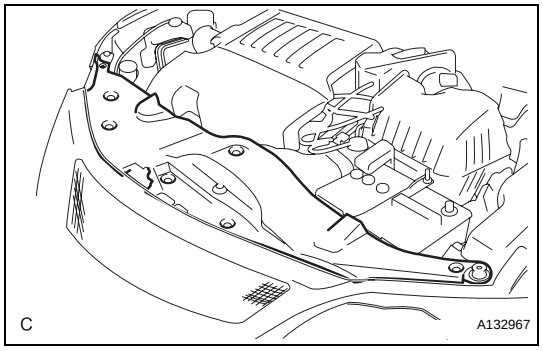
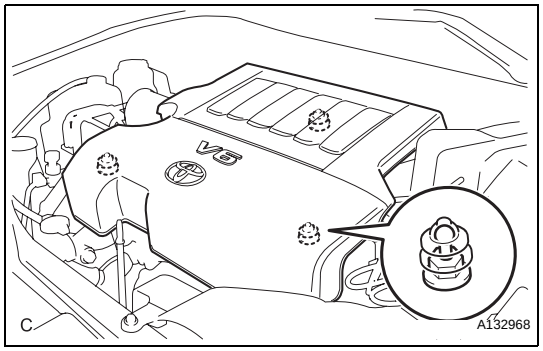
REMOVAL

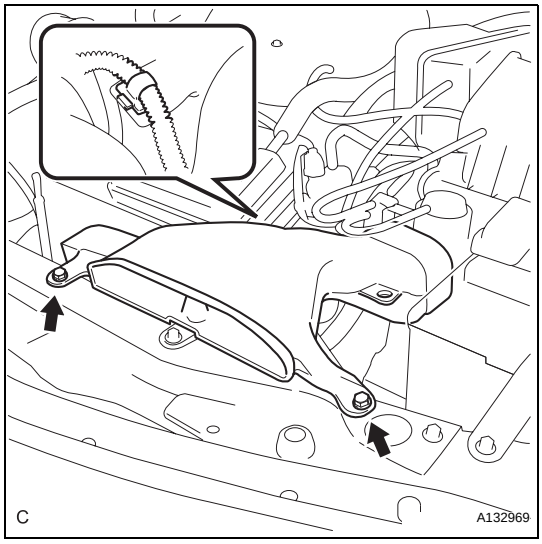
1. **DISCHARGE FUEL SYSTEM PRESSURE**
   HINT:
   See page FU-1.
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**
4. **REMOVE FRONT WHEELS**
5. **REMOVE ENGINE UNDER COVER LH**
6. **REMOVE ENGINE UNDER COVER RH**
7. **REMOVE FRONT FENDER APRON SEAL RH**
8. **DRAIN ENGINE OIL (See page LU-4)**
9. **DRAIN ENGINE COOLANT (See page CO-5)**
10. **DRAIN AUTOMATIC TRANSAXLE FLUID (See page AX-207)**
11. **REMOVE WINDSHIELD WIPER LINK ASSEMBLY**
    See page WW-9.
12. **REMOVE COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-481)**
13. **REMOVE COOL AIR INTAKE DUCT SEAL**
    (a) Remove the 7 clips and intake duct seal.



14. **REMOVE V-BANK COVER SUB-ASSEMBLY**
    (a) Hold the front of the V-bank cover and raise it to disengage the 2 clips on the front of the cover. Continue to raise the cover to disengage the clip on the rear of the cover and remove the cover.
    NOTICE:
    Attempting to disengage both front and rear clips at the same time may cause the cover to break.



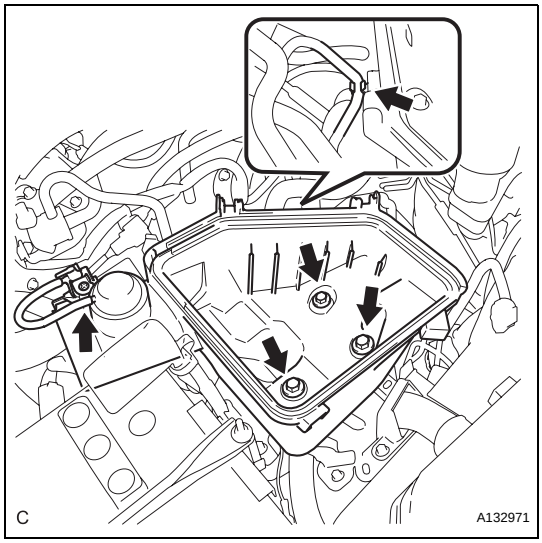
15. **REMOVE V-RIBBED BELT (See page EM-6)**



16. REMOVE AIR CLEANER INLET ASSEMBLY

(a) Remove the 2 bolts, clamp and air cleaner inlet.

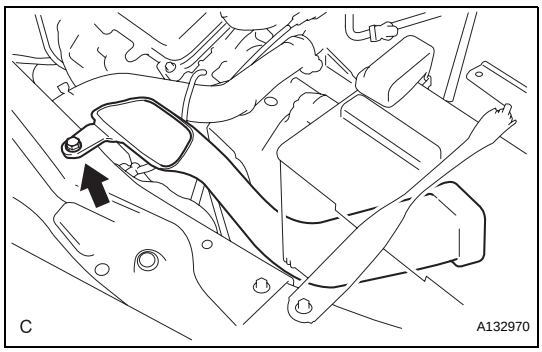
17. REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-503)



18. REMOVE AIR CLEANER CASE SUB-ASSEMBLY

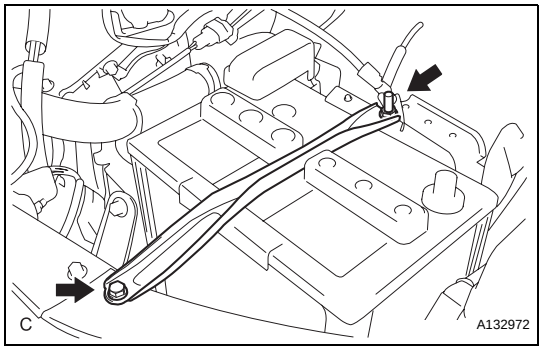
(a) Disconnect the vacuum hose and hose clamp.

(b) Remove the 3 bolts and air cleaner case.



19. REMOVE NO. 1 AIR CLEANER INLET

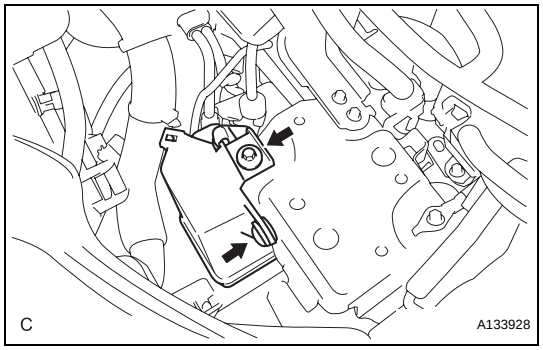
(a) Remove the bolt and No. 1 air cleaner inlet.



20. REMOVE BATTERY

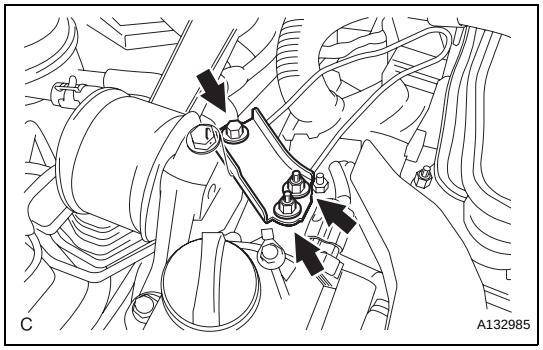
(a) Loosen the bolt and nut, and remove the battery clamp.

(b) Remove the battery and battery tray.



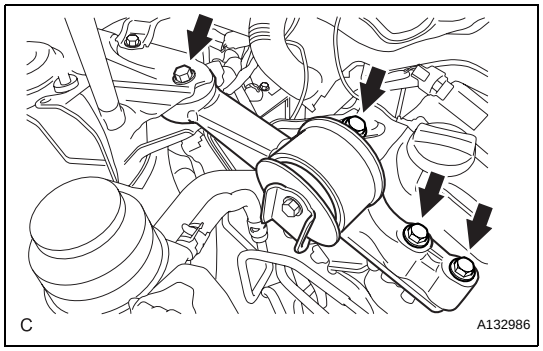
21. REMOVE INTAKE AIR RESONATOR SUB-ASSEMBLY

(a) Remove the clip, bolt and intake air resonator.



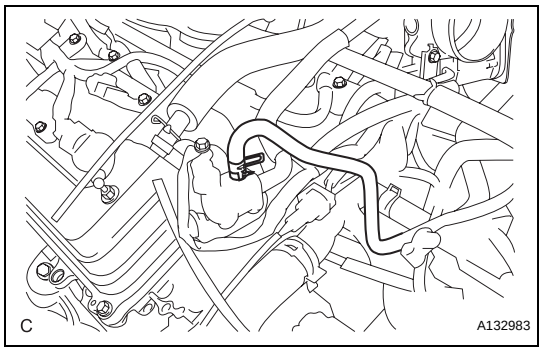
22. REMOVE NO. 2 ENGINE MOUNTING STAY RH

(a) Remove the bolt, 2 nuts, and No. 2 mounting stay RH.



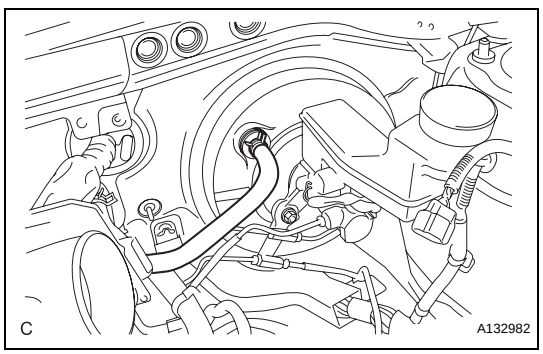
23. REMOVE ENGINE MOVING CONTROL ROD SUB-ASSEMBLY

(a) Remove the 4 bolts and engine moving control rod.



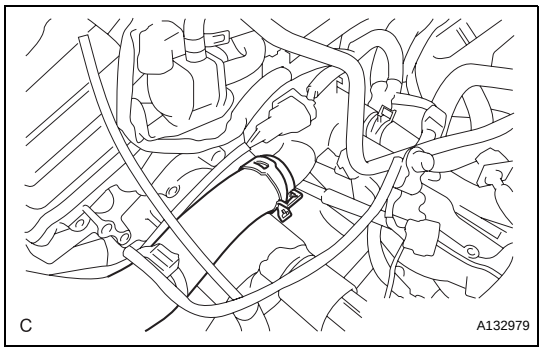
24. DISCONNECT NO. 1 FUEL VAPOR FEED HOSE

(a) Remove the clamp and disconnect the No. 1 fuel vapor feed hose.



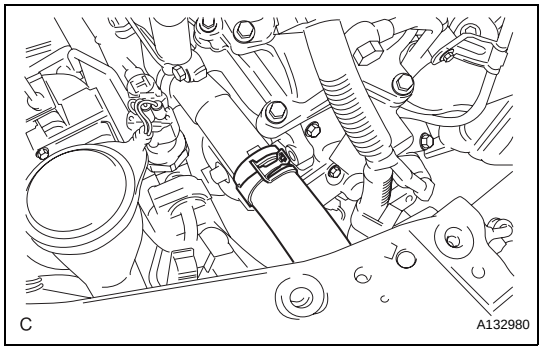
25. DISCONNECT CHECK VALVE TO BRAKE BOOSTER HOSE

(a) Remove the clamp and disconnect the check valve to brake booster hose.



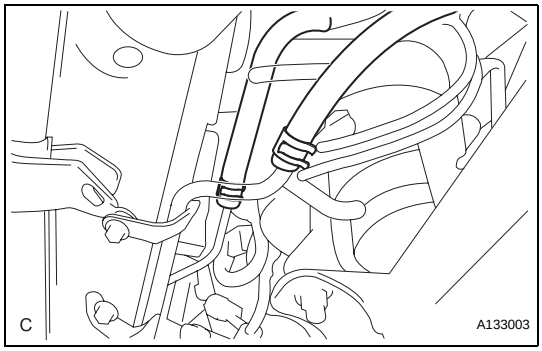
26. REMOVE RADIATOR HOSE INLET

(a) Remove the clamp and disconnect the radiator hose inlet.



27. REMOVE RADIATOR HOSE OUTLET

(a) Remove the clamp and disconnect the radiator hose outlet.

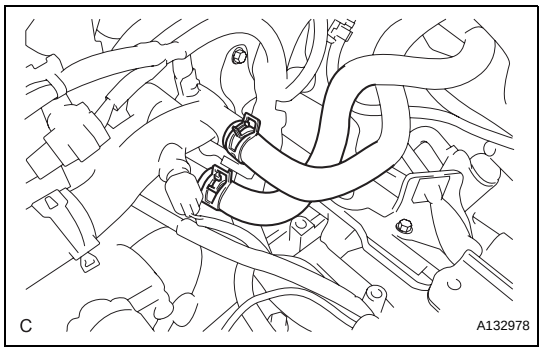


28. DISCONNECT NO. 1 OIL COOLER INLET HOSE

(a) Remove the clamp and disconnect the oil cooler inlet hose.

29. DISCONNECT NO. 1 OIL COOLER OUTLET HOSE

(a) Remove the clamp and disconnect the oil cooler outlet hose.



30. DISCONNECT HEATER INLET WATER HOSE

(a) Disconnect the heater inlet water hose.

31. DISCONNECT HEATER OUTLET WATER HOSE

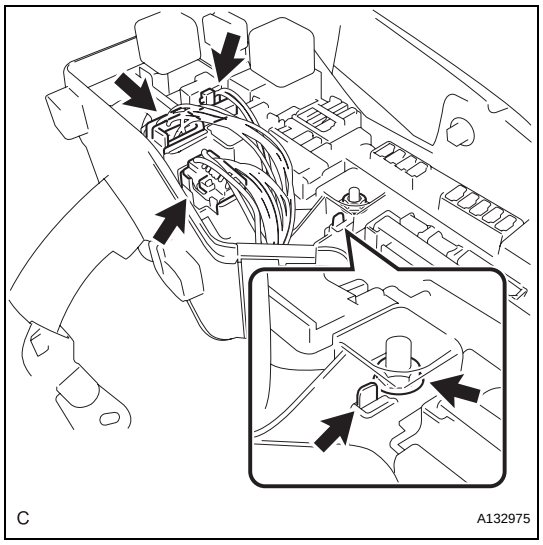
(a) Disconnect the heater outlet water hose.

32. REMOVE ECM

HINT:

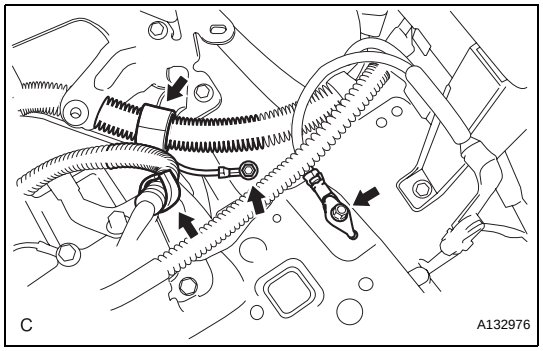
See page ES-518.

33. REMOVE RELAY BLOCK COVER UPPER

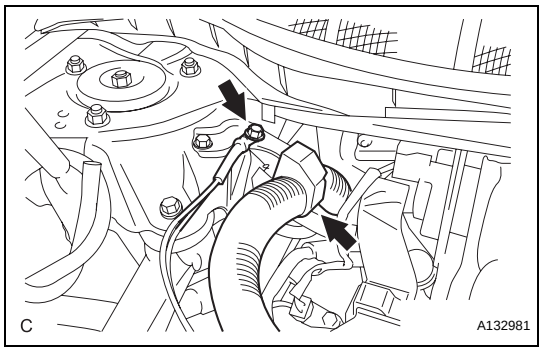


34. DISCONNECT ENGINE WIRE

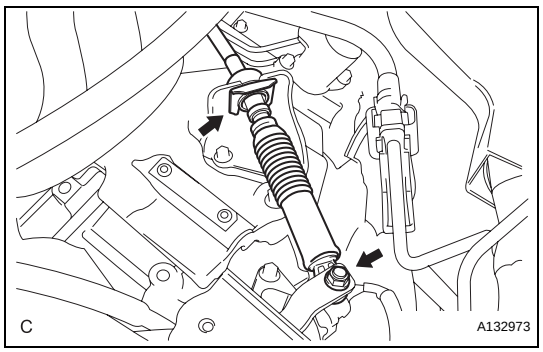
(a) Disconnect the engine wire from the engine room junction block.
  (1) Remove the nut and separate the wire harness.
  (2) Using a screwdriver, unlock the engine room J/B. Pull the engine room J/B upward.
  (3) Disconnect the engine wire connectors.



(b) Remove the 2 bolts and 2 clamps from the body.

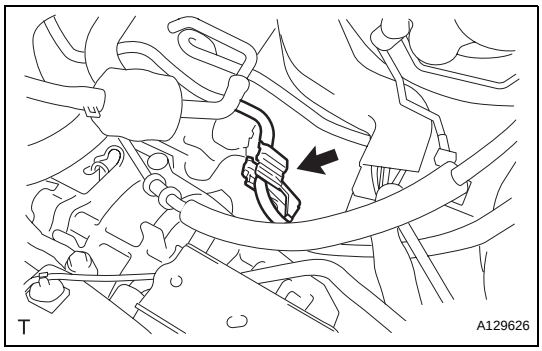


(c) Remove the bolt and clamp from the bracket.



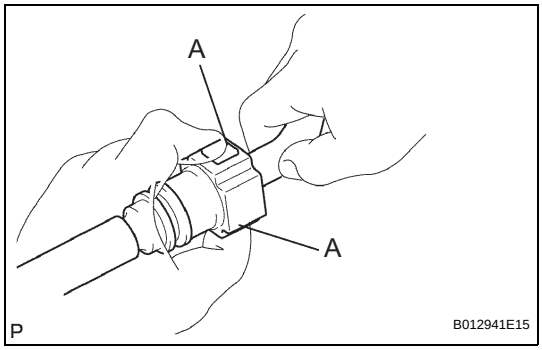
35. DISCONNECT TRANSMISSION CONTROL CABLE ASSEMBLY

(a) Remove the clip and nut, and separate the cable from the transaxle.



36. SEPARATE FUEL TUBE SUB-ASSEMBLY

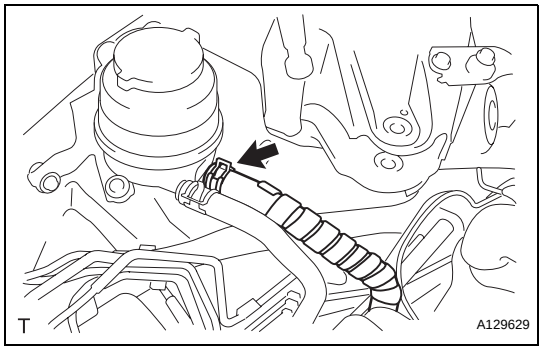
(a) Remove the No. 1 fuel pipe clamp.



(b) Disconnect the connector from the tube while pinching part A with your fingers as shown in the illustration.

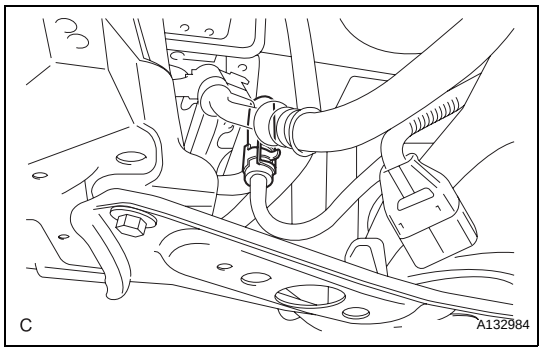
NOTICE:

- **Check for contamination in the pipe and around the connector. Clean if necessary and then disconnect the connector.**
- **Disconnect the connector by hand.**
- **Do not bend, fold or rotate the nylon tube.**
- **If the pipe and connector are stuck together, push and pull the connector until it becomes free.**
- **Put the pipe and connector ends in vinyl bags to prevent damage and contamination.**



37. DISCONNECT NO. 1 OIL RESERVOIR TO PUMP HOSE

(a) Disconnect the No. 1 oil reservoir to pump hose.



38. DISCONNECT RETURN TUBE SUB-ASSEMBLY

(a) Disconnect the return tube sub-assembly.

39. REMOVE EXHAUST PIPE NO. 1 SUPPORT BRACKET (See page EX-3)

40. REMOVE EXHAUST PIPE ASSEMBLY FRONT (See page EX-2)

41. REMOVE FRONT AXLE HUB NUT LH (See page DS-7)

42. REMOVE FRONT AXLE HUB NUT RH

HINT:

Use the same procedures described for the LH side.

43. DISCONNECT FRONT STABILIZER LINK ASSEMBLY LH (See page DS-7)

44. DISCONNECT FRONT STABILIZER LINK ASSEMBLY RH

HINT:
Use the same procedures described for the LH side.

45. DISCONNECT FRONT SPEED SENSOR LH (See page DS-7)

46. DISCONNECT FRONT SPEED SENSOR RH

HINT:
Use the same procedures described for the LH side.

47. DISCONNECT TIE ROD ASSEMBLY LH (See page DS-8)

48. DISCONNECT TIE ROD ASSEMBLY RH

HINT:
Use the same procedures described for the LH side.

49. DISCONNECT FRONT SUSPENSION LOWER NO. 1 ARM LH (See page DS-8)

50. DISCONNECT FRONT SUSPENSION LOWER NO. 1 ARM RH

HINT:
Use the same procedures described for the LH side.

51. SEPARATE FRONT AXLE ASSEMBLY LH (See page DS-8)

52. SEPARATE FRONT AXLE ASSEMBLY RH

HINT:
Use the same procedures described for the LH side.

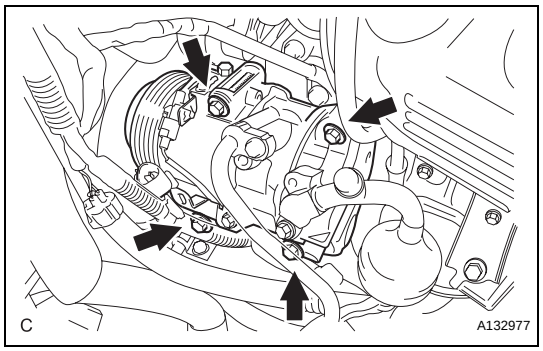
53. REMOVE NO. 1 EXHAUST PIPE SUPPORT BRACKET

(a) Remove the No. 1 exhaust pipe support bracket with the 2 bolts.

54. REMOVE DRIVE PLATE AND TORQUE CONVERTER CLUTCH SETTING BOLT (See page AX-211)

55. DISCONNECT STEERING SLIDING YOKE (See page PS-40)

56. REMOVE GENERATOR ASSEMBLY (See page CH-14)

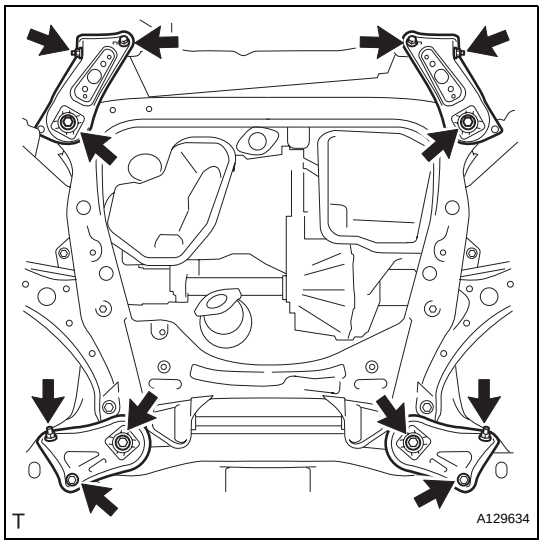


57. SEPARATE COOLER COMPRESSOR ASSEMBLY

(a) Remove the 2 connector clamps.
(b) Remove the 4 bolts and separate the compressor.
HINT:
Hang up the hoses instead of detaching them.

58. REMOVE ENGINE ASSEMBLY WITH TRANSAXLE

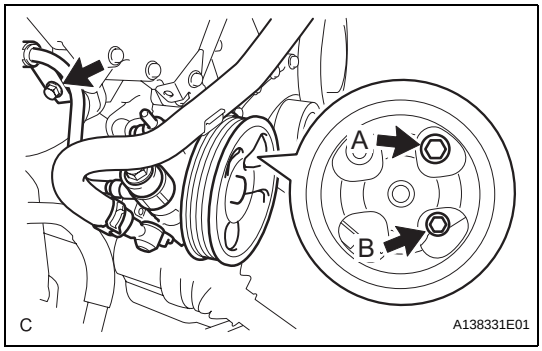
(a) Set the engine lifter.



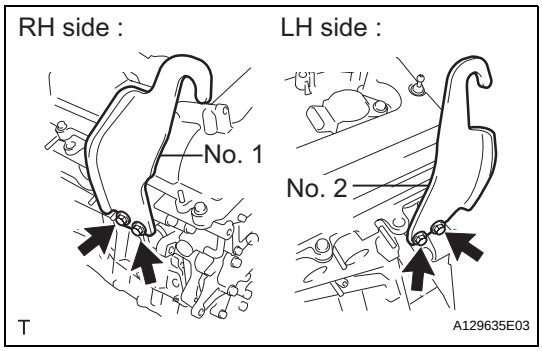
(b) Remove the 4 bolts, 2 nuts, and frame side rail plates RH and LH.
(c) Remove the 4 bolts, 2 nuts, and front suspension member brace rear RH and LH.
(d) Operate the engine lifter, then remove the engine assembly from the vehicle.
NOTICE:
Make sure that the engine is clear of all wiring and hoses.

59. REMOVE VANE PUMP ASSEMBLY

(a) Disconnect the power steering oil pressure switch connector.

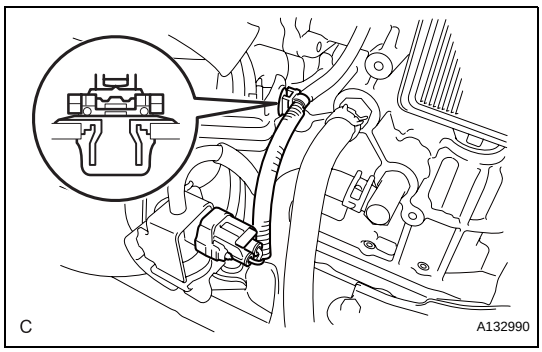


(b) Remove the pressure feed tube clamp bolt.
(c) Loosen the bolt A.
(d) Remove the bolt B and vane pump.



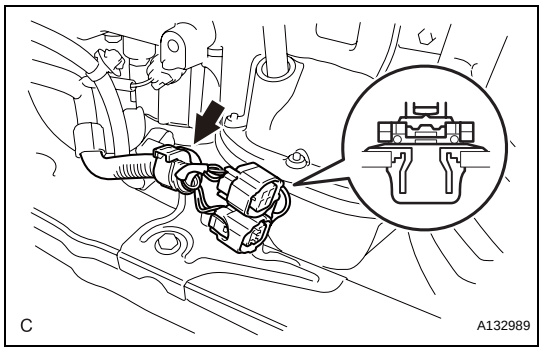
60. INSTALL ENGINE HANGERS

(a) Install the 2 engine hangers with the 4 bolts as shown in the illustration.
Part No.:
No. 1 Engine hanger 12281-31070
No. 2 Engine hanger 12282-31050
Bolts 91671-10825
Torque: 33 N*m (337 kgf*cm, 24 ft.*lbf)
(b) Attach the engine sling device and hang the engine with the chain block.

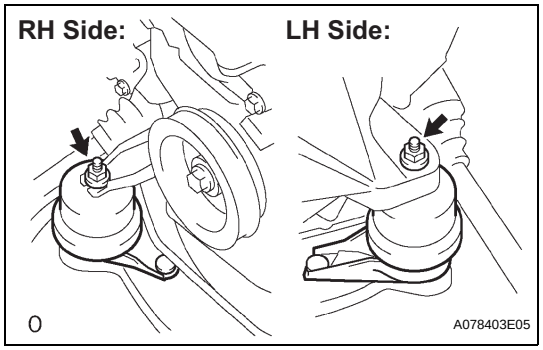


61. REMOVE FRONT FRAME ASSEMBLY

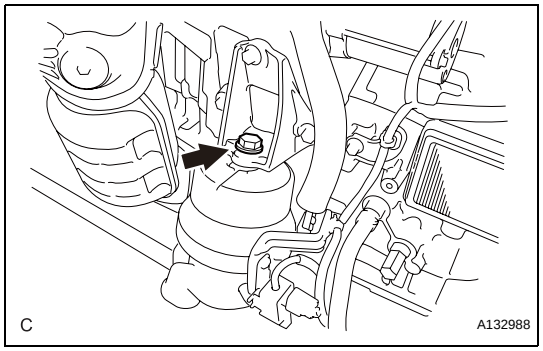
(a) Disconnect the connector and clamp.



(b) Disconnect the 2 clamps.



(c) Remove the 2 nuts and disconnect the engine mounting insulators RH and LH.



(d) Remove the bolt and disconnect the engine mounting insulator FR.

62. REMOVE FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-9)

63. REMOVE FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-9)

64. REMOVE ENGINE WIRE

65. REMOVE STARTER ASSEMBLY (See page ST-141)

66. REMOVE AUTOMATIC TRANSAXLE ASSEMBLY

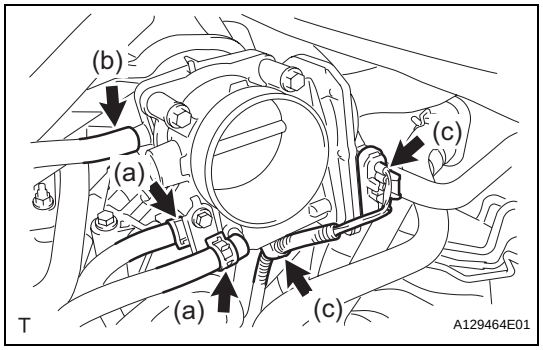
HINT:

See page AX-207.

67. REMOVE DRIVE PLATE AND RING GEAR SUB-ASSEMBLY (See page EM-12)

68. SECURE ENGINE

(a) Secure the engine onto an engine stand with the bolts.



69. REMOVE INTAKE AIR SURGE TANK ASSEMBLY

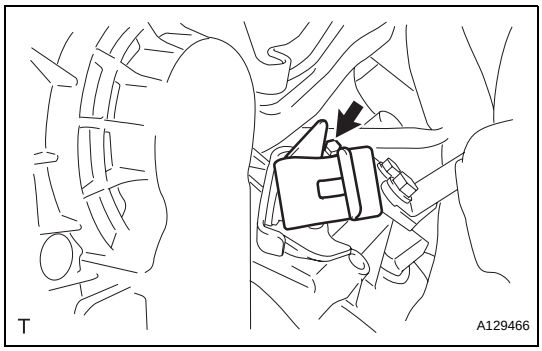
(a) Disconnect the 2 water by-pass hoses from the throttle with motor body assembly.

(b) Disconnect the vapor feed hose.

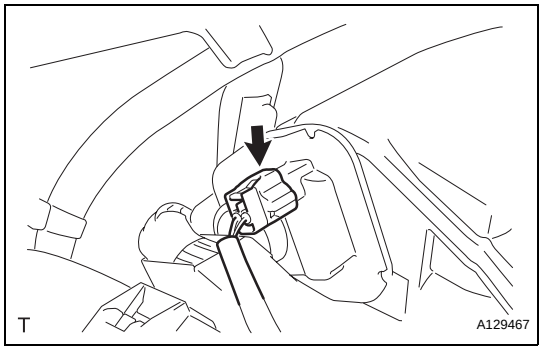
(c) Disconnect the throttle with motor body assembly connector and clamp.

(d) Disconnect the No. 1 ventilation hose.

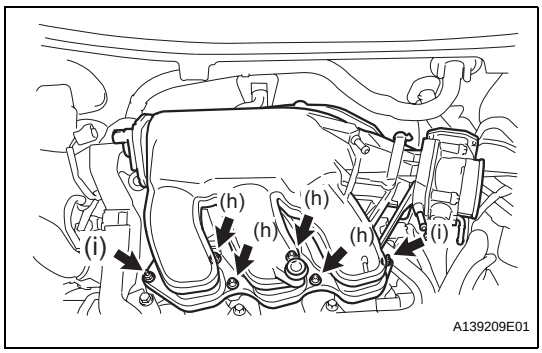
EM



(e) Remove the bolt and vacuum hose clamp.



(f) Disconnect the connector.
(g) Remove the 4 bolts, No. 1 surge tank stay and throttle body bracket.



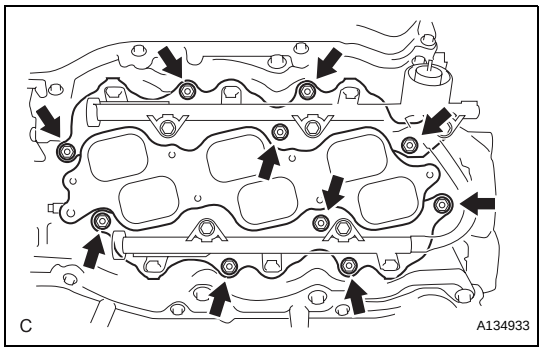
(h) Using a 5 mm socket hexagon wrench, remove the 4 bolts.
(i) Remove the 2 nuts and intake air surge tank.
(j) Remove the gasket from the intake air surge tank.

70. REMOVE IGNITION COIL ASSEMBLY

(a) Remove the 6 bolts and 6 ignition coils.

71. REMOVE NO. 2 ENGINE MOUNTING STAY RH

(a) Remove the bolt and No. 2 engine mounting stay RH.

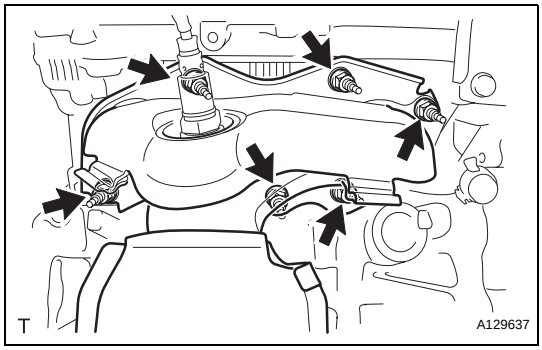


72. REMOVE INTAKE MANIFOLD

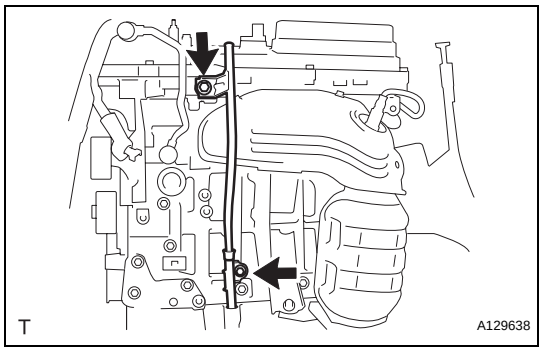
(a) Uniformly loosen and remove the 6 bolts and 4 nuts.
(b) Remove the intake manifold and 2 gaskets.

73. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY RH

(a) Disconnect the A/F sensor connector clamp.

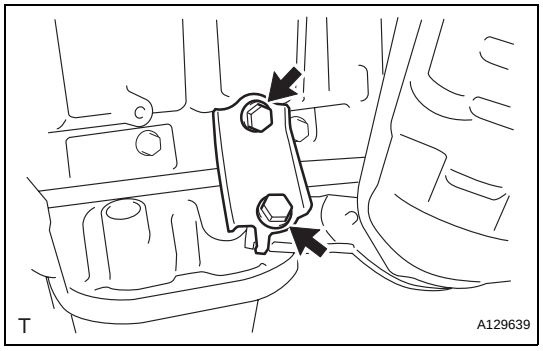


(b) Uniformly loosen and remove the 6 nuts.
(c) Remove the manifold and gasket.



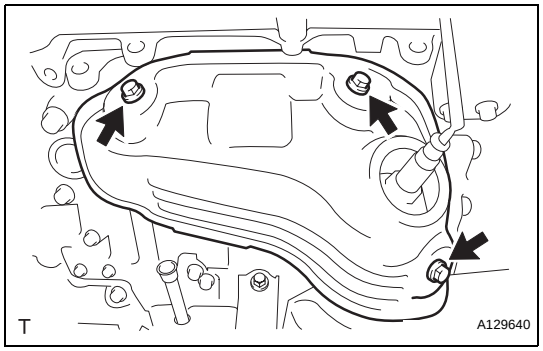
74. REMOVE OIL LEVEL GAUGE GUIDE SUB-ASSEMBLY

(a) Remove the oil level gauge.
(b) Remove the 2 bolts, oil level gauge guides No. 1 and No. 2.
(c) Remove the O-rings from the oil level gauge guide.



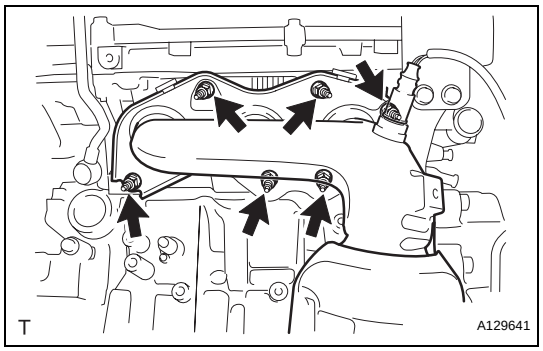
75. REMOVE NO. 2 MANIFOLD STAY

(a) Remove the 2 bolts and No. 2 manifold stay.



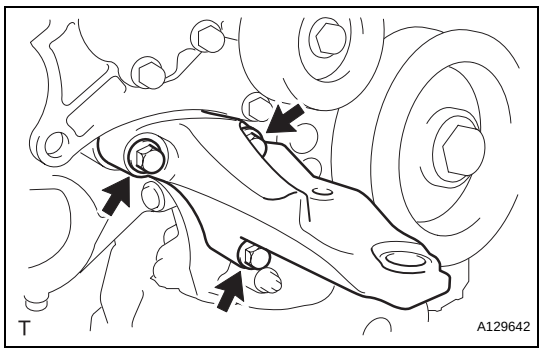
76. REMOVE NO. 2 EXHAUST MANIFOLD HEAT INSULATOR

(a) Remove the 3 bolts and No. 2 insulator.



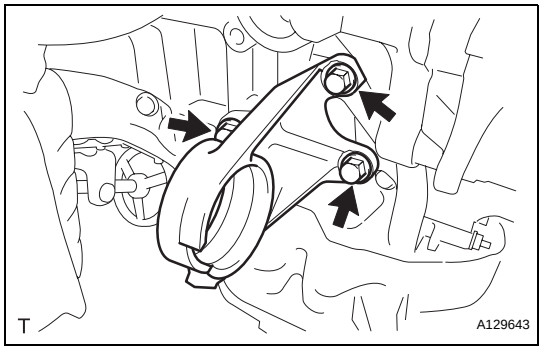
77. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY LH

(a) Uniformly loosen and remove the 6 nuts.
(b) Remove the manifold and gasket.



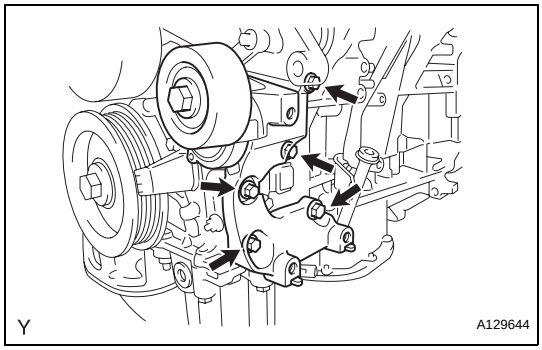
78. REMOVE ENGINE MOUNTING BRACKET RH

(a) Remove the 3 bolts and engine mounting bracket RH.



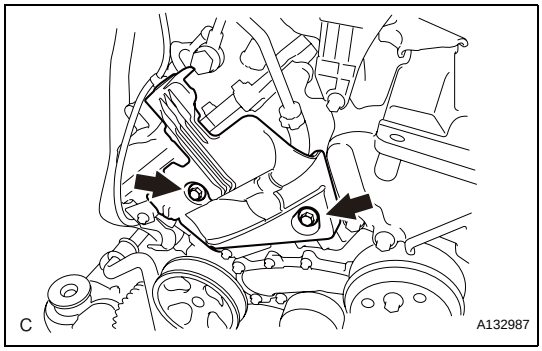
79. REMOVE DRIVE SHAFT BEARING BRACKET

(a) Remove the 3 bolts and drive shaft bearing bracket.



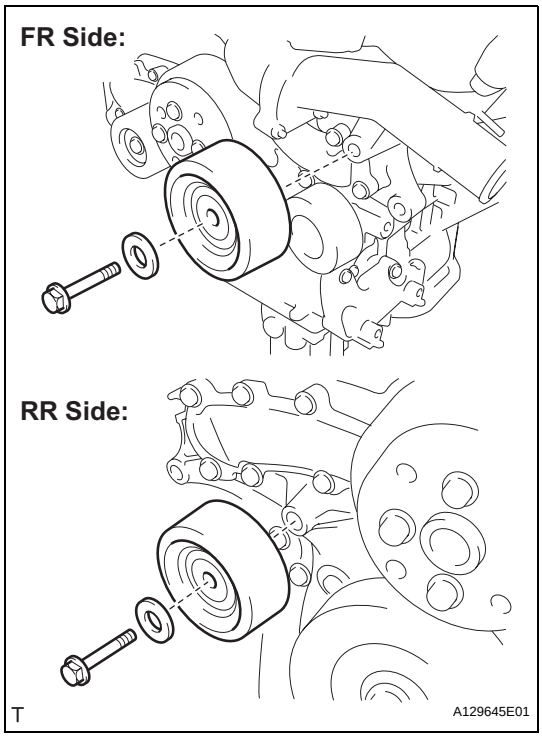
80. REMOVE V-RIBBED BELT TENSIONER ASSEMBLY

(a) Remove the 5 bolts and V-ribbed belt tensioner assembly.



81. REMOVE NO. 2 TIMING GEAR COVER

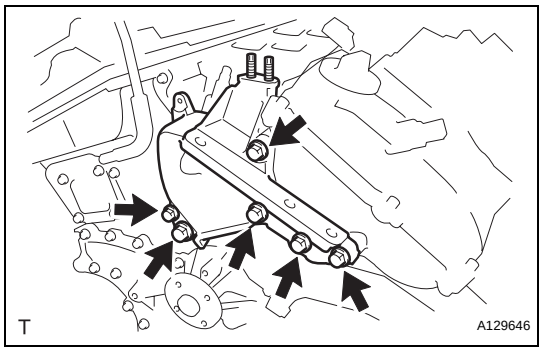
(a) Remove the 2 bolts and No. 2 timing gear cover.



82. REMOVE NO. 2 IDLER PULLEY SUB-ASSEMBLY

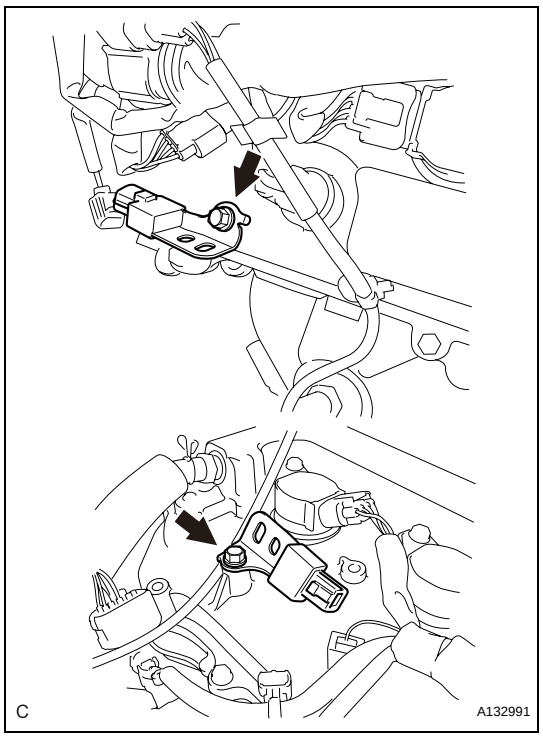
(a) Remove the bolt, plate and No. 2 idler pulley sub-assembly.

83. REMOVE WATER PUMP PULLEY (See page CO-8)



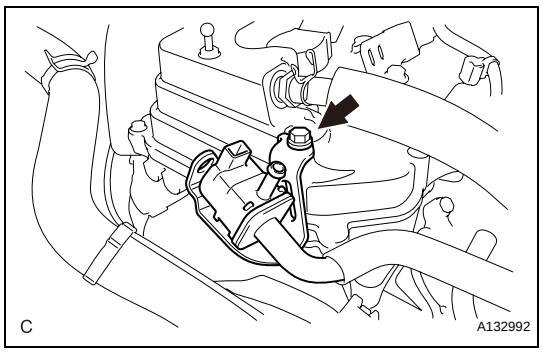
84. REMOVE NO. 1 ENGINE MOUNTING BRACKET FRONT LH

(a) Remove the 6 bolts and No. 1 engine mounting bracket front LH.



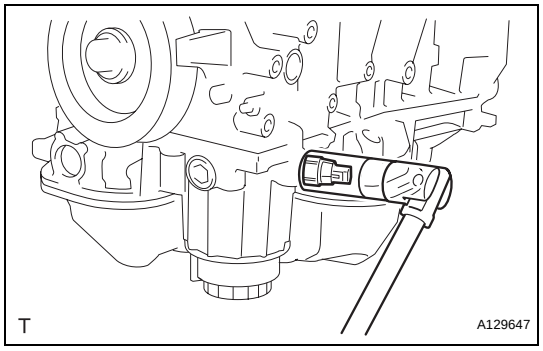
85. REMOVE RADIO SETTING CONDENSER

(a) Remove the 2 bolts and 2 radio setting condensers.



86. REMOVE NO. 1 VACUUM SWITCHING VALVE ASSEMBLY

(a) Remove the bolt and No. 1 vacuum switching valve.

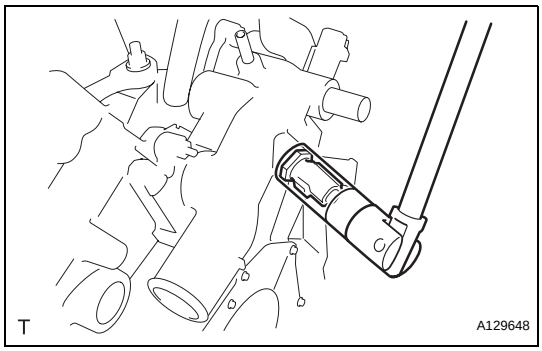


87. REMOVE ENGINE OIL PRESSURE SWITCH ASSEMBLY

(a) Using a 24 mm deep socket wrench, remove the engine oil pressure switch assembly.

88. REMOVE KNOCK CONTROL SENSOR (See page ES-511)

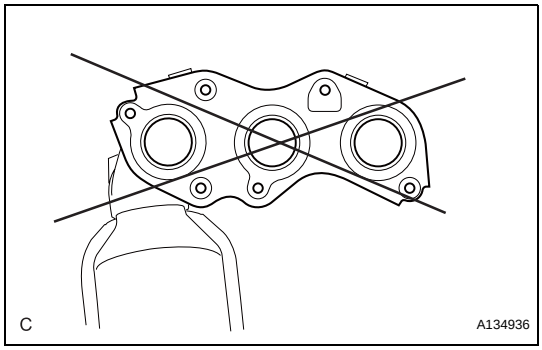
EM



89. REMOVE ENGINE COOLANT TEMPERATURE SENSOR

(a) Using a 19 mm deep socket wrench, remove the EFI engine coolant temperature sensor and gasket.

INSPECTION



1. INSPECT EXHAUST MANIFOLD SUB-ASSEMBLY LH

(a) Using a precision straightedge and feeler gauge, measure the warpage on the contact surface of the cylinder head.

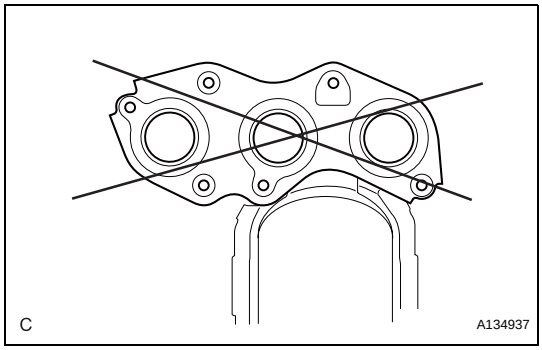
Maximum warpage:

0.7 mm (0.028 in.)

HINT:

The maximum allowable warpage of each installation surface is 0.3 mm (0.012 in.).

If the warpage is greater than the maximum, replace the manifold.



2. INSPECT EXHAUST MANIFOLD SUB-ASSEMBLY RH

(a) Using a precision straightedge and feeler gauge, measure the warpage on the contact surface of the cylinder head.

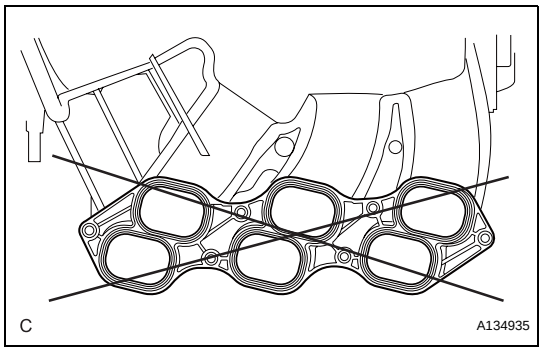
Maximum warpage:

0.7 mm (0.028 in.)

HINT:

The maximum allowable warpage of each installation surface is 0.3 mm (0.012 in.).

If the warpage is greater than the maximum, replace the manifold.



3. INSPECT INTAKE AIR SURGE TANK ASSEMBLY

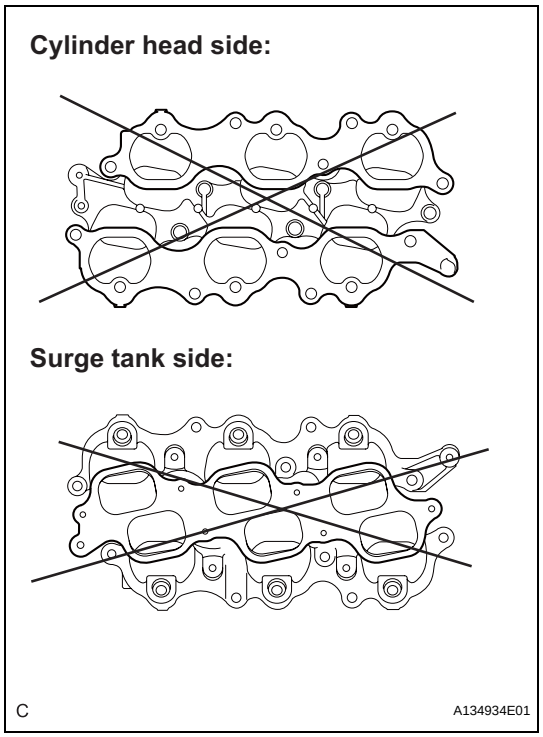
(a) Using a precision straightedge and feeler gauge, measure the warpage on the contact surface of the intake manifold.

Maximum warpage:

2.5 mm (0.098 in.)

If the warpage is greater than the maximum, replace the surge tank.

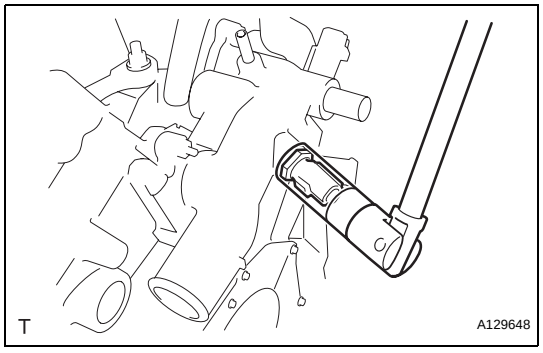
EM



4. **INSPECT INTAKE MANIFOLD**
   (a) Cylinder head side:
      (1) Using a precision straightedge and feeler gauge, measure the surface contacting the cylinder head for warpage.
      Maximum warpage:
      0.1 mm (0.003 in.)
      If the warpage is greater than the maximum, replace the intake manifold.
   (b) Surge tank side:
      (1) Using a precision straightedge and feeler gauge, measure the surface contacting the surge tank for warpage.
      Maximum warpage:
      0.1 mm (0.003 in.)
      If the warpage is greater than the maximum, replace the intake manifold.

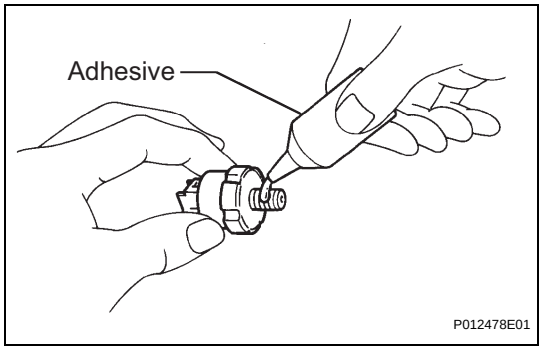
EM

INSTALLATION



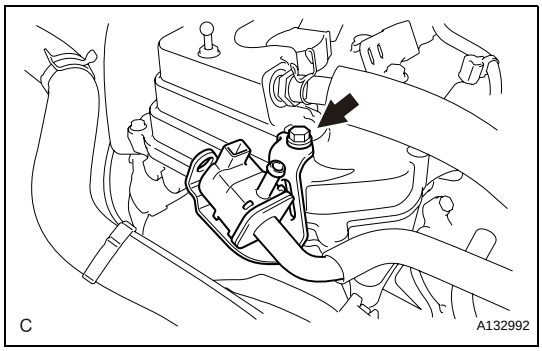
1. **INSTALL ENGINE COOLANT TEMPERATURE SENSOR**
   (a) Using a 19 mm deep socket wrench, install the engine coolant temperature sensor and a new gasket.
   Torque: 20 N*m (200 kgf*cm, 14 ft.*lbf)

2. **INSTALL KNOCK CONTROL SENSOR (See page ES-511)**



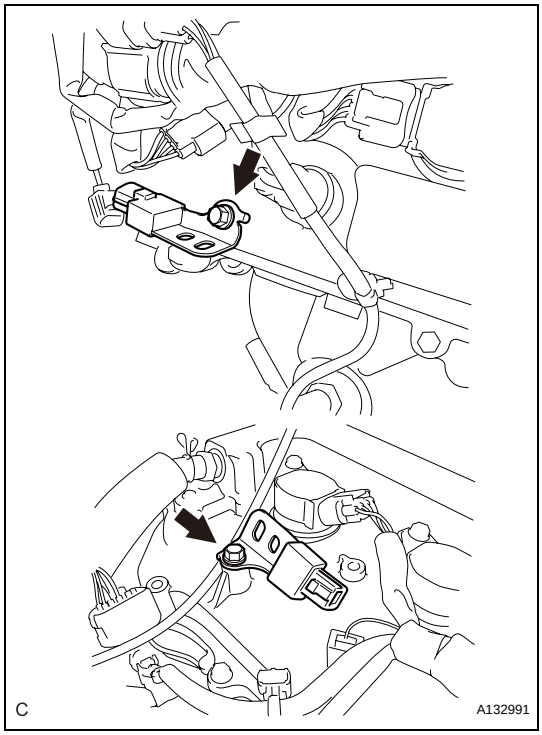
3. **INSTALL ENGINE OIL PRESSURE SWITCH ASSEMBLY**
   (a) Clean the threads of the oil pressure switch. Apply adhesive to 2 or 3 threads of the oil pressure switch.
   Adhesive:
   Part No. 08833-00080 THREE BOND 1344, LOCTITE 242 or equivalent

   (b) Using a 24 mm deep socket wrench, install the oil pressure switch.
   Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)
   NOTICE:
   Do not start the engine within 1 hour after installation to prevent oil leaks.



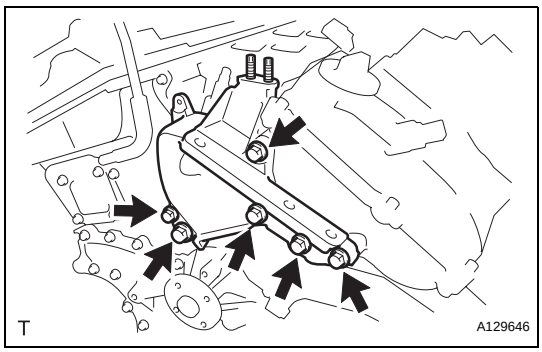
4. INSTALL NO. 1 VACUUM SWITCHING VALVE ASSEMBLY

(a) Install the bolt and No. 1 vacuum switching valve.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)



5. INSTALL RADIO SETTING CONDENSER

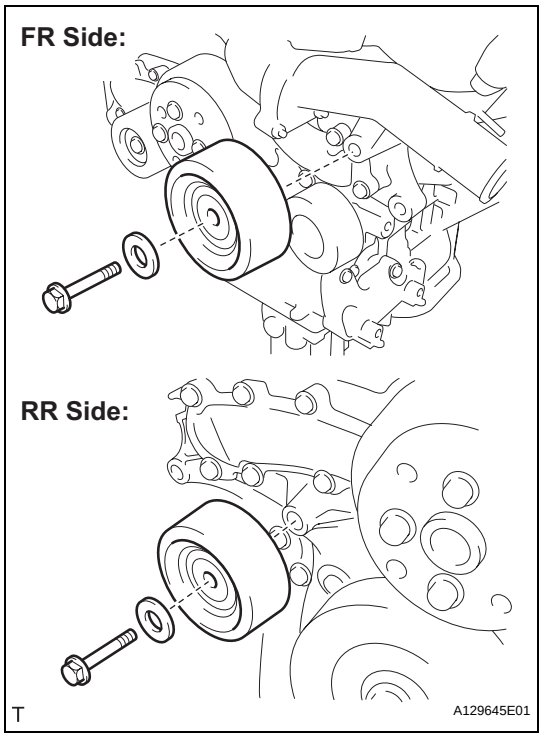
(a) Install the 2 bolts and 2 radio setting condensers.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)



6. INSTALL NO. 1 ENGINE MOUNTING BRACKET FRONT LH

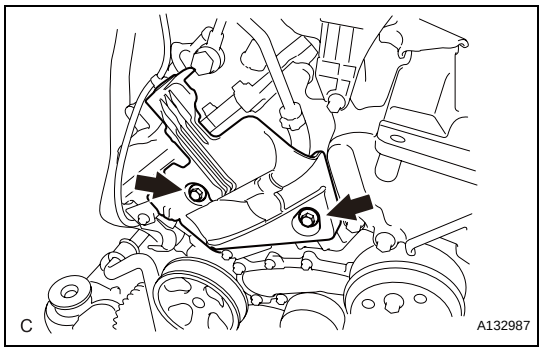
(a) Install the No. 1 engine mounting bracket front LH with the 6 bolts.
Torque: 54 N*m (551 kgf*cm, 40 ft.*lbf)

7. INSTALL WATER PUMP PULLEY (See page CO-10)



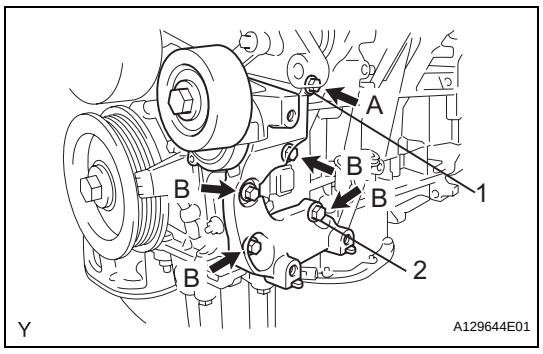
8. INSTALL NO. 2 IDLER PULLEY SUB-ASSEMBLY

(a) Install the No. 2 idler pulley sub-assembly and cover plate with the bolt.
Torque: 43 N*m (438 kgf*cm, 32 ft.*lbf)



9. INSTALL NO. 2 TIMING GEAR COVER

(a) Install the No. 2 timing gear cover with the 2 bolts.
Torque: 6.0 N*m (61 kgf*cm, 53 in.*lbf)

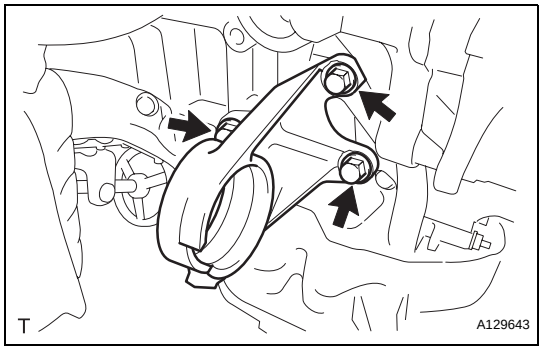


10. INSTALL V-RIBBED BELT TENSIONER ASSEMBLY

(a) Temporarily install the V-ribbed belt tensioner with the 5 bolts.
HINT:
Each bolt length is as follows:
A: 70 mm (2.76 in.)
B: 33 mm (1.30 in.)

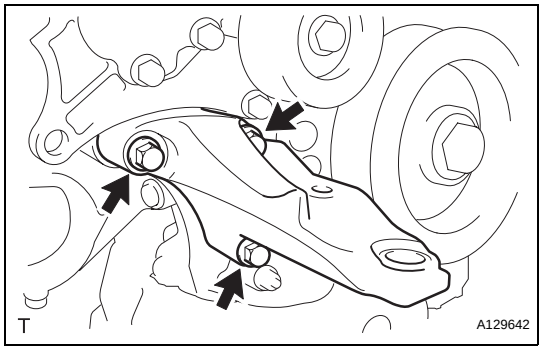
(b) Install the V-ribbed belt tensioner by tightening the bolt 1 and bolt 2 in the order shown in the illustration.
Torque: 43 N*m (438 kgf*cm, 32 ft.*lbf)

(c) Tighten the other bolts.
Torque: 43 N*m (438 kgf*cm, 32 ft.*lbf)



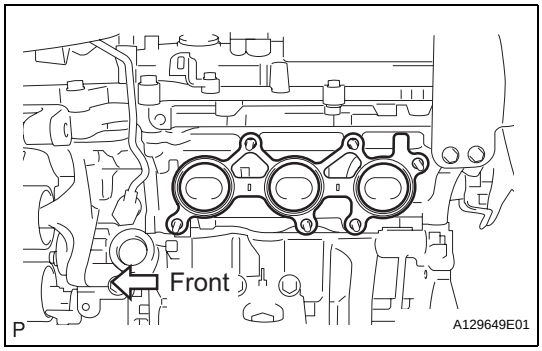
11. INSTALL DRIVE SHAFT BEARING BRACKET

(a) Install the drive shaft bearing bracket with the 3 bolts.
Torque: 64 N*m (650 kgf*cm, 47 ft.*lbf)



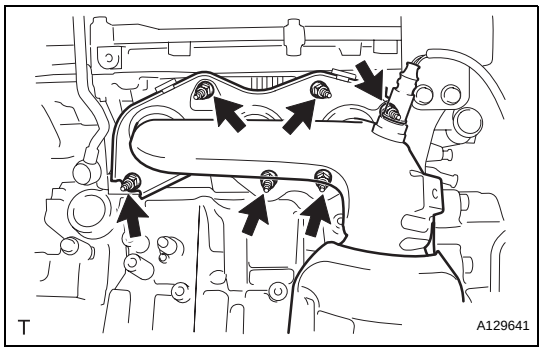
12. INSTALL ENGINE MOUNTING BRACKET RH

(a) Install the engine mounting bracket RH with the 3 bolts.
Torque: 54 N*m (551 kgf*cm, 40 ft.*lbf)

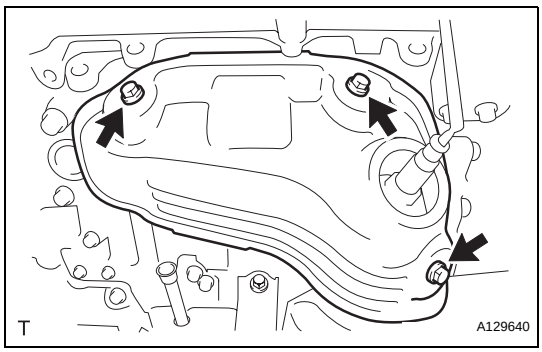


13. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY LH

(a) Install a new gasket as shown in the illustration.

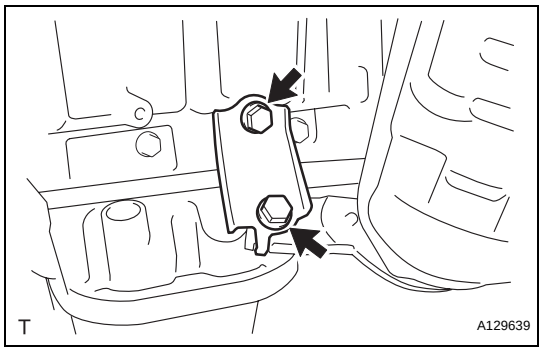


(b) Install the exhaust manifold sub-assembly LH with the 6 nuts.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)



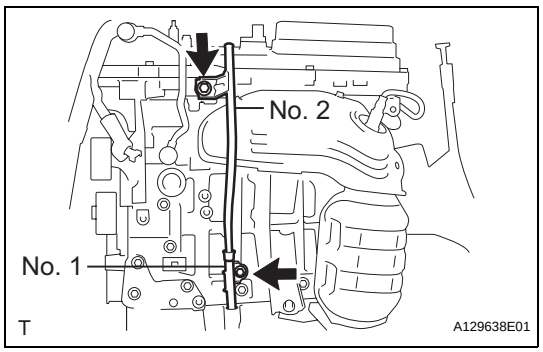
14. INSTALL NO. 2 EXHAUST MANIFOLD HEAT INSULATOR

(a) Install the No. 2 insulator with the 3 bolts.
Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf)



15. INSTALL NO. 2 MANIFOLD STAY

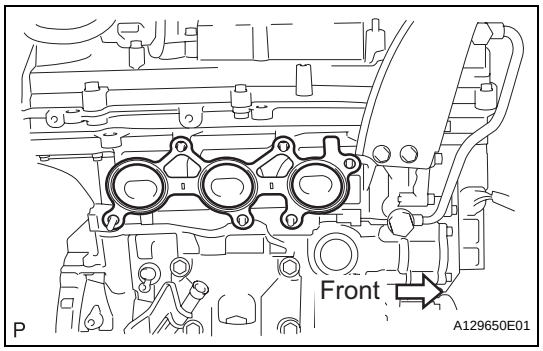
(a) Install the No. 2 manifold stay with the 2 bolts.
Torque: 34 N*m (347 kgf*cm, 25 ft.*lbf)



16. INSTALL OIL LEVEL GAUGE GUIDE SUB-ASSEMBLY

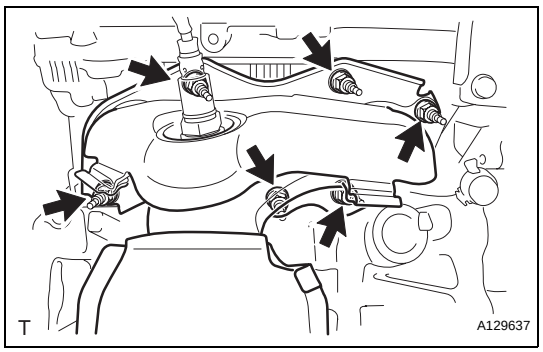
(a) Install 2 new O-rings to the oil level gauge guide.
(b) Apply a light coat of engine oil to the O-rings.
(c) Push in the oil level gauge guide end into the guide hole.
(d) Install the oil level gauge guide No. 1 with the bolt.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)
(e) Install the oil level gauge guide No. 2 with the bolt.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)
(f) Install the oil level gauge.

EM

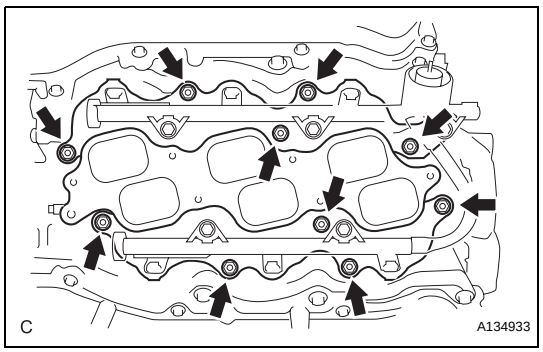


17. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY RH

(a) Install a new gasket as shown in the illustration.



(b) Install the exhaust manifold sub-assembly RH with the 6 nuts.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)



18. INSTALL INTAKE MANIFOLD

(a) Set a new gasket on each cylinder head.
NOTICE:
- **Align the port holes of the gasket and cylinder head.**
- **Make sure that the gasket is installed in the correct direction.**

(b) Set the intake manifold on the cylinder heads.

(c) Install and tighten the 6 bolts and 4 nuts uniformly in several steps.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)

19. INSTALL NO. 2 ENGINE MOUNTING STAY RH

(a) Install the No. 2 mounting stay RH with the bolt.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)

20. INSTALL IGNITION COIL ASSEMBLY

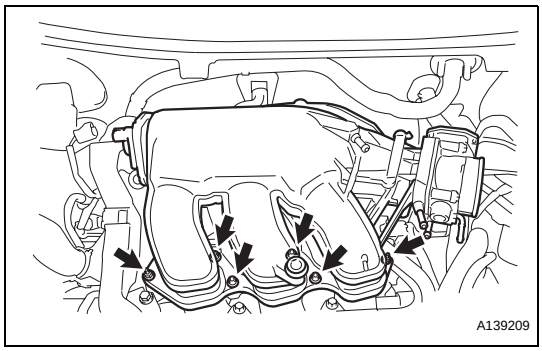
(a) Install the 6 ignition coil assemblies with the 6 bolts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

21. INSTALL INTAKE AIR SURGE TANK ASSEMBLY
NOTICE:
DO NOT apply oil to the bolts as listed below

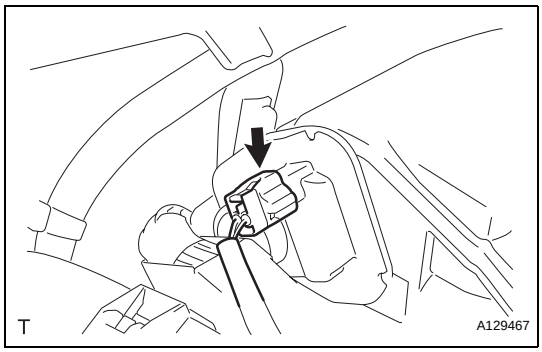
Tightening Parts	Torque N*m (kgf*cm, ft.*lbf)	QTY
Surge Tank and Intake Manifold	18 (184, 13)	4
No. 1 Surge Tank Stay and Cylinder Head Cover	21 (214, 15)	1
No. 1 Surge Tank Stay and Surge Tank	21 (214, 15)	1
Throttle Body Bracket and Cylinder Head Cover	21 (214, 15)	1
Throttle Body Bracket and Surge Tank	21 (214, 15)	1

(a) Install a new gasket to the intake air surge tank.

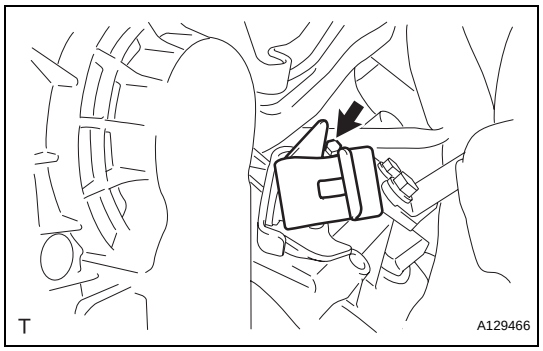
(b) Using a 5 mm hexagon socket wrench, install the 4 bolts and 2 nuts.
Torque: Bolt
18 N*m (184 kgf*cm, 13 ft.*lbf)
Nut
16 N*m (163 kgf*cm, 12 ft.*lbf)



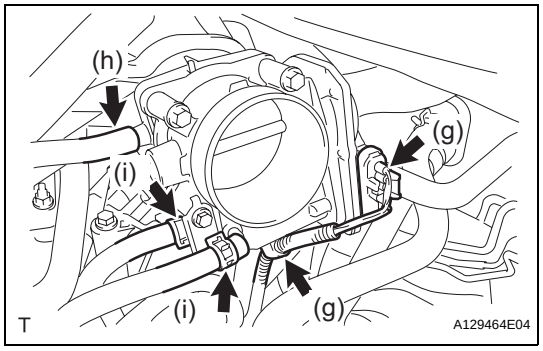
(c) Install the throttle body bracket, No. 1 surge tank stay and 4 bolts.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)



(d) Connect the connector.



(e) Install the vacuum hose clamp with the bolt.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
(f) Connect the No. 1 ventilation hose.



(g) Install the clamp and connect the throttle with motor body assembly connector.
(h) Connect the vapor feed hose.
(i) Connect the 2 water by-pass hoses to the throttle with motor body assembly.

22. REMOVE ENGINE STAND

23. INSTALL DRIVE PLATE AND RING GEAR SUB-ASSEMBLY (See page EM-13)

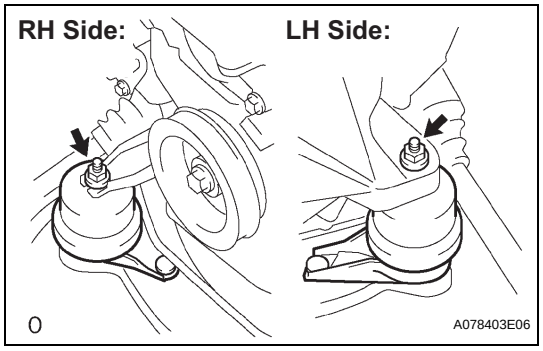
24. INSTALL AUTOMATIC TRANSAXLE ASSEMBLY
HINT:
See page AX-214.

25. INSTALL STARTER ASSEMBLY (See page ST-148)

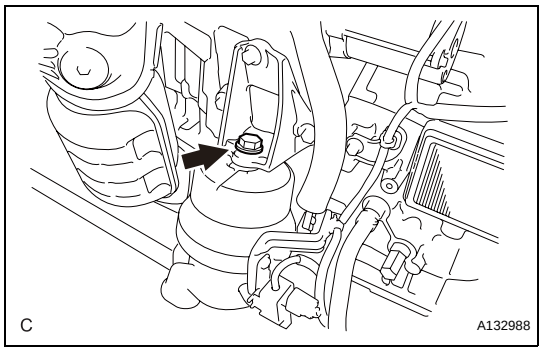
26. INSTALL ENGINE WIRE

27. INSTALL FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-20)

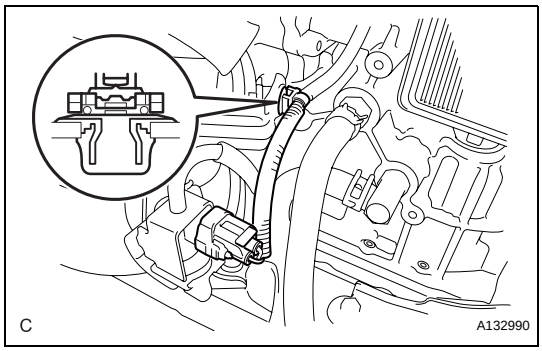
28. INSTALL FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-21)



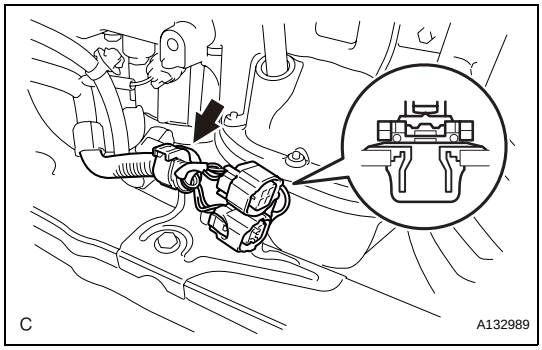
29. INSTALL FRONT FRAME ASSEMBLY
(a) Install the engine mounting insulators RH and LH with the 2 nuts.
Torque: 95 N*m (969 kgf*cm, 70 ft.*lbf)



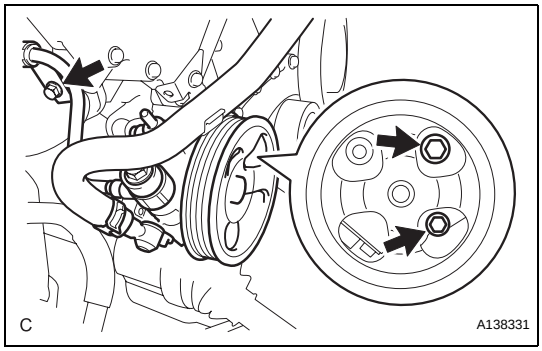
(b) Install the engine mounting insulator FR with the bolt.
Torque: 87 N*m (887 kgf*cm, 64 ft.*lbf)



(c) Connect the connector and clamp.



(d) Connect the 2 clamps.

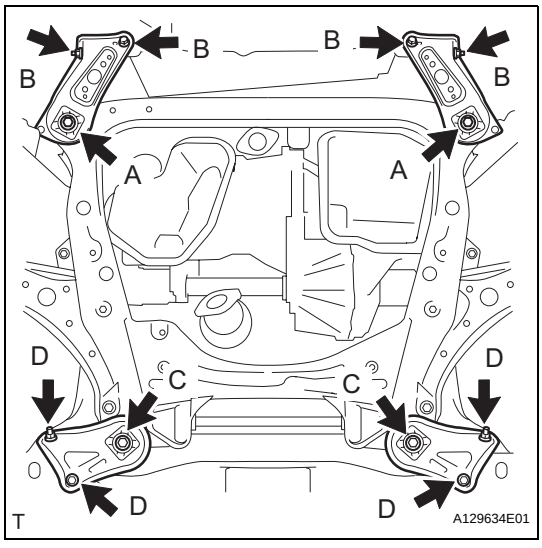


30. INSTALL VANE PUMP ASSEMBLY

(a) Install the vane pump with the 2 bolts.
Torque: 43 N*m (438 kgf*cm, 32 ft.*lbf)

(b) Install the pressure feed tube clamp bolt.
Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)

(c) Connect the power steering oil pressure switch connector.



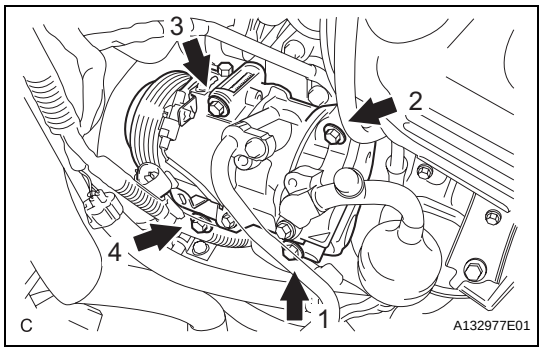
31. INSTALL ENGINE ASSEMBLY WITH TRANSAXLE

(a) Set the engine assembly with transaxle on the engine lifter.

(b) Install the engine assembly to the vehicle.

(c) Install the frame side rail plates RH and LH with the 4 bolts and 2 nuts.
Torque: A
85 N*m (867 kgf*cm, 63 ft.*lbf)
B
32 N*m (329 kgf*cm, 24 ft.*lbf)

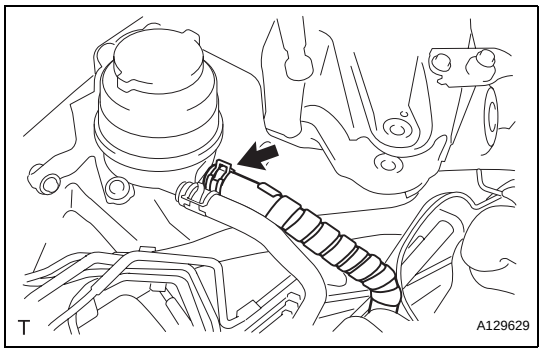
(d) Install the front suspension member brace rear RH and LH with the 4 bolts and 2 nuts.
Torque: C
85 N*m (867 kgf*cm, 63 ft.*lbf)
D
32 N*m (329 kgf*cm, 24 ft.*lbf)



32. **INSTALL COOLER COMPRESSOR ASSEMBLY**
    (a) Temporarily install the cooler compressor with the 4 bolts.
    (b) Install the compressor with the 4 bolts by tightening the bolts in the order shown in the illustration.
    Torque: 25 N*m (250 kgf*cm, 18 ft.*lbf)
    (c) Install the 2 connector clamps.
33. **INSTALL GENERATOR ASSEMBLY (See page CH-22)**
34. **INSTALL STEERING SLIDING YOKE (See page PS-65)**
35. **INSTALL DRIVE PLATE AND TORQUE CONVERTER CLUTCH SETTING BOLT (See page AX-218)**
36. **INSTALL NO. 1 EXHAUST PIPE SUPPORT BRACKET**
    (a) Install the No. 1 exhaust pipe support bracket with the bolt.
    Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)
37. **INSTALL FRONT AXLE ASSEMBLY LH (See page DS-21)**
38. **INSTALL FRONT AXLE ASSEMBLY RH**
    HINT:
    Use the same procedures described for the LH side.
39. **INSTALL FRONT SUSPENSION LOWER NO. 1 ARM LH (See page DS-21)**
40. **INSTALL FRONT SUSPENSION LOWER NO. 1 ARM RH**
    HINT:
    Use the same procedures described for the LH side.
41. **INSTALL TIE ROD ASSEMBLY LH (See page DS-21)**
42. **INSTALL TIE ROD ASSEMBLY RH**
    HINT:
    Use the same procedures described for the LH side.
43. **INSTALL FRONT SPEED SENSOR LH (See page DS-21)**
44. **INSTALL FRONT SPEED SENSOR RH**
    HINT:
    Use the same procedures described for the LH side.
45. **INSTALL FRONT STABILIZER LINK ASSEMBLY LH (See page DS-22)**
46. **INSTALL FRONT STABILIZER LINK ASSEMBLY RH**
    HINT:
    Use the same procedures described for the LH side.
47. **INSTALL FRONT AXLE HUB NUT LH (See page DS-22)**
48. **INSTALL FRONT AXLE HUB NUT RH**
    HINT:
    Use the same procedures described for the LH side.

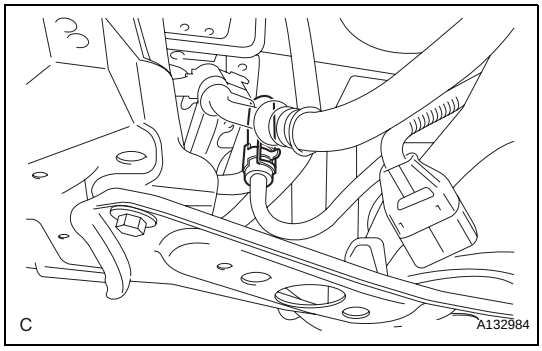
49. INSTALL EXHAUST PIPE ASSEMBLY FRONT (See page EX-4)

50. INSTALL EXHAUST PIPE NO. 1 SUPPORT BRACKET (See page EX-4)



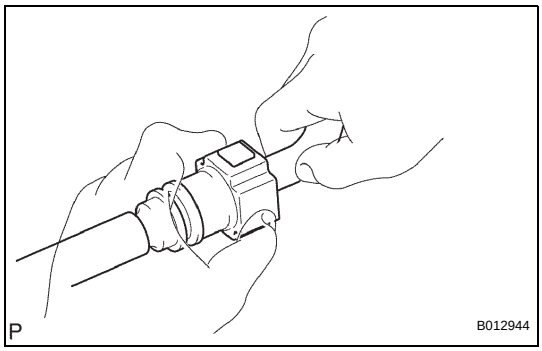
51. CONNECT NO. 1 OIL RESERVOIR TO PUMP HOSE

(a) Connect the No. 1 oil reservoir to pump hose.



52. CONNECT RETURN TUBE SUB-ASSEMBLY

(a) Connect the return tube sub-assembly.



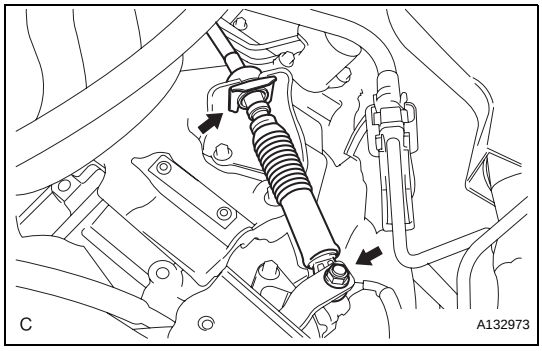
53. CONNECT FUEL TUBE SUB-ASSEMBLY

(a) Push in the fuel tube connector to the fuel pipe until the connector makes a "click" sound.

NOTICE:

- **Check for damage or contamination on the connected part of the pipe.**
- **Check if the pipe and the connector are securely connected by trying to pull them apart.**

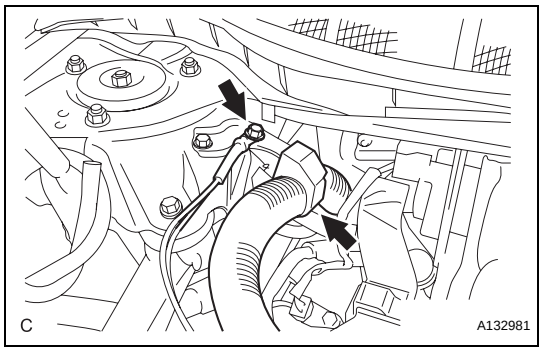
(b) Install the No. 1 fuel pipe clamp.



54. CONNECT TRANSMISSION CONTROL CABLE ASSEMBLY

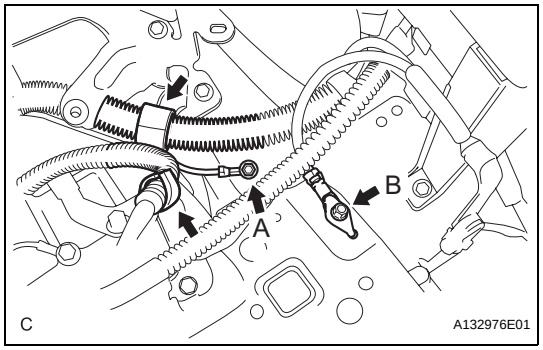
(a) Install the clip and nut, and connect the cable to the transaxle.

Torque: 13 N*m (130 kgf*cm, 9 ft.*lbf)



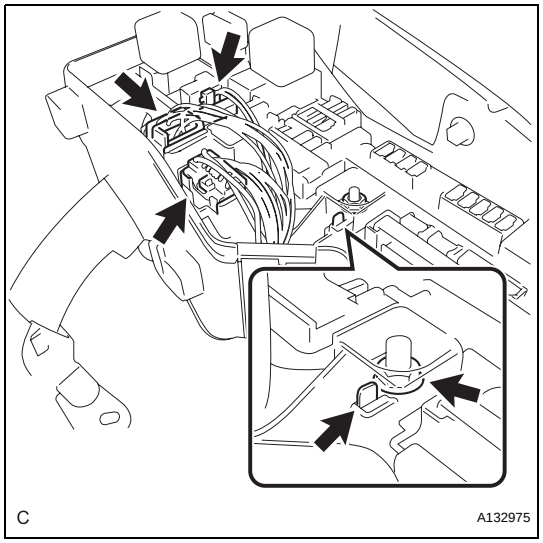
55. CONNECT ENGINE WIRE

(a) Install the bolt and clamp to the bracket.
Torque: 8.4 N*m (85 kgf*cm, 74 in.*lbf)



(b) Install the 2 bolts and 2 clamps to the body.
Torque: Bolt A
12 N*m (123 kgf*cm, 9 ft.*lbf)
Bolt B
8.4 N*m (85 kgf*cm, 74 in.*lbf)

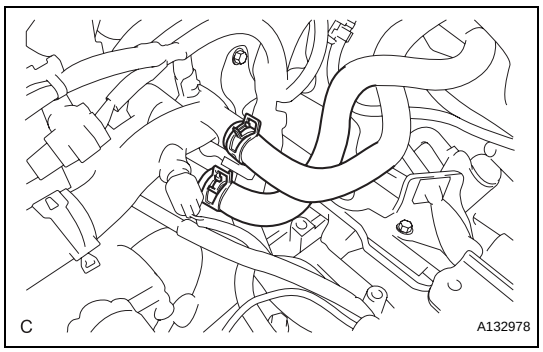
EM



(c) Connect the wire to the engine room junction block. Then, install it with the nut and 3 connectors.
Torque: 8.4 N*m (85 kgf*cm, 74 in.*lbf)

56. INSTALL RELAY BLOCK COVER UPPER

57. INSTALL ECM (See page ES-519)

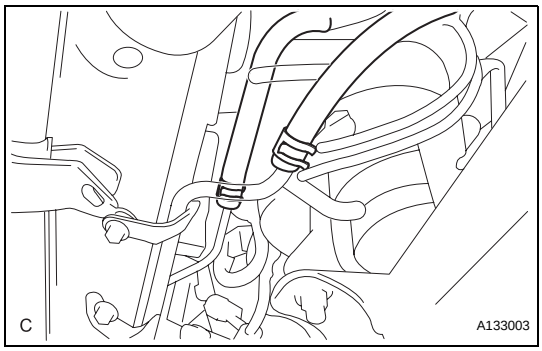


58. CONNECT HEATER INLET WATER HOSE

(a) Connect the heater inlet water hose.

59. CONNECT HEATER OUTLET WATER HOSE

(a) Connect the heater outlet water hose.

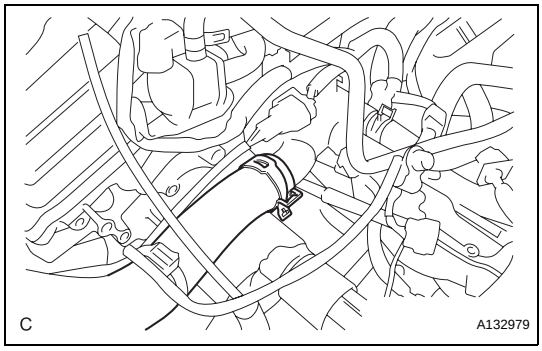


60. CONNECT NO. 1 OIL COOLER INLET HOSE

(a) Install the clamp and connect the oil cooler inlet hose.

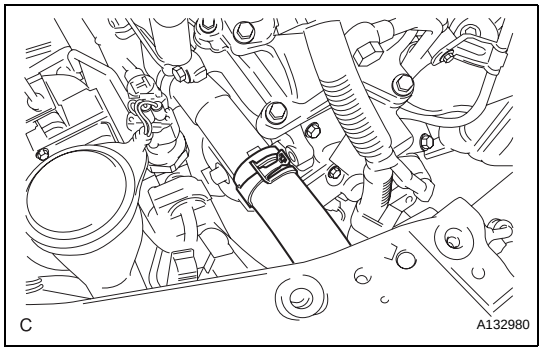
61. CONNECT NO. 1 OIL COOLER OUTLET HOSE

(a) Install the clamp and connect the oil cooler outlet hose.



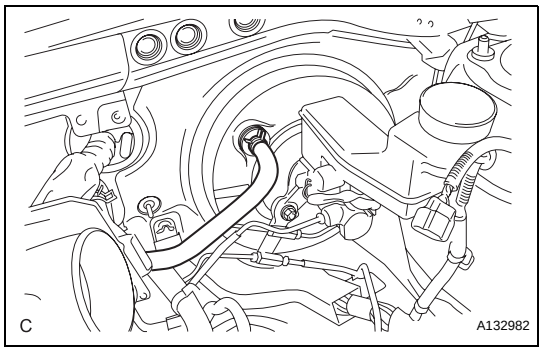
62. INSTALL RADIATOR HOSE INLET

(a) Install the clamp and connect the radiator hose inlet.



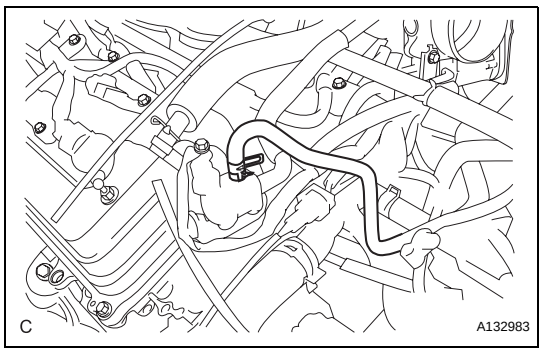
63. INSTALL RADIATOR HOSE OUTLET

(a) Install the clamp and connect the radiator hose outlet.



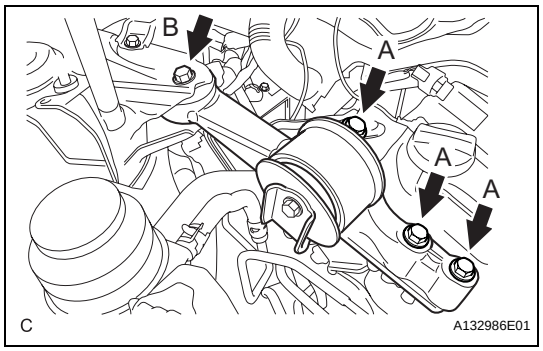
64. CONNECT CHECK VALVE TO BRAKE BOOSTER HOSE

(a) Install the clamp and connect the check valve to brake booster hose.



65. CONNECT NO. 1 FUEL VAPOR FEED HOSE

(a) Install the clamp and connect the No. 1 fuel vapor feed hose.

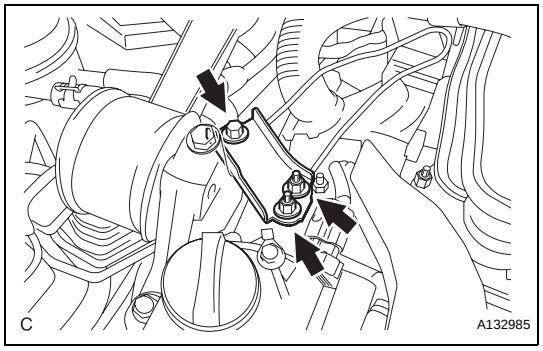


66. INSTALL ENGINE MOVING CONTROL ROD SUB-ASSEMBLY

(a) Temporarily install the engine moving control rod with the 4 bolts.

(b) First install the bolts A, and then the remaining bolt B.

Torque: 38 N*m (388 kgf*cm, 28 ft.*lbf)



67. INSTALL NO. 2 ENGINE MOUNTING STAY RH

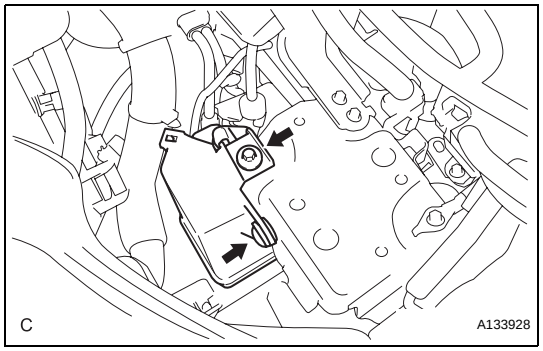
(a) Temporarily install the No. 2 engine mounting stay RH with the bolt.

Torque: 38 N*m (388 kgf*cm, 28 ft.*lbf)

(b) Tighten the 2 nuts.

Torque: 23 N*m (235 kgf*cm, 17 ft.*lbf)

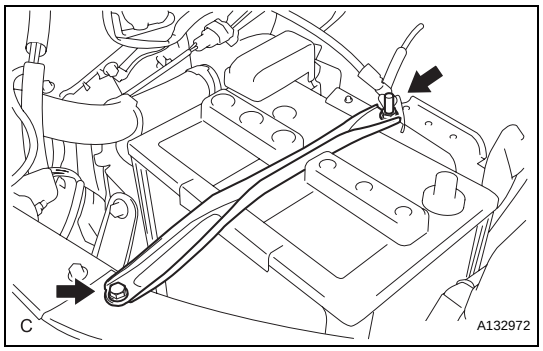
EM



68. INSTALL INTAKE AIR RESONATOR SUB-ASSEMBLY

(a) Install the intake air resonator with the bolt and clip.

Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)



69. INSTALL BATTERY

(a) Install the battery and battery tray.

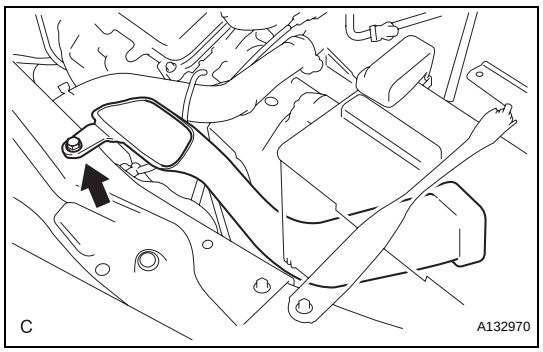
(b) Install the battery clamp with the bolt and nut.

Torque: Bolt

9.0 N*m (92 kgf*cm, 80 in.*lbf)

Nut

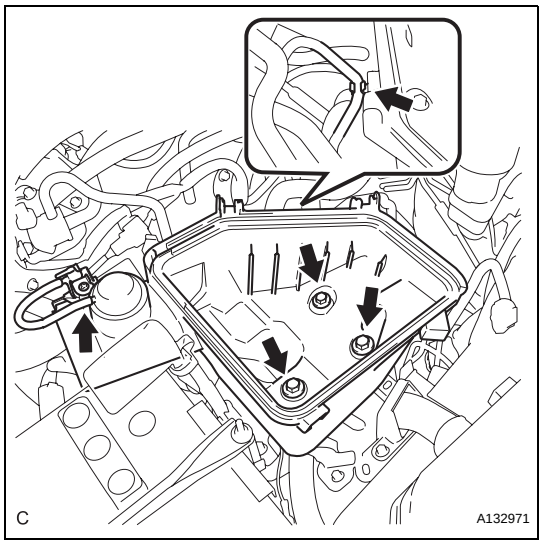
3.5 N*m (36 kgf*cm, 31 in.*lbf)



70. INSTALL NO. 1 AIR CLEANER INLET

(a) Install the No. 1 air cleaner inlet with the bolt.

Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)

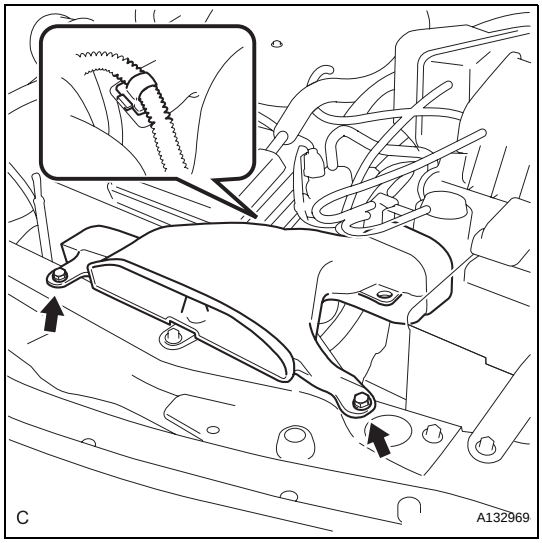


71. INSTALL AIR CLEANER CASE SUB-ASSEMBLY

(a) Install the air cleaner case with the 3 bolts.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)

(b) Connect the vacuum hose and hose clamp.

72. INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-506)

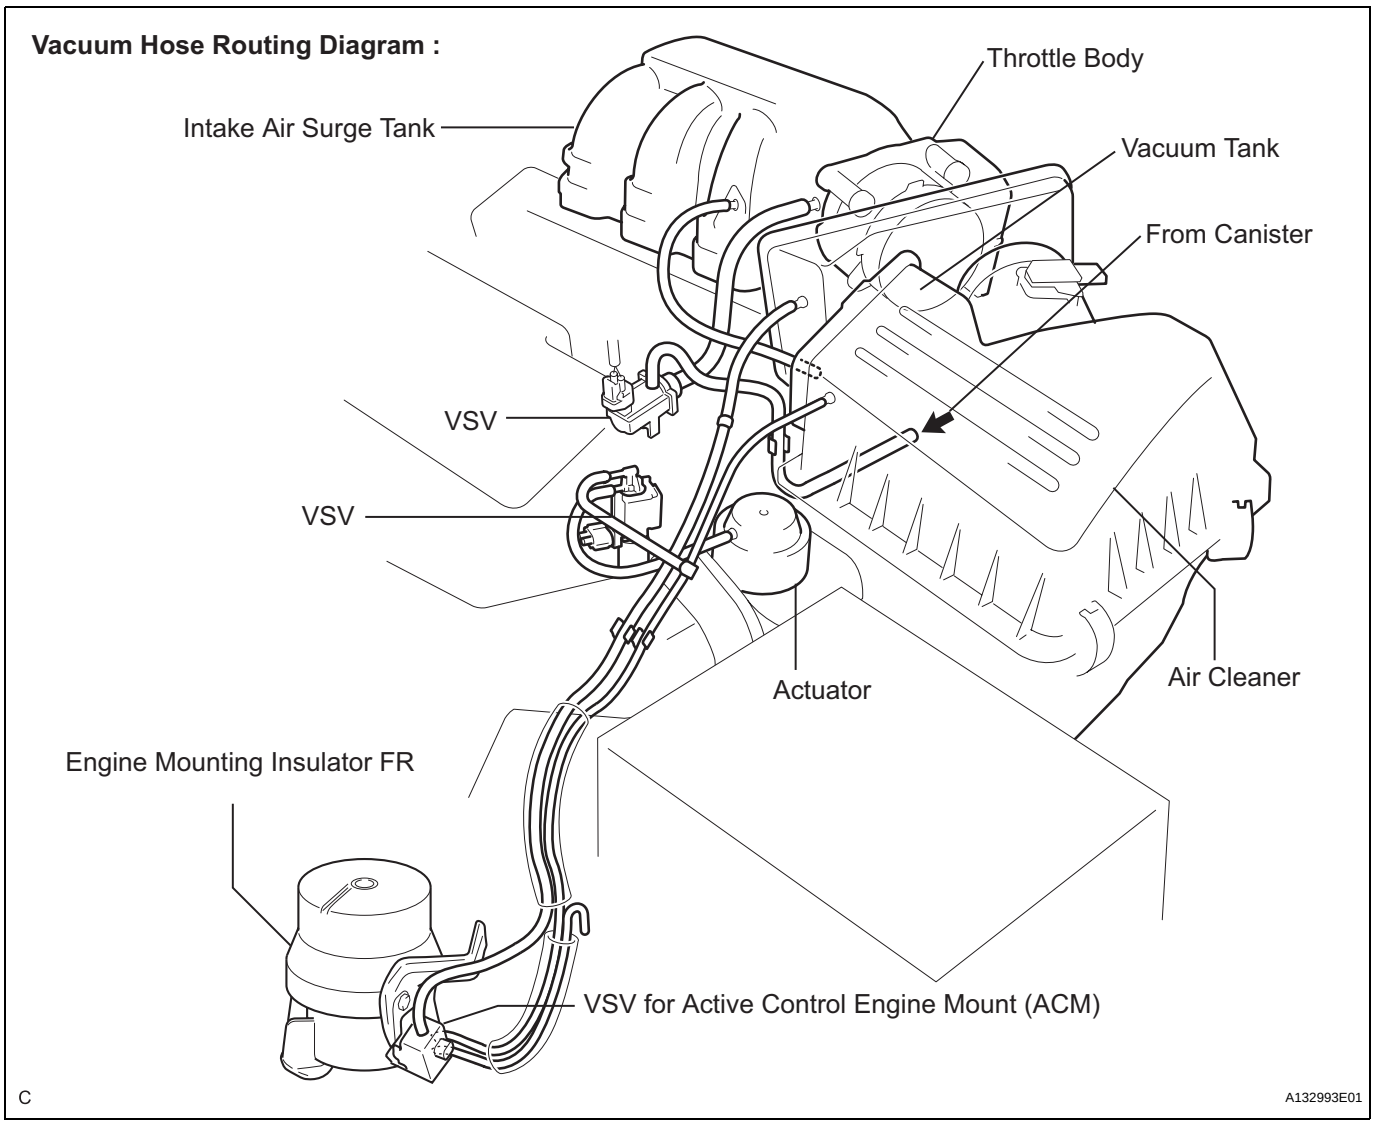


73. INSTALL AIR CLEANER INLET ASSEMBLY

(a) Install the air cleaner inlet with the clamp and 2 bolts.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)

EM

74. CONNECT VACUUM HOSES



EM

75. **INSTALL V-RIBBED BELT (See page EM-7)**

76. **INSTALL COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-485)**

77. **INSTALL WINDSHIELD WIPER LINK ASSEMBLY**
HINT:
See page WW-13.

78. **INSTALL FRONT WHEELS**
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

79. **ADD ENGINE OIL**

80. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
Torque: 6.9 N*m (70 kgf*cm, 61 in.*lbf)

81. **ADD ENGINE COOLANT (See page CO-6)**

82. **ADD AUTOMATIC TRANSAXLE FLUID (See page AX-220)**

83. **ADD POWER STEERING FLUID**

84. BLEED POWER STEERING FLUID (See page PS-7)

85. CHECK FOR FUEL LEAKS (See page FU-8)

86. CHECK FOR ENGINE OIL LEAKS

87. CHECK FOR ENGINE COOLANT LEAKS (See page CO-1)

88. CHECK FOR EXHAUST GAS LEAKS

89. CHECK SHIFT LEVER POSITION (See page AX-191)

90. CHECK AND ADJUST FRONT WHEEL ALIGNMENT
HINT:
See page SP-4.

91. CHECK IGNITION TIMING (See page EM-1)

92. CHECK ENGINE IDLE SPEED (See page EM-2)

93. CHECK CO/HC (See page EM-4)

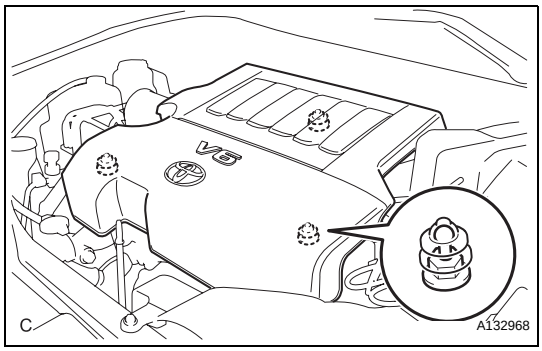
94. CHECK FUNCTION OF THROTTLE BODY (See page ES-503)

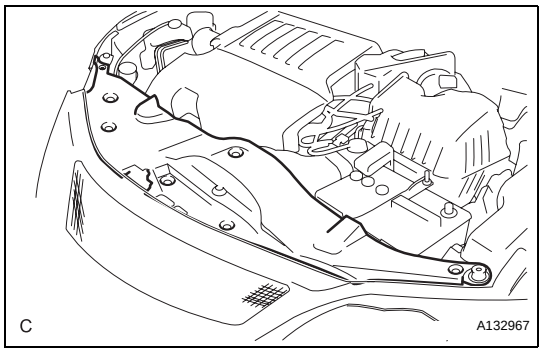
95. INSTALL FRONT FENDER APRON SEAL RH

96. INSTALL ENGINE UNDER COVER LH

97. INSTALL ENGINE UNDER COVER RH

98. INSTALL V-BANK COVER SUB-ASSEMBLY
(a) Fit the 3 retainers and install the V-bank cover.





99. INSTALL COOL AIR INTAKE DUCT SEAL
(a) Install the intake duct seal with the 7 clips.

100. CHECK ABS SPEED SENSOR SIGNAL
(a) ABS: (See page BC-11).
(b) VSC (for BOSCH): (See page BC-290).
(c) VSC (for ADVICS): (See page BC-123).

EM

DISASSEMBLY

1. REMOVE OIL FILLER CAP SUB-ASSEMBLY

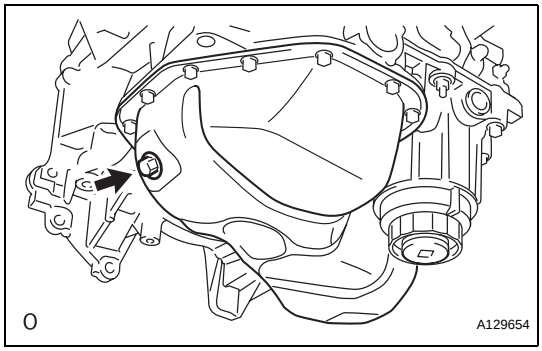
(a) Remove the oil filler cap and gasket.

2. REMOVE SPARK PLUG

(a) Remove the spark plugs.

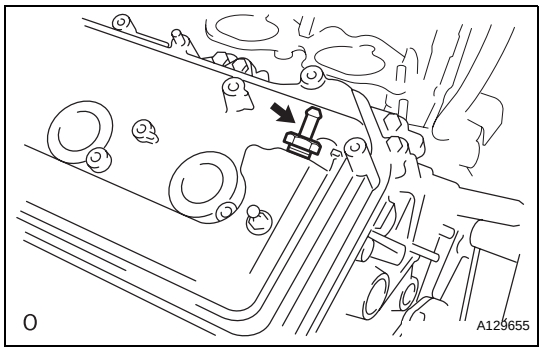
3. REMOVE OIL PAN DRAIN PLUG

(a) Remove the drain plug and gasket.



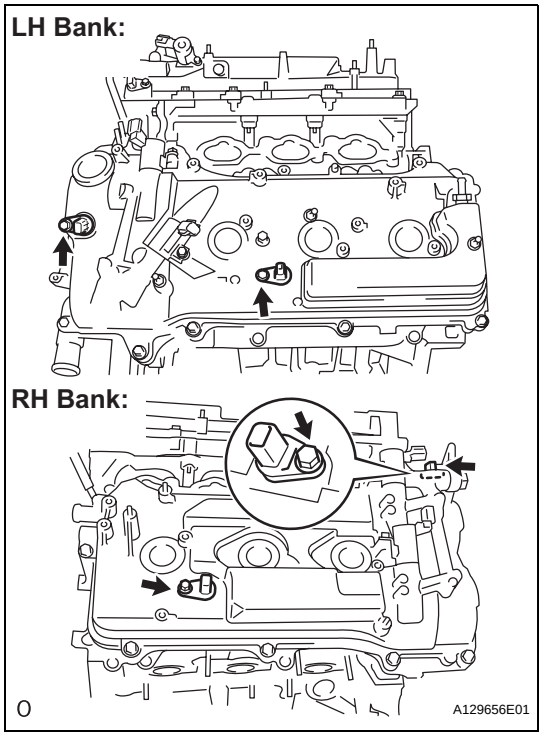
4. REMOVE VENTILATION VALVE SUB-ASSEMBLY

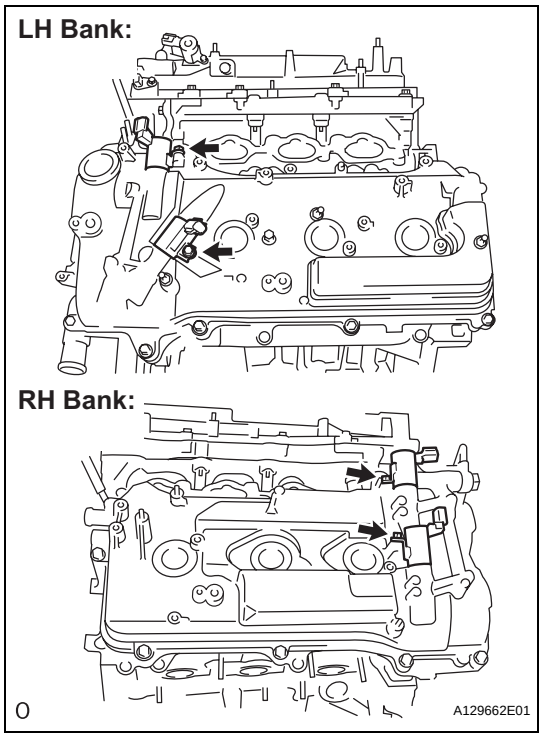
(a) Remove the ventilation valve.



5. REMOVE CAMSHAFT POSITION SENSOR

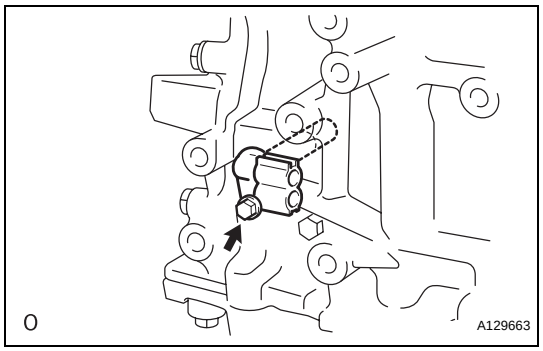
(a) Remove the 4 bolts and 4 sensors.





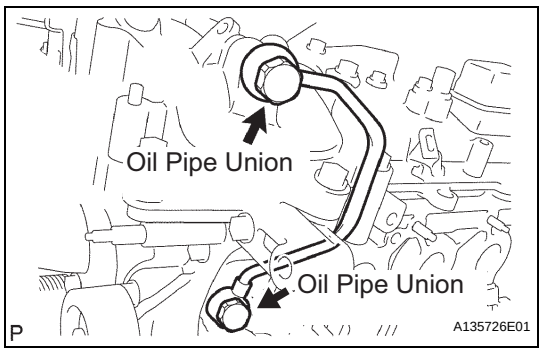
6. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

(a) Remove the 4 bolts and 4 oil control valves.



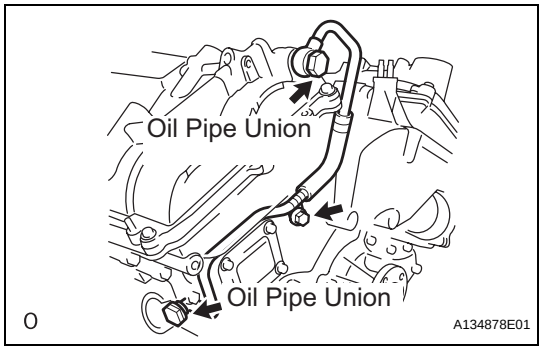
7. REMOVE CRANKSHAFT POSITION SENSOR

(a) Remove the bolt and sensor.



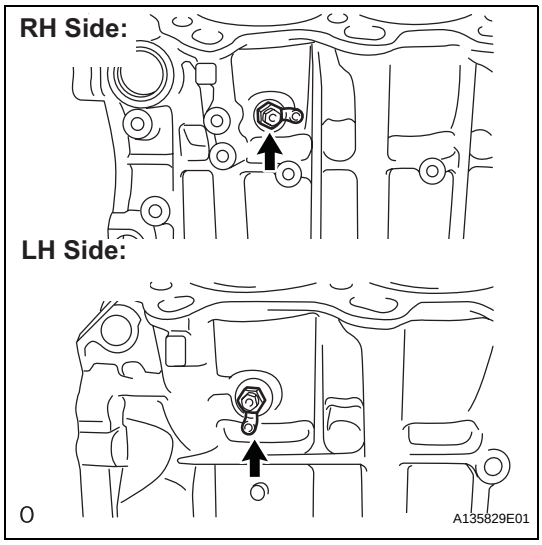
8. REMOVE NO. 1 OIL PIPE

(a) Remove the 2 oil pipe unions and oil pipe.
(b) Remove the oil control valve filter LH and gaskets.



9. REMOVE OIL PIPE

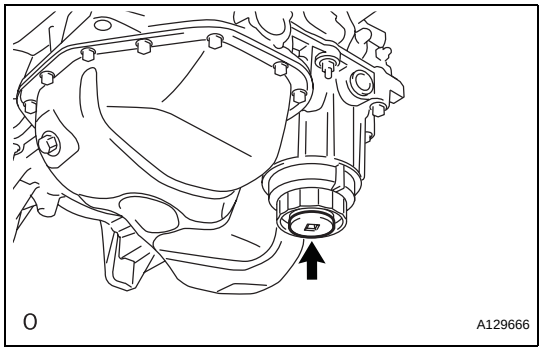
(a) Remove the bolt.
(b) Remove the 2 oil pipe unions and oil pipe.
(c) Remove the oil control valve filter RH and gaskets.



10. REMOVE CYLINDER BLOCK WATER DRAIN COCK SUB-ASSEMBLY

(a) Remove the water drain cocks from the cylinder block.

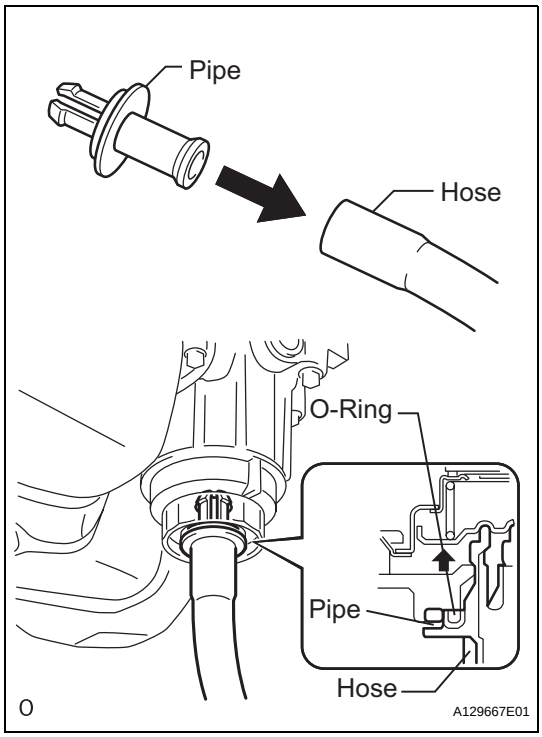
(b) Remove the water drain cock plugs from the water drain cocks.



11. REMOVE OIL FILTER ELEMENT

(a) Remove the drain plug.

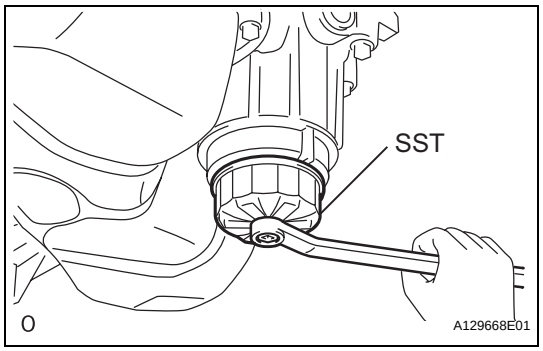
NOTICE:
Do not remove the O-ring from the oil filter cap.



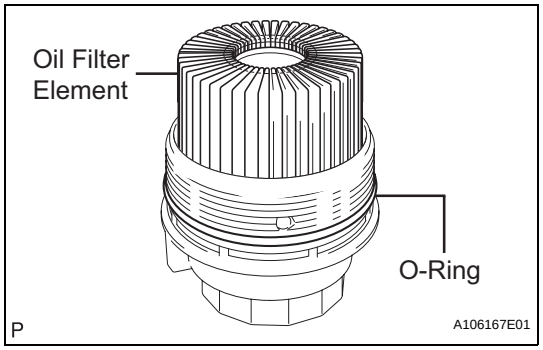
(b) Connect the hose to the pipe.

(c) Insert the pipe with the hose into the oil filter cap.

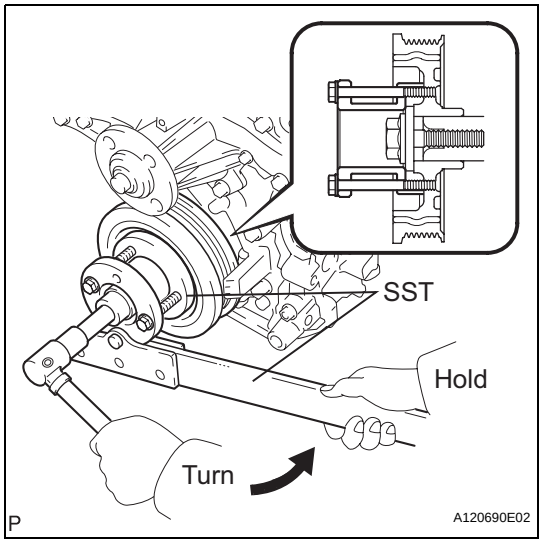
(d) Make sure that the oil is completely drained and remove the pipe and O-ring.



(e) Using SST, remove the oil filter cap.
SST 09228-06501

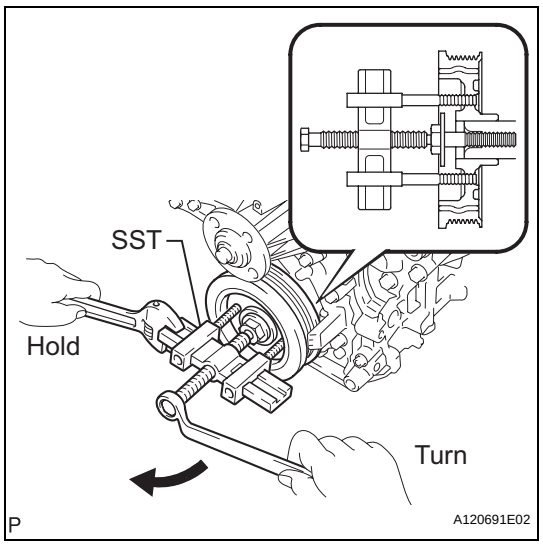


(f) Remove the oil filter element and O-ring from the oil filter cap.
NOTICE:
Do not use any tools when removing the O-ring to prevent the O-ring groove from being damaged.

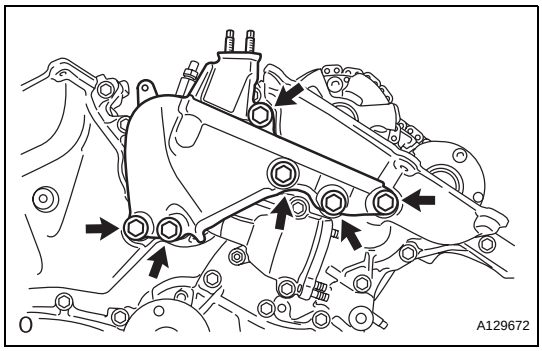


12. REMOVE CRANKSHAFT PULLEY

(a) Using SST, loosen the crankshaft pulley bolt.
SST 09213-70011 (09213-70020), 09330-00021

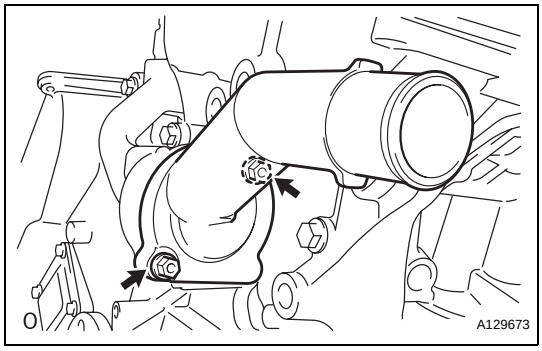


(b) Using SST, remove the crankshaft pulley bolt and crankshaft pulley.
SST 09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05021)



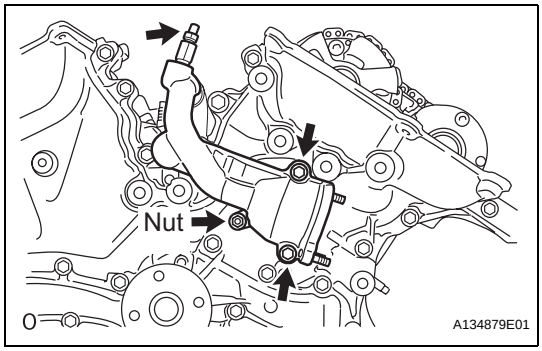
13. REMOVE FRONT ENGINE MOUNTING BRACKET NO. 1 LH

(a) Remove the 6 bolts and engine mounting bracket.
(b) Using "Torx" socket wrench E8, remove the 2 stud bolts.

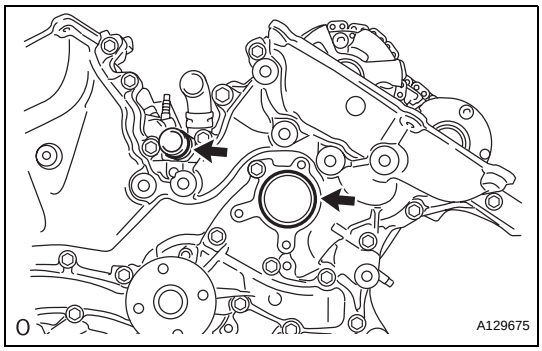


14. REMOVE WATER INLET HOUSING

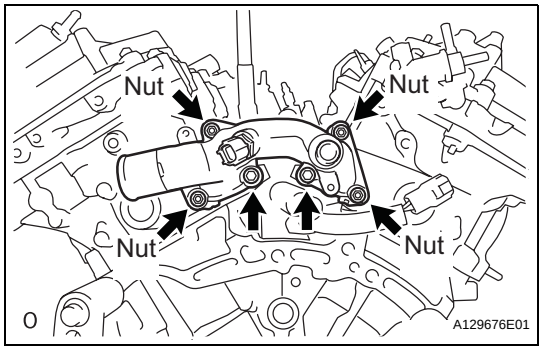
(a) Remove the 2 nuts, water inlet and thermostat.
(b) Remove the gasket.
(c) Remove the housing plug.
(d) Remove the housing drain cock.
(e) Remove the 2 stud bolts.
(f) Separate the water by-pass hose No. 1.



(g) Remove the 2 bolts, nut, and water inlet housing.

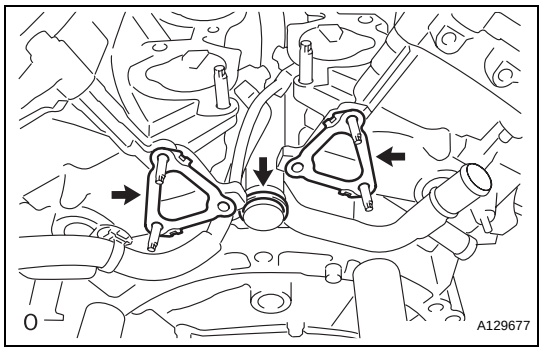


(h) Remove the 2 O-rings.

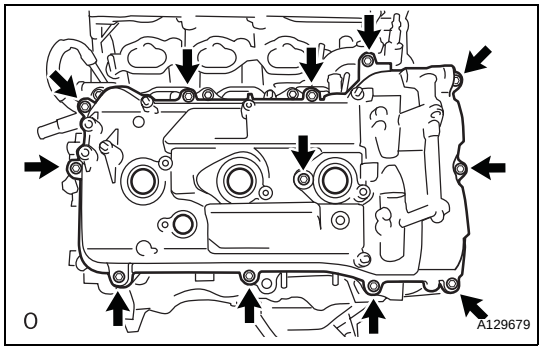


15. REMOVE WATER OUTLET

(a) Remove the 2 bolts, 4 nuts and water outlet.

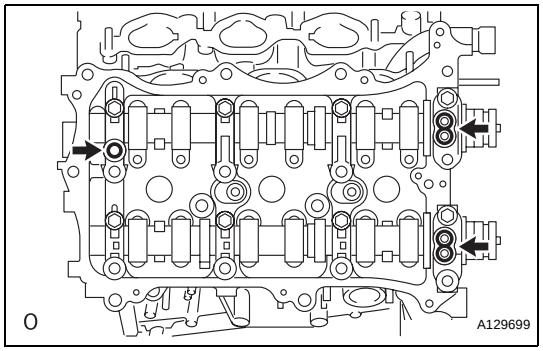


(b) Remove the 2 gaskets and O-ring.

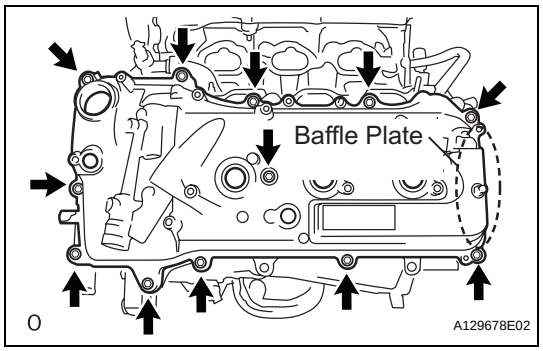


16. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (for Bank 1)

(a) Remove the 12 bolts, seal washer, head cover and gasket.



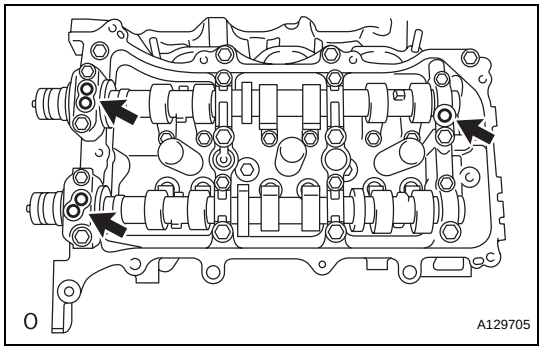
(b) Remove the 3 gaskets.



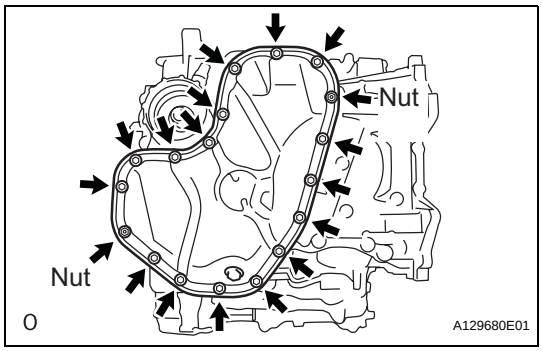
17. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (for Bank 2)

(a) Remove the 12 bolts, seal washer, head cover and gasket.

NOTICE:
The baffle plate is located on the back of the portion shown in the illustration. Do not damage the baffle plate when removing the head cover.

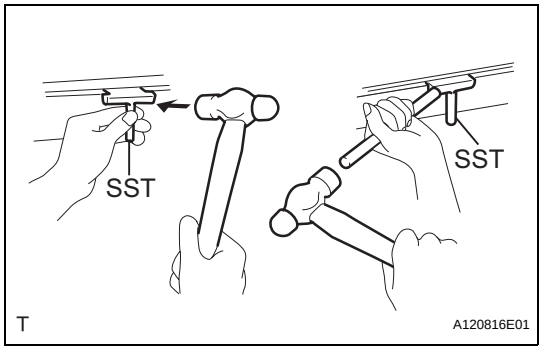


(b) Remove the 3 gaskets.



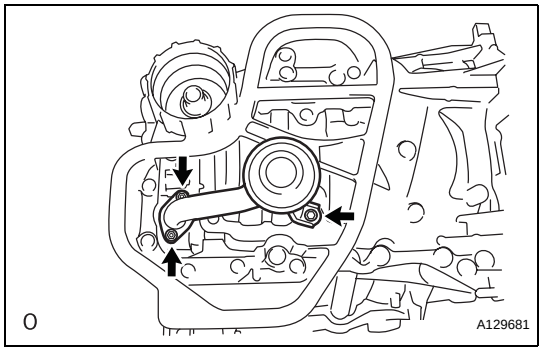
18. REMOVE NO. 2 OIL PAN SUB-ASSEMBLY

(a) Remove the 16 bolts and 2 nuts.



(b) Insert the blade of SST between the oil pans. Cut through the applied sealer and remove the No. 2 oil pan sub-assembly.
SST 09032-00100
NOTICE:
Be careful not to damage the contact surfaces of the oil pans.

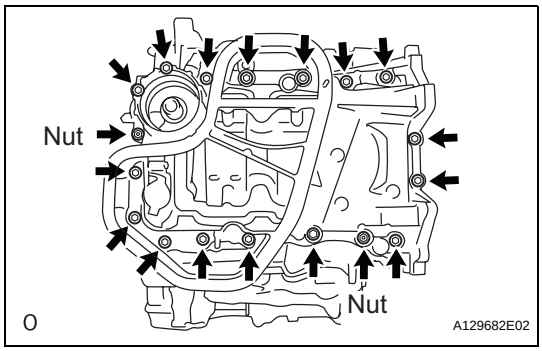
(c) Using "Torx" socket wrench E6, remove the 2 stud bolts.



19. REMOVE OIL STRAINER SUB-ASSEMBLY

(a) Remove the bolt, 2 nuts, oil strainer and gasket.

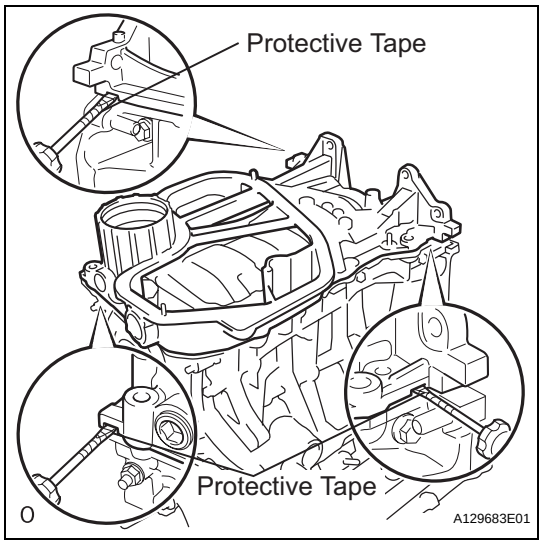
(b) Using "Torx" socket wrench E6, remove the 2 stud bolts.



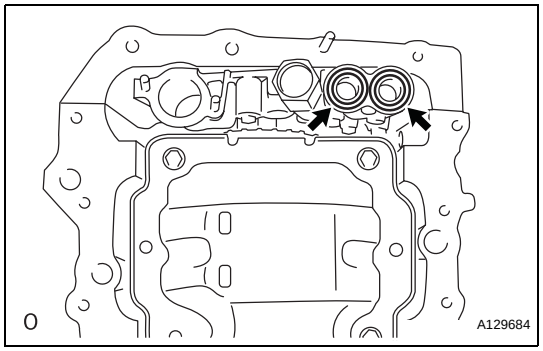
20. REMOVE OIL PAN SUB-ASSEMBLY

(a) Remove the 16 bolts and 2 nuts.
HINT:
Be sure to clean the bolts and stud bolts and check the threads for cracks or other damage.

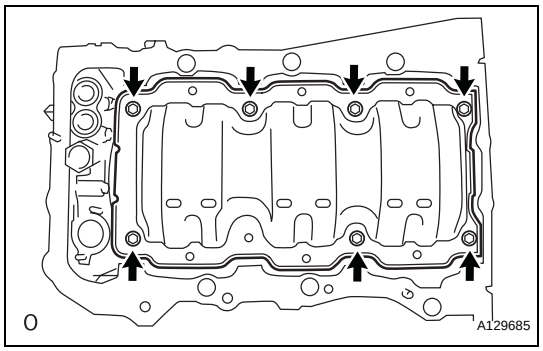
EM



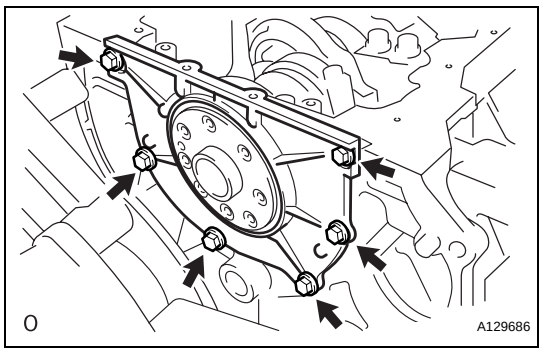
(b) Remove the oil pan by prying between the oil pan and cylinder block with a screwdriver.
NOTICE:
Be careful not to damage the contact surfaces of the cylinder block and oil pan.
HINT:
Tape the screwdriver tip before use.



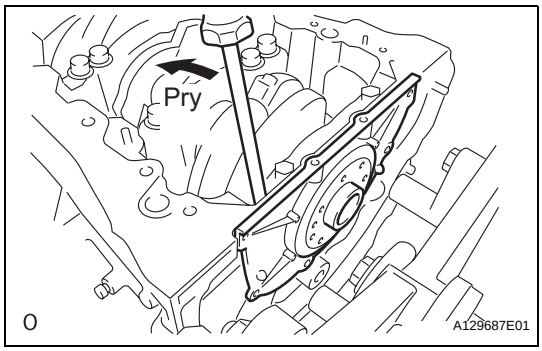
(c) Remove the 2 O-rings.
(d) Using "Torx" socket wrench E8, remove the 2 stud bolts.



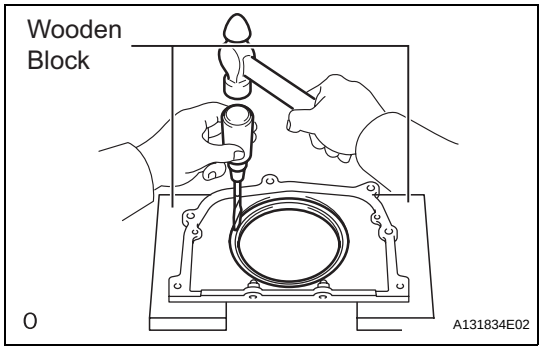
21. REMOVE OIL PAN BAFFLE PLATE
(a) Remove the 7 bolts and baffle plate.



22. REMOVE ENGINE REAR OIL SEAL RETAINER
(a) Remove the 6 bolts.



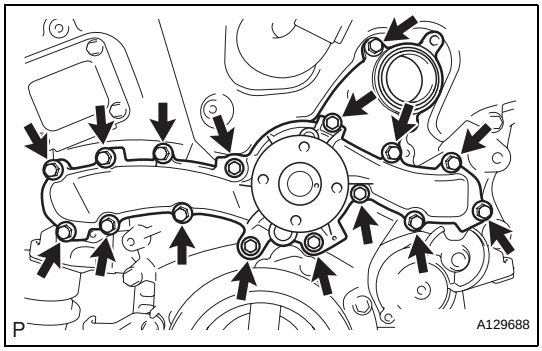
(b) Using a screwdriver, pry out the oil seal retainer.
NOTICE:
Be careful not to damage the engine rear oil seal retainer.
HINT:
Tape the screwdriver tip before use.



23. REMOVE ENGINE REAR OIL SEAL

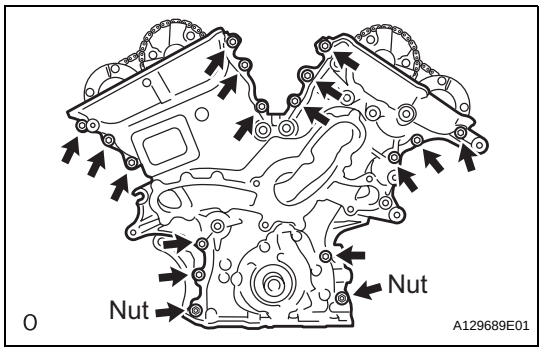
(a) Place the oil seal retainer on wooden blocks.
NOTICE:
Be careful not to damage the engine rear oil seal retainer.

(b) Using a screwdriver and a hammer, tap out the oil seal.
HINT:
Tape the screwdriver tip before use.



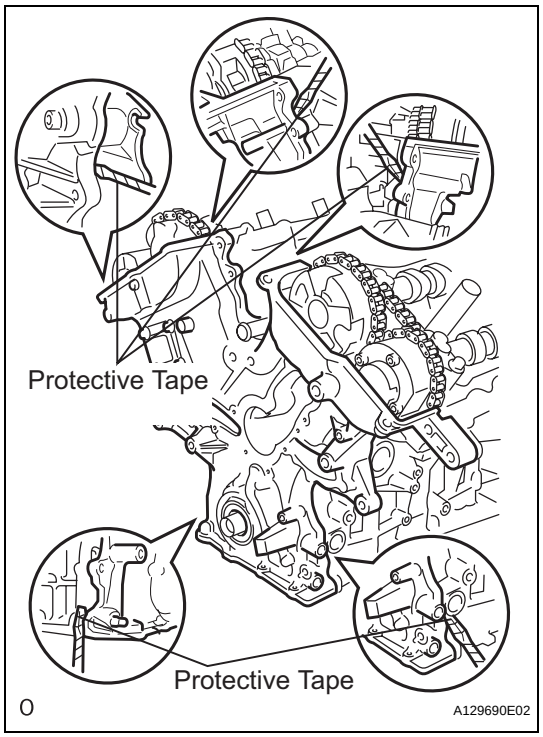
24. REMOVE WATER PUMP ASSEMBLY

(a) Remove the 16 bolts, water pump and gasket.



25. REMOVE TIMING CHAIN COVER SUB-ASSEMBLY

(a) Remove the 15 bolts and 2 nuts as shown in the illustration.



(b) Remove the timing chain cover by prying between the timing chain cover and cylinder head or cylinder block with a screwdriver.

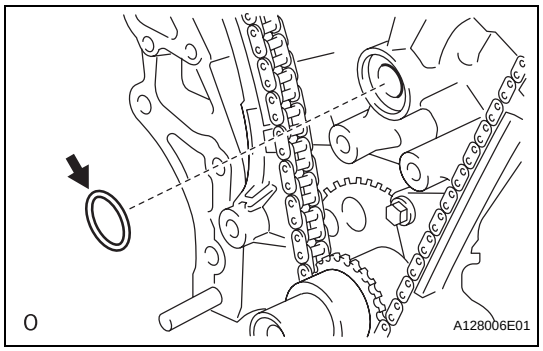
NOTICE:

Be careful not to damage the contact surfaces of the cylinder head, cylinder block and chain cover.

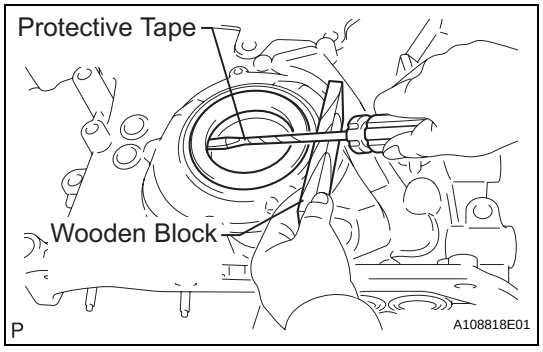
HINT:

Tape the screwdriver tip before use.

(c) Remove the 4 bolts, chain cover plate and gasket.



(d) Remove the gasket.



26. REMOVE TIMING CHAIN CASE OIL SEAL

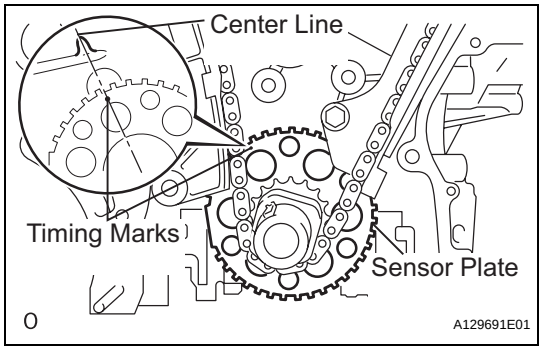
(a) Using a screwdriver, pry out the oil seal.

HINT:

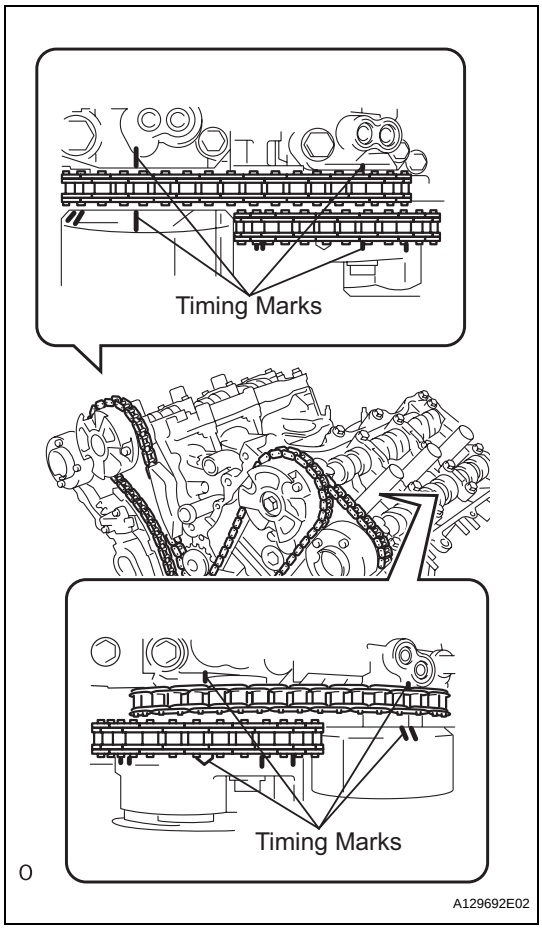
Tape the screwdriver tip before use.

27. SET NO. 1 CYLINDER TO TDC / COMPRESSION

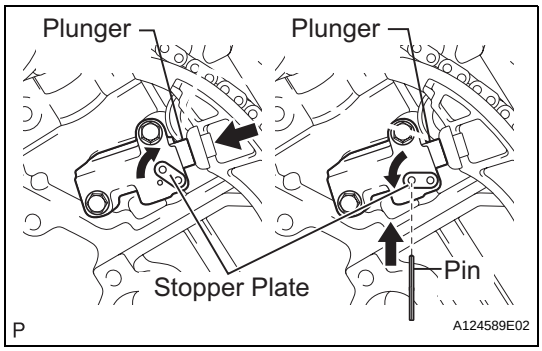
(a) Temporarily tighten the pulley set bolt.



(b) Set the timing mark on the crank angle sensor plate to the RH block bore center line (TDC / compression).



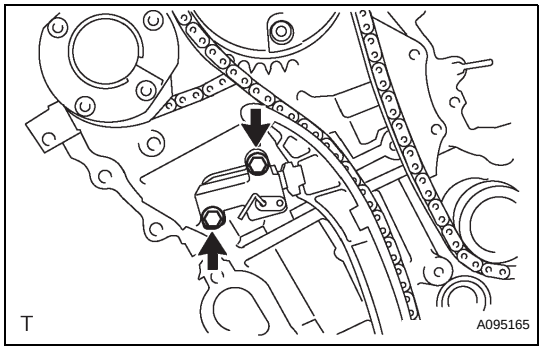
(c) Check that the timing marks of the camshaft timing gears are aligned with the timing marks of the bearing cap as shown in the illustration.
If not, turn the crankshaft 1 revolution (360°) and align the timing marks as above.



28. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY

(a) Move the stopper plate upward to release the lock, and push the plunger deep into the tensioner.

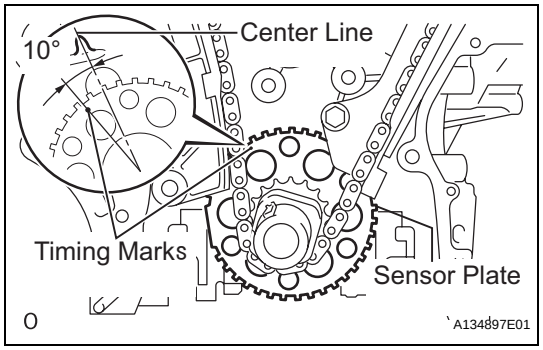
(b) Move the stopper plate downward to set the lock, and insert a pin of ϕ1.27 mm (0.05 in.) into the stopper plate's hole.



(c) Remove the 2 bolts and chain tensioner.

29. REMOVE CHAIN TENSIONER SLIPPER

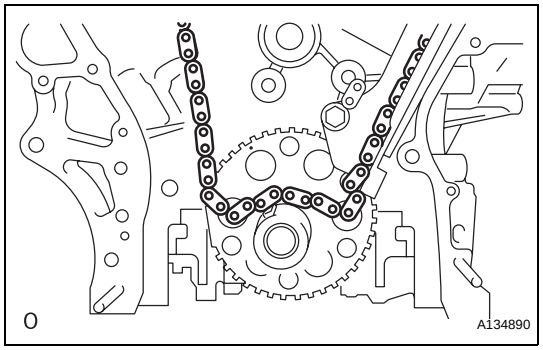
(a) Remove the chain tensioner slipper.



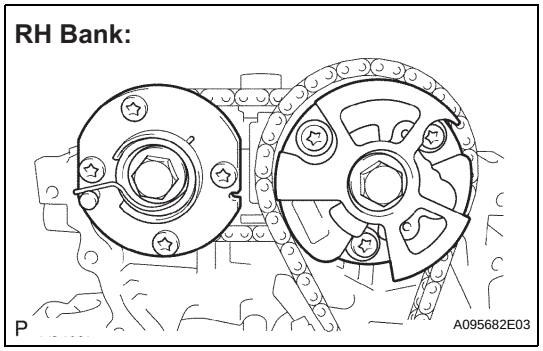
30. REMOVE CHAIN SUB-ASSEMBLY

(a) Turn the crankshaft counterclockwise 10° to loosen the chain of the crankshaft timing sprocket.

(b) Remove the pulley set bolt.

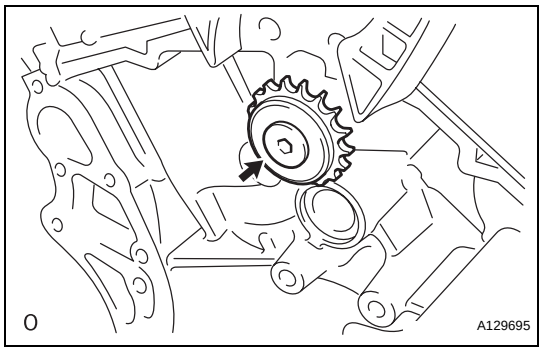


(c) Remove the chain from the crankshaft timing sprocket and place it on the crankshaft.



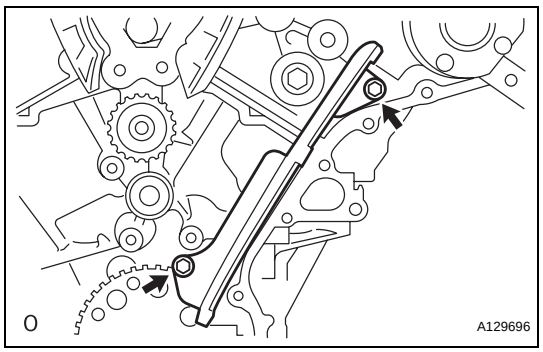
(d) Turn the camshaft timing gear assembly on the RH bank clockwise (approximately 60°) and set it as shown in the illustration. Be sure to loosen the chain between the banks.

(e) Remove the chain.



31. REMOVE IDLE SPROCKET ASSEMBLY

(a) Using a 10 mm hexagon wrench, remove the No. 2 idle gear shaft, sprocket and No. 1 idle gear shaft.



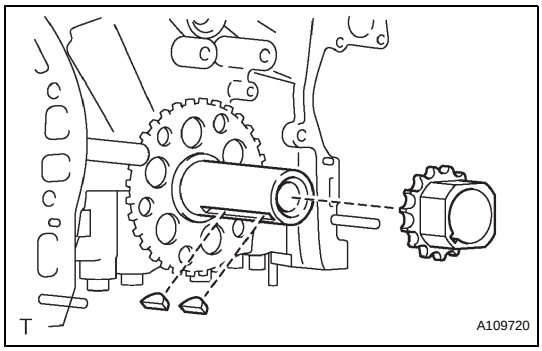
32. REMOVE NO. 1 CHAIN VIBRATION DAMPER

(a) Remove the 2 bolts and vibration damper.

33. REMOVE NO. 2 CHAIN VIBRATION DAMPER

(a) Remove the 2 vibration dampers.

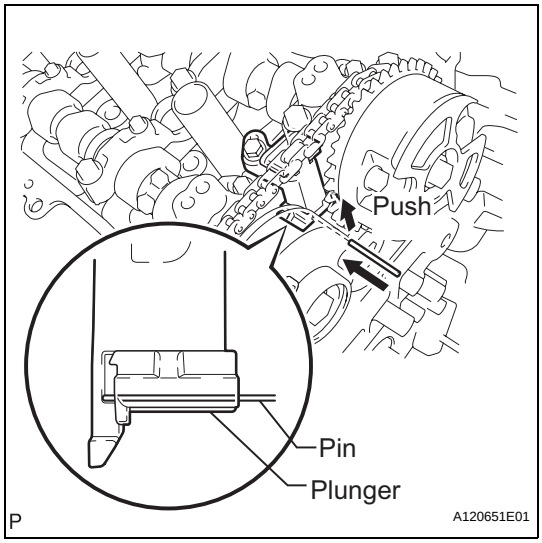
EM



34. REMOVE CRANKSHAFT TIMING SPROCKET

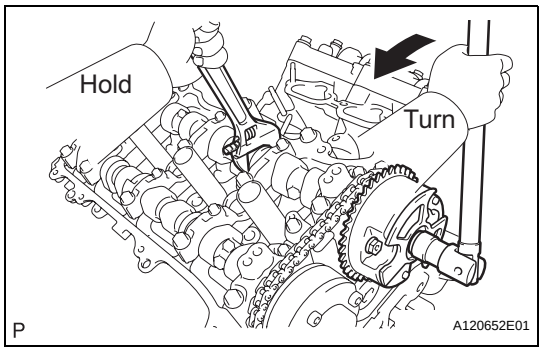
(a) Remove the crankshaft timing sprocket from the crankshaft.

(b) Remove the 2 pulley set keys from the crankshaft.



35. REMOVE CAMSHAFT TIMING GEARS AND NO. 2 CHAIN (for Bank 1)

(a) While raising the No. 2 chain tensioner, insert a pin of ϕ 1.0 mm (0.039 in.) into the hole to fix the No. 2 chain tensioner.

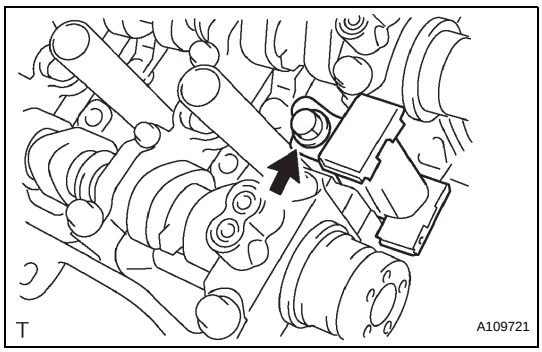


(b) Hold the hexagonal portion of the camshaft with a wrench, and remove the 2 bolts and 2 camshaft timing gear assemblies.

NOTICE:

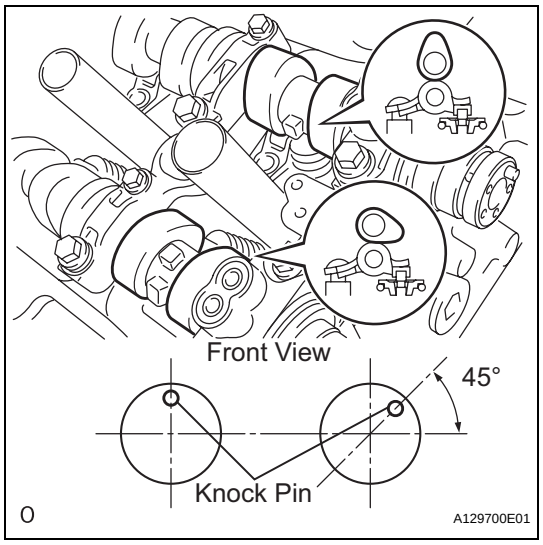
- **Be careful not to damage the cylinder head with the wrench.**
- **Do not disassemble the camshaft timing gear assemblies.**

(c) Remove the No. 2 chain.



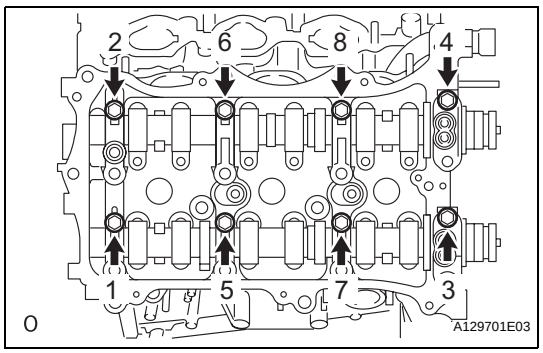
36. REMOVE NO. 2 CHAIN TENSIONER ASSEMBLY

(a) Remove the bolt and No. 2 chain tensioner.

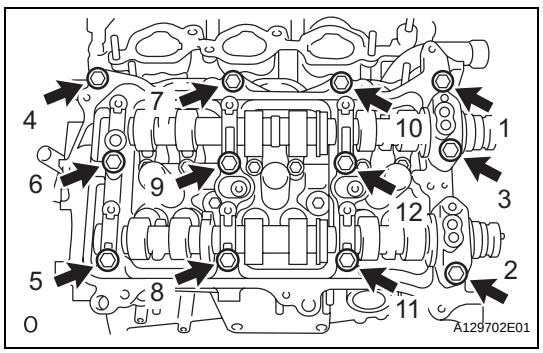


37. REMOVE CAMSHAFT BEARING CAP (for Bank 1)

(a) Check that the camshafts are positioned as shown in the illustration.



(b) Uniformly loosen and remove the 8 bearing cap bolts in the sequence shown in the illustration.



(c) Uniformly loosen and remove the 12 bearing cap bolts in the sequence shown in the illustration.
NOTICE:
Uniformly loosen the bolts while keeping the camshaft level.

(d) Remove the 5 bearing caps.

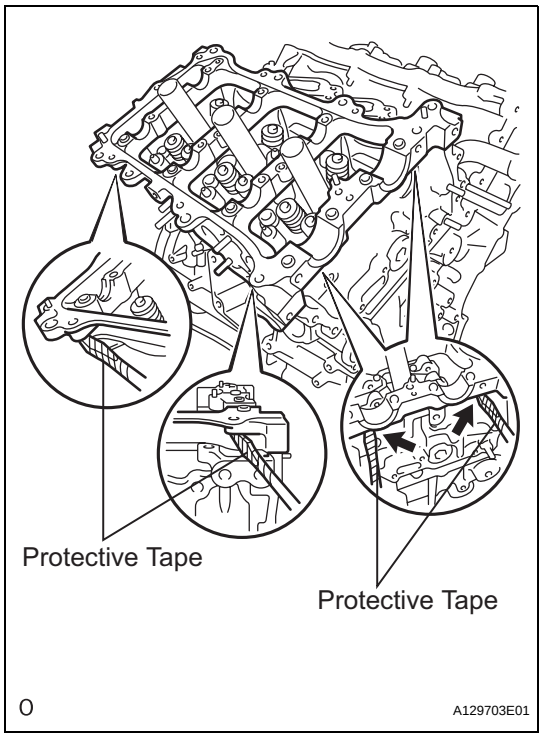
38. REMOVE CAMSHAFT

(a) Remove the camshaft.

39. REMOVE NO. 2 CAMSHAFT

(a) Remove the No. 2 camshaft.

EM



40. REMOVE CAMSHAFT HOUSING SUB-ASSEMBLY RH

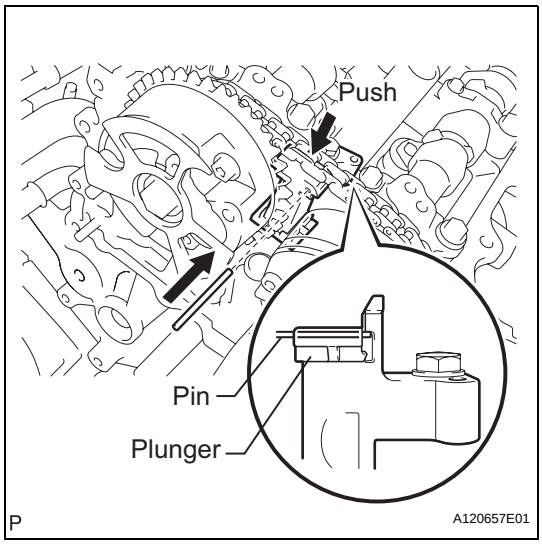
(a) Remove the camshaft housing sub-assembly RH by prying between the cylinder head and camshaft housing sub-assembly RH with a screwdriver.

NOTICE:

Be careful not to damage the contact surfaces of the cylinder head and camshaft housing.

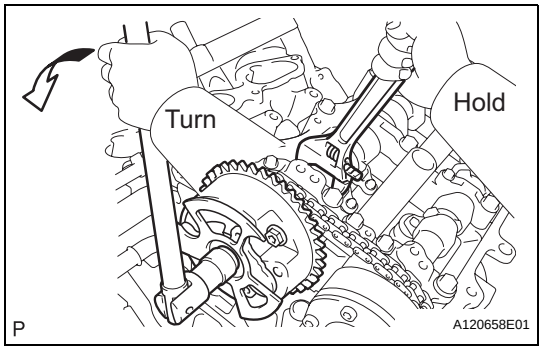
HINT:

Tape the screwdriver tip before use.



41. REMOVE CAMSHAFT TIMING GEARS AND NO. 2 CHAIN (for Bank 2)

(a) While pushing down the No. 3 chain tensioner, insert a pin of ϕ 1.0 mm (0.039 in.) into the hole to fix the No. 3 chain tensioner.

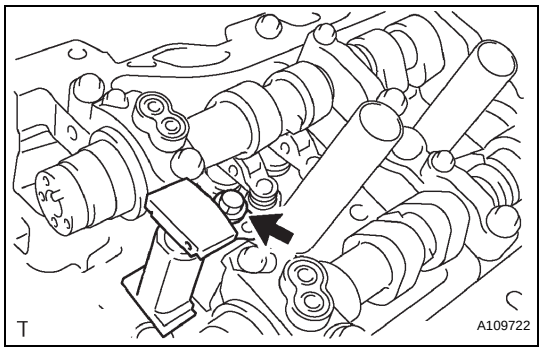


(b) Hold the hexagonal portion of the camshaft with a wrench, and remove the 2 bolts and 2 camshaft timing gear assemblies.

NOTICE:

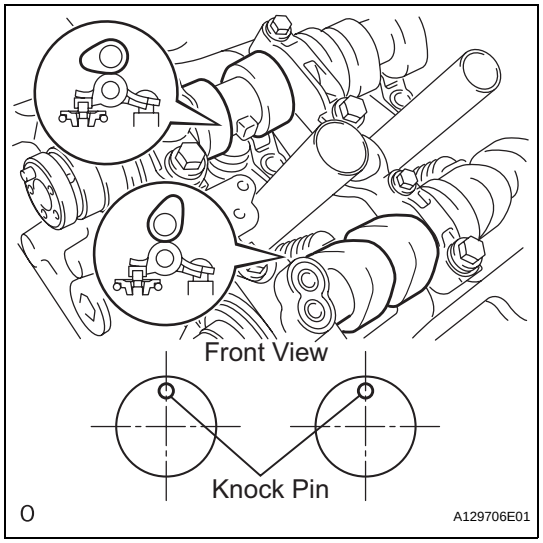
- **Be careful not to damage the cylinder head with the wrench.**
- **Do not disassemble the camshaft timing gear assemblies.**

(c) Remove the No. 2 chain.



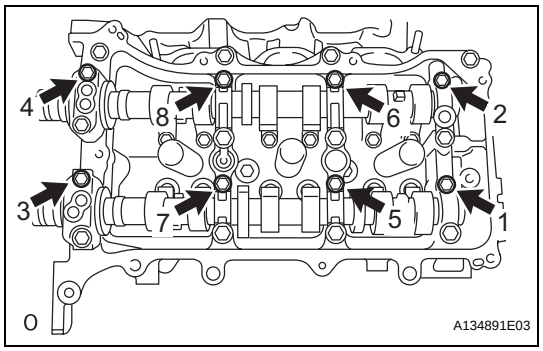
42. REMOVE NO. 3 CHAIN TENSIONER ASSEMBLY

(a) Remove the bolt and No. 3 chain tensioner.

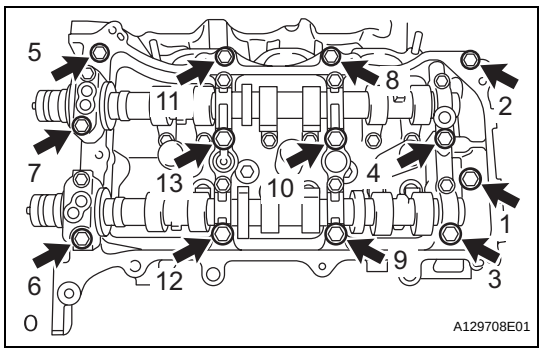


43. REMOVE CAMSHAFT BEARING CAP (for Bank 2)

(a) Check that the camshafts are positioned as shown in the illustration.



(b) Uniformly loosen and remove the 8 bearing cap bolts in the sequence shown in the illustration.



(c) Uniformly loosen and remove the 13 bearing cap bolts in the sequence shown in the illustration.
NOTICE:
Uniformly loosen the bolts while keeping the camshaft level.

(d) Remove the 5 bearing caps.

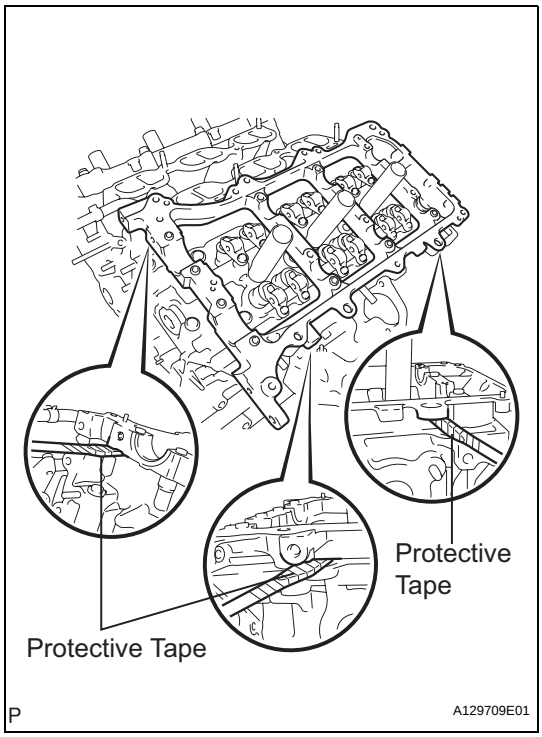
44. REMOVE NO. 3 CAMSHAFT

(a) Remove the No. 3 camshaft.

45. REMOVE NO. 4 CAMSHAFT

(a) Remove the No. 4 camshaft.

EM



46. REMOVE CAMSHAFT HOUSING SUB-ASSEMBLY LH

(a) Remove the camshaft housing by prying between the cylinder head and camshaft housing with a screwdriver.

NOTICE:

Be careful not to damage the contact surfaces of the cylinder head and camshaft housing.

HINT:

Tape the screwdriver tip before use.

47. REMOVE NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY

(a) Remove the 24 valve rocker arms.

HINT:

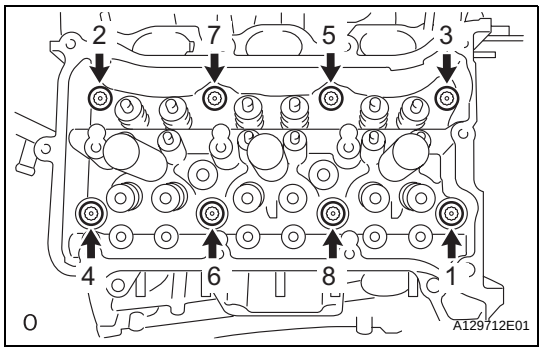
Arrange the removed parts in the correct order.

48. REMOVE VALVE LASH ADJUSTER ASSEMBLY

(a) Remove the 24 valve lash adjusters from the cylinder head.

HINT:

Arrange the removed parts in the correct order.



49. REMOVE CYLINDER HEAD SUB-ASSEMBLY RH

(a) Using a 10 mm bi-hexagon wrench, uniformly loosen the 8 bolts in the sequence shown in the illustration. Remove the 8 cylinder head bolts and plate washers.

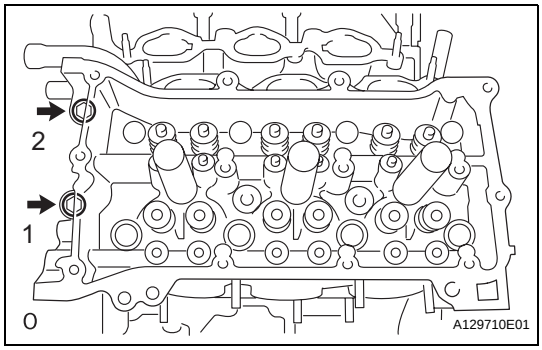
NOTICE:

- **Be careful not to drop washers into the cylinder head.**
- **Cylinder head warpage or cracking could result from removing bolts in an incorrect order.**

HINT:

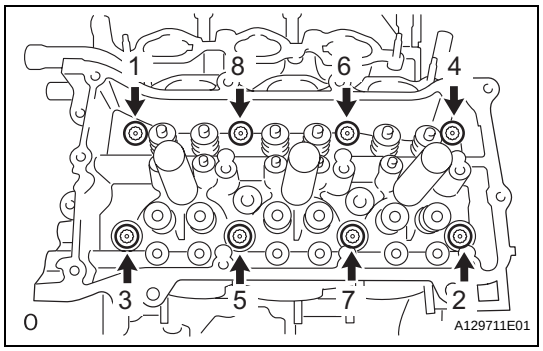
Be sure to keep separate the removed parts for each installation position.

(b) Remove the cylinder head and gasket.



50. REMOVE CYLINDER HEAD SUB-ASSEMBLY LH

(a) Uniformly loosen and remove the bolts in the sequence shown in the illustration.



(b) Using a 10 mm bi-hexagon wrench, uniformly loosen the 8 bolts in the sequence shown in the illustration. Remove the 8 cylinder head bolts and plate washers.

NOTICE:

- **Be careful not to drop washers into the cylinder head.**
- **Cylinder head warpage or cracking could result from removing bolts in an incorrect order.**

HINT:

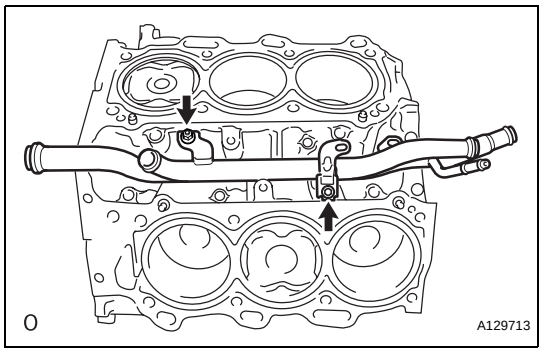
Be sure to keep separate the removed parts for each installation position.

(c) Remove the cylinder head and gasket.

51. REMOVE WATER INLET PIPE

(a) Separate the No. 1 water by-pass hose.

(b) Remove the 2 bolts and water inlet pipe.

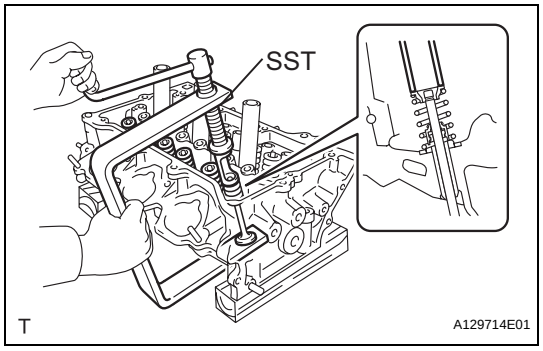


52. REMOVE VALVE STEM CAP

(a) Remove the valve stem caps from the cylinder heads.

HINT:

Arrange the removed parts in the correct order.



53. REMOVE INTAKE VALVE

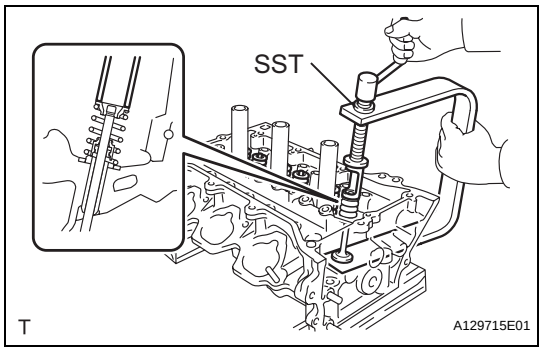
(a) Using SST, compress the compression spring and remove the valve spring retainer locks.

SST 09202-70020 (09202-00010)

(b) Remove the retainer, compression spring and valve.

HINT:

Arrange the removed parts in the correct order.



54. REMOVE EXHAUST VALVE

(a) Using SST, compress the compression spring and remove the valve spring retainer locks.

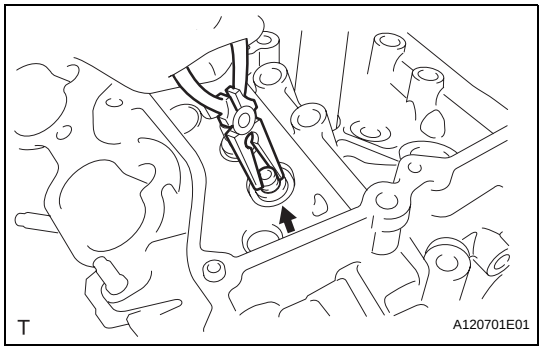
SST 09202-70020 (09202-00010)

(b) Remove the retainer, compression spring and valve.

HINT:

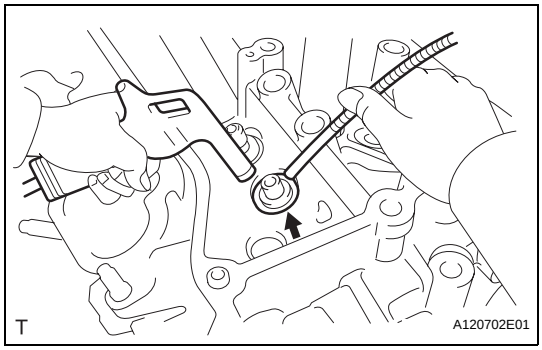
Arrange the removed parts in the correct order.

EM



55. REMOVE VALVE STEM OIL SEAL

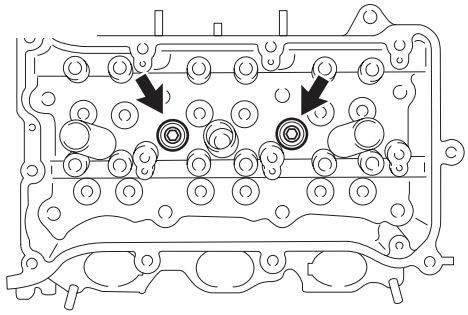
(a) Using needle-nose pliers, remove the oil seals.



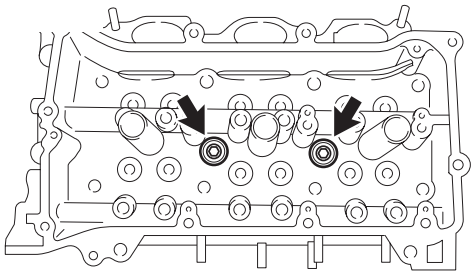
56. REMOVE VALVE SPRING SEAT

(a) Using compressed air and a magnetic finger, remove the valve spring seats by blowing air onto them.

RH Bank:



LH Bank:

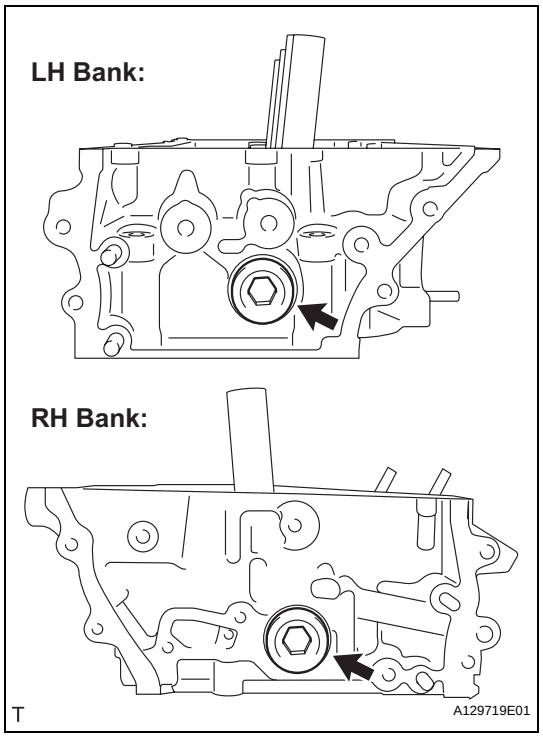


57. REMOVE NO. 1 STRAIGHT SCREW PLUG

(a) Using a 10 mm hexagon wrench, remove the 4 screw plugs and 4 gaskets.

NOTICE:

If water leaks from the straight screw plug or the plug corrodes, replace it.



58. REMOVE NO. 2 STRAIGHT SCREW PLUG

(a) Using a 14 mm hexagon wrench, remove the screw plugs and gaskets.

NOTICE:

If water leaks from the straight screw plug or the plug corrodes, replace it.

59. REMOVE RING PIN

NOTICE:

It is not necessary to remove the ring pin unless it is being replaced.

60. REMOVE STUD BOLT

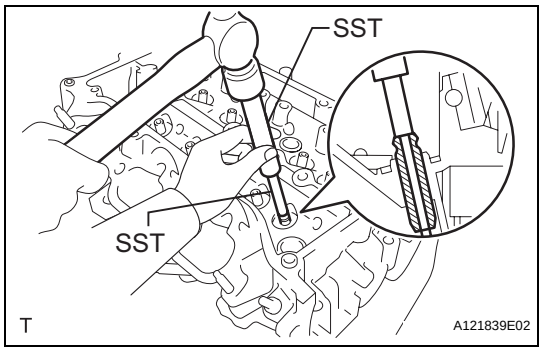
NOTICE:

If the stud bolt is deformed or the threads are damaged, replace it.

61. REMOVE INTAKE VALVE GUIDE BUSH

(a) Heat the cylinder head to 80 to 100°C (176 to 212°F).

(b) Place the cylinder head on wooden blocks.



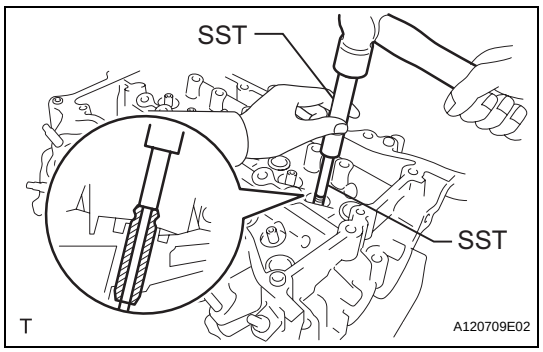
(c) Using SST and a hammer, tap out the guide bushes.

SST 09201-10000 (09201-01050), 09950-70010 (09951-07100)

62. REMOVE EXHAUST VALVE GUIDE BUSH

(a) Heat the cylinder head to 80 to 100°C (176 to 212°F).

(b) Place the cylinder head on wooden blocks.



(c) Using SST and a hammer, tap out the guide bushes.

SST 09201-10000 (09201-01050), 09950-70010 (09951-07100)

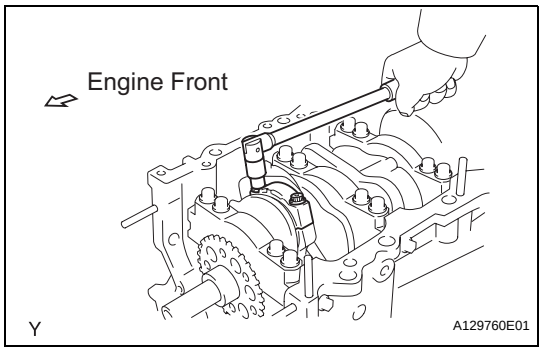
63. REMOVE PISTON SUB-ASSEMBLY WITH CONNECTING ROD

(a) Check that the matchmarks on the connecting rod and cap are aligned.

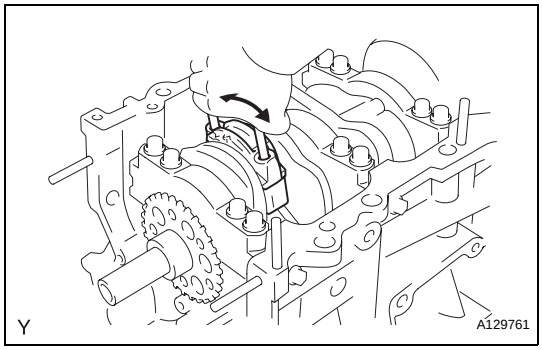
HINT:

The matchmarks on the connecting rods and caps are for ensuring the correct reassembly.

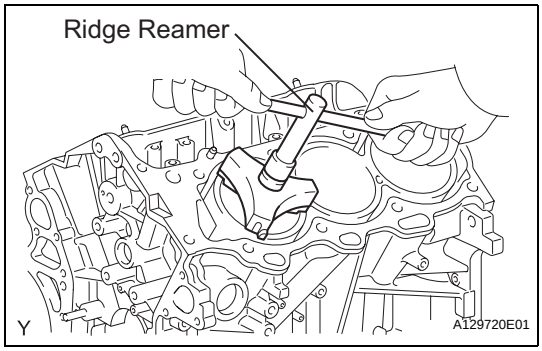
EM



(b) Remove the 2 connecting rod cap bolts.

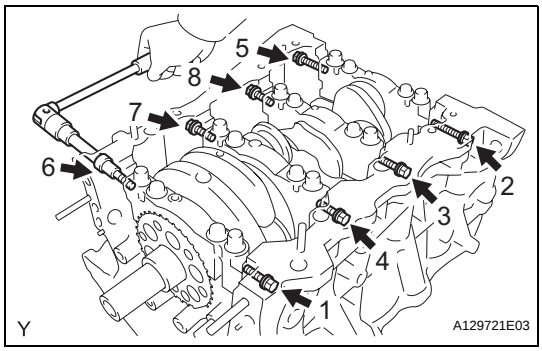


(c) Using the 2 removed connecting rod cap bolts, remove the connecting rod cap and lower bearing by wiggling the connecting rod cap right and left.
HINT:
Keep the lower bearing inserted to the connecting rod cap.

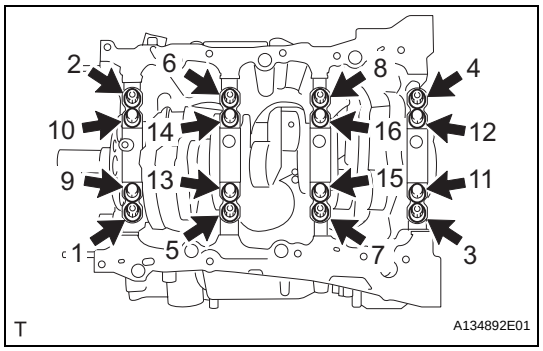


(d) Using a ridge reamer, remove all the carbon from the top of the cylinder.
(e) Push the piston, connecting rod assembly and upper bearing through the top of the cylinder block.
HINT:
- Keep the bearing, connecting rod and cap together.
- Arrange the piston and connecting rod assemblies in the correct order.

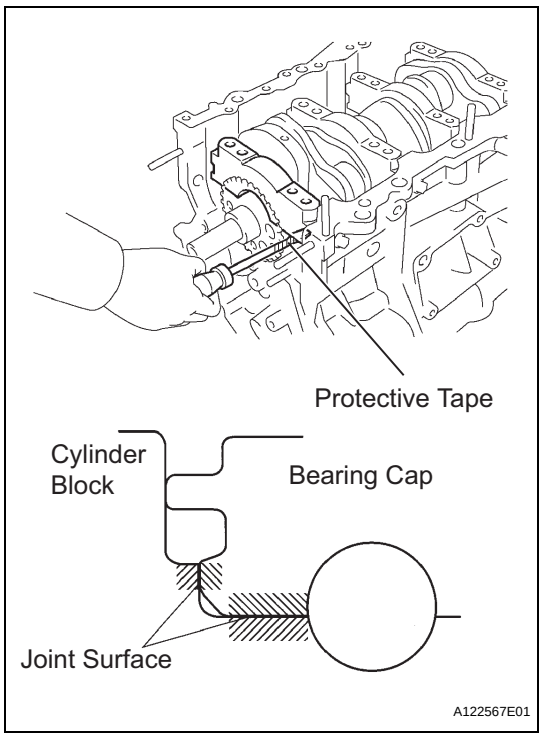
64. REMOVE CONNECTING ROD BEARING
NOTICE:
Arrange the removed parts in the correct order.



65. REMOVE CRANKSHAFT
(a) Uniformly loosen and remove the 8 main bearing cap bolts and seal washers in the several steps and in the sequence shown in the illustration.



(b) Uniformly loosen the 16 bearing cap bolts, in several steps and in the sequence shown in the illustration.

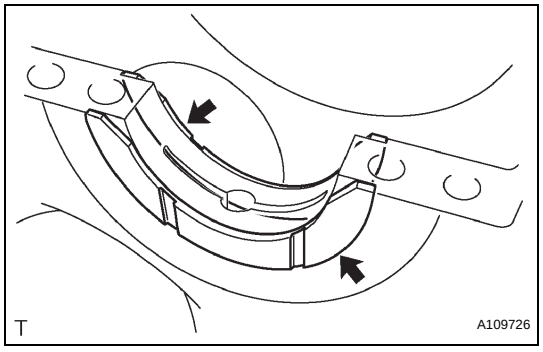


(c) Using a screwdriver, pry out the main bearing caps. Remove the 4 main bearing caps and lower bearings.
NOTICE:
- **Push up on the cap little by little, from the right and left side alternately so that the cap can be removed.**
- **Be careful not to damage the joint surface of the cylinder block and the main bearing cap.**

(d) Remove the crankshaft.

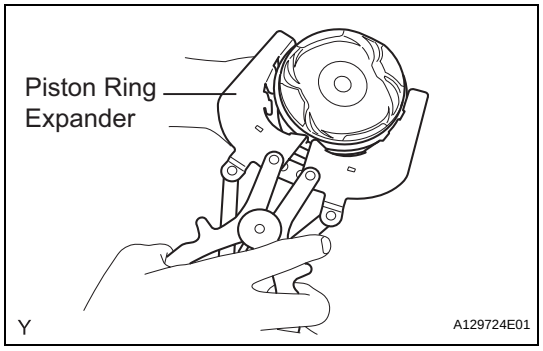
66. REMOVE CRANKSHAFT BEARING

HINT:
Arrange the removed parts in the correct order.



67. REMOVE CRANKSHAFT THRUST WASHER SET

(a) Remove the upper bearings and upper thrust washers from the cylinder block.

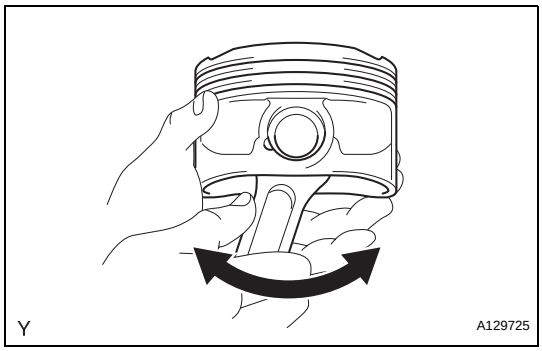


68. REMOVE PISTON RING SET

(a) Using a piston ring expander, remove the 2 compression rings.

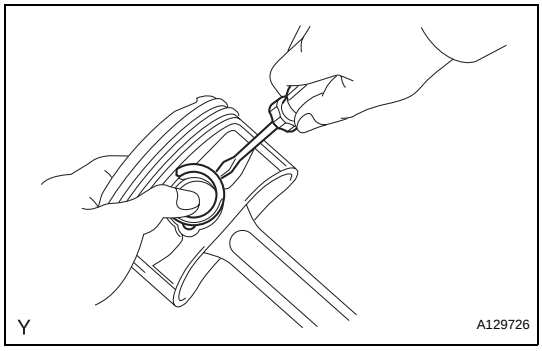
(b) Remove the oil ring expander and 2 side rails by hand.
HINT:
Arrange the removed parts in the correct order.

EM



69. REMOVE PISTON SUB-ASSEMBLY WITH PIN

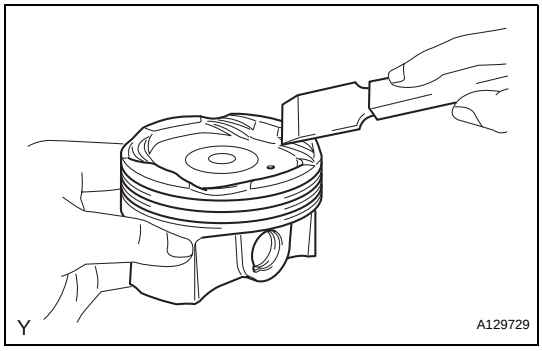
(a) Check the fitting condition between the piston and piston pin.
   (1) Try to move the piston back and forth on the piston pin.
   If any movement is felt, replace the piston and pin as a set.



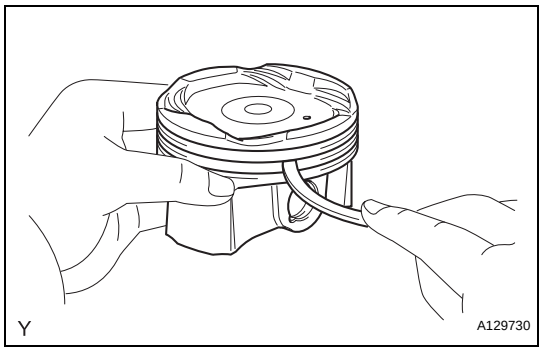
(b) Disconnect the connecting rod from the piston.
   (1) Using a screwdriver, pry off the snap rings from the piston.

   (2) Gradually heat the piston to approximately 80°C (176°F).

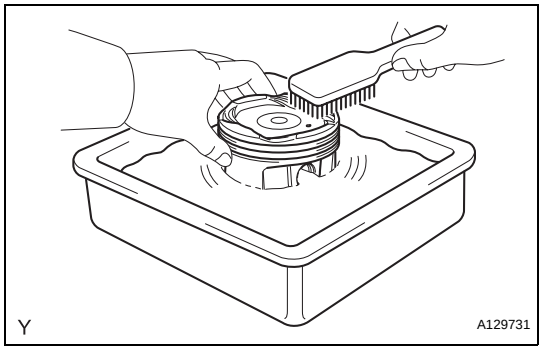
   (3) Using a brass bar and plastic hammer, lightly tap out the piston pin and remove the connecting rod.
   HINT:
   - The piston and pin are a matched set.
   - Arrange the pistons, pins, rings, connecting rods and bearings in the correct order.



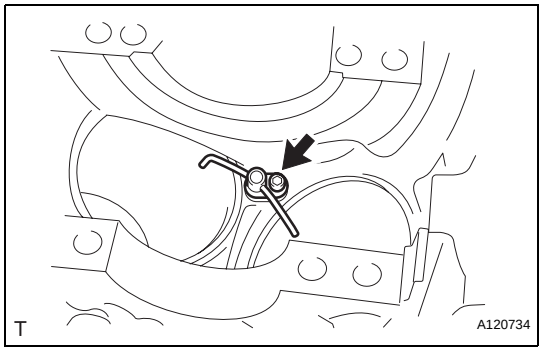
(c) Using a gasket scraper, remove the carbon from the piston top.



(d) Using a groove cleaning tool or broken ring, clean the piston ring grooves.



(e) Using solvent and a brush, thoroughly clean the piston.
NOTICE:
Do not use a wire brush.

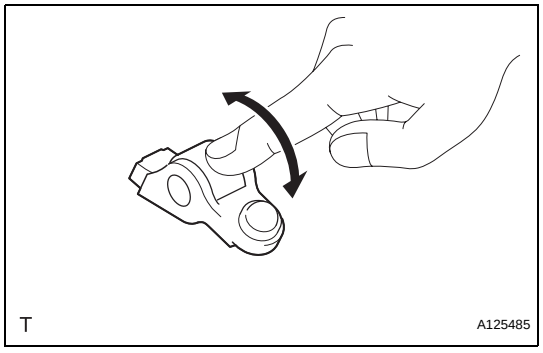


70. REMOVE NO. 1 OIL NOZZLE SUB-ASSEMBLY

(a) Using a 5 mm hexagon wrench, remove the bolts and oil nozzles.

(b) Check the 3 oil nozzles for damage or clogging. If necessary, replace the oil nozzle.

71. CLEAN CYLINDER BLOCK



INSPECTION

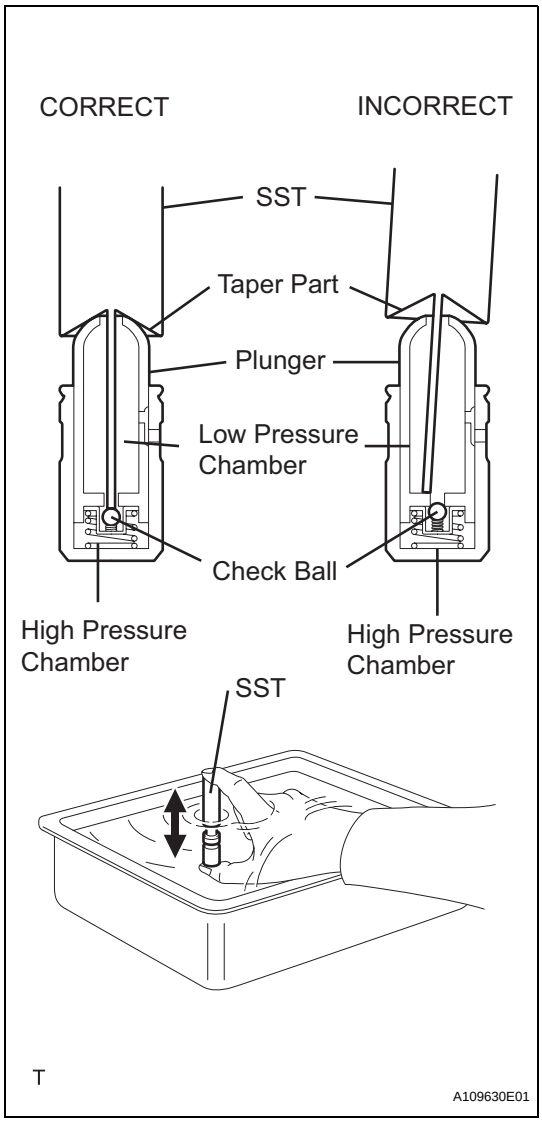
1. INSPECT NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY

(a) Turn the roller by hand to check that it turns smoothly.
HINT:
If the roller does not turn smoothly, replace the valve rocker arm sub-assembly.

2. INSPECT VALVE LASH ADJUSTER ASSEMBLY
NOTICE:

- **Keep the lash adjuster free of dirt and foreign objects.**
- **Only use clean engine oil.**

(a) Place the lash adjuster into a container filled with engine oil.



(b) Insert the SST's tip into the lash adjuster's plunger and use the tip to press down on the check ball inside the plunger.
SST 09276-75010

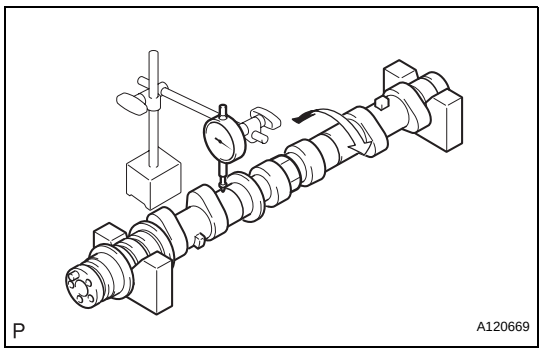
(c) Squeeze the SST and lash adjuster together to move the plunger up and down 5 to 6 times.

(d) Check the movement of the plunger and bleed the air.
OK:
Plunger moves up and down.
NOTICE:
When bleeding air from the high-pressure chamber, make sure that the tip of the SST is actually pressing the check ball as shown in the illustration. If the check ball is not pressed, air will not bleed.

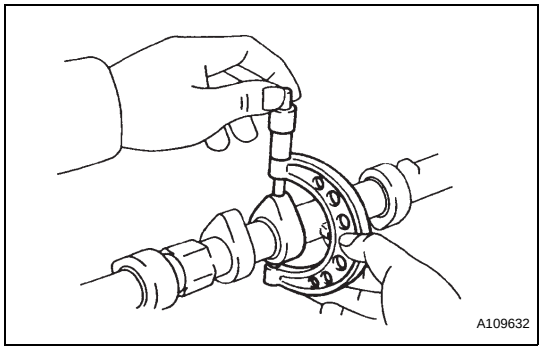
(e) After bleeding the air, remove the SST. Then try to quickly and firmly press the plunger with a finger.
OK:
Plunger is very difficult to move.
If the result is not as specified, replace the lash adjuster.

3. INSPECT CAMSHAFT

(a) Inspect the camshaft for runout.
(1) Place the camshaft on V-blocks.



(2) Using a dial indicator, measure the circle runout at the center journal.
Maximum circle runout:
0.04 mm (0.0016 in.)
If the circle runout is greater than the maximum, replace the camshaft.
HINT:
Check the oil clearance after replacing the camshaft.

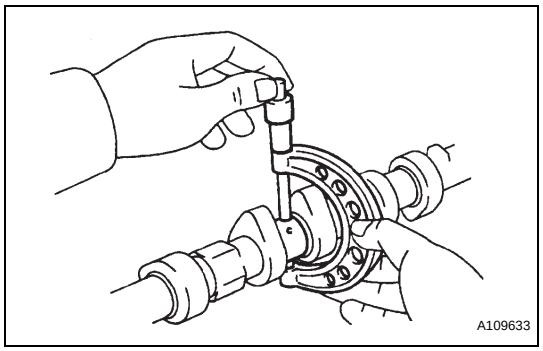


(b) Using a micrometer, measure the cam lobe height.
Standard cam lobe height

Item	Specification
Intake camshaft	44.316 to 44.416 mm (1.7447 to 1.7487 in.)
Exhaust camshaft	44.262 to 44.362 mm (1.7426 to 1.7465 in.)

Maximum cam lobe height

Item	Specification
Intake camshaft	44.166 mm (1.7388 in.)
Exhaust camshaft	44.112 mm (1.7367 in.)



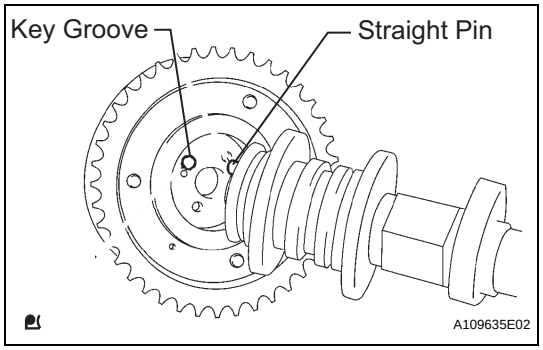
(c) Using a micrometer, measure the journal diameter.
Standard journal diameter

Item	Specification
No. 1 journal	35.946 to 35.960 mm (1.4152 to 1.4157 in.)
Other journals	25.959 to 25. 975 mm (1.0220 to 1.0226 in.)

If the journal diameter is not as specified, check the oil clearance.

4. INSPECT CAMSHAFT TIMING GEAR ASSEMBLY

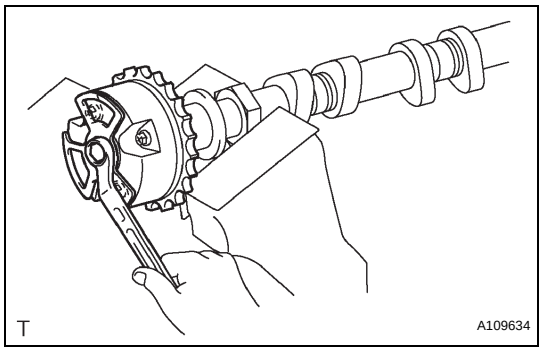
(a) Clamp the camshaft in a vise.
NOTICE:
Be careful not to damage the camshaft in the vise.



(b) Put the camshaft timing gear and camshaft together by aligning the key groove and straight pin.

(c) Lightly press the gear against the camshaft, and turn the gear. Push further at the position where the pin enters the groove.
NOTICE:
Be sure not to turn the camshaft timing gear in the retard direction (the right angle).

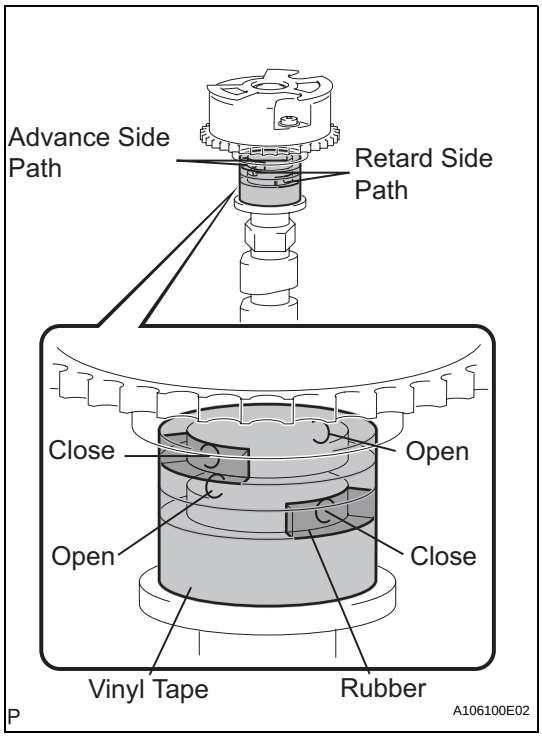
(d) Check that there is no clearance between the gear's flange and the camshaft.



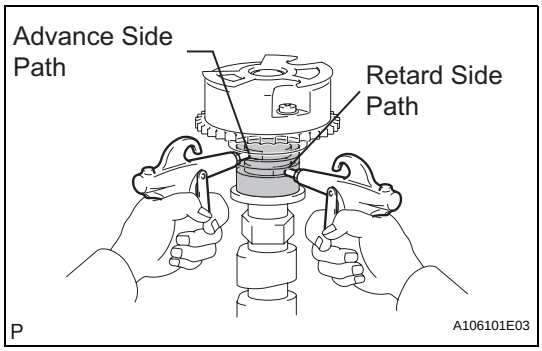
(e) Tighten the flange bolt with the camshaft timing gear fixed.
Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)

(f) Check the lock of the camshaft timing gear.
(1) Clamp the camshaft in a vise, and confirm that the camshaft timing gear is locked.
NOTICE:
Be careful not to damage the camshaft.

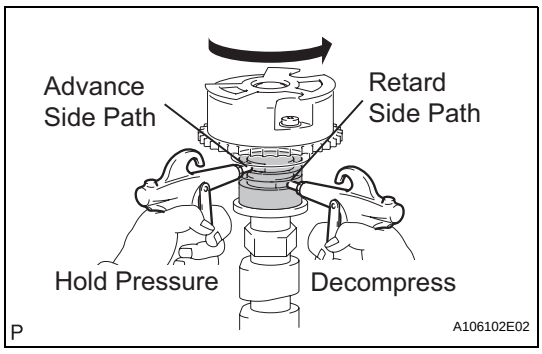
EM



(g) Release the lock pin.
(1) Cover the 4 oil paths of the cam journal with vinyl tape as shown in the illustration.
HINT:
2 advance side paths are provided in the groove of the camshaft. Plug one of the paths with a rubber piece.
(2) Break through the tape of the advance side path and the retard side path on the opposite side to the hole of the advance side path, as shown in the illustration.



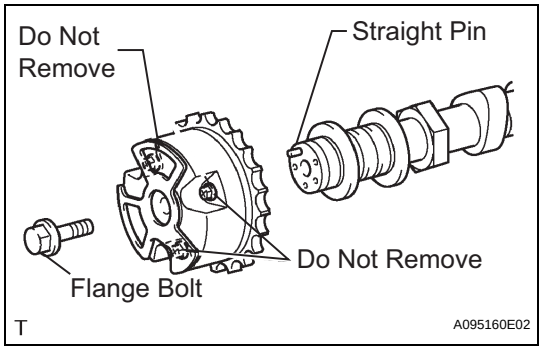
(3) Apply approximately 200 kPa (2.0 kgf/cm^2, 28 psi) of air pressure to the 2 broken paths.
CAUTION:
Cover the paths with a piece of cloth when applying pressure to keep oil from splashing.



(4) Check that the camshaft timing gear revolves in the advance direction when reducing the air pressure applied to the retard side path.
HINT:
This operation releases the lock pin for the most retarded position.
(5) When the camshaft timing gear reaches the most advanced position, release the air pressure from the retard side path and advance side path, in that order.
NOTICE:
Do not release the air pressure from the advance side path first. The gear may abruptly shift in the retard direction and break the lock pin.

(h) Check for smooth rotation.
(1) Turn the camshaft timing gear within its movable range (21°) 2 or 3 times, but do not turn it to the most retarded position. Make sure that the gear turns smoothly.
NOTICE:
Do not use air pressure to perform the smooth operation check.

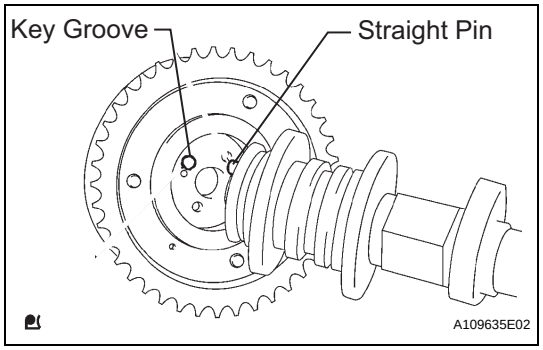
(i) Check the lock in the most retarded position.
(1) Confirm that the camshaft timing gear is locked at the most retarded position.



(j) Remove the flange bolt and camshaft timing gear.
NOTICE:
- **Do not remove the other 3 bolts.**
- **If planning to reuse the gear, be sure to release the straight pin lock before installing the gear.**

5. INSPECT CAMSHAFT TIMING EXHAUST GEAR ASSEMBLY

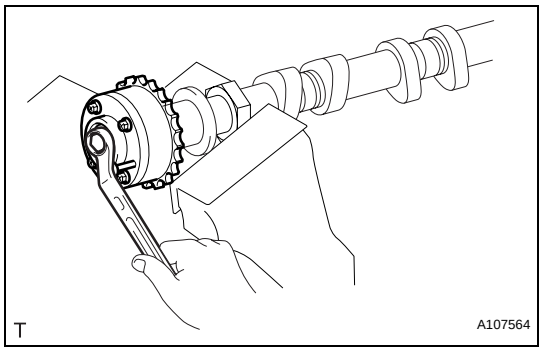
(a) Clamp the camshaft in a vise.
NOTICE:
Be careful not to damage the camshaft in the vise.



(b) Put the camshaft timing exhaust gear and camshaft together by aligning the key groove and straight pin.

(c) Lightly press the gear against the camshaft, and turn the gear. Push further at the position where the pin enters the groove.
NOTICE:
Be sure not to turn the camshaft timing exhaust gear in the retard direction (the right angle).

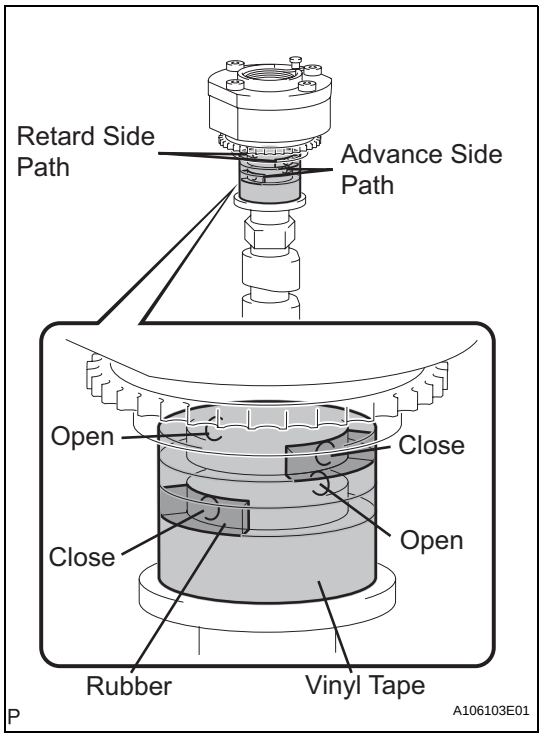
(d) Check that there is no clearance between the gear's flange and the camshaft.



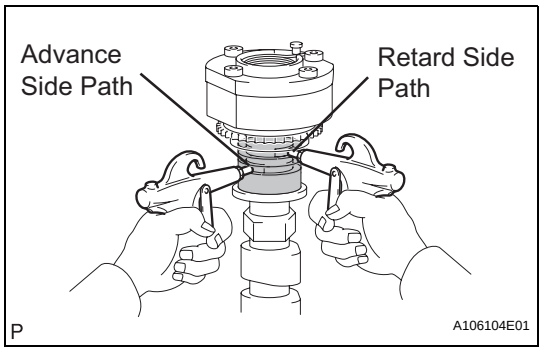
(e) Tighten the flange bolt with the camshaft timing exhaust gear fixed.
Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)

(f) Check the camshaft timing exhaust gear lock.
(1) Make sure that the camshaft timing exhaust gear is locked.

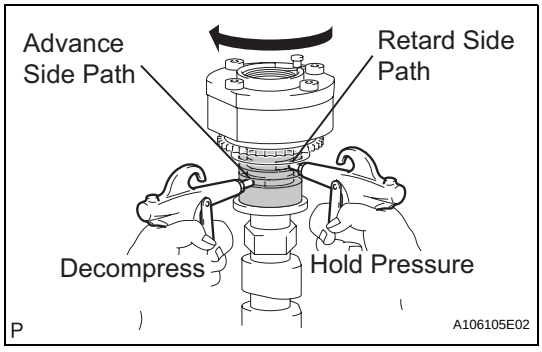
EM



(g) Release the lock pin.
(1) Cover the 4 oil paths of the cam journal with vinyl tape as shown in the illustration.
HINT:
4 oil paths are provided in the groove. Plug 2 paths with rubber pieces.
(2) Prick a hole in the tape placed on the advance side path. Prick a hole in the tape placed on the retard side path, on the opposite side to that of the advance side path, as shown in the illustration.



(3) Apply approximately 200 kPa (2.0 kgf/cm^2, 28 psi) of air pressure to the 2 broken paths (the advance side path and the retard side path).
CAUTION:
Cover the paths with a piece of cloth when applying pressure to keep oil from splashing.

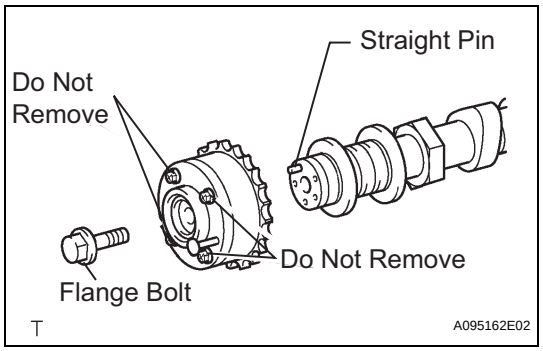


(4) Make sure that the camshaft timing exhaust gear turns in the retard direction when reducing the air pressure applied to the advance side path.
HINT:
The lock pin is released and the camshaft timing exhaust gear turns in the retard direction.
(5) When the camshaft timing exhaust gear moves to the most retarded position, release the air pressure from the advance side path, and then release the air pressure from the retard side path.
NOTICE:
Be sure to release the air pressure from the advance side path first. If the air pressure of the retard side path is released first, the camshaft timing exhaust gear may abruptly shift in the advance direction and break the lock pin or other parts.

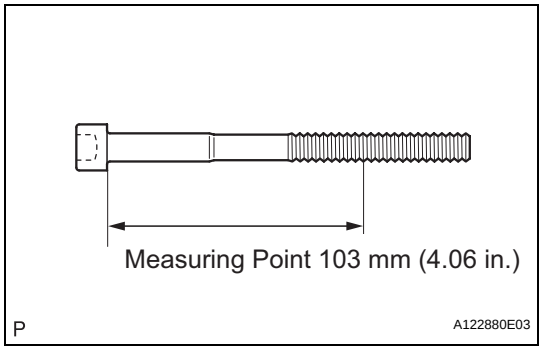
EM

(h) Check for smooth rotation.
(1) Turn the camshaft timing exhaust gear within its movable range (18.5°) 2 or 3 times, but do not turn it to the most advanced position. Make sure that the gear turns smoothly.
NOTICE:
When the air pressure is released from the advance side path and then from the retard side path, the gear automatically returns to the most advanced position due to the advance assist spring operation and locks. Gradually release the air pressure from the retard side path before performing the smooth rotation check.

(i) Check the lock at the most advanced position.
(1) Make sure that the camshaft timing exhaust gear is locked at the most advanced position.

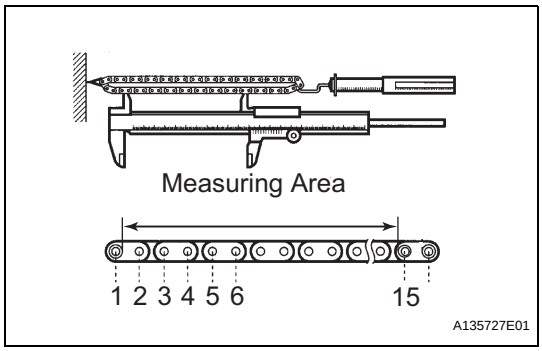


(j) Remove the flange bolt and camshaft timing exhaust gear.
NOTICE:
- **Be sure not to remove the other 4 bolts.**
- **If planning to reuse the gear, be sure to release the straight pin lock before installing the gear.**



6. INSPECT CYLINDER HEAD SET BOLT

(a) Using vernier calipers, measure the minimum diameter of the elongated thread at the measuring point.
Standard outside diameter:
10.85 to 11.00 mm (0.4272 to 0.4331 in.)
Minimum outside diameter:
10.70 mm (0.4213 in.)
Measuring Point:
103 mm (4.06 in.)
HINT:
If a visual check reveals no excessively thin areas, check the center of the bolt and find the area that has the lowest diameter.
If the diameter is less than the minimum, replace the cylinder head bolt.

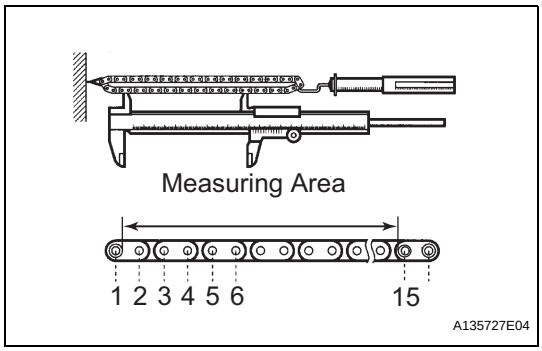


7. INSPECT CHAIN SUB-ASSEMBLY

(a) Pull the chain with a force of 147 N (15 kgf, 33 lbf) as shown in the illustration.

(b) Using vernier calipers, measure the length of 15 links.

Maximum chain elongation:
136.9 mm (5.390 in.)
NOTICE:
Perform the measurement at 3 random places.
Use the average of the measurements.
If the elongation is greater than the maximum, replace the chain.



8. INSPECT NO. 2 CHAIN SUB-ASSEMBLY

(a) Pull the chain with a force of 147 N (15 kgf, 33 lbf) as shown in the illustration.

(b) Using vernier calipers, measure the length of 15 links.

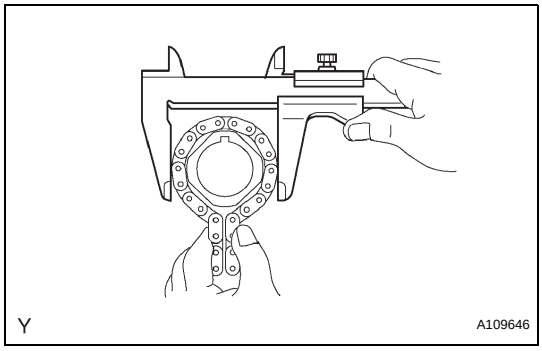
Maximum chain elongation:
137.6 mm (5.417 in.)
NOTICE:
Perform the measurement at 3 random places.
Use the average of the measurements.
If the elongation is greater than the maximum, replace the chain.

9. INSPECT CRANKSHAFT TIMING SPROCKET

(a) Wrap the chain around the sprocket.

(b) Using vernier calipers, measure the sprocket diameter with the chain.

Minimum sprocket diameter (with chain):
61.4 mm (2.417 in.)
HINT:
The vernier calipers must contact the chain rollers for the measurement.
If the diameter is less than the minimum, replace the chain and sprocket.

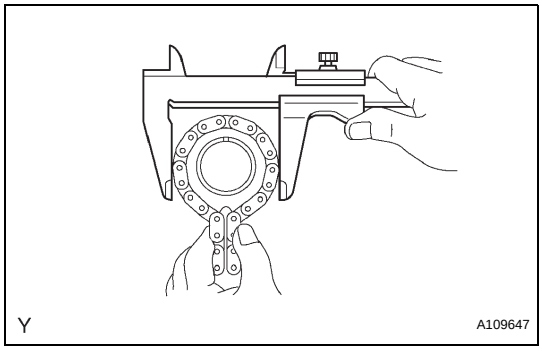


10. INSPECT IDLE SPROCKET ASSEMBLY

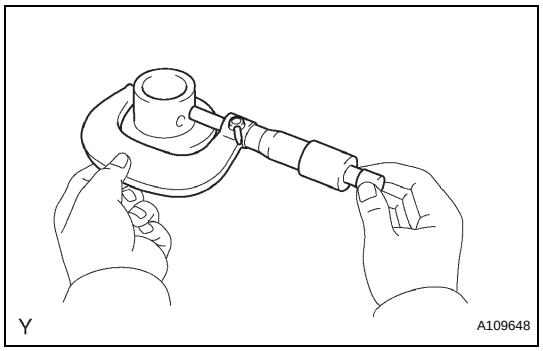
(a) Wrap the chain around the sprocket.

(b) Using vernier calipers, measure the sprocket diameter with the chain.

Minimum sprocket diameter (with chain):
61.4 mm (2.417 in.)
HINT:
The vernier calipers must contact the chain rollers for the measurement.
If the diameter is less than the minimum, replace the chain and sprocket.



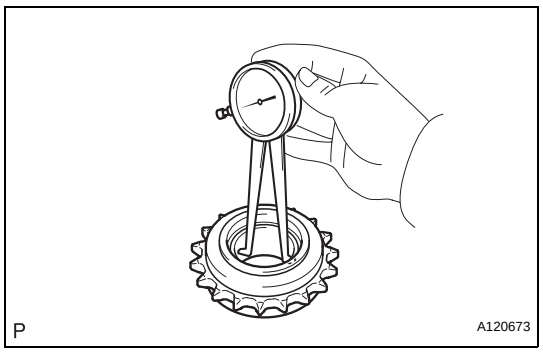
EM



11. INSPECT IDLE GEAR SHAFT OIL CLEARANCE

(a) Using a micrometer, measure the idle gear shaft diameter.

Idle gear shaft diameter:
22.987 to 23.000 mm (0.9050 to 0.9055 in.)



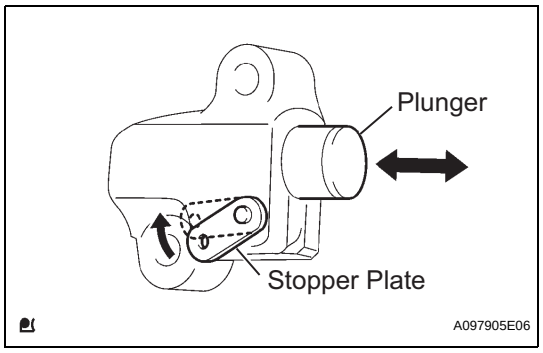
(b) Using a caliper gauge, measure the inside diameter of the idle gear.

Idle gear inside diameter:
23.020 to 23.030 mm (0.9063 to 0.9067 in.)

(c) Subtract the idle gear shaft diameter measurement from the idle gear inside diameter measurement.

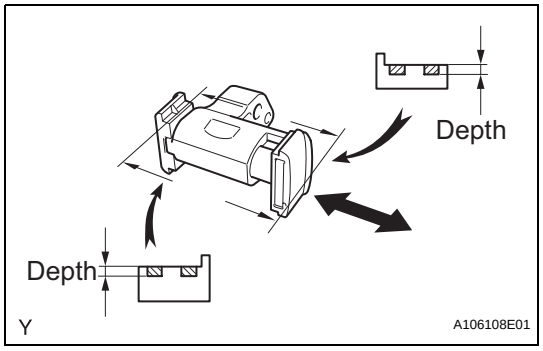
Standard oil clearance:
0.020 to 0.043 mm (0.0008 to 0.0017 in.)
Maximum oil clearance:
0.093 mm (0.0037 in.)

If the thrust oil clearance is greater than the maximum, replace the idle gear shaft and idle gear.



12. INSPECT NO. 1 CHAIN TENSIONER ASSEMBLY

(a) Move the stopper plate upward to release the lock. Push the plunger and check that it moves smoothly. If necessary, replace the chain tensioner assembly.



13. INSPECT NO. 2 CHAIN TENSIONER ASSEMBLY

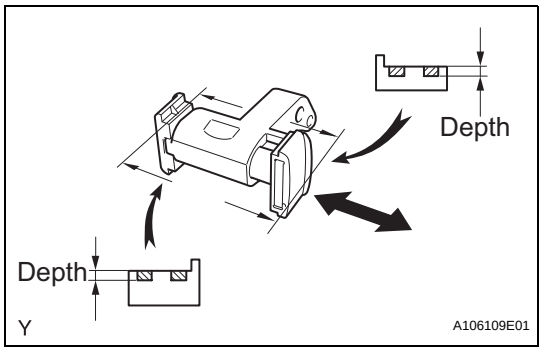
(a) Check that the plunger moves smoothly.

(b) Measure the worn depth of the chain tensioner.

Maximum depth:
0.9 mm (0.035 in.)

If the depth is greater than the maximum, replace the chain tensioner assembly.

EM



14. INSPECT NO. 3 CHAIN TENSIONER ASSEMBLY

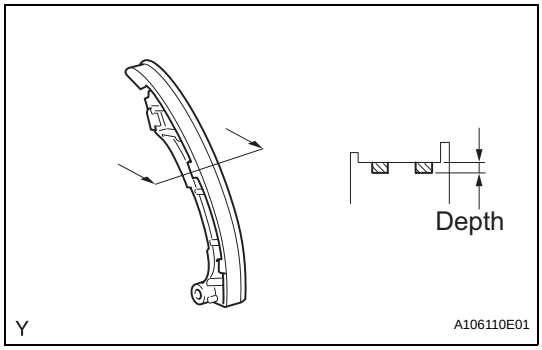
(a) Check that the plunger moves smoothly.

(b) Measure the worn depth of the chain tensioner.

Maximum depth:

0.9 mm (0.035 in.)

If the depth is greater than the maximum, replace the chain tensioner assembly.



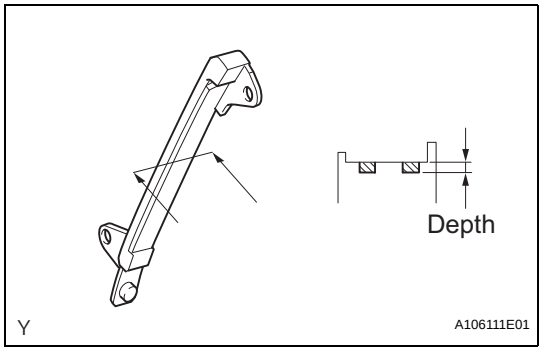
15. INSPECT CHAIN TENSIONER SLIPPER

(a) Measure the worn depth of the chain tensioner slipper.

Maximum depth:

1.0 mm (0.039 in.)

If the depth is greater than the maximum, replace the chain tensioner slipper.



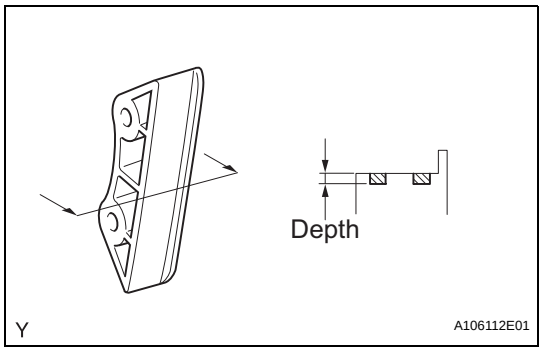
16. INSPECT NO. 1 CHAIN VIBRATION DAMPER

(a) Measure the worn depth of the chain vibration damper.

Maximum depth:

1.0 mm (0.039 in.)

If the depth is greater than the maximum, replace the chain vibration damper.



17. INSPECT NO. 2 CHAIN VIBRATION DAMPER

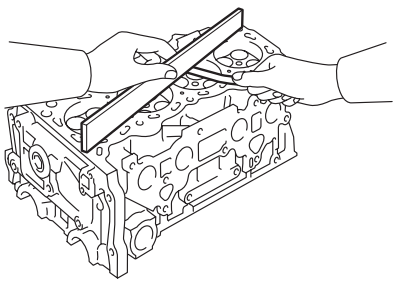
(a) Measure the worn depth of the chain vibration damper.

Maximum depth:

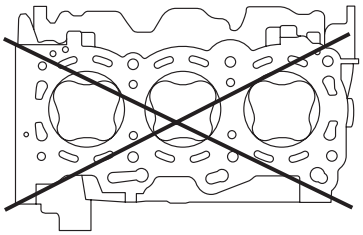
1.0 mm (0.039 in.)

If the depth is greater than the maximum, replace the chain vibration damper.

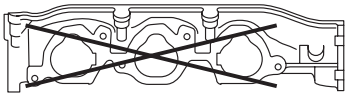
EM



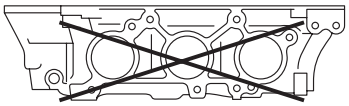
Cylinder head lower side:



Intake side:



Exhaust side:



T A129747E01

18. INSPECT CYLINDER HEAD ASSEMBLY

(a) Using a precision straight edge and feeler gauge, measure the warpage of the contact surface of the cylinder block and manifolds.

Standard warpage

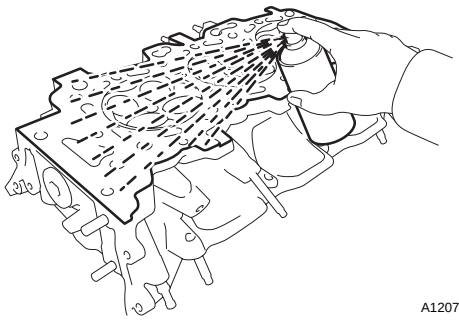
Item	Warpage
Cylinder head lower	0.05 mm (0.0020 in.)
Intake	0.08 mm (0.0031 in.)
Exhaust	0.08 mm (0.0031 in.)

Maximum warpage

Item	Warpage
Cylinder head lower	0.10 mm (0.0039 in.)
Intake	0.10 mm (0.0039 in.)
Exhaust	0.10 mm (0.0039 in.)

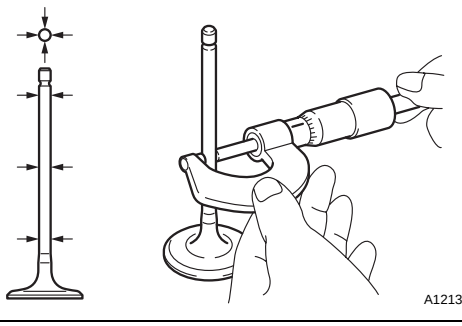
If the warpage is greater than the maximum, replace the cylinder head assembly.

EM



T A120706

(b) Using a dye penetrant, check the intake ports, exhaust ports and cylinder surface for cracks. If cracked, replace the cylinder head assembly.



T A121378

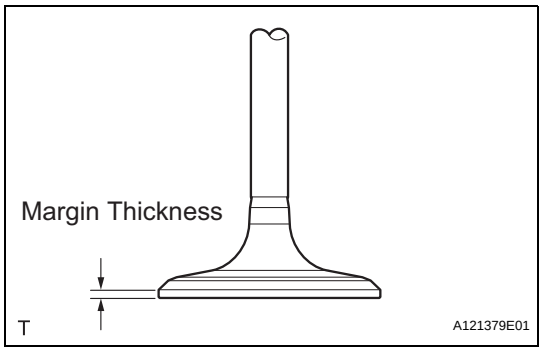
19. INSPECT INTAKE VALVE

(a) Using a micrometer, measure the diameter of the valve stem.

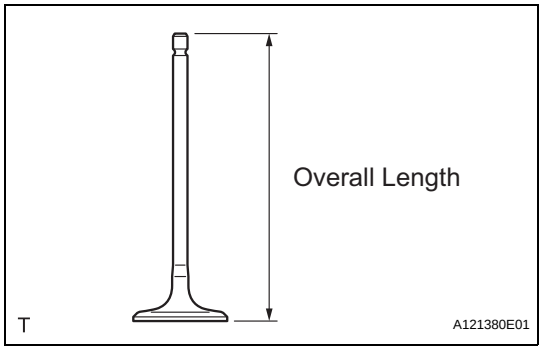
Valve stem diameter:

5.470 to 5.485 mm (0.2154 to 0.2159 in.)

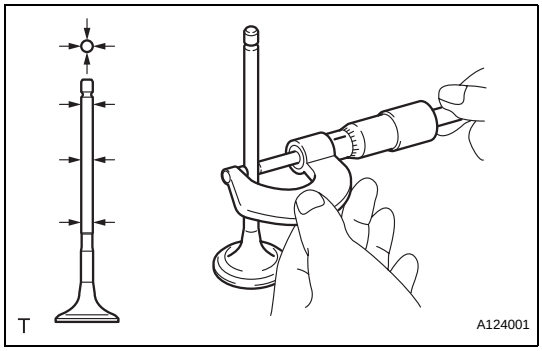
If the valve stem is not as specified, check the oil clearance.



(b) Using vernier calipers, measure the valve head margin thickness.
Standard margin thickness:
1.0 mm (0.03937 in.)
Minimum margin thickness:
0.5 mm (0.0197 in.)
If the margin thickness is less than the minimum, replace the intake valve.

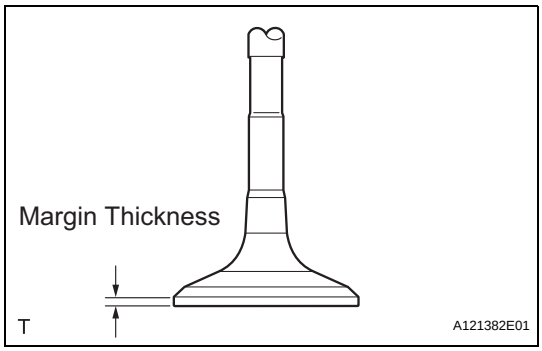


(c) Using vernier calipers, measure the valve's overall length.
Standard overall length:
105.85 mm (4.1673 in.)
Minimum overall length:
105.35 mm (4.1476 in.)
If the overall length is less than the minimum, replace the intake valve.

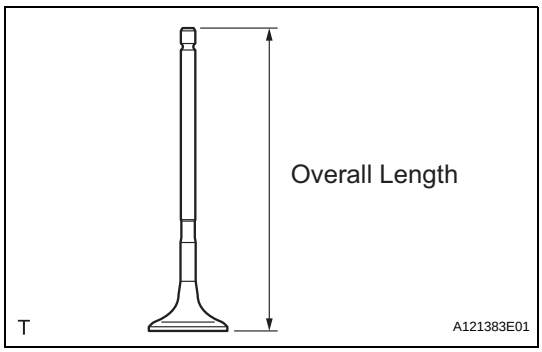


20. INSPECT EXHAUST VALVE

(a) Using a micrometer, measure the diameter of the valve stem.
Valve stem diameter:
5.465 to 5.480 mm (0.2151 to 0.2157 in.)
If the valve stem is not as specified, check the oil clearance.



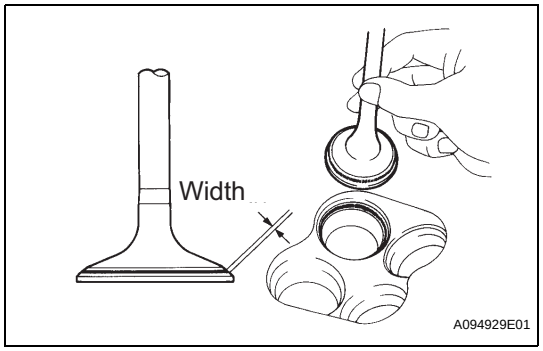
(b) Using vernier calipers, measure the valve head margin thickness.
Standard margin thickness:
1.0 mm (0.0397 in.)
Minimum margin thickness:
0.5 mm (0.0197 in.)
If the margin thickness is less than the minimum, replace the exhaust valve.



(c) Using vernier calipers, measure the valve's overall length.
Standard overall length:
110.40 mm (4.3464 in.)
Minimum overall length:
109.90 mm (4.3268 in.)
If the overall length is less than the minimum, replace the exhaust valve.

21. INSPECT INTAKE VALVE SEAT

(a) Apply a light coat of Prussian blue to the valve face.



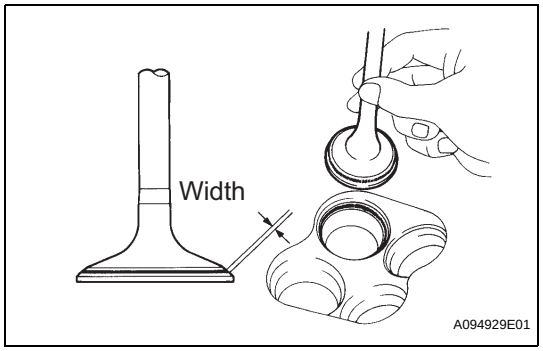
(b) Lightly press the valve face against the valve seat.

(c) Check the valve face and valve seat by using the following procedure.
   (1) If Prussian blue appears around the entire valve face, the valve face is concentric. If not, replace the valve.
   (2) If Prussian blue appears around the entire valve seat, the guide and valve face are concentric. If not, resurface the valve seat.
   (3) Check that the valve seat contacts in the middle of the valve face with the width between 1.1 and 1.5 mm (0.043 and 0.059 in.).

22. INSPECT EXHAUST VALVE SEAT

(a) Apply a light coat of Prussian blue to the valve face.

(b) Lightly press the valve face against the valve seat.



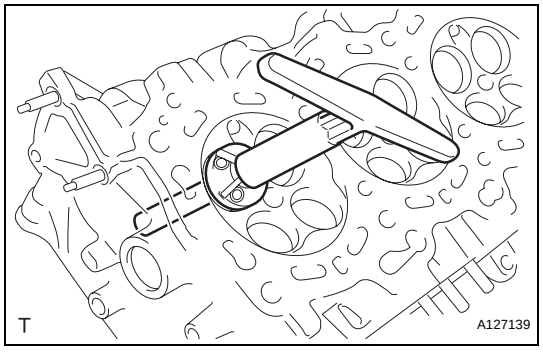
(c) Check the valve face and valve seat by using the following procedure.
   (1) If Prussian blue appears around the entire valve face, the valve face is concentric. If not, replace the valve.
   (2) If Prussian blue appears around the entire valve seat, the guide and valve face are concentric. If not, resurface the valve seat.
   (3) Check that the valve seat contacts in the middle of the valve face with the width between 1.1 and 1.5 mm (0.043 and 0.059 in.).

EM

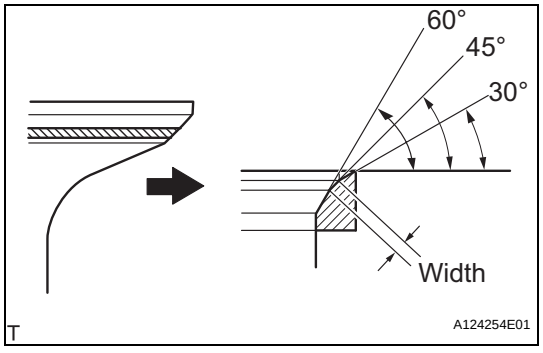
23. REPAIR INTAKE VALVE SEAT

NOTICE:

- **Repair the seat while checking the seating position.**
- **Keep the lip free of foreign matter.**



(a) Using a 45° cutter, resurface the valve seat so that the valve seat width is more than the specification.



(b) Using 30° and 60° cutters, correct the valve seat so that the valve contacts the entire circumference of the seat. The contact should be in the center of the valve seat, and the valve seat width should be maintained within the specified range around the entire circumference of the seat.

Width:

1.1 to 1.5 mm (0.043 to 0.059 in.)

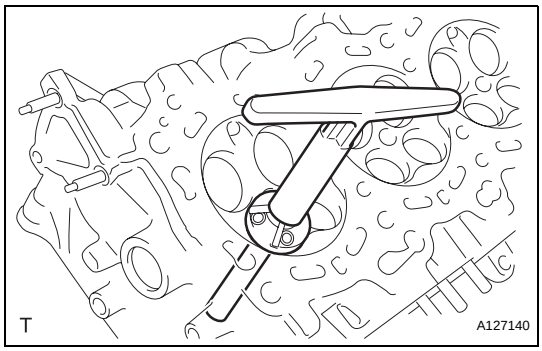
(c) Handrub the valve and valve seat with an abrasive compound.

(d) Check the valve seating position.

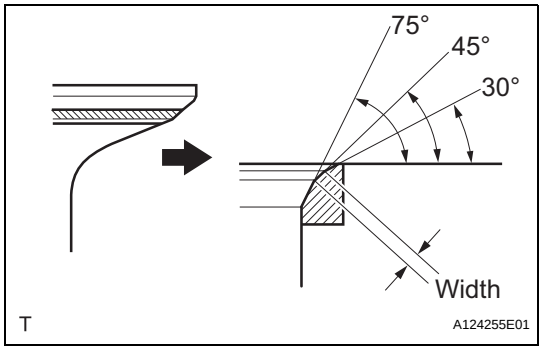
24. REPAIR EXHAUST VALVE SEAT

NOTICE:

- **Repair the seat while checking the seating position.**
- **Keep the lip free of foreign matter.**



(a) Using a 45° cutter, resurface the valve seat so that the valve seat width is more than the specification.



(b) Using 30° and 75° cutters, correct the valve seat so that the valve contacts the entire circumference of the seat. The contact should be in the center of the valve seat, and the valve seat width should be maintained within the specified range around the entire circumference of the seat.

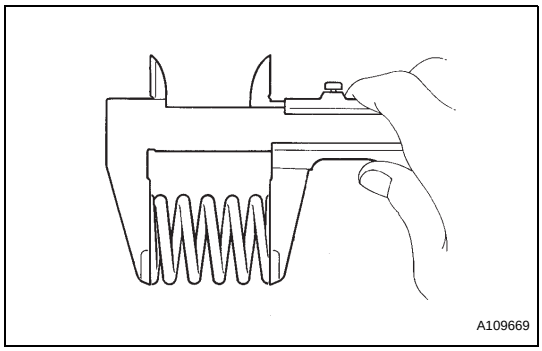
Width:

1.1 to 1.5 mm (0.043 to 0.059 in.)

(c) Handrub the valve and valve seat with an abrasive compound.

(d) Check the valve seating position.

25. INSPECT COMPRESSION SPRING

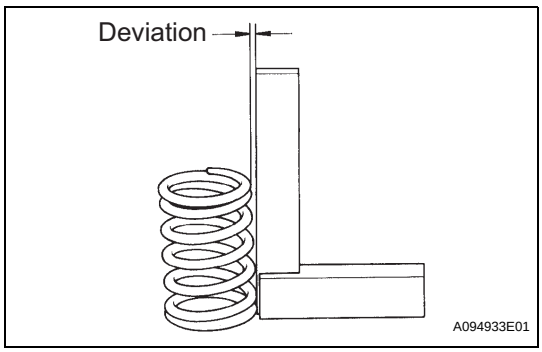


(a) Using vernier calipers, measure the free length of the compression spring.

Free length:

45.46 mm (1.7898 in.)

If the free length is not as specified, replace the spring.



(b) Using a steel square, measure the deviation of the inner compression spring.

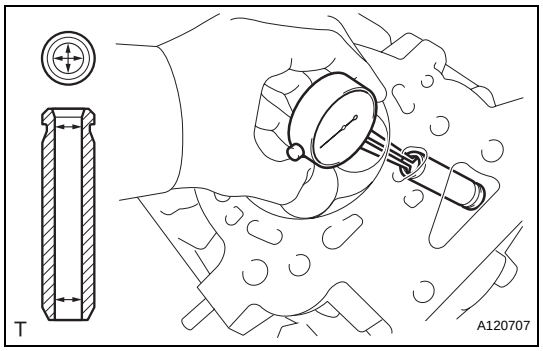
Maximum deviation:

1.0 mm (0.039 in.)

Maximum angle (reference):

2°

If the deviation is greater than the maximum, replace the spring.



26. INSPECT VALVE GUIDE BUSH OIL CLEARANCE

(a) Using a caliper gauge, measure the inside diameter of the guide bush.

Bush inside diameter:
5.510 to 5.530 mm (0.2169 to 0.2177 in.)

(b) Subtract the valve stem diameter measurement from the guide bush inside diameter measurement.

Standard clearance

Item	Clearance
Intake	0.025 to 0.060 mm (0.0010 to 0.0024 in.)
Exhaust	0.030 to 0.065 mm (0.0012 to 0.0026 in.)

Maximum oil clearance

Item	Clearance
Intake	0.08 mm (0.0032 in.)
Exhaust	0.10 mm (0.0039 in.)

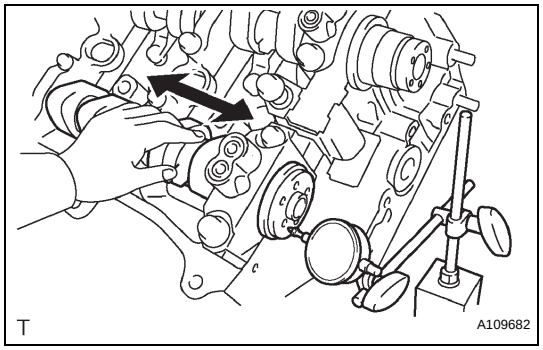
For intake side:
If the clearance is greater than the maximum, replace the intake valve and intake guide bush.
For exhaust side:
If the clearance is greater than the maximum, replace the exhaust valve and exhaust guide bush.

EM

27. INSPECT CAMSHAFT THRUST CLEARANCE

(a) Inspect the RH bank camshaft thrust clearance.

(1) Install the RH bank camshafts (See page EM-113).



(2) Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.

Standard thrust clearance:
0.08 to 0.13 mm (0.0031 to 0.0051 in.)
Maximum thrust clearance:
0.15 mm (0.006 in.)
If the thrust clearance is greater than the maximum, replace the cylinder head. If the thrust surface is damaged, replace the camshaft.

(b) Inspect the LH bank camshaft thrust clearance.

(1) Install the LH bank camshafts (See page EM-113).

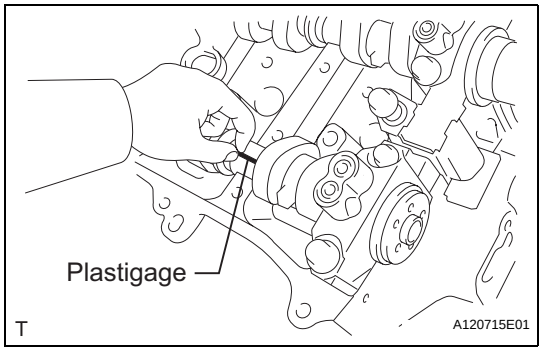
(2) Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.

Standard thrust clearance:
0.08 to 0.13 mm (0.0031 to 0.0051 in.)
Maximum thrust clearance:
0.15 mm (0.006 in.)
If the thrust clearance is greater than the maximum, replace the cylinder head. If the thrust surface is damaged, replace the camshaft.

28. INSPECT CAMSHAFT OIL CLEARANCE

(a) Clean the bearing caps, camshaft housing and camshaft journals.

(b) Place the camshafts on the camshaft housing.

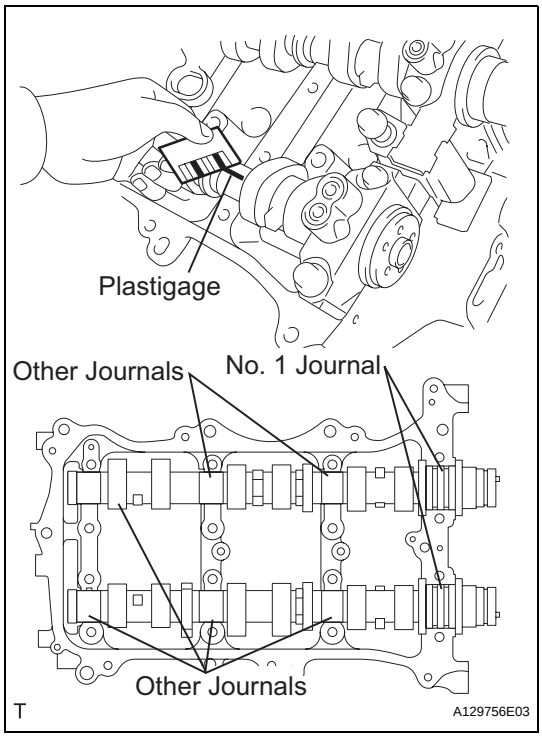


(c) Lay a strip of Plastigage across each of the camshaft journals.

(d) Install the bearing caps (See page EM-113).

NOTICE:
Do not turn the camshaft.

(e) Remove the bearing caps (See page EM-64).



(f) Measure the Plastigage at its widest point.

Standard oil clearance

Item	Oil Clearance
No. 1 journal	0.040 to 0.079 mm (0.0016 to 0.0031 in.)
Other journals	0.025 to 0.062 mm (0.00098 to 0.0024 in.)

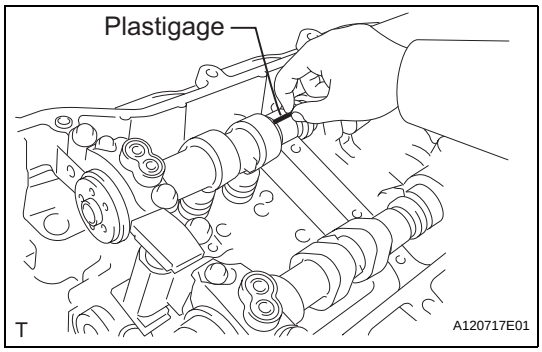
Maximum oil clearance

Item	Oil Clearance
No. 1 journal	0.10 mm (0.0039 in.)
Other journals	0.09 mm (0.0035 in.)

If the oil clearance is greater than the maximum, replace the camshaft. If necessary, replace the camshaft housing.

(g) Clean the bearing caps, camshaft housing and camshaft journals.

(h) Place the camshafts on the camshaft housing.

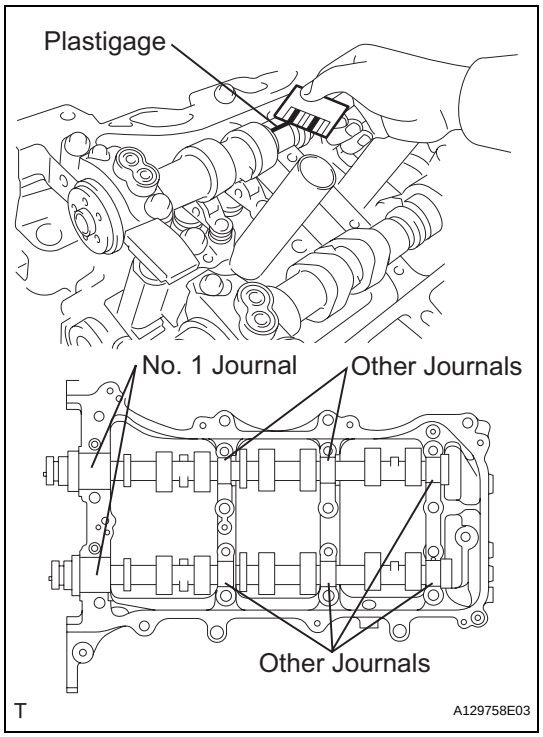


(i) Lay a strip of Plastigage across each of the camshaft journals.

(j) Install the bearing caps (See page EM-113).

NOTICE:
Do not turn the camshaft.

(k) Remove the bearing caps (See page EM-64).



(l) Measure the Plastigage at its widest point.

Standard oil clearance

Item	Oil Clearance
No. 1 journal	0.040 to 0.079 mm (0.0016 to 0.0031 in.)
Other journals	0.025 to 0.062 mm (0.00098 to 0.0024 in.)

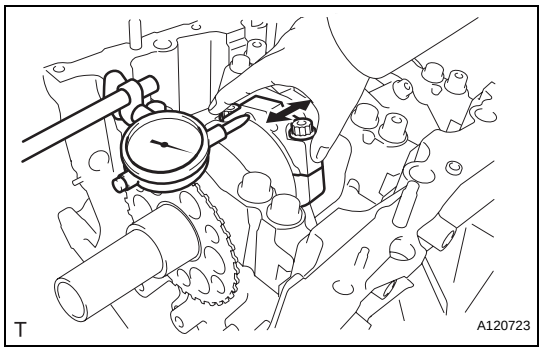
Maximum oil clearance

Item	Oil Clearance
No. 1 journal	0.10 mm (0.0039 in.)
Other journals	0.09 mm (0.0035 in.)

If the oil clearance is greater than the maximum, replace the camshaft. If necessary, replace the camshaft housing.

29. INSPECT CONNECTING ROD THRUST CLEARANCE

(a) Install the connecting rod cap (See page EM-113).



(b) Using a dial indicator, measure the thrust clearance while moving the connecting rod back and forth.

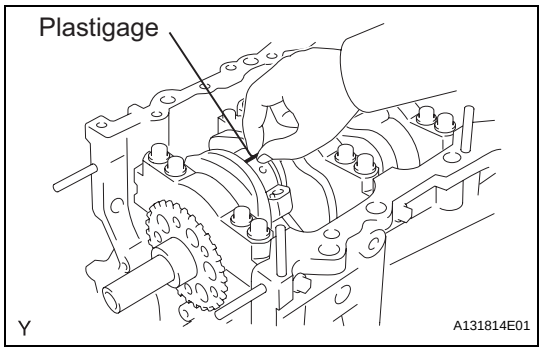
Standard thrust clearance:
0.15 to 0.40 mm (0.0059 to 0.0157 in.)
Maximum thrust clearance:
0.50 mm (0.020 in.)

If the thrust clearance is greater than the maximum, replace the connecting rod assemblies as necessary. If necessary, replace the crankshaft.

30. INSPECT CONNECTING ROD OIL CLEARANCE

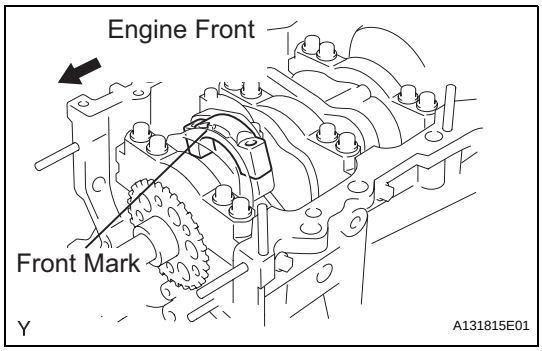
(a) Clean the crank pin and bearing.

(b) Check the crank pin and bearing for pitting and scratches.



(c) Lay a strip of Plastigage on the crank pin.

EM

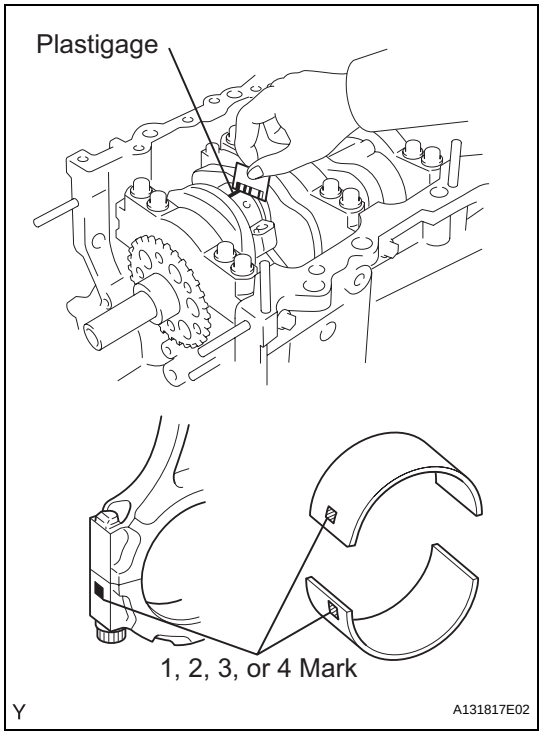


(d) Check that the front mark of the connecting rod cap is facing forward.

(e) Install the connecting rod cap (See page EM-113).

NOTICE:
Do not turn the crankshaft.

(f) Remove the 2 bolts and connecting rod cap (See page EM-64).



(g) Measure the Plastigage at its widest point.

Standard oil clearance:
0.045 to 0.067 mm (0.0018 to 0.0026 in.)
Maximum oil clearance:
0.070 mm (0.0028 in.)

If the oil clearance is greater than the maximum, replace the connecting rod bearings. If necessary, inspect the crankshaft.

HINT:
If replacing a bearing, replace it with one that has the same number as its respective connecting rod cap. Each bearing's standard thickness is indicated by a 1, 2, 3 or 4 mark on its surface.

Connecting rod diameter

Mark	Diameter
1	56.000 to 56.006 mm (2.2047 to 2.2050 in.)
2	56.007 to 56.012 mm (2.2050 to 2.2052 in.)
3	56.013 to 56.018 mm (2.2052 to 2.2054 in.)
4	56.019 to 56.024 mm (2.2055 to 2.2057 in.)

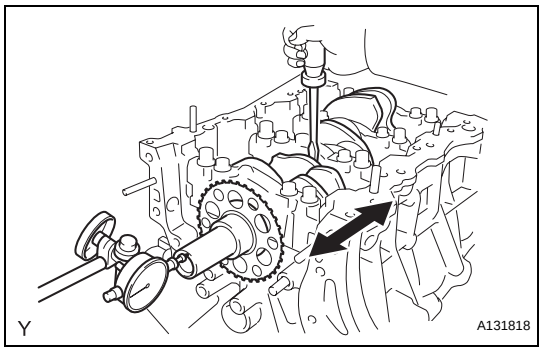
Connecting rod bearing center wall thickness

Mark	Thickness
1	1.481 to 1.484 mm (0.0583 to 0.0584 in.)
2	1.484 to 1.487 mm (0.0584 to 0.0585 in.)
3	1.487 to 1.490 mm (0.0585 to 0.0587 in.)
4	1.490 to 1.493 mm (0.0587 to 0.0588 in.)

Crankshaft pin diameter:
52.992 to 53.000 mm (2.0863 to 2.0866 in.)
NOTICE:
Completely remove the Plastigage after the measurement.

31. INSPECT CRANKSHAFT THRUST CLEARANCE

(a) Install the main bearing cap (See page EM-113).

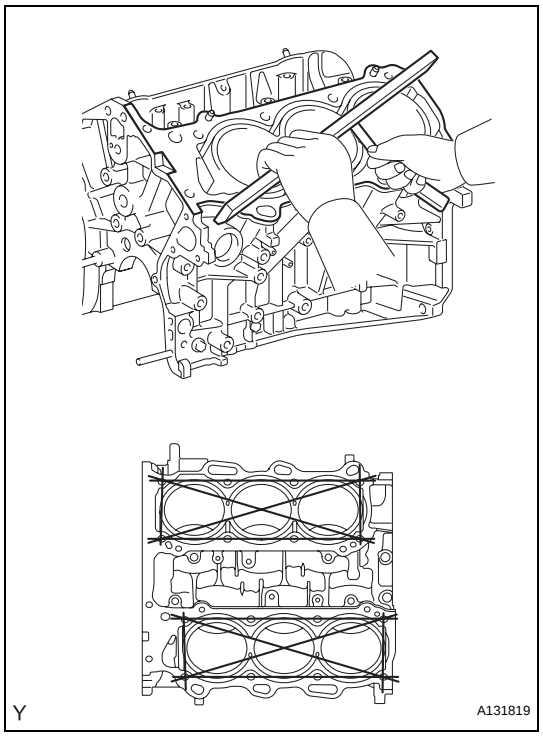


(b) Using a dial indicator, measure the thrust clearance while prying the crankshaft back and forth with a screwdriver.

Standard thrust clearance:
0.04 to 0.24 mm (0.0016 to 0.0094 in.)
Maximum thrust clearance:
0.30 mm (0.0118 in.)

If the thrust clearance is greater than the maximum, replace the thrust washers as a set. If necessary, replace the crankshaft.

Thrust washer thickness:
2.43 to 2.48 mm (0.0957 to 0.0976 in.)

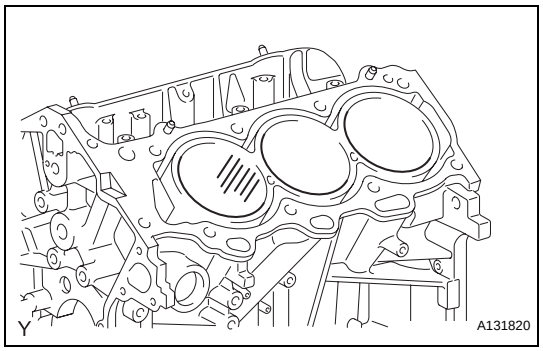


32. INSPECT CYLINDER BLOCK FOR WARPAGE

(a) Using a precision straight edge and feeler gauge, measure the warpage of the contact surface of the cylinder head gasket.

Maximum warpage:
0.07 mm (0.0028 in.)

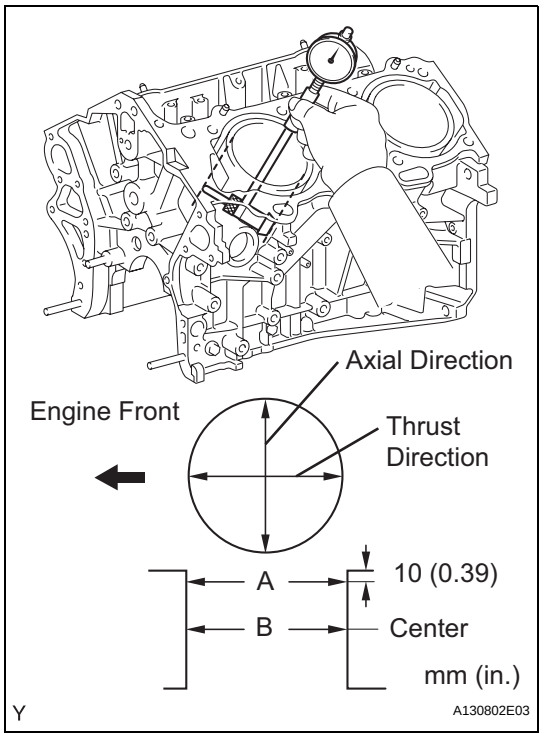
If the warpage is greater than the maximum, replace the cylinder block.



33. INSPECT CYLINDER BORE

(a) Visually check the cylinder for vertical scratches. If deep scratches are present, rebore all the 6 cylinders. If necessary, replace the cylinder block.

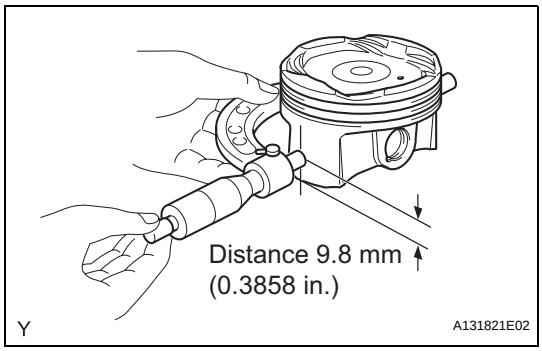
EM



(b) Using a cylinder gauge, measure the cylinder bore diameter at positions A and B in the thrust and axial directions.

Standard diameter:
94.000 to 94.012 mm (3.7008 to 3.7013 in.)
Maximum diameter:
94.200 mm (3.7087 in.)

If the average diameter of 4 positions is greater than the maximum, replace the cylinder block.



34. INSPECT PISTON SUB-ASSEMBLY WITH PIN

(a) Using a micrometer, measure the piston diameter at right angles to the piston center line where the distance from the piston end is as specified.

Distance:
9.8 mm (0.3858 in.)
Standard diameter:
93.960 to 93.980 mm (3.6992 to 3.7000 in.)
Maximum diameter:
93.830 mm (3.6941 in.)

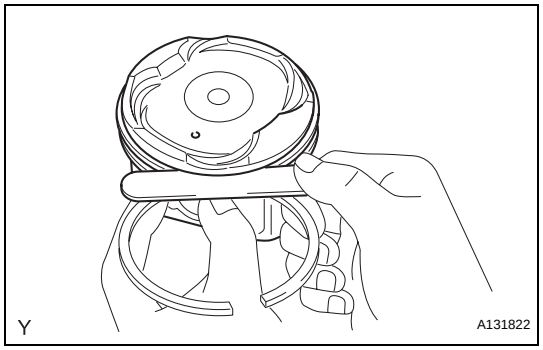
35. INSPECT PISTON OIL CLEARANCE

(a) Measure the cylinder bore diameter in the thrust directions.

(b) Subtract the piston diameter measurement from the cylinder bore diameter measurement.

Standard oil clearance:
0.020 to 0.052 mm (0.0008 to 0.0020 in.)
Maximum oil clearance:
0.060 mm (0.0024 in.)

If the oil clearance is greater than the maximum, replace all the pistons. If necessary, replace the cylinder block.



36. INSPECT RING GROOVE CLEARANCE

(a) Using a feeler gauge, measure the clearance between a new piston ring and the wall of the ring groove.

Ring groove clearance

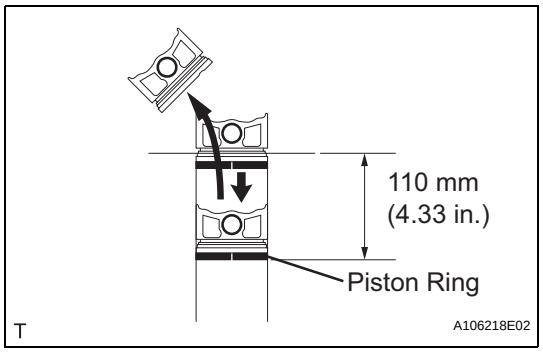
Item	Clearance
No. 1	0.020 to 0.070 mm (0.0008 to 0.0028 in.)
No. 2	0.020 to 0.060 mm (0.0008 to 0.0024 in.)
Oil	0.070 to 0.150 mm (0.0028 to 0.0059 in.)

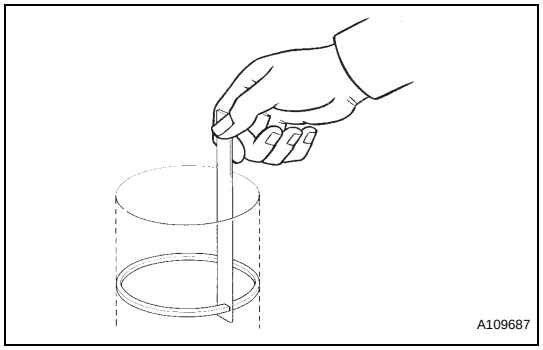
If the clearance is not as specified, replace the piston.

37. INSPECT PISTON RING END GAP

(a) Insert the piston ring into the cylinder bore.

(b) Using a piston, push the piston ring a little beyond the bottom of the ring travel, 110 mm (4.33 in.) from the top of the cylinder block.





(c) Using a feeler gauge, measure the end gap.

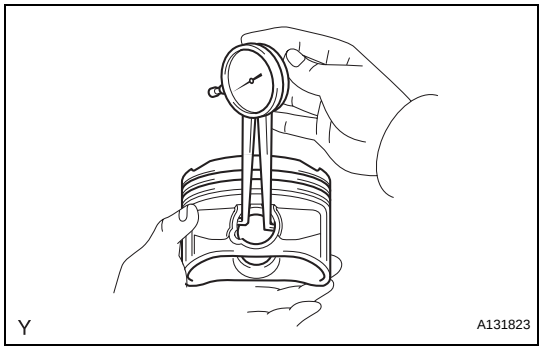
Standard end gap

Item	End Gap
No. 1	0.25 to 0.35 mm (0.0098 to 0.0138 in.)
No. 2	0.50 to 0.60 mm (0.0197 to 0.0236 in.)
Oil	0.10 to 0.40 mm (0.0039 to 0.0157 in.)

Maximum end gap

Item	End Gap
No. 1	0.50 mm (0.0197 in.)
No. 2	0.85 mm (0.0335 in.)
Oil	0.60 mm (0.0236 in.)

If the end gap is greater than the maximum, replace the piston ring. If the end gap is greater than the maximum even with a new piston ring, rebore all the 6 cylinders or replace the cylinder block.

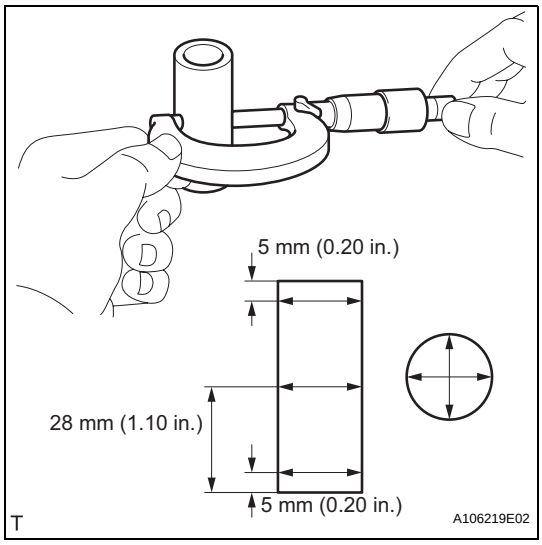


38. INSPECT PISTON PIN OIL CLEARANCE

(a) Using a caliper gauge, measure the inside diameter of the piston pin hole.

Piston pin hole inside diameter

Mark	Diameter
A	22.001 to 22.004 mm (0.8662 to 0.8663 in.)
B	22.004 to 22.007 mm (0.8663 to 0.8664 in.)
C	22.007 to 22.010 mm (0.8664 to 0.8665 in.)



(b) Using a micrometer, measure the piston pin diameter.

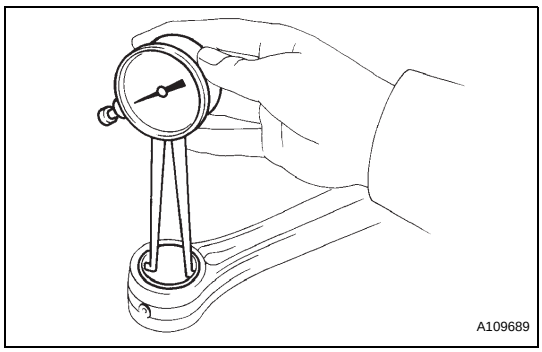
Piston pin diameter

Mark	Diameter
A	21.997 to 22.000 mm (0.8660 to 0.8661 in.)
B	22.000 to 22.003 mm (0.8661 to 0.8663 in.)
C	22.003 to 22.006 mm (0.8663 to 0.8664 in.)

(c) Subtract the piston pin diameter measurement from the piston pin hole diameter measurement.

Standard oil clearance:
0.001 to 0.007 mm (0.00004 to 0.00028 in.)
Maximum oil clearance:
0.015 mm (0.0006 in.)

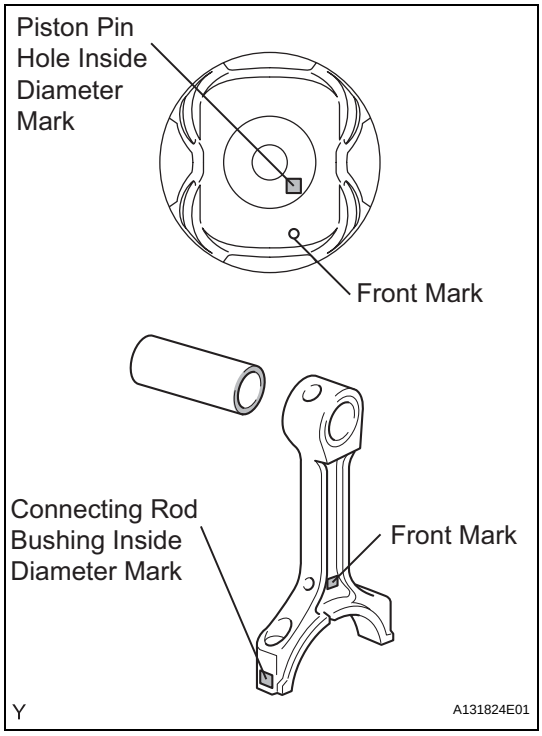
If the oil clearance is greater than the maximum, replace the piston and piston pin as a set.



(d) Using a caliper gauge, measure the inside diameter of the connecting rod bushing.

Bushing inside diameter

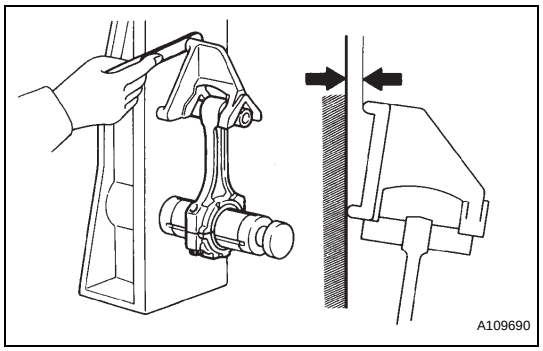
Mark	Diameter
A	22.005 to 22.008 mm (0.8663 to 0.8665 in.)
B	22.009 to 22.011 mm (0.8665 to 0.8666 in.)
C	22.012 to 22.014 mm (0.8666 to 0.8667 in.)



(e) Subtract the piston pin diameter measurement from the bushing inside diameter measurement.

Standard oil clearance:
0.005 to 0.011 mm (0.0002 to 0.0004 in.)
Maximum oil clearance:
0.030 mm (0.0012 in.)

If the oil clearance is greater than the maximum, replace the bushing. If necessary, replace the connecting rod and piston pin as a set.



39. INSPECT CONNECTING ROD

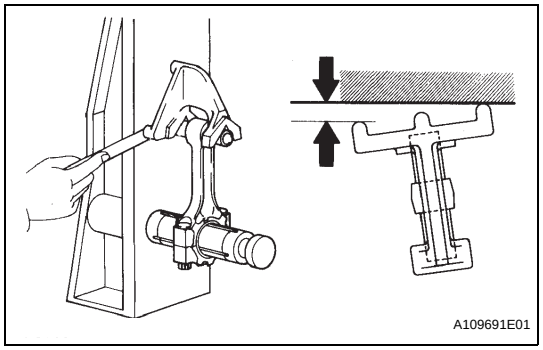
(a) Using a rod aligner and feeler gauge, check the connecting rod alignment.

(1) Check for out-of-alignment.

Maximum out-of-alignment:

0.05 mm (0.0020 in.) per 100 mm (3.94 in.)

If the out-of-alignment is greater than the maximum, replace the connecting rod assembly.



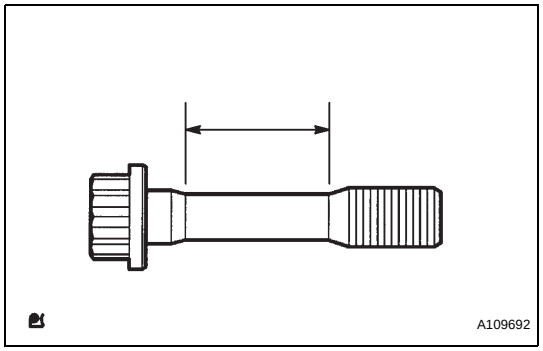
(2) Check for twist.

Maximum twist:

0.15 mm (0.0059 in.) per 100 mm (3.94 in.)

If the twist is greater than the maximum, replace the connecting rod assembly.

EM



40. INSPECT CONNECTING ROD BOLT

(a) Using vernier calipers, measure the tension portion diameter of the bolt.

Standard diameter:

7.2 to 7.3 mm (0.284 to 0.287 in.)

Minimum diameter:

7.0 mm (0.276 in.)

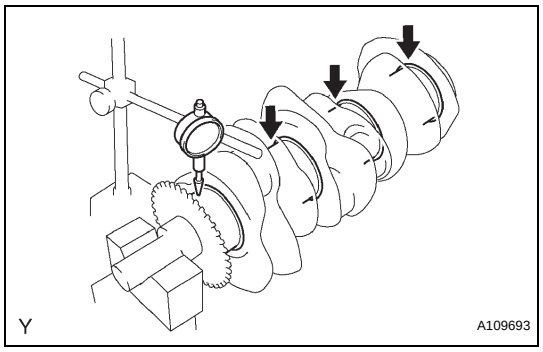
If the diameter is less than the minimum, replace the bolt.

41. INSPECT CRANKSHAFT

(a) Inspect for circle runout.

(1) Clean the crank journal.

(2) Place the crankshaft on V-blocks.

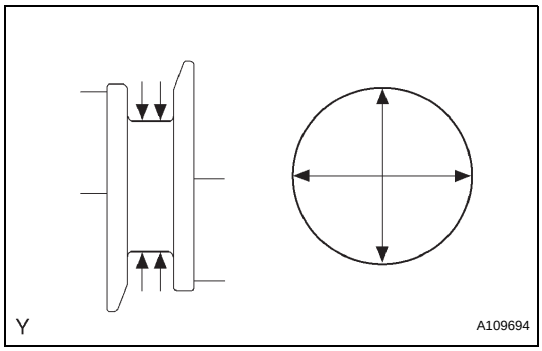


(3) Using a dial indicator, measure the circle runout at the center journal.

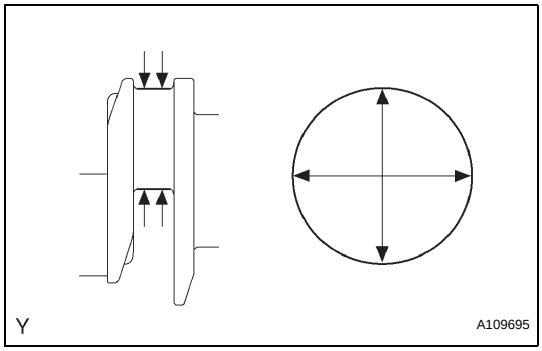
Maximum circle runout:

0.06 mm (0.0024 in.)

If the circle runout is greater than the maximum, replace the crankshaft.



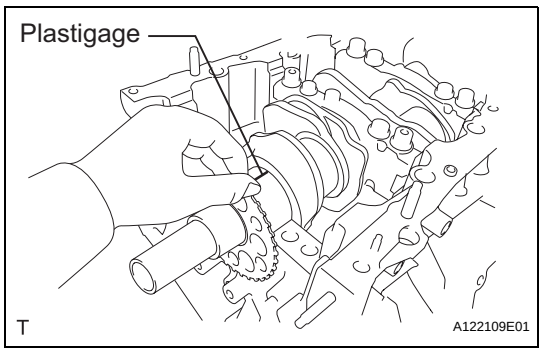
(b) Inspect the main journals.
(1) Using a micrometer, measure the diameter of each main journal.
Standard journal diameter:
60.988 to 61.000 mm (2.4011 to 2.4016 in.)
If the diameter is not as specified, check the oil clearance. If necessary, replace the crankshaft.
(2) Check each main journal for taper and out-of-round as shown in the illustration.
Maximum taper and out-of-round:
0.02 mm (0.0008 in.)
If the taper and out-of-round is greater than the maximum, replace the crankshaft.



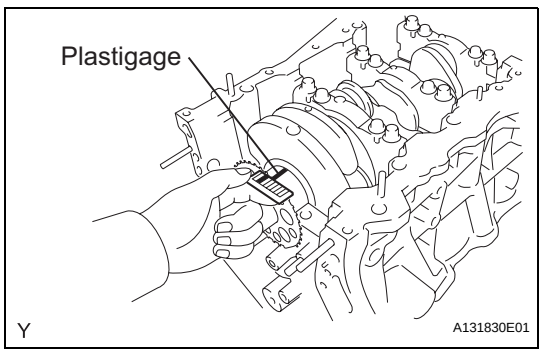
(c) Inspect the crank pin.
(1) Using a micrometer, measure the diameter of each crank pin.
Crankshaft pin diameter:
52.992 to 53.000 mm (2.0863 to 2.0866 in.)
If the diameter is not as specified, check the oil clearance. If necessary, replace the crankshaft.
(2) Check each crank pin for taper and out-of-round as shown in the illustration.
Maximum taper and out-of-round:
0.02 mm (0.0008 in.)
If the taper and out-of-round is greater than the maximum, replace the crankshaft.

42. INSPECT CRANKSHAFT OIL CLEARANCE

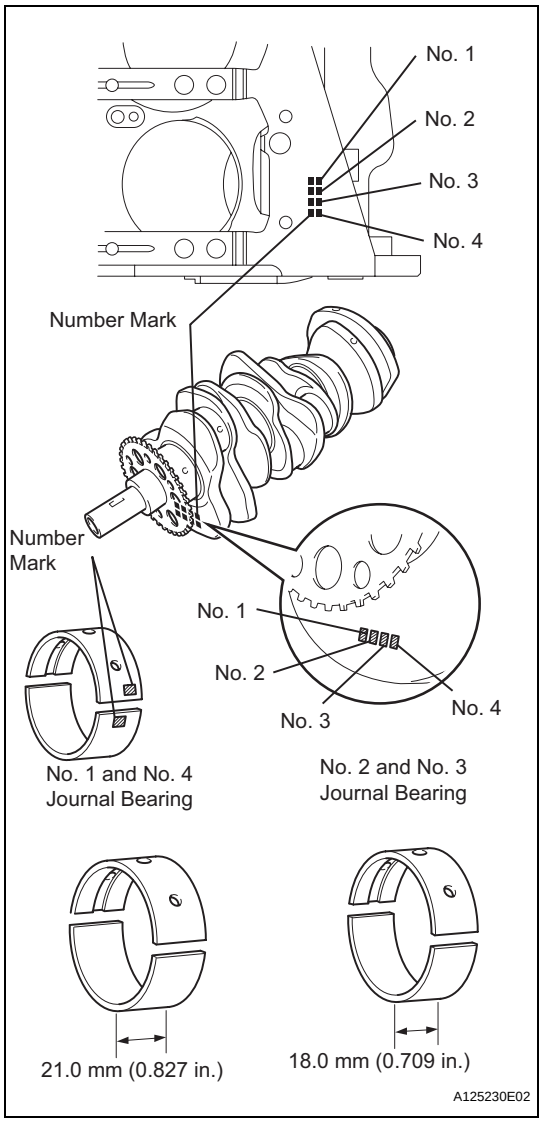
(a) Check the crank journal and bearing for pitting and scratches.
(b) Install the crankshaft bearing (See page EM-113).
(c) Place the crankshaft on the cylinder block.



(d) Lay a strip of Plastigage across each journal.
(e) Examine the front marks and numbers and install the bearing caps on the cylinder block.
HINT:
A number is marked on each main bearing cap to indicate the installation position.
(f) Install the main bearing cap (See page EM-113).
NOTICE:
Do not turn the crankshaft.
(g) Remove the main bearing caps (See page EM-64).



(h) Measure the Plastigage at its widest point.
Standard oil clearance:
0.026 to 0.047 mm (0.0010 to 0.0019 in.)
Maximum oil clearance:
0.050 mm (0.0020 in.)
If the oil clearance is greater than the maximum, replace the bearings. If necessary, replace the crankshaft.
NOTICE:
Completely remove the Plastigage after the measurement.



(i) If replacing a bearing, replace it with one having the same number. If the number of the bearing cannot be determined, select the correct bearing by adding together the numbers imprinted on the cylinder block and crankshaft, then refer to the table below for the appropriate bearing number. There are 5 sizes of standard bearings, marked "1", "2", "3", "4" and "5" accordingly.

Journal bearings:

Cylinder block + Crankshaft	0 - 5	6 - 11	12 - 17	18 - 23	24 - 28
Bearing to be used	"1"	"2"	"3"	"4"	"5"

HINT:
EXAMPLE: Cylinder block "11" + Crankshaft "06" = Total number 17 (Use bearing "3")

Crankshaft main journal diameter

Mark	Diameter
"00"	**60.999 to 61.000 mm (2.4015 to 2.4016 in.)**
"01"	**60.998 to 60.999 mm (2.4015 to 2.4015 in.)**
"02"	**60.997 to 60.998 mm (2.4015 to 2.4015 in.)**
"03"	**60.996 to 60.997 mm (2.4014 to 2.4015 in.)**
"04"	**60.995 to 60.996 mm (2.4014 to 2.4014 in.)**
"05"	**60.994 to 60.995 mm (2.4013 to 2.4014 in.)**
"06"	**60.993 to 60.994 mm (2.4013 to 2.4013 in.)**
"07"	**60.992 to 60.993 mm (2.4013 to 2.4013 in.)**
"08"	**60.991 to 60.992 mm (2.4012 to 2.4013 in.)**
"09"	**60.990 to 60.991 mm (2.4012 to 2.4012 in.)**
"10"	**60.989 to 60.990 mm (2.4011 to 2.4012 in.)**
"11"	**60.988 to 60.989 mm (2.4011 to 2.4011 in.)**

Standard upper bearing center wall thickness (No. 1 and No. 4 journal)

Mark	Thickness
"1"	**2.500 to 2.503 mm (0.0984 to 0.0985 in.)**
"2"	**2.503 to 2.506 mm (0.0985 to 0.0987 in.)**
"3"	**2.506 to 2.509 mm (0.0987 to 0.0988 in.)**
"4"	**2.509 to 2.512 mm (0.0988 to 0.0989 in.)**
"5"	**2.512 to 2.515 mm (0.0989 to 0.0990 in.)**

Standard lower bearing center wall thickness (No. 1 and No. 4 journal)

Mark	Thickness
"1"	**2.478 to 2.481 mm (0.0976 to 0.0977 in.)**
"2"	**2.481 to 2.484 mm (0.0977 to 0.0978 in.)**
"3"	**2.484 to 2.487 mm (0.0978 to 0.0979 in.)**
"4"	**2.487 to 2.490 mm (0.0979 to 0.0980 in.)**
"5"	**2.490 to 2.493 mm (0.0980 to 0.0981 in.)**

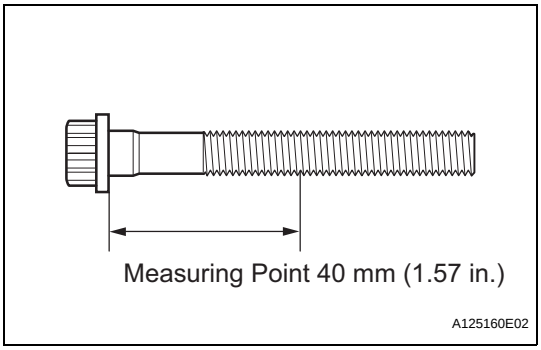
Standard upper bearing center wall thickness (No. 2 and No. 3 journal)

Mark	Thickness
"1"	2.478 to 2.481 mm (0.0976 to 0.0977 in.)
"2"	2.481 to 2.484 mm (0.0977 to 0.0978 in.)
"3"	2.484 to 2.487 mm (0.0978 to 0.0979 in.)
"4"	2.487 to 2.490 mm (0.0979 to 0.0980 in.)
"5"	2.490 to 2.493 mm (0.0980 to 0.0981 in.)

Standard lower bearing center wall thickness (No. 2 and No. 3 journal)

Mark	Thickness
"1"	2.500 to 2.503 mm (0.0984 to 0.0985 in.)
"2"	2.503 to 2.506 mm (0.0985 to 0.0987 in.)
"3"	2.506 to 2.509 mm (0.0987 to 0.0988 in.)
"4"	2.509 to 2.512 mm (0.0988 to 0.0989 in.)
"5"	2.512 to 2.515 mm (0.0989 to 0.0990 in.)

EM



43. INSPECT CRANKSHAFT BEARING CAP SET BOLT

(a) Using vernier calipers, measure the minimum diameter of the compressed thread at the measuring point.

Standard diameter:
10.8 to 11.0 mm (0.4252 to 0.4331 in.)
Minimum diameter:
10.7 mm (0.4213 in.)
Measuring Point:
40 mm (1.57 in.)

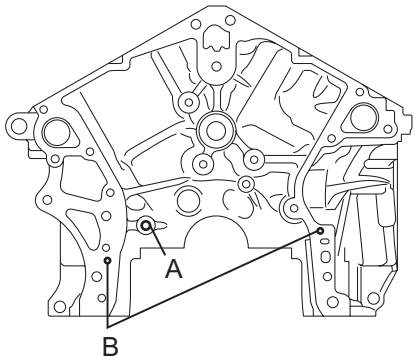
If the diameter is less than the minimum, replace the bolt.

REASSEMBLY

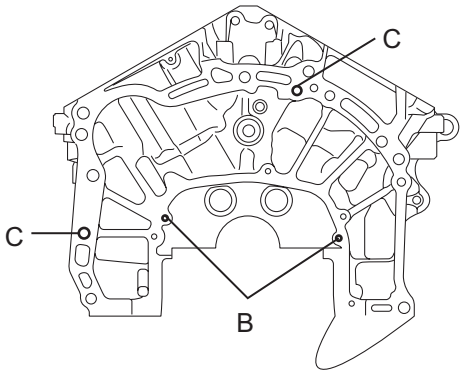
1. INSTALL STRAIGHT PIN

(a) Using a plastic hammer, tap in new straight pins to the cylinder block.

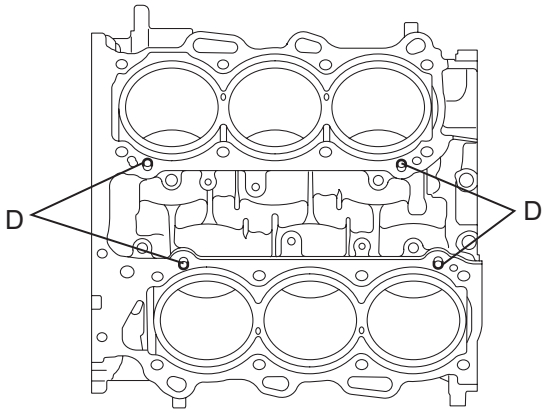
Front Cylinder Block:



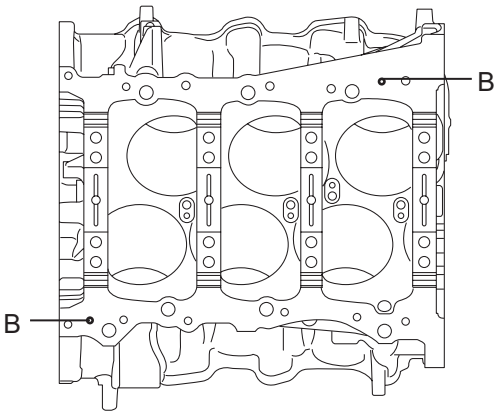
Rear Cylinder Block:



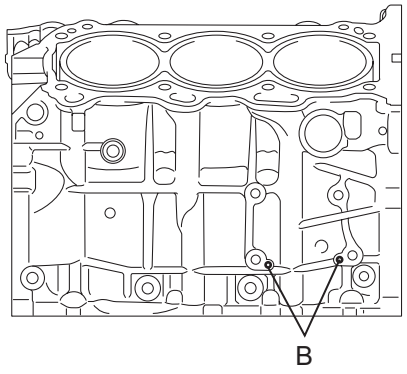
Upper Cylinder Block:

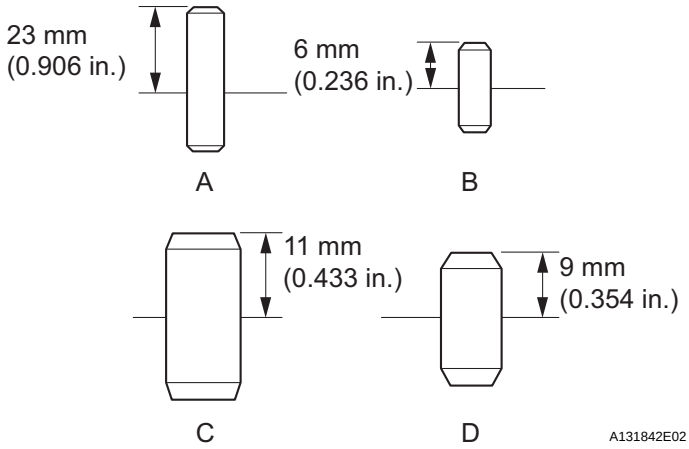


Lower Cylinder Block:



Cylinder Block RH Side:





Y

A131842E02

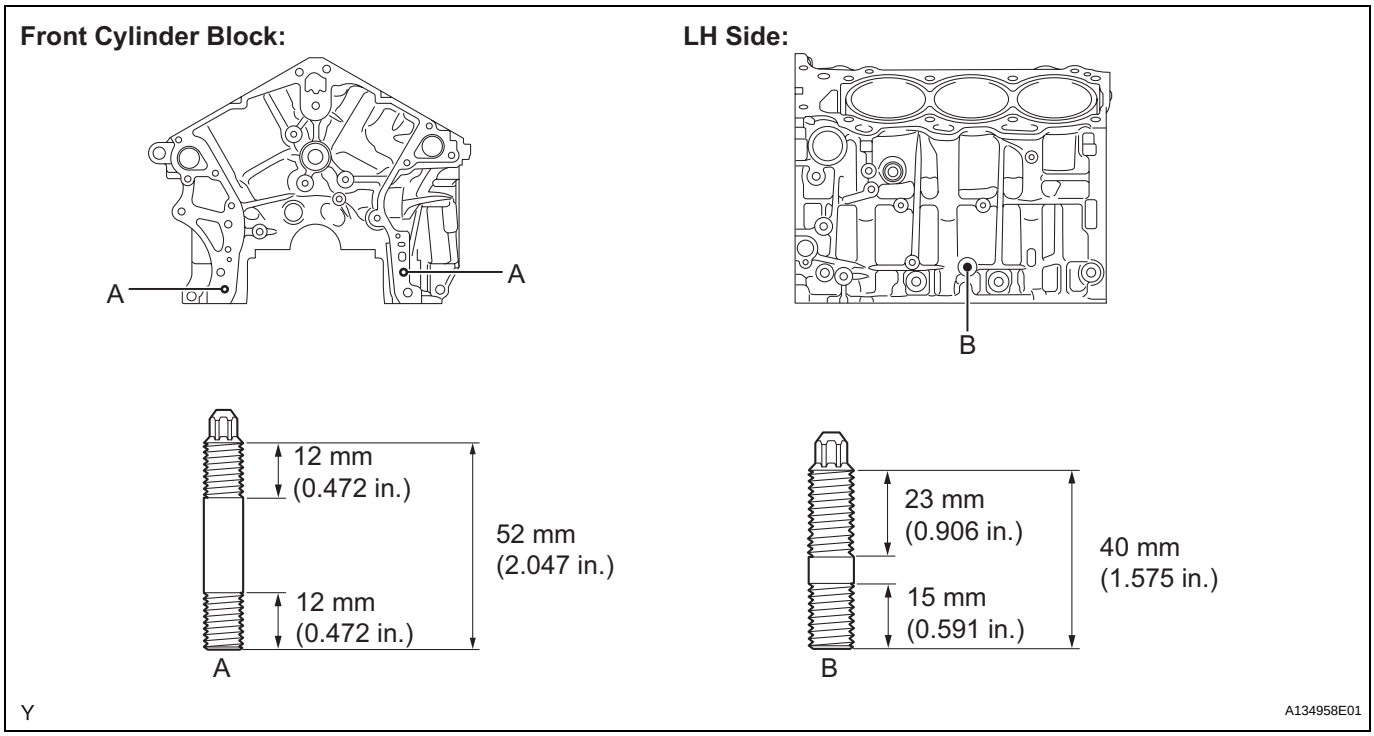
Standard protrusion

Item	Protrusion
Pin A	23 mm (0.906 in.)
Pin B	6 mm (0.236 in.)
Pin C	11 mm (0.433 in.)

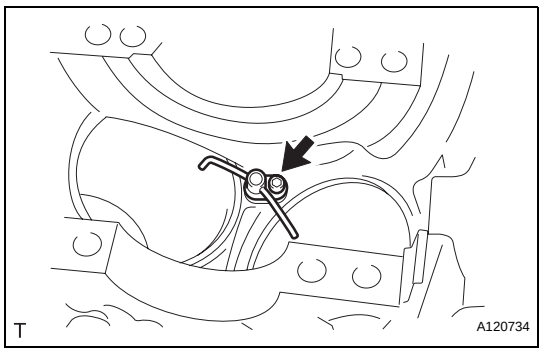
Item	Protrusion
Pin D	9 mm (0.354 in.)

2. INSTALL STUD BOLT

(a) Using E8 and E10 "torx" sockets, install the stud bolts.

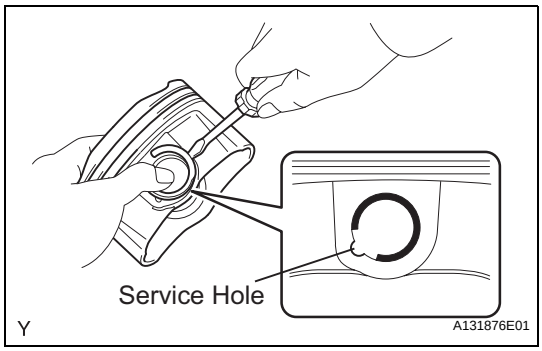


Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf) for bolt A
17 N*m (173 kgf*cm, 13 ft.*lbf) for bolt B



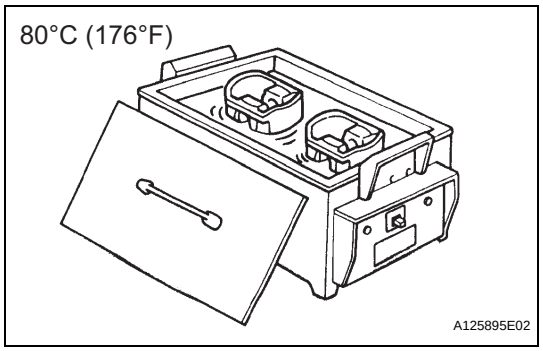
3. INSTALL NO. 1 OIL NOZZLE SUB-ASSEMBLY

(a) Using a 5 mm hexagon wrench, install the oil nozzles.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

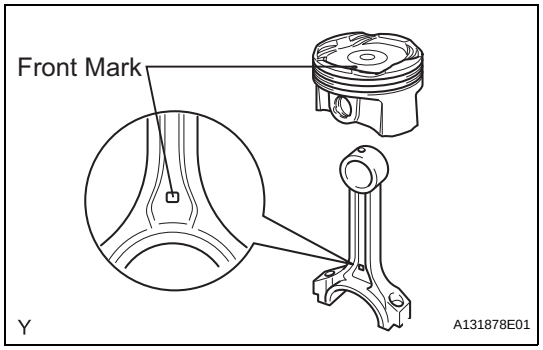


4. INSTALL PISTON SUB-ASSEMBLY WITH PIN

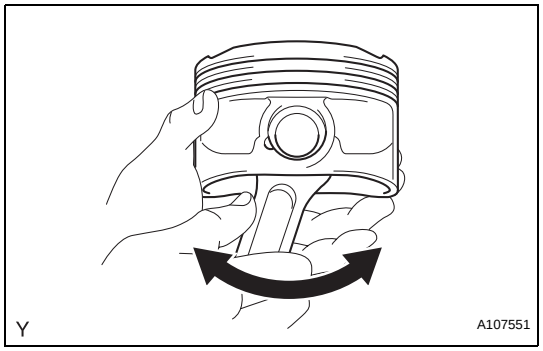
(a) Using a screwdriver, install a new snap ring at one end of the piston pin hole.
HINT:
Be sure that the end gap of the snap ring is not aligned with the pin hole cutout portion of the piston.



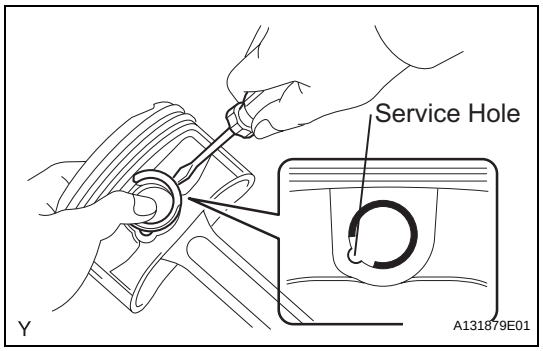
(b) Gradually heat the piston to approximately 80°C (176°F).
(c) Coat the piston pin with engine oil.



(d) Align the front marks of the piston and connecting rod, and push in the piston pin with your thumb.
HINT:
The piston and pin are a matched set.



(e) Check the fitting condition between the piston and piston pin by trying to move the piston back and forth on the piston pin.

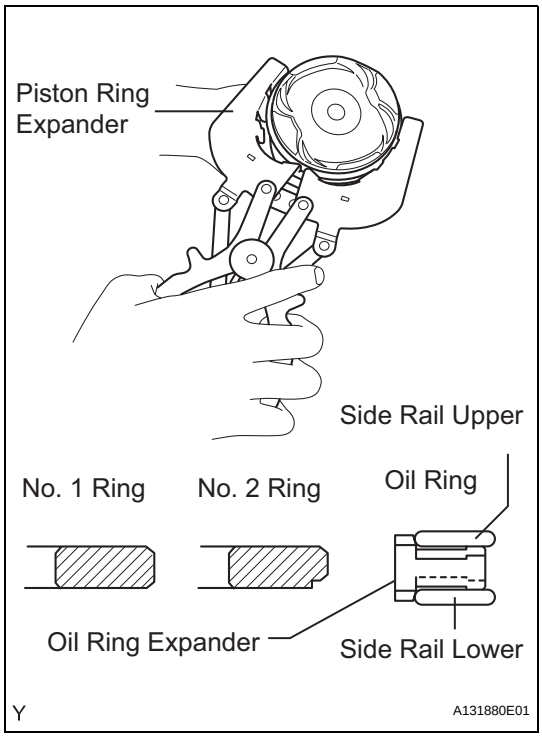


(f) Using a screwdriver, install a new snap ring at the other end of the piston pin hole.
HINT:
Be sure that the end gap of the snap ring is not aligned with the pin hole cutout portion of the piston.

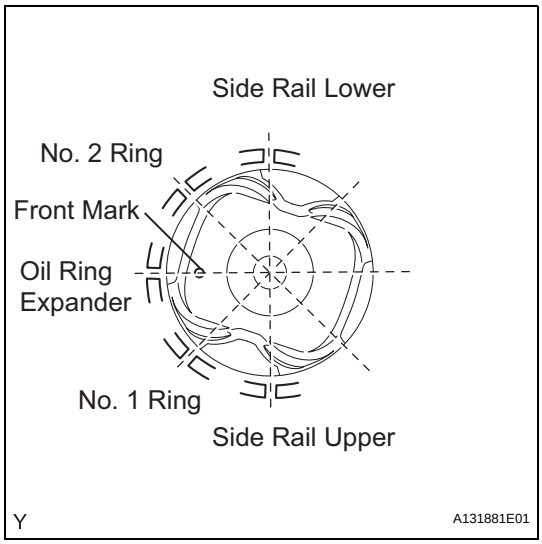
5. INSTALL PISTON RING SET

(a) Install the oil ring expander and 2 side rails by hand.

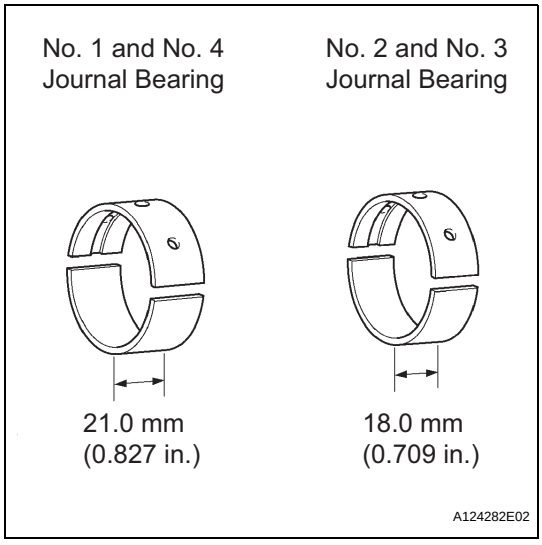
EM



(b) Using a piston ring expander, install the oil ring rail as shown in the illustration.

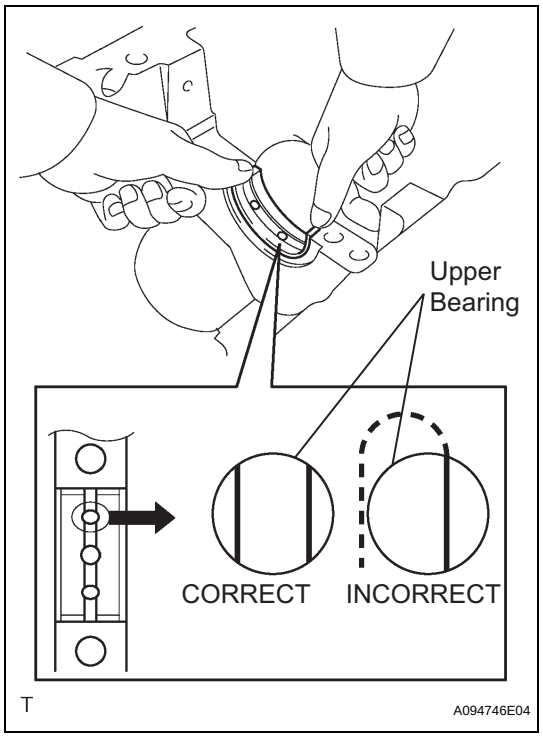


(c) Position the piston rings so that the ring ends are as shown in the illustration.
NOTICE:
Do not align the ring ends.

