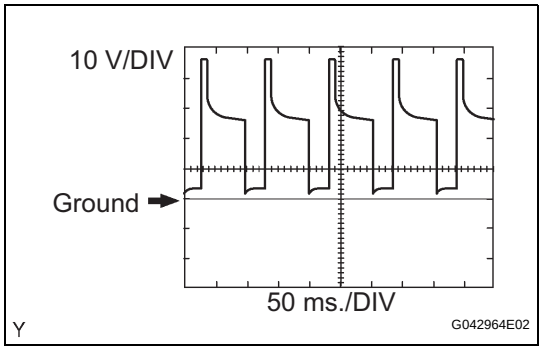
HINT:
The wavelength becomes shorter as the engine rpm increases.



(f) WAVEFORM 6
(1) Igniter IGT signal (from ECM to igniter) (1)
(2) Igniter IGF signal (from igniter to ECM) (2)

ECM Terminal Names	(1) Between IGT (1 to 6) and E1 (2) Between IGF1 and E1
Tester Ranges	2 V/DIV, 20 ms./DIV
Conditions	Idling

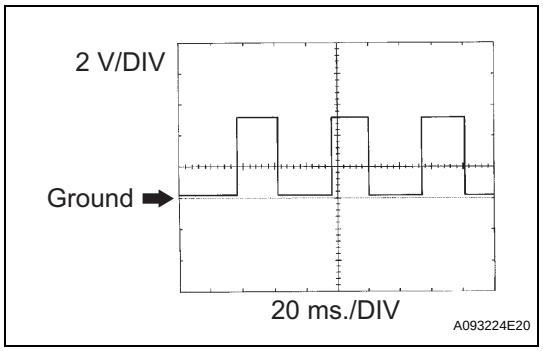
HINT:
The wavelength becomes shorter as the engine rpm increases.



(g) WAVEFORM 7
(1) Purge VSV for EVAP system operation signal

ECM Terminal Names	Between PRG and E1
Tester Ranges	10 V/DIV, 50 ms./DIV
Conditions	Idling

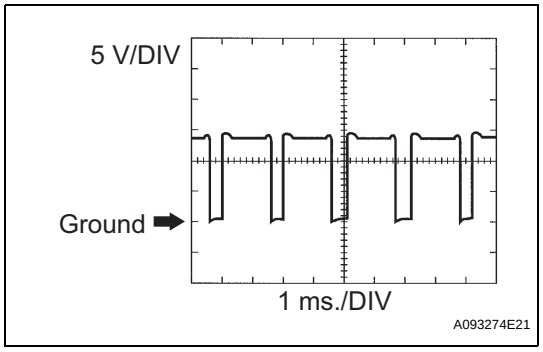
HINT:
If the waveform is not similar to that shown in the illustration, check the waveform again after idling for 10 minutes or more.



(h) WAVEFORM 8
(1) Vehicle speed signal

ECM Terminal Names	Between SPD and E1
Tester Ranges	2 V/DIV, 20 ms./DIV
Conditions	Driving at 12 mph (20 km/h)

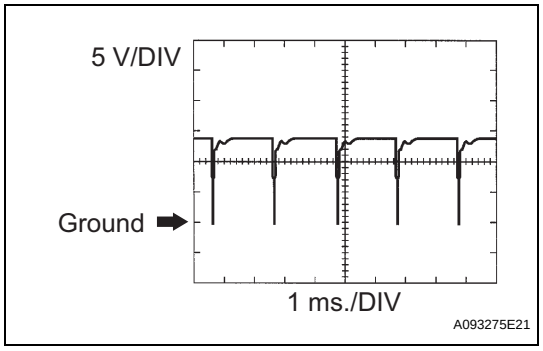
HINT:
- The wavelength becomes shorter as the vehicle speed increases.
- Depending on the vehicle, the output waveform voltage may rise to 12 V if influenced by optionally installed systems.



(i) WAVEFORM 9
(1) Throttle drive motor operation signal (positive terminal)

ECM Terminal Names	Between M+ and ME01
Tester Ranges	5 V/DIV, 1 ms./DIV
Conditions	Idling with warm engine

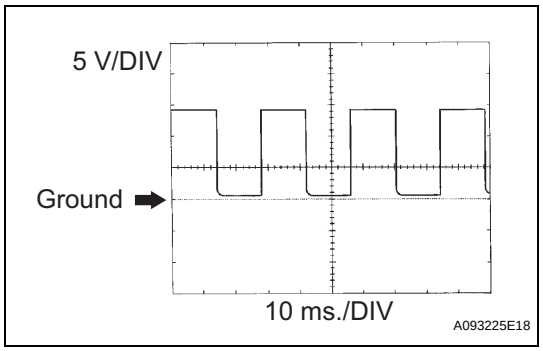
HINT:
The duty ratio varies depending on the throttle actuator operation.



(j) WAVEFORM 10
(1) Throttle drive motor operation signal (negative terminal)

ECM Terminal Names	Between M- and ME01
Tester Ranges	5 V/DIV, 1 ms./DIV
Conditions	Idling with warm engine

HINT:
The duty ratio varies depending on the throttle actuator operation.



(k) WAVEFORM 11
(1) Engine speed signal

ECM Terminal Names	Between TACH and E1
Tester Ranges	5 V/DIV, 10 ms./DIV
Conditions	Idling

HINT:
The wavelength becomes shorter as the engine rpm increases.

ES

DIAGNOSIS SYSTEM

1. DESCRIPTION

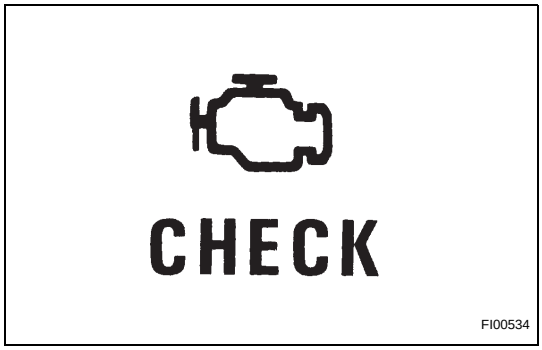
When troubleshooting OBD II (On-Board Diagnostics) vehicles, the intelligent tester (complying with SAE J1987) must be connected to the DLC3 (Data Link Connector 3) of the vehicle. Various data in the vehicle's ECM (Engine Control Module) can be then read.

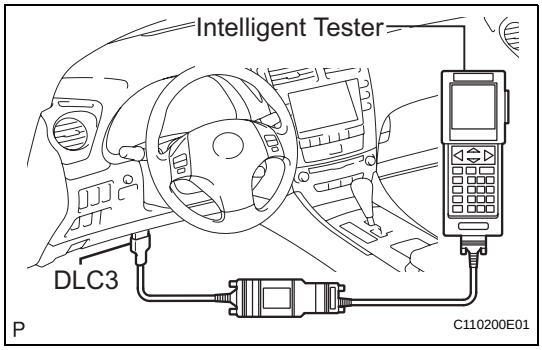
OBD ll regulations require that the vehicle's on-board computer illuminates the MIL (Malfunction Indicator Lamp) on the instrument panel when the computer detects a malfunction in:

(a) The emission control systems and components.
(b) The power train control components (which affect vehicle emissions).
(c) The computer itself.

In addition, the applicable DTCs (Diagnostic Trouble Codes) prescribed by SAE J2012 are recorded on 3 consecutive trips, the MIL turns off automatically but the DTCs remain recorded in the ECM memory.

To check for DTCs, connect the intelligent tester to the DLC3. The tester displays DTCs, freeze frame data, and a variety of the engine data. The DTCs and freeze frame data can be erased with the tester. In order to enhance OBD function on vehicles and develop the Off-Board diagnosis system, CAN communication is introduced in this system (CAN: Controller Area Network). It minimizes a gap between technician skills and vehicle technology. CAN is a network, which uses a pair of data transmission lines, spanning multiple computers and sensors. It allows a high speed communication between the systems and simplification of the wire harness connection. Since this system is equipped with the CAN communication, connecting the CAN VIM (VIM: Vehicle Interface Module) with the intelligent tester is necessary to display any information from the ECM. (Also the communication between the intelligent tester and the ECM uses CAN communication signal). When confirming the DTCs and any data of the ECM, connect the CAN VIM between the DLC3 and the intelligent tester.





2. NORMAL MODE AND CHECK MODE

The diagnosis system operates in normal mode during normal vehicle use. In normal mode, 2 trip detection logic is used to ensure accurate detection of malfunctions. Check mode is also available as an option for technicians. In check mode, 1 trip detection logic is used for simulating malfunction symptoms and increasing the system's ability to detect malfunctions, including intermittent problems (intelligent tester only).

3. 2 TRIP DETECTION LOGIC

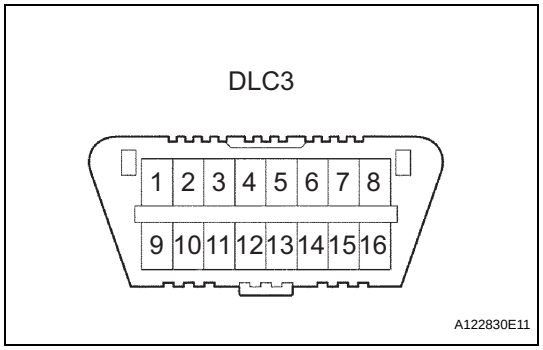
When a malfunction is first detected, the malfunction is temporarily stored in the ECM memory (1st trip). If the same malfunction is detected during the next subsequent drive cycle, the MIL is illuminated (2nd trip).

4. FREEZE FRAME DATA

The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

5. DLC3 (Data link Connector 3)

The vehicle's ECM uses ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.



Symbols	Terminal No.	Names	Reference terminal	Results	Condition
SIL	7	Bus "+" line	5 - Signal ground	Pulse generation	During transmission
CG	4	Chassis ground	Body ground	1 Ω or less	Always
SG	5	Signal ground	Body ground	1 Ω or less	Always
BAT	16	Battery ground	Body ground	9 to 14 V	Always
CANH	6	CAN "High" line	CANL	54 to 69 Ω	Engine switch off
CANH	6	CAN "High" line	Battery positive	1 MΩ or higher	Engine switch off
CANH	6	CAN "High" line	CG	1 kΩ or higher	Engine switch off
CANL	14	CAN "Low" line	Battery positive	1 MΩ or higher	Engine switch off
CANL	14	CAN "Low" line	CG	1 kΩ or higher	Engine switch off

HINT:

The DLC3 is the interface prepared for reading various data from the vehicle's ECM. After connecting the cable of an intelligent tester, turn the ignition switch on (IG) and turn the tester on. If a communication failure message is displayed on the tester screen (on the tester: UNABLE TO CONNECT TO VEHICLE), a problem exists in either the vehicle or tester. In order to identify the location of the problem, connect the tester to another vehicle.

If communication is normal: Inspect the DLC3 on the original vehicle.

If communication is still not possible: The problem is probably in the tester itself. Consult the Service Department listed in the instruction manual.

6. BATTERY VOLTAGE

Standard Voltage:

11 to 14 V

If voltage is below 11 V, replace or recharge the battery before proceeding to the next step.

7. MIL (Malfunction Indicator Lamp)

(a) The MIL is illuminated when the engine switch is first turned on (the engine is not running).

(b) The MIL should turn OFF when the engine is started. If the MIL remains illuminated, the diagnosis system has detected a malfunction or abnormality in the system.

HINT:
If the MIL is not illuminated when the engine switch is first turned on, check the MIL circuit (See page ES-471).

DTC CHECK / CLEAR

NOTICE:
When the diagnosis system is changed from the normal mode to check mode or vice versa, all DTCs and freeze frame data recorded in normal mode are erased. Before changing modes, always check and make a note of DTCs and freeze frame data.

HINT:

- DTCs which are stored in the ECM can be displayed on an intelligent tester. An intelligent tester can display the current and pending DTCs.
- Some DTCs are not set if the ECM does not detect the same malfunction again during a second consecutive driving cycle. However, such malfunctions, detected on only one occasion, are stored as pending DTCs.

1. CHECK DTC (Using an intelligent tester)

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester on.
(d) Enter the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Check the DTC(s) and freeze frame data, and then write them down.
(f) Check the details of the DTC(s) (See page ES-63).

2. CLEAR DTC (Using an intelligent tester)

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester on.
(d) Enter the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CLEAR CODES.
(e) Press the YES button.

3. CLEAR DTC (Without using an intelligent tester)

(a) Perform either one of the following operations:
(1) Disconnect the negative battery cable for more than 1 minute.
(2) Remove the EFI MAIN and ETCS fuses from the Engine Room relay block located inside the engine compartment for more than 1 minute.

FREEZE FRAME DATA

1. DESCRIPTION

The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air/fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

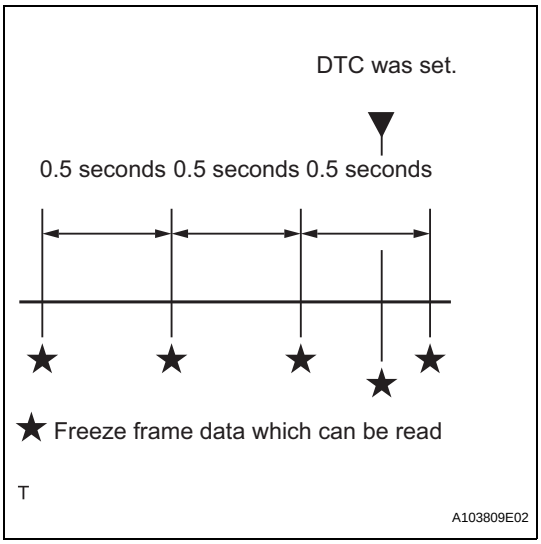
HINT:

If it is impossible to duplicate the problem even though a DTC is detected, confirm the freeze frame data.

The ECM records engine conditions as freeze frame data every 0.5 seconds. Using the intelligent tester, five separate sets of freeze frame data, including the data values at the time when the DTC was set, can be checked.

– 3 data set before the DTC was set.
– 1 data set when the DTC was set.
– 1 data set after the DTC was set.

These data sets can be used to simulate the condition of the vehicle around the time of the occurrence of the malfunction. The data may assist in identifying of the cause of the malfunction, and in judging whether it was temporary or not.



2. LIST OF FREEZE FRAME DATA

LABEL (Intelligent Tester Display)	Measurement Item/Range	Diagnostic Note
IGN ADVANCE	Ignition advance	-
CALC LOAD	Calculate load	Calculated load by ECM
VEHICLE LOAD	Vehicle load	-
MAF	Mass air flow volume	If value is approximately 0.0 g/s: • Mass air flow meter power source circuit open or shorted • VG circuit open or shorted If value is 160.0 g/s or more: • E2G circuit open
ENGINE SPD	Engine speed	-
VEHICLE SPD	Vehicle speed	Speed indicated on speedometer
COOLANT TEMP	Engine coolant temperature	If value is -40°C (-40°F), sensor circuit open If value is 140°C (284°F), sensor circuit shorted
INTAKE AIR	Intake air temperature	If value is -40°C (-40°F), sensor circuit open If value is 140°C (284°F), sensor circuit shorted
FUEL PRESS	Fuel pressure	-
AIR-FUEL PATIO	Air-fuel ratio	-
AMBIENT TEMP	Ambient temperature	-
PURGE DENSITY	Learning value of purge density	-
PURGE FLOW	Purge flow	-
EVAP PURGE VSV	EVAP purge VSV duty ratio	-
KNOCK CRRT VAL	Correction learning value of knocking	-

LABEL (Intelligent Tester Display)	Measurement Item/Range	Diagnostic Note
KNOCK FB VAL	Feedback value of knocking	-
ACCEL POS #1	Absolute Accelerator Pedal Position (APP) No. 1	-
ACCEL POS #2	Absolute APP No. 2	-
THROTTLE POS	Throttle position	Read value with ignition switch on (IG) (Do not start engine)
THROTTLE POS	Throttle sensor positioning	Read value with ignition switch on (IG) (Do not start engine)
THROTTLE POS #2	Throttle sensor positioning #2	-
THROTTLE MOT	Throttle motor	-
O2S B1 S2	Heated oxygen sensor output	Performing INJ VOL or A/F CONTROL function of ACTIVE TEST enables technician to check output voltage of sensor
O2S B2 S2	Heated oxygen sensor output	Performing INJ VOL or A/F CONTROL function of ACTIVE TEST enables technician to check output voltage of sensor
AFS B1 S1	A/F sensor output	Performing INJ VOL or A/F CONTROL function of ACTIVE TEST enables technician to check output voltage of sensor
AFS B2 S1	A/F sensor output	Performing INJ VOL or A/F CONTROL function of ACTIVE TEST enables technician to check output voltage of sensor
TOTAL FT #1	Total fuel trim	-
TOTAL FT #2	Total fuel trim	-
SHORT FT #1	Short-term fuel trim	Short-term fuel compensation used to maintain air-fuel ratio at stoichiometric air-fuel ratio
LONG FT #1	Long-term fuel trim	Overall fuel compensation carried out in long-term to compensate for a continual deviation of short-term fuel trim from central valve
SHORT FT #2	Short-term fuel trim	Short-term fuel compensation used to maintain air-fuel ratio at stoichiometric air-fuel ratio
LONG FT #2	Long-term fuel trim	Overall fuel compensation carried out in long-term to compensate for a continual deviation of short-term fuel trim from central valve
FUEL SYS #1	Fuel system status (Bank 1)	• OL (Open Loop): Has not yet satisfied conditions to go closed loop • CL (Closed Loop): Using heated oxygen sensor as feedback for fuel control • OL DRIVE: Open loop due to driving conditions (fuel enrichment) • OL FAULT: Open loop due to detected system fault • CL FAULT: Closed loop but heated oxygen sensor, which used for fuel control malfunctioning
FUEL SYS #2	Fuel system status (Bank 2)	• OL (Open Loop): Has not yet satisfied conditions to go closed loop • CL (Closed Loop): Using heated oxygen sensor as feedback for fuel control • OL DRIVE: Open loop due to driving conditions (fuel enrichment) • OL FAULT: Open loop due to detected system fault • CL FAULT: Closed loop but heated oxygen sensor, which used for fuel control malfunctioning
O2FT B1 S2	Fuel trim at heated oxygen sensor	Same as SHORT FT #1
O2FT B2 S2	Fuel trim at heated oxygen sensor	Same as SHORT FT #1

LABEL (Intelligent Tester Display)	Measurement Item/Range	Diagnostic Note
AF FT B1 S1	Fuel trim at A/F sensor	-
AF FT B2 S1	Fuel trim at A/F sensor	-
CAT TEMP B1 S1	Catalyst temperature	-

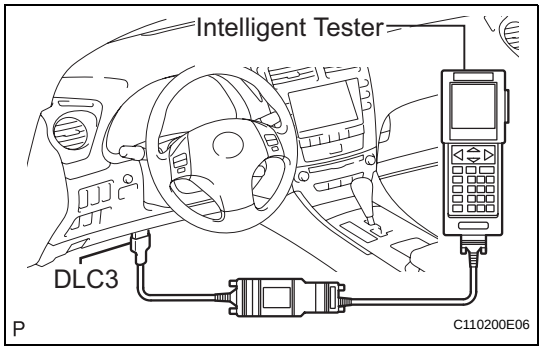
DIST DTC CLEAR	Accumulated distance after DTC cleared	-
WU CYC DTC CLEAR	Warm-up cycle after DTC cleared	-

CHECK MODE PROCEDURE

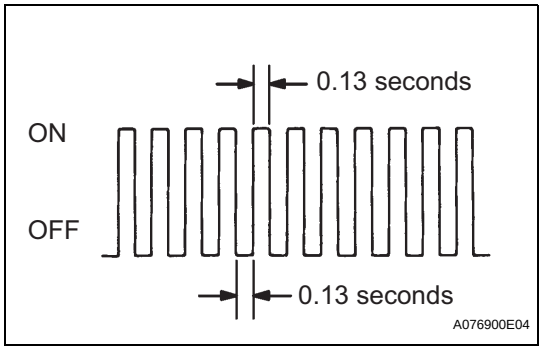
HINT:
Intelligent tester only:
Compared to the normal mode, check mode is more sensitive to malfunctions. Therefore, check mode can detect the malfunctions that cannot be detected in normal mode.
NOTICE:
All the stored DTCs and freeze frame data are erased if: 1) the ECM is changed from normal mode to check mode or vice versa; or 2) the engine switch is turned from on (IG) to ACC or off while in check mode. Before changing modes, always check and note any DTCs and freeze frame data.

ES



1. CHECK MODE PROCEDURE (Using an intelligent tester)

(a) Check and ensure the following conditions:
  (1) Battery positive voltage 11 V or more.
  (2) Throttle valve fully closed.
  (3) Transmission in the P or N position.
  (4) A/C switch OFF.
(b) Turn the engine switch off.
(c) Connect the intelligent tester to the DLC3.
(d) Turn the ignition switch on (IG).
(e) Turn the tester on.
(f) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / CHECK MODE.
(g) Switch the ECM from normal mode to check mode.



(h) Make sure that the MIL flashes as shown in the illustration.
(i) Start the engine.
(j) Make sure that the MIL turns OFF.
(k) Simulate the conditions of the malfunction described by the customer.
(l) Check for DTCs and freeze frame data using the tester.

FAIL-SAFE CHART

If any of the following DTCs are set, the ECM enters fail-safe mode to allow the vehicle to be driven temporarily.

DTCs	Components	Fail-Safe Operations	Fail-Safe Deactivation Conditions
P0031, P0032, P0051 and P0052	Air-Fuel Ratio (A/F) Sensor Heater	ECM turns off A/F sensor heater	Ignition switch off
P0037, P0038, P0057 and P0058	Heated Oxygen (HO2) Sensor Heater	ECM turns off HO2 sensor heater	Ignition switch off
P0100, P0102 and P0103	Mass Air Flow (MAF) Meter	ECM calculates ignition timing according to engine speed and throttle valve position	Pass condition detected
P0110, P0112 and P0113	Intake Air Temperature (IAT) Sensor	ECM estimates IAT to be 20°C (68°F)	Pass condition detected
P0115, P0117 and P0118	Engine Coolant Temperature (ECT) Sensor	ECM estimates ECT to be 80°C (176°F)	Pass condition detected
P0120, P0121, P0122, P0123, P0220, P0222, P0223, P0604, P0606, P0607, P0657, P2102, P2103, P2111, P2112, P2118, P2119 and P2135	Electronic Throttle Control System (ETCS)	ECM cuts off throttle actuator current and throttle valve returned to 6.5° throttle position by return spring ECM then adjusts engine output by controlling fuel injection (intermittent fuel-cut) and ignition timing in accordance with accelerator pedal opening angle, to allow vehicle to continue at minimal speed*	Pass condition detected and then ignition switch turned off
P0327, P0328, P0332 and P0333	Knock Sensor	ECM sets ignition timing to maximum retard	Ignition switch off
P0351 to P0356	Igniter	ECM cuts fuel	Pass condition detected
P2120, P2121, P2122, P2123, P2125, P2127, P2128 and P2138	Accelerator Pedal Position (APP) Sensor	APP sensor has 2 sensor circuits: Main and Sub If either of circuits malfunctions, ECM controls engine using the other circuit If both of circuits malfunction, ECM regards accelerator pedal as being released. As a result, throttle valve is closed and engine idles	Pass condition detected and then ignition switch turned off

NOTE:

*: The vehicle can be driven slowly when the accelerator pedal is depressed slowly. If the accelerator pedal is depressed quickly, the vehicle may speed up and slow down erratically.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

By reading the DATA LIST displayed on an intelligent tester, you can check values, including those of the switches, sensors, and actuators, without removing any parts. Reading the DATA LIST as the first step in troubleshooting is one method of shortening diagnostic time.

NOTICE:

In the table below, the values listed under Normal Condition are reference only. Do not depend solely on these values when determining whether or not a part is faulty.

(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the intelligent tester to the DLC3.
(d) Turn the ignition switch on (IG).
(e) Turn the tester on.
(f) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST.
(g) Check the values by referring to the table below.

Intelligent Tester Display	Measurement Item: Range (Display)	Normal Condition*1	Diagnostic Note
INJECTOR	Injection period of No. 1 cylinder: Min.: 0 ms, Max.: 32.64 ms	1.2 to 2.4 ms: Idling	-
IGN ADVANCE	Ignition timing advance for No. 1 cylinder: Min.: -64 deg, Max.: 63.5 deg	BTDC 7 to 24 deg: Idling	-
CALC LOAD	Load calculated by ECM: Min.: 0%, Max.: 100%	• 10 to 20%: Idling • 10 to 20%: Running without load at 2,500 rpm	Load value
VEHICLE LOAD	Vehicle load: Min.: 0%, Max.: 25,700%	Actual vehicle load	Load percentage in terms of maximum intake air flow amount
MAF	Air flow rate from MAF meter: Min.: 0 g/sec., Max.: 655.35 g/sec.	2 to 5 g/sec.: Idling 8 to 19 g/sec.: Running without load at 2,500 rpm	If value is approximately 0.0 g/sec.: • Mass air flow meter power source circuit open • VG circuit open or shorted If value is 160.0 g/sec. or more: • E2G circuit open
ENGINE SPD	Engine speed: Min.: 0 rpm, Max.: 16,383.75 rpm	600 to 700 rpm: Idling	-
VEHICLE SPD	Vehicle speed: Min.: 0 km/h, Max.: 255 km/h	Actual vehicle speed	Speed indicated on speedometer
COOLANT TEMP	Engine coolant temperature: Min.: -40°C, Max.: 140°C	80 to 100°C (176 to 212°F): After warming up	• If value is -40°C (-40°F): sensor circuit open • If value is 140°C (284°F) or more: sensor circuit shorted
INTAKE AIR	Intake air temperature: Min.: -40°C, Max.: 140°C	Equivalent to ambient air temperature	• If value is -40°C (-40°F): sensor circuit open • If value is 140°C (284°F) or more: sensor circuit shorted
AIR-FUEL RATIO	Ratio compared to stoichiometric level: Min.: 0, Max.: 1.999	0.8 to 1.2: Idling	-
PURGE DENSITY	Learning value of purge density: Min.: -50, Max.: 350	-40 to 0: Idling	Service data

Intelligent Tester Display	Measurement Item: Range (Display)	Normal Condition*1	Diagnostic Note
EVAP PURGE FLOW	Ratio of evaporative purge flow to intake air volume: Min.: 0%, Max.: 102.4%	0 to 8%: Idling	-
EVAP PURGE VSV	EVAP (PURGE) VSV control duty: Min.: 0%, Max.: 100%	0 to 100%: Idling	Command signal from ECM
VAPOR PRES PUMP	Vapor pressure: Min.: 33.853 kPa, Max.: 125.596 kPa	0 kPa: Fuel tank cap removed	EVAP system pressure monitored by canister pressure sensor
VAPOR PRES CALC	Vapor pressure (calculated): Min.: -5.632 kPa, Max.: 715.264 kPa	0 kPa: Fuel tank cap removed	EVAP system pressure monitored by canister pressure sensor
KNOCK CRRT VAL	Correction learning value of knocking: Min: -64°CA, Max.: 1,984°CA	0 to 22°CA: Driving at 70 km/h (44 mph)	Service data
KNOCK FB VAL	Feedback value of knocking: Min: -64°CA, Max.: 1,984°CA	-22 to 0°CA: Driving at 70 km/h (44 mph)	Service data
CLUTCH	Clutch current: Min.: 0 A, Max.: 2.49 A	-	-
EVAP VAPOR PRES	EVAP vapor pressure: Min.: 0 kPa, Max.: 327.675 kPa	0 kPa: Fuel tank cap removed	EVAP system pressure monitored by canister pressure sensor
ACCEL POS #1	Absolute Accelerator Pedal Position (APP) No. 1: Min.: 0%, Max.: 100%	10 to 22%: Accelerator pedal released 54 to 86%: Accelerator pedal fully depressed	Read value with ignition switch ON (Do not start engine)
ACCEL POS #2	Absolute APP No. 2: Min.: 0%, Max.: 100%	12 to 42%: Accelerator pedal released 66 to 98%: Accelerator pedal fully depressed	Read value with ignition switch ON (Do not start engine)
ACCEL POS #1	APP sensor No. 1 voltage: Min.: 0 V, Max.: 4.98 V	-	ETCS freeze frame data
ACCEL POS #2	APP sensor No. 2 voltage: Min.: 0 V, Max.: 4.98 V	-	ETCS freeze frame data
ACCEL POS #1	APP sensor No. 1 voltage: Min.: 0 V, Max.: 5 V	0.5 to 1.1 V: Accelerator pedal released 2.6 to 4.5 V: Accelerator pedal fully depressed	Read value with ignition switch ON (Do not start engine)
ACCEL POS #2	APP sensor No. 2 voltage: Min.: 0 V, Max.: 5 V	1.2 to 2.0 V: Accelerator pedal released 3.4 to 5.0 V: Accelerator pedal fully depressed	Read value with ignition switch ON (Do not start engine)
ACCEL IDL POS	Whether or not accelerator pedal position sensor detecting idle: ON or OFF	ON: Idling	-
THRTL LEARN VAL	Throttle valve fully closed (learned value): Min.: 0 V, Max.: 5 V	0.4 to 0.8 V	-
ACCEL SSR #1 AD	Accelerator fully closed value No. 1 (AD): Min.: 0 V, Max.: 4.98 V	-	ETCS service data
ACCEL LRN VAL#1	Accelerator fully closed learning value No. 1: Min.: 0 deg, Max.: 124.512 deg	-	ETCS service data
ACCEL LRN VAL#2	Accelerator fully closed learning value No. 2: Min.: 0 deg, Max.: 124.512 deg	-	ETCS service data
FAIL #1	Whether or not fail safe function executed: ON or OFF	ON: ETCS has failed	-

Intelligent Tester Display	Measurement Item: Range (Display)	Normal Condition*1	Diagnostic Note
FAIL #2	Whether or not fail safe function executed: ON or OFF	ON: ETCS has failed	-
ST1	Starter signal: ON or OFF	ON: Cranking	-
SYS GUARD JUDGE	System guard: ON or OFF	-	ETCS service data
OPN MALFUNCTION	Open side malfunction: ON or OFF	-	ETCS service data
THROTTLE POS	Absolute throttle position sensor: Min.: 0%, Max.: 100%	• 10 to 24%: Throttle fully closed • 64 to 96%: Throttle fully open	• Calculated value based on VTA1 • Read value with ignition switch ON (Do not start engine)
THROTTL IDL POS	Whether or not throttle position sensor detecting idle: ON or OFF	ON: Idling	-
THRTL REQ POS	Throttle requirement position: Min.: 0 V, Max.: 5 V	0.5 to 1.0 V: Idling	-
THROTTLE POS	Throttle position: Min.: 0%, Max.: 100%	0 to 18%: Idling	Calculated value based on VTA1
THROTTLE POS #2	Absolute throttle position sensor No. 2: Min.: 0%, Max.: 100%	-	Calculated value based on VTA2
THROTTLE POS #1	Throttle position sensor No. 1 output voltage: Min.: 0 V, Max.: 4.98 V	-	ETCS freeze frame data
THROTTLE POS #2	Throttle position sensor No. 2 output voltage: Min.: 0 V, Max.: 4.98 V	-	ETCS freeze frame data
THROTTLE POS #1	Throttle position sensor No. 1 output voltage: Min.: 0 V, Max.: 5 V	• 0.5 to 1.2 V: Throttle fully closed • 3.2 to 4.8 V: Throttle fully open	-
THROTTLE POS #2	Throttle position sensor No. 2 output voltage: Min.: 0 V, Max.: 5 V	• 2.0 to 2.9 V: Throttle fully closed • 4.6 to 5.0 V: Throttle fully open	Read value with ignition switch ON (Do not start engine)
THRTL COMND VAL	Throttle position command value: Min.: 0 V, Max.: 4.9804 V	0.5 to 4.8 V	Read value with ignition switch ON (Do not start engine)
THROTTLE SSR #1	Throttle sensor opener position No. 1: Min.: 0 V, Max.: 4.9804 V	0.6 to 0.9 V	ETCS service data
THROTTLE SSR #2	Throttle sensor opener position No. 2: Min.: 0 V, Max.: 4.9804 V	2.2 to 2.6 V	ETCS service data
THRTL SSR #1 AD	Throttle position sensor No. 1 output voltage (AD): Min.: 0 V, Max.: 4.9804 V	0.6 to 0.9 V	ETCS service data
THROTTLE MOT	Whether or not throttle actuator control permitted: ON or OFF	ON: Idling	Read value with ignition switch ON (Do not start engine)
THROTTLE MOT	Throttle actuator current: Min.: 0 A, Max.: 80 A	0 to 3.0 A: Idling	-
THROTTLE MOT	Throttle actuator: Min.: 0%, Max.: 100%	0.5 to 40%: Idling	-
THROTTLE MOT	Throttle actuator current: Min.: 0 A, Max.: 19.92 A	0 to 3.0 A: Idling	-

Intelligent Tester Display	Measurement Item: Range (Display)	Normal Condition*1	Diagnostic Note
THROTL OPN DUTY	Throttle actuator opening duty ratio: Min.: 0%, Max.: 100%	0 to 40%: Idling	• When accelerator pedal is depressed, duty ratio increaseds • Read value with ignition switch ON (Do not start engine)
THROTL CLS DUTY	Throttle actuator closed duty ratio: Min.: 0%, Max.: 100%	0 to 40%: Idling	• When accelerator pedal is increaseds quickly, duty ratio increaseds • Read value with ignition switch ON (Do not start engine)
THRTL MOT (OPN)	Throttle actuator duty ratio (open): Min.: 0%, Max.: 100%	-	ETCS service data
THRTL MOT (CLS)	Throttle actuator duty ratio (closed): Min.: 0%, Max.: 100%	-	ETCS service data
O2S B1 S2	Heated oxygen sensor output voltage for bank 1 sensor 2: Min.: 0 V Max.: 1.275 V	0.1 to 0.9 V: Driving at 70 km/h (44 mph)	Performing INJ VOL or A/F CONTROL function of ACTIVE TEST enables technician to check output voltage of sensor
O2S B2 S2	Heated oxygen sensor output voltage for bank 2 sensor 2: Min.: 0 V Max.: 1.275 V	0.1 to 0.9 V: Driving at 70 km/h (44 mph)	Performing INJ VOL or A/F CONTROL function of ACTIVE TEST enables technician to check output voltage of sensor
AF FT B1 S1	Short-term fuel trim associated with sensor 1: Min.: 0, Max.: 1.999	• Value less than 1 (0.000 to 0.999) =Lean • Stoichiometric air-fuel ratio=1 • Value greater than 1 (1.001 to 1.999) = Rich	-
AF FT B2 S1	Short-term fuel trim associated with sensor 1: Min.: 0, Max.: 1.999	• Value less than 1 (0.000 to 0.999) =Lean • Stoichiometric air-fuel ratio=1 • Value greater than 1 (1.001 to 1.999) = Rich	-
AFS B1 S1	A/F sensor output voltage for bank 1 sensor 1: Min.: 0 V Max.: 7.999 V	2.8 to 3.8 V: Idling	Performing INJ VOL or A/F CONTROL function of ACTIVE TEST enables technician to check output voltage of sensor
AFS B2 S1	A/F sensor output voltage for bank 2 sensor 1: Min.: 0 V Max.: 7.999 V	2.8 to 3.8 V: Idling	Performing INJ VOL or A/F CONTROL function of ACTIVE TEST enables technician to check output voltage of sensor
TOTAL FT #1	Total fuel trim of bank 1 Average value for fuel system of bank 1: Min.: -0.5, Max.: 0.496	-0.2 to 0.2: Idling	-
TOTAL FT #2	Total fuel trim of bank 2 Average value for fuel system of bank 2: Min.: -0.5, Max.: 0.496	-0.2 to 0.2: Idling	-
SHORT FT #1	Short-term fuel trim of bank 1: Min.: -100%, Max.: 99.2%	-20 to 20%	Short-term fuel compensation used to maintain air-fuel ratio at stoichiometric air-fuel ratio
SHORT FT #2	Short-term fuel trim of bank 2: Min.: -100%, Max.: 99.2%	-20 to 20%	Short-term fuel compensation used to maintain air-fuel ratio at stoichiometric air-fuel ratio
LONG FT #1	Long-term fuel trim of bank 1: Min.: -100%, Max.: 99.2%	-20 to 20%	Overall fuel compensation carried out in long-term to compensate for continual deviation of short-term fuel trim from central value

Intelligent Tester Display	Measurement Item: Range (Display)	Normal Condition*1	Diagnostic Note
LONG FT #2	Long-term fuel trim of bank 2: Min.: -100%, Max.: 99.2%	-20 to 20%	Overall fuel compensation carried out in long-term to compensate for continual deviation of short-term fuel trim from central value
FUEL SYS #1	Fuel system status (Bank 1): OL or CL or OL DRIVE or OL FAULT or CL FAULT	CL: Idling after warming up	• OL (Open Loop): Has not yet satisfied conditions to go closed loop • CL (Closed Loop): Using A/F sensor as feedback for fuel control • OL DRIVE: Open loop due to driving conditions (fuel enrichment) • OL FAULT: Open loop due to detected system fault • CL FAULT: Closed loop but A/F sensor, which used for fuel control malfunctioning
FUEL SYS #2	Fuel system status (Bank 2): OL or CL or OL DRIVE or OL FAULT or CL FAULT	CL: Idling after warming up	• OL (Open Loop): Has not yet satisfied conditions to go closed loop • CL (Closed Loop): Using A/F sensor as feedback for fuel control • OL DRIVE: Open loop due to driving conditions (fuel enrichment) • OL FAULT: Open loop due to detected system fault • CL FAULT: Closed loop but A/F sensor, which used for fuel control, malfunctioning
O2FT B1 S2	Short-term fuel trim associated with bank 1 sensor 2: Min.: -100%, Max.: 99.2%	-20 to 20%	Same as SHORT FT #1
O2FT B2 S2	Short-term fuel trim associated with bank 2 sensor 2: Min.: -100%, Max.: 99.2%	-20 to 20%	Same as SHORT FT #2
AF FT B1 S1	Short-term fuel trim associated with bank 1 sensor 1: Min.: 0, Max.: 1.999	• Value less than 1 (0.000 to 0.999) = Lean • Stoichiometric air-fuel ratio = 1 • Value greater than 1 (1.001 to 1.999) = Rich	-
AF FT B2 S1	Short-term fuel trim associated with bank 2 sensor 1: Min.: 0, Max.: 1.999	• Value less than 1 (0.000 to 0.999) = Lean • Stoichiometric air-fuel ratio = 1 • Value greater than 1 (1.001 to 1.999) = Rich	-
AFS B1 S1	A/F sensor current: Min.: -128 mA, Max.: 127.99 mA	-	-
AFS B2 S1	A/F sensor current: Min.: -128 mA, Max.: 127.99 mA	-	-
CAT TEMP B1S1	Estimated catalyst temperature (bank 1 sensor 1): Min.: -40°C, Max.: 6,513.5°C	-	-
CAT TEMP B1S2	Estimated catalyst temperature (bank 1 sensor 2): Min.: -40°C, Max.: 6,513.5°C	-	-
CAT TEMP B2S1	Estimated catalyst temperature (bank 2 sensor 1): Min.: -40°C, Max.: 6,513.5°C	-	-

Intelligent Tester Display	Measurement Item: Range (Display)	Normal Condition*1	Diagnostic Note
CAT TEMP B2S2	Estimated catalyst temperature (bank 2 sensor 2): Min.: -40°C, Max.: 6,513.5°C	-	-
S O2S B1S2	Sub heated oxygen sensor impedance (bank 1 sensor 2): Min.: 0 Ω, Max.: 21,247.68 Ω	-	-
S O2S B2S2	Sub heated oxygen sensor impedance (bank 2 sensor 2): Min.: 0 Ω, Max.: 21,247.68 Ω	-	-
INI COOL TEMP	Engine coolant temperature at engine start: Min.: -40°C, Max.: 120°C	Close to ambient air temperature	-
INI INTAKE TEMP	Intake air temperature at engine start: Min.: -40°C, Max.: 120°C	Close to ambient air temperature	-
INJ VOL	Injection volume (cylinder 1): Min.: 0 ml, Max.: 2.048 ml	Max.: 0.5 ml	Fuel volume injected over 10 injections
STARTER SIG	Starter signal: ON or OFF	ON: Cranking	-
PS SW	Power steering signal: ON or OFF	ON: Power steering operation	-
PS SIGNAL	Power steering signal (history): ON or OFF	ON: When steering wheel is first turned after battery terminals connected	Signal status usually ON until battery terminals disconnected
CTP SW	Closed throttle position switch: ON or OFF	• ON: Throttle fully closed • OFF: Throttle open	-
A/C SIGNAL	A/C signal: ON or OFF	ON: A/C ON	-
PNP SW [NSW]	PNP switch status: ON or OFF	ON: P or N position	-
ELECT LOAD SIG	Electrical load signal: ON or OFF	ON: Headlights or defogger turned ON	-
STOP LIGHT SW	Stop light switch: ON or OFF	ON: Brake pedal depressed	-
+BM	Whether or not electric throttle control system power input: ON or OFF	ON: Idling	-
+BM VOLTAGE	+BM voltage: Min.: 0, Max.: 19.922	10 to 15 V: Idling	ETCS service data
BATTERY VOLTAGE	Battery voltage: Min.: 0 V, Max.: 65.535 V	9 to 14 V: Idling	-
ACTUATOR POWER	Actuator power supply: ON or OFF	ON: Idling	ETCS service data
ATM PRESSURE	Atmospheric pressure: Min.: 0 kPa, Max.: 255 kPa	Equivalent to atmospheric pressure (absolute pressure)	-
BATTERY CURRENT	Battery current: Min.: -100 A, Max.: 100 A	-	-
BATTERY TEMP	Battery temperature: Min.: -45 °C, Max.: 156.4 °C	-	-
ALT OUTPUT DUTY	Generator output duty ratio: Min.: 0%, Max.: 100%	-	During charge control
ALT V NORMAL	Request output voltage: Min.: 0 V, Max.: 20 V	9 to 14 V	Not during alternator forced activation
ALT V ACT TST	Request output voltage: Min.: 0 V, Max.: 20 V	-	During alternator forced activation
FUEL PMP SP CTL	Fuel pump speed control status: ON or OFF	Idling: ON	Active Test support data

ES

Intelligent Tester Display	Measurement Item: Range (Display)	Normal Condition*1	Diagnostic Note
ACIS VSV	VSV for Acoustic Control Induction System Status: ON or OFF	-	ON: Open OFF: Closed
EVAP (Purge) VSV	Purge VSV status: ON or OFF	-	Active Test support data
FUEL PUMP / SPD	Fuel pump status: ON or OFF	-	Active Test support data
VVT CTRL B1	VVT control (bank 1) status: ON or OFF	-	Active Test support data
VVT CTRL B2	VVT control (bank 2) status: ON or OFF	-	Active Test support data
VACUUM PUMP	Key-off EVAP system leak detection pump status: ON or OFF	-	Active Test support data
EVAP VENT VAL	Key-off EVAP system vent valve status: ON or OFF	-	Active Test support data
FAN MOTOR	Electric fan motor: ON or OFF	ON: Electric fan motor operating	Active Test support data
AICV VSV	VSV for Air Intake Control System Status: ON or OFF	-	-
TC/TE1	TC and CG (TE1) terminal of DLC3: ON or OFF	-	Active Test support data
VVTL AIM ANGL#1*2	VVT aim angle (bank 1 Intake side): Min.: 0%, Max.: 100%	-	-
VVT CHNG ANGL#1*2	VVT change angle (bank 1 Intake side): Min.: 0°FR, Max.: 60°FR	0 to 5°FR: Idling	Displacement angle during intrusive operation
VVT OCV DUTY B1*2	VVT OCV operation duty (bank 1 Intake side): Min.: 0%, Max.: 100%	0 to 100%	Requested duty value for intrusive operation
VVT EX HOLD B1*2	VVT exhaust hold duty ratio learning value (bank 1 Exhaust side): Min.: 0%, Max.: 100%	10 to 50%: Idling	Requested duty value for intrusive operation
VVT EX CHG ANG1*2	VVT change angle (bank 1 Exhaust side): Min.: 0° FR, Max.: 60° FR	0 to 5° FR: Idling	Displacement angle during intrusive operation
VVT EX OCV D B1*2	VVT OCV operation duty (bank 1 Exhaust side): Min.: 0%, Max.: 100%	0 to 100%	Requested duty value for intrusive operation
VVTL AIM ANGL #2*2	VVT aim angle (bank 2 Intake side): Min.: 0%, Max.: 100%	-	-
VVT CHNG ANGL #2*2	VVT change angle (bank 2 Intake side): Min.: 0° FR, Max.: 60° FR	0 to 5° FR: Idling	Displacement angle during intrusive operation
VVT OCV DUTY B2*2	VVT OCV operation duty (bank 2 Intake side): Min.: 0%, Max.: 100%	0 to 100%	Requested duty value for intrusive operation
VVT EX HOLD B2*2	VVT exhaust hold duty ratio learning value (bank 2 Exhaust side): Min.: 0%, Max.: 100%	10 to 50%: Idling	Requested duty value for intrusive operation
VVT EX CHG ANG2*2	VVT change angle (bank 2 Exhaust side): Min.: 0° FR, Max.: 60° FR	0 to 5° FR: Idling	Displacement angle during intrusive operation

Intelligent Tester Display	Measurement Item: Range (Display)	Normal Condition*1	Diagnostic Note
VVT EX OCV D B2*2	VVT exhaust operation duty (bank 2 Exhaust side): Min.: 0%, Max.: 100%	0 to 100%	Requested duty value for intrusive operation
FC IDL	Fuel cut idle: ON or OFF	ON: Fuel cut operation	FC IDL = "ON" when throttle valve fully closed and engine speed over 2,800 rpm
FC TAU	Fuel cut TAU (Fuel cut with very light load): ON or OFF	ON: Fuel cut operating	Fuel cut being performed with very light load to prevent incomplete engine combustion
IGNITION	Ignition counter: Min.: 0, Max.: 800	0 to 800	-
CYL #1	Misfire ratio of cylinder 1: Min.: 0, Max.: 255	0	This item displayed only during idling
CYL #2	Misfire ratio of cylinder 2: Min.: 0, Max.: 255	0	This item displayed only during idling
CYL #3	Misfire ratio of cylinder 3: Min.: 0, Max.: 255	0	This item displayed only during idling
CYL #4	Misfire ratio of cylinder 4: Min.: 0, Max.: 255	0	This item displayed only during idling
CYL #5	Misfire ratio of cylinder 5: Min.: 0, Max.: 255	0	This item displayed only during idling
CYL #6	Misfire ratio of cylinder 6: Min.: 0, Max.: 255	0	This item displayed only during idling
CYL ALL	All cylinders misfire rate: Min.: 0, Max.: 255	0 to 35	-
MISFIRE RPM	Engine RPM for first misfire range: Min.: 0 rpm, Max.: 6,375 rpm	0 rpm: Misfire 0	-
MISFIRE LOAD	Engine load for first misfire range: Min.: 0 g/rev, Max.: 3.98 g/rev	0 g/rev: Misfire 0	-
MISFIRE MARGIN	Misfire monitoring: Min.: -100%, Max.: 99.22%	-100 to 99.22%	Misfire detecting margin
#CODES	#Codes: Min.: 0, Max.: 255	-	Number of detected DTCs
CHECK MODE	Check mode: ON or OFF	ON: Check mode ON	(see page ES-49)
SPD TEST	Check mode result for vehicle speed sensor: COMPL or INCMPL	-	-
MISFIRE TEST	Check mode result for misfire monitor: COMPL or INCMPL	-	-
OXS1 TEST	Check mode result for HO2 sensor (bank 1): COMPL or INCMPL	-	-
OXS2 TEST	Check mode result for HO2 sensor (bank 2): COMPL or INCMPL	-	-
A/F SSR TEST B1	Check mode result for air-fuel ratio sensor (bank 1): COMPL or INCMPL	-	-
A/F SSR TEST B2	Check mode result for air-fuel ratio sensor (bank 2): COMPL or INCMPL	-	-
MIL	MIL status: ON or OFF	ON: MIL ON	-
MIL ON RUN DIST	MIL ON run distance: Min.: 0 km, Max.: 65,535 km	Distance driven after DTC detected	-

Intelligent Tester Display	Measurement Item: Range (Display)	Normal Condition*1	Diagnostic Note
MIL ON RUN TIME	Running time from MIL ON: Min.: 0 minutes, Max.: 65,535 minutes	Running time after MIL ON	-
ENG RUN TIME	Engine run time: Min.: 0 seconds, Max.: 65,535 seconds	Time after engine start	-
TIME DTC CLEAR	Time after DTC cleared: Min.: 0 minutes, Max.: 65,535 minutes	Time after DTCs erased	-
DIST DTC CLEAR	Distance after DTC cleared: Min.: 0 km, Max.: 65,535 km	Distance driven after DTCs erased	-
WU CYC DTC CLEAR	Warm-up cycle after DTC cleared: Min.: 0, Max.: 255	-	Number of warm-up cycles after DTC cleared
OBD CERT	OBD requirement	OBD2	-
#CARB CODES	Number of emission related DTCs	-	-
COMP MON	Comprehensive component monitor: NOT AVL or AVAIL	-	-

CAT CMPL	Catalyst monitor: COMPL or INCMPL	-	-
MODEL CODE	Model code information	-	Identifying model code: GSA3#
ENGINE TYPE	Engine type information	-	Identifying engine type: 2GRFE
CYLINDER NUMBER	Cylinder number: Min.: 0, Max.: 255	-	Identifying cylinder number: 6
TRANSMISSION	Transmission type information	-	Identifying transmission type: 5AT
DESTINATION	Destination information	-	Identifying destination: A (America)
MODEL YEAR	Model year: Min.: 1900, Max.: 2155	-	Identifying model year: 200#
SYSTEM	Engine system information	-	Identifying engine system: GASLIN (gasoline engine)

HINT:

- *1: If no idling conditions are specified, the transmission gear selector lever should be in the N or P position, and the A/C switch and all accessory switches should be OFF.
- *2: DATA LIST values are displayed only when performing the following ACTIVE TESTs: VVT B1, VVT B2, VVT EX B1 and VVT EX B2. For other ACTIVE TESTs, the DATA LIST value will be 0.

ES

2. ACTIVE TEST

HINT:

Performing an ACTIVE TEST enables components including the relays, VSV (Vacuum Switching Valve) and actuators, to be operated without removing any parts. The ACTIVE TEST can be performed with an intelligent tester. Performing an ACTIVE TEST as the first step in troubleshooting is one method of shortening diagnostic time.

DATA LIST can be displayed during ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester on.
(d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST.
(e) Perform the ACTIVE TEST by referring to the table below.

Intelligent Tester Displays	Test Details	Control Ranges	Diagnostic Note
INJ VOL	Change injection volume	Between -12.5 and 24.8 %	• All injectors tested at the same time • Perform test at less than 3,000 rpm • Injection volume can be changed in 1 % graduations within control range
A/F CONTROL	Change injection volume	Lower by 12.5 % or increase by 24.8 %	• Perform test at less than 3,000 rpm • A/F CONTROL enables to check and to graph A/F (Air Fuel Ratio) sensor and Heated Oxygen (HO2) sensor voltage outputs • To conduct test, select following menu items: ACTIVE TEST / A/F CONTROL / USER DATA / AFS B1S1 and O2S B1S2, and press YES and ENTER followed by F4
FUEL PMP SP CTL	Fuel pump speed control	ON (low speed)/OFF (high speed)	Test is possible when following conditions are met: • Ignition switch is on (IG) • Engine is stopped
EVAP (PURGE) VSV	Activate VSV for EVAP (Purge)	ON/OFF	-
EVAP VSV (ALONE)	Activate EVAP VSV control	ON/OFF	-
VVT CTRL B1	Turn on and off OCV (Oil Control Valve)	ON/OFF	• Engine stalls or idles roughly when OCV turned ON • Normal engine running or idling when OCV OFF
VVT CTRL B2	Turn on and off OCV (Oil Control Valve)	ON/OFF	• Engine stalls or idles roughly when OCV turned ON • Normal engine running or idling when OCV OFF
A/C MAG CLUTCH	Control the A/C magnet clutch	ON/OFF	-
FUEL PUMP / SPD	Activate fuel pump (C/OPN Relay)	ON/OFF	-
TC/TE1	Turn on and off TC and TE1 connection	ON/OFF	• ON: TC and TE1 connected • OFF: TC and TE1 disconnected
FC IDL PROHBT	Prohibit idling fuel cut control	ON/OFF	-

Intelligent Tester Displays	Test Details	Control Ranges	Diagnostic Note
COOLING FAN	Control Electric Cooling Fan	ON/OFF	Test is possible when following conditions are met: • Ignition switch is on (IG) • Ignition is stopped
ACC CUT	Active ACC cut relay	ON/OFF	Test is possible when following conditions are met: • Ignition switch is on (IG) • Ignition is stopped
STARTER	Starter	ON/OFF	-
ETCS OPEN SLOW	Throttle actuator	ON: Throttle valve opens slowly	Test is possible when following conditions are met: • Ignition switch is on (IG) • Ignition is stopped • Accelerator pedal is fully depressed (APP: 58 degrees or more)
ETCS CLOSE SLOW	Throttle actuator	ON: Throttle valve closes slowly	Same as above
ETCS OPEN FAST	Throttle actuator	ON: Throttle valve opens fast	Same as above
ETCS CLOSE FAST	Throttle actuator	ON: Throttle valve closes fast	Same as above
FUEL CUT #1	Cylinder #1 injector fuel cut	ON/OFF	Test is possible during vehicle stopping and engine idling.
FUEL CUT #2	Cylinder #2 injector fuel cut	ON/OFF	Same as above
FUEL CUT #3	Cylinder #3 injector fuel cut	ON/OFF	Same as above
FUEL CUT #4	Cylinder #4 injector fuel cut	ON/OFF	Same as above
FUEL CUT #5	Cylinder #5 injector fuel cut	ON/OFF	Same as above
FUEL CUT #6	Cylinder #6 injector fuel cut	ON/OFF	Same as above
COMPRESS CHECK	Check the cylinder compression pressure	ON/OFF	Fuel injection and ignition stop in all cylinders.
VVT B1	Control VVT (bank 1)	-128 to 127 % This valve added to present OCV control duty 100 %: Maximum advance -100 %: Maximum retard	Engine stalls or roughly idles when VVT actuator is operated by 100 %. Test is possible during idling.
VVT B2	Control VVT (bank 2)	Between -128 and 127%	Same as above
VVT EX B1	Control VVT (bank 1)	-128 to 127 % This valve added to present OCV control duty 100 %: Maximum advance -100 %: Maximum retard	-
VVT EX B2	Control VVT (bank 2)	Between -128 and 127 %	Same as above
TARGET FUEL PRS	Control the target fuel pressure	Between -12.5 and 24.8 %	Test is possible during vehicle stopping and engine idling.
INJ TIMING #1	Control injection timing #1	Between -16 CA and 16 CA	Test is possible during vehicle stopping and engine idling.
INJ TIMING #2	Control injection timing #2	Between -16 CA and 16 CA	Same as above
INJ TIMING #3	Control injection timing #3	Between -16 CA and 16 CA	Same as above
INJ TIMING #4	Control injection timing #4	Between -16 CA and 16 CA	Same as above
INJ TIMING #5	Control injection timing #5	Between -16 CA and 16 CA	Same as above
INJ TIMING #6	Control injection timing #6	Between -16 CA and 16 CA	Same as above
VACUUM PUMP	Vacuum pump	ON/OFF	-
VENT VALVE	Vent valve	ON/OFF	-

3. SYSTEM CHECK

HINT:

Performing a SYSTEM CHECK enables the system, which consists of multiple actuators, to be operated without removing any parts. In addition, it can show whether or not any DTCs are set, and can detect potential malfunctions in the system. The SYSTEM CHECK can be performed with an intelligent tester.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester on.
(d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / SYSTEM CHECK.
(e) Perform the SYSTEM CHECK by referring to the table below.

ES

Intelligent Tester Display	Test Detail	Recommended Fuel Temperature	Diagnostic Note
EVAP SYS CHECK (AUTO OPERATION)	Perform 4 steps in order to operate EVAP key-off monitor automatically	35°C (95°F) or less	• If no DTCs are in PENDING CODE after performing this test, system is functioning normally • Refer to EVAP system
EVAP SYS CHECK (MANUAL OPERATION)	Perform 4 steps in order to operate EVAP key-off monitor automatically	35°C (95°F) or less	• Used to detect malfunctioning parts • Refer to EVAP system

DIAGNOSTIC TROUBLE CODE CHART

HINT:
The parameters listed in the chart may not conform exactly to those read during the DTC check due to the type of instrument or other factors.
If a trouble code is displayed during the DTC check in the check mode, check the circuit for the code listed in the table below. For details of each code, refer to the "See page" column in the DTC chart.

SFI SYSTEM:

DTC No.	Detection Item	Suspected Trouble Area	MIL	Memory	See page
P0010	Camshaft Position "A" Actuator Circuit (Bank 1)	1. Open or short in Oil Control Valve (OCV) for intake camshaft circuit 2. OCV for intake camshaft (bank 1) 3. ECM	Comes on	DTC stored	ES-79
P0011	Camshaft Position "A" - Timing Over-Advanced or System Performance (Bank 1)	1. Valve timing 2. OCV for intake camshaft 3. OCV filter 4. Intake camshaft timing gear assembly 5. ECM	Comes on	DTC stored	ES-84
P0012	Camshaft Position "A" - Timing Over-Retarded (Bank 1)	Same as DTC P0011	Comes on	DTC stored	ES-84
P0013	Camshaft Position "B" Actuator Circuit / Open (Bank 1)	1. Open or short in Oil Control Valve (OCV) for exhaust camshaft circuit 2. OCV for exhaust camshaft (bank 1) 3. ECM	Comes on	DTC stored	ES-91
P0014	Camshaft Position "B" - Timing Over-Advanced or System Performance (Bank 1)	1. Valve timing 2. OCV for exhaust camshaft 3. OCV filter 4. Exhaust camshaft 5. ECM	Comes on	DTC stored	ES-96
P0015	Camshaft Position "B" - Timing Over-Retarded (Bank 1)	Same as DTC P0014	Comes on	DTC stored	ES-96
P0016	Crankshaft Position - Camshaft Position Correlation (Bank 1 Sensor A)	1. Mechanical system (Timing chain has jumped teeth or chain is stretched) 2. ECM	Comes on	DTC stored	ES-104
P0017	Crankshaft Position - Camshaft Position Correlation (Bank 1 Sensor B)	Same as DTC P0016	Comes on	DTC stored	ES-104
P0018	Crankshaft Position - Camshaft Position Correlation (Bank 2 Sensor A)	Same as DTC P0016	Comes on	DTC stored	ES-104
P0019	Crankshaft Position - Camshaft Position Correlation (Bank 2 Sensor B)	Same as DTC P0016	Comes on	DTC stored	ES-104

DTC No.	Detection Item	Suspected Trouble Area	MIL	Memory	See page
P0020	Camshaft Position "A" Actuator Circuit (Bank 2)	1. Open or short in Oil Control Valve (OCV) for intake camshaft circuit 2. OCV for intake camshaft (bank 2) 3. ECM	Comes on	DTC stored	ES-79
P0021	Camshaft Position "A" - Timing Over-Advanced or System Performance (Bank 2)	Same as DTC P0011	Comes on	DTC stored	ES-84
P0022	Camshaft Position "A" - Timing Over-Retarded (Bank 2)	Same as DTC P0011	Comes on	DTC stored	ES-84
P0023	Camshaft Position "B" Actuator Circuit / Open (Bank 2)	1. Open or short in Oil Control Valve (OCV) for exhaust camshaft circuit 2. OCV for exhaust camshaft (bank 2) 3. ECM	Comes on	DTC stored	ES-91
P0024	Camshaft Position "B" - Timing Over-Advanced or System Performance (Bank 2)	Same as DTC P0014	Comes on	DTC stored	ES-96
P0025	Camshaft Position "B" - Timing Over-Retarded (Bank 2)	Same as DTC P0014	Comes on	DTC stored	ES-96
P0031	Oxygen (A/F) Sensor Heater Control Circuit Low (Bank 1 Sensor 1)	1. Open in Air-Fuel Ratio (A/F) sensor heater circuit 2. A/F sensor heater (bank 1 sensor 1) 3. A/F sensor heater relay 4. ECM	Comes on	DTC stored	ES-107
P0032	Oxygen (A/F) Sensor Heater Control Circuit High (Bank 1 Sensor 1)	1. Short in A/F sensor heater circuit 2. A/F sensor heater (bank 1 sensor 1) 3. A/F sensor heater relay 4. ECM	Comes on	DTC stored	ES-107
P0037	Oxygen Sensor Heater Control Circuit Low (Bank 1 Sensor 2)	1. Open in Heated Oxygen (HO2) sensor heater circuit 2. HO2 sensor heater (bank 1 sensor 2) 3. Engine room junction block (EFI relay) 4. ECM	Comes on	DTC stored	ES-115
P0038	Oxygen Sensor Heater Control Circuit High (Bank 1 Sensor 2)	1. Short in HO2 sensor heater circuit 2. HO2 sensor heater (bank 1 sensor 2) 3. Engine room junction block (EFI relay) 4. ECM	Comes on	DTC stored	ES-115

DTC No.	Detection Item	Suspected Trouble Area	MIL	Memory	See page
P0051	Oxygen (A/F) Sensor Heater Control Circuit Low (Bank 2 Sensor 1)	1. Open in A/F sensor heater circuit 2. A/F sensor heater (bank 2 sensor 1) 3. A/F sensor heater relay 4. ECM	Comes on	DTC stored	ES-107
P0052	Oxygen (A/F) Sensor Heater Control Circuit High (Bank 2 Sensor 1)	1. Short in A/F sensor heater circuit 2. A/F sensor heater (bank 2 sensor 1) 3. A/F sensor heater relay 4. ECM	Comes on	DTC stored	ES-107
P0057	Oxygen Sensor Heater Control Circuit Low (Bank 2 Sensor 2)	1. Open in HO2 sensor heater circuit 2. HO2 sensor heater (bank 2 sensor 2) 3. Engine room junction block (EFI relay) 4. ECM	Comes on	DTC stored	ES-115
P0058	Oxygen Sensor Heater Control Circuit High (Bank 2 Sensor 2)	1. Short in HO2 sensor heater circuit 2. HO2 sensor heater (bank 2 sensor 2) 3. Engine room junction block (EFI relay) 4. ECM	Comes on	DTC stored	ES-115
P0100	Mass or Volume Air Flow Circuit	1. Open or short in Mass Air Flow (MAF) meter circuit 2. MAF meter 3. ECM	Comes on	DTC stored	ES-125
P0101	Mass Air Flow Circuit Range / Performance Problem	MAF meter	Comes on	DTC stored	ES-133
P0102	Mass or Volume Air Flow Circuit Low Input	1. Open in MAF meter circuit 2. Short in MAF meter circuit 3. MAF meter 4. ECM	Comes on	DTC stored	ES-125
P0103	Mass or Volume Air Flow Circuit High Input	1. Short in MAF meter circuit (+B circuit) 2. MAF meter 3. ECM	Comes on	DTC stored	ES-125
P0110	Intake Air Temperature Circuit Malfunction	1. Open or short in Intake Air Temperature (IAT) sensor circuit 2. IAT sensor (built into Mass Air Flow [MAF] meter) 3. ECM	Comes on	DTC stored	ES-136
P0111	Intake Air Temperature Sensor Gradient Too High	MAF meter	Comes on	DTC stored	ES-142

DTC No.	Detection Item	Suspected Trouble Area	MIL	Memory	See page
P0112	Intake Air Temperature Circuit Low Input	1. Short in IAT sensor circuit 2. IAT sensor (built into MAF meter) 3. ECM	Comes on	DTC stored	ES-136
P0113	Intake Air Temperature Circuit High Input	1. Open in IAT sensor circuit 2. IAT sensor (built into MAF meter) 3. ECM	Comes on	DTC stored	ES-136
P0115	Engine Coolant Temperature Circuit Malfunction	1. Open or short in Engine Coolant Temperature (ECT) sensor circuit 2. ECT sensor 3. ECM	Comes on	DTC stored	ES-145
P0116	Engine Coolant Temperature Circuit Range / Performance Problem	1. Thermostat 2. ECT sensor	Comes on	DTC stored	ES-151
P0117	Engine Coolant Temperature Circuit Low Input	1. Short in ECT sensor circuit 2. ECT sensor 3. ECM	Comes on	DTC stored	ES-145
P0118	Engine Coolant Temperature Circuit High Input	1. Open in ECT sensor circuit 2. ECT sensor 3. ECM	Comes on	DTC stored	ES-145
P0120	Throttle / Pedal Position Sensor / Switch "A" Circuit Malfunction	1. Throttle Position (TP) sensor (built into throttle body) 2. ECM	Comes on	DTC stored	ES-154
P0121	Throttle / Pedal Position Sensor / Switch "A" Circuit Range / Performance Problem	TP sensor (built into throttle body)	Comes on	DTC stored	ES-161
P0122	Throttle / Pedal Position Sensor / Switch "A" Circuit Low Input	1. TP sensor (built into throttle body) 2. Short in VTA1 circuit 3. Open in VC circuit 4. ECM	Comes on	DTC stored	ES-154
P0123	Throttle / Pedal Position Sensor / Switch "A" Circuit High Input	1. TP sensor (built into throttle body) 2. Open in VTA1 circuit 3. Open in E2 circuit 4. Short between VC and VTA1 circuits 5. ECM	Comes on	DTC stored	ES-154
P0125	Insufficient Coolant Temperature for Closed Loop Fuel Control	1. Cooling system 2. ECT sensor 3. Thermostat	Comes on	DTC stored	ES-165
P0128	Coolant Thermostat (Coolant Temperature Below Thermostat Regulating Temperature)	1. Thermostat 2. Cooling system 3. ECT sensor 4. ECM	Comes on	DTC stored	ES-168

DTC No.	Detection Item	Suspected Trouble Area	MIL	Memory	See page
P0136	Oxygen Sensor Circuit Malfunction (Bank 1 Sensor 2)	1. Open or short in HO2 sensor (bank 1 sensor 2) circuit 2. HO2 sensor (bank 1 sensor 2) 3. HO2 sensor heater (bank 1 sensor 2) 4. A/F sensor (bank 1 sensor 1) 5. Engine room junction block (EFI relay) 6. Gas leakage from exhaust system	Comes on	DTC stored	ES-171
P0137	Oxygen Sensor Circuit Low Voltage (Bank 1 Sensor 2)	1. Open in HO2 sensor (bank 1 sensor 2) circuit 2. HO2 sensor (bank 1 sensor 2) 3. HO2 sensor heater (bank 1 sensor 2) 4. Engine room junction block (EFI relay) 5. Gas leakage from exhaust system	Comes on	DTC stored	ES-171
P0138	Oxygen Sensor Circuit High Voltage (Bank 1 Sensor 2)	1. Short in HO2 sensor (bank 1 sensor 2) circuit 2. HO2 sensor (bank 1 sensor 2) 3. ECM internal circuit malfunction	Comes on	DTC stored	ES-171
P0141	Oxygen Sensor Heater Circuit Malfunction (Bank 1 Sensor 2)	1. HO2 sensor 2. ECM	Comes on	DTC stored	ES-115
P0156	Oxygen Sensor Circuit Malfunction (Bank 2 Sensor 2)	1. Open or short in HO2 sensor (bank 2 sensor 2) circuit 2. HO2 sensor (bank 2 sensor 2) 3. HO2 sensor heater (bank 2 sensor 2) 4. A/F sensor (bank 2 sensor 1) 5. Engine room junction block (EFI relay) 6. Gas leakage from exhaust system	Comes on	DTC stored	ES-171
P0157	Oxygen Sensor Circuit Low Voltage (Bank 2 Sensor 2)	1. Open in HO2 sensor (bank 2 sensor 2) circuit 2. HO2 sensor (bank 2 sensor 2) 3. HO2 sensor heater (bank 2 sensor 2) 4. Engine room junction block (EFI relay) 5. Gas leakage from exhaust system	Comes on	DTC stored	ES-171

DTC No.	Detection Item	Suspected Trouble Area	MIL	Memory	See page
P0158	Oxygen Sensor Circuit High Voltage (Bank 2 Sensor 2)	1. Short in HO2 sensor (bank 2 sensor 2) circuit 2. HO2 sensor (bank 2 sensor 2) 3. ECM internal circuit malfunction	Comes on	DTC stored	ES-171
P0161	Oxygen Sensor Heater Circuit Malfunction (Bank 2 Sensor 2)	1. HO2 sensor 2. ECM	Comes on	DTC stored	ES-115
P0171	System Too Lean (Bank 1)	1. Air induction system 2. Injector blockage 3. MAF meter 4. ECT sensor 5. Fuel pressure 6. Gas leakage from exhaust system 7. Open or short in A/F sensor (bank 1 sensor 1) circuit 8. A/F sensor (bank 1 sensor 1) 9. A/F sensor heater (bank 1 sensor 1) 10. A/F sensor heater relay 11. A/F sensor heater and A/F sensor heater relay circuits 12. PCV hose connections 13. PCV valve and hose 14. ECM	Comes on	DTC stored	ES-191
P0172	System Too Rich (Bank 1)	1. Injector leakage or blockage 2. MAF meter 3. ECT sensor 4. Ignition system 5. Fuel pressure 6. Gas leakage from exhaust system 7. Open or short in A/F sensor (bank 1 sensor 1) circuit 8. A/F sensor (bank 1 sensor 1) 9. A/F sensor heater (bank 1 sensor 1) 10. A/F sensor heater relay 11. A/F sensor heater and A/F sensor heater relay circuits 12. ECM	Comes on	DTC stored	ES-191

DTC No.	Detection Item	Suspected Trouble Area	MIL	Memory	See page
P0174	System Too Lean (Bank 2)	1. Air induction system 2. Injector blockage 3. MAF meter 4. ECT sensor 5. Fuel pressure 6. Gas leakage from exhaust system 7. Open or short in A/F sensor (bank 2 sensor 1) circuit 8. A/F sensor (bank 2 sensor 1) 9. A/F sensor heater (bank 2 sensor 1) 10. A/F sensor heater relay 11. A/F sensor heater and A/F sensor heater relay circuits 12. PCV hose connections 13. PCV valve and hose 14. ECM	Comes on	DTC stored	ES-191
P0175	System Too Rich (Bank 2)	1. Injector leakage or blockage 2. MAF meter 3. ECT sensor 4. Ignition system 5. Fuel pressure 6. Gas leakage from exhaust system 7. Open or short in A/F sensor (bank 2 sensor 1) circuit 8. A/F sensor (bank 2 sensor 1) 9. A/F sensor heater (bank 2 sensor 1) 10. A/F sensor heater relay 11. A/F sensor heater and A/F sensor heater relay circuits 12. ECM	Comes on	DTC stored	ES-191
P0220	Throttle / Pedal Position Sensor / Switch "B" Circuit	1. TP sensor (built into throttle body) 2. ECM	Comes on	DTC stored	ES-154
P0222	Throttle / Pedal Position Sensor / Switch "B" Circuit Low Input	1. TP sensor (built into throttle body) 2. Short in VTA2 circuit 3. Open in VC circuit 4. ECM	Comes on	DTC stored	ES-154
P0223	Throttle / Pedal Position Sensor / Switch "B" Circuit High Input	1. TP sensor (built into throttle body) 2. Open in VTA2 circuit 3. Open in E2 circuit 4. Short between VC and VTA2 circuits 5. ECM	Comes on	DTC stored	ES-154

DTC No.	Detection Item	Suspected Trouble Area	MIL	Memory	See page
P0300	Random / Multiple Cylinder Misfire Detected	1. Open or short in engine wire harness 2. Connector connections 3. Vacuum hose connection 4. Ignition system 5. Injector 6. Fuel pressure 7. Mass Air Flow (MAF) meter 8. Engine Coolant Temperature (ECT) sensor 9. Compression pressure 10. Valve clearance 11. Valve timing 12. PCV valve and hose 13. PCV hose connections 14. Air induction system 15. ECM	Comes on or flashes	DTC stored	ES-204
P0301	Cylinder 1 Misfire Detected	Same as DTC P0300	Comes on or flashes	DTC stored	ES-204
P0302	Cylinder 2 Misfire Detected	Same as DTC P0300	Comes on or flashes	DTC stored	ES-204
P0303	Cylinder 3 Misfire Detected	Same as DTC P0300	Comes on or flashes	DTC stored	ES-204
P0304	Cylinder 4 Misfire Detected	Same as DTC P0300	Comes on or flashes	DTC stored	ES-204
P0305	Cylinder 5 Misfire Detected	Same as DTC P0300	Comes on or flashes	DTC stored	ES-204
P0306	Cylinder 6 Misfire Detected	Same as DTC P0300	Comes on or flashes	DTC stored	ES-204
P0327	Knock Sensor 1 Circuit Low Input (Bank 1 or Single Sensor)	1. Short in knock sensor 1 circuit 2. Knock sensor 1 3. ECM	Comes on	DTC stored	ES-216
P0328	Knock Sensor 1 Circuit High Input (Bank 1 or Single Sensor)	1. Open in knock sensor 1 circuit 2. Knock sensor 1 3. ECM	Comes on	DTC stored	ES-216
P0332	Knock Sensor 2 Circuit Low Input (Bank 2)	1. Short in knock sensor 2 circuit 2. Knock sensor 2 3. ECM	Comes on	DTC stored	ES-216
P0333	Knock Sensor 2 Circuit High Input (Bank 2)	1. Open in knock sensor 2 circuit 2. Knock sensor 2 3. ECM	Comes on	DTC stored	ES-216
P0335	Crankshaft Position Sensor "A" Circuit	1. Open or short in Crankshaft Position Sensor (CKP) circuit 2. CKP sensor 3. Sensor plate (CKP sensor plate) 4. ECM	Comes on	DTC stored	ES-222
P0339	Crankshaft Position Sensor "A" Circuit Intermittent	Same as DTC P0335	Does not come on	DTC stored	ES-222

DTC No.	Detection Item	Suspected Trouble Area	MIL	Memory	See page
P0340	Camshaft Position Sensor Circuit Malfunction	1. Open or short in VVT sensor for intake camshaft circuit 2. VVT sensor for intake camshaft 3. Camshaft timing gear for intake camshaft 4. Jumped tooth of timing chain for intake camshaft 5. ECM	Comes on	DTC stored	ES-228
P0342	Camshaft Position Sensor "A" Circuit Low Input (Bank 1 or Single Sensor)	Same as DTC P0340	Comes on	DTC stored	ES-228
P0343	Camshaft Position Sensor "A" Circuit High Input (Bank 1 or Single Sensor)	Same as DTC P0340	Comes on	DTC stored	ES-228
P0345	Camshaft Position Sensor "A" Circuit (Bank 2)	Same as DTC P0340	Comes on	DTC stored	ES-228
P0347	Camshaft Position Sensor "A" Circuit Low Input (Bank 2)	Same as DTC P0340	Comes on	DTC stored	ES-228
P0348	Camshaft Position Sensor "A" Circuit High Input (Bank 2)	Same as DTC P0340	Comes on	DTC stored	ES-228
P0351	Ignition Coil "A" Primary / Secondary Circuit	1. Ignition system 2. Open or short in IGF1 or IGT circuit (1 to 6) between ignition coil and ECM 3. No. 1 to No. 6 ignition coils 4. ECM	Comes on	DTC stored	ES-234
P0352	Ignition Coil "B" Primary / Secondary Circuit	Same as DTC P0351	Comes on	DTC stored	ES-234
P0353	Ignition Coil "C" Primary / Secondary Circuit	Same as DTC P0351	Comes on	DTC stored	ES-234
P0354	Ignition Coil "D" Primary / Secondary Circuit	Same as DTC P0351	Comes on	DTC stored	ES-234
P0355	Ignition Coil "E" Primary / Secondary Circuit	Same as DTC P0351	Comes on	DTC stored	ES-234
P0356	Ignition Coil "F" Primary / Secondary Circuit	Same as DTC P0351	Comes on	DTC stored	ES-234
P0365	Camshaft Position Sensor "B" Circuit (Bank 1)	1. Open or short in VVT sensor for exhaust camshaft circuit 2. VVT sensor for exhaust camshaft 3. Exhaust camshaft 4. Jumped tooth of timing chain 5. ECM	Comes on	DTC stored	ES-243

DTC No.	Detection Item	Suspected Trouble Area	MIL	Memory	See page
P0367	Camshaft Position Sensor "B" Circuit Low Input (Bank 1)	1. Open or short in VVT sensor for exhaust camshaft circuit 2. VVT sensor for exhaust camshaft 3. Exhaust camshaft 4. Jumped tooth of timing chain 5. ECM	Comes on	DTC stored	ES-243
P0368	Camshaft Position Sensor "B" Circuit High Input (Bank 1)	1. Open or short in VVT sensor for exhaust camshaft circuit 2. VVT sensor for exhaust camshaft 3. Exhaust camshaft 4. Jumped tooth of timing chain 5. ECM	Comes on	DTC stored	ES-243
P0390	Camshaft Position Sensor "B" Circuit (Bank 2)	1. Open or short in VVT sensor for exhaust camshaft circuit 2. VVT sensor for exhaust camshaft 3. Exhaust camshaft 4. Jumped tooth of timing chain 5. ECM	Comes on	DTC stored	ES-243
P0392	Camshaft Position Sensor "B" Circuit Low Input (Bank 2)	1. Open or short in VVT sensor for exhaust camshaft circuit 2. VVT sensor for exhaust camshaft 3. Exhaust camshaft 4. Jumped tooth of timing chain 5. ECM	Comes on	DTC stored	ES-243
P0393	Camshaft Position Sensor "B" Circuit High Input (Bank 2)	1. Open or short in VVT sensor for exhaust camshaft circuit 2. VVT sensor for exhaust camshaft 3. Exhaust camshaft 4. Jumped tooth of timing chain 5. ECM	Comes on	DTC stored	ES-243
P0420	Catalyst System Efficiency Below Threshold (Bank 1)	1. Gas leakage from exhaust system 2. A/F sensor (bank 1 sensor 1) 3. HO2 sensor (bank 1 sensor 2) 4. Exhaust manifold (Three-Way Catalytic Converter [TWC])	Comes on	DTC stored	ES-249

DTC No.	Detection Item	Suspected Trouble Area	MIL	Memory	See page
P0430	Catalyst System Efficiency Below Threshold (Bank 2)	1. Gas leakage from exhaust system 2. A/F sensor (bank 2 sensor 1) 3. HO2 sensor (bank 2 sensor 2) 4. Exhaust manifold (Three-Way Catalytic Converter [TWC])	Comes on	DTC stored	ES-249
P043E	Evaporative Emission System Reference Orifice Clog Up	1. Pump module 2. Connector / wire harness (Pump module - ECM) 3. ECM	Comes on	DTC stored	ES-255
P043F	Evaporative Emission System Reference Orifice High Flow	1. Pump module 2. Connector / wire harness (Pump module - ECM) 3. ECM	Comes on	DTC stored	ES-255
P0441	Evaporative Emission Control System Incorrect Purge Flow	1. EVAP VSV 2. Connector / wire harness (EVAP VSV - ECM) 3. ECM 4. Pump module 5. Leakage from EVAP system 6. Leakage from EVAP line (EVAP VSV - Intake manifold)	Comes on	DTC stored	ES-260
P0450	Evaporative Emission Control System Pressure Sensor / Switch	1. Pump module (including pressure sensor) 2. ECM	Comes on	DTC stored	ES-267
P0451	Evaporative Emission Control System Pressure Sensor Range / Performance	1. Pump module (including pressure sensor) 2. Connector / wire harness (between pump module and ECM) 3. ECM	Comes on	DTC stored	ES-267
P0452	Evaporative Emission Control System Pressure Sensor / Switch Low Input	1. Pump module (including pressure sensor) 2. Connector / wire harness (between pump module and ECM) 3. ECM	Comes on	DTC stored	ES-267
P0453	Evaporative Emission Control System Pressure Sensor / Switch High Input	1. Pump module (include pressure sensor) 2. Connector / wire harness (between pump module and ECM) 3. ECM	Comes on	DTC stored	ES-267

DTC No.	Detection Item	Suspected Trouble Area	MIL	Memory	See page
P0455	Evaporative Emission Control System Leak Detected (Gross Leak)	1. Fuel tank cap (loose) 2. Leakage from EVAP line (Canister - Fuel tank) 3. Leakage from EVAP line (EVAP VSV - Canister) 4. Pump module 5. Leakage from fuel tank 6. Leakage from canister	Comes on	DTC stored	ES-274
P0456	Evaporative Emission Control System Leak Detected (Very Small Leak)	Same as DTC P0455	Comes on	DTC stored	ES-274
P0500	Vehicle Speed Sensor "A"	1. Vehicle speed sensor 2. Vehicle speed sensor signal circuit 3. Combination meter 4. ECM 5. Skid control ECU	Comes on	DTC stored	ES-279
P0504	Brake Switch "A" / "B" Correlation	1. Short in stop light switch signal circuit 2. Stop light switch 3. ECM	Does not come on	DTC stored	ES-284
P0505	Idle Control System Malfunction	1. ETCS (Electronic Throttle Control System) 2. Air induction system 3. PCV hose connection 4. ECM	Comes on	DTC stored	ES-288
P050A	Cold Start Idle Air Control System Performance	1. Throttle body assembly 2. MAF meter 3. Air induction system 4. PCV hose connections 5. VVT system 6. Air cleaner filter element 7. ECM	Comes on	DTC stored	ES-291
P050B	Cold Start Ignition Timing Performance	Same as DTC P050A	Comes on	DTC stored	ES-291
P0560	System Voltage	1. Open in back-up power source circuit 2. ECM	Comes on	DTC stored	ES-297
P0604	Internal Control Module Random Access Memory (RAM) Error	ECM	Comes on	DTC stored	ES-302
P0606	ECM / PCM Processor	ECM	Comes on (except when there is a malfunction in the ECM internal circuit)	DTC stored	ES-302

DTC No.	Detection Item	Suspected Trouble Area	MIL	Memory	See page
P0607	Control Module Performance	ECM	Comes on (except when there is a malfunction in the cruise control switch circuit)	DTC stored	ES-302
P0617	Starter Relay Circuit High	1. Park / Neutral Position (PNP) switch 2. Starter relay circuit 3. Cranking holding function circuit 4. Ignition switch 5. ECM	Comes on	DTC stored	ES-304

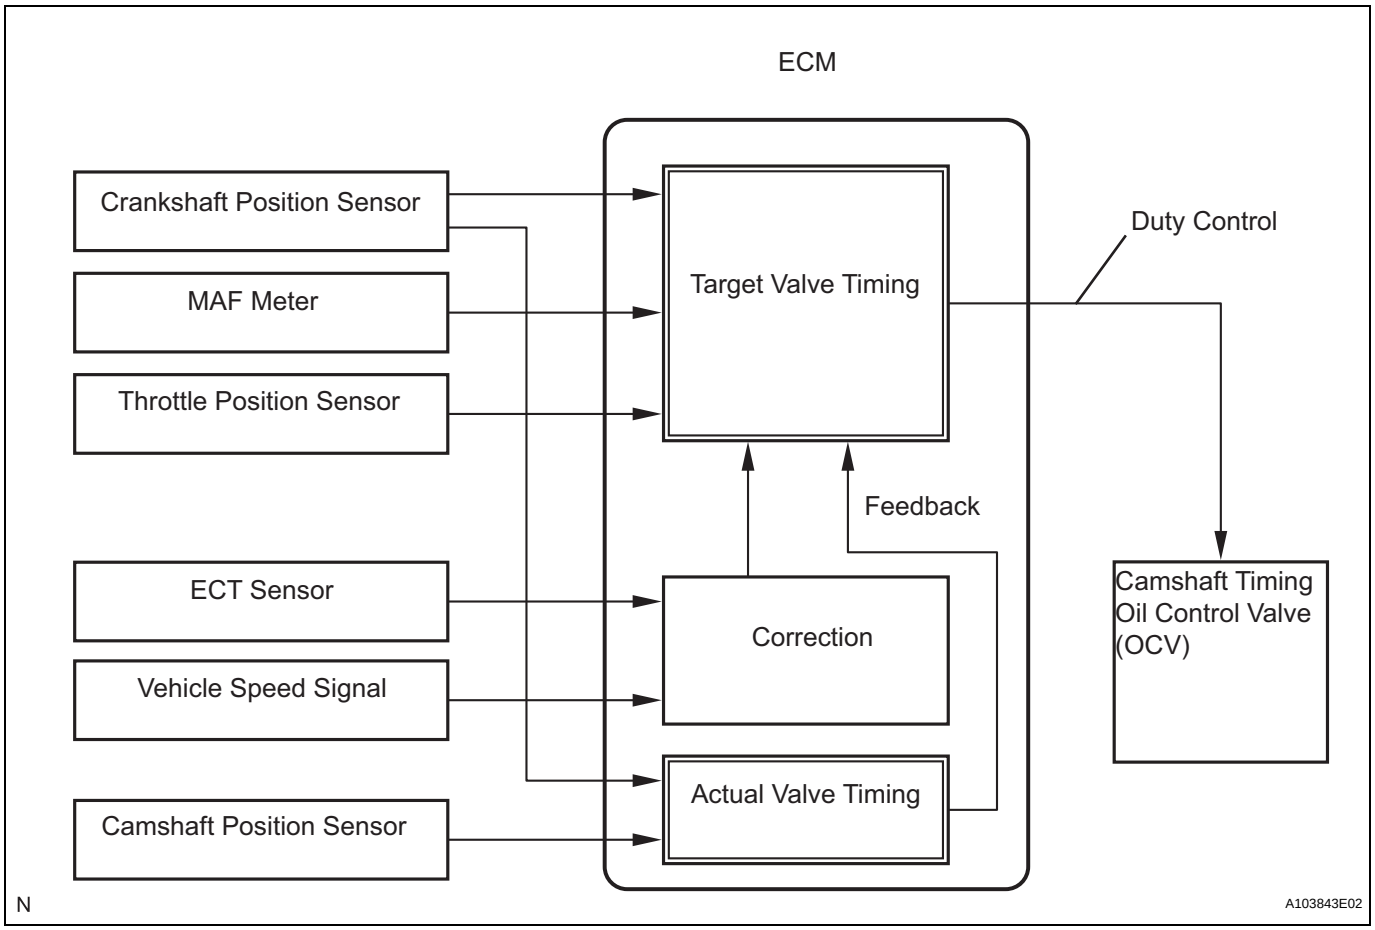
*1: This DTC is related to the A/F sensor, although the caption in the "Detection Item" column refers to the heated oxygen sensor.
*2: This DTC indicates a malfunction related to the primary circuit.

DTC	P0010	Camshaft Position "A" Actuator Circuit (Bank 1)

DTC	P0020	Camshaft Position "A" Actuator Circuit (Bank 2)

DESCRIPTION

The Variable Valve Timing (VVT) system includes the ECM, Oil Control Valve (OCV) and VVT controller. The ECM sends a target duty-cycle control signal to the OCV. This control signal regulates the oil pressure supplied to the VVT controller. Camshaft timing control is performed according to engine operating conditions such as intake air volume, throttle valve position and engine coolant temperature. The ECM controls the OCV, based on the signals transmitted by several sensors. The VVT controller regulates the intake camshaft angle using oil pressure through the OCV. As a result, the relative positions of the camshaft and crankshaft are optimized, the engine torque and fuel economy improves, and the exhaust emissions decrease under overall driving conditions. The ECM detects the actual intake valve timing using signals from the camshaft and crankshaft position sensors, and performs feedback control. This is how the target intake valve timing is verified by the ECM.



DTC No.	DTC Detection Condition	Trouble Area
P0010	Open or short in OCV for intake camshaft (bank 1) circuit (1 trip detection logic)	• Open or short in OCV for intake camshaft (bank 1) circuit • OCV for intake camshaft (bank 1) • ECM
P0020	Open or short in OCV for intake camshaft (bank 2) circuit (1 trip detection logic)	• Open or short in OCV for intake camshaft (bank 2) circuit • OCV for intake camshaft (bank 2) • ECM

MONITOR DESCRIPTION

After the ECM sends the "target" duty-cycle signal to the OCV, the ECM monitors the OCV current to establish an "actual" duty-cycle. The ECM detects a malfunction and sets a DTC when the actual duty-cycle ratio varies from the target duty-cycle ratio.

MONITOR STRATEGY

Related DTCs	P0010: VVT OCV (bank 1) open/short P0020: VVT OCV (bank 2) open/short
Required sensors / components (Main)	VVT OCV (Variable Valve Timing oil control valve)
Required sensors / components (Sub)	-
Frequency of operation	Continuous
Duration	1 second
MIL operation	Immediately
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

Monitor will run whenever these DTCs are not present	None
All of the following conditions are met:	-
Starter	OFF
Engine switch	ON
Time after turning ignition switch off to on (IG)	0.5 seconds or more

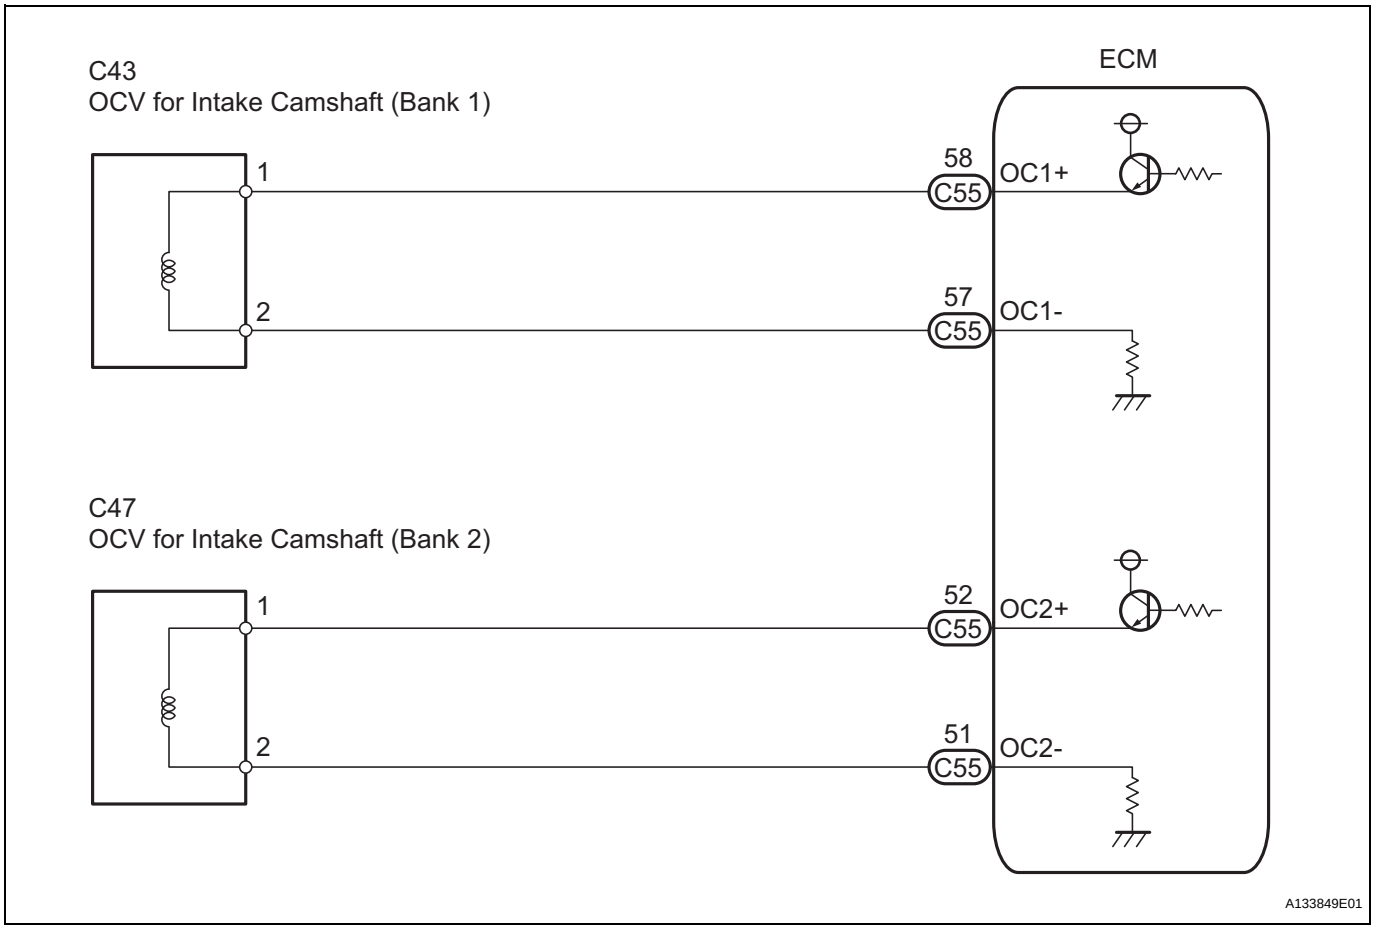
TYPICAL MALFUNCTION THRESHOLDS

One of the following conditions is met:	Condition A, B or C
A. All of the following conditions are met:	-
Battery voltage	11 to 13 V
Target duty ratio	Less than 70 %
Output signal duty ratio	100 %
B. All of the following conditions are met:	-
Battery voltage	13 V or more
Target duty ratio	Less than 80 %
Output signal duty ratio	100 %
C. All of the following conditions are met:	-
Current cut status	Not cut
Output signal duty ratio	3 % or less

COMPONENT OPERATING RANGE

VVT OCV duty ratio	More than 3 %, and Less than 100 %

WIRING DIAGRAM



ES

INSPECTION PROCEDURE

HINT:

- If DTC P0010 is displayed, check the intake camshaft circuit for the right bank VVT system.
- Bank 1 refers to the bank that includes cylinder No. 1.
- If DTC P0020 is displayed, check the intake camshaft circuit for the left bank VVT system.
- Bank 2 refers to the bank that does not include cylinder No. 1.
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

1	**PERFORM ACTIVE TEST BY CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (OCV)**

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the tester on.
(c) Warm up the engine.
(d) On the tester, enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / VVT CTRL B1 or VVT CTRL B2.
(e) Check the engine speed while operating the Oil Control Valve (OCV) using the tester.

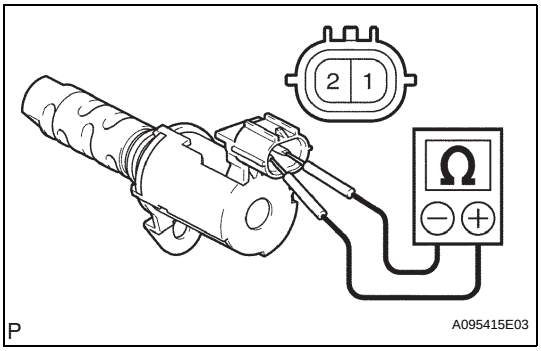
OK

Tester Operation	Specified Condition
OCV OFF	Normal engine speed
OCV ON	Engine idles roughly or stalls (soon after OCV switched from OFF to ON)

OK → **CHECK FOR INTERMITTENT PROBLEMS (See page ES-33)**

NG

2 INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY



(a) Disconnect the C43 or C47 OCV connector.
(b) Measure the resistance between the terminals of the OCV.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	6.9 to 7.9 Ω

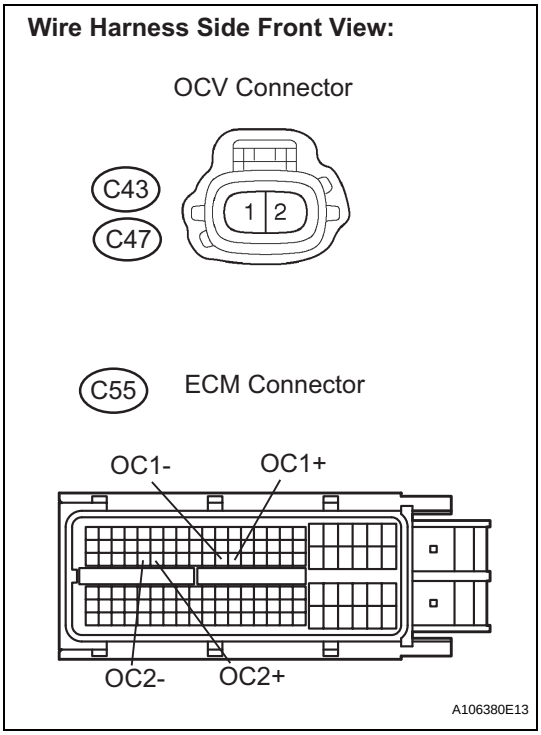
(c) Reconnect the OCV connector.

OK → **REPLACE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-481)**

NG

3 CHECK HARNESS AND CONNECTOR (OCV - ECM)

Wire Harness Side Front View:



(a) Disconnect the C43 or C47 OCV connector.
(b) Disconnect the C55 ECM connector.
(c) Measure the resistance between the terminals.

Standard resistance (Check for open)

Tester Connection	Specified Condition
OC1+ (C55-58) - C43-1	Below 1 Ω
OC1- (C55-57) - C43-2	Below 1 Ω
OC2+ (C55-52) - C47-1	Below 1 Ω
OC2- (C55-51) - C47-2	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
OC1+ (C55-58) or C43-1 - Body ground	10 kΩ or higher
OC1- (C55-57) or C43-2 - Body ground	10 kΩ or higher
OC2+ (C55-52) or C47-1 - Body ground	10 kΩ or higher
OC2- (C55-51) or C47-2 - Body ground	10 kΩ or higher

(d) Reconnect the OCV connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM (See page ES-518)

DTC	P0011	Camshaft Position "A" - Timing Over-Advanced or System Performance (Bank 1)

DTC	P0012	Camshaft Position "A" - Timing Over-Retarded (Bank 1)

DTC	P0021	Camshaft Position "A" - Timing Over-Advanced or System Performance (Bank 2)

DTC	P0022	Camshaft Position "A" - Timing Over-Retarded (Bank 2)

ES

DESCRIPTION

The Variable Valve Timing (VVT) system includes the ECM, Oil Control Valve (OCV) and VVT controller. The ECM sends a target duty-cycle control signal to the OCV. This control signal regulates the oil pressure supplied to the VVT controller. Camshaft timing control is performed according to engine operating conditions such as intake air volume, throttle valve position and engine coolant temperature. The ECM controls the OCV, based on the signals transmitted by several sensors. The VVT controller regulates the intake camshaft angle using oil pressure through the OCV. As a result, the relative positions of the camshaft and crankshaft are optimized, the engine torque and fuel economy improve, and the exhaust emissions decrease under overall driving conditions. The ECM detects the actual intake valve timing using signals from the camshaft and crankshaft position sensors, and performs feedback control. This is how the target intake valve timing is verified by the ECM.

DTC No.	DTC Detection Condition	Trouble Area
P0011 P0021	Advanced cam timing: With warm engine and engine speed of between 500 rpm and 4,000 rpm, all conditions (1), (2) and (3) are met (1 trip detection logic): 1. Difference between target and actual intake valve timing is more than 5°CA (Crankshaft Angle) for 4.5 seconds 2. Current intake valve timing is fixed (timing changes less than 5°CA in 5 seconds) 3. Variations in VVT controller timing is more than 19°CA of maximum delayed timing (advance)	• Valve timing • Oil Control valve (OCV) for intake camshaft (bank 1) • OCV filter (bank 1) • Intake camshaft (bank 1) timing gear assembly • ECM
P0012 P0022	Retarded cam timing: With warm engine and engine speed of between 500 rpm and 4,000 rpm, all conditions (1), (2) and (3) are met (2 trip detection logic): 1. Difference between target and actual intake valve timing is more than 5°CA (Crankshaft Angle) for 4.5 seconds 2. Current intake valve timing is fixed (timing changes less than 5°CA in 5 seconds) 3. Variations in VVT controller timing is 19°CA or less of maximum delayed timing (retarded)	• Valve timing • OCV for intake camshaft (bank 2) • OCV filter (bank 2) • Intake camshaft (bank 2) timing gear assembly • ECM

MONITOR DESCRIPTION

1. The ECM optimizes the intake valve timing using the VVT (Variable Valve Timing) system to control the intake camshaft. The VVT system includes the ECM, the Oil Control Valve (OCV) and the VVT controller.

2. The ECM sends a target duty-cycle control signal to the OCV. This control signal regulates the oil pressure supplied to the VVT controller. The VVT controller can advance or retard the intake camshaft. If the difference between the target and actual intake valve timing is large, and changes in the actual intake valve timing are small, the ECM interprets this as the VVT controller stuck malfunction and sets a DTC.
   Example:
   A DTC will be set when the following conditions 1), 2) and 3) are met:
   1) The difference between the target and actual intake valve timings is more than 5° CA (Crankshaft Angle) and the condition continues for more than 4.5 seconds.
   2) It takes 5 seconds or more to change the valve timing by 5° CA.
   3) After above conditions 1) and 2) are met, the OCV is forcibly activated 63 times or more.
3. DTCs P0011 and P0021 (Advanced Cam Timing) are detected with 1 trip detection logic.
4. DTCs P0012 and P0022 (Retarded Cam Timing) are detected with 2 trip detection logic.
   These DTCs indicate that the VVT controller cannot operate properly due to OCV malfunctions or the presence of foreign objects in the OCV.
5. The monitor will not run unless the following conditions are met:
   (a) The engine is warm (the engine coolant temperature is 75°C (167°F) or more).
   (b) The vehicle has been driven at more than 40 mph (64 km/h) for 3 minutes.
   (c) The engine has idled for 3 minutes.

ES

MONITOR STRATEGY

Related DTCs	P0011: Advanced camshaft timing (bank 1) P0012: Retard camshaft timing (bank 1) P0021: Advanced camshaft timing (bank 2) P0022: Retard camshaft timing (bank 2)
Required sensors / components (Main)	VVT OCV and VVT Actuator
Required sensors / components (Sub)	Crankshaft position sensor, camshaft position sensor and Engine coolant temperature sensor
Frequency of operation	Once per drive cycle
Duration	Within 10 seconds
MIL operation	Advanced camshaft timing (bank 1): Immediately Advanced camshaft timing (bank 2): Immediately Retard camshaft timing (bank 1): 2 driving cycles Retard camshaft timing (bank 2): 2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	P0100 - P0103 (MAF sensor) P0115 - P0118 (ECT sensor) P0125 (Insufficient ECT for closed loop) P0335 (CKP sensor) P0340, P0341 (CMP sensor) P0351 - P0358 (ignitor)
Battery voltage	11 V or more
Engine	500 to 4,000 rpm
ECT	75 to 100°C (167 to 212°F)

TYPICAL MALFUNCTION THRESHOLDS

Advanced camshaft timing:

Difference between actual valve timing and target valve timing	More than 5°CA
Valve timing	No change in advanced valve timing

Retard camshaft timing:

Difference between actual valve timing and target valve timing	More than 5°CA

Valve timing	No change in retarded valve timing

WIRING DIAGRAM

Refer to DTC P0010 (See page ES-81).

INSPECTION PROCEDURE

HINT:

Abnormal bank	Advanced timing over (Valve timing is out of specified range)	Retarded timing over (Valve timing is out of specified range)
Bank 1	P0011	P0012
Bank 2	P0021	P0022

- If DTC P0011 or P0012 is displayed, check the right bank VVT system for intake camshaft circuit (bank 1).
- Bank 1 refers to the bank that includes cylinder No. 1.
- If DTC P0021 or P0022 is displayed, check the intake camshaft circuit for the left bank VVT system (bank 2).
- Bank 2 refers to the bank that does not include cylinder No. 1.
- Read freeze frame data using an intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

1	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0011, P0012, P0021 OR P0022)**

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the tester on.
(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P0011, P0012, P0021 or P0022	A
P0011, P0012, P0021 or P0022 and other DTCs	B

HINT:
If any DTCs other than P0011, P0012, P0021 or P0022 are output, troubleshoot those DTCs first.

B → **GO TO DTC CHART (See page ES-63)**

A

2	**PERFORM ACTIVE TEST BY INTELLIGENT TESTER (OPERATE OCV)**

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the tester on.
(c) Warm up the engine.
(d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / VVT CTRL B1 or VVT CTRL B2.

(e) Check the engine speed while operating the Oil Control Valve (OCV) using the tester.

OK

Tester Operation	Specified Condition
OCV OFF	Normal engine speed
OCV ON	Engine idles roughly or stalls (soon after OCV switched from OFF to ON)

NG → **Go to step 4**

OK

3 CHECK WHETHER DTC OUTPUT RECURS (DTC P0011, P0012, P0021 OR P0022)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the tester on.
(c) Clear the DTCs.
(d) Start the engine and warm it up.
(e) Switch the ECM from normal mode to check mode using the tester.
(f) Drive the vehicle for more than 10 minutes.
(g) Read the DTCs using the tester.
OK:
No DTC output.

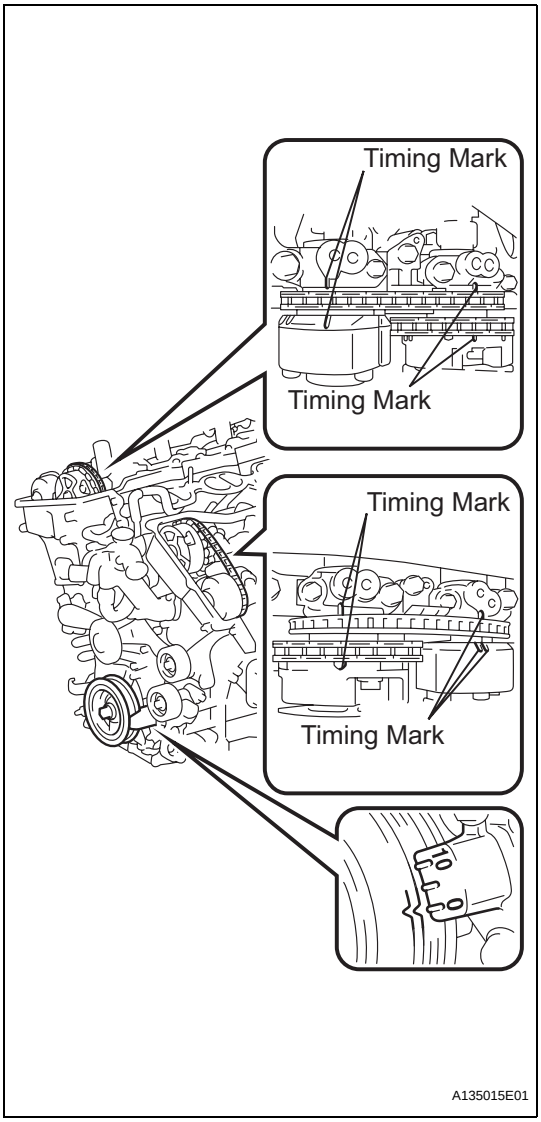
NG → **Go to step 4**

OK

END

ES

4	CHECK VALVE TIMING (CHECK FOR LOOSE AND JUMPED TEETH ON TIMING CHAIN)

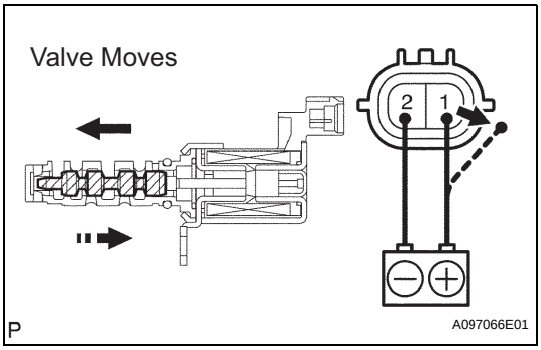


(a) Remove the cylinder head covers RH and LH.
(b) Turn the crankshaft pulley, and align its groove with the timing mark "0" of the timing chain cover.
(c) Check that the timing marks of the camshaft timing gears are aligned with the timing marks of the bearing cap as shown in the illustration.
If not, turn the crankshaft 1 revolution (360°), then align the marks as above.
OK:
Timing marks on camshaft timing gears are aligned as shown in the illustration.
(d) Reinstall the cylinder head cover.

NG → **ADJUST VALVE TIMING**

OK

5	INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (OCV)



(a) Remove the OCV.
(b) Measure the resistance between the terminals of the OCV.
Standard resistance

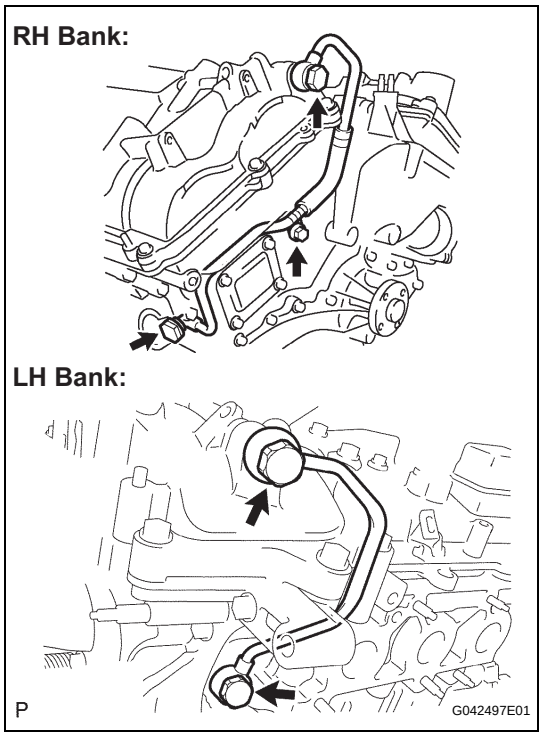
Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	6.9 to 7.9 Ω

(c) Apply positive battery voltage to terminal 1 and negative battery voltage to terminal 2. Check the valve operation.
OK:
Valve moves quickly.
(d) Reinstall the OCV.

NG → REPLACE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-481)

OK

6 INSPECT OIL CONTROL VALVE FILTER AND PIPE



(a) Remove the oil pipe No. 1 or No. 2.
(b) Remove the oil control valve filter.
(c) Check that the filter and pipe are not clogged.
OK:
The filter and pipe are not clogged.

NG → CLEAN OIL CONTROL VALVE FILTER AND PIPE

OK

7 REPLACE CAMSHAFT TIMING GEAR ASSEMBLY

NEXT

8 CHECK WHETHER DTC OUTPUT RECURS

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the tester on.
(c) Clear the DTCs.
(d) Start the engine and warm it up.
(e) Switch the ECM from normal mode to check mode using the tester.
(f) Driver the vehicle for more than 10 minutes.
(g) Read the output DTCs using the intelligent tester.
OK:
No DTC output.

HINT:
DTC P0011, P0012, P0021 or P0022 is output when foreign objects in engine oil are caught in some parts of the system. These codes will stay output even if the system returns to normal after a short time. These foreign objects are then captured by the oil filter, thus eliminating the source of the problem.

OK → **SYSTEM IS OK**

NG

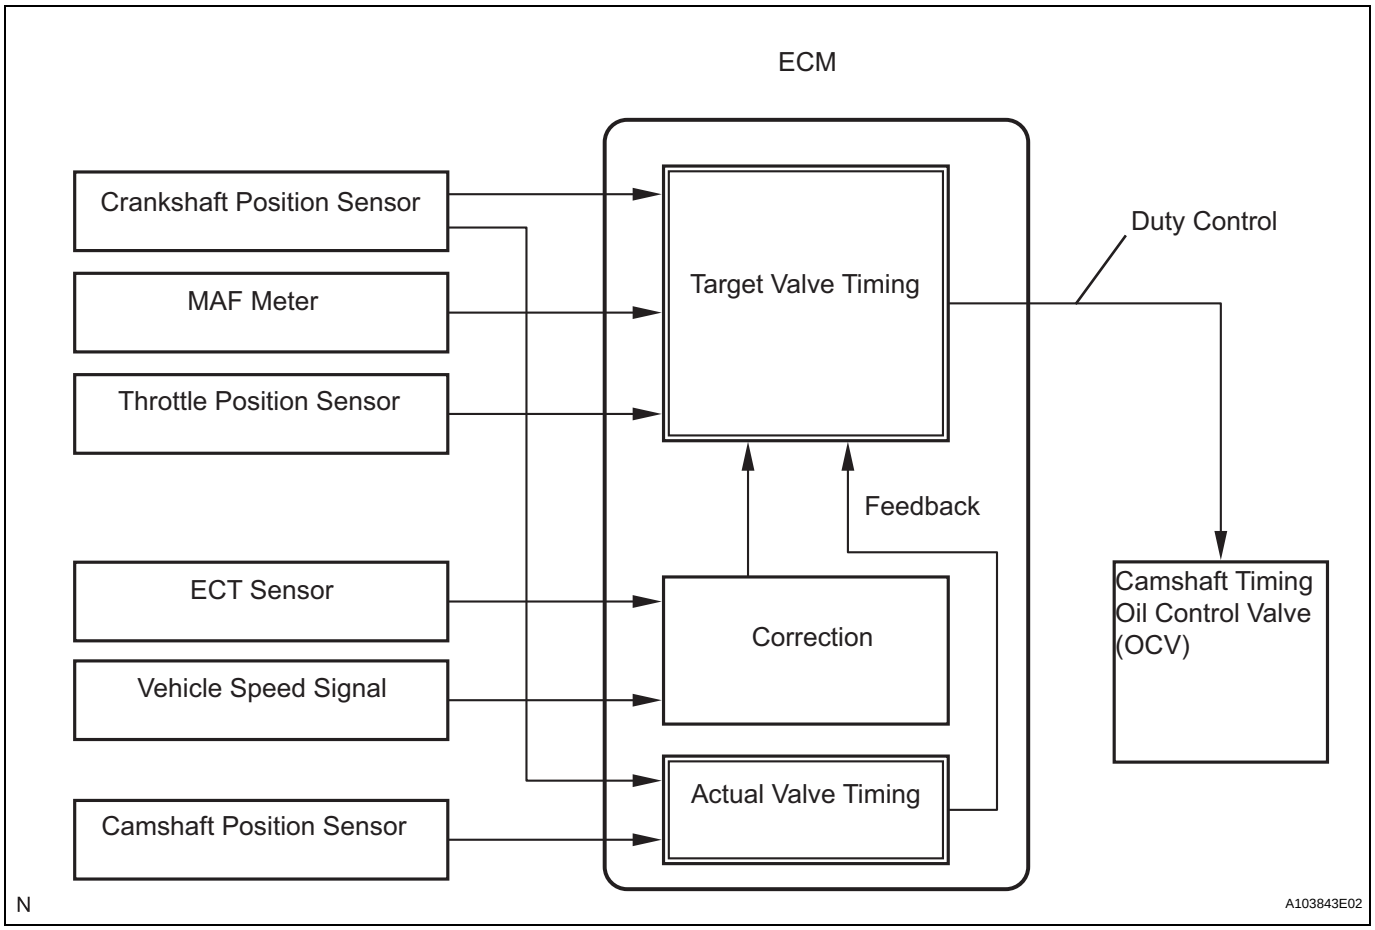
REPLACE ECM (See page ES-518)

DTC	P0013	Camshaft Position "B" Actuator Circuit / Open (Bank 1)

DTC	P0023	Camshaft Position "B" Actuator Circuit / Open (Bank 2)

DESCRIPTION

The Variable Valve Timing (VVT) system includes the ECM, OCV and VVT controller. The ECM sends a target duty-cycle control signal to the OCV. This control signal regulates the oil pressure supplied to the VVT controller. Camshaft timing control is performed according to engine operating conditions such as the intake air volume, throttle valve position and engine coolant temperature. The ECM controls the OCV, based on the signals transmitted by several sensors. The VVT controller regulates the exhaust camshaft angle using oil pressure through the OCV. As a result, the relative positions of the camshaft and crankshaft are optimized, the engine torque and fuel economy improve, and the exhaust emissions decrease under overall driving conditions. The ECM detects the actual exhaust valve timing using signals from the camshaft and crankshaft position sensors, and performs feedback control. This is how the target intake valve timing is verified by the ECM.



DTC No.	DTC Detection Condition	Trouble Area
P0013	Open or short in OCV for exhaust camshaft (bank 1) circuit (1 trip detection logic)	• Open or short in OCV for exhaust camshaft (bank 1) circuit • OCV for exhaust camshaft (bank 1) • ECM
P0023	Open or short in OCV for exhaust camshaft (bank 2) circuit (1 trip detection logic)	• Open or short in OCV for exhaust camshaft (bank 2) circuit • OCV for exhaust camshaft (bank 2) • ECM

MONITOR DESCRIPTION

The ECM optimizes the valve timing using the VVT system to control the exhaust camshaft. The VVT system includes the ECM, the OCV and the VVT controller. The ECM sends a target duty-cycle control signal to the OCV. This control signal regulates the oil pressure supplied to the VVT controller. The VVT controller can advance or retard the exhaust camshaft.
After the ECM sends the target duty-cycle signal to the OCV, the ECM monitors the OCV current to establish an actual duty-cycle. The ECM determines the existence of a malfunction and sets the DTC when the actual duty-cycle ratio varies from the target duty-cycle ratio.

MONITOR STRATEGY

Related DTCs	P0013: VVT OCV (bank 1) open/short P0023: VVT OCV (bank 2) open/short
Required sensors / components (Main)	VVT OCV (Variable Valve Timing oil control valve)

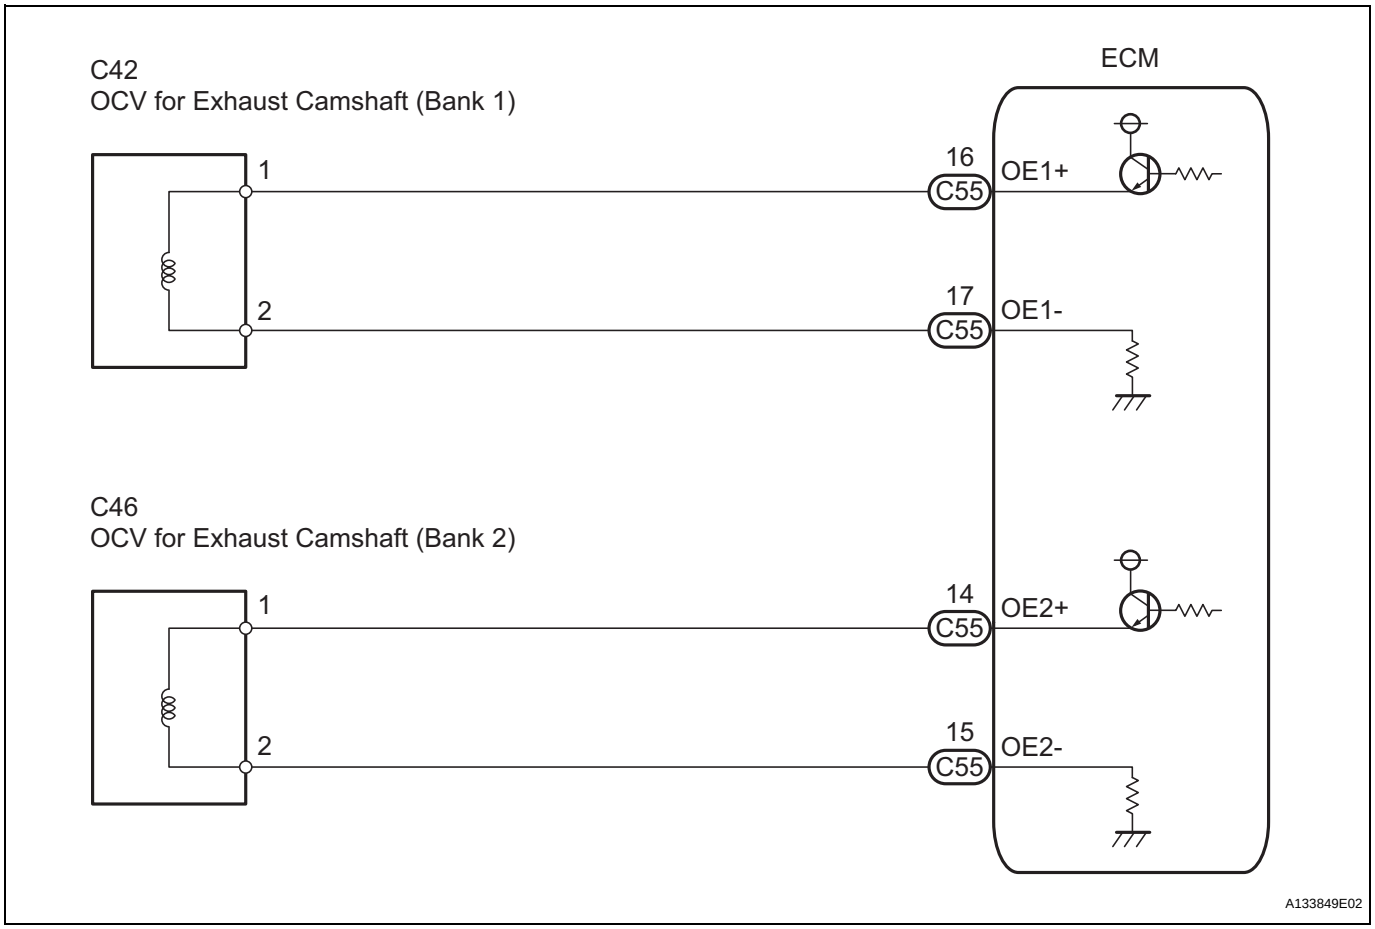
TYPICAL MALFUNCTION THRESHOLDS

One of the following conditions is met:	Condition A, B or C
A. All of the following conditions are met:	-
Battery voltage	11 to 13 V
Target duty ratio	Less than 70%
Output signal duty ratio	100 %
B. All of the following conditions are met:	-
Battery voltage	13 V or more
Target duty ratio	Less than 80%
Output duty ratio	100 %
C. All of the following conditions are met:	-
Current cut status	Not cut
Output signal duty ratio	3% or less

COMPONENT OPERATING RANGE

VVT duty ratio	More than 3, and less than 100 %

WIRING DIAGRAM



ES

INSPECTION PROCEDURE

HINT:

- If DTC P0013 is displayed, check the exhaust camshaft circuit for the bank 1 VVT system.
- Bank 1 refers to the bank that includes cylinder No. 1.
- If DTC P0023 is displayed, check the exhaust camshaft circuit for the bank 2 VVT system.
- Bank 2 refers to the bank that does not include cylinder No. 1.
- Read freeze frame data using an intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (OPERATE OCV)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the tester on.
(c) Warm up the engine.
(d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / VVT CTRL B1 or VVT CTRL B2.
(e) Check the engine speed while operating the Oil Control Valve (OCV) using the tester.

OK

Tester Operation	Specified Condition
OCV OFF	Normal engine speed
OCV ON	Engine idles roughly or stalls (soon after OCV switched from OFF to ON)

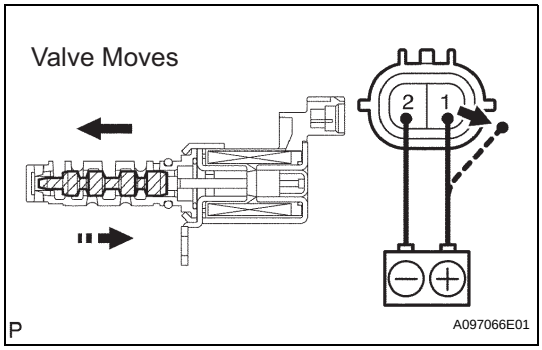
NG → **Go to step 2**

OK →

CHECK FOR INTERMITTENT PROBLEMS

ES

2 INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY



(a) Disconnect the C42 or C46 OCV connector.
(b) Measure the resistance between the terminals of the OCV.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	6.9 to 7.9 Ω

(c) Reconnect the OCV connector.

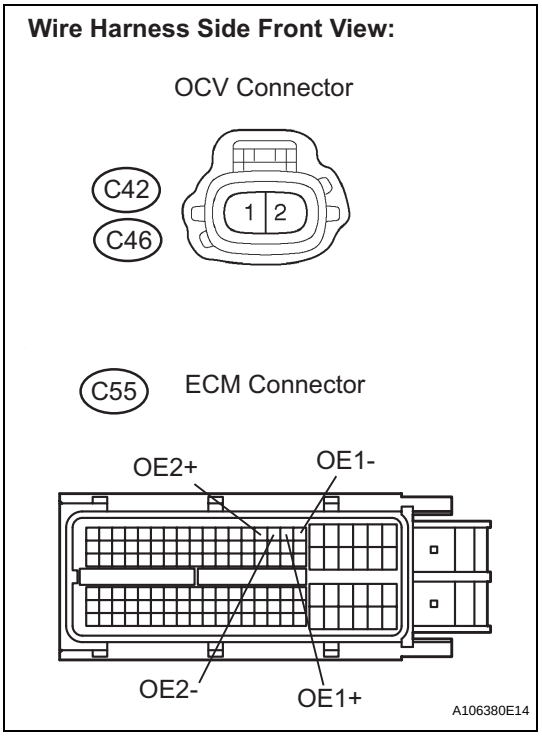
NG → **Go to step 3**

OK →

REPLACE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-481)

3	CHECK HARNESS AND CONNECTOR (OCV - ECM)

Wire Harness Side Front View:



(a) Disconnect the C42 or C46 OCV connector.
(b) Disconnect the C55 ECM connector.
(c) Measure the resistance between the terminals.

Standard resistance (Check for open)

Tester Connection	Specified Condition
OE1+ (C55-16) - C42-1	Below 1 Ω
OE1- (C55-17) - C42-2	Below 1 Ω
OE2+ (C55-14) - C46-1	Below 1 Ω
OE2- (C55-15) - C46-2	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
OE1+ (C55-16) or C42-1 - Body ground	10 kΩ or higher
OE1- (C55-17) or C42-2 - Body ground	10 kΩ or higher
OE2+ (C55-14) or C46-1 - Body ground	10 kΩ or higher
OE2- (C55-15) or C46-2 - Body ground	10 kΩ or higher

(d) Reconnect the ECM connector.
(e) Reconnect the OCV connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM (See page ES-481)

ES

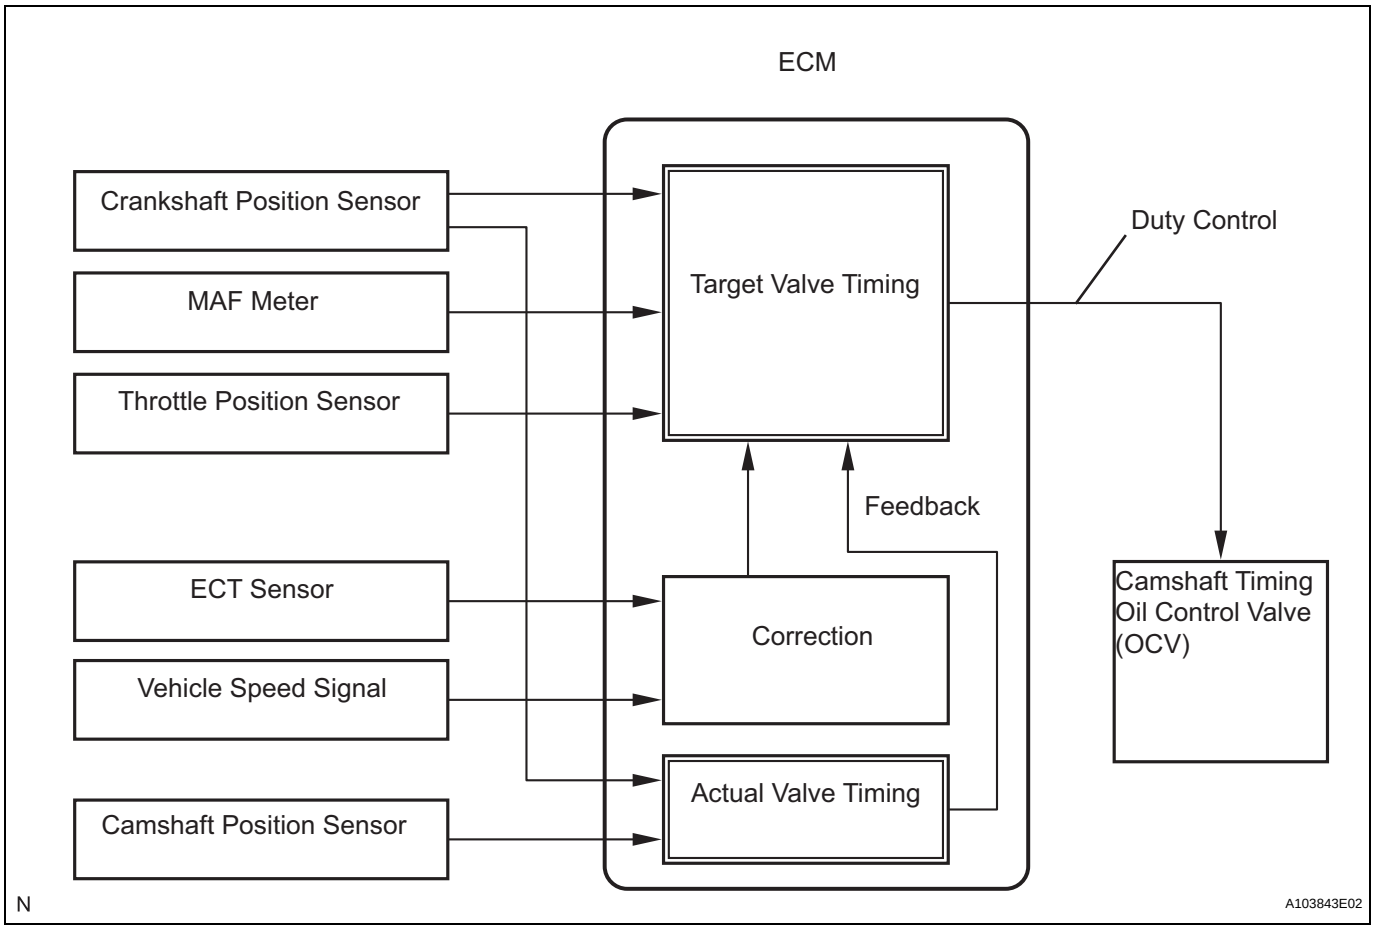
DTC	P0014	Camshaft Position "B" - Timing Over-Advanced or System Performance (Bank 1)
DTC	P0015	Camshaft Position "B" - Timing Over-Retarded (Bank 1)
DTC	P0024	Camshaft Position "B" - Timing Over-Advanced or System Performance (Bank 2)
DTC	P0025	Camshaft Position "B" - Timing Over-Retarded (Bank 2)

DESCRIPTION

HINT:

If DTC P0014, P0015, P0024 or P0025 is present, check the VVT (Variable Valve Timing) system.

The Variable Valve Timing (VVT) system includes the ECM, OCV and VVT controller. The ECM sends a target duty-cycle control signal to the OCV. This control signal regulates the oil pressure supplied to the VVT controller. Camshaft timing control is performed according to engine operating conditions such as the intake air volume, throttle valve position and engine coolant temperature. The ECM controls the OCV, based on the signals transmitted by several sensors. The VVT controller regulates the exhaust camshaft angle using oil pressure through the OCV. As a result, the relative positions of the camshaft and crankshaft are optimized, the engine torque and fuel economy improve, and the exhaust emissions decrease under overall driving conditions. The ECM detects the actual exhaust valve timing using signals from the camshaft and crankshaft position sensors, and performs feedback control. This is how the target intake valve timing is verified by the ECM.



DTC No.	DTC Detection Condition	Trouble Area
P0014 P0024	Advanced cam timing: With warm engine and engine speed of between 500 rpm and 4,000 rpm, all conditions (a), (b) and (c) are met (2 trip detection logic): (a) Difference between target and actual exhaust valve timing is more than 5°CA (Crankshaft Angle) for 4.5 seconds (b) Current exhaust valve timing is fixed (timing changes less than 5°CA in 5 seconds) (c) Variations in VVT controller timing are more than 19°CA of maximum delayed timing (advanced)	• Valve timing • Oil control valve (OCV) for exhaust camshaft (bank 1) • OCV filter (bank 1) • Exhaust camshaft • ECM
P0015 P0025	Retarded cam timing: With warm engine and engine speed of between 500 rpm and 4,000 rpm, all conditions (a), (b) and (c) are met (1 trip detection logic): (a) Difference between target and actual exhaust valve timing is more than 5°CA (Crankshaft Angle) for 4.5 seconds (b) Current exhaust valve timing is fixed (timing changes less than 5°CA in 5 seconds) (c) Variations in VVT controller timing are more than 19°CA or less of maximum delayed timing (retarded)	• Valve timing • OCV for exhaust camshaft (bank 2) • OCV filter (bank 2) • Exhaust camshaft • ECM

MONITOR DESCRIPTION

1. The ECM optimizes the exhaust valve timing using the VVT (Variable Valve Timing) system to control the exhaust camshaft. The VVT system includes the ECM, the Oil Control Valve (OCV) and the VVT controller.

2. The ECM sends a target duty-cycle control signal to the OCV. This control signal regulates the oil pressure supplied to the VVT controller. The VVT controller can advance or retard the exhaust camshaft.
   If the difference between the target and actual exhaust valve timings is large, and changes in actual exhaust valve timing are small, the ECM interprets this as the VVT controller stuck malfunction and sets a DTC.
   Example:
   A DTC is set when the following conditions A, B and C are met:
   (1) The difference between the target and actual exhaust valve timings is more than 5°CA (Crankshaft Angle) and the condition continues for more than 4.5 seconds (Procedure "A").
   (2) It takes 5 seconds or more to change the valve timing by 5°CA (Procedure "B").
   (3) After above procedures "A" and "B" are met, the OCV is forcibly activated 63 times or more (Procedure "C").
3. DTCs P0014 and P0024 (Advanced Cam Timing) are detected with 1 trip detection logic.
4. DTCs P0015 and P0025 (Retarded Cam Timing) are detected with 2 trip detection logic.
   These DTCs indicate that the VVT controller cannot operate properly due to OCV malfunctions or the presence of foreign objects in the OCV.
5. The monitor will not run unless the following conditions are met:
   (a) The engine is warm (the engine coolant temperature is 75°C [167°F] or more).
   (b) The vehicle has been driven at more than 40 mph (64 km/h) for 3 minutes.
   (c) The engine has idled for 3 minutes.

ES

MONITOR STRATEGY

Related DTCs	P0014: Advanced camshaft timing (bank 1) P0015: Retarded camshaft timing (bank 1) P0024: Advanced camshaft timing (bank 2) P0025: Retarded camshaft timing (bank 2)
Required sensors / components (Main)	VVT OCV and VVT Actuator
Required sensors / components (Related)	Crankshaft position sensor, Camshaft position sensor and Engine coolant temperature sensor
Frequency of operation	Once per driving cycle
Duration	Within 10 seconds
MIL operation	Advanced camshaft timing (bank 1): Immediate Advanced camshaft timing (bank 2): Immediate Retarded camshaft timing (bank 1): 2 driving cycles Retarded camshaft timing (bank 2): 2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	P0100 - P0103 (MAF sensor) P0115 - P0118 (ECT sensor) P0125 (insufficient ECT for closed loop) P0335 (CKP sensor) P0340, P0341 (CMP sensor) P0351 - P0358 (ignitor)
Battery voltage	11 V or more
Engine RPM	500 to 4,000 rpm
Engine coolant temperature	75 to 100°C (167 to 212°F)

TYPICAL MALFUNCTION THRESHOLDS

Advanced camshaft timing:

Valve timing	No change
Valve timing	Advanced position

Retarded camshaft timing:

Valve timing	No change
Valve timing	Retard position

WIRING DIAGRAM

Refer to DTC P0013 (See page ES-93).

INSPECTION PROCEDURE

HINT:

Abnormal bank	Advanced timing over (Valve timing is out of specified range)	Retarded timing over (Valve timing is out of specified range)
Bank 1	P0014	P0015
Bank 2	P0024	P0025

- If DTC P0014 or P0015 is displayed, check the exhaust camshaft circuit for the bank 1 VVT system.
- Bank 1 refers to the bank that includes cylinder No. 1.
- If DTC P0024 or P0025 is displayed, check for exhaust camshaft circuit for the bank 2 VVT system.
- Bank 2 refers to the bank that does not include cylinder No. 1.
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0014, P0015, P0024 OR P0025)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the tester on.
(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Read the DTCs.

Result

Display (DTC output)	Proceed to
P0014, P0015, P0024 or P0025	A
P0014, P0015, P0024 or P0025 and other DTCs	B

HINT:
If any DTCs other than P0014, P0015, P0024 or P0025 are output, troubleshoot those DTCs first.

B → GO TO DTC CHART (See page ES-63)

A

2	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (OPERATE OCV)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the tester on.
(c) Warm up the engine.
(d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / VVT CTRL B1.

(e) Check the engine speed while operating the Oil Control Valve (OCV) using the tester.

OK

Tester Operation	Specified Condition
OCV OFF	Normal engine speed
OCV ON	Engine idles roughly or stalls (soon after OCV switched from OFF to ON)

NG → **Go to step 4**

OK

3 CHECK WHETHER DTC OUTPUT RECURS (DTC P0014, P0015, P0024 OR P0025)

ES

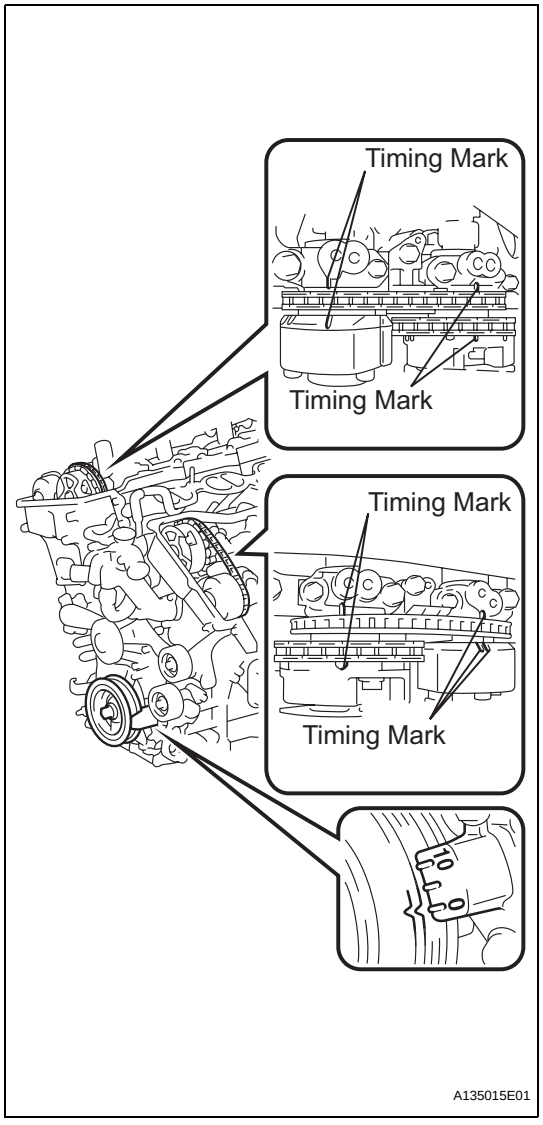
(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the tester on.
(c) Clear the DTCs (See page ES-45).
(d) Start the engine and warm it up.
(e) Switch the ECM from normal mode to check mode using the tester (See page ES-49).
(f) Drive the vehicle for more than 10 minutes.
(g) Read the DTCs using the tester.
OK:
No DTC output.

NG → **Go to step 4**

OK

END

4 CHECK VALVE TIMING (CHECK FOR LOOSE AND JUMPED TEETH ON TIMING CHAIN)

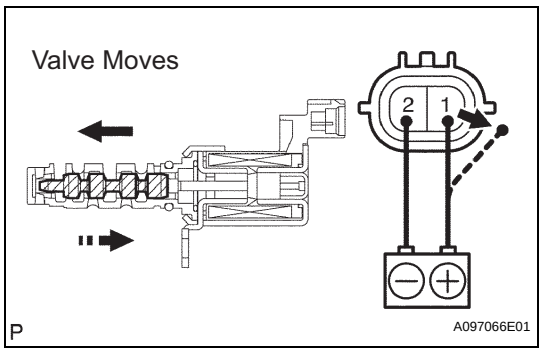


(a) Remove the cylinder head covers RH and LH.
(b) Turn the crankshaft pulley, and align its groove with the timing mark "0" of the timing chain cover.
(c) Check that the timing marks of the camshaft timing gears are aligned with the timing marks of the bearing cap as shown in the illustration.
If not, turn the crankshaft 1 revolution (360°), then align the marks as above.
OK:
Timing marks on crankshaft timing gears are aligned as shown in the illustration.
(d) Reinstall the cylinder head covers.

NG → **ADJUST VALVE TIMING**

OK

5 INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (OCV FOR EXHAUST CAMSHAFT)



(a) Remove the OCV.
(b) Measure the resistance between the terminals of the OCV.
Standard resistance

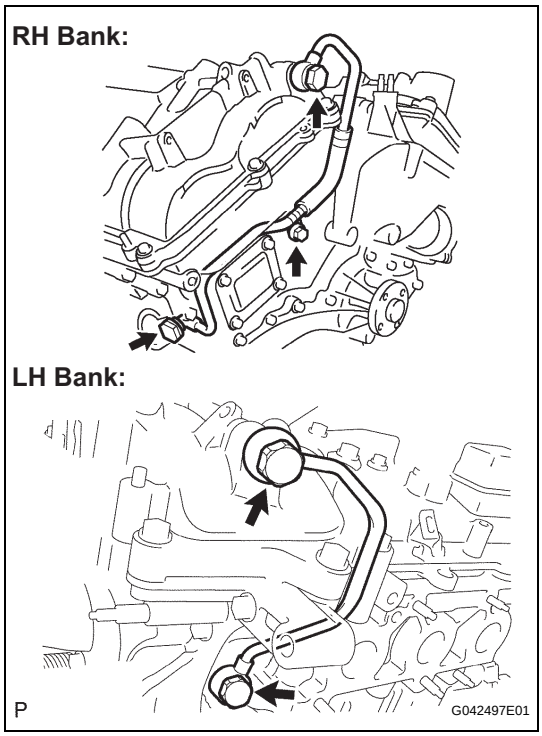
Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	6.9 to 7.9 Ω

(c) Apply positive battery voltage to terminal 1 and negative battery voltage to terminal 2. Check the valve operation.
OK:
Valve moves quickly.
(d) Reinstall the OCV.