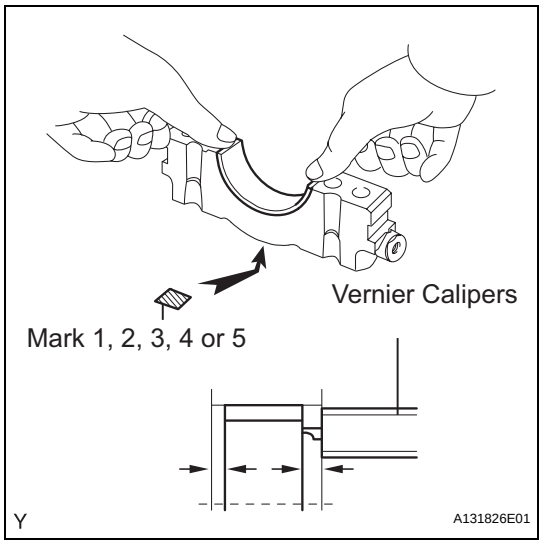


6. INSTALL CRANKSHAFT BEARING

(a) Clean the main journal and both surfaces of the bearing.
NOTICE:
Main bearings come in widths between 18.0 mm (0.709 in.) and 21.0 mm (0.827 in.). Install the 21.0 mm (0.827 in.) bearings in the No. 1 and No. 4 cylinder block journal positions with the main bearing cap. Install the 18.0 mm (0.709 in.) bearings in the No. 2 and No. 3 positions.

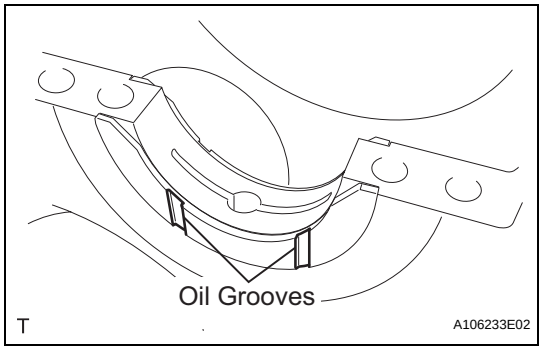


(b) Install the upper bearing.
(1) Install the upper bearings to the cylinder block as shown in the illustration.
NOTICE:
- **Do not apply engine oil to the bearings and the contact surfaces.**
- **Both sides of the oil groove in the cylinder block should be visible through the oil feed holes in the bearing. The amount visible on each side of the holes should be equal.**



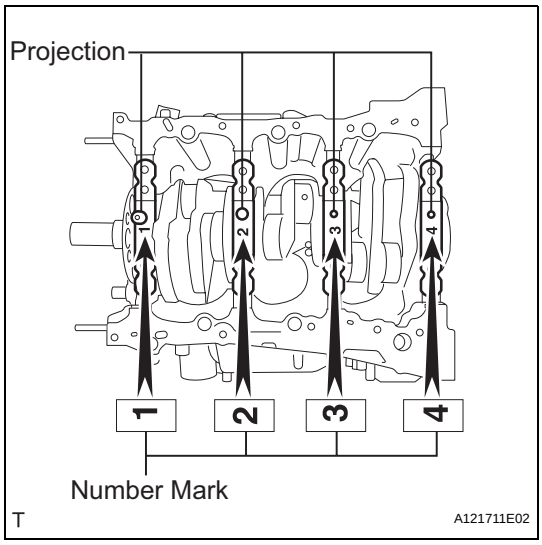
(c) Install the lower bearing.
(1) Install the lower bearings to the bearing caps.
(2) Using vernier calipers, measure the distance between the bearing cap's edge and the lower bearing's edge.
Dimension (A - B):
0.7 mm (0.0276 in.) or less
NOTICE:
Do not apply engine oil to the bearings and the contact surfaces.

7. INSTALL CRANKSHAFT THRUST WASHER SET
(a) Apply engine oil to the crankshaft thrust washer.



(b) Install the 2 thrust washers under the No. 2 journal position of the cylinder block with the oil grooves facing outward.

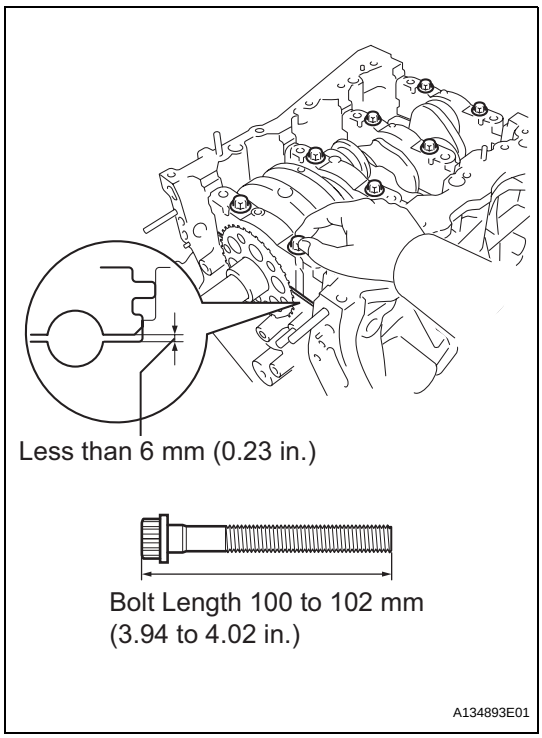
8. INSTALL CRANKSHAFT
(a) Apply engine oil to the upper bearing, then place the crankshaft on the cylinder block.



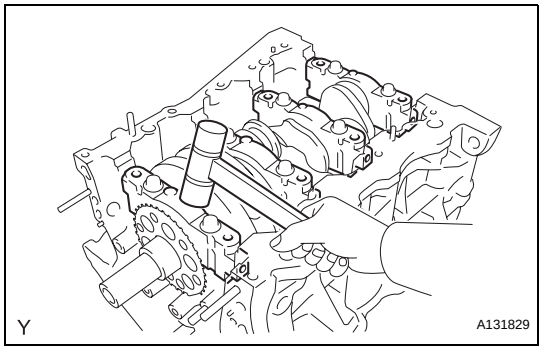
(b) Confirm the projection and numbers of the main bearing caps and install the bearing caps on the cylinder block.
HINT:
A number is marked on each main bearing cap to indicate the installation position.

(c) Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.

(d) Temporarily install the 8 main bearing cap bolts to the inside positions.

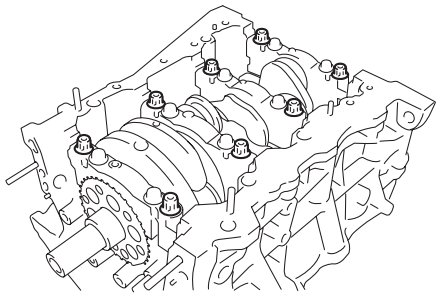


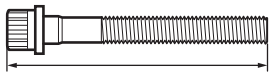
(e) Insert the main bearing cap with your hand until the clearance between the main bearing cap and the cylinder block is less than 6 mm (0.23 in.) by marking the 2 internal bearing cap bolts as a guide.
Bolt length:
100 to 102 mm (3.94 to 4.02 in.)



(f) Using a plastic hammer, lightly tap the bearing cap to ensure a proper fit.

(g) Apply a light coat of engine oil to the threads and under the heads of the 8 main bearing cap bolts.



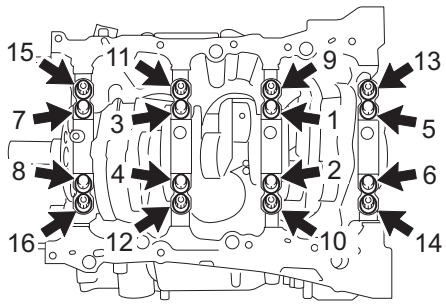


Bolt Length 105.5 to 107.5 mm
(4.15 to 4.23 in.)

A134894E01

(h) Install the 8 main bearing cap bolts to the outside positions.

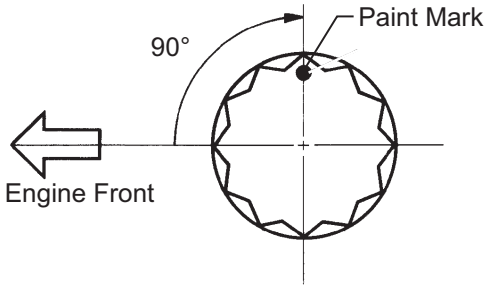
(i) Install the crankshaft bearing cap bolts.
HINT:
The main bearing cap bolts are tightened in 2 progressive steps.



T

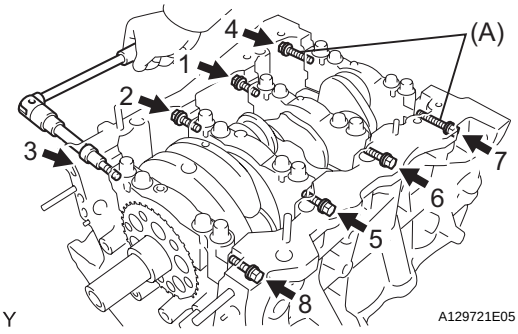
A134892E02

(j) Step 1
(1) Install and uniformly tighten the 16 main bearing cap bolts in the sequence shown in the illustration.
Torque: 61 N*m (622 kgf*cm, 45 ft.*lbf)
If any of the main bearing cap bolts does not meet the torque specified, replace it.



A051462E03

(k) Step 2
(1) Mark the front of the bearing cap bolts with paint.
(2) Retighten the bearing cap bolts by 90° in the order above.
(3) Check that the painted mark is now at a 90° angle to the front.



Y

A129721E05

(l) Install 8 new seal washers and uniformly tighten the 8 main bearing cap bolts in several steps and in the sequence shown in the illustration.
Torque: 52 N*m (525 kgf*cm, 38 ft.*lbf)
Bolt length

Item	Length
Bolt A	45 mm (1.77 in.)
Except bolt A	30 mm (1.18 in.)

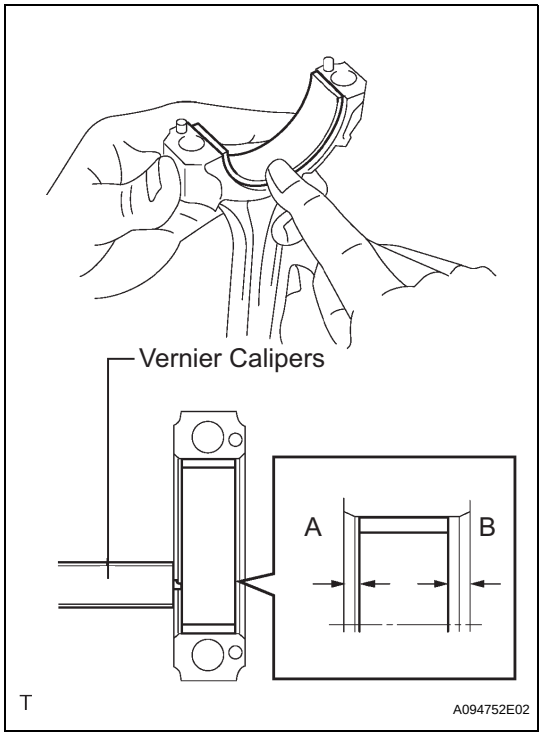
(m) Check that the crankshaft turns smoothly.

(n) Check the crankshaft thrust clearance (See page EM-104).

9. INSTALL CONNECTING ROD BEARING

(a) Install the connecting rod bearing to the connecting rod and bearing cap.

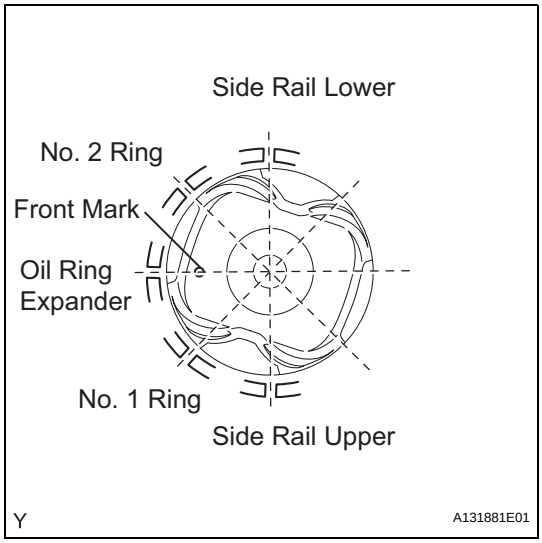
(b) Using vernier calipers, measure the distance between the connecting rod's and bearing cap's edges and the connecting rod bearing's edge.
Dimension (A - B):
0.7 mm (0.0276 in.) or less
NOTICE:
Do not apply engine oil to the bearings and the contact surfaces.

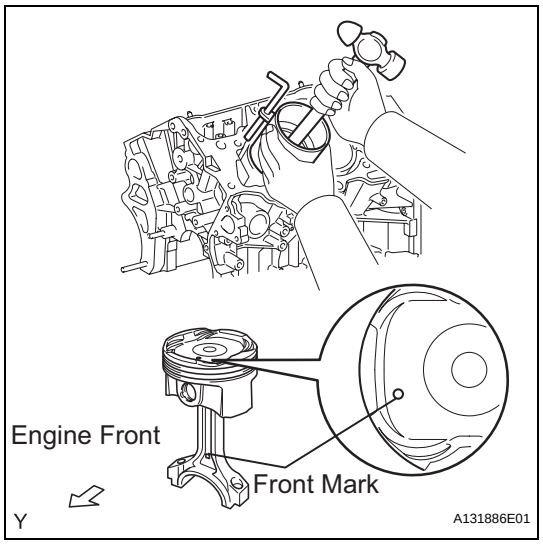


10. INSTALL PISTON SUB-ASSEMBLY WITH CONNECTING ROD

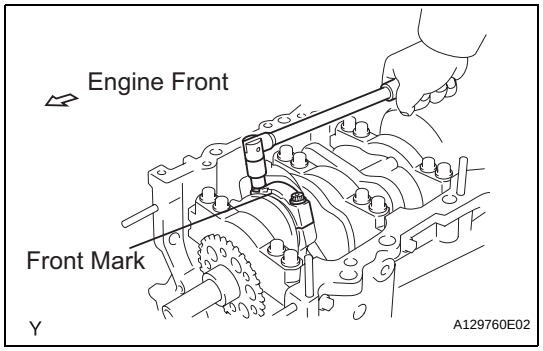
(a) Apply engine oil to the cylinder walls, the pistons, and the surfaces of the connecting rod bearings.

(b) Position the piston rings so that the ring ends are as shown in the illustration.
NOTICE:
Do not align the ring ends.

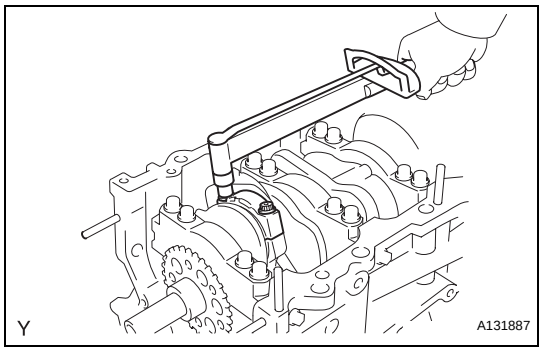




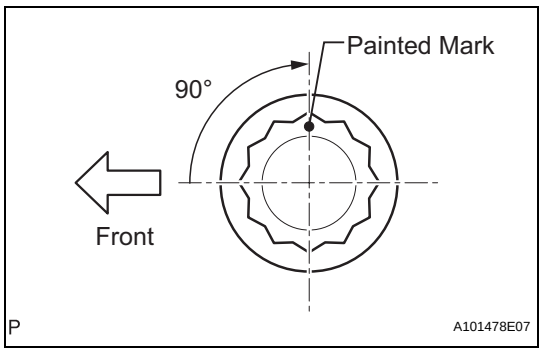
(c) Using a piston ring compressor, push the correctly numbered piston and connecting rod assembly into the cylinder with the front mark of the piston facing forward.
NOTICE:
Match the numbered connecting rod cap with the connecting rod.



(d) Check that the front mark of the connecting rod cap is facing forward.
(e) Apply a light coat of engine oil to the threads and under the heads of the connecting rod cap bolts.
(f) Install the connecting cap bolts.
HINT:
The connecting cap bolts are tightened in 2 progressive steps.

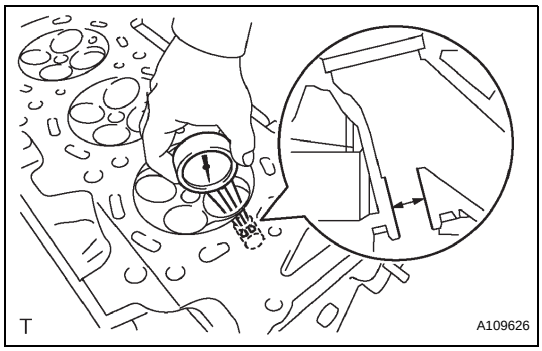


(g) Step 1
(1) Install and alternately tighten the bolts of the connecting rod cap in several steps.
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)



(h) Step 2
(1) Mark the front side of each connecting cap bolt with paint.
(2) Retighten the cap bolts by 90° as shown in the illustration.
(3) Check the painted mark is now at a 90° angle to the front.
(i) Check that the crankshaft turns smoothly.
(j) Check the connecting rod thrust clearance (See page EM-103).

EM



11. INSTALL INTAKE VALVE GUIDE BUSH

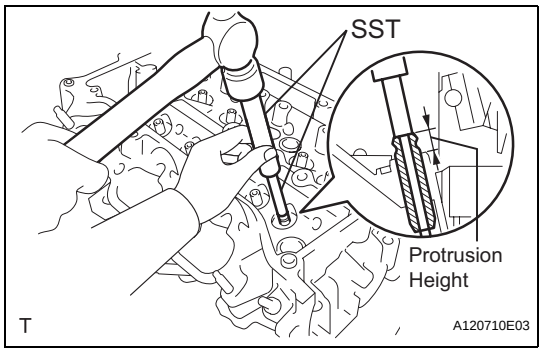
(a) Using a caliper gauge, measure the bush bore diameter of the cylinder head.
Cylinder bore diameter:
10.285 to 10.306 mm (0.4049 to 0.4057 in.)
Select a new guide bush (STD or O/S 0.05)

Bush size	Bush bore diameter
STD	10.285 to 10.306 mm (0.4049 to 0.4057 in.)
O/S 0.05	10.335 to 10.356 mm (0.4069 to 0.4077 in.)

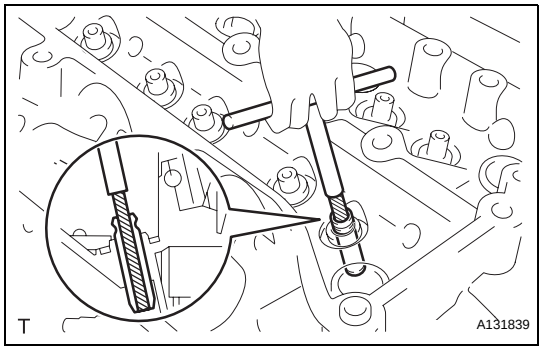
If the bush bore diameter of the cylinder head is greater than 10.306 mm (0.4057 in.), machine the bush bore to the dimension of 10.335 to 10.356 mm (0.4069 to 0.4077 in.) to install a O/S 0.05 valve guide bush.
If the bush bore diameter of the cylinder head is greater than 10.356 mm (0.4077 in.), replace the cylinder head.

(b) Heat the cylinder head to 80 to 100°C (176 to 212°F).

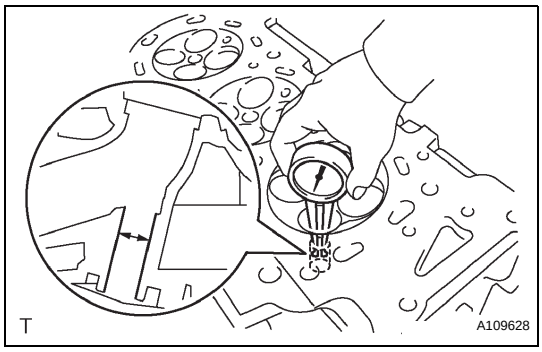
(c) Place the cylinder head on wooden blocks.



(d) Using SST, tap in new valve guide bushes to the specified protrusion height.
SST 09201-10000 (09201-01050), 09950-70010 (09951-07100)
Protrusion height:
9.30 to 9.70 mm (0.3661 to 0.3819 in.)



(e) Using a sharp 5.5 mm reamer, ream the valve guide bushings to obtain the specified clearance.
Standard oil clearance:
0.025 to 0.060 mm (0.0010 to 0.0023 in.)



12. INSTALL EXHAUST VALVE GUIDE BUSH

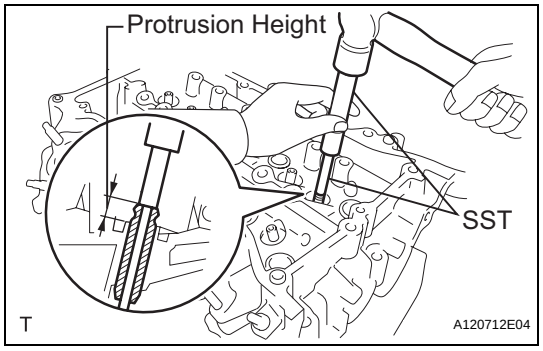
(a) Using a caliper gauge, measure the bush bore diameter of the cylinder head.
Cylinder bore diameter:
10.285 to 10.306 mm (0.4049 to 0.4057 in.)
Select a new guide bush (STD or O/S 0.05)

Bush size	Bush bore diameter
STD	10.285 to 10.306 mm (0.4049 to 0.4057 in.)
O/S 0.05	10.335 to 10.356 mm (0.4069 to 0.4077 in.)

If the bush bore diameter of the cylinder head is greater than 10.306 mm (0.4057 in.), machine the bush bore to the dimension of 10.335 to 10.356 mm (0.4069 to 0.4077 in.) to install a O/S 0.05 valve guide bush.
If the bush bore diameter of the cylinder head is greater than 10.356 mm (0.4077 in.), replace the cylinder head.

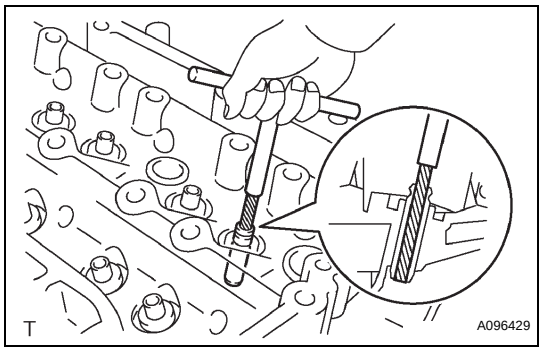
(b) Heat the cylinder head to 80 to 100°C (176 to 212°F).

(c) Place the cylinder head on wooden blocks.

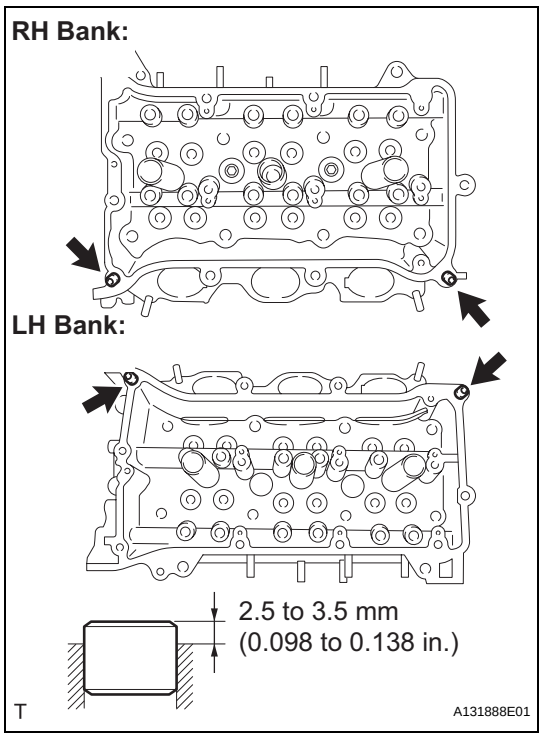


(d) Using SST, tap in new valve guide bushes to the specified protrusion height.
SST 09201-10000 (09201-01050), 09950-70010 (09951-07100)
Protrusion height:
9.30 to 9.70 mm (0.3661 to 0.3819 in.)

EM

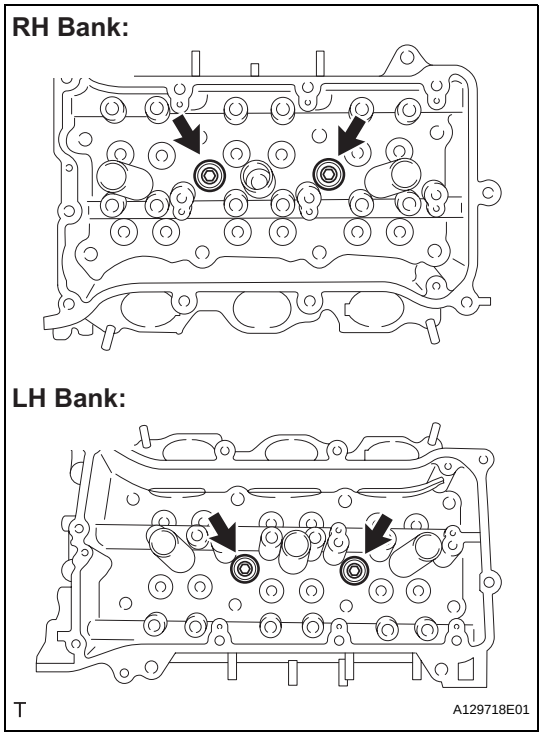


(e) Using a sharp 5.5 mm reamer, ream the valve guide bushings to obtain the specified clearance.
Standard oil clearance:
0.030 to 0.065 mm (0.0012 to 0.0026 in.)



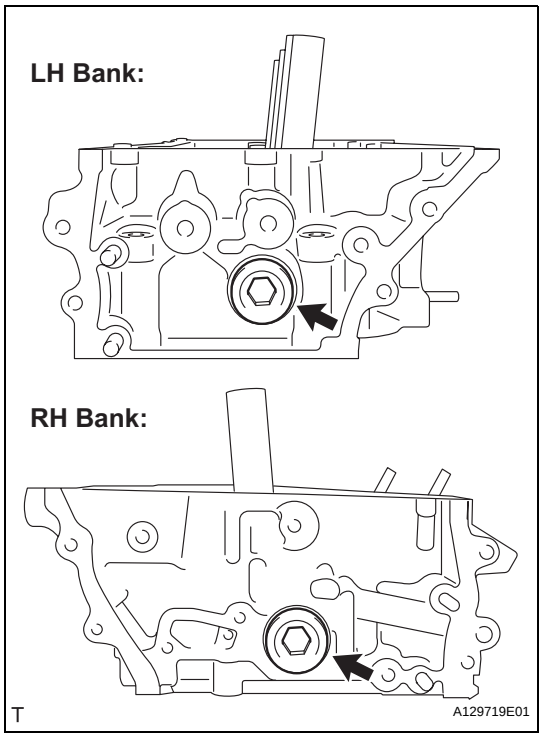
13. INSTALL RING PIN

(a) Using a plastic hammer, tap in new ring pins to the specified protrusion height.
Specified protrusion height:
2.5 to 3.5 mm (0.098 to 0.138 in.)



14. INSTALL NO. 1 STRAIGHT SCREW PLUG

(a) Using a 10 mm hexagon wrench, install 4 new gaskets and the straight screw plugs.
Torque: 44 N*m (449 kgf*cm, 32 ft.*lbf)



15. INSTALL NO. 2 STRAIGHT SCREW PLUG

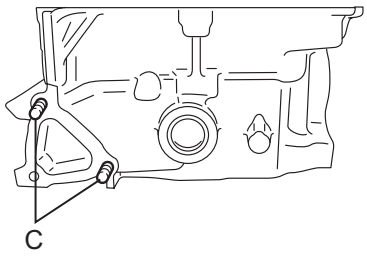
(a) Using a 14 mm hexagon wrench, install 2 new gaskets and the 2 straight screw plugs.
Torque: 80 N*m (816 kgf*cm, 59 ft.*lbf)

16. INSTALL STUD BOLT

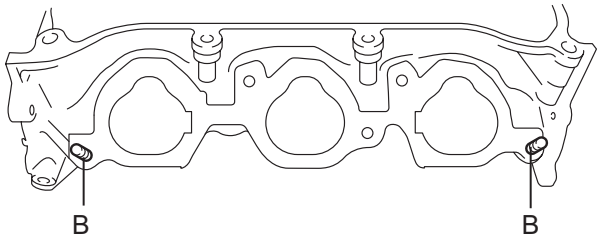
NOTICE:
If the stud bolt is deformed or the threads are damaged, replace it.

(a) Using E6 and E8 "torx" sockets, install the stud bolts.

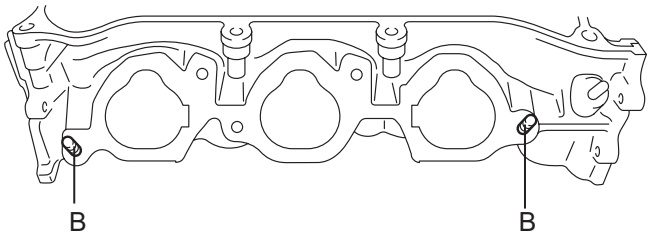
Rear Side RH:



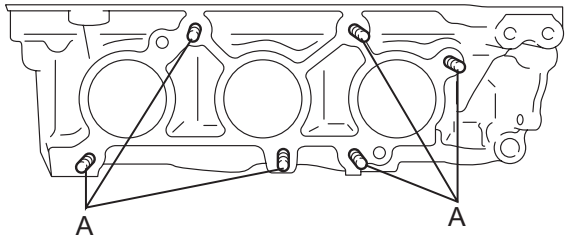
Intake Side RH:



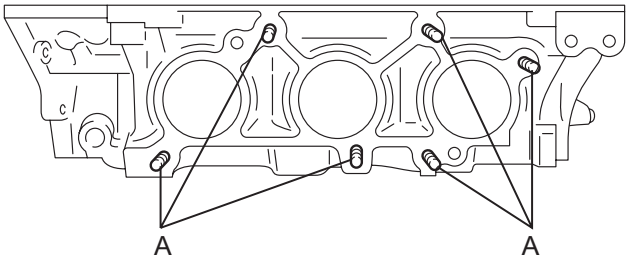
Intake Side LH:



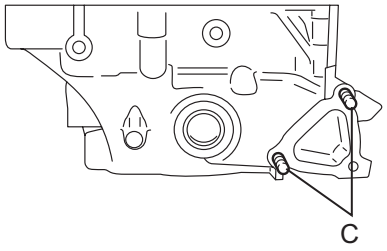
Exhaust Side RH:

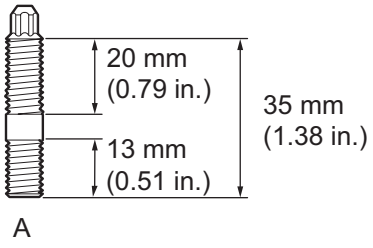


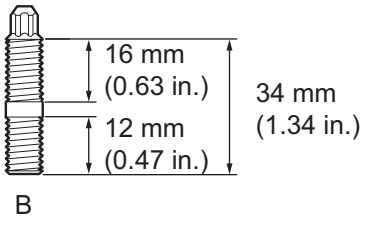
Exhaust Side LH:

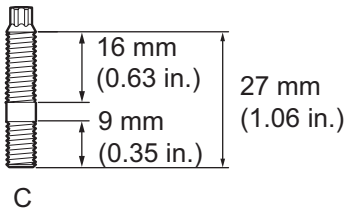


Rear Side LH:









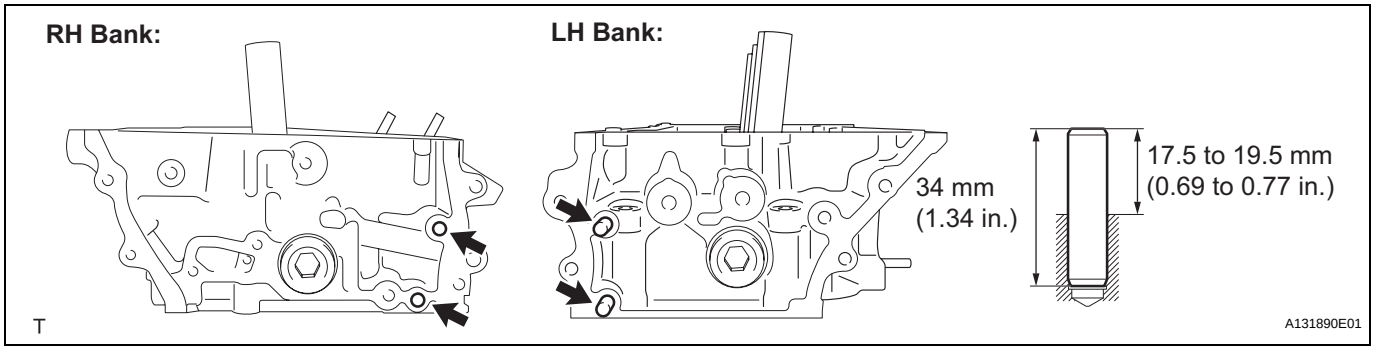
T

A134987E01

Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf) for bolts A and B
4.0 N*m (41 kgf*cm, 35 in.*lbf) for bolt C

17. INSTALL STRAIGHT PIN

(a) Using a plastic hammer, tap in new straight pins as shown in the illustration.



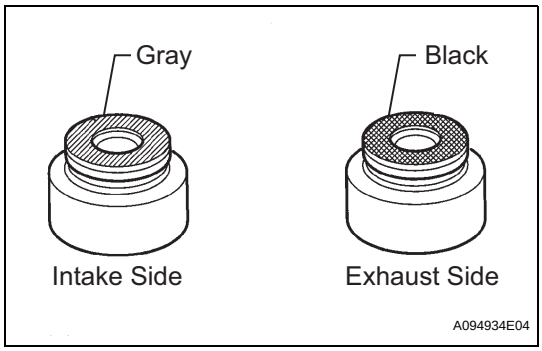
Protrusion height:
17.5 to 19.5 mm (0.689 to 0.768 in.)

18. INSTALL VALVE SPRING SEAT

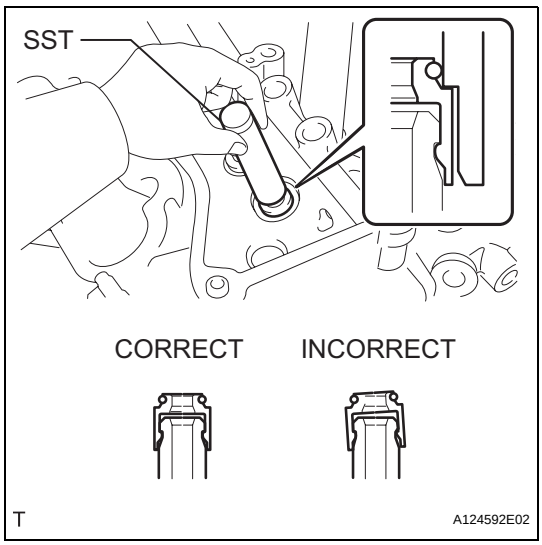
(a) Install the valve spring seats to the cylinder head.

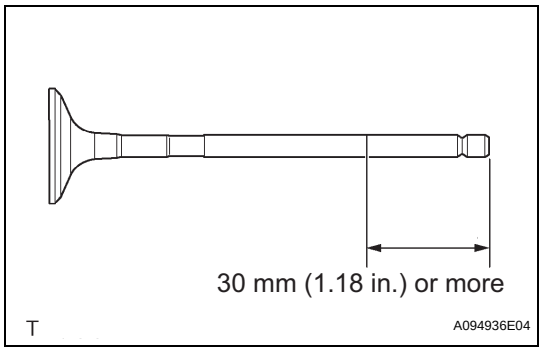
19. INSTALL VALVE STEM OIL SEAL

(a) Apply a light coat of engine oil to new oil seals.
NOTICE:
Pay attention when installing the intake and exhaust oil seals. For example, installing the intake oil seal into the exhaust side or installing the exhaust oil seal to the intake side can cause installation problems later.
HINT:
The intake valve oil seals are gray and the exhaust valve oil seals are black.



(b) Using SST, push in the oil seals.
SST 09201-41020
NOTICE:
Failure to use SST will cause the seal to be damaged or improperly seated.





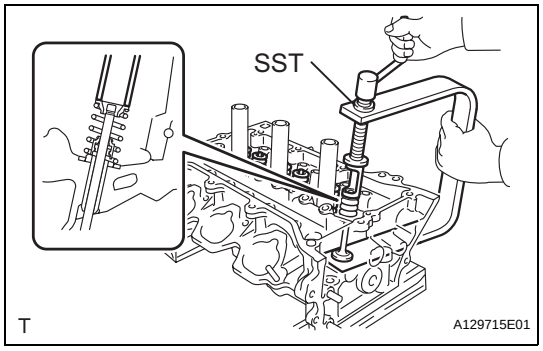
20. INSTALL EXHAUST VALVE

(a) Apply a sufficient coat of engine oil to the tip area of the intake valve shown in the illustration.

(b) Install the valve, compression spring and spring retainer to the cylinder head.

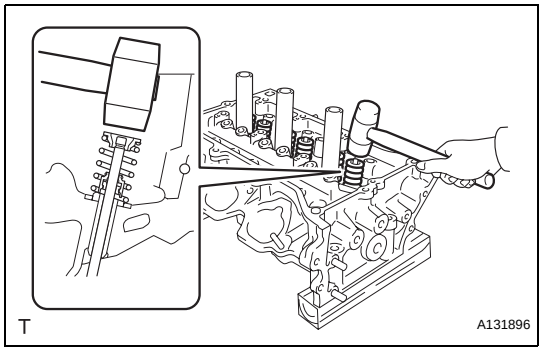
NOTICE:

Install the same parts in the same combination to the original locations.



(c) Using SST, compress the spring and install the 2 retainer locks.

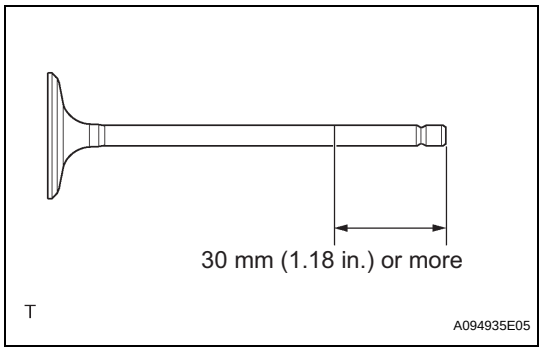
SST 09202-70020 (09202-00010)



(d) Using a plastic hammer, lightly tap the valve stem tip to ensure a proper fit.

NOTICE:

Be careful not to damage the retainer.



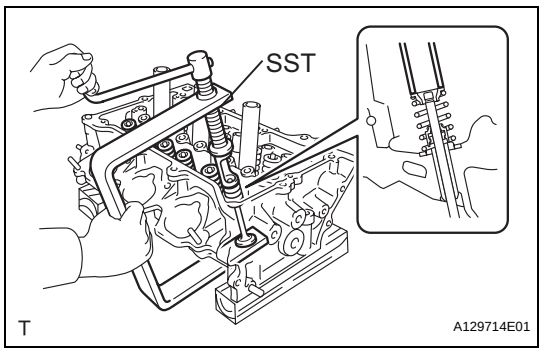
21. INSTALL INTAKE VALVE

(a) Apply a sufficient coat of engine oil to the tip area of the intake valve shown in the illustration.

(b) Install the valve, compression spring and spring retainer to the cylinder head.

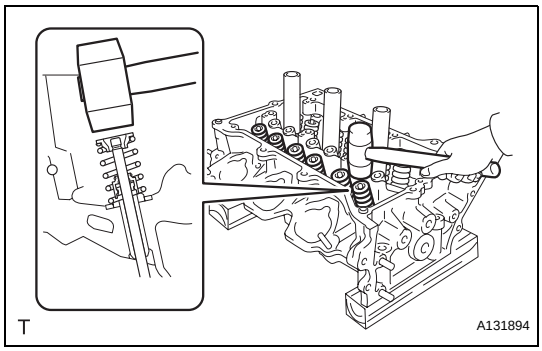
NOTICE:

Install the same parts in the same combination to the original locations.



(c) Using SST, compress the spring and install the 2 retainer locks.

SST 09202-70020 (09202-00010)



(d) Using a plastic hammer, lightly tap the valve stem tip to ensure a proper fit.
NOTICE:
Be careful not to damage the retainer.

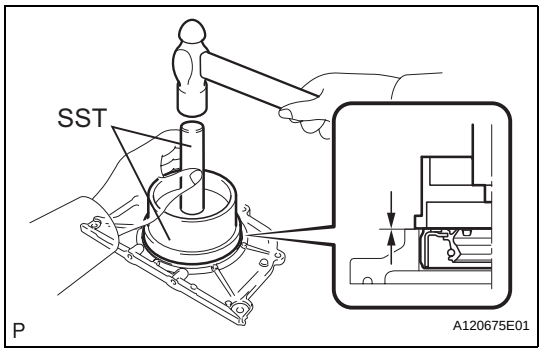
22. INSTALL VALVE STEM CAP

(a) Apply a light coat of engine oil to the valve stem caps.

(b) Install the valve stem caps on the valves.

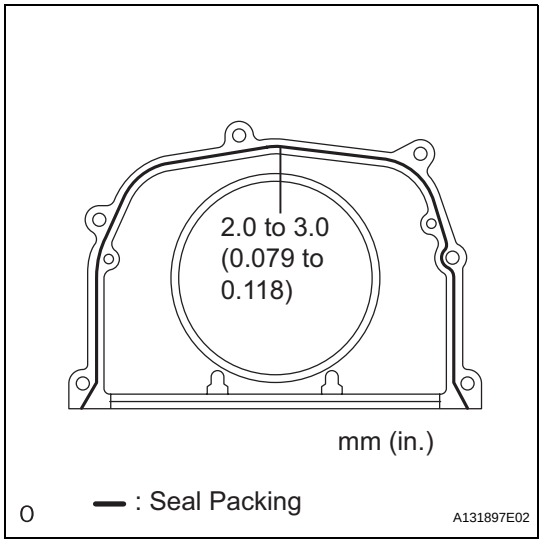
23. INSTALL ENGINE REAR OIL SEAL

(a) Place the oil seal retainer on wooden blocks.



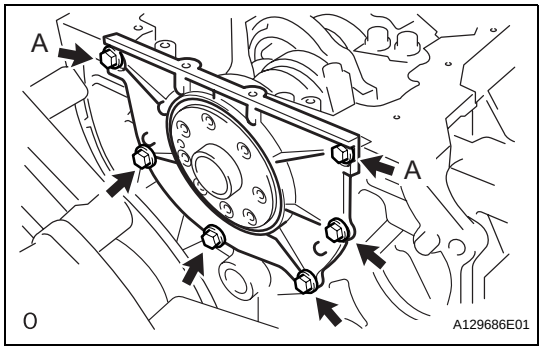
(b) Using SST, tap in a new oil seal until its surface is flush with the oil seal retainer edge.
SST 09223-15030, 09950-70010 (09951-07100)
NOTICE:
- **Keep the lip free of foreign matter.**
- **Do not tap on the oil seal at an angle.**

EM

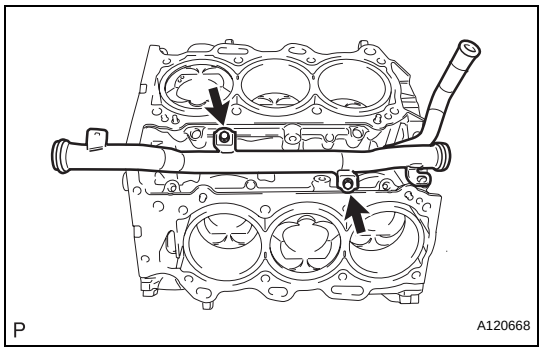


24. INSTALL ENGINE REAR OIL SEAL RETAINER

(a) Apply seal packing in a continuous line as shown in the illustration.
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent
Seal Diameter:
2.0 to 3.0 mm (0.079 to 0.118 in.)
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the oil seal retainer within 3 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after installation.**



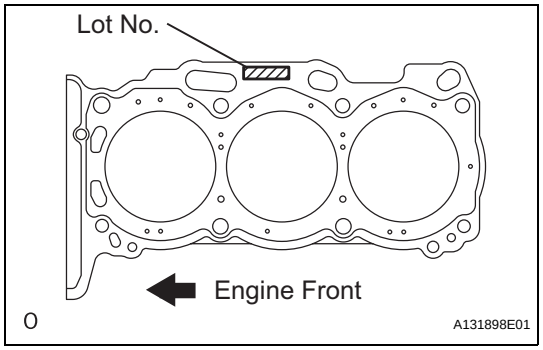
(b) Install the oil seal retainer with the 6 bolts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)
NOTICE:
Be sure to apply adhesive 1324 to the bolts in the places indicated by A before installing them.
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or Equivalent



25. INSTALL WATER INLET PIPE

(a) Install the water inlet pipe with the 2 bolts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

(b) Install the water by-pass hose No. 1.

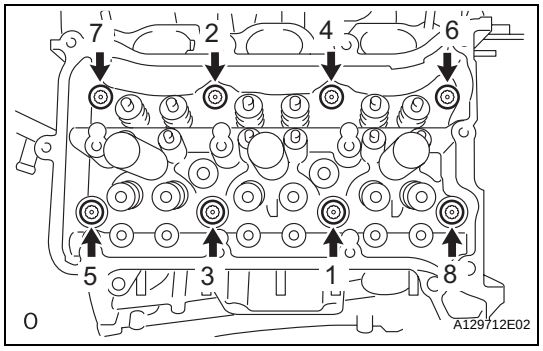


26. INSTALL CYLINDER HEAD SUB-ASSEMBLY RH

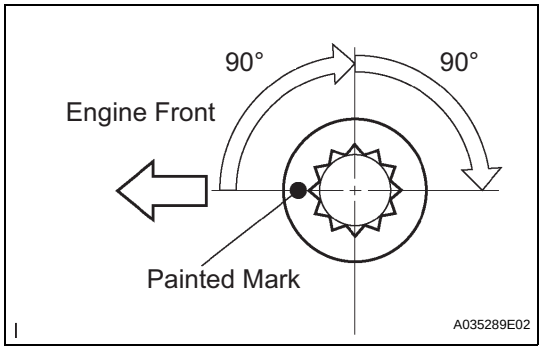
(a) Place the cylinder head gasket on the cylinder block surface with the Lot No. stamp upward.
NOTICE:
- **Be careful of the installation direction.**
- **Gently place the cylinder head in order not to damage the gasket with the bottom part of the head.**

(b) Place the cylinder head on the cylinder block.
NOTICE:
Be careful not to allow oil to adhere to the bottom part of the cylinder head.
HINT:
The cylinder head bolts are tightened in 3 progressive steps.

(c) Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.



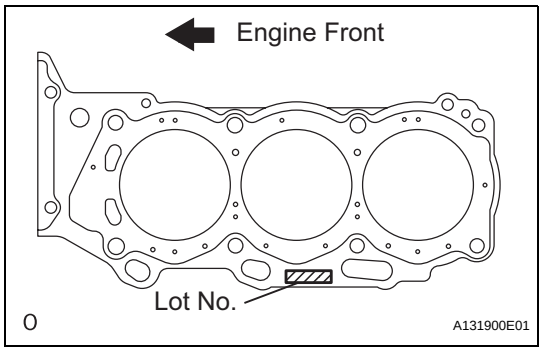
(d) Step 1
(1) Using a 10 mm bi-hexagon wrench, install and uniformly tighten the 8 cylinder head bolts with the plate washers in several steps and in the sequence shown in the illustration.
Torque: 36 N*m (367 kgf*cm, 27 ft.*lbf)



(e) Step 2
(1) Mark the cylinder head bolt head with paint as shown in the illustration.
(2) Tighten the cylinder head bolts another 90°.

(f) Step 3
(1) Tighten the cylinder head bolts by an additional 90°.
(2) Check that the painted mark is now facing rearward.

EM



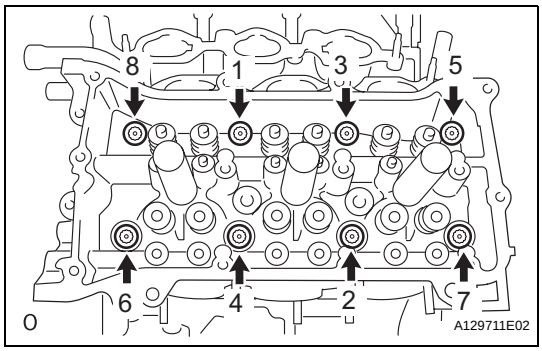
27. INSTALL CYLINDER HEAD SUB-ASSEMBLY LH

(a) Place the cylinder head gasket on the cylinder block surface with the Lot No. stamp upward.
NOTICE:
- **Be careful of the installation direction.**
- **Gently place the cylinder head in order not to damage the gasket with the bottom part of the head.**

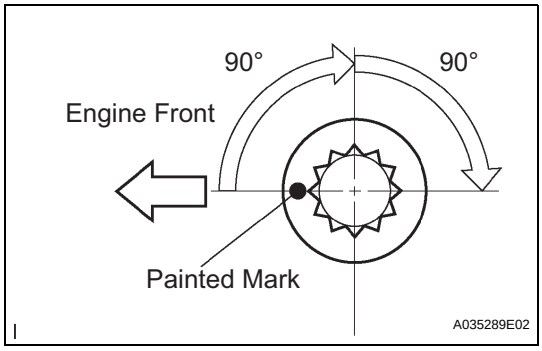
(b) Place the cylinder head on the cylinder block.
NOTICE:
Be careful not to allow oil to adhere to the bottom part of the cylinder head.
HINT:
The cylinder head bolts are tightened in 3 progressive steps.

(c) Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.

EM

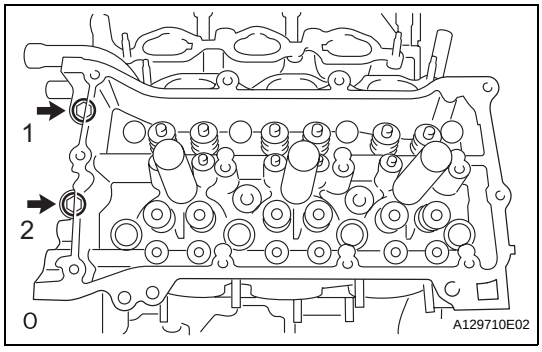


(d) Step 1
(1) Using a 10 mm bi-hexagon wrench, install and uniformly tighten the 8 cylinder head bolts with the plate washers in several steps in the sequence shown in the illustration.
Torque: 36 N*m (367 kgf*cm, 27 ft.*lbf)



(e) Step 2
(1) Mark the cylinder head bolt head with paint as shown in the illustration.
(2) Tighten the cylinder head bolts by 90°.

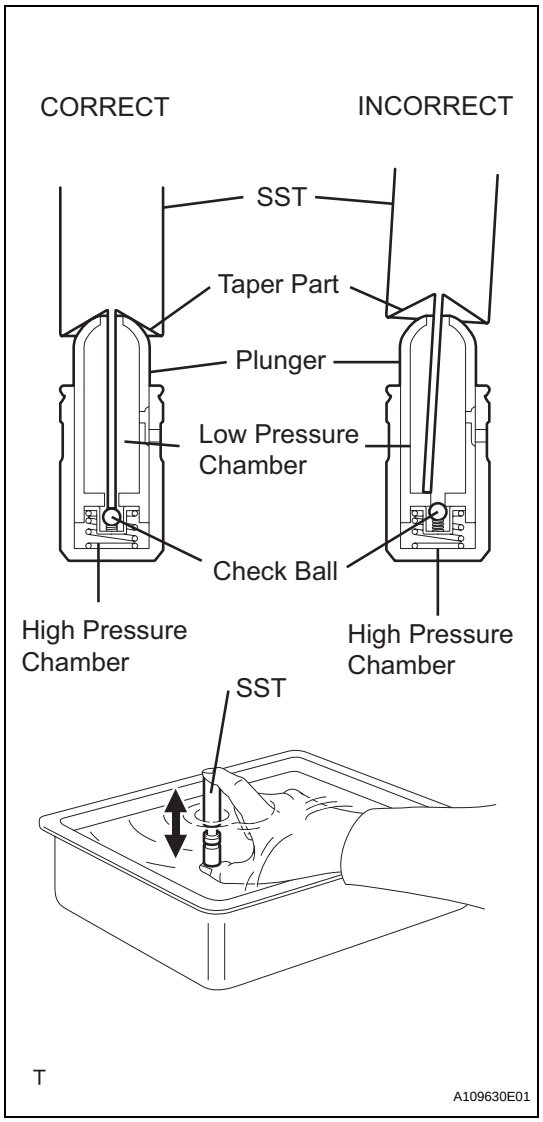
(f) Step 3
(1) Tighten the cylinder head bolts by an additional 90°.
(2) Check that the painted mark is now facing rearward.



(g) Tighten the 2 bolts in the order shown in the illustration.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

28. INSTALL VALVE LASH ADJUSTER ASSEMBLY
NOTICE:
- **Keep the lash adjuster free of dirt and foreign objects.**
- **Only use clean engine oil.**

(a) Place the lash adjuster into a container filled with engine oil.



(b) Insert the SST's tip into the lash adjuster's plunger and use the tip to press down on the check ball inside the plunger.
SST 09276-75010

(c) Squeeze the SST and lash adjuster together to move the plunger up and down 5 to 6 times.

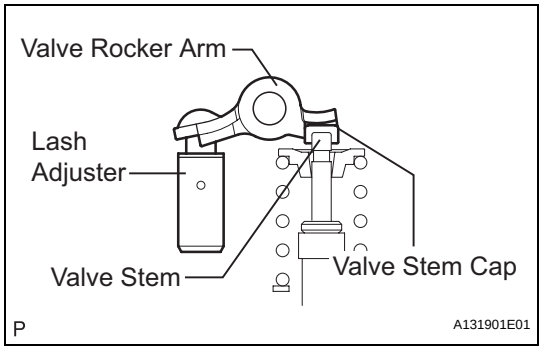
(d) Check the movement of the plunger and bleed the air.
OK:
Plunger moves up and down.
NOTICE:
When bleeding air from the high-pressure chamber, make sure that the tip of the SST is actually pressing the check ball as shown in the illustration. If the check ball is not pressed, air will not bleed.

(e) After bleeding the air, remove the SST. Then, try to press the plunger quickly and firmly with a finger.
OK:
Plunger is very difficult to move.
If the result is not as specified, replace the lash adjuster.

(f) Install the lash adjusters.
NOTICE:
Install the lash adjuster to the same place it was removed from.

29. INSTALL NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY

(a) Apply engine oil to the lash adjuster tip and valve stem cap end.

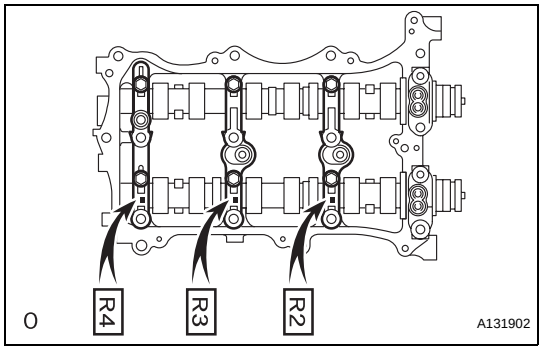


(b) Make sure that the valve rocker arms are installed as shown in the illustration.

30. INSTALL CAMSHAFT BEARING CAP (for Bank 1)

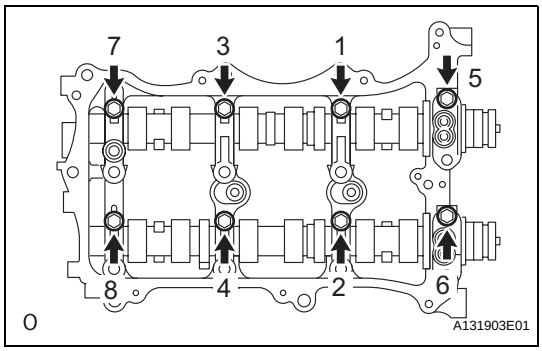
(a) Apply engine oil to the camshaft journals, camshaft housing and bearing caps.

(b) Install the camshaft and No. 2 camshaft to the camshaft housing RH.



(c) Make sure of the marks and numbers on the camshaft bearing caps and place them in each proper position and direction.

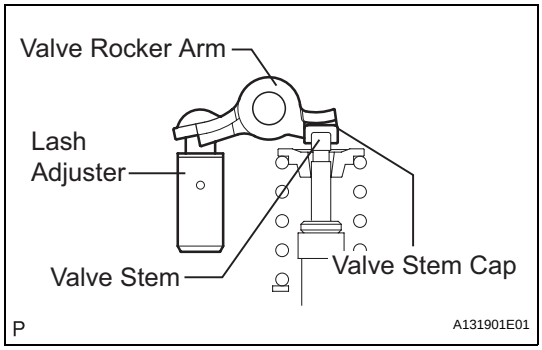
EM



(d) Temporarily tighten the 8 bolts in the order shown in the illustration.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

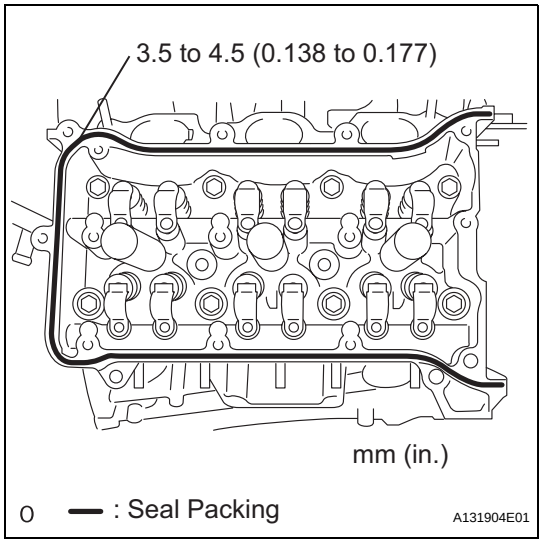
31. INSTALL CAMSHAFT HOUSING SUB-ASSEMBLY RH

(a) Make sure that the valve rocker arm is installed as shown in the illustration.

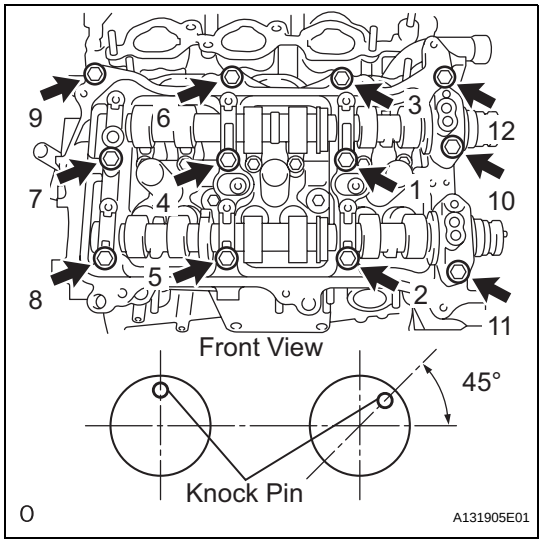


EM

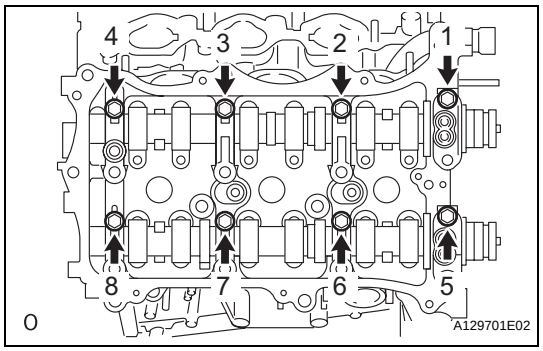
(b) Apply seal packing in a continuous line as shown in the illustration.
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent
Seal diameter:
3.5 to 4.5 mm (0.138 to 0.177 in.)
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the camshaft housing sub-assembly RH within 3 minutes.**
- **Do not start the engine for at least 2 hours after installing.**



(c) Install the camshaft housing RH and tighten the 12 bolts in the order shown in the illustration.
Torque: 28 N*m (286 kgf*cm, 21 ft.*lbf)
NOTICE:
- **When installing the camshaft housing RH, it is necessary to correctly position the camshafts as shown in the illustration. Failure to correctly position these parts may result in damage due to contact between the pistons and valves. If a camshaft is rotated with a piston at TDC, valve contact will occur.**
- **If any of the bolts are loosened during installation, remove the camshaft housing, clean the installation surfaces, and reapply seal packing.**



- **If the camshaft housing is removed because any of the bolts are loosened during installation, make sure that the previously applied seal packing does not enter any oil passages.**

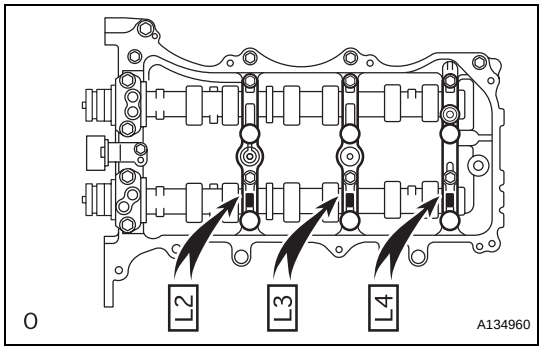


(d) Tighten the 8 bolts in the order shown in the illustration.
Torque: 16 N*m (163 kgf*cm, 12 ft.*lbf)

32. INSTALL CAMSHAFT BEARING CAP (for Bank 2)

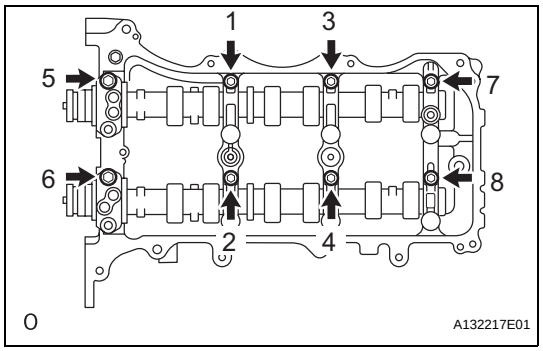
(a) Apply engine oil to the camshaft journals, camshaft housing and bearing caps.

(b) Install the No. 3 camshaft and No. 4 camshaft to the camshaft housing LH.

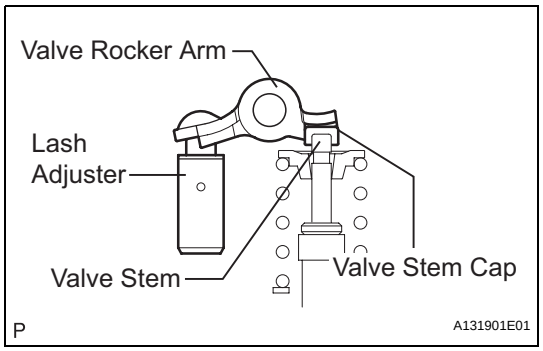


(c) Make sure of the marks and numbers on the camshaft bearing caps and place them in each proper position and direction.

EM

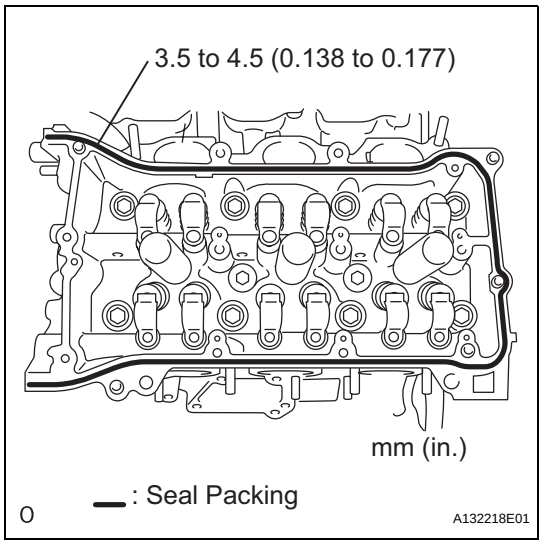


(d) Temporarily tighten the 8 bolts in the order shown in the illustration.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)



33. INSTALL CAMSHAFT HOUSING SUB-ASSEMBLY LH

(a) Make sure that the valve rocker arm is installed as shown in the illustration.



(b) Apply seal packing in a continuous line as shown in the illustration.

Seal packing:

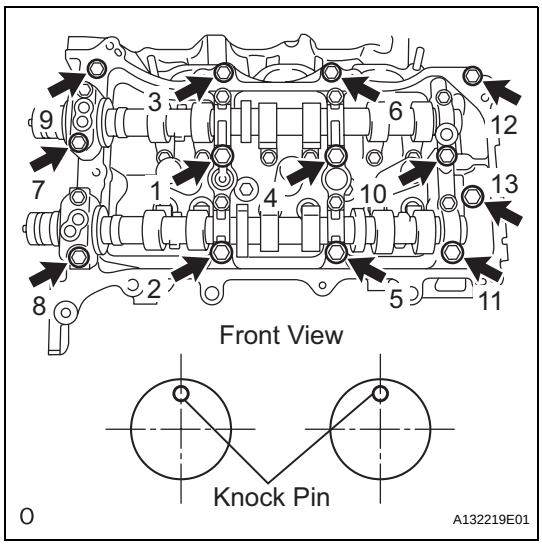
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Seal diameter:

3.5 to 4.5 mm (0.138 to 0.177 in.)

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the camshaft housing sub-assembly LH within 3 minutes.**
- **Do not start the engine for at least 2 hours after installing.**

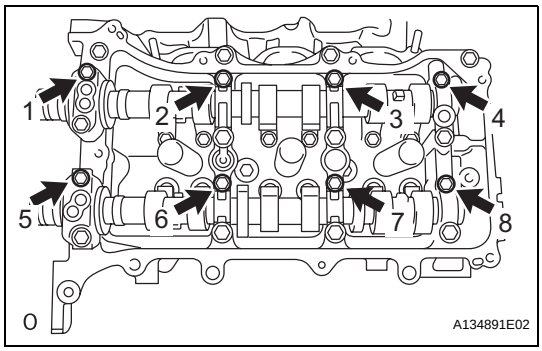


(c) Install the camshaft housing LH and tighten the 13 bolts in the order shown in the illustration.

Torque: 28 N*m (286 kgf*cm, 21 ft.*lbf)

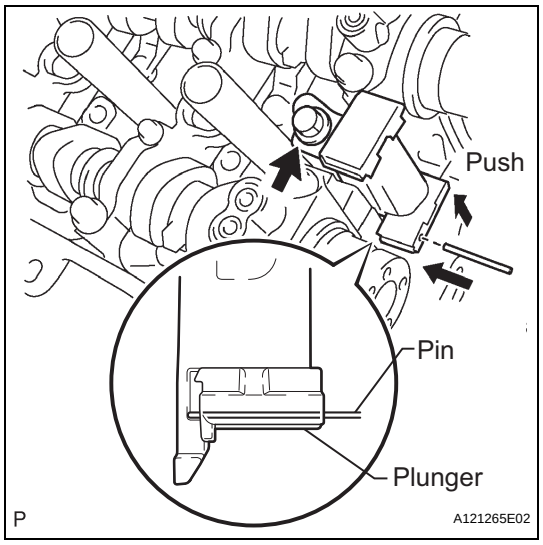
NOTICE:

- **When installing the camshaft housing LH, it is necessary to correctly position the camshafts as shown in the illustration. Failure to correctly position these parts may result in damage due to contact between the pistons and valves. If a camshaft is rotated with a piston at TDC, valve contact will occur.**
- **If any of the bolts are loosened during installation, remove the camshaft housing, clean the installation surfaces, and reapply seal packing.**
- **If the camshaft housing is removed because any of the bolts are loosened during installation, make sure that the previously applied seal packing does not enter any oil passages.**



(d) Tighten the 8 bolts in the order shown in the illustration.

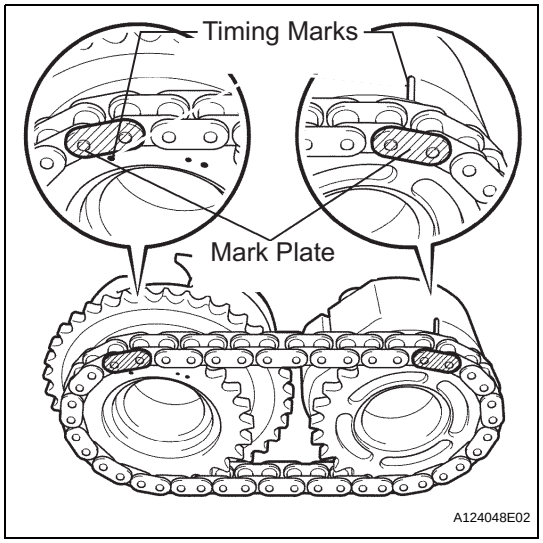
Torque: 16 N*m (163 kgf*cm, 12 ft.*lbf)



34. INSTALL NO. 2 CHAIN TENSIONER ASSEMBLY

(a) Install the No. 2 chain tensioner with the bolt.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)

(b) While pushing in the tensioner, insert a pin of ϕ 1.0 mm (0.039 in.) into the hole to fix it.

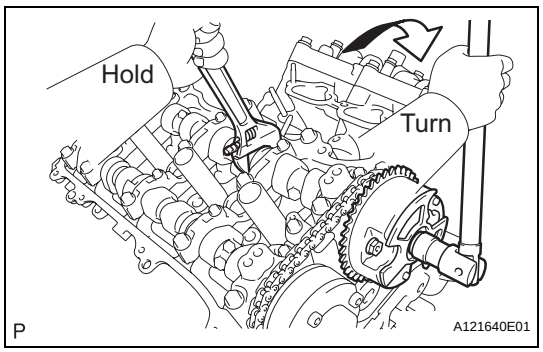


35. INSTALL CAMSHAFT TIMING GEARS AND NO. 2 CHAIN (for Bank 1)

(a) Align the mark plate (yellow) with the timing marks (1-dot mark) of the camshaft timing gears as shown in the illustration.

(b) Apply a light coat of engine oil to the bolt threads and bolt-seating surface.

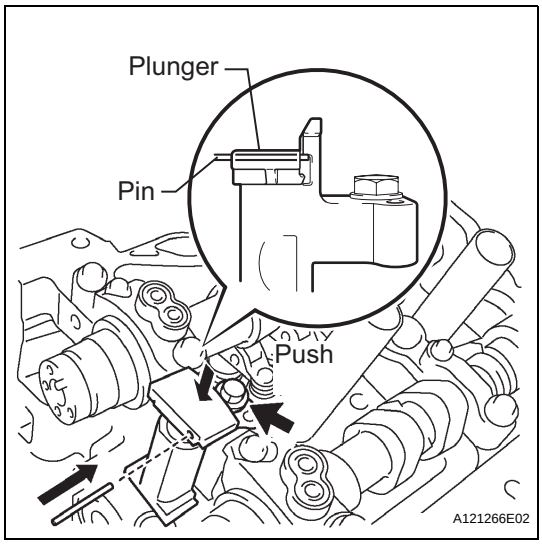
(c) Align the knock pin of the camshaft with the pin hole of the camshaft timing gear. Install the camshaft timing gear and camshaft timing exhaust gear RH with the No. 2 chain installed.



(d) Hold the hexagonal portion of the camshaft with a wrench, and tighten the 2 bolts.
Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)

(e) Remove the pin from the chain tensioner.

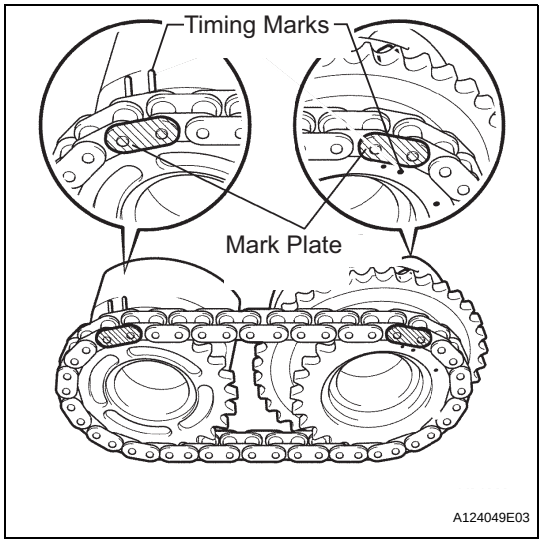
EM



36. INSTALL NO. 3 CHAIN TENSIONER ASSEMBLY

(a) Install the chain tensioner with the bolt.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)

(b) While pushing in the tensioner, insert a pin of ϕ 1.0 mm (0.039 in.) into the hole to hold it.

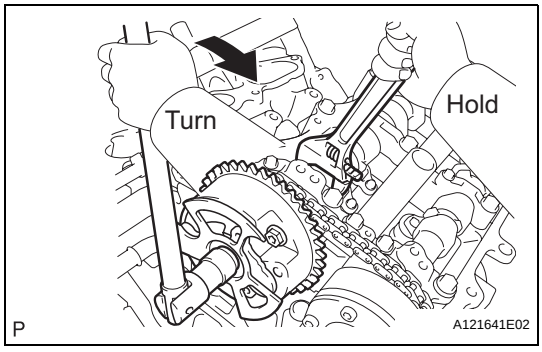


37. INSTALL CAMSHAFT TIMING GEARS AND NO. 2 CHAIN (for Bank 2)

(a) Align the mark plate (yellow) with the timing marks (2-dot mark) of the camshaft timing gears as shown in the illustration.

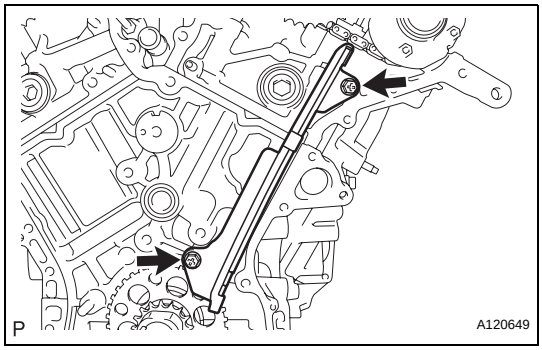
(b) Apply a light coat of engine oil to the bolt threads and bolt-seating surface.

(c) Align the knock pin of the camshaft with the pin hole of the camshaft timing gear. Install the camshaft timing gear and camshaft timing exhaust gear LH with the No. 2 chain installed.



(d) Hold the hexagonal portion of the camshaft with a wrench, and tighten the 2 bolts.
Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)

(e) Remove the pin from the chain tensioner.

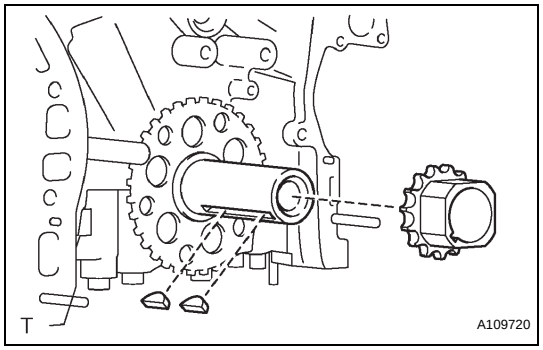


38. INSTALL NO. 1 CHAIN VIBRATION DAMPER

(a) Install the chain vibration damper with the 2 bolts.
Torque: 23 N*m (230 kgf*cm, 17 ft.*lbf)

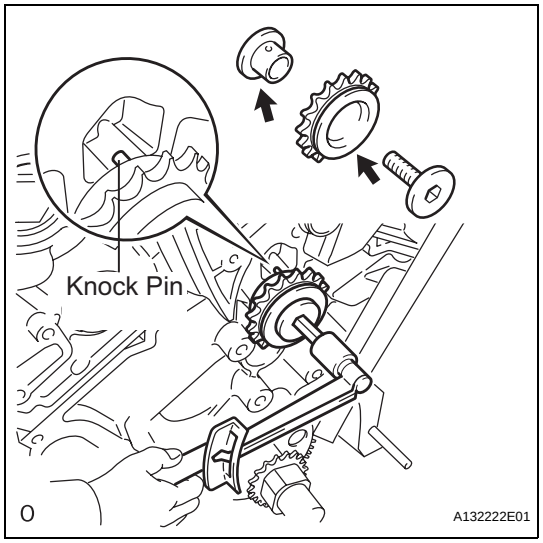
39. INSTALL NO. 2 CHAIN VIBRATION DAMPER

(a) Install the 2 chain vibration dampers.



40. INSTALL CRANKSHAFT TIMING SPROCKET

(a) Install the 2 timing gear set keys and timing sprocket as shown in the illustration.



41. INSTALL IDLE SPROCKET ASSEMBLY

(a) Apply a light coat of engine oil to the rotating surface of the No. 1 idle gear shaft.

(b) Temporarily install the No. 1 idle gear shaft and idle sprocket with the No. 2 idle gear shaft while aligning the knock pin of the No. 1 idle gear with the knock pin groove of the cylinder block.

NOTICE:

Be careful of the idle gear direction.

HINT:

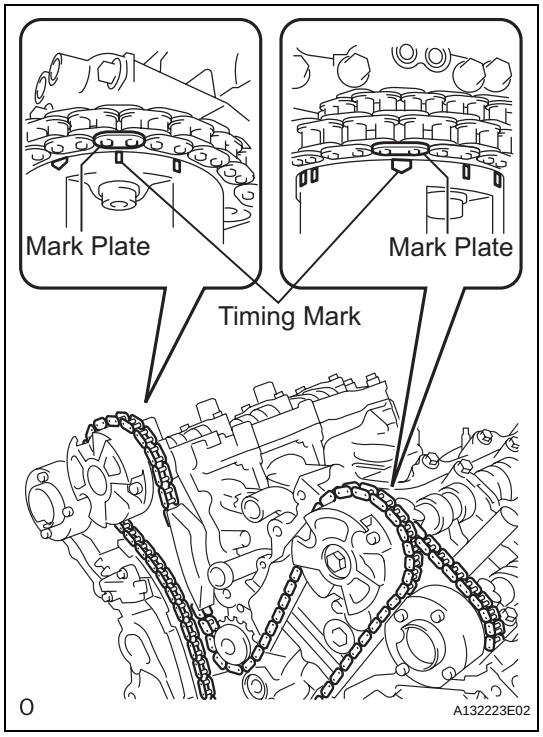
Check that no foreign objects are on the idle gear shafts No. 1 and No. 2.

(c) Using a 10 mm hexagon wrench, tighten the No. 2 idle gear shaft.

Torque: 60 N*m (612 kgf*cm, 44 ft.*lbf)

HINT:

After installing the idle sprocket assembly, check that the idle sprocket turns smoothly.



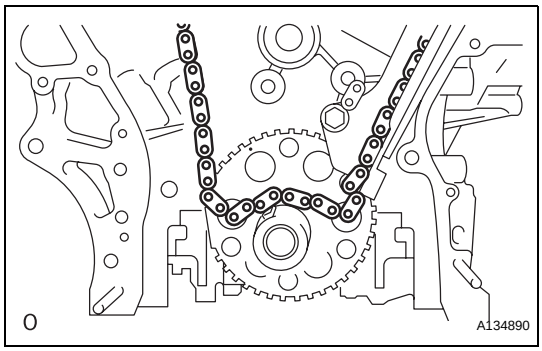
42. INSTALL CHAIN SUB-ASSEMBLY

(a) Align the mark plate and timing marks as shown in the illustration and install the chain.

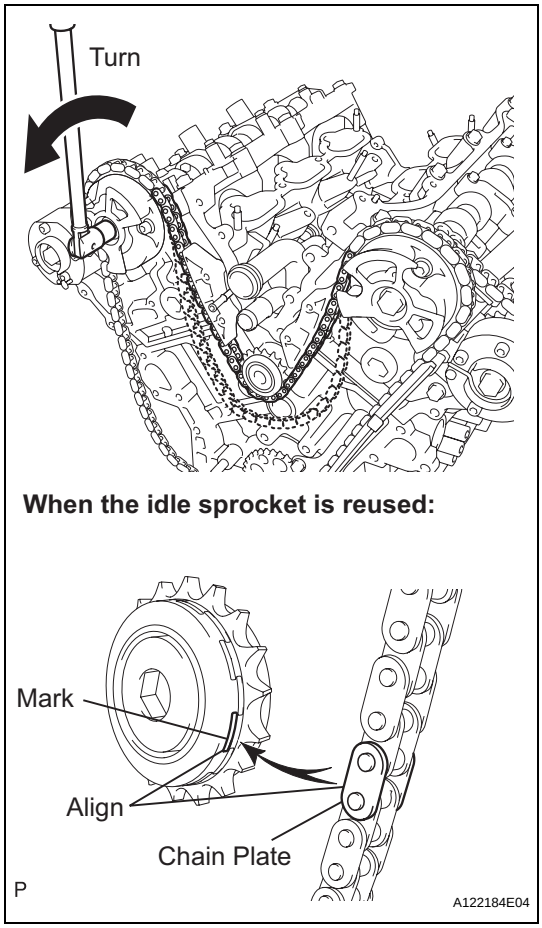
HINT:

The camshaft mark plate is orange.

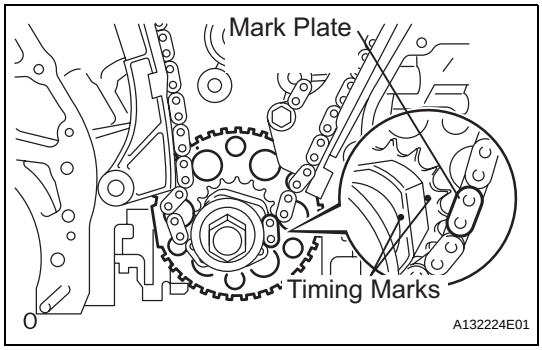
EM



(b) Do not pass the chain over the crankshaft, just put it on it.

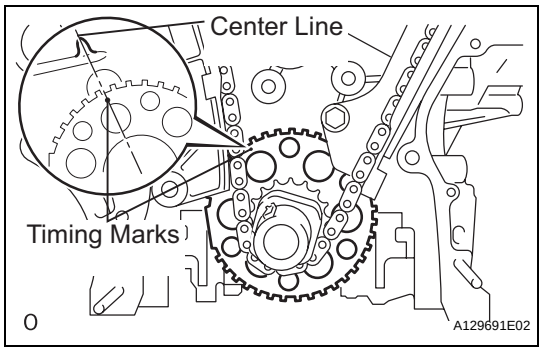


(c) Turn the camshaft timing gear assembly on the RH bank counterclockwise to tighten the chain between the banks.
NOTICE:
When the idle sprocket is reused, align the chain plate with the mark where the plate had been in order to tighten the chain between the banks.



(d) Align the mark plate and timing mark as shown in the illustration and install the chain onto the crankshaft timing sprocket.
HINT:
The crankshaft mark plate is yellow.

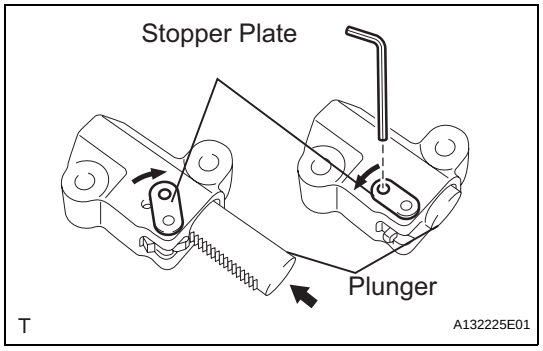
(e) Temporarily tighten the pulley set bolt.



(f) Turn the crankshaft clockwise to set it to the RH block bore center line (TDC / compression).

43. INSTALL CHAIN TENSIONER SLIPPER

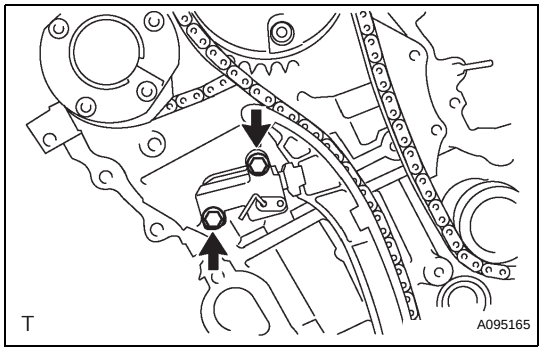
(a) Install the chain tensioner slipper.



44. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY

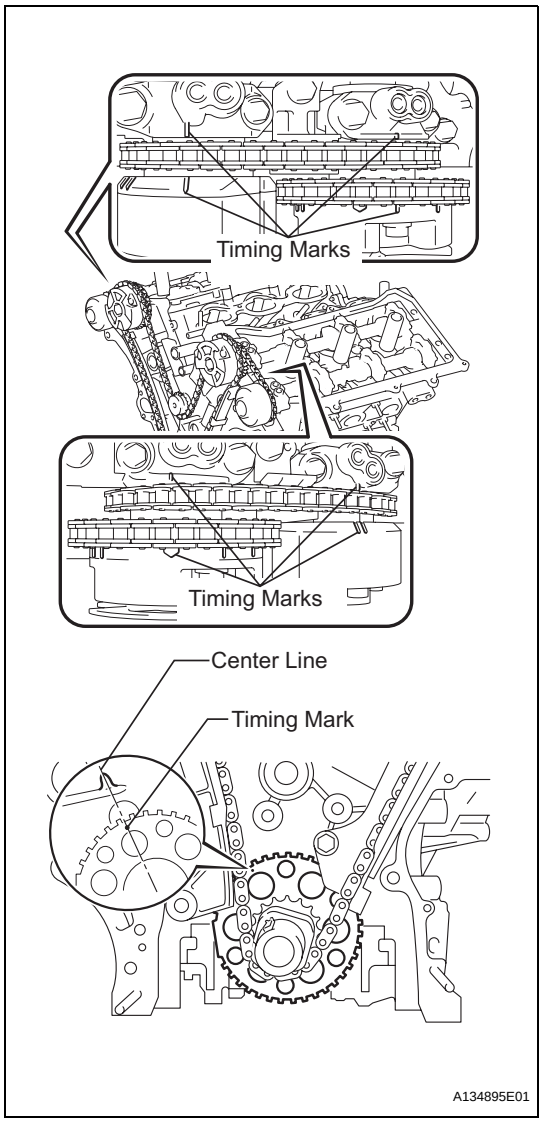
(a) Move the stopper plate upward to release the lock, and push the plunger deep into the tensioner.

(b) Move the stopper plate downward to set the lock, and insert a hexagon wrench into the hole of the stopper plate.

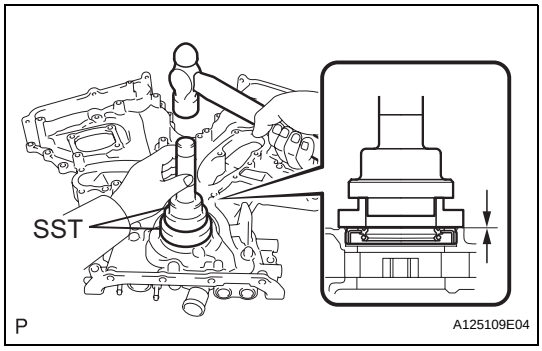


(c) Install the chain tensioner with the 2 bolts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

EM

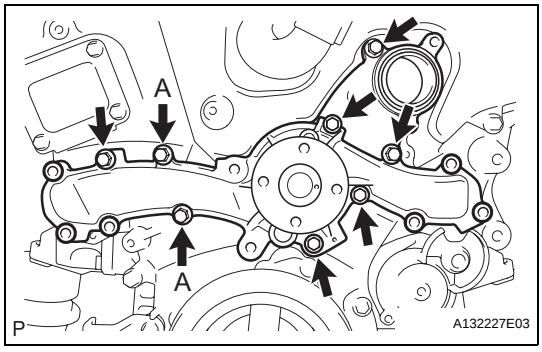


(d) Remove the hexagon wrench of the chain tensioner. Check that each timing mark is aligned with the crankshaft at the TDC / compression.
(e) Remove the pulley set bolt.



45. INSTALL TIMING CHAIN CASE OIL SEAL

(a) Using SST, tap in a new oil seal until its surface is flush with the timing gear case edge.
SST 09223-22010, 09506-35010
NOTICE:
- **Keep the lip free of foreign matter.**
- **Do not tap on the oil seal at an angle.**
- **Make sure that the oil seal edge does not stick out of the timing chain case.**

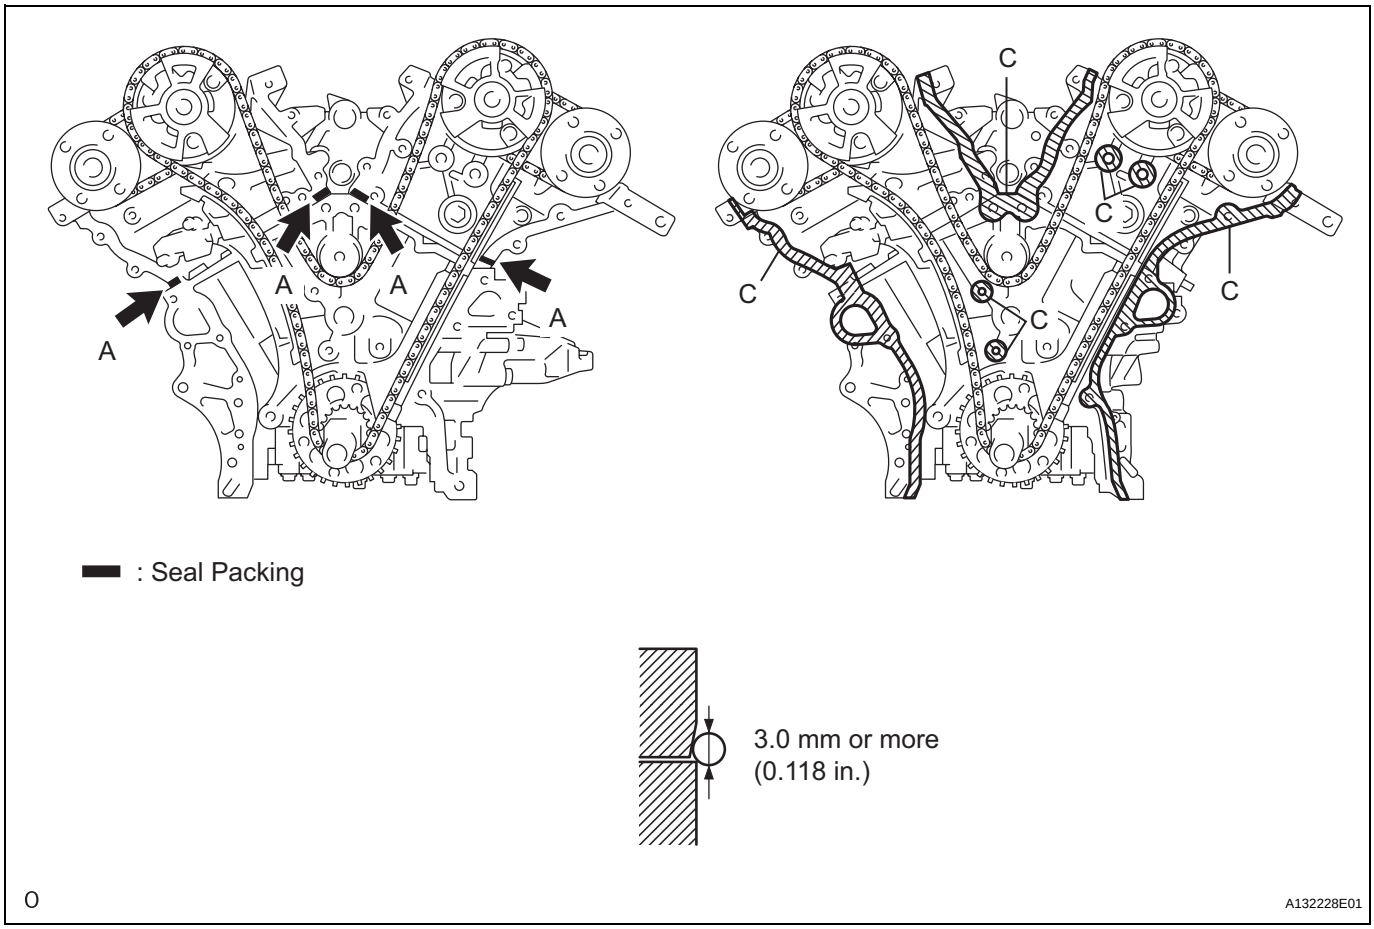


46. INSTALL WATER PUMP ASSEMBLY

(a) Install a new gasket and the water pump with the 8 bolts.
Torque: 9.1 N*m (93 kgf*cm, 81 in.*lbf)
NOTICE:
Be sure to replace the bolts indicated by A with new ones or reuse them after applying adhesive 1344.

47. INSTALL TIMING CHAIN COVER SUB-ASSEMBLY

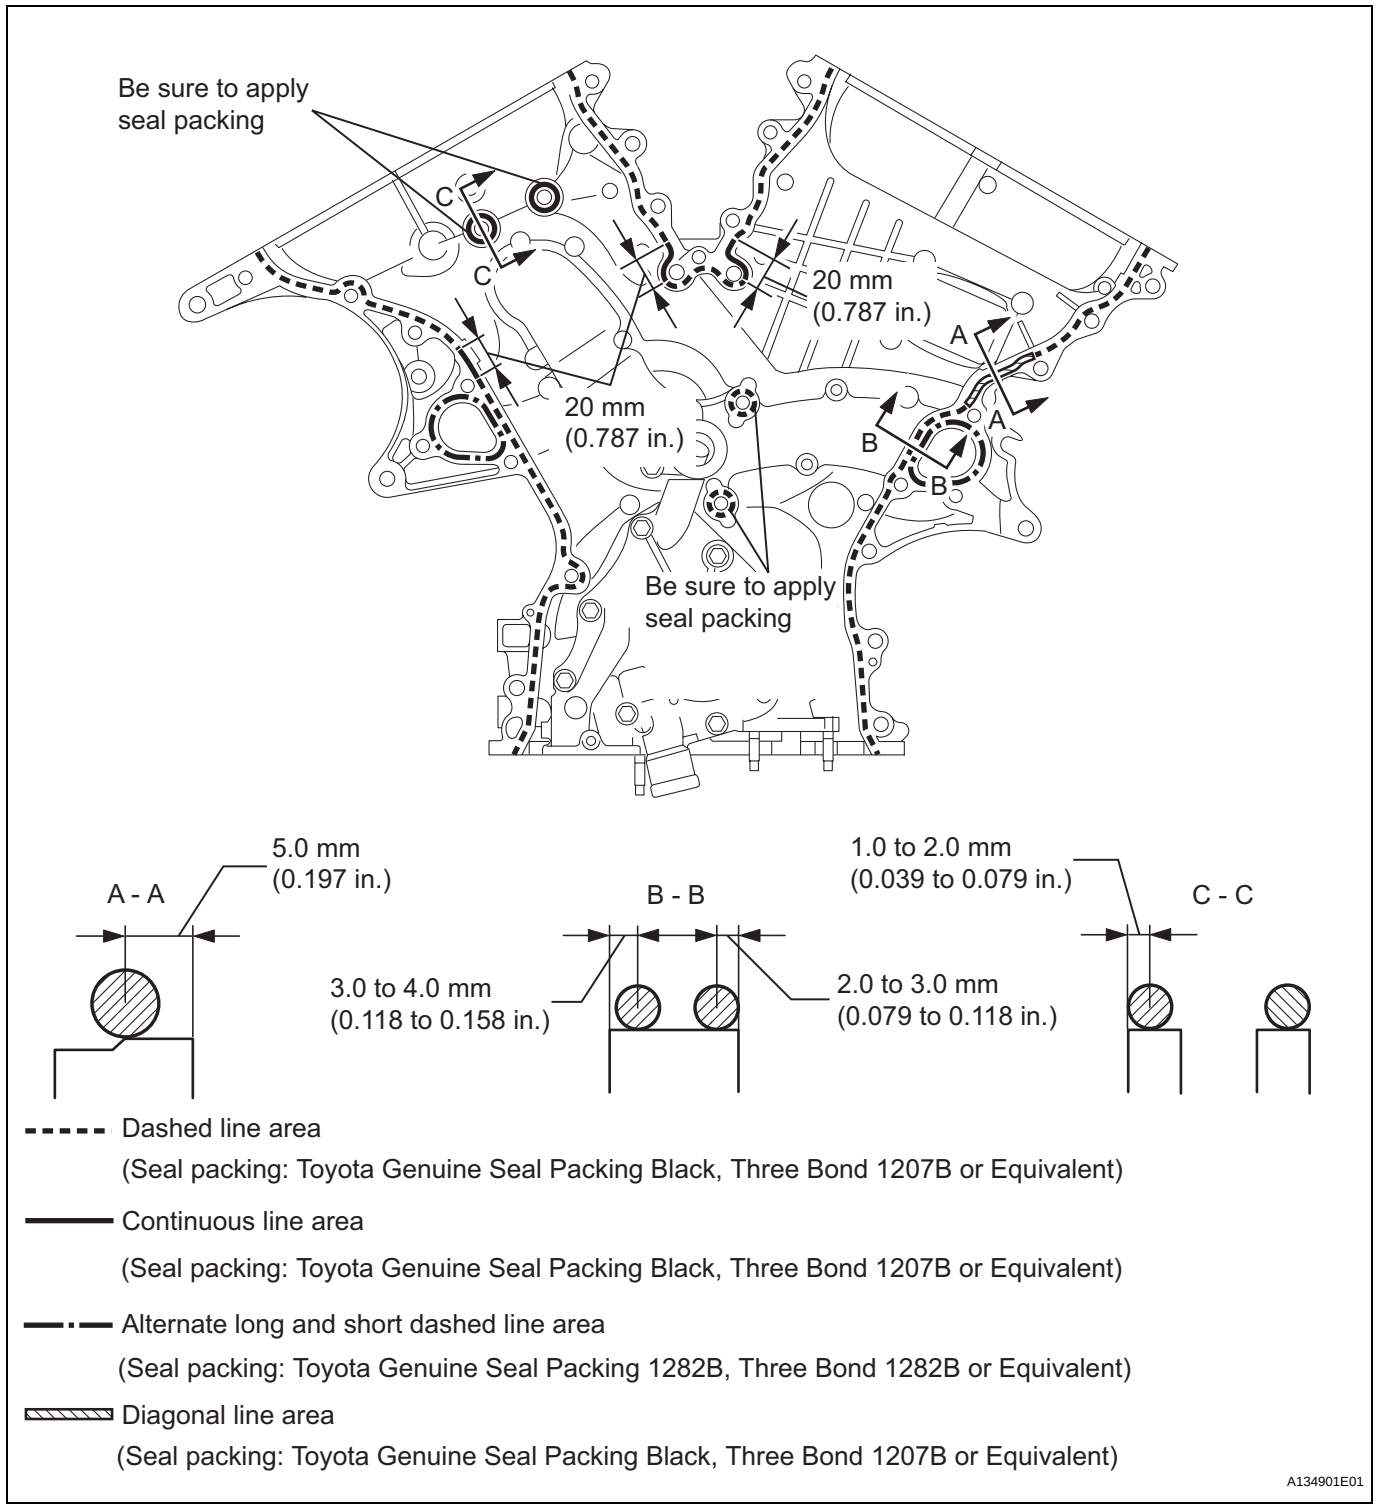
(a) Apply seal packing in a continuous line to the engine unit as shown in the following illustration.



Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent
Seal diameter:
3.0 mm (0.118 in.)
NOTICE:

- **Be sure to clean and degrease the contact surfaces, especially the surfaces indicated by C in the illustration.**
- **When the contact surfaces are wet, wipe them with an oil-free cloth before applying seal packing.**
- **Install the chain cover within 3 minutes.**
- **Do not start the engine for at least 2 hours after installing.**

(b) Apply seal packing in a continuous line to the timing chain cover as shown in the following illustration.



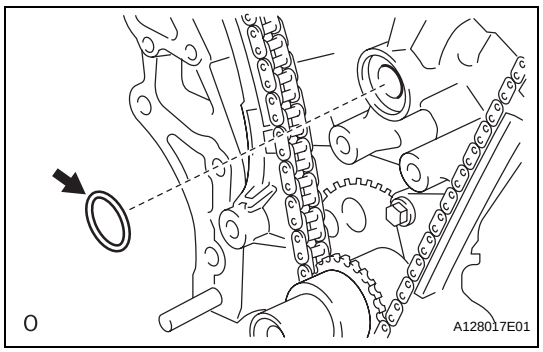
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent
Toyota Genuine Seal Packing Black 1282B, Three Bond 1282B or equivalent

NOTICE:

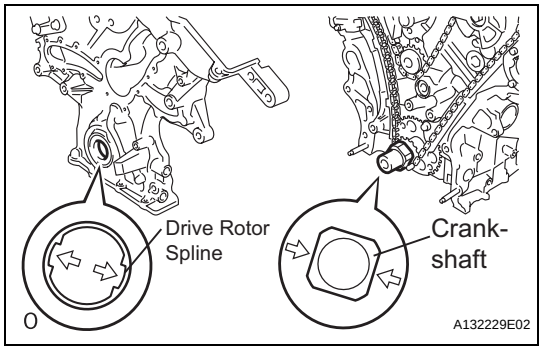
- **When the contact surfaces are wet, wipe them with an oil-free cloth before applying seal packing.**
- **Install the chain cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after installing.**

Apply seal packing as follows

Area	Seal Packing Diameter	Application Position from Inside Seal Line
Continuous Line Area	4.5 mm or more (0.177 in.)	3.0 to 4.0 mm (0.118 to 0.158 in.)
Alternate Long and Dashed Line Area	3.5 mm or more (0.138 in.)	2.0 to 3.0 mm (0.079 to 0.118 in.)
Dashed Line Area	3.5 mm or more (0.138 in.)	3.0 to 4.0 mm (0.118 to 0.158 in.)
Diagonal Line Area	6.0 mm or more (0.236 in.)	5.0 mm (0.197 in.)

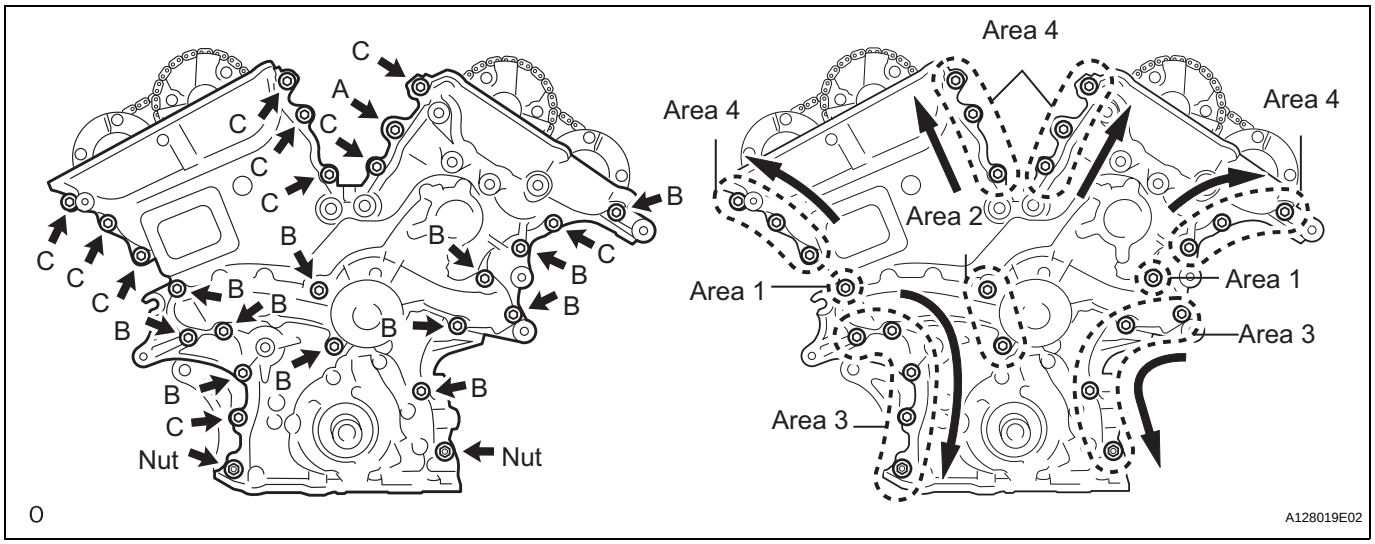


(c) Install a new gasket.



(d) Align the oil pump's drive rotor spline and the crankshaft as shown in the illustration. Install the spline and chain cover to the crankshaft.

(e) Temporarily tighten the timing chain cover with the 23 bolts and 2 nuts.



Bolt length

Item	Length
Bolt A	40 mm (1.57 in.)
Bolt B	55 mm (2.17 in.)
Bolt C	25 mm (0.98 in.)

NOTICE:
Make sure that there is no oil on the bolt threads.

(f) Fully tighten the bolts in this order: Area 1 and Area 2.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)

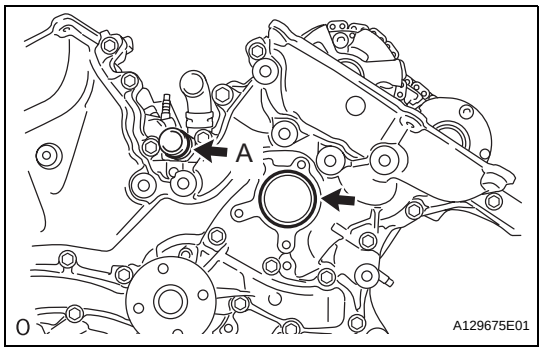
(g) Fully tighten the bolts and nuts in this order: Area 3.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)
HINT:
Tighten the bolts and nuts in the order of upper to lower as shown in the illustration.

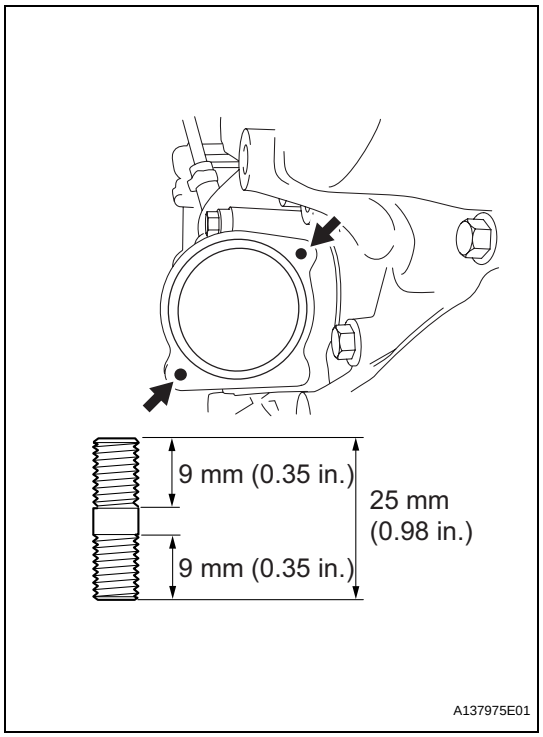
(h) Fully tighten the bolts in this order: Area 4.
Torque: 43 N*m (438 kgf*cm, 32 ft.*lbf) for bolt A
21 N*m (214 kgf*cm, 15 ft.*lbf) for bolts except bolt A
HINT:
Tighten the bolts in the order of lower to upper as shown in the illustration.

(i) Install a new gasket and the chain cover plate with the 4 bolts.
Torque: 9.1 N*m (93 kgf*cm, 81 in.*lbf)

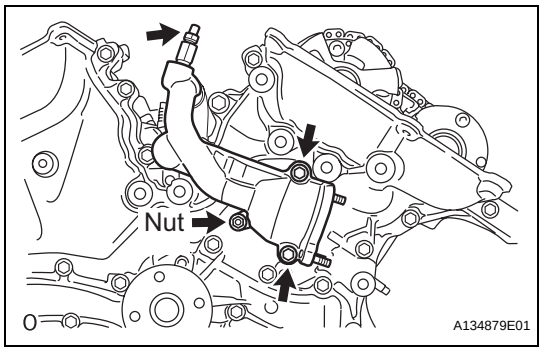
48. INSTALL WATER INLET HOUSING

(a) Install 2 new O-rings.
HINT:
Apply a small amount of water or soapy water to O-ring (A) in the illustration before installing it.





(b) Install the stud bolts.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)



(c) Install the water inlet with the 2 bolts and nut.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)
NOTICE:
Be careful that the O-ring does not get caught between the parts.

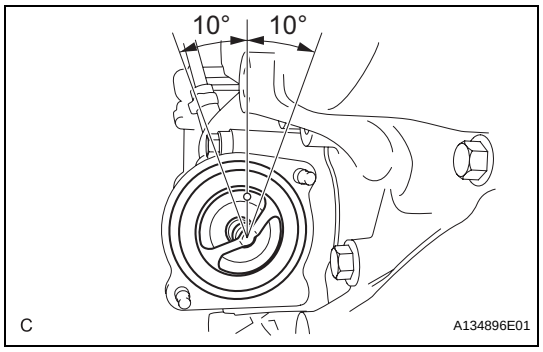
(d) Connect the water by-pass hose No. 1.

(e) Apply adhesive around the drain cock.
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or Equivalent

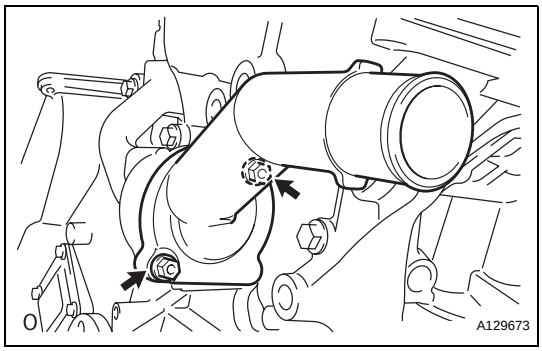
(f) Install the housing drain cock to the water inlet housing.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

(g) Install the housing plug to the water drain cock.
Torque: 13 N*m (130 kgf*cm, 9 ft.*lbf)

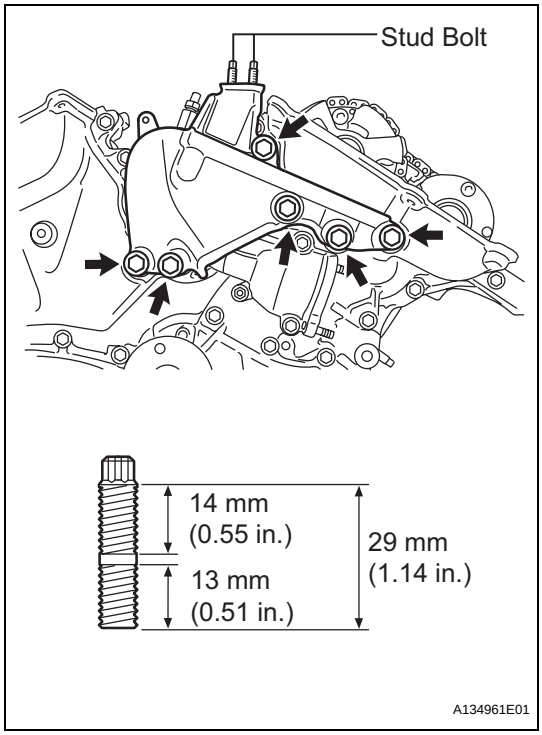
(h) Install a new gasket to the thermostat.



(i) Align the thermostat jiggle valve with the upper stud bolt, and insert the thermostat in the water inlet housing.
HINT:
The jiggle valve may be set within 10° of either side of the prescribed positions.



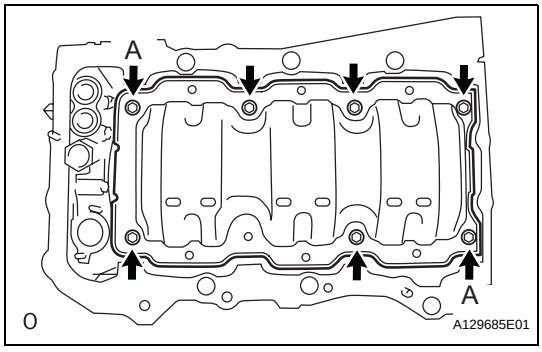
(j) Install the water inlet with the 2 nuts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)



49. INSTALL FRONT ENGINE MOUNTING BRACKET NO. 1 LH

(a) Install the engine mounting bracket with the 6 bolts.
Torque: 54 N*m (551 kgf*cm, 40 ft.*lbf)
NOTICE:
- **Install the water inlet and mounting bracket within 15 minutes after installing the chain cover.**
- **Do not start the engine for at least 2 hours after installation.**

(b) When replacing a stud bolt, install it by using an E8 "torx" socket wrench.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

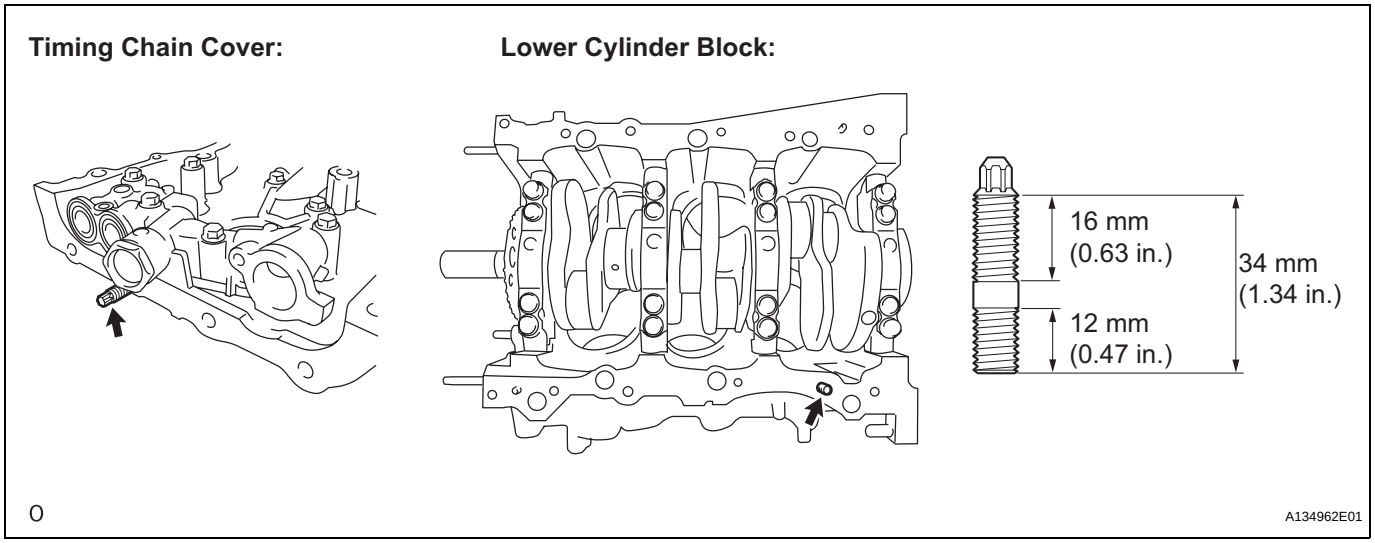


50. INSTALL OIL PAN BAFFLE PLATE

(a) Install the oil pan baffle plate with the 7 bolts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)
HINT:
Temporarily tighten the 7 bolts. Fully tighten 2 bolts A as shown in the illustration before tightening the other bolts.

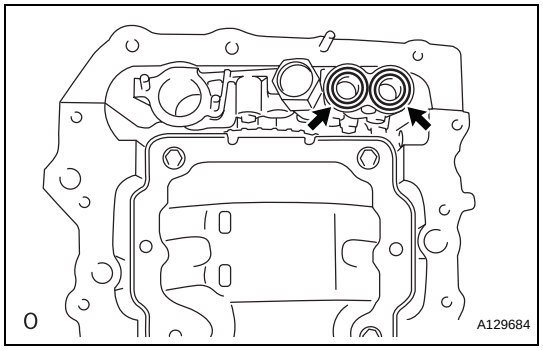
51. INSTALL OIL PAN SUB-ASSEMBLY

(a) When replacing a stud bolt, install it by using an E8 "torx" socket wrench.



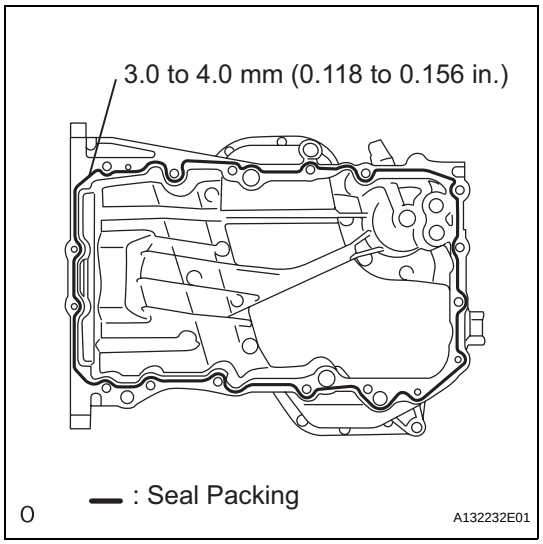
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

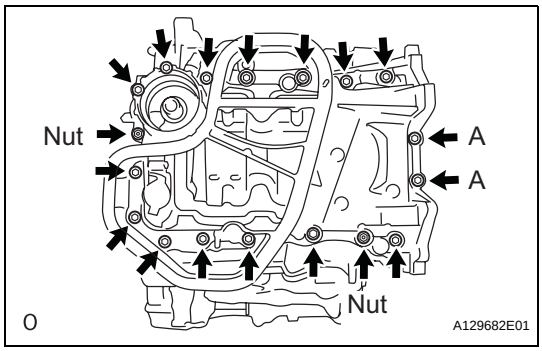
(b) Install 2 new O-rings.



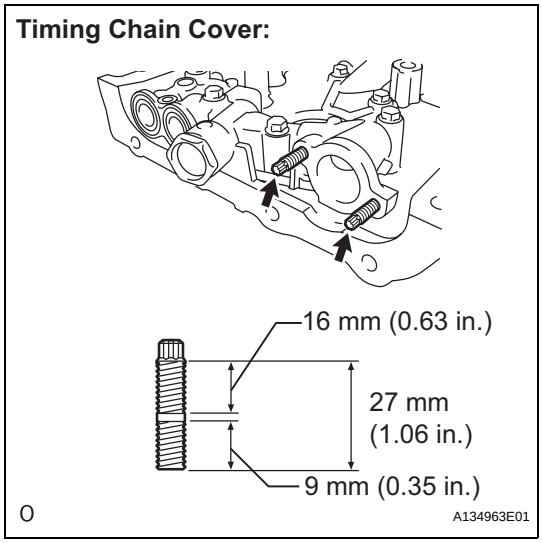
(c) Apply seal packing in a continuous line as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent
Seal diameter:
3.0 to 4.0 mm (0.118 to 0.156 in.)
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the oil pan within 3 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after installing.**



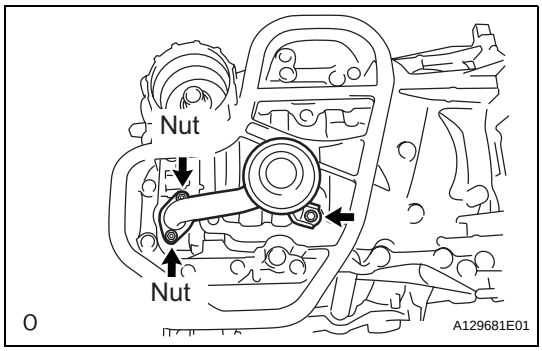


(d) Install the oil pan with the 16 bolts and 2 nuts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf) for bolt A
21 N*m (214 kgf*cm, 15 ft.*lbf) for bolts except A

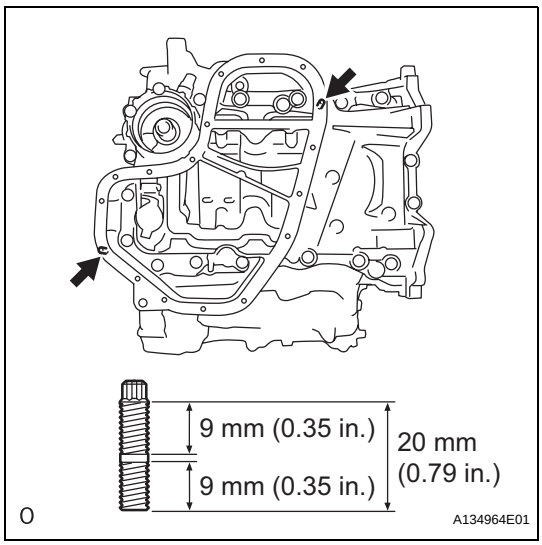


52. INSTALL OIL STRAINER SUB-ASSEMBLY

(a) Using an E6 "torx" socket, install the stud bolts as shown in the illustration.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)

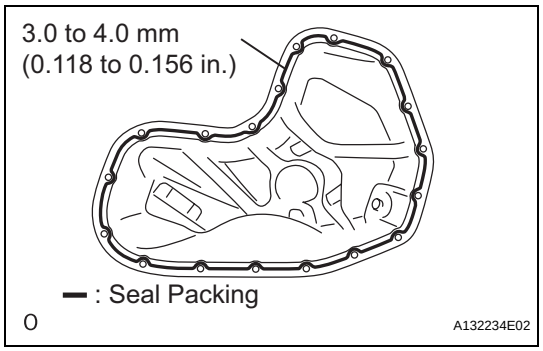


(b) Install a new gasket and the oil strainer with the bolt and 2 nuts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

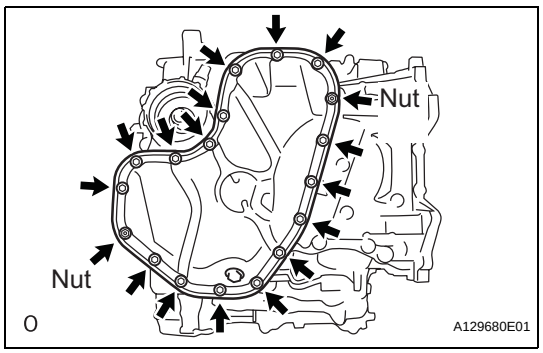


53. INSTALL NO. 2 OIL PAN SUB-ASSEMBLY

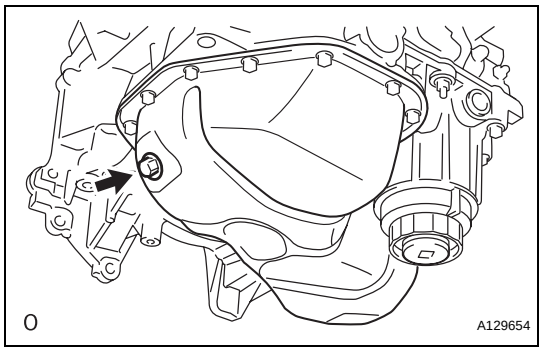
(a) Using an E6 "torx" socket, install the stud bolts as shown in the illustration.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)



(b) Apply seal packing in a continuous line as shown in the illustration.
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent
Seal diameter:
3.0 to 4.0 mm (0.118 to 0.156 in.)
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the oil pan No. 2 within 3 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after installing.**

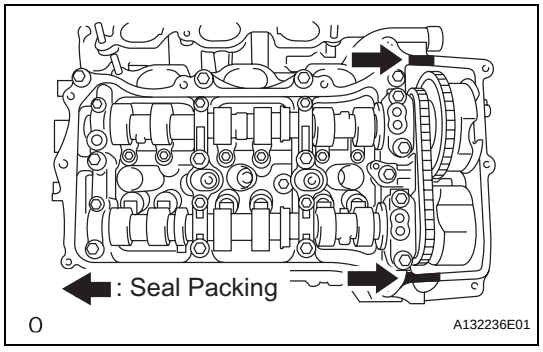


(c) Install the oil pan with the 16 bolts and 2 nuts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)



54. INSTALL OIL PAN DRAIN PLUG

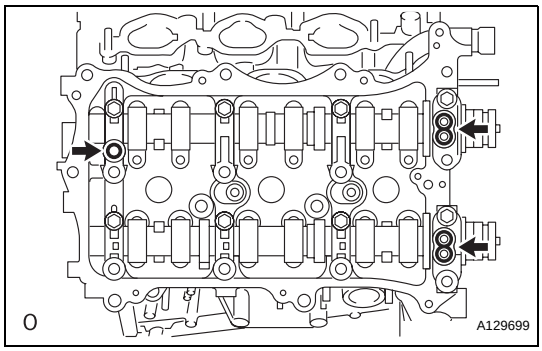
(a) Install a new gasket and the drain plug.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)



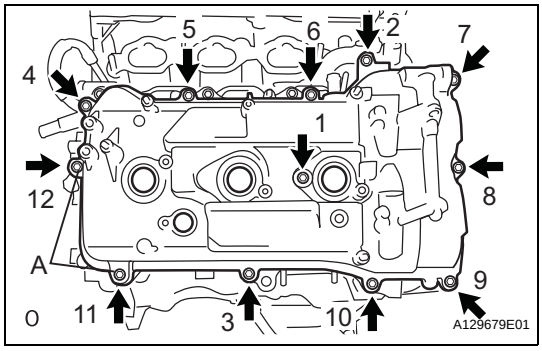
55. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (for Bank 1)

(a) Apply seal packing as shown in the illustration.
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the head cover within 3 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after installing.**

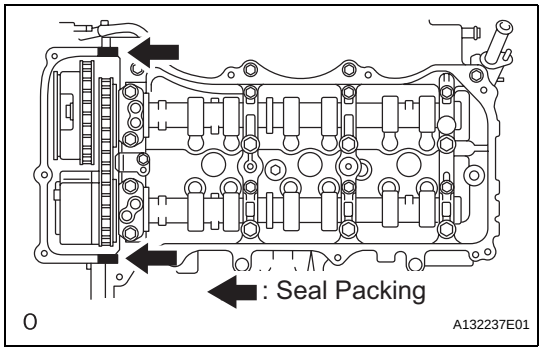
EM



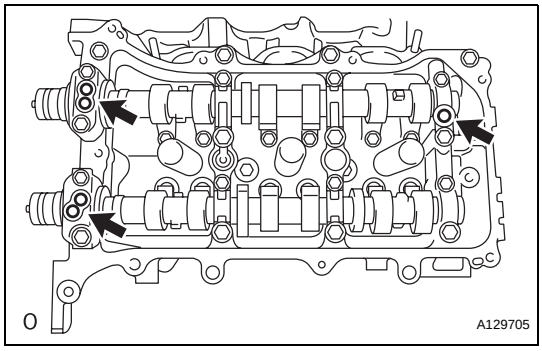
(b) Install 3 new gaskets as shown in the illustration.
(c) Install a new gasket to the head cover.



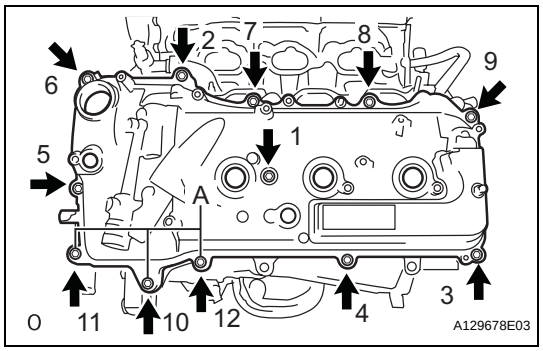
(d) Install a head cover with the 12 bolts and a new washer.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf) for bolt A
10 N*m (102 kgf*cm, 7 ft.*lbf) for bolts except A
HINT:
Make sure the tightening torque of bolt 1.



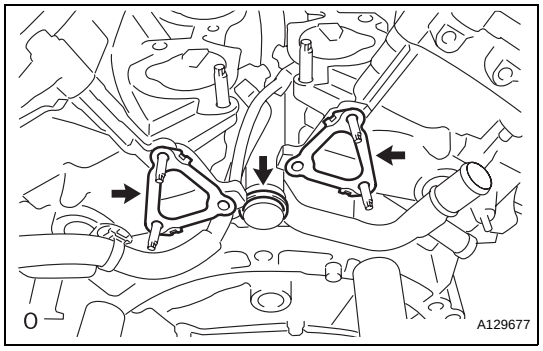
56. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (for Bank 2)
(a) Apply seal packing as shown in the illustration.
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the head cover within 3 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after installing.**



(b) Install 3 new gaskets as shown in the illustration.
(c) Install a new gasket to the head cover.

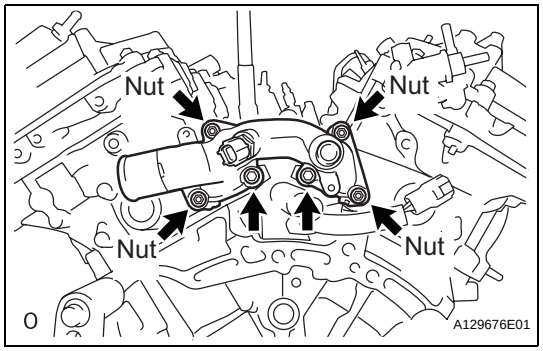


(d) Install the head cover with the 12 bolts and a new washer.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf) for bolt A
10 N*m (102 kgf*cm, 7 ft.*lbf) for bolts except A
HINT:
Make sure the tightening torque of bolts 1 and 10.



57. INSTALL WATER OUTLET

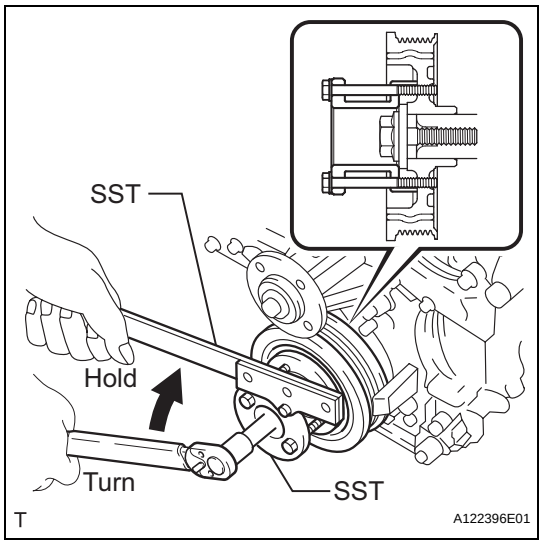
(a) Install 2 new gaskets and a new O-ring.
HINT:
Apply soapy water to the O-ring.



(b) Install the water by-pass joint with the 2 bolts and 4 nuts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf) for bolts
10 N*m (103 kgf*cm, 7 ft.*lbf) for nuts
NOTICE:
Be careful that the O-ring does not get caught between the parts.

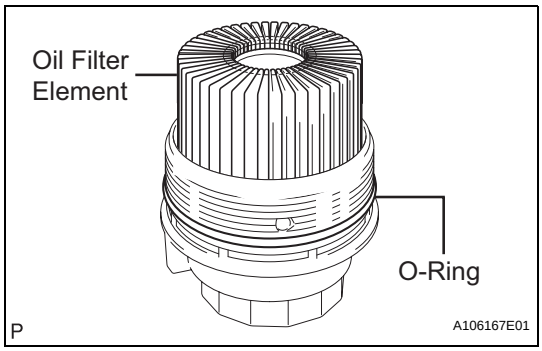
58. INSTALL CRANKSHAFT PULLEY

(a) Align the pulley set key with the key groove of the pulley, and slide on the pulley.



(b) Using SST, install the pulley bolt.
SST 09213-70011 (09213-70020), 09330-00021
Torque: 250 N*m (2,550 kgf*cm, 184 ft.*lbf)

EM



59. INSTALL OIL FILTER ELEMENT

(a) Clean the inside of the oil filter cap, the threads and O-ring groove.

(b) Apply a light coat of engine oil to a new O-ring and install it to the oil filter cap.

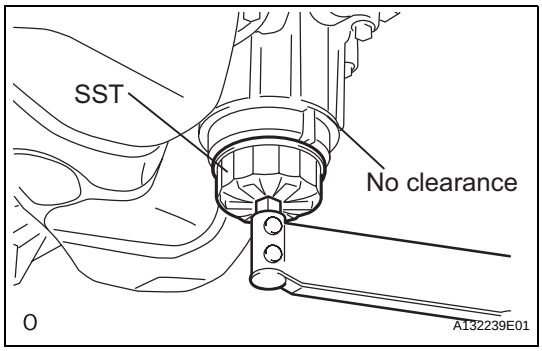
(c) Set a new oil filter element to the oil filter cap.

(d) Remove dirt or foreign matter from the installation surface of the engine.

(e) Apply a light coat of engine oil to the O-ring again and install the oil filter cap.

NOTICE:

- **Be careful that the O-ring does not get caught between the parts.**
- **The O-ring must not be twisted on the groove.**



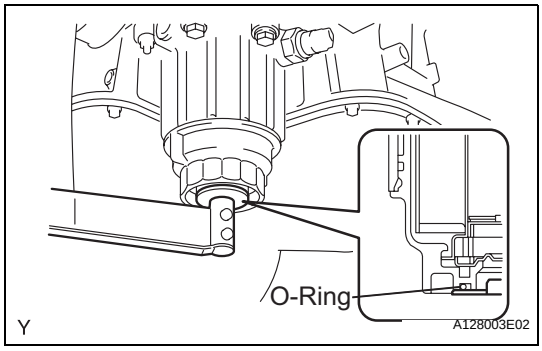
(f) Using SST, tighten the oil filter cap.

SST 09228-06501

Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)

NOTICE:

Make sure that the oil filter is installed securely as shown in the illustration.



(g) Apply a light coat of engine oil to a new O-ring and install it to the oil filter cap.

NOTICE:

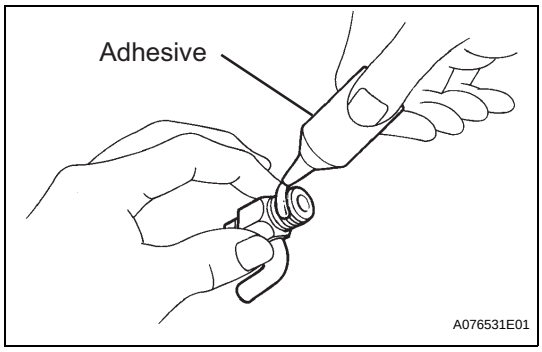
Remove all dirt and foreign matter from the installation surface.

(h) Install the oil filter drain plug to the oil filter cap.

Torque: 13 N*m (130 kgf*cm, 9 ft.*lbf)

NOTICE:

Make sure that the O-ring does not get caught between the parts.



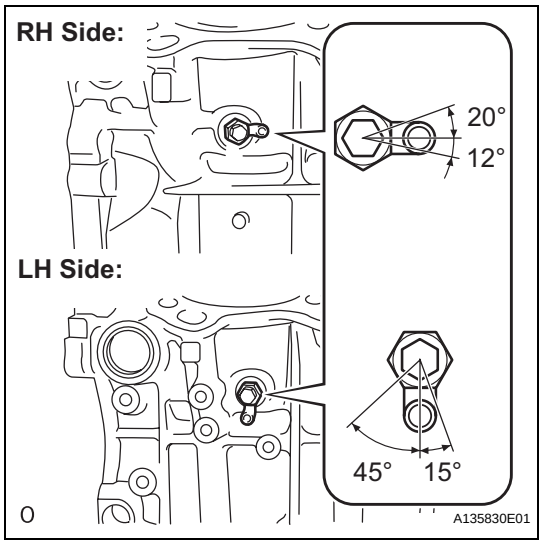
60. INSTALL CYLINDER BLOCK WATER DRAIN COCK SUB-ASSEMBLY

(a) Apply adhesive around the drain cocks.

Adhesive:

Toyota Genuine Adhesive 1324, Three Bond 1324 or Equivalent

EM

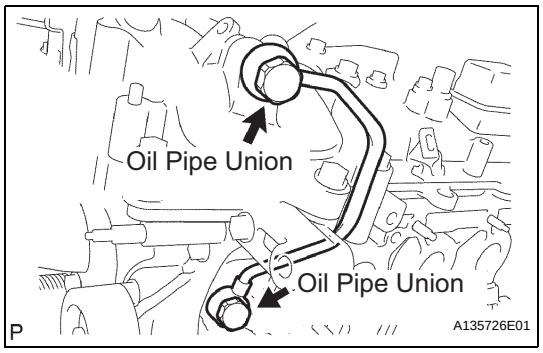


(b) Install the water drain cocks as shown in the illustration.
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)
NOTICE:
Do not rotate the drain cocks more than 1 revolution (360°) after tightening the drain cocks with the specified torque.

(c) Install the water drain cock plugs to the water drain cocks.
Torque: 13 N*m (130 kgf*cm, 9 ft.*lbf)

61. INSTALL NO. 1 OIL PIPE

(a) Make sure that there is no foreign matter on the mesh of the oil control valve filter LH.
NOTICE:
Do not touch the mesh when installing the oil control valve filter.



(b) Install the oil control valve filter LH to the oil pipe union. Install new gaskets and temporarily install the oil pipe (on the head cover side).

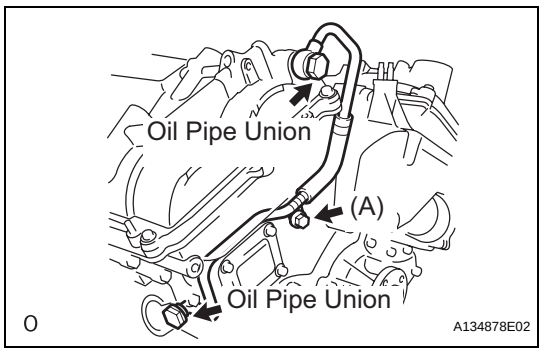
(c) Install a new gasket and temporarily install the oil pipe (on the cylinder head side) with the oil check valve bolt.

(d) Tighten the oil pipe union (on the head cover side).
Torque: 65 N*m (663 kgf*cm, 48 ft.*lbf)

(e) Tighten the oil pipe union (on the cylinder head side).
Torque: 65 N*m (663 kgf*cm, 48 ft.*lbf)
NOTICE:
If the link that connects the gaskets is broken, remove the connecting link by using nippers or similar tools.

62. INSTALL OIL PIPE

(a) Make sure that there is no foreign matter on the mesh of the oil control valve filter RH.
NOTICE:
Do not touch the mesh when installing the oil control valve filter.



(b) Install the oil control valve filter RH to the oil pipe union. Install new gaskets and temporarily install the oil pipe (on the head cover side).

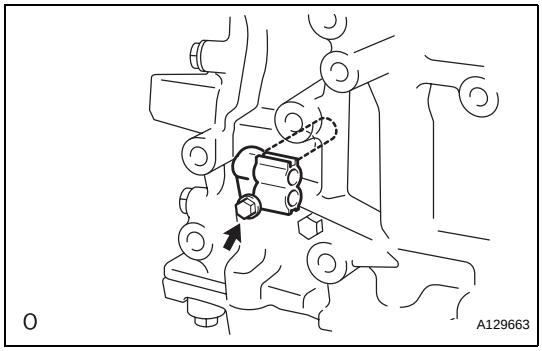
(c) Install a new gasket and temporarily install the oil pipe (on the cylinder head side) with the oil check valve bolt.

(d) Install the bolt (A) to the cylinder head.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

(e) Tighten the oil pipe union (on the head cover side).
Torque: 65 N*m (663 kgf*cm, 48 ft.*lbf)

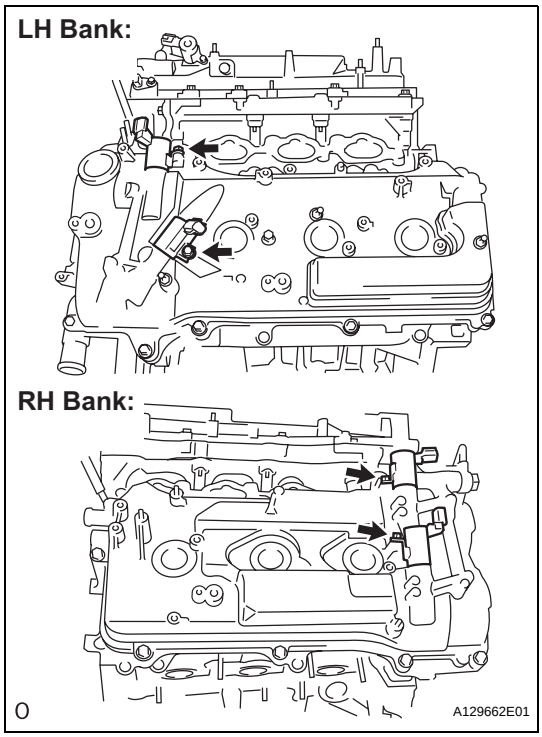
(f) Tighten the oil pipe union (on the cylinder head side).
Torque: 65 N*m (663 kgf*cm, 48 ft.*lbf)

NOTICE:
If the link that connects the gaskets is broken, remove the connecting link by using nippers or similar tools.



63. INSTALL CRANKSHAFT POSITION SENSOR

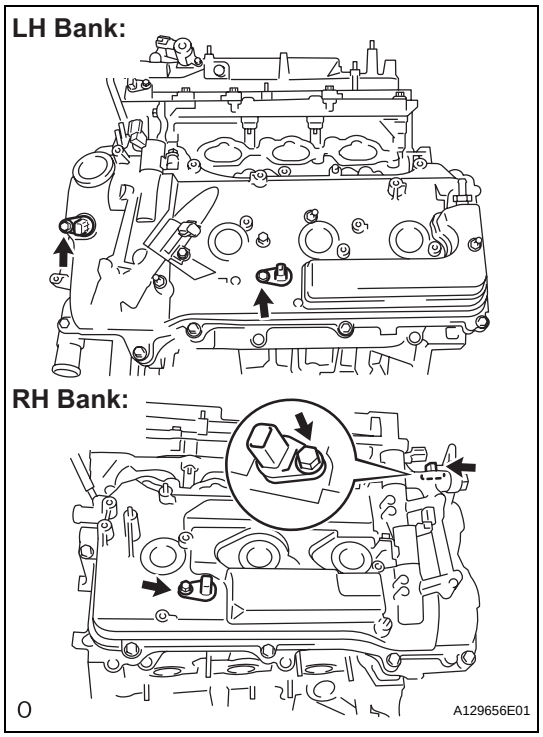
(a) Install the sensor with the bolt.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)



64. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

(a) Install the 4 oil control valves with the 4 bolts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

EM

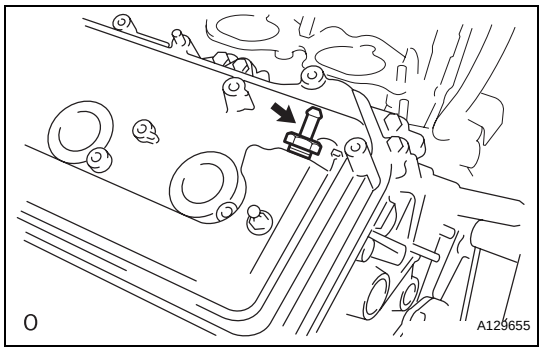


65. INSTALL CAMSHAFT POSITION SENSOR

(a) Install the 4 sensors with the 4 bolts.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

66. INSTALL VENTILATION VALVE SUB-ASSEMBLY

(a) Apply adhesive around the ventilation valve.
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or Equivalent



(b) Install the ventilation valve.
Torque: 27 N*m (275 kgf*cm, 20 ft.*lbf)

67. INSTALL SPARK PLUG

(a) Install the 6 spark plugs.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)

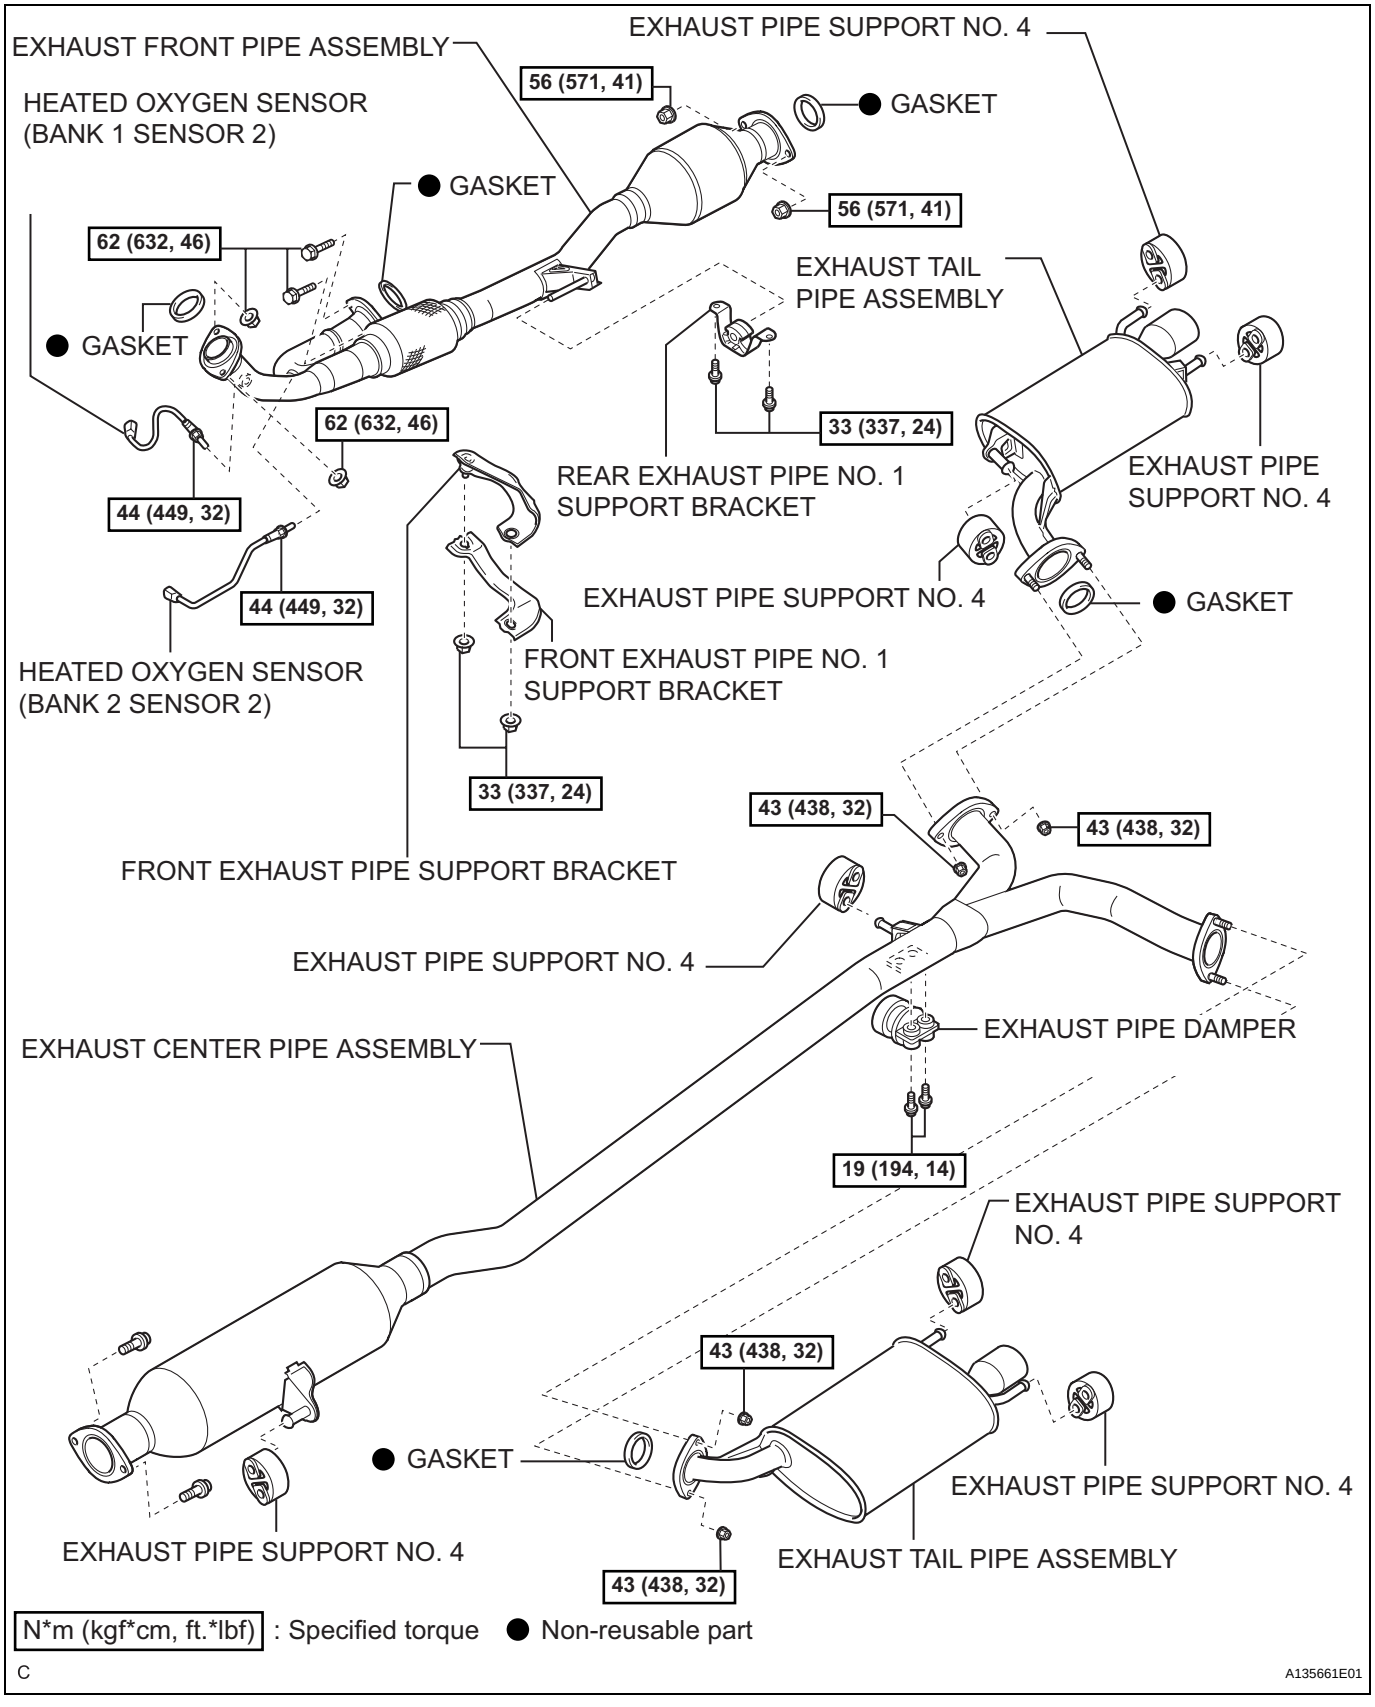
68. INSTALL OIL FILLER CAP SUB-ASSEMBLY

(a) Install a new gasket.
(b) Install the oil filler cap.

EM

EXHAUST PIPE

COMPONENTS

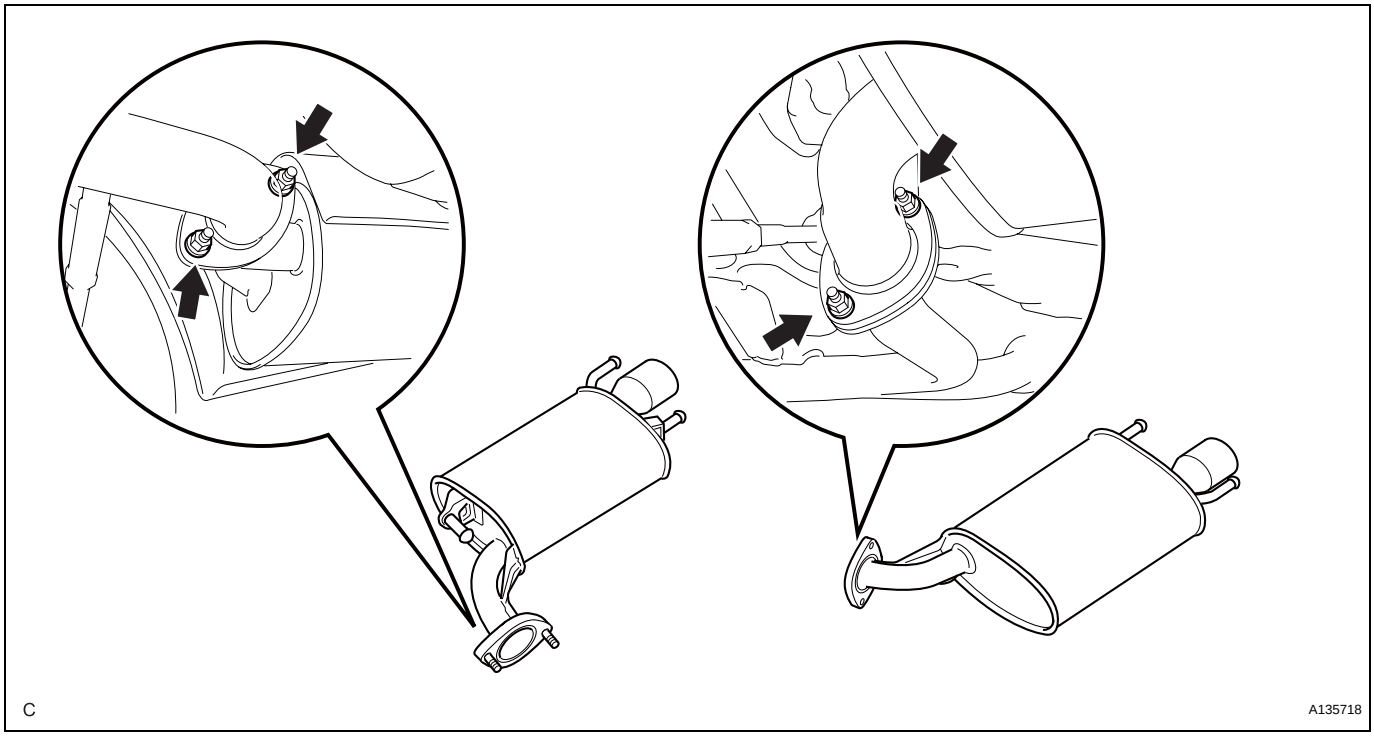


EX

REMOVAL

1. REMOVE EXHAUST TAIL PIPE ASSEMBLY

(a) Remove the 4 nuts and 2 exhaust tail pipes.

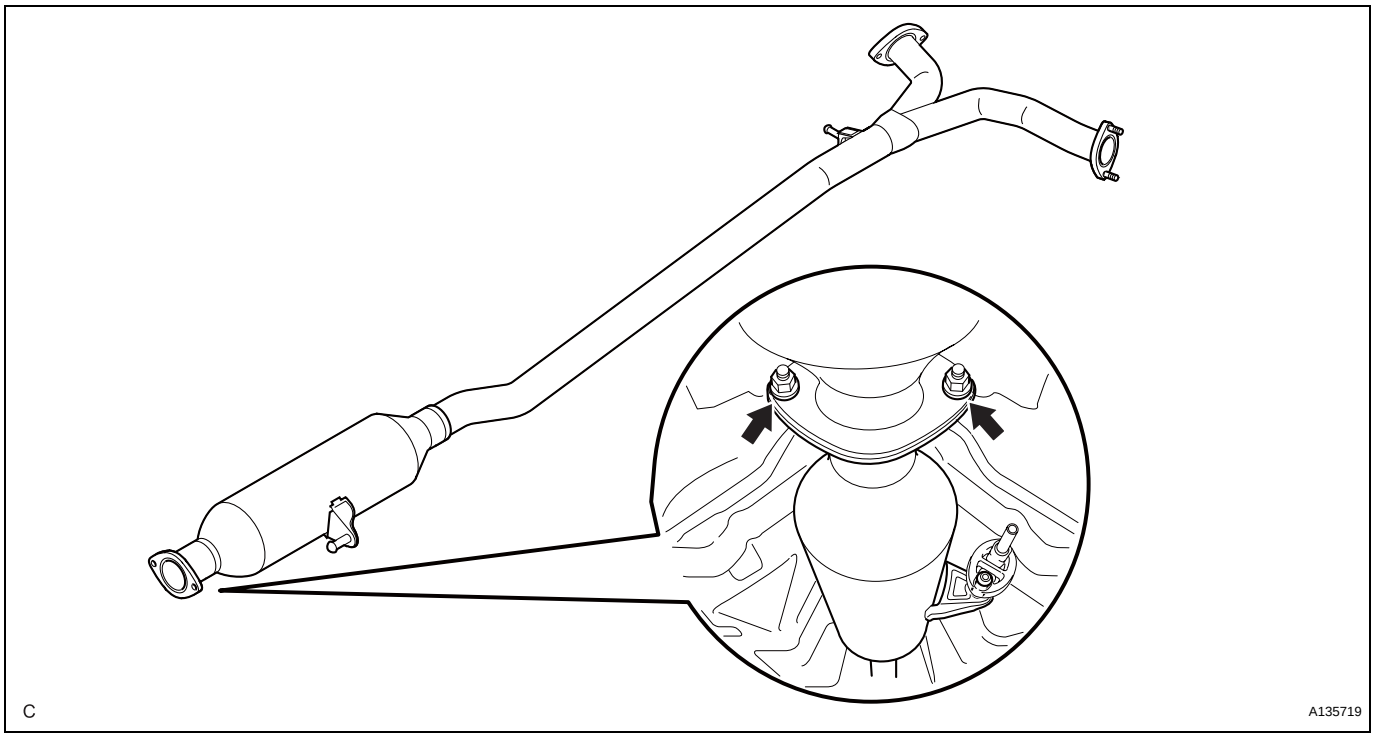


(b) Remove the 2 gaskets from the exhaust center pipe assembly.

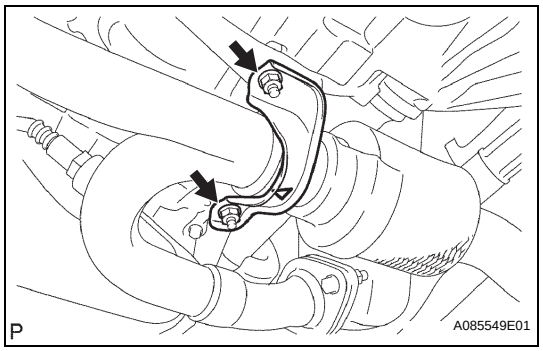
2. REMOVE EXHAUST CENTER PIPE ASSEMBLY

(a) Remove the 2 bolts, 2 nuts and exhaust center pipe assembly.

EX



(b) Remove the gasket from the exhaust pipe assembly.



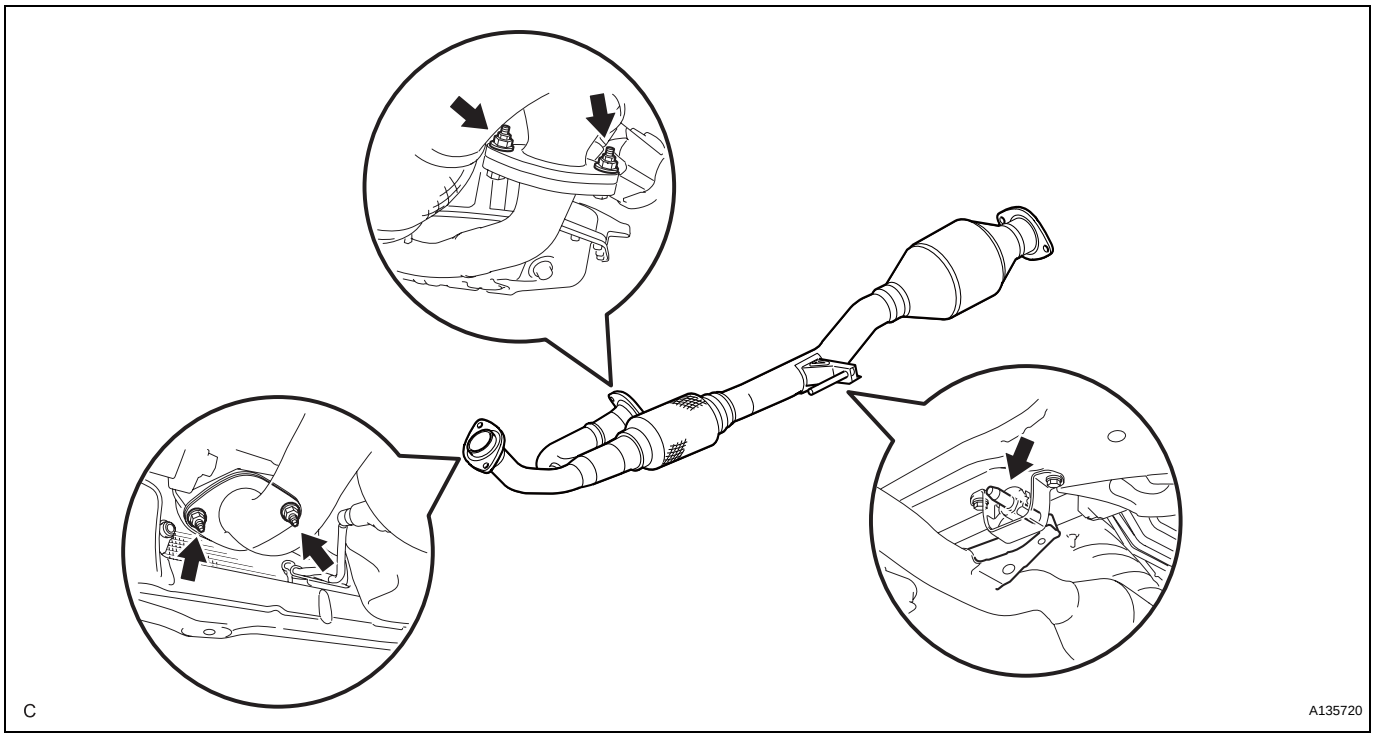
3. REMOVE FRONT EXHAUST PIPE NO. 1 SUPPORT BRACKET

(a) Remove the 2 nuts and front support brackets.

4. REMOVE EXHAUST FRONT PIPE ASSEMBLY

(a) Disconnect the 2 heated oxygen sensor (bank 1, 2 sensor 2) connectors.

(b) Remove the 2 nuts from the exhaust front pipe (left bank exhaust manifold side).

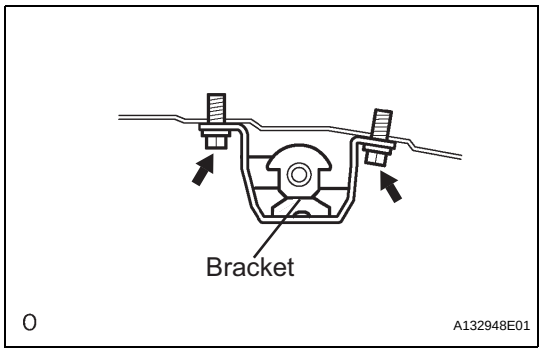


(c) Remove the 2 nuts from the exhaust front pipe (right bank exhaust pipe manifold side).

(d) Remove the exhaust front pipe.

(e) Remove the 2 gaskets from the exhaust front pipe.

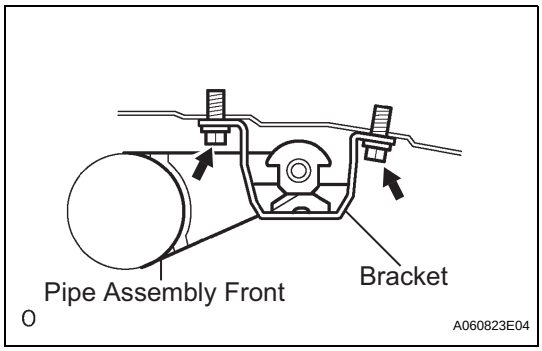
5. REMOVE HEATED OXYGEN SENSOR (See page EC-21)



6. REMOVE REAR EXHAUST PIPE NO. 1 SUPPORT BRACKET

(a) Remove the 2 bolts and rear support bracket.

EX

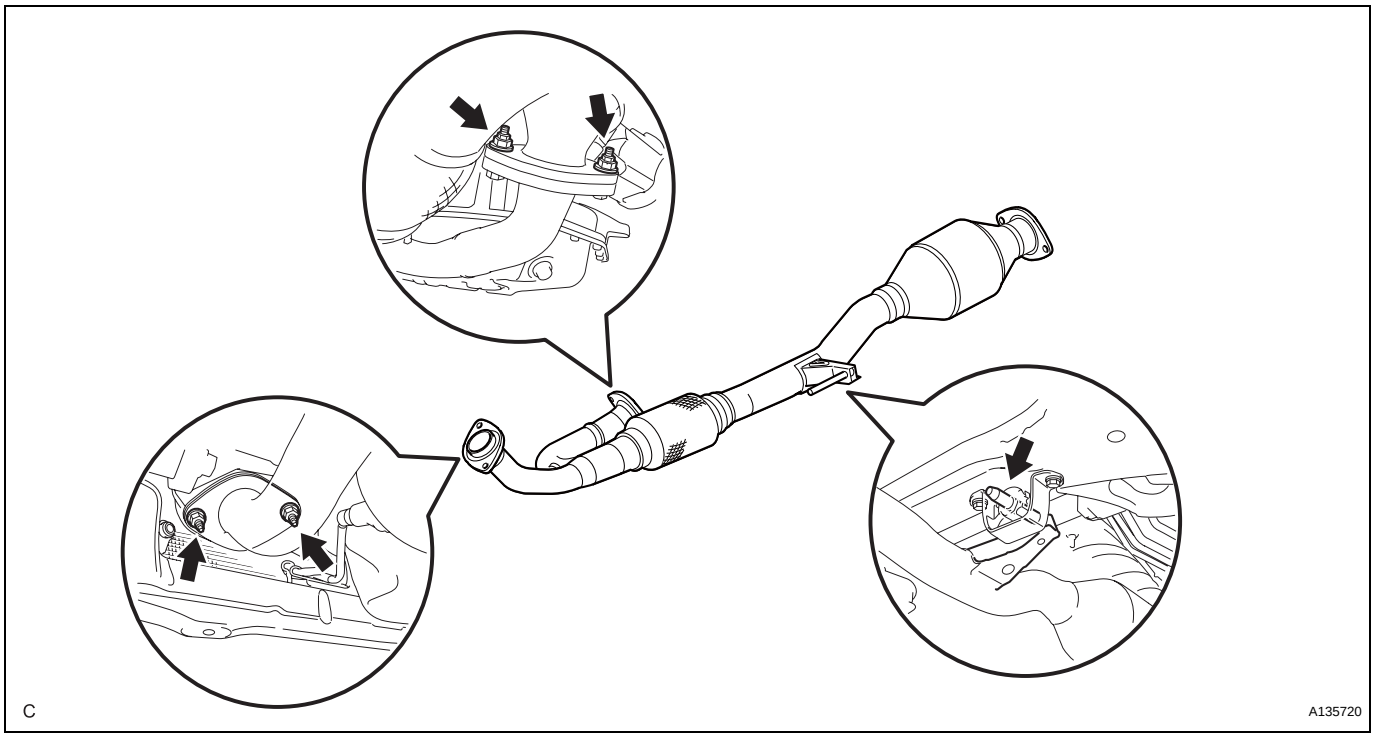


INSTALLATION

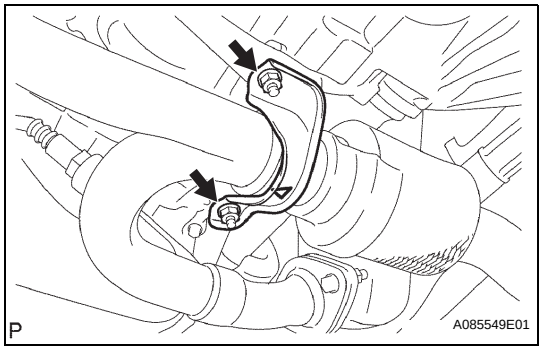
1. **INSTALL REAR EXHAUST PIPE NO. 1 SUPPORT BRACKET**
   (a) Install the rear support bracket with the 2 bolts.
   Torque: 33 N*m (337 kgf*cm, 24 ft.*lbf)
   NOTICE:
   Be sure to install the bracket in the correct direction.

2. **INSTALL HEATED OXYGEN SENSOR (See page EC-21)**

3. **INSTALL EXHAUST FRONT PIPE ASSEMBLY**
   (a) Install 2 new gaskets to the exhaust front pipe.
   (b) Install the exhaust front pipe to the exhaust manifolds with the 4 nuts.



Torque: 62 N*m (632 kgf*cm, 46 ft.*lbf)

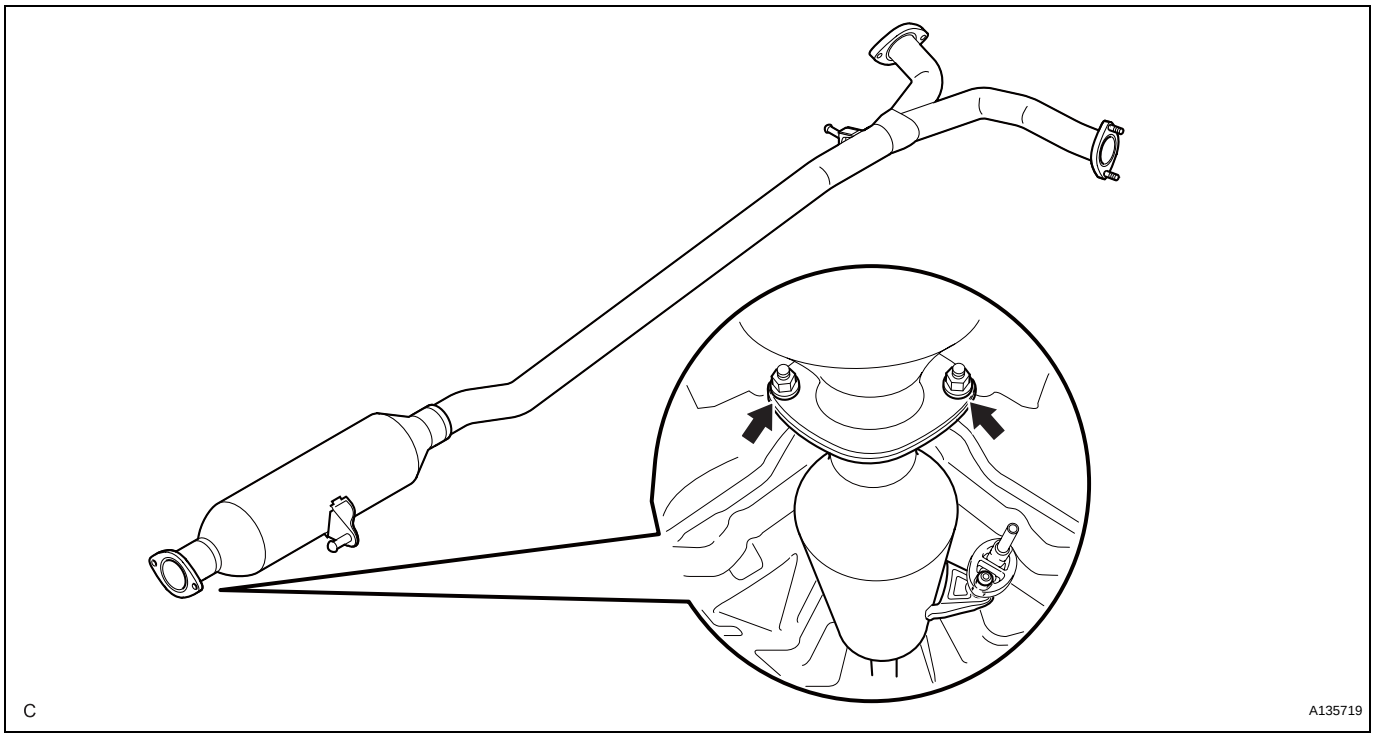


4. **INSTALL FRONT EXHAUST PIPE NO. 1 SUPPORT BRACKET**
   (a) Install the front support brackets with the 2 nuts.
   Torque: 33 N*m (337 kgf*cm, 24 ft.*lbf)
   NOTICE:
   Be sure to install the support brackets in the correct direction.

5. **INSTALL EXHAUST CENTER PIPE ASSEMBLY**
   (a) Install a new gasket to the exhaust center pipe assembly.

EX

(b) Install the exhaust center pipe to the exhaust front pipe with the 2 nuts and 2 bolts.

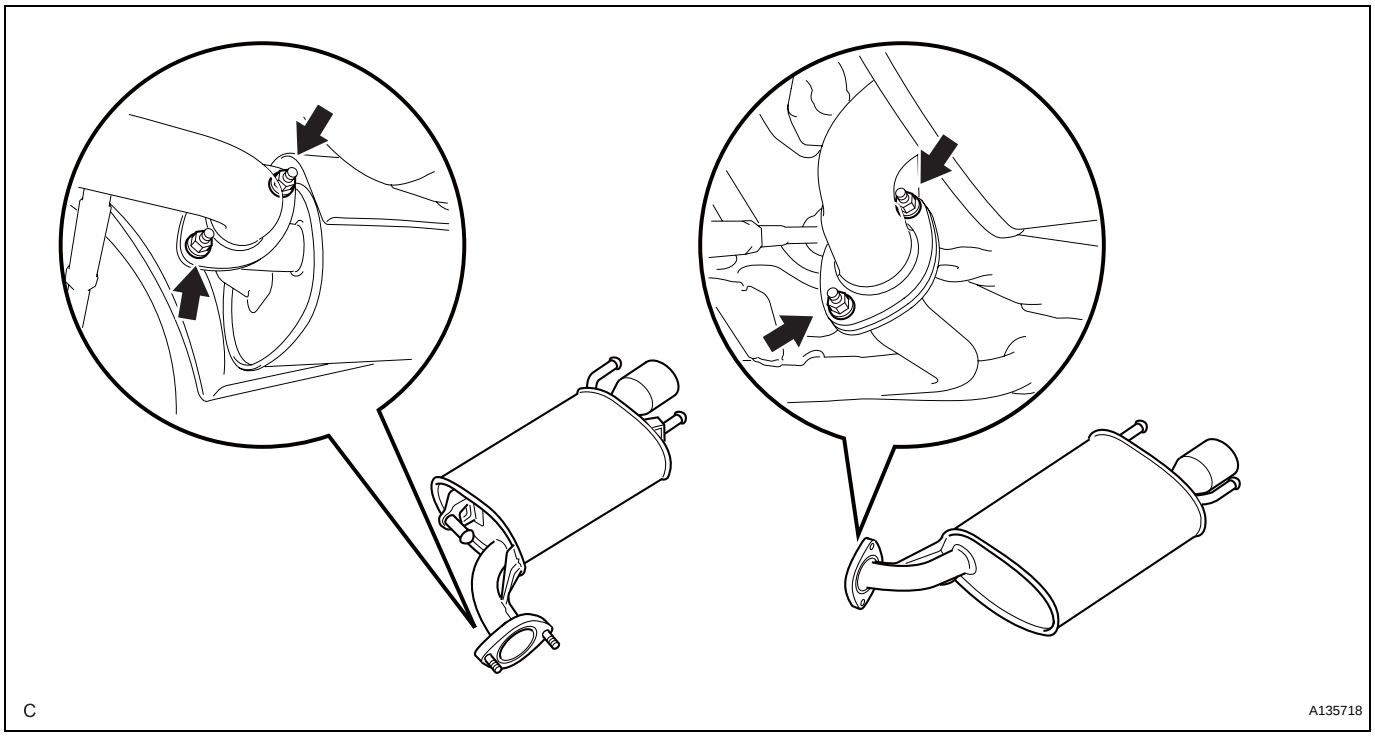


Torque: 56 N*m (571 kgf*cm, 41 ft.*lbf)

6. INSTALL EXHAUST TAIL PIPE ASSEMBLY

(a) Install 2 new gaskets to the exhaust tail pipes.

(b) Install the 2 exhaust tail pipes with the 4 nuts.



Torque: 43 N*m (438 kgf*cm, 32 ft.*lbf)

7. CHECK FOR EXHAUST GAS LEAKS

If gas is leaking, tighten the areas necessary to stop the leak. Replace the damaged parts as necessary.

EX

FUEL SYSTEM

PRECAUTION

1. EXPRESSIONS OF IGNITION SWITCH

(a) The type of the ignition switch used on this model differs according to the specifications of the vehicle. The expressions listed in the table below are used in this section.

Switch Type		Ignition Switch (position)	Engine Switch (condition)
Expression	Ignition Switch off	LOCK	Off
	Ignition Switch on (IG)	ON	On (IG)
	Ignition Switch on (ACC)	ACC	On (ACC)
	Engine Start	START	Start

2. PRECAUTION

(a) Before inspecting and repairing the fuel system, disconnect the negative (-) battery terminal.

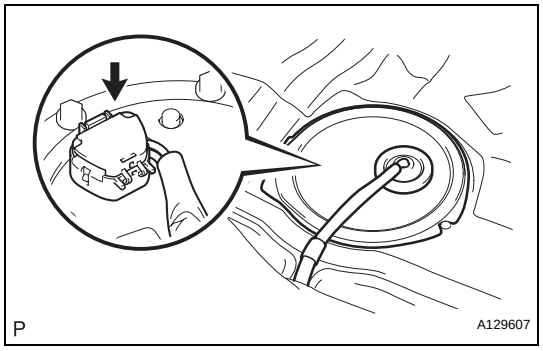
(b) Do not smoke or work near fire when handling the fuel system.

(c) Keep gasoline away from rubber or leather parts.

3. DISCHARGE FUEL SYSTEM PRESSURE

CAUTION:

- **Perform the following procedures to prevent fuel from spilling out before removing any fuel system parts.**
- **Pressure will still remain in the fuel line even after performing the following procedures. When disconnecting the fuel line, cover it with a shop rag or a piece of cloth to prevent fuel from spraying or coming out.**



(a) Disconnect the fuel pump connector.

(1) Remove the rear seat cushion assembly.

(2) Remove the rear floor service hole cover.

(3) Disconnect the fuel pump connector.

(4) Start the engine.

(5) After the engine stops, turn the ignition switch off.

HINT:

DTC P0171/25 (fuel problem) and/or P0191/49 (fuel pressure sensor signal error) may be detected.

(6) Crank the engine again. Check that the engine does not start.

(7) Remove the fuel tank cap to discharge pressure from the fuel tank.

(8) Disconnect the negative (-) battery terminal cable.

(9) Reconnect the fuel pump connector.

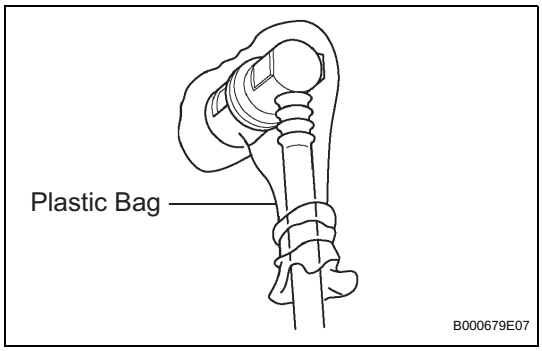
(10) Install the rear floor service hole cover.

(11) Install the rear seat.

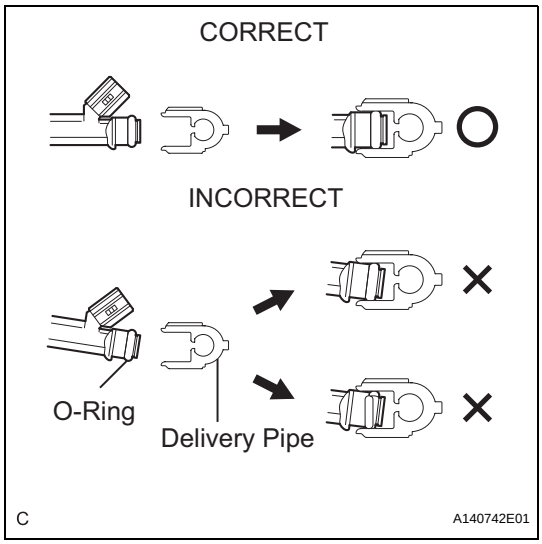
FU

4. FUEL SYSTEM

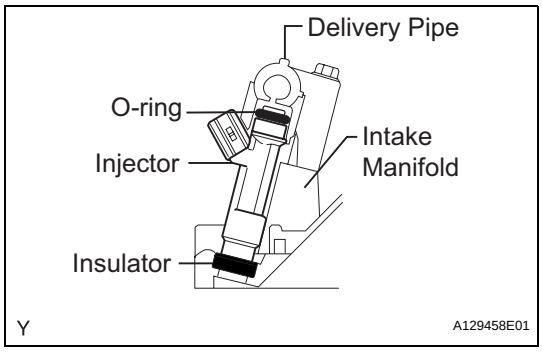
(a) When disconnecting the high fuel pressure line, a large amount of gasoline will spill out, so observe the following procedures:
(1) Discharge the fuel system pressure. (step 3)
(2) Disconnect the fuel pump tube (See page FU-27).
(3) Drain the fuel that remains inside the fuel pump tube.
(4) To protect the disconnected fuel pump tube from damage and contamination, cover it with a plastic bag.
(5) Put a container under the connection part.

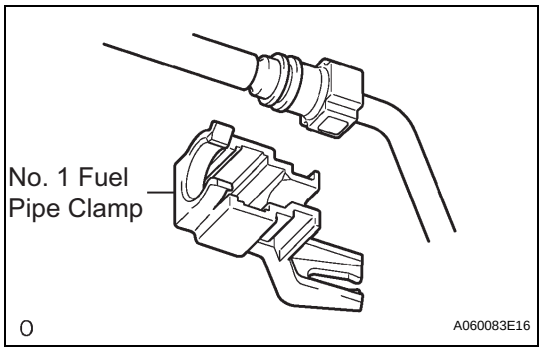


(b) Observe the following precautions when removing and installing the fuel injectors:
(1) Never reuse an O-ring.
(2) When placing a new O-ring on the injector, do not damage the O-ring.
(3) Coat a new O-ring with spindle oil or gasoline before installing it.
NOTICE:
Do not use engine oil, gear oil or brake fluid.

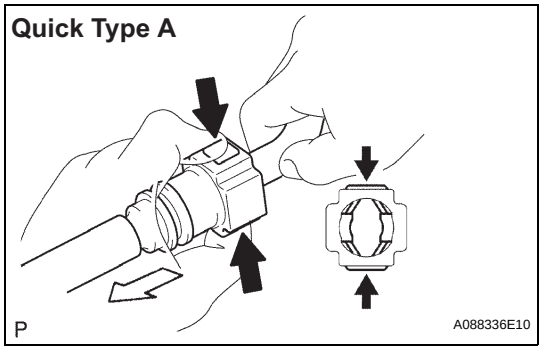


(c) Install the injector to the delivery pipe and lower intake manifold as shown in the illustration.
NOTICE:
Before installing the injector, be sure to apply grease or gasoline to the place where the delivery pipe or cylinder head contacts the O-ring of the injector.

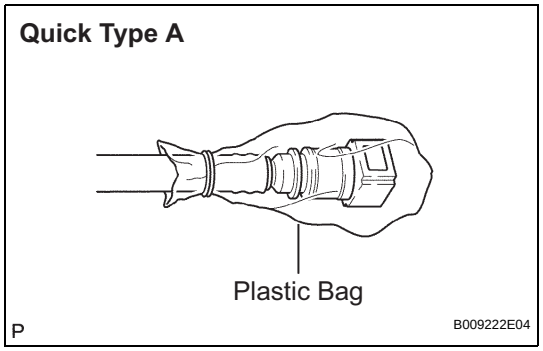




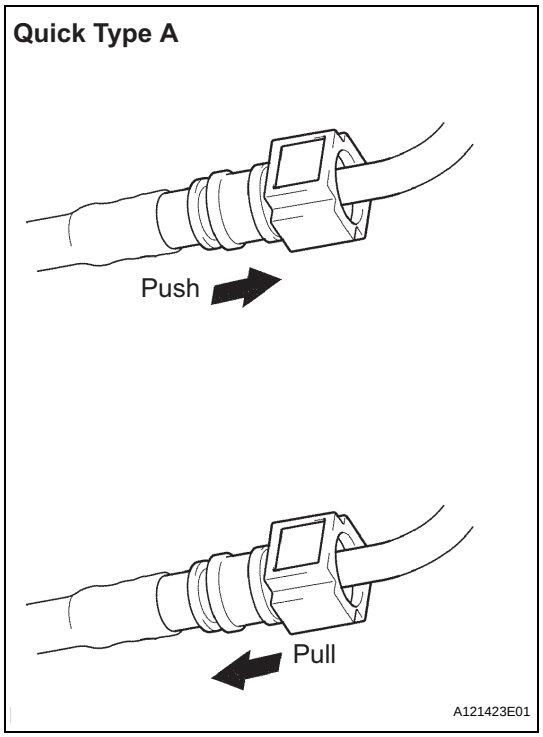
(d) Observe the following precautions when disconnecting the fuel tube connectors (Quick type A):
(1) Remove the No. 1 fuel pipe clamp.
(2) Check that there is no dirt or other foreign objects on the pipe and around the connector before disconnecting them. Clean them if necessary.



(3) Disconnect the connector from the pipe by hand.
(4) When the connector and the pipe are stuck, push in and pull on the connector to release it. Pull the connector out of the pipe carefully.
(5) Check that there is no dirt or other foreign objects on the sealing surface of the disconnected pipe. Clean it away if necessary.

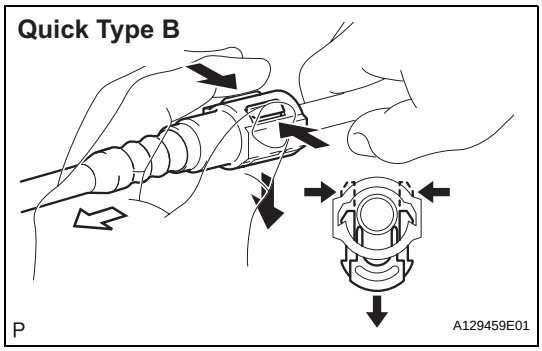


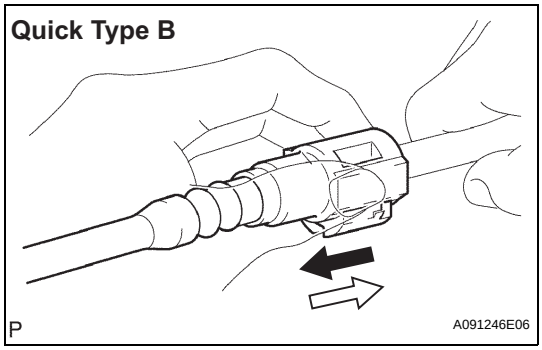
(6) Do not damage the disconnected pipe and connector, and prevent entry of foreign objects by covering them with a plastic bag.

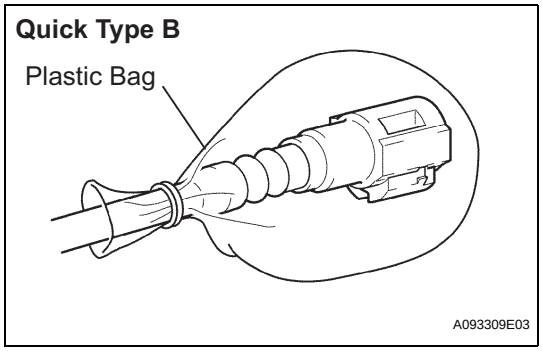


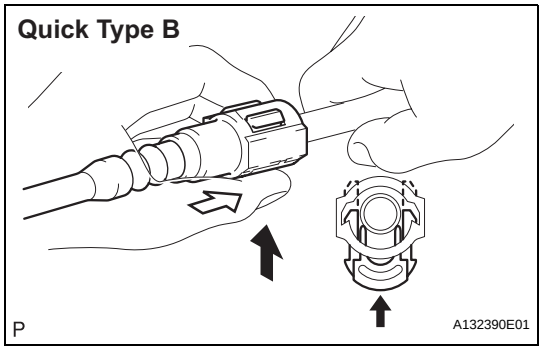
(e) Observe the following precautions when connecting the fuel tube connectors (Quick Type A):
(1) Check if there is any damage or foreign objects on the connecting parts of the pipes.
(2) Line up the two parts of the pipes to be connected, and push them together until the connector makes a "click" sound. If the pipe is difficult to push into the connector, apply a small amount of clean engine oil to the tip of the pipe and reinsert it.
(3) After connecting the pipes, check that the pipe and connector are securely connected by pulling on them.
(4) Check for fuel leaks.

FU









(f) Observe the following precautions when disconnecting the fuel tube connector (Quick type B):
(1) Before disconnecting the connector, clean off any dirt that may be present.
(2) Pinch the tabs of the fuel tube retainer to disengage the 2 claws. Push the retainer down as shown in the illustration.
HINT:
Be sure to disconnect the connector by hand.
(3) If the connector and pipe are stuck, hold the fuel pipe by hand, and push and pull on the connector. Pull the two pipes apart to separate the connector.
(4) If there is any dirt or any other foreign objects on the sealing surfaces of the disconnected pipes, clean them if necessary.
(5) Do not damage the disconnected pipe and connector, and prevent entry of foreign objects by covering them with a plastic bag.

(g) Observe the following precautions when connecting the fuel tube connector (Quick Type B):
(1) Line up the two parts of the pipes to be connected, and fully push the fuel tube connector and pipe together until they are fully seated. Next, push the retainer into the connector until its claws lock. If the pipe is difficult to push in to the connector, apply a small amount of clean engine oil to the tip of the pipe and reinsert it.
(2) After connecting the pipes, check that the pipe and connector are securely connected by pulling on them.
(3) Check for fuel leaks.
(h) Observe the following precautions when handling a nylon tube:
CAUTION:
- **Do not twist the connection part of the nylon tube and the quick connector when connecting them.**
- **Do not bend or twist the nylon tube.**

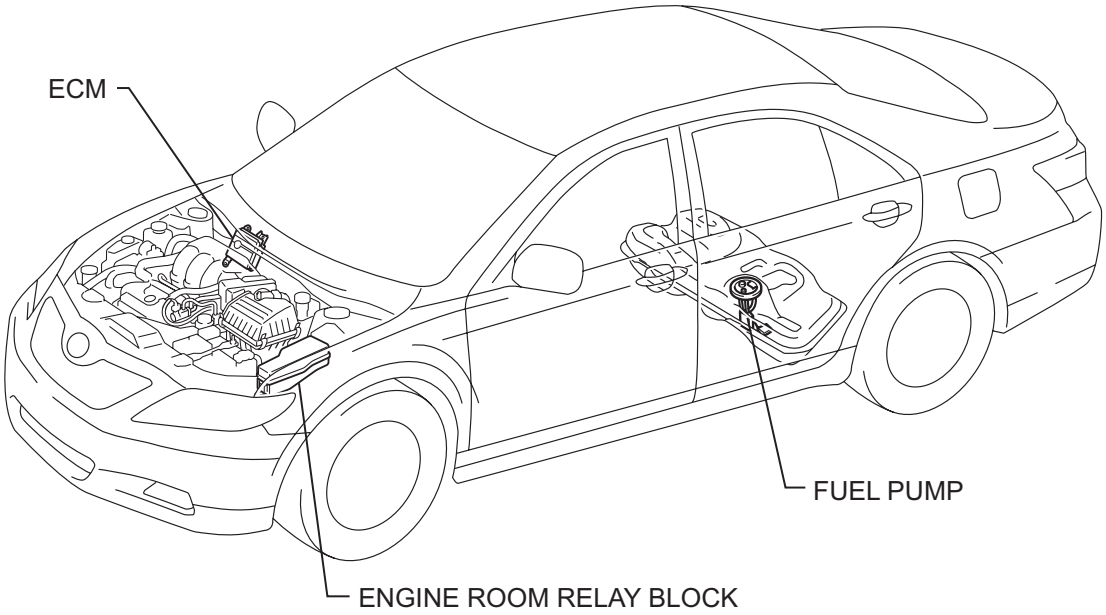
FU

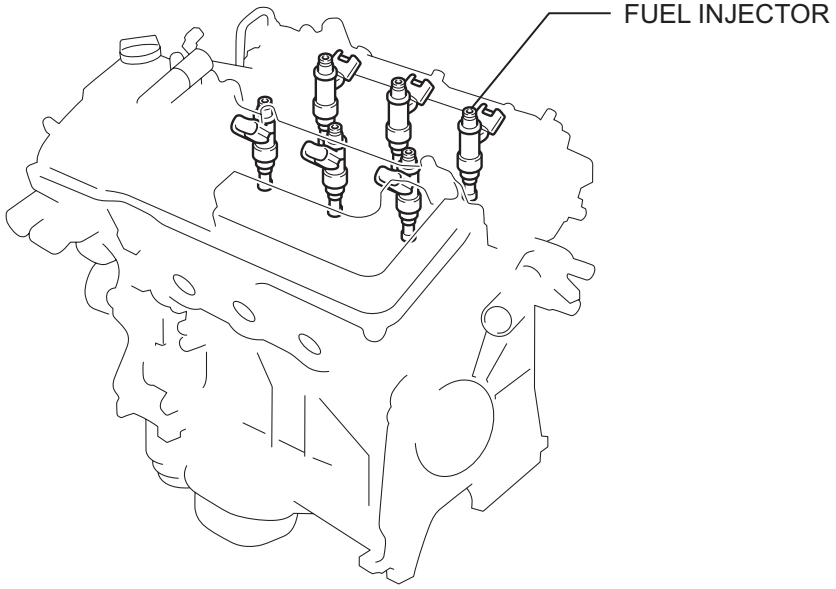
- **Do not remove the EPDM protector on the outside of the nylon tube.**
- **Do not close the piping by bending the nylon tube.**

5. CHECK FOR FUEL LEAKS

(a) Check that there are no fuel leaks from the fuel system after doing any maintenance or repairs (See page FU-8).

PARTS LOCATION

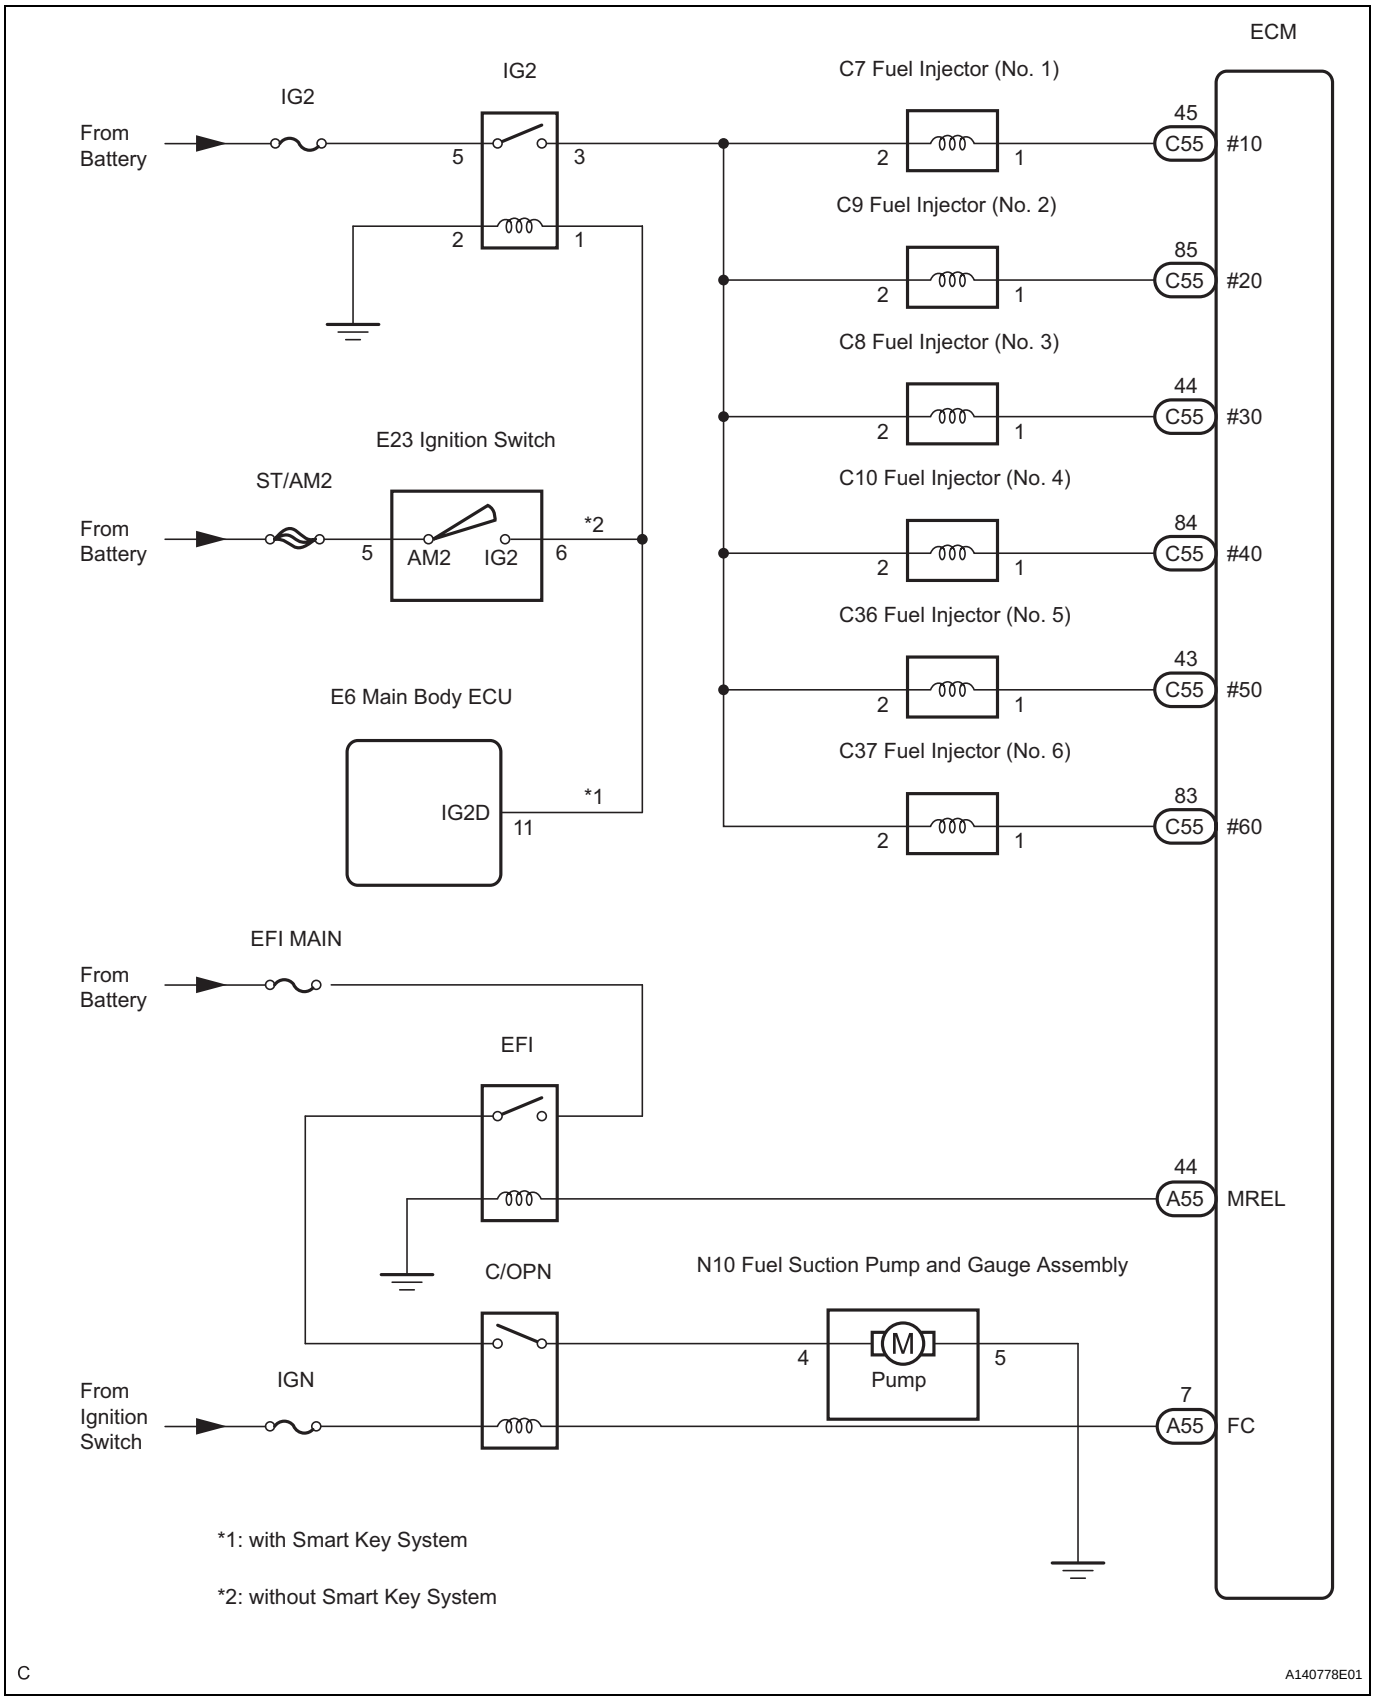




N

A136014E01

SYSTEM DIAGRAM



FU

ON-VEHICLE INSPECTION

1. CHECK FOR FUEL PUMP OPERATION AND FUEL LEAKS

(a) Check fuel pump operation.
  (1) Connect the intelligent tester to the DLC3.
  (2) Turn the ignition switch on (IG) and push the intelligent tester main switch on.
  NOTICE:
  Do not start the engine.
  (3) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / FUEL PUMP / SPD.
  (4) Check for pressure in the fuel inlet tube from the fuel line. Check that sound of fuel flowing in the fuel tank can be heard. If no sound can be heard, check the integration relay, fuel pump, ECM and wiring connector.

(b) Check for fuel leaks.
  (1) Check that there are no fuel leaks anywhere on the system after performing maintenance. If there is a fuel leak, repair or replace parts as necessary.

(c) Turn the ignition switch off.

(d) Disconnect the intelligent tester from the DLC3.

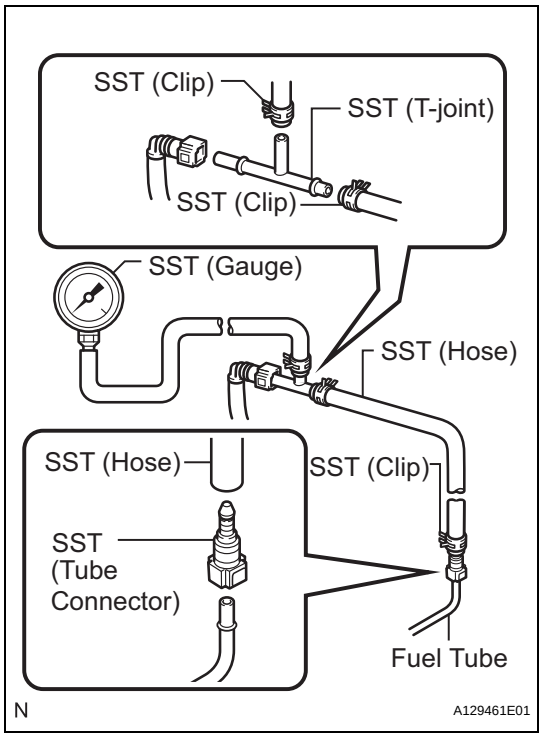
2. CHECK FUEL PRESSURE

(a) Discharge the fuel system pressure (See page FU-1).

(b) Using a voltmeter, measure the battery voltage.
  Standard voltage:
  11 to 14 V

(c) Disconnect the negative (-) battery terminal.

(d) Disconnect the fuel hose from the fuel main tube (See page FU-1).



(e) Install SST (pressure gauge) using SST and a fuel tube connector as shown in the illustration.
SST 09268-31011 (09268-41500, 90467-13001, 95336-08070), 09268-45014 (09268-41200, 09268-41220, 09268-41250)

(f) Wipe up any gasoline.

(g) Connect the negative (-) battery terminal.

(h) Connect the intelligent tester to the DLC3.

(i) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / FUEL PUMP / SPD.

(j) Measure the fuel pressure.
Fuel pressure:

304 to 343 kPa (3.1 to 3.5 kgf*cm^2, 44.1 to 49.7 psi)

- If the fuel pressure is greater than the standard value, replace the fuel pressure regulator.
- If the fuel pressure is less than the standard value, check the fuel hoses and connections, fuel pump, fuel filter and fuel pressure regulator.

(k) Disconnect the intelligent tester from the DLC3.

(l) Start the engine.

(m) Measure the fuel pressure at idle.
Fuel pressure:

304 to 343 kPa (3.1 to 3.5 kgf*cm^2, 44.1 to 49.7 psi)

(n) Stop the engine.

(o) Check that the fuel pressure remains as specified for 5 minutes after the engine stops.
Fuel pressure:

147 kPa (1.5 kgf*cm^2, 21 psi) or more

If the fuel pressure is not as specified, check the fuel pump, pressure regulator and/or fuel injectors.

(p) After checking the fuel pressure, carefully disconnect the negative (-) battery cable, and remove the SST and fuel tube connector to prevent gasoline from splashing.

(q) Reconnect the fuel tube to the main fuel tube (fuel tube connector).

(r) Install the No. 1 fuel pipe clamp to the fuel tube connector.

(s) Check for fuel leaks (step 1).

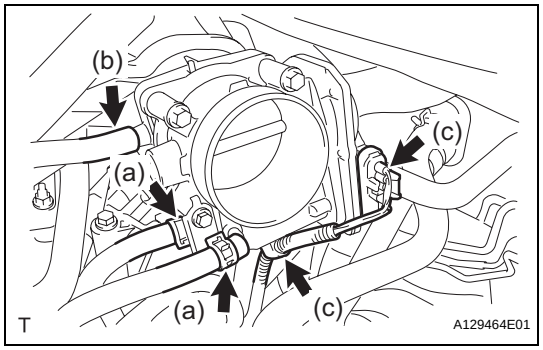
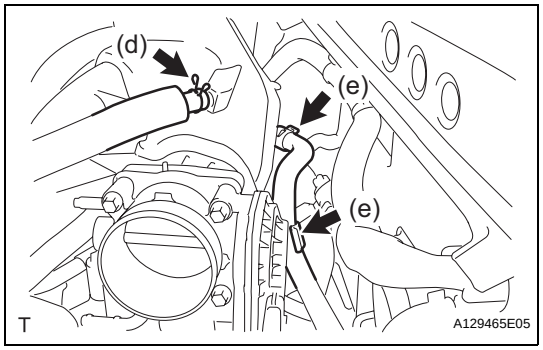
REMOVAL

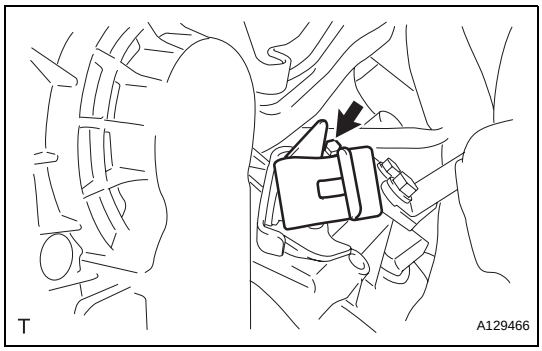
1. **DISCHARGE FUEL SYSTEM PRESSURE**
   HINT:
   See page FU-1.
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **DRAIN ENGINE COOLANT (See page CO-5)**
4. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-9)**
5. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-9)**
6. **REMOVE FRONT FENDER TO COWL SIDE SEAL LH (See page WW-9)**
7. **REMOVE FRONT FENDER TO COWL SIDE SEAL RH (See page WW-9)**
8. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-10)**
9. **REMOVE WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY (See page WW-10)**
10. **REMOVE COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-481)**
11. **REMOVE V-BANK COVER SUB-ASSEMBLY (See page EM-23)**
12. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-503)**
13. **REMOVE INTAKE AIR SURGE TANK ASSEMBLY**
    (a) Disconnect the 2 water by-pass hoses from the throttle with motor body assembly.
    (b) Disconnect the vapor feed hose.
    (c) Disconnect the throttle with motor body assembly connector and clamp.



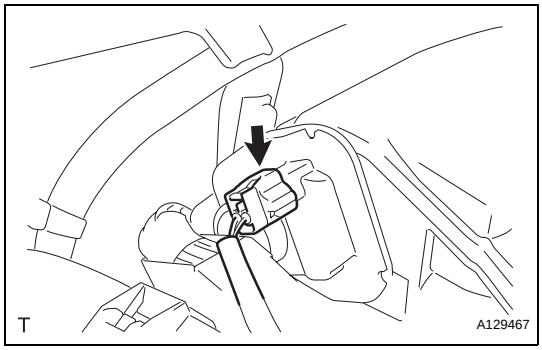
(d) Disconnect the No. 1 ventilation hose.
(e) Disconnect the union to check valve hose.



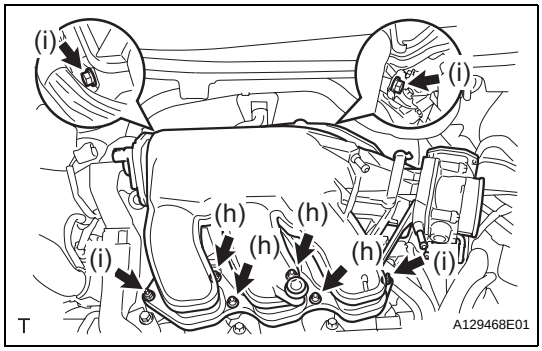
FU



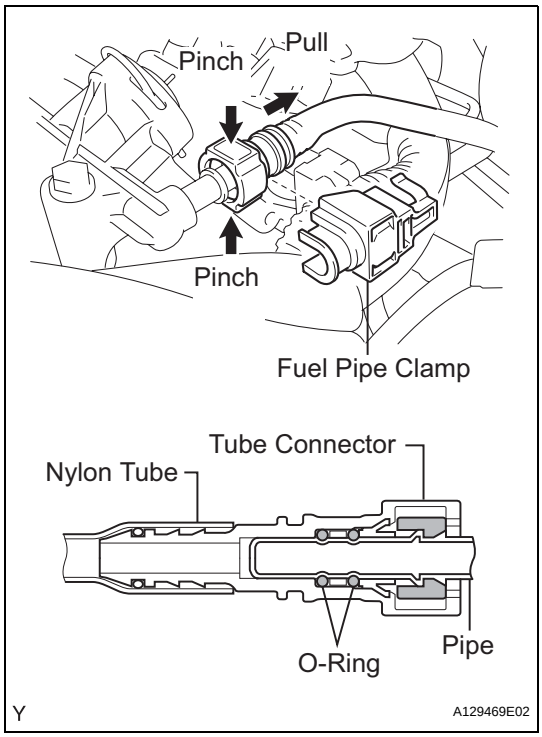
(f) Remove the bolt and vacuum hose clamp.



(g) Disconnect the connector.



(h) Using a 5 mm socket hexagon wrench, remove the 4 bolts.
(i) Remove the 2 nuts, 2 bolts and intake air surge tank.
(j) Remove the gasket from the intake air surge tank.

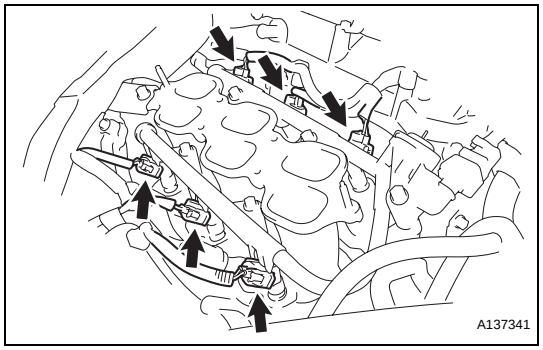


14. DISCONNECT FUEL TUBE SUB-ASSEMBLY

(a) Remove the No. 2 fuel pipe clamp.
(b) Pinch the tube connector and then pull out the fuel pipe.

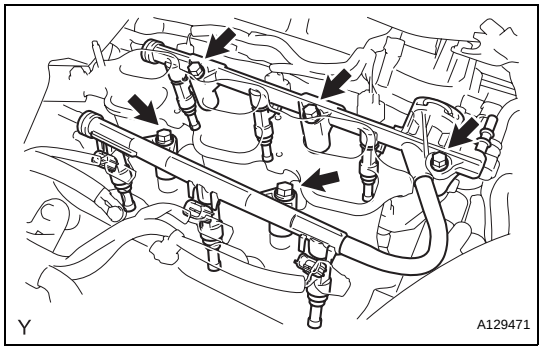
NOTICE:

- **Check that there is no dirt or other foreign objects around the connector before this operation and clean the connector as necessary.**
- **It is necessary to prevent mud or dirt from entering the quick connector. If mud enters the connector, the O-rings may not seal properly.**
- **Remove the quick connector by hand.**
- **Do not bend or twist the nylon tube. Protect the connector by covering it with a plastic bag.**
- **If the pipe and the connector are stuck, try wiggling or pushing and pulling the connector to release it and pull the connector off of the pipe carefully.**



15. REMOVE FUEL INJECTOR ASSEMBLY

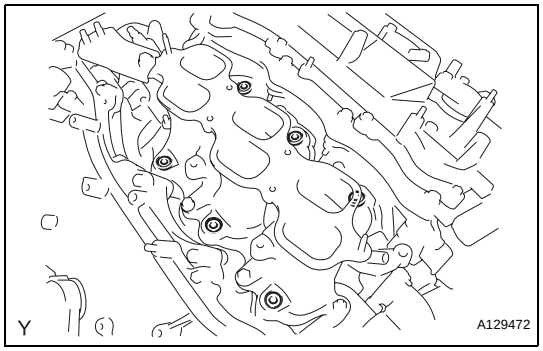
(a) Disconnect the 6 fuel injector connectors.



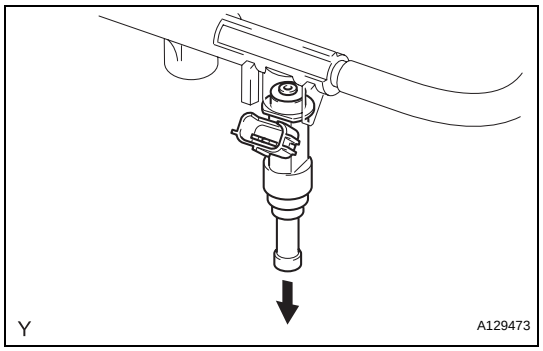
(b) Remove the 5 bolts and fuel delivery pipe together with the 6 fuel injectors.

NOTICE:

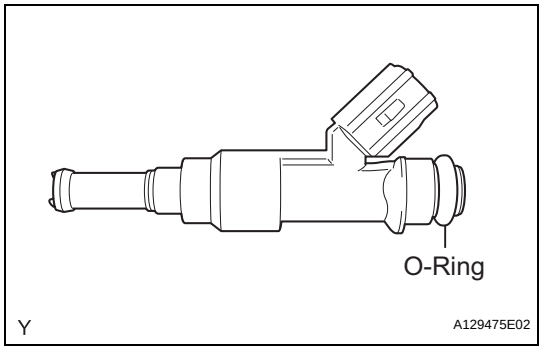
Be careful not to drop the fuel injectors when removing the fuel delivery pipe.



(c) Remove the 6 insulators from the intake manifold.



(d) Pull out the fuel injectors from the fuel delivery pipe.



(e) Remove the 6 O-rings from the injectors.

INSPECTION

1. INSPECT FUEL INJECTOR ASSEMBLY

(a) Inspect injector resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Resistance:

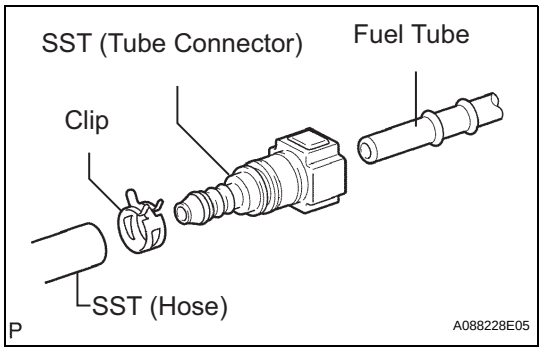
11.6 to 12.4 Ω at 20°C (68°F)

If the resistance is not as specified, replace the injector.

(b) Inspect the injection volume.

CAUTION:

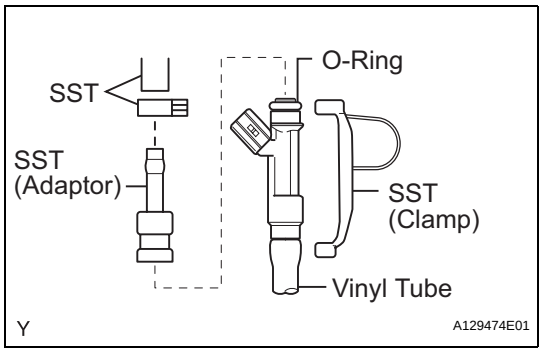
This test involves high-pressure fuel and electricity. Take every precaution regarding safe handling of both the fuel and the electricity. Perform this test in a safe area, and avoid any sparks or flames. Do not smoke.



(1) Install the fuel tube connector to SST (hose), then connect the tube connector to the fuel pipe (vehicle side).

SST 09268-31011 (09268-41500, 90467-13001, 95336-08070)

(2) Install the O-ring to the fuel injector.



(3) Connect SST (adaptor and hose) to the injector, and hold the injector and union with SST (clamp).

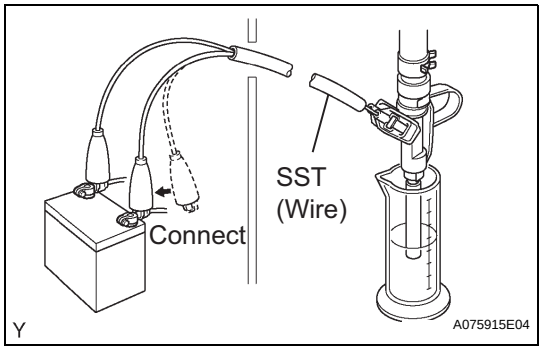
SST 09268-31011 (90467-13001, 95336-08070), 09268-41140, 09268-41400

(4) Put the injector into the graduated cylinder.

CAUTION:

Install a suitable vinyl tube onto the injector to contain gasoline spray.

(5) Operate the fuel pump (See page FU-8).



(6) Connect SST (wire) to the injector and the battery for 15 seconds, and measure the injection volume with the graduated cylinder. Test each injector 2 or 3 times.

SST 09842-30080

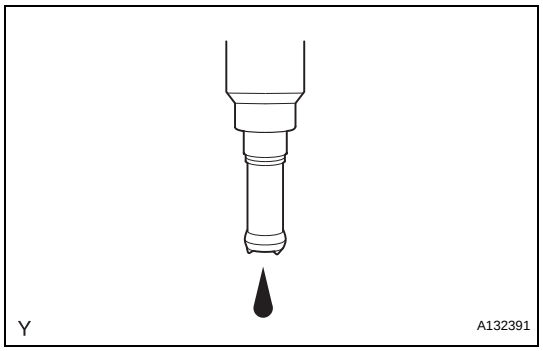
Volume:

84 to 100 cm^3 (5.1 to 6.0 cu in.) in 15 seconds

Difference between each injector:

16 cm^3 (0.98 cu in.) or less

If the injection volume is not as specified, replace the injector.

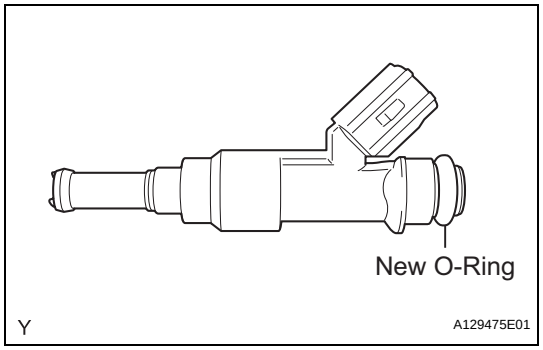


(c) Check for leakage.
(1) In the condition above, disconnect the tester probes of SST (wire) from the battery and check for fuel leakage from the injector.
Fuel drop:
1 drop or less in 16 minutes

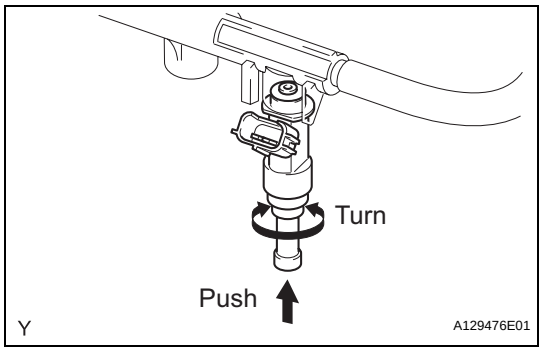
INSTALLATION

1. INSTALL FUEL INJECTOR ASSEMBLY

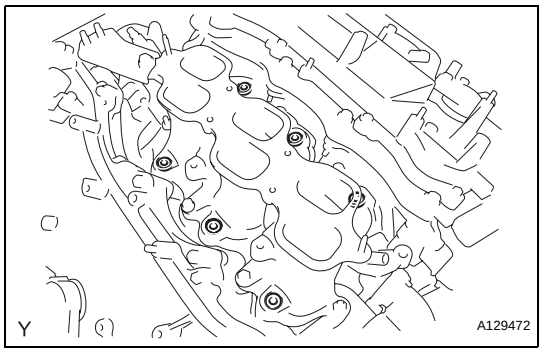
(a) Apply a light coat of spindle oil or gasoline to new O-rings, and install them to each injector.



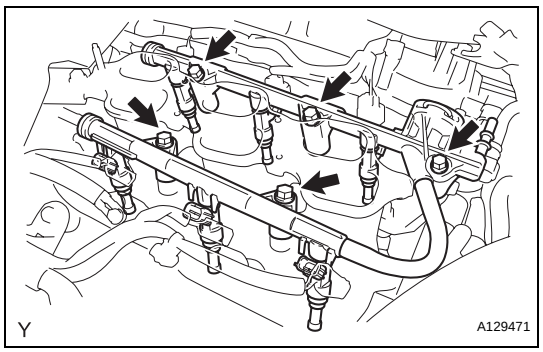
(b) Apply a light coat of spindle oil or gasoline where the fuel delivery pipe contacts the O-ring.
(c) Push the fuel injector while turning it to install the injector in the fuel delivery pipe.
(d) Position the fuel injector connector outward.
NOTICE:
- **Be careful not to twist the O-ring.**
- **After installing the fuel injector, check that it turns smoothly. If not, reinstall it with a new O-ring.**



(e) Install 6 new insulators to the intake manifold.

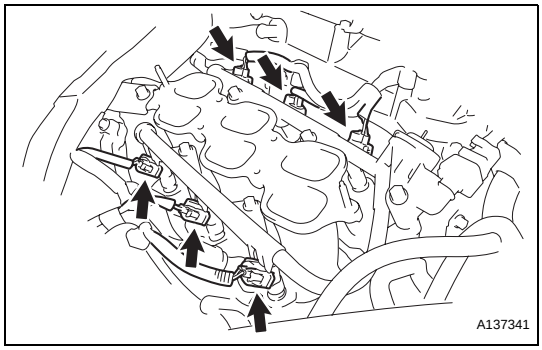


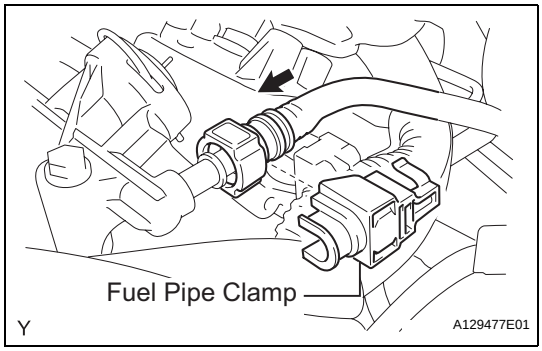
(f) Place the fuel delivery pipe and the 6 fuel injectors together to the intake manifold.
NOTICE:
Be careful not to drop the fuel injectors when installing the fuel delivery pipe.
(g) Temporarily install the 5 bolts which are used to hold the fuel delivery pipe to the intake manifold.
NOTICE:
After installing the fuel injector, check that it turns smoothly. If not, reinstall it with a new O-ring.



(h) Tighten the 5 bolts which are used to hold the fuel delivery pipe to the intake manifold.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)

(i) Connect the 6 fuel injector connectors.





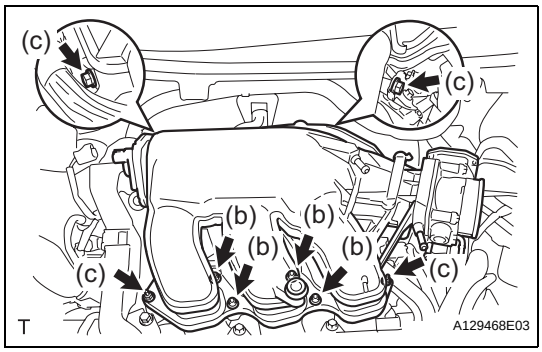
2. CONNECT FUEL TUBE SUB-ASSEMBLY

(a) Push in the tube connector to the pipe until the tube connector makes a "click" sound.
NOTICE:
- **Before connecting the tube, make sure that it is not damaged. Make sure that there is no dirt present on the connecting surfaces.**
- **After connecting, check if the fuel tube connector and the pipe are securely connected by pulling on them.**

(b) Install the No. 2 fuel pipe clamp.

3. INSTALL INTAKE AIR SURGE TANK ASSEMBLY
NOTICE:
DO NOT apply oil to the bolts as listed below

Tightening Parts	Torque N*m (kgf*cm, ft.*lbf)	QTY
Surge Tank and Intake Manifold	18 (184, 13)	4
No. 1 Surge Tank Stay and Surge Tank	21 (214, 15)	1
Throttle Body Bracket and Surge Tank	21 (214, 15)	1

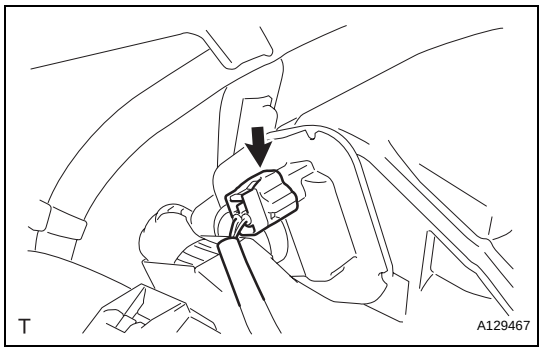


(a) Install a new gasket to the intake air surge tank.

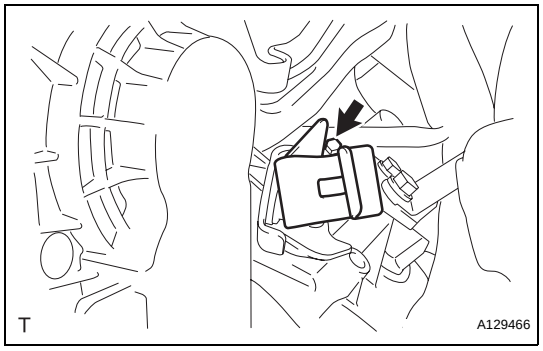
(b) Using a 5 mm hexagon socket wrench, install the 4 bolts.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)

(c) Install the intake air surge tank with the 2 nuts and 2 bolts.
Torque: Nut
16 N*m (163 kgf*cm, 12 ft.*lbf)
Bolt
21 N*m (214 kgf*cm, 15 ft.*lbf)

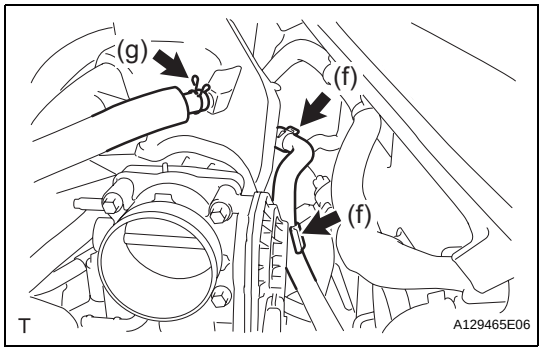
FU



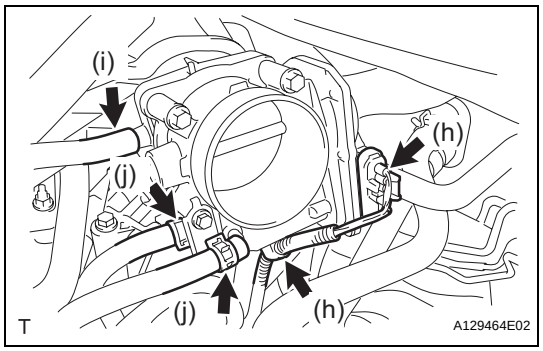
(d) Connect the connector.



(e) Install the vacuum hose clamp with the bolt.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



(f) Connect the union to check valve hose.
(g) Connect the No. 1 ventilation hose.



(h) Install the clamp and connect the throttle with motor body assembly connector.
(i) Connect the vapor feed hose.
(j) Connect the 2 water by-pass hoses to the throttle with motor body assembly.

4. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-506)**
5. **ADD ENGINE COOLANT (See page CO-6)**
6. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
7. **CHECK FOR ENGINE COOLANT LEAKS (See page CO-1)**
8. **CHECK FOR FUEL LEAKS (See page FU-8)**
9. **INSTALL COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-485)**
10. **INSTALL WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY (See page WW-14)**

FU

11. **INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-15)**
12. **INSTALL FRONT FENDER TO COWL SIDE SEAL RH (See page WW-15)**
13. **INSTALL FRONT FENDER TO COWL SIDE SEAL LH (See page WW-15)**
14. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-15)**
15. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-16)**
16. **INSTALL V-BANK COVER SUB-ASSEMBLY (See page EM-52)**

REMOVAL

1. **DISCHARGE FUEL SYSTEM PRESSURE**
   HINT:
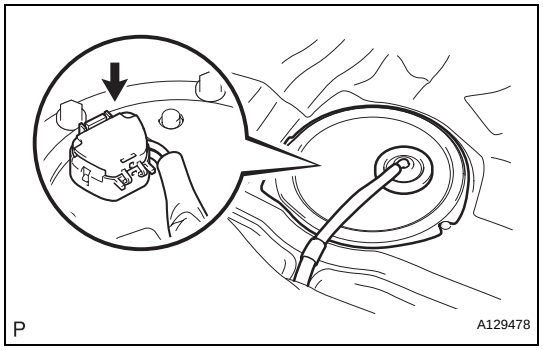
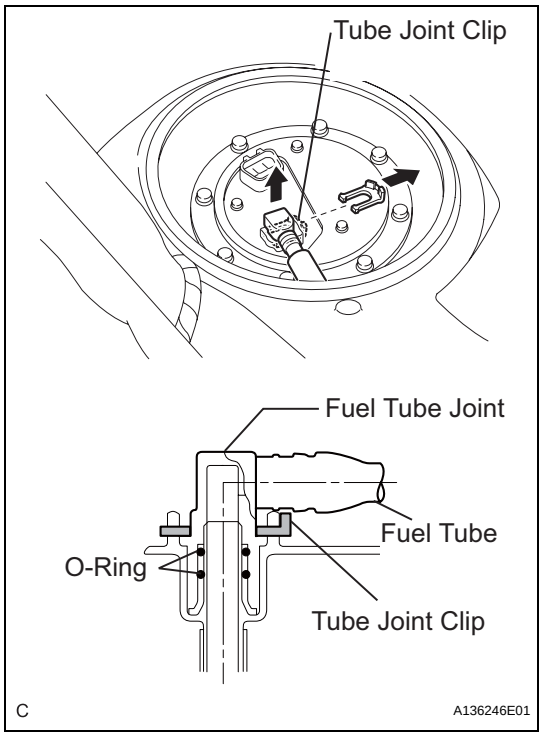
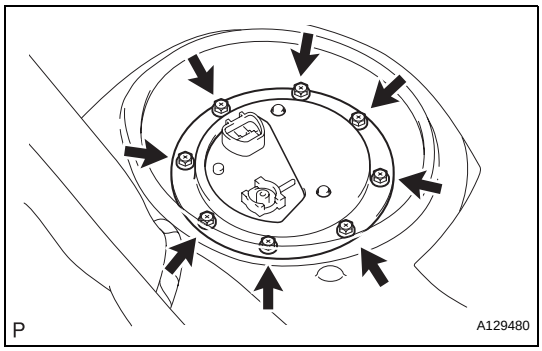
   See page FU-1.
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **REMOVE REAR SEAT CUSHION ASSEMBLY (for Fixed Seat Type) (See page SE-77)**
4. **REMOVE REAR SEAT CUSHION ASSEMBLY (for Fold Down Seat Type) (See page SE-47)**
5. **REMOVE REAR SEAT CUSHION ASSEMBLY (for Reclining Seat Type) (See page SE-62)**
6. **REMOVE REAR FLOOR SERVICE HOLE COVER**
   (a) Remove the rear floor service hole cover.
   (b) Disconnect the fuel pump connector.





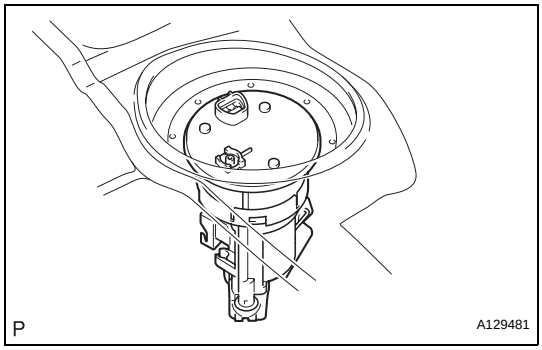
7. **SEPARATE FUEL PUMP TUBE SUB-ASSEMBLY**
   (a) Remove the tube joint clip, and pull out the fuel pump tube.
   NOTICE:
   - **Check that there is no dirt around the fuel tube joint before this work and clean any dirt away.**
   - **It is necessary to prevent mud or dirt from entering the fuel tube joint. If mud enters the joint, the O-rings may not seal the fuel tube connector and fuel suction plate properly.**
   - **Do not use any tools in this work.**
   - **Do not bend or twist the nylon tube.**
   - **After disconnecting, cover the fuel tube joint with a plastic bag.**
   - **If the fuel tube joint and fuel suction plate are stuck, pinch the fuel tank tube between fingers, and turn it carefully to release. Disconnect the fuel tank tube.**

FU



8. REMOVE FUEL TANK VENT TUBE SET PLATE

(a) Remove the 8 bolts and set plate.



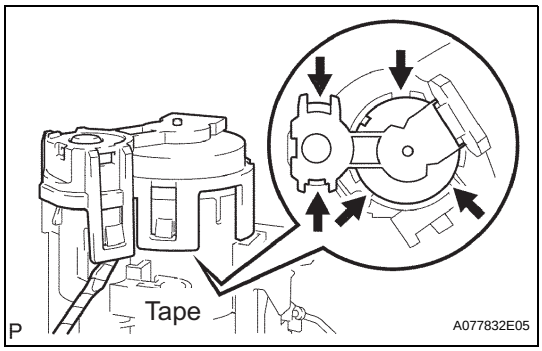
9. REMOVE FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE

(a) Pull out the fuel suction tube from the fuel tank.
NOTICE:
- **Do not damage the fuel pump filter.**
- **Be careful that the arm of the sender gauge does not bend.**

(b) Remove the gasket from the fuel suction tube.

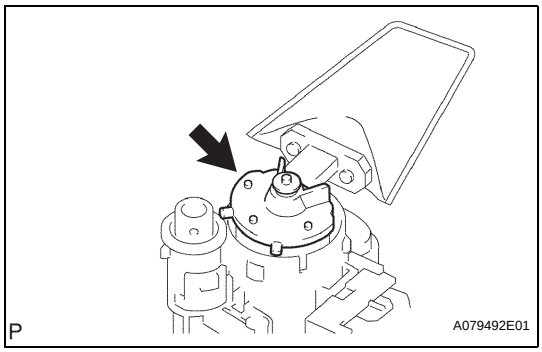
FU

DISASSEMBLY



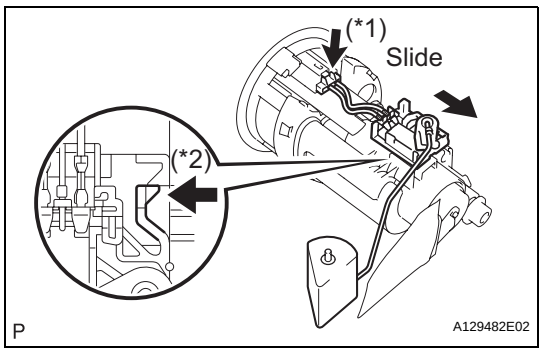
1. REMOVE NO. 2 FUEL SUCTION SUPPORT

(a) Using a screwdriver with its tip wrapped with tape, disengage the 5 snap claws from the claw holes, and remove the No. 2 fuel suction support.
NOTICE:
Do not damage the fuel suction support.



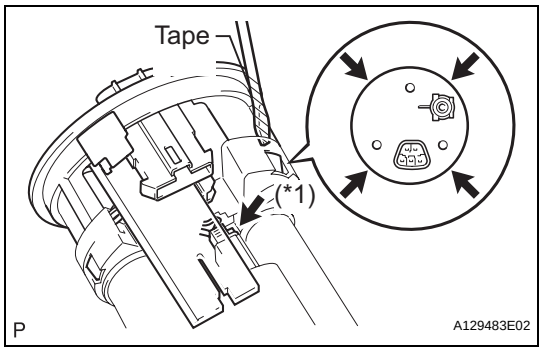
2. REMOVE FUEL PUMP CUSHION RUBBER

(a) Remove the fuel pump cushion rubber from the fuel pump.



3. REMOVE FUEL SENDER GAUGE ASSEMBLY

(a) Disconnect the fuel sender gauge connector (*1).
(b) Unlock the fuel sender gauge, and slide it to remove (*2).



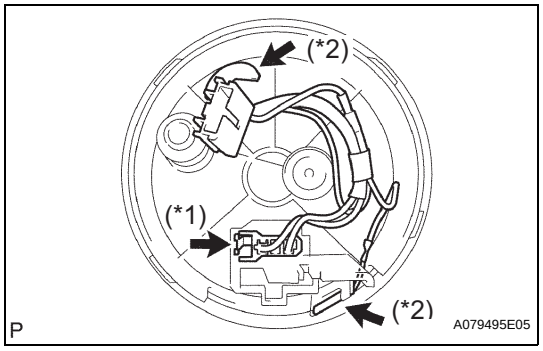
4. REMOVE FUEL SUCTION PLATE SUB-ASSEMBLY

(a) Disconnect the fuel pump connector (*1).

(b) Using a screwdriver with its tip wrapped with tape, disengage the 4 snap claws from the claw holes, and pull out the fuel suction plate.

NOTICE:

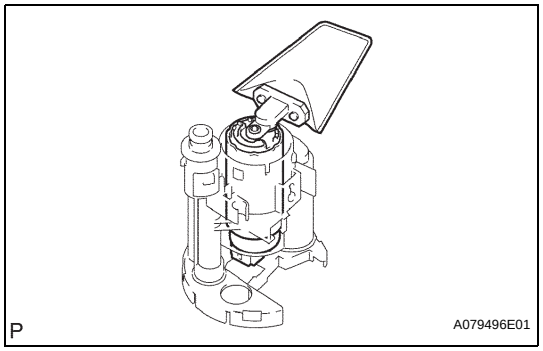
Do not damage the fuel suction support.



5. REMOVE FUEL PUMP HARNESS

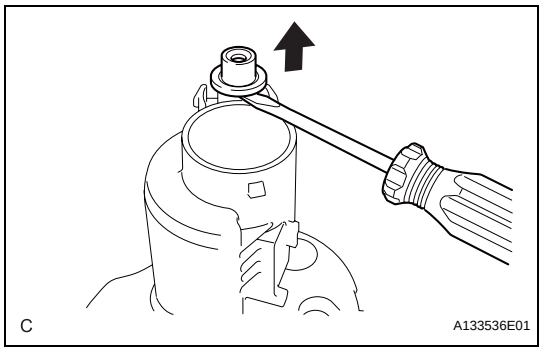
(a) Disconnect the connector (*1).

(b) Using a screwdriver, pry out the fuel pump harness (*2).



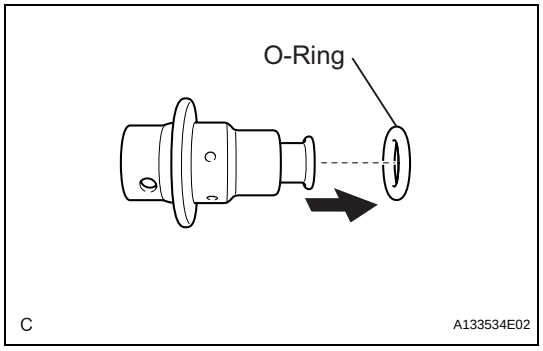
6. REMOVE FUEL PUMP

(a) Pull out the fuel pump from the fuel filter.



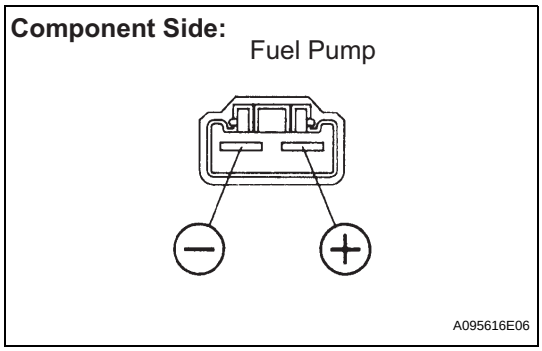
7. REMOVE FUEL PRESSURE REGULATOR ASSEMBLY

(a) Pull out the fuel pressure regulator from the fuel filter.



(b) Remove the O-ring from the fuel pressure regulator.

FU



INSPECTION

1. INSPECT FUEL PUMP

(a) Inspect fuel pump resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Resistance:

0.2 to 3.0 Ω at 20°C (68°F)

If the result is not as specified, replace the fuel pump assembly.

(b) Inspect fuel pump operation.

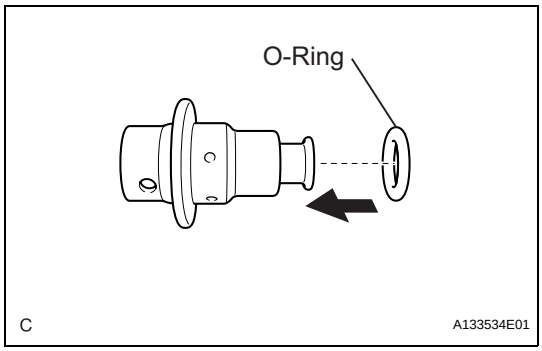
(1) Apply battery voltage to both the terminals. Check that the pump operates.

NOTICE:

- **These tests must be done quickly (within 10 seconds) to prevent damage to the pump.**
- **Keep the fuel pump as far away from the battery as possible.**
- **Always switch the voltage on and off on the battery side, not on the fuel pump side.**

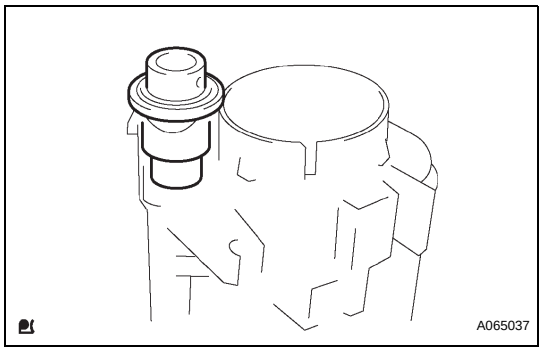
If the pump does not operate, replace the fuel pump assembly.

REASSEMBLY

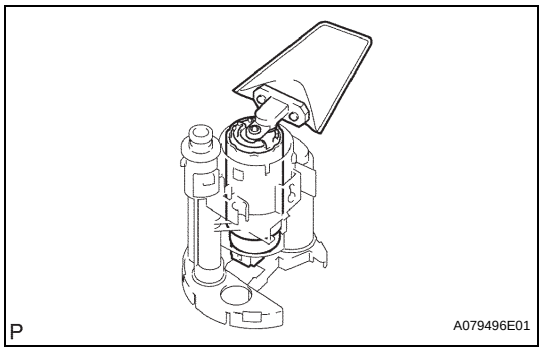


1. INSTALL FUEL PRESSURE REGULATOR ASSEMBLY

(a) Apply a light coat of spindle oil or gasoline to a new O-ring, and install it to the fuel pressure regulator.



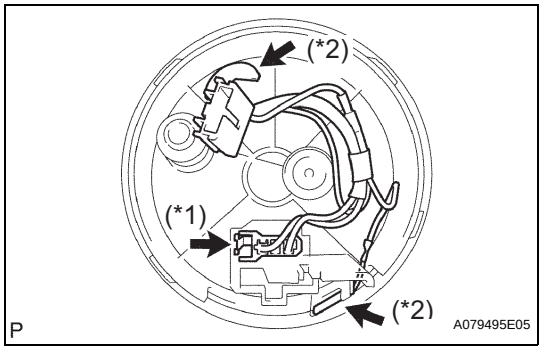
(b) Push in the fuel pressure regulator to the fuel filter.



2. INSTALL FUEL PUMP

(a) Apply a light coat of gasoline or grease to the O-ring of the fuel pump.

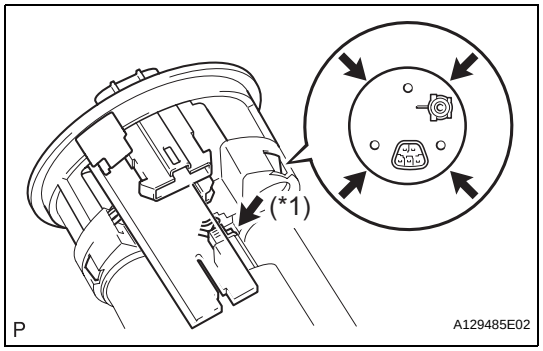
(b) Push in the fuel pump to the fuel filter.



3. INSTALL FUEL PUMP HARNESS

(a) Connect the connector (*1).

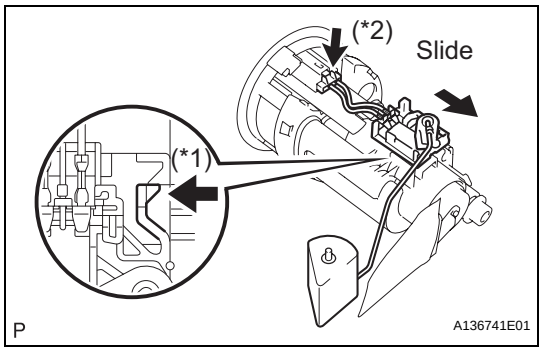
(b) Install the fuel pump harness (*2).



4. INSTALL FUEL SUCTION PLATE SUB-ASSEMBLY

(a) Connect the fuel pump connector (*1).

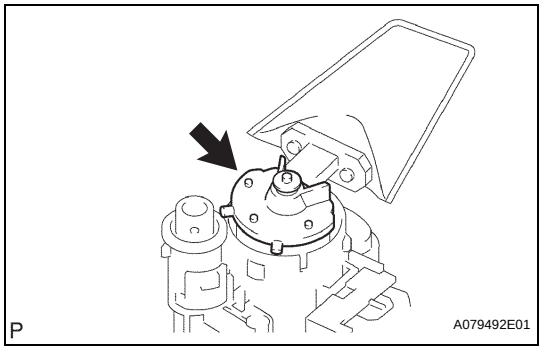
(b) Install the fuel suction plate.



5. INSTALL FUEL SENDER GAUGE ASSEMBLY

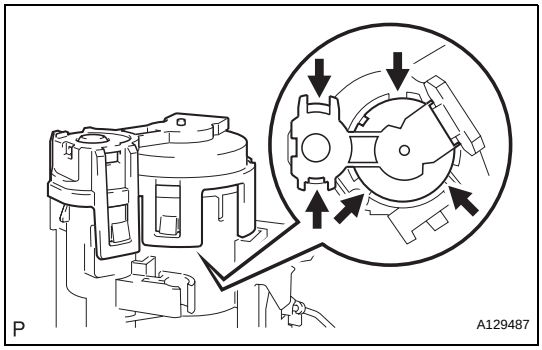
(a) Slide the fuel sender gauge to engage with the claw (*1).

(b) Connect the fuel sender gauge connector (*2).



6. INSTALL FUEL PUMP CUSHION RUBBER

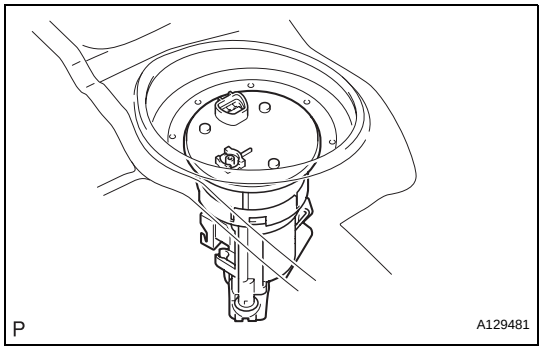
(a) Install the fuel pump cushion rubber to the fuel pump.



7. INSTALL NO. 2 FUEL SUCTION SUPPORT

(a) Install the No. 2 fuel suction support.

INSTALLATION



1. INSTALL FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE

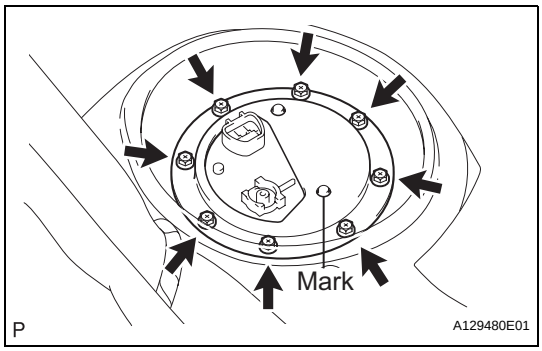
(a) Install a new gasket to the fuel suction tube.

(b) Install the fuel suction tube.

NOTICE:

- **Do not damage the fuel pump filter.**
- **Be careful that the arm of the sender gauge does not bend.**

FU

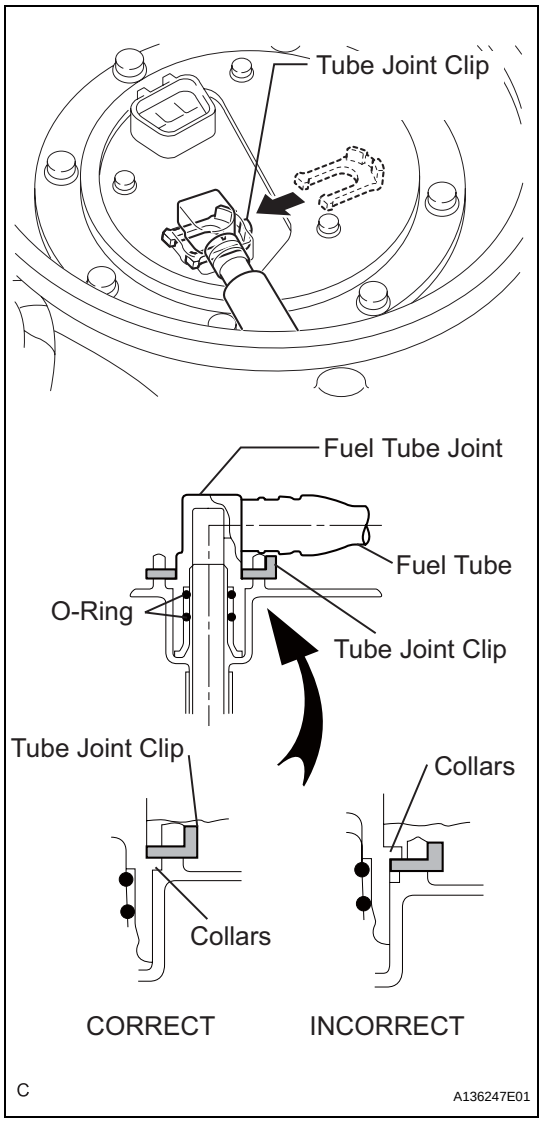


2. INSTALL FUEL TANK VENT TUBE SET PLATE

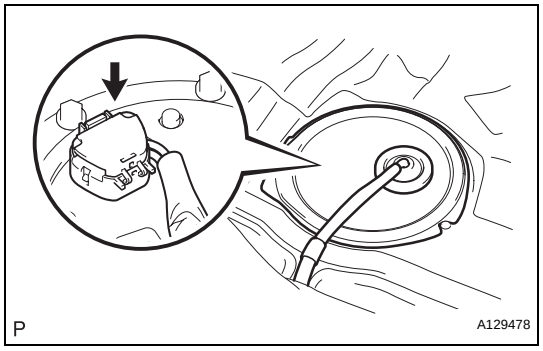
(a) Align the mark of the set plate with the fuel suction tube.

(b) Install the set plate with the 8 bolts.

Torque: 5.9 N*m (60 kgf*cm, 52 in.*lbf)



3. **CONNECT FUEL PUMP TUBE SUB-ASSEMBLY**
   (a) Install the fuel pump tube with the tube joint clip.
   NOTICE:
   - **Check that there are no scratches or foreign objects on the connecting part.**
   - **Check that the fuel tube joint is inserted securely.**
   - **Check that the tube joint clip is on the collar of the fuel tube joint.**
   - **After installing the tube joint clip, check that the fuel tube joint is pulled off.**
4. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
5. **CHECK FOR FUEL LEAKS (See page FU-8)**



6. **INSTALL REAR FLOOR SERVICE HOLE COVER**
   (a) Connect the fuel pump connector.
   (b) Install the rear floor service hole cover with new butyl tape.
7. **INSTALL REAR SEAT CUSHION ASSEMBLY (for Fixed Seat Type) (See page SE-84)**
8. **INSTALL REAR SEAT CUSHION ASSEMBLY (for Fold Down Seat Type) (See page SE-58)**
9. **INSTALL REAR SEAT CUSHION ASSEMBLY (for Reclining Seat Type) (See page SE-73)**

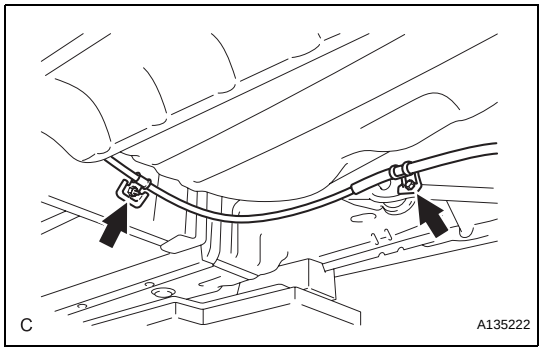
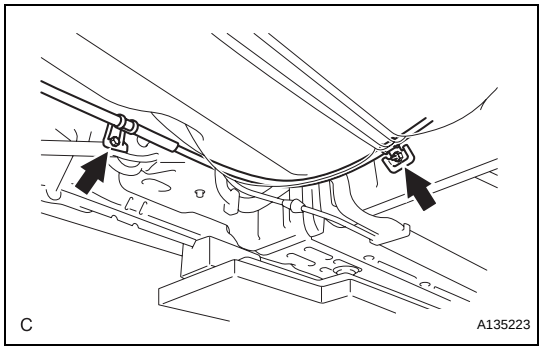
REMOVAL

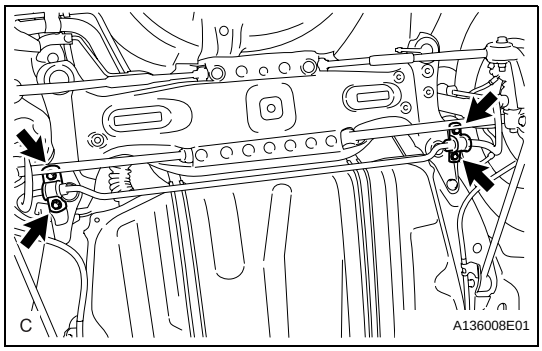
1. **DISCHARGE FUEL SYSTEM PRESSURE**
   HINT:
   See page FU-1.
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **REMOVE REAR SEAT CUSHION ASSEMBLY (for Fixed Seat Type) (See page SE-77)**
4. **REMOVE REAR SEAT CUSHION ASSEMBLY (for Fold Down Seat Type) (See page SE-47)**
5. **REMOVE REAR SEAT CUSHION ASSEMBLY (for Reclining Seat Type) (See page SE-62)**
6. **REMOVE REAR FLOOR SERVICE HOLE COVER (See page FU-27)**
7. **SEPARATE FUEL PUMP TUBE SUB-ASSEMBLY (See page FU-27)**
8. **REMOVE FUEL TANK VENT TUBE SET PLATE (See page FU-28)**
9. **REMOVE FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE (See page FU-28)**
10. **DRAIN FUEL**
11. **REMOVE CENTER EXHAUST PIPE ASSEMBLY (See page EX-2)**
12. **DISCONNECT NO. 2 PARKING BRAKE CABLE ASSEMBLY**
    (a) Remove the set bolt and set nut of the No. 2 parking brake cable assembly.



13. **DISCONNECT NO. 3 PARKING BRAKE CABLE ASSEMBLY**
    (a) Remove the set bolt and set nut of the No. 3 parking brake cable assembly.

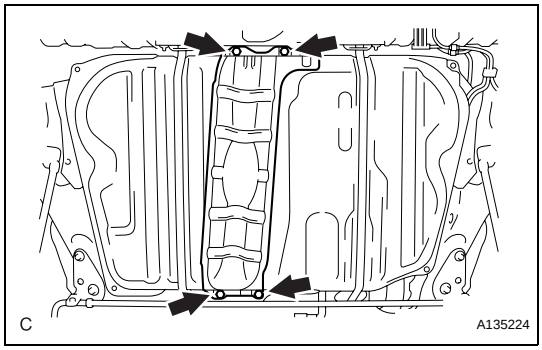


FU



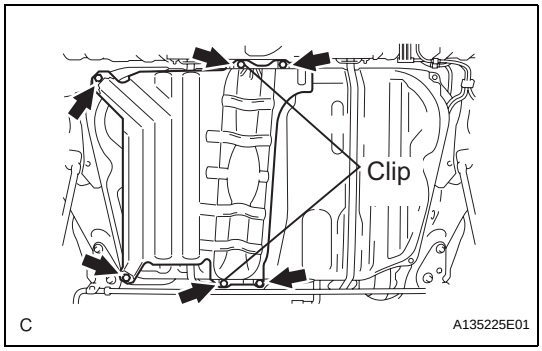
14. REMOVE REAR STABILIZER BAR NO. 1 BRACKET

(a) Remove the 4 bolts and 2 rear stabilizer bar No. 1 brackets.



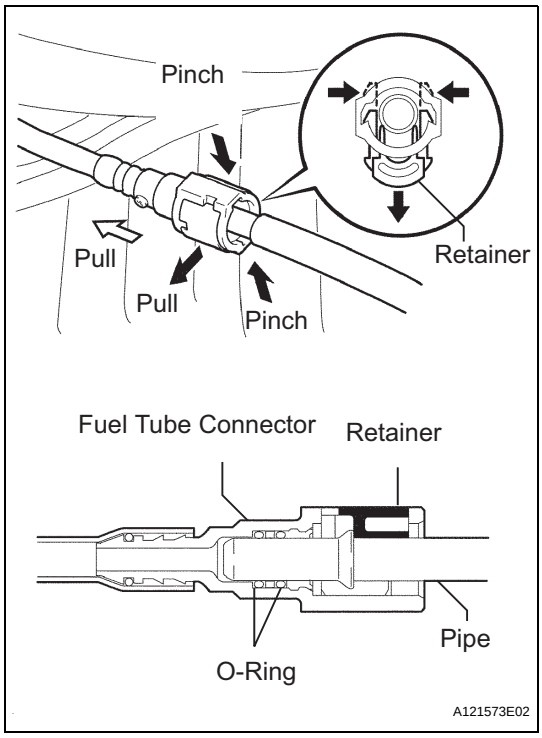
15. REMOVE FUEL TANK PROTECTOR LOWER CENTER

(a) Remove the 4 bolts and fuel tank protector (Except SE Grade).



(b) Remove the 4 bolts and 2 clips (for SE Grade).

(c) Remove the fuel tank protector (for SE Grade).



16. REMOVE FUEL TANK ASSEMBLY

(a) Disconnect the fuel pump tube.

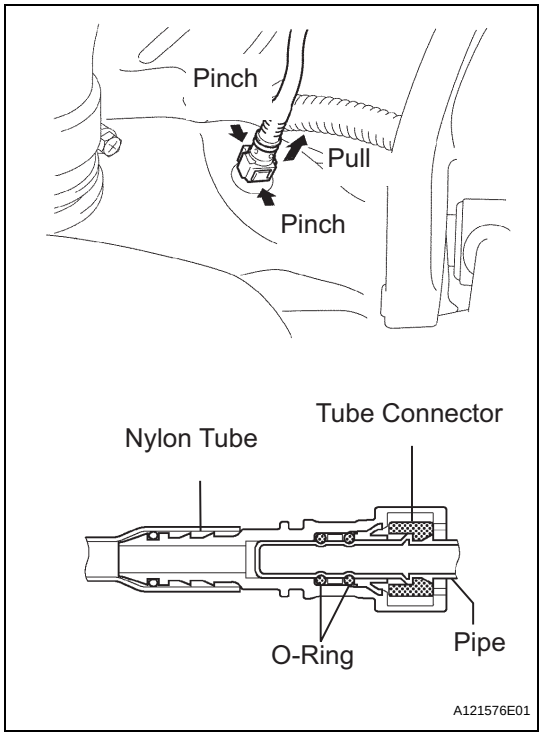
(1) Pinch the tab of the retainer to disengage the lock claws and pull it down as shown in the illustration.

(2) Pull out the fuel tank main tube.

NOTICE:

- **Check that there is no dirt or other foreign objects around the connector before this operation and clean the connector if necessary.**
- **It is necessary to prevent mud or dirt from entering the quick connector. If mud enters the connector, the O-rings may not seal properly.**
- **Remove the quick connector by hand.**
- **Do not bend or twist the nylon tube. Protect the connector by covering it with a plastic bag.**

- **If the pipe and connector are stuck, try wiggling or pushing and pulling the connector to release it and pull the connector off of the pipe carefully.**

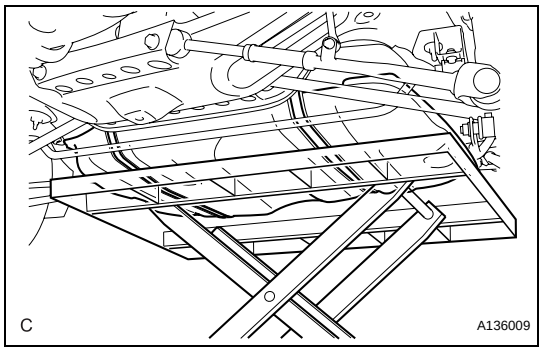


(b) Disconnect the No. 1 fuel tube.

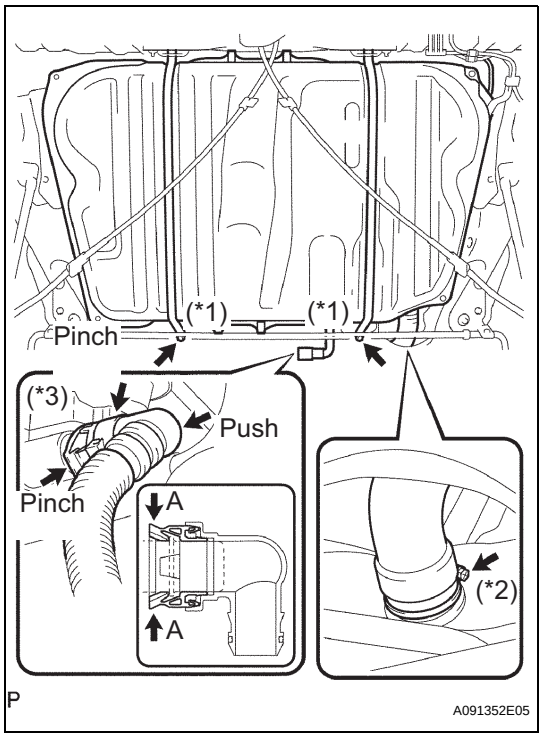
(1) Pinch the tube connector and then pull out the No. 1 fuel tube.

NOTICE:

- **Check that there is no dirt or other foreign objects around the connector before this operation and clean the connector as necessary.**
- **It is necessary to prevent mud or dirt from entering the quick connector. If mud enters the connector, the O-rings may not seal properly.**
- **Remove the quick connector by hand.**
- **Do not bend or twist the nylon tube. Protect the connector by covering it with a plastic bag.**
- **If the pipe and connector are stuck, try wiggling or pushing and pulling the connector to release it and pull the connector off of the pipe carefully.**

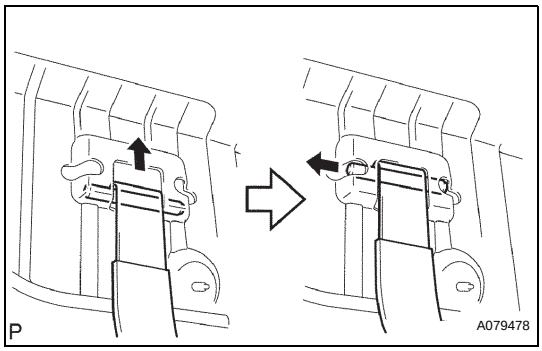


(c) Place a engine lifter under the fuel tank assembly.

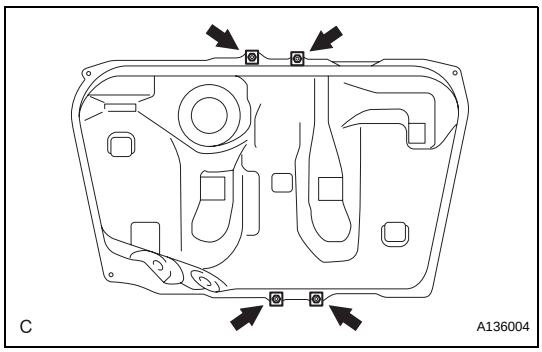


(d) Remove the 2 set bolts of the fuel tank bands. (*1)
(e) Remove the hose clamp and disconnect the fuel tank to filter pipe hose. (*2)
(f) Slightly lower the transmission jack.
(g) Disconnect the fuel tank vent hose from the charcoal canister. (*3)
  (1) Push the connector deep into the charcoal canister to release the locking pin.
  (2) Pinch portion A.
  (3) Pull out the connector.
(h) Remove the fuel tank.

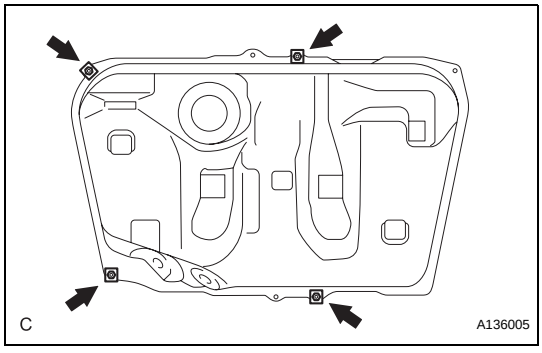
FU



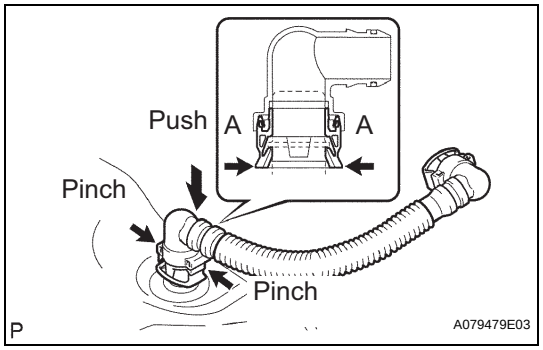
(i) Remove the 2 pins and 2 fuel tank bands as shown in the illustration.



(j) Remove the 4 clip nuts (Except SE Grade).

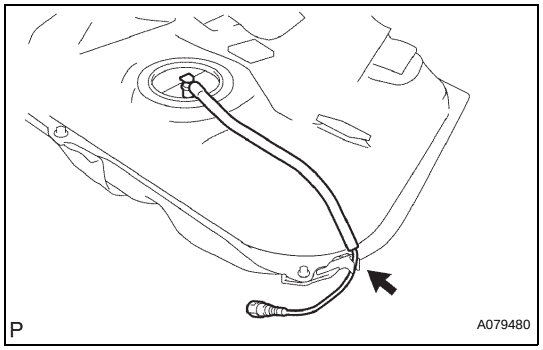


(k) Remove the 4 clip nuts (for SE Grade).



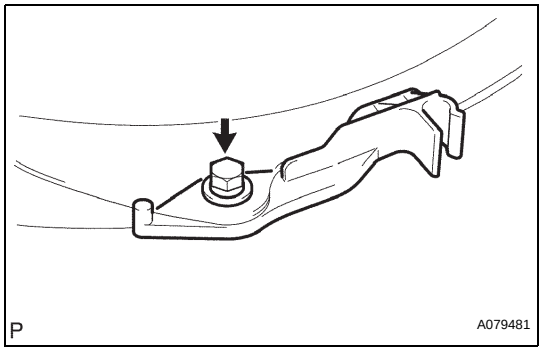
17. REMOVE FUEL TANK VENT HOSE

(a) Push the connector deep into the charcoal canister to release the locking pin.
(b) Pinch portion A.
(c) Pull out the connector.



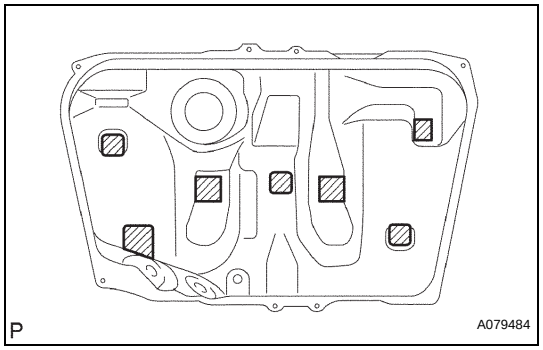
18. REMOVE FUEL PUMP TUBE SUB-ASSEMBLY

(a) Remove the fuel pump tube from the fuel main tube support.



19. REMOVE FUEL MAIN TUBE SUPPORT

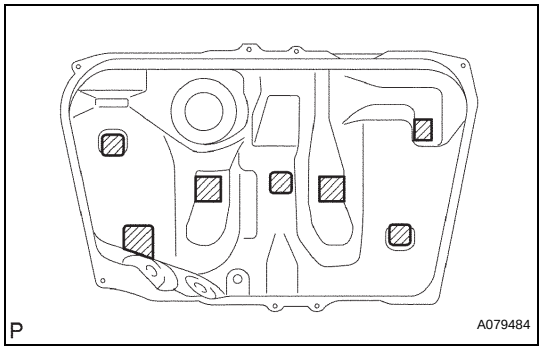
(a) Remove the bolt and tube support.



20. REMOVE NO. 2 FUEL TANK CUSHION

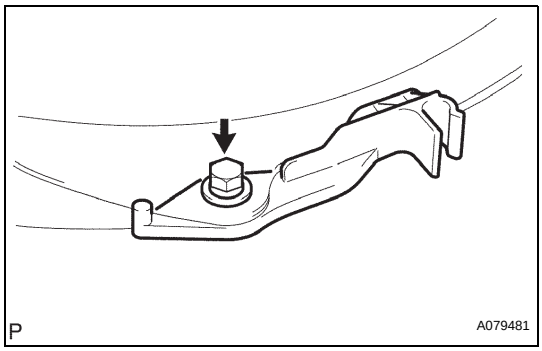
(a) Remove the 7 No. 2 fuel tank cushions.

INSTALLATION



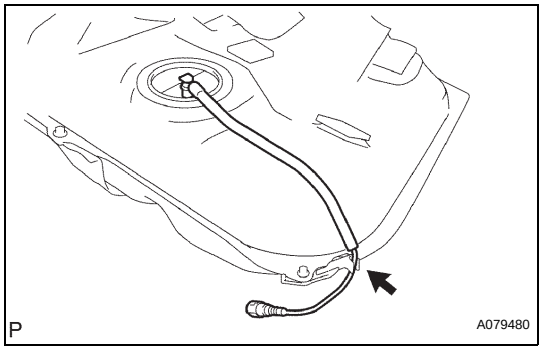
1. INSTALL NO. 2 FUEL TANK CUSHION

(a) Install 7 new No. 2 fuel tank cushions to the fuel tank.



2. INSTALL FUEL MAIN TUBE SUPPORT

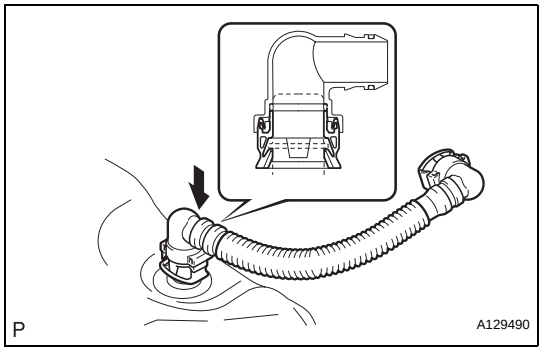
(a) Install the fuel main tube support with the bolt.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



3. INSTALL FUEL PUMP TUBE SUB-ASSEMBLY

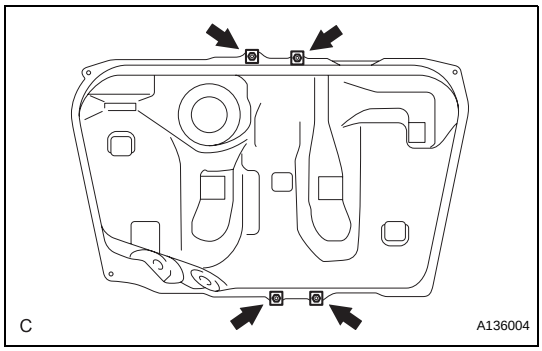
(a) Install the fuel pump tube to the fuel main tube support.

FU



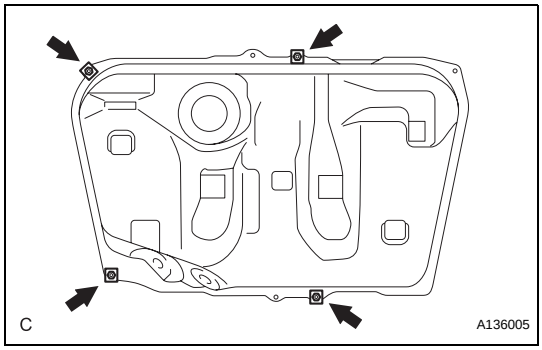
4. INSTALL FUEL TANK VENT HOSE

(a) Install the fuel tank vent hose.

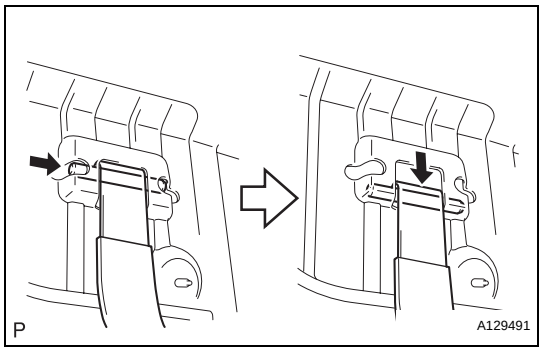


5. INSTALL FUEL TANK ASSEMBLY

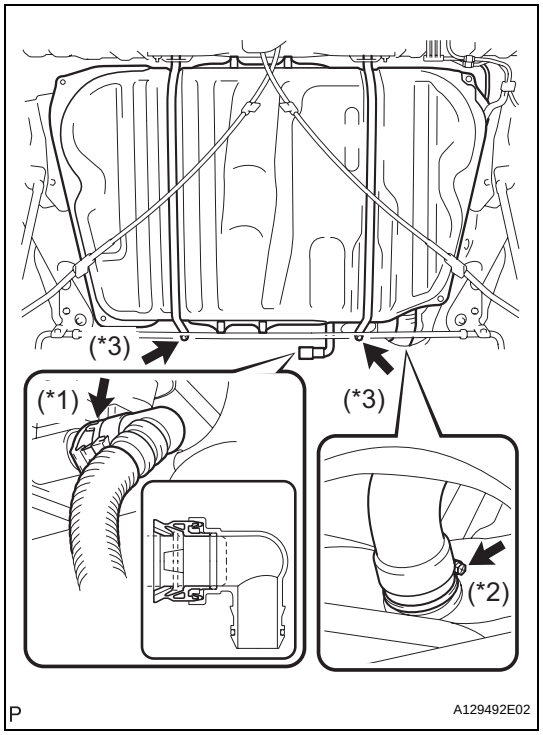
(a) Install the 4 clip nuts (Except SE Grade).



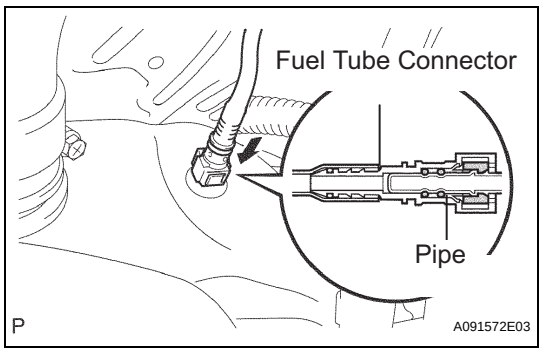
(b) Install the 4 clip nuts (for SE Grade).



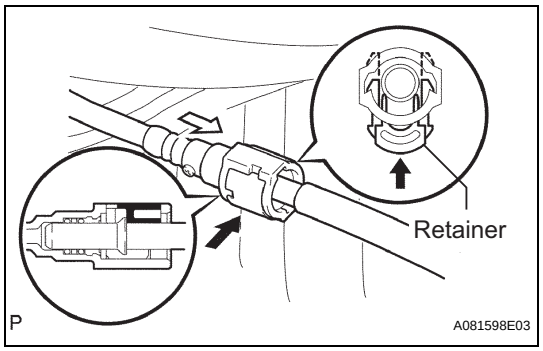
(c) Install the 2 fuel tank bands with the 2 pins.
(d) Set the fuel tank assembly onto the transmission jack.



(e) Raise the transmission jack so that the fuel tank vent hose can be connected. (*1)
NOTICE:
Slowly raise the jack to prevent the fuel tank assembly from dropping.
(f) Connect the fuel tank inlet pipe with the fuel filter pipe clamp. (*2)
(g) Tighten the 2 set bolts of the fuel tank bands. (*3)
Torque: 39 N*m (400 kgf*cm, 29 ft.*lbf)



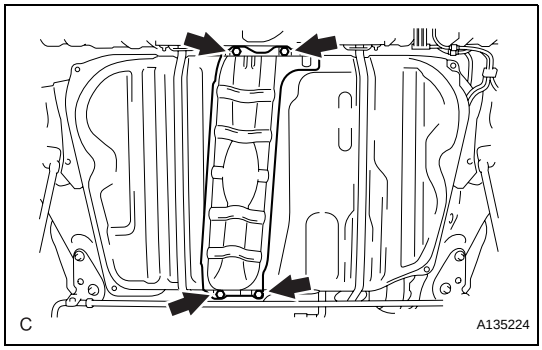
(h) Connect the No. 1 fuel tube.
(1) Push the fuel tube connector into the pipe until the fuel tube connector makes a "click" sound.
NOTICE:
- **Before connecting the tube, make sure that it is not damaged. Make sure that there is no dirt present on the connecting surfaces.**
- **After connecting, check if the fuel tube connector and the pipe are securely connected by pulling on them.**



(i) Connect the fuel pump tube.
(1) Push the fuel tube connector into the pipe and push up the retainer so that the claws engage.
NOTICE:
- **Before connecting the tube, make sure that it is not damaged. Make sure that there is no dirt present on the connecting surfaces.**

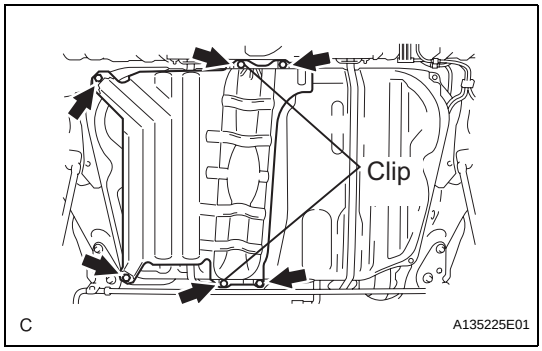
FU

- **After connecting, check if the fuel tube connector and the pipe are securely connected by pulling on them.**

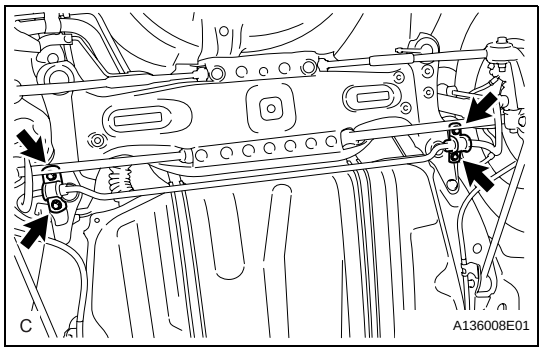


6. INSTALL FUEL TANK PROTECTOR LOWER CENTER

(a) Install the 4 bolts and fuel tank protector (Except SE Grade).
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

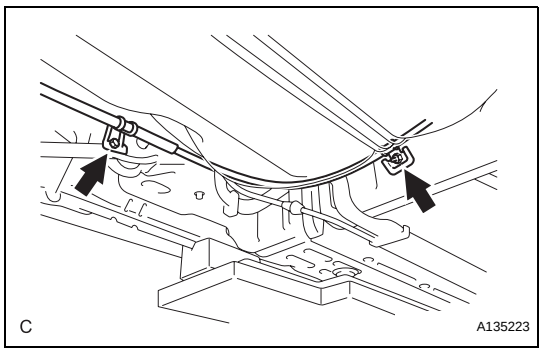


(b) Install the fuel tank protector with the 4 bolts and 2 clips (for SE Grade).
Torque: Bolt
5.4 N*m (55 kgf*cm, 48 in.*lbf)



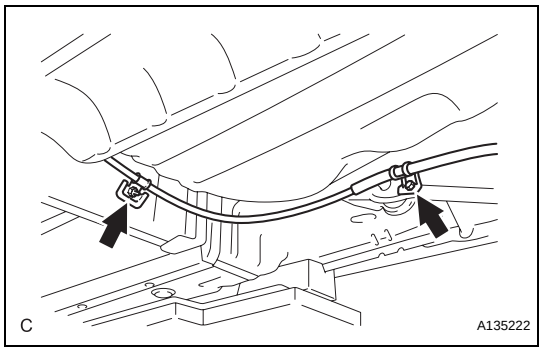
7. INSTALL REAR STABILIZER BAR NO. 1 BRACKET

(a) Install the 2 rear stabilizer bar No. 1 brackets with the 4 bolts.
Torque: 31 N*m (316 kgf*cm, 23 ft.*lbf)



8. INSTALL NO. 3 PARKING BRAKE CABLE ASSEMBLY

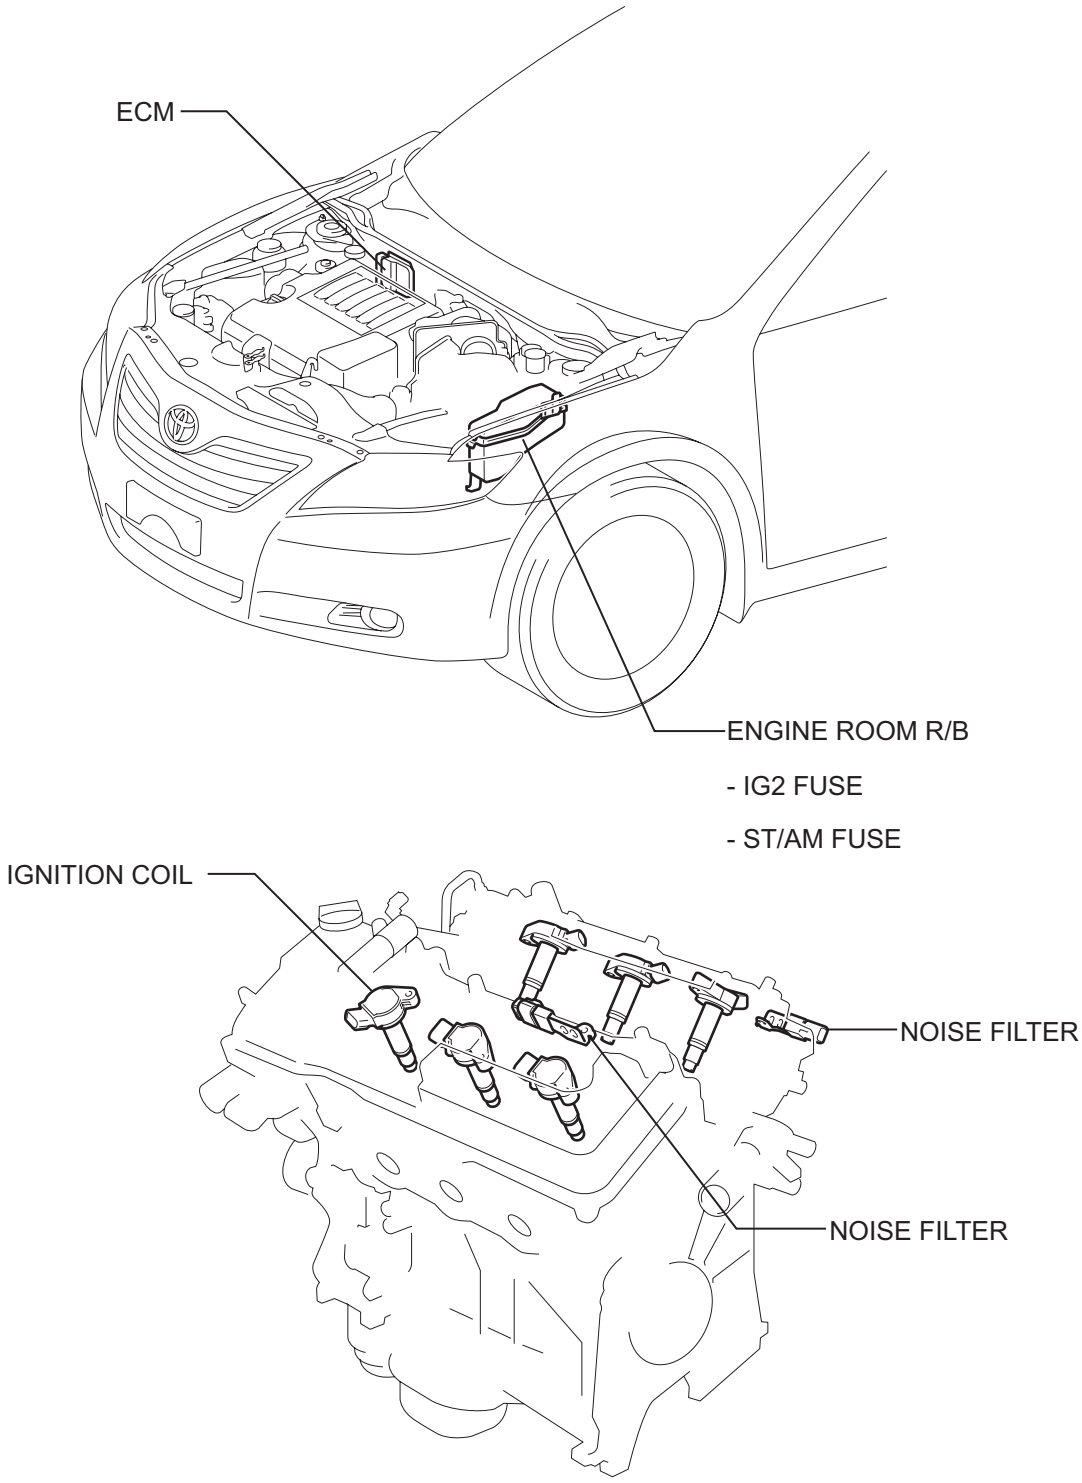
(a) Install the No. 3 parking brake cable assembly with the bolt and nut.
Torque: Bolt
6.0 N*m (61 kgf*cm, 53 in.*lbf)
Nut
8.5 N*m (87 kgf*cm, 75 in.*lbf)



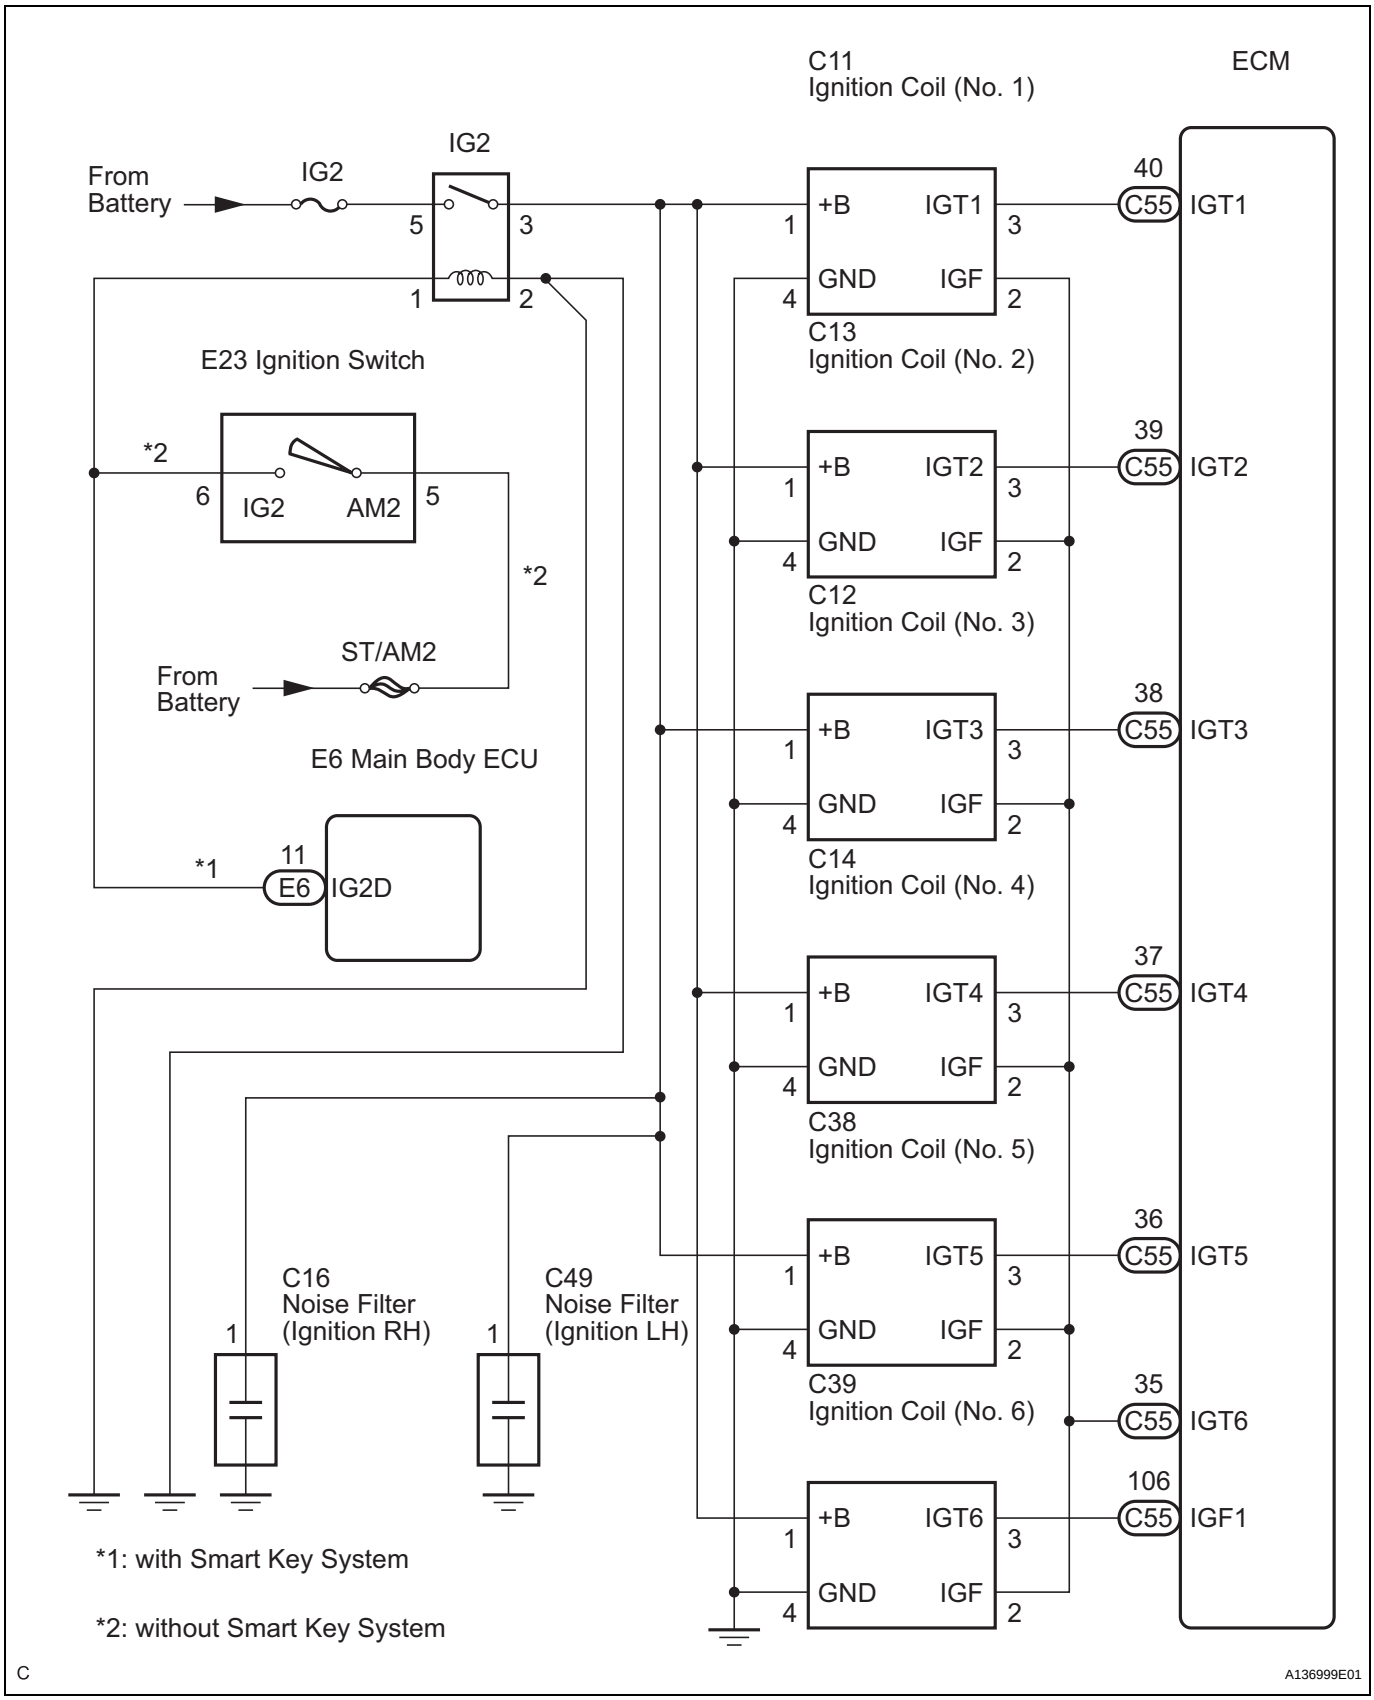
9. **INSTALL NO. 2 PARKING BRAKE CABLE ASSEMBLY**
   (a) Install the No. 2 parking brake cable assembly with the bolt and nut.
   Torque: Bolt
   6.0 N*m (61 kgf*cm, 53 in.*lbf)
   Nut
   8.5 N*m (87 kgf*cm, 75 in.*lbf)
10. **INSTALL CENTER EXHAUST PIPE ASSEMBLY (See page EX-4)**
11. **INSTALL FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE (See page FU-32)**
12. **INSTALL FUEL TANK VENT TUBE SET PLATE (See page FU-32)**
13. **CONNECT FUEL PUMP TUBE SUB-ASSEMBLY (See page FU-33)**
14. **ADD FUEL**
15. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
16. **CHECK FOR FUEL LEAKS (See page FU-8)**
17. **CHECK FOR EXHAUST GAS LEAKS**
18. **INSTALL REAR FLOOR SERVICE HOLE COVER (See page FU-33)**
19. **INSTALL REAR SEAT CUSHION ASSEMBLY (for Fixed Seat Type) (See page SE-84)**
20. **INSTALL REAR SEAT CUSHION ASSEMBLY (for Fold Down Seat Type) (See page SE-58)**
21. **INSTALL REAR SEAT CUSHION ASSEMBLY (for Reclining Seat Type) (See page SE-73)**

IGNITION SYSTEM

PARTS LOCATION



SYSTEM DIAGRAM



IG

ON-VEHICLE INSPECTION

NOTICE:
In this section, the terms "cold" and "hot" refer to the temperature of the coils. "Cold" means approximately -10°C (14°F) to 50°C (122°F). "HOT" means approximately 50°C (122°F) to 100°C (212°F).

1. INSPECT IGNITION COIL ASSEMBLY

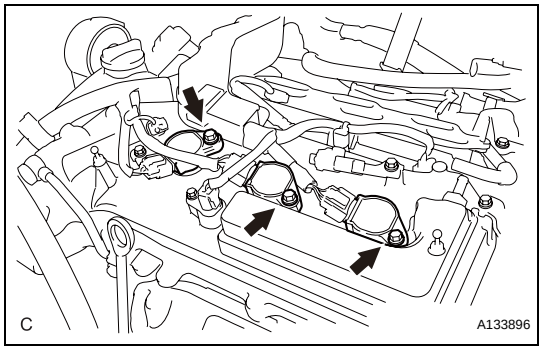
(a) Check for DTCs.
NOTICE:
If any DTC is present, perform troubleshooting in accordance with the procedures for that DTC.

(b) Check that sparks occur.

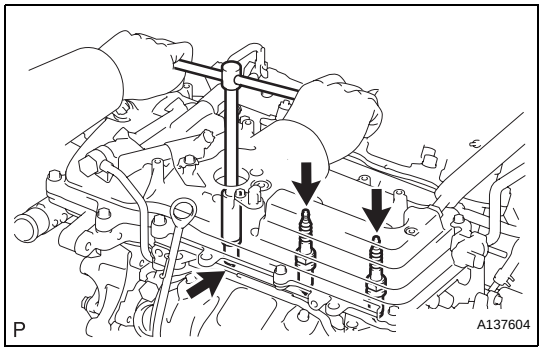
(1) Remove the intake air surge tank (See page FU-13).

(2) Remove the No. 1 surge tank stay (see page IG-10).

(3) Disconnect the 6 ignition coil connectors and remove the 6 bolts and 6 ignition coils.

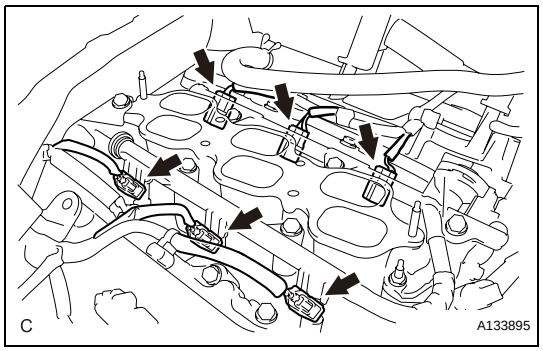


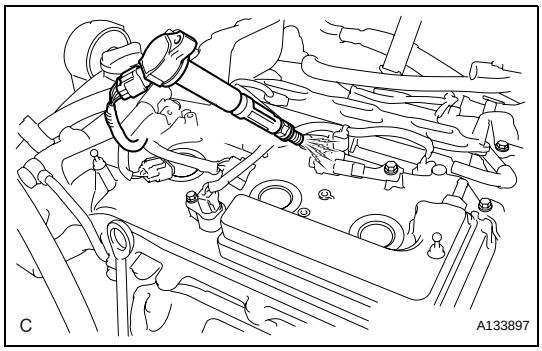
(4) Using a 16 mm (0.63 in.) plug wrench, remove the 6 spark plugs.



(5) Disconnect the 6 fuel injector connectors.

(6) Install the spark plugs to each ignition coil, and connect the ignition coil connectors.





(7) Ground the spark plugs.
(8) Check if a spark occurs at each spark plug while the engine is being cranked.
NOTICE:
- **Be sure to ground the spark plugs when checking.**
- **Replace the ignition coil if it receives an impact.**
- **Do not crank the engine for more than 2 seconds.**

(c) Perform the spark test according to the flowchart below.
(1) Check that the ignition coil connector is securely connected.
Result

Result	Proceed to
NG	Connect securely
OK	Go to next step

(2) Perform a speak test on each ignition coil.
1. Replace the ignition coil with a normal one.
2. Perform the spark test again.
Result

Result	Proceed to
OK	Replace ignition coil
NG	Go to next step

(3) Check the power supply to the ignition coil.
1. Turn the ignition switch on (IG).
2. Check that there is battery voltage at the ignition coil positive (+) terminal.
Result

Result	Proceed to
NG	Check wiring between ignition switch and ignition coil
OK	Go to next step

(4) Check the VVT sensor output voltage.
Result

Result	Proceed to
NG	Check that there is resistance between ECM and VVT sensor. If there is no resistance, replace VVT sensor. If there is resistance, repair wiring between VVT sensor and ECM.
OK	Go to next step

(5) Measure the resistance of the crankshaft position sensor.
Standard resistance

Temperature	Specified Condition
Cold	1,630 to 2,740 Ω
Hot	2,065 to 3,225 Ω

Result

Result	Proceed to
NG	Replace crankshaft position sensor
OK	Go to next step

(6) Check the IGT signal from the ECM.
Result

Result	Proceed to
NG	Check ECM (See page ES-234)
OK	Repair wiring between ignition coil and ECM

(d) Using a 16 mm (0.63 in.) plug wrench, install the spark plugs.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)

(e) Install the 6 ignition coils with the 6 bolts and connect the 6 ignition coil connectors.
Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)

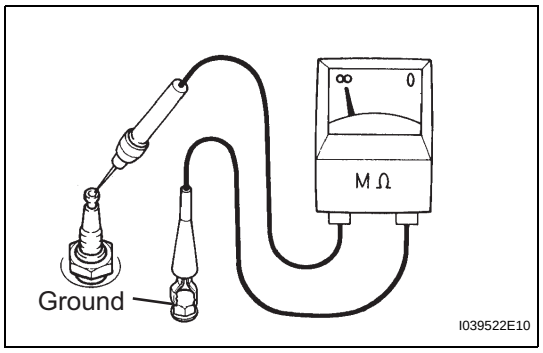
(f) Connect the 6 fuel injector connectors.