NG → **REPLACE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-481)**

OK

6	INSPECT OIL CONTROL VALVE FILTER AND PIPE



(a) Remove the oil pipe No. 1 or No. 2.
(b) Remove the oil control valve filter.
(c) Check that the filter and pipe are not clogged.
OK:
Filter is not clogged.

NG → **CLEAN OIL CONTROL VALVE FILTER AND PIPE**

OK

7	REPLACE EXHAUST CAMSHAFT

NEXT

8	CHECK WHETHER DTC OUTPUT RECURS

(a) Clear the DTCs.
(1) Operate the intelligent tester, or disconnect the EFI and ETCS fuses more than 60 seconds to erase the codes.
(b) Start the engine and warm up the engine.
(c) Switch the ECM from normal mode to check mode using the intelligent tester (See page ES-49).
(d) Drive the vehicle for more than 10 minutes or more.
(e) Read the output DTCs using the intelligent tester.
OK:
No DTC output.

HINT:
DTC P0014, P0015, P0024 or P0025 is output when foreign objects in engine oil are caught in some parts of the system. These codes will stay output even if the system returns to normal after a short time. These foreign objects are then captured by the oil, thus eliminating the source of the problem.

OK → **SYSTEM IS OK**

NG

REPLACE ECM (See page ES-518)

DTC	P0016	Crankshaft Position - Camshaft Position Correlation (Bank 1 Sensor A)

DTC	P0017	Crankshaft Position - Camshaft Position Correlation (Bank 1 Sensor B)

DTC	P0018	Crankshaft Position - Camshaft Position Correlation (Bank 2 Sensor A)

DTC	P0019	Crankshaft Position - Camshaft Position Correlation (Bank 2 Sensor B)

ES

DESCRIPTION

In the VVT system, the appropriate intake and exhaust valve open and close timings are controlled by the ECM. The ECM performs intake and exhaust valve control by performing the following: 1) controlling the camshaft and camshaft oil control valve, and operating the camshaft timing gear; and 2) changing the relative positions of the gaps between the camshaft and crankshaft.

DTC No.	DTC Detection Condition	Trouble Area
P0016	Deviation in crankshaft position sensor signal and VVT sensor 1 (for intake camshaft (bank 1)) signal (2 trip detection logic)	• Mechanical system (Timing chain has jumped teeth or chain stretched) • ECM
P0017	Deviation in crankshaft position sensor signal and VVT sensor 1 (for exhaust camshaft (bank 1)) signal (2 trip detection logic)	• Mechanical system (Timing chain has jumped teeth or chain stretched) • ECM
P0018	Deviation in crankshaft position sensor signal and VVT sensor 2 (for intake camshaft (bank 2)) signal (2 trip detection logic)	• Mechanical system (Timing chain has jumped teeth or chain stretched) • ECM
P0019	Deviation in crankshaft position sensor signal and VVT sensor 2 (for exhaust camshaft (bank 2)) signal (2 trip detection logic)	• Mechanical system (Timing chain has jumped teeth or chain stretched) • ECM

MONITOR DESCRIPTION

To monitor the correlation of the intake camshaft position and crankshaft position, the ECM checks the VVT learning value while the engine is idling. The VVT learning value is calibrated based on the camshaft position and crankshaft position. The intake valve timing is set to the most retarded angle while the engine is idling. If the VVT learning value is out of the specified range in consecutive driving cycles, the ECM illuminates the MIL and sets the DTC P0016 (Bank 1) or P0018 (Bank 2).

To monitor the correlation of the exhaust camshaft position and crankshaft position, the ECM checks the VVT learning value while the engine is idling. The VVT learning value is calibrated based on the camshaft position and crankshaft position. The exhaust valve timing is set to the most advanced angle while the engine is idling. If the VVT learning value is out of the specified range in consecutive driving cycles, the ECM illuminates the MIL and sets the DTC P0017 (Bank 1) or P0019 (Bank 2).

MONITOR STRATEGY

Related DTCs	P0016: Camshaft timing misalignment at idle (intake camshaft bank 1) P0017: Camshaft timing misalignment at idle (exhaust camshaft bank 1) P0018: Camshaft timing misalignment at idle (intake camshaft bank 2) P0019: Camshaft timing misalignment at idle (exhaust camshaft bank 2)
Required sensors/components (Main)	VVT actuator

Required sensors/components (Sub)	Camshaft position sensor, Crankshaft position sensor
Frequency of operation	Once per drive cycle
Duration	Within 1 minute
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

All:

Monitor runs whenever following DTCs are not present	P0011 (VVT system 1 - advance) P0012 (VVT system 1 - retard) P0021 (VVT system 2 - advance) P0115 - P0118 (ECT sensor)

Intake side:

Engine speed	500 to 1,000 rpm

Exhaust side:

VVT feedback mode	Executing
VVT	Maximum advanced position
Engine speed	500 to 1,000 rpm

TYPICAL MALFUNCTION THRESHOLDS

Intake side:

One of the following conditions is met:	Condition 1 or 2
1. VVT leaning value at maximum retarded valve timing	Less than 18.5°CA
2. VVT leaning valve at maximum retarded valve timing	More than 43.5°CA

Exhaust side:

One of the following conditions is met:	Condition 1 or 2
1. VVT leaning value	Less than 77°CA
2. VVT leaning value	More than 102°CA

WIRING DIAGRAM

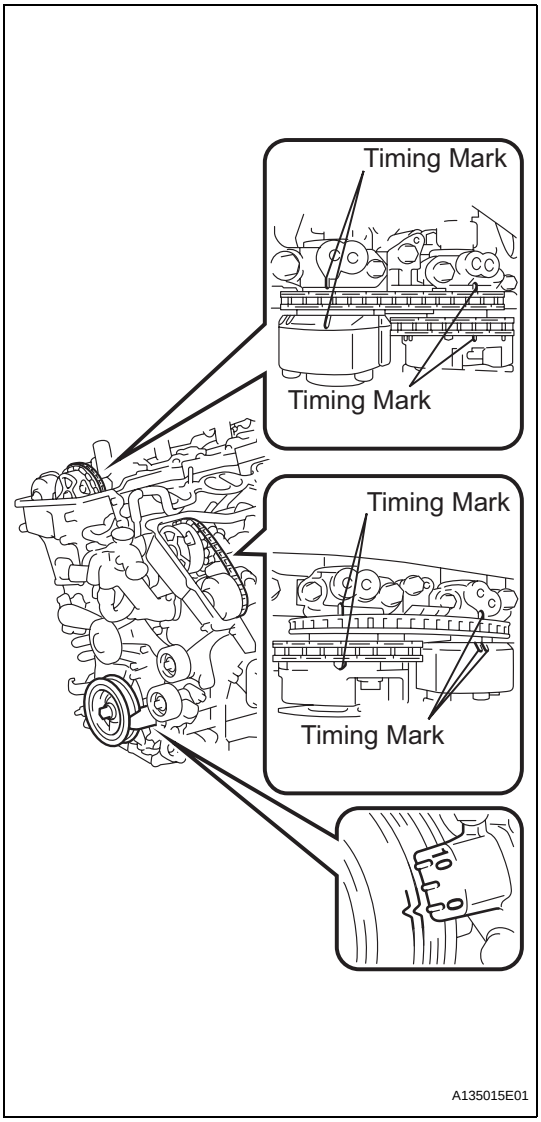
Refer to DTC P0335 (See page ES-224).

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

1	CHECK VALVE TIMING (CHECK FOR LOOSE AND A JUMPED TOOTH OF TIMING CHAIN)



(a) Remove the cylinder head covers RH and LH.
(b) Turn the crankshaft pulley, and align its groove with the timing mark "0" of the timing chain cover.
(c) Check that the timing marks of the camshaft timing gears are aligned with the timing marks of the bearing cap as shown in the illustration.
If not, turn the crankshaft 1 revolution (360°), then align the marks as above.
OK:
Timing marks on camshaft timing gears are aligned as shown in the illustration.
(d) Reinstall the cylinder head covers.

NG → **ADJUST VALVE TIMING (REPAIR OR REPLACE TIMING CHAIN)**

OK

REPLACE ECM (See page ES-518)

DTC	P0031	Oxygen (A/F) Sensor Heater Control Circuit Low (Bank 1 Sensor 1)

DTC	P0032	Oxygen (A/F) Sensor Heater Control Circuit High (Bank 1 Sensor 1)

DTC	P0051	Oxygen (A/F) Sensor Heater Control Circuit Low (Bank 2 Sensor 1)

DTC	P0052	Oxygen (A/F) Sensor Heater Control Circuit High (Bank 2 Sensor 1)

DESCRIPTION

HINT:

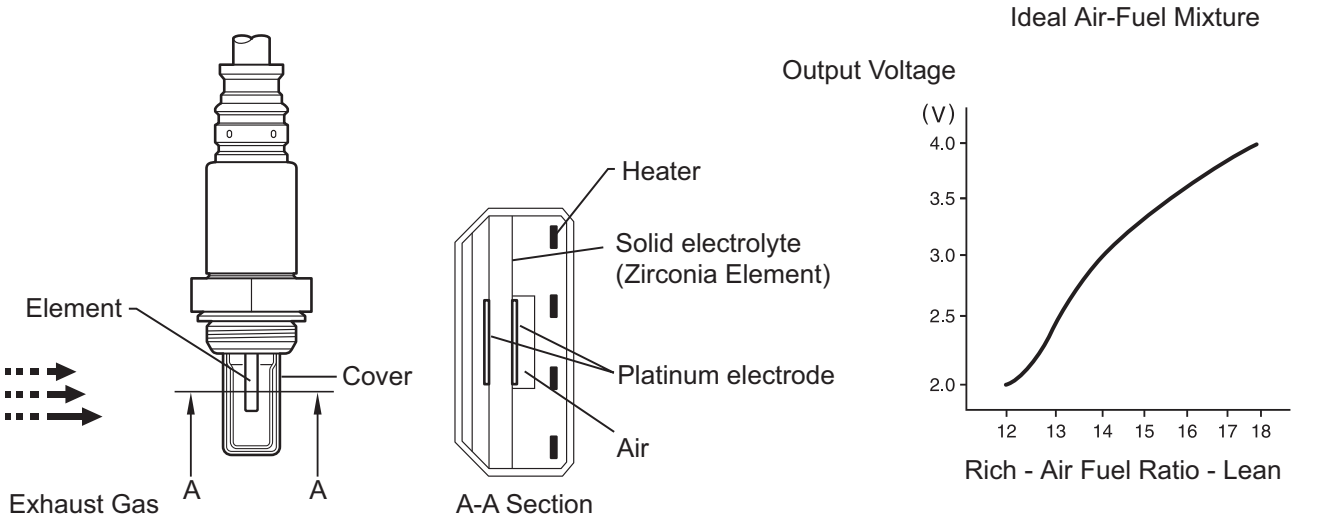
- Although the DTC titles include oxygen sensor, these DTCs relate to the Air-Fuel Ratio (A/F) sensor.
- Sensor 1 refers to the sensor mounted in front of the Three-Way Catalytic Converter (TWC) and located near the engine assembly.

The A/F sensor generates voltage* that corresponds to the actual air-fuel ratio. This sensor voltage is used to provide the ECM with feedback so that it can control the air-fuel ratio. The ECM determines the deviation from the stoichiometric air-fuel ratio level, and regulates the fuel injection time. If the A/F sensor malfunctions, the ECM is unable to control the air-fuel ratio accurately.

The A/F sensor is the planar type and is integrated with the heater, which heats the solid electrolyte (zirconia element). This heater is controlled by the ECM. When the intake air volume is low (the exhaust gas temperature is low), a current flows into the heater to heat the sensor, in order to facilitate accurate oxygen concentration detection. In addition, the sensor and heater portions are narrower than the conventional type. The heat generated by the heater is conducted to the solid electrolyte through the alumina, therefore the sensor activation is accelerated.

A three-way catalytic converter (TWC) is used in order to convert the carbon monoxide (CO), hydrocarbon (HC), and nitrogen oxide (NOx) into less harmful substances. To allow the TWC to function effectively, it is necessary to keep the air-fuel ratio of the engine near the stoichiometric air-fuel ratio.

*: Value changes inside the ECM. Since the A/F sensor is the current output element, a current is converted to a voltage inside the ECM. Any measurements taken at the A/F sensor or ECM connectors will show a constant voltage.

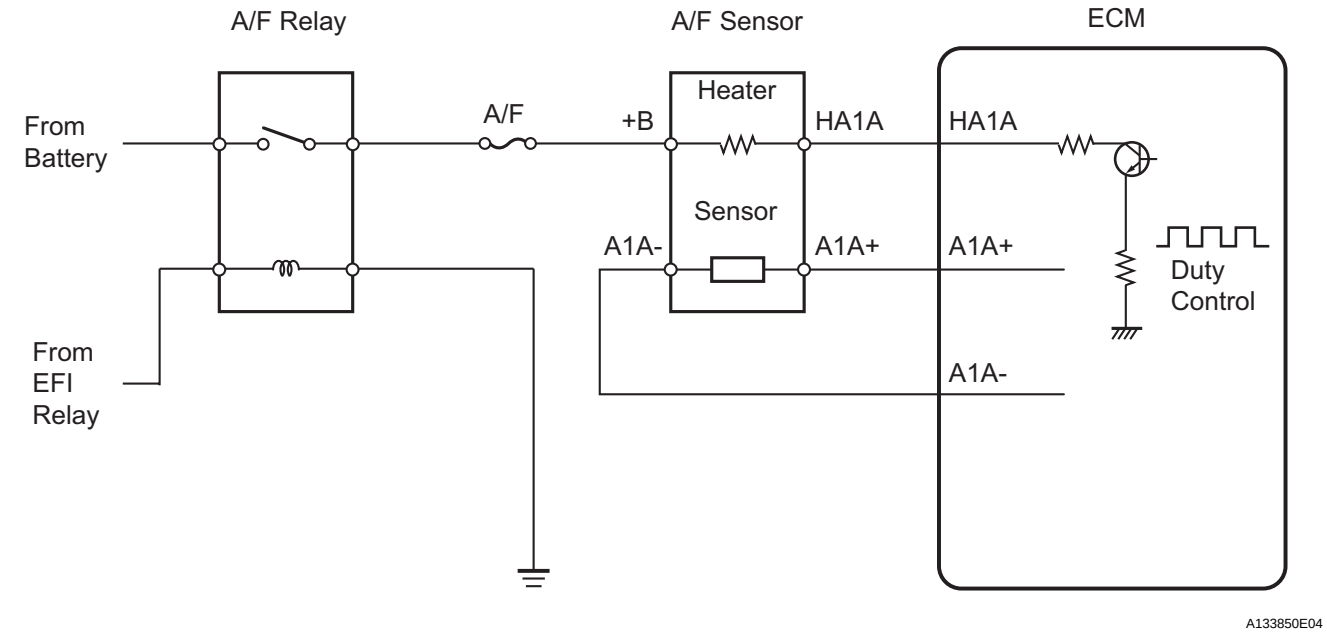


A107164E13

HINT:

- When any of these DTCs are set, the ECM enters fail-safe mode. The ECM turns off the A/F sensor heater in fail-safe mode. Fail-safe mode continues until the engine switch is turned off.
- The ECM provides a pulse width modulated control circuit to adjust the current through the heater. The A/F sensor heater circuit uses a relay on the B+ side of the circuit.

Reference (System Diagram of Bank 1 Sensor 1):



A133850E04

DTC No.	DTC Detection Condition	Trouble Area
P0031 P0051	Air-Fuel Ratio (A/F) sensor heater (bank 1, 2, sensor 1) current is less than 0.8 A (1 trip detection logic)	• Open in A/F sensor heater (bank 1, 2, sensor 1) circuit • A/F sensor heater (bank 1, 2, sensor 1) • A/F HTR relay • ECM

DTC No.	DTC Detection Condition	Trouble Area
P0032 P0052	Air-Fuel Ratio (A/F) sensor heater (bank 1, 2, sensor 1) current is more than 10 A (1 trip detection logic)	• Short in A/F sensor heater (bank 1, 2, sensor 1) circuit • A/F sensor heater (sensor 1) • A/F HTR relay • ECM

HINT:
- Bank 1 refers to the bank that includes cylinder No. 1.
- Bank 2 refers to the bank that does not include cylinder No. 1.
- Sensor 1 refers to the sensor closest to the engine assembly.
- Sensor 2 refers to the sensor farthest away from the engine assembly.

MONITOR DESCRIPTION

1. The ECM uses information from the Air-Fuel Ratio (A/F) sensor to regulate the air-fuel ratio and keep it close to the stoichiometric level. This maximizes the ability of the Three-Way Catalytic Converter (TWC) to purify the exhaust gases.
2. The A/F sensor detects oxygen levels in the exhaust gas and transmits the information to the ECM. The inner surface of the sensor element is exposed to the outside air. The outer surface of the sensor element is exposed to the exhaust gas. The sensor element is made of platinum coated zirconia and includes an integrated heating element.
3. The zirconia element generates a small voltage when there is a large difference in the oxygen concentrations between the exhaust gas and outside air. The platinum coating amplifies this voltage generation.
4. The A/F sensor is more efficient when heated. When the exhaust gas temperature is low, the sensor cannot generate useful voltage signals without supplementary heating. The ECM regulates the supplementary heating using a duty-cycle approach to adjust the average current in the sensor heater element. If the heater current is outside the normal range, the signal transmitted by the A/F sensor will be inaccurate, as a result, the ECM will be unable to regulate air-fuel ratio properly.
5. When the current in the A/F sensor heater is outside the normal operating range, the ECM interprets this as a malfunction in the sensor heater and sets a DTC.

   Example:

   The ECM sets DTC P0032 or P0052 when the current in the A/F sensor heater is more than 10 A. Conversely, when the heater current is less than 0.8 A, DTC P0031 or P0051 is set.

MONITOR STRATEGY

Related DTCs	P0031: A/F sensor heater (bank 1) open/short (Low electrical current) P0032: A/F sensor heater (bank 1) open/short (High electrical current) P0051: A/F sensor heater (bank 2) open/short (Low electrical current) P0052: A/F sensor heater (bank 2) open/short (High electrical current)
Required sensors / components (Main)	A/F sensor heater (bank 1 and 2)
Required sensors / components (Sub)	-
Frequency of operation	Continuous
Duration	10 seconds
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

All:

Monitor runs whenever following DTCs are not present	P0300 - P0306 (misfire)

P0031 and P0051:

Battery voltage	10.5 V or more
Heater output duty	50 % or more

Time after engine start	10 seconds or more

P0032 and P0052:

Battery voltage	Less than 20 V
Engine	Running
Heater output duty	More than 0 %

TYPICAL MALFUNCTION THRESHOLDS

P0031 and P0051:

A/F sensor heater current	Less than 0.8 A

P0032 and P0052:

Hybrid IC high current limiter port	Fail

ES

COMPONENT OPERATING RANGE

P0031 and P0051:

A/F sensor heater current	1.8 to 3.4 A at 20°C (68°F)

WIRING DIAGRAM

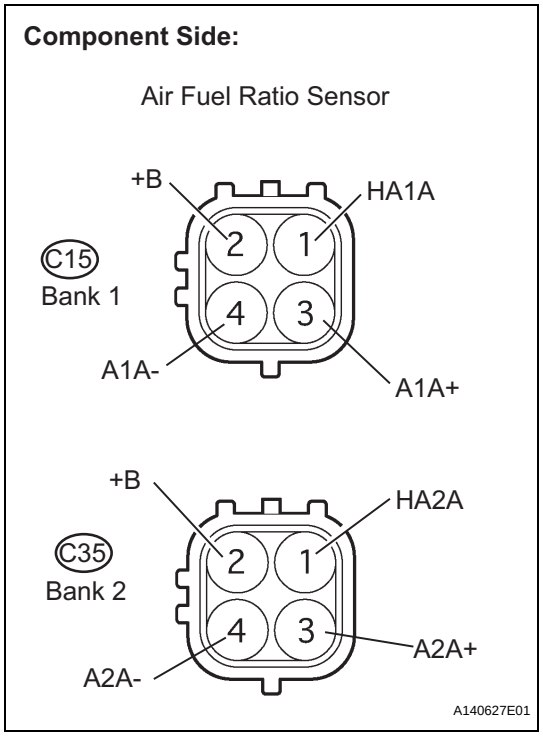
Refer to DTC P2195 (See page ES-350)

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

1 INSPECT AIR FUEL RATIO SENSOR (HEATER RESISTANCE)



(a) Disconnect the C15 or C35 A/F sensor connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance (Bank 1 sensor 1)

Tester Connection	Condition	Specified Condition
HA1A (1) - +B (2)	20°C (68°F)	1.8 to 3.4 Ω
HA1A (1) - A1A- (4)	-	10 kΩ or higher

Standard resistance (Bank 2 sensor 1)

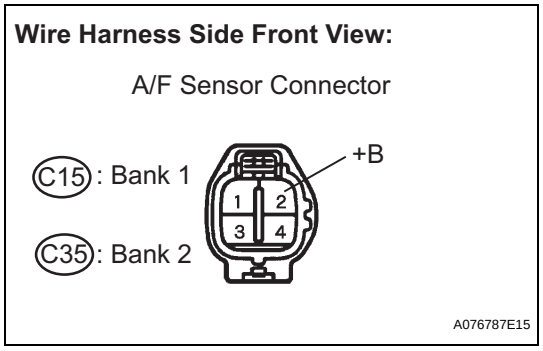
Tester Connection	Condition	Specified Condition
HA2A (1) - +B (2)	20°C (68°F)	1.8 to 3.4 Ω
HA2A (1) - A2A- (4)	-	10 kΩ or higher

(c) Reconnect the A/F sensor connector.

NG → **REPLACE AIR FUEL RATIO SENSOR (See page EC-19)**

OK

2 CHECK TERMINAL VOLTAGE (+B OF A/F SENSOR)



(a) Disconnect the C15 or C35 A/F sensor Connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage between the terminals of the A/F sensor connector and body ground.

Standard voltage

Tester Connection	Specified Condition
+B (C15-2) - Body ground	9 to 14 V
+B (C35-2) - Body ground	9 to 14 V

OK → **Go to step 7**

NG

3 INSPECT FUSE (A/F)

(a) Remove the A/F sensor fuse from the No. 1 integration relay.
(b) Measure the A/F sensor fuse resistance.

Standard resistance:
Below 1 Ω

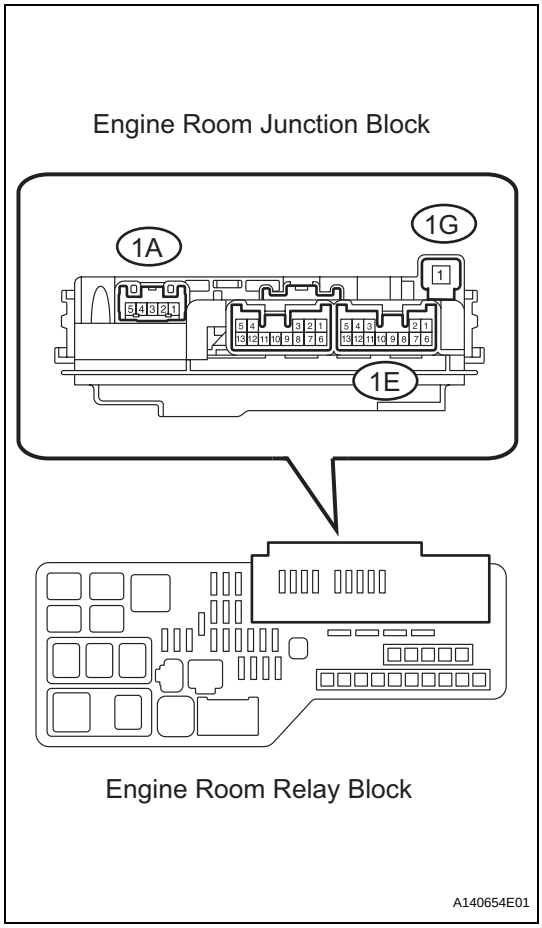
(c) Reinstall the A/F fuse.

NG → **REPLACE A/F FUSE**

ES

OK

4	INSPECT ENGINE ROOM JUNCTION BLOCK (EFI RELAY, A/F RELAY)



(a) Remove the engine room junction block from the engine room R/B.
(b) Inspect the EFI relay.
  (1) Measure the EFI relay resistance.
  Standard resistance

Tester Connection	Specified Condition
1E-12 - 1E-6	10 kΩ or higher
1E-12 - 1E-6	Below 1 Ω (Apply battery voltage between terminals 1E-9 and 1E-10)

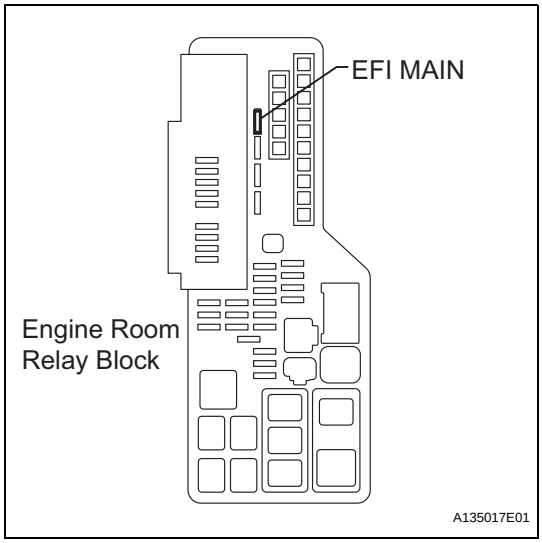
(c) Inspect the A/F relay.
  (1) Measure the A/F relay resistance.
  Standard resistance

Tester Connection	Specified Condition
1G-1 - 1A-4	10 kΩ or higher
1G-1 - 1A-4	Below 1 Ω (Apply battery voltage between terminals 1E-9 and 1E-10)

NG → REPLACE ENGINE ROOM JUNCTION BLOCK

OK

5	INSPECT FUSE (EFI MAIN)

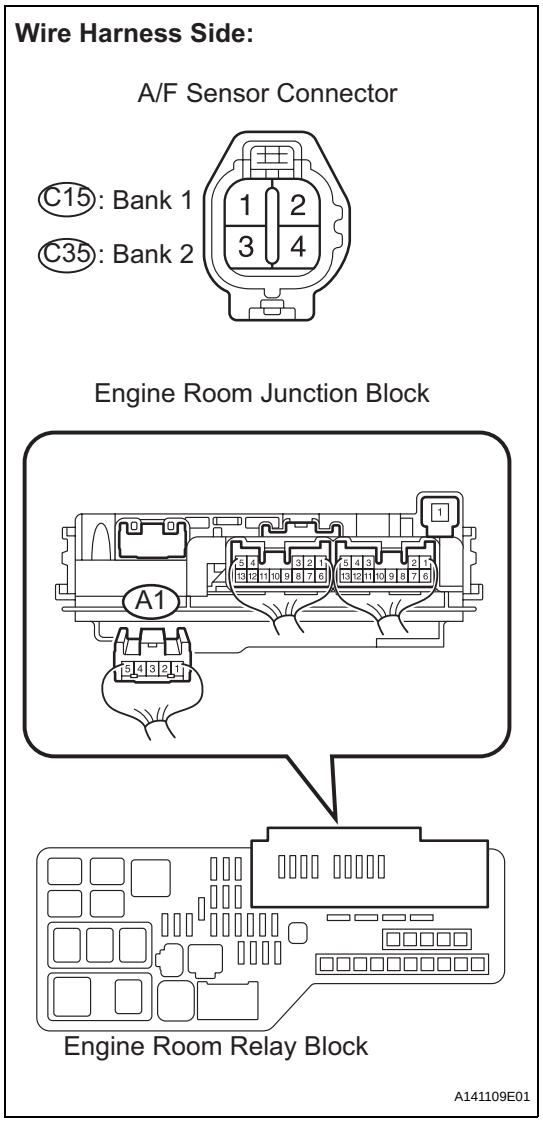


(a) Remove the EFI MAIN fuse from the engine room R/B.
(b) Measure the EFI MAIN fuse resistance.
  Standard resistance:
  Below 1 Ω
(c) Reinstall the EFI MAIN fuse.

NG → REPLACE EFI MAIN FUSE

OK

6	CHECK HARNESS AND CONNECTOR (A/F SENSOR - A/F RELAY)



(a) Disconnect the C15 or C35 A/F sensor connector.
(b) Remove the engine room junction block from the engine room R/B.
(c) Measure the resistance between the terminals.

Standard resistance (Check for open)

Tester Connection	Specified Condition
+B (C15-2) - 1A-4 (Engine room R/B)	Below 1 Ω
+B (C35-2) - 1A-4 (Engine room R/B)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
+B (C15-2) or 1A-4 (Engine room R/B) - Body ground	10 kΩ or higher
+B (C35-2) or 1A-4 (Engine room R/B) - Body ground	10 kΩ or higher

(d) Reinstall the engine room junction block.
(e) Reconnect the A/F sensor connector.

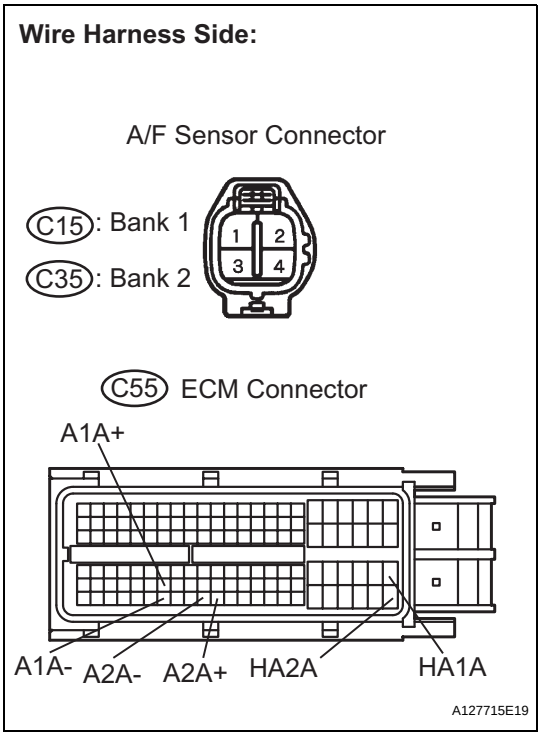
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

CHECK ECM POWER SOURCE CIRCUIT (See page ES-432)

ES

7 CHECK HARNESS AND CONNECTOR



(a) Disconnect the C15 or C35 A/F sensor connector.
(b) Disconnect the C55 ECM connector.
(c) Measure the resistance between the terminals.

Standard resistance (Check for open)

Tester Connection	Specified Condition
HA1A (C55-86) - HA1A (C15-1)	Below 1 Ω
HA2A (C55-109) - HA2A (C35-1)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
HA1A (C55-86) or HA1A (C15-1) - Body ground	10 kΩ or higher
HA2A (C55-109) or HA2A (C35-1) - Body ground	10 kΩ or higher

(d) Reconnect the ECM connector.
(e) Reconnect the A/F sensor connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

8 CHECK WHETHER DTC OUTPUT RECURS

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the intelligent tester on.
(d) Clear the DTCs (See page ES-45).
(e) Start the engine.
(f) Allow the engine to idle for 1 minute or more.
(g) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(h) Read the DTCs.

DTC	P0058	Oxygen Sensor Heater Control Circuit High (Bank 2 Sensor 2)
DTC	P0141	Oxygen Sensor Heater Circuit Malfunction (Bank 1 Sensor 2)
DTC	P0161	Oxygen Sensor Heater Circuit Malfunction (Bank 2 Sensor 2)

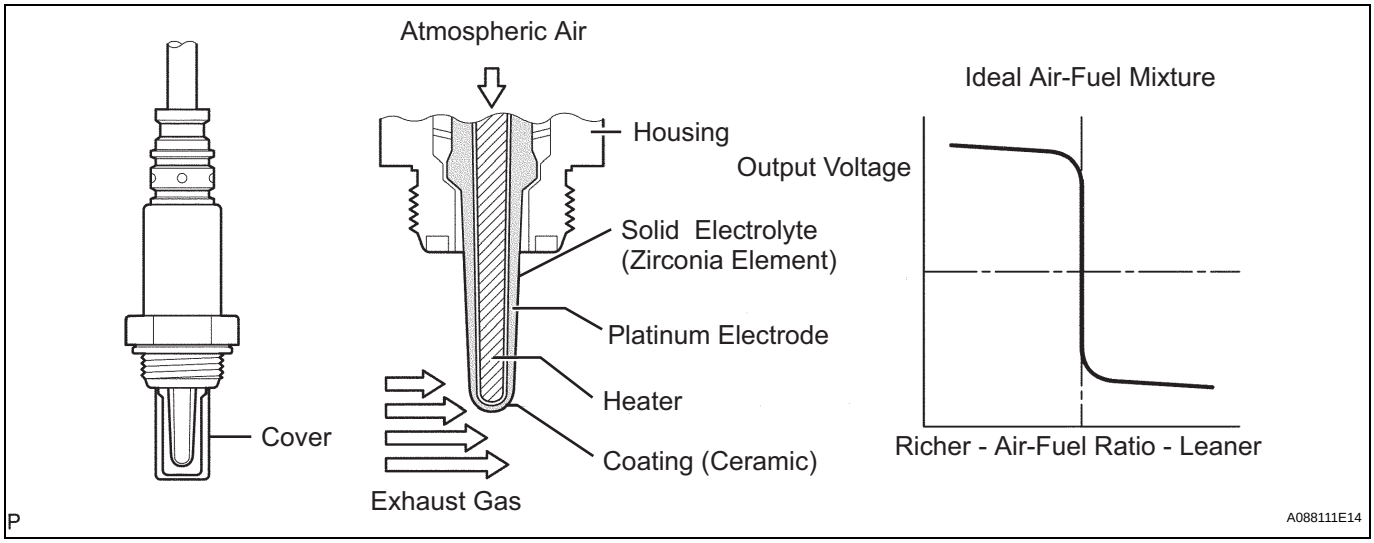
DESCRIPTION

A three-way catalytic converter (TWC) is used in order to convert the carbon monoxide (CO), hydrocarbon (HC), and nitrogen oxide (NOx) into less harmful substances. To allow the TWC to function effectively, it is necessary to keep the air-fuel ratio of the engine near the stoichiometric air-fuel ratio. For the purpose of helping the ECM to deliver accurate air-fuel ratio control, a Heated Oxygen (HO2) sensor is used.

The HO2 sensor is located behind the TWC, and detects the oxygen concentration in the exhaust gas. Since the sensor is integrated with the heater that heats the sensing portion, it is possible to detect the oxygen concentration even when the intake air volume is low (the exhaust gas temperature is low).

When the air-fuel ratio becomes lean, the oxygen concentration in the exhaust gas becomes rich. The HO2 sensor informs the ECM that the post-TWC air-fuel ratio is lean (low voltage, i.e. less than 0.45 V). Conversely, when the air-fuel ratio is richer than the stoichiometric air-fuel level, the oxygen concentration in the exhaust gas becomes lean. The HO2 sensor informs the ECM that the post-TWC air-fuel ratio is rich (high voltage, i.e. more than 0.45 V). The HO2 sensor has the property of changing its output voltage drastically when the air-fuel ratio is close to the stoichiometric level.

The ECM uses the supplementary information from the HO2 sensor to determine whether the air-fuel ratio after the TWC is rich or lean, and adjusts the fuel injection time accordingly. Thus, if the HO2 sensor is working improperly due to internal malfunctions, the ECM is unable to compensate for deviations in the primary air-fuel ratio control.

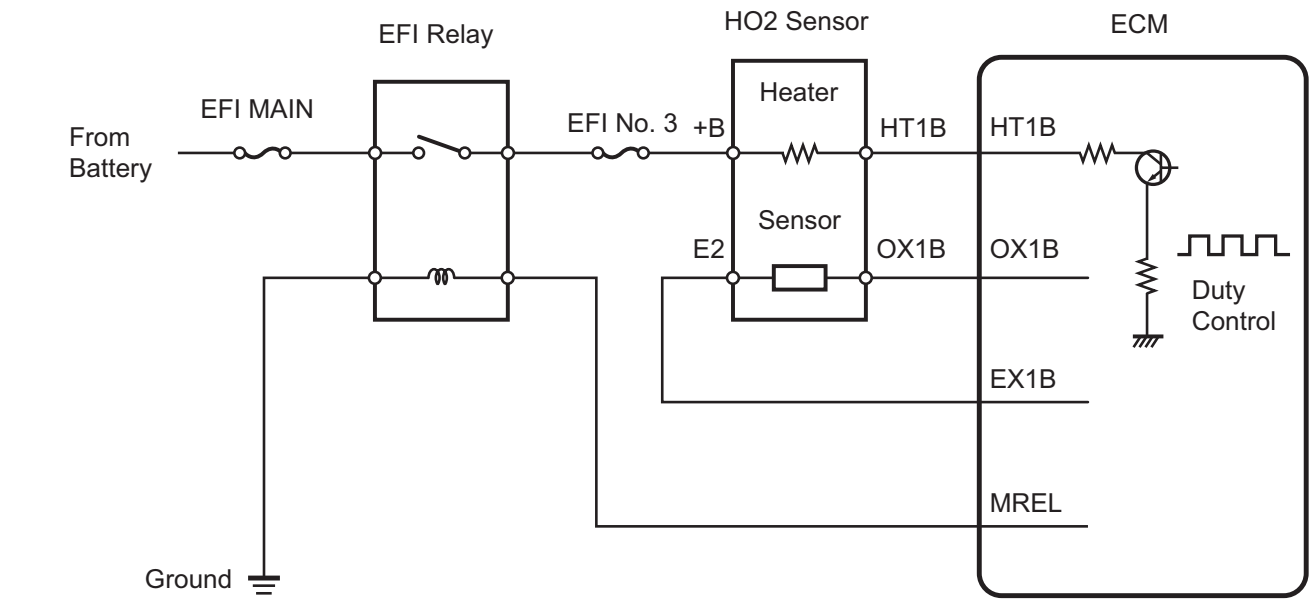


ES

HINT:

- Sensor 2 refers to the sensor mounted behind the Three-Way Catalytic Converter (TWC) and located far from the engine assembly.
- When any of these DTCs are set, the ECM enters fail-safe mode. The ECM turns off the Heated Oxygen (HO2) Sensor heater in fail-safe mode. Fail-safe mode continues until the engine switch is turned off.
- The ECM provides a pulse width modulated control circuit to adjust the current through the heater. The HO2 sensor heater circuit uses a relay on the B+ side of the circuit.

Reference (System Diagram of Bank 1 Sensor 2):



DTC No.	DTC Detection Condition	Trouble Area
P0037 P0057	Heated Oxygen (HO2) sensor heater current is less than 0.3 A (1 trip detection logic)	• Open in HO2 sensor heater circuit • HO2 sensor heater • Engine room junction block (EFI relay) • ECM
P0038 P0058	Heated Oxygen (HO2) sensor heater current is more than 2 A (1 trip detection logic)	• Short in HO2 sensor heater circuit • HO2 sensor heater • Engine room junction block (EFI relay) • ECM

DTC No.	DTC Detection Condition	Trouble Area
P0141 P0161	Cumulative heater resistance correction value exceeds the acceptable threshold. (2 trip detection logic)	• HO2 sensor heater • ECM

HINT:
- Bank 1 refers to the bank that includes cylinder No. 1.
- Bank 2 refers to the bank that does not include cylinder No. 1.
- Sensor 1 refers to the sensor closest to the engine assembly.
- Sensor 2 refers to the sensor farthest away from the engine assembly.

MONITOR DESCRIPTION

The sensing position of the Heated Oxygen (HO2) sensor has a zirconia element which is used to detect the oxygen concentration in the exhaust gas. If the zirconia element is at the appropriate temperature, and the difference between the oxygen concentrations surrounding the inside and outside surfaces of the sensor is large, the zirconia element generates voltage signals. In order to increase the oxygen concentration detecting capacity of the zirconia element, the ECM supplements the heat from the exhaust with heat from a heating element inside the sensor.

Heated oxygen sensor heater range check (P0037,P0038, P0057 and P0058):

The ECM monitors the current applied to the O2 sensor heater to check the heater for malfunctions. If the current is below the threshold value, the ECM will determine that there is an open circuit in the heater. If the current is above the threshold value, the ECM will determine that there is a short circuit in the heater.

Example:

The ECM sets DTC P0038 or P0058 when the current in the HO2 sensor heater is more than 2 A. Conversely, when the heater current is less than 0.3 A, DTC P0037 or P0057 is set.

Heated oxygen sensor heater performance (P0141 and P0161):

After the accumulated heater ON time exceeds 100 seconds, the ECM calculates the heater resistance using the battery voltage and the current applied to the heater. If the resistance is above the threshold value, the ECM will determine that there is a malfunction in the HO2S heater and set DTC P0141 and P0161.

B. Heater current	2 A or more

P0141 and P0161 (Heater performance monitor check):

Accumulated heater resistance	Varies with sensor element temperature (Example: More than 23 ohm)

COMPONENT OPERATING RANGE

Heated Oxygen (HO2) sensor heater current	0.4 to 1 A (when engine idles, HO2 sensor warmed up and battery voltage 11 to 14 V)

MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-25).

WIRING DIAGRAM

Refer to DTC P0136 (See page ES-178).

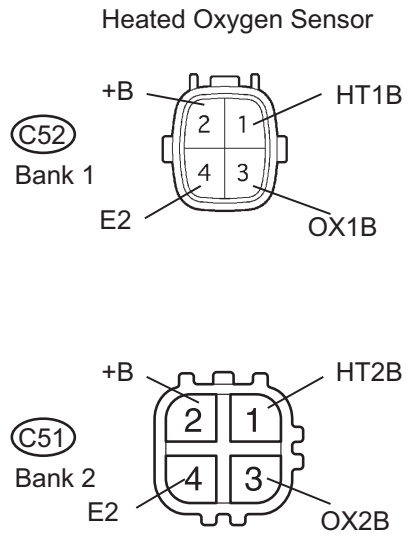
INSPECTION PROCEDURE

HINT:

Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

1 INSPECT HEATED OXYGEN SENSOR (HEATER RESISTANCE)

Component Side:



A137614E06

(a) Disconnect the C52 heated oxygen sensor connector (Bank 1 Sensor 2) or C51 heated oxygen sensor connector (Bank 2 Sensor 2).

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance (Bank 1 sensor 2)

Tester Connection	Condition	Specified Condition
HT1B (1) - +B (2)	20°C (68°F)	11 to 16 Ω
HT1B (1) - E2 (4)	Always	10 kΩ or higher

Standard resistance (Bank 2 sensor 2)

Tester Connection	Condition	Specified Condition
HT2B (1) - +B (2)	20°C (68°F)	11 to 16 Ω
HT2B (1) - E2 (4)	Always	10 kΩ or higher

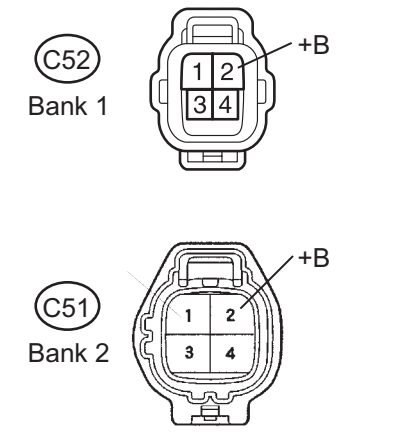
(c) Reconnect the HO2 sensor connector.

NG → **REPLACE HEATED OXYGEN SENSOR (See page EC-20)**

OK

2 CHECK TERMINAL VOLTAGE (+B OF HO2 SENSOR)

Wire Harness Side:



A137619E01

(a) Disconnect the C52 heated oxygen sensor connector (Bank 1 Sensor 2) or C51 heated oxygen sensor connector (Bank 2 Sensor 2).

(b) Turn the ignition switch on (IG).

(c) Measure the voltage between the terminals.

Standard voltage

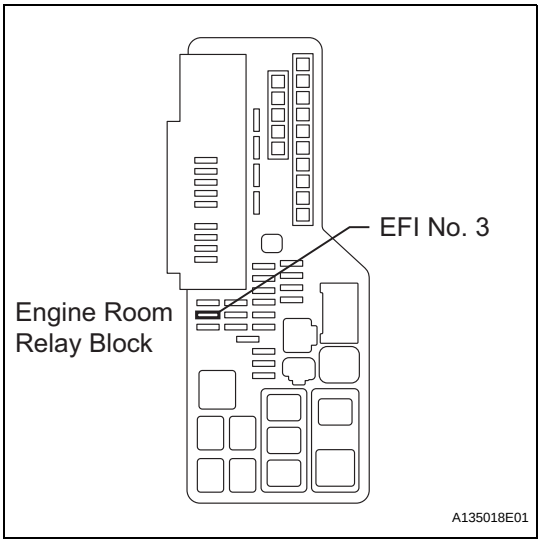
Tester Connection	Specified Condition
+B (C52-2) - Body ground	9 to 11 V
+B (C51-2) - Body ground	9 to 11 V

(d) Reconnect the HO2 sensor connector.

OK → **Go to step 7**

NG

3	INSPECT FUSE (EFI NO. 3)

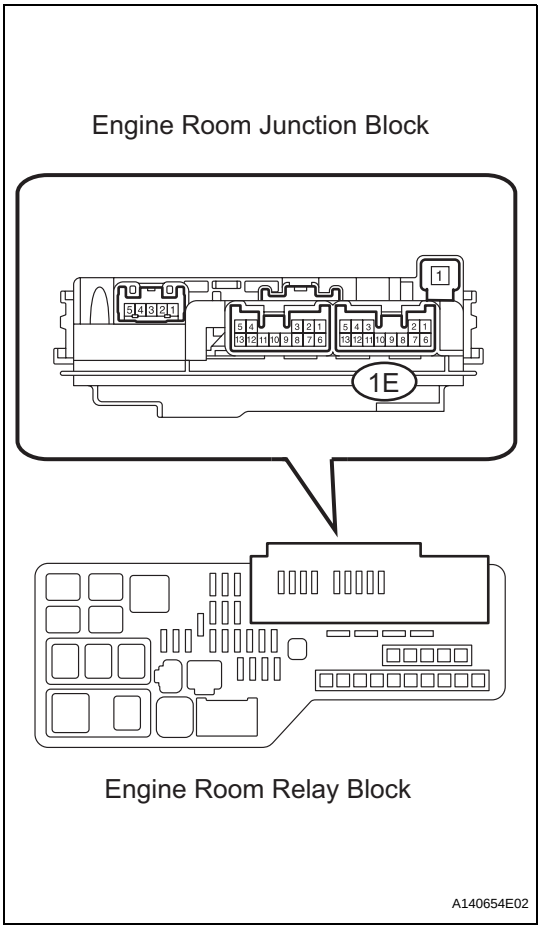


(a) Remove the EFI No. 3 fuse from the engine room R/B.
(b) Measure the EFI No. 3 fuse resistance.
Standard resistance:
Below 1 Ω
(c) Reinstall the EFI No. 3 fuse.

NG → **REPLACE EFI NO. 3 FUSE**

OK

4	INSPECT ENGINE ROOM JUNCTION BLOCK



(a) Remove the engine room junction block from the engine room R/B.
(b) Inspect the EFI relay.
(1) Measure the EFI relay resistance.
Standard resistance

Tester Connection	Specified Condition
1E-12 - 1E-6	10 kΩ or higher
1E-12 - 1E-6	Below 1 Ω (Apply battery voltage between terminals 1E-9 and 1E-10)

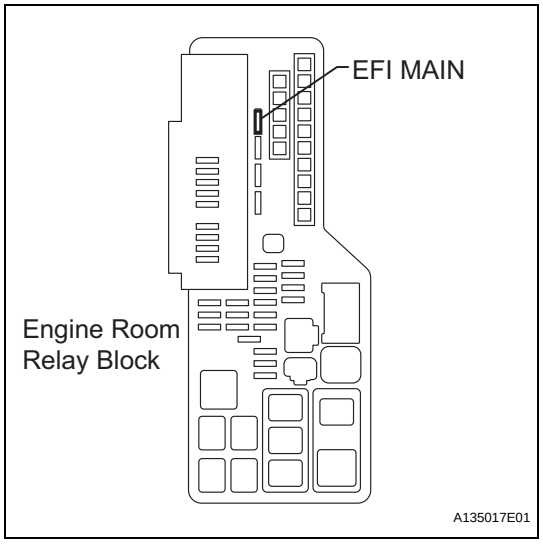
(c) Reinstall the engine room junction block.

NG → **REPLACE ENGINE ROOM JUNCTION BLOCK**

OK

ES

5	INSPECT FUSE (EFI MAIN)



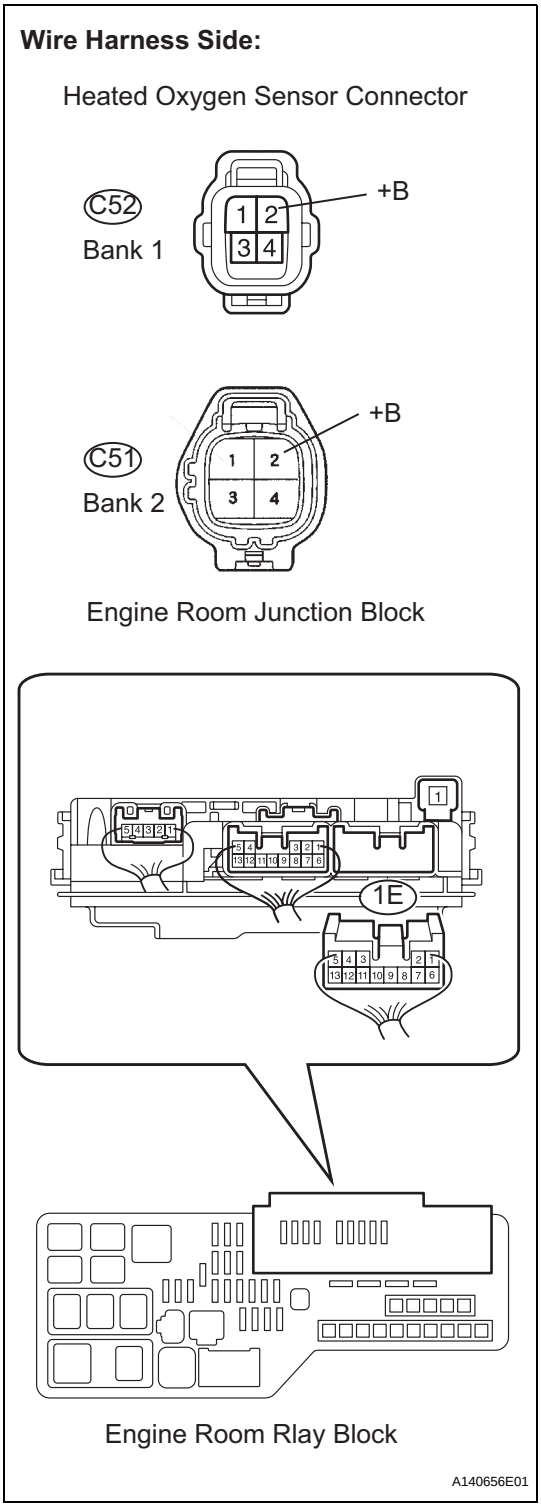
(a) Remove the EFI MAIN fuse from the engine room R/B.
(b) Measure the EFI MAIN fuse.
Standard resistance:
Below 1 Ω
(c) Reinstall the EFI MAIN fuse.

NG → **REPLACE EFI MAIN FUSE**

OK

ES

6	CHECK HARNESS AND CONNECTOR (HO2 SENSOR - EFI RELAY)



(a) Disconnect the C52 or C51 HO2 sensor connector.
(b) Remove the engine room junction block from the engine room R/B.
(c) Measure the resistance between the terminals.

Standard resistance (Check for open)

Tester Connection	Specified Condition
+B (C52-2) - 1E-6 (Engine room R/B)	Below 1 Ω
+B (C51-2) - 1E-6 (Engine room R/B)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
+B (C52-2) or 1E-6 (Engine room R/B) - Body ground	10 kΩ or higher
+B (C51-2) or 1E-6 (Engine room R/B) - Body ground	10 kΩ or higher

(d) Reinstall the engine room junction block.
(e) Reconnect the HO2 sensor connector.

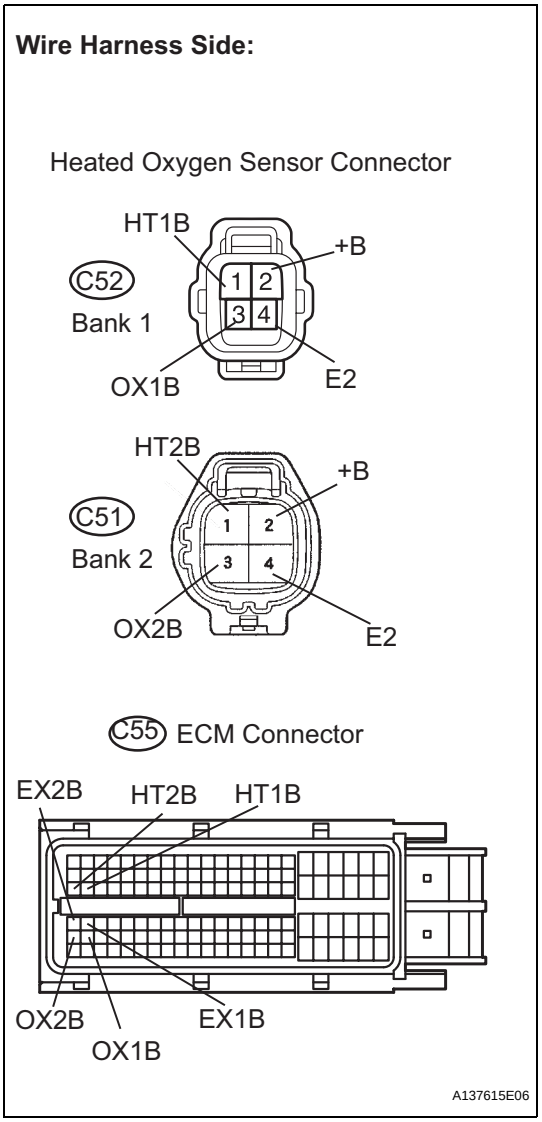
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK ECM POWER SOURCE CIRCUIT

7 CHECK HARNESS AND CONNECTOR (HO2 SENSOR - ECM)

Wire Harness Side:



(a) Disconnect the C52 heated oxygen sensor connector (Bank 1 Sensor 2) or C51 heated oxygen sensor connector (Bank 2 Sensor 2).
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Terminal Connection	Specified Condition
+B (C52-2) - Body ground	9 to 14 V
+B (C51-2) - Body ground	9 to 14 V

(d) Turn the engine switch off.
(e) Disconnect the C55 ECM connector.
(f) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Terminal Connection	Specified Condition
HT1B (C52-1) - HT1B (C55-48)	Below 1 Ω
OX1B (C52-3) - OX1B (C55-88)	Below 1 Ω
E2 (C52-4) - EX1B (C55-65)	Below 1 Ω
HT2B (C51-1) - HT2B (C55-47)	Below 1 Ω
OX2B (C51-3) - OX2B (C55-87)	Below 1 Ω
E2 (C51-4) - EX2B (C55-64)	Below 1 Ω

Standard resistance (Check for short)

Terminal Connection	Specified Condition
HT1B (C52-1) or HT1B (C55-48) - Body ground	10 kΩ or higher
OX1B (C52-3) - OX1B (C55-88) - Body ground	10 kΩ or higher
E2 (C52-4) or EX1B (C55-65) - Body ground	10 kΩ or higher
HT2B (C51-1) or HT2B (C55-47) - Body ground	10 kΩ or higher
OX2B (C51-3) or OX2B (C55-87) - Body ground	10 kΩ or higher
E2 (C51-4) or EX2B (C55-64) - Body ground	10 kΩ or higher

(g) Reconnect the HO2 sensor connector.
(h) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

8 CHECK WHETHER DTC OUTPUT RECURS

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the intelligent tester on.
(d) Clear the DTCs (See page ES-45).
(e) Start the engine.
(f) Allow the engine to idle for 2 minutes.

(g) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(h) Read the DTCs.

Result

Display (DTC Output)	Proceed to
No output	A
P0037, P0038, P0057 and/or P0058	B

B → **REPLACE ECM (See page ES-518)**

CHECK FOR INTERMITTENT PROBLEMS (See page ES-33)

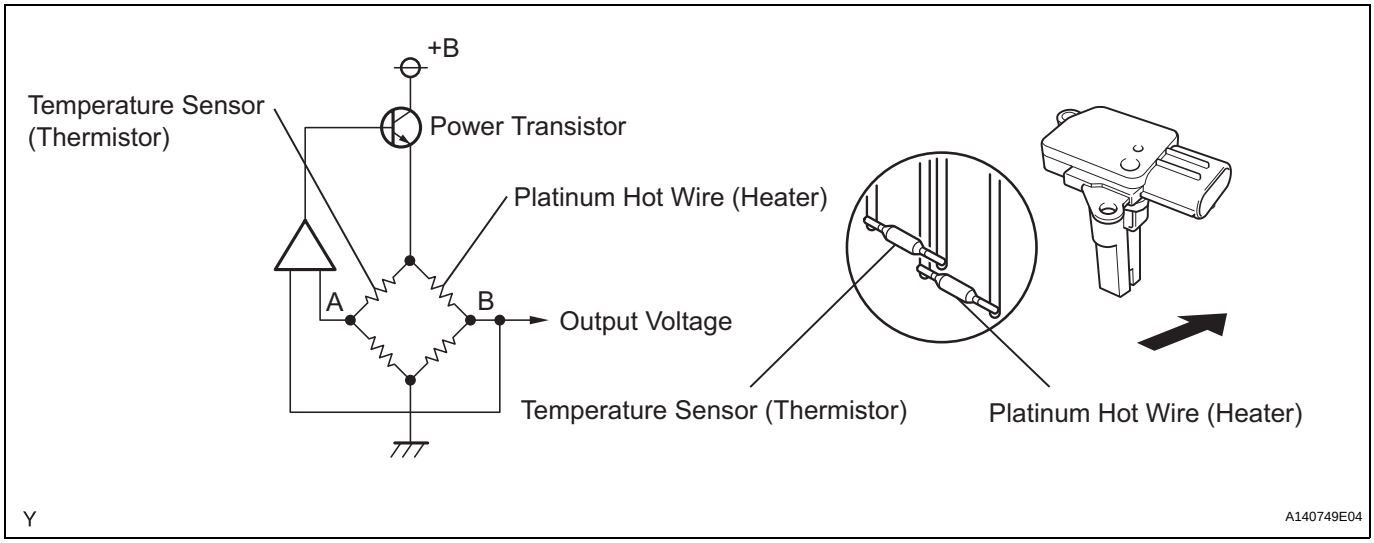
DTC	P0100	Mass or Volume Air Flow Circuit

DTC	P0102	Mass or Volume Air Flow Circuit Low Input

DTC	P0103	Mass or Volume Air Flow Circuit High Input

DESCRIPTION

The Mass Air Flow (MAF) meter is a sensor that measures the amount of air flowing through the valve. The ECM uses this information to determine the fuel injection time and to prove appropriate air-fuel ratio. Inside the MAF meter, there is a heated platinum wire which is exposed to the flow of intake air.
By applying a specific electrical current to the wire, the ECM heats it to a given temperature. The flow of incoming air cools both the wire and an internal thermistor, affecting their resistance. To maintain a constant current value, the ECM varies the voltage applied to these components in the MAF meter. The voltage level is proportional to the airflow through the sensor, and the ECM uses it to calculate the intake air volume.
The circuit is constructed so that the platinum hot wire and the temperature sensor provide a bridge circuit, and the power transistor is controlled so that the potentials of A and B remain equal to maintain the predetermined temperature.
HINT:
When any of these DTCs are set, the ECM enters fail-safe mode. During fail-safe mode, the ignition timing is calculated by the ECM, according to the engine RPM and throttle valve position. Fail-safe mode continues until a pass condition is detected.



DTC No.	DTC Detection Condition	Trouble Area
P0100	Open or short in Mass Air Flow (MAF) meter circuit for 3 seconds	• Open or short in MAF meter circuit • MAF meter • ECM
P0102	Open in Mass Air Flow (MAF) meter circuit for 3 seconds	• Open in MAF meter circuit • Short in MAF meter circuit • MAF meter • ECM
P0103	Short in Mass Air Flow (MAF) meter circuit for 3 seconds	• Short in MAF meter circuit (+B circuit) • MAF meter • ECM

HINT:
When any of these DTCs are set, check the air-flow rate by entering the following menus on the intelligent tester: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / MAF.

Mass Air Flow Rate (gm/s)	Malfunctions
Approximately 0.0	• Open in Mass Air Flow (MAF) meter power source circuit • Open or short in VG circuit
271.0 or more	Open in EVG circuit

MONITOR DESCRIPTION

If there is a defect in the MAF meter or an open or short circuit, the voltage level deviates from the normal operating range. The ECM interprets this deviation as a malfunction in the MAF meter and sets a DTC.
Example:
When the sensor output voltage remains less than 0.2 V, or more than 4.9 V, for more than 3 seconds, the ECM sets a DTC.
If the malfunction is not repaired successfully, a DTC is set 3 seconds after the engine is next started.

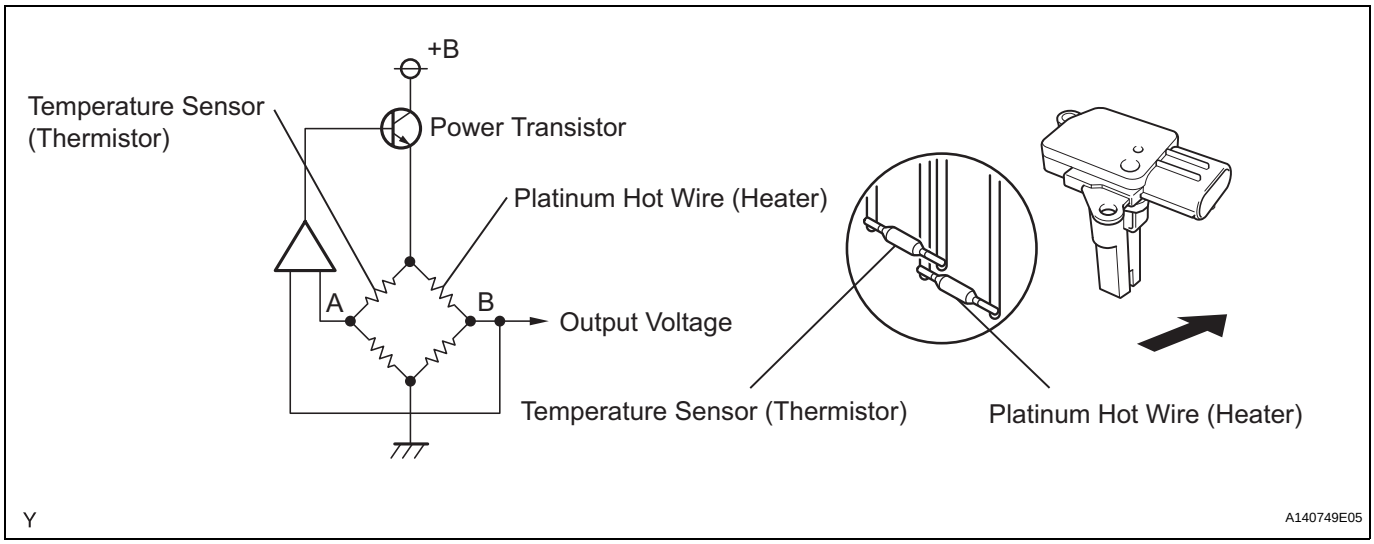
DTC	P0101	Mass Air Flow Circuit Range / Performance Problem

DESCRIPTION

The Mass Air Flow (MAF) meter is a sensor that measures the amount of air flowing through the valve. The ECM uses this information to determine the fuel injection time and to prove appropriate air-fuel ratio. Inside the MAF meter, there is a heated platinum wire which is exposed to the flow of intake air.
By applying a specific electrical current to the wire, the ECM heats it to a given temperature. The flow of incoming air cools both the wire and an internal thermistor, affecting their resistance. To maintain a constant current value, the ECM varies the voltage applied to these components in the MAF meter. The voltage level is proportional to the airflow through the sensor, and the ECM uses it to calculate the intake air volume.
The circuit is constructed so that the platinum hot wire and the temperature sensor provide a bridge circuit, and the power transistor is controlled so that the potentials of A and B remain equal to maintain the predetermined temperature.
HINT:
When any of these DTCs are set, the ECM enters fail-safe mode. During fail-safe mode, the ignition timing is calculated by the ECM, according to the engine RPM and throttle valve position. Fail-safe mode continues until a pass condition is detected.



DTC No.	DTC Detection Condition	Trouble Area
P0101	Test value calculated with engine load and fuel trim are out of specified threshold under the following conditions (2 trip detection logic): – Engine load is 30 % or more and constant – Engine coolant temperature is 70°C (158°F) or higher	MAF meter

MONITOR DESCRIPTION

The MAF meter is a sensor that measures the amount of air flowing through the throttle valve. The ECM uses this information to determine the fuel injection time and to provide an appropriate air-fuel ratio. Inside the MAF meter, there is a heated platinum wire which is exposed to the flow of intake air. By applying a specific electrical current to the wire, the ECM heats it to a specific temperature. The flow of incoming air cools both the wire and an internal thermistor, affecting their resistance. To maintain a constant current value, the ECM varies the voltage applied to these components of the MAF meter. The voltage level is proportional to the airflow through the sensor, and the ECM uses it to calculate the intake air volume. If there is a defect in the sensor, or an open or short in the circuit, the voltage level deviates from the normal operating range. The ECM interprets this deviation as a malfunction in the MAF meter and sets the DTC.

Example:

If the voltage is more than 2.2 V, or less than 1.48 V while idling, the ECM determines that there is a malfunction in the MAF meter and sets the DTC.

Refer to DTC P0100 (See page ES-127).

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0101)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester on.
(d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.

ES

Result

Display (DTC Output)	Proceed to
P0101 and other DTCs	A
P0101	B

(e) Read the DTCs.
HINT:
If any DTCs other than P0101 are output, troubleshoot those DTCs first.

A →

GO TO DTC CHART (See page ES-63)

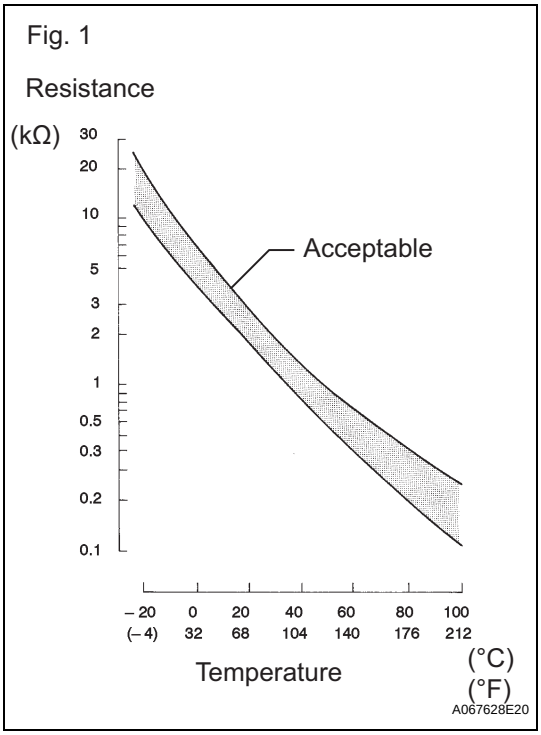
DTC	P0110	Intake Air Temperature Circuit Malfunction

DTC	P0112	Intake Air Temperature Circuit Low Input

DTC	P0113	Intake Air Temperature Circuit High Input

DESCRIPTION

Fig. 1



The Intake Air Temperature (IAT) sensor, mounted on the Mass Air Flow (MAF) meter, monitors the IAT. The IAT sensor has a built-in thermistor with a resistance that varies according to the temperature of the intake air. When the IAT drops, the resistance of the thermistor increases. When the temperature rises, the resistance drops. These variations in resistance are transmitted to the ECM as voltage changes (See Fig. 1).

The IAT sensor is powered by a 5 V supply from the THA terminal of the ECM, via resistor R.

Resistor R and the IAT sensor are connected in series. When the resistance value of the IAT sensor changes, according to changes in the IAT, the voltage at terminal THA also varies. Based on this signal, the ECM increases the fuel injection volume when the engine is cold to improve driveability.

HINT:

When any of DTCs P0110, P0112 and P0113 are set, the ECM enters fail-safe mode. During fail-safe mode, the IAT is estimated to be 20°C (68°F) by the ECM. Fail-safe mode continues until a pass condition is detected.

DTC No.	Proceed to	DTC Detection Condition	Trouble Area
P0110	Step 1	Open or short in Intake Air Temperature (IAT) sensor circuit for 0.5 seconds (1 trip detection logic)	• Open or short in IAT sensor circuit • IAT sensor (built into MAF meter) • ECM
P0112	Step 4	Short in Intake Air Temperature (IAT) sensor circuit for 0.5 seconds (1 trip detection logic)	• Short in IAT sensor circuit • IAT sensor (built into MAF meter) • ECM
P0113	Step 2	Open in Intake Air Temperature (IAT) sensor circuit for 0.5 seconds (1 trip detection logic)	• Open in IAT sensor circuit • IAT sensor (built into MAF meter) • ECM

HINT:
When any of these DTCs are set, check the IAT by entering the following menus on the intelligent tester: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / INTAKE AIR.

Temperature Displayed	Malfunction
-40°C (-40°F)	Open circuit
140°C (284°F) or higher	Short circuit

MONITOR DESCRIPTION

The ECM monitors the sensor voltage and uses this value to calculate the Intake Air Temperature (IAT). When the sensor output voltage deviates from the normal operating range, the ECM interprets this as a malfunction in the IAT sensor and sets a DTC.
Example:

If the sensor output voltage is -40°C (-40°F) for 0.5 seconds or more, the ECM determines that there is an open in the IAT sensor circuit, and sets DTC P0113. Conversely, if the output voltage is more than 140°C (284°F) for 0.5 seconds or more, the ECM determines that there is a short in the sensor circuit, and sets DTC P0112.

If the malfunction is not repaired successfully, a DTC is set 0.5 seconds after the engine is next started.

MONITOR STRATEGY

A

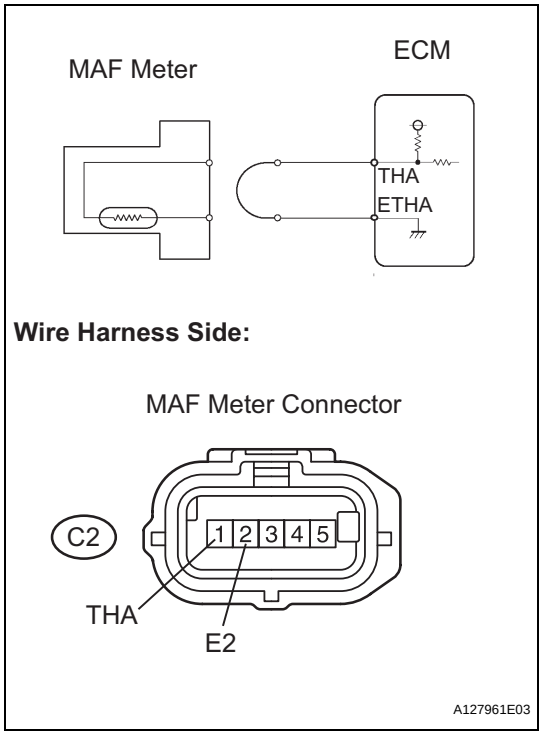
3 CHECK MASS AIR FLOW METER (CHECK FOR OPEN IN SENSOR)



(a) Confirm good connection of the Mass Air Flow (MAF) meter.
(b) Disconnect the C2 MAF meter connector.
(c) Connect terminals THA and E2 of the MAF meter wire harness side connector.
(d) Connect the intelligent tester to the DLC3.
(e) Turn the ignition switch on (IG).
(f) Turn the tester on.
(g) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / INTAKE AIR.
(h) Read the value displayed on the tester.

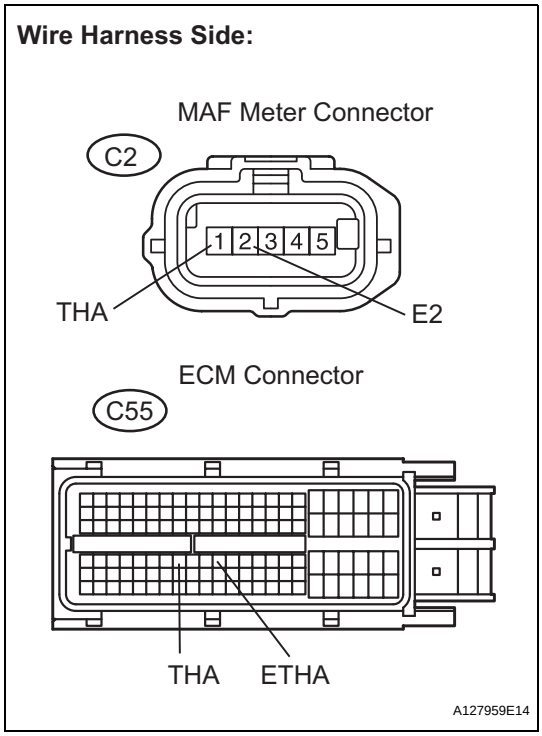
Standard:
140°C (284°F) or higher

(i) Reconnect the MAF meter connector.

OK → **REPLACE MASS AIR FLOW METER (See page ES-477)**

NG

4 CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER - ECM)



(a) Disconnect the C2 MAF meter connector.
(b) Disconnect the C55 ECM connector.
(c) Measure the resistance between the terminals.

Standard resistance (Check for open)

Tester Connection	Specified Condition
THA (C55-71) - THA (C2-1)	Below 1 Ω
ETHA (C55-74) - E2 (C2-2)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
THA (C55-71) or THA (C2-1) - Body ground	10 kΩ or higher
ETHA (C55-74) or E2 (C2-2) - Body ground	10 kΩ or higher

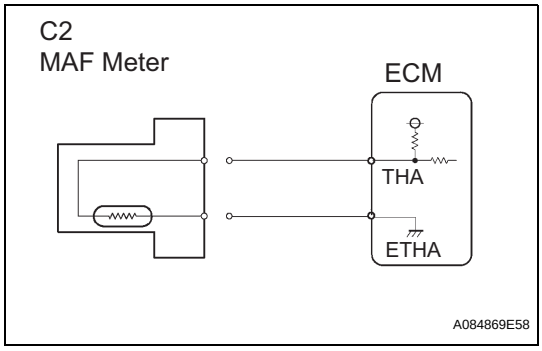
(d) Reconnect the MAF meter connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM (See page ES-518)

5 CHECK MASS AIR FLOW METER (CHECK FOR SHORT IN SENSOR)



(a) Disconnect the C2 MAF meter connector.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch on (IG).
(d) Turn the tester on.
(e) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / INTAKE AIR.
(f) Read the value displayed on the tester.

Standard:

-40°C (-40°F) or higher

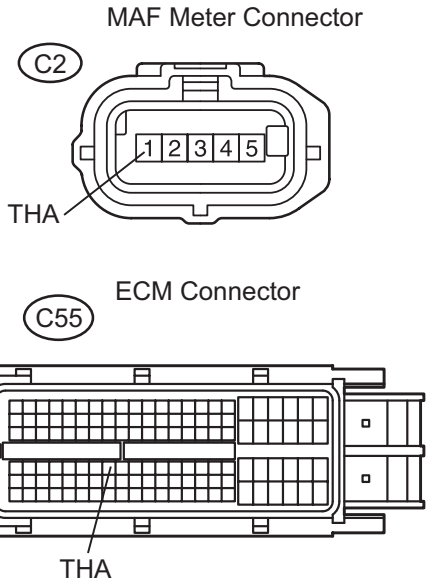
(g) Reconnect the MAF meter connector.

OK → **REPLACE MASS AIR FLOW METER (See page ES-477)**

NG

6	CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER- ECM)

Wire Harness Side:



(a) Disconnect the C2 MAF meter connector.
(b) Disconnect the C55 ECM connector.
(c) Measure the resistance between the terminals.
Standard resistance

Tester Connection	Specified Condition
THA (C55-71) or THA (C2-1) - Body ground	10 kΩ or higher

(d) Reconnect the MAF meter connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM (See page ES-518)

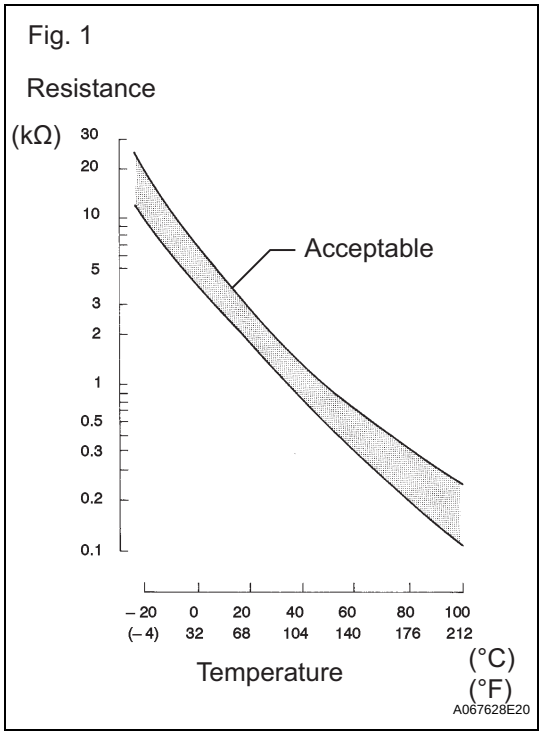
DTC	P0111	Intake Air Temperature Sensor Gradient Too High

DESCRIPTION



The Intake Air Temperature (IAT) sensor, mounted on the Mass Air Flow (MAF) meter, monitors the IAT. The IAT sensor has a built-in thermistor with a resistance that varies according to the temperature of the intake air. When the IAT drops, the resistance of the thermistor increases. When the temperature rises, the resistance drops. These variations in resistance are transmitted to the ECM as voltage changes (See Fig. 1).
The IAT sensor is powered by a 5 V supply from the THA terminal of the ECM, via resistor R.
Resistor R and the IAT sensor are connected in series. When the resistance value of the IAT sensor changes, according to changes in the IAT, the voltage at terminal THA also varies. Based on this signal, the ECM increases the fuel injection volume when the engine is cold to improve driveability.

DTC No.	DTC Detection Condition	Trouble Area
P0111	1. The intake air temperature rise is large, from the previous trip warm-up to the following trip. (2 trip detection logic) 2. When the change in the intake air temperature after engine start is less than the threshold value.	Mass air flow meter assembly

MONITOR DESCRIPTION

The ECM performs OBD II monitoring based on the values from the intake air temperature sensor. If there is no change of the sensor value within the normal range, the ECM will not be able to perform OBD II monitoring or will misdiagnose that there is a malfunction in the sensor. The ECM detects the stuck intake air temperature sensor value by performing monitoring after the engine switch is turned off or the engine is started (short soak or long soak).

MONITOR STRATEGY

Related DTCs	P0111: Intake air temperature sensor rationality (After engine stop) P0111: Intake air temperature sensor rationality (After cold engine start)

ES

GO TO DTC CHART (See page ES-63)

DTC	P0115	Engine Coolant Temperature Circuit Malfunction

DTC	P0117	Engine Coolant Temperature Circuit Low Input

DTC	P0118	Engine Coolant Temperature Circuit High Input

DESCRIPTION

A thermistor is built into the Engine Coolant Temperature (ECT) sensor, of which the resistance value varies according to the ECT.

The structure of the sensor and its connection to the ECM are the same as those of the Intake Air Temperature (IAT) sensor.

HINT:

When any of DTCs P0115, P0117 and P0118 are set, the ECM enters fail-safe mode. During fail-safe mode, the ECT is estimated to be 80°C (176°F) by the ECM. Fail-safe mode continues until a pass condition is detected.

ES

DTC No.	Proceed to	DTC Detection Condition	Trouble Area
P0115	Step 1	Open or short in Engine Coolant Temperature (ECT) sensor circuit for 0.5 seconds (1 trip detection logic)	• Open or short in ECT sensor circuit • ECT sensor • ECM
P0117	Step 4	Short in Engine Coolant Temperature (ECT) sensor circuit for 0.5 seconds (1 trip detection logic)	• Short in ECT sensor circuit • ECT sensor • ECM
P0118	Step 2	Open in Engine Coolant Temperature (ECT) sensor circuit for 0.5 seconds (1 trip detection logic)	• Open in ECT sensor circuit • ECT sensor • ECM

HINT:

When any of these DTCs are set, check the ECT by entering the following menus on the intelligent tester: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / COOLANT TEMP.

Temperature Displayed	Malfunction
-40°C (-40°F)	Open circuit
140°C (284°F) or higher	Short circuit

MONITOR DESCRIPTION

The Engine Coolant Temperature (ECT) sensor is used to monitor the ECT. The ECT sensor has a thermistor with a resistance that varies according to the temperature of the engine coolant. When the coolant temperature drops, the resistance in the thermistor increases. When the temperature rises, the resistance drops. These variations in resistance are reflected in the output voltage from the sensor. The ECM monitors the sensor voltage and uses this value to calculate the ECT. When the sensor output voltage deviates from the normal operating range, the ECM interprets this as a fault in the ECT sensor and sets a DTC.

Example:

If the sensor output voltage is -40°C (-40°F) for 0.5 seconds or more, the ECM determines that there is an open in the ECT sensor circuit, and sets DTC P0118. Conversely, if the voltage output is more than 140°C (284°F) for 0.5 seconds or more, the ECM determines that there is a short in the sensor circuit, and sets DTC P0117.

If the malfunction is not repaired successfully, a DTC is set 0.5 seconds after the engine is next started.

MONITOR STRATEGY

DTC	P0116	Engine Coolant Temperature Circuit Range / Performance Problem

DESCRIPTION

A thermistor is built into the Engine Coolant Temperature (ECT) sensor, of which the resistance value varies according to the ECT.
The structure of the sensor and its connection to the ECM are the same as those of the Intake Air Temperature (IAT) sensor.

DTC No.	DTC Detection Condition	Trouble Area
P0116	ECTs as listed below are nearly same (2 trip detection logic): – ECT when engine is started at lower than 60°C (140°F) of ECT – ECT when engine is warmed up	• Thermostat • ECT sensor
	ECTs as listed below are nearly same when engine is started at higher than 60°C (140°F) of ECT (2 trip detection logic) – ECT when engine is stopped after driving – ECT when engine is started at lower than 60°C (140°F) of ECT	

ES

MONITOR DESCRIPTION

The ECT sensor is used to monitor the ECT. The ECT sensor has a built-in thermistor with a resistance that varies according to the temperature of the engine coolant. When the ECT drops, the resistance of the thermistor increases. When the temperature rises, the resistance drops. These variations in the resistance are reflected in the output voltage from the ECT sensor.
The ECM monitors the sensor voltage and uses this value to calculate the ECT. If the sensor output voltage deviates from the normal operating range, the ECM interprets this deviation as a malfunction in the ECT sensor and sets the DTC.

Examples:

(1) Upon starting the engine, the ECT is between 35°C and 60°C (95°F and 140°F). If, after driving for 250 seconds, the ECT remains within 3°C (5.4°F) of the starting temperature, the DTC is set (2 trip detection logic).

(2) Upon starting the engine, the ECT is over 60°C (140°F). If, after driving for 250 seconds, the ECM remains within 1°C (1.8°F) of the starting temperature, the DTC is set (6 trip detection logic).

MONITOR STRATEGY

Related DTCs	P0116: Engine coolant temperature sensor rationality (ECT sensor cold start monitor) P0116: Engine coolant temperature sensor rationality (ECT sensor soak monitor)
Required Sensors/Components (Main)	Engine coolant temperature (ECT) sensor

Duration	10
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

All:

Monitor runs whenever following DTCs are not present	P0100 - P0103 (MAF sensor)

ECT sensor cold start monitor:

Battery voltage	10.5 V or more
Time after engine start	1 second or more
ECT at engine start	Less than 60°C (140°F)
IAT sensor circuit	OK
Soak time	5 hours
Accumulated MAF	1,056.06 g or more
Engine	Running
Fuel cut	OFF
Difference between ECT at engine start and IAT	Less than 40°C (104°F)

ECT sensor soak monitor:

Battery voltage	10.5 V or more
Engine	Running
Soak time	5 hours or more
ECT at engine start	60°C (140°F) or more
Accumulated MAF	2,101.98 times or more

ES

TYPICAL MALFUNCTION THRESHOLDS

ECT sensor cold start monitor:

ECT sensor value change	Less than 5°C (9°F)

ECT sensor soak monitor:

Difference between current ECT sensor value and previous ECT sensor value when engine stopped	Less than 5°C (9°F)

COMPONENT OPERATING RANGE

Engine coolant temperature	Varies with actual engine coolant temperature

INSPECTION PROCEDURE

HINT:

- If any of DTCs P0115, P0117, P0118 or P0125 are set simultaneously with DTC P0116, the ECT sensor may have an open or a short circuit. Troubleshoot those DTCs first.
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

1	CHECK OTHER DTC OUTPUT (IN ADDITION TO DTC P0116)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester on.
(d) Enter the following menus: DIAGNOSIS / ENHANCED II / DTC INFO / CURRENT CODES.
(e) Read the DTC.

ES

DESCRIPTION

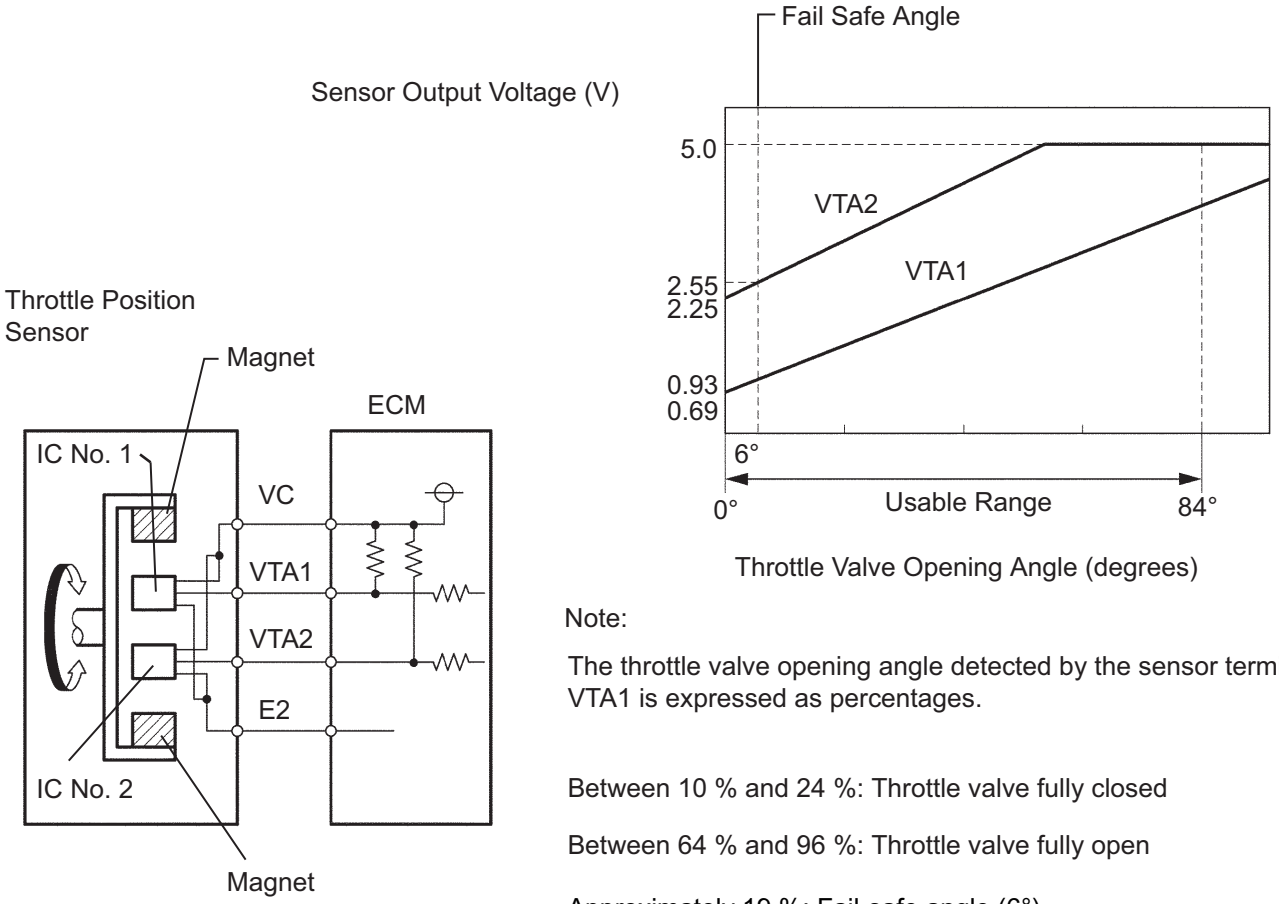
HINT:

This ETC (Electrical Throttle Control System) does not use a throttle cable.

The Throttle Position (TP) sensor is mounted on the throttle body, and detects the opening angle of the throttle valve. This sensor is a non-contact type, and uses Hall-effect elements, in order to yield accurate signals, even in extreme driving conditions, such as at high speeds as well as very low speeds.

The TP sensor has two sensor circuits which each transmits a signal, VTA1 and VTA2. VTA1 is used to detect the throttle valve angle and VTA2 is used to detect malfunctions in VTA1. The sensor signal voltages vary between 0 V and 5 V in proportion to the throttle valve opening angle, and are transmitted to the VTA terminals of the ECM.

As the valve closes, the sensor output voltage decreases and as the valve opens, the sensor output voltage increases. The ECM calculates the throttle valve opening angle according to these signals and controls the throttle actuator in response to driver inputs. These signals are also used in calculations such as air-fuel ratio correction, power increase correction and fuel-cut control.



Note:

The throttle valve opening angle detected by the sensor terminal VTA1 is expressed as percentages.

Between 10 % and 24 %: Throttle valve fully closed

Between 64 % and 96 %: Throttle valve fully open

Approximately 19 %: Fail-safe angle (6°)

DTC No.	DTC Detection Condition	Trouble Area
P0120	Output voltage of VTA1 quickly fluctuates beyond lower and upper malfunction thresholds for 2 seconds (1 trip detection logic)	• Throttle Position (TP) sensor (built into throttle body) • ECM
P0122	Output voltage of VTA1 is 0.2 V or less for 2 seconds (1 trip detection logic)	• TP sensor (built into throttle body) • Short in VTA1 circuit • Open in VC circuit • ECM
P0123	Output voltage of VTA1 is 4.535 V or more for 2 seconds (1 trip detection logic)	• TP sensor (built into throttle body) • Open in VTA1 circuit • Open in E2 circuit • Short between VC and VTA1 circuits • ECM
P0220	Output voltage of VTA2 quickly fluctuates beyond lower and upper malfunction thresholds for 2 seconds (1 trip detection logic)	• TP sensor (built into throttle body) • ECM

DTC No.	DTC Detection Condition	Trouble Area
P0222	Output voltage of VTA2 is 1.75 V or less for 2 seconds (1 trip detection logic)	• TP sensor (built into throttle body) • Short in VTA2 circuit • Open in VC circuit • ECM
P0223	Output voltage of VTA2 is 4.8 V or more, and VTA1 is between 0.2 V and 2.02 V, for 2 seconds (1 trip detection logic)	• TP sensor (built into throttle body) • Open in VTA2 circuit • Open in E2 circuit • Short between VC and VTA2 circuits • ECM
P2135	Either condition (a) or (b) is met (1 trip detection logic): (a) Difference between output voltages of VTA1 and VTA2 is 0.02 V or less for 0.5 seconds or more (b) Output voltage of VTA1 is 0.2 V or less, and VTA2 is 1.75 V or less, for 0.4 seconds or more	• Short between VTA1 and VTA2 circuits • TP sensor (built into throttle body) • ECM

HINT:

- When any of these DTCs are set, check the throttle valve opening angle by entering the following menus on an intelligent tester: DIAGNOSIS / ENHANCED OBD ll / DATA LIST / ETCS / THROTTLE POS AND THROTTLE POS #2.
- THROTTLE POS denotes the VTA1 signal (expressed in percentages), and THROTTLE POS #2 denotes the VTA2 signal (expressed in voltages).

Reference (Normal Condition):

Tester Display	Accelerator Pedal Fully Released	Accelerator Pedal Fully Depressed
THROTTLE POS	10 to 24 %	64 to 96 %
THROTTLE POS #2	2.1 to 3.1 V	4.5 to 5.0 V

MONITOR DESCRIPTION

The ECM uses the Throttle Position (TP) sensor to monitor the throttle valve opening angle. There are several checks that the ECM performs to confirm the proper operation of the TP sensor.

- A specific voltage difference is expected between the sensor terminals, VTA1 and VTA2, for each throttle valve opening angle. If the difference between VTA1 and VTA2 is incorrect, the ECM interprets this as a malfunction in the sensor, and sets a DTC.
- VTA1 and VTA2 each have a specific voltage range. If VTA1 or VTA2 is outside the normal operating range, the ECM interprets this as a malfunction in the sensor, and sets a DTC.
- VTA1 and VTA2 should never be close to the same voltage level. If VTA1 is within 0.02 V of VTA2, the ECM determines that there is a short circuit in the sensor, and sets a DTC.

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None

TYPICAL MALFUNCTION THRESHOLDS

P0120:

VTA1 voltage	0.2 V or less, or 4.535 V or more

P0122:

VTA1 voltage	0.2 V or less

P0123:

VTA1 voltage	4.535 V or more

P0220:

VTA2 voltage	1.75 V or less, or 4.8 V or more

P0222:

VTA2 voltage	1.75 V or less

P0223:

VTA2 voltage when VTA1 is 0.2 to 2.02 V	4.8 V or more

P2135:

Either of following conditions A or B is met:	-
Condition A	-
Difference between VTA1 and VTA2 voltages	0.02 V or less
Condition B	-
VTA1 voltage	0.2 V or less
VTA2 voltage	1.75 V or less

COMPONENT OPERATING RANGE

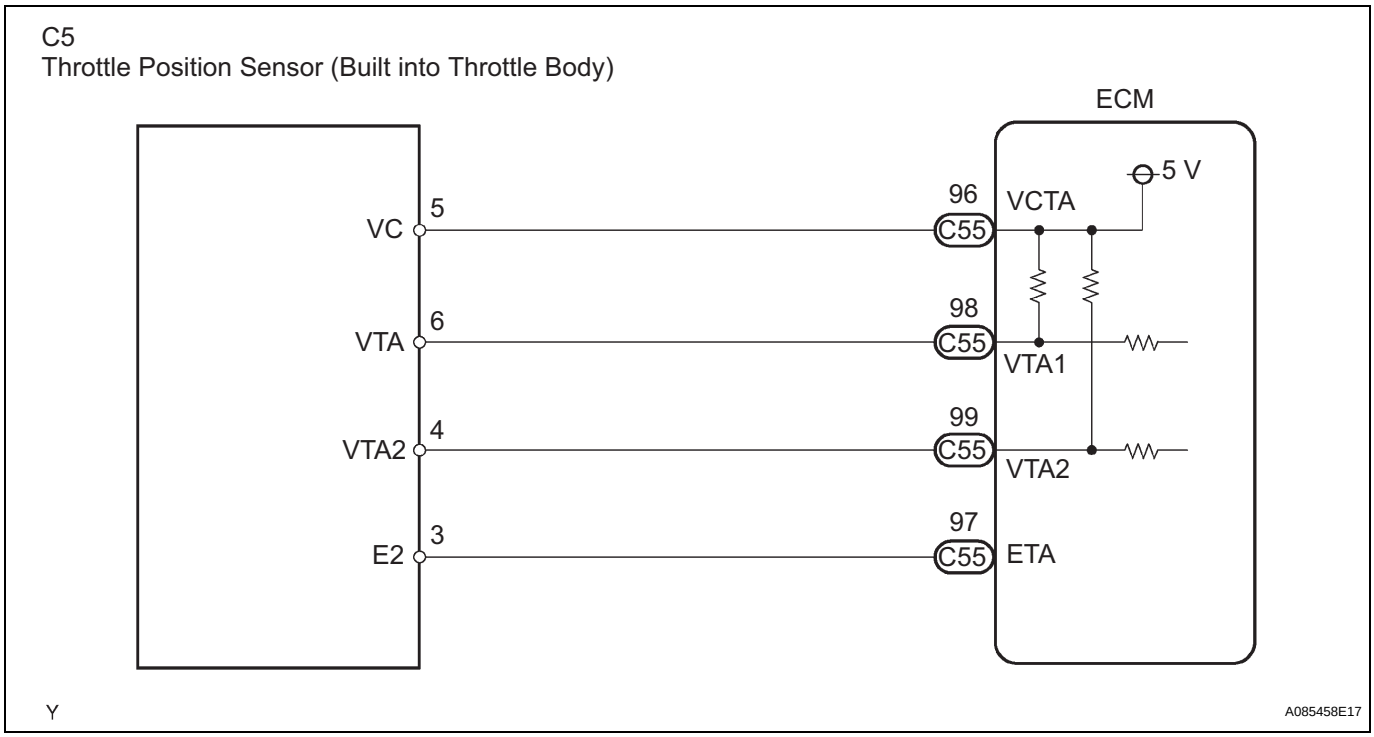
VTA1 voltage	0.69 to 4.05 V
VTA2 voltage	2.25 to 4.8 V

FAIL-SAFE

When any of these DTCs, as well as other DTCs relating to ETCS (Electronic Throttle Control System) malfunctions, are set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator off, and the throttle valve is returned to a 6° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue at a minimal speed. If the accelerator pedal is depressed gently, the vehicle can be driven slowly.

WIRING DIAGRAM

ES



INSPECTION PROCEDURE

HINT:

Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

1	**READ VALUE OF THROTTLE POSITION SENSOR (THROTTLE POS AND THROTTLE POS #2)**

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the intelligent tester on.

(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST / ETCS / THROTTLE POS and THROTTLE POS #2.
(d) Check the values displayed on the tester.

Result

TP#1 (VTA1) When AP Released	TP#2 (VTA2) When AP Released	TP#1 (VTA1) When AP Depressed	TP#2 (VTA2) When AP Depressed	Trouble Area	Proceed to

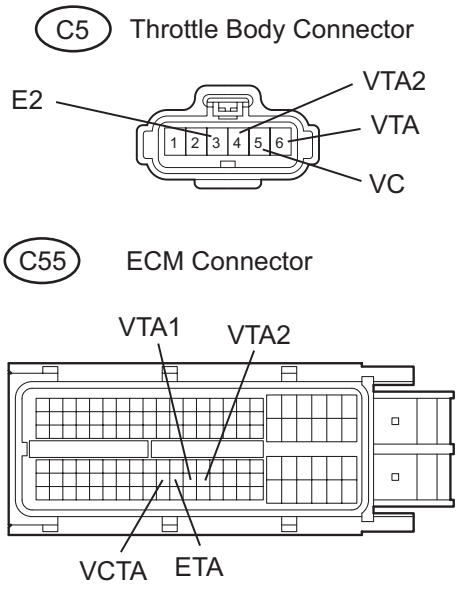
2 CHECK HARNESS AND CONNECTOR (THROTTLE POSITION SENSOR - ECM)

Wire Harness Side Front View:



(a) Disconnect the C5 throttle body connector.
(b) Disconnect the C55 ECM connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
VC (C5-5) - VCTA (C55-96)	Below 1 Ω
VTA (C5-6) - VTA1 (C55-98)	Below 1 Ω
VTA2 (C5-4) - VTA2 (C55-99)	Below 1 Ω
E2 (C5-3) - ETA (C55-97)	Below 1 Ω

Standard resistance (Check for short)

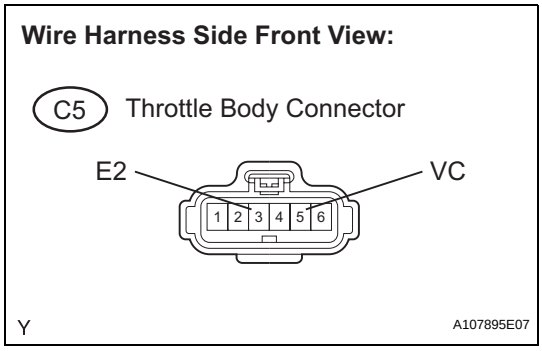
Tester Connection	Specified Condition
VC (C5-5) or VCTA (C55-96) - Body ground	10 kΩ or higher
VTA (C5-6) or VTA1 (C55-98) - Body ground	10 kΩ or higher
VTA2 (C5-4) or VTA2 (C55-99) - Body ground	10 kΩ or higher

(d) Reconnect the throttle body connector.
(e) Reconnect the ECM connector.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3 INSPECT ECM (VC VOLTAGE)



(a) Disconnect the C5 throttle body connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Specified Condition
VC (C5-5) - E2 (C5-3)	4.5 to 5.0 V

(d) Reconnect the throttle body connector.

NG → REPLACE ECM (See page ES-518)

OK

4 REPLACE THROTTLE BODY

(a) Replace the throttle body assembly (See page ES-503).

NEXT

5 CHECK WHETHER DTC OUTPUT RECURS (THROTTLE POSITION SENSOR DTCS)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the tester on.
(c) Clear the DTCs (See page ES-45).
(d) Start the engine.
(e) Allow the engine to idle for 15 seconds or more.
(f) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(g) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P0120, P0122, P0123, P0220, P0223, and/or P2135	A
No output	B

B → SYSTEM IS OK

A

REPLACE ECM (See page ES-518)

DTC	P0121	Throttle / Pedal Position Sensor / Switch "A" Circuit Range / Performance Problem

DESCRIPTION

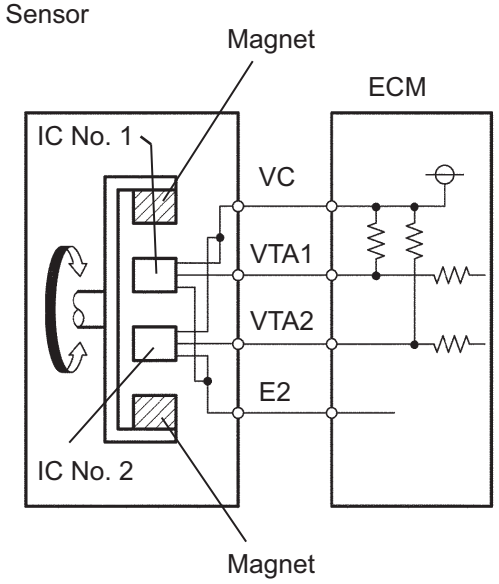
HINT:

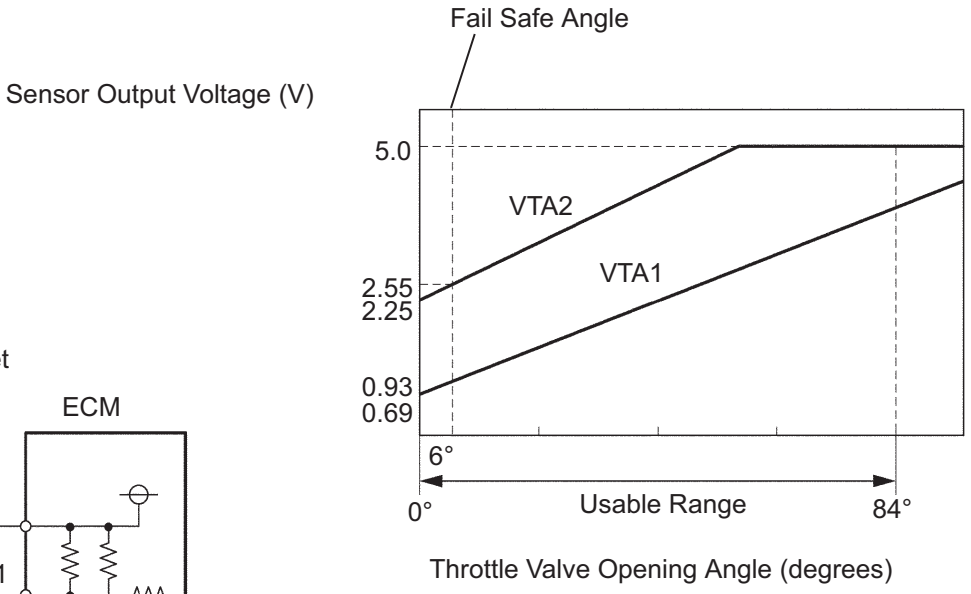
This ETC (Electrical Throttle Control System) does not use a throttle cable.

The Throttle Position (TP) sensor is mounted on the throttle body, and detects the opening angle of the throttle valve. This sensor is a non-contact type, and uses Hall-effect elements, in order to yield accurate signals, even in extreme driving conditions, such as at high speeds as well as very low speeds.

The TP sensor has two sensor circuits which each transmits a signal, VTA1 and VTA2. VTA1 is used to detect the throttle valve angle and VTA2 is used to detect malfunctions in VTA1. The sensor signal voltages vary between 0 V and 5 V in proportion to the throttle valve opening angle, and are transmitted to the VTA terminals of the ECM.

As the valve closes, the sensor output voltage decreases and as the valve opens, the sensor output voltage increases. The ECM calculates the throttle valve opening angle according to these signals and controls the throttle actuator in response to driver inputs. These signals are also used in calculations such as air-fuel ratio correction, power increase correction and fuel-cut control.





Note:

The throttle valve opening angle detected by the sensor terminal VTA1 is expressed as percentages.

Between 10 % and 24 %: Throttle valve fully closed

Between 64 % and 96 %: Throttle valve fully open

Approximately 19 %: Fail-safe angle (6°)

A019802E31

HINT:
This DTC relates to the Throttle Position (TP) sensor.

DTC No.	DTC Detection Condition	Trouble Area
P0121	Difference between VTA1 and VTA2 voltages less than 0.8 V, or more than 1.6 V for 2 seconds (1 trip detection logic)	TP sensor (built into throttle body)

MONITOR DESCRIPTION

The ECM uses the TP sensor to monitor the throttle valve opening angle.
This sensor transmits two signals: VTA1 and VTA2. VTA1 is used to detect the throttle opening angle and VTA2 is used to detect malfunctions in VTA1. The ECM performs several checks to confirm the proper operation of the TP sensor and VTA1.

For each throttle opening angle, a specific voltage difference is expected between the outputs of VTA1 and VTA2. If the output voltage difference between the two signals deviates from the normal operating range, the ECM interprets this as a malfunction of the TP sensor. The ECM illuminates the MIL and sets the DTC.
If the malfunction is not repaired successfully, the DTC is set 2 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P0121: TP sensor rationality

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	P0120, P0122, P0123, P0220, P0222, P0223, P2135 (TP sensor)
Either of following conditions A or B is met:	-
A. Engine switch	ON
B. Electric throttle motor power	ON
TP sensor malfunction (P0120, P0122, P0123, P0220, P0222, P0223, P2135)	Not detected

TYPICAL MALFUNCTION THRESHOLDS

Difference in voltage between VAT1 and VTA2 TP sensor 1 - [TP sensor 2 x 0.8 (corrected by learning value)]	Less than 0.8 V or more than 1.6 V

FAIL-SAFE

When this DTC, as well as other DTCs relating to ETCS (Electronic Throttle Control System) malfunctions, is set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator off, and the throttle valve is returned to a 6° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue at a minimal speed. If the accelerator pedal is depressed firmly and gently, the vehicle can be driven slowly. Fail-safe mode continues until a pass condition is detected, and the engine switch is then turned off.

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air/fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

1	**CHECK OTHER DTC OUTPUT (IN ADDITION TO DTC P0121)**

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Turn the tester on.

(d) Enter the following menus: DIAGNOSIS / ENHANCED II / DTC INFO / CURRENT CODES.
(e) Read the DTC.

REPLACE THROTTLE BODY (See page ES-503)

DTC	P0125	Insufficient Coolant Temperature for Closed Loop Fuel Control

DESCRIPTION

A thermistor is built into the Engine Coolant Temperature (ECT) sensor, and its resistance value varies according to the ECT.
The structure of the sensor and its connection to the ECM are the same as those of the Intake Air Temperature (IAT) sensor.

DTC No.	DTC Detection Condition	Trouble Area
P0125	Engine coolant temperature (ECT) does not reach closed-loop enabling temperature for 20 minutes (this period varies with ECT when engine start)	• Engine coolant temperature sensor • Cooling system • Thermostat

MONITOR DESCRIPTION

The resistance of the ECT varies in proportion to the actual ECT. The ECT supplies a constant voltage to the sensor and monitors the signal output voltage of the sensor. The signal voltage output varies according to the changing resistance of the sensor. After the engine is started, the ECT is monitored through this signal. If the ECT sensor indicates that the engine is not yet warm enough for closed-loop fuel control, despite a specified period of time having elapsed since the engine was started, the ECM interprets this as a malfunction in the sensor or cooling system and sets the DTC.
Example:

The ECT is 0°C (32°F) at engine start. After 5 minutes running time, the ECT sensor still indicates that the engine is not warm enough to begin closed-loop fuel (air-fuel ratio feedback) control. The ECM interprets this as a malfunction in the sensor or cooling system and sets the DTC.

MONITOR STRATEGY

Related DTCs	P0125: Insufficient engine coolant temperature for closed-loop fuel control
Required Sensors/Components (Main)	Thermostat, cooling system
Required Sensors/Components (Related)	Engine coolant temperature sensor and mass air flow meter
Frequency of Operation	Once per driving cycle
Duration	64 seconds: Closed-loop enabling temperature - 8.34°C (15°F) or more 111.2 seconds: Closed-loop enabling temperature - 19.45 to 8.34°C (35 to 15°F) 1,200 seconds: Less than closed-loop enabling temperature - 19.45°C (35°F)
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	P0100 - P0103 (MAF sensor) P0110 - P0113 (IAT sensor) P0115 - P0118 (ECT sensor)
MAF sensor circuit fail	Not detected
IAT sensor circuit fail	Not detected
ECT sensor circuit fail	Not detected
Thermostat fail	Not detected

TYPICAL MALFUNCTION THRESHOLDS

Time until actual engine coolant temperature reaches closed-loop fuel control enabling temperature	64 seconds or more: Engine coolant temperature at engine start is - 8.34°C (15°F) or more 111.2 seconds or more: Engine coolant temperature at engine start is - 19.45 to 8.35°C (15 to 35°F) 1,200 seconds or more: Engine coolant temperature at engine start is less than - 19.4°C (35°F)

WIRING DIAGRAM

Refer to DTC P0115 (See page ES-146).

INSPECTION PROCEDURE

HINT:

- If any of DTCs P0115, P0116, P0117 or P0118 are set simultaneously with DTC P0125, the Engine Coolant Temperature (ECT) sensor may have an open or a short circuit. Troubleshoot those DTCs first.
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

ES

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0125)

(a) Connect an intelligent tester to the DLC3.

(c) Turn the tester on.
(d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P0125	A
P0125 and other DTCs	B

HINT:
If any DTCs other than P0125 are output, troubleshoot those DTCs first.

B → GO TO DTC CHART (See page ES-63)

A

2	INSPECT THERMOSTAT

(a) Remove the thermostat (See page CO-13).
(b) Check the valve opening temperature of the thermostat.
Standard:
80 to 84°C (176 to 183°F)
HINT:
In addition to the above check, confirm that the valve is completely closed when the temperature is below the standard.
(c) Reinstall the thermostat (See page CO-14).

NG → REPLACE THERMOSTAT (See page CO-13)

OK

3	CHECK COOLING SYSTEM

(a) Check for defects in the cooling system that might cause the system to be too cold, such as abnormal radiator fan operation or any modifications.

NG → REPAIR OR REPLACE COOLING SYSTEM

OK

REPLACE ENGINE COOLANT TEMPERATURE SENSOR (See page ES-499)

DTC	P0128	Coolant Thermostat (Coolant Temperature Below Thermostat Regulating Temperature)

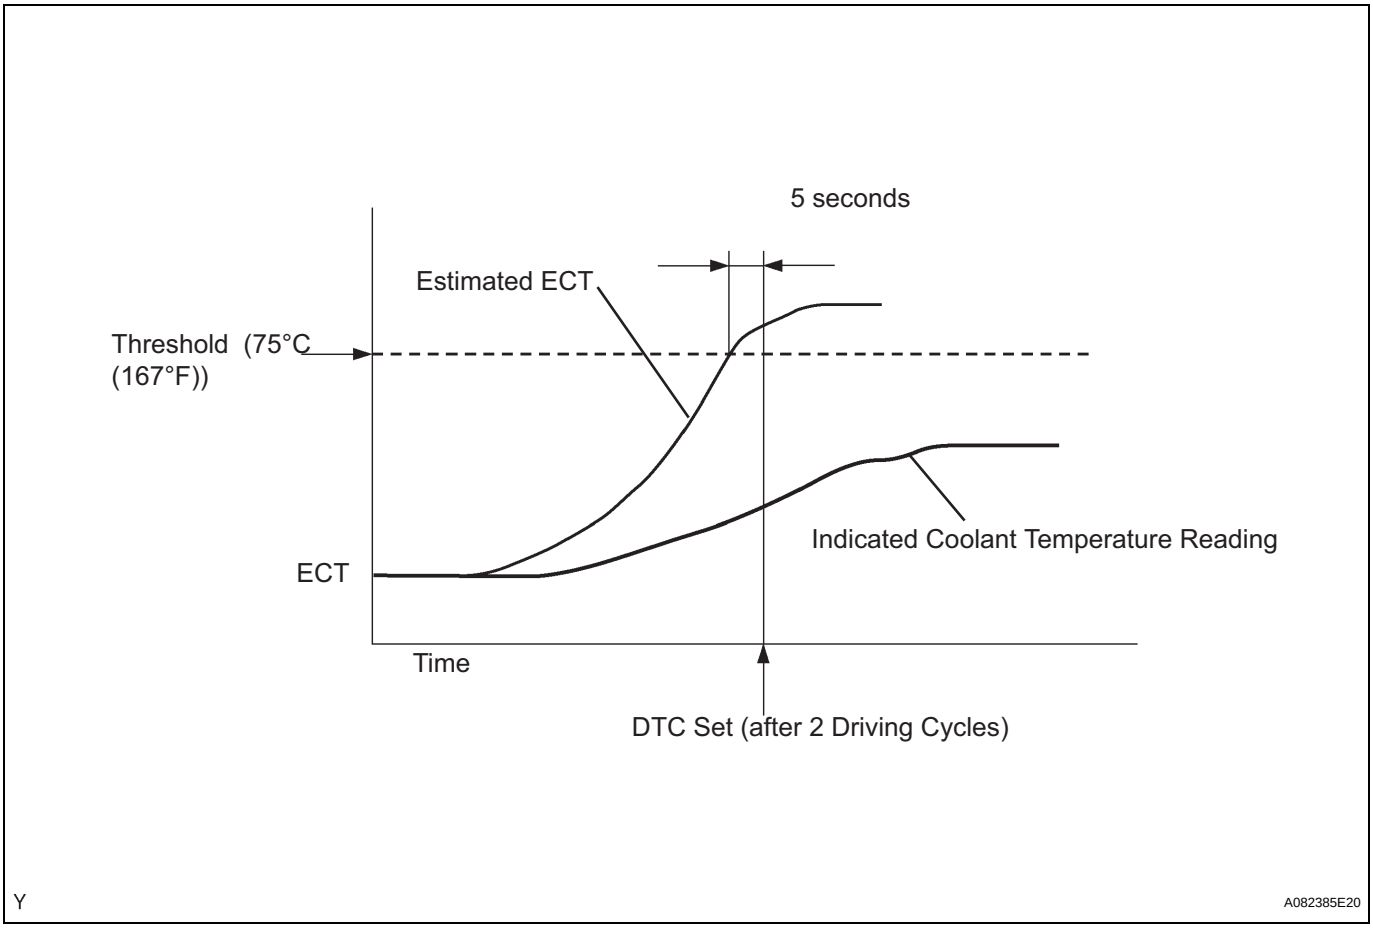
DESCRIPTION

This DTC is set when the Engine Coolant Temperature (ECT) does not reach 75°C (167°F) despite sufficient engine warm-up time.

DTC No.	DTC Detection Condition	Trouble Area
P0128	Conditions (a), (b) and (c) are met for 5 seconds (2 rip detection logic): (a) Cold start (b) Engine warmed up (c) ECT less than 75°C (167°F)	• Thermostat • Cooling system • ECT sensor • ECM

ES

MONITOR DESCRIPTION



The ECM estimates the ECT based on the starting temperature, engine loads, and engine speeds. The ECM then compares the estimated temperature with the actual ECT. When the estimated ECT reaches 75°C (167°F), the ECM checks the actual ECT. If the actual ECT is less than 75°C (167°F), the ECM interprets this as a malfunction in the thermostat or the engine cooling system and sets the DTC.

MONITOR STRATEGY

Related DTCs	P0128: Coolant Thermostat
Required Sensors/Components (Main)	Thermostat
Required Sensors/Components (Sub)	Engine Coolant Temperature (ECT) sensor, Intake Air Temperature (IAT) sensor, Vehicle speed sensor

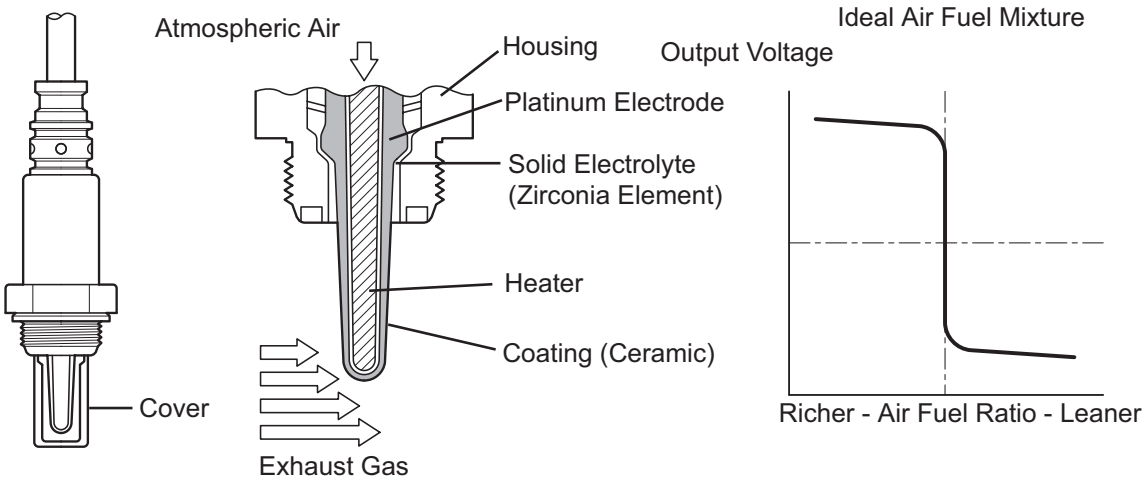
DTC	P0136	Oxygen Sensor Circuit Malfunction (Bank 1 Sensor 2)
DTC	P0137	Oxygen Sensor Circuit Low Voltage (Bank 1 Sensor 2)
DTC	P0138	Oxygen Sensor Circuit High Voltage (Bank 1 Sensor 2)
DTC	P0156	Oxygen Sensor Circuit Malfunction (Bank 2 Sensor 2)
DTC	P0157	Oxygen Sensor Circuit Low Voltage (Bank 2 Sensor 2)
DTC	P0158	Oxygen Sensor Circuit High Voltage (Bank 2 Sensor 2)

DESCRIPTION

A three-way catalytic converter (TWC) is used in order to convert the carbon monoxide (CO), hydrocarbon (HC), and nitrogen oxide (NOx) into less harmful substances. To allow the TWC to function effectively, it is necessary to keep the air-fuel ratio of the engine near the stoichiometric air-fuel ratio. For the purpose of helping the ECM to deliver accurate air-fuel ratio control, the Heated Oxygen (HO2) sensor is used.
The HO2 sensor is located behind the TWC, and detects the oxygen concentration in the exhaust gas. Since the sensor is integrated with the heater that heats the sensing portion, it is possible to detect the oxygen concentration even when the intake air volume is low (the exhaust gas temperature is low).
When the air-fuel ratio becomes lean, the oxygen concentration in the exhaust gas becomes rich. The HO2 sensor informs the ECM that the post-TWC air-fuel ratio is lean (low voltage, i.e. less than 0.45 V). Conversely, when the air-fuel ratio is richer than the stoichiometric air-fuel level, the oxygen concentration in the exhaust gas becomes lean. The HO2 sensor informs the ECM that the post-TWC air-fuel ratio is rich (high voltage, i.e. more than 0.45 V). The HO2 sensor has the property of changing its output voltage drastically when the air-fuel ratio is close to the stoichiometric level.
The ECM uses the supplementary information from the HO2 sensor to determine whether the air-fuel ratio after the TWC is rich or lean, and adjusts the fuel injection time accordingly. Thus, if the HO2 sensor is working improperly due to internal malfunctions, the ECM is unable to compensate for deviations in the primary air-fuel ratio control.



P

DTC No.	DTC Detection Condition	Trouble Area
P0136 P0156	• Abnormal voltage output: During active air-fuel ratio control, following conditions (a) and (b) are met for a certain period of time (2 trip detection logic) (a) Heated Oxygen (HO2) sensor voltage does not decrease to less than 0.2 V (b) HO2 sensor voltage does not increase to more than 0.6 V • Low impedance: Sensor impedance is less than 5 Ω for more than 30 seconds when ECM presumes sensor to being warmed up and operating normally (2 trip detection logic)	• Open or short in HO2 sensor (bank 1, 2 sensor 2) circuit • HO2 sensor (bank 1, 2 sensor 2) • HO2 sensor heater (bank 1, 2 sensor 2) • Air-Fuel Ratio (A/F) sensor (bank 1, 2 sensor 1) • Engine room junction block (EFI relay) • Gas leakage from exhaust system
P0137 P0157	• Low voltage (open): During active air-fuel ratio control, following conditions (a) and (b) are met for a certain period of time (2 trip detection logic) (a) HO2 sensor voltage output less than 0.21 V (b) Target air-fuel ratio rich • High impedance: Sensor impedance is 15 kΩ or more for more than 90 seconds when ECM presumes sensor to being warmed up and operating normally (2 trip detection logic)	• Open in HO2 sensor (bank 1, 2 sensor 2) circuit • HO2 sensor (bank 1, 2 sensor 2) • HO2 sensor heater (bank 1, 2 sensor 2) • Engine room junction block (EFI relay) • Gas leakage from exhaust system
P0138 P0158	• High voltage (short): During active air-fuel ratio control, following conditions (a) and (b) are met for a certain period of time (2 trip detection logic) (a) HO2 sensor voltage output 0.59 V or more (b) Target air-fuel ratio lean • Extremely high voltage (short): HO2 sensor voltage output exceeds 1.2 V for more than 30 seconds (2 trip detection logic)	• Short in HO2 sensor (bank 1, 2 sensor 2) circuit • HO2 sensor (bank 1, 2 sensor 2) • ECM internal circuit malfunction

MONITOR DESCRIPTION

1. Active Air-Fuel Ratio Control

The ECM usually performs air-fuel ratio feedback control so that the Air-Fuel Ratio (A/F) sensor output indicates a near stoichiometric air-fuel level. This vehicle includes active air-fuel ratio control in addition to regular air-fuel ratio control. The ECM performs active air-fuel ratio control to detect any deterioration in the Three-Way Catalytic Converter (TWC) and Heated Oxygen (HO2) sensor malfunctions (refer to the diagram below).

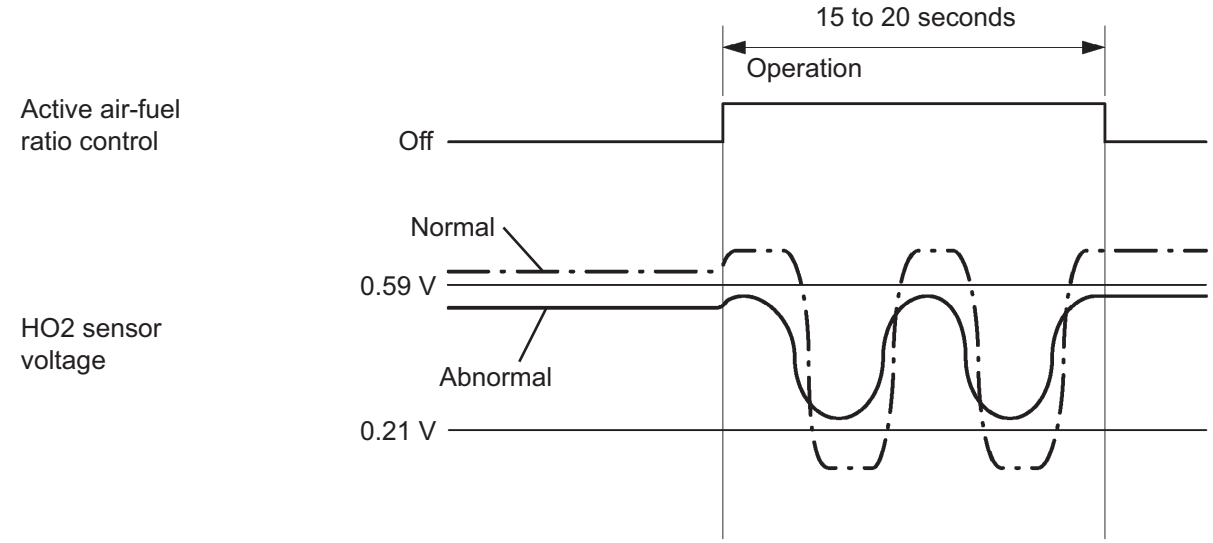
Active air-fuel ratio control is performed for approximately 15 to 20 seconds while driving with a warm engine. During active air-fuel ratio control, the air-fuel ratio is forcibly regulated to become lean or rich by the ECM. If the ECM detects a malfunction, one of the following DTCs is set: DTC P0136 or P0156 (abnormal voltage output), P0137 or P0157 (open circuit) or P0138 or P0158 (short circuit).

2. Abnormal Voltage Output of HO2 Sensor (DTCs P0136 and P0156)

While the ECM is performing active air-fuel ratio control, the air-fuel ratio is forcibly regulated to become rich or lean. If the sensor is not functioning properly, the voltage output variation is small. For example, when the HO2 sensor voltage does not decrease to less than 0.21 V and does not increase to more than 0.59 V during active air-fuel ratio control, the ECM determines that the sensor voltage output is abnormal and sets DTCs P0136 and P0156.

ES

HO2 SENSOR CIRCUIT MALFUNCTION (P0136 and P0156: ABNORMAL VOLTAGE):



3. Open or Short in Heated Oxygen (HO2) Sensor Circuit (DTCs P0137 and P0157 or P0138 and P0158)

During active air-fuel ratio control, the ECM calculates the Oxygen Storage Capacity (OSC)* of the Three- Way Catalytic Converter (TWC) by forcibly regulating the air-fuel ratio to become rich or lean. If the HO2 sensor has an open or short circuit, or the voltage output of the sensor noticeably decreases, the OSC indicates an extraordinarily high value. Even if the ECM attempts to continue regulating the air-fuel ratio to become rich or lean, the HO2 sensor output does not change.

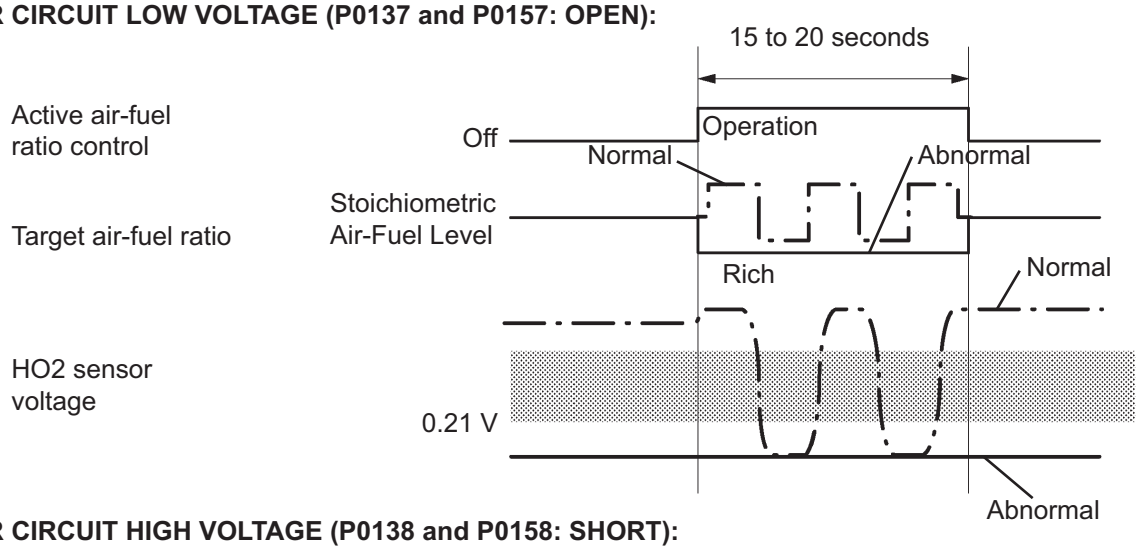
While performing active air-fuel ratio control, when the target air-fuel ratio is rich and the HO2 sensor voltage output is 0.21 V or less (lean), the ECM interprets this as an abnormally low sensor output voltage and sets DTC P0137 or P0157. When the target air-fuel ratio is lean and the voltage output is 0.59 V or more (rich) during active air-fuel ratio control, the ECM determines that the sensor voltage output is abnormally high, and sets DTC P0138 or P0158.

HINT:

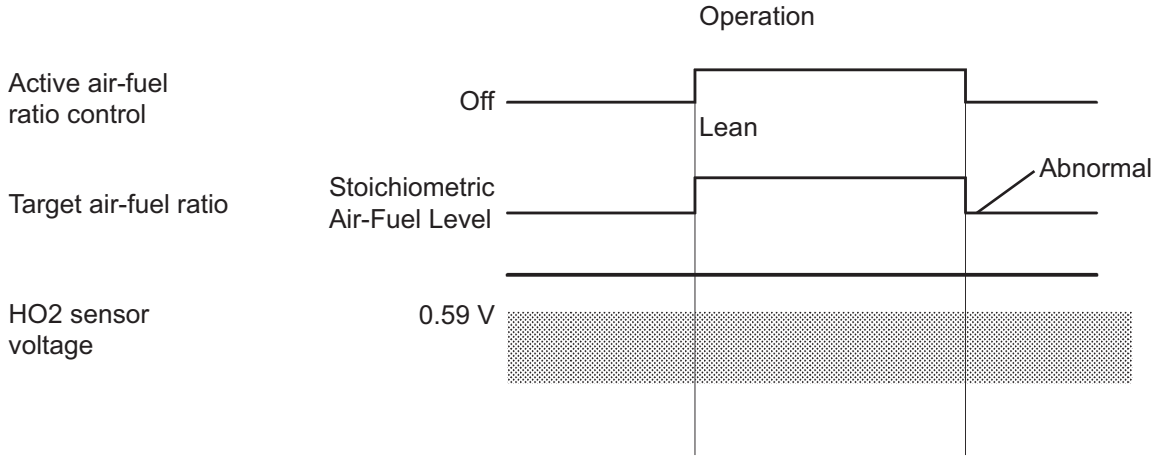
DTC P0138 or P0158 is also set if the HO2 sensor voltage output is more than 1.2 V for 30 seconds or more.

*: The TWC has the capability to store oxygen. The OSC and the emission purification capacity of the TWC are mutually related. The ECM determines whether the catalyst has deteriorated, based on the calculated OSC value (See page ES-249).

HO2 SENSOR CIRCUIT LOW VOLTAGE (P0137 and P0157: OPEN):



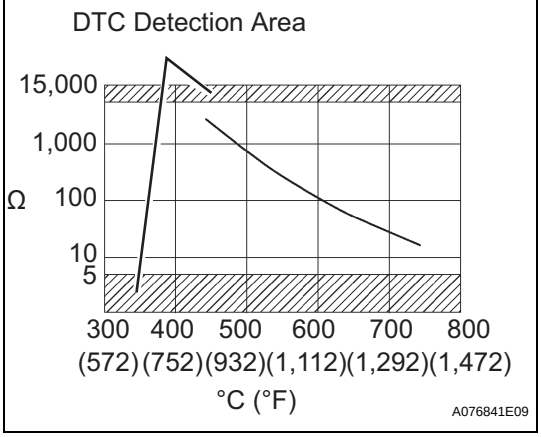
HO2 SENSOR CIRCUIT HIGH VOLTAGE (P0138 and P0158: SHORT):



Y

A080024E11

Interrelation between temperature of element and impedance:



A076841E09

4. High or Low Impedance of Heated Oxygen (HO2) Sensor (DTCs P0136 and P0156 or P0137 and P0157)

During normal air-fuel ratio feedback control, there are small variations in the exhaust gas oxygen concentration. In order to continuously monitor the slight variation of the HO2 sensor signal while the engine is running, the impedance* of the sensor is measured by the ECM. The ECM determines that there is a malfunction in the sensor when the measured impedance deviates from the standard range.

*: The effective resistance in an alternating current electrical circuit.

HINT:

- The impedance cannot be measured using an ohmmeter.

- DTCs P0136 and P0156 indicate the deterioration of the HO2 sensor. The ECM sets the DTCs by calculating the impedance of the sensor when the typical enabling conditions are satisfied (1 driving cycle).
- DTCs P0137 and P0157 indicate an open or short circuit in the HO2 sensor (1 driving cycle). The ECM sets the DTCs when the impedance of the sensor exceeds the threshold of 15 kΩ.

TYPICAL ENABLING CONDITIONS

All:

Monitor runs whenever following DTCs are not present	P0031, P0032, P0051, P0052 (A/F sensor heater - Sensor 1) P0037, P0038, P0057, P0058 (O2 Sensor Heater - Sensor 2) P0100 - P0103 (MAF meter) P0110 - P0113 (IAT sensor) P0115 - P0118 (ECT sensor) P0120 - P0223, P2135 (TP sensor) P0125 (Insufficient ECT for Closed Loop) P0171, P0172 (Fuel system) P0300 - P0308 (Misfire) P0335 (CKP sensor) P0340, P0341 (CMP sensor) P0442 - P0456 (EVAP system) P0500 (VSS) P2196, P2198 (A/F sensor - rationality) P2A00, P2A03 (A/F sensor - slow response)

HO2S voltage (P0136, P0156), HO2S low voltage (P0137, P0157), HO2S high voltage (P0138, P0158):

Active A/F control	Performing
Battery voltage	11 V or more
ECT	75 °C (167°F) or more
Idle	OFF

Engine rpm	Less than 3,200 rpm
A/F sensor status	Activated
Fuel system status	Closed loop
Fuel-cut	OFF
Engine load	10 to 70%
Shift position	4th or more

HO2S low impedance (P0136, P0156):

Battery voltage	11 V or more
Estimated rear HO2S temperature	Less than 700°C (1,292°F)
ECM monitor	Completed
P0606	Not set

HO2S high impedance (P0137, P0157):

Battery voltage	11 V or more
Estimated rear HO2S temperature	450°C (842°F) or more
P0606	Not preset

HO2S high voltage (Extremely high) (P0138, P0158):

Battery voltage	11 V or more
Time after engine start	2 seconds or more

TYPICAL MALFUNCTION THRESHOLDS

HO2S voltage (P0136, P0156):

Either of the following conditions 1 or 2 is met:	-
1. All of the following conditions (a), (b) and (c) are met:	-
(a) Commanded air-fuel ratio	14.3 or less
(b) Rear HO2S voltage	0.21 to 0.59 V
(c) OSC (Oxygen capacity of catalyst)	2 g or more
2. All of the following conditions (d), (e) and (f) are met:	-
(d) Commanded air-fuel ratio	14.9 or more
(e) Rear HO2S voltage	0.21 to 0.59 V
(f) OSC (Oxygen capacity of catalyst)	2 g or more

HO2S low impedance (P0136, P0156):

Duration that following condition is met:	30 seconds or more
Rear HO2S impedance	Less than 5 Ω

HO2S high impedance (P0137, P0157):

Duration that following condition is met:	90 seconds or more
Rear HO2S impedance	15 kΩ or more

HO2S low voltage (P0137, P0157):

All of the following conditions 1, 2 and 3 are met:	-
1. Commanded air-fuel ratio	14.3 or less
2. Rear HO2S voltage	Less than 0.21 V
3. OSC (Oxygen capacity of catalyst)	2 g or more

HO2S high voltage (P0138, P0158):

All of the following conditions 1, 2 and 3 are met:	-
1. Commanded air-fuel ratio	14.9 or more
2. Rear HO2S voltage	More than 0.59 V
3. OSC (Oxygen capacity of catalyst)	2 g or more

HO2S high voltage (Extremely high) (P0138, P0158):

Duration that following condition is met:	10 seconds or more
Rear HO2S voltage	1.2 V or more

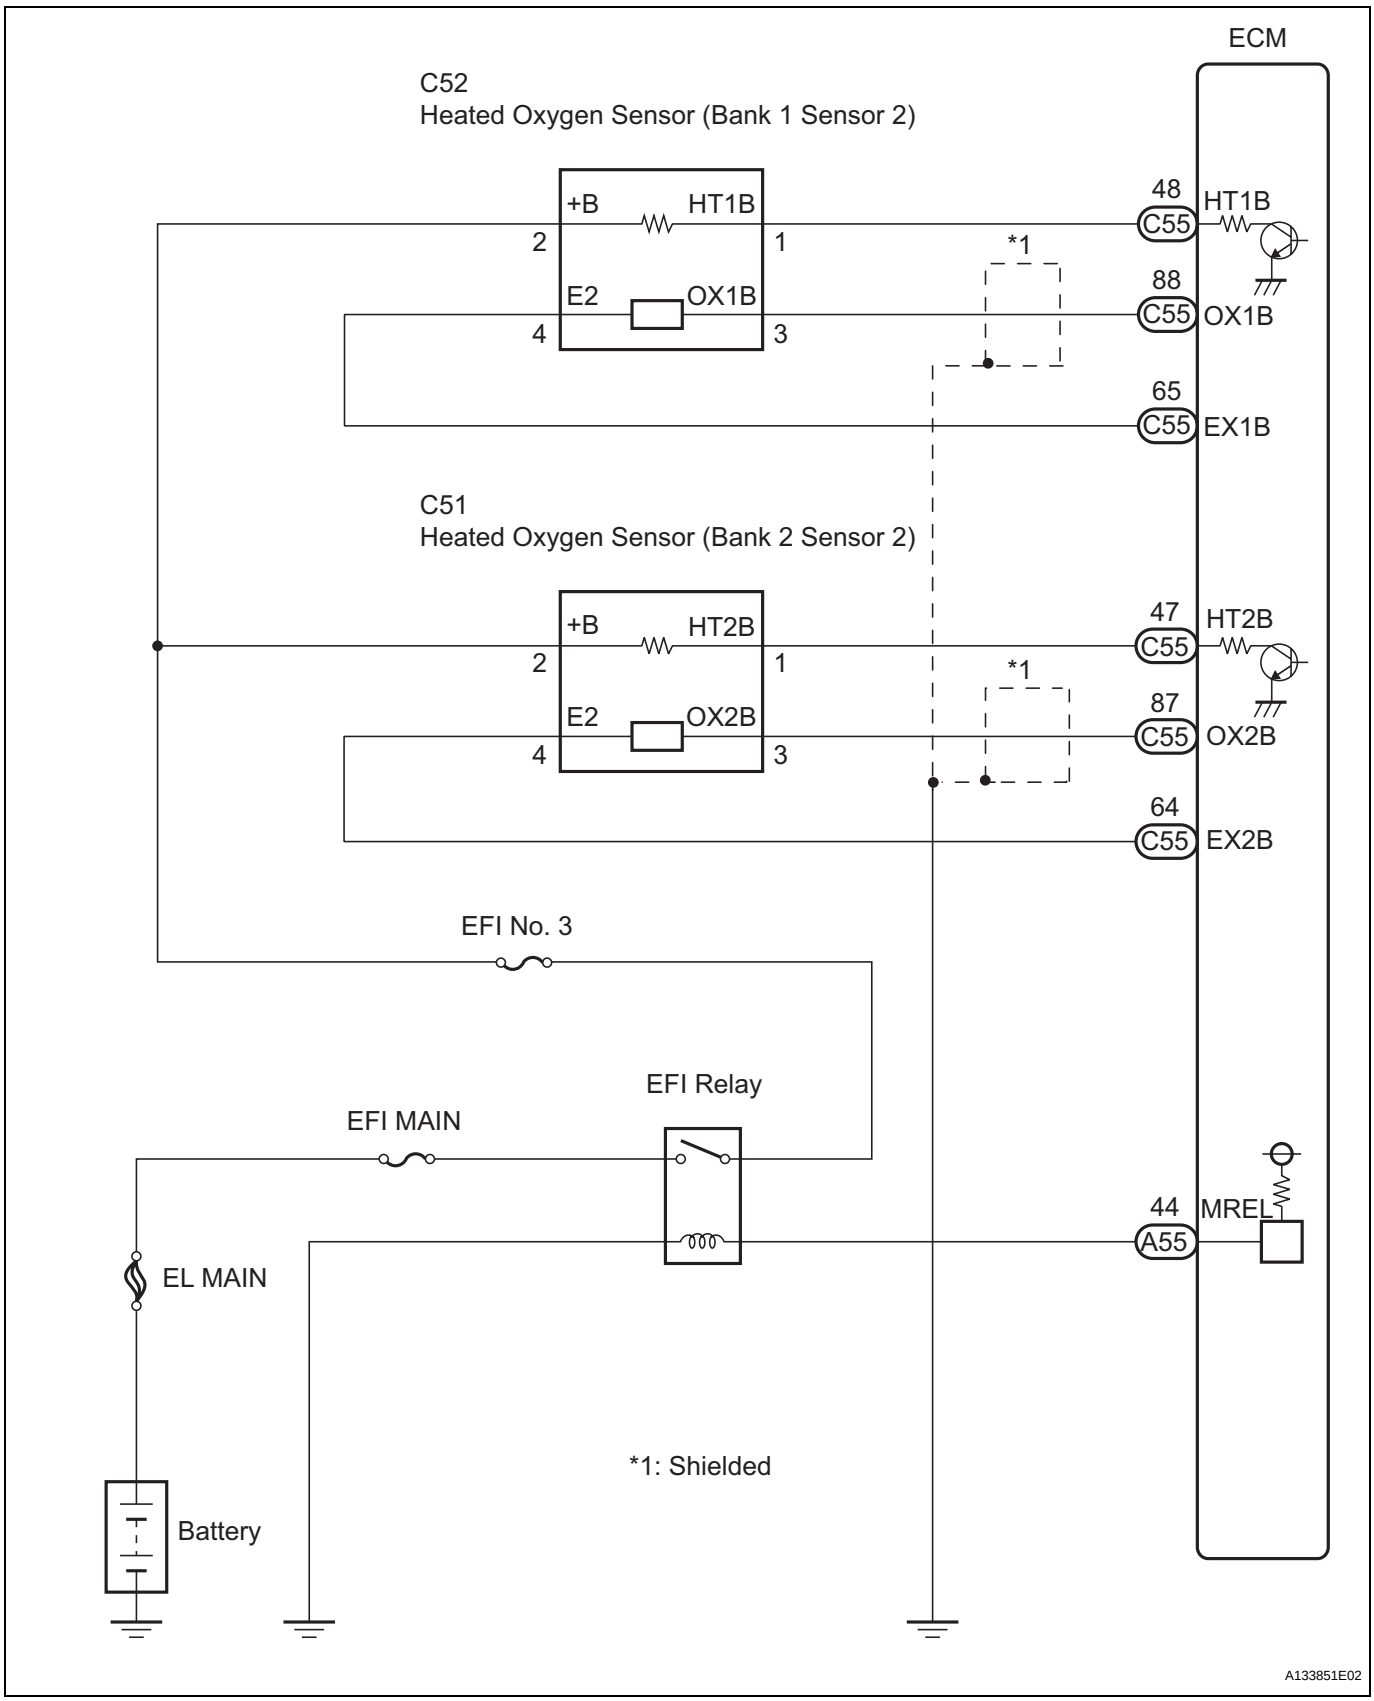
COMPONENT OPERATING RANGE

Duration that following condition is met:	30 seconds or more
Heated oxygen sensor voltage	Varies between 0.1 and 0.9 V

MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-25).