(g) Install the No. 1 surge tank stay (See page IG-11).

(h) Install the intake air surge tank (See page FU-18).

2. INSPECT SPARK PLUG

NOTICE:
- **Never use a wire brush for cleaning.**
- **Never attempt to adjust the electrode gap on a used spark plug.**



(a) Check the electrode.

(1) Using a megohmmeter, measure the insulation resistance.
Standard insulation resistance:
10 MΩ or higher
HINT:
- If the result is 10 MΩ or less, clean the plug and measure the resistance again.
- If a megohmmeter is not available, perform the following simple inspection instead.

(b) Alternative inspection method:

(1) Quickly accelerate the engine to 4,000 rpm 5 times.

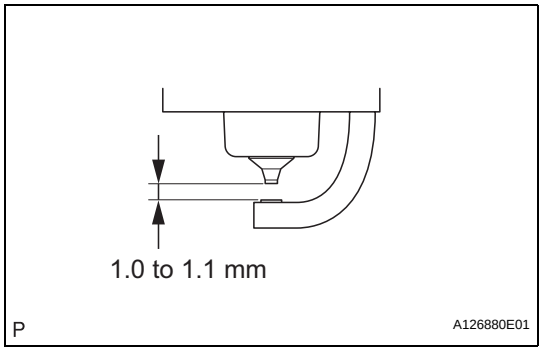
(2) Remove the spark plugs.

(3) Visually check the spark plug.
If the electrode is dry, the spark plug is functioning properly. If the electrode is damp, proceed to the next step.

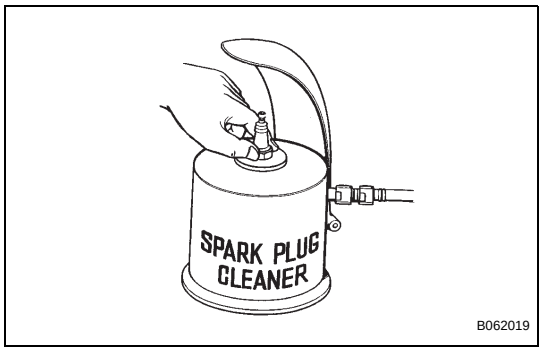
(c) Check the spark plug for any damage to its threads and insulator. If there is damage, replace the spark plug.
Require spark plug

Manufacturer	Spark plug type
DENSO made	FK20HR11

NOTICE:
Use only the listed spark plug or equivalent to ensure engine performance and smooth driveability.



(d) Check the spark plug electrode gap.
Maximum electrode gap for used spark plug:
1.4 mm (0.055 in.)
If the gap is greater than the maximum, replace the spark plug.
Electrode gap for new spark plug:
1.0 to 1.1 mm (0.039 to 0.043 in.)



(e) Clean the spark plugs.
If the electrode has traces of wet carbon, clean the electrode with a spark plug cleaner and then dry it.
Standard air pressure:
588 kPa (6 kgf*cm^2, 85 psi)
Standard duration:
20 seconds or less
HINT:
Only use the spark plug cleaner when the electrode is free of oil. If the electrode has traces of oil, use gasoline to clean off the oil before using the spark plug cleaner.

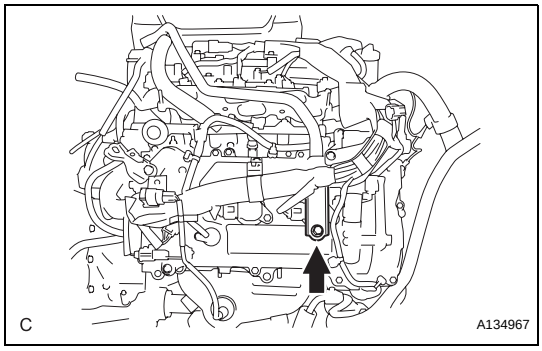
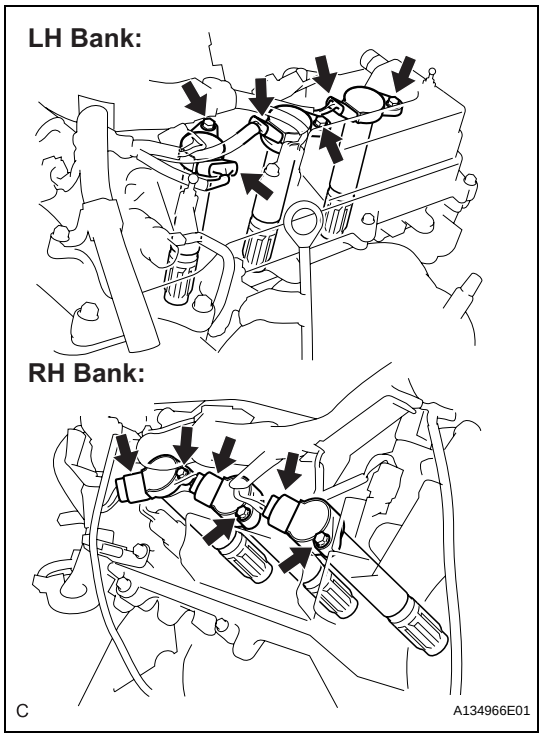
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **DRAIN ENGINE COOLANT (See page CO-5)**
3. **REMOVE WINDSHIELD WIPER LINK ASSEMBLY** (See page WW-9)
4. **REMOVE COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-424)**
5. **REMOVE V-BANK COVER SUB-ASSEMBLY (See page EM-23)**
6. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-503)**
7. **REMOVE INTAKE AIR SURGE TANK ASSEMBLY (See page EM-31)**
8. **REMOVE NO. 1 SURGE TANK STAY**
   (a) Remove the bolt and disconnect the harness clamp.

   (b) Remove the bolt and No. 1 surge tank stay.



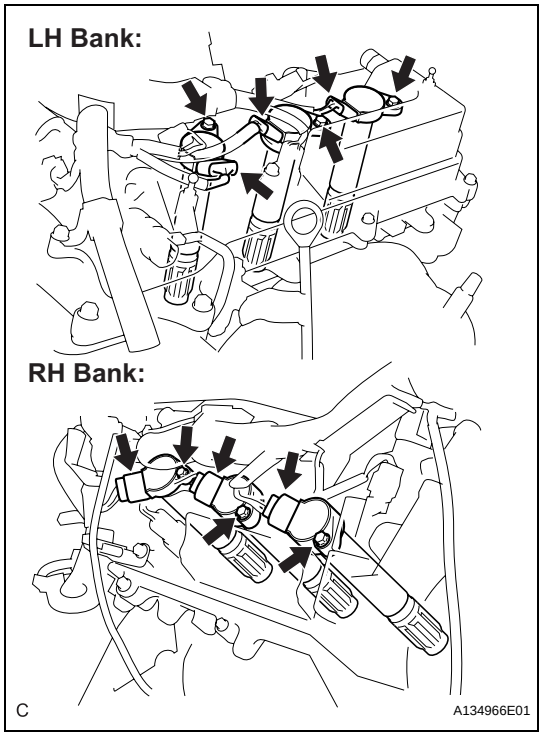


9. REMOVE IGNITION COIL ASSEMBLY

(a) Disconnect the 6 ignition coil connectors.

(b) Remove the 6 bolts and 6 ignition coils.

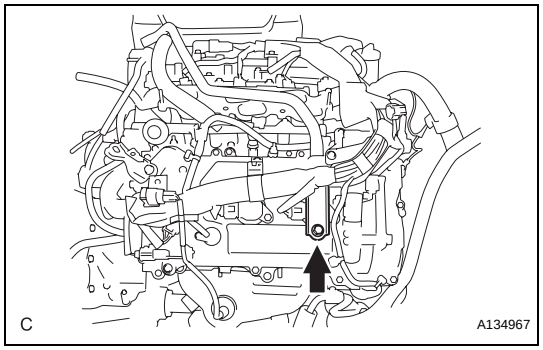
INSTALLATION



1. INSTALL IGNITION COIL ASSEMBLY

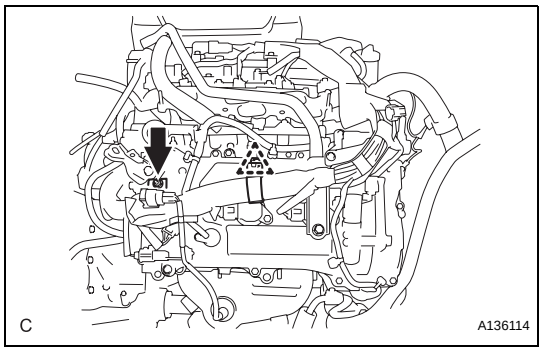
(a) Install the 6 ignition coils with the 6 bolts.
Torque: 10 N*m (102 kgf*cm, 10 ft.*lbf)

(b) Connect the 6 ignition coil connectors.



2. INSTALL NO. 1 SURGE TANK STAY

(a) Install the No. 1 surge tank stay with the bolt.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)
NOTICE:
Make sure that there is no oil on the bolt threads.

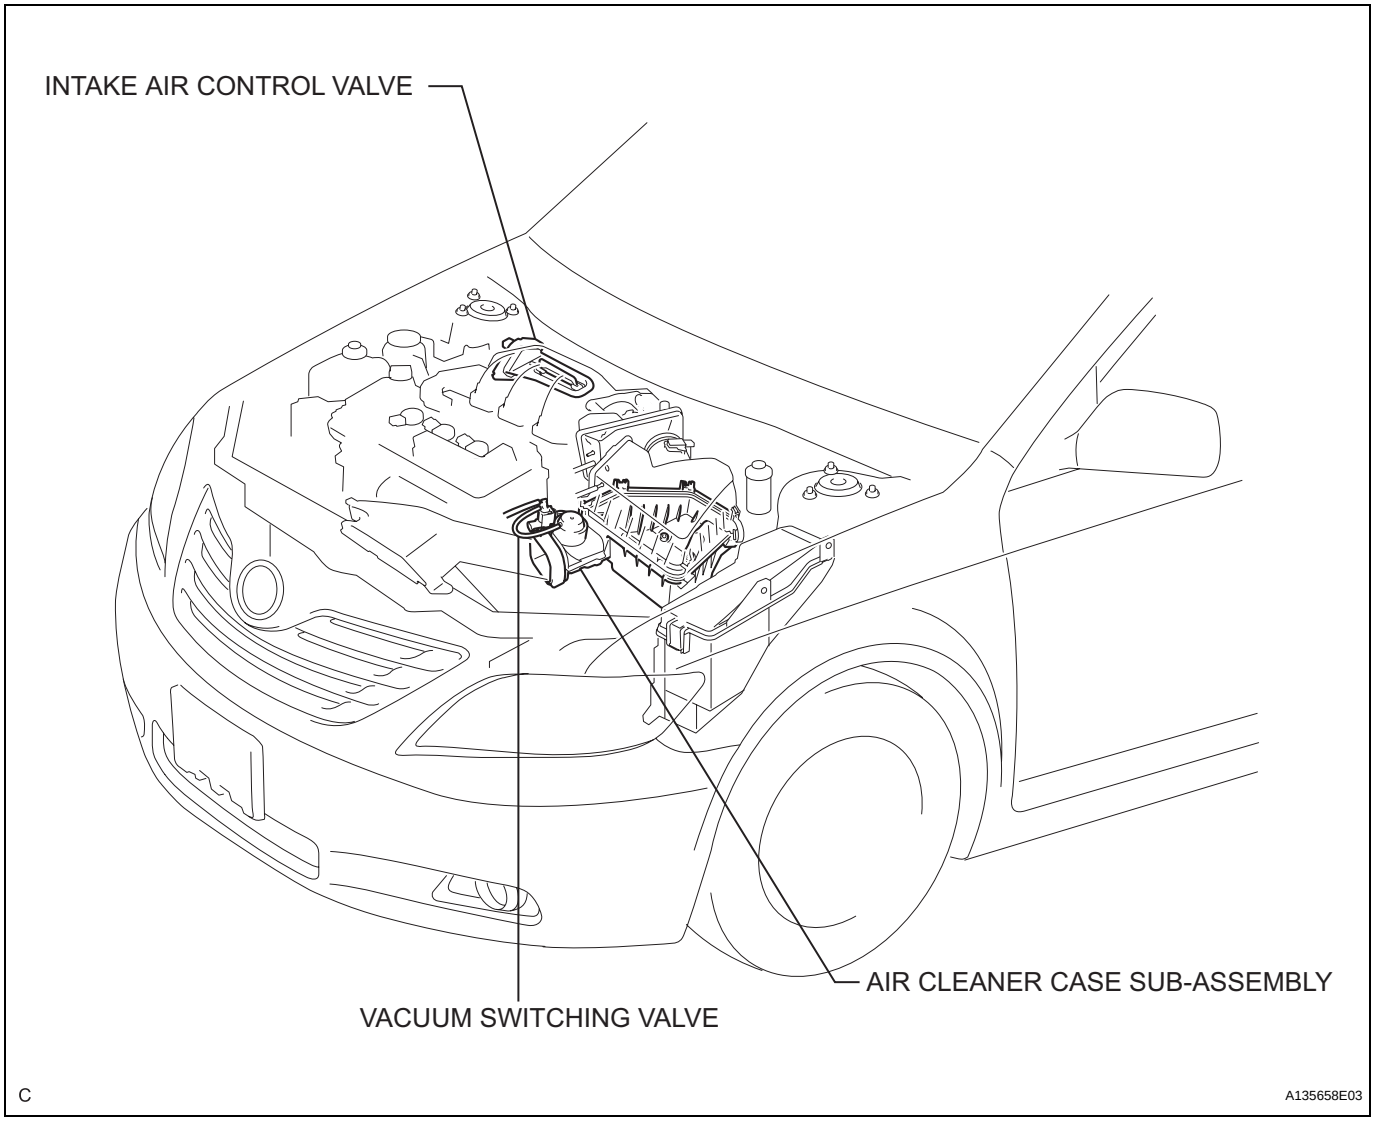


(b) Install the bolt and clamp.
Torque: 7.0 N*m (71 kgf*cm, 62 in.*lbf)

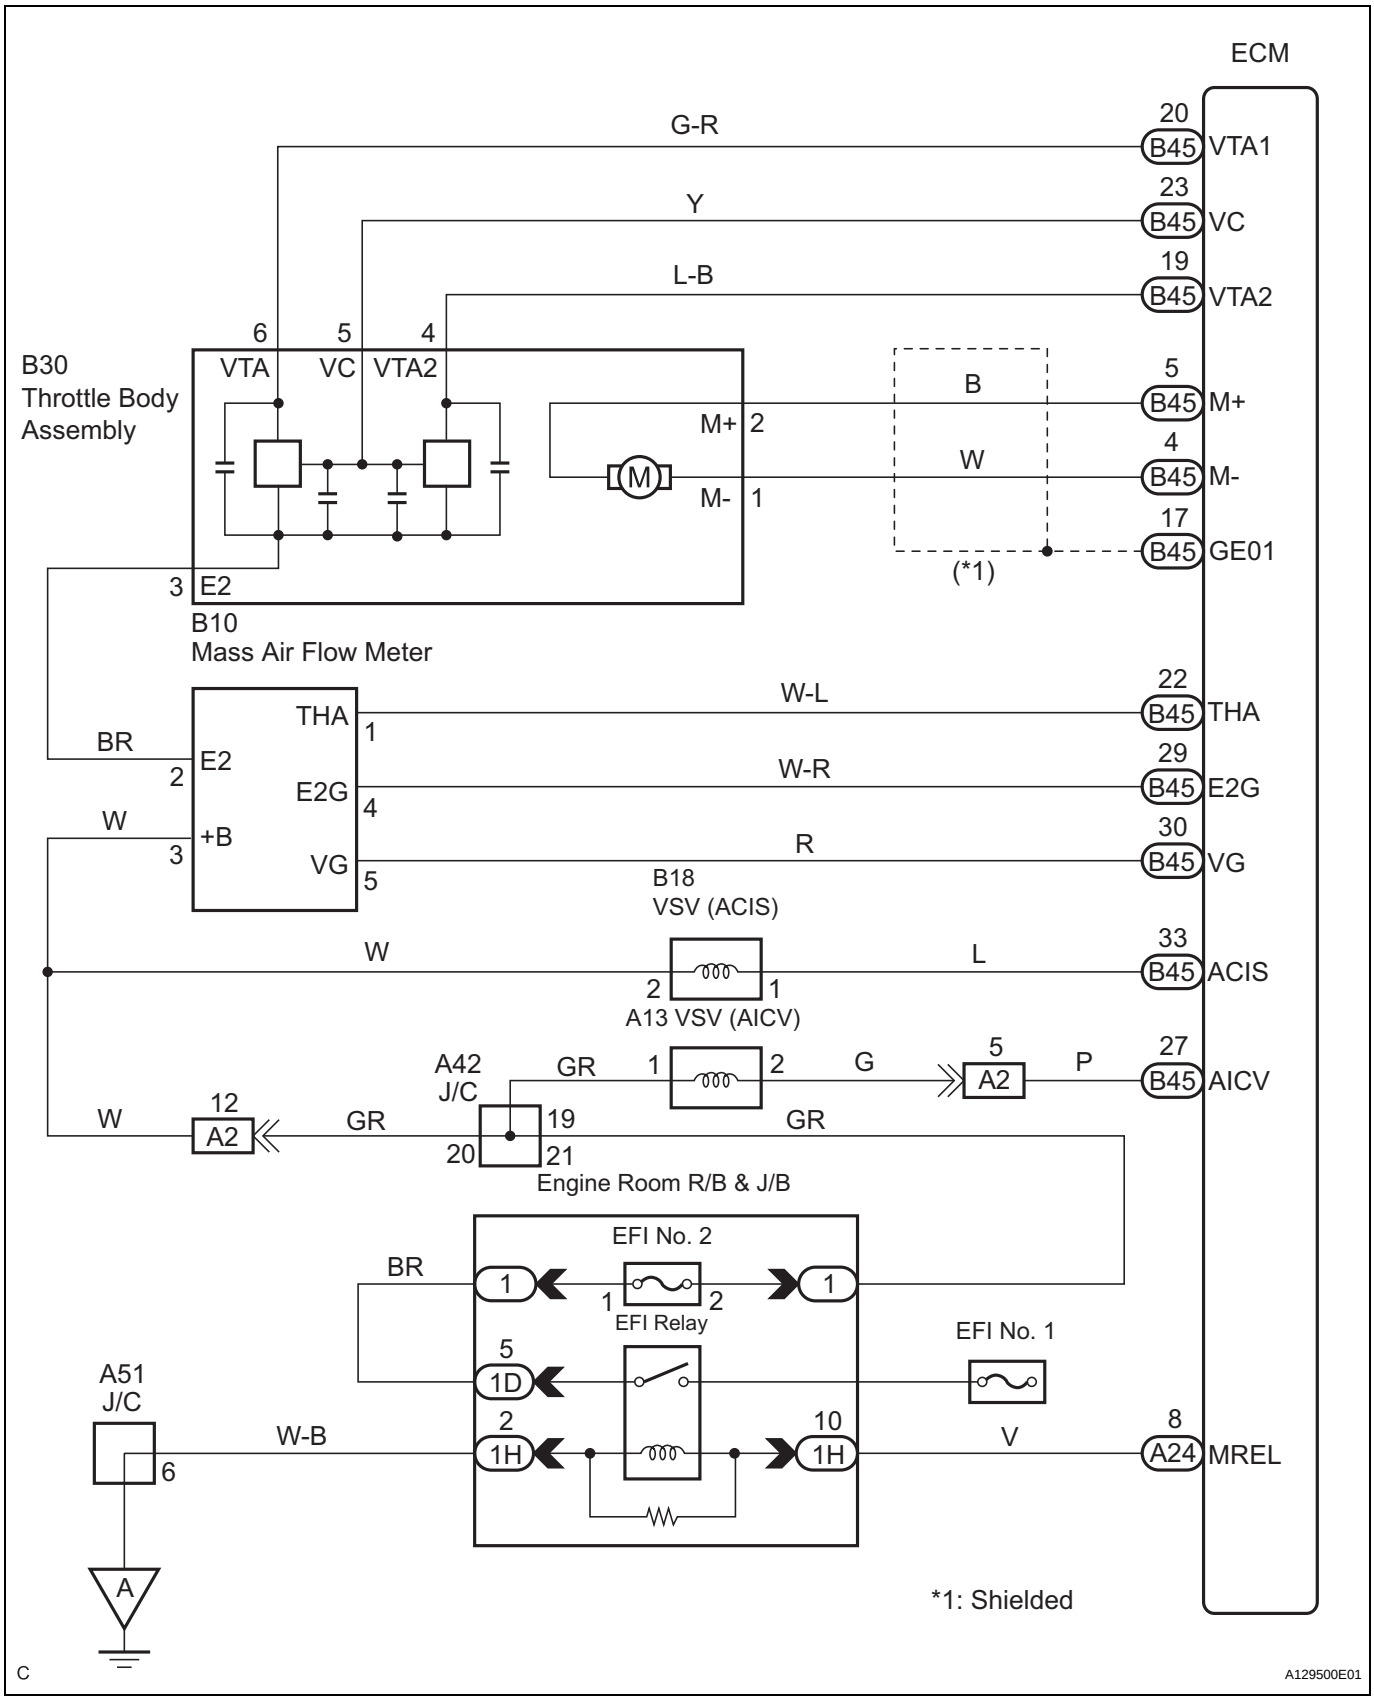
3. **INSTALL INTAKE AIR SURGE TANK ASSEMBLY (See page EM-42)**
4. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-506)**
5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (See page EM-51)**
6. **ADD ENGINE COOLANT (See page CO-6)**
7. **CHECK FOR ENGINE COOLANT LEAKS (See page CO-1)**
8. **INSTALL COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-426)**
9. **INSTALL WINDSHIELD WIPER LINK ASSEMBLY** (See page WW-13)
10. **INSTALL V-BANK COVER SUB-ASSEMBLY (See page EM-52)**

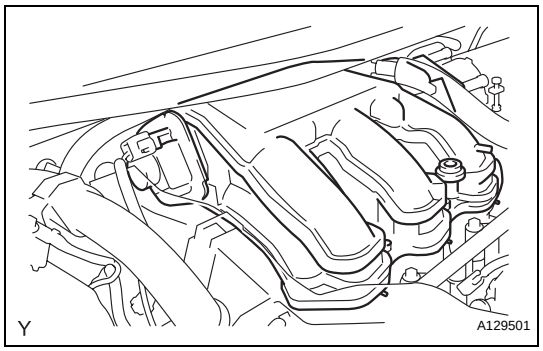
INTAKE AIR CONTROL SYSTEM

PARTS LOCATION



SYSTEM DIAGRAM

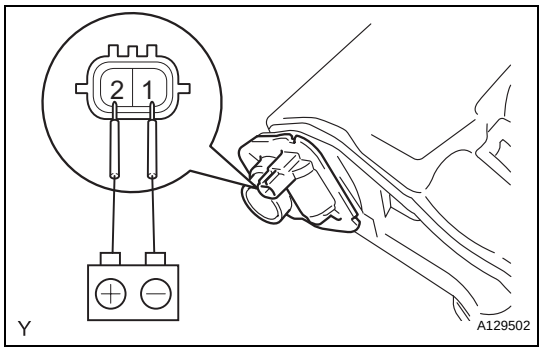




ON-VEHICLE INSPECTION

1. INSPECT INTAKE AIR CONTROL VALVE ASSEMBLY

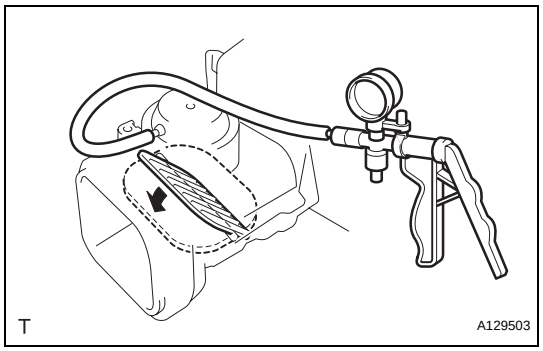
(a) Inspection procedure when using the intelligent tester:
  (1) Warm up the engine.
  (2) Stop the engine.
  (3) Connect the intelligent tester to the DLC3.
  (4) Turn the ignition switch on (IG).
  (5) Turn the tester on.
  (6) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / INTAKE CTL VSV1. Press the right or left button.
  (7) Make sure that a clicking sound is heard from the intake air control valve when current flows. If the result is not as specified, replace the intake air surge tank.



INSPECTION

1. INSPECT INTAKE AIR CONTROL VALVE

(a) Inspection procedure when applying voltage between the terminals:
  (1) Disconnect the connector from the intake air control valve.
  (2) Apply battery voltage between terminals 1 (-) and 2 (+) of the intake air control valve. Check that a clicking sound is heard from the intake air control valve.
  If the result is not as specified, replace the intake air surge tank.



2. INSPECT AIR CLEANER ASSEMBLY

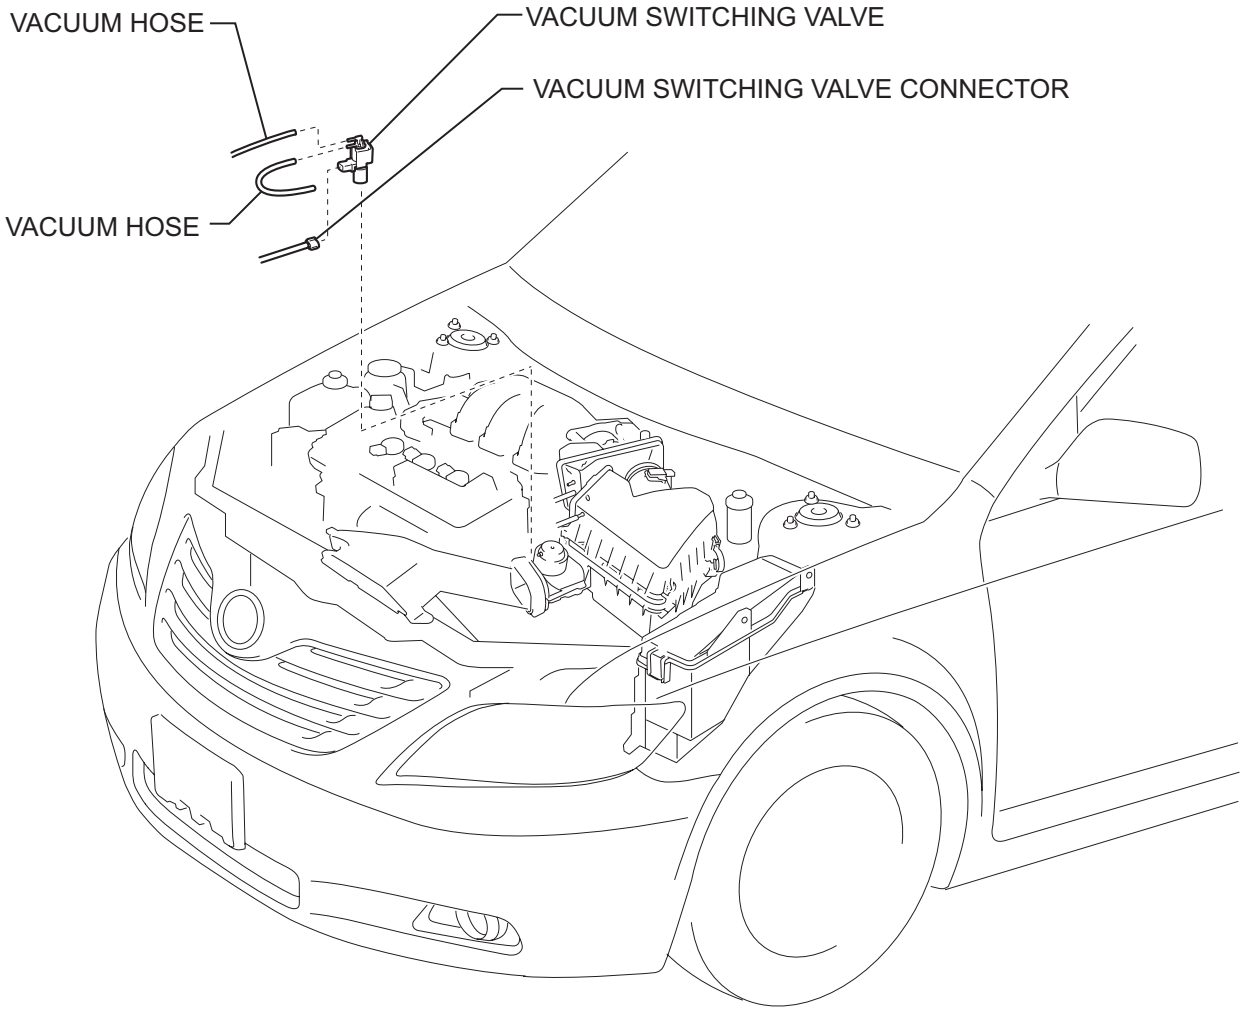
(a) Apply 26.6 kPa (200 mmHg, 7.9 in. Hg) of vacuum to the actuator. Check if the valve rotates open, as shown in the illustration.

(b) Apply vacuum for 1 minute. The actuator should continue to keep the valve open.
  If the result is not as specified, replace the air cleaner assembly.

IT

VACUUM SWITCHING VALVE

COMPONENTS

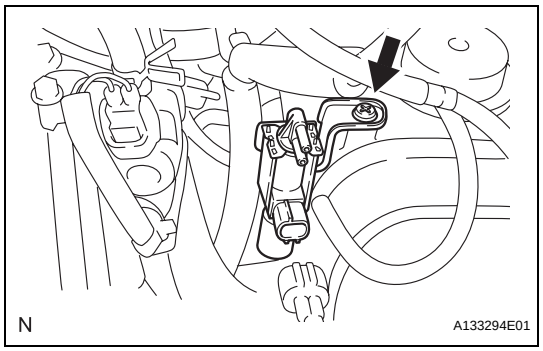


REMOVAL

1. REMOVE VACUUM SWITCHING VALVE

(a) Remove the 2 vacuum hoses and vacuum switching valve connector.

(b) Remove the screw and vacuum switching valve.



INSPECTION

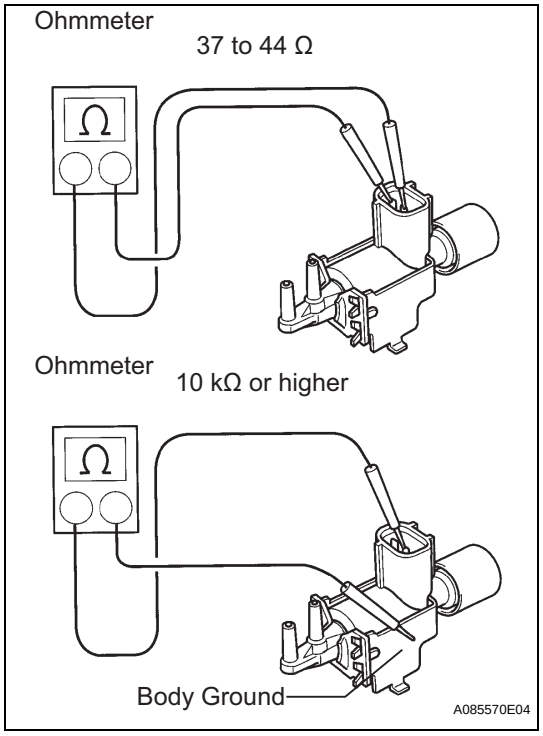
1. INSPECT VACUUM SWITCHING VALVE

(a) Measure the VSV resistance.

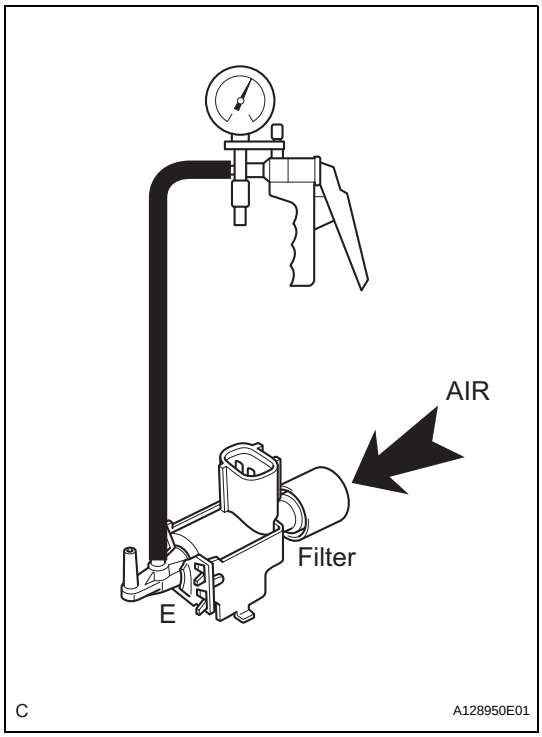
Standard resistance

Tester Connection	Specified Condition
1-2	37 to 44 Ω at 20 °C (68°F)
1 - Body ground 2 - Body ground	10 kΩ or higher

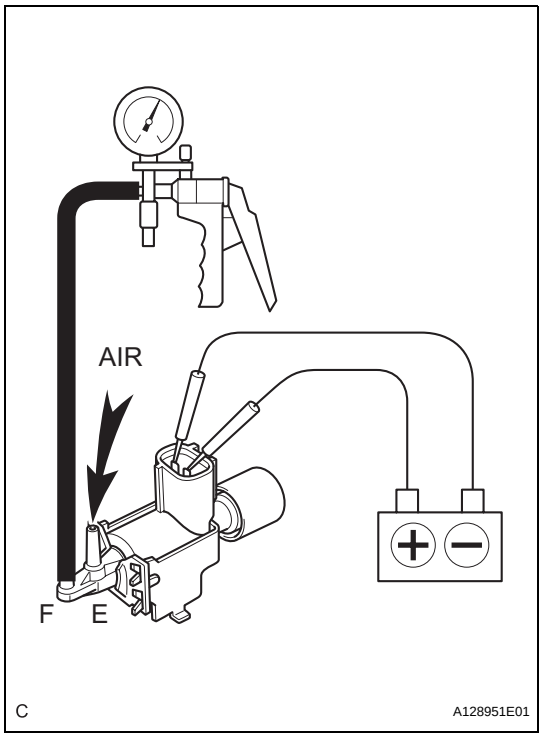
If the result is not as specified, replace the VSV.



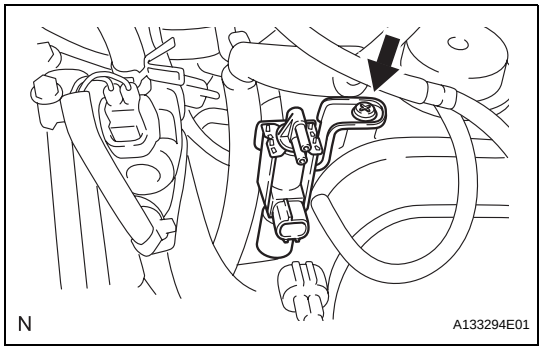
IT



(b) Check VSV operation.
(1) When vacuum is applied to the E port, check that air is sucked into the filter.
If the result is not as specified, replace the VSV.



(2) Apply battery voltage across the terminals.
When vacuum is applied to the F port, check that air is sucked into the E port.
If the result is not as specified, replace the VSV.



INSTALLATION

1. REMOVE VACUUM SWITCHING VALVE

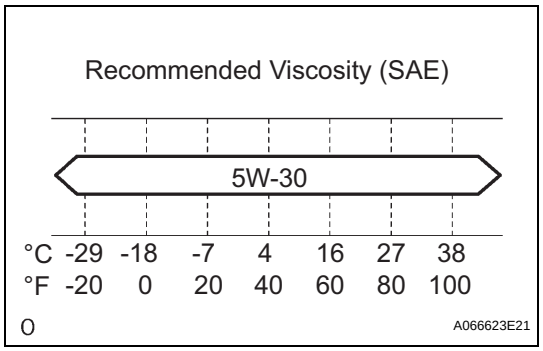
(a) Install the vacuum switching valve with the screw.
(b) Install the 2 vacuum hoses and vacuum switching valve.

LUBRICATION SYSTEM

ON-VEHICLE INSPECTION

1. CHECK ENGINE OIL LEVEL

(a) Warm up the engine, stop it and wait 5 minutes. The oil level should be between the dipstick's low level mark and full level mark.
If low, check for leakage and add oil up to the full level mark.
NOTICE:
Do not fill above the full level mark.

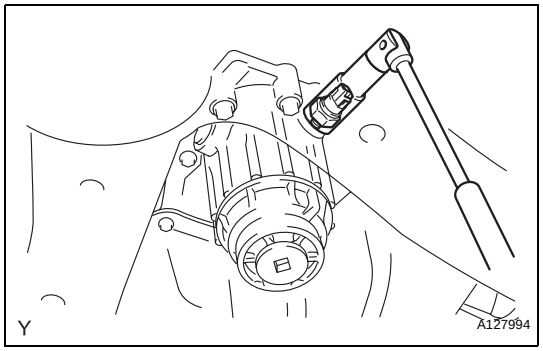


2. CHECK ENGINE OIL QUALITY

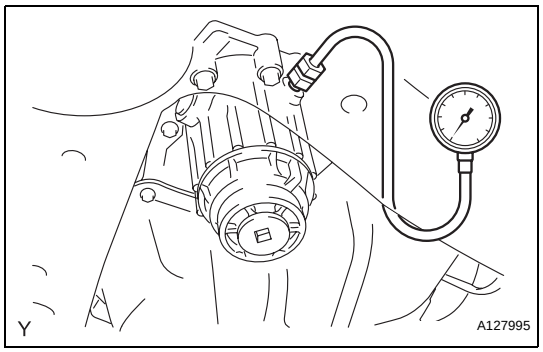
(a) Check the oil for deterioration, water contamination, discoloring or thinning.
If the quality is visibly poor, replace the oil.
Oil grade:
Use ILSAC multigrade engine oil. SAE 5W-30 engine oil may be used. However, SAE 5W-30 is the best choice for good fuel economy and good starting in cold weather.

3. CHECK OIL PRESSURE

(a) Remove the engine under cover LH.
(b) Remove the engine under cover RH.
(c) Disconnect the oil pressure switch connector.
(d) Using a 24 mm deep socket wrench, remove the oil pressure switch.



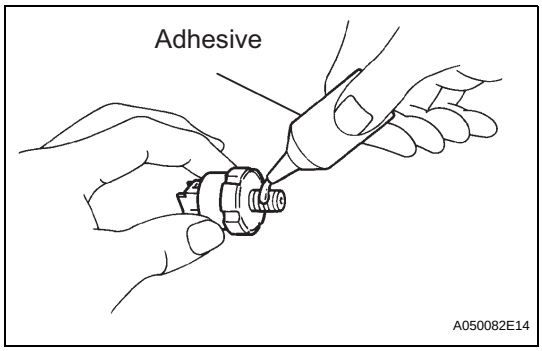
(e) Install the oil pressure gauge with adapter.
(f) Warm up the engine.
(g) Measure the oil pressure.
Standard oil pressure



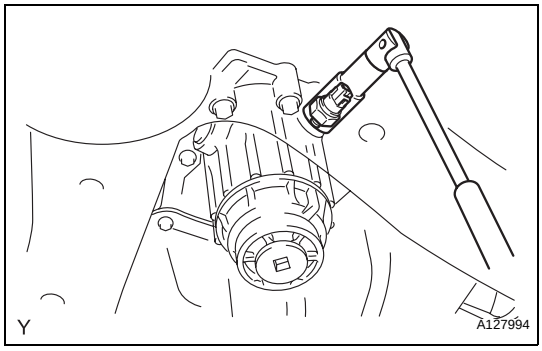
Engine Condition	Oil Pressure
Idle	80 kPa (0.8 kgf*cm^2, 11.6 psi) or more
6,000 rpm	380 kPa (3.9 kgf*cm^2, 55.5 psi) or more

If the oil pressure is not as specified, check the oil pump (See page LU-13).

LU



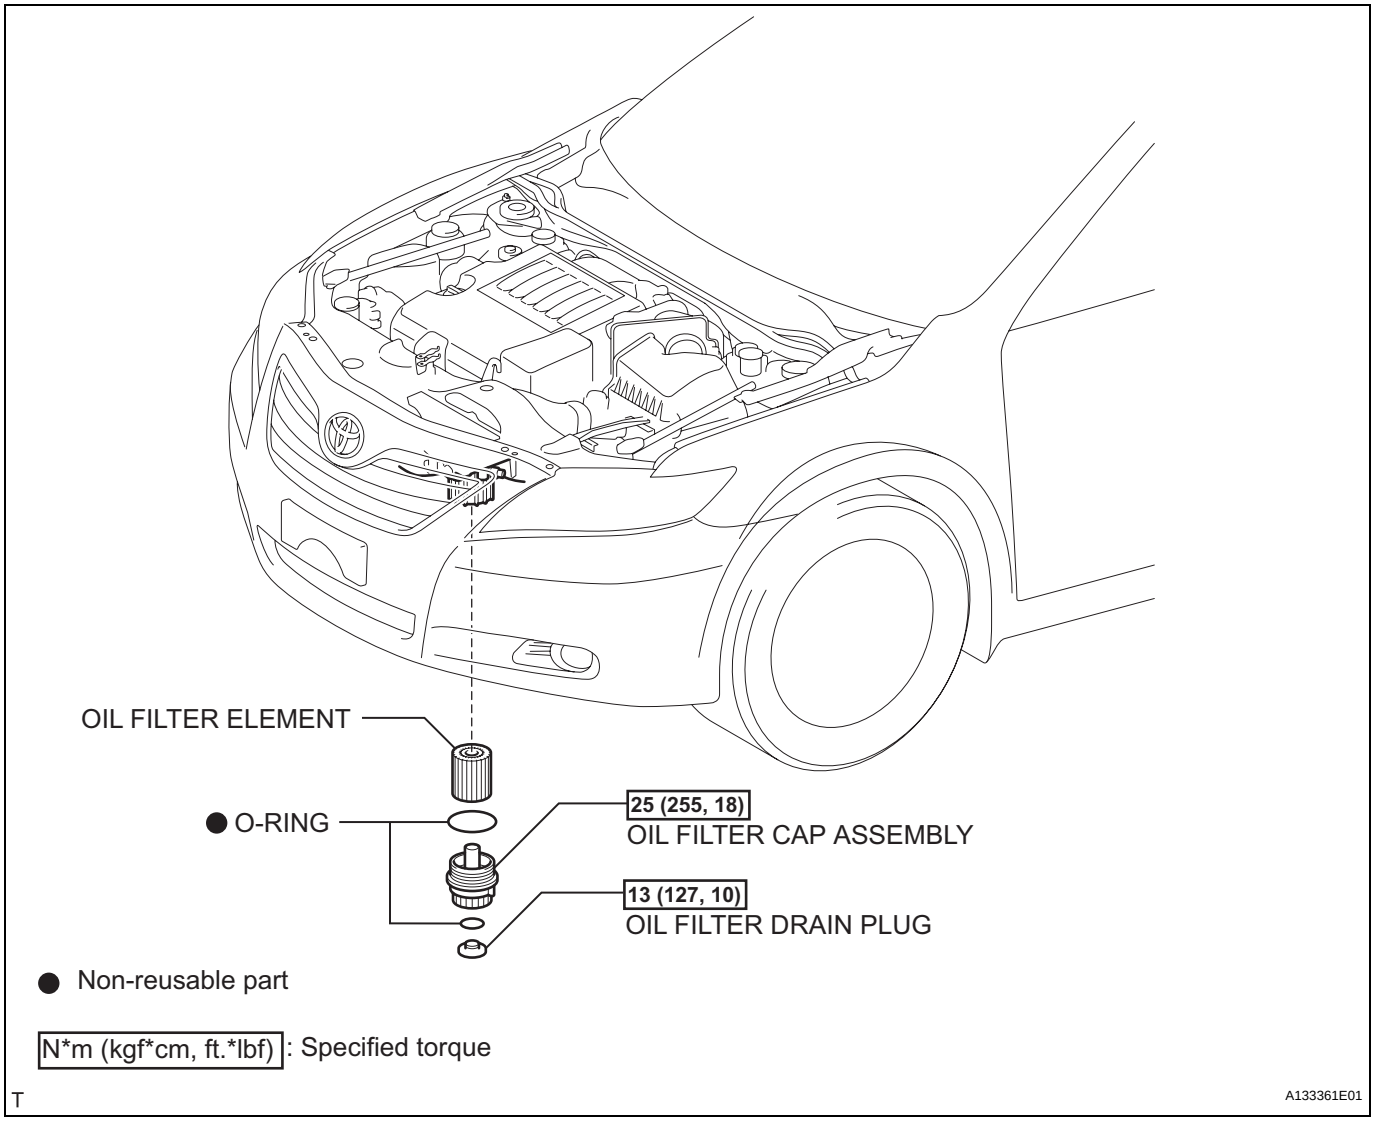
(h) Remove the oil pressure gauge.
(i) Apply adhesive to 2 or 3 threads of the oil pressure switch.
Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent



(j) Using a 24 mm deep socket wrench, install the oil pressure switch.
Torque: 15 N*m (153 kgf*cm, 11 ft.*lbf)
NOTICE:
Do not start the engine within 1 hour after installation.
(k) Connect the oil pressure switch connector.
(l) Check for engine oil leaks.
(m) Remove the engine under cover RH.
(n) Remove the engine under cover LH.

OIL FILTER

COMPONENTS



REPLACEMENT

CAUTION:

- **Prolonged and repeated contact with engine oil will result in the removal of natural oils from the skin, leading to dryness, irritation and dermatitis. In addition, used engine oil contains potentially harmful contaminants which may cause skin cancer.**
- **Precautions should be taken when replacing engine oil to minimize the risk of your skin making contact with used engine oil. Protective clothing and gloves that cannot be penetrated by oil should be worn. The skin should be washed with soap and water, or use water-less hand cleaner, to remove any used engine oil thoroughly. Do not use gasoline, thinners, or solvents.**
- **In order to preserve the environment, used oil and used oil filters must be disposed of at designated disposal sites.**

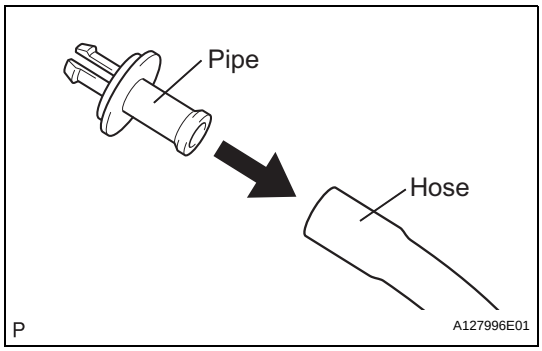
1. DRAIN ENGINE OIL

(a) Remove the oil filler cap.

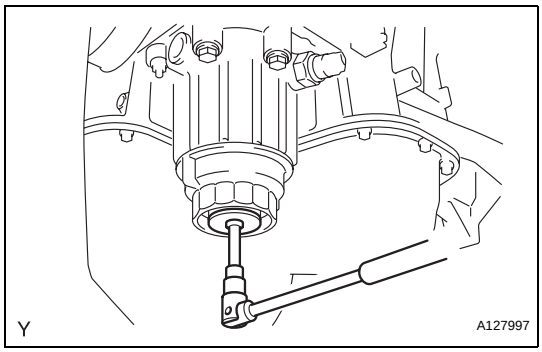
(b) Remove the oil drain plug and drain the oil into a container.

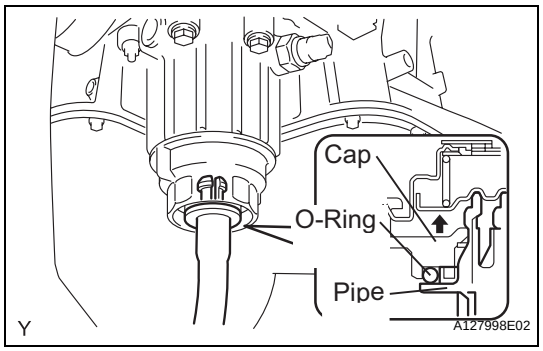
2. REMOVE OIL FILTER ELEMENT

(a) Connect the hose with an inside diameter of 15 mm (0.59 in.) to the pipe.

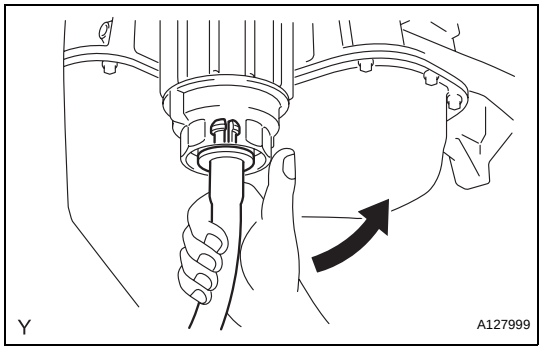


(b) Remove the oil filter drain plug from the oil filter cap.

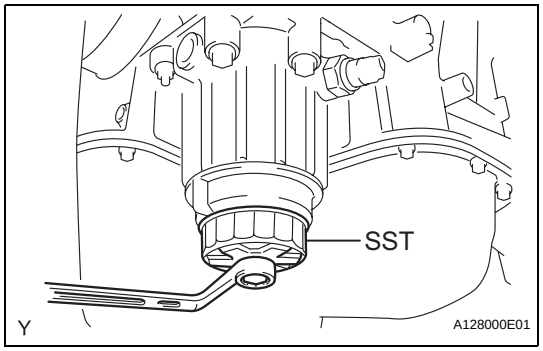




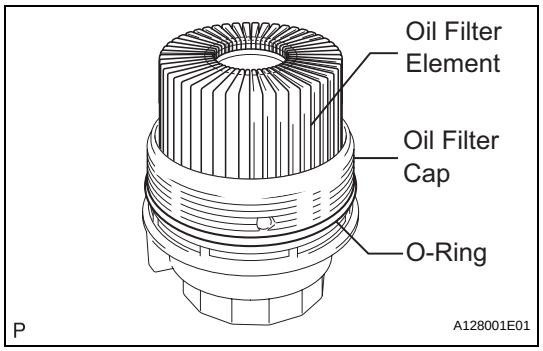
(c) Insert the pipe with the hose into the oil filter cap.
NOTICE:
Be sure to insert the pipe with the O-ring installed on the oil filter cap side.
HINT:
Place the hose end into a container before draining the oil from the hose.



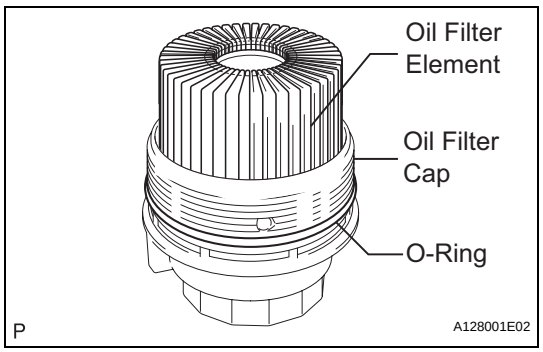
(d) Make sure that oil is completely drained, and remove the pipe and O-ring.
HINT:
Be sure to turn the pipe in the direction of the arrow to remove it.



(e) Using SST, remove the oil filter cap.
SST 09228-06501



(f) Remove the oil filter element and O-ring from the oil filter cap.
NOTICE:
Do not use any tools to remove the O-ring in order to prevent the cap from being damaged. Be sure to remove it by hand.



3. INSTALL OIL FILTER ELEMENT

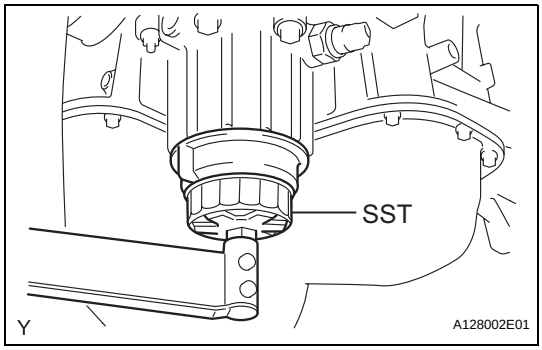
(a) Clean the inside of the oil filter cap, threads, and O-ring groove.

(b) Apply a light coat of engine oil to a new O-ring and install it to the oil filter cap.
NOTICE:
Make sure that the O-ring does not get twisted on the groove.

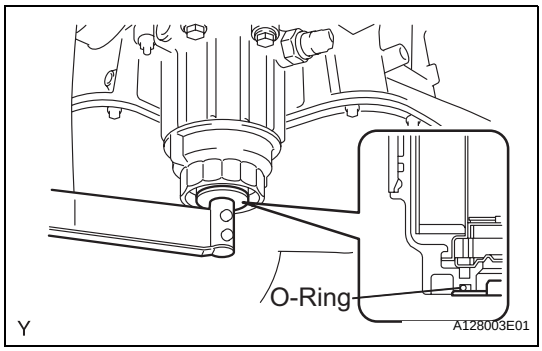
(c) Install a new oil filter element to the oil filter cap.

(d) Remove all dirt and foreign matter from the installation surface and the inside of the cap on the engine side.

(e) Apply a light coat of engine oil to the O-ring again and install the oil filter cap.
NOTICE:
Make sure that the O-ring does not get caught between the parts.



(f) Using SST, install the oil filter cap.
SST 09228-06501
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)
NOTICE:
Make sure that there is no clearance between the parts after tightening the oil filter cap.



(g) Apply a light coat of engine oil to a new O-ring and install it to the oil filter cap.
NOTICE:
Remove all dirt and foreign matter from the installation surface.

(h) Install the oil filter drain plug to the oil filter cap.
Torque: 13 N*m (127 kgf*cm, 10 ft.*lbf)
NOTICE:
Make sure that the O-ring does not get caught between the parts.

4. ADD ENGINE OIL

(a) Clean and install the oil drain plug with a new gasket
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)

(b) Add new oil.
Standard capacity

Item	Standard Condition
Drain and refill with oil filter change	6.1 liters (6.4 US qts, 5.4 lmp. qts)
Drain and refill without oil filter change	5.7 liters (6.0 US qts, 5.0 lmp. qts)
Dry fill	6.5 liters (6.9 US qts, 5.7 lmp. qts)

(c) Install the oil filler cap.

5. CHECK FOR ENGINE OIL LEAKS

(a) Start the engine. Check for engine oil leaks from the connected parts of the oil filter cap and oil filter drain plug.

REMOVAL

1. **REMOVE ENGINE ASSEMBLY WITH TRANSAXLE** (See page EM-29)
2. **SECURE ENGINE** (See page EM-30)
3. **REMOVE INTAKE AIR SURGE TANK ASSEMBLY** (See page FU-13)
4. **REMOVE IGNITION COIL ASSEMBLY (See page EM-32)**
5. **REMOVE NO. 2 ENGINE MOUNTING STAY RH (See page EM-32)**
6. **REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY RH (See page EM-32)**
7. **REMOVE OIL LEVEL GAUGE GUIDE SUB-ASSEMBLY (See page EM-33)**
8. **REMOVE NO. 2 MANIFOLD STAY (See page EM-33)**
9. **REMOVE NO. 2 EXHAUST MANIFOLD HEAT INSULATOR (See page EM-33)**
10. **REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY LH (See page EM-33)**
11. **REMOVE ENGINE MOUNTING BRACKET RH (See page EM-33)**
12. **REMOVE V-RIBBED BELT TENSIONER ASSEMBLY (See page EM-34)**
13. **REMOVE NO. 2 TIMING GEAR COVER (See page EM-34)**
14. **REMOVE NO. 2 IDLER PULLEY SUB-ASSEMBLY (See page EM-34)**
15. **REMOVE WATER PUMP PULLEY (See page CO-8)**
16. **REMOVE RADIO SETTING CONDENSER (See page EM-35)**
17. **REMOVE NO. 1 VACUUM SWITCHING VALVE ASSEMBLY (See page EM-35)**
18. **REMOVE NO. 1 OIL PIPE (See page EM-65)**
19. **REMOVE OIL PIPE (See page EM-65)**
20. **REMOVE CRANKSHAFT PULLEY (See page EM-67)**
21. **REMOVE NO. 1 ENGINE MOUNTING BRACKET FRONT LH (See page EM-68)**
22. **REMOVE WATER INLET HOUSING (See page EM-68)**
23. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (for Bank 1) (See page EM-69)**
24. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (for Bank 2) (See page EM-69)**

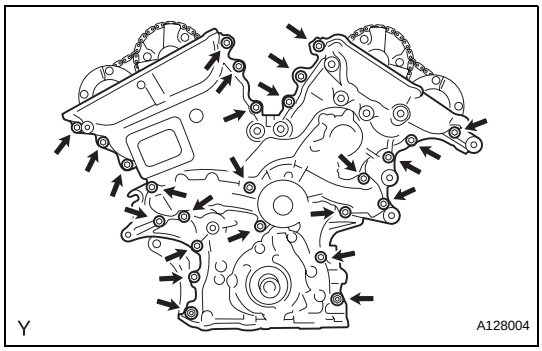
25. REMOVE NO. 2 OIL PAN SUB-ASSEMBLY (See page EM-70)

26. REMOVE OIL STRAINER SUB-ASSEMBLY (See page EM-70)

27. REMOVE OIL PAN SUB-ASSEMBLY (See page EM-70)

28. REMOVE TIMING CHAIN COVER SUB-ASSEMBLY

(a) Remove the 23 bolts and 2 nuts as shown in the illustration.



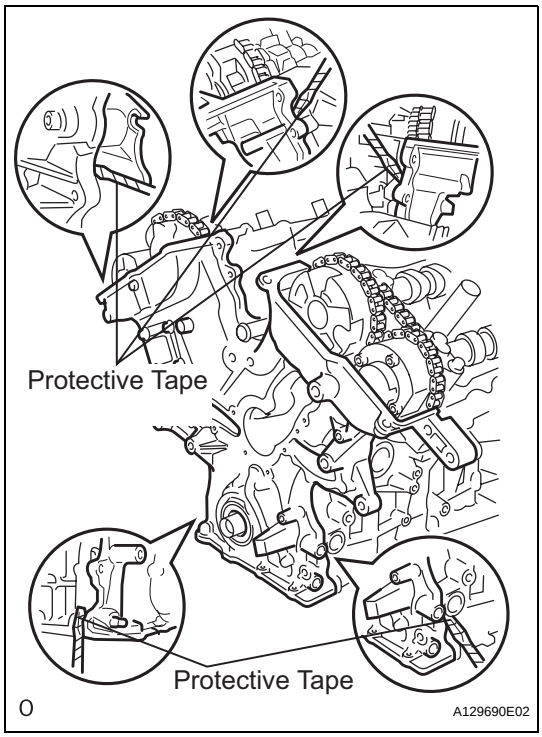
(b) Remove the timing chain cover by prying between the timing chain cover and cylinder head or cylinder block with a screwdriver.

NOTICE:

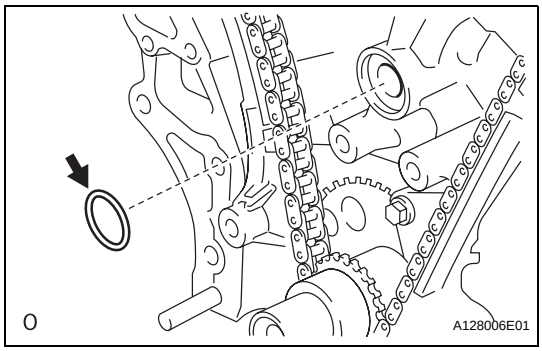
Be careful not to damage the contact surfaces of the cylinder head, cylinder block and chain cover.

HINT:

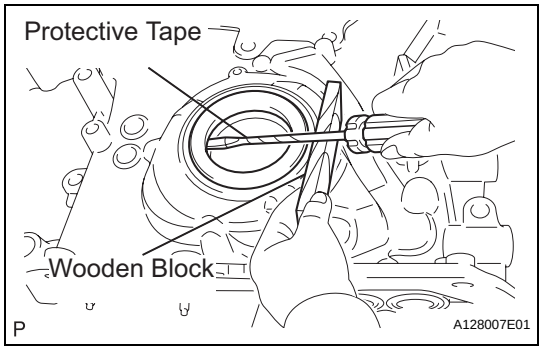
Tape the screwdriver tip before use.



(c) Remove the gasket.



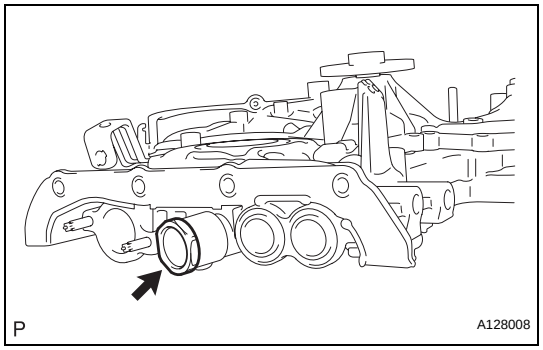
LU



29. REMOVE TIMING CHAIN CASE OIL SEAL

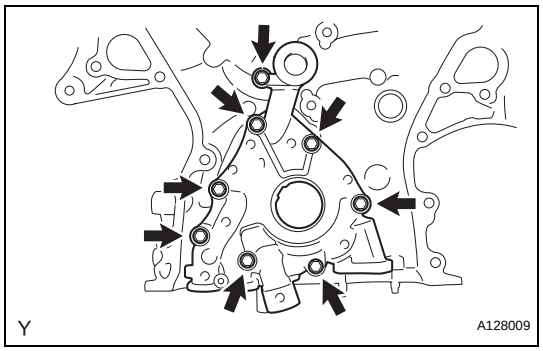
(a) Using a screwdriver, pry out the oil seal.
HINT:
Tape the screwdriver tip before use.

DISASSEMBLY



1. REMOVE OIL PUMP RELIEF VALVE

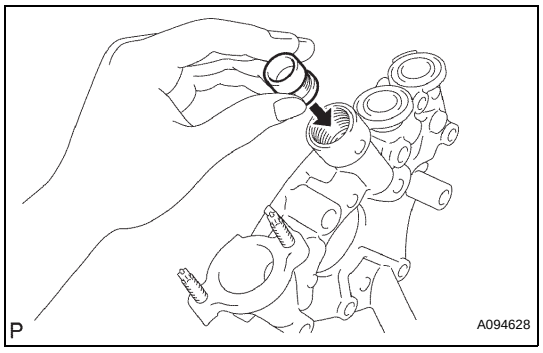
(a) Using a 27 mm socket wrench, remove the relief valve plug.
(b) Remove the valve spring and oil pump relief valve.



2. REMOVE OIL PUMP COVER

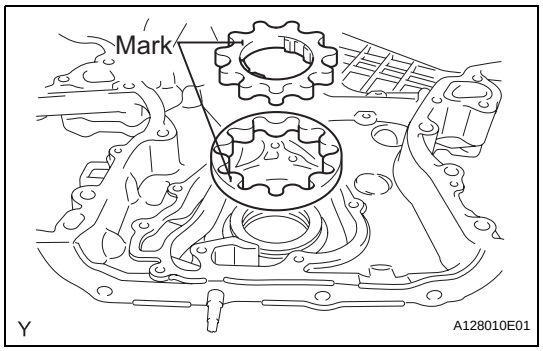
(a) Remove the 8 bolts, oil pump cover and oil pump rotor set.

INSPECTION



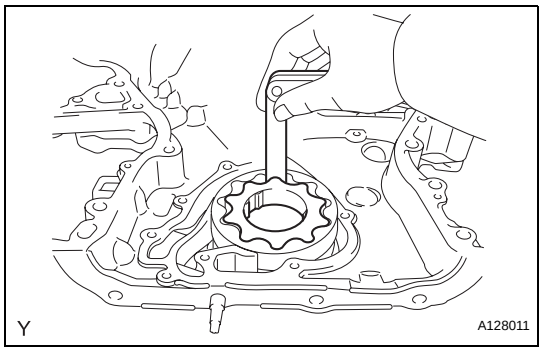
1. INSPECT OIL PUMP RELIEF VALVE

(a) Coat the relief valve with engine oil and check that it falls smoothly into the valve hole under its own weight.
If the valve does not fall smoothly, replace the relief valve. If necessary, replace the oil pump assembly.



2. INSPECT OIL PUMP ROTOR SET

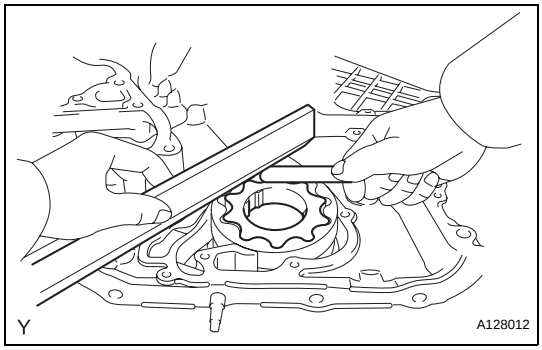
(a) Install the rotors to the timing chain cover with the rotors' marks facing outward. Check that the rotors revolve smoothly.



(b) Check the tip clearance.
(1) Using a feeler gauge, measure the clearance between the drive and driven rotors, as shown in the illustration.
Tip clearance

Standard	Maximum
0.060 to 0.160 mm (0.0024 to 0.0063 in.)	0.16 mm (0.0063 in.)

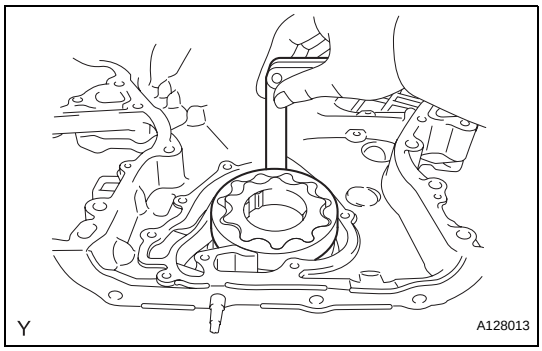
If the clearance is greater than the maximum, replace the drive and driven rotors.



(c) Check the side clearance.
(1) Using a feeler gauge and precision straightedge, measure the clearance between the rotors and precision straightedge, as shown in the illustration.
Side clearance

Standard	Maximum
0.030 to 0.090 mm (0.0012 to 0.0035 in.)	0.090 mm (0.0035 in.)

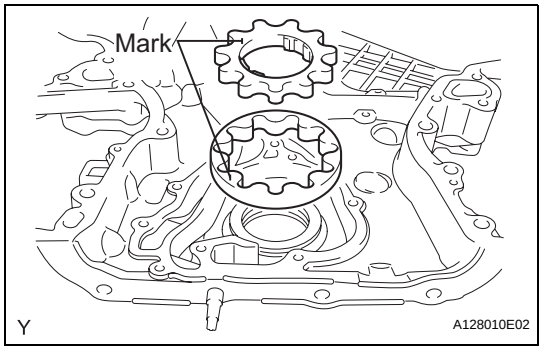
If the side clearance is greater than the maximum, replace the timing chain cover.



(d) Check the body clearance.
(1) Using a feeler gauge, measure the clearance between the timing chain cover and driven rotor, as shown in the illustration.
Body clearance

Standard	Maximum
0.250 to 0.325 mm (0.0098 to 0.0128 in.)	0.325 mm (0.0128 in.)

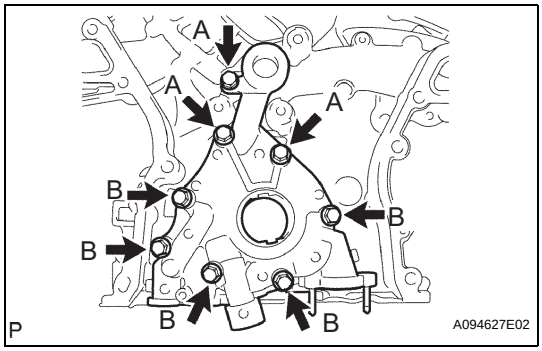
If the body clearance is greater than the maximum, replace the timing chain cover.



REASSEMBLY

1. INSTALL OIL PUMP COVER

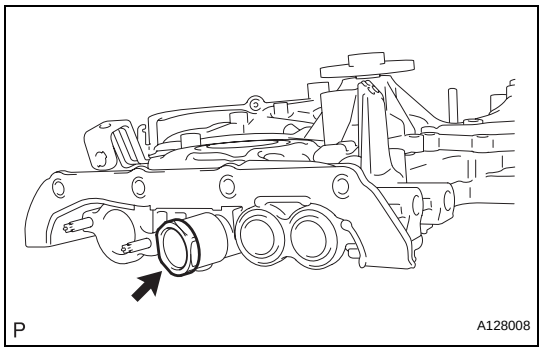
(a) Coat the drive and driven rotors with engine oil and place them into the timing chain cover with the marks facing outward (oil pump cover side). Check that the rotors revolve smoothly.



(b) Install the oil pump cover with the 8 bolts.
Torque: 9.1 N*m (93 kgf*cm, 81 in.*lbf)
Bolt length

Item	Length
Bolt A	22 mm (0.87 in.)
Bolt B	40 mm (1.58 in.)

LU

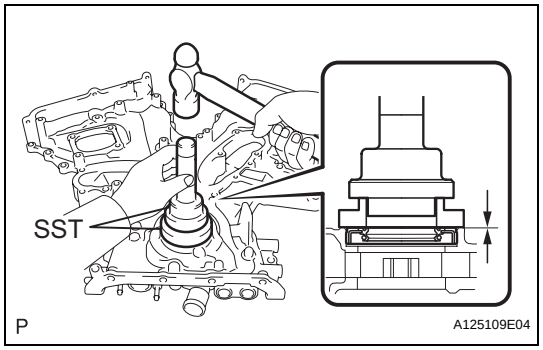


2. INSTALL OIL PUMP RELIEF VALVE

(a) Coat the oil pump relief valve with engine oil.

(b) Insert the relief valve and relief valve spring into the oil pump cover hole.

(c) Using a 27 mm socket wrench, install the plug.
Torque: 49 N*m (500 kgf*cm, 37 ft.*lbf)



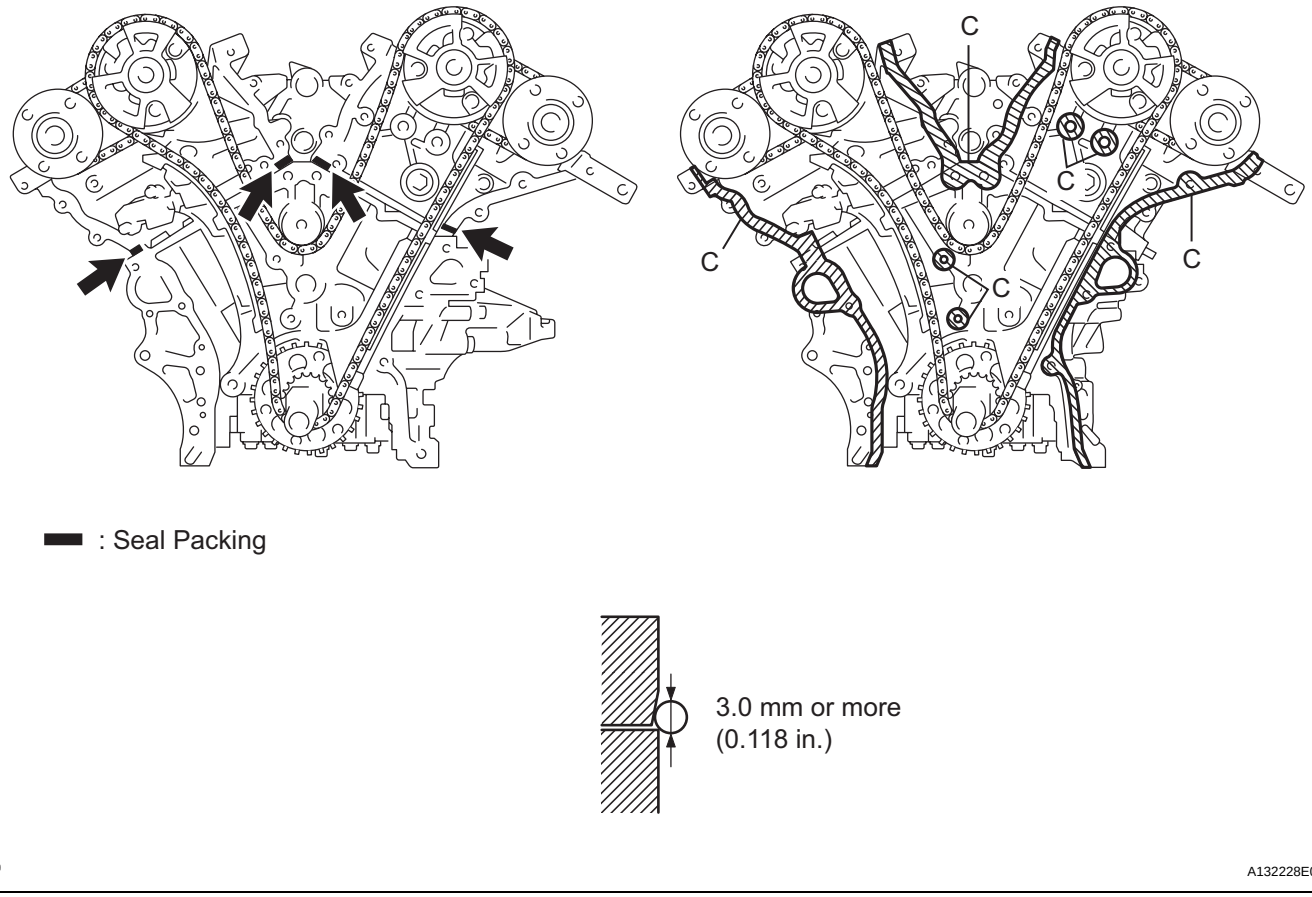
INSTALLATION

1. INSTALL TIMING CHAIN CASE OIL SEAL

(a) Using SST, tap in a new oil seal until its surface is flush with the timing chain case edge.
SST 09223-22010, 09506-35010
NOTICE:
- **Keep the lip free from foreign matter.**
- **Do not tap on the oil seal at an angle.**
- **Make sure that the oil seal edge does not stick out of the timing chain case.**

2. REMOVE TIMING CHAIN COVER SUB-ASSEMBLY

(a) Apply seal packing in a continuous line to the engine unit as shown in the following illustration.

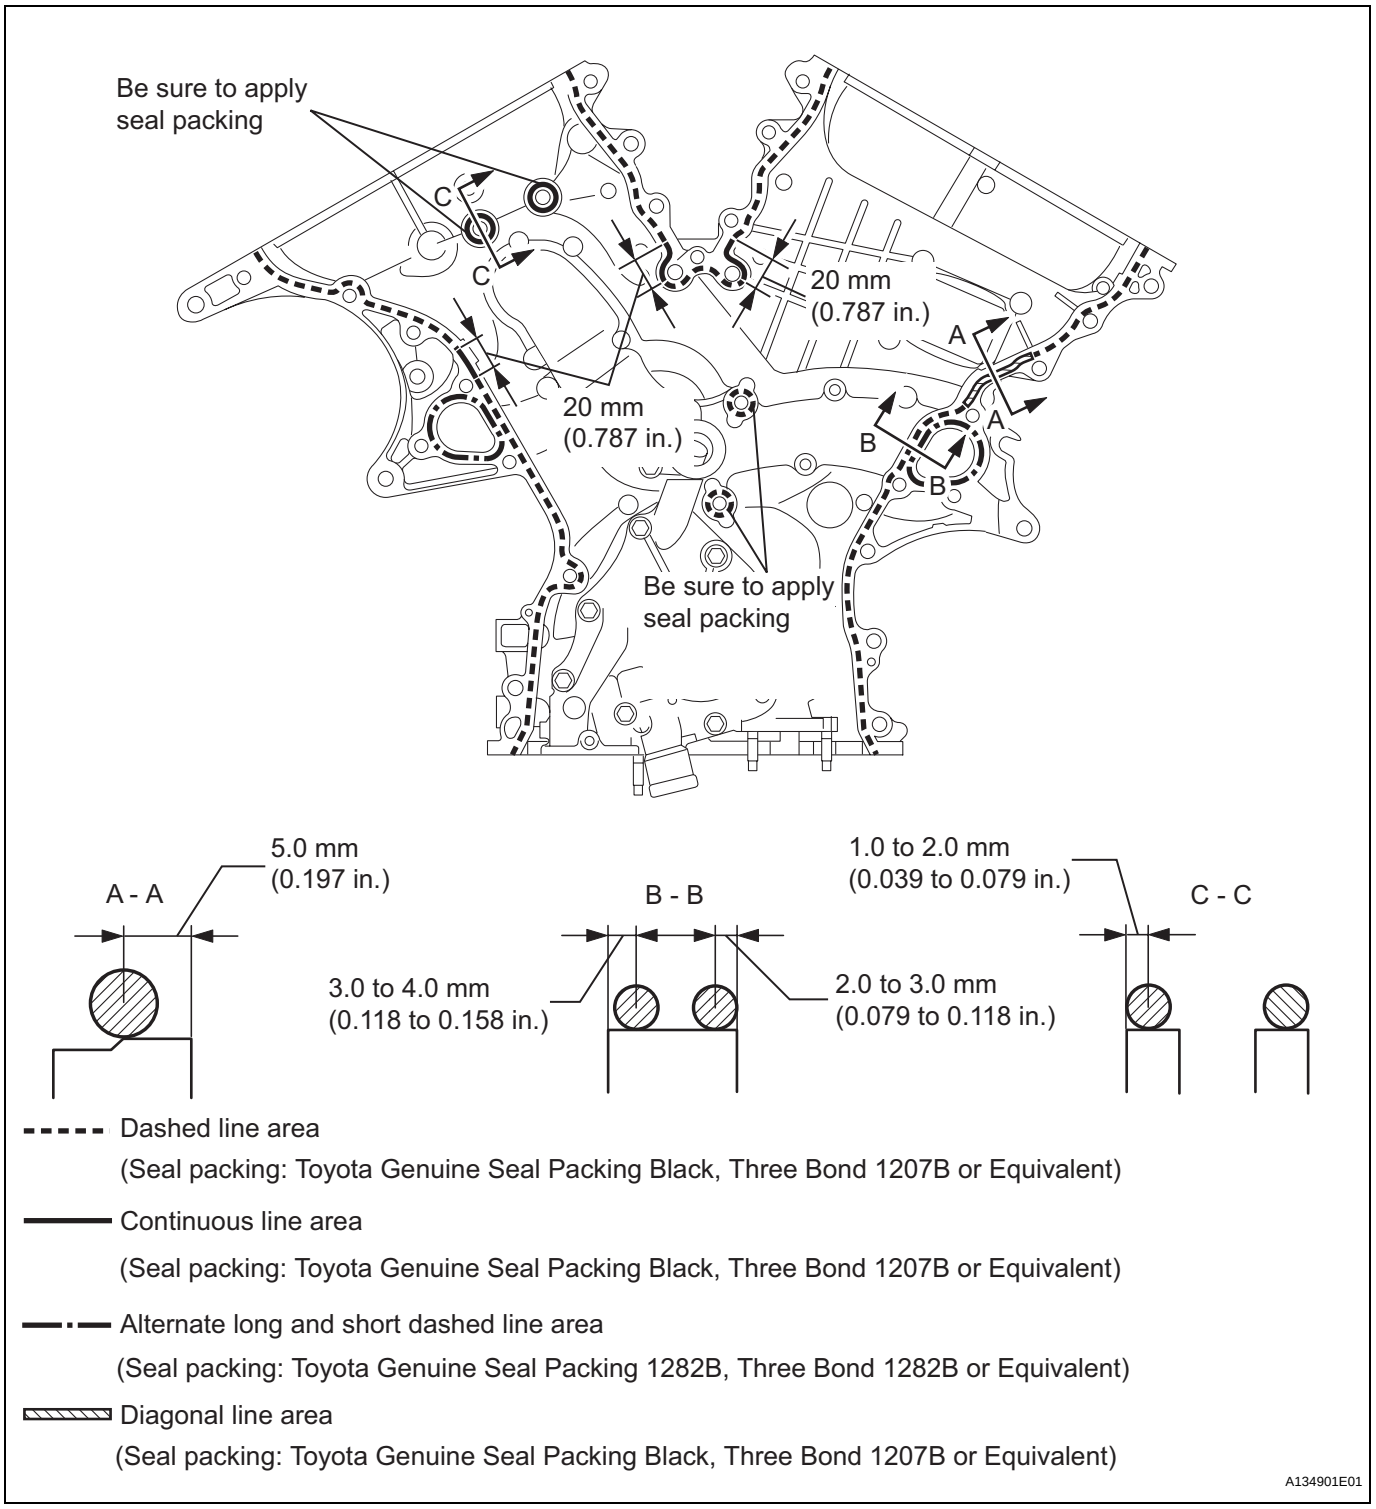


LU

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent
Seal diameter:
3.0 mm (0.118 in.)
NOTICE:

- **Be sure to clean and degrease the contact surfaces, especially the surfaces indicated by C in the illustration.**
- **When the contact surfaces are wet, wipe them with oil-free cloth before applying seal packing.**
- **Install the chain cover within 3 minutes.**
- **Do not start the engine for at least 2 hours after installing.**

(b) Apply seal packing in a continuous line to the timing chain cover as shown in the following illustration.



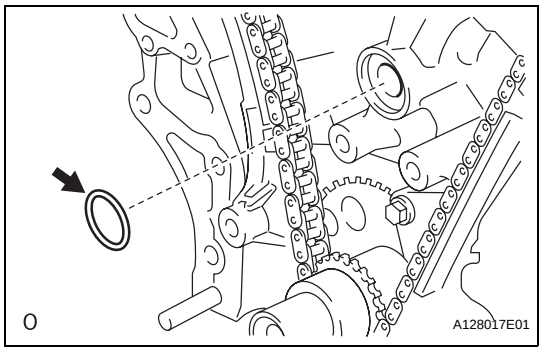
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent
Toyota Genuine Seal Packing Black 1282B, Three Bond 1282B or equivalent

NOTICE:

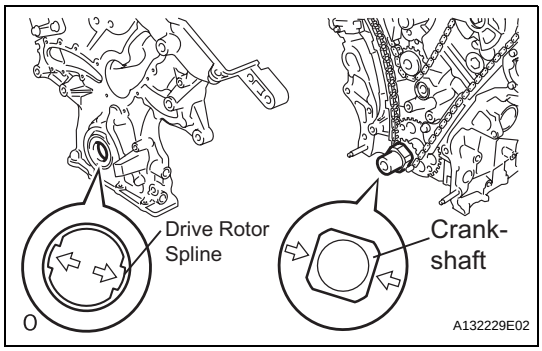
- **When the contact surfaces are wet, wipe them with oil-free cloth before applying seal packing.**
- **Install the chain cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after installing.**

Apply seal packing as follows

Area	Seal Packing Diameter	Application Position from Inside Seal Line
Continuous Line Area	4.5 mm or more (0.177 in.)	3.0 to 4.0 mm (0.118 to 0.158 in.)
Alternate Long and short Dashed Line Area	3.5 mm or more (0.138 in.)	2.0 to 3.0 mm (0.079 to 0.118 in.)
Dashed Line Area	3.5 mm or more (0.138 in.)	3.0 to 4.0 mm (0.118 to 0.158 in.)
Diagonal Line Area	6.0 mm or more (0.236 in.)	5.0 mm (0.197 in.)



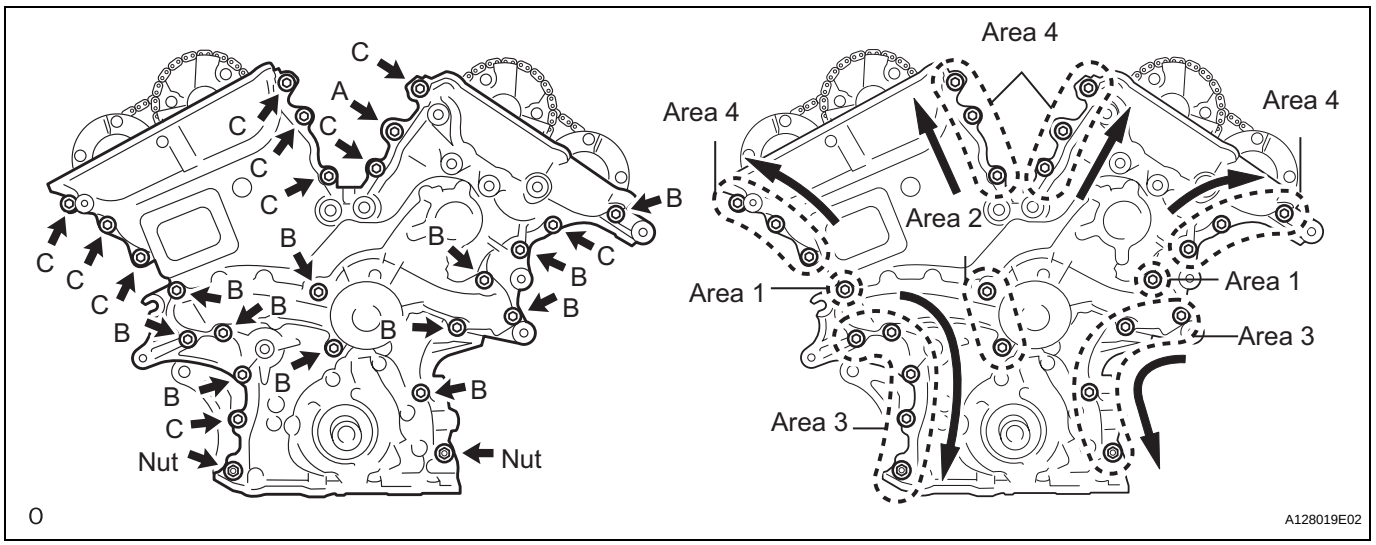
(c) Install a new gasket.



(d) Align the oil pump's drive rotor spline and the crankshaft as shown in the illustration. Install the spline and chain cover to the crankshaft.

(e) Temporarily tighten the timing chain cover with the 23 bolts and 2 nuts.

LU



Bolt length

Item	Length
Bolt A	40 mm (1.57 in.)
Bolt B	55 mm (2.17 in.)
Bolt C	25 mm (0.98 in.)

NOTICE:
Make sure that there is no oil on the bolt threads.

(f) Fully tighten the bolts in this order: Area 1 and Area 2.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)

(g) Fully tighten the bolts and nuts in this order: Area 3.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)
HINT:
Tighten the bolts and nuts in the order of upper to lower as shown in the illustration.

(h) Fully tighten the bolts in this order: Area 4.
Torque: Bolt A
43 N*m (438 kgf*cm, 32 ft.*lbf)
Except bolt A
21 N*m (214 kgf*cm, 15 ft.*lbf)
HINT:
Tighten the bolts in the order of lower to upper as shown in the illustration.

3. **INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (for Bank 2) (See page EM-150)**
4. **INSTALL WATER INLET HOUSING (See page EM-144)**
5. **REMOVE NO. 1 ENGINE MOUNTING BRACKET FRONT LH (See page EM-38)**
6. **INSTALL OIL PAN SUB-ASSEMBLY (See page EM-147)**
7. **INSTALL OIL STRAINER SUB-ASSEMBLY (See page EM-148)**
8. **INSTALL NO. 2 OIL PAN SUB-ASSEMBLY (See page EM-148)**
9. **INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (for Bank 1) (See page EM-149)**
10. **INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (for Bank 2) (See page EM-150)**
11. **INSTALL CRANKSHAFT PULLEY (See page EM-151)**
12. **INSTALL NO. 1 OIL PIPE (See page EM-153)**
13. **INSTALL OIL PIPE (See page EM-153)**
14. **INSTALL NO. 1 VACUUM SWITCHING VALVE (See page EC-14)**
15. **INSTALL RADIO SETTING CONDENSER (See page EM-38)**
16. **INSTALL WATER PUMP PULLEY (See page CO-10)**

17. **INSTALL NO. 2 IDLER PULLEY SUB-ASSEMBLY (See page EM-39)**
18. **INSTALL NO. 2 TIMING GEAR COVER (See page EM-39)**
19. **INSTALL V-RIBBED BELT TENSIONER ASSEMBLY (See page EM-39)**
20. **INSTALL ENGINE MOUNTING BRACKET RH (See page EM-40)**
21. **INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY LH (See page EM-40)**
22. **INSTALL NO. 2 EXHAUST MANIFOLD HEAT INSULATOR (See page EM-40)**
23. **INSTALL NO. 2 MANIFOLD STAY (See page EM-41)**
24. **INSTALL OIL LEVEL GAUGE GUIDE SUB-ASSEMBLY (See page EM-41)**
25. **REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY RH (See page EM-41)**
26. **INSTALL NO. 2 ENGINE MOUNTING STAY RH (See page EM-42)**
27. **INSTALL IGNITION COIL ASSEMBLY (See page EM-42)**
28. **INSTALL INTAKE AIR SURGE TANK ASSEMBLY** (See page FU-18)
29. **REMOVE ENGINE STAND**
30. **INSTALL DRIVE PLATE AND RING GEAR SUB-ASSEMBLY (See page EM-13)**
31. **INSTALL AUTOMATIC TRANSAXLE ASSEMBLY** (See page AX-214)
32. **INSTALL STARTER ASSEMBLY (See page ST-148)**
33. **INSTALL ENGINE WIRE**
34. **INSTALL FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-21)**
35. **INSTALL FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-20)**
36. **INSTALL FRONT FRAME ASSEMBLY (See page EM-43)**
37. **INSTALL VANE PUMP ASSEMBLY (See page EM-44)**
38. **INSTALL ENGINE ASSEMBLY WITH TRANSAXLE** (See page EM-44)

SMART KEY SYSTEM

PRECAUTION

1. EMERGENCY ENGINE START CONTROL

(a) If there is a malfunction in the stop light switch or STOP fuse, their signals may not be correctly transmitted to the main body ECU. This may result in the engine not starting even if the engine switch is pressed while the brake pedal is depressed and the shift lever is in the P position.
To activate the starter:
(1) Turn the engine switch from off to on (ACC).
(2) Press and hold the engine switch for 15 seconds.

2. PRECAUTIONS FOR PUSH-BUTTON START FUNCTION:

(a) Before starting the engine, firmly depress the brake pedal until the indicator in the engine switch turns green.

(b) The power source mode (off, on (ACC), on (IG)) is always retained in memory by the vehicle. If the battery is disconnected, the power source mode that was present before disconnection will be restored after the battery is reconnected. Be sure to turn the engine switch off before disconnecting the cable from the negative battery terminal. Be careful if the power source mode of a vehicle with a discharged battery is not known.

(c) After the battery is reconnected, be sure to wait 10 seconds or more before attempting to start the engine. The engine may not start immediately after the battery is reconnected.

(d) If the electrical key is held near the engine switch to start the engine when the electrical key battery is depleted, the following warnings will sound:
(1) Driver's door open → closed
- An exit warning will sound if the shift lever is in a position other than P and the power source is in a mode other than off.
- An exit warning will sound if the shift lever is in the P position and the power source is in a mode other than off.

(2) Doors other than the driver door open → closed
- A warning will sound to indicate that the electrical key has been taken out of the vehicle.

These warnings will sound because it is not possible for the vehicle to determine if the key is present in the vehicle (due to the depleted key battery). These warnings do not indicate system malfunctions.

SYSTEM DESCRIPTION

1. PUSH-BUTTON START FUNCTION DESCRIPTION

(a) The push-button start function uses a push-type engine switch, which the driver can operate by merely carrying the electrical key. This system consists primarily of the main body ECU, engine switch, ID code box, steering lock ECU, electrical key, ACC relay, IG1 relay, IG2 relay and certification ECU. The main body ECU controls the function. This function operates in cooperation with the smart key system.

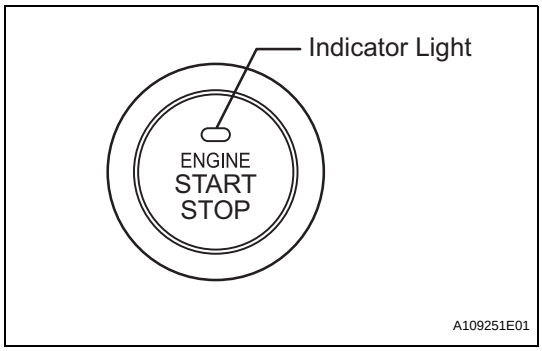
2. FUNCTION OF COMPONENT

Component	Function
Engine Switch • Transponder Key Amplifier	• Transmits engine switch signal to main body ECU. • Informs driver of power source mode or system abnormality with illumination of indicator light. • Receives ID code and transmits it to certification ECU when key battery is low.
Electrical Key	Receives signals from oscillators and returns ID code to entry door control receiver.
Electrical Key Oscillator • Console and Rear Seat	Receives request signals from certification ECU and forms detection area in vehicle interior.
Steering Lock ECU	Receives lock/unlock request signals from certification ECU and main body ECU.
Entry Door Control Receiver	Receives ID code from electrical key and transmits it to certification ECU.
Main body ECU	• Changes power source mode in 4 stages (off, on (ACC), on (IG), start) in accordance with shift position and state of stop light switch. • Controls push-button start function in accordance with signals received from switches and each ECU.
Certification ECU	Certifies ID code received from entry door control receiver and transmits certification results to ID code ECU and steering lock ECU.
Stop Light Switch	Outputs state of brake pedal to main body ECU.
ID Code Box	Receives steering unlock or engine immobiliser unset signals from certification ECU, certifies them, and transmits each unset signal to steering lock ECU or ECM.
ECM	• Receives engine start request signal from main body ECU, turns ON ST relay, and starts engine. • Receives signal from ID code ECU and performs engine ignition and injection.

3. SYSTEM FUNCTION

The electric controls of the push-button start function are described below:

Control	Outline
Engine switch control	• When driver operates engine switch with electrical key in driver's possession, certification ECU starts indoor electrical key oscillator, which transmits request signal to electrical key. Upon receiving this signal, the electrical key transmits ID code signal to main body ECU. • ID code box verifies check results received from certification ECU via LIN and sends them to main body ECU. Based on these results, main body ECU authorizes operation of engine switch.
Diagnosis	When main body ECU detects malfunction, main body ECU diagnoses and memorizes failed section.



4. CONSTRUCTION AND OPERATION

(a) Engine Switch

The engine switch consists of a momentary type switch, 3 color (amber, green, greenish white) LEDs, and a transponder key amplifier.

- The greenish white LED is for illumination.
- The amber and green LEDs are for the indicator lights. The driver can check the present power source mode and whether the engine can start in accordance with the illumination state of the indicator light.
- When the main body ECU detects an abnormality in the push-button start function, it makes the amber indicator light flash. If the engine stopped in this state, it may not be possible to restart it.

(b) Indicator Light Condition

Engine switch indicator light condition:

Power Source Mode/Condition	Indicator Light Condition	
	Brake pedal released	Brake pedal depressed, shift lever in P or N
off	OFF	ON (Green) (When key and vehicle IDs match)
on (ACC, IG)	ON (Amber)	ON (Green)
Engine running	OFF	OFF
Steering lock not unlocked	Flashes (Green) for 15 sec.	Flashes (Green) for 15 sec.
System malfunction	Flashes (Amber) for 15 sec.	Flashes (Amber) for 15 sec.

(c) Main body ECU

The main body ECU consists of the IG1 and IG2 relay actuation circuits and CPU.

HINT:

Before removing the battery, make sure to turn the engine switch off. The main body ECU constantly stores the present power source mode in its memory. Therefore, if the main body ECU is interrupted by disconnecting the battery, the main body ECU restores the power source mode after the battery is reconnected. For this reason, if the battery is disconnected when the engine switch is not off, the power will be restored to the vehicle at the same time the power is restored to the main body ECU (by reconnecting the battery).

5. PUSH-BUTTON START FUNCTION OPERATION

(a) This system has different power source mode patterns depending on the brake pedal condition and shift lever position.

ST

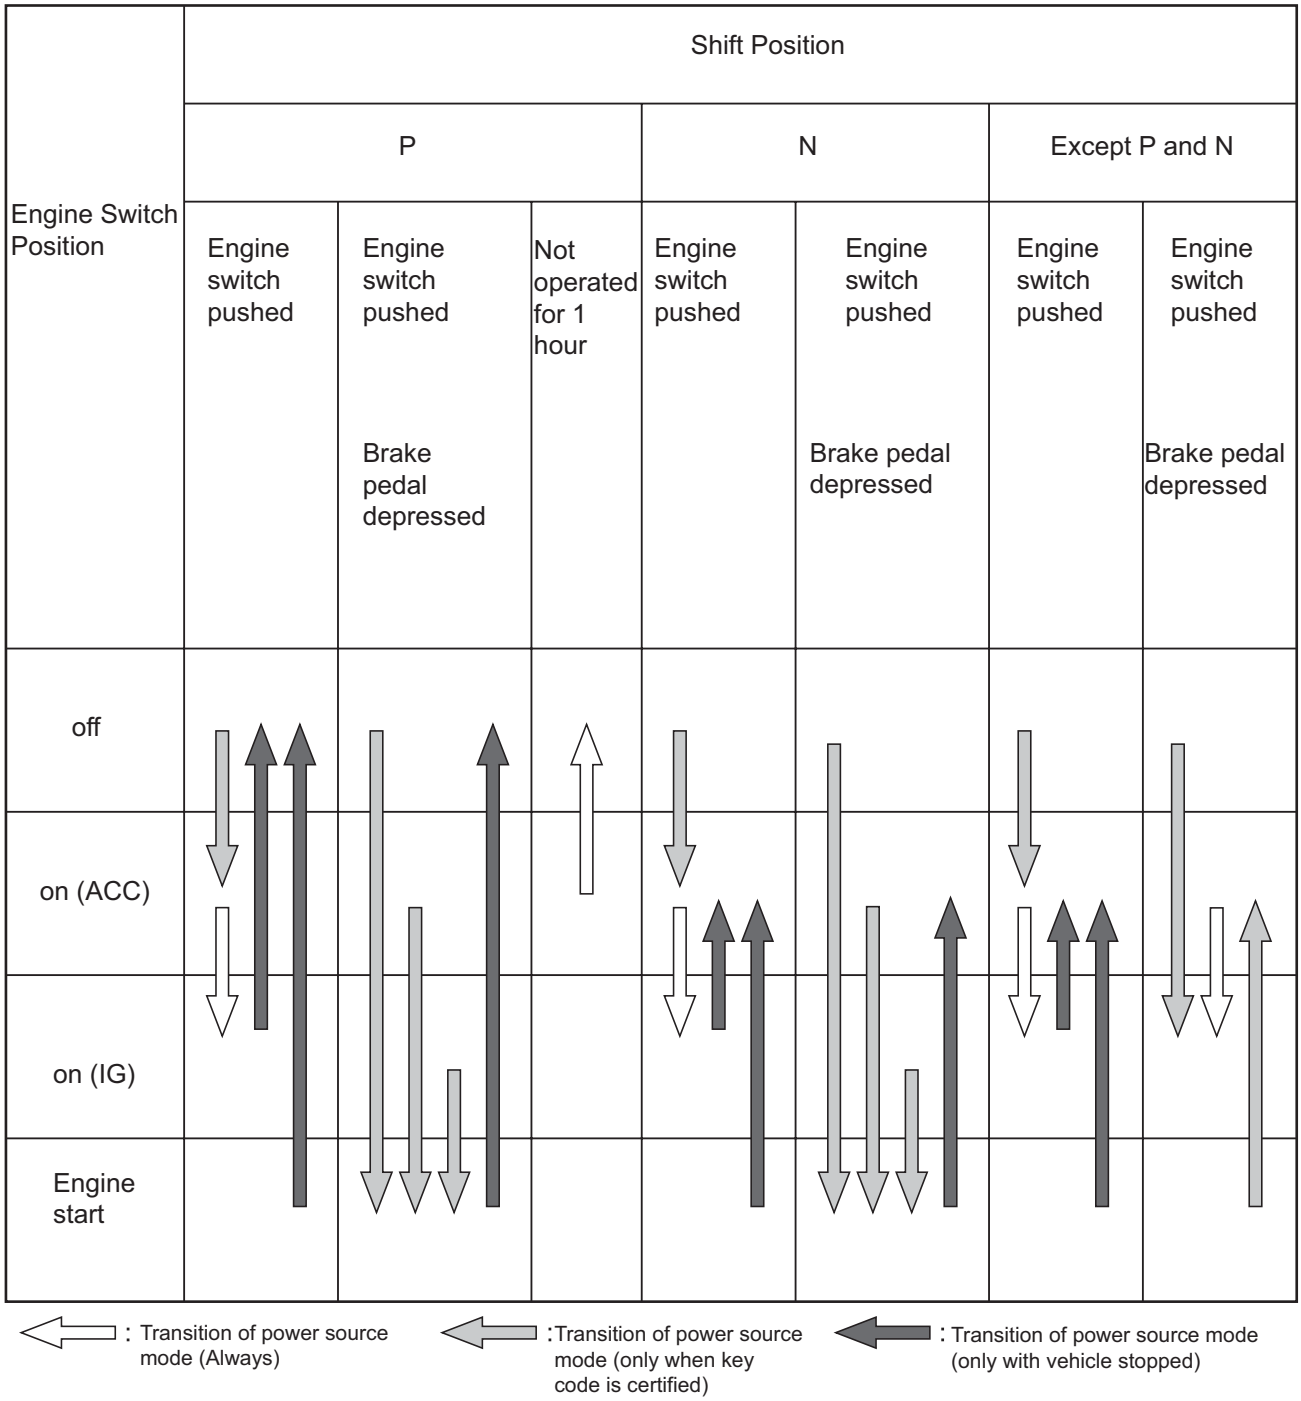
Brake Pedal	Shift Lever	Power Source Mode Pattern
Depressed	P or N position	When the engine switch is pushed once. • off → engine start • on (ACC) → engine start • on (IG) → engine start
Not depressed	P position	Each time the engine switch is pushed. • off → on (ACC) → on (IG) → off
	Except P position	Each time the engine switch is pushed. • off → on (ACC) → on (IG) → on (ACC)

Brake Pedal	Shift Lever	Power Source Mode Pattern
-	P position	When the engine switch is pushed with power source mode on (IG) (engine running). • on (IG) → off
-	Except P position	When the engine switch is pushed with power source mode on (IG) (engine running). • on (IG) → on (ACC)

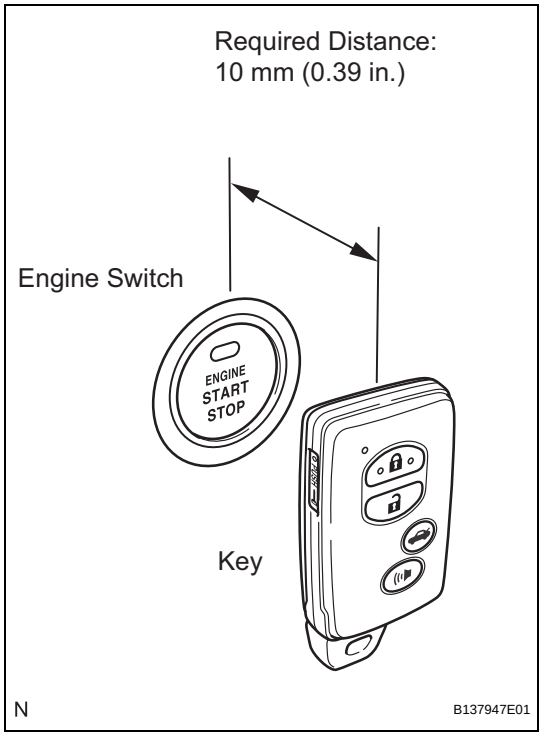
When the battery of the key is low, the push-button start function can be operated by holding the key against the engine switch.

- After approximately 1 hour has passed with the engine switch on (ACC) and the shift position in P, the main body ECU will automatically cut the power supply (the power source mode changes to off).

- The illustration below shows the transition of power source modes.
  Transition of power source mode:



HINT:
While the vehicle is being driven normally, operation of the engine switch is disabled. However, if the engine must be stopped in an emergency while the vehicle is being driven, pressing the engine switch for 3 seconds or more stops the engine. Power source mode changes from start to on (ACC).



6. WHEN KEY BATTERY IS LOW

(a) To operate the push-button start function when the key battery is low, hold the key close to the engine switch with the brake pedal depressed.
(b) The main body ECU transmits a key verification request signal from the stop light switch to the certification ECU.
(c) The certification ECU does not receive an ID code response from the entry door control receiver, so it actuates the transponder key amplifier built into the engine switch.
(d) The transponder key amplifier outputs an engine immobiliser radio wave to the key.
(e) The key receives the radio wave, and returns a radio wave response to the transponder key amplifier.
(f) The transponder key amplifier combines the key ID codes with the radio wave response, and transmits it to the certification ECU.
(g) The certification ECU judges and verifies the ID code, and transmits a key verification OK signal to the main body ECU. The buzzer in the combination meter sounds at the same time.
(h) After the buzzer sounds, if the engine switch is pressed within 5 seconds with the brake pedal not depressed, the power source mode changes to on (ACC) or on (IG), the same as in the normal condition.

7. DIAGNOSIS

The main body ECU can detect malfunctions in the push-button start function when the power source mode is on (IG). When the ECU detects a malfunction, the amber indicator light of the engine switch flashes to warn the driver. At the same time, the ECU stores a 5-digit DTC (Diagnostic Trouble Code) in the memory.

- The indicator light warning continues for 15 seconds even after the power source mode is changed to off.
- The DTC can be read by connecting the intelligent tester to the DLC3.
- The push-button start function cannot be operated if a malfunction occurs.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedures to troubleshoot the push-button start function.
- The intelligent tester should be used in steps 4, 5 and 8.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS CHECK

HINT:

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points in the problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Running conditions, driving conditions, weather conditions
How did it happen?	Problem symptoms

NEXT

3	INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

ST

4	INSPECT COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM

(a) Use the intelligent tester to check if the CAN Communication System is functioning normally (See page CA-8).

Result

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output	B

B → GO TO CAN COMMUNICATION SYSTEM

A

5 CHECK FOR DTC

(a) Check for DTCs and note any codes that are output (See page ST-26).
(b) Delete DTCs.
(c) Recheck for DTCs.

Result

Result	Proceed to
DTC does not reoccur	A
DTC reoccurs	B

B → GO TO DIAGNOSTIC TROUBLE CODE CHART

A

6 INSPECT BASIC OPERATION

(a) Turn the engine switch on (START) and check that the engine starts normally. Make sure the brake pedal is depressed and the shift position is P at this time.
(b) Check that the engine switch mode can be changed by pushing the engine switch.
HINT:
Without depressing the brake pedal, push the engine switch repeatedly. Engine switch mode should turn from off to on (ACC) to on (IG) and back to off.
With the brake pedal depressed, push the engine switch repeatedly. Engine switch mode should turn to ENGINE START from any status.
OK:
Engine can start normally.

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to the system before inspecting the suspected areas below.

PUSH-BUTTON START FUNCTION:

Symptom	Suspected area	See page
Power does not turn on (neither ACC nor IG is possible).	1. AM2 Fuse	ST-114
	2. Engine Switch	-
	3. Wire Harness or Connector	-

ST

(b) Measure the voltage and resistance of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
AM1 (E7-6) - Body ground	L - Body ground	+B power supply	Always	10 to 14 V
AM2 (E6-1) - Body ground	L - Body ground	+B power supply	Always	10 to 14 V
SSW1 (E7-17) - Body ground	L - Body ground	Engine switch signal	Engine switch pushed	Below 1 Ω
SSW1 (E7-17) - Body ground	L - Body ground	Engine switch signal	Engine switch not pushed	10 kΩ or higher
SSW2 (E7-16) - Body ground	V - Body ground	Engine switch signal	Engine switch pushed	Below 1 Ω
SSW2 (E7-16) - Body ground	V - Body ground	Engine switch signal	Engine switch not pushed	10 kΩ or higher
GND3 (E8-1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
LIN1 (IR-9) - Body ground	O - Body ground	LIN line	Always	10 kΩ or higher
BATB (IA-1) - Body ground	B - Body ground	+B Power supply	Always	10 to 14 V
GND1 (IF-10) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
GND2 (IM-9) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
CANN (E8-15) - Body ground	W - Body ground	CAN Line	Always	10 kΩ or higher
CANP (E8-16) - Body ground	L - Body ground	CAN Line	Always	10 kΩ or higher
CANH (E8-5) - Body ground	R - Body ground	CAN Line	Always	10 kΩ or higher
CANL (E8-6) - Body ground	W - Body ground	CAN Line	Always	10 kΩ or higher
ACC (IA-1) - Body ground	B - Body ground	ACC power supply	Always	10 to 14 V
IG (IA-1) - Body ground	B - Body ground	IG power supply	Always	10 to 14 V

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the ECU connectors.

(d) Measure the voltage of the connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
ACCD (E7-22) - GND3 (E8-1)	W - W-B	ACC signal	Engine switch on (ACC)	Output voltage at terminal AM1 or AM2 is -2 V or more.
ACCD (E7-22) - GND3 (E8-1)	W - W-B	ACC signal	Engine switch off	Below 1 V
IG1D (E7-3) - GND3 (E8-1)	P - W-B	IG1 signal	Engine switch on (IG)	Output voltage at terminal AM1 or AM2 is -2 V or more.
IG1D (E7-3) - GND3 (E8-1)	P - W-B	IG1 signal	Engine switch on (ACC)	Below 1 V
IG2D (E6-11) - GND3 (E8-1)	LG - W-B	IG2 signal	Engine switch on (IG)	Output voltage at terminal AM1 or AM2 is -2 V or more.
IG2D (E6-11) - GND3 (E8-1)	LG - W-B	IG2 signal	Engine switch on (ACC)	Below 1 V
STP (IL-7) - GND3 (E8-1)	L - W-B	Stop light signal	Brake pedal depressed	Output voltage at terminal AM1 or AM2 is -2 V or more.
STP (IL-7) - GND3 (E8-1)	L - W-B	Stop light signal	Brake pedal released	Below 1 V
SLR+ (E7-19) - GND3 (E8-1)	BR - W-B	Steering lock motor signal	Steering lock motor operating	Below 1 V
SLR+ (E7-19) - GND3 (E8-1)	BR - W-B	Steering lock motor signal	Steering lock motor does not operate	Output voltage at terminal AM1 or AM2 is -2 V or more.
SLP (E7-18) - GND3 (E8-1)	P - W-B	Steering lock actuator position signal	Steering lock is locked	Pulse generation (See waveform 3)
SLP (E7-18) - GND3 (E8-1)	P - W-B	Steering lock actuator position signal	Steering lock is released	Pulse generation (See waveform 3)
SPD (E8-9) - GND3 (E8-1)	V - W-B	Vehicle speed signal	Engine switch on (IG), rotate rear wheel slowly	Pulse generation (See waveform 1)
TACH (E8-8) - GND3 (E8-1)	B - W-B	Tachometer signal	Engine running	Pulse generation (See waveform 2)

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
P (E9-2) - GND3 (E8-1)	G - W-B	Shift lock signal	Shift lever P position	Output voltage at terminal AM1 or AM2 is -2 V or more.
P (E9-2) - GND3 (E8-1)	G - W-B	Shift lock signal	Shift lever not P position	Below 1 V
ACCR (E6-3) - GND3 (E8-1)	P - W-B	Starter assist signal	Brake pedal depressed, shift lever P position, engine switch is pushed once → on (IG)	0.1 to 0.8 V *1 → Output voltage at terminal AM1 or AM2 is -2 V or more.
STSW (E9-4) - GND3 (E8-1)	GR - W-B	Starter activation request signal	Brake pedal depressed, engine switch held on (ST)	Output voltage at terminal AM1 or AM2 is -2 V or more.
STR (E7-8) - GND3 (E8-1)	G - W-B	Park/neutral position switch	Shift lever P or N position	Below 1 V
STR2 (E9-6) - GND3 (E8-1)	V - W-B	Starter signal	Brake pedal depressed, shift lever P or N position, engine switch on (ST)	Output voltage at terminal AM1 or AM2 is -3.5 V or more. *2
INDS (E7-15) - GND3 (E8-1)	LG - W-B	Vehicle condition signal	Brake pedal depressed, shift lever P position.	Output voltage at terminal AM1 or AM2 is -3 V or more.
INDW (E7-14) - GND3 (E8-1)	P - W-B	Warning signal	Brake pedal depressed, shift lever P position, engine switch on (ACC, IG)	Output voltage at terminal AM1 or AM2 is -3 V or more.
SWIL (E7-25) - GND3 (E8-1)	O - W-B	Illumination signal	Light control switch TAIL or HEAD	Output voltage at terminal AM1 or AM2 is -2 V or more.

HINT:

*1: Voltage is output only when the engine is cranking.

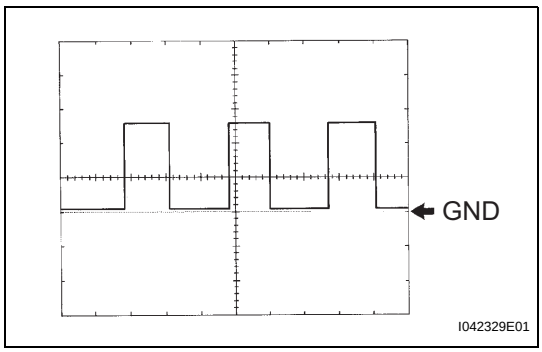
*2: Voltage is output for 0.3 seconds when the engine is cranking to start. Disconnect the C55 connector from the ECM before measuring the voltage.

If the result is not as specified, the ECU may have a malfunction.

(e) Using an oscilloscope, check the signal waveform of the ECU.

(1) Waveform 1

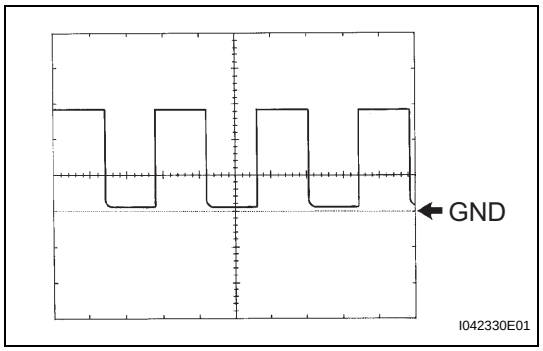
Waveform 1 (Reference):



Terminal No.	E8-9 (SPD) - Body ground
Tool Setting	5 V/DIV., 10 ms./DIV.
Vehicle Condition	Driving at approx. 20 km/h (12 mph)

HINT:

As the vehicle speed increases, the wavelength shortens.

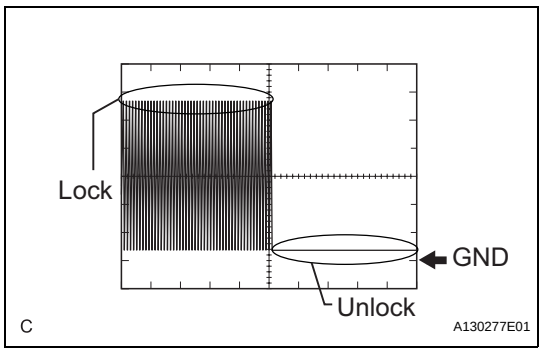


(2) Waveform 2

Waveform 2 (Reference):

Terminal No.	E8-8 (TACH) - Body ground
Tool Setting	5 V/DIV., 10 ms./DIV.
Vehicle Condition	Engine idling

HINT:
As the engine revolution speed increases, the wavelength shortens.

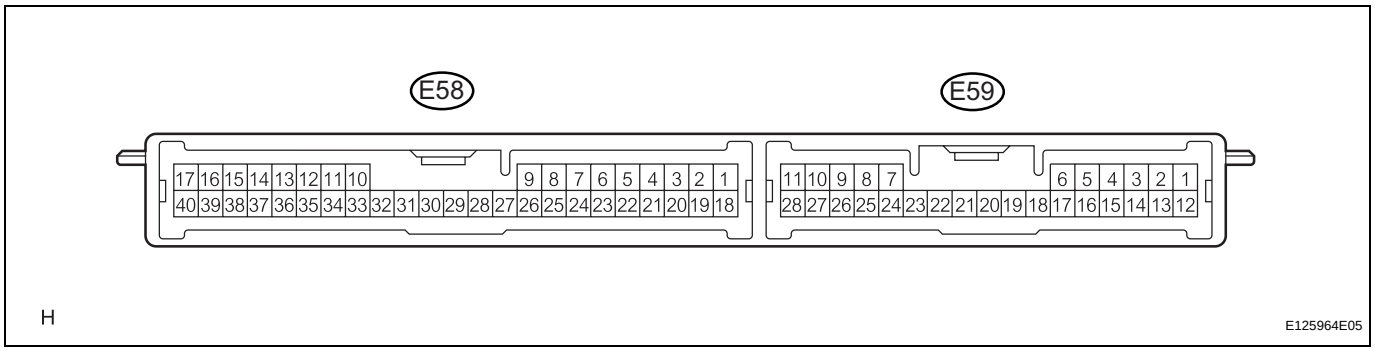


(3) Waveform 3

Waveform 3 (Reference):

Terminal No.	E7-18 (SLP) - Body ground
Tool Setting	2 V/DIV., 100 ms./DIV.
Vehicle Condition	Steering lock/unlock

2. CHECK CERTIFICATION ECU

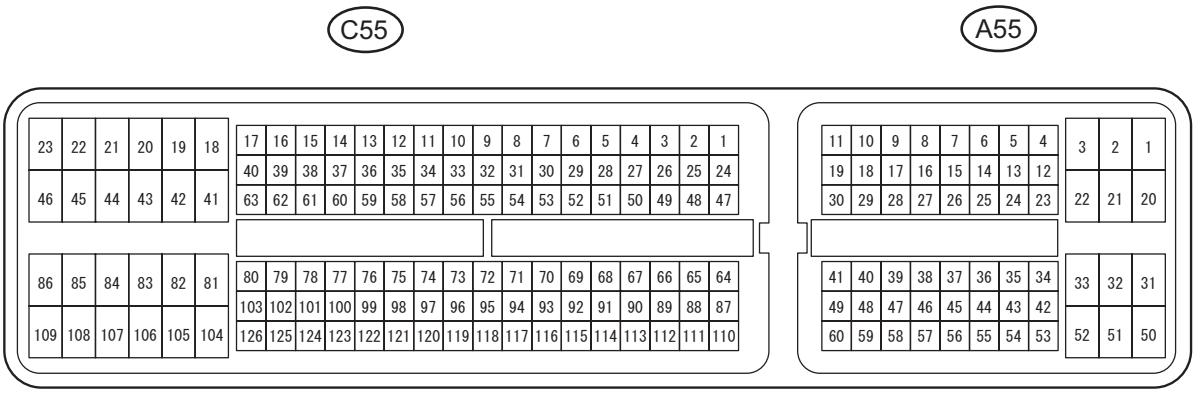


(a) Disconnect the E58 ECU connector.
(b) Measure the voltage and resistance of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
+B (E58-1) - Body ground	W - Body ground	+B power supply	Always	10 to 14 V
IG (E58-18) - Body ground	LG - Body ground	Ignition power supply	Engine switch on (IG)	10 to 14 V
IG (E58-18) - Body ground	LG - Body ground	Ignition power supply	Engine switch off	Below 1 V
LIN (E58-10) - Body ground	O - Body ground	LIN line	Always	10 kΩ or higher
E (E58-17) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

3. CHECK ECM



A107881E32

(a) Disconnect the C55 and A55 ECM connectors.
(b) Measure the voltage and resistance of the wire harness side connectors.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
+B (A55-2) - Body ground	R - Body ground	Power source of ECM	Engine switch on (IG)	10 to 14 V
+B2 (A55-1) - Body ground	R - Body ground	Power source of ECM	Engine switch on (IG)	10 to 14 V
IGSW (A55-28) - Body ground	Y - Body ground	Ignition switch signal	Engine switch on (IG)	10 to 14 V
E01 (C55-22) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
E02 (C55-21) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
E03 (C55-104) - Body ground	B - Body ground	Ground	Always	Below 1 Ω
E04 (C55-23) - Body ground	W - Body ground	Ground	Always	Below 1 Ω
E05 (C55-46) - Body ground	W - Body ground	Ground	Always	Below 1 Ω
E1 (C55-81) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
ME01 (C55-20) - Body ground	B - Body ground	Ground	Always	Below 1 Ω

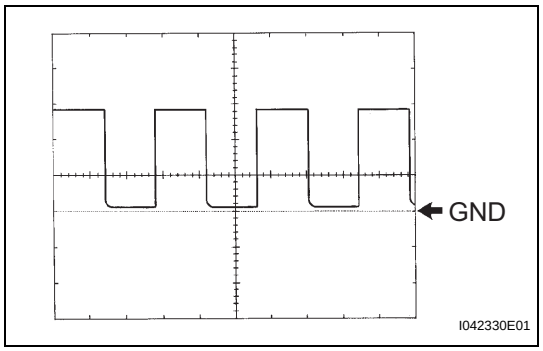
If the result is not as specified, there may be a malfunction on the wire harness side.
(c) Reconnect the ECM connectors.
(d) Measure the voltage of the connectors.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
STA (A55-48) - E1 (C55-81)	V - W-B	Starter relay operation signal	Cranking	10 to 14 V
ACCR (A55-13) - E1 (C55-81)	B - W-B	ACC relay cut signal (output)	Brake pedal depressed, shift lever P position, engine switch is pushed once → on (IG)	0.1 to 0.8 V *1 → Output voltage at terminal AM1 or AM2 is -2 V or more.
TACH (A55-15) - E1 (C55-81)	B - W-B	Engine revolution signal (output)	Idling	Pulse generation (see waveform 1)
STP (A55-36) - E1 (C55-81)	W - W-B	Stop light switch signal (input)	Brake pedal depressed	7.5 to 14 V
STP (A55-36) - E1 (C55-81)	W - W-B	Stop light switch signal (input)	Brake pedal released	Below 1.5 V
STAR (C55-63) - E1 (C55-81)	R - W-B	PNP switch signal (input)	Engine switch on (IG), shift position P or N	10 to 14 V

HINT:
*1: Voltage is output only when the engine is cranking.

ST

If the result is not as specified, the ECM may have a malfunction.



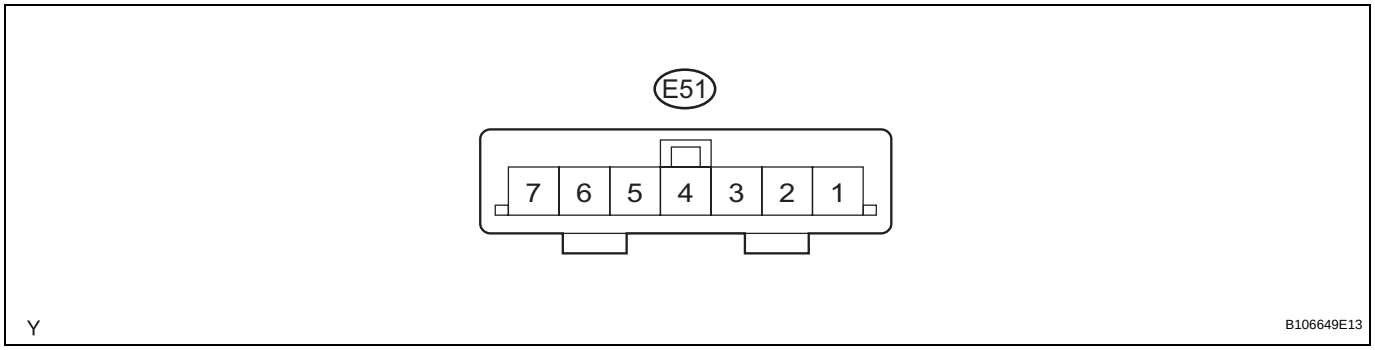
(e) Using an oscilloscope, check the signal waveform of the ECM.

Waveform 1 (Reference):

Terminal No.	A55-15 (TACH) - C55-81 (E1)
Tool Setting	5 V/DIV., 10 ms./DIV.
Vehicle Condition	Engine idling

HINT:
As the vehicle speed increases, the wavelength shortens.

4. CHECK STEERING LOCK ECU



(a) Disconnect the E51 ECU connector.
(b) Measure the voltage and resistance of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (E51-7) - Body ground	P - Body ground	+B power supply	Always	10 to 14 V
IG2 (E51-6) - Body ground	B - Body ground	Ignition power supply	Engine switch on (IG)	10 to 14 V
IG2 (E51-6) - Body ground	B - Body ground	Ignition power supply	Engine switch off	Below 1 V
GND (E51-1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
SGND (E51-2) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the E51 ECU connector.
(d) Measure the voltage of the connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
SLP1 (E51-4) - GND (E51-1)	P - W-B	Steering lock actuator position signal	Steering is locked	10 to 14 V
SLP1 (E51-4) - GND (E51-1)	P - W-B	Steering lock actuator position signal	Steering is released	Below 1 V

If the result is not as specified, the ECU may have a malfunction.

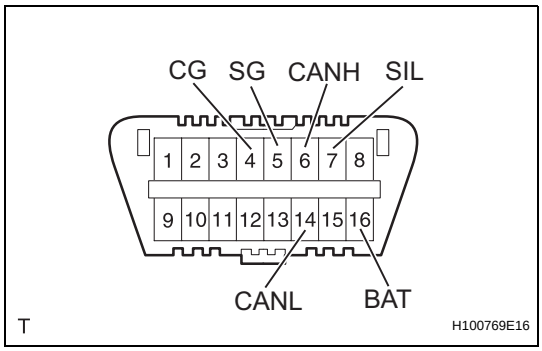
DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) Push-button start function data and the Diagnostic Trouble Codes (DTCs) can be read through the Data Link Connector 3 (DLC3) of the vehicle. When the function seems to be malfunctioning, use the intelligent tester to check for malfunctions and perform repairs.

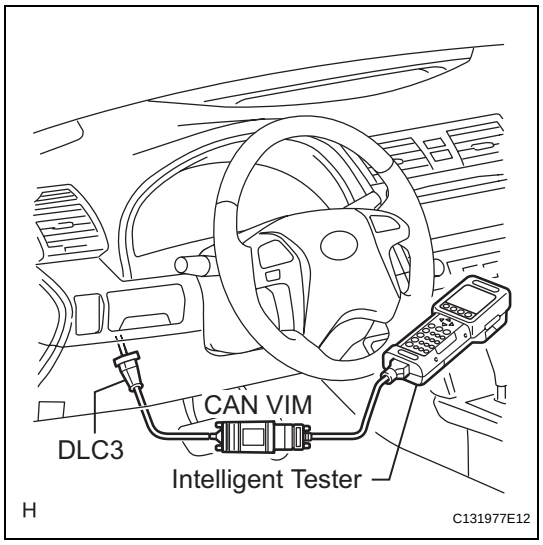
2. CHECK DLC3

HINT:
The ECU uses ISO 15765-4 communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.



Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Engine Switch OFF*	56 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Engine Switch OFF*	200 Ω or more
CANL (14) - CG (4)	LOW-level CAN bus line	Engine Switch OFF*	200 Ω or more
CANH (6) - BAT (16)	HIGH-level CAN bus line	Engine Switch OFF*	6 kΩ or more
CANL (14) - BAT (16)	LOW-level CAN bus line	Engine Switch OFF*	6 kΩ or more

NOTICE:
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the engine switch, any other switches or the doors.**
If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.



HINT:
Connect the cable of the intelligent tester to the DLC3, turn the engine switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

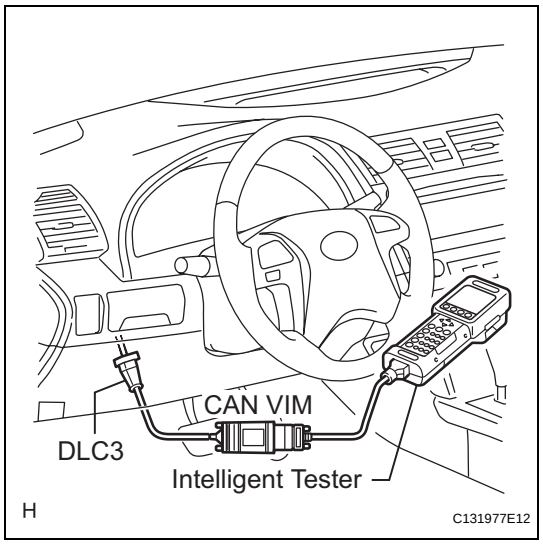
- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.

3. INSPECT BATTERY VOLTAGE

Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.



DTC CHECK / CLEAR

1. CHECK DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Enter the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Read the DTC by following the prompts on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

2. CLEAR DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Enter the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CLEAR CODES.
(d) Erase the DTC by following the directions on the tester screen.

HINT:
Refer to the intelligent tester operator's manual for further details.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the intelligent tester to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful as intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the DATA LIST information early in troubleshooting is one way to save diagnostic time.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
When using the intelligent tester with the engine switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 or less second intervals until communication between the tester and vehicle starts.

(b) Turn the engine switch on (IG).

(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST.

(d) Read the DATA LIST.

MAIN BODY:

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
ACC SW	Engine switch on (ACC) / ON or OFF	ON: Engine switch on (ACC) OFF: Engine switch off	-
IG SW	Engine switch on (IG) / ON or OFF	ON: Engine switch on (IG) OFF: Engine switch off	-
SHIFT P SIG	Shift P position signal / ON or OFF	ON: Shift position is P OFF: Shift position is not P	-
STR UNLOCK SW	Steering lock condition / ON or OFF	ON: Steering is unlocked OFF: Steering is locked	-
STOP LAMP SW	Stop light switch / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
STSW1	Start switch 1 / ON or OFF	ON: Engine switch is pushed OFF: Engine switch is not pushed	-
START SW2	Start switch 2 / ON or OFF	ON: Engine switch is pushed OFF: Engine switch is not pushed	-
N SW / C SW	Neutral start switch / ON or OFF	ON: Shift position is P or N OFF: Shift position is neither P nor N	-
RATCH CIRCUIT	Ratch circuit / ON or OFF	ON: Engine switch on (IG) or engine running OFF: Engine switch off or on (ACC)	-
IG1 RELAY MON1	IG1 outer relay monitor / ON or OFF	ON: Engine switch on (IG) OFF: Engine switch off	-
IG1 RELAY MON2	IG1 inner relay monitor / ON or OFF	ON: Engine switch on (IG) OFF: Engine switch off	-
IG2 RELAY MON1	IG2 outer relay monitor / ON or OFF	ON: Engine switch on (IG) OFF: Engine switch off	-
IG2 RELAY MON2	IG2 inner relay monitor / ON or OFF	ON: Engine switch on (IG) OFF: Engine switch off	-
ST RELAY MON	STARTER relay monitor / ON or OFF	ON: Engine is cranking OFF: Engine is not cranking	Engine is cranking with engine switch on (IG) and shift lever in P or N

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
ST REQUEST SIG	Starter request signal monitor / ON or OFF	ON: ST relay is ON OFF: ST relay is OFF	Engine switch pressed and held with shift lever in P or N
ACC RELAY MON	ACC relay monitor / ON or OFF	ON: Engine switch on (ACC) OFF: Engine switch off	-
ACC CUT SIG	ACC relay cut signal / ON or OFF	ON: Engine is cranking OFF: Engine is not cranking	-
E/G COND	Engine condition / STOP or RUN	STOP: Engine is stopped RUN: Engine is running	-
VEHICLE SPD SIG	Vehicle speed signal / STOP or RUN	STOP: Vehicle is stopped RUN: Vehicle is running	-
PWR COND	Power supply condition / ALL, ACC ON, IG1 IG2, ST ON	ALL: All relays are OFF ACC ON: ACC relay is ON IG1: IG1 relay is ON IG2: IG2 relay is ON ST ON: ST request signal is ON	-
READY SIG	Ready Signal / ON or OFF or Unknown		-
COM ENTRY&STRT	Communication for certification ECU / OK or STOP	OK: Communication STOP: No communication	-

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows the relay, VSV, actuator and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3
(b) Turn the engine switch on (IG).
(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST.
(d) Perform the ACTIVE TEST according to the display on the tester.

MAIN BODY:

Item	Test Details	Diagnostic Note
LIGHTING IND	Indicator for lighting ON / OFF	-
IND CONDITION	Engine switch indicator Green / Amber / No Sig	-
STR LOCK PWR	Power supply for steering lock ECU ON / OFF	-

DIAGNOSTIC TROUBLE CODE CHART

PUSH-BUTTON START FUNCTION:

DTC No.	Detection Item	Trouble Area	See page
B2271	Ignition Hold Monitor Malfunction	1. AM2 fuse 2. Main body ECU (Instrument panel J/B) 3. Wire harness or connector	ST-31
B2272	Ignition 1 Monitor Malfunction	1. IG1 relay 2. Main body ECU (Instrument panel J/B) 3. Wire harness or connector	ST-34
B2273	Ignition 2 Monitor Malfunction	1. IG2 relay 2. Main body ECU (Instrument panel J/B) 3. Wire harness or connector	ST-39
B2274	ACC Monitor Malfunction	1. ACC relay 2. Main body ECU (Instrument panel J/B) 3. Wire harness or connector	ST-43
B2275	STSW Monitor Malfunction	1. ECM 2. Main body ECU (Instrument panel J/B) 3. Wire harness or connector	ST-48
B2276	ACCR Signal Circuit Malfunction	1. Main body ECU (Instrument panel J/B) 2. ECM 3. Wire harness or connector	ST-51
B2277	Detecting Vehicle Submersion	Main body ECU (Instrument panel J/B)	ST-54
B2278	Engine Switch Circuit Malfunction	1. Engine switch 2. Main body ECU (Instrument panel J/B) 3. Wire harness or connector	ST-55
B2281	"P" Signal Malfunction	1. Main body ECU (Instrument panel J/B) 2. Shift lock control ECU 3. Wire harness or connector	ST-60
B2282	Vehicle Speed Signal Malfunction	1. CAN communication system 2. Combination meter system 3. Main body ECU (Instrument panel J/B) 4. Wire harness or connector	ST-63
B2283	Vehicle Speed Sensor Malfunction	1. B2282 detection area 2. Combination meter 3. Speed sensor 4. Skid control ECU 5. Main body ECU (Instrument panel J/B) 6. Wire harness or connector	ST-69
B2284	Brake Signal Malfunction	1. Stop light switch 2. CAN communication system 3. ECM 4. Main body ECU (Instrument panel J/B) 5 Wire harness or connector	ST-72
B2285	Steering Lock Position Signal Circuit Malfunction	1. Main body ECU (Instrument panel J/B) 2. Steering lock ECU 3. Wire harness or connector	ST-77
B2286	Runnable Signal Malfunction	1. CAN communication system 2. ECM 3. Main body ECU (Instrument panel J/B) 4. Wire harness or connector	ST-81

DTC No.	Detection Item	Trouble Area	See page
B2287	LIN Communication Master Malfunction	1. Main body ECU (Instrument panel J/B) 2. Certification ECU 3. Wire harness or connector	ST-85
B2288	Steering Lock Signal Circuit Malfunction	1. Main body ECU (Instrument panel J/B) 2. Steering lock ECU 3. Wire harness or connector	ST-88
B2289	Key Collation Waiting Time Over	1. Main body ECU (Instrument panel J/B) 2. Engine immobiliser system 3. Wire harness or connector 4. Certification ECU	ST-91

ON-VEHICLE INSPECTION

1. CHECK POWER SOURCE MODE CHANGE FUNCTION

(a) Check the function of the engine switch.

(1) Check that power source mode changes in accordance with the conditions of the shift position and brake pedal.

Brake Pedal	Shift Lever	Power Source Mode Pattern
Depressed	P or N Position	When the engine switch is pushed once. • off → engine start • on (ACC) → engine start • on (IG) → engine start
Not depressed	P position	Each time the engine switch is pushed. • off → on (ACC) → on (IG) → off
	Except P Position	Each time the engine switch is pushed. • off → on (ACC) → on (IG) → on (ACC)
-	P Position	When the engine switch is pushed with power source mode on (IG) (engine running). • on (IG) → off
-	Except P Position	When the engine switch is pushed with power source mode on (IG) (engine running). • on (IG) → on (ACC)

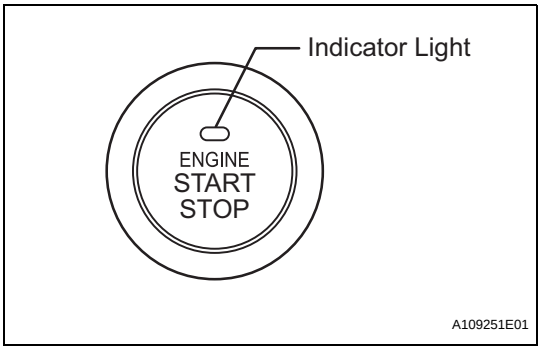
(b) Check if power source mode changes without pressing the engine switch.

(1) With power source mode on (ACC) and the shift position in P, wait for at least 1 hour. Check that power source mode changes from on (ACC) to off automatically.

2. CHECK INDICATOR CONDITION

(a) Check the indicator on the engine switch.

(1) Check that the engine switch indicator turns on and changes color according to the table below.



Power Source Mode/Condition	Indicator Light Condition	
	Brake pedal released	Brake pedal depressed, shift lever in P or N
off	OFF	ON (Green) (When key and vehicle IDs match)
on (ACC, IG)	ON (Amber)	ON (Green)
Engine running	OFF	OFF
Steering lock not unlocked	Flashes (Green) for 15 sec.	Flashes (Green) for 15 sec.
System malfunction	Flashes (Amber) for 15 sec.	Flashes (Amber) for 15 sec.

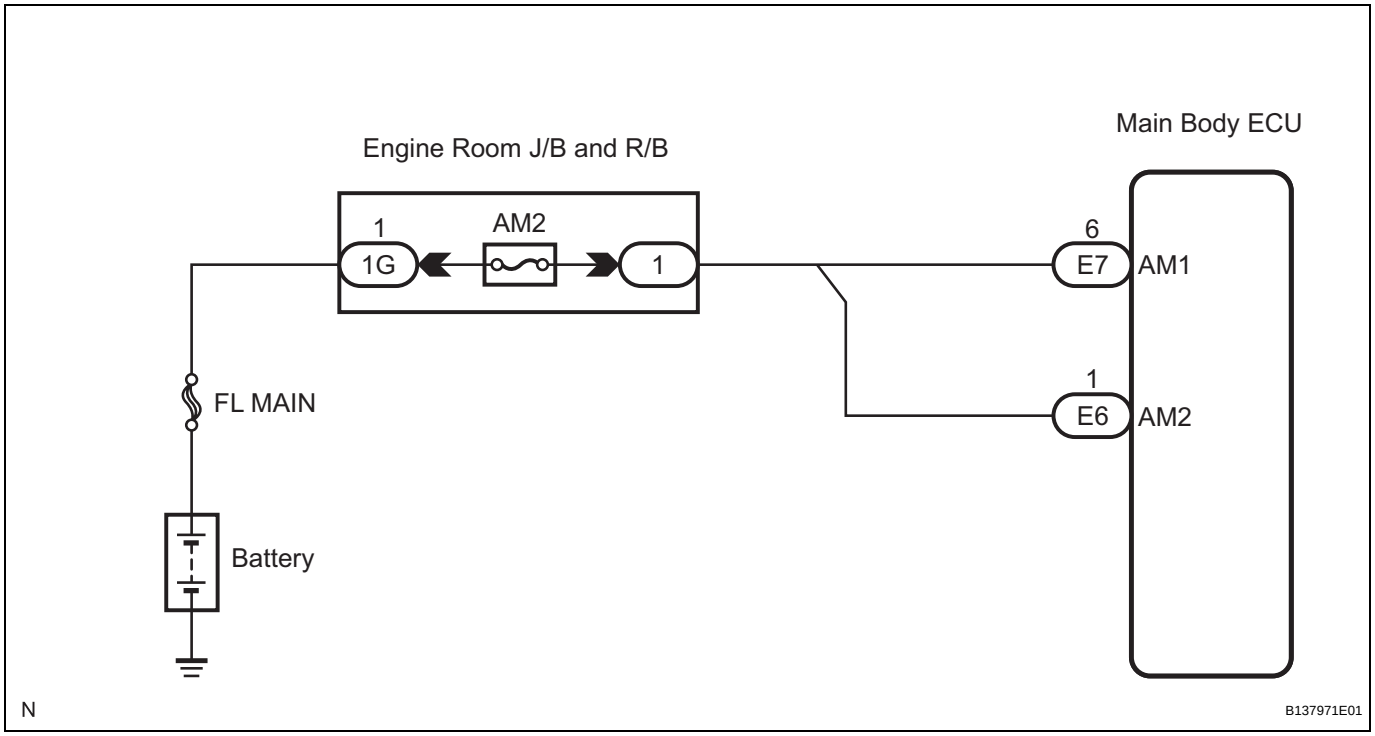
DTC	B2271	Ignition Hold Monitor Malfunction

DESCRIPTION

This DTC is output when a problem such as an open in the AM2 fuse, an open or short in the wire harness between the fuse and main body ECU, a short in the IG output circuit inside the main body ECU, a short between the main body ECU and relay, and a short in the relay is detected.
HINT:
When the main body ECU is replaced with a new one and the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.
After the main body ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-8).

DTC No.	DTC Detection Condition	Trouble Area
B2271	Hold circuit, IG1 relay actuation circuit or IG2 relay actuation circuit inside main body ECU is open or shorted	• AM2 fuse • Main body ECU • Wire harness or connector

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK DTC OUTPUT

(a) Delete the DTCs (See page ST-26).
HINT:
After all DTCs are cleared, check if the trouble occurs again 6 seconds after the engine switch is turned on (IG).
(b) Check for DTCs again.

ST

OK:
No DTC is output.

NG → **Go to step 2**

OK ↓

CHECK INTERMITTENT PROBLEMS

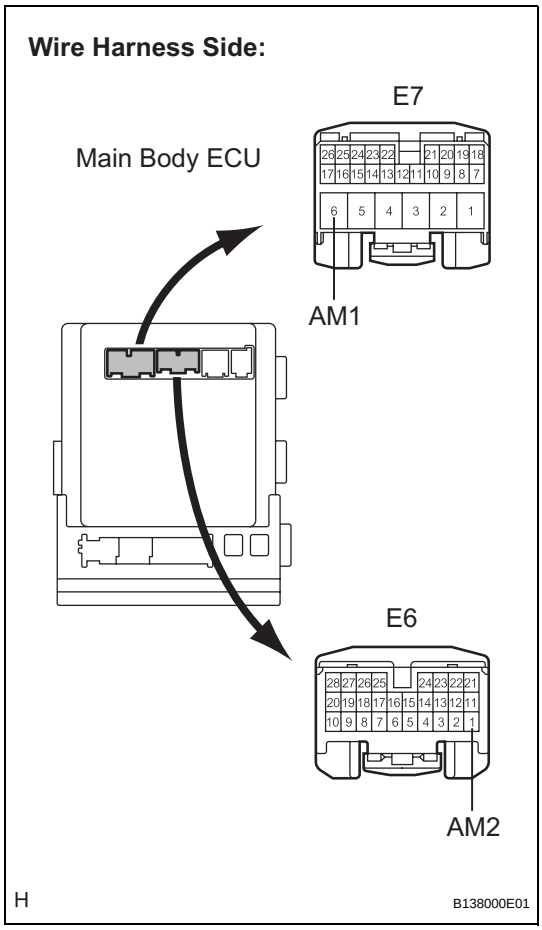
2 **INSPECT FUSE (AM2)**

(a) Remove the AM2 fuse from the engine room J/B.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK ↓

3 **CHECK WIRE HARNESS (MAIN BODY ECU - BATTERY)**



(a) Disconnect the E6 and E7 ECU connectors.
(b) Measure the voltage according to the value(s) in the table below.
Standard voltage

Terminal No. (Symbol)	Condition	Specified Condition
E7-6 (AM1) - Body ground	Always	10 to 14 V
E6-1 (AM2) - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

ST

OK

REPLACE MAIN BODY ECU

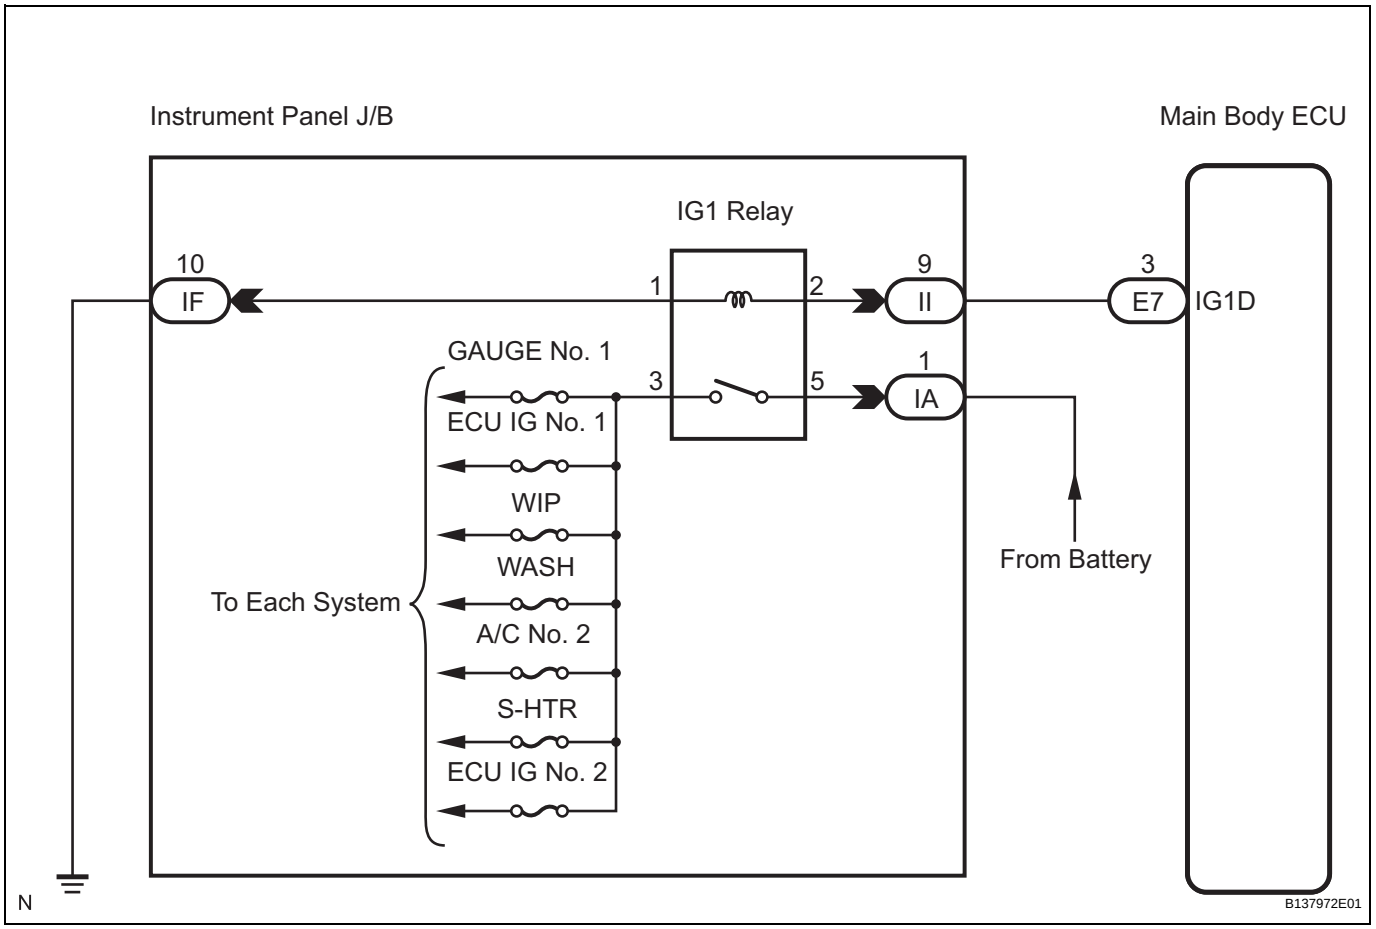
DTC	B2272	Ignition 1 Monitor Malfunction

DESCRIPTION

This DTC is output when there is a problem in the IG1D output circuit, which is from the inside of the main body ECU to the IG1 relay.
HINT:
When the main body ECU is replaced with a new one and the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.
After the main body ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-8).

DTC No.	DTC Detection Condition	Trouble Area
B2272	IG1 relay actuation circuit inside main body ECU or other related circuit is malfunctioning	• Main body ECU • IG1 relay • Wire harness or connector

WIRING DIAGRAM



ST

INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.

(b) Turn the engine switch on (IG) and turn the intelligent tester main switch on.

(c) Select the item below in the Data List, and read the display on the tester.
HINT:
When using the intelligent tester with the engine switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 second intervals or less until communication between the tester and vehicle starts.

MAIN BODY:

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
IG1 RELAY MON1	Status of IG1 relay monitor (outer) / ON or OFF	ON: Engine switch on (IG) (IG1 relay is ON) OFF: Engine switch off (IG1 relay is OFF)	-

OK:
"OK" (engine switch on (IG)) appears on the screen.

NG → **Go to step 3**

OK ↓

2	CHECK ENGINE SWITCH CONDITION

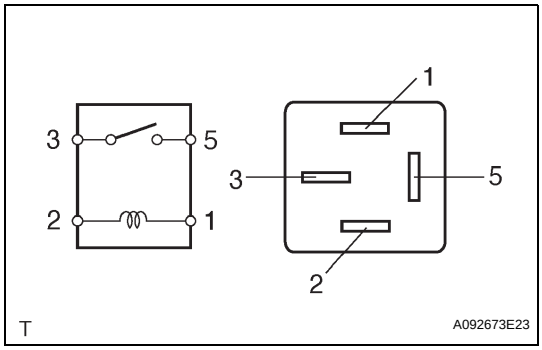
(a) Check the power source mode change.
(1) When the key is inside the vehicle and the shift lever is in the P position, check that pressing the engine switch causes the power source mode to change as follows:
OK:
off → on (ACC) → on (IG) → off
HINT:
- If power mode does not change to ON (IG and ACC) (See page ST-114).
- If power mode does not change to ON (IG) (See page ST-122).

NG → **GO TO OTHER PROBLEM**

OK ↓

ST

3 INSPECT RELAY (IG1 RELAY)



(a) Remove the IG1 relay from the instrument panel J/B.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

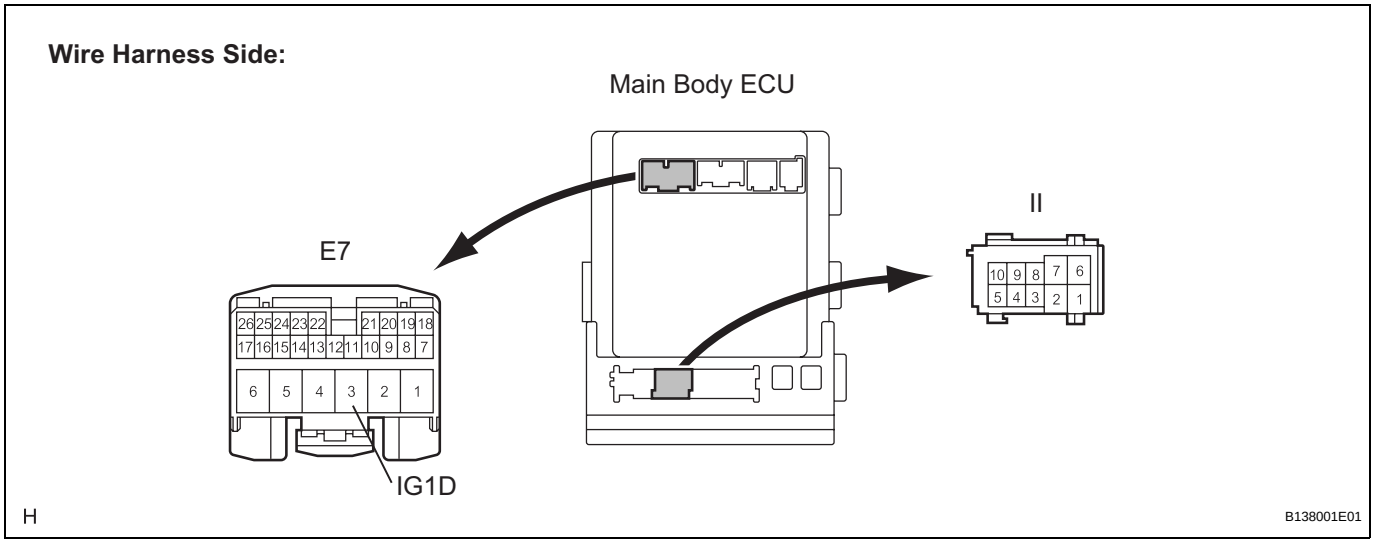
Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

NG → REPLACE RELAY

OK

4 CHECK WIRE HARNESS (INSTRUMENT PANEL J/B - MAIN BODY ECU)

(a) Disconnect the II J/B connector.



(b) Disconnect the E7 ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

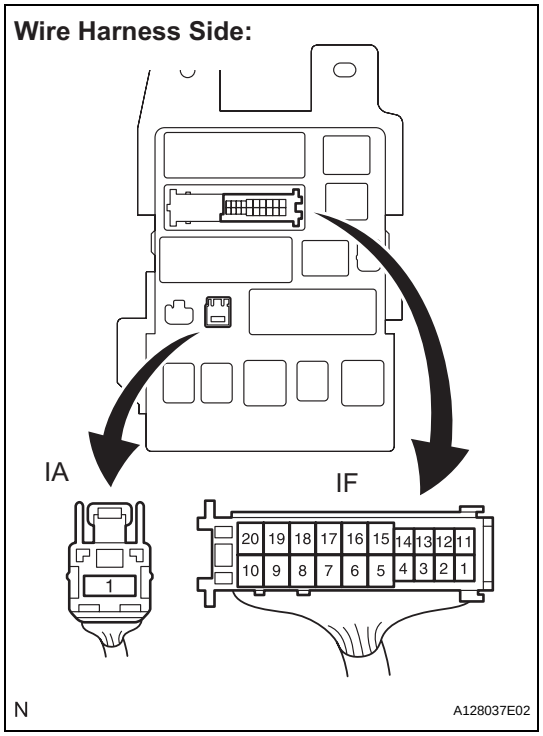
Terminal No. (Symbol)	Condition	Specified Condition
II-9 - E7-3 (IG1D)	Always	Below 1 Ω
E7-3 (IG1D) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

ST

5 CHECK WIRE HARNESS (INSTRUMENT PANEL J/B - BATTERY AND BODY GROUND)



(a) Disconnect the IF and IA J/B connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminal No.	Condition	Specified value
IF-10 - Body ground	Always	Below 1 Ω

(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

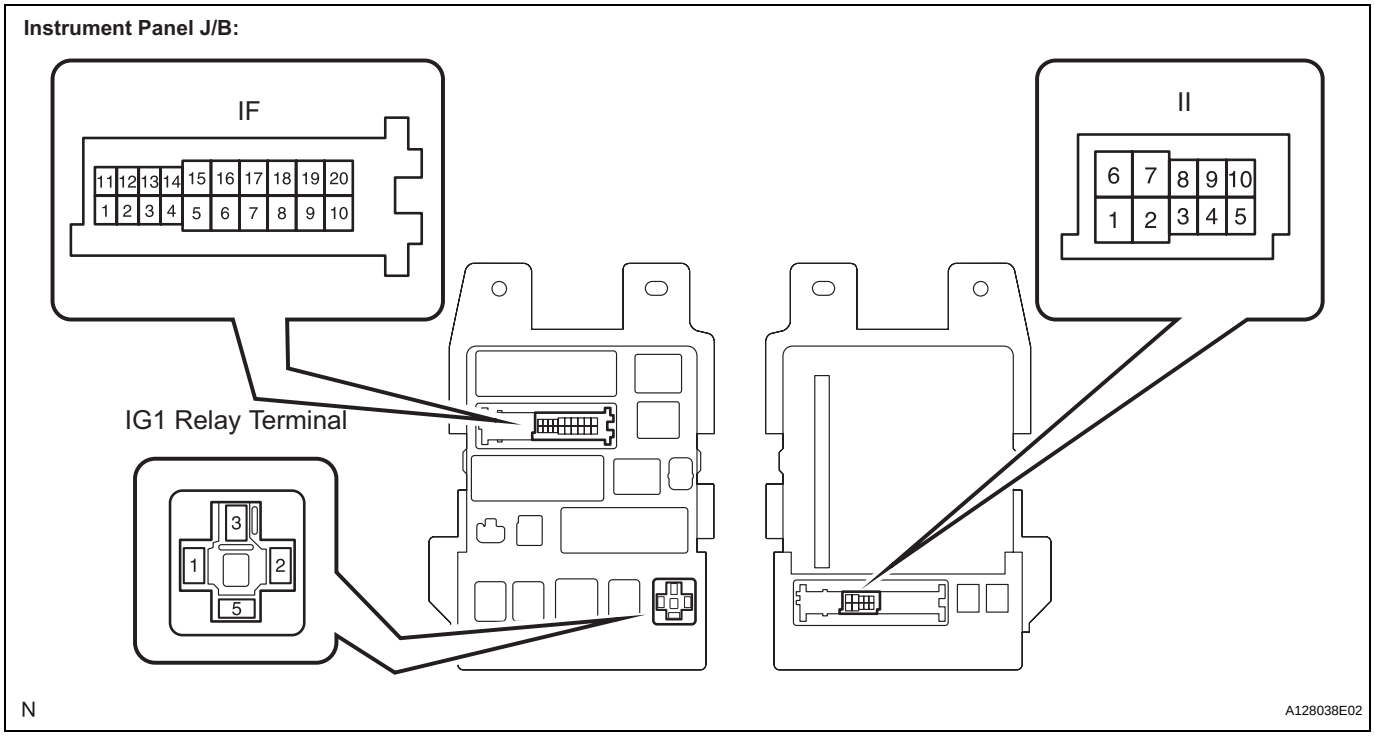
Terminal No.	Condition	Specified value
IA-1 - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6 INSPECT INSTRUMENT PANEL J/B

(a) Measure the resistance according to the value(s) in the table below.



ST

Standard resistance

Terminal No.	Condition	Specified value
IF-10 - IG1 relay terminal-1	Always	Below 1 Ω
II-9 - IG1 relay terminal-2	Always	Below 1 Ω
IF-10 - Body ground	Always	10 kΩ or higher
II-9 - Body ground	Always	10 kΩ or higher

NG → REPLACE INSTRUMENT PANEL J/B

OK

REPLACE MAIN BODY ECU

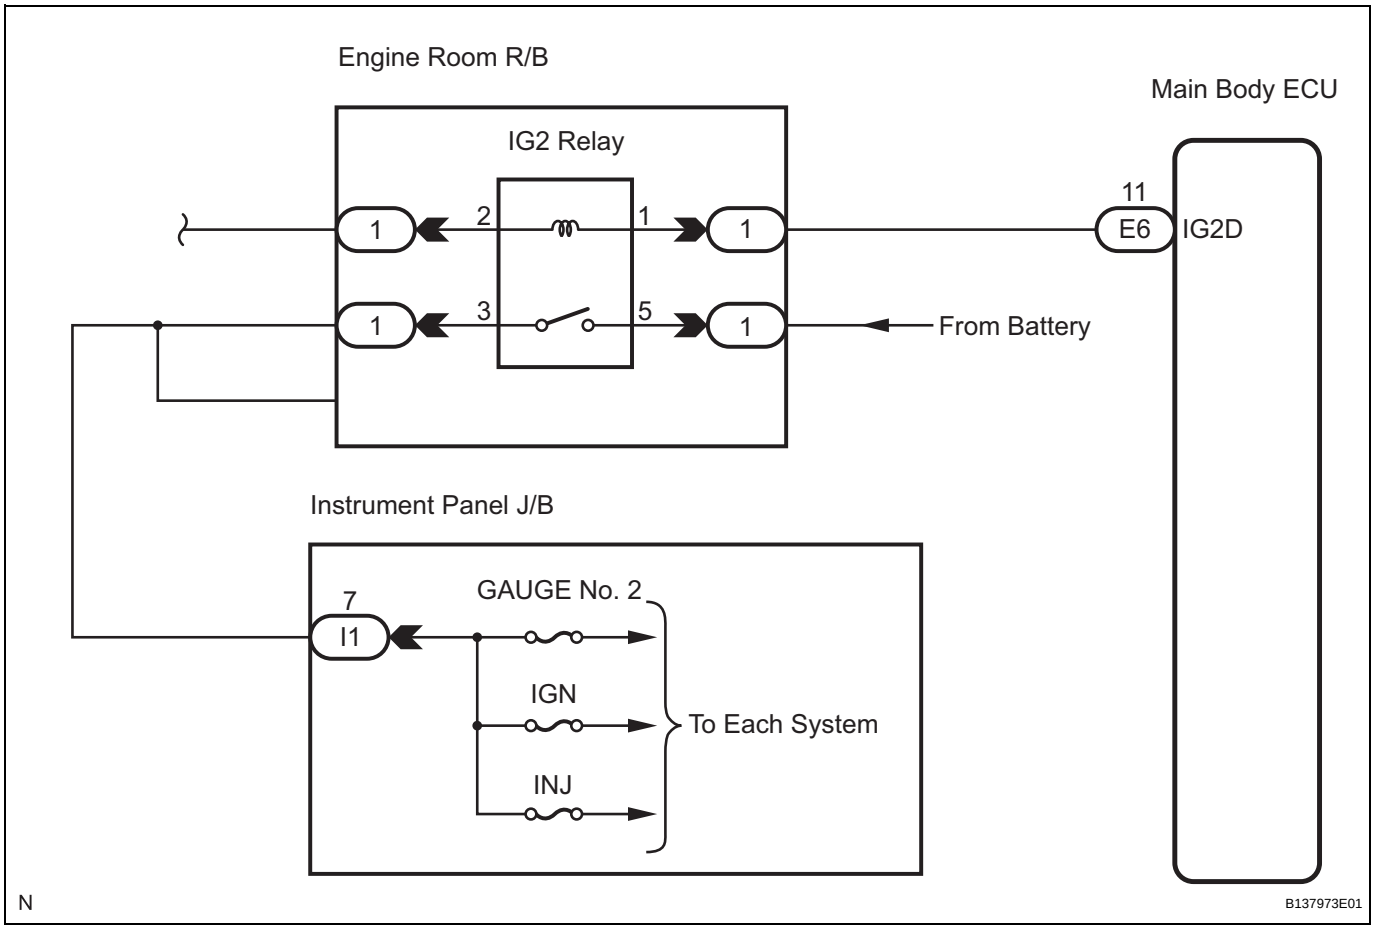
DTC	B2273	Ignition 2 Monitor Malfunction

DESCRIPTION

This DTC is output when there is a problem in the IG2D output circuit, which is from the inside of the main body ECU to the IG2 relay.
HINT:
When the main body ECU is replaced with a new one and the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.
After the main body ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-8).

DTC No.	DTC Detection Condition	Trouble Area
B2273	IG2 relay actuation circuit inside main body ECU or other related circuit is malfunctioning	• Main body ECU • IG2 relay • Wire harness or connector

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.

ST

(b) Turn the engine switch on (IG) and turn the intelligent tester main switch on.
(c) Read the Data List according to the displays on the tester.
HINT:
When using the intelligent tester with the engine switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 second intervals or less until communication between the tester and vehicle starts.

MAIN BODY:

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
IG2 RELAY MON1	Status of IG2 relay monitor (outer) / ON or OFF	ON: Engine switch on (IG) (IG2 relay is ON) OFF: Engine switch off (IG2 relay is OFF)	-

OK:
"ON" (Engine switch on (IG)) appears on the screen.

NG → **Go to step 3**

OK

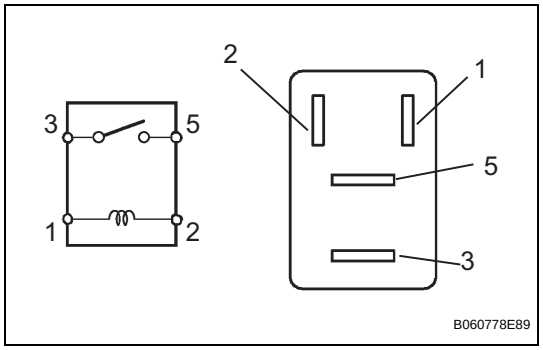
2 CHECK ENGINE SWITCH CONDITION

(a) Check the power source mode change.
(1) When the key is inside the vehicle and the shift lever is in the P position, check that pressing the engine switch causes the power source mode to change as follows:
OK:
off → on (ACC) → on (IG) → off
HINT:
- If power mode does not change to ON (IG and ACC) (See page ST-114).
- If power mode does not change to ON (IG) (See page ST-122).
- If power mode does not change to ON (ACC) (See page ST-131).

NG → **GO TO OTHER PROBLEM**

OK

3	INSPECT RELAY (IG2 RELAY)



(a) Remove the IG2 relay from the engine room R/B.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

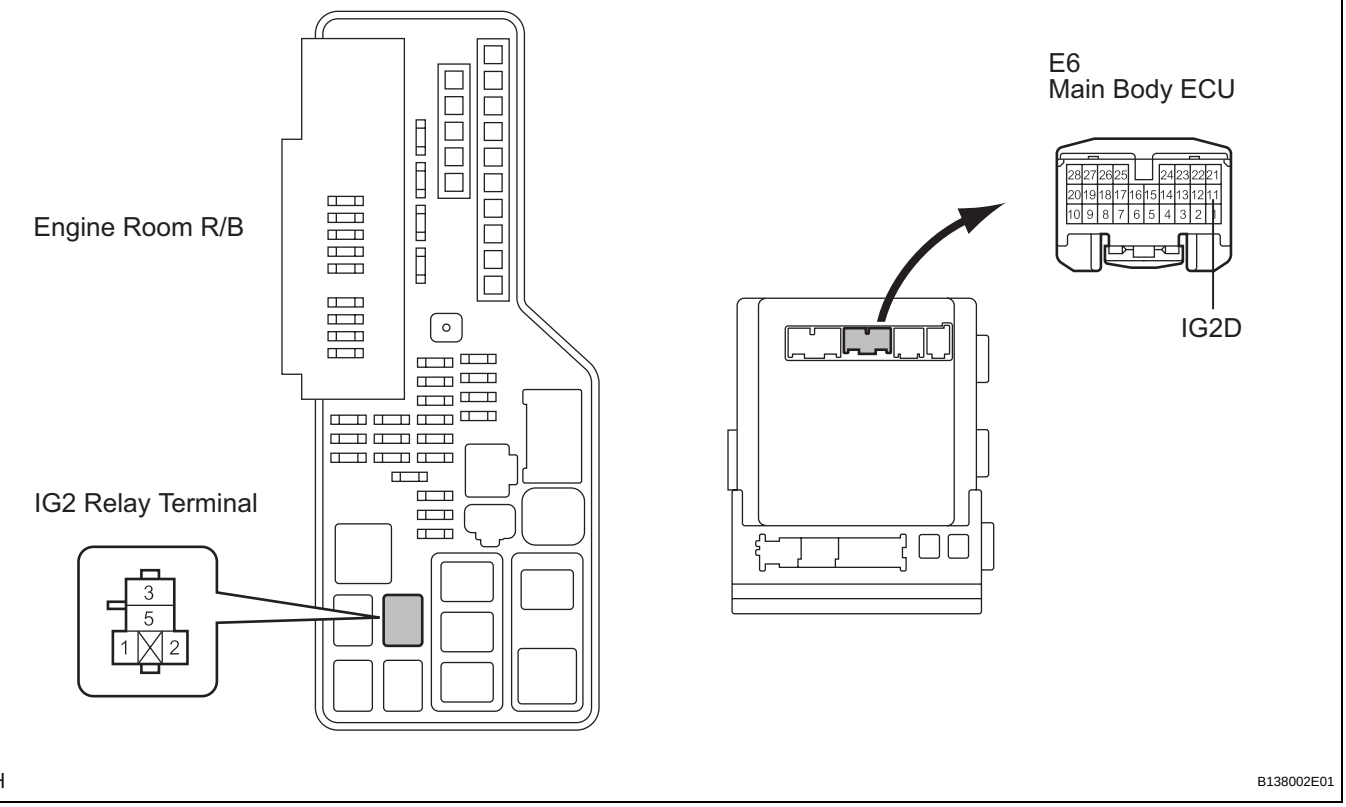
NG → REPLACE RELAY

OK

4	CHECK WIRE HARNESS (ENGINE ROOM R/B - MAIN BODY ECU AND BODY GROUND)

(a) Remove the IG2 relay from the engine room R/B.

Wire Harness Side:



(b) Disconnect the E6 ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

ST

Standard resistance

Terminal No. (Symbol)	Condition	Specified Condition
Engine Room R/B IG2 relay terminal 1 - E6-11 (IG2D)	Always	Below 1 Ω
Engine Room R/B IG2 relay terminal 2 - Body ground	Always	Below 1 Ω
E6-11 (IG2D) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MAIN BODY ECU

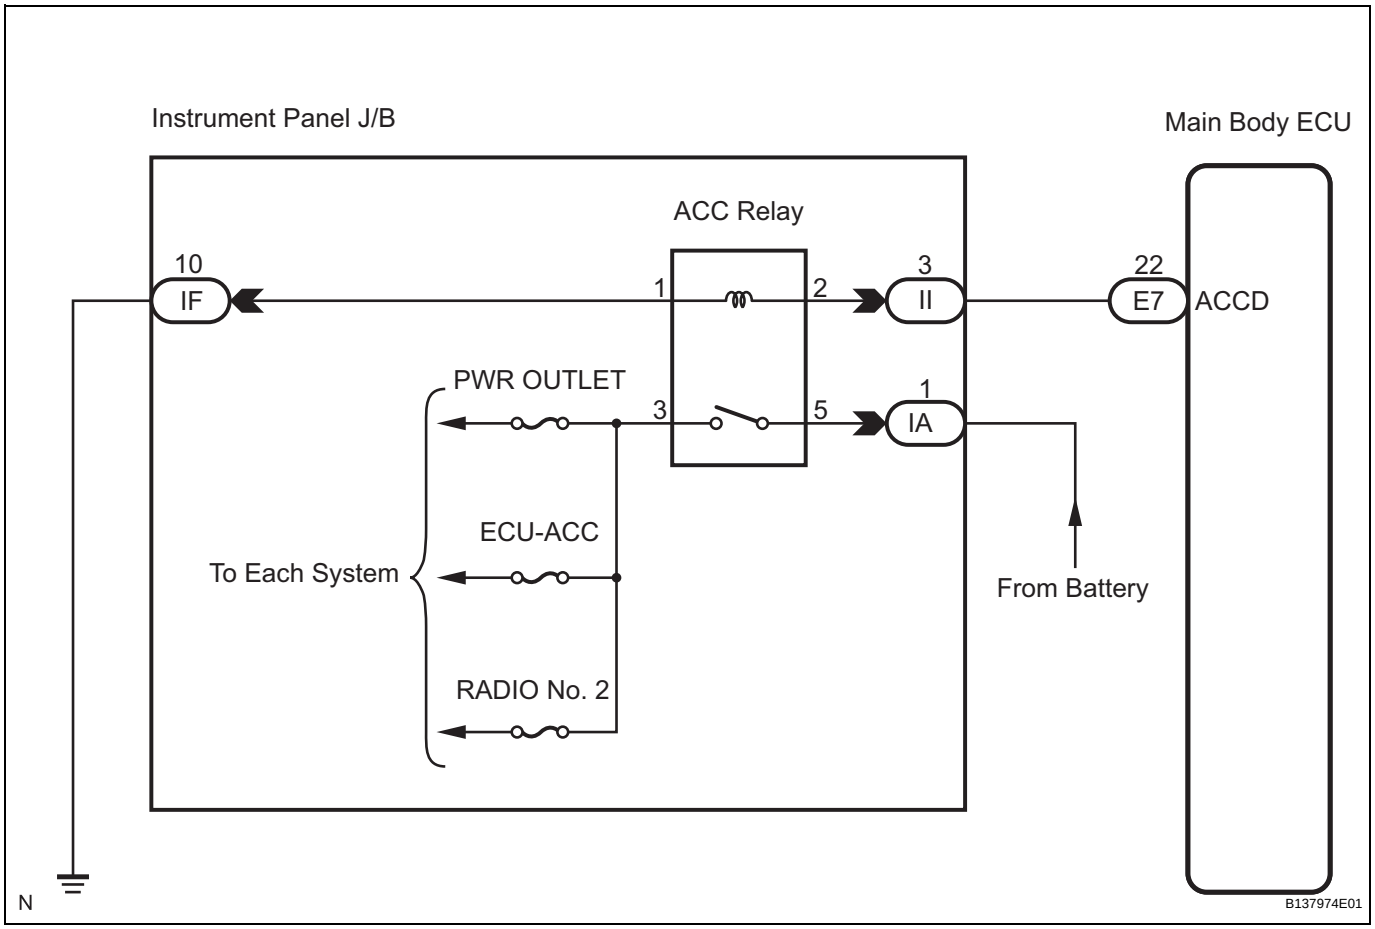
DTC	B2274	ACC Monitor Malfunction

DESCRIPTION

This DTC is output when there is a problem in the ACCD output circuit, which is from the inside of the main body ECU to the ACC relay.
HINT:
When the main body ECU is replaced with a new one and the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.
After the main body ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-8).

DTC No.	DTC Detection Condition	Trouble Area
B2274	ACC relay actuation circuit inside main body ECU or other related circuit is malfunctioning	• Main body ECU • ACC relay • Wire harness or connector

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.

ST

(b) Turn the engine switch on (IG) and turn the intelligent tester main switch on.
(c) Read the Data List according to the displays on the tester.
HINT:
When using the intelligent tester with the engine switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 second intervals or less until communication between the tester and vehicle starts.

MAIN BODY:

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
ACC RELAY MON	Status of ACC Relay Monitor / ON or OFF	ON: Engine switch on (ACC) OFF: Engine switch off	-

OK:
"ON" (engine switch on (ACC)) appears on the screen.

NG → **Go to step 3**

OK

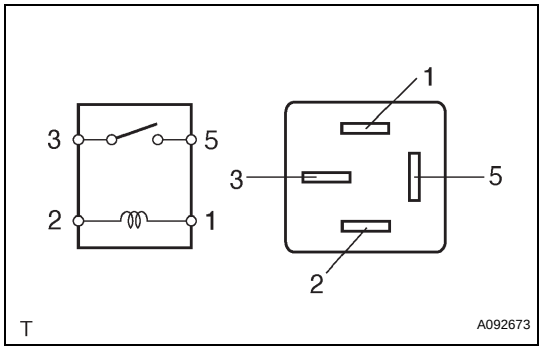
2 CHECK ENGINE SWITCH CONDITION

(a) Check the power source mode change.
(1) When the key is inside the vehicle and the shift lever is in the P position, check that pressing the engine switch causes the power source mode to change as follows:
OK:
off → on (ACC) → on (IG) → off
HINT:
- If power mode does not change to ON (IG and ACC) (See page ST-114).
- If power mode does not change to ON (IG) (See page ST-122).
- If power mode does not change to ON (ACC) (See page ST-131).

NG → **GO TO OTHER PROBLEM**

OK

3 INSPECT RELAY (ACC RELAY)



(a) Remove the ACC relay from the instrument panel J/B.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

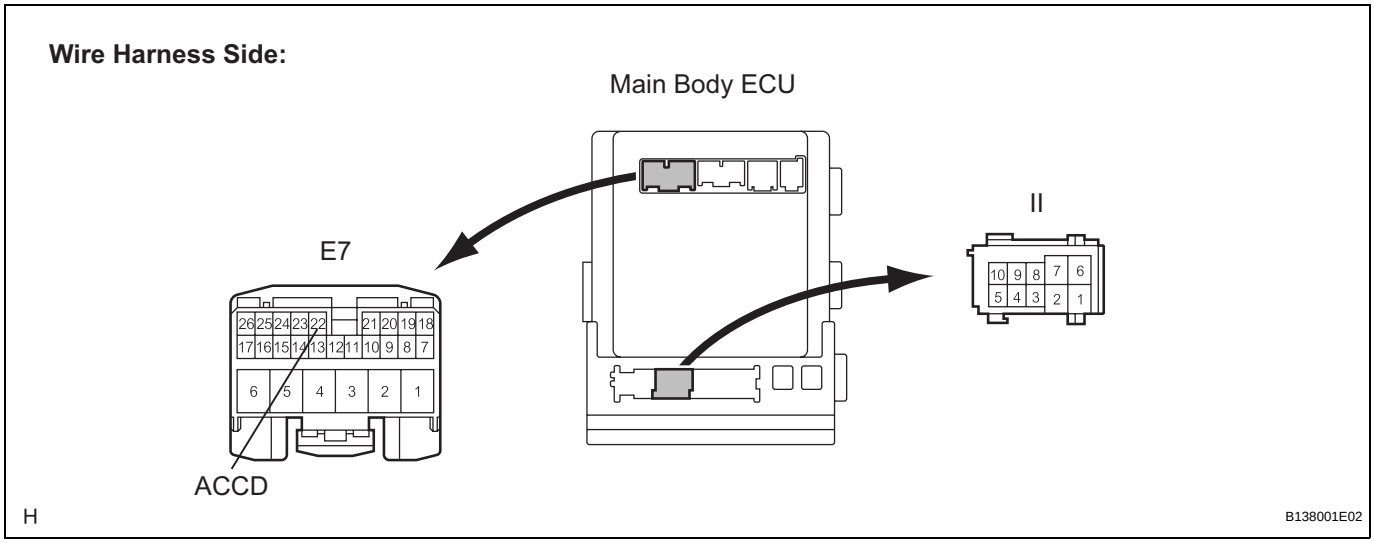
NG → REPLACE RELAY

OK

4 CHECK WIRE HARNESS (INSTRUMENT PANEL J/B - MAIN BODY ECU)

(a) Disconnect the E7 ECU connector.

Wire Harness Side:



(b) Disconnect the II J/B connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

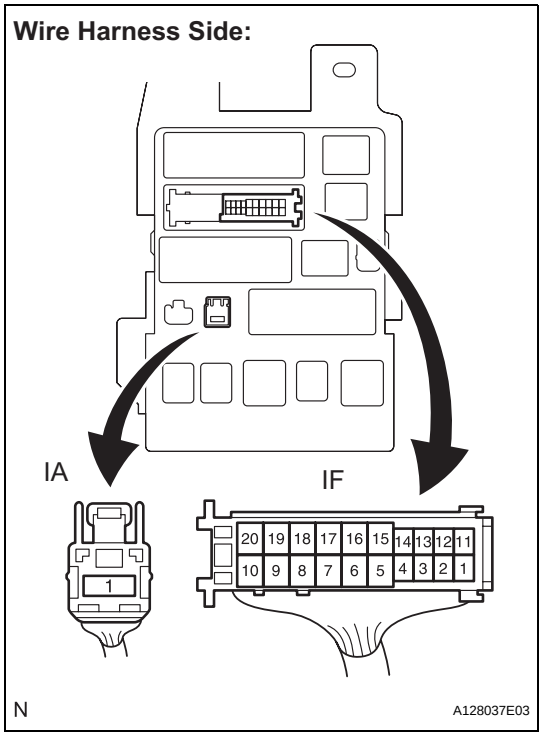
Terminal No. (Symbol)	Condition	Specified Condition
II-3 - E7-22 (ACCD)	Always	Below 1 Ω
E7-22 or II-3 - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

ST

5 CHECK WIRE HARNESS (INSTRUMENT PANEL J/B - BATTERY AND BODY GROUND)



(a) Disconnect the IF and IA J/B connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminal No.	Condition	Specified Condition
IF-10 - Body ground	Always	Below 1 Ω

(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

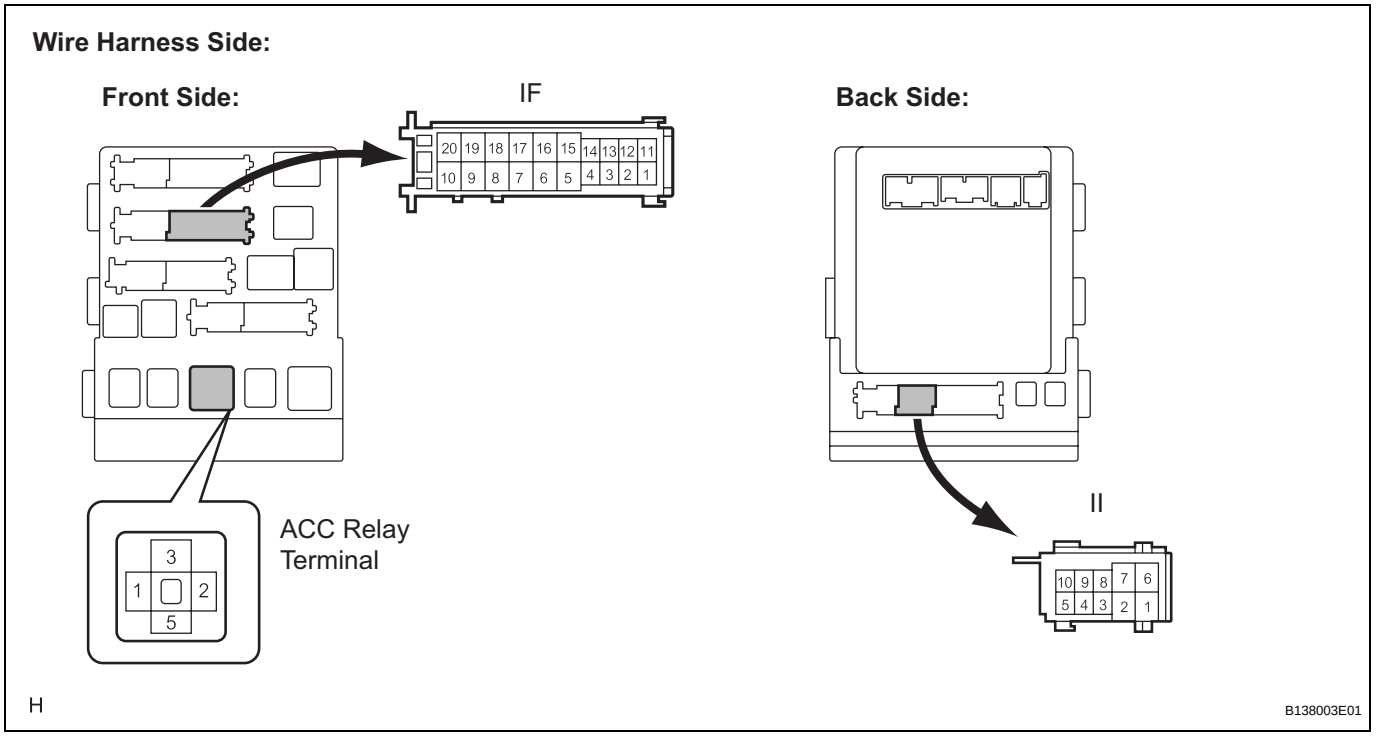
Terminal No.	Condition	Specified Condition
IA-1 - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6 INSPECT INSTRUMENT PANEL J/B

(a) Measure the resistance according to the value(s) in the table below.



ST

Standard resistance

Terminal No.	Condition	Specified Condition
ACC relay terminal 1 - IF-10	Always	Below 1 Ω
ACC relay terminal 2 - II-3	Always	Below 1 Ω
IF-10 - Body ground	Always	10 kΩ or higher
II-3 - Body ground	Always	10 kΩ or higher

NG → REPLACE INSTRUMENT PANEL J/B

OK

REPLACE MAIN BODY ECU

DTC	B2275	STSW Monitor Malfunction

DESCRIPTION

This DTC is output when there is an open, short, or any other problem in the engine start request output circuit inside the main body ECU or in the external circuit.
HINT:
When the main body ECU is replaced with a new one and the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.
After the main body ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-8).

DTC No.	DTC Detection Condition	Trouble Area
B2275	ST output circuit (engine starting request signal circuit) inside main body ECU or other related circuit is malfunctioning	• Main body ECU • ECM • Wire harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK DTC OUTPUT

(a) Delete the DTCs (See page ST-26).
HINT:
After all DTCs are cleared, turn the engine switch on (IG) and depress the brake pedal. After 15 seconds have elapsed, check if the trouble occurs again.
(b) Check for DTCs again.
OK:
No DTC is output.

NG	Go to step 2

ST

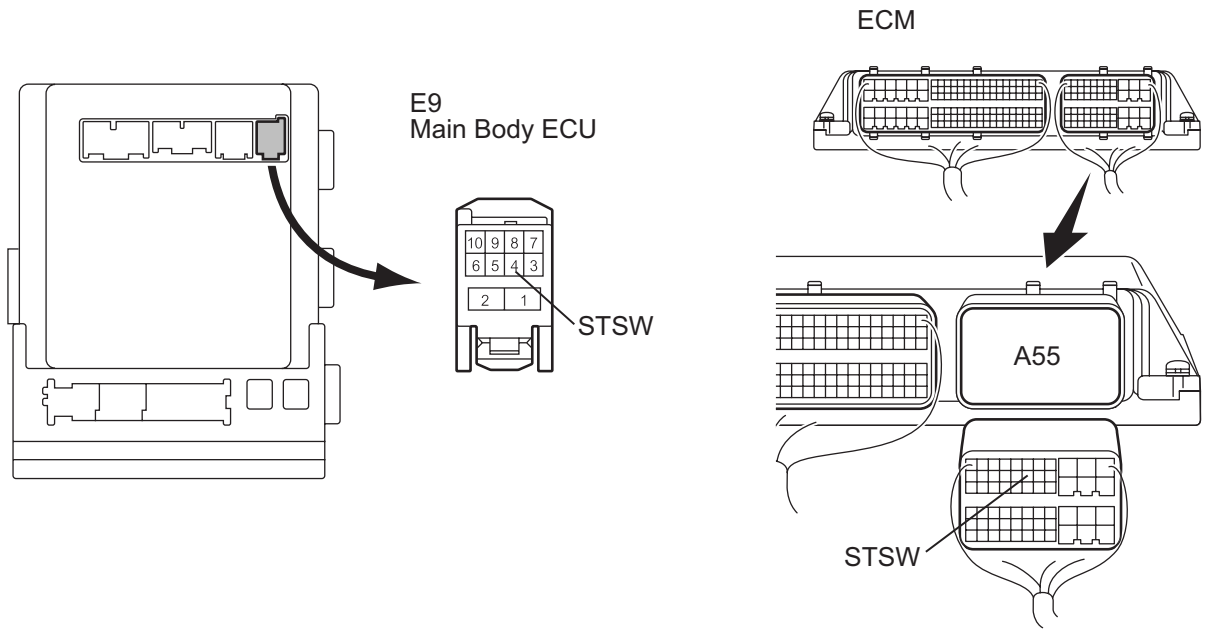
OK

CHECK INTERMITTENT PROBLEMS

2	CHECK WIRE HARNESS (MAIN BODY ECU - ECM)

(a) Disconnect the E9 ECU connector.

Wire Harness Side:



(b) Disconnect the A55 ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

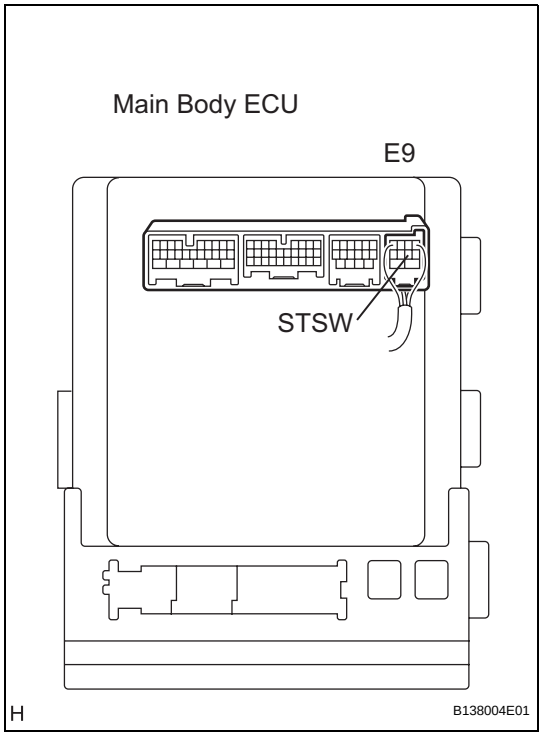
Terminal No. (Symbol)	Condition	Specified Condition
E9-4 (STSW) - A55-14 (STSW)	Always	Below 1 Ω
E9-4 (STSW) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

ST

3	INSPECT MAIN BODY ECU



(a) Reconnect the connectors.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Terminal No. (Symbol)	Condition	Specified Condition
E9-4 (STSW) - Body ground	Brake pedal depressed, Engine switch hold on (ST)	Output voltage at terminal AM1 or AM2 is -2 V or more.

NG → **REPLACE MAIN BODY ECU**

OK

4	CHECK MAIN BODY ECU OPERATION

(a) After replacing the main body ECU with a normally functioning ECU, check that the engine can start.

OK:

Engine can start normally.

NG → **GO TO ENGINE CONTROL SYSTEM**

OK

END (MAIN BODY ECU DEFECTIVE)

DTC	B2276	ACCR Signal Circuit Malfunction

DESCRIPTION

This DTC is output when the ACCR output circuit inside the main body ECU is open or shorted.
HINT:
When the main body ECU is replaced with a new one and the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.
After the main body ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-8).

DTC No.	DTC Detection Condition	Trouble Area
B2276	ACCR output circuit inside main body ECU or other related circuit is malfunctioning	• Main body ECU • ECM • Wire harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK DTC OUTPUT

(a) Delete the DTCs (See page ST-26).
HINT:
After all DTCs are cleared, check if the trouble occurs again 50 seconds after the engine switch is turned on (IG).
(b) Check for DTCs again.
OK:
No DTC B2276 is output.

NG → **Go to step 2**

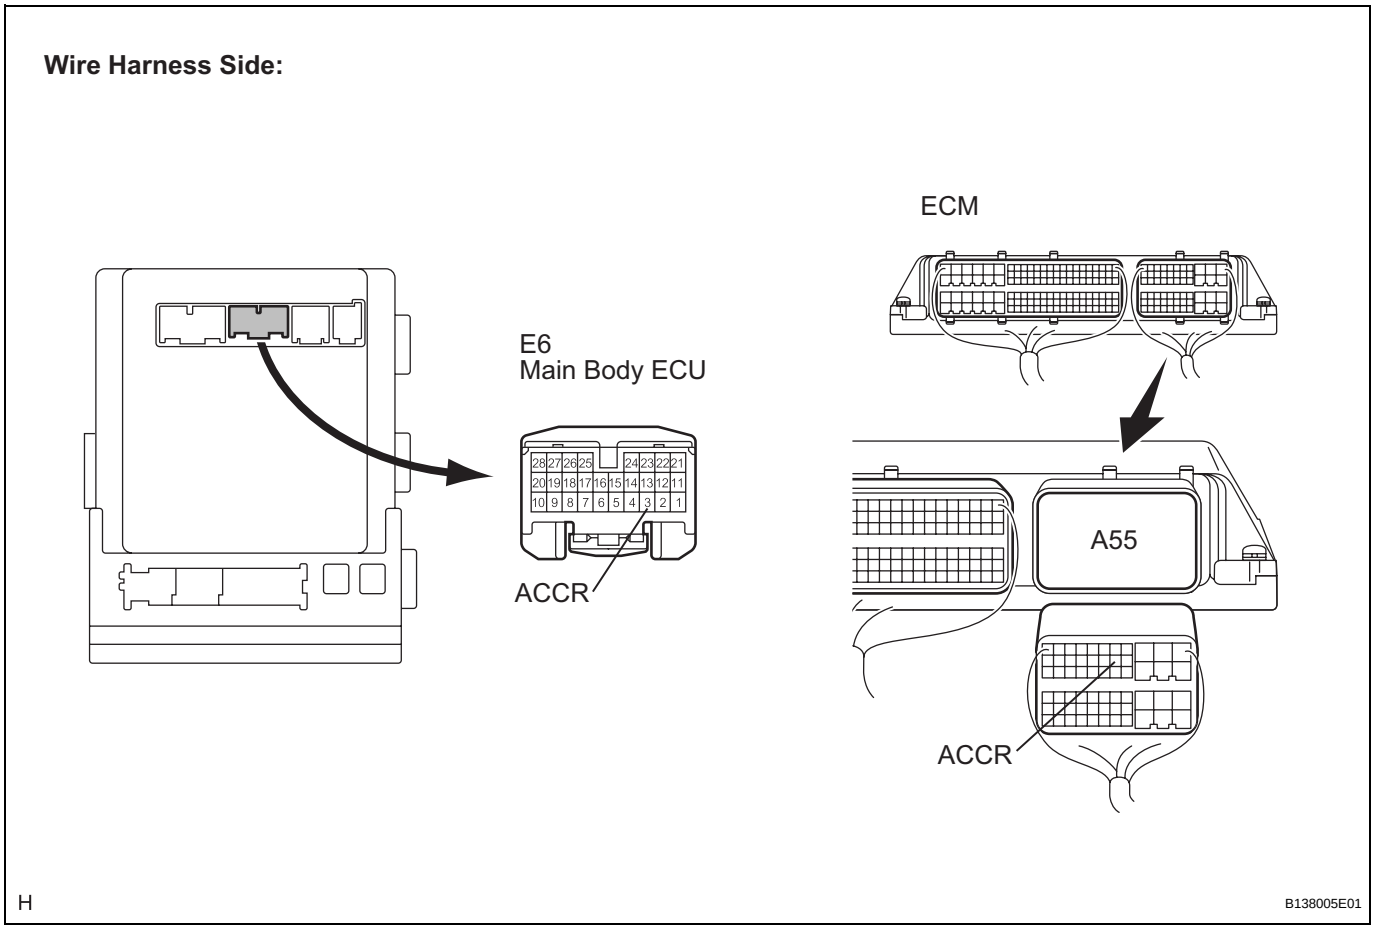
OK

CHECK INTERMITTENT PROBLEMS

ST

2	CHECK WIRE HARNESS (MAIN BODY ECU - ECM)

(a) Disconnect the E6 ECU connector.



(b) Disconnect the A55 ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

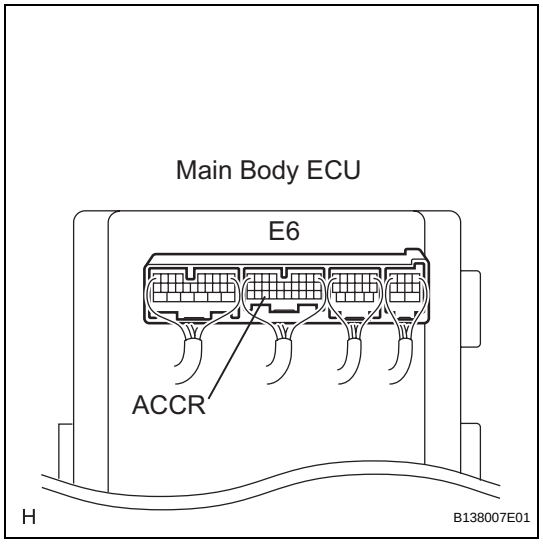
Standard resistance

Terminal No. (Symbol)	Condition	Specified Condition
E6-3 (ACCR) - A55-13 (ACCR)	Always	Below 1 Ω
E6-3 (ACCR) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	INSPECT MAIN BODY ECU



(a) Reconnect the connectors.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Terminal No. (Symbol)	Condition	Specified Condition
E6-3 (ACCR) - Body ground	Brake pedal depressed, shift P position, engine switch is pushed once → on (IG)	0.1 to 0.8 V → output voltage at terminal AM1 or AM2 is -2 V or more.

HINT:
Voltage is output only when the engine is cranking.

NG → **REPLACE MAIN BODY ECU**

OK

4	CHECK MAIN BODY ECU OPERATION

(a) After replacing the main body ECU with a normally functioning ECU, check that the engine starts.

OK:

Engine can start normally.

NG → **REPLACE ECM**

OK

END (MAIN BODY ECU DEFECTIVE)

DTC	B2277	Detecting Vehicle Submersion

DESCRIPTION

This DTC is output when the submersion circuit monitor inside the main body ECU detects that the vehicle is submerged in water.
HINT:
When the main body ECU is replaced with a new one and the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.
After the main body ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-8).

DTC No.	DTC Detection Condition	Trouble Area
B2277	Submersion circuit monitor inside main body ECU detects that vehicle is submerged in water	Main body ECU

INSPECTION PROCEDURE

1 CHECK FOR WATER DAMAGE

(a) Check the main body ECU, peripheral components, and wire harnesses for traces of water.
OK:
There are no traces of water.

NG → **TAKE APPROPRIATE MEASURES AGAINST CAUSE OF WATER DAMAGE AND REPLACE MAIN BODY ECU**

OK ↓

2 CHECK DTC OUTPUT

(a) Delete the DTCs (See page ST-26).
HINT:
After all DTCs are cleared, check if the trouble occurs again 30 seconds after the engine switch is turned on (IG).
(b) Check for DTCs again.
OK:
No DTC is output.

NG → **REPLACE MAIN BODY ECU**

OK ↓

END

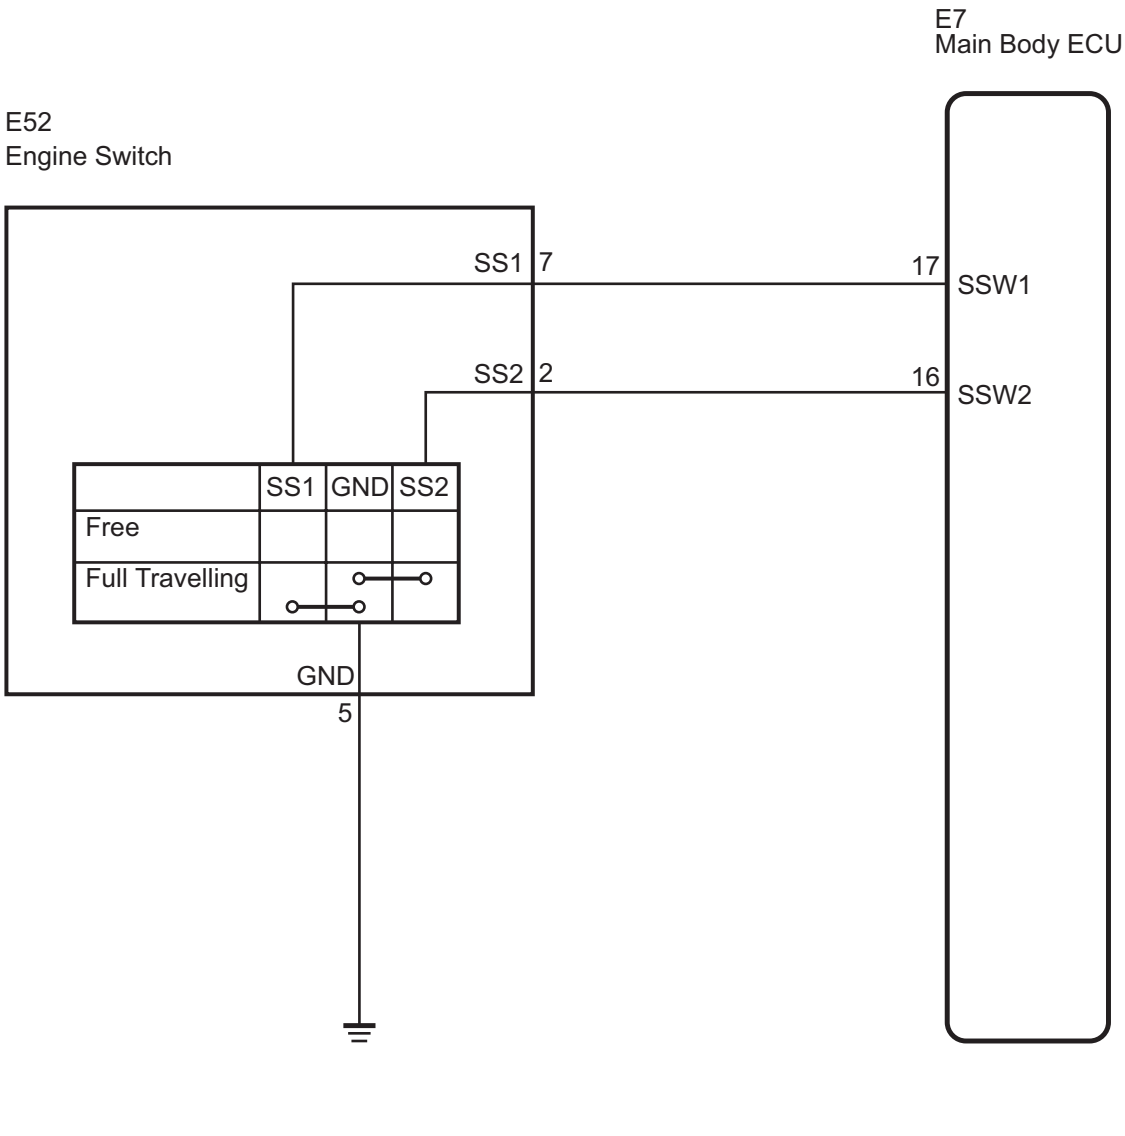
DTC	B2278	Engine Switch Circuit Malfunction

DESCRIPTION

This DTC is output when 1) a malfunction is detected between the main body ECU and the engine switch; or 2) either of the switches inside the engine switch is malfunctioning.
HINT:
When the main body ECU is replaced with a new one and the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.
After the main body ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-8).

DTC No.	DTC Detection Condition	Trouble Area
B2278	Communication is abnormal between the main body ECU and engine switch or the engine switch is defective	• Engine switch • Main body ECU • Wire harness or connector

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER (START SWITCH)

ST

(a) Connect the intelligent tester to the DLC3.
(b) Check the DATA LIST for proper functioning of the start switch.
HINT:
When using the intelligent tester with the engine switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 second intervals or less until communication between the tester and vehicle starts.

MAIN BODY:

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
STSW1	Start Switch 1/ON or OFF	ON: Engine switch on (IG) OFF: Engine switch off	-
START SW2	Start Switch 2/ON or OFF	ON: Engine switch on (IG) OFF: Engine switch off	-

OK:
ON (engine switch on (IG)) and OFF (engine switch off) appear on the screen.

OK → **Go to step 3**

NG

2 CHECK ENGINE SWITCH CONDITION

(a) Check the power source mode change.
(1) When the key is inside the vehicle and the shift lever is in the P position, check that pressing the engine switch causes the power source mode to change as follows:
OK:
off → on (ACC) → on (IG) → off
HINT:
- If power mode does not change to ON (IG and ACC) (See page ST-114).
- If power mode does not change to ON (IG) (See page ST-122).
- If power mode does not change to ON (ACC) (See page ST-131).

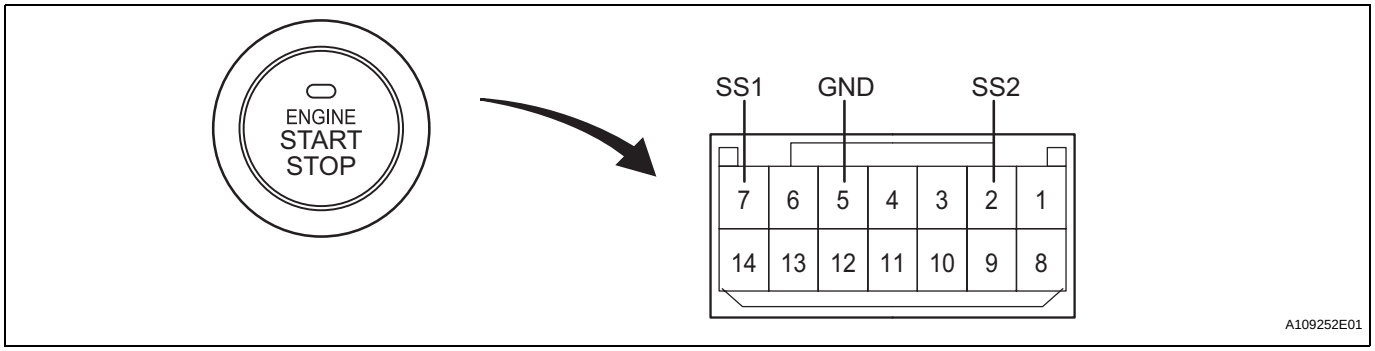
NG → **GO TO OTHER PROBLEM**

OK

END

3 INSPECT ENGINE SWITCH

(a) Remove the engine switch.



(b) Disconnect the switch connector.

ST

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Switch Condition	Specified Condition
7 (SS1) - 5 (GND)	Pushed	Below 1 Ω
2 (SS2) - 5 (GND)	Pushed	Below 1 Ω
7 (SS1) - 5 (GND)	Not pushed	10 kΩ or higher
2 (SS2) - 5 (GND)	Not pushed	10 kΩ or higher

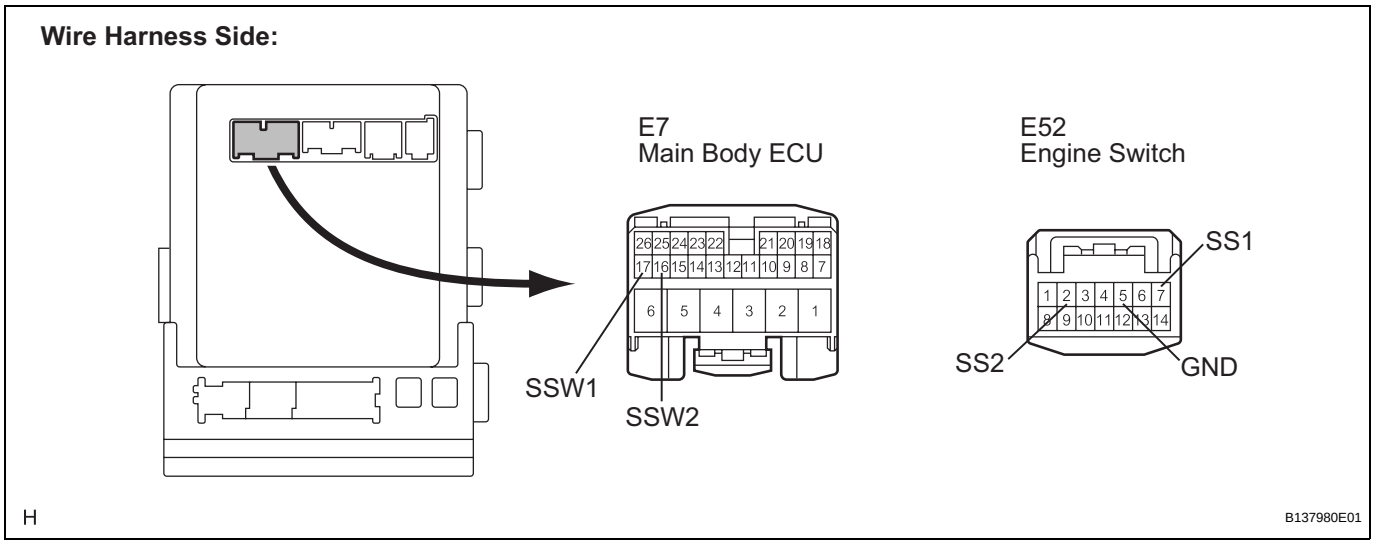
HINT:
This switch is a momentary type switch.

NG → **REPLACE ENGINE SWITCH**

OK

4 CHECK WIRE HARNESS (ENGINE SWITCH - MAIN BODY ECU AND BODY GROUND)

(a) Disconnect the E7 ECU connector.



(b) Disconnect the E52 switch connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E52-7 (SS1) - E7-17 (SSW1)	Always	Below 1 Ω
E52-2 (SS2) - E7-16 (SSW2)	Always	Below 1 Ω
E52-5 (GND) - Body ground	Always	Below 1 Ω
E52-7 (SS1) or E7-17 (SSW1) - Body ground	Always	10 kΩ or higher
E52-2 (SS2) or E7-16 (SSW2) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

ST

OK

REPLACE MAIN BODY ECU

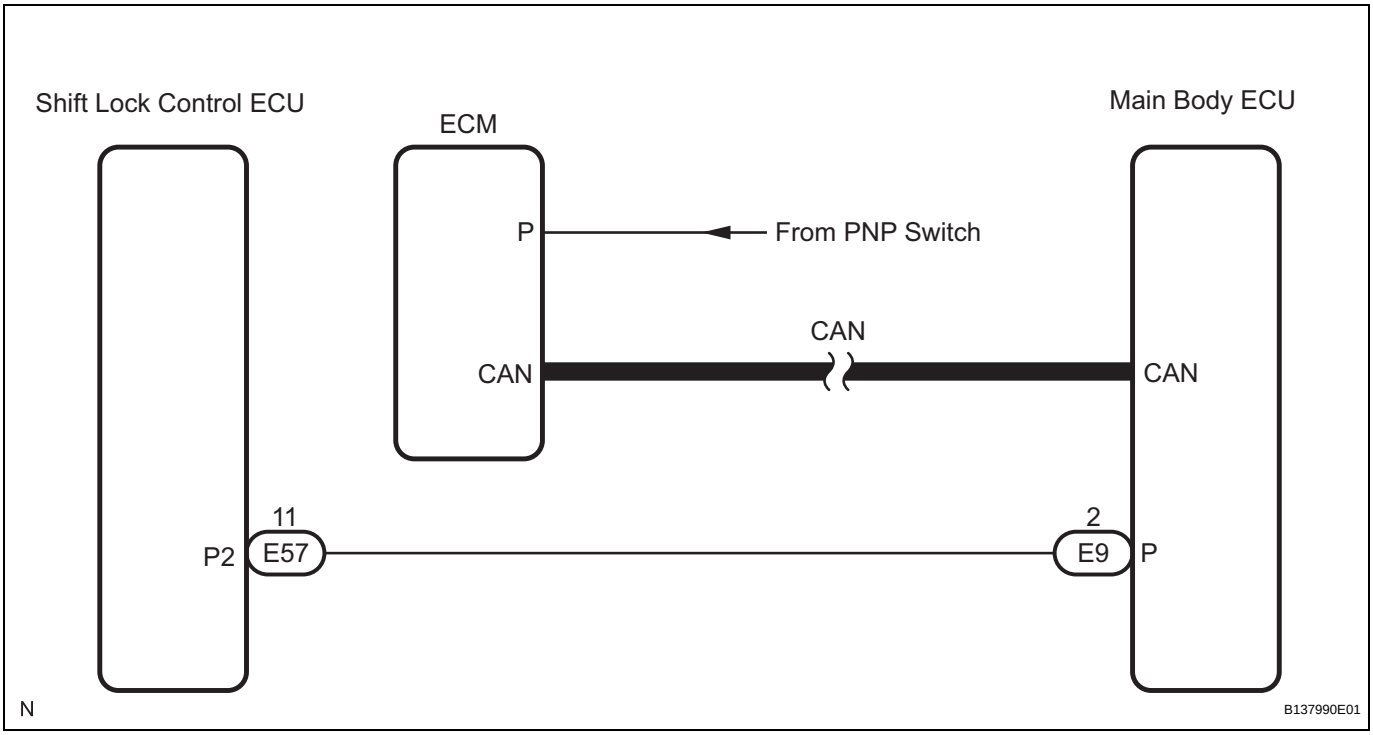
DTC	B2281	"P" Signal Malfunction

DESCRIPTION

The main body ECU and the shift lock control ECU are connected by a cable and the CAN. If the cable information and CAN information are inconsistent, this DTC will be output.
HINT:
After the main body ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-8).

DTC No.	DTC Detection Condition	Trouble Area
B2281	Cable information and CAN information between main body ECU and shift lock control ECU are inconsistent	• Main body ECU • Shift lock control ECU • Wire harness or connector

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG) and turn the intelligent tester main switch on.
(c) Read the DATA LIST according to the displays on the tester.

ST

MAIN BODY:

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
SHIFT P SIG	Shift P Signal / ON or OFF	ON: Shift P signal ON (Shift position is P) OFF: Shift P signal OFF (Shift position is not P)	-

OK:
"ON" (P signal is ON) and "OFF" (P signal is OFF) appear on the screen.

NG → **Go to step 2**

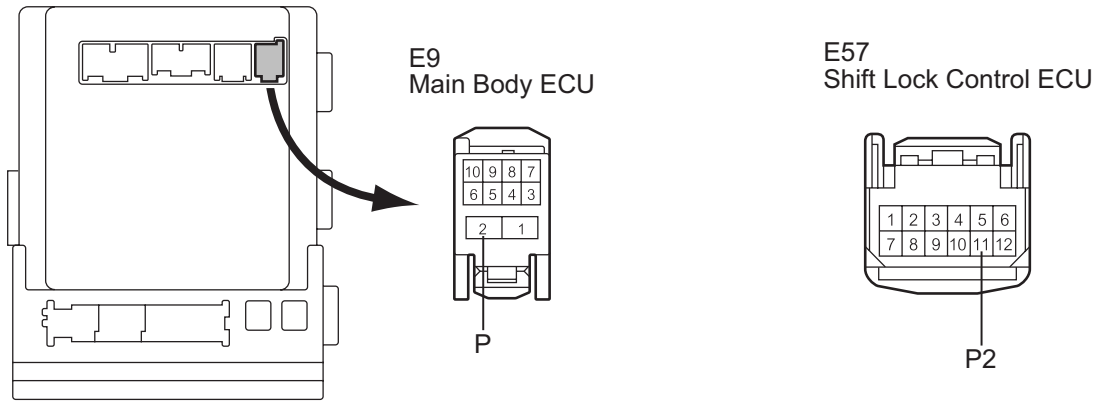
OK

GO TO SHIFT CONTROL SYSTEM

2 CHECK WIRE HARNESS (MAIN BODY ECU - SHIFT LOCK CONTROL ECU)

(a) Disconnect the E9 and E57 ECU connectors.

Wire Harness Side:



(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Terminal No. (Symbol)	Condition	Specified Condition
E9-2 (P) - E57-11 (P2)	Always	Below 1 Ω
E9-2 (P) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 CHECK MAIN BODY ECU OPERATION

(a) After replacing the main body ECU with a normally functioning ECU, check that the engine can start normally.

ST

OK:
Engine can start normally.

NG → **GO TO SHIFT CONTROL SYSTEM**

OK

END (MAIN BODY ECU DEFECTIVE)

DTC	B2282	Vehicle Speed Signal Malfunction

DESCRIPTION

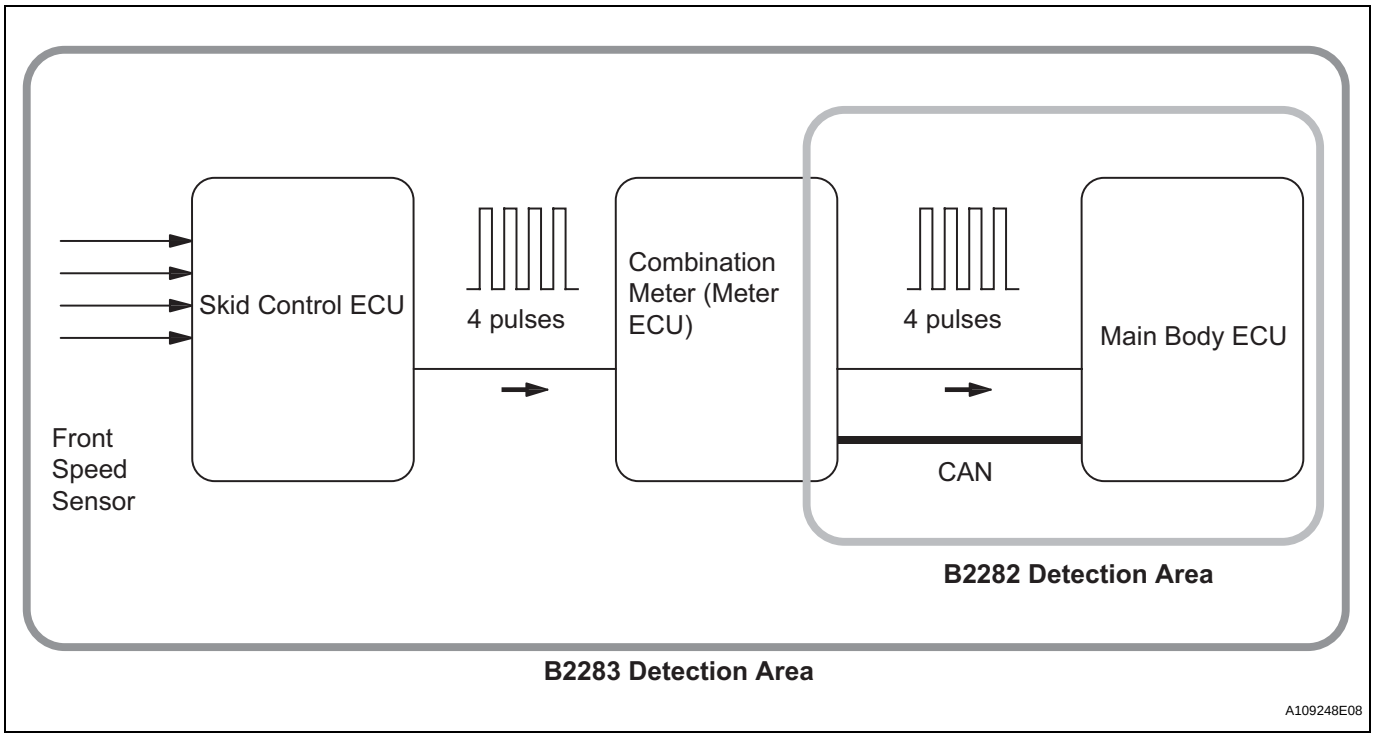
The main body ECU and the combination meter are connected by a cable and the CAN. DTC B2282 is output when: 1) the cable information and CAN information are inconsistent; and 2) a malfunction is detected between the vehicle speed sensor and combination meter.

HINT:

When the main body ECU is replaced with a new one and the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.

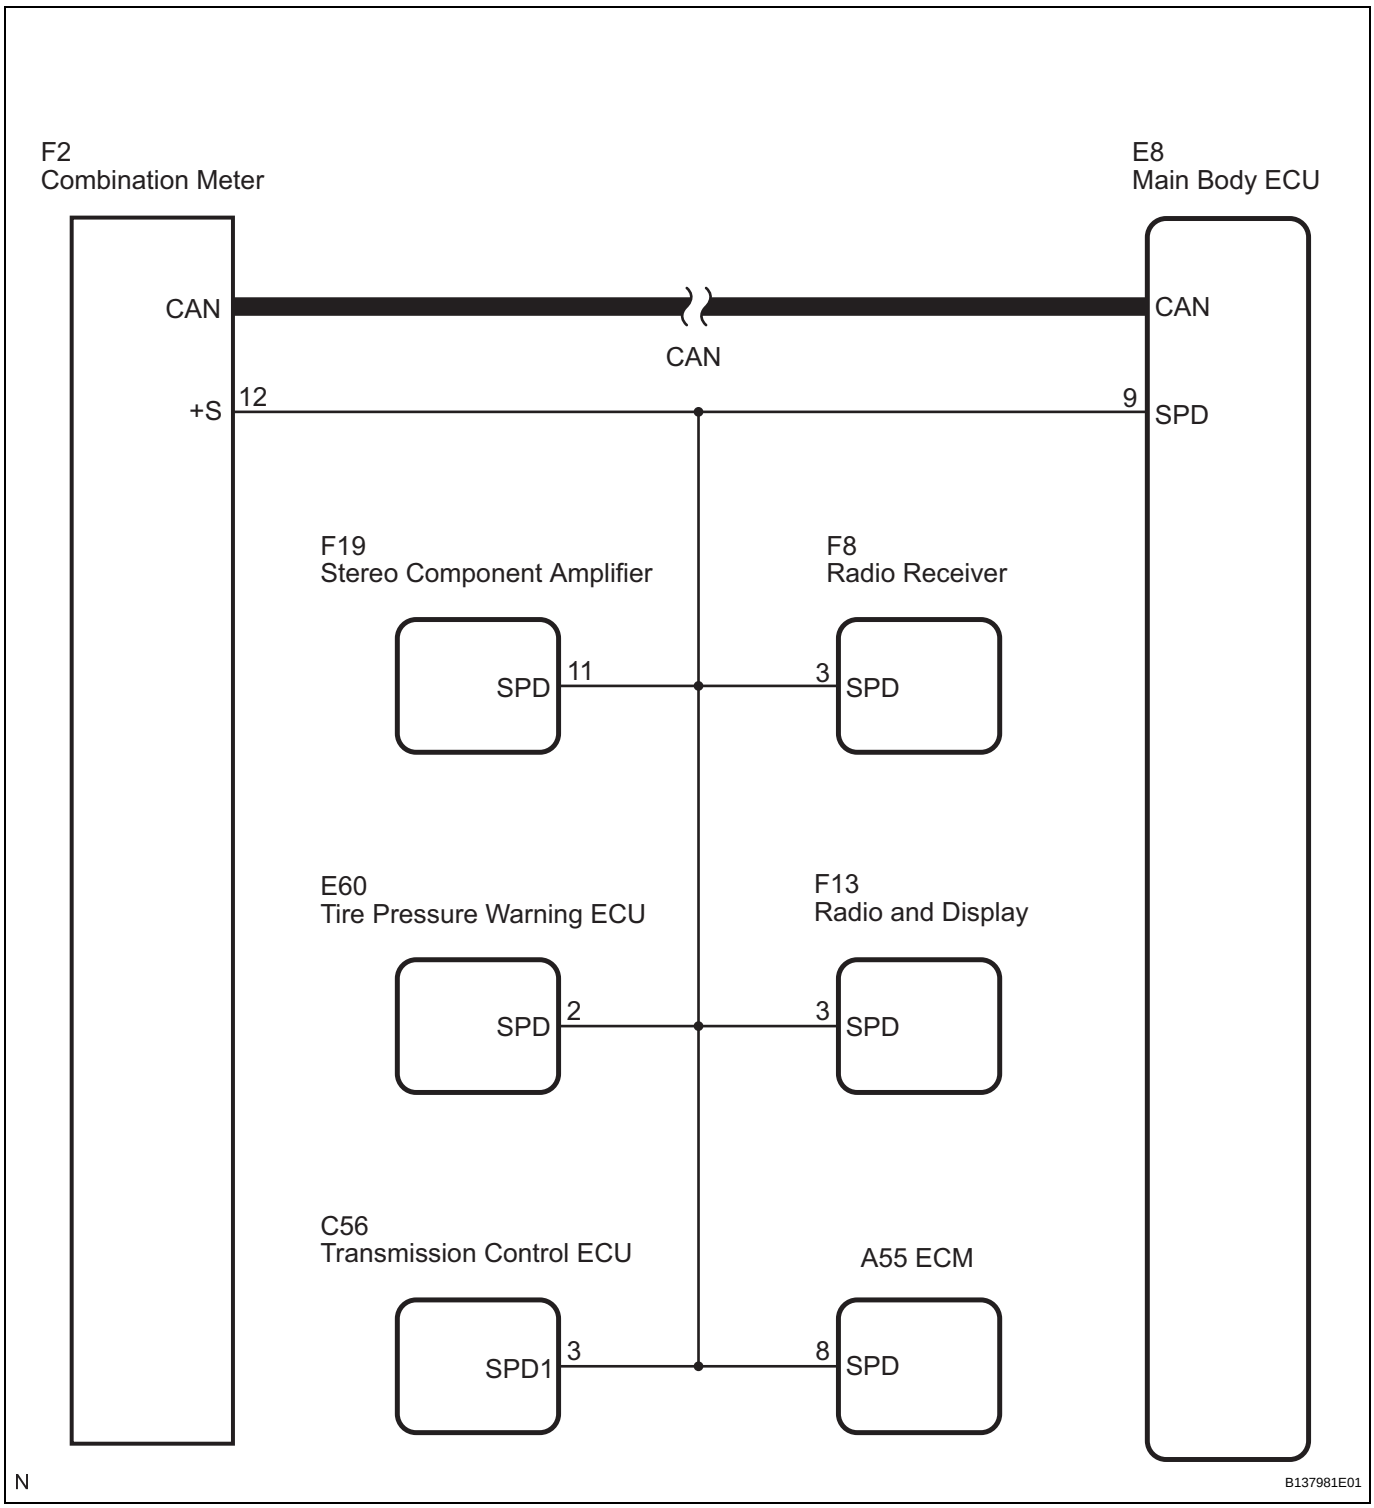
After the main body ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-8).

DTC No.	DTC Detection Condition	Trouble Area
B2282	When both conditions below are met: • Cable information and CAN information between the main body ECU and the combination meter are inconsistent • Malfunction is detected between the vehicle speed sensor and the combination meter	• CAN communication system • Combination meter system • Main body ECU • Wire harness or connector



ST

WIRING DIAGRAM



HINT:

- A voltage of 12 V or 5 V is output from each ECU and then input to the combination meter. The signal is changed to a pulse signal at the transistor in the combination meter. Each ECU controls the respective system based on the pulse signal.
- If a short occurs in an ECU, all systems in the diagram above will not operate normally.

ST

INSPECTION PROCEDURE

1 CHECK OPERATION OF SPEEDOMETER

(a) Drive the vehicle and check if the function of the speedometer in the combination meter is normal.
OK:
Actual vehicle speed and the speed indicated on the speedometer are the same.
HINT:
The vehicle speed sensor is functioning normally when the indication on the speedometer is normal.

NG → **GO TO COMBINATION METER SYSTEM**

OK

2 CHECK DTC OUTPUT (CAN COMMUNICATION SYSTEM)

(a) Delete the DTCs (See page ST-26).
(b) Check for CAN communication system DTCs.
HINT:
If the DTCs for the CAN communication system malfunction are output, inspect those DTCs first (See page CA-31).
OK:
No DTC is output.

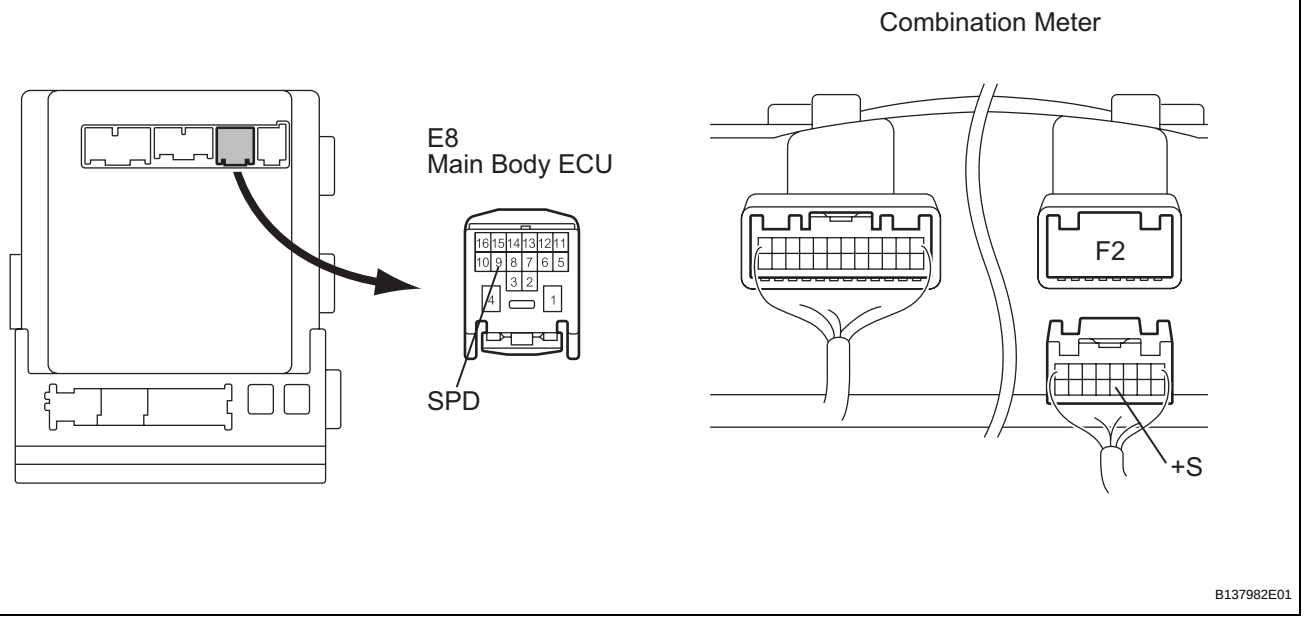
NG → **GO TO CAN COMMUNICATION SYSTEM**

OK

3 CHECK WIRE HARNESS (MAIN BODY ECU - COMBINATION METER)

(a) Disconnect the E8 ECU connector.

Wire Harness Side:



(b) Disconnect the F2 meter connector.
(c) Measure the resistance according to the value(s) in the table below.

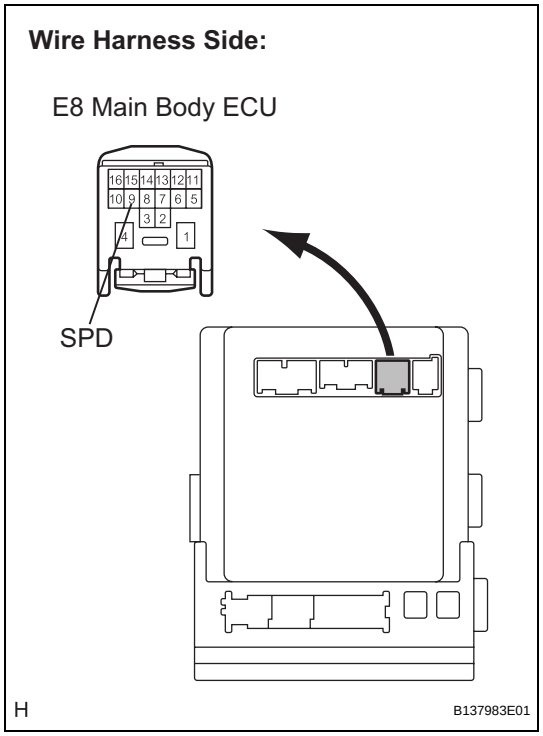
Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E8-9 (SPD) - F2-12 (+S) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 CHECK WIRE HARNESS (MAIN BODY ECU - BODY GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E8-9 (SPD) - Body ground	Always	10 kΩ or higher

HINT:
If the result of the inspection for a short circuit is not as specified, there may be a short in the ECU.

NG → **REPAIR OR REPLACE HARNESS, CONNECTOR OR EACH ECU**

OK

5 READ VALUE OF INTELLIGENT TESTER (VEHICLE SPEED SIGNAL)

(a) Reconnect the connectors.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the engine switch on (IG).
(d) Check the DATA LIST for proper functioning of the vehicle speed signal.

MAIN BODY:

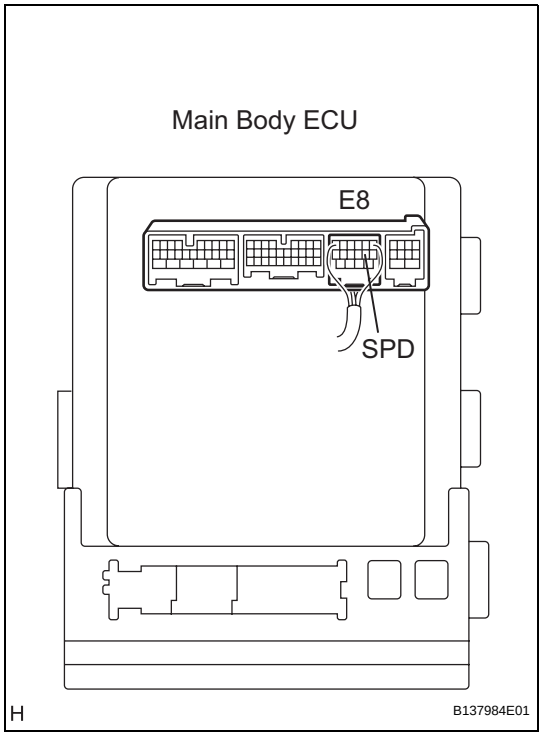
Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
VEHICLE SPD SIG	Vehicle speed signal/STOP or RUN	STOP: Vehicle is stopped RUN: Vehicle is running	-

OK:
STOP (vehicle is stopped) and RUN (vehicle is running) appear on the screen.

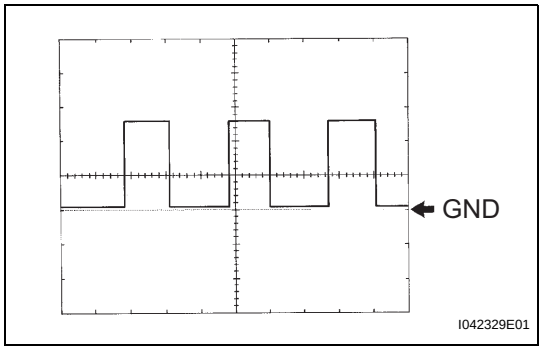
OK → **CHECK INTERMITTENT PROBLEMS**

NG

6	INSPECT MAIN BODY ECU (SPEED SIGNAL)



(a) Check the input signal waveform.
(1) Reconnect the connectors.
(2) Remove the combination meter assembly with the connector(s) still connected.
(3) Connect an oscilloscope to terminal E8-9 (SPD) and body ground.
(4) Turn the engine switch on (IG).
(5) Turn the wheel slowly.



(6) Check the signal waveform according to the condition(s) in the table below.

Item	Condition
Tool setting	5 V/DIV., 10 ms./DIV.
Vehicle condition	Driving at approx. 20 km/h (12 mph)

OK:
The waveform is displayed as shown in the illustration.
HINT:
As the vehicle speed increases, the cycle of the signal waveform narrows.

NG → **REPLACE COMBINATION METER**

OK

REPLACE MAIN BODY ECU

DTC	B2283	Vehicle Speed Sensor Malfunction

DESCRIPTION

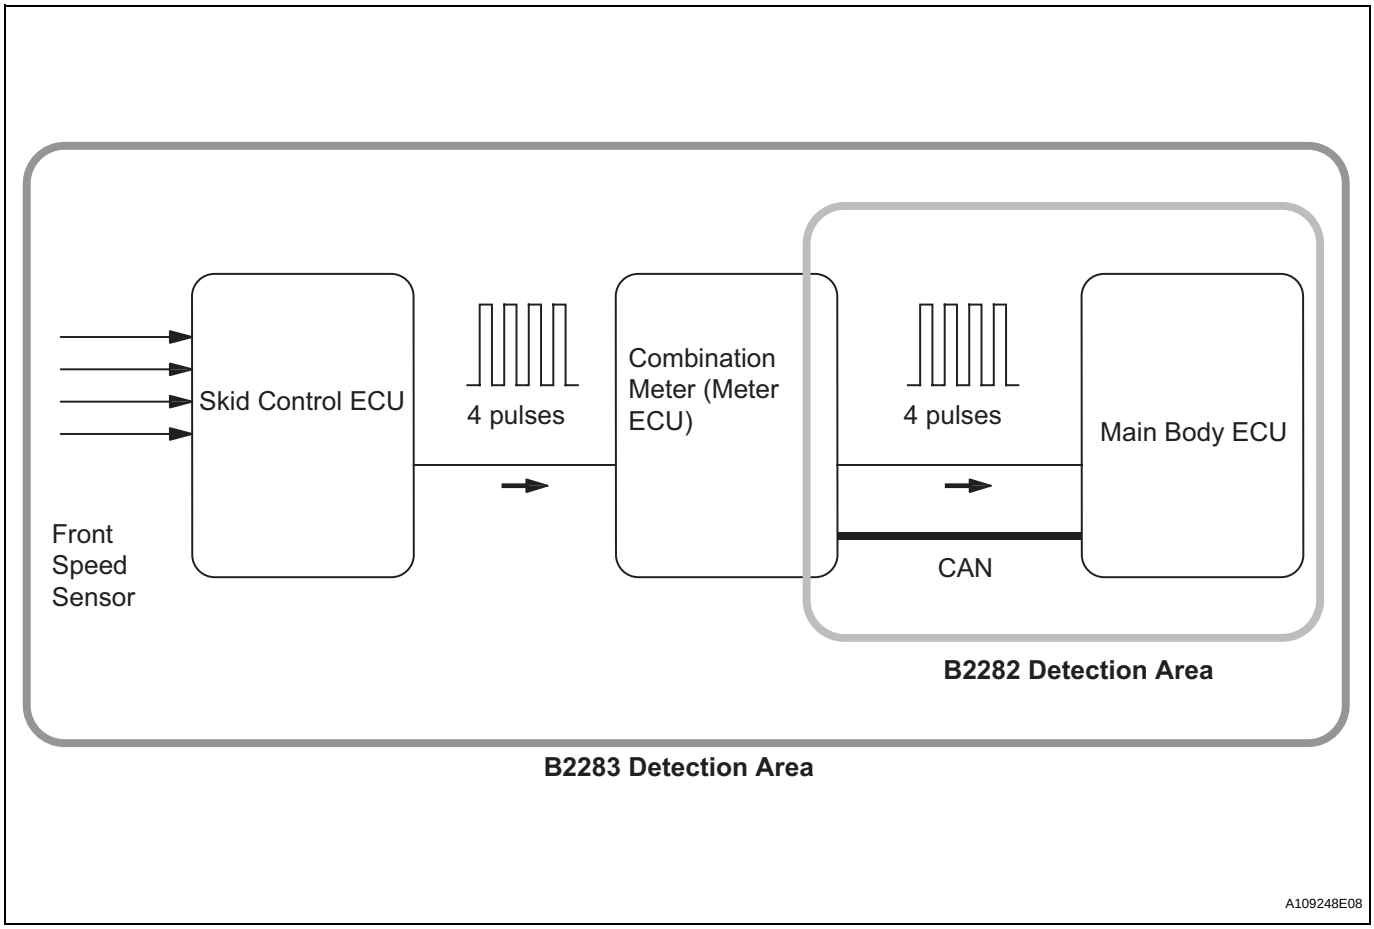
The skid control ECU converts these signals into 4-pulse signals and sends them to the combination meter. After this signal is converted into a more precise rectangular waveform by the waveform shaping circuit inside the combination meter, it is then transmitted to the main body ECU. The main body ECU determines the vehicle speed based on the frequency of these pulse signals.

HINT:

When the main body ECU is replaced with a new one and the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.

After the main body ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-8).

DTC No.	DTC Detection Condition	Trouble Area
B2283	When both conditions below are met: • Over-deceleration in vehicle speed • Vehicle speed and engine speed do not match	• B2282 detection area • Combination meter • Speed sensor • Skid control ECU • Main body ECU • Wire harness or connector



INSPECTION PROCEDURE

1 CHECK DTC OUTPUT (SMART KEY SYSTEM)

(a) Delete the DTCs (See page ST-26).
(b) After all DTCs are cleared, check if the trouble occurs again 320 seconds after the engine switch is turned on (IG).
(c) Check for DTC B2282 and DTC B2283.

Result

Display (DTC output)	Proceed to
"DTC B2283" only	A
"DTC B2283" and "DTC B2282"	B
No DTC	C

HINT:
If DTC B2282 and DTC B2283 are output, perform troubleshooting for DTC B2282 first (See page ST-63).

B → **GO TO DTC B2282**

C → **CHECK INTERMITTENT PROBLEMS**

A

2 CHECK OPERATION OF SPEEDOMETER

(a) Drive the vehicle and check if the function of the speedometer in the combination meter is normal.
OK:
Actual vehicle speed and the speed indicated on the speedometer are the same.
HINT:
The vehicle speed sensor is functioning normally when the indication on the speedometer is normal.

NG → **GO TO COMBINATION METER SYSTEM**

OK

3 CHECK DTC OUTPUT (BRAKE CONTROL)

(a) Delete the DTCs (See page ST-26).
(b) Check for DTCs.
(w/o VSC: See page BC-27)
(for BOSCH made w/ VSC: See page BC-311)
(for ADVICS made w/ VSC: See page BC-151)
OK:
No DTC is output.

NG → **GO TO BRAKE CONTROL SYSTEM**

ST

OK

REPLACE MAIN BODY ECU

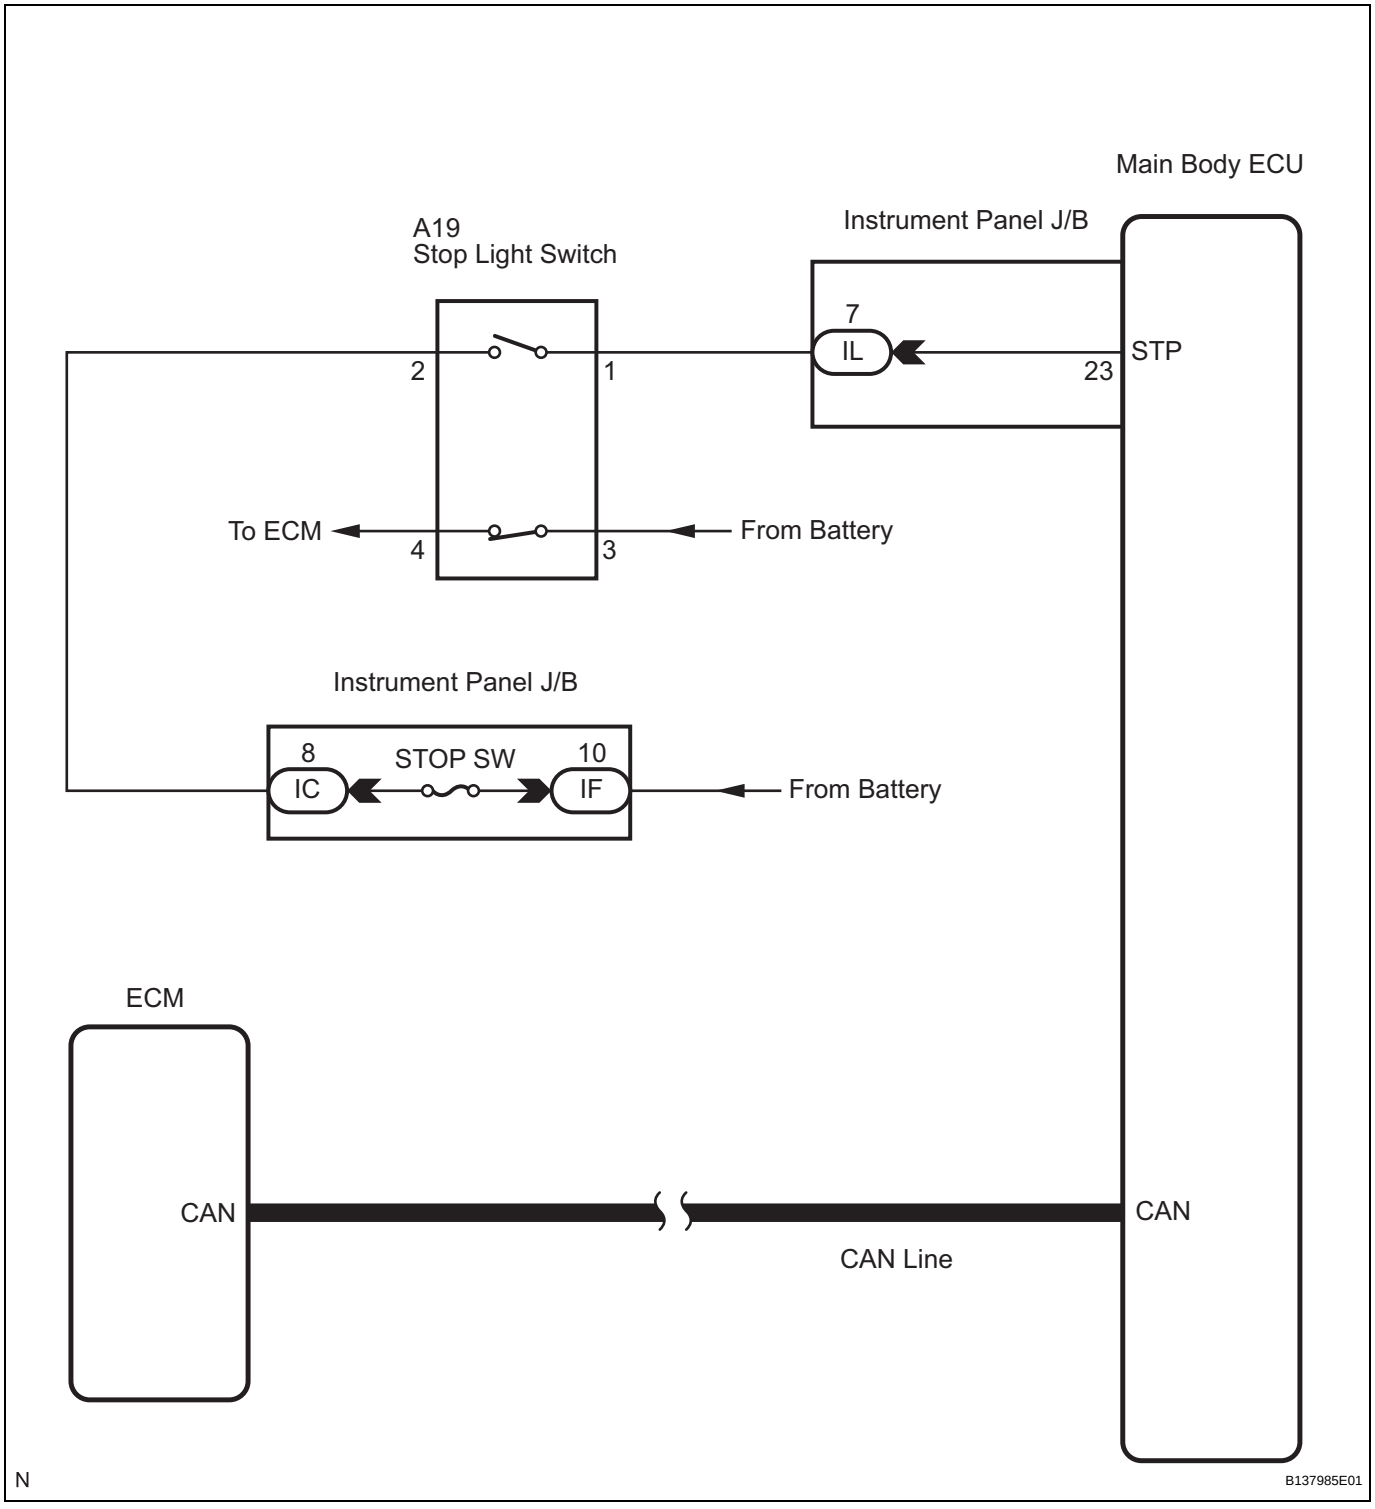
DTC	B2284	Brake Signal Malfunction

DESCRIPTION

This DTC is output when: 1) the brake signal circuit between the main body ECU and the stop light switch is malfunctioning; and 2) the CAN information is inconsistent.
HINT:
When the main body ECU is replaced with a new one and the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.
After the main body ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-8).

DTC No.	DTC Detection Condition	Trouble Area
B2284	Communication or communication line is abnormal between the main body ECU and the stop light switch	• Stop light switch • CAN communication system • ECM • Main body ECU • Wire harness or connector

WIRING DIAGRAM



INSPECTION PROCEDURE

ST

1. EMERGENCY ENGINE START CONTROL

(a) If there is a malfunction in the stop light switch or STOP fuse, their signals may not be correctly transmitted to the main body ECU. This may result in the engine not starting even if the engine switch is pressed while the brake pedal is depressed and the shift lever is in the P position.
To activate the starter:
(1) Turn the engine switch from off to on (ACC).
(2) Press and hold the engine switch for 15 seconds.

HINT:
Before performing the inspection, depress the brake pedal and check that the stop lights come on. If the stop lights do not come on when the brake pedal is depressed, refer to the page shown in the brackets (See page LI-12).

1	READ VALUE OF INTELLIGENT TESTER (STOP LIGHT SWITCH)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Check the DATA LIST for proper functioning of the stop light switch.

MAIN BODY:

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
STOP LAMP SW	Stop light switch / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-

OK:
ON (brake pedal depressed) and OFF (brake pedal released) appear on the screen.

NG → **Go to step 4**

OK ↓

2	CHECK DTC OUTPUT (CAN COMMUNICATION SYSTEM)

(a) Delete the DTCs (See page ST-26).
(b) Check for CAN communication system DTCs (See page CA-31).
HINT:
If the DTCs for the CAN communication system malfunction are output, inspect those DTCs first (See page CA-31).
OK:
No DTC is output.

NG → **GO TO CAN COMMUNICATION SYSTEM**

OK ↓

3	CHECK DTC OUTPUT (ENGINE CONTROL SYSTEM)

(a) Delete the DTCs (See page ST-26).
(b) Check for DTC P0500 and P0503 (See page ES-63).
OK:
No DTC is output.

NG → **GO TO ENGINE CONTROL SYSTEM**

OK ↓

REPLACE MAIN BODY ECU

ST

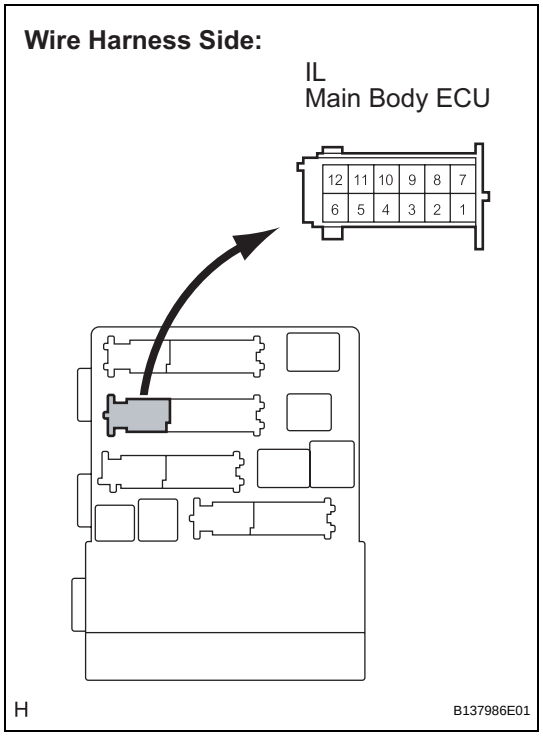
4 **INSPECT FUSE (STOP SW)**

(a) Remove the STOP SW fuse from the instrument panel J/B.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

5 **CHECK WIRE HARNESS (BATTERY - MAIN BODY ECU)**



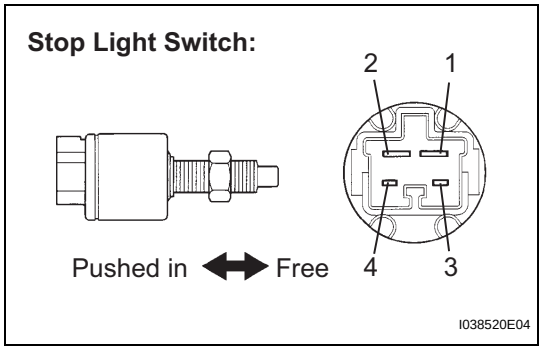
(a) Disconnect the IL ECU connector.
(b) Measure the volage according to the value(s) in the table below.
Standard voltage

Tester Connection	Condition	Specified Condition
IL-7 - Body ground	Brake pedal released	Below 1 V
IL-7 - Body ground	Brake pedal depressed	10 to 14 V

OK → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

NG

6 **INSPECT STOP LIGHT SWITCH**



(a) Remove the switch.
(b) Measure the resistance of the switch.
Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Switch pin free	Below 1 Ω
3 - 4	Switch pin free	10 kΩ or higher
1 - 2	Switch pin pushed in	10 kΩ or higher
3 - 4	Switch pin pushed in	Below 1 Ω

NG → **REPLACE STOP LIGHT SWITCH**

ST

OK

REPLACE MAIN BODY ECU

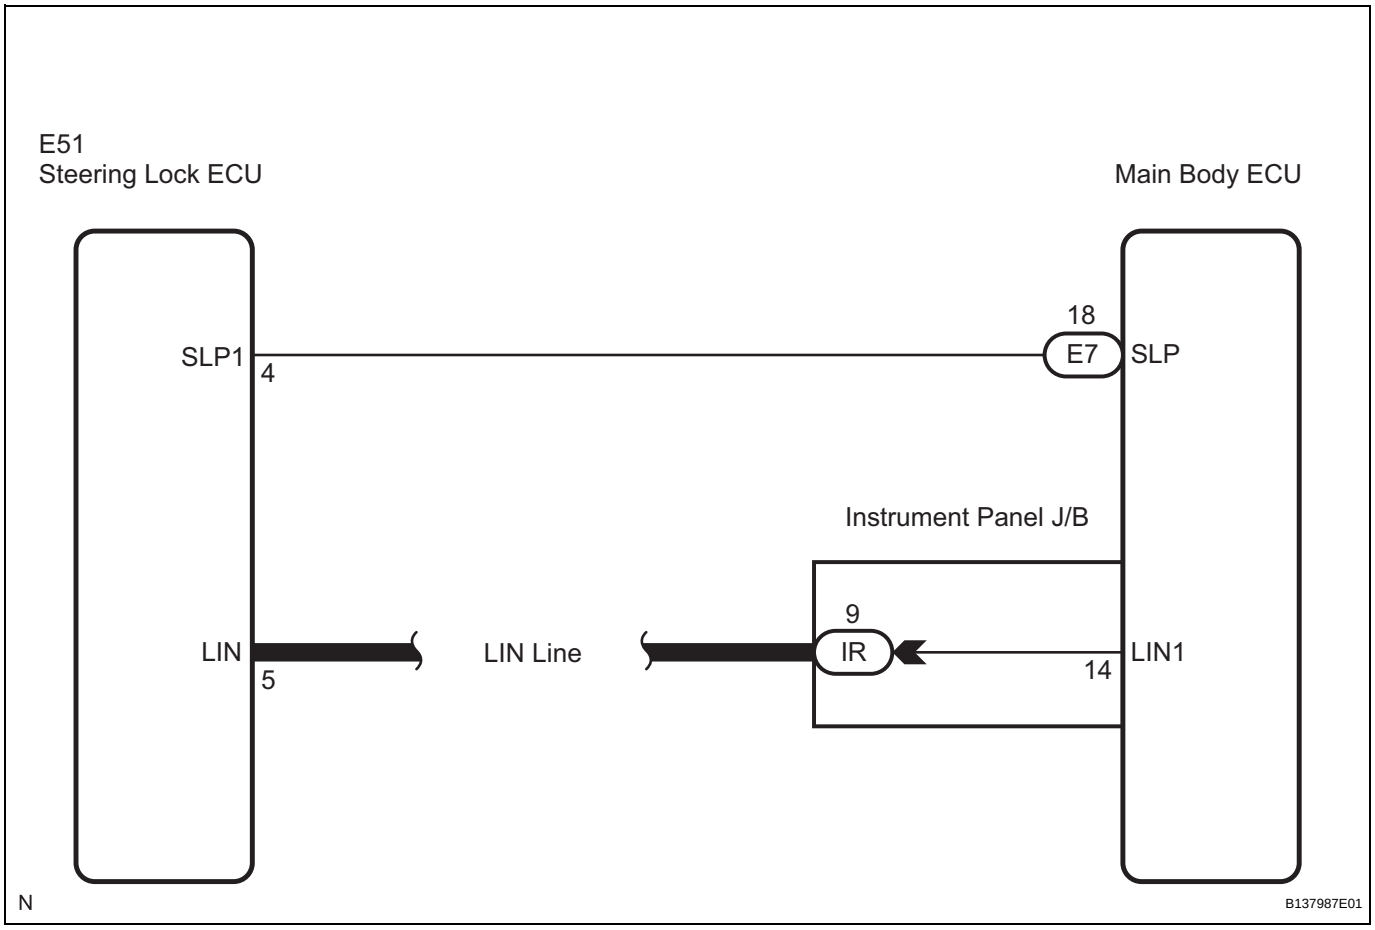
DTC	B2285	Steering Lock Position Signal Circuit Malfunction

DESCRIPTION

This DTC is output when serial communication signals and LIN communication signals in the circuit between the main body ECU and steering lock actuator (steering lock ECU) are inconsistent.
HINT:
When the main body ECU is replaced with a new one and the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.
After the main body ECU or steering lock ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-8).

DTC No.	DTC Detection Condition	Trouble Area
B2285	Cable and LIN information between the main body ECU and the steering lock ECU are inconsistent	• Main body ECU • Steering lock ECU • Wire harness or connector

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.

ST

(b) Check the DATA LIST for proper functioning of the steering lock function.
HINT:
When using the intelligent tester with the engine switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 second intervals or less until communication between the tester and vehicle starts.

MAIN BODY:

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
STR UNLOCK SW	Steering lock condition / ON or OFF	ON: Steering is unlocked OFF: Steering is locked	-

OK:
ON (steering is unlocked) and OFF (steering is locked) appear on the screen.

NG → **Go to step 3**

OK →

2	CHECK FOR DTCS

(a) Delete the DTCs (See page ST-26).
(b) Check for DTC B2285, DTC B2287 and DTC B2785.

Result

Display (DTC output)	Proceed to
"DTC B2285" only	A
"DTC B2287" and/or "DTC B2785"	B
No DTC	C

HINT:
- If DTC B2287 is output (See page ST-85).
- If DTC B2785 is output (See page EI-29).

B → **GO TO DTC CHART**

C → **CHECK INTERMITTENT PROBLEMS**

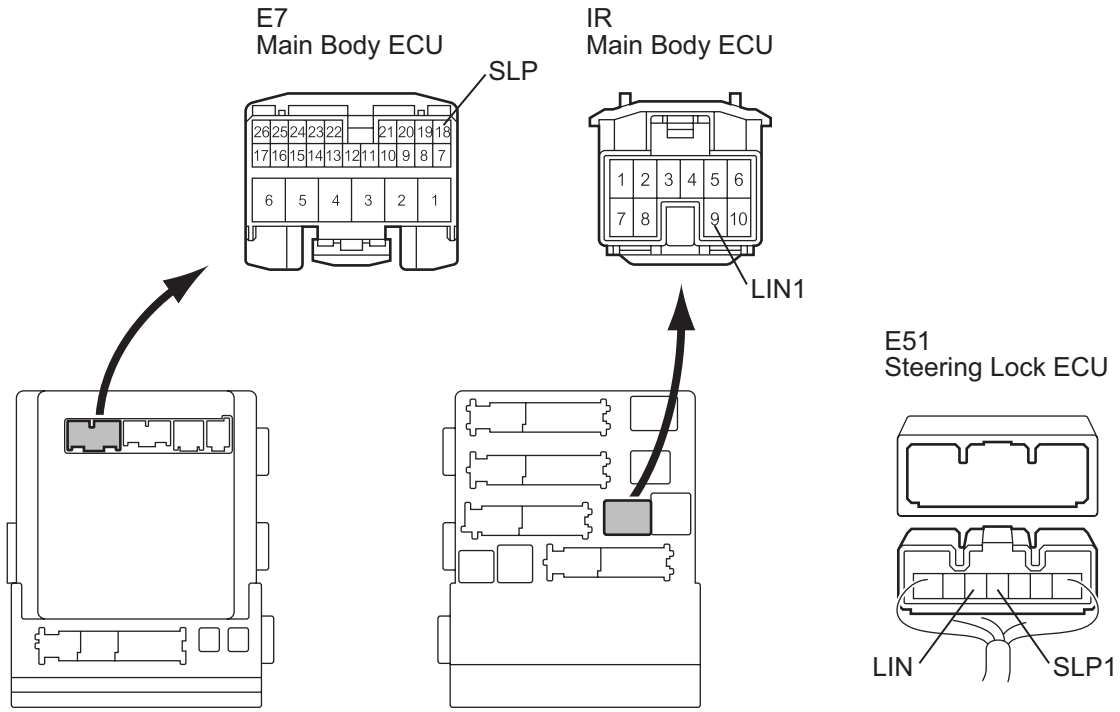
A →

REPLACE MAIN BODY ECU

3	CHECK WIRE HARNESS (MAIN BODY ECU - STEERING LOCK ECU)

(a) Disconnect the E7 and E51 ECU connectors.

Wire Harness Side:



(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E7-18 (SLP) - E51-4 (SLP1)	Always	Below 1 Ω
IR-9 (LIN1) - E51-5 (LIN)	Always	Below 1 Ω
E7-18 (SLP) or E51-4 (SLP1) - Body ground	Always	10 kΩ or higher
IR-9 (LIN1) or E51-5 (LIN) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

ST

4	CHECK MAIN BODY ECU OPERATION

(a) After replacing the main body ECU with a normally functioning ECU, check that the engine starts (See page ST-30).
OK:
Engine can start normally.

NG → **REPLACE STEERING LOCK ECU**

OK ↓

END (MAIN BODY ECU DEFECTIVE)

DTC	B2286	Runnable Signal Malfunction

DESCRIPTION

This DTC is output when serial communication signals and CAN communication signals in the circuit between the main body ECU and ECM are inconsistent.

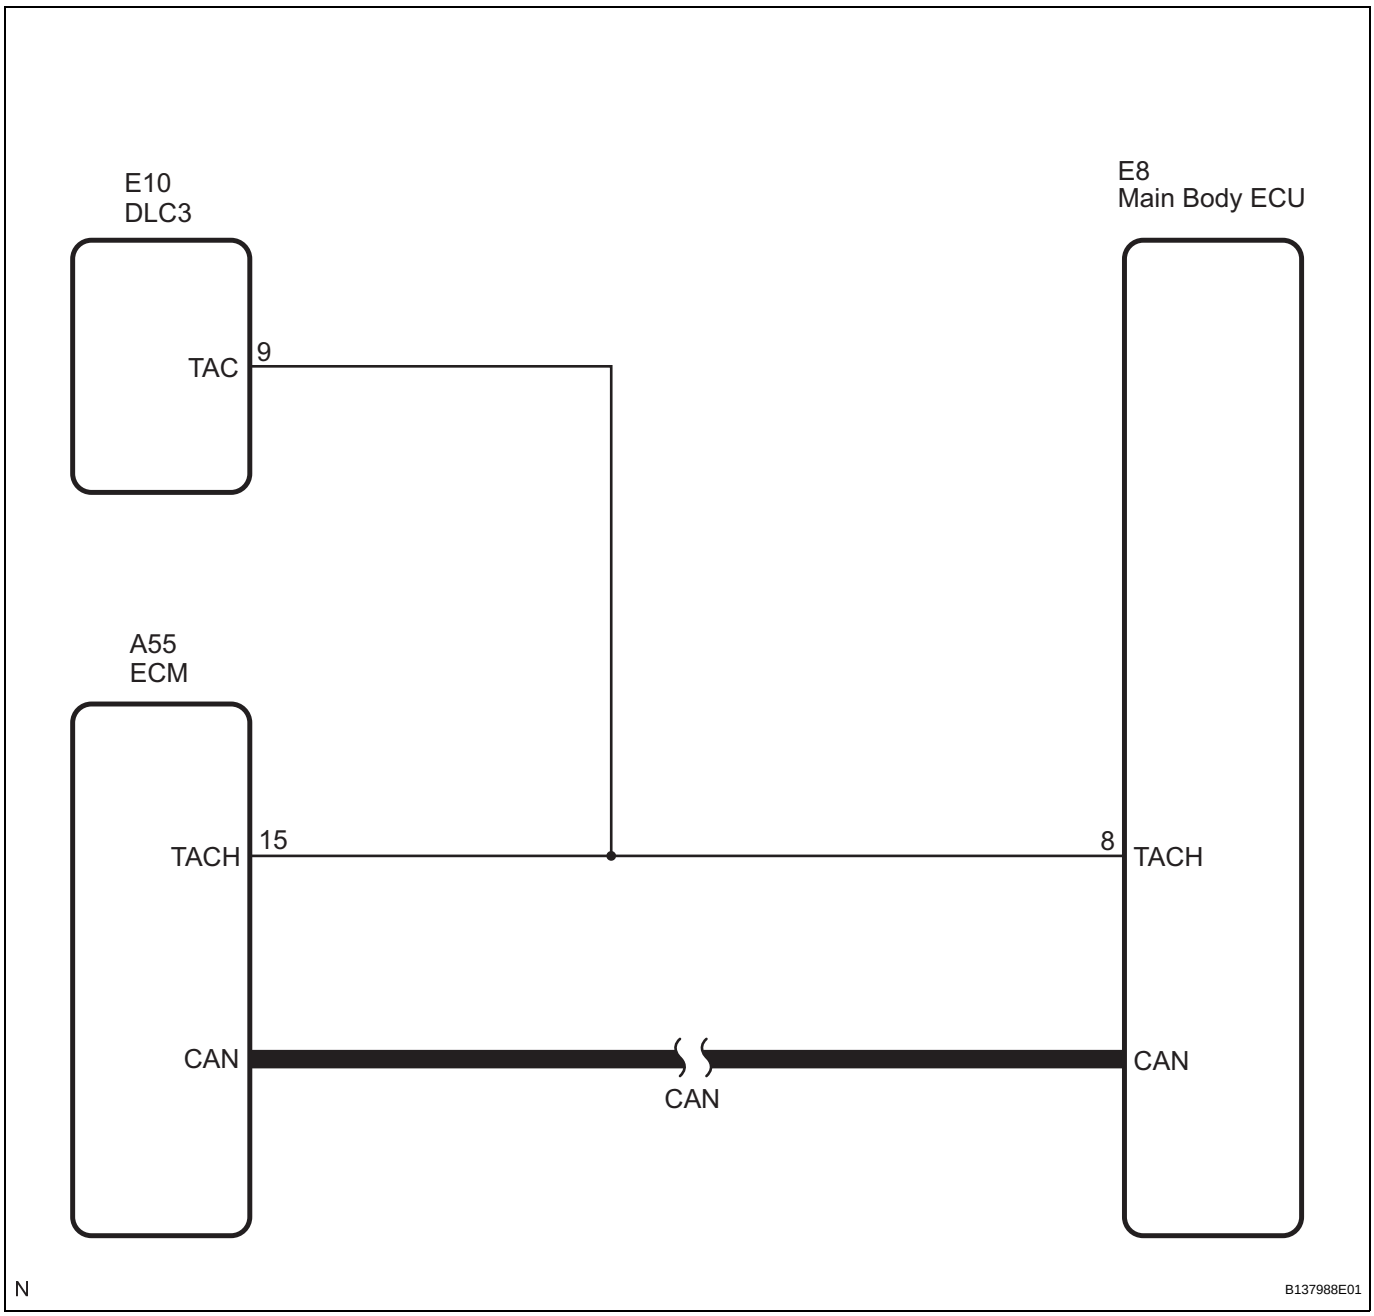
HINT:

When the main body ECU is replaced with a new one and the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.

After the main body ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-8).

DTC No.	DTC Detection Condition	Trouble Area
B2286	Serial communication signals and CAN communication signals in the circuit between the main body ECU and ECM are inconsistent.	• CAN communication system • ECM • Main body ECU • Wire harness or connector

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK OPERATION OF TACHOMETER

(a) Run the engine and check if the function of the tachometer in the combination meter is normal.
OK:
Actual engine revolution speed and the revolution indicated on the tachometer are the same.

NG	GO TO COMBINATION METER SYSTEM

ST

OK

2	CHECK DTC OUTPUT (CAN COMMUNICATION SYSTEM)

(a) Delete the DTCs (See page ST-26).
(b) Check for CAN communication system DTC U0146.
HINT:
If the DTCs for the CAN communication system malfunction are output, inspect those DTCs first (See page CA-31).
OK:
No DTC is output.

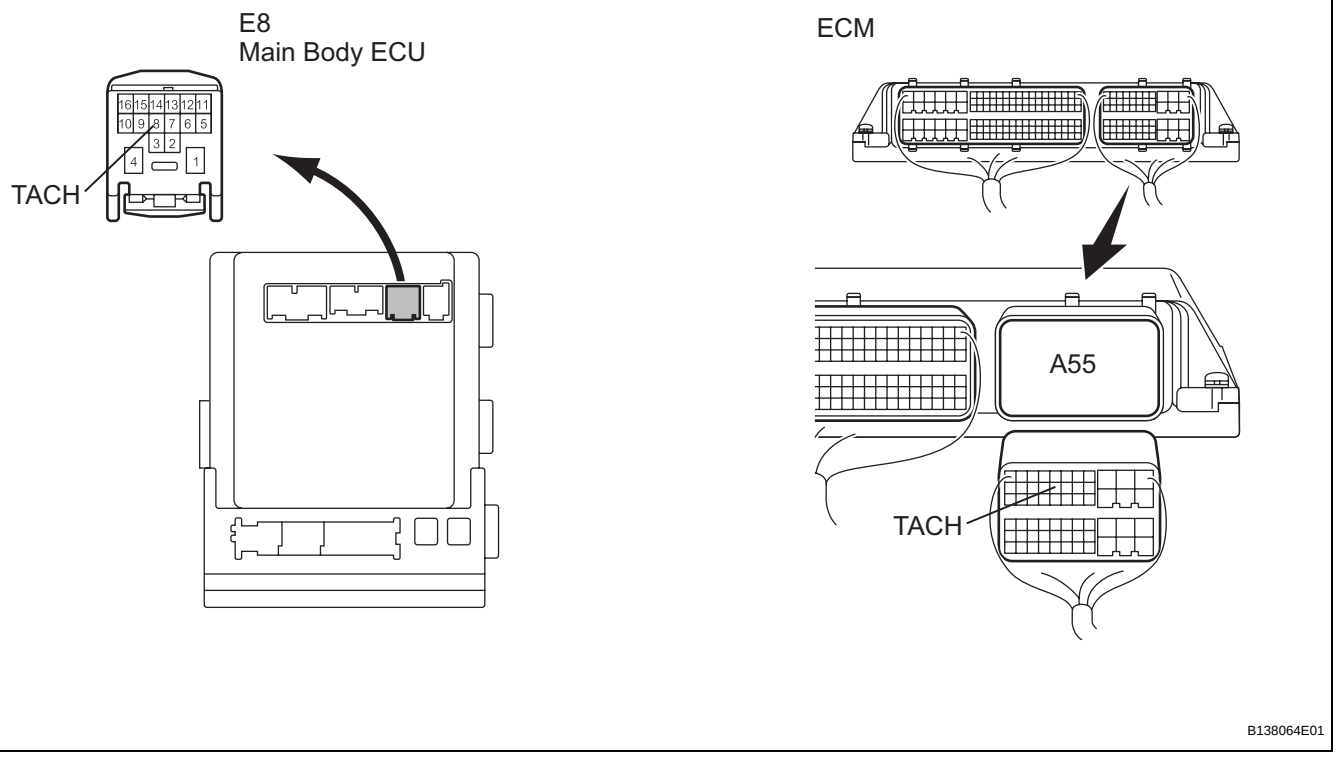
NG → **GO TO CAN COMMUNICATION SYSTEM**

OK

3	CHECK WIRE HARNESS (MAIN BODY ECU - ECM)

(a) Disconnect the A55 ECM connector.

Wire Harness Side:



(b) Disconnect the E8 ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

ST

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E8-8 (TACH) - A55-15 (TACH)	Always	Below 1 Ω
E8-8 (TACH) or A55-15 (TACH) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	READ VALUE OF INTELLIGENT TESTER

(a) Reconnect the connectors.
(b) Connect the intelligent tester to the DLC3.
(c) Check the DATA LIST for proper functioning of the engine.
HINT:
When using the intelligent tester with the engine switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 second intervals or less until communication between the tester and vehicle starts.

MAIN BODY:

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
E/G COND	Engine condition/STOP or RUN	STOP: Engine is stopped RUN: Engine is running	-

OK:
STOP (engine is stopped) and RUN (engine is running) appear on the screen.

NG → **REPLACE ECM**

OK

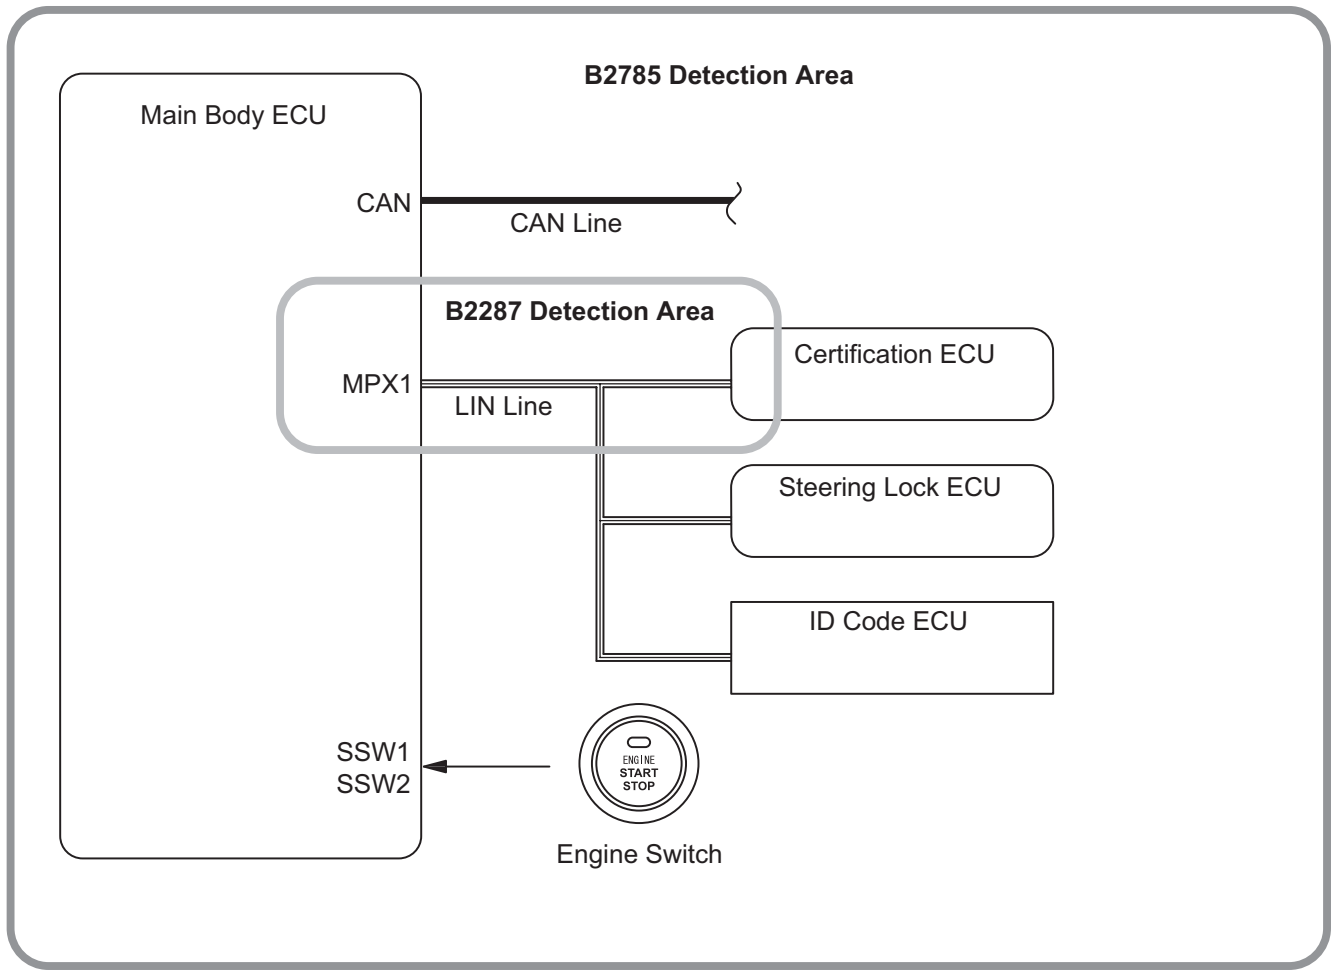
REPLACE MAIN BODY ECU

DTC	B2287	LIN Communication Master Malfunction

DESCRIPTION

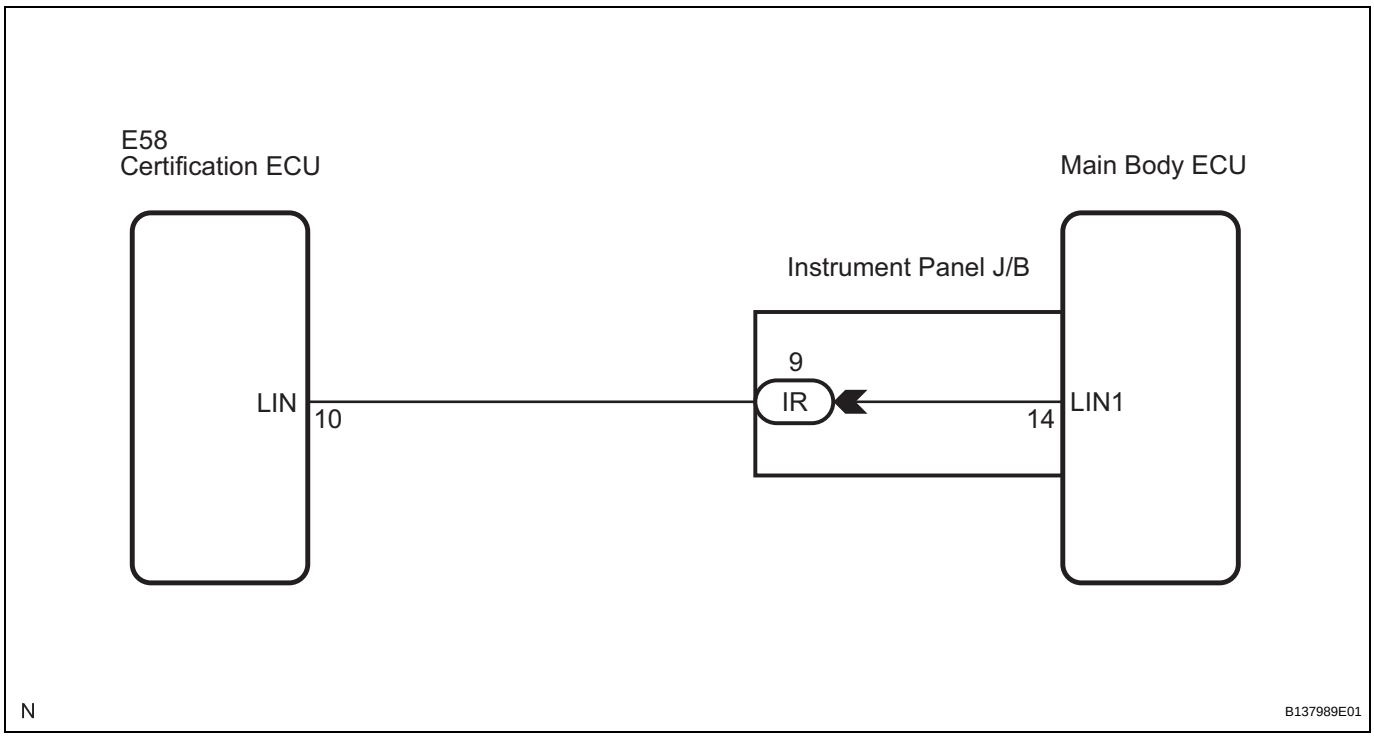
This DTC is output when there is a LIN communication problem between the main body ECU and certification ECU.
HINT:
When the main body ECU is replaced with a new one and the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.
After the main body ECU or certification ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-8).

DTC No.	DTC Detection Condition	Trouble Area
B2287	Communication or communication line is abnormal between the main body ECU and the certification ECU	• Main body ECU • Certification ECU • Wire harness or connector



ST

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK FOR DTCS

(a) Delete the DTCs (See page ST-26).
(b) Check for DTC B2287 and B2785.

Result

Display (DTC output)	Proceed to
"DTC B2287" only	A
"DTC B2287" and "DTC B2785"	B
No DTC	C

HINT:
If DTC B2785 is output, perform troubleshooting for DTC B2785 first (See page EI-29).

B → GO TO DTC B2785

C → CHECK INTERMITTENT PROBLEMS

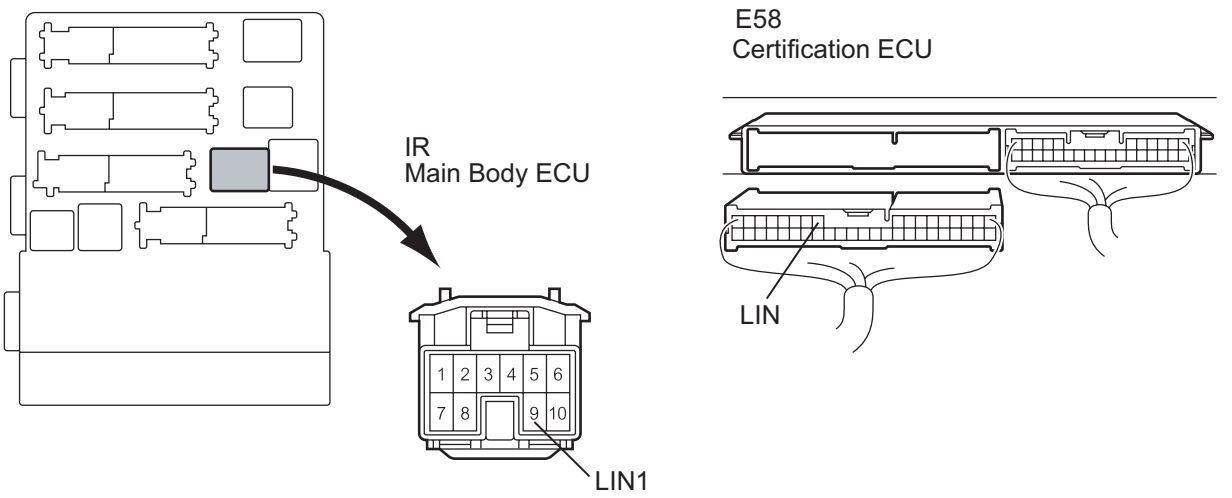
A

ST

2	CHECK WIRE HARNESS (MAIN BODY ECU - CERTIFICATION ECU)

(a) Disconnect the E58 and IR ECU connectors.

Wire Harness Side:



(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
IR-9 (LIN1) - E58-10 (LIN)	Always	Below 1 Ω
IR-9 (LIN1) or E58-10 (LIN) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	CHECK MAIN BODY ECU OPERATION

(a) After replacing the main body ECU with a normally functioning ECU, check that the engine starts (See page ST-30).

OK:

Engine can start normally.

NG → **REPLACE CERTIFICATION ECU**

OK

END (MAIN BODY ECU DEFECTIVE)

ST

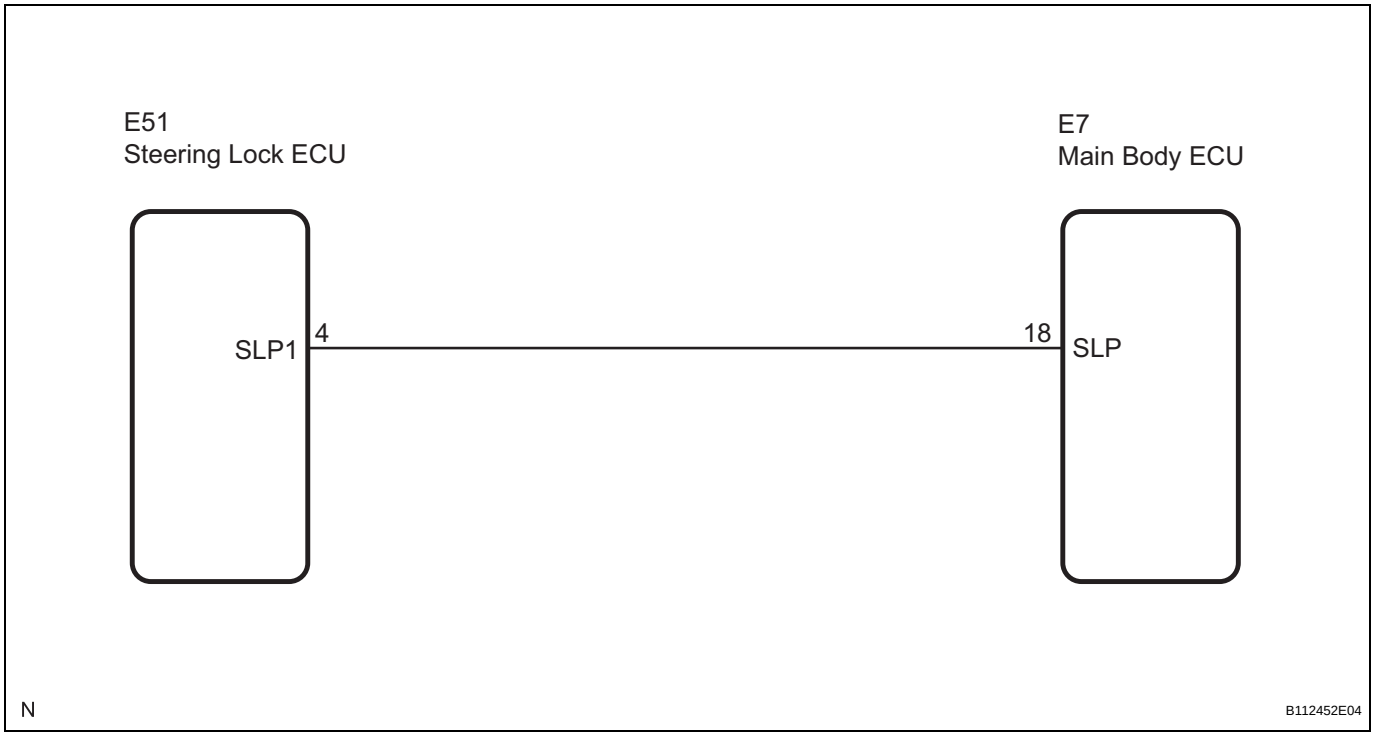
DTC	B2288	Steering Lock Signal Circuit Malfunction

DESCRIPTION

This DTC is output when the main body ECU cannot detect the unlock condition of the steering lock within a specified time.
HINT:
When the main body ECU is replaced with a new one and the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.
After the main body ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-8).

DTC No.	DTC Detection Condition	Trouble Area
B2288	After turning engine switch from off to on (IG), the steering wheel does not unlock for a certain period of time (ECU unlocks steering wheel only when it receives an unlock signal from LIN communication and cable)	• Main body ECU • Steering lock ECU • Wire harness or connector

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK FOR DTCS

(a) Delete the DTCs (See page ST-26).
(b) After all DTCs are cleared, check if the trouble occurs again 5 seconds after the engine switch is turned on (IG).
(c) Check for DTCs again.

ST

OK:
DTC B2785, DTC B2287 and DTC B2781 are not output.

HINT:
- If DTC B2785 is output (See page EI-29).
- If DTC B2287 is output (See page ST-85).
- If DTC B2271 is output (See page ST-31).

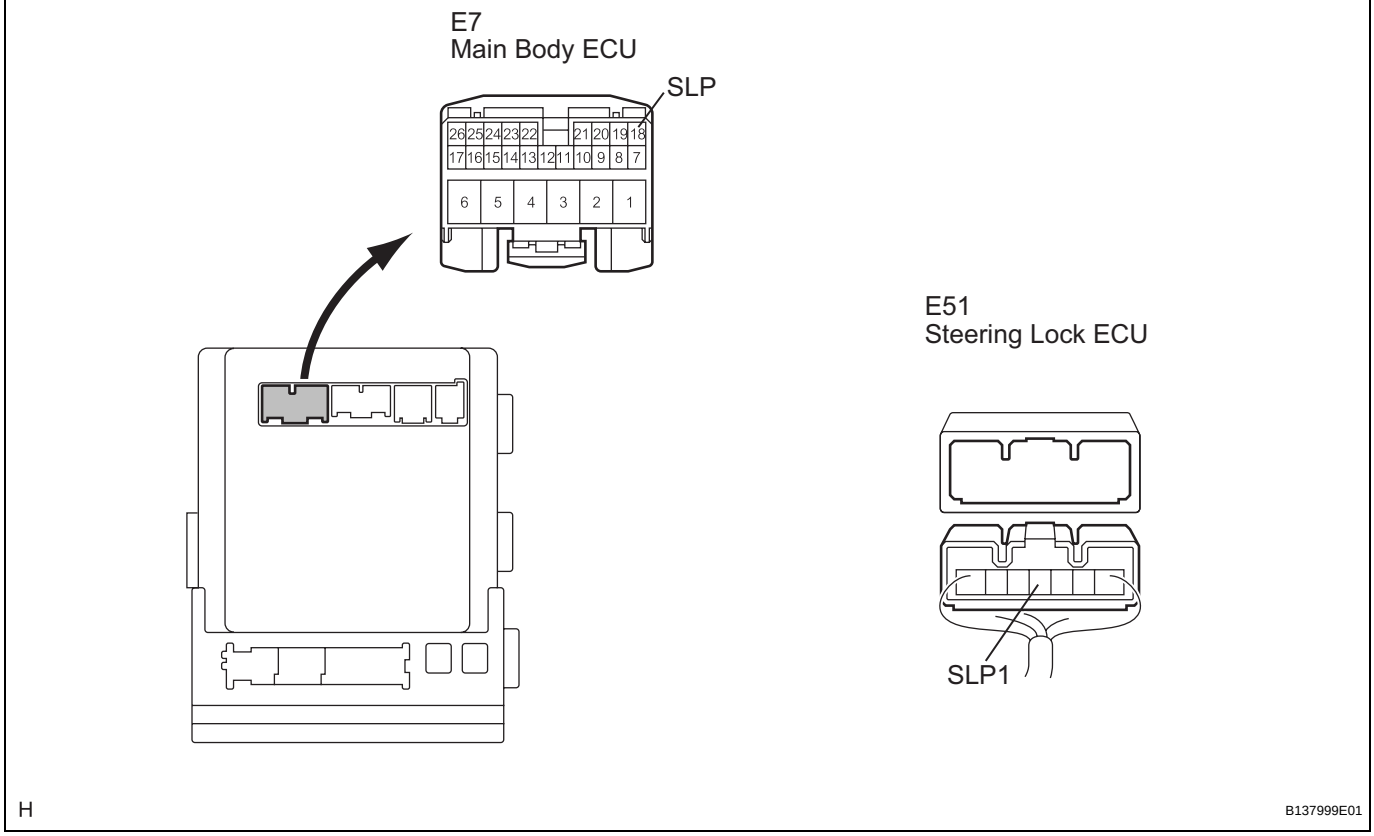
NG → **GO TO DTC CHART**

OK

2	CHECK WIRE HARNESS (MAIN BODY ECU - STEERING LOCK ECU)

(a) Disconnect the E7 and E51 ECU connectors

Wire Harness Side:



(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E7-18 (SLP) - E51-4 (SLP1)	Always	Below 1 Ω
E7-18 (SLP) or E51-4 (SLP1) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

ST

OK

3	CHECK MAIN BODY ECU OPERATION

(a) After replacing the main body ECU with a normally functioning ECU, check that the steering lock/unlock function operates normally.
OK:
Steering lock/unlock function operates normally.
HINT:
If steering lock/unlock function does not operate, refer to PROBLEM SYMPTOMS TABLE of the electrical steering lock (steering wheel cannot be unlocked) (See page SR-10).

NG → **GO TO ELECTRIC STEERING LOCK**

OK

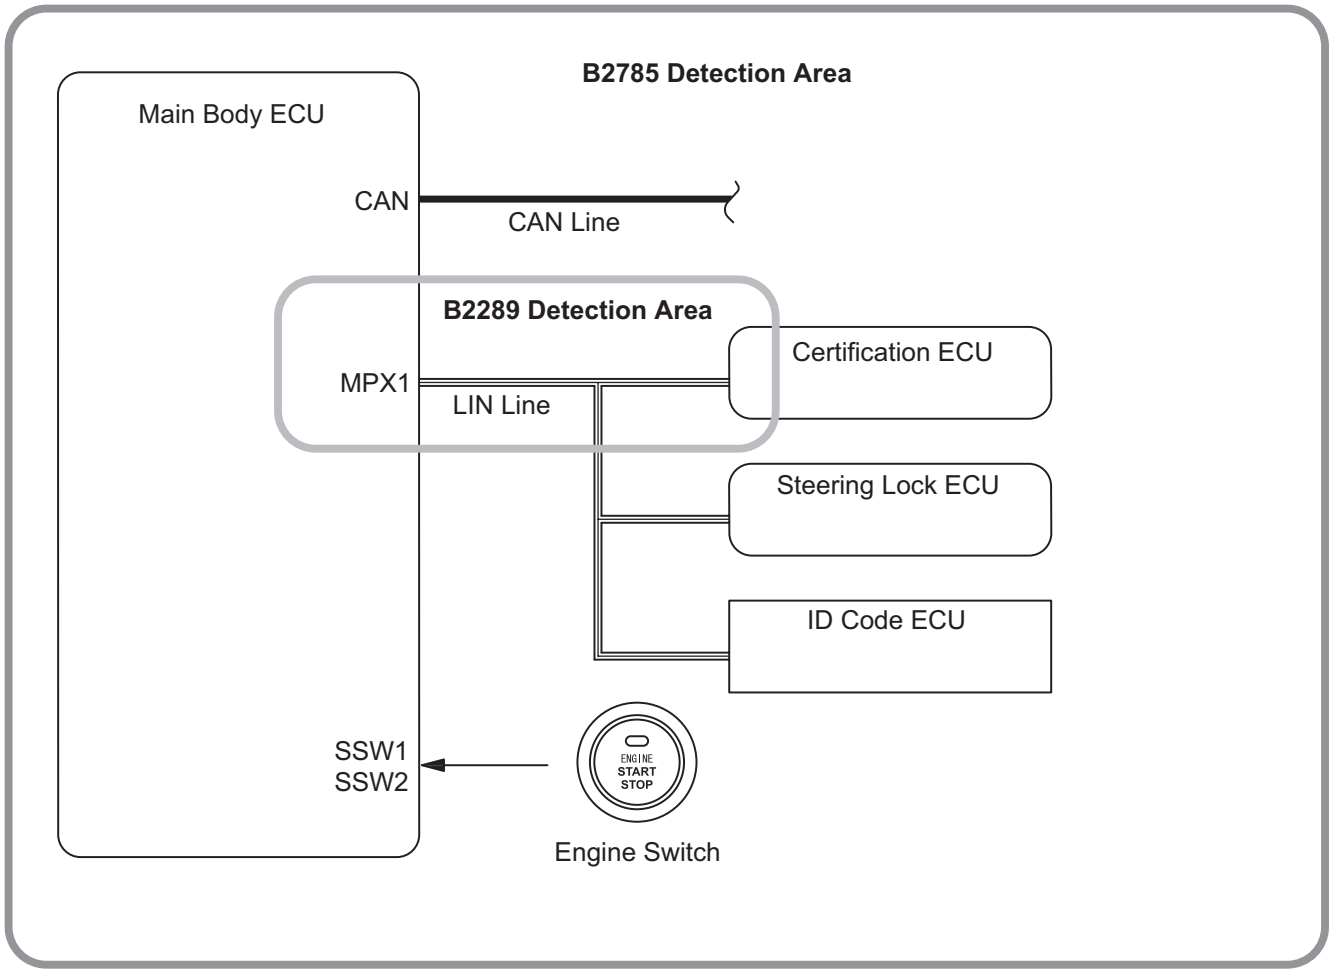
END (MAIN BODY ECU DEFECTIVE)

DTC	B2289	Key Collation Waiting Time Over

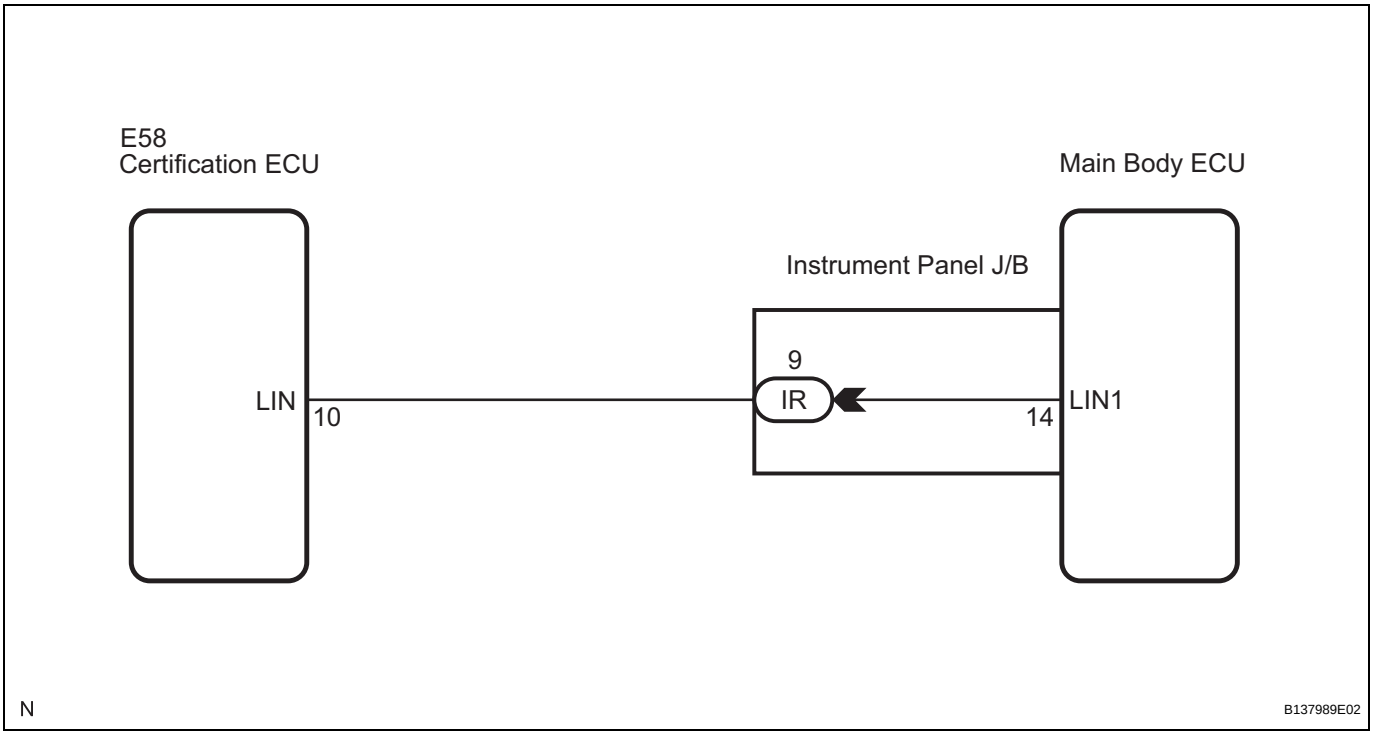
DESCRIPTION

This DTC is output when there is a LIN communication problem between the main body ECU and certification ECU or when there is a problem in the engine immobiliser system.
HINT:
After the main body ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-8).

DTC No.	DTC Detection Condition	Trouble Area
B2289	Either condition below is met: • Cable and CAN are abnormal between the main body ECU and the engine immobiliser system • The engine immobiliser system is malfunctioning	• Main body ECU • Engine immobiliser system • Wire harness or connector • Certification ECU



WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK FOR DTCS

(a) Delete the DTCs (See page ST-26).
(b) Check for DTC B2289 and B2785.

Result

Display (DTC output)	Proceed to
"DTC B2289" only	A
"DTC B2785" only	B
No DTC	C

HINT:
- If DTC B2785 is output, perform troubleshooting for DTC B2785 first (See page EI-29).

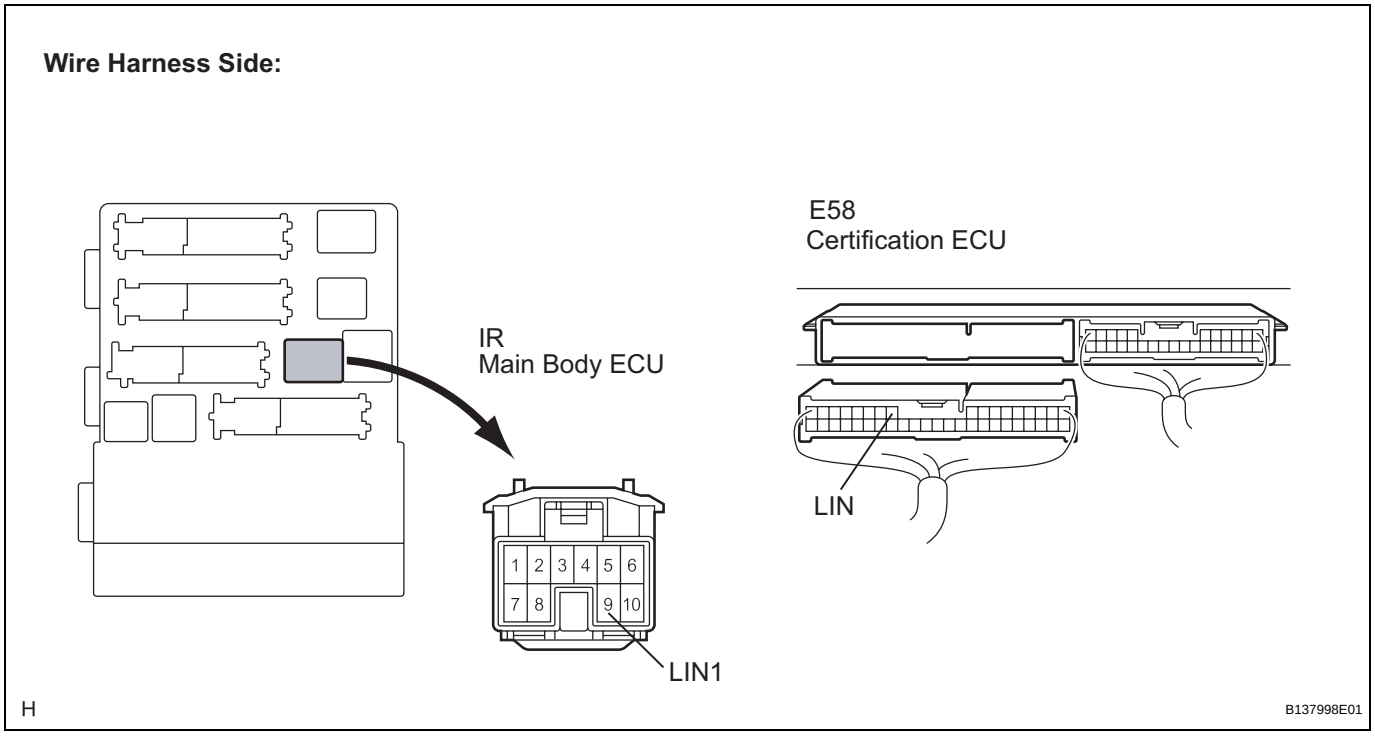
B → GO TO DTC B2785

C → CHECK INTERMITTENT PROBLEMS

A

2	CHECK WIRE HARNESS (MAIN BODY ECU - CERTIFICATION ECU)

(a) Disconnect the E58 and IR ECU connectors.