WIRING DIAGRAM



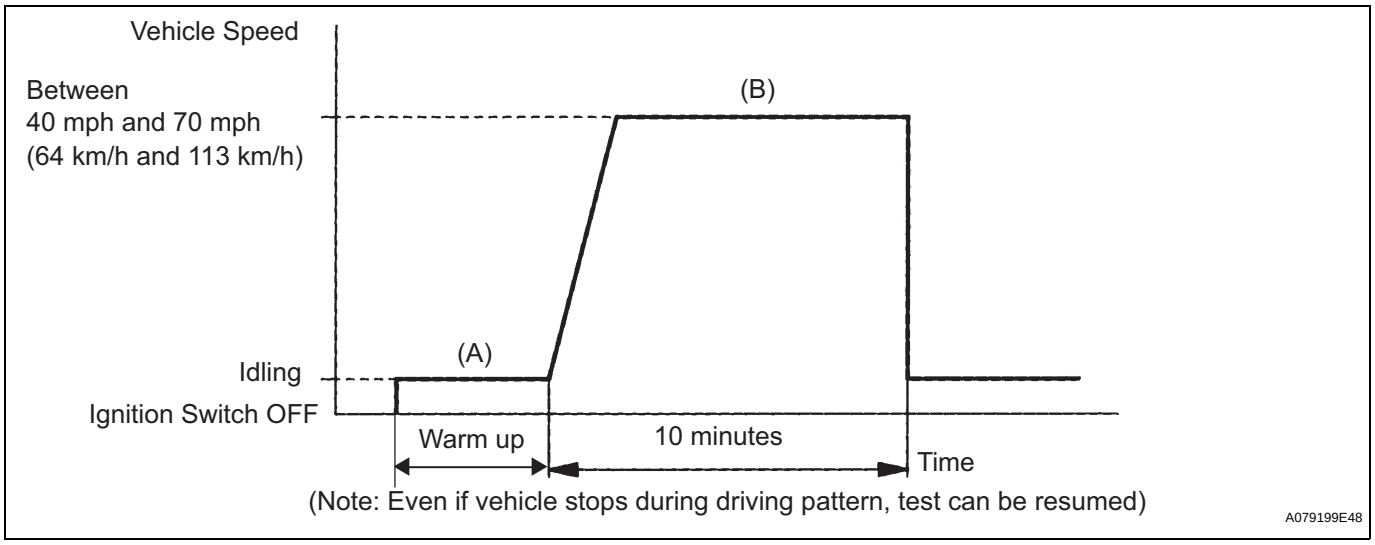
CONFIRMATION DRIVING PATTERN

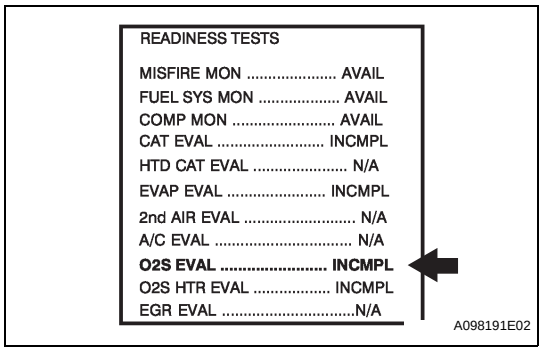
HINT:

- This confirmation driving pattern is used in steps 5, 8 and 11 of the following diagnostic troubleshooting procedure when using an intelligent tester.
- Performing this confirmation driving pattern will activate the Heated Oxygen (HO2) sensor monitor. (The catalyst monitor is performed simultaneously.) This is very useful for verifying the completion of a repair.

NOTICE:

This test will not be completed if the vehicle is driven under absolutely constant speed conditions such as with cruise control activated.





1. Connect an intelligent tester to the DLC3.
2. Turn the ignition switch on (IG).
3. Turn the tester on.
4. Clear the DTCs (where set) (See page ES-45).
5. Select the following menu items: DIAGNOSIS / CARB OBD II / READINESS TESTS.
6. Check that O2S EVAL is INCMPL (incomplete).
7. Start the engine and warm it up (Procedure "A").
8. Drive the vehicle at between 40 mph and 70 mph (64 km/h and 113 km/h) for at least 10 minutes (Procedure "B").
9. Note the state of the Readiness Tests items. Those items will change to COMPL (complete) as O2S EVAL monitor operates.
10. On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES and check if any DTCs (any pending DTCs) are set.

HINT:

If O2S EVAL does not change to COMPL, and any pending DTCs fail to set, extend the driving time.

INSPECTION PROCEDURE

HINT:

Intelligent tester only:

Malfunctioning areas can be identified by performing the A/F CONTROL function provided in the ACTIVE TEST. The A/F CONTROL function can help to determine whether the Air-Fuel Ratio (A/F) sensor, Heated Oxygen (HO2) sensor and other potential trouble areas are malfunctioning.

The following instructions describe how to conduct the A/F CONTROL operation using an intelligent tester.

1. Connect the intelligent tester to the DLC3.
2. Start the engine and turn the tester on.
3. Warm up the engine at an engine speed of 2,500 rpm for approximately 90 seconds.
4. On the tester, enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL.
5. Perform the A/F CONTROL operation with the engine in an idling condition (press the RIGHT or LEFT button to change the fuel injection volume).
6. Monitor the voltage outputs of the A/F and HO2 sensors (AFS B1S1 and O2S B1S2 or AFS B2S1 and O2S B2S2) displayed on the tester.

ES

HINT:

- The A/F CONTROL operation lowers the fuel injection volume by 12.5 % or increases the injection volume by 25 %.
- Each sensor reacts in accordance with increases in the fuel injection volume.

Tester Display (Sensor)	Injection Volume	Status	Voltage
AFS B1S1 or AFS B2S1 (A/F)	+25 %	Rich	Less than 3.0 V
AFS B1S1 or AFS B2S1 (A/F)	-12.5 %	Lean	More than 3.35 V
O2S B1S2 or O2S B2S2 (HO2)	+25 %	Rich	More than 0.55 V
O2S B1S2 or O2S B2S2 (HO2)	-12.5 %	Lean	Less than 0.4 V

NOTICE:

The Air-Fuel Ratio (A/F) sensor has an output delay of a few seconds and the Heated Oxygen (HO2) sensor has a maximum output delay of approximately 20 seconds.

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Area
1	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		-
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage More than 0.55 V Less than 0.4 V		
2	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• A/F sensor • A/F sensor heater • A/F sensor circuit
	Output Voltage Almost no reaction		Output Voltage More than 0.55 V Less than 0.4 V		

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Area
3	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• HO2 sensor • HO2 sensor heater • HO2 sensor circuit
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage Almost no reaction		
4	Injection volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• Fuel pressure • Gas leakage from exhaust system (Air-fuel ratio extremely lean or rich)
	Output Voltage Almost no reaction		Output Voltage Almost no reaction		

ES

- Following the A/F CONTROL procedure enables technicians to check and graph the voltage outputs of both the A/F and HO2 sensors.
- To display the graph, enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL / USER DATA / AFS B1S1 and O2S B1S2 or AFS B2S1 and O2S B2S2, and press the YES button and then the ENTER button followed by the F4 button.

HINT:

- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).
- If the OX1B wire from the ECM connector is short-circuited to the +B wire, DTC P0136 will be set.
- If the OX2B wire from the ECM connector is short-circuited to the +B wire, DTC P0156 will be set.

1	READ DTC OUTPUT

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the tester on.
(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P0138 or P0158	A
P0137 or P0157	B
P0136 or P0156	C

B → Go to step 14

C → Go to step 7

A

2	READ VALUE OF OXYGEN SENSOR (OUTPUT VOLTAGE)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the tester on.

(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / O2S B1S2 or O2S B2S2.
(d) Allow the engine to idle.
(e) Read the Heated Oxygen (HO2) sensor output voltage while idling.

Result

HO2 Sensor Output Voltage	Proceed to
More than 1.2 V	A
Less than 1.0 V	B

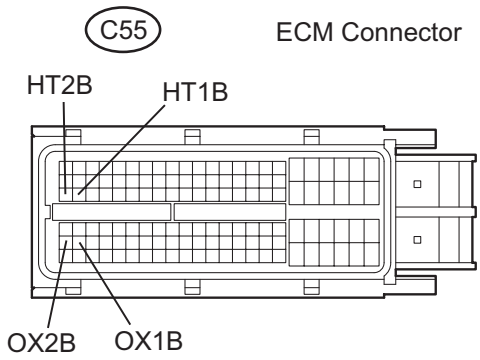
B → **Go to step 5**

A

ES

3 CHECK HARNESS AND CONNECTOR (CHECK FOR SHORT)

Wire Harness Side Front View:



(a) Turn the engine switch off and wait for 5 minutes.
(b) Disconnect the C55 ECM connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
HT1B (C55-48) - OX1B (C55-88)	10 kΩ or higher
HT2B (C55-47) - OX2B (C55-87)	10 kΩ or higher

(d) Reconnect the ECM connector.

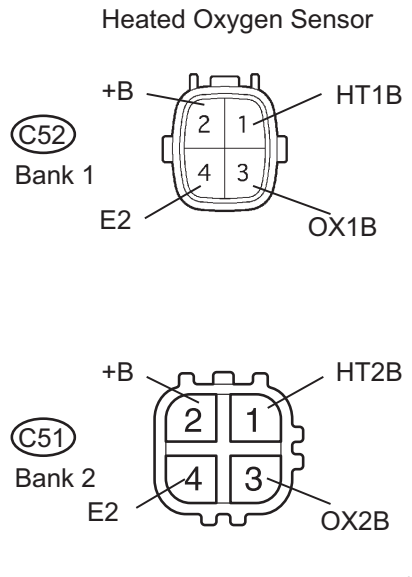
NG → **Go to step 4**

OK

REPLACE ECM (See page ES-518)

4	INSPECT HEATED OXYGEN SENSOR (CHECK FOR SHORT)

Component Side:



(a) Disconnect the C52 oxygen sensor connector (Bank 1 Sensor 2) or C51 oxygen sensor connector (Bank 2 sensor 2).

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance (Bank 1 sensor 2)

Tester Connection	Specified Condition
+B (2) - E2 (4)	10 kΩ or higher
+B (2) - OX1B (3)	10 kΩ or higher

Standard resistance (Bank 2 sensor 2)

Tester Connection	Specified Condition
+B (2) - E2 (4)	10 kΩ or higher
+B (2) - OX2B (3)	10 kΩ or higher

ES

NG → **REPLACE HEATED OXYGEN SENSOR (See page EC-20)**

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR

5	PERFORM CONFIRMATION DRIVING PATTERN

NEXT

6	CHECK WHETHER DTC OUTPUT RECURS (DTC P0138 or P0158)

(a) On the intelligent tester, enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.

(b) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P0138 or P0158	A
No output	B

B → **CHECK FOR INTERMITTENT PROBLEMS**

A

REPLACE HEATED OXYGEN SENSOR (See page EC-20)

7	READ VALUE OF OXYGEN SENSOR (OUTPUT VOLTAGE)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the tester on.
(c) Start the engine.
(d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST / ALL / O2S B1S2 or O2S B1S2.
(e) After warming up the engine, run the engine at an engine speed of 2,500 rpm for 3 minutes.
(f) Read the output voltage of the HO2 sensor when the engine rpm is suddenly increased.
HINT:
Quickly accelerate the engine to 4,000 rpm 3 times using the accelerator pedal.
Standard voltage:
Fluctuates between 0.4 V or less and 0.5 V or more.

NG → **Go to step 14**

OK

8	PERFORM CONFIRMATION DRIVING PATTERN

NEXT

9	CHECK WHETHER DTC OUTPUT RECURS (DTC P0136 or P0156)

(a) On the intelligent tester, enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(b) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P0136 or P0156	A
No output	B

B → **CHECK FOR INTERMITTENT PROBLEMS**

A

10	REPLACE HEATED OXYGEN SENSOR

(a) Replace the hated oxygen sensor (See page EC-20).

NEXT

11	PERFORM CONFIRMATION DRIVING PATTERN

NEXT

12	CHECK WHETHER DTC OUTPUT RECURS (DTC P0136 or P0156)

(a) On the intelligent tester, enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(b) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P0136 or P0156	A
No output	B

B → END

A

13	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (INJECTION VOLUME)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the tester on.
(c) Warm up the engine.
(d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II /ACTIVE TEST / INJ VOL.
(e) Change the fuel injection volume using the tester, while monitoring the output voltage of Air-Fuel Ratio (A/F) and HO2 sensor displayed on the tester.

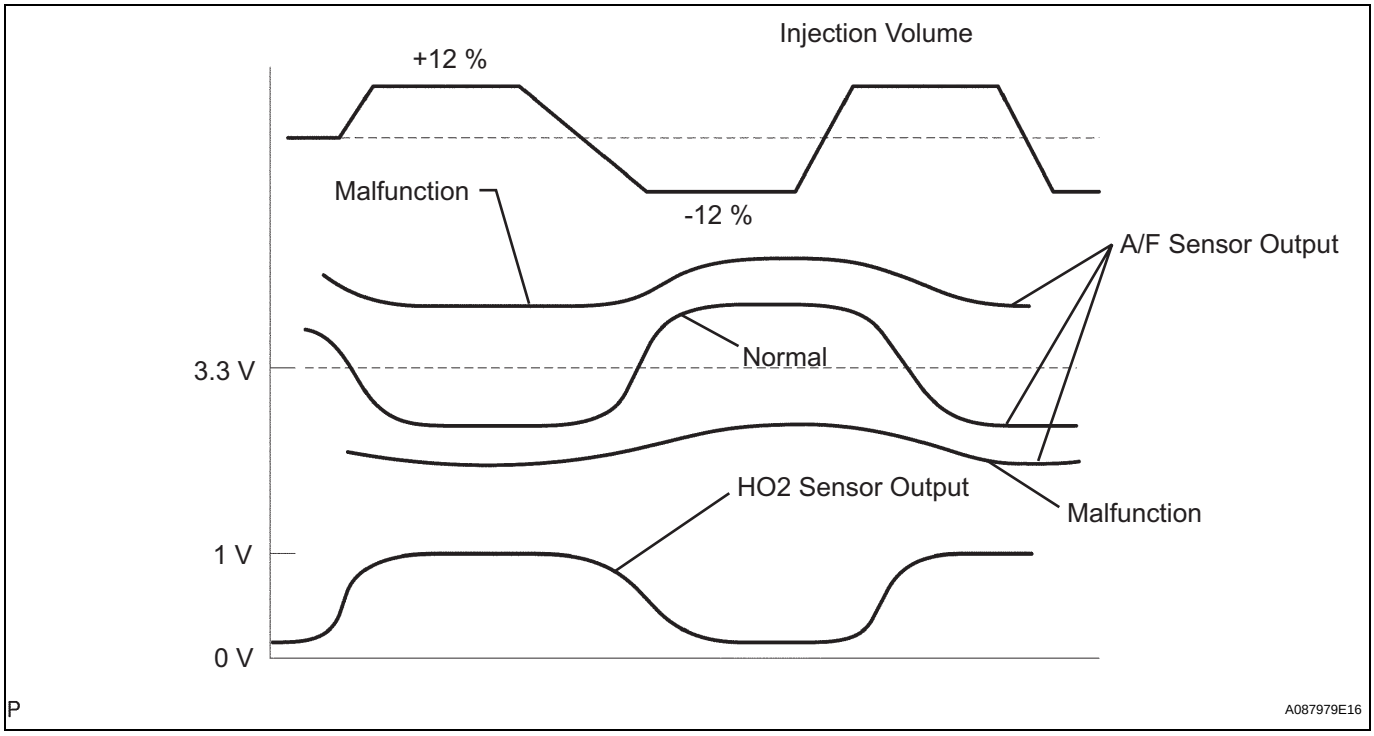
HINT:

- Change the fuel injection volume within the range of -12 % and +12 %. The injection volume can be changed in 1 % graduations within the range.
- The A/F sensor is displayed as AFS B1S1 or AFS B2S1, and the HO2 sensor is displayed as O2S B1S2 or O2S B2S2, on the intelligent tester.

Result

Tester Display (Sensor)	Voltage Variation	Proceed to
AFS B1S1 (A/F) AFS B2S1 (A/F)	Alternates between more and less than 3.3 V	OK
AFS B1S1 (A/F) AFS B2S1 (A/F)	Remains more than 3.3 V	NG
AFS B1S1 (A/F) AFS B2S1 (A/F)	Remains less than 3.3 V	NG

HINT:
A normal HO2 sensor voltage (O2S B1S2 or O2S B2S2) reacts in accordance with increases and decreases in fuel injection volumes. When the A/F sensor voltage remains either less or more than 3.3 V despite the HO2 sensor indicating a normal reaction, the A/F sensor is malfunctioning.



NG → **REPLACE AIR FUEL RATIO SENSOR (See page EC-19)**

OK →

CHECK AND REPAIR EXTREMELY RICH OR LEAN ACTUAL AIR FUEL RATIO (INJECTOR, FUEL PRESSURE, GAS LEAKAGE FROM EXHAUST SYSTEM)

14	CHECK FOR EXHAUST GAS LEAKS

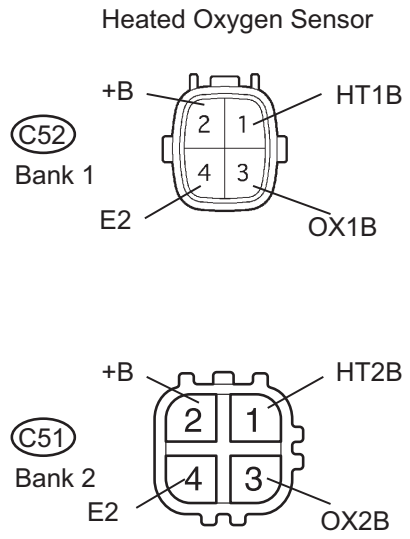
OK:
No gas leakage.

NG → **REPAIR OR REPLACE EXHAUST GAS LEAKAGE POINT**

OK →

15	INSPECT HEATED OXYGEN SENSOR (HEATER RESISTANCE)

Component Side:



A137614E04

(a) Disconnect the C52 oxygen sensor connector (Bank 1 Sensor 2) or C51 oxygen sensor connector (Bank 2 sensor 2).

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance (Bank 1 sensor 2)

Tester Connection	Condition	Specified Condition
HT1B (1) - +B (2)	20°C (68°F)	11 to 16 Ω
HT1B (1) - E2 (4)	Always	10 kΩ or higher

Standard resistance (Bank 2 sensor 2)

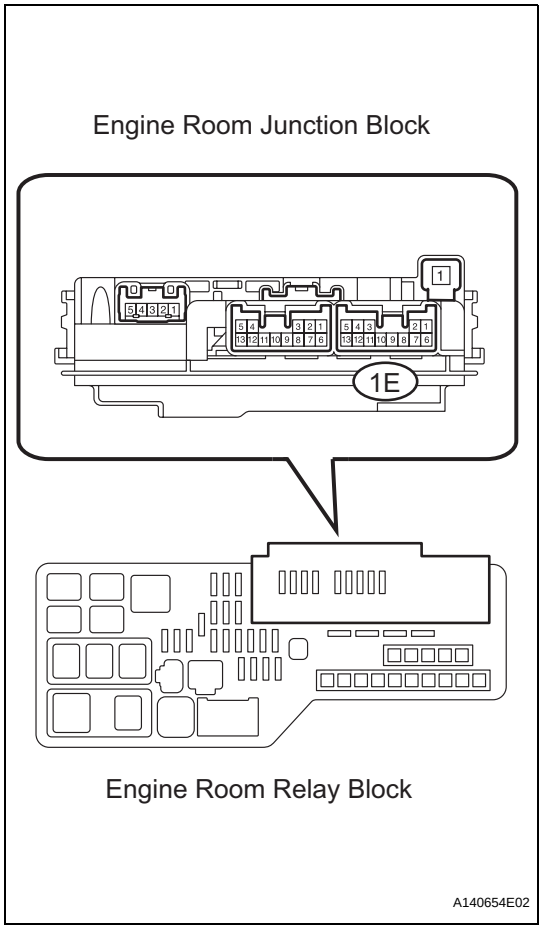
Tester Connection	Condition	Specified Condition
HT2B (1) - +B (2)	20°C (68°F)	11 to 16 Ω
HT2B (1) - E2 (4)	Always	10 kΩ or higher

ES

NG → **REPLACE HEATED OXYGEN SENSOR (See page EC-20)**

OK

16	INSPECT ENGINE ROOM JUNCTION BLOCK (EFI MAIN RELAY)



(a) Remove the engine room junction block from the engine room R/B.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminal Connection	Specified Condition
1E-12 - 1E-6	10 kΩ or higher
1E-12 - 1E-6	Below 1 Ω (when battery voltage applied to terminals 1E-9 and 1E-10)

(c) Reinstall the engine room junction block.

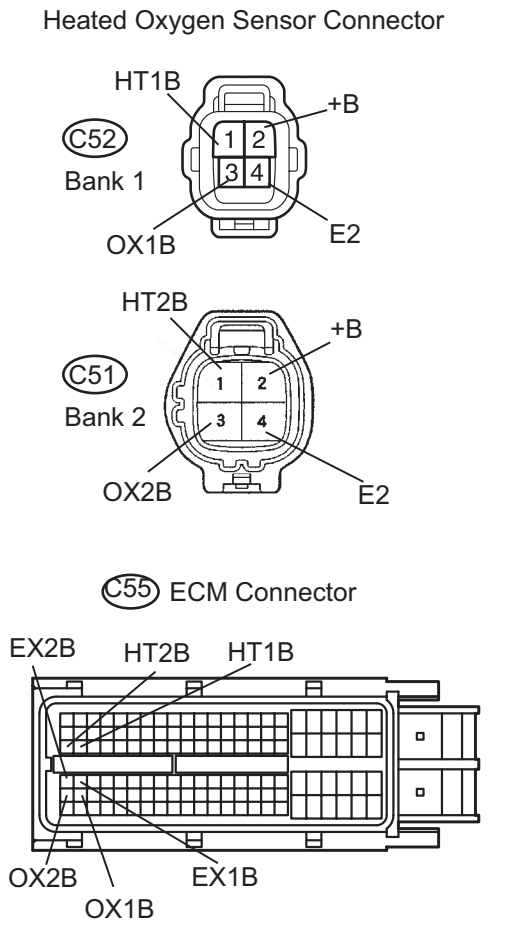
NG → **REPLACE ENGINE ROOM JUNCTION BLOCK**

OK

ES

17	CHECK HARNESS AND CONNECTOR (HEATED OXYGEN SENSOR - ECM)

Wire Harness Side:



(a) Disconnect the C52 oxygen sensor connector (Bank 1 Sensor 2) or C51 oxygen sensor connector (Bank 2 sensor 2).
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Terminal Connection	Specified Condition
+B (C52-2) - Body ground	9 to 14 V
+B (C51-2) - Body ground	9 to 14 V

(d) Turn the engine switch off.
(e) Disconnect the C55 ECM connector.
(f) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Terminal Connection	Specified Condition
HT1B (C52-1) - HT1B (C55-48)	Below 1 Ω
OX1B (C52-3) - OX1B (C55-88)	Below 1 Ω
E2 (C52-4) - EX1B (C55-65)	Below 1 Ω
HT2B (C51-1) - HT2B (C55-47)	Below 1 Ω
OX2B (C51-3) - OX2B (C55-87)	Below 1 Ω
E2 (C51-4) - EX2B (C55-64)	Below 1 Ω

Standard resistance (Check for short)

Terminal Connection	Specified Condition
HT1B (C52-1) or HT1B (C55-48) - Body ground	10 kΩ or higher
OX1B (C52-3) or OX1B (C55-88) - Body ground	10 kΩ or higher
E2 (C52-4) or EX1B (C55-65) - Body ground	10 kΩ or higher
HT2B (C51-1) or HT2B (C55-47) - Body ground	10 kΩ or higher
OX2B (C51-3) or OX2B (C55-87) - Body ground	10 kΩ or higher
E2 (C51-4) or EX2B (C55-64) - Body ground	10 kΩ or higher

(g) Reconnect the HO2 sensor connector.
(h) Reconnect the ECM connector.

REPLACE HEATED OXYGEN SENSOR (See page EC-20)

DTC	P0171	System Too Lean (Bank 1)

DTC	P0172	System Too Rich (Bank 1)

DTC	P0174	System Too Lean (Bank 2)

DTC	P0175	System Too Rich (Bank 2)

DESCRIPTION

The fuel trim is related to the feedback compensation value, not to the basic injection time. The fuel trim consists of both the short-term and long-term fuel trims.

The short-term fuel trim is fuel compensation that is used to constantly maintain the air-fuel ratio at stoichiometric levels. The signal from the Air-Fuel Ratio (A/F) sensor indicates whether the air-fuel ratio is rich or lean compared to the stoichiometric ratio. This triggers a reduction in the fuel injection volume if the air-fuel ratio is rich and an increase in the fuel injection volume if it is lean.

Factors such as individual engine differences, wear over time and changes in operating environment cause short-term fuel trim to vary from the central value. The long-term fuel trim, which controls overall fuel compensation, compensates for long-term deviations in the fuel trim from the central value caused by the short-term fuel trim compensation.

If both the short-term and long-term fuel trims are lean or rich beyond predetermined values, it is interpreted as a malfunction, and the ECM illuminates the MIL and sets a DTC.

ES

DTC No.	DTC Detection Conditions	Trouble Areas
P0171 P0174	With warm engine and stable air-fuel ratio feedback, fuel trim considerably in error to lean side (2 trip detection logic)	• Air induction system • Injector blockage • Mass Air Flow (MAF) meter • Engine Coolant Temperature (ECT) sensor • Fuel pressure • Gas leakage from exhaust system • Open or short in A/F sensor (bank 1, 2 sensor 1) circuit • A/F sensor (bank 1, 2 sensor 1) • A/F sensor heater (bank 1, 2 sensor 1) • A/F sensor heater relay • A/F sensor heater and A/F sensor heater relay circuits • PCV valve and hose • PCV hose connections • ECM
P0172 P0175	With warm engine and stable air-fuel ratio feedback, fuel trim considerably in error to rich side (2 trip detection logic)	• Injector leakage or blockage • MAF meter • ECT sensor • Ignition system • Fuel pressure • Gas leakage from exhaust system • Open or short in A/F sensor (bank 1, 2 sensor 1) circuit • A/F sensor (bank 1, 2 sensor 1) • A/F sensor heater (bank 1, 2 sensor 1) • A/F sensor heater relay • A/F sensor heater and A/F sensor heater relay circuits • ECM

HINT:

- When DTC P0171 or P0174 is set, the actual air-fuel ratio is on the lean side. When DTC P0172 or P0175 is set, the actual air-fuel ratio is on the rich side.
- If the vehicle runs out of fuel, the air-fuel ratio is lean and DTC P0171 or P0174 may be set. The MIL is then illuminated.

- When the total of the short-term and long-term fuel trim values is within the malfunction threshold (and the engine coolant temperature is more than 75°C [167°F]), the system is functioning normally.

MONITOR DESCRIPTION

Under closed-loop fuel control, fuel injection volumes that deviate from those estimated by the ECM cause changes in the long-term fuel trim compensation value. The long-term fuel trim is adjusted when there are persistent deviations in the short-term fuel trim values. Deviations from the ECM's estimated fuel injection volumes also affect the average fuel trim learning value, which is a combination of the average short-term fuel trim (fuel feedback compensation value) and the average long-term fuel trim (learning value of the air-fuel ratio). If the average fuel trim learning value exceeds the malfunction thresholds, the ECM interprets this as a fault in the fuel system and sets a DTC.

Example:

The average fuel trim learning value is more than +35% or less than -35%, the ECM interprets this as a fuel system malfunction.

Fuel-trim:

The monitor will run whenever these DTCs are not present	P0010, P0020 (VVT VSV1, 2), P0011, P0012 (VVT System-Advance, Retard), P0021, P0022(VVT System2-Adavance, Retard), P0031, P0031, P0032, P0051, P0052 (A/F Sensor heater Sensor 1), P0100, P0101, P0102, P0103 (MAF Sensor), P0115, P0116, P0117, P0118 (ECT Sensor), P0120, P0121, P0122, P0123, P0220, P0222, P0223 , P2135 (TP Sensor), P0125 (Insufficient ECT for Closed Loop), P0335 (CKP Sensor), P0340, P0342, P0343, P0345 (VVT Sensor 1, 2), P0351, P0352, P0353, P0354, P0356 (Ignitor), P0500 (VSS),
Fuel system status	Closed-loop
Battery voltage	11 V or more
Either of following conditions is met	Condition 1 or 2
1. Engine RPM	Less than 1,100 rpm
2. Intake air amount per revolution	0.22 g/rev or more

ES

TYPICAL MALFUNCTION THRESHOLDS

Fuel trim:

EVAP purge-cut	Executing
Either of following conditions met	Condition 1 or 2
1. Average between short-term fuel trim and long-term fuel trim	35% or more at 80°C (176°F) of ECT
2. Average between short-term fuel trim and long-term fuel trim	-35% or less at 80°C (176°F) of ECT

WIRING DIAGRAM

Refer to DTC P2195 (See page ES-350).

INSPECTION PROCEDURE

HINT:

For use of the intelligent tester only:

Malfunctioning areas can be identified by performing the A/F CONTROL function provided in the ACTIVE TEST. The A/F CONTROL function can help to determine whether the Air-Fuel Ratio (A/F) sensor, Heated Oxygen (HO2) sensor and other potential trouble areas are malfunctioning.

The following instructions describe how to conduct the A/F CONTROL operation using the intelligent tester.

1. Connect the intelligent tester to the DLC3.
2. Start the engine and turn the tester on.
3. Warm up the engine at an engine speed of 2,500 rpm for approximately 90 seconds.
4. Select the following menu items on the tester: DIAGNOSIS / ENHANCEDOBD II / ACTIVE TEST / A/F CONTROL.
5. Perform the A/F CONTROL operation with the engine in an idling condition (press the RIGHT or LEFT button to change the fuel injection volume).
6. Monitor the voltage outputs of the A/F and HO2 sensors (AFS B1S1 and O2S B1S2 or AFS B2S1 and O2S B2S2) displayed on the tester.

   HINT:

   - The A/F CONTROL operation lowers the fuel injection volume by 12.5% or increases the injection volume by 25%.
   - Each sensor reacts in accordance with increases and decreases in the fuel injection volume.

Standard voltage

Tester Display (Sensor)	Injection Volumes	Status	Voltages
AFS B1S1 or AFS B2S1 (A/F)	+25%	Rich	Less than 3.0
AFS B1S1 or AFS B2S1 (A/F)	-12.5%	Lean	More than 3.35

Tester Display (Sensor)	Injection Volumes	Status	Voltages
O2S B1S2 or O2S B2S2 (HO2)	+25%	Rich	More than 0.55
O2S B1S2 or O2S B2S2 (HO2)	-12.5%	Lean	Less than 0.4

NOTICE:
The Air-Fuel Ratio (A/F) sensor has an output delay of a few seconds and the Heated Oxygen (HO2) sensor has a maximum output delay of approximately 20 seconds.

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Area
1	Injection Volume +25% -12.5%		Injection Volume +25% -12.5%		-
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage More than 0.55 V Less than 0.4 V		
2	Injection Volume +25% -12.5%		Injection Volume +25% -12.5%		• A/F sensor • A/F sensor heater • A/F sensor circuit
	Output Voltage Almost no reaction		Output Voltage More than 0.55 V Less than 0.4 V		
3	Injection Volume +25% -12.5%		Injection Volume +25% -12.5%		• HO2 sensor • HO2 sensor heater • HO2 sensor circuit
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage Almost no reaction		
4	Injection volume +25% -12.5%		Injection Volume +25% -12.5%		• Injector • Fuel pressure • Gas leakage from exhaust system (Air-fuel ratio extremely lean or rich)
	Output Voltage Almost no reaction		Output Voltage Almost no reaction		

ES

– Following the A/F CONTROL procedure enables technicians to check and graph the voltage outputs of both the A/F and HO2 sensors.
– To display the graph, select the following menu items on the tester: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL / USER DATA / AFS B1S1 and O2S B1S2 or AFS B2S1 and O2S B2S2. Press the YES button and then the ENTER button. Then press the F4 button.
HINT:
  - Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.
  - A low A/F sensor voltage could be caused by a rich air-fuel mixture. Check for conditions that would cause the engine to run rich.
  - A high A/F sensor voltage could be caused by a lean air-fuel mixture. Check for conditions that would cause the engine to run lean.

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0171, P0172, P0174 OR P0175)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the tester on.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P0171, P0172, P0174 or P0175	A
P0171, P0172, P0174 or P0175 and other DTCs	B

HINT:
If any DTCs other than P0171, P0172, P0174 or P0175 are output, troubleshoot those DTCs first.

B → **GO TO DTC CHART (See page ES-63)**

2	CHECK PCV HOSE CONNECTIONS

OK:
PCV hose is connected correctly and is not damaged.

NG → **REPAIR OR REPLACE PCV HOSE**

OK

3	CHECK AIR INDUCTION SYSTEM

(a) Check the air induction system for vacuum leakage.
OK:
No leakage from the air induction system.

NG → **REPAIR OR REPLACE AIR INDUCTION SYSTEM**

OK

4	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (A/F CONTROL)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the tester on.
(c) Warm up the engine at an engine speed of 2,500 rpm for approximately 90 seconds.
(d) Select the following menu items on the tester: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL.
(e) Perform the A/F CONTROL operation with the engine in an idling condition (press the RIGHT or LEFT button to change the fuel injection volume).

(f) Monitor the voltage outputs of the A/F and HO2 sensors (AFS B1S1 and O2S B1S2 or AFS B2S1 and O2S B2S2) displayed on the tester.
HINT:
- The A/F CONTROL operation lowers the fuel injection volume by 12.5% or increases the injection volume by 25%.
- Each sensor reacts in accordance with increases and decreases in the fuel injection volume.

Standard voltage

Tester Display (Sensor)	Injection Volumes	Status	Voltages
AFS B1S1 or AFS B2S1 (A/F)	+25%	Rich	Less than 3.0
AFS B1S1 or AFS B2S1 (A/F)	-12.5%	Lean	More than 3.35
O2S B1S2 or O2S B2S2 (HO2)	+25%	Rich	More than 0.55
O2S B1S2 or O2S B2S2 (HO2)	-12.5%	Lean	Less than 0.4

ES

Result

Status AFS B1S1 or AFS B2S1	Status O2S B1S2 or O2S B2S2	A/F Condition and A/F Sensor Condition	Misfires	Suspected Trouble Areas	Proceed to
Lean/Rich	Lean/Rich	Normal	-	-	C
Lean	Lean	Actual air-fuel ratio lean	May occur	• PCV valve and hose • PCV hose connections • Injector blockage • Gas leakage from exhaust system • Air induction system • Fuel pressure • Mass Air Flow (MAF) meter • Engine Coolant Temperature (ECT) sensor	A
Rich	Rich	Actual air-fuel ratio rich	-	• Injector leakage or blockage • Gas leakage from exhaust system • Ignition system • Fuel pressure • MAF meter • ECT sensor	A
Lean	Lean/Rich	A/F sensor malfunction	-	A/F sensor	B
Rich	Lean/Rich	A/F sensor malfunction	-	A/F sensor	B

Lean: During A/F CONTROL, the A/F sensor output voltage (AFS) is consistently more than 3.35 V, and the HO2 sensor output voltage (O2S) is consistently less than 0.4 V.
Rich: During A/F CONTROL, the AFS is consistently less than 3.0 V, and the O2S is consistently more than 0.55 V.
Lean/Rich: During A/F CONTROL of the ACTIVE TEST, the output voltage of the heated oxygen sensor alternates correctly.

B	Go to step 11
C	Go to step 15

A

5	READ VALUE OF INTELLIGENT TESTER (COOLANT TEMP)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the tester on.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / COOLANT TEMP.
(d) Read the COOLANT TEMP twice, when the engine is both cold and warmed up.
Standard:
With cold engine:
Same as ambient air temperature.
With warm engine:
Between 75°C and 95°C (167°F and 203°F)

NG → **REPLACE ENGINE COOLANT TEMPERATURE SENSOR (See page ES-499)**

OK

6	READ VALUE OF INTELLIGENT TESTER (MAF)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the tester on.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / MAF and COOLANT TEMP.
(d) Allow the engine to idle until the COOLANT TEMP reaches 75°C (167°F) or more.
(e) Read the MAF with the engine in an idling condition and at an engine speed of 2,500 rpm.
Standard:
MAF while engine is idling:
Between 3.2 g/s and 4.7 g/s (shift position: N, A/C: OFF).
MAF at engine speed of 2,500 rpm:
Between 13.1 g/s and 18.9 g/s (shift position: N, A/C: OFF).

NG → **REPLACE MASS AIR FLOW METER (See page ES-477)**

OK

7	CHECK FUEL PRESSURE

(a) Check the fuel pressure (See page FU-8).

NG → **REPAIR OR REPLACE FUEL SYSTEM**

ES

OK

8	CHECK FOR EXHAUST GAS LEAKS

OK:
No gas leakage.

NG → **REPAIR OR REPLACE EXHAUST SYSTEM**

OK

9	CHECK FOR SPARKS AND IGNITION

ES

(a) Check for sparks and ignition (See page IG-3).
HINT:
If the spark plugs or ignition system malfunctions, engine misfire may occur. The misfire count can be read using the intelligent tester. Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / CYL #1 (to CYL #6).

NG → **REPAIR OR REPLACE IGNITION SYSTEM**

OK

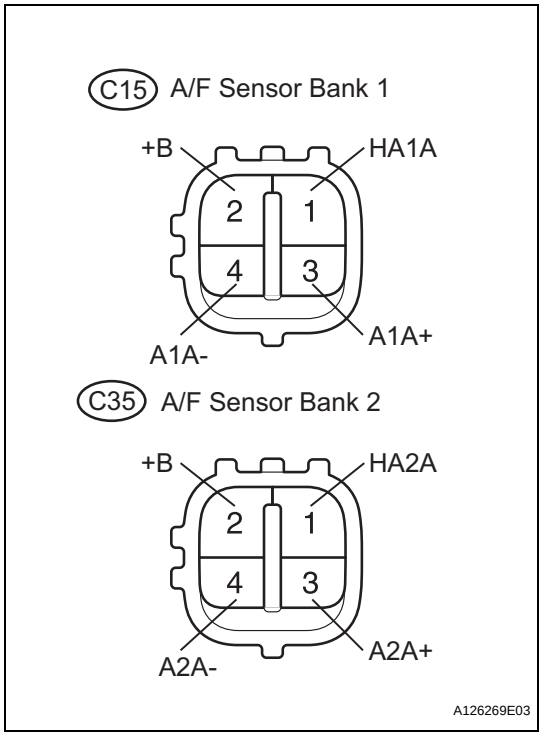
10	INSPECT FUEL INJECTOR ASSEMBLY (INJECTION AND VOLUME)

(a) Inspect the fuel injector assembly (See page FU-15).
HINT:
If the injectors malfunction, engine misfire may occur. The misfire count can be read using the intelligent tester. Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / CYL #1 (to CYL #6).

NG → **REPLACE FUEL INJECTOR ASSEMBLY (See page FU-13)**

OK

11	INSPECT AIR FUEL RATIO SENSOR (HEATER RESISTANCE)



(a) Disconnect the C15 or C35 A/F sensor connector.

(b) Measure the resistance between the terminals of the A/F sensor connector.

Standard resistance:

Bank 1

Tester Connections	Specified Conditions
HA1A (1) - +B (2)	1.8 to 3.4 Ω at 20°C (68°F)
HA1A (1) - A1A- (4)	10 kΩ or higher

Bank 2

Tester Connections	Specified Conditions
HA2A (1) - +B (2)	1.8 to 3.4 Ω at 20°C (68°F)
HT2A (1) - A2A- (4)	10 kΩ or higher

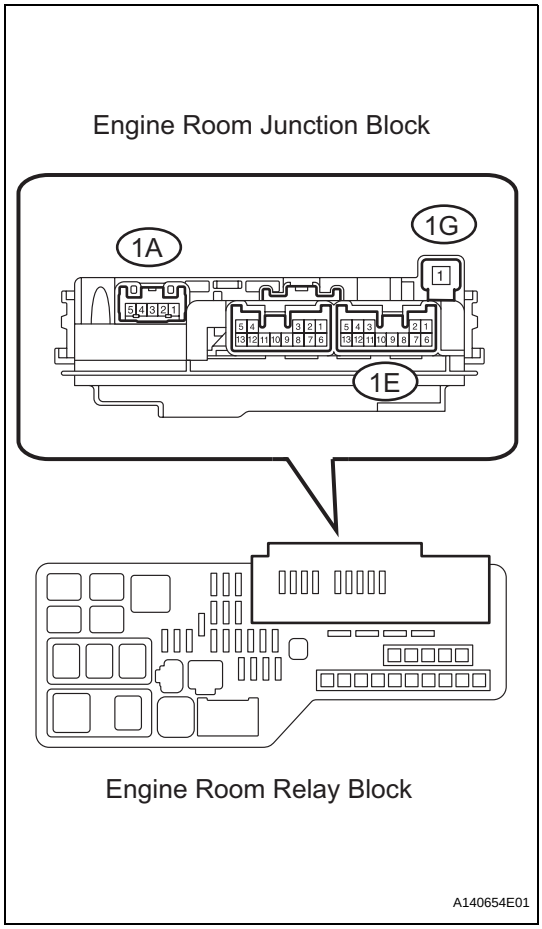
(c) Reconnect the A/F sensor connector.

NG → **REPLACE AIR FUEL RATIO SENSOR (See page EC-19)**

OK

ES

12	INSPECT ENGINE ROOM JUNCTION BLOCK (A/F SENSOR HEATER RELAY)



(a) Remove the engine room junction block from the engine room R/B.
(b) Measure the A/F relay resistance.
Standard resistance

Tester Connections	Specified Conditions
1G-1 - 1A-4	10 kΩ or higher
1G-1 - 1A-4	Below 1 Ω (when battery voltage applied to terminals 1E-6 and 1E-10)

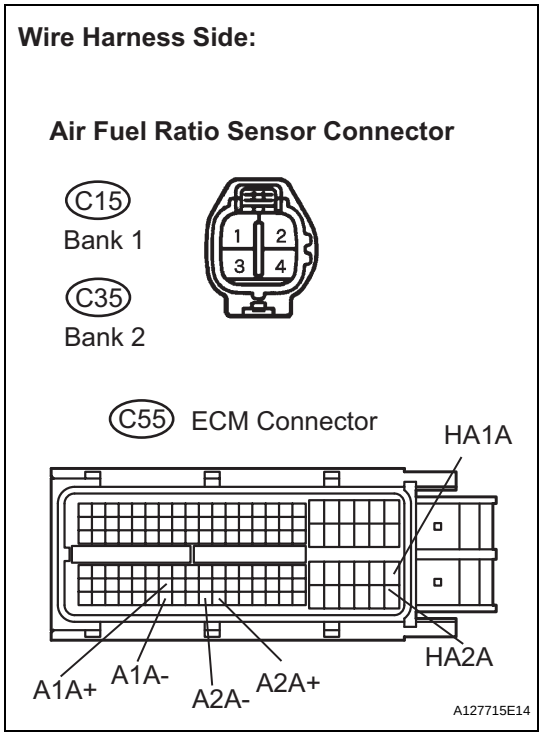
(c) Reinstall the engine room junction block.

NG → **REPLACE ENGINE ROOM JUNCTION BLOCK**

OK

ES

13 CHECK HARNESS AND CONNECTOR (A/F SENSOR - ECM)



(a) Disconnect the C15 or C35 A/F sensor connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage between the +B terminal of the A/F sensor connector and body ground.

Standard voltage

Tester Connections	Specified Conditions
+B (C15-2) - Body ground	9 to 14 V
+B (C35-2) - Body ground	9 to 14 V

(d) Turn the ignition switch off.
(e) Disconnect the C55 ECM connector.
(f) Measure the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
HA1A (C15-1) - HA1A (C55-86)	Below 1 Ω
A1A+ (C15-3) - A1A+ (C55-93)	Below 1 Ω
A1A- (C15-4) - A1A- (C55-116)	Below 1 Ω
HA2A (C35-1) - HA2A (C55-109)	Below 1 Ω
A2A+ (C35-3) - A2A+ (C55-120)	Below 1 Ω
A2A- (C35-4) - A2A- (C55-119)	Below 1 Ω

Standard resistance (Check for short)

Tester Connections	Specified Conditions
HA1A (C15-1) or HA1A (C55-86) - Body ground	10 kΩ or higher
A1A+ (C15-3) or A1A+ (C55-93) - Body ground	10 kΩ or higher
A1A- (C15-4) or A1A- (C55-116) - Body ground	10 kΩ or higher
HA2A (C35-1) or HA2A (C55-109) - Body ground	10 kΩ or higher
A2A+ (C35-3) or A2A+ (C55-120) - Body ground	10 kΩ or higher
A2A- (C35-4) or A2A- (C55-119) - Body ground	10 kΩ or higher

(g) Reconnect the ECM connector.
(h) Reconnect the A/F sensor connector.

ES

DTC	P0304	Cylinder 4 Misfire Detected

DTC	P0305	Cylinder 5 Misfire Detected

ES

DTC	P0306	Cylinder 6 Misfire Detected

DESCRIPTION

When the engine misfires, high concentrations of hydrocarbons (HC) enter the exhaust gas. Extremely high HC concentration levels can cause an increase in exhaust emission levels. High concentrations of HC can also cause increases in the Three-Way Catalytic Converter (TWC) temperature, which may cause damage to the TWC. To prevent this increase in emissions and to limit the possibility of thermal damage, the ECM monitors the misfire rate. When the temperature of the TWC reaches the point of thermal degradation, the ECM blinks the MIL. To monitor misfires, the ECM uses both the Camshaft Position (CMP) sensor and the Crankshaft Position (CKP) sensor. The CMP sensor is used to identify any misfiring cylinders and the CKP sensor is used to measure variations in the crankshaft rotation speed. Misfires are counted when the crankshaft rotation speed variations exceed predetermined thresholds. If the misfire exceeds the threshold levels and may cause emission deterioration, the ECM illuminates the MIL and sets a DTC.

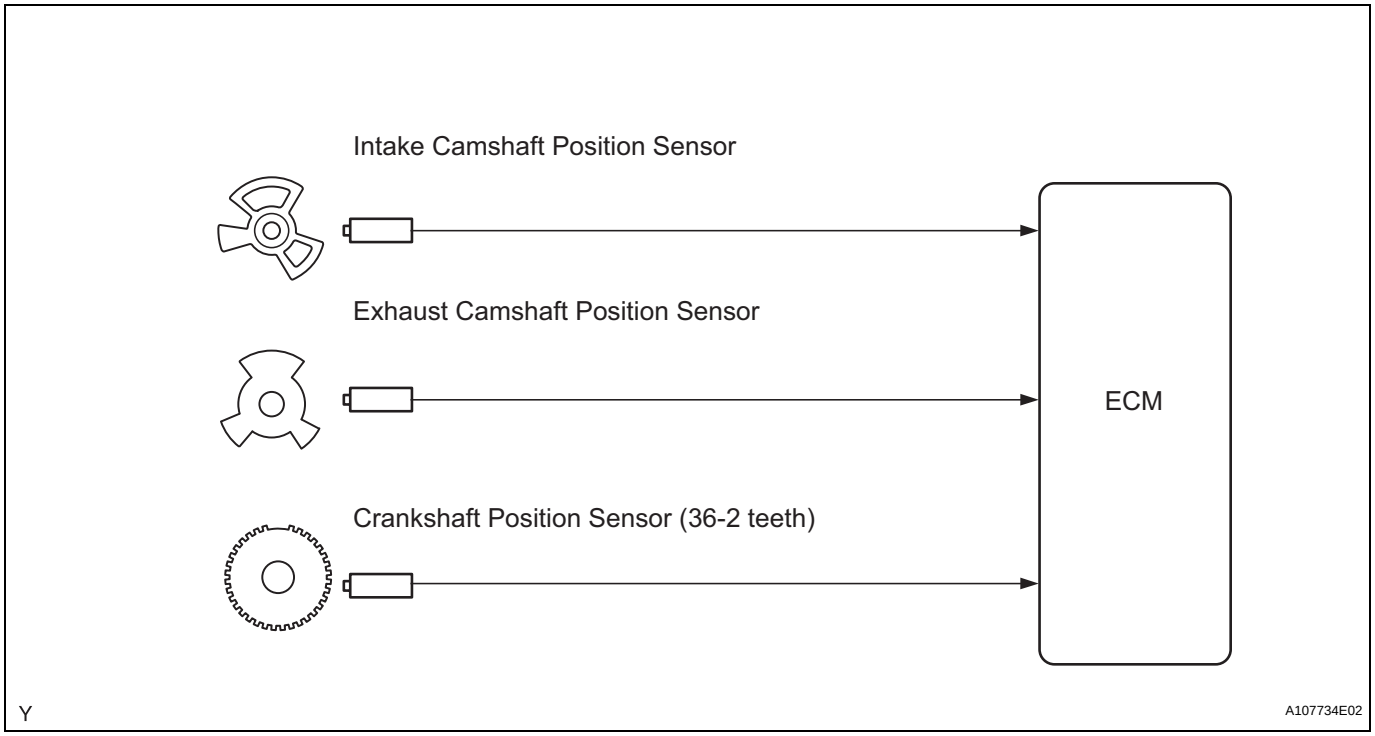
DTC No.	DTC Detection Condition	Trouble Area
P0300	Simultaneous misfiring of several cylinder detected (2 trip detection logic)	• Open or short in engine wire harness • Connector connection • Vacuum hose connections • Ignition system • Injector • Fuel pressure • Mass Air Flow (MAF) meter • Engine Coolant Temperature (ECT) sensor • Compression pressure • Valve clearance • Valve timing • PCV valve and hose • PCV hose connections • Air induction system • ECM

DTC No.	DTC Detection Condition	Trouble Area
P0301 P0302 P0303 P0304 P0305 P0306	Misfiring of specific cylinder detected (2 trip detection logic)	• Open or short in engine wire harness • Connector connection • Vacuum hose connections • Ignition system • Injector for direct injector • Injector for port injector • Fuel pressure • Mass Air Flow (MAF) meter • Engine Coolant Temperature (ECT) sensor • Compression pressure • Valve clearance • Valve timing • PCV valve and hose • PCV hose connections • Air induction system • ECM

If DTCs that indicate misfires are set for different cylinders, but DTC P0300 is not set, it indicates that misfires have been detected in different cylinders at different times. DTC P0300 is only set when several misfiring cylinders are detected at the same time.

ES

MONITOR DESCRIPTION



The ECM illuminates the MIL and sets a DTC when either one of the following conditions, which could cause emission deterioration, is detected (2 trip detection logic):

- Within the first 1,000 crankshaft revolutions of the engine starting, an excessive misfiring rate (approximately 20 to 50 misfires per 1, 000 crankshaft revolutions) occurs once.
- After the first 1,000 crankshaft revolutions, an excessive misfiring rate (approximately 20 to 60 misfires per 1, 000 crankshaft revolutions) occurs 4 times in sequential crankshaft revolutions.

The ECM flashes the MIL and sets a DTC when either one of the following conditions, which could cause the Three-Way Catalytic Converter (TWC) damage, is detected (2 trip detection logic):

- In every 200 crankshaft revolutions at a high engine rpm, the threshold misfiring percentage is recorded once.
- In every 200 crankshaft revolutions at a normal engine rpm, the threshold misfiring percentage is recorded 3 times.

MONITOR STRATEGY

Related DTCs	P0300: Multiple cylinder misfire P0301: Cylinder 1 misfire P0302: Cylinder 2 misfire P0303: Cylinder 3 misfire P0304: Cylinder 4 misfire P0305: Cylinder 5 misfire P0306: Cylinder 6 misfire
Required Sensors/Components (Main)	Injector, Ignition coil, Spark plug
Required Sensors/Components (Related)	Crankshaft, Camshaft, Engine coolant temperature and intake air temperature sensors and Mass air flow meter
Frequency of Operation	Continuous
Duration	1,000 to 4,000 crankshaft revolutions: Emission related misfire 200 to 600 crankshaft revolutions: Catalyst damaged misfire
MIL Operation	2 driving cycles: Emission related misfire MIL flashes immediately: Catalyst damaged misfire
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Misfire:

Monitor runs whenever following DTCs are not present	P0100 - P0103 (MAF meter) P0110 - P0113 (IAT sensor) P0115 - P0118 (ECT sensor) P0120 - P0223, P2135 (TP sensor) P0125 (Insufficient ECT for Closed Loop) P0327 - P0333 (Knock sensor) P0335 (CKP sensor) P0340, P0341 (CMP sensor) P0500 (VSS)
Battery voltage	8 V or more
VVT system	Not operated by scan tool
Engine RPM	450 to 6,500 rpm
Either of following conditions (a) or (b) is met:	-
(a) ECT at engine start	More than -7°C (19°F)
(b) ECT	More than 20°C (68°F)
Fuel cut	OFF

Monitor period of emission-related-misfire:

First 1,000 revolutions after engine start, or Check Mode	Crankshaft 1,000 revolutions
Except above	Crankshaft 1,000 revolutions x 4

Monitor period of catalyst-damaged-misfire (MIL blinks):

All of following conditions 1, 2 and 3 are met:	Crankshaft 200 revolutions
1. Driving cycles	1st
2. Check mode	OFF
3. Engine RPM	Less than 2,500 rpm
Except above	Crankshaft 200 revolutions x 3

TYPICAL MALFUNCTION THRESHOLDS

Monitor period of emission-related-misfire:

Misfire rate	1 % or more

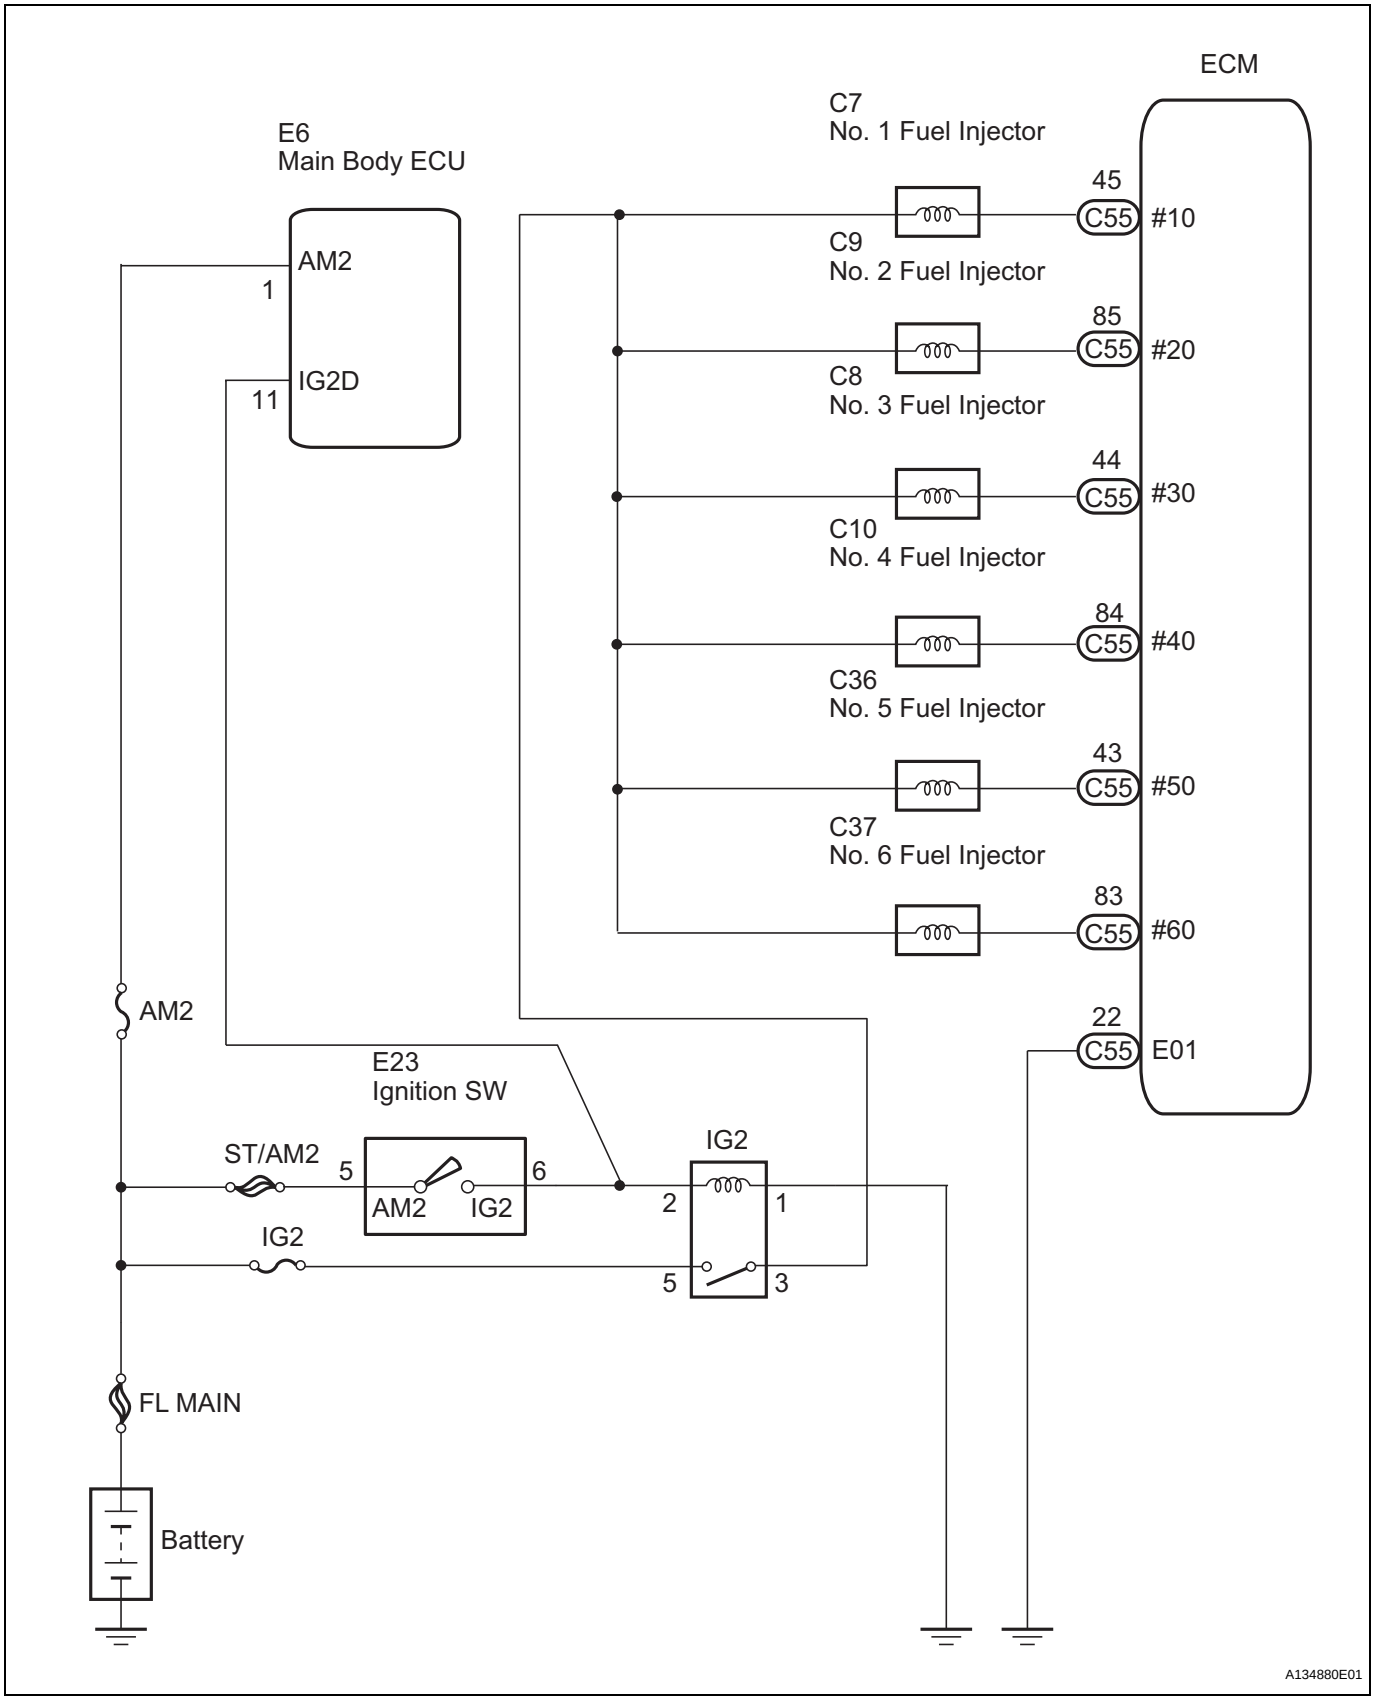
Monitor period of catalyst-damage-misfire (MIL blinks):

Number of misfire per 200 revolutions	94 or more (varies with intake air amount and RPM)
Paired cylinders misfire (MIL blinks immeditately)	Detected

MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-25).

WIRING DIAGRAM



CONFIRMATION DRIVING PATTERN

1. Connect the intelligent tester to the DLC3.
2. Turn the ignition switch on (IG).
3. Turn the tester on.
4. Record the DTC(s) and freeze frame data.
5. Using the tester, switch the ECM from normal mode to check mode (See page ES-49).
6. Read the misfire counts of each cylinder (CYL #10 to #60) with the engine in an idling condition. If any misfire count is displayed, skip the following confirmation driving pattern.
7. Drive the vehicle several times with the conditions, such as engine rpm and engine load, shown in MISFIRE RPM and MISFIRE LOAD in the DATA LIST.
   HINT:
   In order to store misfire DTCs, it is necessary to operate the vehicle for the period of time shown in the table below, using the MISFIRE RPM and MISFIRE LOAD in the DATA LIST.

ES

Engine RPM	Duration
Idling	3.5 minutes or more
1,000	3 minutes or more
2,000	1.5 minutes or more
3,000	1 minute or more

8. Check whether misfires have occurred by checking DTCs and freeze frame data.
   HINT:
   Do not turn the engine switch off until the stored DTC(s) and freeze frame data have been recorded. When the ECM returns to normal mode (default), the stored DTC(s), freeze frame data and other data will be erased.
9. Record the DTC(s), freeze frame data and misfire counts.
10. Turn the engine switch off and wait for at least 5 seconds.

INSPECTION PROCEDURE

HINT:

- If any DTCs other than misfire DTCs are output, troubleshoot those DTCs first.
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).
- If the misfire does not recur when the vehicle is brought to the workshop, reproduce the conditions stored in the ECM as freeze frame data.
- If the misfire still cannot be reproduced even though the conditions stored in the ECM as freeze frame data have been reproduced, one of the following factors is considered to be a possible cause of the problem:
  (a) There was insufficient fuel in the tank.
  (b) Improper fuel is used.
  (c) The spark plugs have been contaminated.
  (d) The problem requires further diagnosis.
- After finishing repairs, check the misfire counts of the cylinders (CYL #1, #2, #3, #4, #5 and #6).
- Be sure to confirm that no misfiring cylinder DTCs are set again by conducting the confirmation driving pattern after finishing repairs.
- For 6 and 8 cylinder engines, the ECM intentionally does not set the specific misfiring cylinder DTCs at high engine RPM. If misfires occur only in high engine RPM areas, only DTC P0300 is set.
  In the event of DTC P0300 being present, perform the following operations:
  (a) Clear the DTC (See page ES-45).
  (b) Start the engine and conduct the confirmation driving pattern.
  (c) Read the misfiring rates of each cylinder or DTC(s) using the tester.

(d) Repair the cylinder(s) that has a high misfiring rate or is indicated by the DTC.
(e) After finishing repairs, conduct the confirmation driving pattern again, in order to verify that DTC P0300 is not set.

- When one of SHORT FT #1, LONG FT #1, SHORT FT #2 or LONG FT #2 in the freeze frame data is outside the range of +-20 %, the air-fuel ratio may be RICH (-20 % or less) or LEAN (+20 % or more).
- When the COOLANT TEMP in the freeze frame data is less than 75°C (167°F), the misfire have occurred only while warming up the engine.

1	CHECK ANY OTHER DTC OUTPUT (IN ADDITION TO MISFIRE DTCS)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester on.
(d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

ES

Result

Display (DTC output)	Proceed to
P0300, P0301, P0302, P0303, P0304, P0305 and/or P0306	A
P0300, P0301, P0302, P0303, P0304, P0305 and/or P0306 and other DTCs	B

HINT:
If any DTCs other than P0300, P0301, P0302, P0303, P0304, P0305 and P0306 are output, troubleshoot those DTCs first.

B → **GO TO DTC CHART (See page ES-63)**

A

2	READ VALUE OF INTELLIGENT TESTER (MISFIRE RPM AND MISFIRE LOAD)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the tester on.
(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST / MISFIRE / MISFIRE RPM and MISFIRE LOAD.
(d) Read and note the MISFIRE RPM and MISFIRE LOAD (engine load) values.
HINT:
The MISFIRE RPM and MISFIRE LOAD values indicate the vehicle conditions under which the misfire occurred.

NEXT

3	CHECK PCV HOSE (HOSE CONNECTIONS)

OK:
PCV hose is connected correctly and is not damaged.

NG → **REPAIR OR REPLACE PCV HOSE**

OK

4	CHECK MISFIRE COUNT (CYL #1, #2, #3, #4, #5 AND #6)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester on.
(d) Clear DTCs.
(e) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST / MISFIRE / CYL #1, #2, #3, #4, #5 and #6 (Step "A").
(f) Allow the engine to idle (Step "B").
(g) Read the value of CYL #1 to #6 displayed on the tester. If no misfire counts occur in any cylinders, perform the following operations (Step "C"):
  (1) Shift the gear selector lever to the D position.
  (2) Repeat steps "A" to "C" above.
  (3) Check the CYL #1 to #6.
  (4) If misfire counts are still no displayed, perform steps "D" and "E" and then check the misfire counts again.
(h) Drive the vehicle with the MISFIRE RPM and MISFIRE LOAD noted in step 2 (Step "D").
(i) Read the CYL #1 to #6 or DTCs displayed on the tester (Step "E").

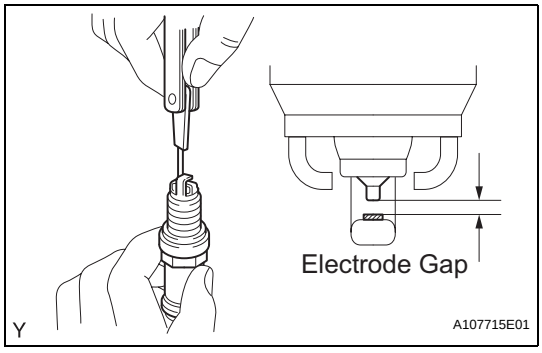
Result

Misfire count	Proceed to
1 or 2 cylinders have misfire counts	A
3 cylinders or more have misfire counts	B

B → **Go to step 13**

A

5	CHECK SPARK PLUG



(a) Remove the ignition coil and the spark plug of the misfiring cylinder.
(b) Measure the spark plug electrode gap.
Standard:
Between 1.0 mm and 1.4 mm (0.039 in. and 0.055 in.)
(c) Check the electrode for carbon deposits.
Recommended spark plug:

Manufacture	Product
DENSO	FK20HBR11

NOTICE:
If the electrode gap is larger than standard, replace the spark plug. Do not adjust the electrode gap.

NG → **REPLACE SPARK PLUG**

OK

6	CHECK FOR SPARKS AND IGNITION

(a) Disconnect the injector connectors, in order to prevent the engine from starting.
(b) Install the spark plug to the ignition coil.
(c) Attach the spark plug assembly to the cylinder head cover.
(d) Crank the engine for less than 2 seconds and check the sparks.
OK:
Sparks jump across the electrode gap.
(e) Reconnect the injector connectors.

NG → **Go to step 8**

OK

7	CHECK CYLINDER COMPRESSION PRESSURE (MALFUNCTION CYLINDER)

(a) Measure the cylinder compression pressure of the misfiring cylinder.

OK → **Go to step 9**

NG

REPAIR OR REPLACE ENGINE TO DETERMINE CAUSE OF LOW COMPRESSION

8	CHANGE SPARK PLUG WITH NORMAL ONE AND CHECK FOR SPARKS OF MISFIRING CYLINDER

(a) Change the installed spark plug with a spark plug that functions normally.
(b) Perform a spark test.
CAUTION:
Always disconnect each injector connector.
NOTICE:
Do not crank the engine for more than 2 seconds.
(1) Install the spark plug to the ignition coil and connect the ignition coil connector.
(2) Disconnect the injector connector.
(3) Ground the spark plug.
(4) Check if sparks occur while the engine is being cranked.
OK:
Sparks jump across the electrode gap.

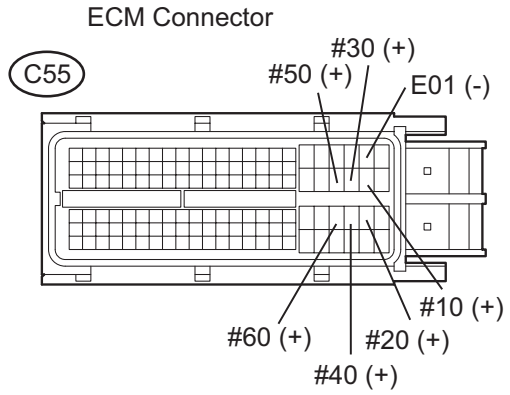
NG → **REPLACE IGNITION COIL ASSEMBLY (See page IG-9)**

OK

REPLACE SPARK PLUG

9	INSPECT ECM (#10, #20, #30, #40, #50 AND/OR #60 VOLTAGE))

Wire Harness Side Front View:



(a) Disconnect the C55 ECM connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage between the terminals.
Standard voltage

Tester Connection	Specified Condition
#10 (C55-45) - E01 (C55-22)	9 to 14 V
#20 (C55-85) - E01 (C55-22)	9 to 14 V
#30 (C55-44) - E01 (C55-22)	9 to 14 V
#40 (C55-84) - E01 (C55-22)	9 to 14 V
#50 (C55-43) - E01 (C55-22)	9 to 14 V
#60 (C55-83) - E01 (C55-22)	9 to 14 V

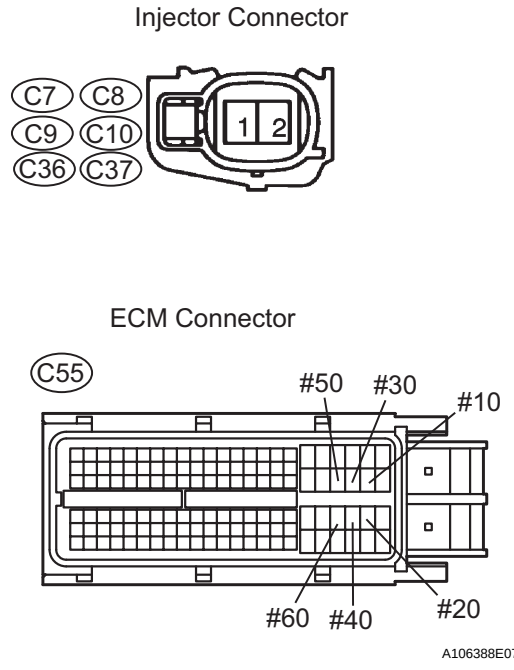
(d) Reconnect the ECM connector.

OK → **Go to step 12**

NG

10	CHECK HARNESS AND CONNECTOR (INJECTOR - ECM)

Wire Harness Side Front View:



(a) Disconnect the injector connector (misfire cylinder).
(b) Disconnect the C55 ECM connector.
(c) Measure the resistance between the terminals.
Standard resistance

Tester Connection	Specified Condition
#10 (C55-45) - C7-1	Below 1 Ω
#20 (C55-85) - C9-1	Below 1 Ω
#30 (C55-44) - C8-1	Below 1 Ω
#40 (C55-84) - C10-1	Below 1 Ω
#50 (C55-43) - C36-1	Below 1 Ω
#60 (C55-83) - C37-1	Below 1 Ω
#10 (C55-45) or C7-1 - Body ground	10 kΩ or higher
#20 (C55-85) or C9-1 - Body ground	10 kΩ or higher
#30 (C55-44) or C8-1 - Body ground	10 kΩ or higher
#40 (C55-84) or C10-1 - Body ground	10 kΩ or higher
#50 (C55-43) or C36-1 - Body ground	10 kΩ or higher
#60 (C55-83) or C37-1 - Body ground	10 kΩ or higher

(d) Reconnect the injector connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

11	CHECK FUEL INJECTOR ASSEMBLY (MISFIRING CYLINDER)

(a) Check the injector injection (whether fuel volume high or low, and whether injection pattern is poor).

NG → **REPLACE FUEL INJECTOR ASSEMBLY (See page FU-13)**

OK

12	CHECK VALVE CLEARANCE (MISFIRING CYLINDER)

NG → **ADJUST VALVE CLEARANCE**

OK

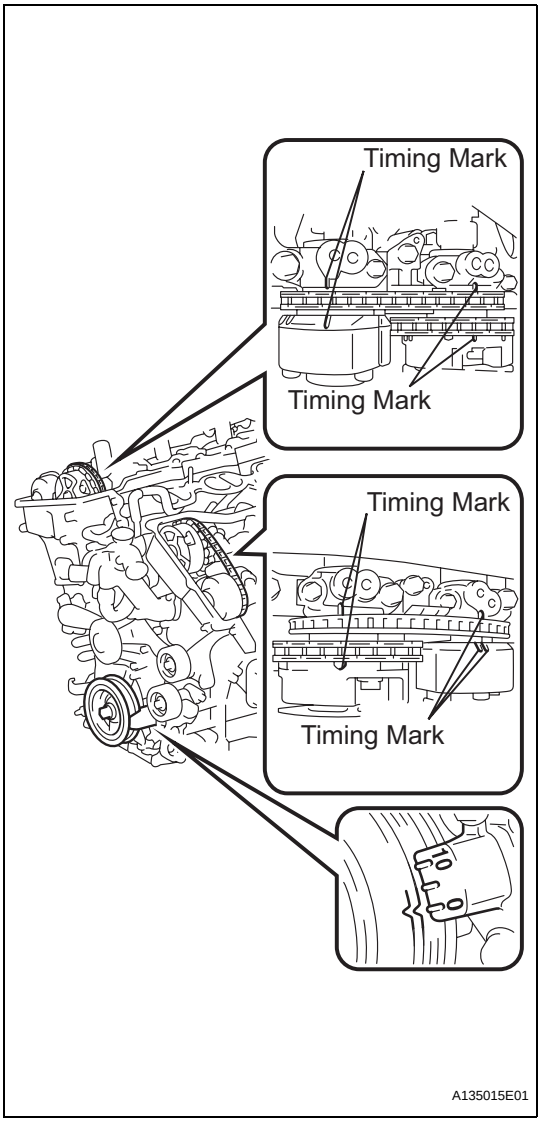
13	CHECK AIR INDUCTION SYSTEM

(a) Check the air induction system for vacuum leakage.
OK:
No leakage from air induction system.

NG → **REPAIR OR REPLACE AIR INDUCTION SYSTEM**

OK

14	CHECK VALVE TIMING



(a) Remove the cylinder head covers.
(b) Turn the crankshaft pulley, and align its groove with the timing mark "0" of the timing chain cover.
(c) Check that the timing marks of the camshaft timing gears are aligned with the timing marks of the bearing cap as shown in the illustration.
If not, turn the crankshaft 1 revolution (360°) and align the marks as above.
OK:
Timing marks on camshaft timing gears are aligned as shown in illustration.
(d) Reinstall the cylinder head covers.

NG → **ADJUST VALVE TIMING**

OK

15	CHECK FUEL PRESSURE

(a) Check the fuel pressure (high or low pressure).
Standard

Item	Standard Condition
Fuel pressure	147 kPa (1.5 kgf/cm^2, 21 psi)

NG → **CHECK AND REPLACE FUEL SYSTEM**

OK

16	READ VALUE OF INTELLIGENT TESTER (COOLANT TEMP)

(a) Connect the intelligent tester to the DLC3.

(b) Turn the ignition switch on (IG).
(c) Turn the tester on.
(d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / COOLANT TEMP.
(e) Read the COOLANT TEMP twice, when the engine is both cold and warmed up.
Standard:
With cold engine:
Same as ambient air temperature.
With warm engine:
Between 75°C and 95°C (167°F and 203°F).

NG → **REPLACE ENGINE COOLANT TEMPERATURE SENSOR (See page ES-499)**

OK

ES

17	READ VALUE OF INTELLIGENT TESTER (MAF)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester on.
(d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / MAF and COOLANT TEMP.
(e) Allow the engine to idle until the COOLANT TEMP reaches 75°C (167°F) or more.
(f) Read the MAF with the engine in an idling condition and at an engine speed of 2,500 rpm.
Standard:
MAF while engine is idling:
Between 2.1 g/sec and 3.1 g/sec (shift position: N, A/C: OFF).
MAF at an engine speed of 2,500 rpm:
Between 7.8 g/sec and 11.4 g/sec (shift position: N, A/C: OFF).

NG → **REPLACE MASS AIR FLOW METER (See page ES-477)**

OK

18	CHECK MISFIRE COUNT (CYL #1, #2, #3, #4, #5 AND #6)

HINT:
- If the result of step 4 is "1 or 2 cylinders", proceed to A.
- If the result of step 4 os "more than 3 cylinders", proceed to B.

B → **Go to step 5**

A

CHECK FOR INTERMITTENT PROBLEMS

DTC	P0327	Knock Sensor 1 Circuit Low Input (Bank 1 or Single Sensor)

DTC	P0328	Knock Sensor 1 Circuit High Input (Bank 1 or Single Sensor)

DTC	P0332	Knock Sensor 2 Circuit Low Input (Bank 2)

DTC	P0333	Knock Sensor 2 Circuit High Input (Bank 2)

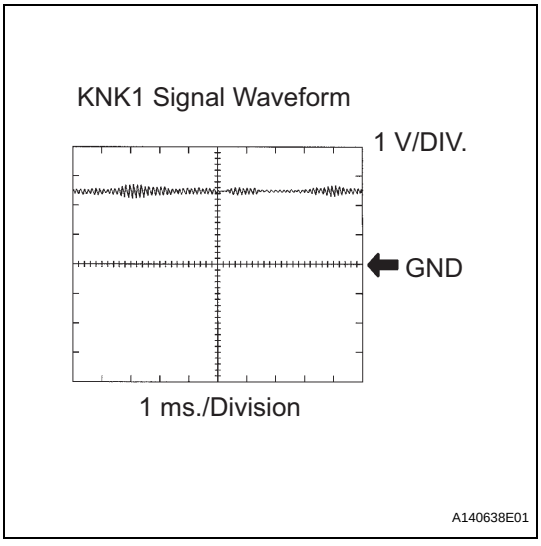
DESCRIPTION

ES

A flat type knock sensor (non-resonant type) has a structure that can detect vibrations over a wide band of frequencies: between approximately 6 kHz and 15 kHz.
Knock sensors are fitted onto the engine block to detect engine knocking.
The knock sensor contains a piezoelectric element which generates a voltage when it becomes deformed. The voltage is generated when the engine block vibrates due to knocking. Any occurrence of engine knocking can be suppressed by delaying the ignition timing.

DTC No.	DTC Detection Condition	Trouble Area
P0327 P0332	Output voltage of knock sensor 1 or 2 is 0.5 V or less (1 trip detection logic)	• Short in knock sensor 1 or 2 circuit • Knock sensor 1 or 2 • ECM
P0328 P0333	Output voltage of knock sensor 1 or 2 is 4.5 V or more (1 trip detection logic)	• Open in knock sensor 1 or 2 circuit • Knock sensor 1 or 2 • ECM

HINT:
When any of DTCs P0327, P0328, P0332 and P0333 are set, the ECM enters fail-safe mode. During fail-safe mode, the ignition timing is delayed to its maximum retardation. Fail-safe mode continues until the engine switch is turned off.
Reference: Inspection using an oscilloscope



The correct waveform is as shown.

Item	Content
Terminals	KNK1 - EKNK or KNK2 -EKN2

Item	Content
Equipment Settings	0.01 to 10 V/DIV. 0.01 to 10 ms./DIV.
Conditions	Keep engine speed at 4,000 rpm with warm engine

MONITOR DESCRIPTION

The knock sensor, located on the cylinder block, detects spark knock. When spark knock occurs, the piezoelectric element of the sensor vibrates. When the ECM detects a voltage in this frequency range, it retards the ignition timing to suppress spark knock.
The ECM also senses background engine noise with the knock sensor and uses this noise to check for faults in the sensor. If the knock sensor signal level is too low for more than 10 seconds, or if the knock sensor output voltage is outside the normal range, the ECM interprets this as a fault in the knock sensor and sets a DTC.

MONITOR STRATEGY

Related DTCs	P0327: Knock sensor (Bank 1) open/short (Low voltage) P0328: Knock sensor (Bank 1) open/short (High voltage) P0332: Knock sensor (Bank 2) open/short (Low voltage) P0333: Knock sensor (Bank 2) open/short (High voltage)
Required Sensors/Components (Main)	Knock sensor (Bank 1 and 2)
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	1 second
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None
Battery voltage	10.5 V or more
Time after engine start	5 seconds or more
Engine switch	ON
Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS

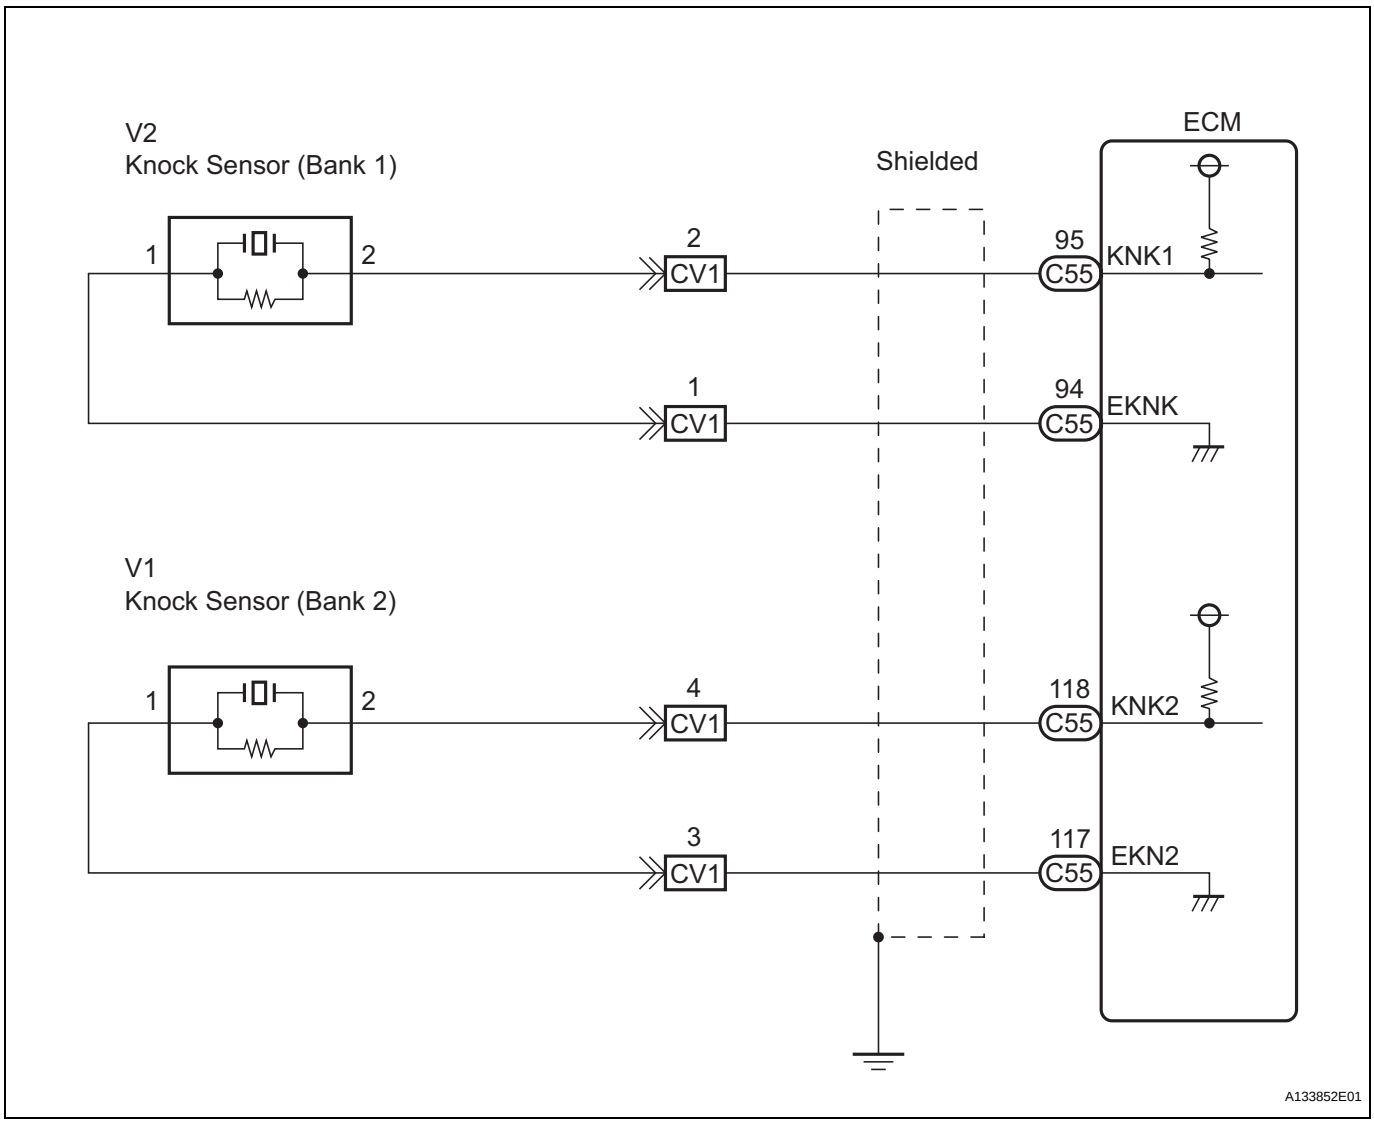
Knock Sensor Range Check (Low voltage) P0327 and P0332:

Knock sensor voltage	Less than 0.5 V

Knock Sensor Range Check (High voltage) P0328 and P0333:

Knock sensor voltage	More than 4.5 V

WIRING DIAGRAM

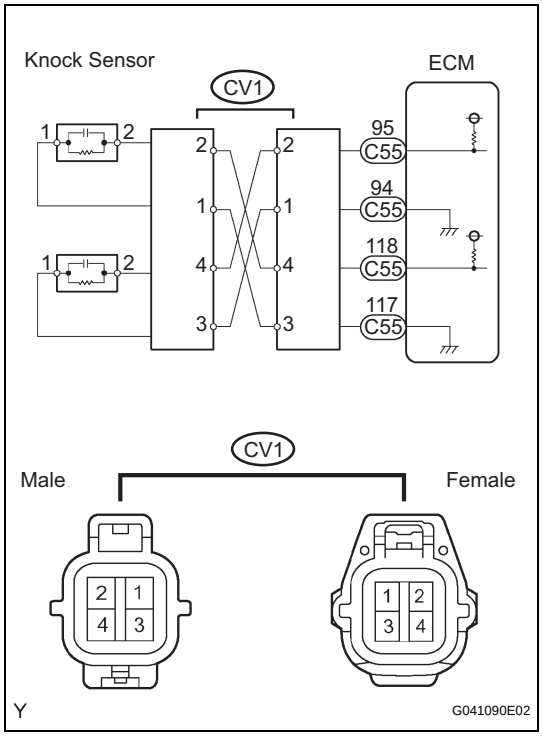


INSPECTION PROCEDURE

HINT:

- DTCs P0327 and P0328 are for the bank 1 knock sensor circuit.
- DTCs P0332 and P0333 are for the bank 2 knock sensor circuit.
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

1	READ OUTPUT DTC (CHECK KNOCK SENSOR CIRCUIT)



(a) Disconnect the CV1 connector.
(b) Using lead wires, connect the connectors as follows:

Male Connector - Female Connector
Terminal 2 - Terminal 4
Terminal 1 - Terminal 3
Terminal 4 - Terminal 2
Terminal 3 - Terminal 1

(c) Warm up the engine.
(d) Run the engine at 3,000 rpm for 10 seconds or more.
(e) Connect the intelligent tester to the DLC3.
(f) Turn the ignition switch on (IG) and turn the intelligent tester on.
(g) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(h) Read the DTCs.

Result

Display	Proceed to
DTCs same as when vehicle brought in P0327, P0328 → P0327, P0328 or P0332, P0333 → P0332, P0333	**A**
DTCs different from when vehicle brought in P0327, P0328 → P0332, P0333 or P0332, P0333 → P0327, P0328	**B**

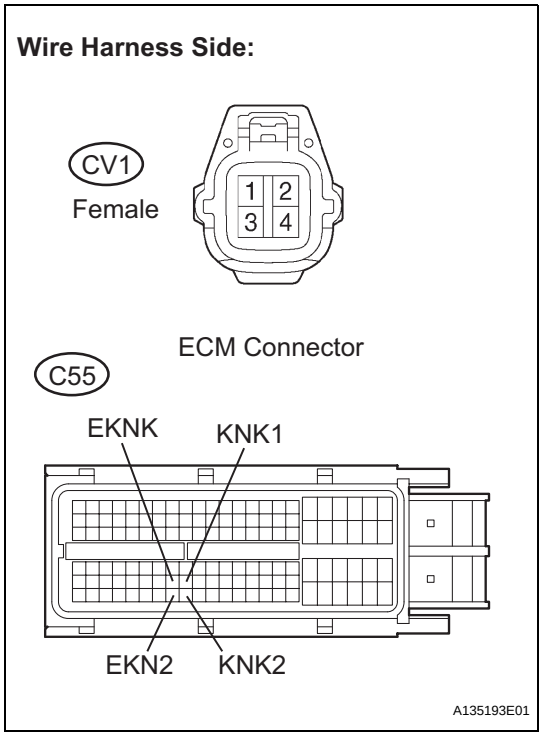
(i) Reconnect the CV1 connector.

B → **Go to step 4**

A

ES

2 CHECK WIRE HARNESS AND CONNECTOR (CONNECTOR - ECM)



(a) Disconnect the CV1 connector.
(b) Disconnect the C55 ECM connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
CV1 female connector 2 - KNK1 (C55-95)	Below 1 Ω
CV1 female connector 1 - EKNK (C55-94)	Below 1 Ω
CV1 female connector 4 - KNK2 (C55-118)	Below 1 Ω
CV1 female connector 3 - EKN2 (C55-117)	Below 1 Ω

Standard resistance (Check for short)

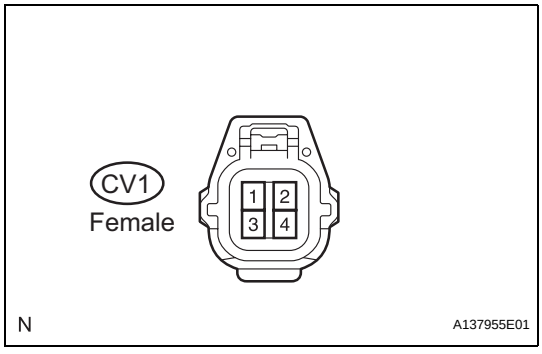
Tester Connection	Specified Condition
CV1 female connector 2 or KNK1 (C55-95) - Body ground	10 kΩ or higher
CV1 female connector 1 or EKNK (C55-94) - Body ground	10 kΩ or higher
CV1 female connector 4 or KNK2 (C55-118) - Body ground	10 kΩ or higher
CV1 female connector 3 or EKN2 (C55-117) - Body ground	10 kΩ or higher

(d) Reconnect the CV1 connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 INSPECT ECM



(a) Disconnect the CV1 connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Specified Condition
CV1 female connector 2 - 1	4.5 to 5.5 V
CV1 female connector 4 - 3	4.5 to 5.5 V

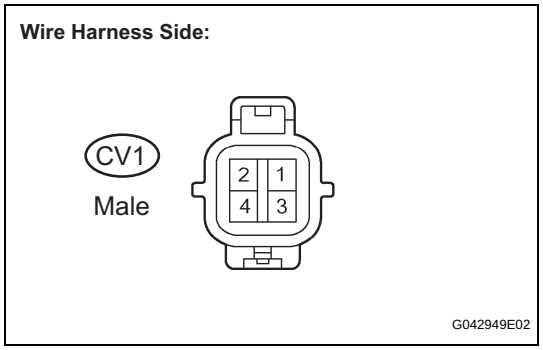
(d) Reconnect the ECM connector.

NG → **REPLACE ECM (See page ES-518)**

OK

CHECK FOR INTERMITTENT PROBLEMS

4 INSPECT KNOCK SENSOR



(a) Disconnect the CV1 connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

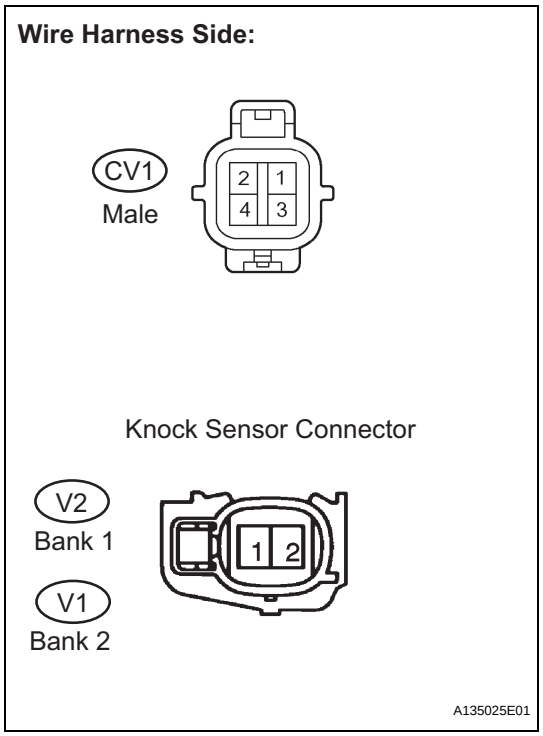
Tester Connection	Specified Condition
CV1 male connector 1 - 2	120 to 280 kΩ
CV1 male connector 3- 4	120 to 280 kΩ

(c) Reconnect the CV1 connector.

OK → CHECK FOR INTERMITTENT PROBLEMS

NG

5 CHECK HARNESS AND CONNECTOR (CONNECTOR - KNOCK SENSOR)



HINT:
- If DTC P0327 or P0328 has changed to P0332 or P0333, check the knock sensor circuit on the right bank side.
- If DTC P0332 or P0333 has changed to P0327 or P0328, check the knock sensor circuit on the left bank side.

(a) Disconnect the CV1 connector.
(b) Disconnect the V2 and V1 knock sensor connectors.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
CV1 male connector 2 - V2-2	Below 1 Ω
CV1 male connector 1 - V2-1	Below 1 Ω
CV1 male connector 4 - V1-2	Below 1 Ω
CV1 male connector 3 - V1-1	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
CV1 male connector 2 or V2-2 - Body ground	10 kΩ or higher
CV1 male connector 1 or V2-1 - Body ground	10 kΩ or higher
CV1 male connector 4 or V1-2 - Body ground	10 kΩ or higher
CV1 male connector 3 or V1-1 - Body ground	10 kΩ or higher

(d) Reconnect the CV1 connector.
(e) Reconnect the knock sensor connectors.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE KNOCK SENSOR (See page ES-510)

ES

DTC	P0335	Crankshaft Position Sensor "A" Circuit

DTC	P0339	Crankshaft Position Sensor "A" Circuit Intermittent

DESCRIPTION

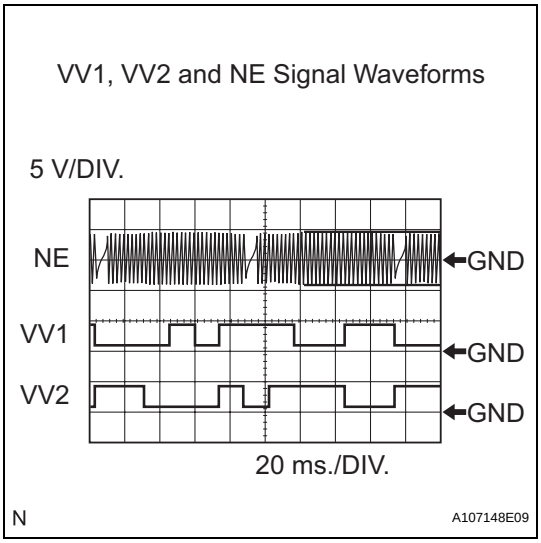
The crankshaft position (CKP) sensor system consists of a crankshaft position sensor plate and a magnetic coil.

The sensor plate has 34 teeth and is installed on the crankshaft. The pickup coil is made of windings, an iron core and magnet. The sensor plate rotates and as each tooth passes through the pickup coil, a pulse signal is created. The pickup coil generates 34 signals for each engine revolution. Based on these signals, the ECM calculates the crankshaft position and engine RPM. Using these calculations, the fuel injection time and ignition time are controlled.

ES

DTC No.	DTC Detection Condition	Trouble Area
P0335	• No CKP sensor signal to ECM while cranking (1 trip detection logic) • No CKP sensor signal to ECM at engine speed of 600 rpm or more (1 trip detection logic)	• Open or short in CKP sensor circuit • CKP sensor • CKP sensor plate • ECM
P0339	Under conditions (a), (b) and (c), no CKP sensor signal to ECM for 0.05 seconds or more (1 trip detection logic): (a) Engine speed 1,000 rpm or more (b) Starter signal OFF (c) 3 seconds or more have elapsed since starter signal switched from ON to OFF	• Open or short in CKP sensor circuit • CKP sensor • CKP sensor plate • ECM

Reference: Inspection using an oscilloscope.



HINT:

- The correct waveform is as shown.
- VV1+ and VV2+ stand for the VVT sensor signal, and NE+ stands for the CKP sensor signal.

Item	Content
Terminals	VV1+ - VV1- VV2+ - VV2- NE+ - NE-
Equipment Settings	5 V/DIV, 20 ms./DIV.
Conditions	Cranking or idling

MONITOR DESCRIPTION

If there is no signal from the crankshaft position sensor despite the engine revolving, the ECM interprets this as a malfunction of the sensor.
If the malfunction is not repaired successfully, these DTCs are set 10 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P0335: CKP sensor signal check when starter ON P0335: CKP sensor signal check when starter OFF P0335: sensor pulse check
Required Sensors/Components (Main)	Crankshaft Position (CKP) sensor
Required Sensors/Components (Sub)	-
Frequency of Operation	Continuous
Duration	Within 5 seconds and 3 times
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

All:

Monitor will run whenever these DTCs are not present	-

CKP sensor signal check when starter OFF:

Engine rpm	600 rpm or more
Time after starter ON to OFF	3 seconds or more

CKP sensor pulse check:

Battery voltage	7 V or higher
Starter	ON
Number of VVT sensor signal pulse	6 times
CMP sensor circuit fail	Not detected
Ignition switch	ON

TYPICAL MALFUNCTION THRESHOLDS

CKP sensor signal check when starter OFF:

Sensor signal	No signal

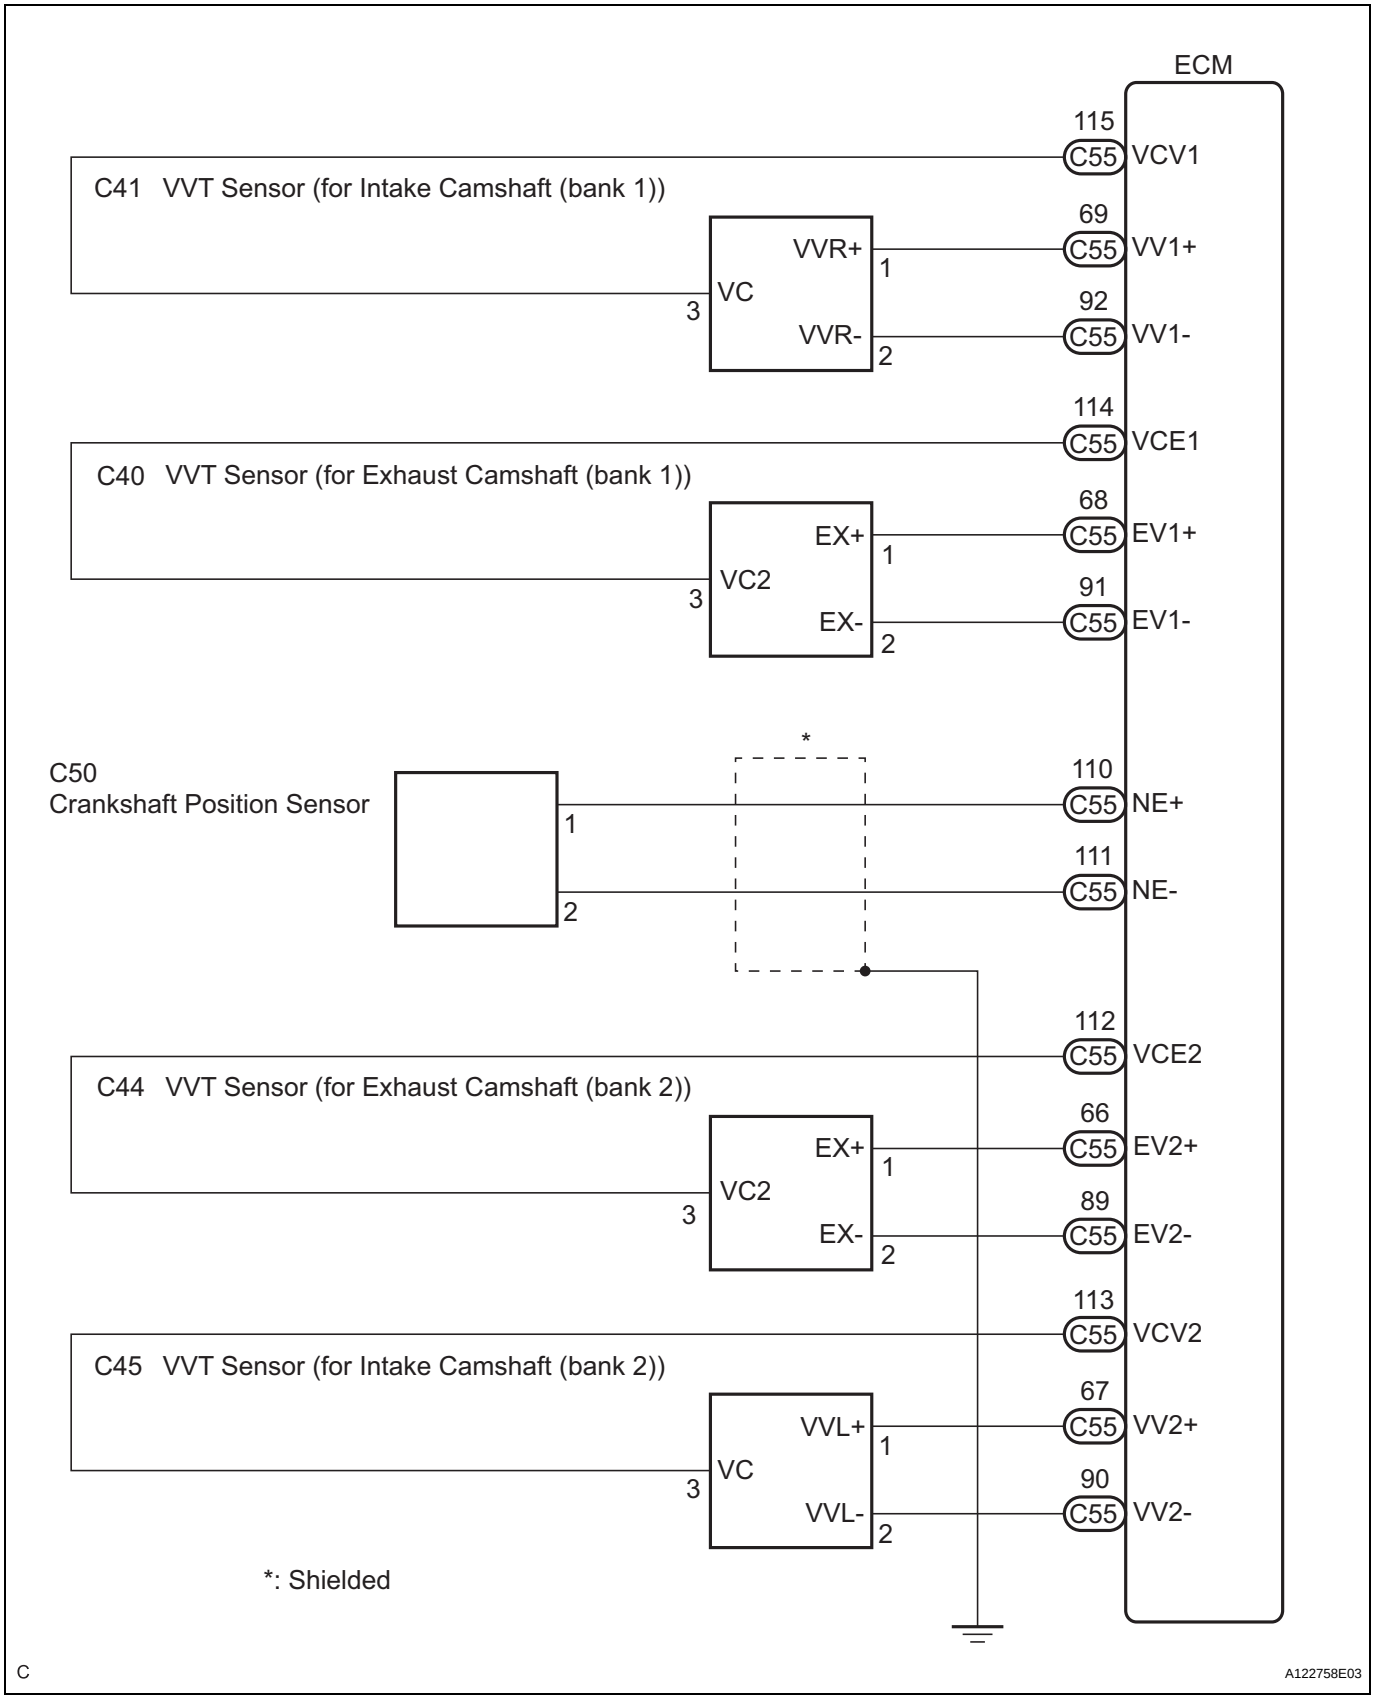
CKP sensor pulse check:

Number of sensor pulse	132 or less, or 174 or more

COMPONENT OPERATING RANGE

CKP sensor	• CKP sensor output voltage fluctuates while crankshaft is revolving • 34 CKP sensor signals per crankshaft revolution

WIRING DIAGRAM



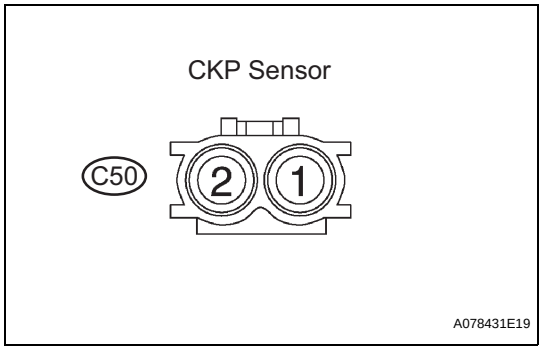
INSPECTION PROCEDURE

HINT:

- If no problem is found by this diagnostic troubleshooting procedure, troubleshoot the engine mechanical system.
- Check the engine speed. The engine speed can be checked by using the intelligent tester. To check, follow the procedure below:
  (a) Connect the intelligent tester to the DLC3.
  (b) Start the engine.
  (c) Turn the tester on.
  (d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / ENGINE SPD.
  The engine speed may be indicated as zero despite the engine revolving normally. This is caused by a lack of NE signals from the crankshaft position (CKP) sensor. Alternatively, the engine speed may be indicated as lower than the actual engine speed, if the CKP sensor output voltage is insufficient.
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

ES

1	INSPECT CRANKSHAFT POSITION SENSOR



(a) Disconnect the C50 crankshaft position (CKP) sensor connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Cold	1,630 to 2,740 Ω
1 - 2	Hot	2,065 to 3,225 Ω

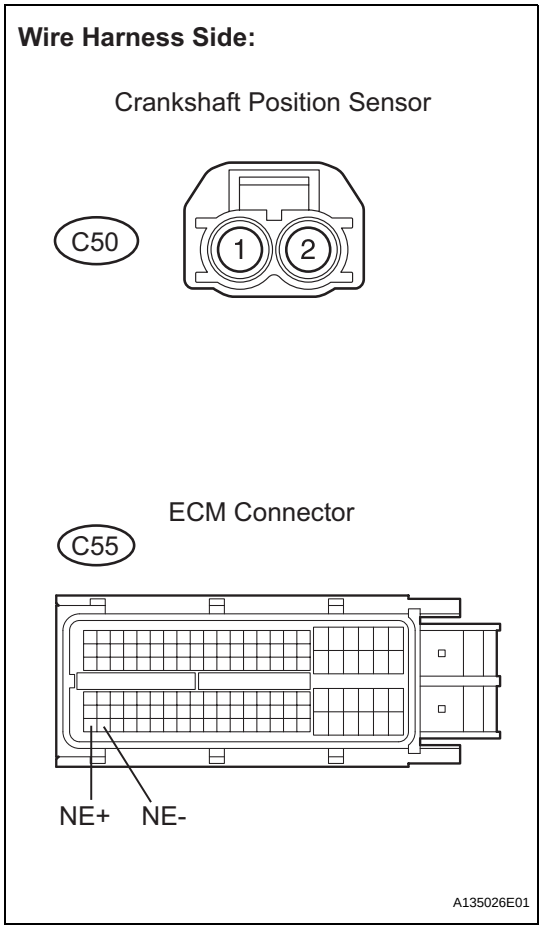
HINT:
Terms "cold" and "hot" refer to the temperature of the coils. "Cold" means approximately -10 to 50°C (14 to 122°F). "Hot" means approximately 50 to 100°C (122 to 212°F).

(c) Reconnect the CKP sensor connector.

NG → **REPLACE CRANKSHAFT POSITION SENSOR (See page ES-496)**

OK

2	CHECK HARNESS AND CONNECTOR (CRANKSHAFT POSITION SENSOR - ECM)



(a) Disconnect the C50 CKP sensor connector.
(b) Disconnect the C55 ECM connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
C50-1 - NE+ (C55-110)	Below 1 Ω
C50-2 - NE- (C55-111)	Below 1 Ω

Standard resistance (Check for short)

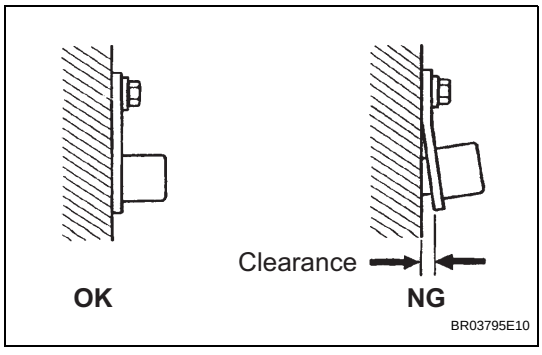
Tester Connection	Specified Condition
C50-1 or NE+ (C55-110) - Body ground	10 kΩ or higher
C50-2 or NE- (C55-111) - Body ground	10 kΩ or higher

(d) Reconnect the ECM connector.
(e) Reconnect the CKP sensor connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	CHECK CRANK POSITION SENSOR (SENSOR INSTALLATION)



(a) Check the CKP sensor installation condition.
OK:
Sensor is installed correctly.

NG → **REPAIR OR REPLACE CRANK POSITION SENSOR**

OK

4	CHECK CRANKSHAFT POSITION SENSOR PLATE (TEETH OF SENSOR PLATE)

(a) Check the teeth of the sensor plate.

OK:
Sensor plate does not have any cracks or deformation.

NG → **REPLACE CRANKSHAFT POSITION SENSOR PLATE**

OK

REPLACE ECM (See page ES-518)

DTC	P0340	Camshaft Position Sensor Circuit Malfunction

DTC	P0342	Camshaft Position Sensor "A" Circuit Low Input (Bank 1 or Single Sensor)

DTC	P0343	Camshaft Position Sensor "A" Circuit High Input (Bank 1 or Single Sensor)

DTC	P0345	Camshaft Position Sensor "A" Circuit (Bank 2)

DTC	P0347	Camshaft Position Sensor "A" Circuit Low Input (Bank 2)

DTC	P0348	Camshaft Position Sensor "A" Circuit High Input (Bank 2)

DESCRIPTION

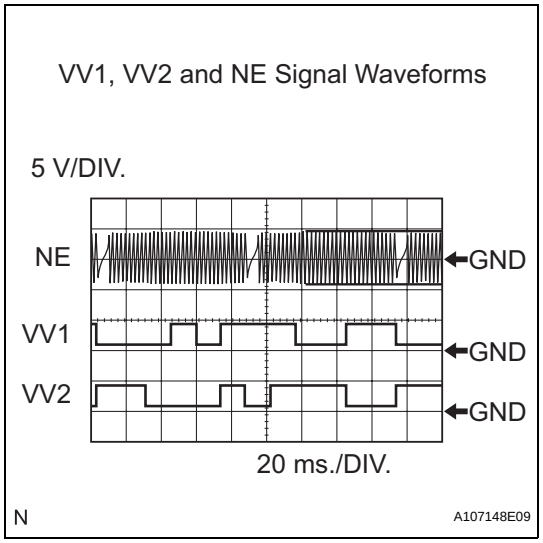
The intake camshaft's Variable Valve Timing (VVT) sensor (G signal) consists of a magnet and MRE (Magneto Resistance Element).

The VVT camshaft drive gear has a sensor plate with 3 teeth on its outer circumference. When the gear rotates, changes occur in the air gaps between the sensor plate and MRE, which affects the magnetic field. As a result, the resistance of the MRE material fluctuates. The VVT sensor converts the gear rotation data to pulse signals, uses the pulse signals to determine the camshaft angle, and sends it to the ECM.

The crankshaft angle sensor plate has 34 teeth. The pickup coil generates 34 signals for each engine revolution. Based on combination of the G signal and NE signal, the ECM detects the crankshaft angle. Then the ECM uses this data to control fuel injection time and injection timing. Also, based on the NE signal, the ECM detects the engine speed.

DTC No.	DTC Detection Condition	Trouble Area
P0340 P0345	• Input voltage to ECM remains 0.3 V or less, or 4.7 V or higher for more than 5 seconds, when 2 or more seconds have elapsed after turning engine switch on (IG) (1 trip detection logic) • No VVT sensor signal to ECM during cranking (1 trip detection logic)	• Open or short in VVT sensor for intake camshaft circuit • VVT sensor for intake camshaft • Camshaft timing gear for intake camshaft • Jumped tooth of timing chain for intake camshaft • ECM
P0342 P0347	Output voltage of VVT sensor 0.3 V or less is for 5 seconds (1 trip detection logic)	• Open or short in VVT sensor for intake camshaft circuit • VVT sensor for intake camshaft • Camshaft timing gear for intake camshaft • Jumped tooth of timing chain for intake camshaft • ECM
P0343 P0348	Output voltage of VVT sensor 4.7 V or more is for 5 seconds (1 trip detection logic)	• Open or short in VVT sensor for intake camshaft circuit • VVT sensor for intake camshaft • Camshaft timing gear for intake camshaft • Jumped tooth of timing chain for intake camshaft • ECM

Reference: Inspection using an oscilloscope



HINT:
- The correct waveform is as shown.
- VV1+ and VV2+ stand for the VVT sensor signal, and NE+ stands for the CKP sensor signal.

Item	Content
Terminals	NE+ - NE- VV1+ - VV1- VV2+ - VV2-
Equipment Settings	5 V/DIV. 20 ms./DIV.
Conditions	Cranking or idling

MONITOR DESCRIPTION

If no signal is transmitted by the VVT sensor despite the engine revolving, or the rotations of the camshaft and the crankshaft are not synchronized, the ECM interprets this as a malfunction of the sensor.

MONITOR STRATEGY

VVT sensor voltage	More than 4.7 V

COMPONENT OPERATING RANGE

VVT sensor voltage	0.3 to 4.7 V

WIRING DIAGRAM

Refer to DTC P0335 (See page ES-224).

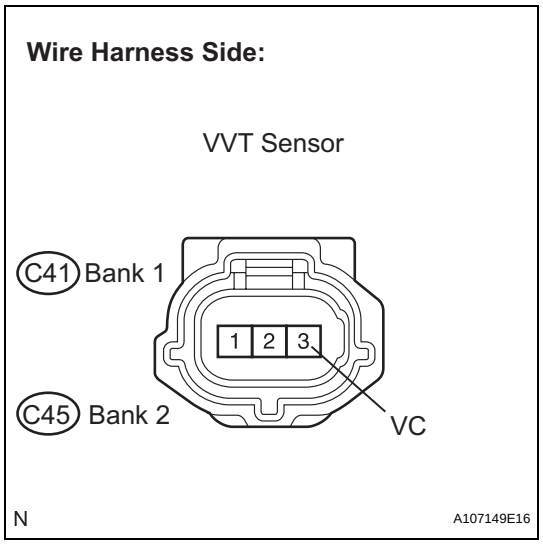
INSPECTION PROCEDURE

HINT:

Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air/fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

ES

1	CHECK HARNESS AND CONNECTOR (SENSOR POWER SOURCE)



(a) Disconnect the C41 or C45 VVT sensor connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

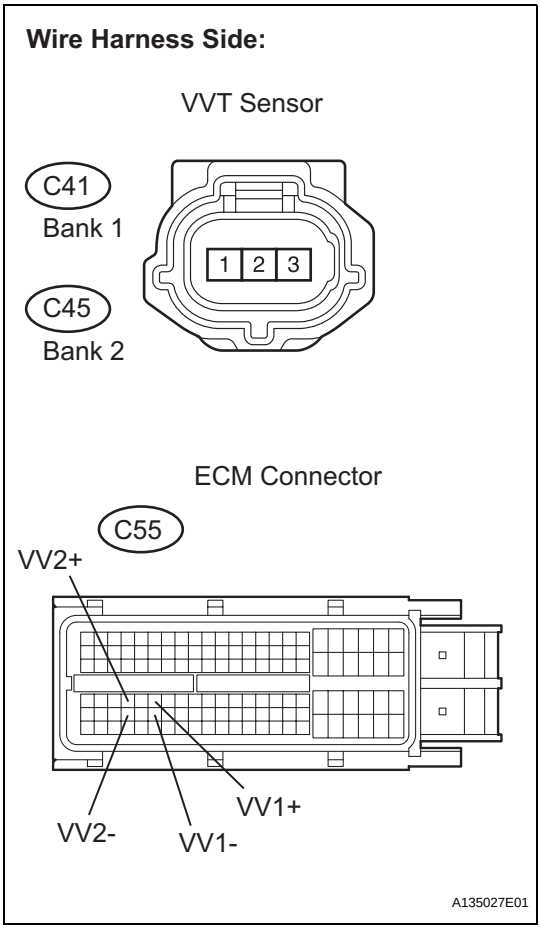
Tester Connection	Specified Condition
VC (C41-3) - Body ground	4.5 to 5.0 V
VC (C45-3) - Body ground	4.5 to 5.0 V

(c) Reconnect the VVT sensor connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2	CHECK HARNESS AND CONNECTOR (VVT SENSOR FOR INTAKE CAMSHAFT - ECM)



(a) Disconnect the C41 or C45 VVT sensor connector.
(b) Disconnect the C55 ECM connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
VVR+ (C41-1) - VV1+ (C55-69)	Below 1 Ω
VVR- (C41-2) - VV1- (C55-92)	Below 1 Ω
VVL+ (C45-1) - VV2+ (C55-67)	Below 1 Ω
VVL- (C45-2) - VV2- (C55-90)	Below 1 Ω

Standard resistance (Check for short)

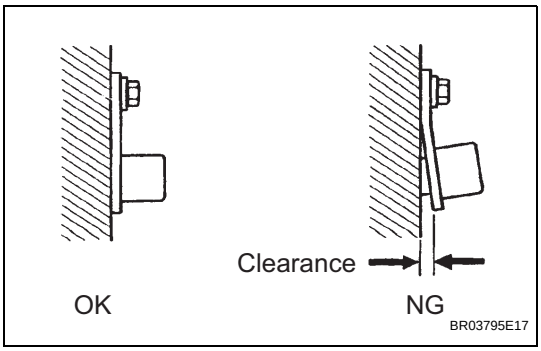
Tester Connection	Specified Condition
VVR+ (C41-1) or VV1+ (C55-69) - Body ground	10 kΩ or higher
VVR- (C41-2) or VV1- (C55-92) - Body ground	10 kΩ or higher
VVL+ (C45-1) or VV2+ (C55-67) - Body ground	10 kΩ or higher
VVL- (C45-2) or VV2- (C55-90) - Body ground	10 kΩ or higher

(d) Reconnect the VVT sensor connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	CHECK VVT SENSOR FOR INTAKE CAMSHAFT (SENSOR INSTALLATION)



(a) Check the CKP sensor installation condition.
OK:
Sensor is installed correctly.

NG → **REPAIR OR REPLACE VVT SENSOR**

OK

4	CHECK CAMSHAFT TIMING GEAR ASSEMBLY (TEETH OF PLATE)

(a) Check the teeth of the signal plate.

OK:
Sensor plate teeth do not have any cracks or deformation.

NG → **REPLACE CAMSHAFT TIMING GEAR ASSEMBLY**

OK

5	**REPLACE VVT SENSOR**

NEXT

6	**CHECK WHETHER DTC OUTPUT RECURS**

ES

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch to on (IG).
(c) Turn the intelligent tester on.
(d) Clear the DTCs (See page ES-45).
(e) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES.
(f) Read the DTCs.

DESCRIPTION

HINT:

- These DTCs indicate malfunctions relating to the primary circuit.
- If DTC P0351 is set, check the No. 1 ignition coil circuit.
- If DTC P0352 is set, check the No. 2 ignition coil circuit.
- If DTC P0353 is set, check the No. 3 ignition coil circuit.
- If DTC P0354 is set, check the No. 4 ignition coil circuit.
- If DTC P0355 is set, check the No. 5 ignition coil circuit.
- If DTC P0356 is set, check the No. 6 ignition coil circuit.

A Direct Ignition System (DIS) is used on this vehicle.

The DIS is a 1-cylinder ignition system in which each cylinder is ignited by one ignition coil and spark plug is connected to the end of each secondary wiring. A powerful voltage, generated in the secondary wiring, is applied directly to each spark plug. The sparks of the spark plugs pass from the center electrode to the ground electrodes.

The ECM determines the ignition timing and transmits the ignition signals (IGT) to each cylinder. Using the IGT signal, the ECM turns the power transistor inside the igniter on and off. The power transistor, in turn, switches on and off the current to the primary coil. When the current to the primary coil is cut off, a powerful voltage is generated in the secondary coil. This voltage is applied to the spark plugs, causing them to spark inside the cylinders. As the ECM cuts the current to the primary coil off, the igniter sends back an ignition confirmation signal (IGF) to the ECM, for each cylinder ignition.

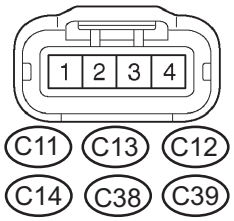
INSPECTION PROCEDURE

HINT:
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

1	INSPECT IGNITION COIL ASSEMBLY (POWER SOURCE)

Wire Harness Side:

Ignition Coil Connector



(a) Disconnect the C11, C13, C12, C14, C38 or C39 ignition coil connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Specified Condition
C11-1 - Body ground	9 to 14 V
C13-1 - Body ground	9 to 14 V
C12-1 - Body ground	9 to 14 V
C14-1 - Body ground	9 to 14 V
C38-1 - Body ground	9 to 14 V
C39-1 - Body ground	9 to 14 V

(d) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
C11-4 - Body ground	Below 1 Ω
C13-4 - Body ground	Below 1 Ω

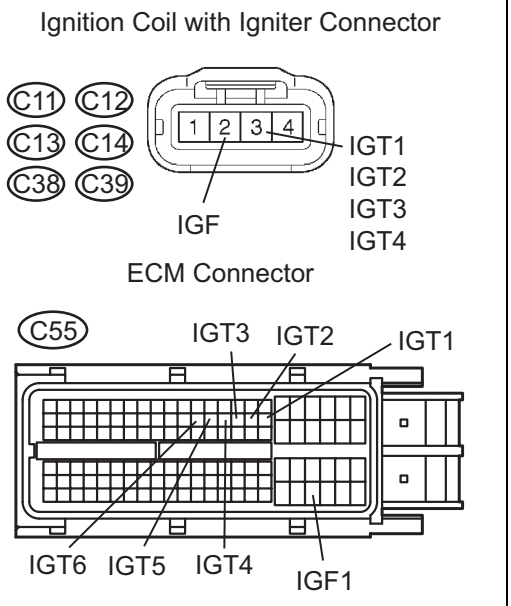
Tester Connection	Specified Condition
C12-4 - Body ground	Below 1 Ω
C14-4 - Body ground	Below 1 Ω
C38-4 - Body ground	Below 1 Ω
C39-4 - Body ground	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

2 CHECK HARNESS AND CONNECTOR (IGNITION COIL ASSEMBLY - ECM (IGT SIGNAL TERMINAL))

Wire Harness Side Front View:



(a) Disconnect the C11, C13, C12, C14, C38 or C39 ignition coil connector.
(b) Disconnect the ECM C55 connectors.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
IGT1 (C11-3) - IGT1 (C55-40)	Below 1 Ω
IGT2 (C13-3) - IGT2 (C55-39)	Below 1 Ω
IGT3 (C12-3) - IGT3 (C55-38)	Below 1 Ω
IGT4 (C14-3) - IGT4 (C55-37)	Below 1 Ω
IGT5 (C38-3) - IGT5 (C55-36)	Below 1 Ω
IGT6 (C39-3) - IGT6 (C55-35)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
IGT1 (C11-3) or IGT1 (C55-40) - Body ground	10 kΩ or higher
IGT2 (C13-3) or IGT2 (C55-39) - Body ground	10 kΩ or higher
IGT3 (C12-3) or IGT3 (C55-38) - Body ground	10 kΩ or higher
IGT4 (C14-3) or IGT4 (C55-37) - Body ground	10 kΩ or higher
IGT5 (C38-3) or IGT5 (C55-36) - Body ground	10 kΩ or higher
IGT6 (C39-3) or IGT6 (C55-35) - Body ground	10 kΩ or higher

Standard resistance (Check for open)

Tester Connection	Specified Condition
IGF (C11-2) - IGF1 (C55-106)	Below 1 Ω
IGF (C13-2) - IGF1 (C55-106)	Below 1 Ω
IGF (C12-2) - IGF1 (C55-106)	Below 1 Ω
IGF (C14-2) - IGF1 (C55-106)	Below 1 Ω
IGF (C38-2) - IGF1 (C55-106)	Below 1 Ω
IGF (C39-2) - IGF1 (C55-106)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
IGF (C11-2) or IGF1 (C55-106) - Body ground	10 kΩ or higher
IGF (C13-2) or IGF1 (C55-106) - Body ground	10 kΩ or higher
IGF (C12-2) or IGF1 (C55-106)- Body ground	10 kΩ or higher
IGF (C14-2) or IGF1 (C55-106) - Body ground	10 kΩ or higher

Tester Connection	Specified Condition
IGF (C38-2) or IGF1 (C55-106) - Body ground	10 kΩ or higher
IGF (C39-2) or IGF1 (C55-106) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 PERFORM SIMULATION TEST

(a) Clear the DTC(s) (See page ES-45).
(b) Change the arrangement of the ignition coils (with igniters).
NOTICE:
Do not change the location of the connectors.
(c) Reform a simulation test.

DTC	P0392	Camshaft Position Sensor "B" Circuit Low Input (Bank 2)

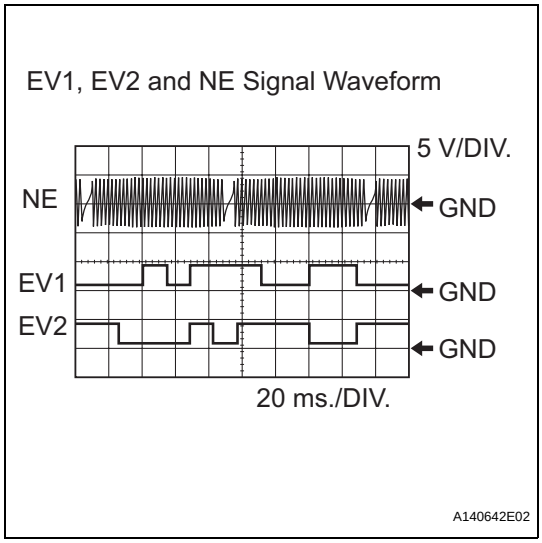
DTC	P0393	Camshaft Position Sensor "B" Circuit High Input (Bank 2)

DESCRIPTION

The exhaust camshaft's Variable Valve Timing (VVT) sensor consists of a magnet and MRE (Magneto Resistance Element).
The exhaust camshaft has a sensor plate with 3 teeth on its outer circumference.
When the exhaust camshaft rotates, changes occur in the air gaps between the 3 teeth and MRE, which affects the magnet. As a result, the resistance of the MRE material fluctuates. The VVT sensor converts the exhaust camshaft rotation data to pulse signals, uses the pulse signals to determine the camshaft angle, and sends it to the ECM.

DTC No.	DTC Detection Condition	Trouble Area
P0365 P0390	• Input voltage to ECM remains 0.3 V or less, or 4.7 V or higher for more than 5 seconds, when 2 or more seconds have elapsed after turning engine switch on (IG) (1 trip detection logic) • No VVT sensor signal to ECM during cranking (1 trip detection logic)	• Open or short in VVT sensor for exhaust camshaft circuit • VVT sensor for exhaust camshaft • Exhaust camshaft • Jumped tooth of timing chain • ECM
P0367 P0392	Output voltage of VVT sensor is 0.3 V or less for 5 seconds (1 trip detection logic)	• Open or short in VVT sensor for exhaust camshaft circuit • VVT sensor for exhaust camshaft • Exhaust camshaft • Jumped tooth of timing chain • ECM
P0368 P0393	Output voltage of VVT sensor is 4.7 V or more for 5 seconds (1 trip detection logic)	• Open or short in VVT sensor for exhaust camshaft circuit • VVT sensor for exhaust camshaft • Exhaust camshaft • Jumped tooth of timing chain • ECM

Reference: Inspection using an oscilloscope



HINT:
- The correct waveform is as shown.
- EV1+ and EV2+ stand for the VVT sensor signal, and NE+ stands for the CKP sensor signal.

Item	Content
Terminal	NE+ - NE- EV1+ - EV1- EV2+ - EV2-
Equipment Setting	5 V/DIV. 20 ms./DIV.
Condition	Cranking or idling

MONITOR DESCRIPTION

If no signal is transmitted by the VVT sensor despite the engine revolving, or the rotations of the camshaft and the crankshaft are not synchronized, the ECM interprets this as a malfunction of the sensor.

MONITOR STRATEGY

Exhaust camshaft position signal	No signal

COMPONENT OPERATING RANGE

VVT sensor voltage	0.3 to 4.7 V

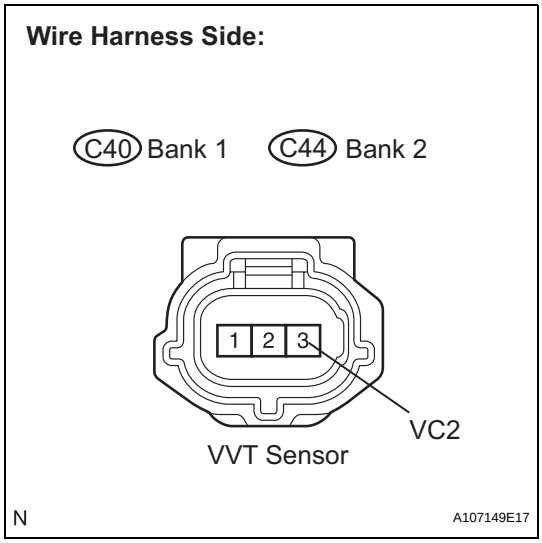
WIRING DIAGRAM

Refer to DTC P0335 (See page ES-224).

INSPECTION PROCEDURE

Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

1	CHECK HARNESS AND CONNECTOR (SENSOR POWER SOURCE)



(a) Disconnect the C40 or C44 VVT sensor connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

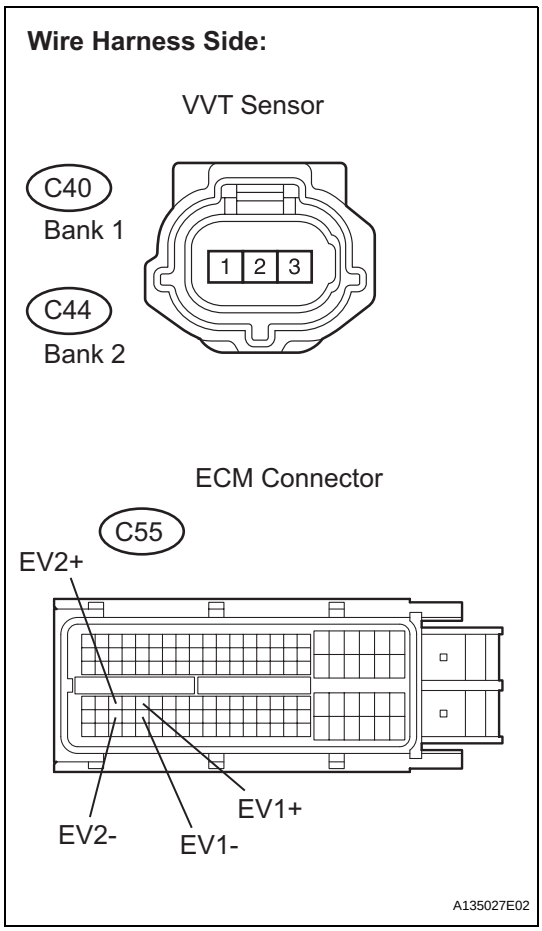
Tester Connection	Specified Condition
VC2 (C40-3) - Body ground	4.5 to 5.0 V
VC2 (C44-3) - Body ground	4.5 to 5.0 V

(c) Reconnect the VVT sensor connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2	CHECK HARNESS AND CONNECTOR (VVT SENSOR - ECM)



(a) Disconnect the C40 or C44 VVT sensor connector.
(b) Disconnect the C55 ECM connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
EX+ (C40-1) - EV1+ (C55-68)	Below 1 Ω
EX- (C40-2) - EV1- (C55-91)	Below 1 Ω
EX+ (C44-1) - EV2+ (C55-66)	Below 1 Ω
EX- (C44-2) - EV2- (C55-89)	Below 1 Ω

Standard resistance (Check for short)

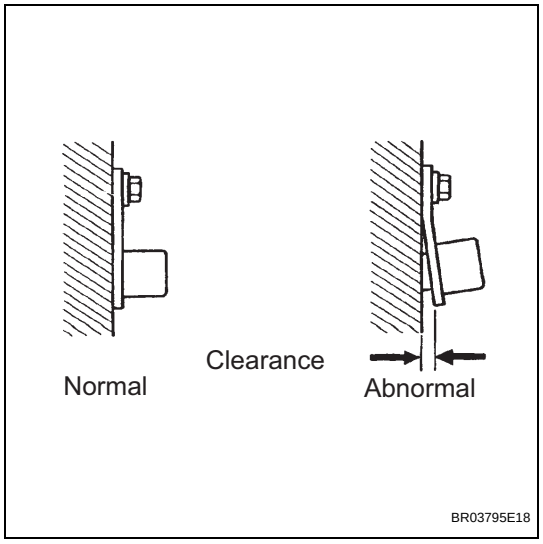
Tester Connection	Specified Condition
EX+ (C40-1) or EV1+ (C55-68) - Body ground	10 kΩ or higher
EX- (C40-2) or EV1- (C55-91) - Body ground	10 kΩ or higher
EX+ (C44-1) or EV2+ (C55-66) - Body ground	10 kΩ or higher
EX- (C44-2) or EV2- (C55-89) - Body ground	10 kΩ or higher

(d) Reconnect the VVT sensor connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	CHECK VVT SENSOR FOR EXHAUST CAMSHAFT (SENSOR INSTALLATION)



(a) Check the VVT sensor installation condition.
OK:
Sensor is installed correctly.

NG → **REPAIR OR REPLACE VVT SENSOR**

OK

4	CHECK EXHAUST CAMSHAFT

(a) Check the teeth of the camshaft.

NG → **REPLACE EXHAUST CAMSHAFT**

OK

5	REPLACE VVT SENSOR

NEXT

END

DTC	P0420	Catalyst System Efficiency Below Threshold (Bank 1)

DTC	P0430	Catalyst System Efficiency Below Threshold (Bank 2)

MONITOR DESCRIPTION

The ECM uses the sensors mounted in front of and behind the Three-Way Catalytic Converter (TWC) to monitor its efficiency.

The first sensor, the Air-Fuel Ratio (A/F) sensor, sends pre-catalyst information to the ECM. The second sensor, the Heated Oxygen (HO2) sensor, sends post-catalyst information to the ECM.

In order to detect any deterioration in the TWC, the ECM calculates the Oxygen Storage Capacity (OSC) of the TWC. This calculation is based on the voltage output of the HO2 sensor while performing active air-fuel ratio control, rather than the conventional detecting method, which uses the locus ratio.

The OSC value is an indication of the oxygen storage capacity of the TWC. When the vehicle is being driven with a warm engine, active air-fuel ratio control is performed for approximately 15 to 20 seconds. When it is performed, the ECM deliberately sets the air-fuel ratio to lean or rich levels. If a rich-lean cycle of the HO2 sensor is long, the OSC becomes greater. There is a direct correlation between the OSCs of the HO2 sensor and the TWC.

The ECM uses the OSC value to determine the state of the TWC. If any deterioration has occurred, it illuminates the MIL and sets a DTC.

DTC No.	DTC Detection Condition	Trouble Area
P0420	OSC value is smaller than standard value under active air-fuel ratio control (2 trip detection logic)	• Gas leakage from exhaust system • A/F sensor (bank 1 sensor 1) • HO2 sensor (bank 1 sensor 2) • Exhaust manifold (TWC)
P0430	OSC value is smaller than standard value under active air-fuel ratio control (2 trip detection logic)	• Gas leakage from exhaust system • A/F sensor (bank 2 sensor 1) • HO2 sensor (bank 2 sensor 2) • Exhaust manifold (TWC)

HINT:

- Bank 1 refers to the bank that includes cylinder No. 1.
- Bank 2 refers to the bank that does not include cylinder No. 1.
- Sensor 1 refers to the sensor closest to the engine assembly.
- Sensor 2 refers to the sensor farthest away from the engine assembly.

Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	P0011, 14 (VVT System 1 - Advance) P0012, 15 (VVT System 1 - Retard) P0031, 32, 51, 52 (A/F Sensor heater - Sensor 1) P0037, 38, 58, 59 (O2 Sensor heater - Sensor 2) P0100 - P0103 (MAF meter) P0115 - P0118 (ECT sensor) P0120 - P0223, P2135 (TP sensor) P0125 (Insufficient ECT for Closed Loop) P0136, P0156(O2 Sensor - Sensor 2) P0171, P0172, P0174, P0175 (Fuel system) P0300 - P0304 (Misfire) P0335 (CKP sensor) P0340 (CMP sensor) P0351 - P0354 (Igniter) P0500 (VSS) P2196, P2198 (A/F Sensor - rationality) P2A00, P2A03 (A/F Sensor - slow response)
Battery voltage	11 V or more
IAT	-10°C (14°F) or more
ECT	70 kPa (525 mmHg) or more
Atmospheric pressure	-
Idle	OFF
Engine RPM	Less than 3,200 rpm
A/F sensor	Activated
Fuel system status	Closed loop
Engine load	10 to 70 %
All of the following conditions 1, 2 and 3 are met:	-
1. MAF	5 to 25 g/sec.
2. Front catalyst temperature (estimated)	600 to 750°C (1,112 to 1,382°F)
3. Rear catalyst temperature (estimated)	100 to 900°C (212 to 1,652°F)
EVAP system monitor	The monitor has not run yet or the vacuum introduction has been completed.
A/F sensor monitor	Completed
Rear HO2S monitor	Completed
Shift position	4th or higher

TYPICAL MALFUNCTION THRESHOLDS

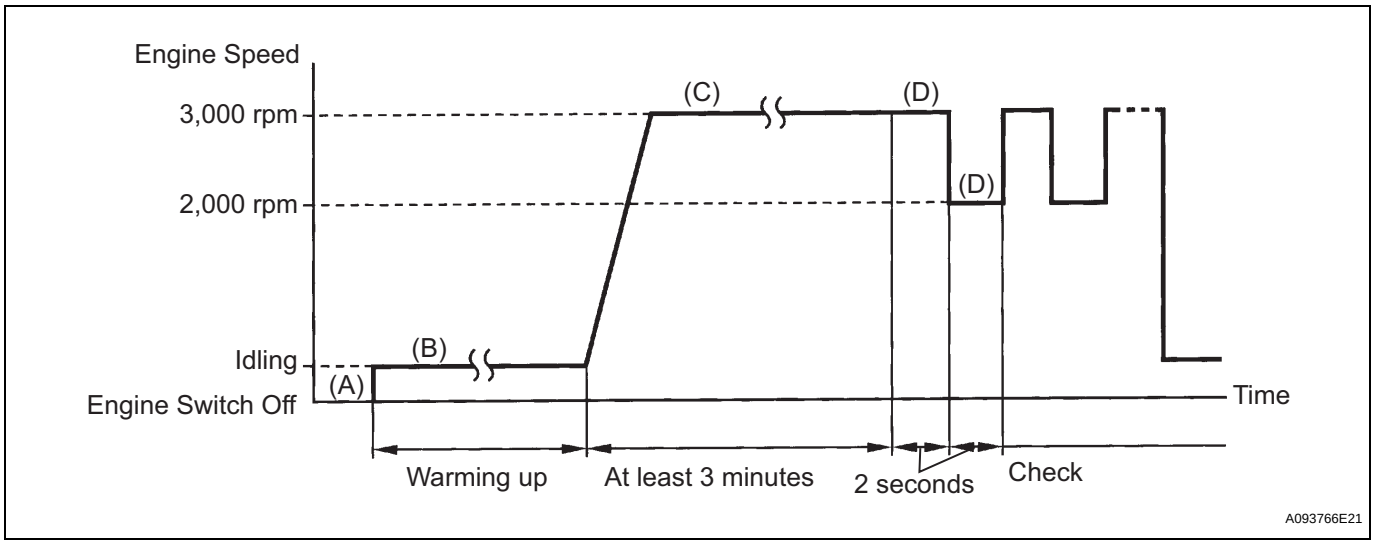
OSC (Oxygen Storage Capacity) of Catalyst	Less than 0.046 g

MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-25).

CONDITIONING FOR SENSOR TESTING

Perform the operation with the engine speeds and time durations described below prior to checking the waveforms of the A/F and HO2 sensors. This is performed in order to heat the sensors sufficiently to obtain the appropriate inspection results.



ES

1. Connect the intelligent tester to the DLC3 (Procedure "A").
2. Start the engine and warm it up with all the accessories switched OFF, until the engine coolant temperature stabilizes (Procedure "B").
3. Run the engine at an engine speed of between 2,500 rpm and 3,000 rpm for at least 3 minutes (Procedure "C").
4. While running the engine at 3,000 rpm for 2 seconds and 2,000 rpm for 2 seconds, check the waveforms of the A/F and HO2 sensors using the tester or scan tool (Procedure "D").

NOTICE:

The Air-Fuel Ratio (A/F) sensor has an output delay of a few seconds and the Heated Oxygen (HO2) sensor has a maximum output delay of approximately 20 seconds.

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Area
1	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		-
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage More than 0.55 V Less than 0.4 V		
2	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• A/F sensor • A/F sensor heater • A/F sensor circuit
	Output Voltage Almost no reaction		Output Voltage More than 0.55 V Less than 0.4 V		
3	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• HO2 sensor • HO2 sensor heater • HO2 sensor circuit
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage Almost no reaction		
4	Injection volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• Fuel pressure • Gas leakage from exhaust system (Air-fuel ratio extremely lean or rich)
	Output Voltage Almost no reaction		Output Voltage Almost no reaction		

- Following the A/F CONTROL procedure enables technicians to check and graph the output voltages of both the A/F and HO2 sensors.
- To display the graph, enter the following menus on the tester: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL / USER DATA / AFS B1 S1 and O2S B1 S2 or AFS B2 S1 and O2S B2 S2, and press the YES button and then the ENTER button followed by the F4 button.

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

ES

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0420 AND/OR P0430)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the tester on.
(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Read the DTCs.

Result

Display (DTC output)	Proceed to
P0420 and/or P0430	A
P0420 and/or P0430 and other DTCs	B

HINT:
If any DTCs other than P0420 or P0430 are output, troubleshoot those DTCs first.

B → GO TO DTC CHART (See page ES-63)

A

2	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (A/F CONTROL)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the tester on.
(c) Warm up the engine at a engine speed of 2,500 rpm for approximately 90 seconds.
(d) On the tester, enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL.
(e) Perform the A/F CONTROL operation with the engine in an idling condition (press the RIGHT or LEFT button to change the fuel injection volume.)
(f) Monitor the output voltages of the A/F and HO2 sensors (AFS B1 S1 and O2S B1 S2 or AFS B2 S1 and O2S B2 S2) displayed on the tester.
HINT:
- The A/F CONTROL operation lowers the fuel injection volume by 12.5 % or increases the injection volume by 25 %.

- Each sensor reacts in accordance with increases and decreases in the fuel injection volume.

Tester Display (Sensor)	Injection Volume	Status	Voltage
AFS B1 S1 or AFS B2 S1 (A/F)	+25 %	Rich	Less than 3.0 V
AFS B1 S1 or AFS B2 S1 (A/F)	-12.5 %	Lean	More than 3.35 V
O2S B1 S2 or O2S B2 S2 (HO2)	+25 %	Rich	More than 0.55 V
O2S B1 S2 or O2S B2 S2 (HO2)	-12.5 %	Lean	Less than 0.4 V

Result

Status AFS B1 S1 or AFS B2 S1	Status O2S B1 S2 or O2S B2 S2	A/F Condition and A/F and HO2 Sensor Conditions	Misfire	Main Suspected Trouble Areas	Proceed to
Lean/Rich	Lean/Rich	Normal	-	• Three-Way Catalytic Converter (TWC) • Gas leakage from exhaust system	A
Lean	Lean/Rich	A/F sensor malfunction	-	• A/F sensor	B
Rich	Lean/Rich	A/F sensor malfunction	May occur	• A/F sensor	B
Lean/Rich	Lean	HO2 sensor malfunction	-	• HO2 sensor • Gas leakage from exhaust system	C
Lean/Rich	Rich	HO2 sensor malfunction	-	• HO2 sensor • Gas leakage from exhaust system	C
Lean	Lean	Actual air-fuel ratio lean	May occur	• Extremely rich or lean actual air-fuel ratio • Gas leakage from exhaust system	A
Rich	Rich	Actual air-fuel ratio lean	-	• Extremely rich or lean actual air-fuel ratio • Gas leakage from exhaust system	A

Lean:

During A/F CONTROL, the A/F sensor (AFS) output voltage is consistently more than 3.35 V, and the HO2 sensor output voltage (O2S) is consistently less than 0.4 V.

Rich:

During A/F CONTROL, the AFS is consistently less than 3.0 V, and the O2S is consistently more than 0.55 V.

Lean/Rich:

During A/F CONTROL of the ACTIVE TEST, the output voltage of the HO2 sensor alternates correctly.

DTC SUMMARY

DTCs	Monitoring Items	Malfunction Detection Conditions	Trouble Areas	Detection Timings	Detection Logic
P043E	0.02 inch orifice clogged	P043E, P043F, P2401, P2402, P2419 are present when one of the following conditions is met during key-off EVAP monitor • Reference orifice clogged • Reference orifice high-flow • Leak detection pump OFF malfunction • Leak detection pump ON malfunction • Vent valve ON (close) malfunction	• Pump module • Connector/wire harness (Pump module - ECM) • ECM	While ignition switch OFF	2 trip
P043F	0.02 inch orifice high-flow				
P2401	Vacuum pump stuck OFF				
P2402	Vacuum pump stuck ON				
P2419	Vent valve stuck open (vent)				

HINT:
The 0.02 inch orifice is located inside the pump module.

DESCRIPTION

The circuit description can be found in the EVAP (Evaporative Emission) System (See page ES-400).

INSPECTION PROCEDURE

Refer to the EVAP System (See page ES-400).

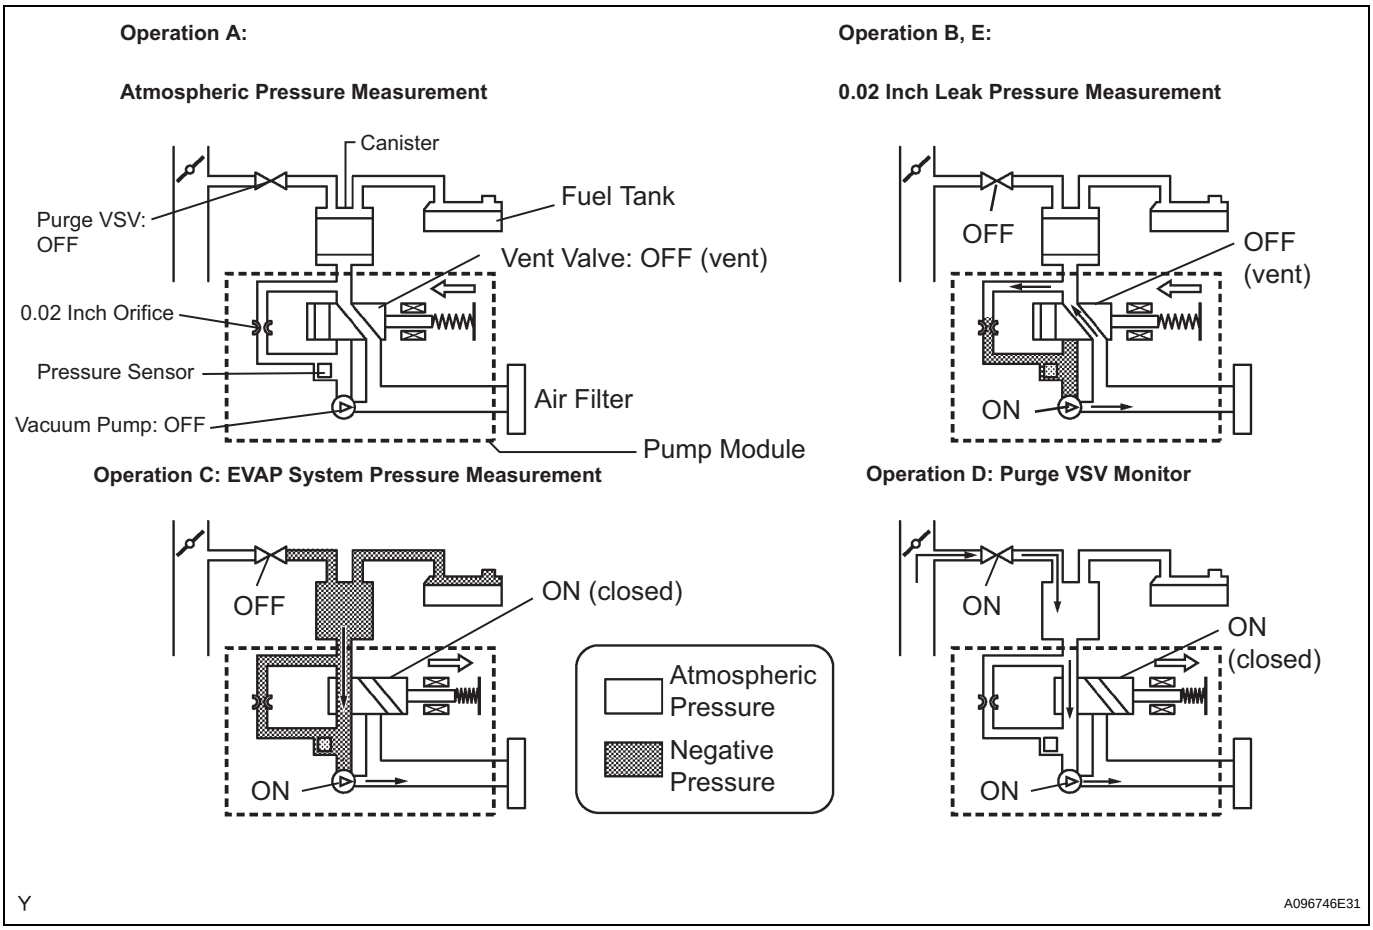
MONITOR DESCRIPTION

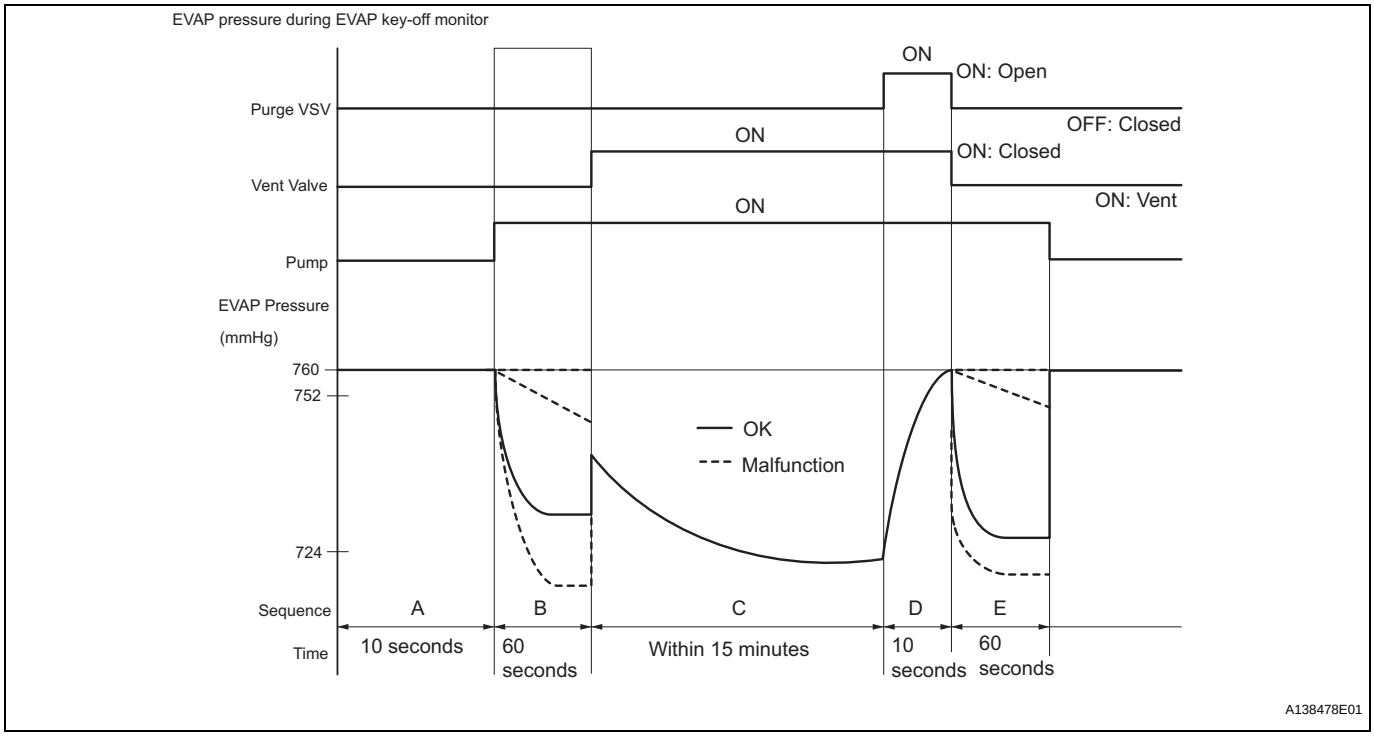
5 hours*1 after the ignition switch is turned off, the electric vacuum pump creates negative pressure (vacuum) in the EVAP (Evaporative Emission) system. The ECM monitors for leaks and actuator malfunctions based on the EVAP pressure.
HINT:
*1: If the engine coolant temperature is not below 35°C (95°F) 5 hours after the ignition switch is turned off, the monitor check starts 2 hours later. If it is still not below 35°C (95°F) 7 hours after the ignition switch is turned off, the monitor check starts 2.5 hours later.

Sequence	Operations	Descriptions	Duration
-	ECM activation	Activated by soak timer, 5 hours (7 or 9.5 hours) after ignition switch turned off.	-

Sequence	Operations	Descriptions	Duration
A	Atmospheric pressure measurement	Vent valve turned OFF (vent) and EVAP system pressure measured by ECM in order to register atmospheric pressure. If pressure in EVAP system is not between 70 kPa and 110 kPa (525 mmHg and 825 mmHg), ECM cancels EVAP system monitor.	10 seconds
B	First 0.02 inch leak pressure measurement	In order to determine 0.02 inch leak pressure standard, vacuum pump creates negative pressure (vacuum) through 0.02 inch orifice and then ECM checks if vacuum pump and vent valve operate normally.	60 seconds
C	EVAP system pressure measurement	Vent valve turned ON (closed) to shut EVAP system. Negative pressure (vacuum) is created in EVAP system, and EVAP system pressure then measured. Write down measured value as it will be used in leak check. If EVAP pressure does not stabilize within 15 minutes, ECM cancels EVAP system monitor.	15 minutes*2
D	Purge VSV monitor	Purge VSV is opened and then EVAP system pressure is measured by ECM. Large increase indicates normal.	10 seconds
E	Second 0.02 inch leak pressure measurement	After second 0.02 inch leak pressure measurement, leak check is performed by comparing first and second 0.02 inch leak pressure standards. If stabilized system pressure is higher than second 0.02 inch leak pressure standard, ECM determines that EVAP system leaking.	60 seconds
F	Final check	Atmospheric pressure is measured and then monitoring result is recorded by ECM.	-

*2: If there is only a small amount of fuel in the fuel tank, stabilizing the EVAP pressure takes longer than usual.





The leak detection pump creates negative pressure through the reference orifice. When the system is normal, the EVAP pressure is in 724 to 752 mmHg* and saturated within a minute.
If not, the ECM interprets this as a malfunction. The ECM will illuminate the MIL and set DTC if this malfunction is detected in consecutive drive cycle.

*: Typical valve

MONITOR STRATEGY

Related DTCs	P043E: 0.02 inch orifice clog (built-in pump module) P043F: 0.02 inch orifice high-flow (built-in pump module) P2401: Vacuum pump stuck OFF P2402: Vacuum pump stuck ON P2419: Vent valve stuck open (vent)
Required Sensors / Components	Pump module
Frequency of Operation	Once per driving cycle
Duration	Within 2 minutes
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever these DTCs are not present	None
EVAP key-off monitor is run when all of the following conditions are met	-
Atmospheric pressure	70 to 110 kPa (525 to 825 mmHg)
Battery voltage	10.5 V or more
Vehicle speed	Below 2.5 mph (4 km/h)
Ignition switch	OFF
Time after key-off	5 or 7 or 9.5 hours
EVAP pressure sensor malfunction (P0450, P0451, P0452, P0453)	Not detected
EVAP canister purge valve	Not operated by scan tool

EVAP canister vent valve	Not operated by scan tool
EVAP leak detection pump	Not operated by scan tool
Both of the following conditions 1 and 2 are met before key-off	Conditions 1 and 2
1. Duration that vehicle driven	5 minutes or more
2. EVAP purge operation	Performed
ECT	4.4 to 35°C (40 to 95°F)
IAT	4.4 to 35°C (40 to 95°F)

Key-off monitor sequence 1 to 8

1. Atmospheric pressure measurement

Next sequence is run if the following condition is met:	-
Atmospheric pressure measurement	Less than 0.3 kPa (2.25 mmHg) in 1 second

2. First reference pressure measurement

Next sequence is run if all of the following conditions are met:	Conditions 1, 2 and 3
1. EVAP pressure just after reference pressure measurement	-1 kPa (-7.5 mmHg) or less
2. Reference pressure	-4.85 to -1.057 kPa (-36.384 to -7.929 mmHg)
3. Reference pressure	Saturated within 1 minute

3. EVAP canister vent valve close stuck check

Next sequence is run if the following condition is met:	-
EVAP pressure change after vent valve is ON	0.3 kPa (2.25 mmHg) or more

4. Vacuum introduction

Next sequence is run if the following condition is met:	-
Vacuum introduction time	Saturated within 15 minutes

5. EVAP canister purge valve close stuck check

Next sequence is run if the following condition is met:	-
EVAP pressure change after purge valve is open	0.3 kPa (2.25 mmHg) or more

6. Second reference pressure measurement

Next sequence is run if all of the following conditions are met:	Conditions 1, 2, 3 and 4
1. EVAP pressure just after reference pressure	-1 kPa (-7.5 mmHg) or less
2. Reference pressure	-4.85 to -1.057 kPa (-36.384 to -7.929 mmHg)
3. Reference pressure	Saturated
4. Difference between first reference pressure and second reference pressure	Less than 0.7 kPa (5.25 mmHg)

7. Leak check

Next sequence is run if the following condition is met	-
EVAP pressure when vacuum introduction was complete	Lower than second reference pressure

8. Atmospheric pressure measurement

EVAP monitor is complete if the following condition is met:	-
Atmospheric pressure difference between sequence 1 and 8	Within 0.3 kPa (2.25 mmHg)

TYPICAL MALFUNCTION THRESHOLDS

One of following conditions met	-

EVAP pressure just after reference pressure measurement start	More than -1 kPa (-7.5 mmHg)
Reference pressure	Less than -4.85 kPa (-36.384 mmHg)
Reference pressure	-1.057 kPa (-7.929 mmHg) or more
Reference pressure	Not saturated
Difference between first reference pressure and second reference pressure	0.7 kPa (5.25 mmHg) or more

MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-25).

DTC	P0441	Evaporative Emission Control System Incorrect Purge Flow

DTC SUMMARY

DTC No.	Monitoring Item	DTC Detection Condition	Trouble Area	Detection Timing	Detection Logic
P0441	EVAP VSV (Vacuum Switching Valve) stuck open	Vacuum pump creates negative pressure (vacuum) in EVAP system and EVAP system pressure measured. 0.02 inch leak pressure standard measured at start and at end of leak check. If stabilized pressure higher than [second 0.02 inch leak pressure standard x 0.2], ECM determines that EVAP VSV stuck open	• EVAP VSV • Connector/wire harness (EVAP VSV - ECM) • ECM • Pump module • Leakage from EVAP system	While engine switch off	2 trip
P0441	EVAP VSV stuck closed	After EVAP leak check performed, EVAP VSV turned ON (open), and atmospheric air introduced into EVAP system. 0.02 inch leak pressure standard measured at start and at end of the check. If pressure does not return to near atmospheric pressure, ECM determines that purge valve stuck closed	• EVAP VSV • Connector/wire harness (EVAP VSV - ECM) • ECM • Pump module • Leakage from EVAP system	While engine switch off	2 trip
P0441	Purge flow	While engine running, following conditions are successively met: • Negative pressure not created in EVAP system when EVAP VSV turned ON (open) • EVAP system pressure change less than 0.5 kPa (3.75 mmHg) when vent valve turned ON (closed) • Atmospheric pressure change before and after purge flow monitor less than 0.1 kPa (0.75 mmHg)	• EVAP VSV • Connector/wire harness (EVAP VSV - ECM) • Leakage from EVAP line (EVAP VSV - Intake manifold) • ECM	While engine running	2 trip

DESCRIPTION

The circuit description can be found in the EVAP (Evaporative Emission) System (See page ES-400).

INSPECTION PROCEDURE

Refer to the EVAP System (See page ES-400).

MONITOR DESCRIPTION

The two monitors, Key-off and Purge Flow, are used to detect malfunctions relating to DTC P0441. The key-off monitor is initiated by the ECM internal timer, known as the soak timer, 5 hours* after the engine switch is turned off. The purge flow monitor runs while the engine is running.

1. KEY-OFF MONITOR

5 hours* after the engine switch is turned off, the electric vacuum pump creates negative pressure (vacuum) in the EVAP (Evaporative Emission) system. The ECM monitors for leaks and actuator malfunctions based on the EVAP pressure.

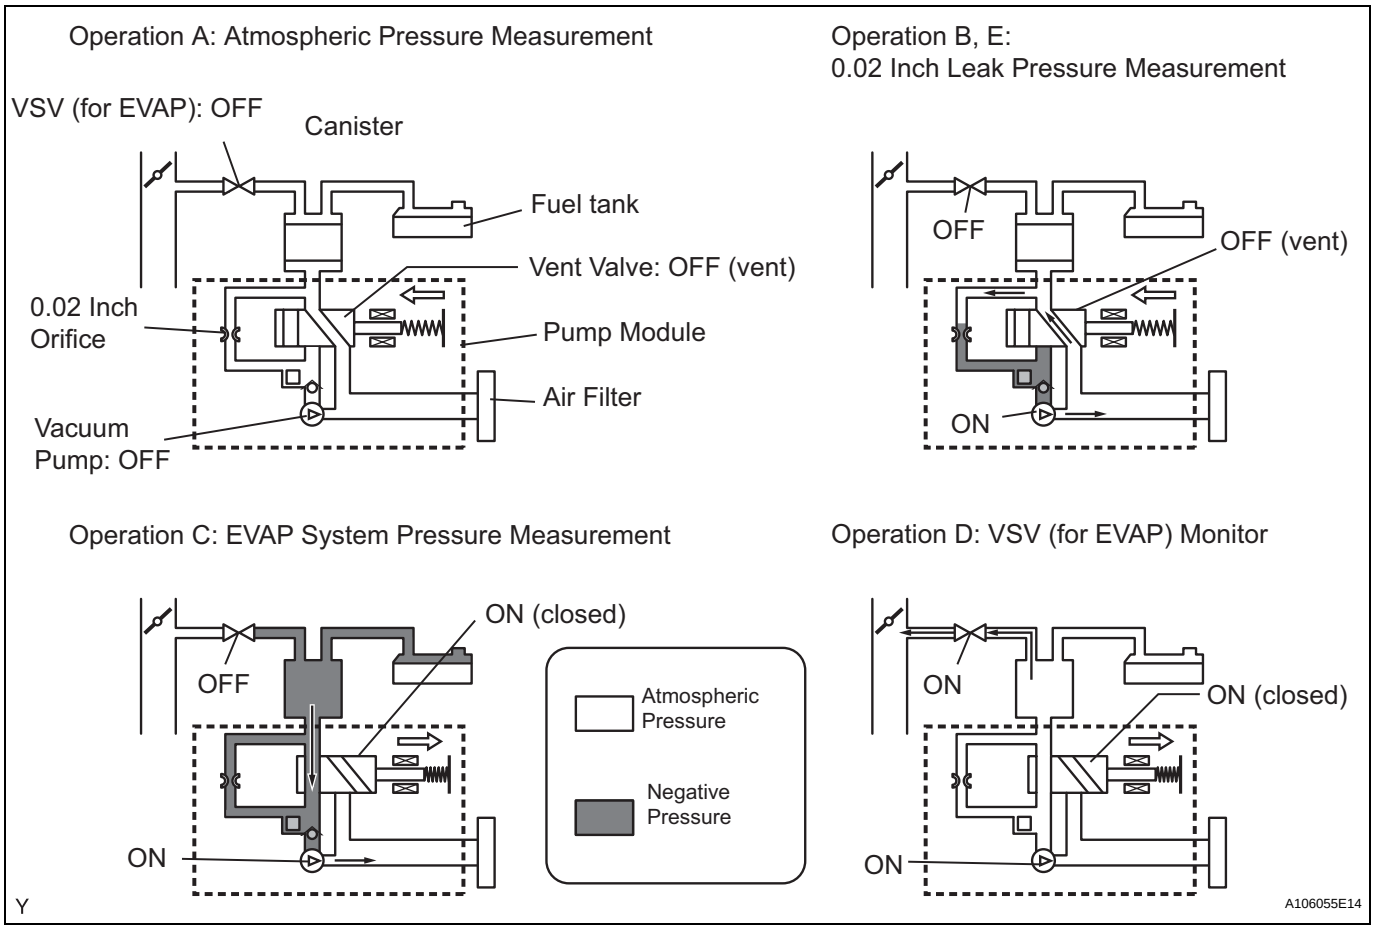
HINT:

*: If the engine coolant temperature is not below 35°C (95°F) 5 hours after the engine switch is turned off, the monitor check starts 2 hours later. If it is still not below 35°C (95°F) 7 hours after the engine switch is turned off, the monitor check starts 2.5 hours later.

Sequence	Operation	Description	Duration
-	ECM activation	Activated by soak timer, 5 hours (7 or 9.5 hours) after engine switch turned off.	-
A	Atmospheric pressure measurement	Vent valve turned OFF (vent) and EVAP system pressure measured by ECM in order to register atmospheric pressure. If pressure in EVAP system not between 70 kPa and 110 kPa (525 mmHg and 825 mmHg), ECM cancels EVAP system monitor.	10 seconds
B	First 0.02 inch leak pressure measurement	In order to determine 0.02 inch leak pressure standard, vacuum pump creates negative pressure (vacuum) through 0.02 inch orifice and then ECM checks if vacuum pump and vent valve operate normally.	60 seconds
C	EVAP system pressure measurement	Vent valve turned ON (closed) to shut EVAP system. Negative pressure (vacuum) created in EVAP system, and EVAP system pressure then measured. Write down measured value as they will be used in leak check. If EVAP pressure does not stabilize within 15 minutes, ECM cancels EVAP system monitor.	15 seconds*
D	EVAP VSV monitor	EVAP VSV opened and then EVAP system pressure measured by ECM. Large increase indicates normal.	10 seconds
E	Second 0.02 inch leak pressure measurement	After second 0.02 inch leak pressure measurement, leak check performed by comparing first and second 0.02 inch leak pressure standards. If stabilized system pressure higher than second 0.02 inch leak pressure standard, ECM determines that EVAP system leaking.	60 seconds
F	Final check	Atmospheric pressure measured and then monitoring result recorded by ECM.	-

HINT:

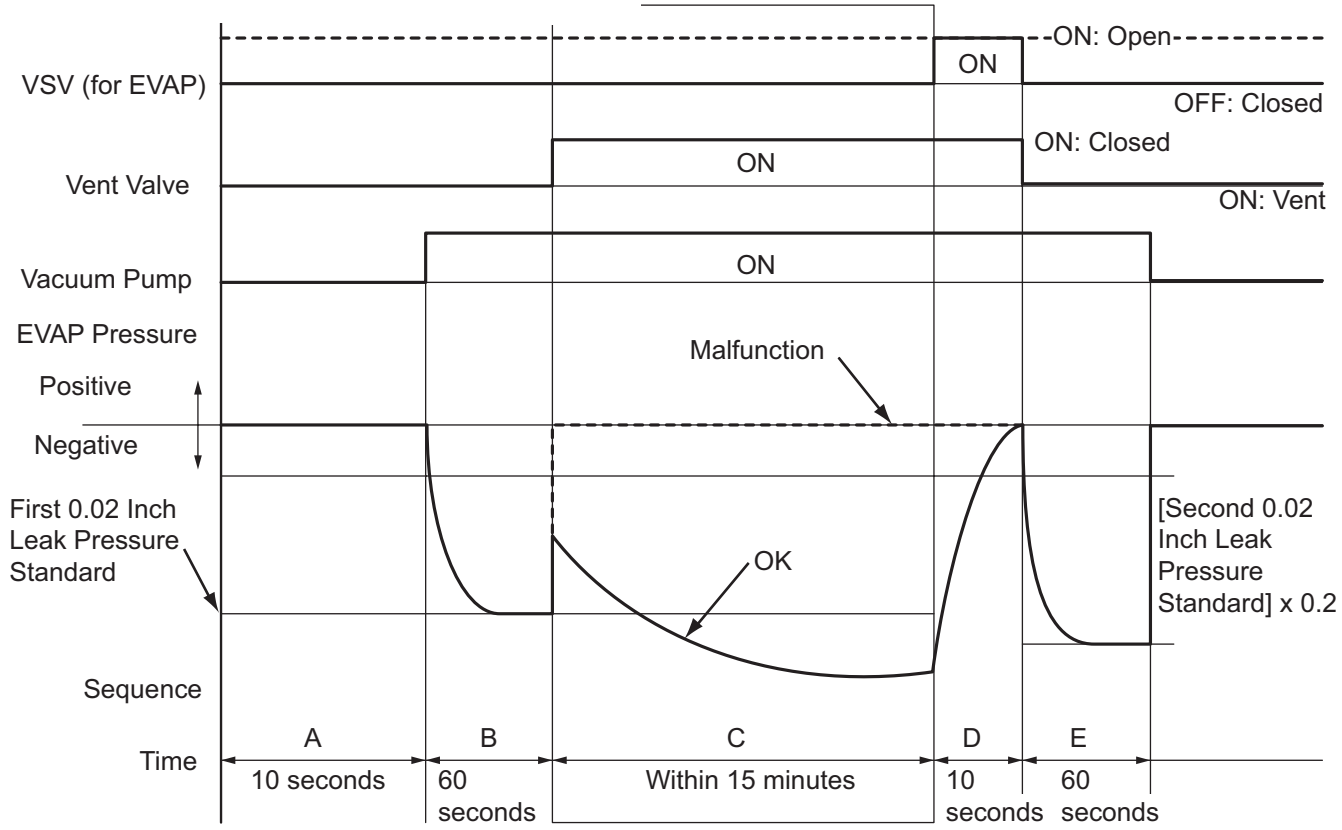
*: If only a small amount of fuel is in the fuel tank, it takes longer for the EVAP pressure to stabilize.



Operation A: Atmospheric Pressure Measurement
VSV (for EVAP): OFF
Canister
Fuel tank
Vent Valve: OFF (vent)
0.02 Inch Orifice
Pump Module
Air Filter
Vacuum Pump: OFF
Operation B, E: 0.02 Inch Leak Pressure Measurement
OFF
OFF (vent)
ON
Operation C: EVAP System Pressure Measurement
ON (closed)
OFF
ON
Atmospheric Pressure
Negative Pressure
Operation D: VSV (for EVAP) Monitor
ON
ON (closed)
ON
A106055E14

(a) EVAP VSV stuck open
In operation C, the vacuum pump creates negative pressure (vacuum) in the EVAP (Evaporative Emission) system. The EVAP system pressure is then measured by the ECM using the pressure sensor. If the stabilized system pressure is higher than [second 0.02 inch leak pressure standard x 0.2], the ECM interprets this as the EVAP VSV (Vacuum Switching Valve) being stuck open. The ECM illuminates the MIL and sets the DTC (2 trip detection logic).

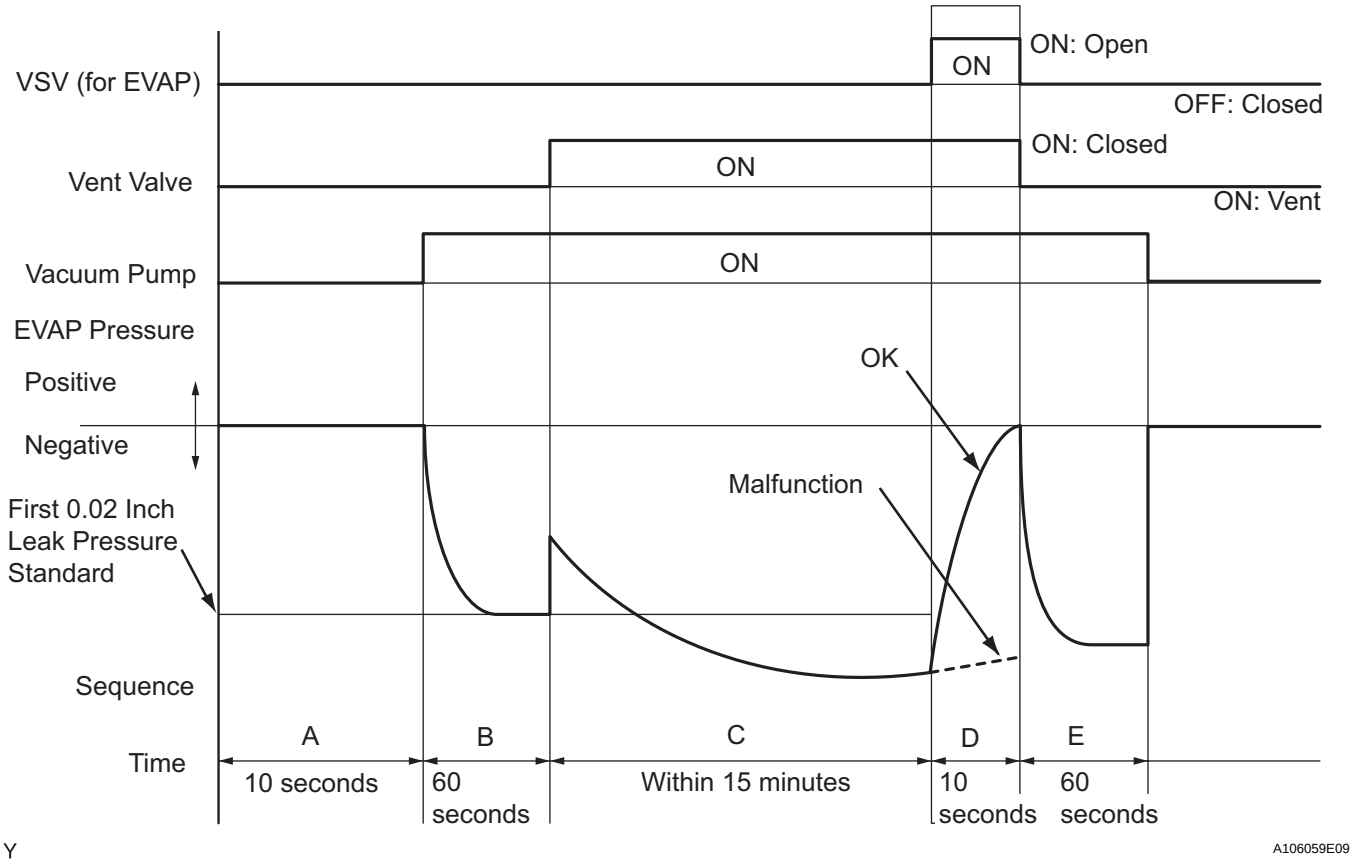
EVAP Pressure when VSV (for EVAP) Stuck Open:



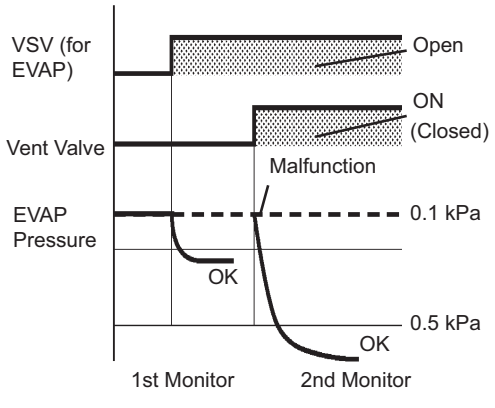
ES

(b) EVAP VSV stuck closed
In operation D, the pressure sensor measures the EVAP (Evaporative Emission) system pressure. The pressure measurement for EVAP VSV monitor is begun when the EVAP VSV is turned ON (open) after the EVAP leak check. When the measured pressure indicates an increase of 0.3 kPa (2.25 mmHg) or more, the EVAP VSV is functioning normally. If the pressure does not increase, the ECM interprets this as the EVAP VSV being stuck closed. The ECM illuminates the MIL and sets the DTC (2 trip detection logic).

EVAP Pressure when VSV (for EVAP) Stuck Closed:



EVAP Pressure During Purge Flow Monitor:



2. PURGE FLOW MONITOR

The purge flow monitor consists of the two step monitors. The 1st monitor is conducted every time and the 2nd monitor is activated if necessary.

- The 1st monitor
  While the engine is running and the EVAP VSV (vacuum Switching Valve) is ON (open), the ECM monitors the purge flow by measuring the EVAP pressure change. If negative pressure is not created, the ECM begins the 2nd monitor.
- The 2nd monitor
  The vent valve is turned ON (closed) and the EVAP pressure is then measured. If the variation in the pressure is less than 0.5 kPa (3.75 mmHg), the ECM interprets this as the EVAP VSV being stuck closed, and illuminates the MIL and sets DTC P0441 (2 trip detection logic).

Atmospheric pressure check:

In order to ensure reliable malfunction detection, the variation between the atmospheric pressure, before and after conduction of the purge flow monitor, is measured by the ECM.

OBD II MONITOR SPECIFICATIONS

1. Key-off Monitor

Monitor Strategy:

Required Sensors/Components	EVAP VSV and pump module
Frequency of Operation	Once per driving cycle
Duration	Within 15 minutes
MIL Operation	2 driving cycles
Sequence of Operation	None

Typical Enabling Conditions:

EVAP key-off monitor runs when all of following conditions are met:	-
Atmospheric pressure	70 to 110 kPa (525 to 825 mmHg)
Battery voltage	10.5 V or more
Vehicle speed	Below 2.5 mph (4 km/h)
Engine switch	OFF
Time after key off	5, 7 or 9.5 hours
EVAP pressure sensor malfunction (P0450, P0451, P0452 and/or P0453)	Not detected
EVAP VSV	Not operated by scan tool
Vent valve	Not operated by scan tool
Leak detection pump	Not operated by scan tool
Both of following conditions are met before key off:	Conditions 1 and 2
1. Duration that vehicle is being driven	5 minutes or more
2. EVAP purge operation	Performed
ECT	4.4 to 35°C (40 to 95°F)
IAT	4.4 to 35°C (40 to 95°F)

(a) Key-off monitor sequence 1 to 8

1. Atmospheric pressure

Next sequence is run if following condition is met:	-
Atmospheric pressure change	Less than 0.3 kPa (2.25 mmHg) for 1 second

2. First reference pressure

Next sequence is run if all of following conditions are met:	Conditions 1, 2 and 3
1. EVAP pressure when 4 seconds. after reference pressure measurement	-1 kPa (-7.5 mmHg) or less
2. Reference pressure	-4.85 to -1.05 kPa (-36.38 to -7.87 mmHg)
3. Reference pressure	Saturated within 1 minute

3. Vent valve stuck closed check

Next sequence is run if following condition is met:	-
EVAP pressure change after vent valve is ON	0.3 kPa (2.25 mmHg) or more

4. Vacuum introduction and leak

Next sequence is run if both of following condition is met:	-
Vacuum introduction time	15 minutes or less

5. EVAP VSV stuck closed check

Next sequence is run if following condition is met:	-

EVAP pressure change after purge VSV ON	0.3 kPa (2.25 mmHg) or more

6. Second reference pressure measurement

Next sequence is run if all of following conditions are met:	Conditions 1, 2, 3 and 4
1. EVAP pressure just after reference pressure measurement	-1 kPa (-7.5 mmHg) or less
2. Reference pressure	-4.85 to -1.05 kPa (-36.38 to -7.87 mmHg)
3. Reference pressure	Saturated within 1 minute
4. Reference pressure difference between first and second	Less than 0.7 kPa (5.25 mmHg)

7. Leak check

Next sequence is run if following condition is met:	-
EVAP pressure when vacuum introduction was complete	Less than second reference pressure

8. Atmospheric pressure

Monitor is complete	-
Atmospheric pressure difference between sequence 1 and 8	0.3 kPa (2.25 mmHg) or less

ES

Typical Malfunction Thresholds:

One of the following conditions is met:	-
(a) EVAP VSV stuck open	-
EVAP pressure when vacuum introduction is complete	Higher than reference pressure x 0.2
(b) EVAP VSV stuck closed	-
EVAP pressure change after EVAP canister purge valve is open	Less than 0.3 kPa (2.25 mmHg)

2. Purge Flow Monitor

Monitor Strategy:

Required Sensors/Components	EVAP VSV and pump module
Frequency of Operation	Once per driving cycle
Duration	Within 10 minutes
MIL Operation	2 driving cycles
Sequence of Operation	None

Typical Enabling Conditions:

Monitor runs whenever these DTCs are not present	-
Engine	Running
ECT	4.4°C (40°F) or more
IAT	4.4°C (40°F) or more
EVAP pressure sensor malfunction	Not detected
EVAP VSV	Not operated by scan tool
EVAP system check	Not detected by scan tool
Battery voltage	10 V or more
Purge duty cycle	8 % or more

Typical Malfunction Thresholds:

Both of following conditions are met:	Condition 1 or 2
1. EVAP pressure change when purge operation is started	Less than 0.1 kPa (0.75 mmHg)
2. EVAP pressure change during purge operation when vent valve is closed	Less than 0.5 kPa (3.75 mmHg)

MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-25).

DTC	P0450	Evaporative Emission Control System Pressure Sensor / Switch

DTC	P0451	Evaporative Emission Control System Pressure Sensor Range / Performance

DTC	P0452	Evaporative Emission Control System Pressure Sensor / Switch Low Input

DTC	P0453	Evaporative Emission Control System Pressure Sensor / Switch High Input

DTC SUMMARY

DTC No.	Monitoring Item	Malfunction Detection Condition	Trouble Area	Detection Timing	Detection logic
P0450	Pressure sensor voltage abnormal fluctuation	Sensor output voltage rapidly fluctuates beyond upper and lower malfunction thresholds for 0.5 seconds.	• Pump module • ECM	• EVAP monitoring (engine switch off) • Engine switch on	1 trip
P0451	Pressure sensor noising	Sensor output voltage fluctuates frequently in a certain time period.	• Pump module • Connector / wire harness (Pump module - ECM) • ECM	• EVAP monitoring (engine switch off) • Engine switch running	2 trip
P0451	Pressure sensor stuck	Sensor output voltage does not vary in a certain time period.	• Pump module • Connector / wire harness (Pump module - ECM) • ECM	• EVAP monitoring (engine switch off)	2 trip
P0452	Pressure sensor voltage low	Sensor output voltage less than 0.45 V for 0.5 seconds.	• Pump module • Connector / wire harness (Pump module - ECM) • ECM	• EVAP monitoring (engine switch off) • Engine switch on	1 trip
P0453	Pressure sensor voltage high	Sensor output voltage more than 4.9V for 0.5 seconds.	• Pump module • Connector / wire harness (Pump module - ECM) • ECM	• EVAP monitoring (engine switch off) • Engine switch on	1 trip

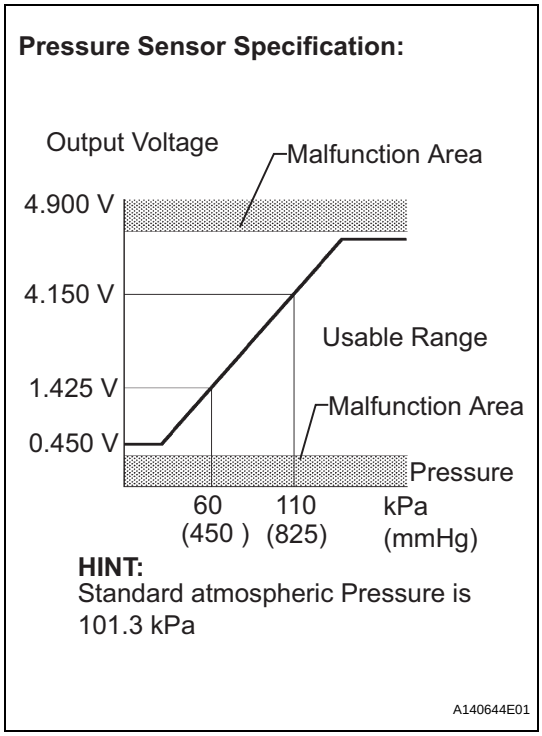
HINT:
The pressure sensor is built into the pump module.

DESCRIPTION

The circuit description can be found in the EVAP (Evaporative Emission) System (See page ES-400).

MONITOR DESCRIPTION

1. DTC P0450: Pressure sensor voltage abnormal fluctuation
   If the pressure sensor output voltage rapidly fluctuates between less than 0.45 V and more than 4.9 V, the ECM interprets this as an open or short circuit malfunction in the pressure sensor or its circuit, and stops the EVAP (Evaporative Emission) system monitor. The ECM then illuminates the MIL and sets the DTC (1 trip detection logic).



2. DTC P0451: Pressure sensor noising or stuck
   If the pressure sensor output voltage fluctuates rapidly for 10 seconds, the ECM stops the EVAP system monitor. The ECM interprets this as noise from the pressure sensor, and stops the EVAP system monitor. The ECM then illuminates the MIL and sets the DTC.
   Alternatively, if the sensor output voltage does not change for 10 seconds, the ECM interprets this as the sensor being stuck, and stops the monitor. The ECM then illuminates the MIL and sets the DTC. (Both the malfunctions are detected by 2 trip detection logic).
3. DTC P0452: Pressure sensor voltage low
   If the pressure sensor output voltage is below 0.45 V, the ECM interprets this as an open or short circuit malfunction in the pressure sensor or its circuit, and stops the EVAP system monitor. The ECM then illuminates the MIL and sets the DTC (1 trip detection logic).
4. DTC P0453: Pressure sensor voltage high
   If the pressure sensor voltage output is 4.9 V or more, the ECM interprets this as an open or short circuit malfunction in the pressure sensor or its circuit, and stops the EVAP system monitor. The ECM then illuminates the MIL and sets the DTC (1 trip detection logic).

MONITOR STRATEGY

Related DTCs	P0450: Pressure sensor chattering P0451: Pressure sensor noise P0451: Pressure sensor stuck P0452: Pressure sensor low voltage P0453: Pressure sensor high voltage
Required Sensors/Components	Pump module
Frequency of Operation	Once per driving cycle: P0451 sensor stuck Continuous: P0451 sensor noising, P0450, P0452 and P0453
Duration	0.5 seconds: P0450, P0452, P0453 Within 15 seconds: P0451

MIL Operation	Immediate: P0450, P0452, P0453 2 driving cycles: P0451
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

P0450, P0452 and P0453 (Pressure sensor chattering, low voltage, high voltage):

Monitor runs whenever following DTCs are not present:	None
Battery voltage	8 V or more
Starter	OFF
Engine switch	ON

P0451 (Pressure sensor noise):

Atmospheric pressure	70 kPa (525 mmHg) to 110 kPa (825 mmHg)
Battery voltage	10.5 V or more
Intake air temperature	4.4 to 35°C (40 to 95°F)
EVAP pressure sensor malfunction (P0450, P0452, P0453)	Not detected
Either of following conditions is met:	1 or 2
1. Engine	Running
2. Time after key off	5, 7 or 9.5 hours

P0451 (Pressure sensor stuck):

Atmospheric pressure	Less than 70 kPa (525 mmHg), or 110 kPa (825 mmHg) or more
Battery voltage	10.5 V or more
Intake air temperature	4.4 to 35°C (40 to 95°F)
EVAP pressure sensor malfunction (P0450, P0452, P0453)	Not detected
Time after key off	5, 7 or 9.5 hours

TYPICAL MALFUNCTION THRESHOLDS

P0450: Pressure sensor chattering

EVAP Pressure	Less than 42.11 kPa (315.82 mmHg), or more than 123.761 kPa (928.207 mmHg)

P0451: Pressure sensor noise

Frequency that EVAP pressure change is 0.3 kPa or more	10 times or more in 10 seconds

P0451: Pressure sensor stuck

EVAP pressure change during reference pressure	Less than 0.65 kPa (4.87 mmHg)

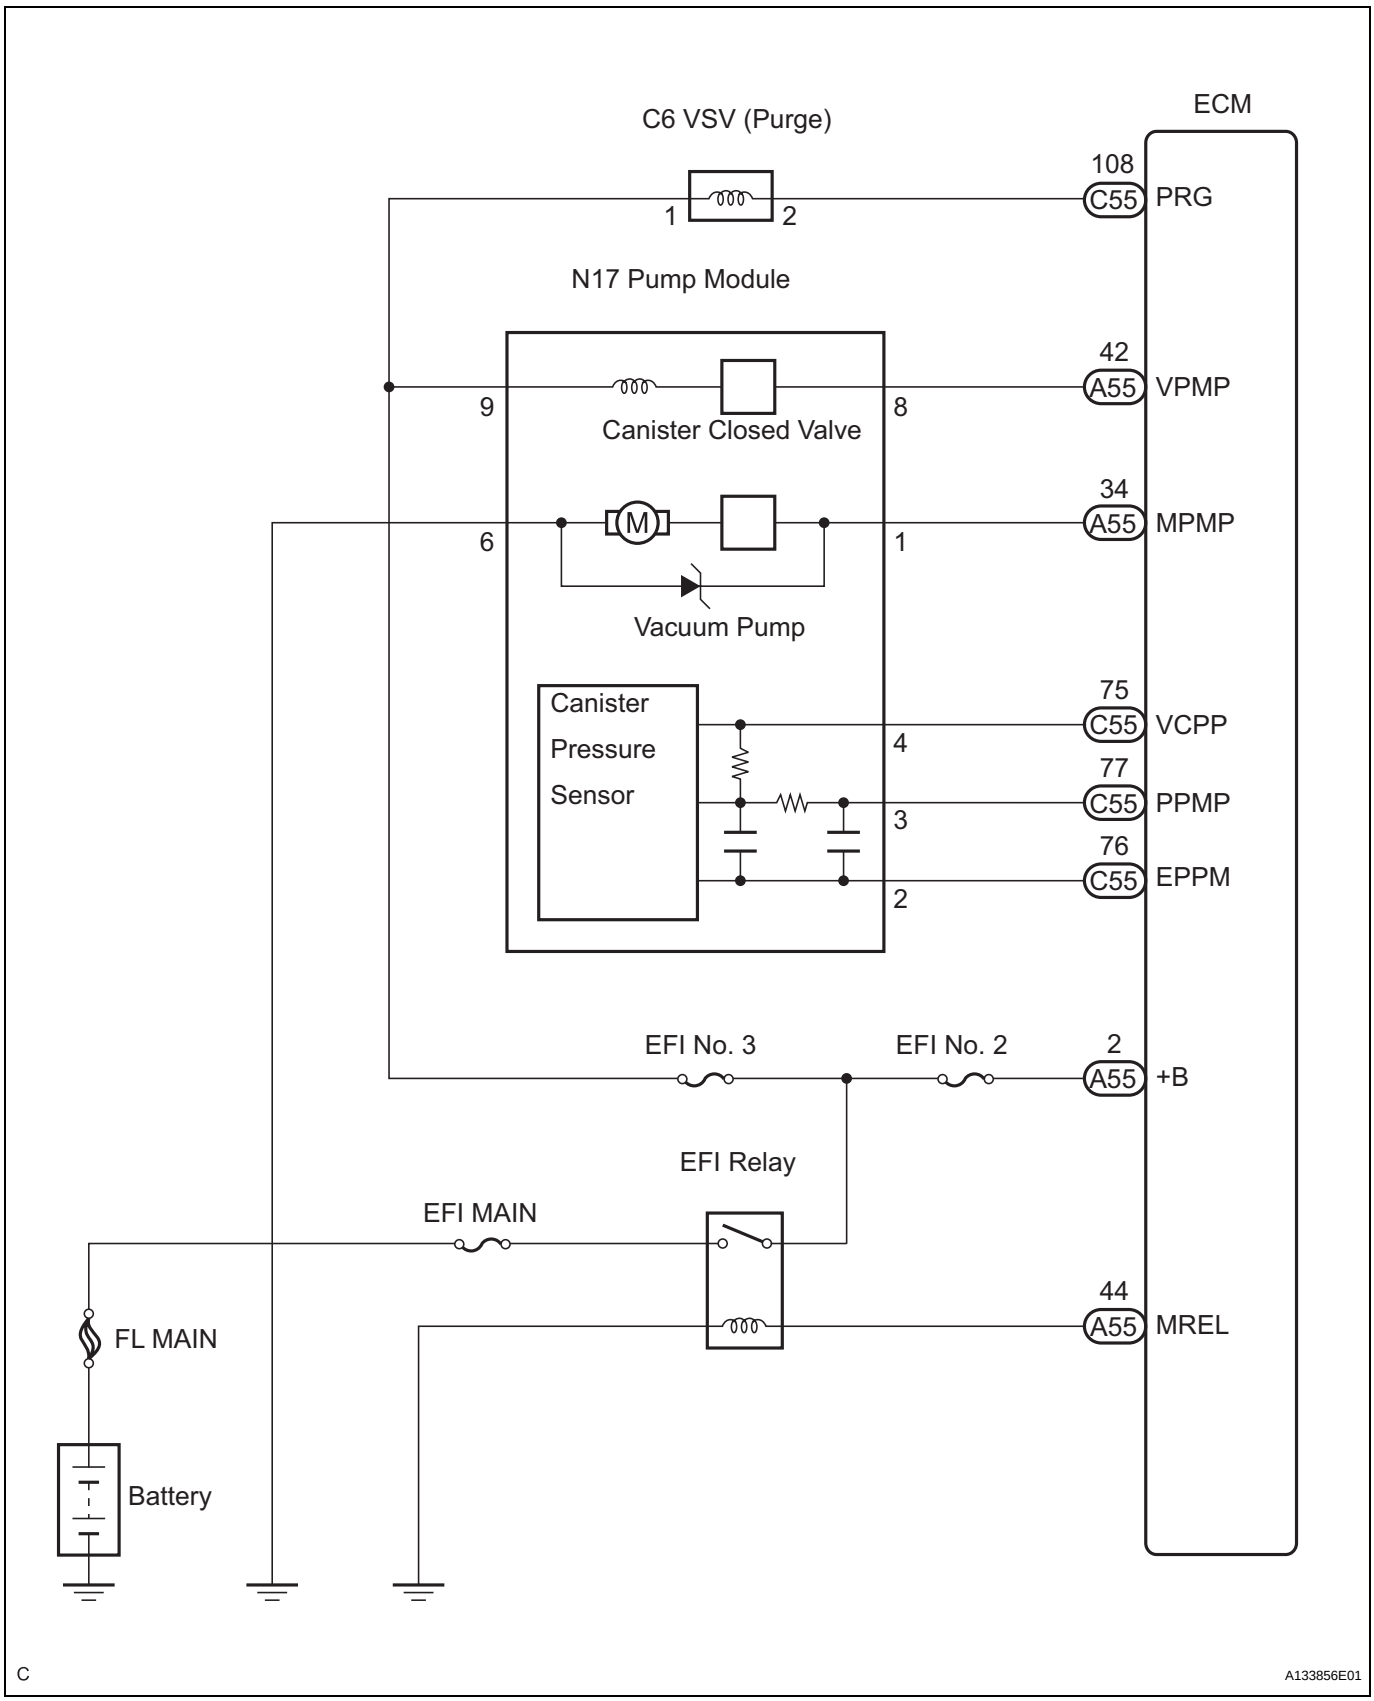
P0452: Pressure sensor low voltage

EVAP Pressure	Less than 42.11 kPa (315.82 mmHg)

P0453: Pressure sensor high voltage

EVAP Pressure	More than 123.761 kPa (928.207 mmHg)

WIRING DIAGRAM

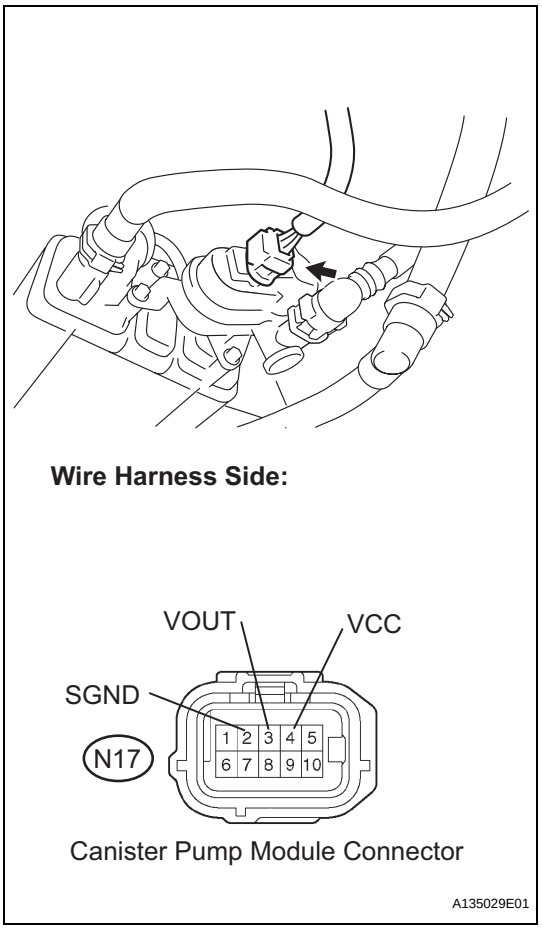


INSPECTION PROCEDURE

NOTICE:

- **When a vehicle is brought into a workshop, leave it as it is. Do not change the vehicle condition. For example, do not tighten the fuel tank cap.**
- **Do not disassemble the pump module.**
- **The intelligent tester is required to conduct the following diagnostic troubleshooting procedure.**

1 CHECK HARNESS AND CONNECTOR (PUMP MODULE - ECM)



(a) Disconnect the N17 canister connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage and resistance according to the value(s) in the table below.

Standard voltage

Tester Connection	Specified Condition
N17-4 - Body ground	4.5 to 5.0 V
N17-3 - Body ground	4.5 to 5.0 V
N17-2 - Body ground	100 Ω or less

Result

Test Result	Suspected Trouble Area	Proceed to
Voltage and resistance within standard ranges	Open in pressure sensor circuit	A
Voltage and resistance outside standard ranges	Open in wire harness/ connector (ECM - pressure sensor)	B

(d) Reconnect the canister connector.

B → **Go to step 3**

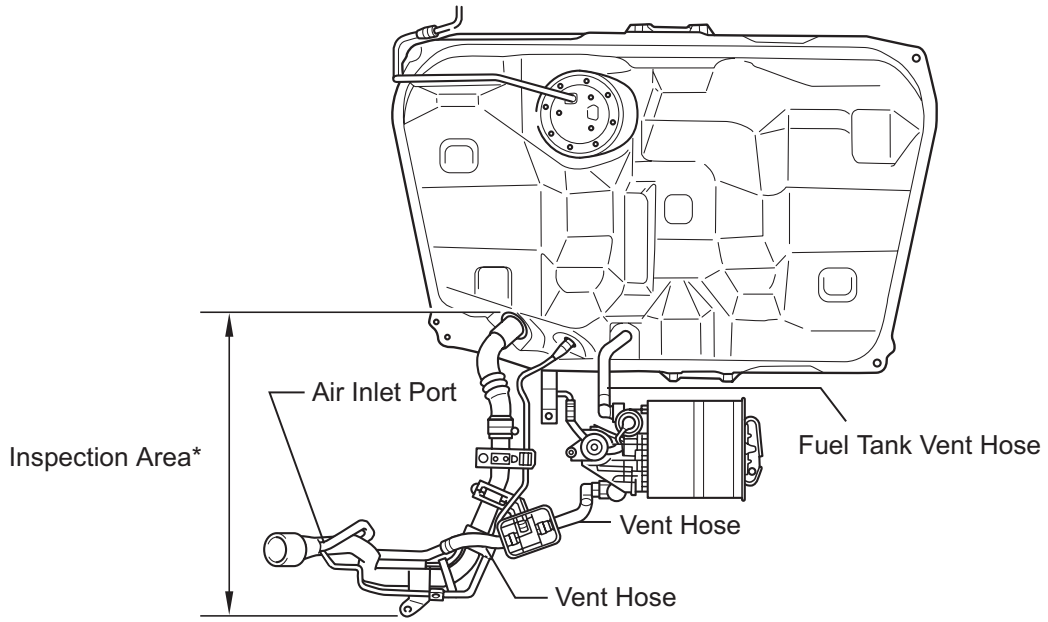
A

2 REPLACE CHARCOAL CANISTER ASSEMBLY

(a) Replace the canister assembly (See page EC-9).

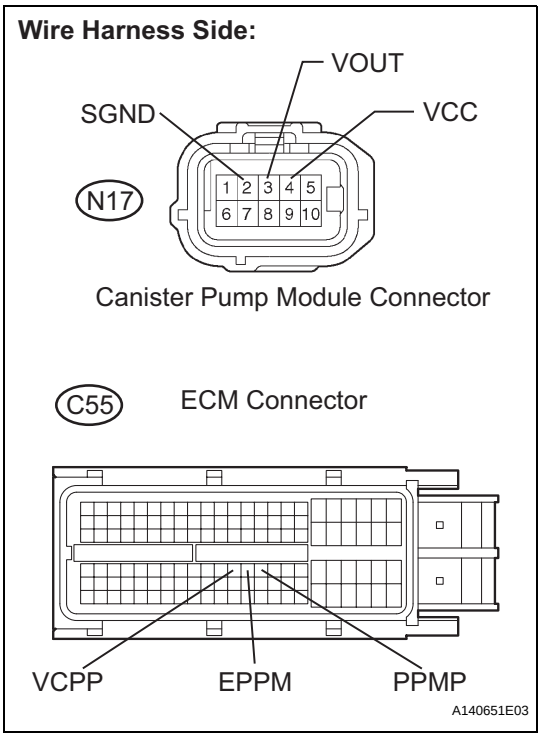
NOTICE:

When replacing the canister, check the canister pump module interior and related pipes for water, fuel and other liquids. If liquids are present, check for disconnections and/or cracks in the following: 1) the pipe from the air inlet port to the canister pump module; 2) the canister filter; and 3) the fuel tank vent hose.



NEXT	Go to step 5

3 CHECK HARNESS AND CONNECTOR



(a) Disconnect the N17 canister pump module connector.
(b) Disconnect the C55 ECM connector.
(c) Measure the resistance between the terminals of the wire harness side connectors.

Standard resistance (Check for open)

Tester Connection	Specified Condition
N17-4 (VCC) - C55-75 (VCPP)	Below 1 Ω
N17-3 (VOUT) - C55-77 (PPMP)	Below 1 Ω
N17-2 (SGND) - C55-76 (EPPM)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
N17-4 (VCC) or C55-75 (VCPP) - Body ground	10 kΩ or higher
N17-3 (VOUT) or C55-77 (PPMP) - Body ground	10 kΩ or higher
N17-2 (SGND) or C55-76 (EPPM) - Body ground	10 kΩ or higher

(d) Reconnect the canister pump module connector.
(e) Reconnect the ECM connector.

NG	REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

4	REPLACE ECM

(a) Replace the ECM (See page ES-518).

NEXT

5	CHECK WHETHER DTC OUTPUT RECURS (AFTER REPAIR)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) (do not start the engine).
(c) Turn the tester on.
(d) Wait for at least 60 seconds.
(e) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES.
HINT:
If no pending DTCs are displayed on the tester, the repair has been successfully completed.

NEXT

COMPLETED

DTC	P0455	Evaporative Emission Control System Leak Detected (Gross Leak)

DTC	P0456	Evaporative Emission Control System Leak Detected (Very Small Leak)

DTC SUMMARY

DTC No.	Monitoring Item	Malfunction Detection Condition	Trouble Area	Detection Timing	Detection logic
P0455	EVAP gross leak	Vacuum pump creates negative pressure (vacuum) in EVAP system and EVAP system pressure measured. 0.02 inch leak pressure standard measured at start and at end of leak check. If stabilized pressure higher than [second 0.02 inch leak pressure standard x 0.2], ECM determines that EVAP system has a large leak	• Fuel tank cap (loose) • Leakage from EVAP line (Canister - Fuel tank) • Leakage from EVAP line (EVAP VSV - Canister) • Pump module • Leakage from fuel tank • Leakage from canister	While engine switch off	2 trip
P0456	EVAP small leak	Vacuum pump creates negative pressure (vacuum) in EVAP system and EVAP system pressure measured. 0.02 inch leak pressure standard measured at start and at end of leak check. If stabilized pressure higher than second 0.02 inch leak pressure standard, ECM determines that EVAP system has a small leak	Same above	While engine switch off	2 trip

DESCRIPTION

The circuit description can be found in the EVAP (Evaporative Emission) System (See page ES-400).

INSPECTION PROCEDURE

Refer to the EVAP System (See page ES-400).

MONITOR DESCRIPTION

5 hours* after the engine switch is turned off, the electric vacuum pump creates negative pressure (vacuum) in the EVAP (Evaporative Emission) system. The ECM monitors for leaks and actuator malfunctions based on the EVAP pressure.

HINT:

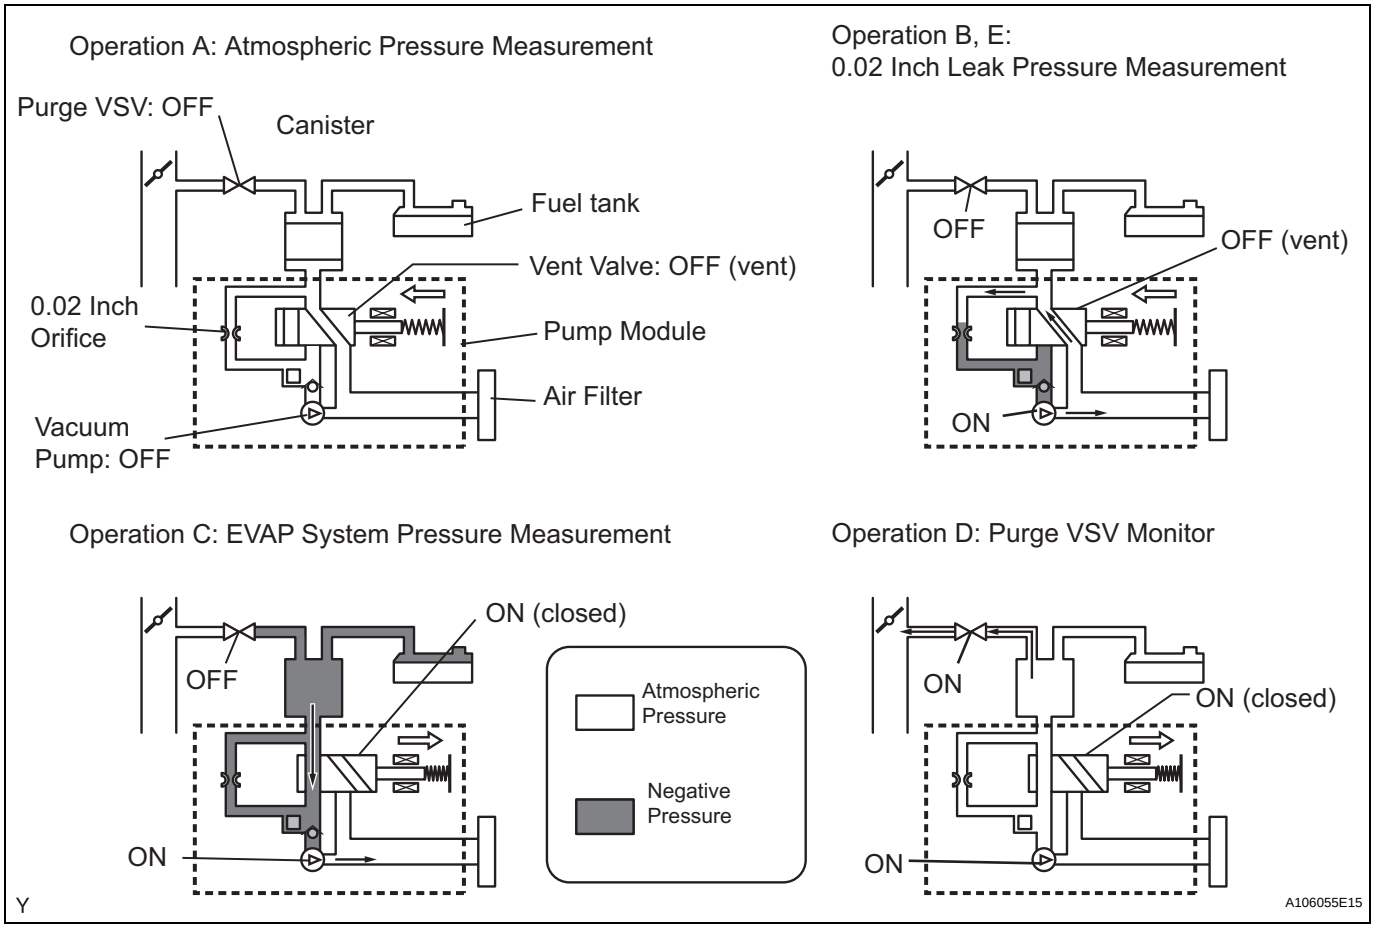
*: If the engine coolant temperature is not below 35°C (95°F) 5 hours after the engine switch is turned off, the monitor check starts 2 hours later. If it is still not below 35°C (95°F) 7 hours after the engine switch is turned off, the monitor check starts 2.5 hours later.

Sequence	Operation	Description	Duration
-	ECM activation	Activated by soak timer, 5 hours (7 or 9.5 hours) after engine switch turned off.	-
A	Atmospheric pressure measurement	Vent valve turned OFF (vent) and EVAP system pressure measured by ECM in order to register atmospheric pressure. If pressure in EVAP system not between 70 kPa and 110 kPa (525 mmHg and 825 mmHg), ECM cancels EVAP system monitor.	10 seconds

Sequence	Operation	Description	Duration
B	First 0.02 inch leak pressure measurement	In order to determine 0.02 inch leak pressure standard, vacuum pump creates negative pressure (vacuum) through 0.02 inch orifice and then ECM checks if vacuum pump and vent valve operate normally.	60 seconds
C	EVAP system pressure measurement	Vent valve turned ON (closed) to shut EVAP system. Negative pressure (vacuum) created in EVAP system, and EVAP system pressure then measured. Write down measured value as they will be used in leak check. If EVAP pressure does not stabilize within 15 minutes, ECM cancels EVAP system monitor.	15 minutes*
D	EVAP VSV monitor	EVAP VSV opened and then EVAP system pressure measured by ECM. Large increase indicates normal.	10 seconds
E	Second 0.02 inch leak pressure measurement	After second 0.02 inch leak pressure measurement, leak check performed by comparing first and second 0.02 inch leak pressure standards. If stabilized system pressure higher than second 0.02 inch leak pressure standard, ECM determines that EVAP system leaking.	60 seconds
F	Final check	Atmospheric pressure measured and then monitoring result recorded by ECM.	-

ES

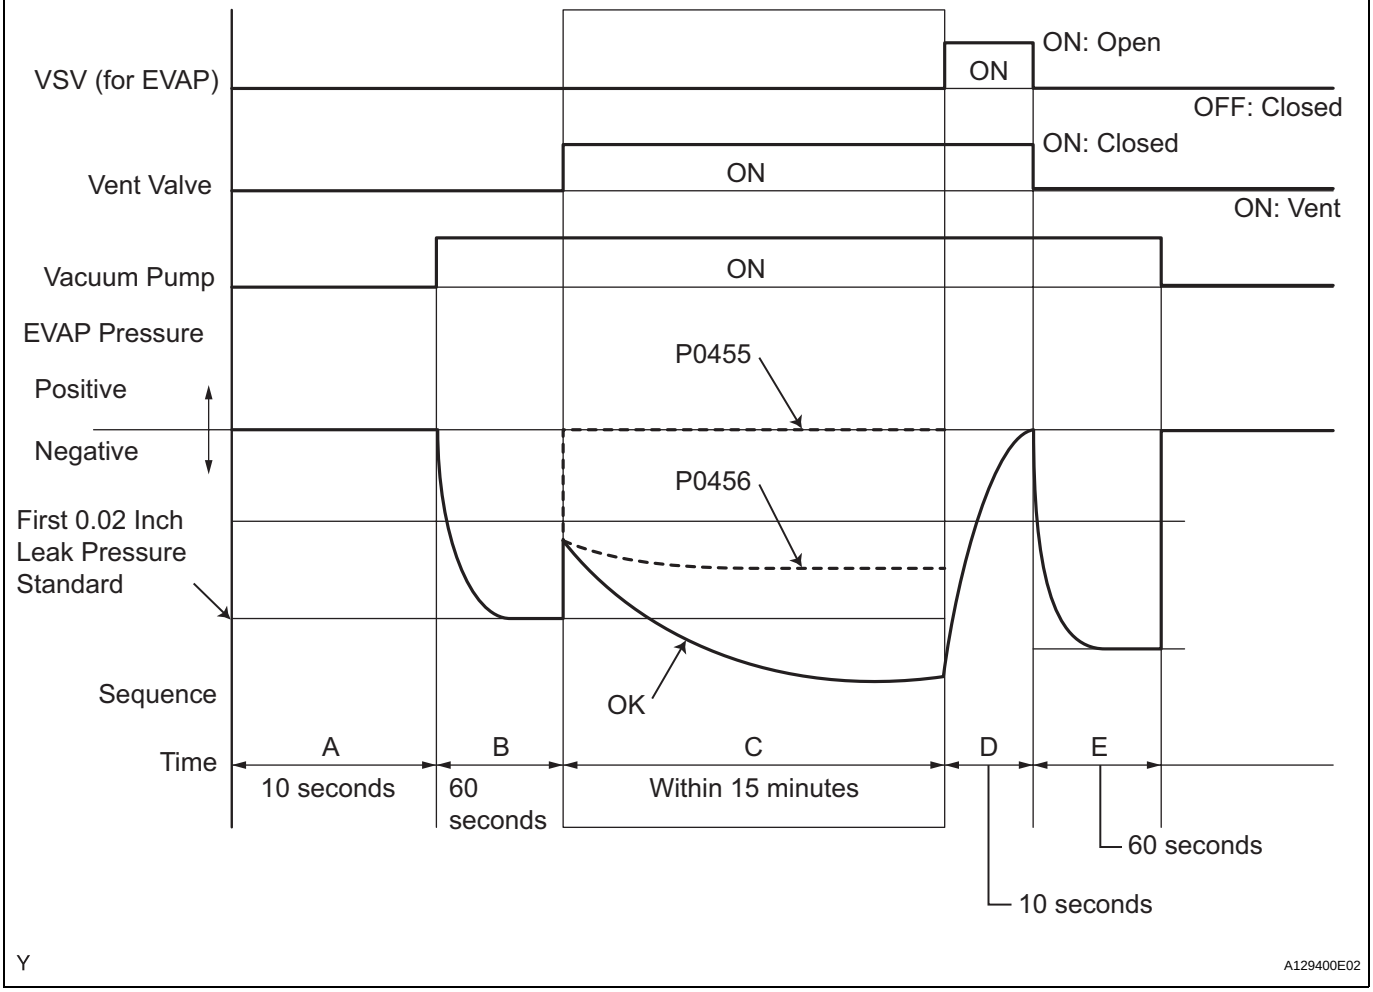
HINT:
*: If only a small amount of fuel is in the fuel tank, it takes longer for the EVAP pressure to stabilize.



1. P0455: EVAP (Evaporative Emission) gross leak
   In operation C, the vacuum pump creates negative pressure (vacuum) in the EVAP system and the EVAP system pressure is measured. If the stabilized system pressure is higher than [second 0.02 inch leak pressure standard x 0.2] (near atmospheric pressure), the ECM determines that the EVAP system has a large leak, illuminates the MIL and sets the DTC (2 trip detection logic).

2. P0456: EVAP very small leak
In operation C, the vacuum pump creates negative pressure (vacuum) in the EVAP system and the EVAP system pressure is measured. If the stabilized system pressure is higher than the second 0.02 inch leak pressure standard, the ECM determines that the EVAP system has a small leak, illuminates the MIL and sets the DTC (2 trip detection logic).

EVAP Pressure when EVAP System Leaks:



MONITOR STRATEGY

Required Sensors/Components	EVAP VSV and pump module
Frequency of Operation	Once per driving cycle
Duration	Within 15 minutes (varies with amount of fuel in tank)
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

EVAP key-off monitor runs when all of following conditions are met:	-
Atmospheric pressure	70 to 110 kPa (525 to 825 mmHg)
Battery voltage	10.5 V or more
Vehicle speed	Below 2.5 mph (4 km/h)
Engine switch	OFF

Time after key off	5, 7 or 9.5 hours
EVAP pressure sensor malfunction (P0450, P0451, P0452 and P0453)	Not detected
EVAP VSV	Not operated by scan tool
Vent valve	Not operated by scan tool
Leak detection pump	Not operated by scan tool
Both of following conditions are met before key OFF:	Conditions 1 and 2
1. Duration that vehicle is being driven	5 minutes or more
2. EVAP purge operation	Performed
ECT	4.4 to 35°C (40 to 95°F)
IAT	4.4 to 35°C (40 to 95°F)

1. Key-off monitor sequence 1 to 8

1. Atmospheric pressure

Next sequence is run if following condition is met:	-
Atmospheric pressure change	Less than 0.3 kPa (2.25 mmHg) for 1 second

ES

2. First reference pressure

Next sequence is run if all of following conditions are met:	Conditions 1, 2 and 3
1. EVAP pressure when 4 seconds after reference pressure measurement	-1 kPa (-7.5 mmHg) or less
2. Reference pressure	-4.85 to -1.05 kPa (-36.38 to -7.87 mmHg)
3. Reference pressure	Saturated within 1 minute

3. Vent valve stuck closed check

Next sequence is run if following condition is met:	-
EVAP pressure change after vent valve is ON	0.3 kPa (2.25 mmHg) or more

4. Vacuum introduction and leak

Next sequence is run if both of following conditions are met:	-
Vacuum introduction time	15 minutes or less

5. EVAP VSV stuck closed check

Next sequence is run if following condition is met:	-
EVAP pressure change after purge VSV ON	0.3 kPa (2.25 mmHg) or more

6. Second reference pressure measurement

Next sequence is run if all of following conditions are met:	Conditions 1, 2, 3 and 4
1. EVAP pressure just after reference pressure measurement	-1 kPa (-7.5 mmHg) or less
2. Reference pressure	-4.85 to -1.05 kPa (-36.38 to -7.87 mmHg)
3. Reference pressure	Saturated within 1 minute
4. Reference pressure difference between first and second	Less than 0.7 kPa (5.25 mmHg)

7. Leak check

Next sequence is run if following condition is met:	-
EVAP pressure when vacuum introduction was complete	Less than second reference pressure

8. Atmospheric pressure

Monitor is complete	-
Atmospheric pressure difference between sequence 1 and 8	0.3 kPa (2.25 mmHg) or less

TYPICAL MALFUNCTION THRESHOLDS

"Saturated" indicates that the EVAP pressure change is less than 0.1 kPa (0.75 mmHg) in 30 seconds.

P0455: EVAP gross leak

EVAP pressure when vacuum introduction is complete	Higher than reference pressure x 0.2

P0456: EVAP small leak

EVAP pressure when vacuum introduction is complete	Between reference pressure and reference pressure x 0.2

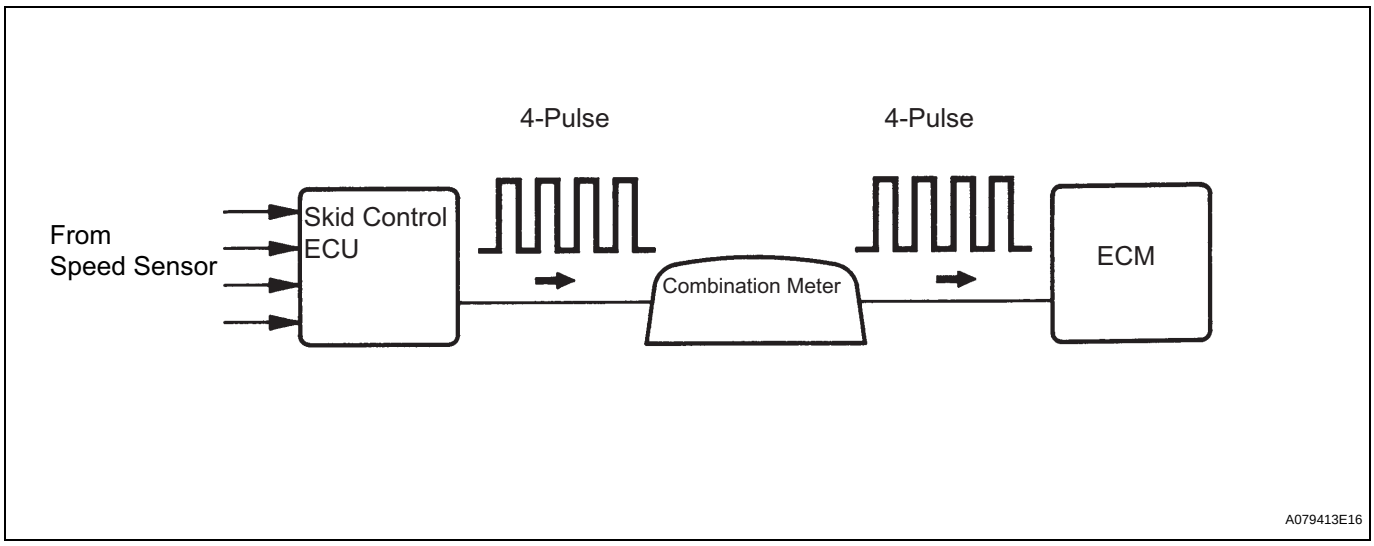
MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-25).

DTC	P0500	Vehicle Speed Sensor "A"

DESCRIPTION

The speed sensor detects the wheel speed and sends the appropriate signals to the skid control ECU. The skid control ECU converts these wheel speed signals into a 4-pulse signal and outputs it to the ECM via the combination meter. The ECM determines the vehicle speed based on the frequency of these pulse signals.



DTC No.	DTC Detection Condition	Trouble Area
P0500	Vehicle speed signal from vehicle speed sensor is cut for 0.14 sec. or more while cruise control is in operation	• Vehicle speed sensor • Vehicle speed sensor signal circuit • Combination meter • ECM • Skid control ECU

MONITOR DESCRIPTION

The ECM assumes that the vehicle is being driven when the transmission counter gear indicates more than 300 rpm and over 30 seconds have passed since the park/neutral position switch was turned OFF. If there is no signal from the vehicle speed sensor with these conditions satisfied, the ECM concludes that the vehicle speed sensor is malfunctioning. The ECM will turn on the MIL and a DTC will be set.

MONITOR STRATEGY

Related DTCs	P0500: Vehicle Speed Sensor Circuit
Required sensors / components (Main)	Vehicle speed sensor, Combination meter, ABS ECU
Required sensors / components (Sub)	Counter gear Speed (CS) sensor, ECT sensor
Frequency of operation	Continuous
Duration	8 seconds
MIL operation	2 driving cycles
Sequence operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever these DTCs are not present	P0100 - P0103 (MAF sensor) P0105 - P0108 (MAP sensor) P0115 - P0118 (ECT sensor) P0120 - P02238 (TP sensor) P0125 (VSS/ECT1 sensor, non-ECT)
Engine coolant temperature	70°C (158°F) or more

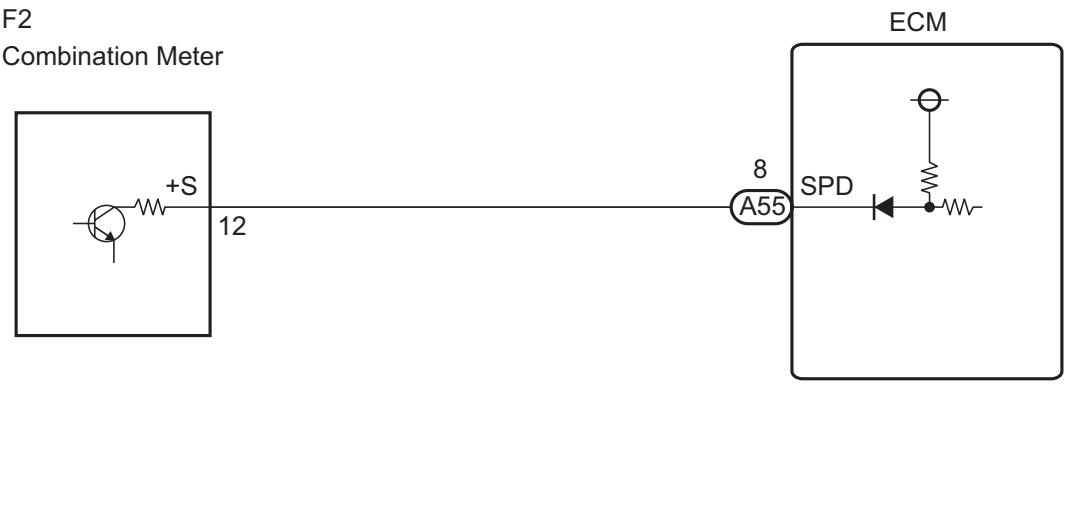
Engine speed	2,000 to 5,000 rpm
Engine load	30.37 % or more
Fuel cut high engine speed	Not executing
Battery voltage	8 V or more
Engine switch	ON
ETC sensor circuit fail	Not detected
MAF sensor circuit fail	Not detected
Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS

Vehicle speed sensor signal	No pulse input

ES

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
Read freeze frame data using the intelligent tester or the OBD II scan tool. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

1	**CHECK SPEEDOMETER**

(a) Drive the vehicle and check whether the operation of the speedometer in the combination meter is normal.
HINT:
- The vehicle speed sensor is operating normally if the speedometer reading is normal.

- If the speedometer does not operate, check it by following the procedure described in speedometer malfunction.

NG → GO TO SPEEDOMETER CIRCUIT

OK

2	READ VALUE OF INTELLIGENT TESTER (VEHICLE SPEED)

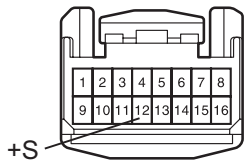
(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / VEHICLE SPD.
(e) Drive the vehicle.
(f) Read the value displayed on the tester.
OK:
Vehicle speeds displayed on tester and speedometer display are equal.

NG → CHECK INTERMITTENT PROBLEMS

OK

3	CHECK COMBINATION METER ASSEMBLY (+S VOLTAGE)

Wire Harness Side:



Combination Meter Connector

N A132286E01

(a) Disconnect the F2 combination meter connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage between the terminal of the combination meter and body ground.
Standard voltage

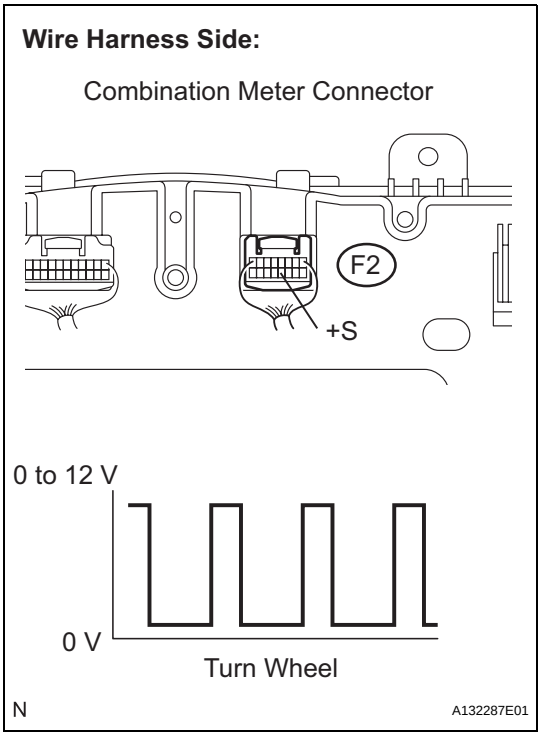
Tester Connection	Specified Condition
F2-12 (+S) - Body ground	4.5 to 5.5 V

(d) Reconnect the combination meter connector.

NG → Go to step 5

OK

4	CHECK COMBINATION METER ASSEMBLY (SPD SIGNAL WAVEFORM)



(a) Shift the transmission gear selector lever to the neutral position.
(b) Jack up the vehicle.
(c) Turn the ignition switch on (IG).
(d) Measure the voltage between the terminal of the combination meter and body ground while the wheel is turned slowly.

Standard voltage

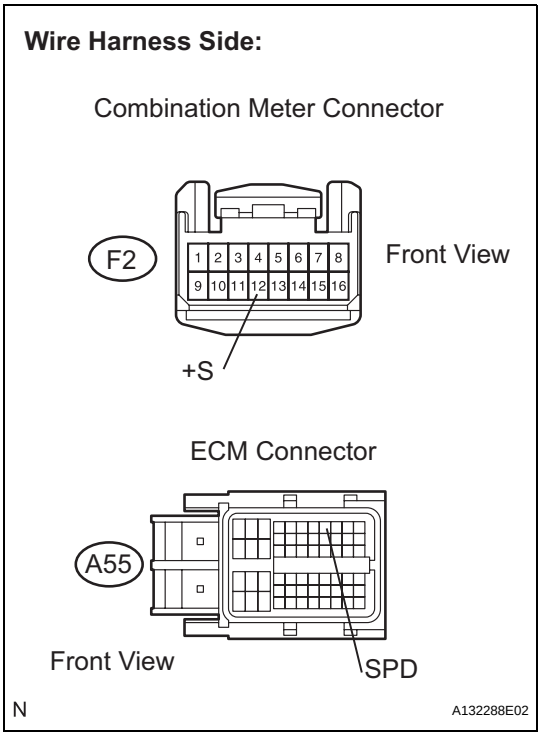
Tester Connection	Specified Condition
F2-12 (+S) - Body ground	Voltage generated intermittently

HINT:
The output voltage should fluctuate up and down, similarly to the diagram, when the wheel is turned slowly.

NG → **REPLACE COMBINATION METER ASSEMBLY (See page ME-63)**

OK

5	CHECK HARNESS AND CONNECTOR (COMBINATION METER ASSEMBLY - ECM)



(a) Disconnect the F2 combination meter connector.
(b) Disconnect the A55 ECM connector.
(c) Measure the resistance.

Standard resistance (Check for open)

Tester Connection	Specified Condition
+S (F2-12) - SPD (A55-8)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
+S (F2-12) or SPD (A55-8) - Body ground	10 kΩ or higher

(d) Reconnect the combination meter connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

ES

OK

REPLACE ECM (See page ES-518)

DTC	P0504	Brake Switch "A" / "B" Correlation

DTC	P0724	Brake Switch "B" Circuit High

DESCRIPTION

The stop light switch is a duplex system that transmits two signals: STP and ST1-. These two signals are used by the ECM to monitor whether or not the brake system is working properly. If the signals, which indicate the brake pedal is being depressed and released, are detected simultaneously, the ECM interprets this as a malfunction in the stop light switch and sets the DTC.

HINT:

The normal conditions are as shown in the table below. The signals can be read using an intelligent tester.

Signal	Brake Pedal Released	In Transition	Brake Pedal Depressed
STP	OFF	ON	ON
ST1-	ON	ON	OFF

ES

DTC No.	DTC Detection Condition	Trouble Area
P0504	Conditions (a), (b) and (c) continue for 0.5 seconds or more (1 trip detection logic): (a) Ignition switch on (IG) (b) Brake pedal released (c) STP signal OFF when ST1- signal OFF	• Short in stop light switch signal circuit • Stop light switch • ECM
P0724	The stop light switch remains ON even when the vehicle is driven in a STOP (less than 2 mph (3 km/h)) and GO (19 mph (30 km/h) or more) fashion 5 times. (2 trip detection logic)	• Short in stop light switch signal circuit • Stop light switch • ECM

MONITOR DESCRIPTION

This DTC indicates that the stop light switch remains on. When the stop light switch remains ON during "stop and go" driving, the ECM interprets this as a fault in the stop light switch and the MIL comes on and the ECM stores the DTC. The vehicle must stop (less than 2 mph (3 km/h)) and go (19 mph (30 km/h) or more) 5 times in two driving cycles in order to detect a malfunction.

MONITOR STRATEGY

Related DTCs	P0724: Stop light switch/Rationality
Required sensors/Components	Stop light switch, Vehicle speed sensor
Frequency of operation	Continuous
Duration	GO and STOP 5 times
MIL operation	2 driving cycles
Sequence of operation	None

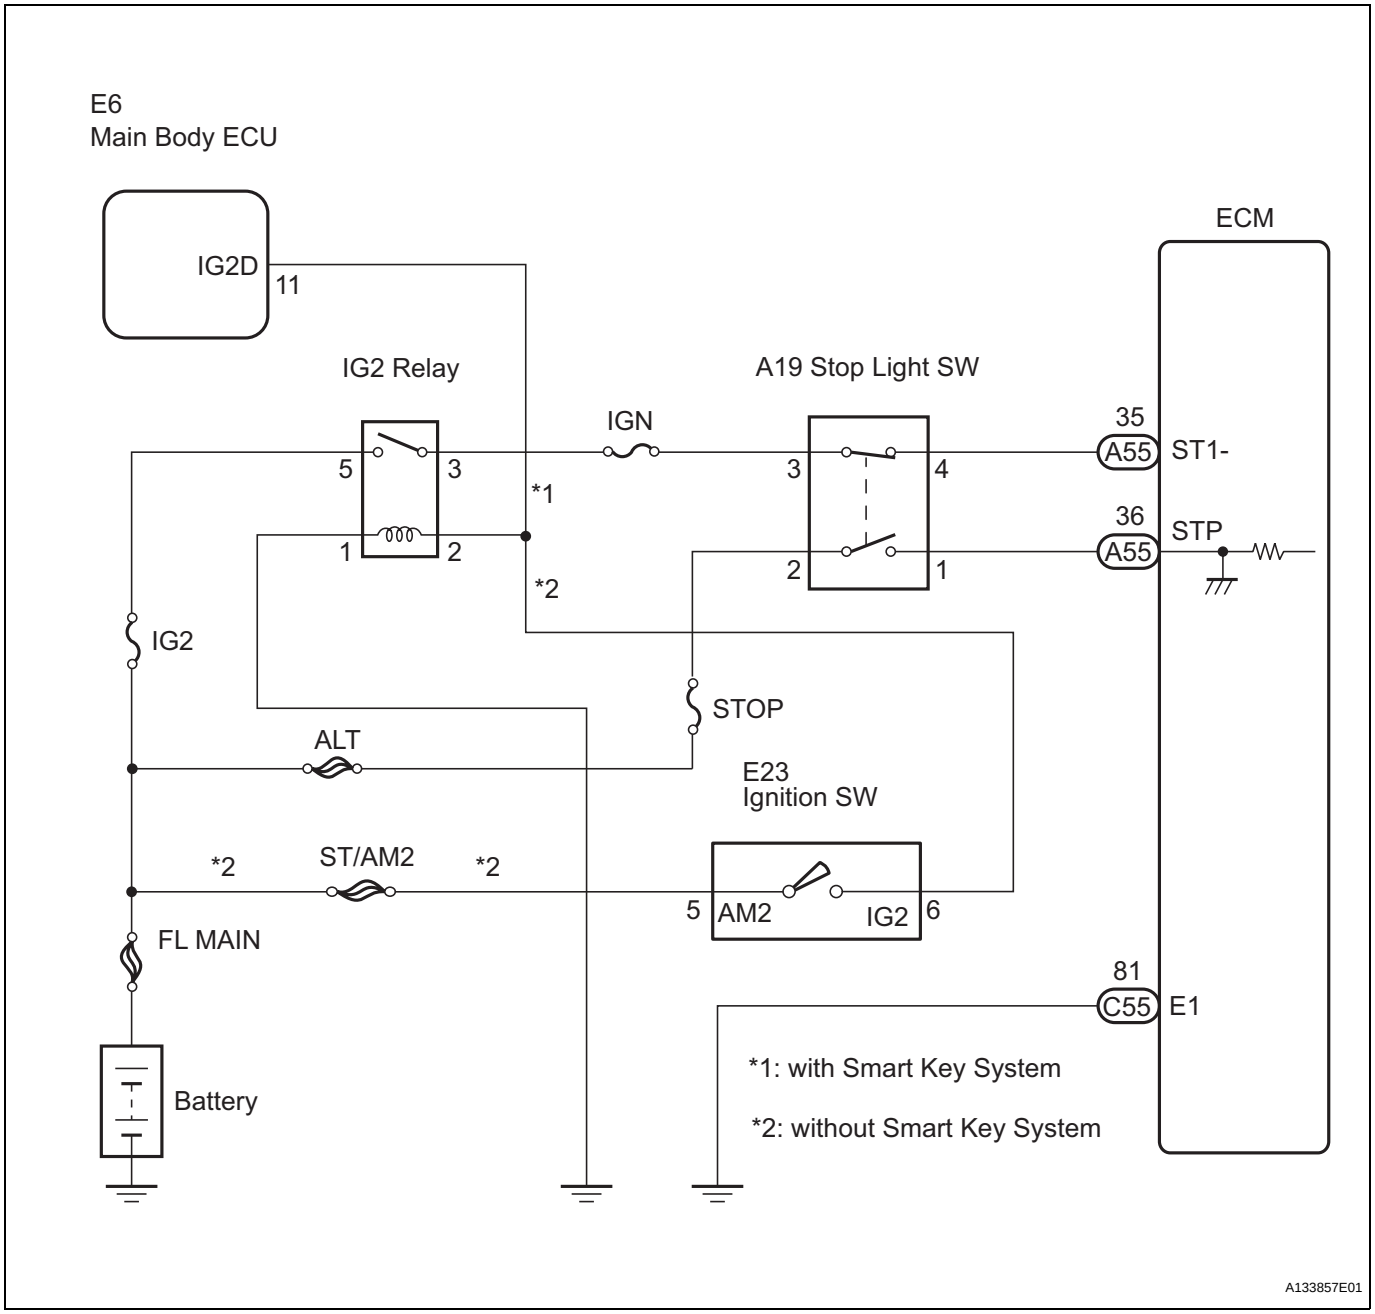
TYPICAL ENABLING CONDITIONS

The monitor will run whenever this DTC is not present	None
Engine switch	ON
Starter	OFF
Battery voltage	8 V or more
GO (Vehicle speed is 18.65 mph (30 km/h) or more)	Once
STOP (Vehicle speed is less than 1.86 mph (3 km/h))	Once

TYPICAL MALFUNCTION THRESHOLDS

Brake switch	Remain ON during GO and STOP 5 times

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

1 **CHECK STOP LIGHT (OPERATION OF STOP LIGHT)**

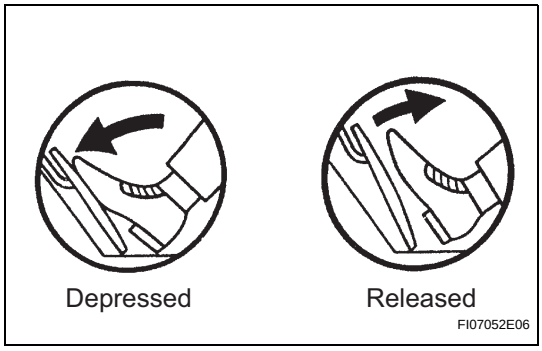
(a) Check whether the stop lights turn on and off normally when the brake pedal is depressed and released.
OK:
Stop lights turn ON when brake pedal is depressed.

NG → **REPAIR OR REPLACE STOP LIGHT SWITCH CIRCUIT**

OK

ES

2 **READ VALUE OF INTELLIGENT TESTER (STP SIGNAL AND ST1 - VOLTAGE)**



(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the tester on.
(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / STOP LIGHT SW.
(d) Check the STP signal when the brake pedal is depressed and released.
OK

Brake Pedal Operation	Specified Condition
Depressed	STP signal ON
Released	STP signal OFF

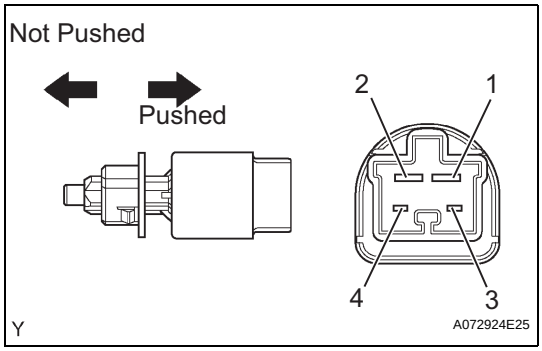
(e) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / ST1.
(f) Check the ST1 signal when the brake pedal is depressed and released.
OK

Brake Pedal Operation	Specified Condition
Depressed	ST1 signal OFF
Released	ST1 signal ON

OK → **CHECK FOR INTERMITTENT PROBLEMS**

NG

3 **INSPECT STOP LIGHT SWITCH ASSEMBLY**



(a) Remove the stop light switch assembly.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

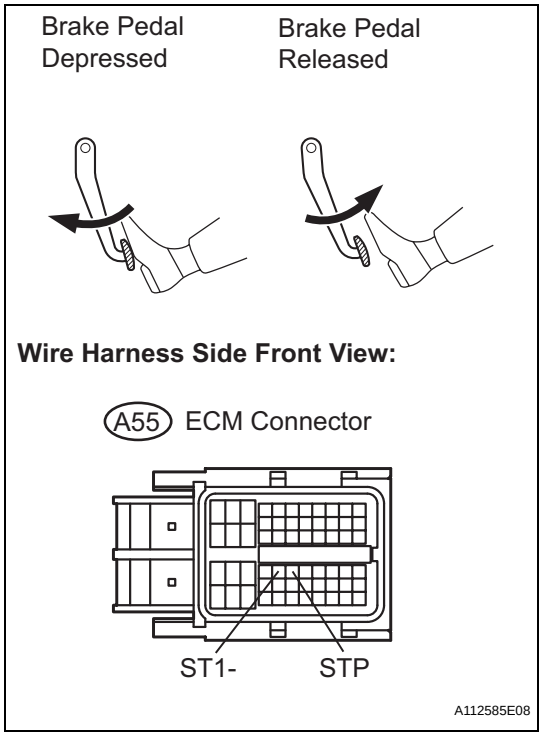
Switch Position	Tester Connection	Specified Condition
Switch pin free	1 - 2	Below 1 Ω
Switch pin free	3 - 4	10 kΩ or higher
Switch pin pushed in	1 - 2	10 kΩ or higher
Switch pin pushed in	3 - 4	Below 1 Ω

(c) Reinstall the stop light switch assembly.

NG → **REPLACE STOP LIGHT SWITCH ASSEMBLY (See page LI-125)**

OK

4 CHECK ECM (STP, ST1 - VOLTAGE)



(a) Disconnect the A55 ECM connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Brake Pedal Operation	Specified Condition
STP (A55-36) - Body ground	Depressed	9 to 14 V
STP (A55-36) - Body ground	Released	0 to 3 V
ST1- (A55-35) - Body ground	Depressed	0 to 3 V
ST1- (A55-35) - Body ground	Released	9 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM (See page ES-518)

ES

DTC	P0505	Idle Control System Malfunction

DESCRIPTION

The idle speed is controlled by the Electronic Throttle Control System (ETCS). The ETCS is comprised of: 1) one valve type throttle body; 2) the throttle actuator, which operates the throttle valve; 3) the throttle position sensor, which detects the opening angle of the throttle valve; 4) the accelerator pedal position sensor, which detects the accelerator pedal position; 5) the ECM, which controls the ETCS. Based on the target idle speed, the ECM controls the throttle actuator to provide the proper throttle valve opening angle.

DTC No.	DTC Detection Condition	Trouble Area
P0505	Idle speed continues to vary greatly from target speed (2 trip detection logic)	• ETCS • Air induction system • PCV hose connection • ECM

ES

MONITOR DESCRIPTION

The ECM monitors the idling speed and idling air flow volume to conduct Idle Speed Control (ISC). The ECM determines that the ISC system is malfunctioning if the following conditions are met:

- The learned idling air flow volume remains at the maximum or minimum 5 times or more during a driving cycle
- While driving at 6 mph (10 km/h) or more, the actual engine idling speed varies from the target idling speed by between 100 rpm and 200 rpm, 5 times or more during a driving cycle.

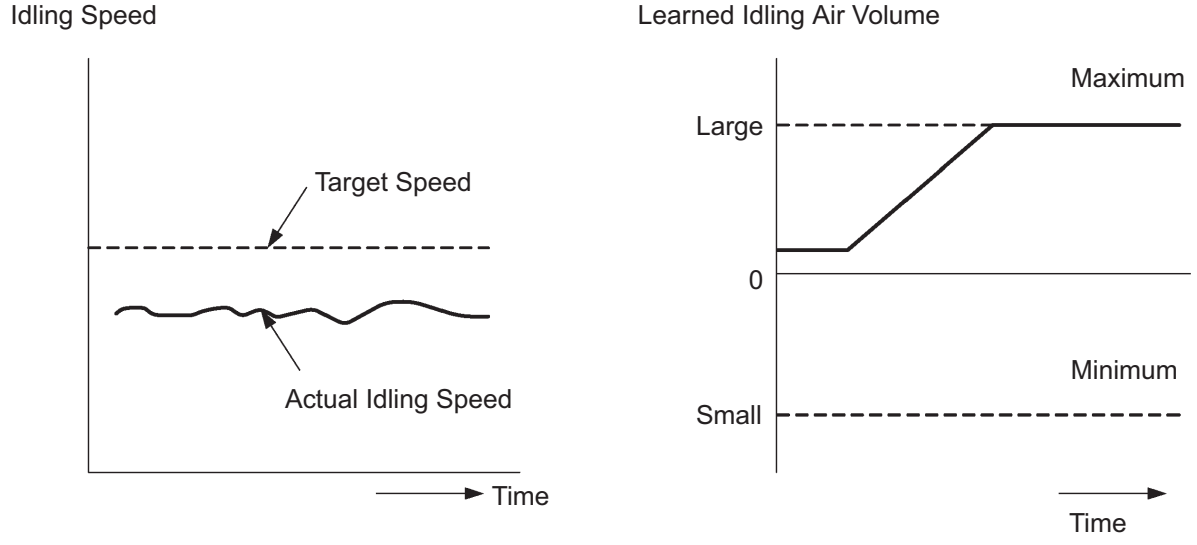
Example:

If the actual idling speed varies from the target idling speed by more than 200 rpm* 5 times during a driving cycle, the ECM illuminates the MIL and sets the DTC.

HINT:

*: Threshold idling speed varies with engine load.

Example



Y

A082389E26

MONITOR STRATEGY

Related DTCs	P0505: ISC function
Required Sensors/Components (Main)	ETCS
Required Sensors/Components (Sub)	Crankshaft position sensor, Engine coolant temperature sensor, and Vehicle speed sensor
Frequency of Operation	Continuous
Duration	10 minutes
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Functional check:

Monitor will run whenever these DTCs are not present	None
Engine	Running

ES

TYPICAL MALFUNCTION THRESHOLDS

Functional check:

Either of the following conditions 1 or 2 is met:	-
1. Frequency that following conditions (a) and (b) are met:	5 time or more
(a) Engine RPM - target engine RPM	Below -100 rpm, or 200 rpm or more
(b) Vehicle condition	Stop after vehicle was driven by 6.25 mph (10 km/h) or more
2. Frequency that following conditions (a) and (b) are met:	Once
(a) Engine RPM - target engine RPM	Below -100 rpm, or 200 rpm or more
(b) ISC flow rate learning value	1.3 L/sec. or less. or 8.5 L/sec. or more

INSPECTION PROCEDURE

HINT:

- The following conditions may also cause DTC P0505 to be set:
  (a) The floor carpet overlapping onto the accelerator pedal, causing the accelerator pedal to be slightly depressed and therefore the throttle valve position to be slightly open.
  (b) The accelerator pedal being not fully released.
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0505)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester on.
(d) Enter the following the menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC output)	Proceed to
P0505	A

Display (DTC output)	Proceed to
P0505 and other DTCs	B

HINT:
If any DTCs other than P0505 are output, troubleshoot those DTCs first.

B → GO TO DTC CHART (See page ES-63)

A

2 CHECK PCV HOSE (HOSE CONNECTIONS)

OK:
PCV hose is connected correctly and is not damaged.

NG → REPAIR OR REPLACE PCV HOSE

OK

3 CHECK AIR INDUCTION SYSTEM

(a) Check the air induction system for vacuum leakage.
OK:
No leakage from air induction system.

NG → REPAIR OR REPLACE AIR INDUCTION SYSTEM

OK

4 CHECK THROTTLE BODY (VISUALLY CHECK THROTTLE VALVE)

(a) Check for contamination between the throttle valve and the housing. If necessary, clean the throttle body. And check that the throttle valve moves smoothly.
OK:
Throttle valve is not contamainated with foreign objects and moves smoothly.

NG → REPLACE THROTTLE BODY (See page ES-503)

OK

REPLACE ECM (See page ES-518)

DTC	P050A	Cold Start Idle Air Control System Performance

DTC	P050B	Cold Start Ignition Timing Performance

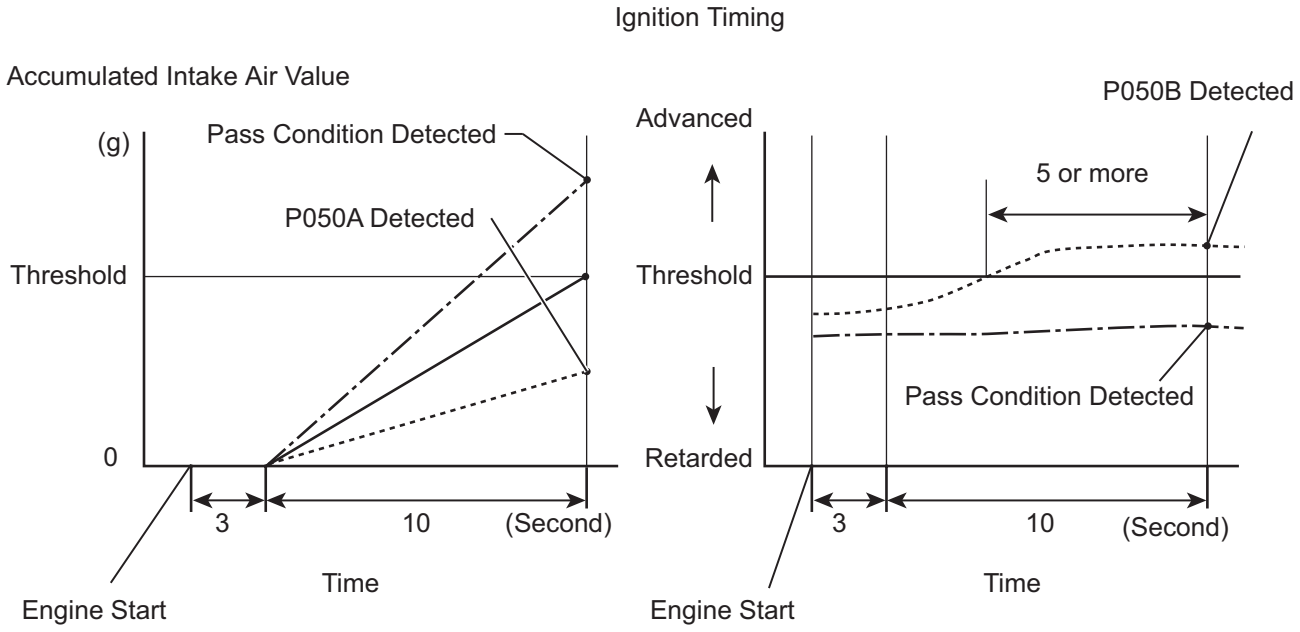
DESCRIPTION

The Electronic Throttle Control System (ETCS) controls the engine idling speed. The ETCS operates the throttle actuator to open and close the throttle valve, and adjusts the intake air amount to achieve the target idling speed.
In addition, the ECM retards the ignition timing and the ETCS increases the intake air amount to quickly increase the catalyst temperature at cold start to reduce emissions.

DTC No.	DTC Detection Conditions	Trouble Areas
P050A	Accumulated intake air amount during 10 seconds of idling after cold start, less than threshold (2 trip detection logic)	• Throttle body assembly • Mass air flow meter • Air induction system • PCV hose connections • VVT system • Air cleaner filter element • ECM
P050B	Ignition timing retard value insufficient for 5 seconds or more during 10 seconds of P050A monitoring at cold start (2 trip detection logic)	• Throttle body assembly • Mass air flow meter • Air induction system • PCV hose connections • VVT system • Air cleaner filter element • ECM

ES

MONITOR DESCRIPTION



The ECM monitors the intake air amount during idling and the ignition timing.
When the Engine Coolant Temperature (ECT) is between -10°C and 50°C (14°F and 122°F), the ECM calculates the idling intake air amount for 10 seconds, beginning 3 seconds after the engine starts.
When the accumulated value is below the threshold, the ECM interprets this as a malfunction in the Idle Speed Control (ISC) system at cold start.
The ECM also monitors the ignition timing at cold start, and judges it to be incorrect when it is advanced to the same value for a warm engine for 5 seconds or more of the 10 second monitoring period.
Example:
P050A is detected when all conditions below are met (2 trip detection logic).
1. The ECT is between -10°C and 50°C (14°F and 122°F) when the engine starts.
2. The engine idles for 13 seconds after engine start.
3. The accumulated intake air amount is below the threshold.

The ECM sets the DTC and illuminates the MIL 13 seconds after the engine is next started.

NOTICE:

When the negative battery terminal is disconnected during inspection or repairs, the ISC learning values are cleared. The ISC learning must be performed by warming up the engine and idling for 5 minutes with the ECT at 75°C (167°F) or more because DTCs cannot be detected with the ISC learning values cleared.

ES

MONITOR STRATEGY

Related DTCs	P050A: Idle speed control problem at cold P050B: Idle ignition timing problem at cold
Required Sensors/Components (Main)	Mass air flow meter
Required Sensors/Components (Related)	Engine Coolant Temperature (ECT) sensor, Throttle position sensor, Vehicle speed sensor
Frequency of Operation	Once per driving cycle
Duration	10 seconds
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

P050A:

Battery voltage	8 V or more
Time after engine start	3 seconds or more
Starter	OFF
ECT at engine start	-10°C (14°F) or more
ECT	-10°C to 50°C (14°F to 122°F)
Engine idling time	3 seconds or more
Fuel-cut	OFF
Vehicle speed	Less than 1.875 mph (3 km/h)
Time after shift position changed	1 second or more
Atmospheric pressure	76 kPa (570 mmHg) or more

P050B:

Battery voltage	8 V or more
Time after engine start	3 seconds or more
Starter	OFF
ECT at engine start	-10°C (14°F) or more
ECT	-10°C to 50°C (14°F to 122°F)
Engine idling time	3 seconds or more
Fuel-cut	OFF
Vehicle speed	Less than 1.875 mph (3 km/h)

TYPICAL MALFUNCTION THRESHOLDS

P050A:

Accumulated mass air flow	Varies with ECT (Example: Less than 42.5 g)

P050B:

Accumulated time when ignition timing retard is cut off	5 seconds or more

INSPECTION PROCEDURE

HINT:
Read freeze frame data using an intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

ES

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P050A AND/OR P050B)

(a) Connect an intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester on.
(d) Select the following the menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P050A and/or P050B	A
P050A and/or P050B and other DTCs	B

HINT:
If any DTCs other than P050A and P050B are output, troubleshoot those DTCs first.

B → GO TO DTC CHART (See page ES-63)

A

2	READ VALUE USING INTELLIGENT TESTER (FUEL TRIM)

HINT:
Calculate the total fuel trim values to check the characteristic deviation of the mass air flow meter.
(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / SHORT FT #1 and LONG FT #1.
(e) Read the values displayed on the tester.
(f) Add together the SHORT FT #1 and LONG FT #1 values to obtain the total FUEL TRIM.

OK:
Total of SHORT FT #1 and LONG FT #1 values is between -20 % and 20 %.

OK → **Go to step 12**

NG

3	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (OPERATE OCV)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the tester ON.
(c) Warm up the engine.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / VVT CTRL B1.
(e) Check the engine speed while operating the Oil Control Valve (OCV) using the tester.

OK

Tester Operations	Specified Conditions
OCV OFF	Normal engine speed
OCV ON	Engine idles roughly or stalls (soon after OCV switched from OFF to ON)

NG → **Go to step 8**

OK

4	CHECK PCV HOSE CONNECTIONS

OK:
PCV hose is connected correctly and is not damaged.

NG → **Go to step 9**

OK

5	CHECK AIR INDUCTION SYSTEM

(a) Check the air induction system for vacuum leakage.
OK:
No leakage from air induction system.

NG → **Go to step 10**

OK

6	CHECK AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY

(a) Visually check that the air cleaner filter element is not excessively contaminated with dirt or oil.
OK:
Air cleaner filter element is not excessively contaminated with dirt or oil.

NG → Go to step 11

OK

7	REPLACE MASS AIR FLOW METER

NEXT → Go to step 15

8	CHECK AND REPAIR VVT SYSTEM

NEXT → Go to step 15

ES

9	REPAIR OR REPLACE PCV HOSE

NEXT → Go to step 15

10	REPAIR OR REPLACE AIR INDUCTION SYSTEM

NEXT → Go to step 15

11	REPLACE AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY

NEXT → Go to step 15

12	CHECK THROTTLE VALVE

(a) Check for deposits around the throttle valve and throttle valve condition.

OK:

No deposits around throttle valve and throttle valve moves smoothly.

NG → Go to step 14

OK

13	REPLACE ECM

NEXT → Go to step 15

14	REPAIR OR REPLACE THROTTLE BODY ASSEMBLY

NEXT → Go to step 15

15	CHECK WHETHER DTC OUTPUT RECURS (DTC P050A AND/OR P050B)

NOTICE:
In this operation, the engine must be cold (the same level as the engine coolant temperature recorded in the freeze frame data).

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester on.
(d) Clear the DTCs (See page ES-45).
(e) Switch the ECM from normal mode to check mode using the tester (See page ES-49).
(f) Start the engine to idle for a minute.
OK:
Stable fast idling.
(g) Read the DTCs.
OK:
No DTC output.

NEXT

END

DTC	P0560	System Voltage

DESCRIPTION

The battery supplies electricity to the ECM even when the ignition switch is off. This power allows the ECM to store data such as DTC history, freeze frame data and fuel trim values. If the battery voltage falls below a minimum level, these memories are cleared and the ECM determines that there is a malfunction in the power supply circuit. When the engine is next started, the ECM illuminates the MIL and sets the DTC.

DTC No.	DTC Detection Condition	Trouble Area
P0560	Open in ECM back-up power source circuit (1 trip detection logic)	• Open in back-up power source circuit • ECM

HINT:
If DTC P0560 is set, the ECM does not store other DTCs.

MONITOR STRATEGY

Related DTCs	P0560: ECM system voltage
Required Sensors/Components (Main)	ECM
Required Sensors/Components (Sub)	-
Frequency of Operation	Continuous
Duration	3 seconds
MIL Operation	Immediate (MIL illuminated after next engine start)
Sequence of Operation	None

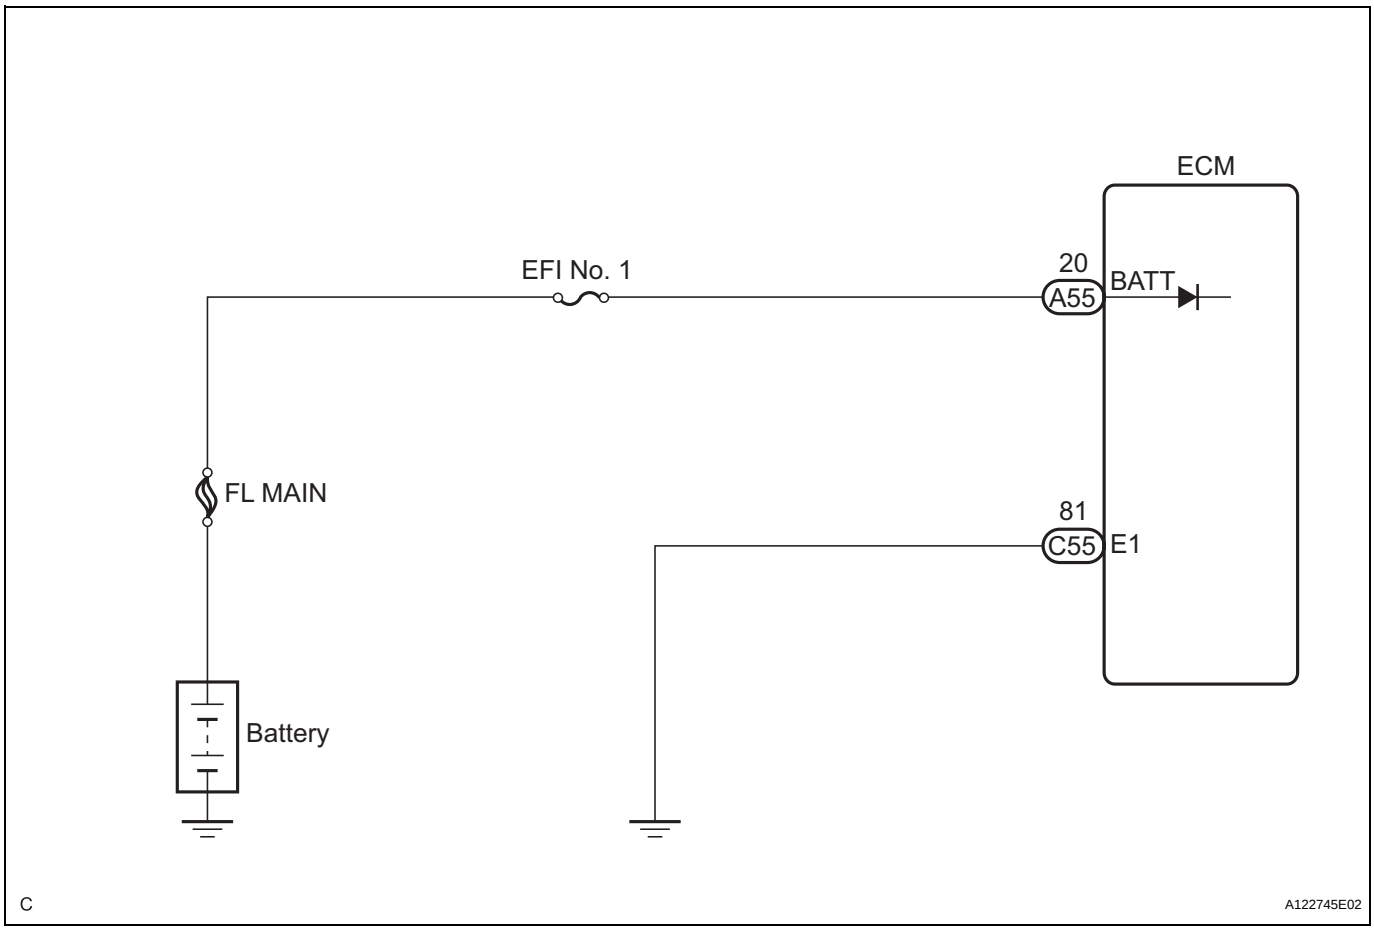
TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present:	None
Stand-by RAM	Initialized

TYPICAL MALFUNCTION THRESHOLDS

ECM power source	Less than 3.5 V

WIRING DIAGRAM

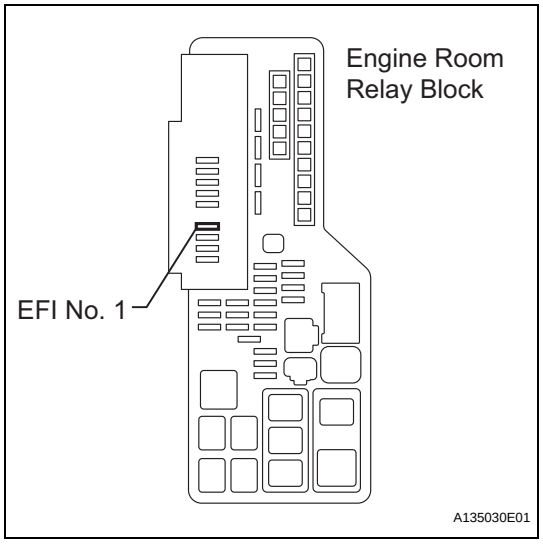


INSPECTION PROCEDURE

HINT:

Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

1	INSPECT FUSE (EFI NO. 1)

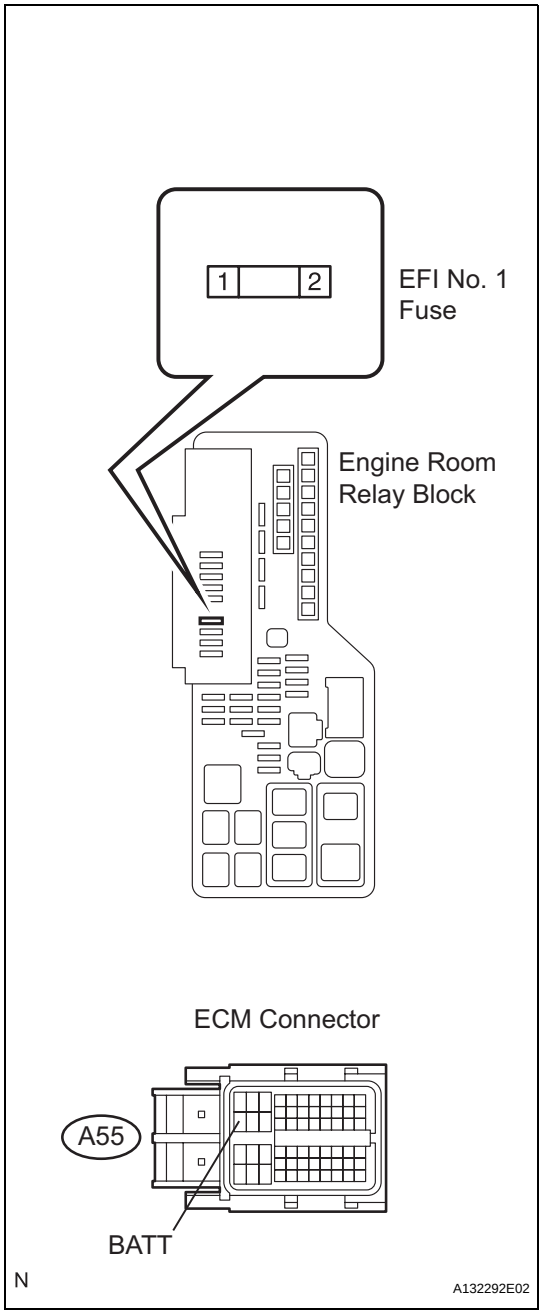


(a) Remove the EFI No. 1 fuse from the engine room R/B.
(b) Measure the EFI No. 1 fuse resistance.
Standard resistance:
Below 1 Ω
(c) Reinstall the EFI No. 1 fuse.

NG → **REPLACE EFI NO. 1 FUSE**

OK

2	CHECK HARNESS AND CONNECTOR



(a) Check the harness and connector between the EFI No. 1 fuse and ECM.
  (1) Remove the EFI No. 1 fuse from the engine room R/B.
  (2) Disconnect the A55 ECM connector.
  (3) Measure the resistance between the terminals.
  Standard resistance (Check for open)

Tester Connection	Specified Condition
Engine room R/B EFI No. 1 fuse terminal 2 - BATT (A55-20)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
Engine room R/B EFI No. 1 fuse terminal 2 or BATT (A55-20) - Body ground	10 kΩ or higher

  (4) Reinstall the ECM connector.

(b) Check the harness and the connector between the EFI No. 1 fuse and battery.
  (1) Disconnect the negative battery terminal.
  (2) Disconnect the positive battery terminal.
  (3) Measure the resistance between the terminals.
  Standard resistance (Check for open)

Tester Connection	Specified Condition
Battery positive terminal - Engine room R/B EFI No 1 fuse terminal 1	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
Battery positive terminal or Engine room R/B EFI No. 1 fuse terminal 1 - Body ground	10 kΩ or higher

  (4) Reconnect the positive battery terminal.
  (5) Disconnect the negative battery terminal.
  (6) Reinstall the EFI No. 1 fuse.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	INSPECT BATTERY

(a) Check that the battery is not depleted.
OK:
Battery is not depleted.

NG → **REPLACE BATTERY**

OK

4	CHECK BATTERY TERMINAL

(a) Check that the battery terminals are not loose or corroded.
OK:
Battery terminals are not loose or corroded.

NG → **REPAIR OR REPLACE BATTERY TERMINAL**

OK ↓

5	CHECK WHETHER DTC OUTPUT RECURS

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the intelligent tester on.
(d) Clear the DTCs (See page ES-45).
(e) Turn the intelligent tester off.
(f) Start the engine and turn the intelligent tester on.
(g) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(h) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P0560	A
No output	B

B → **CHECK FOR INTERMITTENT PROBLEMS**

A ↓

REPLACE ECM (See page ES-518)

ES

DTC	P0604	Internal Control Module Random Access Memory (RAM) Error

DTC	P0606	ECM / PCM Processor

DTC	P0607	Control Module Performance

DTC	P0657	Actuator Supply Voltage Circuit / Open

DESCRIPTION

ES

The ECM continuously monitors its internal memory status, internal circuits, and output signals sent to the throttle actuator. This self-check ensures that the ECM is functioning properly. If any malfunction is detected, the ECM will set the appropriate DTC and illuminate the MIL.

The ECM memory status is diagnosed by internal "mirroring" of the main CPU and the sub CPU to detect Random Access Memory (RAM) errors. The 2 CPUs also perform continuous mutual monitoring. The ECM illuminates the MIL and sets a DTC if: 1) outputs from the 2 CPUs are different and deviate from the standards, 2) the signals sent to the throttle actuator deviate from the standards, 3) a malfunction is found in the throttle actuator supply voltage, and 4) any other ECM malfunction is found.

DTC No.	DTC Detection Condition	Trouble Area
P0604 P0606 P0607 P0657	ECM internal error (1 trip detection logic)	ECM

MONITOR STRATEGY

Related DTCs	P0604: ECM RAM error P0606: ECM range check P0607: ECM CPU malfunction P0657: ETCS power supply
Required Sensors/Components (Main)	ECM
Required Sensors/Components (Sub)	-
Frequency of Operation	Continuous
Duration	Within 1 second
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None

TYPICAL MALFUNCTION THRESHOLDS

ECM RAM errors (P0604):

RAM mirror check	Fail

ECM CPU range check (P0606):

Either of following conditions is met:	-
Difference between throttle valve position of main CPU and throttle valve position of sub CPU	0.3 V or more
Difference between accelerator pedal position of main CPU and accelerator pedal position of sub CPU	0.3 V or more

ECM CPU malfunction (P0607):

Either A or B is met	-
A. Following conditions are met:	-
CPU reset	1 time or more
Learned TP - learned APP	0.4 V or more
Throttle actuator	OFF
B. CPU reset	2 times or more

ETCS power supply (P0657):

ETCS (Electronic Throttle Control System) power supply when ignition switch turned on (IG)	7 V or more

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

ES

1	CHECK OTHER DTC OUTPUT (IN ADDITION TO DTC P0604/P0606/P0607/P0657)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester on.
(d) Enter the following menus: DIAGNOSIS / ENHANCED II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC output)	Proceed to
P0604, P0606, P0607, P0657	A
No output DTC	B

B → END

A → REPLACE ECM (See page ES-518)

DTC	P0617	Starter Relay Circuit High

DESCRIPTION

While the engine is being cranked, the positive battery voltage is applied to terminal STA of the ECM. If the ECM detects the Starter Control (STA) signal while the vehicle is being driven, it determines that there is a malfunction in the STA circuit. The ECM then illuminates the MIL and sets the DTC.
This monitor runs when the vehicle is driven at 12.4 mph (20 km/h) for over 20 seconds.

DTC No.	DTC Detection Condition	Trouble Area
P0617	When conditions (a), (b) and (c) are met, positive (+B) battery voltage 10.5 V or more applied to ECM for 20 seconds (1 trip detection logic): (a) Vehicle speed more than 12.4 mph (20 km/h) (b) Engine speed more than 1,000 rpm (c) STA signal ON	• Park/Neutral Position (PNP) switch • Starter relay circuit • Cranking holding function circuit (With smart key system) • Ignition switch (Without smart key system) • ECM

ES

MONITOR STRATEGY

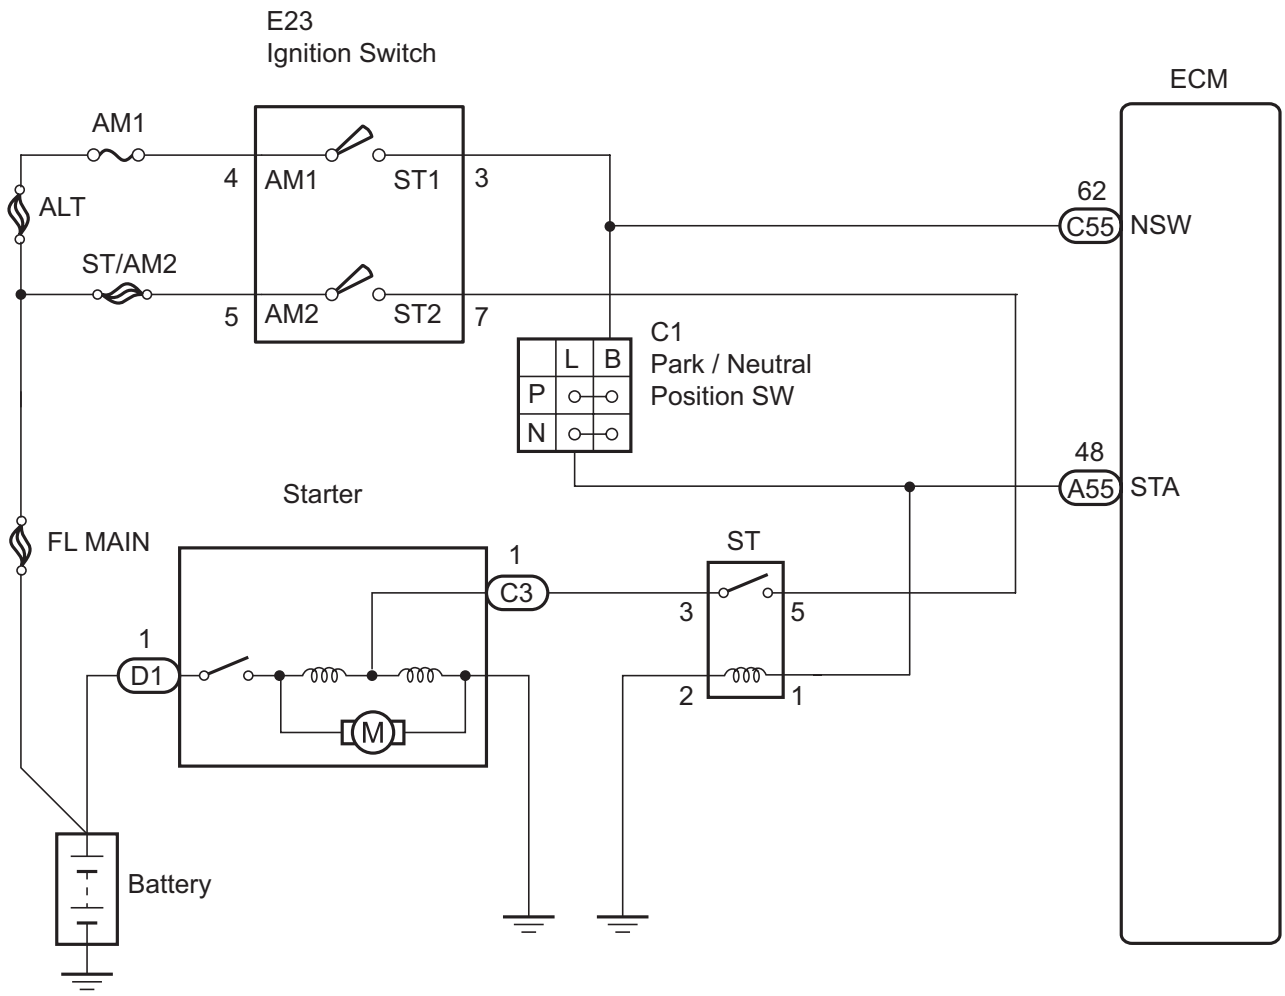
Without Smart Key System:



INSPECTION PROCEDURE

HINT:

- The following troubleshooting flowchart is based on the premise that the engine is cranked normally. If the engine does not crank, proceed to the problem symptoms table (See page ES-33).
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

1	READ VALUE OF INTELLIGENT TESTER (STARTER SIGNAL)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the tester on.

(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST / ALL / STARTER SIG.
(d) Check the value displayed on the tester when the ignition switch is turned on (IG) and the engine is started.

OK

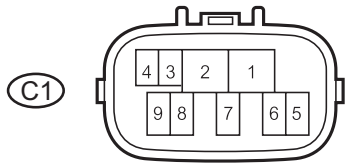
Engine Switch Condition	ON (IG)	ENGINE START
STARTER SIG	OFF	ON

OK → **REPLACE ECM (See page ES-518)**

NG

2 INSPECT PARK / NEUTRAL POSITION SWITCH ASSEMBLY

Component Side:



Park / Neutral Position Switch

A107908E03

(a) Inspect the Park / Neutral Position (PNP) switch.
(1) Disconnect the C1 switch connector.
(2) Measure the resistance according to the value(s) in the table below.