(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
IR-9 (LIN1) - E58-10 (LIN)	Always	Below 1 Ω
IR-9 (LIN1) or E58-10 (LIN) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	CHECK MAIN BODY ECU OPERATION

(a) After replacing the main body ECU with a normally functioning ECU, check that the engine starts.

OK:

Engine can start normally.

HINT:

If the engine does not start, refer to PROBLEM SYMPTOMS TABLE of the smart key system (entry) (matching for the inside of the cabin cannot be performed) (See page DL-147).

NG → **GO TO SMART KEY SYSTEM (ENTRY)**

ST

OK

END (MAIN BODY ECU DEFECTIVE)

Engine does not Start

DESCRIPTION

1. ENGINE START SYSTEM FUNCTION

(a) If the engine switch is pressed with the shift lever in the P or N position and the brake pedal depressed, the main body ECU determines that it is an engine start request.
(b) The certification ECU and other ECUs perform key verification via the LIN communication line.
(c) The main body ECU activates the ACC relay.
(d) The main body ECU activates the IG1 and IG2 relays.
(e) The certification ECU outputs a steering UNLOCK signal. The signal is sent to the main body ECU via the steering lock ECU.
(f) The main body ECU sends an engine start request signal to the ECM.
(g) The ECM sends an ACC cut request signal to the main body ECU.
(h) The ECM and main body ECU activate the ST relay.
(i) The main body ECU deactivates the ACC relay until the ECU detects an engine start.
(j) When engine revolution speed reaches 200 rpm, the main body ECU determines that the engine has been started.
The ECU reactivates the ACC relay and turns off the engine switch indicator light.

Symbols of main body ECU	Signals
STP	Stop light switch ON signal
SSW1/SSW2	Engine switch ON signal
ACCD	ACC relay operation signal
IG2D	IG2 relay operation signal

ST

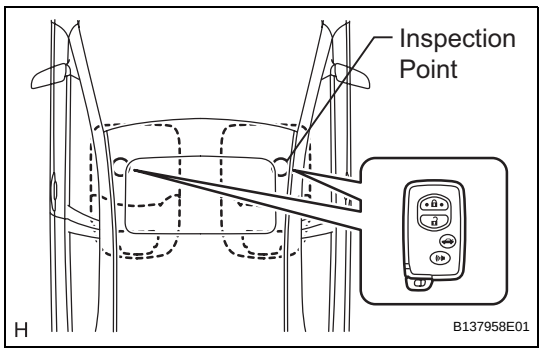
INSPECTION PROCEDURE

1. EMERGENCY ENGINE START CONTROL

(a) If there is a malfunction in the stop light switch or STOP fuse, their signals may not be correctly transmitted to the main body ECU. This may result in the engine not starting even if the engine switch is pressed while the brake pedal is depressed and the shift lever is in the P position.
To activate the starter:
(1) Turn the engine switch from off to on (ACC).
(2) Press and hold the engine switch for 15 seconds.

HINT:
After the main body ECU, certification ECU, steering lock ECU, ID code box and/or ECM are/is replaced, perform the registration procedures for the engine immobiliser system (See page EI-8).

1	CHECK ENTRY FUNCTION DETECTION AREA



(a) Inspect entry detection area.
(1) When the electrical key is in either of the 2 inspection points in the illustration, the shift lever is in the P position and the brake pedal is depressed, check that the engine switch indicator illuminates in green.
OK:
Engine switch illuminates in green.
HINT:
If the engine switch does not illuminate, perform troubleshooting according to the PROBLEM SYMPTOMS TABLE (See page ST-17).

NG → **GO TO OTHER PROBLEM**

OK ↓

2	CHECK IF ENGINE STARTS (INITIALIZE STEERING LOCK)

(a) Make sure that the shift lever is in the P position.
(b) Open and close the driver's door with the engine switch off. Check if the engine can be started.
OK:
Engine can be started.
HINT:
After the battery is discharged and then recharged, the engine may not start unless the steering lock is initialized using the above procedure (See page SR-9).

OK → **END**

NG ↓

3	CHECK FOR DTC

(a) Delete the DTCs (See page ST-26).
(b) Check for DTCs again.
OK:
No DTC is output.

HINT:
- If smart key system (start) DTCs are output (See page ST-28).
- If smart key system (entry) DTCs are output (See page DL-159).
- If electrical steering lock DTCs are output (See page EI-25).
- If engine immobiliser system DTCs are output (See page SR-15).
- If engine control system DTCs are output (See page ES-63).

NG → **GO TO DTC CHART**

OK ↓

4	CHECK ENGINE SWITCH CONDITION

(a) Check the power source mode change.
(1) When the key is inside the vehicle and the shift lever is in the P position, check that pressing the engine switch causes the power source mode to change as follows:
OK:
off → on (ACC) → on (IG) → off
HINT:
- If power mode does not change to ON (IG and ACC) (See page ST-114).
- If power mode does not change to ON (IG) (See page ST-122).
- If power mode does not change to ON (ACC) (See page ST-131).

NG → **GO TO OTHER PROBLEM**

OK ↓

5	CHECK CRANKING FUNCTION

(a) Check the engine cranking function.
(1) When there is fuel in the fuel tank, the key is inside the vehicle, and the shift lever is in the P position, check that depressing the brake pedal and pressing the engine switch crank the engine.
OK:
Engine cranks.

OK → **Go to step 21**

NG ↓

6	READ VALUE OF INTELLIGENT TESTER (P SIGNAL)

(a) Connect the intelligent tester to the DLC3.

ST

(b) Turn the engine switch on (IG).
(c) Read the DATA LIST according to the displays on the tester screen.

MAIN BODY:

Item	Measurement Item/Range (Display)	Normal Condition	Diagnostic Note
SHIFT P SIG	Shift P signal / ON or OFF	ON: Shift position is P OFF: Shift position is not P	-

OK:
ON (P signal is ON) and OFF (P signal is OFF) appear on the screen.
HINT:
If the result is not as specified, perform troubleshooting for DTC B2281 first (See page ST-60).

NG → **GO TO DTC B2281**

OK

7 READ VALUE OF INTELLIGENT TESTER (STOP LIGHT SWITCH)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Check the DATA LIST for proper functioning of the stop light switch.

MAIN BODY:

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
STOP LAMP SW	Stop light Switch / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-

OK:
ON (brake pedal depressed) and OFF (brake pedal released) appear on the screen.
HINT:
If the result is not as specified, perform troubleshooting for DTC B2284 first (See page ST-72).

NG → **GO TO DTC B2284**

OK

8 READ VALUE OF INTELLIGENT TESTER (STEERING LOCK)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).

ST

MAIN BODY:

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
STR UNLOCK SW	Steering lock condition / ON or OFF	ON: Steering is unlocked OFF: Steering is locked	-

OK:
ON (steering is unlocked) and OFF (steering is locked) appear on the screen.

HINT:
If the result is not as specified, perform troubleshooting for DTCs B2285 and B2288 first (See page ST-28).

NG → GO TO DTC B2285

OK

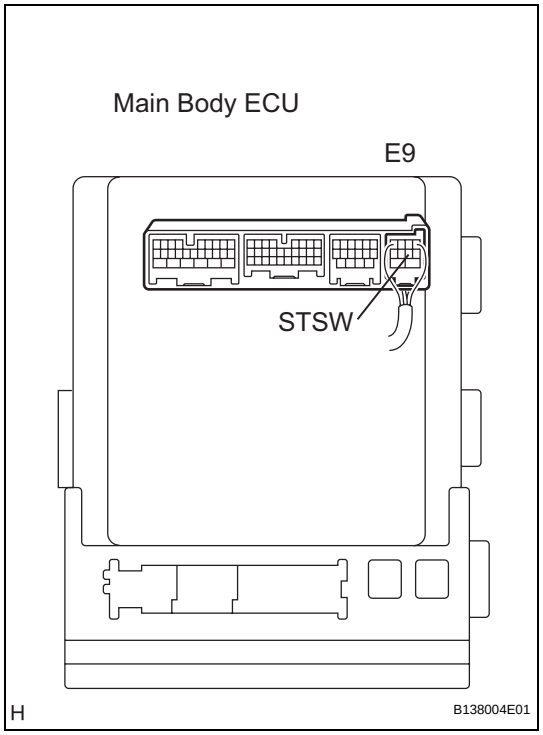
9 CHECK STEERING LOCK

(a) Check if the steering lock is released when turning the engine switch on (ACC).
OK:
The steering lock is released.

NG → GO TO STEERING LOCK SYSTEM

OK

10 INSPECT MAIN BODY ECU (STSW VOLTAGE)



(a) Disconnect the A55 ECM connector.
(b) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection (Symbols)	Condition	Specified Condition
E9-4 (STSW) - Body ground	Brake pedal depressed, engine switch held on (ST)	Output voltage at terminal AM1 or AM2 is - 2 V or more.

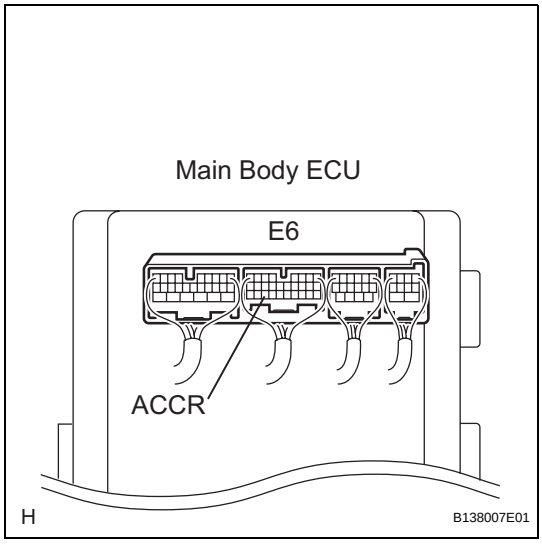
HINT:
If the result is not as specified, perform troubleshooting for DTC B2275 first (See page ST-48).

NG → GO TO DTC B2275

OK

ST

11 INSPECT ECM (ACCR VOLTAGE)



(a) Reconnect the connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

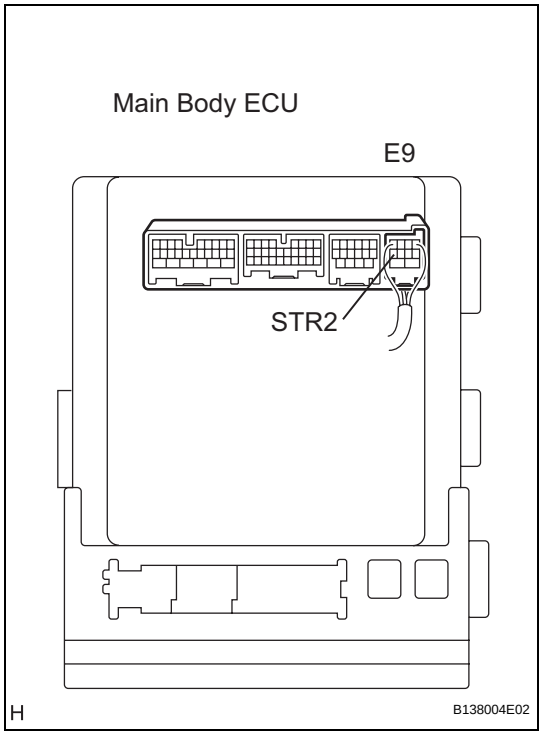
Tester Connection (Symbols)	Condition	Specified Condition
ACCR (E6-3) - GND2 (IM-9)	Brake pedal depressed, shift lever P position, engine switch is pushed once → on (IG)	0.1 to 0.8 V*1 → Output voltage at terminal AM1 or AM2 is -2 V or more.

*1: Voltage is output only when the engine is cranking.
HINT:
If the result is not as specified, perform troubleshooting for DTC B2276 first (See page ST-51).

NG → **GO TO DTC B2276**

OK

12 INSPECT ECM (STR2 VOLTAGE)



(a) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection (Symbols)	Condition	Specified Condition
STR2 (E9-6) - GND2 (IM-9)	Brake pedal depressed, shift lever P or N position, engine switch on (ST)	Output voltage at terminal AM1 or AM2 is -3.5 V or more.*1

*1: Voltage is output for 0.3 seconds when the engine is cranking to start.

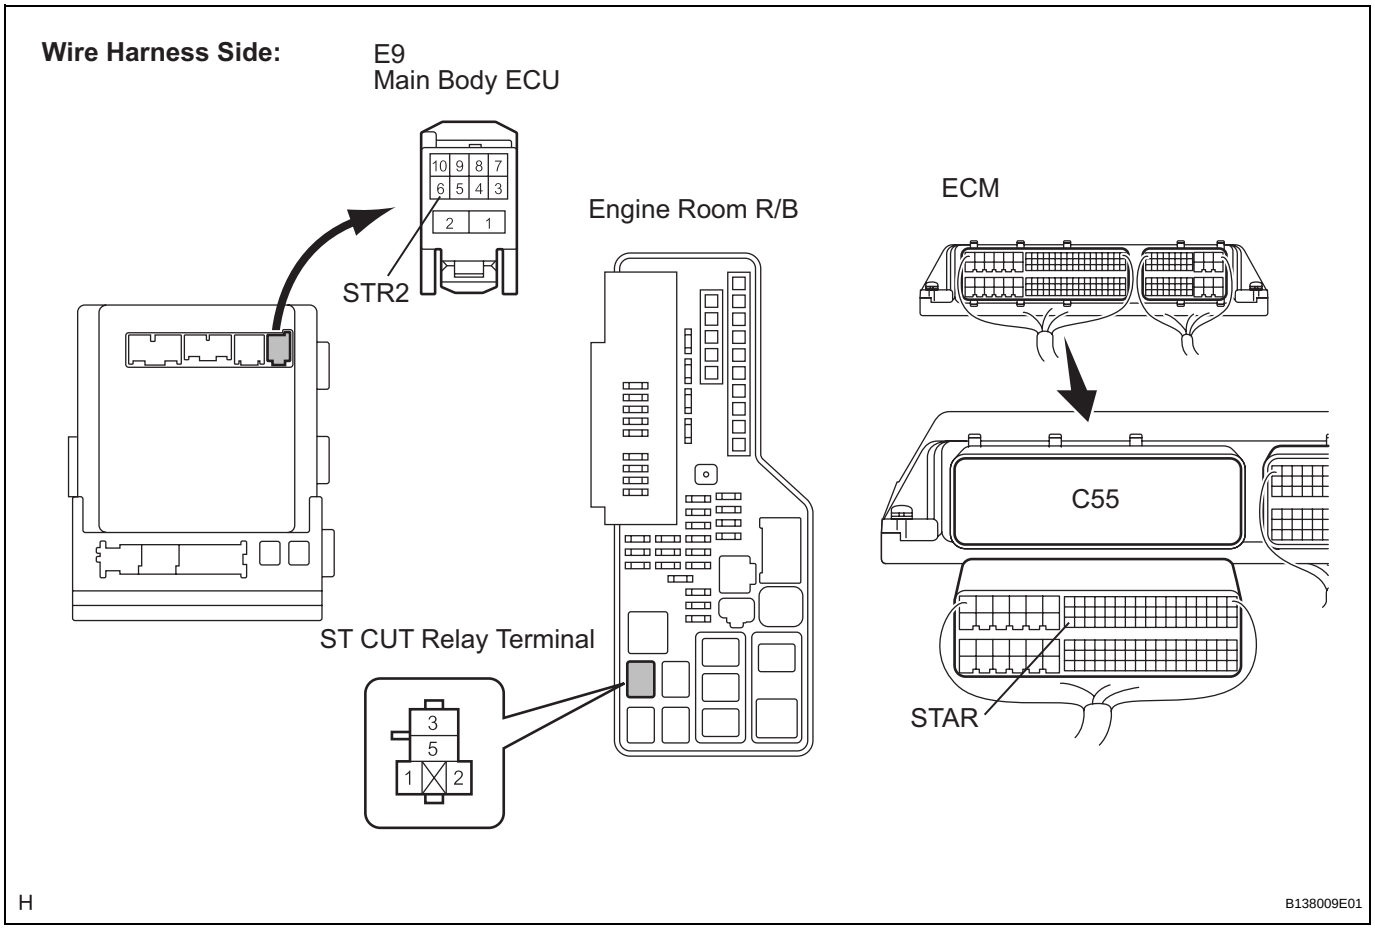
NG → **REPLACE ECM**

OK

13 CHECK WIRE HARNESS (MAIN BODY ECU -ECM - ENGINE ROOM R/B)

(a) Remove the ST CUT relay from the engine room R/B.

ST



(b) Measure the resistance according to the value(s) in the table below.

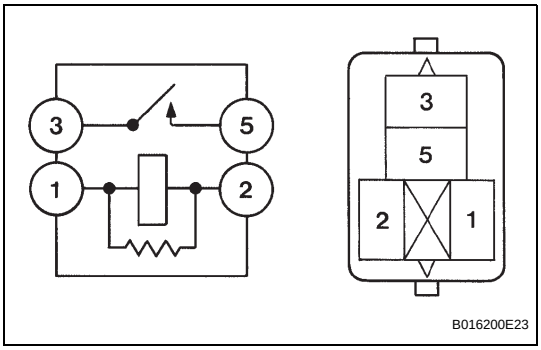
Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
C55-63 (STAR) - E9-6 (STR2)	Always	Below 1 Ω
C55-63 (STAR) - ST CUT relay terminal - 3	Always	Below 1 Ω
C55-63 (STAR) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

14 INSPECT RELAY (ST CUT)



(a) Measure the resistance of the ST CUT relay.
Standard resistance

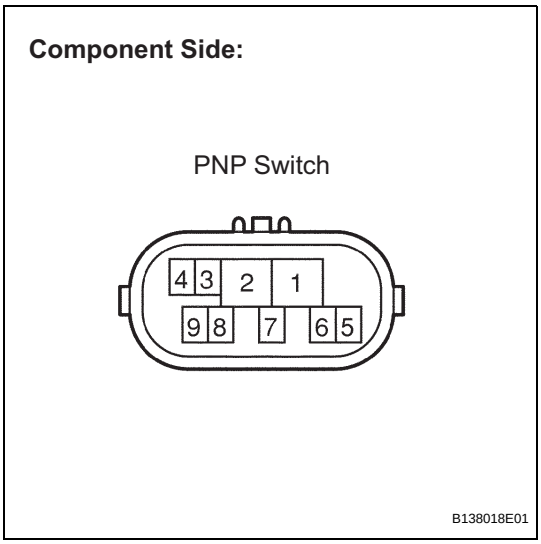
Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

NG → **REPLACE RELAY**

OK

15 INSPECT PARK/NEUTRAL POSITION SWITCH

Component Side:



(a) Disconnect the park/neutral position (PNP) switch connector.
(b) Measure the resistance according the the value(s) in the table below.
Standard resistance

Shift Position	Tester Connection	Specified Condition
P	4 - 9	Below 1 Ω
N	4 - 9	Below 1 Ω
Except P and N	4 - 9	10 kΩ or higher

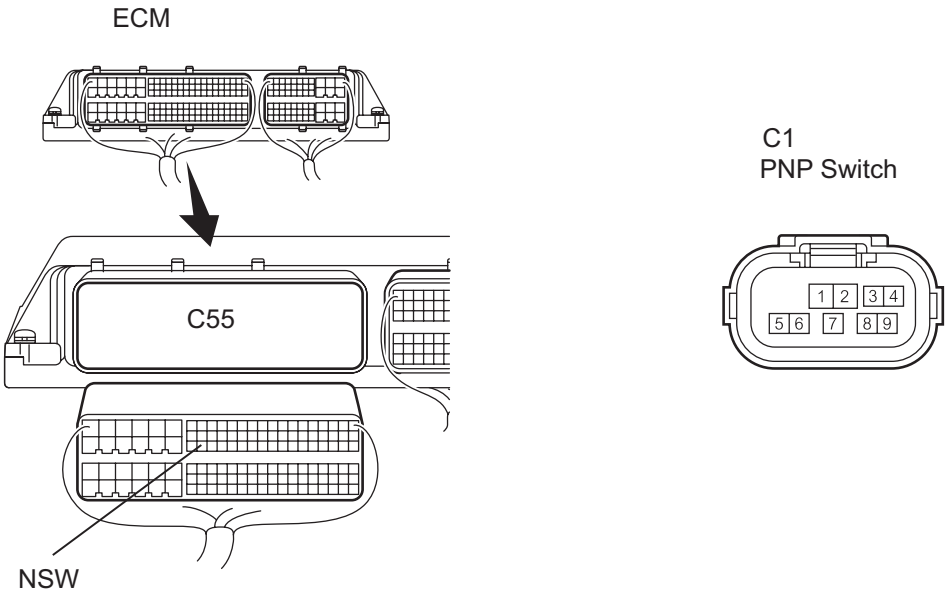
NG → **REPLACE PARK/NEUTRAL POSITION SWITCH**

OK

16 CHECK HARNESS AND CONNECTOR (PARK/NEUTRAL POSITION SWITCH - ECM)

(a) Disconnect the C55 ECM connector.

Wire Harness Side:



(b) Measure the resistance according to the value(s) in the table below.

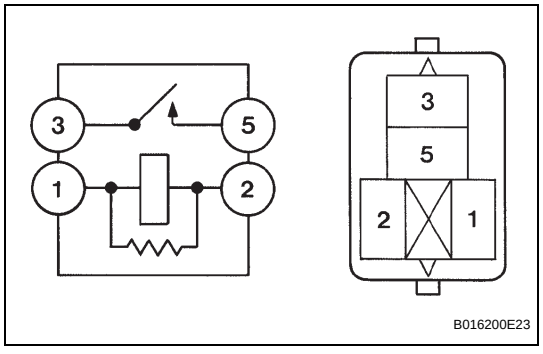
Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
C55-62 (NSW) - C1-4	Always	Below 1 Ω
C55-62 (NSW) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

17 INSPECT RELAY (ST)



(a) Remove the starter relay from the engine room R/B.

(b) Measure the resistance of the starter relay.

Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

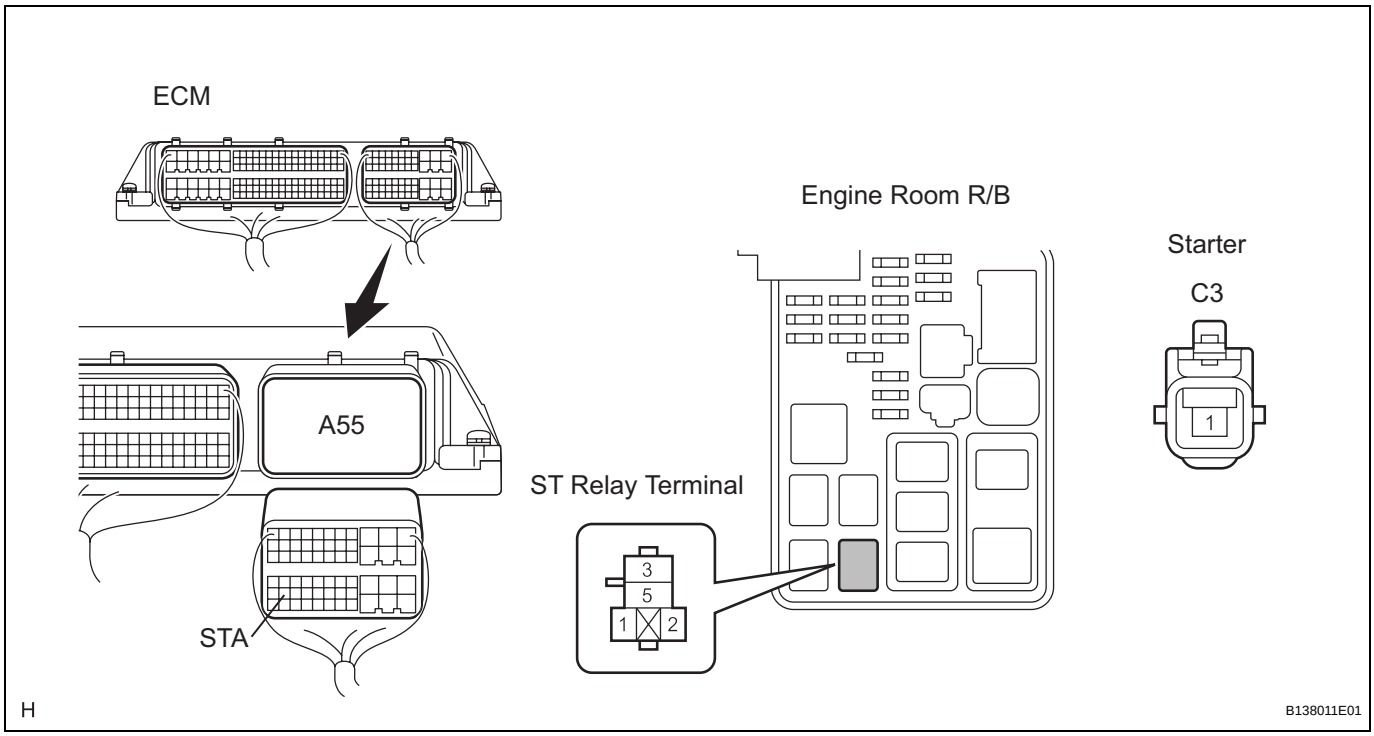
NG → **REPLACE RELAY**

OK

ST

18	CHECK HARNESS AND CONNECTOR (ECM AND STARTER - ST RELAY)

(a) Disconnect the A55 ECM connector.



(b) Disconnect the C3 starter connector.
(c) Measure the resistance according the the value(s) in the table below.

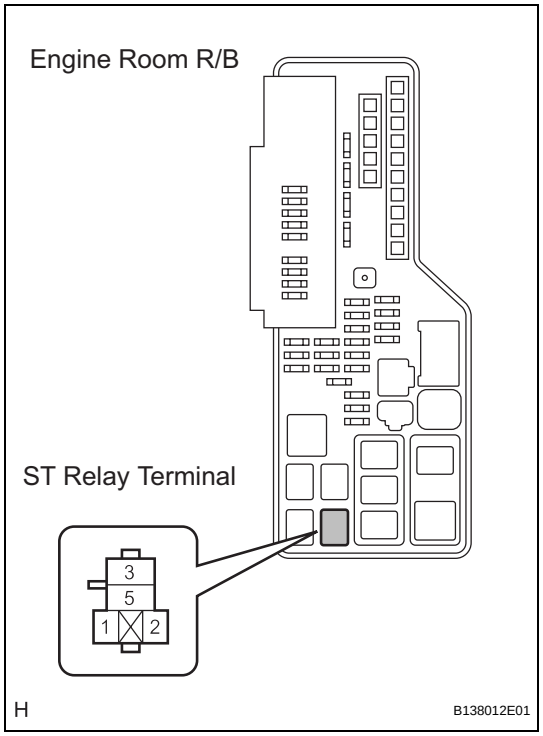
Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
A55-48 (STA) - ST relay terminal - 1	Always	Below 1 Ω
A55-48 (STA) - Body ground	Always	10 kΩ or higher
C3-1 - ST relay terminal - 3	Always	Below 1 Ω
C3-1 - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

19 INSPECT ENGINE ROOM RELAY BLOCK (ST RELAY VOLTAGE)



(a) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
ST relay terminal - 5 - Body ground	Always	9 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

20 INSPECT STARTER ASSEMBLY

HINT:
See page ST-143.

NG → **REPAIR OR REPLACE STARTER ASSEMBLY**

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR (PNP SWITCH - ST RELAY, STARTER - BATTERY)

21 READ VALUE OF INTELLIGENT TESTER (L CODE)

(a) Reconnect the connectors.
(b) Connect the intelligent tester to the DLC3.
HINT:
When using the intelligent tester with the engine switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 second intervals or less until communication between the tester and vehicle starts.

(c) Turn the engine switch on (IG).

SMART ACCESS (Certification ECU):

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
L CODE CHK	L code check / ON or NG	OK: Normal NG: Malfunction	Electrical key in the cabin

OK:

OK is displayed on the screen.

HINT:

If the result is not as specified, there may be a malfunction with the steering lock ECU or the ID code box.

NG → **GO TO ENGINE IMMOBILISER SYSTEM**

OK

22 READ VALUE OF INTELLIGENT TESTER (ENGINE START REQUEST)

(a) Connect the intelligent tester to the DLC3.

HINT:

When using the intelligent tester with the engine switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 second intervals or less until communication between the tester and vehicle starts.

(b) Turn the engine switch on (IG).

SMART ACCESS (Certification ECU):

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
START RQST	Start request signal response / OK or NG	OK: Received NG: Not received	-

OK:

OK (received) and NG (not received) appear on the screen.

NG → **REPLACE CERTIFICATION ECU**

OK

23 READ VALUE OF INTELLIGENT TESTER (S CODE)

(a) Connect the intelligent tester to the DLC3.

HINT:

When using the intelligent tester with the engine switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 second intervals or less until communication between the tester and vehicle starts.

(b) Turn the engine switch on (IG).

SMART ACCESS (Certification ECU):

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
S CODE CHK	S code check / OK or NG	OK: Normal NG: Malfunction	-

OK:

OK is displayed on the screen.

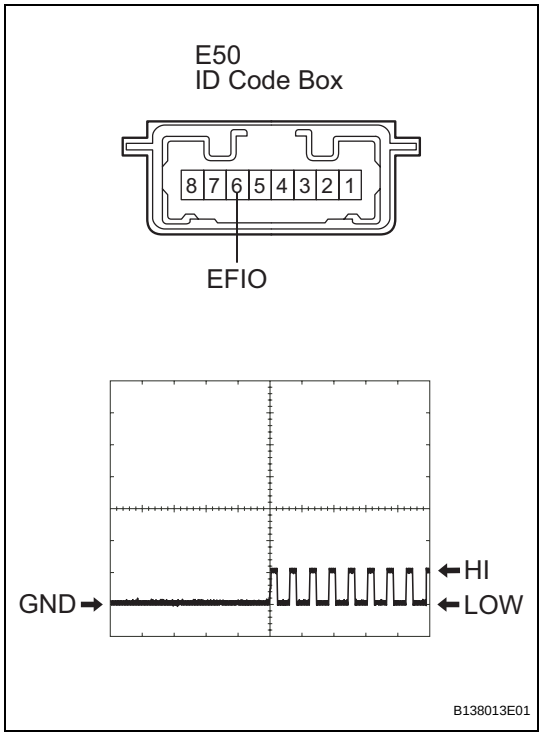
HINT:

If the result is not as specified, there may be a malfunction with the certification ECU or the ID code box.

NG → **GO TO ENGINE IMMOBILISER SYSTEM**

OK

24 INSPECT ID CODE BOX



(a) Check the input signal waveform.

(1) Connect an oscilloscope to terminal E50-6 (EFIO) and body ground.

(2) Turn the engine switch on (IG).

(3) Check the signal waveform according to the condition(s) in the table below.

Item	Condition
Tool setting	10 V/DIV., 100 ms./DIV.
Vehicle condition	Engine switch on (IG)

NG → **REPLACE ID CODE BOX**

OK

END

ST

Engine Switch Indicator Circuit

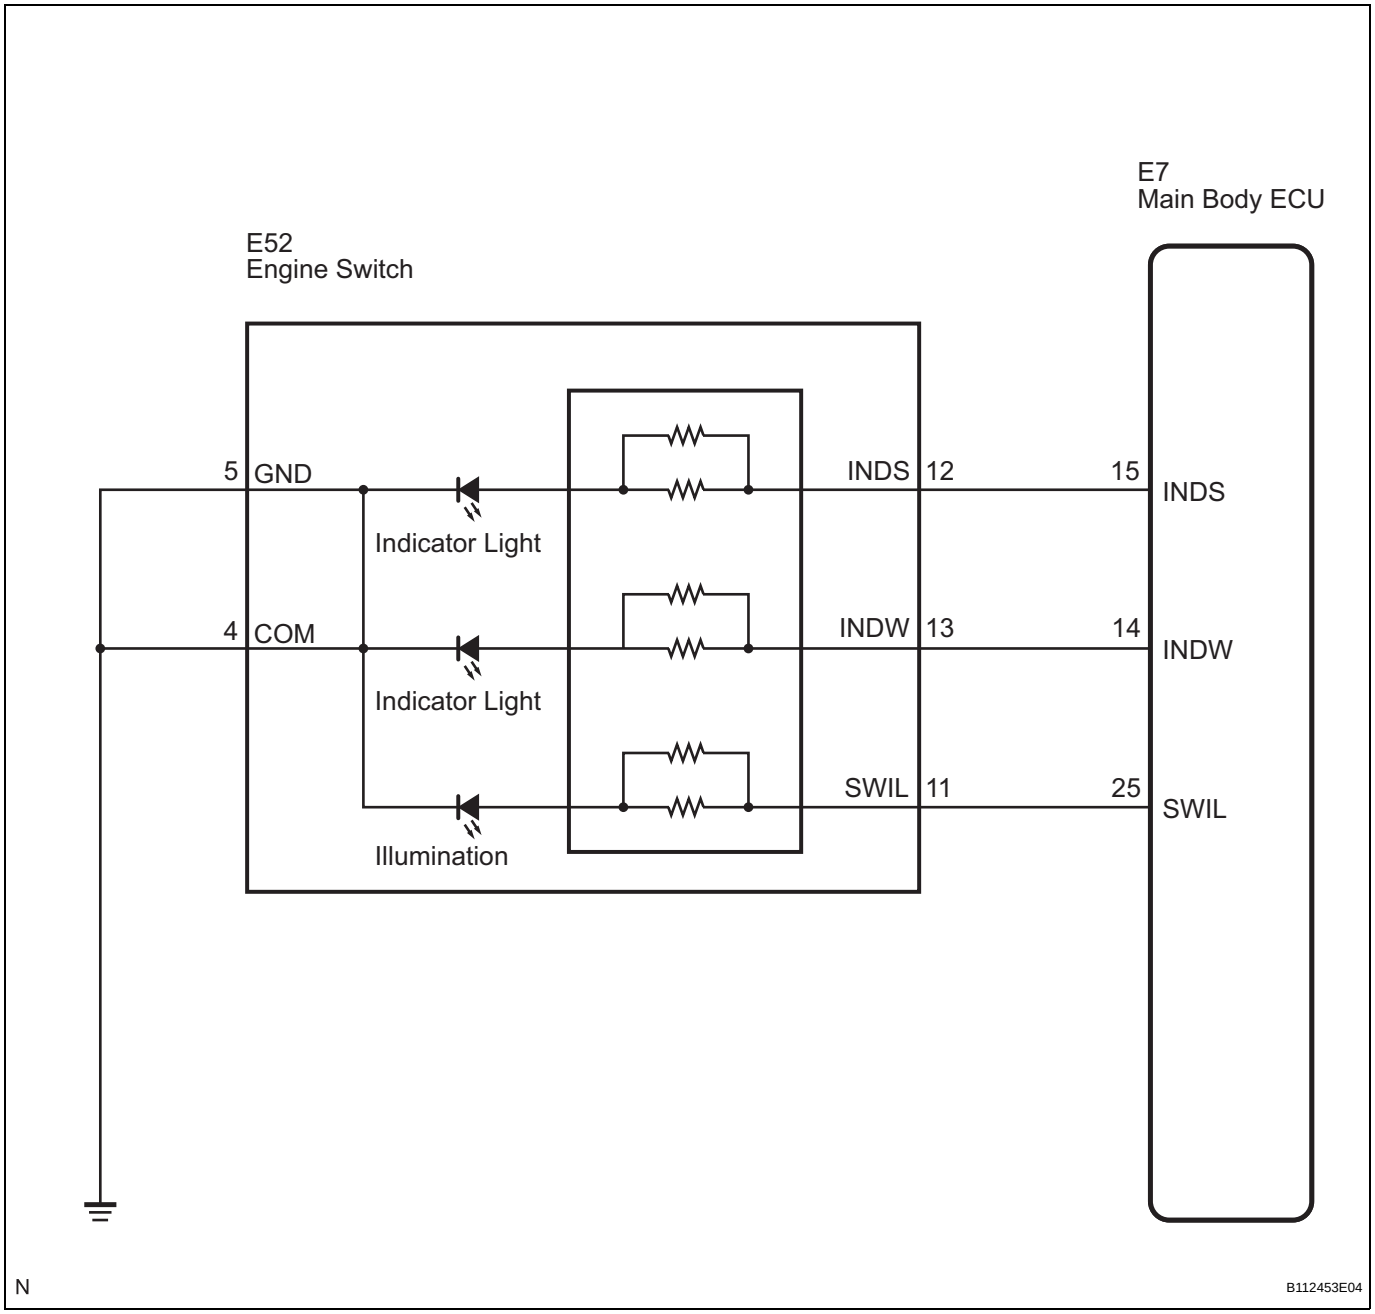
DESCRIPTION

Engine start conditions or system malfunctions can be checked by the status of the engine switch indicator light.

Engine switch indicator light condition:

Power Source Mode/Condition	Indicator Light Condition	
	Brake pedal released	Brake pedal depressed, shift lever in P or N
off	OFF	ON (Green) (When key and vehicle IDs match)
on (ACC, IG)	ON (Amber)	ON (Green)
Engine running	OFF	OFF
Steering lock not unlocked	Flashes (Green) for 15 sec.	Flashes (Green) for 15 sec.
System malfunction	Flashes (Amber) for 15 sec.	Flashes (Amber) for 15 sec.

WIRING DIAGRAM

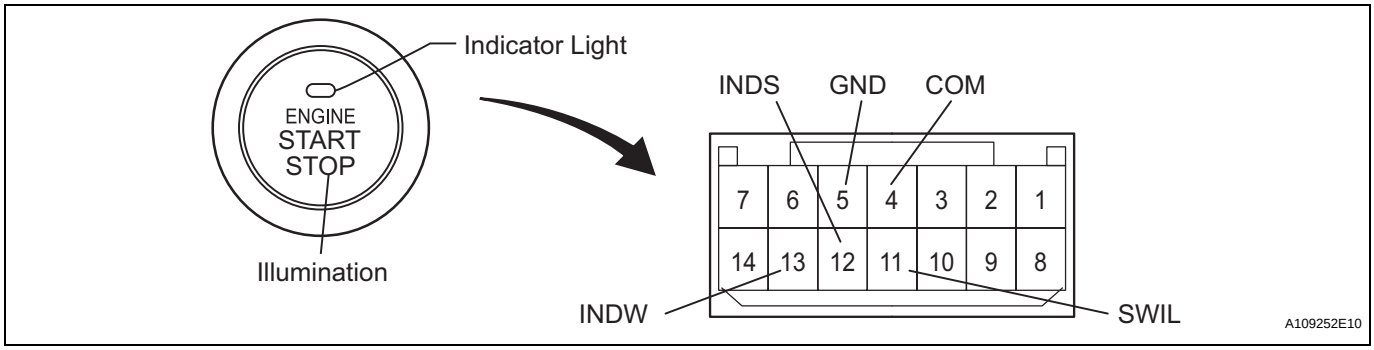


INSPECTION PROCEDURE

1	**INSPECT ENGINE SWITCH**

(a) Remove the engine switch.

ST



(b) Apply battery voltage between the terminals of the switch, and check the illumination condition of the switch.

NOTICE:

- **If the positive (+) lead and the negative (-) lead are incorrectly connected, the engine switch indicator will not illuminate.**
- **If the voltage is too low, the indicator will not illuminate.**

OK

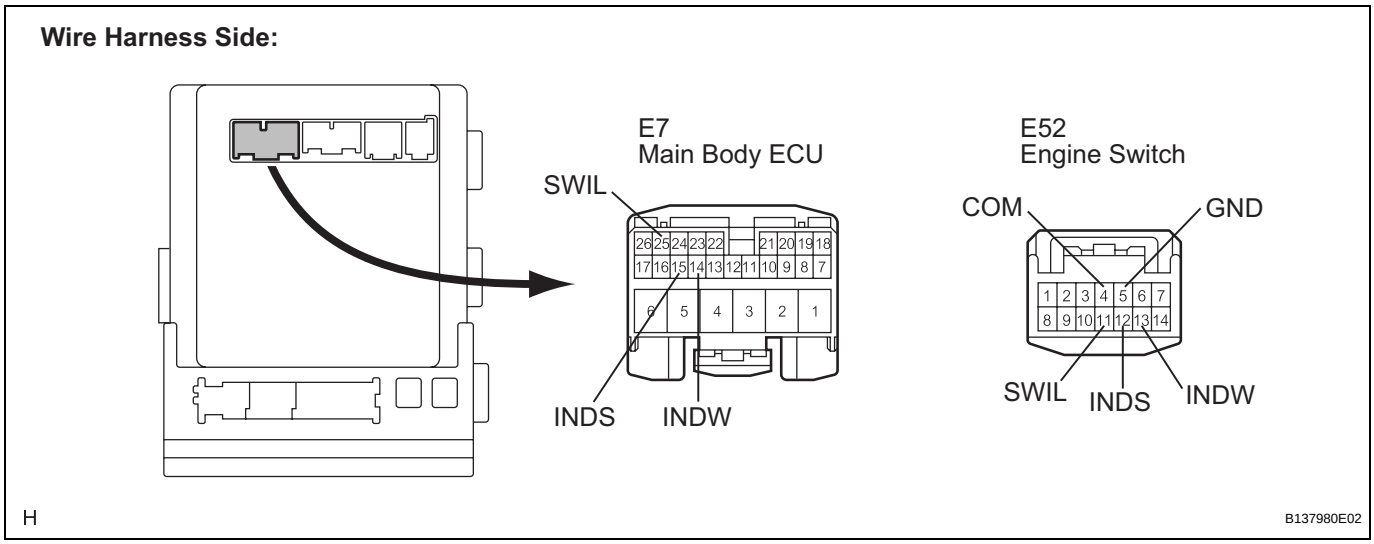
Measurement Condition	Specified Condition
Battery positive (+) → Terminal 11 (SWIL) Battery negative (-) → Terminal 4 (COM) or 5 (GND)	Illuminates
Battery positive (+) → Terminal 12 (INDS) Battery negative (-) → Terminal 4 (COM) or 5 (GND)	Illuminates
Battery positive (+) → Terminal 13 (INDW) Battery negative (-) → Terminal 4 (COM) or 5 (GND)	Illuminates

NG → **REPLACE ENGINE SWITCH**

OK

2	CHECK WIRE HARNESS (ENGINE SWITCH - MAIN BODY ECU AND BODY GROUND)

(a) Disconnect the E52 switch connector.



(b) Disconnect the E7 ECU connector.

(c) Measure the resistance according to the value(s) in the table below.

ST

Standard resistance

Tester Connection	Condition	Specified Condition
E52-11 (SWIL) - E7-25 (SWIL)	Always	Below 1 Ω
E52-12 (INDS) - E7-15 (INDS)	Always	Below 1 Ω
E52-13 (INDW) - E7-14 (INDW)	Always	Below 1 Ω
E52-5 (GND) - Body ground	Always	Below 1 Ω
E52-4 (COM) - Body ground	Always	Below 1 Ω
E52-11 (SWIL) or E7-25 (SWIL) - Body ground	Always	10 kΩ or higher
E52-12 (INDS) or E7-15 (INDS) - Body ground	Always	10 kΩ or higher
E52-13 (INDW) or E7-14 (INDW) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MAIN BODY ECU

Power Source Mode does not Change to ON (IG and ACC)

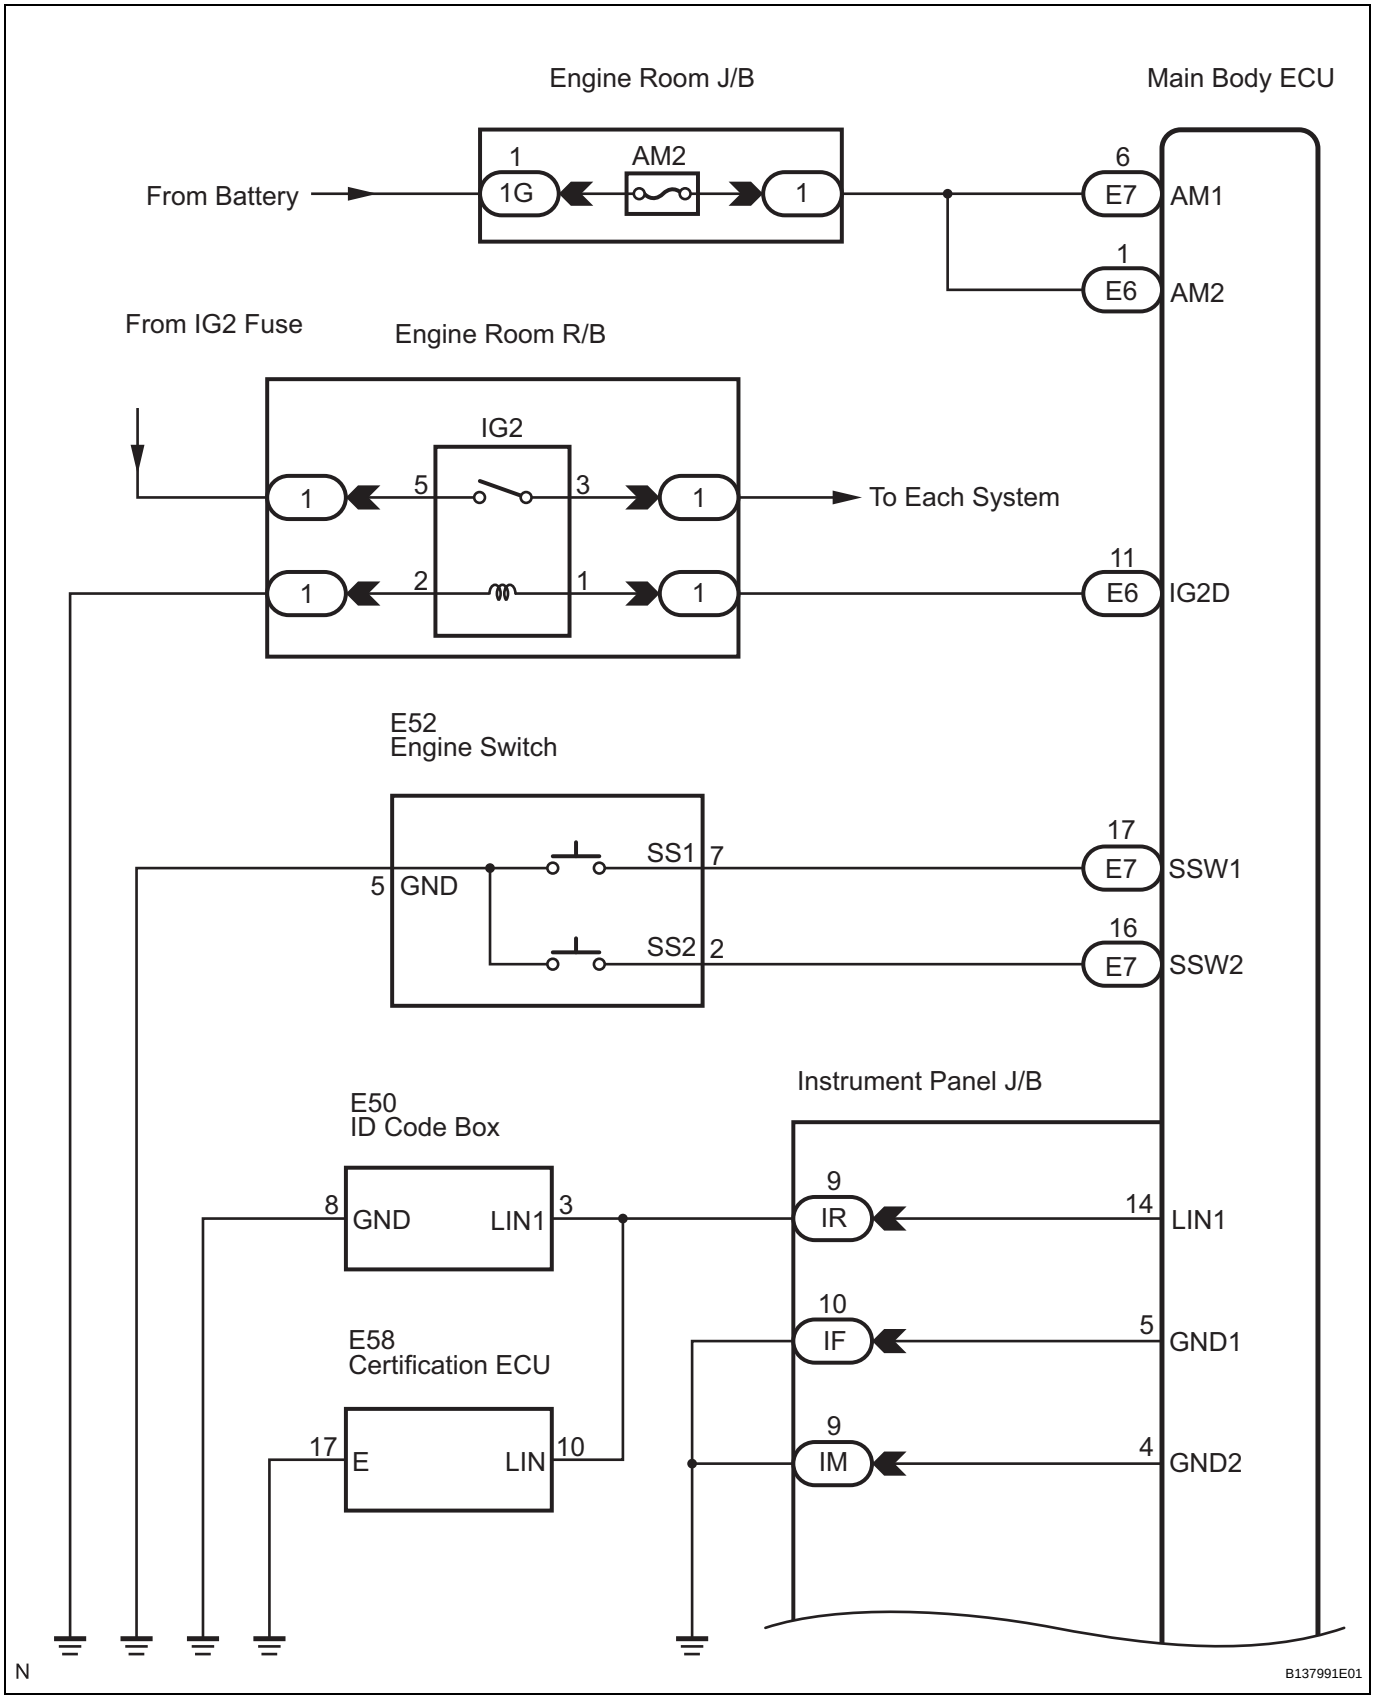
DESCRIPTION

When the engine switch is pushed with the electrical key in the cabin, the main body ECU receives signals to switch the power source mode.

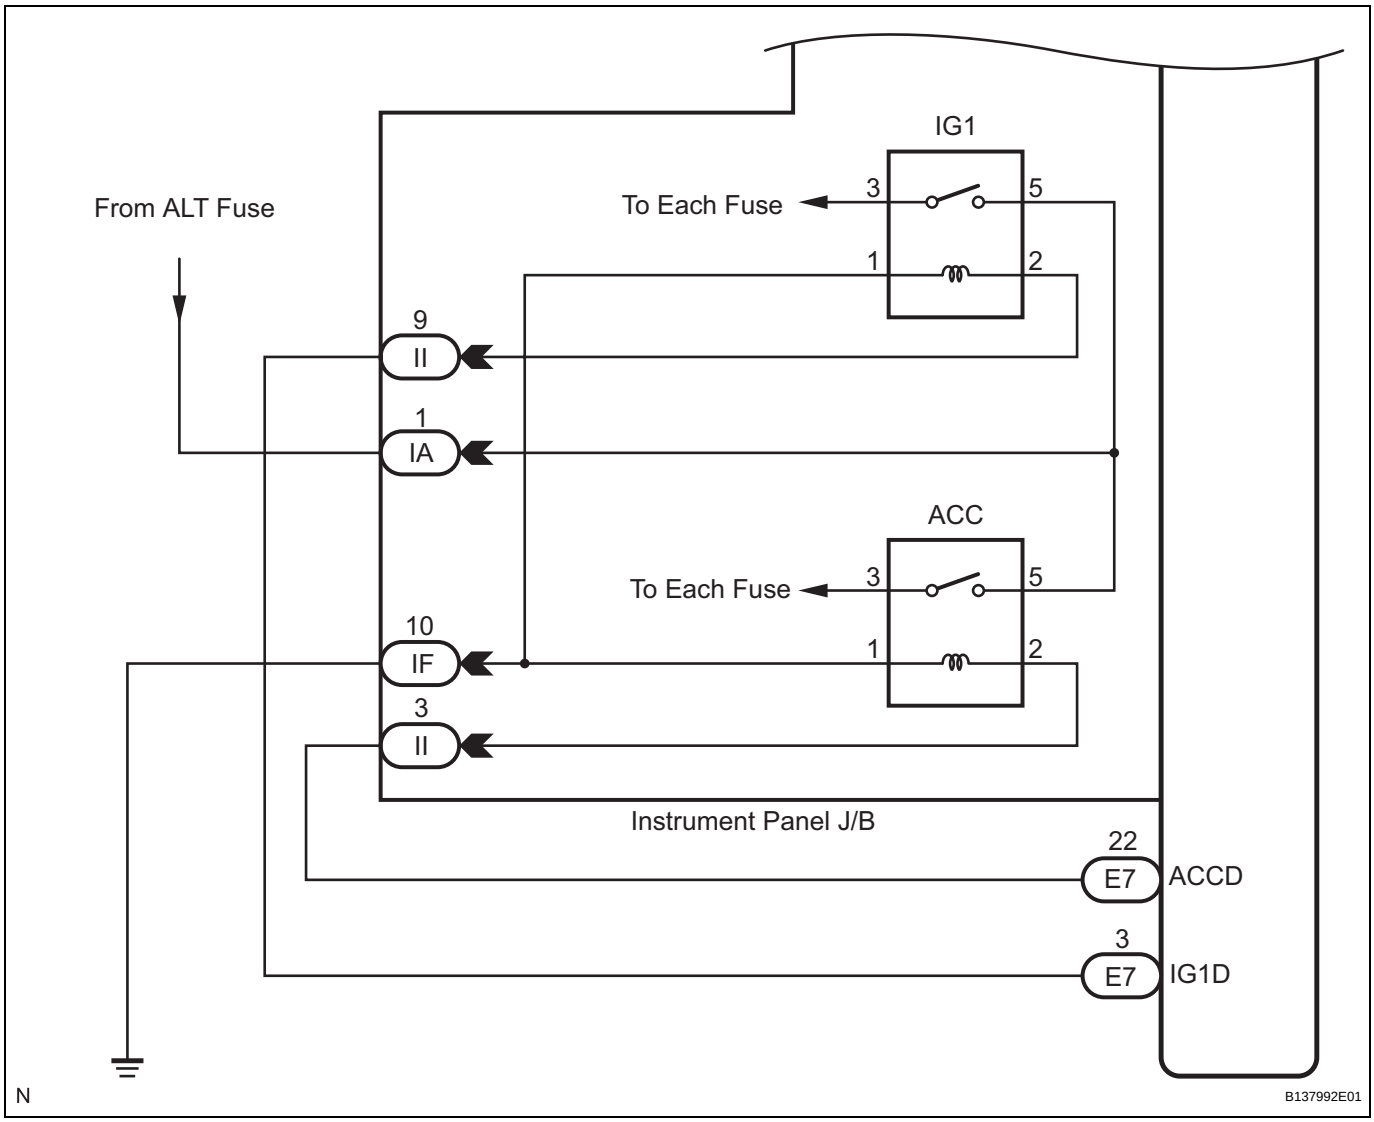
HINT:

To allow use of the intelligent tester to inspect the push-button start function when the engine switch is off, repeat opening and closing any of the doors. Opening and closing a door establishes communication between the intelligent tester and the main body ECU. (Opening and closing a door can also be simulated by operating a door courtesy light switch.)

WIRING DIAGRAM

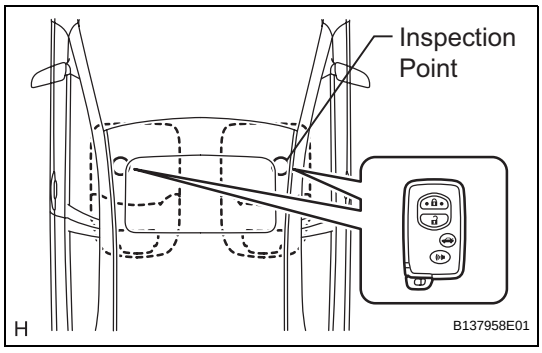


ST



INSPECTION PROCEDURE

1	CHECK ENTRY FUNCTION DETECTION AREA



(a) Inspect entry detection area.
(1) When the electrical key is in either of the 2 inspection points in the illustration, the shift lever is in the P position and the brake pedal is depressed, check that the engine switch indicator illuminates in green.

OK:

Engine switch illuminates in green.

HINT:

If the engine switch does not illuminate, perform troubleshooting according to the PROBLEM SYMPTOMS TABLE (See page ST-17).

NG	GO TO OTHER PROBLEM

ST

OK

2	INSPECT FUSE (AM2)

(a) Remove the AM2 fuse from the engine room J/B.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

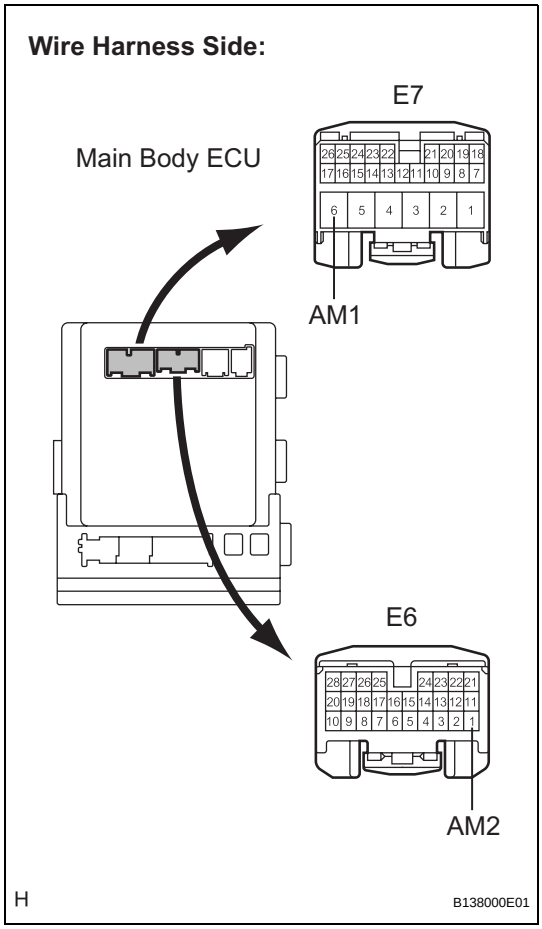
3	CHECK CONNECTORS

(a) Check that the connectors are securely connected and the terminals are not deformed or loose.
OK:
The connectors are securely connected and the terminals are not deformed or loose.

NG → **REPAIR OR REPLACE CONNECTORS**

OK

4	CHECK WIRE HARNESS (MAIN BODY ECU - BATTERY)



(a) Disconnect the E6 and E7 ECU connectors.
(b) Measure the voltage according to the value(s) in the table below.

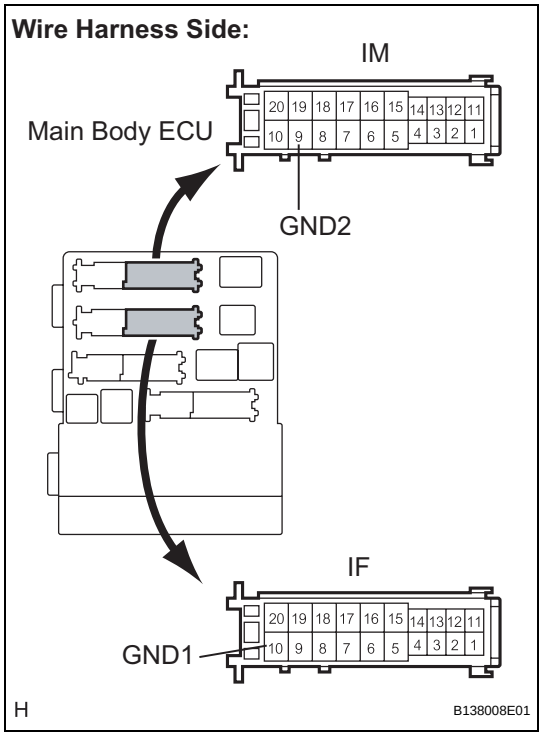
Standard voltage

Tester Connection (Symbols)	Condition	Specified Condition
E7-6 (AM1) - Body ground	Always	10 to 14 V
E6-1 (AM2) - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5 CHECK WIRE HARNESS (MAIN BODY ECU - BODY GROUND)



(a) Disconnect the IF and IM ECU connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
IF-10 (GND1) - Body ground	Always	Below 1 Ω
IM-9 (GND2) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6 CHECK FOR DTCS

(a) Delete the DTCs (See page ST-26).
HINT:
After all the DTCs are cleared, check if the trouble occurs again 5 seconds after the engine switch is turned on (IG).
(b) Check for DTCs again.
OK:
No DTC is output.

NG → **GO TO DTC CHART**

OK

7 READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Check the DATA LIST for proper functioning of the start switches 1 and 2.
HINT:
When using the intelligent tester with the engine switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 second intervals or less until communication between the tester and vehicle starts.

ST

MAIN BODY:

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
STSW1	Start Switch 1/ON or OFF	ON: Engine switch on (IG) OFF: Engine switch off	-
START SW2	Start Switch 2/ON or OFF	ON: Engine switch on (IG) OFF: Engine switch off	-

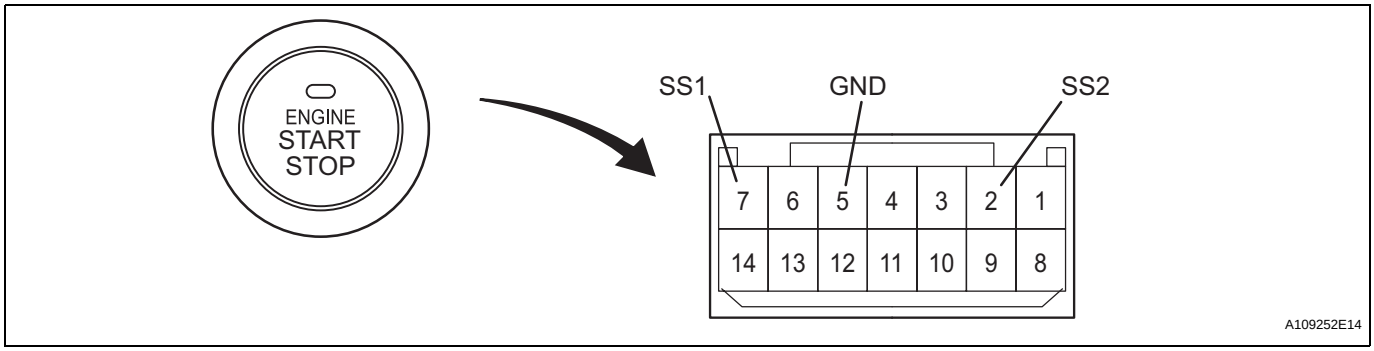
OK:
ON (engine switch on (IG)) and OFF (engine switch off) appear on the screen.

OK → **REPLACE MAIN BODY ECU**

NG

8 INSPECT ENGINE SWITCH

(a) Remove the engine switch.



(b) Measure the resistance of the switch.
Standard resistance

Tester Connection	Switch Condition	Specified Condition
7 (SS1) - 5 (GND)	Pushed	Below 1 Ω
2 (SS2) - 5 (GND)	Pushed	Below 1 Ω
7 (SS1) - 5 (GND)	Not pushed	10 kΩ or higher
2 (SS2) - 5 (GND)	Not pushed	10 kΩ or higher

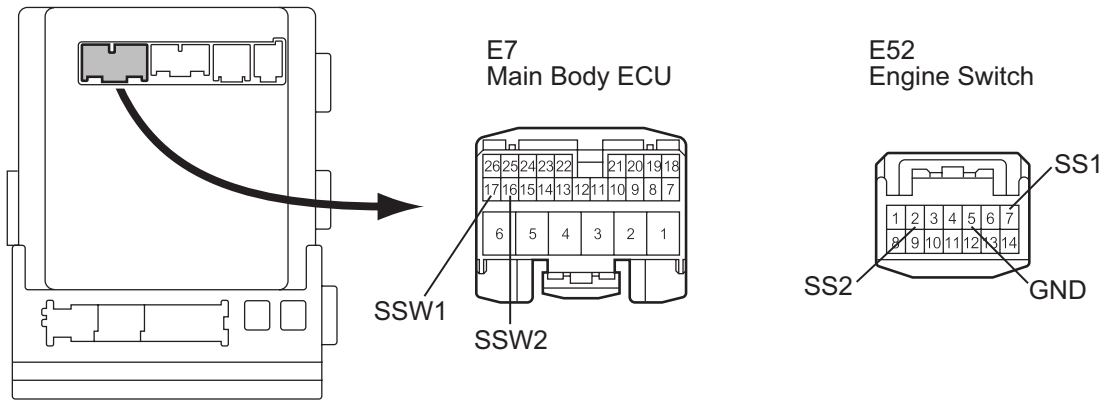
NG → **REPLACE ENGINE SWITCH**

OK

9 CHECK WIRE HARNESS (MAIN BODY ECU AND BODY GROUND - ENGINE SWITCH)

(a) Disconnect the E7 ECU connector.

Wire Harness Side:



H

B137980E01

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E52-7 (SS1) - E7-17 (SSW1)	Always	Below 1 Ω
E52-2 (SS2) - E7-16 (SSW2)	Always	Below 1 Ω
E52-5 (GND) - Body ground	Always	Below 1 Ω
E52-7 (SS1) or E7-17 (SSW1) - Body ground	Always	10 kΩ or higher
E52-2 (SS2) or E7-16 (SSW2) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MAIN BODY ECU

Power Source Mode does not Change to ON (IG)

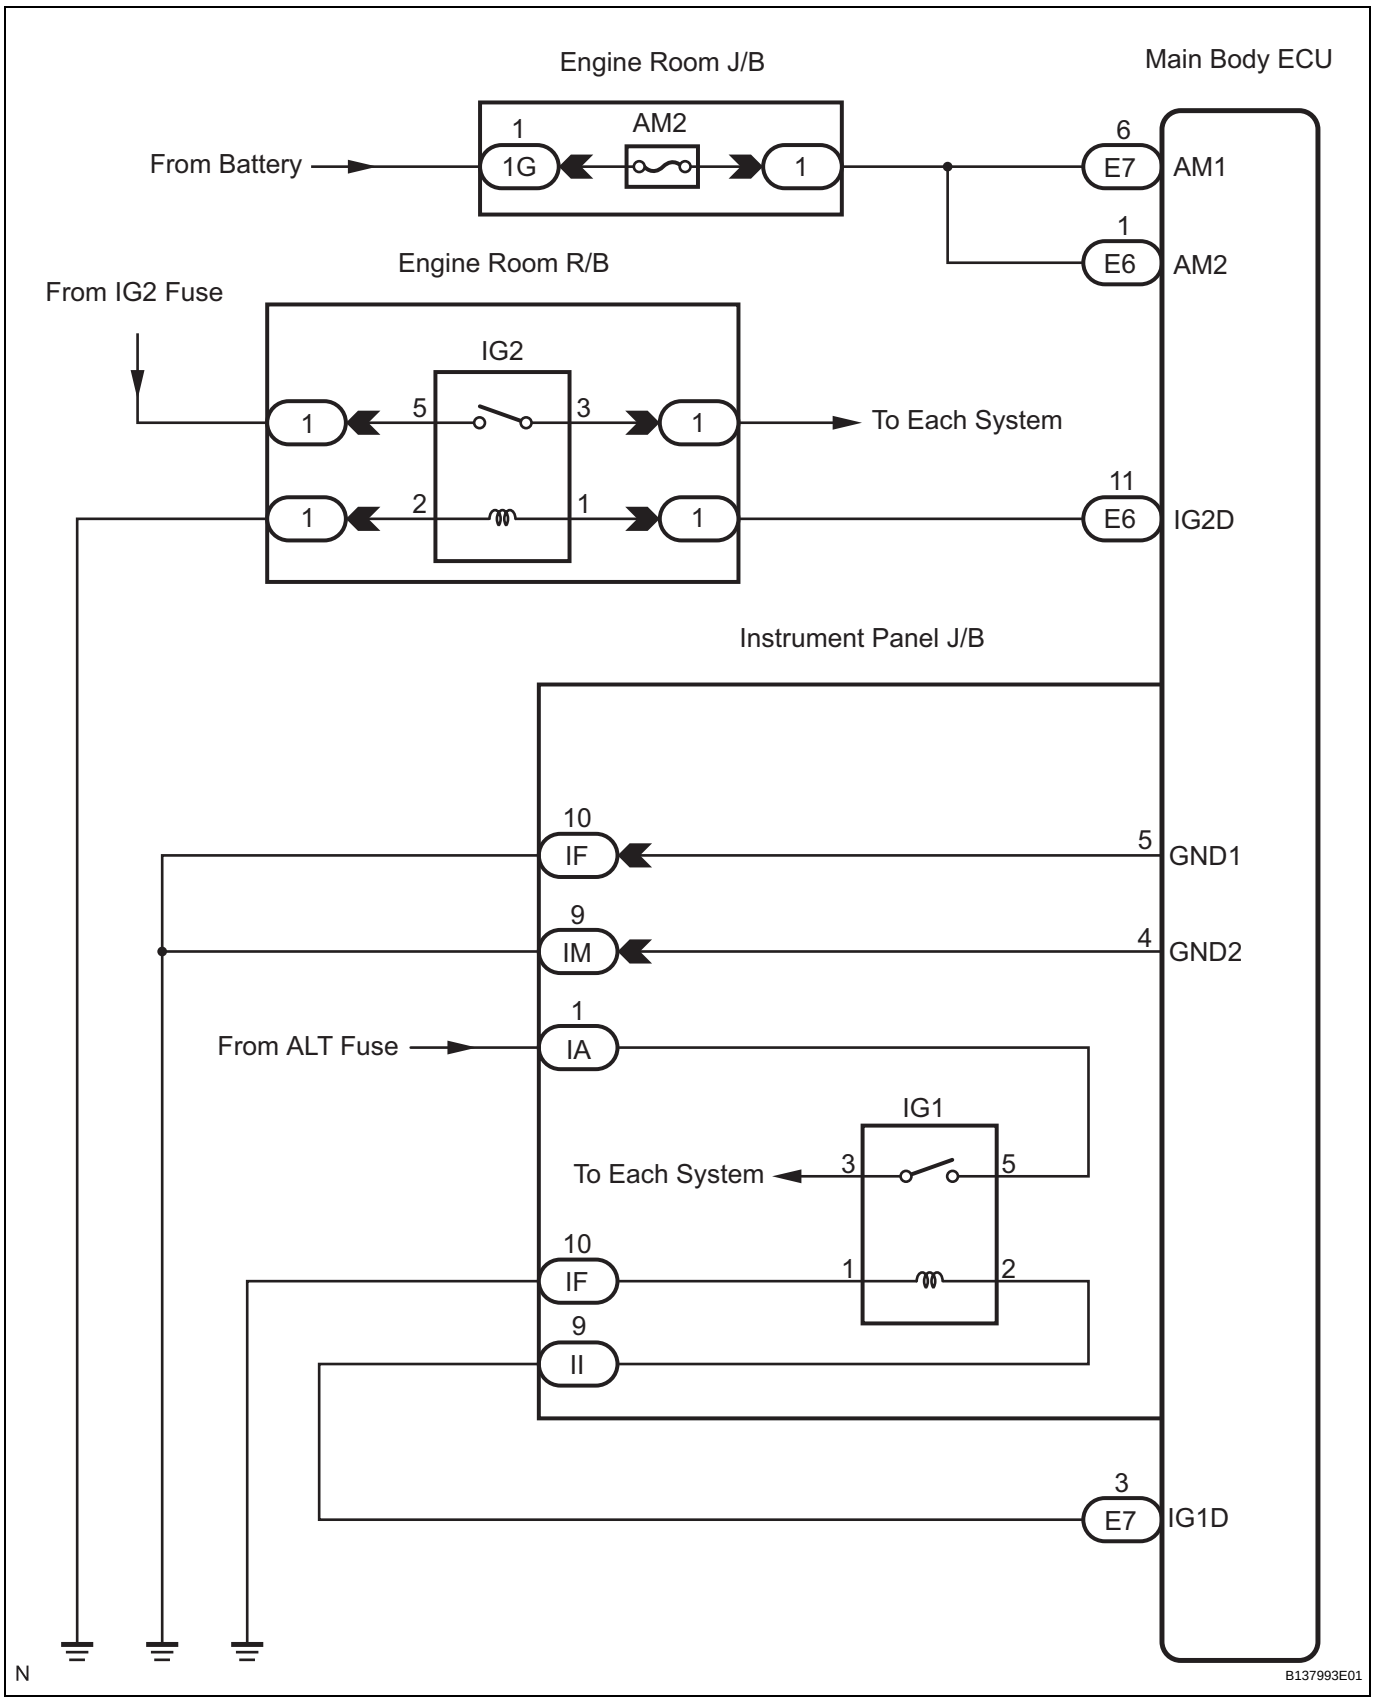
DESCRIPTION

When the engine switch is pushed with the electrical key in the cabin, the main body ECU receives signals to switch the power source mode.

HINT:

To allow use of the intelligent tester to inspect the push-button start function when the engine switch is off, repeat opening and closing any of the doors. Opening and closing a door establishes communication between the intelligent tester and the main body ECU. (Opening and closing a door can also be simulated by operating a door courtesy light switch.)

WIRING DIAGRAM



ST

INSPECTION PROCEDURE

1	INSPECT FUSE (AM2)

(a) Remove the AM2 fuse from the engine room J/B.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

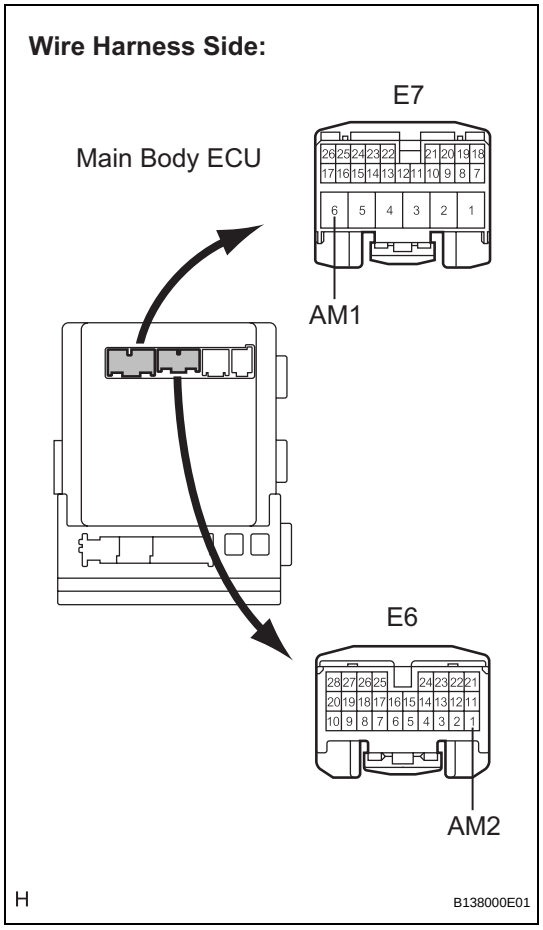
2	CHECK CONNECTORS

(a) Check that the connectors are securely connected and the terminals are not deformed or loose.
OK:
The connectors are securely connected and the terminals are not deformed or loose.

NG → **REPAIR OR REPLACE CONNECTORS**

OK

3	CHECK WIRE HARNESS (MAIN BODY ECU - BATTERY)



(a) Disconnect the E6 and E7 ECU connectors.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

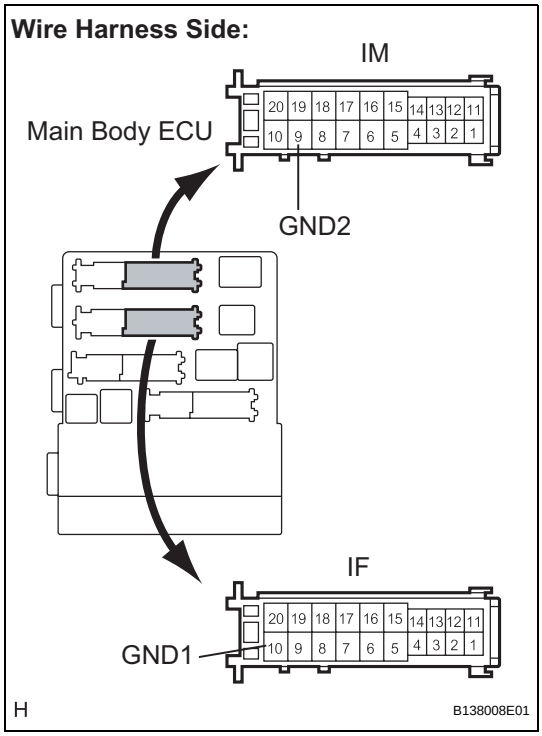
Tester Connection (Symbols)	Condition	Specified Condition
E7-6 (AM1) - Body ground	Always	10 to 14 V
E6-1 (AM2) - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

ST

4 CHECK WIRE HARNESS (MAIN BODY ECU - BODY GROUND)



(a) Disconnect the IF and IM ECU connectors.
(b) Measure the resistance according to the value(s) in the table below.

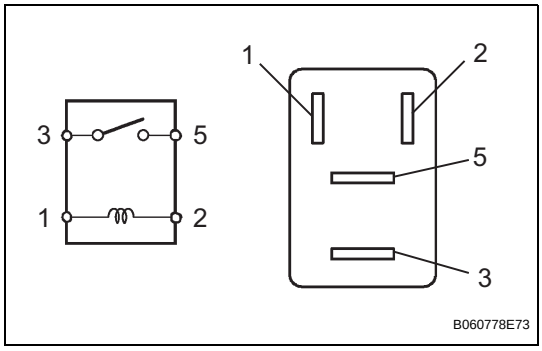
Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
IF-10 (GND1) - Body ground	Always	Below 1 Ω
IM-9 (GND2) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5 INSPECT RELAY (IG2 RELAY)



(a) Remove the IG2 relay from the engine room R/B No. 2.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (When battery voltage is applied to terminals 1 and 2)

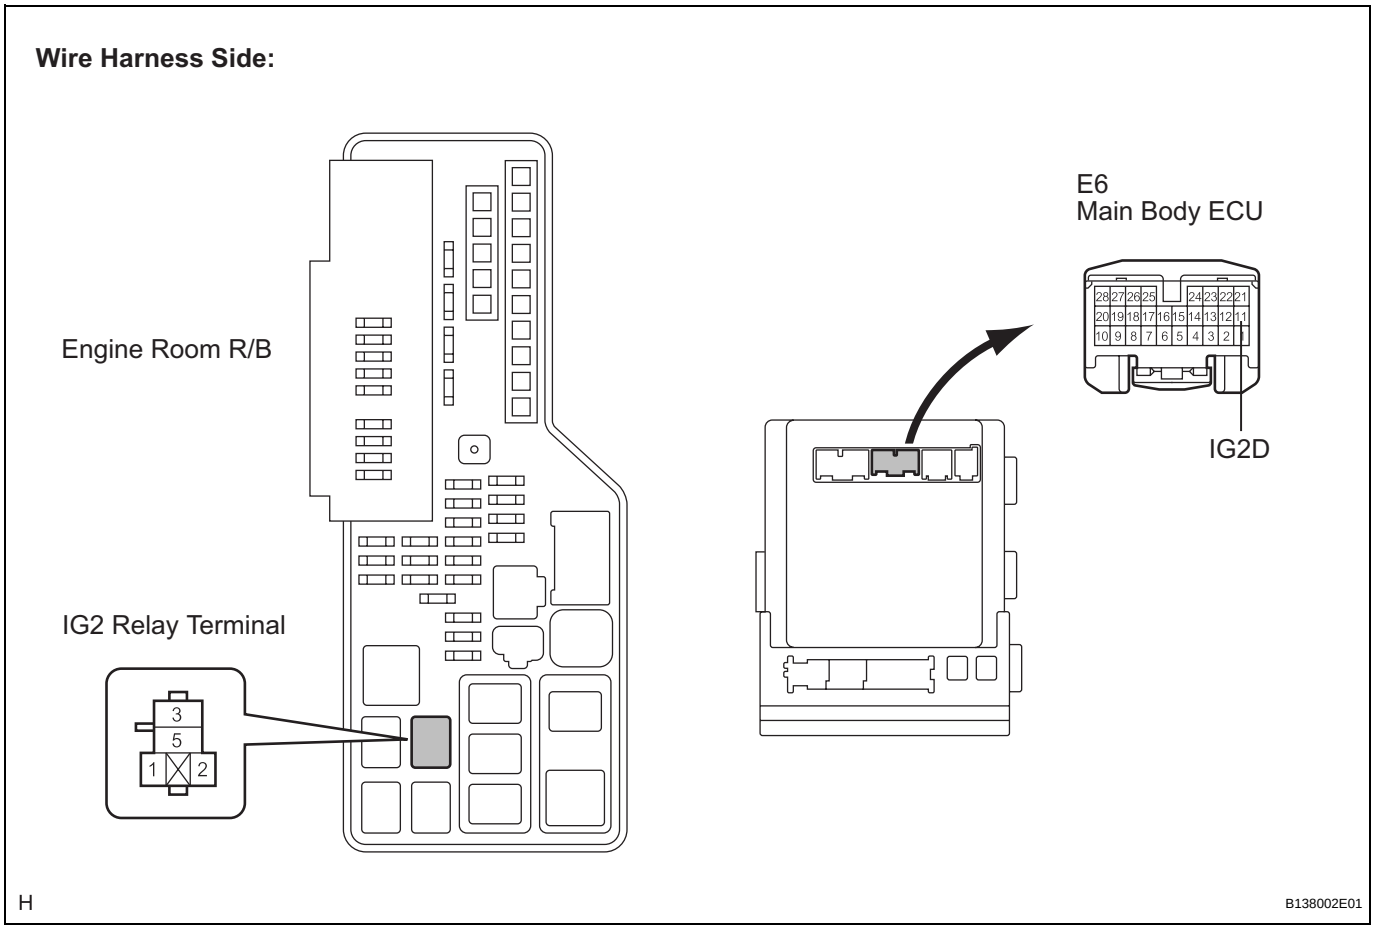
NG → **REPLACE RELAY**

OK

6 CHECK WIRE HARNESS (ENGINE ROOM R/B - MAIN BODY ECU AND BODY GROUND)

(a) Remove the IG2 relay from the engine room R/B.

ST



(b) Disconnect the E6 ECU connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

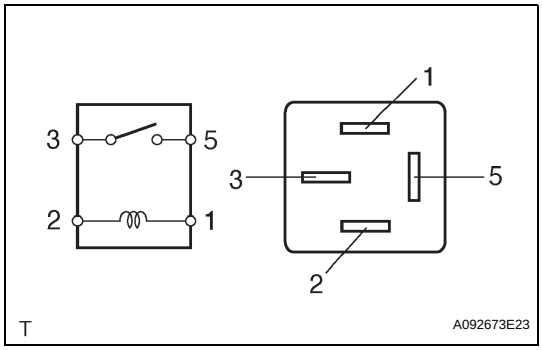
Terminal No. (Symbol)	Specified Condition
Engine room R/B IG2 relay terminal 1 - E6-11 (IG2D)	Below 1 Ω
Engine room R/B IG2 relay terminal 2 - Body ground	Below 1 Ω
E6-11 (IG2D) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

ST

7 INSPECT RELAY (IG1 RELAY)



(a) Remove the IG1 relay from the instrument panel J/B.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

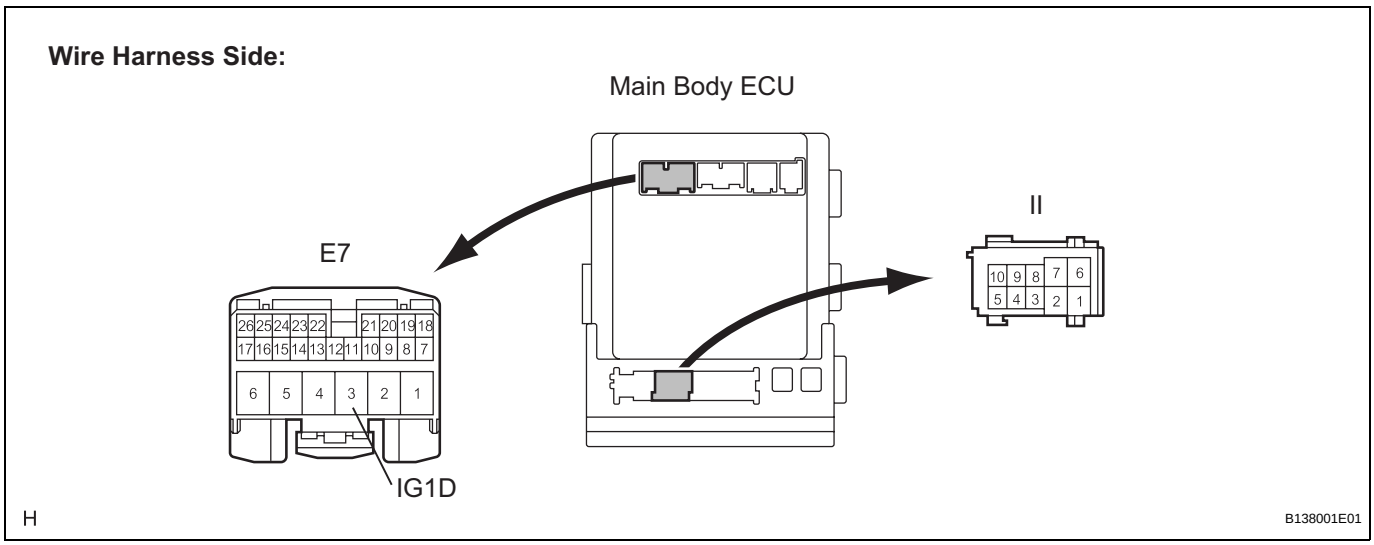
Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

NG → REPLACE RELAY

OK

8 CHECK WIRE HARNESS (INSTRUMENT PANEL J/B - MAIN BODY ECU)

(a) Disconnect the II J/B connector.



(b) Disconnect the E7 ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

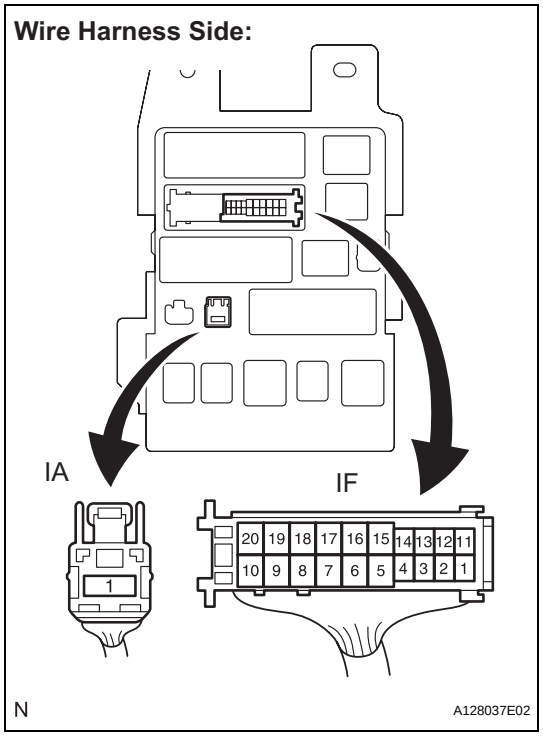
Terminal No. (Symbol)	Condition	Specified Condition
II-9 - E7-3 (IG1D)	Always	Below 1 Ω
E7-3 (IG1D) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

ST

9 CHECK WIRE HARNESS (INSTRUMENT PANEL J/B - BATTERY AND BODY GROUND)



(a) Disconnect the IF and IA J/B connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminal No.	Condition	Specified Condition
IF-10 - Body ground	Always	Below 1 Ω

(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

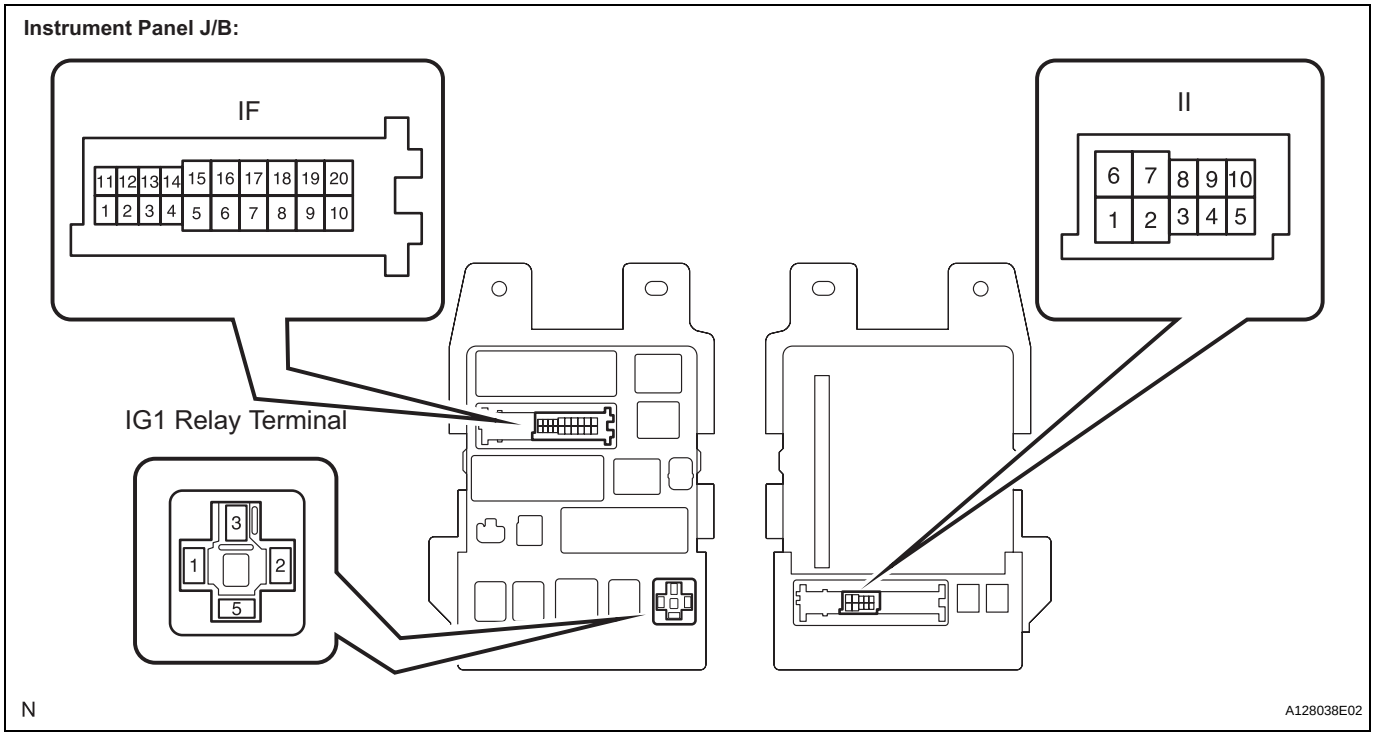
Terminal No.	Condition	Specified Condition
IA-1 - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

10 INSPECT INSTRUMENT PANEL J/B

(a) Measure the resistance according to the value(s) in the table below.



ST

Standard resistance

Terminal No.	Condition	Specified Condition
IF-10 - IG1 relay terminal-1	Always	Below 1 Ω
II-9 - IG1 relay terminal-2	Always	Below 1 Ω
IF-10 - Body ground	Always	10 kΩ or higher
II-9 - Body ground	Always	10 kΩ or higher

NG → **REPLACE MAIN BODY ECU**

OK

REPLACE INSTRUMENT PANEL J/B

Power Source Mode does not Change to ON (ACC)

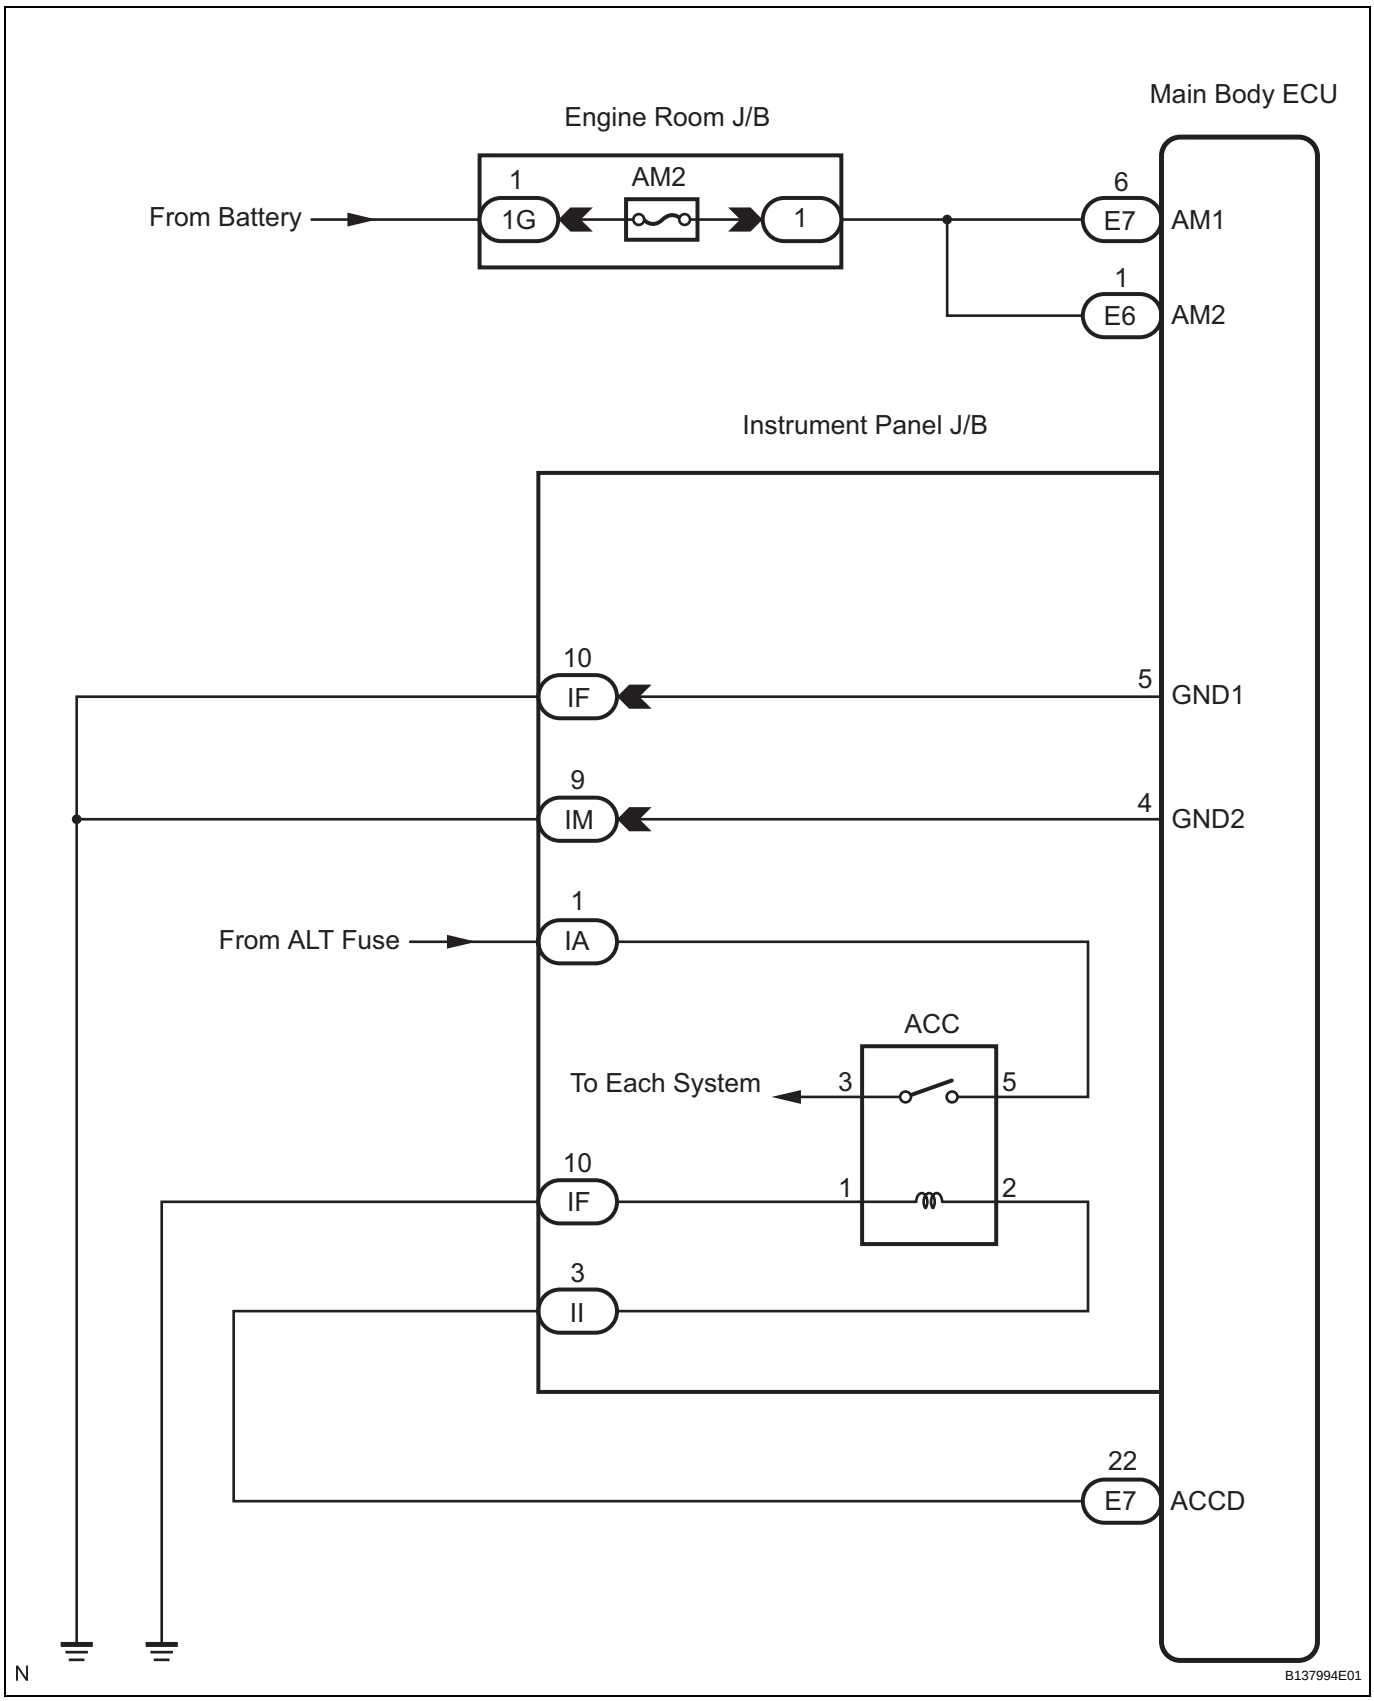
DESCRIPTION

When the engine switch is pushed with the electrical key in the cabin, the main body ECU receives signals to switch the power source mode.

HINT:

To allow use of the intelligent tester to inspect the push-button start function when the engine switch is off, repeat opening and closing any of the doors. Opening and closing a door establishes communication between the intelligent tester and the main body ECU. (Opening and closing a door can also be simulated by operating a door courtesy light switch.)

WIRING DIAGRAM



ST

INSPECTION PROCEDURE

1	INSPECT FUSE (AM2)

(a) Remove the AM2 fuse from the engine room J/B.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

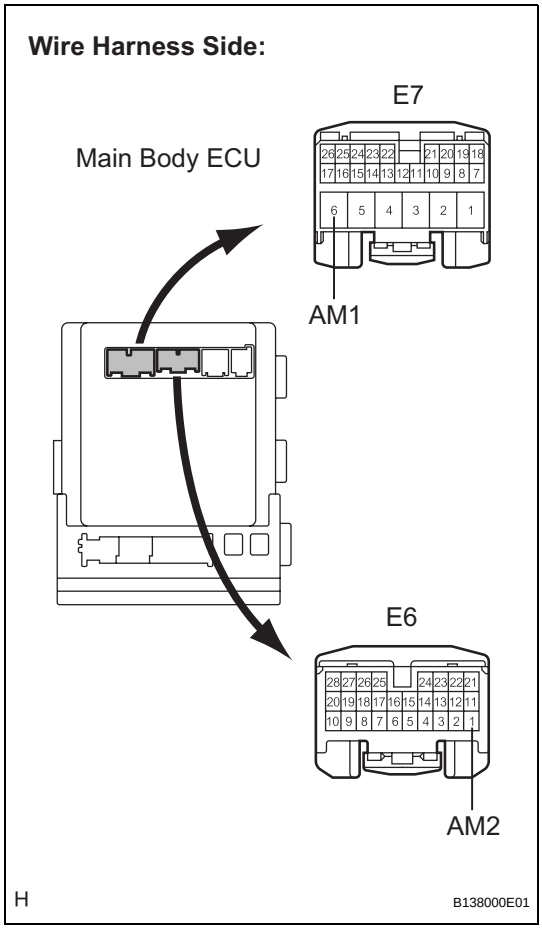
2	CHECK CONNECTORS

(a) Check that the connectors are securely connected and the terminals are not deformed or loose.
OK:
The connectors are securely connected and the terminals are not deformed or loose.

NG → **REPAIR OR REPLACE CONNECTORS**

OK

3	CHECK WIRE HARNESS (MAIN BODY ECU - BATTERY)



(a) Disconnect the E6 and E7 ECU connectors.
(b) Measure the voltage according to the value(s) in the table below.

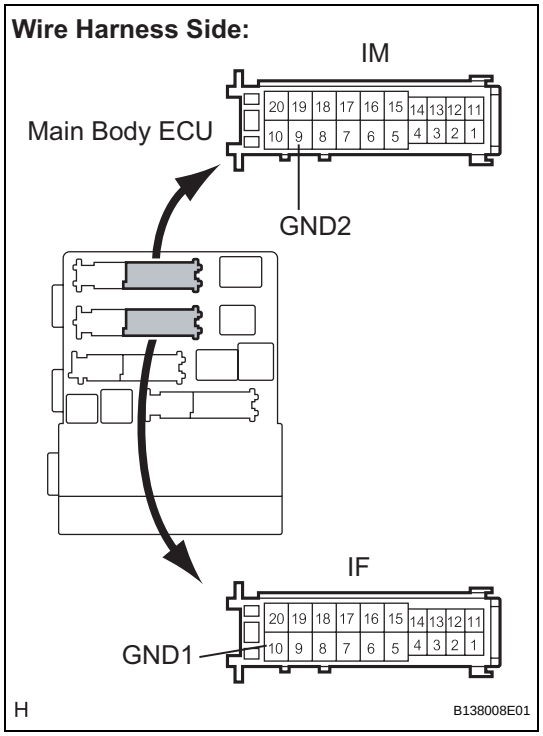
Standard voltage

Tester Connection (Symbols)	Condition	Specified Condition
E7-6 (AM1) - Body ground	Always	10 to 14 V
E6-1 (AM2) - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 CHECK WIRE HARNESS (MAIN BODY ECU - BODY GROUND)



(a) Disconnect the IF and IM ECU connectors.
(b) Measure the resistance according to the value(s) in the table below.

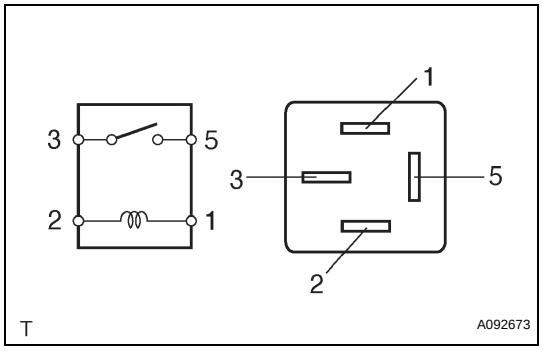
Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
IF-10 (GND1) - Body ground	Always	Below 1 Ω
IM-9 (GND2) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5 INSPECT RELAY (ACC RELAY)



(a) Remove the ACC relay from the instrument panel J/B.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

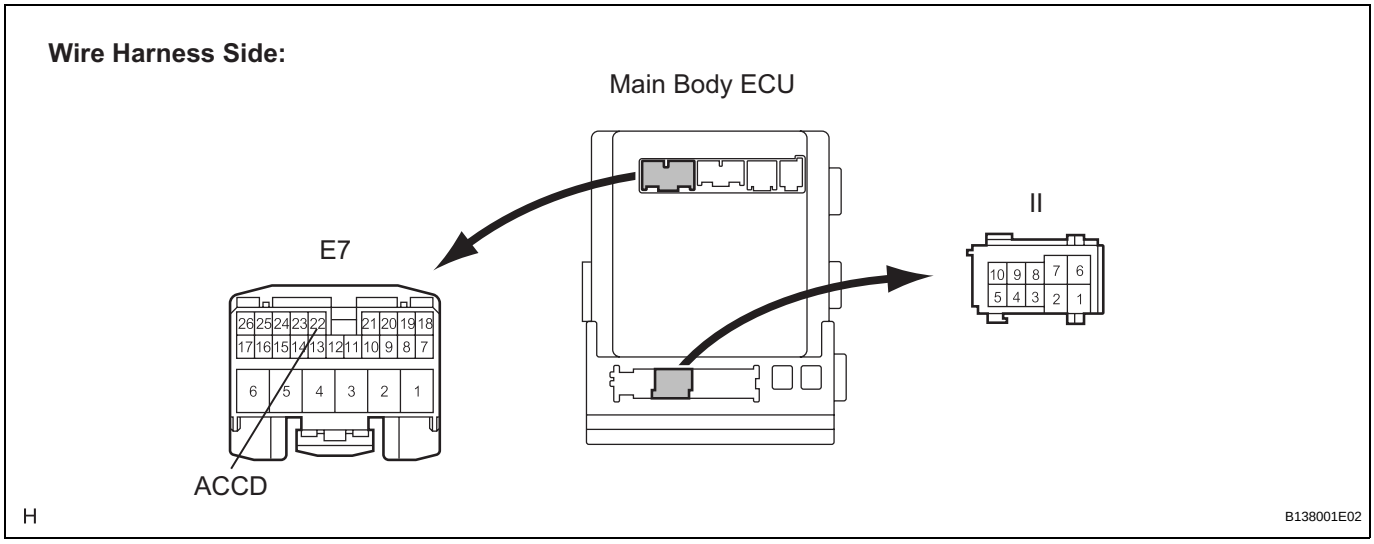
NG → **REPLACE RELAY**

OK

6 CHECK WIRE HARNESS (INSTRUMENT PANEL J/B - MAIN BODY ECU)

(a) Disconnect the E7 ECU connector.

ST



(b) Disconnect the II J/B connector.
(c) Measure the resistance according to the value(s) in the table below.

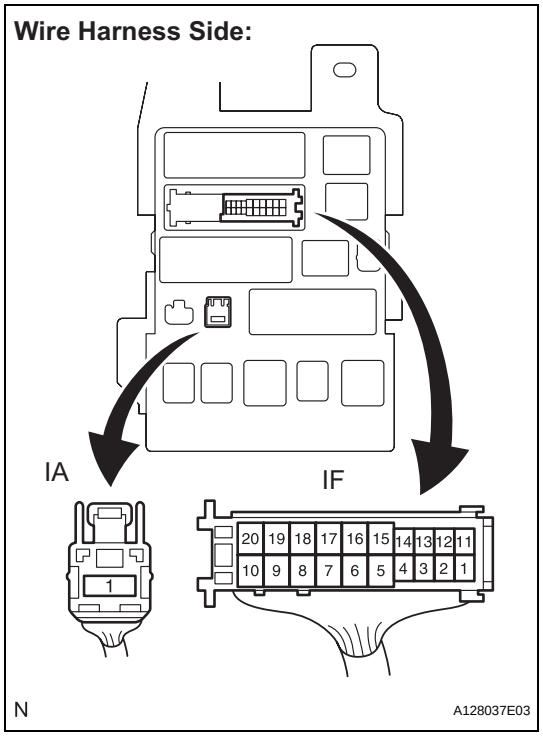
Standard resistance

Terminal No. (Symbol)	Condition	Specified Condition
II-3 - E7-22 (ACCD)	Always	Below 1 Ω
E7-22 or II-3 - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

7 CHECK WIRE HARNESS (INSTRUMENT PANEL J/B - BATTERY AND BODY GROUND)



(a) Disconnect the IF and IA J/B connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminal No.	Condition	Specified Condition
IF-10 - Body ground	Always	Below 1 Ω

(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

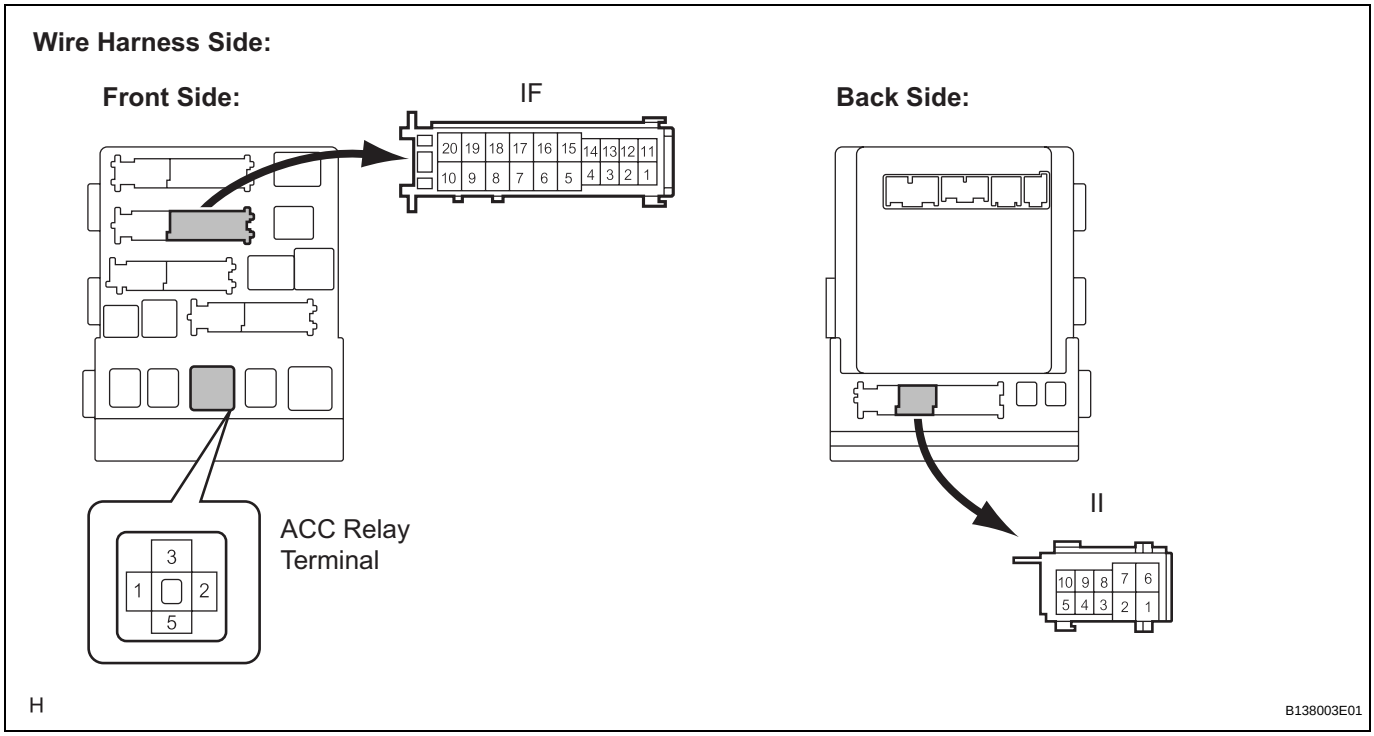
Terminal No.	Condition	Specified Condition
IA-1 - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

8 INSPECT INSTRUMENT PANEL J/B

(a) Measure the resistance according to the value(s) in the table below.



ST

Standard resistance

Terminal No.	Condition	Specified Condition
ACC relay terminal 1 - IF-10	Always	Below 1 Ω
ACC relay terminal 2 - II-3	Always	Below 1 Ω
IF-10 - Body ground	Always	10 kΩ or higher
II-3 - Body ground	Always	10 kΩ or higher

NG → REPLACE INSTRUMENT PANEL J/B

OK

REPLACE MAIN BODY ECU

ST

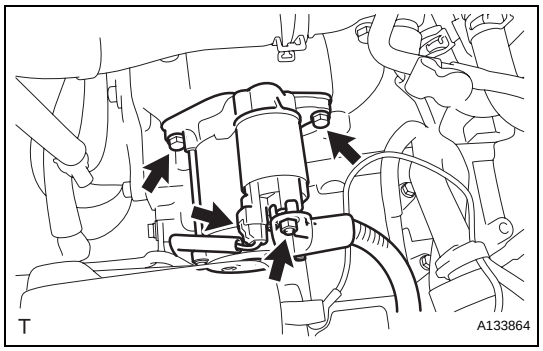
REMOVAL

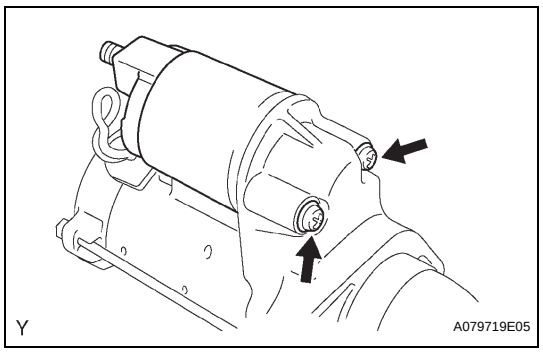
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE COOL AIR INTAKE DUCT SEAL (See page EM-23)**
3. **REMOVE V-BANK COVER SUB-ASSEMBLY (See page EM-23)**
4. **REMOVE AIR CLEANER INLET ASSEMBLY (See page EM-24)**
5. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-503)**
6. **REMOVE AIR CLEANER CASE SUB-ASSEMBLY (See page EM-24)**
7. **REMOVE NO. 1 AIR CLEANER INLET (See page EM-24)**
8. **REMOVE STARTER ASSEMBLY**
   (a) Disconnect the terminal 50 connector from the starter assembly.
   (b) Remove the nut and disconnect the wire harness from terminal 30.
   (c) Remove the 2 bolts and starter assembly.

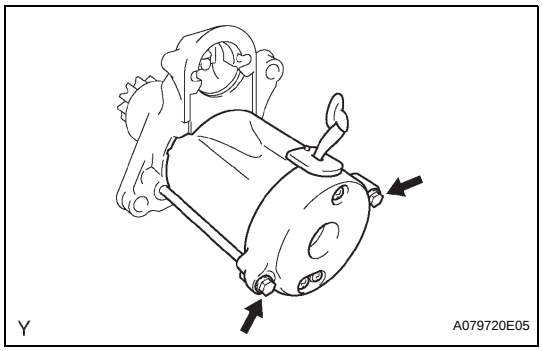


DISASSEMBLY

1. **REMOVE REPAIR SERVICE STARTER KIT**
   (a) Remove the nut and disconnect the lead wire from terminal C.

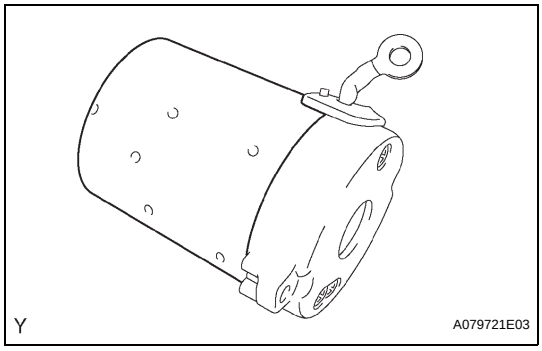
   (b) Remove the 2 screws that hold the magnetic switch to the motor terminal starter kit.
   (c) Remove the repair service starter kit.
   (d) Remove the return spring and the plunger from the repair service starter kit.



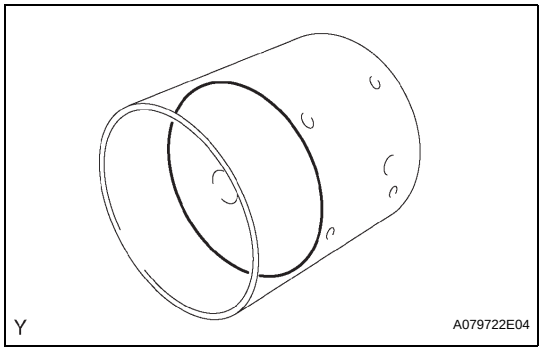


2. REMOVE STARTER YOKE ASSEMBLY

(a) Remove the 2 through bolts and pull out the starter yoke assembly together with the starter commutator end frame assembly.

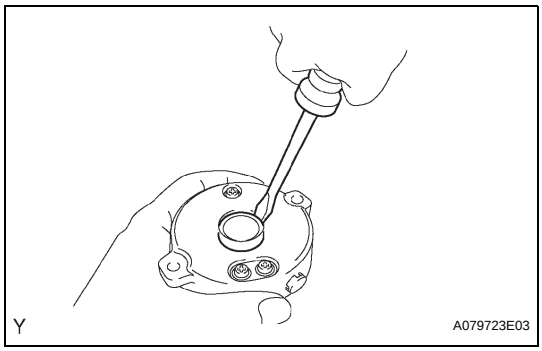


(b) Remove the starter yoke assembly from the starter commutator end frame assembly.



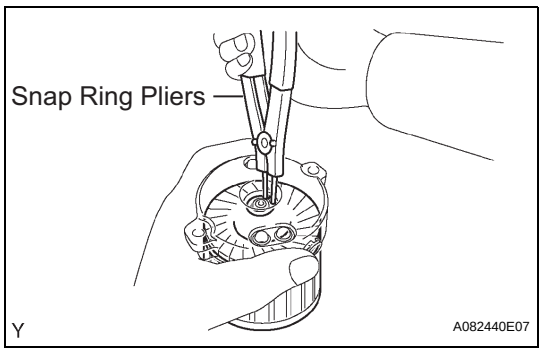
3. REMOVE STARTER ARMATURE PLATE

(a) Remove the starter armature plate from the starter yoke assembly.



4. REMOVE STARTER COMMUTATOR END FRAME COVER

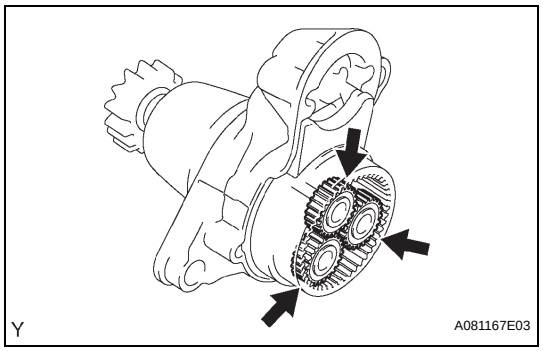
(a) Using a screwdriver, remove the starter commutator end frame cover.



5. REMOVE STARTER ARMATURE ASSEMBLY

(a) Using snap ring pliers, remove the snap ring and plate washer.

(b) Remove the starter armature assembly from the commutator end frame assembly.



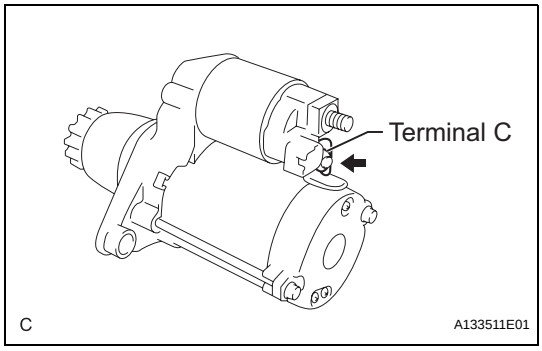
6. REMOVE PLANETARY GEAR

(a) Remove the 3 planetary gears from the motor terminal starter kit.

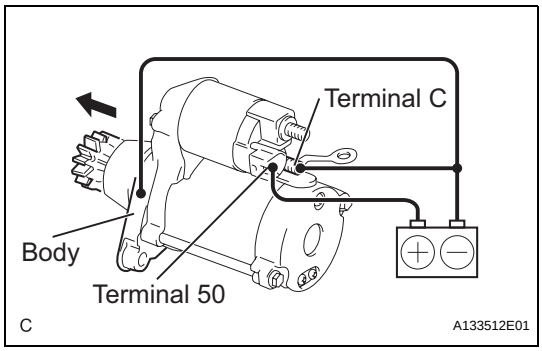
INSPECTION

1. INSPECT STARTER ASSEMBLY

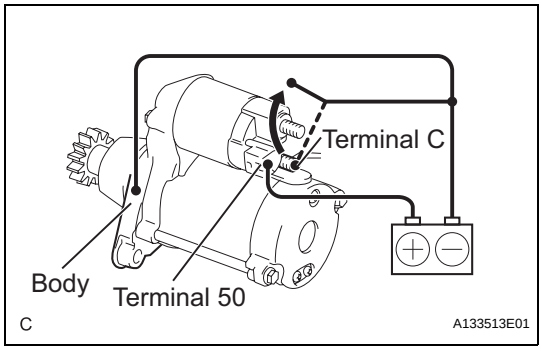
CAUTION:
Make sure to complete each of the following tests within 5 seconds to prevent the coil from burning out.



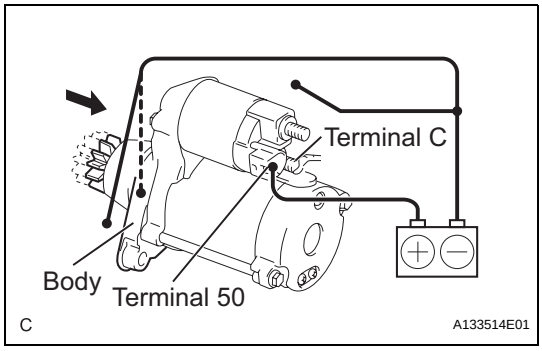
(a) Perform pull-in test:
(1) Disconnect the lead wire from terminal C.



(2) Connect the battery to the magnetic switch as shown in the illustration. Check that the clutch pinion gear moves outward.
If the clutch pinion gear does not move outward, replace the repair service starter kit.

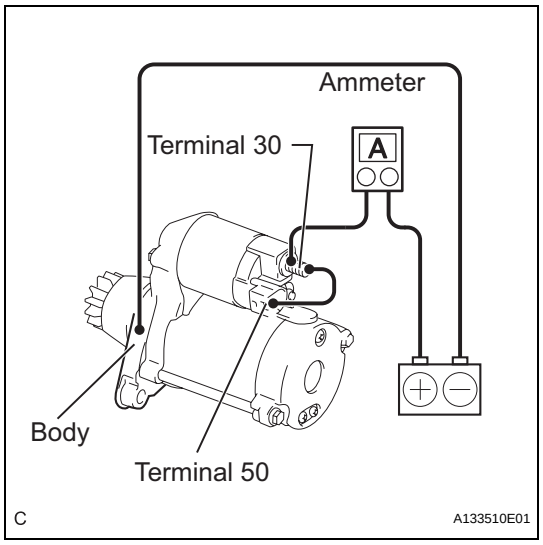


(b) Perform hold-in test:
(1) Disconnect the negative (-) terminal lead from terminal C under the conditions for pull-in test. Check that the pinion gear remains out.
If the clutch pinion gear moves inward, replace the repair service starter kit.



(c) Inspect clutch pinion gear return:
(1) Disconnect the negative (-) lead from the starter body. Check that the clutch pinion gear moves inward.
If the clutch pinion gear does not move inward, replace the repair service starter kit.

(d) Perform no-load performance test:
(1) Connect the field coil wire to terminal C with the nut. Make sure that the lead is not grounded.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)
(2) Clamp the starter in a vise.

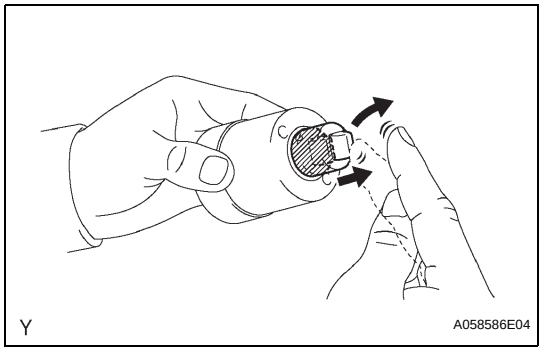


(3) Connect the battery and an ammeter to the starter as shown in the illustration.
(4) Check that the starter rotates smoothly and steadily with the clutch pinion gear extended. Check that the ammeter reads the specified current.

Specified current

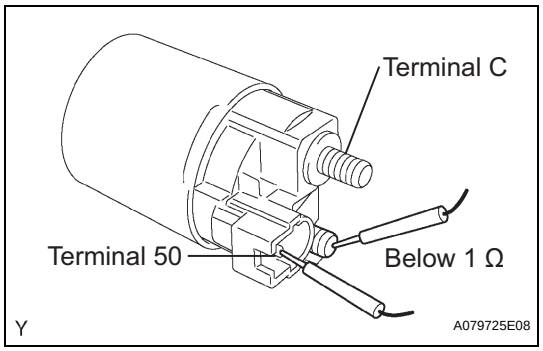
Condition	Specified condition
at 11.5 V	90 A or less

If the result is not as specified, overhaul the starter assembly.



2. INSPECT REPAIR SERVICE STARTER KIT

(a) Check the plunger.
(1) Push in the plunger and check that it returns quickly to its original position.
If necessary, replace the repair service starter kit.

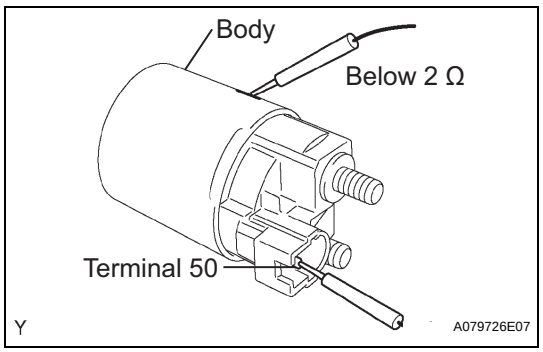


(b) Inspect the resistance of the pull-in coil.
(1) Using an ohmmeter, measure the resistance between terminals 50 and C.

Standard resistance

Tester connection	Specified condition
Terminal 50 - Terminal C	Below 1 Ω

If the resistance is not as specified, replace the repair service starter kit.



(c) Inspect the resistance of the hold-in coil.
(1) Using an ohmmeter, measure the resistance between terminal 50 and the switch body.

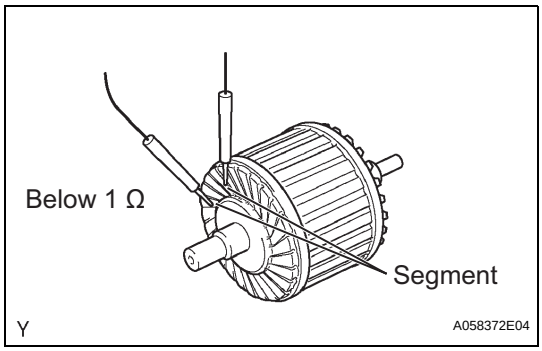
Standard resistance

Tester connection	Specified condition
Terminal 50 - Switch body	Below 2 Ω

If the resistance is not as specified, replace the repair service starter kit.

3. INSPECT STARTER ARMATURE ASSEMBLY

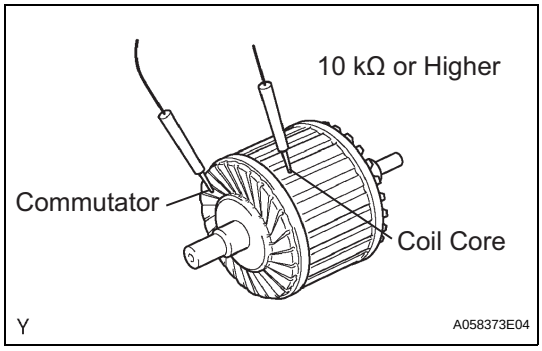
(a) Check the commutator surface for dirt or burning.
If the surface is dirty or burnt, smooth the surface with 400-grit sandpaper or leather.



(b) Inspect the resistance of the commutator.
(1) Using an ohmmeter, measure the resistance between the segments of the commutator.
Standard resistance

Tester connection	Specified condition
Segment - Segment	Below 1 Ω

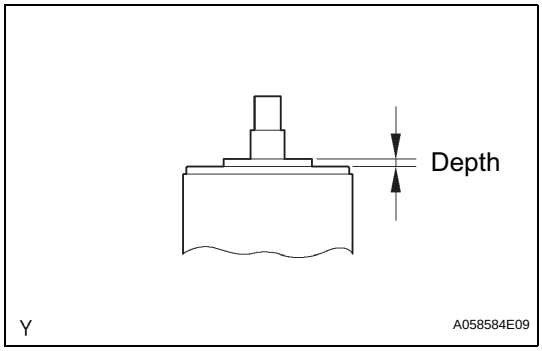
If the resistance is not as specified, replace the starter armature assembly.



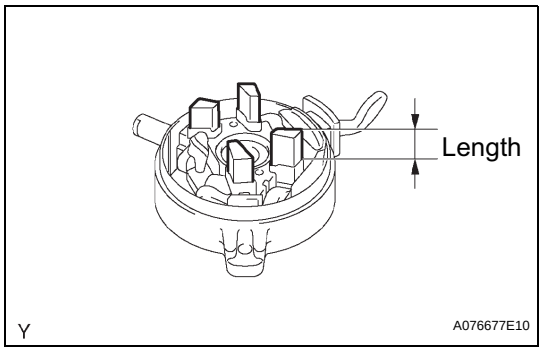
(2) Using an ohmmeter, measure the resistance between the commutator and armature coil core.
Standard resistance

Tester connection	Specified condition
Commutator - Armature coil core	10 kΩ or higher

If the resistance is not as specified, replace the starter armature assembly.

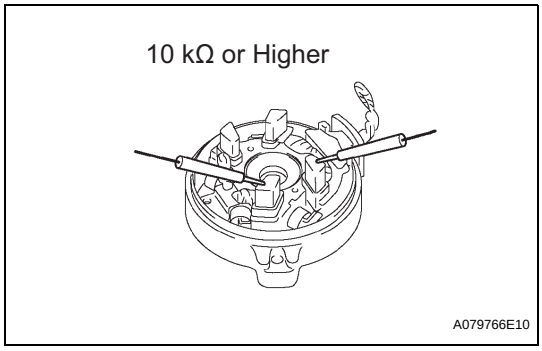


(c) Using vernier calipers, measure the commutator depth.
Specified depth:
3.1 mm (0.122 in.)
Maximum depth:
3.8 mm (0.150 in.)
If the depth is greater than the maximum, replace the starter armature assembly.



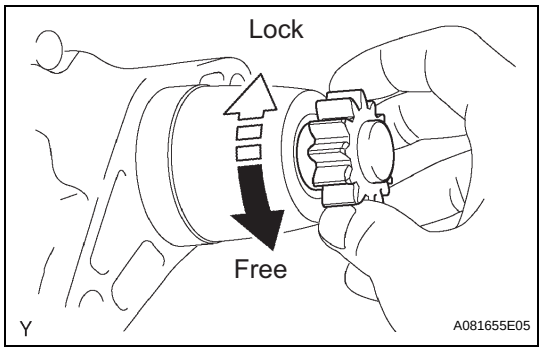
4. INSPECT STARTER COMMUTATOR END FRAME ASSEMBLY

(a) Check the brush length.
(1) Using vernier calipers, measure the brush length.
Specified length:
9.0 mm (0.354 in.)
Maximum length:
4.0 mm (0.157 in.)
If the length is less than the minimum, replace the starter commutator end frame assembly.



(b) Check the resistance.
(1) Using an ohmmeter, measure the resistance between the positive (+) and negative (-) brushes.
Resistance:
10 kΩ or higher
If the resistance is not as specified, repair or replace the starter commutator end frame assembly.

ST



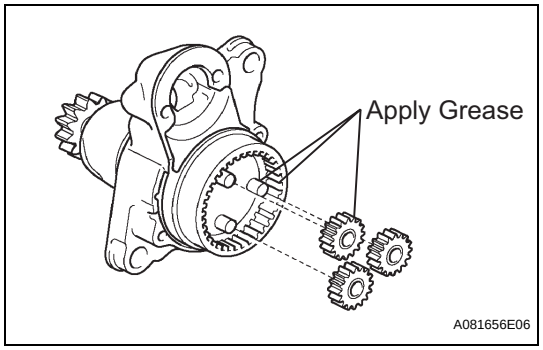
5. INSPECT MOTOR TERMINAL STARTER KIT

(a) Check the starter clutch.

(1) Rotate the clutch pinion gear counterclockwise and check that it turns freely. Try to rotate the clutch pinion gear clockwise and check that it locks.

If necessary, replace the motor terminal starter kit.

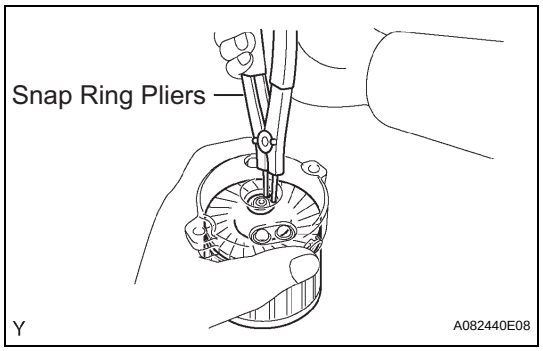
REASSEMBLY



1. INSTALL PLANETARY GEAR

(a) Apply high-temperature grease to the planetary gears and pin parts of the planetary shaft.

(b) Install the 3 planetary gears to the motor terminal starter kit.

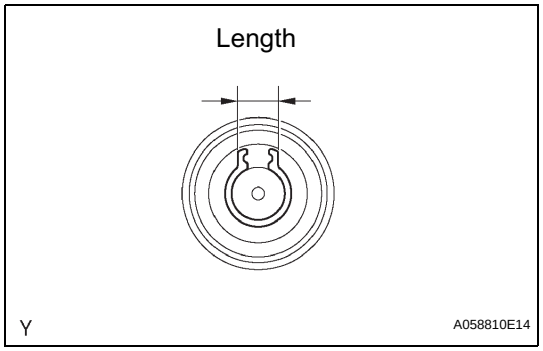


2. INSTALL STARTER ARMATURE ASSEMBLY

(a) Apply high-temperature grease to the plate washer and the armature shaft.

(b) Install the starter armature assembly to the starter commutator end frame assembly.

(c) Using snap ring pliers, install the plate washer and a new snap ring.

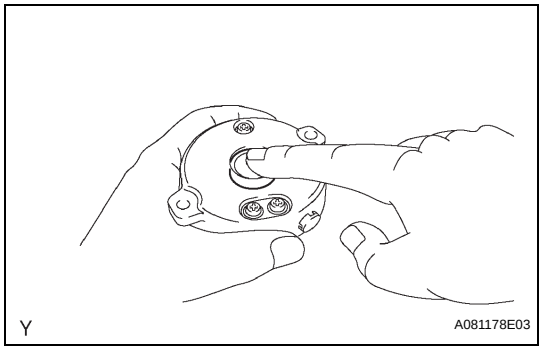


(d) Using vernier calipers, measure the snap ring.

Maximum length:

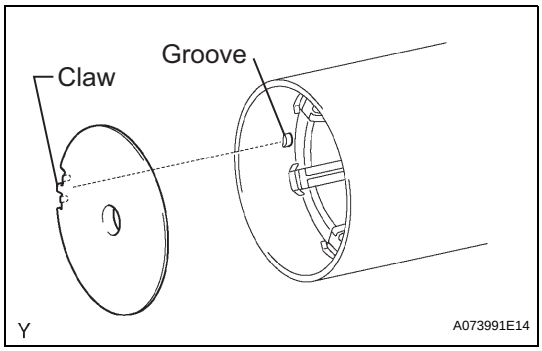
5.0 mm (0.197 in.)

If the length is greater than the maximum, replace the snap ring with a new one.



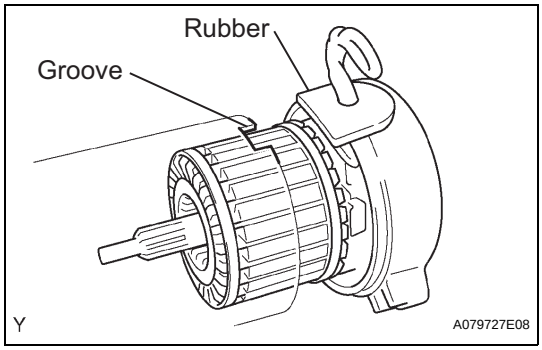
3. INSTALL STARTER COMMUTATOR END FRAME COVER

(a) Install the starter commutator end frame cover to the starter commutator end frame assembly.



4. INSTALL STARTER ARMATURE PLATE

(a) Align the claw of the armature plate with the groove inside the starter yoke assembly, and install the starter armature plate.



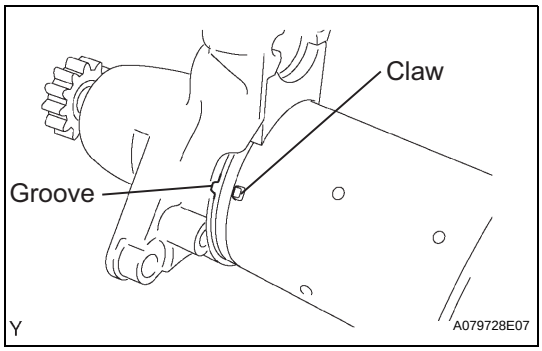
5. INSTALL STARTER COMMUTATOR END FRAME ASSEMBLY

(a) Align the starter commutator end frame rubber with the groove of the starter yoke assembly.

(b) Install the starter commutator end frame assembly to the starter yoke assembly.

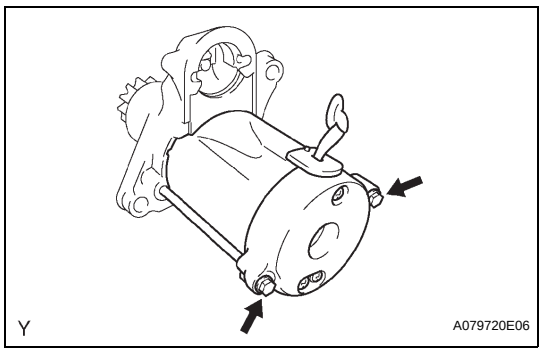
NOTICE:

The magnet of the starter yoke assembly may attract the starter armature assembly when the starter commutator end frame assembly is installed, causing the magnet to break.



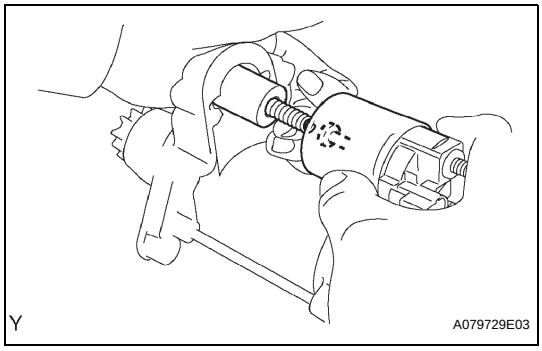
6. INSTALL STARTER YOKE ASSEMBLY

(a) Align the claw of the starter yoke with the groove inside the motor terminal starter kit.



(b) Install the starter yoke with the 2 through bolts.

Torque: 6.0 N*m (61 kgf*cm, 53 in.*lbf)

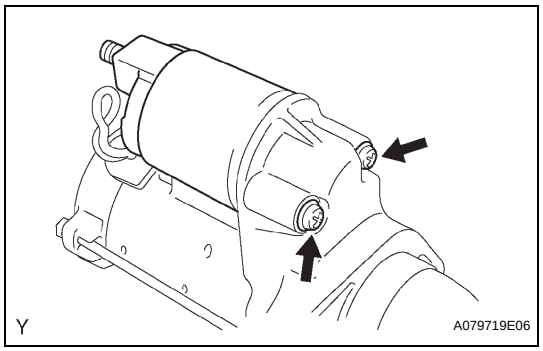


7. INSTALL REPAIR SERVICE STARTER KIT

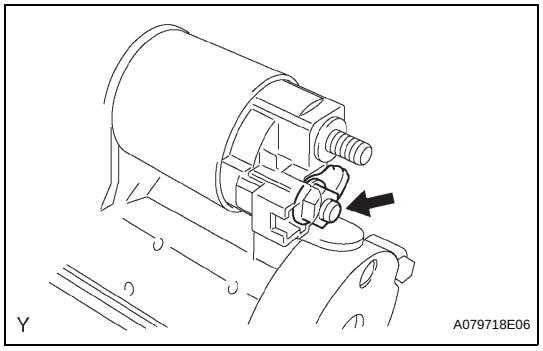
(a) Apply high-temperature grease to the plunger and the hook.

(b) Hang the plunger hook of the repair service starter kit to the drive lever hook.

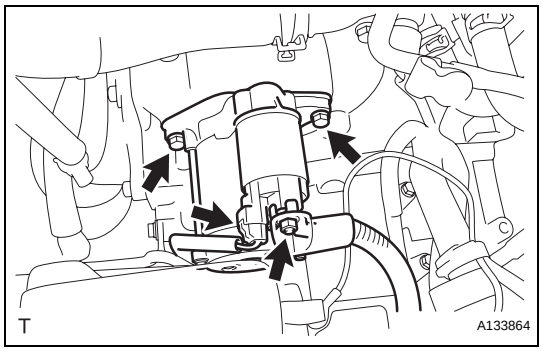
(c) Install the plunger and the return spring.



(d) Install the repair service starter kit with the 2 screws.
Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)

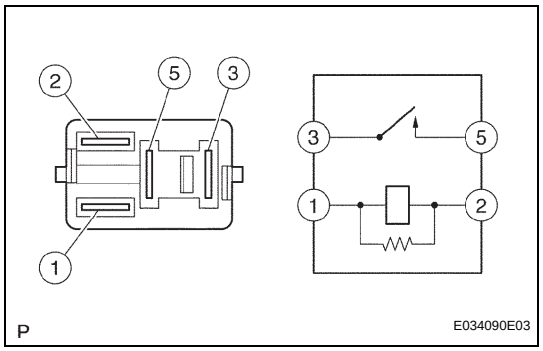


(e) Connect the lead wire to terminal C with the nut.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)



INSTALLATION

1. **INSTALL STARTER ASSEMBLY**
   (a) Install the starter assembly with the 2 bolts.
   Torque: 37 N*m (380 kgf*cm, 28 ft.*lbf)
   (b) Connect the wire harness to terminal 30 and install the nut. Then, attach the terminal cap.
   Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)
   (c) Connect the terminal 50 connector to the starter assembly.
2. **INSTALL NO. 1 AIR CLEANER INLET (See page EM-49)**
3. **INSTALL AIR CLEANER CASE SUB-ASSEMBLY (See page EM-50)**
4. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-506)**
5. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-50)**
6. **INSTALL V-BANK COVER SUB-ASSEMBLY (See page EM-52)**
7. **INSTALL COOL AIR INTAKE DUCT SEAL (See page EM-52)**
8. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (See page EM-51)**



STARTER RELAY

ON-VEHICLE INSPECTION

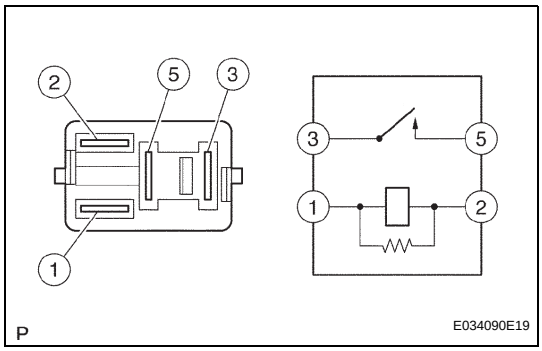
1. INSPECT STARTER RELAY ASSEMBLY

(a) Using an ohmmeter, measure the resistance between each terminal.

Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

If the result is not as specified, replace the starter relay assembly.



STARTER CUT RELAY (w/ Smart Key System)

ON-VEHICLE INSPECTION

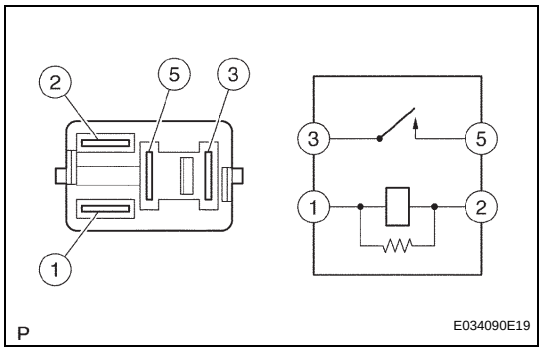
1. INSPECT STARTER CUT RELAY

(a) Using an ohmmeter, measure the resistance between each terminal.

Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

If the result is not as specified, replace the starter cut relay.



IGNITION RELAY (w/ Smart Key System)

ON-VEHICLE INSPECTION

1. INSPECT NO. 2 IGNITION RELAY

(a) Using an ohmmeter, measure the resistance between each terminal.

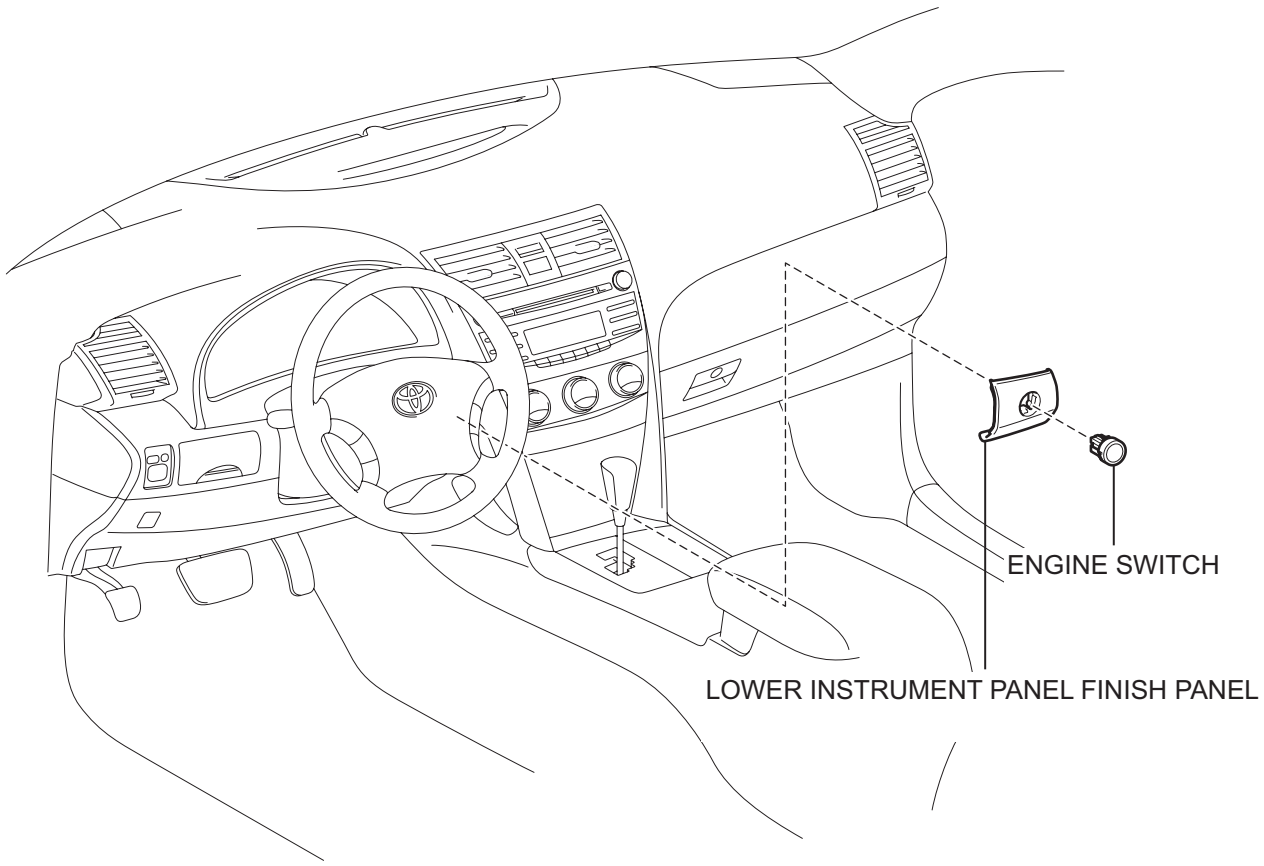
Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
	Below 1 Ω (Apply battery voltage between terminals 1 and 2)

If the result is not as specified, replace the No. 2 ignition relay.

ENGINE SWITCH (w/ Smart Key System)

COMPONENTS



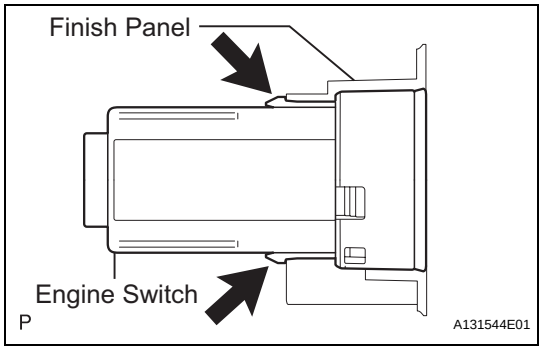
T

A133822E01

REMOVAL

1. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (See page IP-22)**

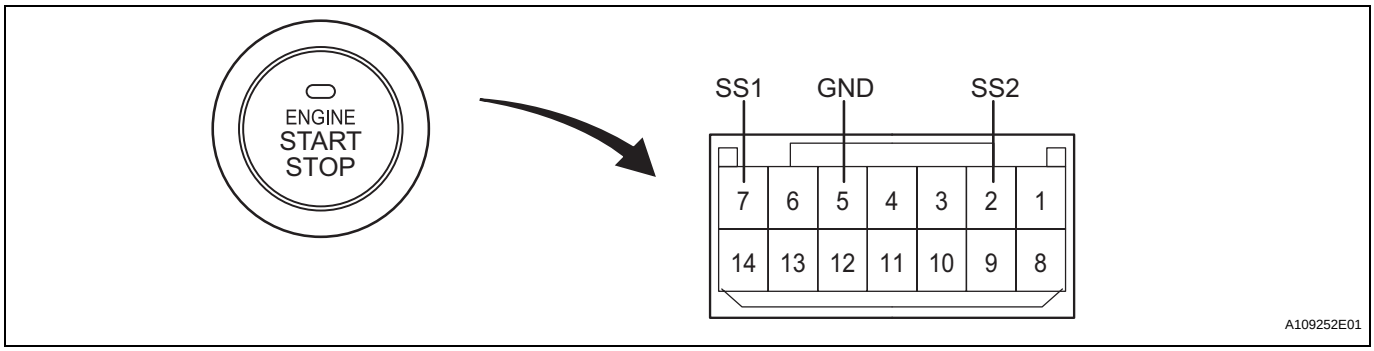
2. **REMOVE ENGINE SWITCH**
   (a) Detach the 2 claws and remove the engine switch from the finish panel.



INSPECTION

1. INSPECT ENGINE SWITCH

(a) Measure the resistance according to the value(s) in the table below.

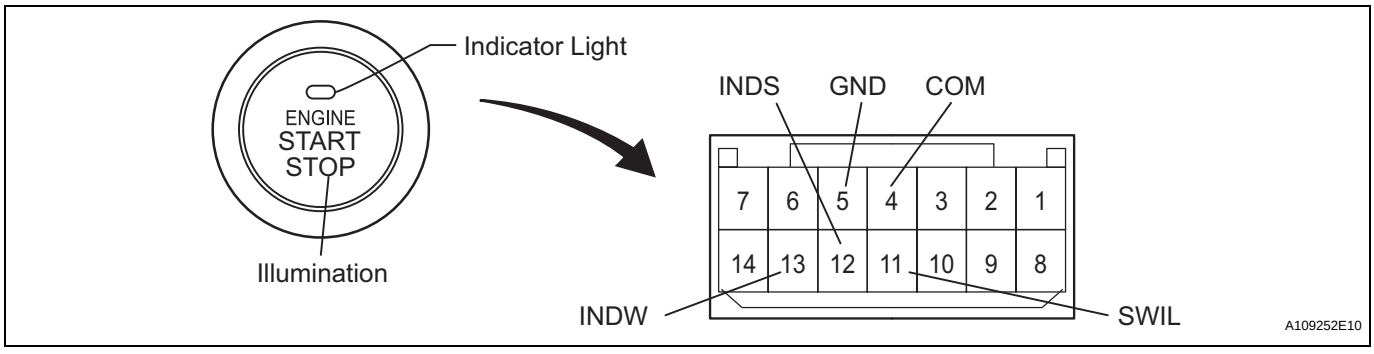


Standard resistance

Tester Connection	Switch Condition	Specified Condition
7 (SS1) - 5 (GND)	Pushed	Below 1 Ω
2 (SS2) - 5 (GND)	Pushed	Below 1 Ω
7 (SS1) - 5 (GND)	Not pushed	10 kΩ or higher
2 (SS2) - 5 (GND)	Not pushed	10 kΩ or higher

If the result is not as specified, replace the engine switch.

(b) Apply battery voltage between the terminals of the switch, and check the illumination condition of the switch.

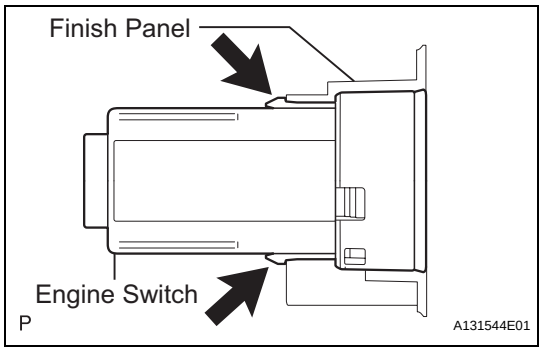


Standard resistance

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 11 (SWIL) Battery negative (-) → Terminal 4 (COM) or 5 (GND)	Illuminates
Battery positive (+) → Terminal 12 (INDS) Battery negative (-) → Terminal 4 (COM) or 5 (GND)	Illuminates
Battery positive (+) → Terminal 13 (INDW) Battery negative (-) → Terminal 4 (COM) or 5 (GND)	Illuminates

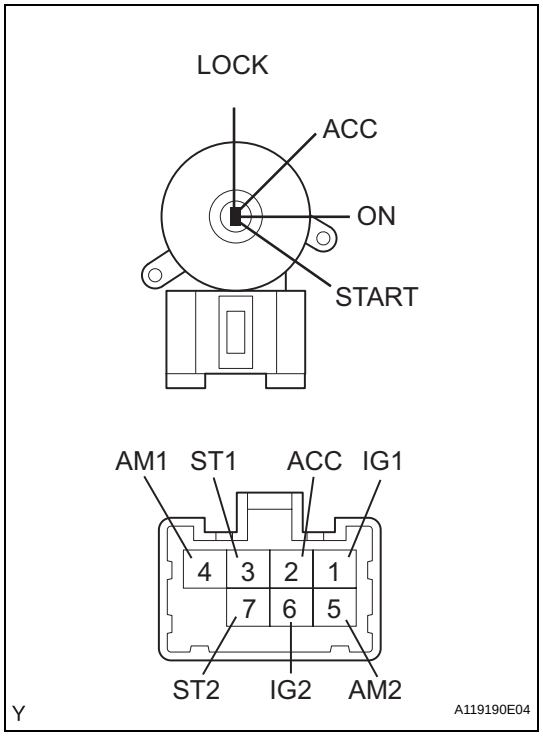
If the result is not as specified, replace the engine switch.

ST



INSTALLATION

1. **INSTALL ENGINE SWITCH**
   (a) Attach the 2 claws to install the switch.
2. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (See page IP-57)**



IGNITION SWITCH (w/o Smart Key System)

ON-VEHICLE INSPECTION

1. INSPECT IGNITION OR STARTER SWITCH ASSEMBLY

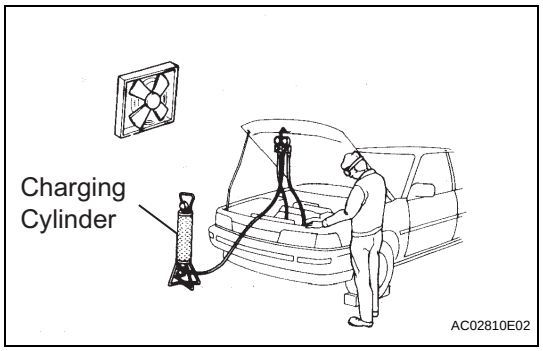
(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard resistance

Condition	Tester Connection	Specified Condition
LOCK	Between all terminals	10 kΩ or higher
ACC	2 - 4	Below 1 Ω
ON	1 - 2 - 4	Below 1 Ω
	5 - 6	
START	1 - 3 - 4	Below 1 Ω
	5 - 6 - 7	

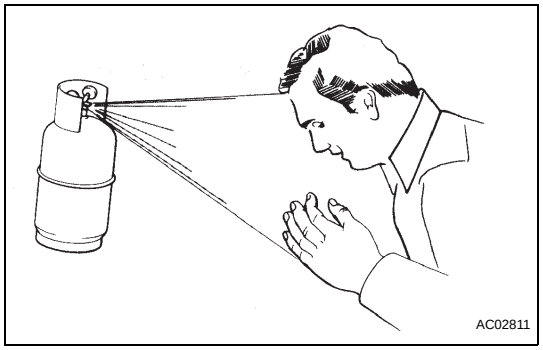
If the result is not as specified, replace the ignition or starter switch.



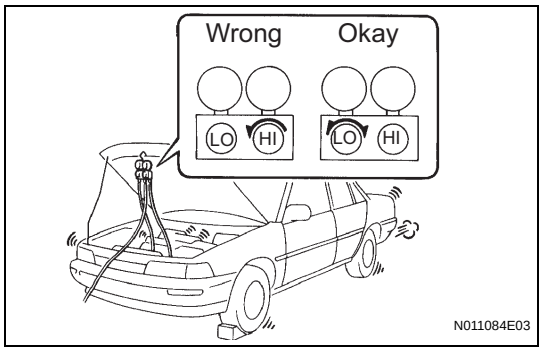
AIR CONDITIONING SYSTEM

PRECAUTION

1. **DO NOT HANDLE REFRIGERANT IN AN ENCLOSED AREA OR NEAR AN OPEN FLAME**
2. **ALWAYS WEAR EYE PROTECTION**



3. **BE CAREFUL NOT TO GET LIQUID REFRIGERANT IN YOUR EYES OR ON YOUR SKIN**
   If liquid refrigerant gets in your eyes or on your skin:
   (a) Wash the area with lots of cold water.
   CAUTION:
   Do not rub your eyes or skin.
   (b) Apply clean petroleum jelly to the skin.
   (c) Go immediately to a hospital or see a physician for professional treatment.
4. **NEVER HEAT CONTAINER OR EXPOSE THE CONTAINER TO OPEN FLAME**
5. **BE CAREFUL NOT TO DROP CONTAINER OR APPLY PHYSICAL SHOCKS TO IT**



6. **DO NOT OPERATE COMPRESSOR WITHOUT ENOUGH REFRIGERANT IN REFRIGERANT SYSTEM**
   If there is not enough refrigerant in the A/C system, oil lubrication will be insufficient and the compressor may be damaged.
   Necessary care should be taken to avoid this.
7. **DO NOT OPEN HIGH PRESSURE MANIFOLD VALVE WHILE COMPRESSOR IS OPERATING**
   (a) Open and close only the low pressure valve.
   If the high pressure valve is opened, refrigerant flows in the reverse direction causing the charging cylinder to rupture.
8. **BE CAREFUL NOT TO OVERCHARGE SYSTEM WITH REFRIGERANT**
   If refrigerant is overcharged, it causes problems such as insufficient cooling, poor fuel economy, engine overheating, etc.
9. **DO NOT OPERATE ENGINE AND COMPRESSOR WITH NO REFRIGERANT**
   CAUTION:
   Doing so may damage the inside of the compressor because the compressor parts always move regardless of whether the A/C system is turned on or off.

10. SUPPLEMENTAL RESTRAINT SYSTEM (SRS)

(a) This vehicle is equipped with an SRS (Supplemental Restraint System) such as the driver, front passenger, side, and curtain shield air bags. Failure to carry out service operation in the correct sequence could cause the SRS to unexpectedly deploy during servicing, possibly leading to a serious accident. Before servicing (including removal or installation of parts, inspection or replacement), be sure to read the precautionary notices (See page RS-1).

11. GENERAL PRECAUTION

(a) While using the battery during inspection, do not bring the positive and negative tester probes too close to each other as a short circuit may occur.

12. EXPRESSIONS OF IGNITION SWITCH

(a) The type of ignition switch used on this model differs according to the specifications of the vehicle. The expressions listed in the table below are used in this section.

Switch Type		Ignition Switch (Position)	Engine Switch (Condition)
Expression	Ignition switch off	LOCK	Off
	Ignition switch on (IG)	ON	On (IG)
	Ignition switch on (ACC)	ACC	On (ACC)
	Engine start	START	Start

SYSTEM DESCRIPTION

1. GENERAL

The air conditioning system has the following controls:

Control	Outline	Manual A/C	Automatic A/C
Neural Network Control	This control is capable of effecting complex control by artificially simulating the information processing method of the nervous system of living organisms in order to establish a complex input / output relationship that is similar to a human brain.	-	○
Manual Control	The A/C amplifier controls the damper positions (air inlet control damper, air mix control damper and mode control damper) and blower speed in accordance with the positions of the switches (temperature control switch, blower switch, mode select switch and air inlet control switch).	○	-
Outlet Air Temp. Control	Based on the temperature set at the temperature control switch, the neural network control calculates the outlet air temperature based on the input signals from various sensors.	-	○
	The temperature setting for the driver and front passenger are controlled independently in order to provide a separate vehicle interior temperatures for the right and left side of the cabin. Thus, air conditioning that accommodates the occupants' preferences has been realized.	-	○
Blower Control	Controls the blower motor in accordance with the airflow volume that has been calculated by the neural network control based on the input signals from various sensors.	-	○
Air Outlet Control	Automatically switches the air outlets in accordance with the outlet mode that has been calculated by the neural network control based on the input signals from various sensors.	-	○
	In accordance with the engine coolant temperature, outside air temperature, amount of sunlight, required blower, outlet temperature, and vehicle speed conditions, this control automatically switches the blower outlet to the FOOT / DEF mode to prevent the windows from becoming fogged when the outside air temperature is low.	-	○
Air Inlet Control	Automatically controls the air inlet control damper to achieve the calculated required outlet air temperature.	-	○
	Drives the servo motor (for air inlet) according to the operation of the air inlet control switch and moves the dampers to the FRESH or RECIRC position.	-	○
Compressor Control	Through the calculation of the target evaporator temperature based on various sensor signals, the A/C amplifier optimally controls the discharge capacity by regulating the opening extent of the A/C compressor solenoid valve.	○	○
	The A/C amplifier compares the A/C pulley speed signals, which are transmitted by the lock sensor located on the A/C compressor, with the engine speed signals, which are transmitted by the ECM (crankshaft position sensor). When the A/C amplifier determines that the A/C pulley is locked, it turns off the magnetic clutch. (for 2GR-FE)	○	○
MAX A/C Control	When the temperature control switch is in the MAX A/C position, the A/C amplifier turns the compressor on and activates the servomotor (air inlet) to set the air inlet control damper to the RECIRC position, improving the cooling efficiency.	○	-
Rear Window Defogger Control	Switches the rear defogger and outside rear view mirror heaters on for 15 minutes when the rear defogger button is pressed. Switches them off if the button is pressed while they are operating.	○	○
Outside Temperature Indication Control	Calculates the outside temperature using signals transmitted by the outside temperature sensor. Calculated values are corrected by the A/C amplifier and then indicated on the multi-information display.	○	○
Self-Diagnosis	A DTC (Diagnostic Trouble Code) is stored in the memory when the A/C amplifier detects a problem with the air conditioning system.	○	○

2. NEURAL NETWORK CONTROL

- In previous automatic air conditioning systems, the A/C amplifier determined the required outlet air temperature and blower air volume in accordance with the calculation formula that has been obtained based on information received from the sensors. However, because the senses of a person are rather complex, a given temperature is sensed differently, depending on the environment in which the person is situated. For example, a given amount of solar radiation can feel comfortably warm in a cold climate, or extremely uncomfortable in a hot climate. Therefore, as a technique for effecting a higher level of control, a neural network has been adopted in the automatic air conditioning system. With this technique, the data that has been collected under varying environmental conditions is stored in the A/C amplifier. The A/C amplifier can then effect control to provide enhanced air conditioning comfort.
- The neural network control consists of neurons in the input layer, intermediate layer, and output layer. The input layer neurons process the input data of the outside temperature, the amount of sunlight, and the room temperature based on the outputs of the switches and sensors, and output them to the intermediate layer neurons. Based on this data, the intermediate layer neurons adjust the strength of the links among the neurons. The sum of these is then calculated by the output layer neurons in the form of the required outlet temperature, solar correction, target airflow volume, and outlet mode control volume. Accordingly, the A/C amplifier controls the servo motors and blower motor in accordance with the control volumes that have been calculated by the neural network control.

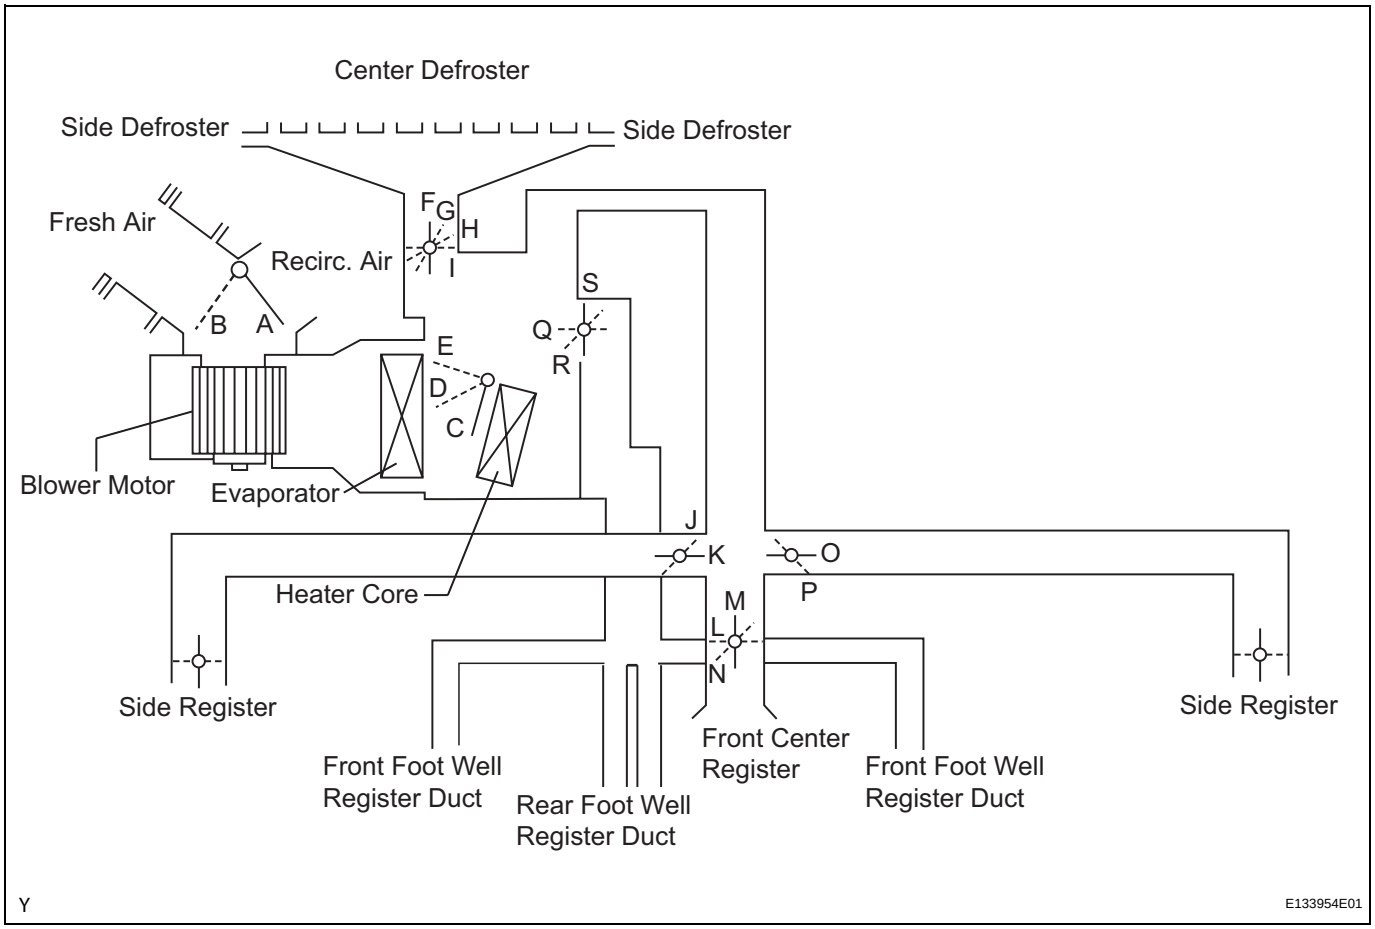
3. MODE POSITION AND DAMPER OPERATION

(a) Mode Position and Damper Operation (for Manual A/C)



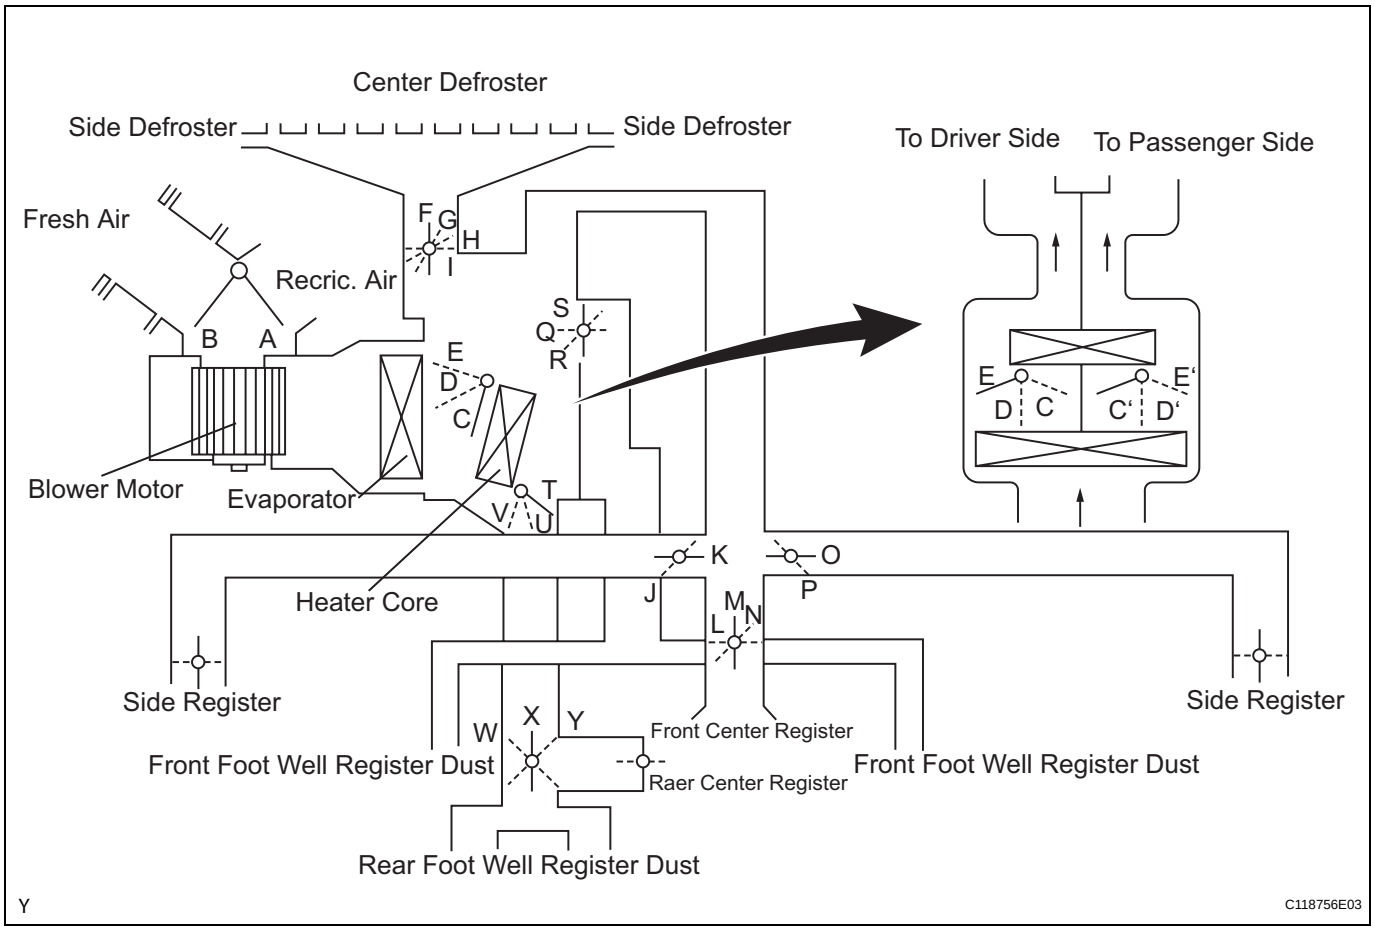
Functions of Main Dampers:

Control Damper	Operation Position	Damper Position	Operation
Air Inlet Control Damper	FRESH	A	Brings in fresh air.
	RECIRC	B	Recirculates internal air.
Air Mix Control Damper	MAX COLD to MAX HOT Temperature Setting	C - D - E	Varies the mixture ratio of the fresh air and the recirculation air in order to regulate the temperature continuously from HOT to COLD.

AC

Control Damper	Operation Position	Damper Position	Operation
Air Outlet Control Damper	DEF	F, J, L, P, S	Defrosts the windshield through the center defroster, side defroster, side register, and rear register.
	FOOT / DEF	G, J, L, P, Q	Defrosts the windshield through the center defroster, side defroster, side register, and rear register, while air is also blown out from the front and rear foot well register ducts.
	FOOT	H, J, L, P, Q	Air blows out of the foot well register duct and side register. In addition, air blows out slightly from the center defroster and side defroster.
	BI-LEVEL	I, K, N, O, R	Air blows out of the front center register, side register and front and rear foot well register ducts.
	FACE	I, K, M, O, S	Air blows out of the front center register and side register.

(b) Mode Position and Damper Operation (for Automatic A/C)



Functions of Main Dampers:

Control Damper	Operation Position	Damper Position	Operation
Air Inlet Control Damper	FRESH	A	Brings in fresh air.
	RECIRC	B	Recirculates internal air.

Control Damper	Operation Position	Damper Position	Operation
Air Mix Control Damper	MAX COLD to MAX HOT Temperature Setting	C - D - E (C' - D' - E') T - U - V	Varies the mixture ratio of the fresh air and the recirculation air in order to regulate the temperature continuously from HOT to COLD.
Air Outlet Control Damper	DEF	F, J, L, P, S, Y	Defrosts the windshield through the center defroster, side defroster, and side register.
	FOOT / DEF	G, J, L, P, Q, X	Defrosts the windshield through the center defroster, side defroster, side register, and rear center register, while air is also blown out from the front and rear foot well register ducts.
	FOOT	H, J, L, P, Q, X	Air blows out of the foot well register dust, and side register. In addition, air blows out slightly from the center defroster and side defroster.
	BI-LEVEL	I, K, N, O, R, X	Air blows out of the front and rear center registers, side register and front and rear foot well register ducts.
	FACE	I, K, M, O, S, W	Air blows out of the front and rear center registers, and side register.

4. AIR OUTLETS AND AIRFLOW VOLUME

(a) Air Outlets and Airflow Volume

AC

The size of the circle ○ indicates the proportion of airflow volume.

*1: Greater airflow volume at the upper area
*2: Greater airflow volume at the lower area
*3: Greater airflow volume at the front
*4: Greater airflow volume at the rear
*5: Greater airflow volume at the defroster
*6: Only for models with automatic air conditioning.

5. PLASMACLUSTER ION GENERATOR CONTROL

(a) General:

(1) A Plasmacluster ion generator is provided inside the air duct of the side register on the driver seat side to improve the air quality and comfort in the cabin.

(2) This generator is controlled by the A/C amplifier and operates in conjunction with the blower motor.

NOTICE:

- **The Plasmacluster ion generator uses a high voltage, which is hazardous. Therefore, if the Plasmacluster ion generator requires repairs, be sure to have them done at a TOYOTA dealer.**

AC

- **Do not apply any type of spray (such as a cleaning solvent or hair spray) or stick any foreign matter into the Plasmacluster ion outlet, as this could cause improper operation or a malfunction.**
- **After use, dust may accumulate around the side register on the driver seat side. If this occurs, press the OFF switch on the heater control panel to stop the blower motor before cleaning the area.**
- **It is normal for the Plasmacluster ion generator to emit a slight sound during operation. This sound is created when electrons collide with the electrode while Plasmacluster ions are being generated.**

HINT:

Plasmacluster™, plasmacluster, and plasmacluster ions are a trademark of the SHARP Corporation.

(b) Operation:

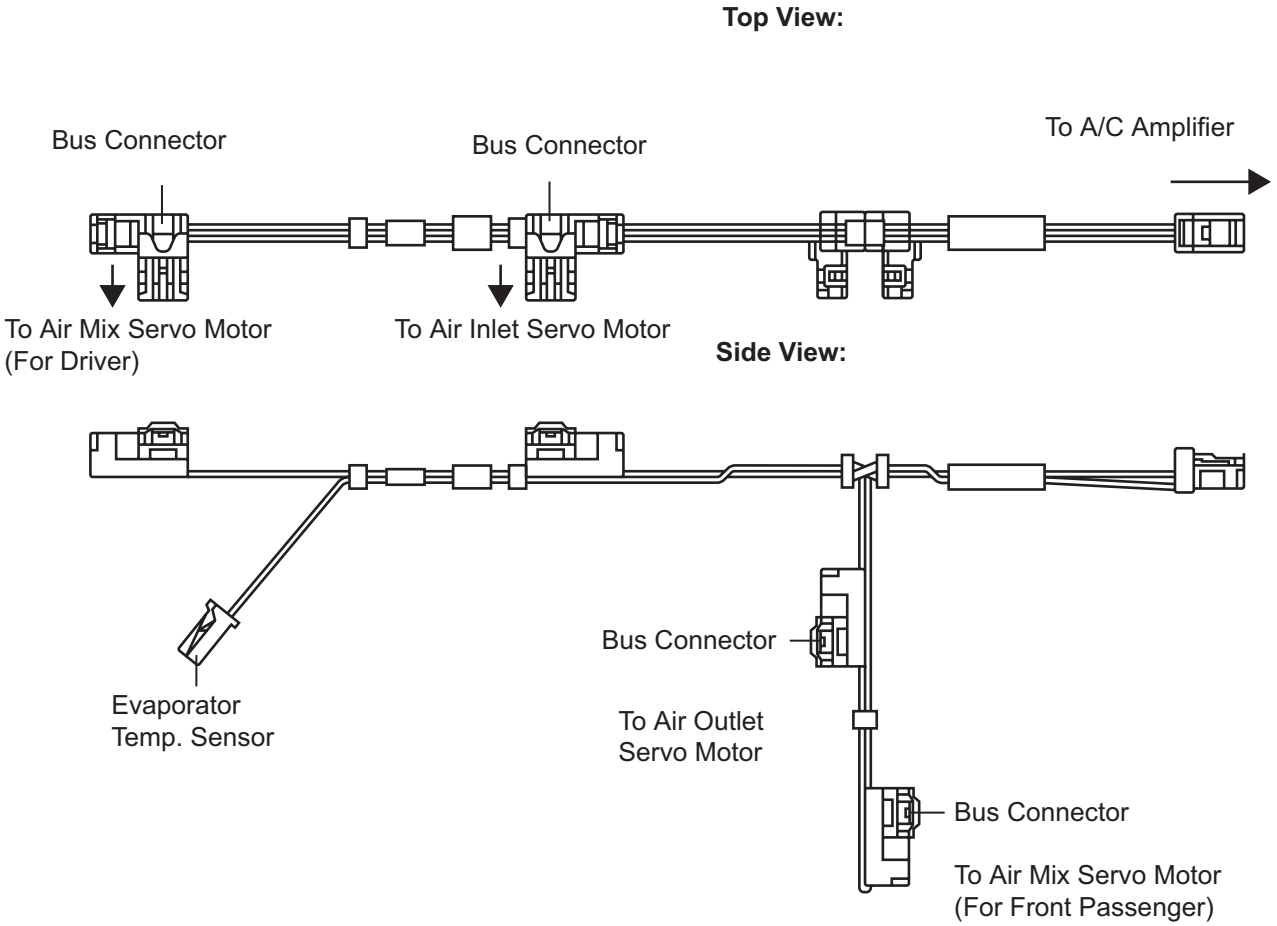
(1) The Plasmacluster ion generator produces positive and negative ions from the water molecules (H2O) and oxygen molecules (O2) in the air, and emits them into the air. These ions reduce airborne germs.

6. BLOWER MOTOR

The blower motor has a built-in blower controller, and is controlled with duty control from the A/C amplifier.

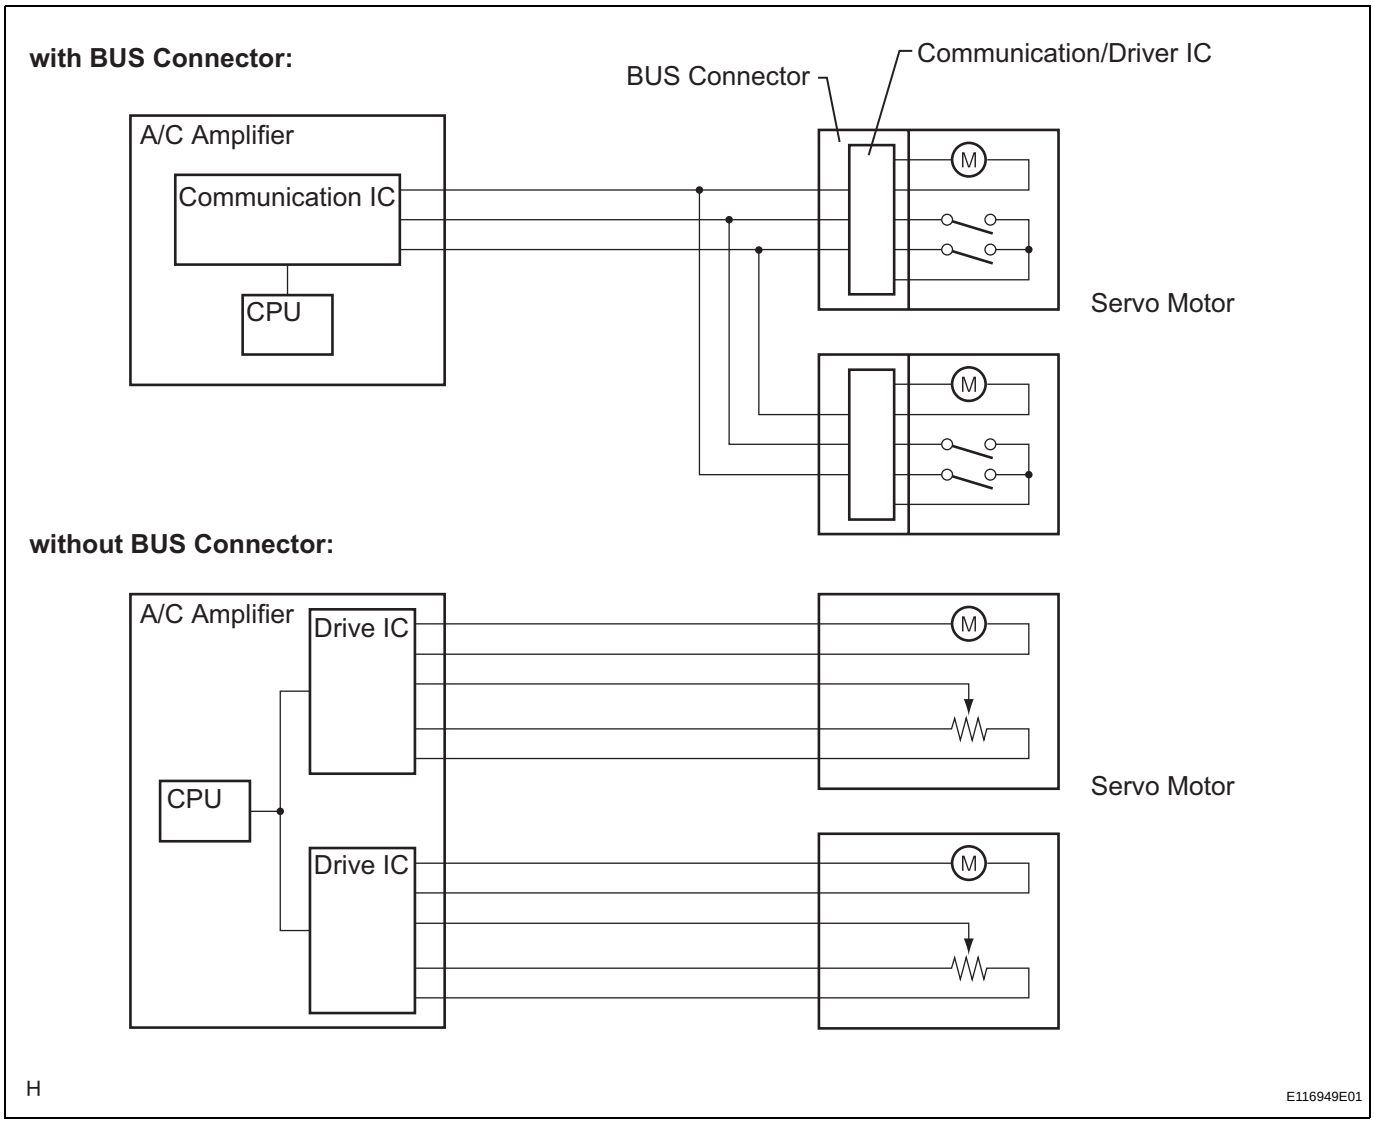
7. BUS CONNECTOR

(a) A BUS connector is used in the wire harness connection that connects the servo motor from the A/C amplifier.



AC

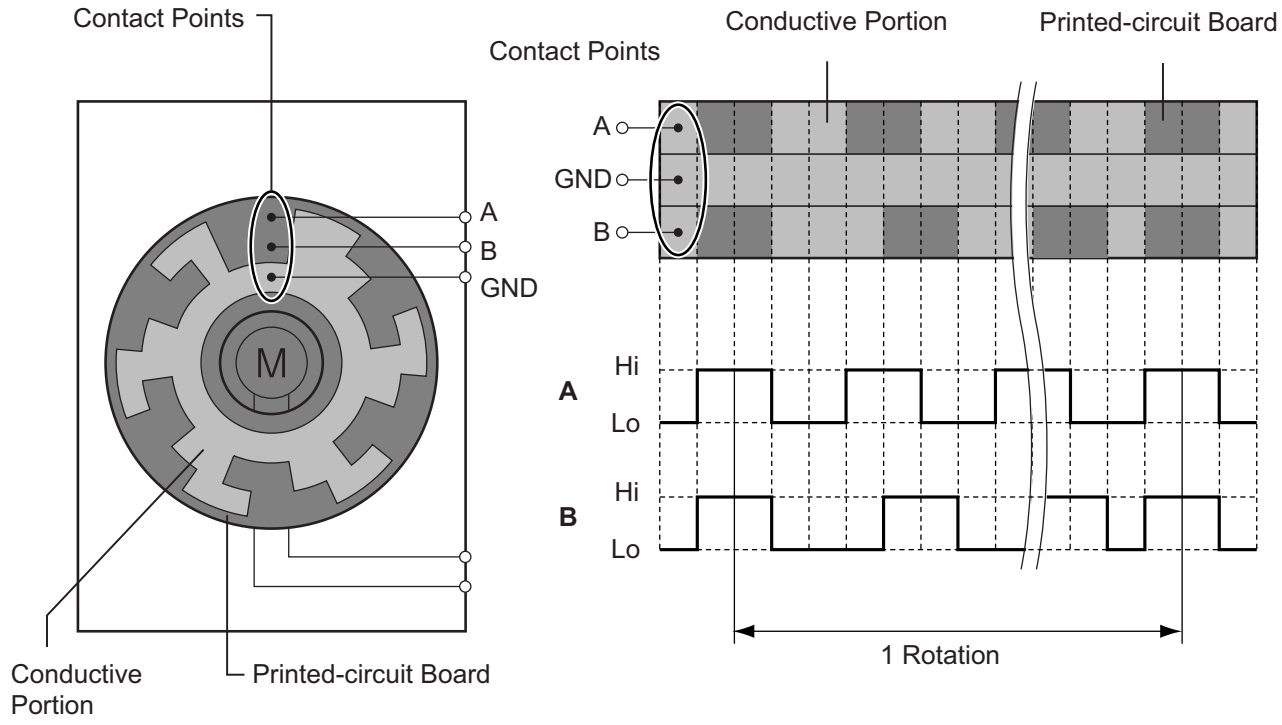
(b) The BUS connector has a built-in communication/ driver IC which communicates with each servo motor connector, actuates the servo motor, and has a position detection function. This enables bus communication for the servo motor wire harness, for a more lightweight construction and a reduced number of wires.



AC

8. SERVO MOTOR

(a) The pulse pattern type servo motor consists of a printed circuit board and servo motor. The printed circuit board has three contact points, and transmits to the A/C amplifier two ON-OFF signals for the difference of the pulse phase. The BUS connector detects the damper position and movement direction with this signal.



9. A/C COMPRESSOR

(a) General

(1) The A/C compressor is a continuously variable capacity type in which its capacity can be varied in accordance with the cooling load of the air conditioning.

(2) This compressor consists of the A/C pulley, shaft, lug plate, swash plate, piston, shoe, crank chamber, cylinder, and solenoid valve.

(3) The A/C pulley with built-in magnetic clutch and the lock sensor that detects whether the magnetic clutch is locked are installed on models with the 2GR-FE.

(4) The DL (Damper Limiter) type A/C pulley is installed on models with the 2AZ-FE.

(5) A solenoid valve that adjusts the suction pressure so that the compressor capacity can be controlled as desired is provided.

AC

(6) The internal valve is provided on models with 2AZ-FE to improve the A/C compressor durability under the high speed and large thermal load conditions. The internal valve is integrated into the solenoid valve.

(b) Solenoid Valve Operation

(1) The crank chamber is connected to the discharge passage. A solenoid valve is provided between the discharge passage (LO pressure) and the discharge passage (HI pressure).

(2) The solenoid valve operates under duty cycle control in accordance with the signals from A/C amplifier.

(3) When the solenoid valve closes (solenoid coil is energized), a difference in pressure is created and the pressure in the crank chamber decreases. Then, the pressure that is applied to the right side of the piston becomes greater than the pressure that is applied to the left side of the piston. This compresses the spring and tilts the swash plate. As a result, the piston stroke increases and the discharge capacity increases.

(4) When the solenoid valve opens (solenoid coil is not energized), the difference in pressure disappears. Then, the pressure that is applied to the left side of the piston becomes the same as the pressure that is applied to the right side of the piston. Thus, the spring elongates and eliminates the tilt of the swash plate. As a result, there is no piston stroke and the discharge capacity is reduced.

(c) Internal Valve Operation (for 2AZ-FE)

(1) The internal valve operates when the A/C compressor speed has increased rapidly, the A/C compressor speed is high, or when thermal load has suddenly changed. As a result, the A/C compressor capacity is reduced, increasing the durability of the A/C compressor.

(d) DL type A/C Pulley (for 2AZ-FE)

(1) This pulley contains a damper to absorb the torque fluctuations of the engine and a limiter mechanism to protect the drive belt in case the compressor locks. In the event that the compressor locks, the limiter mechanism causes the spoke portion of the pulley to break, thus separating the pulley from the compressor.

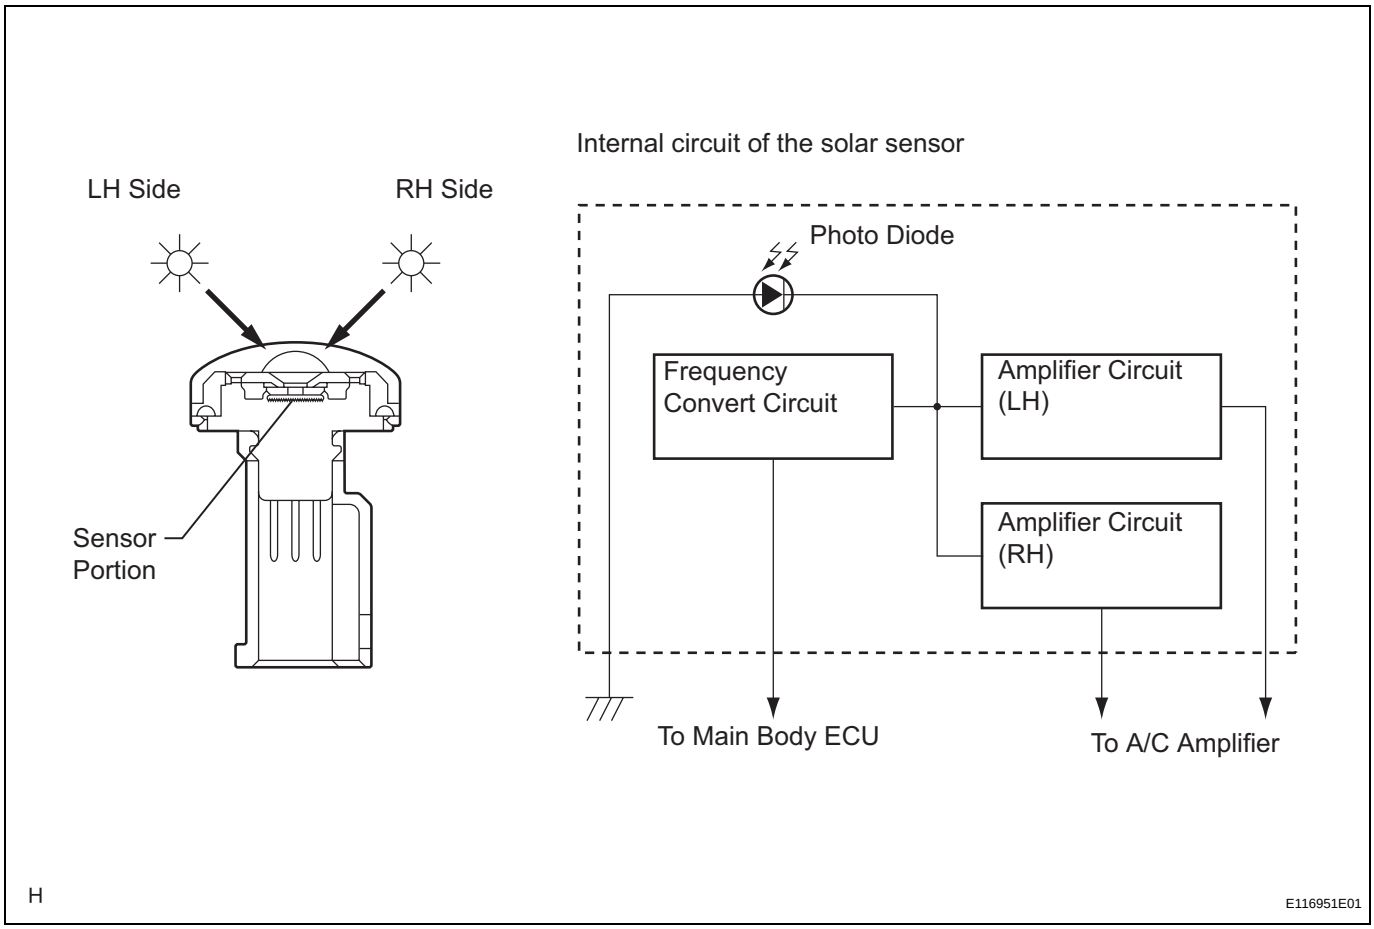
10. LOCK SENSOR (for 2GR-FE)

The lock sensor sends A/C pulley speed signals to the A/C amplifier. The A/C amplifier determines whether the magnetic clutch is locked or not by using those signals and engine speed signals.

11. ROOM TEMPERATURE SENSOR (for AUTO A/C)
The room temperature sensor detects the cabin temperature based on changes in the resistance of its built-in thermistor and sends a signal to the A/C amplifier.

12. AMBIENT TEMPERATURE SENSOR
The ambient temperature sensor detects the outside temperature based on changes in the resistance of its built-in thermistor and sends a signal to the A/C amplifier.

13. SOLAR SENSOR (for AUTO A/C)
(a) The solar sensor consists of a photo diode, two amplifier circuits for the solar sensor, and frequency converter circuit for the light control sensor.
(b) A solar sensor detects (in the form of changes in the current that flows through the built-in photo diode) the changes in the amount of sunlight from the LH and RH sides (2 directions) and outputs these sunlight strength signals to the A/C amplifier.



14. EVAPORATOR TEMPERATURE SENSOR
The evaporator temperature sensor detects the temperature of the cool air immediately past the evaporator in the form of resistance changes, and outputs it to the A/C amplifier.

15. A/C PRESSURE SENSOR

The A/C pressure sensor detects the refrigerant pressure and outputs it to the A/C amplifier in the form of voltage changes.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedures to troubleshoot the air conditioning system.
- *: Use the intelligent tester.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	INSPECT BATTERY VOLTAGE

(a) Inspect the battery voltage.
Standard voltage:
11 to 14 V
If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

3	CHECK COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*

AC

(a) Use the intelligent tester to check if the CAN Communication System is functioning normally.
Result

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output	B

B → Go to CAN COMMUNICATION SYSTEM

A

4	CHECK FOR DTC*

(a) Check for DTCs and note any codes that are output.
HINT:
Refer to the DTC CHECK / CLEAR (See page AC-32).
(b) Delete the DTCs.
(c) Recheck for DTCs. Based on the DTCs output above, try to force output of the A/C system DTC by simulating the operation indicated by the DTC.
Result

Result	Proceed to
DTC is not output	A
DTC is output	B

B → Go to step 7

A

5	PROBLEM SYMPTOMS TABLE

(a) Refer to the problem symptoms table (See page AC-25).

Result

Result	Proceed to
Fault is not listed in problem symptoms table	A
Fault is listed in problem symptoms table	B

B → Go to step 8

A

6	OVERALL ANALYSIS AND TROUBLESHOOTING*

(a) Actuator Check (See page AC-43 for AUTO A/C)
(b) DATA LIST / ACTIVE TEST (See page AC-38)
(c) Terminals of ECU (See page AC-29)
(d) On-vehicle Inspection
(e) Inspection

NEXT

END

CUSTOMIZE PARAMETERS

HINT:
The following items can be customized.
NOTICE:

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Be sure to make a note of the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

AIR CONDITIONER (AUTO A/C)

DISPLAY (ITEM)	DEFAULT	CONTENTS	SETTING
SET TEMP SHIFT (Set Temperature Shift)	NORMAL	To shift the temperature against the displayed temperature	+2 C / +1 C / NORMAL / -1 C / -2 C

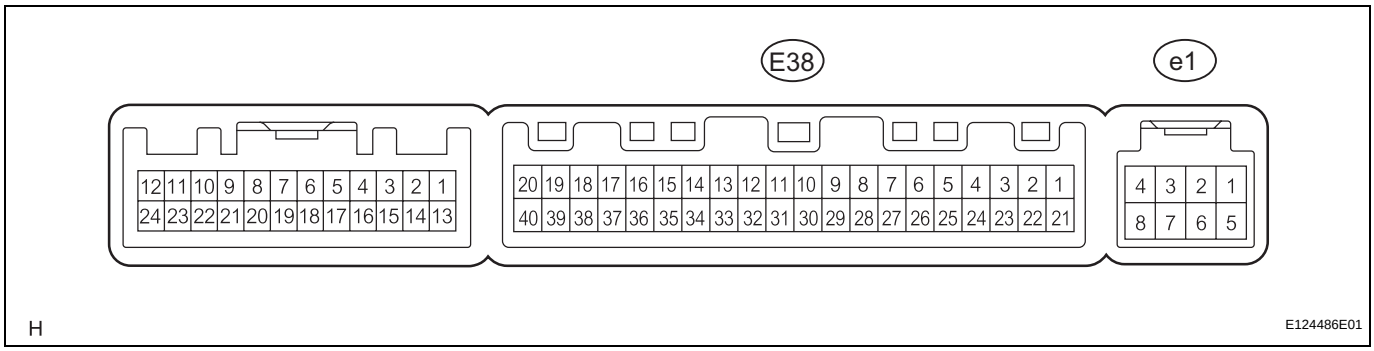
TERMINALS OF ECU

1. A/C AMPLIFIER



HINT:
Check from the rear of the connector while it is connected to the A/C amplifier.

Terminal No. (Symbols)	Wiring Color	Terminal Description	Condition	Specified Condition
E38-1 (IG+) - E38-14 (GND)	V - W-B	Power source (IG)	Ignition switch on (IG)	10 to 14 V
E38-1 (IG+) - E38-14 (GND)	V - W-B	Power source (IG)	Ignition switch off	Below 1 V
E38-2 (SOL+) - E38-14 (GND)	W - W-B	A/C compressor operation signal	Engine is running A/C switch: ON Blower switch: LO	Pulse generation (See waveform 1)
E38-5 (TAM) - E38-14 (GND)	P - W-B	A/C ambient temperature sensor signal	Ignition switch on (IG) at 25°C (77°F)	1.35 to 1.75 V
E38-5 (TAM) - E38-14 (GND)	P - W-B	A/C ambient temperature sensor signal	Ignition switch on (IG) at 40°C (104°F)	0.9 to 1.2 V
E38-8 (LOCK)*1 - E38-14 (GND)	G - W-B	A/C compressor lock sensor signal	Engine is running Blower switch: LO A/C switch: ON	Pulse generation (See waveform 2)
E38-9 (PRE) - E38-13 (SG-2)	V - L	A/C pressure sensor signal	Start engine, Operate A/C system, Refrigerant pressure: Abnormal pressure (more than 3,140 kPa (32.0 kgf/cm^2, 455 psi))	4.74 V or higher
E38-9 (PRE) - E38-13 (SG-2)	V - L	A/C pressure sensor signal	Start engine, Operate A/C system, Refrigerant pressure: Abnormal pressure (less than 196 kPa (2.0 kgf/cm^2, 28 psi))	Below 0.76 V
E38-9 (PRE) - E38-13 (SG-2)	V - L	A/C pressure sensor signal	Start engine, Operate A/C system, Refrigerant pressure: Abnormal pressure (more than 3,140 kPa (32.0 kgf/cm^2, 455 psi) and less than 196 kPa (2.0 kgf/cm^2, 28 psi))	0.76 to 4.74 V
E38-10 (S5-3) - E38-13 (SG-2)	BR - L	Power supply for A/C pressure sensor	Ignition switch on (IG) A/C switch: ON	4.5 to 5.5 V
E38-10 (S5-3) - E38-13 (SG-2)	BR - L	Power supply for A/C pressure sensor	Ignition switch on (IG) A/C switch: OFF	Below 1 V
E38-11 (CANH) - E38-12 (CANL)	B - W	CAN communication system	CAN communication circuit	Pulse generation
E38-13 (SG-2) - Body ground	L - Body ground	Ground for A/C pressure sensor, A/C ambient temperature sensor, A/C lock sensor	Always	Below 1 V
E38-14 (GND) - Body ground	W-B - Body ground	Ground for main power supply	Always	Below 1 V

AC

Terminal No. (Symbols)	Wiring Color	Terminal Description	Condition	Specified Condition
E38-20 (MGC)*1 - E38-14 (GND)	LG - W-B	A/C compressor magnetic clutch operation signal	Ignition switch on (IG) Blower switch: LO A/C switch: OFF	10 to 14 V
E38-20 (MGC)*1 - E38-14 (GND)	LG - W-B	A/C compressor magnetic clutch operation signal	Ignition switch on (IG) Blower switch: LO A/C switch: ON	Below 1 V
E38-21 (B) - E38-14 (GND)	GR - W-B	Power source (Back-up)	Always	10 to 14 V
E38-23 (BLW) - E38-14 (GND)	R - W-B	Blower motor speed control signal	Ignition switch on (IG) Blower switch: ON	Pulse generation (See waveform 3)
E38-29 (TR)*2 - E38-34 (SG-1)	P - LG	A/C room temperature sensor signal	Ignition switch on (IG) Cabin temperature at 25°C (77°F)	1.8 to 2.2 V
E38-29 (TR)*2 - E38-34 (SG-1)	P - LG	A/C room temperature sensor signal	Ignition switch on (IG) Cabin temperature at 40°C (104°F)	1.2 to 1.6 V
E38-32 (TSP)*2 - E38-14 (GND)	Y - W-B	A/C solar sensor signal (for Front passenger side)	Ignition switch on (IG) Solar sensor is subjected to electric light.	0.8 to 4.3 V
E38-32 (TSP)*2 - E38-14 (GND)	Y - W-B	A/C solar sensor signal (for Front passenger side)	Ignition switch on (IG) Solar sensor is covered with a cloth.	Below 0.8 V
E38-33 (TSD)*2 - E38-14 (GND)	O - W-B	A/C solar sensor signal (for Driver side)	Ignition switch on (IG) Solar sensor is subjected to electric light.	0.8 to 4.3 V
E38-33 (TSD)*2 - E38-14 (GND)	O - W-B	A/C solar sensor signal (for Driver side)	Ignition switch on (IG) Solar sensor is covered with a cloth.	Below 0.8 V
E38-34 (SG-1)*2 - Body ground	LG - Body ground	Ground for A/C room temperature sensor	Always	Below 1 V
E38-37 (LIN1) - E38-14 (GND)	GR - W-B	LIN communication signal	Ignition switch on (IG)	Pulse generation
E38-38 (RDFG) - E38-14 (GND)	G - W-B	DEF relay signal	Ignition switch on (IG) REAR DEF switch: ON	Below 1 V
E38-38 (RDFG) - E38-14 (GND)	G - W-B	DEF relay signal	Ignition switch on (IG) REAR DEF switch: OFF	10 to 14 V
E38-39 (PCD1)*2 - E38-14 (GND)	R - W-B	Plasmacluster™ operation signal	Ignition switch on (IG) Blower switch: OFF (plasmacluster™ not operating)	10 to 14 V
E38-39 (PCD1)*2 - E38-14 (GND)	R - W-B	Plasmacluster™ operation signal	Ignition switch on (IG) Blower switch: ON (plasmacluster™ operating)	Below 1 V
e1-2 (BUS G) - Body ground	-	Ground for BUS IC	Always	Below 1 V
e1-3 (BUS) - e1-2 (BUS G)	-	BUS IC control signal	Ignition switch off → on (IG)	Pulse generation
e1-4 (B BUS) - e1-2 (BUS G)	-	Power supply for BUS IC	Ignition switch off	Below 1 V
e1-4 (B BUS) - e1-2 (BUS G)	-	Power supply for BUS IC	Ignition switch on (IG)	10 to 14 V
e1-5 (SGA) - Body ground	-	Ground for evaporator temperature sensor	Always	Below 1 V
e1-6 (TEA) - e1-5 (SGA)	-	A/C evaporator temperature sensor signal	Ignition switch on (IG) Evaporator temperature at 0°C (32°F)	1.7 to 2.1 V
e1-6 (TEA) - e1-5 (SGA)	-	A/C evaporator temperature sensor signal	Ignition switch on (IG) Evaporator temperature at 15°C (59°F)	0.7 to 1.3 V

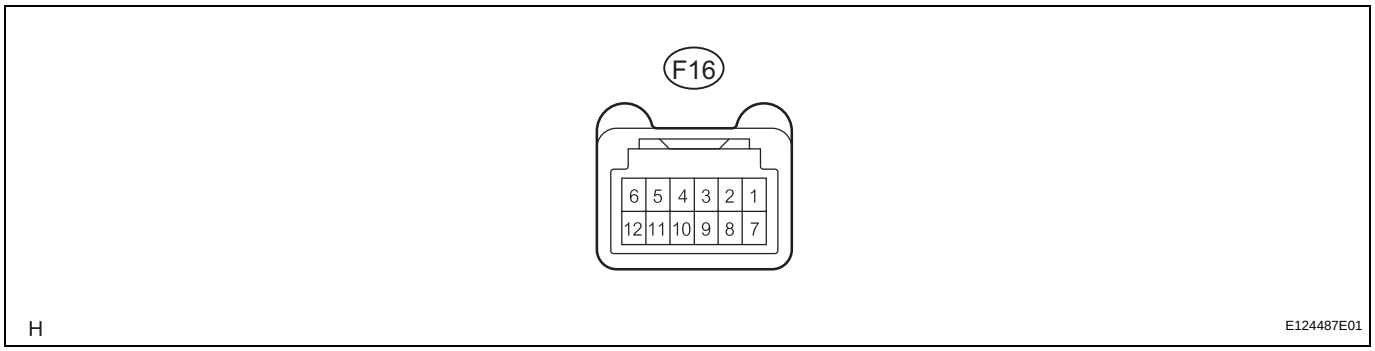
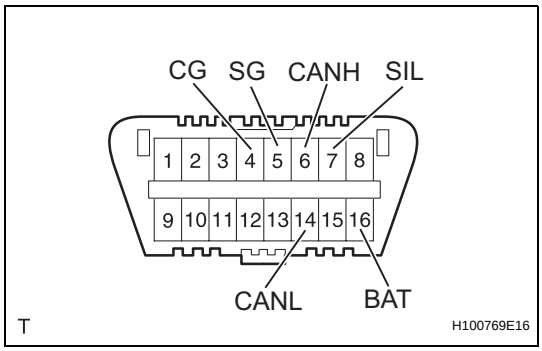
2. A/C CONTROL ASSEMBLY



HINT:
Check from the rear of the connector while it is connected to the A/C control assembly.

Terminal No. (Symbols)	Wiring Color	Terminal Description	Condition	Specified Condition
F16-3 (GND) - Body ground	W-B - Body ground	Ground for A/C control assembly	Always	Below 1 V
F16-4 (TX+) - F16-3 (GND)	L - W-B	LIN communication circuit	Ignition switch on (IG)	Pulse generation
F16-5 (IG+) - F16-3 (GND)	V - W-B	Power source (IG)	Ignition switch off	Below 1 V
F16-5 (IG+) - F16-3 (GND)	V - W-B	Power source (IG)	Ignition switch on (IG)	10 to 14 V

AC



DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The vehicle's ECU uses the ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbol (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch off*	54 to 69 Ω
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch off*	6 kΩ or higher
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch off*	200 Ω or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition switch off*	6 kΩ or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch off*	200 Ω or higher

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches, or the doors.**

HINT:

Connect the cable of the intelligent tester to the DLC3, turn the ignition switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.

AC

DTC CHECK / CLEAR

HINT:
*: For AUTO A/C

1. DTC CHECK (SENSOR CHECK)*

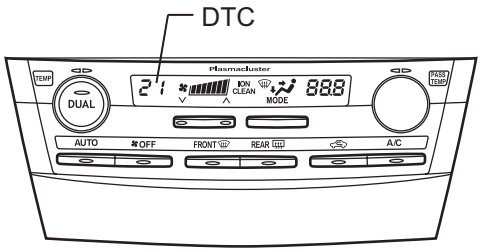
(a) Start the engine and warm it up.

(b) Perform the indicator check (See page AC-34).
HINT:
After the indicator check is completed, the system enters the DTC check mode automatically.

(c) Read the code displayed on the panel. (Trouble codes are output on the temperature display.)
NOTICE:
- **In the sensor check mode, which is automatically transferred from the indicator check mode, troubleshooting may be partially performed. Be sure to perform the actuator check, and then the sensor check again.**
- **If the check is performed in a dark place, DTC 21 or 24 may be displayed even though the system is normal.**

HINT:
Refer to the DTC chart (Diagnostic Trouble Code chart) for details of the codes (See page AC-41).
- When there are no problems, DTC 00 is output.
- As an example, the illustration shows that display code 21 is output.

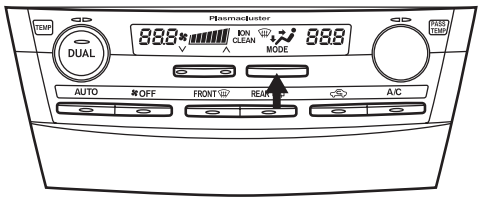
A/C Control Assembly:



H E124467E01

(d) If the steps are difficult to read because they change automatically, push the "MODE" switch to display the steps one at a time so that they can be read easily. The items are displayed step by step each time the "MODE" switch is pushed.
- Push the "OFF" switch to finish panel diagnosis.
- Push the "R/F" switch to enter the actuator check mode.

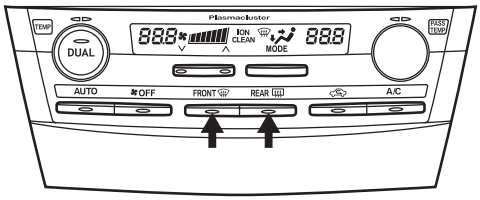
A/C Control Assembly:



H E124466E03

AC

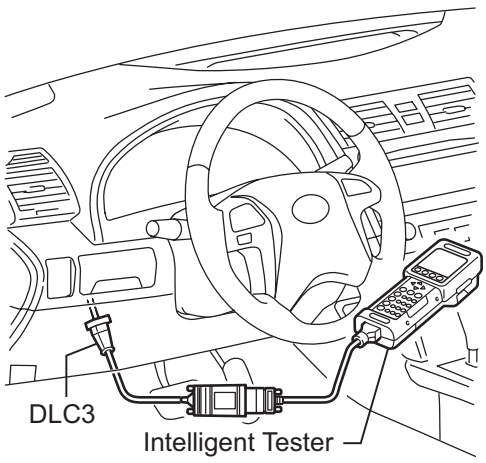
A/C Control Assembly:



H E124466E04

2. CLEARING DTC*

(a) During the sensor check, press the "FRONT DEF" switch and "REAR DEF" switch at the same time.



H C131977E01

3. DTC CHECK USING INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester ON.
(d) Enter the following menu items: DIAGNOSIS / OBD/ MOBD / DTC INFO / CURRENT CODES.
HINT:
Refer to the intelligent tester operator's manual for further details.
(e) Check the details of the DTCs.
(f) Clear the DTCs.
HINT:
After repairing the malfunctions, clear the DTC.
(1) Connect the intelligent tester to the DLC3.
(2) Turn the ignition switch on (IG).
(3) Enter the following menu items: DIAGNOSIS / OBD/MOBD / DTC INFO / CLEAR CODES.
HINT:
Refer to the intelligent tester operator's manual for further details.
(4) Press the YES button.

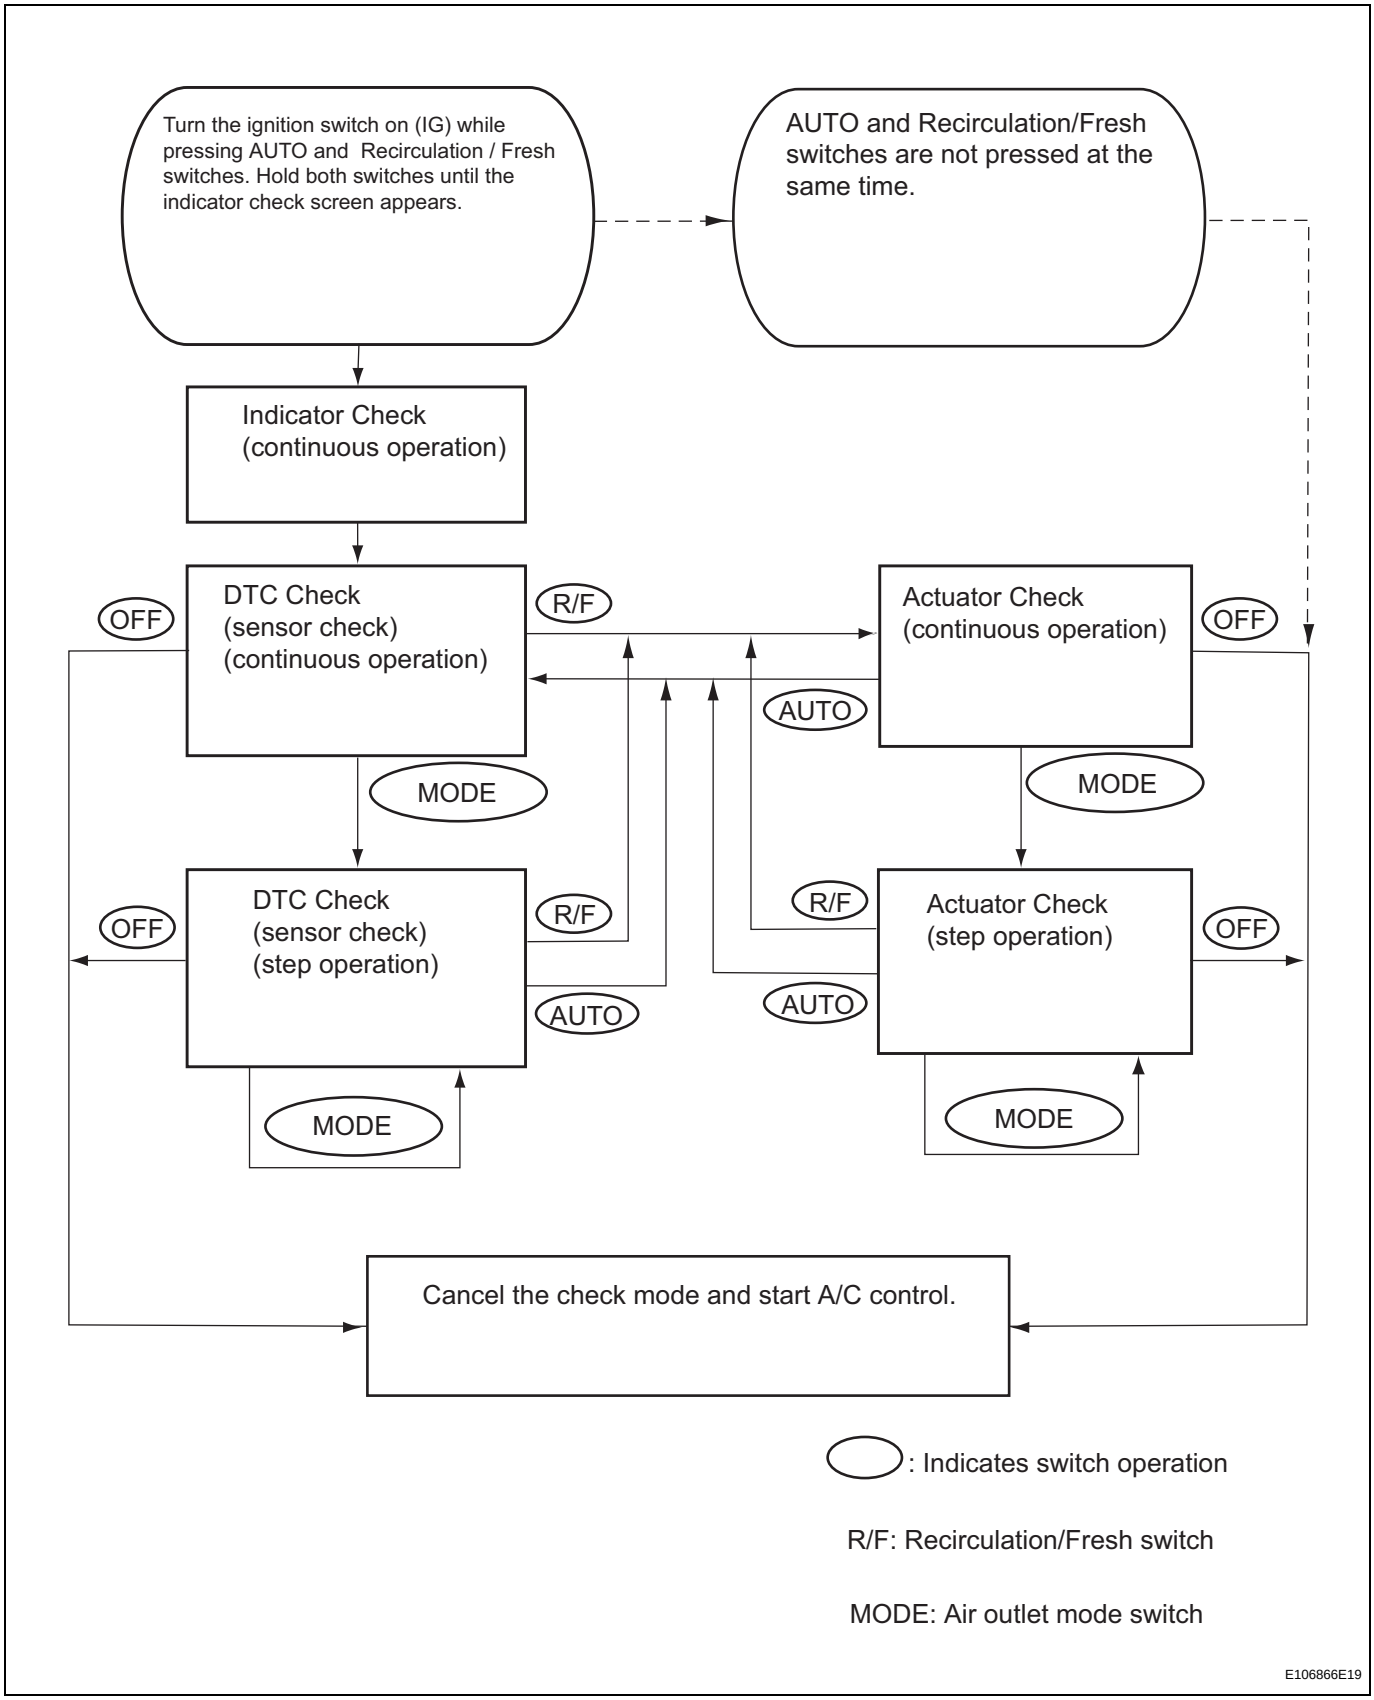
AC

CHECK MODE PROCEDURE

HINT:
*: For AUTO A/C

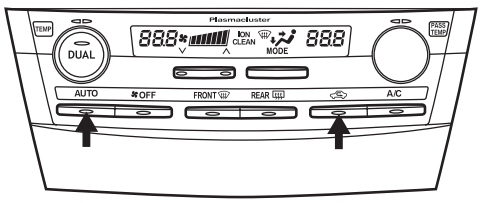
1. LIST OF OPERATION METHODS*

(a) By operating each of the A/C control switches as shown in the diagram below, it is possible to enter the diagnostic check mode.



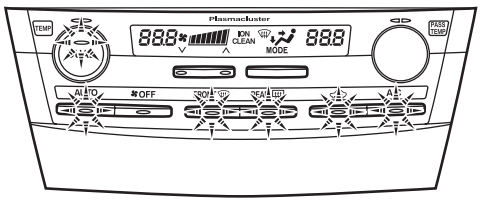
AC

A/C Control Assembly:

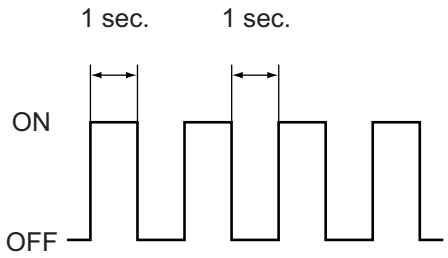


H E124466E05

A/C Control Assembly:



Indicator Blinking Pattern:



H E124468E01

2. INDICATOR CHECK*

(a) Turn the ignition switch off.

(b) Turn the ignition switch on (IG) while pressing the A/C control "AUTO" switch and "R/F" switch simultaneously. Hold both switches until the indicator check screen appears.

(c) The indicator check is automatically performed when panel diagnosis is activated. Check that the indicators light up and go off at 1 second intervals 4 times in succession.
HINT:
- The sensor check automatically starts when the indicator check is completed.
- Press the "OFF" switch to cancel the check mode.
- If a navigation system is installed, the indicator will blink and the buzzer will sound.

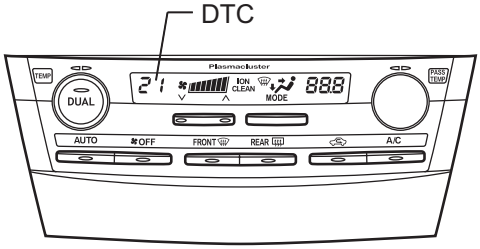
3. DTC CHECK (SENSOR CHECK)*

(a) Start the engine and warm it up.

(b) Perform the indicator check.
HINT:
After the indicator check is completed, the system enters the DTC check mode automatically.

AC

A/C Control Assembly:

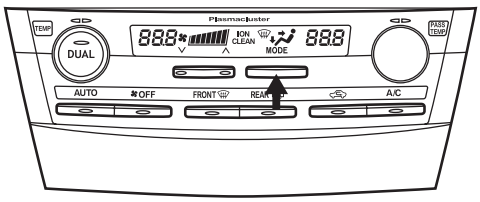


H E124467E01

(c) Read the code displayed on the panel.
NOTICE:
- **In the sensor check mode, which is automatically transferred from the indicator check mode, troubleshooting may be partially performed. Be sure to perform the actuator check, and then the sensor check again.**
- **If the check is performed in a dark place, DTC 21 or 24 may be displayed even though the system is normal.**

HINT:
Refer to the DTC chart (Diagnostic Trouble Code chart) for details of the codes (See page AC-41).
- When there are no problems, DTC 00 is output.
- As an example, the illustration shows that display code 21 is output.

A/C Control Assembly:



H E124466E03

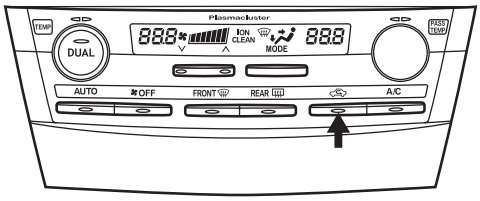
(d) If the steps are difficult to read because they change automatically, push the "MODE" switch to display the steps one at a time so that they can be read easily. The items are displayed step by step each time the "MODE" switch is pushed.
- Push the "OFF" switch to finish panel diagnosis.
- Push the "R/F" switch to enter the actuator check mode.

4. ACTUATOR CHECK*

(a) Start the engine and warm it up.

(b) Perform the indicator check.

A/C Control Assembly:

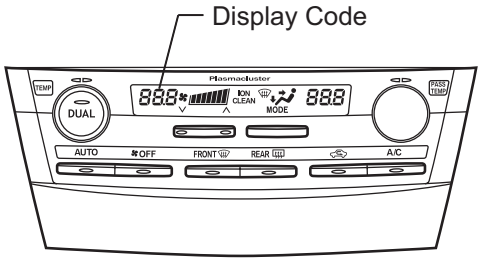


H E124466E02

(c) Push the "R/F" switch to perform the actuator check.
HINT:
Be sure to perform the actuator check after starting the engine.

AC

A/C Control Assembly:



H E124466E06

(d) As the actuator check is repeated from steps 1 to 10 at 1 second intervals, check the temperature and air flow visually and by hand.
HINT:
- The display blinks at 1 second intervals in the step operation.
- Push the "OFF" switch to finish panel diagnosis.
- Push the "AUTO" switch to enter the sensor check mode.

Step No.	Display Code	Conditions				
		Blower Level	Air Mix Damper	Airflow Vent	Air Inlet Damper	Compressor

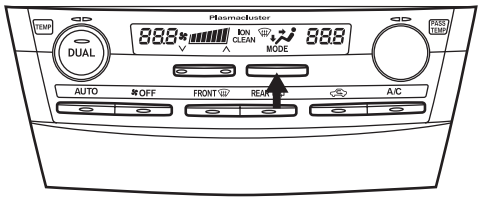
A/C Control Assembly:



H E124466E03

(e) If the steps are difficult to read because they change automatically, push the "MODE" switch to display the steps one at a time so that they can be read easily. The items are displayed step by step each time the "MODE" switch is pushed.
HINT:
- Push the "OFF" switch to finish panel diagnosis.
- Push the "R/F" switch to enter the sensor check mode.

AC

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the intelligent tester's DATA LIST allows switch, sensor, actuator, and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester on.
(d) Enter the following menus: DIAGNOSIS / OBD/ MOBD / AIR CONDITIONER / DATA LIST.
(e) Check the value(s) by referring to the table below.

AIR CONDITIONER (for MANUAL A/C)

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
AMBI TEMP SENS (Ambient temperature sensor)	Ambient temperature sensor / Min.: -23.3°C (-9.94°F), Max.: 65.95°C (150.71°F)	Actual ambient temperature is displayed	-
AMBI TEMP (Adjusted ambient temperature)	Adjusted ambient temperature / Min.: -30.8°C (-23.44°F), Max.: 50.8°C (123.44°F)	-	-
EVAP FIN TEMP (Evaporator fin thermistor)	Evaporator fin thermistor / Min.: -29.7°C (-21.46°F), Max.: 59.55°C (139.19°F)	Actual evaporator temperature is displayed	-
COOLANT TEMP (Engine coolant temperature)	Engine coolant temperature / Min.: 1.3°C (34.34°F), Max.: 90.55°C (194.99°F)	Actual engine coolant temperature is displayed while engine is warmed up	-
REG PRESS SENS (Regulator pressure sensor)	Regulator pressure sensor / Min.: -0.5 kgf/cm^2G, Max.: 37.75 kgf/cm^2G	Actual refrigerant pressure is displayed	-
REG CTRL CURRNT (Regulator control current)	Compressor variable output current / Min.: 0 A, Max.: 0.996 A	-	-
AIR MIX PULSE-D (Air mix servomotor target pulse (D side))	Driver side air mix servo motor target pulse / Min.: 0, Max.: 255	MAX. COLD: 105 (pulse) MAX. HOT: 7 (pulse)	-
AIR OUT PULSE-D (Air out pulse-D)	Driver side air outlet servo motor target pulse / Min.: 0, Max.: 255	FACE: 8 (pulse) B/L: 30 to 38 (pulse) FOOT: 50 to 74 (pulse) FOOT/DEF: 80 (pulse) DEF: 97 (pulse)	-
A/I DAMP PLS (Air inlet damper target pulse)	Air inlet damper target pulse / Min.: 0, Max.: 255	RECIRCULATION: 7 (pulse) FRESH: 28 (pulse)	-
#CODES (Number of trouble codes)	Number of trouble codes / Min.: 0, Max.: 255	Number of DTCs will be displayed	-

AIR CONDITIONER (for AUTO A/C)

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
ROOM TEMP (Room temperature sensor)	Room temperature sensor / Min.: -6.5°C (20.3°F), Max.: 57.25°C (135.05°F)	Actual cabin temperature is displayed	-
AMBI TEMP SENS (Ambient temperature sensor)	Ambient temperature sensor / Min.: -23.3°C (-9.94°F), Max.: 65.95°C (150.71°F)	Actual ambient temperature is displayed	-
AMBI TEMP (Adjusted ambient temperature)	Adjusted ambient temperature / Min.: -30.8°C (-23.44°F), Max.: 50.8°C (123.44°F)	-	-

AC

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
EVAP FIN TEMP (Evaporator fin thermistor)	Evaporator fin thermistor / Min.: -29.7°C (-21.46°F), Max.: 59.55°C (139.19°F)	Actual evaporator temperature is displayed	-
SOLAR SENS-D (Solar sensor (D side))	Driver side solar sensor / Min.: 0, Max.: 255	Driver side solar sensor value increases as brightness increases	-
SOLAR SENS-P (Solar sensor (P side))	Passenger side solar sensor / Min.: 0, Max.: 255	Passenger side solar sensor value increases as brightness increases	-
COOLANT TEMP (Engine coolant temperature)	Engine coolant temperature / Min.: 1.3°C (34.34°F), Max.: 90.55°C (194.99°F)	Actual engine coolant temperature is displayed while engine is warmed up	-
SET TEMP-D (Set temperature (D - side))	Driver side set temperature / Min.: 0°C (32°F), Max.: 30°C (54°F)	Driver side set temperature is displayed	-
SET TEMP-P (Set temperature (P - side))	Passenger side set temperature / Min.: 0°C (32°F), Max.: 30°C (54°F)	Passenger side set temperature is displayed	-
ESTIMATE TEMP-D (Estimate temperature (D side)	Driver side estimate temperature / Min.: -358.4°C (-613.12°F), Max.: 358.4°C (677.12°F)	Damper is at "MAX. COOL": -358.4°C (-613.12°F) Damper is at "MAX. HOT": 358.4°C (677.12°F)	-
ESTIMATE TEMP-P (Estimate temperature (P side)	Passenger side estimate temperature / Min.: -358.4, Max.: 358.4	Damper is at "MAX. COOL": -358.4°C (-613.12°F) Damper is at "MAX. HOT": 358.4°C (677.12°F)	-
HAND FREE TEL (Hand free telephone)	Hands free telephone / OFF or ON	-	-
BLOWER LEVEL (Blower motor speed level)	Blower motor speed level / Min.: 0 level, Max.: 31 level	Increases in the range between 0 and 31 as the blower motor speed increases	-
REG PRESS SENS (Regulator pressure sensor)	Regulator pressure sensor / Min.: -0.5 kgf/cm^{2}G, Max.: 37.75 kgf/cm^{2}G	Actual refrigerant pressure is displayed	-
REG CTRL CURRNT (Regulator control current)	Compressor variable output current / Min.: 0 A, Max.: 0.996 A	-	-
AIR MIX PULSE-D (Air mix servomotor target pulse (D side))	Driver side air mix servo motor target pulse / Min.: 0, Max.: 255	MAX. COLD: 5 (pulse) MAX. HOT: 103 (pulse)	-
AIR MIX PULSE-P (Air mix servomotor target pulse (P side))	Passenger side air mix servo motor target pulse / Min.: 0, Max.: 255	MAX. COLD: 105 (pulse) MAX. HOT: 7 (pulse)	-
AIR OUT PULSE-D (Air out pulse-D)	Driver side air outlet servo motor target pulse / Min.: 0, Max.: 255	FACE: 8 (pulse) B/L: 30 to 38 (pulse) FOOT: 50 to 74 (pulse) FOOT/DEF: 80 (pulse) DEF: 97 (pulse)	-
A/I DAMP PLS (Air inlet damper target pulse)	Air inlet damper target pulse / Min.: 0, Max.: 255	RECIRCULATION: 7 (pulse) FRESH: 28 (pulse)	-
#CODES (Number of trouble codes)	Number of trouble codes / Min.: 0, Max.: 255	Number of DTCs will be displayed	-

ENGINE

Item	Measurement Item / (Range) Display	Normal Condition	Diagnostic Note
A/C SIGNAL (A/C signal)	A/C signal / ON or OFF	ON: A/C ON OFF: A/C OFF	-
A/C MAG CLUTCH (A/C magnetic clutch relay)	A/C magnetic clutch relay / ON or OFF	ON: A/C magnetic clutch ON OFF: A/C magnetic clutch OFF	-

2. ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows relays, VSVs, actuators and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed in the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester on.
(d) Enter the following menus: DIAGNOSIS / OBD/ MOBD / AIR CONDITIONER / ACTIVE TEST.
(e) Perform the ACTIVE TEST by referring to the table below.

AIR CONDITIONER (for MANUAL A/C)

Item	Test Details / Display (Range)	Diagnostic Note
DEFOGER RLY-R (Defogger relay (Rear))	Defogger relay (Rear) / OFF, ON	-
AIR MIX PULSE-D (Air mix servomotor pulse (D side))	Driver side air mix servo motor pulse / Min.: 0, Max.: 255	-
AIR OUT PULSE-D (Air outlet servomotor pulse (D side)	Driver side air outlet servo motor pulse / Min.: 0, Max.: 255	-
A/I DAMP PLS (Air inlet damper target pulse)	Air inlet damper target pulse / Min.: 0, Max.: 255	-

AIR CONDITIONER (for AUTO A/C)

Item	Test Details / Display (Range)	Diagnostic Note
BLOWER MOTOR (Blower motor)	Blower motor / Min.: Level 0, Max.: Level 31	-
DEFOGER RLY-R (Defogger relay (Rear))	Defogger relay (Rear) / OFF, ON	-
AIR MIX PULSE-D (Air mix servomotor pulse (D side))	Driver side air mix servo motor pulse / Min.: 0, Max.: 255	-
AIR MIX PULSE-P (Air mix servomotor pulse (P side))	Passenger side air mix servo motor pulse / Min.: 0, Max.: 255	-
AIR OUT PULSE-D (Air outlet servomotor pulse (D side)	Driver side air outlet servo motor pulse / Min.: 0, Max.: 255	-
A/I DAMP PLS (Air inlet damper target pulse)	Air inlet damper target pulse / Min.: 0, Max.: 255	-

ENGINE

Item	Test Details / Display (Range)	Diagnostic Note
A/C MAG CLUTCH (Magnetic clutch relay)	Magnetic clutch relay / ON or OFF	-

*1: If the room temperature is approx. -18.6°C (-1.48°F) or lower, DTC B1411/11 may be output even though the system is normal.

*2: If the ambient temperature is approx. -52.9°C (-63.22°F) or lower, DTC B1412/12 may be output even though the system is normal.

*3: If the check is performed in a dark place, DTC B1421/21 or B1424/24 (solar sensor circuit abnormal) may be output even though the system is normal.

*4: The A/C amplifier memorizes the DTC of the respective malfunction if it has occurred for the period of time indicated in the brackets.

*5: For AUTO A/C

ACTUATOR CHECK

HINT:
*: For AUTO A/C

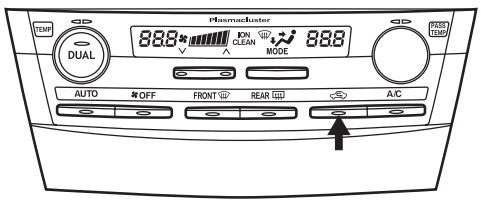
1. ACTUATOR CHECK*

(a) Start the engine and warm it up.

(b) Perform the indicator check (See page AC-34).

(c) Push the "R/F" switch to perform the actuator check.
HINT:
Be sure to perform the actuator check after starting the engine.

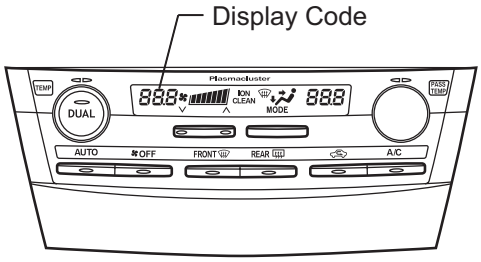
A/C Control Assembly:



H E124466E02

(d) As the actuator check is repeated from steps 1 to 10 at 1 second intervals, check the temperature and air flow visually and by hand.
HINT:
- The display blinks at 1 second intervals in the step operation.
- Push the "OFF" switch to finish panel diagnosis.
- Push the "AUTO" switch to enter the sensor check mode.

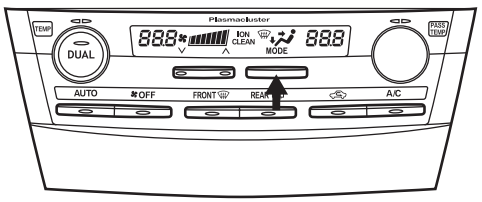
A/C Control Assembly:



H E124466E06

Step No.	Display Code	Conditions				
		Blower Level	Air Mix Damper	Airflow Vent	Air Inlet Damper	Compressor
1	0	0	0% open	FACE	FRESH	OFF
2	1	1	0% open	FACE	FRESH	OFF
3	2	17	0% open	FACE	RECIRCULATION / FRESH	ON
4	3	17	0% open	FACE	RECIRCULATION	ON
5	4	17	50% open	B/L	RECIRCULATION	ON
6	5	17	50% open	B/L	RECIRCULATION	ON
7	6	17	50% open	FOOT	FRESH	ON
8	7	17	100% open	FOOT-0	FRESH	ON
9	8	17	100% open	F/D	FRESH	ON
10	9	31	100% open	DEF	FRESH	ON

A/C Control Assembly:



H E124466E03

(e) If the steps are difficult to read because they change automatically, push the "MODE" switch to display the steps one at a time so that they can be read easily. The items are displayed step by step each time the "MODE" switch is pushed.
HINT:
- Push the "OFF" switch to finish panel diagnosis.
- Push the "R/F" switch to enter the sensor check mode.

DTC	B1411/11	Room Temperature Sensor Circuit

DESCRIPTION

This sensor detects the cabin temperature that is used as the basis for temperature control and sends a signal to the A/C amplifier.

DTC No.	DTC Detection Condition	Trouble Area
B1411/11	Room temperature sensor circuit (Open or short)	• A/C room temperature sensor • Harness or connector between A/C room temperature sensor and A/C amplifier • A/C amplifier

WIRING DIAGRAM

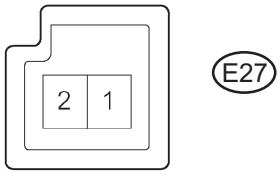
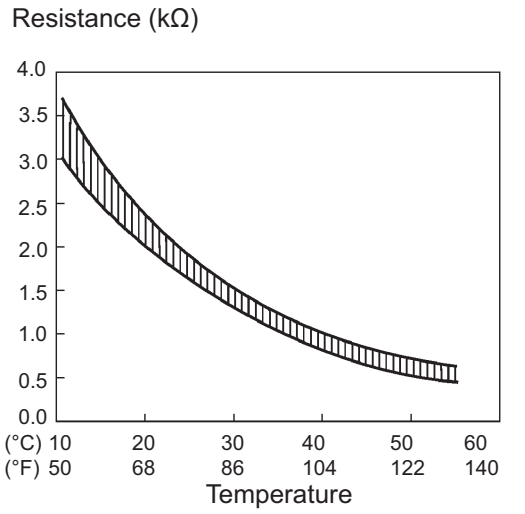
3 INSPECT A/C ROOM TEMPERATURE SENSOR

A/C Room Temperature Sensor Connector Front View:





(a) Remove the A/C room temperature sensor.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E27-1 - E27-2	10°C (50°F)	3.00 to 3.73 kΩ
E27-1 - E27-2	15°C (59°F)	2.45 to 2.88 kΩ
E27-1 - E27-2	20°C (68°F)	1.95 to 2.30 kΩ
E27-1 - E27-2	25°C (77°F)	1.60 to 1.80 kΩ
E27-1 - E27-2	30°C (86°F)	1.28 to 1.47 kΩ
E27-1 - E27-2	35°C (95°F)	1.00 to 1.22 kΩ
E27-1 - E27-2	40°C (104°F)	0.80 to 1.00 kΩ
E27-1 - E27-2	45°C (113°F)	0.65 to 0.85 kΩ
E27-1 - E27-2	50°C (122°F)	0.50 to 0.70 kΩ
E27-1 - E27-2	55°C (131°F)	0.44 to 0.60 kΩ
E27-1 - E27-2	60°C (140°F)	0.36 to 0.50 kΩ

NOTICE:

- **Hold the sensor only by its connector. Touching the sensor may change the resistance value.**
- **When measuring, the sensor temperature must be the same as the ambient temperature.**

HINT:

As the temperature increases, the resistance decreases (see the graph).

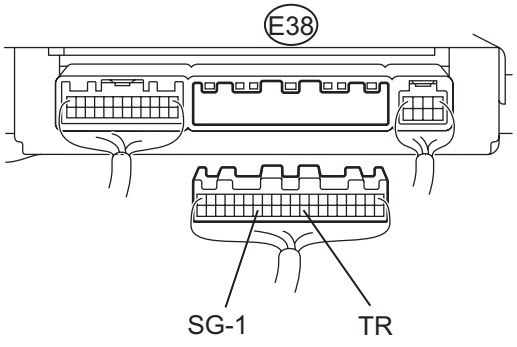
NG → **REPLACE A/C ROOM TEMPERATURE SENSOR**

OK

AC

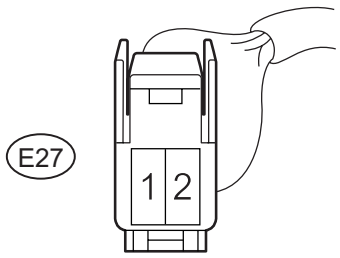
4	CHECK HARNESS AND CONNECTOR (A/C ROOM TEMPERATURE SENSOR - AIR CONDITIONING AMPLIFIER)

A/C Amplifier Connector Wire Harness View:



(a) Disconnect the connector from the A/C amplifier.

A/C Room Temperature Sensor Connector Front View:



(b) Disconnect the connector from the A/C room temperature sensor.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E38-29 (TR) - E27-1	Always	Below 1 Ω
E38-34 (SG-1) - E27-2	Always	Below 1 Ω
E38-29 (TR) - Body ground	Always	10 kΩ or higher
E38-34 (SG-1) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE AIR CONDITIONING AMPLIFIER

AC

DTC	B1412/12	Ambient Temperature Sensor Circuit

DESCRIPTION

The ambient temperature sensor is installed in front of the condenser to detect the ambient temperature which is used to control the air conditioner "AUTO" mode. This sensor is connected to the A/C amplifier and detects fluctuations in the ambient temperature. This data is used for controlling the cabin temperature. The sensor sends a signal to the A/C amplifier. The resistance of the ambient temperature sensor changes in accordance with the ambient temperature. As the temperature decreases, the resistance increases. As the temperature increases, the resistance decreases.
The A/C amplifier applies voltage (5 V) to the ambient temperature sensor and reads voltage changes as the resistance of the ambient temperature sensor changes.

DTC No.	DTC Detection Condition	Trouble Area
B1412/12	Open or short in ambient temperature sensor circuit	• Ambient temperature sensor • Harness or connector between ambient temperature sensor and A/C amplifier • A/C amplifier

DTC	B1413/13	Evaporator Temperature Sensor Circuit

DESCRIPTION

The evaporator temperature sensor (A/C thermistor) is installed on the evaporator in the air conditioning unit. It detects the temperature of the cooled air that has passed through the evaporator and its signal is used to control the air conditioning. It sends a signal to the A/C amplifier. The resistance of the evaporator temperature sensor (A/C thermistor) changes in accordance with the temperature of the cooled air that has passed through the evaporator. As the temperature decreases, the resistance increases. As the temperature increases, the resistance decreases.

The A/C amplifier applies voltage (5 V) to the evaporator temperature sensor (A/C thermistor) and reads voltage changes as the resistance of the evaporator temperature sensor (A/C thermistor) changes. This sensor is used to prevent the evaporator from freezing.

DTC No.	DTC Detection Condition	Trouble Area
B1413/13	Open or short in evaporator temperature sensor circuit	• Air conditioning harness (evaporator temperature sensor) • A/C amplifier

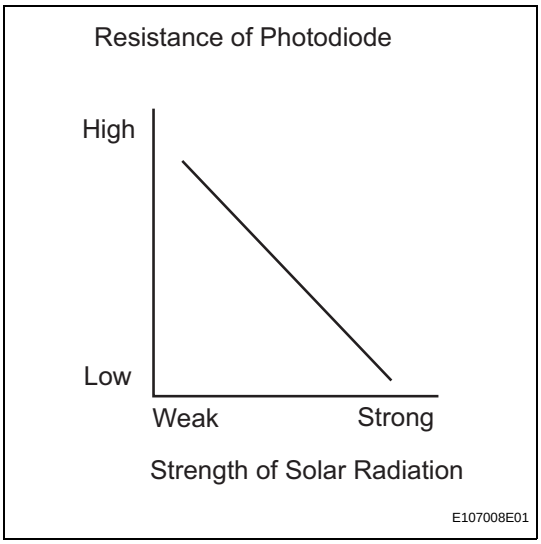
DTC	B1421/21	Solar Sensor Circuit (Passenger Side)

DESCRIPTION

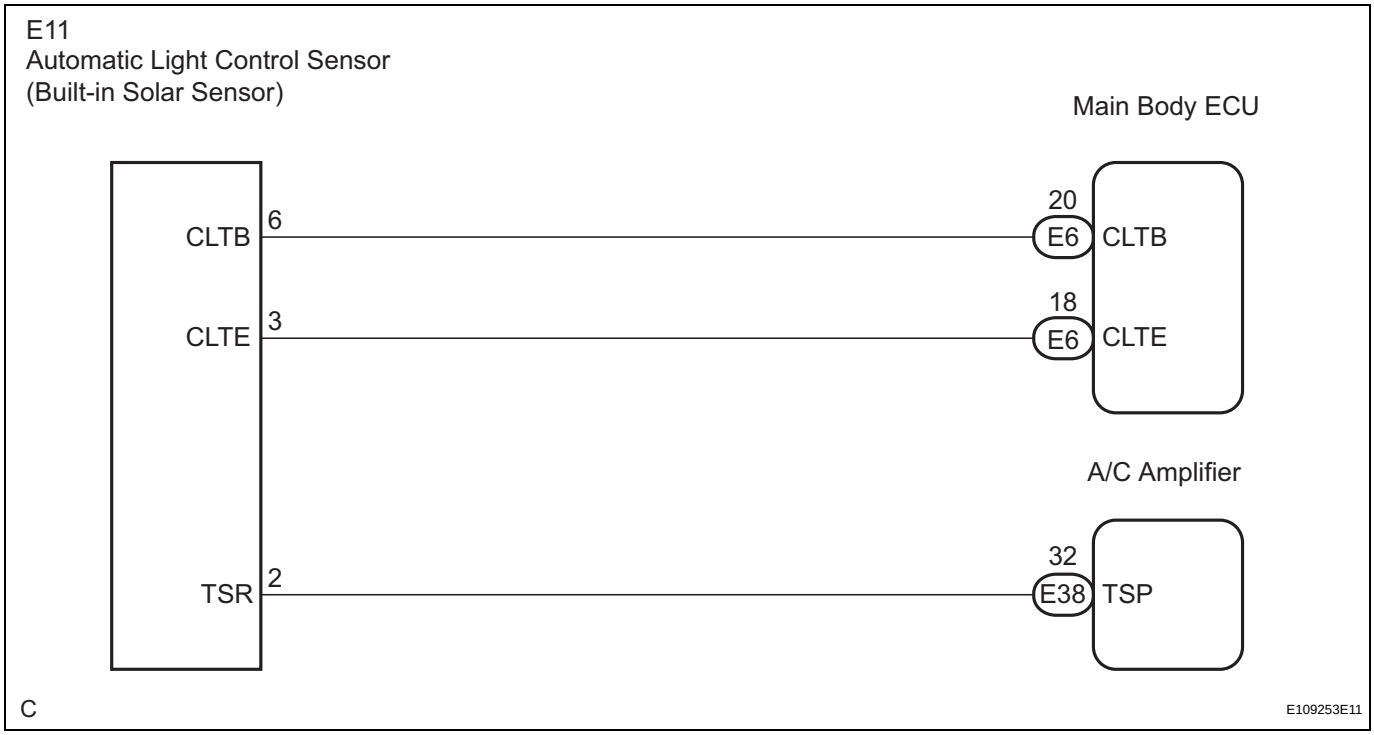


The solar sensor, which is installed on the upper side of the instrument panel, detects sunlight and controls the air conditioning in AUTO mode. The output voltage from the solar sensor varies according to the amount of sunlight. When the sunlight increases, the output voltage increases. As the sunlight decreases, the output voltage decreases. The A/C amplifier detects voltage output from the solar sensor.

DTC No.	DTC Detection Condition	Trouble Area
B1421/21	Open or short in passenger side solar sensor circuit	• Solar sensor • Harness or connector between solar sensor and A/C amplifier • Harness or connector between solar sensor and main body ECU • A/C amplifier • Main body ECU

AC

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

- If DTC B1244 is output at the same time, troubleshoot DTC B1244 first (See page LI-23).
- If the check is performed in a dark place, DTC B1421/21 or B1424/24 (solar sensor circuit abnormal) may be output even though the system is normal.

AC

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the intelligent tester main switch on.
(c) Expose the sensing portion of the solar sensor to light.
HINT:
Use an incandescent light for inspection.
(d) Select the item below in the DATA LIST, and read the display on the intelligent tester.

DATA LIST / AIR CONDITIONER:

Item	Measure Item / Display (Range)	Normal Condition	Diagnostic Note
SOLAR SENS-P (Solar sensor (P side))	Passenger side solar sensor / Min.: 0, Max.: 255	Passenger side solar sensor value increases as brightness increases	-

DTC	B1422/22	Compressor Lock Sensor Circuit

SYSTEM DESCRIPTION

The ECM sends a signal to the A/C amplifier via CAN communication.
The A/C amplifier reads the difference between compressor speed and engine speed. When the difference becomes too large, the A/C amplifier determines that the compressor locks, and turns the magnetic clutch off.

DTC No.	DTC Detection Condition	Trouble Area
B1422/22	Open or short in compressor lock sensor circuit	• A/C compressor (A/C lock sensor) • Compressor drive belt • Harness or connector between compressor and magnetic clutch (A/C lock sensor) • A/C amplifier • CAN communication system

REPLACE AIR CONDITIONING AMPLIFIER

DTC	B1423/23	Pressure Sensor Circuit

DESCRIPTION

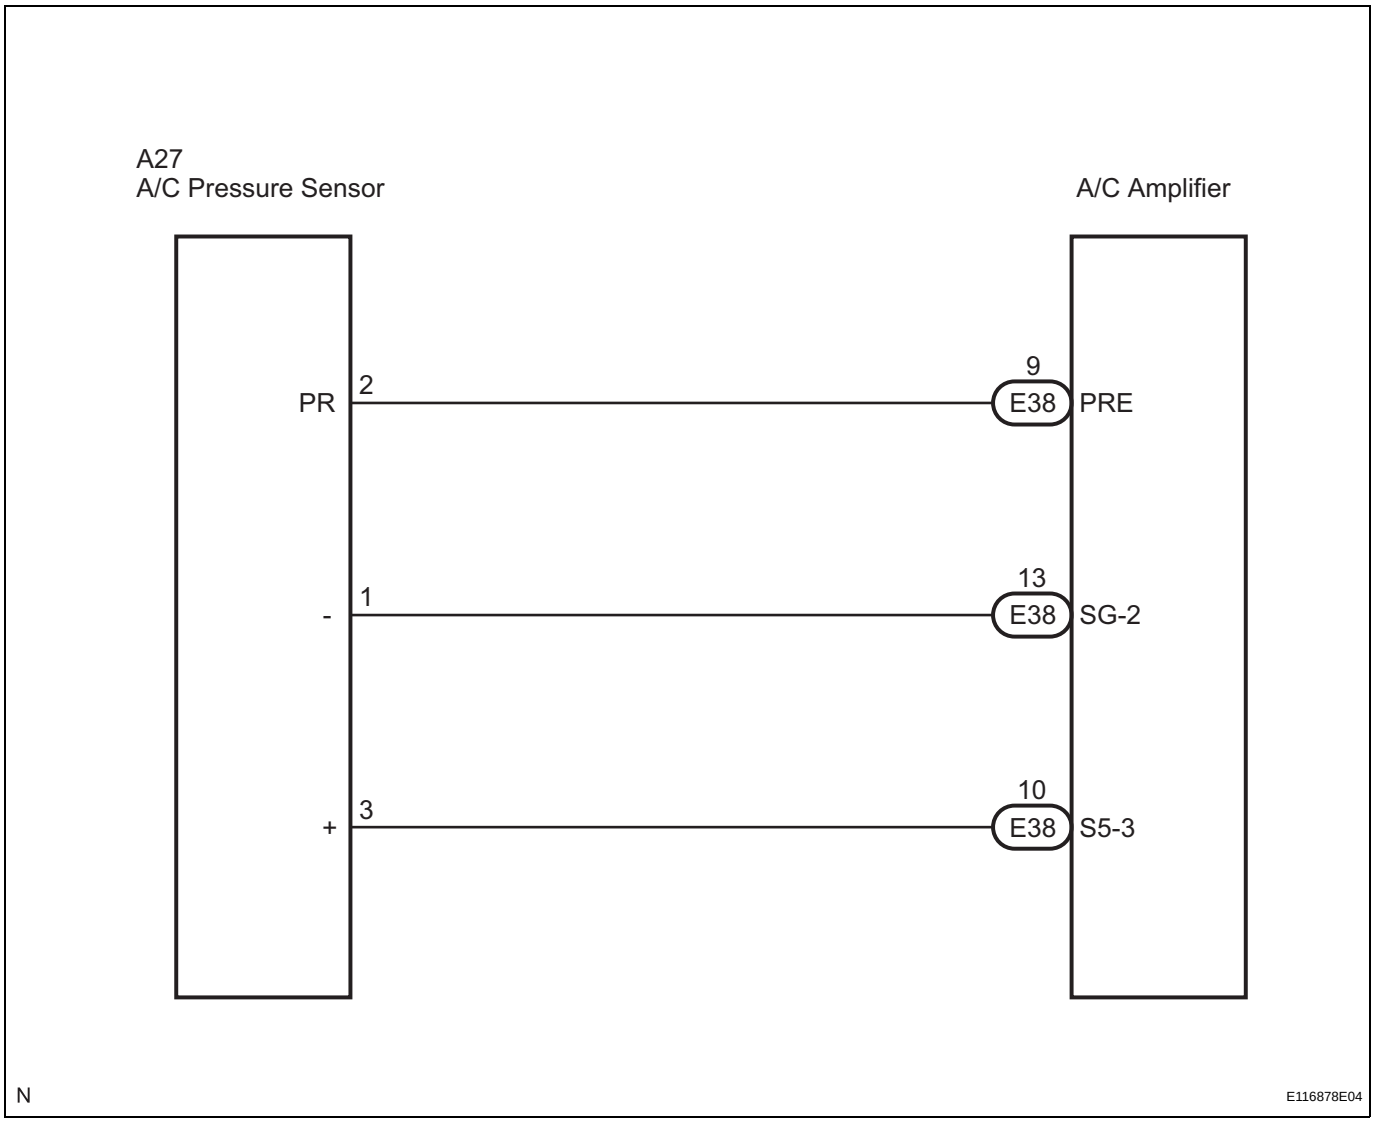
This DTC is output when refrigerant pressure is extremely low (0.19 MPa (2.0 kgf/cm^2, 28 psi) or less) or extremely high (3.14 MPa (32.0 kgf/cm^2, 455 psi) or more). The pressure sensor, which is installed on the pipe of the high pressure side to detect refrigerant pressure, outputs a refrigerant pressure signal to the A/C amplifier. The A/C amplifier converts this signal to pressure according to the sensor characteristics to control the compressor.

HINT:

Be sure to check the refrigerant volume first when this DTC is output because this DTC can also be output if there is no refrigerant in the system.

DTC No.	DTC Detection Condition	Trouble Area
B1423/23	Open or short in pressure switch circuit	• Pressure sensor • Harness or connector between pressure sensor and A/C amplifier • Refrigerant pipe line • A/C amplifier

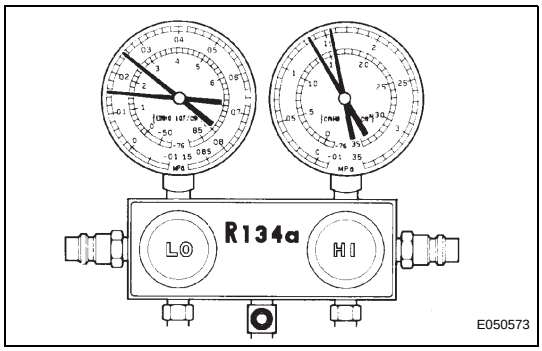
WIRING DIAGRAM



AC

INSPECTION PROCEDURE

1	CHECK REFRIGERANT PRESSURE



(a) Install the manifold gauge set (See page AC-120).
(b) Read the manifold gauge pressure when the following conditions are established.
  (1) Prepare the vehicle according to the chart below.

Item	Condition
Vehicle Doors	Fully open
Temperature Setting	MAX COLD
Blower Speed	HI
A/C switch	ON
R/F Switch	RECIRCULATION (30 to 35°C (86 to 95°F))

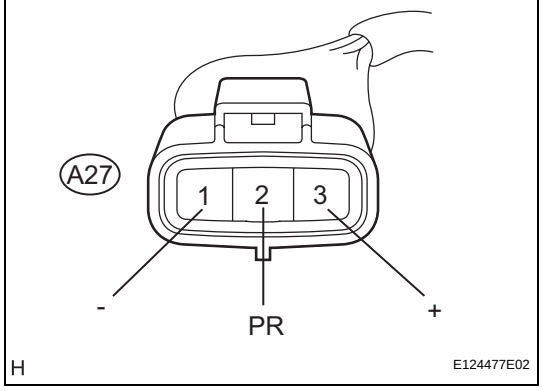
Standard pressure:
Low pressure side:
0.15 to 0.25 MPa (1.5 to 2.5 kgf/cm^2, 21.3 to 35.6 psi)
High pressure side:
1.37 to 1.57 MPa (14 to 16 kgf/cm^2, 199 to 228 psi)

NG → **CHARGE REFRIGERANT**

AC **OK**

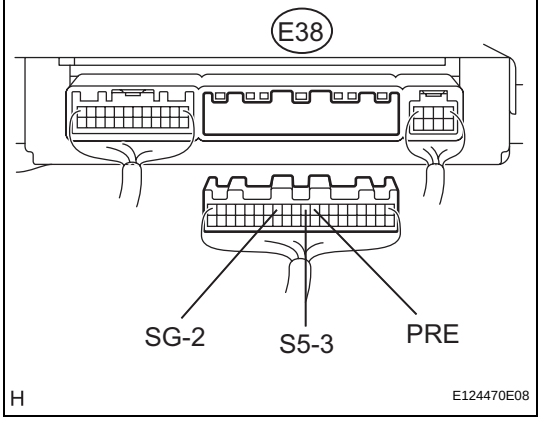
2	CHECK HARNESS AND CONNECTOR (PRESSURE SENSOR - A/C AMPLIFIER)

A/C Pressure Sensor Connector Front View:



(a) Disconnect the pressure sensor connector.

Air Conditioning Amplifier Connector Wire Harness View:



(b) Disconnect the A/C amplifier connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

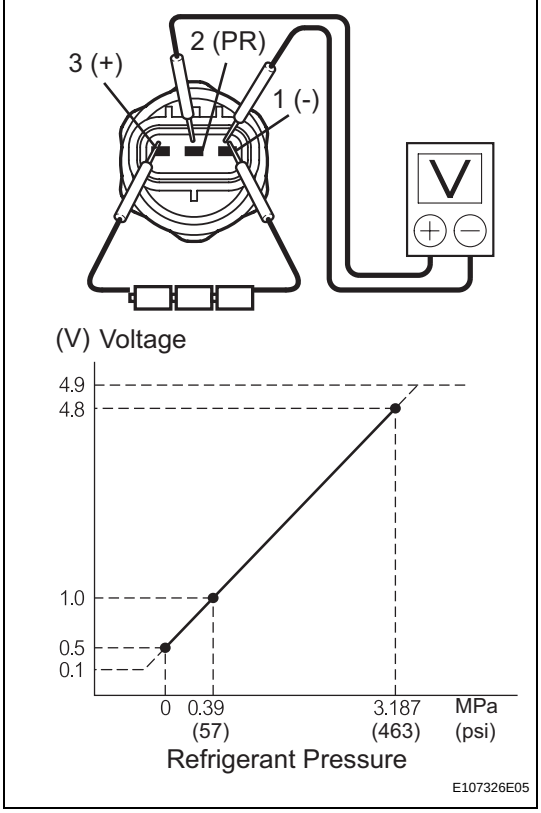
Tester Connection	Condition	Specified Condition
A27-2 (PR) - E38-9 (PRE)	Always	Below 1 Ω
A27-3 (+) - E38-10 (S5-3)	Always	Below 1 Ω
A27-1 (-) - E38-13 (SG-2)	Always	Below 1 Ω
E38-9 (PRE) - Body ground	Always	10 kΩ or higher
E38-10 (S5-3) - Body ground	Always	10 kΩ or higher
E38-13 (SG-2) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 INSPECT PRESSURE SENSOR

A/C Pressure Sensor Connector Front View:



(a) Install the manifold gauge set (See page AC-120).
(b) Connect the three 1.5 V dry cell batterie's positive (+) lead to terminal 3, and the negative (-) lead to terminal 1. Then connect the voltmeter's positive (+) lead to terminal 2, and the negative (-) lead to terminal 1. Measure the voltage.

OK:

The voltage changes according to refrigerant pressure, as shown in the graph.

Result

Result	Proceed to
NG	A
OK (When troubleshooting according to the DTC)	B
OK (When troubleshooting according to the PROBLEM SYMPTOMS TABLE)	C

B → **REPLACE AIR CONDITIONING AMPLIFIER**

C → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

AC

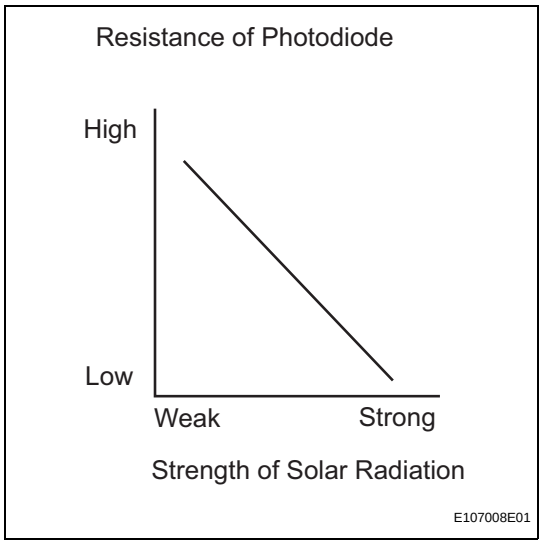
REPLACE PRESSURE SENSOR

DTC	B1424/24	Solar Sensor Circuit (Driver Side)

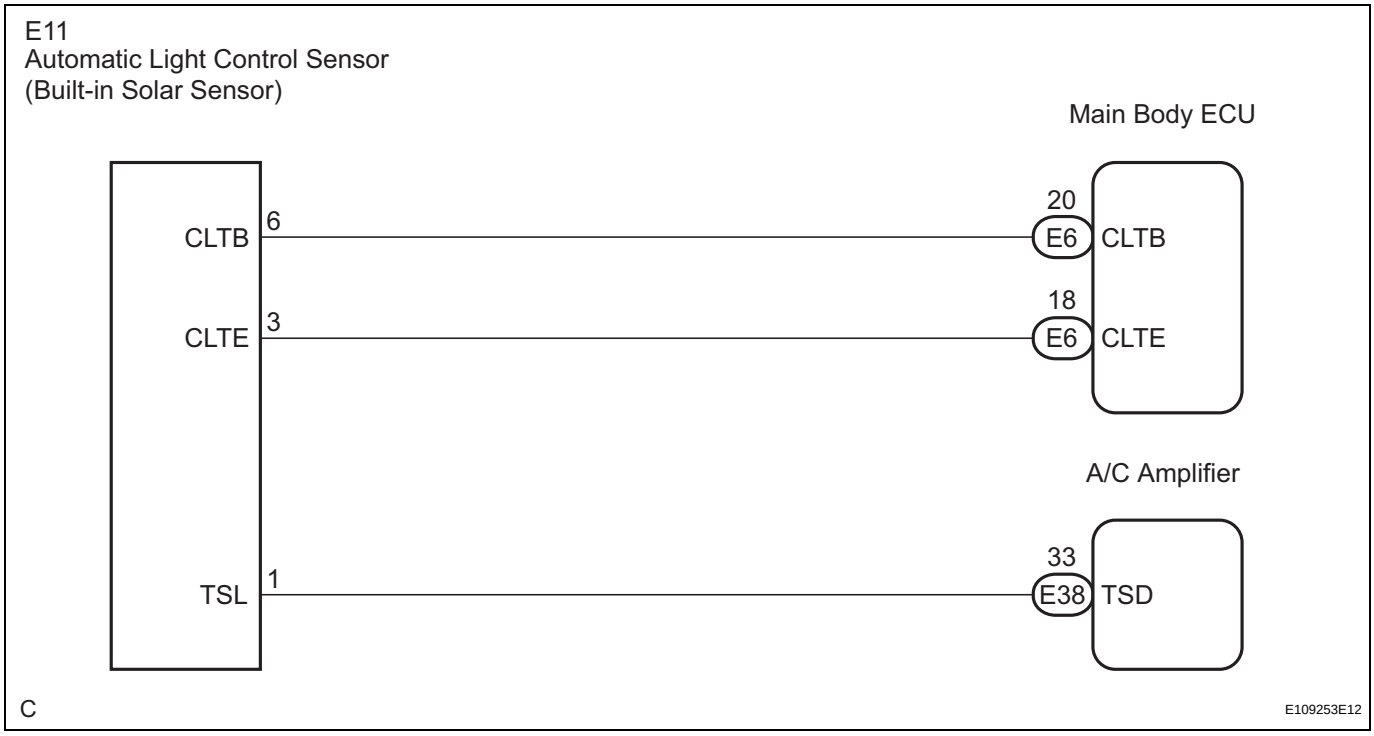
DESCRIPTION



The solar sensor, which is installed on the upper side of the instrument panel, detects sunlight and controls the air conditioning in AUTO mode. The output voltage from the solar sensor varies according to the amount of sunlight. When the sunlight increases, the output voltage increases. As the sunlight decreases, the output voltage decreases. The A/C amplifier detects output voltage from the solar sensor.

DTC No.	DTC Detection Condition	Trouble Area
B1424/24	Open or short in driver side solar sensor circuit	• Solar sensor • Harness or connector between solar sensor and A/C amplifier • Harness or connector between solar sensor and main body ECU • A/C amplifier • Main body ECU

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

AC

- If DTC B1244 is output at the same time, troubleshoot DTC B1244 first (See page LI-23).
- If the check is performed in a dark place, DTC B1421/21 or B1424/24 (solar sensor circuit abnormal) may be output even though the system is normal.

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the intelligent tester main switch on.
(c) Expose the sensing portion of the solar sensor to light.
HINT:
Use an incandescent light for inspection.
(d) Select the item below in the DATA LIST, and read the display on the intelligent tester.

DATA LIST / AIR CONDITIONER:

Item	Measure Item / Display (Range)	Normal Condition	Diagnostic Note
SOLAR SENS-D (Solar sensor (D side))	Driver side solar sensor / Min.: 0, Max.: 255	Driver side solar sensor value increases as brightness increases	-

OK:

The display is as specified in the normal condition column.

Result

Result	Proceed to
NG	A
OK (When troubleshooting according to the PROBLEM SYMPTOMS TABLE)	B
OK (When troubleshooting according to the DTC)	C

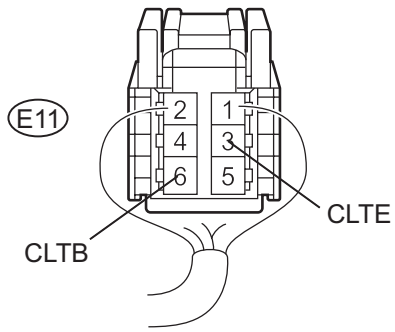
B → PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

C → REPLACE AIR CONDITIONING AMPLIFIER

A

2 CHECK HARNESS AND CONNECTOR (SOLAR SENSOR)

A/C Solar Sensor Connector Wire Harness View:



H E124476E02

(a) Disconnect the solar sensor connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E11-6 (CLTB) - E11-3 (CLTE)	Ignition switch on (IG)	10 to 14 V
E11-6 (CLTB) - E11-3 (CLTE)	Ignition switch off	Below 1 V

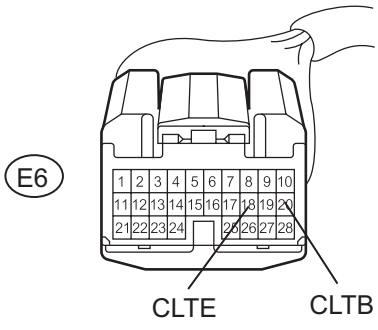
OK → Go to step 4

NG

AC

3 CHECK HARNESS AND CONNECTOR (SOLAR SENSOR - MAIN BODY ECU)

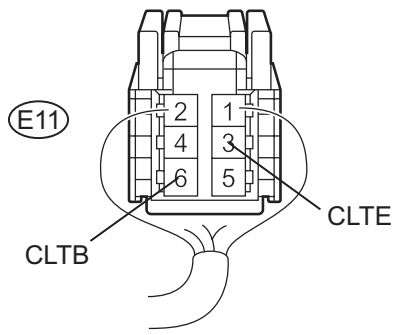
Main Body ECU Connector Front View:



H E124475E02

(a) Disconnect the main body ECU connector.

A/C Solar Sensor Connector Wire Harness View:



H E124476E02

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E6-20 (CLTB) - E11-6 (CLTB)	Always	Below 1 Ω
E6-18 (CLTE) - E11-3 (CLTE)	Always	Below 1 Ω
E6-20 (CLTB) - Body ground	Always	10 kΩ or higher
E6-18 (CLTE) - Body ground	Always	10 kΩ or higher

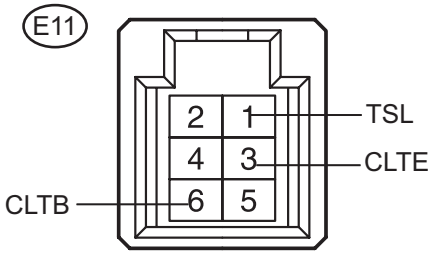
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MAIN BODY ECU

4 CHECK SOLAR SENSOR

Solar Sensor Connector Front View:



P E109215E15

(a) Remove the solar sensor with its connector still connected.

(b) Connect the positive (+) lead from the battery to terminal 6 (CLTB), and the negative (-) lead to terminal 3 (CLTE) of the solar sensor.

(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E11-1 (TSL) - E11-3 (CLTE)	Sensor is subjected to electric light	0.8 to 4.3 V
E11-1 (TSL) - E11-3 (CLTE)	Sensor is covered with a cloth	Below 0.8 V

NOTICE:

- **The connection procedure for using a digital tester such as a TOYOTA electrical tester is shown above. When using an analog tester, connect the negative (-) lead to terminal 6, and the positive (+) lead to terminal 3 of the solar sensor.**
- **While using the battery during inspection, do not bring the positive and negative tester probes too close to each other as a short circuit may occur.**

HINT:

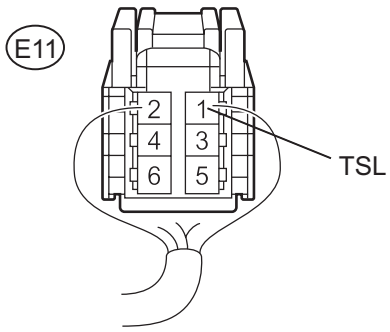
- Use an incandescent light for inspection. Bring it within about 30 cm (11.8 in.) of the solar sensor.
- As the inspection light is moved away from the sensor, the voltage increases.

NG → **REPLACE SOLAR SENSOR**

OK

5	CHECK HARNESS AND CONNECTOR (SOLAR SENSOR - A/C AMPLIFIER)

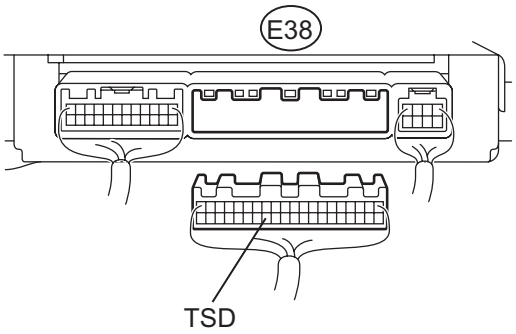
A/C Solar Sensor Connector Wire Harness View:



H E124476E04

(a) Disconnect the solar sensor connector.

Air Conditioning Amplifier Connector Wire Harness View:



H E124470E09

(b) Disconnect the A/C amplifier connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E38-33 (TSD) - E11-1 (TSL)	Always	Below 1 Ω
E38-33 (TSD) - Body ground	Always	10 kΩ or higher

AC

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE AIR CONDITIONING AMPLIFIER

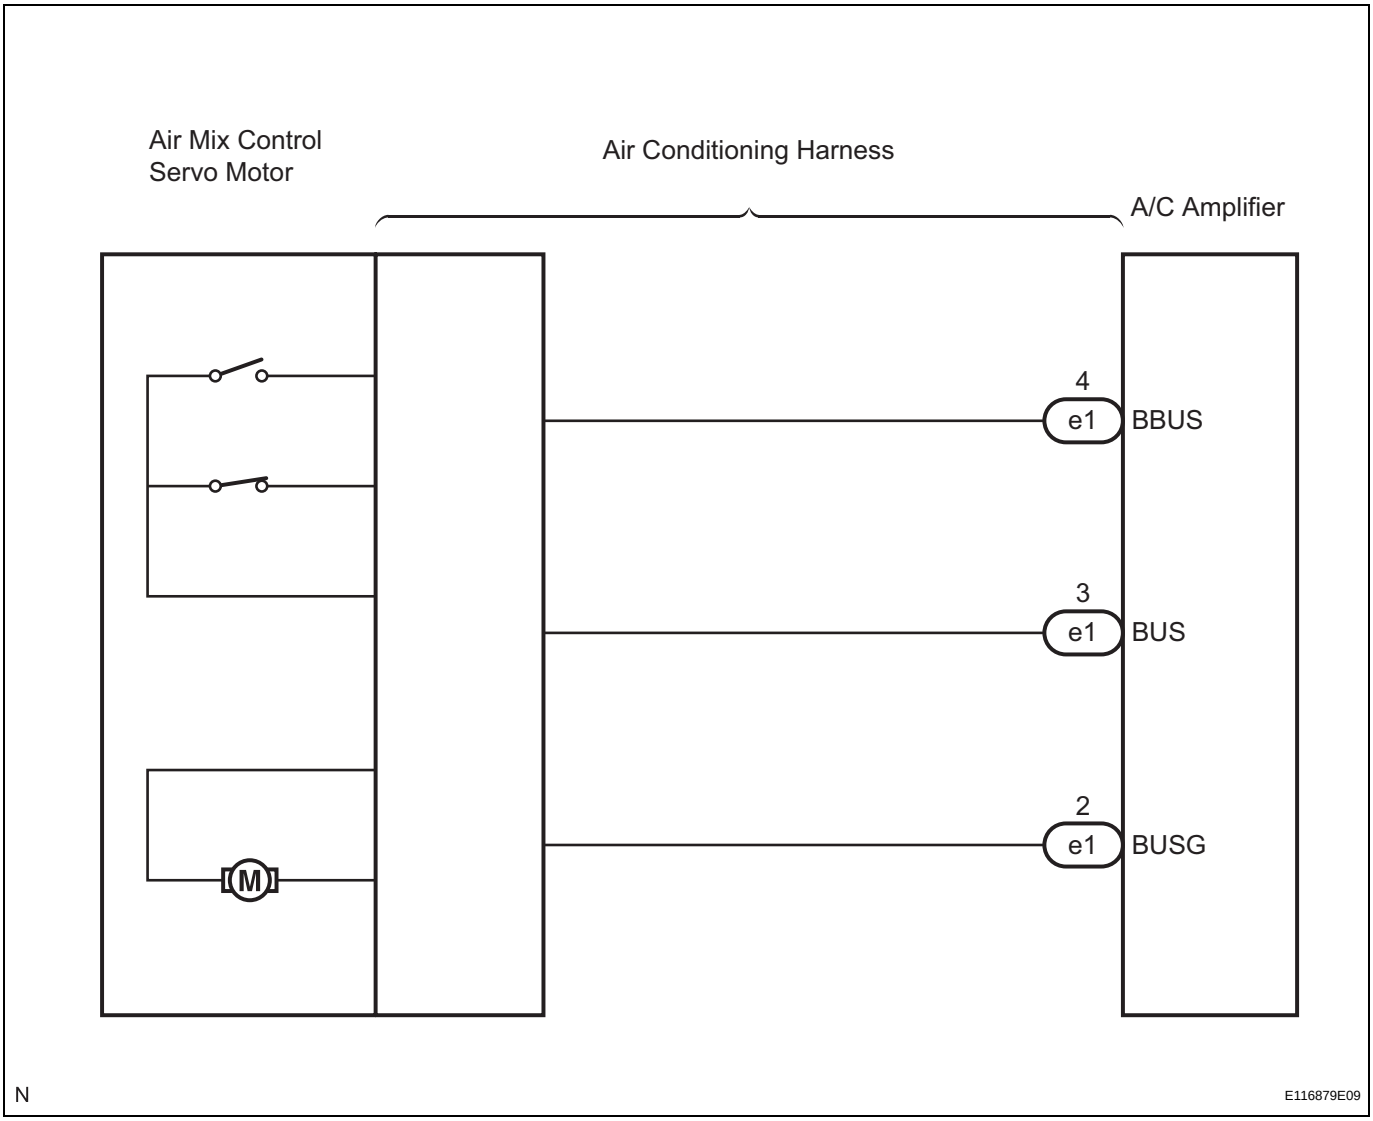
DTC	B1441/41	Air Mix Damper Control Servo Motor Circuit (Passenger Side)

DESCRIPTION

The air mix damper servo sends pulse signals to inform the air conditioning amplifier of the damper position. The air conditioning amplifier activates the motor (normal, reverse) based on the signals to move the air mix damper (passenger seat) to any position, which adjusts the amount of air passing the heater core after passing the evaporator to control the blowing temperature.
HINT:
Confirm that no mechanical problem is present because this diagnostic code can be output when either a damper link or damper is mechanically locked.

DTC No.	DTC Detection Condition	Trouble Area
B1441/41	Air mix damper position sensor value does not change even if air conditioning amplifier operates air mix control servo motor	• Air mix control servo motor • Air conditioning harness • A/C amplifier

WIRING DIAGRAM



AC

INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the intelligent tester main switch on.
(c) Operate the front passenger side temperature adjustment switch.
(d) Select the item below in the DATA LIST, and read the display on the intelligent tester.

DATA LIST / AIR CONDITIONER:

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
AIR MIX PULSE-P (Air mix servomotor target pulse (P side))	Passenger side air mix servo motor target pulse / Min.: 0, Max.: 255	MAX. COLD: 105 (pulse) MAX. HOT: 7 (pulse)	-

OK:

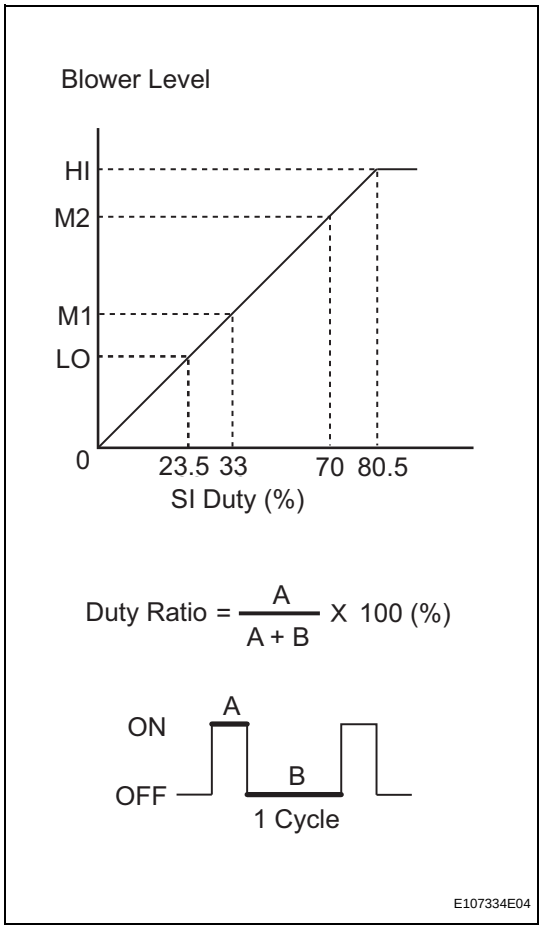
Blower Motor Circuit

DESCRIPTION



The blower motor is operated by signals from the A/C amplifier. The blower motor speed is controlled using various duty ratios.

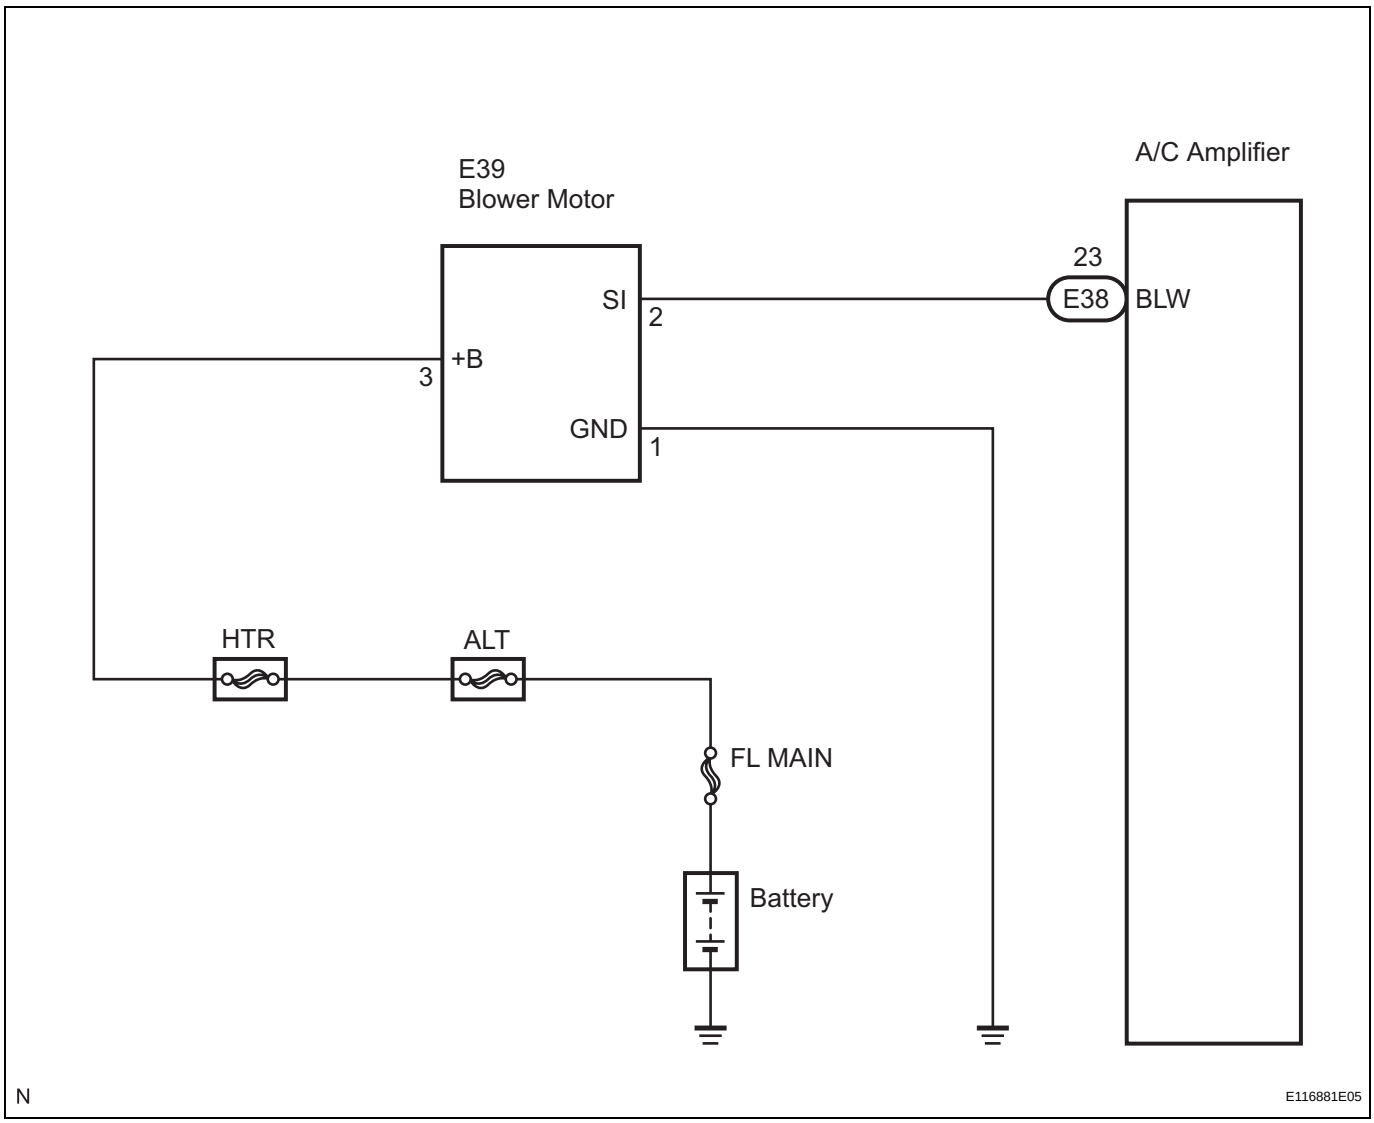
Duty Ratio:

The duty ratio is the ratio of the blower motor ON time (A) to the total of the blower motor ON and OFF time (A + B).

The blower motor controller controls the blower motor speed.

AC

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

- AUTO A/C: Start inspection from step 1.
- MANUAL A/C: Start inspection from step 2.

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the intelligent tester main switch on.
(c) Select the item below in the ACTIVE TEST and then check that the blower motor operates.

ACTIVE TEST / AIR CONDITIONER:

Item	Test Details / Display (Range)	Diagnostic Note
BLOWER MOTOR (Blower motor)	Blower motor / Min.: Level 01, Max.: Level 31	-

Result

Result	Proceed to
OK	A
NG (blower motor does not operate)	B

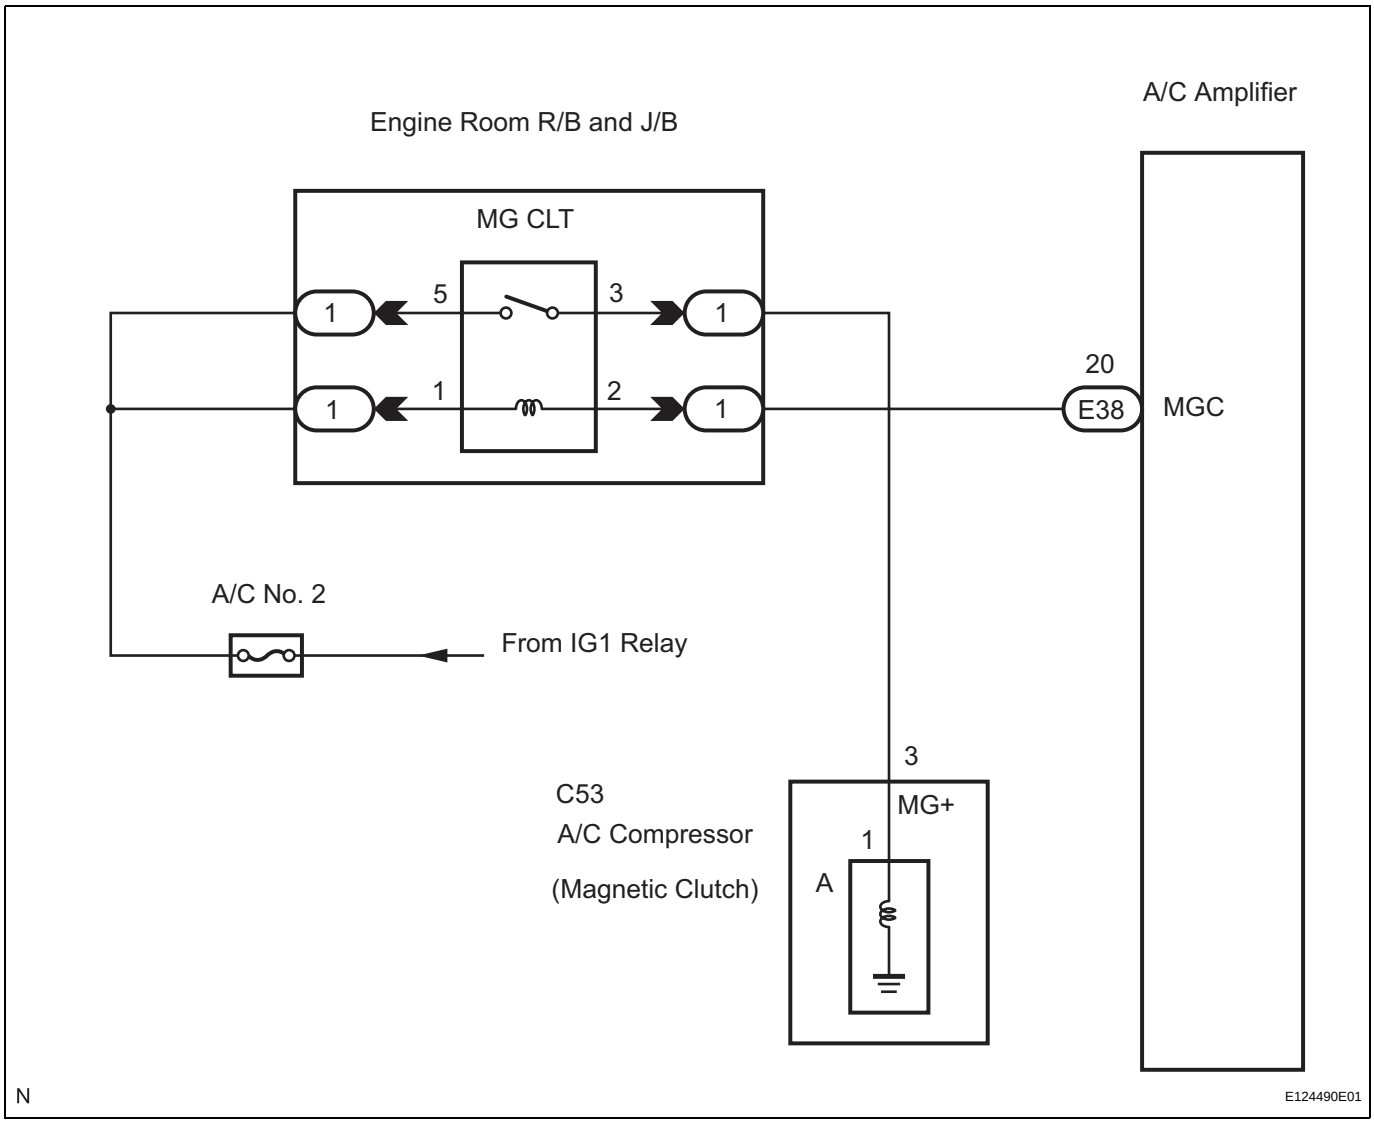
Air Conditioning Compressor Magnetic Clutch Circuit

DESCRIPTION

When the A/C amplifier is turned on, a magnetic clutch ON signal is sent from the MGC terminal of the A/C amplifier. Then, the MG CLT relay turns on to operate the magnetic clutch.

WIRING DIAGRAM



AC

INSPECTION PROCEDURE

1	CHECK CAN COMMUNICATION SYSTEM

(a) Use the intelligent tester to check if the CAN Communication System is functioning normally.
Result

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output	B

B → GO TO CAN COMMUNICATION SYSTEM

A

2 READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the intelligent tester main switch on.
(c) Turn the A/C switch on and off.
(d) Select the item below in the DATA LIST, and read the display on the intelligent tester.

DATA LIST / ENGINE:

Item	Measure Item	Normal Condition	Diagnostic Note
A/C SIGNAL (A/C Signal)	A/C signal / ON or OFF	ON: A/C ON OFF: A/C OFF	-

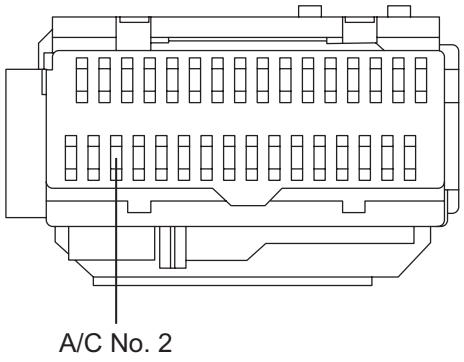
OK:
The display is as specified in the normal condition column.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK

3 INSPECT FUSE (A/C NO. 2)

Instrument Panel J/B:



(a) Remove the A/C No. 2 fuse from the instrument panel J/B.
(b) Measure the resistance of the fuse.
Standard resistance

Tester Item	Condition	Specified Condition
A/C No. 2 fuse	Always	Below 1 Ω

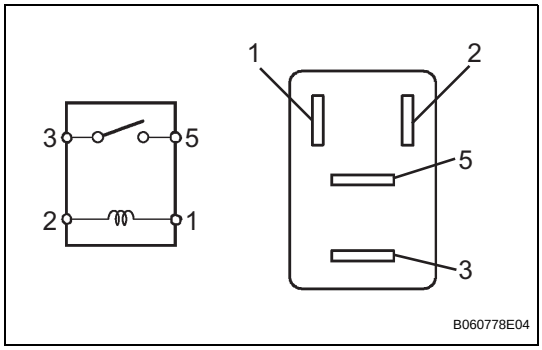
(c) Reconnect the A/C No. 2 fuse to the instrument panel J/B.

NG → **REPLACE FUSE (A/C NO. 2)**

OK

AC

4 INSPECT RELAY (MG CLT)



(a) Remove the MG CLT relay from the engine room R/B and J/B.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

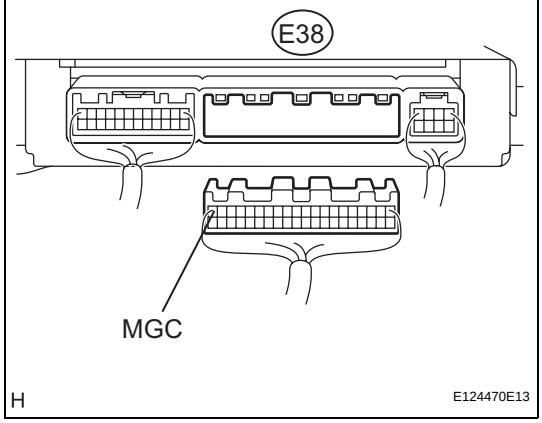
(c) Install the MG CLT relay to the engine room R/B and J/B.

NG → REPLACE RELAY (MG CLT)

OK

5 CHECK HARNESS AND CONNECTOR (A/C AMPLIFIER - BATTERY)

Air Conditioning Amplifier Connector Wire Harness View:



(a) Disconnect the connector from the A/C amplifier.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection (Symbols)	Condition	Specified Condition
E38-20 (MGC) - Body ground	Ignition switch off	Below 1 V
E38-20 (MGC) - Body ground	Ignition switch on (IG)	10 to 14 V

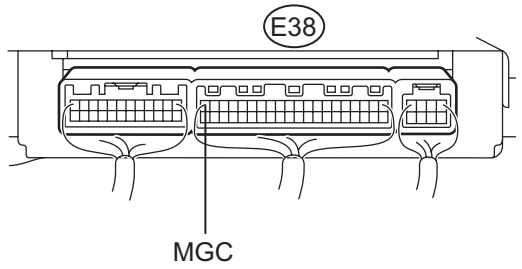
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

AC

6 INSPECT AIR CONDITIONING AMPLIFIER

Air Conditioning Amplifier Connector Wire Harness View:



H E124471E11

(a) Reconnect the connector to the A/C amplifier.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

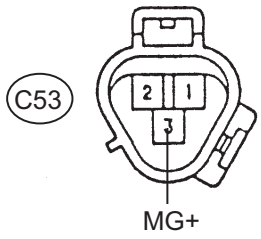
Tester Connection (Symbols)	Condition	Specified Condition
E38-20 (MGC) - Body ground	Ignition switch on (IG) A/C switch: OFF	10 to 14 V
E38-20 (MGC) - Body ground	Ignition switch on (IG) A/C switch: ON	Below 1 V

NG → REPLACE AIR CONDITIONING AMPLIFIER

OK

7 INSPECT A/C COMPRESSOR

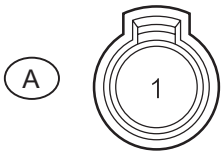
A/C Compressor Connector Front View:



E005280E15

(a) Disconnect the connector from the A/C compressor.

Magnetic Clutch Connector Front View:



H E124482E01

(b) Disconnect the connector from the magnetic clutch.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

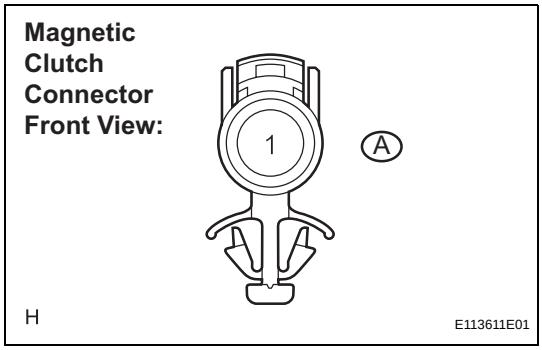
Tester Connection (Symbols)	Condition	Specified Condition
C53-3 (MG+) - A-1	Always	Below 1 Ω
C53-3 (MG+) - Body ground	Always	10 kΩ or higher

NG → REPLACE A/C COMPRESSOR

OK

AC

8 INSPECT MAGNETIC CLUTCH



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

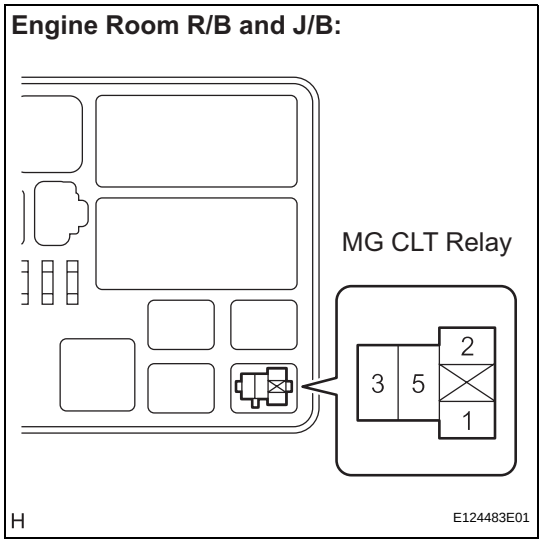
Tester Connection	Condition	Specified Condition
A-1 - Body ground	Always	3.4 to 3.8 Ω

(b) When connector terminal A1 is connected to the positive (+) battery terminal, check that the following occurs: 1) the magnetic clutch's operating sound can be heard, and 2) the magnetic clutch's hub and rotor lock.

NG → **REPLACE MAGNETIC CLUTCH**

OK

9 CHECK HARNESS AND CONNECTOR (ENGINE ROOM R/B AND J/B - BATTERY)



(a) Remove the MG CLT relay from the engine room R/B and J/B.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Specified Condition
Relay block MG CLT relay terminal 5 - Body ground	10 to 14 V
Relay block MG CLT relay terminal 1 - Body ground	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (ENGINE ROOM R/B AND J/B - A/C COMPRESSOR)**

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR

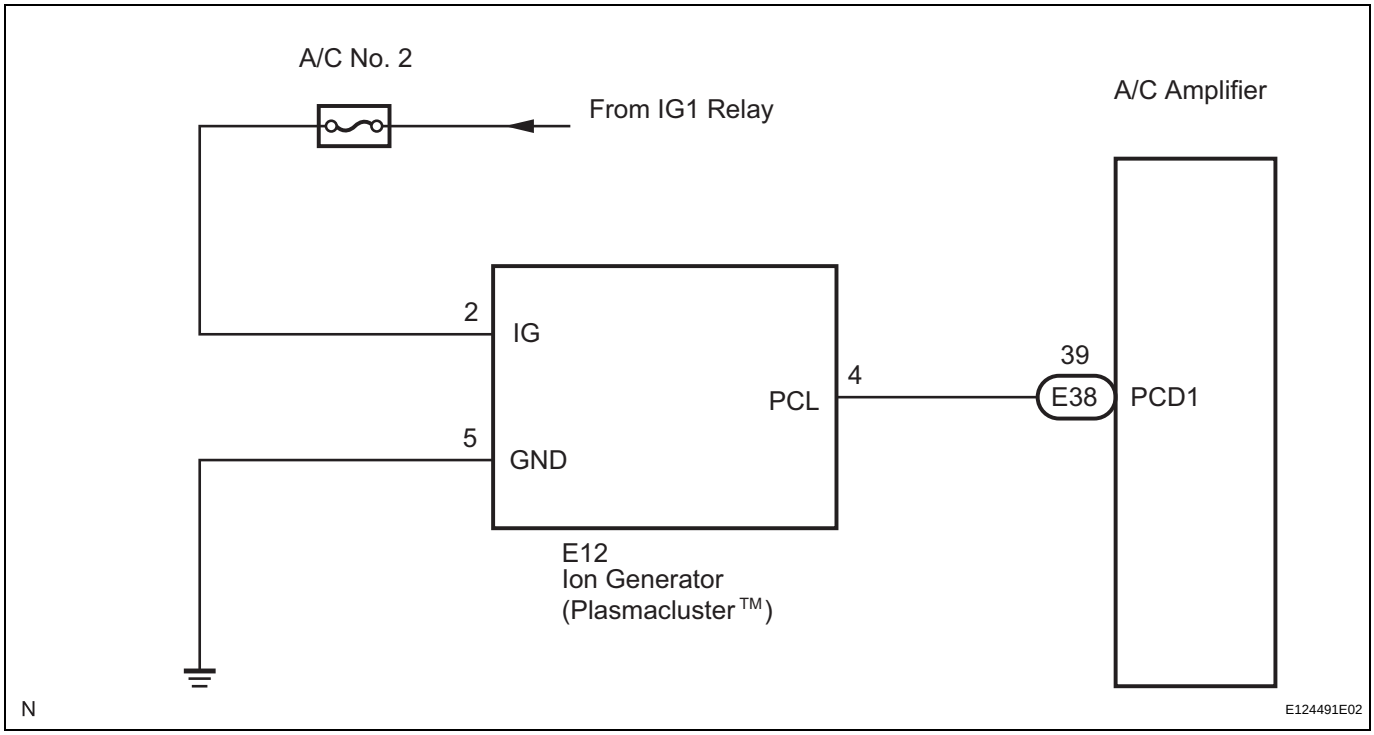
AC

Plasmacluster Circuit

DESCRIPTION

The plasmacluster™ operates in conjunction with blower switch operation. The plasmacluster™ operation indicator (CLEAN) illuminates on the A/C control assembly when the plasmacluster™ is operating.

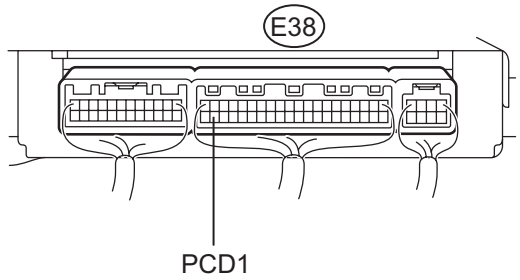
WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT AIR CONDITIONING AMPLIFIER

Air Conditioning Amplifier Connector Wire Harness View:



(a) Remove the A/C amplifier with the connectors still connected.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection (Symbols)	Condition	Specified Condition
E38-39 (PCD1) - Body ground	Ignition switch on (IG) Blower switch: OFF	10 to 14 V
E38-39 (PCD1) - Body ground	Ignition switch on (IG) Blower switch: ON	Below 1 V

NG	Go to step 2

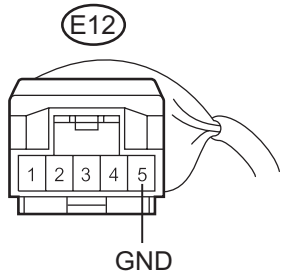
AC

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

2 CHECK HARNESS AND CONNECTOR (ION GENERATOR - BODY GROUND)

Ion Generator Connector Front View:



(a) Disconnect the connector from the ion generator.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E12-5 (GND) - Body ground	Always	Below 1 Ω

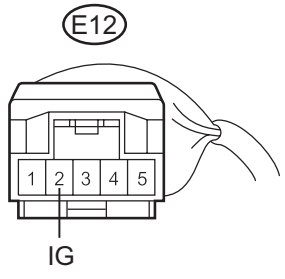
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

AC

3 CHECK HARNESS AND CONNECTOR (ION GENERATOR - BATTERY)

Ion Generator Connector Front View:



(a) Measure the voltage according to the value(s) in the table below.

Standard voltage

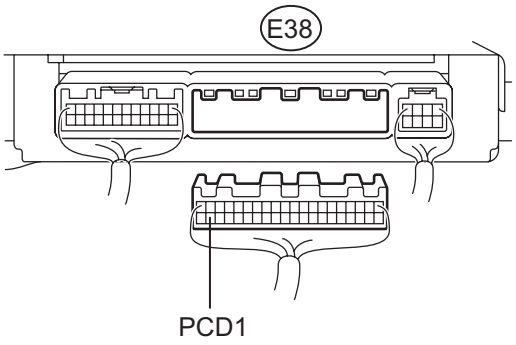
Tester Connection (Symbols)	Condition	Specified Condition
E12-2 (IG) - Body ground	Ignition switch off	Below 1 V
E12-2 (IG) - Body ground	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	CHECK HARNESS AND CONNECTOR (ION GENERATOR - A/C AMPLIFIER)

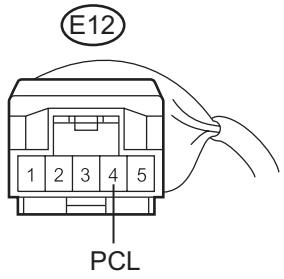
Air Conditioning Amplifier Connector Wire Harness View:



H E124470E14

(a) Disconnect the connector from the A/C amplifier.

Ion Generator Connector Front View:



H E116928E05

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E12-4 (PCL) - E38-39 (PCD1)	Always	Below 1 Ω
E12-4 (PCL) - Body ground	Always	10 kΩ or higher

AC

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ION GENERATOR

Steering Pad Switch Circuit

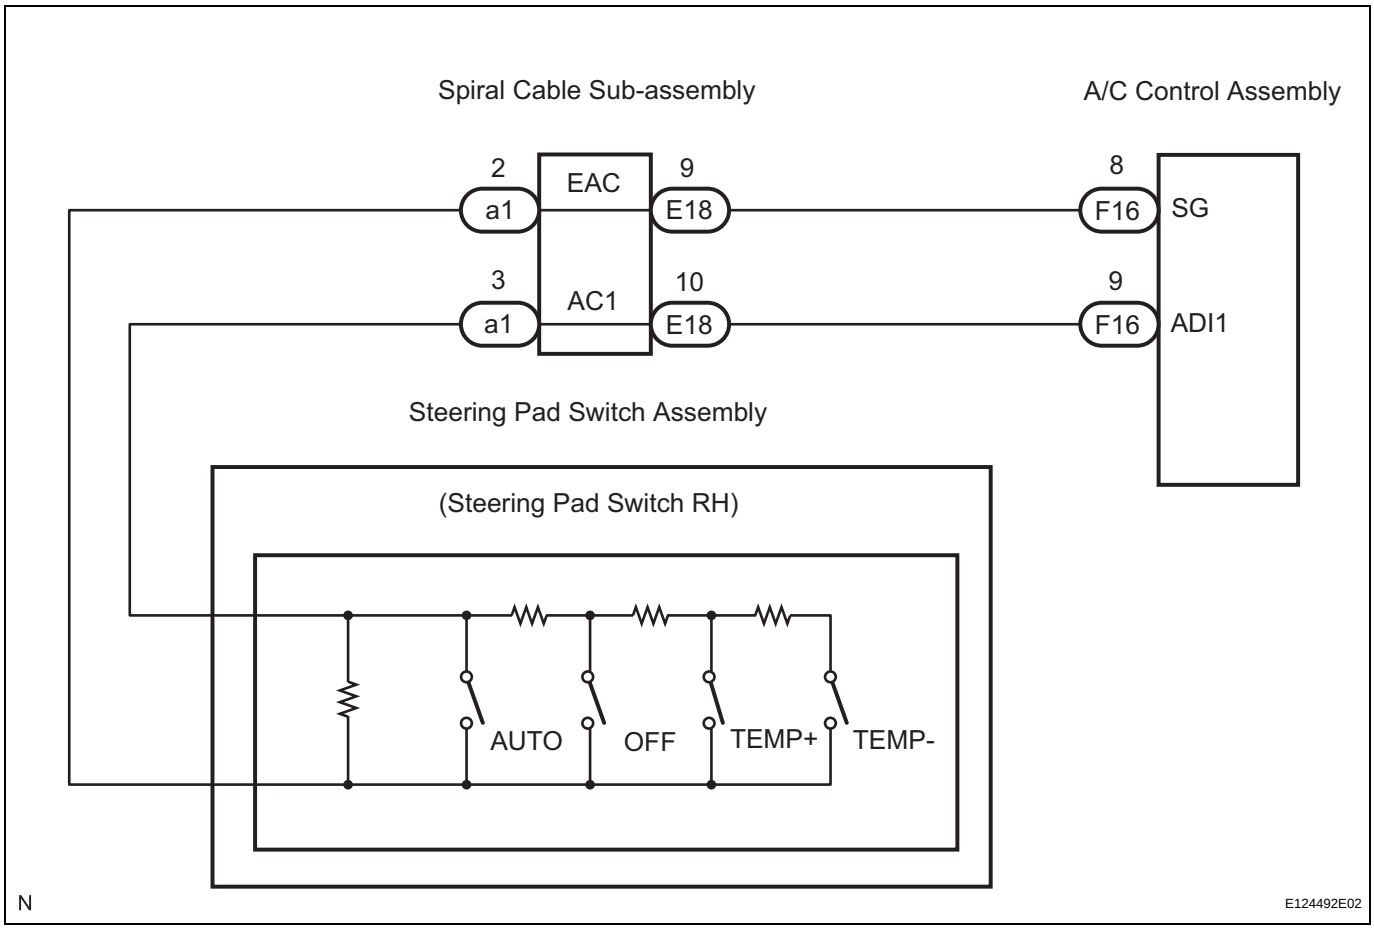
DESCRIPTION

AUTO, OFF, TEMP UP (+), and TEMP DOWN (-) switches are located on the steering pad switch. The resistance of the steering pad switch changes in accordance with switch operation. The A/C control assembly outputs voltage to the steering pad switch and reads voltage changes due to the resistance changes that result from switch operation.

HINT:

If there is an open in the circuit, the A/C system cannot be operated by the steering pad switch assembly. If there is a short in the circuit, the resulting condition is the same as if the switch were continuously depressed. Therefore, the A/C control assembly cannot be operated by the steering pad switch assembly, and the A/C control assembly will not be able to function correctly.

WIRING DIAGRAM

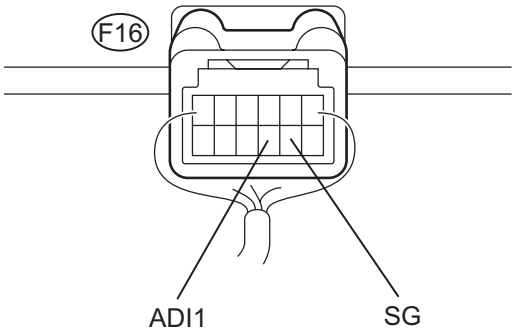


AC

INSPECTION PROCEDURE

1 **INSPECT A/C CONTROL ASSEMBLY**

A/C Control Assembly Connector Wire Harness View:



H E124479E02

(a) Remove the A/C control assembly with the connectors still connected.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
F16-9 (ADI1) - F16-8 (SG)	AUTO switch: ON	Below 2.5 Ω
F16-9 (ADI1) - F16-8 (SG)	OFF switch: ON	Approx. 329 Ω
F16-9 (ADI1) - F16-8 (SG)	TEMP+ switch: ON	Approx. 1,000 Ω
F16-9 (ADI1) - F16-8 (SG)	TEMP- switch: ON	Approx. 3,110 Ω

NG → **Go to step 2**

OK

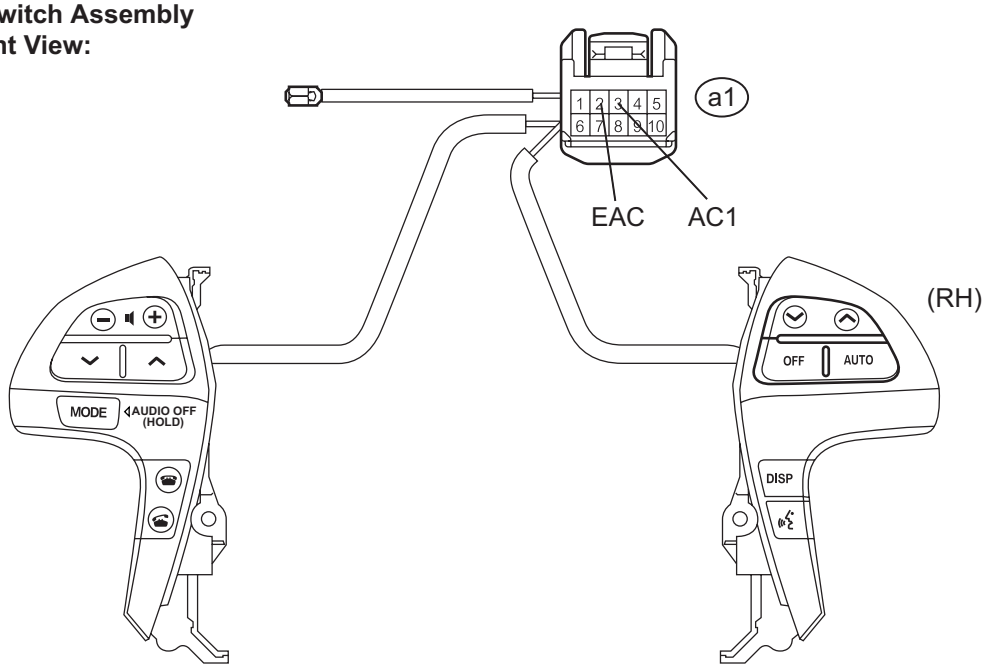
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

AC

2 **INSPECT STEERING PAD SWITCH ASSEMBLY**

(a) Remove the steering pad switch assembly.
(b) Disconnect the connector from the steering pad switch assembly.

Steering Pad Switch Assembly Connector Front View:



H

E124484E01

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

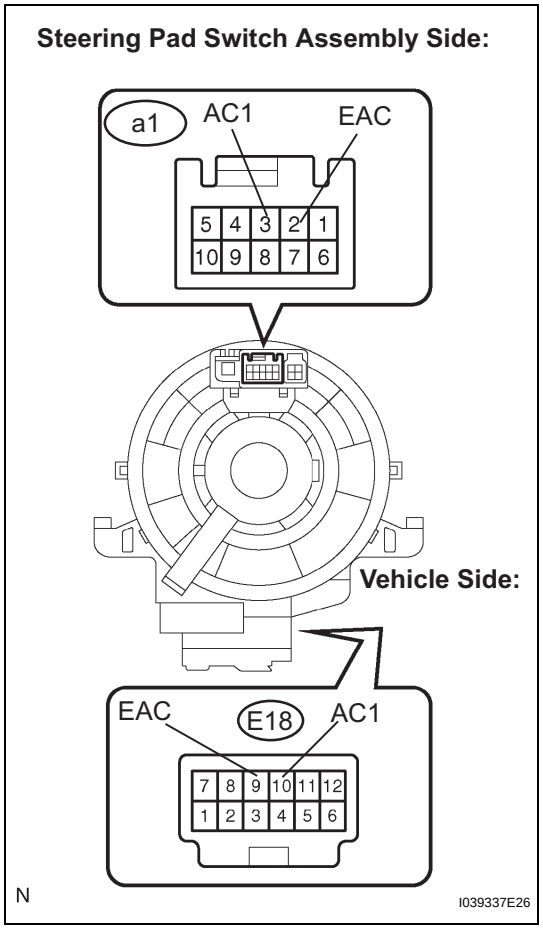
Tester Connection (Symbols)	Condition	Specified Condition
a1-3 (AC1) - a1-2 (EAC)	AUTO switch: ON	Below 2.5 Ω
a1-3 (AC1) - a1-2 (EAC)	OFF switch: ON	Approx. 329 Ω
a1-3 (AC1) - a1-2 (EAC)	TEMP+ switch: ON	Approx. 1,000 Ω
a1-3 (AC1) - a1-2 (EAC)	TEMP- switch: ON	Approx. 3,110 Ω

AC

NG → **REPLACE STEERING PAD SWITCH ASSEMBLY**

OK

3 INSPECT SPIRAL CABLE SUB-ASSEMBLY



(a) Disconnect the connector from the spiral cable sub-assembly.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

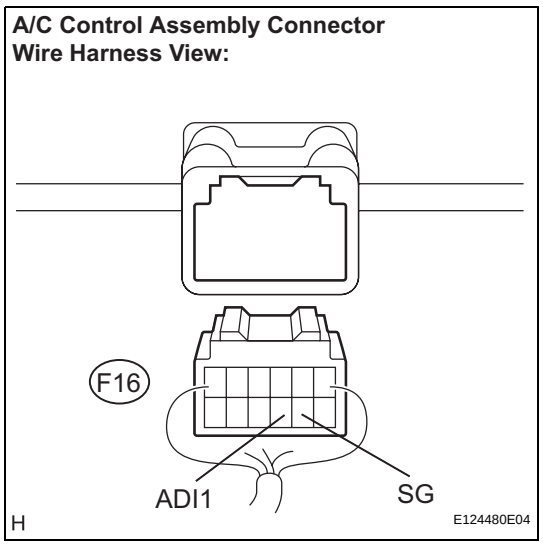
Tester Connection (Symbols)	Condition	Specified Condition
E18-10 (AC1) - a1-3 (AC1)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
E18-9 (EAC) - a1-2 (EAC)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	

HINT:
The spiral cable makes a maximum of approximately 5 rotations.

NG → REPLACE SPIRAL CABLE SUB-ASSEMBLY

OK

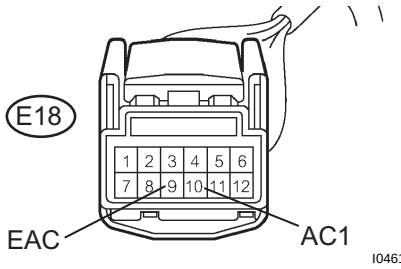
4 CHECK HARNESS AND CONNECTOR (A/C CONTROL ASSEMBLY - SPIRAL CABLE SUB-ASSEMBLY)



(a) Disconnect the connector from the A/C control assembly.

AC

Spiral Cable Sub-assembly Connector Front View:



(b) Disconnect the connector from the spiral cable sub-assembly.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
F16-9 (ADI1) - E18-10 (AC1)	Always	Below 1 Ω
F16-8 (SG) - E18-9 (EAC)	Always	Below 1 Ω
F16-9 (ADI1) - E18-10 (AC1)	Always	10 kΩ or higher
F16-8 (SG) - E18-9 (EAC)	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE A/C CONTROL ASSEMBLY

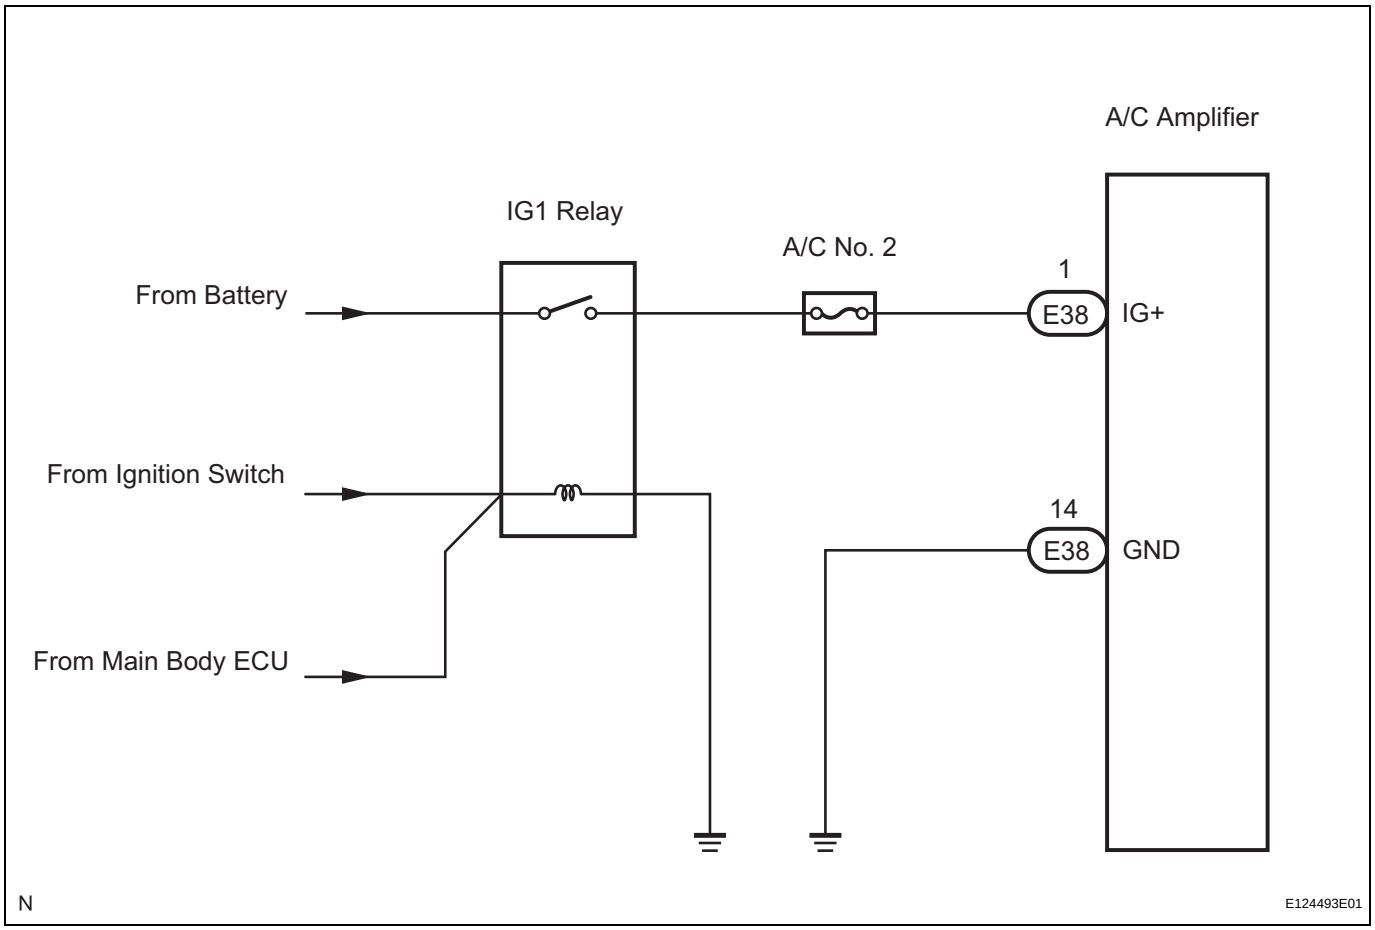
AC

IG Power Source Circuit

DESCRIPTION

The main power source is supplied to the A/C amplifier when the ignition switch is turned on (IG).
The power source is used for operating the A/C amplifier and servo motor, etc.

WIRING DIAGRAM



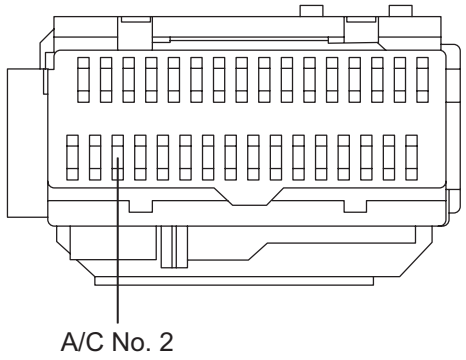
INSPECTION PROCEDURE

HINT:
Start the engine before inspection. Check the IG1 relay or battery if the engine does not start.

AC

1	INSPECT FUSE (A/C NO. 2)

Instrument Panel J/B:



H E124481E02

(a) Remove the A/C No. 2 fuse from the instrument panel J/B.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Item	Condition	Specified Condition
A/C No. 2 fuse	Always	Below 1 Ω

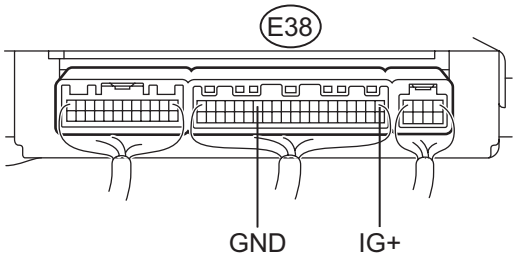
NG → **REPLACE FUSE (A/C NO. 2)**

OK

2	INSPECT AIR CONDITIONING AMPLIFIER (IG+ - GND)

AC

Air Conditioning Amplifier Connector Wire Harness View:



H E124471E09

(a) Remove the A/C amplifier with its connectors still connected.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E38-1 (IG+) - E38-14 (GND)	Ignition switch on (IG)	10 to 14 V

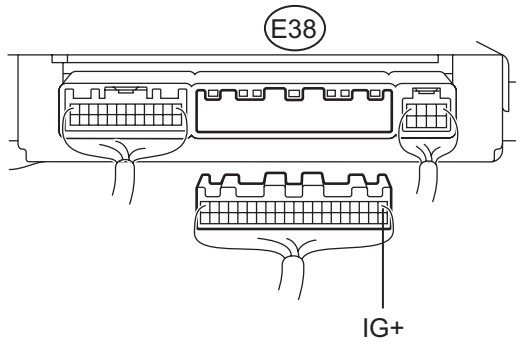
NG → **Go to step 3**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

3	CHECK WIRE HARNESS (AIR CONDITIONING AMPLIFIER - BATTERY)

Air Conditioning Amplifier Connector Wire Harness View:



(a) Disconnect the A/C amplifier connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

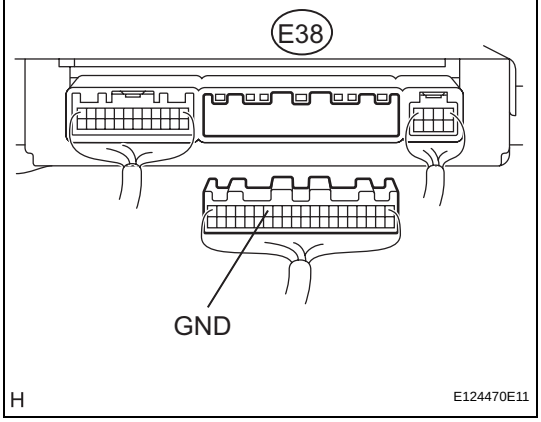
Tester Connection	Condition	Specified Condition
E38-1 (IG+) - Body ground	Ignition switch off	Below 1 V
	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	CHECK WIRE HARNESS (AIR CONDITIONING AMPLIFIER - BODY GROUND)

Air Conditioning Amplifier Connector Wire Harness View:



(a) Disconnect the A/C amplifier connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E38-14 (GND) - Body ground	Always	Below 1 Ω

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

AC

REFRIGERANT

ON-VEHICLE INSPECTION

1. INSPECT REFRIGERANT VOLUME

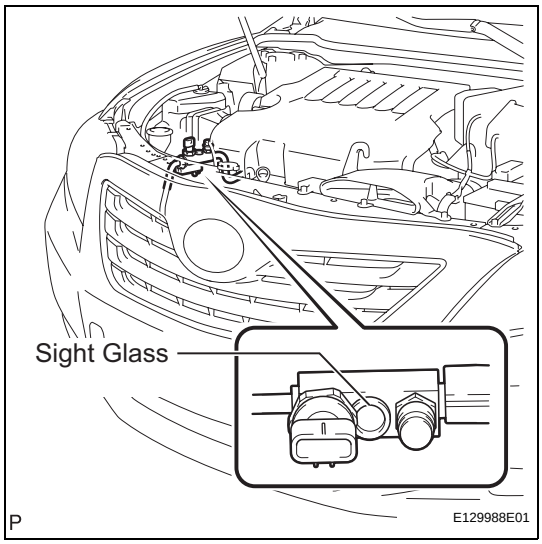
HINT:

Vehicles manufactured by TMC are equipped with a sight glass. A simple inspection of refrigerant volume can be performed using this sight glass. The inspection procedure is as follows.

(a) Check the sight glass on the air conditioning tube & accessory assembly.

(1) Prepare the vehicle according to the chart below.

Item	Condition
Vehicle door	Fully open
Temperature setting	MAX COLD
Blower speed	HI
A/C	ON



(2) Compare the sight glass to the following chart.

AC

Item	Symptom	Amount of refrigerant	Corrective Actions
1	Bubbles exist	Insufficient*	1. Check for gas leakage and repair if necessary 2. Recharge with proper amount of refrigerant
2	No bubbles exist (DTC 76 is output)	Empty, insufficient, or excessive	Refer to 3 and 4
3	No temperature difference between compressor inlet and outlet	Empty or nearly empty	1. Check for gas leakage and repair if necessary 2. Evacuate the AC system and recharge with the proper amount of refrigerant
4	Considerable temperature difference between compressor inlet and outlet	Proper or excessive	Refer to 5 and 6
5	Immediately after air conditioning is turned off, refrigerant remains clear	Excessive	1. Recover refrigerant 2. Evacuate the AC system and recharge with the proper amount of refrigerant
6	Immediately after air conditioning is turned off, refrigerant foams and then becomes clear	Proper	-

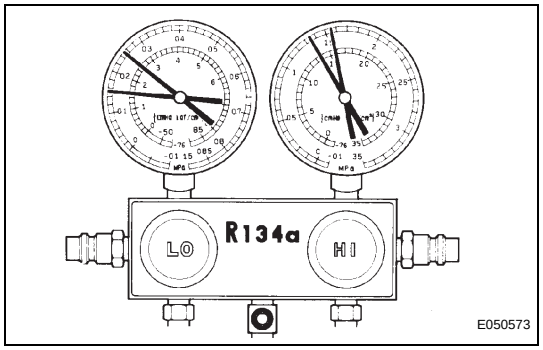
*: Bubbles in the sight glass with the vehicle's interior temperature above 35°C (95°F) can be considered normal if cooling is sufficient.

2. INSPECT REFRIGERANT PRESSURE WITH MANIFOLD GAUGE SET

HINT:

This is a method where a manifold gauge set is used to help locate the problem.

(a) Read the manifold gauge pressure when the following conditions are established.
Test conditions:
- Temperature at the air inlet with the switch set at RECIRC is 30 to 35°C (86 to 95°F)
- Engine is running at 1,500 rpm
- Blower speed control switch is at "HI"
- Temperature control dial is at "COOL"
- A/C switch is ON
- Doors are fully open
- Ignition switch is in a position that enables the AC compressor to run.



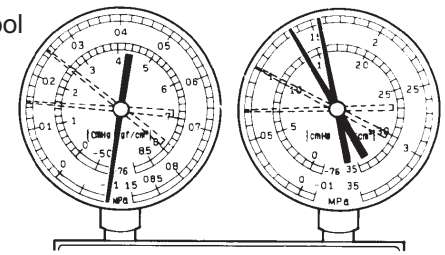
E050573

(1) Normally functioning refrigeration system
Gauge reading

Pressure side	Refrigerant volume
Low	0.15 to 0.25 MPa (1.5 to 2.5 kgf/cm^2, 21.3 to 35.5 psi)
High	1.37 to 1.57 MPa (14 to 16 kgf/cm^2, 199.1 to 227.5 psi)

(2) Moisture is present in refrigeration system.

Condition:
Periodically cools and then fails to cool

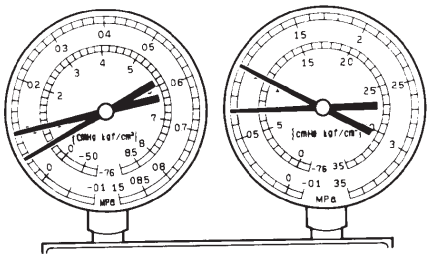


I022117E21

Symptom	Probable Cause	Diagnosis	Corrective Actions
During operation, pressure on low pressure side cycles between normal and vacuum	Moisture in AC system will freeze at the expansion valve orifice, causing the refrigeration cycle to temporarily stop After the system stops, and warms up again, the ice will melt and normal operation will be temporarily restored	• Cooler dryer (integrated into condenser tank) in oversaturated state • Moisture in refrigeration system freezes at expansion valve orifice and blocks circulation of refrigerant	1. Replace cooler dryer 2. Remove moisture in system by repeatedly evacuating air 3. Supply a proper amount of new refrigerant

(3) Insufficient cooling

Condition: Cooling system does not function effectively.



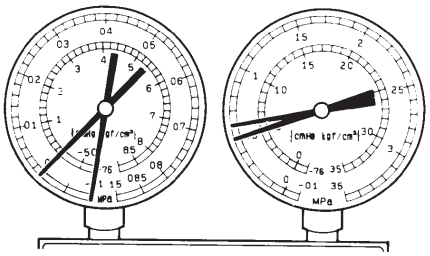
I022118E13

AC

Symptom	Probable Cause	Diagnosis	Corrective Actions
• Pressure is low on both low and high pressure sides • Bubbles are seen through sight glass continuously • Insufficient cooling performance	Gas leakage from the refrigeration system	• Insufficient refrigerant • Refrigerant leaking	1. Check for gas leakage and repair if necessary 2. Supply a proper amount of new refrigerant 3. If the gauge indicates a pressure of close to 0, then it will be necessary to evacuate the system after repairing the leak

(4) Poor circulation of refrigerant

Condition: Cooling system does not function effectively.



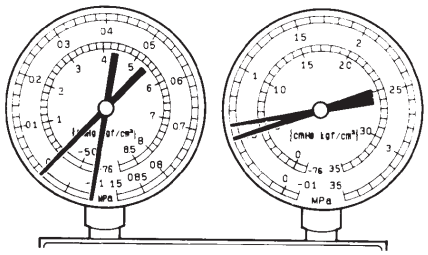
I022119E14

Symptom	Probable Cause	Diagnosis	Corrective Actions
• Pressure is low on both low and high pressure sides • Frost exists on pipe from condenser to unit	Refrigerant flow is obstructed by dirt inside the pipes of the condenser core	Receiver is clogged	Replace condenser

(5) Refrigerant does not circulate.

AC

Condition : Cooling system does not function. (Sometimes it may function.)

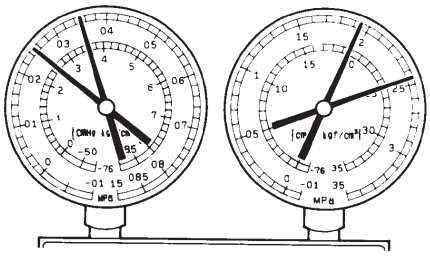


I022120E14

Symptom	Probable Cause	Diagnosis	Corrective Actions
• Vacuum is indicated on low pressure side and very low pressure is indicated on high pressure side • Frost or condensation is seen on piping on both sides of receiver/drier or expansion valve	• Refrigerant flow is obstructed by moisture or dirt in refrigeration system • Refrigerant flow is disrupted by gas leaking internally through the expansion valve	Refrigerant does not circulate	1. Check the expansion valve 2. Replace expansion valve 3. Replace condenser 4. Evacuate air and supply a proper amount of new refrigerant 5. For internal gas leak at expansion valve, replace expansion valve

(6) Refrigerant is overcharged or cooling effectiveness of condenser is insufficient.

Condition: Cooling system does not function.



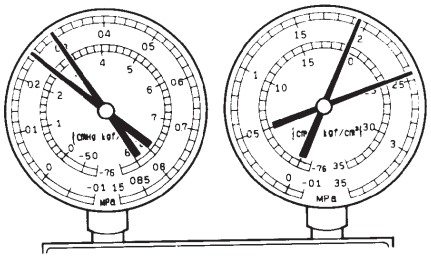
I022121E14

Symptom	Probable Cause	Diagnosis	Corrective Actions
• Pressure is too high on both low and high pressure sides • No air bubbles are seen through sight glass even when engine rpm lowers	• Unable to develop sufficient performance due to excessive use of refrigeration system • Cooling effectiveness of condenser is insufficient	• Excessive refrigerant in cycle → excessive refrigerant was added during recharging • Condenser cooling effectiveness is insufficient → condenser fins are clogged at cooling fan	1. Clean condenser 2. Check the operation of the condenser cooling fan 3. If 1 and 2 are normal state, check the amount of refrigerant and supply proper amount of refrigerant

(7) Air is present in refrigeration system.

Condition: Cooling system does not function.

NOTE: These gauge indications occur when the refrigeration system opens and the refrigerant is charged without vacuum purging.

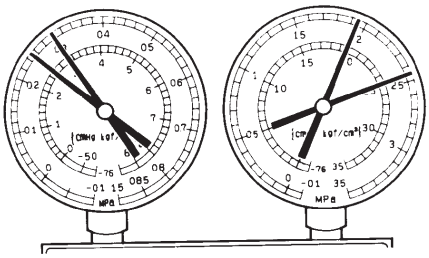


I022122E06

Symptom	Probable Cause	Diagnosis	Corrective Actions
• Pressure is too high on both low and high pressure sides • The low pressure piping is too hot to touch • Bubbles can be seen through sight glass	Air in system	• Air present in refrigeration system • Insufficient vacuum purging	1. Check compressor oil to see if it is dirty or insufficient 2. Evacuate the system and recharge it with new or purified refrigerant

(8) Expansion valve malfunction

Condition: Insufficient cooling

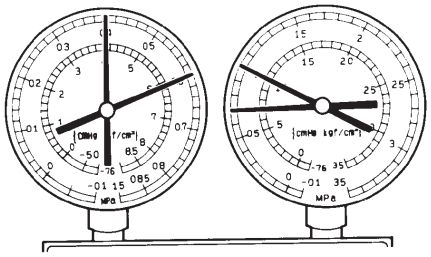


I022123E05

Symptom	Probable Cause	Diagnosis	Corrective Actions
• Pressure is too high on both low and high pressure sides • Frost or a large amount of condensation on piping on low pressure side	Expansion valve may be sticking	• Excessive refrigerant in low pressure piping • Expansion valve opened too wide	Check expansion valve

(9) Insufficient compressor compression

Condition: Insufficient cooling



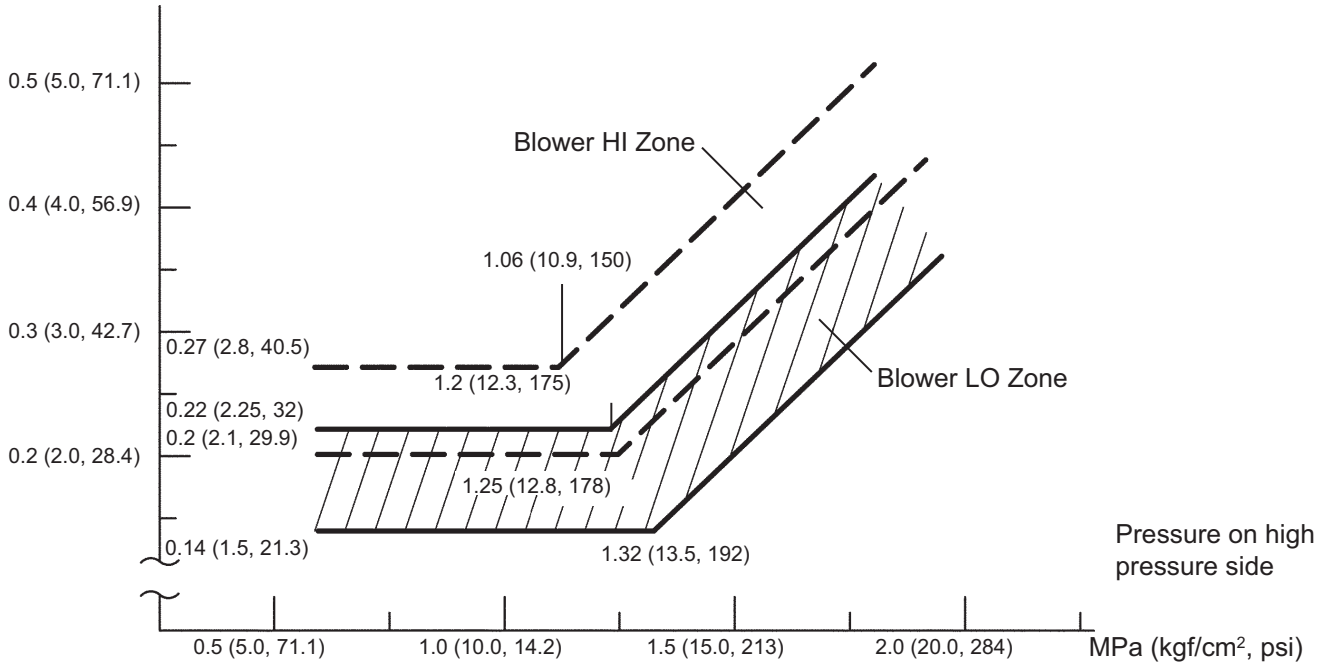
I022124E05

Symptom	Probable Cause	Diagnosis	Corrective Actions
• Pressure is too high both on low and high pressure sides • Pressure is too low on high pressure side	Internal leak in compressor	• Low compression • Leak from a damaged valve, or parts may be broken	Replace compressor

Gauge readings (Reference)

Pressure on low pressure side

AC



I030081E07

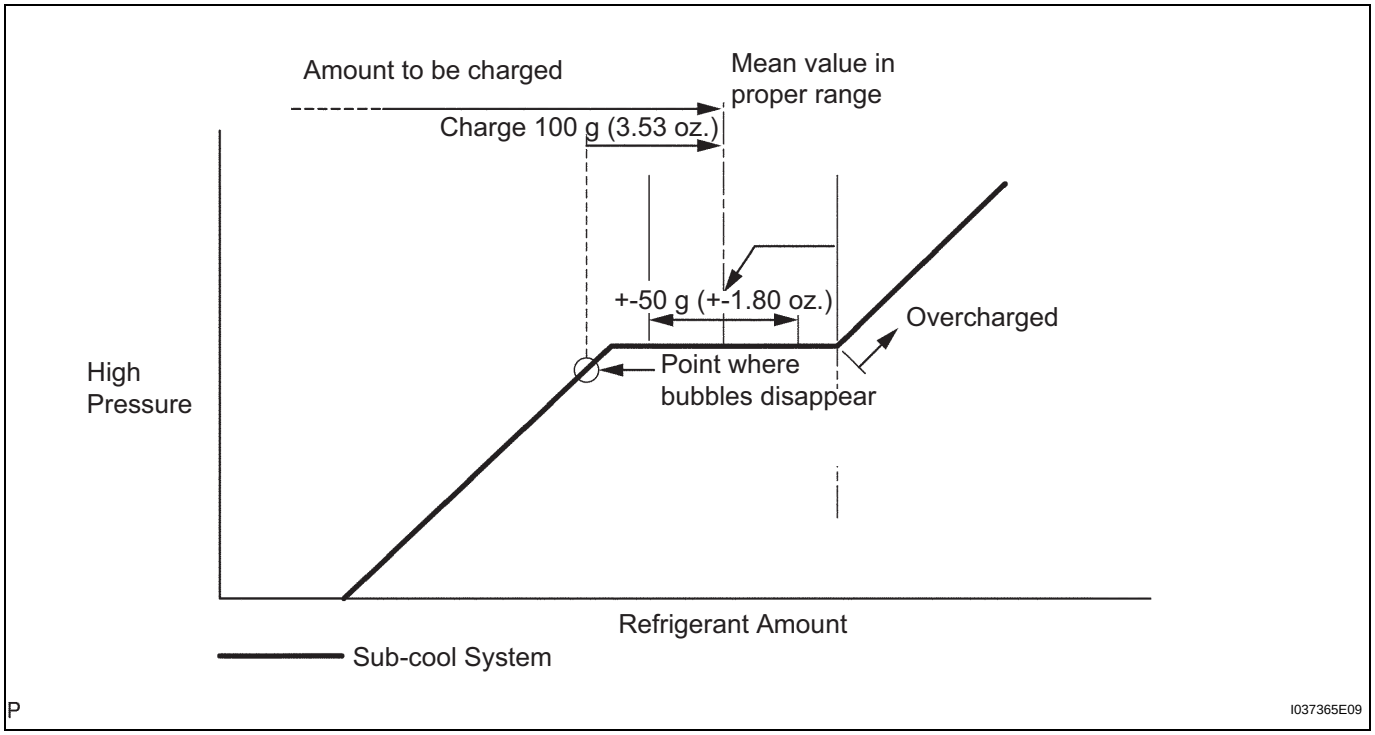
REPLACEMENT

1. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM

(a) Start up the engine.
(b) Turn the A/C switch on.
(c) Operate the cooler compressor at an engine speed of approximately 1,000 rpm for 5 to 6 minutes to circulate the refrigerant. This causes most of the compressor oil from the various components of the A/C system to collect in the A/C compressor.
(d) Stop the engine.
(e) Recover the refrigerant from the A/C system using a refrigerant recovery unit.

2. CHARGE WITH REFRIGERANT

(a) Perform vacuum purging using a vacuum pump.
(b) Charge with refrigerant HFC-134a (R134a).



Standard:
450 to 550 g (15.9 to 19.4 oz.)

SST 07110-58060 (07117-58060, 07117-58070, 07117-58080, 07117-58090, 07117-78050, 07117-88060, 07117-88070, 07117-88080)

NOTICE:

- **Do not turn the A/C on before charging with refrigerant. Doing so will cause the cooler compressor to work without refrigerant, resulting in overheating of the cooler compressor.**

AC

- **Approximately 100 g (3.53 oz.) of refrigerant may need to be charged after bubbles disappear.**
  The refrigerant amount should be checked by quantity, not with the sight glass.

HINT:
Ensure that sufficient refrigerant is available to recharge the system when using a refrigerant recovery unit. Refrigerant recovery units are not always able to recover 100 % of the refrigerant from an A/C system.

3. WARM UP ENGINE

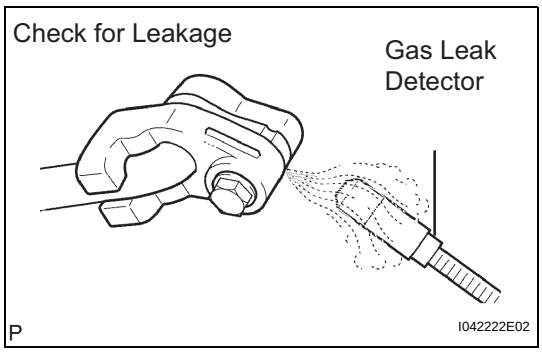
(a) Keep the A/C switch on for at least 2 minutes to warm up the compressor.
NOTICE:
Be sure to warm up the compressor when turning the A/C on after removing and installing the cooler refrigerant lines (including the compressor), to prevent damage to the compressor.

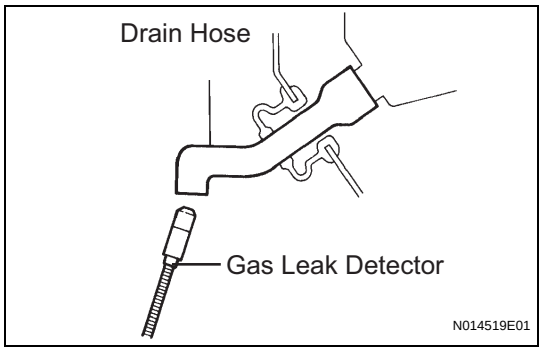
4. CHECK FOR LEAKAGE OF REFRIGERANT

(a) After recharging with refrigerant gas, check for leakage of refrigerant gas using a halogen leak detector.

(b) Carry out the test under the following conditions:
- IG OFF
- Secure good ventilation (the gas leak detector may react to volatile gases which are not refrigerant, such as evaporated gasoline and exhaust gas).
- Repeat the test 2 or 3 times.
- Make sure that there is some refrigerant remaining in the refrigeration system.
  When the compressor is off: approx. 392 to 588 kPa (4 to 6 kgf/cm^2, 57 to 85 psi)

(c) Using a gas leak detector, check for leakage from the refrigerant lines.





(d) Bring the gas leak detector close to the drain hose with the detector's power off, and then turn the detector on.
HINT:
- After the blower motor has stopped, let the cooling unit stand for more than 15 minutes.
- Bring the gas leak detector sensor under the drain hose.
- When bringing the gas leak detector close to the drain hose, make sure that the gas leak detector does not react to volatile gases.
  If it is not possible to avoid interference from volatile gases, the vehicle should be lifted up to allow testing.

(e) If a gas leak is not detected from the drain hose, remove the blower motor control from the cooling unit. Insert the gas leak detector sensor into the unit and perform the test.

(f) Disconnect the pressure switch connector and leave it for approximately 20 minutes. Bring the gas leak detector close to the pressure switch and perform the test.

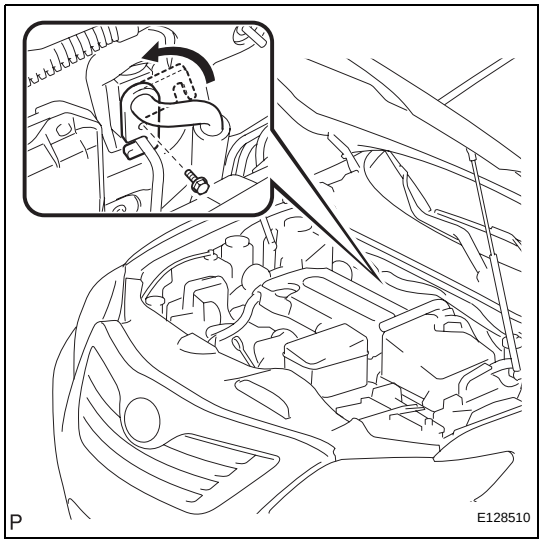
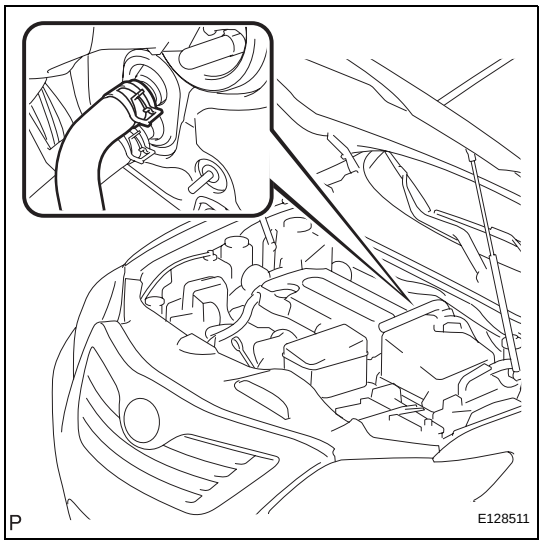
REMOVAL

1. **RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM (See page AC-125)**
2. **ALIGN FRONT WHEELS FACING STRAIGHT AHEAD**
3. **DISCONNECT BATTERY NEGATIVE TERMINAL**
   NOTICE:
   Wait for 90 seconds after disconnecting the terminal to prevent the airbag from deploying. (See page RS-1)
4. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-9)**
5. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-9)**
6. **REMOVE FRONT FENDER TO COWL SIDE SEAL LH (See page WW-9)**
7. **REMOVE FRONT FENDER TO COWL SIDE SEAL RH (See page WW-9)**
8. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-10)**
9. **REMOVE WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY (See page WW-10)**
10. **REMOVE COWL TOP OUTER FRONT PANEL SUB-ASSEMBLY (See page BR-29)**
11. **DISCONNECT SUCTION PIPE SUB-ASSEMBLY**
    (a) Remove the bolt, and slide the hook connector.
    (b) Disconnect the suction pipe sub-assembly.
    (c) Remove the O-ring from the suction hose sub-assembly.
    NOTICE:
    Seal the openings of the disconnected parts using vinyl tape to prevent entry of moisture and foreign matter.
12. **DISCONNECT AIR CONDITIONER TUBE AND ACCESSORY**
    (a) Disconnect the air conditioner tube and accessory.
    (b) Remove the O-ring from the air conditioner tube and accessory.
    NOTICE:
    Seal the openings of the disconnected parts using vinyl tape to prevent entry of moisture and foreign matter.



AC



13. **DISCONNECT HEATER OUTLET WATER HOSE**
    (a) Using pliers, grip the claws of the clip and slide the clip to disconnect the heater outlet water hose.
    NOTICE:
    - **Do not apply excessive force to the heater outlet water hose.**
    - **Prepare a drain pan or cloth in case the coolant leaks.**
14. **DISCONNECT HEATER INLET WATER HOSE**
    HINT:
    Disconnection procedure for the heater inlet water hose is the same as that for the heater outlet water hose.
15. **REMOVE LOWER NO. 3 STEERING WHEEL COVER (See page RS-349)**
16. **REMOVE LOWER NO. 2 STEERING WHEEL COVER (See page RS-349)**
17. **REMOVE STEERING PAD (See page RS-350)**
18. **REMOVE STEERING WHEEL ASSEMBLY (See page SR-38)**
19. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-24)**
20. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-25)**
21. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-20)**
22. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-21)**
23. **REMOVE STEERING COLUMN COVER (for TMC Made) (See page IP-21)**
24. **REMOVE STEERING COLUMN COVER (for TMMK Made) (See page IP-21)**
25. **REMOVE TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (See page SR-39)**
26. **REMOVE NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-22)**
27. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/o Smart Key System) (See page IP-22)**
28. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/ Smart Key System) (See page IP-22)**
29. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page IP-22)**
30. **REMOVE COMBINATION METER ASSEMBLY (for TMC Made) (See page IP-23)**
31. **REMOVE COMBINATION METER ASSEMBLY (for TMMK Made) (See page IP-23)**

32. REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-26)
33. REMOVE COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-26)
34. REMOVE INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-23)
35. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-23)
36. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-24)
37. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-24)
38. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-24)
39. REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-24)
40. REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-25)
41. REMOVE FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-25)
42. REMOVE UPPER CONSOLE PANEL (for Manual Transaxle) (See page IP-25)
43. REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-26)
44. REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Manual Transaxle) (See page IP-26)
45. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-27)
46. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-27)
47. REMOVE INSTRUMENT PANEL NO. 2 REGISTER ASSEMBLY (See page IP-27)
48. REMOVE RADIO RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/o Navigation System) (See page AV-146)
49. REMOVE NAVIGATION RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (See page NS-195)
50. REMOVE CONSOLE BOX POCKET (See page IP-28)
51. REMOVE CONSOLE BOX CARPET (See page IP-28)
52. REMOVE CONSOLE BOX ASSEMBLY (for TMC Made) (See page IP-28)
53. REMOVE CONSOLE BOX ASSEMBLY (for TMMK Made) (See page IP-29)

54. **REMOVE NO. 2 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-29)**

55. **REMOVE NO. 2 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-30)**

56. **REMOVE NO. 1 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-30)**

57. **REMOVE NO. 1 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-30)**

58. **REMOVE FRONT PILLAR GARNISH LH (See page IR-27)**

59. **REMOVE INSTRUMENT PANEL NO. 1 REGISTER ASSEMBLY (See page IP-31)**

60. **REMOVE INSTRUMENT PANEL NO. 1 SPEAKER PANEL SUB-ASSEMBLY (See page IP-31)**

61. **REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) (See page AV-156)**

62. **REMOVE FRONT PILLAR GARNISH RH (See page IR-27)**

63. **REMOVE INSTRUMENT PANEL NO. 3 REGISTER ASSEMBLY (See page IP-31)**

64. **REMOVE INSTRUMENT PANEL NO. 2 SPEAKER PANEL SUB-ASSEMBLY (See page IP-32)**

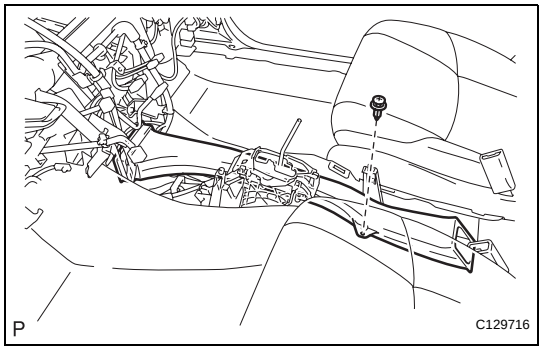
65. **REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side) (See page IP-32)**

66. **REMOVE NO. 1 DEFROSTER NOZZLE GARNISH (See page IP-32)**

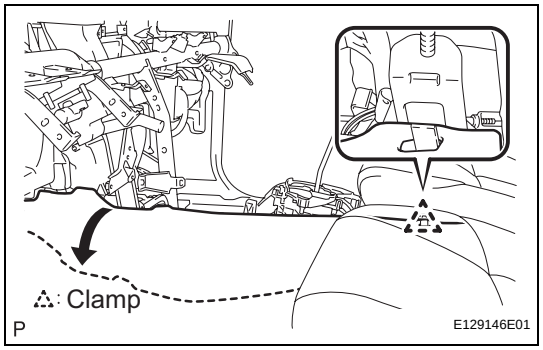
67. **REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for TMC Made) (See page IP-32)**

68. **REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for TMMK Made) (See page IP-34)**

69. **REMOVE NO. 1 CONSOLE BOX DUCT (for Automatic Air Conditioning System)**
    (a) Remove the clip and No. 1 console box duct .

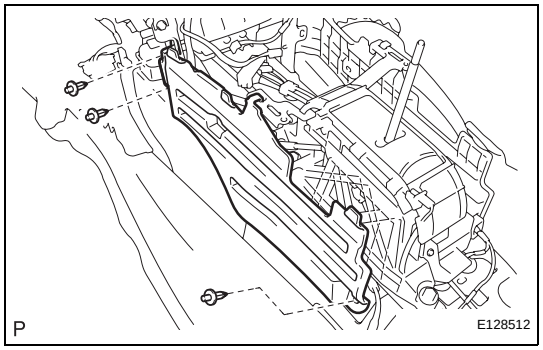


AC

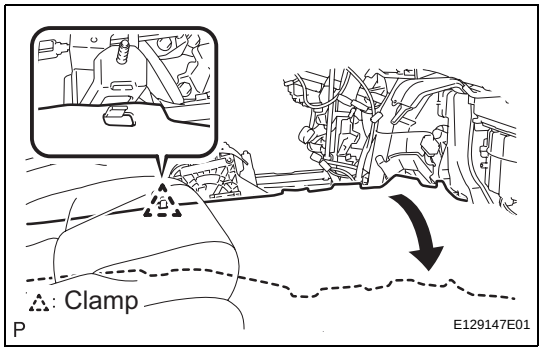


70. REMOVE FLOOR CARPET BRACKET LH

(a) Release the clamp.
(b) Turn back the floor carpet.



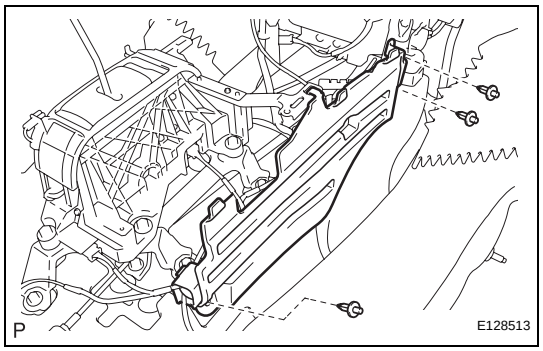
(c) Remove the 3 clips.
(d) Remove the floor carpet bracket LH.



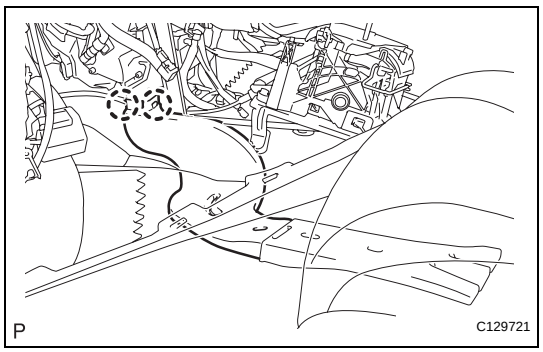
71. REMOVE FLOOR CARPET BRACKET RH

(a) Release the clamp.
(b) Turn back the floor carpet.

AC

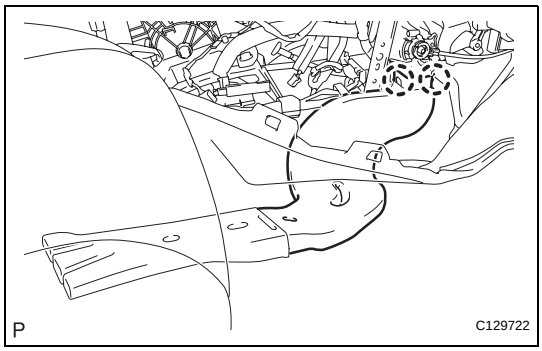


(c) Remove the 3 clips.
(d) Remove the floor carpet bracket RH.



72. REMOVE REAR NO. 2 AIR DUCT

(a) Release the 2 claws and remove the rear No. 2 air duct.



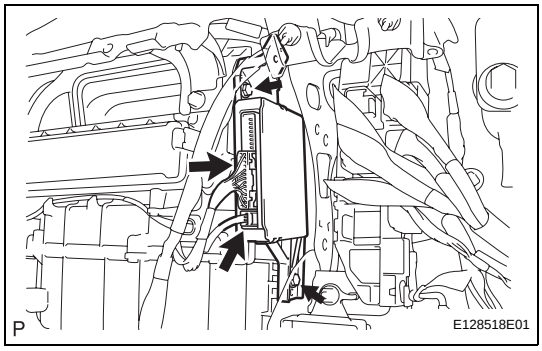
73. REMOVE REAR NO. 1 AIR DUCT

(a) Release the 2 claws and remove the rear No. 1 air duct.

74. REMOVE NO. 1 AIR DUCT (See page SR-39)

75. SEPARATE STEERING COLUMN ASSEMBLY (for TMC Made) (See page SR-39)

76. REMOVE STEERING POST ASSEMBLY (for TMMK Made) (See page SR-41)



77. REMOVE AIR CONDITIONING AMPLIFIER ASSEMBLY

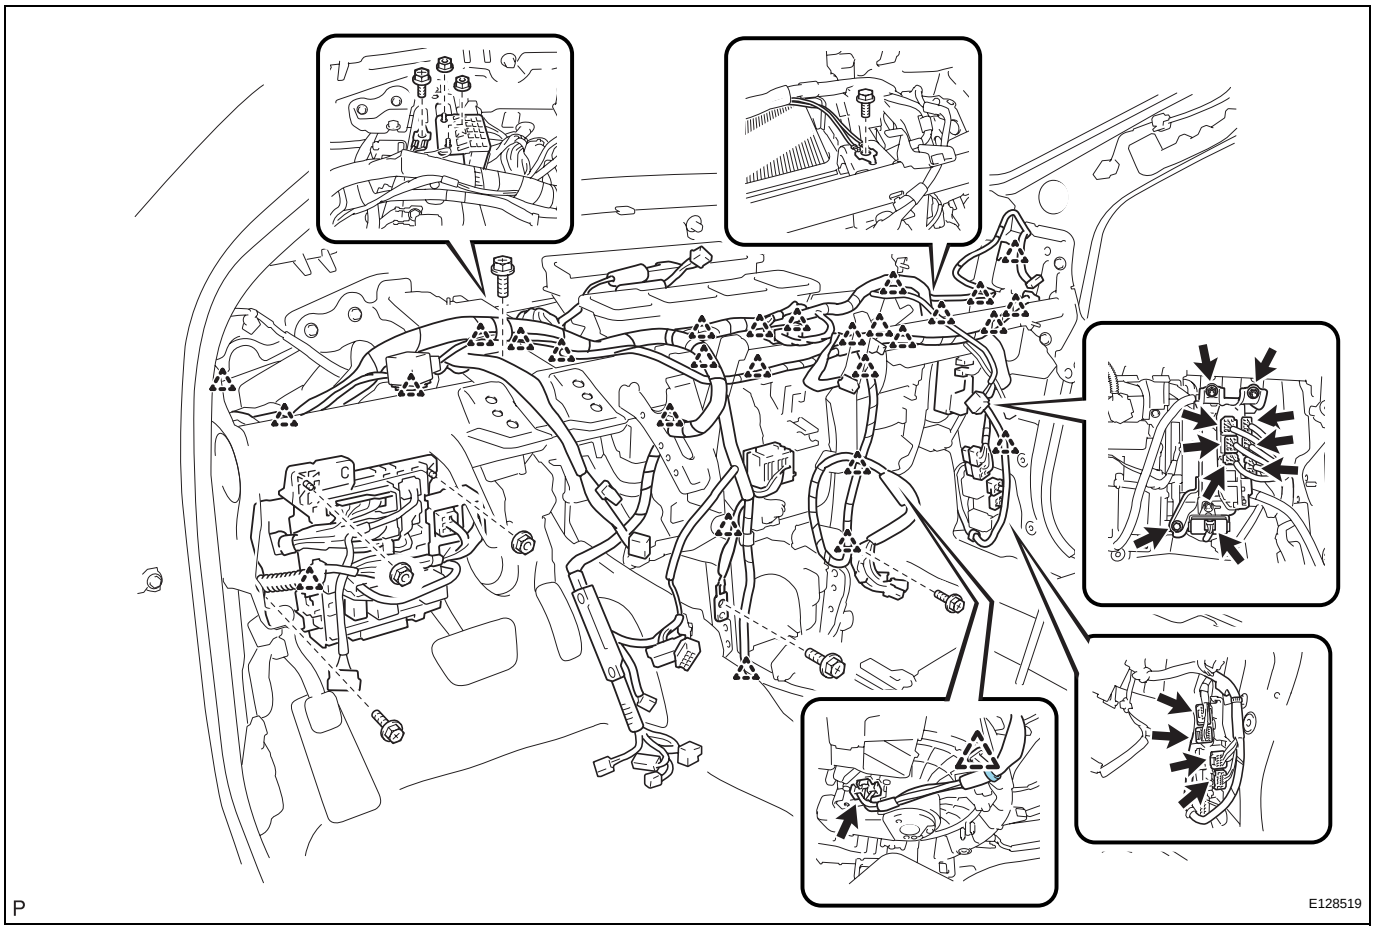
(a) Disconnect the 2 connectors.

(b) Remove the 2 bolts and air conditioning amplifier assembly.

78. REMOVE INSTRUMENT PANEL REINFORCEMENT ASSEMBLY

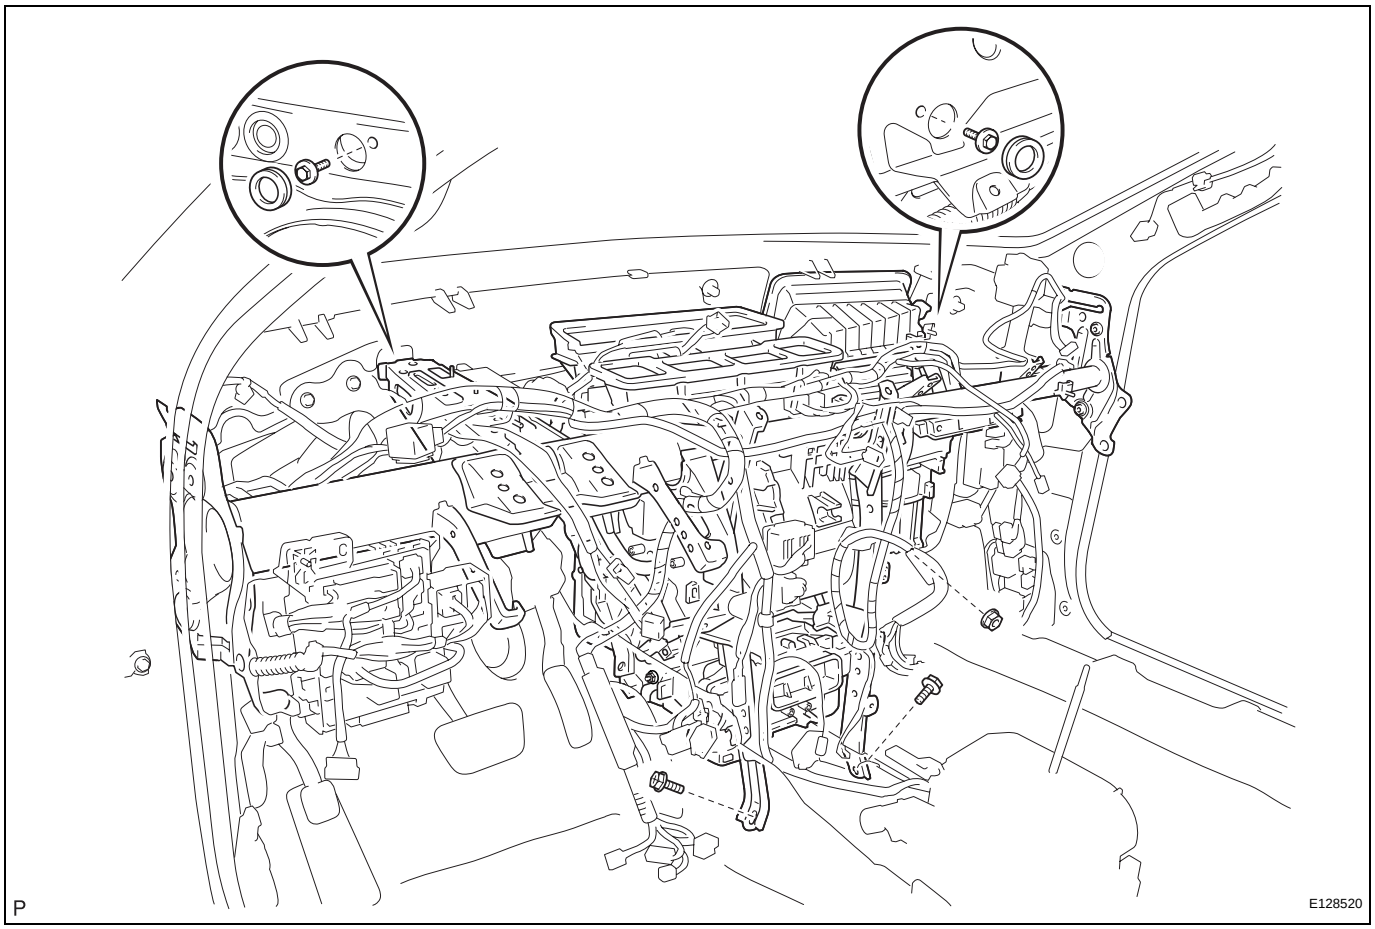
(a) Remove the 28 clamps, disconnect the 11 connectors, and then disconnect the wire harness.

(b) Remove the 6 nuts, 7 bolts, and junction block.



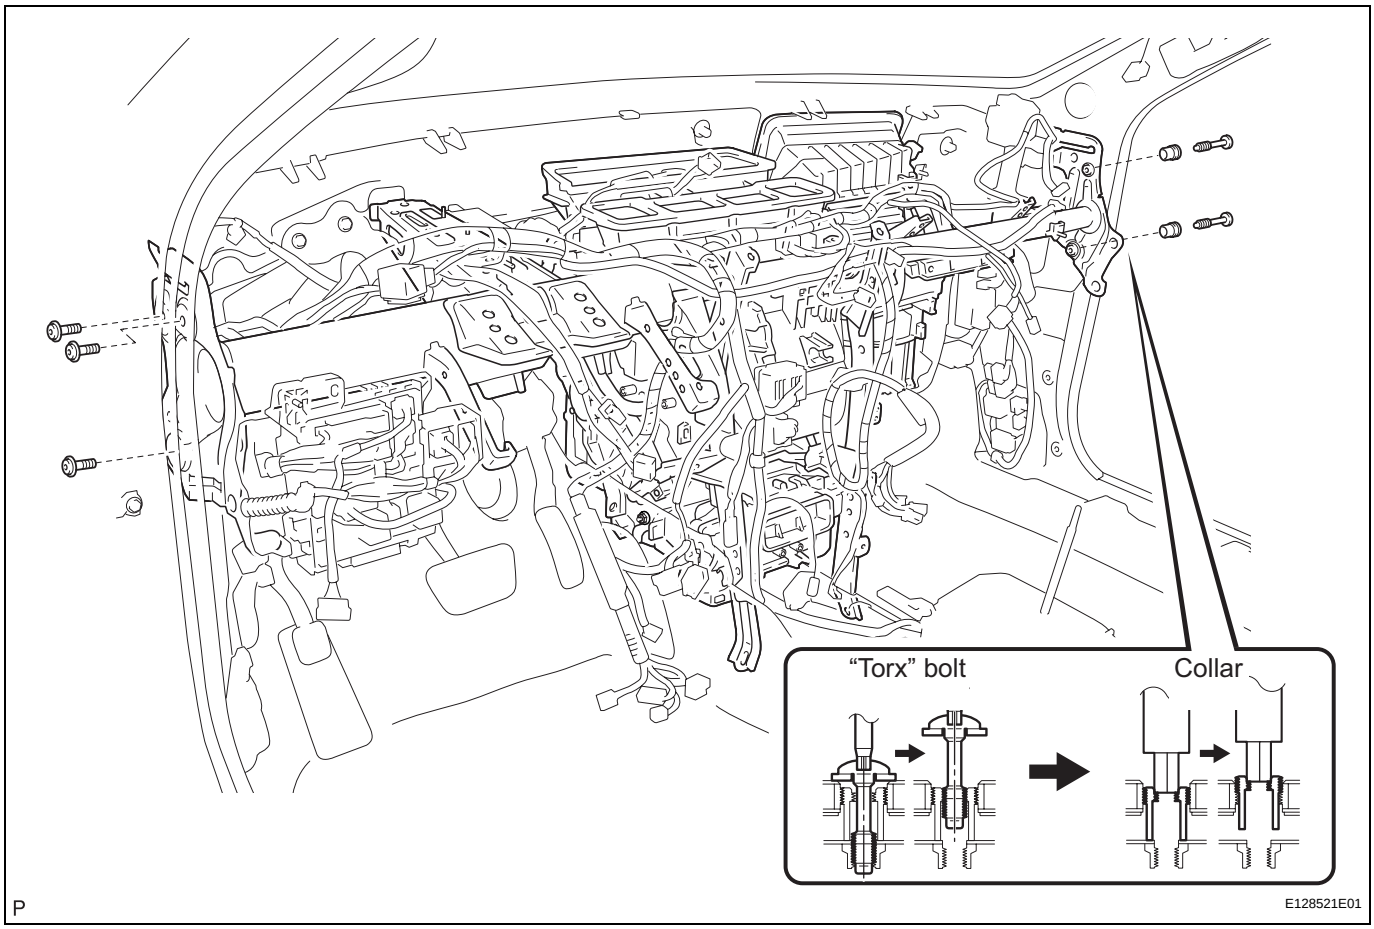
AC

(c) Remove the 2 caps and 2 bolts from the engine compartment side.



(d) Remove the 2 bolts and nut.

(e) Using a "Torx" socket wrench (T40), remove the 5 "Torx" bolts.

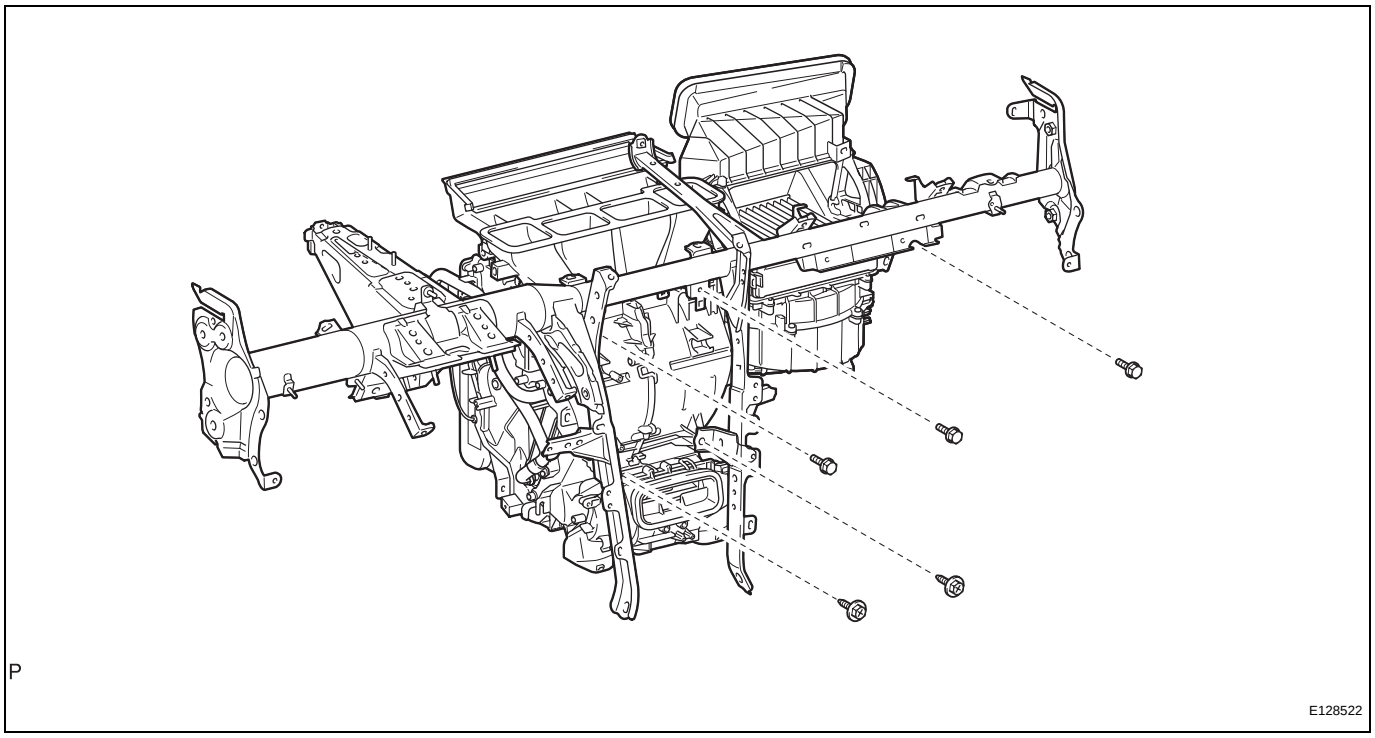


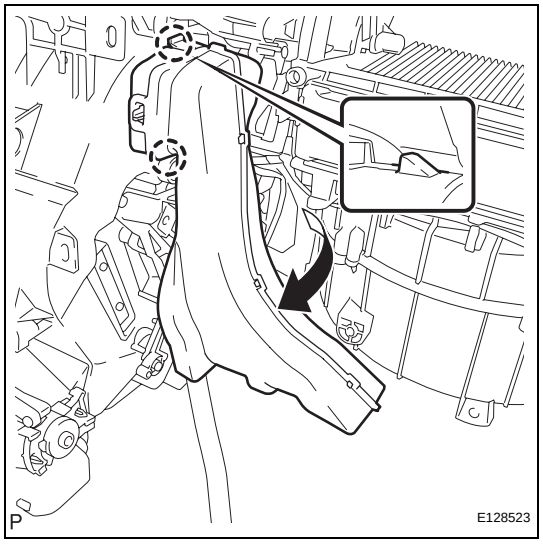
HINT:
The "Torx" bolts on the passenger side can be removed with the collars for adjustment.

(f) Using a hexagon wrench 12 mm, remove the 2 collars and instrument panel reinforcement assembly with the air conditioner unit assembly.

AC

(g) Remove the 3 bolts, 2 screws, and instrument panel reinforcement assembly.





DISASSEMBLY

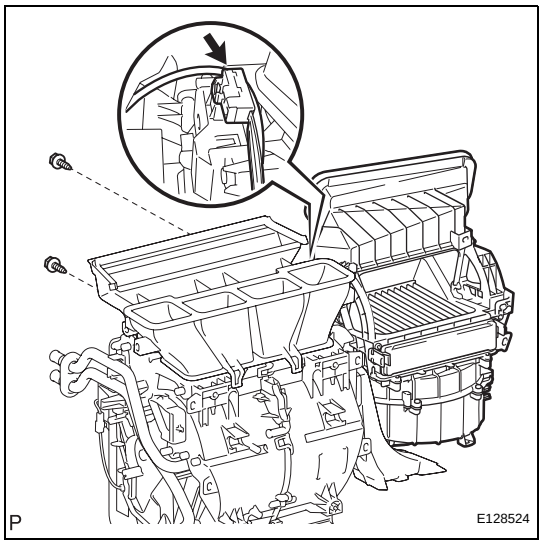
1. REMOVE NO. 2 AIR DUCT SUB-ASSEMBLY (for TMC Made)

(a) Release the 2 claws and remove the No. 2 air duct sub-assembly as shown in the illustration.

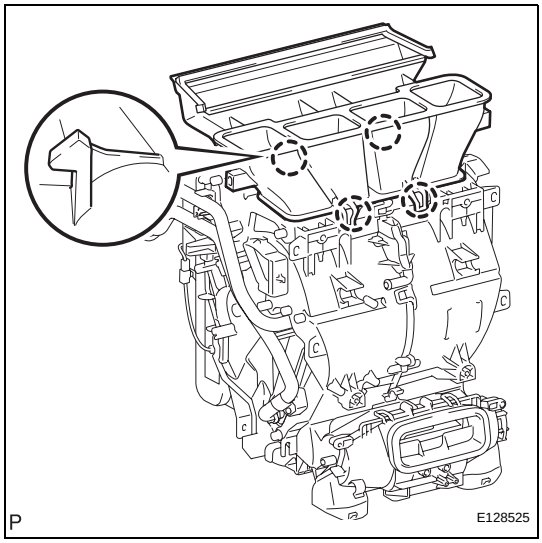
2. REMOVE BLOWER ASSEMBLY (for TMC Made)

(a) Disconnect the connector.

AC

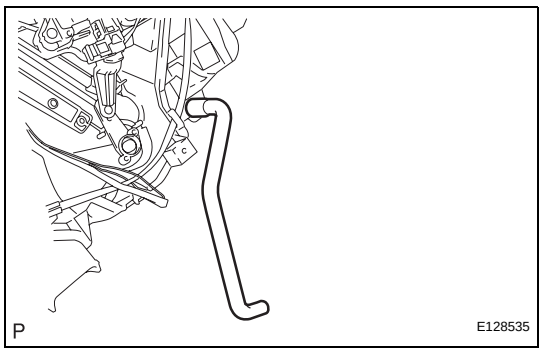


(b) Remove the 2 screws and blower assembly.



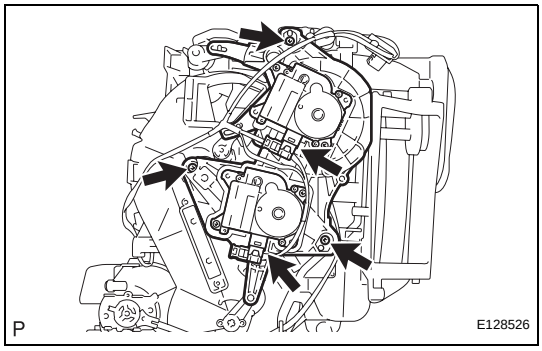
3. REMOVE NO. 6 HEATER TO REGISTER DUCT ASSEMBLY (for TMC Made)

(a) Release the 4 claws and remove the No. 6 heater to register duct assembly.



4. REMOVE DRAIN COOLER HOSE (for TMC Made)

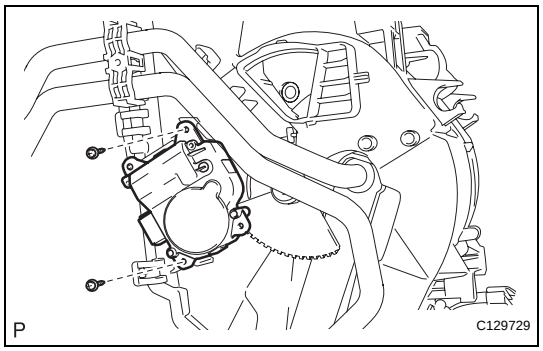
(a) Remove the drain cooler hose from the air conditioning radiator assembly.



5. REMOVE AIR OUTLET CONTROL SERVO MOTOR (for TMC Made)

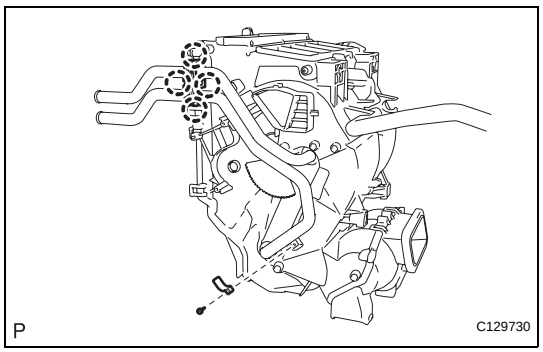
(a) Disconnect the 2 connectors and remove the air conditioner harness.

(b) Remove the 3 screws and then remove the air outlet control servo motor.



6. REMOVE AIR MIX CONTROL SERVO MOTOR (for Automatic Air Conditioning System)

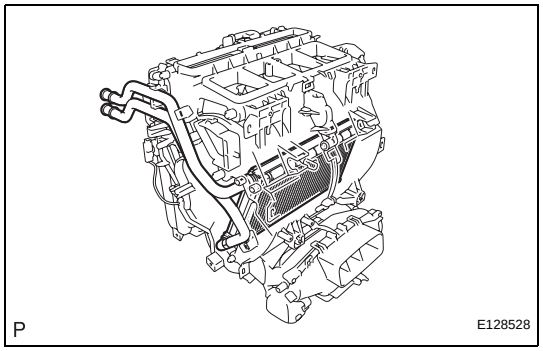
(a) Remove the 2 screws and air mix control servo motor.



7. REMOVE HEATER RADIATOR UNIT SUB-ASSEMBLY (for TMC Made)

(a) Remove the screw and clamp.

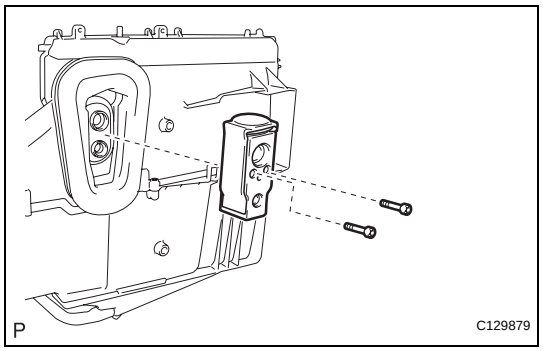
(b) Release the 4 claws and remove the clamp.



(c) Remove the heater radiator unit sub-assembly from the air conditioning radiator assembly.

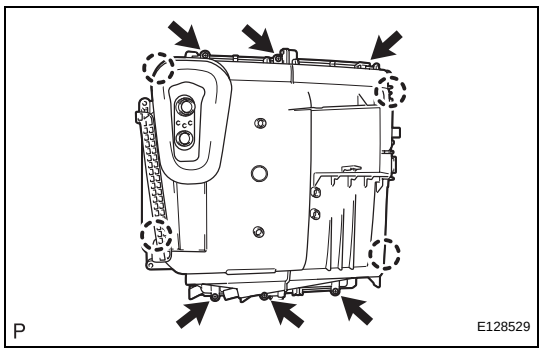
NOTICE:

Prepare a drain pan or cloth in case the cooling water leaks.



8. REMOVE COOLER EXPANSION VALVE (for TMC Made)

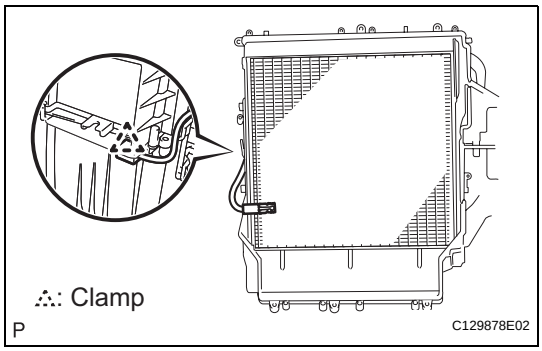
(a) Using a 4 mm hexagon wrench, remove the 2 hexagon bolts and cooler expansion valve.



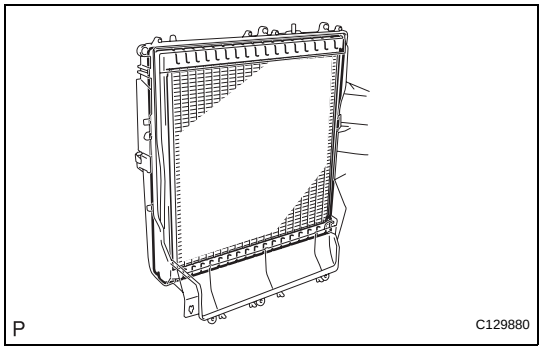
9. REMOVE NO. 1 COOLER EVAPORATOR SUB-ASSEMBLY (for TMC Made)

(a) Remove the 6 screws, release the 4 claws, and remove the plate cover.

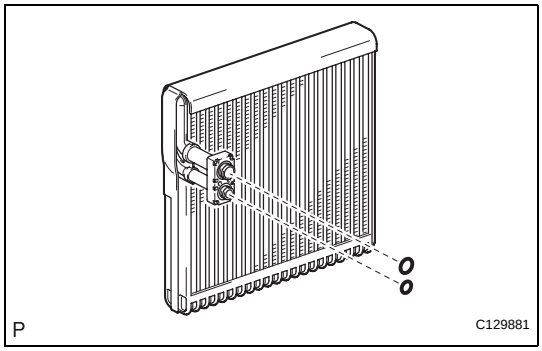
AC



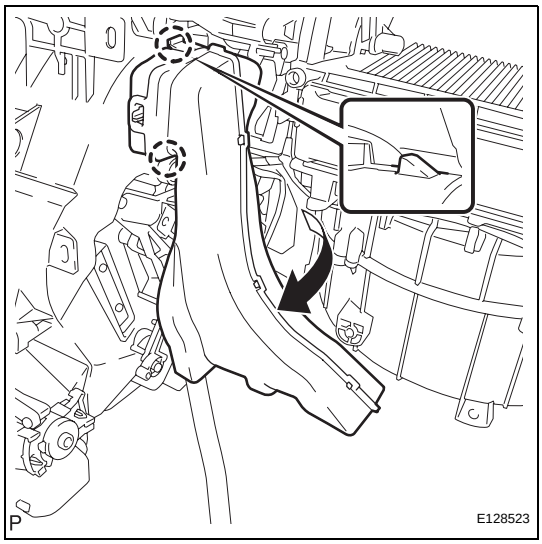
(b) Remove the clamp and No. 1 cooler thermistor.



(c) Remove the No. 1 cooler evaporator sub-assembly.

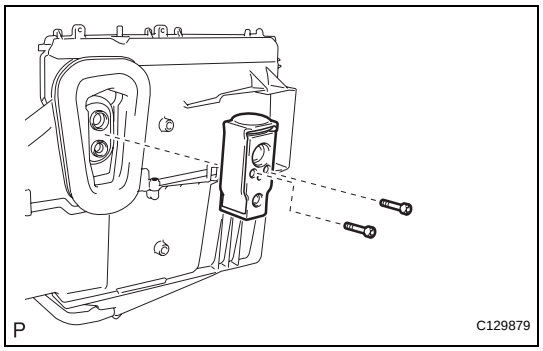


(d) Remove the 2 O-rings from the No. 1 cooler evaporator sub-assembly.



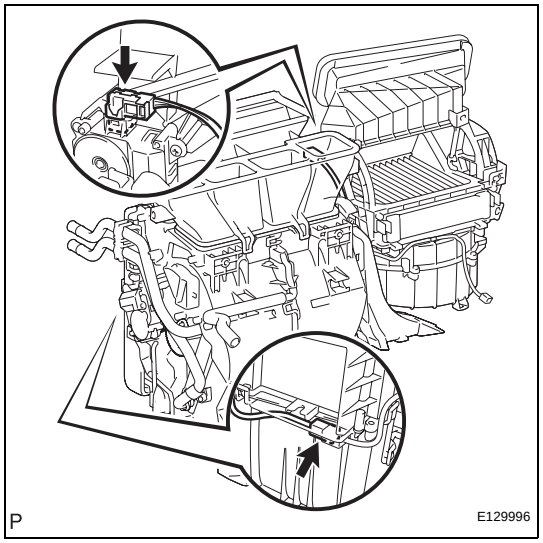
10. REMOVE NO. 2 AIR DUCT SUB-ASSEMBLY (for TMMK Made)

(a) Release the 2 claws and remove the No. 2 air duct sub-assembly as shown in the illustration.



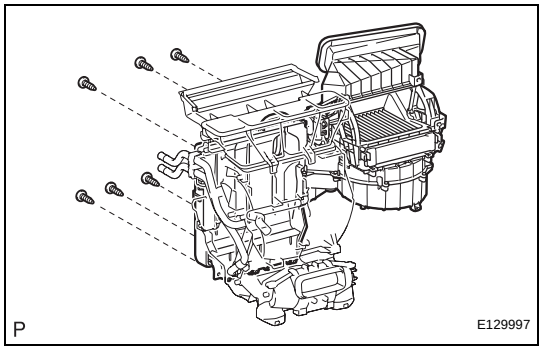
11. REMOVE COOLER EXPANSION VALVE (for TMMK Made)

(a) Using a 4 mm hexagon wrench, remove the 2 hexagon bolts and cooler expansion valve.

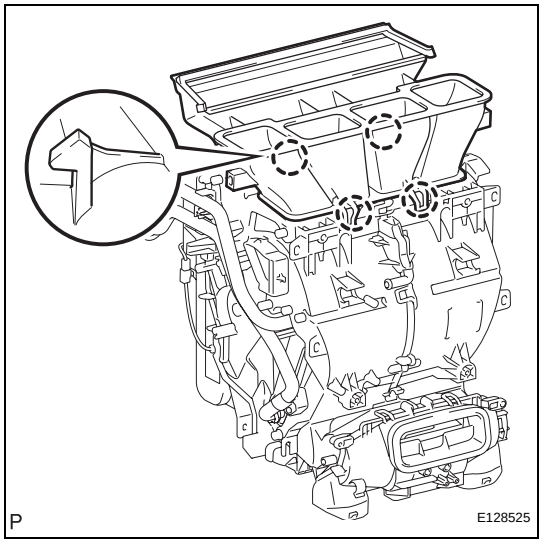


12. REMOVE BLOWER ASSEMBLY (for TMMK Made)

(a) Remove the connector and clamp, and disconnect the wire harness.



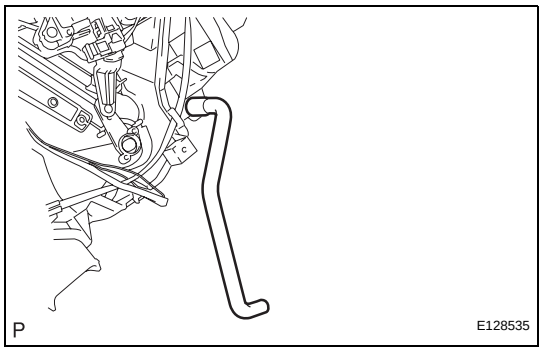
(b) Remove the 6 screws and then the blower assembly with the cooler evaporator sub-assembly.



13. REMOVE NO. 6 HEATER TO REGISTER DUCT ASSEMBLY (for TMMK Made)

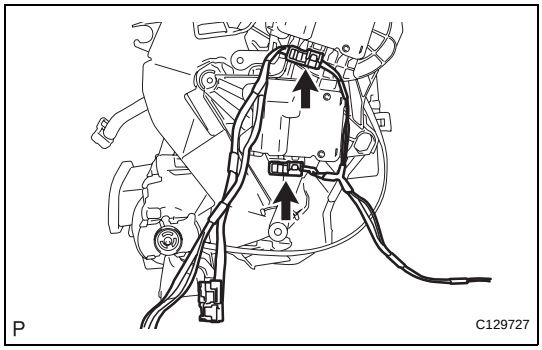
(a) Release the 4 claws and remove the No. 6 heater to register duct assembly.

AC



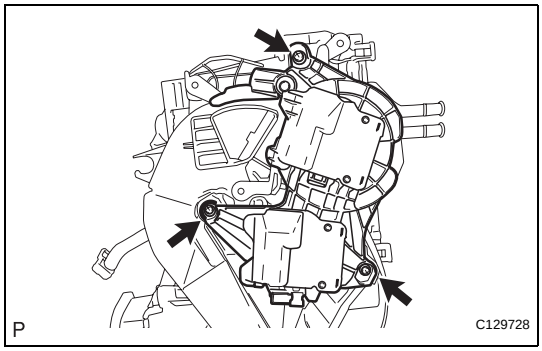
14. REMOVE DRAIN COOLER HOSE (for TMMK Made)

(a) Remove the drain cooler hose from the air conditioning radiator assembly.

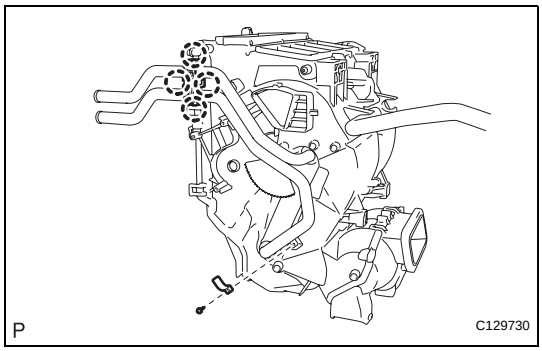


15. REMOVE AIR OUTLET CONTROL SERVO MOTOR (for TMMK Made)

(a) Disconnect the 2 connectors and remove the air conditioner harness.



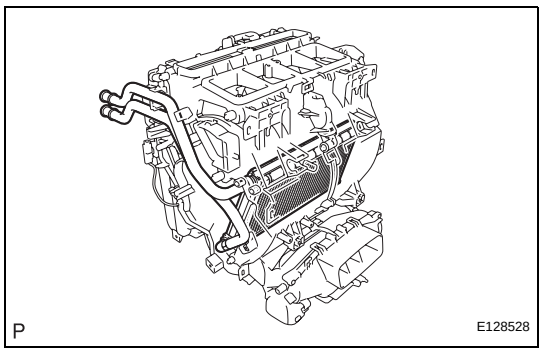
(b) Remove the 3 screws and then the air outlet control servo motor.



16. REMOVE HEATER RADIATOR UNIT SUB-ASSEMBLY (for TMMK Made)

(a) Remove the screw and clamp.

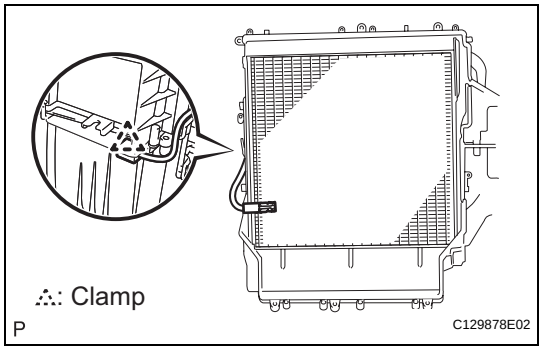
(b) Release the 4 claws and remove the clamp.



(c) Remove the heater radiator unit sub-assembly from the air conditioning radiator assembly.

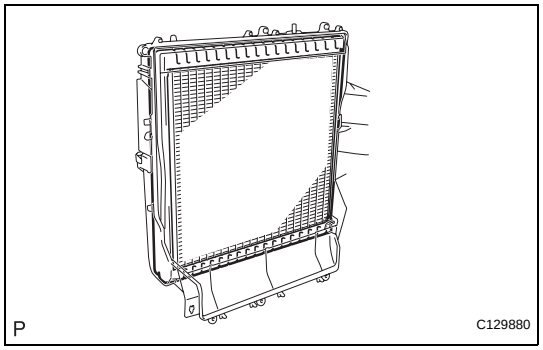
NOTICE:

Prepare a drain pan or cloth in case the cooling water leaks.

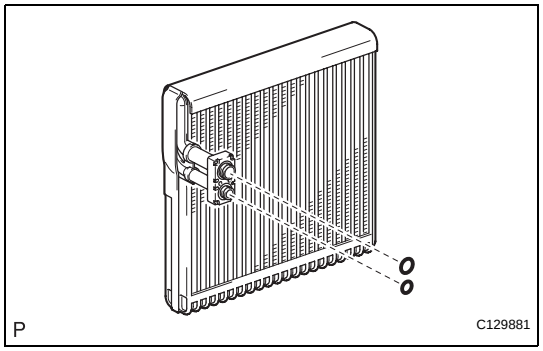


17. REMOVE NO. 1 COOLER EVAPORATOR SUB-ASSEMBLY (for TMMK Made)

(a) Remove the clamp and No. 1 cooler thermistor.



(b) Remove the No. 1 cooler evaporator sub-assembly.



(c) Remove the 2 O-rings from the No. 1 cooler evaporator sub-assembly.

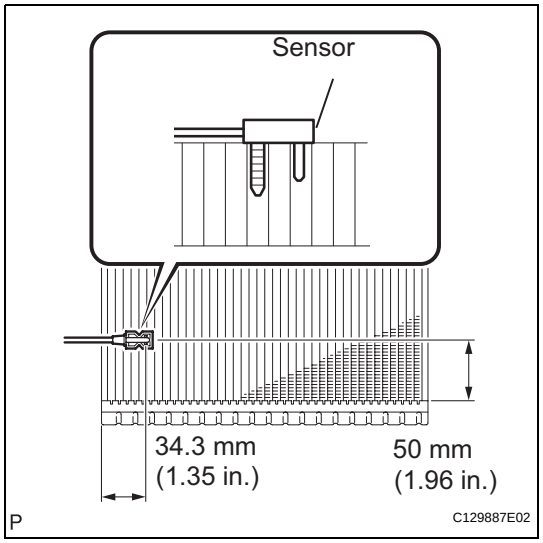
AC

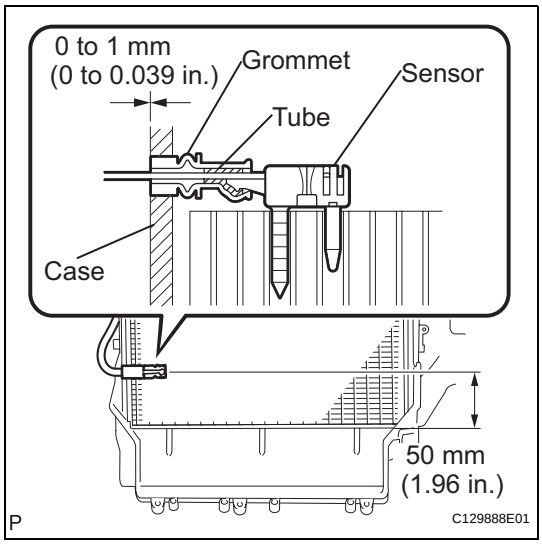
REASSEMBLY

1. INSTALL NO. 1 COOLER THERMISTOR (for TMC Made)

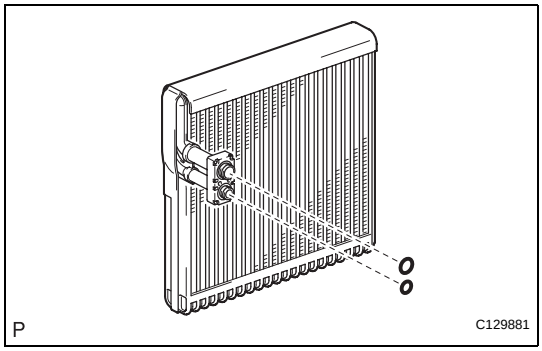
(a) If using a new evaporator:

(1) Install the No. 1 cooler thermistor to the evaporator as shown in the illustration.





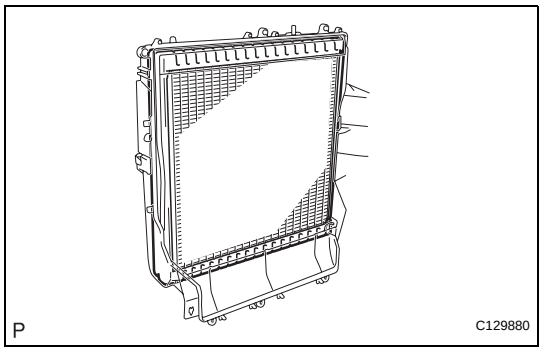
(b) If reusing the evaporator:
(1) Install the No. 1 cooler thermistor to the evaporator as shown in the illustration.



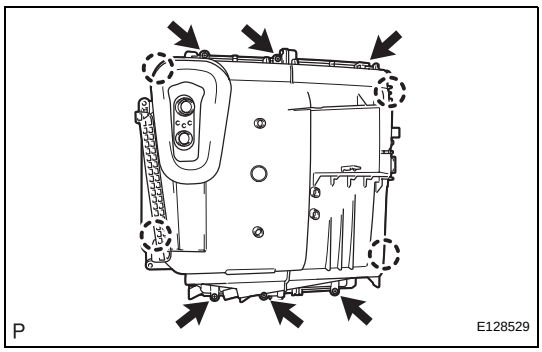
2. INSTALL NO. 1 COOLER EVAPORATOR SUB-ASSEMBLY (for TMC Made)

(a) Sufficiently apply compressor oil to 2 new O-rings and the fitting surfaces. Install the 2 O-rings to the No. 1 cooler evaporator sub-assembly.
Compressor oil:
ND-OIL 8 or equivalent

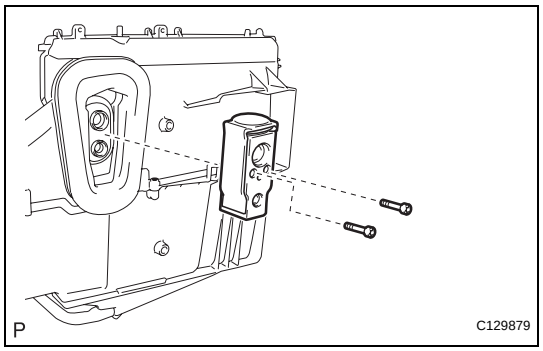
AC



(b) Install the No. 1 cooler evaporator sub-assembly.

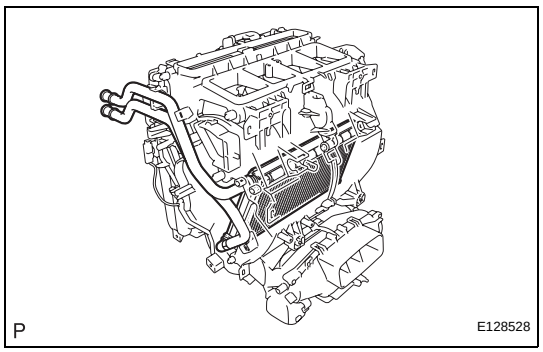


(c) Engage the 4 claws and install the plate cover with the 6 screws.



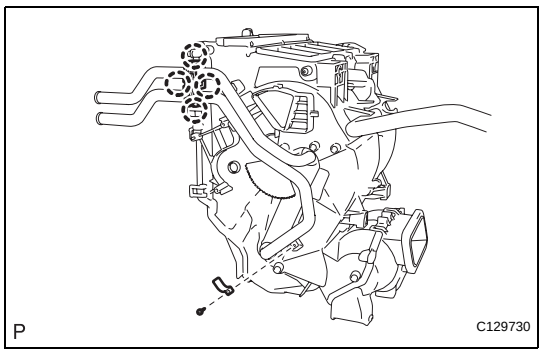
3. INSTALL COOLER EXPANSION VALVE (for TMC Made)

(a) Using a 4 mm hexagon wrench, install the cooler expansion valve with the 2 hexagon bolts.
Torque: 3.5 N*m (35 kgf*cm, 30 in.*lbf)

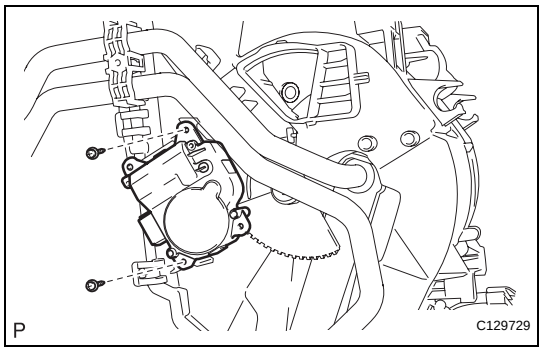


4. INSTALL HEATER RADIATOR UNIT SUB-ASSEMBLY (for TMC Made)

(a) Install the heater radiator unit sub-assembly to the air conditioner radiator assembly.

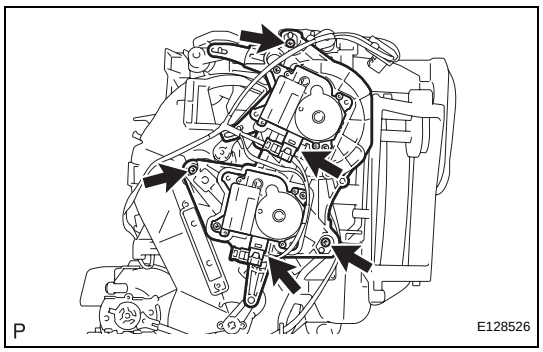


(b) Install the clamp with the screw.
(c) Engage the 4 claws and install the heater clamp.



5. INSTALL AIR MIX CONTROL SERVO MOTOR (for Automatic Air Conditioning System)

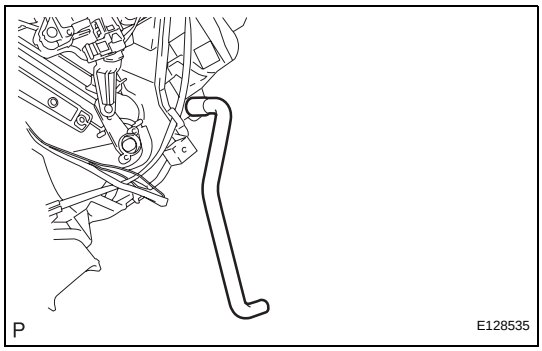
(a) Install the air mix control servo motor with the 2 screws.



6. INSTALL AIR OUTLET CONTROL SERVO MOTOR (for TMC Made)

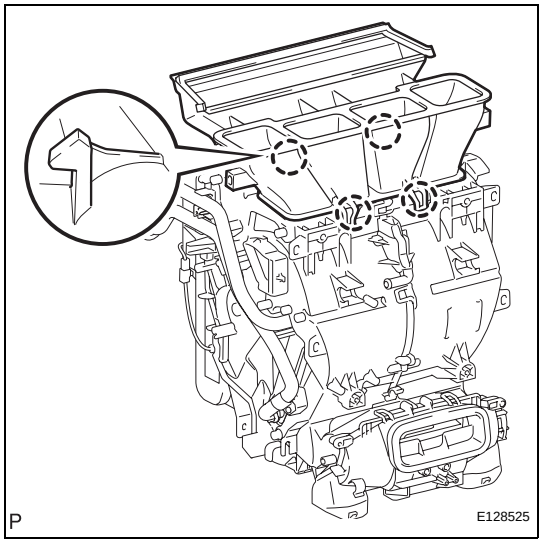
(a) Install the air outlet control servo motor with the 3 screws.
(b) Connect the 2 connectors and install the air conditioner harness.

AC



7. INSTALL DRAIN COOLER HOSE (for TMC Made)

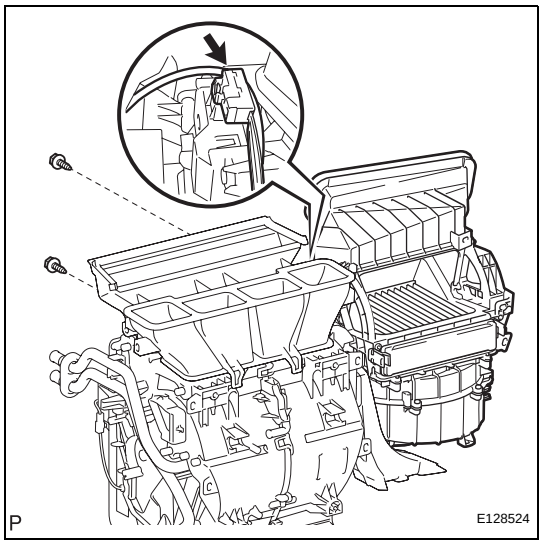
(a) Install the drain cooler hose to the air conditioner radiator assembly.



8. INSTALL NO. 6 HEATER TO REGISTER DUCT ASSEMBLY (for TMC Made)

(a) Engage the 4 claws to install the No. 6 heater to register duct assembly.

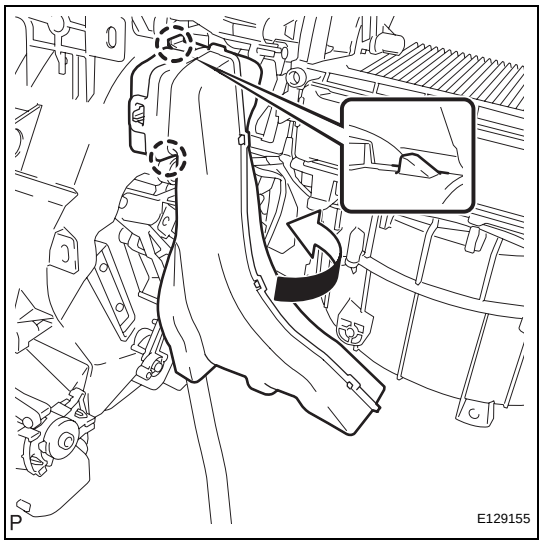
AC



9. INSTALL BLOWER ASSEMBLY (for TMC Made)

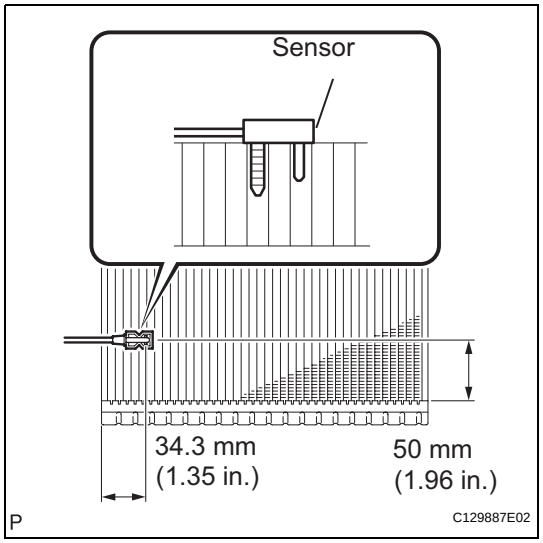
(a) Install the blower assembly with the 2 screws.

(b) Connect the connector.



10. INSTALL NO. 2 AIR DUCT SUB-ASSEMBLY (for TMC Made)

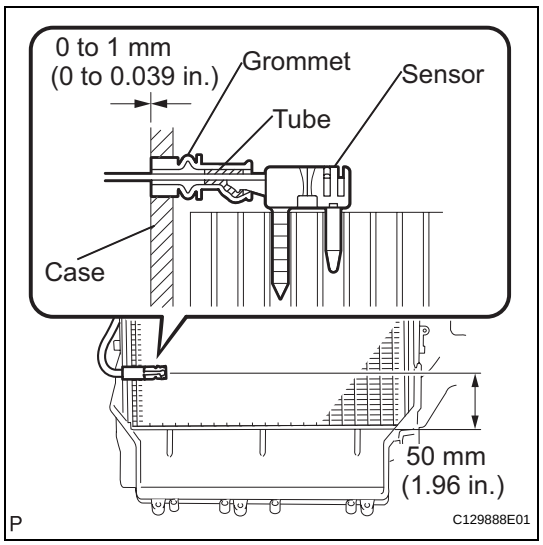
(a) Engage the 2 claws to install the No. 2 air duct sub-assembly.



11. INSTALL NO. 1 COOLER THERMISTOR (for TMMK Made)

(a) If using a new evaporator:

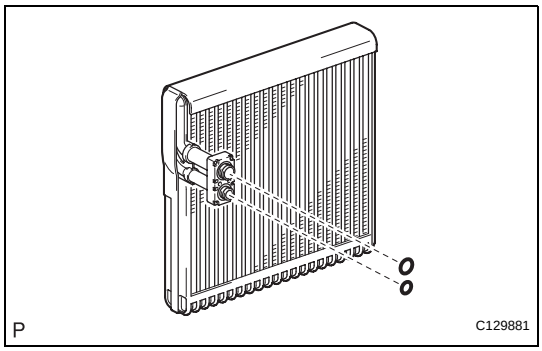
(1) Install the No. 1 cooler thermistor to the evaporator as shown in the illustration.



(b) If reusing the evaporator:

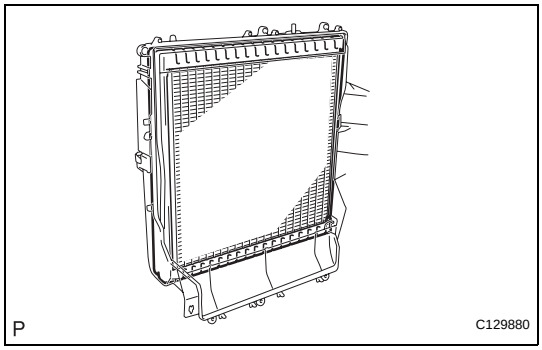
(1) Install the No. 1 cooler thermistor to the evaporator as shown in the illustration.

AC

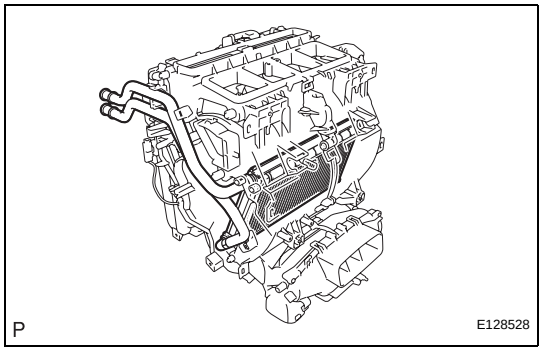


12. INSTALL NO. 1 COOLER EVAPORATOR SUB-ASSEMBLY (for TMMK Made)

(a) Sufficiently apply compressor oil to 2 new O-rings and the fitting surfaces. Install the 2 O-rings to the No. 1 cooler evaporator sub-assembly.
Compressor oil:
ND-OIL 8 or equivalent

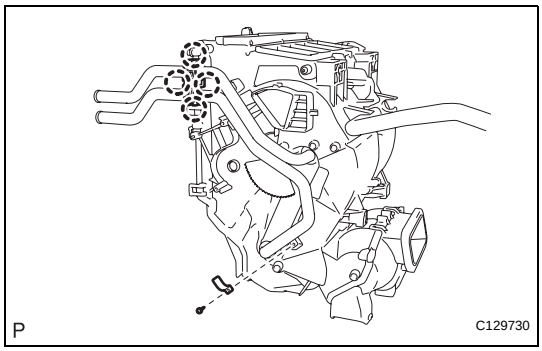


(b) Install the No. 1 cooler evaporator sub-assembly.

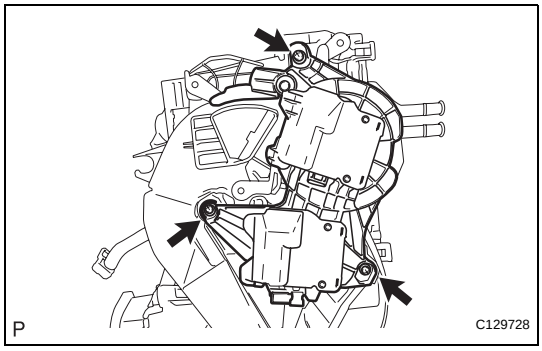


13. INSTALL HEATER RADIATOR UNIT SUB-ASSEMBLY (for TMMK Made)

(a) Install the heater radiator unit sub-assembly to the air conditioner radiator assembly.



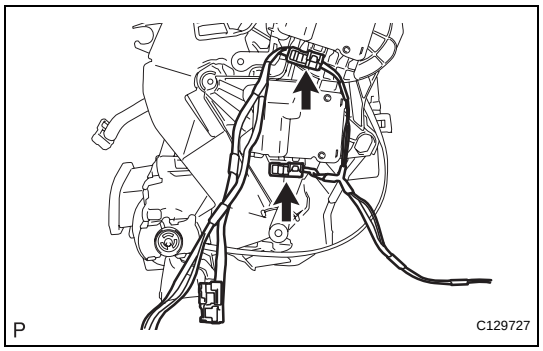
(b) Install the clamp with the screw.
(c) Engage the 4 claws and install the heater clamp.



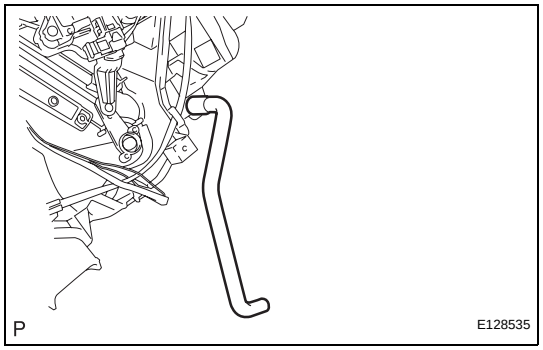
14. INSTALL AIR OUTLET CONTROL SERVO MOTOR (for TMMK Made)

(a) Install the air outlet control servo motor with the 3 screws.

AC

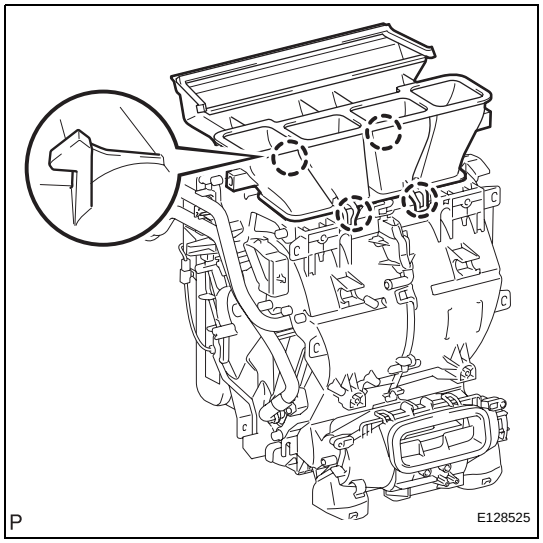


(b) Connect the 2 connectors and install the air conditioner harness.



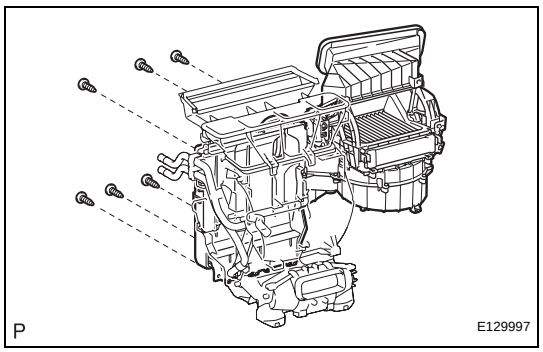
15. INSTALL DRAIN COOLER HOSE (for TMMK Made)

(a) Install the drain cooler hose to the air conditioner radiator assembly.



16. INSTALL NO. 6 HEATER TO REGISTER DUCT ASSEMBLY (for TMMK Made)

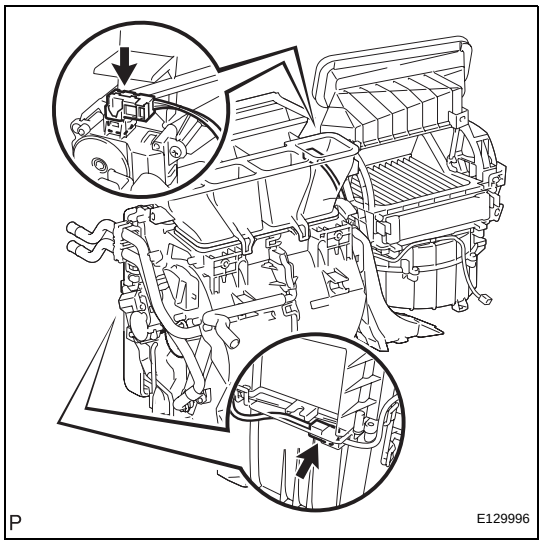
(a) Engage the 4 claws to install the No. 6 heater to register duct assembly.



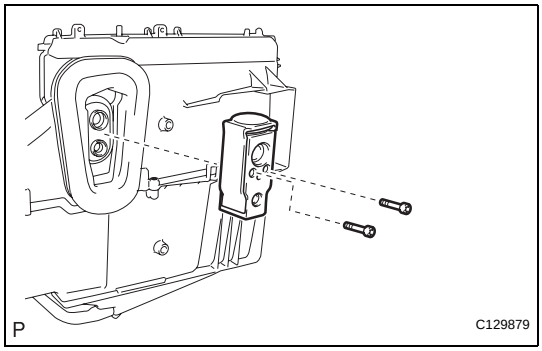
17. INSTALL BLOWER ASSEMBLY (for TMMK Made)

(a) Install the blower assembly with the 6 screws.

AC



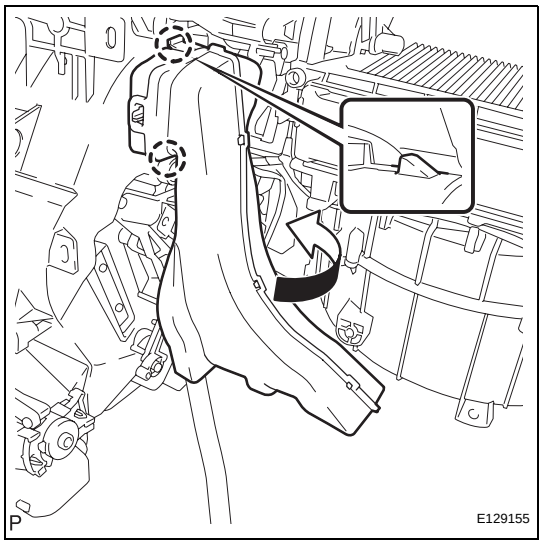
(b) Connect the connector.



18. INSTALL COOLER EXPANSION VALVE (for TMMK Made)

(a) Using a 4 mm hexagon wrench, install the cooler expansion valve with the 2 hexagon bolts.
Torque: 3.5 N*m (35 kgf*cm, 30 in.*lbf)

AC



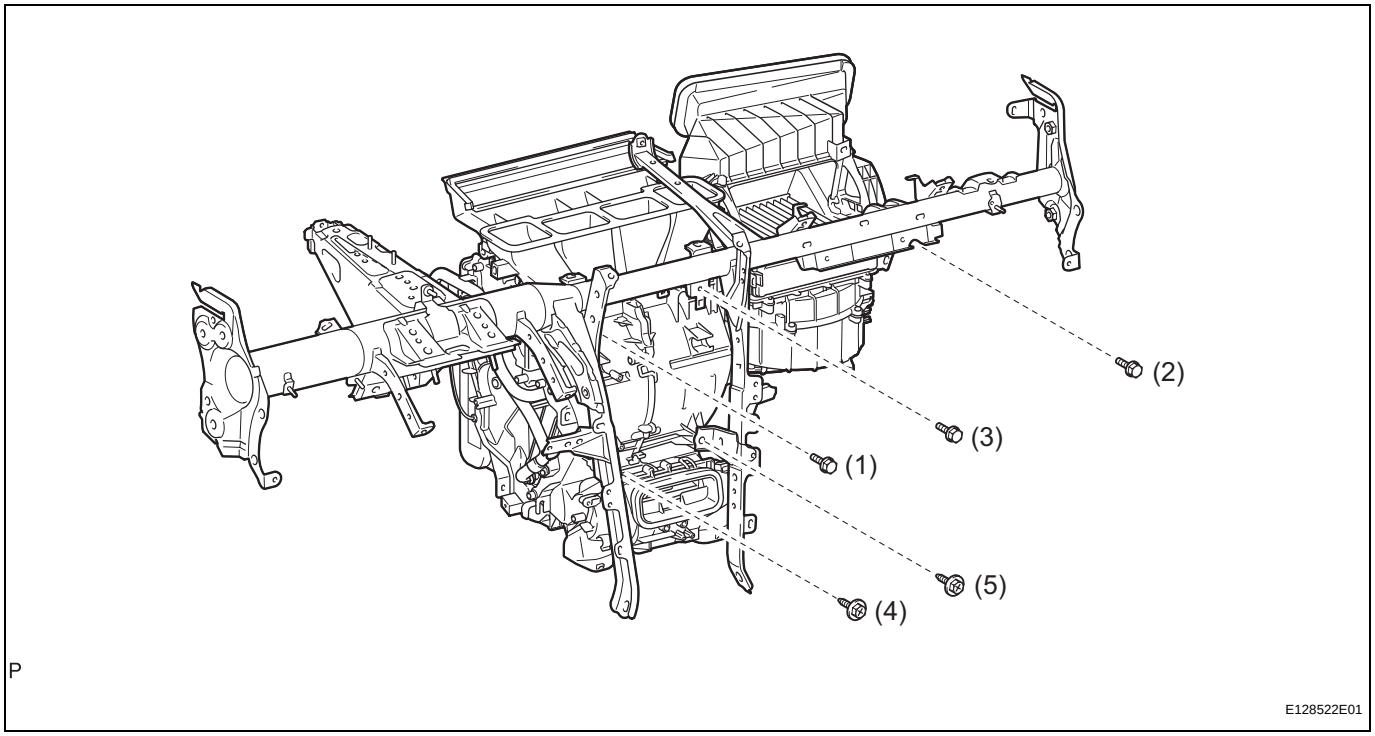
19. INSTALL NO. 2 AIR DUCT SUB-ASSEMBLY (for TMMK Made)

(a) Engage the 2 claws to install the No. 2 air duct sub-assembly.

INSTALLATION

1. INSTALL INSTRUMENT PANEL REINFORCEMENT ASSEMBLY

(a) Install the conditioner unit assembly to the instrument panel reinforcement assembly with the 2 screws and 3 bolts.



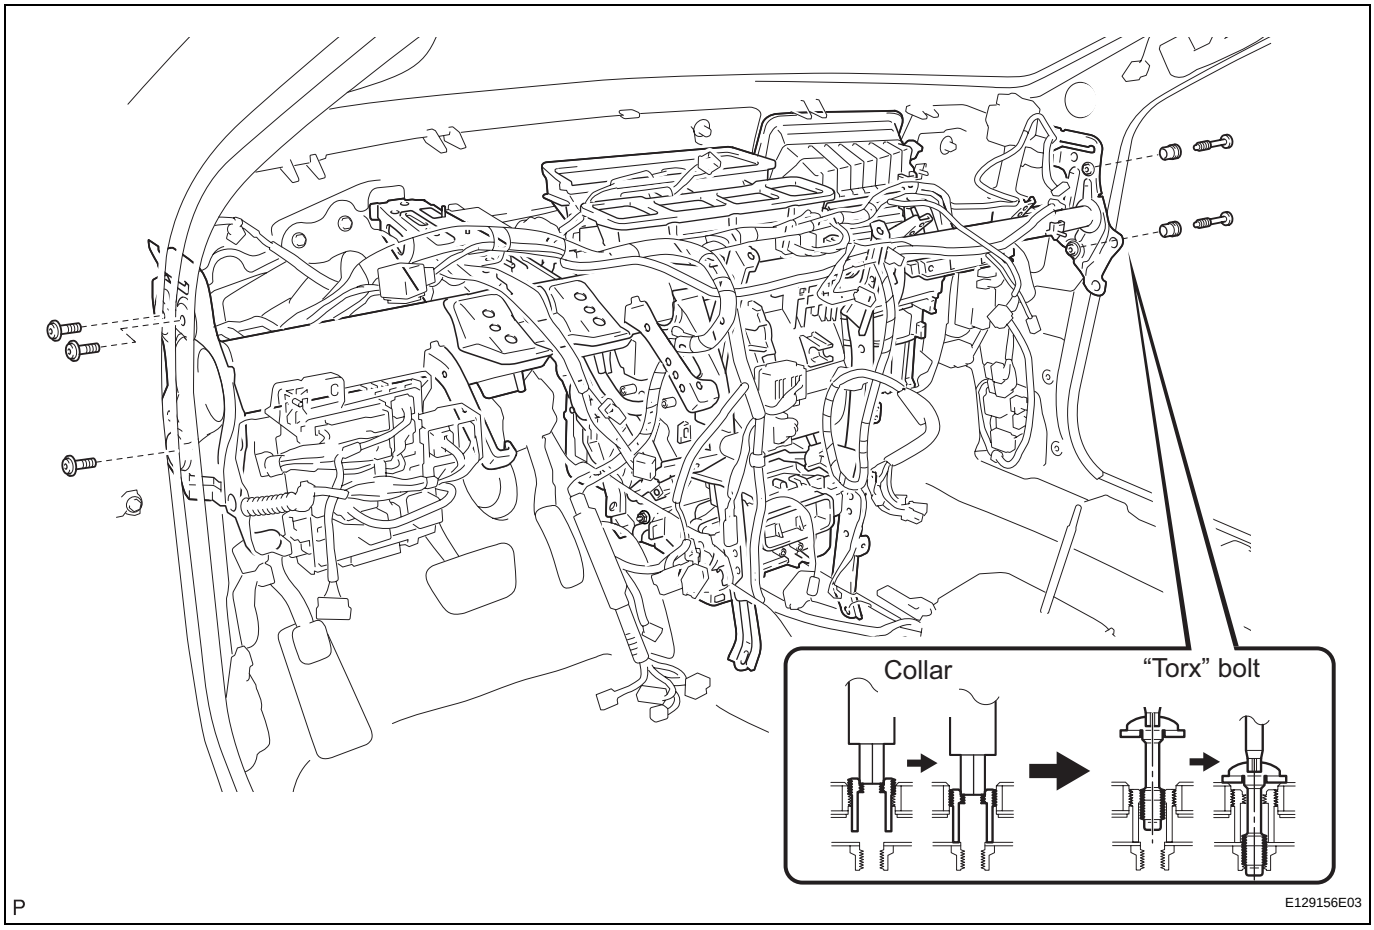
Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)

NOTICE:

Tighten the bolts and screws in the order shown in the illustration to install the air conditioner unit assembly.

(b) Driver seat:

(1) Using a "Torx" socket wrench (T40), install the instrument panel reinforcement assembly with the 3 "Torx" bolts.



Torque: 17 N*m (173 kgf*cm, 13 ft.*lbf)

(c) Passenger seat:

(1) Using a 12 mm hexagon wrench, adjust the position of the 2 collars.

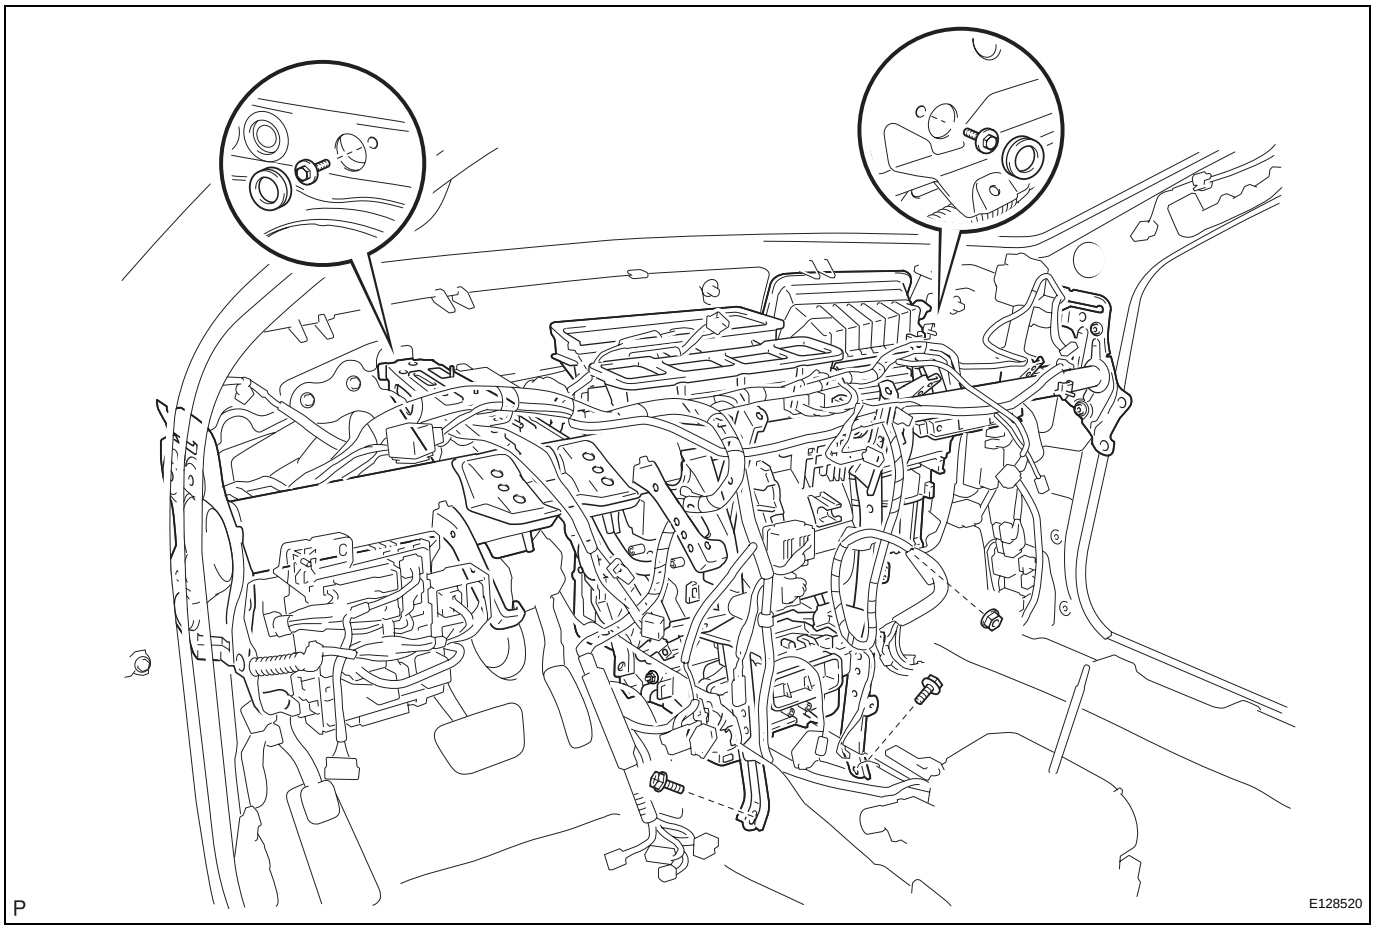
Torque: 6.0 N*m (61 kgf*cm, 53 in.*lbf)

(2) Using a "Torx" socket wrench (T40), install the instrument panel reinforcement assembly with the 2 "Torx" bolts.

Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)

AC

(d) Install the instrument panel reinforcement assembly with the 2 bolts and nut.

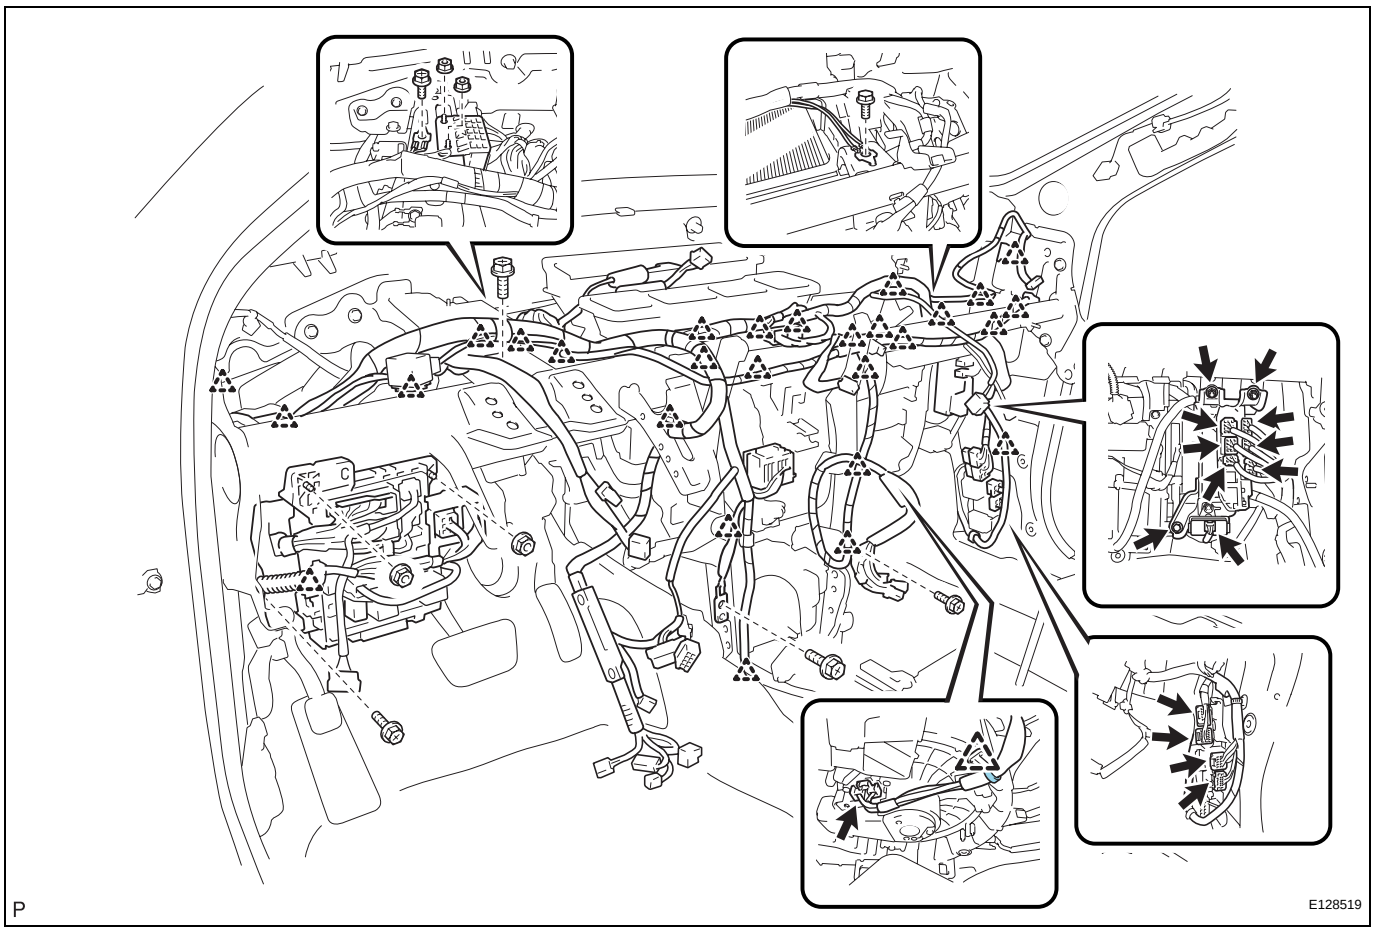


Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf) (NUT)

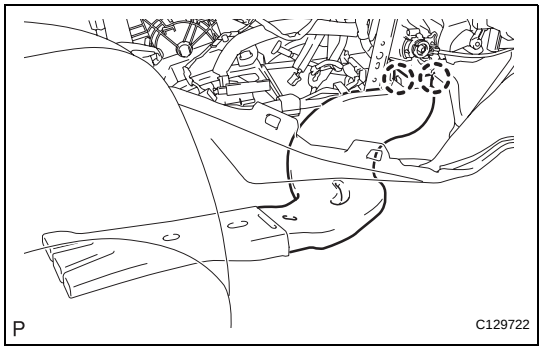
(e) Install the 2 bolts and 2 caps.

(f) Connect the connectors and clamps.

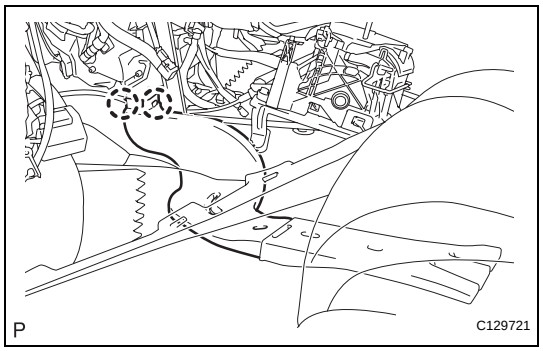
(g) Install the 6 nuts and 7 bolts.



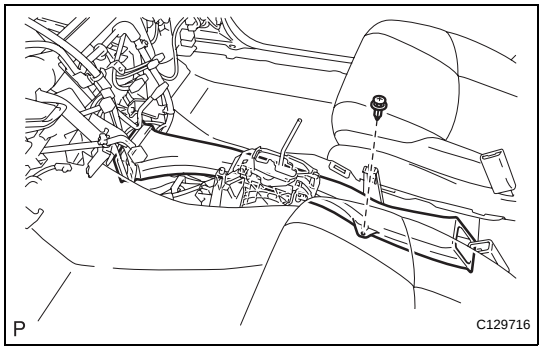
2. **INSTALL STEERING COLUMN ASSEMBLY (for TMC Made) (See page SR-47)**
3. **INSTALL STEERING POST ASSEMBLY (for TMMK Made) (See page SR-49)**
4. **INSTALL NO. 1 AIR DUCT (See page SR-50)**
5. **INSTALL REAR NO. 1 AIR DUCT**
   (a) Engage the 2 claws to install the rear No. 1 air duct.



AC



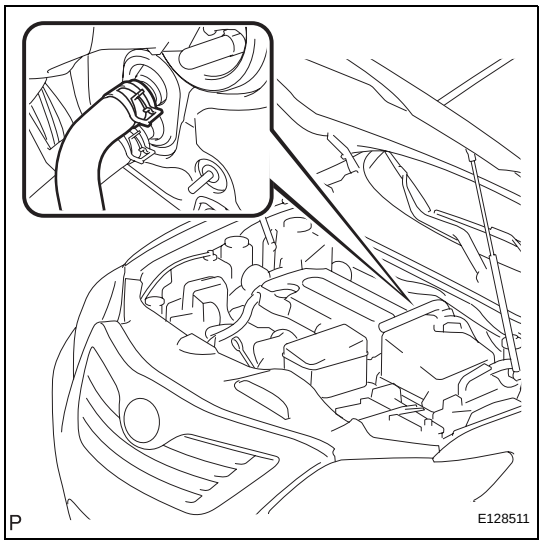
6. **INSTALL REAR NO. 2 AIR DUCT**
   (a) Engage the 2 claws to install the rear No. 2 air duct.
7. **INSTALL FLOOR CARPET BRACKET RH**
8. **INSTALL FLOOR CARPET BRACKET LH**



9. **INSTALL NO. 1 CONSOLE BOX DUCT (for Automatic Air Conditioning System)**
   (a) Install the No. 1 console box duct with the clip.
10. **INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for TMC Made) (See page IP-44)**
11. **INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for TMMK Made) (See page IP-45)**
12. **INSTALL NO. 1 DEFROSTER NOZZLE GARNISH (See page IP-48)**
13. **INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) (See page AV-156)**
14. **INSTALL INSTRUMENT PANEL NO. 1 SPEAKER PANEL SUB-ASSEMBLY (See page IP-48)**
15. **INSTALL INSTRUMENT PANEL NO. 1 REGISTER ASSEMBLY (See page IP-48)**
16. **INSTALL FRONT PILLAR GARNISH LH (See page IR-51)**
17. **INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side) (See page IP-48)**
18. **INSTALL INSTRUMENT PANEL NO. 2 SPEAKER PANEL SUB-ASSEMBLY (See page IP-49)**
19. **INSTALL INSTRUMENT PANEL NO. 3 REGISTER ASSEMBLY (See page IP-49)**
20. **INSTALL FRONT PILLAR GARNISH RH (See page IR-52)**
21. **INSTALL NO. 1 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-49)**
22. **INSTALL NO. 1 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-50)**
23. **INSTALL NO. 2 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-50)**
24. **INSTALL NO. 2 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-50)**
25. **INSTALL CONSOLE BOX ASSEMBLY (for TMC Made) (See page IP-51)**

26. **INSTALL CONSOLE BOX ASSEMBLY (for TMMK Made) (See page IP-51)**
27. **INSTALL CONSOLE BOX CARPET (See page IP-51)**
28. **INSTALL CONSOLE BOX POCKET (See page IP-51)**
29. **INSTALL RADIO RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/o Navigation System) (See page AV-147)**
30. **INSTALL NAVIGATION RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/ Navigation System) (See page NS-196)**
31. **INSTALL INSTRUMENT PANEL NO. 2 REGISTER ASSEMBLY (See page IP-52)**
32. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-52)**
33. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-52)**
34. **INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-53)**
35. **INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Manual Transaxle) (See page IP-53)**
36. **INSTALL FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-53)**
37. **INSTALL UPPER CONSOLE PANEL (for Manual Transaxle) (See page IP-54)**
38. **INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-54)**
39. **INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-55)**
40. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-55)**
41. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-55)**
42. **INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-55)**
43. **INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-56)**
44. **INSTALL INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-56)**
45. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-55)**
46. **INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-55)**

47. INSTALL COMBINATION METER ASSEMBLY (for TMC Made) (See page IP-56)
48. INSTALL COMBINATION METER ASSEMBLY (for TMMK Made) (See page IP-56)
49. INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page IP-57)
50. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (w/o Smart Key System) (See page IP-57)
51. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (w/ Smart Key System) (See page IP-57)
52. INSTALL NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-57)
53. INSTALL TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (See page SR-50)
54. ADJUST SPIRAL CABLE SUB-ASSEMBLY (See page RS-367)
55. INSTALL STEERING COLUMN COVER (for TMC Made) (See page IP-58)
56. INSTALL STEERING COLUMN COVER (for TMMK Made) (See page IP-58)
57. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-58)
58. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-59)
59. INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-54)
60. INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-54)
61. INSTALL STEERING WHEEL ASSEMBLY (See page SR-51)
62. INSTALL STEERING PAD (See page RS-350)
63. INSTALL LOWER NO. 3 STEERING WHEEL COVER (See page RS-351)
64. INSTALL LOWER NO. 2 STEERING WHEEL COVER (See page RS-352)

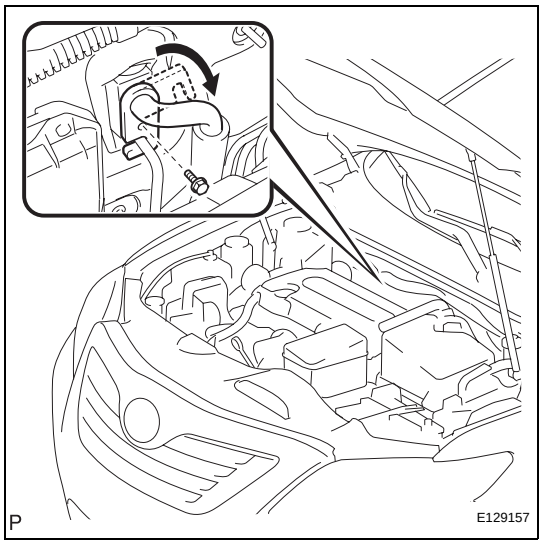


65. INSTALL HEATER INLET WATER HOSE
(a) Install the water hose and attach the clip.

66. INSTALL HEATER OUTLET WATER HOSE
(a) Use the same procedures described for the heater inlet water hose.

67. INSTALL AIR CONDITIONER TUBE AND ACCESSORY
(a) Remove the attached vinyl tape from the tube.
(b) Sufficiently apply compressor oil to a new O-ring and fitting surface of the air conditioning tube assembly.
Compressor oil:
ND-OIL 8 or equivalent
(c) Install the O-ring on the air conditioner tube and accessory.
(d) Install the air conditioner tube and accessory.

68. INSTALL SUCTION HOSE SUB-ASSEMBLY
(a) Remove the attached vinyl tape from the hose.
(b) Sufficiently apply compressor oil to a new O-ring and the fitting surface of the suction hose sub-assembly.
Compressor oil:
ND-OIL 8 or equivalent
(c) Install the O-ring on the suction hose sub-assembly.
(d) Move the hook connector in the direction indicated by the arrow in the illustration.
(e) Insert the pipe joint into the fitting hole securely and tighten the bolt.
Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)



69. INSTALL COWL TOP OUTER FRONT PANEL SUB-ASSEMBLY (See page BR-36)

70. INSTALL WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY (See page WW-14)

71. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-15)

72. INSTALL FRONT FENDER TO COWL SIDE SEAL LH (See page WW-15)

73. INSTALL FRONT FENDER TO COWL SIDE SEAL RH (See page WW-15)

74. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-15)

75. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-16)

76. CONNECT NEGATIVE BATTERY TERMINAL

77. INSPECT STEERING PAD (See page RS-352)

78. INSPECT SRS WARNING LIGHT
(See page RS-32)

AC

79. **ADD ENGINE COOLANT (for 2AZ-FE) (See page CO-5)**
80. **ADD ENGINE COOLANT (for 2GR-FE) (See page CO-6)**
81. **CHECK FOR ENGINE COOLANT LEAKS**
82. **CHARGE WITH REFRIGERANT (See page AC-125)**
83. **WARM UP ENGINE (See page AC-126)**
84. **CHECK FOR REFRIGERANT LEAKS (See page AC-126)**

REMOVAL

1. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM (See page AC-125)
2. ALIGN FRONT WHEELS FACING STRAIGHT AHEAD
3. DISCONNECT BATTERY NEGATIVE TERMINAL
   CAUTION:
   Wait for 90 seconds after disconnecting the terminal to prevent the airbag from deploying. (See page RS-1)
4. REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-9)
5. REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-9)
6. REMOVE FRONT FENDER TO COWL SIDE SEAL LH (See page WW-9)
7. REMOVE FRONT FENDER TO COWL SIDE SEAL RH (See page WW-9)
8. REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-10)
9. REMOVE WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY (See page WW-10)
10. REMOVE COWL TOP OUTER FRONT PANEL SUB-ASSEMBLY (See page BR-29)
11. DISCONNECT SUCTION PIPE SUB-ASSEMBLY (See page AC-151)
12. DISCONNECT AIR CONDITIONER TUBE AND ACCESSORY (See page AC-151)
13. DISCONNECT HEATER OUTLET WATER HOSE (See page AC-152)
14. DISCONNECT HEATER INLET WATER HOSE (See page AC-152)
15. REMOVE LOWER NO. 3 STEERING WHEEL COVER (See page RS-349)
16. REMOVE LOWER NO. 2 STEERING WHEEL COVER (See page RS-349)
17. REMOVE STEERING PAD (See page RS-350)
18. REMOVE STEERING WHEEL ASSEMBLY (See page SR-38)
19. REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-24)
20. REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-25)
21. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-20)

22. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-21)
23. REMOVE STEERING COLUMN COVER (for TMC Made) (See page IP-21)
24. REMOVE STEERING COLUMN COVER (for TMMK Made) (See page IP-21)
25. REMOVE TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (See page SR-39)
26. REMOVE NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-22)
27. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/o Smart Key System) (See page IP-22)
28. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/ Smart Key System) (See page IP-22)
29. REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page IP-22)
30. REMOVE COMBINATION METER ASSEMBLY (for TMC Made) (See page IP-23)
31. REMOVE COMBINATION METER ASSEMBLY (for TMMK Made) (See page IP-23)
32. REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-26)
33. REMOVE COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-26)
34. REMOVE INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-23)
35. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-23)
36. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-24)
37. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-24)
38. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-24)
39. REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-24)
40. REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-25)
41. REMOVE FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-25)
42. REMOVE UPPER CONSOLE PANEL (for Manual Transaxle) (See page IP-25)

43. REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-26)
44. REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Manual Transaxle) (See page IP-26)
45. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-27)
46. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-27)
47. REMOVE INSTRUMENT PANEL NO. 2 REGISTER ASSEMBLY (See page IP-27)
48. REMOVE RADIO RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/o Navigation System) (See page AV-146)
49. REMOVE NAVIGATION RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (See page NS-195)
50. REMOVE CONSOLE BOX POCKET (See page IP-28)
51. REMOVE CONSOLE BOX CARPET (See page IP-28)
52. REMOVE CONSOLE BOX ASSEMBLY (for TMC Made) (See page IP-28)
53. REMOVE CONSOLE BOX ASSEMBLY (for TMMK Made) (See page IP-29)
54. REMOVE NO. 2 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-29)
55. REMOVE NO. 2 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-30)
56. REMOVE NO. 1 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-30)
57. REMOVE NO. 1 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-30)
58. REMOVE FRONT PILLAR GARNISH LH (See page IR-27)
59. REMOVE INSTRUMENT PANEL NO. 1 REGISTER ASSEMBLY (See page IP-31)
60. REMOVE INSTRUMENT PANEL NO. 1 SPEAKER PANEL SUB-ASSEMBLY (See page IP-31)
61. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) (See page AV-156)
62. REMOVE FRONT PILLAR GARNISH RH (See page IR-27)
63. REMOVE INSTRUMENT PANEL NO. 3 REGISTER ASSEMBLY (See page IP-31)
64. REMOVE INSTRUMENT PANEL NO. 2 SPEAKER PANEL SUB-ASSEMBLY (See page IP-32)

65. **REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side)**

66. **REMOVE NO. 1 DEFROSTER NOZZLE GARNISH (See page IP-32)**

67. **REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for TMC Made) (See page IP-32)**

68. **REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for TMMK Made) (See page IP-34)**

69. **REMOVE NO. 1 CONSOLE BOX DUCT (for Automatic Air Conditioning System) (See page AC-154)**

70. **REMOVE FLOOR CARPET BRACKET LH (See page AC-155)**

71. **REMOVE FLOOR CARPET BRACKET RH (See page AC-155)**

72. **REMOVE REAR NO. 2 AIR DUCT (See page AC-155)**

73. **REMOVE REAR NO. 1 AIR DUCT (See page AC-156)**

74. **REMOVE NO. 1 AIR DUCT (See page SR-39)**

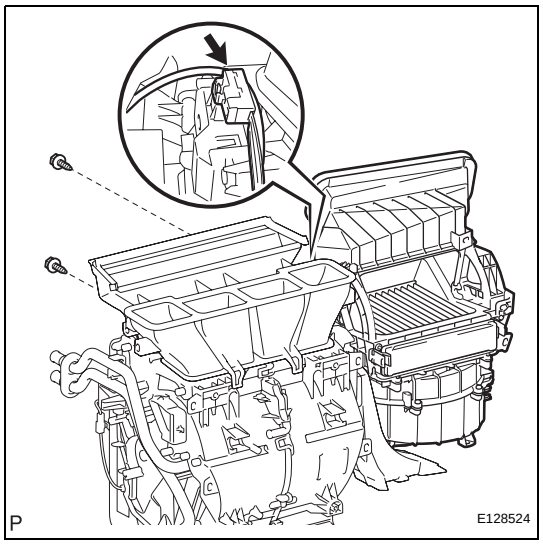
75. **SEPARATE STEERING COLUMN ASSEMBLY (for TMC Made) (See page SR-39)**

76. **REMOVE STEERING POST ASSEMBLY (for TMMK Made) (See page SR-41)**

77. **REMOVE AIR CONDITIONING AMPLIFIER ASSEMBLY (See page AC-259)**

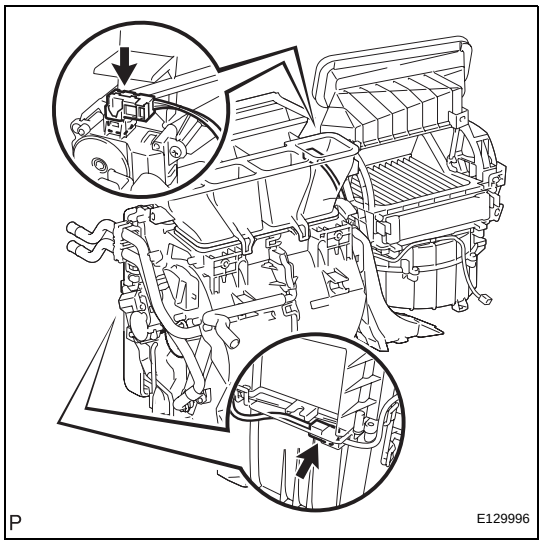
78. **REMOVE INSTRUMENT PANEL REINFORCEMENT ASSEMBLY (See page AC-156)**

79. **REMOVE BLOWER ASSEMBLY (for TMC Made)**
    (a) Disconnect the connector.
    (b) Remove the 2 screws and blower assembly.



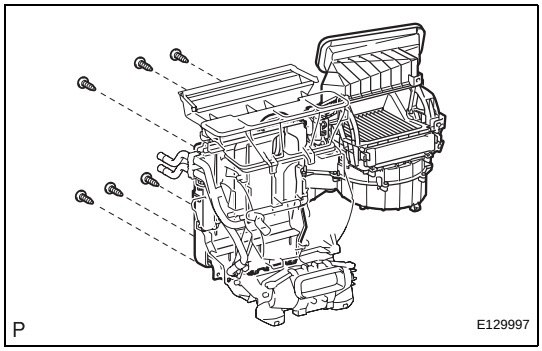
80. **REMOVE COOLER EXPANSION VALVE (for TMMK Made) (See page AC-163)**

AC

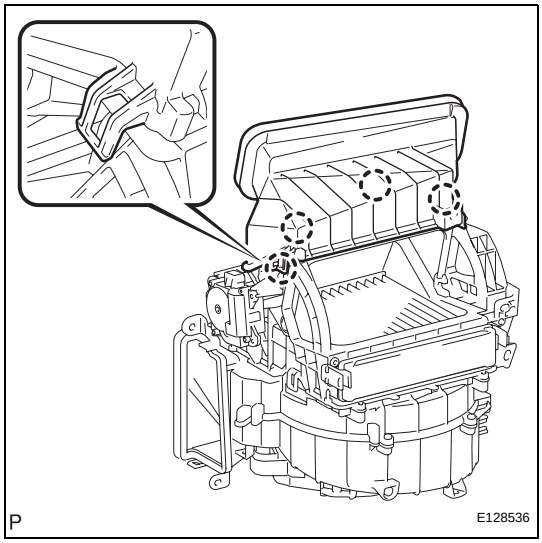


81. REMOVE BLOWER ASSEMBLY (for TMMK Made)

(a) Remove the connector and clamp, and disconnect the wire harness.



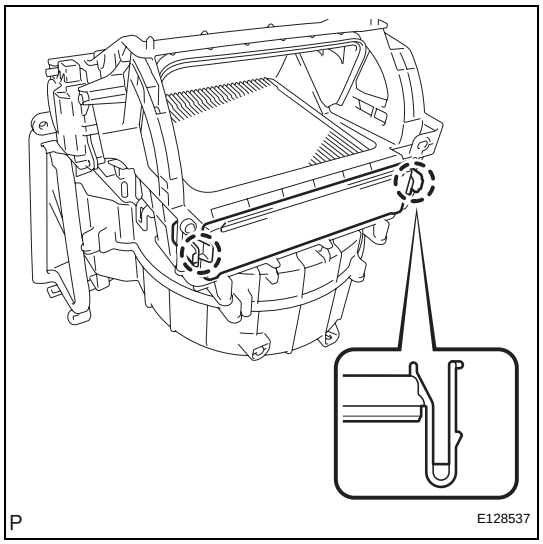
(b) Remove the 6 screws and then the blower assembly with the cooler evaporator sub-assembly.



DISASSEMBLY

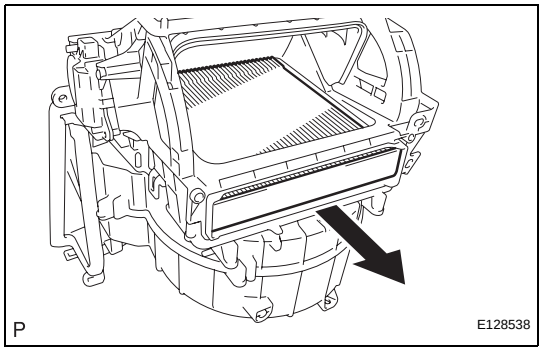
1. REMOVE AIR DUCT SUB-ASSEMBLY (for TMC Made)

(a) Release the 4 claws and remove the air duct sub-assembly.



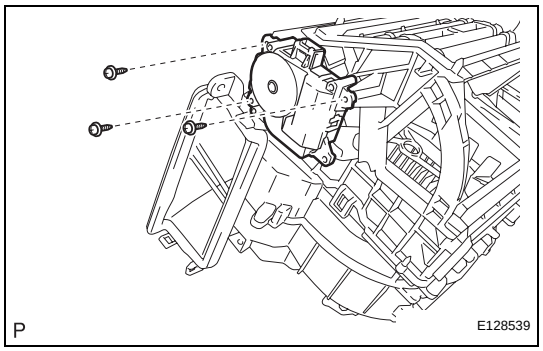
2. REMOVE AIR FILTER COVER PLATE (for TMC Made)

(a) Release the 2 claws and remove the air filter cover plate.



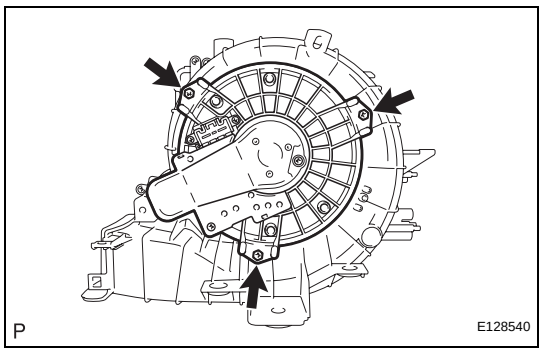
3. REMOVE CLEAN AIR FILTER (for TMC Made)

(a) Remove the clean air filter as shown in the illustration.



4. REMOVE AIR INLET SERVO MOTOR (for TMC Made)

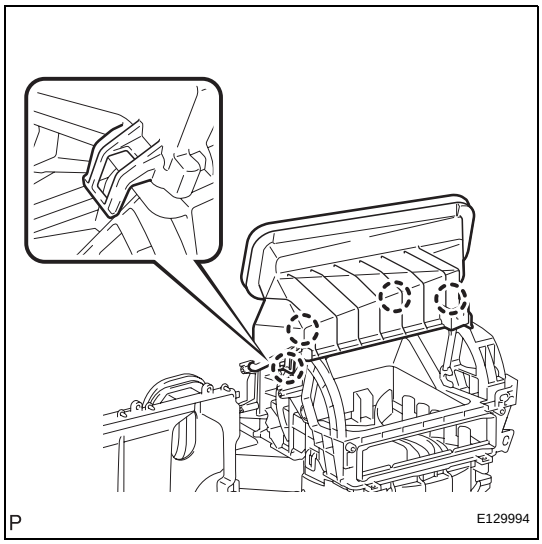
(a) Remove the 3 screws and air inlet servo motor.



5. REMOVE BLOWER WITH FAN MOTOR SUB-ASSEMBLY (for TMC Made)

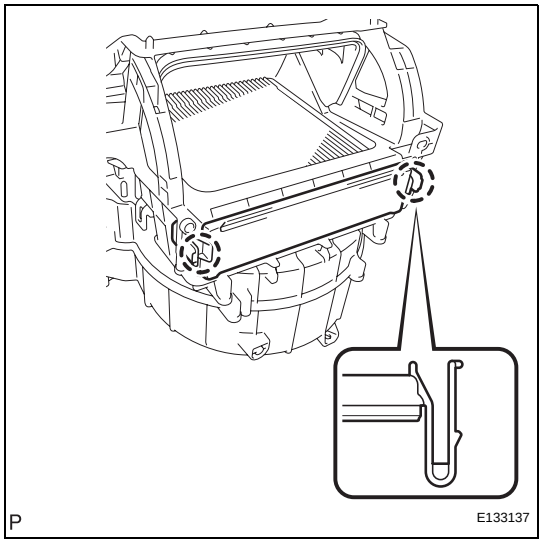
(a) Remove the 3 screws and blower with fan motor sub-assembly.

AC



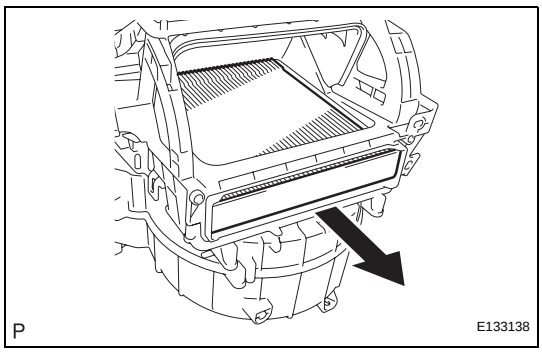
6. REMOVE AIR DUCT SUB-ASSEMBLY (for TMMK Made)

(a) Disengage the 4 claws and then remove the air duct sub-assembly.



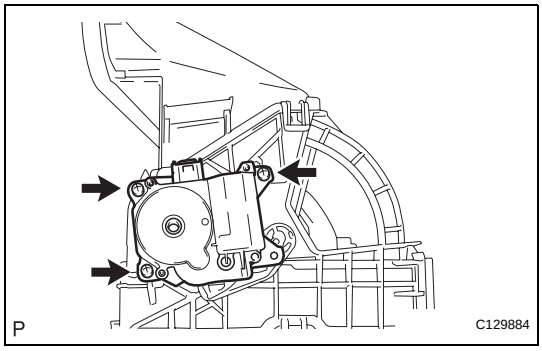
7. REMOVE AIR FILTER COVER PLATE (for TMMK Made)

(a) Release the 2 claws and remove the air filter cover plate.



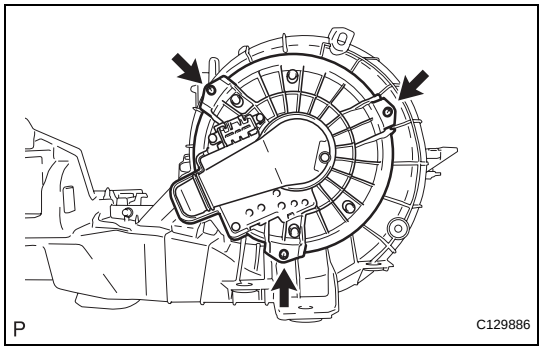
8. REMOVE CLEAN AIR FILTER (for TMMK Made)

(a) Remove the clean air filter as shown in the illustration.



9. REMOVE AIR INLET SERVO MOTOR (for TMMK Made)

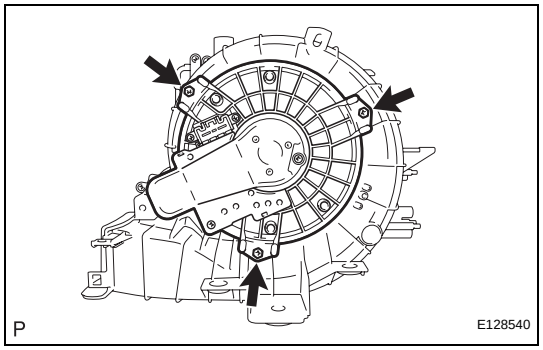
(a) Remove the 3 screws and air inlet servo motor.



10. REMOVE BLOWER WITH FAN MOTOR SUB-ASSEMBLY (for TMMK Made)

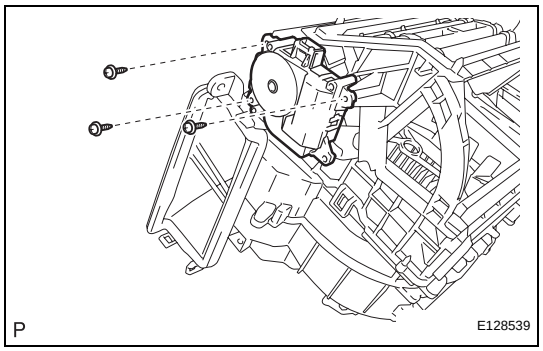
(a) Remove the 3 screws and blower with fan motor sub-assembly.

REASSEMBLY



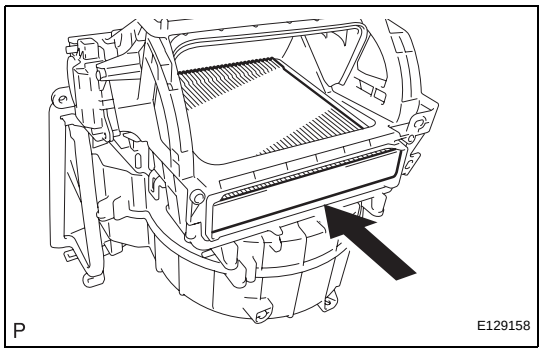
1. INSTALL BLOWER WITH FAN MOTOR SUB-ASSEMBLY (for TMC Made)

(a) Install the blower with fan motor sub-assembly with the 3 screws.



2. INSTALL AIR INLET SERVO MOTOR (for TMC Made)

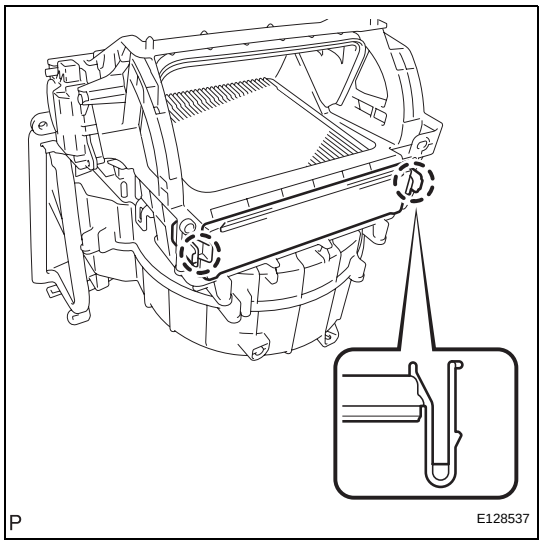
(a) Install the air inlet servo motor with the 3 screws.



3. INSTALL CLEAN AIR FILTER (for TMC Made)

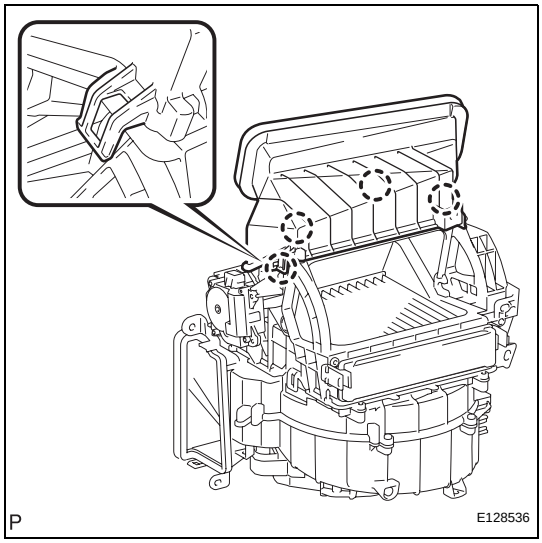
(a) Install the clean air filter as shown in the illustration.

AC



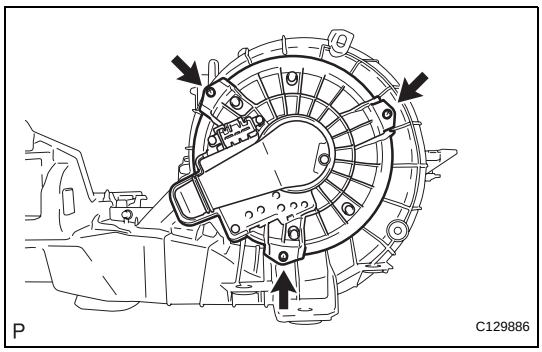
4. INSTALL AIR FILTER COVER PLATE (for TMC Made)

(a) Engage the 2 claws to install the air filter cover plate.



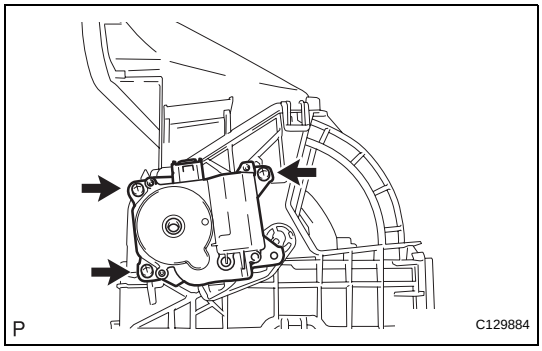
5. INSTALL AIR DUCT SUB-ASSEMBLY (for TMC Made)

(a) Engage the 4 claws to install the air duct sub-assembly.



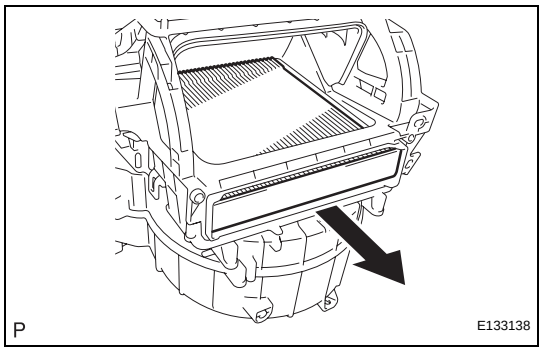
6. INSTALL BLOWER WITH FAN MOTOR SUB-ASSEMBLY (for TMMK Made)

(a) Install the blower with fan motor sub-assembly with the 3 screws.



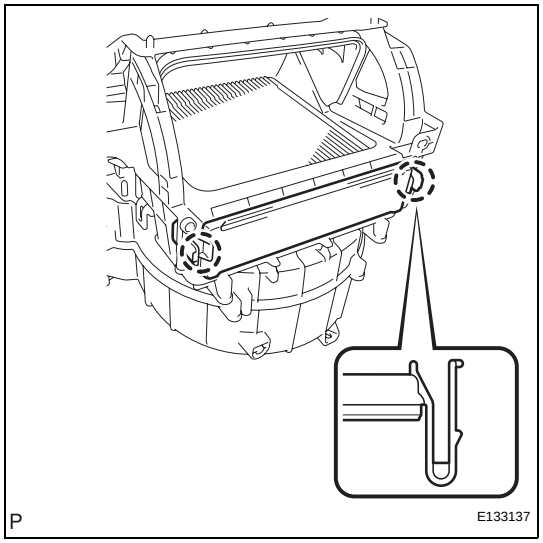
7. INSTALL AIR INLET SERVO MOTOR (for TMMK Made)

(a) Install the air inlet servo motor with the 3 screws.



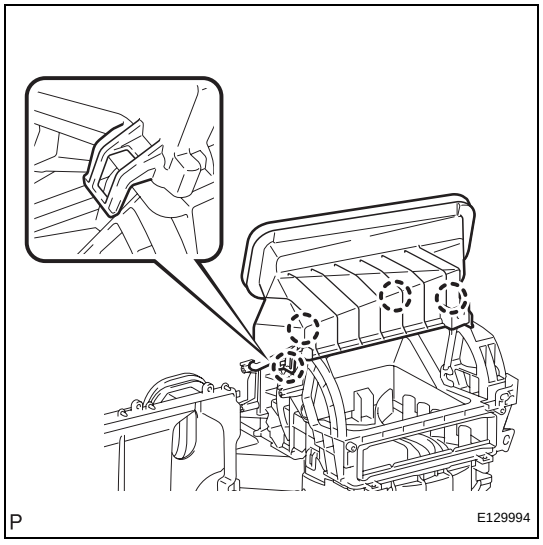
8. INSTALL CLEAN AIR FILTER (for TMMK Made)

(a) Install the clean air filter as shown in the illustration.



9. INSTALL AIR FILTER COVER PLATE (for TMMK Made)

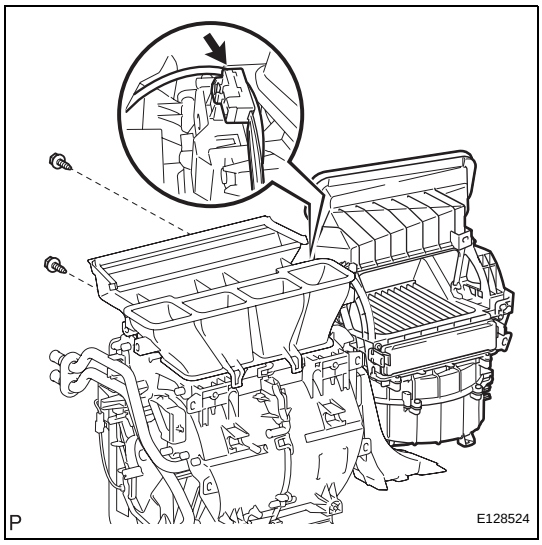
(a) Engage the 2 claws to install the air filter cover plate.



10. INSTALL AIR DUCT SUB-ASSEMBLY (for TMMK Made)

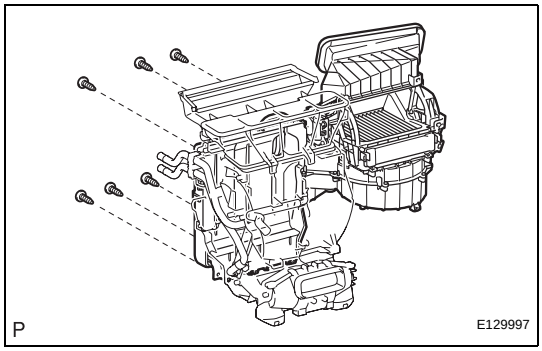
(a) Engage the 4 claws to install the air duct sub-assembly.

AC



INSTALLATION

1. **INSTALL BLOWER ASSEMBLY (for TMC Made)**
   (a) Install the blower assembly with the 2 screws.
   (b) Connect the connector.
2. **INSTALL COOLER EXPANSION VALVE (for TMMK Made) (See page AC-172)**



3. **INSTALL BLOWER ASSEMBLY (for TMMK Made)**
   (a) Install the blower assembly with the 6 screws.

AC

   (b) Connect the connector.
4. **INSTALL INSTRUMENT PANEL REINFORCEMENT ASSEMBLY (See page AC-173)**
5. **INSTALL STEERING COLUMN ASSEMBLY (for TMC Made) (See page SR-47)**
6. **INSTALL STEERING POST ASSEMBLY (for TMMK Made) (See page SR-49)**
7. **INSTALL NO. 1 AIR DUCT (See page SR-50)**
8. **INSTALL REAR NO. 1 AIR DUCT (See page AC-176)**
9. **INSTALL REAR NO. 2 AIR DUCT (See page AC-177)**
10. **INSTALL FLOOR CARPET BRACKET RH**
11. **INSTALL FLOOR CARPET BRACKET LH**
12. **INSTALL NO. 1 CONSOLE BOX DUCT (for Automatic Air Conditioning System) (See page AC-177)**
13. **INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for TMC Made) (See page IP-44)**
14. **INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for TMMK Made) (See page IP-45)**
15. **INSTALL NO. 1 DEFROSTER NOZZLE GARNISH (See page IP-48)**

16. INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) (See page AV-156)
17. INSTALL INSTRUMENT PANEL NO. 1 SPEAKER PANEL SUB-ASSEMBLY (See page IP-48)
18. INSTALL INSTRUMENT PANEL NO. 1 REGISTER ASSEMBLY (See page IP-48)
19. INSTALL FRONT PILLAR GARNISH LH (See page IR-51)
20. INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side) (See page IP-48)
21. INSTALL INSTRUMENT PANEL NO. 2 SPEAKER PANEL SUB-ASSEMBLY (See page IP-49)
22. INSTALL INSTRUMENT PANEL NO. 3 REGISTER ASSEMBLY (See page IP-49)
23. INSTALL FRONT PILLAR GARNISH RH (See page IR-52)
24. INSTALL NO. 1 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-49)
25. INSTALL NO. 1 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-50)
26. INSTALL NO. 2 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-50)
27. INSTALL NO. 2 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-50)
28. INSTALL CONSOLE BOX ASSEMBLY (for TMC Made) (See page IP-51)
29. INSTALL CONSOLE BOX ASSEMBLY (for TMMK Made) (See page IP-51)
30. INSTALL CONSOLE BOX CARPET (See page IP-51)
31. INSTALL CONSOLE BOX POCKET (See page IP-51)
32. INSTALL RADIO RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/o Navigation System) (See page AV-147)
33. INSTALL NAVIGATION RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/ Navigation System) (See page NS-196)
34. INSTALL INSTRUMENT PANEL NO. 2 REGISTER ASSEMBLY (See page IP-52)
35. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-52)
36. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-52)
37. INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-53)

38. **INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Manual Transaxle) (See page IP-53)**
39. **INSTALL FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-53)**
40. **INSTALL UPPER CONSOLE PANEL (for Manual Transaxle) (See page IP-54)**
41. **INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-54)**
42. **INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-55)**
43. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-55)**
44. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-55)**
45. **INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-55)**
46. **INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-56)**
47. **INSTALL INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-56)**
48. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-55)**
49. **INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-55)**
50. **INSTALL COMBINATION METER ASSEMBLY (for TMC Made) (See page IP-56)**
51. **INSTALL COMBINATION METER ASSEMBLY (for TMMK Made) (See page IP-56)**
52. **INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page IP-57)**
53. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (w/o Smart Key System) (See page IP-57)**
54. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (w/ Smart Key System) (See page IP-57)**
55. **INSTALL NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-57)**
56. **INSTALL TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (See page SR-50)**
57. **ADJUST SPIRAL CABLE SUB-ASSEMBLY (See page RS-367)**
58. **INSTALL STEERING COLUMN COVER (for TMC Made) (See page IP-58)**
59. **INSTALL STEERING COLUMN COVER (for TMMK Made) (See page IP-58)**

60. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-58)
61. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-59)
62. INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-54)
63. INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-54)
64. INSTALL STEERING WHEEL ASSEMBLY (See page SR-51)
65. INSTALL STEERING PAD (See page RS-352)
66. INSTALL LOWER NO. 3 STEERING WHEEL COVER (See page RS-351)
67. INSTALL LOWER NO. 2 STEERING WHEEL COVER (See page RS-352)
68. INSTALL HEATER INLET WATER HOSE (See page AC-180)
69. INSTALL HEATER OUTLET WATER HOSE (See page AC-180)
70. INSTALL AIR CONDITIONER TUBE AND ACCESSORY (See page AC-180)
71. INSTALL SUCTION HOSE SUB-ASSEMBLY (See page AC-180)
72. INSTALL WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY (See page WW-14)
73. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-15)
74. INSTALL FRONT FENDER TO COWL SIDE SEAL LH (See page WW-15)
75. INSTALL FRONT FENDER TO COWL SIDE SEAL RH (See page WW-15)
76. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-15)
77. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-16)
78. CONNECT NEGATIVE BATTERY TERMINAL
79. INSPECT STEERING PAD (See page RS-352)
80. INSPECT SRS WARNING LIGHT (See page AC-180)
81. ADD ENGINE COOLANT (for 2AZ-FE) (See page CO-5)
82. ADD ENGINE COOLANT (for 2GR-FE) (See page CO-6)
83. CHECK FOR ENGINE COOLANT LEAKS

84. **CHARGE WITH REFRIGERANT (See page AC-125)**
85. **WARM UP ENGINE (See page AC-126)**
86. **CHECK FOR REFRIGERANT LEAKS (See page AC-126)**

REMOVAL

1. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM (See page AC-125)
2. DISCONNECT BATTERY NEGATIVE TERMINAL
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment (See page RS-1)
3. REMOVE FRONT WHEEL RH
4. REMOVE FRONT FENDER APRON SEAL RH
5. REMOVE FRONT WHEEL OPENING EXTENSION PAD RH
6. REMOVE FRONT WHEEL OPENING EXTENSION PAD LH
7. REMOVE ENGINE UNDER COVER RH
8. REMOVE ENGINE UNDER COVER LH
9. DRAIN ENGINE COOLANT (See page CO-5)
10. REMOVE COOL AIR INTAKE DUCT SEAL (See page EM-23)
11. REMOVE V-BANK COVER SUB-ASSEMBLY (See page EM-23)
12. REMOVE AIR CLEANER INLET ASSEMBLY (See page EM-24)
13. REMOVE AIR CLEANER CAP SUB-ASSEMBLY
14. REMOVE NO. 1 AIR CLEANER INLET (See page EM-24)
15. REMOVE FRONT BUMPER COVER (w/o Fog Light) (See page ET-5)
16. REMOVE FRONT BUMPER COVER (w/ Fog Light) (See page ET-6)
17. REMOVE FRONT BUMPER ENERGY ABSORBER (See page ET-9)
18. SEPARATE RADIATOR RESERVE TANK HOSE (See page CO-24)
19. SEPARATE RADIATOR INLET HOSE (See page CO-24)
20. SEPARATE RADIATOR OUTLET HOSE (See page CO-24)
21. REMOVE NO. 1 OIL COOLER INLET HOSE (for Automatic Transaxle) (See page CO-25)
22. REMOVE NO. 1 OIL COOLER OUTLET HOSE (for Automatic Transaxle) (See page CO-25)
23. REMOVE RADIATOR SUPPORT UPPER (See page CO-25)

24. REMOVE FAN SHROUD (See page CO-26)

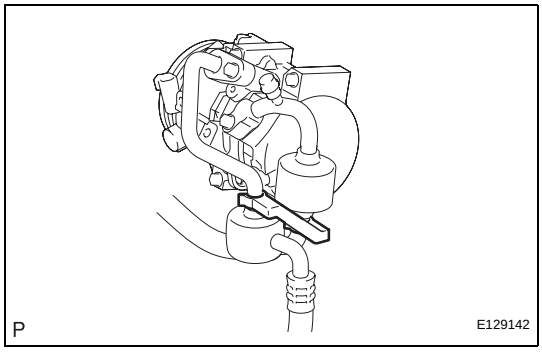
25. REMOVE RADIATOR ASSEMBLY (See page CO-26)

26. REMOVE V-RIBBED BELT (See page EM-6)

27. REMOVE GENERATOR ASSEMBLY (See page CH-14)

28. REMOVE PIPING CLAMP

(a) Remove the piping clamp from the No. 1 cooler refrigerant discharge hose and No. 1 cooler refrigerant suction hose.

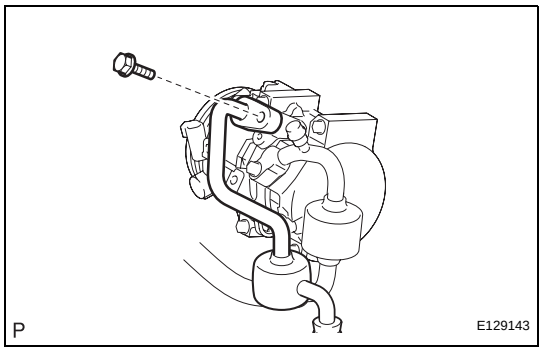


29. DISCONNECT NO. 1 COOLER REFRIGERANT DISCHARGE HOSE

(a) Remove the bolt and disconnect the No. 1 cooler refrigerant discharge hose from the compressor.

(b) Remove the O-ring from the discharge hose sub-assembly.

NOTICE:
Seal the openings of the disconnected parts using vinyl tape to prevent entry of moisture and foreign matter.

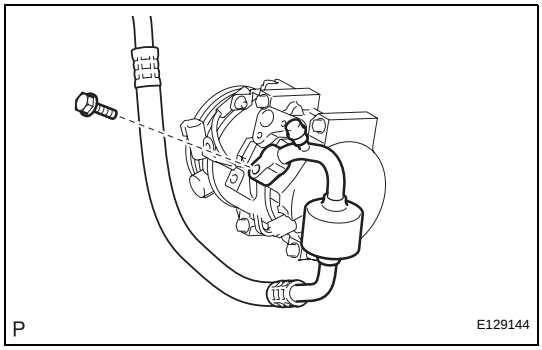


30. DISCONNECT NO. 1 COOLER REFRIGERANT SUCTION HOSE

(a) Remove the bolt and disconnect the No. 1 cooler refrigerant suction hose from the compressor.

(b) Remove the O-ring from the cooler refrigerant suction hose.

NOTICE:
Seal the openings of the disconnected parts using vinyl tape to prevent entry of moisture and foreign matter.

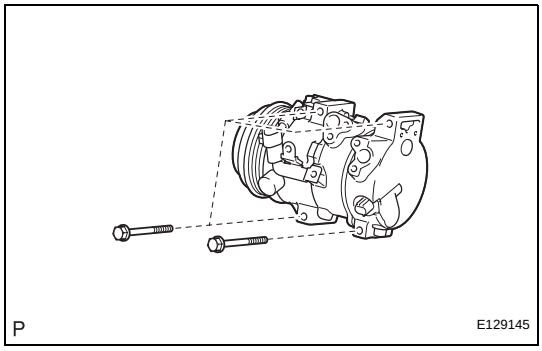


31. REMOVE COMPRESSOR AND MAGNETIC CLUTCH

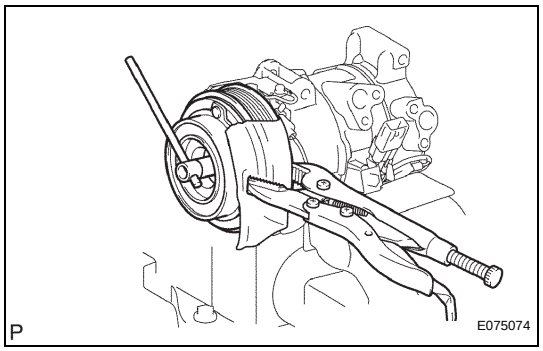
(a) Disconnect the magnetic clutch connector.

(b) Remove the 4 bolts.

(c) Remove the compressor and magnetic clutch.



AC



DISASSEMBLY

1. REMOVE MAGNETIC CLUTCH ASSEMBLY

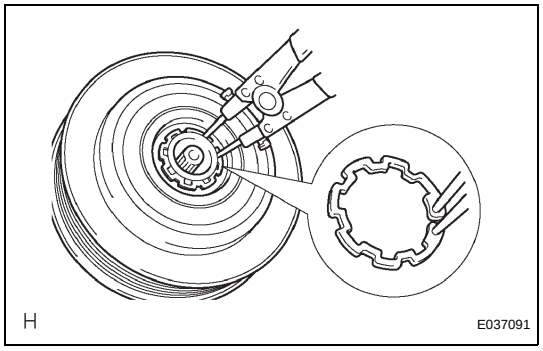
(a) Place the compressor and magnetic clutch in a vise.

(b) Using locking pliers, hold the magnetic clutch hub.

(c) Remove the bolt, magnetic clutch hub, and magnetic clutch washers.

HINT:

There is no set number of magnetic clutch washers because they are used for adjustment.



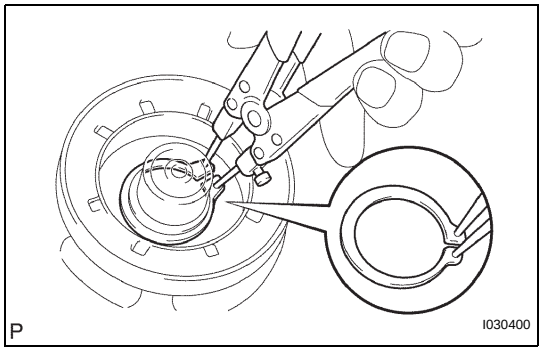
(d) Using a snap ring expander, remove the snap ring and then remove the magnetic clutch rotor.

NOTICE:

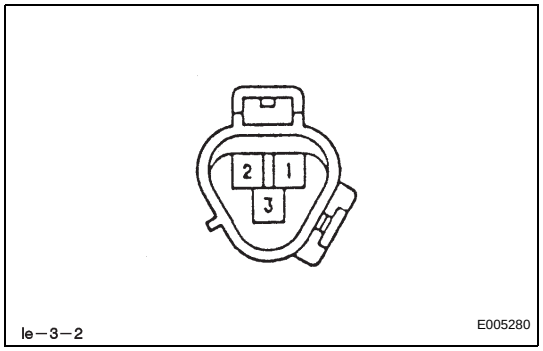
Take care not to damage the seal cover of the bearing when removing the snap ring.

(e) Disconnect the connector.

(f) Remove the screw.



(g) Using a snap ring expander, remove the snap ring and magnetic clutch stator.



INSPECTION

1. INSPECT COMPRESSOR AND MAGNETIC CLUTCH (A/C LOCK SENSOR)

(a) Measure the resistance according to the value(s) in the table below.

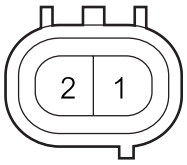
Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Always (at 20°C (68°F))	165 to 205 Ω

If the resistance is not as specified, replace the compressor and magnetic clutch.

AC

Compressor and Magnetic Clutch Connector Front View:



H E116970E04

2. INSPECT COMPRESSOR AND MAGNETIC CLUTCH (A/C COMPRESSOR SOLENOID)

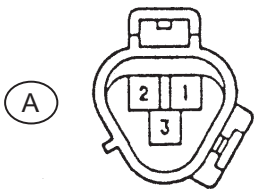
(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
2 - 1	20°C (68°F)	10 to 11 Ω

If the resistance is not as specified, replace the compressor and magnetic clutch.

A/C Compressor Connector Front View:



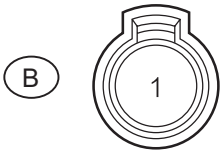
Ie–3–2 E005280E18

3. INSPECT COMPRESSOR AND MAGNETIC CLUTCH

(a) Disconnect the connector from the compressor and magnetic clutch.

AC

Magnetic Clutch Connector Front View:



H E124482E03

(b) Disconnect the connector from the magnetic clutch.

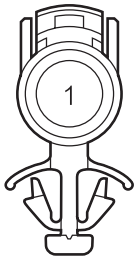
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A-3 - B-1	Always	Below 1 Ω
A-3 - Body ground	Always	10 kΩ or higher

If the resistance is not as specified, replace the compressor and magnetic clutch.

Magnetic Clutch Connector Front View:



H E113611E02

4. INSPECT MAGNETIC CLUTCH

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - Body ground	Always	3.4 to 3.8 Ω

If the resistance is not as specified, replace the magnetic clutch.

(b) When connector terminal 1 is connected to the positive (+) battery terminal, check that the following occurs: 1) the magnetic clutch's operating sound can be heard, and 2) the magnetic clutch's hub and rotor lock.

OK:

1):

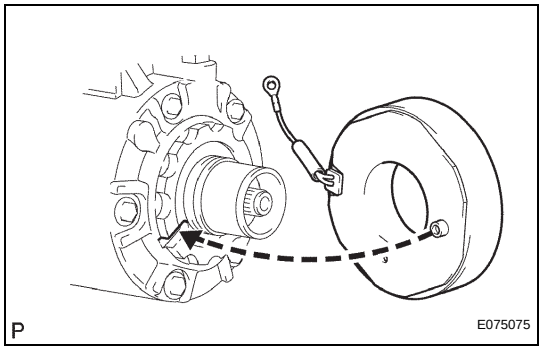
The magnetic clutch's operating sound can be heard.

2):

The magnetic clutch's hub and rotor lock.

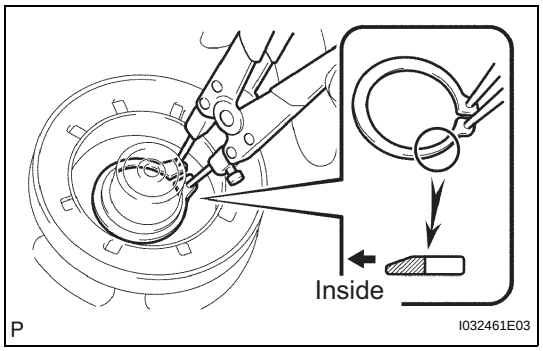
If the result is not as specified, replace the magnetic clutch.

REASSEMBLY



1. INSTALL MAGNETIC CLUTCH ASSEMBLY

(a) Install the magnetic clutch stator while aligning the protrusion on the stator with the notch on the air compressor assembly as shown in the illustration.

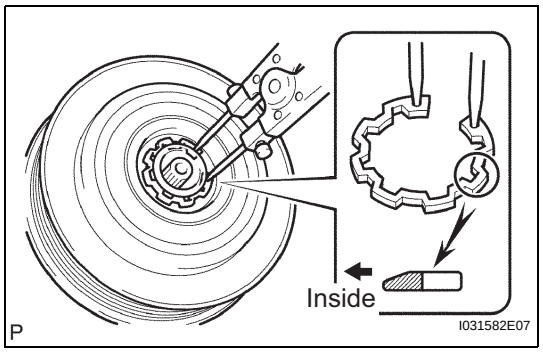


(b) Using a snap ring expander, install a new snap ring with the chamfered side facing up.

NOTICE:

Take care not to damage the seal cover of the bearing when installing the snap ring.

(c) Connect the connector.



(d) Using a snap ring expander, install the magnetic clutch rotor and a new snap ring with the chamfered side facing up.

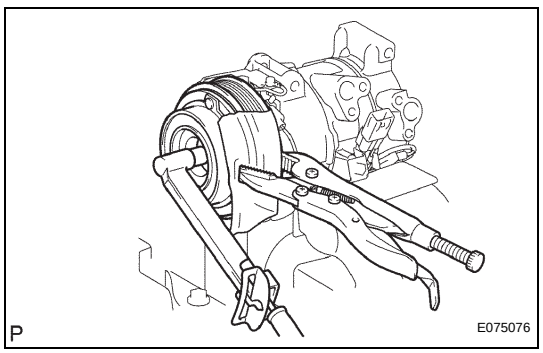
NOTICE:

- **Do not expand the snap ring by more than 35.5 mm (1.39 in.) when installing it.**
- **Do not damage the seal cover of the bearing when installing the snap ring.**

(e) Install the magnetic clutch washer and magnetic clutch hub.

NOTICE:

Do not change the combination of the magnetic clutch washers used before disassembly.



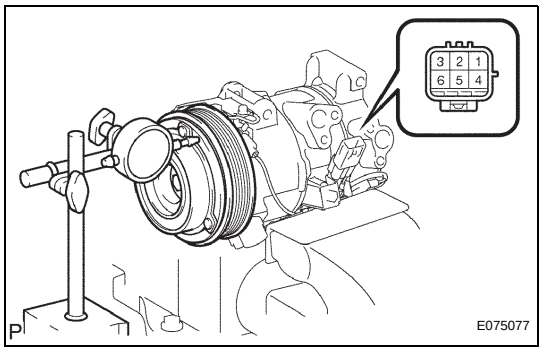
(f) Using vise pliers, hold the magnetic clutch hub and install the bolt.

Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)

NOTICE:

Make sure that there is no foreign matter or oil on the compressor shaft, bolt, and clutch hub.

AC



2. INSPECT MAGNETIC CLUTCH CLEARANCE

(a) Set the dial indicator to the magnetic clutch hub.

(b) Connect the battery positive lead to terminal 1 of the magnetic clutch connector, and the negative lead to the ground wire. Turn the magnetic clutch on and off and measure the clearance.

Standard clearance:

0.26 to 0.60 mm (0.010 to 0.024 in.)

If the measured value is not within the standard range, remove the magnetic clutch hub and adjust it with magnetic clutch washers.

NOTICE:

Adjustment should be performed with 3 or less magnetic clutch washers.

(c) Remove the compressor and magnetic clutch from the vise.

3. ADJUST COMPRESSOR OIL LEVEL

(a) When replacing the compressor and magnetic clutch with a new one, gradually discharge the inert gas (helium) from the service valve, and drain the following amount of oil from the new compressor and magnetic clutch before installation.

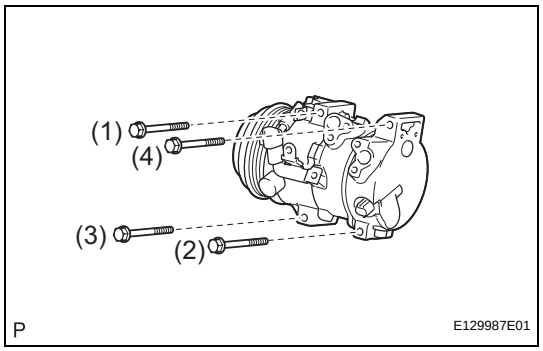
Standard:

(Oil capacity inside the new compressor and magnetic clutch: 130 + 15 cc (4.6 + 0.51 fl.oz.)) - (Remaining oil amount in the removed compressor and magnetic clutch) = (Oil amount to be removed from the new compressor when replacing)

NOTICE:

- **When checking the compressor oil level, observe the precautions on the cooler removal/installation.**
- **If a new compressor and magnetic clutch is installed without removing some oil, due to the oil remaining in the pipes of the vehicle, the oil amount will be too large. This prevents heat exchange in the refrigerant cycle and causes refrigerant failure.**
- **If the volume of oil remaining in the removed compressor and magnetic clutch is too small, check for oil leakage.**
- **Be sure to use ND-OIL 8 or equivalent for compressor oil.**

AC



INSTALLATION

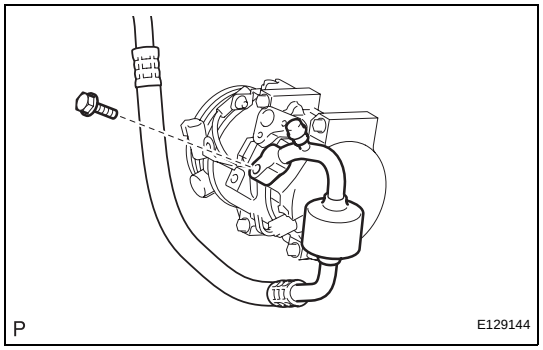
1. INSTALL COMPRESSOR AND MAGNETIC CLUTCH

(a) Install the compressor and magnetic clutch with the 4 bolts.

Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)

NOTICE:

Tighten the bolts in the order shown in the illustration to install the compressor and magnetic clutch.



2. INSTALL NO. 1 COOLER REFRIGERANT SUCTION HOSE

(a) Remove the attached vinyl tape from the hose.

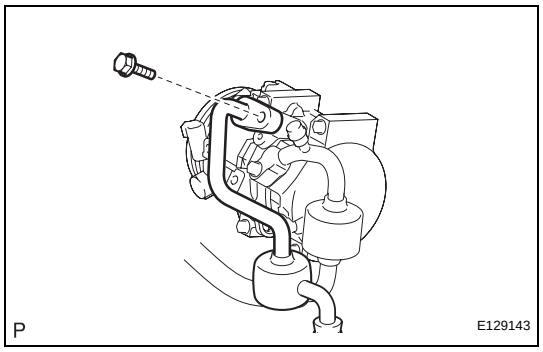
(b) Apply sufficient compressor oil to a new O-ring and the fitting surface of the compressor and magnetic clutch.

Compressor oil:
ND-OIL 8 or equivalent

(c) Install the O-ring onto the No. 1 cooler refrigerant suction hose.

(d) Install the No. 1 cooler refrigerant suction hose onto the compressor and magnetic clutch with the bolt.

Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)



3. INSTALL NO. 1 COOLER REFRIGERANT DISCHARGE HOSE

(a) Remove the attached vinyl tape from the hose.

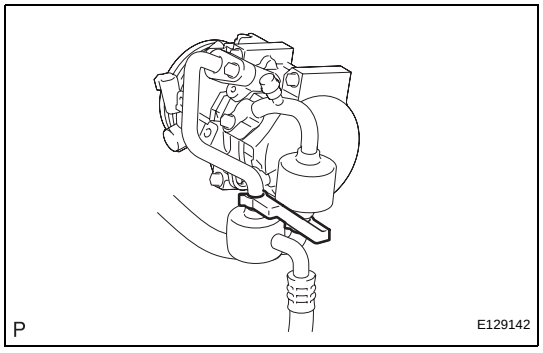
(b) Apply sufficient compressor oil to a new O-ring and the fitting surface of the compressor and magnetic clutch.

Compressor oil:
ND-OIL 8 or equivalent

(c) Install the O-ring onto the No. 1 cooler refrigerant discharge hose sub-assembly.

(d) Install the No. 1 cooler refrigerant discharge hose onto the compressor and magnetic clutch with the bolt.

Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)



4. INSTALL PIPING CLAMP

(a) Install the piping clamp to the No. 1 cooler refrigerant suction hose and No. 1 cooler refrigerant discharge hose.

5. INSTALL GENERATOR ASSEMBLY (See page CH-22)

6. INSTALL V-RIBBED BELT (See page EM-7)

7. INSTALL RADIATOR ASSEMBLY (See page CO-31)

8. INSTALL FAN SHROUD (See page CO-32)

9. INSTALL RADIATOR SUPPORT UPPER (See page CO-32)

10. INSTALL NO. 1 OIL COOLER OUTLET TUBE (for Automatic Transaxle) (See page CO-33)

AC

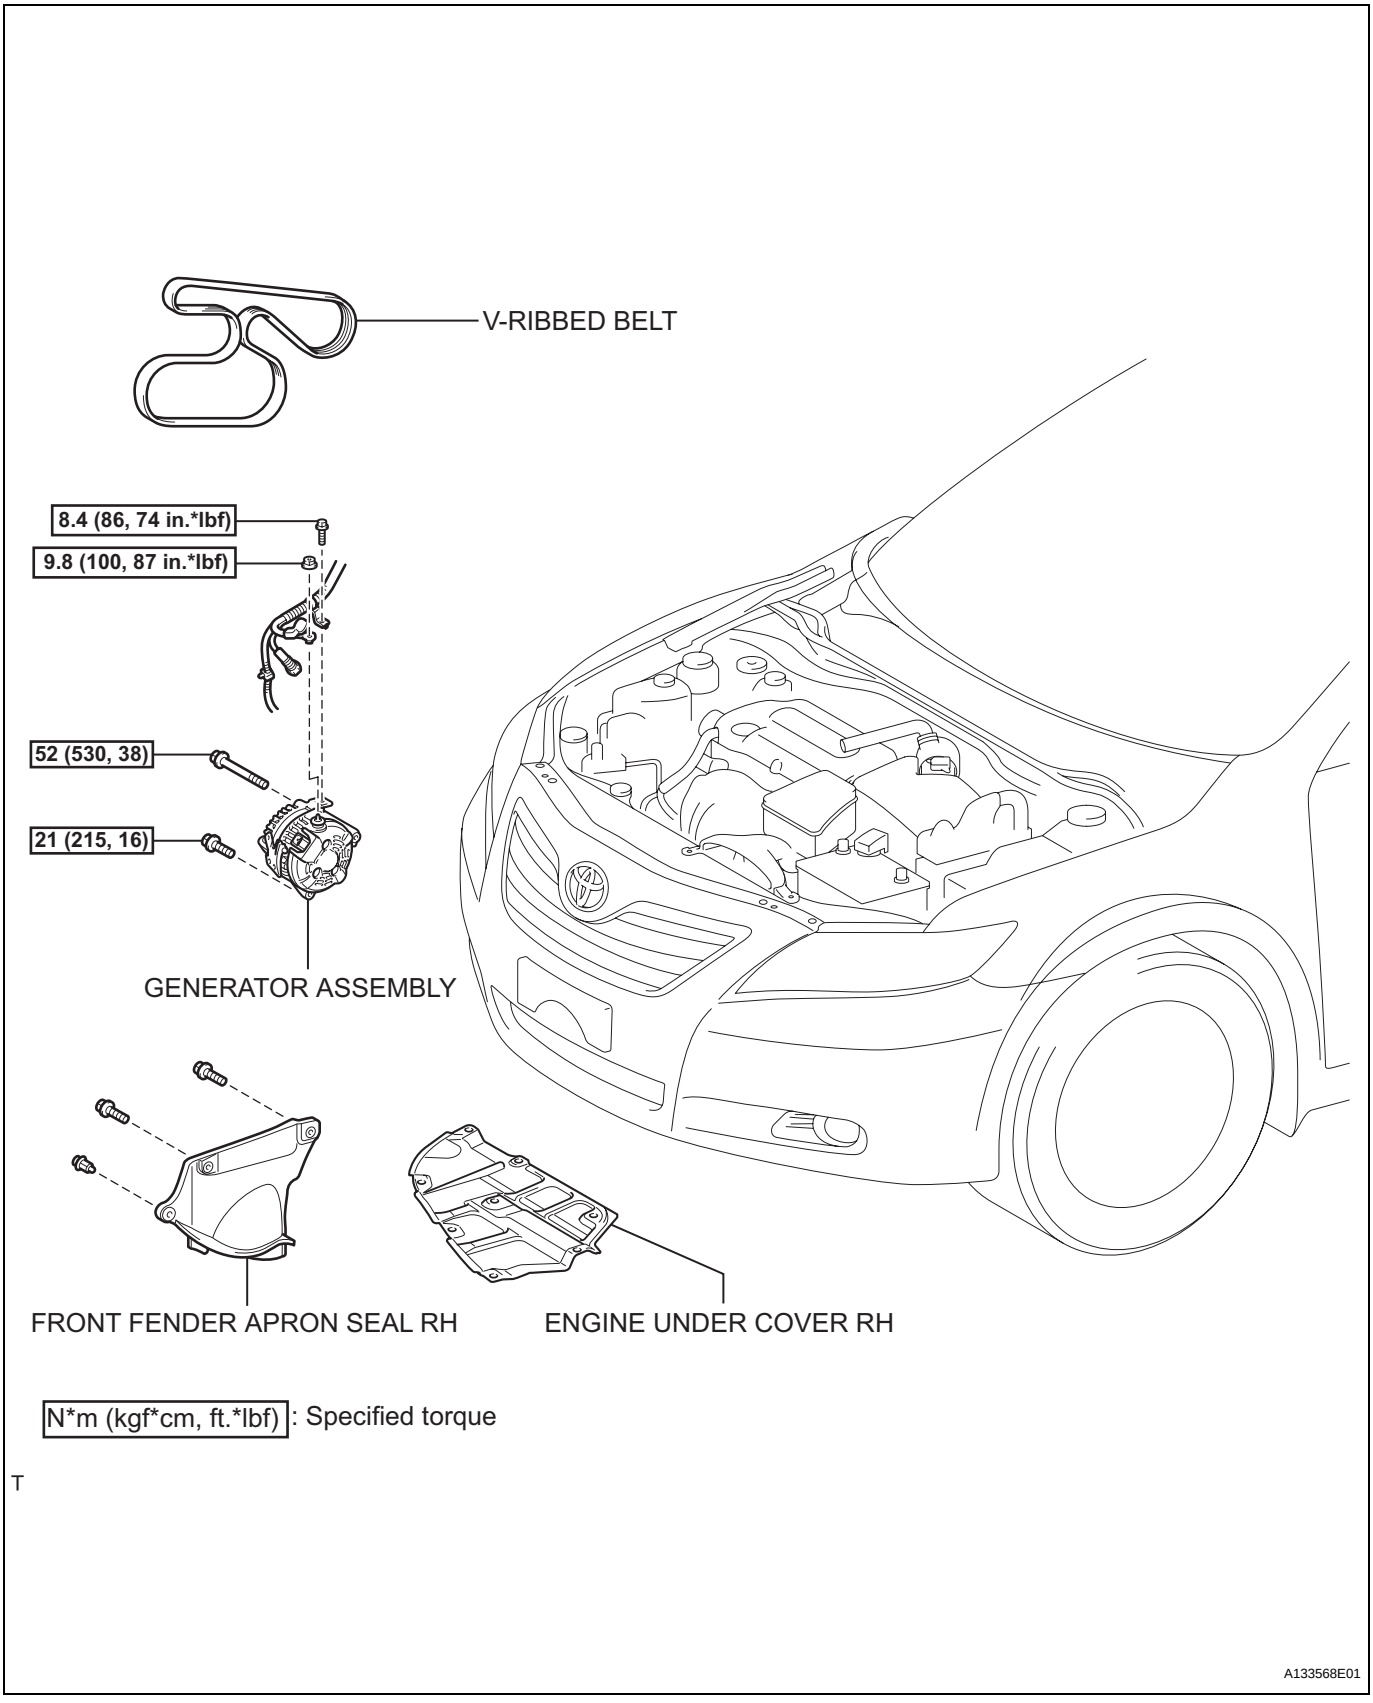
11. INSTALL NO. 1 OIL COOLER INLET TUBE (for Automatic Transaxle) (See page CO-33)
12. CONNECT RADIATOR OUTLET HOSE (See page CO-33)
13. CONNECT RADIATOR INLET HOSE (See page CO-33)
14. CONNECT RADIATOR RESERVE TANK HOSE (See page CO-34)
15. INSTALL FRONT BUMPER ENERGY ABSORBER (See page ET-10)
16. INSTALL FRONT BUMPER ASSEMBLY (w/o Fog Light) (See page ET-13)
17. INSTALL FRONT BUMPER ASSEMBLY (w/ Fog Light) (See page ET-14)
18. INSTALL NO. 1 AIR CLEANER INLET (See page EM-49)
19. INSTALL AIR CLEANER CAP SUB-ASSEMBLY
20. INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-50)
21. CONNECT BATTERY NEGATIVE TERMINAL
22. ADD ENGINE COOLANT (See page CO-6)
23. CHECK FOR ENGINE COOLANT LEAKS (See page CO-1)
24. CHARGE WITH REFRIGERANT (See page AC-125)
25. WARM UP ENGINE (See page AC-126)
26. CHECK FOR REFRIGERANT LEAKS (See page AC-126)
27. INSTALL V-BANK COVER SUB-ASSEMBLY (See page EM-52)
28. INSTALL COOL AIR INTAKE DUCT SEAL (See page EM-52)
29. INSTALL ENGINE UNDER COVER RH
30. INSTALL ENGINE UNDER COVER LH
31. INSTALL FRONT WHEEL OPENING EXTENSION PAD RH
32. INSTALL FRONT WHEEL OPENING EXTENSION PAD LH
33. INSTALL FRONT FENDER APRON SEAL RH
34. INSTALL FRONT WHEEL RH
35. VEHICLE PREPARATION FOR FOG LIGHT AIMING (w/ Fog Light) (See page LI-79)
36. PREPARATION FOR FOG LIGHT AIMING (w/ Fog Light) (See page LI-80)

37. **INSPECT FOG LIGHT AIMING (w/ Fog Light) (See page LI-81)**

38. **ADJUST FOG LIGHT AIMING (w/ Fog Light) (See page LI-82)**

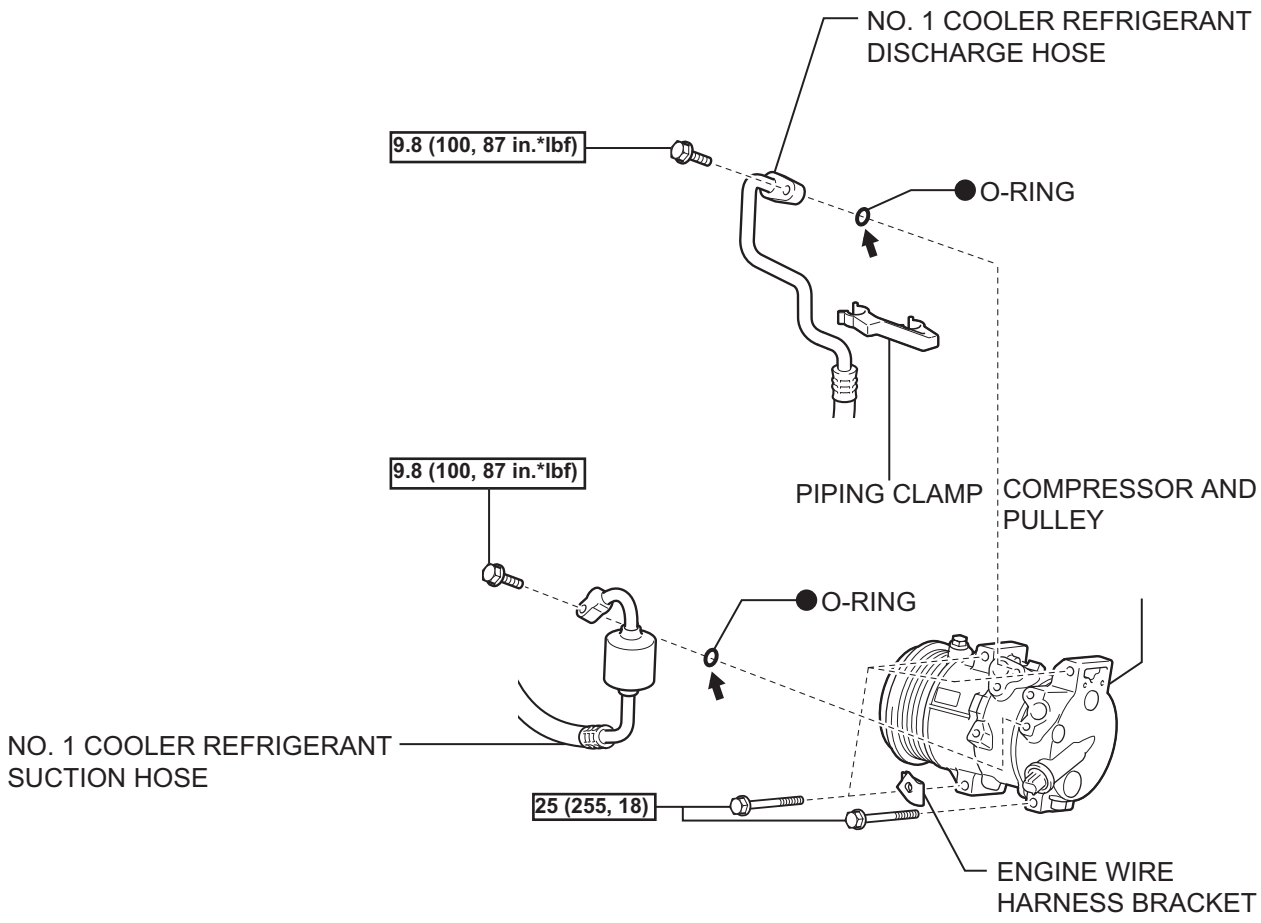
COMPRESSOR AND PULLEY (for 2AZ-FE)

COMPONENTS



AC

T



AC

← Compressor oil ND-OIL 8 or equivalent

● Non-reusable part

N*m (kgf*cm, ft.*lbf)

P

E129149E01

ON-VEHICLE INSPECTION

1. INSPECT COMPRESSOR FOR METALLIC SOUND

(a) Check if there is abnormal metallic sound from the compressor when the A/C switch is on and the compressor operates.
If abnormal metallic sound is heard, replace the compressor and pulley.

2. INSPECT REFRIGERANT PRESSURE

HINT:
(See page AC-120)

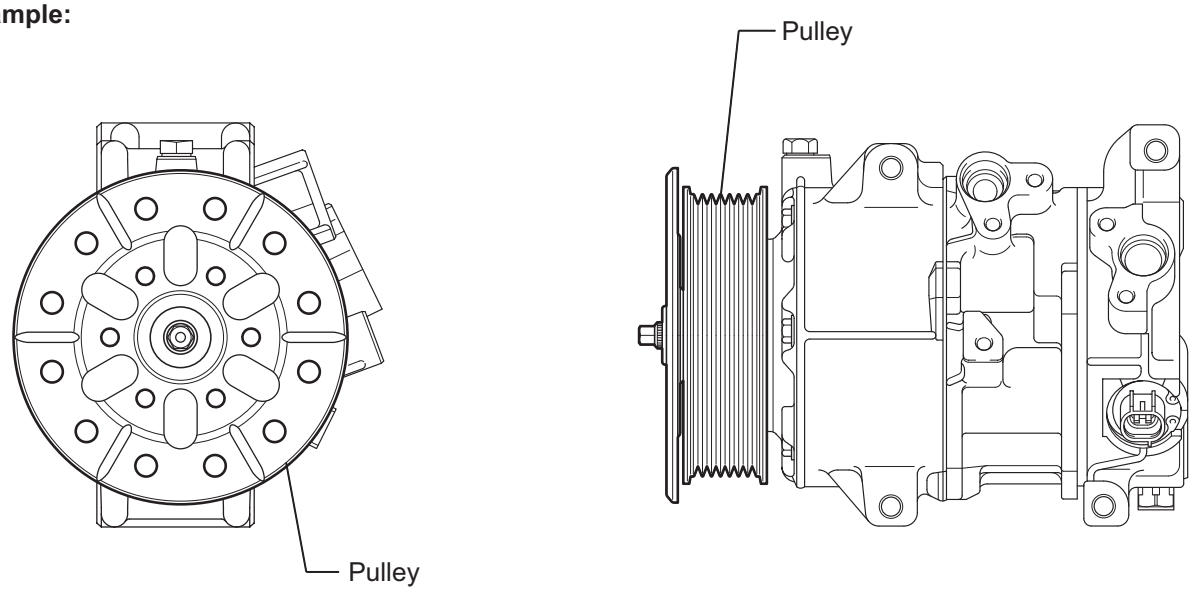
3. INSPECT FOR LEAKAGE OF REFRIGERANT

(a) Using a gas leak detector, check for leakage of refrigerant.
If there is any leakage, replace the compressor and pulley.

4. INSPECT COMPRESSOR AND PULLEY

(a) Check operation of compressor and pulley.
(1) Start the engine.
(2) Inspect the compressor pulley.

Example:



P E130370E02

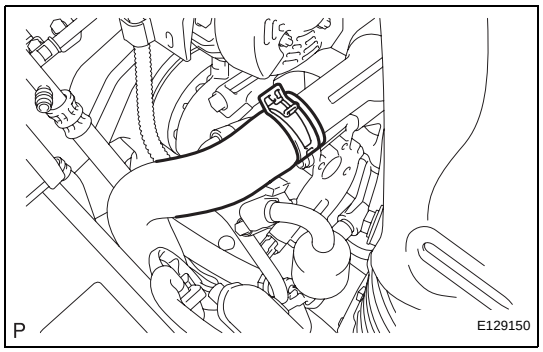
Standard:

The compressor shaft rotates along with the pulley.

If the result is not as specified, replace the compressor and pulley.

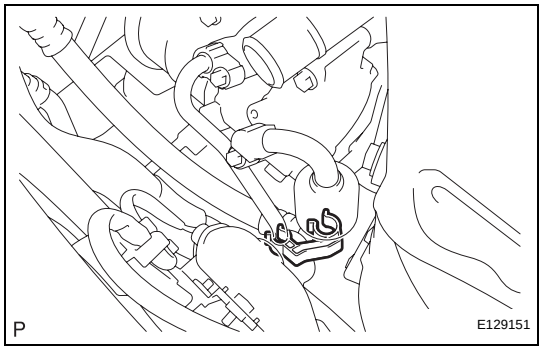
REMOVAL

1. **RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM (See page AC-125)**
2. **DISCONNECT REFRIGERANT FROM REFRIGERATION SYSTEM**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment (See page RS-1)
3. **DRAIN ENGINE COOLANT (See page CO-5)**
4. **REMOVE FRONT WHEEL RH**
5. **REMOVE ENGINE UNDER COVER RH**
6. **REMOVE FRONT FENDER APRON SEAL RH**
7. **REMOVE V-RIBBED BELT (See page EM-6)**
8. **REMOVE GENERATOR ASSEMBLY (See page CH-11)**
9. **DISCONNECT RADIATOR HOSE OUTLET**
   (a) Using pliers, grip the claws of the clip and slide the clip to disconnect the radiator hose outlet.

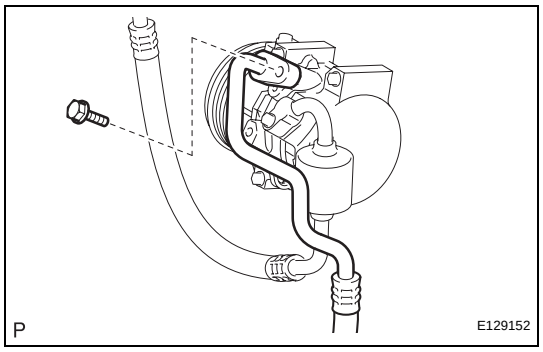


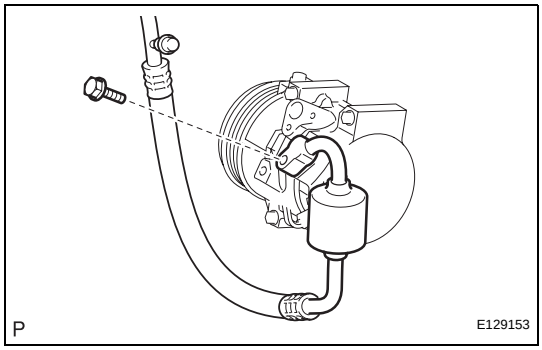
AC

10. **REMOVE PIPING CLAMP**
    (a) Remove the piping clamp from the No. 1 cooler refrigerant discharge hose and No. 1 cooler refrigerant suction hose.



11. **DISCONNECT NO. 1 COOLER REFRIGERANT DISCHARGE HOSE**
    (a) Remove the bolt and disconnect the No. 1 cooler refrigerant discharge hose from the compressor and pulley.
    (b) Remove the O-ring from the No. 1 cooler refrigerant discharge hose.
    NOTICE:
    Seal the openings of the disconnected parts using vinyl tape to prevent entry of moisture and foreign matter.





12. DISCONNECT NO. 1 COOLER REFRIGERANT SUCTION HOSE

(a) Remove the bolt and disconnect the No. 1 cooler refrigerant suction hose from the compressor and pulley.

(b) Remove the O-ring from the No. 1 cooler refrigerant suction hose.

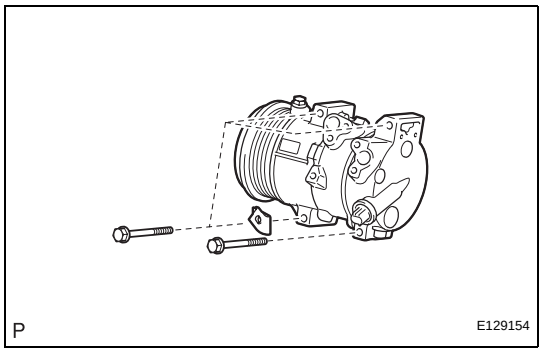
NOTICE:

Seal the openings of the disconnected parts using vinyl tape to prevent entry of moisture and foreign matter.

13. REMOVE COMPRESSOR AND PULLEY

(a) Disconnect the connector.

(b) Remove the 4 bolts, engine wire harness bracket, and the compressor and pulley.



INSPECTION

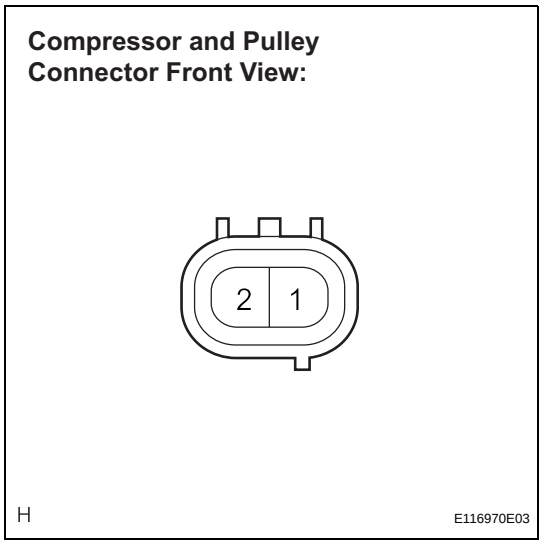
1. INSPECT COMPRESSOR AND PULLEY (A/C COMPRESSOR SOLENOID)

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
2 - 1	20°C (68°F)	10 to 11 Ω

If the resistance is not as specified, replace the compressor and pulley.



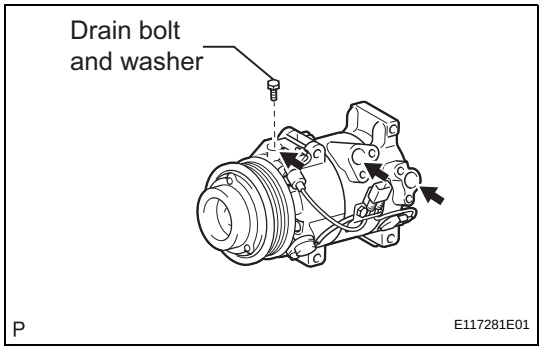
INSTALLATION

1. ADJUST COMPRESSOR OIL LEVEL

(a) When replacing the cooler compressor assembly with a new one, gradually discharge the inert gas (helium) from the service valve, and drain the following amount of oil from the vents indicated by the arrows in the illustration before installation.

HINT:

The drain bolt and washer can be reused.

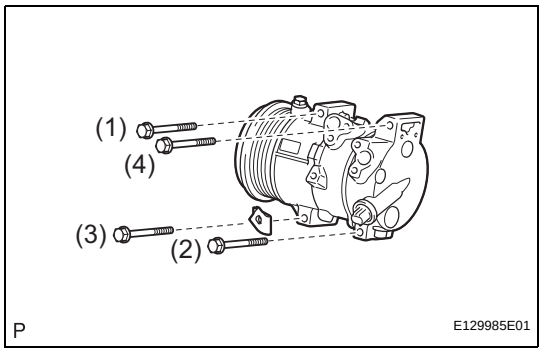


Standard:

AC (Oil capacity inside the new compressor and magnetic clutch: 160 + 15 cc (5.4 + 0.51 fl.oz.)) - (Remaining oil amount in the removed compressor and magnetic clutch) = (Oil amount to be removed from the new compressor when replacing)

NOTICE:

- **If a new compressor and magnetic clutch is installed without removing some oil, due to the oil remaining in the pipes of the vehicle, the oil amount will be too large. This prevents heat exchange in the refrigerant cycle and causes refrigeration system failure.**
- **If the volume of oil remaining in the removed compressor and magnetic clutch is too small, check for oil leakage.**
- **Be sure to use ND-OIL 8 or equivalent for compressor oil.**



2. INSTALL COMPRESSOR AND PULLEY

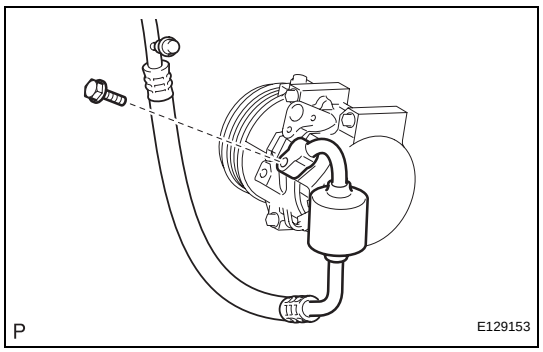
(a) Install the compressor and pulley and the engine wire harness bracket with the 4 bolts.

Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)

NOTICE:

Tighten the bolts in the order shown in the illustration to install the compressor and pulley.

AC



3. INSTALL NO. 1 COOLER REFRIGERANT SUCTION HOSE

(a) Remove the attached vinyl tape from the hose.

(b) Apply sufficient compressor oil to a new O-ring and the fitting surface of the compressor and magnetic clutch.

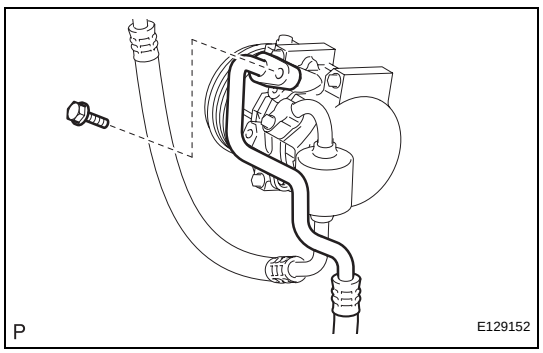
Compressor oil:

ND-OIL 8 or equivalent

(c) Install the O-ring onto the No. 1 cooler refrigerant suction hose.

(d) Install the No. 1 cooler refrigerant suction hose onto the compressor and magnetic clutch with the bolt.

Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)



4. INSTALL NO. 1 COOLER REFRIGERANT DISCHARGE HOSE

(a) Remove the attached vinyl tape from the hose.

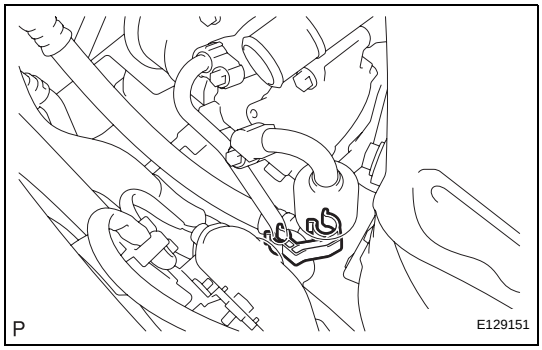
(b) Apply sufficient compressor oil to a new O-ring and the fitting surface of the compressor and magnetic clutch.

Compressor oil:

ND-OIL 8 or equivalent

(c) Install the O-ring onto the No. 1 cooler refrigerant discharge hose.

(d) Install the discharge hose sub-assembly onto the compressor and magnetic clutch with the bolt.
Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)



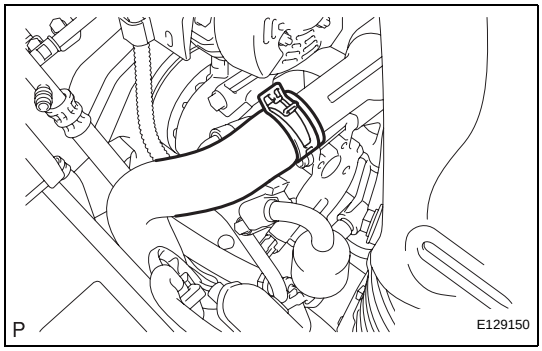
5. INSTALL PIPING CLAMP

(a) Install the piping clamp to the No. 1 cooler refrigerant suction hose and No. 1 cooler refrigerant discharge hose.

6. INSTALL GENERATOR ASSEMBLY (See page CH-19)

7. INSTALL V-RIBBED BELT (See page EM-6)

8. INSTALL FRONT FENDER APRON SEAL RH



9. INSTALL RADIATOR HOSE OUTLET

(a) Install the radiator hose outlet and attach the clip.

10. CONNECT BATTERY NEGATIVE TERMINAL

11. ADD ENGINE COOLANT (See page CO-5)

12. CHECK FOR ENGINE COOLANT LEAKS
NOTICE:
Do not turn the A/C on before charging with refrigerant. Doing so will cause the cooler compressor to work without refrigerant, resulting in overheating of the cooler compressor.

13. INSTALL ENGINE UNDER COVER RH

14. INSTALL FRONT WHEEL RH

15. CHARGE WITH REFRIGERANT (See page AC-125)

16. WARM UP ENGINE (See page AC-126)

17. CHECK FOR REFRIGERANT LEAKS (See page AC-126)

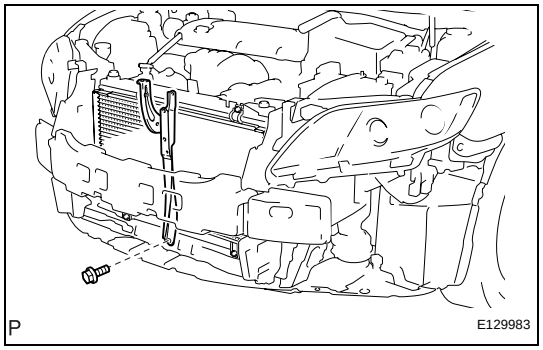
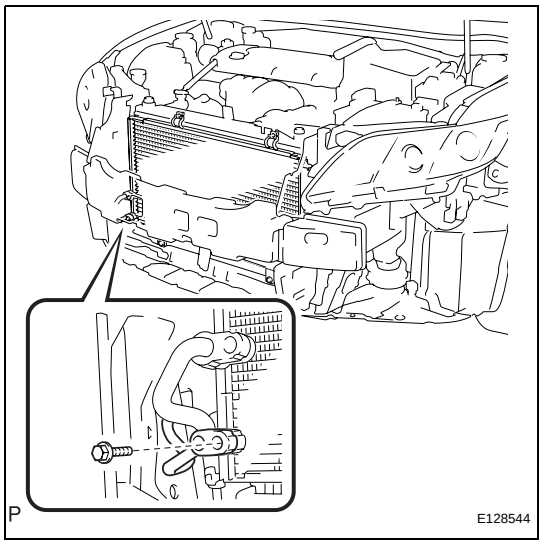
REMOVAL

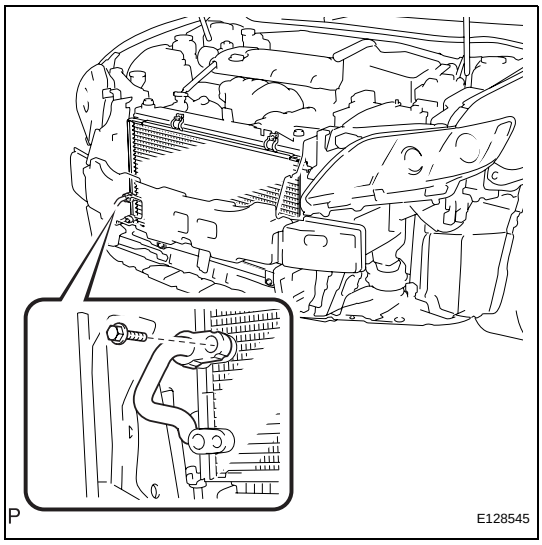
1. **RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM**
2. **REMOVE V-BANK COVER SUB-ASSEMBLY (for 2GR-FE) (See page EM-23)**
3. **REMOVE COOL AIR INTAKE DUCT SEAL (for 2GR-FE) (See page EM-23)**
4. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (for 2AZ-FE) (See page ES-416)**
5. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (for 2GR-FE) (See page ES-503)**
6. **REMOVE AIR CLEANER INLET ASSEMBLY (for 2AZ-FE) (See page EM-94)**
7. **REMOVE AIR CLEANER INLET SUB-ASSEMBLY (for 2GR-FE) (See page EM-24)**
8. **REMOVE NO. 1 AIR CLEANER INLET (for 2GR-FE) (See page EM-24)**
9. **REMOVE FRONT BUMPER ASSEMBLY (w/o Fog Light) (See page ET-5)**
10. **REMOVE FRONT BUMPER ASSEMBLY (w/ Fog Light) (See page ET-6)**
11. **REMOVE RADIATOR SUPPORT UPPER**
12. **REMOVE HOOD LOCK SUPPORT SUB-ASSEMBLY**
    (a) Remove the bolt and hood lock support sub-assembly.



13. **DISCONNECT AIR CONDITIONER TUBE AND ACCESSORY**
    (a) Remove the bolt and disconnect the air conditioning tube assembly from the condenser.
    (b) Remove the O-ring from the air conditioning tube assembly.
    NOTICE:
    Seal the openings of the disconnected parts using vinyl tape to prevent entry of moisture and foreign matter.



AC



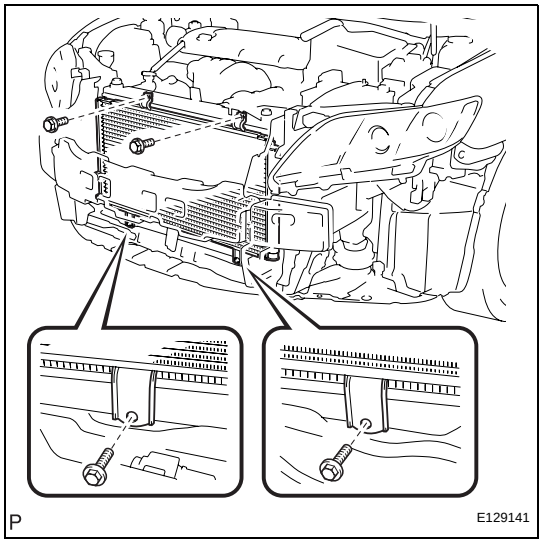
14. DISCONNECT COOLER REFRIGERANT DISCHARGE PIPE

(a) Remove the bolt and disconnect the cooler refrigerant discharge pipe from the condenser.

(b) Remove the O-ring from the cooler refrigerant discharge pipe.

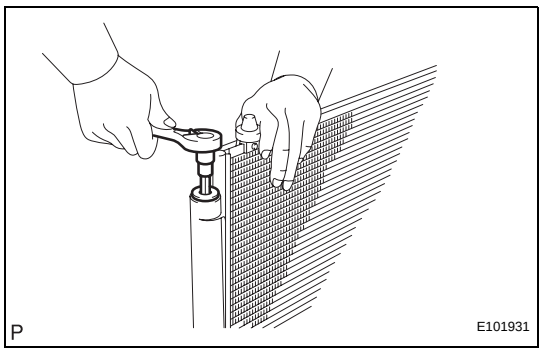
NOTICE:

Seal the openings of the disconnected parts using vinyl tape to prevent entry of moisture and foreign matter.



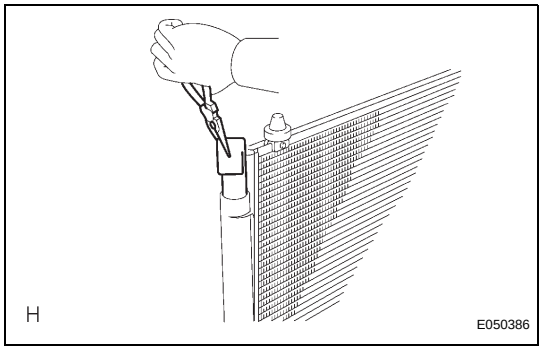
15. REMOVE COOLER CONDENSER ASSEMBLY

(a) Remove the 4 bolts and condenser.



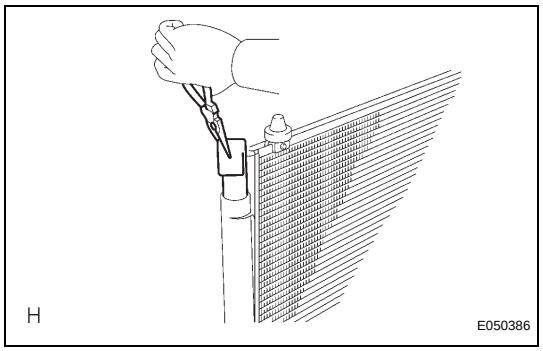
16. REMOVE COOLER DRYER

(a) Using a 14 mm straight hexagon wrench, remove the cap from the modulator.



(b) Using pliers, remove the cooler dryer.

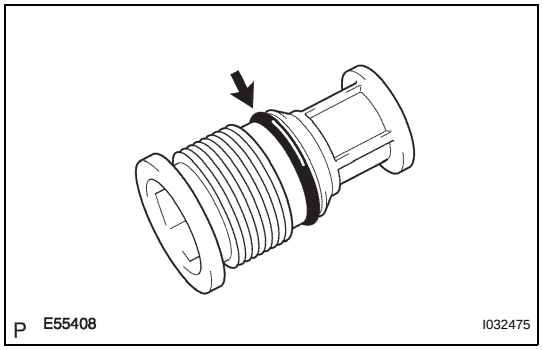
AC



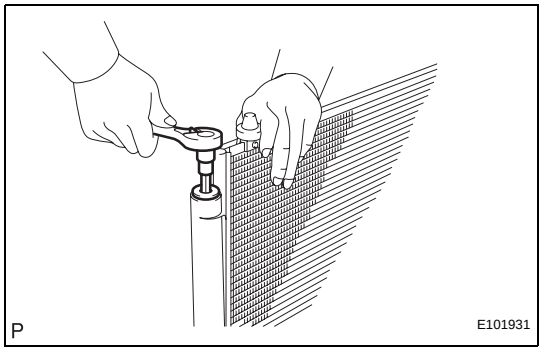
INSTALLATION

1. INSTALL COOLER DRYER

(a) Using pliers, install the cooler dryer to the modulator.

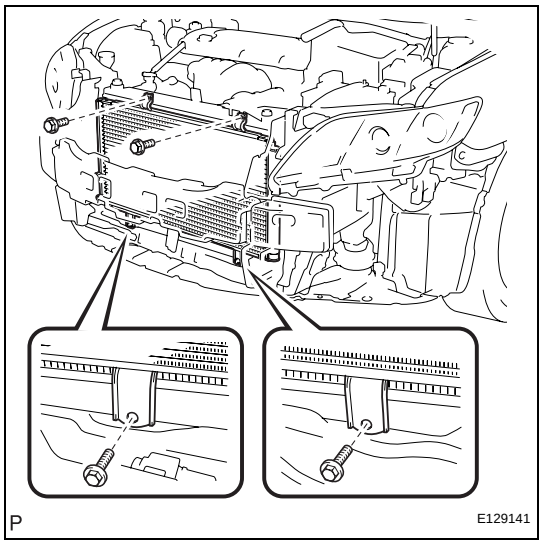


(b) Apply sufficient compressor oil to an O-ring and cap fitting surface.
Compressor oil:
ND-OIL 8 or equivalent



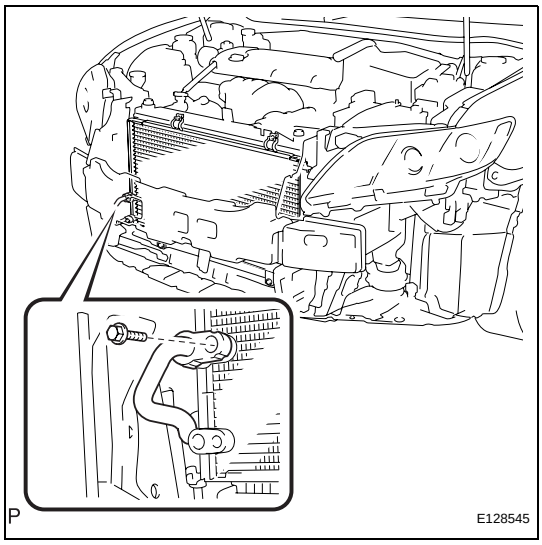
(c) Using a straight hexagon wrench 14 mm, install the cap to the cooler condenser core.
Torque: 2.9 N*m (30 kgf*cm, 26 in.*lbf)

AC

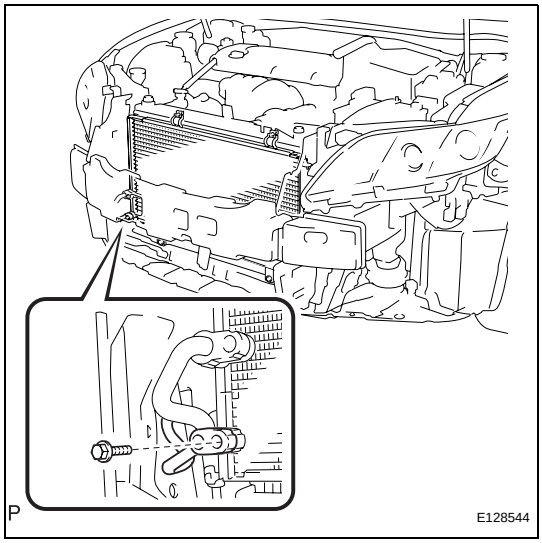


2. INSTALL COOLER CONDENSER ASSEMBLY

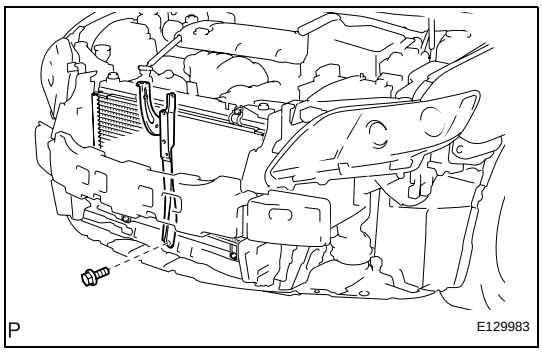
(a) Install the cooler condenser assembly with the 4 bolts.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)
HINT:
If the condenser is replaced with a new one, add compressor oil to the new condenser.
Capacity:
40 cc (1.4 fl. oz.)
Compressor oil:
ND-8 or equivalent



3. **INSTALL COOLER REFRIGERANT DISCHARGE PIPE**
   (a) Remove the attached vinyl tape from the pipe and the connecting part of the cooler condenser assembly.
   (b) Sufficiently apply compressor oil to a new O-ring and the fitting surface of the pipe joint.
   Compressor oil:
   ND-OIL 8 or equivalent
   (c) Install the O-ring on the cooler refrigerant discharge pipe.
   Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)



4. **INSTALL AIR CONDITIONER TUBE AND ACCESSORY**
   (a) Remove the attached vinyl tape from the tube and the connecting part of the cooler condenser assembly.
   (b) Sufficiently apply compressor oil to a new O-ring and the fitting surface of the tube joint.
   Compressor oil:
   ND-OIL 8 or equivalent
   (c) Install the O-ring on the air conditioning tube assembly.
   (d) Install the air conditioning tube assembly on the cooler condenser assembly with the bolt.
   Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)



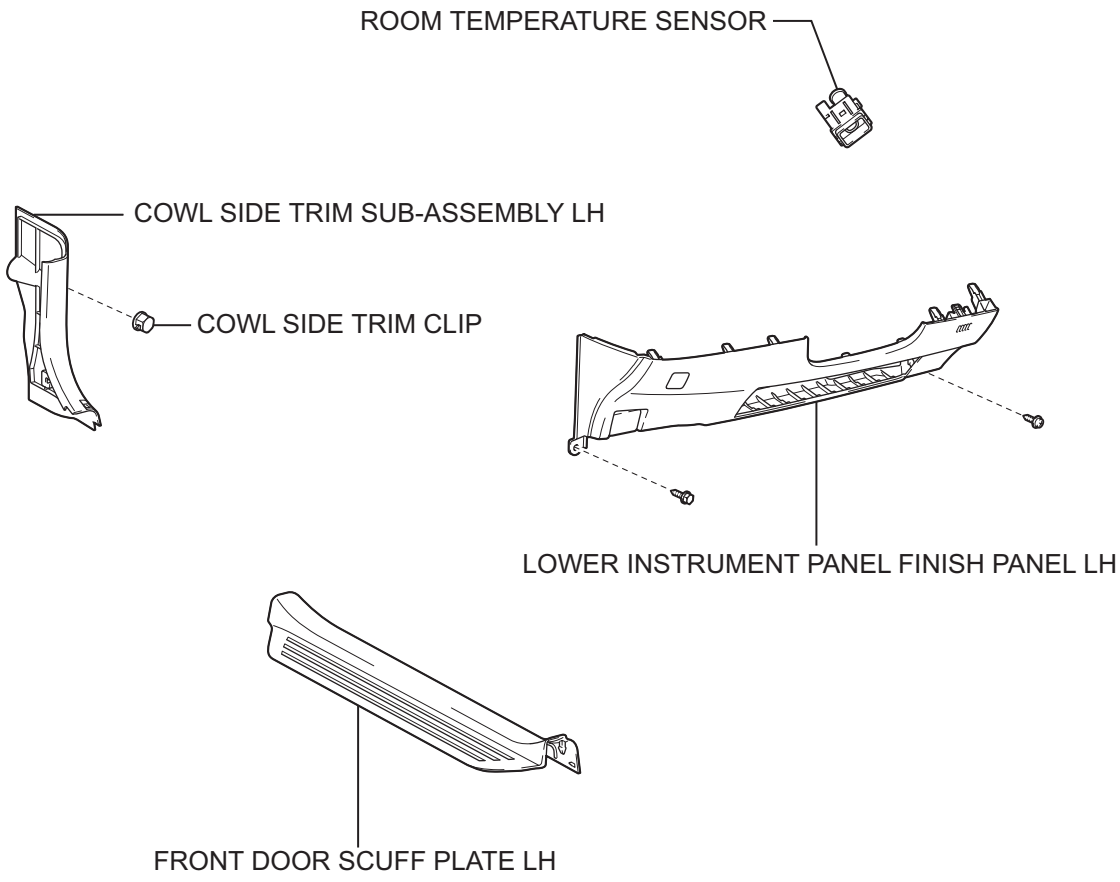
5. **INSTALL HOOD LOCK SUPPORT SUB-ASSEMBLY**
   (a) Install the hood lock support sub-assembly with the bolt.
   Torque: 7.5 N*m (77 kgf*cm, 66 in.*lbf)
6. **INSTALL RADIATOR SUPPORT UPPER**
7. **INSTALL FRONT BUMPER ASSEMBLY (w/o Fog Light) (See page ET-13)**
8. **INSTALL FRONT BUMPER ASSEMBLY (w/ Fog Light) (See page ET-14)**
9. **INSTALL NO. 1 AIR CLEANER INLET (for 2GR-FE) (See page EM-49)**
10. **INSTALL AIR CLEANER INLET ASSEMBLY (for 2AZ-FE) (See page EM-120)**
11. **INSTALL AIR CLEANER INLET SUB-ASSEMBLY (for 2GR-FE) (See page EM-50)**
12. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (for 2AZ-FE) (See page ES-419)**

AC

13. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (for 2GR-FE) (See page ES-506)**
14. **INSTALL COOL AIR INTAKE DUCT SEAL (for 2GR-FE) (See page EM-52)**
15. **INSTALL V-BANK COVER SUB-ASSEMBLY (for 2GR-FE) (See page EM-52)**
16. **ADD ENGINE COOLANT (for 2AZ-FE) (See page CO-5)**
17. **ADD ENGINE COOLANT (for 2GR-FE) (See page CO-6)**
18. **CHECK FOR ENGINE COOLANT LEAKS**
19. **CHARGE WITH REFRIGERANT (See page AC-125)**
20. **WARM UP ENGINE (See page AC-126)**
21. **CHECK FOR REFRIGERANT LEAKS (See page AC-126)**

ROOM TEMPERATURE SENSOR

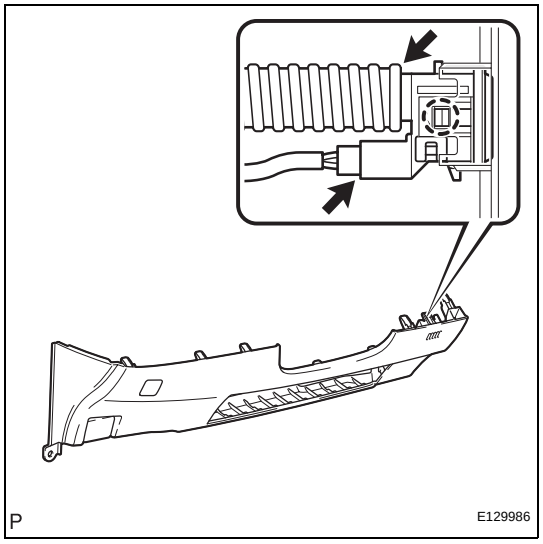
COMPONENTS



AC

REMOVAL

1. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-24)**
2. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-25)**
3. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-20)**
4. **REMOVE ROOM TEMPERATURE SENSOR**
   (a) Disconnect the connector and air hose.
   (b) Release the claw and remove the sensor.



INSPECTION

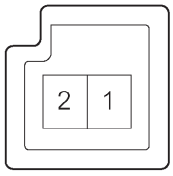
1. **INSPECT ROOM TEMPERATURE SENSOR**
   (a) Measure the resistance according to the value(s) in the table below.
   Standard resistance

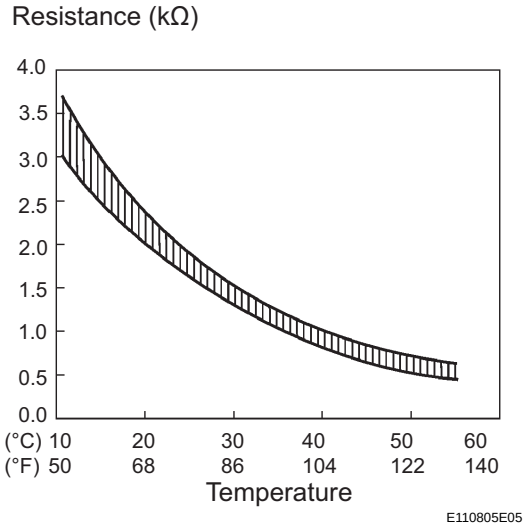
Tester Connection	Condition	Specified Condition
1 - 2	10°C (50°F)	3.00 to 3.73 kΩ
1 - 2	15°C (59°F)	2.45 to 2.88 kΩ
1 - 2	20°C (68°F)	1.95 to 2.30 kΩ
1 - 2	15°C (77°F)	1.60 to 1.80 kΩ
1 - 2	30°C (86°F)	1.28 to 1.47 kΩ
1 - 2	35°C (95°F)	1.00 to 1.22 kΩ
1 - 2	40°C (104°F)	0.80 to 1.00 kΩ
1 - 2	45°C (113°F)	0.65 to 0.85 kΩ
1 - 2	50°C (122°F)	0.50 to 0.70 kΩ
1 - 2	55°C (131°F)	0.44 to 0.60 kΩ
1 - 2	60°C (140°F)	0.36 to 0.50 kΩ

NOTICE:
- **Hold the sensor only by its connector. Touching the sensor may change the resistance value.**
- **When measuring, the sensor temperature must be the same as the ambient temperature.**

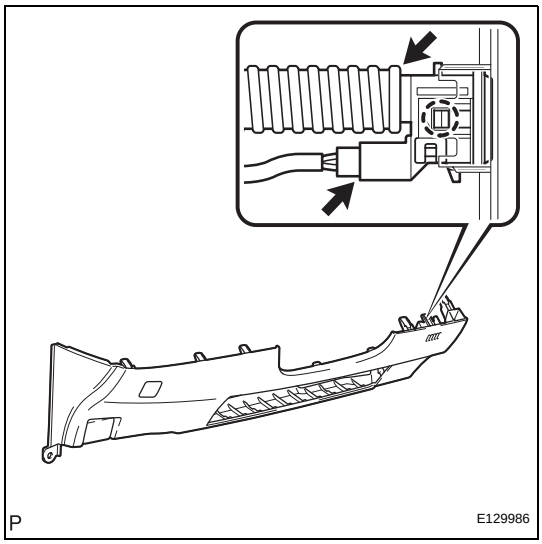
HINT:
As the temperature increases, the resistance decreases (see the graph).

A/C Room Temperature Sensor Connector Front View:





If the resistance is not as specified, replace the room temperature sensor.

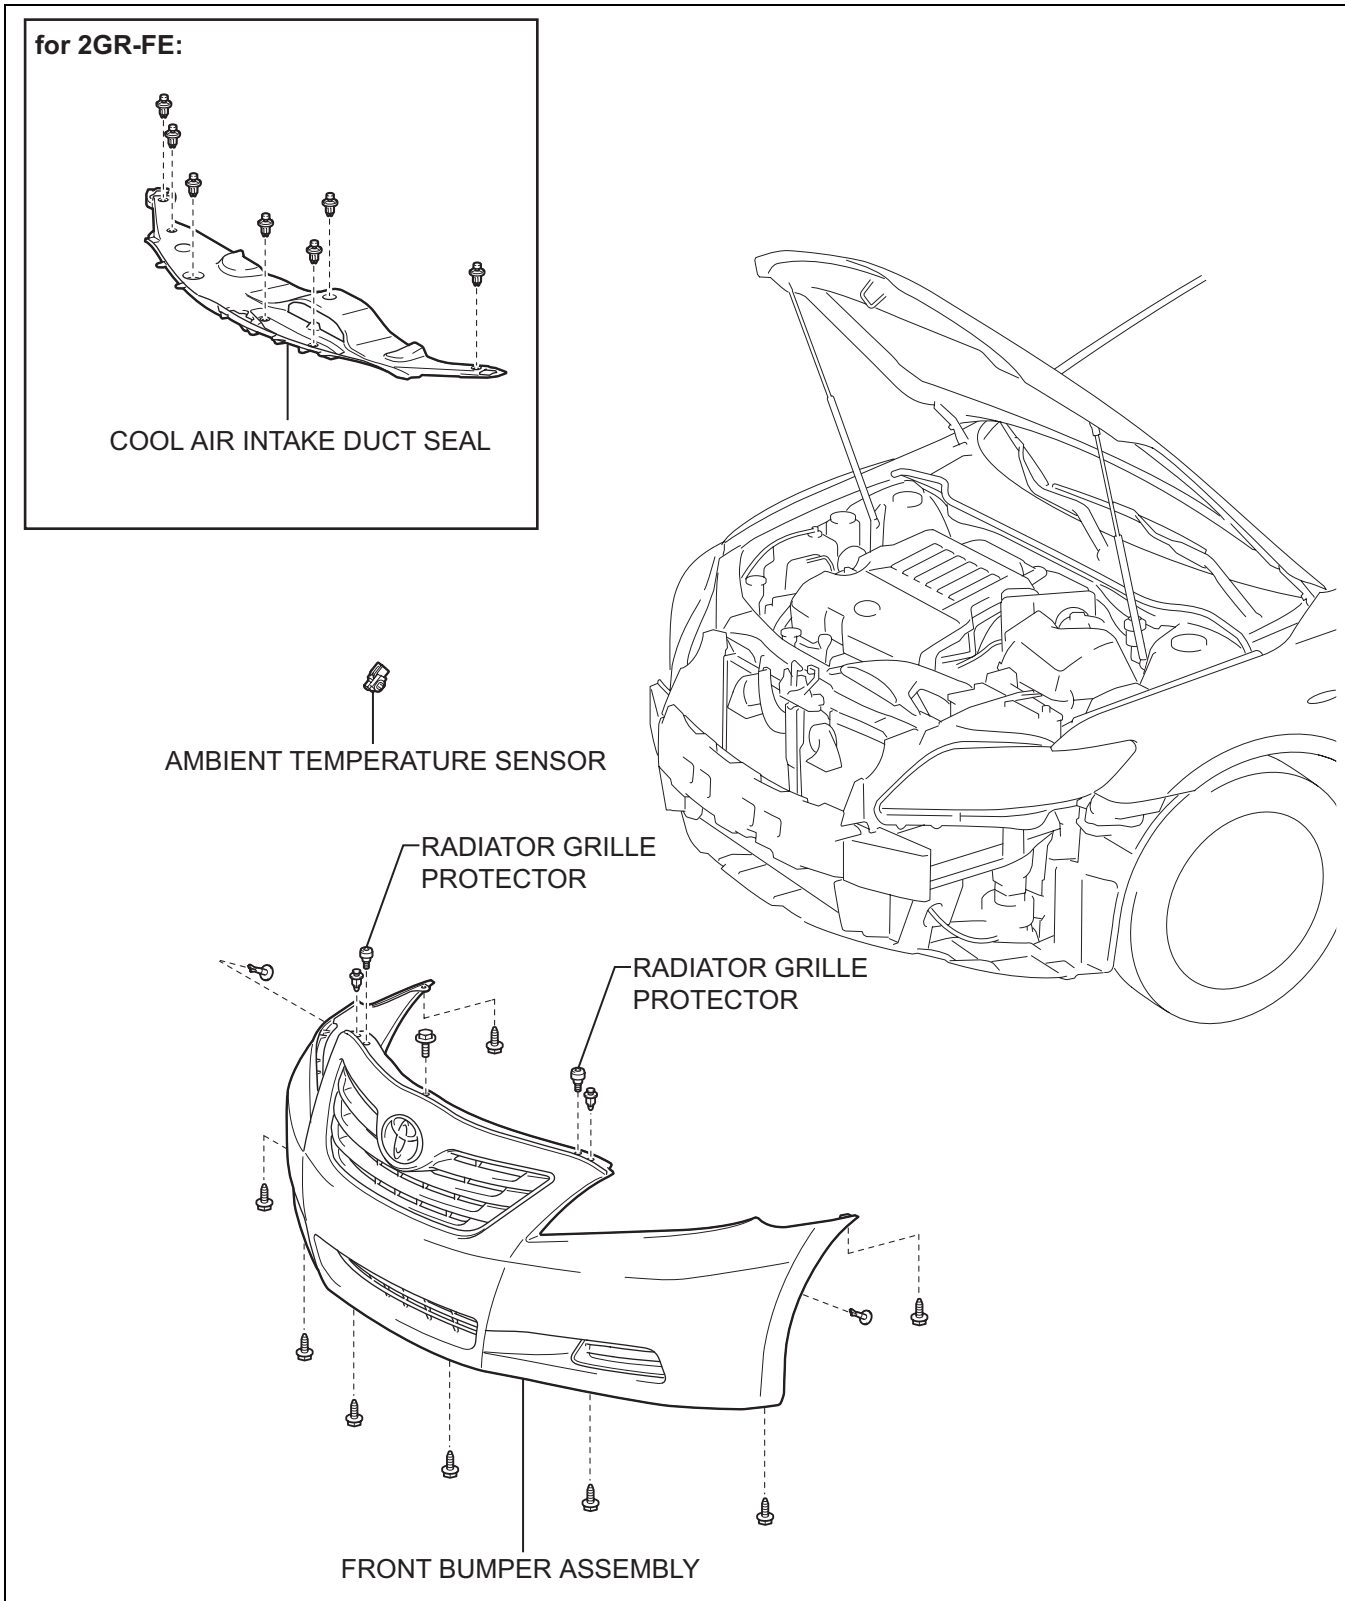


INSTALLATION

1. **INSTALL ROOM TEMPERATURE SENSOR**
   (a) Engage the claw to install the sensor.
   (b) Connect the connector and attach the air hose.
2. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-58)**
3. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-54)**
4. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-54)**

AMBIENT TEMPERATURE SENSOR

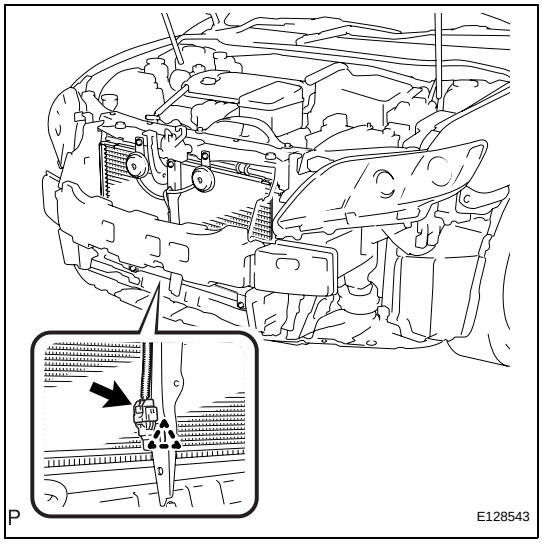
COMPONENTS



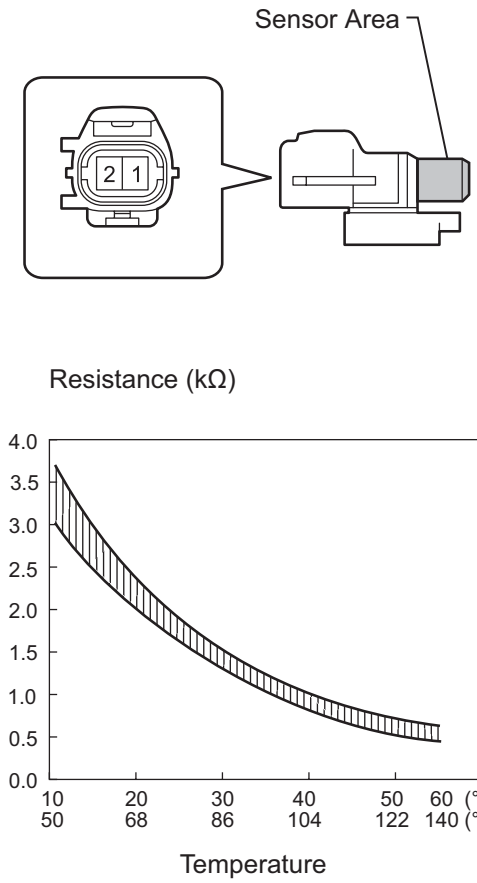
AC

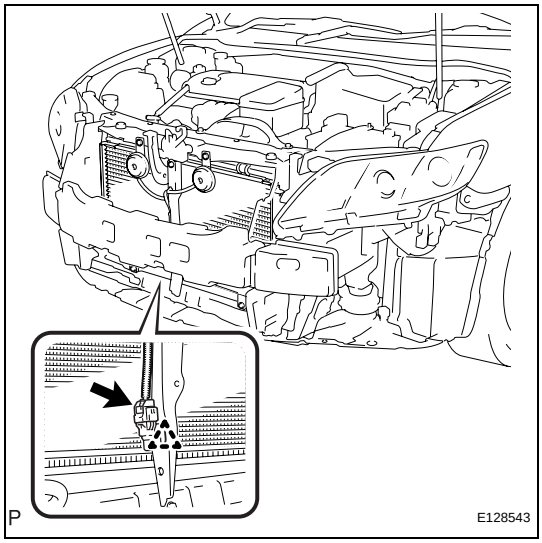
REMOVAL

1. **REMOVE COOL AIR INTAKE DUCT SEAL (for 2GR-FE) (See page ET-4)**
2. **REMOVE FRONT BUMPER ASSEMBLY (w/o Fog Light) (See page ET-5)**
3. **REMOVE FRONT BUMPER ASSEMBLY (w/ Fog Light) (See page ET-6)**
4. **REMOVE AMBIENT TEMPERATURE SENSOR**
   (a) Disconnect the connector and detach the clamp.
   (b) Remove the ambient temperature sensor.



Ambient Temperature Sensor Connector Front View:





INSPECTION

1. **INSPECT AMBIENT TEMPERATURE SENSOR**
   (a) Measure the resistance according to the value(s) in the table below.
   Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	10°C (50°F)	3.00 to 3.73 kΩ
1 - 2	15°C (59°F)	2.45 to 2.88 kΩ
1 - 2	20°C (68°F)	1.95 to 2.30 kΩ
1 - 2	25°C (77°F)	1.60 to 1.80 kΩ
1 - 2	30°C (86°F)	1.28 to 1.47 kΩ
1 - 2	35°C (95°F)	1.00 to 1.22 kΩ
1 - 2	40°C (104°F)	0.80 to 1.00 kΩ
1 - 2	45°C (113°F)	0.65 to 0.85 kΩ
1 - 2	50°C (122°F)	0.50 to 0.70 kΩ
1 - 2	55°C (131°F)	0.44 to 0.60 kΩ
1 - 2	60°C (140°F)	0.36 to 0.50 kΩ

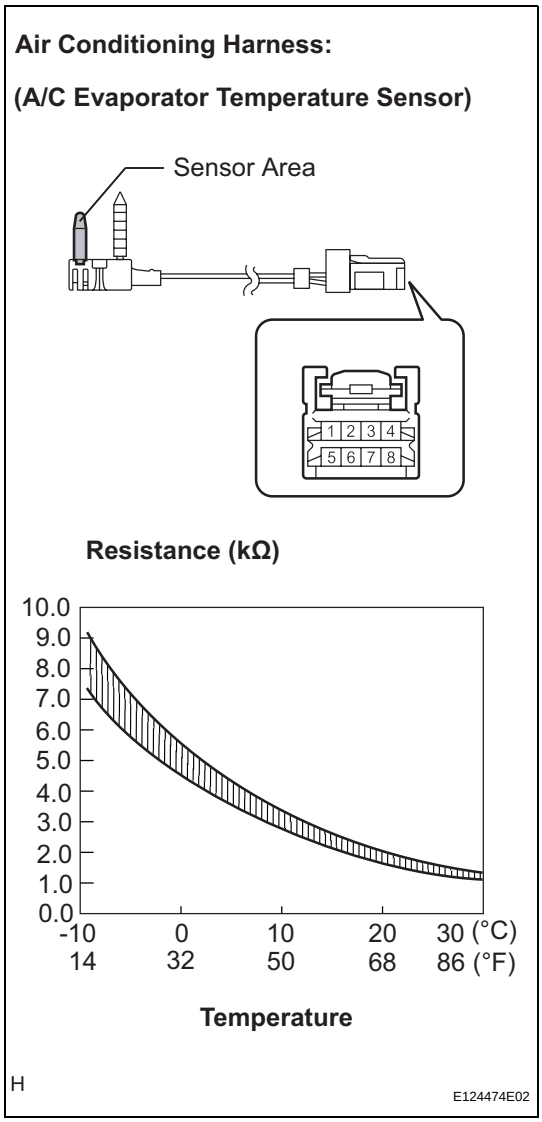
NOTICE:
- **Even slightly touching the sensor may change the resistance value. Be sure to hold the connector of the sensor.**
- **When measuring, the sensor temperature must be the same as the ambient temperature.**

HINT:
As the temperature increases, the resistance decreases (see the graph).
If the resistance is not as specified, replace the ambient temperature sensor.

AC

INSTALLATION

1. **INSTALL AMBIENT TEMPERATURE SENSOR**
   (a) Install the ambient temperature sensor with the clamp.
   (b) Connect the connector.
2. **INSTALL FRONT BUMPER ASSEMBLY (w/o Fog Light) (See page ET-13)**
3. **INSTALL FRONT BUMPER ASSEMBLY (w/ Fog Light) (See page ET-14)**
4. **INSTALL COOL AIR INTAKE DUCT SEAL**
5. **VEHICLE PREPARATION FOR FOG LIGHT AIMING (w/ Fog Light) (See page LI-79)**
6. **PREPARATION FOR FOG LIGHT AIMING (w/ Fog Light) (See page LI-80)**
7. **INSPECT FOG LIGHT AIMING (w/ Fog Light) (See page LI-81)**
8. **ADJUST FOG LIGHT AIMING (w/ Fog Light) (See page LI-82)**



EVAPORATOR TEMPERATURE SENSOR

ON-VEHICLE INSPECTION

1. INSPECT EVAPORATOR TEMPERATURE SENSOR

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
5 - 6	-10°C (14°F)	7.30 to 9.10 kΩ
5 - 6	-5°C (23°F)	5.65 to 6.95 kΩ
5 - 6	0°C (32°F)	4.40 to 5.35 kΩ
5 - 6	5°C (41°F)	3.40 to 4.15 kΩ
5 - 6	10°C (50°F)	2.70 to 3.25 kΩ
5 - 6	15°C (59°F)	2.14 to 2.58 kΩ
5 - 6	20°C (68°F)	1.71 to 2.05 kΩ
5 - 6	25°C (77°F)	1.38 to 1.64 kΩ
5 - 6	30°C (86°F)	1.11 to 1.32 kΩ

NOTICE:

- **Even slightly touching the sensor may change the resistance value. Be sure to hold the connector of the sensor.**
- **When measuring, the sensor temperature must be the same as the ambient temperature.**

HINT:

As the temperature increases, the resistance decreases (see the graph).

If the resistance is not as specified, replace the evaporator temperature sensor.

AC

AIR CONDITIONING PRESSURE SENSOR

ON-VEHICLE INSPECTION

1. INSPECT PRESSURE SENSOR

(a) Install the manifold gauge set (See page AC-120).

(b) Connect the three 1.5 V dry cell batterie's positive (+) lead to terminal 3 and the negative (-) lead to terminal 1. Then connect the voltmeter's positive (+) lead to terminal 2 and the negative (-) lead to terminal 1. Measure the voltage.

OK:

The voltage changes according to refrigerant pressure, as shown in the graph.

If the voltage is not as specified, replace the pressure sensor.

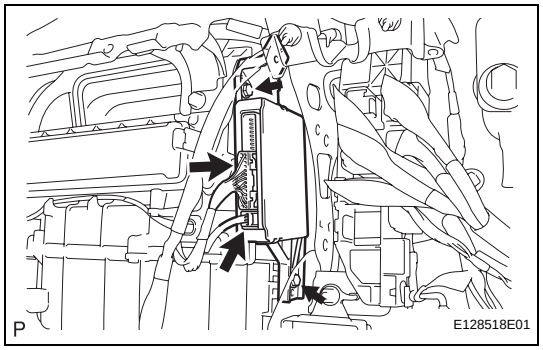
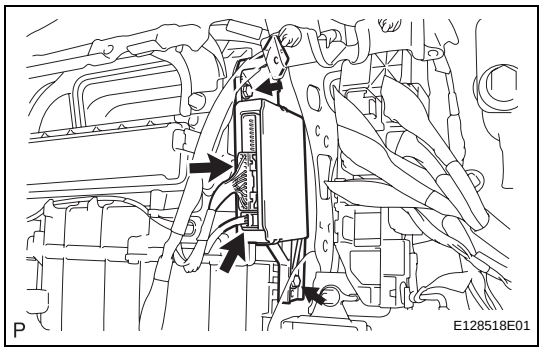
4. **REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-23)**
5. **REMOVE AIR CONDITIONING AMPLIFIER ASSEMBLY**
   (a) Disconnect the connectors.
   (b) Remove the 2 bolts and air conditioning amplifier assembly.



INSTALLATION

1. **INSTALL AIR CONDITIONING AMPLIFIER ASSEMBLY**
   (a) Install the air conditioning amplifier assembly with the 2 bolts.
   (b) Connect the connectors.
2. **INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-55)**
3. **INSTALL INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-56)**
4. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-55)**
5. **INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-55)**



REMOVAL

1. ALIGN FRONT WHEELS FACING STRAIGHT AHEAD
2. DISCONNECT BATTERY NEGATIVE TERMINAL
   NOTICE:
   Wait for 90 seconds after disconnecting the terminal to prevent the airbag from deploying. (See page RS-1)
3. REMOVE LOWER NO. 3 STEERING WHEEL COVER (See page RS-349)
4. REMOVE LOWER NO. 2 STEERING WHEEL COVER (See page RS-349)
5. REMOVE STEERING PAD (See page RS-350)
6. REMOVE STEERING WHEEL ASSEMBLY (See page SR-38)
7. REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-24)
8. REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-25)
9. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-20)
10. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-21)
11. REMOVE STEERING COLUMN COVER (for TMC Made) (See page IP-21)
12. REMOVE STEERING COLUMN COVER (for TMMK Made) (See page IP-21)
13. REMOVE TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (See page SR-39)
14. REMOVE NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-22)
15. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/o Smart Key System) (See page IP-22)
16. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/ Smart Key System) (See page IP-22)
17. REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page IP-22)
18. REMOVE COMBINATION METER ASSEMBLY (for TMC Made) (See page IP-23)
19. REMOVE COMBINATION METER ASSEMBLY (for TMMK Made) (See page IP-23)
20. REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-26)
21. REMOVE COWL SIDE TRIM SUB-ASSEMBLY RH

22. REMOVE INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-23)
23. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-23)
24. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-24)
25. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-24)
26. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-24)
27. REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-24)
28. REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-25)
29. REMOVE FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-25)
30. REMOVE UPPER CONSOLE PANEL (for Manual Transaxle) (See page IP-25)
31. REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-26)
32. REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Manual Transaxle) (See page IP-26)
33. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-27)
34. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-27)
35. REMOVE INSTRUMENT PANEL NO. 2 REGISTER ASSEMBLY (See page IP-27)
36. REMOVE RADIO RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/o Navigation System) (See page AV-146)
37. REMOVE NAVIGATION RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (See page NS-195)
38. REMOVE CONSOLE BOX POCKET (See page IP-28)
39. REMOVE CONSOLE BOX CARPET (See page IP-28)
40. REMOVE CONSOLE BOX ASSEMBLY (for TMC Made) (See page IP-28)
41. REMOVE CONSOLE BOX ASSEMBLY (for TMMK Made) (See page IP-29)
42. REMOVE NO. 2 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-29)
43. REMOVE NO. 2 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-30)

44. **REMOVE NO. 1 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-30)**

45. **REMOVE NO. 1 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-30)**

46. **REMOVE FRONT PILLAR GARNISH LH (See page IR-27)**

47. **REMOVE INSTRUMENT PANEL NO. 1 REGISTER ASSEMBLY (See page IP-31)**

48. **REMOVE INSTRUMENT PANEL NO. 1 SPEAKER PANEL SUB-ASSEMBLY (See page IP-31)**

49. **REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) (See page AV-156)**

50. **REMOVE FRONT PILLAR GARNISH RH (See page IR-27)**

51. **REMOVE INSTRUMENT PANEL NO. 3 REGISTER ASSEMBLY (See page IP-31)**

52. **REMOVE INSTRUMENT PANEL NO. 2 SPEAKER PANEL SUB-ASSEMBLY (See page IP-32)**

53. **REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side) (See page IP-32)**

54. **REMOVE NO. 1 DEFROSTER NOZZLE GARNISH (See page IP-32)**

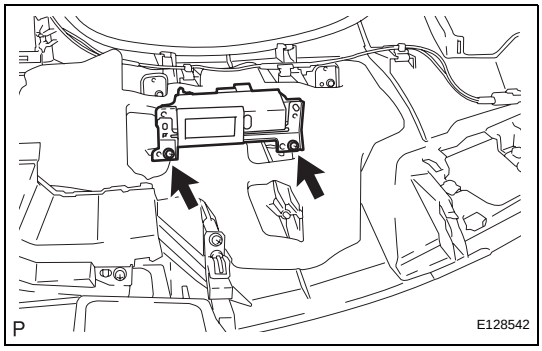
55. **REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for TMC Made) (See page IP-32)**

56. **REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for TMMK Made) (See page IP-34)**

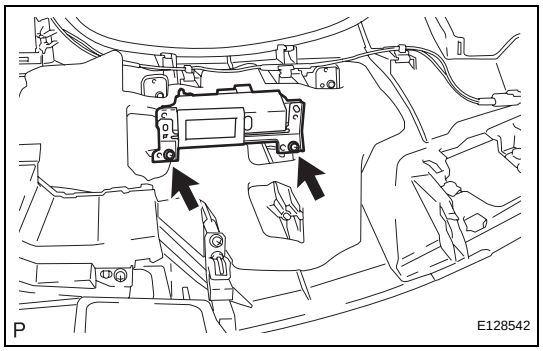
57. **REMOVE SIDE NO. 1 DEFROSTER NOZZLE DUCT (See page IP-37)**

58. **REMOVE NO. 1 HEATER TO REGISTER DUCT (See page IP-38)**

59. **REMOVE PLASMACLUSTER**
    (a) Remove the 2 screws and "Plasmacluster".



AC



INSTALLATION

1. **INSTALL PLASMACLUSTER**
   (a) Install the "Plasmacluster" with the 2 screws.
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
2. **INSTALL NO. 1 HEATER TO REGISTER DUCT (See page IP-42)**
3. **INSTALL SIDE NO. 1 DEFROSTER NOZZLE DUCT (See page IP-43)**
4. **INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for TMC Made) (See page IP-44)**
5. **INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for TMMK Made) (See page IP-45)**
6. **INSTALL NO. 1 DEFROSTER NOZZLE GARNISH (See page IP-48)**
7. **INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) (See page AV-156)**
8. **INSTALL INSTRUMENT PANEL NO. 1 SPEAKER PANEL SUB-ASSEMBLY (See page IP-48)**
9. **INSTALL INSTRUMENT PANEL NO. 1 REGISTER ASSEMBLY (See page IP-48)**
10. **INSTALL FRONT PILLAR GARNISH LH (See page IR-51)**
11. **INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side) (See page IP-48)**
12. **INSTALL INSTRUMENT PANEL NO. 2 SPEAKER PANEL SUB-ASSEMBLY (See page IP-49)**
13. **INSTALL INSTRUMENT PANEL NO. 3 REGISTER ASSEMBLY (See page IP-49)**
14. **INSTALL FRONT PILLAR GARNISH RH (See page IR-52)**
15. **INSTALL NO. 1 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-49)**
16. **INSTALL NO. 1 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-50)**
17. **INSTALL NO. 2 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-50)**
18. **INSTALL NO. 2 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-50)**
19. **INSTALL CONSOLE BOX ASSEMBLY (for TMC Made) (See page IP-51)**
20. **INSTALL CONSOLE BOX ASSEMBLY (for TMMK Made) (See page IP-51)**
21. **INSTALL CONSOLE BOX CARPET (See page IP-51)**
22. **INSTALL CONSOLE BOX POCKET (See page IP-51)**

23. INSTALL RADIO RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/o Navigation System) (See page AV-147)
24. INSTALL NAVIGATION RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/ Navigation System) (See page NS-196)
25. INSTALL INSTRUMENT PANEL NO. 2 REGISTER ASSEMBLY (See page IP-52)
26. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-52)
27. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-52)
28. INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-53)
29. INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Manual Transaxle) (See page IP-53)
30. INSTALL FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-53)
31. INSTALL UPPER CONSOLE PANEL (for Manual Transaxle) (See page IP-54)
32. INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-54)
33. INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-55)
34. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-55)
35. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-55)
36. INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-55)
37. INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-56)
38. INSTALL INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-56)
39. INSTALL COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-55)
40. INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-55)
41. INSTALL COMBINATION METER ASSEMBLY (for TMC Made) (See page IP-56)
42. INSTALL COMBINATION METER ASSEMBLY (for TMMK Made) (See page IP-56)

43. INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page IP-57)
44. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (w/o Smart Key System) (See page IP-57)
45. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (w/ Smart Key System) (See page IP-57)
46. INSTALL NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-57)
47. INSTALL TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (See page SR-50)
48. ADJUST SPIRAL CABLE SUB-ASSEMBLY (See page RS-367)
49. INSTALL STEERING COLUMN COVER (for TMC Made) (See page IP-58)
50. INSTALL STEERING COLUMN COVER (for TMMK Made) (See page IP-58)
51. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-58)
52. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-59)
53. INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-54)
54. INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-54)
55. INSTALL STEERING WHEEL ASSEMBLY (See page SR-51)
56. INSTALL STEERING PAD (See page RS-350)
57. INSTALL LOWER NO. 3 STEERING WHEEL COVER (See page RS-351)
58. INSTALL LOWER NO. 2 STEERING WHEEL COVER (See page RS-352)
59. CONNECT NEGATIVE BATTERY TERMINAL
60. INSPECT STEERING PAD (See page RS-352)
61. INSPECT SRS WARNING LIGHT (See page IP-59)

AV

SYSTEM DESCRIPTION

1. DISC PLAYER OUTLINE

(a) A CD player uses a laser pickup to read digital signals recorded on CDs. By converting the digital signals to analog, music and other content can be played.

CAUTION:

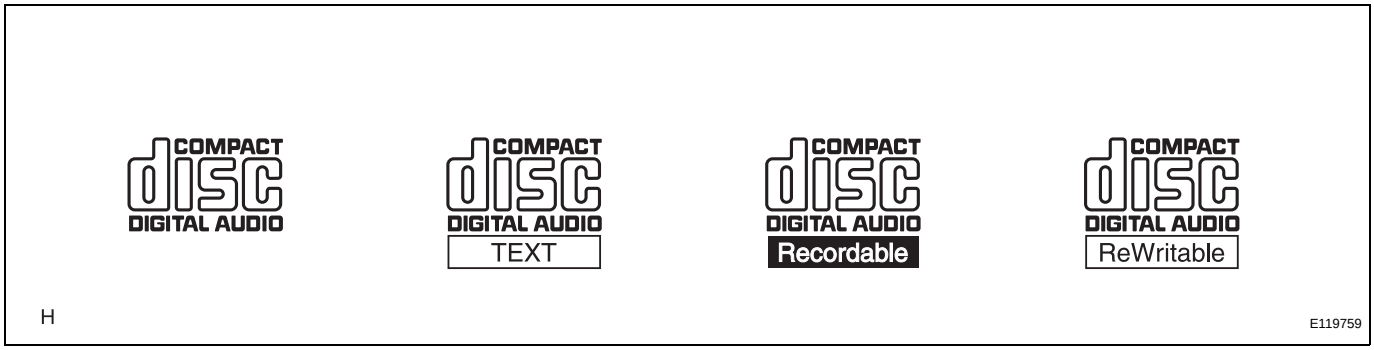
Do not look directly at the laser pickup because the CD player uses an invisible laser beam. Be sure to operate the player only as instructed.

NOTICE:

- **Do not disassemble any part of the CD player.**
- **Do not apply oil to the CD player.**
- **Do not insert anything but a CD into the CD player.**

(b) Usable discs

(1) The CD player can only play audio CDs, CD-Rs (CD-Recordable), and CD-RWs (CD-ReWritable) that have any of the following marks:



(c) Precautions for use of discs

NOTICE:

- **Copy-protected CDs cannot be played.**
- **CD-Rs and CD-RWs may not be played depending on the recording conditions or characteristics of the discs, or due to damage, dirt, or deterioration caused by leaving the discs in the cabin for a long time.**
- **Unfinalized CD-Rs and CD-RWs cannot be played.**
- **Keep the discs away from dirt. Be careful not to damage the discs or leave your fingerprints on them.**
- **Hold discs by the outer edge and center hole with the label side up.**
- **Leaving the disc exposed halfway out of the slot for a long time after pressing the disc eject button may cause deformation of the disc, making the disc unusable.**
- **If discs have adhesive tape, stickers, CDR labels, or any traces of such labels attached, the discs may not be ejected or player malfunctions may result.**

- **Keep the discs away from direct sunlight. (Exposure to direct sunlight may cause deformation of the disc, making the disc unusable.)**
- **Do not use odd-shaped CDs because these may cause player malfunctions.**
- **Do not use discs whose recording portion is transparent or translucent because they may not be inserted, ejected, or played normally.**

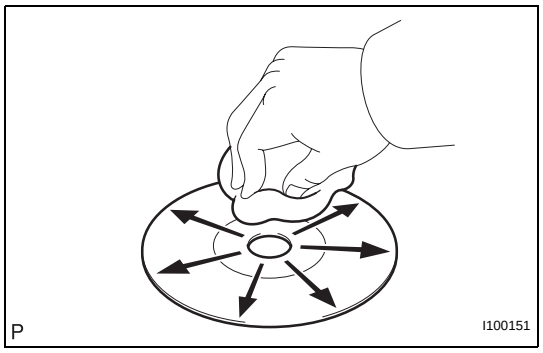
HINT:

- When it is cold or it is raining, if the windows mist up, mist and also dew may form in the player. In such a case, the CD may skip or the CD may stop in the middle of play. Ventilate or dehumidify the cabin for a while before using the player.
- The CD may skip if the player experiences strong vibrations when the vehicle is driven on rough road or similar uneven surface(s).

(d) Cleaning

NOTICE:

Do not use a lens cleaner because it may cause a malfunction in the pickup portion of the player.



(1) If dirt is on the disc surface, wipe it clean with a soft dry cloth such as an eyeglass cleaner for plastic lenses from the inside to the outside in a radial direction.

NOTICE:

- **Pressing on the disc by hand or rubbing the disc with a hard cloth may scratch the disc surface.**
- **Use of solvent such as a record spray, antistatic agent, alcohol, benzine, and thinner, or a chemical cloth may cause damage to the disc, making the disc unusable.**

2. MP3/WMA OUTLINE

(a) Playable MP3 file standards

Compatible standard	MP3 (MPEG1 LAYER3, MPEG2 LSF LAYER 3)
Compatible sampling frequency	• MPEG1 LAYER3: 32, 44.1, 48 (kHz) • MPEG2 LSF LAYER3: 16, 22.05, 24 (kHz)
Compatible bit rate	• MPEG1 LAYER3: 64, 80, 96, 112, 128, 160, 192, 224, 256, 320 (kbps) • MPEG2 LSF LAYER3: 64, 80, 96, 112, 128, 144, 160 (kbps) • Compatible with VBR
Compatible channel mode	Stereo, joint stereo, dual channel, monaural

(b) Playable WMA file standards

Compatible standard	WMA Ver. 7, 8, and 9
Compatible sampling frequency	32, 44.1, 48 (kHz)
Compatible bit rate	• Ver. 7, 8: CBR48, 64, 80, 96, 128, 160, 192 (kbps) • Ver. 9: CBR48, 64, 80, 96, 128, 160, 192, 256, 320 (kbps) • Compatible with playback of channel 2 only

(c) ID3 tag and WMA tag
(1) Additional textual information called ID3 tag can be input to MP3 files. Information such as song titles and artist names can be stored.
HINT:
This player is compatible with the ID3 tags of ID3 Ver. 1.0 and 1.1, and ID3 Ver. 2.2 and 2.3. (Number of characters complies with ID3 Ver. 1.0 and 1.1.)
(2) Additional textual information called WMA tag can be input to WMA files. Information such as song titles and artist names can be stored.

(d) Usable media
(1) Only CD-ROMs, CD-Rs (CD-Recordable), and CD-RWs (CD-ReWritable) can be used to play MP3/WMA files.
NOTICE:
- **CD-Rs and CD-RWs are more easily affected by a hot and humid environment than discs used for normal audio CDs. For this reason, some CD-Rs and CD-RWs may not be played.**
- **If there are fingerprints or scratches on the disc, the disc may not be played or the CD may skip.**
- **Some CD-Rs and CD-RWs deteriorate if they are left in the cabin for a long time.**
- **Keep CD-Rs and CD-RWs in a storage case that is impenetrable to light.**

(e) Usable media format
(1) Usable media format

Disc format	CD-ROM Mode 1, CD-ROM XA Mode 2 Form1
File format	ISO9660 Level 1 and Level 2 (Joliet, Romeo)

HINT:
- As for MP3/WMA files written in any format other than those above, the contents of the files may not be played normally or the file names or folder names may not be displayed correctly.
- This player is compatible with multi-session discs and can play CD-Rs and CD-RWs on which MP3/WMA files are added. However, only the first session can be played.
- Discs whose first session includes both music data and MP3 or WMA format data cannot be played.

(2) Standard and restrictions

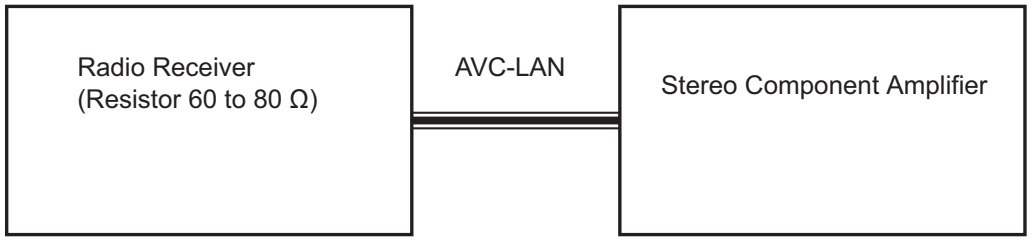
Maximum directory levels	8 levels
Maximum number of characters for a folder name/file name	32 characters
Maximum number of folders	192 (Including empty folders, route folders, and folders that do not contain MP3/WMA files)
Maximum number of files in a disc	255 (Including non-MP3/WMA files)

(f) File names
(1) Only files with an extension of ".mp3" or ".wma" can be recognized and played as MP3 or WMA files.
(2) Save MP3 or WMA files with an extension of ".mp3" or ".wma".
NOTICE:
If saving non-MP3 or non-WMA files with an extension of ".mp3" or ".wma", those files are wrongly recognized as MP3 or WMA files and played. A loud noise may occur and damage to the speaker may result.

3. AVC-LAN DESCRIPTION

(a) What is AVC-LAN?

Example:



T I100319E09

AVC-LAN, an abbreviation for "Audio Visual Communication Local Area Network", is a united standard developed by the manufacturers in affiliation with Toyota Motor Corporation. This standard pertains to audio and visual signals as well as switch and communication signals.

(b) Purpose:
Recently, car audio systems have rapidly developed and the functions have vastly changed. The conventional car audio system is being integrated with multi-media interfaces similar to those in navigation systems. At the same time, customers are demanding higher quality from their audio systems. This is merely an overview of the standardization background. The specific purposes are as follows:
(1) To solve sound problems, etc. caused by using components of different manufacturers through signal standardization.
(2) To allow each manufacturer to concentrate on developing products they do best. From this, reasonably priced products can be produced.
HINT:
- If a short to +B or short to ground is detected in the AVC-LAN circuit, communication is interrupted and the audio system will stop functioning.