Standard resistance

Gear Selector Lever Position	Tester Connection	Specified Condition
P	4 - 5	Below 1 Ω
N	4 - 5	Below 1 Ω

(3) Reconnect the PNP switch connector.

Result

Result	Proceed to
OK (without smart key system)	A
OK (with smart key system)	B
NG	C

B → **CHECK CRANKING HOLDING FUNCTION CIRCUIT (See page ES-455)**

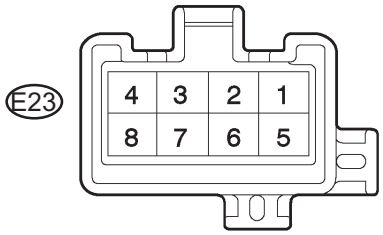
C → **REPLACE PARK / NEUTRAL POSITION SWITCH (THEN CHECK CRANKING HOLDING FUNCTION CIRCUIT) (See page AX-174)**

A

ES

3	INSPECT IGNITION SWITCH ASSEMBLY

Component Side:



Ignition Switch

A135034E01

(a) Disconnect the E23 ignition switch connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Switch Condition	Tester Connection	Specified Condition
LOCK	3-4, 5-7	10 kΩ or higher
START	3-4, 5-7	Below 1 Ω

(c) Reconnect the ignition switch connector.

NG → **REPAIR OR REPLACE IGNITION SWITCH ASSEMBLY**

OK

4	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the tester on.
(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST / ALL / STARTER SIG.
(d) Check the value displayed on the tester when the ignition switch is turned on (IG) and the ignition is started.

OK

Engine Switch Condition	ON (IG)	ENGINE START
STARTER SIG	OFF	ON

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

SYSTEM IS OK

DTC	P0630	VIN not Programmed or Mismatch - ECM / PCM

DESCRIPTION

DTC P0630 is set when the Vehicle Identification Number (VIN) is not stored in the Engine Control Module (ECM) or the input VIN is not accurate. Input the VIN with the intelligent tester.

DTC No.	DTC Detection Condition	Trouble Area
P0630	• VIN not stored in ECM • Input VIN in ECM not accurate	ECM

MONITOR STRATEGY

Related DTCs	P0630: VIN not programmed
Required Sensors/Components (Main)	ECM
Required Sensors/Components (Sub)	-
Frequency of Operation	Continuous
Duration	0.325 seconds
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

DTC	P0705	Transmission Range Sensor Circuit Malfunction (PRNDL Input)

DESCRIPTION

The park / neutral position switch detects the shift lever position and sends signals to the ECM.

DTC No.	DTC Detection Condition	Trouble Area
P0705	(A) Any 2 or more signals of the following are ON simultaneously (2-trip detection logic) • P input signal is ON. • N input signal is ON. • R input signal is ON. • D input signal is ON. (B) Any 2 or more signals of the following are ON simultaneously (2-trip detection logic) • NSW input signal is ON. • R input signal is ON. • D input signal is ON. (C) Any of following conditions is met for 2.0 sec. or more in the S position (2-trip detection logic). • NSW input signal is ON. • P input signal is ON. • N input signal is ON. • R input signal is ON. (D) All switches are OFF simultaneously for NSW, P, R, N and D.	• Short in park / neutral position switch circuit • Park / neutral position switch • ECM

ES

MONITOR DESCRIPTION

These DTCs indicate a problem with the park / neutral position switch and the wire harness in the park / neutral position switch circuit.
The park / neutral position switch detects the shift lever position and sends a signal to the ECM.
For security, the park / neutral position switch detects the shift lever position so that engine can be started only when the shift lever is in the P or N position.
The park / neutral position switch sends a signal to the ECM according to the shift position (P, R, N or D).
The ECM determines that there is a problem with the switch or related parts if it receives more than 1 position signal simultaneously. The ECM will turn on the MIL and store the DTC.

MONITOR STRATEGY

Related DTCs	P0705: Park / neutral position switch/Verify switch input
Required sensors/Components	Park / neutral position switch
Frequency of operation	Continuous
Duration	2 sec.
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

All:

The monitor will run whenever this DTC is not present.	None
Ignition switch	ON
Battery voltage	10.5 V or more

Condition (C):

One of the following conditions is met:	Condition (a), (b), (c) or (d)
(a) Park Neutral position switch	ON
(b) Park position switch	ON

(c) Neutral position switch	ON
(d) R range position switch	ON

TYPICAL MALFUNCTION THRESHOLDS

1. One of the following conditions is met: Condition (A), (B) and (C)

Condition (A):

Number of the following signal input at the same time	2 or more
Park position switch	ON
Neutral position switch	ON
R range position switch	ON
D range position switch	ON

Condition (B):

Number of the following signal input at the same time	2 or more
Park neutral position switch	ON
R range switch	ON
D range switch	ON

Condition (C):

"M" switch	ON

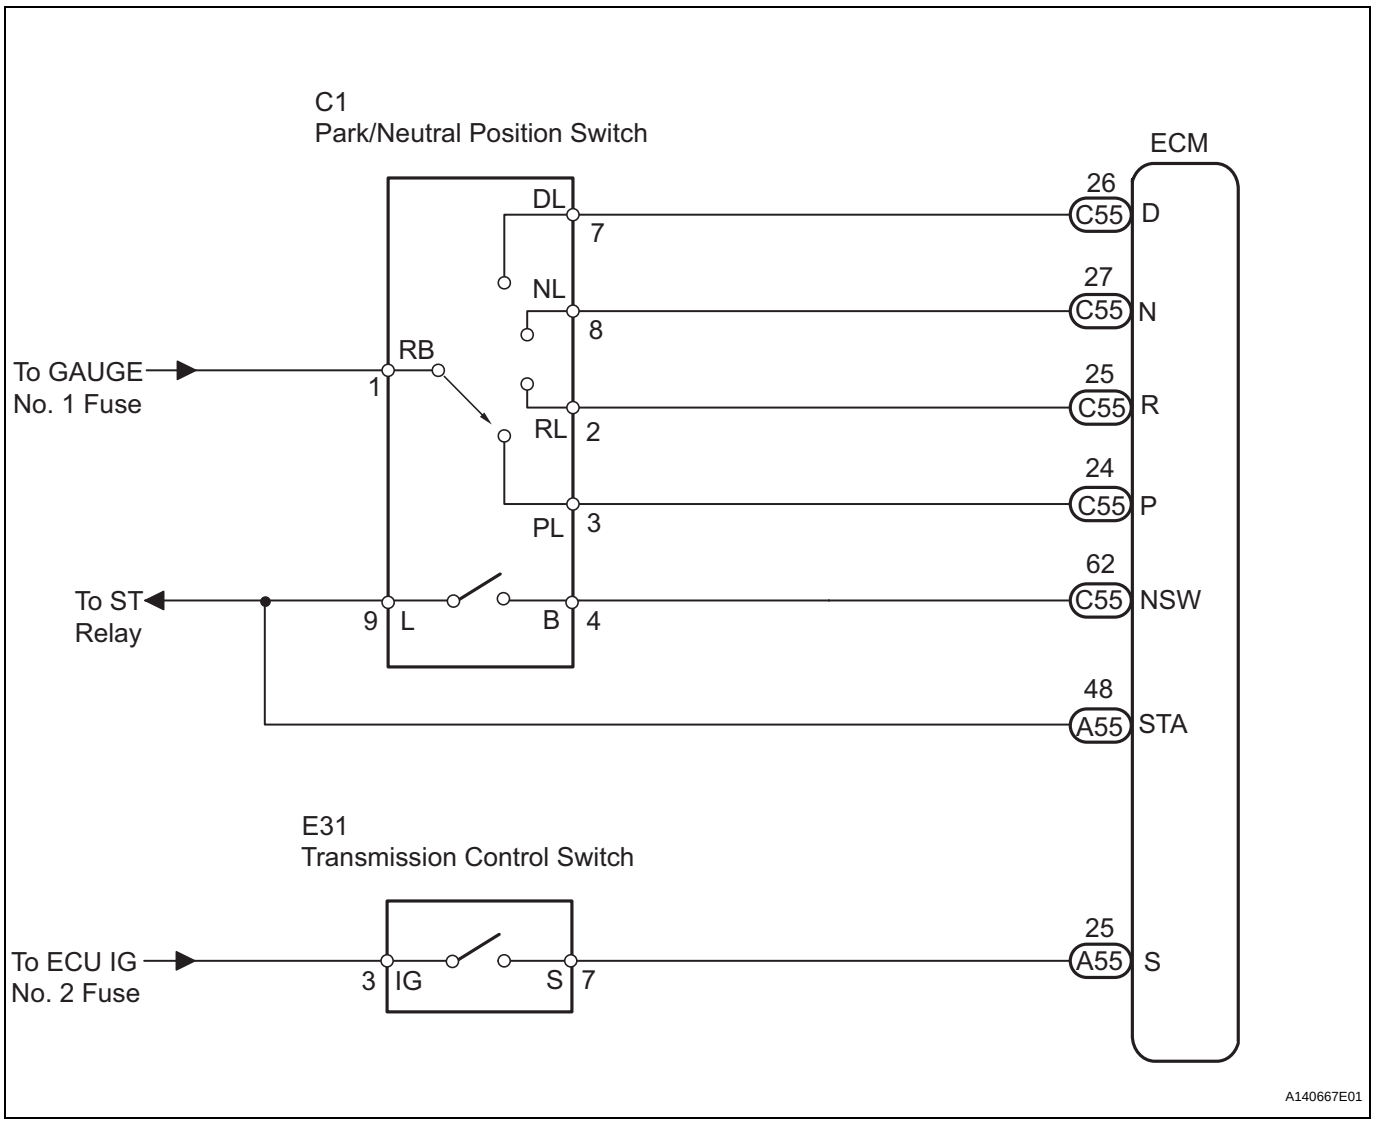
Condition (D):

Park position switch	OFF
Neutral position switch	OFF
Park neutral position switch	OFF
R range switch	OFF
D range switch	OFF

COMPONENT OPERATING RANGE

Park / neutral Position switch	The park / neutral position switch sends only one signal to the ECM.

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

According to the DATA LIST displayed by the intelligent tester, you can read the value of the switch, sensor, actuator and so on without parts removal. Reading the DATA LIST as the first step of troubleshooting is one method to shorten labor time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

1. READ DATA LIST

(a) Turn the ignition switch off.

(b) Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.

(c) Turn the ignition switch on (IG).

(d) Turn on the tester.

(e) Select the item "DIAGNOSIS / ENHANCED OBD II / DATA LIST".

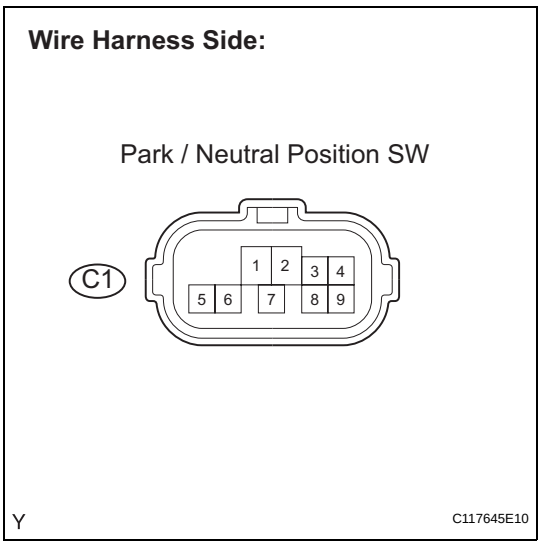
(f) According to the display on the tester, read the "DATA LIST".

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
PNP SW [NSW]	PNP SW Status / ON or OFF	Shift lever position is; P and N: ON Except P or N: OFF	When the shift lever position displayed on the intelligent tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect.
REVERSE	PNP SW Status / ON or OFF	Shift lever position is; R: ON Except R: OFF	↑
DRIVE	PNP SW Status / ON or OFF	Shift lever position is; D and S: ON Except D or S: OFF	↑

ES

1 CHECK HARNESS AND CONNECTOR (BATTERY - PARK / NEUTRAL POSITION SWITCH)

Wire Harness Side:



(a) Disconnect the park / neutral position switch connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

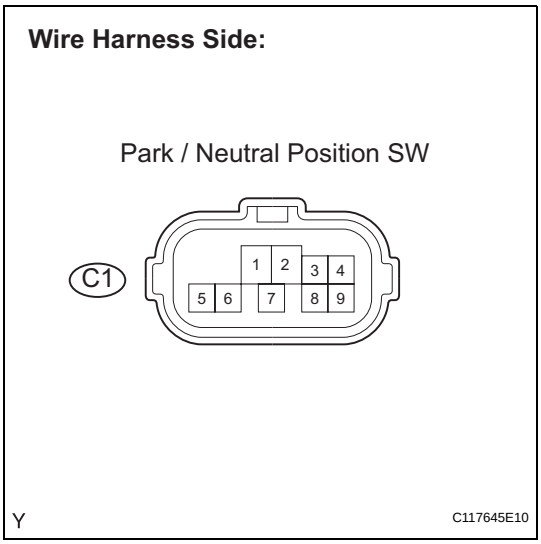
Tester Connection	Specified Condition
2 - Body ground	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2 CHECK ECM (OUTPUT SIGNAL)

Wire Harness Side:



(a) Turn the ignition switch on (IG).
(b) Measure the voltage according to the value(s) in the table below.

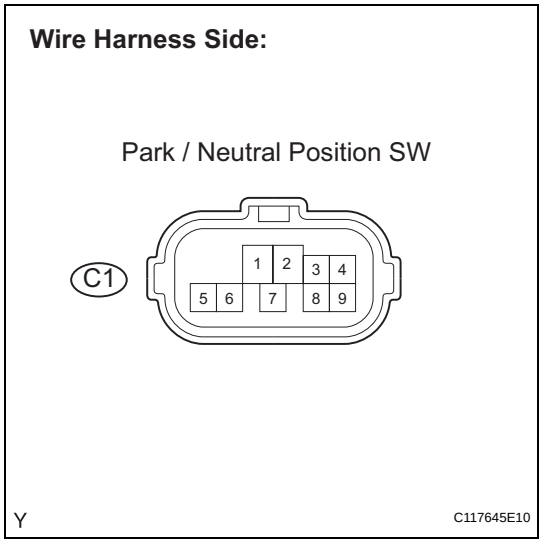
Standard voltage

Tester Connection	Specified Condition
4 - Body ground	10 to 14 V

NG → **Go to step 9**

OK

3	CHECK HARNESS AND CONNECTOR (PARK/NEUTRAL POSITION SWITCH - BODY GROUND)



(a) Disconnect the C1 park/neutral position switch connector.
(b) Measure the resistance between the terminals.
Standard resistance

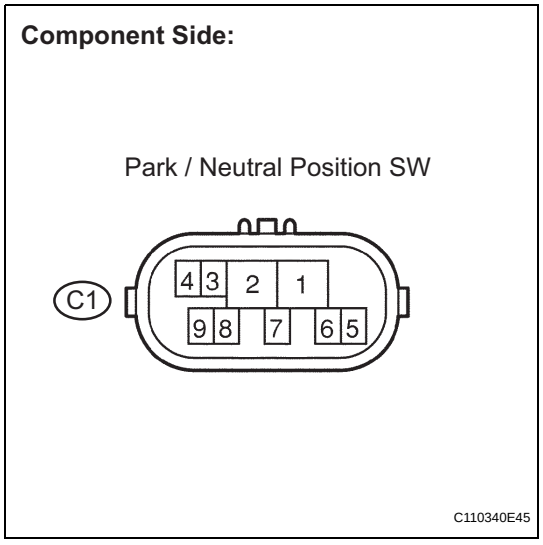
Tester Connection	Specified Condition
L (C1-9) - Body ground	Below 1 Ω

(c) Reconnect the park/neutral position switch connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	INSPECT PARK / NEUTRAL POSITION SWITCH ASSEMBLY



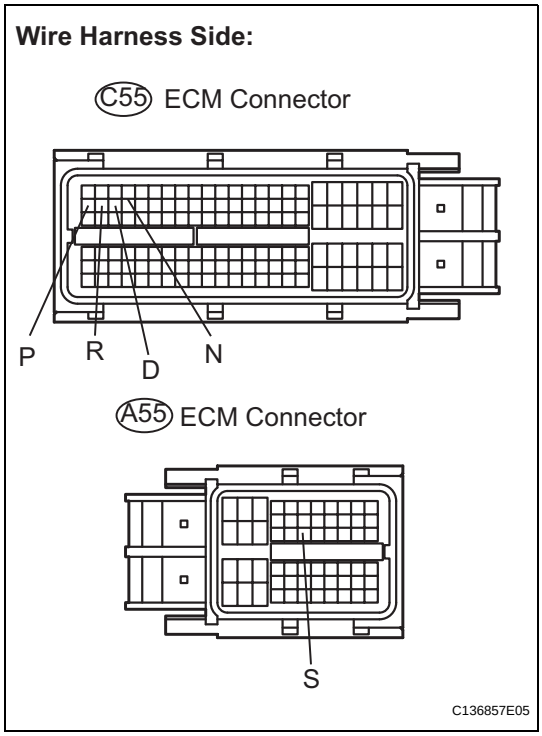
(a) Measure the resistance according to the value(s) in the table below when the shift lever is moved to each position.
Standard resistance

Shift Position	Tester Connection	Specified Condition
P	1 - 3 and 4 - 9	Below 1 Ω
Except P		10 kΩ or higher
R	1 - 2	Below 1 Ω
Except R		10 kΩ or higher
N	1 - 8and 4 - 9	Below 1 Ω
Except N		10 kΩ or higher
D, S, "+" and "-"	1 - 7	Below 1 Ω
Except D, S, "+" and "-"		10 kΩ or higher

NG → **REPLACE PARK/NEUTRAL POSITION SWITCH ASSEMBLY**

OK

5	CHECK HARNESS AND CONNECTOR



(a) Connect the park / neutral position switch connector.
(b) Disconnect the ECM connectors.
(c) Turn the ignition switch on (IG), and measure the voltage according to the value(s) in the table below when the shift lever is moved to each position.

Standard voltage

Shift Position	Tester Connection	Specified Condition
P	C55-24 (P) - Body ground	10 to 14 V
Except P		Below 1 V
N	C55-27 (N) - Body ground	10 to 14 V
Except N		Below 1 V
R	C55-25 (R) - Body ground	10 to 14 V*
Except R		Below 1 V
D and S	C55-26 (D) - Body ground	10 to 14 V
Except D and S		Below 1 V
S, "+" and "-"	A55-25 (S) - Body ground	10 to 14 V
Except S, "+" and "-"		Below 1 V

HINT:
*: The voltage will drop slightly due to lighting up of the back up light.

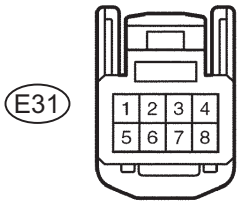
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6 CHECK HARNESS AND CONNECTOR

Wire Harness Side:

Transmission Control Switch



C110345E20

(a) Disconnect the transmission control switch connector of the shift lock control unit assembly.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage between the terminals.
Standard voltage

Tester Connection	Specified Condition
3 - Body ground	10 to 14 V

(d) Reconnect the transmission control switch connector.

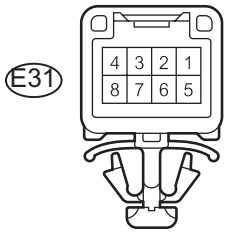
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

7 INSPECT TRANSMISSION CONTROL SWITCH

Component Side:

Transmission Control Switch



C136860E03

(a) Measure the resistance according to the value(s) in the table below when the shift lever is moved to each position.
Standard resistance

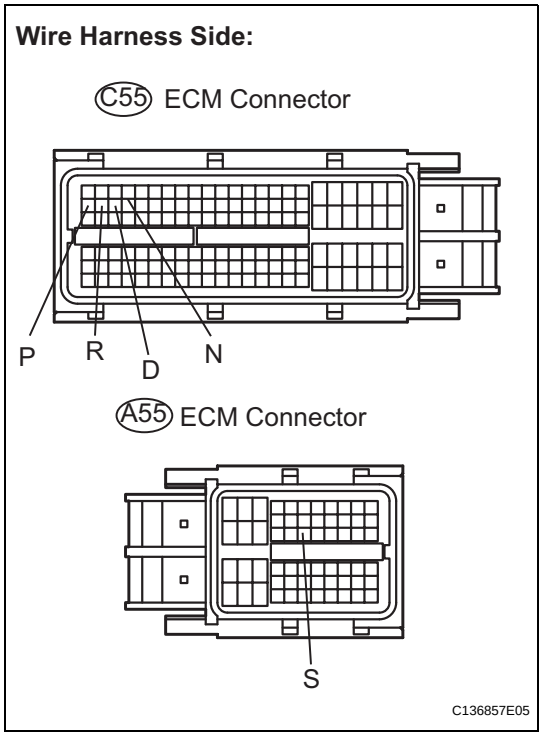
Shift Position	Tester Connection	Specified Condition
S, "+" and "-"	3 - 7	Below 1 Ω
Except S, "+" and "-"		10 kΩ or higher

NG → **REPLACE TRANSMISSION CONTROL SWITCH**

OK

ES

8	CHECK HARNESS AND CONNECTOR



(a) Connect the transmission control switch connector of the shift lock control unit assembly.
(b) Turn the ignition switch on (IG), and measure the voltage according to the value(s) in the table below when the shift lever is moved to each position.

Standard voltage

Shift Position	Tester Connection	Specified Condition
P	C55-24 (P) - Body ground	10 to 14 V
Except P	↑	Below 1 V
N	C55-27 (N) - Body ground	10 to 14 V
Except N	↑	Below 1 V
R	C55-25 (R) - Body ground	10 to 14 V *
Except R	↑	Below 1 V
D and S	C55-26 (D) - Body ground	10 to 14 V
Except D and S	↑	Below 1 V
S, "+" and "-"	A55-25 (S) - Body ground	10 to 14 V
Except S, "+" and "-"	↑	Below 1 V

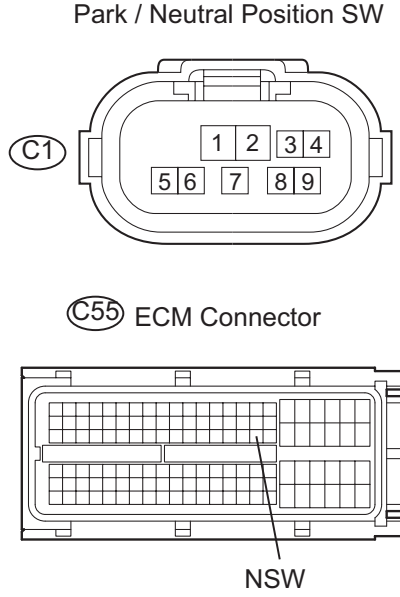
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

9	CHECK HARNESS AND CONNECTOR (PARK / NEUTRAL POSITION SWITCH - ECM)

Wire Harness Side:



(a) Disconnect the ECM connectors.
(b) Turn the ignition switch off.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
B (C1-4) - NSW (C55-62)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
B (C1-4) or NSW (C55-62) - Body ground	10 kΩ or higher

ES

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK →

REPLACE ECM

DTC	P2102	Throttle Actuator Control Motor Circuit Low

DTC	P2103	Throttle Actuator Control Motor Circuit High

SYSTEM DESCRIPTION

The throttle actuator is operated by the ECM and opens and closes the throttle valve using the gears. The opening angle of the throttle valve is detected by the Throttle Position (TP) sensor, which is mounted on the throttle body. The TP sensor provides feedback to the ECM. This feedback allows the ECM to appropriately control the throttle actuator and monitor the throttle opening angle as the ECM responds to driver inputs.

HINT:

This ETCS (Electronic Throttle Control System) does not use a throttle cable.

ES

DTC No.	DTC Detection Condition	Trouble Area
P2102	Conditions (a) and (b) continue for 2.0 seconds (1 trip detection logic): (a) Throttle actuator duty ratio 80 % or more (b) Throttle actuator current 0.5 A or less	• Open in throttle actuator circuit • Throttle actuator • ECM
P2103	Either of the following conditions is met: • Hybrid IC diagnosis signal fails • Hybrid IC current limiter port fails	• Short in throttle actuator circuit • Throttle actuator • Throttle valve • Throttle body assembly • ECM

MONITOR DESCRIPTION

The ECM monitors the electrical current through the electronic actuator, and detects malfunctions and open circuits in the throttle actuator based on this value. If the current is outside the standard range, the ECM determines that there is a malfunction in the throttle actuator. In addition, if the throttle valve does not function properly (for example, stuck on), the ECM determines that there is a malfunction. The ECM then illuminates the MIL and sets a DTC.

Example:

When the electrical current is more than 10 A, or less than 0.5 A and the throttle actuator duty ratio exceeds 80 %, the ECM interprets this as the current being outside the standard range, and illuminates the MIL and sets a DTC.

If the malfunction is not repaired successfully, a DTC is set when the engine is quickly revved up to a high rpm several times after the engine has idled for 5 seconds after engine start.

MONITOR STRATEGY

Related DTCs	P2102: Throttle actuator current (low current) P2103: Throttle actuator current (high current)
Required Sensors/Components (Main)	Throttle actuator (throttle body)
Required Sensors/Components (Related)	None
Frequency of Operation	Continuous
Duration	P2102 (Throttle actuator current (low current)): 2 seconds P2103 (Throttle actuator current (high current)): 25 times or 0.6 seconds
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

All:

Monitor runs whenever following DTCs are not present	None

P2102:

Throttle motor	ON
Duty-cycle ratio to open throttle actuator	80 % or more
Throttle actuator power supply	8 V or more
Current motor current - Motor current at 0.016 sec. before	Less than 0.2 A

P2103:

Throttle motor	ON
Either of the following conditions 1 or 2 is met:	-
1. Throttle actuator power supply	8 V or more
2. Throttle actuator power	ON
Battery voltage	8 V or more
Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS

P2102:

Throttle actuator current	Less than 0.5 A

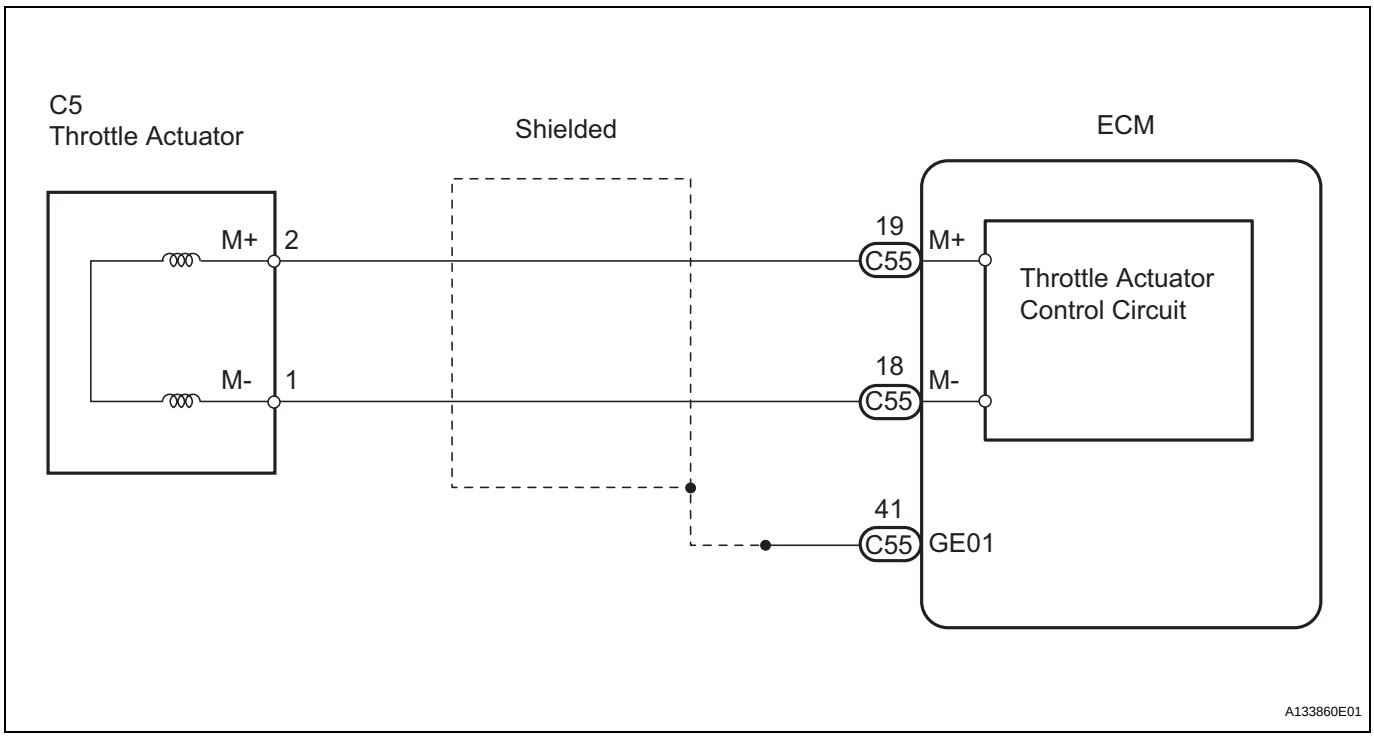
P2103:

Either of following conditions is met:	A or B
A. Hybrid IC diagnosis signal	Fail
B. Hybrid IC current limiter port	Fail

FAIL-SAFE

When either of these DTCs, as well as other DTCs relating to ETCS (Electronic Throttle Control System) malfunctions, is set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator off, and the throttle valve is returned to a 6° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue running at a minimal speed. If the accelerator pedal is depressed gently, the vehicle can be driven slowly.
Fail-safe mode continues until a pass condition is detected, and the engine switch is then turned off.

WIRING DIAGRAM



ES

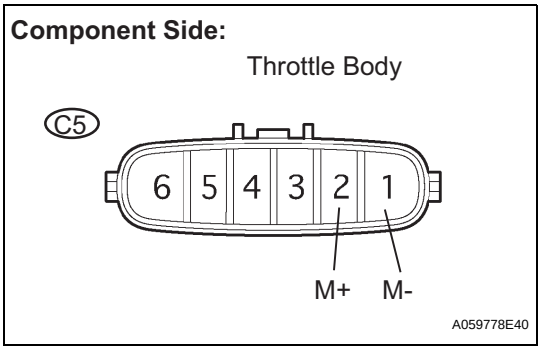
INSPECTION PROCEDURE

HINT:

- Read freeze frame data using an intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).
- The throttle actuator current (THROTTLE MOT) and the throttle actuator duty ratio (THROTTLE OPN / THROTTLE CLS) can be read using the intelligent tester. However, the ECM shuts off the throttle actuator current when the ETCS malfunctions.

1	INSPECT THROTTLE BODY (RESISTANCE OF THROTTLE CONTROL MOTOR)

Component Side:



(a) Disconnect the C5 throttle body connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
M+ (C5-2) - M- (C5-1)	20°C (68°F)	0.3 to 100 Ω

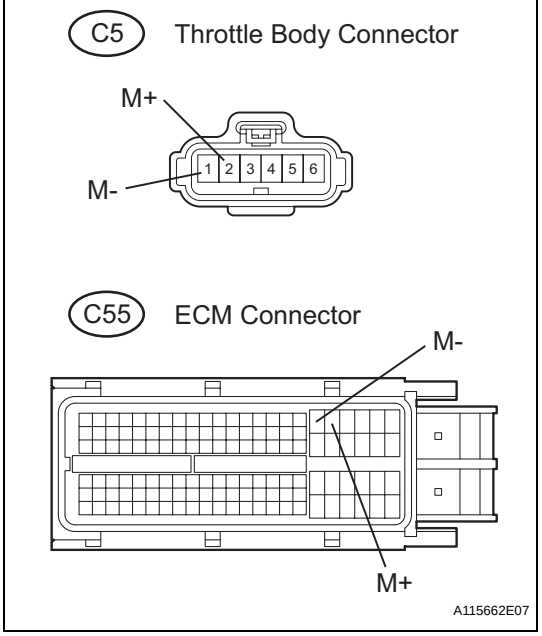
(c) Reconnect the throttle body connector.

NG → **REPLACE THROTTLE BODY (See page ES-503)**

OK

2	CHECK HARNESS AND CONNECTOR (THROTTLE CONTROL MOTOR - ECM)

Wire Harness Side Front View:



(a) Disconnect the C5 throttle body connector.
(b) Disconnect the C55 ECM connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
M+ (C5-2) - M+ (C55-19)	Below 1 Ω
M- (C5-1) - M- (C55-18)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
M+ (C5-2) or M+ (C55-19) - Body ground	10 kΩ or higher
M- (C5-1) or M- (C55-18) - Body ground	10 kΩ or higher

(d) Reconnect the throttle body connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	INSPECT THROTTLE BODY (VISUALLY CHECK THROTTLE VALVE)

(a) Check for foreign objects between the throttle valve and the housing.

NG → **REMOVE FOREIGN OBJECT AND CLEAN THROTTLE BODY**

OK

4	INSPECT THROTTLE VALVE

(a) Check if the throttle valve opens and closes smoothly.

NG → **REPLACE THROTTLE BODY (See page ES-503)**

OK

REPLACE ECM (See page ES-518)

DTC	P2111	Throttle Actuator Control System - Stuck Open

DTC	P2112	Throttle Actuator Control System - Stuck Closed

SYSTEM DESCRIPTION

The throttle actuator is operated by the ECM, and opens and closes the throttle valve using the gears. The opening angle of the throttle valve is detected by the Throttle Position (TP) sensor, which is mounted on the throttle body. The TP sensor provides feedback to the ECM. This feedback allows the ECM to appropriately control the throttle actuator and monitor the throttle opening angle as the ECM responds to driver inputs.

HINT:

This ETCS (Electronic Throttle Control System) does not use a throttle cable.

ES

DTC No.	DTC Detection Condition	Trouble Area
P2111	ECM signals throttle actuator to close, but stuck (1 trip detection logic)	• Throttle actuator • Throttle body • Throttle valve
P2112	ECM signals throttle actuator to open, but stuck (1 trip detection logic)	• Throttle actuator • Throttle body • Throttle valve

MONITOR DESCRIPTION

The ECM determines that there is a malfunction in the ETCS when the throttle valve remains at a fixed angle despite a high drive current from the ECM. The ECM illuminates the MIL and sets a DTC.

If the malfunction is not repaired successfully, a DTC is set when the accelerator pedal is fully depressed and released quickly (to fully open and close the throttle valve) after the engine is next started.

MONITOR STRATEGY

Related DTCs	P2111: Throttle actuator stuck open P2112: Throttle actuator stuck closed
Required Sensors/Components (Main)	Throttle actuator
Required Sensors/Components (Sub)	-
Frequency of Operation	Continuous
Duration	0.5 seconds
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

All:

Monitor runs whenever following DTCs are not present	None

P2111 (Throttle actuator stuck open):

System guard*	ON
Throttle actuator current	2 A or more
Duty cycle to close throttle	80 % or more

P2112 (Throttle actuator stuck closed):

System guard*	ON
Throttle actuator current	2 A or more
Duty cycle to open throttle	80 % or more

*System guard set when following conditions are met:	-
Throttle actuator	ON
Throttle actuator duty calculation	Executing
Throttle position sensor	Fail determined
Throttle actuator current-cut operation	Not executing
Throttle actuator power supply	4 V or more
Throttle actuator	Fail determined

TYPICAL MALFUNCTION THRESHOLDS

P2111 (Throttle actuator stuck open):

TP sensor voltage change	No change

P2112 (Throttle actuator stuck closed):

TP sensor voltage change	No change

ES

FAIL-SAFE

When either of these DTCs, as well as other DTCs relating to ETCS (Electronic Throttle Control System) malfunctions, is set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator off, and the throttle valve is returned to a 6° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue running at a minimal speed. If the accelerator pedal is depressed firmly and gently, the vehicle can be driven slowly. Fail-safe mode continues until a pass condition is detected, and the ignition switch is then turned off.

WIRING DIAGRAM

Refer to DTC P2102 (See page ES-320).

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

1	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P2111 or P2112)**

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester on.
(d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P2111 or P2112	A
P2111 or P2112 and other DTCs	B

HINT:
If any DTCs other than P2111 or P2112 are output, troubleshoot those DTCs first.

B → GO TO DTC CHART (See page ES-63)

A

2 INSPECT THROTTLE BODY (VISUALLY CHECK THROTTLE VALVE)

(a) Check for contamination between the throttle valve and the housing. If necessary, clean the throttle body. And check that the throttle valve moves smoothly.

OK:

Throttle valve is not contaminated with foreign objects and moves smoothly.

NG → REPLACE THROTTLE BODY ASSEMBLY (See page ES-503)

OK

3 CHECK WHETHER DTC OUTPUT RECURS (DTC P2111 OR P2112)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester on.
(d) Clear the DTCs (See page ES-45).
(e) Start the engine, and fully depress and release the accelerator pedal quickly (to fully open and close the throttle valve).
(f) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(g) Read the DTCs.

Result

Display (DTC Output)	Proceed to
No DTC	A
P2111 or P2112	B

B → REPLACE ECM (See page ES-518)

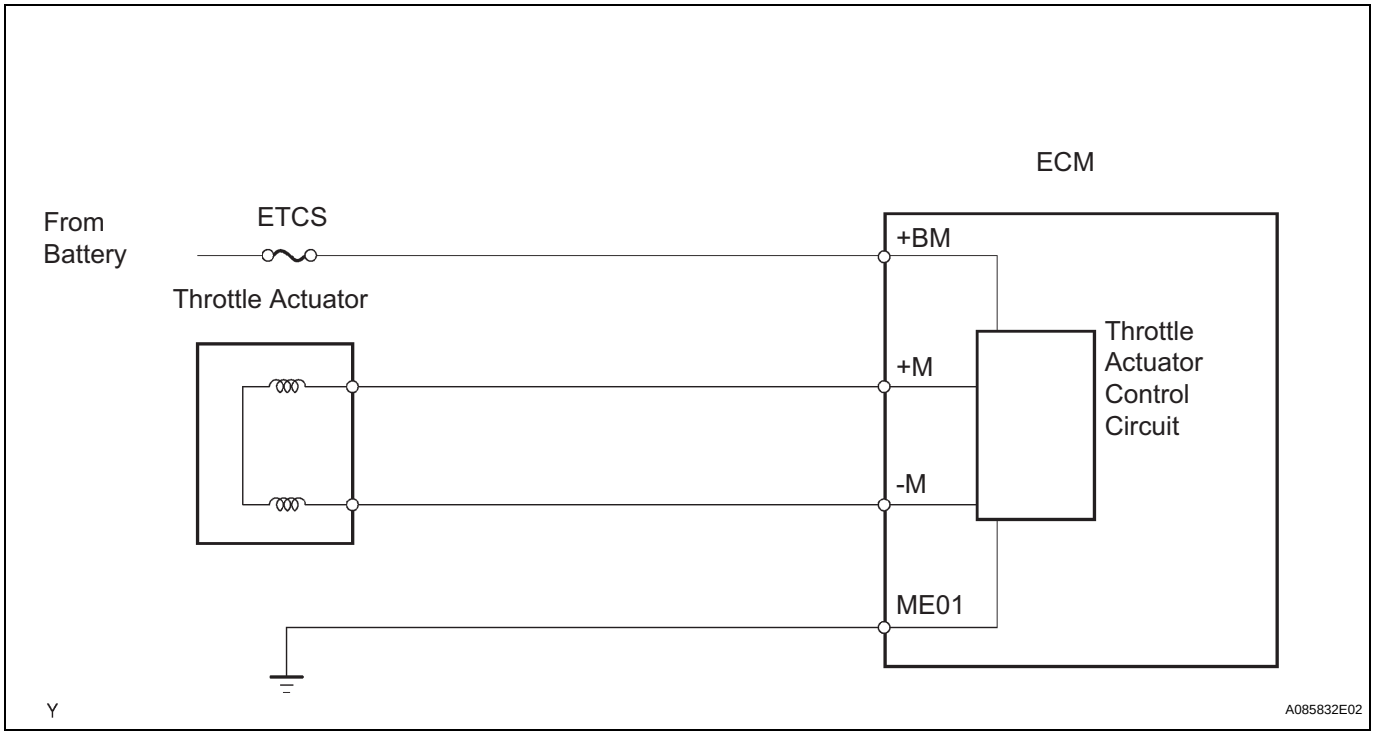
A

CHECK FOR INTERMITTENT PROBLEMS

DTC	P2118	Throttle Actuator Control Motor Current Range / Performance

DESCRIPTION

The ETCS (Electronic Throttle Control System) has a dedicated power supply circuit. When the monitored voltage (+BM) is low (less than 4 V), the ECM determines that there is a malfunction in the ETCS and cuts off the current to the throttle actuator.
When the voltage becomes unstable, the ETCS itself becomes unstable. For this reason, when the voltage is low, the current to the throttle actuator is cut. If repairs are made and the system returns to normal, turn the ignition switch off. The ECM then allows the current to flow to the throttle actuator so that it can be restarted.
HINT:
The ETCS does not use a throttle cable.



DTC No.	DTC Detection Condition	Trouble Area
P2118	Open in ETCS power source (+BM) circuit (1 trip detection logic)	• Open in ETCS power source circuit • ETCS fuse • ECM

MONITOR DESCRIPTION

The ECM monitors the battery supply voltage applied to the throttle actuator.
When the power supply voltage (+BM) drops below 4 V for 0.8 seconds or more, the ECM interprets this as an open in the power supply circuit (+BM). The ECM illuminates the MIL and sets the DTC.
If the malfunction is not repaired successfully, the DTC is set 5 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P2118: Throttle actuator power supply
Required Sensors/Components (Main)	Throttle actuator, throttle valve, ETCS fuse
Required Sensors/Components (Sub)	None
Frequency of Operation	Continuous
Duration	0.8 seconds

MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None
Battery voltage	8 V or more
Throttle actuator power	ON

TYPICAL MALFUNCTION THRESHOLDS

Throttle actuator power supply voltage (+BM)	Less than 4 V

ES

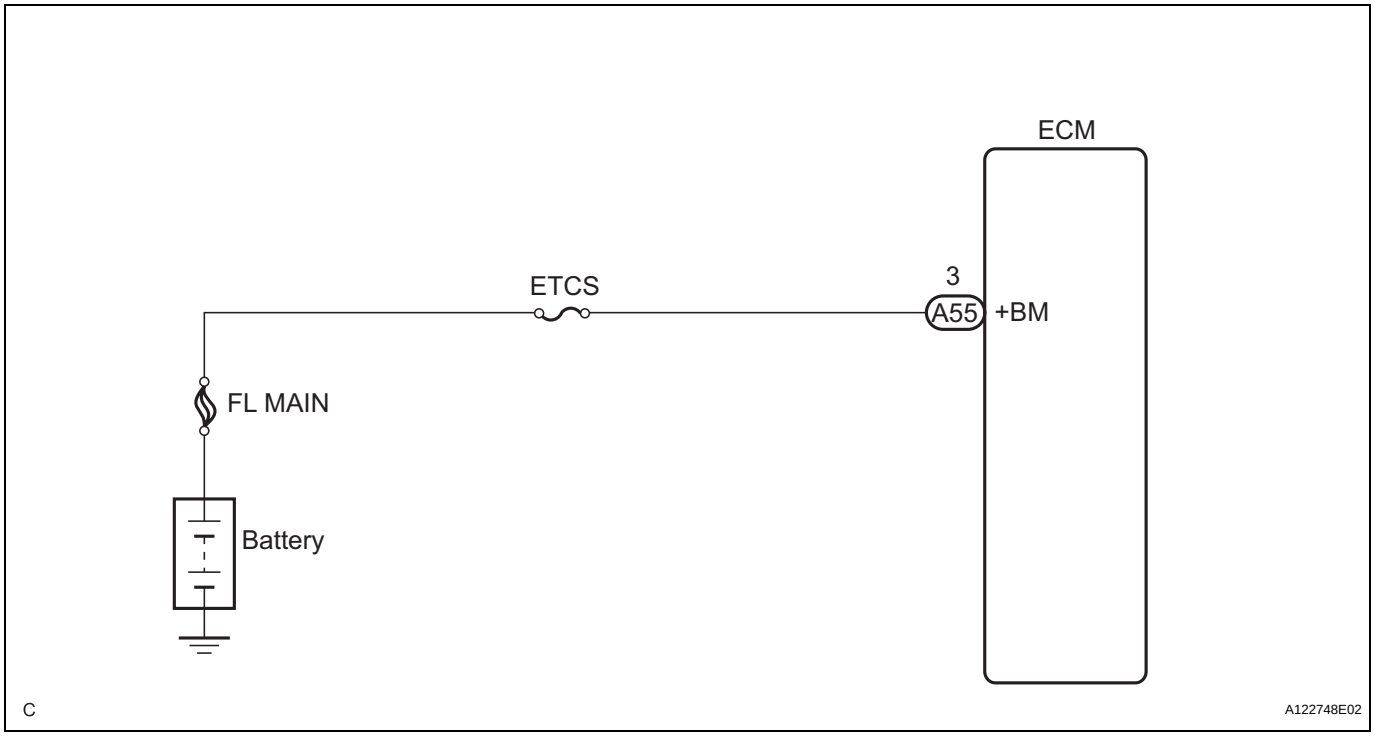
COMPONENT OPERATING RANGE

Throttle actuator power supply voltage	9 to 14 V

FAIL-SAFE

When this DTC, as well as other DTCs relating to ETCS (Electronic Throttle Control System) malfunctions, is set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator off, and the throttle valve is returned to a 6° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue running at a minimal speed. If the accelerator pedal is depressed firmly and gently, the vehicle can be driven slowly. Fail-safe mode continues until a pass condition is detected, and the ignition switch is then turned off.

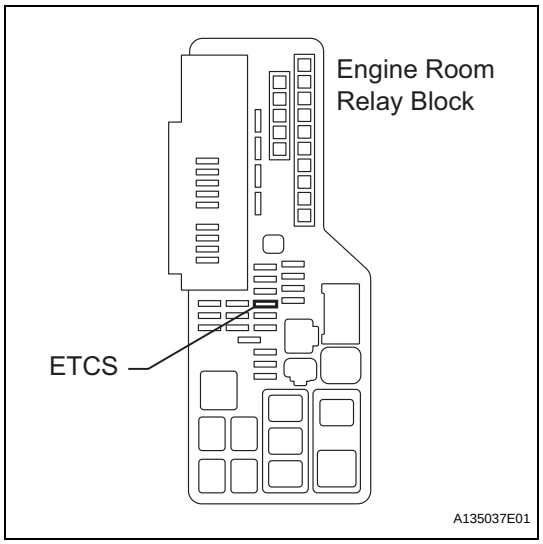
WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

1	CHECK FUSE (ETCS FUSE)

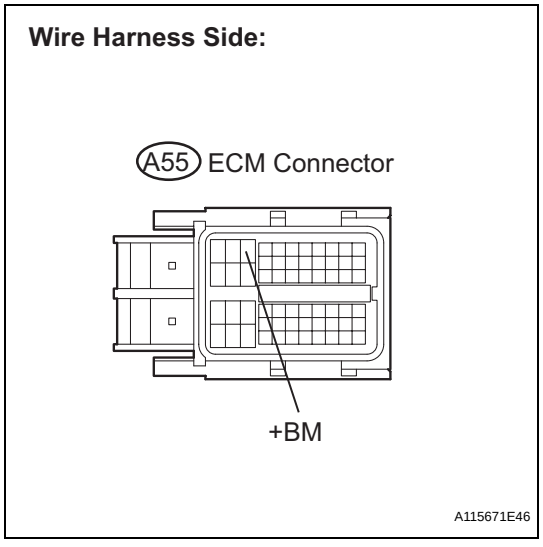


(a) Remove the ETCS fuse from the engine room R/B.
(b) Measure the resistance of the ETCS fuse.
Standard resistance:
Below 1 Ω
(c) Reinstall the ETCS fuse.

NG → **REPLACE ETCS FUSE**

OK

2	INSPECT ECM (+BM VOLTAGE)



(a) Disconnect the A55 ECM connector.
(b) Measure the voltage according to the value(s) in the table below.
Standard voltage

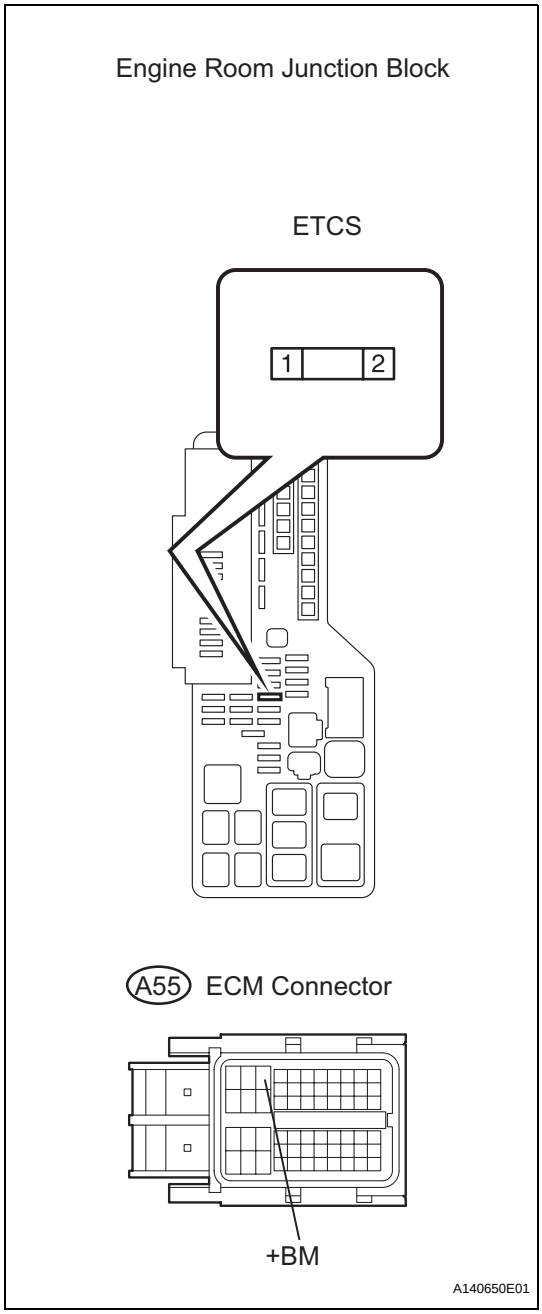
Tester Connection	Specified Condition
+BM (A55-3) - Body ground	9 to 14 V

(c) Reconnect the ECM connector.

OK → **CHECK FOR INTERMITTENT PROBLEMS**

NG

3	CHECK HARNESS AND CONNECTOR (ECM - ETCS FUSE, ETCS FUSE - BATTERY)



(a) Check the harness and connector between the ETCS fuse and ECM.
  (1) Remove the ETCS fuse from the engine room R/B.
  (2) Disconnect the A55 ECM connector.
  (3) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
Engine room R/B ETCS fuse terminal 2 - +BM (A55-3)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
Engine room R/B ETCS fuse terminal 2 or +BM (A55-3) - Body ground	10 kΩ or higher

  (4) Reinstall the ETCS fuse.
  (5) Reconnect the ECM connector.

(b) Check the harness and connector between the ETCS fuse and positive battery cable.
  (1) Remove the ETCS fuse from the engine room R/B.
  (2) Disconnect the negative battery terminal.
  (3) Disconnect the positive battery terminal.
  (4) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
Positive battery terminal - Engine room R/B ETCS fuse terminal 1	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
Positive battery terminal or Engine room R/B ETCS fuse terminal 1 - Body ground	10 kΩ or higher

  (5) Reinstall the ETCS fuse.
  (6) Reconnect the positive battery terminal.
  (7) Reconnect the negative battery terminal.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM (See page ES-518)

DTC	P2119	Throttle Actuator Control Throttle Body Range / Performance

SYSTEM DESCRIPTION

The Electronic Throttle Control System (ETCS) is composed of the throttle actuator, Throttle Position (TP) sensor, Accelerator Pedal Position (APP) sensor, and ECM. The ECM operates the throttle actuator to regulate the throttle valve in response to driver inputs. The TP sensor detects the opening angle of the throttle valve, and provides the ECM with feedback so that the throttle valve can be appropriately controlled by the ECM.

DTC No.	DTC Detection Condition	Trouble Area
P2119	Throttle valve opening angle continues to vary greatly from target opening angle (1 trip detection logic)	• ETCS • ECM

MONITOR DESCRIPTION

The ECM determines the actual opening angle of the throttle valve from the TP sensor signal. The actual opening angle is compared to the target opening angle commanded by the ECM. If the difference between these two values is outside the standard range, the ECM interprets this as a malfunction in the ETCS. The ECM then illuminates the MIL and sets the DTC.
If the malfunction is not repaired successfully, the DTC is set when the accelerator pedal is quickly released (to close the throttle valve) after the engine speed reaches 5,000 rpm by fully depressing the accelerator pedal (fully open the throttle valve).

MONITOR STRATEGY

Related DTCs	P2119: ETCS malfunction
Required Sensors/Components (Main)	Throttle actuator
Required Sensors/Components (Sub)	-
Frequency of Operation	Continuous
Duration	1 second
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None
System guard*	ON
*System guard set when following conditions are met:	-
Throttle actuator	ON
Throttle actuator duty calculation	Executing
TP sensor	Fail determined
Throttle actuator current-cut operation	Not executing
Throttle actuator power supply	4 V or more
Throttle actuator	Fail determined

TYPICAL MALFUNCTION THRESHOLDS

Either of following conditions A or B is met	-
A. Commanded closed TP - current closed TP	0.3 V or more for 1 second
B. Commanded open TP - current open TP	0.3 V or more for 0.6 seconds

FAIL-SAFE

When this DTC, as well as other DTCs relating to ETCS (Electronic Throttle Control System) malfunctions, is set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator off, and the throttle valve is returned to a 6° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue running at a minimal speed. If the accelerator pedal is depressed firmly and gently, the vehicle can be driven slowly. Fail-safe mode continues until a pass condition is detected, and the ignition switch is then turned off.

WIRING DIAGRAM

Refer to DTC P2102 (See page ES-322).

INSPECTION PROCEDURE

ES

HINT:

Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P2119)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester on.
(d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P2119	A
P2119 and other DTCs	B

HINT:

If any DTCs other than P2119 are output, troubleshoot those DTCs first.

B → GO TO DTC CHART (See page ES-63)

A

2	CHECK WHETHER DTC OUTPUT RECURS (DTC P2119)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester on.
(d) Clear the DTCs (See page ES-45).
(e) Allow the engine to idle for 15 seconds.

CAUTION:

Exercise extreme care and take precautions at procedure "A" and "B" below. Failure to do so may result in the vehicle unexpectedly rolling away.

(f) Securely apply the parking brake and move the gear selector lever to the D position (Procedure "A").
(g) While depressing the brake pedal securely, fully depress the accelerator pedal for 5 seconds (Procedure "B").
(h) On the tester, enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(i) Read the DTCs.
HINT:
The output voltage of the throttle position sensor can be checked during procedure "B" using the intelligent tester. Variations in the output voltage indicate that the throttle actuator is in operation. To check the output voltage using the intelligent tester, enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / THROTTLE POS #1.
OK:
No DTC output.

ES

NG → **REPLACE THROTTLE BODY ASSEMBLY (See page ES-503)**

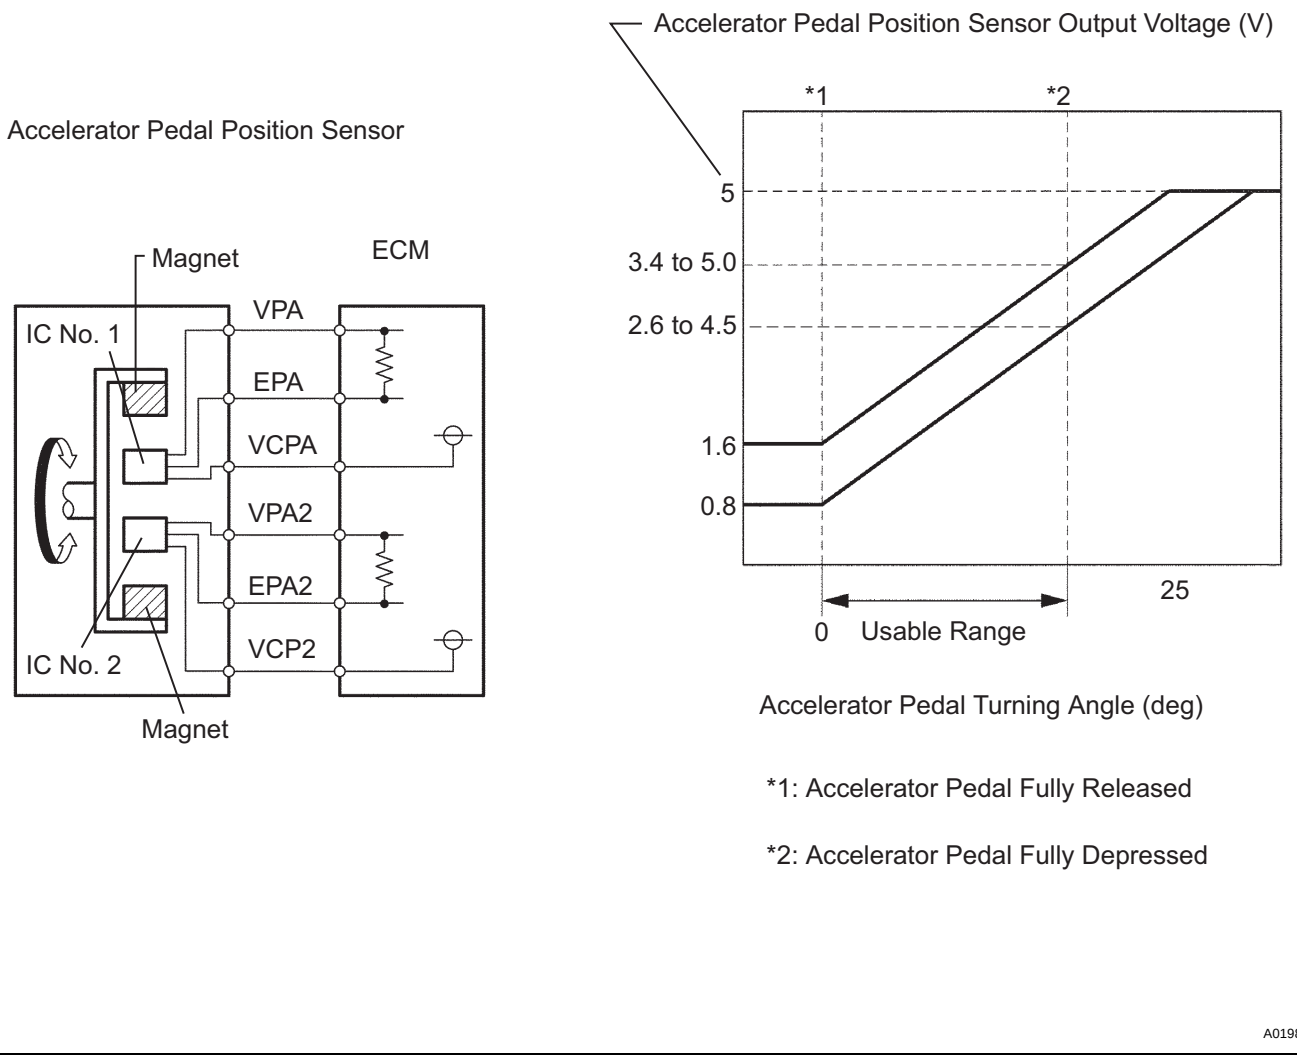
OK

END

DTC	P2120	Throttle / Pedal Position Sensor / Switch "D" Circuit
DTC	P2122	Throttle / Pedal Position Sensor / Switch "D" Circuit Low Input
DTC	P2123	Throttle / Pedal Position Sensor / Switch "D" Circuit High Input
DTC	P2125	Throttle / Pedal Position Sensor / Switch "E" Circuit
DTC	P2127	Throttle / Pedal Position Sensor / Switch "E" Circuit Low Input
DTC	P2128	Throttle / Pedal Position Sensor / Switch "E" Circuit High Input
DTC	P2138	Throttle / Pedal Position Sensor / Switch "D" / "E" Voltage Correlation

DESCRIPTION

This ETCS (Electronic Throttle Control System) does not use a throttle cable.
The Accelerator Pedal Position (APP) sensor is mounted on the accelerator pedal bracket and has 2 sensor circuits: VPA (main) and VPA2 (sub). This sensor is a non-contact type, and uses Hall-effect elements, in order to yield accurate signals, even in extreme driving conditions, such as at high speeds as well as very low speeds. The voltage, which is applied to terminals VPA and VPA2 of the ECM, varies between 0 V and 5 V in proportion to the operating angle of the accelerator pedal (throttle valve). A signal from VPA indicates the actual accelerator pedal opening angle (throttle valve opening angle) and is used for engine control. A signal from VPA2 conveys the status of the VPA circuit and is used to check the APP sensor itself.
The ECM monitors the actual accelerator pedal opening angle (throttle valve opening angle) through the signals from VPA and VPA2, and controls the throttle actuator according to these signals.



DTC No.	DTC Detection Condition	Trouble Area
P2120	VPA fluctuates rapidly beyond upper and lower malfunction thresholds for 0.5 seconds or more (1 trip detection logic)	• Accelerator Pedal Position (APP) sensor • ECM
P2122	VPA is 0.4 V or less for 0.5 seconds or more when accelerator pedal is fully released (1 trip detection logic)	• APP sensor • Open in VCP1 circuit • Open or ground short in VPA circuit • ECM
P2123	VPA is 4.8 V or more for 2.0 seconds or more (1 trip detection logic)	• APP sensor • Open in EPA circuit • ECM
P2125	VPA2 fluctuates rapidly beyond upper and lower malfunction thresholds for 0.5 seconds or more (1 trip detection logic)	• APP sensor • ECM
P2127	VPA2 is 1.2 V or less for 0.5 seconds or more when accelerator pedal is fully released (1 trip detection logic)	• APP sensor • Open in VCP2 circuit • Open or ground short in VPA2 circuit • ECM
P2128	Conditions (a) and (b) continue for 2.0 seconds or more (1 trip detection logic): (a) VPA2 is 4.8 V or more (b) VPA is between 0.4 V and 3.45 V	• APP sensor • Open in EPA2 circuit • ECM

DTC No.	DTC Detection Condition	Trouble Area
P2138	Condition (a) or (b) continues for 2.0 seconds or more (1 trip detection logic): (a) Difference between VPA and VPA2 is 0.02 V or less (b) VPA is 0.4 V or less and VPA2 1.2 V or less	• Short between VPA and VPA2 circuits • APP sensor • ECM

HINT:
When any of these DTCs are set, check the APP sensor voltage by entering the following menus on the intelligent tester: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / ACCEL POS #1 and ACCEL POS #2.

Trouble Areas	ACCEL POS #1 When AP Released	ACCEL POS #2 When AP Released	ACCEL POS #1 When AP Depressed	ACCEL POS #2 When AP Depressed
VCP circuit open	0 to 0.4 V	0 to 1.2 V	0 to 0.4 V	0 to 1.2 V
Open or ground short in VPA circuit	0 to 0.4 V	1.2 to 2.0 V	0 to 0.4 V	3.4 to 5.0 V
Open or ground short in VPA2 circuit	0.5 to 1.1 V	0 to 0.2 V	2.6 to 4.5 V	0 to 0.2 V
EPA circuit open	4.5 to 5.0 V	4.5 to 5.0 V	4.5 to 5.0 V	4.5 to 5.0 V
Normal condition	0.5 to 1.1 V	1.2 to 2.0 V	2.6 to 4.5 V	3.4 to 5.0 V

HINT:
- Accelerator pedal positions are expressed as voltages.
- AP denotes Accelerator Pedal.

MONITOR DESCRIPTION

When either of the output voltages of VPA or VPA2 deviates from the standard range, or the difference between the output voltages of the 2 sensor circuits is less than the threshold, the ECM determines that there is a malfunction in the APP sensor. The ECM then illuminates the MIL and sets a DTC.

Example:

When the output voltage of VPA drops below 0.4 V for more than 0.5 seconds when the accelerator pedal is fully depressed, DTC P2122 is set.

If the malfunction is not repaired successfully, a DTC is set 2 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P2120: Accelerator Pedal Position (APP) sensor 1 range check (fluctuating) P2122: APP sensor 1 range check (low voltage) P2123: APP sensor 1 range check (high voltage) P2125: APP sensor 2 range check (fluctuating) P2127: APP sensor 2 range check (low voltage) P2128: APP sensor 2 range check (high voltage) P2138: APP sensor range check (correlation)

Monitor runs whenever following DTCs are not present	None

TYPICAL MALFUNCTION THRESHOLDS

P2120:

One of the following conditions is met:	-
VPA voltage when VPA2 is 0.04 V or more	0.4 V or less
VPA voltage	4.8 V or more

P2122:

VPA voltage when VPA2 is 0.04 V or more	0.4 V or less

P2123:

VPA voltage	4.8 V or more

P2125:

One of the following conditions is met:	-
VPA2 voltage when VPA 0.04 V or more	1.2 V or less
VPA2 voltage when VPA 0.4 to 3.45 V	4.8 V or more

P2127:

VPA2 voltage when VPA is 0.04 V or more	1.2 V or less

P2128:

VPA2 voltage when VPA is 0.4 to 3.45 V	4.8 V or more

P2138:

Either of following conditions A or B is met:	-
Condition A	-
Difference between VPA and VPA 2 voltages	0.02 V or less
Condition B	-
VPA voltage	0.4 V or less
VPA2 voltage	1.2 V or less

COMPONENT OPERATING RANGE

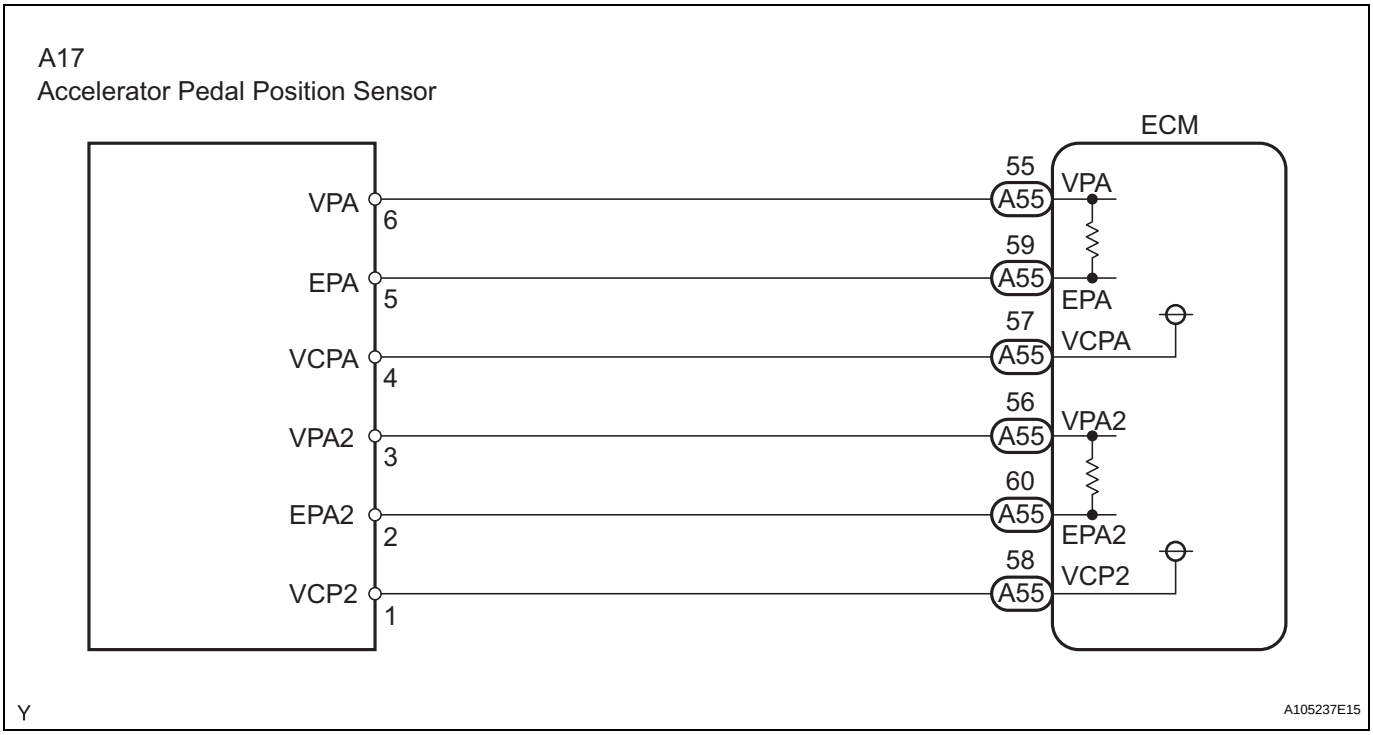
Parameter	Standard Value
VPA voltage	0.4 V to 4.8 V
VPA2 voltage	0.5 V to 4.8 V
Difference between VPA and VPA2 voltages	More than 0.02 V

FAIL-SAFE

When any of DTCs P2120, P2121, P2122, P2123, P2125, P2127, P2128 and P2138 are set, the ECM enters fail-safe mode. If either of the 2 sensor circuits malfunctions, the ECM uses the remaining circuit to calculate the accelerator pedal position to allow the vehicle to continue driving. If both of the circuits malfunction, the ECM regards the accelerator pedal as being released. As a result, the throttle valve is closed and the engine idles.

Fail-safe mode continues until a pass condition is detected, and the engine switch is then turned off.

WIRING DIAGRAM



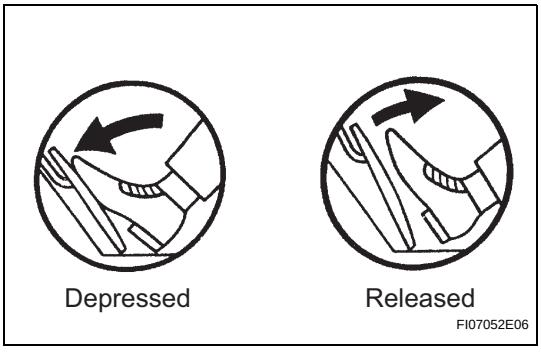
ES

INSPECTION PROCEDURE

HINT:

- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).
- These DTCs relate to the Accelerator Pedal Position (APP) sensor.

1	READ VALUE OF INTELLIGENT TESTER (ACCEL POS #1 AND ACCEL POS #2)



(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the tester on.
(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST / ALL / ACCEL POS #1 and ACCEL POS #2.
(d) Read the value displayed on the tester.

Standard voltage

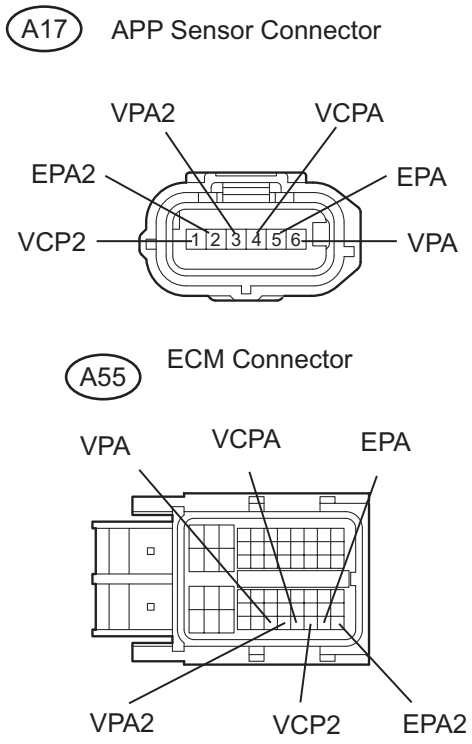
Accelerator Pedal Operations	ACCEL POS #1 (AP#1)	ACCEL POS #2 (AP#2)
Released	0.5 to 1.1 V	1.2 to 2.0 V
Depressed	2.6 to 4.5 V	3.4 to 5.0 V

OK → **Go to step 5**

NG

2 CHECK HARNESS AND CONNECTOR (ACCELERATOR PEDAL POSITION SENSOR - ECM)

Wire Harness Side Front View:



A115665E06

(a) Disconnect the A17 Accelerator Pedal Position (APP) sensor connector.
(b) Disconnect the A55 ECM connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
VPA (A17-6) - VPA (A55-55)	Below 1 Ω
EPA (A17-5) - EPA (A55-59)	Below 1 Ω
VCPA (A17-4) - VCPA (A55-57)	Below 1 Ω
VPA2 (A17-3) - VPA2 (A55-56)	Below 1 Ω
EPA2 (A17-2) - EPA2 (A55-60)	Below 1 Ω
VCP2 (A17-1) - VCP2 (A55-58)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
VPA (A17-6) or VPA (A55-55) - body ground	10 kΩ or higher
EPA (A17-5) or EPA (A55-59) - body ground	10 kΩ or higher
VCPA (A17-4) or VCPA (A55-57) - body ground	10 kΩ or higher
VPA2 (A17-3) or VPA2 (A55-56) - body ground	10 kΩ or higher
EPA2 (A17-2) or EPA2 (A55-60) - body ground	10 kΩ or higher
VCP2 (A17-1) or VCP2 (A55-58) - body ground	10 kΩ or higher

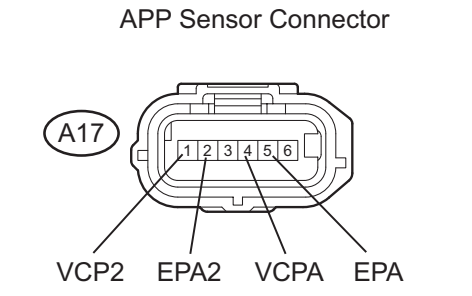
(d) Reconnect the APP sensor connector.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 INSPECT ACCELERATOR POSITION SENSOR (VCPA AND VCP2 VOLTAGE)

Wire Harness Side Front View:



A115666E08

(a) Disconnect the A17 APP sensor connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Specified Condition
VCPA (A17-4) - EPA (A17-5)	4.5 to 5.0 V
VCP2 (A17-1) - EPA2 (A17-2)	4.5 to 5.0 V

(d) Reconnect the APP sensor connector.

NG → **REPLACE ECM (See page ES-518)**

OK

4	REPLACE ACCELERATOR PEDAL ROD ASSEMBLY

NEXT

5	CHECK WHETHER DTC OUTPUT RECURS (ACCELERATOR PEDAL POSITION SENSOR DTCS)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the tester on.
(c) Clear the DTCs (See page ES-45).
(d) Start the engine.
(e) Allow the engine to idle for 15 seconds.
(f) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES
(g) Read the DTCs.

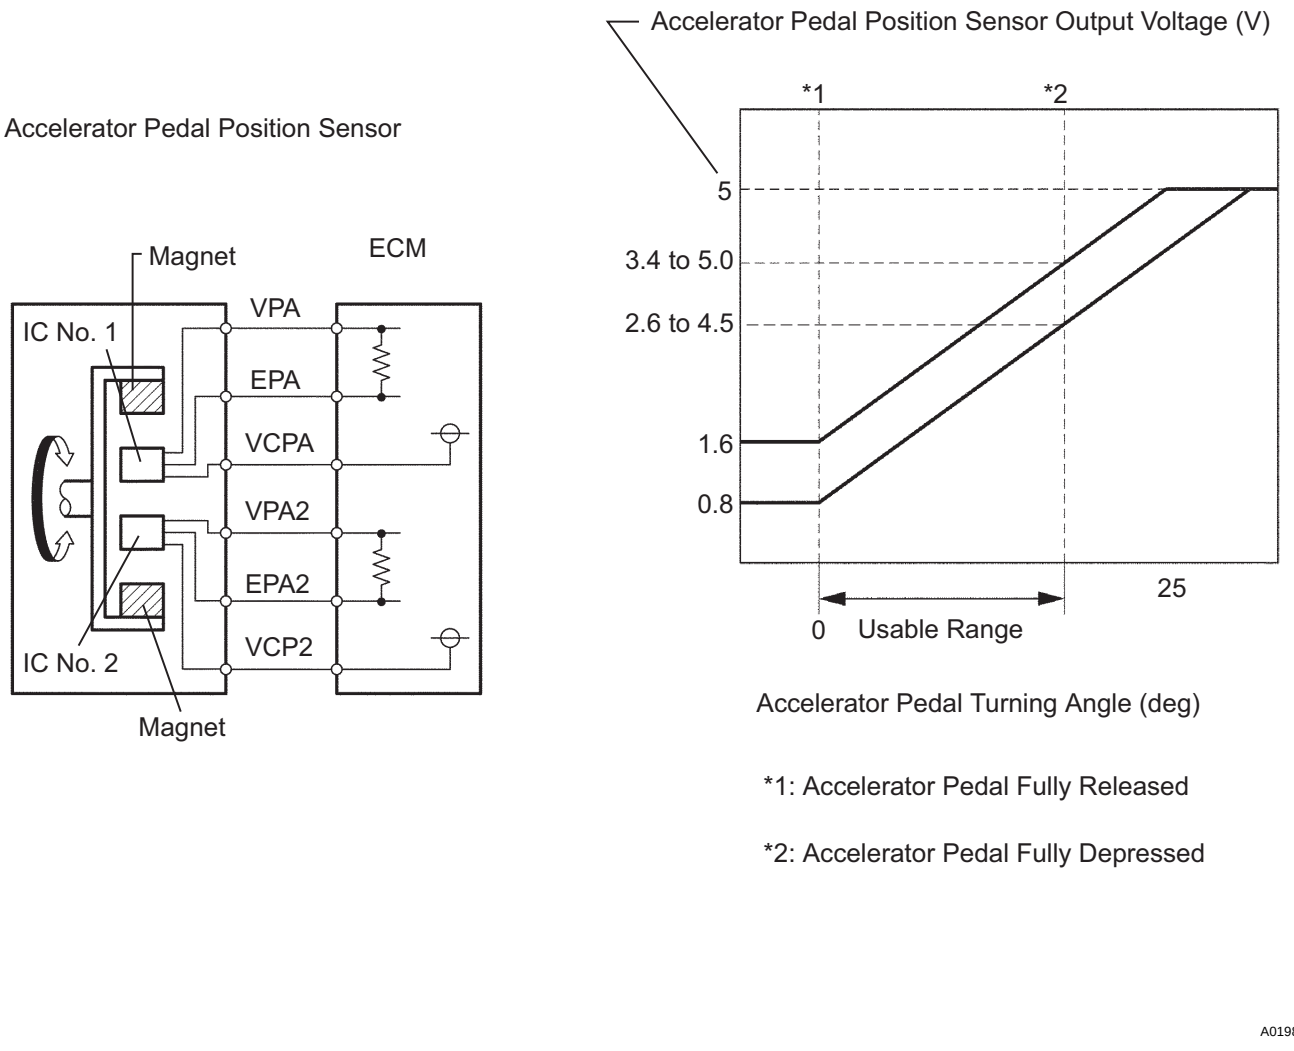
REPLACE ECM (See page ES-518)

DTC	P2121	Throttle / Pedal Position Sensor / Switch "D" Circuit Range / Performance

DESCRIPTION

This ETCS (Electronic Throttle Control System) does not use a throttle cable.
The Accelerator Pedal Position (APP) sensor is mounted on the accelerator pedal bracket and has 2 sensor circuits: VPA (main) and VPA2 (sub). This sensor is a non-contact type, and uses Hall-effect elements, in order to yield accurate signals, even in extreme driving conditions, such as at high speeds as well as very low speeds. The voltage, which is applied to terminals VPA and VPA2 of the ECM, varies between 0 V and 5 V in proportion to the operating angle of the accelerator pedal (throttle valve). A signal from VPA indicates the actual accelerator pedal opening angle (throttle valve opening angle) and is used for engine control. A signal from VPA2 conveys the status of the VPA circuit and is used to check the APP sensor itself.
The ECM monitors the actual accelerator pedal opening angle (throttle valve opening angle) through the signals from VPA and VPA2, and controls the throttle actuator according to these signals.

ES



DTC No.	DTC Detection Condition	Trouble Area
P2121	Difference between VPA and VPA2 is less than 0.4 V, or more than 1.2 V for 0.5 seconds (1 trip detection logic)	• Accelerator Pedal Position (APP) sensor • ECM

MONITOR DESCRIPTION

The accelerator pedal position sensor is mounted on the accelerator pedal bracket. The accelerator pedal position sensor has 2 sensor elements and 2 signal outputs: VPA and VPA2. VPA is used to detect the actual accelerator pedal angle (used for engine control) and VPA2 is used to detect malfunctions in VPA. When the difference between the output voltages of VPA and VPA2 deviates from the standard, the ECM determines that the accelerator pedal position sensor is a malfunctioning. The ECM turns on the MIL and the DTC is set.

MONITOR STRATEGY

Related DTCs	P2121: Accelerator pedal position (APP) sensor rationality
Required Sensors/Components (Main)	APP sensor
Required Sensors/Components (Sub)	-
Frequency of Operation	Continuous
Duration	0.5 seconds
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None

TYPICAL MALFUNCTION THRESHOLDS

Difference between VPA1 voltage (learned value) and VPA2 voltage (learned value)	Less than 0.4 V, or more than 1.2 V

FAIL-SAFE

The accelerator pedal position sensor has two (main and sub) sensor circuits. If a malfunction occurs in either of the sensor circuits, the ECM detects the abnormal signal voltage difference between the two sensor circuits and switches to limp mode. In limp mode, the functioning circuit is used to calculate the accelerator pedal opening angle to allow the vehicle to continue driving. If both circuits malfunction, the ECM regards the opening angle of the accelerator pedal as being fully closed. In this case, the throttle valve remains closed as if the engine is idling.
If a pass condition is detected and then the ignition switch is turned off, the fail-safe operation stops and the system returns to a normal condition.

WIRING DIAGRAM

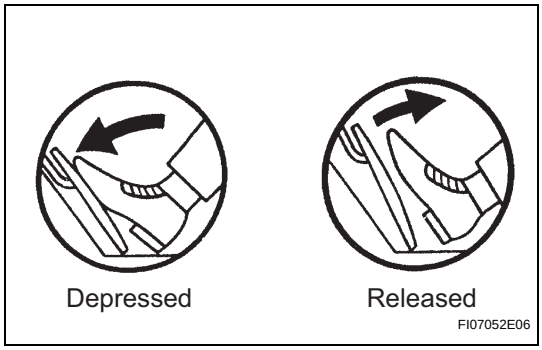
Refer to DTC P2120 (See page ES-338).

INSPECTION PROCEDURE

HINT:

- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).
- This DTC relates to the Accelerator Pedal Position (APP) sensor.

1	READ VALUE OF INTELLIGENT TESTER (ACCEL POS #1 AND ACCEL POS #2)



(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the tester on.
(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST / ALL / ACCEL POS #1 and ACCEL POS #2.
(d) Read the values displayed on the tester.

Standard voltage

Accelerator Pedal Operations	ACCEL POS #1 (AP#1)	ACCEL POS #2 (AP#2)
Released	0.5 to 1.1 V	1.2 to 2.0 V
Depressed	2.6 to 4.5 V	3.4 to 4.7 V

ES

OK → Go to step 3

REPLACE ECM (See page ES-518)

DTC	P2195	Oxygen (A/F) Sensor Signal Stuck Lean (Bank 1 Sensor 1)

DTC	P2196	Oxygen (A/F) Sensor Signal Stuck Rich (Bank 1 Sensor 1)

DTC	P2197	Oxygen (A/F) Sensor Signal Stuck Lean (Bank 2 Sensor 1)

DTC	P2198	Oxygen (A/F) Sensor Signal Stuck Rich (Bank 2 Sensor 1)

DESCRIPTION

HINT:

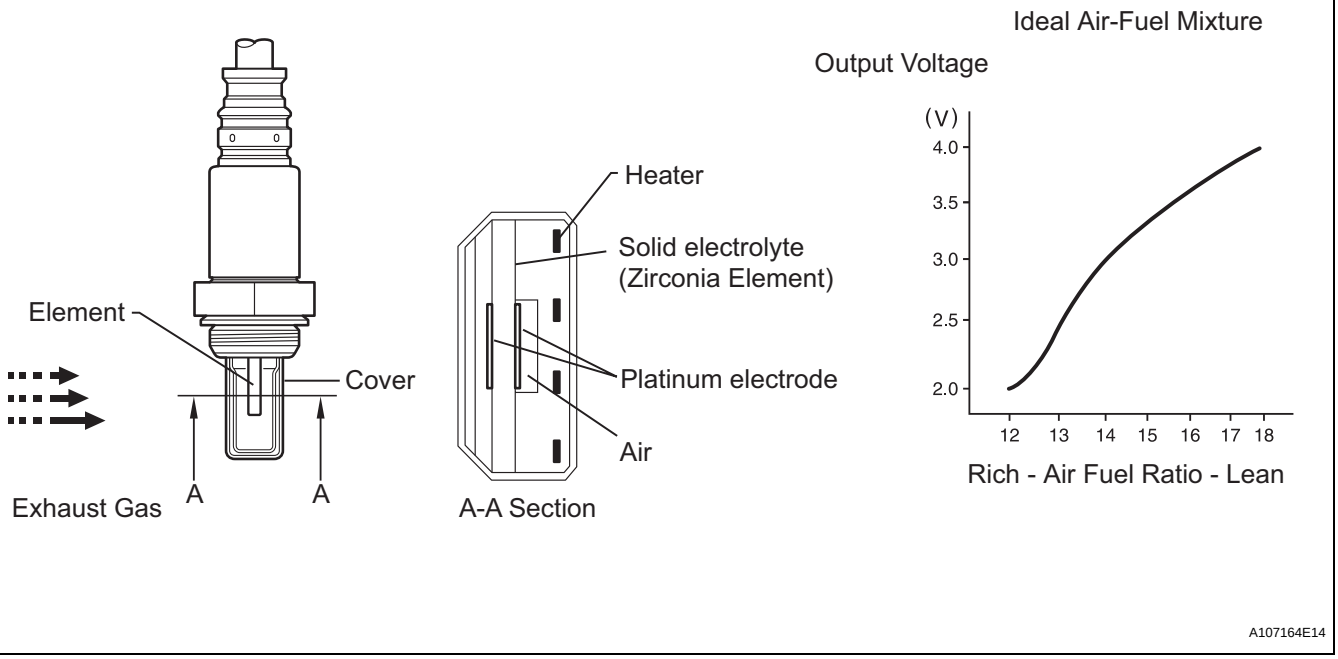
- Although the DTC titles include oxygen sensor, these DTCs relate to the Air-Fuel Ratio (A/F) sensor.
- Sensor 1 refers to the sensor mounted in front of the Three-Way Catalytic Converter (TWC) and located near the engine assembly.

The A/F sensor generates voltage* that corresponds to the actual air-fuel ratio. This sensor voltage is used to provide the ECM with feedback so that it can control the air-fuel ratio. The ECM determines the deviation from the stoichiometric air-fuel ratio level, and regulates the fuel injection time. If the A/F sensor malfunctions, the ECM is unable to control the air-fuel ratio accurately.

The A/F sensor is the planar type and is integrated with the heater, which heats the solid electrolyte (zirconia element). This heater is controlled by the ECM. When the intake air volume is low (the exhaust gas temperature is low), a current flows into the heater to heat the sensor, in order to facilitate accurate oxygen concentration detection. In addition, the sensor and heater portions are narrower than the conventional type. The heat generated by the heater is conducted to the solid electrolyte through the alumina, therefore the sensor activation is accelerated.

A three-way catalytic converter (TWC) is used in order to convert the carbon monoxide (CO), hydrocarbon (HC), and nitrogen oxide (NOx) into less harmful substances. To allow the TWC to function effectively, it is necessary to keep the air-fuel ratio of the engine near the stoichiometric air-fuel ratio.

*: Value changes inside the ECM. Since the A/F sensor is the current output element, a current is converted to a voltage inside the ECM. Any measurements taken at the A/F sensor or ECM connectors will show a constant voltage.



DTC No.	DTC Detection Condition	Trouble Area
P2195 P2197	Conditions (a) and (b) continue for 2 seconds or more (2 trip detection logic): (a) Air-Fuel Ratio (A/F) sensor voltage is more than 3.8 V (b) Heated Oxygen (HO2) sensor voltage is 0.15 V or more	• Open or short in A/F sensor (bank 1, 2 sensor 1) circuit • A/F sensor (bank 1, 2 sensor 1) • A/F sensor (bank 1, 2 sensor 1) heater • A/F sensor heater relay • A/F sensor heater and relay circuits • Air induction system • Injector • ECM
P2195 P2197	While fuel-cut operation is performed (during vehicle deceleration), air-fuel ratio (A/F) sensor current is 3.6 mA or more for 3 seconds (2 trip detection logic)	• A/F sensor • ECM
P2196 P2198	Conditions (a) and (b) continue for 2 seconds or more (2 trip detection logic): (a) A/F sensor voltage is less than 2.8 V (b) HO2 sensor voltage is less than 0.85 V	• Open or short in A/F sensor (bank 1, 2 sensor 1) circuit • A/F sensor (bank 1, 2 sensor 1) • A/F sensor (bank 1, 2 sensor 1) heater • A/F sensor heater relay • A/F sensor heater and relay circuits • Air induction system • Injector • ECM
P2196 P2198	While fuel-cut operation is performed (during vehicle deceleration), air-fuel ratio (A/F) sensor current is 1.4 mA for 3 seconds (2 trip detection logic)	• A/F sensor • ECM

HINT:

- DTCs P2195 and P2196 indicate malfunctions related to the bank 1 A/F sensor circuit.
- DTCs P2197 and P2198 indicate malfunctions related to the bank 2 A/F sensor circuit.
- Bank 1 refers to the bank that includes cylinder No. 1.
- Bank 2 refers to the bank that includes cylinder No. 2.
- When any of these DTCs are set, check the A/F sensor output voltage by entering the following menus on the intelligent tester: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / AFS B1S1.
- Short-term fuel trim values can also be read using an intelligent tester.
- The ECM regulates the voltages at the A1A+, A2A+, A1A- and A2A- terminals of the ECM to a constant level. Therefore, the A/F sensor output voltage cannot be confirmed without using the intelligent tester.

- If a A/F sensor malfunction is detected, the ECM sets a DTC.

MONITOR DESCRIPTION

Sensor voltage detection monitor

Under the air-fuel ratio feedback control, if the A/F sensor output voltage indicates rich or lean for a certain period of time, the ECM determines that there is a malfunction in the A/F sensor. The ECM illuminates the MIL and sets a DTC.

Example:

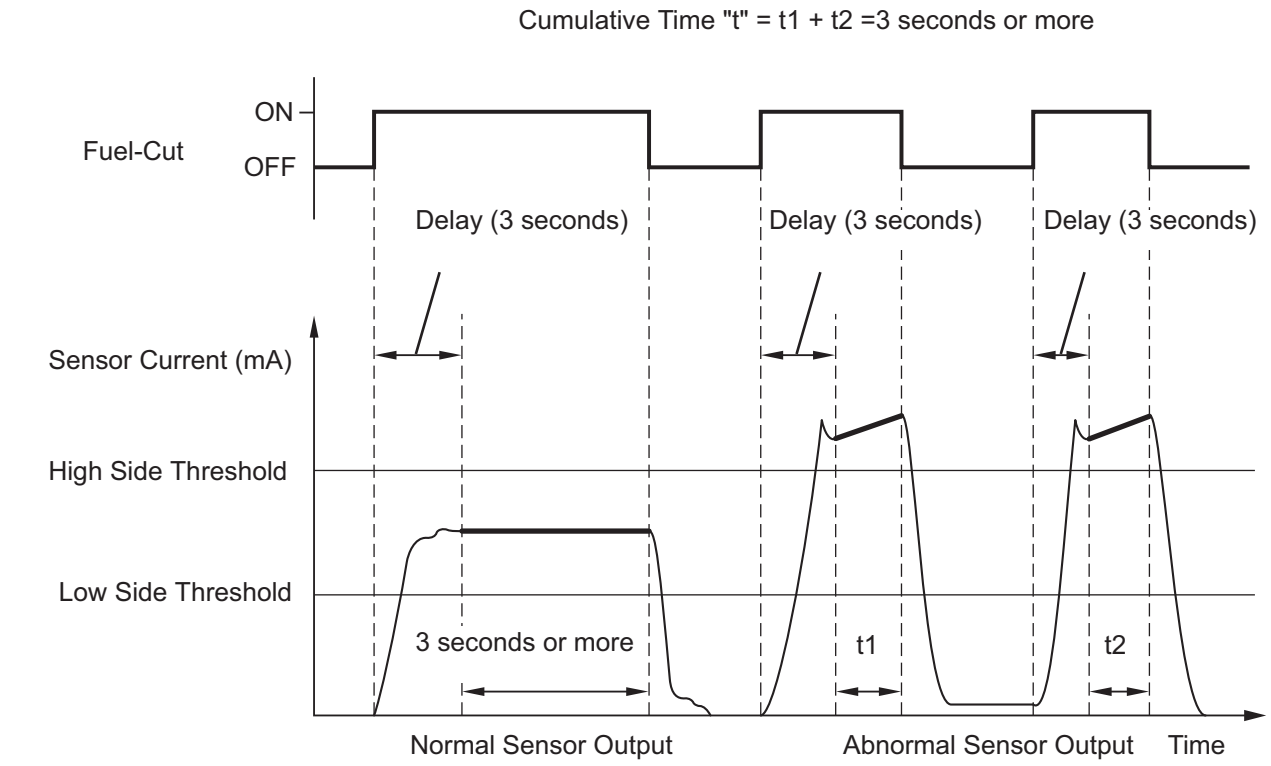
(1) If the A/F sensor voltage output is less than 2.8 V (very rich condition) for 10 seconds, despite the HO2 sensor output voltage being less than 0.6 V, the ECM sets DTC P2196. Alternatively, if the A/F sensor output voltage is more than 3.8 V (very lean condition) for 15 seconds, despite the HO2 sensor output voltage being 0.15 V or more, DTC P2195 is set.

(2) Sensor current detection monitor

(3) A rich air-fuel mixture causes a low A/F sensor current, and a lean air-fuel mixture causes a high A/F sensor current. Therefore, the sensor output becomes low during acceleration, and it becomes high during deceleration with the throttle valve fully closed. The ECM monitors the A/F sensor current during fuel-cut and detects any abnormal current values.

(4) If the A/F sensor output is 3.6 mA or more for more than 3 seconds of cumulative time, the ECM interprets this as a malfunction in the A/F sensor and sets DTC P2195 (high-side stuck). If the A/F sensor output is 1.0 mA or less for more than 3 seconds of cumulative time, the ECM sets DTC P2196 (low-side stuck).

Air Fuel Ratio Sensor Current Monitor



MONITOR STRATEGY

Related DTCs	P2195: A/F sensor (Bank 1) signal stuck lean P2196: A/F sensor (Bank 1) signal stuck rich P2197: A/F sensor (Bank 2) signal stuck lean P2198: A/F sensor (Bank 2) signal stuck rich

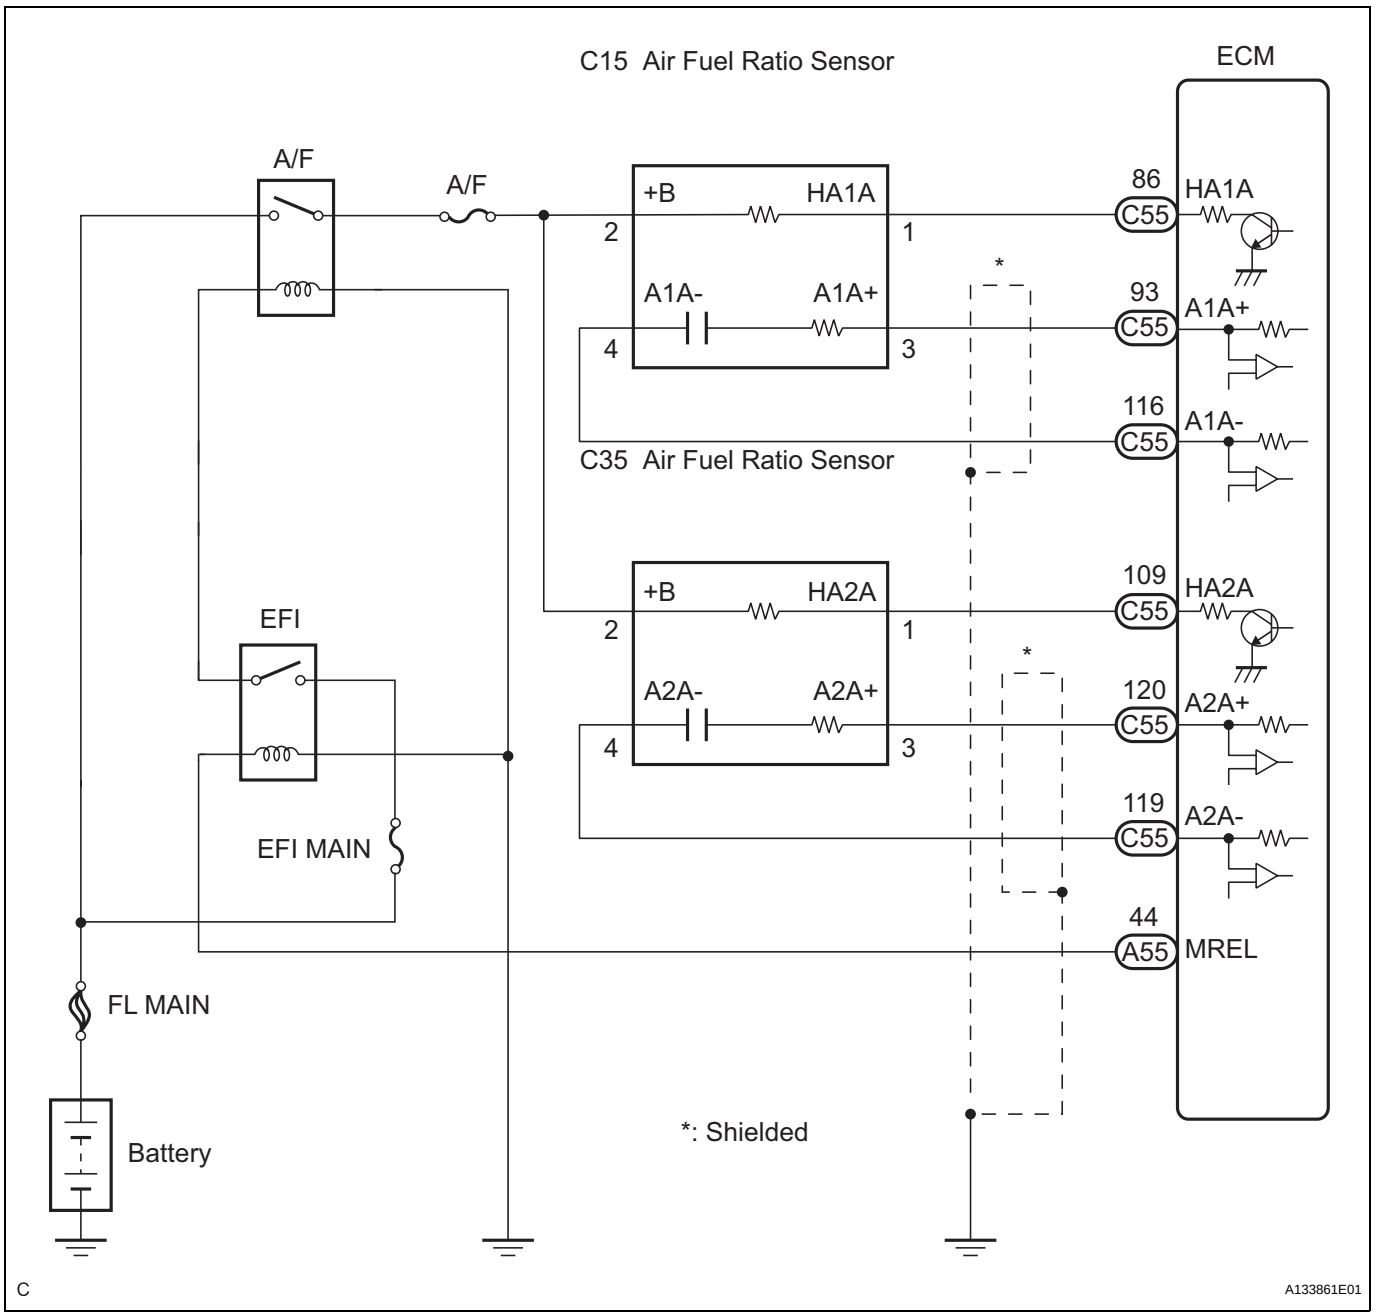
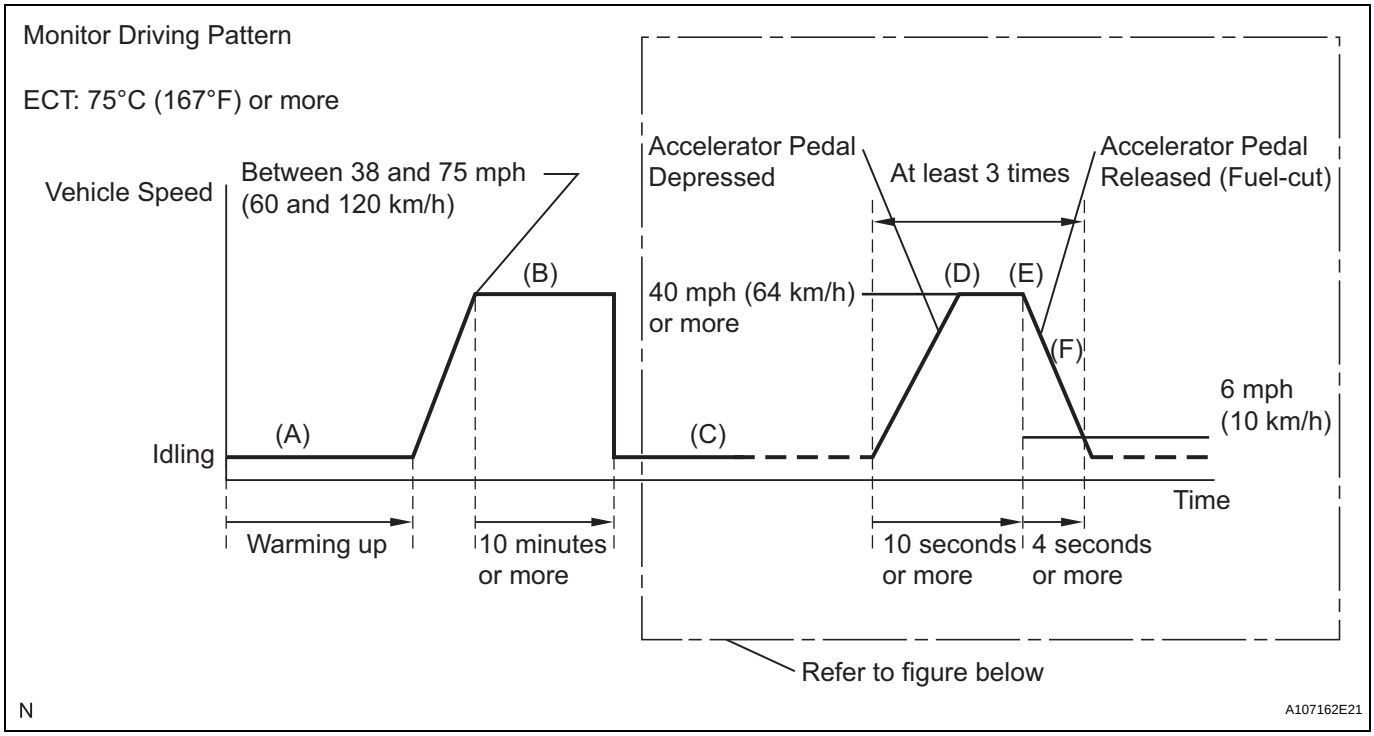
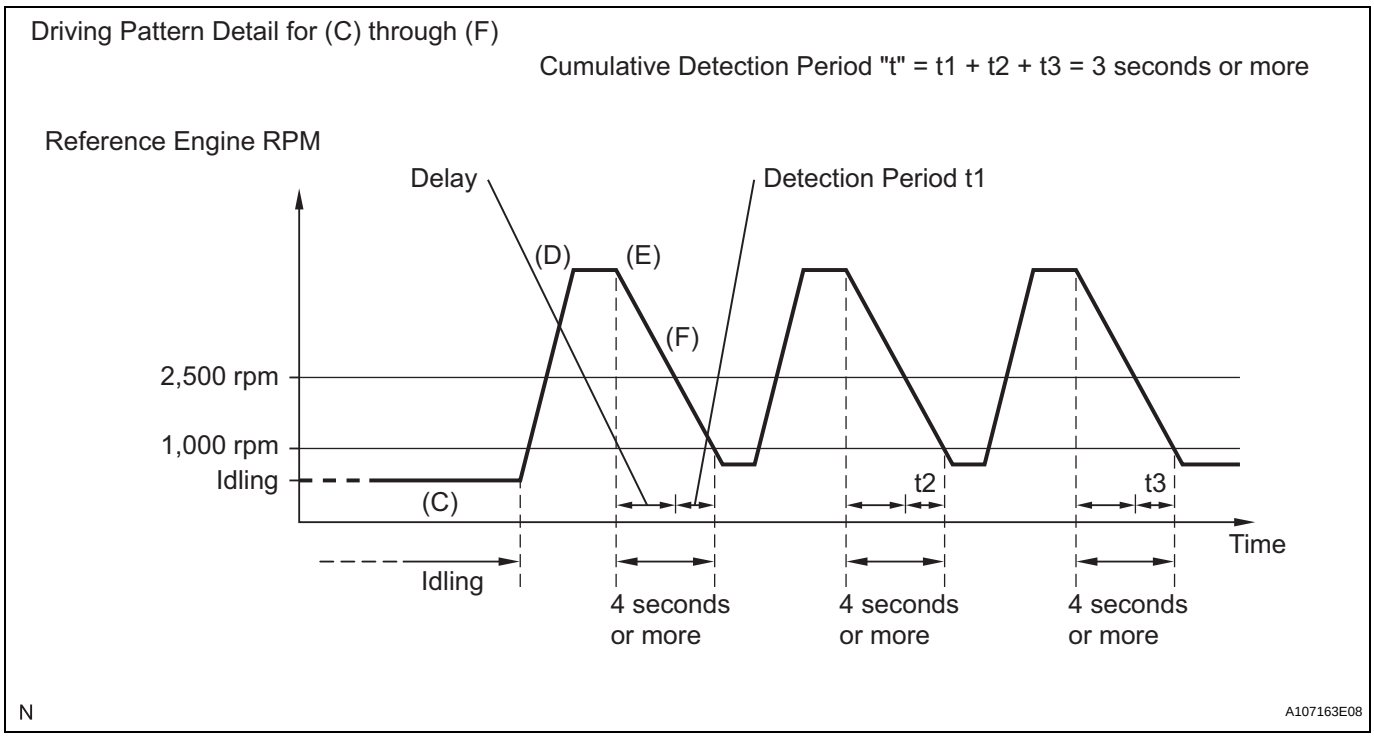
WIRING DIAGRAM



CONFIRMATION DRIVING PATTERN

This confirmation driving pattern is used in steps 2, 4, 7, 17 and 21 of the following diagnostic troubleshooting procedure when using an intelligent tester.





1. Connect an intelligent tester to the DLC3.
2. Turn the ignition switch on (IG).
3. Turn the tester on.
4. Clear the DTCs.
5. Start the engine, and warm it up until the ECT reaches 75°C (167°F) or higher (Procedure "A").
6. On the intelligent tester, enter the following menus to check the fuel-cut status: DIAGNOSIS / ENHANCED OBD II / DATA LIST / USER DATA / FC IDLE.
7. Drive the vehicle at between 38 mph (60 km/h) and 75 mph (120 km/h) for at least 10 minutes (Procedure "B").
8. Change the transmission to the 2nd gear (Procedure "C").

9. Drive the vehicle at a proper vehicle speed to perform fuel-cut operation (refer to the following HINT) (Procedure "D").
   HINT:
   Fuel-cut is performed when the following conditions are met:
   - Accelerator pedal is fully released.
   - Engine speed is 2,500 rpm or more (fuel injection resumes at 1,000 rpm).
10. Accelerate the vehicle to 40 rpm (64 km/h) or more by depressing the accelerator pedal for at least 10 seconds (Procedure "E").
11. Soon after performing procedure E above, release the accelerator pedal for at least 4 seconds without depressing the brake pedal, in order to execute fuel-cut control (Procedure "F").
12. Allow the vehicle to decelerate until the vehicle speed declines to less than 6 mph (10 km/h).
13. Repeat procedure from C through F above at least 3 times in one driving cycle.
    HINT:
    Completion of all A/F sensor monitors is required to change the value in TEST RESULT.
    CAUTION:
    Strictly observe posted speed limits, traffic laws, and road conditions when performing these drive patterns.

ES

INSPECTION PROCEDURE

HINT:
Malfunctioning areas can be identified by performing the A/F CONTROL function provided in the ACTIVE TEST. The A/F CONTROL function can help to determine whether the Air-fuel Ratio (A/F) sensor, Heated Oxygen (HO2) sensor and other potential trouble areas are malfunctioning.
The following instructions describe how to conduct the A/F CONTROL operation using the intelligent tester.

1. Connect the intelligent tester to the DLC3.
2. Start the engine and turn the tester on.
3. Warm up the engine at an engine speed of 2,500 rpm for approximately 90 seconds.
4. On the intelligent tester, enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL.
5. Perform the A/F CONTROL operation with the engine in an idling condition (press the RIGHT or LEFT button to change the fuel injection volume).
6. Monitor the output voltages of the A/F and HO2 sensors (AFS B1 S1 and O2S B1 S2 or AFS B2 S1 and O2S B2 S2) displayed on the tester.

HINT:
- The A/F CONTROL operation lowers the fuel injection volume by 12.5 % or increases the injection volume by 25 %.
- Each sensor reacts in accordance with increases in the fuel injection volume.

Tester Display (Sensor)	Injection Volume	Status	Voltage
AFS B1S1 or AFS B2S1 (A/F)	+25 %	Rich	Less than 3.0 V
AFS B1S1 or AFS B2S1 (A/F)	-12.5 %	Lean	More than 3.35 V
O2S B1S2 or O2S B2S2 (HO2)	+25 %	Rich	More than 0.55 V
O2S B1S2 or O2S B2S2 (HO2)	-12.5 %	Lean	Less than 0.4 V

NOTICE:
The Air-Fuel Ratio (A/F) sensor has an output delay of a few seconds and the HO2S (sensor 2) output has a maximum output delay of 20 seconds.

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Areas
1	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		-
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage More than 0.55 V Less than 0.4 V		
2	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• A/F sensor • A/F sensor heater • A/F sensor circuit
	Output Voltage Almost no reaction		Output Voltage More than 0.55 V Less than 0.4 V		
3	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• HO2 sensor • HO2 sensor heater • HO2 sensor circuit
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage Almost no reaction		
4	Injection volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• Fuel pressure • Gas leakage from exhaust system (Air-fuel ratio extremely lean or rich)
	Output Voltage Almost no reaction		Output Voltage Almost no reaction		

- Following the A/F CONTROL procedure enables technicians to check and graph the voltage outputs of both the A/F and HO2 sensors.
- To display the graph, enter the following menus on the tester: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL / USER DATA / AFS B1 S1 and O2S B 1S2 or AFS B2 S1 and O2S B2 S2 and press the YES button and then the ENTER button followed by the F4 button.

HINT:

- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).
- A low A/F sensor voltage could be caused by a rich air-fuel mixture. Check for conditions that would cause the engine to run rich.
- A high A/F sensor voltage could be caused by a lean air-fuel mixture. Check for conditions that would cause the engine to run lean.

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO P2195, P2196, 2197 OR P2198)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester on.
(d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P2195, P2196, P2197, or P2198	A
P2195, P2196, P2197, or P2198 and other DTCs	B

HINT:
If any DTCs other than P2195, P2196, P2197 or P2198 are output, troubleshoot those DTCs first.

B → **GO TO DTC CHART (See page ES-63)**

A

2	READ VALUE OF INTELLIGENT TESTER (TEST VALUE OF A/F SENSOR)

ES

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the tester on.
(c) Clear the DTCs.
(d) Allow the vehicle to drive in accordance with the driving pattern described in the CONFIRMATION DRIVING PATTERN.
(e) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / MONITOR INFO / MONITOR STATUS.
(f) Check the status of O2S MON is COMPL.
If the status is still INCMPL, drive the vehicle according to the driving pattern again.
HINT:
- AVAIL indicates that the component has not been monitored yet.
- COMPL indicates that the component is functioning normally.
- INCMPL indicates that the component is malfunctioning.

(g) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / MONITOR INFO / TEST RESULT / RANGE B1 S1, then press the ENTER button.
(h) Check the test value of the A/F sensor output current during fuel-cut.

Result

Test Value	Proceed to
Within normal range (1.4 mA or more, and less than 3.6 mA)	A
Outside normal range (Less than 1.4 mA, or 3.6 mA or more)	B

B → **Go to step 20**

A

3	READ VALUE OF INTELLIGENT TESTER (OUTPUT VOLTAGE OF A/F SENSOR)

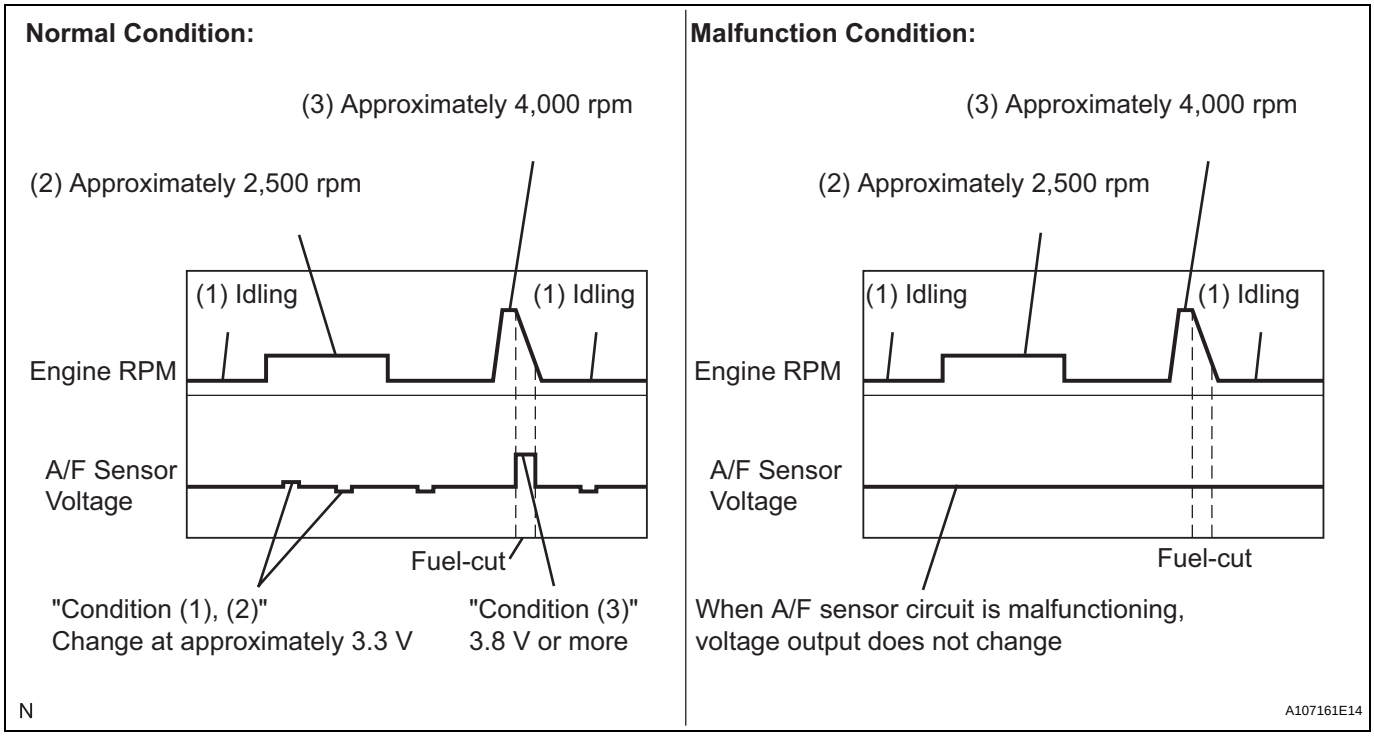
(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Turn the tester on.

(d) Warm up the Air-Fuel Ratio (A/F) sensor at an engine speed of 2,500 rpm for 90 seconds.
(e) On the tester, enter the following menus: DIAGNOSIS / ENHANCED OBD II / SNAPSHOT / MANUAL SNAPSHOT / USER DATA / AFS B1 S1 or AFS B2 S1 and ENGINE SPD.
(f) Check the A/F sensor voltage three times, when the engine is in each of the following conditions:
  (1) While idling (check for at least 30 seconds)
  (2) At an engine speed of approximately 2,500 rpm (without any sudden changes in engine speed)
  (3) Raise the engine speed to 4,000 rpm and then quickly release the accelerator pedal so that the throttle valve is fully closed.

Standard voltage

Condition	A/F Sensor Voltage Variation	Reference
(1) and (2)	Changes at approximately 3.3 V	Between 3.1 V and 3.5 V
(3)	Increases to 3.8 V or more	This occurs during engine deceleration (when fuel-cut performed)

HINT:
- For more information, see the diagrams below.



- If the output voltage of the A/F sensor remains at approximately 3.3 V (see Malfunction Condition diagram) under any conditions, including those above, the A/F sensor may have an open circuit. (this will also happen if the A/F sensor heater has an open circuit.)
- If the output voltage of the A/F sensor remains at either approximately 3.8 V or more, or 2.8 V or less (see Malfunction Condition diagram) under any conditions, including those above, the A/F sensor may have a short circuit.

- The ECM stops fuel injection (fuel cut) during engine deceleration. This causes a lean condition and results in a momentary increase in the A/F sensor output voltage.
- The ECM must establish a closed throttle valve position learning value to perform fuel cut. If the battery terminal has been reconnected, the vehicle must be driven over 10 mph (16 km/h) to allow the ECM terminal to be reconnected, the vehicle must be driven at over 10 mph (16 km/h) to allow the ECM to learn the closed throttle valve position.
- When the vehicle is driven:
  The output voltage of the A/F sensor may be below 2.8 V during fuel enrichment. For the vehicle, this translates to a sudden increase in speed with the accelerator pedal fully depressed when trying to overtake another vehicle. The A/F sensor is functioning normally.
- The A/F sensor is a current output element; therefore, the current is converted into a voltage inside the ECM. Measuring the voltage at the connectors of the A/F sensor or ECM will show a constant voltage result.

NG → **Go to step 10**

OK

4	PERFORM CONFIRMATION DRIVING PATTERN

NEXT

5	CHECK WHETHER DTC OUTPUT RECURS (DTC P2195, P2196, P2197 OR P2198)

(a) Read the DTCs using the intelligent tester.
(b) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.

Result

Display (DTC Output)	Proceed to
P2195, P2196, P2197, or P2198	A
No output	B

B → **Go to step 9**

A

6	REPLACE AIR FUEL RATIO SENSOR

(a) Replace the air fuel ratio sensor (See page EC-19).

NEXT

7	PERFORM CONFIRMATION DRIVING PATTERN

NEXT

8	CHECK WHETHER DTC OUTPUT RECURS (DTC P2195, P2196, P2197 OR P2198)

(a) Read the DTCs using the intelligent tester.
(b) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.

Result

Display (DTC Output)	Proceed to
No output	A
P2195, P2196, P2197, or P2198	B

B → REPLACE ECM (See page ES-518)

A

9	CONFIRM IF VEHICLE HAS RUN OUT OF FUEL IN PAST

(a) Has the vehicle run out of fuel in the past?

NO → CHECK FOR INTERMITTENT PROBLEMS

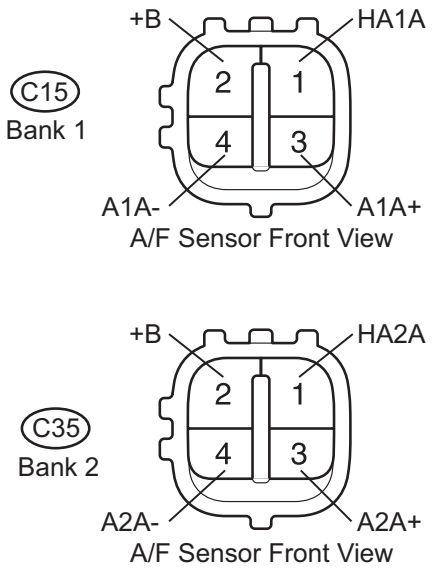
YES

DTC CAUSED BY RUNNING OUT OF FUEL

ES

10	INSPECT AIR FUEL RATIO SENSOR (HEATER RESISTANCE)

Component Side:



A126269E11

(a) Disconnect the C15 or C35 A/F sensor connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance (Bank 1 sensor 1)

Tester Connection	Condition	Specified Condition
HA1A (1) - +B (2)	20°C (68°F)	1.8 Ω to 3.4 Ω
HA1A (1) - A1A- (4)	Always	10 kΩ or higher

Standard resistance (Bank 2 sensor 1)

Tester Connection	Condition	Specified Condition
HA2A (1) - +B (2)	20°C (68°F)	1.8 Ω to 3.4 Ω
HA2A (1) - A2A- (4)	Always	10 kΩ or higher

(c) Reconnect the A/F sensor connector.

NG → **REPLACE AIR FUEL RATIO SENSOR (See page EC-19)**

OK

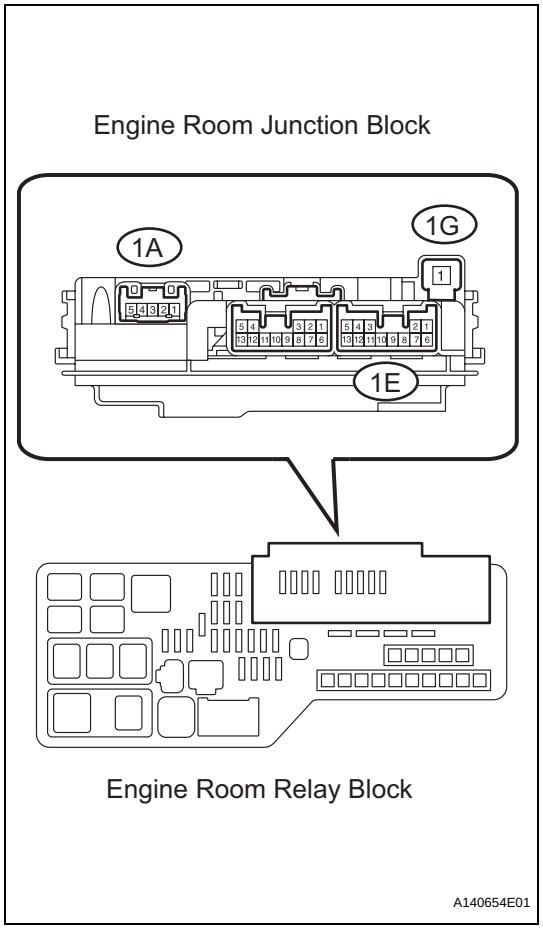
11	INSPECT FUSE (A/F FUSE)

(a) Remove the A/F fuse from the integration relay.
(b) Measure the A/F fuse resistance.
Standard resistance:
Below 1 Ω
(c) Reinstall the A/F fuse.

NG → **REPLACE A/F FUSE**

OK

12	INSPECT ENGINE ROOM JUNCTION BLOCK (A/F RELAY)



(a) Remove the engine room junction block from the engine room R/B.

(b) Inspect the A/F relay.

(1) Measure the A/F relay resistance.

Standard resistance

Tester Connection	Specified Condition
1G-1 - 1A-4	10 kΩ or higher
1G-1 - 1A-4	Below 1 Ω (Apply battery voltage between terminals 1E-9 and 1E-10)

(c) Reinstall the engine room junction block.

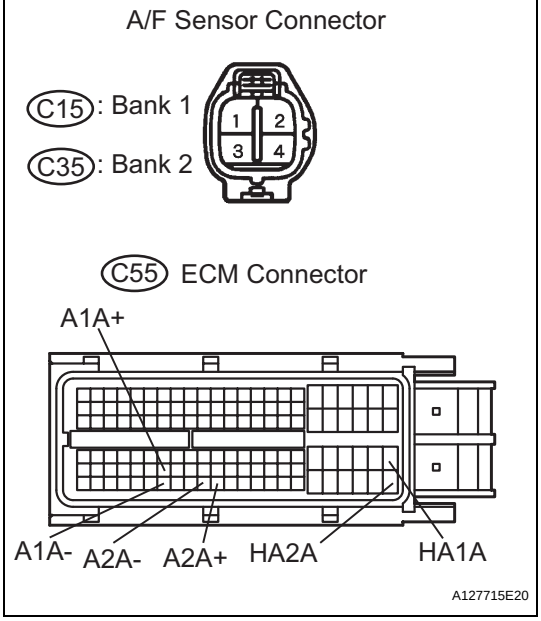
NG → **REPLACE ENGINE ROOM JUNCTION BLOCK**

OK

ES

13	CHECK HARNESS AND CONNECTOR (A/F SENSOR - ECM)

Wire Harness Side:



(a) Disconnect the C15 and C35 A/F sensor connectors.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Specified Condition
+B (C15-2) - Body ground	9 to 14 V
+B (C35-2) - Body ground	9 to 14 V

(d) Turn the ignition switch off.
(e) Disconnect the C55 ECM connector.
(f) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
HA1A (C15-1) - HA1A (C55-86)	Below 1 Ω
A1A+ (C15-3) - A1A+ (C55-93)	Below 1 Ω
A1A- (C15-4) - A1A- (C55-116)	Below 1 Ω
HA2A (C35-1) - HA2A (C55-109)	Below 1 Ω
A2A+ (C35-3) - A2A+ (C55-120)	Below 1 Ω
A2A- (C35-4) - A2A- (C55-119)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
HA1A (C15-1) or HA1A (C55-86) - Body ground	10 kΩ or higher
A1A+ (C15-3) or A1A+ (C55-93) - Body ground	10 kΩ or higher
A1A- (C15-4) or A1A- (C55-116) - Body ground	10 kΩ or higher
HA2A (C35-1) or HA2A (C55-109) - Body ground	10 kΩ or higher
A2A+ (C35-3) or A2A+ (C55-120) - Body ground	10 kΩ or higher
A2A- (C35-4) or A2A- (C55-119) - Body ground	10 kΩ or higher

(g) Reconnect the ECM connector.
(h) Reconnect the A/F sensor connector.

DESCRIPTION

HINT:

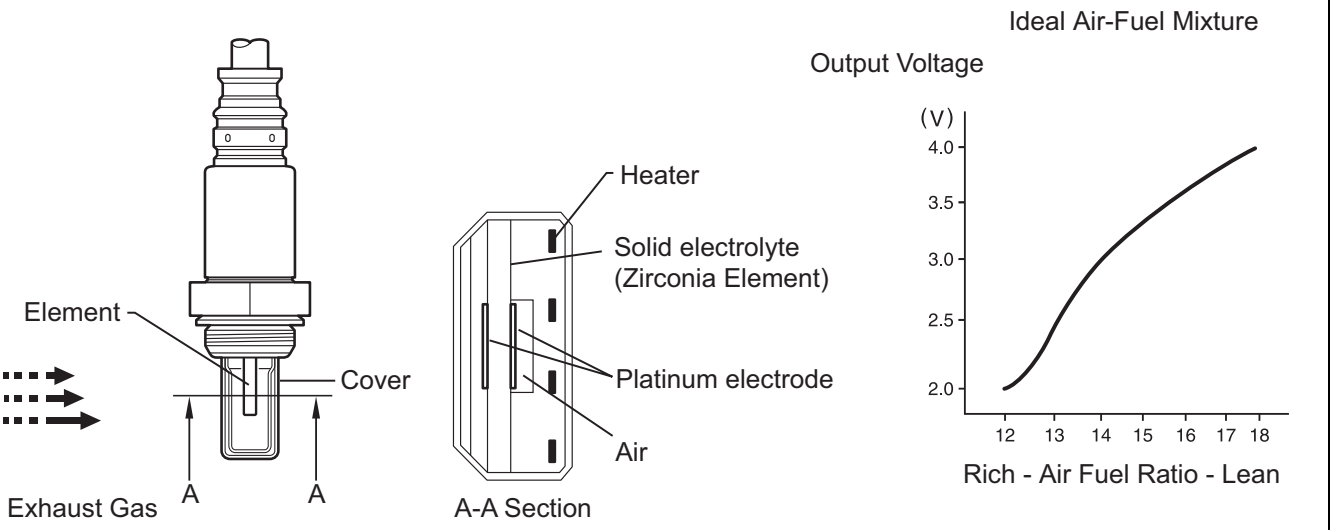
- Although the DTC titles include oxygen sensor, these DTCs relate to the Air-Fuel Ratio (A/F) sensor.
- Sensor 1 refers to the sensor mounted in front of the Three-Way Catalytic Converter (TWC) and located near the engine assembly.

The A/F sensor generates voltage* that corresponds to the actual air-fuel ratio. This sensor voltage is used to provide the ECM with feedback so that it can control the air-fuel ratio. The ECM determines the deviation from the stoichiometric air-fuel ratio level, and regulates the fuel injection time. If the A/F sensor malfunctions, the ECM is unable to control the air-fuel ratio accurately.

The A/F sensor is the planar type and is integrated with the heater, which heats the solid electrolyte (zirconia element). This heater is controlled by the ECM. When the intake air volume is low (the exhaust gas temperature is low), a current flows into the heater to heat the sensor, in order to facilitate accurate oxygen concentration detection. In addition, the sensor and heater portions are narrower than the conventional type. The heat generated by the heater is conducted to the solid electrolyte through the alumina, therefore the sensor activation is accelerated.

A three-way catalytic converter (TWC) is used in order to convert the carbon monoxide (CO), hydrocarbon (HC), and nitrogen oxide (NOx) into less harmful substances. To allow the TWC to function effectively, it is necessary to keep the air-fuel ratio of the engine near the stoichiometric air-fuel ratio.

*: Value changes inside the ECM. Since the A/F sensor is the current output element, a current is converted to a voltage inside the ECM. Any measurements taken at the A/F sensor or ECM connectors will show a constant voltage.



DTC No.	DTC Detection Condition	Trouble Area
P2238 P2241	• Case 1: Condition (a) or (b) continues for 5.0 seconds or more (1 trip detection logic): (a) AF+ voltage is 0.5 V or less (b) (AF+) - (AF-) = 0.1 V or less • Case 2: A/F sensor admittance: Less than 0.022 1/Ω (2 trip detection logic)	• Open or short in A/F sensor (bank 1, 2 sensor 1) circuit • A/F sensor (bank 1, 2 sensor 1) • A/F sensor heater • A/F sensor heater relay • A/F sensor heater and relay circuits • ECM
P2239 P2242	AF+ voltage is more than 4.5 V for 5.0 seconds or more (2 trip detection logic)	• Open or short in A/F sensor (bank 1, 2 sensor 1) circuit • A/F sensor (bank 1, 2 sensor 1) • A/F sensor heater • A/F sensor heater relay • A/F sensor heater and relay circuits • ECM
P2252 P2255	AF- voltage is 0.5 V or less for 5.0 seconds or more (2 trip detection logic)	• Open or short in A/F sensor (bank 1, 2 sensor 1) circuit • A/F sensor (bank 1, 2 sensor 1) • A/F sensor heater • A/F sensor heater relay • A/F sensor heater and relay circuits • ECM
P2253 P2256	AF- voltage is more than 4.5 V for 5.0 seconds or more (2 trip detection logic)	• Open or short in A/F sensor (bank 1, 2 sensor 1) circuit • A/F sensor (bank 1, 2 sensor 1) • A/F sensor heater • A/F sensor heater relay • A/F sensor heater and relay circuits • ECM

HINT:

- DTCs P2238, P2239, P2252 and P2253 indicate malfunctions related to the bank 1 A/F sensor circuit.
- DTCs P2241, P2242, P2255 and P2256 indicate malfunctions related to the bank 2 A/F sensor circuit.
- Bank 1 refers to the bank that includes cylinder No. 1.
- Bank 2 refers to the bank that includes cylinder No. 2.

MONITOR DESCRIPTION

The Air-Fuel Ratio (A/F) sensor varies its output voltage in proportion to the air-fuel ratio. If the A/F sensor impedance (alternating current resistance) or output voltage deviates greatly from the standard range, the ECM determines that there is an open or short malfunction in the A/F sensor circuit.

MONITOR STRATEGY

Related DTCs	P2238: A/F sensor (Bank 1) open circuit between AF+ and AF- P2238: A/F sensor (Bank 1) short circuit between AF+ and AF- P2238: A/F sensor (Bank 1) short circuit between AF+ and GND P2239: A/F sensor (Bank 1) short circuit between AF+ and +B P2241: A/F sensor (Bank 2) open circuit between AF+ and AF- P2241: A/F sensor (Bank 2) short circuit between AF+ and AF- P2241: A/F sensor (Bank 2) short circuit between AF+ and GND P2242: A/F sensor (Bank 2) short circuit between AF+ and +B P2252: A/F sensor (Bank 1) short circuit between AF- and GND P2253: A/F sensor (Bank 1) short circuit between AF- and +B P2255: A/F sensor (Bank 2) short circuit between AF- and GND P2256: A/F sensor (Bank 2) short circuit between AF- and +B
Required Sensors/Components (Main)	A/F sensor
Required Sensors/Components (Sub)	Engine Coolant Temperature (ECT) sensor, Crankshaft position sensor
Frequency of Operation	Once per driving cycle
Duration	10 seconds
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	P0031, P0032, P0051, P0052 (A/F sensor heater - Sensor 1) P0100 - P0103 (MAF meter) P0110 - P0113 (IAT sensor) P0115 - P0118 (ECT sensor) P0120 - P0223, P2135 (TP sensor) P0125 (Insufficient ECT for Closed Loop) P0171, P0172 (Fuel system) P0300 - P0308 (Misfire) P0335 (CKP sensor) P0500 (VSS)

P2238 and P2241 (open circuit between AF+ and AF-):

AF+ terminal voltage	0.5 to 4.5 V
AF- terminal voltage	0.5 to 4.5 V
Difference between AF+ and AF- terminal voltages	0.1 to 0.8 V
ECT	5°C (41°F) or more (Varies with ECT at engine start)
Engine condition	Running
Fuel-cut	OFF
Time after engine start	10 seconds or more
A/F sensor heater duty-cycle	ON
Time after A/F sensor heating	5 seconds or more
Battery voltage	11 V or more
Ignition switch	ON

Others:

Battery voltage	10.5 V or more
Ignition switch	ON

TYPICAL MALFUNCTION THRESHOLDS

P2238 and P2241 (Open circuit between AF+ and AF-):

A/F sensor admittance	Below 0.022 1/Ω

P2238 and P2241 (Short circuit between AF+ and GND):

AF+ terminal voltage	0.5 V or less

P2238 and P2241 (Short circuit between AF+ and AF-):

Difference between AF+ and AF- terminal voltages	0.1 v or less

P2239 and P2242 (Short circuit between AF+ and +B):

AF+ terminal voltage	More than 4.5 V

P2252 and P2255 (Short circuit between AF- and GND):

AF- terminal voltage	0.5 V or less

P2253 and P2256 (Short circuit between AF- and +B):

AF- terminal voltage	More than 4.5 V

ES

WIRING DIAGRAM

Refer to DTC P2195 (See page ES-350).

INSPECTION PROCEDURE

HINT:

Intelligent tester only:

Malfunctioning areas can be identified by performing the A/F CONTROL function provided in the ACTIVE TEST. The A/F CONTROL function can help to determine whether the Air-Fuel Ratio (A/F) sensor, Heated Oxygen (HO2) sensor and other potential trouble areas are malfunctioning.

The following instructions describe how to conduct the A/F CONTROL operation using the intelligent tester.

1. Connect the intelligent tester to the DLC3.
2. Start the engine and turn the tester on.
3. Warm up the engine at an engine speed of 2,500 rpm for approximately 90 seconds.
4. On the tester, enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL.
5. Perform the A/F CONTROL operation with the engine in an idling condition (press the RIGHT or LEFT button to change the fuel injection volume).
6. Monitor the output voltages of the A/F and HO2 sensors (AFS B1 S1 and O2S B1 S2 or AFS B2 S1 and O2S B2 S2) displayed on the tester.

HINT:

- The A/F CONTROL operation lowers the fuel injection volume by 12.5 % or increases the injection volume by 25 %.
- Each sensor reacts in accordance with increases and decreases in the fuel injection volume.

Tester Display (Sensor)	Injection Volume	Status	Voltage
AFS B1S1 or AFS B2S1 (A/F)	+25 %	Rich	Less than 3.0 V
AFS B1S1 or AFS B2S1 (A/F)	-12.5 %	Lean	More than 3.35 V
O2S B1S2 or O2S B2S2 (HO2)	+25 %	Rich	More than 0.55 V
O2S B1S2 or O2S B2S2 (HO2)	-12.5 %	Lean	Less than 0.4 V

NOTICE:
The Air-Fuel Ratio (A/F) sensor has an output delay of a few seconds and the Heated Oxygen (HO2) sensor has a maximum output delay of approximately 20 seconds.

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Areas
1	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		-
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage More than 0.55 V Less than 0.4 V		
2	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• A/F sensor • A/F sensor heater • A/F sensor circuit
	Output Voltage Almost no reaction		Output Voltage More than 0.55 V Less than 0.4 V		
3	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• HO2 sensor • HO2 sensor heater • HO2 sensor circuit
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage Almost no reaction		
4	Injection volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• Injector • Fuel pressure • Gas leakage from exhaust system (Air-fuel ratio extremely lean or rich)
	Output Voltage Almost no reaction		Output Voltage Almost no reaction		

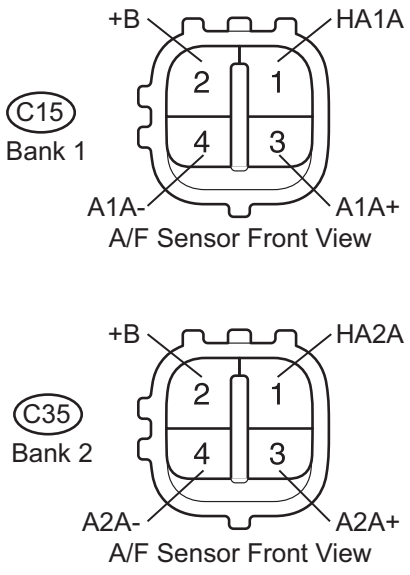
- Following the A/F CONTROL procedure enables technicians to check and graph the output voltages of both the A/F and HO2 sensors.
- To display the graph, enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL / USER DATA / AFS B1 S1 and O2S B1 S2 or AFS B2 S1 and O2S B2 S2, and press the YES button and then the ENTER button followed by the F4 button.

HINT:

- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

1 INSPECT AIR FUEL RATIO SENSOR (HEATER RESISTANCE)

Component Side:



A126269E12

(a) Disconnect the C15 or C35 A/F sensor connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance (Bank 1 sensor 1)

Tester Connection	Condition	Specified Condition
HA1A (1) - +B (2)	20°C (68°F)	1.8 to 3.4 Ω
HA1A (1) - A1A- (4)	-	10 kΩ or higher

Standard resistance (Bank 2 sensor 1)

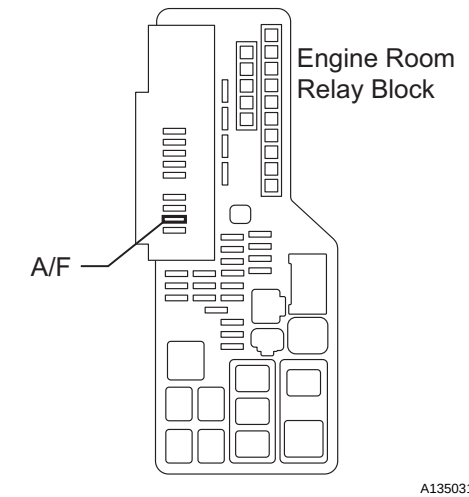
Tester Connection	Condition	Specified Condition
HA2A (1) - +B (2)	20°C (68°F)	1.8 to 3.4 Ω
HA2A (1) - A2A- (4)	-	10 kΩ or higher

(c) Reconnect the A/F sensor connector.

NG → **REPLACE AIR FUEL RATIO SENSOR (See page EC-19)**

OK

2 INSPECT A/F FUSE



A135031E01

(a) Remove the A/F fuse from the engine room junction block.
(b) Measure the A/F fuse resistance.

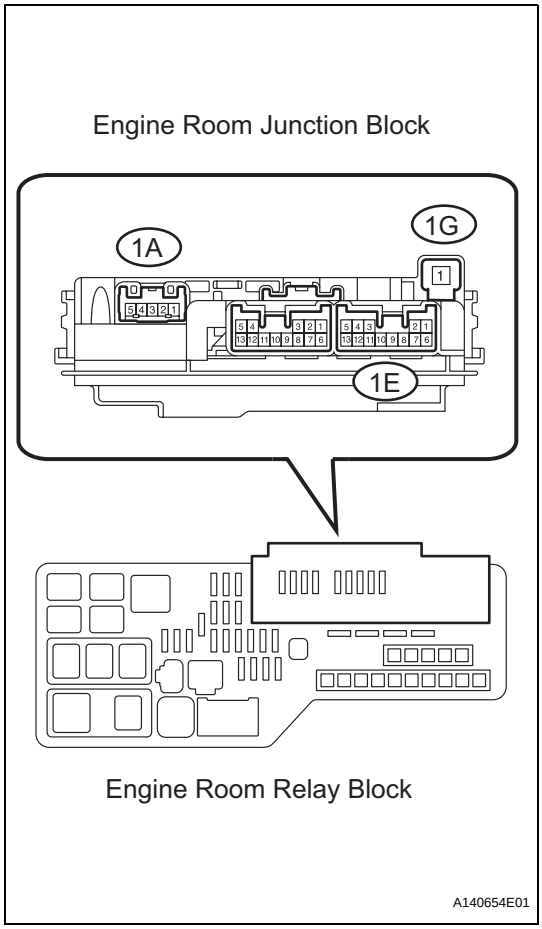
Standard resistance:
Below 1 Ω

(c) Reinstall the A/F fuse.