AV

- If the audio system has a navigation system installed, the multi-display unit acts as the master unit. If the navigation system is not installed, the audio head unit acts as the master unit instead. If the radio and navigation assembly is installed, it is the master unit.
- The radio receiver contains a resistor that is necessary to enable communication on the different AVC-LAN circuits.
- The car audio system with an AVC-LAN circuit has a diagnostic function.
- Each component has a specified number (3-digit) called a physical address. Each function has a number (2-digit) called a logical address.

4. COMMUNICATION SYSTEM OUTLINE

(a) Components of the audio system communicate with each other via the AVC-LAN.

(b) The master component of the AVC-LAN is a radio receiver with a 60 to 80 Ω resistor. This is essential for communication.

(c) If a short circuit or open circuit occurs in the AVC-LAN circuit, communication is interrupted and the audio system will stop functioning.

5. DIAGNOSTIC FUNCTION OUTLINE

(a) The audio system has a diagnostic function (the result is indicated on the master unit).

(b) A 3-digit hexadecimal component code (physical address) is allocated to each component on the AVC-LAN. Using this code, the component in the diagnostic function can be displayed.

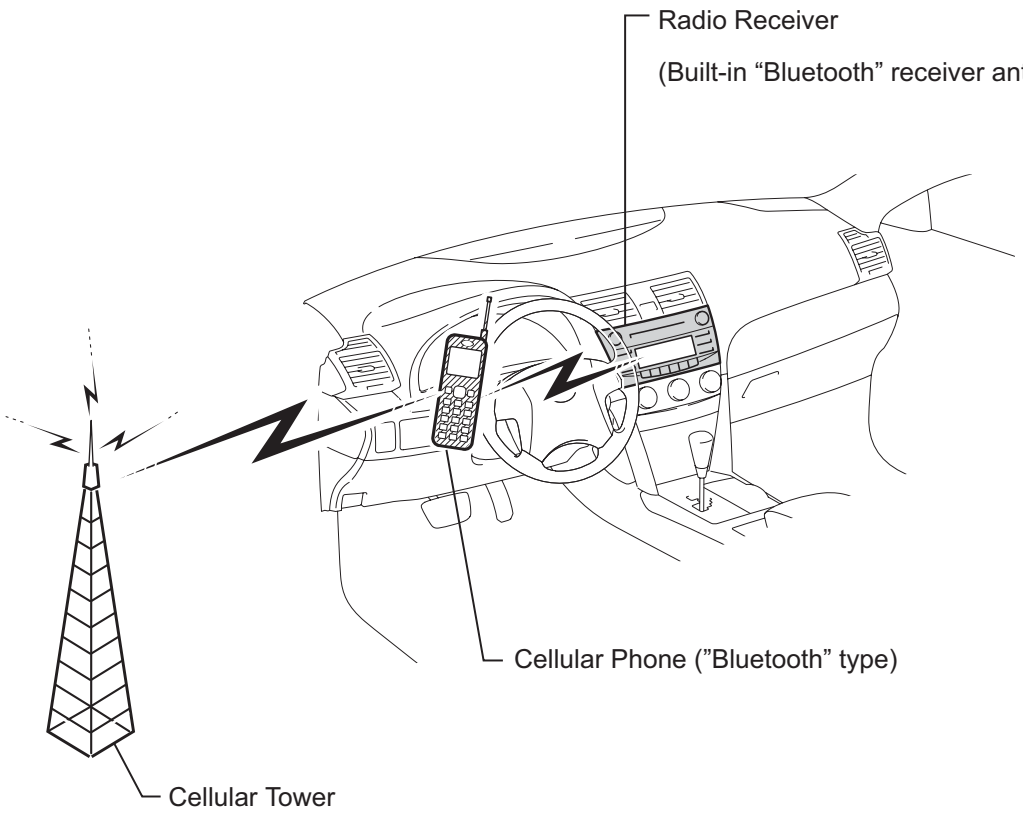
6. "BLUETOOTH" OUTLINE

(a) "Bluetooth" is a trademark owned by Bluetooth SIG. Inc.

(b) "Bluetooth" is a new wireless connection technology that uses the 2.4 GHz frequency band. This makes it possible to connect a cellular phone ("Bluetooth" compatible phone *1) to the radio receiver (the "Bluetooth" system is built in), and use the handsfree function of the cellular phone, even if it is in a pocket or bag. As a result, it is not necessary to use a connector attached directly to the cellular phone.

*1: Some versions of "Bluetooth" compatible cellular phones may not function.

Example:



P E129829E02

HINT:
The communication performance of "Bluetooth" may vary depending on obstructions or radio wave conditions between communication devices, electromagnetic radiation, communication device sensitivity, or antenna capacity.

HOW TO PROCEED WITH TROUBLESHOOTING

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V
If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

3	BASIC INSPECTION

(a) Turn the ignition switch on (IG).
(b) Check whether or not the radio receiver turns on.

Result

Result	Proceed to
Radio receiver turns on	A
Radio receiver does not turn on	B

B → **Go to step 6**

A

4	CHECK FOR DTC

(a) Check for DTCs and note any codes that are output.
(b) Delete the DTCs.
(c) Recheck for DTCs by simulating the operation indicated by the DTCs.
HINT:
- If the system cannot enter the diagnostic mode, inspect the AVC-LAN and all the components that connect to the AVC-LAN for short circuits and repair or replace the problem part.
- Even if the malfunction symptom is not confirmed, check the DTCs. This is because the system stores past DTCs.
- Check and clear past DTCs. Then check for DTCs.

Result

Result	Proceed to
DTC is output again	A
DTC is not output	B

B → Go to step 6

A

5 DIAGNOSTIC TROUBLE CODE CHART

Find the output code in the diagnostic trouble code chart (See page AV-27).

NEXT

Go to step 8

6 PROBLEM SYMPTOMS TABLE

Refer to the problem symptoms table (See page AV-13).

Result

Result	Proceed to
Fault is not listed in problem symptoms table	A
Fault is listed in problem symptoms table	B

B → Go to step 8

A

7 OVERALL ANALYSIS AND TROUBLESHOOTING

(a) Terminals of ECU (See page AV-15).

NEXT

8 ADJUST, REPAIR OR REPLACE

NEXT

9 CONFIRMATION TEST

NEXT

END

IDENTIFICATION OF NOISE SOURCE

1. Radio Description

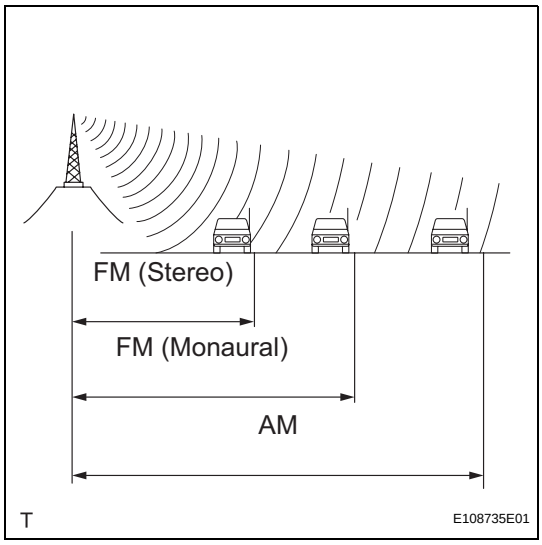
(a) Radio frequency band

(1) Radio broadcasts use the radio frequency bands shown in the table below.

Frequency	30 kHz	300 kHz	30 MHz	30 MHz	300 MHz
Designation	LF	MF	HF	VHF	
Radio Wave		AM ⟷		FM ⟷	
Modulation	Amplitude modulation			Frequency modulation	

LF: Low Frequency MF: Medium Frequency HF: High Frequency VHF: Very High Frequency

E108734E01



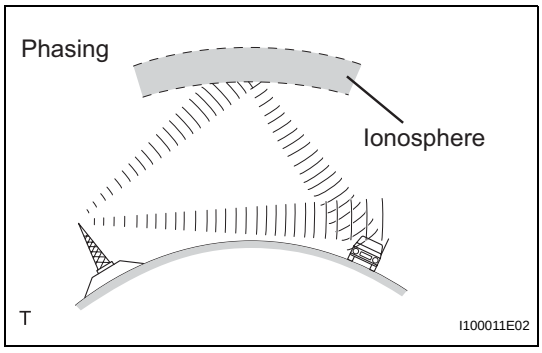
(b) Service area

(1) The service areas of AM and FM broadcasts are vastly different. Sometimes an AM broadcast can be received very clearly but an FM stereo cannot. FM stereo has the smallest service area, and is prone to pick up static and other types of interference such as noise.

(c) Radio reception problems

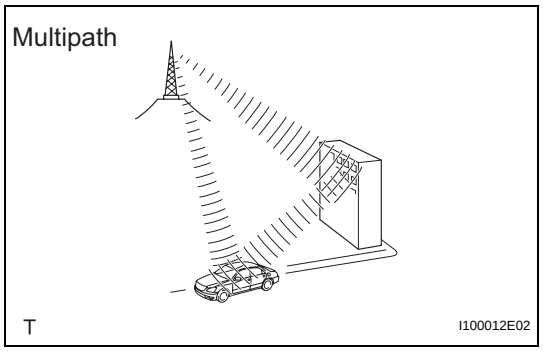
HINT:

In addition to static, other problems such as "phasing", "multipath", and "fade out" exist. These problems are not caused by electrical noise, but by the radio signal propagation method itself.

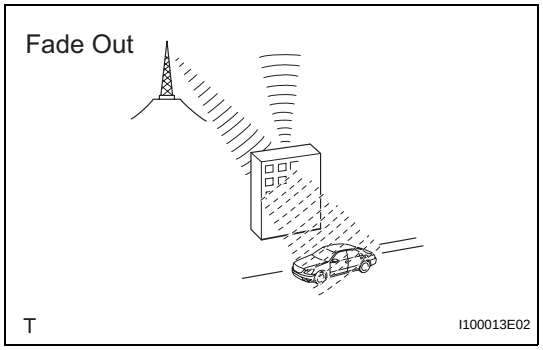


(1) Phasing

AM broadcasts are susceptible to electrical interference and another kind of interference called phasing. Occurring only at night, phasing is the interference created when a vehicle receives 2 radio wave signals from the same transmitter. One signal is reflected off the ionosphere and the other signal is received directly from the transmitter.



(2) Multipath
Multipath is a type of interference created when a vehicle receives 2 radio wave signals from the same transmitter. One signal is reflected off buildings or mountains and the other signal is received directly from the transmitter.



(3) Fade out
Fade out is caused by objects (buildings, mountains, and other such large obstacles) that deflect away part of a signal, resulting in a weaker signal when the object is between the transmitter and vehicle. High frequency radio waves, such as FM broadcasts, are easily deflected by obstructions. Low frequency radio waves, such as AM broadcasts, are much more difficult to deflect.

(d) Noise problem
Technicians must have a clear understanding about each customer's noise complaint. Use the following table to diagnose noise problems.

Radio Frequency	Noise Occurrence Condition	Presumable Cause
AM	Noise occurs in a specified area	Foreign noise
AM	Noise occurs when listening to an intermittent broadcast	An identical program transmitted from multiple towers can cause noise where the signals overlap
AM	Noise occurs only at night	Music beat from a distant broadcast
FM	Noise occurs while driving in a specified area	Multipath or phasing noise resulting from a change in FM frequency

HINT:
If the noise does not match the examples above, refer to the descriptions about phasing and multipath.

PROBLEM SYMPTOMS TABLE

HINT:

- Before inspecting the suspected areas listed in the table below, check the fuse and relay.
- Before inspecting the suspected areas listed in the table below, check for DTCs.
- Methods used to verify the cause of the problem are listed in order of probability in the suspected area column.

Audio Function:

Symptom	Suspected area	See page
Pressing power switch does not turn on system.	1. Proceed to "Pressing Power Switch does not Turn on System"	AV-68
	2. Radio receiver power source circuit	AV-140
	3. AVC-LAN circuit	AV-118
	4. Radio receiver	AV-145
Panel switch does not function.	1. Steering pad switch circuit	AV-91
	2. AVC-LAN circuit	AV-118
	3. Radio receiver	AV-145
No sound can be heard from speakers. (Audio is mute.) (for premium model)	1. Radio receiver power source circuit	AV-140
	2. Proceed to "No Sound can be Heard from Speakers"	AV-69
	3. Stereo component amplifier power source circuit	AV-142
	4. Proceed to "Sound Signal Circuit between Radio Receiver and Stereo Component Amplifier"	AV-111
	5. Speaker circuit	AV-103
	6. Proceed to "Mute Signal Circuit between Radio Receiver and Stereo Component Amplifier"	AV-115
	7. Stereo component amplifier	AV-150
	8. Radio receiver	AV-145
No sound can be heard from speakers. (Audio is mute.) (for standard model)	1. Radio receiver power source circuit	AV-140
	2. Proceed to "No Sound can be Heard from Speakers"	AV-69
	3. Speaker circuit	AV-103
	4. Radio receiver	AV-145
Sound quality is bad in all modes. (Volume is too low.) (for premium model)	1. Proceed to "Poor Sound Quality in All Modes (Low Volume)"	AV-80
	2. Speaker circuit.	AV-103
	3. Proceed to "Sound Signal Circuit between Radio Receiver and Stereo Component Amplifier"	AV-111
	4. Proceed to "Mute Signal Circuit between Radio Receiver and Stereo Component Amplifier"	AV-115
	5. Stereo component amplifier	AV-150
	6. Radio receiver	AV-145
Sound quality is bad in all modes. (Volume is too low.) (for standard model)	1. Proceed to "Poor Sound Quality in All Modes (Low Volume)"	AV-80
	2. Speaker circuit	AV-103
	3. Radio receiver	AV-145
ASL does not function. (for premium model)	Proceed to "Vehicle Speed Signal Circuit between Stereo Component Amplifier and Combination Meter"	AV-120
ASL does not function. (for standard model)	Proceed to "Vehicle Speed Signal Circuit between Radio Receiver and Combination Meter"	AV-87
External device sound cannot be heard or sound quality is bad. (Stereo jack is used.)	1. Radio receiver power source circuit	AV-140
	2. Proceed to "Sound Signal Circuit between Radio Receiver and Stereo Jack Adapter"	AV-113
	3. Stereo jack adapter	AV-223
	4. Radio receiver	AV-145

Symptom	Suspected area	See page
Abnormal noise occurs. (for premium model)	1. Proceed to "Noise occurs"	AV-66
	2. Stereo component amplifier	AV-150
	3. Radio receiver	AV-145
Abnormal noise occurs. (for standard model)	1. Proceed to "Noise occurs"	AV-66
	2. Radio receiver	AV-145
Radio broadcast cannot be received or poor reception.	Proceed to "Radio Broadcast cannot be Received or Poor Reception"	AV-76
CD cannot be inserted / played or CD is ejected right after insertion.	1. Radio receiver power source circuit	AV-140
	2. Proceed to "CD cannot be Inserted / Played or CD is Ejected Right After Insertion"	AV-72
CD cannot be ejected.	1. Radio receiver power source circuit	AV-140
	2. Proceed to "CD cannot be Ejected"	AV-71
Sound quality is bad only when CD is played. (Volume is too low.)	Proceed to "Sound Quality is Bad Only when CD is Played (Volume is Too Low)"	AV-70
CD sound skips.	Proceed to "CD Sound Skips"	AV-74
Radio receiver cannot be illuminated at night.	1. Illumination circuit	AV-96
	2. Radio receiver	AV-145

Steering Pad Switch Function:

Symptom	Suspected area	See page
Audio system cannot be operated with steering pad switch.	1. Steering pad switch circuit	AV-91
	2. Radio receiver	AV-145
Steering pad switch cannot be illuminated at night.	1. Illumination circuit	AV-96
	2. Radio receiver	AV-145

"Bluetooth" Function (*1):

Symptom	Suspected area	See page
Cellular phone registration failure, phone directory transfer failure.	Proceed to "Cellular Phone Registration Failure, Phone Directory Transfer Failure"	AV-81
Cellular phone cannot send / receive.	1. Proceed to "Cellular Phone cannot Send / Receive"	AV-83
	2. Steering pad switch circuit	AV-91
	3. Radio receiver	AV-145
The other caller's voice cannot be heard, is too quiet, or distorted.	1. Proceed to "The Other Caller's Voice cannot be Heard, is too Quiet, or Distorted"	AV-85
	2. Proceed to "Cellular Phone Voice Circuit between Radio Receiver and Stereo Component Amplifier"	AV-124

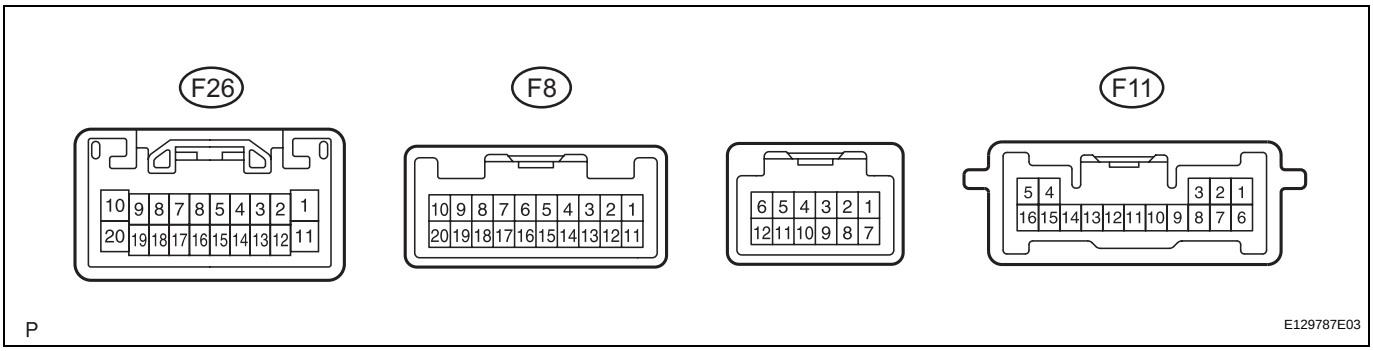
	4. Stereo component amplifier	AV-150
The other caller cannot hear your voice, or your voice is too quiet or distorted.	1. Proceed to "The Other Caller cannot Hear Your Voice, or Your Voice is too Quiet or Distorted"	AV-86
	2. Proceed to "Microphone Circuit between Microphone and Radio Receiver"	AV-126
	3. Microphone	AV-232
	4. Radio receiver	AV-145

*1: for Premium Model

TERMINALS OF ECU

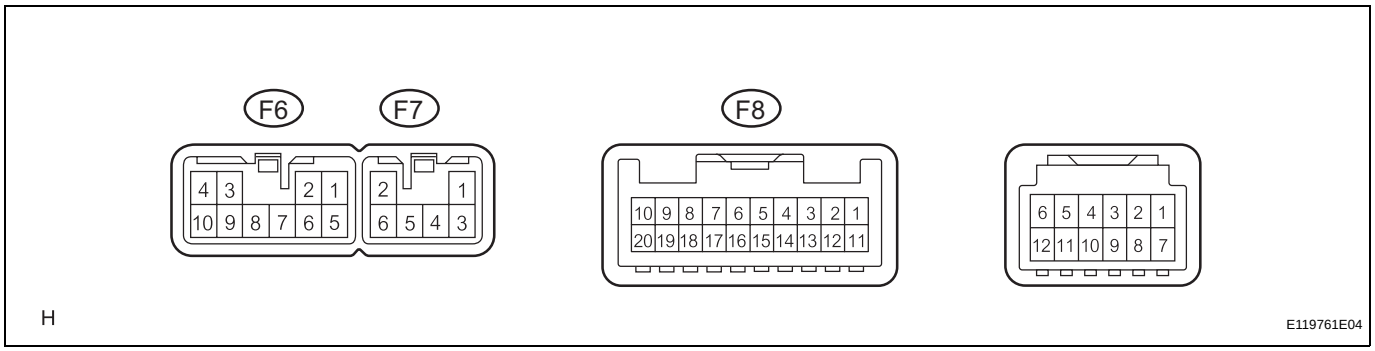
1. RADIO RECEIVER (PREMIUM MODEL)



Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specification
B (F26-1) - GND (F26-20)	L-Y - BR	Battery	Always	10 to 14 V
ILL+ (F26-2) - GND (F26-20)	G - BR	Illumination signal	Light control switch OFF → TAIL	Below 1 V → 10 to 14 V
ATX+ (F26-5) - GND (F26-20)	R - BR	AVC-LAN communication signal	Turn ignition switch on (ACC)	2 to 3 V
MUTE (F26-7) - GND (F26-20)	O - BR	MUTE signal	Audio system is playing → Changing	Above 3.5 V → Below 1 V
R+ (F26-8) - GND (F26-20)	R - BR	Sound signal (Right)	Audio system is playing	A waveform synchronized with sounds is output
L+ (F26-9) - GND (F26-20)	B - BR	Sound signal (Left)	Audio system is playing	A waveform synchronized with sounds is output
SLD (F26-10) - Body ground	Shielded - Body ground	Shield ground	Always	Below 1 V
ACC (F26-11) - GND (F26-20)	GR - BR	Accessory (ON)	Turn ignition switch on (ACC)	10 to14 V
ILL- (F26-12) - GND (F26-20)	W-B - BR	Illumination (rheostat) signal	Light control switch OFF → TAIL	Below 1 V → Pulse generation
ANT (F26-13) - GND (F26-20)	O - BR	Power source of antenna	Radio switch ON and AM or FM	10 to 14 V
ATX- (F26-15) - GND (F26-20)	G - BR	AVC-LAN communication signal	Turn ignition switch on (ACC)	2 to 3 V
R- (F26-18) - GND (F26-20)	G - BR	Sound signal (Right)	Audio system is playing	A waveform synchronized with sounds is output
L- (F26-19) - GND (F26-20)	W - BR	Sound signal (Left)	Audio system is playing	A waveform synchronized with sounds is output
GND (F26-20) - Body ground	BR - Body ground	Ground	Always	Below 1 V
SWG (F8-6) - GND (F26-20)	P - BR	Steering pad switch ground	Always	Below 1 V
SW1 (F8-7) - GND (F26-20)	O - BR	Steering pad switch signal	Steering pad switch not operated → SEEK+ switch pushed → SEEK- switch pushed → VOL+ switch pushed → VOL- switch pushed	4 V or more → Approx. 0.5 V → Approx. 0.9 V → Approx. 2.0 V → Approx. 3.4 V
SW2 (F8-8) - GND (F26-20)	Y - BR	Steering pad switch signal	Steering pad switch not operated → MODE switch pushed → ON HOOK switch pushed → OFF HOOK switch pushed	4 V or more → Approx. 0.5 V → Approx. 0.9 V → Approx. 2.0 V
IVO+ (F8-11) - GND (F26-20)	R - BR	Voice signal	"Bluetooth" handsfree voice signal is playing	A waveform synchronized with sounds is output

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specification
IVO- (F8-12) - GND (F26-20)	G - BR	Voice signal	"Bluetooth" handsfree voice signal is playing	A waveform synchronized with sounds is output
SLD (F8-13) - Body ground	Shielded - Body ground	Shield ground	Always	Below 1 V
ARI (F8-15) - GND (F26-20)	G - BR	Sound signal (Right)	External device is playing (When stereo jack is used)	A waveform synchronized with sounds is output
ASGN (F8-16) - GND (F26-20)	BR - BR	Shield ground	Always	Below 1 V
ALI (F8-17) - GND (F26-20)	R - BR	Sound signal (Left)	External device is playing (When stereo jack is used)	A waveform synchronized with sounds is output
AUXI (F8-19) - GND (F26-20)	G - BR	External device connection detection signal	External device is connected	Below 1 V
MIC- (F11-1) - GND (F26-20)	R - BR	Microphone voice signal	Bluetooth handsfree function is ON	A waveform synchronized with sounds is output
MIC+ (F11-2) - GND (F26-20)	G - BR	Microphone voice signal	Bluetooth handsfree function is ON	A waveform synchronized with sounds is output
+B (F11-5) - GND (F26-20)	L - BR	Battery	Always	10 to 14 V
MCVD (F11-7) - GND (F26-20)	LG - BR	Microphone AMP power supply	Turn ignition switch off → on (IG)	Below 1 V → 5 V
GND (F11-14) - Body ground	BR - Body ground	Ground	Always	Below 1 V
ACC (F11-16) - GND (F26-20)	GR - BR	Accessory (ON)	Turn ignition switch off → on (ACC)	Below 1 V → 10 to 14 V

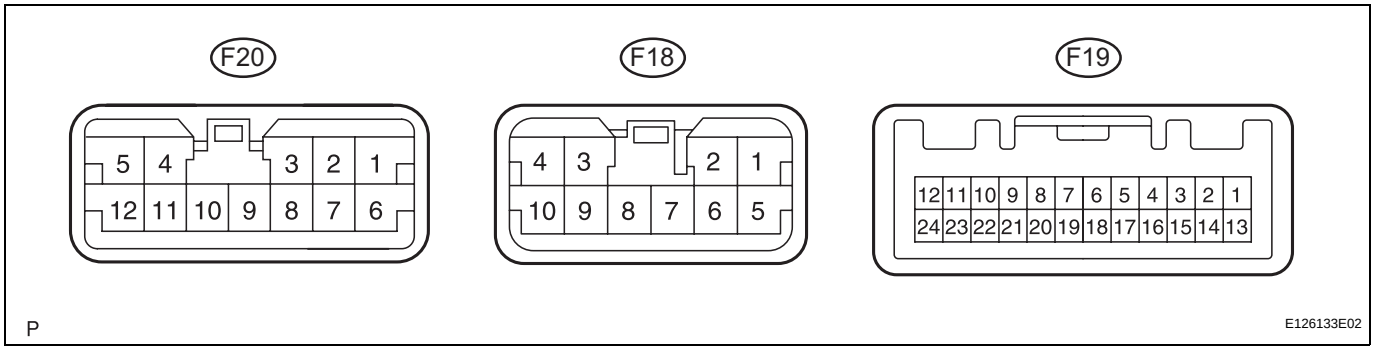
2. RADIO RECEIVER (STANDARD MODEL)



Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specification
FR+ (F6-1) - GND (F6-7)	LG - BR	Sound signal (Front Right)	Audio system is playing	A waveform synchronized with sounds is output
FL+ (F6-2) - GND (F6-7)	P - BR	Sound signal (Front Left)	Audio system is playing	A waveform synchronized with sounds is output
ACC (F6-3) - GND (F6-7)	GR - BR	Accessory (ON)	Turn ignition switch off→ on (ACC)	Below 1 V → 10 to 14 V
B (F6-4) - GND (F6-7)	L-Y - BR	Battery	Always	10 to 14 V
FR- (F6-5) - GND (F6-7)	L - BR	Sound signal (Front Right)	Audio system is playing	A waveform synchronized with sounds is output
FL- (F6-6) - GND (F6-7)	V - BR	Sound signal (Front Left)	Audio system is playing	A waveform synchronized with sounds is output
GND (F6-7) - Body ground	BR - Body ground	Ground	Always	Below 1 V
ANT (F6-8) - GND (F6-7)	O - BR	Power source of antenna	Radio switch ON and AM or FM	10 to 14 V
ILL+ (F6-10) - GND (F6-7)	G - BR	Illumination signal	Light control switch OFF → TAIL or HEAD	Below 1 V → 10 to 14 V
RR+ (F7-1) - GND (F6-7)	R - BR	Sound signal (Rear Right)	Audio system is playing	A waveform synchronized with sounds is output
RL+ (F7-2) - GND (F6-7)	B - BR	Sound signal (Rear Left)	Audio system is playing	A waveform synchronized with sounds is output

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specification
RR- (F7-3) - GND (F6-7)	W - BR	Sound signal (Rear Right)	Audio system is playing	A waveform synchronized with sounds is output
ILL- (F7-5) - GND (F6-7)	W-B - BR	Illumination (rheostat) signal	Light control switch OFF → TAIL or HEAD	Below 1 V → Pulse generation
RL- (F7-6) - GND (F6-7)	Y - BR	Sound signal (Rear Left)	Audio system is playing	A waveform synchronized with sounds is output
SPD (F8-3) - GND (F6-7)	V - BR	Speed signal from combination meter	Turn ignition switch on (IG). Turn drive wheels slowly.	Pulse generation
SWG (F8-6) - GND (F6-7)	P - BR	Steering pad switch ground	Always	Below 1 V
SW1 (F8-7) - GND (F6-7))	O - BR	Steering pad switch signal	Steering pad switch not operated → SEEK+ switch pushed → SEEK- switch pushed → VOL+ switch pushed → VOL- switch pushed	4 V or more → Approx. 0.5 V → Approx. 0.9 V → Approx. 2.0 V → Approx. 3.4 V
SW2 (F8-8) - GND (F6-7)	Y - BR	Steering pad switch signal	Steering pad switch not operated → MODE switch pushed	4 V or more → Below 2.5 V
ARI (F8-15) - GND (F6-7)	O - BR	Sound signal (Right)	External device is playing (When stereo jack is used)	A waveform synchronized with sounds is output
ASGN (F8-16) - GND (F6-7)	BR - BR	Shield ground	Always	Below 1 V
ALI (F8-17) - GND (F6-7)	R - BR	Sound signal (Left)	External device is playing (When stereo jack is used)	A waveform synchronized with sounds is output
AUXI (F8-19) - GND (F6-7)	G - BR	External device connection detection signal	External device is connected	Below 1 V

3. STEREO COMPONENT AMPLIFIER (PREMIUM MODEL)

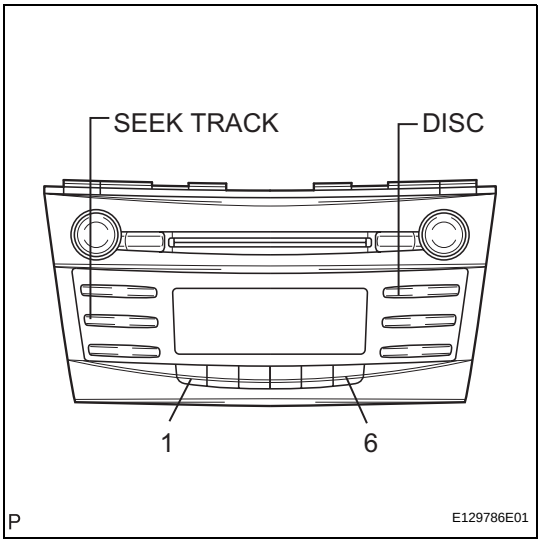


Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specification
MUTE (F19-1) - GND (F20-6)	O - BR	Mute signal from radio receiver	Audio system is playing → Changing	Above 3.5 V → Below 1 V
L- (F19-2) - GND (F20-6)	W - BR	Sound signal (Left)	Audio system is playing	A waveform synchronized with sounds is output
L+ (F19-3) - GND (F20-6)	B - BR	Sound signal (Left)	Audio system is playing	A waveform synchronized with sounds is output
R- (F19-4) - GND (F20-6)	G - BR	Sound signal (Right)	Audio system is playing	A waveform synchronized with sounds is output
R+ (F19-5) - GND (F20-6)	R - BR	Sound signal (Right)	Audio system is playing	A waveform synchronized with sounds is output
SLD (F19-6) - Body ground	Shielded - Body ground	Shield ground	Always	Blow 1 V
TX- (F19-7) - GND (F20-6)	G - BR	AVC-LAN communication signal	Turn ignition switch on (ACC)	2 to 3 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specification
TX+ (F19-8) - GND (F20-6)	R - BR	AVC-LAN communication signal	Turn ignition switch on (ACC)	2 to 3 V
SPD (F19-11) - GND (F20-6)	V - BR	Speed signal from combination meter	Turn ignition switch on (IG). Turn drive wheels slowly.	Pulse generation
ACC (F19-12) - GND (F20-6)	GR - BR	Accessory (ON)	Turn ignition switch off → on (ACC)	Below 1 V → 10 to 14 V
INT- (F19-22) - GND (F20-6)	G - BR	Voice signal	Navigation or "Bluetooth " handsfree voice signal is provided	A waveform synchronized with sounds is output
INT+ (F19-23) - GND (F20-6)	R - BR	Voice signal	Navigation or "Bluetooth " handsfree voice signal is provided	A waveform synchronized with sounds is output
+B (F18-1) - GND (F20-6)	GR - BR	Battery	Always	10 to 14 V
FR+ (F18-2) - GND (F20-6)	LG - BR	Sound signal (Front Right)	Audio system is playing	A waveform synchronized with sounds is output
RL+ (F18-3) - GND (F20-6)	B - BR	Sound signal (Rear Left)	Audio system is playing	A waveform synchronized with sounds is output
RR- (F18-4) - GND (F20-6)	W - BR	Sound signal (Rear Right)	Audio system is playing	A waveform synchronized with sounds is output
+B2 (F18-5) - GND (F20-6)	GR - BR	Battery	Always	10 to 14 V
FR- (F18-6) - GND (F20-6)	L - BR	Sound signal (Front Right)	Audio system is playing	A waveform synchronized with sounds is output
FL- (F18-7) - GND (F20-6)	V - BR	Sound signal (Front Left)	Audio system is playing	A waveform synchronized with sounds is output
FL+ (F18-8) - GND (F20-6)	P - BR	Sound signal (Front Left)	Audio system is playing	A waveform synchronized with sounds is output
RL- (F18-9) - GND (F20-6)	Y - BR	Sound signal (Rear Left)	Audio system is playing	A waveform synchronized with sounds is output
RR+ (F18-10) - GND (F20-6)	R - BR	Sound signal (Rear Right)	Audio system is playing	A waveform synchronized with sounds is output
WFL- (F20-1) - GND (F20-6)	V - BR	Sound signal (Front Left)	Audio system is playing	A waveform synchronized with sounds is output
WFL+ (F20-2) - GND (F20-6)	P - BR	Sound signal (Front Left)	Audio system is playing	A waveform synchronized with sounds is output
WFR- (F20-3) - GND (F20-6)	L - BR	Sound signal (Front Right)	Audio system is playing	A waveform synchronized with sounds is output
SL+ (F20-4) - GND (F20-6)	G-W - BR	Sound signal (Rear Left)	Audio system is playing	A waveform synchronized with sounds is output
SR+ (F20-5) - GND (F20-6)	L - BR	Sound signal (Rear Right)	Audio system is playing	A waveform synchronized with sounds is output
GND (F20-6) - Body ground	BR - Body ground	Ground	Always	Below 1 V
E (F20-7) - Body ground	BR - Body ground	Ground	Always	Below 1 V
WFR+ (F20-9) - GND (F20-6)	LG - BR	Sound signal (Front Right)	Audio system is playing	A waveform synchronized with sounds is output
SL- (F20-10) - GND (F20-6)	BR - BR	Sound signal (Rear Left)	Audio system is playing	A waveform synchronized with sounds is output
SR- (F20-12) - GND (F20-6)	Y - BR	Sound signal (Rear Right)	Audio system is playing	A waveform synchronized with sounds is output

DTC CHECK / CLEAR

HINT:
If the system cannot enter the diagnostic mode, inspect the AVC-LAN and all the components that connect to the AVC-LAN for short circuits and repair or replace the problem part. (See page AV-118)

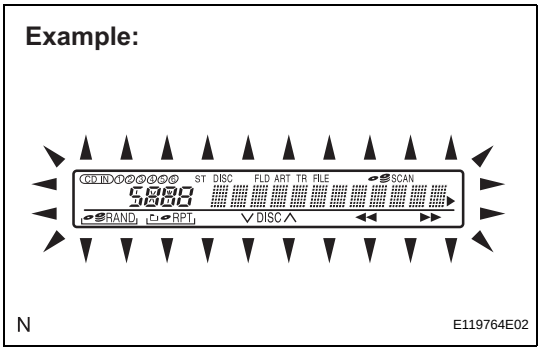


1. STARTING DIAGNOSTIC MODE

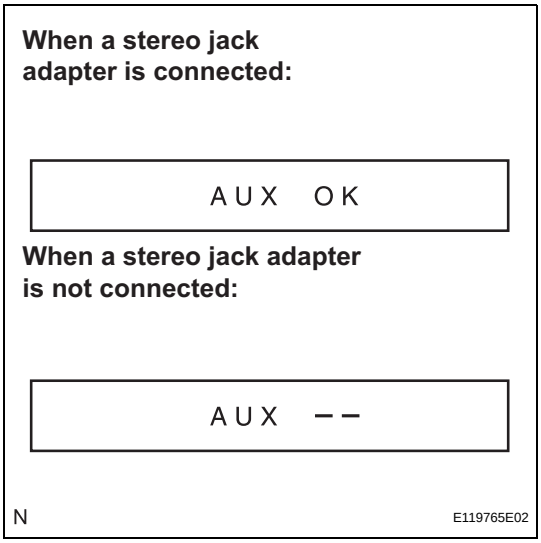
(a) Turn the ignition switch on (ACC).
(b) Turn off the audio system.
(c) While pressing the preset switches "1" and "6" at the same time, press the "DISC" switch 3 times.
HINT:
A beep is emitted 3 times and the diagnostic function is activated. The system enters the all element illumination mode and the switch check mode.

2. ALL ELEMENT ILLUMINATION MODE AND SWITCH CHECK MODE

HINT:
Illumination status of all switches and operations of the panel switches can be checked.



(a) Check that all elements are on.
(b) When pressing each panel switch, check that a beep is emitted.
NOTICE:
Pressing the "SEEK TRACK UP" switch transfers the screen to the stereo jack adapter connection check screen. Check the operation of this switch by confirming the transfer of the screen.



3. STEREO JACK ADAPTER CONNECTION CHECK MODE

(a) Press the "SEEK TRACK UP" switch.
(b) Check if the stereo jack adapter is recognized.
HINT:
Vehicles that do not have a stereo jack adapter also have this function.
NOTICE:
This function is not to check connection information on an external device, but to check recognition information on a stereo jack adapter.

4. SERVICE CHECK MODE

(a) Press the "SEEK TRACK UP" switch.
HINT:
For details of the service check mode, refer to "6. CHECK DTC" and "7. DTC CLEAR/RECHECK".

5. FINISHING DIAGNOSTIC MODE

(a) Press the "DISC" switch for 2 seconds or more, or turn the ignition switch off.

AV

6. CHECK DTC

HINT:

Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle.

(a) Reference:

In the system check mode, the system check and the diagnostic memory check are performed, and the check results are displayed in ascending order of the component codes (physical address).

Terms	Meaning
Component code (Physical address)	Three-digit code (in hexadecimal) given to each device comprising AVC-LAN. Corresponding to its function, individual symbol is provided.
Logical address	Two-digit code (in hexadecimal) given to each function and device unit in each device comprising AVC-LAN.

(b) Service check result display

Display	Previous term	Meaning	Action to be taken
good	Good (normal)	No DTCs are detected in both "System Check Mode" and "Diagnostic Memory Mode".	-
nCon	No connection	The system recognized the component when it was registered, but the component gives no response to the "Diagnostic Mode ON Request".	Check the power source circuit and the communication circuit of the component indicated by the component code (physical address).
ECHn	Exchange	One or more DTCs for "Exchange" are detected in either "System Check Mode" or "Diagnostic Memory Mode".	Go to the detailed information mode to check the trouble area referring to the DTC list.
CHEC	Check	When no DTCs are detected for "Exchange", one or more DTCs for "Check" are detected in either "System Check Mode" or "Diagnostic Memory Mode".	Go to the detailed information mode to check the trouble area referring to the DTC list.
OLd	Old version	Old DTC application is identified and DTC is detected in either "System Check Mode" or "Diagnostic Memory Mode".	-
nrES	No response	The device gives no response to any one of "System Check Mode ON Request", "System Check Result Request", and "Diagnostic Memory Request".	Check the power source circuit and the communication circuit of the component indicated by the component code (physical address).

(c) Device name and physical address

Physical address No.	Name
190	Radio receiver
440	Stereo component amplifier
19D	"Bluetooth" handsfree module

AV

(d) Service check mode

(1) Press the "SEEK TRACK" switch to see the check result of each component.

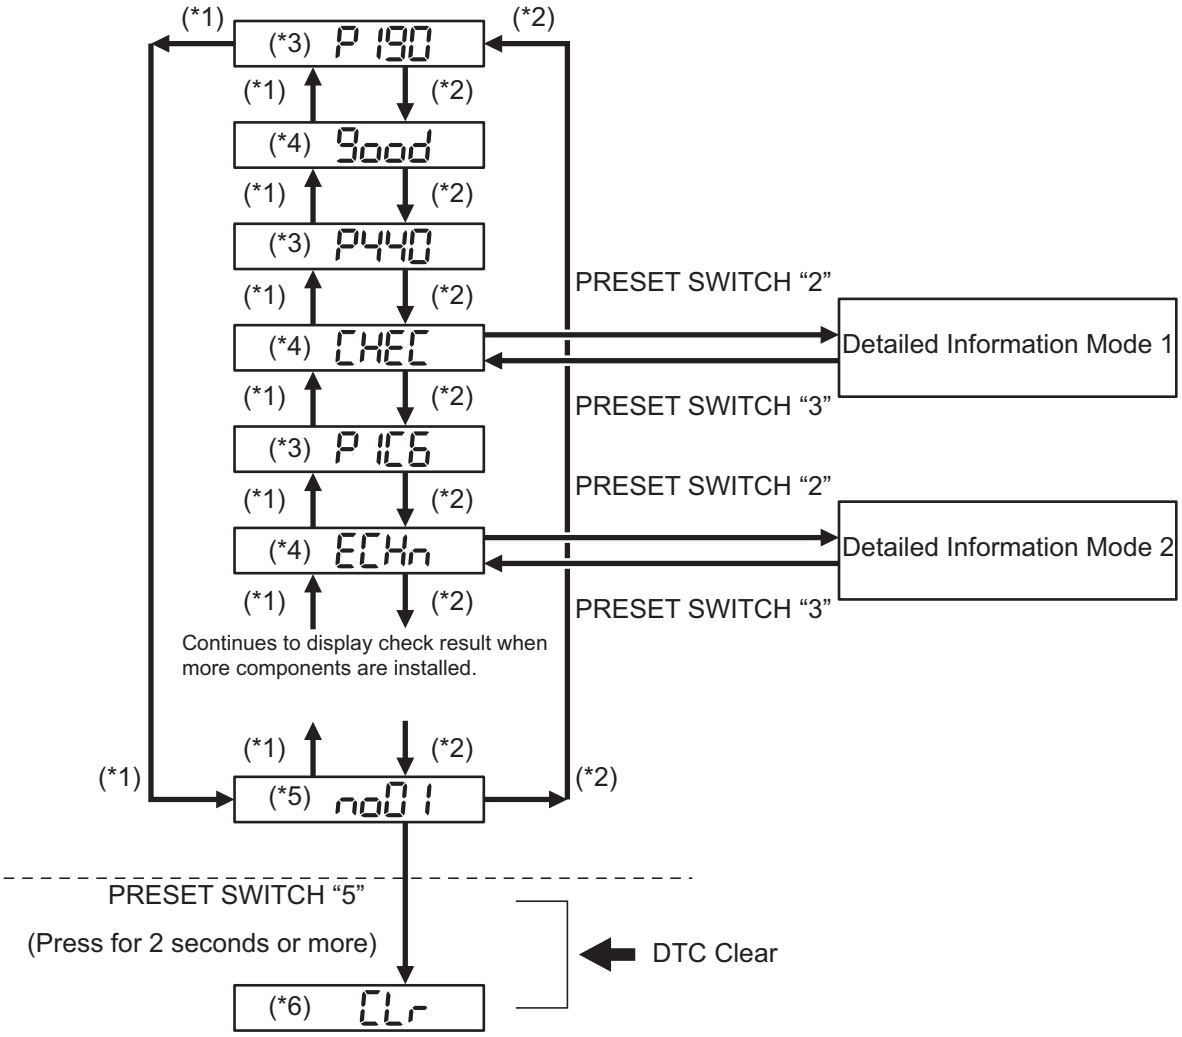
(2) The component code (physical address) is displayed first, and then the check result follows.

HINT:

- If all check results are "good", the system judges that no DTC exists.

- If the preset switch "1" is pressed in the service check mode, service check is performed again.
- This illustration is only an example and may differ in cases such as for each option part and output DTCs.

Service Check Mode:



*1: SEEK TRACK DOWN

*2: SEEK TRACK UP

*3: P...Indicates physical address

190/440/1C6...Physical address

*4: Result

*5: Up-to-date connection check number

*6: Memory clear

AV

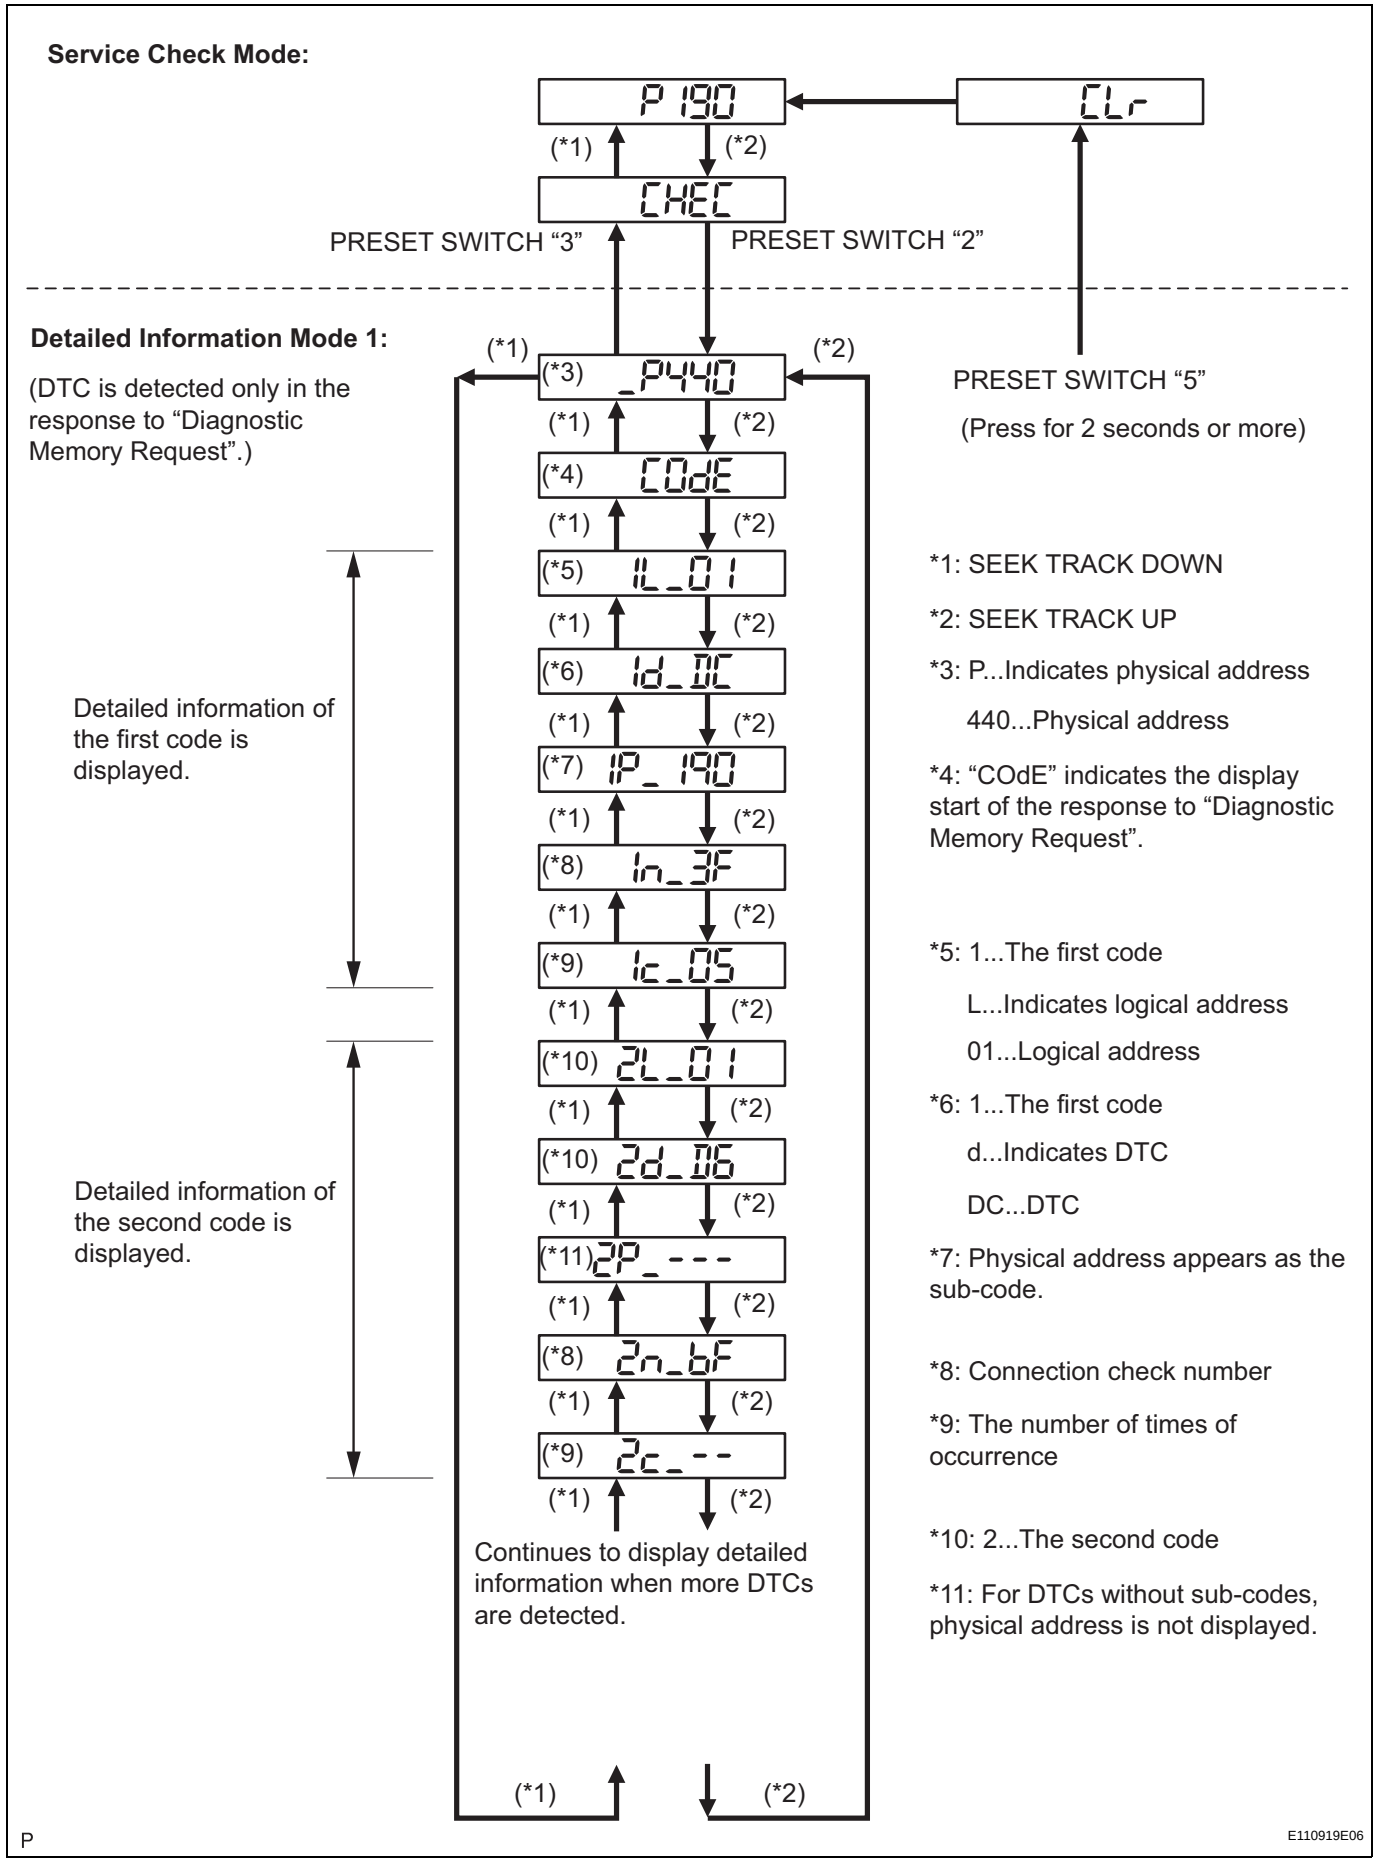
(e) Detailed information mode 1
HINT:
- "Detailed Information Mode 1" is displayed when there is no response to "System Check Result Request" and DTC is detected only in "Diagnostic Memory Request".
- The component device code (physical address) is displayed first, and then the check result follows.
- This illustration is only an example and may differ in cases such as for each option part and output DTCs.

(1) Press the preset switch "2" to go to the "Detailed Information Mode 1".
(2) Press the "SEEK TRACK" switch to display the physical address and DTC of the component.
(3) Press the preset switch "3" to go to the "Service Check Mode".
(4) Distinguish between the displays of the responses to "System Check Result Request" and "Diagnostic Memory Request". In order to distinguish the information detected in "System Check Mode" and "Diagnostic Memory Mode" in "ECHn", "CHEC", and "OLd" in "Detailed Information Mode 1", refer to the following:
- "SyS" is displayed before the detailed codes detected as a result of "System Check Result Request" are displayed.
- "COdE" is displayed before the detailed codes detected as a result of "Diagnostic Memory Request" are displayed.

HINT:
- The response to "System Check Result Request" is the current information given from each ECU as a result of the system check.
- The response to "Diagnostic Memory Request" contains the information received from each ECU or stored in each ECU in the past.
- The response to "Diagnostic Memory Request" is the output DTCs as a result of the diagnostic memory check or the DTCs received from each ECU.
- "System Check Result Request (SyS)" is displayed first, and then the logical address and DTC appear in order.
- "Diagnostic Memory Request (COdE)" is displayed first, and then the logical address, DTC, sub-code, connection check number, and the number of occurrence appear in order.



Service Check Mode:

(f) Detailed information mode 2
HINT:
- "Detailed Information Mode 2" is displayed when DTCs are detected in the responses to both "System Check Result Request" and "Diagnostic Memory Request".
- The component device code (physical address) is displayed first, and then the check result follows.
- This illustration is only an example and may differ in cases such as for each option part and output DTCs.

(1) Press the preset switch "2" to go to the "Detailed Information Mode 2".
(2) Press the "SEEK TRACK" switch to display the physical address and DTC of the component.
(3) Press the preset switch "3" to go to the "Service Check Mode".
(4) Distinguish between the displays of the responses to "System Check Result Request" and "Diagnostic Memory Request". In order to distinguish the information detected in "System Check Mode" and "Diagnostic Memory Mode" in "ECHn", "CHEC", and "OLd" in "Detailed Information Mode 2", refer to the following:
- "SyS" is displayed before the detailed codes detected as a result of "System Check Result Request" are displayed.
- "COdE" is displayed before the detailed codes detected as a result of "Diagnostic Memory Request" are displayed.
HINT:
- The response to "System Check Result Request" is the current information given from each ECU as a result of the system check.
- The response to "Diagnostic Memory Request" contains the information received from each ECU or stored in each ECU in the past.
- The response to "Diagnostic Memory Request" is the output DTCs as a result of the diagnostic memory check or the DTCs received from each ECU.
- "System Check Result Request (SyS)" is displayed first, and then the logical address and DTC appear in order.
- "Diagnostic Memory Request (COdE)" is displayed first, and then the logical address, DTC, sub-code, connection check number, and the number of occurrence appear in order.

7. DTC CLEAR/RECHECK

(a) Clearing All DTC Memory (when clearing all the memory of the DTCs previously detected).

(1) When the preset switch "5" is pressed for 2 seconds or more during "Service Check Mode", the DTCs for all components are cleared. ("CLr" is displayed at this time.)

HINT:

- A beep sound is emitted once when the DTC memory is completely cleared.
- When the DTC memory for all the components is cleared, only the component codes (physical address) are displayed.
- After the DTC memory is cleared, the "Service Check Mode" is restored.

(b) Clearing Individual DTC Memory (when clearing the memory of the DTC previously detected individually).

(1) When the preset switch "5" is pressed for 2 seconds or more during "Detailed Information Mode 1" or "Detailed Information Mode 2", the DTCs for the target component are cleared.

HINT:

- A beep sound is emitted once when the DTC memory is completely cleared.
- When the DTC memory is cleared, only the component code (physical address) is displayed for the target component.
- After the DTC memory is cleared, the "Service Check Mode" is restored.
- To check DTCs, press the preset switch "1" and perform the system check again.

(c) Press the preset switch "1" to perform the service check again, and check that no DTCs are displayed for all the component codes (physical address).

DIAGNOSTIC TROUBLE CODE CHART

COMMUNICATION DIAGNOSIS:

DTC No.	Detection Item	Trouble Area	See page
01-21	ROM Error	Radio receiver	AV-31
01-22	RAM Error	Radio receiver	AV-31
01-D5	Absence of Registration Unit	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio receiver and the component shown by the sub-code 3. Component shown by the sub-code	AV-32
01-D6	No Master	1. Radio receiver power source circuit 2. Power source circuit of the component which has stored this code 3. AVC-LAN circuit between the radio receiver and the component which has stored this code 4. Component which has stored this code 5. Radio receiver	AV-34
01-D7	Connection Check Error	1. Radio receiver power source circuit 2. Power source circuit of the component which has stored this code 3. AVC-LAN circuit between the radio receiver and the component which has stored this code 4. Component which has stored this code 5. Radio receiver	AV-34
01-D8	No Response for Connection Check	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio receiver and the component shown by the sub-code 3. Component shown by the sub-code	AV-32
01-D9	Last Mode Error	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio receiver and the component shown by the sub-code 3. Component shown by the sub-code	AV-32
01-DA	No Response Against ON / OFF Command	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio receiver and the component shown by the sub-code 3. Component shown by the sub-code	AV-32

TELEPHONE:

DTC No.	Detection Item	Trouble Area	See page
57-47	Bluetooth Module Initialization Failed	Radio receiver	AV-53

DTC	01-21	ROM Error

DTC	01-22	RAM Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-21	A malfunction exists in ROM.	Radio receiver
01-22	A malfunction exists in RAM.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	REPLACE RADIO RECEIVER

NEXT

END

DTC	01-D5	Absence of Registration Unit

DTC	01-D8	No Response for Connection Check

DTC	01-D9	Last Mode Error

DTC	01-DA	No Response Against ON / OFF Command

DTC	01-DB	Mode Status Error

DTC	01-DE	Slave Reset

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-D5 *1, *3	A device that the sub-code shows is (was) disconnected from the system when turning the ignition switch on (ACC or IG). The communication condition with the device that the code shows cannot be obtained when the engine starts.	• Power source circuit of the component shown by the sub-code • AVC-LAN circuit between the radio receiver and the component shown by the sub-code • Component shown by the sub-code
01-D8 *2, *3	The device indicated by the sub-code is (was) disconnected from the system after the engine starts.	
01-D9 *1, *3	The device that had functioned before the engine stopped is (was) disconnected from the system when turning the ignition switch is on (ACC or IG).	
01-DA *3	No response is identified when changing mode. Sound and image do not change by switch operation.	
01-DB *1, *3	A dual alarm is detected.	
01-DE *3, *4	A slave device has been disconnected after the engine starts	

HINT:

- *1: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.
- *2: If the power connector is disconnected after the engine starts, this code is stored after 180 seconds.
- *3: If the device is reported as not existing during verification, check the power source circuit and AVC-LAN circuit for the device.
- *4: This code may be stored if the engine is started and the ignition switch is turned to the START position again. (Key type ignition switch only)

NOTICE:

- **Before starting troubleshooting, be sure to clear DTCs to erase codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The radio receiver is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

INSPECTION PROCEDURE

NOTICE:

Be sure to read DESCRIPTION before performing the following procedures.

1	**CHECK "RADIO RECEIVER COMMUNICATION ERROR" IN FLOW CHART**

Refer to the radio receiver communication error (See page AV-129).

NEXT

END

DTC	01-D6	No Master

DTC	01-D7	Connection Check Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-D6 *1	When either of the following conditions is met: • The device that stores (stored) the code has (had) been disconnected when the ignition switch is turned on (ACC or IG). • The master device has (had) been disconnected when this code is stored.	• Radio receiver power source circuit • Power source circuit of the component which has stored this code • AVC-LAN circuit between the radio receiver and the component which has stored this code • Component which has stored this code • Radio receiver
01-D7 *2	When either of the following conditions is met: • The device that stored the code has (had) been disconnected after the engine starts (started). • The master device has (had) been disconnected when this code is (was) stored.	

HINT:
- *1: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.
- *2: When 210 seconds have elapsed after disconnecting the power supply connector of the master component with the ignition switch on (ACC or IG), this code is stored.

NOTICE:
- **Before starting troubleshooting, be sure to clear DTCs to erase codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The radio receiver is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

INSPECTION PROCEDURE

NOTICE:
Be sure to read DESCRIPTION before performing the following procedures.

1	CHECK RADIO RECEIVER POWER SOURCE CIRCUIT

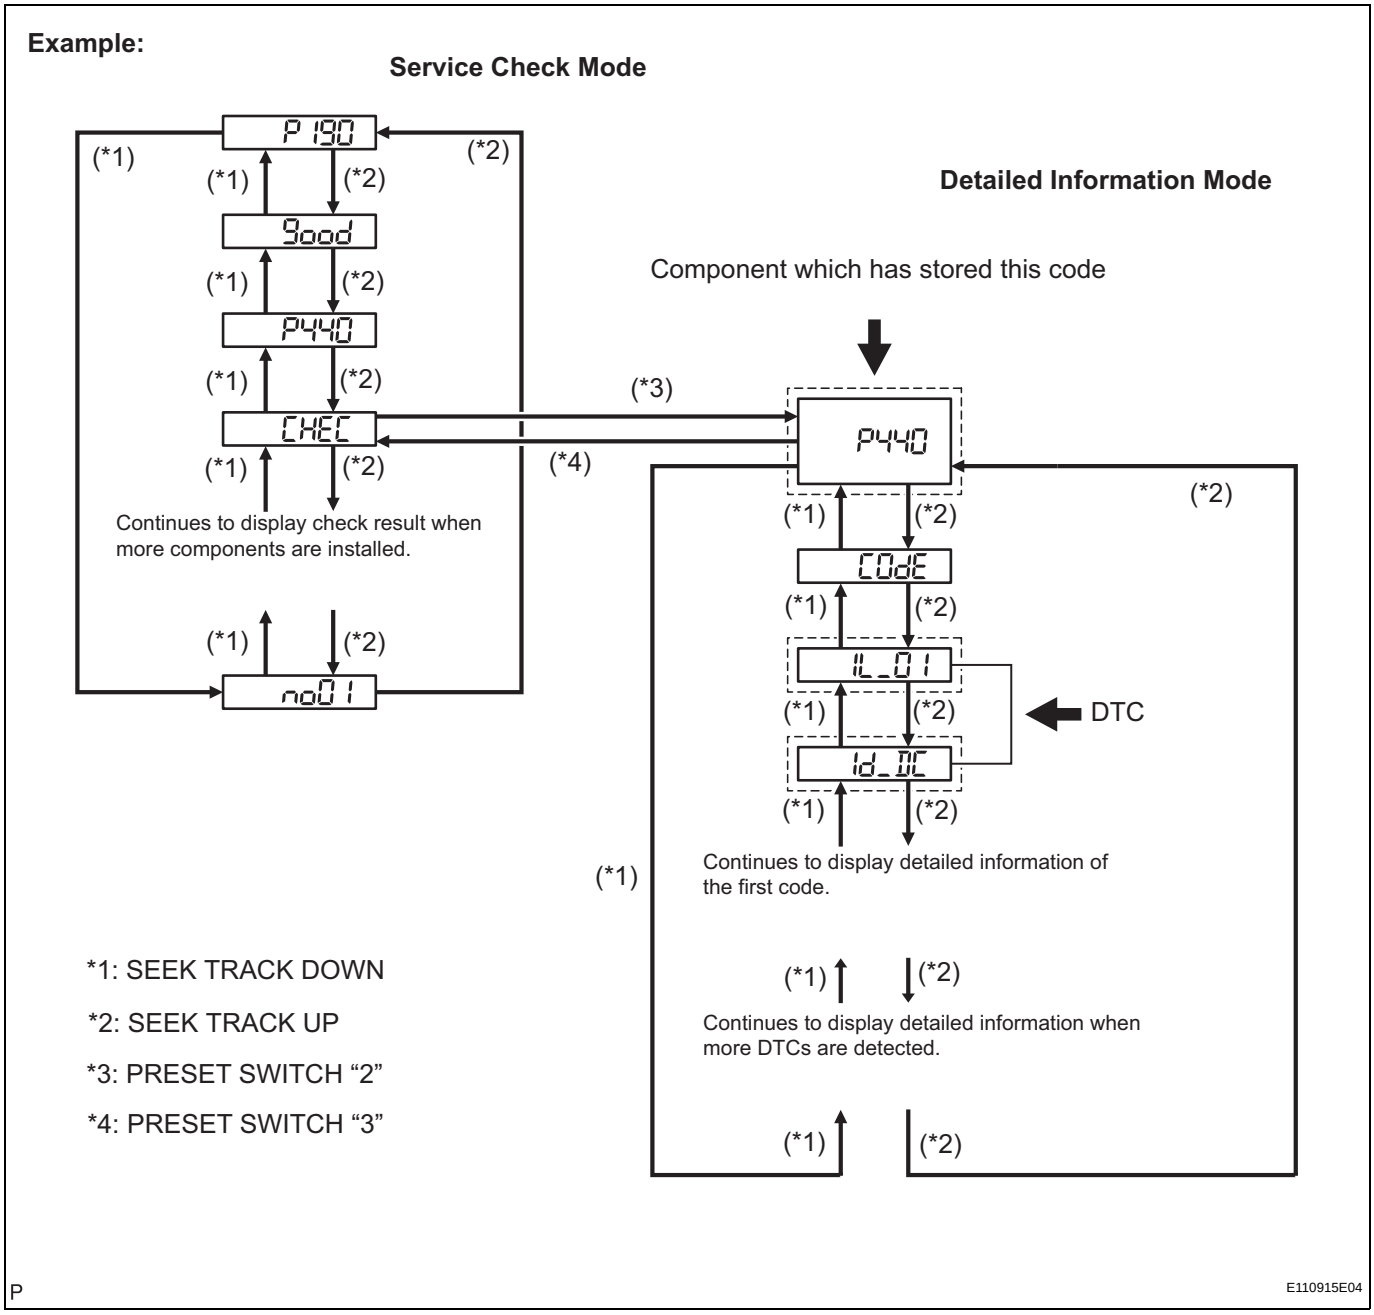
Refer to the radio receiver power source circuit (See page AV-140).
If the power source circuit is operating normally, proceed to the next step.

NEXT

AV

2	IDENTIFY THE COMPONENT WHICH HAS STORED THIS CODE

(a) Enter the diagnostic mode.



(b) Press the preset switch "3" to change to "Detailed Information Mode".

(c) Identify the component which has stored this code.

Component Table:

Component	Physical address
Stereo component amplifier	440
"Bluetooth" handsfree module	19D

HINT:

- "440 (stereo component amplifier)" is the component which has stored this code in the example shown in the illustration.
- For details of the DTC display, refer to "DTC CHECK/ CLEAR" (See page AV-19).

AV

NEXT

3	CHECK COMPONENT WHICH HAS STORED THIS CODE

(a) Select the component which has stored this code.
HINT:
The "Bluetooth" handsfree module is built into the radio receiver. If there is a problem between the "Bluetooth" handsfree module and radio receiver, replace the radio receiver.

Component Table:

Component	Proceed to
"Bluetooth" handsfree module	A
Except "Bluetooth" handsfree module	B

A → REPLACE RADIO RECEIVER

B

4	CHECK POWER SOURCE CIRCUIT OF COMPONENT WHICH HAS STORED THIS CODE

(a) Inspect the power source circuit of the component which has stored this code.
If the power source circuit is operating normally, proceed to the next step.

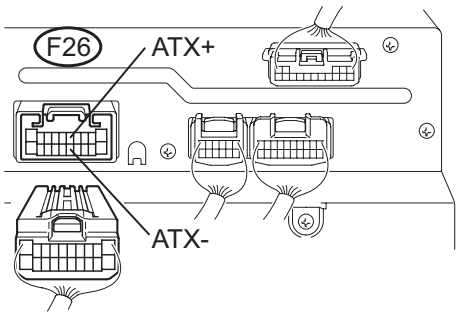
Component Table:

Component	Proceed to
Stereo component amplifier	Stereo component amplifier power source circuit (See page AV-142)

NEXT

5	INSPECT RADIO RECEIVER

Premium Model Wire Harness View:



P E129798E04

(a) Disconnect the radio receiver connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
ATX+ (F26-5) - ATX- (F26-15)	Always	60 to 80 Ω

NG → REPLACE RADIO RECEIVER

OK

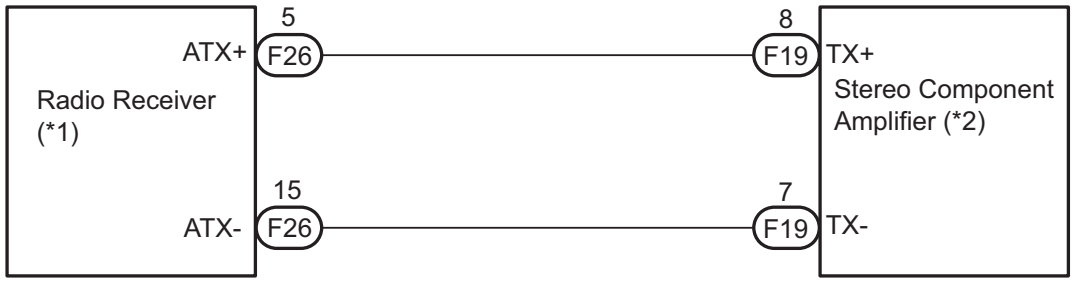
6	CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - COMPONENT WHICH HAS STORED THIS CODE)

HINT:
For details of the connectors, refer to the "TERMINALS OF ECU" (See page AV-15).

(a) Referring to the AVC-LAN wiring diagram below, check the AVC-LAN circuit between the radio receiver and the component which has stored this code.
  (1) Disconnect all connectors between the radio receiver and the component which has stored this code.
  (2) Check for an open or short in the AVC-LAN circuit between the radio receiver and the component which has stored this code.
  OK:
  There is no open or short circuit.

AVC-LAN WIRING DIAGRAM

Premium Model:



*1: Master Unit

*2: Slave Unit

P

E111831E15

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

7	REPLACE COMPONENT WHICH HAS STORED THIS CODE

(a) Replace the component which has stored this code with a normal one and check if the same problem occurs again.

AV

OK:
Same problem does not occur.

NG → **REPLACE RADIO RECEIVER**

OK

END

DTC 01-DC Transmission Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-DC *1	Transmission to component shown by sub-code failed (Detecting this DTC does not always mean actual failure)	If the same sub-code is recorded in other components, check harness for power supply and communication system of all components shown by code

HINT:
*1: This code may be stored if the engine is started, idled for 60 seconds and then the ignition switch is turned to the START position again. (Key type ignition switch only)
NOTICE:
- **Before starting troubleshooting, be sure to clear DTCs to erase codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The radio receiver is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

INSPECTION PROCEDURE

NOTICE:
Be sure to read DESCRIPTION before performing the following procedures.

1 CHECK FOR DTC OF OTHER COMPONENTS

(a) Check if the component shown by the sub-code is displayed in the check result of the other components.
  (1) Check if "01-DC" is output for the other components.
  (2) If "01-DC" is output for any other components, check if the same physical address is displayed.
  Result

Result	Proceed to
"01-DC" is output and the same physical address is displayed	**A**
"01-DC" is not output or the same physical address is not displayed	**B**

HINT:
For the list of the components shown by sub-codes, refer to the table in step 2.

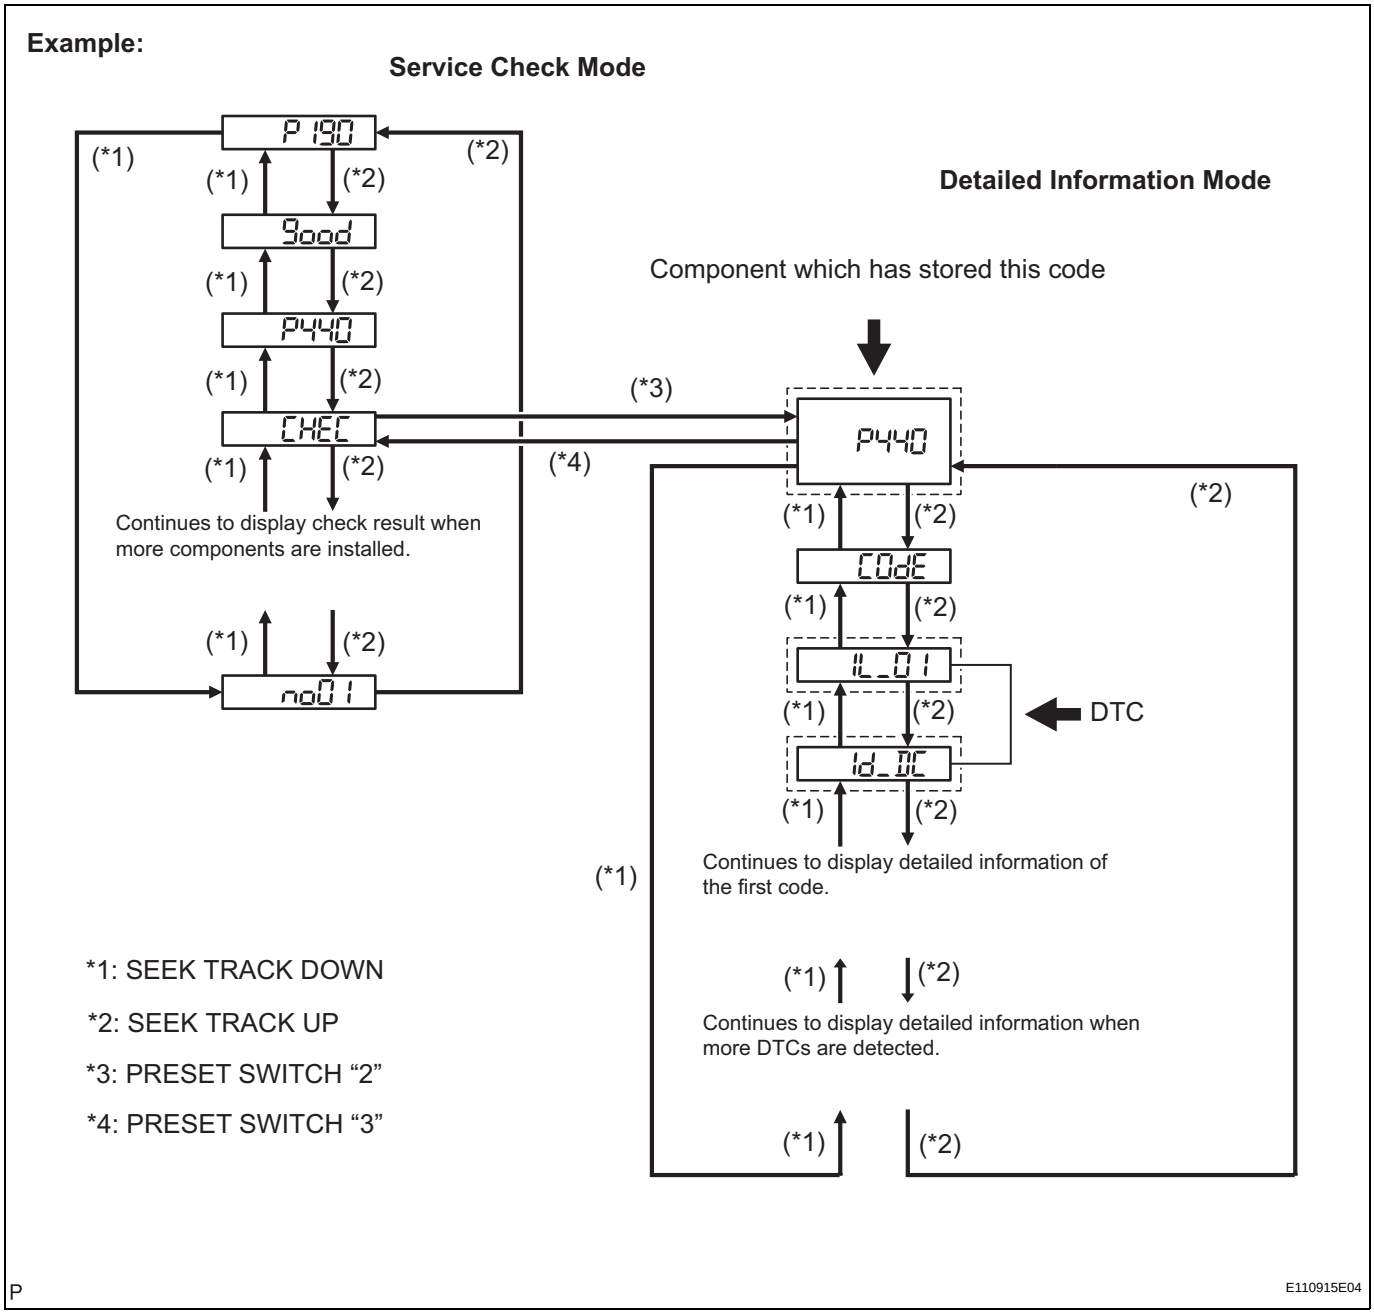
B → **Go to step 4**

A

2 IDENTIFY THE COMPONENT WHICH HAS STORED THIS CODE

(a) Enter the diagnostic mode.

AV



(b) Press the preset switch "3" to change to "Detailed Information Mode".

(c) Identify the component which has stored this code.

Component Table:

Component	Physical address
Stereo component amplifier	440
"Bluetooth" handsfree module	19D
Radio receiver	190

HINT:

- "440 (stereo component amplifier)" is the component which has stored this code in the example shown in the illustration.
- For details of the DTC display, refer to "DTC CHECK/ CLEAR" (See page AV-19).

AV

NEXT

3	CHECK COMPONENT WHICH HAS STORED THIS CODE

(a) Select the component which has stored this code.

Component Table:

Component	Proceed to
Stereo component amplifier	Stereo component amplifier communication error (See page AV-133)
"Bluetooth" handsfree module	"Bluetooth" handsfree module communication error (See page AV-136)
Radio receiver	Radio receiver communication error (See page AV-129)

NEXT

END

4	CLEAR DTC

(a) Clear the DTCs (See page AV-19).
HINT:
If "01-DC" is output for only one component, this may not indicate a malfunction.

NEXT

5	RECHECK DTC

(a) Recheck for DTCs and check if the same trouble occurs again.
OK:
Malfunction disappears.

NG → **Go to step 3**

OK

END

DTC	01-DD	Master Reset

DTC	01-E1	Voice Processing Device ON Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-DD *1	The device that should be the master has been disconnected after engine start.	• Radio receiver power source circuit • AVC-LAN circuit between the radio receiver and the component which has stored this code • Radio receiver • Component which has stored this code
01-E1 *2	The AMP device records that the AMP output does not function even while the source device operates.	

HINT:
*1: This code may be stored if the engine is started and the ignition switch is turned to START position again. (Key type ignition switch only)
*2: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.
NOTICE:
- **Before starting troubleshooting, be sure to clear DTCs to erase codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The radio receiver is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

INSPECTION PROCEDURE

NOTICE:
Be sure to read DESCRIPTION before performing the following procedures.

1	CHECK RADIO RECEIVER POWER SOURCE CIRCUIT

DTC	01-E0	Registration Complete Indication Error

DTC	01-E3	Registration Demand Transmission

DTC	01-E4	Multiple Frame Incomplete

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-E0	"Registration complete" signal from the master device cannot be received.	-
01-E3	The registration demand signal from the slave device is output. Or the registration demand signal is output by receiving connection confirmation signal from the sub-master device.	-
01-E4	The multiple frame transmission is incomplete.	-

HINT:
Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs. These DTCs do not indicate a malfunction.

DTC	01-E2	ON / OFF Indication Parameter Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-E2	The command for ON/OFF control from the master device has a problem.	Radio receiver

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	REPLACE RADIO RECEIVER

NEXT

END

DTC	57-47	Bluetooth Module Initialization Failed

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
57-47	• "Bluetooth" module is not installed. • Problem with "Bluetooth" module • Problem in communication line to "Bluetooth" module	Radio receiver

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	REPLACE RADIO RECEIVER

DTC	63-41	Wrong Disc

DTC	63-42	Disc cannot be Read

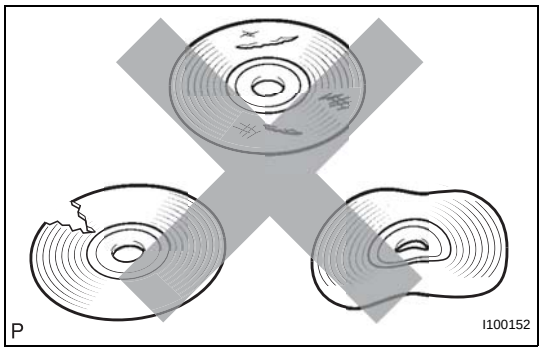
DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
62-41	An unsuitable disc is inserted.	• CD • Radio receiver
62-42	The disc cannot be read.	
63-41	An unsuitable disc is inserted.	
63-42	The disc cannot be read.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	CHECK DISC

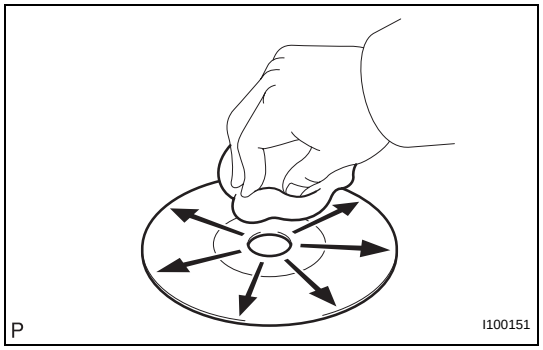


(a) Check that the disc is not deformed or cracked.
OK:
No deformation or cracks on the disc.

NG → **CHANGE DISC**

OK

2	DISC CLEANING



(a) Disc cleaning
(1) If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.
NOTICE:
Do not use a conventional record cleaner or anti-static preservative.

NEXT

AV

3	CLEAR DTC

(a) Clear the DTCs (See page AV-19).

NEXT

4	RECHECK DTC

(a) Recheck for DTCs and check if the same trouble occurs again.

OK:

Malfunction disappears.

OK → END

NG

5	REPLACE DISC WITH ANOTHER AND RECHECK

(a) Replace the disc with another and recheck.
   (1) Replace the disc with another normal one.
   (2) Clear the DTCs (See page AV-19).
   (3) Recheck for DTCs and check if the same trouble occurs again.

DTC	62-43	CD-ROM Abnormal

DTC	63-43	CD-ROM Abnormal

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
62-43	CD-ROM operation is abnormal	• CD • Radio receiver
63-43	CD-ROM operation is abnormal	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	CHECK IF A PROPER CD IS INSERTED

(a) Make sure that the CD is an audio CD or a CD with an MP3 or WMA file, and that it is not deformed, flawed, stained, burred, or otherwise defective.
OK:
Normal CD
HINT:
- Translucent or uniquely-shaped CDs cannot be played.
- CDs with adhesive paper labels should not be played.
- Commercial audio CDs can be played.
- CD-DA files on CD-ROMs, CD-Rs, and CD-RWs can be played.
- MP3 and WMA files on CD-ROMs, CD-Rs, and CD-RWs can be played.
- For details on playable CDs, refer to the Owner's Manual.

NG → **CHANGE DISC**

OK

2	REPLACE CD WITH ANOTHER AND RECHECK

(a) Replace the CD with another and recheck.
(1) Replace the CD with another normal one.
(2) Clear the DTCs (See page AV-19).
(3) Recheck for DTCs and check if the same trouble occurs again.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK

END

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
62-45	Disc cannot be ejected.	Radio receiver
62-51	Mechanical error occurs during elevator operation.	
62-52	Error occurs in CD player clamp.	
63-45	Magazine cannot be ejected.	
63-51	Mechanical error occurs during elevator operation.	
63-52	Error occurs in CD changer clamp.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	**CHECK RADIO RECEIVER**

(a) Check if a disc can be changed, inserted or ejected normally.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK

END

DTC	62-46	Scratched / Reversed Disc

DTC	63-46	Scratched / Reversed Disc

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
62-46	Scratches or dirt is found on CD surface or CD is set upside down.	• CD • Radio receiver
63-46	Scratches or dirt is found on CD surface or CD is set upside down.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

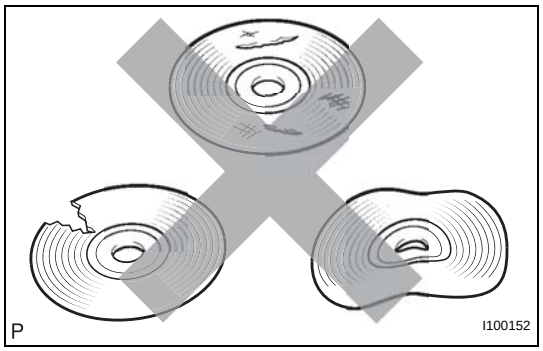
1	CHECK THAT CD IS INSERTED PROPERLY

(a) Check whether or not the CD is inserted upside down.
OK:
CD is properly inserted.

NG → **REINSERT DISC PROPERLY**

OK

2	CHECK DISC



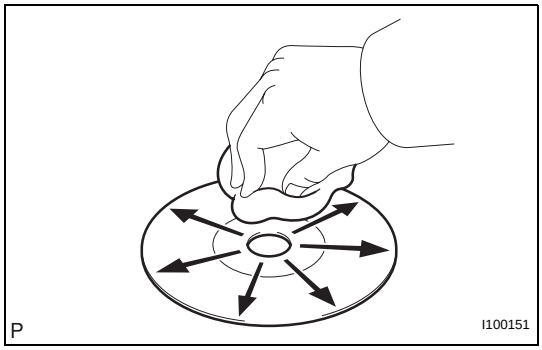
(a) Check that the disc is not deformed or cracked.
OK:
No deformation or cracks on the disc.

NG → **CHANGE DISC**

OK

AV

3	DISC CLEANING



(a) Disc cleaning
  (1) If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.
  NOTICE:
  Do not use a conventional record cleaner or anti-static preservative.

NEXT

4	CLEAR DTC

(a) Clear the DTCs (See page AV-19).

NEXT

5	RECHECK DTC

(a) Recheck for DTCs and check if the same trouble occurs again.

OK:
Malfunction disappears.

OK → END

NG

6	REINSERT DISC PROPERLY

(a) Replace the disc with another and recheck.
  (1) Replace the disc with another normal one.
  (2) Clear the DTCs (See page AV-19).
  (3) Recheck for DTCs and check if the same trouble occurs again.
  OK:
  Malfunction disappears.

NG → REPLACE RADIO RECEIVER

OK

END

DTC	62-47	High Temperature

DTC	63-47	High Temperature

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
62-47	Sensor detects that CD unit temperature is high. (Over 80°C)	Radio receiver
63-47	Sensor detects that CD unit temperature is high. (Over 80°C)	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	CHECK RADIO RECEIVER

(a) Park the vehicle in a cool place.
(b) Check that the temperature of the radio receiver becomes sufficiently low, and start the engine. Check that the malfunction disappears.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK

END

DTC	62-78	DSP Error

DTC	63-78	DSP Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
62-78	An error occurs during the decode process (MP3/ WMA).	-
63-78	An error occurs during the decode process (MP3/ WMA).	-

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.
NOTICE:
- **These codes may be output even if there is no malfunction.**
- **If these codes are output frequently, replace the radio receiver.**

1	CLEAR DTC

(a) Clear the DTCs (See page AV-19).

NEXT

2	RECHECK DTC

(a) Recheck for DTCs and check if the same trouble occurs again.
OK:
Malfunction disappears.

NG → REPLACE RADIO RECEIVER

OK

END

DTC	62-7D	Disc cannot be Played

DTC	62-7E	No Playable Files

DTC	62-7F	Copyright Protection Error

DTC	63-7D	Disc cannot be Played

DTC	63-7E	No Playable Files

DTC	63-7F	Copyright Protection Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
62-7D	• An incompatible MP3/WMA file is used. • Although the file has an extension of ".mp3" or ".wma", the header information cannot be read.	• CD • Radio receiver
62-7E	• A disc with no music data is used. • Playable files are not on the disc (MP3/WMA).	
62-7F	A copy-protected file, which cannot be played, is used.	
63-7D	• An incompatible MP3/WMA file is used • Although the file has an extension of ".mp3" or ".wma", the header information cannot be read.	
63-7E	• A disc with no music data is used. • Playable files are not on the disc (MP3/WMA).	
63-7F	A copy-protected file, which cannot be played, is used.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	CHANGE DISC

(a) Insert a disc with a playable file and check if the disc can be played correctly.
HINT:
For details on playable files and discs, refer to the Owner's Manual.
OK:
The disc can be played correctly.

NG → **REPLACE RADIO RECEIVER**

OK

END

AV

Noise Occurs

INSPECTION PROCEDURE

1 **NOISE CONDITION**

(a) Check from which direction the noise comes (front left or right, or rear left or right).
(1) Check from which direction the noise comes.
OK:
The location of the noise source can be determined.

NG → **Go to step 3**

OK

2 **CHECK SPEAKERS**

(a) Check the installation conditions of the speaker units that are located near the noise source and that there are no cracks, scratches, deformation, or other failures.

Result

Condition	Proceed to
A speaker is installed incorrectly	A
Foreign objects are in the speaker	B
A speaker cone paper is broken	C
No malfunction is found	D

A → **REINSTALL SPEAKER**

B → **REMOVE FOREIGN OBJECT**

C → **REPLACE SPEAKER**

D

3 **CHECK NOISE CONDITIONS**

(a) Check the noise condition.
HINT:
The radio has a noise prevention function to reduce noise when listening to the radio. If a loud noise occurs, check whether the ground at the antenna mounting base and the noise prevention unit are installed and wired correctly.

Conditions under which noise occurs	Noise source
Noise increases when the accelerator pedal is depressed, but stops when the engine is stopped.	Generator
Noise occurs during A/C or heater operation.	Blower motor
Noise occurs when the vehicle accelerates rapidly on an unpaved road or after the ignition switch is turned on (IG or ACC).	Fuel pump

Conditions under which noise occurs	Noise source
Noise occurs when the horn switch is pressed and released or when pressed and held.	Horn
Noise occurs synchronously with the blink of the turn signal.	Flasher
Noise occurs during window washer operation.	Washer
Noise occurs while the engine is running, and continues even after the engine is stopped.	Water temperature sensor
Noise occurs during wiper operation.	Wiper
Noise occurs when the brake pedal is depressed.	Stop light switch
Others	Static electricity

HINT:

- In the chart's left column, find the situation that matches the customer's complaint. Then, in the right column, find the part that is causing the noise. Check the noise filter on or for the part.
- To save time and avoid a misdiagnosis, first make sure that the noise is not coming from outside the vehicle.
- Noise should be removed in descending order of loudness.
- Setting the radio to a frequency where no signal is received may make recognition of the noise problem easier.

OK:

The noise source cannot be determined.

NG → **REPAIR OR REPLACE NOISE SOURCE**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Pressing Power Switch does not Turn on System

INSPECTION PROCEDURE

1	CHECK VEHICLE CONDITION

(a) Check that conditions in the cabin are not likely to cause condensation.
HINT:
This problem occurs when the cabin is humid and the temperature changes rapidly. This may produce condensation, resulting in a short circuit.
OK:
Condensation is not likely to be produced.

NG → **DRY OUT CABIN AND RECHECK CONDITION**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

No Sound can be Heard from Speakers

INSPECTION PROCEDURE

1	CHECK RADIO RECEIVER

(a) Check radio receiver setting.
  (1) Check that the volume is not set to "0".
  (2) Check that "MUTE" is off.
  OK:
  The volume is not set to "0" and "MUTE" is off.

OK → **END**

NG

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Sound Quality is Bad Only when CD is Played (Volume is Too Low)

INSPECTION PROCEDURE

1	**REPLACE CD WITH ANOTHER AND RECHECK**

(a) Replace the CD with another one and recheck.
(1) Check if the problem recurs using another CD.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

OK

END

CD cannot be Ejected

INSPECTION PROCEDURE

1	**PRESS "EJECT" AND CHECK OPERATION**

(a) Press the CD EJECT switch of the radio receiver for 2 seconds or more and check that the CD is ejected.
OK:
CD is ejected.

NG → **REPLACE RADIO RECEIVER**

OK

2	**REPLACE CD WITH ANOTHER AND RECHECK**

(a) Insert another CD and check if it is ejected.
OK:
CD is ejected.

NG → **REPLACE RADIO RECEIVER**

OK

END

CD cannot be Inserted / Played or CD is Ejected Right After Insertion

INSPECTION PROCEDURE

1	CHECK IF A PROPER CD IS INSERTED

(a) Make sure that the CD is an audio CD or a CD with an MP3 or WMA file, and that it is not deformed, flawed, stained, burred, or otherwise defective.
OK:
Normal CD.
HINT:
- Translucent or uniquely-shaped CDs cannot be played.
- CDs with adhesive paper labels should not be played.
- Commercial audio CDs can be played.
- CD-DA files on CD-ROMs, CD-Rs, and CD-RWs can be played.
- MP3 and WMA files on CD-ROMs, CD-Rs, and CD-RWs can be played.
- For details on playable CDs, refer to the Owner's Manual.

NG → **CHANGE DISC**

OK

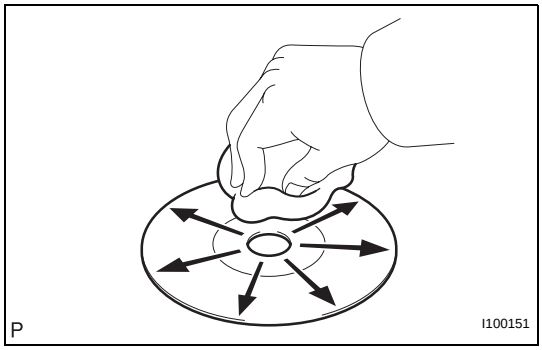
2	CHECK THAT CD IS INSERTED PROPERLY

(a) Check whether or not the CD is inserted upside down.
OK:
CD is properly inserted.

NG → **INSERT CD PROPERLY**

OK

3	CHECK CD



(a) Clean the disc by wiping it with a soft cloth from the inside to the outside in a radial direction.
OK:
Malfunction disappears.
NOTICE:
Do not use a conventional record cleaner or anti-static preservative.

NG → **Go to step 4**

AV

OK

END

4	REPLACE CD WITH ANOTHER AND RECHECK

(a) Replace the CD with a normal one and check that the malfunction disappears.
OK:
Malfunction disappears.

NG → **REPLACE RADIO RECEIVER**

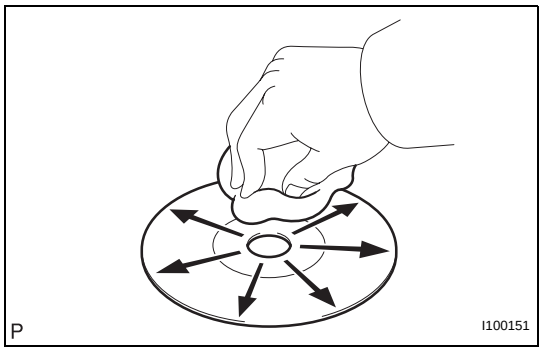
OK

END

CD Sound Skips

INSPECTION PROCEDURE

1	CHECK CD

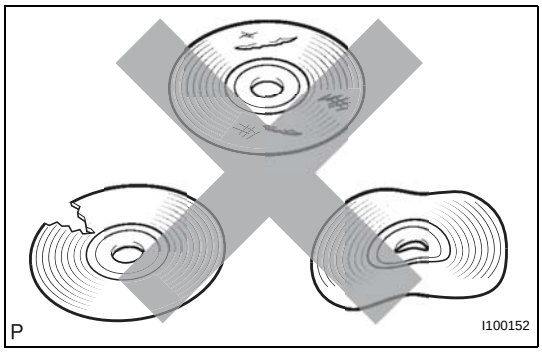


(a) Check the CD.
OK:
The CD is clean.
HINT:
If dirt is on the CD surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.
NOTICE:
Do not use a conventional record cleaner or anti-static preservative.

NG → **CLEAN CD**

OK

2	CHECK CD



(a) Check that the CD is not deformed or cracked.
OK:
No deformation or cracks on the CD.

NG → **CHANGE DISC**

OK

3	CHECK OPERATION USING ANOTHER CD

(a) Check using another CD.
(1) Check if the problem recurs using another CD.
OK:
The problem does not occur.

OK → **END**

NG

4	CHECK RADIO RECEIVER

(a) Check the radio receiver installation condition.
(1) Check that the radio receiver is properly installed.
OK:
Radio receiver is properly installed.

NG → **REINSTALL RADIO RECEIVER PROPERLY**

OK

REPLACE RADIO RECEIVER

Radio Broadcast cannot be Received or Poor Reception

INSPECTION PROCEDURE

1	CHECK RADIO RECEIVER

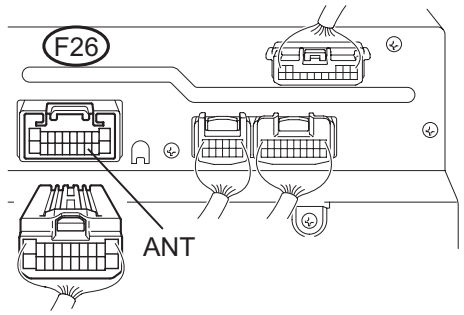
(a) Check the radio's automatic station search function.
(1) Check the radio's automatic station search function by activating it.
OK:
The radio's automatic station search function works properly.

OK → **REPLACE RADIO RECEIVER**

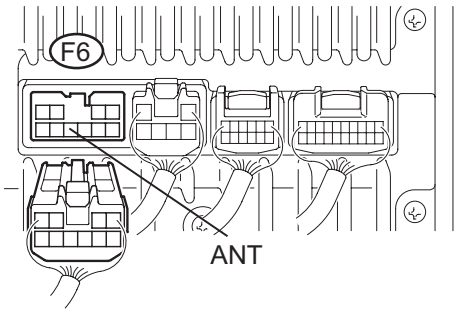
NG

2	INSPECT RADIO RECEIVER

Wire Harness View (Premium Model):



Wire Harness View (Standard Model):



P E129799E03

(a) Disconnect the radio receiver connector.
(b) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester connection	Condition	Specified condition
ANT - Body ground	Ignition SW on (IG) Radio SW ON	10 to 14 V

NG → **REPLACE RADIO RECEIVER**

AV

OK

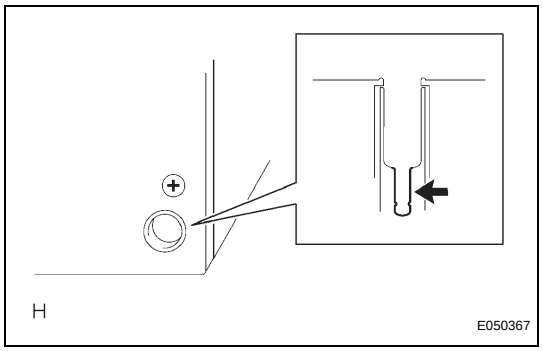
3	CHECK OPTIONAL COMPONENTS

(a) Check optional components (sun-shade film, telephone antenna, etc.).
  (1) Check if any optional components, such as sunshade film or telephone antenna that may decrease reception capacity, are installed.
  OK:
  Optional components are installed.
  NOTICE:
  Do not remove any optional components installed by the customer without his or her consent.

OK → **REMOVE OPTIONAL COMPONENTS AND CHECK AGAIN (SEE NOTICE ABOVE)**

NG

4	CHECK RADIO RECEIVER

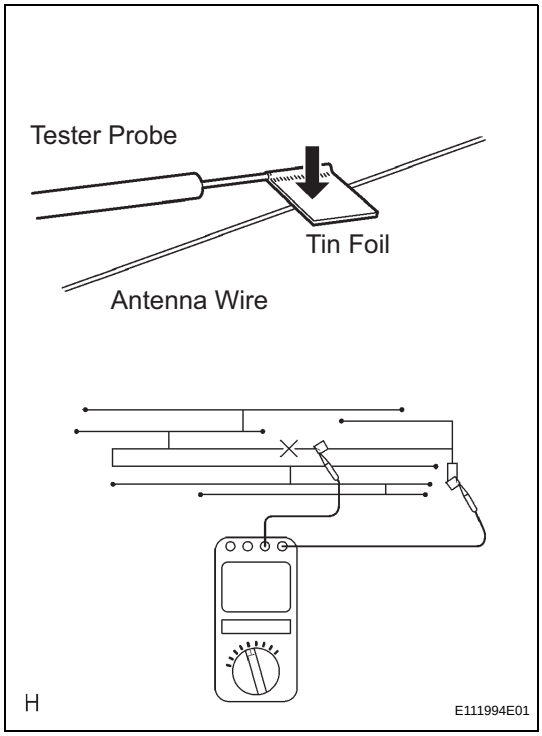


(a) Preparation for check
  (1) Remove the antenna plug from the radio receiver.
(b) Check for noise
  (1) Turn the ignition switch on (ACC) with the radio receiver connector connected.
  (2) Turn the radio on and put into AM mode.
  (3) Place a screwdriver, thin wire, or other metal object on the radio receiver's antenna jack and check that noise can be heard from the speaker.
  OK:
  Noise occurs.

NG → **REPLACE RADIO RECEIVER**

OK

5	CHECK GLASS ANTENNA



(a) Check for continuity of the antenna.
HINT:
Check for continuity at the center of each antenna wire as shown in the illustration.
NOTICE:
When cleaning the glass, wipe it in the direction of the wire with a soft dry cloth. Take care not to damage the wire. Do not use detergents or glass cleaners with abrasive ingredients. When measuring voltage, wrap a piece of tin foil around the tip of the negative probe and press the foil against the wire with your finger, as shown in the illustration.
OK:
There is continuity in the antenna.

NG → **REPAIR GLASS ANTENNA**

OK

6	CHECK ANTENNA CORD

(a) Remove the antenna plug of the radio receiver and antenna.
(b) Measure the resistance between the antenna and radio receiver to check for an open circuit in the antenna cord.
Standard resistance:
Below 1 Ω
(c) Measure the resistance between the antenna cord and body ground to check for a short circuit in the antenna cord.
Standard resistance:
10 kΩ or higher

NG → **REPLACE ANTENNA CORD**

OK

7	REPLACE AMPLIFIER ANTENNA

(a) Replace the amplifier antenna and check if radio broadcasts can be received normally.
OK:
Radio broadcasts can be received.

OK → **NORMAL OPERATION**

AV

NG

REPLACE RADIO RECEIVER

Poor Sound Quality in All Modes (Low Volume)

INSPECTION PROCEDURE

1	CHECK AUDIO SETTINGS

(a) Set "BASS", "MID", and "TREB" to the initial values and check that sound is normal.
OK:
Malfunction disappears.

OK → **END**

NG

2	COMPARE WITH ANOTHER VEHICLE OF SAME MODEL

(a) Compare with another vehicle of the same model.
(1) Compare with another vehicle of the same model which does not have trouble to see if there is any difference in the sound quality.
OK:
No difference is found.

OK → **END**

NG

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Cellular Phone Registration Failure, Phone Directory Transfer Failure

INSPECTION PROCEDURE

1 CHECK CURRENT CONDITIONS

(a) Proceed to the next step according to the table below.

RESULT

Conditions	Proceed to
Another "Bluetooth" compatible cellular phone is present.	A
Another "Bluetooth" compatible vehicle is present.	B
None of the above	C

B → Go to step 3

C → Go to step 4

A

2 CHECK USING ANOTHER CELLULAR PHONE

(a) Check if the system functions using another "Bluetooth" compatible cellular phone.
HINT:
- Confirm that either the same or a different version of another "Bluetooth" compatible cellular phone complies with the system.
- Depending on the version, some "Bluetooth" compatible cellular phones cannot be used.

OK:
The system functions.

NG → REPLACE RADIO RECEIVER

OK

USE A "BLUETOOTH" COMPATIBLE CELLULAR PHONE

3 CHECK USING ANOTHER "BLUETOOTH" COMPATIBLE VEHICLE

(a) Register the cellular phone with another vehicle and check if the system functions normally.
HINT:
Depending on the version, some "Bluetooth" compatible cellular phones cannot be used.

OK:
The system functions.

OK → REPLACE RADIO RECEIVER

NG

USE A "BLUETOOTH" COMPATIBLE CELLULAR PHONE

4	CHECK CELLULAR PHONE

(a) Check if the cellular phone is "Bluetooth" compatible.
HINT:
Some versions of "Bluetooth" compatible cellular phones may not function.
OK:
The phone is Bluetooth compatible.

NG → **USE A "BLUETOOTH" COMPATIBLE CELLULAR PHONE**

OK

5	CHECK CELLULAR PHONE

(a) Check if a call can be made from the cellular phone.
HINT:
When the battery is low, registration or directory transfer cannot be done.
OK:
A call can be made from the cellular phone.

NG → **REPAIR OR REPLACE CELLULAR PHONE**

OK

REPLACE RADIO RECEIVER

Cellular Phone cannot Send / Receive

INSPECTION PROCEDURE

1	CHECK "BLUETOOTH" SETTINGS

(a) Check if the "Bluetooth" settings are correct.
OK:
"Bluetooth" settings are correct.

NG → **SET SETTINGS CORRECTLY**

OK

2	CHECK CELLULAR PHONE

(a) Check if the cellular phone is "Bluetooth" compatible.
HINT:
Some versions of "Bluetooth" compatible cellular phones may not function.
OK:
Phone is "Bluetooth" compatible.

NG → **END (ONLY A "BLUETOOTH" COMPATIBLE CELLULAR PHONE CAN BE USED)**

OK

3	CHECK SETTINGS

(a) Check if the cellular phone functions.
HINT:
The cellular phone is unable to call under any of the following conditions.
- The cellular phone is locked.
- The directory is being transferred.
- The line is crossed.
- Transmission is regulated.
- The power is off.
- The cellular phone is not connected to "Bluetooth" ("BT" is displayed while connected).

OK:
None of the above conditions exist.

NG → **SET CORRECTLY**

OK

4	CHECK CELLULAR PHONE

(a) Check if the cellular phone can make a call.

AV

HINT:
When the battery is low, calls cannot be made or received.
OK:
Cellular phone can make a call.

NG → **REPAIR OR REPLACE CELLULAR PHONE**

OK

5	**CHECK RECEPTION**

(a) Set the cellular phone so that it can receive calls.
(b) Place the cellular phone close to the radio receiver.
(c) Check if the cellular phone has reception according to the radio receiver.
OK:
Cellular phone has reception.

NG → **REPLACE RADIO RECEIVER**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

The Other Caller's Voice cannot be Heard, is too Quiet, or Distorted

INSPECTION PROCEDURE

1 CHECK CELLULAR PHONE

(a) Check if the voice on the other side can be heard using a cellular phone.
OK:
Voice can be heard.

NG → **REPAIR OR REPLACE CELLULAR PHONE**

OK

2 CHECK AUDIO AND VISUAL SYSTEM

(a) Check that audio sound can be heard from the driver side speaker.
OK:
Audio sound can be heard.
HINT:
If audio sound cannot be heard, proceed to "No sound can be heard from speakers. (Audio is mute.)" in the PROBLEM SYMPTOMS TABLE (See page AV-13).

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK

3 CHECK SETTINGS

(a) Check that the received voice level setting on the cellular phone is not too low.
OK:
The received voice level setting is not too low.

NG → **SET VOLUME TO HIGH**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

The Other Caller cannot Hear Your Voice, or Your Voice is too Quiet or Distorted

INSPECTION PROCEDURE

1	**CHECK CELLULAR PHONE**

(a) Check if the other side can hear your voice properly.
OK:
Your voice can be heard correctly.

NG → **REPLACE CELLULAR PHONE**

OK

2	**CHECK SETTINGS**

(a) Check if the mute is set to ON.
OK:
Mute is not set to ON.

NG → **TURN MUTE OFF**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

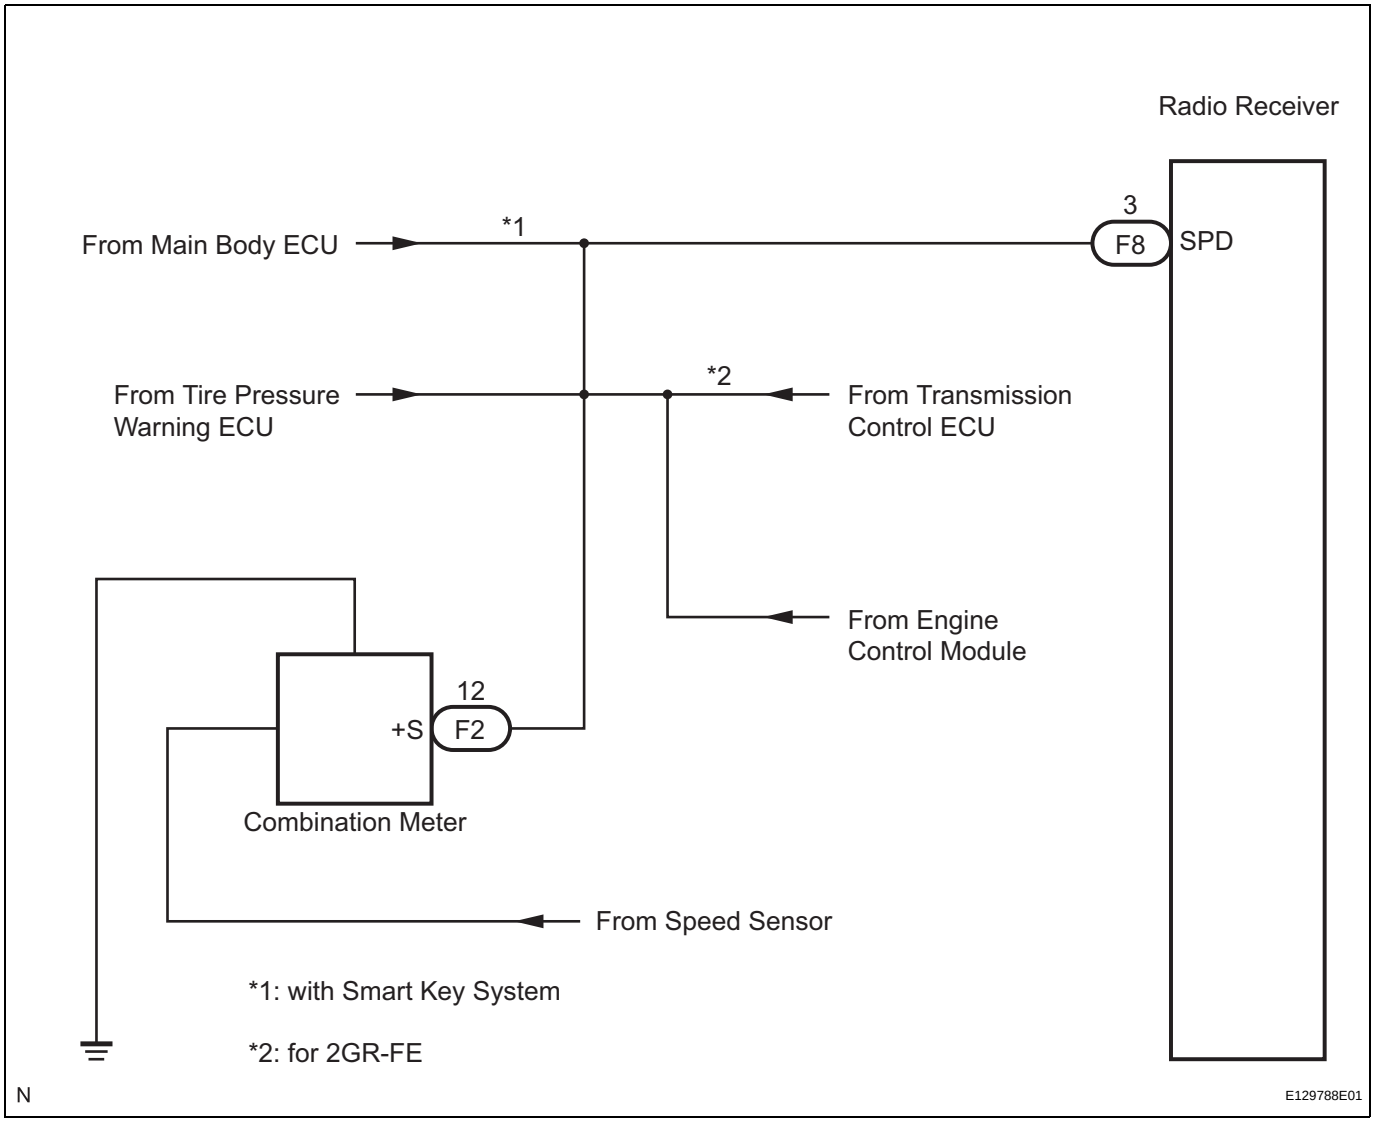
Vehicle Speed Signal Circuit between Radio Receiver and Combination Meter

DESCRIPTION

This circuit is necessary for the ASL (Auto Sound Leveliser) built into the radio receiver.
Speed signals are received from the combination meter and used for the ASL.
The ASL function automatically adjusts the sound data in order to enable hearing the clear audio sound even when vehicle noise increases (as vehicle noise increases, the volume is turned up etc.).
HINT:

- A voltage of 12 V or 5 V is output from each ECU and then input to the combination meter. The signal is changed to a pulse signal at the transistor in the combination meter. Each ECU controls the respective system based on the pulse signal.
- If a short occurs in an ECU, all systems in the diagram below will not operate normally.

WIRING DIAGRAM



AV

INSPECTION PROCEDURE

1	CHECK OPERATION OF SPEEDOMETER

(a) Drive the vehicle and check if the function of the speedometer on the combination meter is normal.

OK:

Actual vehicle speed and the speed indicated on the speedometer are the same.

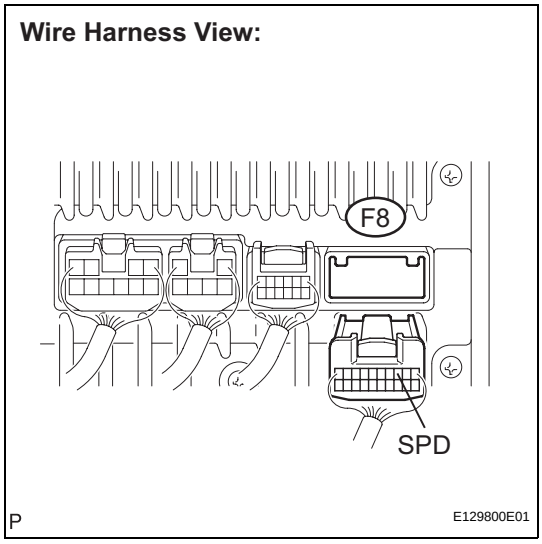
HINT:

The vehicle speed sensor is functioning normally when the indication on the speedometer is normal.

NG → **CHECK COMBINATION METER**

OK

2	INSPECT RADIO RECEIVER



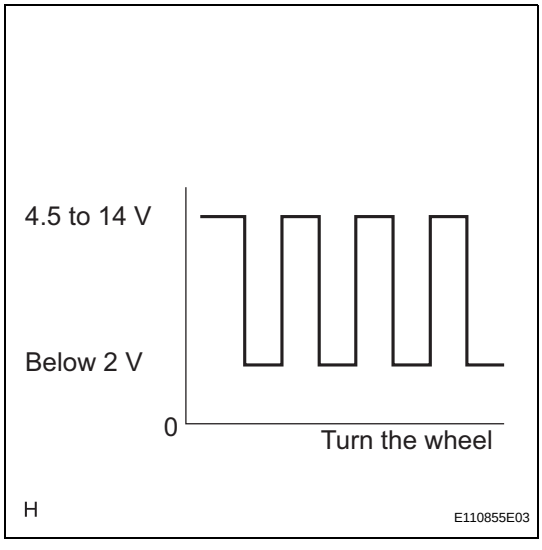
(a) Disconnect the radio receiver connector F8.

(b) Measure the voltage.

(1) Jack up either one of the drive wheels.

(2) Move the shift lever to the neutral position.

(3) Turn the ignition switch on (IG).



(4) Measure the voltage between terminal SPD of the wire harness connector and body ground when the drive wheels are turned slowly.

OK:

Voltage pulses as shown in the illustration.

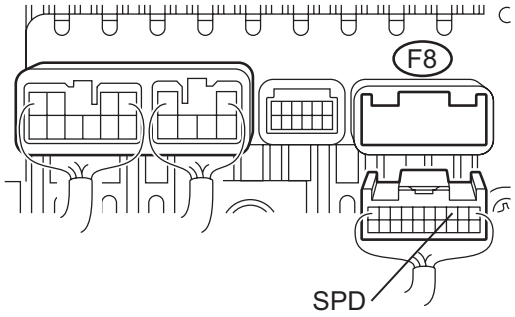
OK → **REPLACE RADIO RECEIVER**

NG

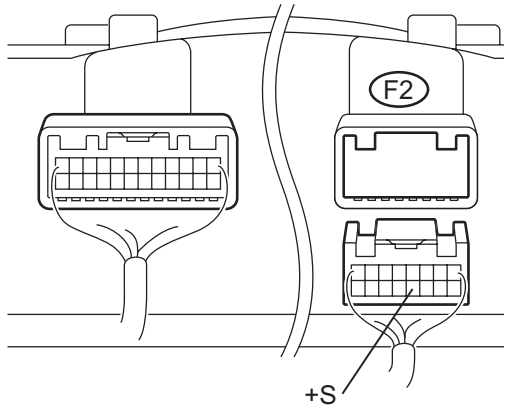
AV

3	CHECK HARNESS AND CONNECTOR (COMBINATION METER - RADIO RECEIVER)

Radio Receiver Wire Harness View:



Combination Meter Wire Harness View:



E129801E01

(a) Disconnect the radio receiver connector F8 and combination meter connector F2.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
SPD - +S	Ignition switch off	Below 1 Ω

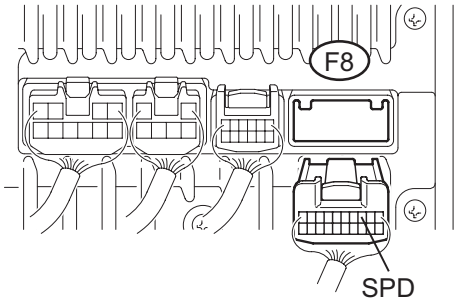
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

AV

4	CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - BODY GROUND)

Wire Harness View:



P E129800E01

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
SPD - Body ground	Ignition switch off	10 kΩ or higher

HINT:
If the resistance between terminal SPD and body ground is less than 10 kΩ, there may be a short in a wire harness, connector, or an ECU that is connected to the SPD signal wire.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR OR EACH ECU**

OK

REPLACE COMBINATION METER

Steering Pad Switch Circuit

DESCRIPTION

This circuit sends an operation signal from the steering pad switch to the radio receiver.
If there is an open in the circuit, the audio system cannot be operated using the steering pad switch.
If there is a short in the circuit, the same condition as that when the switch is continuously depressed occurs.
Therefore, the radio receiver cannot be operated using the steering pad switch, and also the radio receiver itself cannot function.

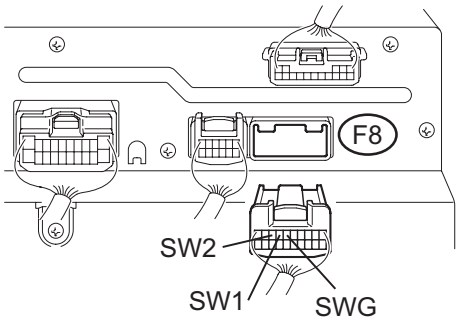
INSPECTION PROCEDURE

NOTICE:

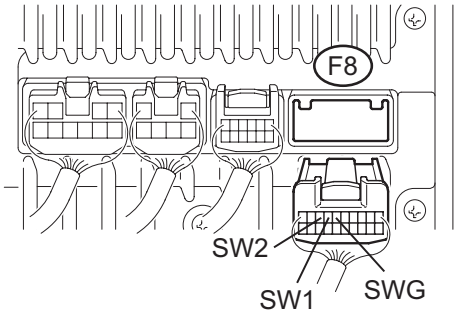
The vehicle is equipped with an SRS (Supplemental Restraint System) which includes components such as airbags. Before servicing (including removal or installation of parts), be sure to read the precautionary notice for the Supplemental Restraint System (See page RS-1).

1	INSPECT RADIO RECEIVER

Wire Harness View (Premium Model):



Wire Harness View (Standard Model):



P E129803E02

(a) Disconnect the radio receiver connector F8.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
SW1 - SWG	No switch is pushed	Approx. 100 kΩ
SW1 - SWG	SEEK+ switch: push	0 to 2.5 Ω
SW1 - SWG	SEEK- switch: push	Approx. 0.3 kΩ
SW1 - SWG	VOL+ switch: push	Approx. 1 kΩ
SW1 - SWG	VOL- switch: push	Approx. 3.1 kΩ
SW2 - SWG	No switch is pushed	Approx. 100 kΩ
SW2 - SWG	MODE switch: push	0 to 2.5 Ω
SW2 - SWG	ON HOOK switch: push (*1)	Approx. 0.3 kΩ
SW2 - SWG	OFF HOOK switch: push (*1)	Approx. 1 kΩ

*1: for Premium model

NG → **Go to step 2**

OK

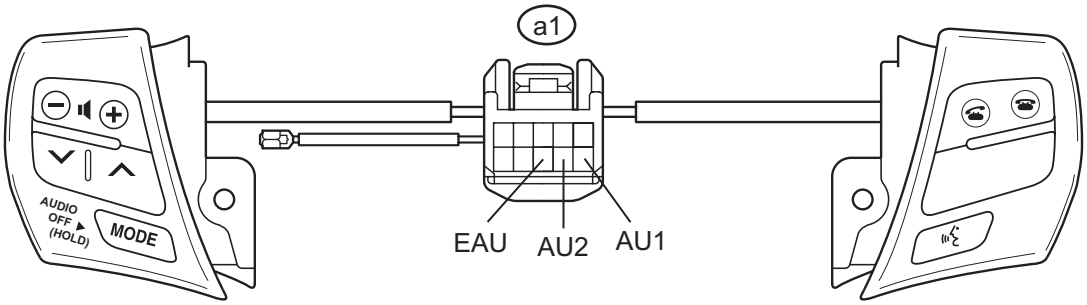
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

2	INSPECT STEERING PAD SWITCH ASSEMBLY

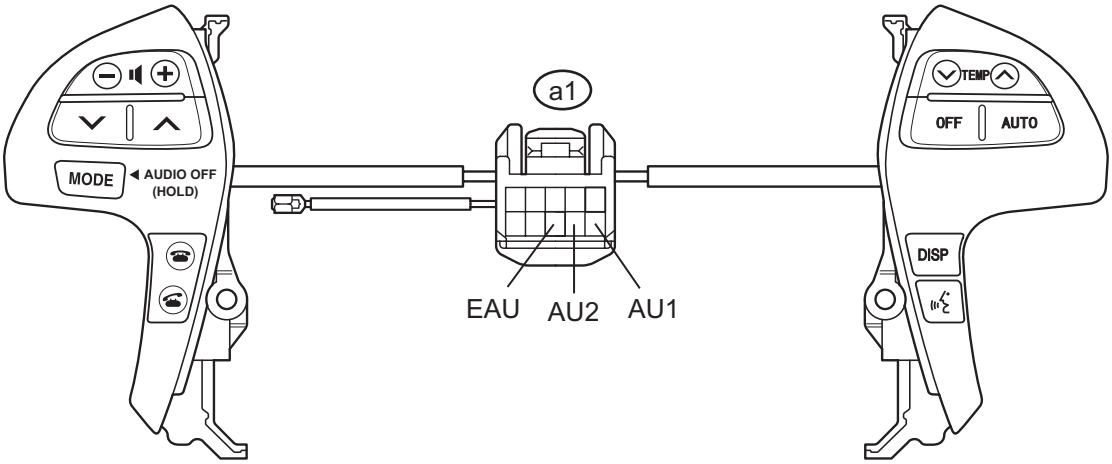
(a) Disconnect the steering pad switch assembly connector.
(b) Measure the resistance according to the values in the table below.

AV

3 Spoke Type:



4 Spoke Type:



P

E129804E01

Standard resistance

Tester connection	Condition	Specified condition
AU1 - EAU	No switch is pushed	Approx. 100 kΩ
AU1 - EAU	SEEK+ switch: push	0 to 2.5 Ω
AU1 - EAU	SEEK- switch: push	Approx. 0.3 kΩ
AU1 - EAU	VOL+ switch: push	Approx. 1 kΩ
AU1 - EAU	VOL- switch: push	Approx. 3.1 kΩ
AU2 - EAU	No switch is pushed	Approx. 100 kΩ
AU2 - EAU	MODE switch: push	0 to 2.5 Ω
AU2 - EAU	ON HOOK switch: push (*1)	Approx. 0.3 kΩ
AU2 - EAU	OFF HOOK switch: push (*1)	Approx. 1 kΩ

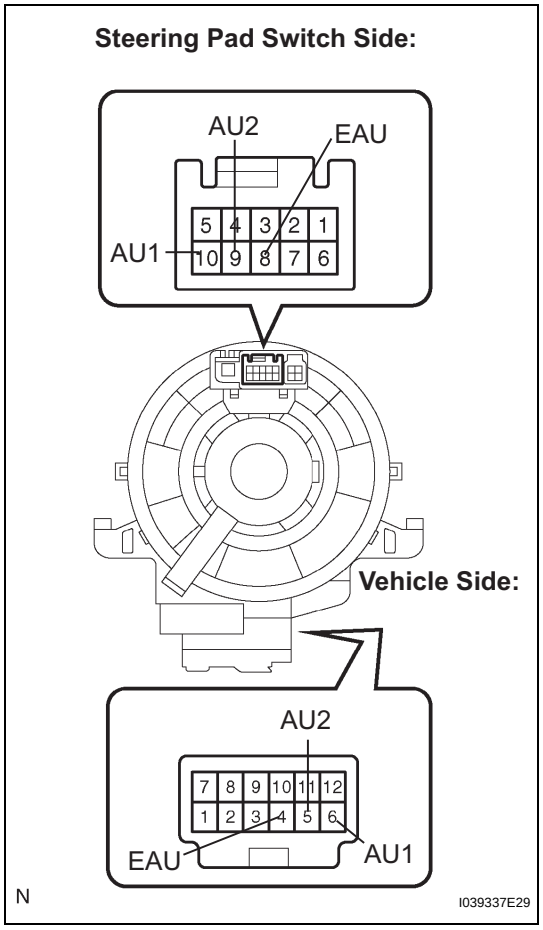
*1: for Premium model

AV

NG → REPLACE STEERING PAD SWITCH ASSEMBLY

OK

3 INSPECT SPIRAL CABLE



(a) Disconnect the steering pad switch and spiral cable connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Spiral cable position	Specified condition
EAU - EAU	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
AU1 - AU1	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
AU2 - AU2	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	

NOTICE:
The spiral cable is an important part of the SRS airbag system. Incorrect removal or installation of the spiral cable may prevent the airbag from deploying. Be sure to read the page shown in the brackets.

HINT:

- Removal (See page RS-363)
- Installation (See page RS-366)

NG → REPLACE SPIRAL CABLE

OK

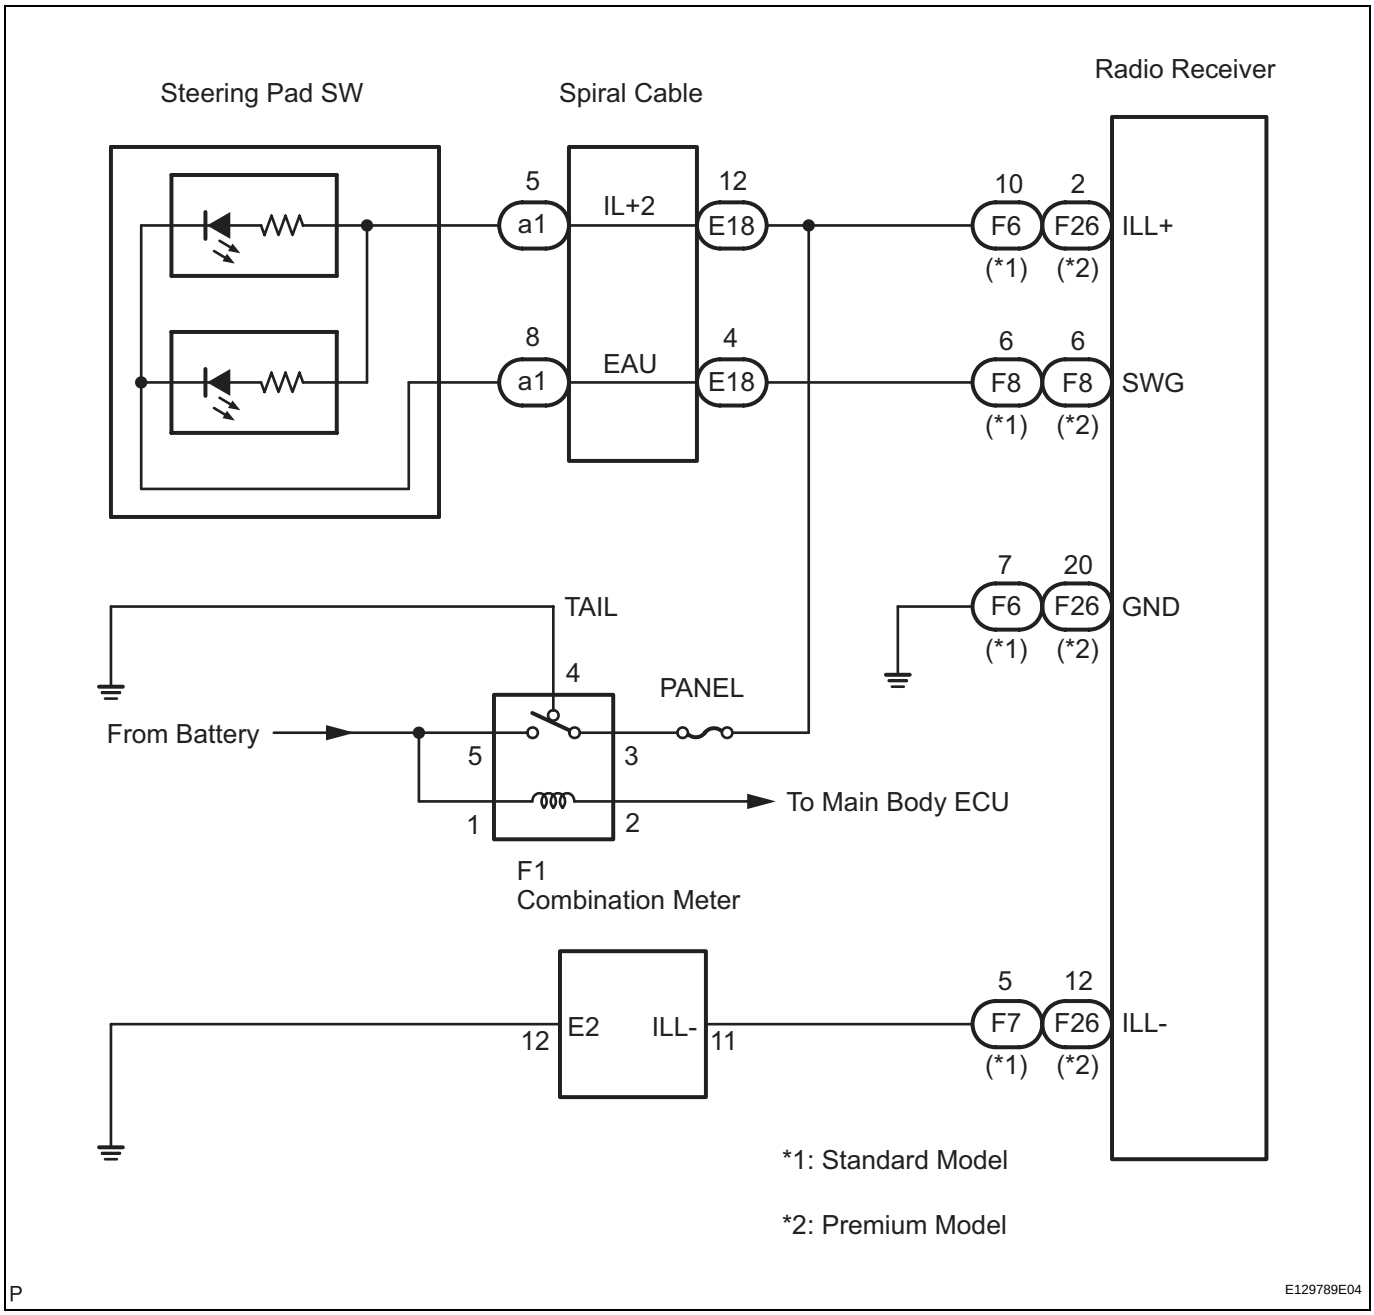
REPAIR OR REPLACE HARNESS OR CONNECTOR (SPIRAL CABLE - RADIO RECEIVER)

Illumination Circuit

DESCRIPTION

Power is supplied to the radio receiver and steering pad switch illumination when the light control switch is in the TAIL or HEAD position.

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

The vehicle is equipped with an SRS (Supplemental Restraint System) which includes components such as airbags. Before servicing (including removal or installation of parts), be sure to read the precautionary notice for the supplemental restraint system (See page RS-1).

1	CHECK ILLUMINATION

(a) Check if the illumination for the radio receiver, steering pad switch, glove box or others (hazard switch, transmission control switch, etc.) comes on when the light control switch is turned to the HEAD or TAIL position.

Result

Result	Proceed to
Illumination comes on for all components except steering pad switch.	A
Illumination comes on for all components except radio receiver.	B
No illumination comes on (radio receiver, hazard switch, glove box, etc.).	C
Illumination comes on only for glove box and steering pad switch.	D

B → Go to step 6

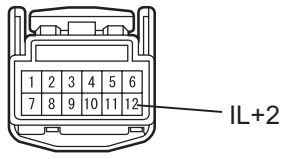
C → GO TO LIGHTING SYSTEM

D → GO TO COMBINATION METER SYSTEM

A

2	CHECK HARNESS AND CONNECTOR (BATTERY - SPIRAL CABLE)

Spiral Cable Connector Front View:



(a) Disconnect the spiral cable connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester connection	Condition	Specified condition
IL+2 - Body ground	Light control SW TAIL or HEAD	10 to 14 V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

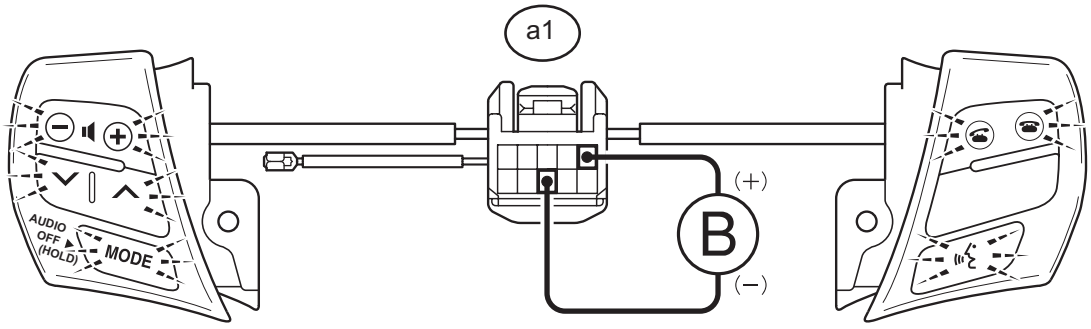
OK

3	INSPECT STEERING PAD SWITCH ASSEMBLY

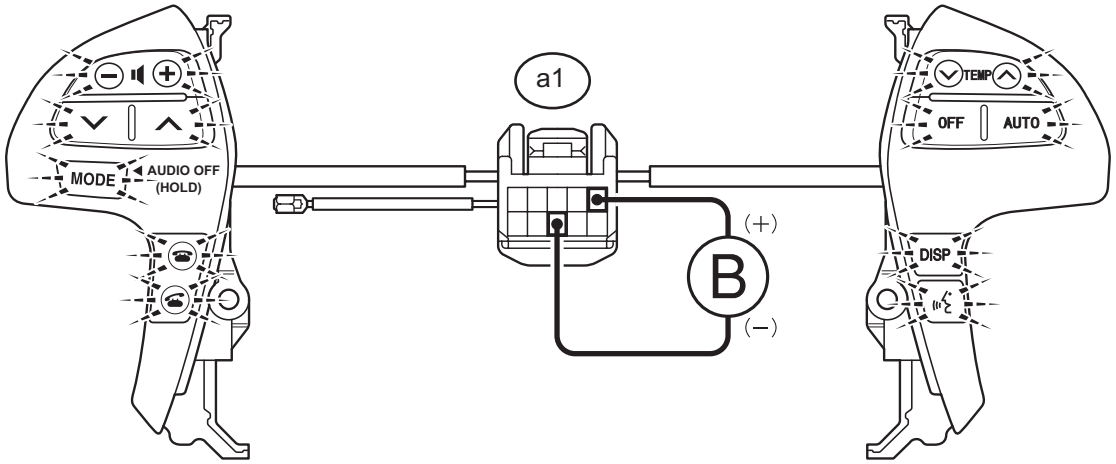
(a) Disconnect the steering pad switch connector.
(b) Connect the positive (+) lead to terminal IL+2 and the negative (-) lead to terminal EAU of the steering pad switch assembly connector.

AV

3 Spoke Type:



4 Spoke Type:



P

E129805E01

(c) Check if the illumination for the steering pad switch assembly comes on.

OK:

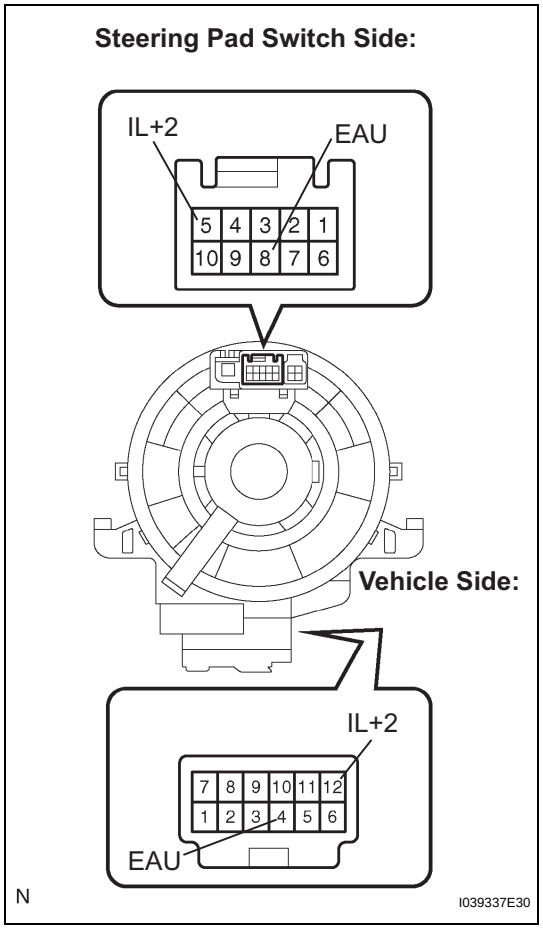
Illumination for the steering pad switch assembly comes on.

AV

NG → **REPLACE STEERING PAD SWITCH ASSEMBLY**

OK

4	INSPECT SPIRAL CABLE



(a) Disconnect the steering pad switch and spiral cable connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Spiral cable position	Specified condition
EAU - EAU	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
IL+2 - IL+2	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	

NOTICE:

The spiral cable is an important part of the SRS airbag system. Incorrect removal or installation of the spiral cable may prevent the airbag from deploying. Be sure to read the page shown in the brackets.

HINT:

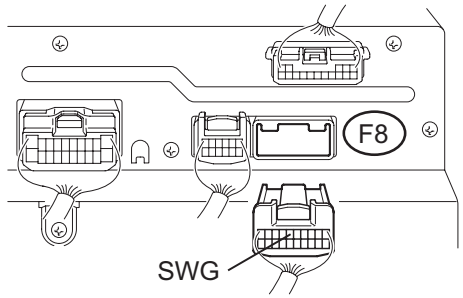
- Removal (See page RS-363)
- Installation (See page RS-366)

NG → **REPLACE SPIRAL CABLE**

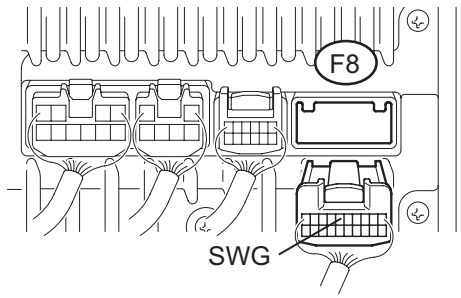
OK

5	CHECK HARNESS AND CONNECTOR (SPIRAL CABLE - RADIO RECEIVER)

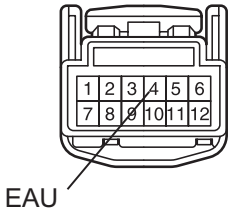
Radio Receiver Wire Harness View (Premium Model):



Radio Receiver Wire Harness View (Standard Model):



Spiral Cable Connector Front View:



P

E129806E02

(a) Disconnect the connectors from the radio receiver and spiral cable.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
SWG - EAU	Always	Below 1 Ω

AV

Speaker Circuit

DESCRIPTION

- When the vehicle has a built-in type amplifier, a sound signal is sent from the radio receiver to the speakers via the "Standard Model" circuit.
- When the vehicle has a separate type amplifier, a sound signal from the radio receiver is amplified by the stereo component amplifier and then transmitted to the speaker via the "Premium Model" circuit.

If there is a short in this circuit, the stereo component amplifier detects it and stops output to the speakers. Thus sound cannot be heard from the speakers even if there is no malfunction in the stereo component amplifier or speakers.

AV

Mute Signal Circuit between Radio Receiver and Stereo Component Amplifier

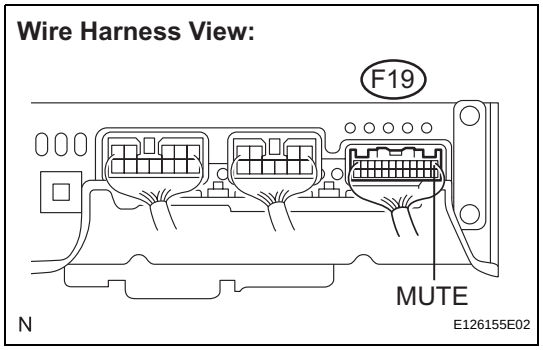
DESCRIPTION

This circuit sends a signal to the stereo component amplifier to mute noise. Because of that, the noise produced by changing the sound source ceases.
If there is an open in the circuit, noise can be heard from the speakers when changing the sound source.
If there is a short in the circuit, even though the stereo component amplifier is normal, no sound, or only an extremely small sound, can be produced.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	INSPECT STEREO COMPONENT AMPLIFIER



(a) Measure the voltage according to the value(s) in the table below.
Standard voltage

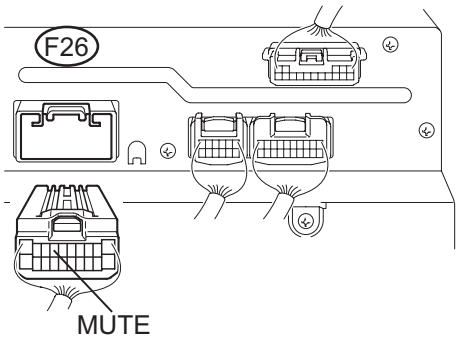
Tester connection	Condition	Specified condition
MUTE - Body ground	Turn ignition switch on (ACC), Audio system is playing → Changing	Above 3.5 V → Below 1 V

OK → PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

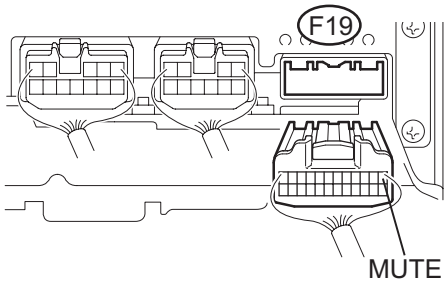
NG

2	CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - STEREO COMPONENT AMPLIFIER)

Radio Receiver Wire Harness View:



Stereo Component Amplifier Wire Harness View:



P E129816E06

(a) Disconnect the radio receiver connector F26 and stereo component amplifier connector F19.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

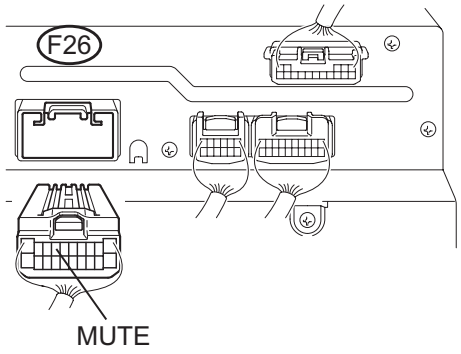
Tester connection	Condition	Specified condition
MUTE - MUTE	Always	Below 1 Ω
MUTE - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	INSPECT STEREO COMPONENT AMPLIFIER (OUTPUT SIGNAL)

Premium Model Wire Harness View:



P E131994E04

(a) Reconnect the stereo component amplifier connector F19.

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester connection	Condition	Specified condition
MUTE - Body ground	Turn ignition switch on (ACC), Audio system is playing.	Above 3.5 V

NG → **REPLACE STEREO COMPONENT AMPLIFIER**

OK

REPLACE RADIO RECEIVER

AVC-LAN Circuit

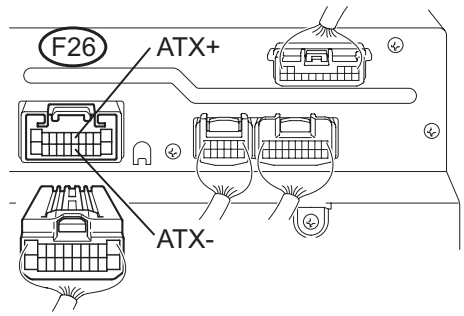
DESCRIPTION

Each unit of the audio system connected to the AVC-LAN (communication bus) transfers the signal of each switch by communication.
When a short to +B or short to ground occurs in this AVC-LAN, the audio system will not function normally as the communication is discontinued.

INSPECTION PROCEDURE

1	INSPECT RADIO RECEIVER

Premium Model Wire Harness View:



P E129798E04

(a) Disconnect the radio receiver connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
ATX+ (F26-5) - ATX- (F26-15)	Always	60 to 80 Ω

NG → **REPLACE RADIO RECEIVER**

OK

2	CHECK HARNESS AND CONNECTOR

HINT:
For details of the connectors, refer to the "TERMINALS OF ECU" (See page AV-15).

(a) Referring to the AVC-LAN wiring diagram below, check all AVC-LAN circuits.
  (1) Disconnect all connectors in all AVC-LAN circuits.
  (2) Check for an open or short in all AVC-LAN circuits.
    OK:
      There is no open or short circuit.

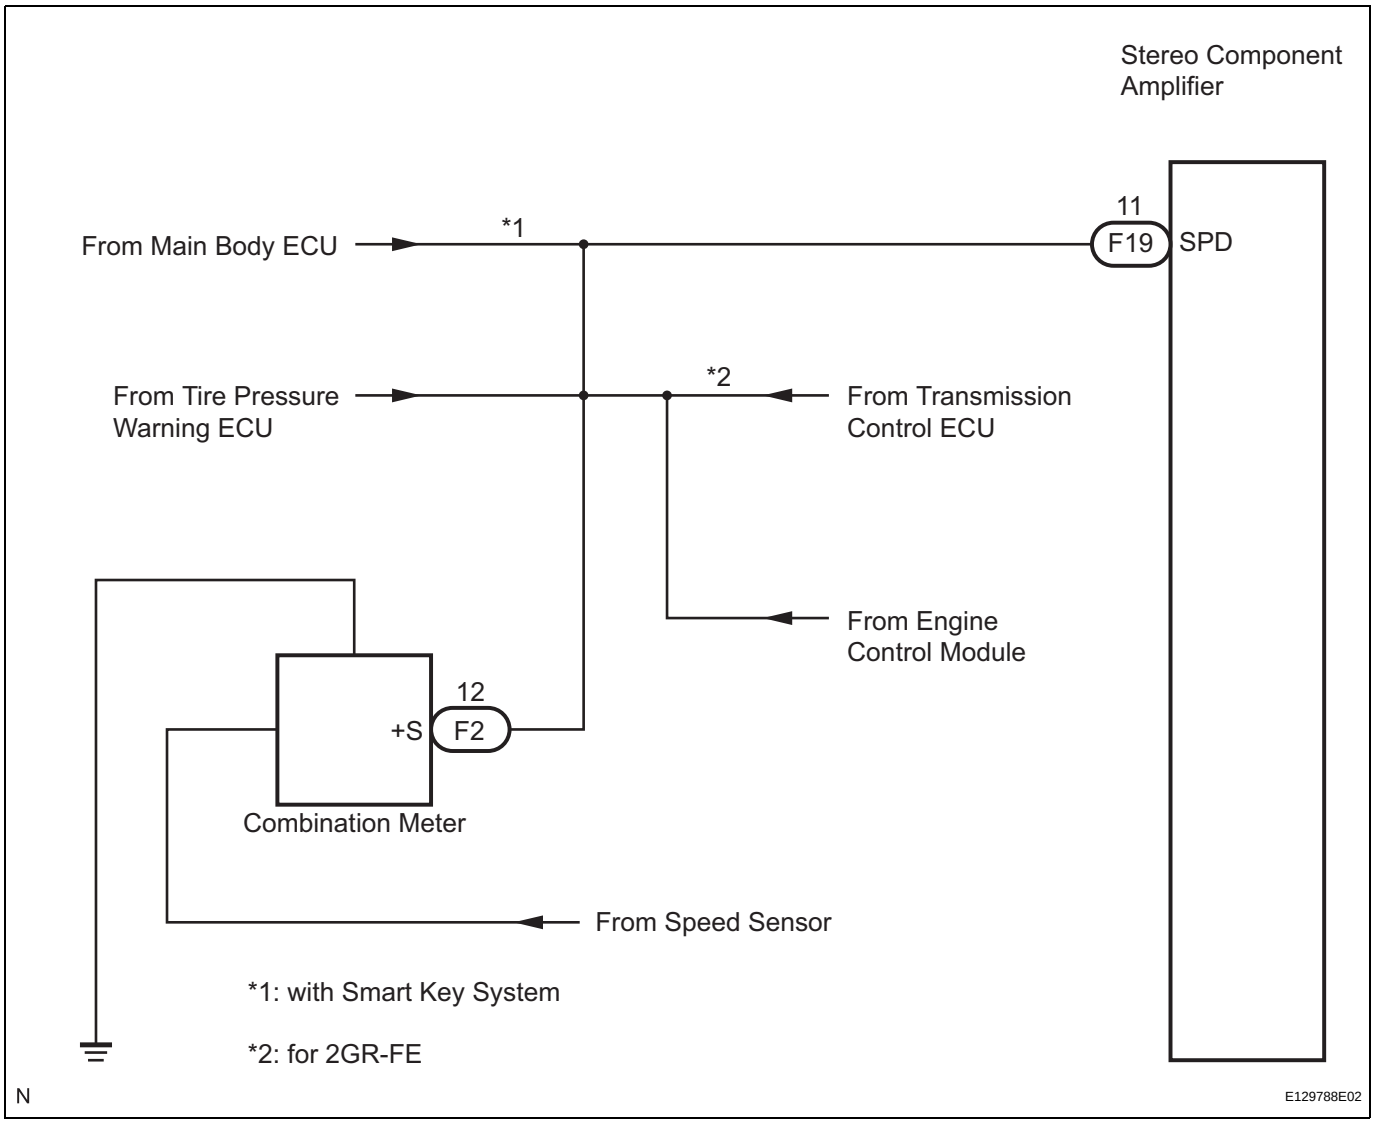
Vehicle Speed Signal Circuit between Stereo Component Amplifier and Combination Meter

DESCRIPTION

This circuit is necessary for the ASL (Auto Sound Leveliser) built into the stereo component amplifier. Speed signals are received from the combination meter and used for the ASL.
The ASL function automatically adjusts the sound data in order to enable hearing the clear audio sound even when vehicle noise increases (as vehicle noise increases, the volume is turned up etc.).
HINT:

- A voltage of 12 V or 5 V is output from each ECU and then input to the combination meter. The signal is changed to a pulse signal at the transistor in the combination meter. Each ECU controls the respective system based on the pulse signal.
- If a short occurs in an ECU, all systems in the diagram below will not operate normally.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	OPERATION OF SPEEDOMETER

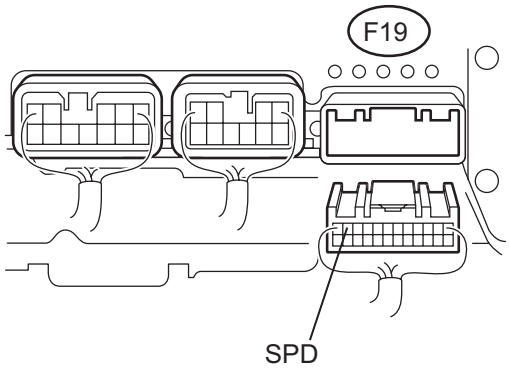
(a) Drive the vehicle and check if the function of the speedometer on the combination meter is normal.
OK:
Actual vehicle speed and the speed indicated on the speedometer are the same.
HINT:
The vehicle speed sensor is functioning normally when the indication on the speedometer is normal.

NG → **CHECK COMBINATION METER**

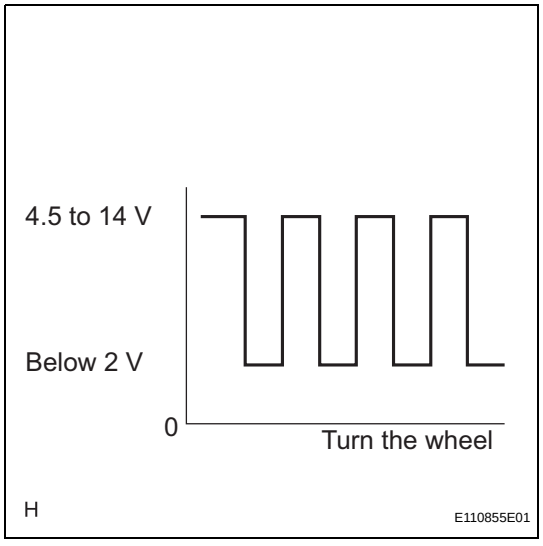
OK

2	INSPECT STEREO COMPONENT AMPLIFIER

Wire Harness View:



(a) Disconnect the stereo component amplifier connector F19.
(b) Measure the voltage.
(1) Jack up either one of the drive wheels.
(2) Move the shift lever to the neutral position.
(3) Turn the ignition switch on (IG).



(4) Measure the voltage between terminal SPD of the wire harness connector and body ground when the drive wheels are turned slowly.
OK:
Voltage pulses as shown in the illustration.

NG → **Go to step 3**

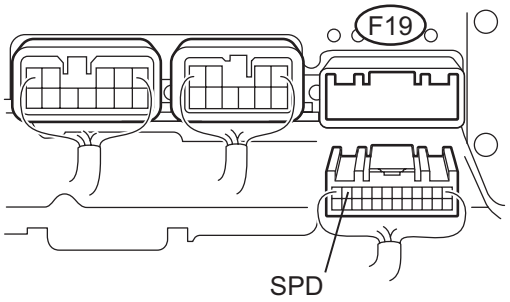
AV

OK

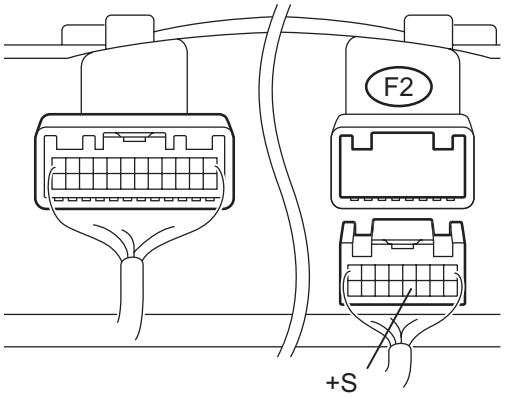
REPLACE STEREO COMPONENT AMPLIFIER

3	CHECK HARNESS AND CONNECTOR (COMBINATION METER - STEREO COMPONENT AMPLIFIER)

Stereo Component Amplifier Wire Harness View:



Combination Meter Wire Harness View:



H E129817E01

(a) Disconnect the stereo component amplifier connector F19 and combination meter connector F2.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
SPD - +S	Ignition switch off	Below 1 Ω

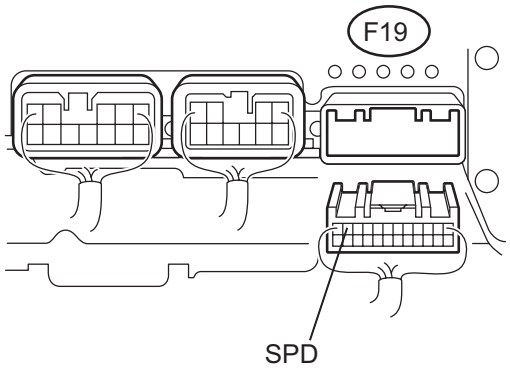
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

AV

4	CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - BODY GROUND)

Stereo Component Amplifier Wire Harness View:



E132126E09

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
SPD - Body ground	Ignition switch off	10 kΩ or higher

HINT:
If the resistance between terminal SPD and body ground is less than 10 kΩ, there may be a short in a wire harness, connector, or an ECU that is connected to the SPD signal wire.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR OR CHECK EACH ECU**

OK

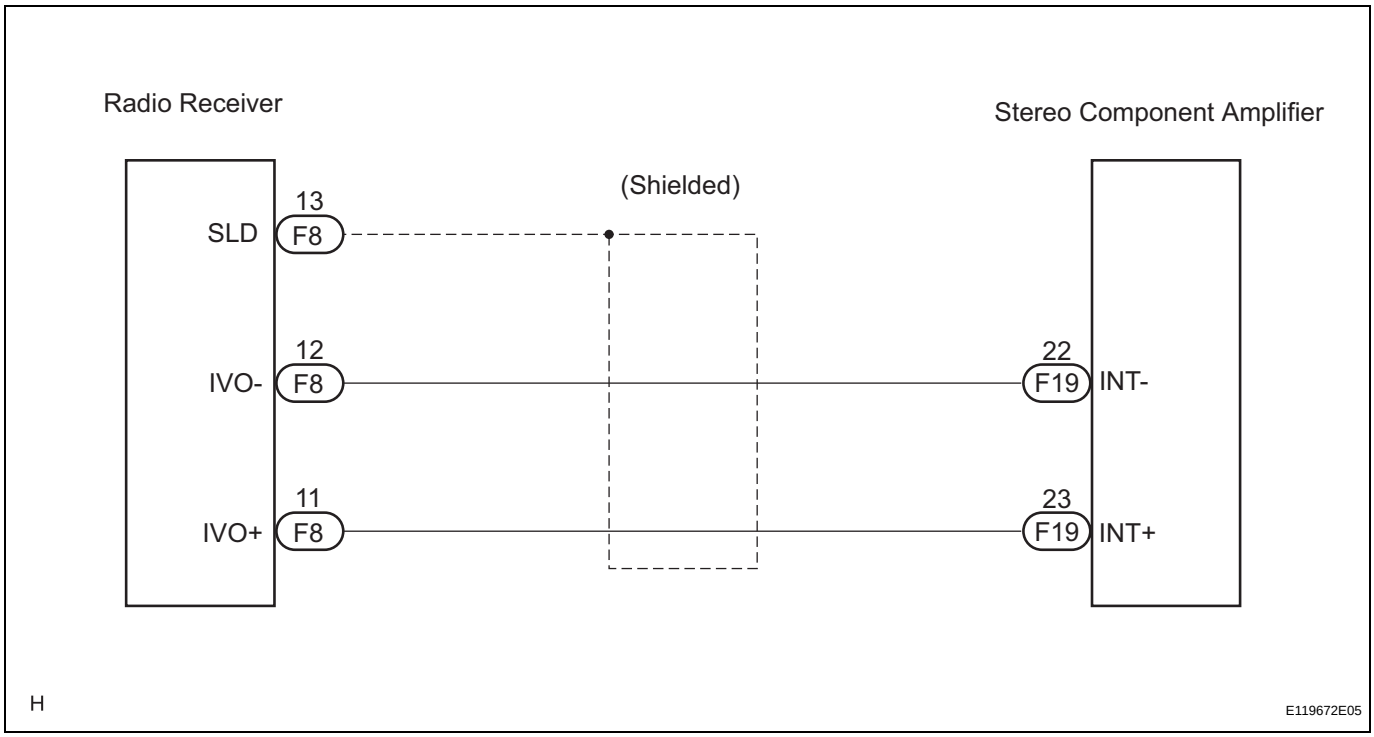
REPLACE COMBINATION METER

Cellular Phone Voice Circuit between Radio Receiver and Stereo Component Amplifier

SYSTEM DESCRIPTION

This circuit is used when the cellular phone voice in the "Bluetooth" handsfree system is on.

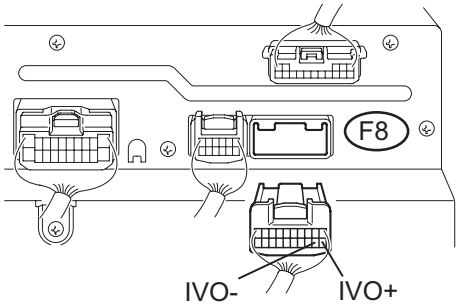
WIRING DIAGRAM



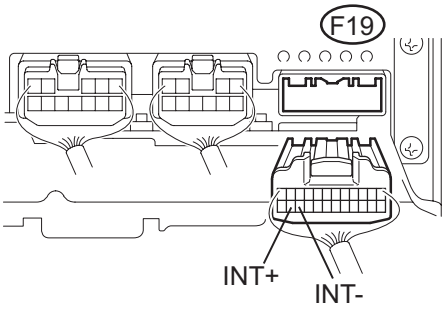
INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - STEREO COMPONENT AMPLIFIER)

Radio Receiver Wire Harness View:



Stereo Component Amplifier Wire Harness View:



P E133935E01

(a) Disconnect the radio receiver connector F8 and stereo component amplifier connector F19.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
IVO+ - INT+	Always	Below 1 Ω
IVO- - INT-	Always	Below 1 Ω
IVO+ - Body ground	Always	10 kΩ or higher
IVO- - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

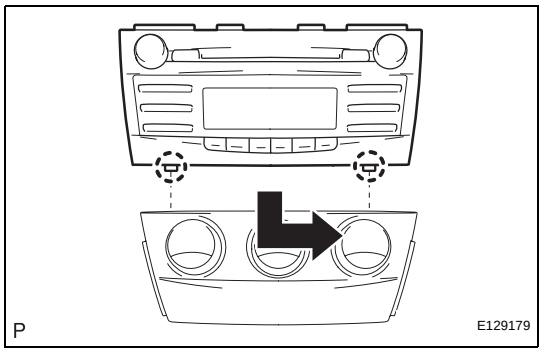
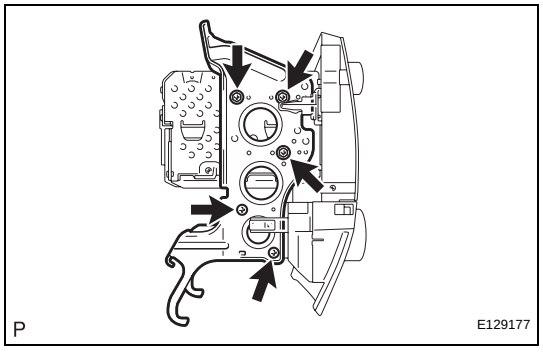
(a) Remove the radio receiver assembly as shown in the illustration.

INSTALLATION



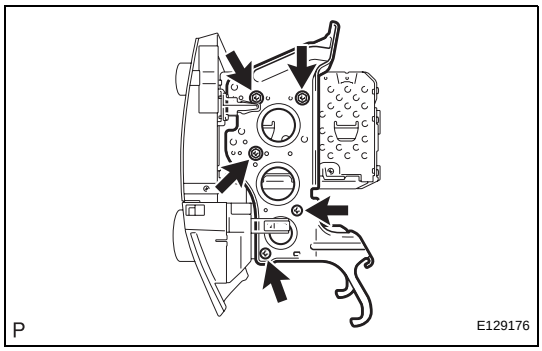
1. INSTALL RADIO RECEIVER ASSEMBLY

(a) Install the radio receiver assembly as shown in the illustration.

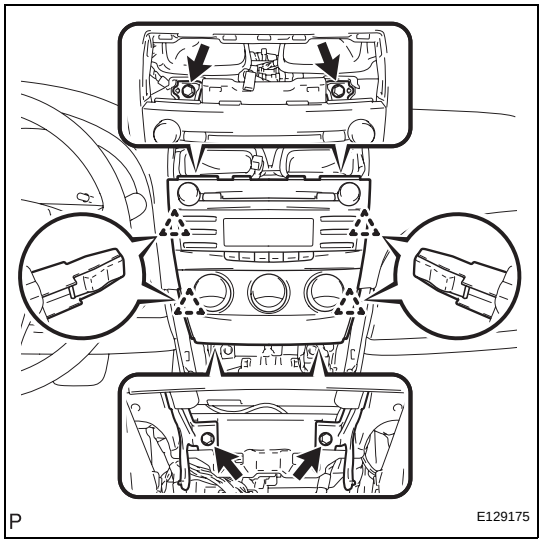


2. INSTALL RADIO NO. 2 BRACKET

(a) Install the radio No. 2 bracket with the 5 bolts.



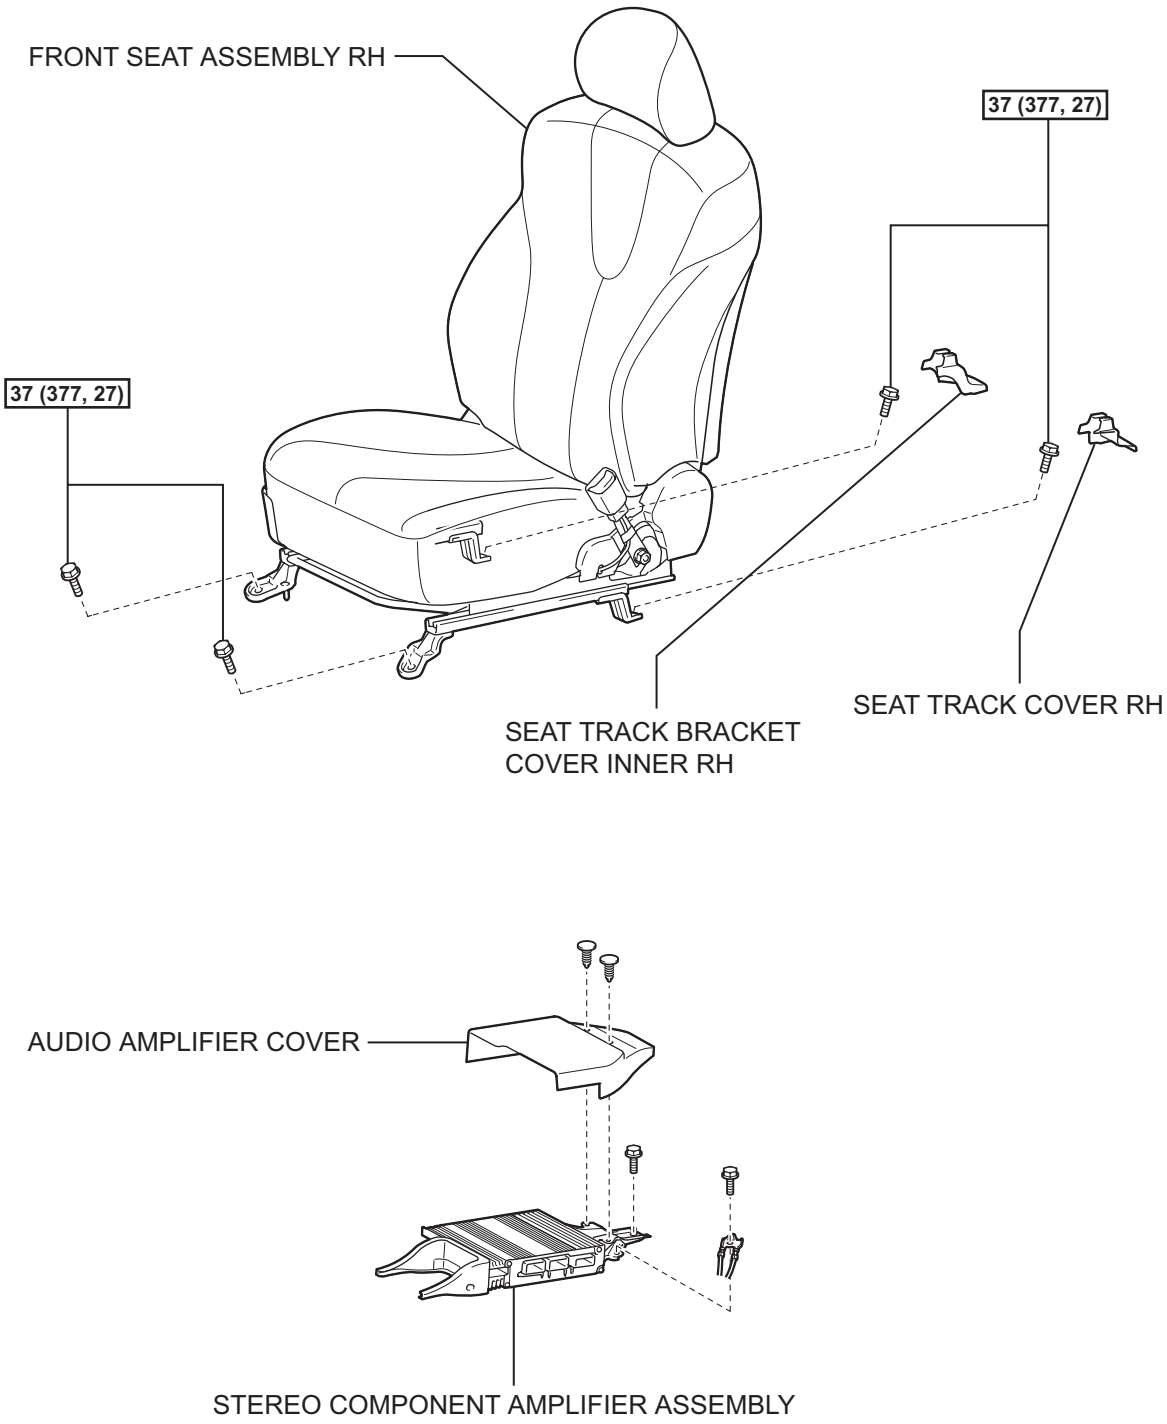
3. **INSTALL RADIO NO. 1 BRACKET**
   (a) Install the radio No. 1 bracket with the 5 bolts.



4. **INSTALL RADIO RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY**
   (a) Connect each connector.
   (b) Engage the 4 clips.
   (c) Install the radio receiver with heater control panel assembly with the 4 bolts.
5. **INSTALL INSTRUMENT PANEL NO. 2 REGISTER ASSEMBLY (See page IP-52)**
6. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-52)**
7. **INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-53)**
8. **INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Manual Transaxle) (See page IP-53)**
9. **INSTALL FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-53)**
10. **INSTALL UPPER CONSOLE PANEL (for Manual Transaxle) (See page IP-54)**
11. **INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-54)**
12. **INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-55)**
13. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-55)**
14. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-55)**

STEREO COMPONENT AMPLIFIER

COMPONENTS



N*m (kgf*cm, ft.*lbf): Specified torque

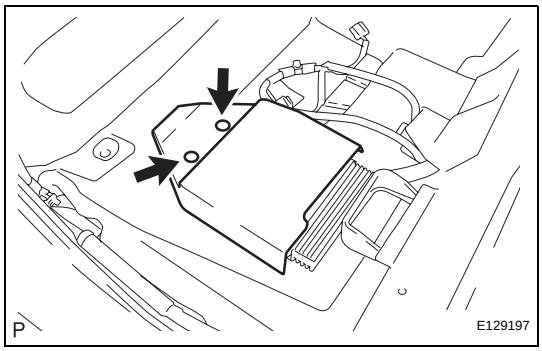
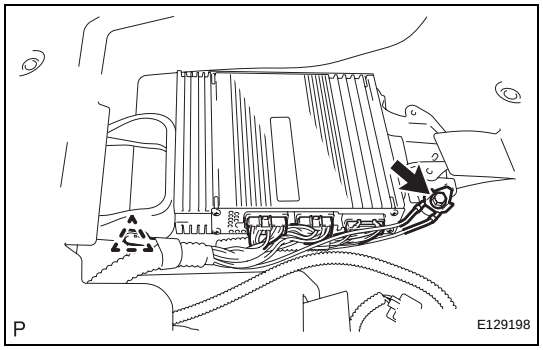
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent the airbag working.
2. **REMOVE SEAT TRACK COVER RH (for Manual Seat)**
   HINT:
   Use the same procedures for the RH side and the LH side (see page SE-16).
3. **REMOVE SEAT TRACK BRACKET COVER INNER RH (for Manual Seat)**
   HINT:
   Use the same procedures for the RH side and the LH side (see page SE-16).
4. **REMOVE FRONT SEAT ASSEMBLY RH (for Manual Seat)**
   HINT:
   Use the same procedures for the RH side and the LH side (see page SE-16).
5. **REMOVE SEAT TRACK COVER RH (for Power Seat)**
   HINT:
   Use the same procedures for the RH side and the LH side (see page SE-30).
6. **REMOVE SEAT TRACK BRACKET COVER INNER RH (for Power Seat)**
   HINT:
   Use the same procedures for the RH side and the LH side (see page SE-30).
7. **REMOVE FRONT SEAT ASSEMBLY RH (for Power Seat)**
   HINT:
   Use the same procedures for the RH side and the LH side (see page SE-30).
8. **REMOVE AUDIO AMPLIFIER COVER**
   (a) Remove the 2 clips and audio amplifier cover.

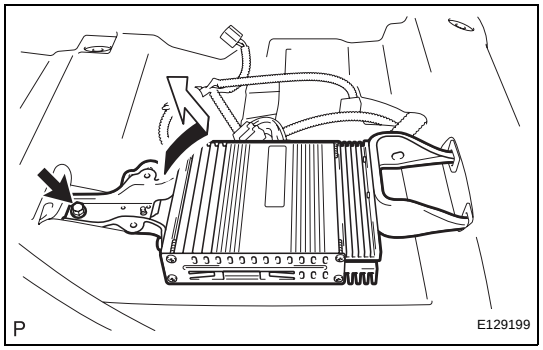




9. REMOVE STEREO COMPONENT AMPLIFIER ASSEMBLY

(a) Disconnect each connector and remove the bolt.

(b) Disengage the clip.

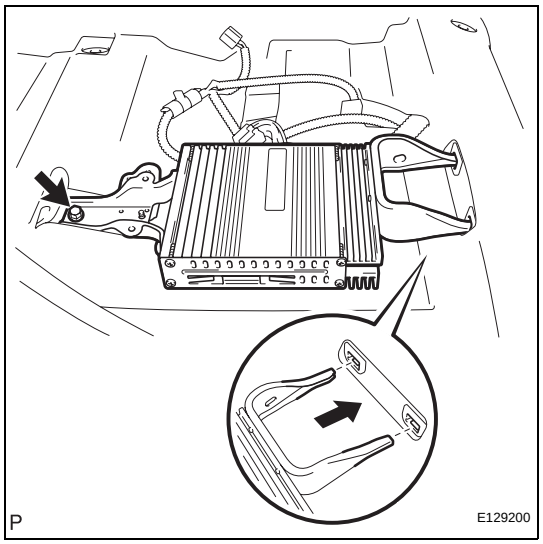


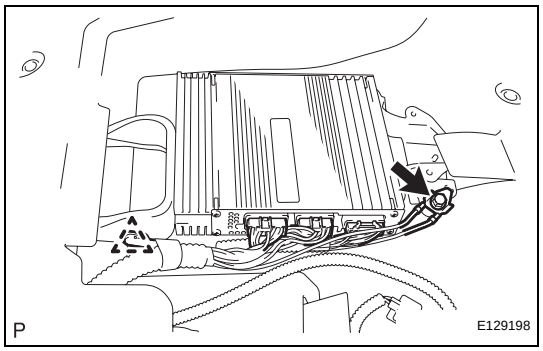
(c) Remove the bolt and stereo component amplifier assembly as shown in the illustration.

INSTALLATION

1. INSTALL STEREO COMPONENT AMPLIFIER ASSEMBLY

(a) Install the stereo component amplifier assembly as shown in the illustration.



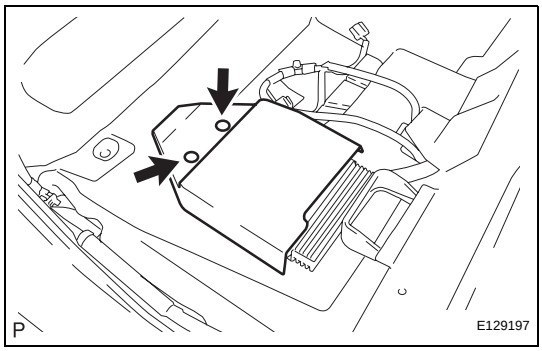


(b) Install the bolt and connect each connector.

(c) Engage the clip.

(d) Install the bolt.

AV



2. **INSTALL AUDIO AMPLIFIER COVER**
   (a) Install the audio amplifier cover with the 2 clips.

3. **INSTALL FRONT SEAT ASSEMBLY RH (for Manual Seat)**
   HINT:
   Use the same procedures for the RH side and the LH side (see page SE-24).

4. **INSTALL SEAT TRACK BRACKET COVER INNER RH (for Manual Seat)**
   HINT:
   Use the same procedures for the RH side and the LH side (see page SE-25).

5. **INSTALL SEAT TRACK COVER RH (for Manual Seat)**
   HINT:
   Use the same procedures for the RH side and the LH side (see page SE-25).

6. **INSTALL FRONT SEAT ASSEMBLY RH (for Power Seat)**
   HINT:
   Use the same procedures for the RH side and the LH side (see page SE-41).

7. **INSTALL SEAT TRACK BRACKET COVER INNER RH (for Power Seat)**
   HINT:
   Use the same procedures for the RH side and the LH side (see page SE-42).

8. **INSTALL SEAT TRACK COVER RH (for Power Seat)**
   HINT:
   Use the same procedures for the RH side and the LH side (see page SE-42).

9. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

10. **PERFORM ZERO POINT CALIBRATION AND SENSITIVITY CHECK**
    (See page RS-242)

FRONT SIDE SPEAKER

COMPONENTS

ON-VEHICLE INSPECTION

1. INSPECT FRONT NO. 1 SPEAKER

HINT:

Remove interior parts so that the front No. 1 speaker can be seen.

(a) Check the speaker installation.

OK:

The speaker is securely installed.

If the result is not as specified, reinstall the front No. 1 speaker.

(b) Visually check the speaker.

OK:

The cone paper of the speaker is not torn.

If the result is not as specified, replace the front No. 1 speaker.

(c) Speaker resistance check

(1) Disconnect the front No. 1 speaker connector.

(2) Measure the resistance between the terminals of the speaker.

Standard resistance:

Premium Model: 1.8 to 2.6 Ω

Standard Model: Approximately 4 Ω

If the result is not as specified, replace the front No. 1 speaker.

2. INSPECT FRONT NO. 2 SPEAKER

HINT:

Remove interior parts so that the front No. 2 speaker can be seen.

(a) Check the speaker installation.

OK:

The speaker is securely installed.

If the result is not as specified, reinstall the front No. 2 speaker.

(b) Visually check the speaker.

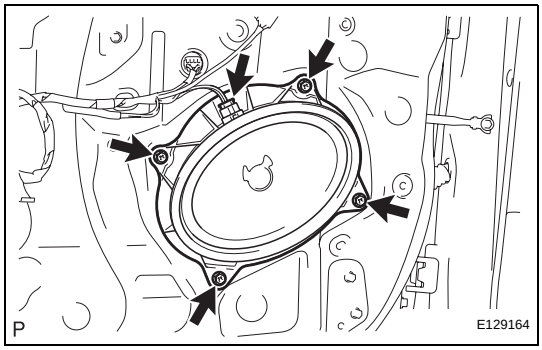
OK:

The cone paper of the speaker is not torn.

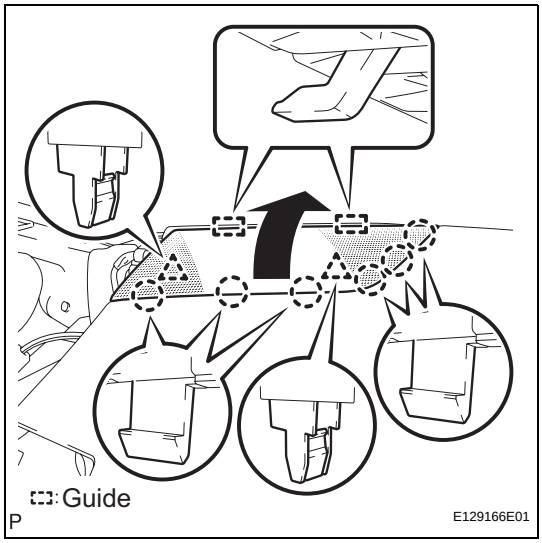
If the result is not as specified, replace the front No. 2 speaker.

REMOVAL

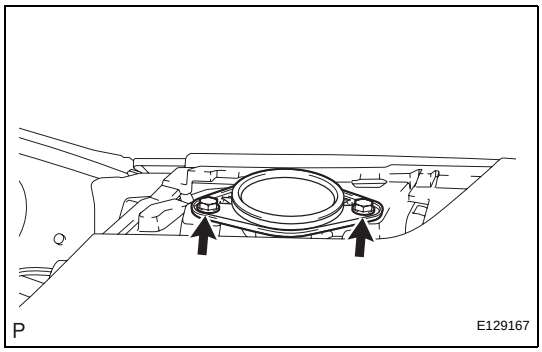
1. **REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH (See page ED-14)**
2. **REMOVE FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-14)**
3. **REMOVE ASSIST GRIP COVER (See page ED-15)**
4. **REMOVE COURTESY LIGHT ASSEMBLY (See page ED-15)**
5. **REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-15)**
6. **REMOVE FRONT DOOR INNER GLASS WEATHERSTRIP (See page ED-16)**
7. **REMOVE FRONT NO. 1 SPEAKER ASSEMBLY**
   (a) Disconnect the connector.
   (b) Remove the 4 bolts and front No. 1 speaker assembly.
   NOTICE:
   Do not touch the cone part of the speaker.



8. **REMOVE FRONT PILLAR GARNISH (See page IR-27)**
9. **REMOVE INSTRUMENT PANEL NO. 2 SPEAKER PANEL SUB-ASSEMBLY**
   (a) Engage the 6 claws and 2 clips.
   (b) Remove the instrument panel No. 2 speaker panel sub-assembly.

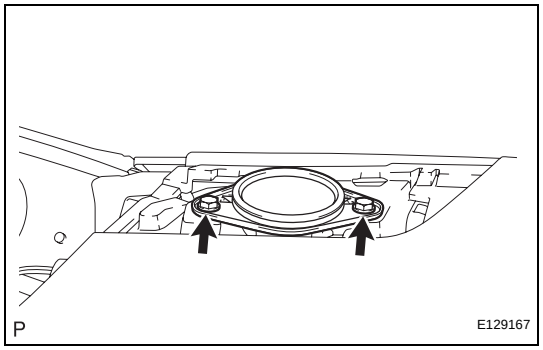


10. **REMOVE FRONT NO. 2 SPEAKER ASSEMBLY**
    (a) Remove the 2 bolts and front No. 2 speaker assembly.
    (b) Disconnect the connector.

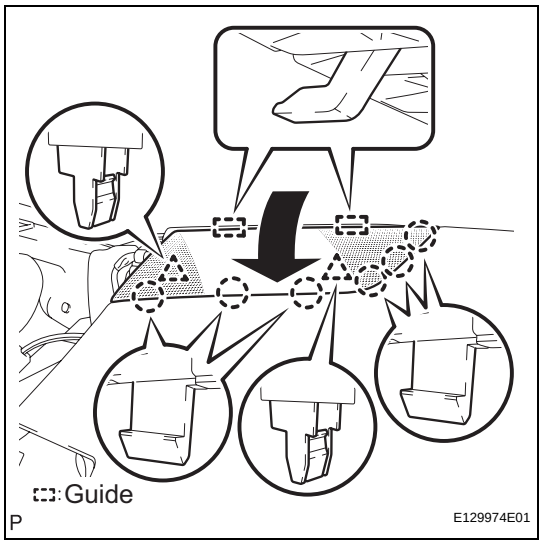


AV

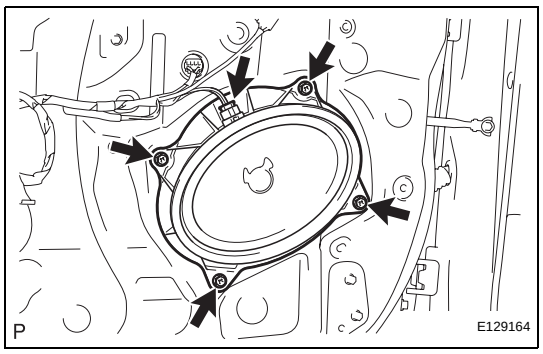
INSTALLATION



1. **INSTALL FRONT NO. 2 SPEAKER ASSEMBLY**
   (a) Connect the connector.
   (b) Install the front No. 2 speaker assembly with the 2 bolts.



2. **INSTALL INSTRUMENT PANEL NO. 2 SPEAKER PANEL SUB-ASSEMBLY**
   (a) Engage the 6 claws and 2 clips and install the instrument panel No. 2 speaker panel sub-assembly.
3. **INSTALL FRONT PILLAR GARNISH (See page IR-51)**



4. **INSTALL FRONT NO. 1 SPEAKER ASSEMBLY**
   (a) Install the front No. 1 speaker assembly with the 4 bolts.
   (b) Connect the connector.
5. **INSTALL FRONT DOOR INNER GLASS WEATHERSTRIP (See page ED-32)**
6. **INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-33)**
7. **INSTALL COURTESY LIGHT ASSEMBLY (See page ED-34)**
8. **INSTALL ASSIST GRIP COVER (See page ED-34)**
9. **INSTALL FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-34)**
10. **INSTALL FRONT DOOR LOWER FRAME BRACKET GARNISH (See page ED-34)**

ON-VEHICLE INSPECTION

1. INSPECT REAR SPEAKER

HINT:

Remove interior parts so that the rear speaker can be seen.

(a) Check the speaker installation.

OK:

The speaker is securely installed.

If the result is not as specified, reinstall the rear speaker.

(b) Visually check the speaker.

OK:

The cone paper of the speaker is not torn.

If the result is not as specified, replace the rear speaker.

(c) Speaker resistance check

(1) Disconnect the rear speaker connector.

(2) Measure the resistance between the terminals of the speaker.

Standard resistance (Premium Model (Only Woofer Speaker))

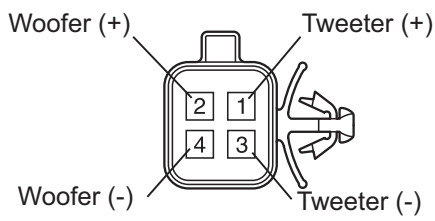
Tester connection	Condition	Specified condition
2 - 4	Always	1.8 to 2.6 Ω

Standard resistance (Standard Model):

Approximately 4 Ω

If the result is not as specified, replace the rear speaker.

Premium Model:



P E129809E02

AV

REMOVAL

1. REMOVE REAR SEAT HEADREST ASSEMBLY
2. REMOVE REAR CENTER SEAT HEADREST ASSEMBLY
3. REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-62)
4. REMOVE REAR SEAT BACK ASSEMBLY (for Fixed Seat Type) (See page SE-77)
5. REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-47)
6. REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-47)
7. REMOVE REAR SIDE SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-48)
8. REMOVE REAR SIDE SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-48)
9. REMOVE REAR SEAT BACK COVER (for Reclining Seat Type) (See page SE-63)
10. REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Reclining Seat Type) (See page SE-63)
11. REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Reclining Seat Type) (See page SE-64)
12. REMOVE CENTER SEAT BACK ASSEMBLY (for Reclining Seat Type) (See page SE-64)
13. REMOVE REAR DOOR SCUFF PLATE LH (See page IR-24)
14. DISCONNECT REAR DOOR OPENING TRIM WEATHERSTRIP LH (for Reclining Seat Type)
15. REMOVE REAR DOOR SCUFF PLATE RH (See page IR-24)
16. DISCONNECT REAR DOOR OPENING TRIM WEATHERSTRIP RH (for Reclining Seat Type)
17. REMOVE RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY LH (for Reclining Seat Type) (See page SE-68)
18. REMOVE RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY RH (for Reclining Seat Type)
19. DISCONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (for TMC Made) (See page SB-35)

20. **DISCONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (for TMMK Made) (See page SB-35)**

21. **REMOVE ROOF SIDE INNER GARNISH LH (See page IR-26)**

22. **REMOVE ROOF SIDE INNER GARNISH RH (See page IR-26)**

23. **DISCONNECT REAR SEAT OUTER BELT ASSEMBLY (for LH Side) (See page SB-50)**

24. **DISCONNECT REAR SEAT OUTER BELT ASSEMBLY (for RH Side) (See page SB-50)**

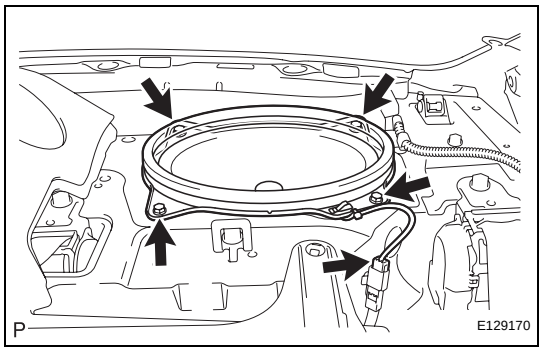
25. **REMOVE REAR SEAT SHOULDER BELT COVER (See page SB-50)**

26. **REMOVE REAR SEAT SHOULDER BELT HOLE COVER (See page SB-51)**

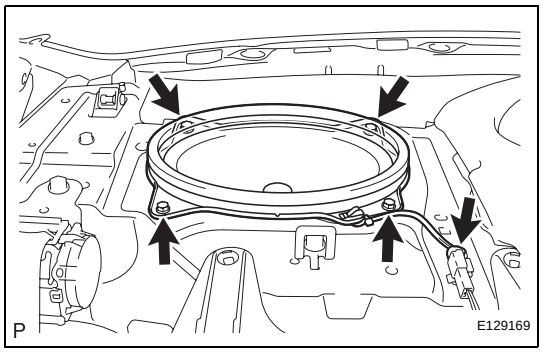
27. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page SB-37)**

28. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (for Reclining Seat Type) (See page SB-37)**

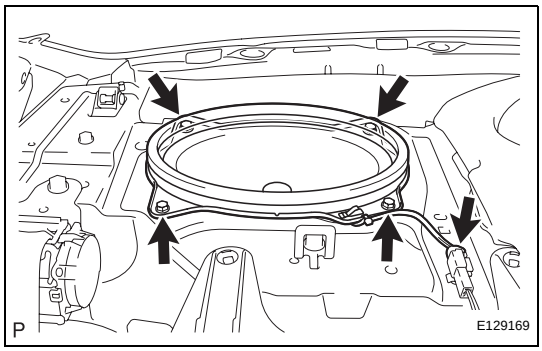
29. **REMOVE REAR SPEAKER ASSEMBLY (for LH Side)**
    (a) Turn up the partition pad.
    (b) Disconnect the connector.
    (c) Remove the 4 bolts and the rear speaker assembly.

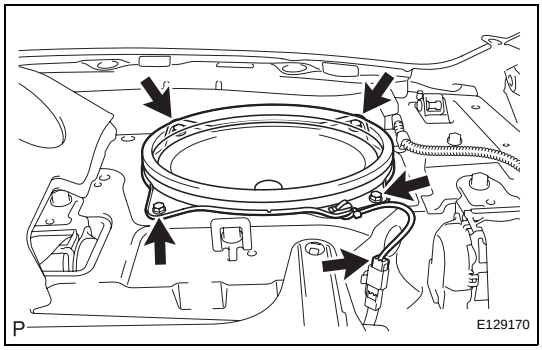


30. **REMOVE REAR SPEAKER ASSEMBLY (for RH Side)**
    (a) Turn up the partition pad.
    (b) Disconnect the connector.
    (c) Remove the 4 bolts and the rear speaker assembly.



AV





INSTALLATION

1. **INSTALL REAR SPEAKER ASSEMBLY (for RH Side)**
   (a) Install the rear speaker assembly with the 4 bolts.
   (b) Connect the connector.
   (c) Install the partition pad.

2. **INSTALL REAR SPEAKER ASSEMBLY (for LH Side)**
   (a) Install the rear speaker assembly with the 4 bolts.
   (b) Connect the connector.
   (c) Install the partition pad.

3. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page SB-38)**

4. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (for Reclining Seat Type) (See page SB-39)**

5. **INSTALL REAR SEAT SHOULDER BELT HOLE COVER (See page SB-51)**

6. **INSTALL REAR SEAT SHOULDER BELT COVER (See page SB-52)**

7. **CONNECT REAR SEAT OUTER BELT ASSEMBLY (for LH Side) (See page SB-52)**

8. **CONNECT REAR SEAT OUTER BELT ASSEMBLY (for RH Side) (See page SB-52)**

9. **INSTALL ROOF SIDE INNER GARNISH LH (See page IR-52)**

10. **INSTALL ROOF SIDE INNER GARNISH RH (See page IR-52)**

11. **CONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (for TMC Made) (See page SB-40)**

12. **CONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (for TMMK Made) (See page SB-40)**

13. **INSTALL RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY LH (for Reclining Seat Type) (See page SE-69)**

14. **INSTALL RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY RH (for Reclining Seat Type) (See page SB-53)**

15. **CONNECT REAR DOOR OPENING TRIM WEATHERSTRIP LH (for Reclining Seat Type) (See page IR-55)**

16. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-56)**

17. CONNECT REAR DOOR OPENING TRIM WEATHERSTRIP RH (for Reclining Seat Type) (See page IR-56)
18. INSTALL REAR DOOR SCUFF PLATE RH (See page IR-56)
19. INSTALL CENTER SEAT BACK ASSEMBLY (for Reclining Seat Type) (See page SE-71)
20. INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Reclining Seat Type) (See page SE-72)
21. INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Reclining Seat Type) (See page SE-71)
22. INSTALL REAR SEAT BACK COVER (for Reclining Seat Type)
23. INSTALL REAR SIDE SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-57)
24. INSTALL REAR SIDE SEAT BACK ASSEMBLY RH (for Fold Down Seat Type)
25. INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-57)
26. INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-57)
27. INSTALL REAR SEAT BACK ASSEMBLY (for Fixed Seat Type) (See page SE-84)
28. INSTALL REAR SEAT CUSHION ASSEMBLY (See page SE-58)
29. INSTALL REAR CENTER SEAT HEADREST ASSEMBLY
30. INSTALL REAR SEAT HEADREST ASSEMBLY

REMOVAL

1. **PRECAUTION**
   (See page IP-1)
2. **ALIGN FRONT WHEELS FACING STRAIGHT AHEAD**
3. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment (See page RS-1).
4. **REMOVE LOWER NO. 3 STEERING WHEEL COVER (See page RS-349)**
5. **REMOVE LOWER NO. 2 STEERING WHEEL COVER (See page RS-349)**
6. **REMOVE STEERING PAD (See page RS-350)**
7. **REMOVE STEERING WHEEL ASSEMBLY (See page SR-38)**
8. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-24)**
9. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-25)**
10. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-20)**
11. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-21)**
12. **REMOVE STEERING COLUMN COVER (for TMC Made) (See page IP-21)**
13. **REMOVE STEERING COLUMN COVER (for TMMK Made) (See page IP-21)**
14. **REMOVE TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (See page SR-39)**
15. **REMOVE NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-22)**
16. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/o Smart Key System) (See page IP-22)**
17. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/ Smart Key System) (See page IP-22)**
18. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page IP-22)**
19. **REMOVE COMBINATION METER ASSEMBLY (for TMC Made) (See page IP-23)**
20. **REMOVE COMBINATION METER ASSEMBLY (for TMMK Made) (See page IP-23)**
21. **REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-26)**

22. REMOVE COWL SIDE TRIM SUB-ASSEMBLY RH
23. REMOVE INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-23)
24. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-23)
25. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-24)
26. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-24)
27. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-24)
28. REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-24)
29. REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-25)
30. REMOVE FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-25)
31. REMOVE UPPER CONSOLE PANEL (for Manual Transaxle) (See page IP-25)
32. REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-26)
33. REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Manual Transaxle) (See page IP-26)
34. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-27)
35. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-27)
36. REMOVE INSTRUMENT PANEL NO. 2 REGISTER ASSEMBLY (See page IP-27)
37. REMOVE RADIO RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/o Navigation System) (See page AV-146)
38. REMOVE NAVIGATION RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (See page NS-195)
39. REMOVE CONSOLE BOX POCKET (See page IP-28)
40. REMOVE CONSOLE BOX CARPET (See page IP-28)
41. REMOVE CONSOLE BOX ASSEMBLY (for TMC Made) (See page IP-28)
42. REMOVE CONSOLE BOX ASSEMBLY (for TMMK Made) (See page IP-29)
43. REMOVE NO. 2 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-29)

44. **REMOVE NO. 2 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-30)**
45. **REMOVE NO. 1 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-30)**
46. **REMOVE NO. 1 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-30)**
47. **REMOVE FRONT PILLAR GARNISH LH (See page IR-27)**
48. **REMOVE INSTRUMENT PANEL NO. 1 REGISTER ASSEMBLY (See page IP-31)**
49. **REMOVE INSTRUMENT PANEL NO. 1 SPEAKER PANEL SUB-ASSEMBLY (See page IP-31)**
50. **REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) (See page AV-156)**
51. **REMOVE FRONT PILLAR GARNISH RH (See page IR-27)**
52. **REMOVE INSTRUMENT PANEL NO. 3 REGISTER ASSEMBLY (See page IP-31)**
53. **REMOVE INSTRUMENT PANEL NO. 2 SPEAKER PANEL SUB-ASSEMBLY (See page IP-32)**
54. **REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side)**
    HINT:
    Use the same procedures for the RH side and the LH side (See page AV-156).
55. **REMOVE NO. 1 DEFROSTER NOZZLE GARNISH (See page IP-32)**
56. **REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for TMC Made) (See page IP-32)**
57. **REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for TMMK Made) (See page IP-34)**
58. **REMOVE SIDE NO. 1 DEFROSTER NOZZLE DUCT (for TMC Made) (See page IP-37)**
59. **REMOVE SIDE NO. 1 DEFROSTER NOZZLE DUCT (for TMMK Made) (See page IP-37)**
60. **REMOVE SIDE NO. 2 DEFROSTER NOZZLE DUCT (for TMC Made) (See page IP-38)**
61. **REMOVE SIDE NO. 2 DEFROSTER NOZZLE DUCT (for TMMK Made) (See page IP-38)**
62. **REMOVE DEFROSTER NOZZLE ASSEMBLY (for TMC Made) (See page IP-38)**
63. **REMOVE DEFROSTER NOZZLE ASSEMBLY (for TMMK Made) (See page IP-38)**
64. **REMOVE NO. 1 HEATER TO REGISTER DUCT (for TMC Made) (See page IP-38)**

65. **REMOVE NO. 1 HEATER TO REGISTER DUCT (for TMMK Made) (See page IP-39)**

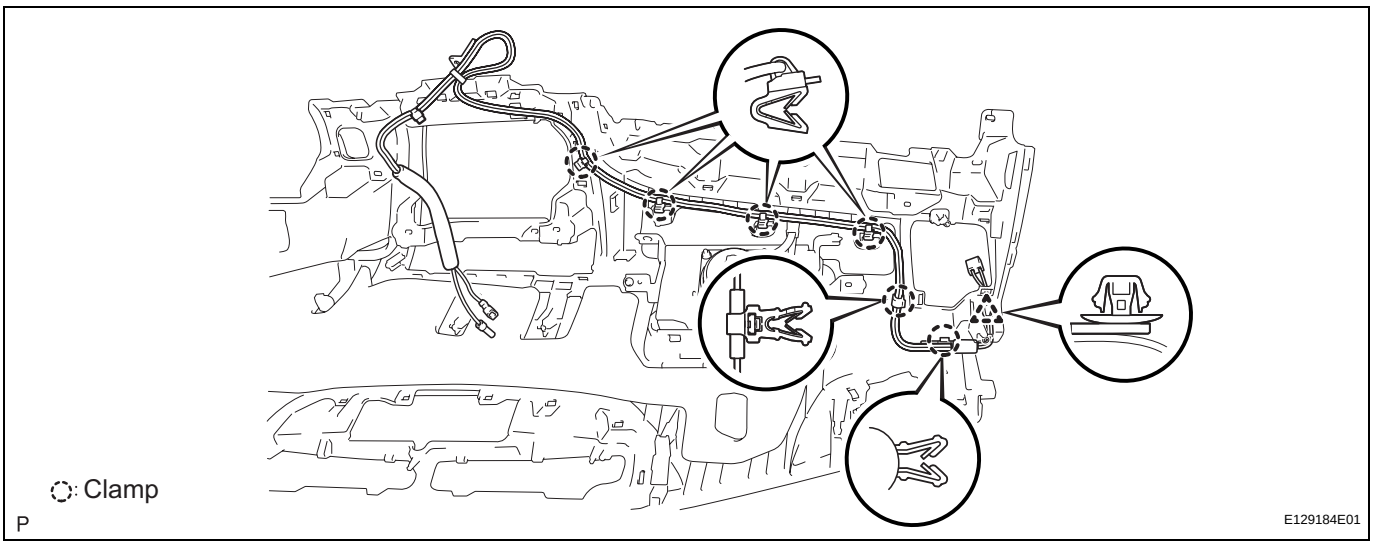
66. **REMOVE NO. 3 HEATER TO REGISTER DUCT (for TMC Made) (See page IP-39)**

67. **REMOVE NO. 3 HEATER TO REGISTER DUCT (for TMMK Made) (See page IP-39)**

68. **REMOVE NO. 2 HEATER TO REGISTER DUCT (for TMC Made) (See page IP-39)**

69. **REMOVE NO. 2 HEATER TO REGISTER DUCT (for TMMK Made) (See page IP-39)**

70. **REMOVE NO. 2 ANTENNA CORD SUB-ASSEMBLY**
    (a) Disengage the 6 clamps and clip and remove the No. 2 antenna cord sub-assembly.



71. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Manual Seat)**

72. **REMOVE SEAT TRACK COVER LH (for Manual Seat) (See page SE-16)**

73. **REMOVE INNER SEAT TRACK BRACKET COVER LH (for Manual Seat) (See page SE-16)**

74. **REMOVE FRONT SEAT ASSEMBLY LH (for Manual Seat) (See page SE-16)**

75. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Power Seat)**

76. **REMOVE SEAT TRACK COVER LH (for Power Seat) (See page SE-30)**

77. **REMOVE SEAT TRACK COVER RH (for Power Seat) (See page SE-30)**

78. **REMOVE FRONT SEAT ASSEMBLY LH (for Power Seat) (See page SE-30)**

79. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Manual Seat)**

80. REMOVE SEAT TRACK COVER RH (for Manual Seat) (See page IR-22)
81. REMOVE INNER SEAT TRACK BRACKET COVER RH (for Manual Seat) (See page IR-22)
82. REMOVE FRONT SEAT ASSEMBLY RH (for Manual Seat) (See page IR-22)
83. REMOVE FRONT SEAT HEADREST ASSEMBLY (for Power Seat)
84. REMOVE SEAT TRACK COVER RH (for Power Seat) (See page IR-22)
85. REMOVE SEAT TRACK COVER LH (for Power Seat) (See page IR-23)
86. REMOVE FRONT SEAT ASSEMBLY RH (for Power Seat) (See page IR-23)
87. REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-77)
88. REMOVE REAR SEAT HEADREST ASSEMBLY
89. REMOVE REAR CENTER SEAT HEADREST ASSEMBLY
90. REMOVE REAR SEAT BACK ASSEMBLY (for Fixed Seat Type) (See page SE-77)
91. REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-47)
92. REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-47)
93. REMOVE REAR SIDE SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-48)
94. REMOVE REAR SIDE SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-48)
95. REMOVE REAR SEAT BACK COVER (for Reclining Seat Type) (See page SE-63)
96. REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Reclining Seat Type) (See page SE-63)
97. REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Reclining Seat Type) (See page SE-64)
98. REMOVE CENTER SEAT BACK ASSEMBLY (for Reclining Seat Type) (See page SE-64)
99. REMOVE REAR DOOR SCUFF PLATE LH (See page IR-24)
100. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH

101. REMOVE REAR DOOR SCUFF PLATE RH (See page IR-24)
102. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH
103. REMOVE RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY LH (for Reclining Seat Type) (See page SE-68)
104. REMOVE RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY RH (for Reclining Seat Type)
105. REMOVE REAR DOOR INSIDE HANDLE BEZEL PLUG LH (See page ED-38)
106. REMOVE DOOR ASSIST GRIP COVER LH (See page ED-38)
107. REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY LH (See page ED-39)
108. REMOVE REAR DOOR INNER GLASS WEATHERSTRIP LH (See page ED-40)
109. REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-24)
110. REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-25)
111. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH
112. REMOVE LAP BELT OUTER ANCHOR COVER (See page IR-25)
113. DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY LH (See page IR-25)
114. REMOVE LOWER CENTER PILLAR GARNISH LH (See page IR-25)
115. REMOVE UPPER CENTER PILLAR GARNISH LH (See page IR-26)
116. REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-26)
117. REMOVE COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-26)
118. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH
119. REMOVE LAP BELT OUTER ANCHOR COVER (See page IR-26)
120. DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY RH (See page IR-26)
121. REMOVE LOWER CENTER PILLAR GARNISH RH (See page IR-26)
122. REMOVE UPPER CENTER PILLAR GARNISH RH (See page IR-26)

123. **REMOVE ROOF SIDE INNER GARNISH LH (See page IR-26)**

124. **REMOVE ROOF SIDE INNER GARNISH RH (See page IR-26)**

125. **REMOVE FRONT PILLAR GARNISH LH (See page IR-27)**

126. **REMOVE FRONT PILLAR GARNISH RH (See page IR-27)**

127. **REMOVE ROOF CONSOLE BOX ASSEMBLY (See page IR-28)**

128. **REMOVE VISOR ASSEMBLY LH (See page IR-28)**

129. **REMOVE VISOR ASSEMBLY RH (See page IR-29)**

130. **REMOVE VISOR HOLDER (See page IR-29)**

131. **REMOVE FRONT ASSIST GRIP SUB-ASSEMBLY (See page IR-29)**

132. **REMOVE REAR ASSIST GRIP SUB-ASSEMBLY (See page IR-29)**

133. **REMOVE NO. 1 ROOM LIGHT ASSEMBLY (w/o Sliding Roof) (See page IR-30)**

134. **REMOVE SPOT LIGHT ASSEMBLY (w/ Sliding Roof) (See page IR-30)**

135. **REMOVE SUN ROOF OPENING TRIM MOULDING (w/ Sliding Roof) (See page IR-31)**

136. **REMOVE SUNSHADE TRIM HOLDER (w/ Rear Sunshade) (See page IR-31)**

137. **REMOVE ROOF HEADLINING ASSEMBLY (w/o Sliding Roof) (See page IR-31)**

138. **REMOVE ROOF HEADLINING ASSEMBLY (w/ Sliding Roof) (See page IR-32)**

139. **REMOVE ANTENNA CORD SUB-ASSEMBLY**

(a) Peel the strips of the tape used to secure the antenna cord only to the extent that allows removal of the antenna cord.

HINT:

Tape is not available as a supply part. Try to leave as much tape as possible on the roof headlining so that the tape can be reused.

(b) Remove the antenna cord from the roof headlining.

AV

INSTALLATION

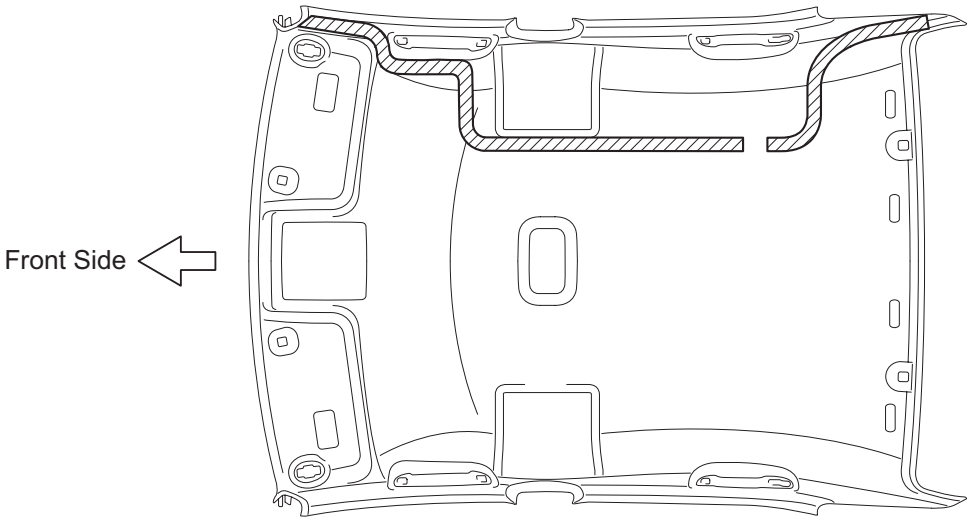
1. INSTALL ANTENNA CORD SUB-ASSEMBLY

HINT:

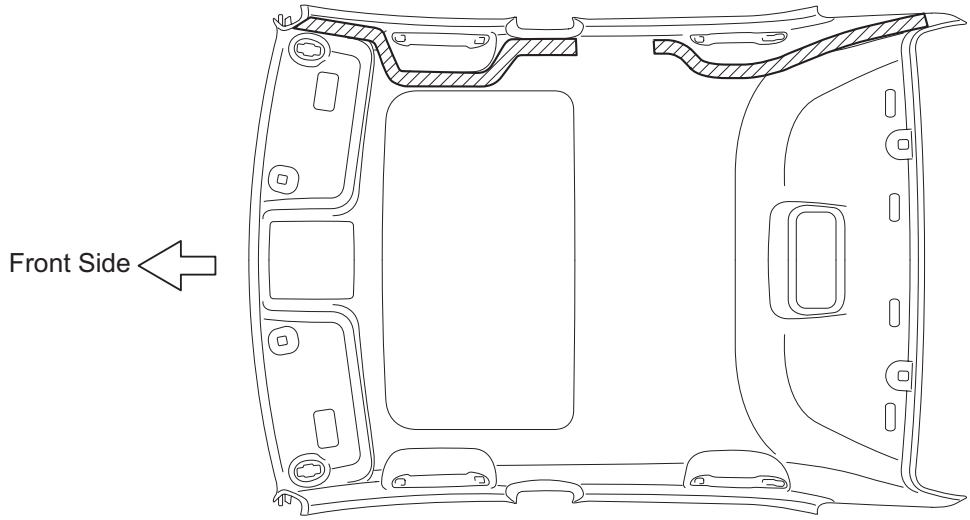
The double-sided tape and tape are not available as supply parts. If these tapes still have enough adhesion to secure the roof headlining and antenna cord, reuse the tapes. If the roof headlining has been replaced with a new one, or if the tape and/or the double-sided tape is no longer sticky, apply new tape following the procedures below.

(a) Apply new double-sided tape.

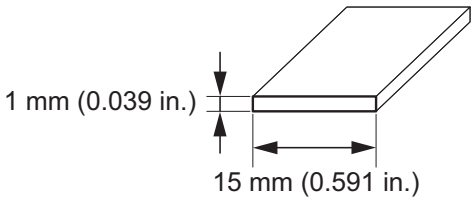
without Sliding Roof:



with Sliding Roof:



Double-sided Tape



: Double-sided Tape

P

E129190E01

(1) Remove the double-sided tape from the roof headlining assembly.

AV

(2) Peel off the appropriate amount of new double-sided tape. Be careful not to touch the adhesive surface.
(3) Apply the double-sided tape to the roof headlining while aligning the tape with the markings on the roof headlining assembly.
(4) Peel off the backing sheet from the double-sided tape.

(b) Install the antenna cord to the roof headlining assembly from the front of the vehicle.

P

E129191E03

HINT:
Align the taped part of the antenna cable with the protrusion of the roof headlining, and apply tape to secure the cable to the headlining.

(c) Put the strips of the tape back to the positions shown in the illustration in order to secure the antenna cord to the roof headlining assembly.
HINT:
- If the tape is no longer sticky, use other tape, such as packing tape, that has enough adhesion to secure the antenna cord to the roof headlining assembly.
- For the right front corner of the roof headlining assembly, align the marking tape on the antenna cord with the protrusion of the roof headlining, and wrap tape around the antenna cord and roof headlining assembly once or twice to securely hold them.
- For the right rear corner of the roof headlining assembly, align the marking tape on the antenna cord with the rear edge of the roof headlining, and secure the antenna cord to the roof headlining assembly with tape.

2. **INSTALL ROOF HEADLINING ASSEMBLY (w/o Sliding Roof) (See page IR-45)**

REMOVAL

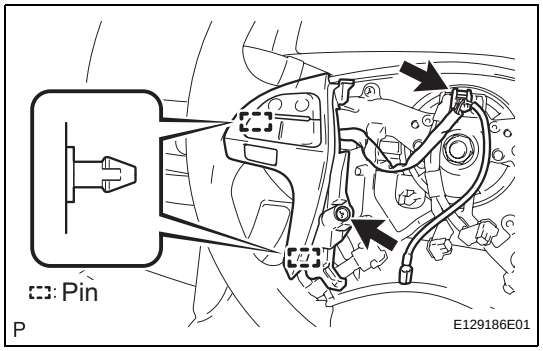
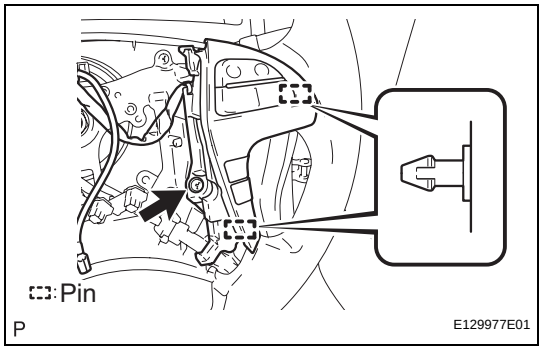
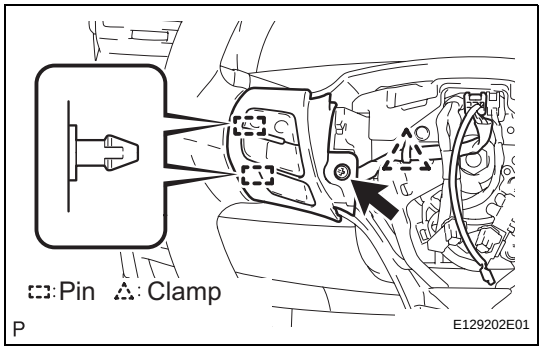
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent the airbag working.
2. **REMOVE NO. 3 LOWER STEERING WHEEL COVER (See page RS-349)**
3. **REMOVE NO. 2 LOWER STEERING WHEEL COVER (See page RS-349)**
4. **REMOVE STEERING PAD (See page RS-350)**
5. **REMOVE STEERING PAD SWITCH LH (for 4 Spoke)**
   (a) Disconnect the pad switch connector from the spiral cable.
   (b) Remove the screw.
   (c) Disengage the 2 pins and remove the steering pad switch LH.



6. **REMOVE STEERING PAD SWITCH ASSEMBLY (for 4 Spoke)**
   (a) Disconnect the pad switch connector from the spiral cable.
   (b) Remove the screw.
   (c) Disengage the 2 pins and remove the steering pad switch.

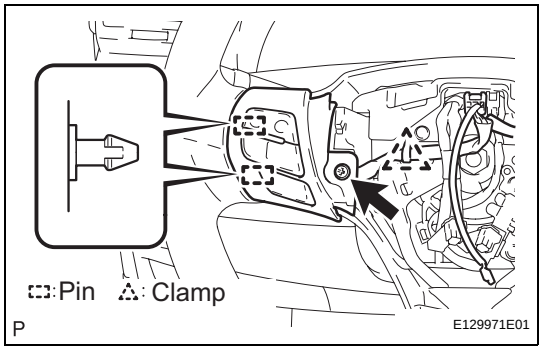
   (d) Remove the screw.
   (e) Disengage the 2 pins and remove the steering pad switch assembly.





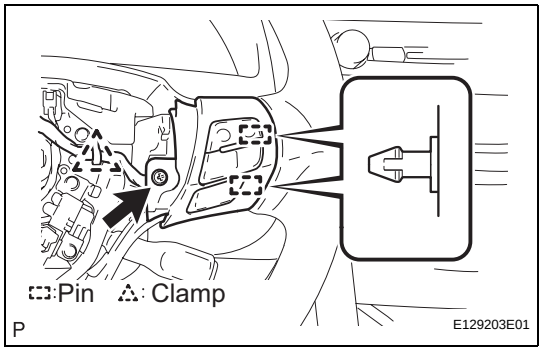
7. REMOVE STEERING PAD SWITCH LH (for 3 Spoke)

(a) Disconnect the pad switch connector from the spiral cable and disengage the clamp.
(b) Remove the screw.
(c) Disengage the 2 pins and remove the steering pad switch LH.



8. REMOVE STEERING PAD SWITCH ASSEMBLY (for 3 Spoke)

(a) Disconnect the pad switch connector from the spiral cable.
(b) Disengage the clamp and remove the screw.
(c) Disengage the 2 pins and remove the steering pad switch.



(d) Disengage the clamp and remove the screw.
(e) Disengage the 2 pins and remove the steering pad switch assembly.

INSPECTION

1. INSPECT STEERING PAD SWITCH

(a) Disconnect the steering pad switch assembly connector.

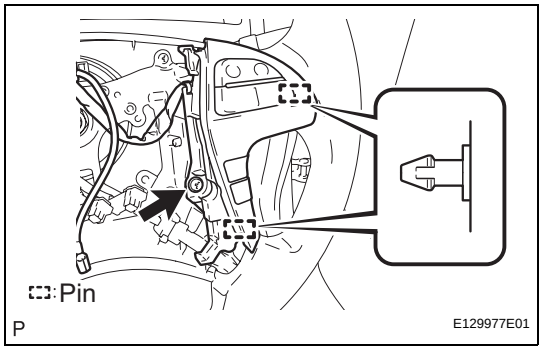
Tester connection	Condition	Specified condition
AU1 - EAU	No switch is pushed	Approx. 100 kΩ
AU1 - EAU	SEEK+ switch: push	0 to 2.5 Ω
AU1 - EAU	SEEK- switch: push	Approx. 0.3 kΩ
AU1 - EAU	VOL+ switch: push	Approx. 1 kΩ
AU1 - EAU	VOL- switch: push	Approx. 3.1 kΩ
AU2 - EAU	No switch is pushed	Approx. 100 kΩ

Tester connection	Condition	Specified condition
AU2 - EAU	MODE switch: push	0 to 2.5 Ω
AU2 - EAU	VOICE switch: push (*1)	Approx. 3.1 kΩ
AU2 - EAU	ON HOOK switch: push (*2)	Approx. 0.3 kΩ
AU2 - EAU	OFF HOOK switch: push (*2)	Approx. 1 kΩ

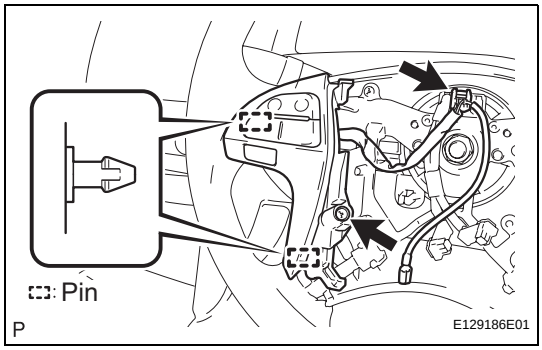
*1: with Navigation System
*2: with "Bluetooth" Module
If the result is not as specified, replace the steering pad switch.



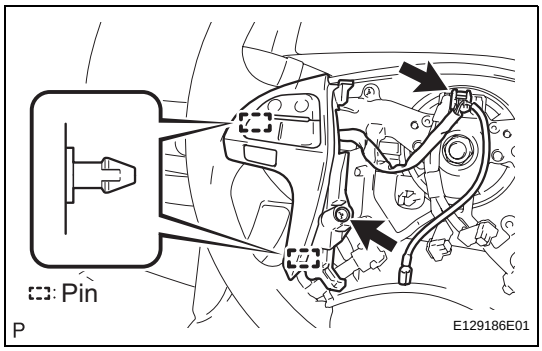
INSTALLATION

1. INSTALL STEERING PAD SWITCH ASSEMBLY (for 4 Spoke)

(a) Engage the 2 pins and install the steering pad switch assembly.
(b) Install the screw.
Torque: 2.4 N*m (24 kgf*cm, 21 in.*lbf)

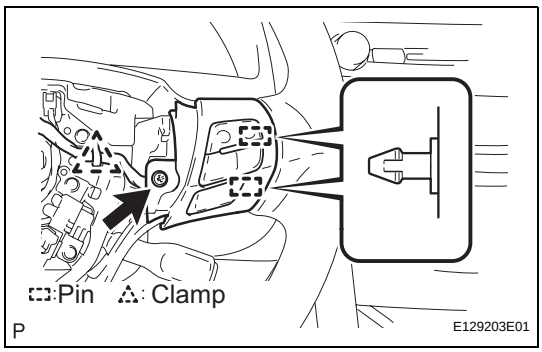


(c) Engage the 2 pins and install the steering pad switch assembly.
(d) Install the screw.
Torque: 2.4 N*m (24 kgf*cm, 21 in.*lbf)
(e) Connect the connector to the spiral cable.



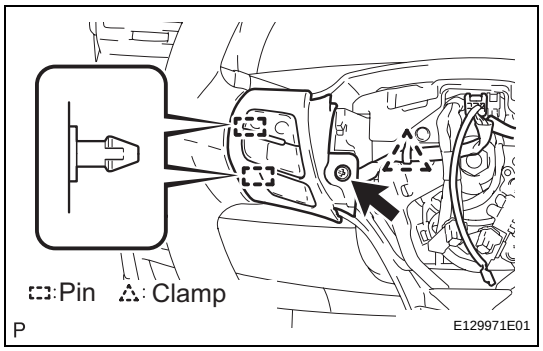
2. INSTALL STEERING PAD SWITCH LH (for 4 Spoke)

(a) Engage the 2 pins and install the steering pad switch LH.
(b) Install the screw.
Torque: 2.4 N*m (24 kgf*cm, 21 in.*lbf)
(c) Connect the connector to the spiral cable.

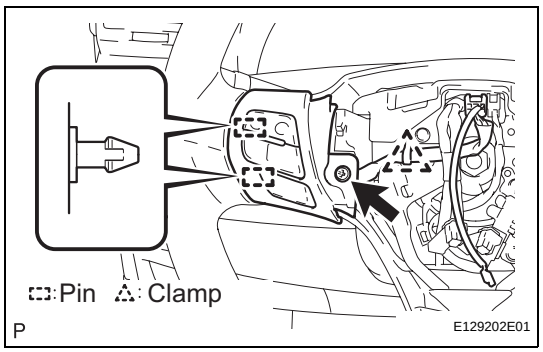


3. INSTALL STEERING PAD SWITCH ASSEMBLY (for 3 Spoke)

(a) Engage the 2 pins and install the steering pad switch assembly.
(b) Install the screw and engage the clamp.
Torque: 2.4 N*m (24 kgf*cm, 21 in.*lbf)



(c) Engage the 2 pins and install the steering pad switch assembly.
(d) Install the screw and engage the clamp.
Torque: 2.4 N*m (24 kgf*cm, 21 in.*lbf)
(e) Connect the connector to the spiral cable.



4. **INSTALL STEERING PAD SWITCH LH (for 3 Spoke)**
(a) Engage the 2 pins and install the steering pad switch LH.
(b) Install the screw and engage the clamp.
Torque: 2.4 N*m (24 kgf*cm, 21 in.*lbf)
(c) Connect the connector to the spiral cable.

5. **INSTALL STEERING PAD (See page RS-350)**

6. **INSTALL NO. 3 LOWER STEERING WHEEL COVER (See page RS-351)**

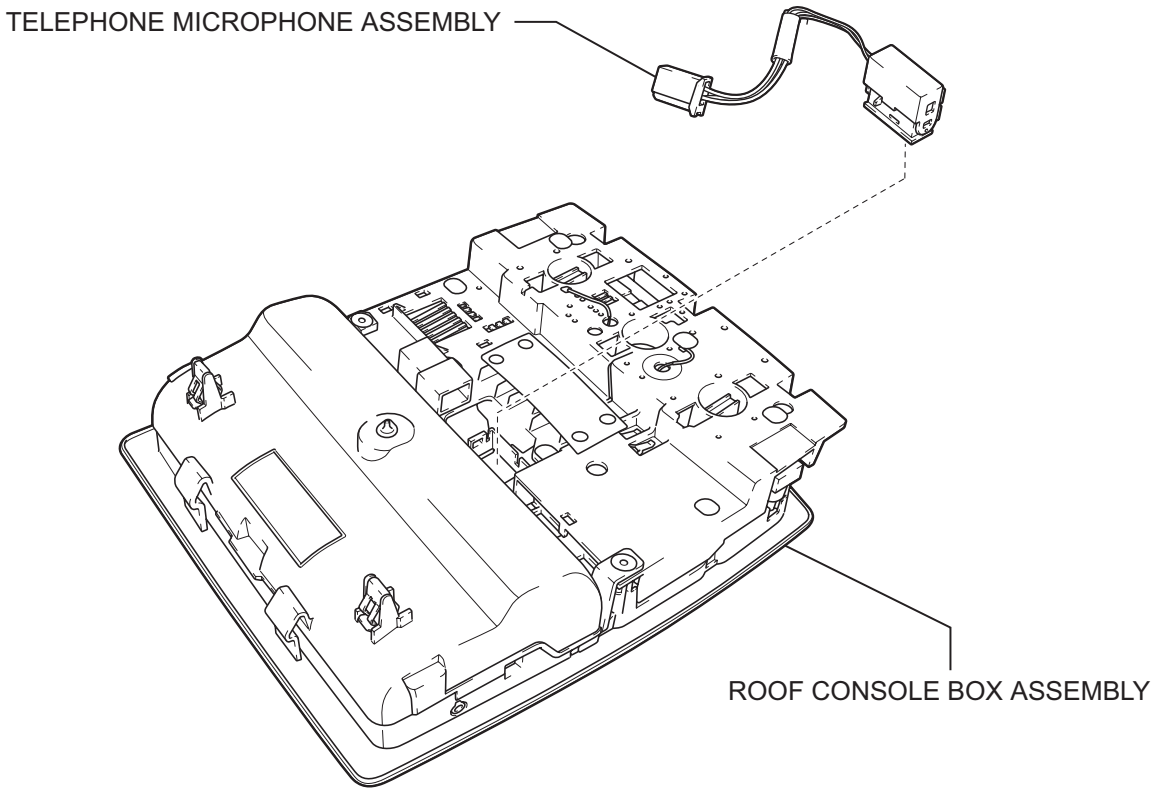
7. **INSTALL NO. 2 LOWER STEERING WHEEL COVER (See page RS-352)**

8. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

9. **INSPECT SRS WARNING LIGHT**
(See page RS-32)

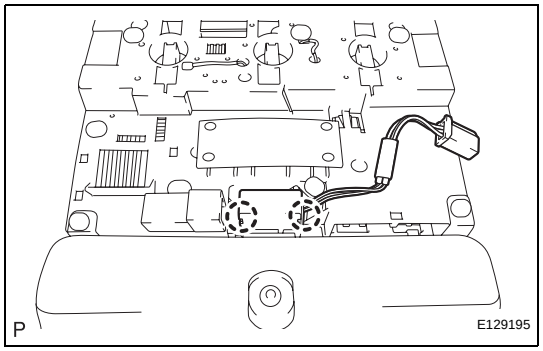
MICROPHONE

COMPONENTS

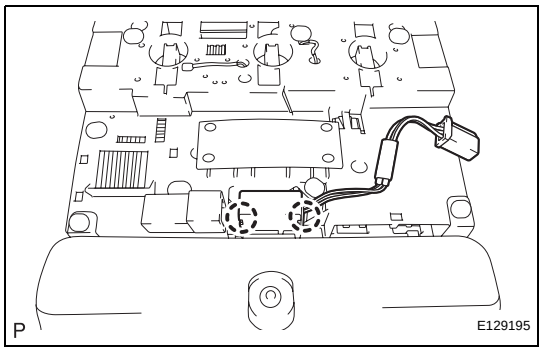


REMOVAL

1. **REMOVE ROOF CONSOLE BOX ASSEMBLY (See page IR-28)**
2. **REMOVE TELEPHONE MICROPHONE ASSEMBLY**
   (a) Disconnect the connector.
   (b) Disengage the 2 claws and remove the telephone microphone assembly.



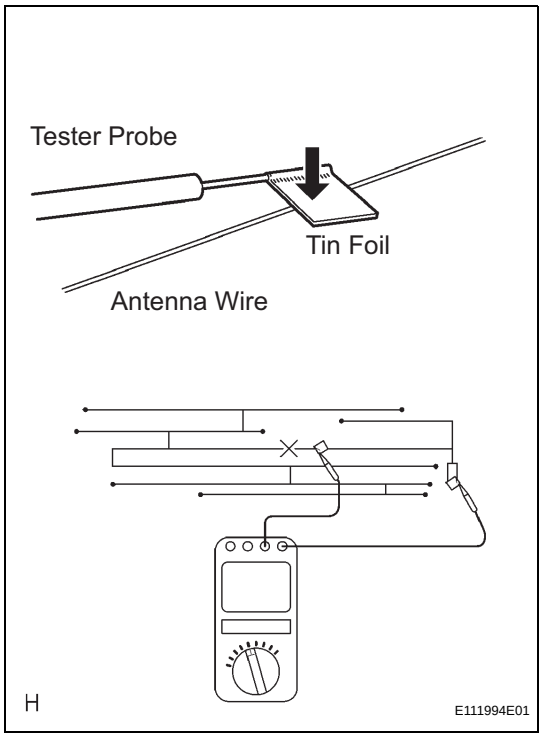
INSTALLATION



1. **INSTALL TELEPHONE MICROPHONE ASSEMBLY**
   (a) Engage the 2 claws and install the telephone microphone assembly.
   (b) Connect the connector.
2. **INSTALL ROOF CONSOLE BOX ASSEMBLY (See page IR-50)**

WINDOW GLASS ANTENNA WIRE

ON-VEHICLE INSPECTION



1. INSPECT WINDOW GLASS ANTENNA WIRE

(a) Check for continuity of the antenna.

HINT:

Check for continuity at the center of each antenna wire as shown in the illustration.

NOTICE:

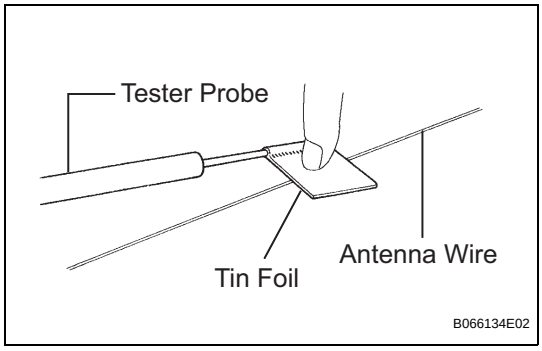
- **When cleaning the glass, wipe it in the direction of the wire with a soft, dry cloth. Take care not to damage the wire. Do not use detergents or glass cleaners with abrasive ingredients.**
- **When measuring voltage, wrap a piece of tin foil around the tip of the negative probe and press the foil against the wire with your finger, as shown in the illustration.**

OK:

There is continuity in the antenna.

If the result is not as specified, repair the window glass antenna wire.

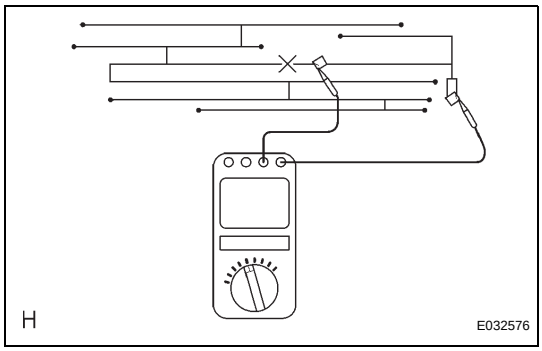
REPAIR



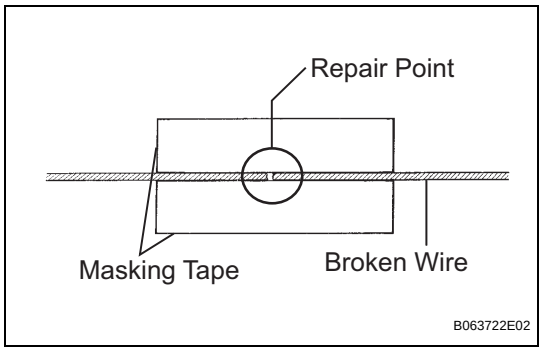
1. WINDOW GLASS ANTENNA WIRE

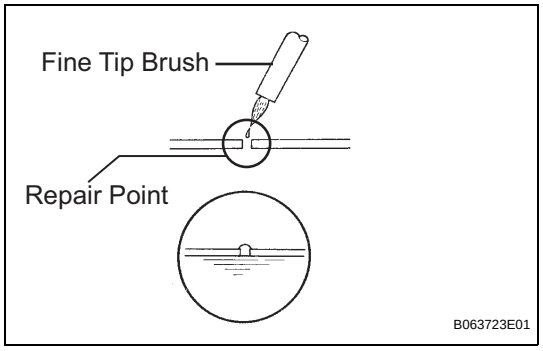
NOTICE:

- **When cleaning the glass, wipe it in the direction of the wire with a soft, dry cloth. Take care not to damage the wire. Do not use detergents or glass cleaners with abrasive ingredients.**
- **When measuring voltage, wrap a piece of tin foil around the tip of the negative probe and press the foil against the wire with your finger, as shown in the illustration.**



(a) Check the voltage at the center of each wire, as shown in the illustration.





2. REPAIR WINDOW GLASS ANTENNA WIRE

(a) Clean the broken wire tips with a grease, wax and silicone remover.

(b) Place masking tape along both sides of the wire to be repaired.

(c) Thoroughly mix the repair agent (Dupont paste No. 4817 or equivalent).

(d) Using a fine tip brush, apply a small amount of the repair agent to the wire.

(e) After a few minutes, remove the masking tape.

AXLE SYSTEM

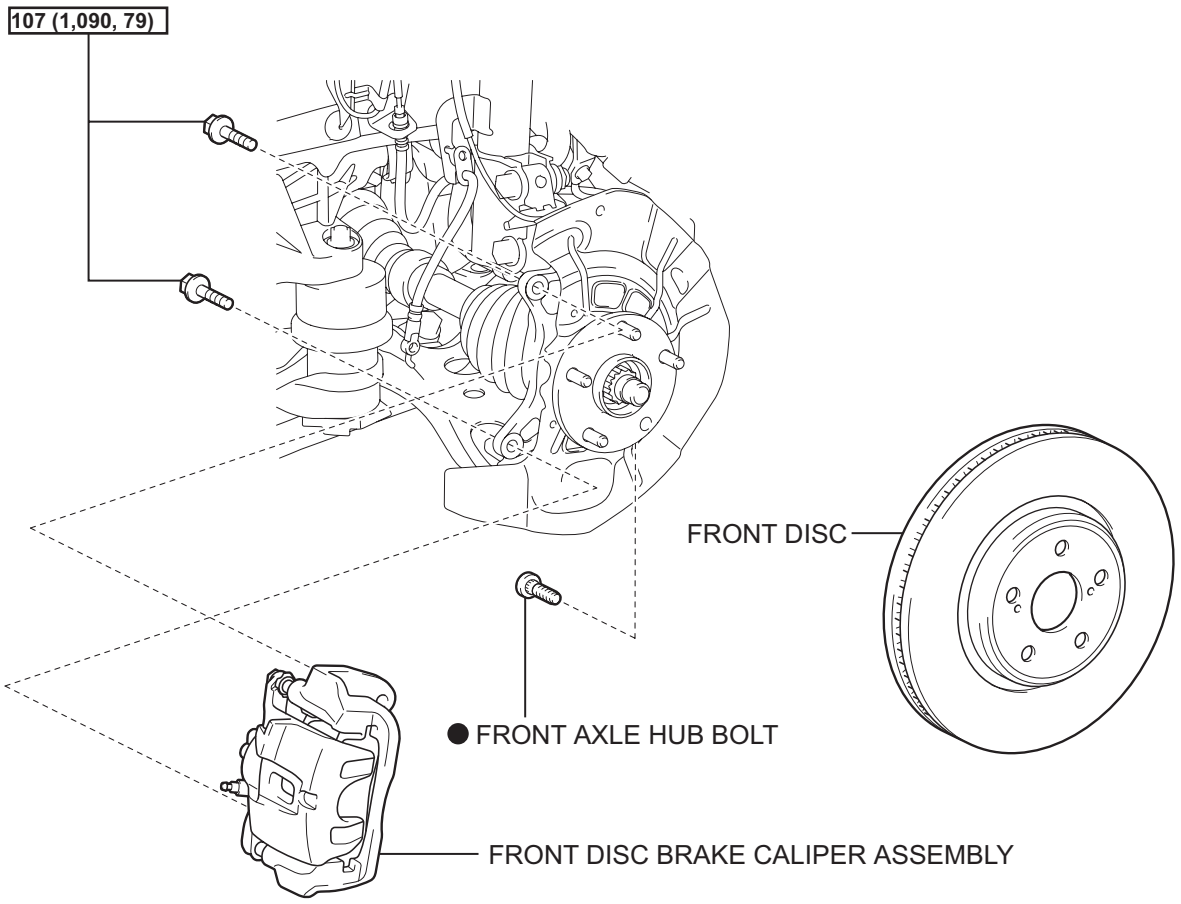
PROBLEM SYMPTOMS TABLE

Use the table below to help find the cause of the problem. Check each part. If necessary, replace these parts.

Symptom	Suspected area	See page
Wander	1. Wheel alignment (Front)	SP-4
	2. Wheel alignment (Rear)	SP-13
	3. Steering linkage	PS-49
	4. Hub bearing (Front)	AH-5
	5. Hub bearing (Rear)	AH-14
	6. Stabilizer bar (Front)	SP-33
	7. Stabilizer bar (Rear)	SP-69
Front wheel shimmy	1. Shock absorber	SP-18
	2. Lower ball joint	SP-28
	3. Hub bearing	AH-5

FRONT AXLE HUB BOLT

COMPONENTS

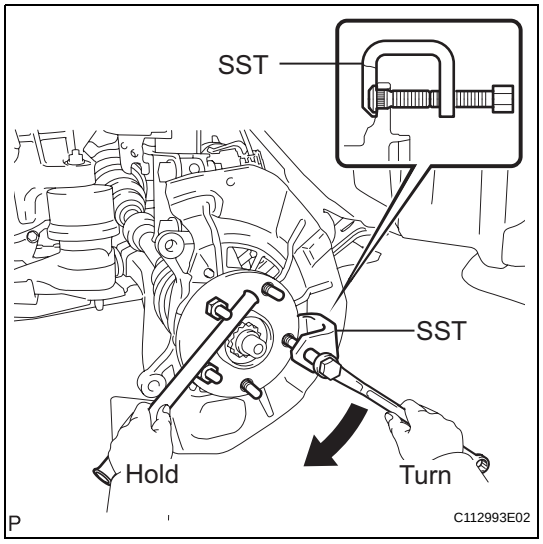


N*m (kgf*cm, ft.*lbf): Specified torque ● Non-reusable part

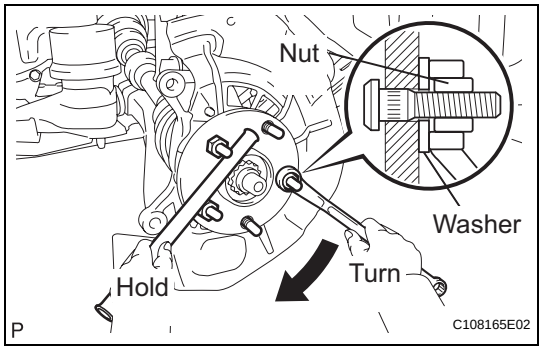
C137195E01

REPLACEMENT

1. **REMOVE FRONT WHEEL**
2. **SEPARATE FRONT DISC BRAKE CALIPER ASSEMBLY (See page AH-6)**
3. **REMOVE FRONT DISC (See page BR-49)**
4. **REMOVE FRONT AXLE HUB BOLT**
   (a) Temporarily install the 2 nuts and washers to the front axle hub bolt as shown in the illustration.
   (b) Using SST and a brass bar or an equivalent tool to hold the front axle, remove the front axle hub bolt.
   SST 09628-10011



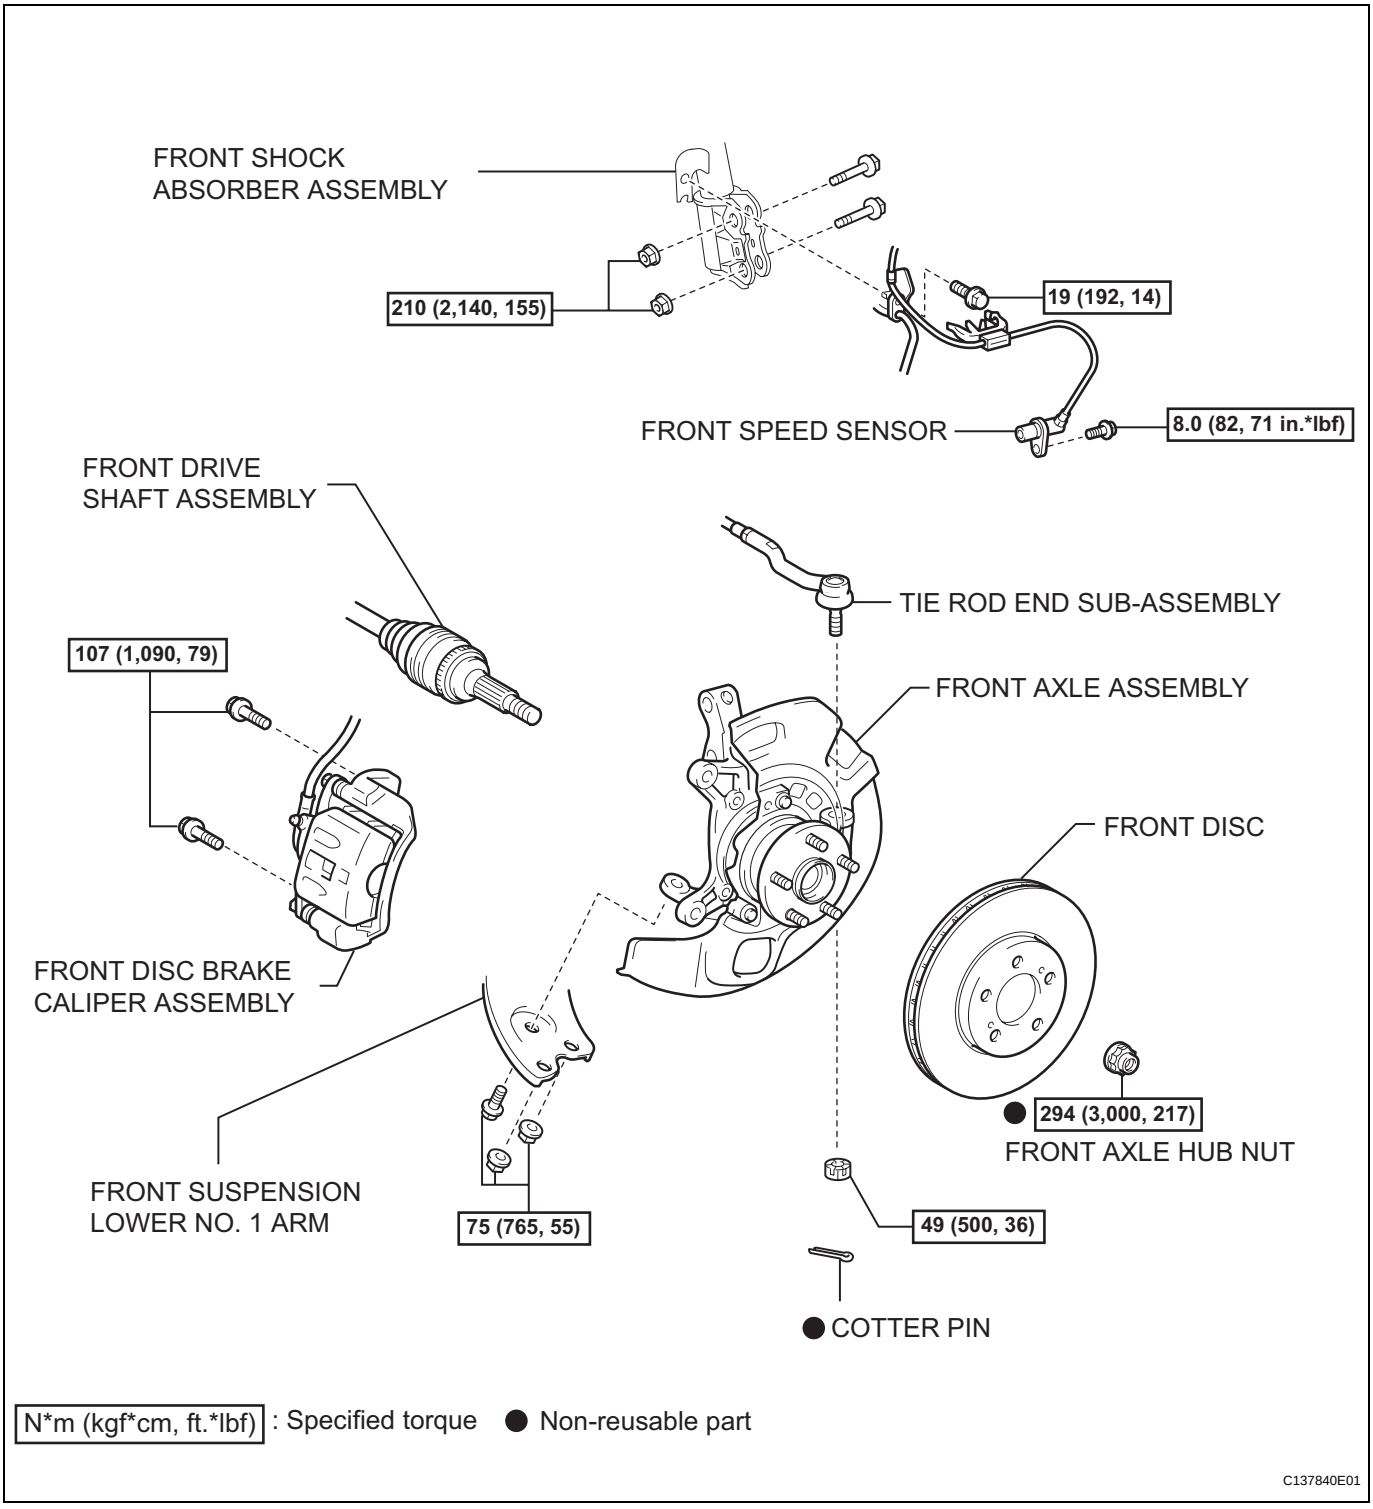
5. **INSTALL FRONT AXLE HUB BOLT**
   (a) Install a washer and nut to a new front axle hub bolt as shown in the illustration.
   (b) Using a brass bar to hold the front axle, install the hub bolt by torquing the nut.
6. **INSTALL FRONT DISC (See page BR-51)**
7. **INSTALL FRONT DISC BRAKE CALIPER ASSEMBLY (See page AH-10)**
8. **INSTALL FRONT WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

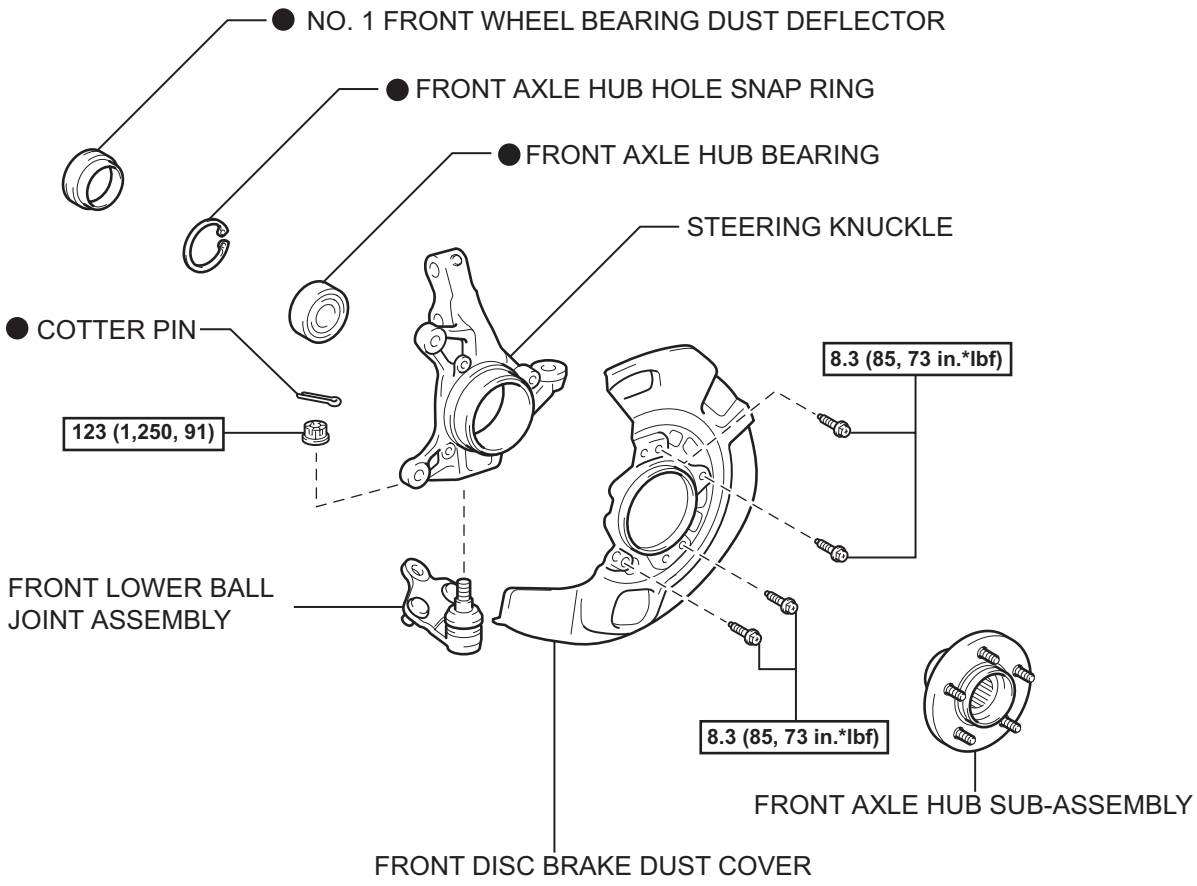


AH

FRONT AXLE HUB

COMPONENTS





N*m (kgf*cm, ft.*lbf) : Specified torque ● Non-reusable part

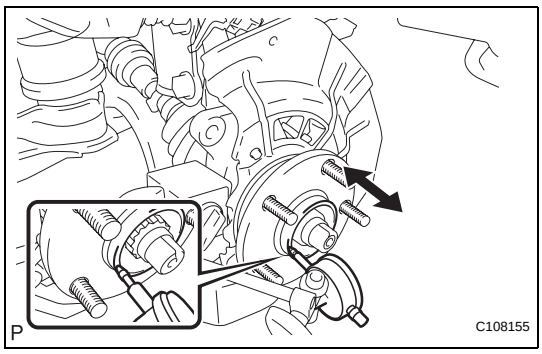
C137841E01

AH

AH

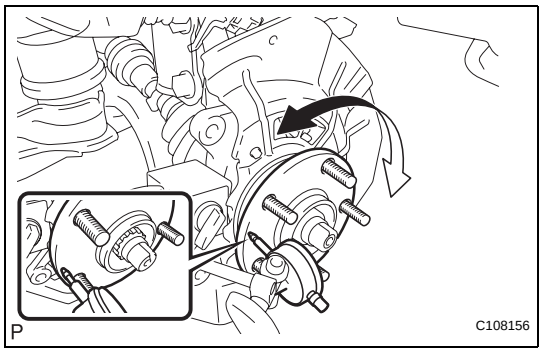
ON-VEHICLE INSPECTION

1. **REMOVE FRONT WHEEL**
2. **SEPARATE FRONT DISC BRAKE CALIPER ASSEMBLY (See page AH-6)**
3. **REMOVE FRONT DISC (See page BR-49)**
4. **INSPECT FRONT AXLE HUB BEARING LOOSENESS**



(a) Using a dial indicator, check for looseness near the center of the axle hub.
Maximum:
0.05 mm (0.0020 in.)
NOTICE:
Ensure that the dial indicator is set perpendicular to the measurement surface.
HINT:
If looseness exceeds the maximum, replace the bearing.

5. **INSPECT FRONT AXLE HUB RUNOUT**



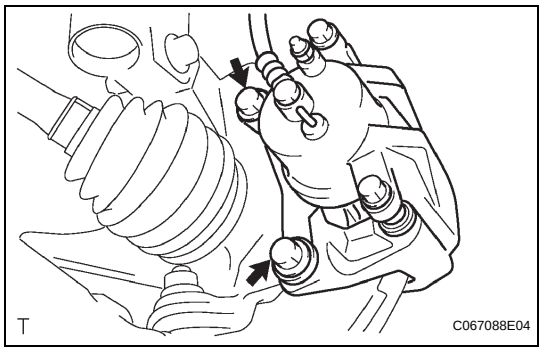
(a) Using a dial indicator, check for runout on the surface of the axle hub outside the hub bolt.
Maximum:
0.05 mm (0.0020 in.)
NOTICE:
Ensure that the dial indicator is set perpendicular to the measurement surface.
HINT:
If runout exceeds the maximum, replace the axle hub.

6. **INSTALL FRONT DISC (See page BR-51)**
7. **INSTALL FRONT DISC BRAKE CALIPER ASSEMBLY (See page AH-10)**
8. **INSTALL FRONT WHEEL**
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

REMOVAL

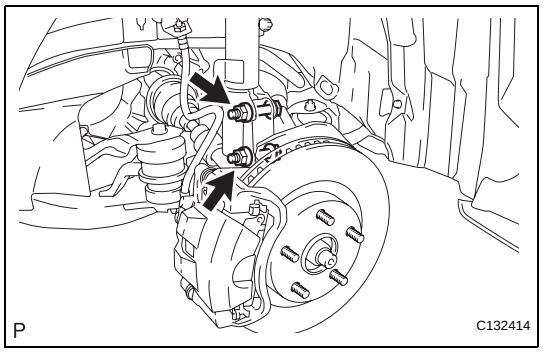
HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. **REMOVE FRONT WHEEL**
2. **REMOVE FRONT AXLE HUB NUT (See page DS-7)**
3. **SEPARATE FRONT SPEED SENSOR (See page DS-7)**
4. **SEPARATE FRONT DISC BRAKE CALIPER ASSEMBLY**
   (a) Remove the 2 bolts and separate the front disc brake caliper assembly from the steering knuckle.
   NOTICE:
   Use wire or an equivalent tool to keep the brake caliper from hanging down by the flexible hose.

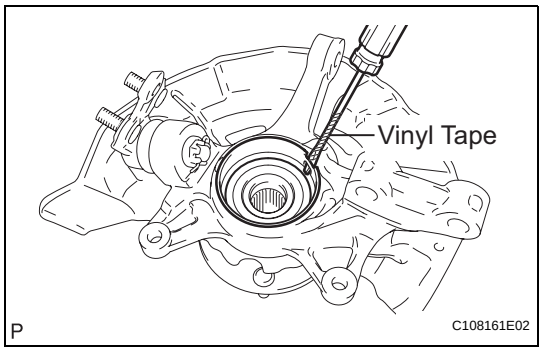


5. **REMOVE FRONT DISC (See page BR-49)**
6. **SEPARATE TIE ROD END SUB-ASSEMBLY (See page DS-8)**
7. **SEPARATE FRONT SUSPENSION LOWER NO. 1 ARM (See page DS-8)**
8. **REMOVE FRONT AXLE ASSEMBLY**
   (a) Put matchmarks on the front drive shaft assembly and the front axle hub sub-assembly.
   (b) Using a plastic hammer, separate the front drive shaft assembly from the front axle assembly.
   NOTICE:
   Be careful not to damage the drive shaft boot and speed sensor rotor.

   (c) Remove the 2 bolts, 2 nuts, and front axle assembly.



AH

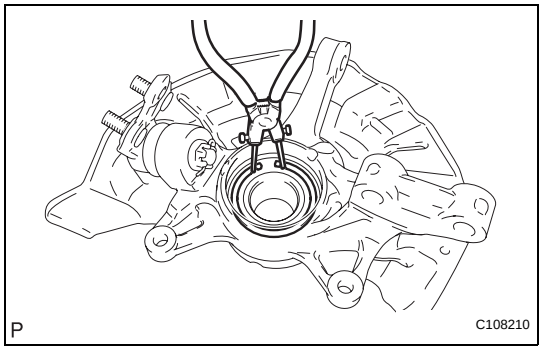


9. REMOVE NO. 1 FRONT WHEEL BEARING DUST DEFLECTOR

(a) Using a screwdriver with its tip wrapped with vinyl tape, remove the No. 1 front wheel bearing dust deflector.

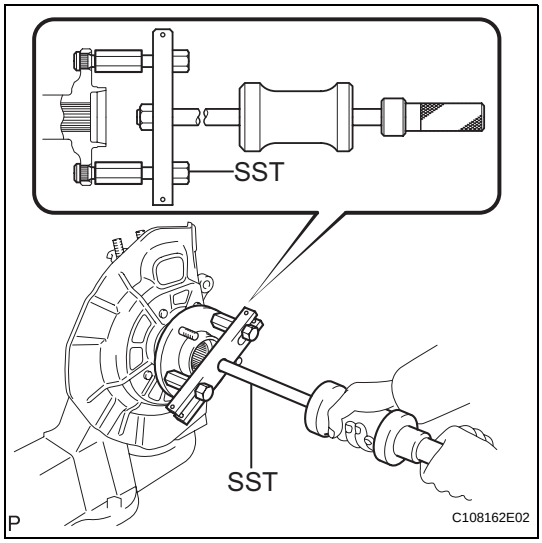
NOTICE:

Be careful not to damage the steering knuckle.



10. REMOVE FRONT AXLE HUB HOLE SNAP RING

(a) Using snap ring pliers, remove the front axle hub hole snap ring.



11. REMOVE FRONT AXLE HUB SUB-ASSEMBLY

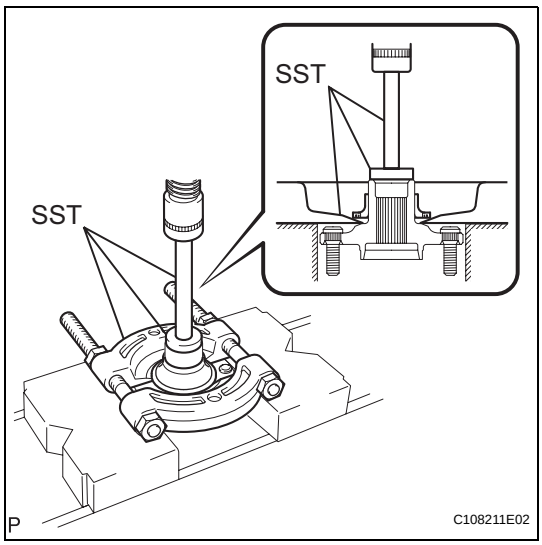
(a) Hold the front axle assembly between aluminium plates in a vise.

NOTICE:

Do not overtighten the vise.

(b) Using SST, remove the front axle hub sub-assembly.

SST 09520-00031



(c) Using SST and a press, remove the bearing inner race (outside) from the front axle hub sub-assembly.

SST 09555-55010, 09950-60010 (09951-00430), 09950-70010 (09951-07100)

NOTICE:

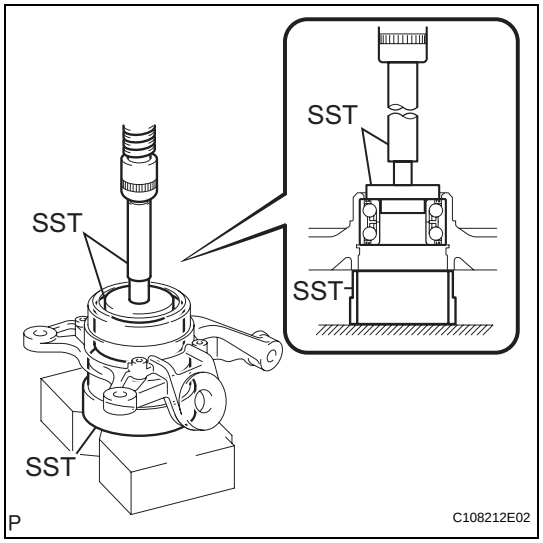
Be careful not to drop the front axle hub sub-assembly.

12. REMOVE FRONT DISC BRAKE DUST COVER

(a) Remove the 4 bolts and disc brake dust cover from the steering knuckle.

13. REMOVE FRONT LOWER BALL JOINT ASSEMBLY

(See page SP-28)

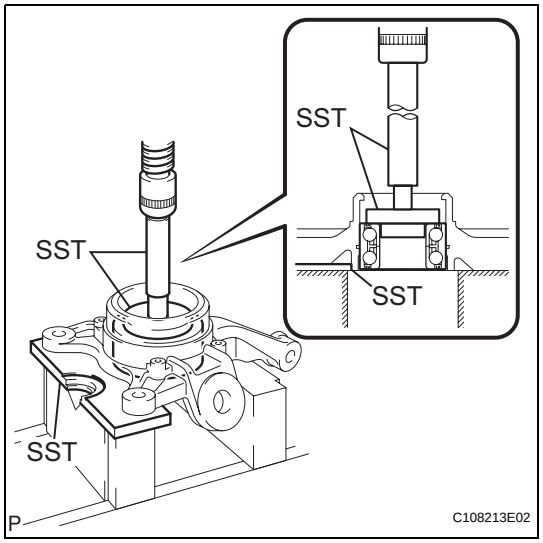


14. REMOVE FRONT AXLE HUB BEARING

(a) Place the bearing inner race (outside) on the front axle hub bearing.

(b) Using SST and a press, press the front axle hub bearing until it contacts the SST.

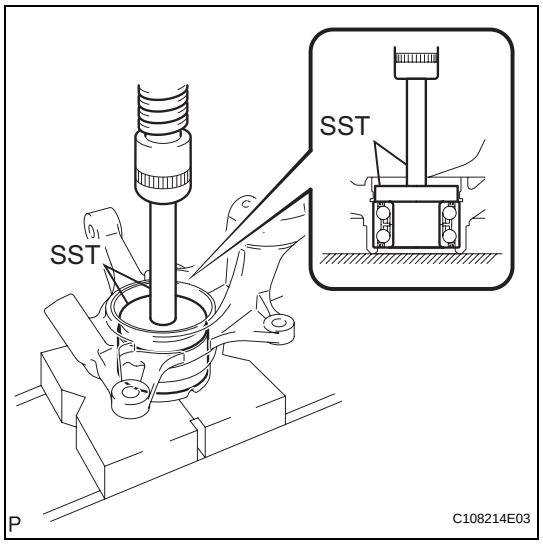
SST 09527-17011, 09950-60010 (09951-00600, 09951-00400, 09952-06010), 09950-70010 (09951-07100)



(c) Using SST to make the steering knuckle horizontal, fix it to the V-block as shown in the illustration.

SST 09527-20011, 09950-60010 (09951-00600, 09951-00400, 09952-06010), 09950-70010 (09951-07100)

(d) Using SST and a press, remove the front axle hub bearing from the steering knuckle.



INSTALLATION

1. INSTALL FRONT AXLE HUB BEARING

(a) Using SST and a press, install a new front axle hub bearing to the steering knuckle.

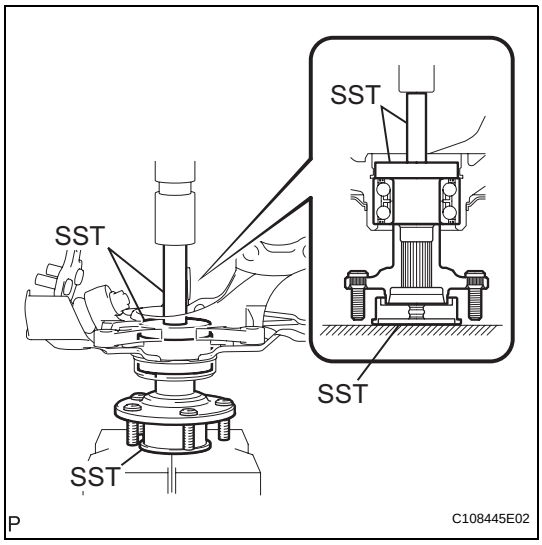
SST 09950-60020 (09951-00810), 09950-70010 (09951-07100)

2. INSTALL FRONT LOWER BALL JOINT ASSEMBLY (See page SP-29)

3. INSTALL FRONT DISC BRAKE DUST COVER

(a) Install the disc brake dust cover to the steering knuckle with the 4 bolts.

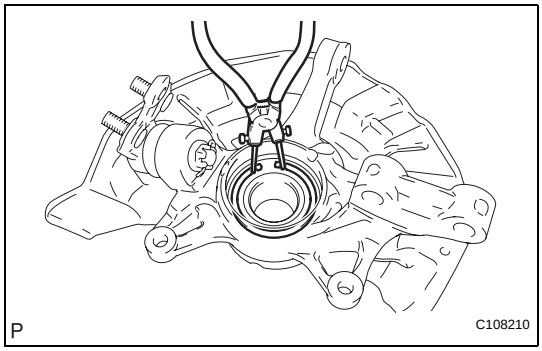
Torque: 8.3 N*m (85 kgf*cm, 73 in.*lbf)



4. INSTALL FRONT AXLE HUB SUB-ASSEMBLY

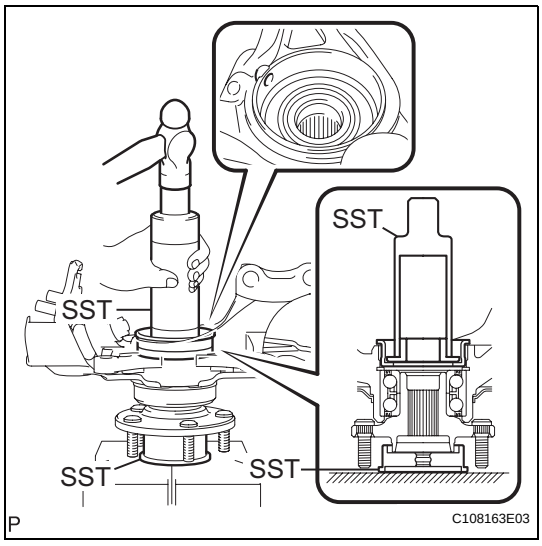
(a) Using SST and a press, install the front axle hub sub-assembly.

SST 09608-32010, 09950-60020 (09951-00810), 09950-70010 (09951-07100)



5. INSTALL FRONT AXLE HUB HOLE SNAP RING

(a) Using snap ring pliers, install a new front axle hub hole snap ring.



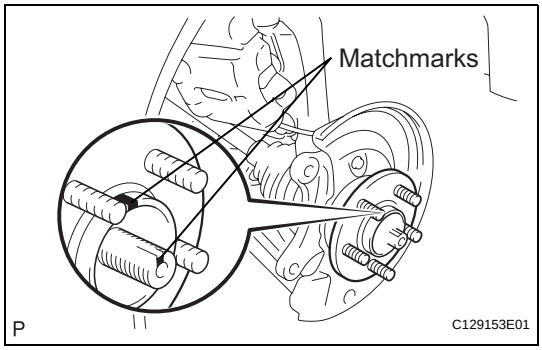
6. INSTALL NO. 1 FRONT WHEEL BEARING DUST DEFLECTOR

(a) Using SST and a hammer, install a new No. 1 front wheel bearing dust deflector.

SST 09316-60011 (09316-00011, 09316-00031), 09608-32010

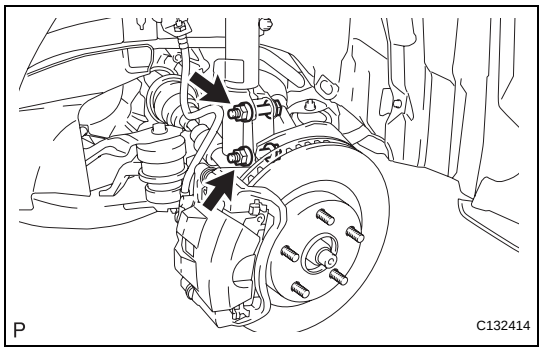
HINT:

Align the hole for the speed sensor in the No. 1 front wheel bearing dust deflector with the steering knuckle.



7. INSTALL FRONT AXLE ASSEMBLY

(a) Align the matchmarks and install the front drive shaft assembly to the front axle hub sub-assembly.

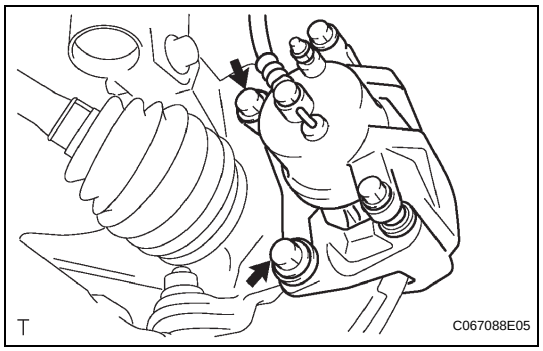


(b) Install the steering knuckle with the front axle assembly to the front shock absorber with the 2 bolts and 2 nuts.
Torque: 210 N*m (2,140 kgf*cm, 155 ft.*lbf)
NOTICE:
- **Only when reusing the bolts and nuts, apply a small amount of engine oil to the threads of the nuts.**
- **Be careful not to damage the drive shaft boot and speed sensor rotor.**

8. **INSTALL FRONT SUSPENSION LOWER NO. 1 ARM (See page DS-21)**

9. **INSTALL TIE ROD END SUB-ASSEMBLY (See page DS-21)**

10. **INSTALL FRONT DISC**



11. **INSTALL FRONT DISC BRAKE CALIPER ASSEMBLY**
(a) Install the front disc brake caliper assembly to the steering knuckle with the 2 bolts.
Torque: 107 N*m (1,090 kgf*cm, 79 ft.*lbf)
NOTICE:
Do not twist the brake hose when installing the front disc brake caliper assembly.

12. **INSTALL FRONT AXLE HUB NUT**
(a) Using a socket wrench (30 mm), install a new axle hub nut.
Torque: 294 N*m (3,000 kgf*cm, 217 ft.*lbf)
HINT:
Stake the nut after inspecting for looseness and runout in the following steps.

13. **SEPARATE FRONT DISC BRAKE CALIPER ASSEMBLY**
(a) Remove the 2 bolts and separate the front disc brake caliper assembly from the steering knuckle.
NOTICE:
Use wire or an equivalent tool to keep the brake caliper from hanging down by the flexible hose.

14. **REMOVE FRONT DISC**

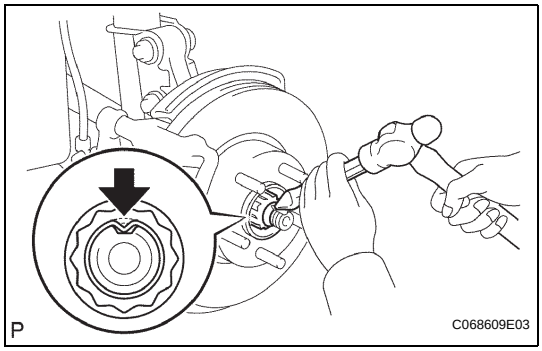
15. **INSPECT FRONT AXLE HUB BEARING LOOSENESS (See page AH-5)**

16. **INSPECT FRONT AXLE HUB RUNOUT (See page AH-6)**

17. **INSTALL FRONT DISC (See page BR-51)**

18. **INSTALL FRONT DISC BRAKE CALIPER ASSEMBLY**
(a) Install the front disc brake caliper assembly with the 2 bolts to the steering knuckle.
Torque: 107 N*m (1,090 kgf*cm, 79 ft.*lbf)
NOTICE:
Do not twist the brake hose when installing the front disc brake caliper assembly.

AH



19. INSTALL FRONT SPEED SENSOR (See page DS-21)

20. INSTALL FRONT AXLE HUB NUT

(a) Using a chisel and hammer, stake the axle hub nut.

21. INSTALL FRONT WHEEL

Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

22. ADJUST FRONT WHEEL ALIGNMENT

HINT:

See page SP-4

23. CHECK ABS SPEED SENSOR SIGNAL

(a) ABS: See page BC-11

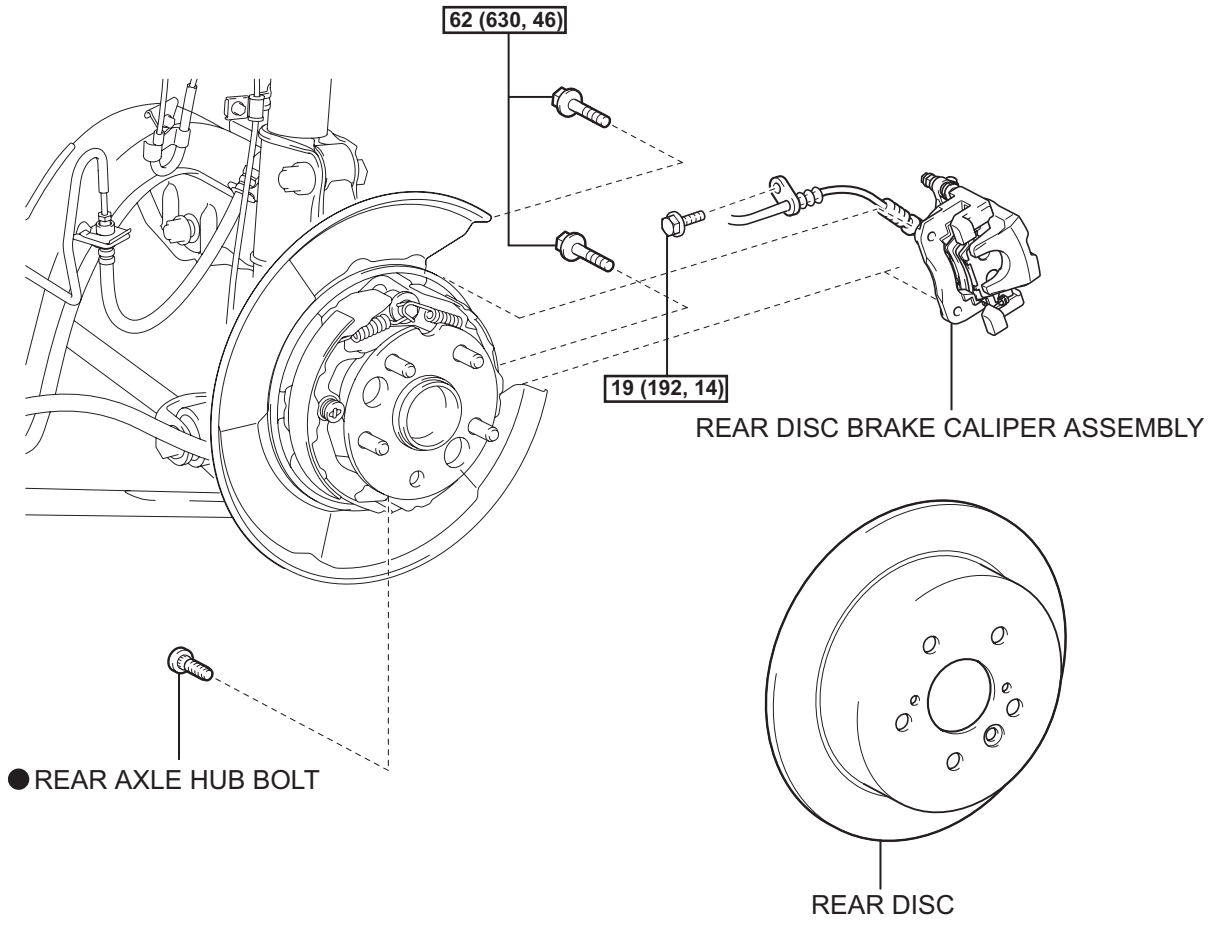
(b) VSC (for BOSCH): See page BC-290

(c) VSC (for ADVICS): See page BC-123

AH

REAR AXLE HUB BOLT

COMPONENTS



N*m (kgf*cm, ft.*lbf): Specified torque ● Non-reusable part

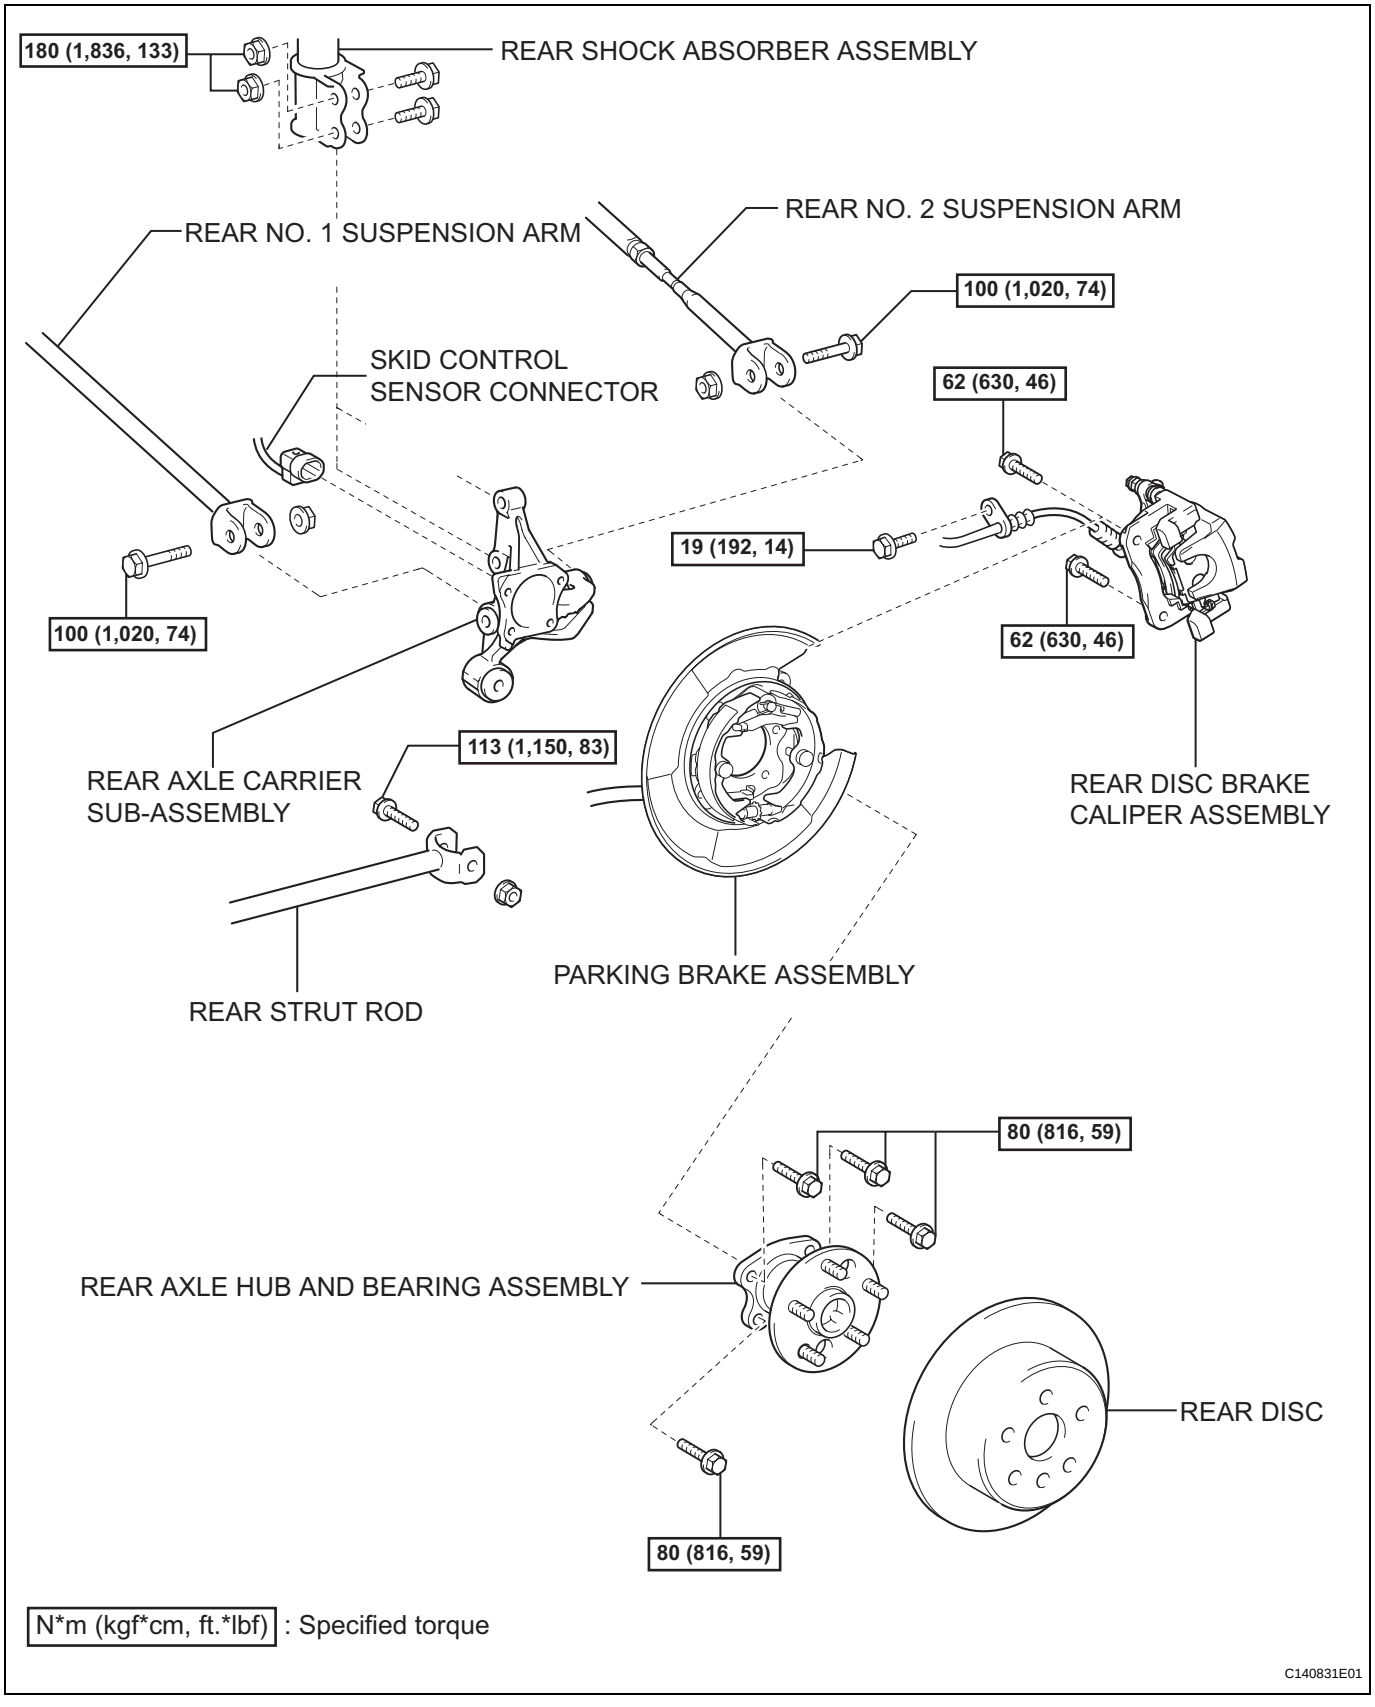
REAR AXLE CARRIER

COMPONENTS



N*m (kgf*cm, ft.*lbf) : Specified torque

C140831E01

AH

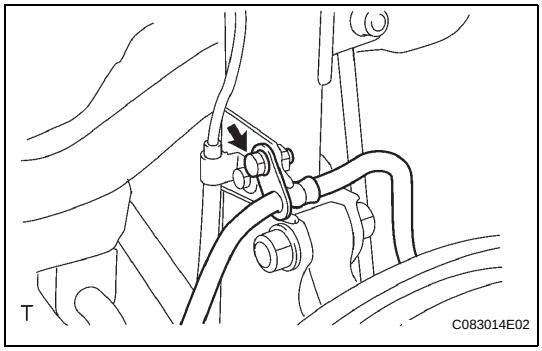
REMOVAL

HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. REMOVE REAR WHEEL

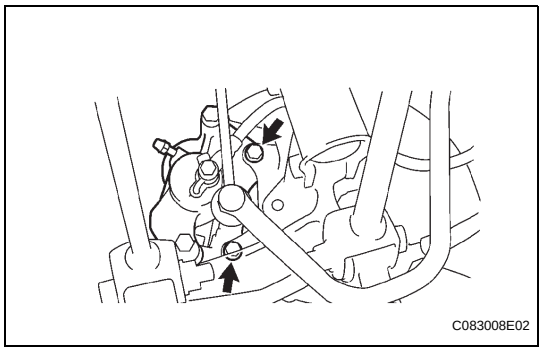
2. SEPARATE REAR DISC BRAKE CALIPER ASSEMBLY

(a) Remove the bolt and separate the flexible hose from the shock absorber.



(b) Remove the 2 bolts and separate the rear disc brake caliper assembly.

NOTICE:
Use wire or an equivalent tool to keep the brake caliper from hanging down by the flexible hose.



3. REMOVE REAR DISC (See page PB-58)

4. REMOVE REAR AXLE HUB AND BEARING ASSEMBLY (See page AH-15)

5. SEPARATE REAR STRUT ROD

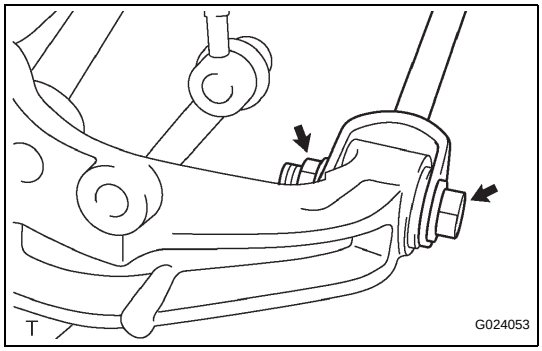
(a) Remove the bolt and nut, and separate the rear strut rod (rear axle carrier side) from the rear axle carrier sub-assembly.

HINT:
When removing the bolt, keep the nut from rotating.

6. SEPARATE REAR NO. 2 SUSPENSION ARM

(a) Remove the bolt and nut, and separate the rear No. 2 suspension arm (rear axle carrier side) from the rear axle carrier sub-assembly.

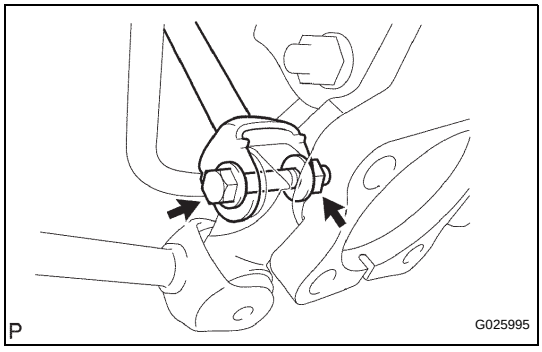
HINT:
When removing the bolt, keep the nut from rotating.

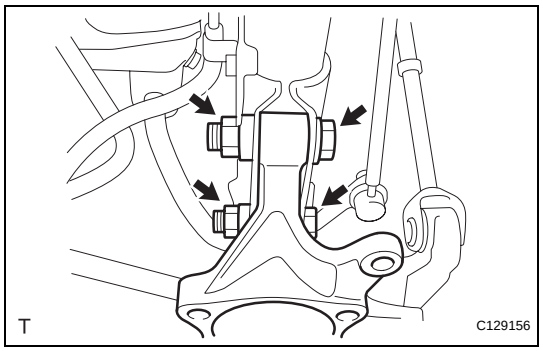


7. SEPARATE REAR NO. 1 SUSPENSION ARM

(a) Remove the bolt and nut, and separate the rear No. 1 suspension arm (rear axle carrier side) from the rear axle carrier sub-assembly.

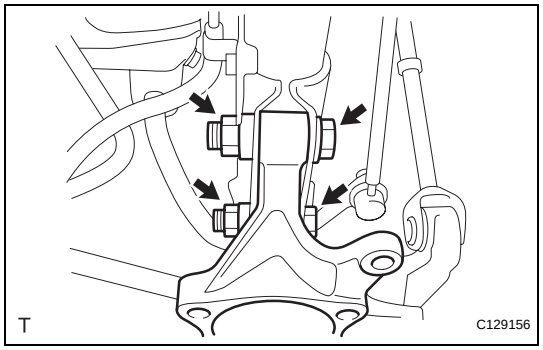
HINT:
When removing the bolt, keep the nut from rotating.



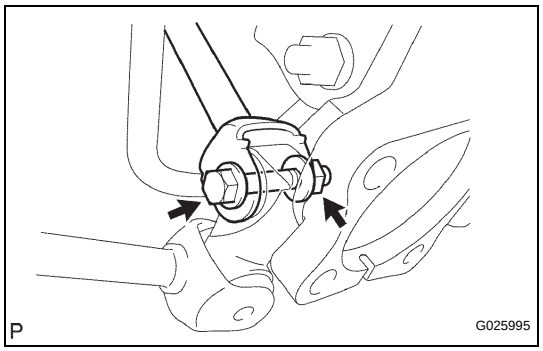


8. **REMOVE REAR AXLE CARRIER SUB-ASSEMBLY**
   (a) Remove the 2 bolts and 2 nuts, and remove the rear axle carrier sub-assembly from the shock absorber.

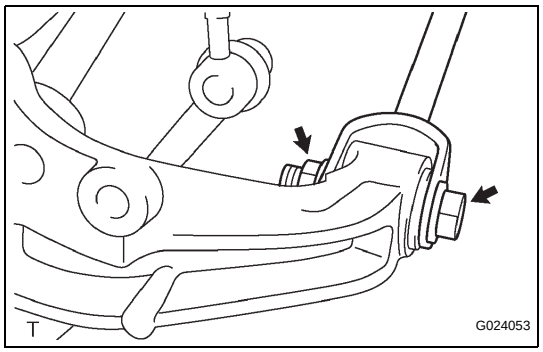
INSTALLATION



1. **INSTALL REAR AXLE CARRIER SUB-ASSEMBLY**
   (a) Install the rear axle carrier sub-assembly to the shock absorber with the 2 bolts and 2 nuts.
   Torque: 180 N*m (1,836 kgf*cm, 133 ft.*lbf)



2. **TEMPORARILY TIGHTEN REAR NO. 1 SUSPENSION ARM**
   (a) Temporarily tighten the rear No. 1 suspension arm with the bolt and nut.
   HINT:
   Insert the bolt from the rear side of the vehicle and temporarily tighten the bolt.



3. **TEMPORARILY TIGHTEN REAR NO. 2 SUSPENSION ARM**
   (a) Temporarily tighten the rear No. 2 suspension arm with the bolt and nut.
   HINT:
   Insert the bolt from the rear side of the vehicle and temporarily tighten the bolt.

4. **TEMPORARILY TIGHTEN REAR STRUT ROD**
   (a) Temporarily tighten the rear strut rod with the bolt and nut.
   HINT:
   Insert the bolt from the inside of the vehicle and temporarily tighten the bolt.

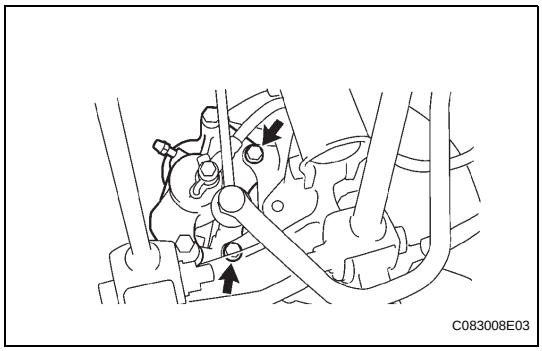
5. **INSTALL REAR AXLE HUB AND BEARING ASSEMBLY (See page AH-16)**

6. **INSPECT REAR AXLE HUB BEARING LOOSENESS (See page AH-15)**

7. **INSPECT REAR AXLE HUB RUNOUT (See page AH-15)**

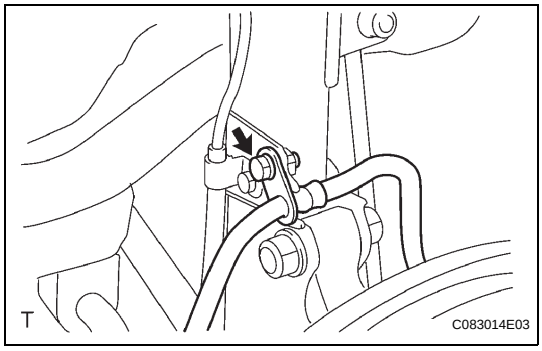
8. **INSTALL REAR DISC (See page BR-63)**

AH



9. INSTALL REAR DISC BRAKE CALIPER ASSEMBLY

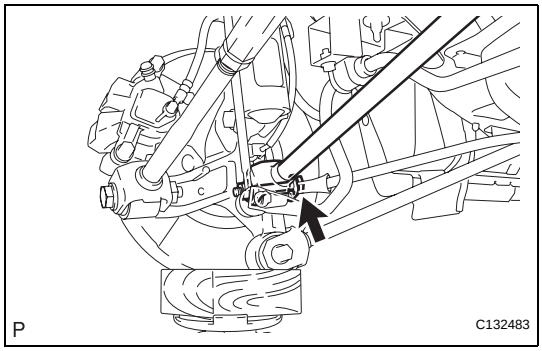
(a) Install the rear disc brake caliper with the 2 bolts.
Torque: 62 N*m (630 kgf*cm, 46 ft.*lbf)
NOTICE:
Do not twist the brake hose when installing the rear disc brake caliper assembly LH.



(b) Install the rear flexible hose with the bolt.
Torque: 19 N*m (192 kgf*cm, 14 ft.*lbf)

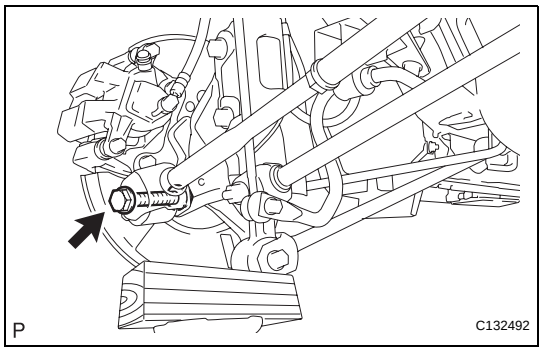
10. INSTALL REAR WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

11. STABILIZE SUSPENSION (See page SP-50)



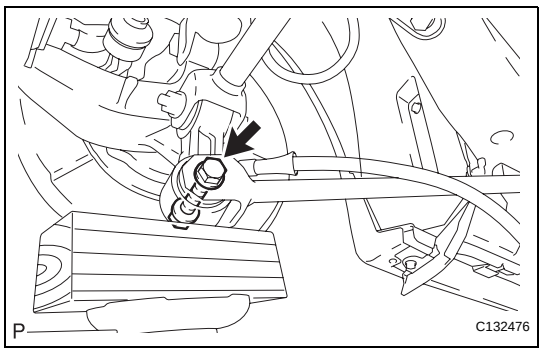
12. FULLY TIGHTEN REAR NO. 1 SUSPENSION ARM

(a) Fully tighten the bolt.
Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)



13. FULLY TIGHTEN REAR NO. 2 SUSPENSION ARM

(a) Fully tighten the bolt.
Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)



14. FULLY TIGHTEN REAR STRUT ROD

(a) Fully tighten the bolt.
Torque: 113 N*m (1,150 kgf*cm, 83 ft.*lbf)

15. ADJUST REAR WHEEL ALIGNMENT
HINT:
See page SP-13

16. CHECK ABS SPEED SENSOR SIGNAL

(a) ABS: See page BC-11
(b) VSC (for BOSCH): See page BC-290
(c) VSC (for ADVICS): See page BC-123

ANTI-LOCK BRAKE SYSTEM

PRECAUTION

1. EXPRESSIONS OF IGNITION SWITCH

The type of ignition switch used on this model differs according to the specifications of the vehicle.
The expressions listed in the table below are used in this section.

Expression	Switch Type	
	Ignition Switch (Position)	Engine Switch (Condition)
Ignition switch off	LOCK	off
Ignition switch on (IG)	ON	on (IG)
Ignition switch on (ACC)	ACC	on (ACC)
Engine start	START	start

2. TROUBLESHOOTING PRECAUTION

HINT:
The anti-lock brake system includes the ABS and EBD.

(a) When there is a malfunction in the terminal contact points or installation problems with parts, removing and installing the suspected problem parts may return the system to normal, either completely or temporarily.
(b) In order to determine the malfunctioning area, be sure to check the conditions at the time the malfunction occurred, such as by the DTC output and the freeze frame data output, and record it before disconnecting each connector or removing and installing parts.
(c) Be sure to remove and install the brake actuator and each individual sensor with the ignition switch off unless otherwise specified in the inspection procedure.
(d) If the brake actuator or a sensor has been removed and installed, it is necessary to check the system for problems after the parts have been reassembled. Check for DTCs using the intelligent tester, also check that system functions and signals received by the ECU are normal using test mode.

3. CAN COMMUNICATION SYSTEM PRECAUTION

(a) The CAN communication system is used for data communication between each of the ECUs and sensors. If there is trouble in the CAN communication line, a DTC of the communication line is output.
(b) If a DTC of the CAN communication line is output, repair the malfunction in the communication line and troubleshoot the anti-lock brake system.

(c) In order to enable CAN communication, a specific type of wiring is used for the CAN communication lines. The wiring used for each communication line is a twisted pair of wires that have an equal length. A bypass wire should not be used, because the data being transmitted will be corrupted.