NG → **REPLACE A/F FUSE**

OK

3	INSPECT ENGINE ROOM JUNCTION BLOCK (A/F RELAY)



(a) Remove the engine room junction block from the engine room R/B.
(b) Inspect the A/F relay.
  (1) Measure the A/F relay resistance.
  Standard resistance

Tester Connection	Specified Condition
1G-1 - 1A-4	10 kΩ or higher
1G-1 - 1A-4	Below 1 Ω (Apply battery voltage between terminals 1E-6 and 1E-10)

(c) Reinstall the engine room junction block.

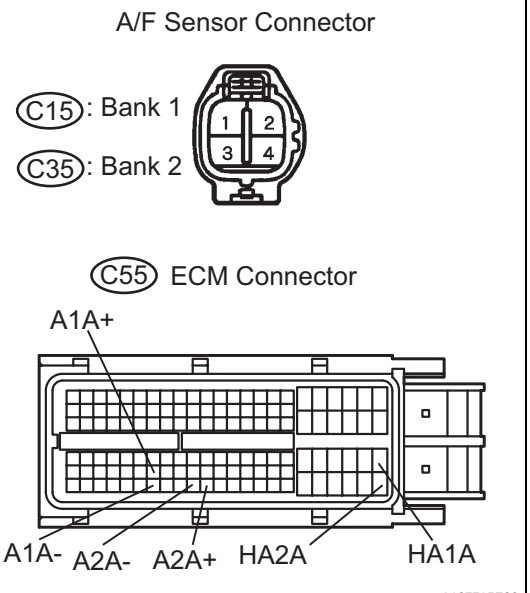
NG → REPLACE ENGINE ROOM JUNCTION BLOCK

OK

ES

4	CHECK HARNESS AND CONNECTOR (A/F SENSOR - ECM)

Wire Harness Side:



(a) Disconnect the C15 and C35 A/F sensor connectors.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Specified Condition
+B (C15-2) - Body ground	9 to 14 V
+B (C35-2) - Body ground	9 to 14 V

(d) Turn the ignition switch off.
(e) Disconnect the C55 ECM connector.
(f) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
HA1A (C15-1) - HA1A (C55-86)	Below 1 Ω
A1A+ (C15-3) - A1A+ (C55-93)	Below 1 Ω
A1A- (C15-4) - A1A- (C55-116)	Below 1 Ω
HA2A (C35-1) - HA2A (C55-109)	Below 1 Ω
A2A+ (C35-3) - A2A+ (C55-120)	Below 1 Ω
A2A- (C35-4) - A2A- (C55-119)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
HA1A (C15-1) or HA1A (C55-86) - Body ground	10 kΩ or higher
A1A+ (C15-3) or A1A+ (C55-93) - Body ground	10 kΩ or higher
A1A- (C15-4) or A1A- (C55-116) - Body ground	10 kΩ or higher
HA2A (C35-1) or HA2A (C55-109) - Body ground	10 kΩ or higher
A2A+ (C35-3) or A2A+ (C55-120) - Body ground	10 kΩ or higher
A2A- (C35-4) or A2A- (C55-119) - Body ground	10 kΩ or higher

(g) Reconnect the ECM connector.
(h) Reconnect the A/F sensor connector.

ES

OK

REPLACE ECM (See page ES-518)

DTC	P2420	Evaporative Emission System Switching Valve Control Circuit High

DTC SUMMARY

DTC No.	Monitoring Item	DTC Detection Condition	Trouble Area	Detection Timing	Detection Logic
P2420	Vent valve stuck open (vent)	The following condition is met during key-off EVAP monitor • EVAP pressure change when vent valve is closed (ON) less than 2.3 mmHg	• Pump module (0.02 inch orifice, vacuum pump, vent valve) • Connector / wire harness (Pump module - ECM) • ECM	Ignition switch off	2 trip

DESCRIPTION

The circuit description can be found in the EVAP (Evaporative Emission) System (See page ES-400).

ES

INSPECTION PROCEDURE

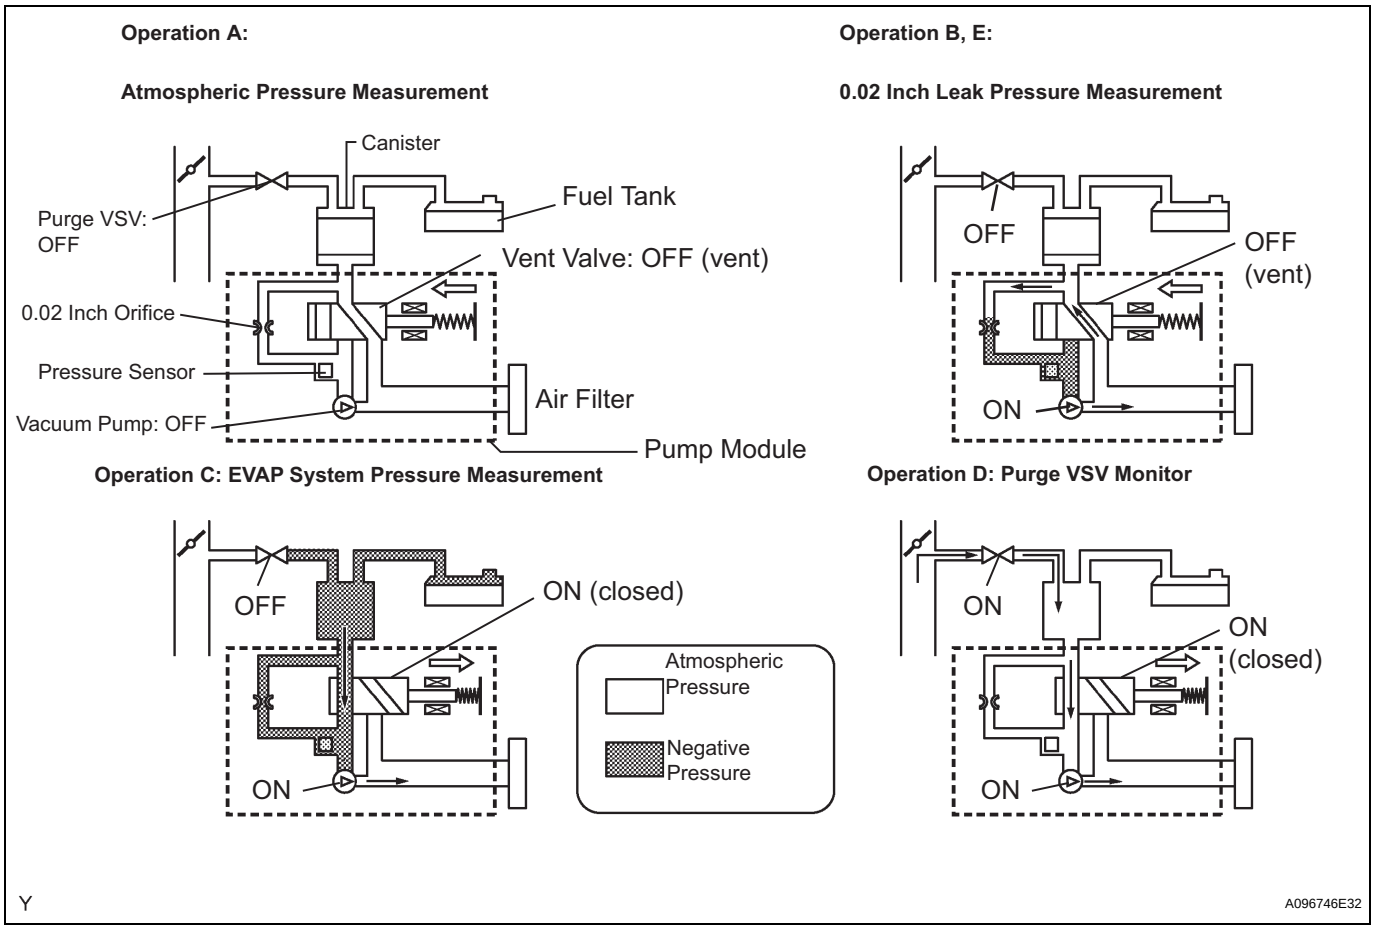
Refer to the EVAP System (See page ES-400).

MONITOR DESCRIPTION

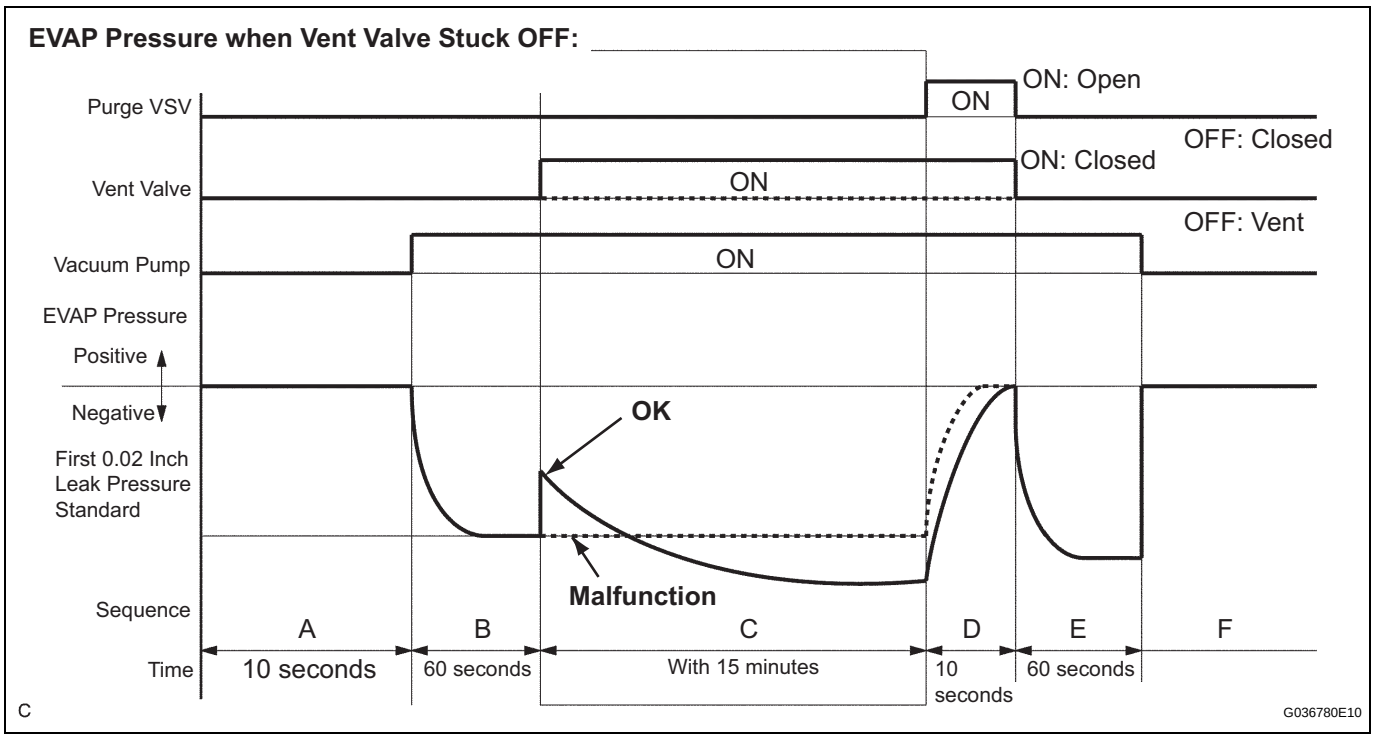
5 hours*1 after the ignition switch is turned off, the electric vacuum pump creates negative pressure (vacuum) in the EVAP (Evaporative Emission) system. The ECM monitors for leaks and actuator malfunctions based on the EVAP pressure.
HINT:
*1: If the engine coolant temperature is not below 35°C (95°F) 5 hours after the ignition switch is turned off, the monitor check starts 2 hours later. If it is still not below 35°C (95°F) 7 hours after the ignition switch is turned off, the monitor check starts 2.5 hours later.

Sequence	Operations	Descriptions	Duration
-	ECM activation	Activated by soak timer, 5 hours (7 or 9.5 hours) after ignition switch turned off.	-
A	Atmospheric pressure measurement	Vent valve turned OFF (vent) and EVAP system pressure measured by ECM in order to register atmospheric pressure. If pressure in EVAP system is not between 70 kPa and 110 kPa (525 mmHg and 825 mmHg), ECM cancels EVAP system monitor.	10 seconds
B	First 0.02 inch leak pressure measurement	In order to determine 0.02 inch leak pressure standard, vacuum pump creates negative pressure (vacuum) through 0.02 inch orifice and then ECM checks if vacuum pump and vent valve operate normally.	60 seconds
C	EVAP system pressure measurement	Vent valve is turned ON (closed) to shut EVAP system. Negative pressure (vacuum) is created in EVAP system, and then EVAP system pressure is measured. Write down measured value as they will be used in leak check. If EVAP pressure does not stabilize within 15 minutes, ECM cancels EVAP system monitor.	15 minutes*2
D	Purge VSV monitor	Purge VSV is opened and then EVAP system pressure is measured by ECM. Large increase indicates normal.	10 seconds
E	Second 0.02 inch leak pressure measurement	After second 0.02 inch leak pressure measurement, leak check is performed by comparing first and second 0.02 inch leak pressure standards. If stabilized system pressure is higher than second 0.02 inch leak pressure standard, ECM determines that there is a leak in EVAP system.	60 seconds
F	Final check	Atmospheric pressure is measured and then monitoring result is recorded by ECM.	-

*2: If only a small amount of fuel is in the fuel tank, it takes longer for the EVAP pressure to stabilize.



The vent valve turns ON (closes) and the EVAP (Evaporative Emission) system pressure is then measured by the ECM, using the pressure sensor, to conduct an EVAP leak check. If the pressure does not increase when the vent valve is open, the ECM interprets this as the vent valve being stuck open. The ECM illuminates the MIL and sets the DTC.



MONITOR STRATEGY

Related DTC	P2420: Vent valve stuck open (vent)
Required Sensors/Components	Purge VSV and pump module
Frequency of Operation	Once per driving cycle
Duration	Within 2 minutes
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever these DTCs are not present	None
Key-off monitor is run when all of the following conditions are met	-
Atmospheric pressure	70 to 110 kPa (525 to 825 mmHg)
Battery voltage	10.5 V or more
Vehicle speed	2.5 mph (4 km/h) or less
Ignition switch	OFF
Time after key-off	5 or 7 or 9.5 hours
EVAP pressure sensor malfunction (P0450, P0452, P0453)	Not detected
EVAP canister purge valve	Not operated by scan tool
EVAP canister vent valve	Not operated by scan tool
EVAP leak detection pump	Not operated by scan tool
Both of the following conditions 1 and 2 are set before key-off	-
1. Duration that vehicle has been driven	5 minutes or more
2. EVAP purge operation	Performed
ECT	4.4 to 35°C (40 to 95°F)
IAT	4.4 to 35°C (40 to 95°F)

ES

Key-off monitor sequence 1 to 8

1. Atmospheric pressure measurement

Next sequence is run if the following condition is met	-
Atmospheric pressure change	Less than 0.3 kPa (2.25 mmHg) in 1 second

2. First reference pressure measurement

Next sequence is run if the following conditions are met	Conditions 1, 2 and 3
1. EVAP pressure just after reference pressure measurement start	-1 kPa (-7.5 mmHg) or less
2. Reference pressure	-4.85 to -1.057 kPa (-36.384 to -7.929 mmHg)
3. Reference pressure	Saturated

3. EVAP canister vent valve close stuck check

Next sequence is run if the following condition is met	-
EVAP pressure change after vent valve is ON	0.3 kPa (2.25 mmHg) or more

4. Vacuum introduction

Next sequence is run if the following condition is met	-
EVAP pressure	Saturated within 15 minutes

5. EVAP canister purge valve close stuck check

Next sequence is run if the following condition is met	-
EVAP pressure change after purge valve is open	0.3 kPa (2.25 mmHg) or more

6. Second reference pressure measurement

Next sequence is run if the following conditions are met	Conditions 1, 2, 3 and 4
1. EVAP pressure just after reference pressure	-1 kPa (-7.5 mmHg) or less
2. Reference pressure	-4.85 to -1.057 kPa (-36.384 to -7.929 mmHg)
3. Reference pressure	Saturated
4. Difference between first reference pressure and second reference pressure	Less than 0.7 kPa (5.25 mmHg)

7. Leak check

Next sequence is run if the following condition is met	-
EVAP pressure when vacuum introduction is complete	Lower than second reference pressure

8. Atmospheric pressure measurement

EVAP monitor is complete if the following condition is met	-
Atmospheric pressure difference between sequence 1 and 8	Within 0.3 kPa (2.25 mmHg)

TYPICAL MALFUNCTION THRESHOLDS

EVAP pressure change after EVAP canister vent valve is ON	Less than 0.3 kPa (2.25 mmHg)

MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-25).

DTC	P2610	ECM / PCM Internal Engine Off Timer Performance

DTC SUMMARY

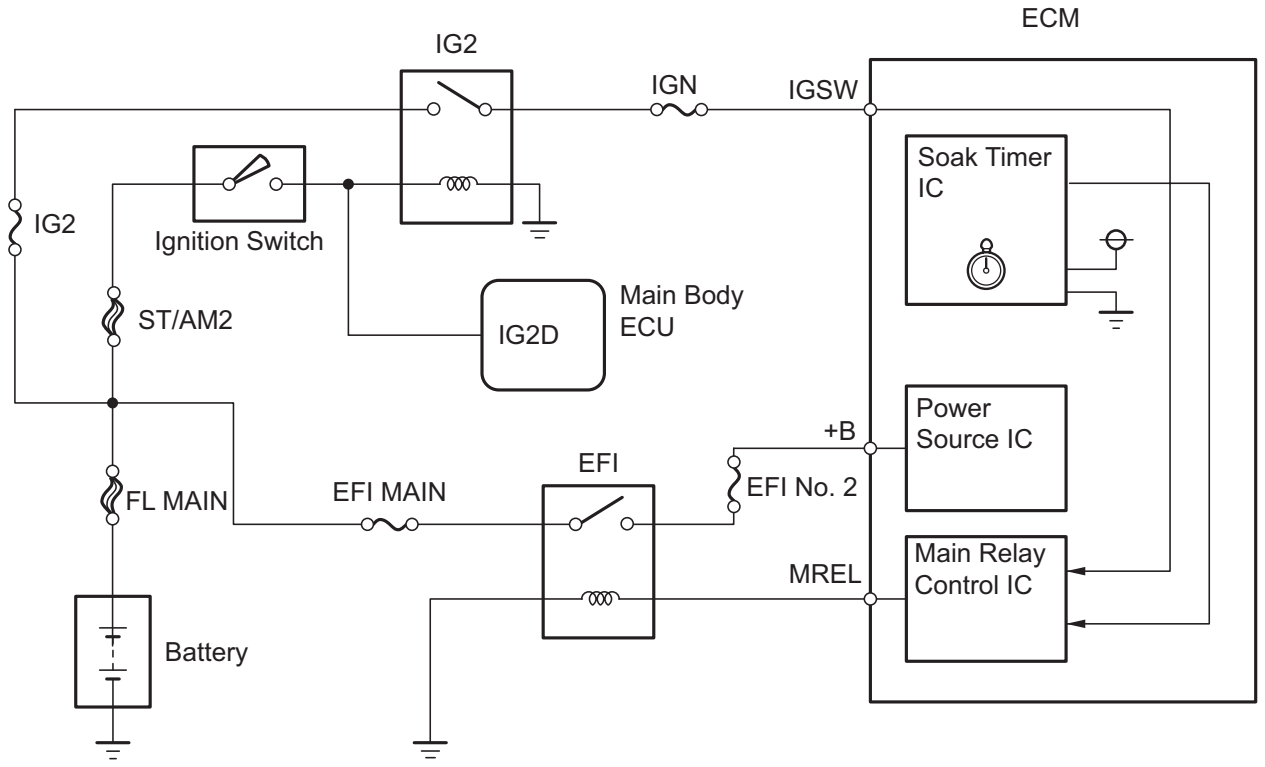
DTC No.	Monitoring Item	DTC Detection Condition	Trouble Area	Detection Timing	Detection Logic
P2610	Soak timer (built into ECM)	ECM internal malfunction	ECM	Engine running	2 trip

DESCRIPTION

To ensure the accuracy of the EVAP (Evaporative Emission) monitor values, the soak timer, which is built into the ECM, measures 5 hours (+/- 15 minutes) from when the ignition switch is turned off, before the monitor is run. This allows the fuel to cool down, which stabilizes the Fuel Tank Pressure (FTP). When 5 hours have elapsed, the ECM turns on.

ES

Soak Timer Circuit (fig. 3):



MONITOR DESCRIPTION

5 hours after the ignition switch is turned off, the soak timer activates the ECM to begin the EVAP system monitor. While the engine is running, the ECM monitors the synchronization of the soak timer and the CPU clock. If these two are not synchronized, the ECM interprets this as a malfunction, illuminates the MIL and sets the DTC (2 trip detection logic).

MONITOR STRATEGY

Required Sensors/Components	ECM
Frequency of Operation	Once per driving cycle

Duration	10 minutes
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Case 1:

Engine switch	ON
Engine	Running
Battery voltage	8 V or more
Starter	OFF

Case 2:

Internal engine OFF timer (elapsed time from engine stop)	10 to 300 minutes
Battery voltage	8 V or more
Engine switch	ON
Starter	OFF

Case 3:

Internal engine OFF timer (elapsed time from engine stop)	310 minutes
Battery voltage	8 V or more
Engine switch	ON
Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS

Case 1:

Soak timer measurement when ECM CPU clock counts 10 minutes	Less than 7 minutes or more than 13 minutes

Case 2:

ECM had the started record by internal engine	Yes

Case 3:

ECM had the started record by internal engine	No

INSPECTION PROCEDURE

HINT:

- DTC P2610 is set if an internal ECM problem is detected. In this case, diagnostic procedures are not required. ECM replacement is required.
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

1	**REPLACE ECM**

(a) Replace the ECM (See page ES-518).

NEXT

2	CHECK WHETHER DTC OUTPUT RECURS

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on.
(c) Clear the DTCs (See page ES-45).
(d) Start the engine and wait for 10 minutes or more.
(e) On the tester, enter the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC / INFO / PENDING CODEs.
(f) If no pending DTC is displayed, the repair has been successfully completed.

NEXT

ES

END

DTC	P2A00	A/F Sensor Circuit Slow Response (Bank 1 Sensor 1)

DTC	P2A03	A/F Sensor Circuit Slow Response (Bank 2 Sensor 1)

DESCRIPTION

HINT:

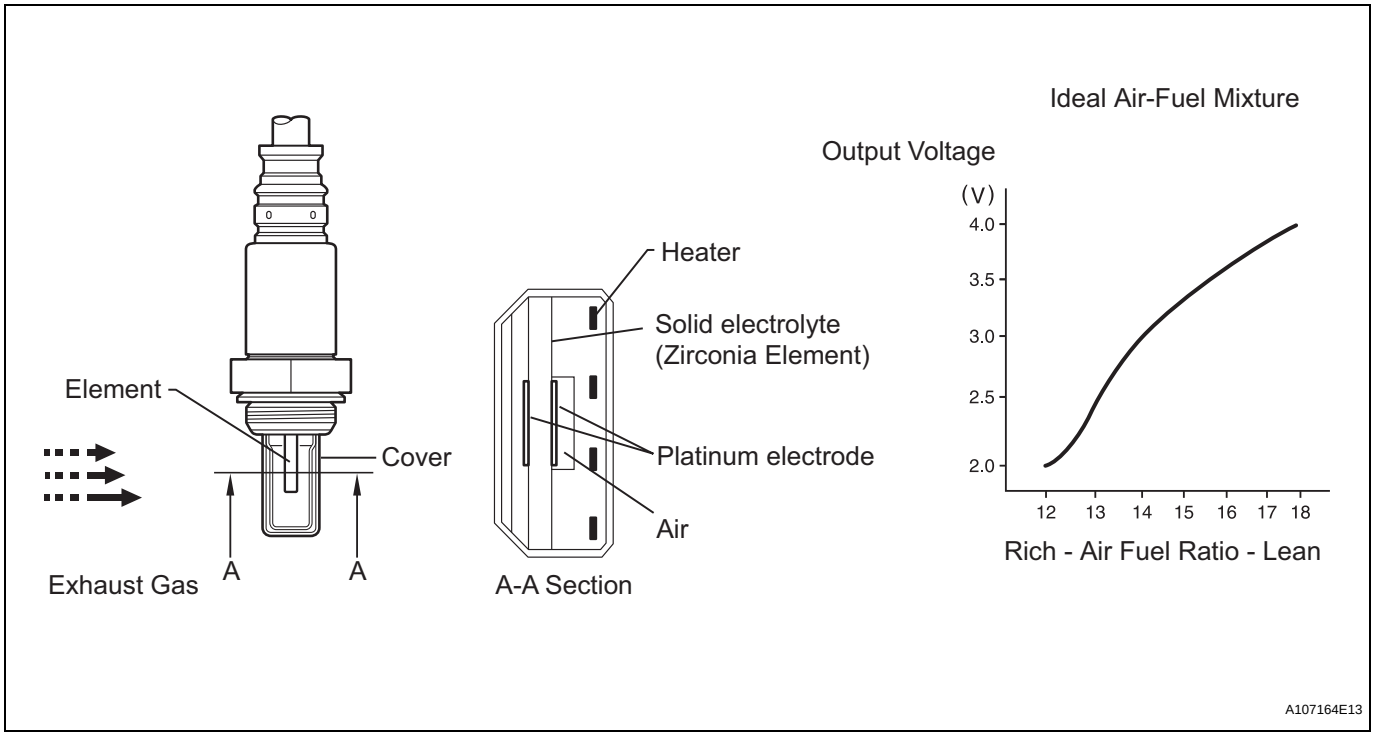
- DTC P2A00 indicates malfunctions related to the bank 1 A/F sensor.
- DTC P2A03 indicates malfunctions related to the bank 2 A/F sensor.
- Bank 1 refers to the bank that includes cylinder No. 1.
- Bank 2 refers to the bank that includes cylinder No. 2.
- Sensor 1 refers to the sensor mounted in front of the Three-Way Catalytic Converter (TWC) and located near the engine assembly.
- Although the DTC titles say oxygen sensor, these DTCs relate to the Air-Fuel Ratio (A/F) sensor.
- Sensor 1 refers to the sensor mounted in front of the Three-Way Catalytic Converter (TWC) and located near the engine assembly.

The A/F sensor generates voltage* that corresponds to the actual air-fuel ratio. This sensor voltage is used to provide the ECM with feedback so that it can control the air-fuel ratio. The ECM determines the deviation from the stoichiometric air-fuel ratio level, and regulates the fuel injection time. If the A/F sensor malfunctions, the ECM is unable to control the air-fuel ratio accurately.

The A/F sensor is the planar type and is integrated with the heater, which heats the solid electrolyte (zirconia element). This heater is controlled by the ECM. When the intake air volume is low (the exhaust gas temperature is low), a current flows into the heater to heat the sensor, in order to facilitate accurate oxygen concentration detection. In addition, the sensor and heater portions are narrower than the conventional type. The heat generated by the heater is conducted to the solid electrolyte through the alumina, therefore the sensor activation is accelerated.

A three-way catalytic converter (TWC) is used in order to convert the carbon monoxide (CO), hydrocarbon (HC), and nitrogen oxide (NOx) into less harmful substances. To allow the TWC to function effectively, it is necessary to keep the air-fuel ratio of the engine near the stoichiometric air-fuel ratio.

*: Value changes inside the ECM. Since the A/F sensor is the current output element, a current is converted to a voltage inside the ECM. Any measurements taken at the A/F sensor or ECM connectors will show a constant voltage.

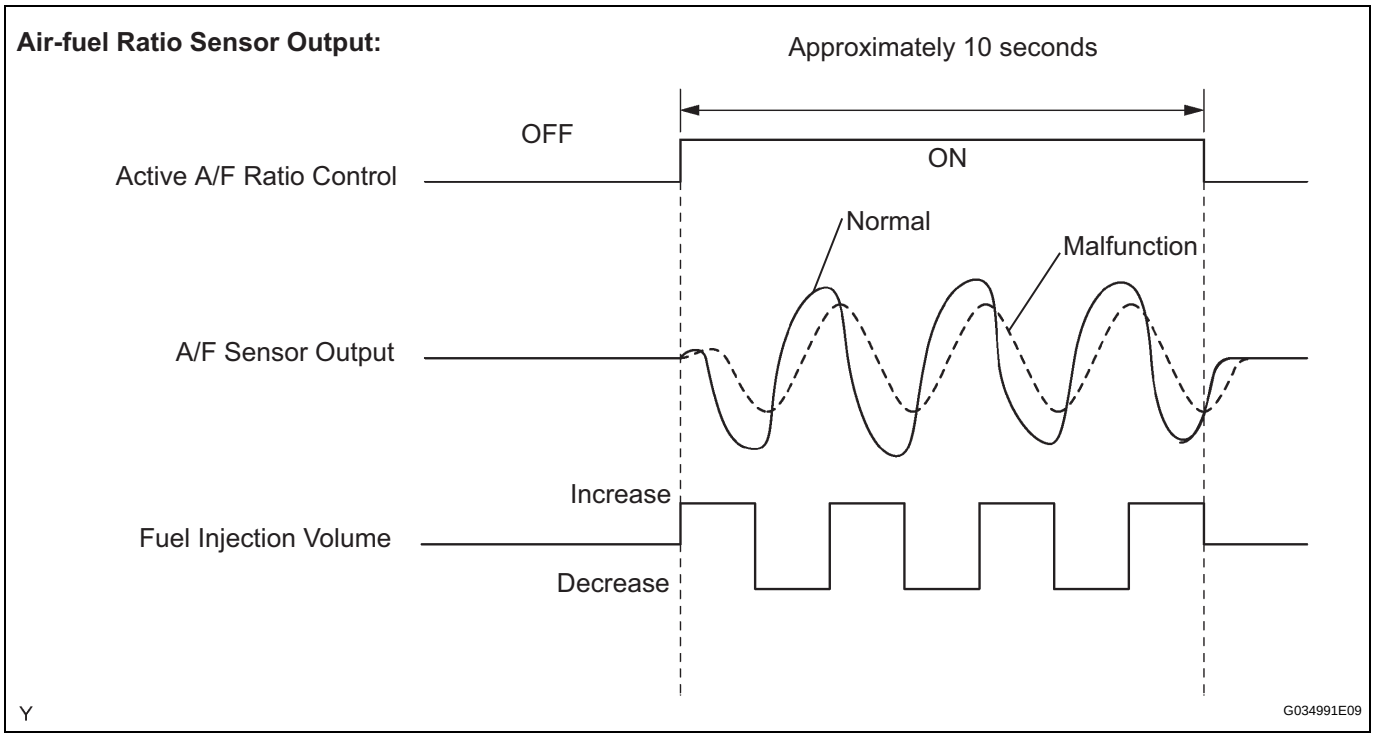


DTC No.	DTC Detection Conditions	Trouble Area
P2A00 P2A03	Calculated value for air-fuel ratio (A/F) sensor response rate deterioration level is less than threshold	• Open or short in A/F sensor circuit • A/F sensor • ECM

MONITOR DESCRIPTION

After the engine is warmed up, the ECM performs air-fuel ratio feedback control to maintain the air-fuel ratio at the stoichiometric level. In addition, active A/F ratio control is performed for approximately 10 seconds after preconditions are met in order to measure the A/F sensor response rate. During active A/F ratio control, the ECM forcibly increases and decreases the injection volume by a certain amount, based on the stoichiometric air-fuel ratio learned during normal air-fuel ratio control, and measures the A/F sensor response rate. The ECM receives a signal from the A/F sensor while performing active A/F ratio control and uses it to calculate the A/F sensor response rate deterioration level.

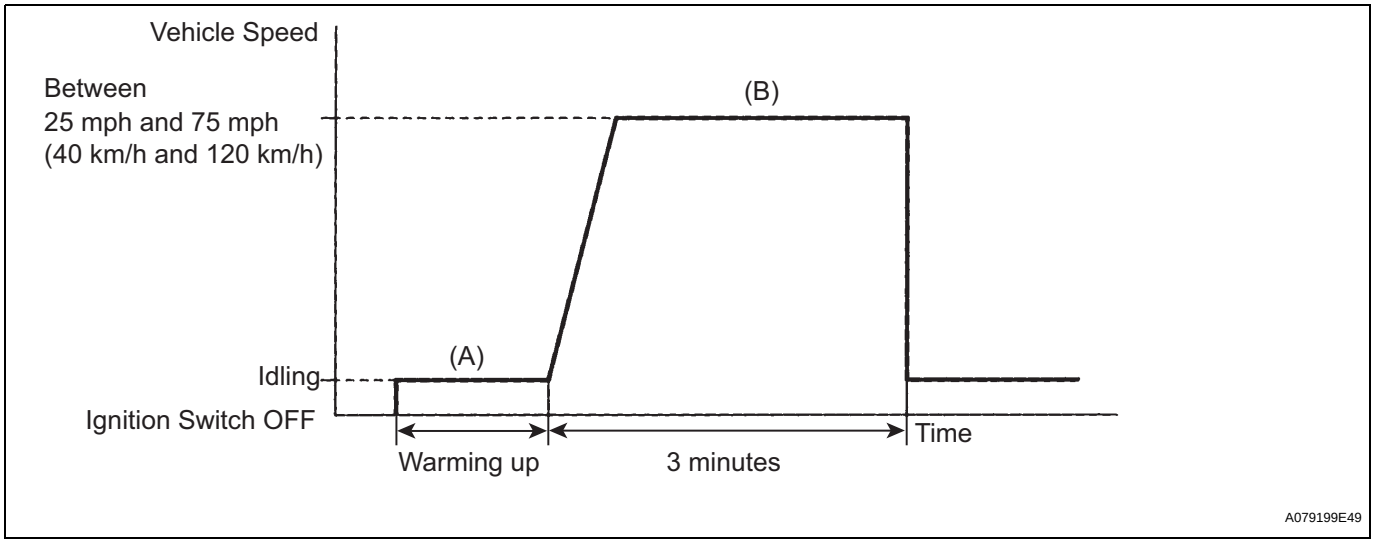
If the value for A/F sensor response rate deterioration level is less than the threshold, the ECM interprets this as a malfunction and sets the DTC.

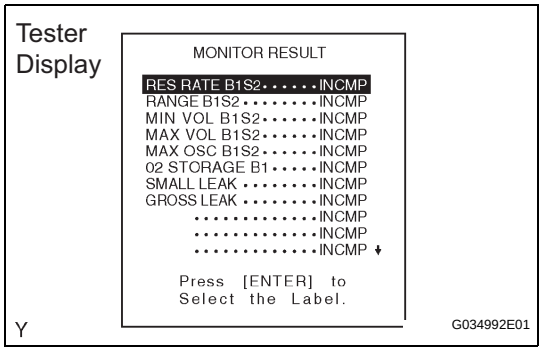


ES

CONFIRMATION DRIVING PATTERN

HINT:
Performing this confirmation pattern will activate the A/F sensor response monitor.





1. Connect an intelligent tester to the DLC3.

2. Turn the ignition switch on (IG).
3. Turn the tester on.
4. Clear the DTCs (where set).
5. Select the following menu items: DIAGNOSIS /ENHANCED OBD II / MONITOR INFO / MONITOR RESULT.
6. Check that RES RATE B1S1 is INCOMP.
7. Start the engine and warm it up (Procedure "A").
8. Drive the vehicle at between 25 mph and 75 mph (40 km/h and 120 km/h) for 3 minutes. However, the vehicle should be driven at a constant speed (Procedure "B").
9. Check the monitor result values on the intelligent tester by selecting the following menu items: DIAGNOSIS / ENHANCED OBD II / MONITOR INFO / TEST RESULT.
10. If the values indicated on the tester do not change, perform READINESS MONITOR DRIVE PATTERN for the A/F sensor and the heated oxygen sensor (See page ES-338).
    HINT:
    Completion of all A/F sensor monitors is required to change the value in TEST RESULT.
11. Note the value of the Monitor Result.
12. Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES.
13. Check if any DTCs (any pending DTCs) are set.

ES

MONITOR STRATEGY

Related DTCs	P2A00: A/F sensor (Bank 1) slow response P2A03: A/F sensor (Bank 2) slow response
Required Sensors/Components (Main)	A/F sensor
Required Sensors/Components (Related)	Vehicle speed sensor, Crankshaft position sensor
Frequency of Operation	Once per driving cycle
Duration	10 to 15 seconds
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	P0031, P0032, P0051, P0052 (A/F sensor heater - Sensor 1) P0100 - P0103 (MAF meter) P0110 - P0113 (IAT sensor) P0115 - P0118 (ECT sensor) P0120 - P0223, P2135 (TP sensor) P0125 (Insufficient ECT for Closed Loop) P0171, P0172, P0173, P0174 (Fuel system) P0300 - P0308 (Misfire) P0335 (CKP sensor) P0340, P0341 (CMP sensor) P0500 (VSS) P2196, P2198 (A/F sensor - rationality)
Battery voltage	11 V or more
ECT	75°C (167°F) or more
Idle	OFF
Engine rpm	Less than 4,000 rpm
A/F sensor status	Activated
Fuel-cut	OFF
Engine load	10 to 70 %
Shift position	2 or more
Catalyst monitor	Not yet
MAF	2.5 to 15 g/sec.

TYPICAL MALFUNCTION THRESHOLDS

Response rate deterioration level	Less than 0.18 V

MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-25).

WIRING DIAGRAM

Refer to DTC P2195 (See page ES-350).

INSPECTION PROCEDURE

HINT:

Intelligent tester only:

Malfunctioning areas can be identified by performing the A/F CONTROL function provided in the ACTIVE TEST. The A/F CONTROL function can help to determine whether the Air-fuel Ratio (A/F) sensor, Heated Oxygen (HO2) sensor and other potential trouble areas are malfunctioning.

The following instructions describe how to conduct the A/F CONTROL operation using the intelligent tester.

1. Connect the intelligent tester to the DLC3.
2. Start the engine and turn the tester on.
3. Warm up the engine at an engine speed of 2,500 rpm for approximately 90 seconds.
4. On the intelligent tester, enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL.
5. Perform the A/F CONTROL operation with the engine in an idling condition (press the RIGHT or LEFT button to change the fuel injection volume).
6. Monitor the output voltages of the A/F and HO2 sensors (AFS B1 S1 and O2S B1 S2 or AFS B2 S1 and O2S B2 S2) displayed on the tester.

HINT:

- The A/F CONTROL operation lowers the fuel injection volume by 12.5 % or increases the injection volume by 25 %.
- Each sensor reacts in accordance with increases in the fuel injection volume.

Tester Display (Sensor)	Injection Volume	Status	Voltage
AFS B1 S1 or AFS B2 S1 (A/F)	+25 %	Rich	Less than 3.0 V
AFS B1 S1 or AFS B2 S1 (A/F)	-12.5 %	Lean	More than 3.35 V
O2S B1 S2 or O2S B2 S2 (HO2)	+25 %	Rich	More than 0.55 V
O2S B1 S2 or O2S B2 S2 (HO2)	-12.5 %	Lean	Less than 0.4 V

NOTICE:

The Air-Fuel Ratio (A/F) sensor has an output delay of a few seconds and the Heated Oxygen (HO2) sensor has a maximum output delay of approximately 20 seconds.

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Area
1	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		-
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage More than 0.55 V Less than 0.4 V		

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Area
2	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• A/F sensor • A/F sensor heater A/F sensor circuit
	Output Voltage Almost no reaction		Output Voltage More than 0.55 V Less than 0.4 V		
3	Injection Volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• HO2 sensor • HO2 sensor heater • HO2 sensor circuit
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage Almost no reaction		
4	Injection volume +25 % -12.5 %		Injection Volume +25 % -12.5 %		• Fuel pressure • Gas leakage from exhaust system (Air-fuel ratio extremely lean or rich)
	Output Voltage Almost no reaction		Output Voltage Almost no reaction		

- Following the A/F CONTROL procedure enables technicians to check and graph the voltage outputs of both the A/F and HO2 sensors.
- To display the graph, enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL / USER DATA / AFS B1 S1 and O2S B1 S2 or AFS B2 S1 and O2S B2 S2, and press the YES button and then the ENTER button followed by the F4 button.

HINT:

- DTC P2A00 or P2A03 may also be set, when the air-fuel ratio is stuck rich or lean.
- A low A/F sensor voltage could be caused by a rich air-fuel mixture. Check for conditions that would cause the engine to run rich.
- A high A/F sensor voltage could be caused by a lean air-fuel mixture. Check for conditions that would cause the engine to run lean.
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P2A00 AND/OR P2A03)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester on.
(d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P2A00 and/or P2A03	A
P2A00 and/or P2A03 and other DTCs	B

ES

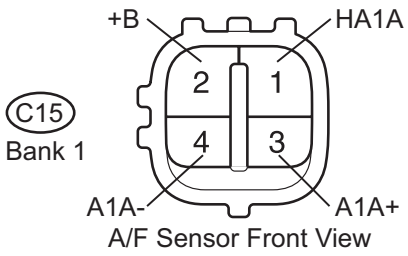
HINT:
If any DTCs other than P2A00 or P2A03 are output, troubleshoot those DTCs first.

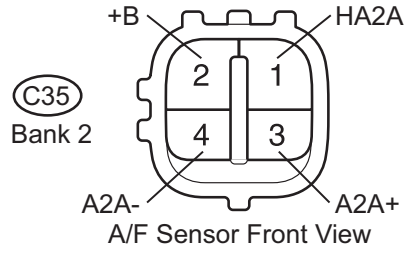
B → **GO TO DTC CHART (See page ES-63)**

A

2 INSPECT AIR FUEL RATIO SENSOR (HEATER RESISTANCE)

Component Side:





A126269E12

(a) Disconnect the C15 or C35 A/F sensor connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance (Bank 1 sensor 1)

Tester Connection	Condition	Specified Condition
HA1A (1) - +B (2)	20°C (68°F)	1.8 to 3.4 Ω
HA1A (1) - A1A- (4)	-	10 kΩ or higher

Standard resistance (Bank 2 sensor 1)

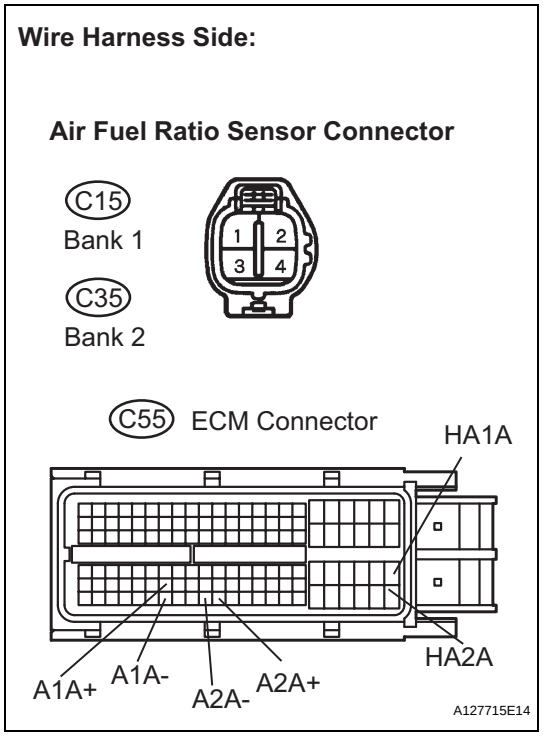
Tester Connection	Condition	Specified Condition
HA2A (1) - +B (2)	20°C (68°F)	1.8 to 3.4 Ω
HA2A (1) - A2A- (4)	-	10 kΩ or higher

(c) Reconnect the A/F sensor connector.

NG → **REPLACE AIR FUEL RATIO SENSOR (See page EC-19)**

OK

3	CHECK HARNESS AND CONNECTOR (A/F SENSOR - ECM)



(a) Disconnect the C15 and C35 A/F sensor connectors.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Specified Condition
+B (C15-2) - Body ground	9 to 14 V
+B (C35-2) - Body ground	9 to 14 V

(d) Turn the ignition switch off.
(e) Disconnect the C55 ECM connector.
(f) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
HA1A (C15-1) - HA1A (C55-86)	Below 1 Ω
A1A+ (C15-3) - A1A+ (C55-93)	Below 1 Ω
A1A- (C15-4) - A1A- (C55-116)	Below 1 Ω
HA2A (C35-1) - HA2A (C55-109)	Below 1 Ω
A2A+ (C35-3) - A2A+ (C55-120)	Below 1 Ω
A2A- (C35-4) - A2A- (C55-119)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
HA1A (C15-1) or HA1A (C55-86) - Body ground	10 kΩ or higher
A1A+ (C15-3) or A1A+ (C55-93) - Body ground	10 kΩ or higher
A1A- (C15-4) or A1A- (C55-116) - Body ground	10 kΩ or higher
HA1A (C35-1) or HA2A (C55-109) - Body ground	10 kΩ or higher
A2A+ (C35-3) or A2A+ (C55-120) - Body ground	10 kΩ or higher
A2A- (C35-4) or A2A- (C55-119) - Body ground	10 kΩ or higher

(g) Reconnect the ECM connector.
(h) Reconnect the A/F sensor connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	PERFORM CONFIRMATION DRIVING PATTERN

NEXT

5	CHECK WHETHER DTC OUTPUT RECURS (DTC P2A00 AND/OR P2A03)

(a) Read the DTCs using the intelligent tester.
(b) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.

ES

DTC	U0101	Lost Communication with TCM

DESCRIPTION

The Transmission Control Module (TCM) and ECM perform 2-way communications with each other via the Controller Area Network (CAN). The TCM sends signals to the ECM concerning required engine rpm, required engine torques, warning indicators in the combination meter, DTCs and other data. The ECM sends signals to the TCM concerning engine rpm, opening angles of the throttle valve, temperature of intake air, temperature of engine coolant, engine torques and other data. If the TCM cannot communicate with the ECM, the TCM will conclude that there is a malfunction in the CAN system, illuminate the MIL and set a DTC.

DTC No.	DTC Detection Condition	Trouble Area
U0101	No communication from TCM continues	• Open or short in TCM and ECM circuit • TCM • ECM

ES

MONITOR STRATEGY

Related DTCs	U0101: Verify communication
Required Sensors/Components (Main)	ECM
Required Sensors/Components (Sub)	-
Frequency of Operation	Continuous
Duration	1.25 seconds
MIL Operation	immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None
Battery Voltage	10.5 V or more (0.5 second or more)
Engine switch	ON
Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS

Communication signal	Lost communication with TCM

INSPECTION PROCEDURE

1	CHECK OTHER DTC OUTPUT (IN ADDITION TO DTC U0101)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester on.
(d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC output)	Proceed to
U0101	A
U0101 and other DTCs	B

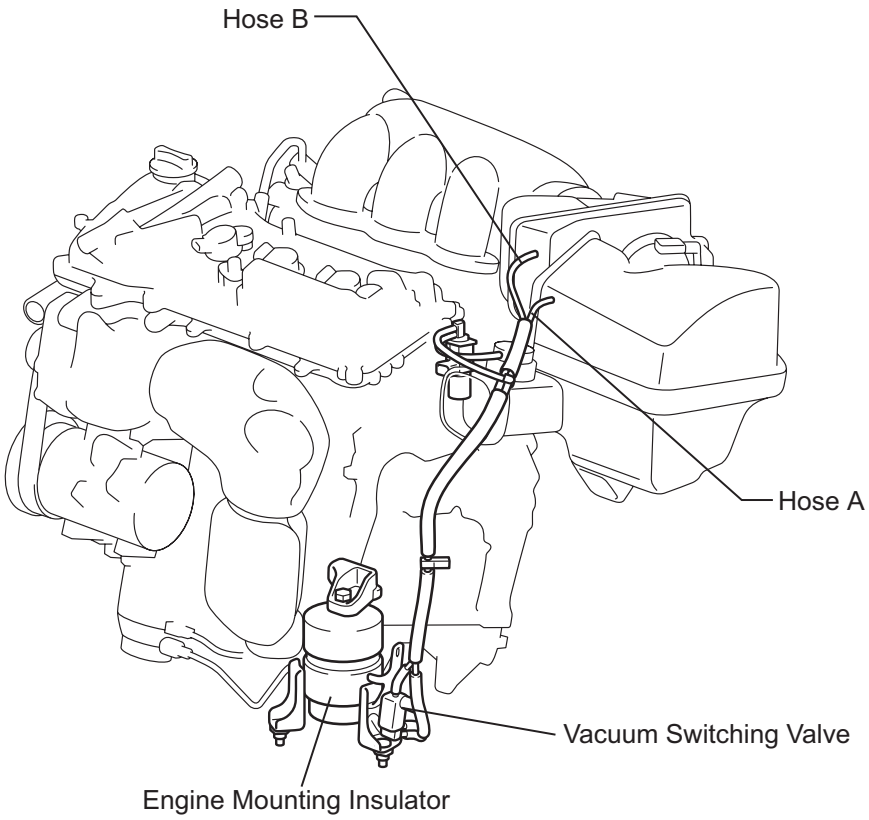
REPLACE TCM

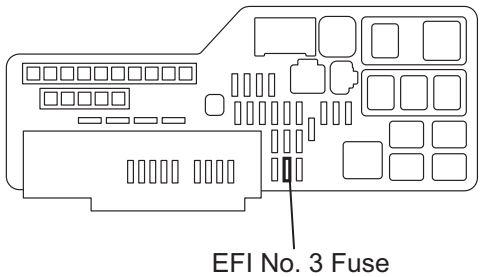
Active Control Engine Mount System

DESCRIPTION

LOCATION



Engine Room R/B:

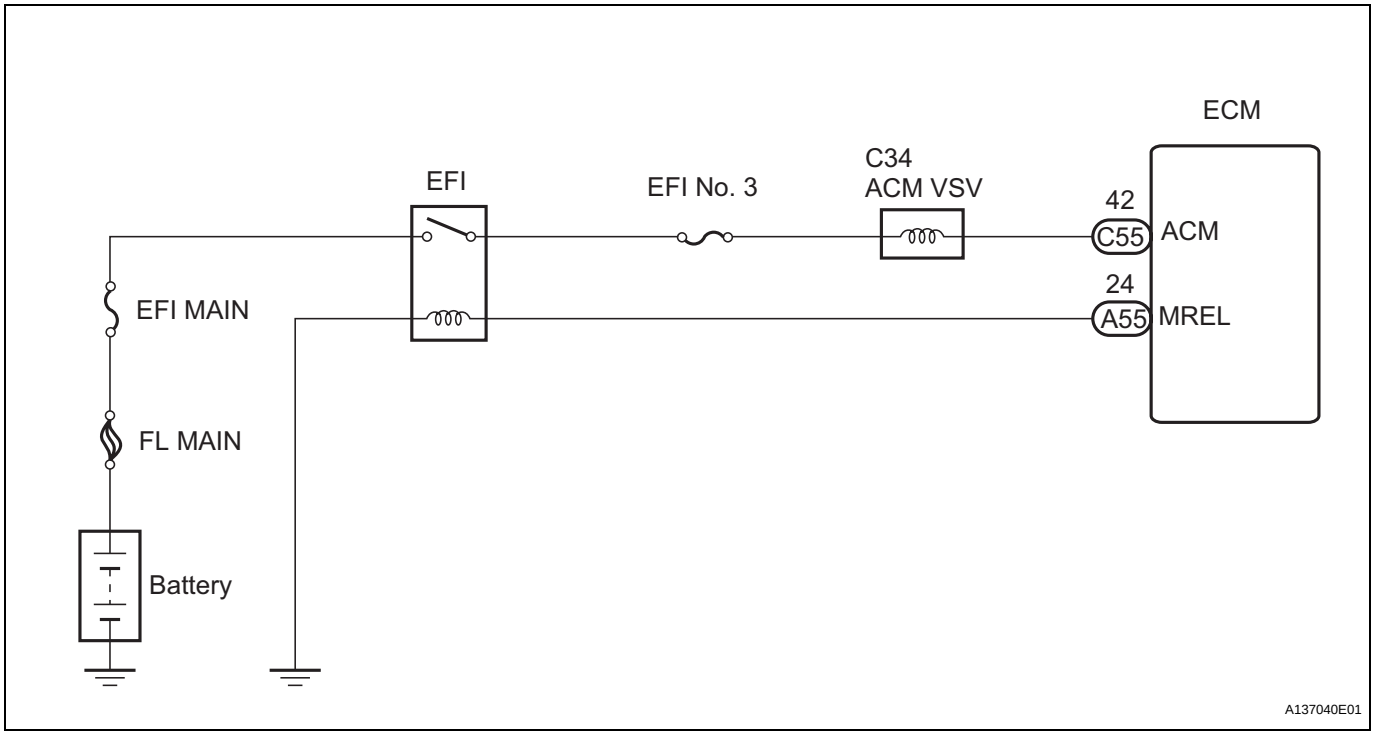


N

A136282E01

The Active Control Engine Mount (ACM) system decreases engine vibration at a low engine speed using the ACM VSV. The VSV is controlled by a pulse signal transmitted to the VSV from the ECM. The frequency of this pulse signal is matched to the engine speed to decrease engine vibration.

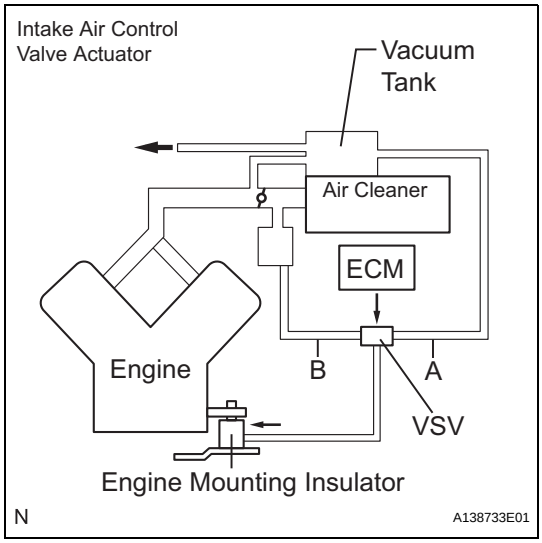
WIRING DIAGRAM



ES

INSPECTION PROCEDURE

1	CHECK VACUUM HOSES

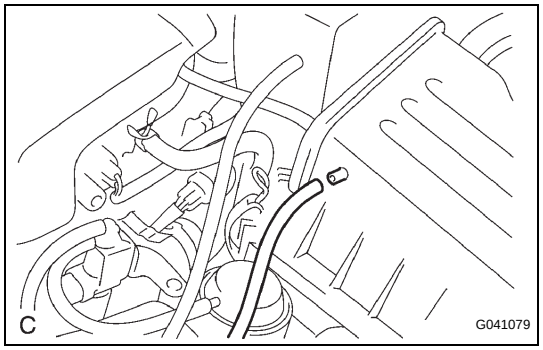


(a) If the hose is damaged, replace the vacuum hose assembly.
(b) Check the air and vacuum hoses for looseness, disconnection and blockage.

NG → **REPAIR OR REPLACE VACUUM HOSES**

OK

2 **CHECK VACUUM**



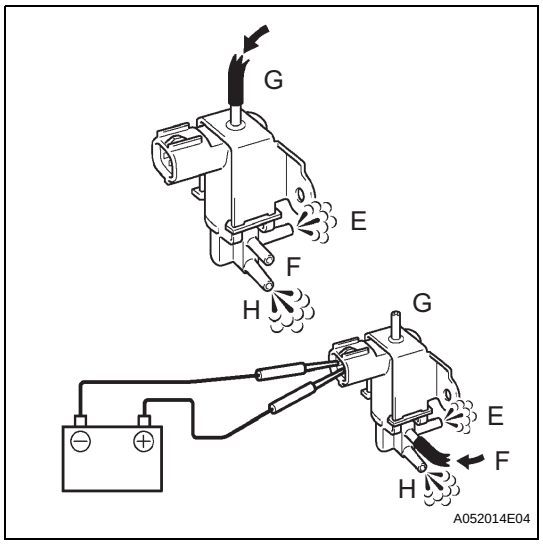
(a) Start the engine.
(b) Disconnect the vacuum hose from the air cleaner cap.
(c) Check that the disconnected port located on the vacuum tank applies suction to your finger.
OK:
Vacuum pressure exists.
(d) Reconnect the vacuum hose.

NG → **CHECK AND REPLACE VACUUM SOURCE AND HOSES**

OK

ES

3 **INSPECT DUTY VACUUM SWITCHING VALVE (OPERATION)**

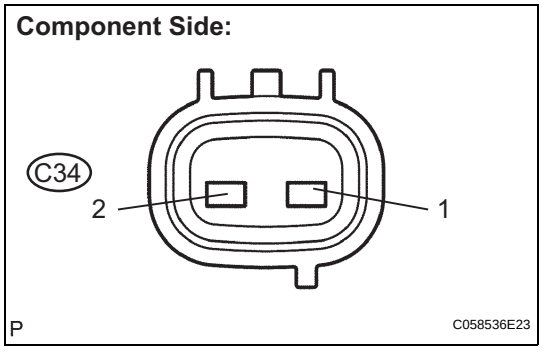


(a) Remove the VSV for ACM.
(b) Check operation of the VSV for ACM when positive battery voltage is applied to the terminals of the VSV for ACM connector.
Positive battery voltage is not applied:
The air from pipe G is flowing out through pipes E and H.
Positive battery voltage is applied:
The air from pipe F is flowing out through pipes E and H.
(c) Reinstall the VSV for ACM.

NG → **REPLACE DUTY VACUUM SWITCHING VALVE**

OK

4 **INSPECT DUTY VACUUM SWITCHING VALVE (RESISTANCE)**

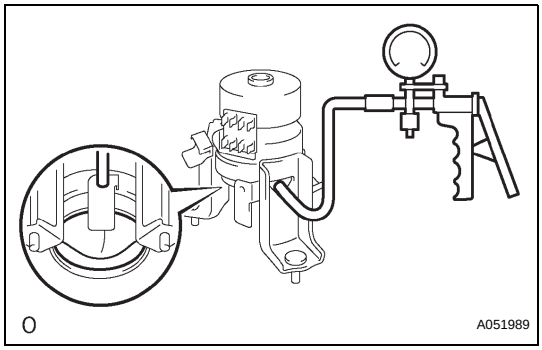


(a) Disconnect the C34 VSV for ACM connector.
(b) Measure the resistance between terminals 1 and 2.
Standard resistance:
19 to 21 Ω at 20°C (68°F)
(c) Reconnect the VSV for ACM connector.

NG → **REPLACE DUTY VACUUM SWITCHING VALVE**

OK

5	INSPECT ENGINE MOUNTING INSULATOR ASSEMBLY FRONT

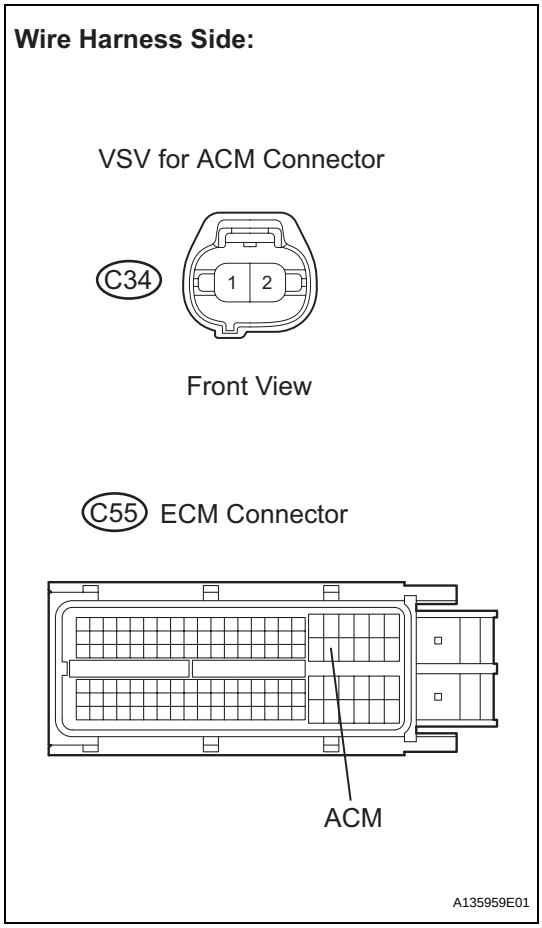


(a) Disconnect the vacuum hose from the front engine mount insulator.
(b) Using a vacuum pump, apply vacuum of 80 kPa (600 mmHg, 25 in.Hg) and wait for 1 minute.
(c) Check that there is no change in the needle movement of the vacuum pump gauge.
(d) Check that there is no fluid leakage caused by a break in the diaphragm.
OK:
Vacuum pressure exists.
(e) Reconnect the vacuum hose.

NG → **REPLACE FRONT ENGINE MOUNTING INSULATOR ASSEMBLY**

OK

6	CHECK HARNESS AND CONNECTOR (VSV FOR ACM - ECM)



(a) Check the wire harness between the VSV for ACM connector and the ECM connector.
(1) Disconnect the C34 VSV for ACM connector.
(2) Disconnect the C55 ECM connector.
(3) Measure the resistance between the wire harness side connectors.
Standard resistance (Check for open)

Tester Connections	Specified Conditions
VSV for ACM (C34-2) - ACM (C55-42)	Below 1 Ω

Standard resistance (Check for open)

Tester Connections	Specified Conditions
VSV for ACM (C34-2) or ACM (C55-42) - Body ground	10 kΩ or higher

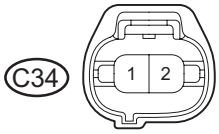
(4) Reconnect the ECM connector.
(5) Reconnect the VSV connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

7	INSPECT DUTY VACUUM SWITCHING VALVE (VOLTAGE)

Wire Harness Side:



VSV for ACM Connector

A135958E01

(a) Disconnect the C34 VSV connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage between the terminals.

Standard voltage

Tester Connection	Specified Condition
C34-1 - Body ground	9 to 14 V

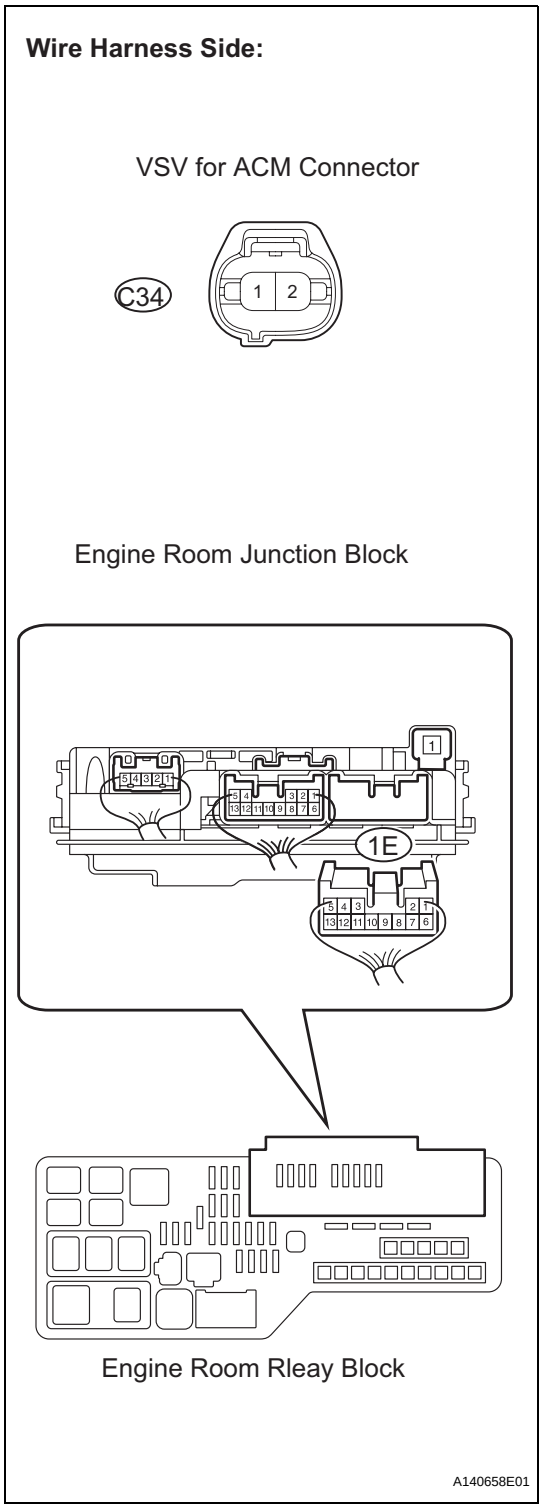
NG → **Go to step 8**

OK

REPLACE ECM (See page ES-518)

ES

8	CHECK HARNESS AND CONNECTOR (VSV FOR ACM - ENGINE JUNCTION BLOCK (EFI RELAY))



(a) Check the wire harness between the VSV for ACM and the EFI relay.
  (1) Disconnect the C34 VSV connector.
  (2) Remove the engine room junction block.
  (3) Measure the resistance between the wire harness side connectors.

Standard resistance (Check for open)

Tester Connections	Specified Condition
VSV for ACM (C34-1) - 1E-6 (Engine room relay block)	Below 1 Ω

Standard resistance (Check for short)

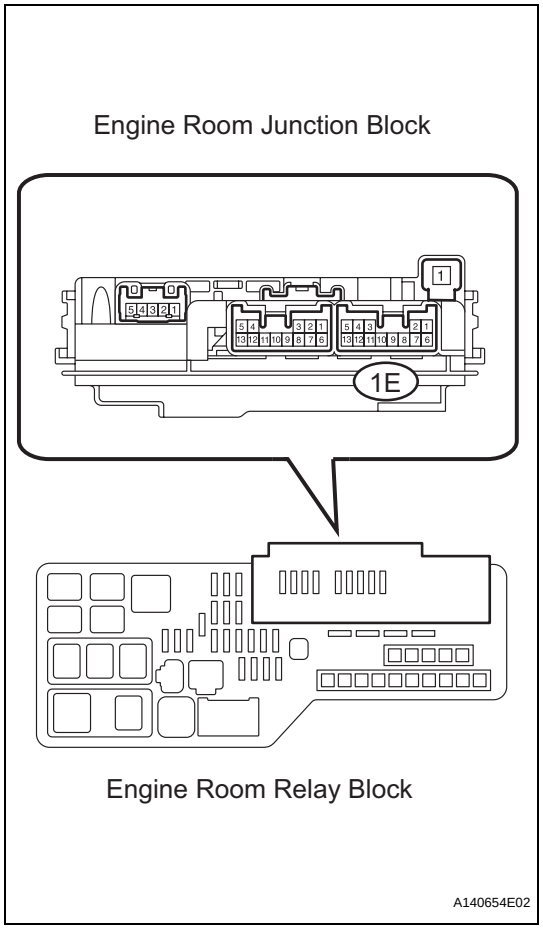
Tester Connections	Specified Condition
VSV for ACM (C34-1) or 1E-6 (Engine room relay block) - Body ground	10 kΩ or higher

  (4) Reconnect the VSV for ACM connector.
  (5) Reinstall the engine room junction block.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

9	INSPECT ENGINE ROOM JUNCTION BLOCK (EFI RELAY)



(a) Remove the engine room junction block.
(b) Measure the EFI relay resistance.
Standard resistance

Tester Connection	Specified Condition
1E-12 - 1E-6	10 kΩ or higher
1E-12 - 1E-6	Bellow 1 Ω (Apply battery voltage between terminals 1E-9 and 1E-10)

(c) Reinstall the engine room junction block.

NG → **REPLACE ENGINE ROOM JUNCTION BLOCK**

OK

REPLACE ECM (See page ES-518)

ES

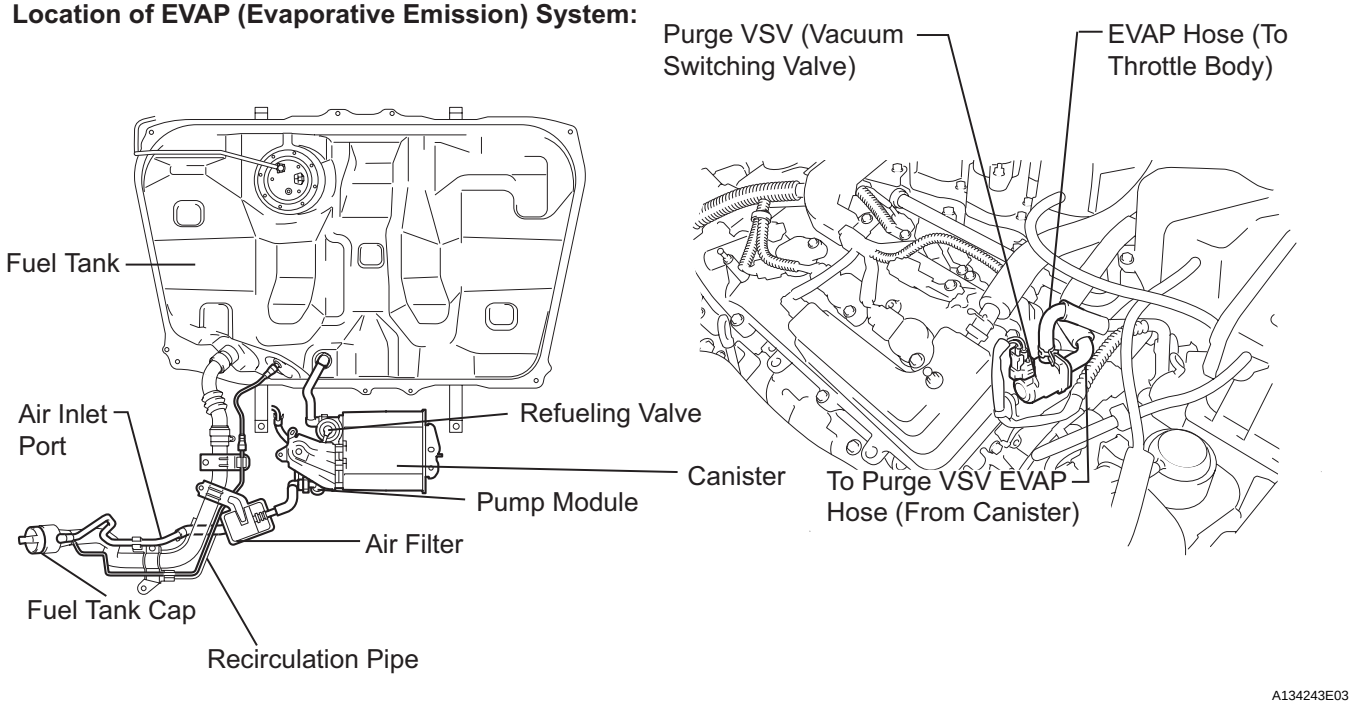
NOTICE:
If the reference pressure difference between the first and second checks is greater than the specification, all the DTCs relating to the reference pressure (P043E, P043F, P2401, P2402 and P2419) are stored.

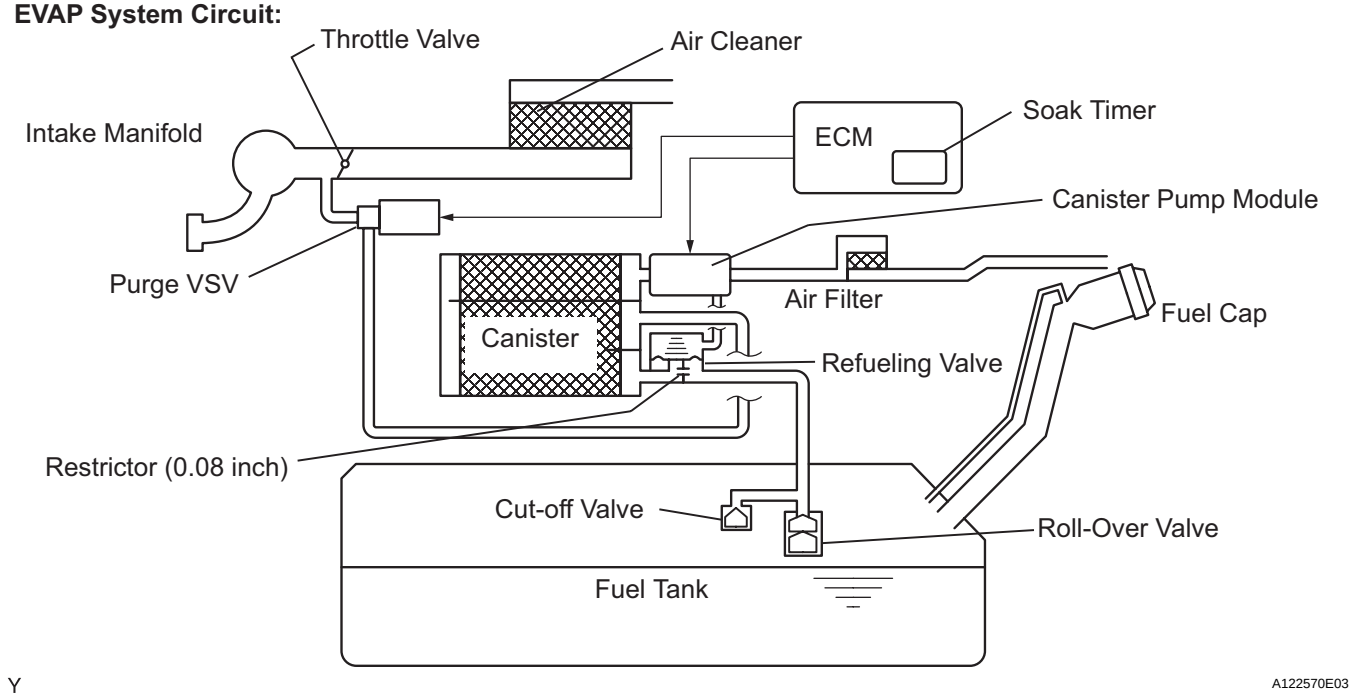
ES

DESCRIPTION

Location of EVAP (Evaporative Emission) System:



EVAP System Circuit:



NOTICE:

In this vehicle's EVAP system, turning ON the vent valve does not seal off the EVAP system. To check for leaks in the EVAP system, disconnect the air inlet vent hose and apply pressure from the atmospheric side of the canister.

While the engine is running, if a predetermined condition (closed-loop, etc.) is met, the purge VSV is opened by the ECM and fuel vapors stored in the canister are purged into the intake manifold. The ECM changes the duty cycle ratio of the purge VSV to control purge flow volume.

The purge flow volume is also determined by the intake manifold pressure. Atmospheric pressure is allowed into the canister through the vent valve to ensure that the purge flow is maintained when negative pressure (vacuum) is applied to the canister.

The following two monitors run to confirm the appropriate EVAP system operation.

1. Key-off monitor

This monitor checks for EVAP (Evaporative Emission) system leaks and canister pump module malfunctions. The monitor starts 5 hours* after the ignition switch is turned off. At least 5 hours are required for the fuel to cool down to stabilize the EVAP pressure, thus making the EVAP system monitor more accurate.

The leak detection pump creates negative pressure (vacuum) in the EVAP system and the pressure is measured. Finally, the ECM monitors for leaks from the EVAP system, and malfunctions in both the canister pump module and purge VSV, based on the EVAP pressure.

HINT:

*: If the engine coolant temperature is not below 35°C (95°F) 5 hours after the ignition switch is turned off, the monitor check starts 2 hours later. If it is still not below 35°C (95°F) 7 hours after the ignition switch is turned off, the monitor check starts 2.5 hours later.

2. Purge flow monitor

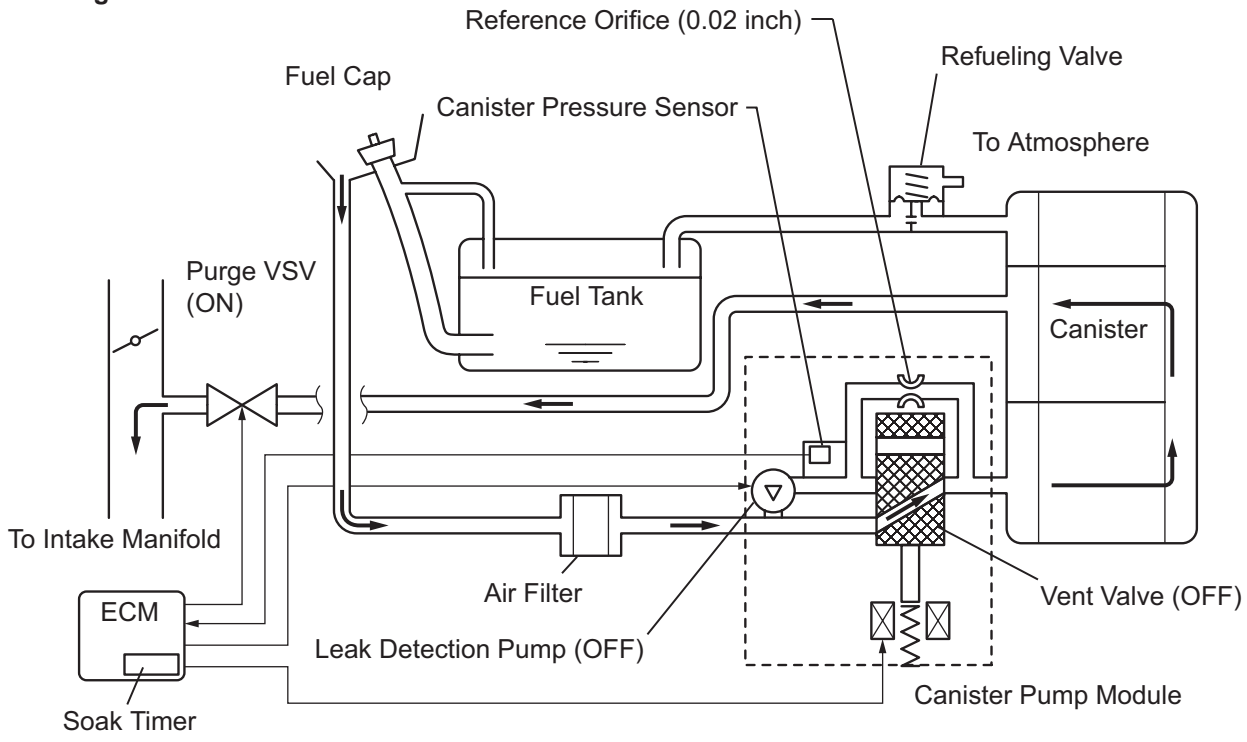
The purge flow monitor consists of the two monitors. The 1st monitor is conducted every time and the 2nd monitor is activated if necessary.

- The 1st monitor
  While the engine is running and the purge VSV (Vacuum Switching Valve) is ON (open), the ECM monitors the purge flow by measuring the EVAP pressure change. If negative pressure is not created, the ECM begins the 2nd monitor.
- The 2nd monitor
  The vent valve is turned OFF (open) and the EVAP pressure is measured. If the variation in the pressure is less than 0.5 kPa-g (3.75 mmHg-g), the ECM interprets this as the purge VSV being stuck closed, and illuminates the MIL and sets DTC P0441 (2 trip detection logic).

Atmospheric pressure check:

In order to ensure reliable malfunction detection, the variation between the atmospheric pressures, before and after conduction of the purge flow monitor, is measured by the ECM.

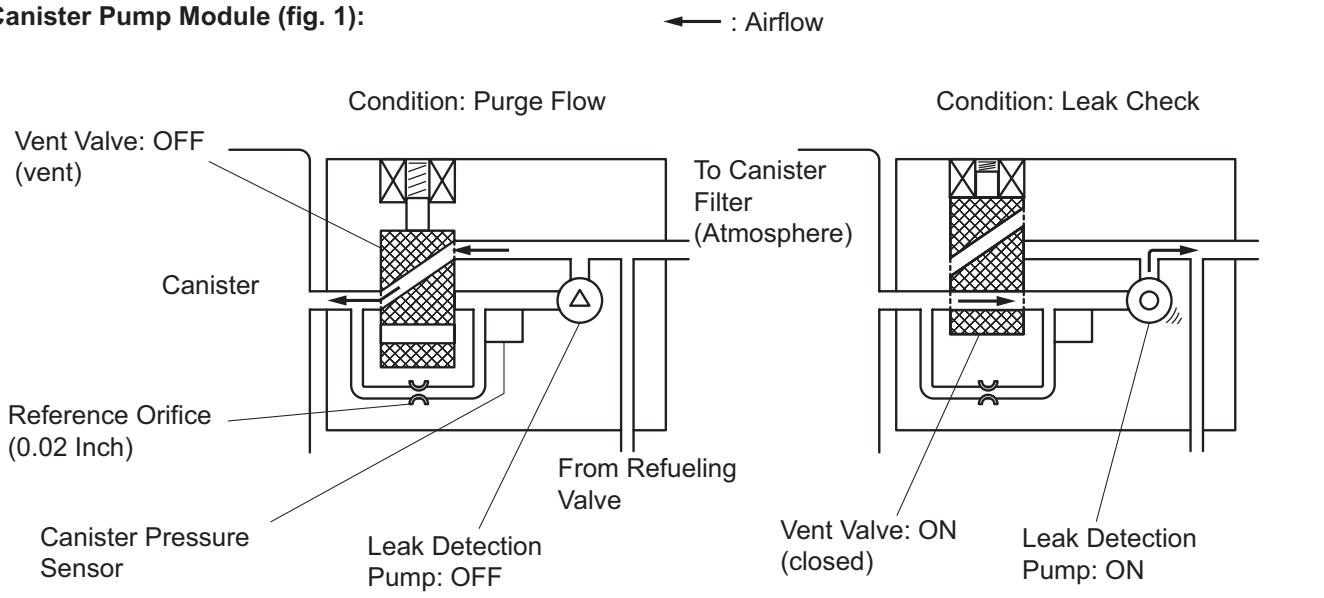
EVAP Purge Flow:



Components	Operations
Canister	Contains activated charcoal to absorb EVAP (Evaporative Emissions) generated in fuel tank.
Cut-off valve	Located in fuel tank. Valve floats and closes when fuel tank 100 % full.
Purge VSV (Vacuum Switching Valve)	Opens or closes line between canister and intake manifold. ECM uses purge VSV to control EVAP purge flow. In order to discharge EVAP absorbed by canister to intake manifold, ECM opens purge VSV. EVAP discharge volume to intake manifold controlled by purge VSV duty cycle ratio (current-carrying time) (Open: ON; Closed: OFF).
Refueling valve	Controls EVAP pressure from fuel tank to canister. Valve consists of diaphragm, spring and restrictor (diameter: 0.08 inch). When fuel vapor and pressure inside fuel tank increase, valve opens. While EVAP purged, valve closes and restrictor prevents large amount of vacuum from affecting pressure in fuel tank. Valve opened while refueling.
Roll-over valve	Located in fuel tank. Valve closed by its own weight when vehicle overturns to prevent fuel from spilling out.
Soak timer	Built into ECM. To ensure accurate EVAP monitor, measures 5 hours (+-15 min) after ignition switch turned off. This allows fuel to cool down, stabilizing EVAP pressure. When approximately 5 hours elapsed, ECM in activated (refer to fig. 3).
Canister pump module	Consists of (a) to (d) below. Canister pump module cannot be disassembled.
(a) Vent valve	Vents and closes EVAP system. When ECM turns valve ON, EVAP system closed. When ECM turns valve off, EVAP system vented. Negative pressure (vacuum) created in EVAP system to check for EVAP leaks by closing purge VSV, turning on vent valve (closed) and operating leak detection pump (refer to fig. 1).
(b) Canister pressure sensor	Indicates pressure as voltages. ECM supplies regulated 5 V to canister pressure sensor, and uses feedback from sensor to monitor EVAP system pressure (refer to fig. 2).
(c) Leak detection pump	Creates negative pressure (vacuum) in EVAP system for leak check.
(d) Reference orifice	Has opening with 0.02 inch diameter. Vacuum produced through orifice by closing purge VSV, turning off vent valve and operating leak detection pump, to monitor reference pressure. Reference pressure indicates small leak of EVAP.

ES

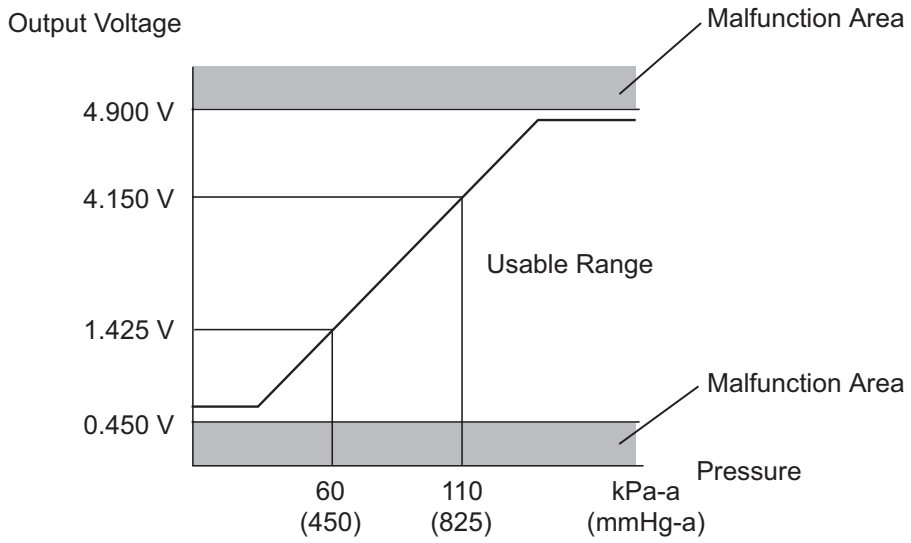
Canister Pump Module (fig. 1):



Y

A115902E02

Canister Pressure Sensor Specification (fig. 2):



HINT:

Standard atmospheric pressure is 101.3 kPa-a (760 mmHg-a)

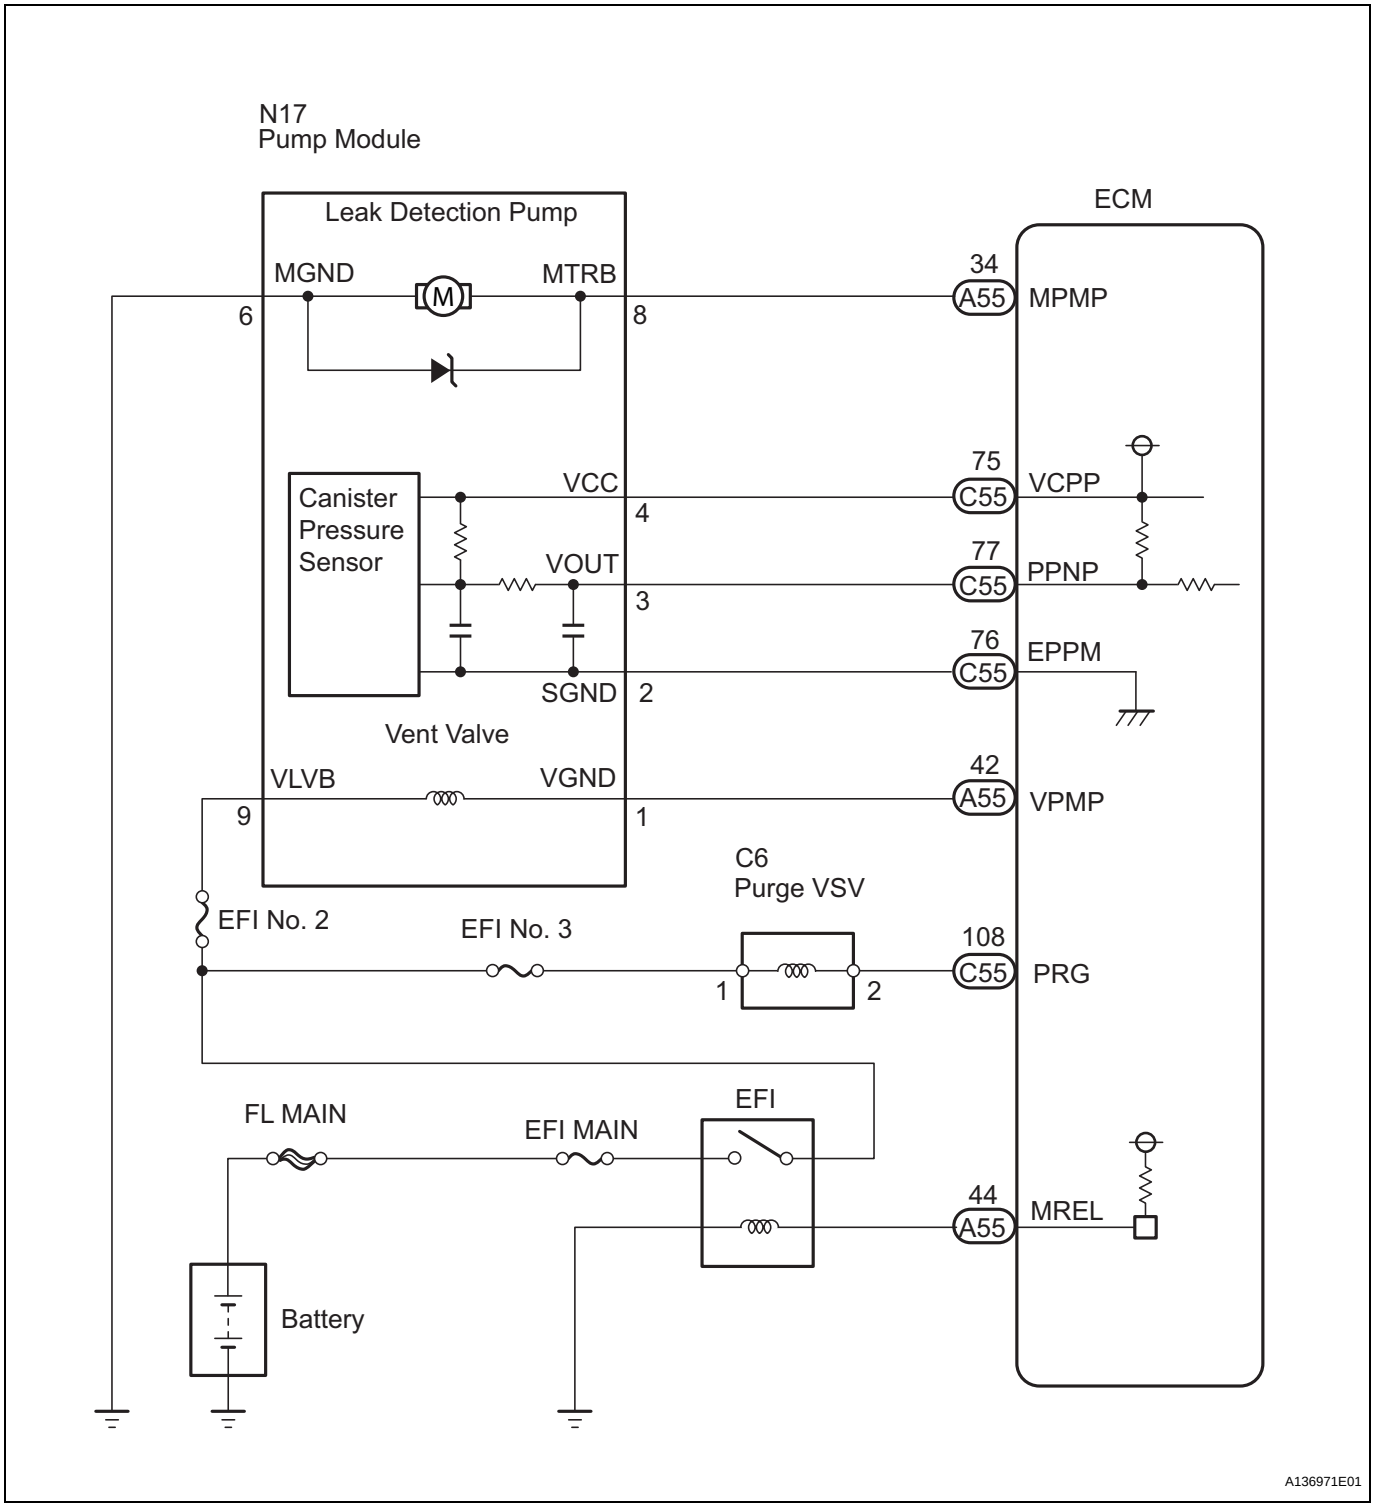
WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

The intelligent tester is required to conduct the following diagnostic troubleshooting procedure.

HINT:

- Using intelligent tester monitor results enables the EVAP (Evaporative Emission) system to be confirmed.

- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction (See page ES-45).

1	CONFIRM DTC

(a) Turn the ignition switch off and wait for 10 seconds.
(b) Turn the ignition switch on (IG).
(c) Turn the ignition switch off and wait for 10 seconds.
(d) Connect an intelligent tester to the DLC3.
(e) Turn the ignition switch on (IG) and turn the tester ON.
(f) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(g) Confirm DTCs and freeze frame data.
If any EVAP system DTCs are set, the malfunctioning area can be determined using the table below.
NOTICE:
If the reference pressure difference between the first and second checks is greater than the specification, all the DTCs relating to the reference pressure (P043E, P043F, P2401, P2402 and P2419) are stored.

ES

2	PERFORM EVAP SYSTEM CHECK (AUTO OPERATION)

NOTICE:

- **The EVAP SYSTEM CHECK (AUTO OPERATION) consists of 5 steps performed automatically by the intelligent tester. It takes a maximum of approximately 18 minutes.**
- **Do not perform the EVAP SYSTEM CHECK when the fuel tank is more than 90% full because the cut-off valve may be closed, making the fuel tank leak check unavailable.**
- **Do not run the engine during this operation.**
- **When the temperature of the fuel is 35°C (95°F) or more, a large amount of vapor forms and any check results become inaccurate. When performing the EVAP SYSTEM CHECK, keep the temperature below 35°C (95°F).**

(a) Clear the DTCs (See page ES-45).

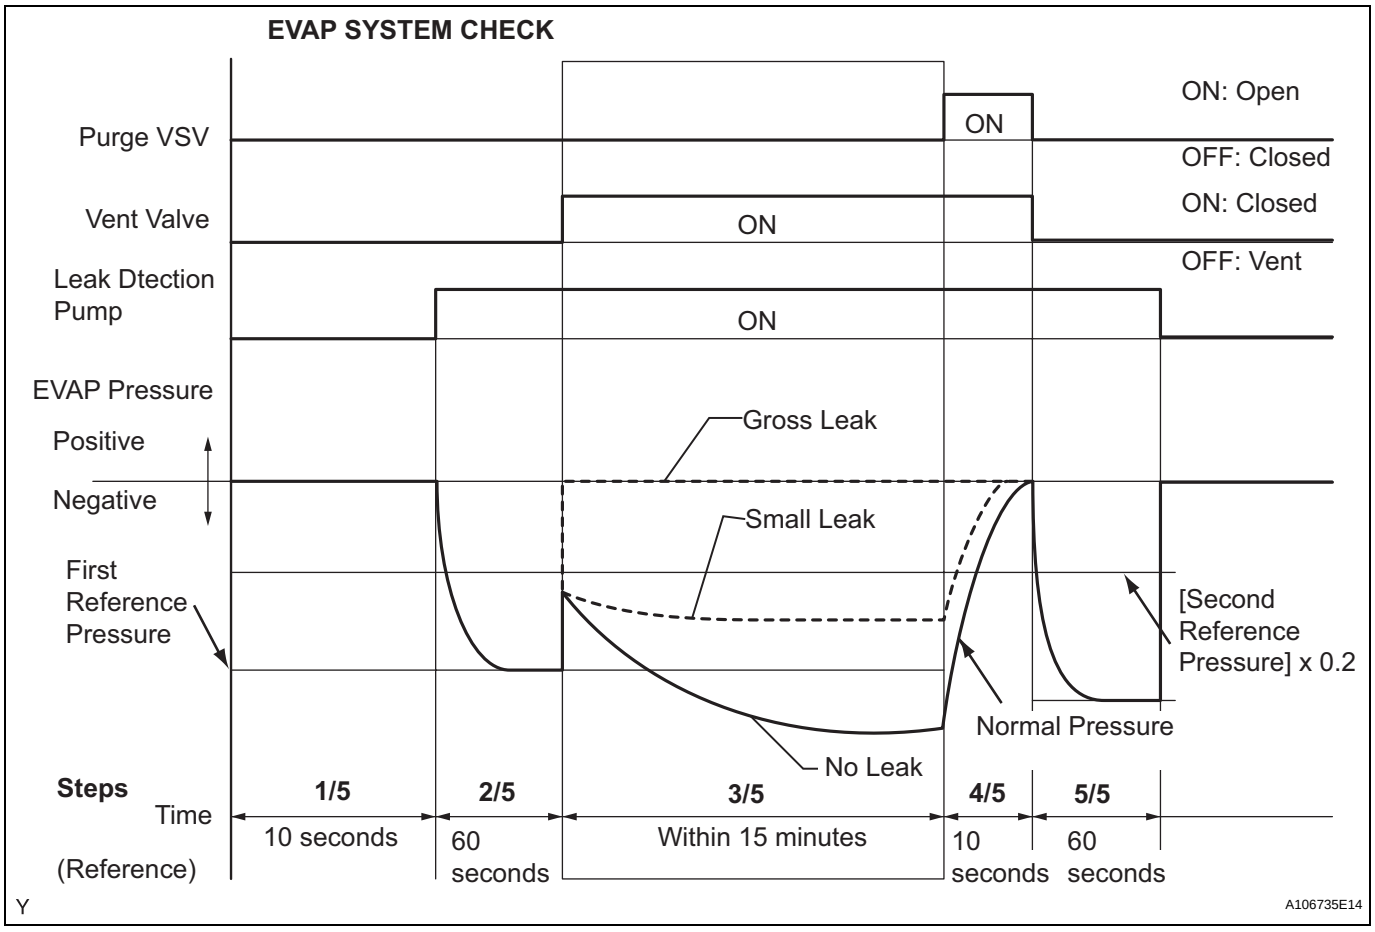
(b) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / SYSTEM CHECK / EVAP SYS CHECK / AUTO OPERATION.

(c) After the EVAP SYSTEM CHECK is completed, check for pending DTCs by selecting the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES.
HINT:
If no pending DTCs are displayed, perform the MONITOR CONFIRMATION (see "Diagnostic Help" menu). After this confirmation, check for pending DTCs. If no DTCs are displayed, the EVAP system is normal.

NEXT

ES

3	PERFORM EVAP SYSTEM CHECK (MANUAL OPERATION)



NOTICE:

- **In the EVAP SYSTEM CHECK (MANUAL OPERATION), perform the series of 5 EVAP SYSTEM CHECK steps manually using the intelligent tester.**
- **Do not perform the EVAP SYSTEM CHECK when the fuel tank is more than 90% full because the cut-off valve may be closed, making the fuel tank leak check unavailable.**
- **Do not run the engine during this operation.**

- **When the temperature of the fuel is 35°C (95°F) or more, a large amount of vapor forms and any check results become inaccurate. When performing the EVAP SYSTEM CHECK, keep the temperature below 35°C (95°F).**

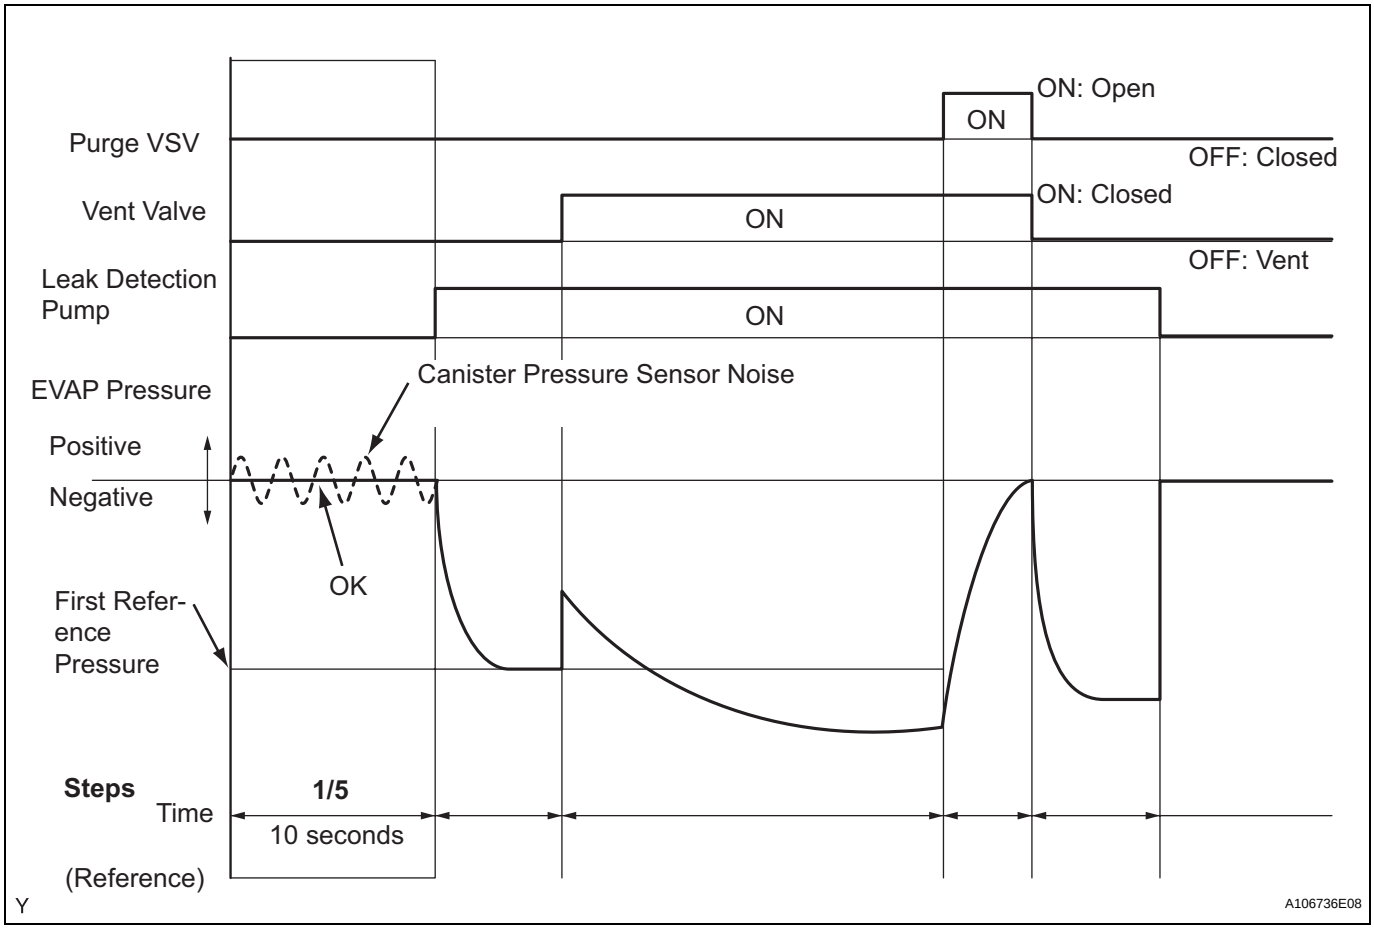
(a) Clear the DTCs (See page ES-45).

(b) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / SYSTEM CHECK / EVAP SYS CHECK / MANUAL OPERATION.

NEXT

4	PERFORM EVAP SYSTEM CHECK (STEP 1/5)

ES



(a) Check the EVAP pressure in step 1/5.

Result

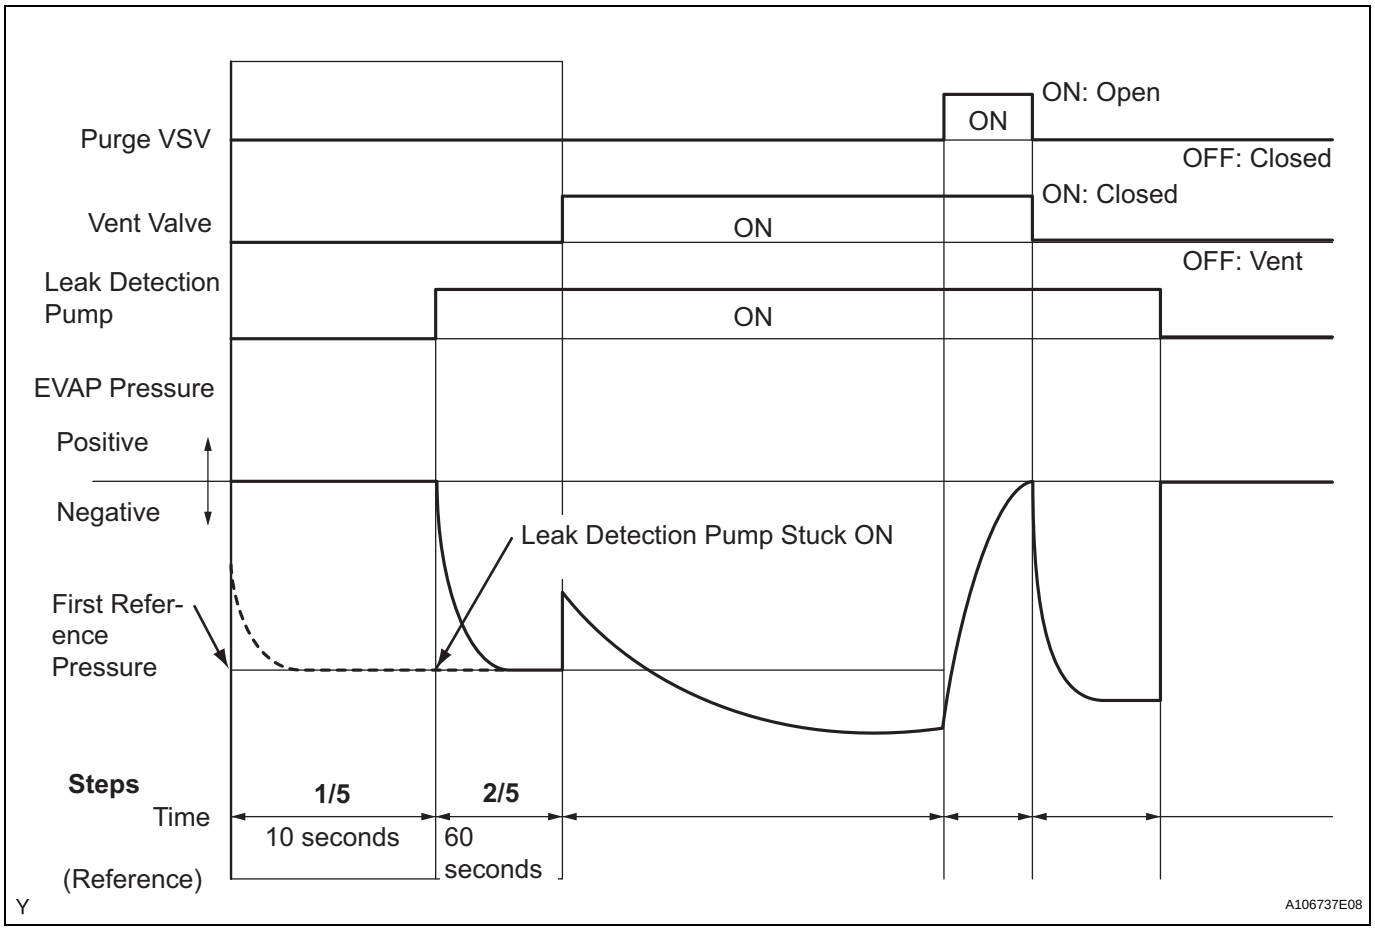
DTCs*	Test Results	Suspected Trouble Areas	Proceed to
-	Virtually no variation in EVAP pressure	Not yet determined	A
P0451	EVAP pressure fluctuates by +-0.3 kPa-g (2.25 mmHg-g) or more	Canister pressure sensor noise	B

*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "CONFIRM DTC" procedures above.

B	Go to step 29

A

5	PERFORM EVAP SYSTEM CHECK (STEP 1/5 TO 2/5)



(a) Check the EVAP pressure in steps 1/5 and 2/5.

Result

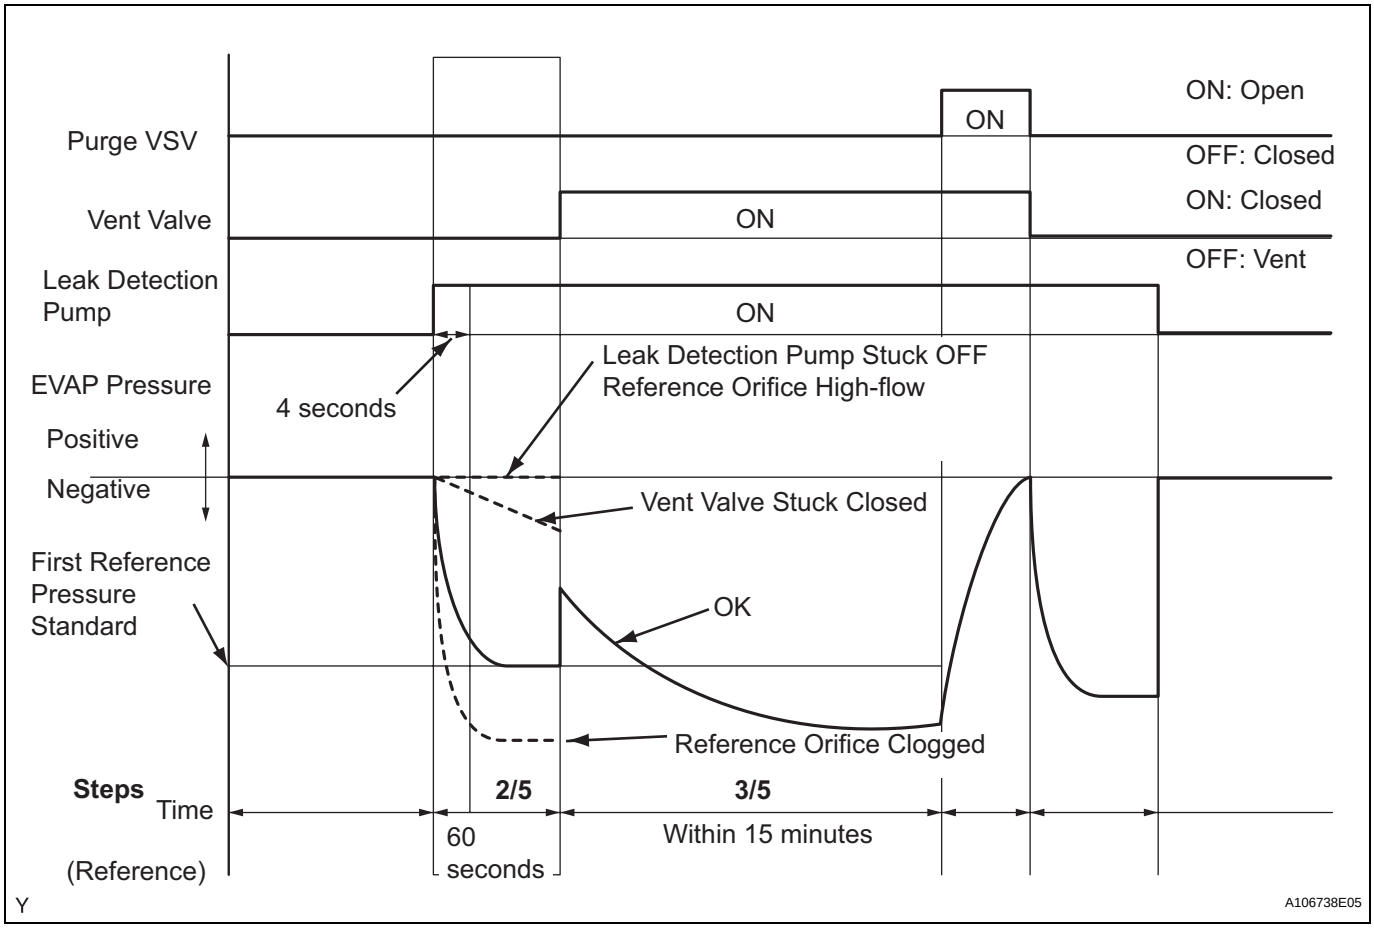
DTCs*	Test Results	Suspected Trouble Areas	Proceed to
-	Virtually no variation in EVAP pressure during step 1/5. Then decreases to reference pressure	Not yet determined	A
P2402	Small difference between EVAP pressures during steps 1/5 and 2/5	Leak detection pump stuck ON	B

*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "CONFIRM DTC" procedures above.
HINT:
The first reference pressure is the value determined in step 2/5.

B → Go to step 22

A

6	PERFORM EVAP SYSTEM CHECK (STEP 2/5)



HINT:
Make a note of the pressures checked in steps "A" and "B" below.
(a) Check the EVAP pressure 4 seconds after the leak detection pump is activated* (Step "A").
*: The leak detection pump begins to operate as step 1/5 finishes and step 2/5 starts.
(b) Check the EVAP pressure again when it has stabilized. This pressure is the reference pressure (Step "B").

Result

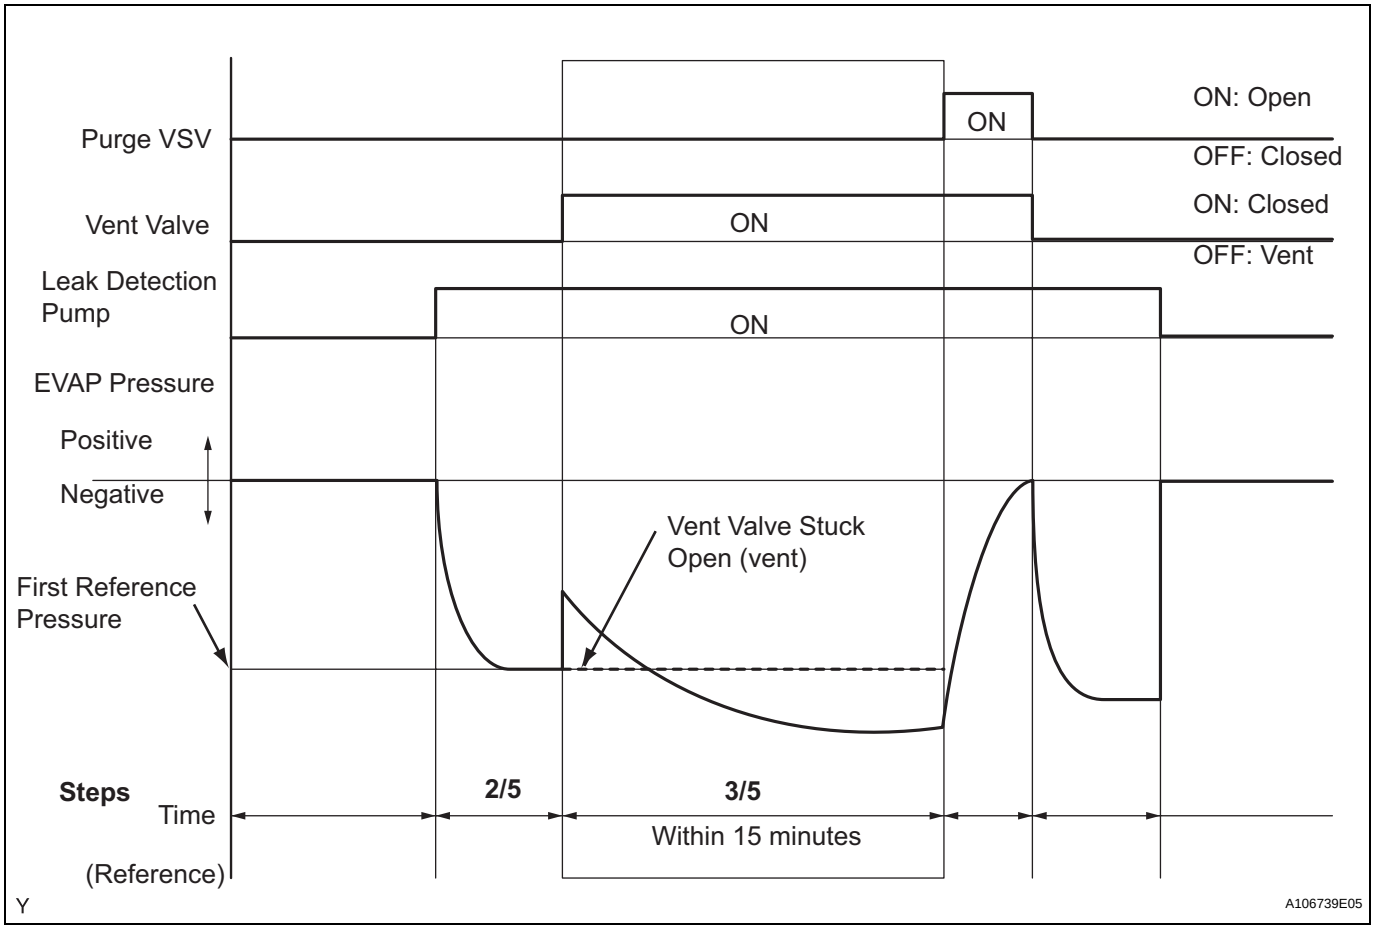
DTCs*	Test Results	Suspected Trouble Areas	Proceed to
-	EVAP pressure in step (b) between -4.85 kPa-g and -1.057 kPa-g (-36.4 mmHg-g and -7.93 mmHg-g)	Not yet determined	A
P043F and P2401	EVAP pressure in step (b) -1.057 kPa-g (-7.93 mmHg-g) or more	• Reference orifice high-flow • Leak detection pump stuck OFF	B
P043E	EVAP pressure in step (b) below -4.85 kPa-g (-36.4 mmHg-g)	Reference orifice clogged	C
P2419	EVAP pressure in step (a) more than -1.057 kPa-g (-7.93 mmHg-g)	Vent valve stuck closed	D

*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "CONFIRM DTC" procedures above.

B	Go to step 11
C	Go to step 29
D	Go to step 20

A

7	PERFORM EVAP SYSTEM CHECK (STEP 2/5 TO 3/5)



(a) Check the EVAP pressure increase in step 3/5.

Result

DTCs*	Test Results	Suspected Trouble Areas	Proceed to
-	EVAP pressure increases by 0.3 kPa-g (2.25 mmHg-g) or more within 10 seconds of proceeding from step 2/5 to step 3/5	Not yet determined	A
P2420	No variation in EVAP pressure despite proceeding from step 2/5 to step 3/5	Vent valve stuck open (vent)	B
P0451	No variation in EVAP pressure during steps 1/5 through 3/5	Canister pressure sensor malfunction fixed	C

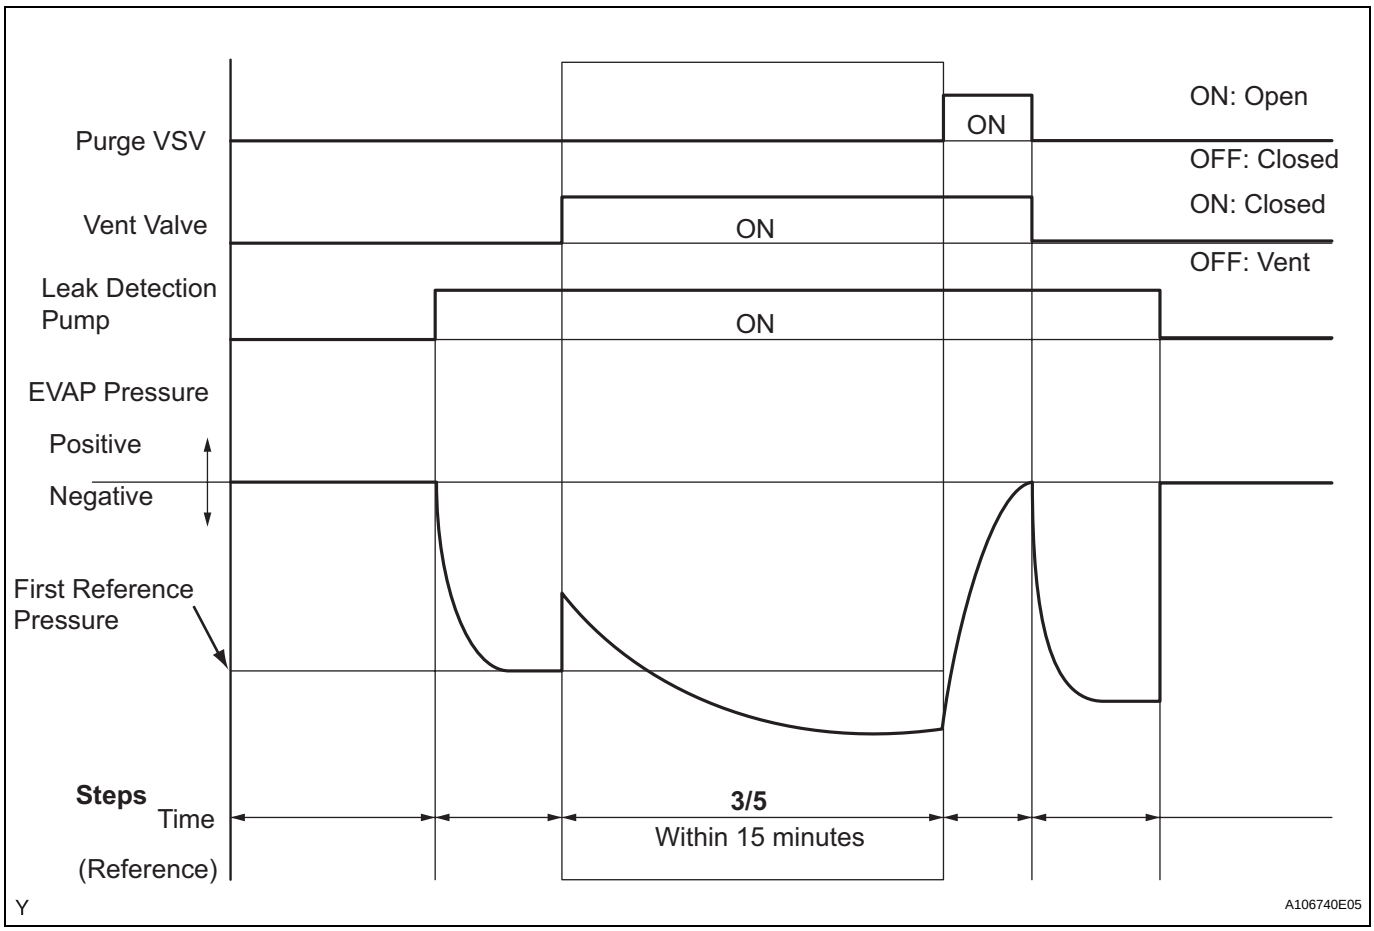
*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "CONFIRM DTC" procedures above.

B	Go to step 19

C → Go to step 29

A

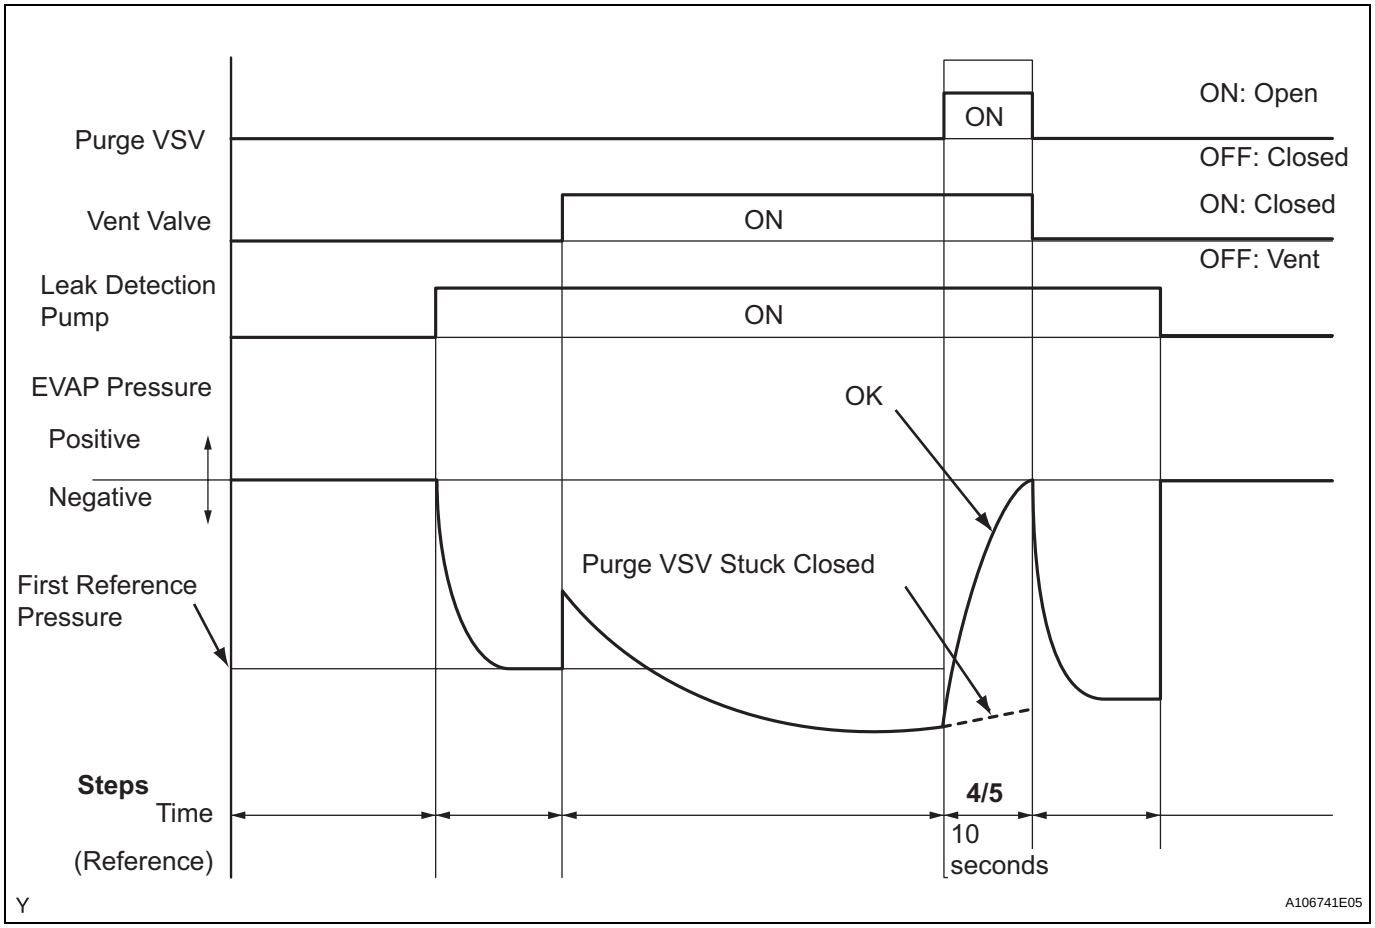
8	PERFORM EVAP SYSTEM CHECK (STEP 3/5)



(a) Wait until the EVAP pressure change is less than 0.1 kPa-g (0.75 mmHg-g) for 30 seconds.
(b) Measure the EVAP pressure and record it.
HINT:
A few minutes are required for the EVAP pressure to become saturated. When there is little fuel in the fuel tank, it takes up to 15 minutes.

NEXT

9	PERFORM EVAP SYSTEM CHECK (STEP 4/5)



(a) Check the EVAP pressure in step 4/5.

Result

DTCs*	Test Results	Suspected Trouble Areas	Proceed to
-	EVAP pressure increases by 0.3 kPa-g (2.25 mmHg-g) or more within 10 seconds of proceeding from step 3/5 to step 4/5	Not yet determined	A
P0441	EVAP pressure increases by 0.3 kPa-g (2.25 mmHg-g) or more within 10 seconds of proceeding from step 3/5 to step 4/5	Problems in EVAP hose between purge VSV and intake manifold	B
P0441	Variation in EVAP pressure less than 0.3 kPa-g (2.25 mmHg-g) for 10 seconds, after proceeding from step 3/5 to step 4/5	Purge VSV stuck closed	C

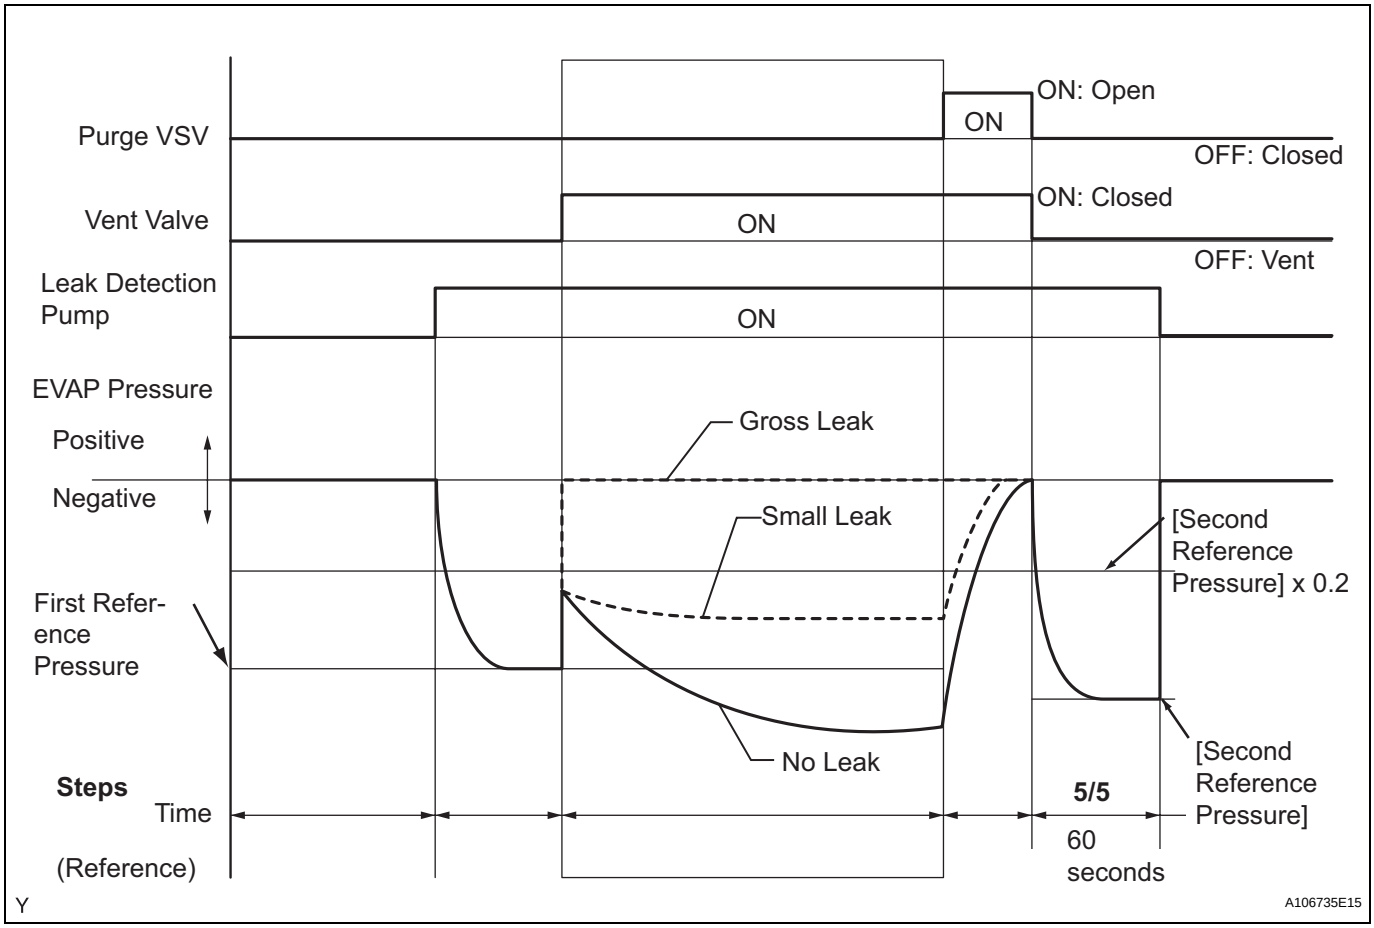
*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "CONFIRM DTC" procedures above.

B → Go to step 15

C → Go to step 12

A

10	PERFORM EVAP SYSTEM CHECK (STEP 5/5)



(a) Check the EVAP pressure in step 5/5.
(b) Compare the EVAP pressure in step 3/5 and the second reference pressure (step 5/5).

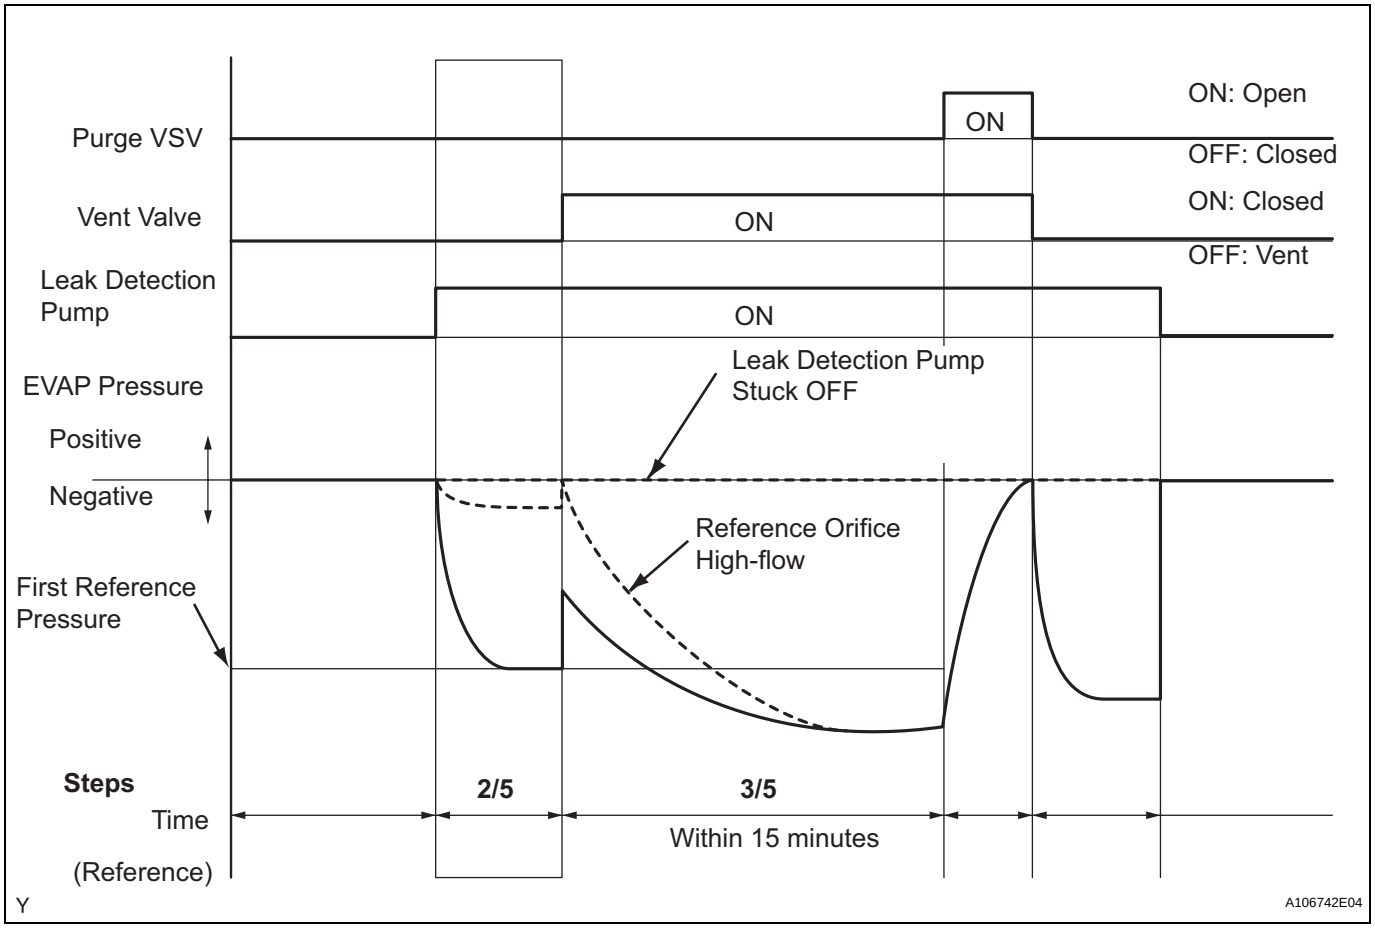
Result

DTCs*	Test Results	Suspected Trouble Areas	Proceed to
-	EVAP pressure (step 3/5) lower than second reference pressure (step 5/5)	Not yet determined (no leakage from EVAP system)	A
P0441 and P0455	EVAP pressure (step 3/5) higher than [second reference pressure (step 5/5) x 0.2]	• Purge VSV stuck open • EVAP gross leak	B
P0456	EVAP pressure (step 3/5) higher than second reference pressure (step 5/5)	EVAP small leak	B

*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "CONFIRM DTC" procedures above.

A	Go to step 35
B	Go to step 12

11	PERFORM EVAP SYSTEM CHECK (STEP 3/5)



(a) Check the EVAP pressure in step 3/5.

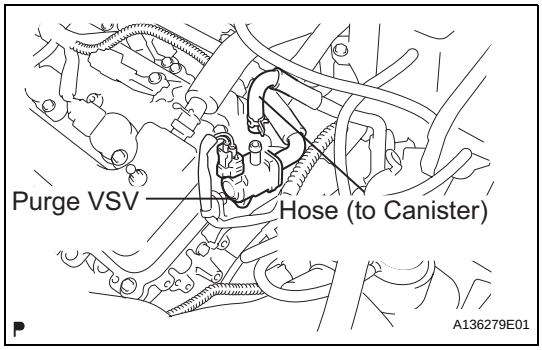
Result

DTCs*	Test Results	Suspected Trouble Areas	Proceed to
P043F	EVAP pressure less than [reference pressure] measured at 2/5	Reference orifice high-flow	A
P2401	EVAP pressure almost same as [reference pressure] measured at 2/5	Leak detection pump stuck OFF	B

*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "CONFIRM DTC" procedures above.
HINT:
The first reference pressure is the value determined in step 2/5.

A	Go to step 29
B	Go to step 22

12	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (PURGE VSV)



(a) On the intelligent tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / EVAP VSV (ALONE).
(b) Disconnect the hose (connected to the canister) from the purge VSV.
(c) Start the engine.
(d) Using the tester, turn off the purge VSV (EVAP VSV: OFF).
(e) Use your finger to confirm that the purge VSV has no suction.
(f) Using the tester, turn on the purge VSV (EVAP VSV: ON).
(g) Use your finger to confirm that the purge VSV has suction.

ES

Result

Test Results	Suspected Trouble Areas	Proceed to
No suction when purge VSV turned OFF, and suction applied when turned ON	Purge VSV normal	A
Suction applied when purge VSV turned OFF	Purge VSV stuck open	B
No suction when purge VSV turned ON	• Purge VSV stuck closed • Problems with EVAP hose between purge VSV and intake manifold	C

(h) Reconnect the hose.

B	Go to step 14
C	Go to step 15

A

13	CHECK FUEL CAP ASSEMBLY

(a) Check that the fuel cap is correctly installed and confirm the fuel cap meets OEM specifications.
(b) Tighten the fuel cap until a few click sounds are heard.
HINT:
If an EVAP tester is available, check the fuel cap using the tester.
1. Remove the fuel cap and install it onto a fuel cap adapter.
2. Connect an EVAP tester pump hose to the adapter, and pressurize the cap to 3.2 to 3.7 kPa (24 to 28 mmHg) using an EVAP tester pump.
3. Seal the adapter and wait for 2 minutes.
4. Check the pressure. If the pressure is 2 kPa (15 mmHg) or more, the fuel cap is normal.

Result

Test Results	Suspected Trouble Areas	Proceed to
Fuel cap correctly installed	-	A

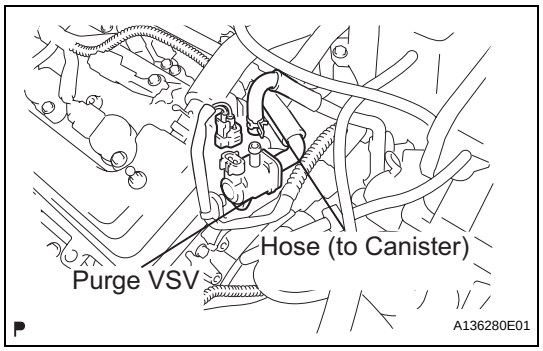
Test Results	Suspected Trouble Areas	Proceed to
Fuel cap loose	• Fuel cap improperly installed • Defective fuel cap • Fuel cap does not meet OEM specifications	B
Defective fuel cap	-	B
No fuel cap	-	C

(c) Reinstall the fuel cap.

A	Go to step 28
B	Go to step 26
C	Go to step 27

ES

14 INSPECT DUTY VACUUM SWITCHING VALVE (PURGE VSV)



(a) Turn the ignition switch off.
(b) Disconnect the C6 purge VSV connector.
(c) Disconnect the hose (connected to the canister) from the purge VSV.
(d) Start the engine.
(e) Use your finger to confirm that the purge VSV has no suction.

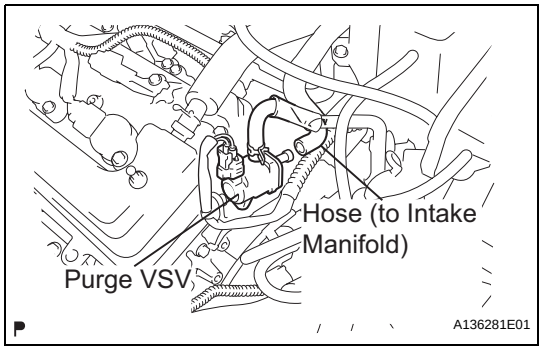
Result

Test Results	Suspected Trouble Areas	Proceed to
No suction	ECM	A
Suction applied	Purge VSV	B

(f) Reconnect the purge VSV connector.
(g) Reconnect the hose.

A	Go to step 34
B	Go to step 30

15 CHECK EVAP HOSE (PURGE VSV - INTAKE MANIFOLD)



(a) Disconnect the hose (connected to the intake manifold) from the purge VSV.
(b) Start the engine.
(c) Use your finger to confirm that the hose has suction.

Result

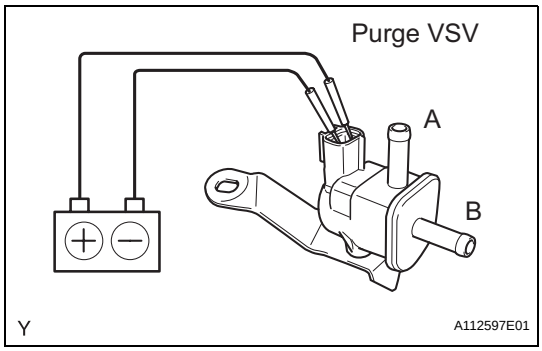
Test Results	Suspected Trouble Areas	Proceed to
Suction applied	EVAP hose between purge VSV and intake manifold normal	A
No suction	• Intake manifold port • EVAP hose between purge VSV and intake manifold	B

(d) Reconnect the hose.

B → Go to step 25

A

16 INSPECT DUTY VACUUM SWITCHING VALVE (PURGE VSV)



(a) Remove the purge VSV.
(b) Apply the battery voltage to the terminals of the purge VSV.
(c) Using an air gun, confirm that air flows from port A to port B.

Result

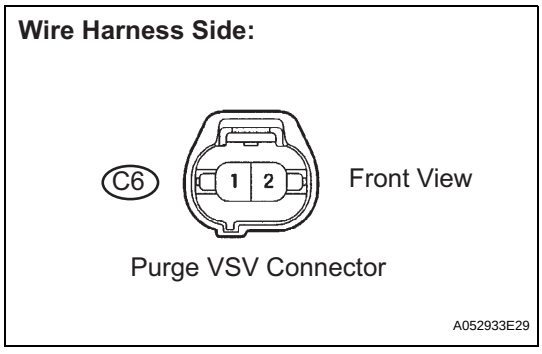
Test Results	Suspected Trouble Areas	Proceed to
Air flows	Purge VSV normal	A
No air flow	Purge VSV	B

(d) Install the purge VSV.

B → Go to step 30

A

17 CHECK HARNESS AND CONNECTOR (POWER SOURCE OF PURGE VSV)



(a) Disconnect the C6 purge VSV connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage between terminal 2 of the purge VSV connector and body ground.

Result

Test Results	Suspected Trouble Areas	Proceed to
9 to 14 V	Normal	A
Other than result above	Wire harness or connectors between purge VSV and ECM	B

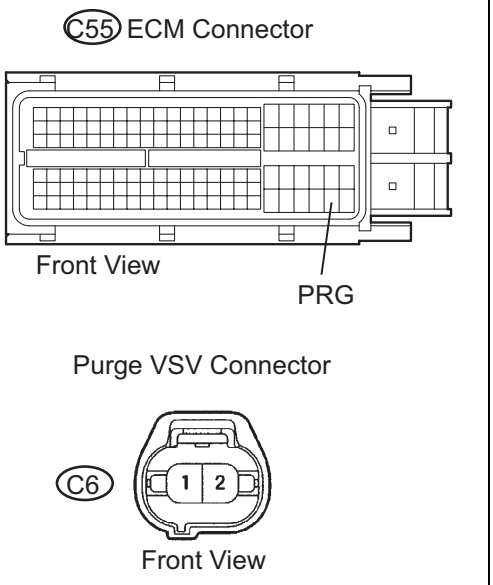
(d) Reconnect the purge VSV connector.

B	Go to step 31

A

18 CHECK HARNESS AND CONNECTOR (PURGE VSV - ECM)

Wire Harness Side:



(a) Disconnect the C55 ECM connector and the C6 purge VSV connector.
(b) Measure the resistance.

Standard resistance

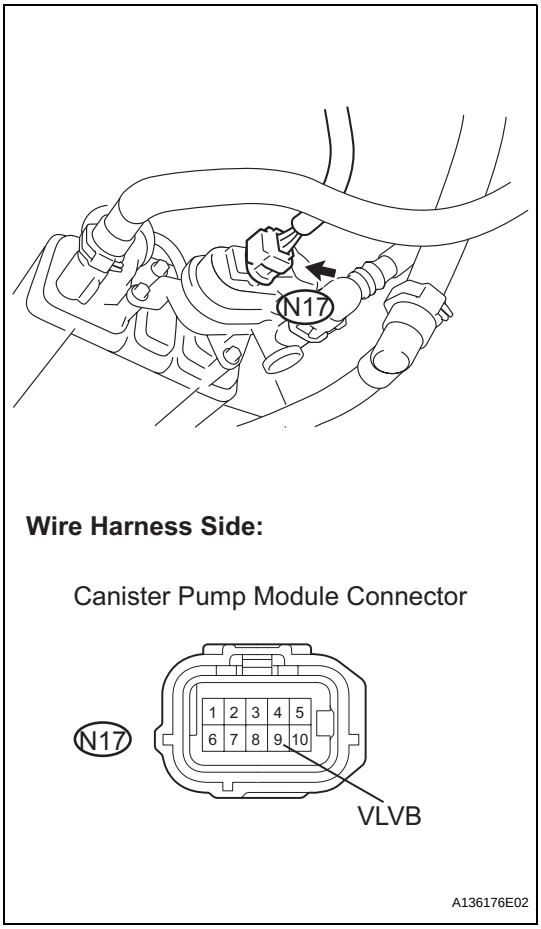
Tester Connections	Specified Conditions
C55-108 (PRG) - C6-2 (Purge VSV)	Below 1 Ω
C55-108 (PRG) - Body ground	10 kΩ or higher
C6-2 (Purge VSV) - Body ground	10 kΩ or higher

(c) Reconnect the purge VSV connector.
(d) Reconnect the ECM connector.

OK	Go to step 34
NG	Go to step 31

ES

19	INSPECT CANISTER PUMP MODULE (POWER SOURCE FOR VENT VALVE)



(a) Turn the ignition switch off.
(b) Disconnect the N17 canister pump module connector.
(c) Turn the ignition switch on (IG).
(d) Measure the voltage between the VLVB terminal of the canister pump module connector and body ground.

Result

Test Results	Suspected Trouble Areas	Proceed to
9 to 14 V	1. Wire harness between vent valve and ECM 2. Vent valve 3. ECM	A
Below 3 V	Power source wire harness of vent valve	B

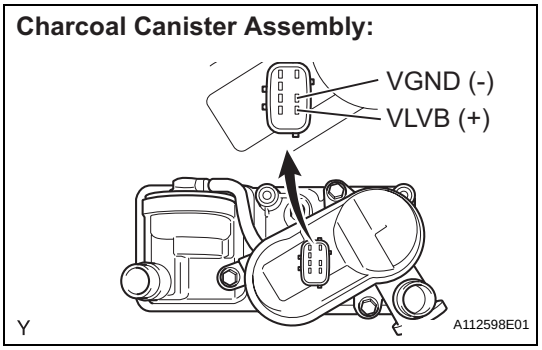
(e) Reconnect the canister pump module connector.

B → Go to step 31

A

20 INSPECT CANISTER PUMP MODULE (VENT VALVE OPERATION)

Charcoal Canister Assembly:



(a) Turn the ignition switch off.
(b) Disconnect the N17 canister pump module connector.
(c) Apply battery voltage to the VLVB and VGND terminals of the canister pump module.
(d) Touch the canister pump module to confirm the vent valve operation.

Result

Test Results	Suspected Trouble Areas	Proceed to
Operating	1. Wire harness between vent valve and ECM 2. ECM	A
Not operating	Vent valve	B

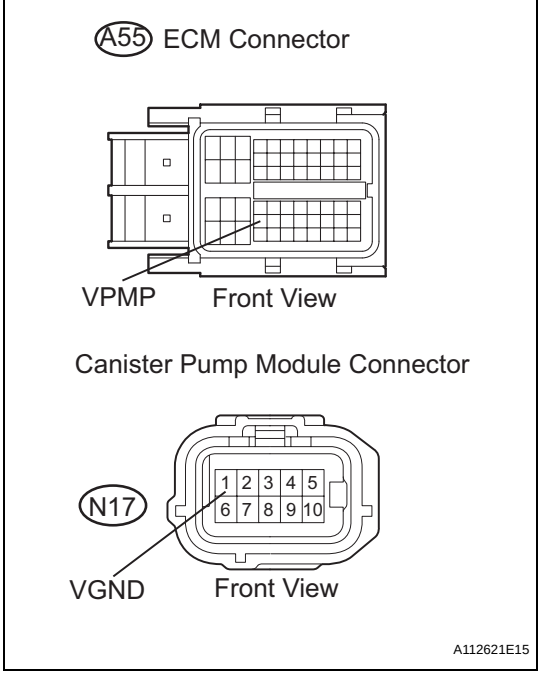
(e) Reconnect the canister connector.

B → **Go to step 29**

A

21 CHECK HARNESS AND CONNECTOR (ECM - CANISTER PUMP MODULE)

Wire Harness Side:



(a) Disconnect the A55 ECM connector.
(b) Disconnect the N17 canister pump module connector.
(c) Measure the resistance between the VPMP terminal of the ECM connector and the VGND terminal of the canister pump module connector.

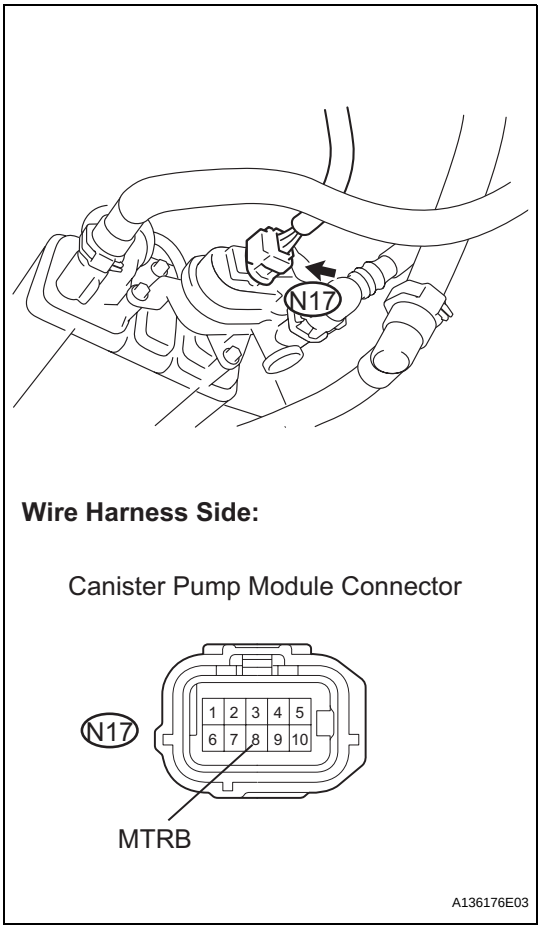
Result

Test Results	Suspected Trouble Areas	Proceed to
Below 1 Ω	ECM	A
10 kΩ or higher	Wire harness between ECM and canister pump module	B

(d) Reconnect the ECM connector.
(e) Reconnect the canister pump module connector.

A	Go to step 34
B	Go to step 31

22 PERFORM ACTIVE TEST USING INTELLIGENT TESTER (VACUUM PUMP (ALONE))



(a) Turn the ignition switch off.
(b) Disconnect the N17 canister pump module connector.
(c) Turn the ignition switch on (IG).
(d) On the intelligent tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / VACUUM PUMP.
(e) Measure the voltage between MTRB terminal 1 of the canister pump module connector and body ground when the leak detection pump is turned ON and OFF using the tester.

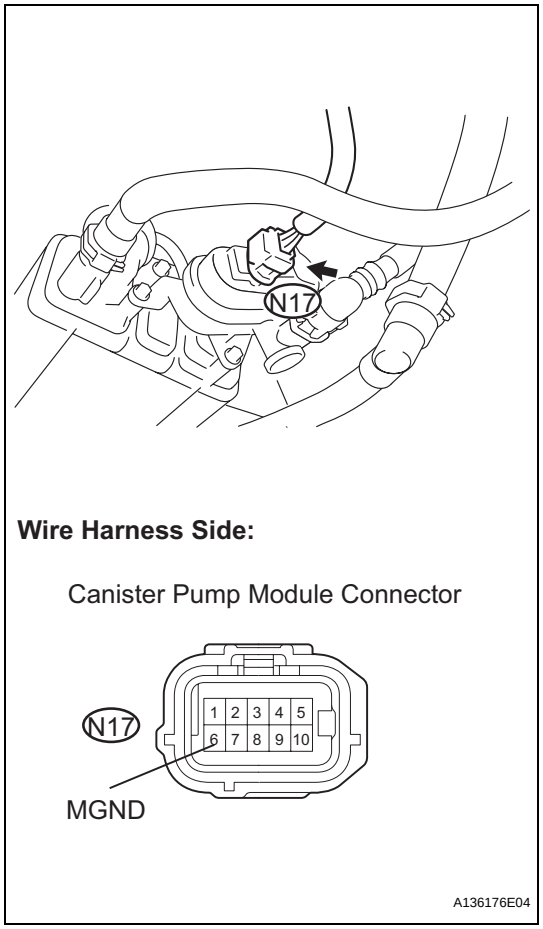
Result

Test Results	Suspected Trouble Areas	Proceed to
Below 3 V when OFF 9 to 14 V when ON	1. Wire harness between leak detection pump and body ground 2. Leak detection pump	A
Below 3 V when OFF and ON	1. Wire harness between leak detection pump and ECM 2. ECM	B

B	Go to step 24

A

23	CHECK HARNESS AND CONNECTOR (CANISTER PUMP MODULE - BODY GROUND)



(a) Turn the ignition switch off.
(b) Disconnect the N17 canister pump module connector.
(c) Measure the resistance between the MGND terminal of the canister pump module connector and body ground.

Result

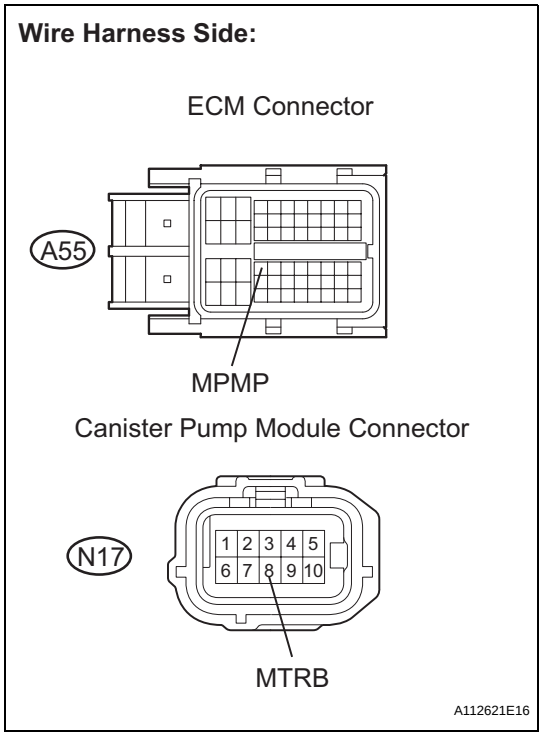
Test Results	Suspected Trouble Areas	Proceed to
Below 1 Ω	**Leak detection pump**	**A**
10 kΩ or higher	**Wire harness between canister pump module and body ground**	**B**

(d) Reconnect the canister pump module connector.

A	**Go to step 29**
B	**Go to step 31**

ES

24 CHECK HARNESS AND CONNECTOR (ECM - CANISTER PUMP MODULE)



(a) Turn the ignition switch off.
(b) Disconnect the N17 canister pump module connector.
(c) Disconnect the C55 ECM connector.
(d) Measure the resistance between the MPMP terminal of the ECM connector and the MTRB terminal of the canister pump module connector.

Result

Test Results	Suspected Trouble Areas	Proceed to
Below 1 Ω	ECM	A
10 kΩ or higher	Wire harness between ECM and canister pump module	B

(e) Reconnect the canister pump module connector.
(f) Reconnect the ECM connector.

A	Go to step 34
B	Go to step 31

25 INSPECT INTAKE MANIFOLD (EVAP PURGE PORT)

(a) Stop the engine.
(b) Disconnect the EVAP hose from the intake manifold.
(c) Start the engine.
(d) Use your finger to confirm that the port of the intake manifold has suction.

Result

Test Results	Suspected Trouble Areas	Proceed to
Suction applied	EVAP hose between intake manifold and purge VSV	A
No suction	Intake manifold	B

(e) Reconnect the EVAP hose.

A	Go to step 32
B	Go to step 33

26	CORRECTLY REINSTALL OR REPLACE FUEL CAP

HINT:
- When reinstalling the fuel cap, tighten it until a few click sounds are heard.
- When replacing the fuel cap, use a fuel cap that meets OEM specifications, and install it until a few click sounds are heard.

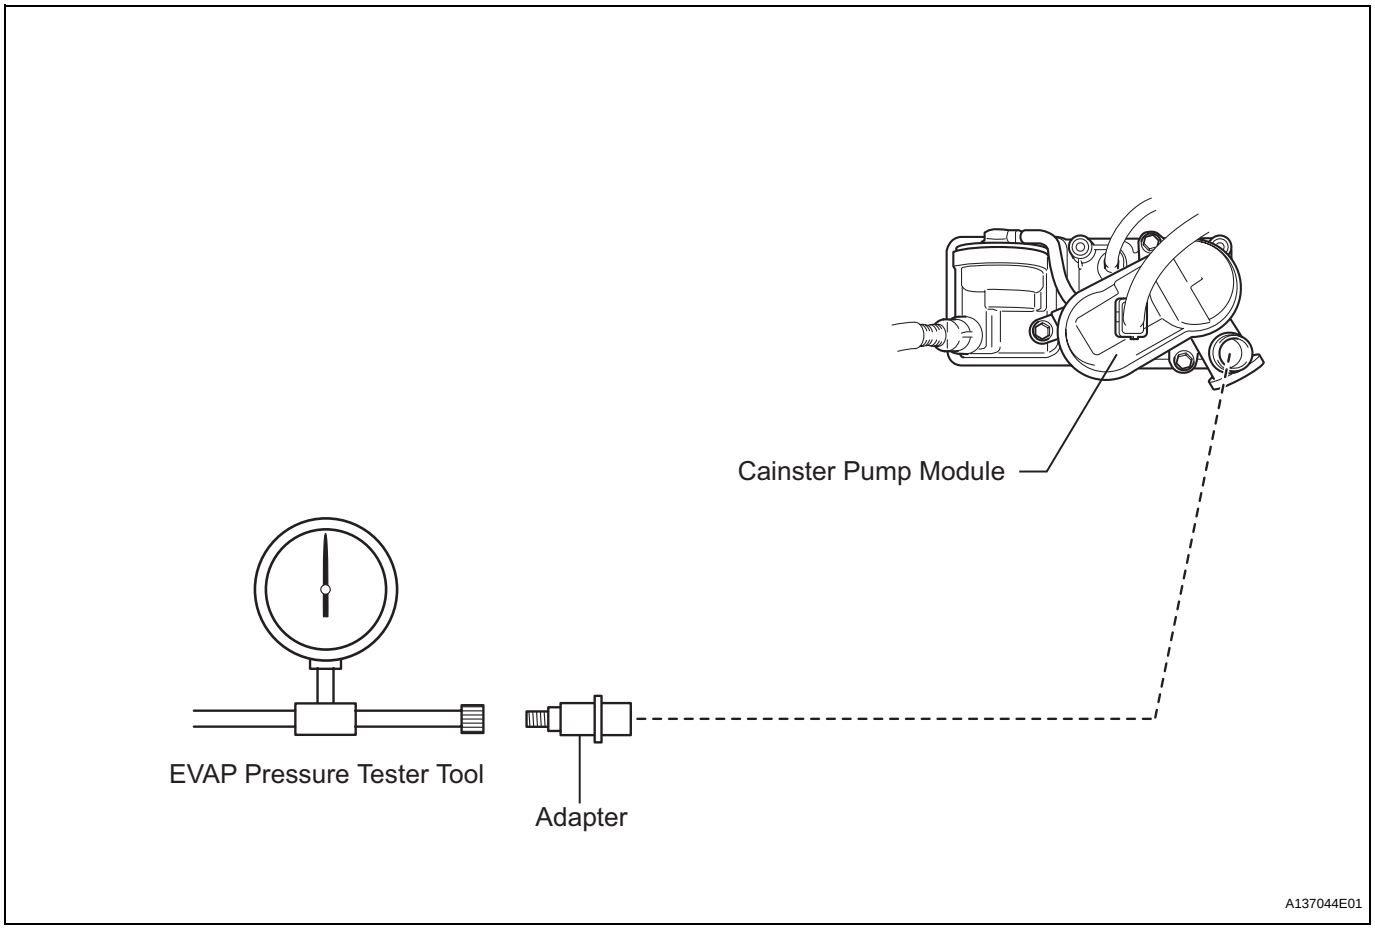
NEXT	Go to step 36

27	REPLACE FUEL CAP

HINT:
When installing the fuel cap, tighten it until a few click sounds are heard.

NEXT	Go to step 36

28	LOCATE EVAP LEAK PART



(a) Disconnect the vent hose.
(b) Connect the EVAP pressure tester tool to the canister pump module with the adapter.

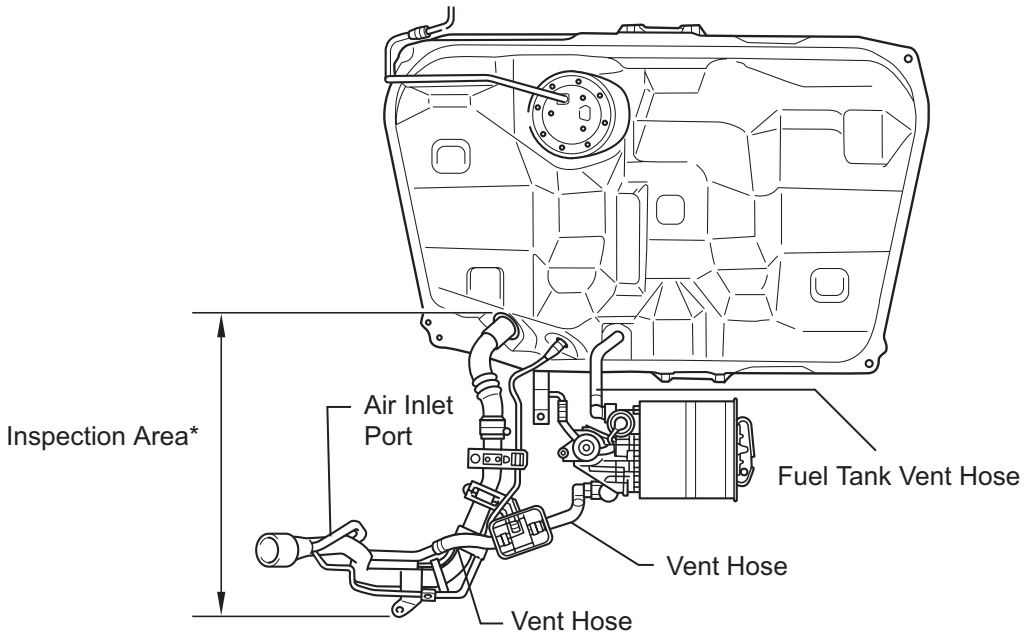
(c) Pressurize the EVAP system to 3.2 to 3.7 kPa (24 to 28 mmHg).
(d) Apply soapy water to the piping and connecting parts of the EVAP system.
(e) Look for areas where bubbles appear. This indicates the leak point.
(f) Repair or replace the leak point.
HINT:
Disconnect the hose between the canister and the fuel tank from the canister. Block the canister side and conduct an inspection. In this way, the fuel tank can be excluded as an area suspected of causing fuel leaks.

NEXT	Go to step 36

ES

29	REPLACE CHARCOAL CANISTER ASSEMBLY

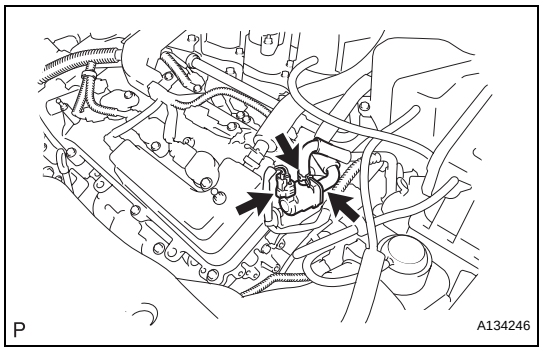
(a) Replace the canister assembly (See page EC-9).



NOTICE:
When replacing the canister, check the canister pump module interior and related pipes for water, fuel and other liquids. If liquids are present, check for disconnections and/or cracks in the following: 1) the pipe from the air inlet port to the canister pump module; 2) the canister filter; and 3) the fuel tank vent hose.

NEXT → Go to step 36

30 REPLACE DUTY VACUUM SWITCHING VALVE (PURGE VSV)



(a) Disconnect the connector and the hoses from the purge VSV.
(b) Remove the purge VSV (See page EC-13).
(c) Install a new purge VSV (See page EC-14).
(d) Reconnect the connector and hoses.

NEXT → Go to step 36

ES

31 REPAIR OR REPLACE HARNESS OR CONNECTOR

NEXT → Go to step 36

32 REPLACE EVAP HOSE (INTAKE MANIFOLD - PURGE VSV)

NEXT → Go to step 36

33 INSPECT INTAKE MANIFOLD (EVAP PURGE PORT)

(a) Check that the EVAP purge port of the intake manifold is not clogged. If necessary, replace the intake manifold.

NEXT → Go to step 36

34 REPLACE ECM

(a) Replace the ECM (See page ES-518).

NEXT → Go to step 36

35 REPAIR OR REPLACE PARTS AND COMPONENTS INDICATED BY OUTPUT DTCS

(a) Repair the malfunctioning areas indicated by the DTCs that had been confirmed when the vehicle was brought in.

NEXT → Go to step 36

36	PERFORM EVAP SYSTEM CHECK (AUTO OPERATION)

NOTICE:

- **The EVAP SYSTEM CHECK (AUTO OPERATION) consists of 5 steps performed automatically by the intelligent tester. It takes a maximum of approximately 18 minutes.**
- **Do not perform the EVAP SYSTEM CHECK when the fuel tank is more than 90% full because the cut-off valve may be closed, making the fuel tank leak check unavailable.**
- **Do not run the engine in this step.**
- **When the temperature of the fuel is 35°C (95°F) or more, a large amount of vapor forms and any check results become inaccurate. When performing an EVAP SYSTEM CHECK, keep the temperature below 35°C (95°F).**

(a) Clear the DTCs (See page ES-45).

(b) On the intelligent tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / SYSTEM CHECK / EVAP SYS CHECK / AUTO OPERATION.

(c) After the SYSTEM CHECK is completed, check for pending DTCs by selecting the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES.
HINT:
If no pending DTCs are found, the repair has been successfully completed.

NEXT

COMPLETED

CONFIRMATION DRIVING PATTERN

HINT:
After a repair, check Monitor Status by performing the Key-Off Monitor Confirmation and Purge Flow Monitor Confirmation described below.

1. KEY-OFF MONITOR CONFIRMATION

(a) Preconditions
The monitor will not run unless:
- The vehicle has been driven for 10 minutes or more (in a city area or on a freeway).
- The fuel tank is less than 90 % full.
- The altitude is less than 8,000 ft (2,400 m).
- The Engine Coolant Temperature (ECT) is between 4.4°C and 35°C (40°F and 95°F).
- The Intake Air Temperature (IAT) is between 4.4°C and 35°C (40°F and 95°F).
- The vehicle remains stationary (the vehicle speed is 0 mph (0 km/h)).

(b) Monitor Conditions
1. Allow the engine to idle for at least 5 minutes.
2. Turn the ignition switch off and wait for 6 hours (8 or 10.5 hours).
HINT:
Do not start the engine until checking MONITOR STATUS. If the engine is started, the steps described above must be repeated.

(c) Monitor Status
1. Connect the intelligent tester to the DLC3.
2. Turn the ignition switch on (IG) and turn the tester on.
3. Select the following menu items: DIAGNOSIS / ENHANCED OBD II / MONITOR STATUS.
4. Check the Monitor Status displayed on the tester.
HINT:
If INCMP is displayed, the monitor is not complete. Make sure that the preconditions have been met, and perform the Monitor Conditions again.

2. PURGE FLOW MONITOR CONFIRMATION (P0441)

HINT:
Perform this monitor confirmation after the Key-Off Monitor Confirmation shows COMPL (complete).

(a) Preconditions
The monitor will not run unless:
- The vehicle has been driven for 10 minutes or more (in a city area or on a freeway)
- The ECT is between 4.4°C and 35°C (40°F and 95°F)
- The IAT is between 4.4°C and 35°C (40°F and 95°F)

(b) Monitor Conditions
1. Release the pressure from the fuel tank by removing and reinstalling the fuel cap.
2. Warm the engine up until the ECT reaches more than 75°C (167°F).
3. Increase the engine speed to 3,000 rpm once.
4. Allow the engine to idle and turn A/C ON for 1 minute.

(c) Monitor Status
1. Turn the ignition switch off (if ON or the engine is running).
2. Connect the intelligent tester to the DLC3.
3. Turn the ignition switch on (IG) and turn the tester on.
4. Select the following menu items: DIAGNOSIS / ENHANCED OBD II / MONITOR STATUS.
5. Check the Monitor Status displayed on the tester.
HINT:
If INCMP is displayed, the monitor is not complete. Make sure that the preconditions have been met, and perform the Monitor Conditions again.

MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-25).

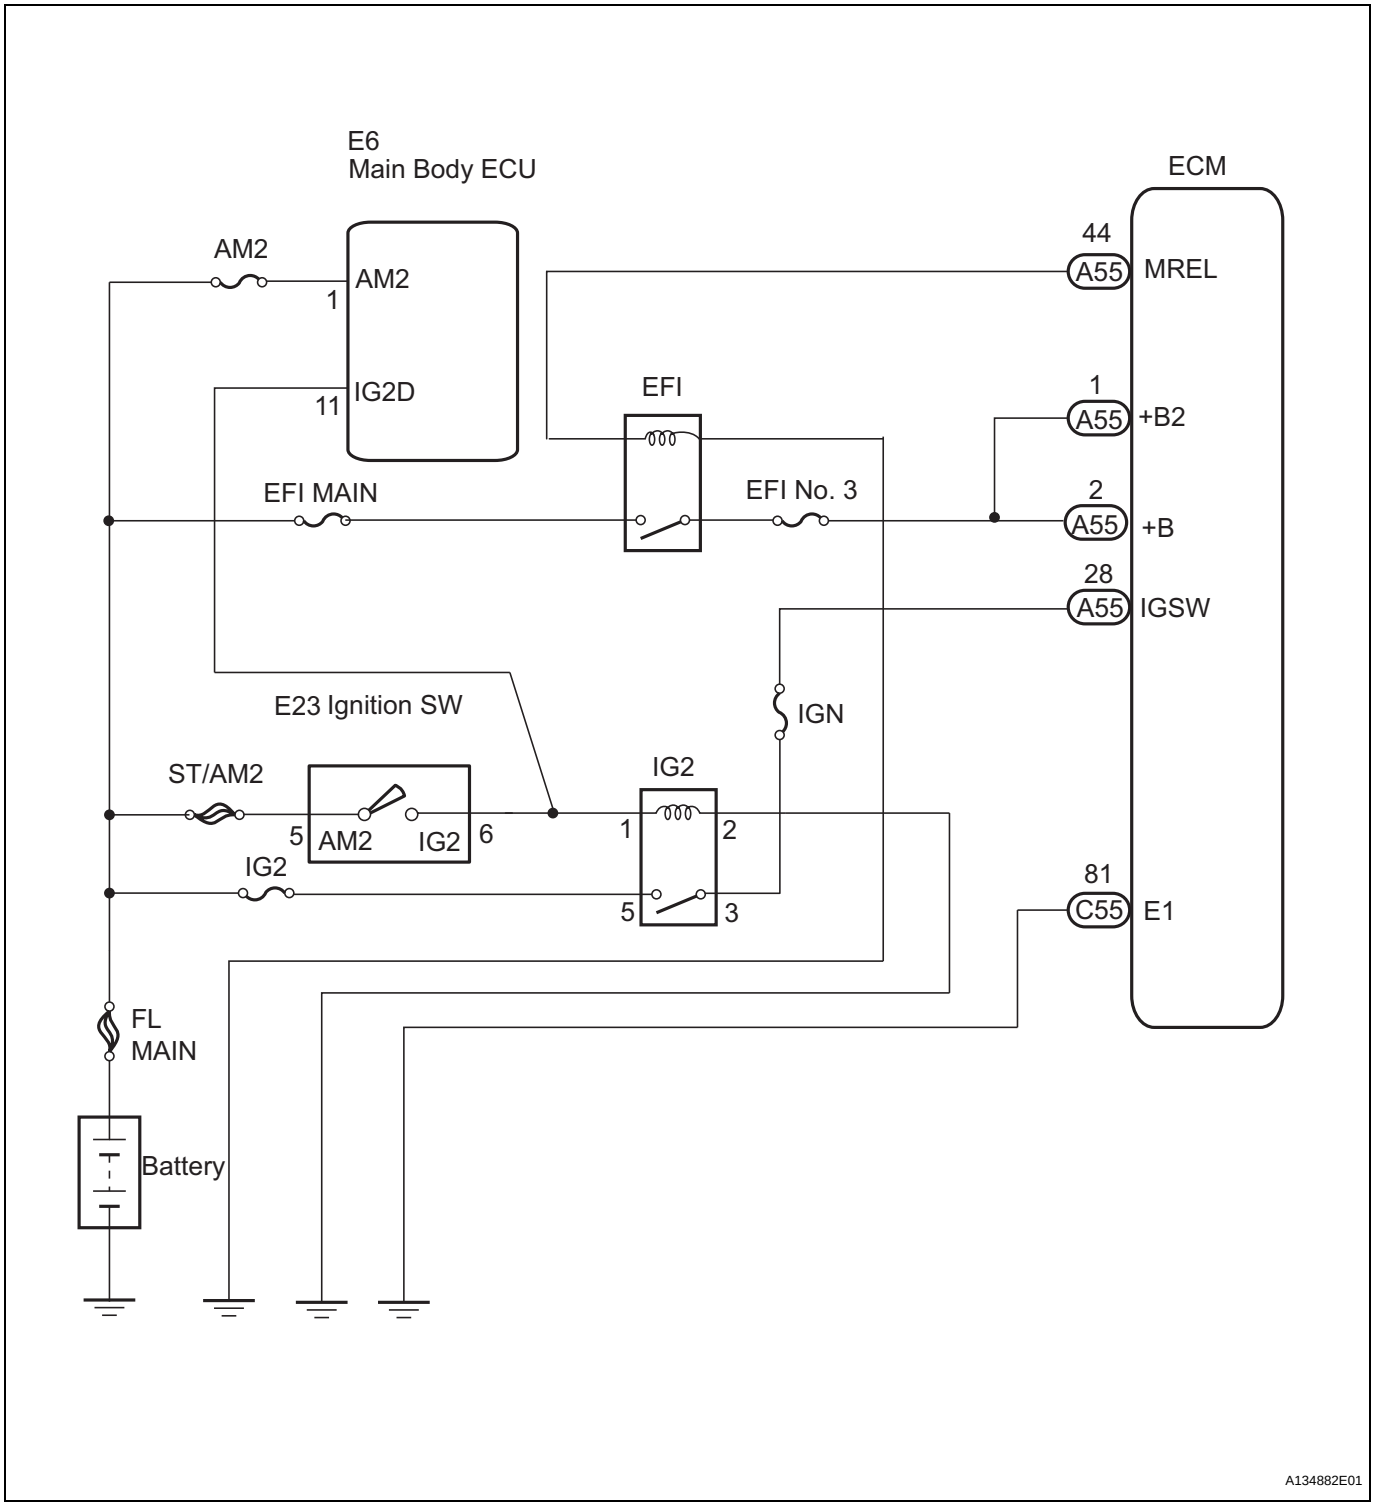
ES

ECM Power Source Circuit

DESCRIPTION

When the ignition switch is turned on (IG), the battery voltage is applied to terminal IGSW of the ECM. The ECM MREL output signal causes a current to flow to the coil, closing the contacts of the EFI MAIN relay and supplying power to terminal +B of the ECM.
If the ignition switch is turned off, the ECM holds the EFI MAIN relay ON for a maximum of 2 seconds to allow for the initial setting of the throttle valve.
When the ignition switch is turned on (IG), voltage from the ECM's MREL terminal applies to the engine room junction block (EFI relay). This causes the contacts of the engine room junction block (EFI relay) to close, which supplies power to terminal +B or +B1 of the ECM.

WIRING DIAGRAM

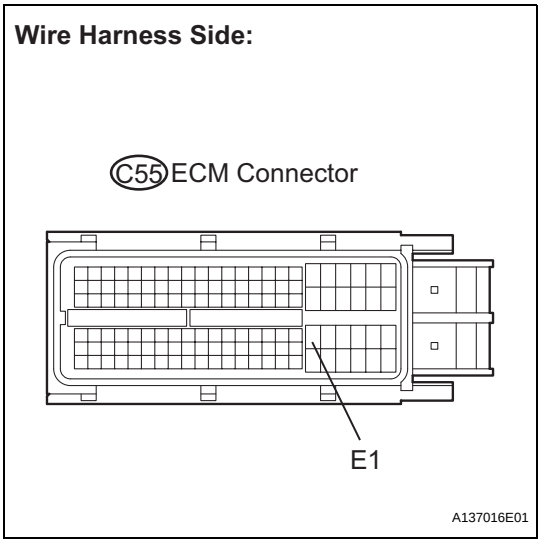


ES

INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR (ECM - BODY GROUND)

Wire Harness Side:



(a) Disconnect the C55 ECM connector.
(b) Measure the resistance between the terminals.
Standard resistance

Tester Connection	Specified Condition
E1 (C55-81) - Body ground	Below 1 Ω

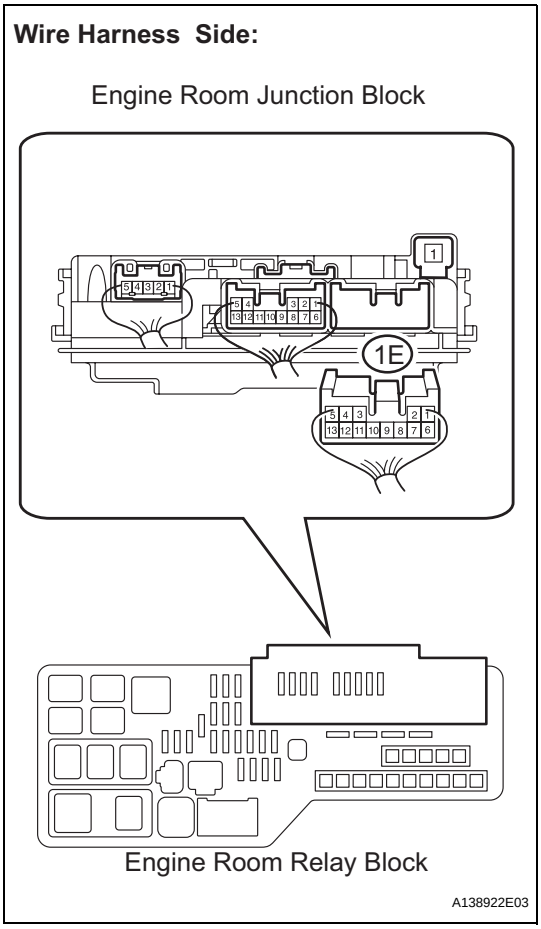
(c) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2	CHECK ENGINE ROOM JUNCTION BLOCK (EFI RELAY VOLTAGE)

Wire Harness Side:



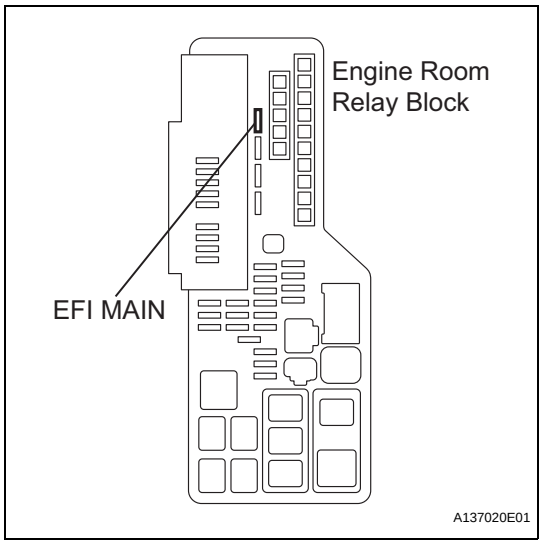
(a) Remove the engine room junction block from the engine room R/B.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage between the terminals.
Standard voltage

Tester Connection	Specified Condition
1E-6 - Body ground	9 to 14 V

OK → **Go to step 5**

NG

3 INSPECT EFI MAIN FUSE

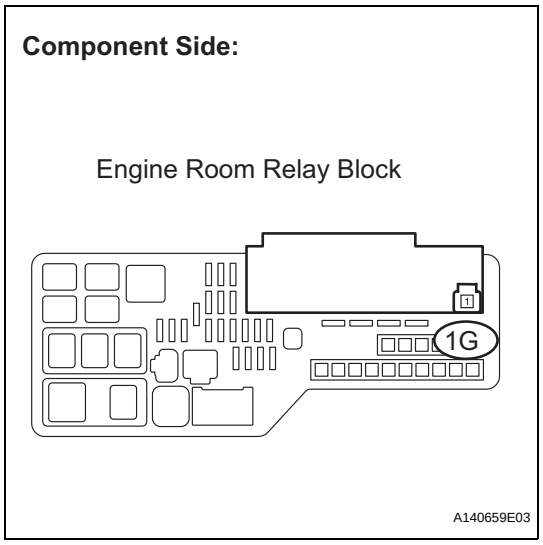


(a) Remove the EFI MAIN fuse from the engine room R/B.
(b) Measure the EFI MAIN fuse resistance.
Standard resistance:
Below 1 Ω
(c) Reinstall the EFI MAIN fuse.

NG → **REPLACE EFI MAIN FUSE**

OK

4 CHECK HARNESS AND CONNECTOR (ENGINE ROOM RELAY BLOCK - BATTERY)



(a) Disconnect the negative battery terminal.
(b) Disconnect the positive battery terminal.
(c) Remove the engine room junction block from the engine room R/B.
(d) Measure the resistance between the terminals.
Standard resistance (Check for open)

Tester Connection	Specified Condition
1G-1 - Positive battery terminal	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
1G-1 or Positive battery terminal - Body ground	10 kΩ or higher

(e) Reinstall the engine room junction block.
(f) Reconnect the positive battery terminal.
(g) Reconnect the negative battery terminal.

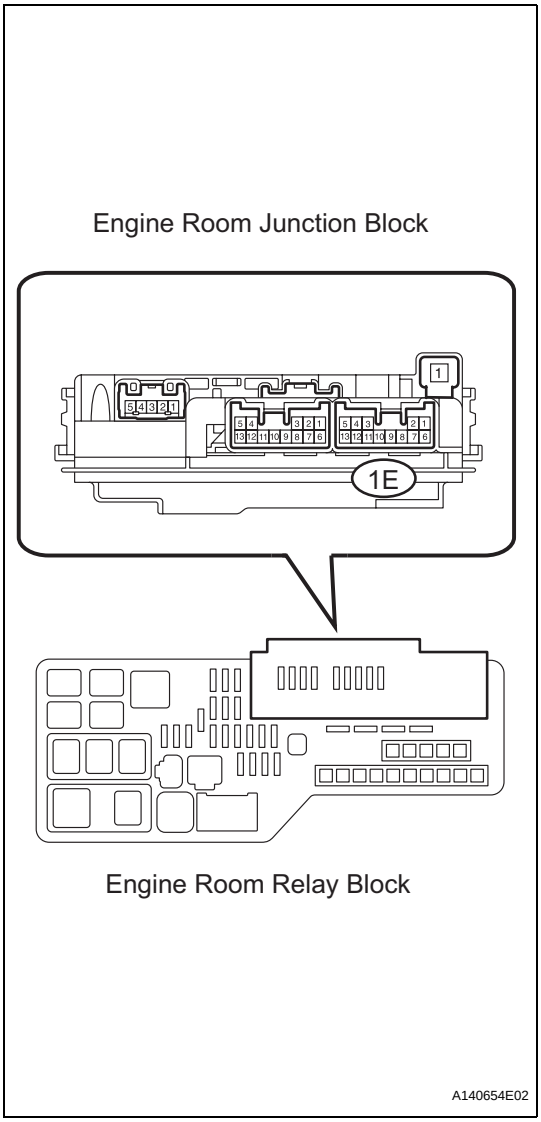
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page ES-33)

ES

5	INSPECT ENGINE ROOM JUNCTION BLOCK (EFI RELAY)



(a) Remove the engine room junction block from the engine room R/B.
(b) Measure the resistance between the terminals.
Standard resistance

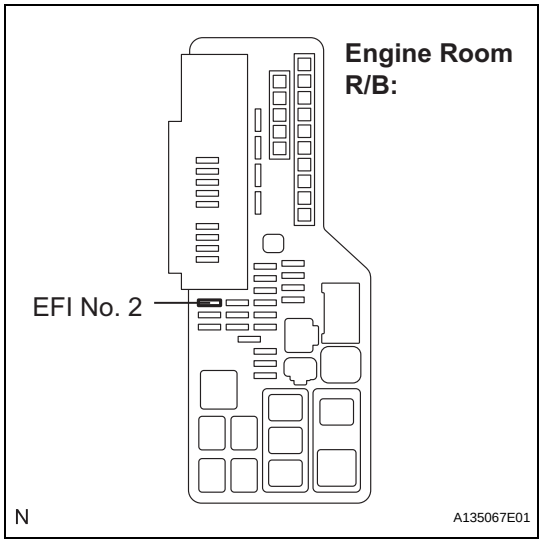
Tester Connection	Specified Condition
1E-6 - 1E-12	10 kΩ or higher
1E-6 - 1E-12	Below 1 Ω (Apply battery voltage between terminals 1E-9 and 1E-11)

(c) Reinstall the engine room junction block.

NG → **REPLACE ENGINE ROOM JUNCTION BLOCK**

OK

6	INSPECT EFI NO. 2 FUSE



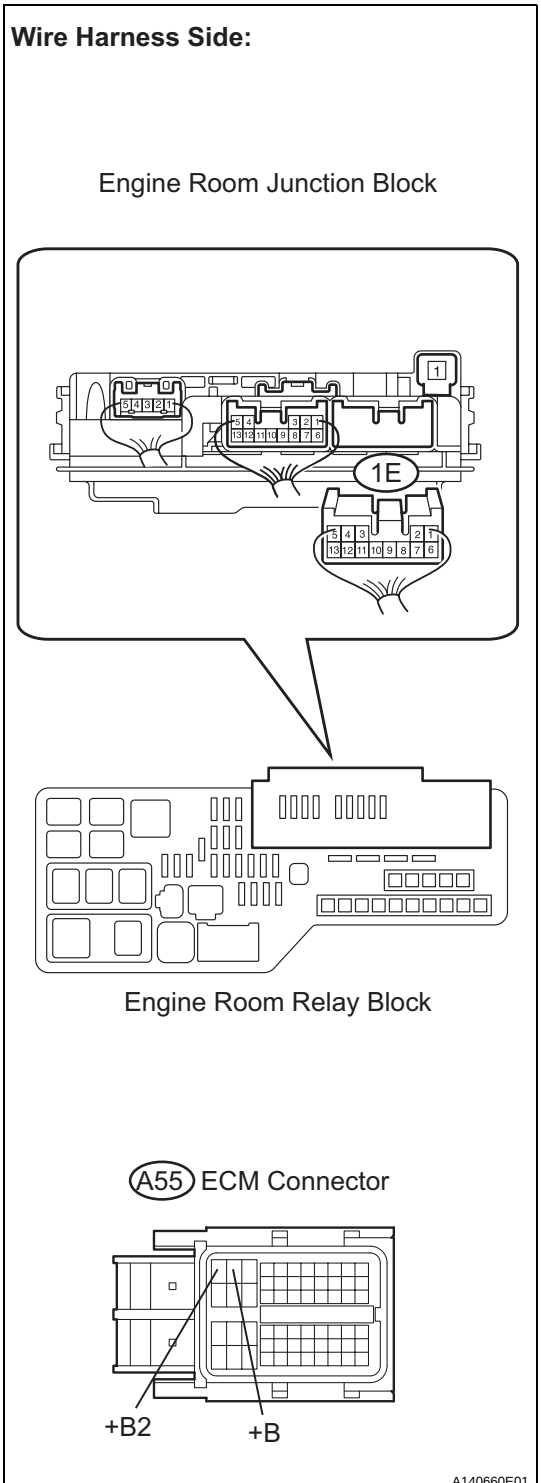
(a) Remove the EFI No. 2 fuse from the engine room R/B.
(b) Measure the EFI No. 2 fuse resistance.
Standard resistance:
Below 1 Ω
(c) Reinstall the EFI No. 2 fuse.

NG → **REPLACE EFI NO 2 FUSE**

OK

7	CHECK HARNESS AND CONNECTOR (ECM - ENGINE ROOM JUNCTION BLOCK)

Wire Harness Side:



(a) Disconnect the A55 ECM connector.
(b) Remove the engine room junction block from the engine room R/B.
(c) Measure the resistance between the terminals.

Standard resistance (Check for open)

Tester Connection	Specified Condition
1E-6 - +B (A55-2)	Below 1 Ω
1E-6 - +B2 (A55-1)	Below 1 Ω

Standard resistance (Check for short)

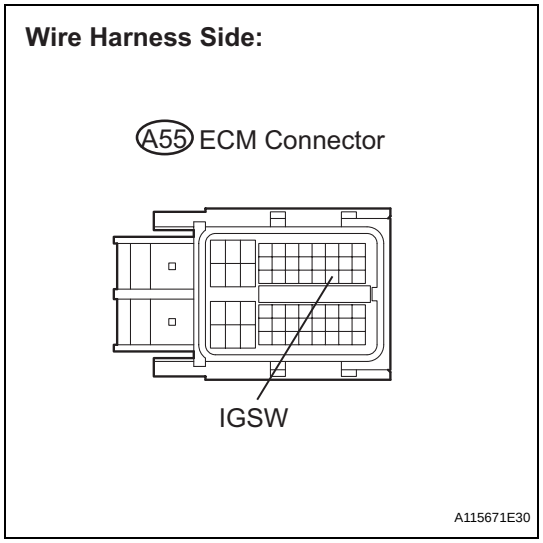
Tester Connection	Specified Condition
1E-6 or +B (A55-2) - Body ground	10 kΩ or higher
1E-6 or +B2 (A55-1) - Body ground	10 kΩ or higher

(d) Reinstall the engine room junction block.
(e) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

8 INSPECT ECM (IGSW VOLTAGE)



(a) Disconnect the A55 ECM connector.
(b) Measure the voltage between the terminals.
Standard voltage

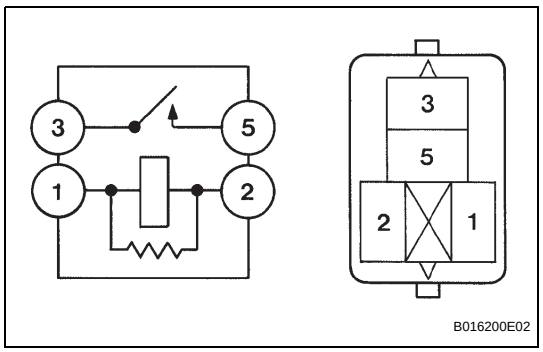
Tester Connection	Specified Condition
IGSW (A55-28) - Body ground	9 to 14 V

(c) Reconnect the ECM connector.

OK → **Go to step 12**

NG

9 INSPECT IG2 RELAY



(a) Remove the IG2 relay from the engine room R/B.
(b) Measure the resistance between the terminals.
Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (Apply battery voltage between terminals 1 and 2)

(c) Reinstall the IG2 relay.

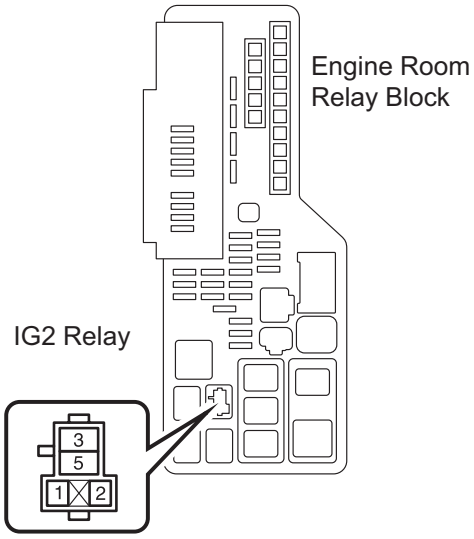
NG → **REPLACE IG2 RELAY**

OK

ES

10 CHECK HARNESS AND CONNECTOR (IG2 RELAY - BODY GROUND)

Wire Harness Side:



A137039E01

(a) Remove the IG2 relay from the engine room R/B.
(b) Measure the resistance between the terminals.
Standard resistance

Tester Connection	Specified Condition
IG2 relay terminal 2 - Body ground	Below 1 Ω

(c) Reinstall the IG2 relay.
Result

Result	Proceed to
OK (Without smart key system)	A
OK (With smart key system)	B
NG	C

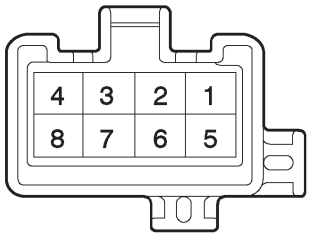
B → **GO TO SMART ACCESS SYSTEM WITH PUSH-BUTTON START**

C → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

A

11 INSPECT IGNITION SWITCH ASSEMBLY

Component Side:



A056879E35

(a) Disconnect the E23 ignition switch connector.
(b) Measure the resistance between the terminals.
Standard resistance

Tester Connection	Ignition Switch Position	Specified Condition
All terminals	LOCK	10 kΩ or higher
2 - 4	ACC	Below 1 Ω
1 - 2 - 4, 5 - 6	ON	
1 - 3 - 4, 5 - 6 - 7	START	

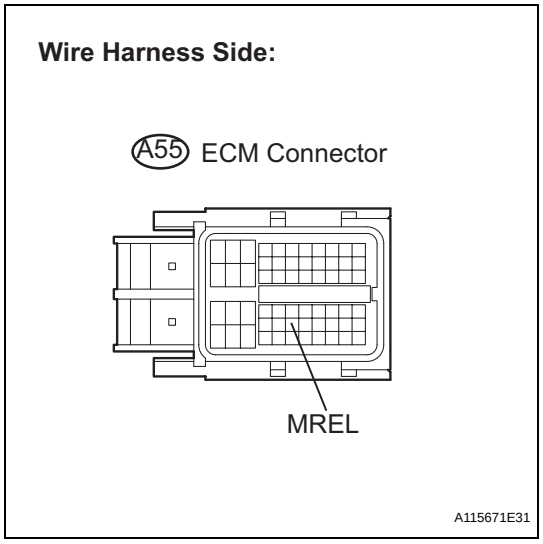
(c) Reconnect the ignition switch connector.

NG → **REPLACE IGNITION SWITCH ASSEMBLY**

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR (ECM - BATTERY)

12	CHECK HARNESS AND CONNECTOR (ECM - BODY GROUND)



(a) Disconnect the A55 ECM connector.
(b) Measure the resistance between the terminals.
Standard resistance

Tester Connection	Specified Condition
MREL (A55-24) - Body ground	Below 1 Ω

(c) Reconnect the ECM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

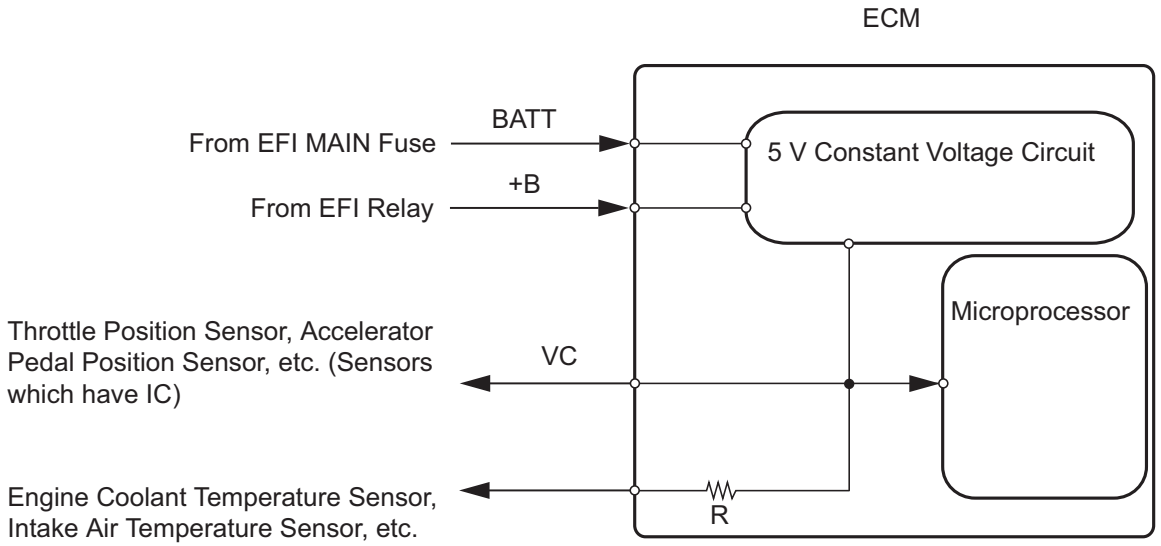
REPLACE ECM (See page ES-518)

ES

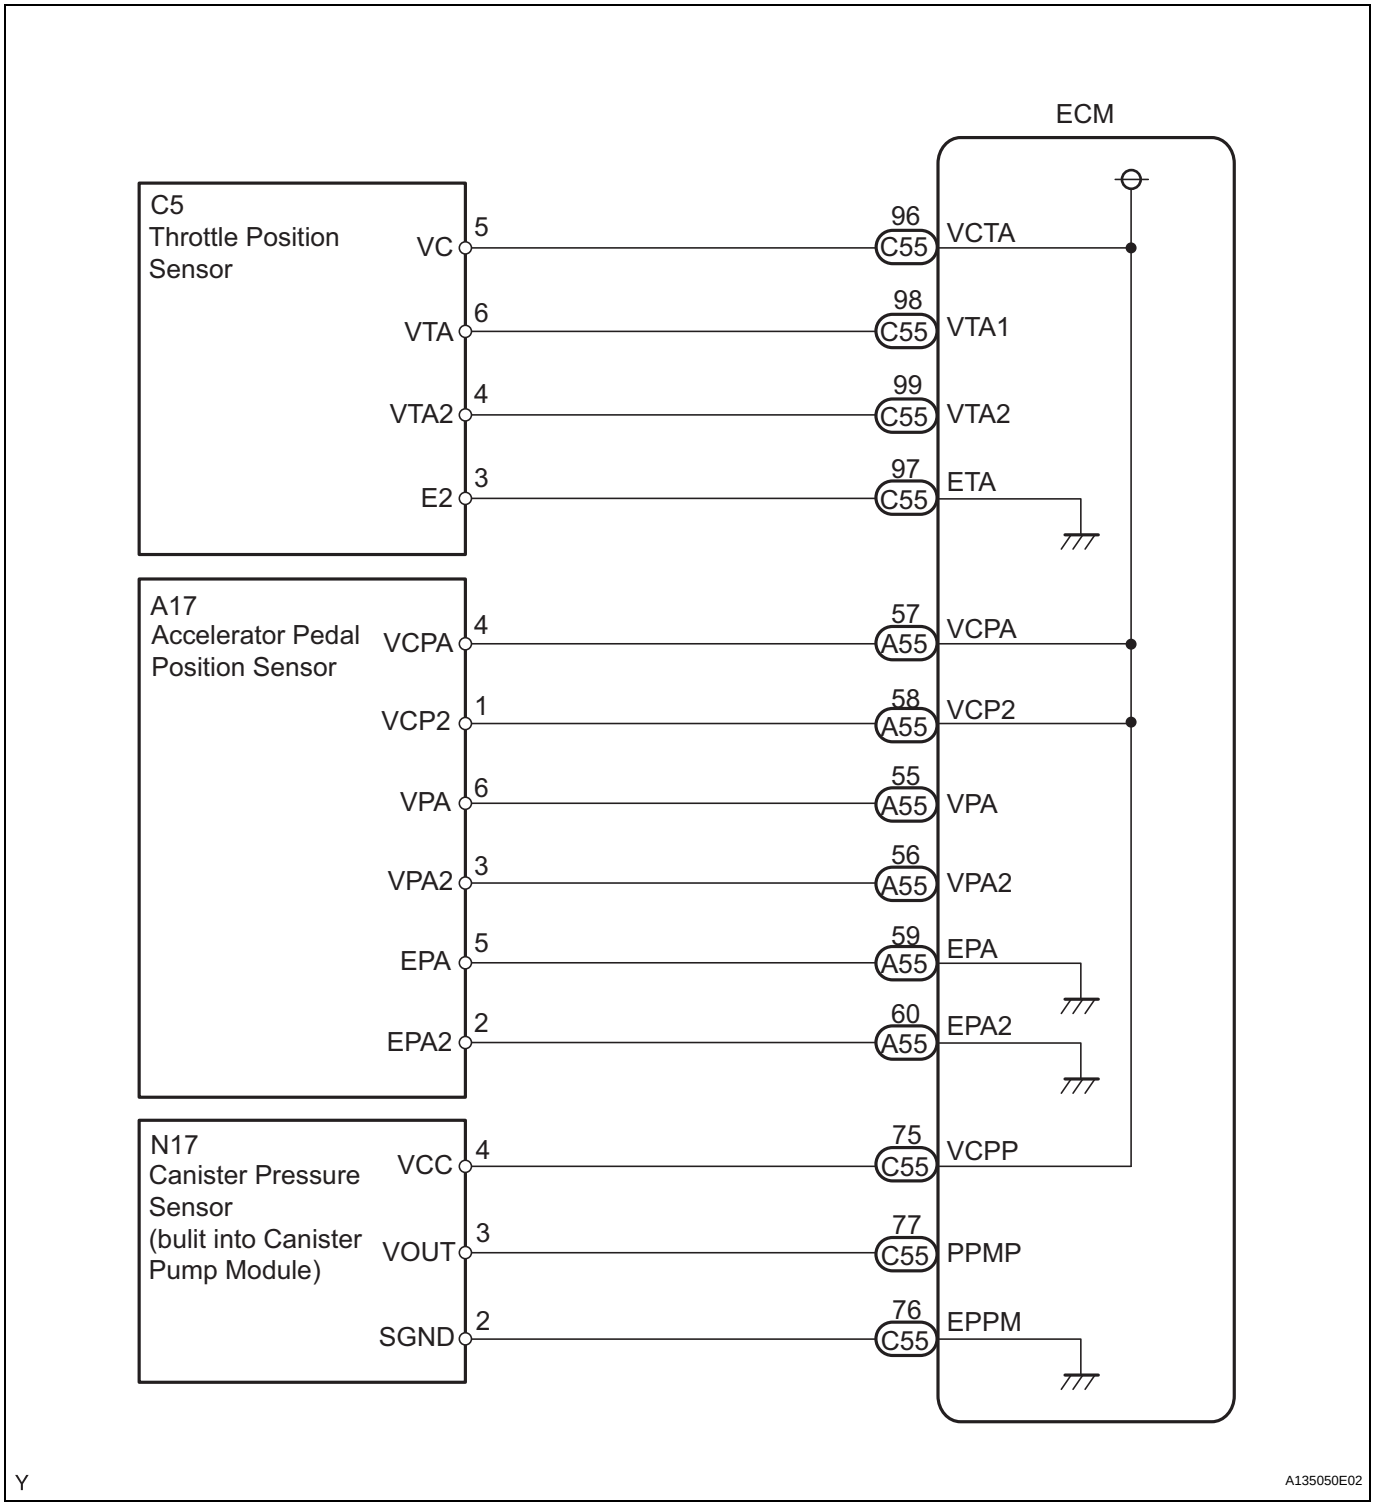
VC Output Circuit

DESCRIPTION

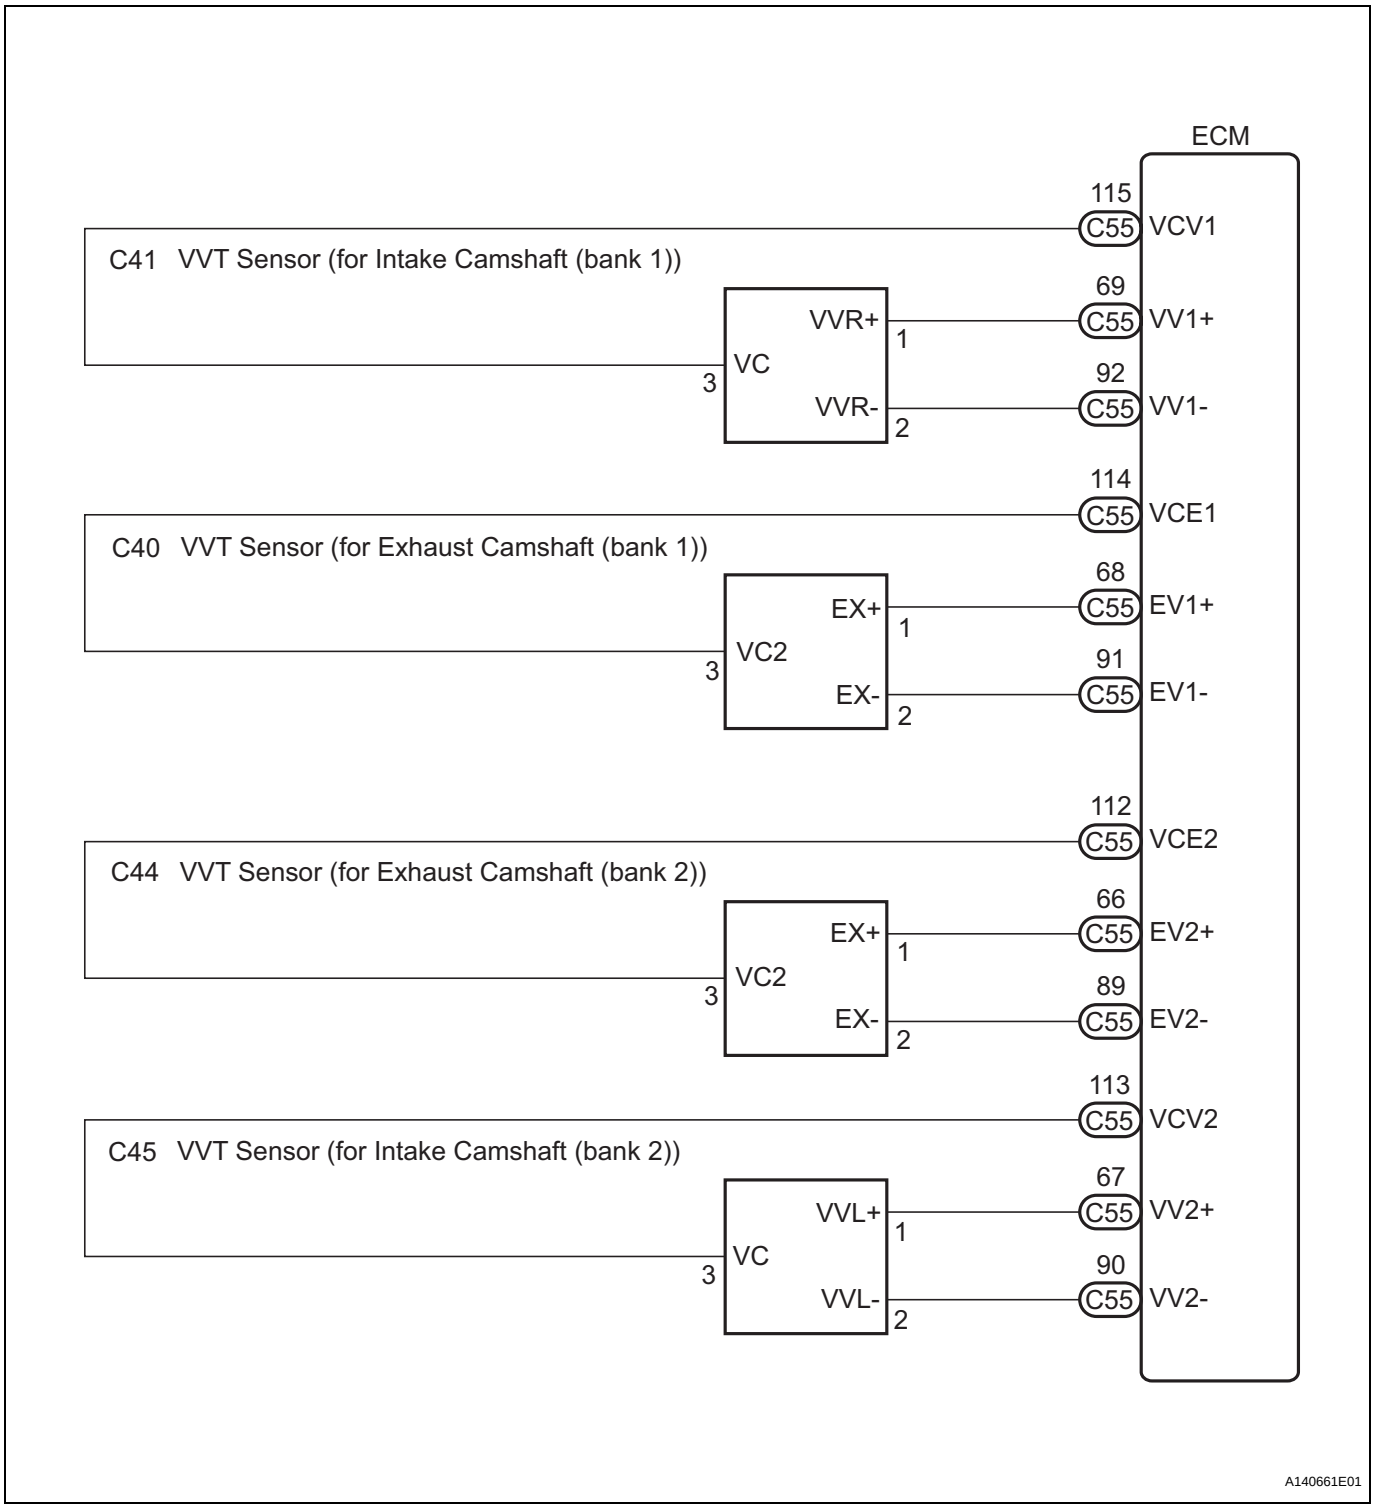
The ECM constantly uses 5 V from the battery voltages supplied to the +B (BATT) terminal to operate the microprocessor. The ECM also provides this power to the sensors through the VC output circuit.
When the VC circuit is short-circuited, the microprocessor in the ECM and sensors that are supplied power through the VC circuit are inactivated because the power is not supplied from the VC circuit. Under this condition, the system does not start up and the MIL does not illuminate even if the system malfunctions.
HINT:
Under normal conditions, the MIL is illuminated for several seconds when the ignition switch is first turned on (IG). The MIL goes off when the engine is started.



WIRING DIAGRAM



ES



INSPECTION PROCEDURE

1	**CHECK MIL**

(a) Check that Malfunction Indicator Lamp (MIL) lights up when turning the ignition switch on (IG).
OK:
MIL lights up.

OK → GO TO MIL CIRCUIT (See page ES-471)

NG

2 CHECK CONNECTION BETWEEN INTELLIGENT TESTER AND ECM

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and tester on.
(c) Check the communication between the tester and ECM.

Result

Result	Proceed to
Communication is possible	A
Communication is not possible	B

A → GO TO MIL CIRCUIT (See page ES-471)

B

3 CHECK THROTTLE BODY ASSEMBLY (CHECK MIL ILLUMINATED)

(a) Disconnect the throttle body connector.
(b) Turn the ignition switch on (IG).
(c) Check the MIL.

Result

Result	Proceed to
MIL illuminates	A
MIL does not illuminate	B

(d) Reconnect the throttle body connector.

A → REPLACE THROTTLE BODY ASSEMBLY (See page ES-503)

B

4 CHECK ACCELERATOR PEDAL ASSEMBLY (CHECK MIL ILLUMINATED)

(a) Disconnect the accelerator pedal position sensor connector.
(b) Turn the ignition switch on (IG).
(c) Check the MIL.

Result

Result	Proceed to
MIL illuminates	A
MIL does not illuminate	B

(d) Reconnect the accelerator pedal position sensor connector.

A → REPLACE ACCELERATOR PEDAL ASSEMBLY (See page ES-521)

B

5	CHECK VVT SENSOR FOR INTAKE CAMSHAFT BANK 1 (CHECK MIL ILLUMINATED)

(a) Disconnect the VVT sensor for intake camshaft bank 1 connector.
(b) Turn the ignition switch on (IG).
(c) Check the MIL.

Result

Result	Proceed to
MIL illuminates	A
MIL does not illuminate	B

(d) Reconnect the VVT sensor for intake camshaft bank 1 connector.

A → **REPLACE VVT SENSOR FOR INTAKE CAMSHAFT BANK 1 (See page ES-489)**

B

6	CHECK VVT SENSOR FOR EXHAUST CAMSHAFT BANK 1 (CHECK MIL ILLUMINATED)

(a) Disconnect the VVT sensor for exhaust camshaft bank 1 connector.
(b) Turn the ignition switch on (IG).
(c) Check the MIL.

Result

Result	Proceed to
MIL illuminates	A
MIL does not illuminate	B

(d) Reconnect the VVT sensor for exhaust camshaft bank 1 connector.

A → **REPLACE VVT SENSOR FOR EXHAUST CAMSHAFT BANK 1 (See page ES-489)**

B

7	CHECK VVT SENSOR FOR INTAKE CAMSHAFT BANK 2 (CHECK MIL ILLUMINATED)

(a) Disconnect the VVT sensor for intake camshaft bank 2 connector.
(b) Turn the ignition switch on (IG).
(c) Check the MIL.

Result

Result	Proceed to
MIL illuminates	A
MIL does not illuminate	B

(d) Reconnect the VVT sensor for intake camshaft bank 2 connector.

A → REPLACE VVT SENSOR FOR INTAKE CAMSHAFT BANK 2 (See page ES-489)

B

8	CHECK VVT SENSOR FOR EXHAUST CAMSHAFT BANK 2 (CHECK MIL ILLUMINATED)

(a) Disconnect the VVT sensor for exhaust camshaft bank 2 connector.
(b) Turn the ignition switch on (IG).
(c) Check the MIL.

Result

Result	Proceed to
MIL illuminates	A
MIL does not illuminate	B

(d) Reconnect the VVT sensor for exhaust camshaft bank 2 connector.

A → REPLACE VVT SENSOR FOR EXHAUST CAMSHAFT BANK 2 (See page ES-489)

B

9	CHECK CHARCOAL CANISTER ASSEMBLY (CHECK MIL ILLUMINATED)

(a) Disconnect the canister pump module connector.
(b) Turn the ignition switch on (IG).
(c) Check the MIL.

Result

Result	Proceed to
MIL illuminates	A
MIL does not illuminate	B

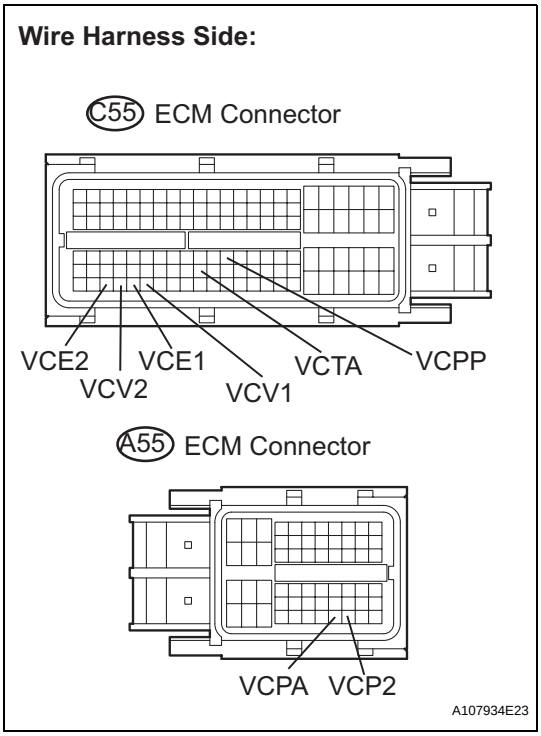
(d) Reconnect the canister pump module connector.

A → REPLACE CHARCOAL CANISTER ASSEMBLY (See page EC-9)

B

ES

10	CHECK HARNESS AND CONNECTOR



(a) Disconnect the throttle body connector.
(b) Disconnect the accelerator pedal position sensor connector.
(c) Disconnect the VVT sensor for intake camshaft bank 1 connector.
(d) Disconnect the VVT sensor for exhaust camshaft bank 1 connector.
(e) Disconnect the VVT sensor for intake camshaft bank 2 connector.
(f) Disconnect the VVT sensor for exhaust camshaft bank 2 connector.
(g) Disconnect the canister pump module connector.
(h) Disconnect the C55 and A55 ECM connectors.
(i) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for short)

Tester Connections	Specified Conditions
VCTA (C55-96) - Body ground	10 kΩ or higher
VCV1 (C55-115) - Body ground	10 kΩ or higher
VCV2 (C55-113) - Body ground	10 kΩ or higher
VCE1 (C55-114) - Body ground	10 kΩ or higher
VCE2 (C55-112) - Body ground	10 kΩ or higher
VCPA (A55-57) - Body ground	10 kΩ or higher
VCP2 (A55-58) - Body ground	10 kΩ or higher
VCPP (C55-75) - Body ground	10 kΩ or higher

(j) Reconnect the ECM connectors.
(k) Reconnect the canister pump module connector.
(l) Reconnect the fuel pressure sensor connector.
(m) Reconnect the VVT sensor for exhaust camshaft bank 2 connector.
(n) Reconnect the VVT sensor for intake camshaft bank 2 connector.
(o) Reconnect the VVT sensor for exhaust camshaft bank 1 connector.
(p) Reconnect the VVT sensor for intake camshaft bank 1 connector.
(q) Reconnect the accelerator pedal position sensor connector.
(r) Reconnect the throttle body connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM (See page ES-518)

Fuel Pump Control Circuit

DESCRIPTION

In the diagram below, when the engine is cranked, current flows from terminal ST1 (STR) of the ignition switch (power source control ECU) to the starter relay (Marking: ST) coil and also current flows to terminal STA of ECM (STA signal).
When the STA signal and NE signal are input to the ECM, Tr is turned ON, current flows to coil of the circuit opening relay (Marking: C/OPN), the relay switches on, power is supplied to the fuel pump and the fuel pump operates.
While the NE signal is generated (engine running), the ECM keeps Tr ON (circuit opening relay ON) and the fuel pump also keeps operating.

ES

INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (OPERATE C/OPN RELAY)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and tester on.

(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / FUEL PUMP / SPD.
(d) Check whether the fuel pump operation sound occurs when performing the Active Test on the tester.
OK:
Fuel pump operating sound occurs.

NG → **Go to step 2**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page ES-33)

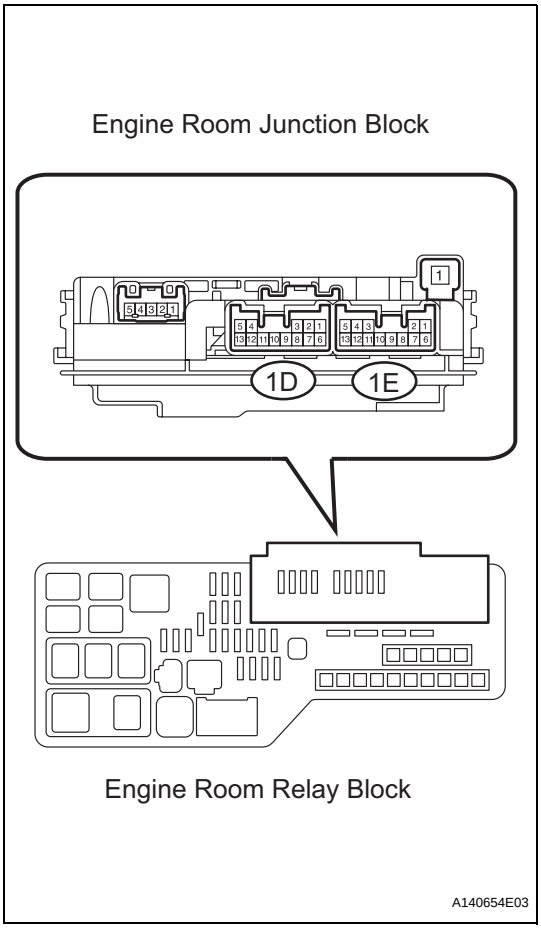
ES

2	CHECK ECM POWER SOURCE CIRCUIT

NG → **REPAIR OR REPLACE ECM POWER SOURCE CIRCUIT**

OK

3	INSPECT ENGINE ROOM JUNCTION BLOCK (C/OPN RELAY)



(a) Remove the integration relay from the engine room relay block.
(b) Inspect the C/OPN relay.
(1) Measure the C/OPN relay resistance.
Standard resistance

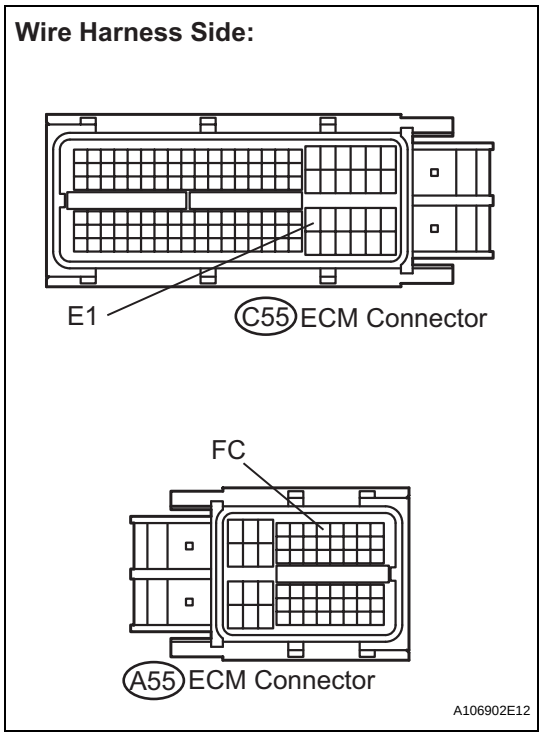
Tester Connections	Specified Conditions
1E-7 - 1E-13	10 kΩ or higher
	Below 1 Ω (Apply battery voltage between terminals 1D-12 and 1E-8)

(c) Reinstall the integration relay.

NG → **REPLACE ENGINE ROOM JUNCTION BLOCK**

OK

4	INSPECT ECM (FC VOLTAGE)



(a) Disconnect the A55 and C55 ECM connectors.
(b) Measure the voltage between the terminals of the A24 and C24 ECM connectors.
Standard voltage

Tester Connection	Specified Condition
A55-7 (FC) - C55-81 (E1)	9 to 14 V

(c) Reconnect the ECM connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (ECM - BATTERY)**

ES

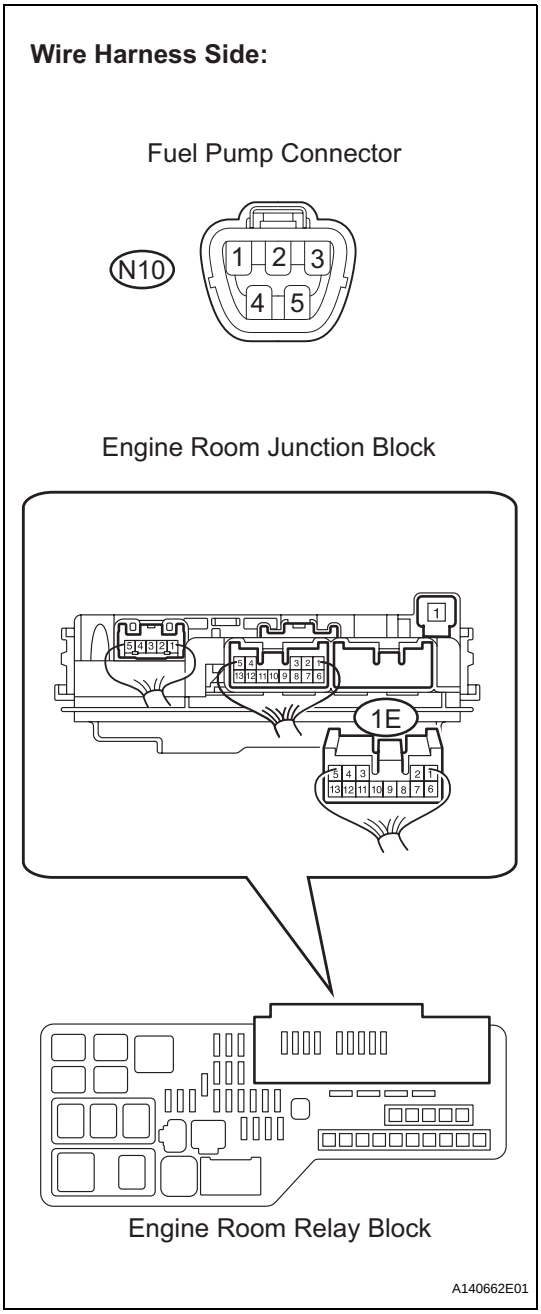
OK

5	INSPECT FUEL PUMP

NG → **REPLACE FUEL PUMP (See page FU-27)**

OK

6	CHECK HARNESS AND CONNECTOR (C/OPN RELAY - FUEL PUMP - BODY GROUND)



(a) Check the harness and the connectors between the engine room relay block and the fuel pump.
  (1) Disconnect the integration relay connector.
  (2) Disconnect the N10 fuel pump connector.
  (3) Measure the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
1E-13 - N10-4 (Fuel pump)	Below 1 Ω

Standard resistance (Check for short)

Tester Connections	Specified Conditions
1E-13 or N10-4 (Fuel pump) - Body ground	10 kΩ or higher

(b) Check the harness and the connectors between the fuel pump and body ground.
  (1) Disconnect the N10 fuel pump connector.
  (2) Measure the resistance.

Standard resistance (Check for open)

Tester Connection	Specified Condition
N10-5 (Fuel pump) - Body ground	Below 1 Ω

(c) Reconnect the integration relay connector.
(d) Reconnect the fuel pump connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

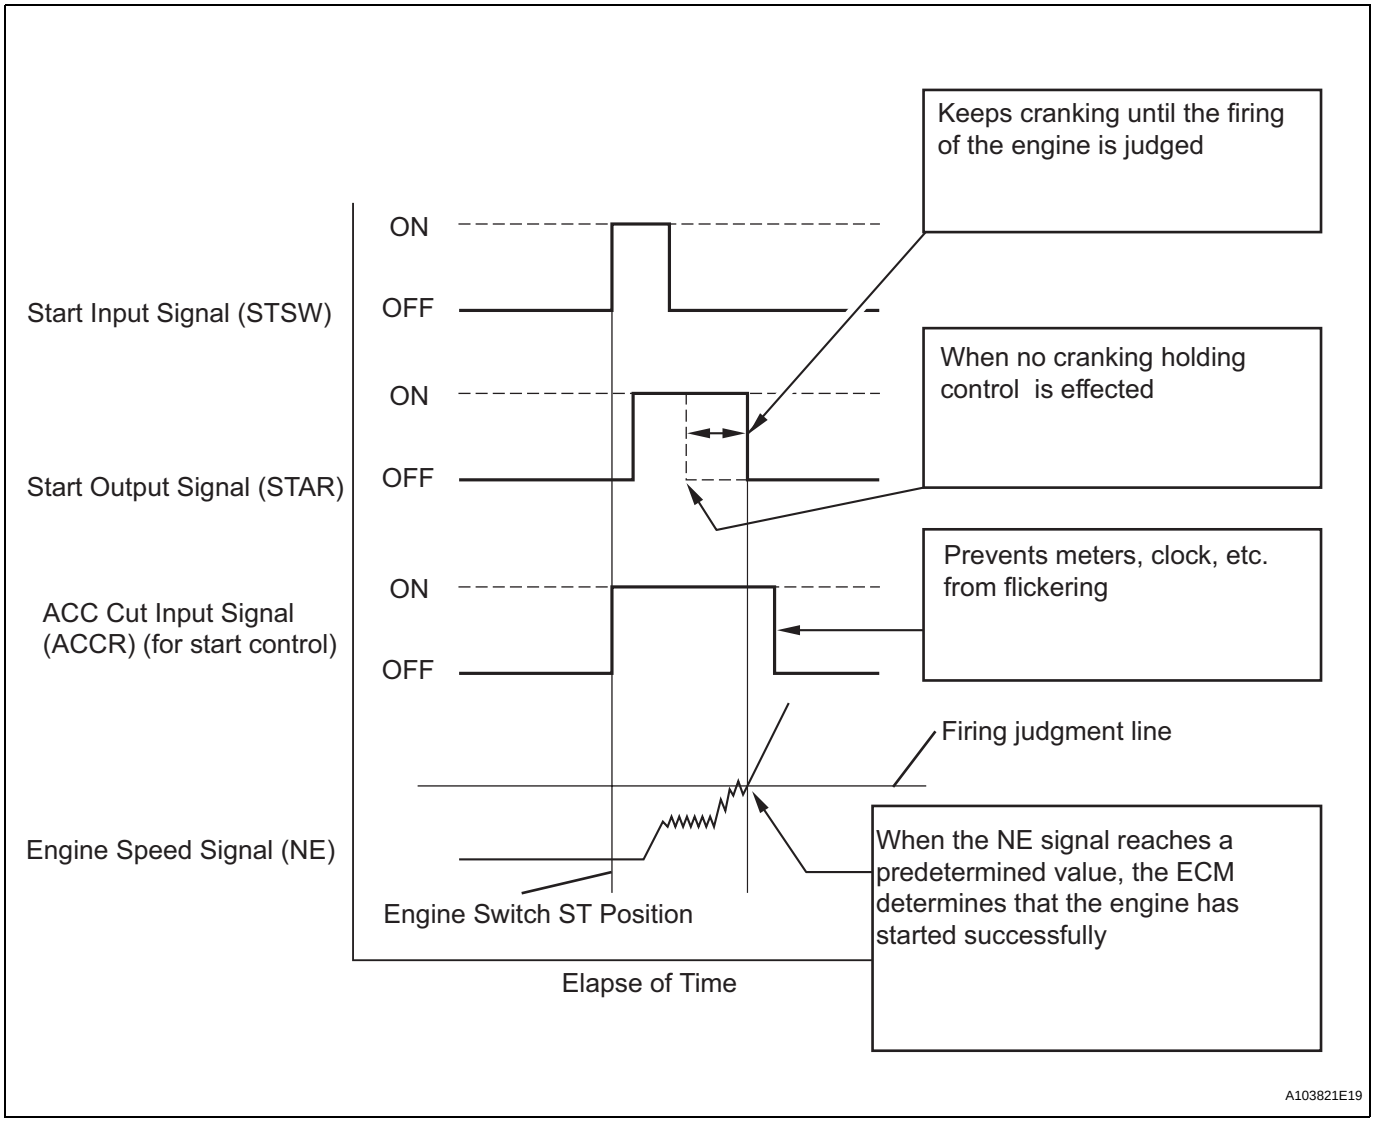
OK

REPLACE ECM (See page ES-518)

Cranking Holding Function Circuit

DESCRIPTION

The cranking holding control system provides current to the starter when the ECM detects the engine switch's start signal (STSW). When the ECM performs a firing judgment, the system cuts current to the starter. When an ECM receives the STSW signal, it turns on the ST CUT relay, which prevents flickering of the combination meter, clock, audio system, etc. Also, the ECM sends a signal to the ECM's STAR terminal. Then the STAR output signal travels through the park/neutral position (PNP) switch to the STARTER relay, causing the starter to activate.
When the engine is cranking, the starter operation signal is sent to the ECM's STA terminal.



WIRING DIAGRAM

Refer to DTC P0617 (See page ES-305).

INSPECTION PROCEDURE

1	CHECK CRANKING

(a) When starting the engine, check whether the starter motor starts.

OK → CHECK FOR INTERMITTENT PROBLEMS

NG

2	READ VALUE OF INTELLIGENT TESTER (STA SIGNAL)

ES

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the intelligent tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / ALL / STARTER SIG. Read the values.
(e) Check the result when the ignition switch is turned on (IG) and when the engine is started.

Standard

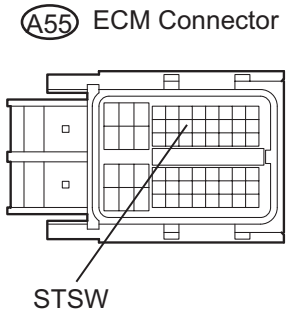
Display (STARTER SIG)	Ignition Switch Position
OFF	ON
ON	START

OK → Go to step 7

NG

3	INSPECT ECM (STSW VOLTAGE)

Wire Harness Side:



A115671E32

(a) Disconnect the A55 ECM Connector.
(b) Measure the voltage between the terminals of the ECM connector and body ground while cranking the engine.
Standard voltage

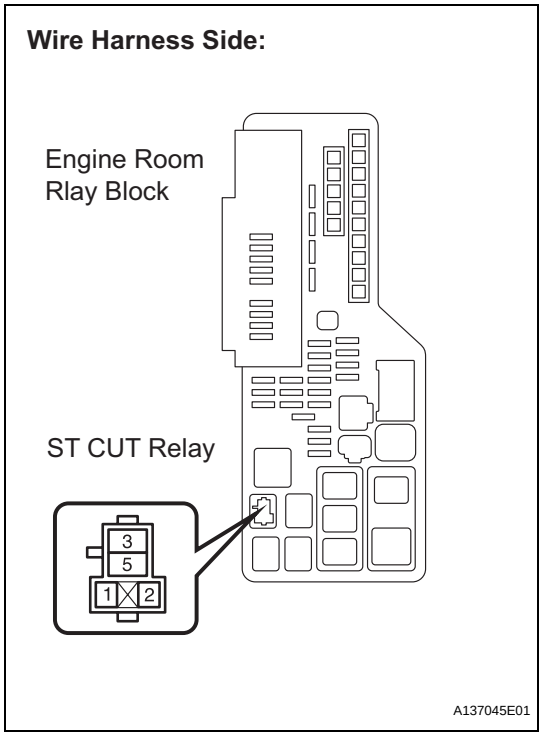
Tester Connection	Specified Condition
STSW (A55-14) - Body ground	9 to 14 V

(c) Reconnect the ECM connector.

OK → Go to step 11

OK

4 INSPECT ECM (STAR VOLTAGE)



(a) Remove the ST CUT relay from the engine room R/B.
(b) Measure the voltage between the terminals of the engine room R/B and body ground while cranking the engine.
Standard voltage

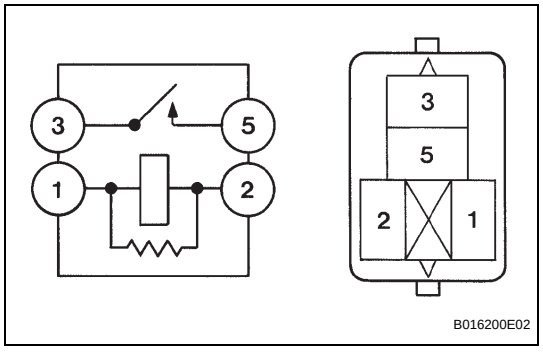
Tester Connection	Specified Condition
ST CUT relay (3) - Body ground	9 to 14 V

(c) Reinstall the ST CUT relay.

NG → **Go to step 8**

OK

5 INSPECT ST CUT RELAY



(a) Remove the ST CUT relay from the engine room R/B.
(b) Measure the resistance between the terminals.
Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (when battery voltage applied to terminals 1 and 2)

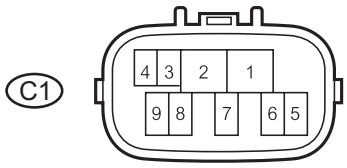
(c) Reinstall the ST CUT relay.

NG → **REPLACE ST CUT RELAY**

OK

6 INSPECT PARK/NEUTRAL SWITCH ASSEMBLY

Component Side:



Park / Neutral Position Switch

A107908E03

(a) Inspect the Park / Neutral Position (PNP) switch.
(1) Disconnect the C1 switch connector.
(2) Measure the resistance according to the value(s) in the table below.

Standard resistance

Gear Selector Lever Position	Tester Connection	Specified Condition
P	4 - 5	Below 1 Ω
N	4 - 5	Below 1 Ω

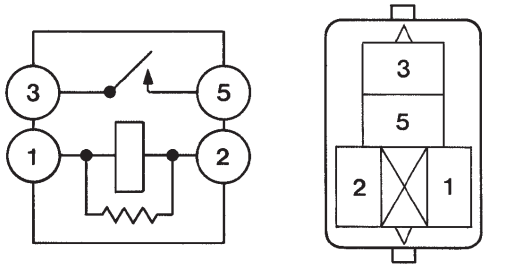
(3) Reconnect the PNP switch connector.

NG → **REPLACE PARK/NEUTRAL POSITION SWITCH ASSEMBLY (See page AX-174)**

OK

CHECK HARNESS AND CONNECTOR

7 INSPECT STARTER RELAY



B016200E02

(a) Remove the ST relay from the engine room R/B.
(b) Measure the resistance between the terminals.

Standard resistance

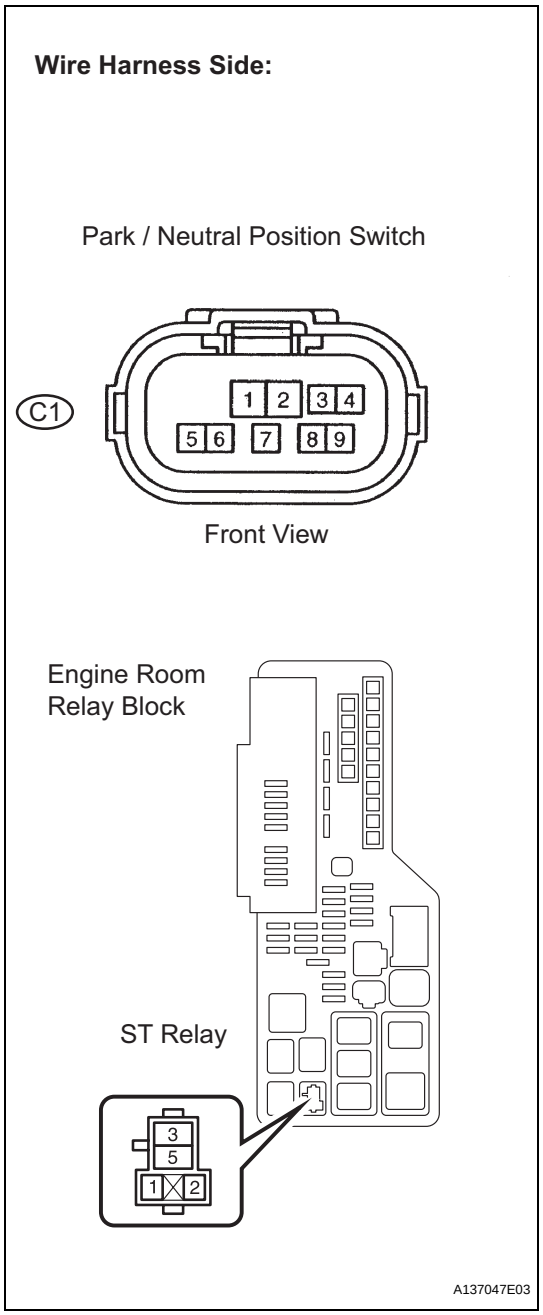
Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (when battery voltage applied to terminals 1 and 2)

(c) Reinstall the ST relay.

NG → **REPLACE STARTER RELAY**

OK

8	CHECK HARNESS AND CONNECTOR (PARK / NEUTRAL POSITION SWITCH - STARTER RELAY)



(a) Disconnect the C1 park/neutral position switch connector.
(b) Remove the ST relay from the engine room R/B.
(c) Measure the resistance between the terminals.

Standard resistance (Check for open)

Tester Connection	Specified Condition
C1-9 - ST relay terminal (5)	Below 1 Ω

Standard resistance (Check for open)

Tester Connection	Specified Condition
C1-9 or ST relay terminal (5) - Body ground	10 kΩ or higher

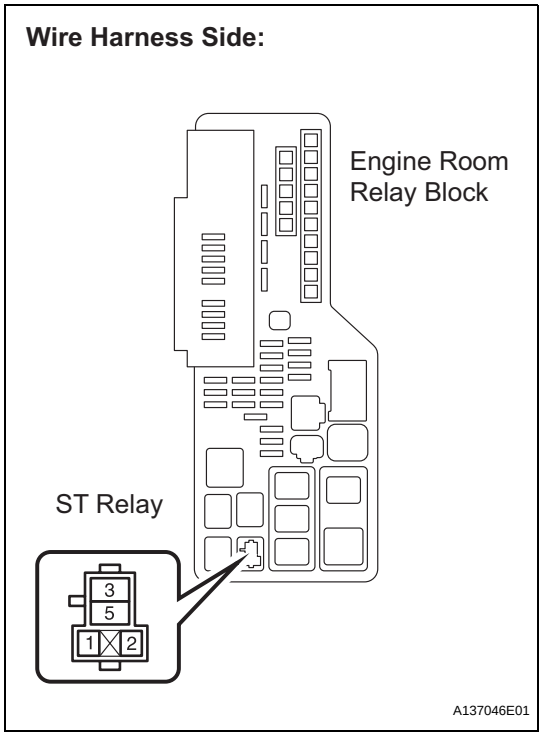
(d) Reinstall the ST relay.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

ES

9	INSPECT ENGINE ROOM RELAY BLOCK (STARTER RELAY VOLTAGE)



(a) Remove the ST relay from the engine room R/B.
(b) Measure the voltage between the terminals of the engine room R/B and body ground.

Standard voltage

Tester Connection	Specified Condition
ST relay (5) - Body ground	9 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

10	INSPECT STARTER ASSEMBLY

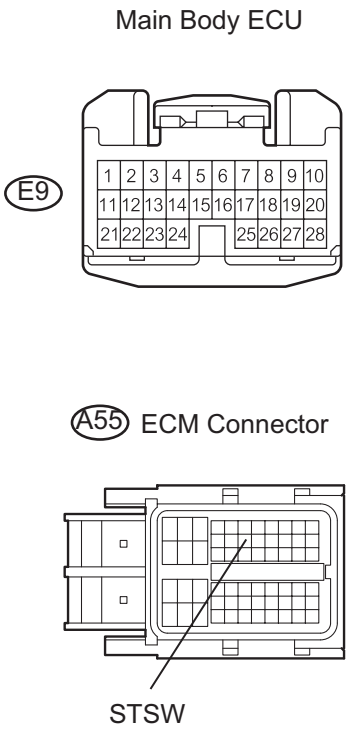
NG → **REPAIR OR REPLACE STARTER ASSEMBLY**

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR (STARTER RELAY - STARTER, STARTER - BATTERY)

11	CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - ECM)

Wire Harness Side:



(a) Disconnect the E6 main body ECU connector.
(b) Disconnect the A55 ECM connector.
(c) Measure the resistance between the terminals.

Standard resistance (Check for open)

Tester Connection	Specified Condition
STSW (E9-4) - STSW (A55-14)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
STSW (E9-4) or STSW (A55-14) - Body ground	10 kΩ or higher

(d) Reconnect the main body ECU connector.
(e) Reconnect the ECM connector.

ES

OK → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

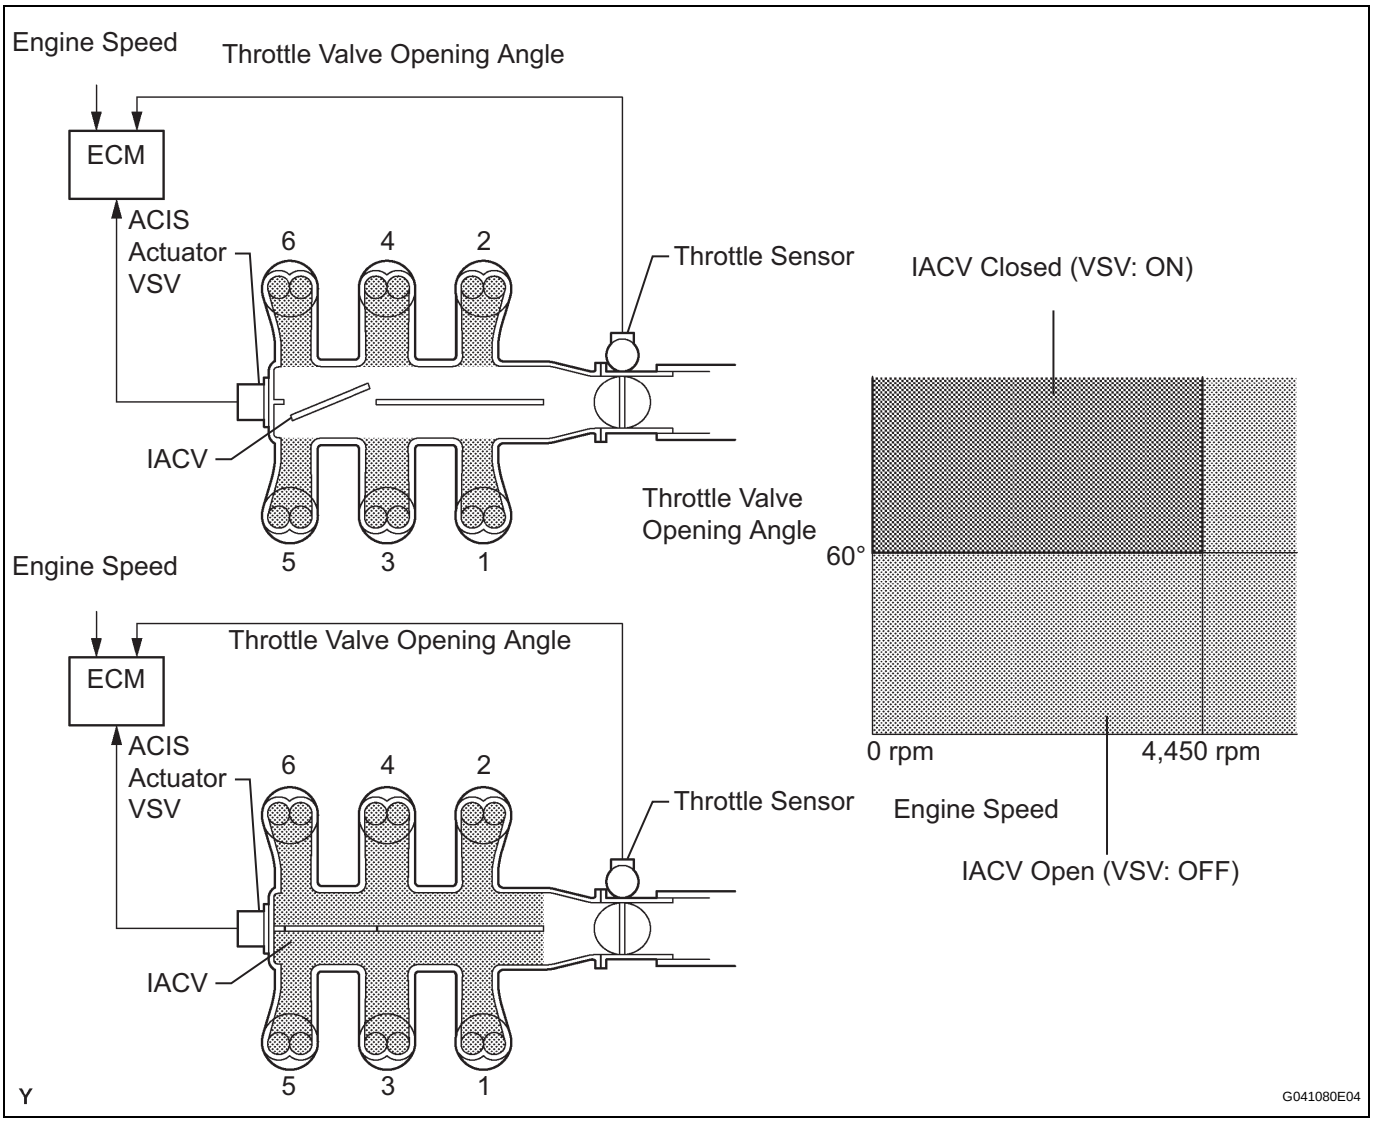
OK

GO TO SMART KEY SYSTEM

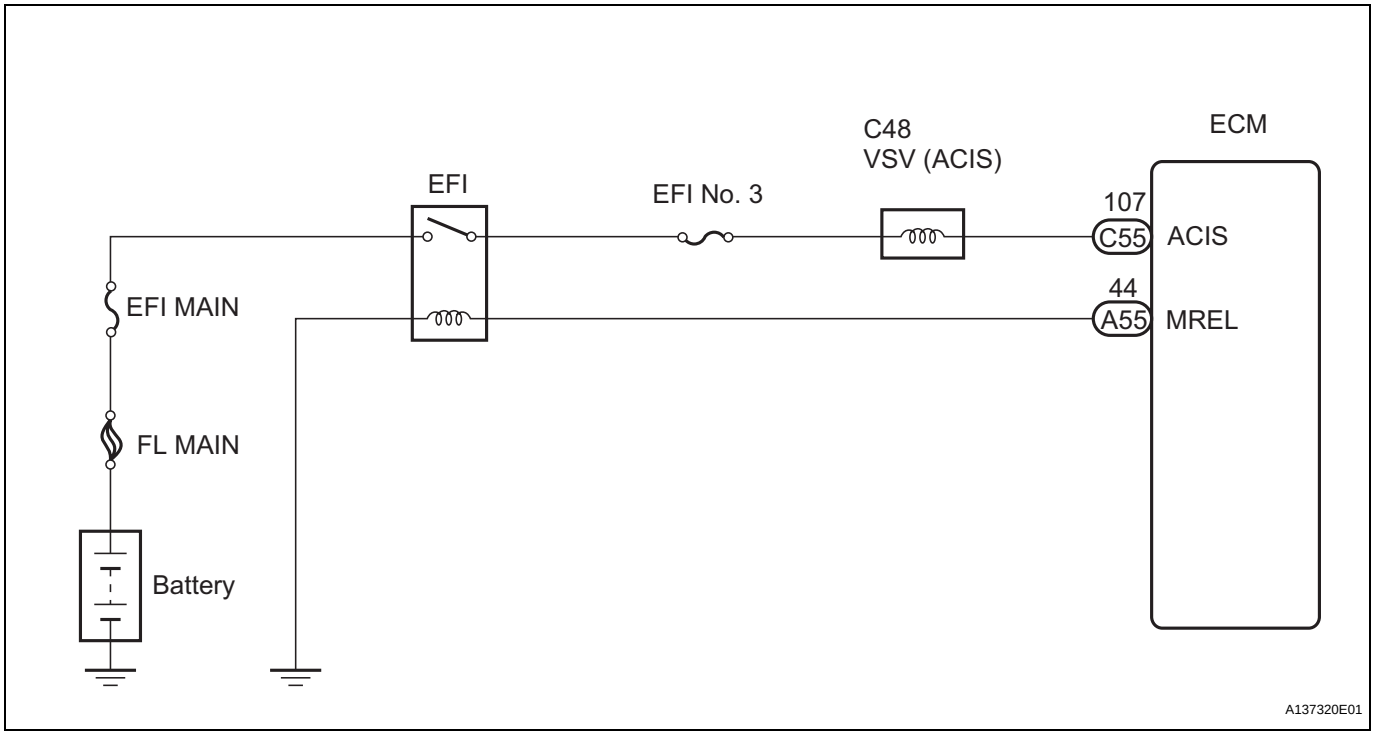
ACIS Control Circuit

DESCRIPTION

This circuit opens and closes the Intake Air Control Valve (IACV) in response to changes in the engine load in order to increase the intake efficiency (ACIS: Acoustic Control Induction System).
When the engine speed is between 0 and 4,450 rpm and the throttle valve opening angle is 60° or more, the ECM supplies current to the VSV (ON status), to close the IACV. Under other conditions, the VSV is usually OFF and the IACV is open.



WIRING DIAGRAM



ES

INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (OPERATE VSV FOR ACIS)

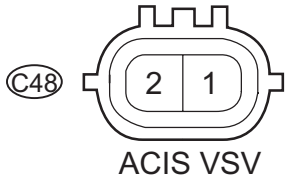
(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the intelligent tester on.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / INTAKE CTL VSC48. Operate the VSV for AICS.
OK:
Operational noise can be heard.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page ES-33)**

NG

2	CHECK INTAKE AIR CONTROL VALVE (OPERATION)

Component Side:



E121181E02

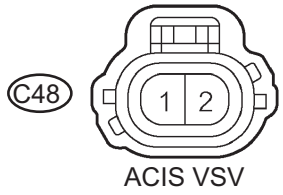
(a) Disconnect the C48 air intake valve connector.
(b) Apply battery voltage between the terminals of the air intake valve connector.
(c) Check the air intake valve operation.
OK:
Operational noise can be heard.

NG → **REPLACE INTAKE AIR SURGE TANK**

ES **OK**

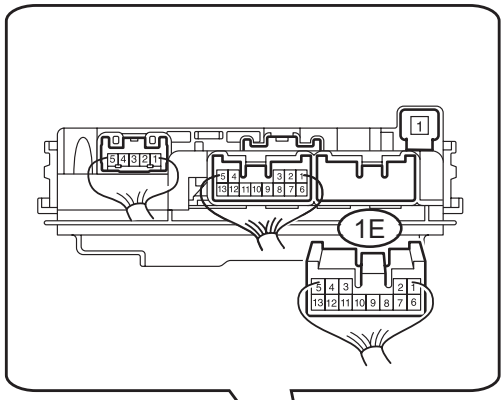
3	CHECK HARNESS AND CONNECTOR (VSV FOR ACIS - ECM, VSV FOR ACIS - EFI RELAY)

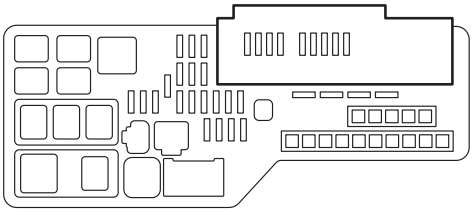
Wire Harness Side:



ACIS VSV

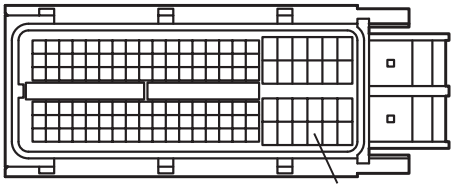
Engine Room Junction Block





Engine Room Relay Block

C55 ECM Connector



ACIS

A137082E01

(a) Check the wire harness and connectors between the VSV for ACIS and ECM.
  (1) Disconnect the C48 VSV for ACIS connector.
  (2) Disconnect the C55 ECM connector.
  (3) Measure the resistance between the terminals of the VSV for ACIS connector and ECM connector.
  Standard resistance (Check for open)

Tester Connections	Specified Conditions
VSV for ACIS (C48-1) - ACIS (C55-107)	Below 1 Ω

Standard resistance (Check for short)

Tester Connections	Specified Conditions
VSV for ACIS (C48-1) or ACIS (C55-107) - Body ground	10 kΩ or higher

  (4) Reconnect the VSV for ACIS connector.
  (5) Reconnect the ECM connector.

(b) Check the EFI No. 3 fuse.
  (1) Remove the EFI No. 3 fuse from the engine room R/B.
  (2) Measure the EFI No. 3 fuse resistance.
  Standard resistance:
  Below 1 Ω
  (3) Reinstall the EFI No. 3 fuse

(c) Check the wire harness between the VSV for ACIS connector and EFI MAIN relay.
  (1) Remove the engine room junction block from the engine room R/B.
  (2) Disconnect the C48 VSV connector.
  (3) Measure the resistance between the terminals.
  Standard resistance (Check for open)

Tester Connections	Specified Conditions
VSV for ACIS (C48-2) - 1E-6	Below 1 Ω

  (4) Reinstall the engine room junction block.
  (5) Reconnect the VSV connector.

NG	REPAIR OR REPLACE HARNESS OR CONNECTOR

ES

OK

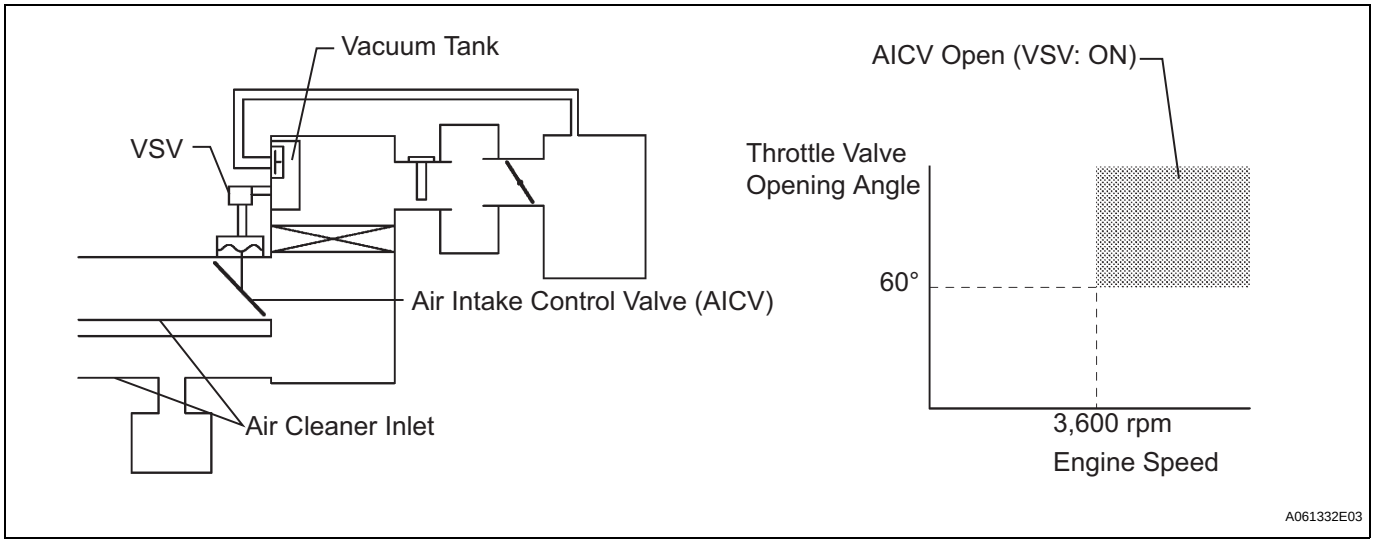
REPLACE ECM (See page ES-518)

Air Intake Control Circuit

DESCRIPTION

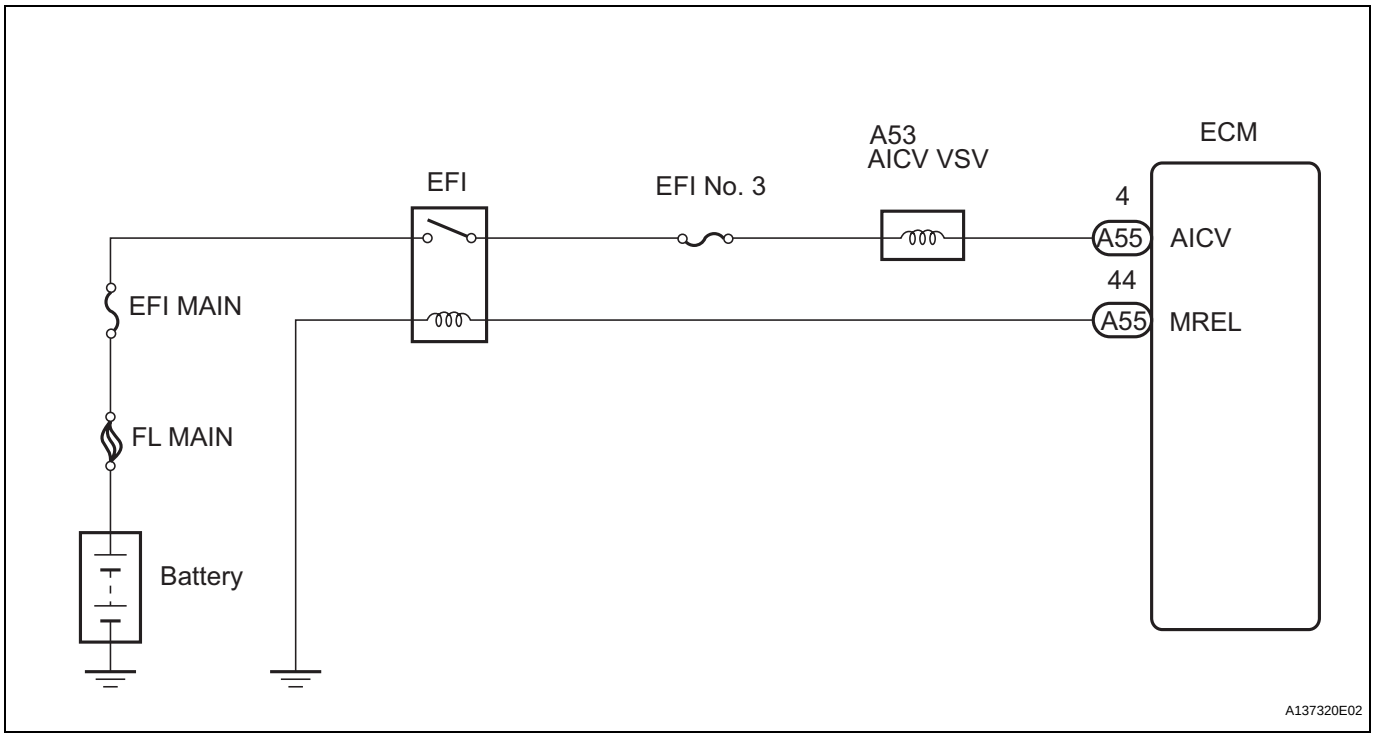
The air cleaner is equipped with two inlets, one of which is opened or closed by the Air Intake Control Valve (AICV). This system reduces intake noise and increases engine power at low-to-high engine speeds range.

When the engine is operating in the low-to-mid speed range, this control operates the AICV to close one of the air cleaner inlets. When the engine speed is more than 3,600 rpm and the opening angle of the throttle valve is more than 60°, the ECM activates the VSV and opens the AICV.



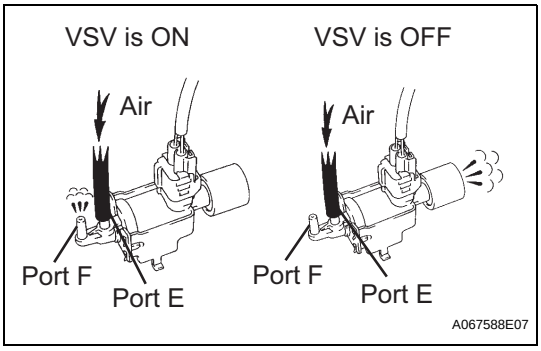
ES

WIRING DIAGRAM



INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (VSV FOR AICV)



(a) Turn the ignition switch on (IG) and turn the intelligent tester ON.
(b) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / INTAKE CTL VSV1 and operate the VSV for AICV.
(c) Check the operation of the VSV when the VSV is operated by the intelligent tester.

Standard

Tester Operation	Specified Condition
VSV is ON	Air from port E flows out through port F
VSV is OFF	Air from port E flows out through the air filter

OK → **Go to step 4**

NG

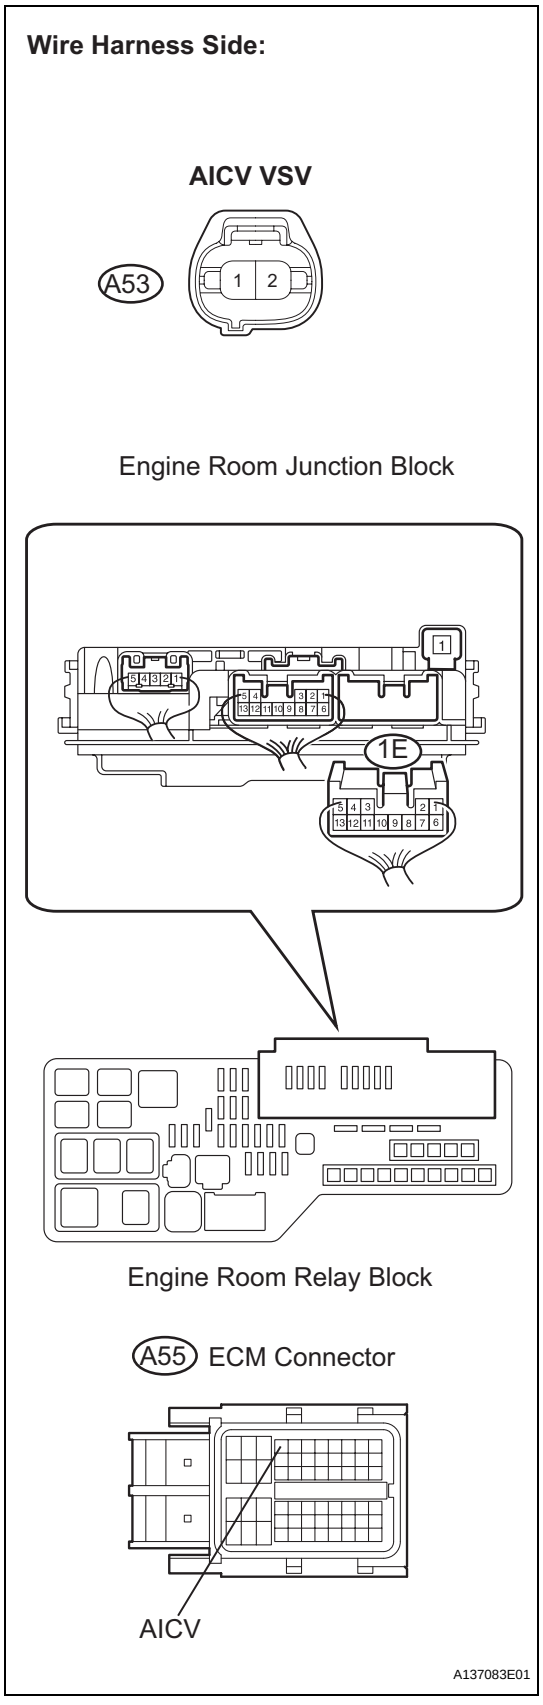
2	CHECK VSV (FOR AICV)

(a) Inspect the intake air control valve assembly (See page IT-5).

NG → **REPLACE INTAKE AIR CONTROL VALVE ASSEMBLY**

OK

3	CHECK HARNESS AND CONNECTOR (VSV FOR AICV - ECM, VSV FOR AICV - EFI RELAY)



(a) Check the wire harness between the VSV for AICV connector and the ECM connector.
  (1) Disconnect the A53 VSV for AICV connector.
  (2) Disconnect the A55 ECM connector.
  (3) Measure the resistance between the terminals of the wire harness side connectors and body ground.
  Standard resistance (Check for open)

Tester Connection	Specified Condition
VSV for AICV (A53-2) - AICV (A55-4)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
VSV for AICV (A53-2) or AICV (A55-4) - Body ground	10 kΩ or higher

  (4) Reconnect the ECM connector.

(b) Check the EFI No. 3 fuse.
  (1) Remove the EFI No. 3 fuse from the engine room R/B.
  (2) Measure the resistance EFI No. 3 fuse.
  Standard resistance:
  Below 1 Ω
  (3) Reinstall the EFI No. 3 fuse.

(c) Check the wire harness between the VSV for AICV and the EFI relay.
  (1) Remove the engine room junction block from the engine room R/B.
  (2) Measure the resistance between the terminals of the wire harness side connectors.
  Standard resistance (Check for open)

Tester Connection	Specified Condition
VSV for AICV (A53-1) - 1E-6	Below 1 Ω

  (3) Reconnect the VSV for AICV connector.
  (4) Reinstall the engine room junction block.

NG	REPAIR OR REPLACE HARNESS OR CONNECTOR

ES

OK

4	INSPECT VACUUM TANK

(a) Inspect the vacuum tank (See page IT-3).

NG → REPAIR OR REPLACE AIR CLEANER CAP

OK

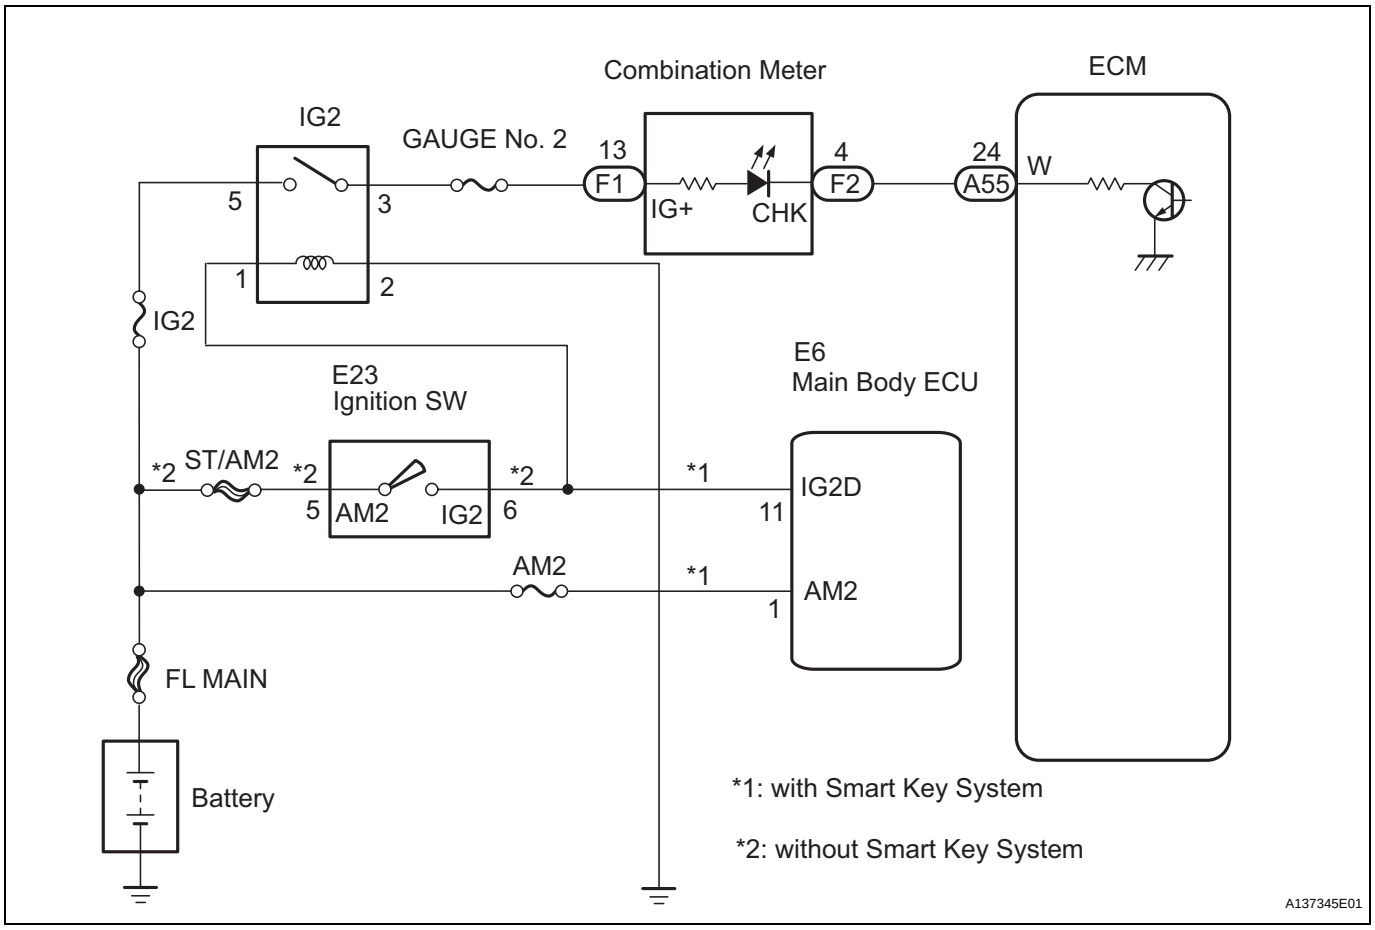
REPLACE ECM (See page ES-518)

MIL Circuit

DESCRIPTION

The MIL (Malfunction Indicator Lamp) is used to indicate vehicle malfunctions detected by the ECM. When the ignition switch is turned on (IG), power is supplied to the MIL circuit, and the ECM provides the circuit ground which illuminates the MIL.
The MIL operation can be checked visually: When the ignition switch is first turned on (IG), the MIL should be illuminated and should then turn off. If the MIL remains illuminated or is not illuminated, conduct the following troubleshooting procedure using the intelligent tester.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK THAT MIL IS ILLUMINATED

(a) Perform troubleshooting in accordance with the table below:
Result

Conditions	Proceed to
MIL remains ON	A
MIL does not illuminate	B

B	Go to step 5

A

2	CHECK WHETHER MIL TURNS OFF

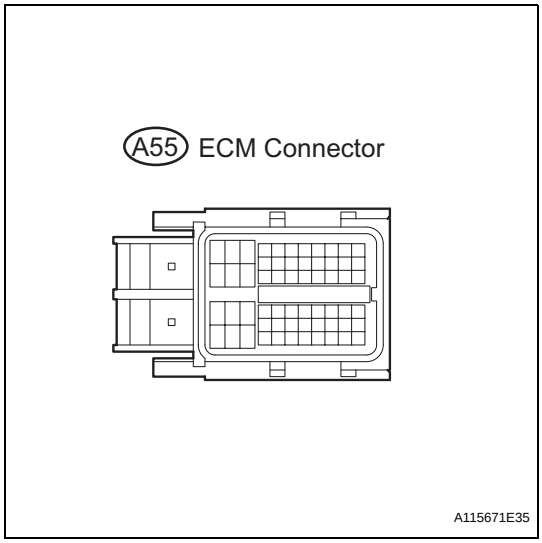
(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the tester on.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Check if any DTCs have been stored. Note down any DTCs.
(e) Clear the DTCs (See page ES-38).
(f) Check if the MIL goes off.
Standard:
MIL goes off.

ES

OK → **REPAIR CIRCUITS INDICATED BY OUTPUT DTCS (See page ES-63)**

NG

3	CHECK HARNESS AND CONNECTOR (CHECK FOR SHORT IN WIRE HARNESS)

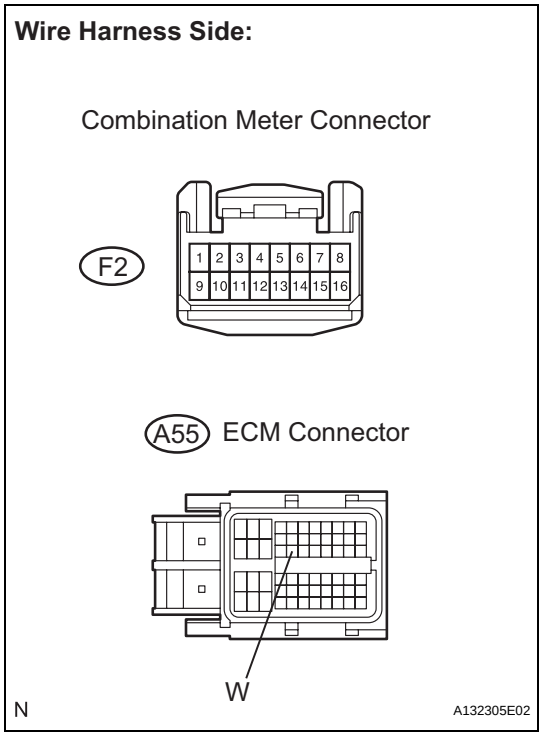


(a) Disconnect the A55 ECM connector.
(b) Turn the ignition switch on (IG).
(c) Check that the MIL is not illuminated.
OK:
MIL is not illuminated.
(d) Reconnect the ECM connector.

OK → **REPLACE ECM (See page ES-518)**

NG

4	CHECK HARNESS AND CONNECTOR (COMBINATION METER - ECM)



(a) Disconnect the A55 ECM connector.
(b) Disconnect the F2 combination meter connector.
(c) Measure the resistance.
Standard resistance (Check for short)

Tester Connection	Specified Condition
A55-24 (W) or F2-4 (CHK) - Body ground	10 kΩ or higher

(d) Reconnect the ECM connector.
(e) Reconnect the combination meter connector.

OK → **REPAIR OR REPLACE COMBINATION METER ASSEMBLY**

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

5	CHECK THAT MIL IS ILLUMINATED

(a) Check if the MIL is illuminated when the ignition switch is turned on (IG).
OK:
MIL is illuminated.

OK → **SYSTEM OK**

NG

6	CHECK THAT ENGINE STARTS

(a) Turn the ignition switch on (IG).
(b) Start the engine.
Result

Result	Proceed to
Engine starts	A
Engine does not start*	B

ES

HINT:
*: The intelligent tester cannot communicate with the ECM.

B → GO TO VC OUTPUT CIRCUIT (See page ES-442)

A

7	INSPECT COMBINATION METER ASSEMBLY (MIL CIRCUIT)

(a) Check the MIL circuit (See page ME-19).