SYSTEM DESCRIPTION

1. SYSTEM DESCRIPTION

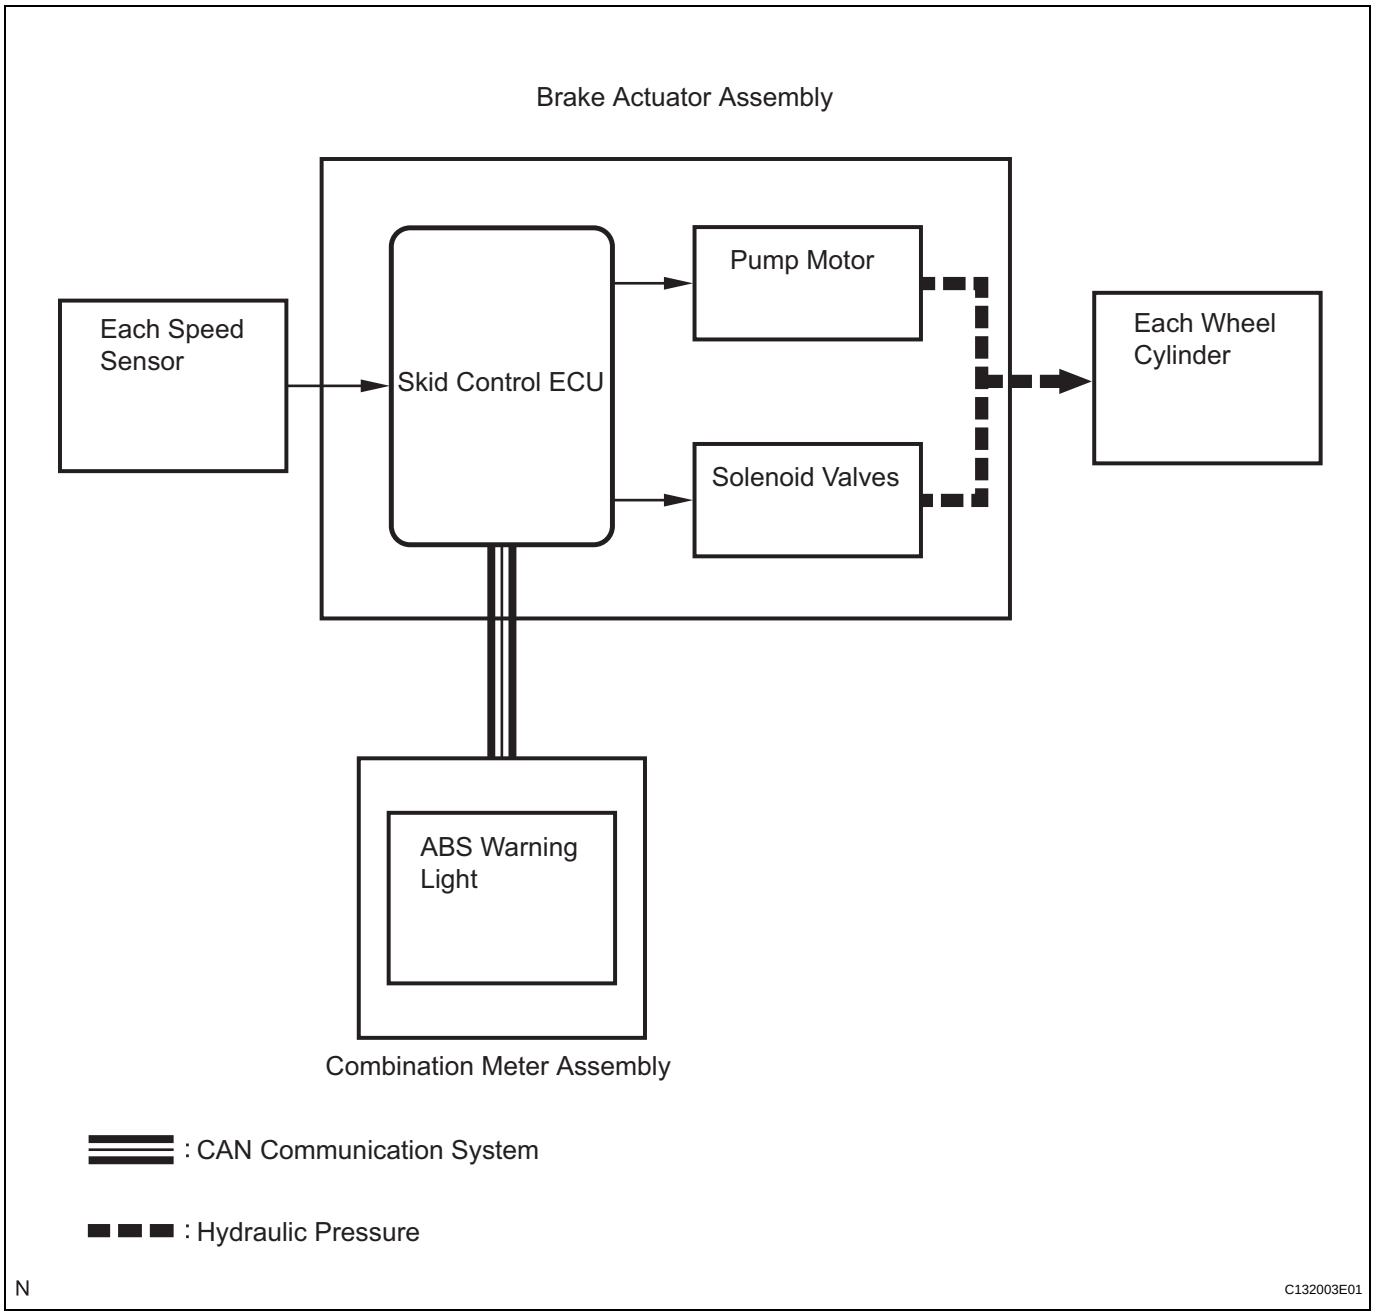
HINT:

The skid control ECU is located within the brake actuator assembly.

(a) ABS

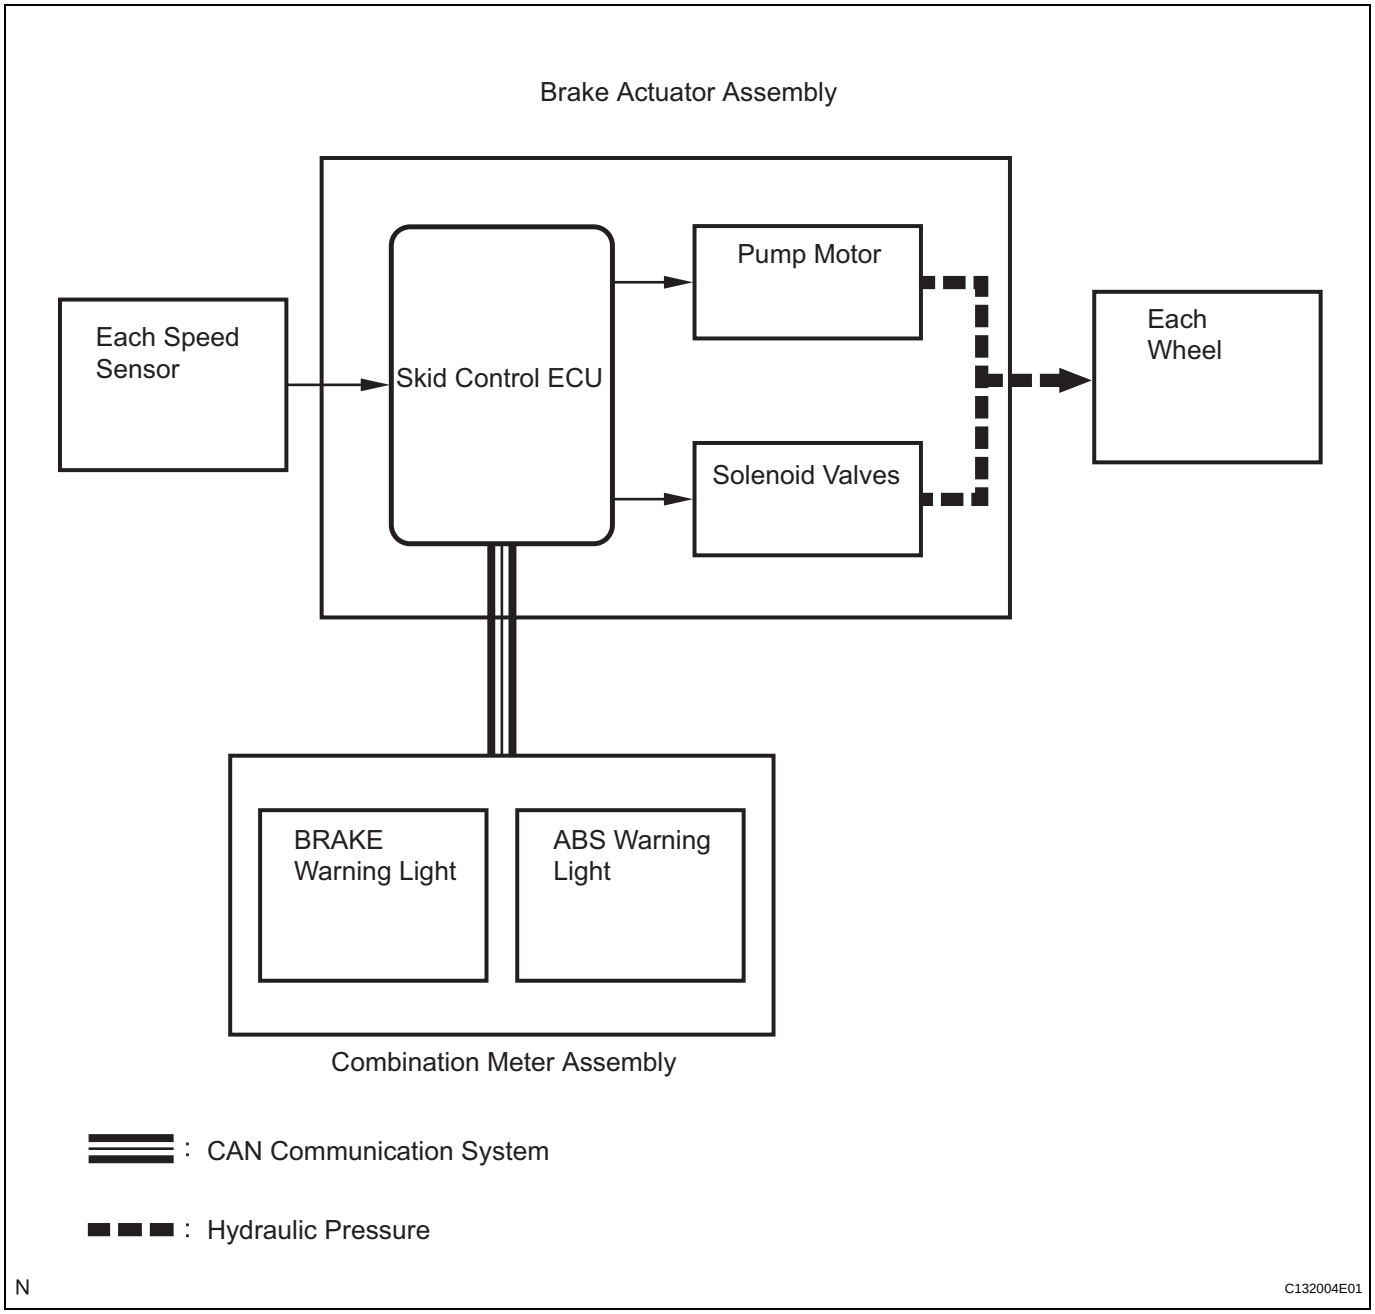
(Anti-lock Brake System)

The ABS helps prevent the wheels from locking when the brakes are applied firmly or when braking on a slippery surface.



Operation description
The skid control ECU detects wheel lock based on speed signals it receives from the wheel speed sensors. Based on this information, the skid control ECU controls the pump motor and solenoid valves. The pump motor and solenoid valves are used to prevent wheel lock by controlling the hydraulic pressure applied to the brakes at each wheel. The ABS warning light will come on when the system is malfunctioning.

(b) EBD
(Electronic Brake force Distribution)
The EBD control utilizes ABS, realizing proper brake force distribution between the front and rear wheels in accordance with driving conditions.
In addition, when braking while cornering, it also controls the brake forces of the right and left wheels, helping to maintain vehicle behavior.



Operation description
The skid control ECU receives a speed signal from each wheel speed sensor, and uses these signals to detect locking of the wheels. The ECU uses this information in order to determine appropriate control of the solenoid valves. The solenoid valves control the hydraulic pressure applied to the brake cylinder at each wheel. In this way, the solenoid valves are used to control the brake power split between the front and rear, and left and right wheels. The ABS and BRAKE warning lights come on if there is a malfunction in the EBD system.

2. ABS with EBD OPERATION

(a) Based on the signals received from the 4 wheel speed sensors, the skid control ECU calculates the deceleration and speed of each wheel, while monitoring for wheel lock. If wheel lock is occurring, the ECU controls the solenoid valves in the brake actuator in order to adjust the hydraulic pressure applied to the brakes at each wheel.

3. FAIL SAFE FUNCTION

(a) When a failure occurs in the anti-lock brake system, the ABS warning light comes on and operation is prohibited. In addition, when a failure which disables EBD operation occurs, the brake warning light also comes on and operation is prohibited (See page BC-24).

4. INITIAL CHECK

(a) When the vehicle speed first becomes approximately 4 mph (6 km/h) or more after the ignition switch is turned on (IG), each solenoid valve and motor of the brake actuator is sequentially activated to perform an electrical check. During the initial check, the operating sound of solenoid valve and motor can be heard from the engine compartment, but this is not a malfunction.

5. FUNCTION OF COMPONENTS

Components	Function
Brake actuator assembly	• Composed of the holding solenoid valve, pressure reduction solenoid valve, pump motor, reservoir, etc., and adjusts the hydraulic pressure applied to each wheel cylinder. • Houses the skid control ECU.
Skid control ECU	Processes the signals sent from each sensor to control ABS and EBD.
Speed sensor	Detects speed of each wheel and inputs the data into the skid control ECU.
Master cylinder	Generates pressure according to pedal effort.
Stop light switch	Illuminates the stop light when the brake pedal is depressed. (Sends a brake on signal to the skid control ECU)
Solenoid relay	• Supplies power to each solenoid. • Housed in the skid control ECU.
Motor relay	• Supplies power to the pump motor. • Housed in the skid control ECU.
ABS warning light	• Comes on to inform the driver that a malfunction in the ABS and EBD has occurred. • Blinks to output DTC.

Components	Function
BRAKE warning light	• Comes on to inform the driver that the parking brake is on when the system is normal or the brake fluid level has decreased. • Comes on to inform the driver that a malfunction in the EBD has occurred.

HOW TO PROCEED WITH TROUBLESHOOTING

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS

(a) Interview the customer to confirm the trouble.

NEXT

3	CHECK CAN COMMUNICATION SYSTEM

BC

(a) Check for DTCs (See page BC-21).
HINT:
The skid control ECU is connected to the CAN communication system.
Therefore, before starting troubleshooting, make sure to check that there is no trouble in the CAN communication system.

Result

Result	Proceed to
DTC is not output	A
DTC is output	B

B → CHECK CAN COMMUNICATION CIRCUIT

A

4	CHECK DTC AND FREEZE FRAME DATA

(a) Check for DTCs and Freeze Frame Data (See page BC-21 for DTC Check / Clear, BC-23 for Freeze Frame Data).
(1) Record the DTCs and Freeze Frame Data.
(b) Clear the DTCs.
(c) Recheck for DTCs.
(1) Reproduce the malfunction and check if the DTCs are output again.

Result

Result	Proceed to
DTC is output	A
DTC is not output (Problem symptom does not occur)	B
DTC is not output (Problem symptom occurs)	C

B → GO TO STEP 9

C → GO TO STEP 10

TEST MODE PROCEDURE

1. WARNING LIGHT AND INDICATOR LIGHT INITIAL CHECK

(a) Release the parking brake.

NOTICE:

Before releasing the parking brake, move the shift lever to the P position for safety (AT model) or set the chocks to hold the vehicle for safety (MT model).

HINT:

When the parking brake is applied or the level of the brake fluid is low, the BRAKE warning light comes on.

(b) When the ignition switch is turned on (IG), check that the ABS warning light comes on for approximately 3 seconds.

HINT:

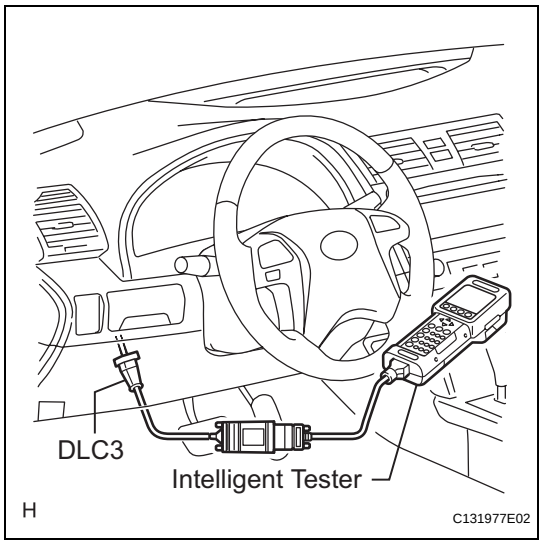
- If the skid control ECU stores any DTCs, the ABS and BRAKE warning lights come on.
- If the indicator remains on or does not come on, proceed to troubleshooting for the light circuits listed below.

Trouble Area	See procedure
ABS warning light (Remains on)	BC-74
ABS warning light circuit (Does not come on)	BC-78
BRAKE warning light (Remains on)	BC-81
BRAKE warning light (Does not come on)	BC-91

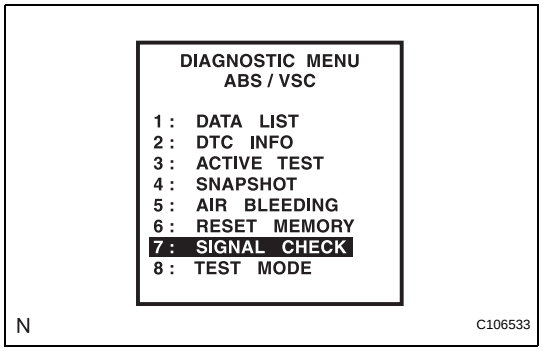
2. SENSOR SIGNAL CHECK USING TEST MODE (SIGNAL CHECK) (INTELLIGENT TESTER)

HINT:

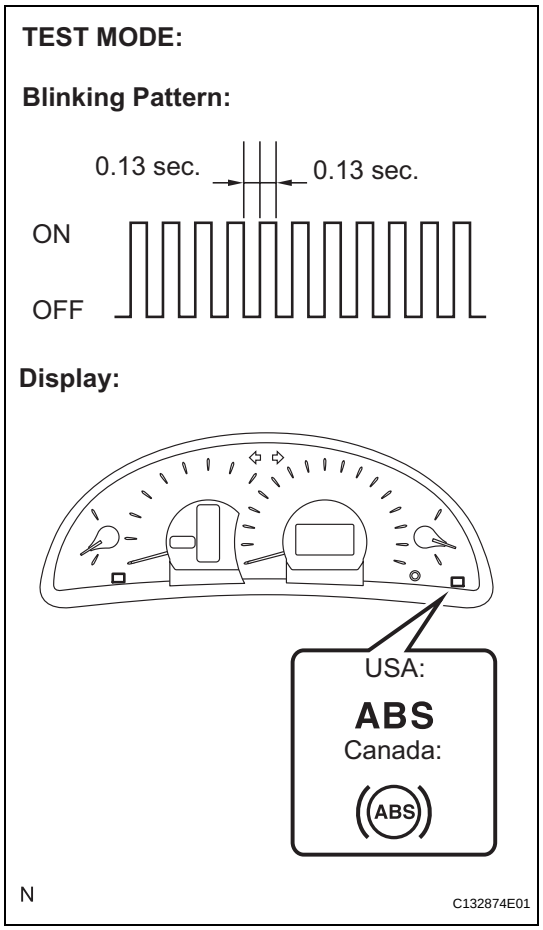
If the ignition switch is turned from on (IG) to on (ACC) or off during Test Mode (signal check), DTCs recorded during the signal check function will be erased.



(a) Procedure to enter Test Mode.
(1) Turn the ignition switch off.
(2) Connect the intelligent tester to the DLC3.
(3) Check that the steering wheel is centered and move the shift lever to the P position (for Automatic Transaxle) or apply the parking brake (Manual Transaxle).
(4) Turn the ignition switch on (IG).



(5) Set the intelligent tester to Test Mode (select "SIGNAL CHECK").
HINT:
Refer to the intelligent tester operator's manual for further details.



(6) Check that the ABS warning light comes on for several seconds and then blinks in test mode.
HINT:
If the ABS warning light does not blink, inspect the ABS warning light circuit.

Trouble Area	See procedure
ABS warning light (Does not come on)	BC-78

(b) Check the sensor signal.
(1) Drive the vehicle straight ahead.
Accelerate the vehicle to a speed of 28 mph (45 km/h) or more for several seconds and check that the ABS warning light goes off when the brake pedal is depressed.
HINT:
- The sensor check may not be completed if wheel spin occurs, or if the steering wheel is turned during this check.
- The ABS warning light goes off when the sensor signal check has been completed and the brake pedal is depressed.
- The ABS warning light comes on immediately after a malfunction has been detected during the speed sensor signal check.

BC

(c) Stop the vehicle.
NOTICE:
- **The speed sensor check may not be completed if the speed sensor check is started while turning the steering wheel or spinning the wheels.**
- **If the signal check has not been completed, the ABS warning light will blink while driving and the ABS system will not operate.**

(d) Read the DTC(s) by following the tester screen.
NOTICE:
- **If only the DTCs are displayed, repair the malfunction area and clear the DTCs.**
- **If the DTCs or Test Mode codes (DTC of signal check function) are displayed, repair the malfunction area, clear the DTCs and perform the Test Mode inspection.**

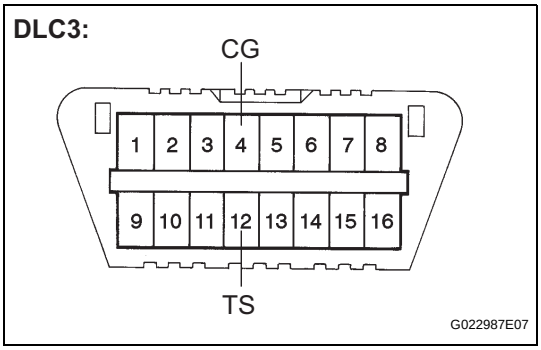
HINT:
See the list of DTCs (See procedure "A").

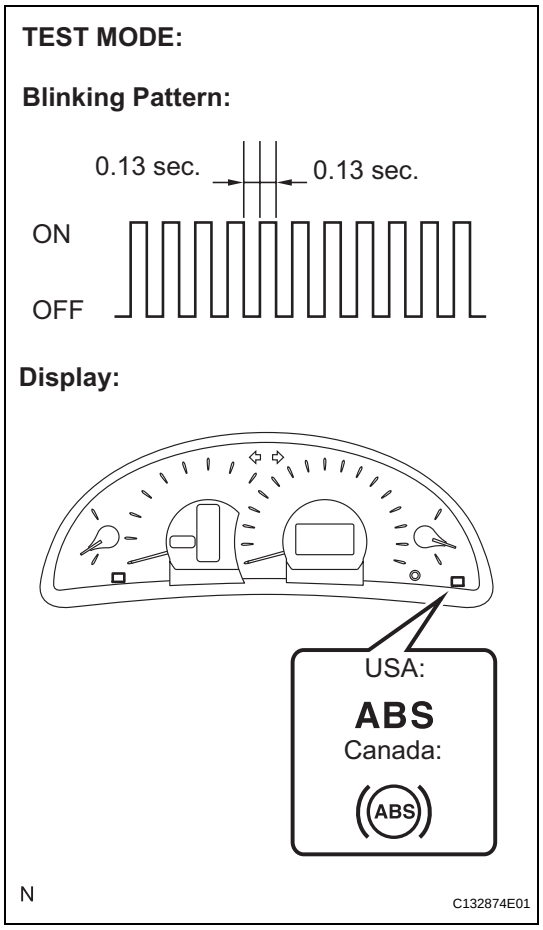
3. SENSOR SIGNAL CHECK BY TEST MODE (SIGNAL CHECK) (SST CHECK WIRE)

HINT:
If the ignition switch is turned from on (IG) to on (ACC) or off during Test Mode (signal check), DTCs recorded during the signal check will be erased.

(a) Procedure for Test Mode.
(1) Turn the ignition switch off.
(2) Check that the steering wheel is centered and move the shift lever to the P position (Automatic Transaxle) or apply the parking brake (Manual Transaxle).
(3) Using SST, connect terminals TS and CG of the DLC3.
SST 09843-18040
(4) Turn the ignition switch on (IG).

DLC3:





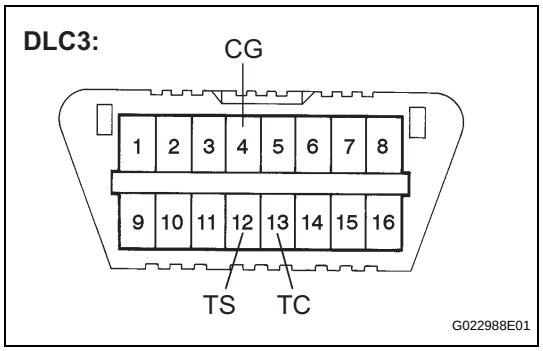
(5) Check that the ABS warning light comes on for several seconds and then blinks in Test Mode.
HINT:
If the ABS warning light does not blink, inspect the TS and CG terminal circuit, and ABS warning light circuit.

Trouble Area	See procedure
TS and CG terminal circuit	BC-97
ABS warning light circuit (Does not come on)	BC-78

(b) Check the sensor signal.
(1) Drive the vehicle straight ahead.
Accelerate the vehicle to a speed of 28 mph (45 km/h) or more for several seconds and check that the ABS warning light goes off when the brake pedal is depressed.
HINT:
- The sensor check may not be completed if wheel spin occurs, or if the steering wheel is turned during this check.
- The ABS warning light goes off when the sensor signal check has been completed and the brake pedal is depressed.
- The ABS warning light comes on immediately after a malfunction has been detected during the speed sensor signal check.

(c) Stop the vehicle.
NOTICE:
- **The speed sensor check may not be completed if the speed sensor check is started while turning the steering wheel or spinning the wheels.**
- **If the signal check has not been completed, the ABS warning light will blink while driving and the ABS system will not operate.**

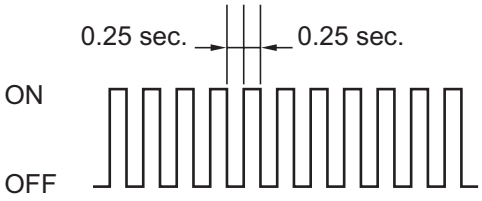
(d) Using SST, connect terminals TC and CG of the DLC3.
SST 09843-18040



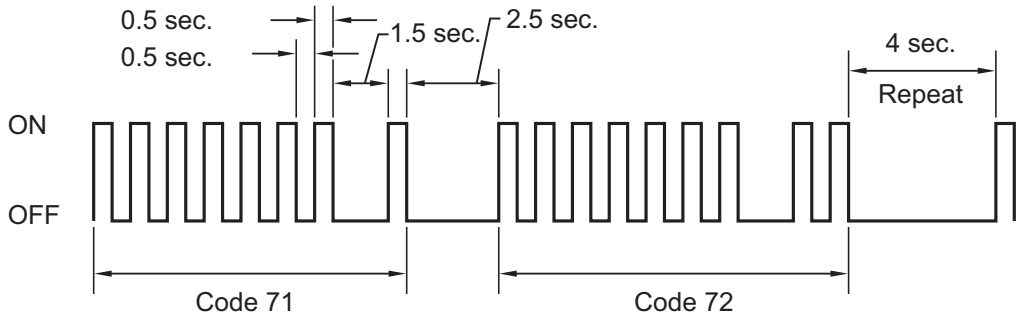
BC

(e) Count the number of blinks of the ABS warning light.

Blinking Pattern of Normal System Code:



Blinking Pattern of Trouble Code (Example Codes 71 and 72):



N

C132876E01

NOTICE:

- **If only the DTCs are displayed, repair the malfunction area and clear the DTCs.**
- **If the DTCs or Test Mode codes (DTC of signal check function) are displayed, repair the malfunction area, clear the DTCs and perform the Test Mode inspection.**

HINT:

- If more than 1 malfunction is detected at the same time, the lowest numbered code will be displayed first.
- See the list of DTCs (See procedure "A").

(f) After performing the check, disconnect the SST from terminals TS and CG, and TC and CG of the DLC3, and turn the ignition switch off.

(g) Turn the ignition switch on (IG) to cancel the test mode.

HINT:

- If the ignition switch is not turned on (IG) after the SST is removed from the DLC3, the previous Test Mode will continue.
- If the ignition switch is turned on (IG) with terminals TS and CG shorted, the previous Test Mode will continue.

4. DTC OF TEST MODE (SIGNAL CHECK) FUNCTION (Procedure "A")

DTC of Test Mode (Signal Check):

Code No.	Diagnosis	Trouble Area
C1271/71	Low output signal of front speed sensor RH	• Front speed sensor RH • Sensor installation • Speed sensor rotor
C1272/72	Low output signal of front speed sensor LH	• Front speed sensor LH • Sensor installation • Speed sensor rotor
C1273/73	Low output signal of rear speed sensor RH	• Rear speed sensor RH • Sensor installation • Speed sensor rotor
C1274/74	Low output signal of rear speed sensor LH	• Rear speed sensor LH • Sensor installation • Speed sensor rotor
C1275/75	Abnormal change in output signal of front speed sensor RH	• Front speed sensor RH • Front speed sensor circuit RH • Sensor installation
C1276/76	Abnormal change in output signal of front speed sensor LH	• Front speed sensor LH • Front speed sensor circuit LH • Sensor installation
C1277/77	Abnormal change in output signal of rear speed sensor RH	• Rear speed sensor RH • Rear speed sensor circuit RH • Sensor installation
C1278/78	Abnormal change in output signal of rear speed sensor LH	• Rear speed sensor LH • Rear speed sensor circuit LH • Sensor installation

HINT:
The codes in this table are output only in Test Mode (signal check).

PROBLEM SYMPTOMS TABLE

If a normal code is displayed during the DTC check but the problem still occurs, check the circuits for each problem symptom in the order given in the table below and proceed to the relevant troubleshooting page.

NOTICE:

When replacing the skid control ECU, sensor, etc., turn the ignition switch off.

HINT:

- Inspect the fuses and relays before investigating the suspected areas as shown in the table below.
- Inspect each malfunction circuit in numerical order for the corresponding symptoms.

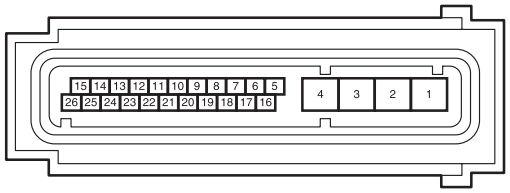
ANTI-LOCK BRAKE SYSTEM:

Symptom	Suspected area	See page
ABS does not operate	1. Check the DTC reconfirming that the normal system code is output	BC-21
	2. IG power source circuit	BC-63
	3. Front speed sensor circuit	BC-30
	4. Rear speed sensor circuit	BC-38
	5. Check the brake actuator assembly with the intelligent tester (Check brake actuator assembly operation using the active test function) If abnormal, check the hydraulic circuit for leakage	BR-42
	6. If the symptoms still occur even after the above circuits in suspected areas have been inspected and proved to be normal, replace the brake actuator assembly (skid control ECU)	BC-432
ABS does not operate efficiently	1. Check the DTC reconfirming that the normal system code is output.	BC-21
	2. Front speed sensor circuit	BC-30
	3. Rear speed sensor circuit	BC-38
	4. Stop light switch circuit	BC-67
	5. Check the brake actuator assembly with the intelligent tester (Check brake actuator assembly operation using the active test function)	BR-42
	6. If the symptoms still occur even after the above circuits in suspected areas have been inspected and proved to be normal, replace the brake actuator assembly (skid control ECU)	BC-432
ABS warning light malfunction (Remains on)	1. ABS warning light circuit	BC-74
	2. Brake actuator assembly (skid control ECU)	BC-432
ABS warning light malfunction (Does not come on)	1. ABS warning light circuit	BC-78
Brake warning light malfunction (Remains on)	1. Brake warning light circuit	BC-81
	2. Brake actuator assembly (skid control ECU)	BC-432
Brake warning light malfunction (Does not come on)	1. Brake warning light circuit	BC-91
	2. Brake actuator assembly (skid control ECU)	BC-432
ABS sensor DTC check cannot be done	1. Check the DTC again and make sure that the normal system code is output	BC-21
	2. TS and CG terminal circuit	BC-97
	3. TC and CG terminal circuit	BC-94
	4. If the symptoms still occur even after the above circuits in suspected areas have been inspected and proved to be normal, replace the brake actuator assembly (skid control ECU)	BC-432

TERMINALS OF ECU

1. TERMINALS OF ECU

Skid Control ECU (Brake Actuator Assembly):



N

C131974E01

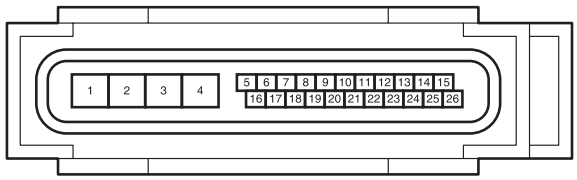
Symbols (Terminal No.)	Terminal Description
GND2 (1)	Actuator pump motor ground
+BM (2)	Motor relay power supply
+BS (3)	Solenoid valves power supply
GND1 (4)	Skid control ground
FL+ (5)	Front LH (+) wheel speed signal input
FL- (6)	Front LH (-) wheel speed signal input
RL+ (7)	Rear LH (+) wheel speed signal input
RR- (8)	Rear RH (-) wheel speed signal input
FR- (9)	Front RH (-) wheel speed signal input
FR+ (10)	Front RH (+) wheel speed signal input
D/G (11)	Diagnosis tester communication line
CANL (15)	CAN communication line L
RL- (17)	Rear LH (-) wheel speed signal input
IG1 (18)	ECU power supply
RR+ (19)	Rear RH (+) wheel speed signal input
STP (20)	Stop light switch input
SP1 (23)	Speed signal output for speedometer
TS (25)	Sensor check input
CANH (26)	CAN communication line H

BC

2. TERMINAL INSPECTION

(a) Disconnect the connector and measure the voltage or resistance on the wire harness side.
HINT:
Voltage cannot be measured with the connector connected to the skid control ECU as the connector is watertight.

Skid Control ECU (Harness Side Connector Front View):



N

C131969E01

BC

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
GND2 (1) - Body ground	W-B - Body ground	Actuator pump motor ground	Always	Below 1 Ω
+BM (2) - Body ground	B - Body ground	Motor relay power supply	Always	10 to 14 V
+BS (3) - Body ground	L - Body ground	Solenoid valves power supply	Always	10 to 14 V
GND1 (4) - Body ground	W-B - Body ground	Skid control ECU ground	Always	Below 1 Ω
IG1 (18) - Body ground	P - Body ground	ECU power supply	Ignition switch on (IG)	10 to 14 V
STP (20) - Body ground	P - Body ground	Stop light switch input	Stop light switch ON (Brake pedal depressed)	8 to 14 V
STP (20) - Body ground	P - Body ground	Stop light switch input	Stop light switch OFF (Brake pedal released)	Below 3 V

DIAGNOSIS SYSTEM

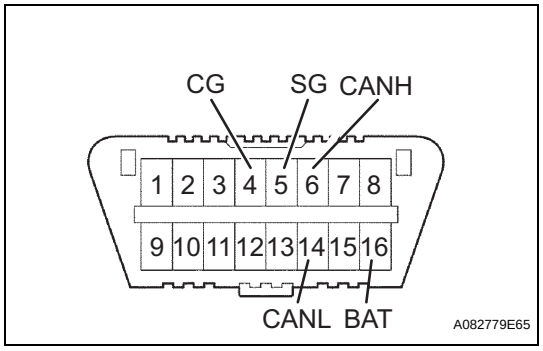
1. DIAGNOSIS SYSTEM

(a) Inspect the battery voltage.

Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge the battery before proceeding.



(b) The vehicle's ECU uses the ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

HINT:

Connect the cable of the intelligent tester to the DLC3, turn the ignition switch on (IG) and attempt to use the intelligent tester. If the screen displays a communication error message, a problem exists on either the vehicle side or the tester side.

If the communication is normal when the tester is connected to another vehicle, inspect the DLC3 on the original vehicle.

If the communication is still impossible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.

BC

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	9 to 14 V
CANH (6) - CANL (14)	HIGH-level CAN bus line	Ignition switch OFF*	54 to 69 Ω
CANH (6) - Battery positive	HIGH-level CAN bus line	Ignition switch OFF*	6 kΩ or higher
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANL (14) - Battery positive	LOW-level CAN bus line	Ignition switch OFF*	6 kΩ or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 Ω or higher

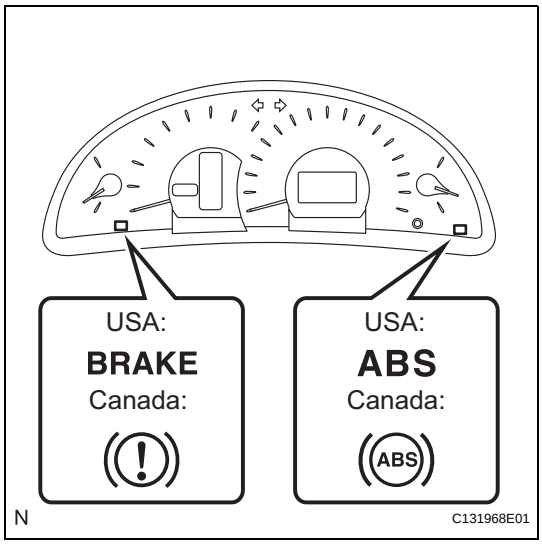
NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**

2. DIAGNOSIS

NOTICE:

When releasing the parking brake, set chocks to hold the vehicle for safety.



(a) Release the parking brake.
(b) Turn the ignition switch on (IG).
(c) If the skid control ECU detects a malfunction, the ABS warning light and brake warning light will come on to warn the driver. The table below indicates which light will come on when there is a malfunction in a particular function.

Item/Trouble Area	ABS System	EBD System	Skid Control ECU
ABS Warning light	○	○	○
Brake Warning light	-	○	○

○: Light ON
-: Light OFF

- The DTCs are simultaneously stored in the memory. The DTCs can be read by connecting the SST (09843-18043) between the TC and CG terminals of the DLC3 and observing the blinking pattern of the ABS warning light, or by connecting an intelligent tester (See page BC-21).
- This system has a sensor signal check function (See page BC-11).

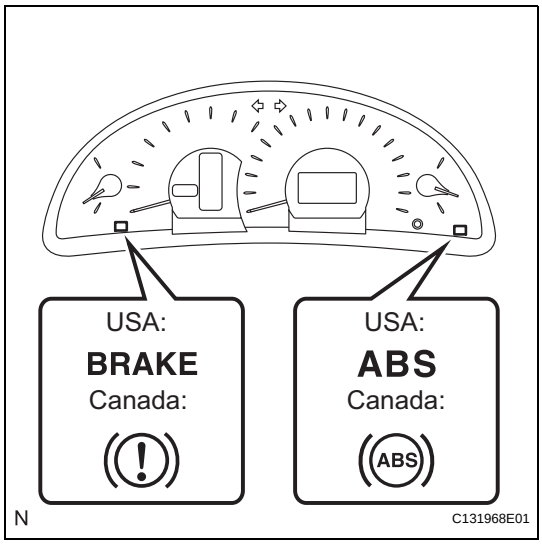
3. WARNING LIGHT INITIAL CHECK

NOTICE:

When releasing the parking brake, set chocks to hold the vehicle for safety.

HINT:

When the parking brake is applied or the level of the brake fluid is low, the brake warning light comes on.



(a) Release the parking brake.
(b) Check that the ABS warning light and brake warning light come on when the ignition switch is turned on (IG) and go off in approximately 3 seconds.
(c) If the warning lights do not come on or remain on, inspect the ABS warning light circuit and/or brake warning light circuit.

Trouble Area	See procedure
ABS warning light circuit (Remains on)	BC-74
ABS warning light circuit (Does not come on)	BC-78
Brake warning light circuit (Remains on)	BC-81
Brake warning light circuit (Does not come on)	BC-91

4. SYMPTOM SIMULATION

HINT:

The most difficult case in troubleshooting is when no symptoms occur. In such cases, a thorough customer problem analysis must be carried out. Then the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be reproduced. No matter how experienced or skilled a technician may be, if he proceeds to troubleshoot without confirming the problem symptoms, he will likely overlook something important and make a wrong guess at some points in the repair operation. This leads to a standstill in troubleshooting.

(a) Vibration method: When vibration seems to be the major cause.

HINT:

Perform the simulation method only during the primary check period (for approximately 6 seconds after the ignition switch is turned on (IG)).

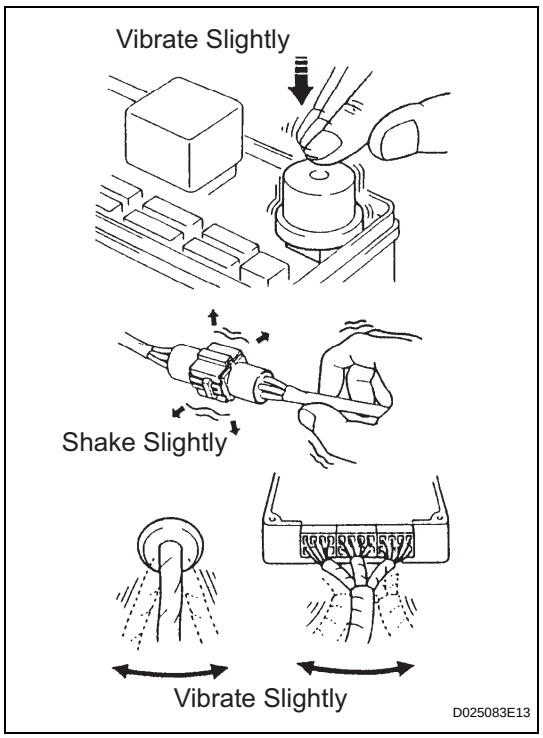
(1) Slightly vibrate the part of the sensor considered to be the problem cause with your fingers and check whether the malfunction occurs.

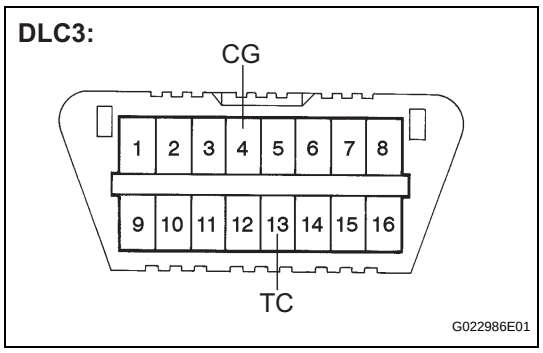
(2) Slightly shake the connector vertically and horizontally.

HINT:

Shaking the relays too strongly may result in open relays.

(3) Slightly shake the wire harness vertically and horizontally. The connector joint and fulcrum of the vibration are the major areas to be checked thoroughly.





DTC CHECK / CLEAR

1. DTC CHECK / CLEAR (SST CHECK WIRE)

(a) DTC check

(1) Using SST, connect terminals TC and CG of the DLC3.

SST 09843-18040

(2) Turn the ignition switch on (IG).

(3) Read the DTCs from the ABS warning light on the combination meter.

HINT:

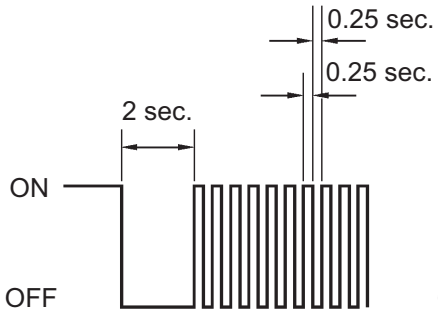
If no code appears, inspect the TC and CG terminal circuit and the ABS warning light circuit.

Trouble Area	See procedure
TC and CG terminal circuit	BC-94
ABS warning light circuit (Remains on)	BC-74
ABS warning light circuit (Does not come on)	BC-78

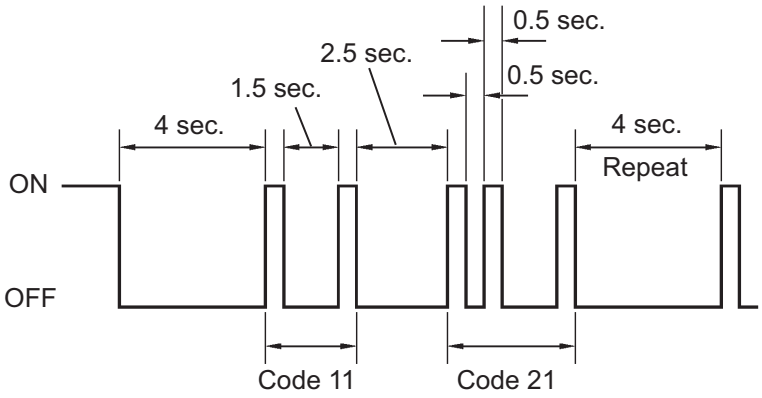
BC

(4) As an example, refer to the chart below for the blinking patterns of the normal system code and trouble codes 11 and 21.

Normal System Code:



Trouble Code (Example Codes 11 and 21):



N

I042843E01

BC

(5) The codes are explained in the code table (See page BC-27).

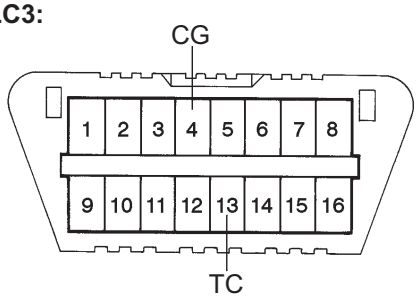
(6) After completing the check, disconnect terminals TC and CG of the DLC3, and turn off the display. If 2 or more DTCs are detected at the same time, the DTCs will be displayed in ascending order.

(b) DTC clear

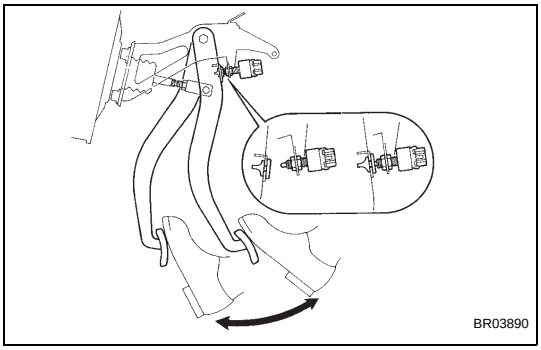
(1) Using SST, connect terminals TC and CG of the DLC3.
SST 09843-18040

(2) Turn the ignition switch on (IG).

DLC3:



G022986E01



BR03890

(3) Clear the DTCs stored in the ECU by depressing the brake pedal 8 times or more within 5 seconds.

(4) Check that the warning light indicates the normal system code.

(5) Remove the SST from the terminals of the DLC3.
HINT:
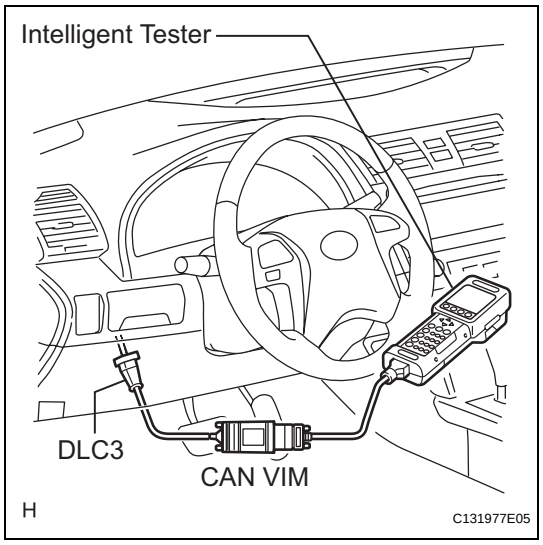
Clearing the DTCs cannot be performed by disconnecting the battery terminal or the ECU-IG fuse.



2. DTC CHECK/CLEAR (WHEN USING INTELLIGENT TESTER:)

(a) DTC check
  (1) Connect the intelligent tester to the DLC3.
  (2) Turn the ignition switch on (IG).
  (3) Read the DTCs by following the prompts on the tester screen.

(b) DTC clear
  (1) Connect the intelligent tester to the DLC3.
  (2) Turn the ignition switch on (IG).
  (3) Operate the intelligent tester to clear the codes.
  HINT:
  Refer to the intelligent tester operator's manual for further details.

3. END OF DTC CHECK/CLEAR

(a) Turn the ignition switch on (IG).

(b) Check that the ABS warning light goes off within approximately 3 seconds.

FREEZE FRAME DATA

1. FREEZE FRAME DATA

(a) Whenever a DTC is detected or the ABS operates, the skid control ECU stores the current vehicle (sensor) status as Freeze Frame Data.

(b) The skid control ECU stores the number of times (maximum: 31) the ignition switch has been turned from off to on (IG) since the last time the ABS was activated.
HINT:
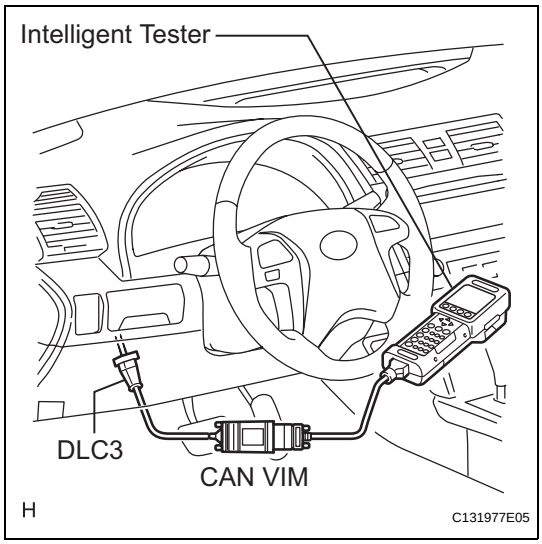
- Freeze frame data at the time the ABS operates: The skid control ECU stores and updates data whenever the ABS system operates.
  When the skid control ECU stores data at the time a DTC is detected, the data stored during ABS operation is erased.
- Freeze frame data at the time a DTC is detected: When the skid control ECU stores data at the time a DTC is detected, no updates will be performed until the data is cleared.

(c) Connect the intelligent tester to the DLC3.

(d) Turn the ignition switch on (IG).

(e) Select "DTC INFO" on the tester display.

(f) On the DTC data display screen, select the DTC data display with "*".



Intelligent Tester Display	Measurement Item	Reference Value
TROUBLE CODE	Freeze DTC	min.: 0, max.: 65535
#DTC	Number of trouble codes	min.: 0, max.: 255
FREEZE TIME	Elapsed time after freeze trigger	Min.: 0 ms, Max.: 500 ms
#IG ON	Number of operations of ignition switch on (IG) after storing freeze frame data	0 to 31
STOP LAMP SW	Stop light switch signal	Stop light switch ON: ON, OFF: OFF
PARKING BRAKE SW	Parking brake condition	ON: Parking brake on OFF: Parking brake off
OPERATED SYSTEM	Operated system	ABS operated: ABS
FR WHEEL SPD	Front right wheel speed	Min.: 0 MPH (0 km/h), Max.: 202 MPH (326 km/h)
FL WHEEL SPD	Front left wheel speed	Min.: 0 MPH (0 km/h), Max.: 202 MPH (326 km/h)
RR WHEEL SPD	Rear right wheel speed	Min.: 0 MPH (0 km/h), Max.: 202 MPH (326 km/h)

Intelligent Tester Display	Measurement Item	Reference Value
RL WHEEL SPD	Rear left wheel speed	Min.: 0 MPH (0 km/h), Max.: 202 MPH (326 km/h)
VEHICLE SPD	Vehicle speed reading	Speed indication on the meter
SPD GRADE	Vehicle speed grade	Min.: -1.869 G, Max.: 1.869 G

FAIL-SAFE CHART

1. FAIL SAFE OPERATION

If there is a problem with sensor signals or brake actuator systems, the skid control ECU will prohibit power supply to the brake actuator and terminate ABS control.

ABS control will be prohibited, but EBD control continues as much as possible. If EBD control is impossible, the brake warning light will come on to warn the driver (See page BC-19).

Malfunction Area	Control Method
ABS system	Prohibits the ABS control
EBD system	Prohibits the ABS and EBD control

HINT:

If the ABS system has a malfunction, the brake system will operate normally without ABS control.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

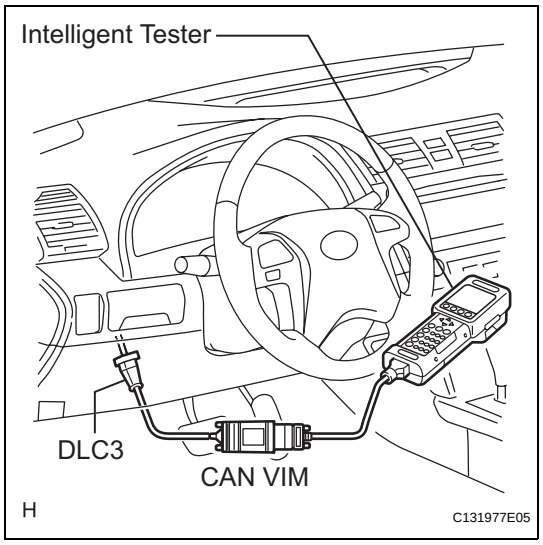
According to the DATA LIST displayed by the intelligent tester, the value of the switch, sensor, actuator and other items can be read without removing any parts. Reading the DATA LIST as a first step in troubleshooting is one of the methods to save labor time.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) According to the display on the tester, read the "DATA LIST".



DATA LIST:

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
ABS MOT RELAY	ABS motor relay / ON or OFF	ON: During pump motor operation OFF: No pump motor operation	-
SOL RELAY	Solenoid relay / ON or OFF	ON: Solenoid relay ON OFF: Solenoid relay OFF	-
STOP LAMP SW	Stop light switch / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
PARKING BRAKE SW	Parking brake switch / ON or OFF	ON: Parking brake applied OFF: Parking brake released	-
FR WHEEL SPD	Wheel speed sensor (FR) reading / min.: 0 km/h (0 MPH), max.: 326 km/h (202 MPH)	Actual wheel speed	Speed indicated on speedometer
FL WHEEL SPD	Wheel speed sensor (FL) reading / min.: 0 km/h (0 MPH), max.: 326 km/h (202 MPH)	Actual wheel speed	Speed indicated on speedometer
RR WHEEL SPD	Wheel speed sensor (RR) reading / min.: 0 km/h (0 MPH), max.: 326 km/h (202 MPH)	Actual wheel speed	Speed indicated on speedometer
RL WHEEL SPD	Wheel speed sensor (RL) reading / min.: 0 km/h (0 MPH), max.: 326 km/h (202 MPH)	Actual wheel speed	Speed indicated on speedometer
VEHICLE SPD	Vehicle speed reading / min.: 0 km/h (0 MPH), max.: 326 km/h (202 MPH)	Actual wheel speed	Speed indicated on speedometer
IG VOLTAGE	ECU power supply voltage / NORMAL or TOO LOW	NORMAL: 9.5 V or over TOO LOW: Below 9.5 V	-
SFRR	ABS solenoid (SFRR) ON / OFF	ON: Operates	-

TEST MODE	Test mode / NORMAL or TEST	NORMAL: Normal mode TEST: During test mode	-
#CODES	Number of DTCs recorded / min.: 0, max.: 255	Min.: 0, max.: 19	-
ABS WARN LAMP	ABS warning light ON /OFF	ON: ABS warning light ON OFF: ABS warning light off	-
BRAKE WARN LAMP	Brake warning light ON / OFF	ON: Brake warning light ON OFF: Brake warning light off	-
FR WHEEL ACCEL	Front right wheel acceleration / Min.: -200.84 m/s, Max.: 199.27 m/s	0 m/s	-
FL WHEEL ACCEL	Front left wheel acceleration / Min.: -200.84 m/s, Max.: 199.27 m/s	0 m/s	-
RR WHEEL ACCEL	Rear right wheel acceleration / Min.: -200.84 m/s, Max.: 199.27 m/s	0 m/s	-
RL WHEEL ACCEL	Rear left wheel acceleration / Min.: -200.84 m/s, Max.: 199.27 m/s	0 m/s	-
FR ABS STATUS	Front right ABS control status / ON or OFF	ON: During ABS control OFF: Not ABS control	-
FL ABS STATUS	Front left ABS control status / ON or OFF	ON: During ABS control OFF: Not ABS control	-
RR ABS STATUS	Rear right ABS control status / ON or OFF	ON: During ABS control OFF: Not ABS control	-
RL ABS STATUS	Rear left ABS control status / ON or OFF	ON: During ABS control OFF: Not ABS control	-
FR EBD STATUS	Front right EBD control status / ON or OFF	ON: During EBD control OFF: Not EBD control	-
FL EBD STATUS	Front left EBD control status / ON or OFF	ON: During EBD control OFF: Not EBD control	-
RR EBD STATUS	Rear right EBD control status / ON or OFF	ON: During EBD control OFF: Not EBD control	-
RL EBD STATUS	Rear left EBD control status / ON or OFF	ON: During EBD control OFF: Not EBD control	-

BC

2. ACTIVE TEST

HINT:

Performing the ACTIVE TEST using the intelligent tester allows the relay, actuator and other items to operate without removing any parts. Performing the ACTIVE TEST as a first step in troubleshooting is one of the methods to save labor time.

It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.

(b) Turn the ignition switch on (IG).

(c) According to the display on the tester, perform the "ACTIVE TEST".

ACTIVE TEST:

Item	Vehicle Condition / Test Details	Diagnostic Note
SFRR	Turns ABS solenoid (SFRR) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SFRH	Turns ABS solenoid (SFRH) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SFLR	Turns ABS solenoid (SFLR) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SFLH	Turns ABS solenoid (SFLH) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SRRR	Turns ABS solenoid (SRRR) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SRRH	Turns ABS solenoid (SRRH) ON / OFF	Operating sound of solenoid (clicking sound) can be heard

ABS WRN LIGHT	Turns ABS warning light ON / OFF	Observe combination meter
BRAKE WRN LIGHT	Turns Brake warning light ON / OFF	Observe combination meter

DIAGNOSTIC TROUBLE CODE CHART

NOTICE:

Turn the ignition switch off before removing parts.

HINT:

- If no abnormality is found when inspecting parts, inspect the skid control ECU and ground points for poor contact.
- If a malfunction code is displayed during the DTC check, check the circuit indicated by the DTC. For details of each code, refer to the "See page" for respective "DTC No." in the DTC chart.
- When 2 or more DTCs are detected, perform circuit inspection one by one until the problem is identified.

ANTI-LOCK BRAKE SYSTEM:

DTC No.	Detection Item	Trouble Area	See page
C0200/31	Right Front Wheel Speed Sensor Signal Malfunction	1. Front speed sensor RH 2. Front speed sensor RH circuit 3. Front speed sensor rotor RH 4. Sensor installation 5. Brake actuator assembly (skid control ECU)	BC-30
C0205/32	Left Front Wheel Speed Sensor Signal Malfunction	1. Front speed sensor LH 2. Front speed sensor LH circuit 3. Front speed sensor rotor LH 4. Sensor installation 5. Brake actuator assembly (skid control ECU)	BC-30
C0210/33	Right Rear Wheel Speed Sensor Signal Malfunction	1. Rear speed sensor RH 2. Rear speed sensor RH circuit 3. Rear speed sensor rotor RH 4. Sensor installation 5. Brake actuator assembly (skid control ECU)	BC-38

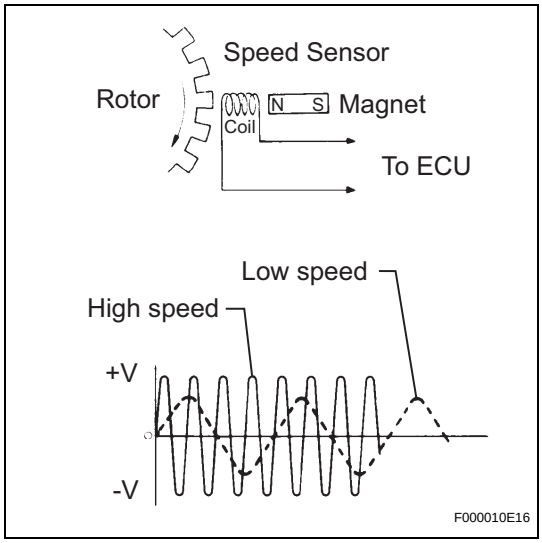
BC

DESCRIPTION

The speed sensors detect wheel speed and transmit the signals to the skid control ECU. These signals are used for control of the ABS control system. Each of the front and rear rotors has 48 serrations. When the rotors rotate, the magnetic field generated by the permanent magnet in the speed sensor induces AC voltage. Since the frequency of this AC voltage changes in direct proportion to the speed of the rotor, the frequency is used by the ECU to detect the speed of each wheel.
DTCs C1271/71 to C1276/76 can be deleted when the speed sensor sends a wheel speed signal or the test mode ends. DTCs C1271/71 to C1276/76 are output only in the test mode.



DTC No.	DTC Detecting Condition	Trouble Area
C0200/31 C0205/32	When either of the following is detected: • Vehicle speed is more than 25 mph (40 km/h), and pulses are not input for 0.03 sec. • When the vehicle speed has reached 8 mph (12 km/h) after the initial start or restart, a wheel speed of 0 mph (0 km/h) is detected.	• Front speed sensor RH and/or LH • Front speed sensor circuit RH and/or LH • Front speed sensor rotor RH and/or LH • Sensor installation • Brake actuator assembly (skid control ECU)
C1330/35 C1331/36	Abnormality in the resistance value of each speed sensor is detected.	• Front speed sensor RH and/or LH • Front speed sensor circuit RH and/or LH • Sensor installation
C1271/71 C1272/72	Detected only during test mode.	• Front speed sensor • Sensor installation • Sensor rotor
C1275/75 C1276/76	Detected only during test mode.	• Front speed sensor • Front speed sensor circuit • Sensor installation

HINT:
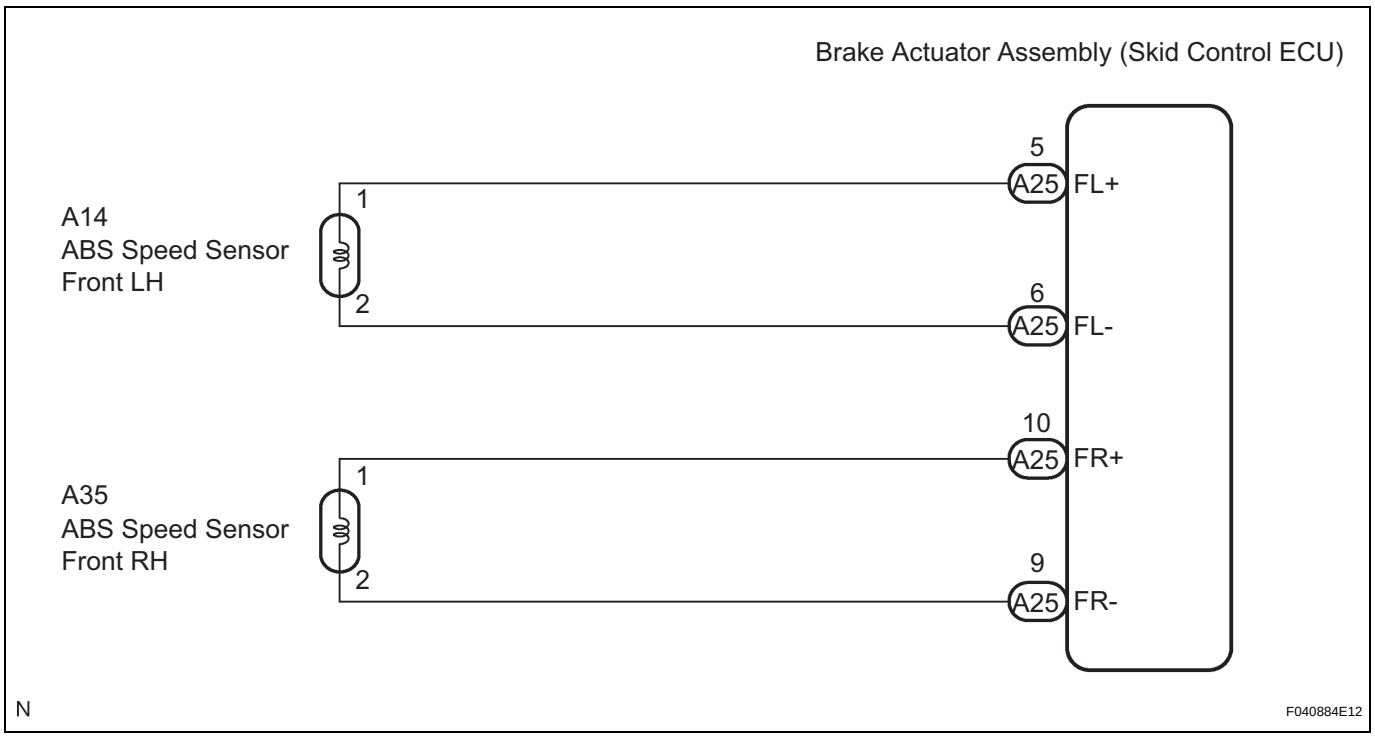
DTC No. C0200/31 and C1330/35 are for the front speed sensor RH.
DTC No. C0205/32 and C1331/36 are for the front speed sensor LH.

BC

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	READ VALUE OF INTELLIGENT TESTER (FRONT SPEED SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.

(c) Select "DATA LIST" and read the value displayed on the intelligent tester (See page BC-25).

DATA LIST: ABS

Item	Measurement Item / Range (Display)	Normal Condition
FR WHEEL SPD	Wheel speed sensor (FR) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed
FL WHEEL SPD	Wheel speed sensor (FL) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed

(d) Check that there is no difference between the speed value output from the speed sensor displayed on the intelligent tester and the speed value displayed on the speedometer when driving the vehicle.
OK:
The speed value output from the speed sensor displayed on the intelligent tester is the same as the actual vehicle speed.

NG → **Go to step 5**

BC

OK

2 PERFORM TEST MODE INSPECTION (SIGNAL CHECK)

(a) Check if test mode (signal check) DTCs are detected (See page BC-11).

Result

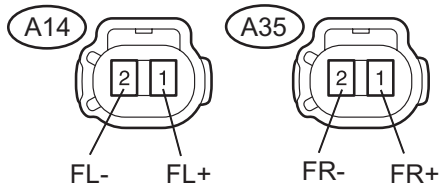
Condition	Proceed to
Test mode (signal check) DTC is not output	A
Test mode (signal check) DTC is output	B

B → **Go to step 5**

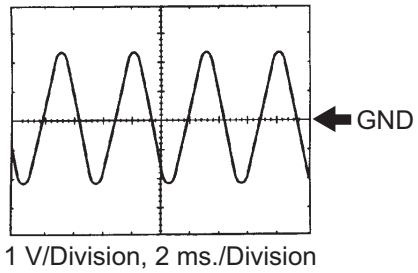
A

3 INSPECT SPEED SENSOR SIGNAL WAVEFORM

Front Speed Sensor (Wire Harness Side) Connector Front View:



Normal Signal Waveform:



C132005E01

(a) Lift up the vehicle.
(b) Perform the inspection using an oscilloscope.
  (1) Disconnect the front speed sensor connector.
  (2) Connect the oscilloscope to terminals 1 and 2 of the front speed sensor.
  (3) Check that a waveform is output when the tires are rotated.
  OK:
  The same waveform is output from front wheels and there is no noise or interference in the waveform.
  HINT:
  - As vehicle speed (wheel rotation speed) increases, the width of the waveform narrows and the output voltage becomes greater.
  - When noise is identified in the waveform on the oscilloscope, the erratic signals are generated due to rotor scratches, looseness or foreign matter attached to the speed sensor.
(c) Connect the connector.

NG → **Go to step 11**

OK

4 RECONFIRM DTC

(a) Clear the DTCs (See page BC-21).
(b) Drive the vehicle at a speed of approximately 25 mph (40 km/h) or more for 60 seconds or more.
(c) Check if the same DTCs are recorded (See page BC-21).
  HINT:
  Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTCs (C0200/31, C0205/32, C1330/35 and C1331/36) are output	A
DTCs (C0200/31, C0205/32, C1330/35 and C1331/36) are output (When troubleshooting in accordance with the PROBLEM SYMPTOMS TABLE)	B
DTCs (C0200/31, C0205/32, C1330/35 and C1331/36) are not output (When troubleshooting in accordance with the DTC CHART)	C

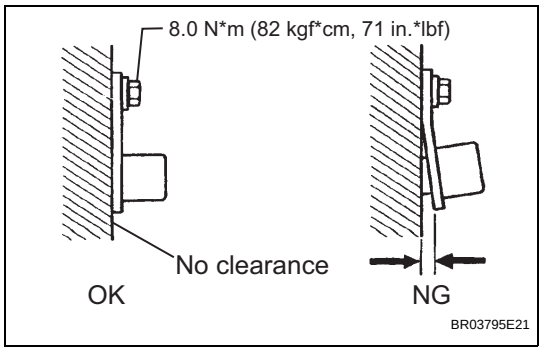
B → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page BC-16)**

C → **END**

BC

A

5 INSPECT FRONT SPEED SENSOR INSTALLATION



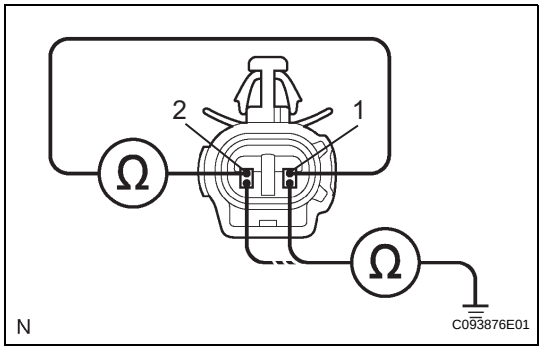
(a) Check the front speed sensor installation.
OK:
The installation bolt is tightened properly.
There is no clearance between the sensor and front steering knuckle.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
NOTICE:
Check the speed sensor signal after replacement (See page BC-11).

NG → **REPLACE FRONT SPEED SENSOR (See page BC-438)**

BC

OK

6 INSPECT FRONT SPEED SENSOR



(a) Make sure that there is no looseness at the locking part and the connecting part of the connectors.
(b) Disconnect the front speed sensor connectors.
(c) Measure the resistance according to the value(s) in the table below.
Standard resistance:
LH

Tester Connection	Specified Condition
A14-1 (FL+) - A14-2 (FL-)	0.92 to 1.22 kΩ at 20 °C (68°F)
A14-1 (FL+) - Body ground	10 kΩ or higher
A14-2 (FL-) - Body ground	10 kΩ or higher

RH

Tester Connection	Specified Condition
A35-1 (FR+) - A35-2 (FR-)	0.92 to 1.22 kΩ at 20 °C(68°F)
A35-1 (FR+) - Body ground	10 kΩ or higher
A35-2 (FR-) - Body ground	10 kΩ or higher

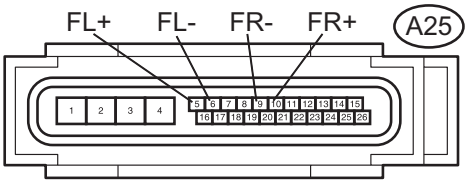
NOTICE:
Check the speed sensor signal after replacement (See page BC-11).

NG → **REPLACE FRONT SPEED SENSOR (See page BC-438)**

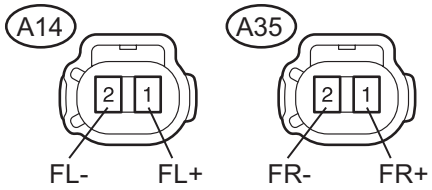
OK

7 CHECK HARNESS AND CONNECTOR (FRONT SPEED SENSOR TO SKID CONTROL ECU)

Skid Control ECU (Wire Harness Side) Connector Front View:



Front Speed Sensor (Wire Harness Side) Connector Front View:



N

C132908E02

(a) Disconnect the skid control ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

LH

Tester Connection	Specified Condition
A25-5 (FL+) - A14-1 (FL+)	Below 1 Ω
A25-6 (FL-) - A14-2 (FL-)	Below 1 Ω
A14-1 (FL+) - Body ground	10 kΩ or higher
A14-2 (FL-) - Body ground	10 kΩ or higher

RH

Tester Connection	Specified Condition
A25-10 (FR+) - A35-1 (FR+)	Below 1 Ω
A25-9 (FR-) - A35-2 (FR-)	Below 1 Ω
A35-1 (FR+) - Body ground	10 kΩ or higher
A35-2 (FR-) - Body ground	10 kΩ or higher

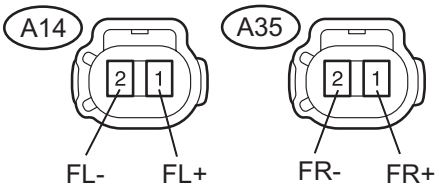
(c) Connect the connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (FRONT SPEED SENSOR TO SKID CONTROL ECU)**

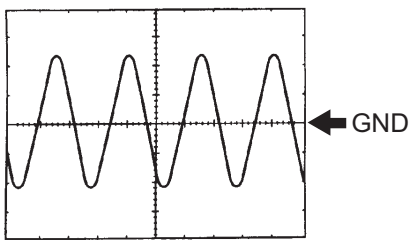
OK

8 INSPECT SPEED SENSOR SIGNAL WAVEFORM

Front Speed Sensor (Wire Harness Side) Connector Front View:



Normal Signal Waveform:



1 V/Division, 2 ms./Division

C132005E01

(a) Lift up the vehicle.
(b) Perform the inspection using an oscilloscope.
  (1) Disconnect the front speed sensor connector.
  (2) Connect the oscilloscope to terminals 1 and 2 of the front speed sensor.
  (3) Check that a waveform is output when the tires are rotated.

  OK:

  The same waveforms is output from front wheels and there is no noise or interference in the waveform.

  HINT:
  - As vehicle speed (wheel rotation speed) increases, the width of the waveform narrows and the output voltage becomes greater.
  - When noise is identified in the waveform on the oscilloscope, the erratic signals are generated due to rotor scratches, looseness or foreign matter attached to the speed sensor.

  (4) Connect the connector.

NG → **Go to step 11**

BC

OK

9	READ VALUE OF INTELLIGENT TESTER (FRONT SPEED SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Select "DATA LIST" and read the value displayed on the intelligent tester (See page BC-25).

DATA LIST: ABS

Item	Measurement Item / Range (Display)	Normal Condition
FR WHEEL SPD	Wheel speed sensor (FR) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed
FL WHEEL SPD	Wheel speed sensor (FL) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed

(d) Check that there is no difference between the speed value output from the speed sensor displayed on the intelligent tester and the speed value displayed on the speedometer when driving the vehicle.
OK:
The speed value output from the speed sensor displayed on the intelligent tester is the same as the actual vehicle speed.
HINT:
If troubleshooting has been carried out according to the "PROBLEM SYMPTOMS TABLE", refer back to the table and proceed to the next step before replacing the part (See page BC-16).

BC

NG → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

OK

10	RECONFIRM DTC

(a) Clear the DTCs (See page BC-21).
(b) Drive the vehicle at a speed of approximately 25 mph (40 km/h) or more for 60 seconds or more.
(c) Check if the same DTCs are recorded (See page BC-21).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTCs (C0200/31, C0205/32, C1330/35 and C1331/36) are output	A
DTCs (C0200/31, C0205/32, C1330/35 and C1331/36) are not output	B

B → **END**

A

11	INSPECT SPEED SENSOR TIP

(a) Remove the front speed sensor (See page BC-438).
(b) Check the sensor tip.
OK:
No scratches or foreign matter on the sensor tip.
NOTICE:
Check the speed sensor signal after cleaning or replacement (See page BC-11).
(c) Install the speed sensor.

NG → **CLEAN OR REPLACE SPEED SENSOR**

OK

CLEAN OR REPLACE SPEED SENSOR ROTOR

DTC	**C0210/33**	**Right Rear Wheel Speed Sensor Signal Malfunction**
DTC	**C0215/34**	**Left Rear Wheel Speed Sensor Signal Malfunction**
DTC	**C1273/73**	**Low Output Signal of Rear Speed Sensor RH (Test Mode DTC)**
DTC	**C1274/74**	**Low Output Signal of Rear Speed Sensor LH (Test Mode DTC)**
DTC	**C1277/77**	**Abnormal Change in Output Signal of Rear Speed Sensor RH (Test Mode DTC)**
DTC	**C1278/78**	**Abnormal Change in Output Signal of Rear Speed Sensor LH (Test Mode DTC)**
DTC	**C1332/38**	**Right Rear Speed Sensor Circuit**
DTC	**C1333/39**	**Left Rear Speed Sensor Circuit**

BC

DESCRIPTION

Refer to DTCs C0200/31, C0205/32, C1330/35, and C1331/36 (See page BC-30).
DTCs from C1273/73 to C1278/78 can be deleted when the speed sensor sends a vehicle speed signal or the test mode ends. DTCs from C1273/73 to C1278/78 are output only in the test mode.

DTC No.	DTC Detecting Condition	Trouble Area
C0210/33 C0215/34	When either of the following is detected: • Vehicle speed is more than 25 mph (40 km/h), and pulses are not input for 0.03 sec. • When the vehicle speed has reached 8 mph (12 km/h), after the initial start or restart a wheel speed of 0 mph (0 km/h) is detected.	• Rear speed sensor RH and/or LH • Rear speed sensor circuit RH and/or LH • Rear speed sensor rotor RH and/or LH • Sensor installation • Brake actuator assembly (skid control ECU)
C1332/38 C1333/39	Abnormality in the resistance value of each speed sensor is detected.	• Rear speed sensor RH and/or LH • Rear speed sensor circuit RH and/or LH • Sensor installation
C1273/73 C1274/74	Detected only during test mode.	• Rear speed sensor • Sensor installation • Sensor rotor
C1277/77 C1278/78	Detected only during test mode.	• Rear speed sensor • Sensor installation • Sensor rotor

HINT:
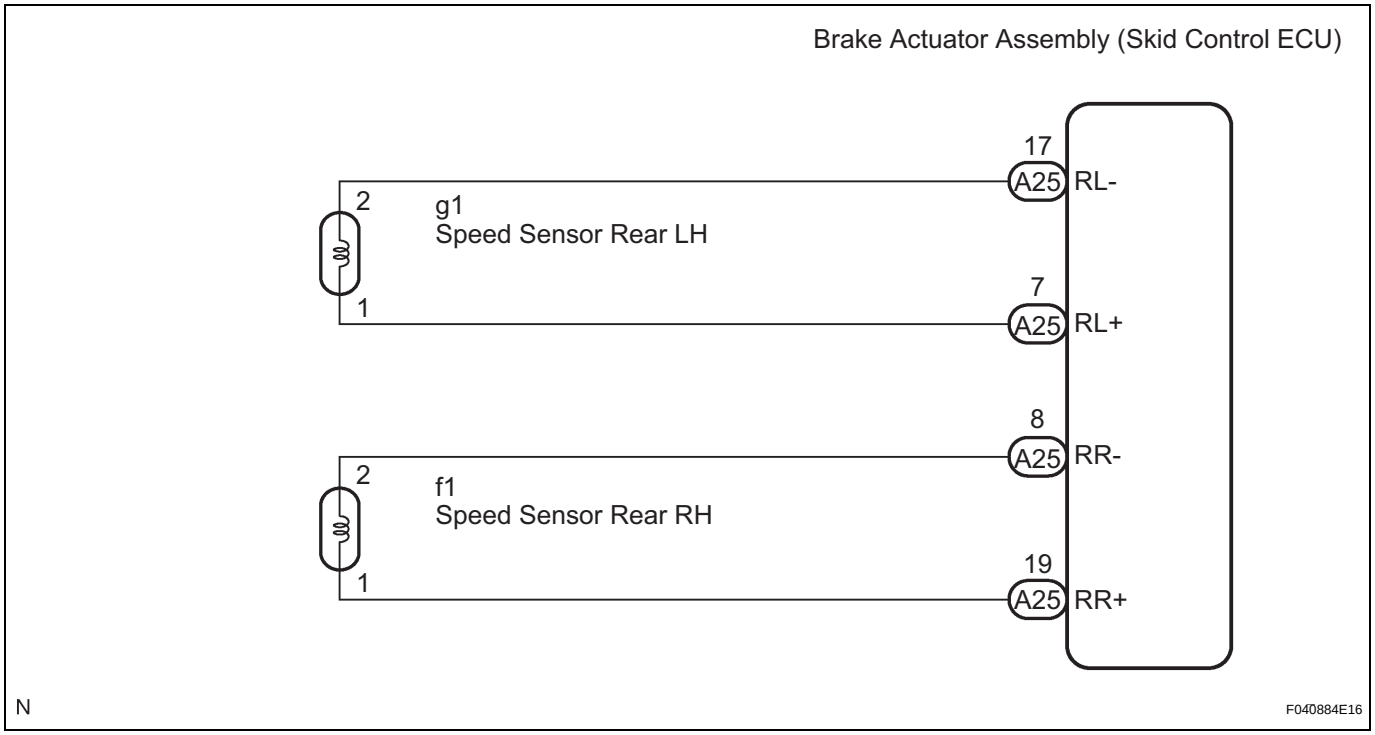
DTC No. C0210/33 and C1332/38 are for the rear speed sensor RH.
DTC No. C0215/34 and C1333/39 are for the rear speed sensor LH.

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	READ VALUE OF INTELLIGENT TESTER (REAR SPEED SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Select "DATA LIST" and read the value displayed on the intelligent tester (See page BC-25).

DATA LIST: ABS

Item	Measurement Item / Range (Display)	Normal Condition
RR WHEEL SPD	Wheel speed sensor (RR) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed
RL WHEEL SPD	Wheel speed sensor (RL) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed

(d) Check that there is no difference between the speed value output from the speed sensor displayed on the intelligent tester and the speed value displayed on the speedometer when driving the vehicle.

OK:

The speed value output from the speed sensor displayed on the intelligent tester is the same as the actual vehicle speed.

NG → **Go to step 5**

OK

2	PERFORM TEST MODE INSPECTION (SIGNAL CHECK)

(a) Check if test mode (signal check) DTCs are detected (See page BC-11).

Result

Condition	Proceed to
Test mode (signal check) DTC is not output	A
Test mode (signal check) DTC is output	B

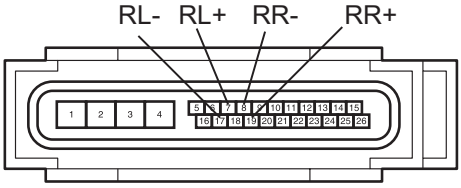
B → **Go to step 5**

A

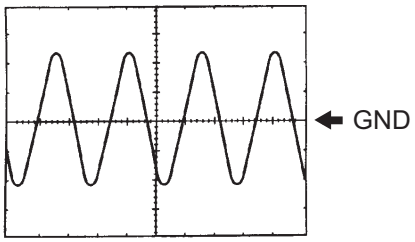
3	INSPECT SPEED SENSOR SIGNAL WAVEFORM

BC

Skid Control ECU (Harness Side Connector Front View):



Normal Signal Waveform:



C132907E02

(a) Lift up the vehicle.
(b) Perform the inspection using an oscilloscope.
  (1) Disconnect the skid control ECU connector.
  (2) Connect the oscilloscope to terminals of the skid control ECU.
  (3) Check that a waveform is output when the tires are rotated.
    OK:
    The same waveform is output from rear wheels and there is no noise or interference in the waveform.
    HINT:
    - As vehicle speed (wheel rotation speed) increases, the width of the waveform narrows and the output voltage becomes greater.
    - When noise is identified in the waveform on the oscilloscope, the erratic signals are generated due to rotor scratches, looseness or foreign matter attached to the speed sensor.
  (4) Connect the connector.

NG → **CLEAN OR REPLACE SPEED SENSOR AND SENSOR ROTOR**

OK

4	RECONFIRM DTC

(a) Clear the DTCs (See page BC-21).
(b) Drive the vehicle at a speed of approximately 25 mph (40 km/h) or more for 60 seconds or more.

(c) Check if the same DTCs are recorded (See page BC-21).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTCs (C0210/33, C0215/34, C1332/38 and C1333/39) are output	A
DTCs (C0210/33, C0215/34, C1332/38 and C1333/39) are output (When troubleshooting in accordance with the PROBLEM SYMPTOMS TABLE)	B
DTCs (C0210/33, C0215/34, C1332/38 and C1333/39) are not output (When troubleshooting in accordance with the DTC CHART)	C

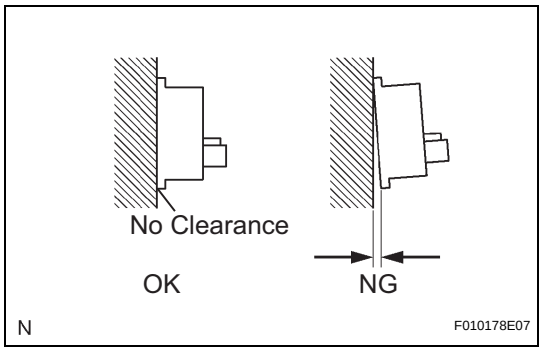
B → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page BC-16)**

C → **END**

BC

A

5 INSPECT SPEED SENSOR INSTALLATION

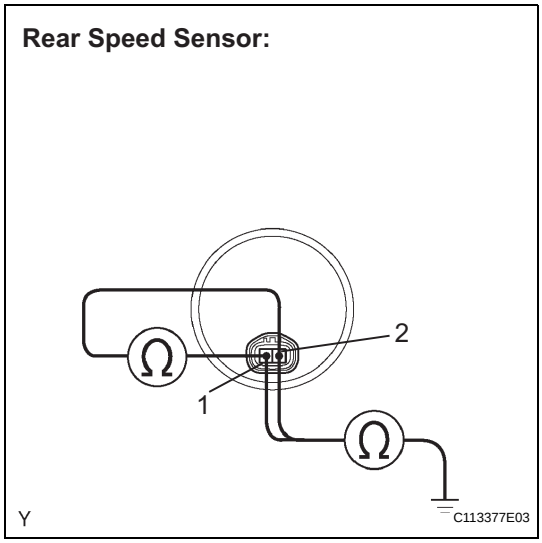


(a) Check the rear speed sensor installation.
OK:
There is no clearance between the sensor and rear axle carrier.
NOTICE:
Check the speed sensor signal after replacement (See page BC-11).

NG → **REPLACE REAR SPEED SENSOR (See page BC-443)**

OK

6	INSPECT REAR SPEED SENSOR



(a) Disconnect the rear speed sensor connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

LH

Tester Connection	Specified Condition
g1-1 (RL+) - g1-2 (RL-)	Below 2.2 kΩ
g1-1 (RL+) - Body ground	10 kΩ or higher
g1-2 (RL-) - Body ground	10 kΩ or higher

RH

Tester Connection	Specified Condition
f1-1 (RR+) - f1-2 (RR-)	Below 2.2 kΩ
f1-1 (RR+) - Body ground	10 kΩ or higher
f1-2 (RR-) - Body ground	10 kΩ or higher

NOTICE:
Check the speed sensor signal after replacement (See page BC-11).

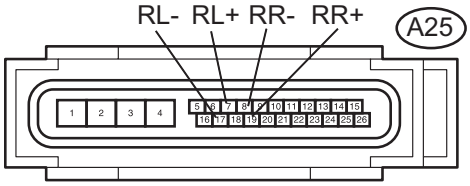
NG → **REPLACE REAR SPEED SENSOR (See page BC-443)**

OK

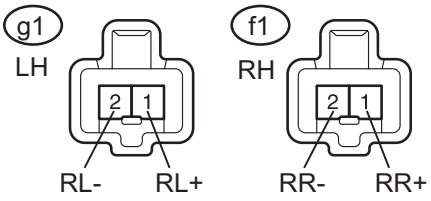
BC

7 CHECK HARNESS AND CONNECTOR (SKID CONTROL SENSOR WIRE TO SKID CONTROL ECU)

Skid Control ECU (Wire Harness Side) Connector Front View:



Front Speed Sensor (Wire Harness Side) Connector Front View:



N

C132909E03

(a) Check harness and connector.
(1) Disconnect the skid control ECU connector.
(2) Disconnect the skid control sensor wire.
(3) Measure the resistance according to the value(s) in the table below.

Standard resistance:

LH

Tester Connection	Specified Condition
A25-7 (RL+) - g1-1 (RL+)	Below 1 Ω
A25-17 (RL-) - g1-2 (RL-)	Below 1 Ω
g1-1 (RL+) - Body ground	10 kΩ or higher
g1-2 (RL-) - Body ground	10 kΩ or higher

RH

Tester Connection	Specified Condition
A25-19 (RR+) - f1-1 (RR+)	Below 1 Ω
A25-8 (RR-) - f1-2 (RR-)	Below 1 Ω
f1-1 (RR+) - Body ground	10 kΩ or higher
f1-2 (RR-) - Body ground	10 kΩ or higher

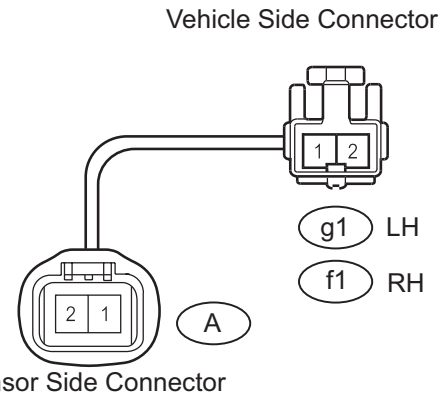
BC

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SKID CONTROL ECU TO SKID CONTROL SENSOR WIRE)**

OK

8 CHECK HARNESS AND CONNECTOR (SKID CONTROL SENSOR WIRE TO REAR SPEED SENSOR)

Skid Control Sensor Wire:



C113396E04

(a) Check harness and connector (skid control sensor wire).
(1) Measure the resistance according to the value(s) in the table below.

Standard resistance:

LH

Tester Connection	Specified Condition
g1-1 - A-1	Below 1 Ω
g1-1 - A-2	10 kΩ or higher
g1-1 - Body ground	10 kΩ or higher
g1-2 - A-2	Below 1 Ω
g1-2 - A-1	10 kΩ or higher
g1-2 - Body ground	10 kΩ or higher

RH

Tester Connection	Specified Condition
f1-1 - A-1	Below 1 Ω

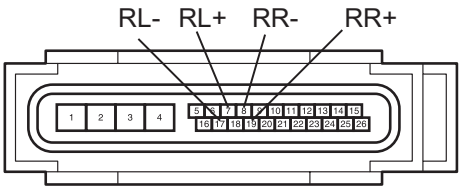
Tester Connection	Specified Condition
f1-1 - A-2	10 kΩ or higher
f1-1 - Body ground	10 kΩ or higher
f1-2 - A-2	Below 1 Ω
f1-2 - A-1	10 kΩ or higher
f1-2 - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE SKID CONTROL SENSOR WIRE**

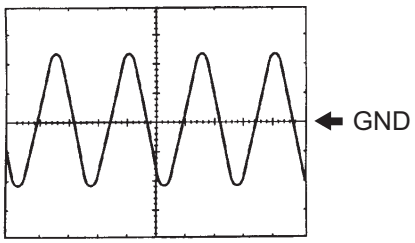
OK

9 INSPECT SPEED SENSOR SIGNAL WAVEFORM

Skid Control ECU (Harness Side Connector Front View):



Normal Signal Waveform:



1 V/Division, 2 ms./Division

C132907E02

(a) Lift up the vehicle.
(b) Perform the inspection using the oscilloscope.
  (1) Disconnect the skid control ECU connector.
  (2) Connect the oscilloscope to terminals of the skid control ECU.
  (3) Check that a waveform is output when the tires are rotated.
    OK:
    The same waveforms is output from rear wheels and there is no noise or interference in the waveform.
    HINT:
    - As vehicle speed (wheel rotation speed) increases, the width of the waveform narrows and the output voltage becomes greater.
    - When noise is identified in the waveform on the oscilloscope, the erratic signals are generated due to rotor scratches, looseness or foreign matter attached to the speed sensor.
  (4) Connect the connectors.

NG → **CLEAN OR REPLACE SPEED SENSOR AND SENSOR ROTOR**

OK

10 READ VALUE OF INTELLIGENT TESTER (REAR SPEED SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.

(c) Select "DATA LIST" and read the value displayed on the intelligent tester (See page BC-25).

DATA LIST: ABS

Item	Measurement Item / Range (Display)	Normal Condition
RR WHEEL SPD	Wheel speed sensor (RR) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed
RL WHEEL SPD	Wheel speed sensor (RL) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed

(d) Check that there is no difference between the speed value output from the speed sensor displayed on the intelligent tester and the speed value displayed on the speedometer when driving the vehicle.

OK:

The speed value output from the speed sensor displayed on the intelligent tester is the same as the actual vehicle speed.

HINT:

- It is suspected that the DTCs were output due to a bad connection of the connector terminal.
- If troubleshooting has been carried out according to the "PROBLEM SYMPTOMS TABLE", refer back to the table and proceed to the next step (See page BC-16).

NG → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

OK

11 RECONFIRM DTC

(a) Clear the DTCs (See page BC-21).
(b) Drive the vehicle at a speed of approximately 25 mph (40 km/h) or more for 60 seconds or more.
(c) Check if the same DTCs are recorded (See page BC-21).

HINT:

Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTCs (C0210/33, C0215/34, C1332/38 and C1333/39) are output	A
DTCs (C0210/33, C0215/34, C1332/38 and C1333/39) are not output	B

B → **END**

A

12 INSPECT SPEED SENSOR ROTOR

(a) Turn the ignition switch off.
(b) Remove the rear axle (See page AH-15).

(c) Check the rotor.
OK:
No scratches, cracks, oil, or foreign matter on the rotors.
NOTICE:
Check the speed sensor signal after cleaning or replacement (See page BC-11).

(d) Install the rear axle (See page AH-16).

NG → **CLEAN OR REPLACE SPEED SENSOR ROTOR**

OK

REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

DTC	C0226/21	SFR Solenoid Circuit

DTC	C0236/22	SFL Solenoid Circuit

DTC	C0246/23	SRR Solenoid Circuit

DTC	C0256/24	SRL Solenoid Circuit

DESCRIPTION

These solenoids turn on when signals are received from the ECU and they control the pressure acting on the wheel cylinders thus controlling braking force.

DTC No.	DTC Detecting Condition	Trouble Area
C0226/21 C0236/22 C0246/23 C0256/24	Solenoid valve signal does not match the check result.	• Each solenoid circuit • Brake actuator assembly

BC

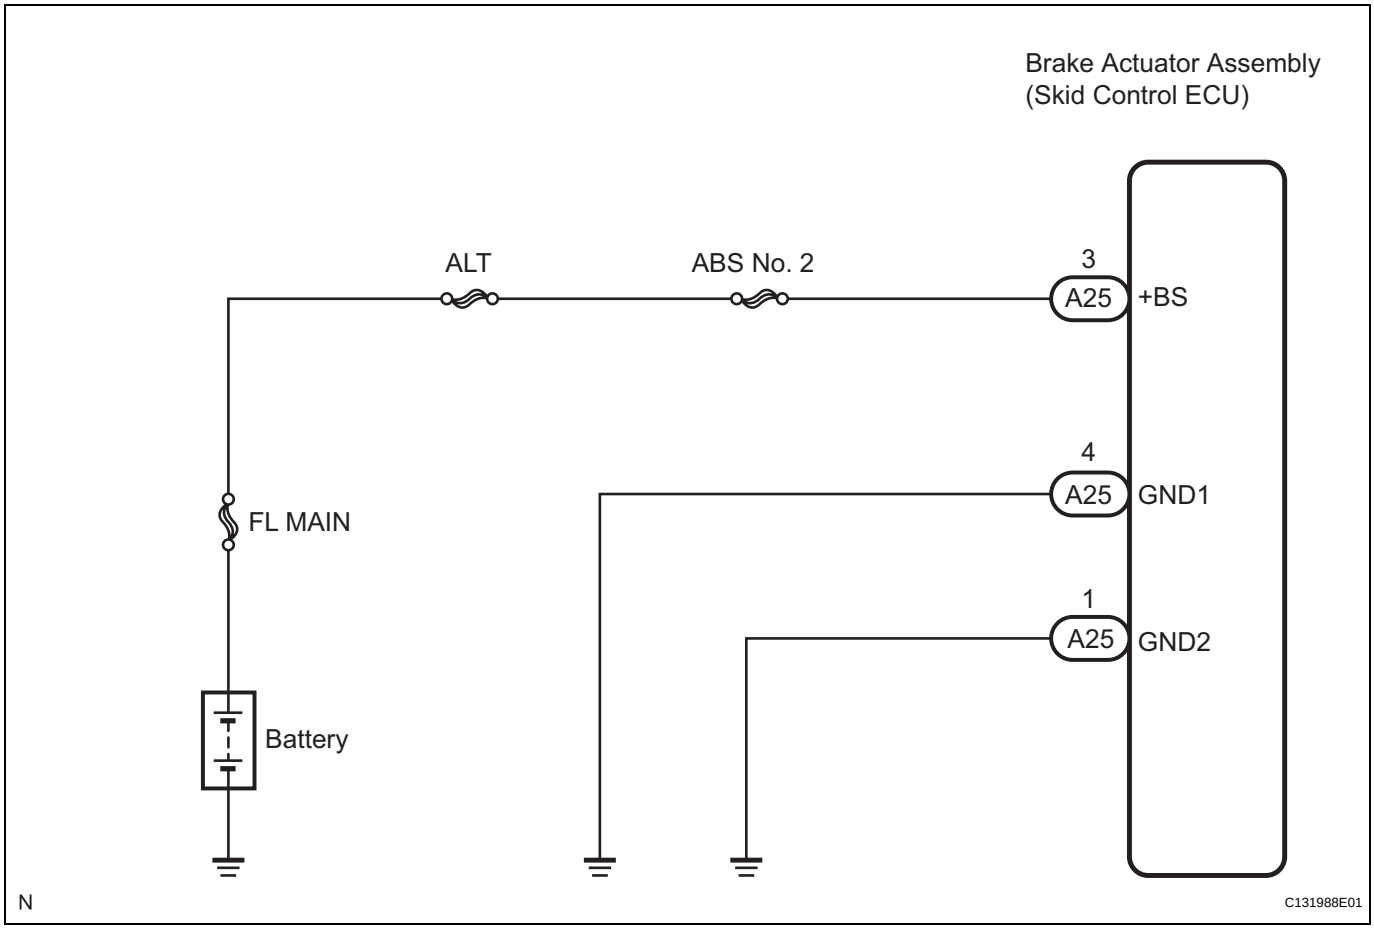
WIRING DIAGRAM



INSPECTION PROCEDURE

1	RECONFIRM DTC

HINT:
These codes are detected when a problem is identified in the brake actuator assembly.
The solenoid circuit is in the brake actuator assembly. Therefore, solenoid circuit inspection and solenoid unit inspection cannot be performed. Be sure to check if the DTC is output before replacing the brake actuator assembly.

(a) Clear the DTC (See page BC-21).
(b) Start the engine.
(c) Drive the vehicle at a speed of 12 mph (20 km/h) or more for 30 seconds or more.
(d) Check if the same DTC is recorded (See page BC-21).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

HINT:

- If the normal system code is output (the trouble code is not output), slightly jiggle the connectors, wire harness, and fuses of the brake actuator assembly. Make sure that no DTCs are output.
- If any DTCs are output while jiggling a connector or wire harness of the brake actuator (skid control ECU), inspect and repair the connector or wire harness.
- It is suspected that the DTCs were output due to a bad connection of the connector terminal.

B → **REPAIR BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

A

END

DTC	C0273/13	Open or Short Circuit in ABS Motor Relay Circuit

DESCRIPTION

The ABS motor relay supplies power to the ABS pump motor. While the ABS is activated, the ECU turns the motor relay on and operates the ABS pump motor.
If the voltage supplied to the motor relay (+BM) is below the DTCs detection threshold due to low voltage from the battery or alternator, the DTC may be stored.

DTC No.	DTC Detecting Condition	Trouble Area
C0273/13	When any of the following is detected: • When the motor relay is actuated, voltage is not supplied to the pump motor within 0.1 second. • When the motor relay is changed from ON to OFF, the remaining high voltage is more than 2 V for 1 second. • For 30 to 125 msec. after the motor relay is turned from ON to OFF, the remaining high voltage is out of range. The voltage is still out of range when the motor relay is turned from ON to OFF 3 times.	• ABS No. 1 fuse (Fusible link) • Wire harness (+BM circuit) • Brake actuator assembly (motor relay)

BC

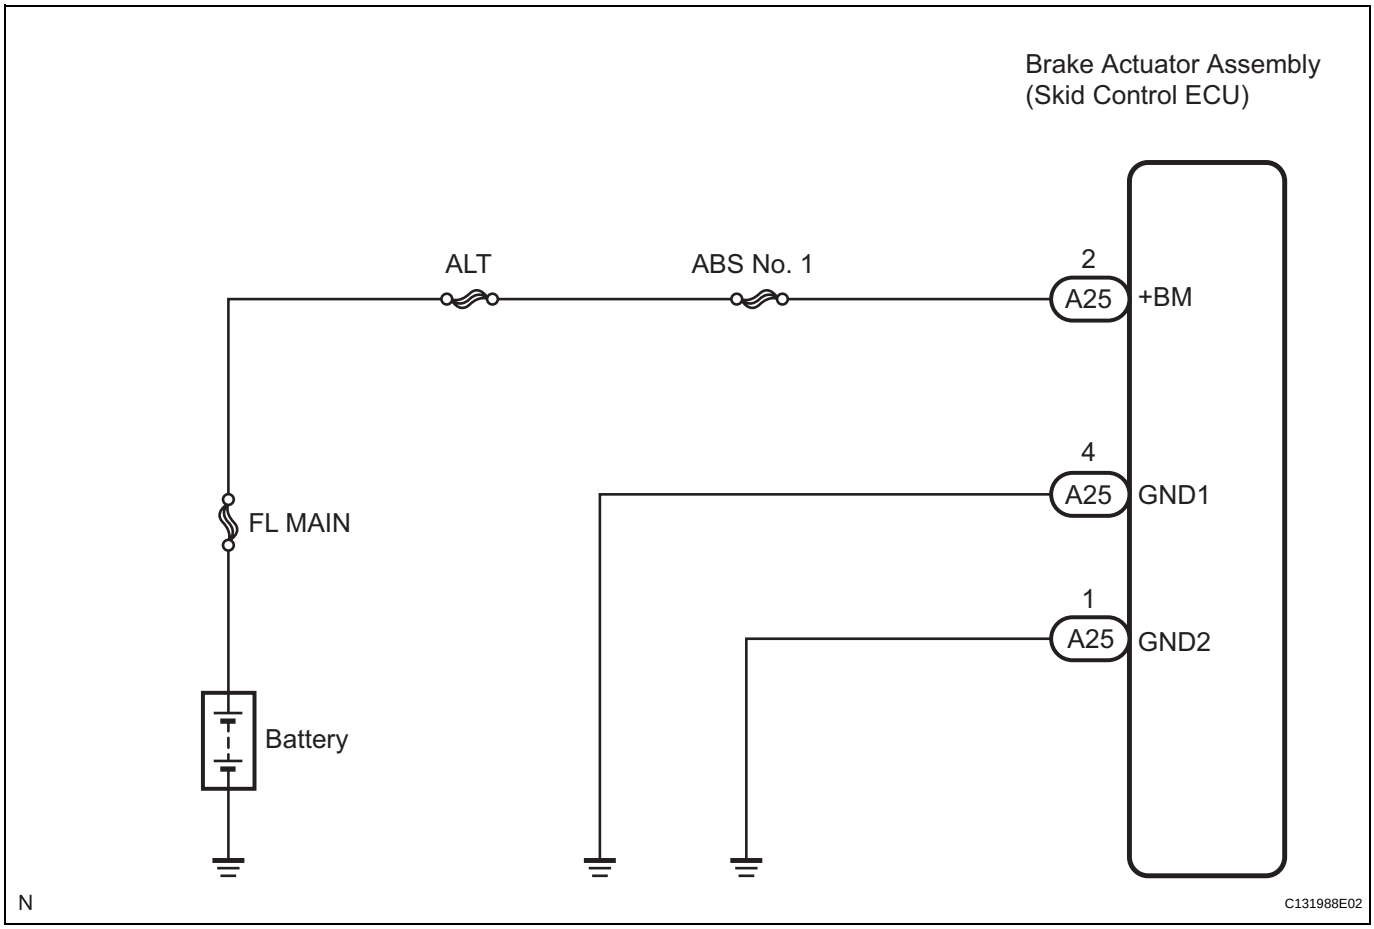
WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

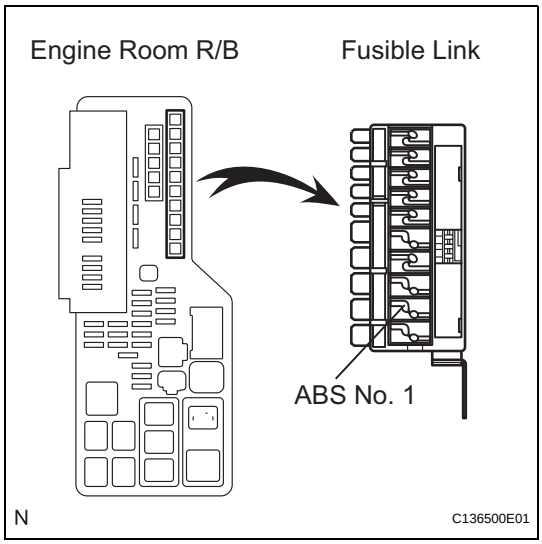
- When C1241/41 is output together with C0273/13, inspect and repair the trouble areas indicated by C1241/41 (See page BC-63).

- Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	INSPECT FUSIBLE LINK (ABS NO. 1 FUSE)



(a) Remove the fusible link from the engine room R/B.
(b) Check if the fusible link is melted.
OK:
The fusible link is not melted.
(c) Install the fusible link to the engine room R/B with the nut.

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

NG → **REPLACE FUSIBLE LINK**

OK

2	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (ABS MOTOR RELAY)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Select "ACTIVE TEST" on the intelligent tester (See page BC-25).

ACTIVE TEST: ABS

Item	Measurement Item / Range (Display)	Normal Condition
ABS MTR RELAY	Turns ABS motor relay ON / OFF	Operating sound of motor is heard

(d) Check the operating sound of the ABS motor relay when operating it with the intelligent tester.
OK:
The operating sound of the ABS motor relay should be heard.

Result

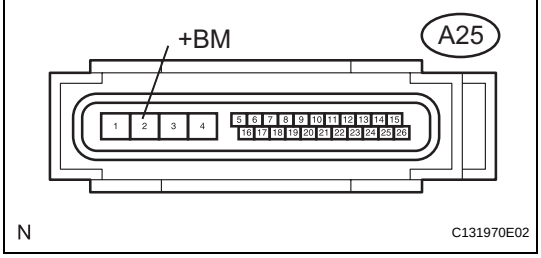
Result	Proceed to
The operating sound is not heard	A
The operating sound is heard	B

B → **Go to step 5**

A

3 INSPECT SKID CONTROL ECU CONNECTOR (+BM TERMINAL VOLTAGE)

Skid Control ECU (Harness Side Connector Front View):



(a) Disconnect the skid control ECU connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

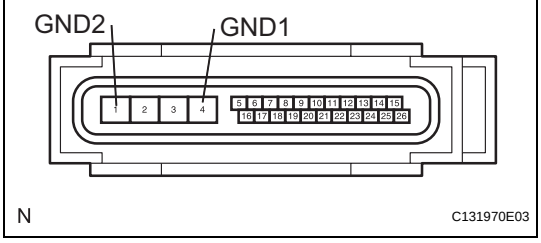
Tester Connection	Condition	Specified Condition
A25-2 (+BM) - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (+BM CIRCUIT)**

OK

4 INSPECT SKID CONTROL ECU CONNECTOR (GND TERMINAL CONTINUITY)

Skid Control ECU (Harness Side Connector Front View):



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
A25-4 (GND1) - Body ground	Below 1 Ω
A25-1 (GND2) - Body ground	Below 1 Ω

(b) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

5 RECONFIRM DTC

HINT:
This code is detected when a problem is identified in the brake actuator assembly.
The ABS motor relay is in the brake actuator assembly. Therefore, ABS motor relay inspection and motor relay unit inspection cannot be performed. Be sure to check if the DTC is output before replacing the brake actuator assembly.

(a) Clear the DTC (See page BC-21).
(b) Start the engine.
(c) Drive the vehicle at a speed of 12 mph (20 km/h) or more for 30 seconds or more.
(d) Check if the same DTC is recorded (See page BC-21).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTC is not output	A

Condition	Proceed to
DTC is output	B

HINT:

- If the normal system code is output (the trouble code is not output), slightly jiggle the connectors, wire harness, and fuses of the brake actuator assembly. Make sure that no DTCs are output.
- If any DTCs are output while jiggling a connector or wire harness of the brake actuator (skid control ECU), inspect and repair the connector or wire harness.
- It is suspected that the DTCs were output due to a bad connection of the connector terminal.

B → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

A

BC

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION) (See page BC-19)

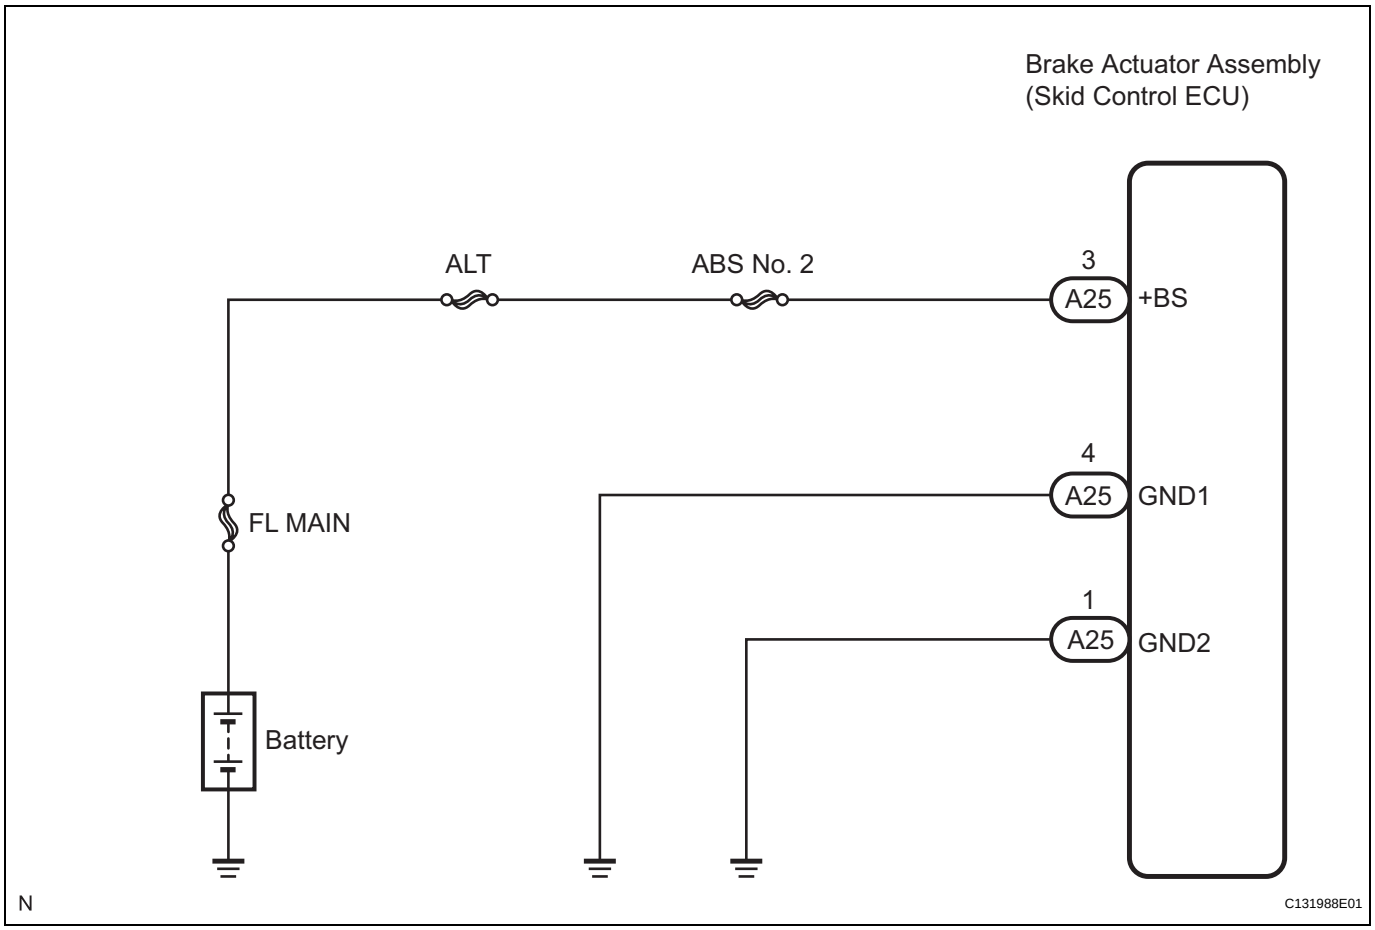
DTC	C0278/11	Open or Short Circuit in ABS Solenoid Relay Circuit

DESCRIPTION

This relay supplies power to each ABS solenoid. If the ABS initial check is OK after the ignition switch is turned on (IG), the skid control ECU will turn the ABS solenoid relay on.

DTC No.	DTC Detecting Condition	Trouble Area
C0278/11	When any of the following is detected: • 3 or more solenoid valves are found faulty and simultaneously valve supply voltage is detected to be abnormal. • Solenoid valve relay is not switched off. • Valve relay is stuck open even through the valve relay supply voltage is high.	• Wire harness (+BS circuit) • ABS No. 2 fuse (Fusible link) • Brake actuator assembly (Solenoid relay)

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

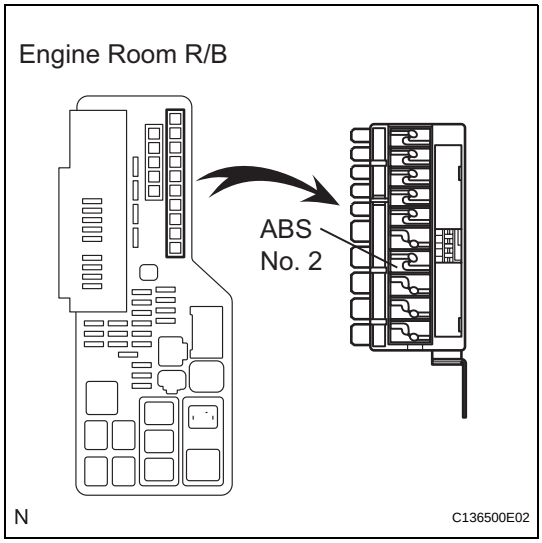
- When C1241/41 is output together with C0278/11, inspect and repair the trouble areas indicated by C1241/41 (See page BC-63).
- Check the condition of each related circuit before troubleshooting (See page IN-40).

1 INSPECT FUSIBLE LINK (ABS NO. 2 FUSE)



(a) Remove the fusible link from the engine room R/B.
(b) Check if the fusible link is melted.
OK:
The fusible link is not melted.
(c) Install the fusible link to the engine room R/B with the nut.

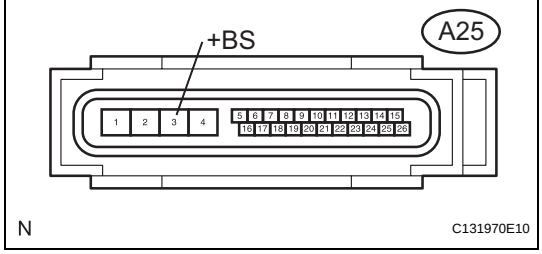
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

NG → **REPLACE FUSIBLE LINK**

OK

2 INSPECT SKID CONTROL ECU CONNECTOR (+BS CIRCUIT)

Skid Control ECU (Harness Side Connector Front View):



(a) Disconnect the skid control ECU connector.
(b) Measure the voltage according to the value(s) in the table below.
Standard voltage

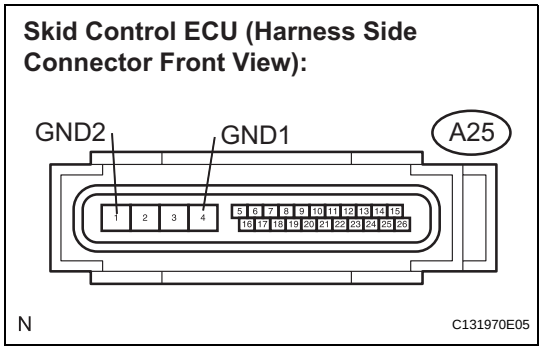
Tester Connection	Condition	Specified Condition
A25-3 (+BS) - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (+BS CIRCUIT)**

OK

3 INSPECT SKID CONTROL ECU CONNECTOR (GND TERMINAL CONTINUITY)

Skid Control ECU (Harness Side Connector Front View):



(a) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition
A25-4 (GND1) - Body ground	Below 1 Ω
A25-1 (GND2) - Body ground	Below 1 Ω

(b) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

4	RECONFIRM DTC

HINT:
This code is detected when a problem is identified in the brake actuator assembly.
The solenoid circuit is in the brake actuator assembly. Therefore, solenoid circuit inspection and solenoid unit inspection cannot be performed. Be sure to check if the DTC is output before replacing the brake actuator assembly.

(a) Clear the DTC (See page BC-21).
(b) Start the engine.
(c) Drive the vehicle at a speed of 12 mph (20 km/h) or more for 30 seconds or more.
(d) Check if the same DTC is recorded (See page BC-21).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

BC

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

HINT:
- If the normal system code is output (the trouble code is not output), slightly jiggle the connectors, wire harnesses, and fuses of the brake actuator assembly. Make sure that no DTCs are output.
- If any DTCs are output while jiggling a connector or wire harness of the brake actuator (skid control ECU), inspect and repair the connector or wire harness.
- It is suspected that the DTCs were output due to a bad connection of the connector terminal.

B → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

A

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION) (See page BC-19)

DTC	C1237/37	Speed Sensor Rotor Faulty

DESCRIPTION

The skid control ECU measures the speed of each wheel by receiving signals from the speed sensor. These signals are used for recognizing that all 4 wheels are operating properly.
Therefore, all wheel signals must be equal.

DTC No.	DTC Detecting Condition	Trouble Area
C1237/37	When any of the following is detected: • Wheel speed difference between the wheels. • Wheel sensor signal failure. • ABS control continues for 60 sec. or more.	• Brake actuator assembly (skid control ECU) • Speed sensor rotor (Front) • Rear axle hub and bearing assembly • Speed sensor • Speed sensor circuit • Tire and wheel size • Tire deformation

WIRING DIAGRAM

BC

BC

INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK TIRES

(a) Check the size and condition of all 4 tires (See page TW-3).
HINT:
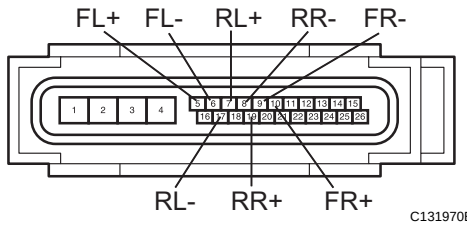
This DTC is output when tire deformation or a difference in tire size is detected.
OK:
The diameters of all 4 tires and air pressure are the same.

NG → **REPLACE TIRES SO THAT ALL 4 TIRES ARE THE SAME SIZE**

OK

2 INSPECT SPEED SENSOR AND SENSOR ROTOR SERRATIONS

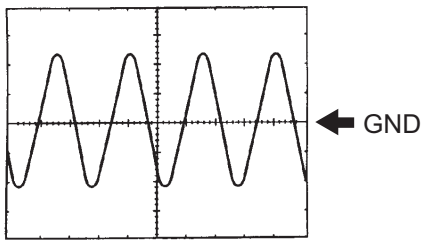
Skid Control ECU (Harness Side Connector Front View):



(a) Disconnect the skid control ECU connector.
(b) Connect the oscilloscope to each speed sensor terminal of the skid control ECU connector.
Terminals

Connector	Circuit
A25-5 (FL+) - A25-6 (FL-)	Front left speed sensor
A25-10 (FR+) - A25-9 (FR-)	Front right speed sensor
A25-7 (RL+) - A25-17 (RL-)	Rear left speed sensor
A25-19 (RR+) - A25-8 (RR-)	Rear right speed sensor

Normal Signal Waveform:



1 V / Division, 2 ms. / Division

(c) Check that a waveform is output when the tires are rotated (by the sensor circuit).
OK:
A waveform as shown in the figure should be output.
HINT:
- Each sensor circuit outputs the same waveform without noise.
- As vehicle speed (wheel rotation speed) increases, the width of the waveform narrows and the output voltage becomes greater.
- When noise is identified in the waveform on the oscilloscope, the erratic signals are generated due to rotor scratches, looseness or foreign matter attached to the speed sensor.

(d) Make sure that the waveform does not change while jiggling a connector or a wire harness.
OK:
The waveform does not change.
HINT:
If the waveform changes while jiggling a connector or a wire harness, there may be a malfunction in the connector or the wire harness.
(e) Connect the connector.

NG → **Go to step 4**

OK

3 RECONFIRM DTC

(a) Clear the DTC (See page BC-21).
(b) Start the engine.
(c) Drive the vehicle at a speed of 20 mph (32 km/h) or more for 60 seconds or more.
(d) Check if the same DTC is recorded (See page BC-21).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

A

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION) (See page BC-19)

4 CHECK SPEED SENSOR ROTOR

(a) Check the speed sensor rotor.
Front Speed Sensor Rotor: (See page DS-25)
Rear Speed Sensor Rotor: (See page AH-15)
OK:
No scratches or foreign matter on the rotors.
NOTICE:
Check the speed sensor signal after the cleaning/ replacement (See page BC-11).

NG → **CLEAN OR REPLACE SPEED SENSOR ROTOR**

OK

5 CHECK SPEED SENSOR TIP

(a) Remove each speed sensor.
(b) Check the speed sensor tip.
OK:
No scratches or foreign matter on the sensor tip.
NOTICE:
Check the speed sensor signal after the cleaning/ replacement (See page BC-11).
(c) Install speed sensor.

NG → **CLEAN OR REPLACE SPEED SENSOR**

OK

BC

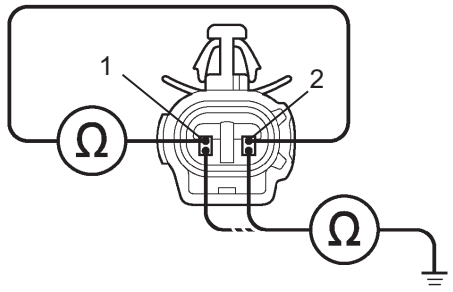
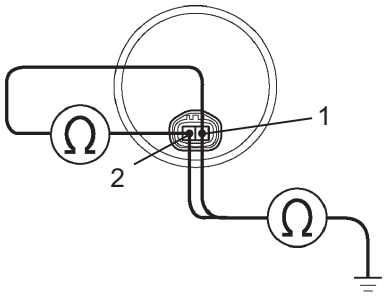
6	INSPECT EACH SPEED SENSOR

Front Speed Sensor:



Rear Speed Sensor:



C136027E01

(a) Disconnect each speed sensor connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

FRONT

Tester Connection	Condition	Specified Condition
A14-1 (FL+) - A14-2 (FL-)	Always	1.4 to 1.8 kΩ at 20°C (68°F)
A14-1 (FL+) - Body ground	Always	10 kΩ or higher
A14-2 (FL-) - Body ground	Always	10 kΩ or higher
A35-1 (FR+) - A35-2 (FR-)	Always	1.4 to 1.8 kΩ at 20°C (68°F)
A35-1 (FR+) - Body ground	Always	10 kΩ or higher
A35-2 (FR-) - Body ground	Always	10 kΩ or higher

REAR

Tester Connection	Condition	Specified Condition
g1-1 (RL+) - g1-2 (RL-)	Always	Below 2.2 kΩ
g1-1 (RL+) - Body ground	Always	10 kΩ or higher
g1-2 (RL-) - Body ground	Always	10 kΩ or higher
f1-1 (RR+) - f1-2 (RR-)	Always	Below 2.2 kΩ
f1-1 (RR+) - Body ground	Always	10 kΩ or higher
f1-2 (RR-) - Body ground	Always	10 kΩ or higher

(c) Connect the connector.

NOTICE:

Check the speed sensor signal after replacement (See page BC-11).

NG → **REPLACE EACH SPEED SENSOR**

OK

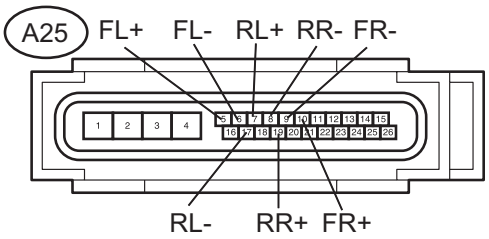
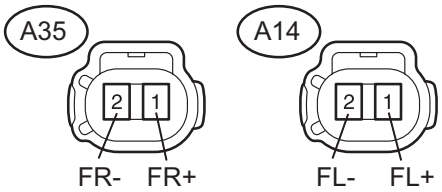
7 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU TO EACH SPEED SENSOR)

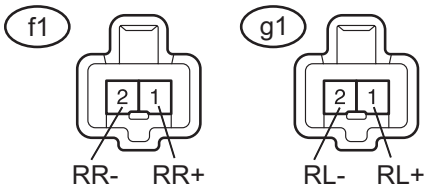
Skid Control ECU Harness Side Connector Front View:



Front Speed Sensor Harness Side Connector Front View:



Rear Speed Sensor Harness Side Connector Front View:



C136491E02

(a) Disconnect the skid control ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

FRONT

Tester Connection	Condition	Specified Condition
A25-5 (FL+) - A14-1 (FL+)	Always	Below 1 Ω
A25-6 (FL-) - A14-2 (FL-)	Always	Below 1 Ω
A25-10 (FR+) - A35-1 (FR+)	Always	Below 1 Ω
A25-9 (FR-) - A35-2 (FR-)	Always	Below 1 Ω
A25-5 (FL+) - Body ground	Always	10 kΩ or higher
A25-6 (FL-) - Body ground	Always	10 kΩ or higher
A25-10 (FR+) - Body ground	Always	10 kΩ or higher
A25-9 (FR-) - Body ground	Always	10 kΩ or higher

REAR

Tester Connection	Condition	Specified Condition
A25-7 (RL+) - g1-1 (RL+)	Always	Below 1 Ω
A25-17 (RL-) - g1-2 (RL-)	Always	Below 1 Ω
A25-19 (RR+) - f1-1 (RR+)	Always	Below 1 Ω
A25-8 (RR-) - f1-2 (RR-)	Always	Below 1 Ω
A25-7 (RL+) - Body ground	Always	10 kΩ or higher
A25-17 (RL-) - Body ground	Always	10 kΩ or higher
A25-19 (RR+) - Body ground	Always	10 kΩ or higher
A25-8 (RR-) - Body ground	Always	10 kΩ or higher

(c) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SKID CONTROL ECU TO EACH SPEED SENSOR)**

OK

8 RECONFIRM DTC

(a) Clear the DTC (See page BC-21).
(b) Start the engine.

BC

(c) Drive the vehicle at the speed of 20 mph (32 km/h) or more for at least 60 seconds.
(d) Check if the same DTC is recorded (See page BC-21).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTC (C1237/37) is not output	A
DTC (C1237/37) is output	B

B → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

A → **CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION) (See page BC-19)**

DTC	C1241/41	Low Battery Positive Voltage or Abnormally High Battery Positive Voltage

DESCRIPTION

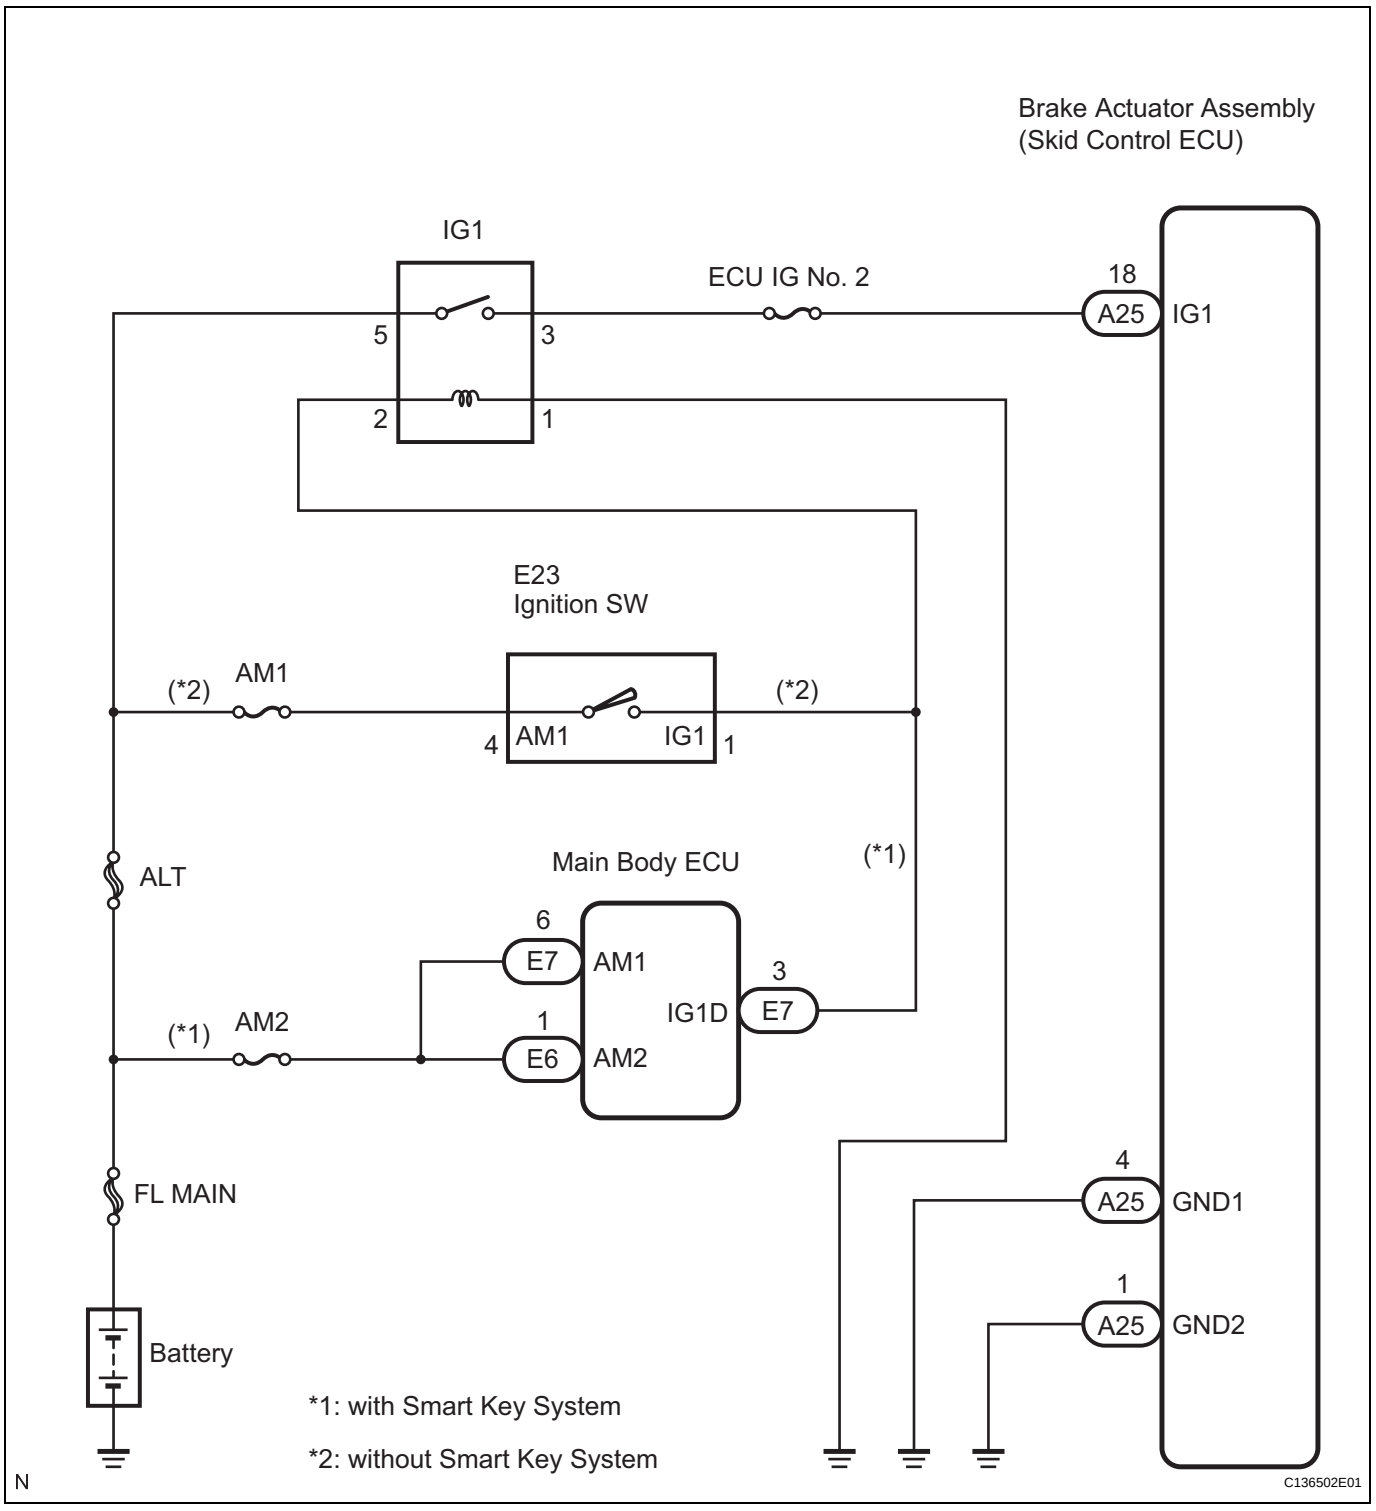
If a malfunction is detected in the power supply circuit of the brake actuator assembly (skid control ECU), the skid control ECU (housed in the actuator assembly) stores this DTC and the fail-safe function prohibits ABS operation (See page BC-24).

This DTC is output when the IG1 terminal voltage deviates from the normal condition due to a malfunction in the power supply or charging circuit such as the battery or alternator circuit, etc.

This DTC is cancelled when the IG1 terminal voltage returns to normal (only when the voltage returns to normal from a voltage lower than the specified value).

DTC No.	DTC Detecting Condition	Trouble Area
C1241/41	With vehicle speed more than 4 mph (6 km/h), when any of the following is detected: • Battery voltage is 16.9 V or more. • Battery voltage is 9.4 V or less when ABS does not operate. • Battery voltage is 9.2 V or less when ABS operates.	• Battery • Charging system • Power source circuit • Brake actuator assembly (Skid control ECU)

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

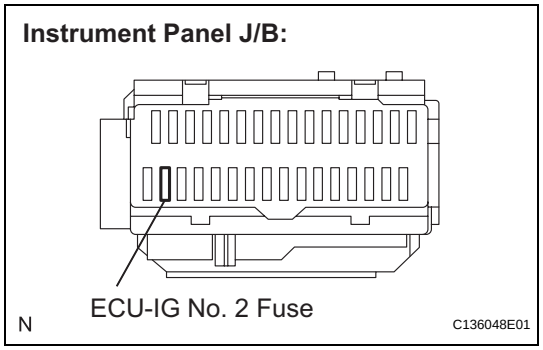
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1 INSPECT FUSE (ECU-IG NO. 2 FUSE)



(a) Remove the ECU-IG No. 2 fuse from the instrument panel J/B.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition
ECU-IG No. 2 fuse	Below 1 Ω (Continuity)

(c) Install the fuse.

NG → **REPLACE FUSE**

OK

2 INSPECT BATTERY

(a) Check the battery voltage.
Standard voltage:
11 to 14 V

NG → **INSPECT CHARGING SYSTEM**

OK

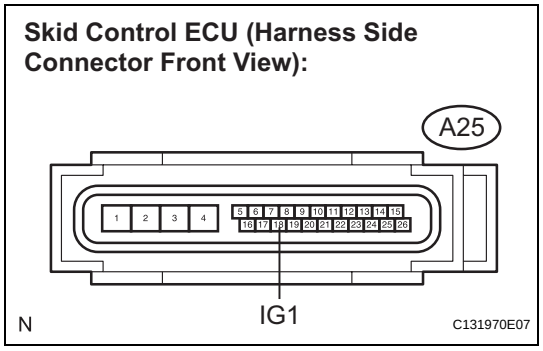
3 INSPECT SKID CONTROL ECU CONNECTOR (IG1 TERMINAL VOLTAGE)



(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Condition	Specified Condition
A25-18 (IG1) - Body ground	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (IG1 CIRCUIT)**

OK

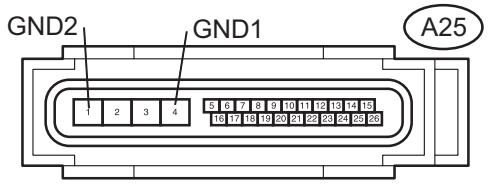
4 INSPECT SKID CONTROL ECU CONNECTOR (GND TERMINAL CONTINUITY)

Skid Control ECU (Harness Side Connector Front View):



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
A25-4 (GND1) - Body ground	Below 1 Ω
A25-1 (GND2) - Body ground	Below 1 Ω

(b) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

BC

5 RECONFIRM DTC

(a) Clear the DTC (See page BC-21).
(b) Turn the ignition switch on (IG).
(c) Check if the same DTC is recorded (See page BC-21).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTC (C1241/41) is output	A
DTC (C1241/41) is output (When troubleshooting in accordance with the PROBLEM SYMPTOMS TABLE)	B
DTC (C1241/41) is not output (When troubleshooting in accordance with the DTC CHART)	C

B → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page BC-16)**

C → **END**

A

REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

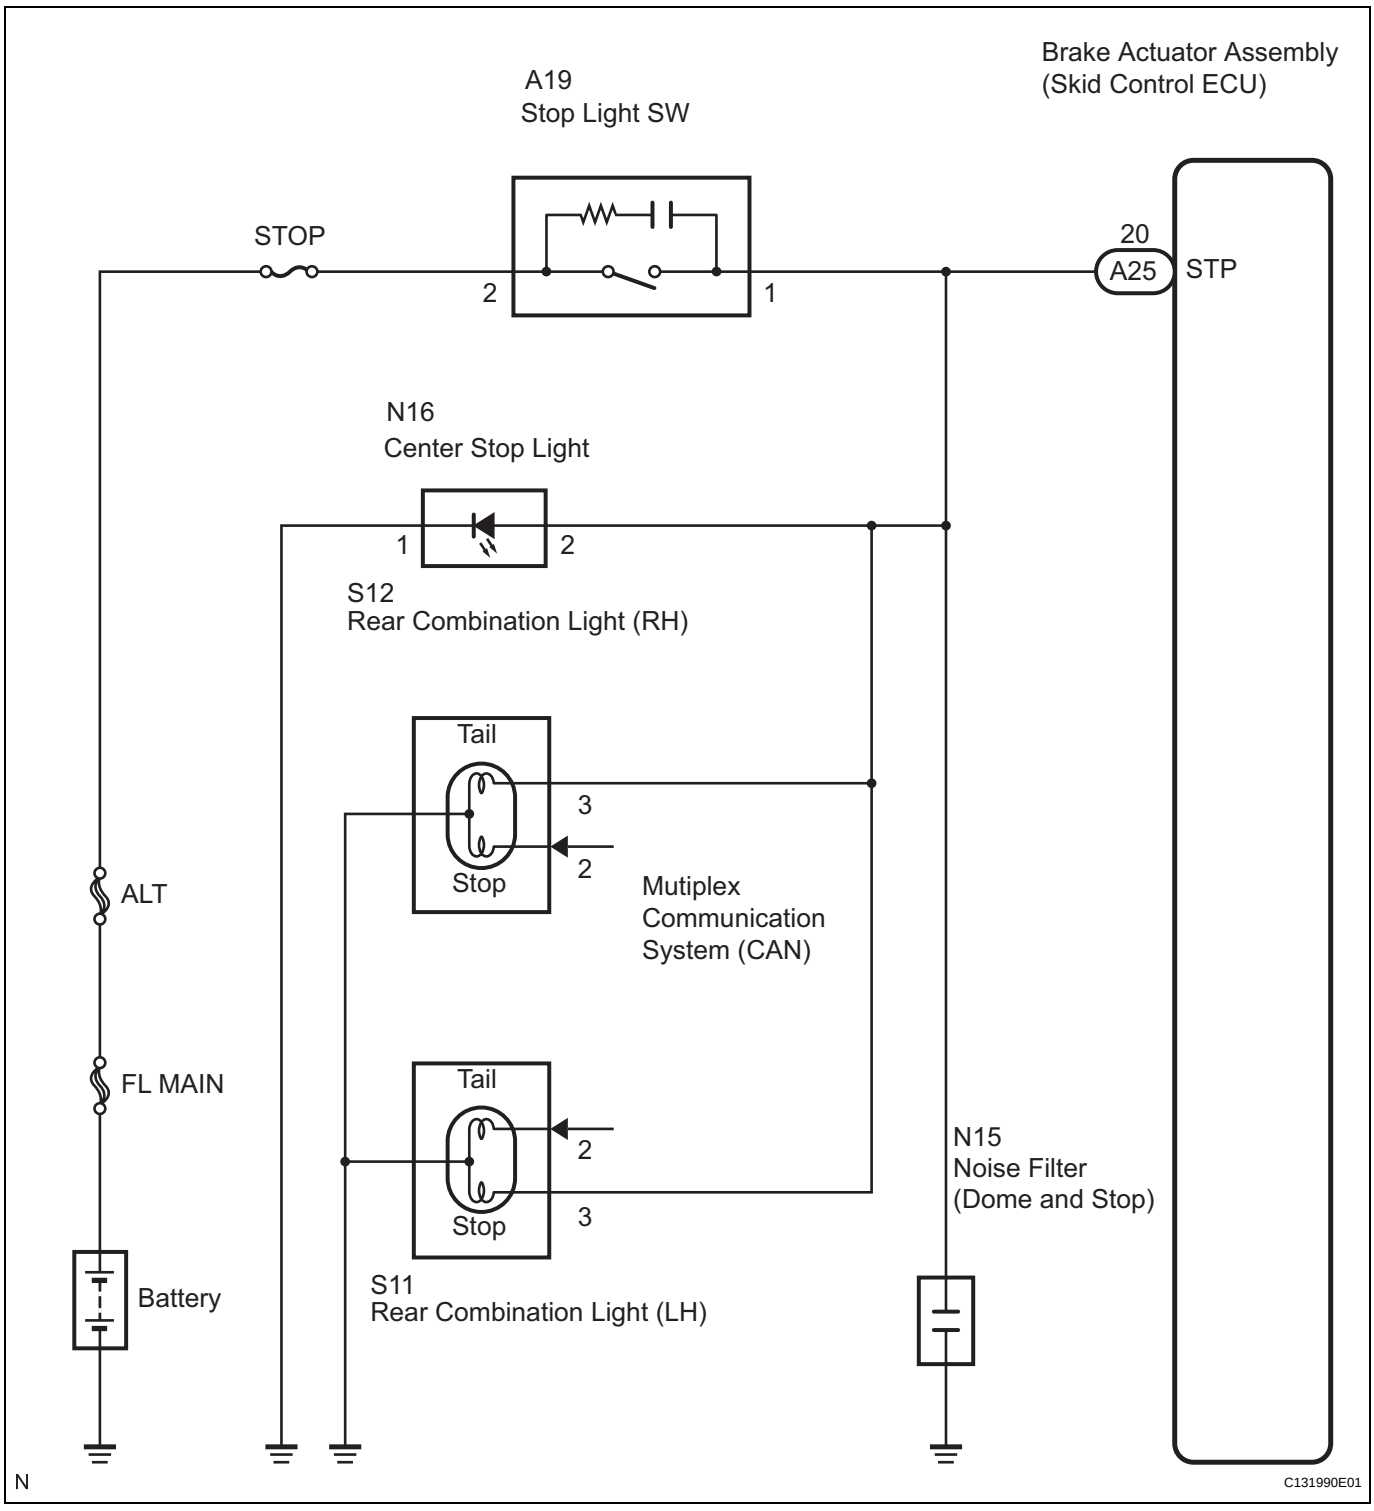
DTC	C1249/49	Open in Stop Light Switch Circuit

DESCRIPTION

This circuit recognizes brake operation by sending a stop light signal to the skid control ECU.
The skid control ECU has an open detection circuit, which outputs this DTC when detecting an open in the stop light signal input line (STP terminal) or the ground line of the stop light circuit with the stop light switch off (brake pedal not depressed).

DTC No.	DTC Detecting Condition	Trouble Area
C1249/49	Stop light switch circuit is open, and stop light switch voltage is 40% or more and less than 67% of the battery voltage.	• Stop light switch • Stop light switch circuit • Brake actuator assembly (Skid Control ECU)

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1 CHECK STOP LIGHT SWITCH OPERATION (STOP LIGHT SWITCH CIRCUIT)

(a) Check that the stop lights come on when the brake pedal is depressed and goes off when the brake pedal is released.

OK

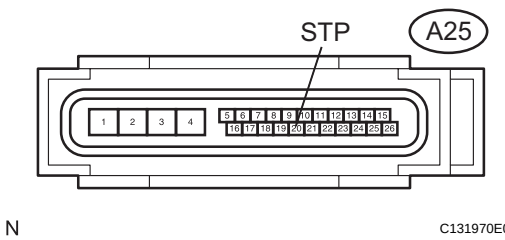
Pedal Condition	Illumination Condition
Brake pedal depressed	ON
Brake pedal released	OFF

NG → **Go to step 5**

OK

2 INSPECT SKID CONTROL ECU CONNECTOR (STP TERMINAL)

Skid Control ECU (Harness Side Connector Front View):



(a) Disconnect the skid control ECU connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

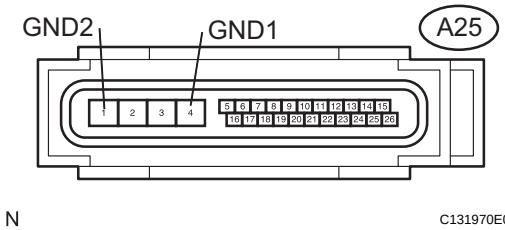
Tester Connection	Switch Condition	Specified Condition
A25-20 (STP) - Body ground	Brake pedal depressed	8 to 14 V
A25-20 (STP) - Body ground	Brake pedal released	Below 4.0 V

NG → **Go to step 7**

OK

3 INSPECT SKID CONTROL ECU CONNECTOR (GND TERMINAL CONTINUITY)

Skid Control ECU (Harness Side Connector Front View):



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
A25-4 (GND1) - Body ground	Below 1 Ω
A25-1 (GND2) - Body ground	Below 1 Ω

(b) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

4 RECONFIRM DTC

(a) Clear the DTC (See page BC-21).
(b) Start the engine.

(c) Depress the brake pedal several times to test the stop light circuit.
(d) Check if the same DTC is recorded (See page BC-21).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTC is not output	A
DTC is output (When troubleshooting in accordance with the DTC CHART)	B
DTC is output (When troubleshooting in accordance with the PROBLEM SYMPTOMS TABLE)	C

B → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

C → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page BC-16)**

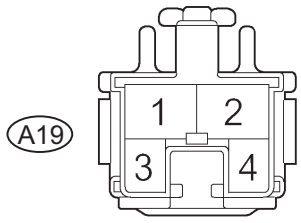
BC

A

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION) (See page BC-19)

5 INSPECT STOP LIGHT SWITCH ASSEMBLY (POWER SOURCE TERMINAL VOLTAGE)

Stop Light Switch (Wire Harness Side) Connector Front View:



I042363E17

(a) Disconnect the stop light switch connector.
(b) Measure the voltage according to the value(s) in the table below.

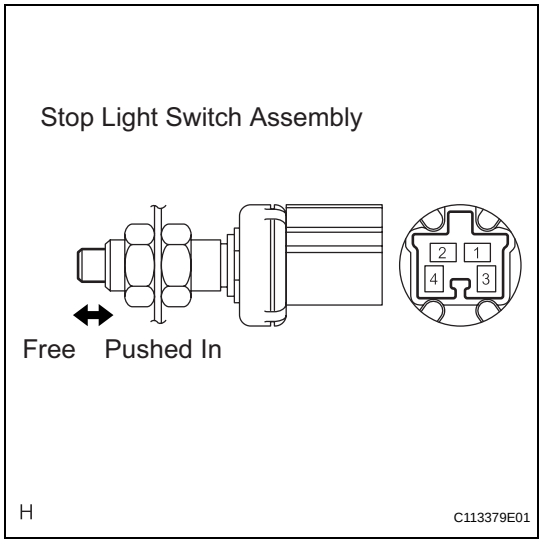
Standard voltage

Tester Connection	Condition	Specified Condition
A19-2 - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER SOURCE CIRCUIT)**

OK

6 INSPECT STOP LIGHT SWITCH ASSEMBLY



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

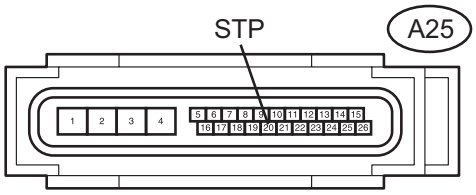
Tester Connection	Condition	Specified Condition
Switch pin free	1 - 2	Below 1 Ω
Switch pin pushed in	1 - 2	10 kΩ or higher

NG → **REPLACE STOP LIGHT SWITCH ASSEMBLY (See page BR-71)**

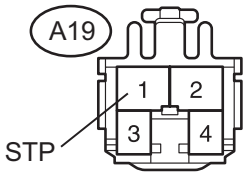
OK

7 CHECK HARNESS AND CONNECTOR (STOP LIGHT SWITCH TO SKID CONTROL ECU)

Skid Control ECU (Wire Harness Side) Connector Front View:



Stop Light Switch (Wire Harness Side) Connector Front View:



(a) Disconnect the stop light switch connector and skid control ECU connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
A25-20 (STP) - A19-1 (STP)	Below 1 Ω

(c) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (STOP LIGHT SWITCH TO SKID CONTROL ECU)**

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR (STOP LIGHT CIRCUIT)

BC

DTC	C1300/62	Skid Control ECU Malfunction

DESCRIPTION

The skid control ECU outputs this DTC, if malfunctions are found in the circuit inside the computer by self diagnosis.

DTC No.	DTC Detecting Condition	Trouble Area
C1300/62	Internal failure of the skid control ECU control unit	Brake actuator assembly (skid control ECU)

INSPECTION PROCEDURE

1	REPLACE BRAKE ACTUATOR ASSEMBLY

(a) Replace the brake actuator assembly (skid control ECU) (See page BC-432).
HINT:
This DTC is output when the skid control ECU detects a malfunction in the internal circuit.
(b) Clear the DTC (See page BC-21).

NEXT

END

DTC	U0073/94	Control Module Communication Bus OFF

DESCRIPTION

- The skid control ECU receives the signal sent from the ECM via the CAN communication system.
- When DTCs indicating a CAN communication system malfunction are output, repair the CAN communication system before repairing each corresponding sensor.

DTC No.	DTC Detecting Condition	Trouble Area
U0073/94	When any of the following is detected: 1. The skid control ECU cannot send a signal (30 cycles). 2. The condition that bus OFF state occurs for 300 msec.	• Wire harness (CANL, CANH circuit) • Brake actuator assembly (Skid control ECU)

INSPECTION PROCEDURE

Proceed to CAN communication system troubleshooting (See page CA-8).
HINT:
When DTCs indicating a CAN communication system malfunction are output, repair the CAN communication system before repairing each corresponding sensor.

ABS Warning Light Remains ON

DESCRIPTION

The skid control ECU sends the indicator signals to the combination meter assembly via the CAN communication system.

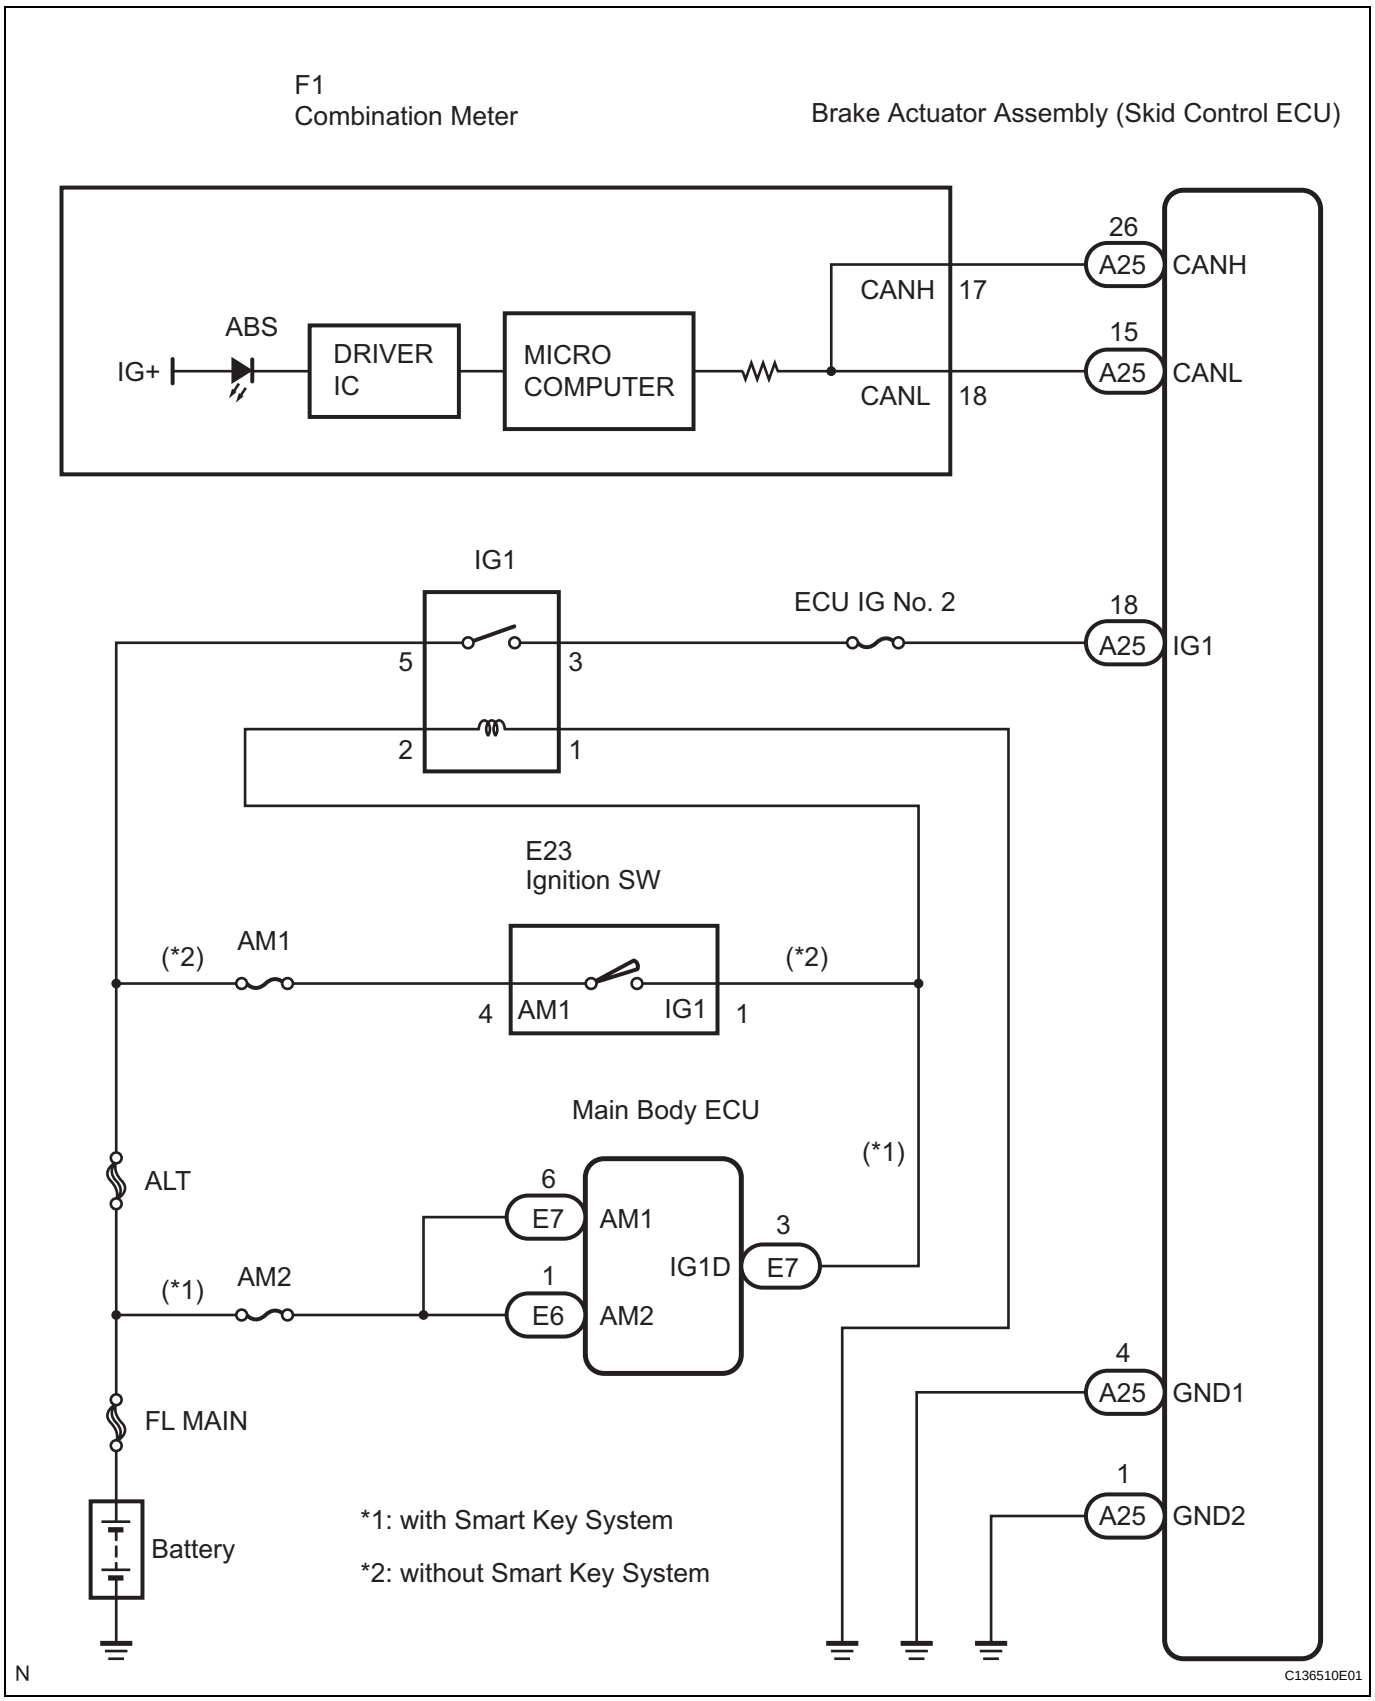
If any of the following is detected, the ABS warning light remains on.

- The skid control ECU connectors are disconnected from the skid control ECU.
- There is a malfunction in the skid control ECU internal circuit.
- There is an open in the wire harness between the combination meter and the skid control ECU.
- The ABS and/or EBD is defective.

HINT:

The intelligent tester may not be used when the skid control ECU is abnormal.

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

HINT:

Check the condition of each related circuit before troubleshooting (See page IN-40).

1	INSPECT CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication system DTC is output (See page BC-21).

Result

Condition	Proceed to
CAN communication system DTC is not output	A
CAN communication system DTC is output	B

B → **INSPECT CAN COMMUNICATION SYSTEM (See page CA-8)**

A

2	CHECK SKID CONTROL ECU CONNECTOR SECURELY CONNECTED

BC

(a) Check if the skid control ECU connector is connected.
OK:
The connector is securely connected.

NG → **CONNECT CONNECTOR TO ECU CORRECTLY**

OK

3	CHECK BATTERY

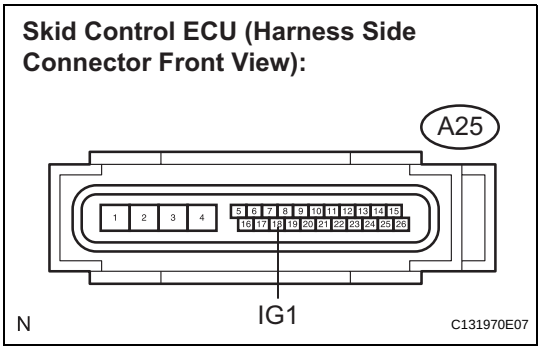
(a) Check the battery voltage.
Standard voltage:
11 to 14 V

NG → **INSPECT CHARGING SYSTEM**

OK

4	INSPECT SKID CONTROL ECU CONNECTOR (IG1 TERMINAL VOLTAGE)

Skid Control ECU (Harness Side Connector Front View):



(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.
Standard voltage

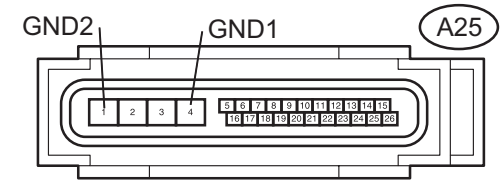
Tester Connection	Condition	Specified Condition
A25-18 (IG1) - Body ground	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (IG1 CIRCUIT)**

OK

5 INSPECT SKID CONTROL ECU CONNECTOR (GND TERMINAL CONTINUITY)

Skid Control ECU (Harness Side Connector Front View):



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
A25-4 (GND1) - Body ground	Below 1 Ω
A25-1 (GND2) - Body ground	Below 1 Ω

(b) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

6 INSPECT COMBINATION METER ASSEMBLY

(a) Connect the intelligent tester to the DLC3.
(b) Select the "ACTIVE TEST" on the tester (See page BC-25).

ACTIVE TEST: ABS

Item	Vehicle Condition / Test Details	Diagnostic Note
ABS WRN LIGHT	Turn ABS warning light ON / OFF	Observe combination meter

(c) Check the ABS warning light operation.

OK:

The ABS warning light turns on or off in accordance with the intelligent tester.

Result

Condition	Proceed to
OK	A
OK (When troubleshooting in accordance with the PROBLEM SYMPTOMS TABLE)	B
NG	C

B → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page BC-16)**

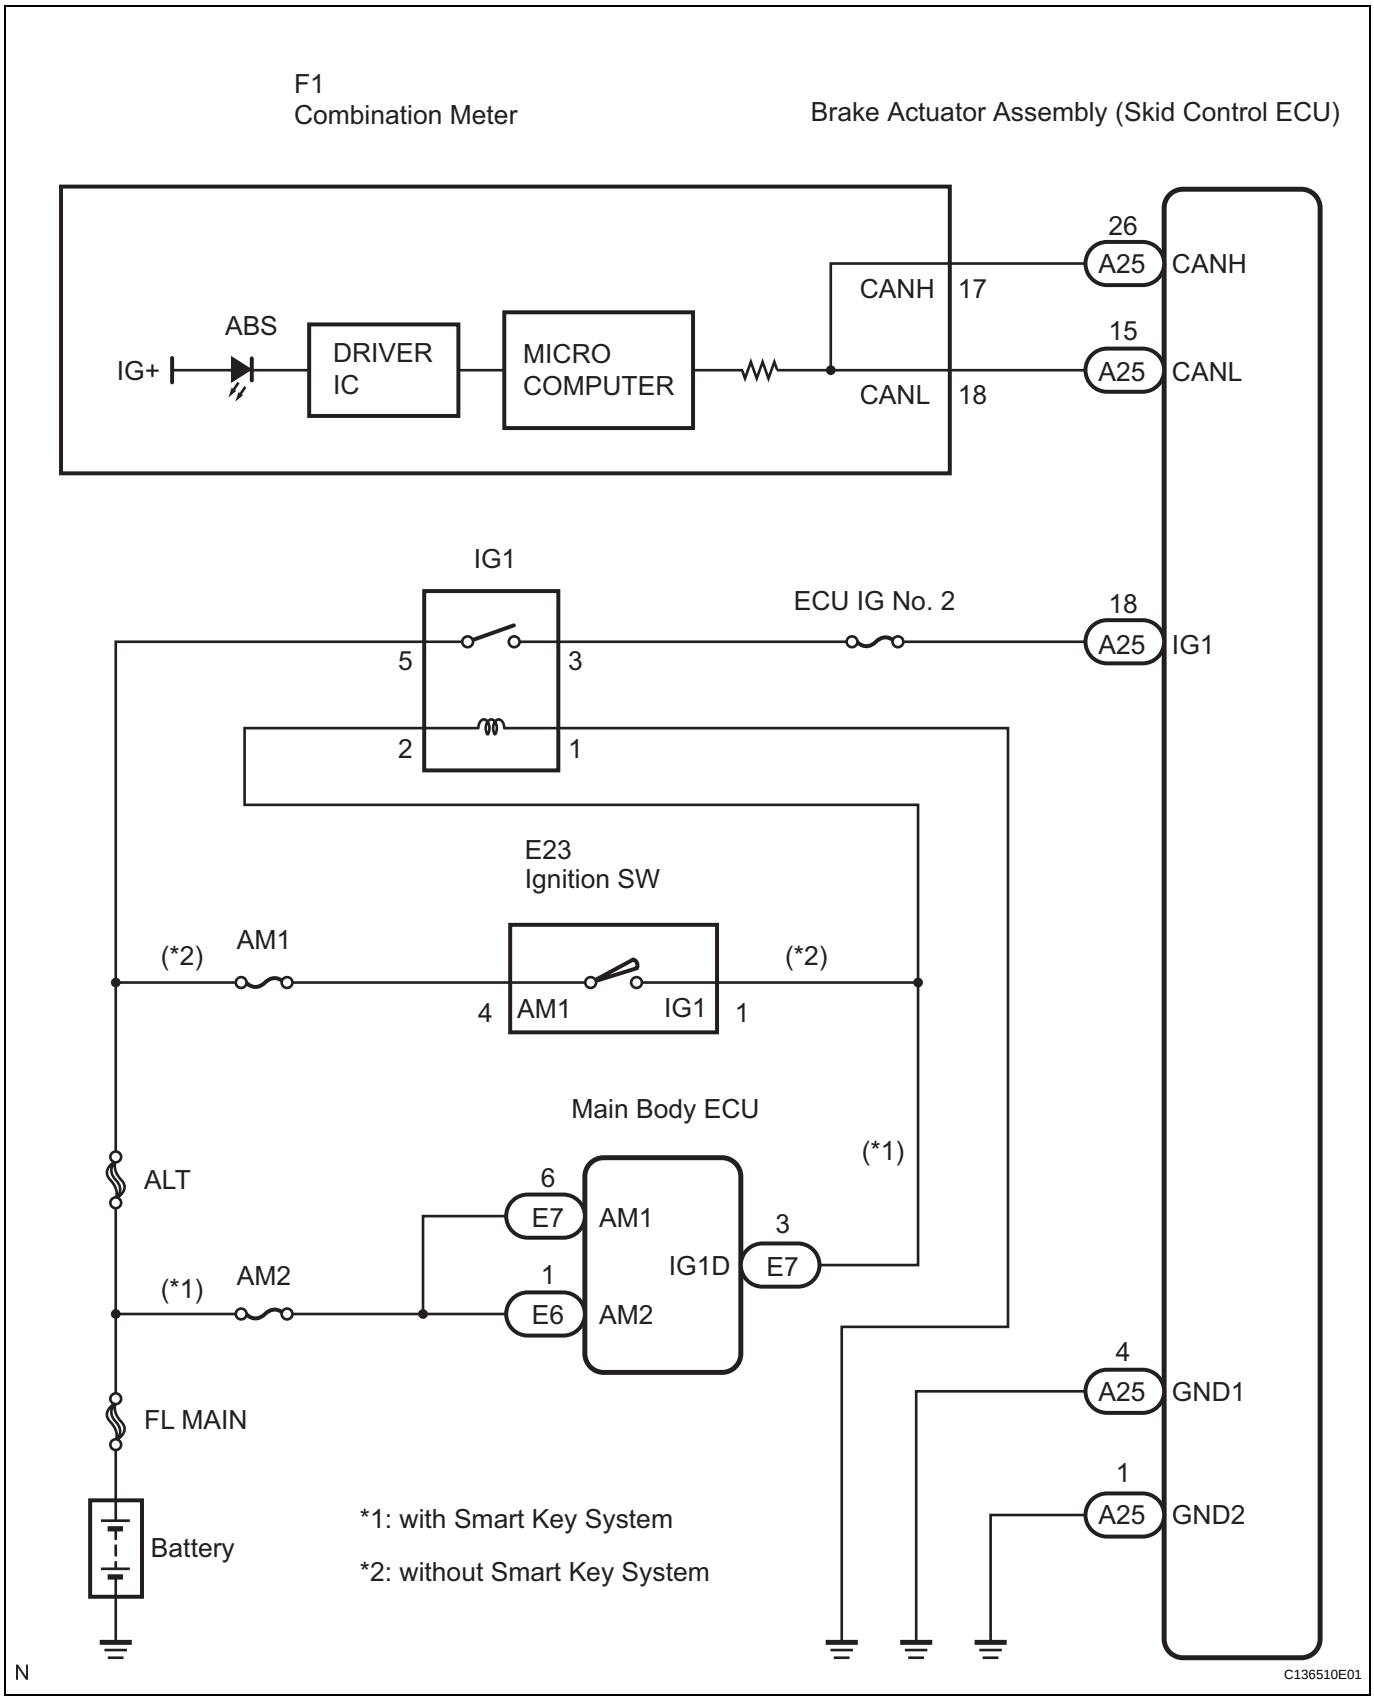
C → **REPLACE COMBINATION METER ASSEMBLY (See page ME-63)**

A

REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

ABS Warning Light does not Come ON

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1 INSPECT CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication system DTC is output (See page BC-21).

Result

Condition	Proceed to
CAN communication system DTC is not output	A
CAN communication system DTC is output	B

B → **REPAIR CAN COMMUNICATION SYSTEM (See page CA-8)**

A

2 INSPECT ABS WARNING LIGHT

HINT:
When disconnecting the skid control ECU connector, the ABS warning light comes on.

(a) Turn the ignition switch off.
(b) Disconnect the skid control ECU connector.
(c) Turn the ignition switch on (IG).
(d) Check that the ABS warning light comes on.
OK:
The ABS warning light comes on.
(e) Connect the connector.

NG → **Go to step 3**

OK

REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

3 INSPECT COMBINATION METER ASSEMBLY

(a) Connect the intelligent tester to the DLC3.
(b) Select the "ACTIVE TEST" on the tester (See page BC-25).

ACTIVE TEST: METER

Item	Vehicle Condition / Test Details	Diagnostic Note
ABS WRN LIGHT	Turn ABS warning light ON / OFF	Observe combination meter

(c) Check the ABS warning light operation.
OK:
The ABS warning light turns on or off in accordance with the intelligent tester.

NG → REPLACE COMBINATION METER ASSEMBLY (See page ME-63)

OK

REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

Brake Warning Light Remains ON

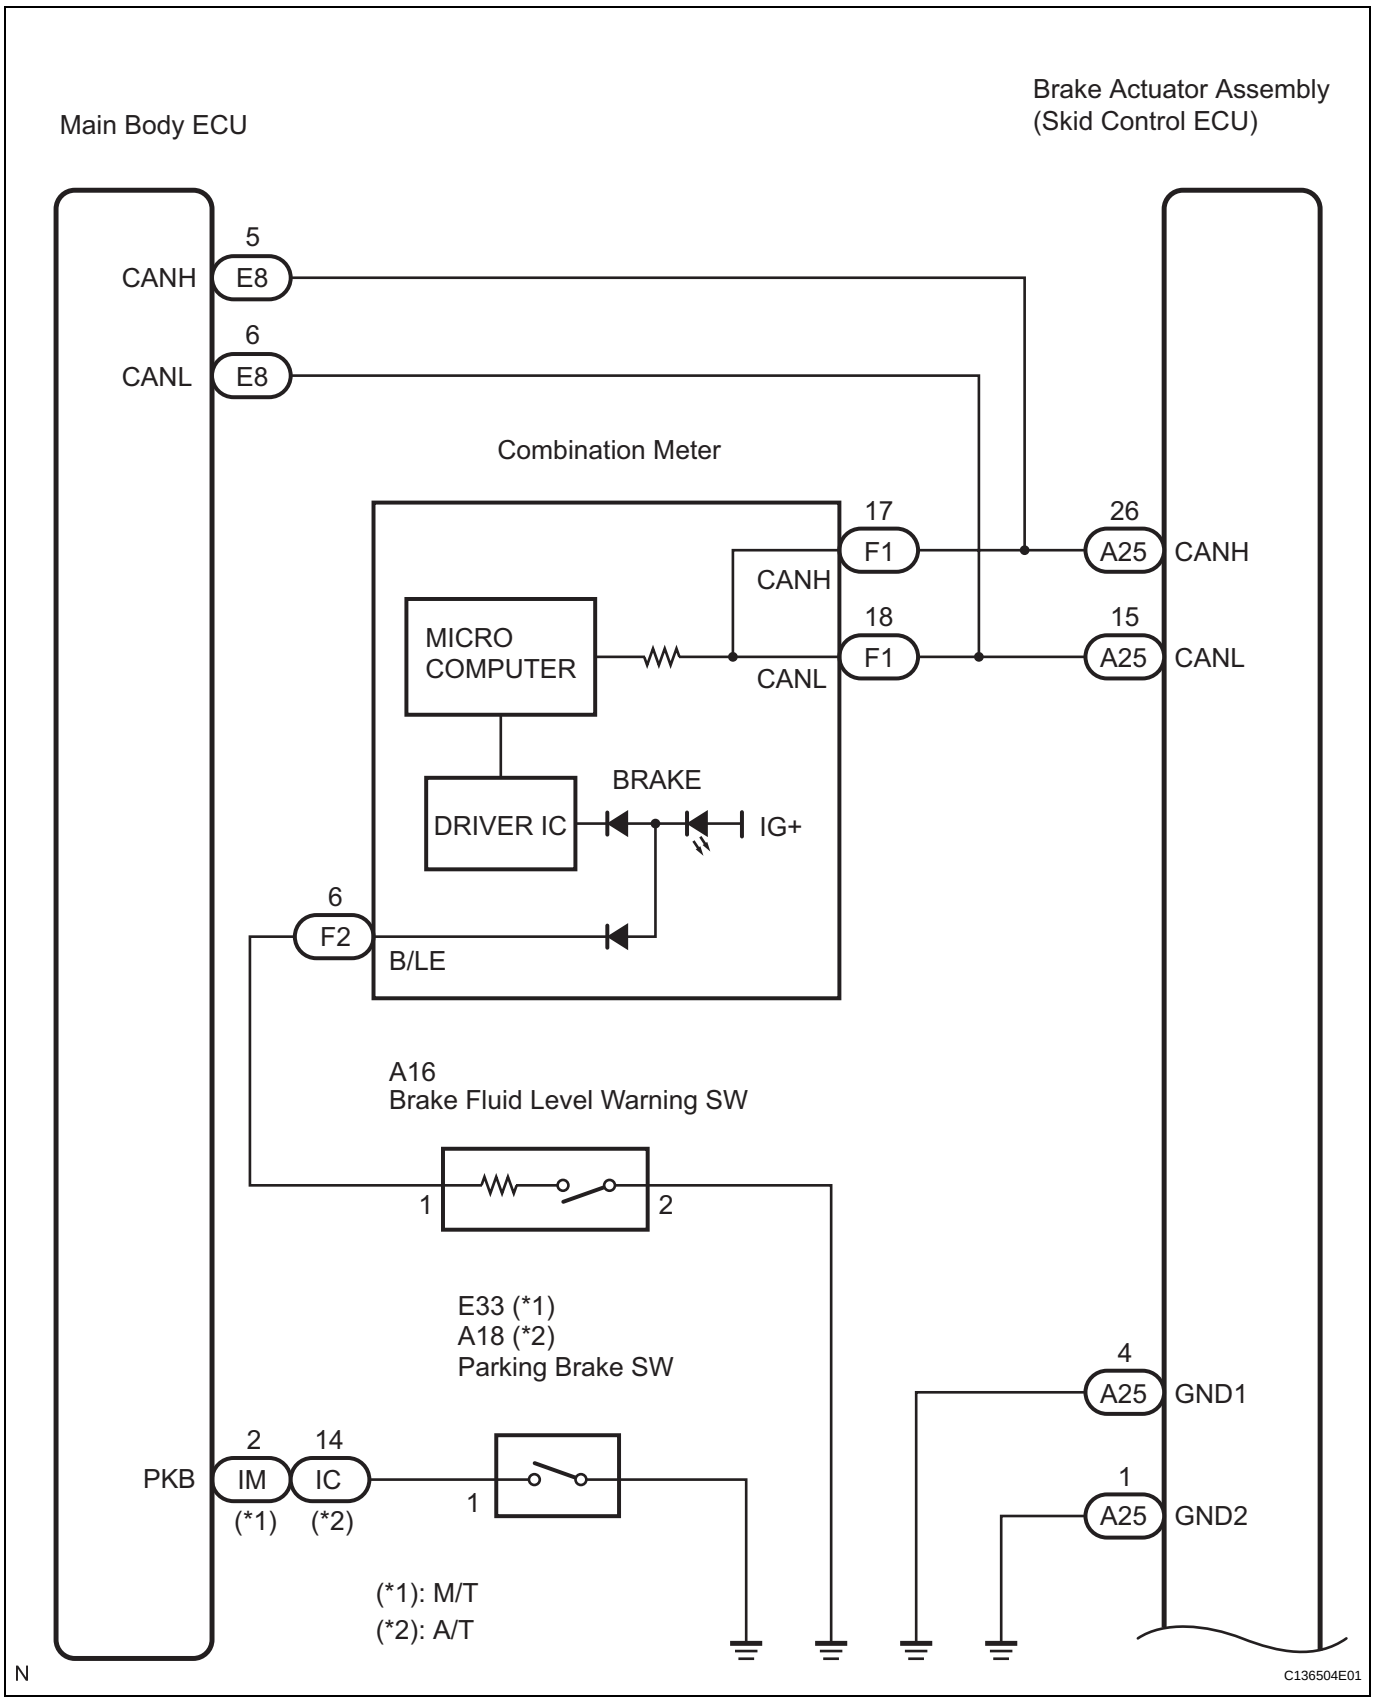
DESCRIPTION

The skid control ECU sends the indicator signals to the combination meter assembly via the CAN communication system.

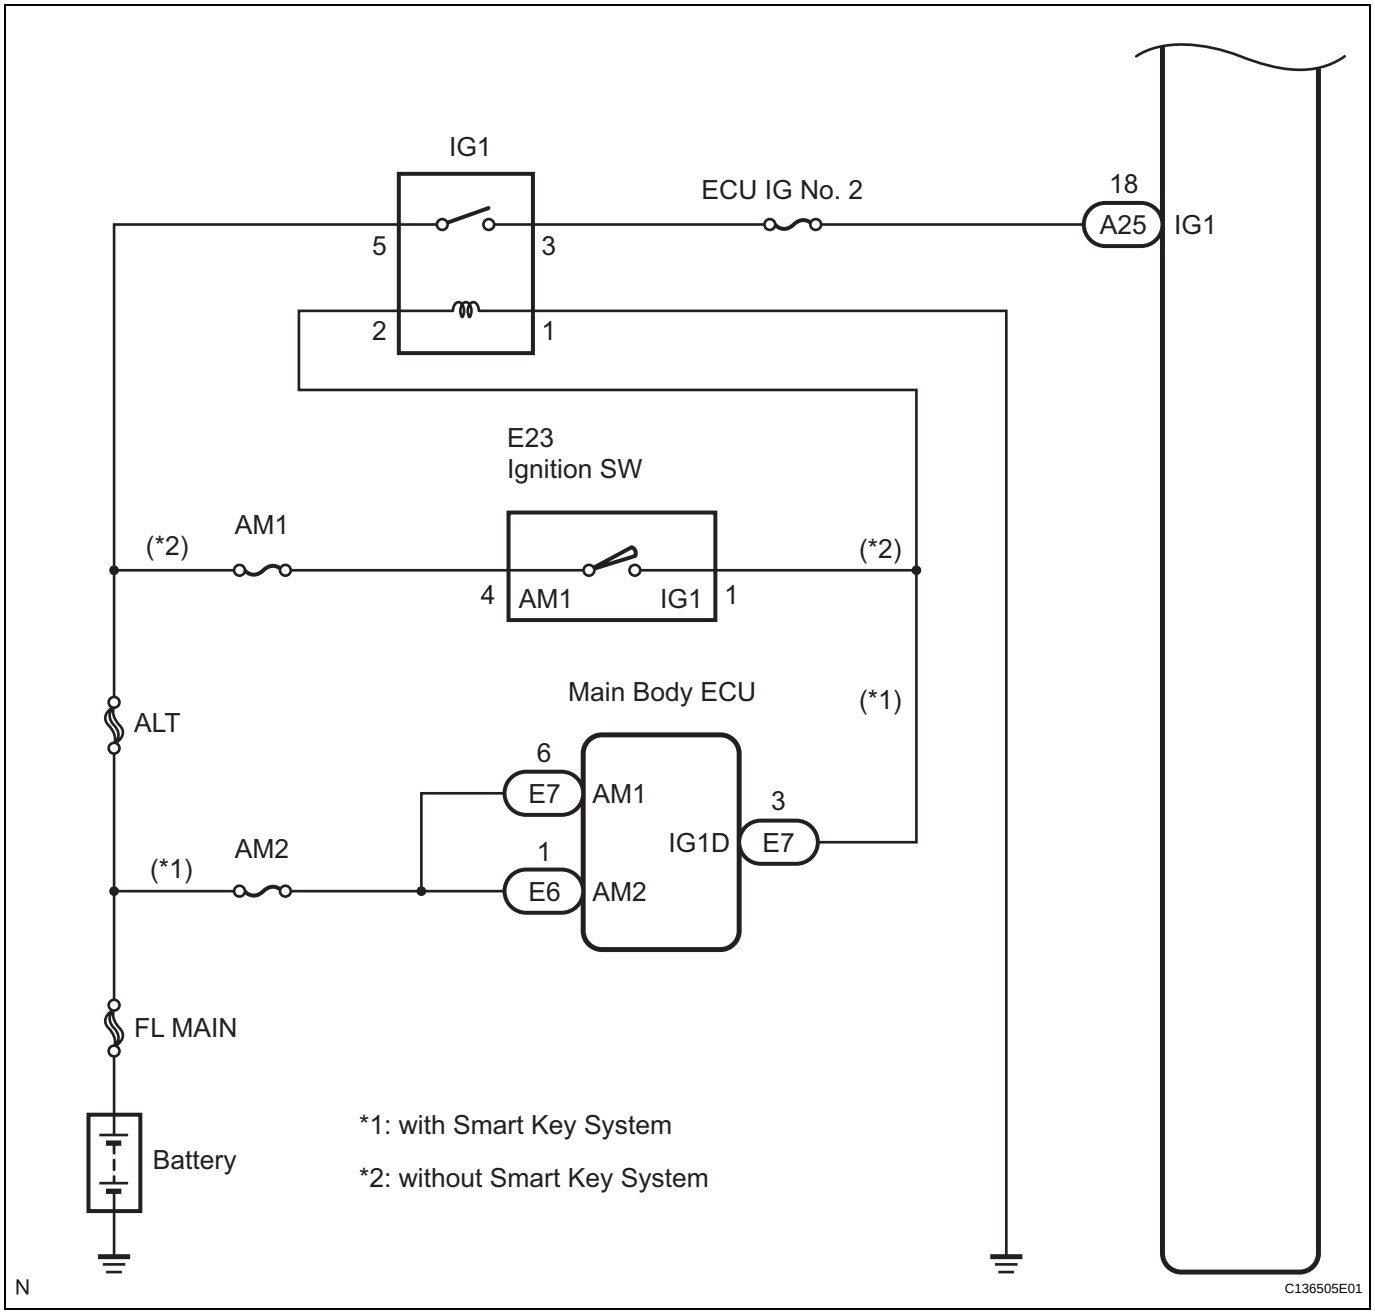
If any of the following is detected, the brake warning light remains on:

- The skid control ECU connector is disconnected from the skid control ECU.
- The brake fluid level is insufficient.
- The parking brake is applied.
- EBD operation is not possible.

WIRING DIAGRAM



BC



INSPECTION PROCEDURE

HINT:

Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK DTC

(a) Check if an ABS DTC is output (See page BC-21).

Result

Condition	Proceed to
CAN communication system DTC is not output	A
CAN communication system DTC is output	B

BC

B → **REPAIR CIRCUITS INDICATED BY OUTPUT DTCS (See page BC-27)**

A

2	INSPECT CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication system DTC is output (See page BC-21).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → **REPAIR CAN COMMUNICATION SYSTEM (See page CA-8)**

BC

A

3	CHECK IF SKID CONTROL ECU CONNECTOR SECURELY CONNECTED

(a) Check if the skid control ECU connector is connected securely.
OK:
The connector should be securely connected.

NG → **CONNECT CONNECTOR TO ECU CORRECTLY**

OK

4	CHECK BATTERY

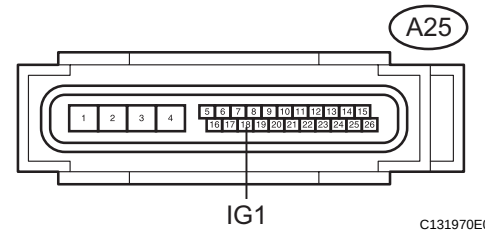
(a) Check the battery voltage.
Standard voltage:
11 to 14 V

NG → **INSPECT CHARGING SYSTEM**

OK

5 INSPECT SKID CONTROL ECU CONNECTOR (IG1 TERMINAL VOLTAGE)

Skid Control ECU (Harness Side Connector Front View):



(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
A25-18 (IG1) - Body ground	Ignition switch on (IG)	10 to 14 V

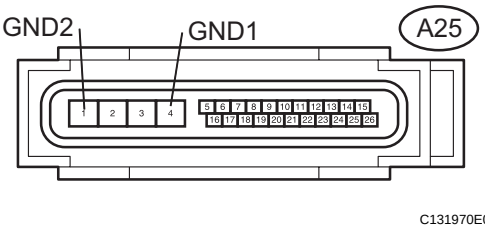
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (IG1 CIRCUIT)**

OK

6 INSPECT SKID CONTROL ECU CONNECTOR (GND TERMINAL CONTINUITY)

BC

Skid Control ECU (Harness Side Connector Front View):



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
A25-4 (GND1) - Body ground	Below 1 Ω
A25-1 (GND2) - Body ground	Below 1 Ω

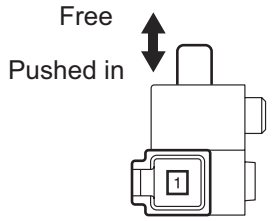
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

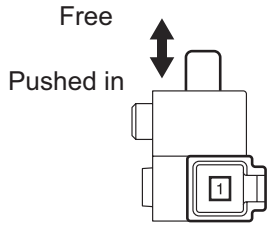
7	**INSPECT PARKING BRAKE SWITCH**

Parking Brake Switch:

Automatic Transaxle:



Manual Transaxle:



N C109430E03

(a) Remove the parking brake switch.
(b) Disconnect the parking brake switch connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Automatic Transaxle

Tester Connection	Condition	Specified Condition
(A18-1) - Ground part	Free	Below 1 Ω
(A18-1) - Ground part	Pushed in	10 kΩ or higher

Manual Transaxle

Tester Connection	Condition	Specified Condition
(E33-1) - Ground part	Free	Below 1 Ω
(E33-1) - Ground part	Pushed in	10 kΩ or higher

NG → **REPLACE PARKING BRAKE SWITCH**

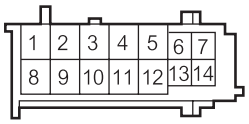
OK

BC

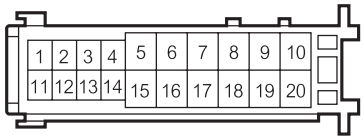
8	CHECK HARNESS AND CONNECTOR (MAIN BODY ECU TO PARKING BRAKE SWITCH)

Main Body ECU
Wire Harness View:

IC : Automatic Transaxle



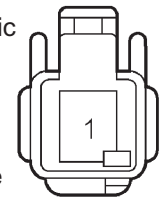
IM : Manual Transaxle



Parking Brake Switch Harness Side Connector Front View:

A18 : Automatic Transaxle

E33 : Manual Transaxle



C136418E03

OK

(a) Disconnect the main body ECU connector.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance:
Automatic Transaxle

Tester Connection	Specified Condition
IC-14 - A18-1 (PKB)	Below 1 Ω
A18-1 (PKB) - Body ground	10 kΩ or higher

Manual Transaxle

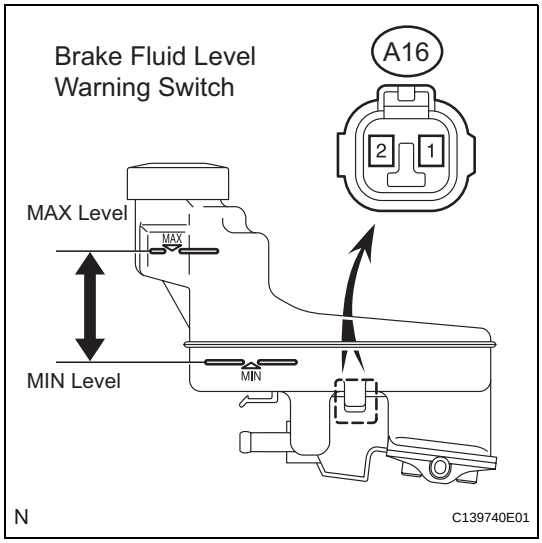
Tester Connection	Specified Condition
IM-2 (PKB) - E33-1 (PKB)	Below 1 Ω
E33-1 (PKB) - Body ground	10 kΩ or higher

(c) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (MAIN BODY ECU TO PARKING BRAKE SWITCH)**

BC

9	**INSPECT BRAKE FLUID LEVEL WARNING SWITCH ASSEMBLY**



(a) Remove the reservoir tank cap.
(b) Disconnect the brake fluid level warning switch connector.
(c) Measure the resistance according to the value(s) in the table below.
HINT:
A float is located inside the reservoir.
Its position can be changed by increasing or decreasing the level of brake fluid.
Standard resistance

Tester Connection	Condition	Specified Condition
(A16-1) - (A16-2)	Float UP	10 kΩ or higher (No Continuity)
(A16-1) - (A16-2)	Float DOWN	Below 1 Ω (Continuity)

HINT:
If there is no problem after finishing the above check, adjust the brake fluid level to the MAX level.

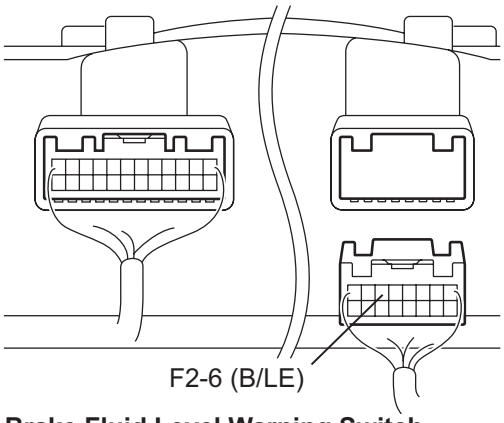
NG → **REPLACE BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY (BRAKE FLUID LEVEL WARNING SWITCH)**

OK

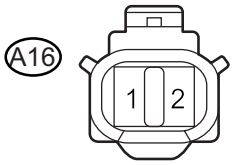
BC

10	CHECK HARNESS AND CONNECTOR (BRAKE FLUID LEVEL WARNING SWITCH TO COMBINATION METER)

Combination Meter Wire Harness View:



Brake Fluid Level Warning Switch Harness Side Connector Front View:



C136033E01

(a) Disconnect the combination meter assembly connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
A16-1 - F2-6 (B/LE)	Below 1 Ω
F2-6 (B/LE) - Body ground	10 kΩ or higher
A16-2 - Body ground	Below 1 Ω

(c) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (BRAKE FLUID LEVEL WARNING SWITCH TO COMBINATION METER)**

OK

11	INSPECT COMBINATION METER ASSEMBLY

(a) Connect the intelligent tester to the DLC3.
(b) Select the "ACTIVE TEST" on the tester (See page BC-25).

ACTIVE TEST: ABS

Item	Vehicle Condition / Test Details	Diagnostic Note
BRAKE WARN LIGHT	Turn brake warning light ON / OFF	Observe combination meter

(c) Check the ABS warning light operation.

OK:

The BRAKE warning light turns on or off in accordance with the intelligent tester.

Result

Condition	Proceed to
OK	A
OK (When troubleshooting in accordance with the PROBLEM SYMPTOMS TABLE)	B
NG	C

BC

B → PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page BC-16)

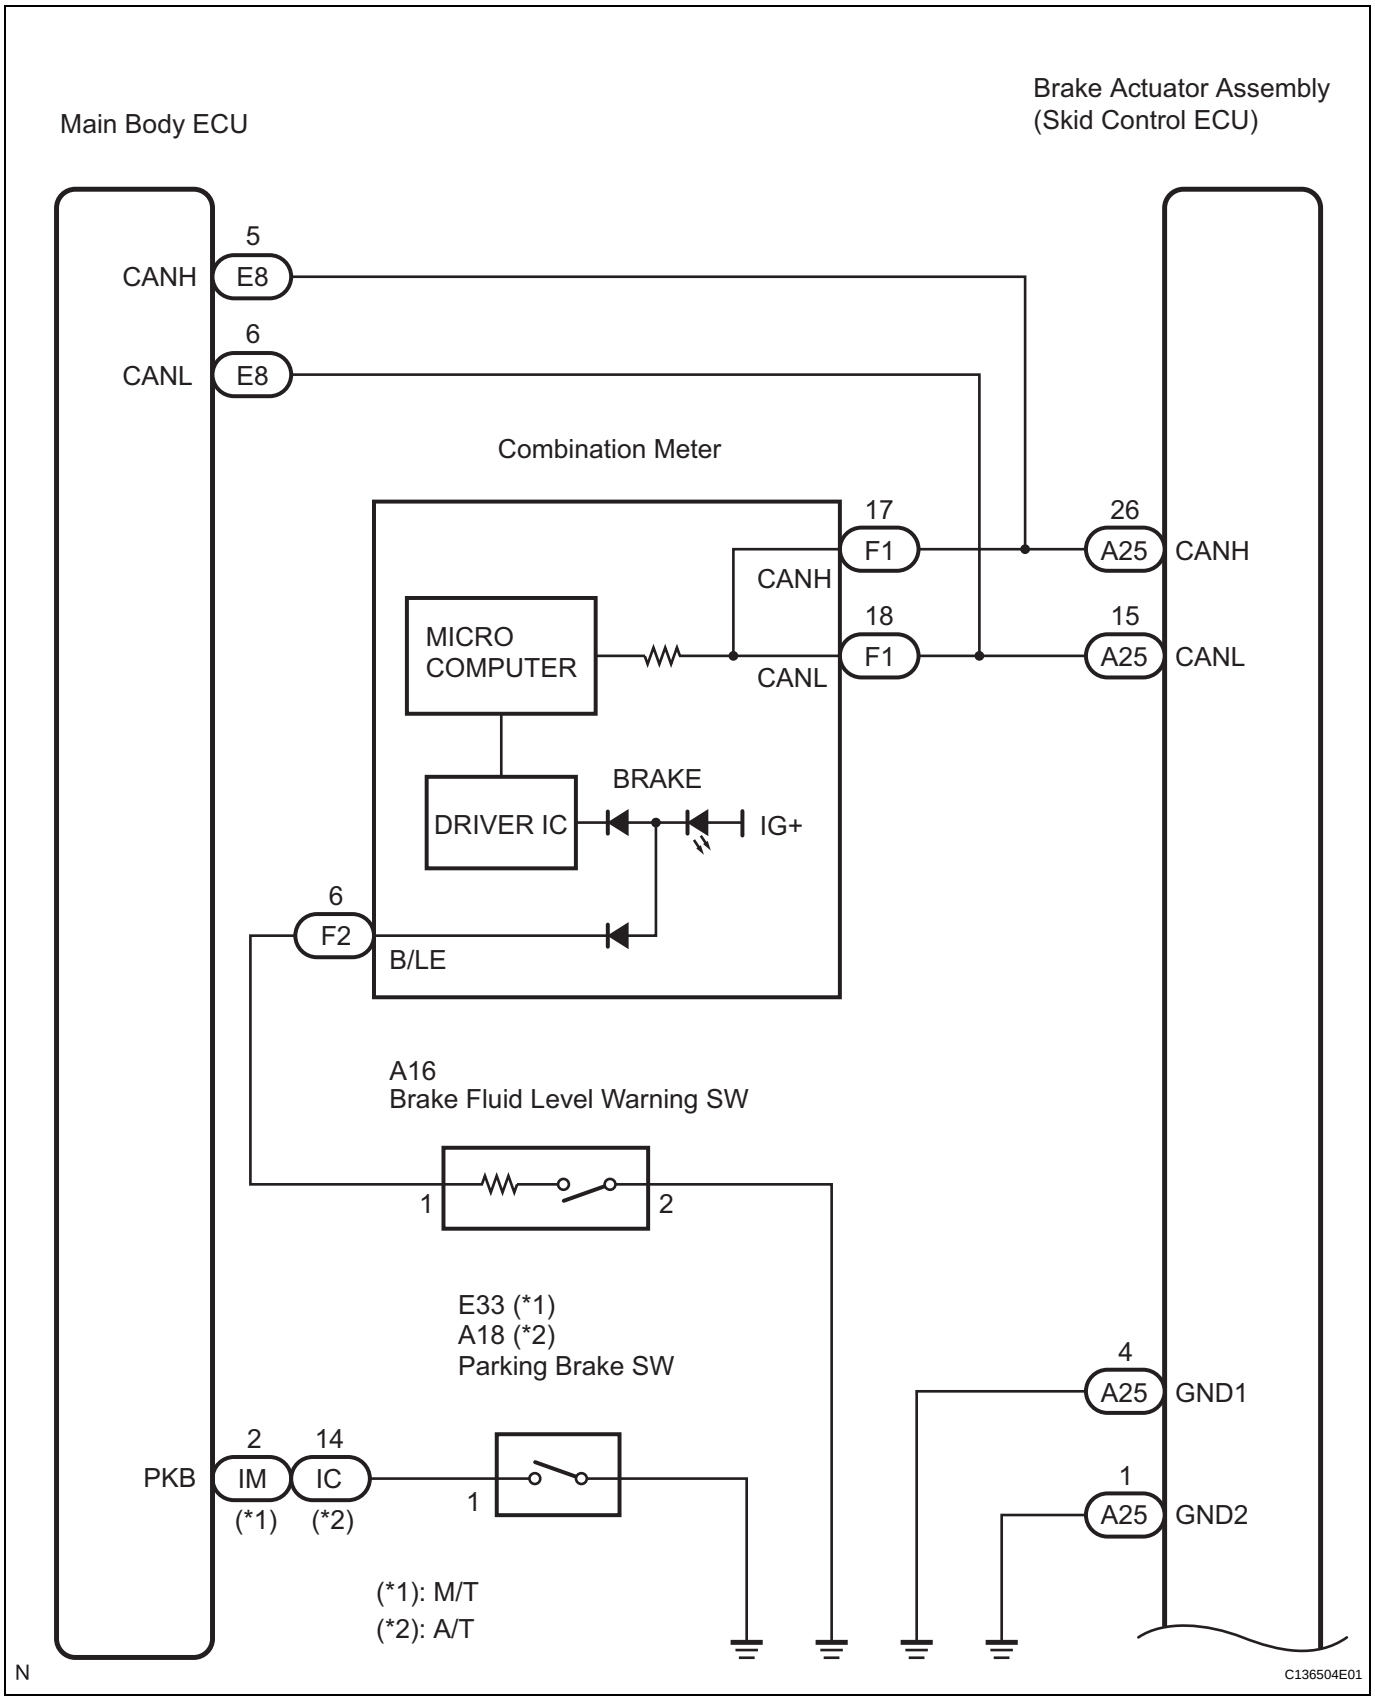
C → REPLACE COMBINATION METER ASSEMBLY (See page ME-63)

A

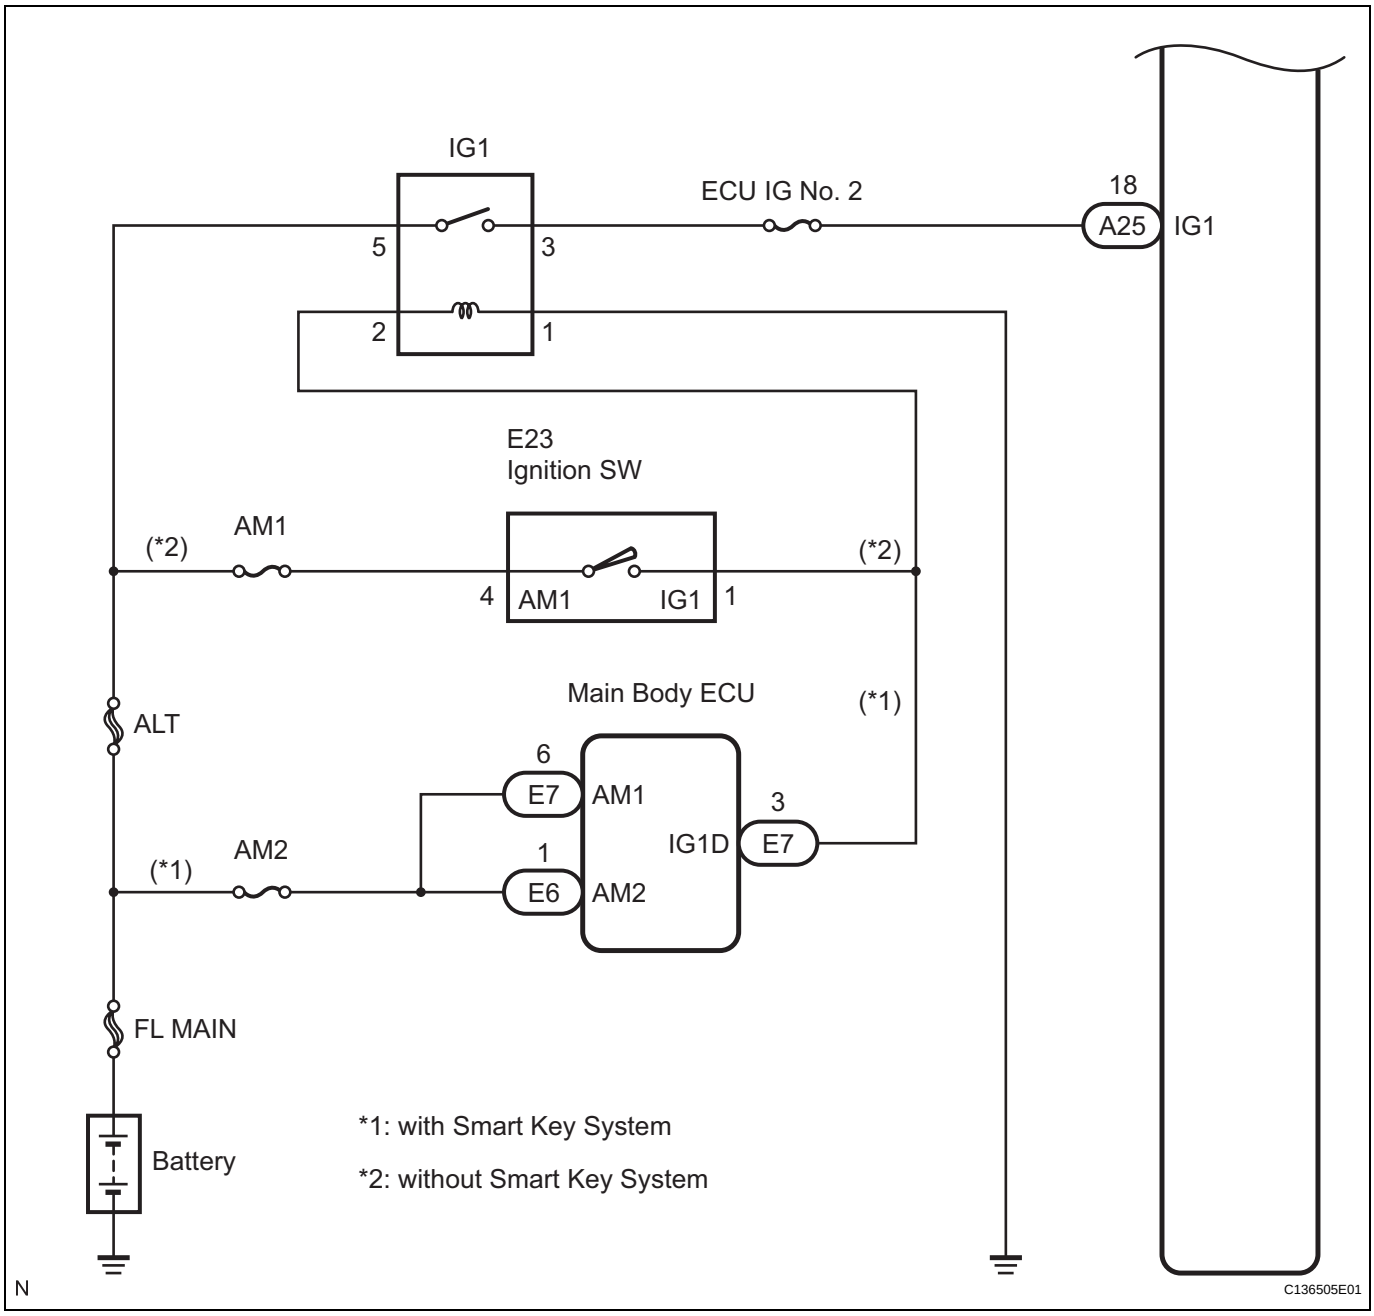
REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

Brake Warning Light does not Come ON

WIRING DIAGRAM



BC



INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	INSPECT CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication system DTC is output (See page BC-21).

Result

Condition	Proceed to
CAN communication system DTC is not output	A
CAN communication system DTC is output	B

B → **REPAIR CAN COMMUNICATION SYSTEM (See page CA-8)**

A

2	INSPECT BRAKE WARNING LIGHT

HINT:
When disconnecting the skid control ECU connector, the brake warning light comes on.

(a) Turn the ignition switch off.
(b) Disconnect the skid control ECU connector.
(c) Turn the ignition switch on (IG).
(d) Check that the brake warning light comes on.
OK:
The brake warning light comes on.

NG → **Go to step 3**

OK

REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

3	INSPECT COMBINATION METER ASSEMBLY

(a) Connect the intelligent tester to the DLC3.
(b) Select the "ACTIVE TEST" on the tester (See page BC-25).

ACTIVE TEST: METER

Item	Vehicle Condition / Test Details	Diagnostic Note
BRAKE WARN LIGHT	Turn brake warning light ON / OFF	Observe combination meter

(c) Check the ABS warning light operation.
OK:
The BRAKE warning light turns on or off in accordance with the intelligent tester.

NG → **REPLACE COMBINATION METER ASSEMBLY (See page ME-63)**

OK

REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

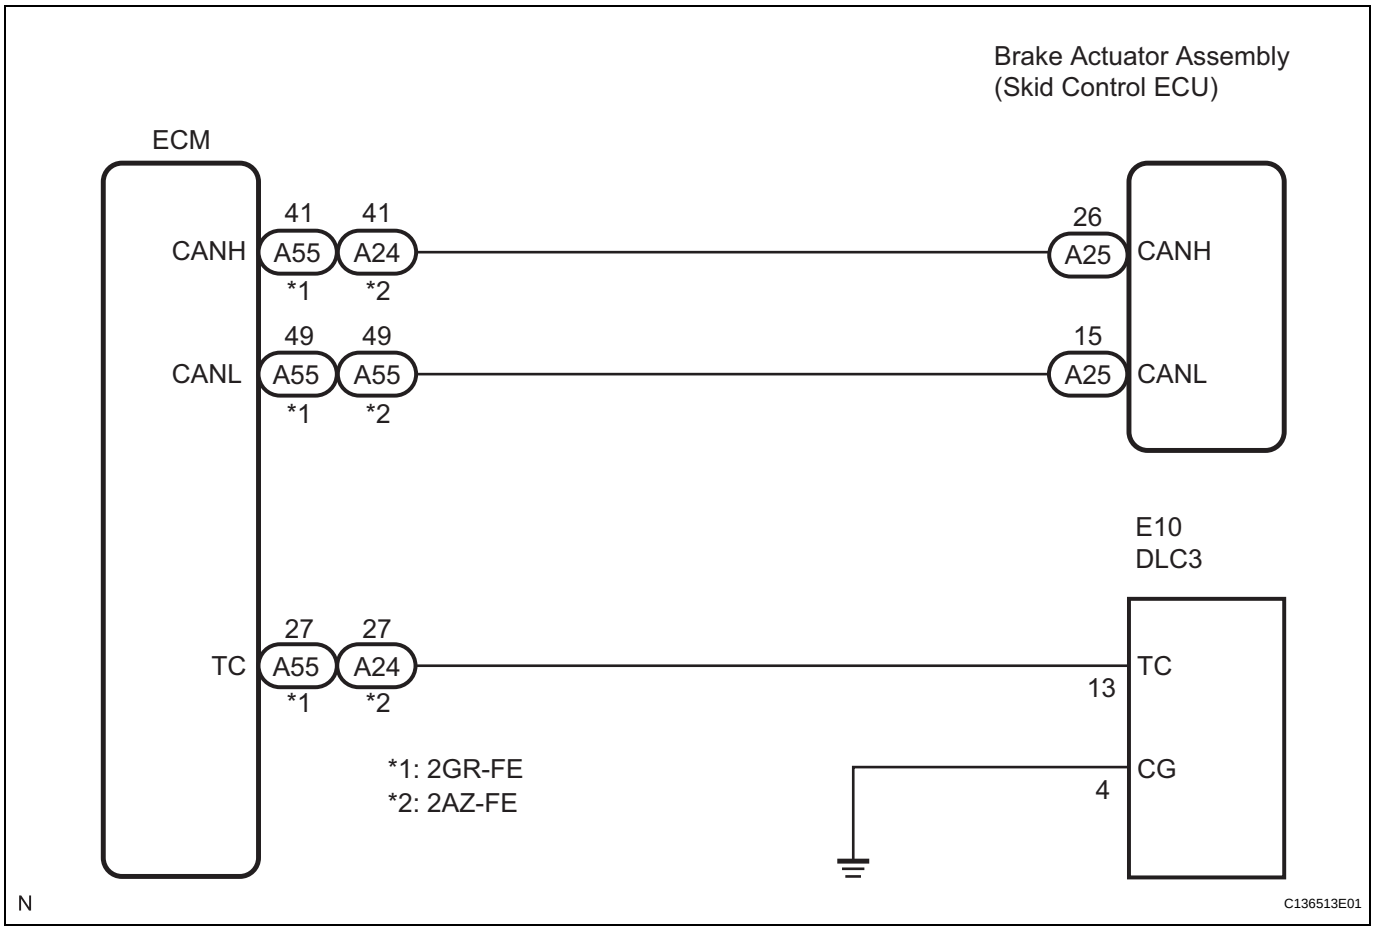
BC

TC and CG Terminal Circuit

DESCRIPTION

DTC output mode is set by connecting terminals TC and CG of the DLC3.
DTCs are indicated by the blinking pattern of the ABS warning light.

WIRING DIAGRAM



HINT:
When warning lights continue to blink, a ground short in the wiring of terminal TC of the DLC3 or an internal ground short in one or more ECUs is suspected.

INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication DTC is output (See page BC-21).

Result

Result	Proceed to
CAN communication system DTC is output	A
CAN communication system DTC is not output	B

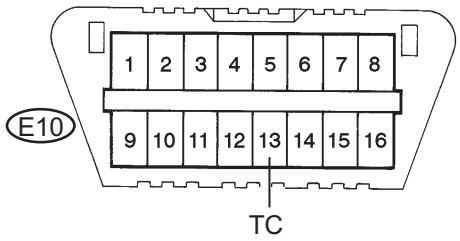
B → Go to step 2

A

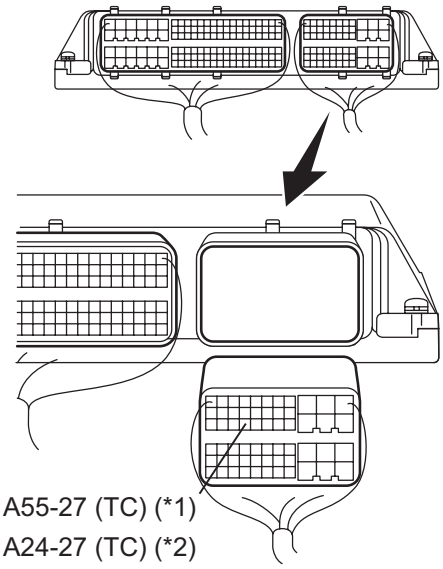
GO TO CAN COMMUNICATION SYSTEM (See page CA-8)

2 CHECK HARNESS AND CONNECTOR (ECM TO DLC3)

DLC3:



ECM Wire Harness View:



(*1): 2GR-FE (*2): 2AZ-FE

C136035E02

(a) Disconnect the ECM connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

2GR-FE

Tester Connection	Specified Condition
A55-27 (TC) - E10-13 (TC)	Below 1 Ω
E10-13 (TC) - Body ground	10 kΩ or higher

2AZ-FE

Tester Connection	Specified Condition
A24-27 (TC) - E10-13 (TC)	Below 1 Ω
E10-13 (TC) - Body ground	10 kΩ or higher

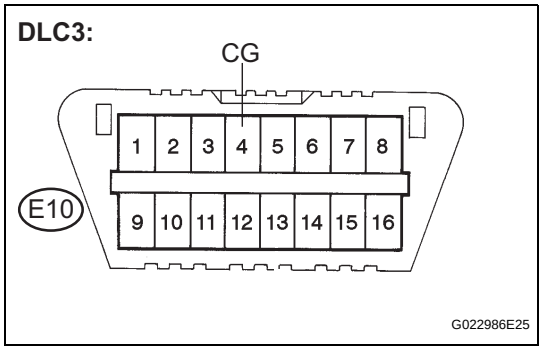
(c) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (TC TERMINAL CIRCUIT)**

OK

BC

3	CHECK HARNESS AND CONNECTOR (DLC3 CG CIRCUIT)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

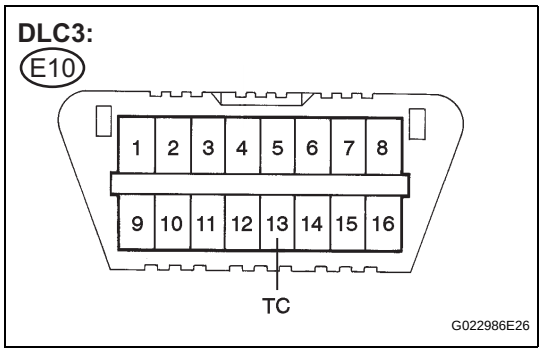
Tester Connection	Specified Condition
E10-4 (CG) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (CG TERMINAL CIRCUIT)**

OK

4	REPAIR OR REPLACE HARNESS OR CONNECTOR (TC TERMINAL CIRCUIT)

BC



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
E10-13 (TC) - Body ground	10 kΩ or higher

NG → **CHECK HARNESS AND CONNECTOR (TC TERMINAL CIRCUIT)**

OK

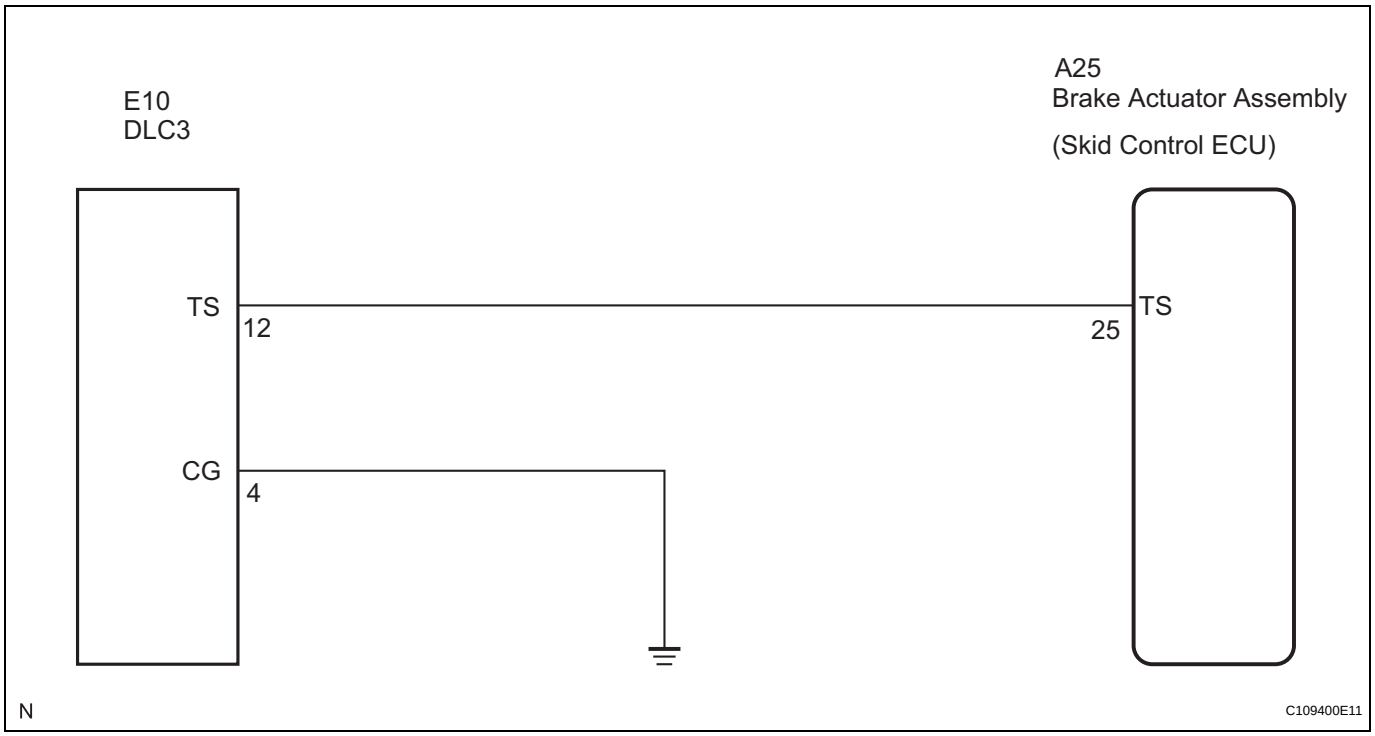
REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

TS and CG Terminal Circuit

DESCRIPTION

In the Test Mode (signal check), a malfunction of the speed sensor that cannot be detected when the vehicle is stopped can be detected while driving.
Transition to the sensor check mode can be performed by connecting terminals TS and CG of the DLC3 and turning the ignition switch from off to on (IG).

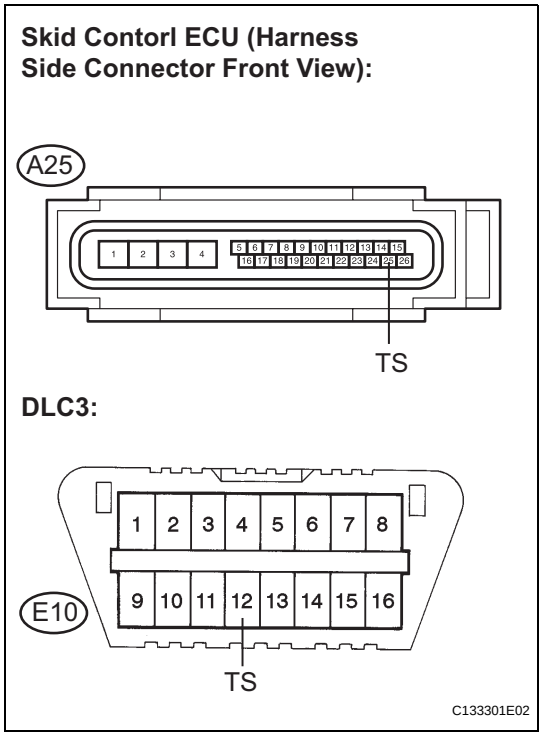
WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU TO DLC3)



(a) Disconnect the skid control ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

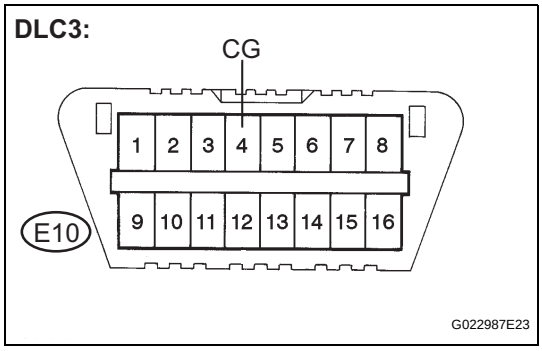
Tester Connection	Condition	Specified Condition
A25-25 (TS) - E10-12 (TS)	Always	Below 1 Ω

(c) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SKID CONTROL ECU TO DLC3)**

OK

2 CHECK HARNESS AND CONNECTOR (DLC3 TO BODY GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

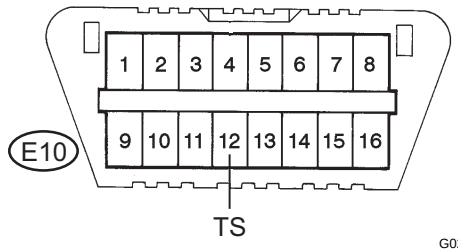
Tester Connection	Condition	Specified Condition
E10-4 (CG) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (DLC3 TO BODY GROUND)**

OK

3	CHECK HARNESS AND CONNECTOR (DLC3 TO BODY GROUND)

DLC3:



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E10-12 (TS) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (DLC3 TO BODY GROUND)**

OK

REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

VEHICLE STABILITY CONTROL SYSTEM (for ADVICS Made)

PRECAUTION

1. EXPRESSIONS OF IGNITION SWITCH

The type of ignition switch used on this model differs according to the specifications of the vehicle.
The expressions listed in the table below are used in this section.

Expression	Switch Type	
	Ignition Switch (Position)	Engine Switch (Condition)
Ignition switch off	LOCK	off
Ignition switch on (IG)	ON	on (IG)
Ignition switch on (ACC)	ACC	on (ACC)
Engine start	START	start

BC

2. TROUBLESHOOTING PRECAUTIONS

(a) When there is a malfunction with terminal contact points or part installation problems, removal and installation of the suspected problem parts may return the system to the normal condition either completely or temporarily.
(b) In order to determine the malfunctioning area, be sure to check the conditions at the time the malfunction occurred, such as DTC output and the Freeze Frame Data, and record it before disconnecting each connector or removing and installing parts.
(c) Since the system may be influenced by malfunctions in systems other than the brake control system, be sure to check for DTCs in other systems.

3. HANDLING PRECAUTIONS

(a) Do not remove or install VSC parts such as the steering angle sensor or yaw rate sensor (acceleration sensor included) except when required, as they cannot be adjusted correctly after removal or installation.
(b) Be sure to perform preparation before work and confirmation after work is completed by following the direction in the repair manual when working on the VSC system.
(c) Be sure to remove and install the ECU, actuator, each sensor, etc. with the ignition switch off unless it is not specified in the inspection procedure.
(d) If the ECU, brake actuator, or a sensor has been removed and installed, it is necessary to check the system for problems after the parts have been reassembled. Check for DTCs using the intelligent tester, also check that system functions and signals received by the ECU are normal using Test Mode.

4. DTC PRECAUTION

(a) Warnings for some DTCs cannot be cleared only by repairing the malfunctioning parts. If the warning is displayed after repair work, the DTC should be cleared after turning the ignition switch off.
NOTICE:
If a DTC for a malfunctioning part reappears after it was cleared, then it has been stored again.

5. CHASSIS DYNAMOMETER PRECAUTION

(a) Enter Test Mode to disable TRAC and VSC control when using a chassis dynamometer.
HINT:
The vehicle may move unexpectedly out of the dynamometer because of TRAC and VSC operations.
NOTICE:
- **Make sure that the VSC warning light is blinking (for vehicles without the multi information display) or "CHECK VSC SYSTEM" is displayed on the multi information display (for vehicles with the multi information display) (Test Mode is achieved).**
- **Secure the vehicle with the lock chain for safety.**

6. CAN COMMUNICATION SYSTEM PRECAUTIONS

(a) The CAN communication system is used for the data communication between the skid control ECU, the steering angle sensor, the yaw rate sensor (acceleration sensor included) and other ECUs. If there is trouble in the CAN communication line, corresponding DTCs in the communication line are output.

(b) If the DTC in the CAN communication line is output, repair the malfunction in the communication line and troubleshoot the VSC system while data communication is normal.

(c) In order to enable CAN communication, a specific type of wiring is used for the CAN communication lines. The wiring used for each communication line is a twisted pair of wires that have an equal length. A bypass wire should not be used, because the data being transmitted will be corrupted.

BC

SYSTEM DESCRIPTION

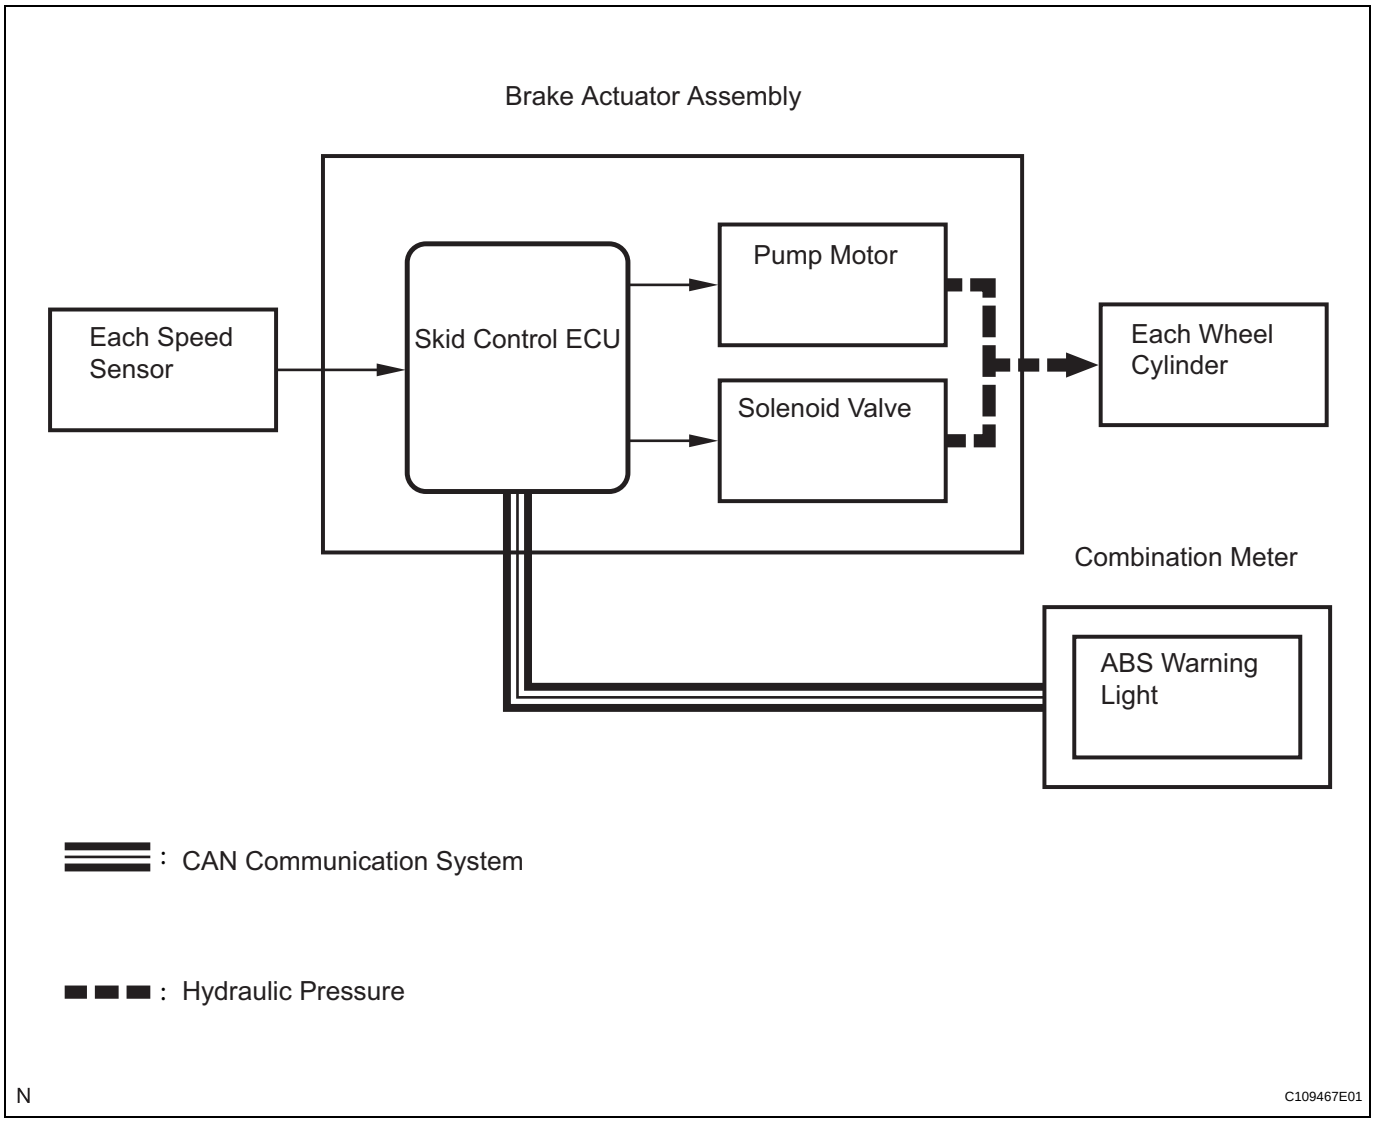
1. FUNCTION DESCRIPTION

HINT:

- The skid control ECU is located within the brake actuator assembly.
- The yaw rate sensor and acceleration sensor are combined in a single unit. This unit communicates with the skid control ECU through CAN communication.

(a) ABS (Anti-lock Brake System)

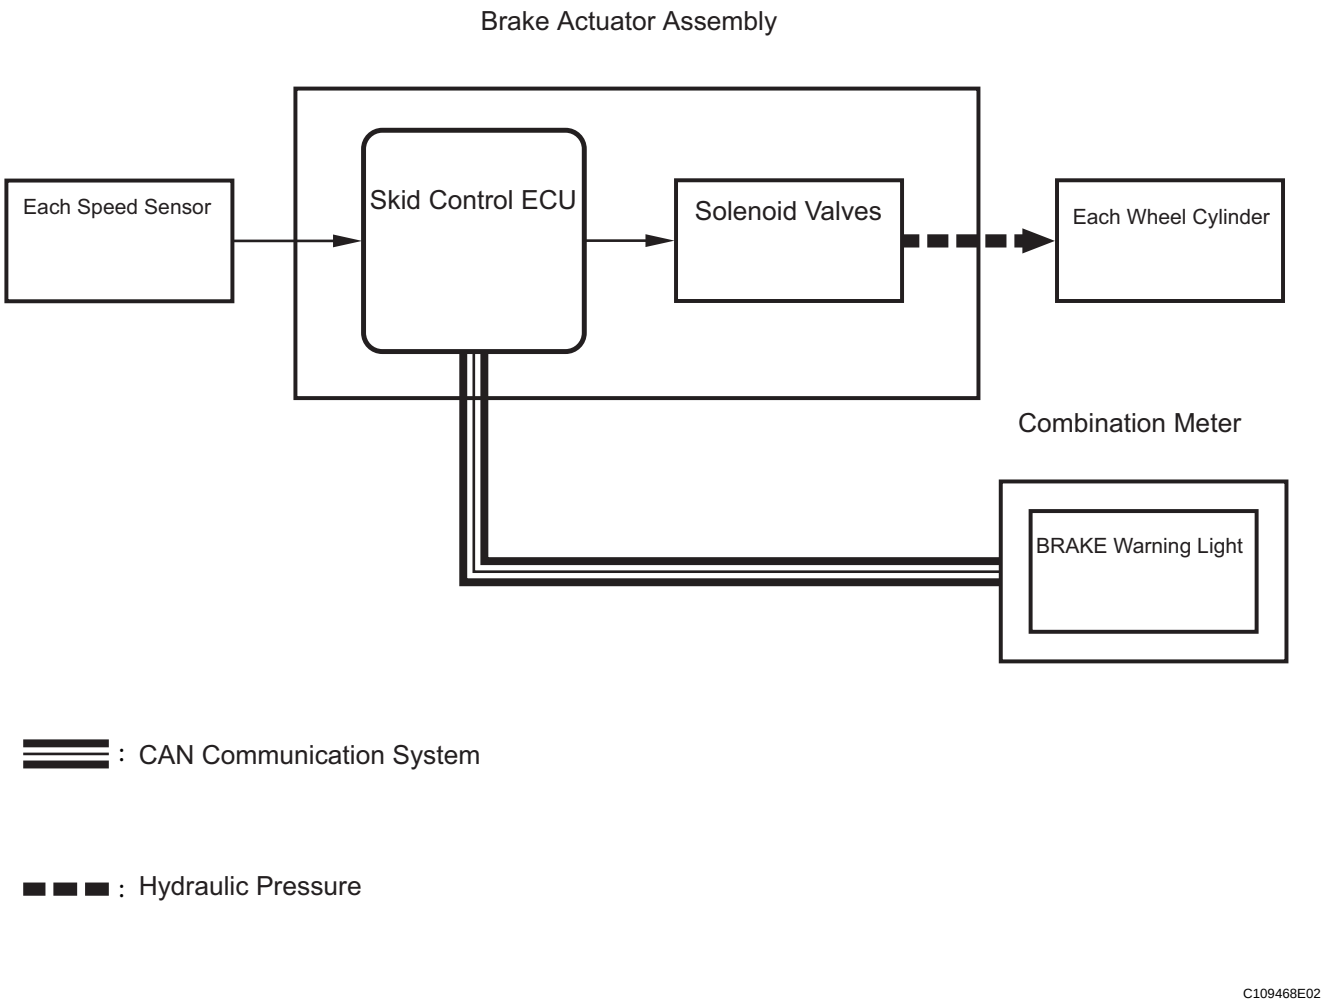
The ABS helps prevent the wheels from locking when the brakes are applied firmly or when braking on a slippery surface.



(1) Operation description
The skid control ECU detects wheel lock based on speed signals it receives from the wheel speed sensors. Based on this information, the skid control ECU controls the pump motor and solenoid valves. The pump motor and solenoid valves are used to prevent wheel lock by controlling the hydraulic pressure applied to the brakes at each wheel. The ABS warning light will come on when the system is malfunctioning.

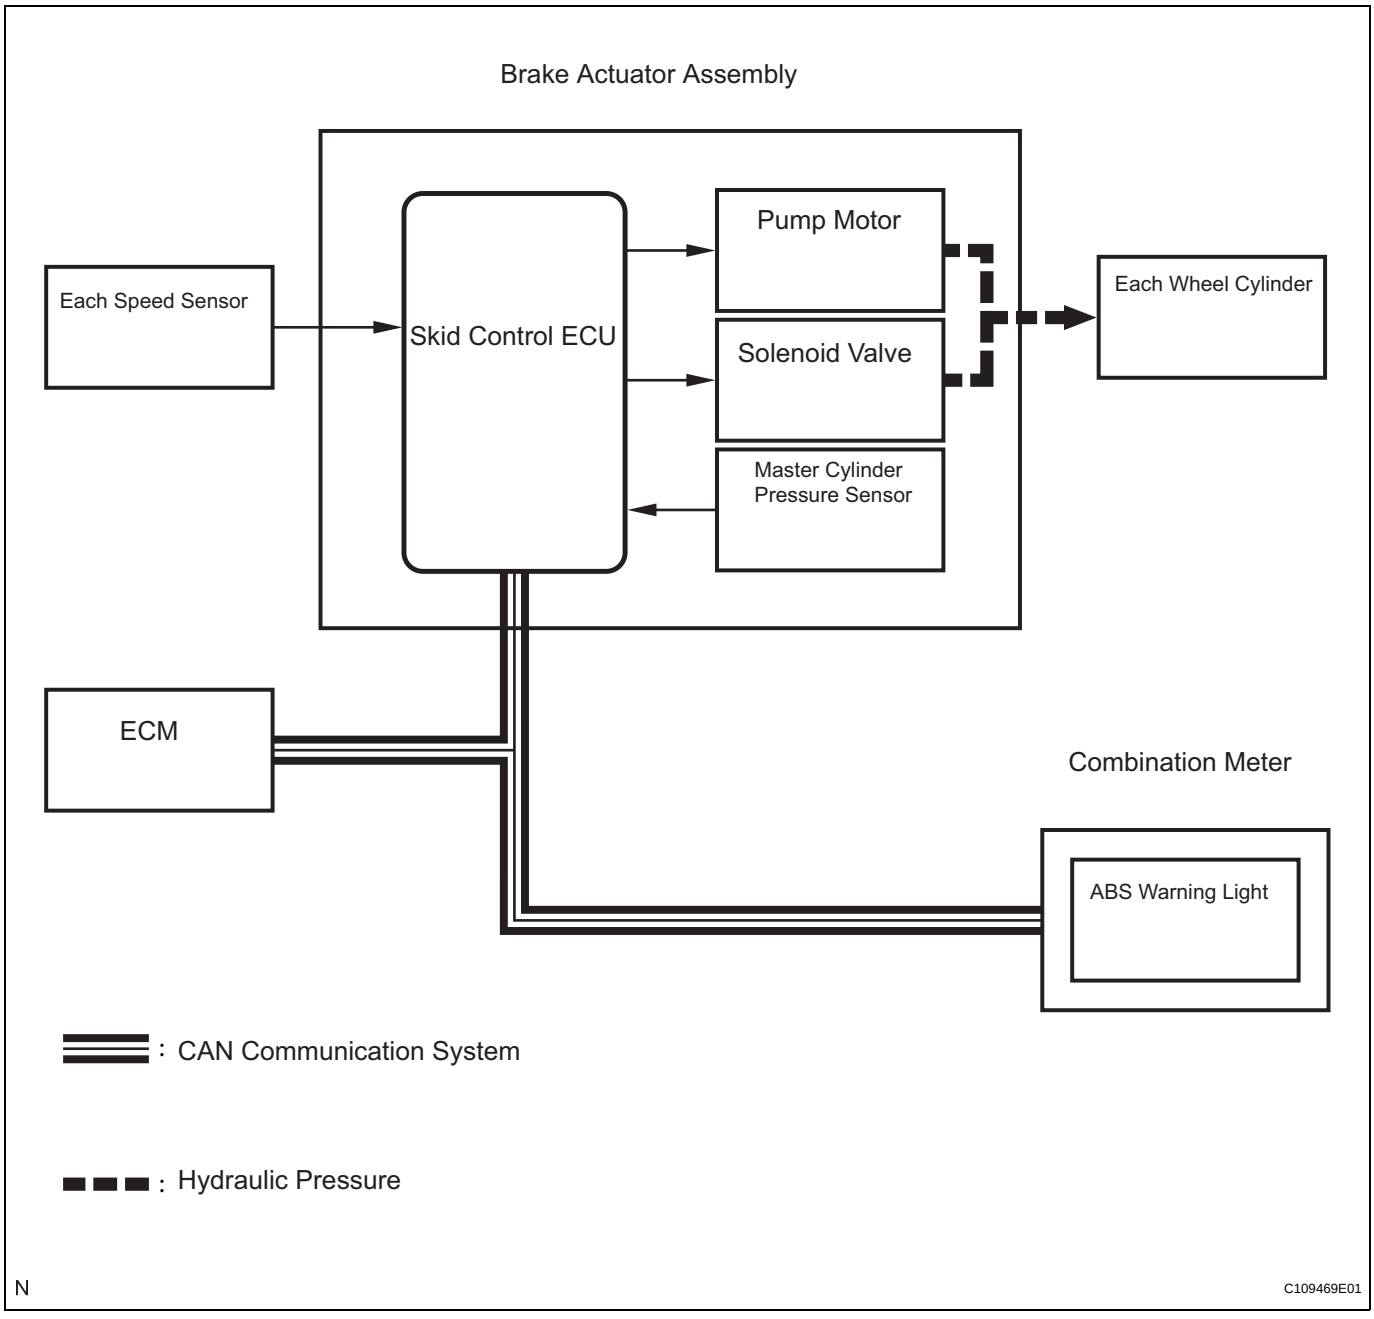
(b) EBD (Electronic Brake force Distribution)
The EBD control utilizes ABS, and performs proper brake force distribution between the front and rear wheels in accordance with driving conditions. When braking while cornering, it also controls the brake forces of the right and left wheels, helping to maintain vehicle behavior.

BC



(1) Operation description
The skid control ECU receives a speed signal from each wheel speed sensor, and uses these signals to detect locking of the wheels. The ECU uses this information in order to determine appropriate control of the solenoid valves.
The solenoid valves control the hydraulic pressure applied to the brake cylinder at each wheel. In this way, the solenoid valves are used to control the brake power split between the front and rear, and left and right wheels. The BRAKE warning light will come on if there is a malfunction in the EBD system.

(c) BA (Brake Assist)
The primary purpose of the brake assist system is to provide auxiliary brake force to assist the driver who cannot generate a large enough brake force during emergency braking, thus helping to maximize the brake performance of the vehicle.

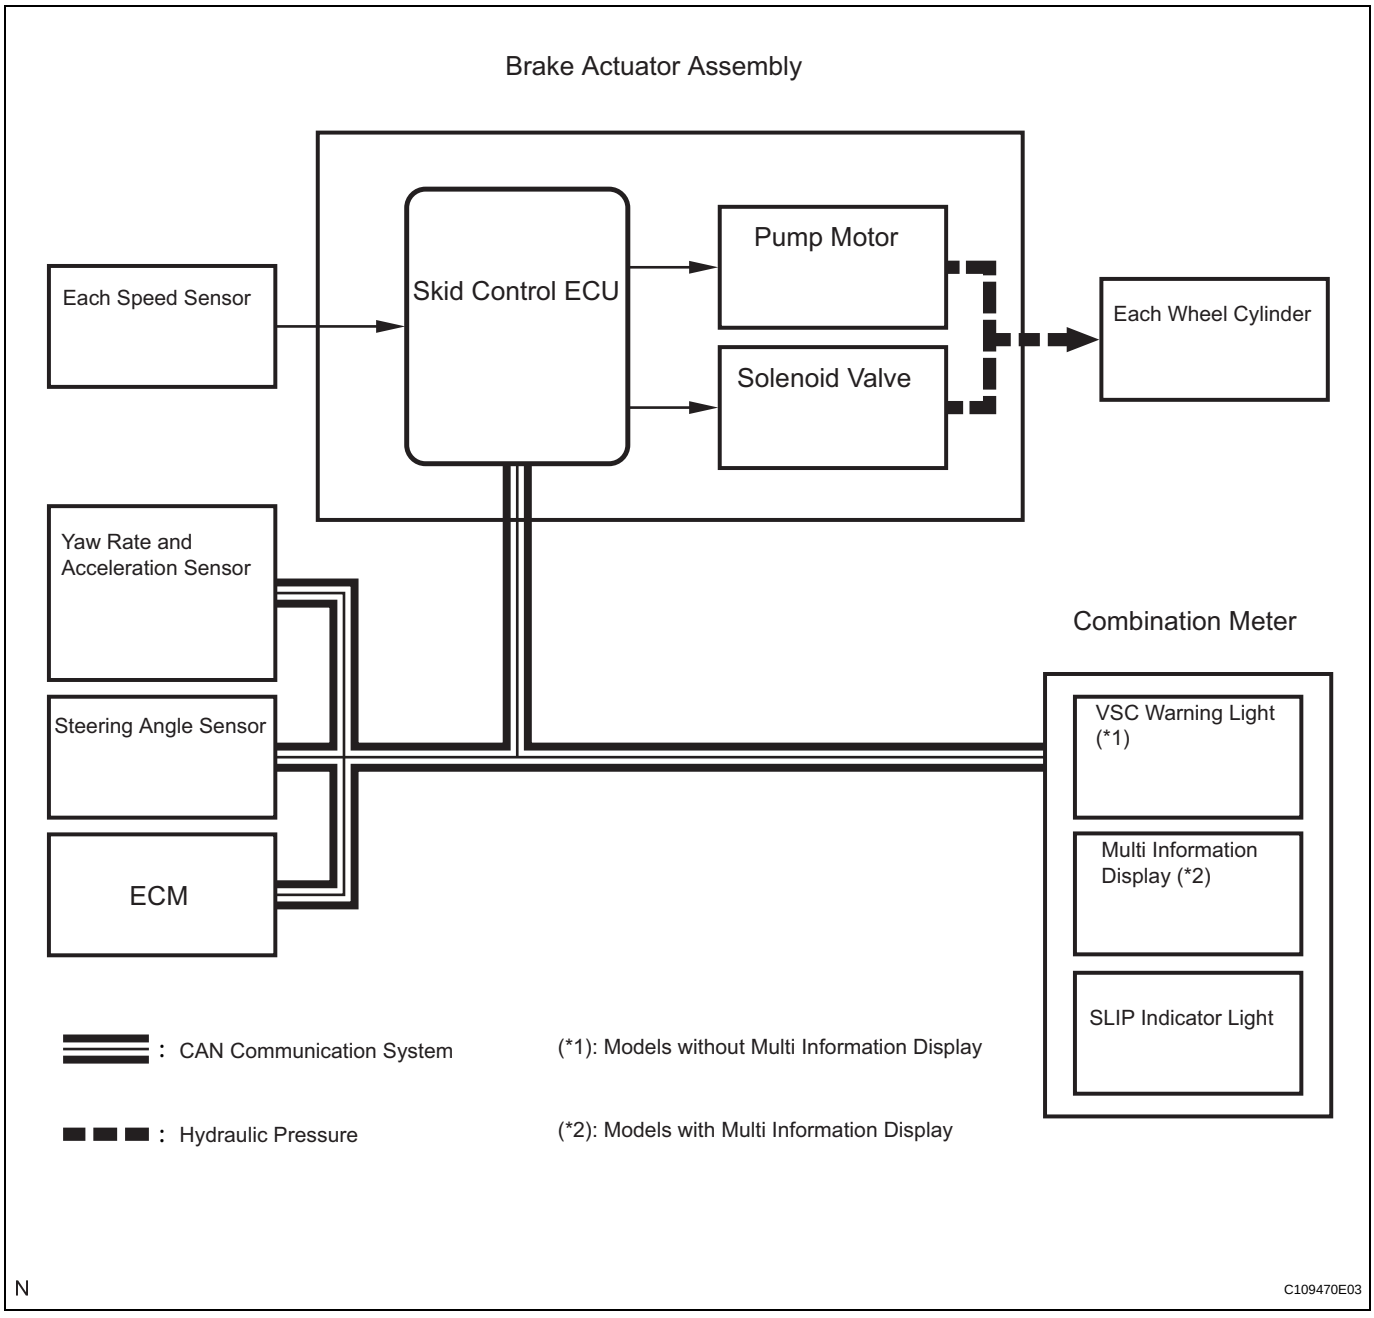


(1) Operation description

The skid control ECU receives the speed signal from each speed sensor and the fluid pressure signal from the master cylinder pressure sensor to determine whether brake assist is necessary. If brake assist is necessary, the skid control ECU sends control signals to the pump motor and solenoid. The pump and the solenoid valve then control the pressure applied to each wheel cylinder.

The ABS warning light comes on to indicate a malfunction in the BA system.

(d) TRAC (Traction Control)
The TRAC system helps prevent the drive wheels from slipping when the driver depresses the accelerator pedal excessively when starting off or accelerating on a slippery surface.



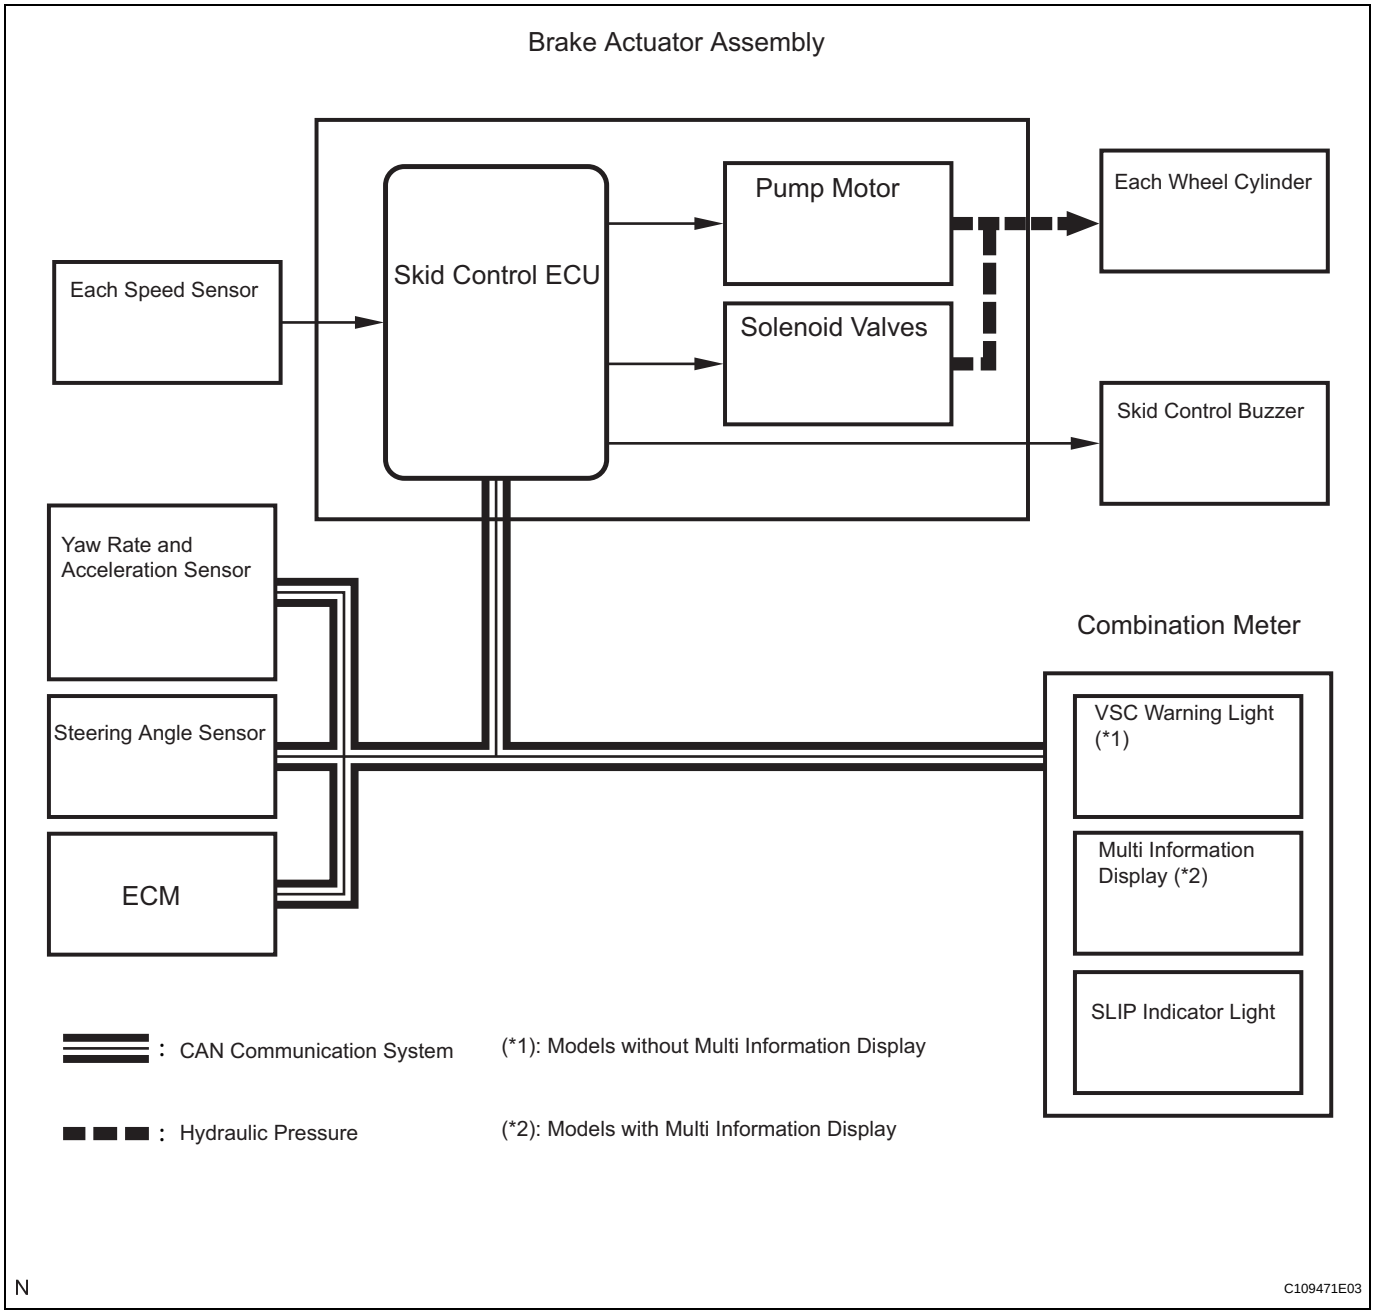
BC

(1) Operation description

The skid control ECU detects wheelspin by receiving signals from each speed sensor and the ECM via CAN communication. The skid control ECU controls engine torque with the ECM via CAN communication and brake hydraulic pressure through the pump and solenoid valve.

The SLIP indicator light blinks when the system is operating. When there is a malfunction in the TRAC system, both VSC warning light (models without multi information display) and SLIP indicator light will come on and the DTC will be displayed on the multi information display (models with multi information display).

(e) VSC (Vehicle Stability Control)
The VSC system helps prevent the vehicle from slipping sideways as a result of strong front or rear wheel skid during cornering.



(1) Operation description

The skid control ECU determines the vehicle operating conditions based on signals received from the wheel speed sensors, yaw rate and acceleration sensor, and steering angle sensor. The skid control ECU sends signals via CAN communication to the ECM in order to control engine torque. The skid control ECU controls brake hydraulic pressure using the pump and solenoid valves.

The SLIP indicator light will blink, and the skid control buzzer will sound when the system is operating. If a malfunction occurs in the VSC system, both the VSC warning light (models without multi information display) and the SLIP indicator light will come on. In addition, the DTC will appear on the multi information display (models with multi information display).

2. ABS with EBD, BA, TRAC and VSC OPERATION

(a) The skid control ECU calculates vehicle stability tendency based on the signals from the speed sensor, yaw rate and acceleration sensor, and steering angle sensor. In addition, it evaluates the results of the calculations to determine whether any control actions (control of the engine output torque by electronic throttle control and of the wheel brake pressure by the brake actuator assembly) should be implemented.

(b) The SLIP indicator blinks and the skid control buzzer sounds to inform the driver that the VSC system is operating. The SLIP indicator also blinks when traction control is operating, and the operation being performed is displayed.

3. FAIL SAFE

(a) When a failure occurs in the ABS with BA, TRAC and VSC systems, the ABS warning, VSC warning (models without multi information display), and SLIP indicator lights come on or the DTC will be displayed on the multi information display (models with multi information display) and ABS with BA, TRAC and VSC operations are prohibited. In addition, when there is a failure that disables the EBD operation, the BRAKE warning light also comes on and the EBD operation is prohibited.

(b) If control is prohibited due to a malfunction during operation, control will be disabled gradually. This is to avoid sudden vehicle instability.

4. INITIAL CHECK

(a) When the vehicle speed first becomes approximately 4 mph (6 km/h) or more after the ignition switch is turned on (IG), each solenoid valve and motor of the brake actuator is sequentially activated to perform an electrical check. During the initial check, the operating sound of solenoid valve and motor can be heard from the engine compartment, but this is not a malfunction.

5. INSPECTION MODE

(a) VSC operation can be disabled by operating the intelligent tester.
HINT:
Refer to the intelligent tester operator's manual for further details.

6. FUNCTION OF COMPONENTS

Components	Function
Speed sensor	Detects the wheel speed and sends the signal to the skid control ECU.
Skid control ECU (housed in brake actuator assembly)	• Processes the signals sent from each sensor to control the ABS, BA, TRAC, and VSC. • Sends and receives the control signals to or from the ECM, yaw rate and acceleration sensor, and steering angle sensor, etc. via CAN communication.
Brake actuator assembly	• Consists of the master cylinder cut solenoid valve, retention solenoid valve, pressure reduction solenoid valve, pump motor, and reservoir, and adjusts the brake fluid pressure applied to each wheel cylinder. • Houses the skid control ECU.
Solenoid relay	• Supplies power to each solenoid. • Housed in the skid control ECU.
Motor relay (VSC NO. 2 relay)	Supplies power to the pump motor.
Fail safe relay (VSC NO. 1 relay)	Cuts off power to the motor when the pump motor circuit malfunctions.
Steering angle sensor	• Installed in the combination switch. • Detects the steering amount and direction and sends the signals to the skid control ECU via CAN communication. • Has the magnetic resistance element which detects the rotation of the magnet housed in the detection gear in order to detect the changes of magnetic resistance and the steering amount and direction.
Yaw rate and acceleration sensor	• Acceleration sensor measures the capacity of the condenser that changes the distance between the electrodes depending on G force, which occurs when the vehicle is accelerated, and converts the measured value into electrical signals. • Yaw rate sensor detects the vehicle's angular velocity (yaw rate) in the vertical direction based on the amount and direction of the piezoelectric ceramics deflection. • Sends signals to the skid control ECU via CAN communication.
Master cylinder pressure sensor	• Detects the fluid pressure in the master cylinder. • Housed in the brake actuator assembly.
Stop light switch	Detects the brake operating conditions and inputs the results to the skid control ECU.
ECM	Controls the engine output when TRAC and VSC are operating with the skid control ECU via CAN communication.
Skid control buzzer	Intermittently sounds to inform the driver that the VSC is operating.
ABS warning light	• Comes on to inform the driver that a malfunction in the ABS or BA has occurred. • Blinks to output DTC.
BRAKE warning light	• Comes on to inform the driver that the parking brake is ON when the system is normal, or the brake fluid has decreased. • Comes on to inform the driver that a malfunction in the EBD has occurred.

Components	Function
VSC warning light (*1)	• Comes on to inform the driver that a malfunction in the VSC system has occurred. • Blinks to output DTC.
Multi information display (*2)	• Displays to inform the driver that a malfunction in the VSC system has occurred. • Displays to output DTC.
SLIP indicator light	Blinks to inform the driver that TRAC and VSC are operating.
Master caution indicator light	Comes on to inform the driver that a malfunction.

(*1): Models without multi information display
(*2): Models with multi information display

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
The intelligent tester can be used at steps 3, 7, and 10.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS

(a) Interview the customer and confirm the trouble (See page IN-45).

NEXT

BC

3	CHECK DTC AND FREEZE FRAME DATA

(a) Check and record a DTC and Freeze Frame Data.
(b) Clear the DTC and Freeze Frame Data (See page BC-141).
(c) Reconfirm the DTC.
  (1) Reconfirm the DTC based on the recorded DTC and Freeze Frame Data (See page BC-141 for DTC Check/Clear, and BC-144 for Freeze Frame Data).
  HINT:
  If any of the DTCs U0100/65, U0123/62, U0124/95, and U0126/63 is output together with a CAN communication DTC, first check the appropriate sensor for a momentary open circuit (See page BC-118).

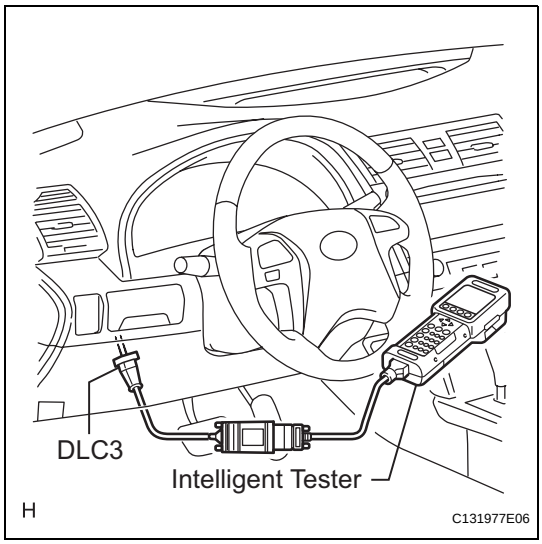
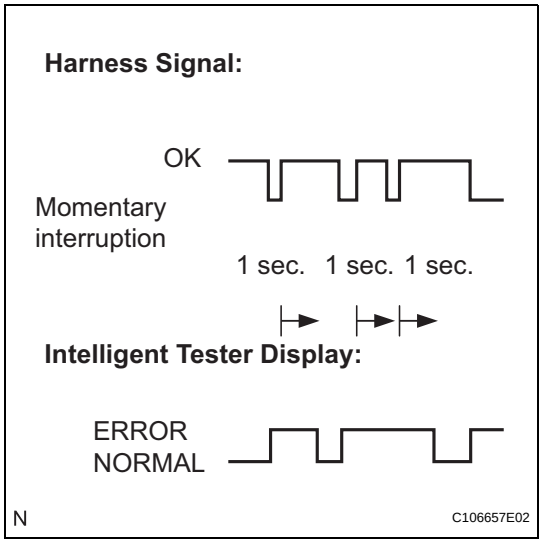
CHECK FOR INTERMITTENT PROBLEMS

1. CHECK FOR INTERMITTENT PROBLEMS

HINT:
A momentary interruption (open circuit) in the connectors and/or wire harness between the sensors and ECUs can be detected using the ECU Data List function of the intelligent tester.

(a) Turn the ignition switch off and connect the intelligent tester to the DLC3.

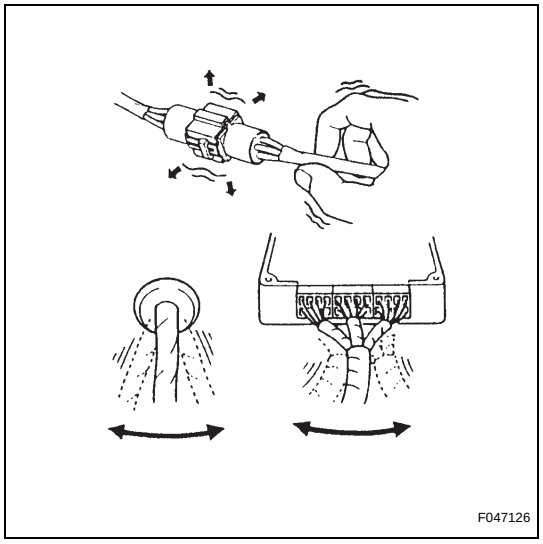




(b) Turn the ignition switch on (IG). Follow the directions on the intelligent tester to display the Data List and select areas where momentary interruption should be monitored.
HINT:
- A momentary interruption (open circuit) cannot be detected for 3 seconds after the ignition switch is turned on (IG) (initial check).
- If the status remains on (ERROR displayed), check the continuity between the ECU and the sensors, or between ECUs.
- The ERROR display on the intelligent tester remains on for 1 second after the harness signal changes from momentary interruption (open circuit) to normal condition.

Item (Display)	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
FR SPD OPN	FR speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
FL SPD OPN	FL speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
RR SPD OPN	RR speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
RL SPD OPN	RL speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
EFI COM OPN	EFI communication open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-

Item (Display)	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
YAW RATE OPN	Yaw rate sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
DECELERAT OPN	Acceleration sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
STEERING OPN	Steering angle sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
M/C OPN	Master cylinder pressure sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-



(c) While observing the screen, gently jiggle the connector or wire harness between the ECU and sensors, or between ECUs.

Result:

ERROR display does not change.

HINT:

The connector and/or wire harness will be in momentary interruption (open circuit) if the display changes. Repair or replace the connector and/or wire harness as one of them is faulty.

BC

CALIBRATION

1. DESCRIPTION

- After replacing the VSC relevant components or performing "Front wheel alignment adjustment", clear and read the sensor calibration data.
- Follow the chart to perform calibration.

Replacing Parts / Operation	Necessary Operation
Skid control ECU	Yaw rate and acceleration sensor zero point calibration.
Yaw rate and acceleration sensor	1. Clearing zero point calibration data. 2. Yaw rate and acceleration sensor zero point calibration.
Front wheel alignment adjustment	1. Clearing zero point calibration data. 2. Yaw rate and acceleration sensor zero point calibration.

2. OBTAIN ZERO POINT OF YAW RATE AND ACCELERATION SENSOR (INTELLIGENT TESTER)

NOTICE:

- **While obtaining the zero point, keep the vehicle stationary and do not vibrate, tilt, move, or shake it. (Do not start the engine.)**
- **Be sure to perform this procedure on a level surface (with an inclination of less than 1 degree).**

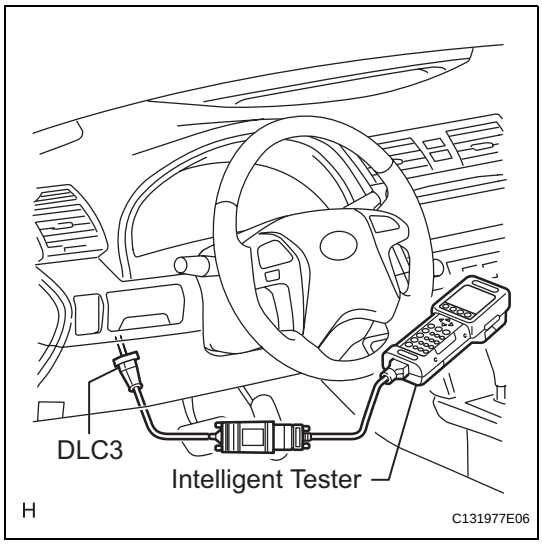
(a) Clear the zero point calibration data.

(1) Turn the ignition switch off.

(2) Connect the intelligent tester to the DLC3.

(3) Check that the steering wheel is centered and move the shift lever to the P position (A/T) or apply the parking brake (M/T).

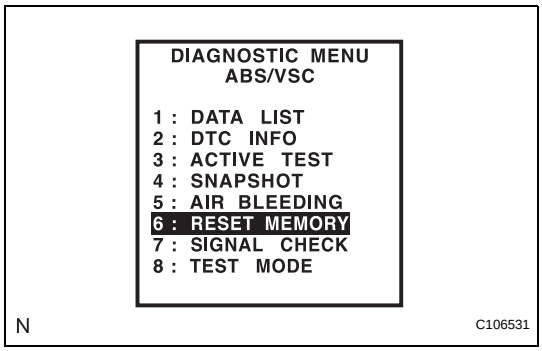
(4) Turn the ignition switch on (IG).



(5) Operate the intelligent tester to erase the codes (select "RESET MEMORY").

HINT:

Refer to the intelligent tester operator's manual for further details.



(6) Turn the ignition switch off.

NOTICE:

If the ignition switch is turned on (IG) for more than 15 seconds with the shift lever in the P position (A/T) or the parking brake applied (M/T) after zero point of the yaw rate and acceleration sensor has been cleared, only the zero point of the yaw rate sensor will be stored. If the vehicle is driven under these conditions, the skid control ECU will store the zero point calibration for the acceleration sensor as not being completed. The skid control ECU will then also indicate this as a malfunction of the VSC system using the indicator lights (models without multi information display) or multi information display (models with multi information display).

(b) Perform zero point calibration of the yaw rate and acceleration sensor.

(1) Turn the ignition switch off.

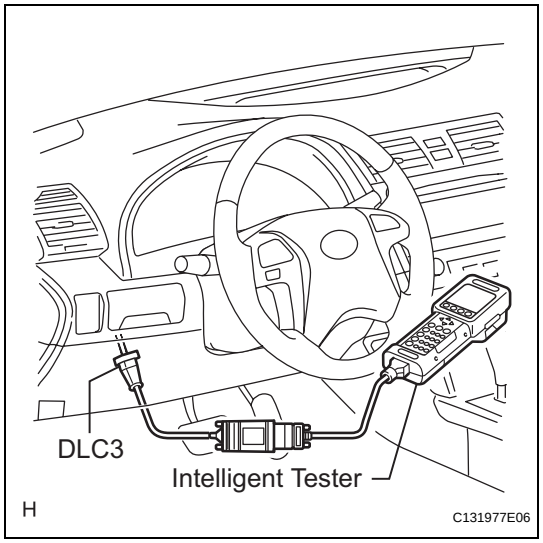
(2) Check that the steering wheel is centered and move the shift lever to the P position (A/T) or apply the parking brake (M/T).

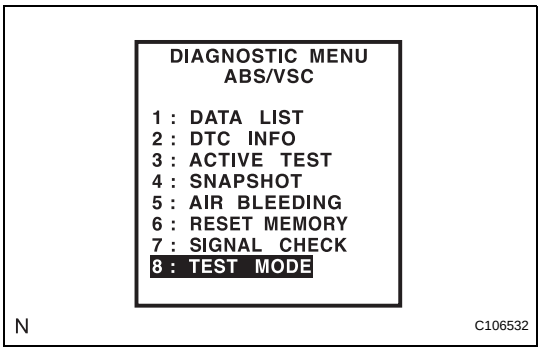
NOTICE:

DTCs C1210/36 and C1336/39 will be recorded if the shift lever is not in the P position (A/T) or the parking brake is not applied (M/T) (See page BC-188).

(3) Connect the intelligent tester to the DLC3.

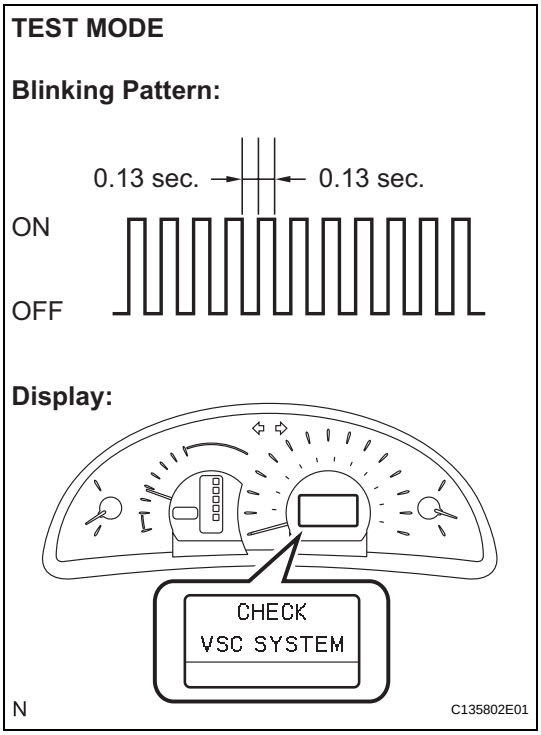
(4) Turn the ignition switch on (IG).





(5) Set the intelligent tester to Test Mode (select "TEST MODE").
HINT:
Refer to the intelligent tester operator's manual for further details.

(6) After the Test Mode has been entered, keep the vehicle stationary on a level surface for 2 seconds or more.

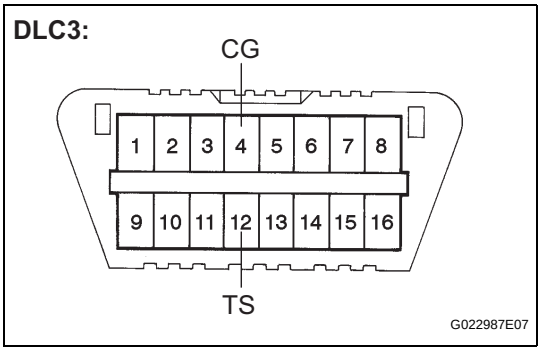


(7) Check that the VSC warning light blinks (models without multi information display) or "CHECK VSC SYSTEM" is displayed on the multi information display (models with multi information display) (Test Mode).
HINT:
- The SLIP indicator light remains on during Test Mode because TRAC is prohibited.
- If the VSC warning light does not blink (models without multi information display) or "CHECK VSC SYSTEM" is not displayed on the multi information display (models with multi information display), perform zero point calibration again.
- The zero point calibration is performed only once after the system enters the Test Mode.
- Calibration cannot be performed again until the stored data is cleared.

(8) Turn the ignition switch off and disconnect the intelligent tester.

3. OBTAIN ZERO POINT OF YAW RATE AND ACCELERATION SENSOR (SST CHECK WIRE)

NOTICE:
- **While obtaining the zero point, keep the vehicle stationary and do not vibrate, tilt, move, or shake it. (Do not start the engine.)**
- **Be sure to perform the procedure on a level surface (with an inclination of less than 1 degree).**

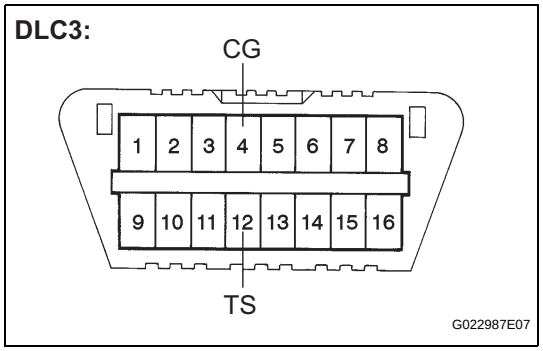


(a) Clear the zero point calibration data.
(1) Turn the ignition switch off.
(2) Check that the steering wheel is centered and move the shift lever to the P position (A/T) or apply the parking brake (M/T).
(3) Turn the ignition switch on (IG).
(4) The warning light and indicator light come on for 3 seconds to indicate that the initial check is completed.
(5) Using SST, connect and disconnect terminals TS and CG of the DLC3 4 times or more within 8 seconds.
SST 09843-18040

NOTICE:
If the ignition switch is turned on (IG) for more than 15 seconds with the shift lever in the P position (A/T) or the parking brake applied (M/T) after zero point of the yaw rate and acceleration sensor has been cleared, only the zero point of the yaw rate sensor will be stored. If the vehicle is driven under these conditions, the skid control ECU will store the zero point calibration for the acceleration sensor as not being completed. The skid control ECU will then also indicate this as a malfunction of the VSC system using the indicator lights (models without multi information display) or multi information display (models with multi information display).

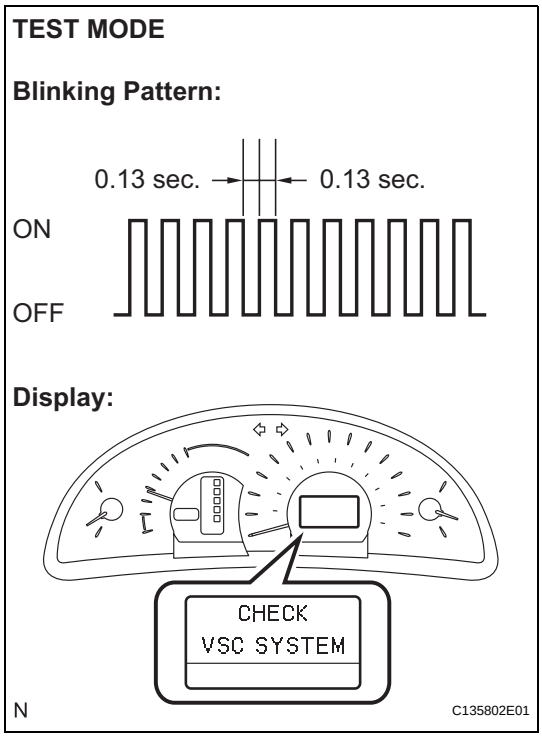
(b) Perform zero point calibration of the yaw rate and acceleration sensor.
(1) Turn the ignition switch off.
(2) Check that the steering wheel is centered and move the shift lever to the P position (A/T) or apply the parking brake (M/T).
NOTICE:
DTCs C1210/36 and C1336/39 will be recorded if the shift lever is not in the P position (A/T) or the parking brake is not applied (M/T) (See page BC-188).

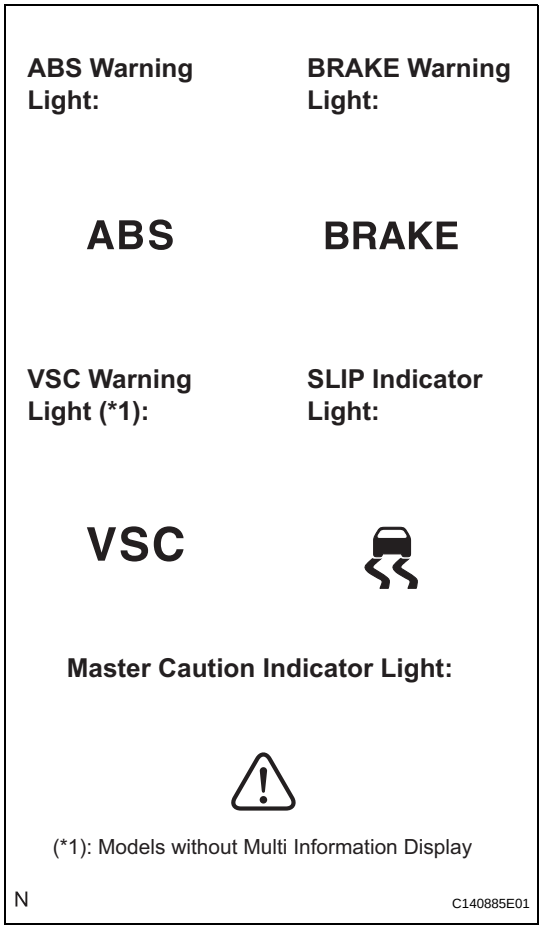
DLC3:



(3) Using SST, connect terminals TS and CG of the DLC3.
SST 09843-18040
(4) Turn the ignition switch on (IG).
(5) Keep the vehicle stationary on a level surface for 2 seconds or more.

BC





(6) Check that the VSC warning light blinks (models without multi information display) or "CHECK VSC SYSTEM" is displayed on the multi information display (models with multi information display) (Test Mode).
HINT:
- The SLIP indicator light remains on during Test Mode because TRAC is prohibited.
- If the VSC warning light does not blink (models without multi information display) or "CHECK VSC SYSTEM" is not displayed on the multi information display (models with multi information display), perform zero point calibration again.
- The zero point calibration is performed only once after the system enters the Test Mode.
- Calibration cannot be performed again until the stored data is cleared.

(7) Turn the ignition switch off and disconnect the SST from the DLC3.

TEST MODE PROCEDURE

1. WARNING LIGHT AND INDICATOR LIGHT INITIAL CHECK

(a) Release the parking brake.
NOTICE:
Before releasing the parking brake, move the shift lever to the P position for safety (A/T) or set the chocks to hold the vehicle for safety (M/T).
HINT:
When the parking brake is applied or the level of the brake fluid is low, the BRAKE warning light comes on.

(b) When the ignition switch is turned on (IG), check that the ABS warning, BRAKE warning, SLIP indicator, and master caution indicator lights come on for approximately 3 seconds. Vehicles equipped with VSC, which are not equipped with a multi information display, the VSC warning light will illuminate instead of the master caution indicator light.
HINT:
If the ECU stores a DTC, the ABS warning, BRAKE warning, VSC warning and SLIP indicator lights will come on.

If the vehicle is equipped with a multi information display, and the vehicle stores a DTC, the master caution indicator light will illuminate, and the multi information display will indicate the malfunction instead of the VSC warning light. In this case, the ABS warning, BRAKE warning, and SLIP indicator lights will also come on.
If the indicator remains on or does not come on, proceed to troubleshooting for the light circuits listed below.

Trouble Area	See procedure
ABS warning light circuit	BC-229 or BC-233
BRAKE warning light circuit	BC-244 or BC-252
VSC warning light circuit	BC-236 or BC-240
SLIP indicator light circuit	BC-255 or BC-259

2. SENSOR CHECK USING TEST MODE (SIGNAL CHECK) (INTELLIGENT TESTER)

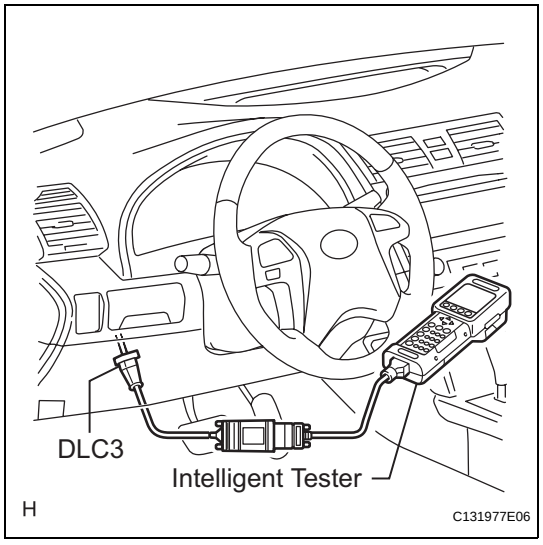
NOTICE:

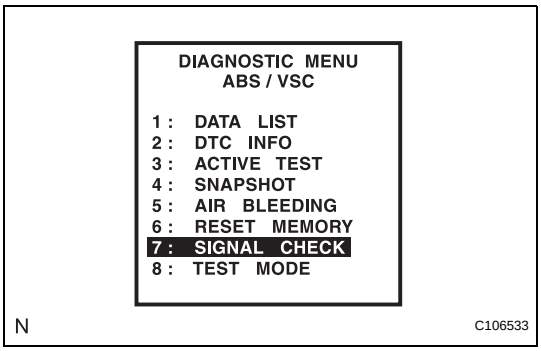
After replacement of the brake actuator assembly and/or yaw rate and acceleration sensor, perform zero point calibration of the yaw rate and acceleration sensor.

HINT:

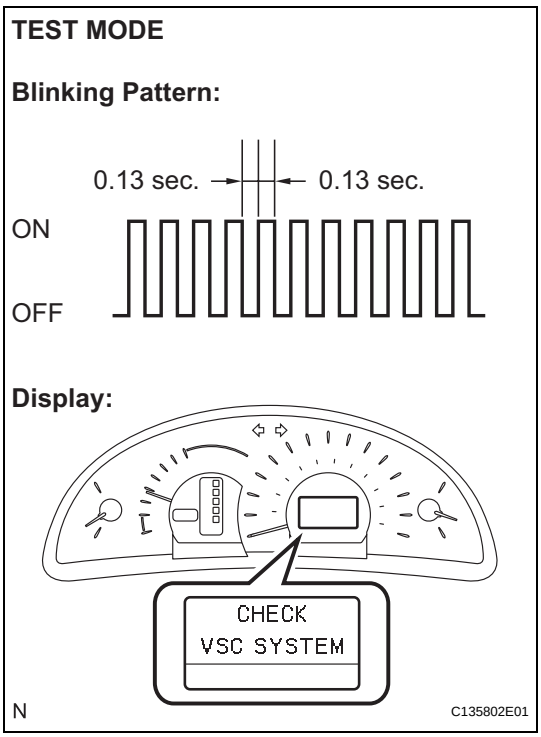
- If the ignition switch is turned from on (IG) to on (ACC) or off during Test Mode (signal check), DTCs of the signal check function will be erased.
- During Test Mode (signal check), the skid control ECU records all DTCs of the signal check function. By performing the Test Mode (signal check), the codes are erased if a normal condition is confirmed. The remaining codes are the codes where an abnormality was found.

(a) Procedure to enter Test Mode.
  (1) Turn the ignition switch off.
  (2) Connect the intelligent tester to the DLC3.
  (3) Check that the steering wheel is centered and move the shift lever to the P position (A/T) or apply the parking brake (M/T).
  (4) Turn the ignition switch on (IG).



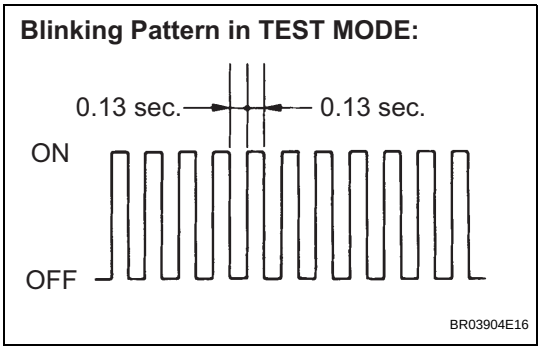


(5) Set the intelligent tester to Test Mode (select "SIGNAL CHECK").
HINT:
Refer to the intelligent tester operator's manual for further details.



(6) Check that the ABS and VSC (models without multi information display) warning lights blink or "CHECK VSC SYSTEM" is displayed on the multi information display (models with multi information display) (Test Mode).
HINT:
- The SLIP indicator light remains on during Test Mode because TRAC is prohibited.
- If the ABS and VSC (models without multi information display) warning lights do not blink or "CHECK VSC SYSTEM" is not displayed on the multi information display (models with multi information display), inspect the TS and CG terminal circuit, and ABS and VSC warning light circuits.

Trouble Area	See procedure
TS and CG terminal circuit	BC-269
ABS warning light circuit	BC-233
VSC warning light circuit	BC-240



(7) Check the ABS sensor.
HINT:
Check that the ABS warning light is blinking in Test Mode and perform the check.

3. ACCELERATION SENSOR CHECK (INTELLIGENT TESTER)

(a) Keep the vehicle stationary on a level surface for 1 second or more.
HINT:
Acceleration sensor check can be performed with the master cylinder pressure sensor check below.

4. MASTER CYLINDER PRESSURE SENSOR CHECK (INTELLIGENT TESTER)

(a) Leave the vehicle in a stationary condition and release the brake pedal for 1 second or more, and quickly and continuously depress the brake pedal with a force of 98 N (10 kgf, 22 lbf) or more for 1 second.

(b) Check that the ABS warning light stays on for 3 seconds.
HINT:
- Ensure that the ABS warning light comes on.
- While the ABS warning light stays on, continue to depress the brake pedal with a force of 98 N (10 kgf, 22 lbf) or more.
- The ABS warning light comes on for 3 seconds every time brake pedal operation above is performed.
- If the check of the master cylinder pressure sensor is not completed, depressing the brake pedal causes further decrease in the negative pressure, making the sensor check difficult to be completed.
- If the negative pressure is insufficient, the master cylinder pressure sensor check may not be completed. In this case, run the engine at idle to obtain sufficient negative pressure.
- If the brake pedal is strongly depressed when the negative pressure is insufficient, the BRAKE warning light may come on in accordance with the booster pressure control. In this case, run the engine at idle to obtain sufficient negative pressure.

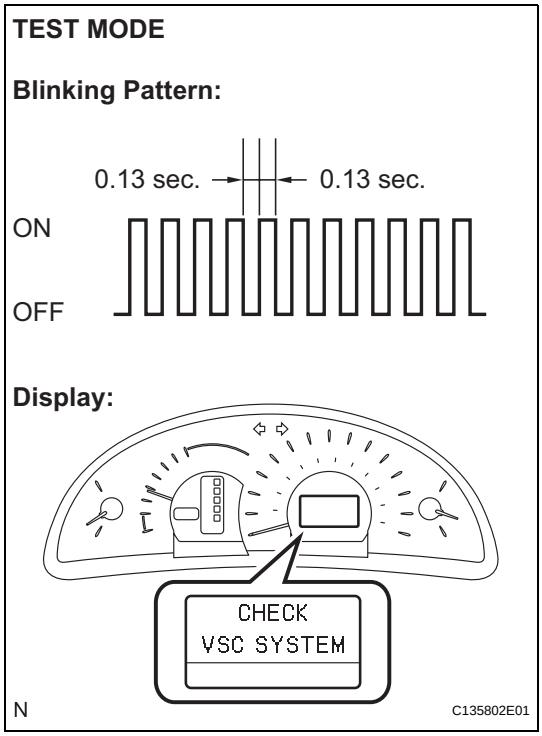
5. SPEED SENSOR CHECK (INTELLIGENT TESTER)

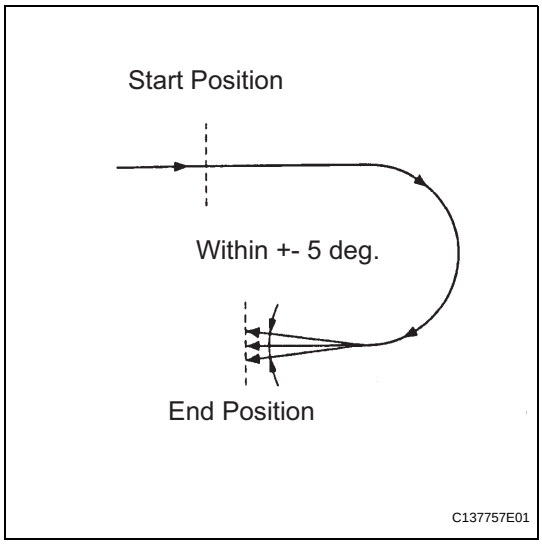
(a) Check the speed sensor signal.
(1) Drive the vehicle straight ahead.
Accelerate the vehicle to a speed of 28 mph (45 km/h) or more for several seconds and check that the ABS warning light goes off.
HINT:
The sensor check may not be completed if wheelspin occurs.

(b) Stop the vehicle.
NOTICE:
- **Before performing the speed sensor check, complete the acceleration sensor and master cylinder pressure sensor checks.**
- **The speed sensor check may not be completed if the speed sensor check is started while turning the steering wheel or spinning the wheels.**
- **After the ABS warning light goes off and if the vehicle speed exceeds 50 mph (80 km/h), a signal check code will be stored again. Accelerate or stop the vehicle before the speed reaches 50 mph (80 km/h).**
- **If the signal check has not been completed, the ABS warning light blinks while driving and the ABS system does not operate.**

HINT:
When the sensor check has been completed, the ABS warning light goes off while driving and blinks in the Test Mode pattern while stationary.

(c) Check the VSC sensor.
Check that the VSC warning light (models without multi information display) blinks or "CHECK VSC SYSTEM" is displayed on the multi information display (models with multi information display), and perform the check.



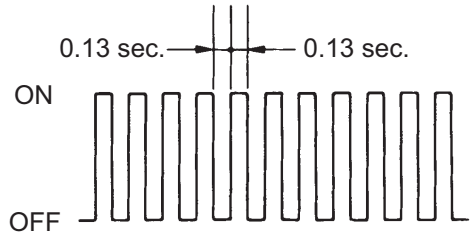


6. YAW RATE SENSOR CHECK (INTELLIGENT TESTER)

(a) Check the output of the yaw rate sensor.
(1) Keep the vehicle in a stationary condition on a level surface for 1 second or more.
(2) Move the shift lever from P to the D position (A/T) or release the parking brake (M/T) and drive the vehicle at a speed of approximately 3 mph (5 km/h), and turn the steering wheel either to the left or right 90° or more until the vehicle makes a 180° turn.
(3) Stop the vehicle and move the shift lever to the P position (A/T) or apply the parking brake (M/T). Check that the skid control buzzer sounds for 3 seconds.
HINT:
- If the skid control buzzer sounds, the sensor check is completed normally.
- If the skid control buzzer does not sound, check the skid control buzzer circuit (See page BC-263), then perform the sensor check again.
- If the skid control buzzer still does not sound, there is a malfunction in the yaw rate sensor, so check the DTC.
- Make a 180° turn. At the end of the turn, the direction of the vehicle should be within 180° +- 5° of its start position.

- Do not spin the wheels.
- Do not turn the ignition switch off while turning.
- Do not move the shift lever to the P position (A/T) or do not apply the parking brake (M/T) while turning, but changing in the vehicle speed, stopping, or driving in reverse is possible.
- Complete the turn within 20 seconds.

Blinking Pattern in TEST MODE:



7. END OF SENSOR CHECK (INTELLIGENT TESTER)

(a) If the sensor check is completed, the ABS warning light blinks (Test Mode) when the vehicle stops and the ABS warning light is off while the vehicle is driving.

NOTICE:

- **When the yaw rate sensor, acceleration sensor, speed sensor, and master cylinder pressure sensor checks are completed, the sensor check is completed.**
- **If the sensor check is not completed, the ABS warning light blinks even while the vehicle is driving and the ABS does not operate.**

8. READ DTC OF SIGNAL CHECK FUNCTION (INTELLIGENT TESTER)

(a) Read the DTC(s) by following the tester screen.

NOTICE:

- **If only the DTCs are displayed, repair the malfunction area and clear the DTCs.**
- **If the DTCs or Test Mode codes (DTC of signal check function) are displayed, repair the malfunction area, clear the DTCs and perform the Test Mode inspection.**

HINT:

See the list of DTC (See procedure "A").

9. SENSOR CHECK USING TEST MODE (SIGNAL CHECK) (SST CHECK WIRE)

NOTICE:

After replacement of the brake actuator assembly and/or yaw rate and acceleration sensor, perform zero point calibration of the yaw rate and acceleration sensor.

HINT:

- If the ignition switch is turned from on (IG) to on (ACC) or off during Test Mode (signal check), DTCs of the signal check function will be erased.
- During Test Mode (signal check), the skid control ECU records all DTCs of the signal check function. By performing the Test Mode (signal check), the codes are erased if a normal condition is confirmed. The remaining codes are the codes where an abnormality was found.

(a) Procedure to enter Test Mode.

(1) Turn the ignition switch off.

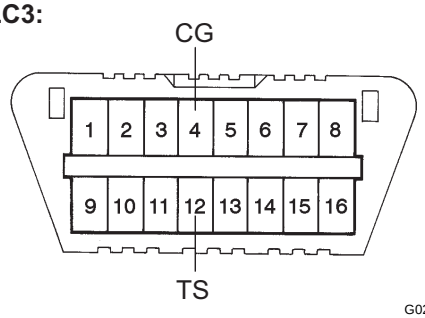
BC

(2) Check that the steering wheel is centered and move the shift lever to the P position (A/T) or apply the parking brake (M/T).

(3) Using SST, connect terminals TS and CG of the DLC3.
SST 09843-18040

(4) Turn the ignition switch on (IG).

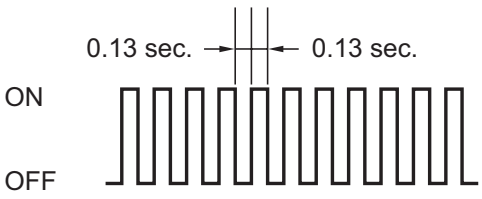
DLC3:



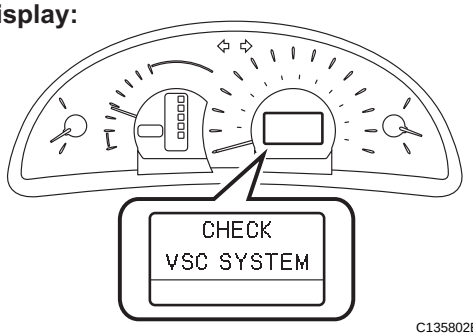
G022987E07

TEST MODE

Blinking Pattern:



Display:



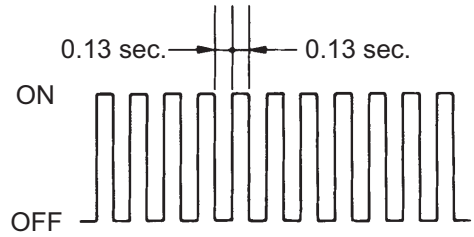
N

C135802E01

(5) Check that the ABS and VSC (models without multi information display) warning lights blink or "CHECK VSC SYSTEM" is displayed on the multi information display (models with multi information display) (Test Mode).
HINT:
- The SLIP indicator light remains on during Test Mode because TRAC is prohibited.
- If the ABS and VSC (models without multi information display) warning lights do not blink or "CHECK VSC SYSTEM" is not displayed on the multi information display (models with multi information display), inspect the TS and CG terminal circuit, and ABS and VSC warning light circuits.

Trouble Area	See procedure
TS and CG terminal circuit	BC-269
ABS warning light circuit	BC-233
VSC warning light circuit	BC-240

Blinking Pattern in TEST MODE:



BR03904E16

(6) Check the ABS sensor.
HINT:
Check that the ABS warning light is blinking in Test Mode and perform the check.

10. ACCELERATION SENSOR CHECK (SST CHECK WIRE)

(a) Keep the vehicle stationary on a level surface for 1 second or more.
HINT:
Acceleration sensor check can be performed with the master cylinder pressure sensor check below.

11. MASTER CYLINDER PRESSURE SENSOR CHECK (SST CHECK WIRE)

(a) Leave the vehicle in a stationary condition and release the brake pedal for 1 second or more, and quickly and continuously depress the brake pedal with a force of 98 N (10 kgf, 22 lbf) or more for 1 second.

(b) Check that the ABS warning light stays on for 3 seconds.
HINT:
- Ensure that the ABS warning light comes on.
- While the ABS warning light stays on, continue to depress the brake pedal with a force of 98 N (10 kgf, 22 lbf) or more.
- The ABS warning light comes on for 3 seconds every time the brake pedal operation above is performed.
- If the check of the master cylinder pressure sensor is not completed, depressing the brake pedal causes further decrease in the negative pressure, making the sensor check difficult to be completed.
- If the negative pressure is insufficient, the master cylinder pressure sensor check may not be completed. In this case, run the engine at idle to obtain sufficient negative pressure.
- If the brake pedal is strongly depressed when the negative pressure is insufficient, the BRAKE warning light may come on in accordance with the booster pressure control. In this case, run the engine at idle to obtain sufficient negative pressure.

12. SPEED SENSOR CHECK (SST CHECK WIRE)

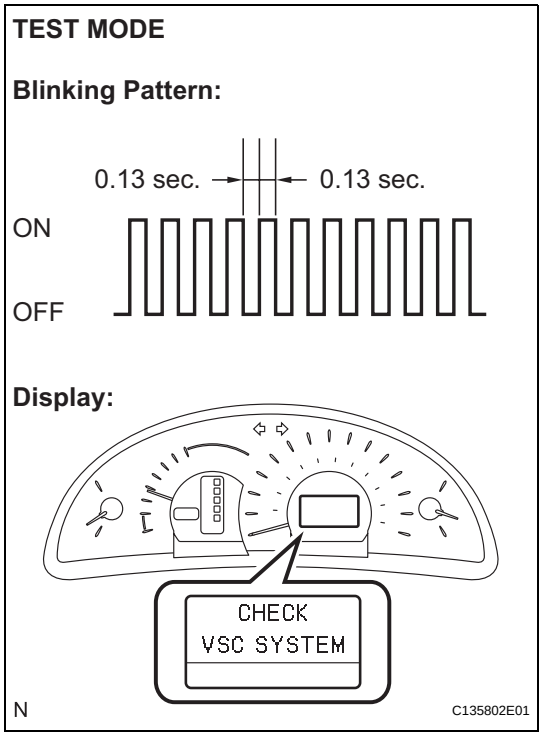
(a) Check the speed sensor signal.

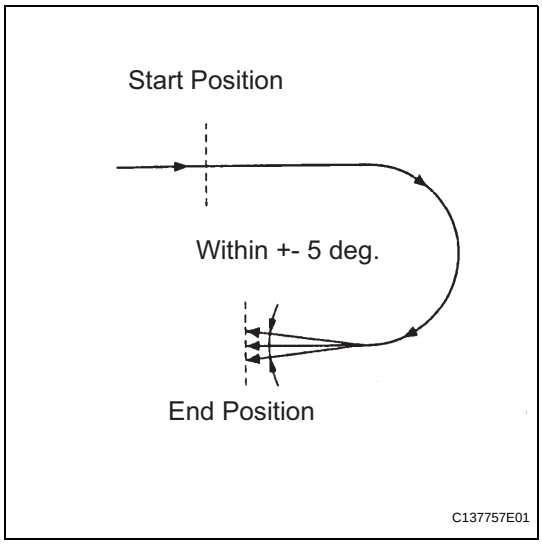
(1) Drive the vehicle straight ahead.
Accelerate the vehicle to a speed of 28 mph (45 km/h) or more for several seconds and check that the ABS warning light goes off.
HINT:
The sensor check may not be completed if wheelspin occurs.

(b) Stop the vehicle.
NOTICE:
- **Before performing the speed sensor check, complete the acceleration sensor and master cylinder pressure sensor checks.**
- **The speed sensor check may not be completed if the speed sensor check is started while turning the steering wheel or spinning the wheels.**
- **After the ABS warning light goes off, if vehicle speed exceeds 50 mph (80 km/h), a signal check code will be stored again. Accelerate or stop the vehicle before the speed reaches 50 mph (80 km/h).**
- **If the signal check has not been completed, the ABS warning light blinks while driving and the ABS system does not operate.**

HINT:
When the sensor check has been completed, the ABS warning light goes off while driving and blinks in the Test Mode pattern while stationary.

(c) Check the VSC sensor.
Check that the VSC warning light (models without multi information display) blinks or "CHECK VSC SYSTEM" is displayed on the multi information display (models with multi information display), and perform the check.



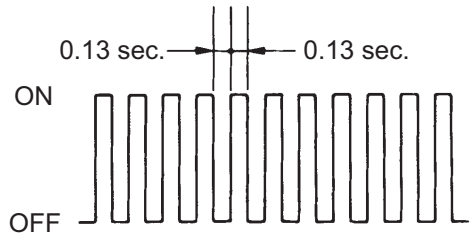


13. YAW RATE SENSOR CHECK (SST CHECK WIRE)

(a) Check the output of the yaw rate sensor.
(1) Keep the vehicle stationary on a level surface for 1 second or more.
(2) Move the shift lever from P to the D position (A/T) or release the parking brake (M/T) and drive the vehicle at a vehicle speed of approximately 3 mph (5 km/h) and turn the steering wheel either to the left or right 90° or more and until the vehicle makes a 180° turn.
(3) Stop the vehicle and move the shift lever to the P position (A/T) or apply the parking brake (M/T). Check that the skid control buzzer sounds for 3 seconds.
HINT:
- If the skid control buzzer sounds, the sensor check is completed normally.
- If the skid control buzzer does not sound, check the skid control buzzer circuit (See page BC-263), then perform the sensor check again.
- If the skid control buzzer still does not sound, there is a malfunction in the yaw rate sensor, so check the DTC.
- Make a 180° turn. At the end of the turn, the direction of the vehicle should be within 180° +- 5° of its start position.
- Do not spin the wheels.

- Do not turn the ignition switch off while turning.
- Do not move the shift lever to the P position (A/T) or do not apply the parking brake (M/T) while turning, but changing in the vehicle speed, stopping, or driving in reverse is possible.
- Complete the turn within 20 seconds.

Blinking Pattern in TEST MODE:



BR03904E16

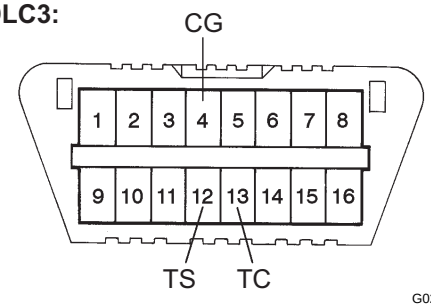
14. END OF SENSOR CHECK (SST CHECK WIRE)

(a) If the sensor check is completed, the ABS warning light blinks (Test Mode) when the vehicle stops and the ABS warning light is off while the vehicle is driving.