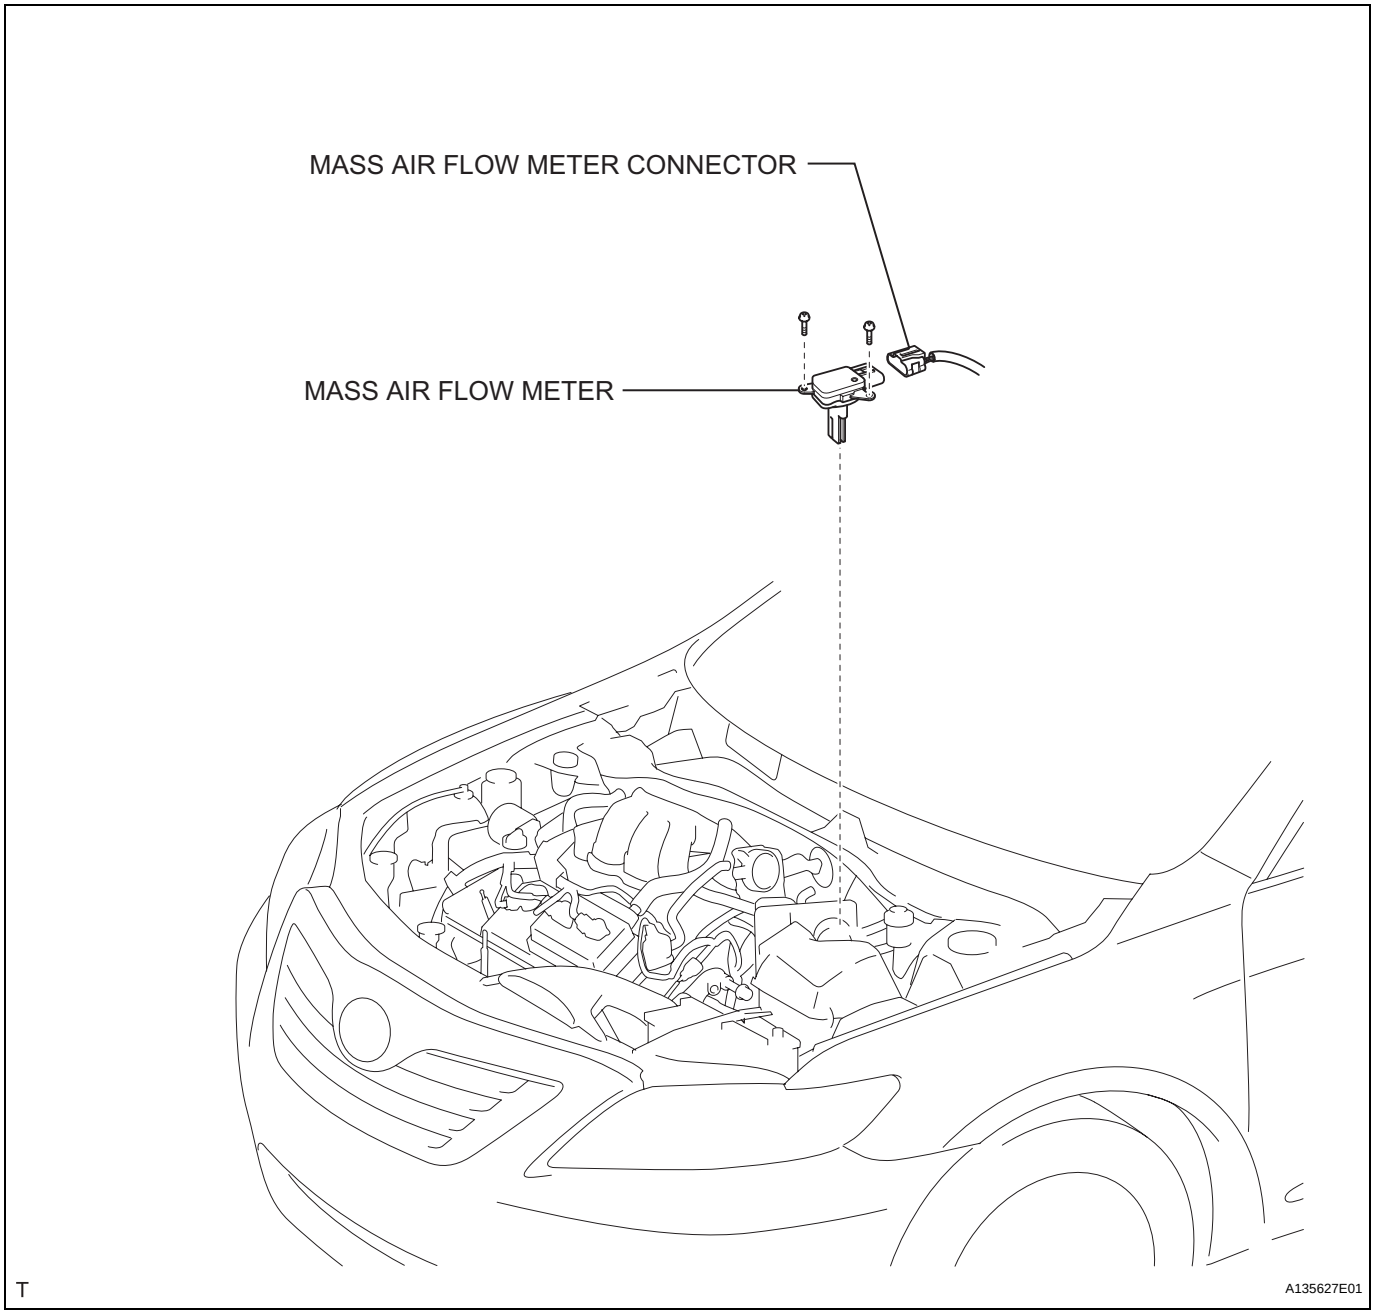
NG → REPAIR OR REPLACE COMBINATION METER ASSEMBLY

OK

CHECK AND REPLACE HARNESS AND CONNECTOR (COMBINATION METER - ECM)

MASS AIR FLOW METER

COMPONENTS

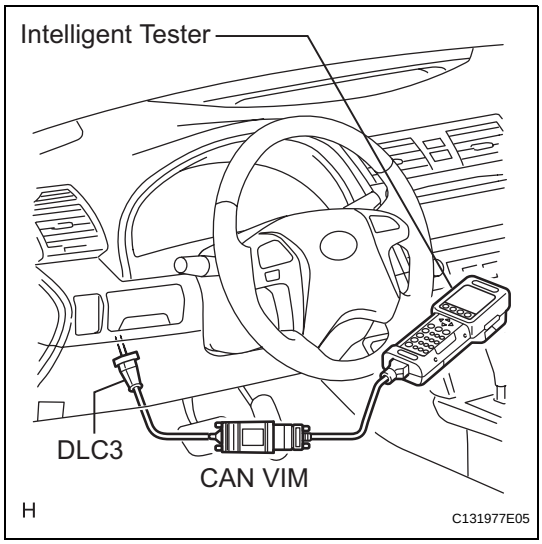


ON-VEHICLE INSPECTION

1. CHECK MASS AIR FLOW METER

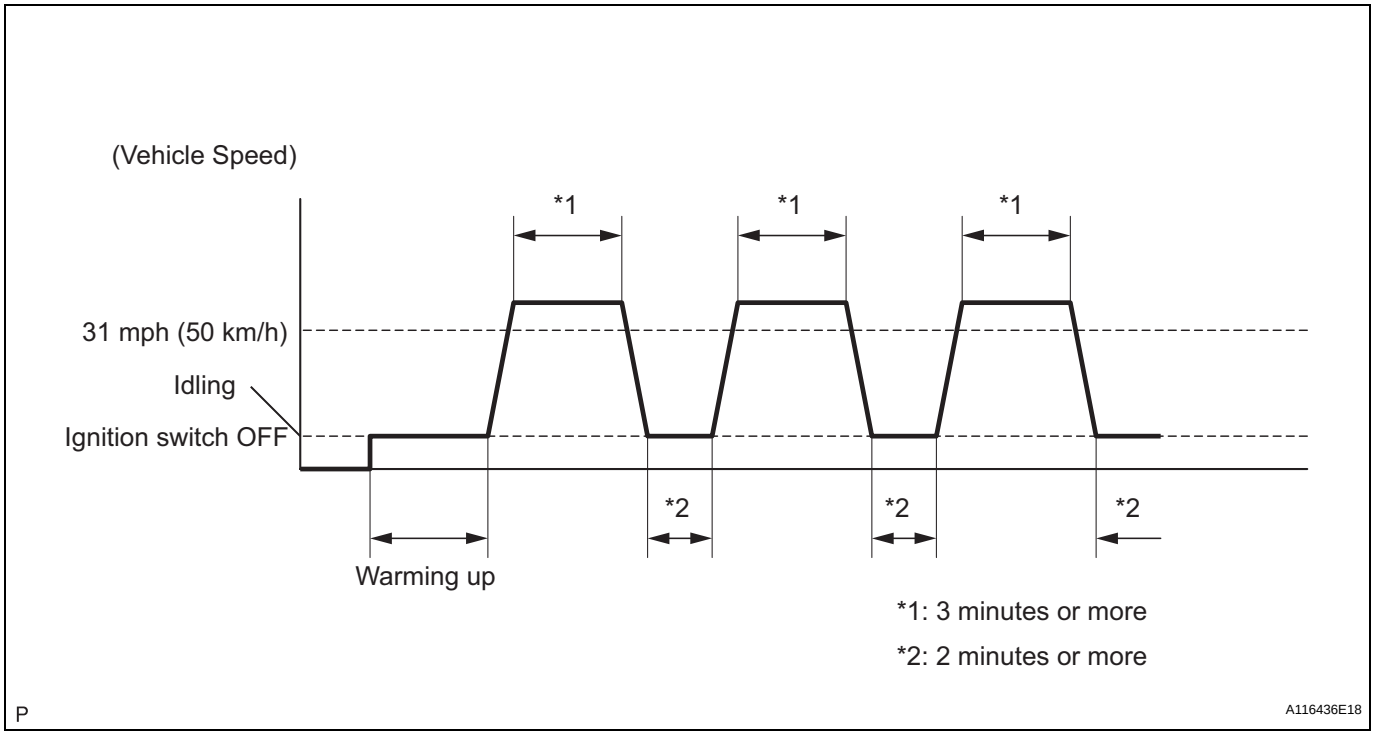
NOTICE:

- **Perform the MAF meter inspection by following the procedures below.**
- **Only replace the MAF meter when both the LONG FT#1 value and MAF value in the DATA LIST (with the engine stopped) are not within the normal operating range.**



(a) Perform confirmation driving pattern.

(1) Connect the intelligent tester to the DLC3.
(2) Turn the ignition switch on (IG).
(3) Turn the tester on.
(4) Clear the DTCs (See page ES-45).
(5) Start the engine and warm it up with all accessory switches off (until the engine coolant temperature is 75 °C(167°F) or more).
(6) Drive the vehicle at 31 mph (50 km/h) or more for 3 minutes or more (*1).
(7) Allow the engine to idle (accelerator pedal fulley released) for 2 minutes or more (*2).
(8) Perform steps (*1) and (*2) at least 3 times or more.



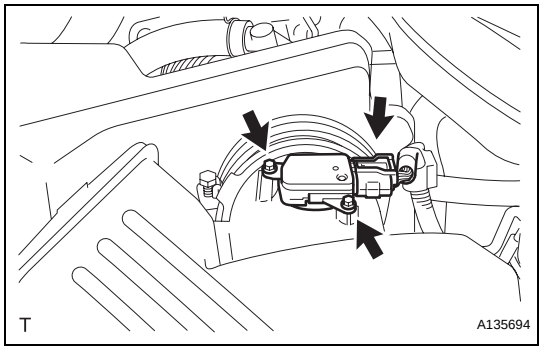
(b) Read values using the intelligent tester (LONG FT#1).

(1) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / LONG FT#1.

(2) Read the values displayed on the tester.
Standard value:
Within -15 to +15 %
If the result is not within the specified range, perform the inspection below.

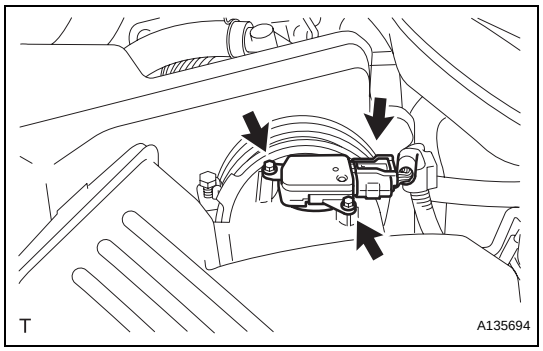
(c) Read values using the intelligent tester (MAF).
NOTICE:
- **Turn off the engine.**
- **Perform the inspection with the vehicle indoors and on a level surface.**
- **Perform the inspection of the MAF meter while it is installed to the air cleaner case (installed to the vehicle).**
- **During the test, do not use the exhaust air duct to perform suction on the exhaust pipe.**

(1) Turn off the engine (do not run the engine).
(2) Turn the ignition switch on (IG).
(3) Turn the tester on.
(4) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / PRIMARY / MAF.
(5) Wait 30 seconds, and read the values on the intelligent tester.
Standard condition:
Less than 0.56 g/sec
- If the result is not as specified, replace the MAF meter.
- If the result is within the specified range, inspect the cause of the extremely rich or lean air fuel ratio (See page EC-19).



REMOVAL

1. REMOVE MASS AIR FLOW METER
(a) Disconnect the mass air flow meter connector.
(b) Remove the 2 screws and mass air flow meter.



INSTALLATION

1. INSTALL MASS AIR FLOW METER
(a) Install the mass air flow meter with the 2 screws.
(b) Connect the mass air flow meter connector.

ON-VEHICLE INSPECTION

1. INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

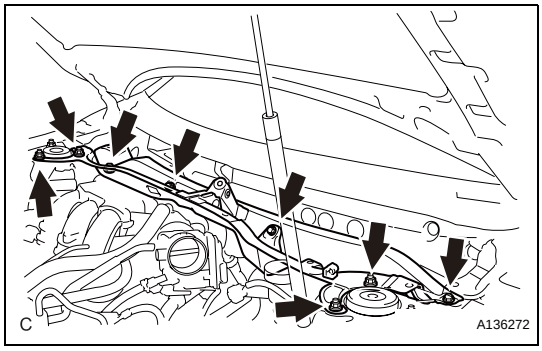
(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Start and warm up the engine.
(d) Connect the intelligent tester and select VVT from the ACTIVE TEST menu.
(e) Check the engine speed when the OCV is operated with the intelligent tester.
OK

Condition	Specified Condition
VVT system is OFF (OCV is OFF)	Normal engine speed
VVT system is ON (OCV is ON)	Rough idle or engine stalled

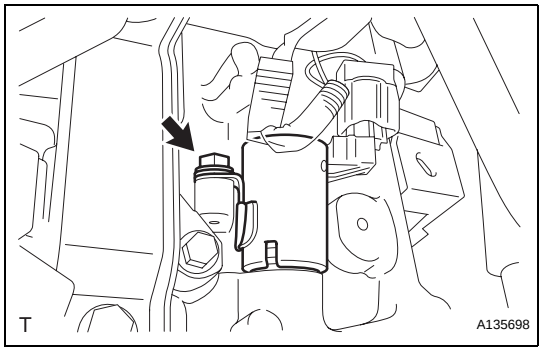
ES

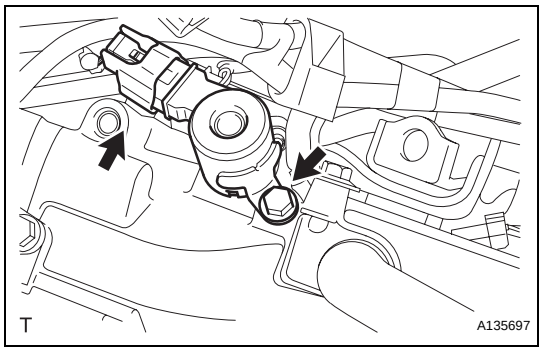
REMOVAL

1. **REMOVE ENGINE UNDER COVER LH**
2. **REMOVE ENGINE UNDER COVER RH**
3. **DRAIN ENGINE COOLANT (See page CO-5)**
4. **REMOVE WINDSHIELD WIPER ARM AND BLADE ASSEMBLY LH (See page WW-9)**
5. **REMOVE WINDSHIELD WIPER ARM AND BLADE ASSEMBLY RH (See page WW-9)**
6. **REMOVE FRONT FENDER TO COWL SIDE SEAL LH (See page WW-9)**
7. **REMOVE FRONT FENDER TO COWL SIDE SEAL RH (See page WW-9)**
8. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-10)**
9. **REMOVE WINDSHIELD WIPER MOTOR AND LINK (See page WW-10)**
10. **REMOVE COWL TOP PANEL OUTER SUB-ASSEMBLY**
    (a) Remove the 4 bolts, 4 nuts and cowl top panel outer sub-assembly.



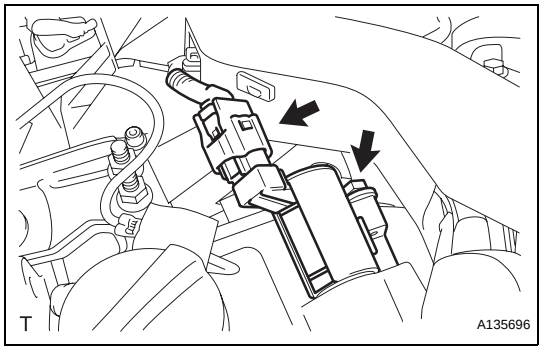
11. **REMOVE COOL AIR INTAKE DUCT SEAL (See page EM-23)**
12. **REMOVE V-BANK COVER SUB-ASSEMBLY (See page EM-23)**
13. **REMOVE AIR CLEANER INLET ASSEMBLY (See page EM-24)**
14. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-503)**
15. **REMOVE AIR CLEANER CASE SUB-ASSEMBLY (See page EM-24)**
16. **REMOVE NO. 1 AIR CLEANER INLET (See page EM-24)**
17. **REMOVE INTAKE AIR SURGE TANK (See page FU-13)**
18. **REMOVE CAMSHAFT TIMING OIL CONTROL VALVE (for Bank 1 Exhaust Side)**
    (a) Disconnect the camshaft timing oil control valve connector.
    (b) Remove the bolt and camshaft timing oil control valve.
    (c) Remove the O-ring from the camshaft timing oil control valve.





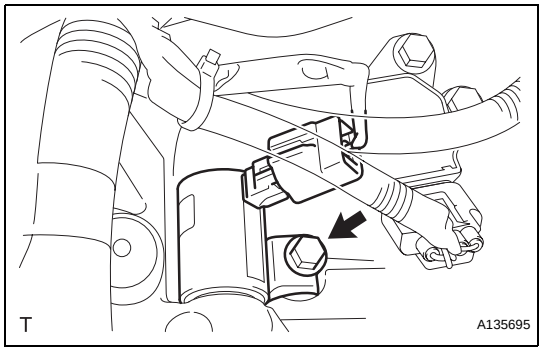
19. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE (for Bank 1 Intake Side)

(a) Disconnect the camshaft timing oil control valve connector.
(b) Remove the bolt and camshaft timing oil control valve.
(c) Remove the O-ring from the camshaft timing oil control valve.



20. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE (for Bank 2 Exhaust Side)

(a) Disconnect the camshaft timing oil control valve connector.
(b) Remove the bolt and camshaft timing oil control valve.
(c) Remove the O-ring from the camshaft timing oil control valve.



21. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE (for Bank 2 Intake Side)

(a) Disconnect the camshaft timing oil control valve connector.
(b) Remove the bolt and camshaft timing oil control valve.
(c) Remove the O-ring from the camshaft timing oil control valve.

INSPECTION

1. INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

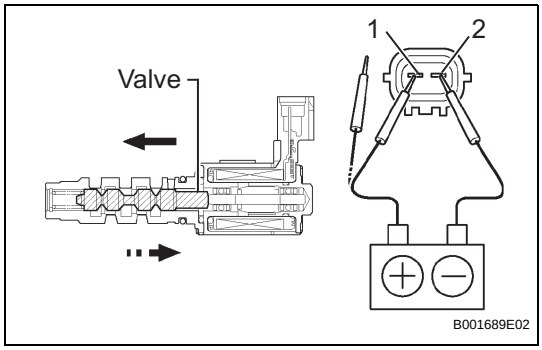
(a) Resistance inspection.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard resistance:

6.9 to 7.9 Ω at 20°C (68°F)

If necessary, replace the camshaft timing oil control valve assembly.



(b) Movement inspection.

(1) Connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 2, and check the movement of the valve.

NOTICE:

Confirm that the valve moves freely and does not stick in any position.

If necessary, replace the camshaft timing oil control valve assembly.

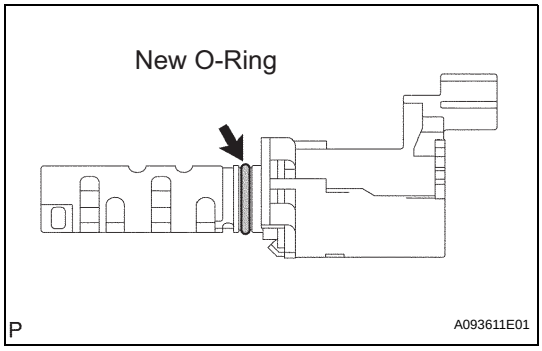
HINT:

Accumulation of foreign objects causes subtle pressure leaks. The subtle pressure leaks will cause the camshaft to advance, and this will cause a DTC to be set.

INSTALLATION

1. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE (for Bank 2 Intake Side)

(a) Apply a light coat of engine oil to a new O-ring and install it to the camshaft timing oil control valve.

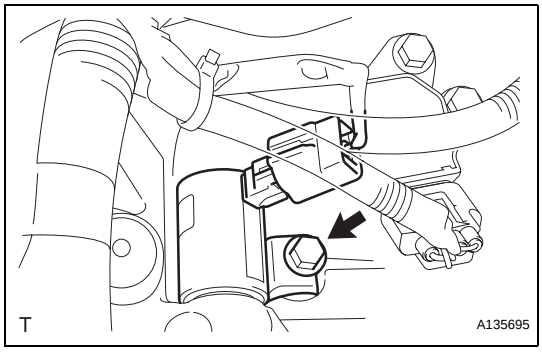


(b) Install the camshaft timing oil control valve with the bolt.

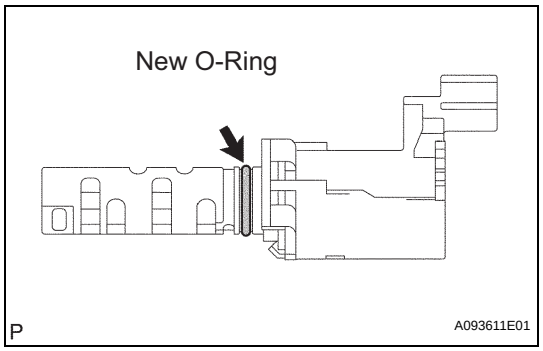
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

NOTICE:

Make sure that the O-ring is not cracked or jammed when installing the oil control valve.

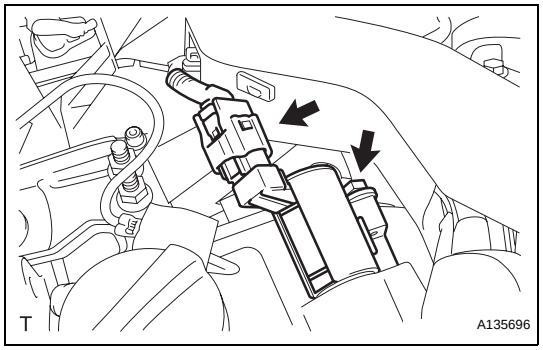


(c) Connect the camshaft timing oil control valve connector.



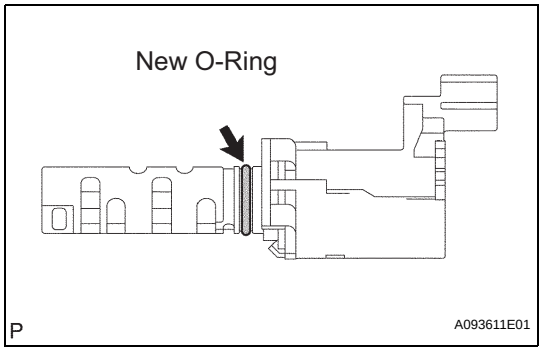
2. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE (for Bank 2 Exhaust Side)

(a) Apply a light coat of engine oil to a new O-ring and install it to the camshaft timing oil control valve.



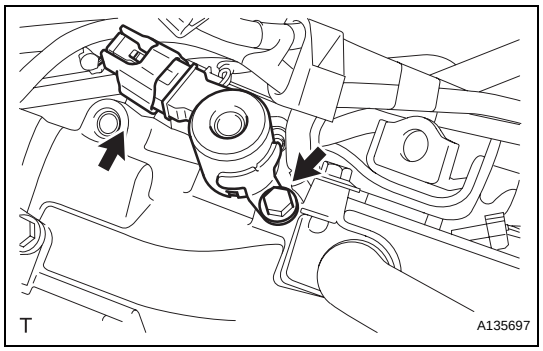
(b) Install the camshaft timing oil control valve with the bolt.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)
NOTICE:
Make sure that the O-ring is not cracked or jammed when installing the oil control valve.

(c) Connect the camshaft timing oil control valve connector.



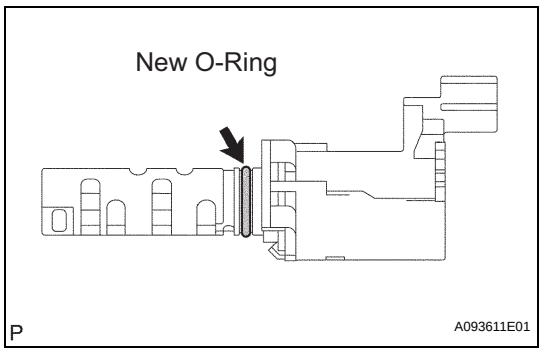
3. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE (for Bank 1 Intake Side)

(a) Apply a light coat of engine oil to a new O-ring and install it to the camshaft timing oil control valve.



(b) Install the camshaft timing oil control valve with the bolt.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)
NOTICE:
Make sure that the O-ring is not cracked or jammed when installing the oil control valve.

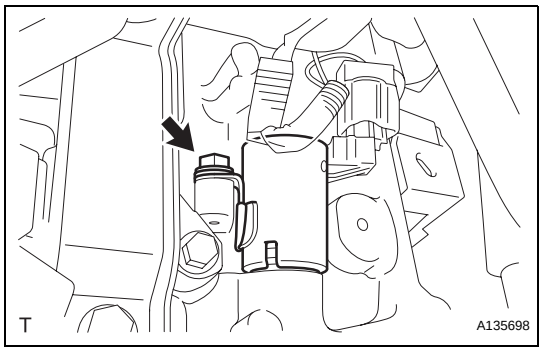
(c) Connect the camshaft timing oil control valve connector.



4. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE (for Bank 1 Exhaust Side)

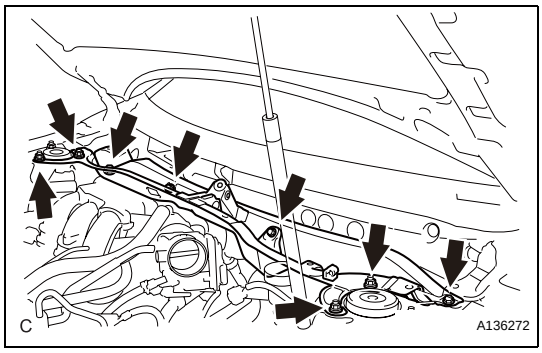
(a) Apply a light coat of engine oil to a new O-ring and install it to the camshaft timing oil control valve.

ES



(b) Install the camshaft timing oil control valve with the bolt.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)
NOTICE:
Make sure that the O-ring is not cracked or jammed when installing the oil control valve.
(c) Connect the camshaft timing oil control valve connector.

5. **INSTALL INTAKE AIR SURGE TANK (See page FU-18)**
6. **INSTALL NO. 1 AIR CLEANER INLET (See page EM-49)**
7. **INSTALL AIR CLEANER CASE SUB-ASSEMBLY (See page EM-50)**
8. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-506)**
9. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-50)**
10. **INSTALL V-BANK COVER SUB-ASSEMBLY (See page EM-52)**
11. **INSTALL COOL AIR INTAKE DUCT SEAL (See page EM-52)**



12. **INSTALL COWL TOP PANEL OUTER SUB-ASSEMBLY**
(a) Install the cowl top panel outer sub-assembly with the 4 bolts and 4 nuts.
Torque: Bolt
5.0 N*m (51 kgf*cm, 44 in.*lbf)

REMOVAL

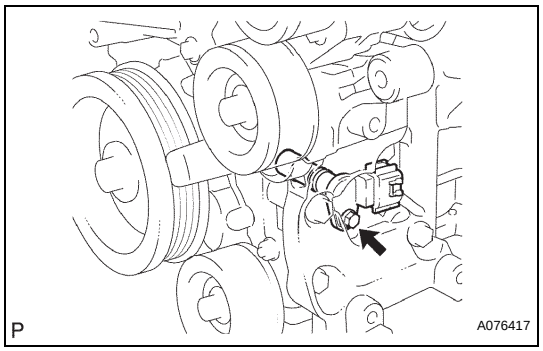
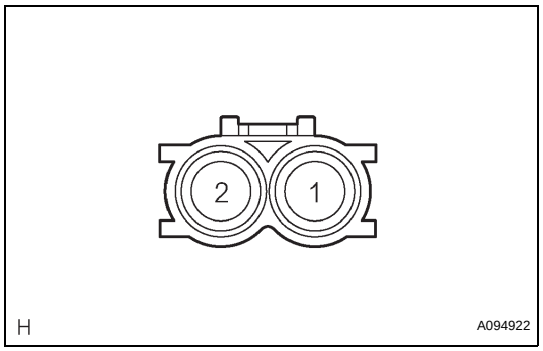
1. **REMOVE GENERATOR ASSEMBLY**
   HINT:
   (See page CH-13)
2. **DISCONNECT COOLER COMPRESSOR ASSEMBLY**
   HINT:
   (See page AC-219)
3. **REMOVE CRANKSHAFT POSITION SENSOR**
   (a) Disconnect the crankshaft position sensor connector.
   (b) Remove the bolt and crankshaft position sensor.



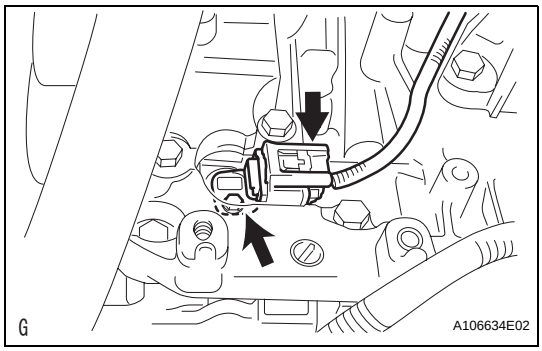


INSPECTION

1. **INSPECT CRANKSHAFT POSITION SENSOR**
   (a) Using an ohmmeter, measure the resistance between the terminals.
   Resistance:
   1,630 to 2,740 Ω at cold
   2,065 to 3,225 Ω at hot
   NOTICE:
   The terms "cold" and "hot" refer to the temperature of the coils. "Cold" means approximately -10 to 50°C (14 to 122°F). "Hot" means approximately 50 to 100°C (122 to 212°F).
   If the resistance is not as specified, replace the sensor.

ES

INSTALLATION



1. INSTALL CRANKSHAFT POSITION SENSOR

(a) Apply a light coat of engine oil to the O-ring of the crankshaft position sensor.

(b) Install the crankshaft position sensor with the bolt.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

(c) Connect the crankshaft position sensor connector.

2. INSTALL COOLER COMPRESSOR ASSEMBLY

HINT:
(See page AC-225)

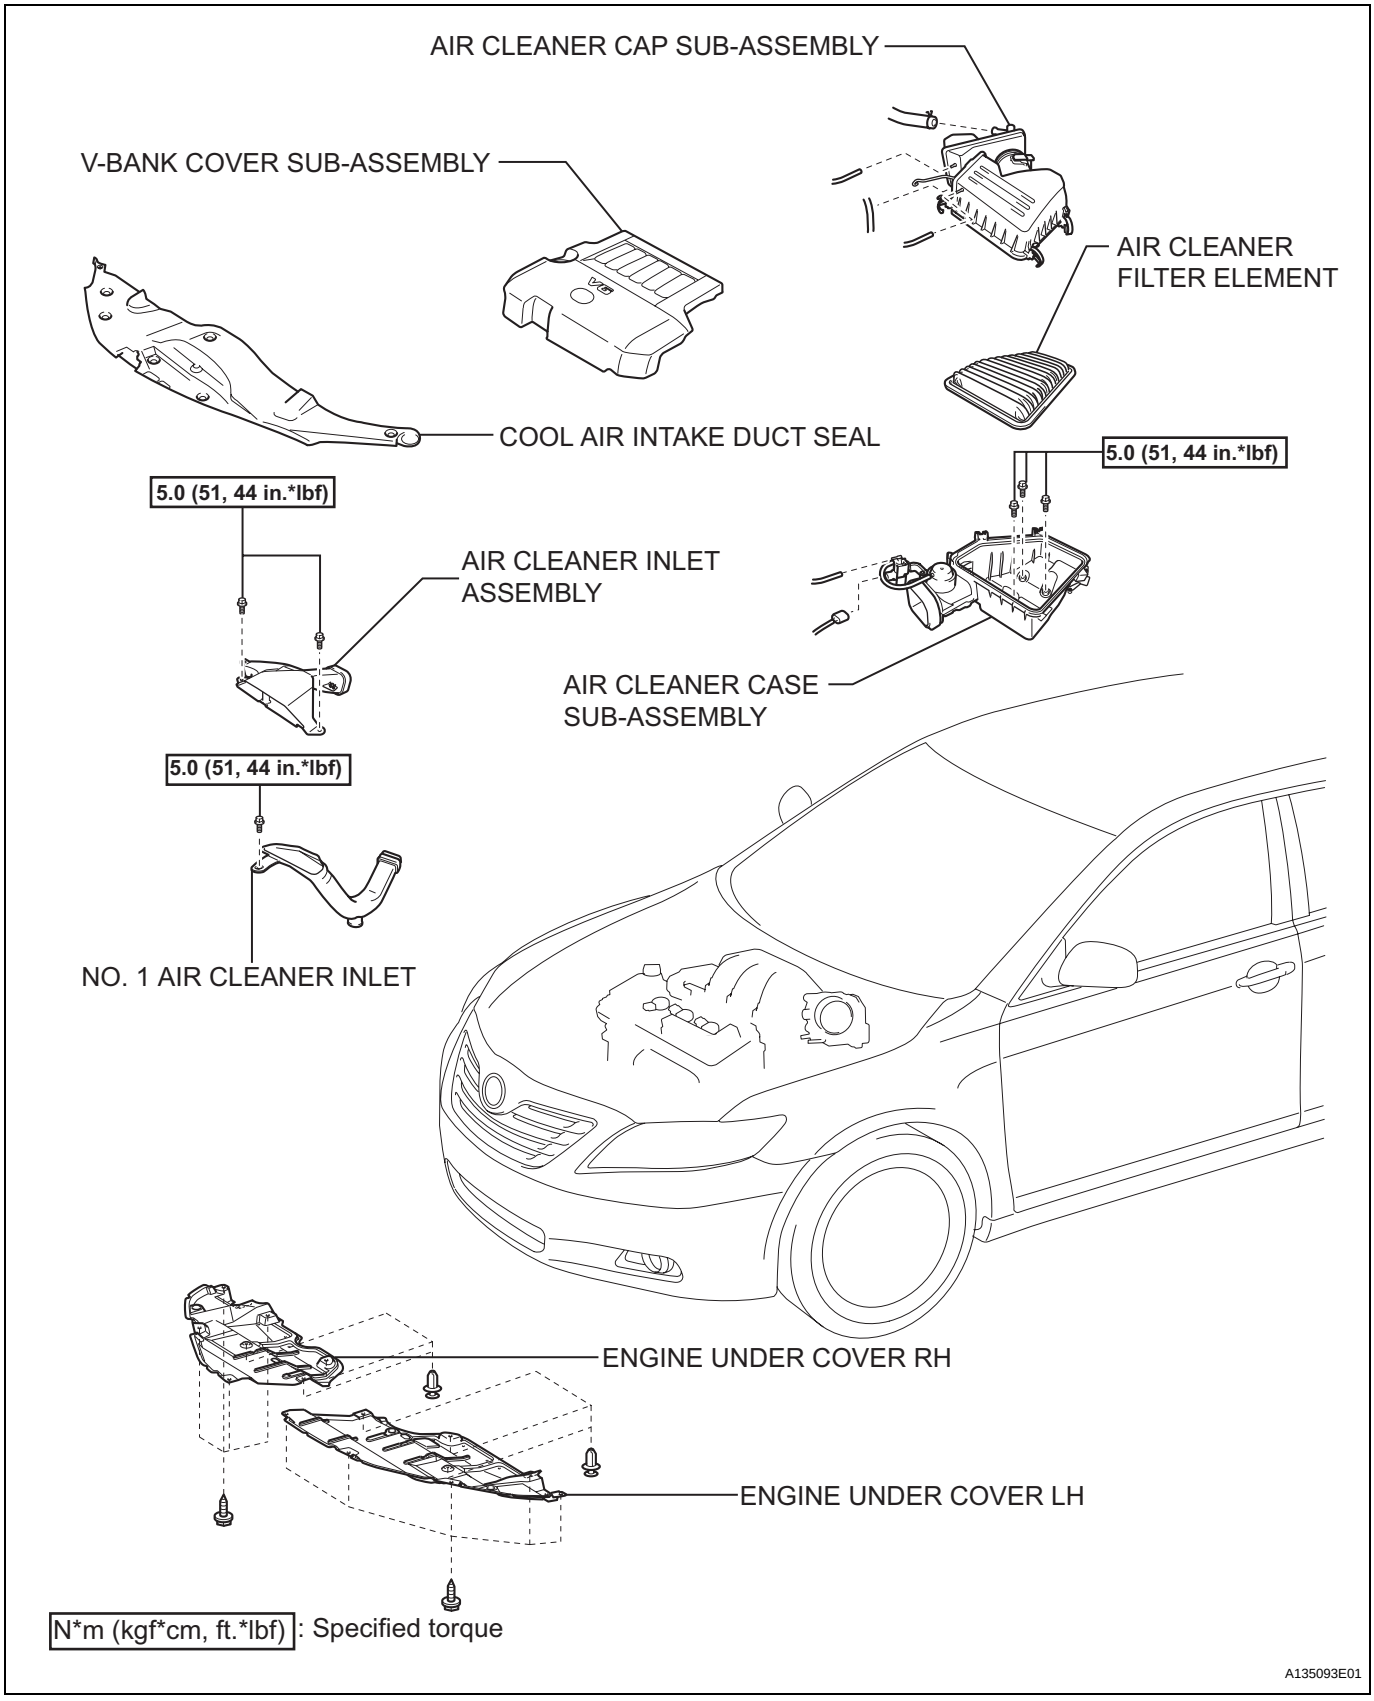
3. INSTALL GENERATOR ASSEMBLY

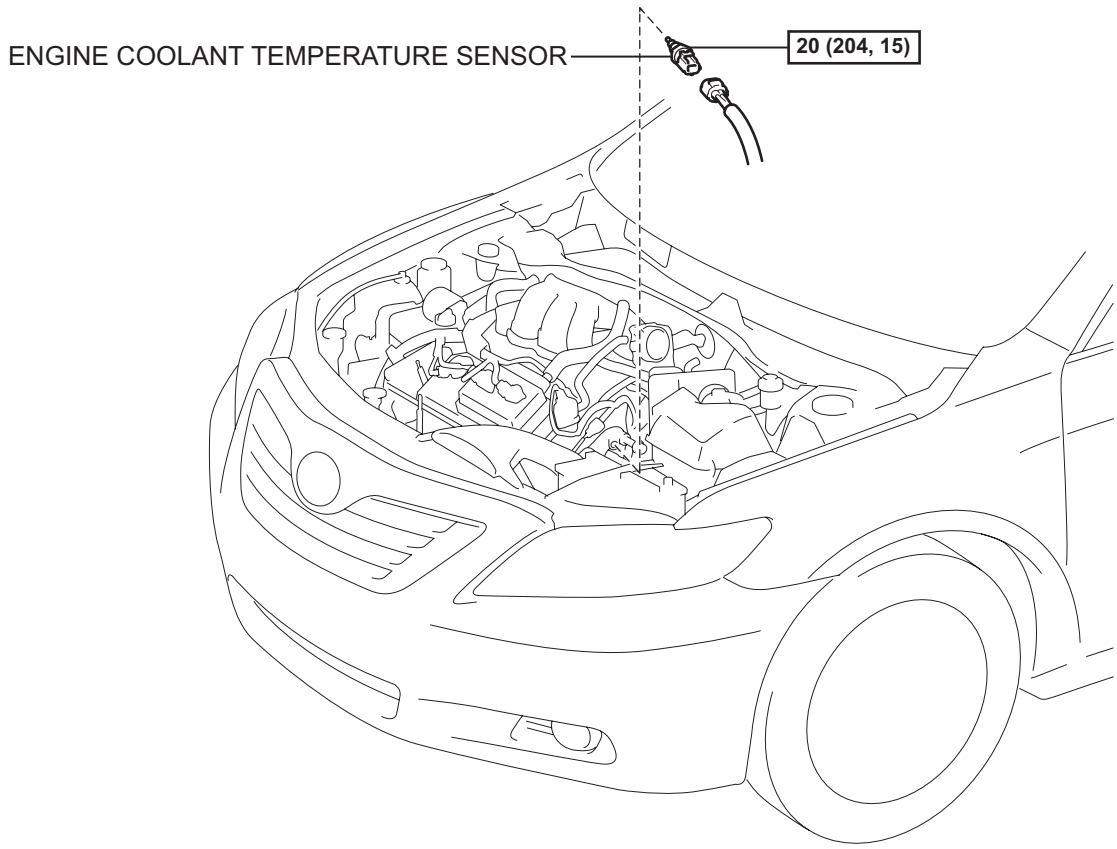
HINT:
(See page CH-22)

ES

ENGINE COOLANT TEMPERATURE SENSOR

COMPONENTS





N*m (kgf*cm, ft.*lbf): Specified torque

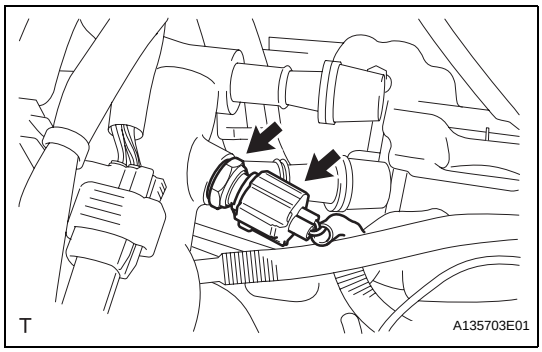
T

A135635E01

ES

REMOVAL

1. **REMOVE ENGINE UNDER COVER LH**
2. **REMOVE ENGINE UNDER COVER RH**
3. **DRAIN ENGINE COOLANT (See page CO-5)**
4. **REMOVE V-BANK COVER SUB-ASSEMBLY (See page EM-23)**
5. **REMOVE AIR CLEANER INLET ASSEMBLY (See page EM-24)**
6. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-503)**
7. **REMOVE AIR CLEANER CASE SUB-ASSEMBLY (See page EM-24)**
8. **REMOVE NO. 1 AIR CLEANER INLET (See page EM-24)**
9. **REMOVE ENGINE COOLANT TEMPERATURE SENSOR**
   (a) Remove the engine coolant temperature sensor connector.
   (b) Remove the engine coolant temperature sensor.



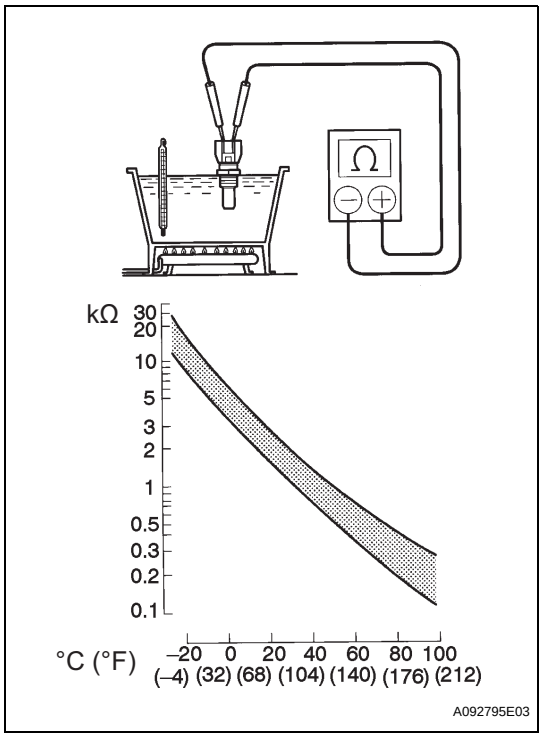
INSPECTION

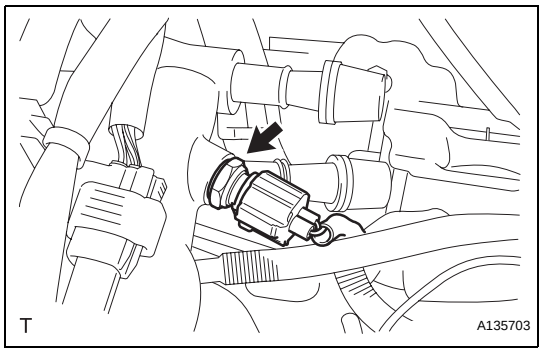
1. **INSPECT ENGINE COOLANT TEMPERATURE SENSOR**
   (a) Measure the resistance between the terminals.
   Standard resistance

Condition	Specified Condition
Approx. 20°C (68°F)	2.32 to 2.59 kΩ
Approx. 80°C (176°F)	0.31 to 0.326 kΩ

If the result is not as specified, replace the sensor.

NOTICE:
If checking the ECT sensor in the water, keep the terminals dry. After checking, dry the sensor.



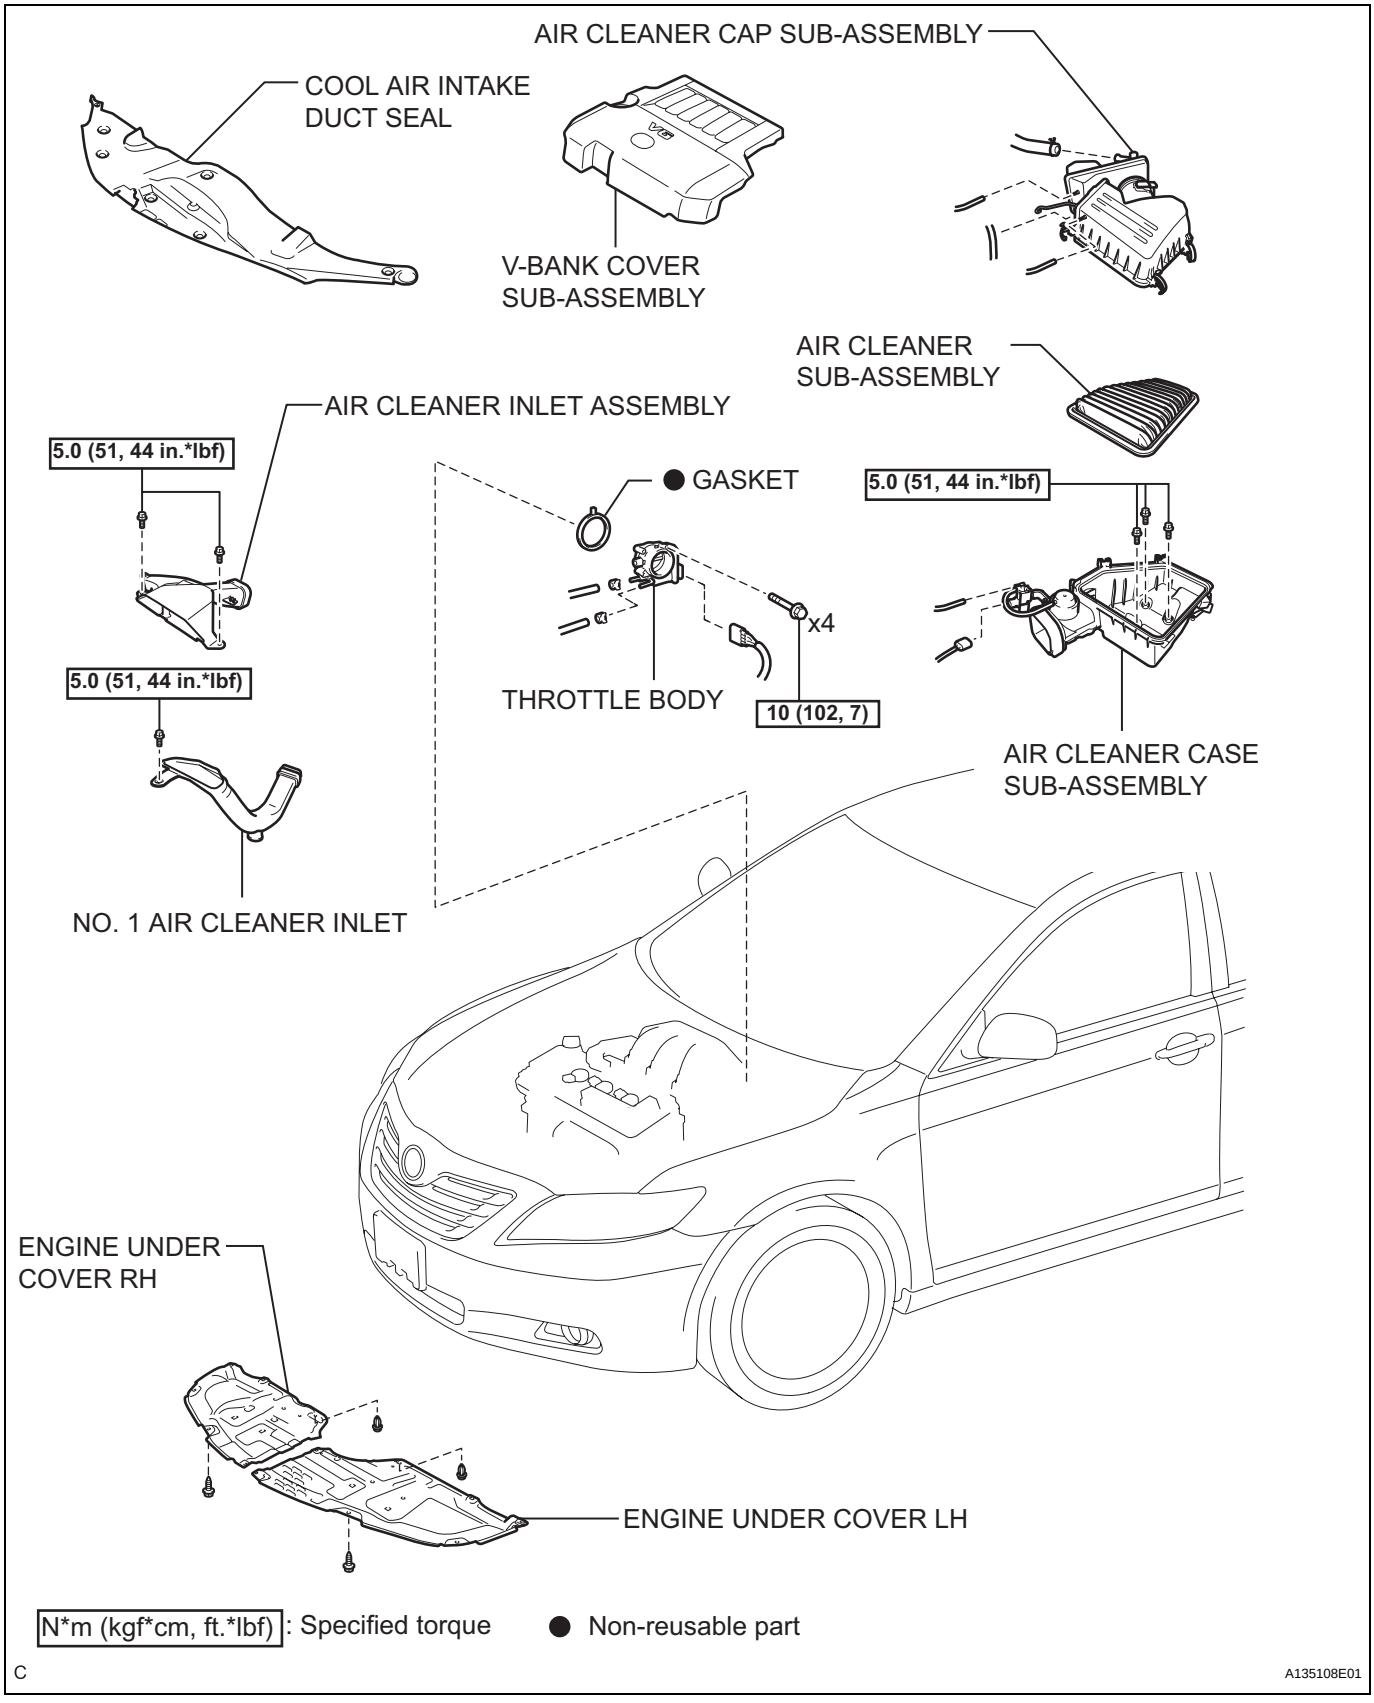


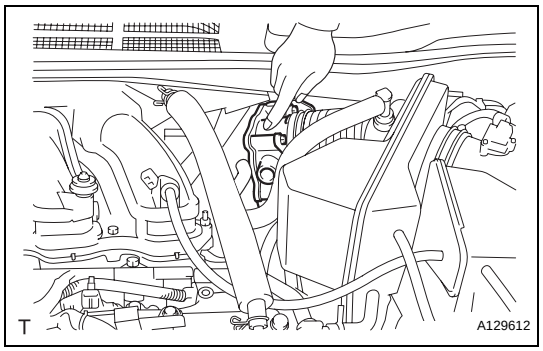
INSTALLATION

1. **INSTALL ENGINE COOLANT TEMPERATURE SENSOR**
   (a) Install a new gasket to the engine coolant temperature sensor.
   (b) Install the engine coolant temperature sensor.
   Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)
   (c) Connect the engine coolant temperature sensor connector.
2. **INSTALL NO. 1 AIR CLEANER INLET (See page EM-49)**
3. **INSTALL AIR CLEANER CASE SUB-ASSEMBLY (See page EM-50)**
4. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-506)**
5. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-50)**
6. **INSTALL V-BANK COVER SUB-ASSEMBLY (See page EM-52)**
7. **ADD ENGINE COOLANT (See page CO-6)**
8. **CHECK FOR ENGINE COOLANT LEAKS (See page CO-1)**
9. **INSTALL ENGINE UNDER COVER RH**
10. **INSTALL ENGINE UNDER COVER LH**

THROTTLE BODY

COMPONENTS





ON-VEHICLE INSPECTION

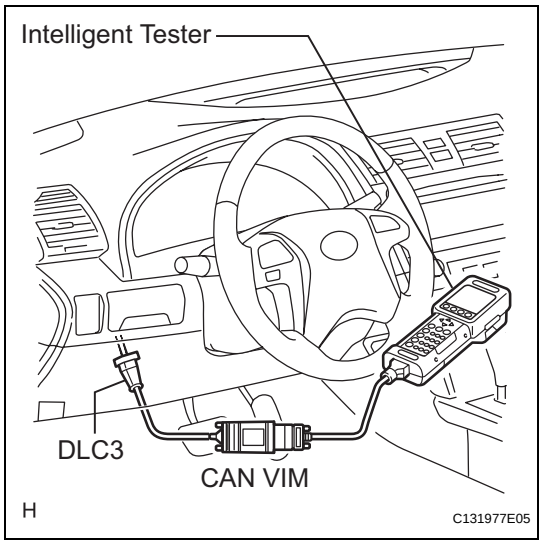
1. INSPECTION THROTTLE BODY

(a) Inspect the throttle control motor for operating sounds.

(1) Turn the ignition switch on (IG).

(2) When turning the accelerator pedal position sensor lever, check for running sounds of the motor. The motor should be running smoothly without friction sounds.

If operation is not as specified, check the throttle control motor, wiring and ECM (See page ES-505).



(b) Inspect the throttle position sensor.

(1) Connect the intelligent tester (with CAN VIM) to the DLC3.

(2) Turn the ignition switch on (IG).

(3) Check that the MIL is off.

(4) Check that, under the CURRENT DATA, THROTTLE POS (throttle valve opening percentage) is within the standard range below.

Standard throttle valve opening percentage:
60 % or more

If operation is not as specified, check the throttle position sensor, wiring and ECM (See page ES-505).

ES

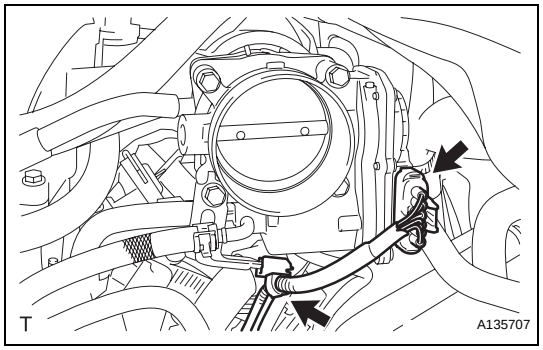
ES

REMOVAL

1. **REMOVE ENGINE UNDER COVER LH**
2. **REMOVE ENGINE UNDER COVER RH**
3. **DRAIN ENGINE COOLANT (See page CO-5)**
4. **REMOVE COOL AIR INTAKE DUCT SEAL (See page EM-23)**
5. **REMOVE V-BANK COVER SUB-ASSEMBLY (See page EM-23)**
6. **REMOVE AIR CLEANER INLET ASSEMBLY (See page EM-24)**
7. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY**
   (a) Disconnect the 3 vacuum hoses.

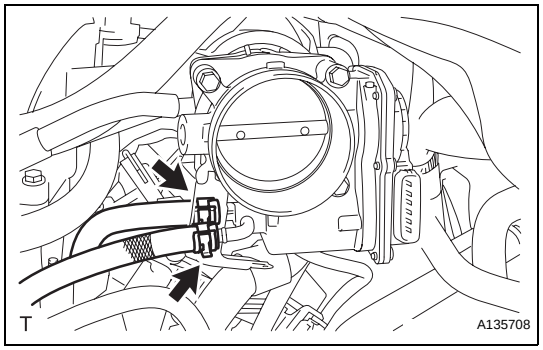
   (b) Disconnect the mass air flow meter connector (*1).
   (c) Disconnect the No. 2 ventilation hose (*2).
   (d) Disconnect the hose band (*3).

   (e) Disconnect the 3 bands, and remove the air cleaner cap sub-assembly.
8. **REMOVE AIR CLEANER CASE SUB-ASSEMBLY (See page EM-24)**
9. **REMOVE NO. 1 AIR CLEANER INLET (See page EM-24)**

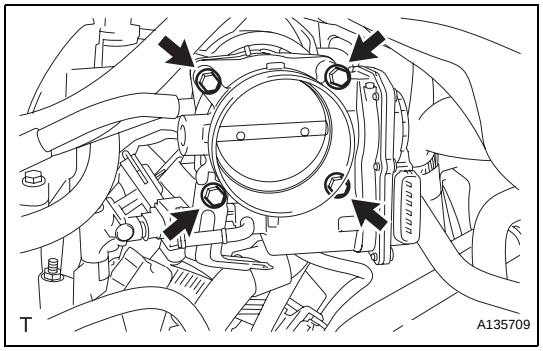


10. REMOVE THROTTLE BODY

(a) Disconnect the throttle body connector and clamp.

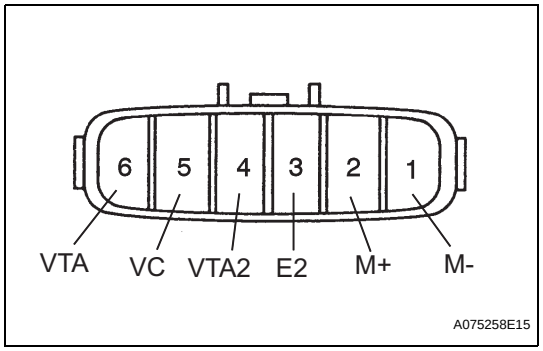


(b) Disconnect the 2 water by-pass hoses from the throttle body.



(c) Remove the 4 bolts and throttle body.

(d) Remove the throttle body gasket from the intake air surge tank.



INSPECTION

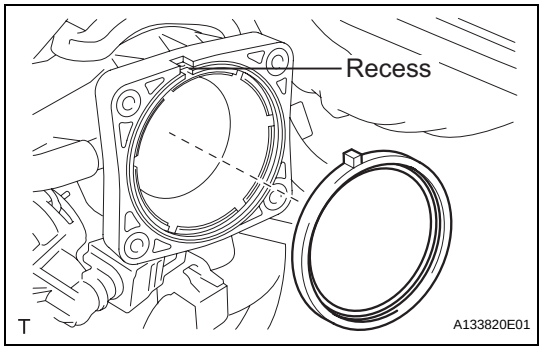
1. INSPECT THROTTLE BODY

(a) Measure the resistance between the terminals.

Standard resistance

Tester Connection	Condition	Specified Condition
2 (M+) - 1 (M-)	20°C (68°F)	0.3 to 100 Ω
5 (VC) - 3 (E2)	20°C (68°F)	1.2 to 3.2 kΩ

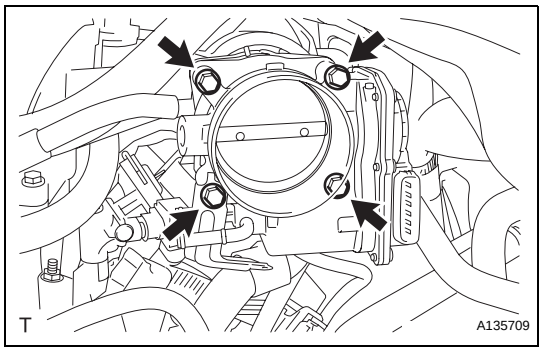
If the result is not as specified, replace the throttle body assembly.



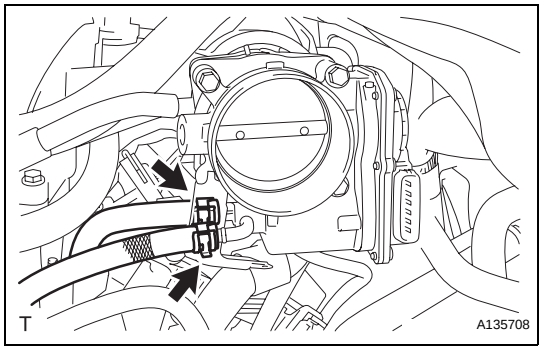
INSTALLATION

1. INSTALL THROTTLE BODY

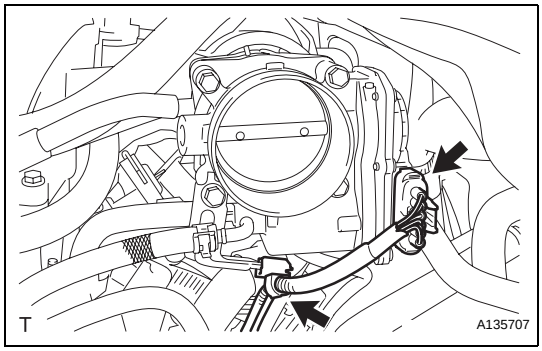
(a) Install a new throttle body gasket to the intake air surge tank.



(b) Install the throttle body with the 4 bolts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)



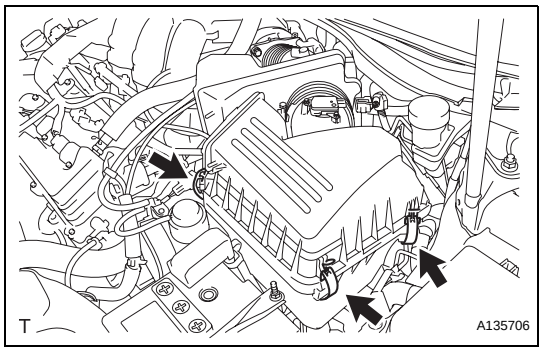
(c) Connect the 2 water by-pass hoses.



(d) Connect the throttle body connector and clamp.

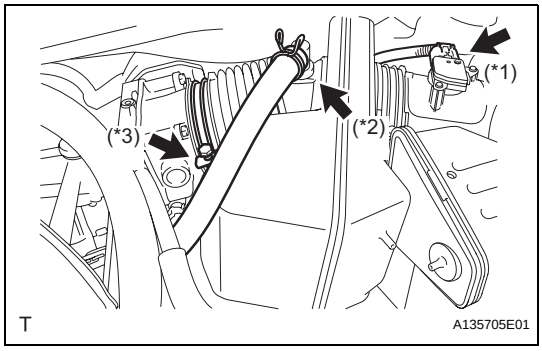
2. INSTALL NO. 1 AIR CLEANER INLET (See page EM-49)

3. INSTALL AIR CLEANER CASE SUB-ASSEMBLY (See page EM-50)



4. INSTALL AIR CLEANER CAP SUB-ASSEMBLY

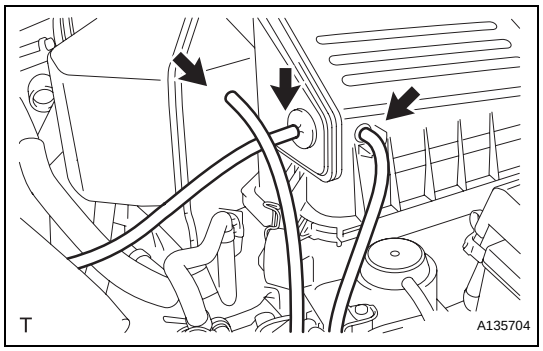
(a) Install the air cleaner cap sub-assembly, and connect the 3 bands.



(b) Connect the mass air flow meter connector (*1).

(c) Connect the No. 2 ventilation hose (*2).

(d) Connect the hose band (*3).



(e) Connect the 3 vacuum hoses.

5. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-50)**
6. **INSTALL COOL AIR INTAKE DUCT SEAL (See page EM-52)**
7. **ADD ENGINE COOLANT (See page CO-6)**
8. **CHECK FOR ENGINE COOLANT LEAKS (See page CO-1)**
9. **CHECK FUNCTION OF THROTTLE BODY (See page ES-503)**
10. **INSTALL V-BANK COVER SUB-ASSEMBLY (See page EM-52)**

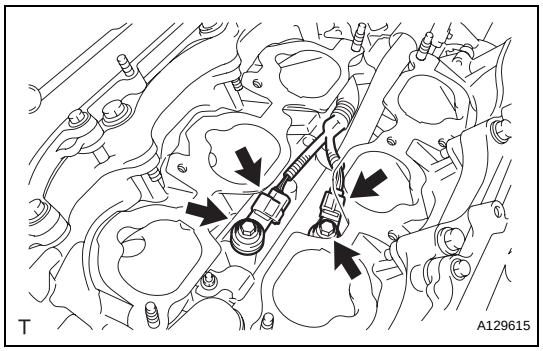
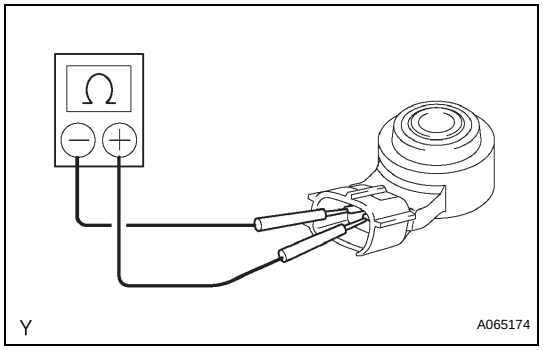
11. REMOVE COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-481)
12. REMOVE COOL AIR INTAKE DUCT SEAL (See page ES-481)
13. REMOVE V-BANK COVER SUB-ASSEMBLY (See page EM-23)
14. REMOVE AIR CLEANER INLET ASSEMBLY (See page EM-24)
15. REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-503)
16. REMOVE AIR CLEANER CASE SUB-ASSEMBLY (See page EM-24)
17. REMOVE NO. 1 AIR CLEANER INLET (See page EM-24)
18. REMOVE INTAKE AIR SURGE TANK (See page FU-13)
19. SEPARATE FUEL TUBE SUB-ASSEMBLY (See page EM-28)
20. REMOVE INTAKE MANIFOLD (See page EM-32)

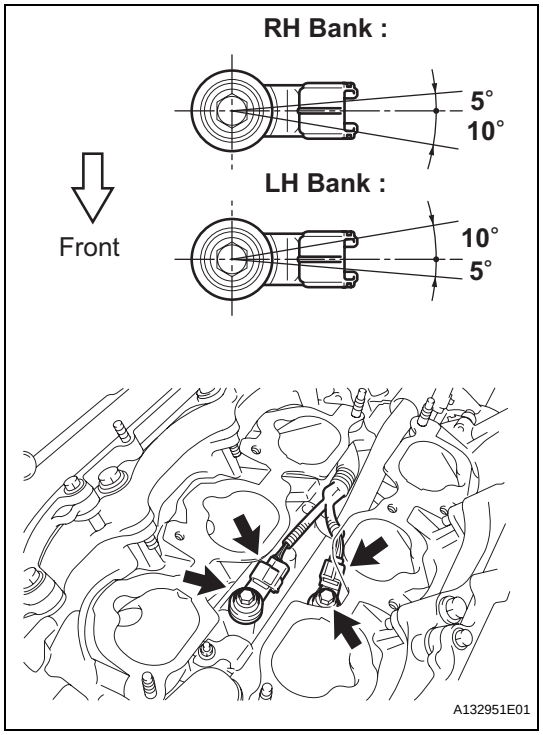


21. **REMOVE KNOCK CONTROL SENSOR**
    (a) Disconnect the 2 knock control sensor connectors.
    (b) Remove the 2 bolts and 2 knock control sensors.



INSPECTION

1. **INSPECT KNOCK CONTROL SENSOR**
    (a) Using an ohmmeter, measure the resistance between the terminals.
    Standard resistance:
    120 to 280 kΩ at 20°C (68°F)
    If the result is not as specified, replace the sensor.

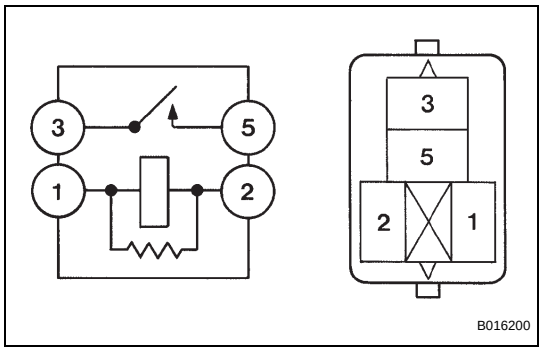


INSTALLATION

1. **INSTALL KNOCK CONTROL SENSOR**
    (a) Install the 2 knock control sensors with the 2 bolts as shown in the illustration.
    Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)
    (b) Connect the 2 knock control sensor connectors.
2. **INSTALL INTAKE MANIFOLD (See page EM-41)**
3. **CONNECT FUEL TUBE SUB-ASSEMBLY (See page EM-46)**
4. **INSTALL INTAKE AIR SURGE TANK (See page FU-18)**
5. **INSTALL NO. 1 AIR CLEANER INLET (See page EM-49)**
6. **INSTALL AIR CLEANER CASE SUB-ASSEMBLY (See page EM-50)**
7. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-506)**
8. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-50)**
9. **INSTALL V-BANK COVER SUB-ASSEMBLY (See page EM-52)**
10. **INSTALL COOL AIR INTAKE DUCT SEAL (See page EM-52)**
11. **INSTALL COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-485)**
12. **INSTALL WINDSHIELD WIPER MOTOR AND LINK (See page WW-14)**

ES

13. **INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-15)**
14. **INSTALL FRONT FENDER TO COWL SIDE SEAL RH (See page WW-15)**
15. **INSTALL FRONT FENDER TO COWL SIDE SEAL LH (See page WW-15)**
16. **INSTALL WINDSHIELD WIPER ARM AND BLADE ASSEMBLY LH (See page WW-15)**
17. **INSTALL WINDSHIELD WIPER ARM AND BLADE ASSEMBLY RH (See page WW-16)**
18. **ADD ENGINE COOLANT (See page CO-6)**
19. **CHECK FOR ENGINE COOLANT LEAKS (See page CO-1)**
20. **CHECK FOR FUEL LEAKS (See page FU-8)**
21. **INSTALL ENGINE UNDER COVER RH**
22. **INSTALL ENGINE UNDER COVER LH**



IG2 RELAY

INSPECTION

1. INSPECT IG2 RELAY

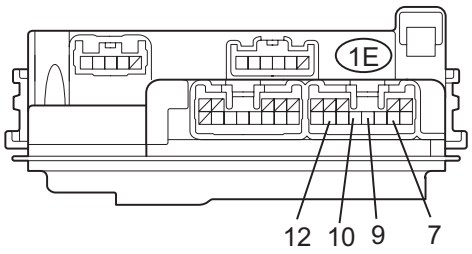
(a) Using an ohmmeter, measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (Battery voltage applied between terminals 1 and 2)

If the result is not as specified, replace the relay.

Engine Room R/B Unit D:



A137364E01

EFI RELAY

INSPECTION

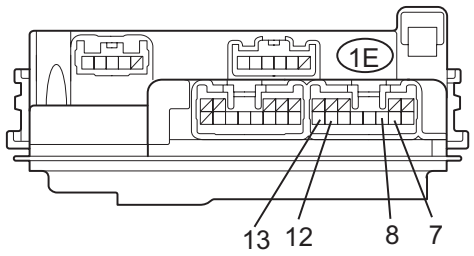
1. INSPECT EFI RELAY

(a) Using an ohmmeter, measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Specified Condition
1E-9 - 1E-10	Below 1 Ω
1E-7 - 1E-12	10 kΩ or higher
1E-7 - 1E-12	Below 1 Ω (Battery voltage applied between terminals 1E-9 and 1E-10)

Engine Room R/B Unit D:



A137364E02

CIRCUIT OPENING RELAY

INSPECTION

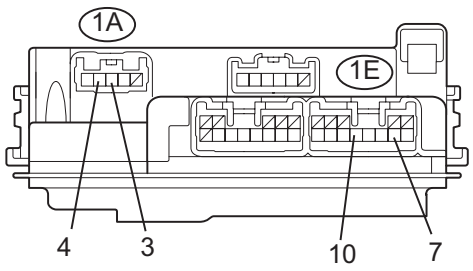
1. INSPECT CIRCUIT OPENING RELAY

(a) Using an ohmmeter, measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Specified Condition
1E-8 - 1E-12	Below 1 Ω
1E-7 - 1E-13	10 kΩ or higher
1E-7 - 1E-13	Below 1 Ω (Battery voltage applied between terminals 1E-8 and 1E-12)

Engine Room R/B Unit D:



A137364E03

AIR FUEL RATIO SENSOR RELAY

INSPECTION

1. INSPECT AIR FUEL RATIO SENSOR RELAY

(a) Using an ohmmeter, measure the resistance according to the value(s) in the table below.

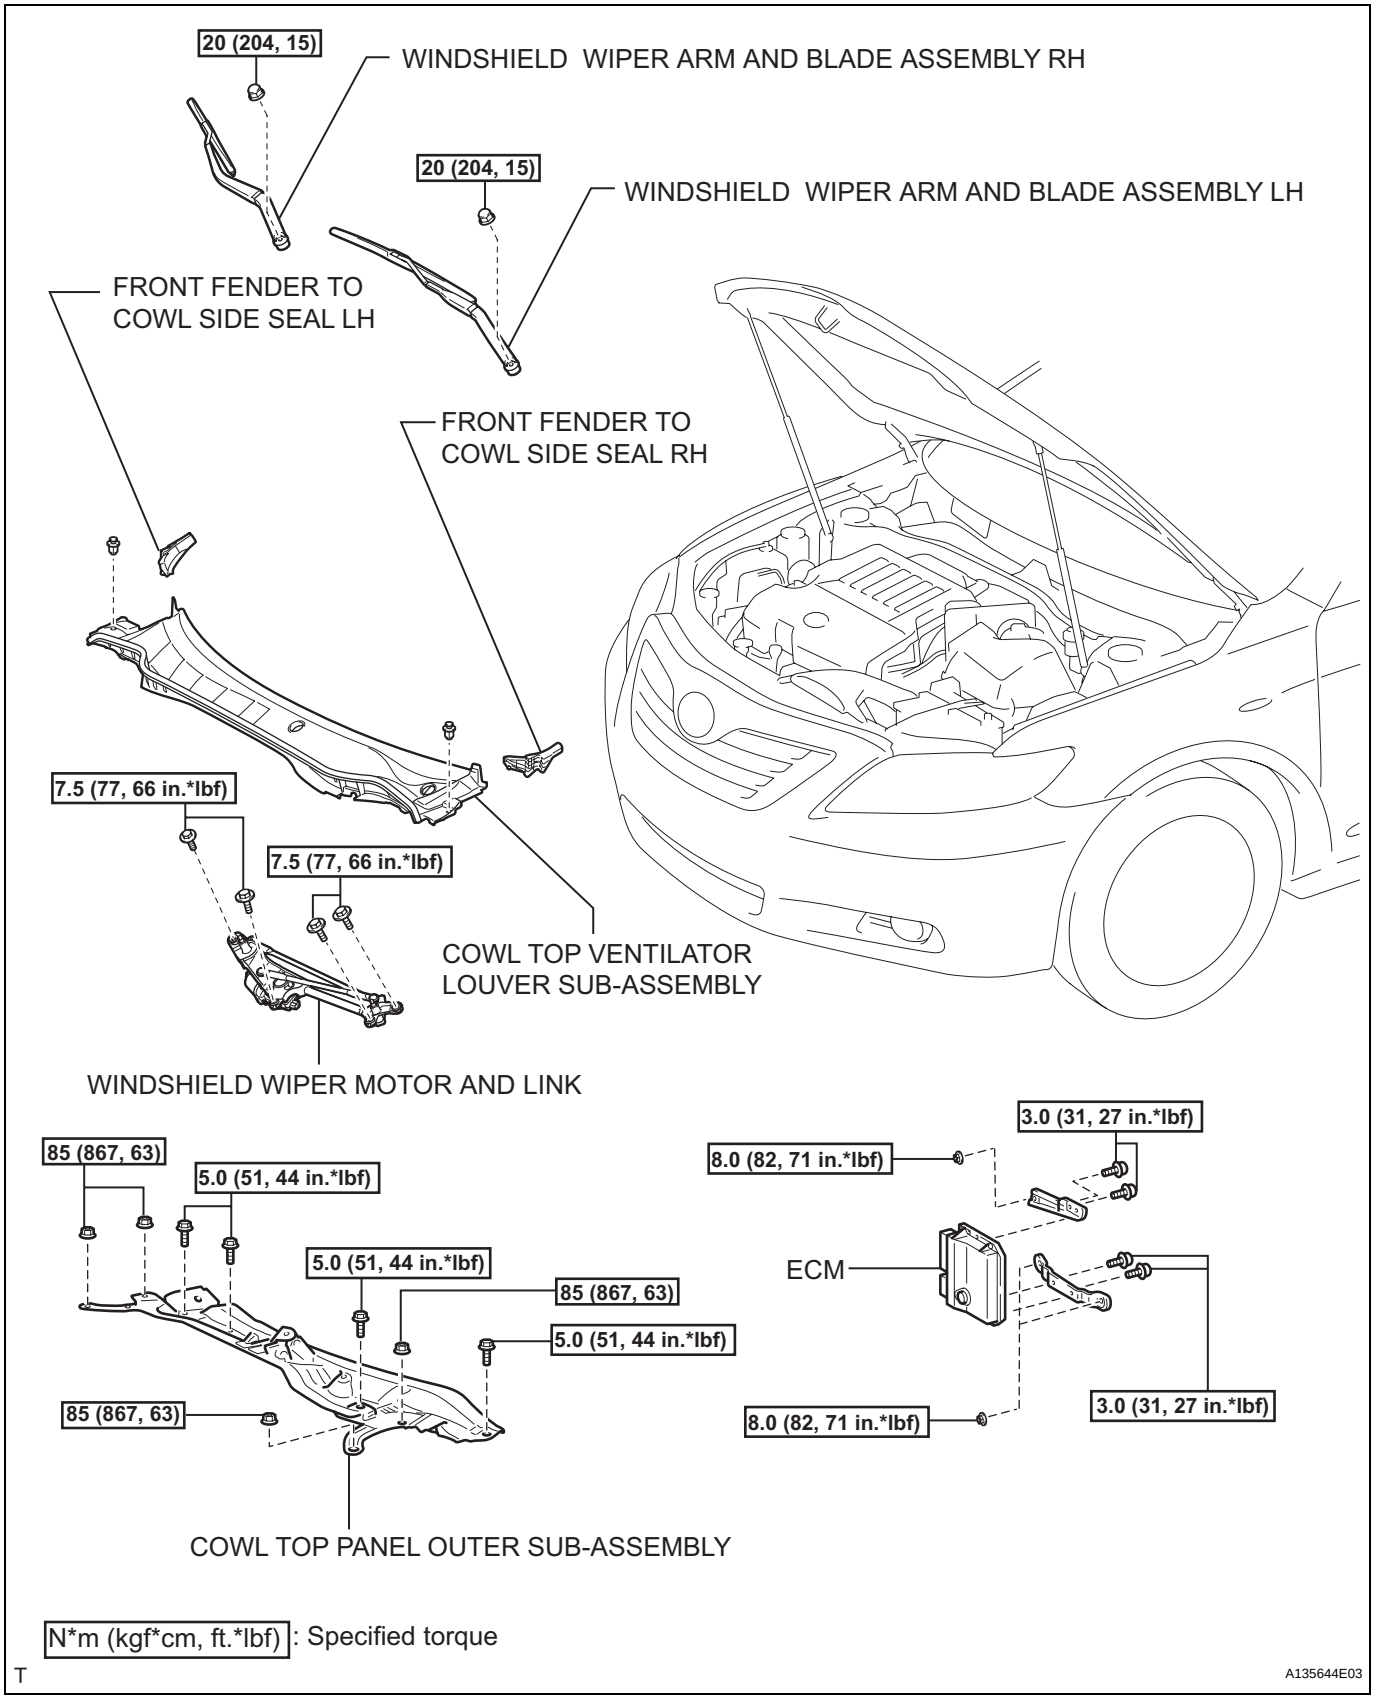
Standard resistance

Tester connection	Specified Condition
1E-7 - 1E-10	Below 1 Ω
1A-3 - 1A-4	10 kΩ or higher
1A-3 - 1A-4	Below 1 Ω (Battery voltage applied between terminals 1E-7 and 1E-10)

ES

ECM

COMPONENTS

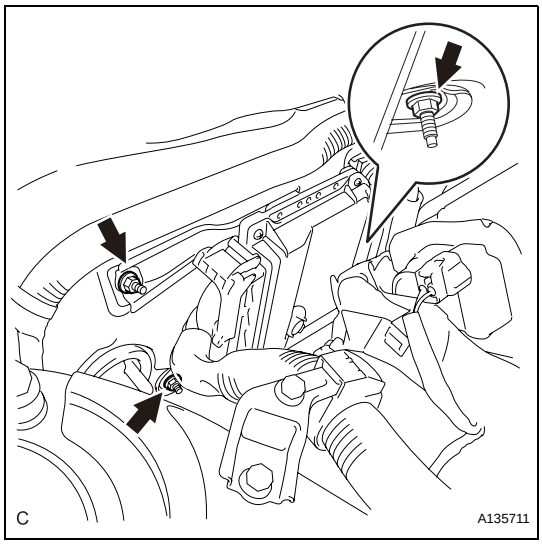


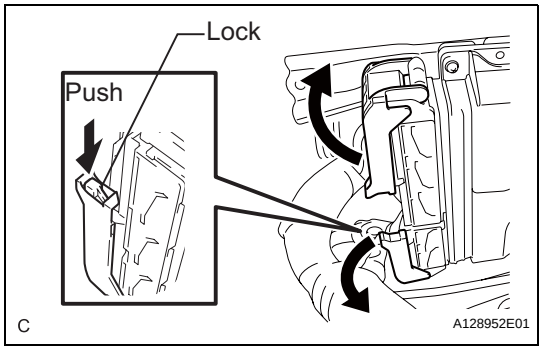
ES

REMOVAL

1. **REMOVE WINDSHIELD WIPER ARM AND BLADE ASSEMBLY LH (See page WW-9)**
2. **REMOVE WINDSHIELD WIPER ARM AND BLADE ASSEMBLY RH (See page WW-9)**
3. **REMOVE FRONT FENDER TO COWL SIDE SEAL LH (See page WW-9)**
4. **REMOVE FRONT FENDER TO COWL SIDE SEAL RH (See page WW-9)**
5. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-10)**
6. **REMOVE WINDSHIELD WIPER MOTOR AND LINK (See page WW-10)**
7. **REMOVE COWL TOP OUTER PANEL SUB-ASSEMBLY (See page ES-481)**
8. **REMOVE ECM**

(a) Remove the 3 nuts.



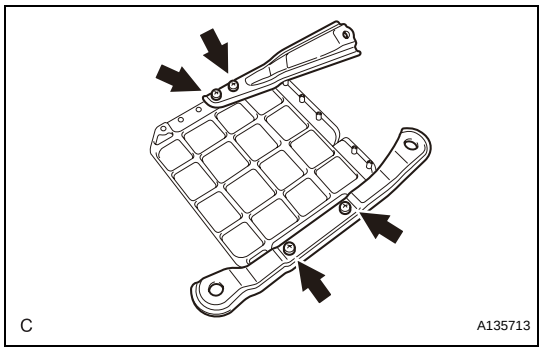


(b) Disconnect the 2 ECM connectors and remove the ECM.

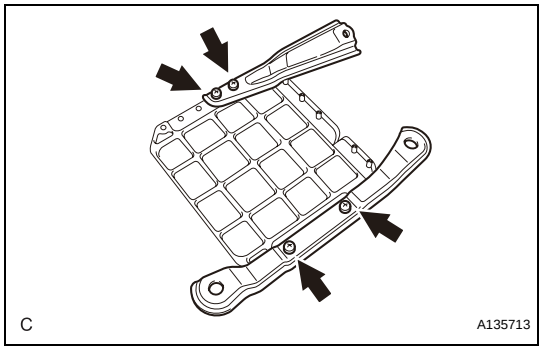
(1) Raise the 2 levers while pushing the locks on the 2 levers, and disconnect the 2 ECM connectors.

NOTICE:
After disconnecting the connector, make sure that dirt, water and other foreign matter do not contact the connecting part of the connector.

(2) Remove the ECM.



(c) Remove the 4 screws and 2 ECM brackets.



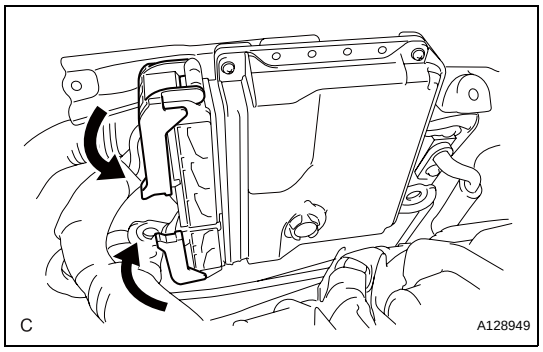
INSTALLATION

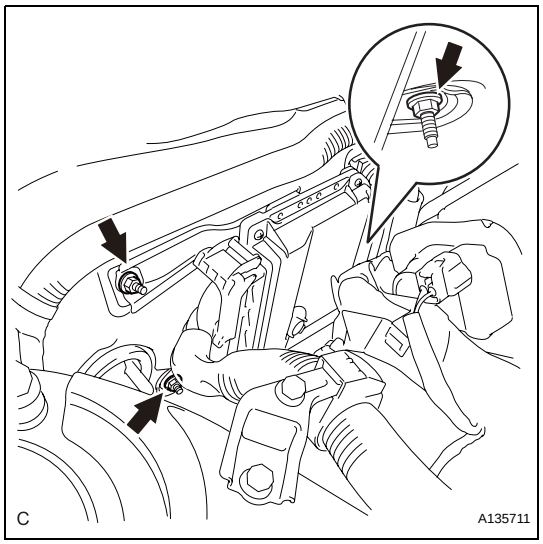
1. INSTALL ECM

(a) Install the ECM bracket with the 4 screws.
Torque: 3.0 N*m (31 kgf*cm, 27 in.*lbf)

(b) Connect the 2 ECM connectors.
NOTICE:
When connecting the connector, make sure that dirt, water and other foreign matter do not become stuck between the connector and other parts.

(1) Connect the 2 ECM connectors and lower the 2 levers.
NOTICE:
Make sure that the 2 levers are securely lowered.





(c) Install the ECM with the 3 nuts.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

2. INSTALL COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-485)

3. INSTALL WINDSHIELD WIPER MOTOR AND LINK (See page WW-14)

4. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-15)

5. INSTALL FRONT FENDER TO COWL SIDE SEAL RH (See page WW-15)

6. INSTALL FRONT FENDER TO COWL SIDE SEAL LH (See page WW-15)

7. INSTALL WINDSHIELD WIPER ARM AND BLADE ASSEMBLY LH (See page WW-15)

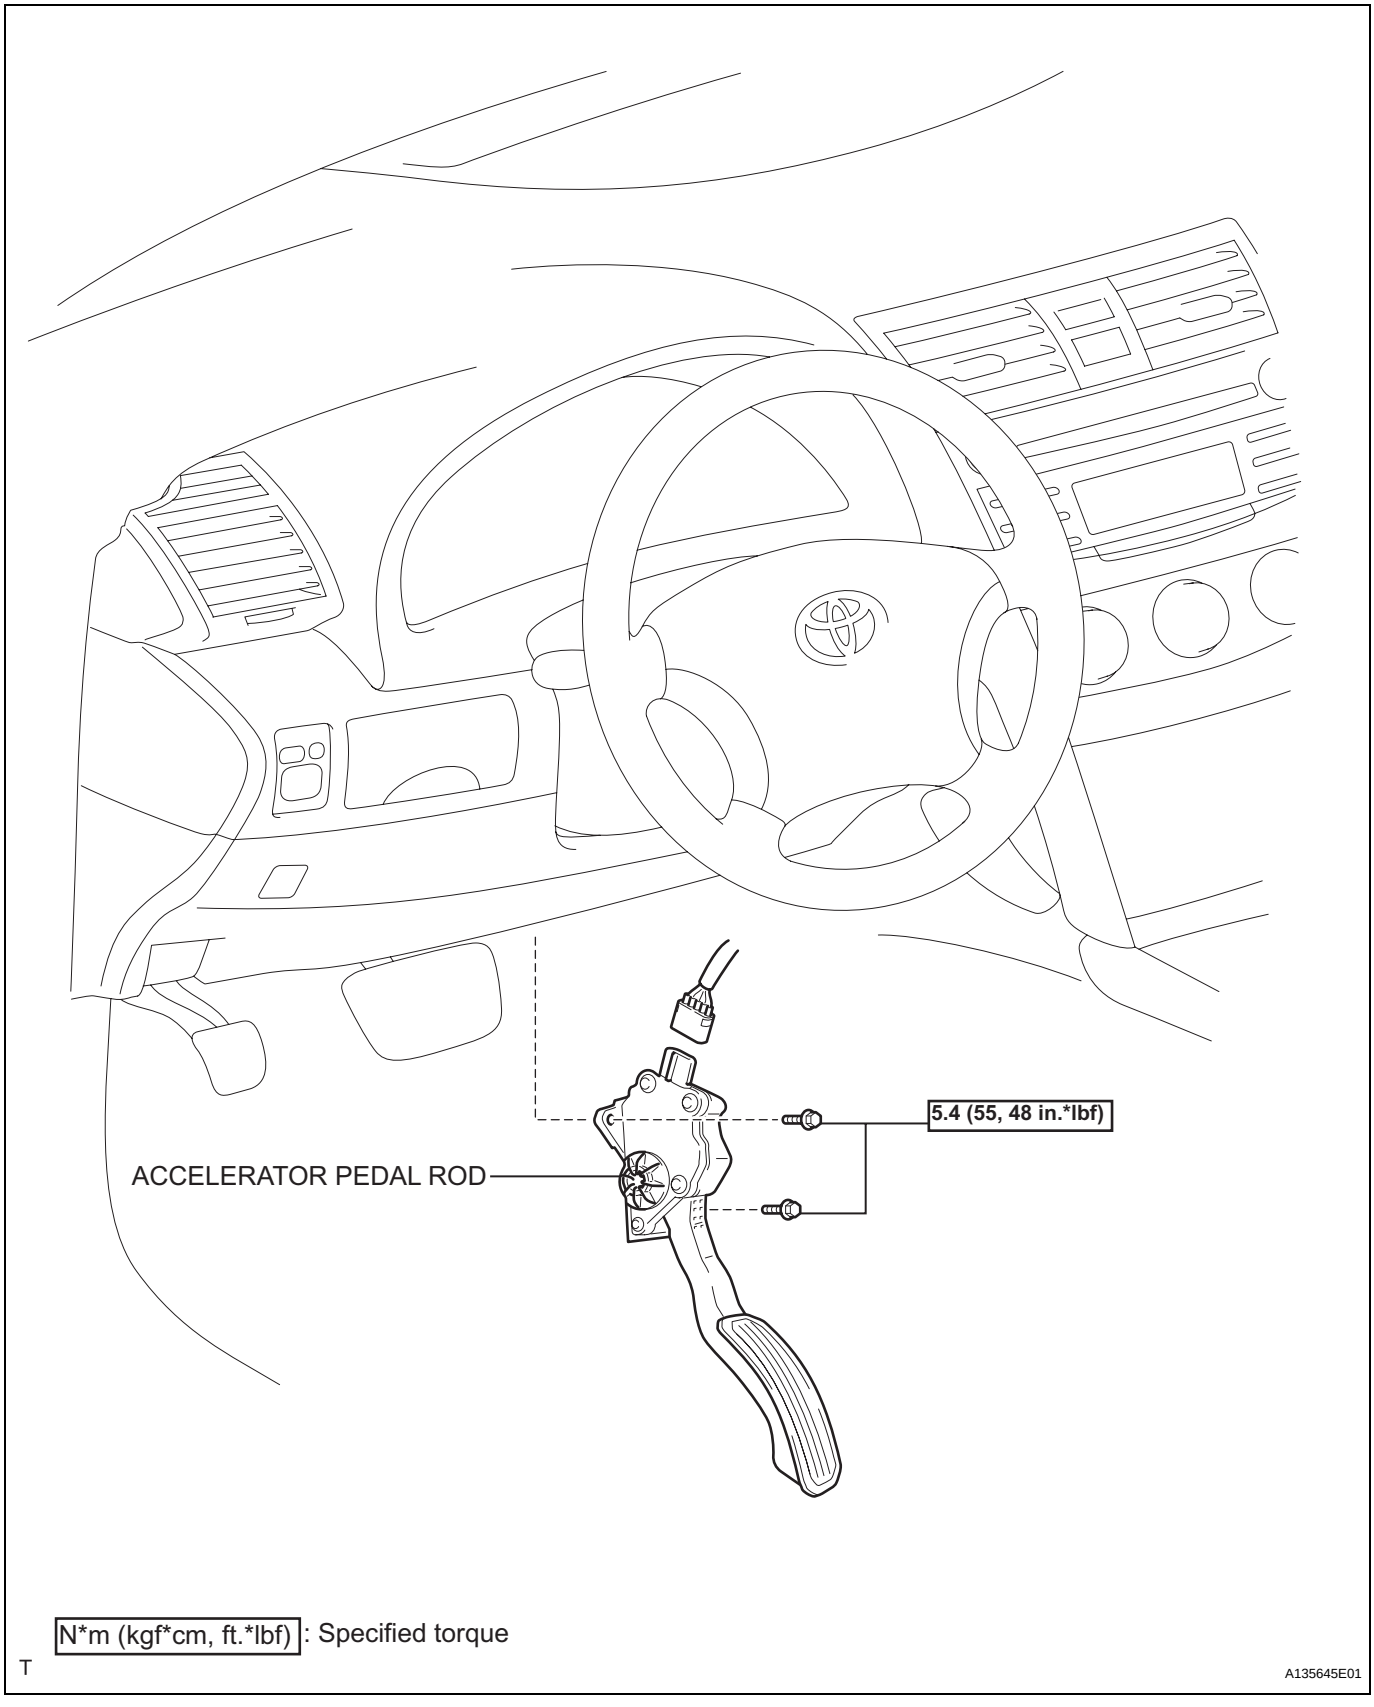
8. INSTALL WINDSHIELD WIPER ARM AND BLADE ASSEMBLY RH (See page WW-16)

9. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (See page EM-51)

ACCELERATOR PEDAL

COMPONENTS

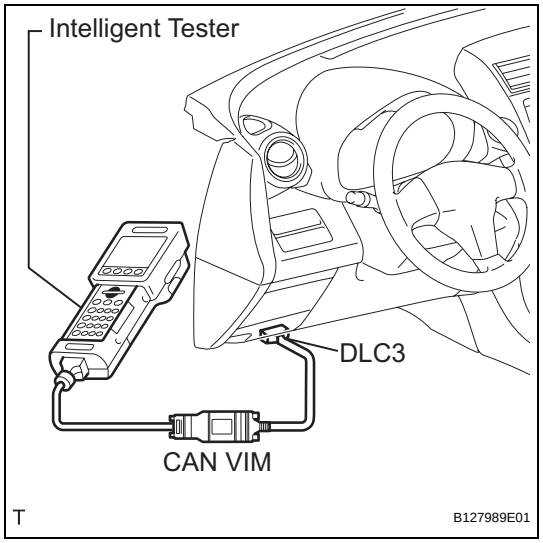
ES



N*m (kgf*cm, ft.*lbf): Specified torque

T

A135645E01



ON-VEHICLE INSPECTION

1. CHECK ACCELERATOR PEDAL ROD

(a) Measure the voltage.

(1) Connect the intelligent tester to the DLC3.

(2) Turn the ignition switch on (IG).

(3) Turn the intelligent tester ON.

(4) Select the menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / ALL / ACCEL POS #1, ACCEL POS #2.

(5) Operate the accelerator pedal, and then check that the ACCEL POS #1 and ACCEL POS #2 values are within the specifications.

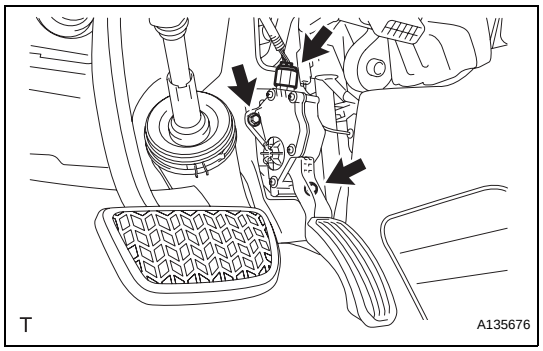
Standard voltage (ACCEL POS #1)

Accelerator Pedal Condition	Specified Condition
Released	0.5 to 1.1 V
Depressed	2.5 to 4.5 V

Standard voltage (ACCEL POS #2)

Accelerator Pedal Condition	Specified Condition
Released	1.2 to 2.0 V
Depressed	3.4 to 5.0 V

If the result is not as specified, check the accelerator pedal rod, wire harness or ECM.



REMOVAL

1. REMOVE ACCELERATOR PEDAL

(a) Disconnect the accelerator pedal connector.

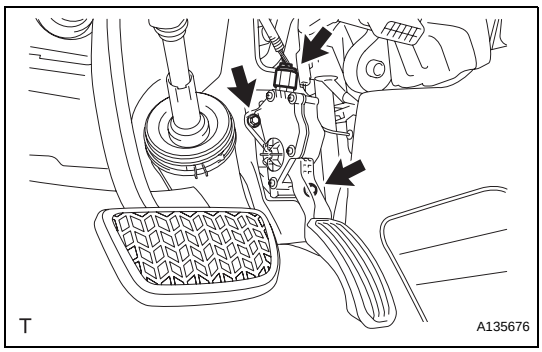
(b) Remove the 2 bolts and the accelerator pedal assembly.

INSTALLATION

1. INSTALL ACCELERATOR PEDAL

NOTICE:

- **Avoid physical shock to the accelerator pedal assembly.**
- **Do not disassemble the accelerator pedal assembly.**



(a) Install the accelerator pedal assembly with the 2 bolts.

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

(b) Connect the accelerator pedal connector.

ENGINE

ON-VEHICLE INSPECTION

1. INSPECT ENGINE COOLANT

(a) Inspect the engine coolant (See page CO-1).

2. INSPECT ENGINE OIL

(a) Inspect the engine oil (See page LU-1).

3. INSPECT BATTERY

(a) Inspect the battery (See page CH-4).

4. INSPECT SPARK PLUGS

(a) Inspect the spark plugs (See page IG-5).

5. INSPECT AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY

(a) Remove the air cleaner filter element sub-assembly.

(b) Visually check that there is no dirt, blockage, and/or damage to the air cleaner filter element.
HINT:
- If there is any dirt or a blockage in the air cleaner filter element, clean it with compressed air.
- If any dirt or a blockage remains even after cleaning the air cleaner filter element with compressed air, replace it.

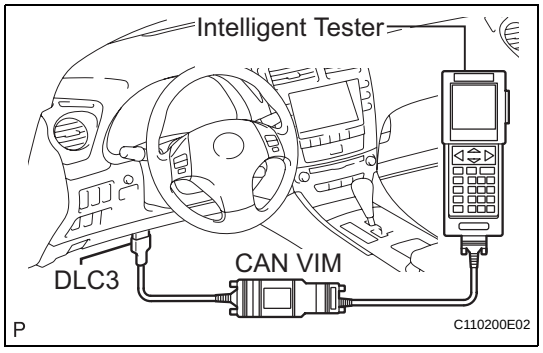
6. INSPECT VALVE LASH ADJUSTER NOISE

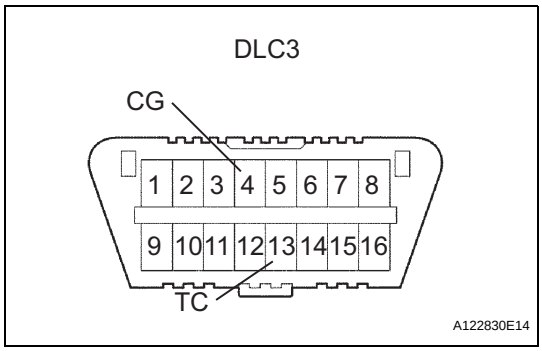
(a) Rev up the engine several times. Check that the engine does not emit unusual noises.
If unusual noises occur, warm up the engine and idle it for over 30 minutes. Then repeat this procedure.
HINT:
If any defects or problems are found during the inspection above, perform lash adjuster inspection (See page EM-87).

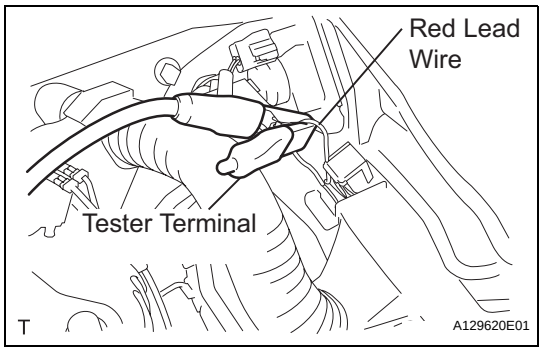
7. INSPECT IGNITION TIMING

(a) Warm up the engine.

(b) When using the intelligent tester:
Check the ignition timing.
(1) Connect the intelligent tester to the DLC3.
(2) Enter DATA LIST mode with the intelligent tester.
Ignition timing:
8 to 12° BTDC at idle
HINT:
Refer to the intelligent tester operator's manual for help when selecting the DATA LIST.





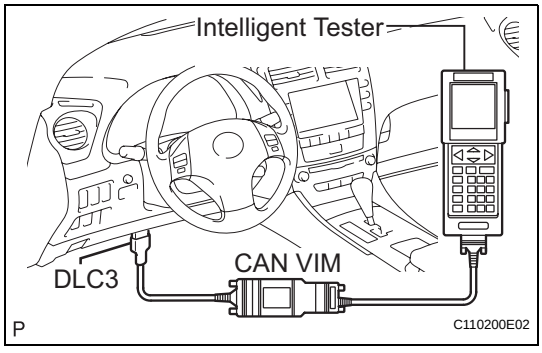


(c) When not using the intelligent tester:
Check the ignition timing.
(1) Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.
SST 09843-18040
NOTICE:
- **Confirm the terminal numbers before connecting them. Connection with a wrong terminal can damage the engine.**
- **Turn off all electrical systems before connecting the terminals.**
- **Perform this inspection after the cooling fan motor is turned off.**

(2) Remove the V-bank cover.
(3) Pull out the red lead wire harness.
(4) Connect the tester terminal of the timing light to the red lead wire as shown in the illustration.
NOTICE:
Use a timing light which can detect the first signal.
(5) Check the ignition timing at idle.
Ignition timing:
8 to 12° BTDC at idle
NOTICE:
When checking the ignition timing, the transmission should be in neutral.
HINT:
Run the engine at 1,000 to 1,300 rpm for 5 seconds, and then check that the engine rpm returns to idle speed.
(6) Disconnect terminals 13 (TC) and 4 (CG) of the DLC3.
(7) Check the ignition timing at idle.
Ignition timing:
12 to 22° BTDC at idle
(8) Confirm that the ignition timing moves to the advanced angle side when the engine rpm is increased.
(9) Remove the timing light.

8. INSPECT ENGINE IDLE SPEED

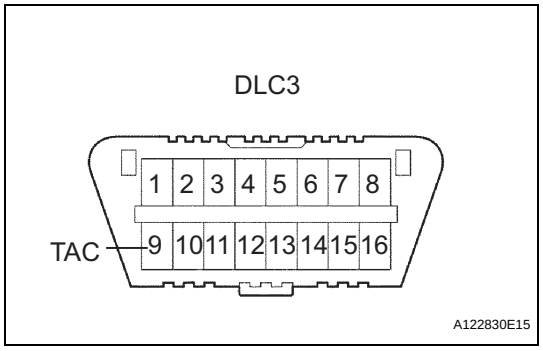
(a) Warm up the engine.



(b) When using the intelligent tester:
Check the idle speed.
(1) Connect the intelligent tester to the DLC3.
(2) Enter DATA LIST mode with the intelligent tester.
Idle speed:
600 to 700 rpm
NOTICE:
- **When checking the idle speed, the transmission should be in neutral.**
- **Check the idle speed with the cooling fan off.**

- **Switch off all accessories and air conditioning before connecting the intelligent tester.**

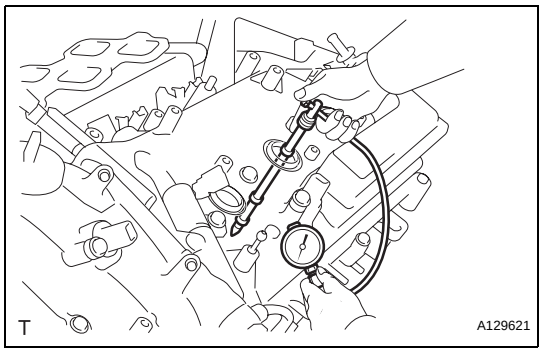
HINT:
Refer to the intelligent tester operator's manual for further details.



(c) When not using the intelligent tester:
Check the idle speed.
(1) Using SST, connect the tachometer test probe to terminal 9 (TAC) of the DLC3.
SST 09843-18030
(2) Check the idle speed.
Idle speed:
600 to 700 rpm

9. INSPECT COMPRESSION

(a) Warm up and stop the engine.
(b) Disconnect the injector connectors.
(c) Remove the intake air surge tank (See page FU-13).
(d) Remove the 6 ignition coils.
(e) Remove the 6 spark plugs.



(f) Check the cylinder compression pressure.
(1) Insert a compression gauge into the spark plug hole.
(2) While cranking the engine, measure the compression pressure.
Compression pressure:
1.4 MPa (14 kgf/cm^2, 199 psi)
Minimum pressure:
0.98 MPa (10 kgf/cm^2, 142 psi)
Difference between each cylinder:
0.1 MPa (1.0 kgf/cm^2, 15 psi)
NOTICE:
- **Always use a fully charged battery to obtain an engine speed of 250 rpm or more.**
- **Check the other cylinders' compression pressure in the same way.**
- **This measurement must be done as quickly as possible.**

(3) If the cylinder compression is low, pour a small amount of engine oil into the cylinder through the spark plug hole and inspect again.
HINT:
- If adding oil increases the compression, the piston rings and/or cylinder bore may be worn or damaged.
- If pressure stays low, a valve may be stuck or seated improperly, or there may be leakage in the gasket.

(g) Install the 6 spark plugs.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)

EM

(h) Install the 6 ignition coils.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)
(i) Install the intake air surge tank. (See page FU-17).

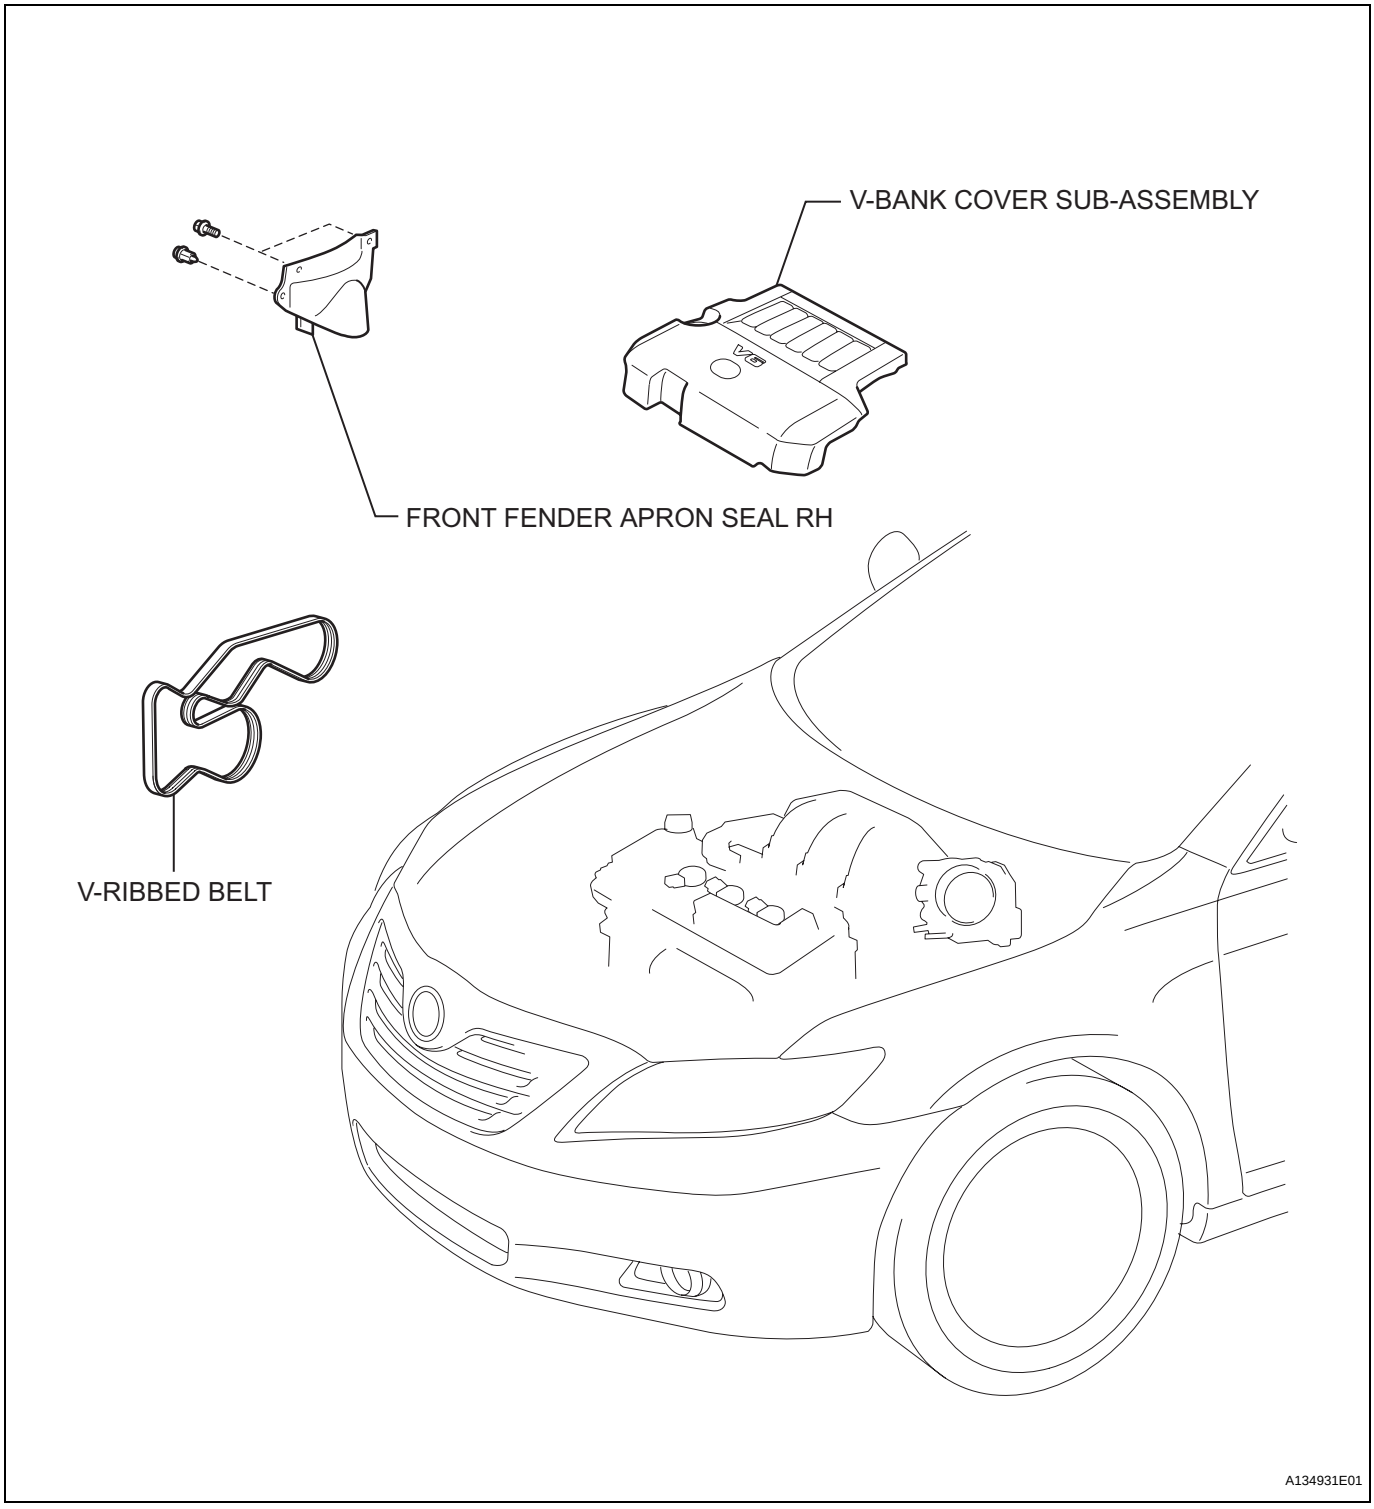
10. INSPECT CO/HC

(a) Start the engine.
(b) Run the engine at 2,500 rpm for approximately 180 seconds.
(c) Insert the CO/HC meter testing probe at least 40 cm (1.3 ft) into the tailpipe during idling.
(d) Check CO/HC concentration at idle and/or 2,500 rpm.
HINT:
Check regulations and restrictions in your area when performing 2 mode CO/HC concentration testing (engine check at both idle speed and at 2,500 rpm).
If the CO/HC concentration does not comply with regulations, perform troubleshooting in the order given below.
(1) Check A/F sensor and heated oxygen sensor operation.
(2) See the table below for possible causes, and then inspect and repair.

CO	HC	Problems	Causes
Normal	High	Rough idle	1. Faulty ignitions: – Incorrect timing – Fouled, shorted or improperly gapped plugs 2. Incorrect valve clearance 3. Leaks in intake and exhaust valves 4. Leaks in cylinders
Low	High	Rough idle (fluctuating HC reading)	1. Vacuum leaks: – PCV hoses – Intake manifold – Throttle body – Brake booster line 2. Lean mixture causing misfire
High	High	Rough idle (black smoke from exhaust)	1. Restricted air filter 2. Plugged PCV valve 3. Faulty SFI system: – Faulty fuel pressure regulator – Defective ECT sensor – Defective MAF meter – Faulty ECM – Faulty injectors – Faulty throttle position sensor

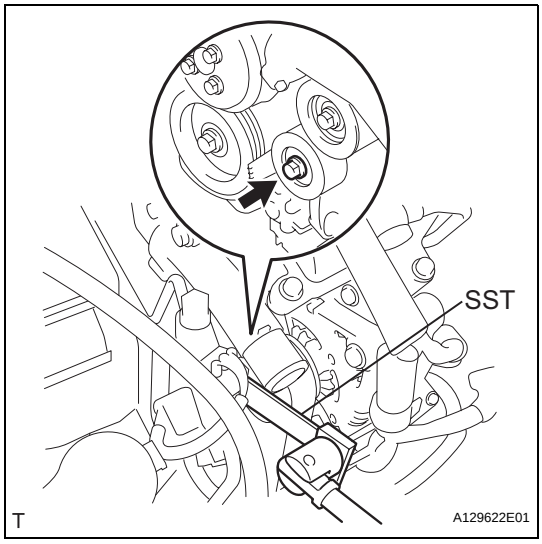
DRIVE BELT

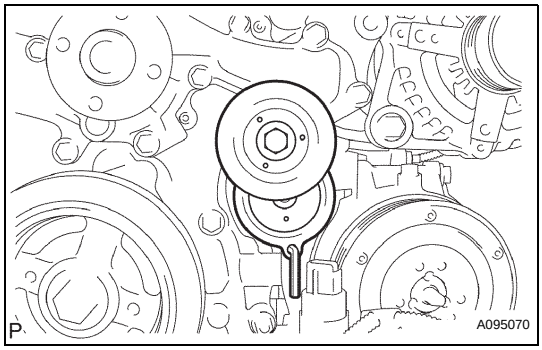
COMPONENTS



REMOVAL

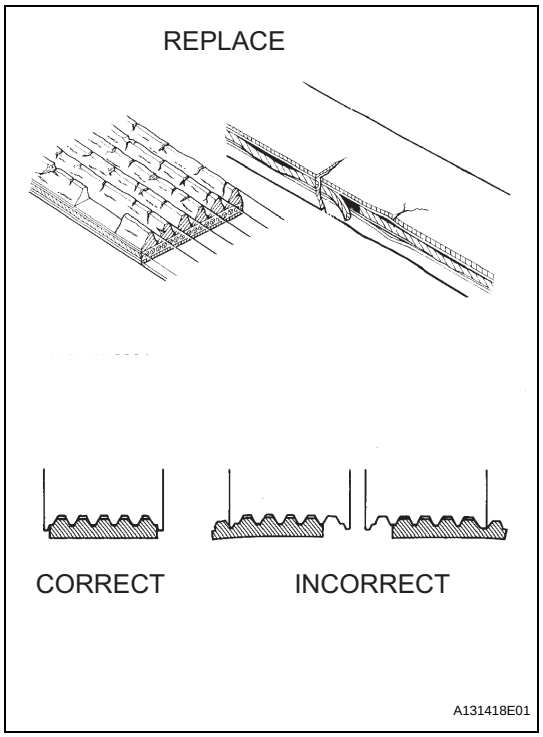
1. **REMOVE FRONT WHEEL RH**
2. **REMOVE FRONT FENDER APRON SEAL RH**
3. **REMOVE V-BANK COVER SUB-ASSEMBLY (See page EM-23)**
4. **REMOVE V-RIBBED BELT**
   (a) Using SST, release the belt tension by turning the belt tensioner counterclockwise, and remove the V-ribbed belt from the belt tensioner.
   SST 09249-63010





(b) While turning the belt tensioner counterclockwise, align with its holes, and then insert the 5 mm bi-hexagon wrench into the holes to fix the V-ribbed belt tensioner.

EM



INSPECTION

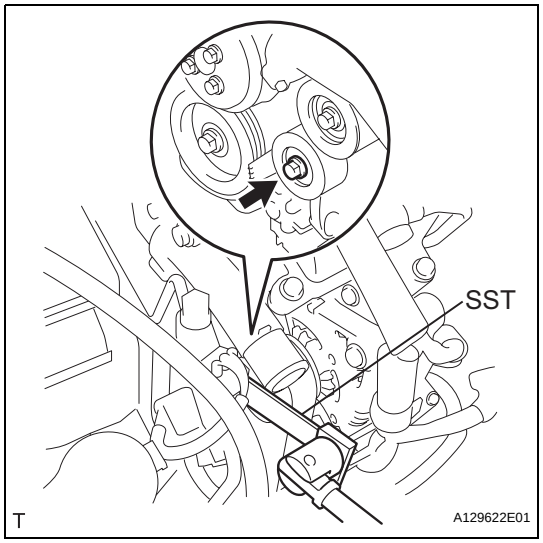
1. INSPECT V-RIBBED BELT

(a) Visually check the V-ribbed belt for excessive wear, frayed cords, etc.
If any defect has been found, replace the V-ribbed belt.
HINT:
Cracks on the rib side of a V-ribbed belt are considered acceptable.
If the drive belt has chunks missing from its ribs, it should be replaced.
HINT:
- A "new belt" is a belt which has been used for less than 5 minutes with the engine running.
- A "used belt" is a belt which has been used for 5 minutes or more with the engine running.

2. INSPECT V-RIBBED BELT TENSIONER ASSEMBLY

(a) Check that nothing gets caught in the tensioner by turning it clockwise and counterclockwise.
If a malfunction exitsts, replace the tensioner.

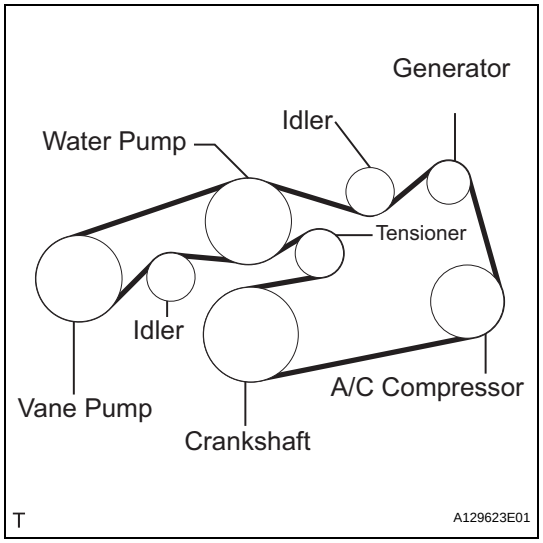
EM



INSTALLATION

1. INSTALL V-RIBBED BELT

(a) Install the V-ribbed belt.
(b) Using SST, turn the belt tensioner counterclockwise and remove the bar.
SST 09249-63010



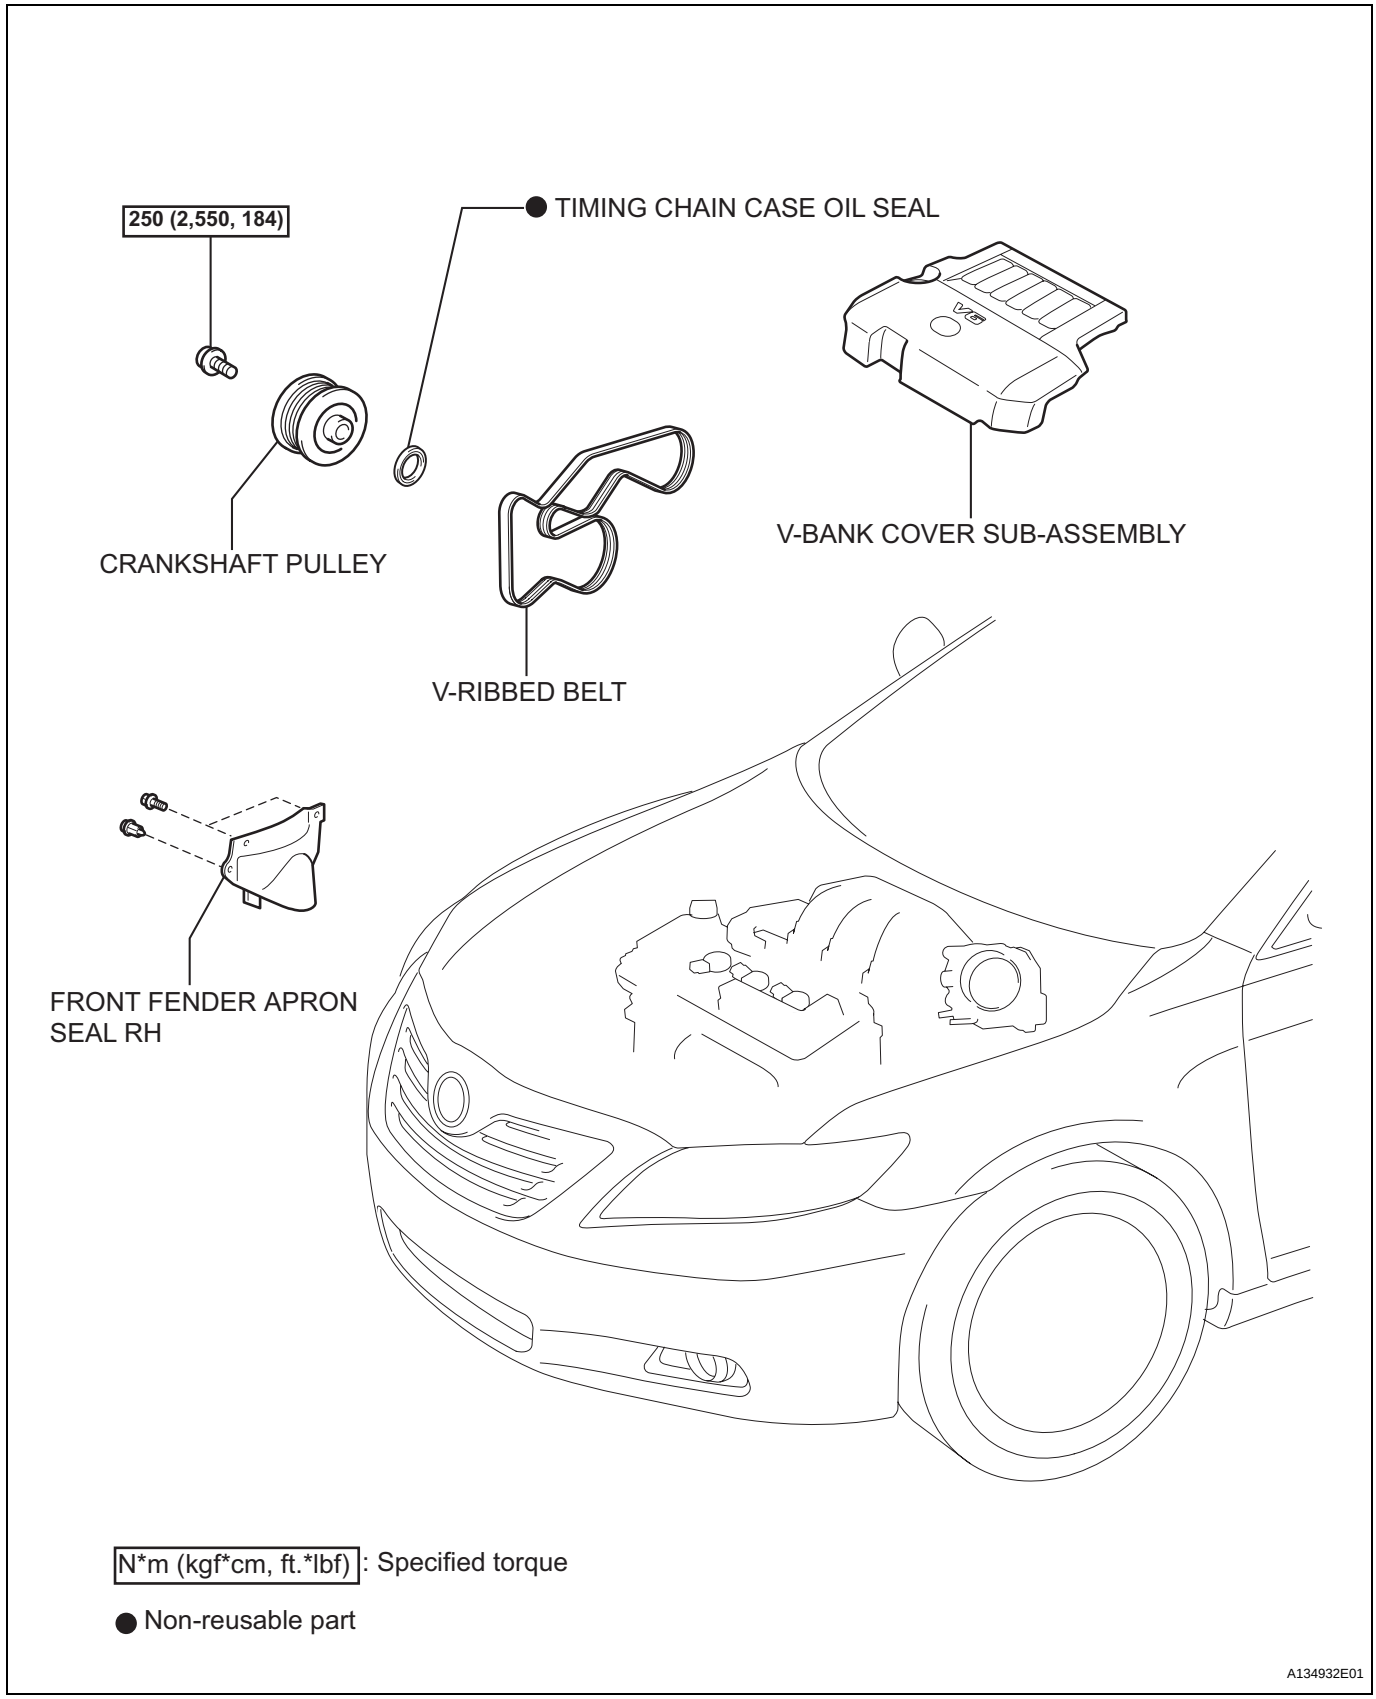
(c) If it is difficult to install the V-ribbed belt, perform the following procedure:
(1) Put the V-ribbed belt on every pulley except the tensioner pulley as shown in the illustration.
(2) While releasing the belt tension by turning the belt tensioner counterclockwise, put the V-ribbed belt on the tensioner pulley.
NOTICE:
- **Put the backside of the V-ribbed belt on the tensioner pulley and idler pulley.**
- **Check that the V-ribbed belt is properly set to each pulley.**

(3) After installing the V-ribbed belt, check that it fits properly in the ribbed grooves. Confirm that the belt has not slipped out of the grooves on the bottom of the crank pulley by hand.

2. **INSTALL V-BANK COVER SUB-ASSEMBLY (See page EM-52)**
3. **INSTALL FRONT FENDER APRON SEAL RH**
4. **INSTALL FRONT WHEEL RH**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

ENGINE FRONT OIL SEAL

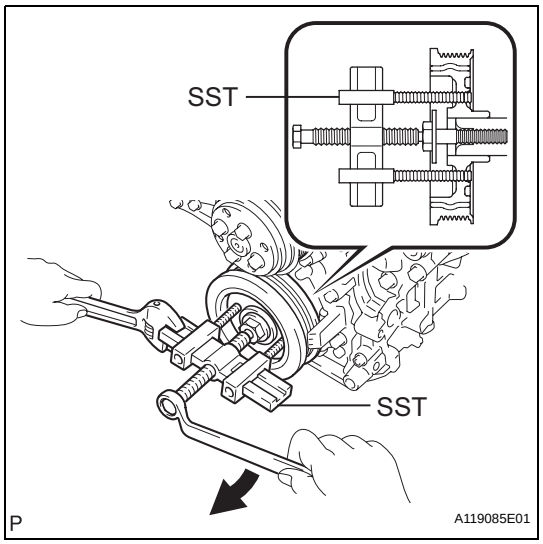
COMPONENTS



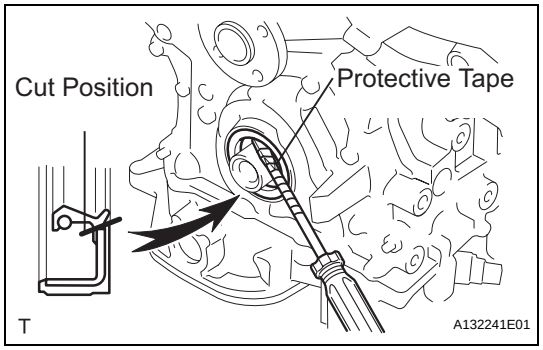
REMOVAL

1. **REMOVE FRONT WHEEL RH**
2. **REMOVE FRONT FENDER APRON SEAL RH**
3. **REMOVE V-BANK COVER SUB-ASSEMBLY (See page EM-23)**
4. **REMOVE V-RIBBED BELT (See page EM-6)**
5. **REMOVE CRANKSHAFT PULLEY**
   (a) Using SST, loosen the crankshaft pulley bolt.
   SST 09213-70011 (09213-70020), 09330-00021

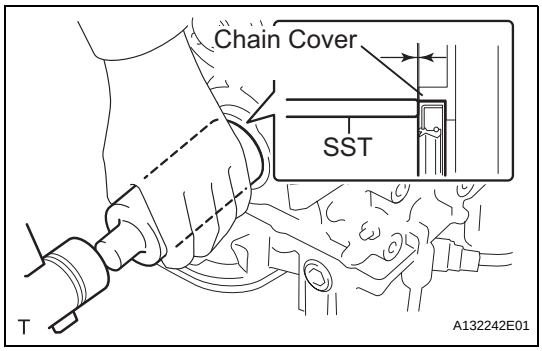
   (b) Using SST, remove the crankshaft pulley bolt and crankshaft pulley.
   SST 09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05021)

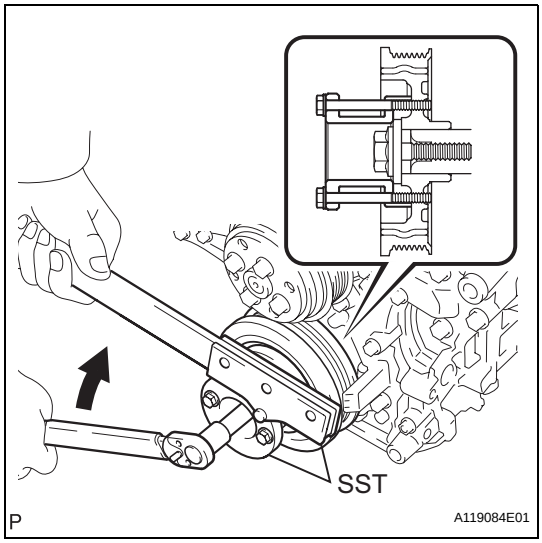


6. **REMOVE TIMING CHAIN CASE OIL SEAL**
   (a) Using a screwdriver, pry out the oil seal.
   HINT:
   Tape the screwdriver tip before use.
   NOTICE:
   After the removal, check the crankshaft for damage. If it is damaged, smooth the surface with 400-grit sandpaper.



EM





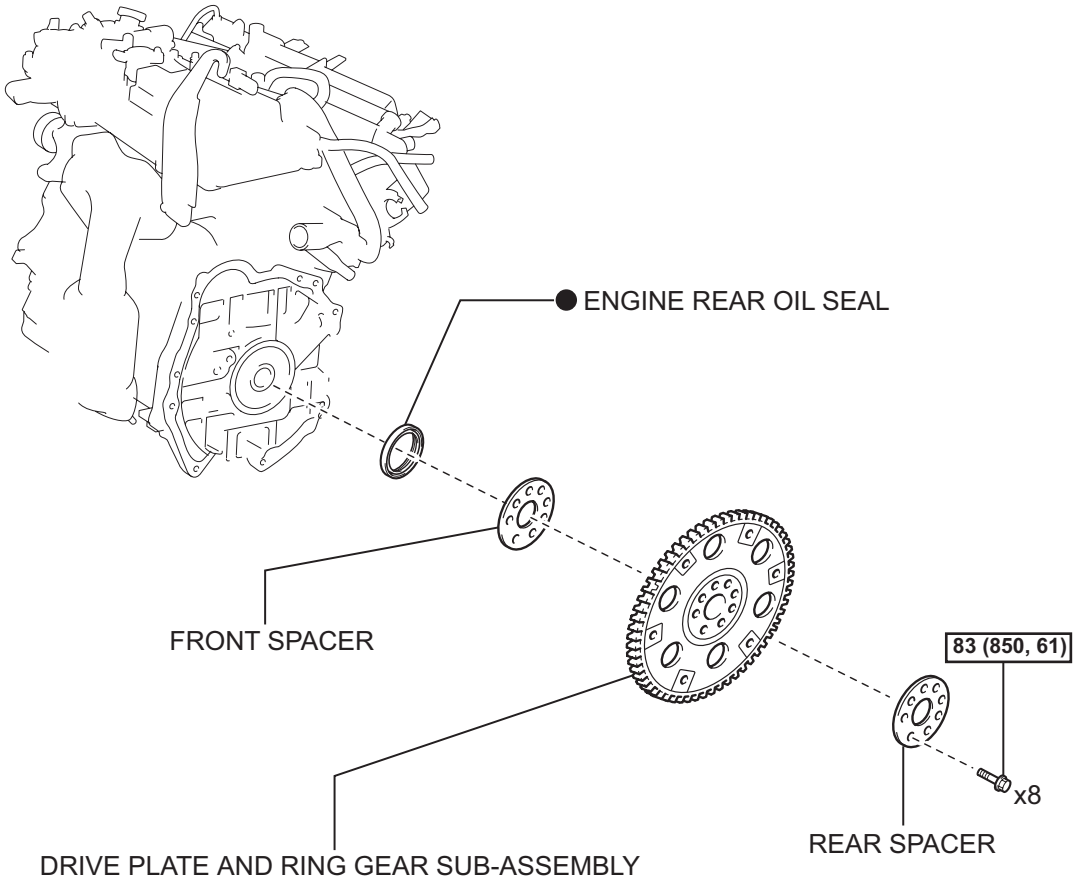
INSTALLATION

1. **INSTALL TIMING CHAIN CASE OIL SEAL**
   (a) Apply MP grease to a new oil seal lip.
   (b) Using SST and a hammer, tap in the oil seal until its surface is flush with the timing chain cover edge.
   SST 09316-60011 (09316-00011)
   NOTICE:
   - **Keep the lip free of foreign matter.**
   - **Do not tap the oil seal at an angle.**
2. **INSTALL CRANKSHAFT PULLEY**
   (a) Align the pulley set key with the key groove of the pulley, and slide on the pulley.
   (b) Using SST, install the pulley bolt.
   SST 09213-70011 (09213-70020), 09330-00021
   Torque: 250 N*m (2,550 kgf*cm, 184 ft.*lbf)
3. **INSTALL V-RIBBED BELT (See page EM-7)**
4. **INSTALL V-BANK COVER SUB-ASSEMBLY (See page EM-52)**
5. **INSTALL FRONT FENDER APRON SEAL RH**
6. **INSTALL FRONT WHEEL RH**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

EM

ENGINE REAR OIL SEAL

COMPONENTS



N*m (kgf*cm, ft.*lbf) : Specified torque

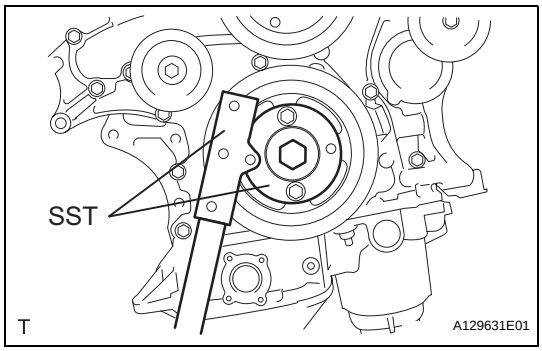
● Non-reusable part

A134930E01

EM

REMOVAL

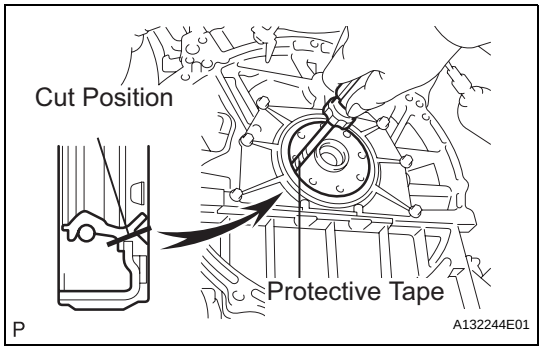
1. **REMOVE AUTOMATIC TRANSAXLE ASSEMBLY**
   HINT:
   See page AX-207.



2. **REMOVE DRIVE PLATE AND RING GEAR SUB-ASSEMBLY**
   (a) Using SST, hold the crankshaft.
   SST 09213-70011 (09213-70020), 09330-00021

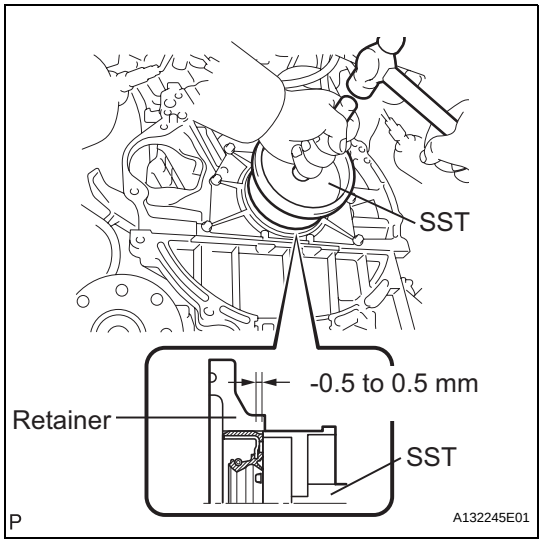
   (b) Remove the 8 bolts, front spacer, drive plate and rear spacer.

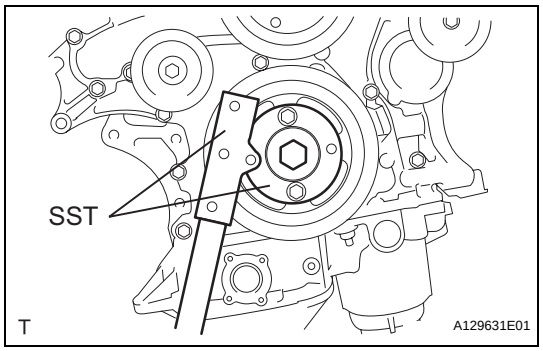
3. **REMOVE ENGINE REAR OIL SEAL**
   (a) Using a knife, cut off the oil seal lip.
   (b) Using a screwdriver, pry out the oil seal.
   NOTICE:
   Be careful not to damage the crankshaft. Tape the screwdriver tip before use.



INSTALLATION

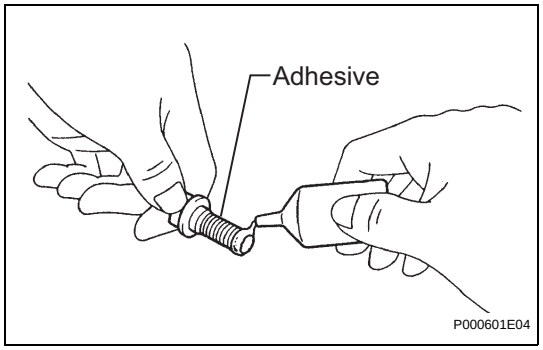
1. **INSTALL ENGINE REAR OIL SEAL**
   (a) Apply MP grease to a new oil seal lip.
   (b) Using SST and a hammer, tap in the oil seal.
   SST 09223-15030, 09950-70010 (09951-07150)
   Oil seal tap in depth:
   -0.5 to 0.5 mm (-0.020 to 0.020 in.)



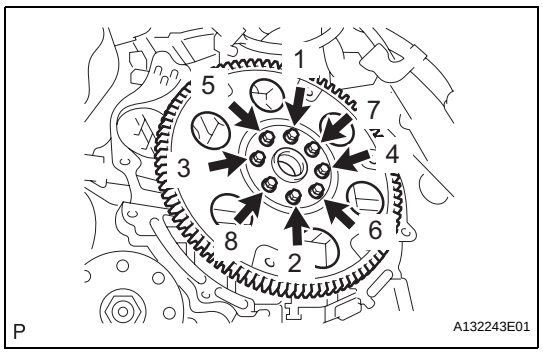


2. INSTALL DRIVE PLATE AND RING GEAR SUB-ASSEMBLY

(a) Using SST, hold the crankshaft.
SST 09213-70011 (09213-70020), 09330-00021



(b) Apply adhesive to 2 or 3 threads of the mounting bolt end.
Adhesive:
Part No. 08833-00070, THREE BOND 1324 or equivalent



(1) Install the front spacer, drive plate and rear spacer on the crankshaft.
(2) Install and tighten the 8 mounting bolts uniformly in several steps.
Torque: 83 N*m (850 kgf*cm, 61 ft.*lbf)

3. INSTALL AUTOMATIC TRANSAXLE ASSEMBLY

HINT:
See page AX-214.