NOTICE:

- **When the yaw rate sensor, acceleration sensor, speed sensor, and master cylinder pressure sensor checks are completed, the sensor check is completed.**
- **If the sensor check is not completed, the ABS warning light blinks even while the vehicle is driving and the ABS does not operate.**

DLC3:



G022988E01

15. READ DTC OF SIGNAL CHECK FUNCTION (SST CHECK WIRE)

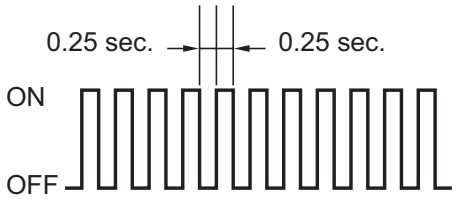
(a) Using SST, connect terminals TC and CG of the DLC3.

SST 09843-18040

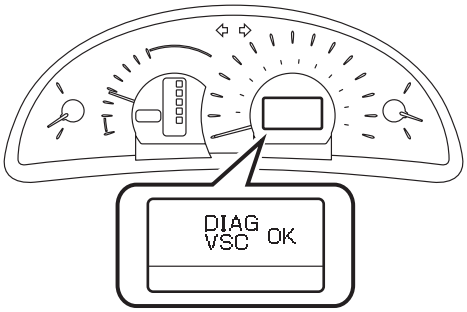
BC

(b) Count the number of blinks of the ABS and VSC (models without multi information display) warning lights or read "DIAG VSC" on the multi information display (models with multi information display).

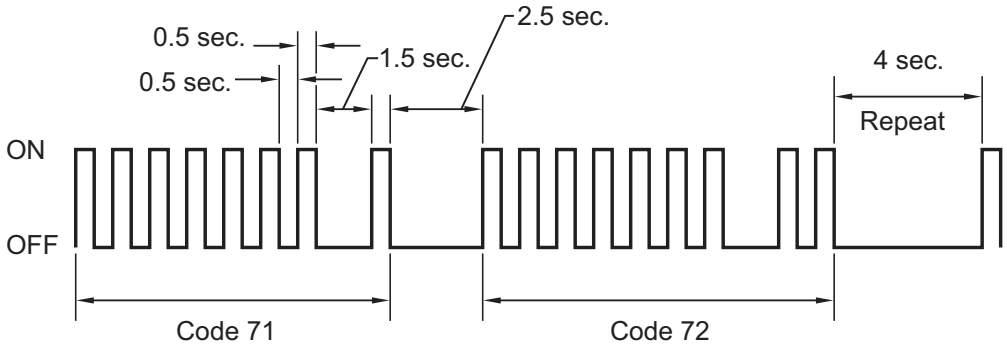
Blinking Pattern in Normal System Code:



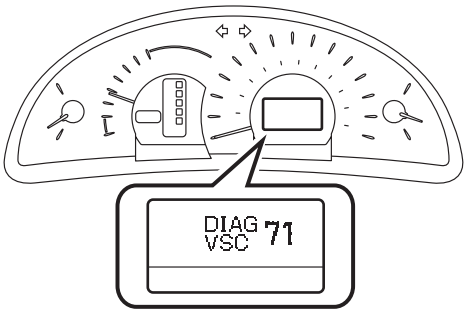
Display of Normal System Code:



Blinking Pattern in Trouble Code (Example Codes 71 and 72):



Display of Trouble Code (Example Code 71):



N

C135803E02

NOTICE:

- **If only the DTCs are displayed, repair the malfunction area and clear the DTCs.**
- **If the DTCs or Test Mode codes (DTC of signal check function) are displayed, repair the malfunction area, clear the DTCs and perform the Test Mode inspection.**

HINT:

- If more than 1 malfunction is detected at the same time, the lowest numbered code will be displayed first.
- See the list of DTC (See procedure "A").

(c) After performing the check, disconnect the SST from terminals TS and CG, and TC and CG of the DLC3 and turn the ignition switch off.

(d) Turn the ignition switch on (IG).
HINT:
- If the ignition switch is not turned on (IG) after the SST is removed from the DLC3, the previous Test Mode will continue.
- If the ignition switch is turned on (IG) with terminals TS and CG shorted, the previous Test Mode will continue.

16. DTC OF TEST MODE (SIGNAL CHECK) FUNCTION (Procedure "A")

ABS sensor:

Code No.	Diagnosis	Trouble Area
C1271/71	Low output signal of front speed sensor RH	• Front speed sensor RH • Sensor installation • Speed sensor rotor
C1272/72	Low output signal of front speed sensor LH	• Front speed sensor LH • Sensor installation • Speed sensor rotor
C1273/73	Low output signal of rear speed sensor RH	• Rear speed sensor RH • Sensor installation • Speed sensor rotor
C1274/74	Low output signal of rear speed sensor LH	• Rear speed sensor LH • Sensor installation • Speed sensor rotor
C1275/75	Abnormal change in output signal of front speed sensor RH	Speed sensor rotor
C1276/76	Abnormal change in output signal of front speed sensor LH	Speed sensor rotor
C1277/77	Abnormal change in output signal of rear speed sensor RH	Speed sensor rotor
C1278/78	Abnormal change in output signal of rear speed sensor LH	Speed sensor rotor
C1279/79	Acceleration sensor output voltage malfunction	• Yaw rate and acceleration sensor • Sensor installation
C1281/81	Master cylinder pressure sensor output malfunction	• Stop light switch • Master cylinder pressure sensor

VSC sensor:

Code No.	Diagnosis	Trouble Area
C0371/71	Yaw rate sensor	Yaw rate and acceleration sensor

HINT:
The codes in this table are output only in Test Mode (signal check).

BC

PROBLEM SYMPTOMS TABLE

If there are no DTCs output and the problem still occurs, check the circuits for each problem symptom in the order given in the table below and proceed to the relevant troubleshooting page.

HINT:

- Inspect the fuse and relay before investigating the suspected areas as shown in the table below.
- Inspect each malfunction circuit in numerical order for the corresponding symptom.

Vehicle Stability Control System:

Symptom	Suspected Area	See page
ABS, BA and/or EBD does not operate	1. Check the DTC again and make sure that the normal system code is output.	BC-141
	2. IG power source circuit	BC-207
	3. Front speed sensor circuit	BC-156
	4. Rear speed sensor circuit	BC-164
	5. Check the brake actuator assembly with the intelligent tester. (Check brake actuator assembly operation using the Active Test function.) If abnormal, check the hydraulic circuit for leakage.	BC-425
	6. If the symptoms still occur even after the above circuits in suspected areas have been inspected and proved to be normal, replace the brake actuator assembly (skid control ECU).	BC-426
ABS, BA and/or EBD does not operate efficiently	1. Check the DTC again and make sure that the normal system code is output.	BC-141
	2. Front speed sensor circuit	BC-156
	3. Rear speed sensor circuit	BC-164
	4. Stop light switch circuit	BC-213
	5. Check the brake actuator assembly with the intelligent tester. (Check brake actuator assembly operation using the Active Test function.) If abnormal, check the hydraulic circuit for leakage.	BC-425
	6. If the symptoms still occur even after the above circuits in suspected areas have been inspected and proved to be normal, replace the brake actuator assembly (skid control ECU).	BC-426
ABS sensor DTC check cannot be done	1. Check the DTC again and make sure that the normal system code is output.	BC-141
	2. TC and CG terminal circuit	BC-266
	3. If the symptoms still occur even after the above circuit in suspected areas has been inspected and proved to be normal, replace the brake actuator assembly (skid control ECU).	BC-426
ABS warning light abnormal (Remains on)	1. ABS warning light circuit	BC-229
	2. Brake actuator assembly (Skid control ECU)	BC-426
ABS warning light abnormal (Does not come on)	1. ABS warning light circuit	BC-233
	2. Brake actuator assembly (Skid control ECU)	BC-426
BRAKE warning light abnormal (Remains on)	1. BRAKE warning light circuit	BC-244
	2. Brake actuator assembly (Skid control ECU)	BC-426
BRAKE warning light abnormal (Does not come on)	1. BRAKE warning light circuit	BC-252
	2. Brake actuator assembly (Skid control ECU)	BC-426

Symptom	Suspected Area	See page
VSC and/or TRAC does not operate	1. Check the DTC again and make sure that the normal system code is output.	BC-141
	2. IG power source circuit	BC-207
	3. Check the hydraulic circuit for leakage	-
	4. Front speed sensor circuit	BC-156
	5. Rear speed sensor circuit	BC-164
	6. Yaw rate and acceleration sensor circuit	BC-193
	7. Steering angle sensor circuit	BC-190
	8. If the symptoms still occur even after the above circuits in suspected areas have been inspected and proved to be normal, replace the brake actuator assembly (skid control ECU).	BC-426
VSC sensor DTC check cannot be done	1. Check the DTC again and make sure that the normal system code is output.	BC-141
	2. TC and CG terminal circuit	BC-266
	3. If the symptoms still occur even after the above circuit in suspected areas has been inspected and proved to be normal, replace the brake actuator assembly (skid control ECU).	BC-426
VSC warning light abnormal (Remains on) (*1)	1. VSC warning light circuit	BC-236
	2. Brake actuator assembly (Skid control ECU)	BC-426
VSC warning light abnormal (Does not come on) (*1)	1. VSC warning light circuit	BC-240
	2. Brake actuator assembly (Skid control ECU)	BC-426
Multi information display abnormal (Remains on) (*2)	1. VSC warning light circuit	BC-236
	2. Brake actuator assembly (Skid control ECU)	BC-426
Multi information display abnormal (Does not come on) (*2)	1. VSC warning light circuit	BC-240
	2. Brake actuator assembly (Skid control ECU)	BC-426
SLIP indicator light abnormal (Remains on)	1. SLIP indicator light circuit	BC-255
	2. Brake actuator assembly (Skid control ECU)	BC-426
SLIP indicator light abnormal (Does not come on)	1. SLIP indicator light circuit	BC-259
	2. Brake actuator assembly (Skid control ECU)	BC-426
Sensor check cannot be done	1. TS and CG terminal circuit	BC-269

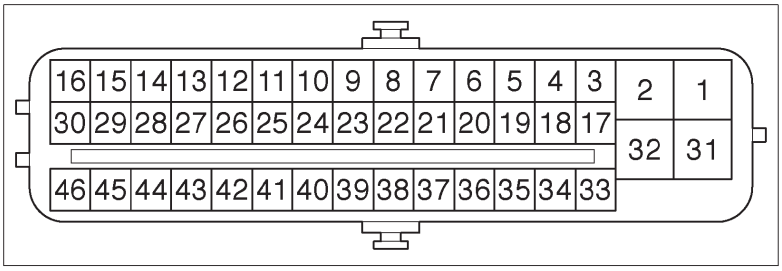
TERMINALS OF ECU

1. Terminal of ECU

Skid Control ECU:



N

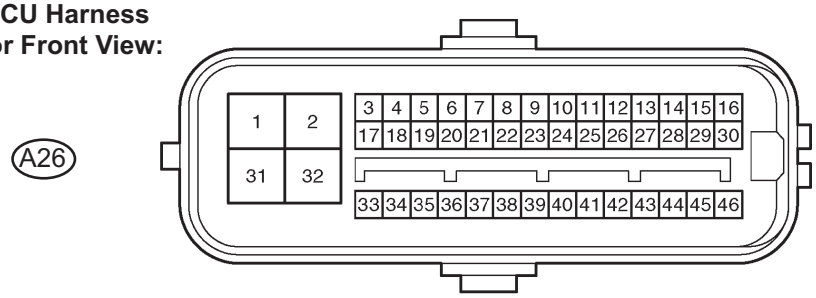
F045080E06

Symbols (Terminal No.)	Terminal Description
GND2 (1)	Pump motor ground
BM (2)	Motor relay input
FR+ (3)	Front wheel speed RH signal power supply output
FL- (4)	Front wheel speed LH signal input
RR+ (5)	Rear wheel speed RH signal power supply output
RL- (6)	Rear wheel speed LH signal input
CANH (11)	CAN communication line H
SP1 (12)	Speed signal output for combination meter
D/G (13)	Diagnosis tester communication line
MRF (14)	Fail safe motor relay output
MR (15)	Motor relay output
FR- (17)	Front wheel speed RH signal input
FL+ (18)	Front wheel speed LH signal power supply output
RR- (19)	Rear wheel speed RH signal input
RL+ (20)	Rear wheel speed LH signal power supply output
TS (24)	Test mode (signal check) input
CANL (25)	CAN communication line L
STP (27)	Stop light switch input
BZ (30)	Skid control buzzer output
+BS (31)	Solenoid relay power supply
GND1 (32)	Skid control ECU ground
WFSE (42)	WFSE input
R+ (45)	Power supply for motor relay
IG1 (46)	IG1 power supply

2. Terminal Inspection

(a) Disconnect the connector and measure the voltage or resistance on the wire harness side.

Skid Control ECU Harness Side Connector Front View:



HINT:
Voltage cannot be measured with the connector connected to the skid control ECU because the connector is watertight.

Standard

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
GND2 (A26-1) - Body ground	W-B - Body ground	Pump motor ground	Ignition switch off	Below 1 Ω
STP (A26-27) - Body ground	P - Body ground	Stop light switch input	Stop light switch ON → OFF (Brake pedal depressed → released)	8 to 14 V → Below 1.5 V
BZ (A26-30) - Body ground	R - Body ground	Buzzer output	Ignition switch on (IG), when buzzer not sounding	6 to 10 V
+BS (A26-31) - Body ground	L - Body ground	Solenoid relay power supply	Always	10 to 14 V
GND1 (A26-32) - Body ground	W-B - Body ground	Skid control ECU ground	Always	Below 1 Ω
IG1 (A26-46) - Body ground	P - Body ground	IG1 power supply	Ignition switch on (IG)	10 to 14 V

DIAGNOSIS SYSTEM

1. DESCRIPTION

When troubleshooting a vehicle with the diagnosis system, the only difference from the usual troubleshooting procedure is connecting the intelligent tester to the vehicle and reading various data output from the vehicle's skid control ECU.

The skid control ECU records DTCs when the computer detects a malfunction in the computer itself or in its circuits.

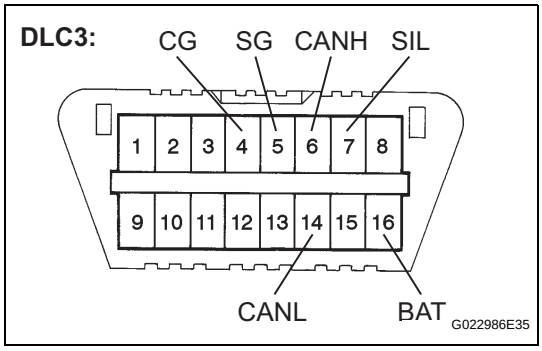
To check the DTCs, connect the intelligent tester to the DLC3 on the vehicle. The intelligent tester enables you to erase the DTCs, activate the various actuators, and check the Freeze Frame Data and Data List.

(a) Check the battery voltage.

Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge the battery before proceeding.



(b) Check the DLC3.

The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

Verify the conditions listed in the table below.

Symbols (Terminal No.)	Terminal Description	Condition	Specified condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	*Ignition switch off	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	*Ignition switch off	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	*Ignition switch off	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	*Ignition switch off	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	*Ignition switch off	6 kΩ or higher

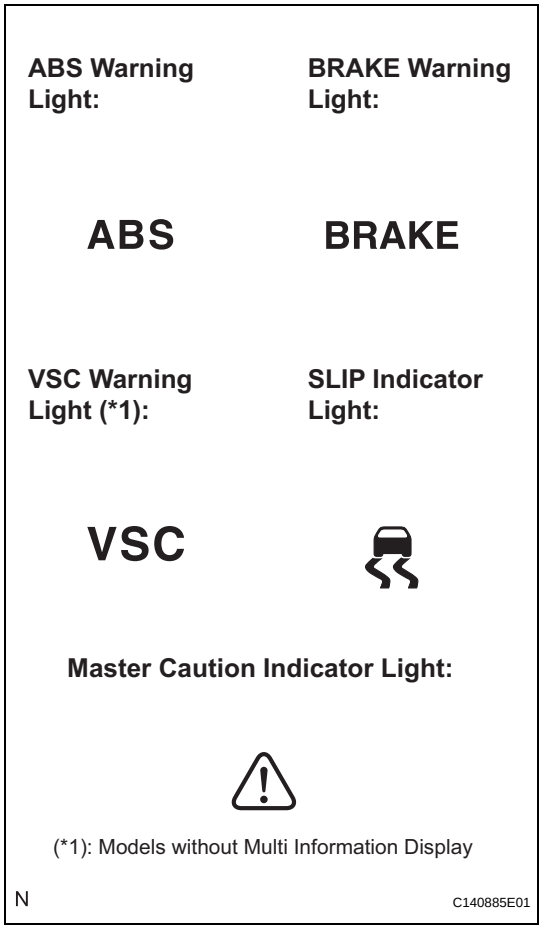
NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**

HINT:

Connect the cable of the intelligent tester to the DLC3, turn the ignition switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's operator's manual.

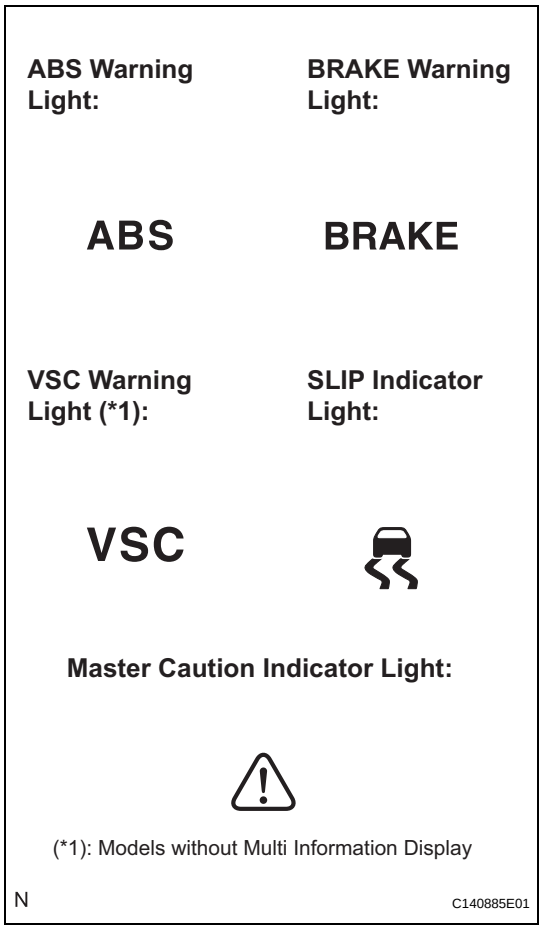


2. DIAGNOSIS

(a) If the skid control ECU detects a malfunction, the ABS, BRAKE, and VSC (models without multi information display) warning lights, and SLIP indicator light will come on and the multi information display (models with multi information display) shows warning messages in order to warn the driver.
The table below indicates which lights will come on when there is a malfunction in a particular function.

BC

Item / Trouble Area	ABS	EBD	BA	TRAC	VSC
ABS warning light	○	○	○	-	-
BRAKE warning light	-	○	-	-	-
VSC warning light (*1)	○	○	○	○	○
Multi information display (*2)	○	○	○	○	○
SLIP indicator light	○	○	○	○	○



○: Light ON
-: Light OFF
(*1): Models without multi information display
(*2): Models with multi information display

- The DTCs are simultaneously stored in the memory. The DTCs can be read by connecting the SST between terminals TC and CG of the DLC3 and observing the blinking pattern of the ABS and VSC (models without multi information display) warning lights, by reading the multi information display (models with multi information display), or by connecting the intelligent tester.
- This system has a Test Mode (signal check) function (See page BC-123).
  The DTC can be read by connecting the intelligent tester and observing the blinking pattern of the ABS and VSC (models without multi information display) warning lights or by reading the multi information display (models with multi information display).

3. WARNING LIGHT AND INDICATOR LIGHT CHECK

(a) Release the parking brake.
NOTICE:
When releasing the parking brake, move the shift lever to the P position for safety (A/T) or set the chocks to hold the vehicle for safety (M/T).
HINT:
When the parking brake is applied or the level of the brake fluid is low, the BRAKE warning light comes on.

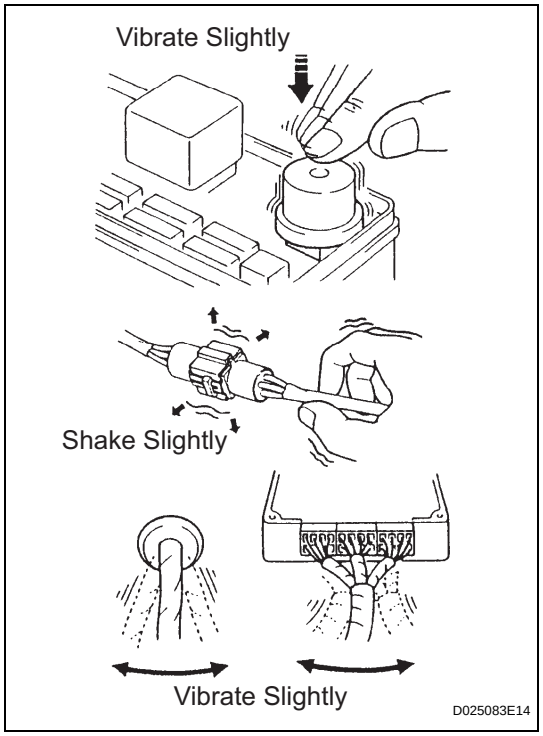
(b) When the ignition switch is turned on (IG), check that the ABS, BRAKE and VSC (models without multi information display) warning lights, and SLIP, and master caution indicator lights come on for approximately 3 seconds.
HINT:
If the warning light and indicator light check result is not normal, proceed to troubleshooting for the ABS, BRAKE and VSC warning light circuits and SLIP indicator light circuit.
If the indicator remains on, proceed to troubleshooting for the light circuit below.

Trouble Area	See procedure
ABS warning light circuit	BC-229
BRAKE warning light circuit	BC-244
VSC warning light circuit	BC-236
SLIP indicator light circuit	BC-255

4. SYMPTOM SIMULATION

HINT:

The most difficult case in troubleshooting is when no symptoms occur. In such cases, a thorough customer problem analysis must be carried out. Then the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be reproduced. No matter how experienced or skilled a technician may be, if he proceeds to troubleshoot without confirming the problem symptoms, he will likely overlook something important and make a wrong guess at some points in the repair operation. This leads to a standstill in troubleshooting.



(a) Vibration method: When vibration seems to be the major cause.

HINT:

Perform the simulation method only during the primary check period (for approximately 6 seconds after the ignition switch is on (IG)).

(1) Slightly vibrate the part of the sensor considered to be the problem cause with your fingers and check whether the malfunction occurs.

(2) Slightly shake the connector vertically and horizontally.

HINT:

Shaking the relays too strongly may result in open relays.

(3) Slightly shake the wire harness vertically and horizontally. The connector joint and fulcrum of the vibration are the major areas to be checked thoroughly.

BC

DTC CHECK / CLEAR

1. DTC CHECK/CLEAR (INTELLIGENT TESTER)

(a) Check the DTC.

(1) Connect the intelligent tester to the DLC3.

(2) Turn the ignition switch on (IG).

(3) Read the DTCs following the prompts on the tester screen.

(b) Clear the DTC.

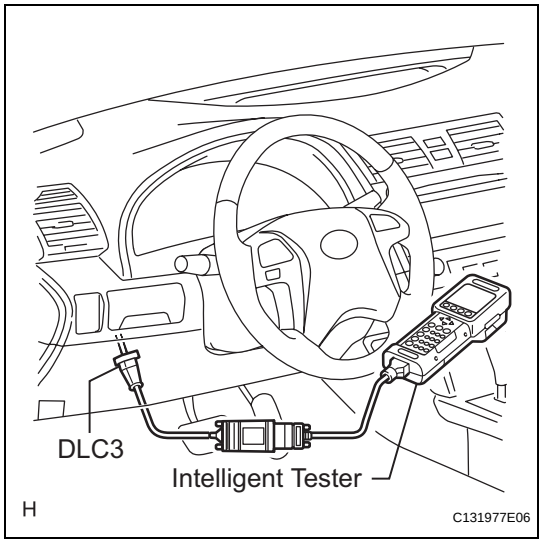
(1) Connect the intelligent tester to the DLC3.

(2) Turn the ignition switch on (IG).

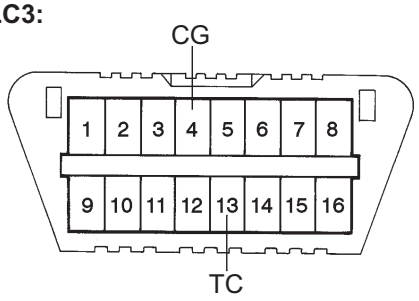
(3) Operate the intelligent tester to clear the codes.

HINT:

Refer to the intelligent tester operator's manual for further details.



DLC3:



2. DTC CHECK/CLEAR (SST CHECK WIRE)

(a) Check the DTC.

(1) Using SST, connect terminals TC and CG of the DLC3.

SST 09843-18040

(2) Turn the ignition switch on (IG).

(3) Observe the blinking pattern of the ABS and VSC (models without multi information display) warning lights or read the multi information display (models with multi information display) in order to identify the DTC.

HINT:

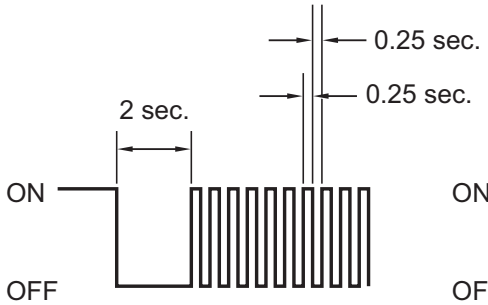
If no code appears, inspect the TC and CG terminal circuit, and ABS and VSC warning light circuits.

Trouble Area	See procedure
TC and CG terminal circuit	BC-266
ABS warning light circuit	BC-229 or BC-233
VSC warning light circuit	BC-236 or BC-240

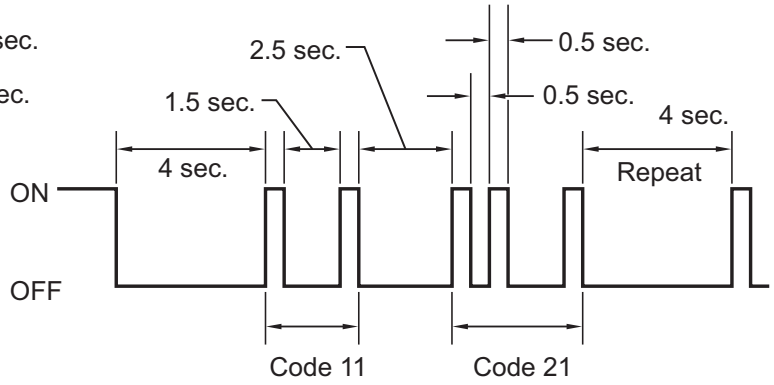
BC

(4) As an example, the illustration below shows the blinking patterns of the normal system code and trouble codes 11 and 21 for ABS and VSC (models without multi information display) warning lights or display of the normal system code and trouble code 43 for the VSC on the multi information display (models with multi information display).

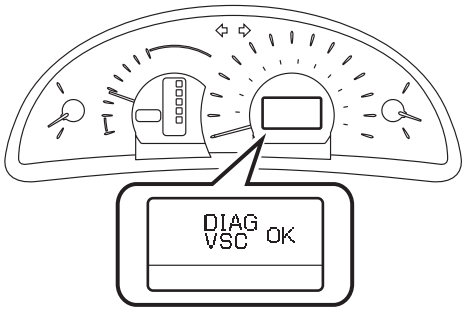
Blinking Pattern in Normal System Code:



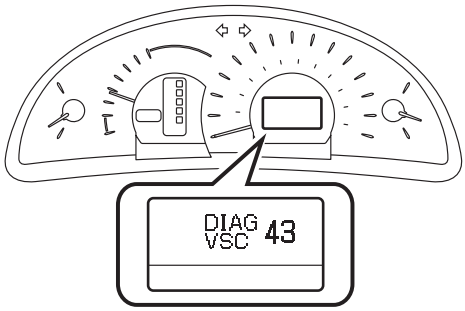
Blinking Pattern in Trouble Code (Example Codes 11 and 21):



Display of Normal System Code:



Display of Trouble Code (Example Code 43):



N

C135804E02

(5) The codes are explained in the code table (See page BC-151).

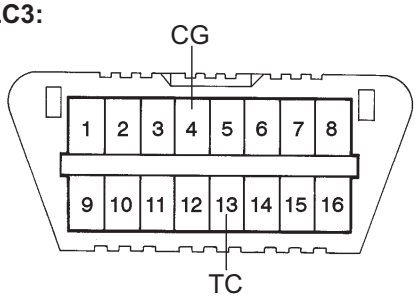
(6) After completing the check, disconnect terminals TC and CG of the DLC3, and turn off the display. If 2 or more DTCs are detected at the same time, the DTCs will be displayed in ascending order.

(b) Clear the DTC.

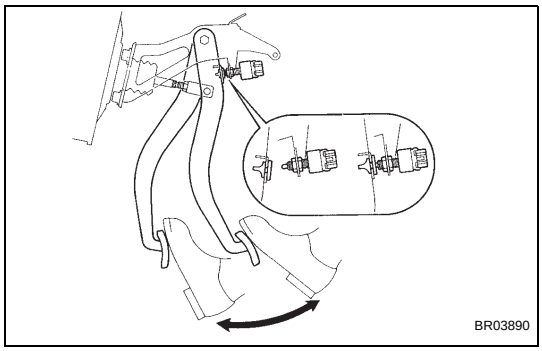
(1) Using SST, connect terminals TC and CG of the DLC3.
SST 09843-18040

(2) Turn the ignition switch on (IG).

DLC3:



G022986E01



(3) Clear the DTCs stored in the ECU by depressing the brake pedal 8 times or more within 5 seconds.
(4) Check that the warning light or multi information display indicates the normal system code.
(5) Remove the SST from the terminals of the DLC3.
HINT:
Clearing the DTCs cannot be performed by disconnecting the battery terminal or the ECU-IG NO. 2 fuse.

3. END OF DTC CHECK/CLEAR

(a) Turn the ignition switch on (IG).
(b) Check that the ABS warning light goes off within approximately 3 seconds.

FREEZE FRAME DATA

1. FREEZE FRAME DATA

(a) Whenever an ABS DTC is detected, the skid control ECU stores the current vehicle (sensor) state as Freeze Frame Data.
The skid control ECU stores the number of times (maximum: 31) the ignition switch has been turned from off to on (IG) since the last time the ABS was activated.
HINT:
- However, if the vehicle is stopped or at a low speed (4.3 mph (7 km/h) or less), or if a DTC is detected, the skid control ECU will stop counting the number.
- Freeze Frame Data at the time the ABS operates:
  The skid control ECU stores and updates data whenever the ABS system operates.
  When the ECU stores data at the time a DTC is detected, the data stored during ABS operation is erased.
- Freeze Frame Data at the time a DTC is detected:
  When the skid control ECU stores data at the time a DTC is detected, no updates will be performed until the data is cleared.

(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch on (IG).
(d) On the tester display, select the Freeze Frame Data.

Item (Display)	Measurement Item	Reference Value
VEHICLE SPD	Vehicle speed reading	Min.: 0 mph (0 km/h), Max.: 202 mph (326.4 km/h)
STOP LAMP SW	Stop light switch signal	Stop light switch ON: ON, OFF: OFF
#IG ON	Number of operations of ignition switch on (IG) after storing Freeze Frame Data	0 to 31
MAS CYL PRESS 1	Master cylinder pressure sensor reading	Brake pedal released: 0.3 to 0.5 V
M/C PRESS GRADE	Master cylinder pressure sensor change	Min.: -30 MPa/s, Max.: 225 MPa/s
YAW RATE	Yaw rate sensor reading	Min.: -128 deg/s, Max.: 127 deg/s
STEERING SEN	Steering angle sensor reading	Left turn: Increase Right turn: Decrease
FORWARD & REA G	Forward and backward G	Min.: -25.11 m/s^2, Max.: 24.91 m/s^2
SPD GRADE	Vehicle speed grade	Min.: -25.11 m/s^2, Max.: 24.91 m/s^2
BUZZER	Skid control buzzer signal	Skid control buzzer ON: ON, OFF: OFF
ACCELERATOR %	Accelerator opening angle %	Min.: 0 %, Max.: 128 %
PARKING BRAKE SW	Parking brake switch signal	Parking brake switch ON: ON, OFF: OFF
ENGINE TORQUE	Real engine torque	Min.: -1,024 Nm, Max.: 1,023 Nm
FR WHEEL SPD	FR wheel speed	Min.: 0 mph (0 km/h), Max.: 202 mph (326.4 km/h)
FL WHEEL SPD	FL wheel speed	Min.: 0 mph (0 km/h), Max.: 202 mph (326.4 km/h)
RR WHEEL SPD	RR wheel speed	Min.: 0 mph (0 km/h), Max.: 202 mph (326.4 km/h)

Item (Display)	Measurement Item	Reference Value
RL WHEEL SPD	RL wheel speed	Min.: 0 mph (0 km/h), Max.: 202 mph (326.4 km/h)
LATERAL G	Lateral G	Min.: -25.11 m/s^2, Max.: 24.91 m/s^2
GEAR POSITION	Gear position information	FAIL 1st 2nd 3rd 4th 5th 6th P, N R NOT R
LEVER POSITION	Shift lever position information	FAIL 1st 2nd 3rd 4th 5th 6th/B D/M P, N R
OPERATED SYSTEM	Operated system status	ABS activated: ABS VSC activated: VSC TRAC activated: TRAC BA activated: BA Fail safe mode activated: FAIL No system activated: NON System prohibited: SYS
FREEZE TIME	Elapsed time after freeze trigger	Min.: 0 ms, Max.: 500 ms
TROUBLE CODE	Freeze frame DTC	Displays to output DTC
INSPECTION MODE	Inspection mode	OTHER: Normal, INSPECT: Service

FAIL-SAFE CHART

1. FAIL SAFE OPERATION

- If there is a problem with sensor signals or actuator systems, the skid control ECU prohibits power supply to the brake actuator assembly and informs the ECM of VSC system failure.
  The brake actuator assembly turns off each solenoid and the ECM shuts off VSC control (traction control signal) from the skid control ECU accordingly, which turns out to be as if the ABS, TRAC and VSC systems were not installed.
  The ABS control will be prohibited, but EBD control continues as much as possible. If EBD control is impossible, the BRAKE warning light comes on to warn the driver (See page BC-138).
- If system components have any malfunction before starting control, immediately stop the operation. If system components have any malfunction during control, gradually stop the control so as not to trigger a sudden change in vehicle conditions.
  If it is impossible to control the systems, the warning light comes on to inform the driver of termination of the systems (See page BC-138).

HINT:
If the hydraulic brake booster encounters a malfunction, brake performance is gradually lost and ABS, BA, TRAC and VSC systems are prohibited.

BC

ABS, EBD and BA system:

Malfunction Area	Control Method
ABS system	ABS, BA, TRAC and VSC control prohibited
BA system	ABS, BA, TRAC and VSC control prohibited
EBD system	ABS, EBD, BA, TRAC and VSC control prohibited

HINT:
A malfunction in either the ABS or BA system will result in an identical operation, with ABS, BA, TRAC and VSC system control prohibited.

TRAC and VSC system:

Malfunction Area	Control Method
Engine control system (TRAC and VSC systems)	Before control: Disables control During control: Uses only the brakes to effect control
Brake control system (VSC system)	Before control: Disables control During control: Uses only the engine to effect control
Brake control system (TRAC system)	Before control: Disables control During control: Disables control (by gradually ending control)

HINT:
As for the TRAC and VSC systems, different systems prohibit different controls depending on a malfunctioning part.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

With the intelligent tester connected to the DLC3 and the ignition switch on (IG), the ABS, TRAC and VSC Data List can be displayed. Follow the prompts on the tester screen to access the Data List.

Item (Display)	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
ABS MTR RELAY	ABS motor relay / ON or OFF	ON: Motor relay ON OFF: Motor relay OFF	-

2. ACTIVE TEST

HINT:
Performing the Active Test using the intelligent tester allows the relay, actuator, and other items to operate without removing any parts. Performing the Active Test as the first step in troubleshooting is one of the methods to save labor time.
It is possible to display the Data List during the Active Test.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) On the tester display, select the Active Test.
HINT:
The ignition switch must be turned on (IG) to proceed to the Active Test using the intelligent tester.

(*2): Models with multi information display

DIAGNOSTIC TROUBLE CODE CHART

- If a trouble code is displayed during the DTC check, check the circuit indicated by the DTC. For details of each code, refer to the page for the respective "DTC No." in the DTC chart.
- Inspect the fuse and relay before investigating the trouble areas as shown in the table below.

DTC chart of ABS:

DTC No.	Detection Item	Trouble Area	See page
C0200/31 (*1)	Front Speed Sensor RH Circuit	1. Front speed sensor RH 2. Speed sensor circuit 3. Speed sensor rotor 4. Sensor installation 5. Brake actuator assembly (Skid control ECU)	BC-156
C0205/32 (*1)	Front Speed Sensor LH Circuit	1. Front speed sensor LH 2. Speed sensor circuit 3. Speed sensor rotor 4. Sensor installation 5. Brake actuator assembly (Skid control ECU)	BC-156
C0210/33 (*1)	Rear Speed Sensor RH Circuit	1. Rear speed sensor RH 2. Speed sensor circuit 3. Speed sensor rotor 4. Sensor installation 5. Brake actuator assembly (Skid control ECU)	BC-164
C0215/34 (*1)	Rear Speed Sensor LH Circuit	1. Rear speed sensor LH 2. Speed sensor circuit 3. Speed sensor rotor 4. Sensor installation 5. Brake actuator assembly (Skid control ECU)	BC-164
C0226/21	SFR Solenoid Circuit	1. Brake actuator assembly 2. SFRH or SFRR circuit	BC-172
C0236/22	SFL Solenoid Circuit	1. Brake actuator assembly 2. SFLH or SFLR circuit	BC-172
C0246/23	SRR Solenoid Circuit	1. Brake actuator assembly 2. SRRH or SRRR circuit	BC-172
C0256/24	SRL Solenoid Circuit	1. Brake actuator assembly 2. SRLH or SRLR circuit	BC-172
C0273/13 (*1)	Open in ABS Motor Relay Circuit	1. ABS NO. 1 fuse 2. VSC NO. 2 relay 3. VSC NO. 2 relay circuit 4. Brake actuator assembly	BC-175
C0274/14	Short to B+ in ABS Motor Relay Circuit	1. ABS NO. 1 fuse 2. VSC NO. 2 relay 3. VSC NO. 2 relay circuit 4. Brake actuator assembly	BC-175
C0278/11	Open in ABS Solenoid Relay Circuit	1. ABS NO. 2 fuse 2. ABS solenoid relay 3. ABS solenoid relay circuit 4. Brake actuator assembly	BC-181
C0279/12	Short to B+ in ABS Solenoid Relay Circuit	Brake actuator assembly	BC-181
C1225/25	SM Solenoid Circuit	1. Brake actuator assembly 2. SM1 or SM2 circuit	BC-172
C1235/35	Foreign Object is Attached on Tip of Front Speed Sensor RH	1. Front speed sensor RH 2. Speed sensor rotor 3. Sensor installation 4. Brake actuator assembly (Skid control ECU)	BC-197

DTC No.	Detection Item	Trouble Area	See page
C1236/36	Foreign Object is Attached on Tip of Front Speed Sensor LH	1. Front speed sensor LH 2. Speed sensor rotor 3. Sensor installation 4. Brake actuator assembly (Skid control ECU)	BC-197
C1238/38	Foreign Object is Attached on Tip of Rear Speed Sensor RH	1. Rear speed sensor RH 2. Speed sensor rotor 3. Sensor installation 4. Brake actuator assembly (Skid control ECU)	BC-197
C1239/39	Foreign Object is Attached on Tip of Rear Speed Sensor LH	1. Rear speed sensor LH 2. Speed sensor rotor 3. Sensor installation 4. Brake actuator assembly (Skid control ECU)	BC-197
C1241/41	Low Battery Positive Voltage	1. ECU-IG NO. 2 fuse 2. Battery 3. Charging system 4. Power source circuit 5. Internal power supply circuit of the skid control ECU	BC-207
C1243/43 (*1)	Acceleration Sensor Stuck Malfunction	1. Yaw rate and acceleration sensor 2. Yaw rate and acceleration sensor circuit	BC-193
C1244/44	Open or Short in Acceleration Sensor Circuit	1. Yaw rate and acceleration sensor 2. Yaw rate and acceleration sensor circuit	BC-193
C1245/45 (*1)	Acceleration Sensor Output Malfunction	1. Yaw rate and acceleration sensor 2. Yaw rate and acceleration sensor circuit	BC-193
C1246/46 (*2)	Master Cylinder Pressure Sensor Malfunction	1. Master cylinder pressure sensor 2. Master cylinder pressure sensor circuit 3. Stop light switch circuit 4. Brake actuator assembly	BC-210
C1249/49	Open in Stop Light Switch Circuit	1. STOP fuse 2. Stop light switch 3. Stop light switch circuit 4. Brake actuator assembly (Skid control ECU)	BC-213
C1251/51 (*1)	Open in Pump Motor Circuit	1. Brake actuator assembly (GND circuit) 2. Brake actuator assembly (Motor circuit)	BC-219
C1361/91	Short Circuit in ABS Motor Fail Safe Relay Circuit	1. ABS NO. 1 fuse 2. VSC NO. 1 (fail safe) relay 3. VSC NO. 1 (fail safe) relay circuit 4. Brake actuator assembly	BC-175
C1381/97	Yaw Rate and / or Acceleration Sensor Power Supply Voltage Malfunction	1. Yaw rate and acceleration sensor 2. Yaw rate and acceleration sensor power source circuit	BC-193
U0073/94	Control Module Communication Bus OFF	CAN communication system	BC-224
U0124/95	Lost Communication with Lateral Acceleration Sensor Module	CAN communication system (Skid control ECU to yaw rate and acceleration sensor)	BC-224

(*1, *2):

BC

Even after the trouble areas are repaired, the ABS warning light will not go off unless the following operations are performed:

- (*1):
  (a) Drive the vehicle at 12 mph (20 km/h) for 30 seconds or more and check that the ABS warning light goes off.
  (b) Clear the DTC.
- (*2):
  (a) Keep the vehicle stationary for 5 seconds or more and depress the brake pedal lightly 2 or 3 times.
  (b) Drive the vehicle at the vehicle speed of 31 mph (50 km/h) and keep depressing the brake pedal strongly for approximately 3 seconds.
  (c) Repeat the above operation 3 times or more and check that the ABS warning light goes off.
  (d) Clear the DTC.

HINT:
In some cases, the intelligent tester cannot be used when the ABS warning light remains on.

DTC	43	ABS Control System Malfunction

DESCRIPTION

This DTC is output when the VSC system detects a malfunction in the ABS control system.

DTC No.	DTC Detection Condition	Trouble Area
43	Malfunction in the ABS control system.	ABS control system

INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	CHECK ABS CONTROL SYSTEM

(a) Clear the DTC (See page BC-141).
(b) Turn the ignition switch on (IG).
(c) Check if the same DTC is recorded (See page BC-141).

BC

Result

Condition	Proceed to
DTC (ABS control system DTC) is not output	A
DTC (ABS control system DTC) is output	B

B → REPAIR CIRCUIT INDICATED BY OUTPUT DTC (See page BC-151)

A

2	RECONFIRM DTC

(a) Clear the DTC (See page BC-141).
(b) Turn the ignition switch on (IG).
(c) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTC (43) is not output	A
DTC (43) is output	B

A

USE SIMULATION METHOD TO CHECK

DTC	C0200/31	Front Speed Sensor RH Circuit

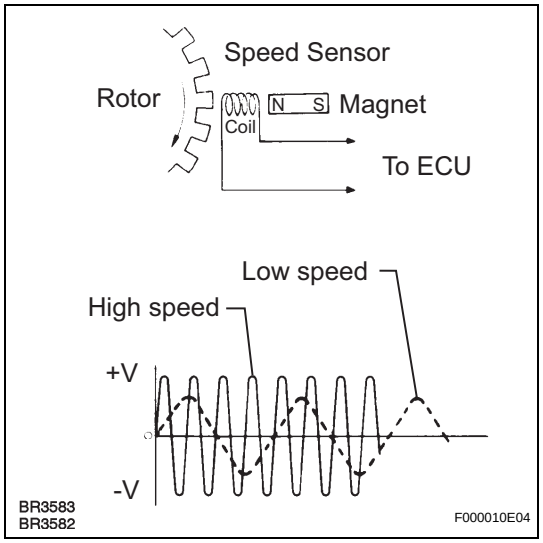
DTC	C0205/32	Front Speed Sensor LH Circuit

DTC	C1271/71	Low Output Signal of Front Speed Sensor RH (Test Mode DTC)

DTC	C1272/72	Low Output Signal of Front Speed Sensor LH (Test Mode DTC)

DESCRIPTION

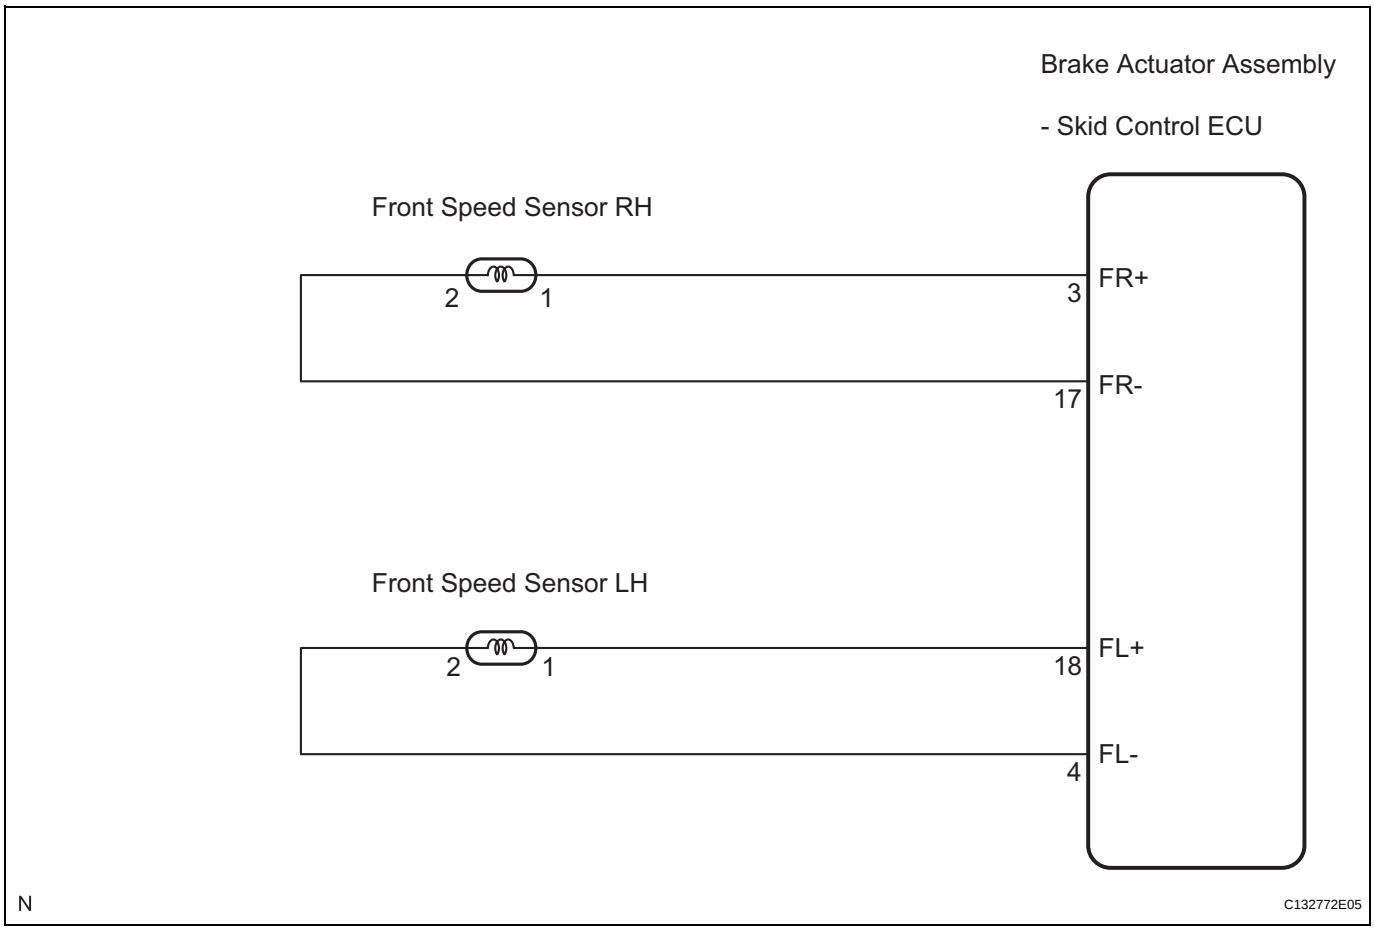
The speed sensors detect wheel speed and transmit the signals to the ECU. These signals are used for control of the ABS control system. Each of the front and rear rotors have 48 serrations.
When the rotors rotate, the magnetic field generated by the permanent magnet in the speed sensor induces an AC voltage.
Since the frequency of this AC voltage changes in direct proportion to the speed of the rotor, the frequency is used by the ECU to detect the speed of each wheel.
DTCs C1271/71 and C1272/72 can be deleted when the speed sensor sends a wheel speed signal or the Test Mode ends. DTCs C1271/71 and C1272/72 are output only in the Test Mode.



DTC No.	DTC Detection Condition	Trouble Area
C0200/31 C0205/32	When any of the following is detected: 1. At a vehicle speed of 6 mph (10 km/h) or more, an open or short in the sensor signal circuit continues for 1 second or more. 2. Momentary interruption of the sensor signal from the abnormal wheel occurs 7 times or more. 3. An open in the speed sensor signal circuit continues for 0.5 seconds or more.	• Front speed sensor RH/LH • Speed sensor circuit • Speed sensor rotor • Sensor installation • Brake actuator assembly (Skid control ECU)

HINT:
- DTC C0200/31 is for the front speed sensor RH.
- DTC C0205/32 is for the front speed sensor LH.

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	CHECK HARNESS AND CONNECTOR (MOMENTARY INTERRUPTION)

(a) Using the intelligent tester, check for any momentary interruption in the wire harness and connector corresponding to a DTC (See page BC-118).

ABS / VSC:

Item (Display)	Measurement Item / Range (Display)	Normal Condition
FR SPD OPN	FR speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal
FL SPD OPN	FL speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal

Result

Condition	Proceed to
There are no momentary interruptions	**A**
There are momentary interruptions	**B**
There is a constant open circuit	**C**

HINT:

Perform the above inspection before removing the sensor and connector.

B → Go to step 11

C → Go to step 5

A

2 READ VALUE OF INTELLIGENT TESTER (FRONT SPEED SENSOR)

(a) Turn the ignition switch off.
(b) Connect the intelligent tester to the DLC3.
(c) Start the engine.
(d) Select the Data List mode on the intelligent tester.

ABS / VSC:

Item (Display)	Measurement Item / Range (Display)	Normal Condition
FR WHEEL SPD	FR wheel speed sensor reading / min.: 0 mph (0 km/h), max.: 202 mph (326 km/h)	Actual wheel speed
FL WHEEL SPD	FL wheel speed sensor reading /min.: 0 mph (0 km/h), max.: 202 mph (326 km/h)	Actual wheel speed

BC

(e) Check that there is no difference between the speed value output from the speed sensor displayed on the intelligent tester and the speed value displayed on the speedometer when driving the vehicle.
OK:
The speed value output from the speed sensor displayed on the intelligent tester is the same as the actual vehicle speed.

NG → Go to step 5

OK

3 PERFORM TEST MODE (SIGNAL CHECK)

(a) Perform sensor check in the Test Mode procedure (See page BC-123).
OK:
All Test Mode DTCs are erased.

NG → Go to step 5

OK

4 RECONFIRM DTC

(a) Turn the ignition switch off.
(b) Clear the DTC (See page BC-141).
(c) Start the engine.
(d) Drive the vehicle at the speed of 20 mph (32 km/h) or more for at least 60 seconds.
(e) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTCs (C0200/31 and/or C0205/32) are not output	A
DTCs (C0200/31 and/or C0205/32) are output	B

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

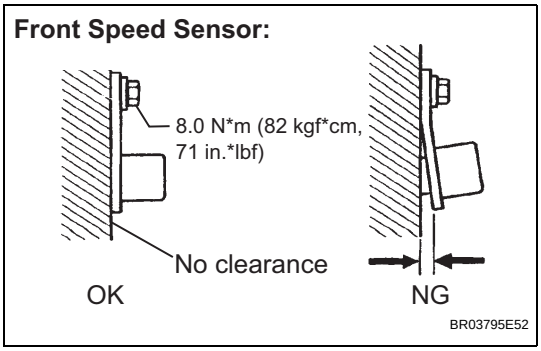
B → **Go to step 7**

A

USE SIMULATION METHOD TO CHECK

BC

5 CHECK FRONT SPEED SENSOR INSTALLATION



(a) Turn the ignition switch off.
(b) Check the speed sensor installation.
OK:
There is no clearance between the sensor and the front steering knuckle.
The installation bolt is tightened properly.
Torque:
8.0 N*m (82 kgf*cm, 71 in.*lbf)

NG → **INSTALL FRONT SPEED SENSOR CORRECTLY**

OK

6 CHECK FRONT SPEED SENSOR TIP

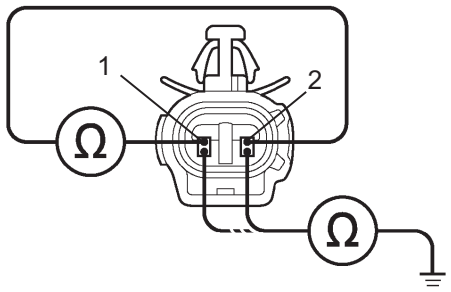
(a) Remove the front speed sensor (See page BC-438).
(b) Check the speed sensor tip.
OK:
No scratches or foreign matter on the sensor tip.
NOTICE:
Check the speed sensor signal after cleaning or replacement (See page BC-123).

NG → **CLEAN OR REPLACE FRONT SPEED SENSOR**

OK

7	INSPECT FRONT SPEED SENSOR

Front Speed Sensor:



C136017E01

(a) Turn the ignition switch off.
(b) Install the front speed sensor.
(c) Disconnect the front speed sensor connector.
(d) Measure the resistance according to the value(s) in the table below.

Standard resistance:

RH

Tester Connection	Condition	Specified Condition
1 (FR+) - 2 (FR-)	Always	1.4 to 1.8 kΩ at 20°C (68 °F)
1 (FR+) - Body ground	Always	10 kΩ or higher
2 (FR-) - Body ground	Always	10 kΩ or higher

LH

Tester Connection	Condition	Specified Condition
1 (FL+) - 2 (FL-)	Always	1.4 to 1.8 kΩ at 20°C (68 °F)
1 (FL+) - Body ground	Always	10 kΩ or higher
2 (FL-) - Body ground	Always	10 kΩ or higher

NOTICE:
Check the speed sensor signal after replacement (See page BC-123).

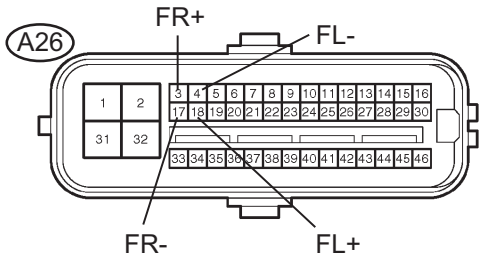
NG → **REPLACE FRONT SPEED SENSOR**

OK

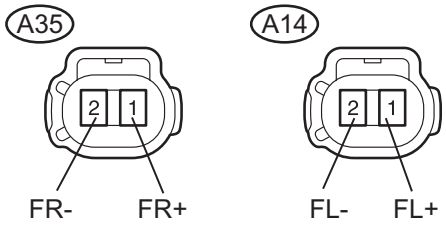
BC

8 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - FRONT SPEED SENSOR)

Skid Control ECU Harness Side Connector Front View:



Front Speed Sensor Harness Side Connector Front View:



C136018E01

(a) Disconnect the skid control ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

RH

Tester Connection	Condition	Specified Condition
A26-3 (FR+) - A35-1 (FR+)	Always	Below 1 Ω
A26-3 (FR+) - Body ground	Always	10 kΩ or higher
A26-17 (FR-) - A35-2 (FR-)	Always	Below 1 Ω
A26-17 (FR-) - Body ground	Always	10 kΩ or higher

LH

Tester Connection	Condition	Specified Condition
A26-18 (FL+) - A14-1 (FL+)	Always	Below 1 Ω
A26-18 (FL+) - Body ground	Always	10 kΩ or higher
A26-4 (FL-) - A14-2 (FL-)	Always	Below 1 Ω
A26-4 (FL-) - Body ground	Always	10 kΩ or higher

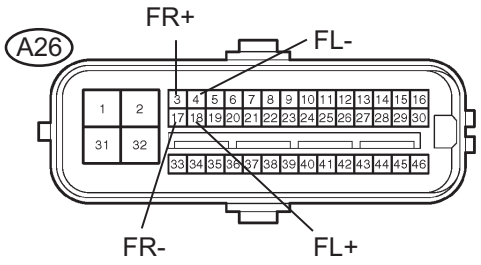
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

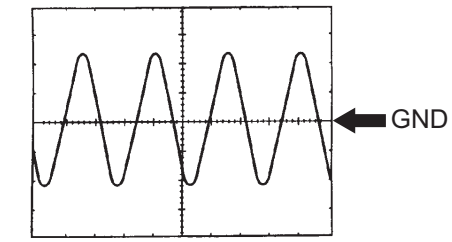
BC

9 CHECK SPEED SENSOR AND SPEED SENSOR ROTOR SERRATIONS

Skid Control ECU Harness Side Connector Front View:



Normal Signal Waveform:



1 V/Division, 2 ms/Division

C136019E04

(a) Reconnect the front speed sensor connector.
(b) Connect the oscilloscope to the front speed sensor terminal of the skid control ECU.
(c) Check that a waveform is output when the tires are rotated.

OK:

The same waveform is output from all the 4 wheels and there is no noise or interference in the waveform.

HINT:

- As the vehicle speed (wheel revolution speed) increases, a cycle of the waveform narrows and the output voltage becomes greater.
- When noise is identified in the waveform on the oscilloscope, the erratic signals are generated due to speed sensor rotor's scratches, looseness or foreign matter attached to it.

NG → **REPLACE BRAKE ACTUATOR ASSEMBLY**

OK

10 RECONFIRM DTC

(a) Reconnect the skid control ECU connector.
(b) Clear the DTC (See page BC-141).
(c) Start the engine.
(d) Drive the vehicle at the speed of 20 mph (32 km/h) or more for at least 60 seconds.
(e) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTCs (C0200/31 and/or C0205/32) are output	A
DTCs (C0200/31 and/or C0205/32) are not output	B

HINT:

If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

B → **USE SIMULATION METHOD TO CHECK**

BC

A

REPLACE BRAKE ACTUATOR ASSEMBLY

11	**REPAIR OR REPLACE HARNESS OR CONNECTOR (SKID CONTROL ECU - FRONT SPEED SENSOR)**

(a) Turn the ignition switch off.
(b) Repair or replace the harness or connector.
(c) Check for any momentary interruption between the skid control ECU and front speed sensor (See page BC-118).
(d) Check that there is no momentary interruption.

NEXT

BC

12	**RECONFIRM DTC**

(a) Clear the DTC (See page BC-141).
(b) Start the engine.
(c) Drive the vehicle at the speed of 20 mph (32 km/h) or more for at least 60 seconds.
(d) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTCs (C0200/31 and/or C0205/32) are not output	A
DTCs (C0200/31 and/or C0205/32) are output	B

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

B → **Go to step 2**

A

END

DTC	C0210/33	Rear Speed Sensor RH Circuit

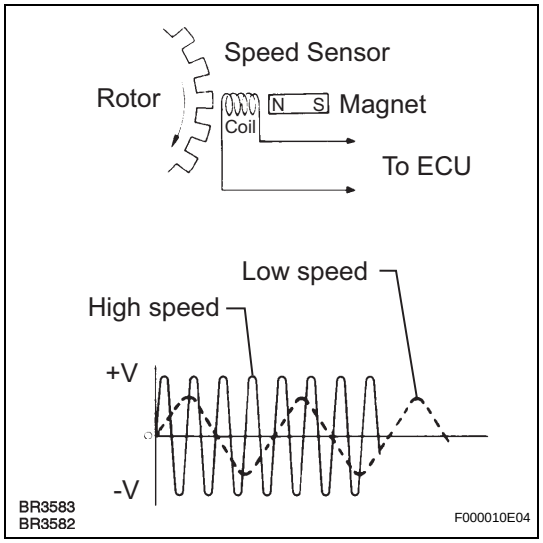
DTC	C0215/34	Rear Speed Sensor LH Circuit

DTC	C1273/73	Low Output Signal of Rear Speed Sensor RH (Test Mode DTC)

DTC	C1274/74	Low Output Signal of Rear Speed Sensor LH (Test Mode DTC)

DESCRIPTION

The speed sensors detect wheel speed and transmit the signals to the ECU. These signals are used for control of the ABS control system. Each of the front and rear rotors have 48 serrations.
When the rotors rotate, the magnetic field generated by the permanent magnet in the speed sensor induces an AC voltage.
Since the frequency of this AC voltage changes in direct proportion to the speed of the rotor, the frequency is used by the ECU to detect the speed of each wheel.
DTCs C1273/73 and C1274/74 can be deleted when the speed sensor sends a wheel speed signal or the Test Mode ends. DTCs C1273/73 and C1274/74 are output only in the Test Mode.



DTC No.	DTC Detection Condition	Trouble Area
C0210/33 C0215/34	When any of the following is detected: 1. At a vehicle speed of 6 mph (10 km/h) or more, an open or short in the sensor signal circuit continues for 1 second or more. 2. Momentary interruption of the sensor signal from the abnormal wheel occurs 7 times or more. 3. An open in the speed sensor signal circuit continues for 0.5 seconds or more.	• Rear speed sensor RH/LH • Speed sensor circuit • Speed sensor rotor • Sensor installation • Brake actuator assembly (Skid control ECU)

HINT:
- DTC C0210/33 is for the rear speed sensor RH.
- DTC C0215/34 is for the rear speed sensor LH.

(e) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTCs (C0210/33 and/or C0215/34) are not output	A
DTCs (C0210/33 and/or C0215/34) are output	B

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

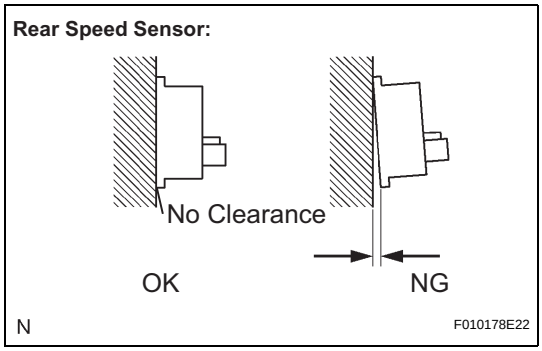
B → **Go to step 6**

A

USE SIMULATION METHOD TO CHECK

BC

5 CHECK REAR SPEED SENSOR INSTALLATION

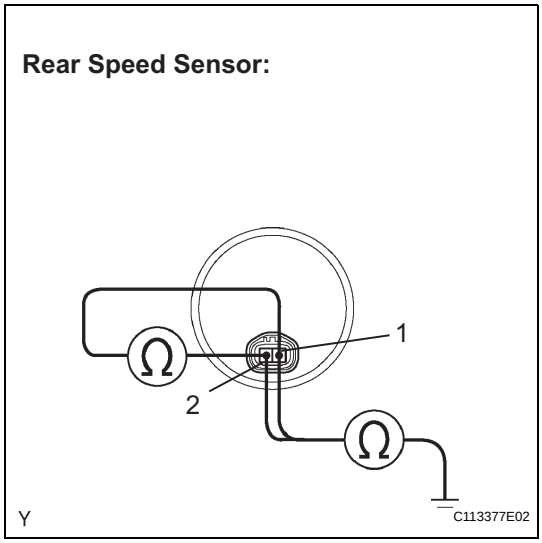


(a) Turn the ignition switch off.
(b) Check the speed sensor installation.
OK:
There is no clearance between the sensor and rear axle carrier.

NG → **INSTALL REAR SPEED SENSOR CORRECTLY**

OK

6 INSPECT REAR SPEED SENSOR



(a) Turn the ignition switch off.
(b) Disconnect the rear speed sensor connector.
(c) Measure the resistance according to the value(s) in the table below.
Standard resistance:
RH

Tester Connection	Condition	Specified Condition
2 (RR+) - 1 (RR-)	Always	0.9 to 2.1 kΩ
2 (RR+) - Body ground	Always	10 kΩ or higher
1 (RR-) - Body ground	Always	10 kΩ or higher

LH

Tester Connection	Condition	Specified Condition
2 (RL+) - 1 (RL-)	Always	0.9 to 2.1 kΩ
2 (RL+) - Body ground	Always	10 kΩ or higher
1 (RL-) - Body ground	Always	10 kΩ or higher

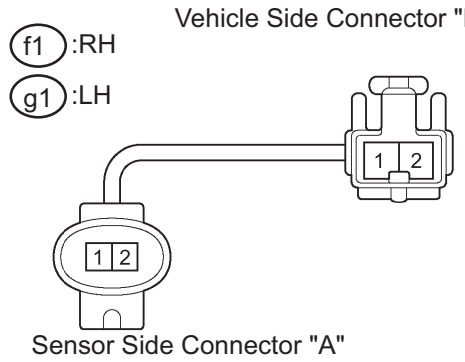
NOTICE:
Check the speed sensor signal after replacement (See page BC-123).

NG → **REPLACE REAR SPEED SENSOR**

OK

7 CHECK HARNESS AND CONNECTOR (SKID CONTROL SENSOR WIRE)

Skid Control Sensor Wire:



(a) Disconnect the skid control sensor wire.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

RH

Tester Connection	Condition	Specified Condition
f1 ("A"-1) - f1 ("B"-2)	Always	Below 1 Ω
f1 ("A"-1) - f1 ("B"-1)	Always	10 kΩ or higher

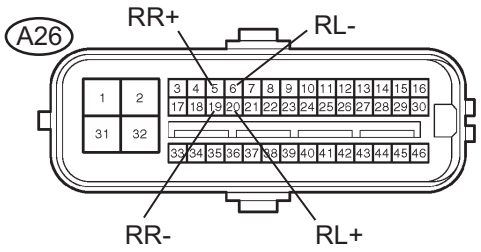
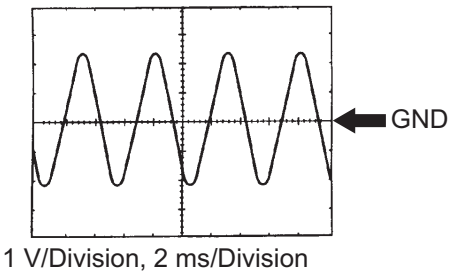
9 CHECK SPEED SENSOR AND SPEED SENSOR ROTOR SERRATIONS

Skid Control ECU Harness Side Connector Front View:



Normal Signal Waveform:



C136019E02

(a) Reconnect the skid control sensor wire.
(b) Reconnect the rear speed sensor connector.
(c) Connect the oscilloscope to the rear speed sensor terminal of the skid control ECU.
(d) Check that a waveform is output when the tires are rotated.

OK:

The same waveform is output from all the 4 wheels and there is no noise or interference in the waveform.

HINT:

- As the vehicle speed (wheel revolution speed) increases, a cycle of the waveform narrows and the output voltage becomes greater.
- When noise is identified in the waveform on the oscilloscope, the erratic signals are generated due to speed sensor rotor's scratches, looseness or foreign matter attached to it.

NG → **REPLACE BRAKE ACTUATOR ASSEMBLY**

OK

10 RECONFIRM DTC

(a) Reconnect the skid control ECU connector.
(b) Clear the DTC (See page BC-141).
(c) Start the engine.
(d) Drive the vehicle at the speed of 20 mph (32 km/h) or more for at least 60 seconds.
(e) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTCs (C0210/33 and/or C0215/34) are output	A
DTCs (C0210/33 and/or C0215/34) are not output	B

HINT:

If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

B → **USE SIMULATION METHOD TO CHECK**

BC

A

REPLACE BRAKE ACTUATOR ASSEMBLY

11 **REPAIR OR REPLACE HARNESS OR CONNECTOR (SKID CONTROL ECU - REAR SPEED SENSOR)**

(a) Turn the ignition switch off.
(b) Repair or replace the harness or connector.
(c) Check for any momentary interruption between the skid control ECU and rear speed sensor (See page BC-118).
(d) Check that there is no momentary interruption.

NEXT

BC

12 **RECONFIRM DTC**

(a) Clear the DTC (See page BC-141).
(b) Start the engine.
(c) Drive the vehicle at the speed of 20 mph (32 km/h) or more for at least 60 seconds.
(d) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTCs (C0210/33 and/or C0215/34) are not output	A
DTCs (C0210/33 and/or C0215/34) are output	B

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

B → **Go to step 2**

DTC	C0226/21	SFR Solenoid Circuit

DTC	C0236/22	SFL Solenoid Circuit

DTC	C0246/23	SRR Solenoid Circuit

DTC	C0256/24	SRL Solenoid Circuit

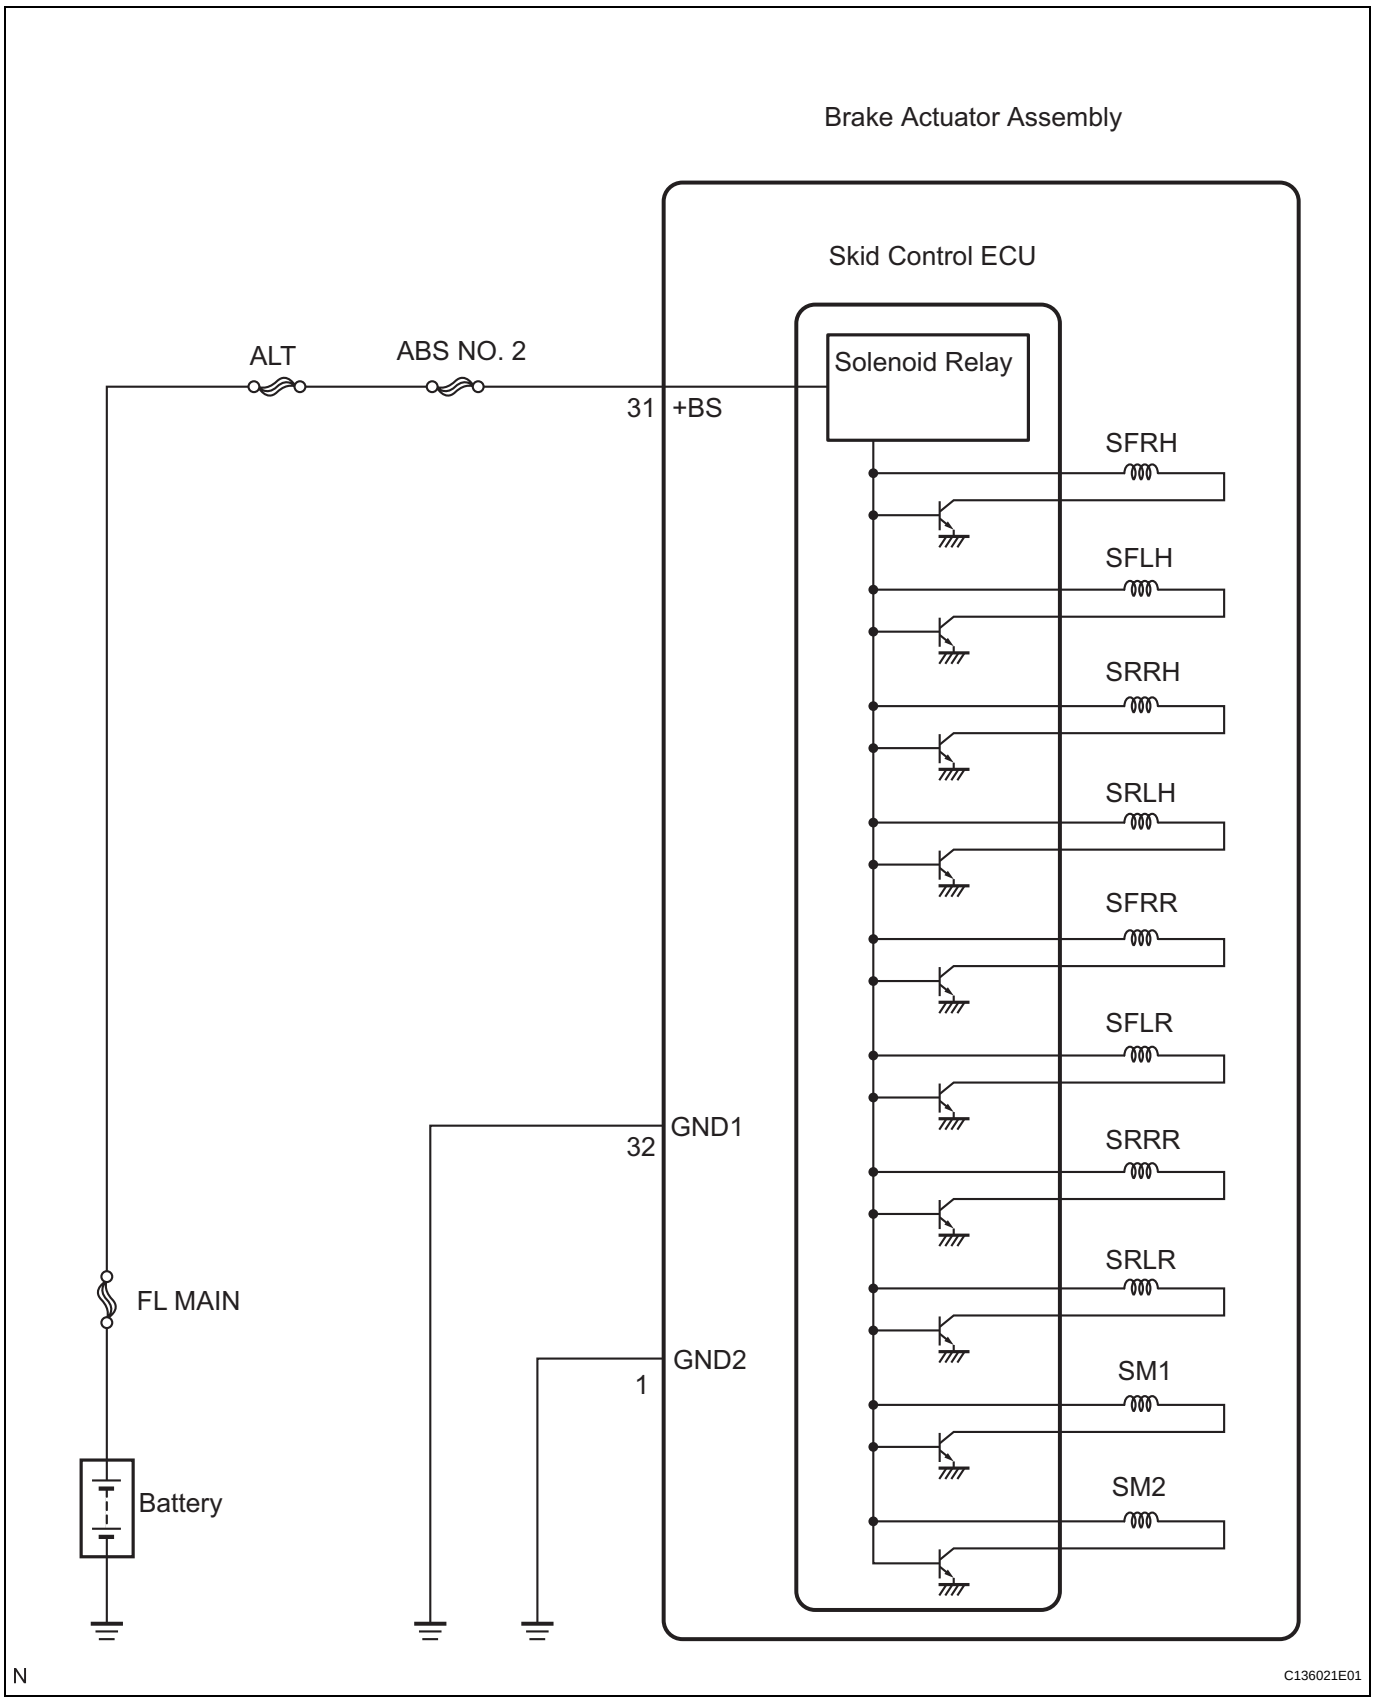
DTC	C1225/25	SM Solenoid Circuit

DESCRIPTION

These solenoids turn on when signals are received from the skid control ECU and they control the pressure acting on the wheel cylinders to control the braking force.

DTC No.	DTC Detection Condition	Trouble Area
C0226/21 C0236/22 C0246/23 C0256/24	Open or short in the solenoid circuit continues for 0.05 seconds or more.	• Brake actuator assembly • Solenoid circuit
C1225/25	When any of the following is detected: • While outputting switching solenoid (SM1 or SM2) ON, overcurrent continues for 0.05 seconds or more. • While outputting switching solenoid (SM1 or SM2) OFF, an open circuit continues for 0.05 seconds or more. • While outputting switching solenoid (SM1 or SM2) ON, an open circuit continues for 0.1 second or more. • While outputting switching solenoid (SM1 or SM2) OFF, current continues to be applied for 0.1 second or more. • Short to GND in the switching solenoid (SM1 or SM2) continues for 0.1 second or more. • Switching solenoids SM1 and SM2 are shorted for 0.1 second or more.	• Brake actuator assembly • SM1 or SM2 circuit

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	**RECONFIRM DTC**

HINT:
These codes are detected when a problem is determined in the brake actuator assembly.
The solenoid circuits are in the brake actuator assembly. Therefore, solenoid circuit inspection and solenoid unit inspection cannot be performed. Be sure to check if any DTC code is output before replacing the brake actuator assembly.

(a) Clear the DTC (See page BC-141).
(b) Start the engine.
(c) Drive the vehicle at the speed of 4 mph (6 km/h) or more.
(d) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTCs (C0226/21, C0236/22, C0246/23, C0256/24 and/or C1225/25) are not output	A
DTCs (C0226/21, C0236/22, C0246/23, C0256/24 and/or C1225/25) are output	B

BC

HINT:

- If a speed signal of 4 mph (6 km/h) or more is input to the skid control ECU, with the ignition switch on (IG) and the stop light switch off, the ECU performs self diagnosis of the motor and solenoid circuits.
- If the normal system code is output (the trouble code is not output), slightly jiggle the connectors, wire harness, and fuses of the brake actuator assembly. Make sure that no DTCs are output.
- If any DTCs are output while jiggling a connector or wire harness of the brake actuator assembly (skid control ECU), inspect and repair the connector or wire harness.

B → **REPLACE BRAKE ACTUATOR ASSEMBLY**

USE SIMULATION METHOD TO CHECK

DTC	C0273/13	Open in ABS Motor Relay Circuit

DTC	C0274/14	Short to B+ in ABS Motor Relay Circuit

DTC	C1361/91	Short Circuit in ABS Motor Fail Safe Relay Circuit

DESCRIPTION

If a DTC of the motor line is stored, the VSC NO. 1 (fail safe) relay cuts off the power supply to the VSC NO. 2 relay and performs fail safe.

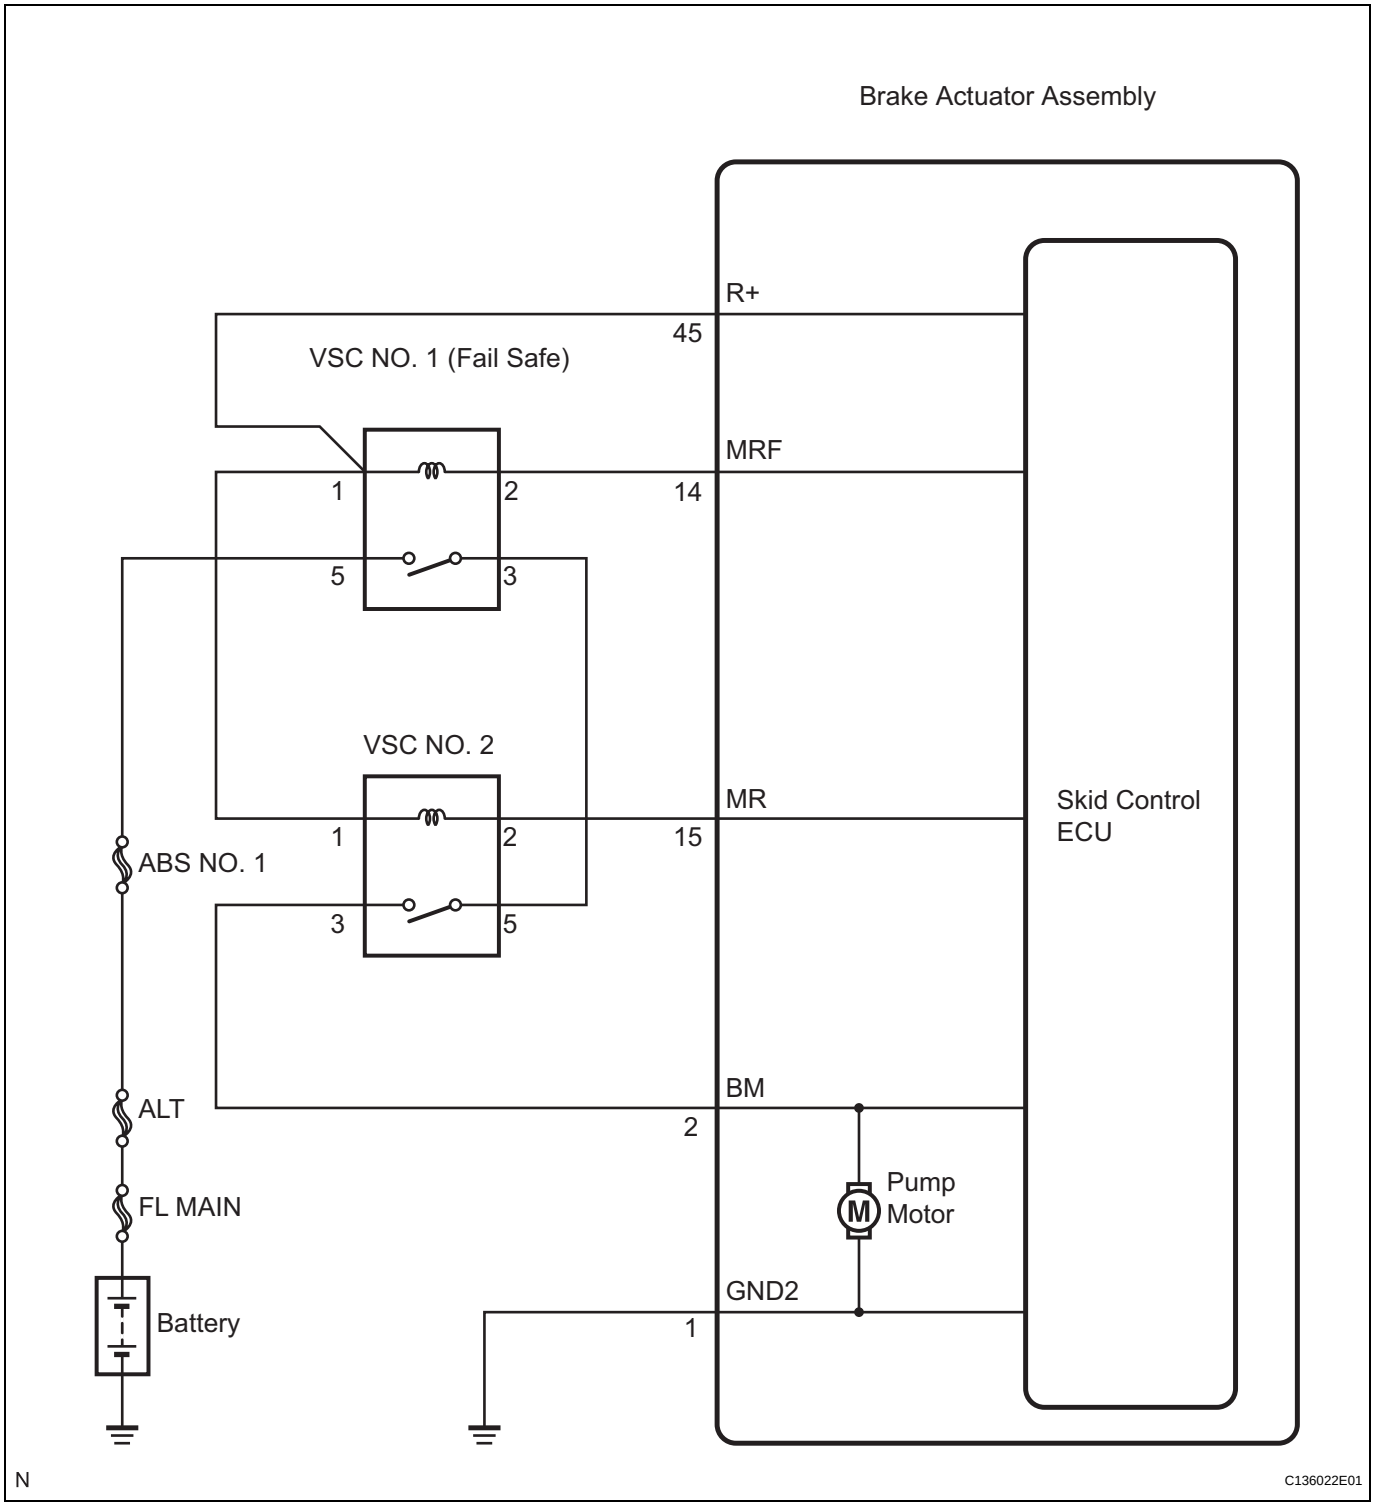
While any of the ABS, TRAC, VSC, or BA is operating, the skid control ECU (housed in the actuator assembly) turns the VSC NO. 2 relay on and activates the pump motor in the brake actuator.

This code may be stored if the motor relay (BM) voltage becomes lower than the DTC detecting condition due to insufficient output from the battery or alternator.

BC

DTC No.	DTC Detection Condition	Trouble Area
C0273/13	When any of the following (1 or 2) is detected: 1. All of the following conditions continue for 0.12 seconds or more. • The IG1 terminal voltage is between 9.5 and 17.2 V. • During initial check and ABS, BA, TRAC, or VSC are operating. • Relay contact is open when the relay is ON. 2. All of the following conditions continue for 0.12 seconds. • The IG1 terminal voltage is 9.5 V or less. • Relay contact remains open when the relay is ON.	• ABS NO. 1 fuse • VSC NO. 2 relay • VSC NO. 2 relay circuit • Brake actuator assembly
C0274/14	When the motor relay is OFF, the VSC NO. 2 relay remains closed for 4 seconds or more.	• ABS NO. 1 fuse • VSC NO. 2 relay • VSC NO. 2 relay circuit • Brake actuator assembly
C1361/91	Immediately after the ignition switch is turned on (IG), the relay contact is closed for 4 seconds when the VSC NO. 1 (fail safe) relay is OFF.	• ABS NO. 1 fuse • VSC NO. 1 (fail safe) relay • VSC NO. 1 (fail safe) relay circuit • Brake actuator assembly

WIRING DIAGRAM

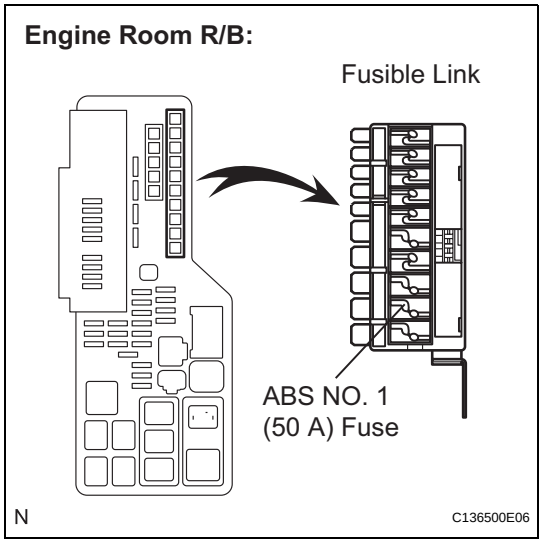


INSPECTION PROCEDURE

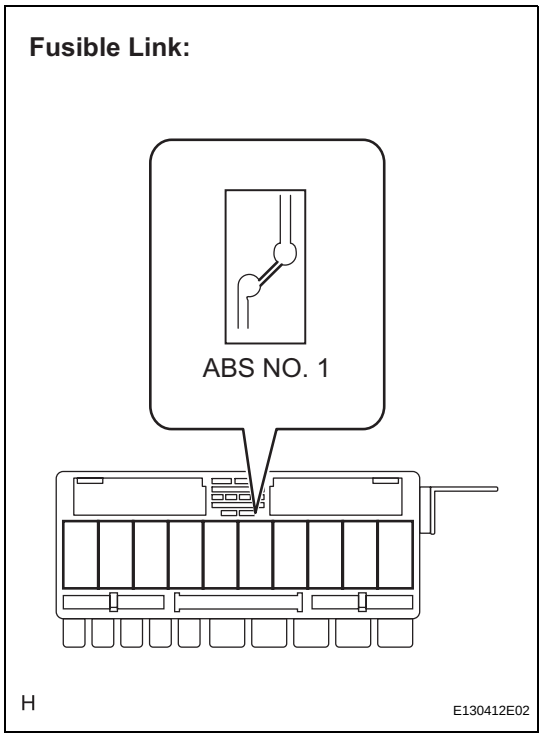
NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	**INSPECT ABS NO. 1 FUSE**



(a) Remove the fusible link from the engine room R/B.



(b) Check if the fusible link is melted.
OK:
The fusible link is melted.

(c) Install the fusible link to the engine room R/B with the nut.

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

NG → **REPLACE FUSIBLE LINK (ABS NO. 1 FUSE)**

BC

DTC	C0278/11	Open in ABS Solenoid Relay Circuit

DTC	C0279/12	Short to B+ in ABS Solenoid Relay Circuit

DESCRIPTION

The ABS solenoid relay supplies power to the ABS solenoid and TRAC solenoid.
The solenoid relay is turned on 1.5 seconds after the ignition switch is turned on (IG), and is turned off if an open or short in the solenoid is detected by self diagnosis performed when the vehicle starts running.
The ABS solenoid relay is housed in the skid control ECU in the actuator assembly.
HINT:
If a speed signal of 4 mph (6 km/h) or more is input to the skid control ECU, with the ignition switch on (IG) and the stop light switch off, the ECU performs self diagnosis of the motor and solenoid circuits.

DTC No.	DTC Detection Condition	Trouble Area
C0278/11	When any of the following (1 or 2) is detected: 1. Both of the following conditions continue for 0.2 seconds or more. • The IG1 terminal voltage is between 9.5 and 17.2 V. • The solenoid relay contact is open when the relay is ON. 2. Both of the following conditions continue for 0.2 seconds or more. • IG1 terminal voltage becomes lower than 9.5 V or less when the relay is turned on. • The relay contact remains open.	• ABS NO. 2 fuse • ABS solenoid relay • ABS solenoid relay circuit • Brake actuator assembly
C0279/12	Immediately after the ignition switch is turned on (IG), the solenoid relay contact is closed for 0.2 seconds when the relay is turned off.	Brake actuator assembly

OK

REPLACE ECM

BC

DTC	C1210/36	Zero Point Calibration of Yaw Rate Sensor Undone

DTC	C1336/39	Zero Point Calibration of Acceleration Sensor Undone

DESCRIPTION

The skid control ECU receives signals from the yaw rate and acceleration sensor via the CAN communication system.
The yaw rate sensor has the built in acceleration sensor and detects the vehicle's condition using 2 circuits (GL1, GL2). If there is trouble in the bus lines between the yaw rate and acceleration sensor and the CAN communication system, the DTCs U0123/62 (yaw rate sensor communication trouble) and U0124/95 (acceleration sensor communication trouble) are output.
The DTCs are also output when the calibration has not been completed.

DTC No.	DTC Detection Condition	Trouble Area
C1210/36	Zero point calibration of yaw rate sensor undone.	• Brake actuator assembly (Skid control ECU) • Yaw rate and acceleration sensor • Zero point calibration undone (Perform zero point calibration and check DTC. If DTC is not output again, the sensor is normal)
C1336/39	When either of the following is detected: 1. The vehicle runs in the normal mode with zero point calibration undone. 2. After the zero point has been obtained, the zero point voltage of the sensor is not between 2.38 and 2.62 V.	• Brake actuator assembly (Skid control ECU) • Yaw rate and acceleration sensor • Zero point calibration undone (Perform zero point calibration and check DTC. If DTC is not output again, the sensor is normal)

BC

INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

HINT:

When U0123/62, U0124/95 or U0126/63 is output along with C1210/36 or C1336/39, inspect and repair trouble areas indicated by U0123/62, U0124/95 or U0126/63 first.

1	PERFORM ZERO POINT CALIBRATION OF YAW RATE AND ACCELERATION SENSOR

(a) Perform zero point calibration of the yaw rate and acceleration sensor (See page BC-119).

NEXT

2	RECONFIRM DTC

(a) Clear the DTC (See page BC-141).
(b) Check if the same DTCs are recorded (See page BC-141).

Result

Condition	Proceed to
DTCs (C1210/36 and/or C1336/39) are output	A
DTCs (C1210/36 and/or C1336/39) are not output	B

HINT:
- The DTCs are recorded because zero point calibration has not been completed.
- End the procedure as the same DTCs are not recorded after completion of zero point calibration.

B → **END**

A

3	CHECK YAW RATE AND ACCELERATION SENSOR INSTALLATION

(a) Turn the ignition switch off.
(b) Check that the yaw rate and acceleration sensor has been installed properly (See page BC-448).
OK:
The sensor should be tightened to the specified torque.
The sensor should not be tilted.

NG → **INSTALL YAW RATE AND ACCELERATION SENSOR CORRECTLY**

OK

REPLACE BRAKE ACTUATOR ASSEMBLY

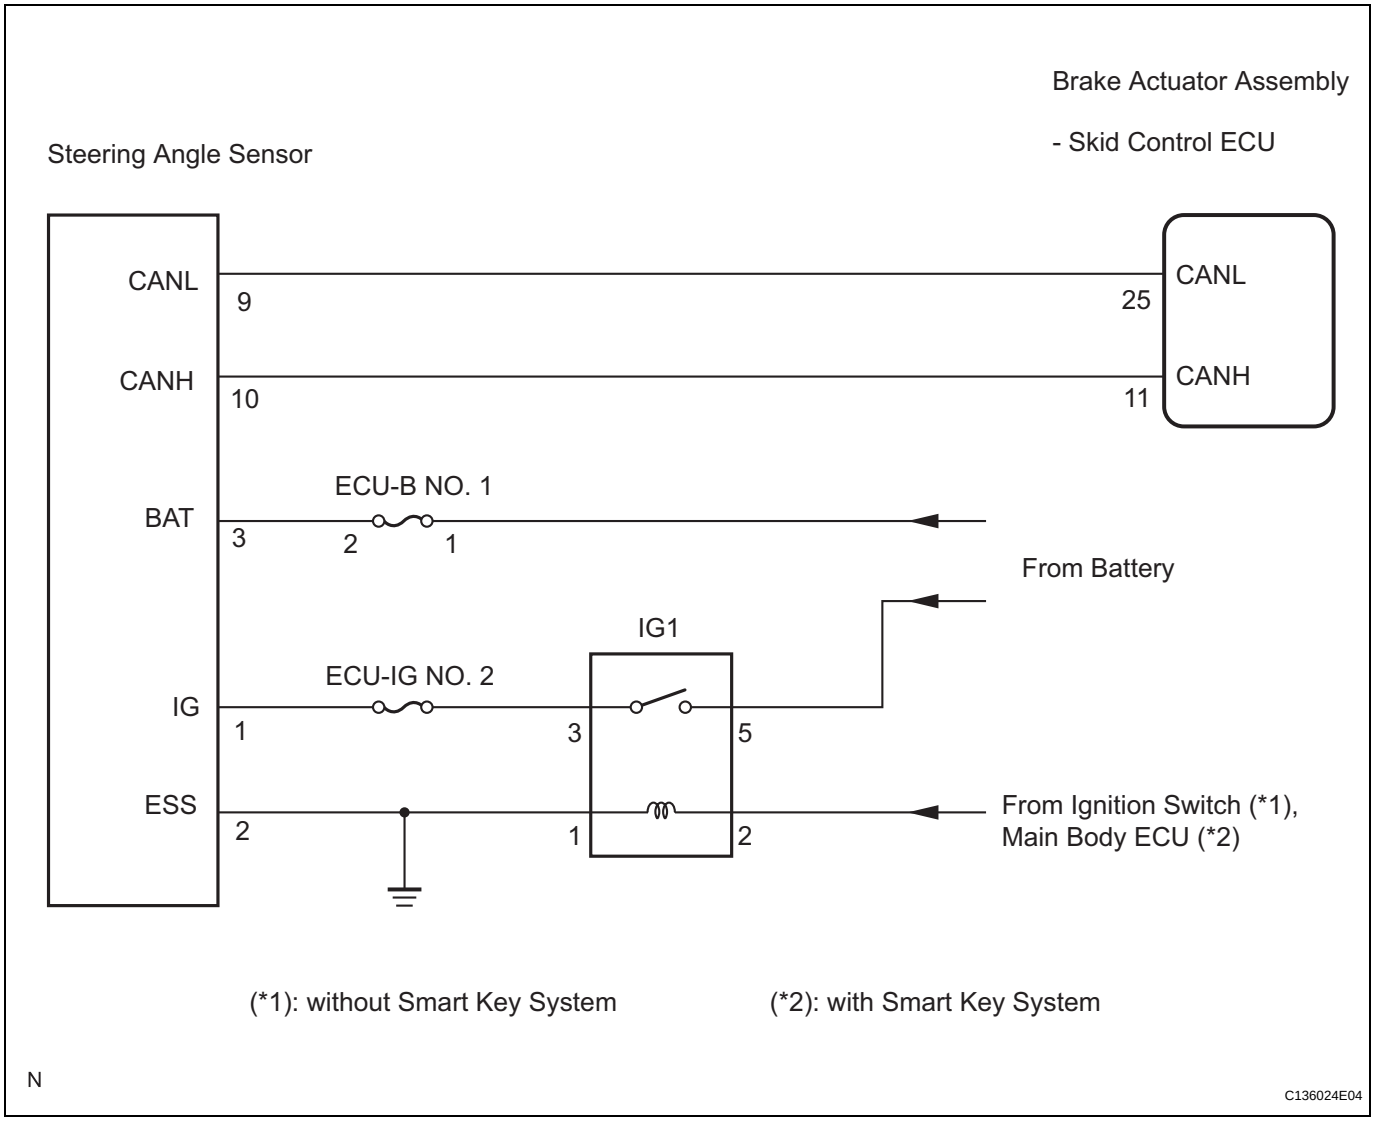
DTC	C1231/31	Steering Angle Sensor Circuit Malfunction

DESCRIPTION

The steering angle sensor signal is sent to the skid control ECU via the CAN communication system. When there is a malfunction in the CAN communication system, it will be detected by the steering angle sensor zero point malfunction diagnostic function.

DTC No.	DTC Detection Condition	Trouble Area
C1231/31	When ECU IG1 terminal voltage is 9.5 V or more, the steering angle sensor malfunction signal is received.	• Steering angle sensor • Steering angle sensor circuit • Steering angle sensor power supply • Brake actuator assembly (Skid control ECU)

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

- When U0073/94, U0123/62, U0124/95 or U0126/63 is output together with C1231/31, inspect and repair the trouble areas indicated by U0073/94, U0123/62, U0124/95 or U0126/63 first.

- When the speed sensor or the yaw rate sensor has trouble, DTCs for the steering angle sensor may be output even when the steering angle sensor is normal. When DTCs for the speed sensor or yaw rate sensor are output together with other DTCs for the steering angle sensor, inspect and repair the speed sensor and yaw rate sensor first, and then inspect and repair the steering angle sensor.

1 CHECK DTC

(a) Clear the DTC (See page BC-141).
(b) Turn the ignition switch off.
(c) Turn the ignition switch on (IG) again and check that no CAN communication system DTC is output.
(d) Drive the vehicle and turn the steering wheel to the right and left at the speed of 22 mph (35 km/h) and check that no speed sensor and yaw rate sensor DTCs are output.

Result

Condition	Proceed to
No CAN communication system DTC and the speed sensor or yaw rate sensor DTC are output	A
CAN communication system DTC is output	B
Speed sensor or yaw rate sensor DTC is output	C

BC

HINT:
- If there is a malfunction in the speed sensor or the yaw rate sensor, an abnormal value may be output although the steering angle sensor is normal.
- If the speed sensor and the yaw rate sensor DTCs are output simultaneously, repair the sensors and inspect the steering angle sensor.

B → **INSPECT CAN COMMUNICATION SYSTEM**

C → **REPAIR CIRCUIT INDICATED BY OUTPUT DTC (See page BC-151)**

A

DTC	**C1244/44**	**Open or Short in Acceleration Sensor Circuit**
DTC	**C1245/45**	**Acceleration Sensor Output Malfunction**
DTC	**C1279/79**	**Acceleration Sensor Output Voltage Malfunction (Test Mode DTC)**
DTC	**C1381/97**	**Yaw Rate and / or Acceleration Sensor Power Supply Voltage Malfunction**

BC

DESCRIPTION

The skid control ECU receives signals from the yaw rate and acceleration sensor via the CAN communication system.

The yaw rate sensor has a built in acceleration sensor and detects the vehicle's condition using 2 circuits (GL1, GL2).

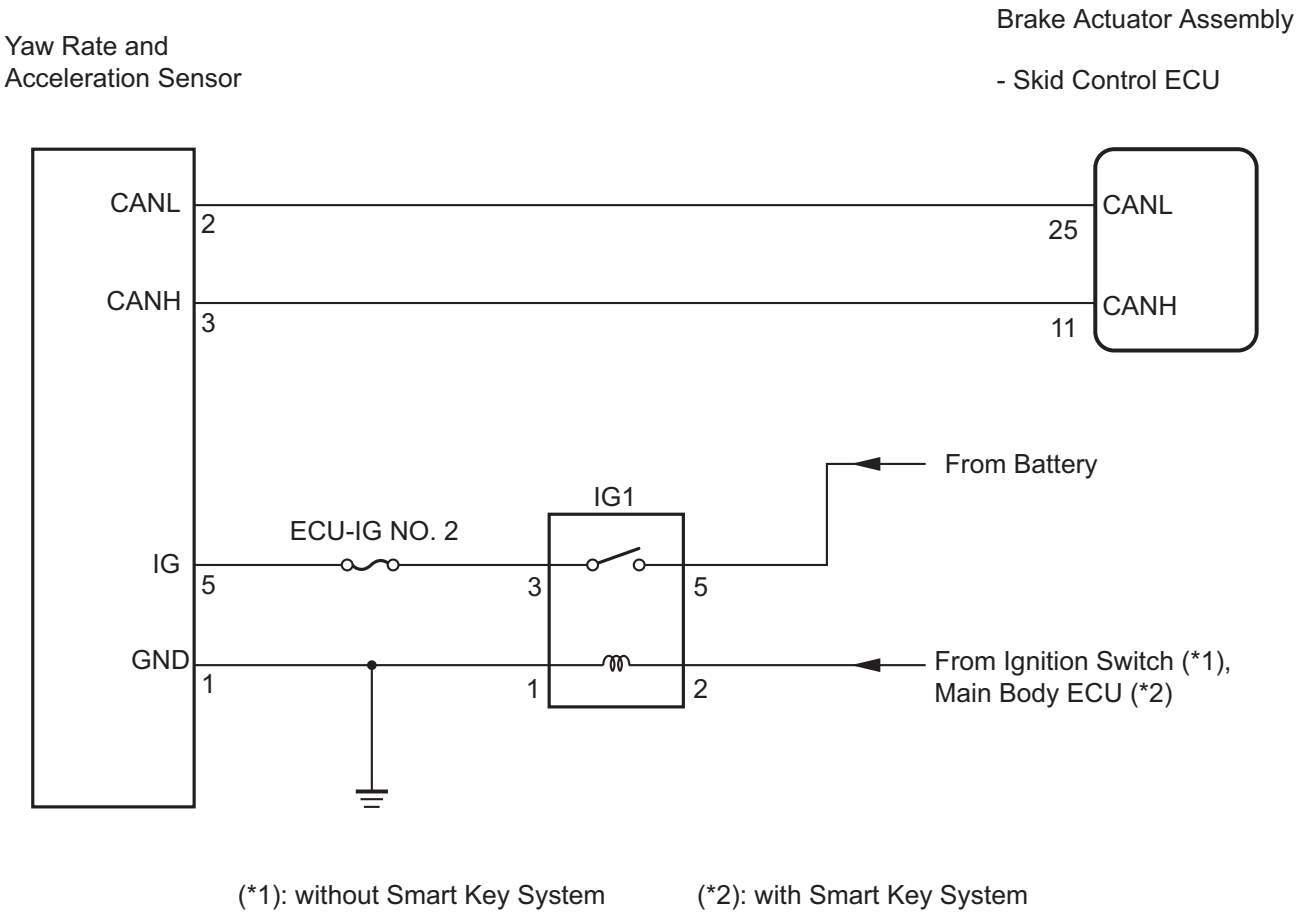
If there is trouble in the bus lines between the yaw rate and acceleration sensor and the CAN communication system, the DTC U0123/62 (malfunction in CAN communication with the yaw rate sensor) and U0124/95 (malfunction in CAN communication with the acceleration sensor) are output.

These DTCs are also output when calibration has not been completed.

DTCs C0371/71 and C1279/79 can be deleted when the yaw rate and acceleration sensor sends a yaw rate and/or acceleration signal or the Test Mode ends. DTCs C0371/71 and C1279/79 are output only in the Test Mode.

DTC No.	DTC Detection Condition	Trouble Area
C1232/32	At a vehicle speed of 6 mph (10 km/h) or more, either GL1 or GL2 (input signal) does not change for 30 seconds or more.	• Yaw rate and acceleration sensor • Yaw rate and acceleration sensor circuit
C1234/34	Sensor malfunction signal is received from the yaw rate sensor.	• Yaw rate and acceleration sensor • Yaw rate and acceleration sensor circuit
C1243/43	While the vehicle speed changes from 19 mph (30 km/h) to 0 mph (0 km/h), the condition that the values of GL1 and GL2 do not change occurs 16 times or more.	• Yaw rate and acceleration sensor • Yaw rate and acceleration sensor circuit
C1244/44	When either of the following is detected: 1. A data malfunction signal is received from the acceleration sensor. 2. After the difference between GL1 and GL2 becomes 0.6 G or more with the vehicle stationary, the difference remains 0.4 G or more for 60 seconds or more.	• Yaw rate and acceleration sensor • Yaw rate and acceleration sensor circuit
C1245/45	At a vehicle speed of 19 mph (30 km/h) or more, the difference between the forward and backward G calculated from the acceleration sensor value and that calculated from the vehicle speed sensor exceeds 0.35 G for 60 seconds or more.	• Yaw rate and acceleration sensor • Yaw rate and acceleration sensor circuit
C1381/97	At a vehicle speed of more than 2 mph (3 km/h), the acceleration sensor power source malfunction signal is received for 10 seconds or more.	• Yaw rate and acceleration sensor • Yaw rate and acceleration sensor power source circuit

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

NOTICE:

When replacing the yaw rate and acceleration sensor, perform zero point calibration (See page BC-119).

HINT:

When U0123/62, U0124/95 or U0126/63 is output together with C1232/32, C1234/34, C1243/43, C1244/44, C1245/45, or C1381/97, inspect and repair the trouble areas indicated by U0123/62, U0124/95 or U0126/63 first.

1	CHECK DTC

(a) Clear the DTC (See page BC-141).
(b) Turn the ignition switch off.
(c) At a speed of 19 mph (30 km/h) or more, drive the vehicle, turn the steering wheel, and decelerate the vehicle (depress the brake pedal).

(d) Turn the ignition switch on (IG) again and check that no CAN communication system DTC is output.
(e) Check if DTCs for zero point calibration of the yaw rate sensor undone (C1210/36) or for zero point calibration of the acceleration sensor undone (C1336/39) are output.

Result

Condition	Proceed to
DTCs (C1210/36, C1336/39 and/or CAN communication system DTC) are not output	A
CAN communication system DTC is output	B
DTCs (C1210/36 and/or C1336/39) are output	C

2 CHECK YAW RATE AND ACCELERATION SENSOR INSTALLATION

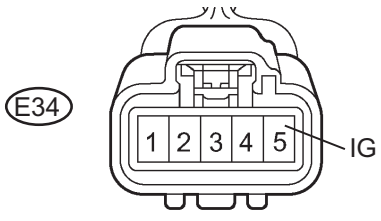
(a) Turn the ignition switch off.
(b) Check that the yaw rate and acceleration sensor has been installed properly (See page BC-448).
OK:
The sensor is tightened to the specified torque.
The sensor is not tilted.

NG → **INSTALL YAW RATE AND ACCELERATION SENSOR CORRECTLY**

OK

3 INSPECT YAW RATE AND ACCELERATION SENSOR (IG TERMINAL)

Yaw Rate and Acceleration Sensor Harness Side Connector Front View:



(a) Disconnect the yaw rate and acceleration sensor connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.
Standard voltage

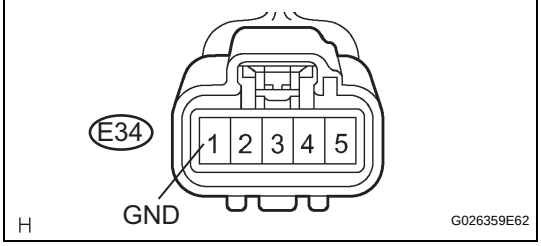
Tester Connection	Condition	Specified Condition
E34-5 (IG) - Body ground	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (IG CIRCUIT)**

OK

4 INSPECT YAW RATE AND ACCELERATION SENSOR (GND TERMINAL)

Yaw Rate and Acceleration Sensor Harness Side Connector Front View:



(a) Turn the ignition switch off.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E34-1 (GND) - Body ground	Always	Below 1 Ω

NOTICE:
Check the yaw rate and acceleration sensor signal after replacement (See page BC-123).
HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

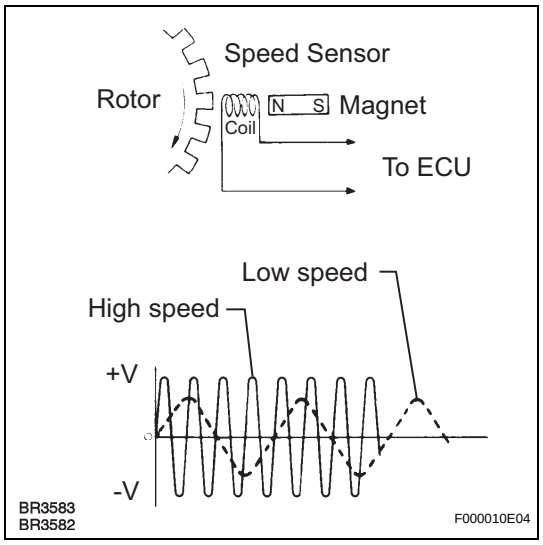
REPLACE YAW RATE AND ACCELERATION SENSOR

BC

DTC	**C1235/35**	**Foreign Object is Attached on Tip of Front Speed Sensor RH**
DTC	**C1236/36**	**Foreign Object is Attached on Tip of Front Speed Sensor LH**
DTC	**C1238/38**	**Foreign Object is Attached on Tip of Rear Speed Sensor RH**
DTC	**C1239/39**	**Foreign Object is Attached on Tip of Rear Speed Sensor LH**
DTC	**C1275/75**	**Abnormal Change in Output Signal of Front Speed Sensor RH (Test Mode DTC)**
DTC	**C1276/76**	**Abnormal Change in Output Signal of Front Speed Sensor LH (Test Mode DTC)**
DTC	**C1277/77**	**Abnormal Change in Output Signal of Rear Speed Sensor RH (Test Mode DTC)**
DTC	**C1278/78**	**Abnormal Change in Output Signal of Rear Speed Sensor LH (Test Mode DTC)**

DESCRIPTION

The speed sensors detect wheel speed and transmit the signals to the ECU. These signals are used for control of the ABS control system. Each of the front and rear rotors have 48 serrations.
When the rotors rotate, the magnetic field generated by the permanent magnet in the speed sensor induces an AC voltage.
Since the frequency of this AC voltage changes in direct proportion to the speed of the rotor, the frequency is used by the ECU to detect the speed of each wheel.
DTCs C1275/75 to C1278/78 can be deleted when the speed sensor sends a vehicle speed signal or the Test Mode ends. DTCs from C1275/75 to C1278/78 are output only in the Test Mode.



DTC No.	DTC Detection Condition	Trouble Area
C1235/35 C1236/36 C1238/38 C1239/39	At a vehicle speed of 12 mph (20 km/h) or more, noise occurs in the sensor signal from the abnormal wheel for 5 seconds or more.	• Speed sensor • Speed sensor rotor • Sensor installation • Brake actuator assembly (Skid control ECU)

BC

HINT:
- DTC C1235/35 is for the front speed sensor RH.
- DTC C1236/36 is for the front speed sensor LH.
- DTC C1238/38 is for the rear speed sensor RH.
- DTC C1239/39 is for the rear speed sensor LH.

INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

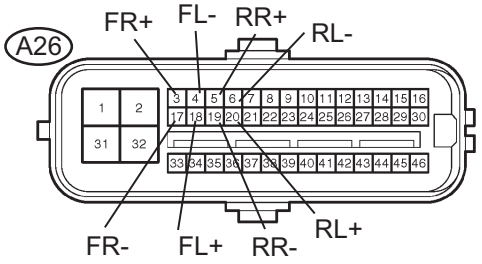
HINT:

When C0200/31, C0205/32, C0210/33, or C0215/34 is output together with C1235/35, C1236/36, C1238/38, or C1239/39, inspect and repair the trouble areas indicated by C0200/31, C0205/32, C0210/33, or C0215/34 first.

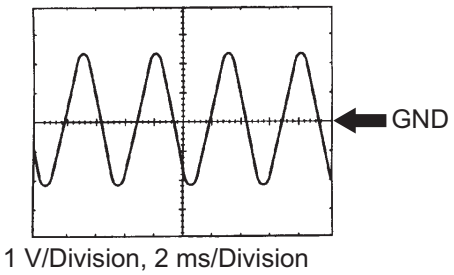
BC

1 CHECK SPEED SENSOR AND SPEED SENSOR ROTOR SERRATIONS

Skid Control ECU Harness Side Connector Front View:



Normal Signal Waveform:



C136019E05

(a) Disconnect the skid control ECU connector.
(b) Connect the oscilloscope to each speed sensor terminal of the skid control ECU.
(c) Check that a waveform is output when the tires are rotated (by the sensor circuit).

OK:

The same waveform is output from all the 4 wheels and there is no noise or interference in the waveform.

(d) Check that the waveform does not change while jiggling a connector or a wire harness.

OK:

The waveform does not change.

HINT:

- As the vehicle speed (wheel revolution speed) increases, a cycle of the waveform narrows and the output voltage becomes greater.
- When noise is identified in the waveform on the oscilloscope, the erratic signals are generated due to speed sensor rotor's scratches, looseness or foreign matter attached to it.

NG → **Go to step 3**

OK

2 RECONFIRM DTC

(a) Reconnect the skid control ECU connector.
(b) Clear the DTC (See page BC-141).
(c) Start the engine.
(d) Drive the vehicle at the speed of 12 mph (20 km/h) or more for at least 60 seconds.
(e) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTCs (C1235/35, C1236/36, C1238/38 and/or C1239/39) are not output	A

6 RECONFIRM DTC

(a) Reconnect the skid control sensor wire.
(b) Reconnect the skid control ECU connector and the speed sensor connector.
(c) Clear the DTC (See page BC-141).
(d) Start the engine.
(e) Drive the vehicle at the speed of 12 mph (20 km/h) or more for at least 60 seconds.
(f) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTCs (C1235/35, C1236/36, C1238/38 and/or C1239/39) are output (for front)	A
DTCs (C1235/35, C1236/36, C1238/38 and/or C1239/39) are output (for rear)	B

Condition	Proceed to
DTCs (C1235/35, C1236/36, C1238/38 and/or C1239/39) are not output	C

B → Go to step 8

C → USE SIMULATION METHOD TO CHECK

A

7 CHECK FRONT SPEED SENSOR TIP

(a) Turn the ignition switch off.
(b) Remove the front speed sensor (See page BC-438).
(c) Check the speed sensor tip.
OK:
No scratches or foreign matter on the sensor tip.
NOTICE:
Check the speed sensor signal after cleaning or replacement (See page BC-123).

NG → CLEAN OR REPLACE FRONT SPEED SENSOR

OK

8 CHECK EACH SPEED SENSOR ROTOR

(a) Turn the ignition switch off.
(b) Remove each speed sensor rotor.
(c) Check the speed sensor rotor.
OK:
No scratches, missing teeth, or foreign matter on the rotors.
NOTICE:
Check the speed sensor signal after cleaning or replacement (See page BC-123).

NG → CLEAN OR REPLACE EACH SPEED SENSOR ROTOR

OK

9 RECONFIRM DTC

(a) Install the front speed sensor and the speed sensor rotor.
(b) Clear the DTC (See page BC-141).
(c) Start the engine.
(d) Drive the vehicle at the speed of 12 mph (20 km/h) or more for at least 60 seconds.
(e) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTCs (C1235/35, C1236/36, C1238/38 and/or C1239/39) are output	A
DTCs (C1235/35, C1236/36, C1238/38 and/or C1239/39) are not output	B

B → **USE SIMULATION METHOD TO CHECK**

A

REPLACE BRAKE ACTUATOR ASSEMBLY

DTC	C1241/41	Low Battery Positive Voltage

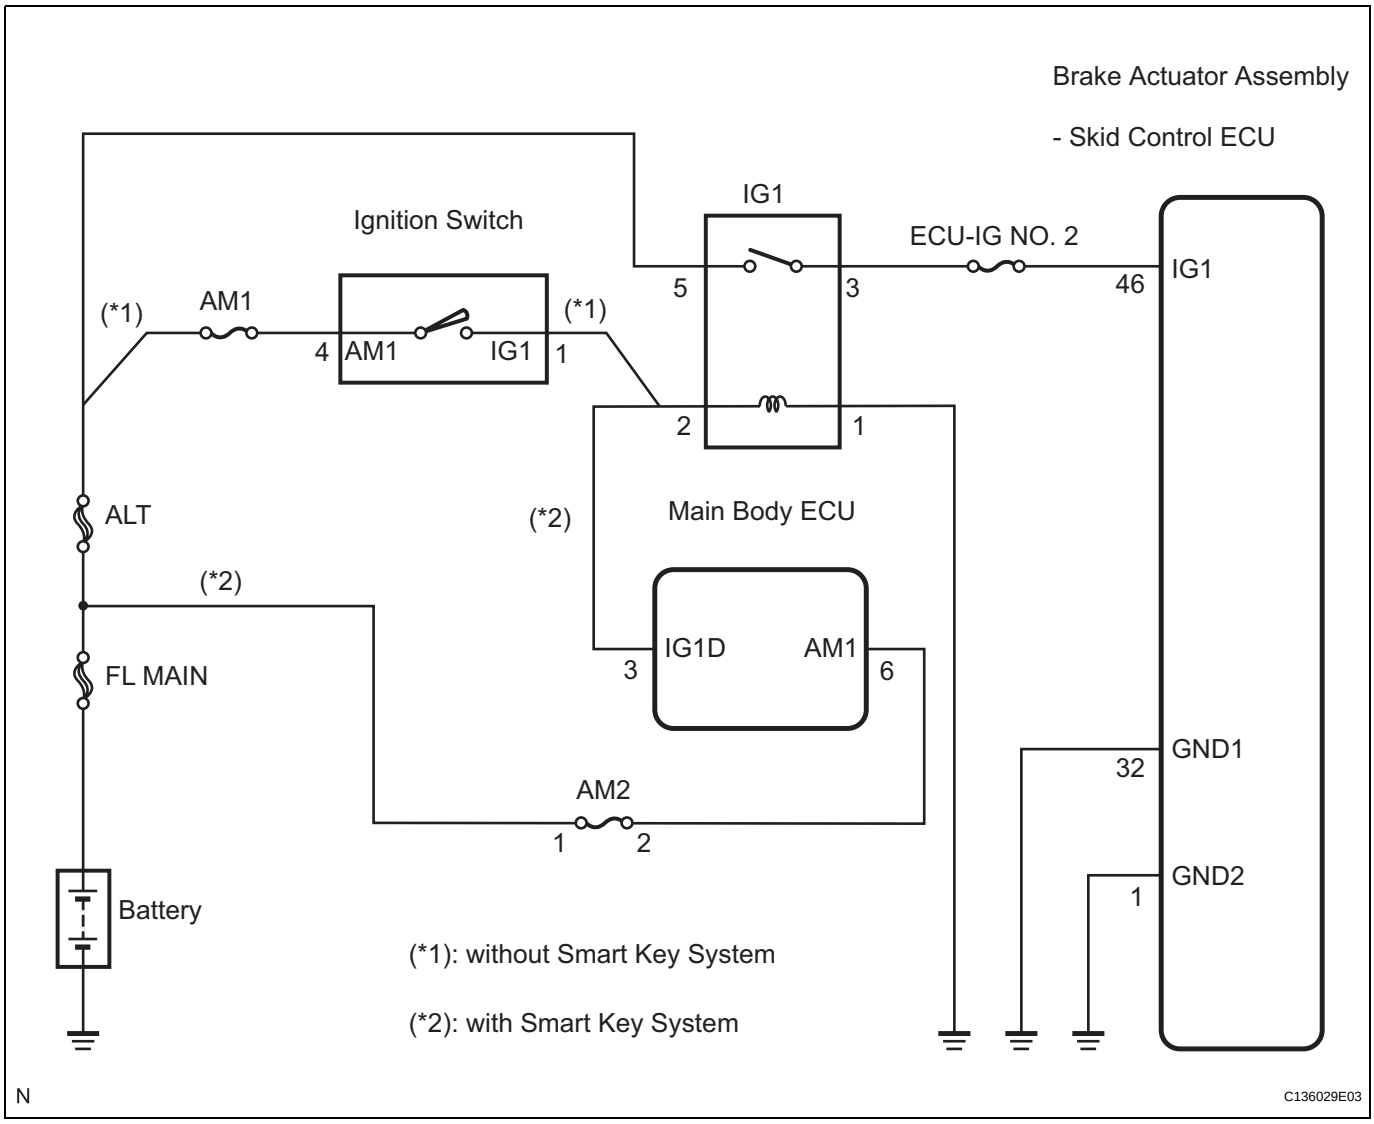
DESCRIPTION

If a malfunction is detected in the power supply circuit, the skid control ECU (housed in the actuator assembly) stores this DTC and the fail safe function prohibits ABS operation.
This DTC is stored when the IG1 terminal voltage deviates from the DTC detection condition due to a malfunction in the power supply or charging circuit such as the battery or alternator circuit, etc.
The DTC is cancelled when the IG1 terminal voltage returns to normal.

DTC No.	DTC Detection Condition	Trouble Area
C1241/41	When any of the following is detected: 1. At a vehicle speed of 2 mph (3 km/h) or more, the IG1 terminal voltage is 9.5 V or less for 10 seconds or more. 2. When the solenoid relay remains ON and the IG1 terminal voltage is 9.5 V or less, the relay contact is open for 0.2 seconds or more. 3. While the VSC NO. 1 (fail safe) relay is ON after VSC NO. 2 relay ON, the IG1 terminal voltage is 9.5 V or less and the actuator pump drive motor is OFF for 0.1 second or more.	• ECU-IG NO. 2 fuse • Battery • Charging system • Power source circuit • Internal power supply circuit of the skid control ECU

BC

WIRING DIAGRAM



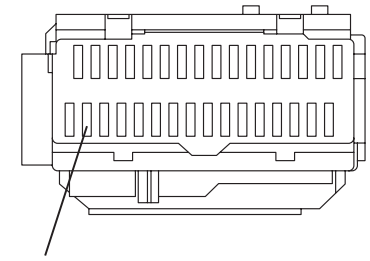
INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1 INSPECT ECU-IG NO. 2 FUSE

Main Body ECU:



N C135806E01

(a) Remove the ECU-IG NO. 2 fuse from the main body ECU.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
ECU-IG NO. 2 (7.5 A) fuse	Always	Below 1 Ω

NG → **REPLACE ECU-IG NO. 2 FUSE**

OK

2 CHECK BATTERY

(a) Install the ECU-IG NO. 2 fuse.
(b) Check the battery voltage.

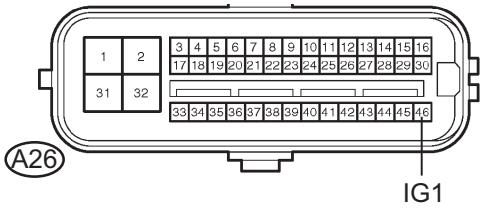
Standard voltage:
10 to 14 V

NG → **CHECK AND REPLACE CHARGING SYSTEM OR BATTERY**

OK

3 INSPECT SKID CONTROL ECU (IG1 TERMINAL)

Skid Control ECU Harness Side Connector Front View:



N F049362E98

(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

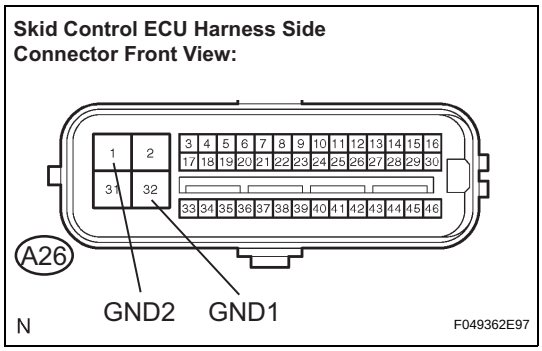
Tester Connection	Condition	Specified Condition
A26-46 (IG1) - Body ground	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (IG1 CIRCUIT)**

BC

OK

4 INSPECT SKID CONTROL ECU (GND TERMINAL)



(a) Turn the ignition switch off.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A26-32 (GND1) - Body ground	Always	Below 1 Ω
A26-1 (GND2) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

BC

5 RECONFIRM DTC

(a) Reconnect the skid control ECU connector.
(b) Clear the DTC (See page BC-141).
(c) Turn the ignition switch on (IG).
(d) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTC (C1241/41) is not output	A
DTC (C1241/41) is output	B

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

B → **REPLACE BRAKE ACTUATOR ASSEMBLY**

A

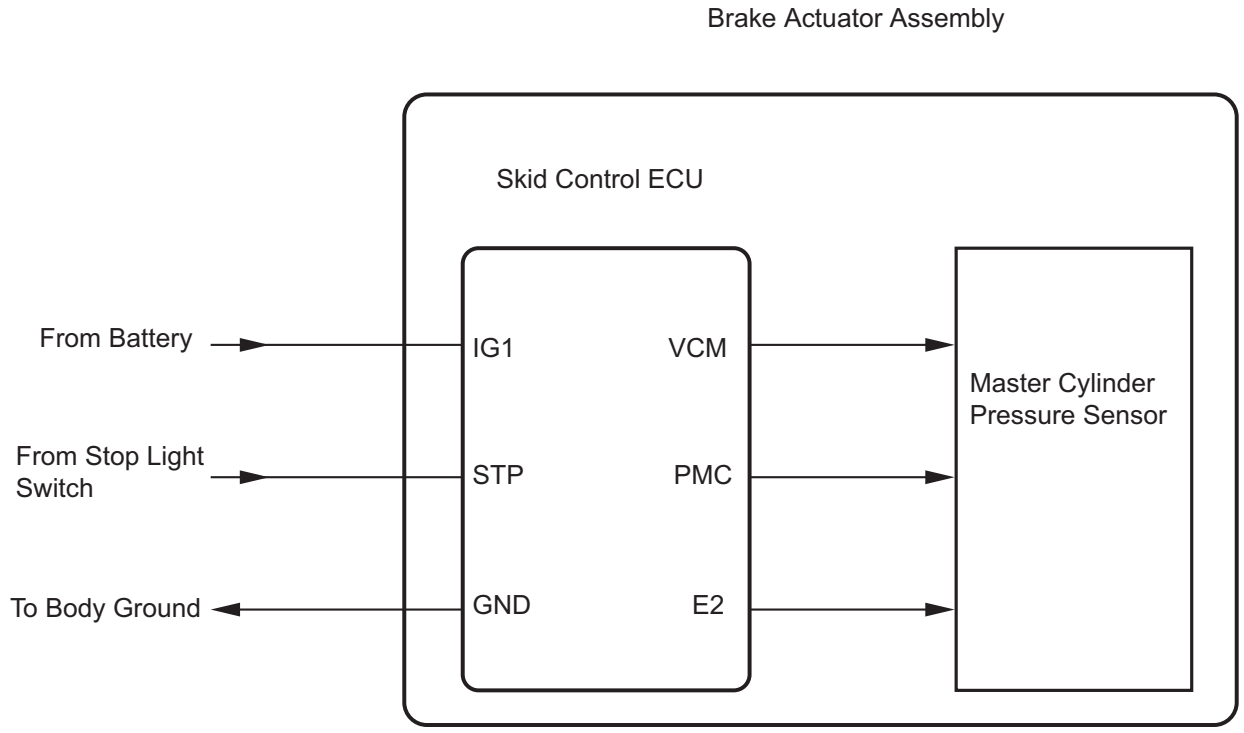
USE SIMULATION METHOD TO CHECK

DTC	C1246/46	Master Cylinder Pressure Sensor Malfunction

DTC	C1281/81	Master Cylinder Pressure Sensor Output Malfunction (Test Mode DTC)

DESCRIPTION

Master cylinder pressure sensor is connected to the skid control ECU in the brake actuator assembly. DTC C1281/81 can be deleted when the master cylinder pressure sensor sends a master cylinder pressure signal or the Test Mode ends. DTC C1281/81 is output only in the Test Mode.



VCM: Power Supply for Master Cylinder Pressure Sensor

PMC: Master Cylinder Pressure Sensor Input

E2: Master Cylinder Pressure Sensor Ground

N

C106656E05

BC

DTC No.	DTC Detection Condition	Trouble Area
C1246/46	When any of the following is detected: • At a vehicle speed of 4.3 mph (7 km/h) or more, when the PMC terminal voltage is over 0.86 V, it does not change by 0.005 V or more for 30 seconds. • Noise occurs in the PMC terminal 7 times or more within 5 seconds. • When the stop light switch is OFF, the PMC terminal voltage is more than 0.86 V or less than 0.3 V for 5 seconds or more. • With the IG1 terminal voltage between 9.5 and 17.2 V, the VCM terminal voltage is not between 4.4 and 5.6 V for 1.2 seconds or more. • When the VCM terminal voltage between 4.4 and 5.6 V, the PCM terminal voltage is not between 0.14 and 4.85 V for 1.2 seconds or more.	• Master cylinder pressure sensor • Master cylinder pressure sensor circuit • Stop light switch circuit • Brake actuator assembly

INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

BC

1 CHECK STOP LIGHT OPERATION

(a) Check that the stop light comes on when the brake pedal is depressed, and goes off when the brake pedal is released.

OK

Condition	Illumination Condition
Brake pedal depressed	**ON**
Brake pedal released	**OFF**

NG → **INSPECT STOP LIGHT CIRCUIT**

OK

2 READ VALUE OF INTELLIGENT TESTER (MASTER CYLINDER PRESSURE SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Select the Data List mode on the intelligent tester.

ABS / VSC:

Item (Display)	Measurement Item / Range (Display)	Normal Condition
MAS CYL PRESS 1	Master cylinder pressure sensor 1 reading / min.: 0 V, max.: 5 V	When brake pedal is released: 0.3 to 0.5 V

(d) Check that the brake fluid pressure value of the master cylinder pressure sensor observed on the intelligent tester changes when the brake pedal is depressed.

OK:

When the pedal is depressed, voltage displayed on the intelligent tester increases.

NG → **REPLACE BRAKE ACTUATOR ASSEMBLY**

OK

3	READ VALUE OF INTELLIGENT TESTER (STOP LIGHT SWITCH)

(a) Select the Data List mode on the intelligent tester.

ABS / VSC:

Item (Display)	Measurement Item / Range (Display)	Normal Condition
STOP LAMP SW	Stop light switch / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released

(b) Check that the stop light condition observed on the intelligent tester changes when the brake pedal is depressed.

OK:

When the brake pedal is depressed, the intelligent tester displays "ON".

NG → **REPLACE BRAKE ACTUATOR ASSEMBLY**

OK

BC

4	RECONFIRM DTC

(a) Turn the ignition switch off.
(b) Clear the DTC (See page BC-141).
(c) Start the engine.
(d) At a speed of 18 mph (30 km/h) or more, drive the vehicle and perform braking test (decelerate the vehicle by depressing the brake pedal).
(e) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTC (C1246/46) is not output	A
DTC (C1246/46) is output	B

B → **REPLACE BRAKE ACTUATOR ASSEMBLY**

A

USE SIMULATION METHOD TO CHECK

DTC	C1249/49	Open in Stop Light Switch Circuit

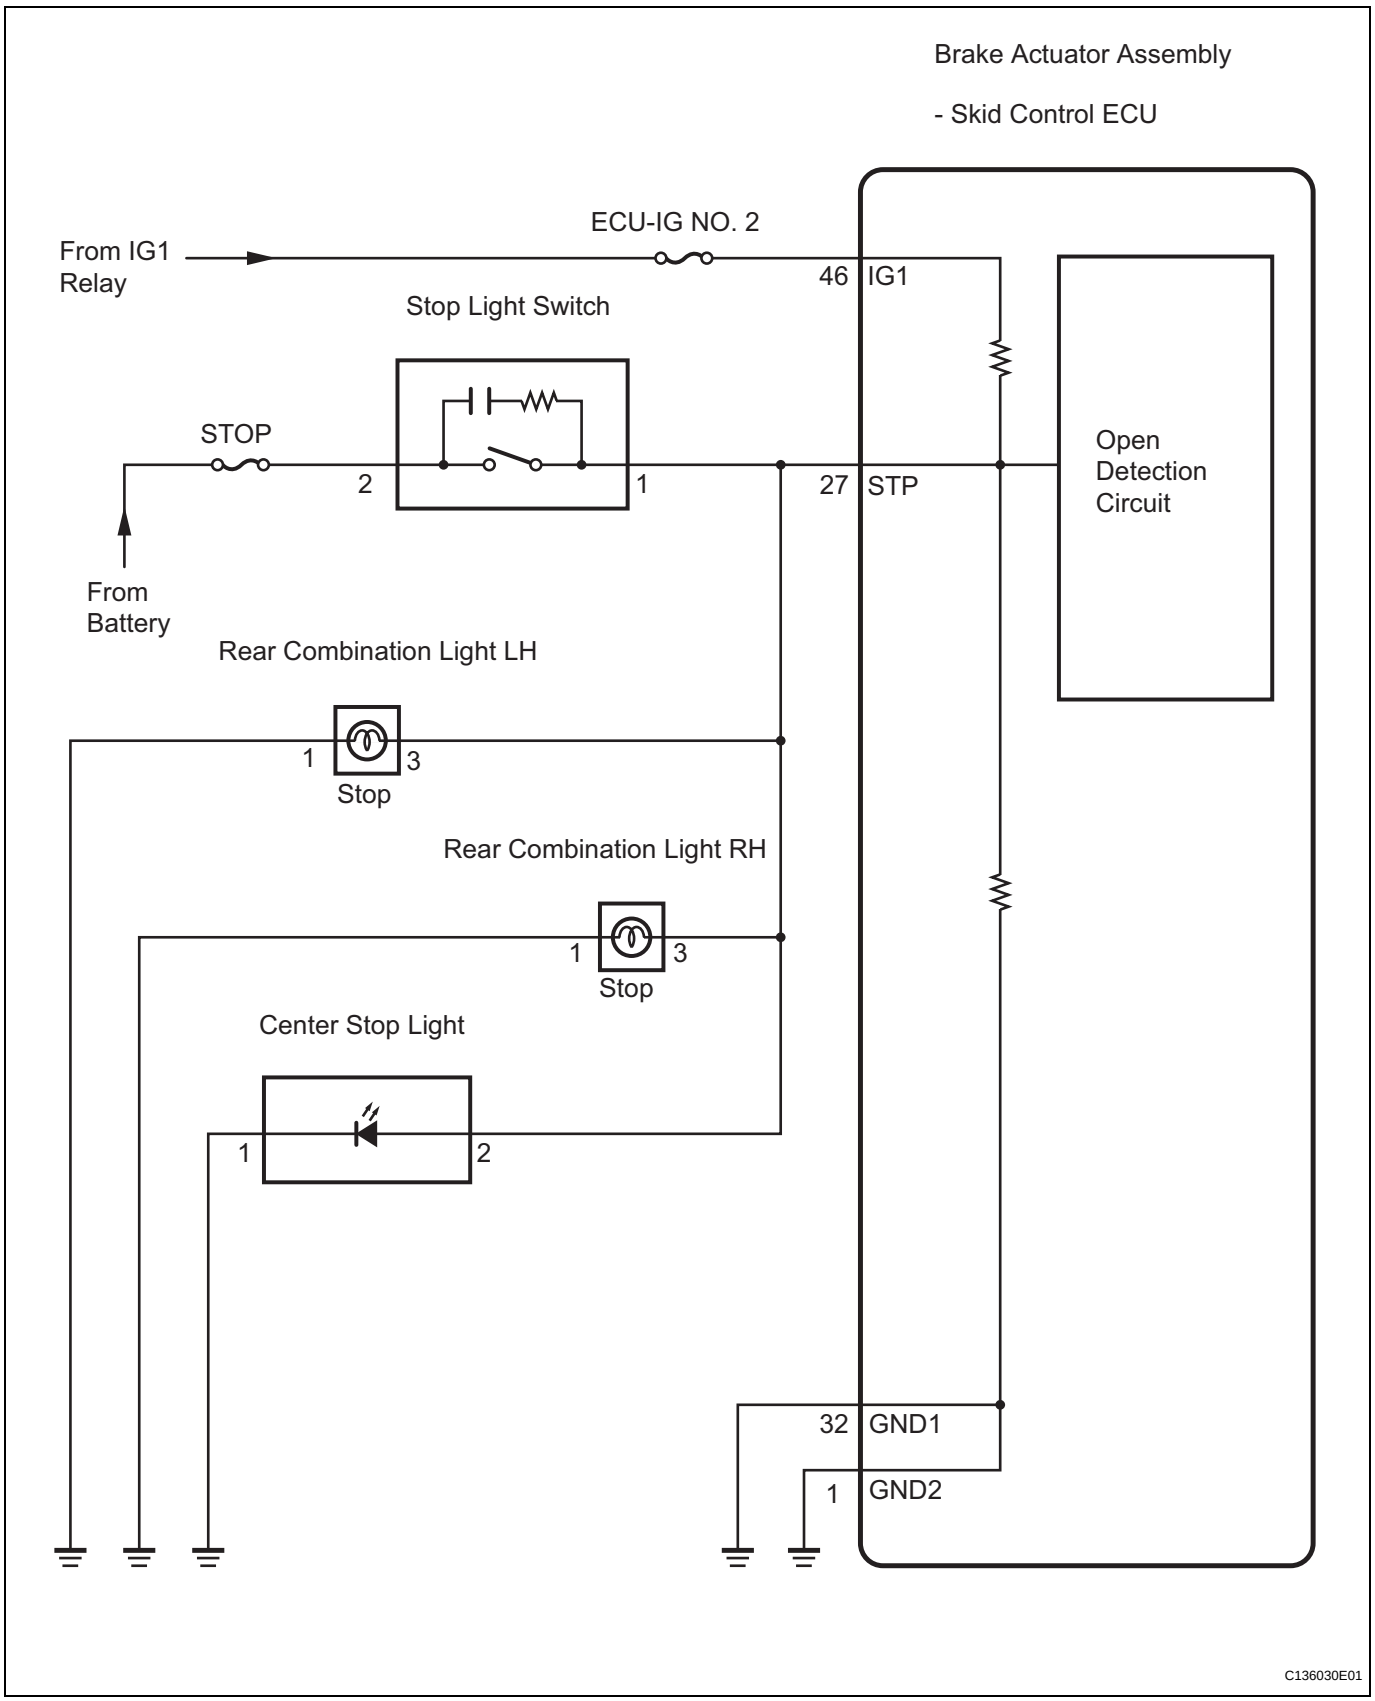
DESCRIPTION

The skid control ECU (housed in the actuator assembly) inputs the stop light switch signal and the condition of brake operation.

The skid control ECU has an open detection circuit, which outputs this DTC when detecting an open in the stop light input line while the stop light switch is OFF.

DTC No.	DTC Detection Condition	Trouble Area
C1249/49	When IG1 terminal voltage is 9.5 to 17.2 V, an open circuit of the stop light switch continues for 0.3 seconds or more.	• STOP fuse • Stop light switch • Stop light switch circuit • Brake actuator assembly (Skid control ECU)

WIRING DIAGRAM



BC

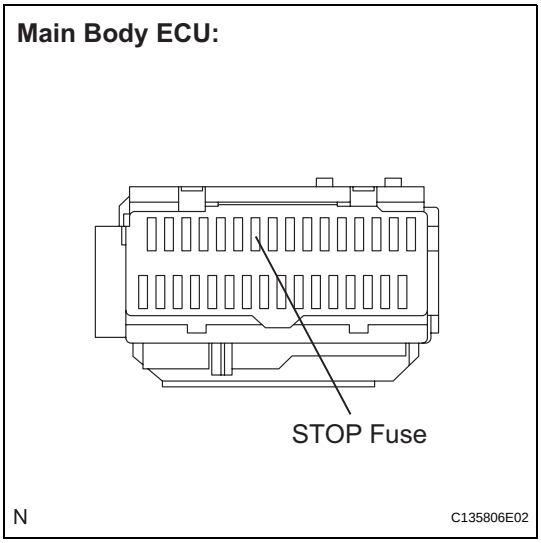
INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1 INSPECT STOP FUSE

Main Body ECU:



(a) Remove the STOP fuse from the main body ECU.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
STOP (10 A) fuse	Always	Below 1 Ω

NG → **REPLACE STOP FUSE**

OK

2 CHECK STOP LIGHT OPERATION

(a) Install the STOP fuse.
(b) Check that the stop light comes on when the brake pedal is depressed, and goes off when the brake pedal is released.

OK

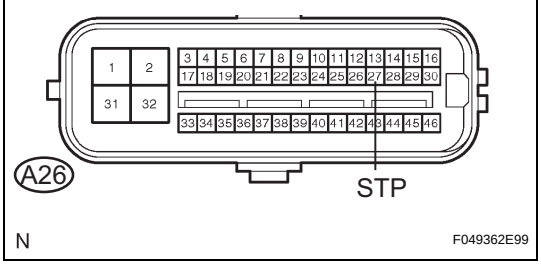
Condition	Illumination Condition
Brake pedal depressed	ON
Brake pedal released	OFF

NG → **Go to step 7**

OK

3 INSPECT SKID CONTROL ECU (STP TERMINAL)

Skid Control ECU Harness Side Connector Front View:



(a) Disconnect the skid control ECU connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

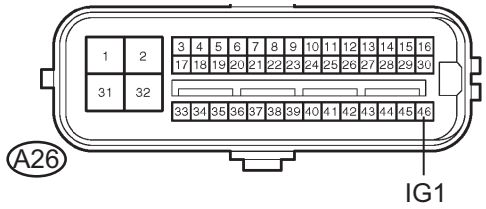
Tester Connection	Condition	Specified Condition
A26-27 (STP) - Body ground	Stop light switch ON (Brake pedal depressed)	8 to 14 V
A26-27 (STP) - Body ground	Stop light switch OFF (Brake pedal released)	Below 1.5 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (STP CIRCUIT)**

OK

4 INSPECT SKID CONTROL ECU (IG1 TERMINAL)

Skid Control ECU Harness Side Connector Front View:



(a) Turn the ignition switch on (IG).
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
A26-46 (IG1) - Body ground	Ignition switch on (IG)	10 to 14 V

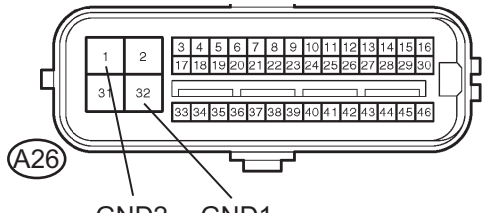
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (IG1 CIRCUIT)**

OK

BC

5 INSPECT SKID CONTROL ECU (GND TERMINAL)

Skid Control ECU Harness Side Connector Front View:



(a) Turn the ignition switch off.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A26-32 (GND1) - Body ground	Always	Below 1 Ω
A26-1 (GND2) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

6 RECONFIRM DTC

(a) Reconnect the skid control ECU connector.
(b) Clear the DTC (See page BC-141).
(c) Start the engine.
(d) Depress the brake pedal several times to test the stop light circuit.
(e) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTC (C1249/49) is not output	A
DTC (C1249/49) is output	B

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

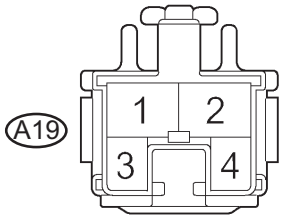
B → **REPLACE BRAKE ACTUATOR ASSEMBLY**

A

USE SIMULATION METHOD TO CHECK

7 INSPECT STOP LIGHT SWITCH (POWER SOURCE TERMINAL)

Stop Light Switch Harness Side Connector Front View:



I042363E16

(a) Disconnect the stop light switch connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
A19-2 - Body ground	Always	10 to 14 V

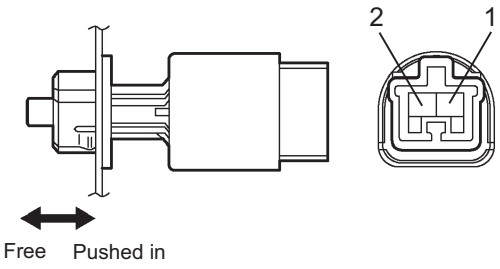
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER SOURCE CIRCUIT)**

BC

OK

8 INSPECT STOP LIGHT SWITCH

Stop Light Switch:



C124796E03

(a) Measure the resistance according to the value(s) in the table below.

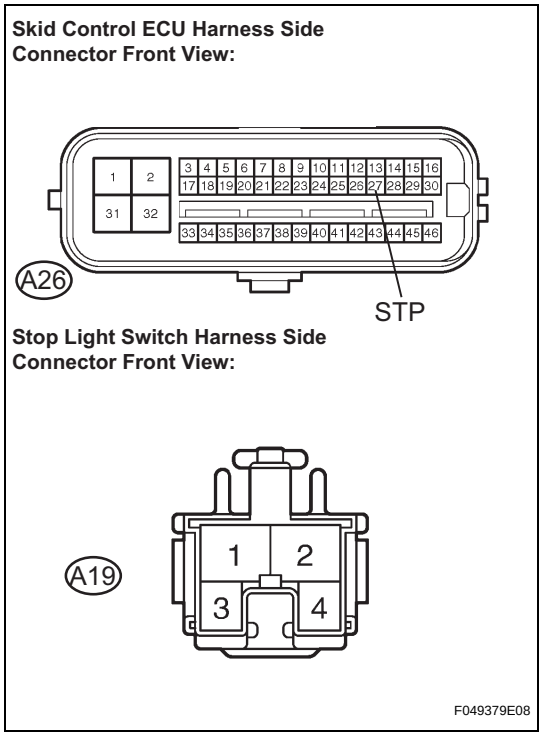
Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Switch pin free	Below 1 Ω
1 - 2	Switch pin pushed in	10 kΩ or higher

NG → **REPLACE STOP LIGHT SWITCH**

OK

9 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - STOP LIGHT SWITCH)



(a) Disconnect the skid control ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A26-27 (STP) - A19-1	Always	Below 1 Ω
A26-27 (STP) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

10 RECONFIRM DTC

(a) Reconnect the skid control ECU connector and the stop light switch connector.
(b) Clear the DTC (See page BC-141).
(c) Start the engine.
(d) Depress the brake pedal several times to test the stop light circuit.
(e) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTC (C1249/49) is not output	A
DTC (C1249/49) is output	B

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

B → **REPLACE BRAKE ACTUATOR ASSEMBLY**

A

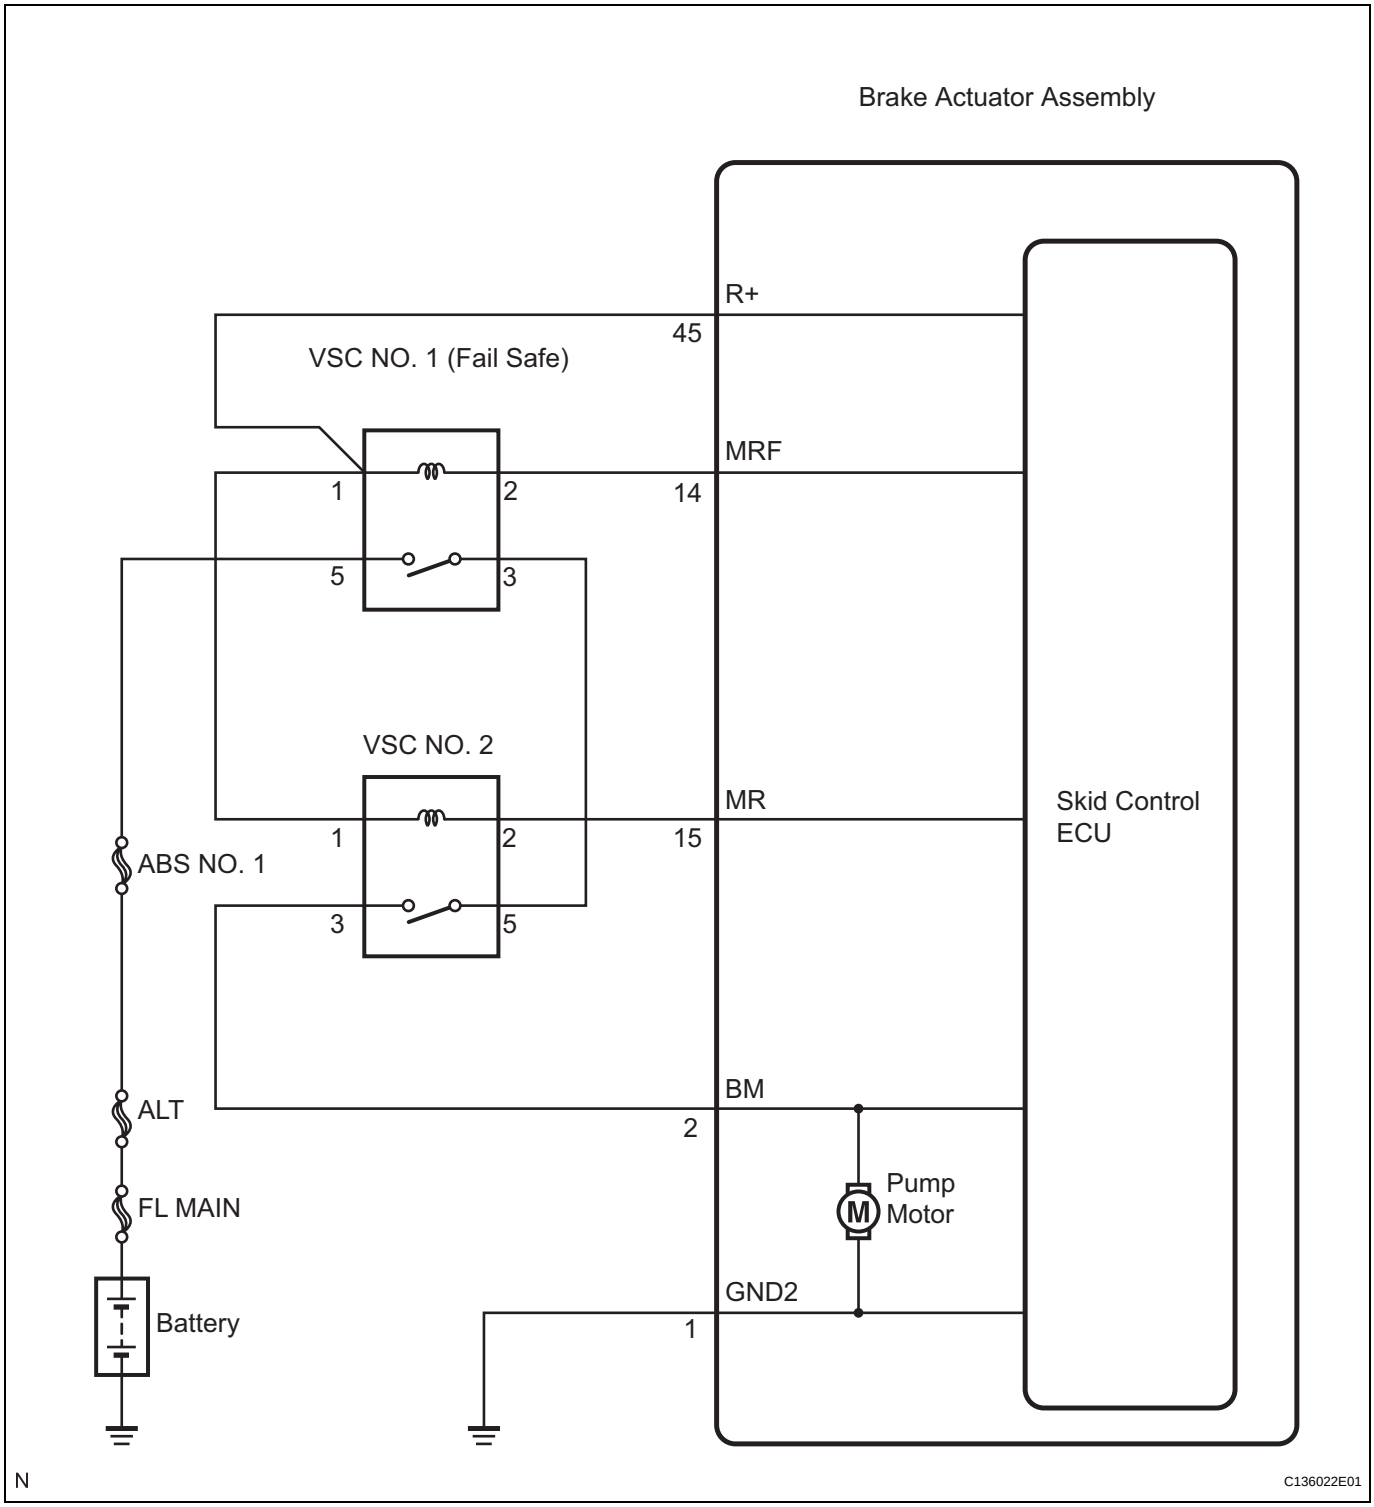
INSPECT LIGHTING SYSTEM (STOP LIGHT CIRCUIT)

DTC C1251/51 Open in Pump Motor Circuit

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
C1251/51	• Actuator pump motor does not operate properly. • Open in actuator pump motor circuit continues for at least 2 seconds.	• Brake actuator assembly (GND circuit) • Brake actuator assembly (Motor circuit)

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1 PERFORM ACTIVE TEST BY INTELLIGENT TESTER (ABS MOTOR RELAY)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Select the Active Test mode on the intelligent tester.

ABS / VSC:

Item (Display)	Vehicle Condition / Test Details	Diagnostic Note
MOTOR RELAY	Turns ABS motor relay ON / OFF	Operating sound of relay (clicking sound) and motor can be heard

(d) Check the operating sound of the ABS motor relay and motor when operating it with the intelligent tester.

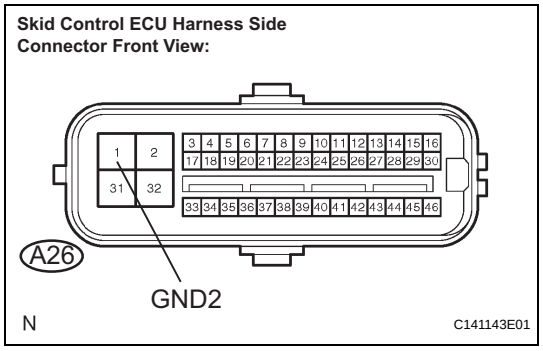
OK:

The operating sound of the ABS motor relay and motor can be heard.

OK → **Go to step 3**

NG

2 INSPECT SKID CONTROL ECU (GND2 TERMINAL)



(a) Turn the ignition switch off.
(b) Disconnect the skid control ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A26-1 (GND2) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND2 CIRCUIT)**

OK

3 RECONFIRM DTC

(a) Reconnect the skid control ECU connector.
(b) Clear the DTC (See page BC-141).
(c) Start the engine.
(d) Drive the vehicle at the speed of 4.3 mph (7 km/h) or more.
(e) Check if the same DTC is recorded (See page BC-141).

Result

Condition	Proceed to
DTC (C1251/51) is not output	A
DTC (C1251/51) is output	B

HINT:

- If a speed signal of 4 mph (6 km/h) or more is input to the skid control ECU, with the ignition switch on (IG) and the stop light switch off, the ECU performs self diagnosis of the motor and solenoid circuits.
- If a normal system code is output (the trouble code is not output), slightly jiggle the connectors, wire harness, and fuses of the brake actuator assembly. Make sure that no DTCs are output.
- If any DTCs are output while jiggling a connector or wire harness of the brake actuator assembly (skid control ECU), inspect and repair the connector or wire harness.

B → **REPLACE BRAKE ACTUATOR ASSEMBLY**

A

BC

USE SIMULATION METHOD TO CHECK

DTC	C1290/66	Steering Angle Sensor Zero Point Malfunction

DESCRIPTION

The skid control ECU acquires steering angle sensor zero point every time the ignition switch is turned on (IG) and the vehicle is driven at 22 mph (35 km/h) or more for approximately 5 seconds. The ECU also stores the previous zero point.
If front wheel alignment or steering wheel position is adjusted without disconnecting the negative battery terminal, or if yaw rate and acceleration sensor zero point is not acquired after the adjustments have been completed, the skid control ECU detects the difference between the previous zero point and newly acquired zero point and outputs this DTC to indicate a poor adjustment.
Warning of the steering angle sensor zero point malfunction will be cancelled by turning the ignition switch off.

DTC No.	DTC Detection Condition	Trouble Area
C1290/66	The steering angle sensor zero point calibration position vastly differs from the recorded value	• Yaw rate and acceleration sensor zero point calibration incomplete • Poor adjustment of the centered position of the steering wheel • Poor adjustment of front wheel alignment

BC

INSPECTION PROCEDURE

NOTICE:
When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	PERFORM ZERO POINT CALIBRATION OF YAW RATE AND ACCELERATION SENSOR

(a) Perform zero point calibration of the yaw rate and acceleration sensor (See page BC-119).
HINT:
- When the stored zero point of the yaw rate and acceleration sensor is erased, steering angle sensor zero point will also be erased.
- If the zero point and output value of the yaw rate and acceleration sensor and the output value of the speed sensors are not normal, steering angle sensor zero point cannot be acquired normally even if the vehicle is driven straight ahead at 22 mph (35 km/h) or more.

NEXT

2	CHECK STEERING ANGLE SENSOR ZERO POINT CALIBRATION

(a) Drive the vehicle straight ahead at 22 mph (35 km/h) or more for at least 5 seconds.
(b) Check that the centered position of the steering wheel is correctly set while driving straight ahead.
HINT:
If front wheel alignment and steering position are adjusted as a result of abnormal centered position of the steering wheel, acquire yaw rate and acceleration sensor zero point again after the adjustments are completed.

OK:
The centered position of the steering wheel is correctly set.

NG → **ADJUST FRONT WHEEL ALIGNMENT OR STEERING POSITION**

OK ↓

3	RECONFIRM DTC

(a) Turn the ignition switch off.
(b) Clear the DTC (See page BC-141).
(c) Start the engine.
(d) Drive the vehicle and turn the steering wheel to the right and left at the speed of 22 mph (35 km/h) or more.
(e) Check if the same DTC is recorded (See page BC-141).

Result

BC

Condition	Proceed to
DTC (C1290/66) is not output	A
DTC (C1290/66) is output	B

DTC	U0073/94	Control Module Communication Bus OFF

DTC	U0100/65	Lost Communication with ECM / PCM

DTC	U0123/62	Lost Communication with Yaw Rate Sensor Module

DTC	U0124/95	Lost Communication with Lateral Acceleration Sensor Module

DTC	U0126/63	Lost Communication with Steering Angle Sensor Module

DESCRIPTION

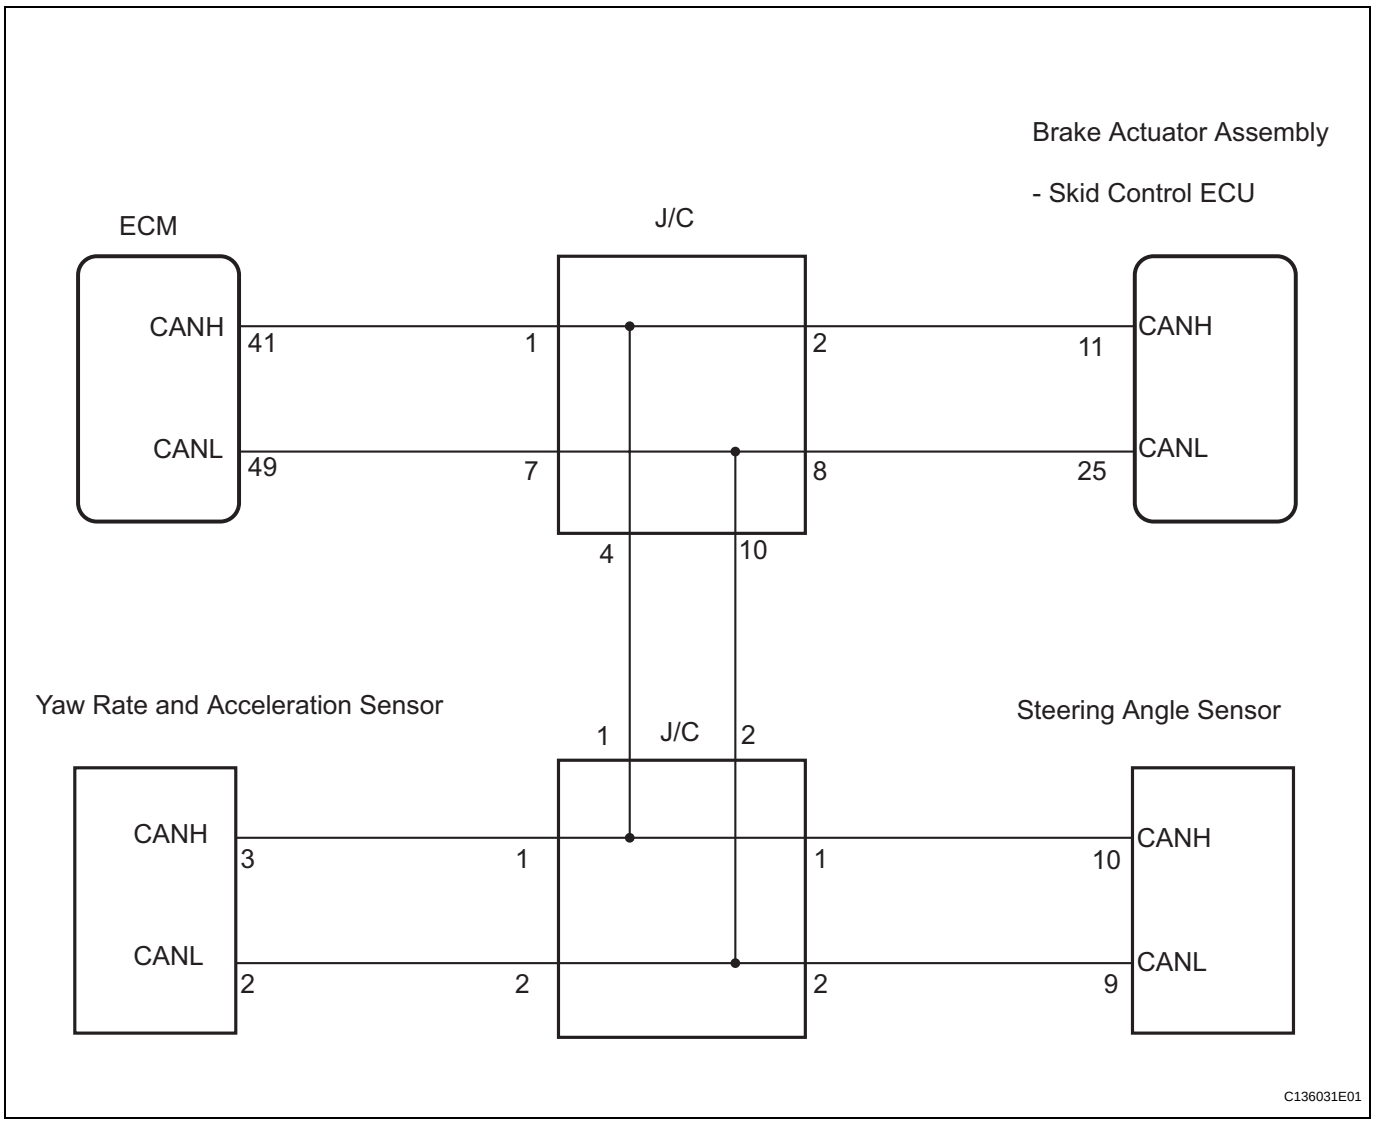
The skid control ECU receives the signals from the ECM, steering angle sensor, and yaw rate and acceleration sensor via the CAN communication system.

BC

DTC No.	DTC Detection Condition	Trouble Area
U0073/94	When any of the following is detected: 1. With the IG1 terminal voltage 10 V or more, after the output of data from the skid control ECU is completed, the sending continues for 5 seconds or more. 2. With the IG1 terminal voltage 10 V or more, the condition that bus OFF state occurs once or more within 100 ms occurs 10 times in succession. (Sent signals cannot be received.) 3. With the IG1 terminal voltage 10 V or more, a delay in receiving data from the yaw rate and acceleration sensor and steering angle sensor continues for 1 second or more. 4. With the IG1 terminal voltage 10 V or more, the condition that a delay in receiving data from the yaw rate and acceleration sensor and steering angle sensor occurs more than once within 5 seconds occurs 10 times in succession within 60 seconds.	CAN communication system
U0100/65	When either of the following is detected: 1. With the IG1 terminal voltage 10 V or more and the vehicle speed 9 mph (15 km/h) or more, data cannot be sent to the ECM for 2 seconds or more. 2. The IG1 terminal voltage 10 V or more and the vehicle speed 9 mph (15 km/h) or more for 2 seconds or more.	CAN communication system (Skid control ECU to ECM)
U0123/62	When either of the following is detected: 1. With the IG1 terminal voltage 10 V or more, data from the yaw rate sensor cannot be received for 1 second or more. 2. With the IG1 terminal voltage 10 V or more, the following occurs 10 times in succession within 60 seconds. • The condition that data from the yaw rate sensor cannot be received occurs once or more within 5 seconds.	CAN communication system (Skid control ECU to yaw rate and acceleration sensor)
U0124/95	When either of the following is detected: 1. With the IG1 terminal voltage 10 V or more, data from the acceleration sensor cannot be received for 1 second or more. 2. With the IG1 terminal voltage 10 V or more, the following occurs 10 times in succession within 60 seconds. • The condition that data from the acceleration sensor cannot be received occurs once or more within 5 seconds.	CAN communication system (Skid control ECU to yaw rate and acceleration sensor)

DTC No.	DTC Detection Condition	Trouble Area
U0126/63	When either of the following is detected: 1. With the IG1 terminal voltage 10 V or more, data from the steering angle sensor cannot be received for 1 second or more. 2. With the IG1 terminal voltage 10 V or more, the following occurs 10 times in succession within 60 seconds. • The condition that data from the steering angle sensor cannot be received occurs once or more within 5 seconds.	CAN communication system (Skid control ECU to steering angle sensor)

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR (MOMENTARY INTERRUPTION)

(a) Using the intelligent tester, check for any momentary interruption in the wire harness and connector corresponding to a DTC (See page BC-118).

ABS / VSC:

Item (Display)	Measurement Item / Range (Display)	Normal Condition
EFI COM OPN	EFI communication open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal
STEERING OPN	Steering sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal
YAW RATE OPN	Yaw rate sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal

Result

Condition	Proceed to
There is a constant open circuit	**A**
There are no momentary interruptions	**B**
There are momentary interruptions	**C**

HINT:
Perform the above inspection before removing the sensor and connector.

B → **Go to step 3**

C → **Go to step 4**

A

2	CHECK IF EACH SENSOR AND ECM CONNECTOR IS SECURELY CONNECTED

(a) Turn the ignition switch off.
(b) Check if each sensor or ECM connector is securely connected.
OK:
The connector should be securely connected.

NG → **CONNECT CONNECTOR TO EACH SENSOR OR ECM CORRECTLY**

OK

3	RECONFIRM DTC

(a) Turn the ignition switch off.
(b) Record the output DTCs (for ABS, VSC, and CAN communication) (See page BC-141).

HINT:
If the CAN communication system DTC and the relevant sensor DTCs are output simultaneously, troubleshoot the relevant sensor DTCs (for ABS and VSC) after the CAN communication system returns to normal.

Result

Condition	Proceed to
DTC (CAN communication system DTC) is output	A
DTC (ABS and/or VSC DTC) is output	B
DTC is not output	C

B → **REPAIR CIRCUIT INDICATED BY OUTPUT DTC (See page BC-151)**

C → **USE SIMULATION METHOD TO CHECK**

A

BC

INSPECT CAN COMMUNICATION SYSTEM

4 REPAIR OR REPLACE HARNESS OR CONNECTOR

(a) Turn the ignition switch off.
(b) Repair or replace the harness or connector.
(c) Check for any momentary interruption between the skid control ECU and each sensor or ECM (See page BC-118).
(d) Check that there is no momentary interruption.

NEXT

5 RECONFIRM DTC

(a) Turn the ignition switch off.
(b) Clear the DTC (See page BC-141).
(c) Start the engine.
(d) Drive the vehicle and turn the steering wheel to the right and left at a speed of 9 mph (15 km/h) or more.
(e) Check that no CAN communication system DTC is output.
(f) If ABS and VSC DTCs are output, record them.

Result

Condition	Proceed to
DTC output for the CAN communication system	A
No DTC is output (ABS and/or VSC DTC is output)	B
No DTC is output (No ABS and/or VSC DTC is output)	C

HINT:
The CAN communication system must be normal when repairing each sensor DTC (for ABS and VSC).

B	**REPAIR CIRCUIT INDICATED BY OUTPUT DTC (See page BC-151)**
C	**END**

A

INSPECT CAN COMMUNICATION SYSTEM

ABS Warning Light Remains ON

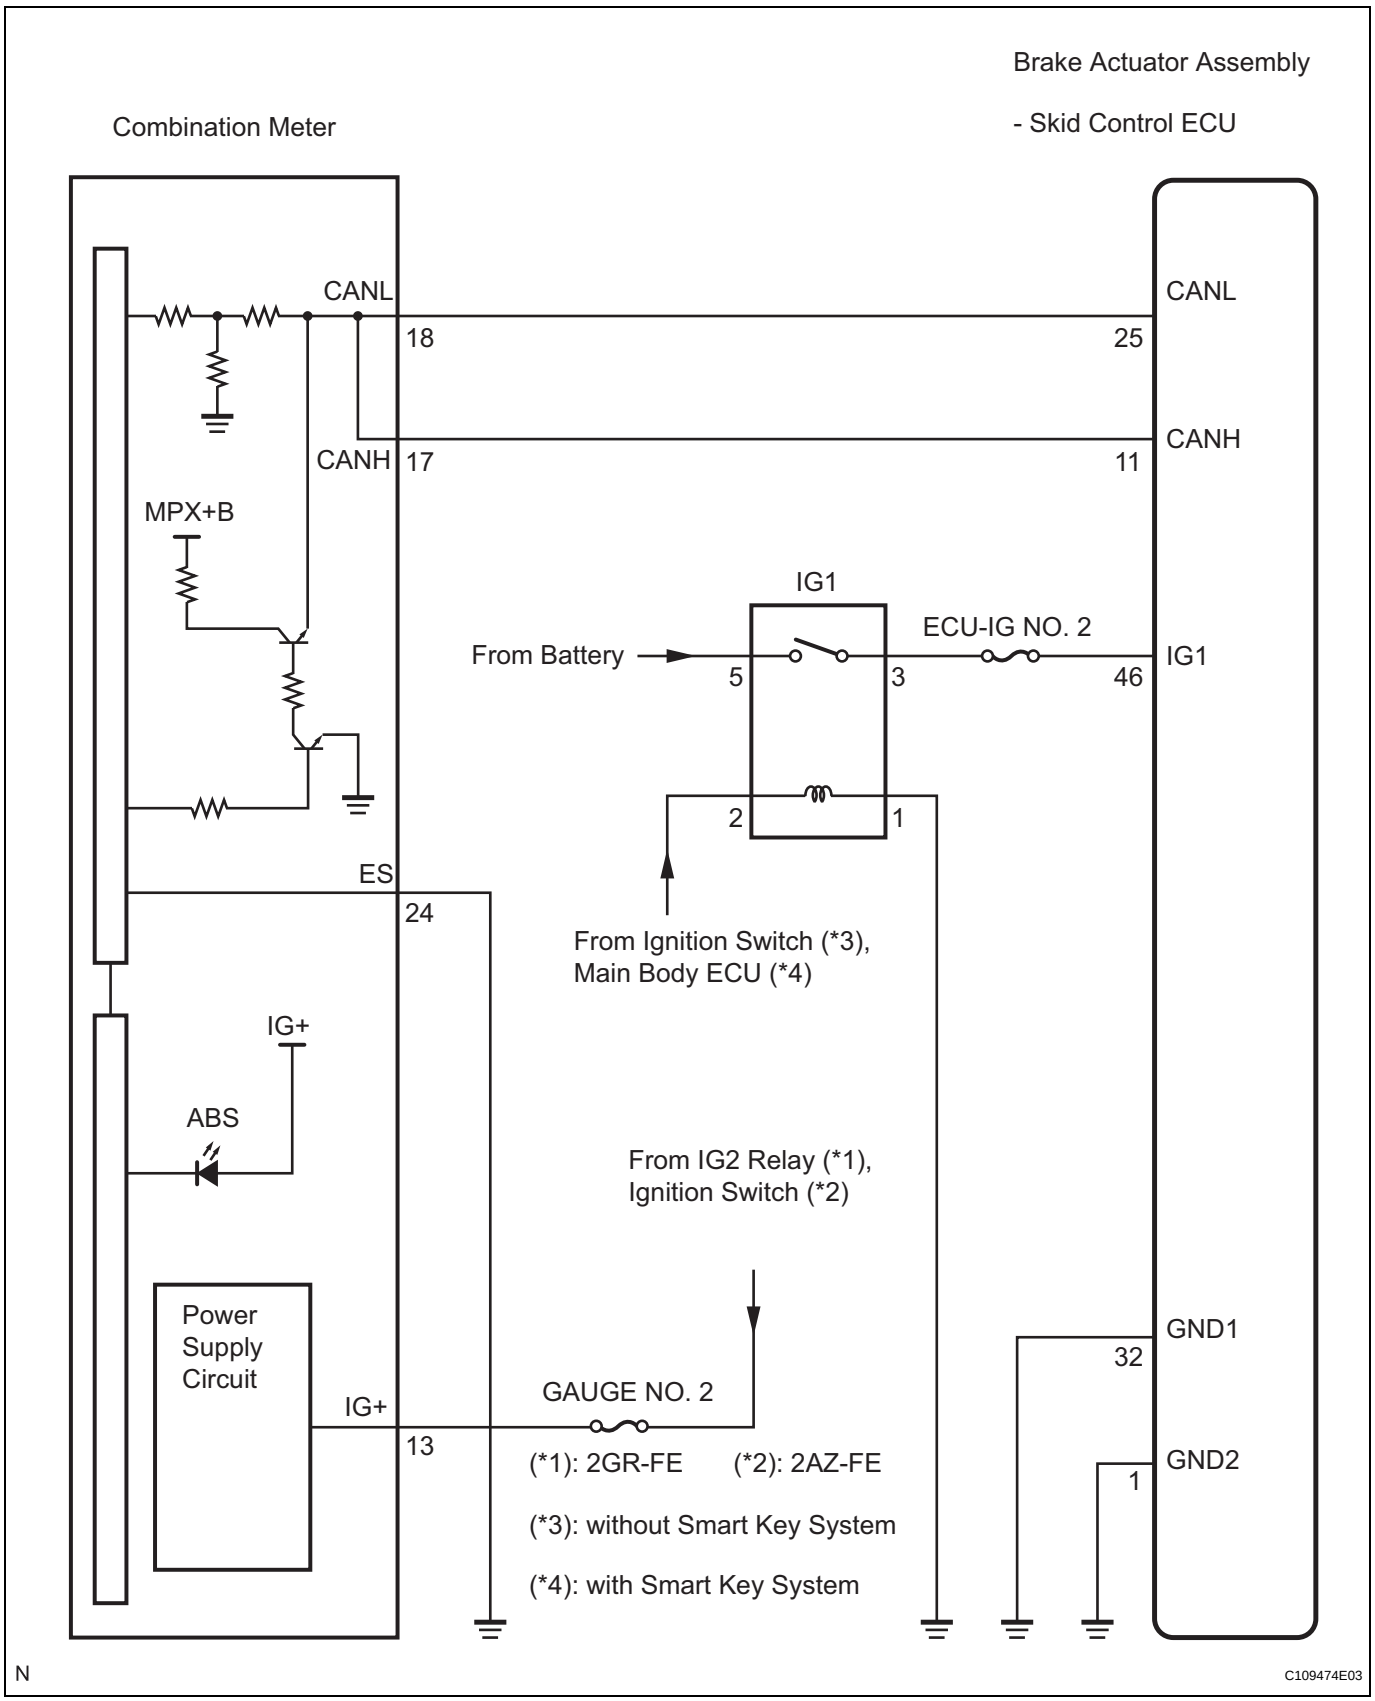
DESCRIPTION

The skid control ECU is connected to the combination meter via CAN communication.
If any of the following is detected, the ABS warning light remains on.

- The skid control ECU connectors are disconnected from the skid control ECU.
- There is a malfunction in the skid control ECU internal circuit.
- There is an open in the harness between the combination meter and the skid control ECU.

HINT:
In some cases, the intelligent tester cannot be used when the skid control ECU is abnormal.

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-25).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → **INSPECT CAN COMMUNICATION SYSTEM**

A

2	CHECK IF SKID CONTROL ECU CONNECTOR IS SECURELY CONNECTED

BC

(a) Check if the skid control ECU connector is securely connected.
OK:
The connector should be securely connected.

NG → **CONNECT CONNECTOR TO ECU CORRECTLY**

OK

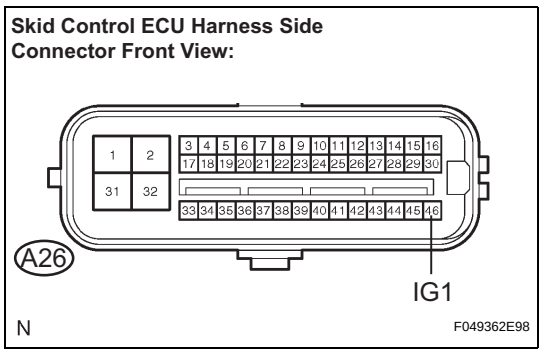
3	CHECK BATTERY

(a) Check the battery voltage.
Standard voltage:
11 to 14 V

NG → **CHECK AND REPLACE CHARGING SYSTEM OR BATTERY**

OK

4	INSPECT SKID CONTROL ECU (IG1 TERMINAL)



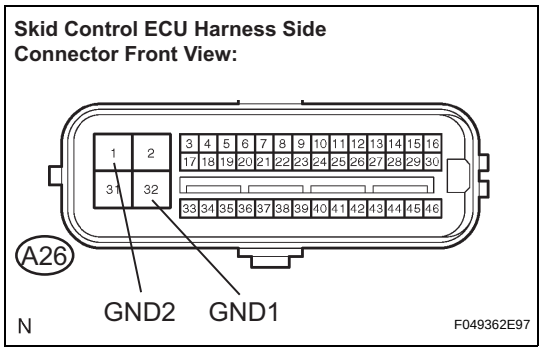
(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Condition	Specified Condition
A26-46 (IG1) - Body ground	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (IG1 CIRCUIT)**

OK

5 INSPECT SKID CONTROL ECU (GND TERMINAL)



(a) Turn the ignition switch off.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A26-32 (GND1) - Body ground	Always	Below 1 Ω
A26-1 (GND2) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

BC

6 INSPECT COMBINATION METER ASSEMBLY

(a) Reconnect the skid control ECU connector.
(b) Perform Active Test of the combination meter (meter CPU) using the intelligent tester (See page ME-32).

OK:

The ABS warning light turns on or off in accordance with the intelligent tester.

HINT:

If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-134).

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

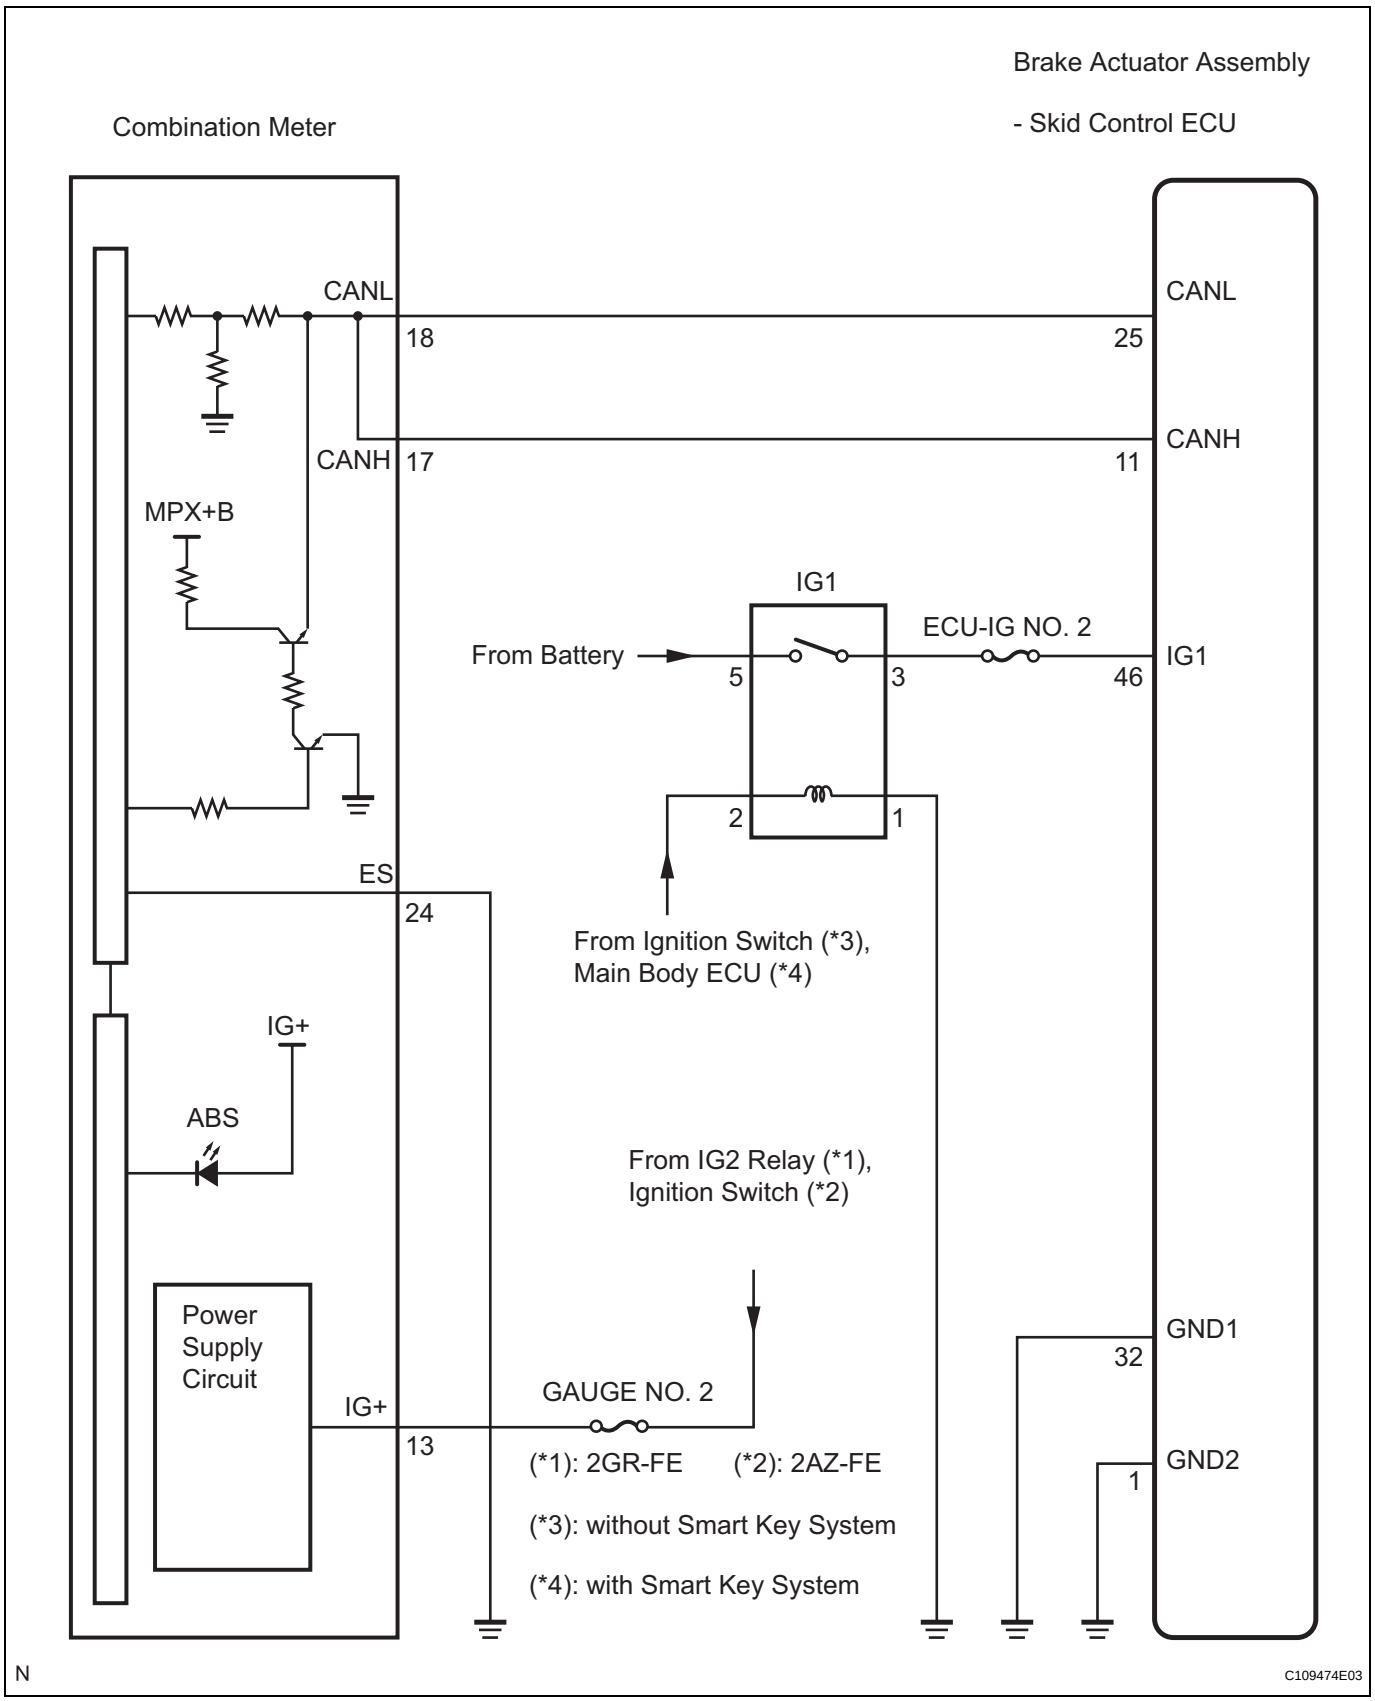
REPLACE BRAKE ACTUATOR ASSEMBLY

ABS Warning Light does not Come ON

DESCRIPTION

The skid control ECU is connected to the combination meter via CAN communication.

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-25).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → INSPECT CAN COMMUNICATION SYSTEM

A

2	CHECK ABS WARNING LIGHT

BC

(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch on (IG).
(c) Check that the ABS warning light comes on.
OK:
The ABS warning light comes on.
HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-134).

OK → REPLACE BRAKE ACTUATOR ASSEMBLY

NG

3	INSPECT COMBINATION METER ASSEMBLY

(a) Turn the ignition switch off.
(b) Reconnect the skid control ECU connector.
(c) Perform Active Test of the combination meter (meter CPU) using the intelligent tester (See page ME-32).
OK:
The ABS warning light turns on or off in accordance with the intelligent tester.
HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

NG → REPLACE COMBINATION METER ASSEMBLY

OK

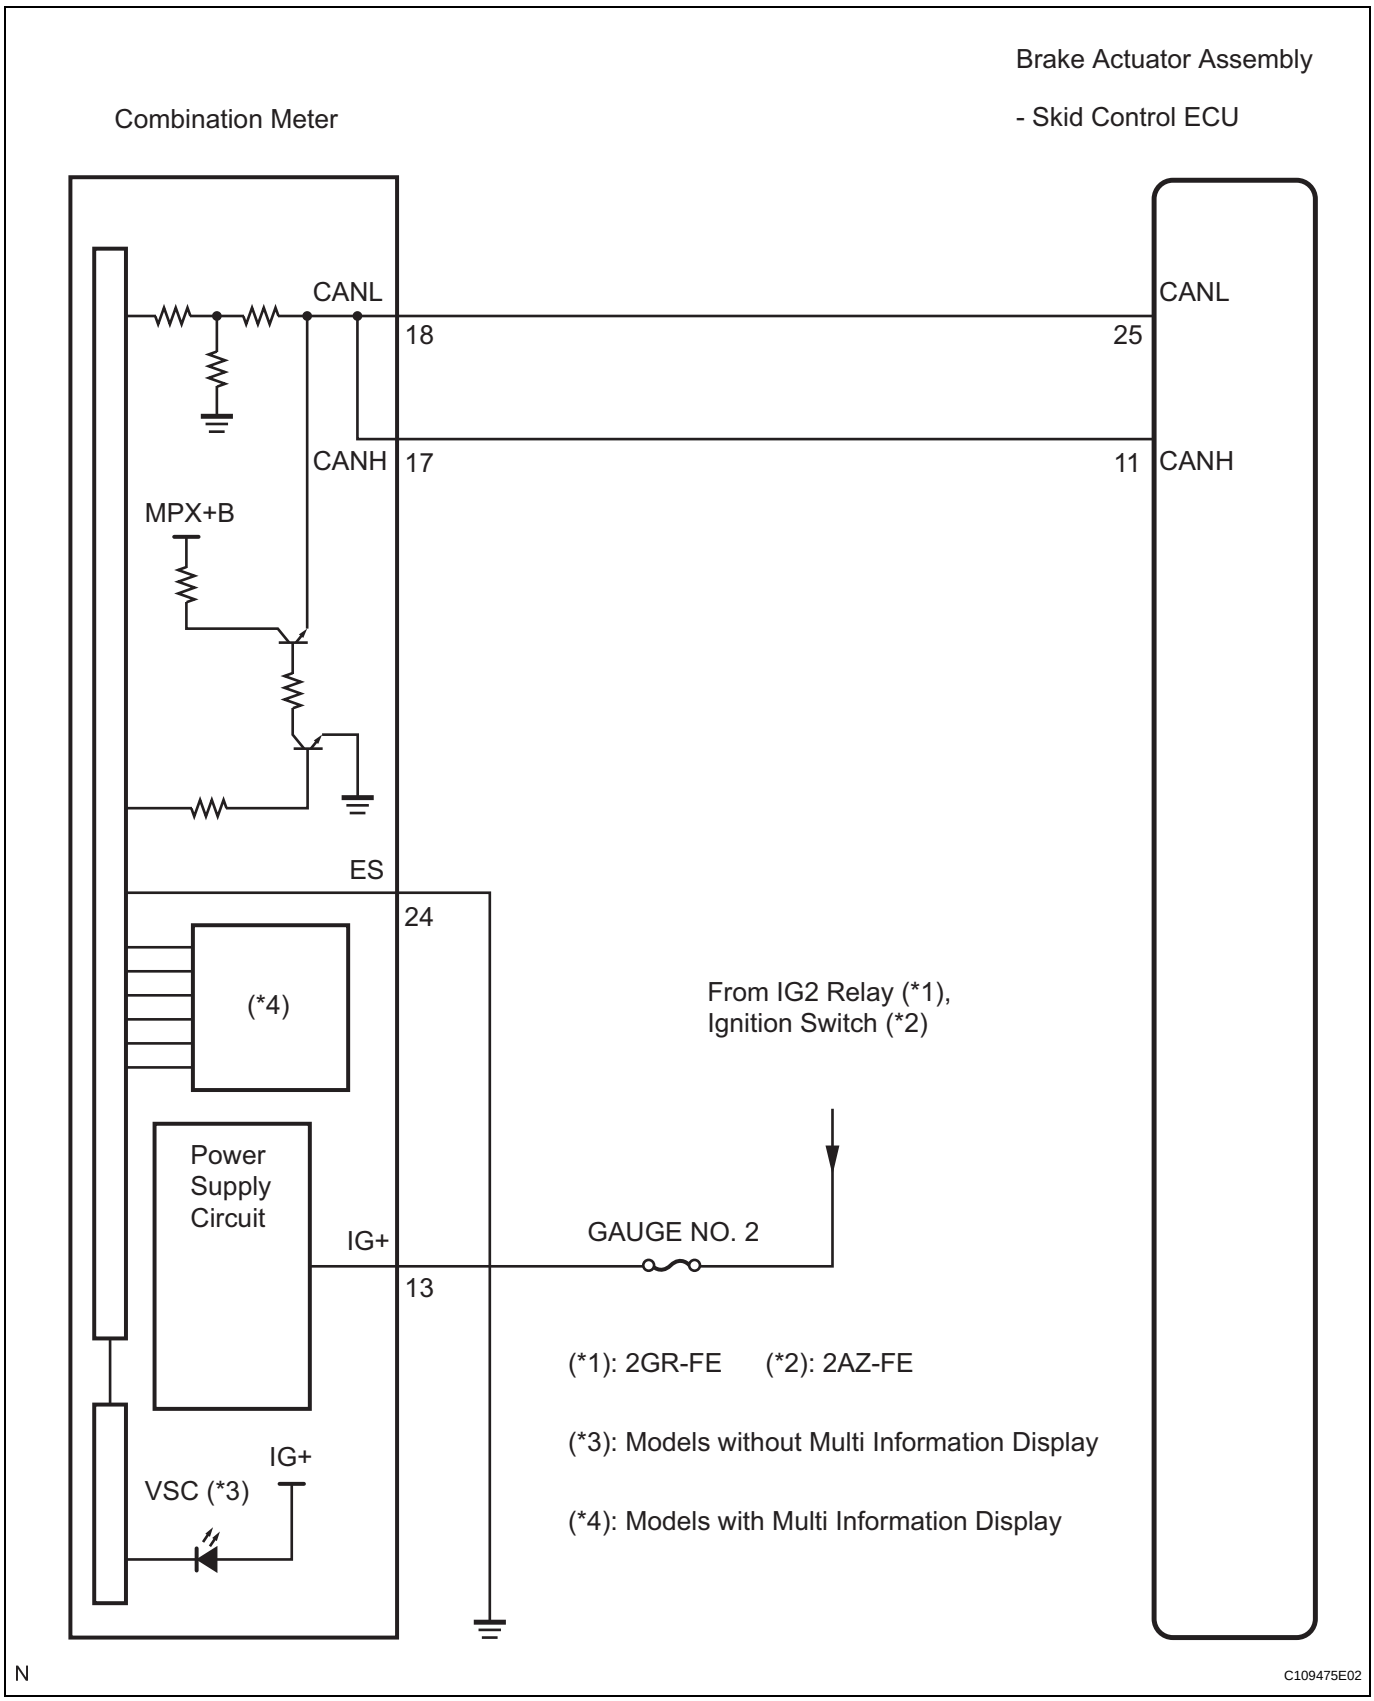
REPLACE BRAKE ACTUATOR ASSEMBLY

VSC Warning Light Remains ON

DESCRIPTION

The skid control ECU communicates with the combination meter via CAN communication. If the ECU stores a DTC, the DTC will be displayed on the multi information display in the combination meter (models with multi information display). On models without a multi information display, the VSC warning light will come on when the skid control ECU stores a DTC.

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-25).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → INSPECT CAN COMMUNICATION SYSTEM

A

2	CHECK IF SKID CONTROL ECU CONNECTOR IS SECURELY CONNECTED

(a) Check if the skid control ECU connector is securely connected.
OK:
The connector should be securely connected.

NG → CONNECT CONNECTOR TO ECU CORRECTLY

OK

3	CHECK BATTERY

(a) Check the battery voltage.
Standard voltage:
11 to 14 V

NG → CHECK AND REPLACE CHARGING SYSTEM OR BATTERY

OK

4	INSPECT COMBINATION METER ASSEMBLY

(a) Perform Active Test of the combination meter (meter CPU) using the intelligent tester (See page ME-32).
OK:
The VSC warning light (models without multi information display) or multi information display (models with multi information display) turns on or off in accordance with the intelligent tester.
HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-134).

BC

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

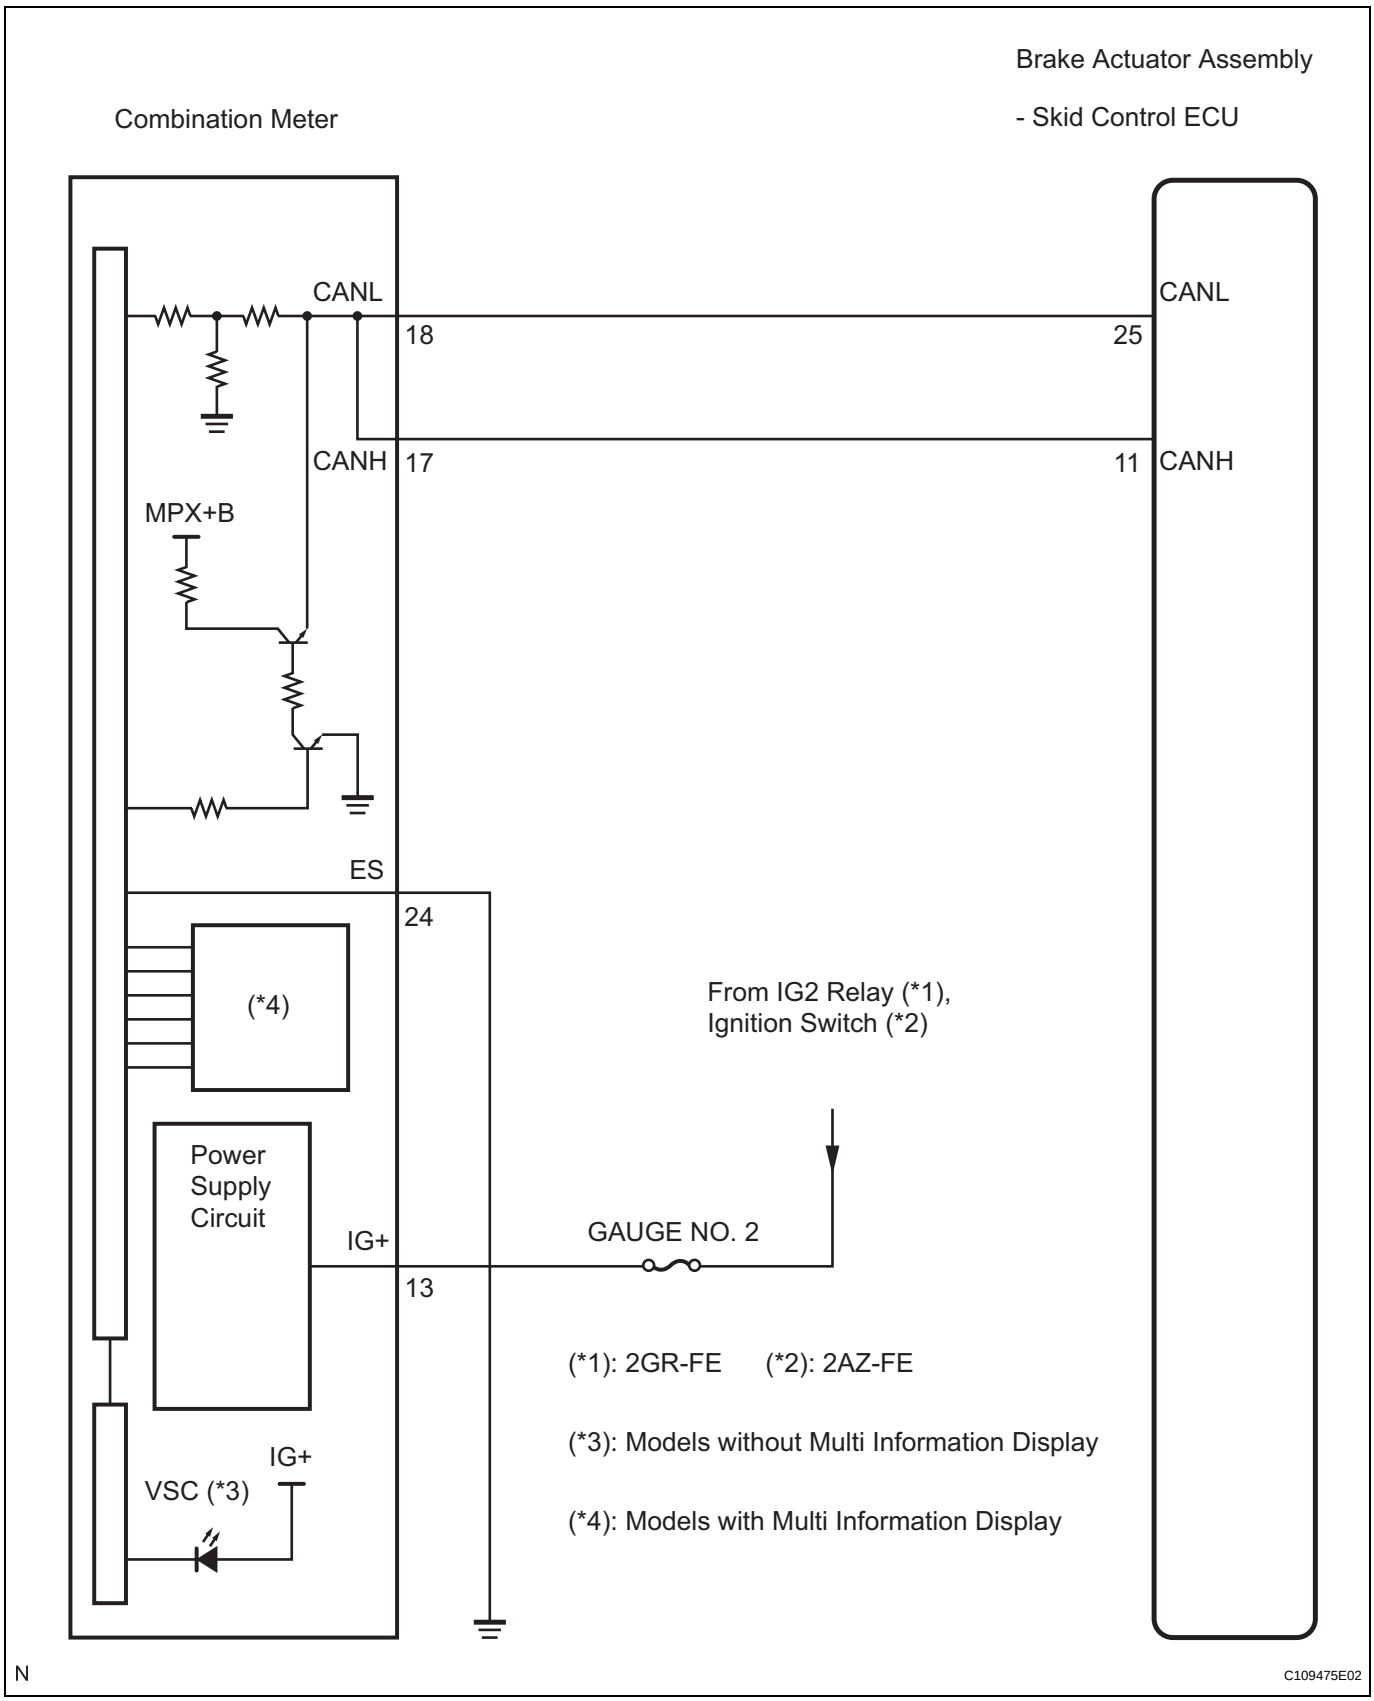
REPLACE BRAKE ACTUATOR ASSEMBLY

VSC Warning Light does not Come ON

DESCRIPTION

The skid control ECU communicates with the combination meter via CAN communication. If the ECU stores a DTC, the DTC will be displayed on the multi information display in the combination meter (models with multi information display). On models without a multi information display, the VSC warning light will come on when the skid control ECU stores a DTC.

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-25).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → INSPECT CAN COMMUNICATION SYSTEM

A

2	CHECK VSC WARNING LIGHT

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Select "VSC WARN LAMP" in the Active Test and operate the VSC warning light (models without multi information display) or multi information display (models with multi information display) using the intelligent tester.

ABS / VSC:

Item (Display)	Vehicle Condition / Test Details	Diagnostic Note
VSC WARN LAMP	Turn VSC warning light (*1) or multi information display (*2) ON / OFF	Observe combination meter

(*1): Models without multi information display
(*2): Models with multi information display

(d) Check that "ON" and "OFF" of the VSC warning light (models without multi information display) or multi information display (models with multi information display) are indicated on the combination meter when using the intelligent tester.

OK:

The VSC warning light (models without multi information display) or multi information display (models with multi information display) turns on or off in accordance with the intelligent tester.

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-134).

OK → REPLACE BRAKE ACTUATOR ASSEMBLY

NG

3	INSPECT COMBINATION METER ASSEMBLY

(a) Turn the ignition switch off.

(b) Perform Active Test of the combination meter (meter CPU) using the intelligent tester (See page ME-32).
OK:
The VSC warning light (models without multi information display) or multi information display (models with multi information display) turns on or off in accordance with the intelligent tester.
HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

REPLACE BRAKE ACTUATOR ASSEMBLY

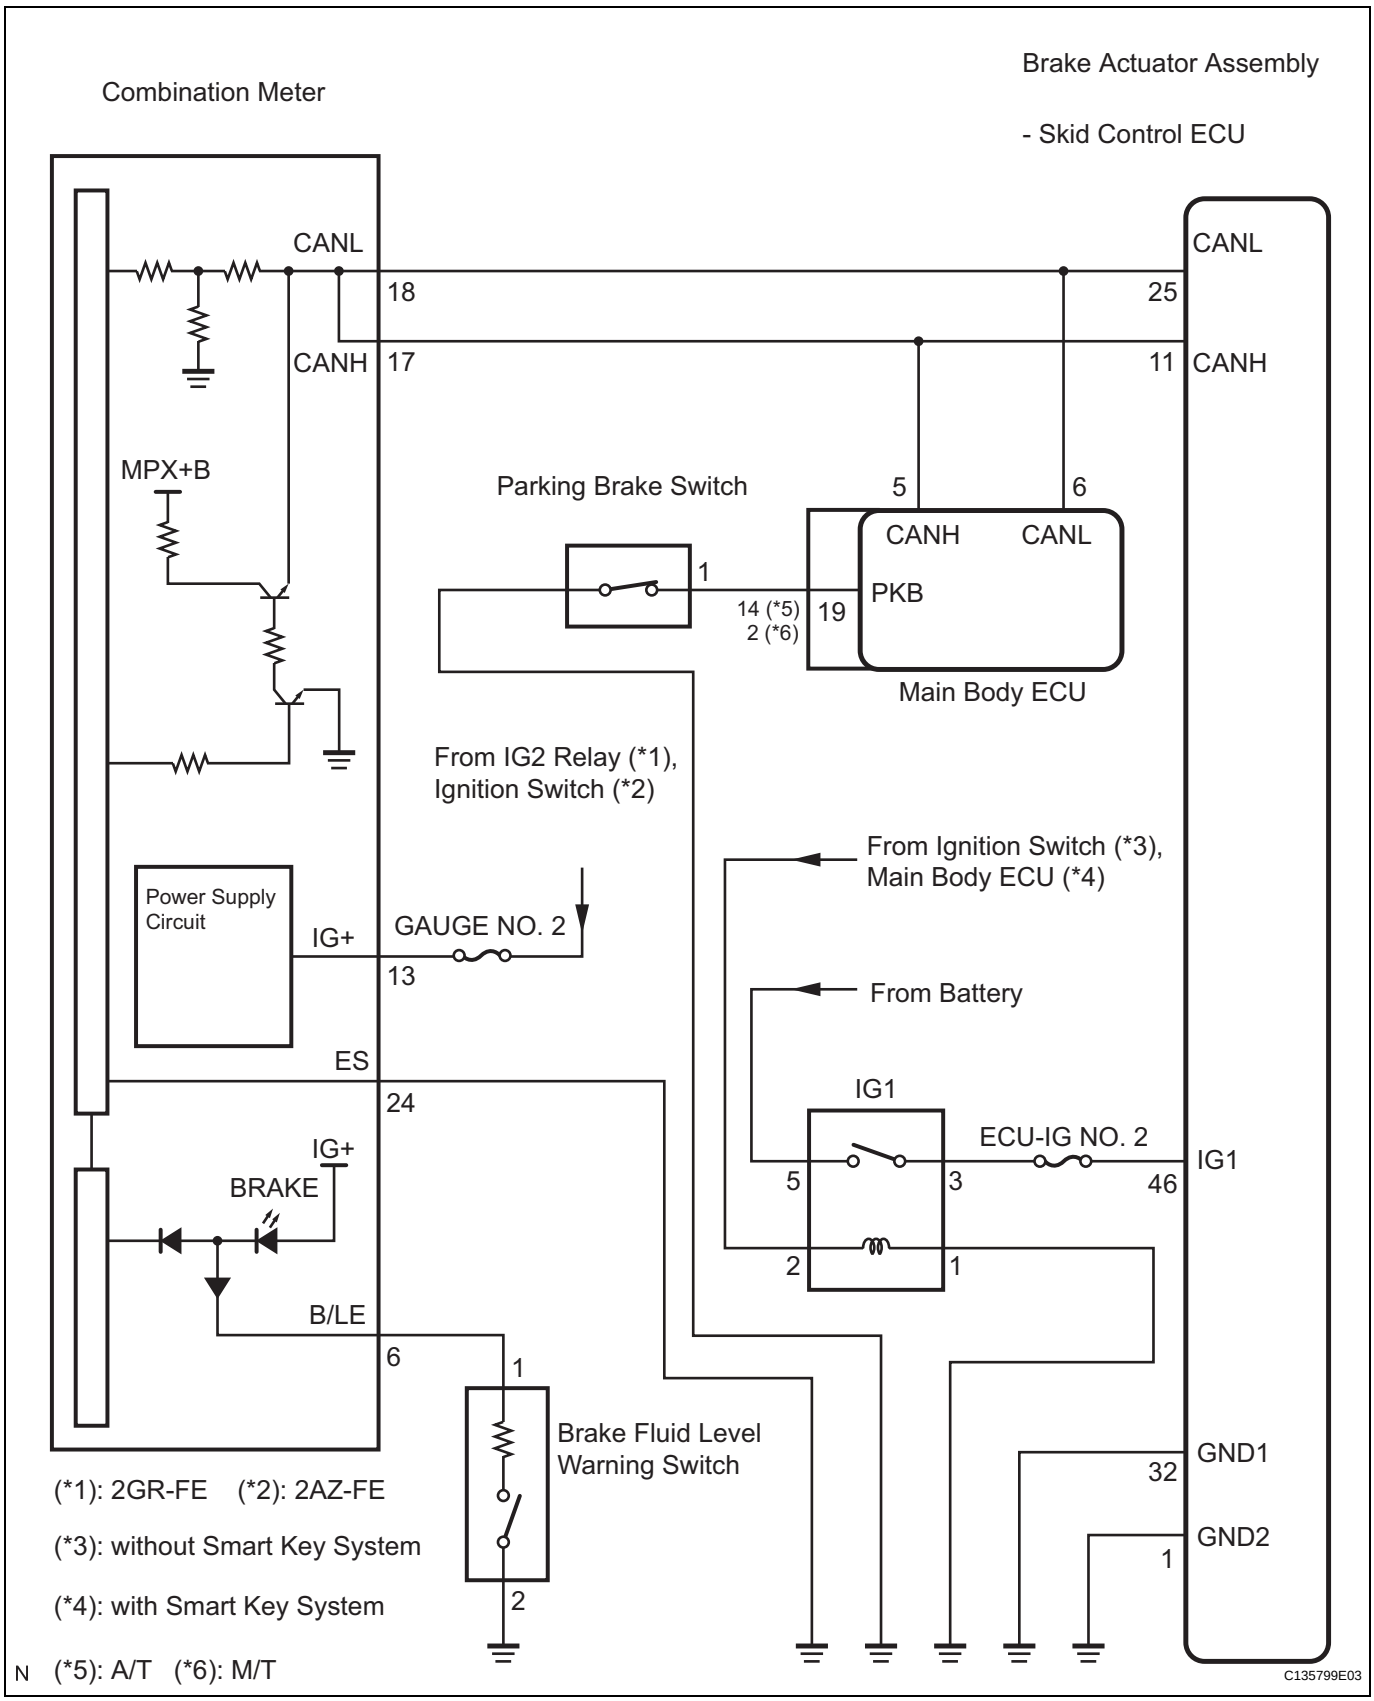
Brake Warning Light Remains ON

DESCRIPTION

The skid control ECU is connected to the combination meter via CAN communication.
If any of the following is detected, the BRAKE warning light remains on:

- The skid control ECU connector is disconnected from the skid control ECU.
- The brake fluid level is insufficient.
- The parking brake is applied.
- EBD operation is not possible.

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-25).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → INSPECT CAN COMMUNICATION SYSTEM

A

2	CHECK IF SKID CONTROL ECU CONNECTOR IS SECURELY CONNECTED

(a) Check if the skid control ECU connector is securely connected.
OK:
The connector should be securely connected.

NG → CONNECT CONNECTOR TO ECU CORRECTLY

OK

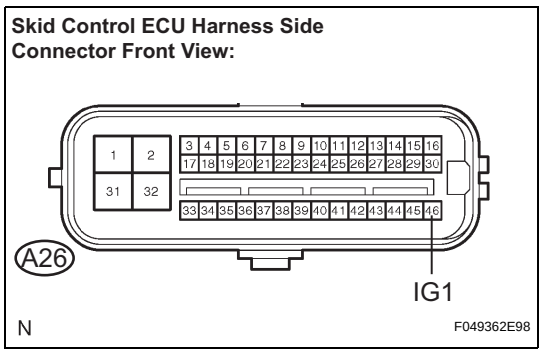
3	CHECK BATTERY

(a) Check the battery voltage.
Standard voltage:
11 to 14 V

NG → CHECK AND REPLACE CHARGING SYSTEM OR BATTERY

OK

4	INSPECT SKID CONTROL ECU (IG1 TERMINAL)



(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.
Standard voltage

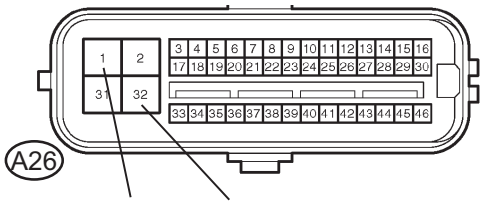
Tester Connection	Condition	Specified Condition
A26-46 (IG1) - Body ground	Ignition switch on (IG)	10 to 14 V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR (IG1 CIRCUIT)

OK

5 INSPECT SKID CONTROL ECU (GND TERMINAL)

Skid Control ECU Harness Side Connector Front View:



(a) Turn the ignition switch off.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A26-32 (GND1) - Body ground	Always	Below 1 Ω
A26-1 (GND2) - Body ground	Always	Below 1 Ω

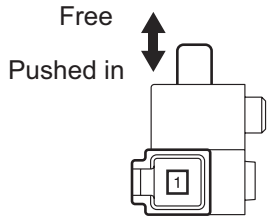
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

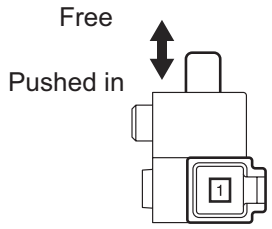
6 INSPECT PARKING BRAKE SWITCH

Parking Brake Switch

A/T:



M/T:



N C109430E02

(a) Disconnect the parking brake switch connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - Body ground	Parking brake switch ON (Switch pin free)	Below 1 Ω
1 - Body ground	Parking brake switch OFF (Switch pin pushed in)	10 kΩ or higher

NG → **REPLACE PARKING BRAKE SWITCH**

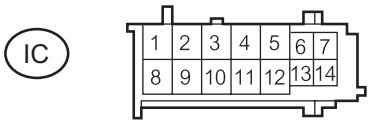
OK

BC

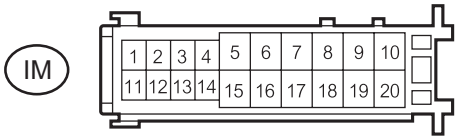
7	CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - PARKING BRAKE SWITCH)

Main Body ECU Harness Side Connector Front View

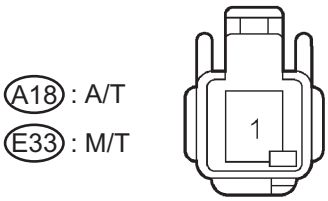
A/T:



M/T:



Parking Brake Switch Harness Side Connector Front View:



C136418E01

(a) Disconnect the main body ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

A/T

Tester Connection	Condition	Specified Condition
IC-14 (PKB) - A18-1	Always	Below 1 Ω
IC-14 (PKB) - Body ground	Always	10 kΩ or higher

M/T

Tester Connection	Condition	Specified Condition
IM-2 (PKB) - E33-1	Always	Below 1 Ω
IM-2 (PKB) - Body ground	Always	10 kΩ or higher

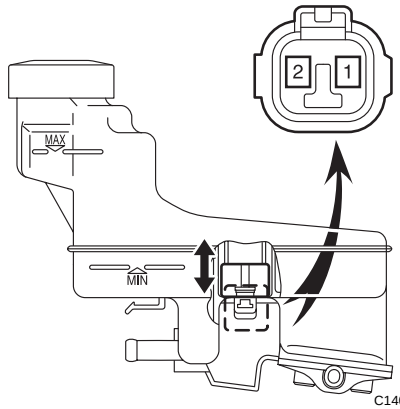
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

BC

8	**INSPECT BRAKE FLUID LEVEL WARNING SWITCH**

Brake Fluid Level Warning Switch:



C140953E01

(a) Remove the reservoir tank cap and strainer.
(b) Disconnect the brake fluid level warning switch connector.
(c) Measure the resistance according to the value(s) in the table below.

HINT:
A float is located inside the reservoir. Its position can be changed by increasing or decreasing the level of brake fluid.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Float up (Switch OFF)	1.9 to 2.1 kΩ
1 - 2	Float down (Switch ON)	Below 1 Ω

HINT:
If there is no problem after finishing the above check, adjust the brake fluid level to the MAX level.

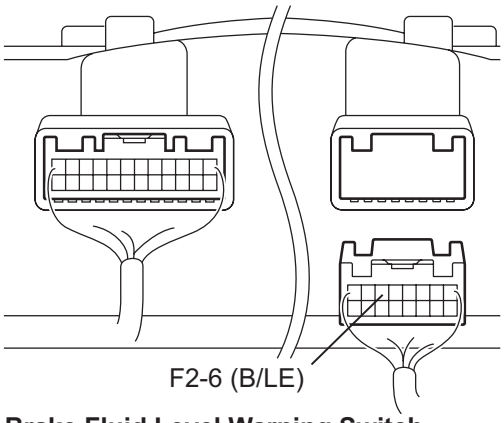
NG → **REPLACE BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY (BRAKE FLUID LEVEL WARNING SWITCH)**

OK

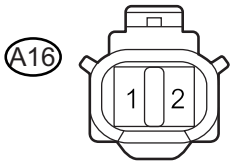
BC

9	CHECK HARNESS AND CONNECTOR (COMBINATION METER - BRAKE FLUID LEVEL WARNING SWITCH)

Combination Meter Wire Harness View:



Brake Fluid Level Warning Switch Harness Side Connector Front View:



C136033E01

(a) Disconnect the combination meter connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
F2-6 (B/LE) - A16-1	Always	Below 1 Ω
F2-6 (B/LE) - Body ground	Always	10 kΩ or higher
A16-2 - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

10	INSPECT COMBINATION METER ASSEMBLY

(a) Perform Active Test of the combination meter (meter CPU) using the intelligent tester (See page ME-32).

OK:

The BRAKE warning light turns on or off in accordance with the intelligent tester.

HINT:

- Reinstall the connectors and restore the vehicle to its prior condition before checking the combination meter.
- If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-134).

NG → **REPLACE COMBINATION METER ASSEMBLY**

BC

OK

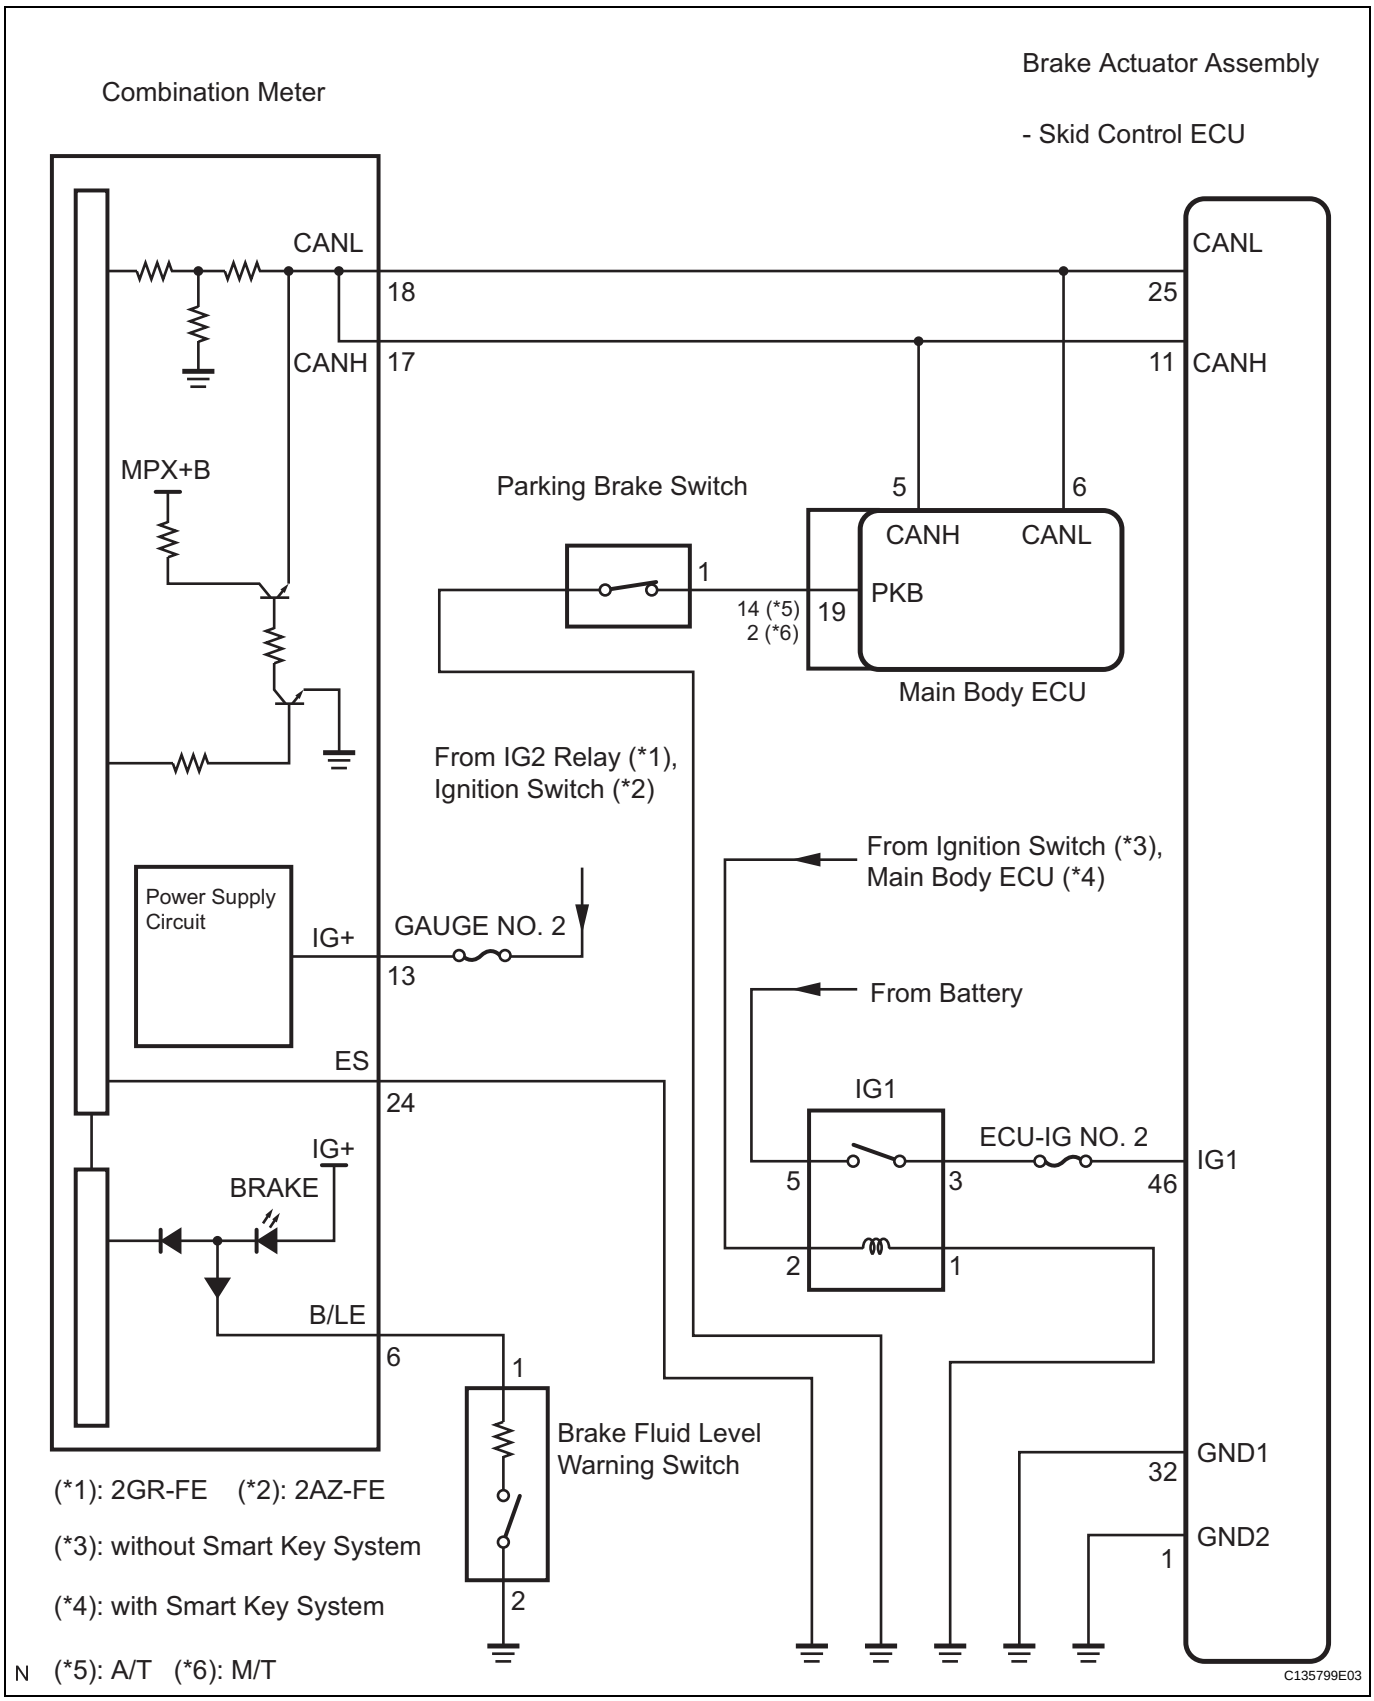
REPLACE BRAKE ACTUATOR ASSEMBLY

Brake Warning Light does not Come ON

DESCRIPTION

The skid control ECU is connected to the combination meter via CAN communication.

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-25).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → INSPECT CAN COMMUNICATION SYSTEM

A

2	CHECK BRAKE WARNING LIGHT

(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch on (IG).
(c) Check that the BRAKE warning light comes on.
OK:
The BRAKE warning light comes on.
HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-134).

OK → REPLACE BRAKE ACTUATOR ASSEMBLY

NG

3	INSPECT COMBINATION METER ASSEMBLY

(a) Turn the ignition switch off.
(b) Reconnect the skid control ECU connector.
(c) Perform Active Test of the combination meter (meter CPU) using the intelligent tester (See page ME-32).
OK:
The BRAKE warning light turns on or off in accordance with the intelligent tester.
HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

NG → REPLACE COMBINATION METER ASSEMBLY

OK

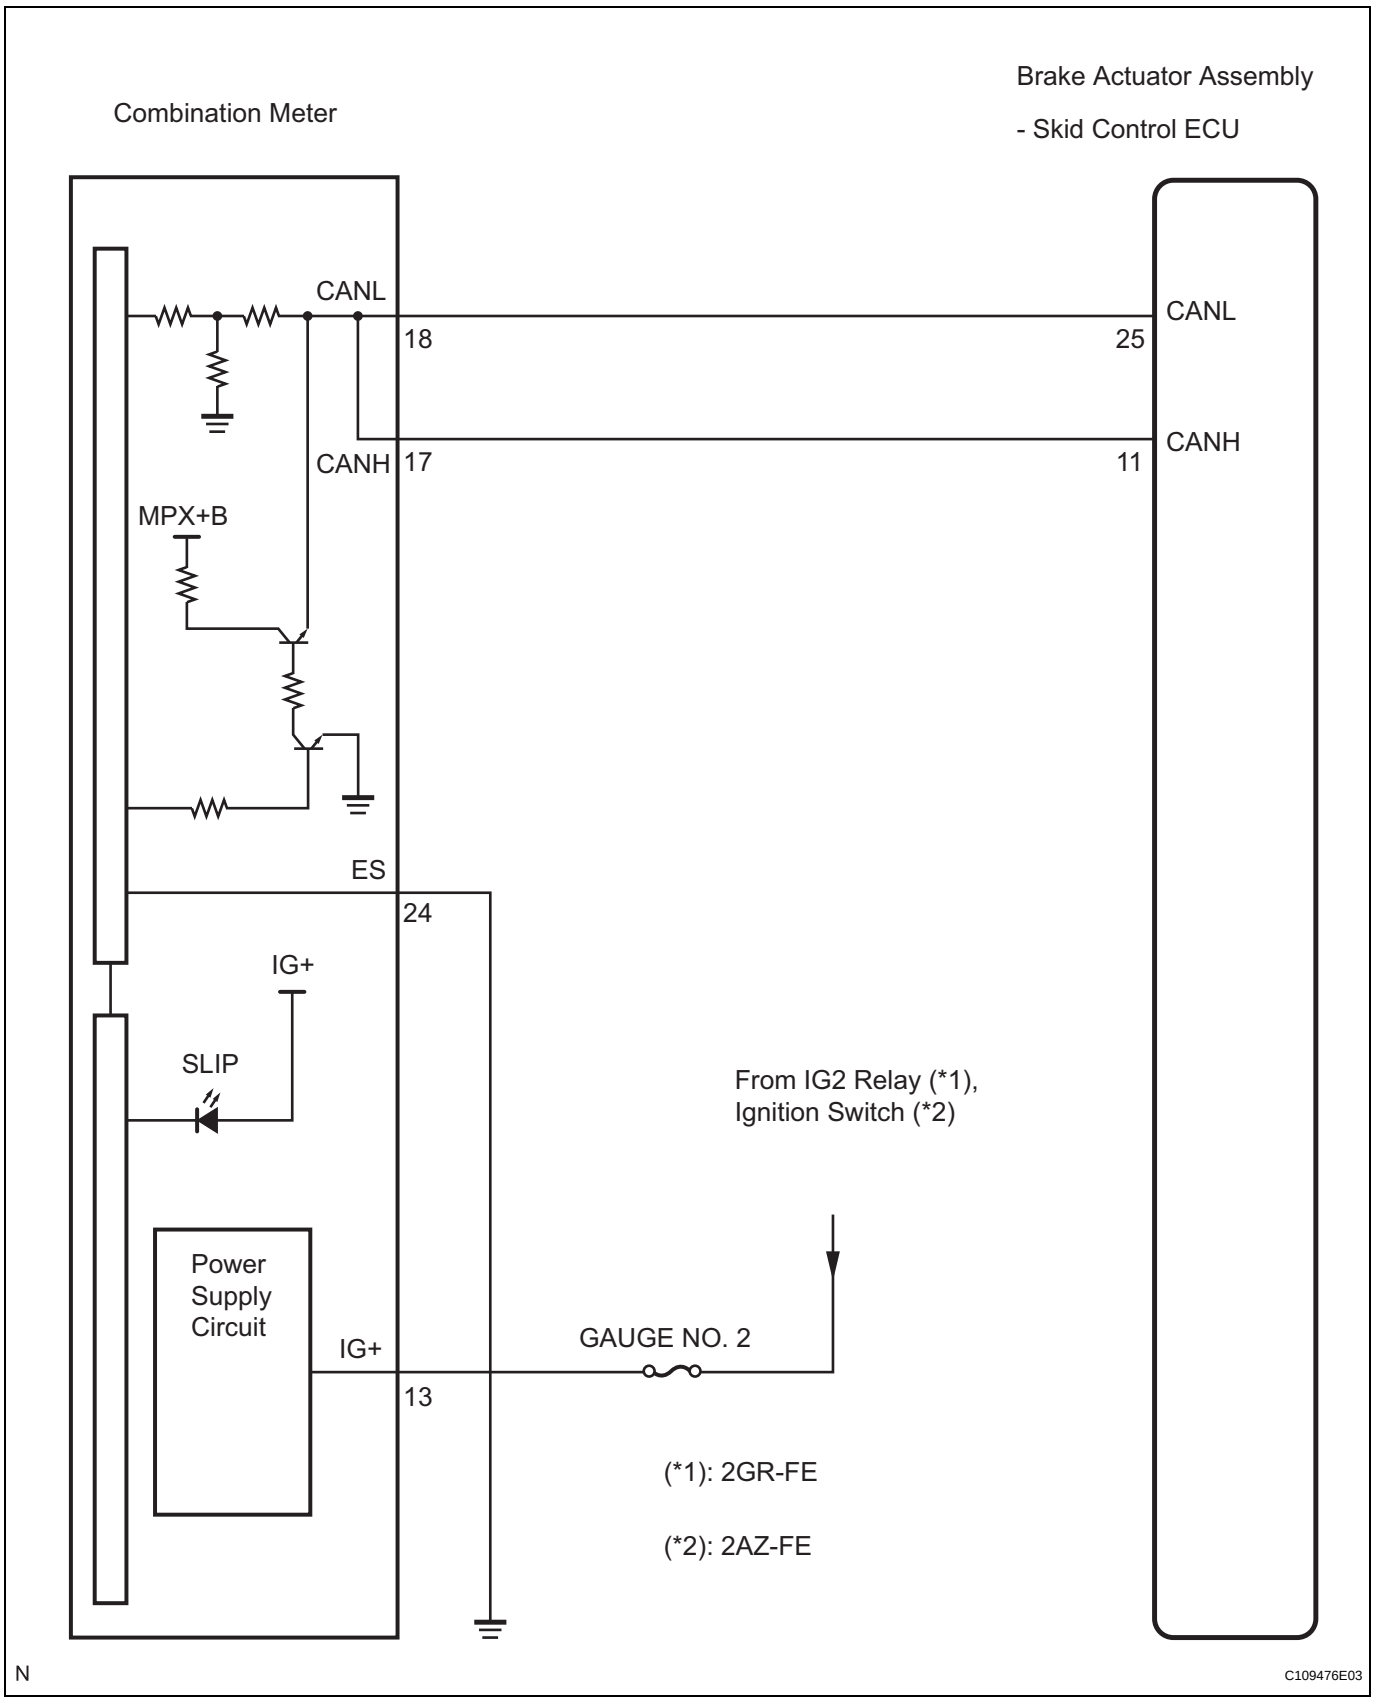
REPLACE BRAKE ACTUATOR ASSEMBLY

Slip Indicator Light Remains ON

DESCRIPTION

The skid control ECU is connected to the combination meter via CAN communication.
The SLIP indicator light blinks during VSC and/or TRAC operation.
When the system fails, the SLIP indicator light comes on to warn the driver (See page BC-138).

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-25).

Result

2	CHECK IF SKID CONTROL ECU CONNECTOR IS SECURELY CONNECTED

BC

(a) Check if the skid control ECU connector is securely connected.
OK:
The connector should be securely connected.

NG → **CONNECT CONNECTOR TO ECU CORRECTLY**

OK

3	CHECK BATTERY

(a) Check the battery voltage.
Standard voltage:
11 to 14 V

NG → **CHECK AND REPLACE CHARGING SYSTEM OR BATTERY**

OK

4	INSPECT COMBINATION METER ASSEMBLY

(a) Perform Active Test of the combination meter (meter CPU) using the intelligent tester (See page ME-32).
OK:
The SLIP indicator light turns on or off in accordance with the intelligent tester.
HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-134).

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

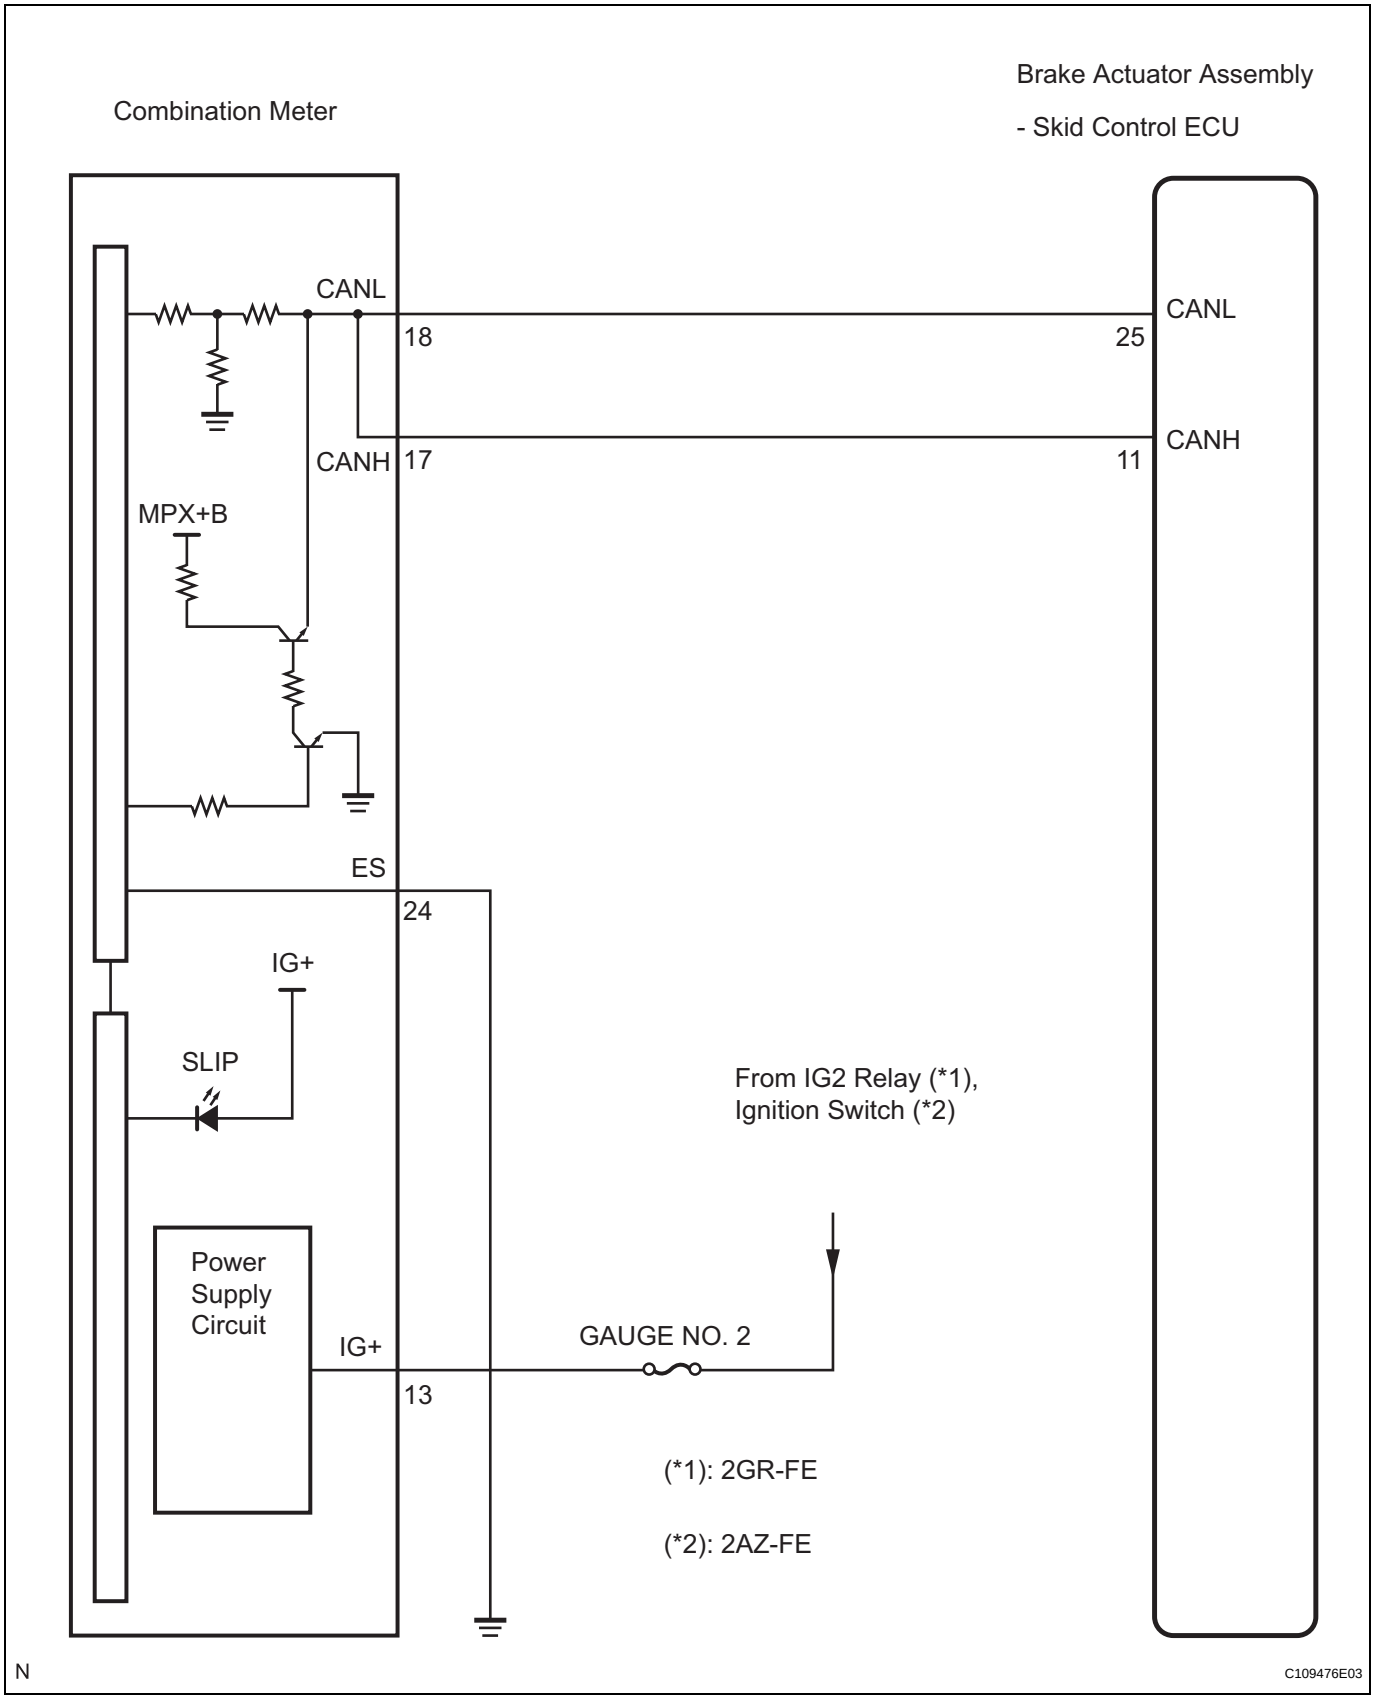
REPLACE BRAKE ACTUATOR ASSEMBLY

Slip Indicator Light does not Come ON

DESCRIPTION

The skid control ECU is connected to the combination meter via CAN communication.
The SLIP indicator light blinks during VSC and/or TRAC operation.
When the system fails, the SLIP indicator light comes on to warn the driver (See page BC-138).

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-25).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → INSPECT CAN COMMUNICATION SYSTEM

A

2	CHECK SLIP INDICATOR LIGHT

BC

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Select "SLIP INDI LAMP" in the Active Test and operate the SLIP indicator light using the intelligent tester.

ABS / VSC:

Item (Display)	Vehicle Condition / Test Details	Diagnostic Note
SLIP INDI LAMP	Turn SLIP indicator light ON / OFF	Observe combination meter

(d) Check that "ON" and "OFF" of the SLIP indicator light are indicated on the combination meter when using the intelligent tester.
OK:
The SLIP indicator light turns on or off in accordance with the intelligent tester.
HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-134).

OK → REPLACE BRAKE ACTUATOR ASSEMBLY

NG

3	INSPECT COMBINATION METER ASSEMBLY

(a) Turn the ignition switch off.
(b) Perform Active Test of the combination meter (meter CPU) using the intelligent tester (See page ME-32).
OK:
The SLIP indicator light turns on or off in accordance with the intelligent tester.
HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

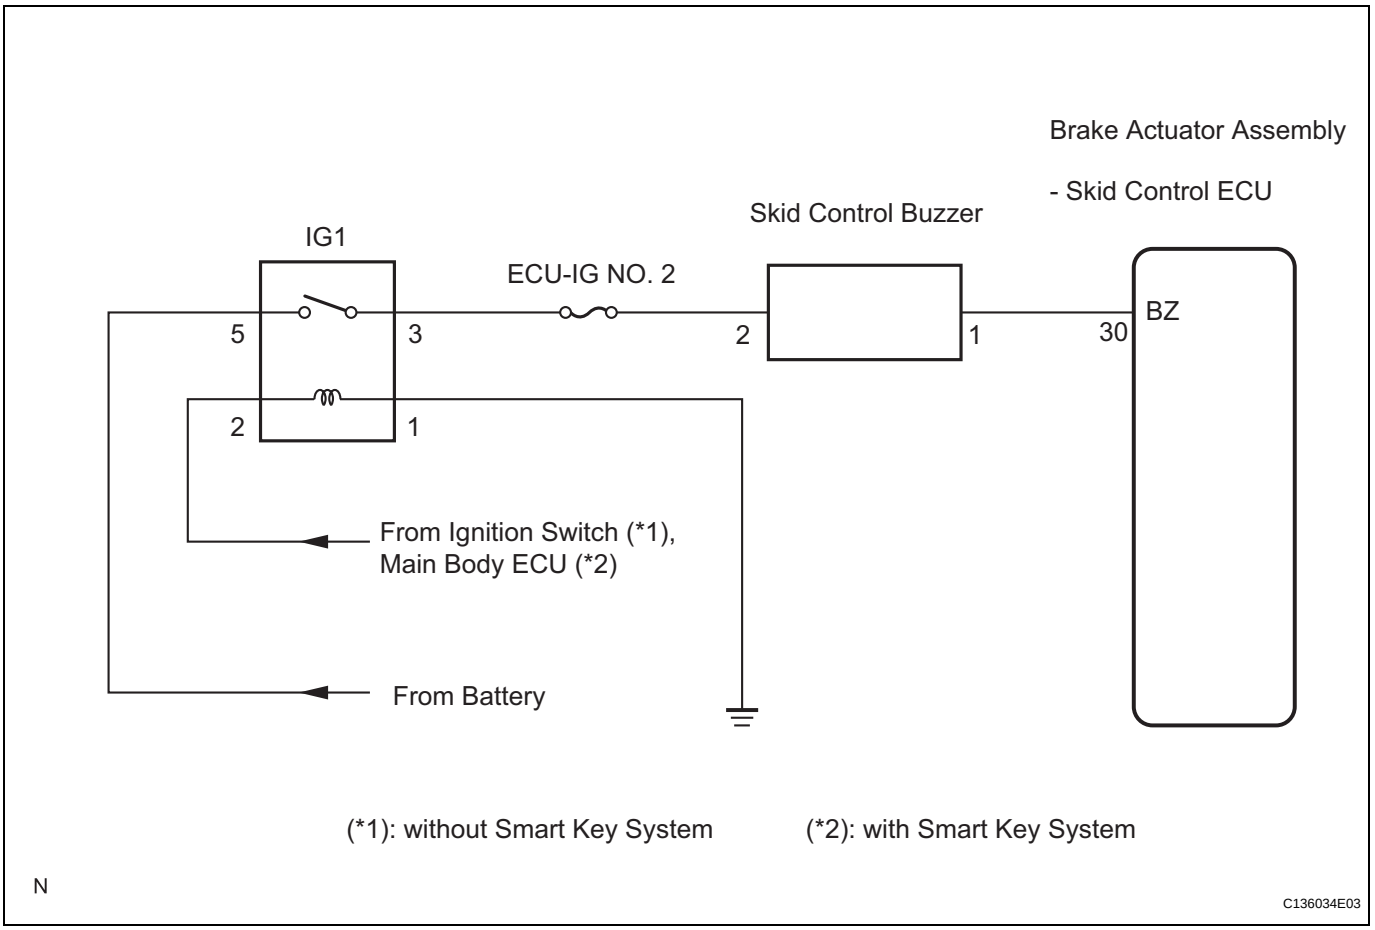
REPLACE BRAKE ACTUATOR ASSEMBLY

Skid Control Buzzer Circuit

DESCRIPTION

The skid control buzzer sounds while the accumulator pressure is abnormally low or when an abnormality causing low fluid pressure occurs, and then the VSC is activated.

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (SKID CONTROL BUZZER)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Select the Active Test mode on the intelligent tester.

ABS / VSC:

Item (Display)	Vehicle Condition / Test Details	Diagnostic Note
BUZZER	Turns skid control buzzer ON / OFF	Buzzer can be heard

(d) Check that the buzzer sounds/stops when turning the skid control buzzer on/off by using the intelligent tester.

Result

Condition	Proceed to
Buzzer does not sound or sounds constantly	A
Buzzer sounds/stops	B

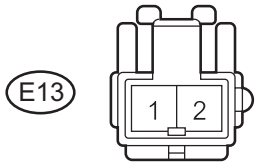
HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-134).

B → **END**

A

2 INSPECT SKID CONTROL BUZZER (POWER SOURCE TERMINAL)

Skid Control Buzzer Harness Side Connector Front View:



(a) Turn the ignition switch off.
(b) Disconnect the skid control buzzer connector.
(c) Turn the ignition switch on (IG).
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

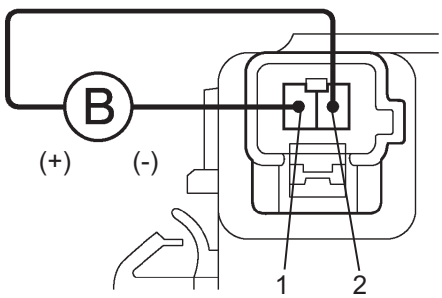
Tester Connection	Condition	Specified Condition
E13-2 - Body ground	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER SOURCE CIRCUIT)**

OK

3 INSPECT SKID CONTROL BUZZER

Skid Control Buzzer:



(a) Apply battery negative voltage to terminal 1, and battery positive voltage to terminal 2 of the skid control buzzer, and then check that the buzzer sounds.

OK:

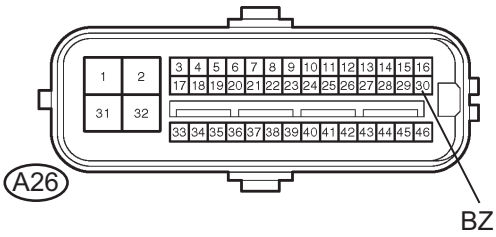
The skid control buzzer sounds.

NG → **REPLACE SKID CONTROL BUZZER**

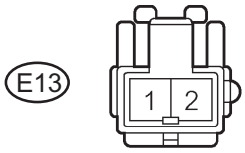
OK

4	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - SKID CONTROL BUZZER)

Skid Control ECU Harness Side Connector Front View:



Skid Control Buzzer Harness Side Connector Front View:



H

I045407E11

(a) Turn the ignition switch off.
(b) Disconnect the skid control ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A26-30 (BZ) - E13-1	Always	Below 1 Ω
A26-30 (BZ) - Body ground	Always	10 kΩ or higher

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-134).

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

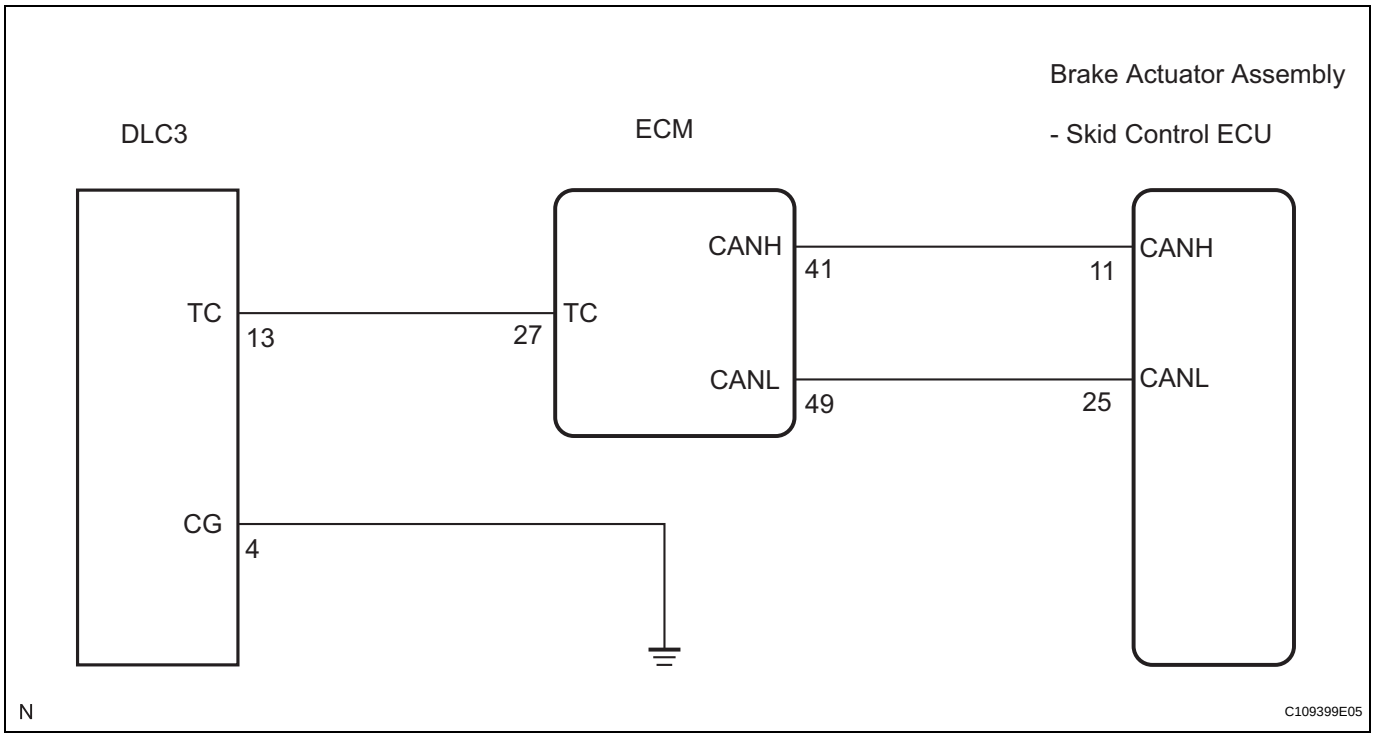
REPLACE BRAKE ACTUATOR ASSEMBLY

TC and CG Terminal Circuit

DESCRIPTION

Connecting terminals TC and CG of the DLC3 causes the ECU to display the DTC by blinking the ABS warning light.

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-25).

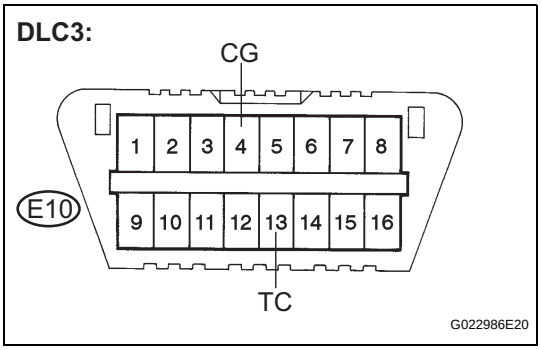
Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → INSPECT CAN COMMUNICATION SYSTEM

A

2	INSPECT DLC3



(a) Turn the ignition switch on (IG).
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

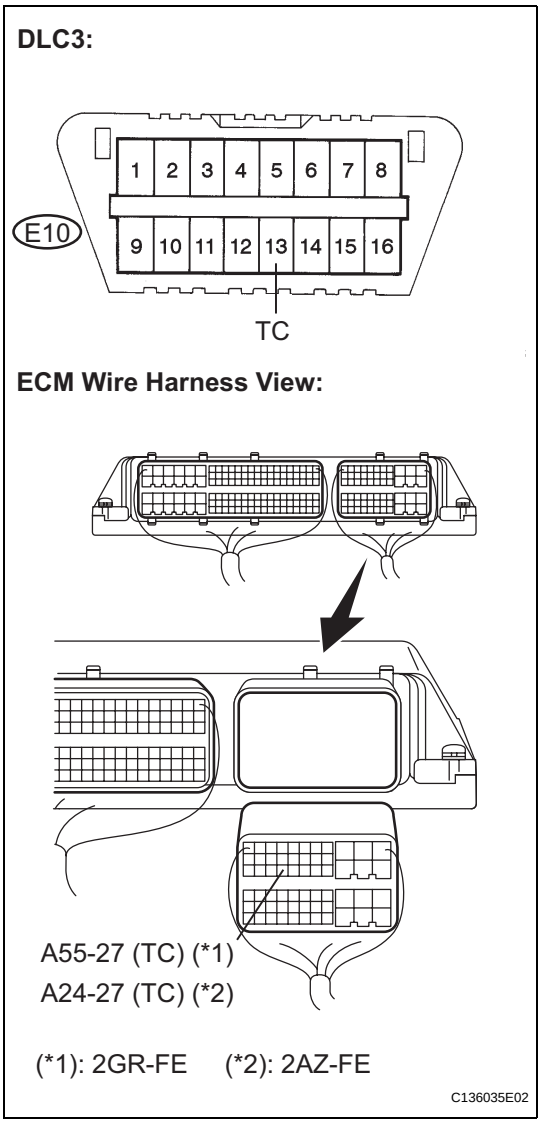
Tester Connection	Condition	Specified Condition
E10-13 (TC) - E10-4 (CG)	Ignition switch on (IG)	10 to 14 V

OK → **Go to step 5**

NG

3	CHECK HARNESS AND CONNECTOR (TC of DLC3 - ECM)

BC



(a) Turn the ignition switch off.
(b) Disconnect the ECM connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance:

2GR-FE

Tester Connection	Condition	Specified Condition
E10-13 (TC) - A55-27 (TC)	Always	Below 1 Ω
E10-13 (TC) - Body ground	Always	10 kΩ or higher

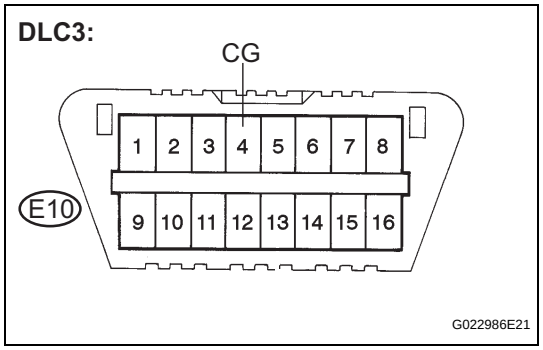
2AZ-FE

Tester Connection	Condition	Specified Condition
E10-13 (TC) - A24-27 (TC)	Always	Below 1 Ω
E10-13 (TC) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 CHECK HARNESS AND CONNECTOR (CG of DLC3 - BODY GROUND)



(a) Measure the resistance according to the value(s) in the table below.

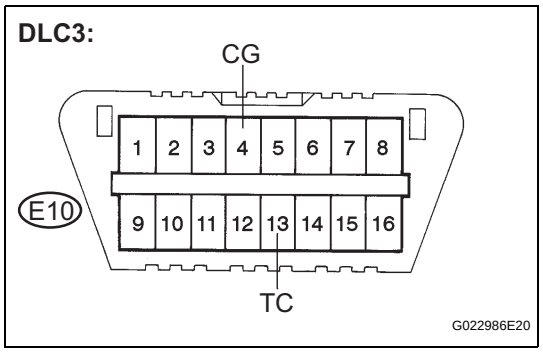
Standard resistance

Tester Connection	Condition	Specified Condition
E10-4 (CG) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5 CHECK ECM (TC of DLC3 INPUT)



(a) Turn the ignition switch off.
(b) Reconnect the ECM connector.
(c) Using SST, connect terminals TC and CG of the DLC3.
(d) Turn the ignition switch on (IG).
(e) Check that the check engine warning light is blinking.

Result

Condition	Proceed to
Check engine warning light is blinking	A
Check engine warning light is not blinking	B

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-134).

B → **REPAIR OR REPLACE WIRE HARNESS OR ECM (TC of ECM CIRCUIT)**

A

REPLACE BRAKE ACTUATOR ASSEMBLY

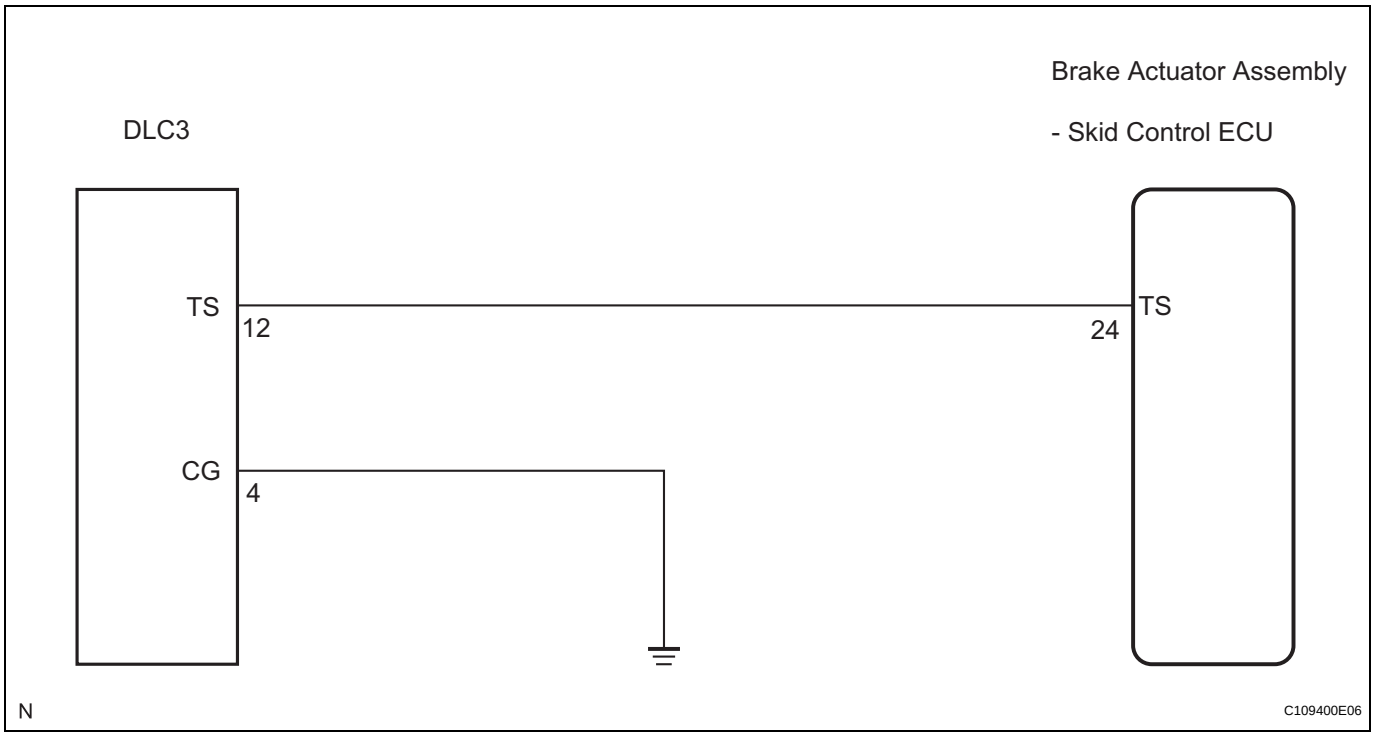
BC

TS and CG Terminal Circuit

DESCRIPTION

In the Test Mode (signal check), a malfunction of the speed sensor that cannot be detected when the vehicle is stopped can be detected while driving.
Transition to the sensor check mode can be performed by connecting terminals TS and CG of the DLC3 and turning the ignition switch from off to on (IG).

WIRING DIAGRAM

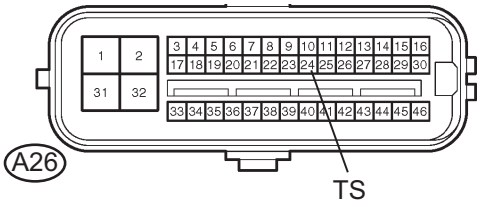


INSPECTION PROCEDURE

NOTICE:
When replacing the brake actuator assembly, perform zero point calibration (See page BC-119).

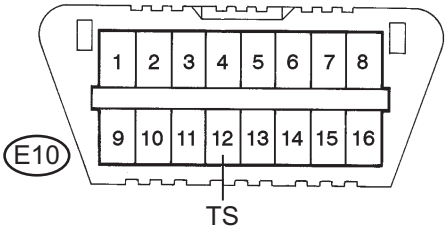
1 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - TS of DLC3)

Skid Control ECU Harness Side Connector Front View:



N

DLC3:



C128347E08

(a) Disconnect the skid control ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

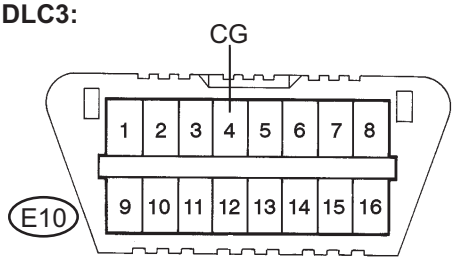
Tester Connection	Condition	Specified Condition
A26-24 (TS) - E10-12 (TS)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2 CHECK HARNESS AND CONNECTOR (CG of DLC3 - BODY GROUND)

DLC3:



G022987E21

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

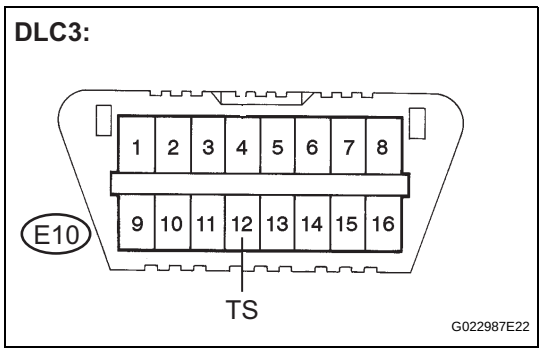
Tester Connection	Condition	Specified Condition
E10-4 (CG) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

BC

3	CHECK HARNESS AND CONNECTOR (TS of DLC3 - BODY GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E10-12 (TS) - Body ground	Always	10 kΩ or higher

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-134).

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

BC

OK

REPLACE BRAKE ACTUATOR ASSEMBLY

VEHICLE STABILITY CONTROL SYSTEM (for BOSCH Made)

PRECAUTION

1. EXPRESSIONS OF IGNITION SWITCH

The type of ignition switch used on this model differs according to the specifications of the vehicle.
The expressions listed in the table below are used in this section.

Expression	Switch Type	
	Ignition Switch (Position)	Engine Switch (Condition)
Ignition switch off	LOCK	off
Ignition switch on (IG)	ON	on (IG)
Ignition switch on (ACC)	ACC	on (ACC)
Engine start	START	start

BC

2. TROUBLESHOOTING PRECAUTION

(a) When there is a malfunction in the contact point of the terminals or installation problems with parts, the removal and installation of the suspected problem parts may return the system to the normal condition either completely or temporarily.
(b) In order to determine the malfunctioning area, be sure to check the conditions at the time the malfunction occurred, such as by DTC output and freeze frame data output, and record it before disconnecting each connector or removing and installing parts.
(c) Since the vehicle stability control system may be influenced by a malfunction in the other systems, be sure to check for DTCs in the other systems.
(d) Be sure to remove and install the brake actuator assembly and each sensor with the ignition switch off unless specified in the inspection procedure.
(e) If the brake actuator or a sensor has been removed and installed, it is necessary to check the system for problems after the parts have been reassembled. Check for DTCs using the intelligent tester, also check that system functions and signals received by the ECU are normal using test mode.

3. CAN COMMUNICATION SYSTEM PRECAUTION

(a) The CAN communication system is used for data communication between the skid control ECU, the steering angle sensor, and the yaw rate and acceleration sensor. If there is trouble in the CAN communication line, a DTC of the communication line is output.
(b) If a DTC of the CAN communication line is output, repair the malfunction in the communication line and troubleshoot the vehicle stability control system under the condition that data communication is normal.

(c) In order to enable CAN communication, a specific type of wiring is used for the CAN communication lines. The wiring used for each communication line is a twisted pair of wires that have an equal length. A bypass wire should not be used, because the data being transmitted will be corrupted.

4. DTC PRECAUTION

(a) Warnings for some DTCs cannot be cleared by only repairing the malfunctioning parts. If the warning is displayed after repair work, the DTC should be cleared after turning the ignition switch off.

NOTICE:

If a DTC for a malfunctioning part reappears after it was cleared, then it has been stored again.

5. CHASSIS DYNAMOMETER PRECAUTION

(a) Enter Test Mode to disable TRAC and VSC control when using a chassis dynamometer.

HINT:

The vehicle may move unexpectedly out of the dynamometer because of TRAC and VSC operations.

NOTICE:

- **Make sure that the VSC warning (multi information display and master caution indicator light) light is blinking (TEST Mode is achieved).**
- **Secure the vehicle with the lock chain for safety.**

BC

SYSTEM DESCRIPTION

1. SYSTEM DESCRIPTION

HINT:

- The skid control ECU is located within the brake actuator assembly.
- The yaw rate sensor and acceleration sensor are combined in a single unit. This unit communicates with the skid control ECU through the CAN communication system.

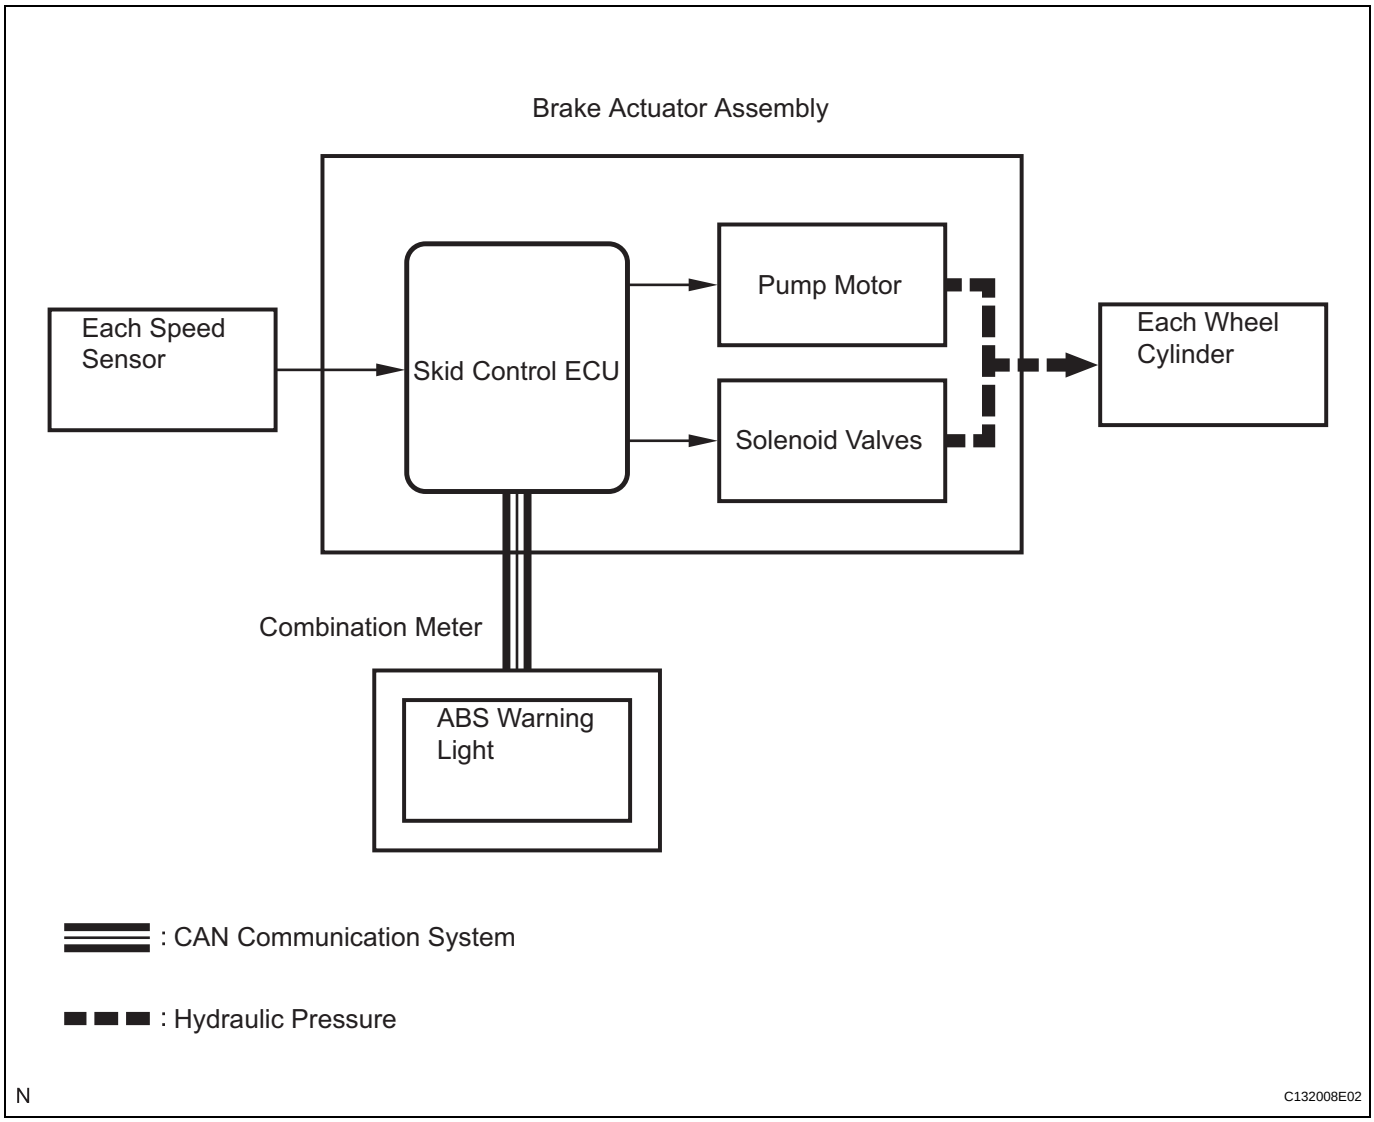
(a) ABS operation

(1) Based on the signals received from the 4 wheel speed sensors, the skid control ECU calculates the deceleration and speed of each wheel, while monitoring for wheel lock. If wheel lock is occurring, the ECU controls the solenoid valves in the brake actuator in order to adjust the hydraulic pressure applied to the brakes at each wheel.

2. FUNCTION DESCRIPTION

(a) ABS (Anti-lock Brake System)

The ABS helps prevent the wheels from locking when the brakes are applied firmly or when braking on a slippery surface.

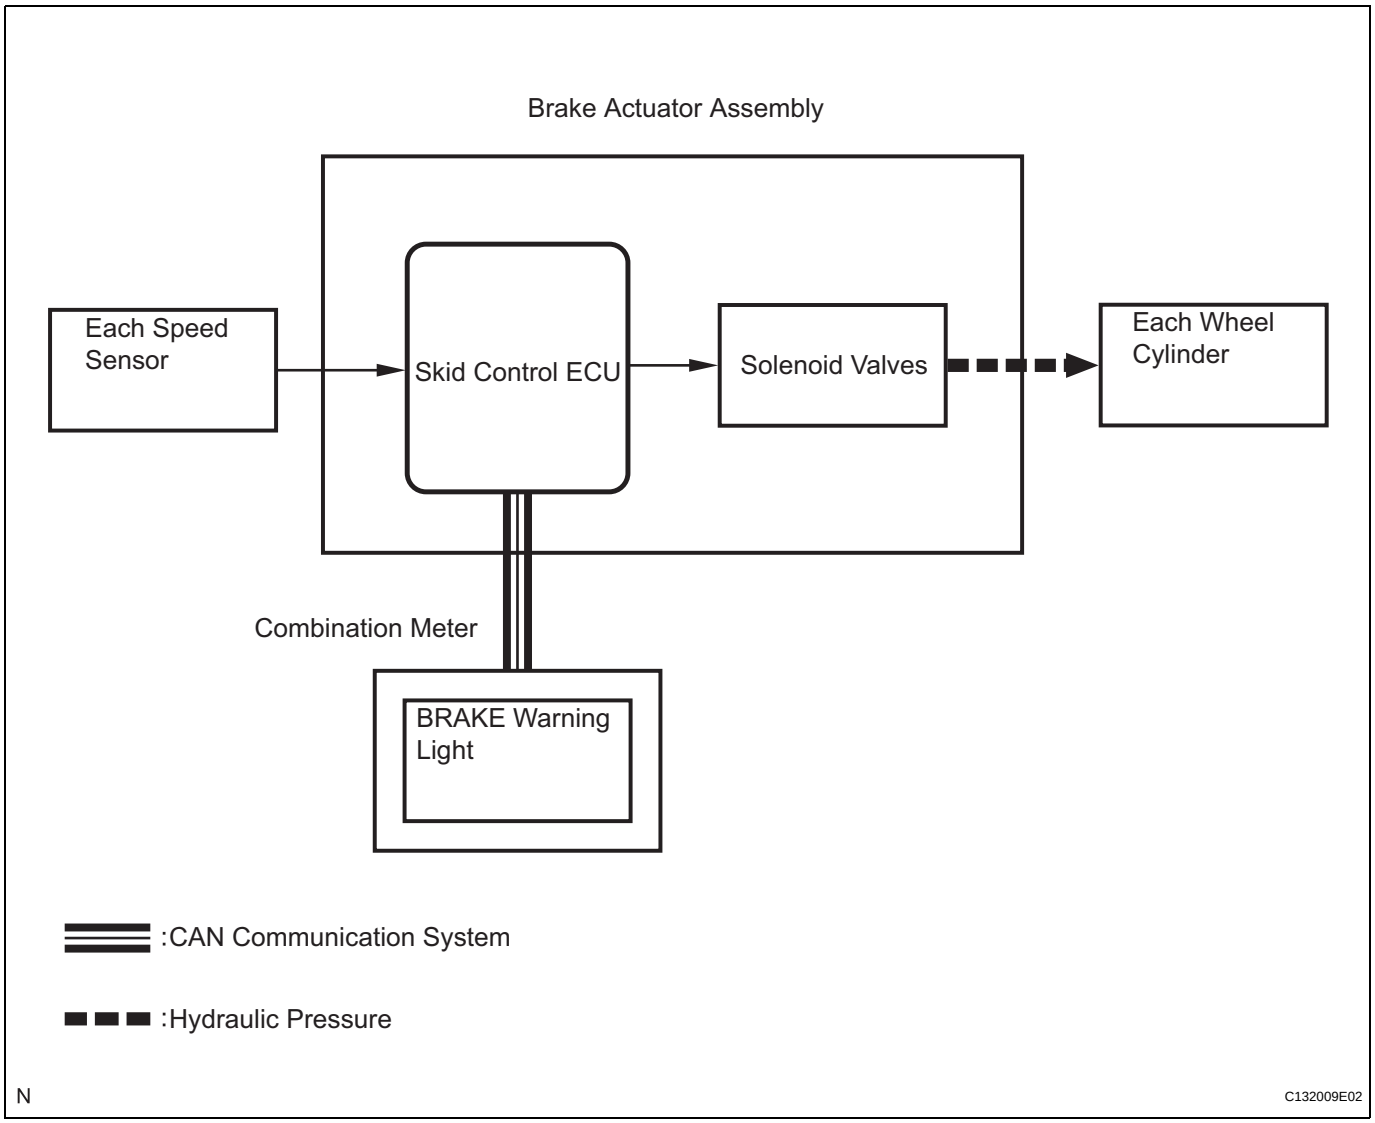


(1) Operation description

The skid control ECU detects wheel lock condition by receiving vehicle speed signals from each speed sensor, and sends control signals to the pump motor and solenoid valves. The pump motor and solenoid valves avoid wheel lock by controlling the hydraulic pressure of each wheel cylinder.

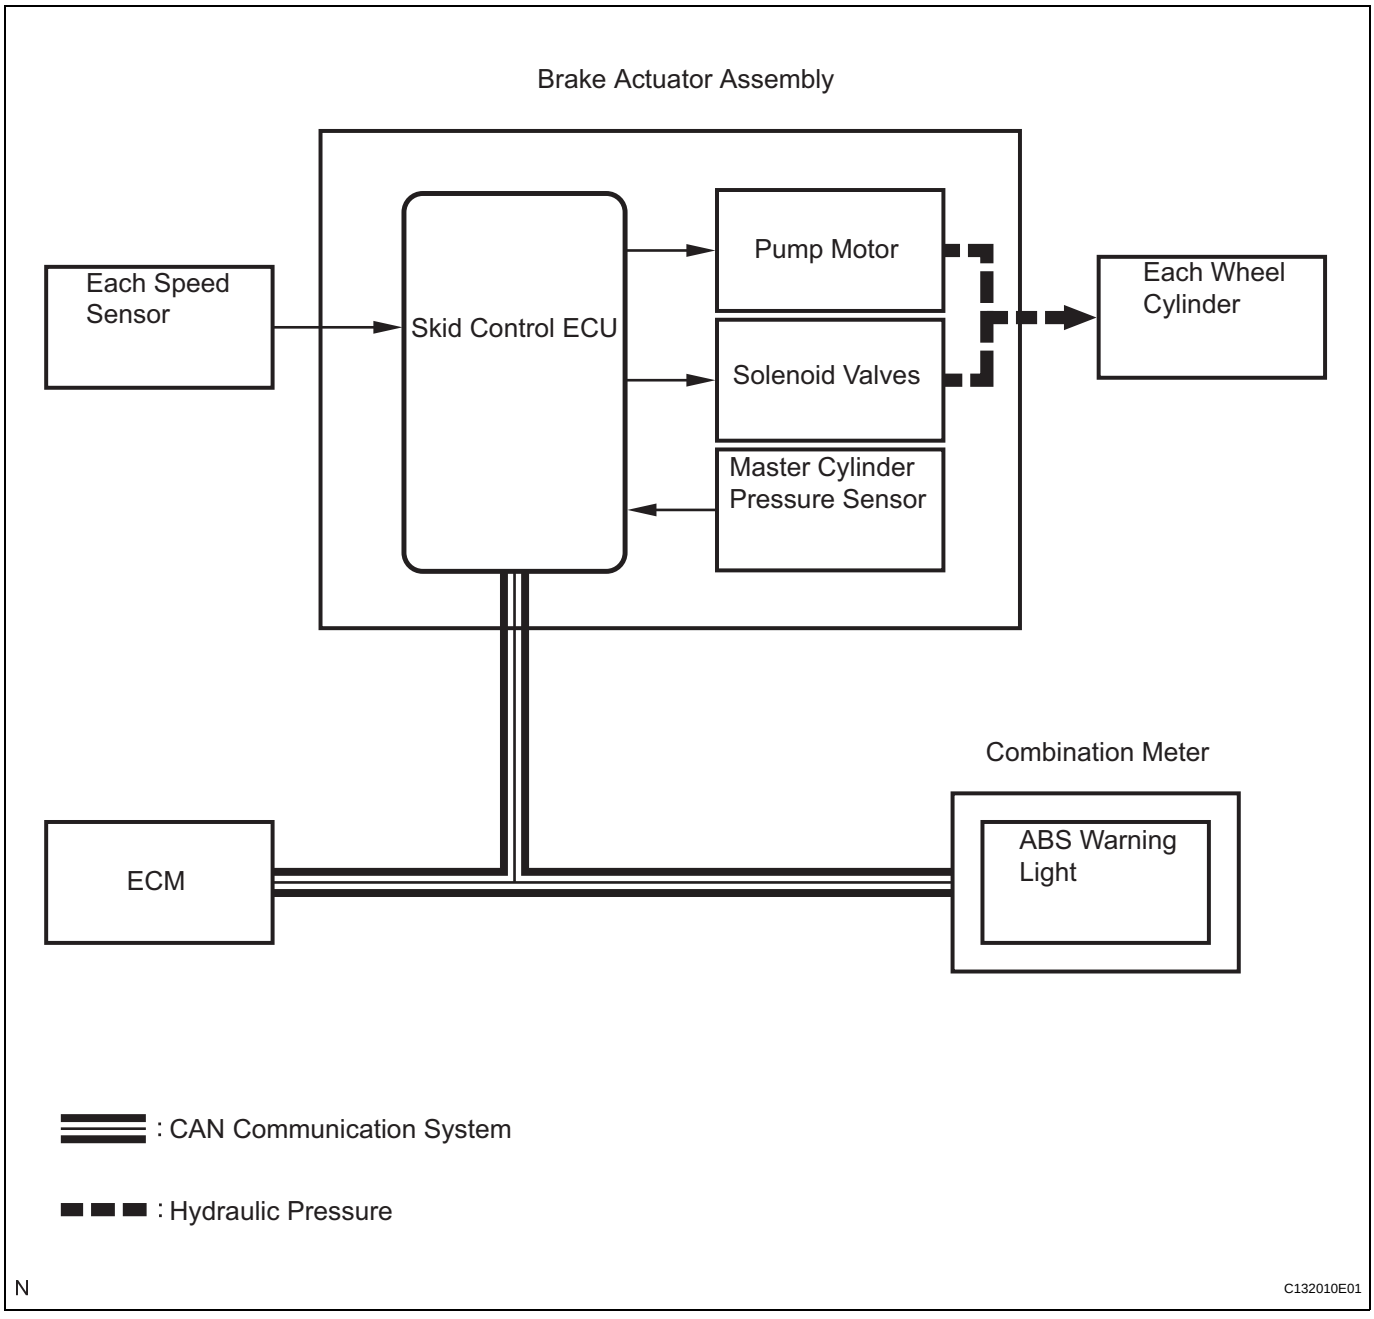
The ABS warning light comes on when the ABS system is malfunctioning.

(b) EBD (Electronic Brake force Distribution)
The EBD control utilizes ABS, which ensures proper brake force distribution between the front and rear wheels in accordance with driving conditions. In addition, when braking while cornering, it also controls the brake forces of the right and left wheels, helping to maintain vehicle behavior.



(1) Operation description
The skid control ECU receives a speed signal from each speed sensor, and uses these signals to detect locking of the wheels. The ECU uses this information in order to determine appropriate control of the solenoid valves.
The solenoid valves control the hydraulic pressure applied to the brake cylinder at each wheel. In this way, the solenoid valves are used to control the brake power split between the front and rear, and left and right wheels. The BRAKE warning light comes on if there is a malfunction in the EBD system.

(c) BA (Brake Assist)
The primary purpose of the brake assist system is to provide auxiliary brake force to assist a driver who cannot generate a large enough brake force during emergency braking. This system helps to maximize the brake performance of the vehicle.



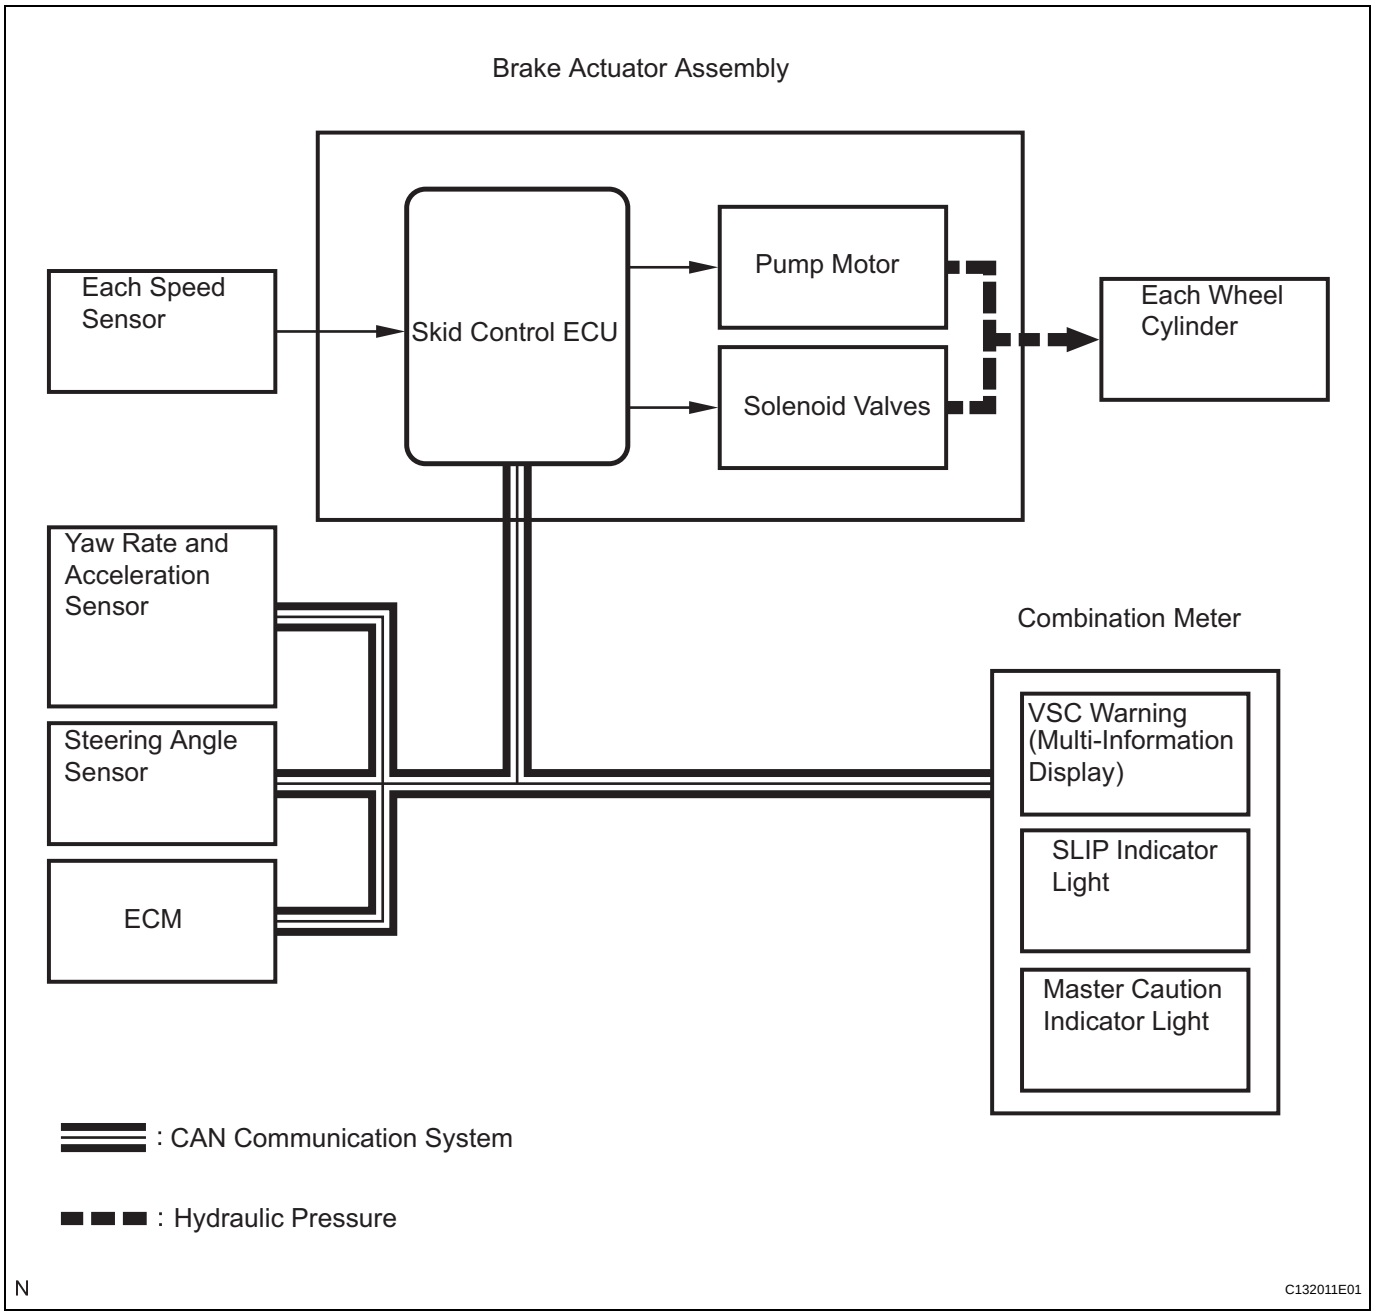
(1) Operation description

The skid control ECU receives the speed signal from each speed sensor and the hydraulic pressure signal from the master cylinder pressure sensor to determine whether brake assist is necessary. If brake assist is considered to be necessary, the skid control ECU sends control signals to the pump motor and solenoid valve.

The pump and solenoid valve then control the pressure applied to each wheel cylinder.

The ABS warning light comes on to indicate a malfunction in the BA (brake assist) system.

(d) TRAC (Traction Control)
The TRAC system helps prevent the drive wheel from slipping if the driver depresses the accelerator pedal excessively when starting off or accelerating on a slippery surface.

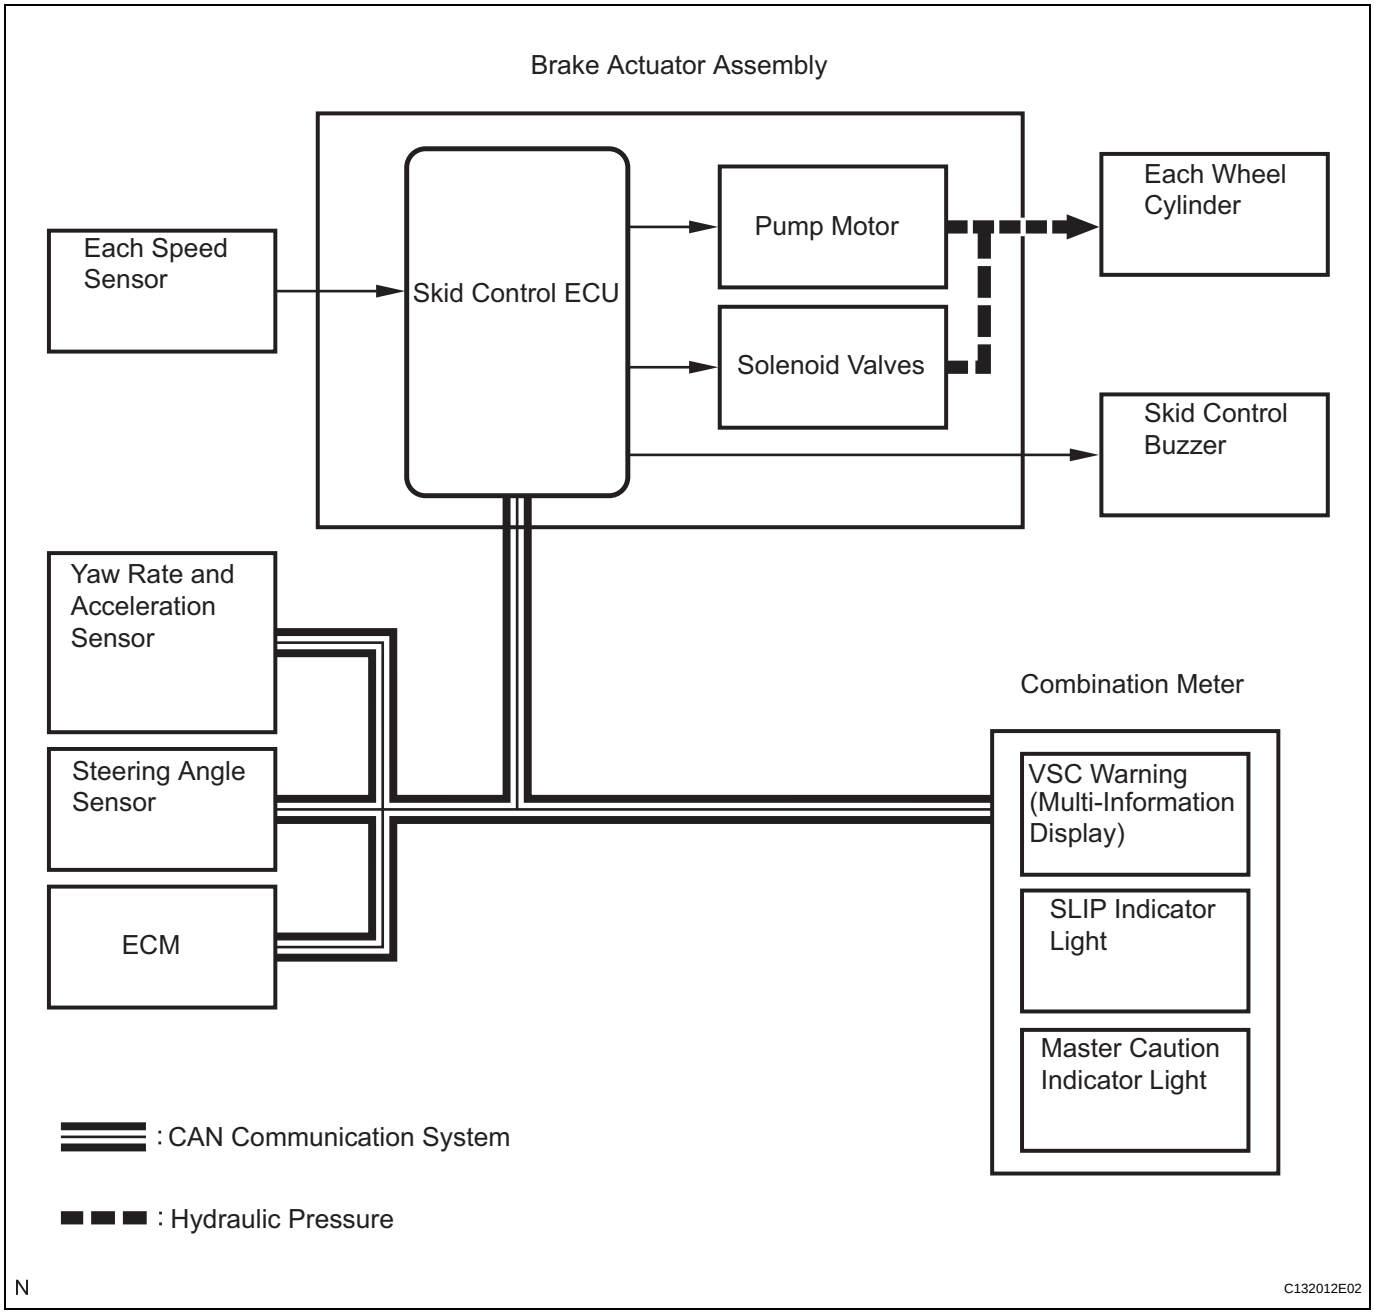


(1) Operation description

The skid control ECU detects wheelspin condition by receiving signals from each speed sensor and the ECM via CAN communication. The skid control ECU controls engine torque with the ECM via CAN communication and brake hydraulic pressure through the pump and solenoid valve.

The SLIP indicator light blinks when the system is operating. If a malfunction occurs in the TRAC system, both master caution and SLIP indicator lights will come on and the DTC will be displayed on the multi-information display.

(e) VSC (Vehicle Stability Control)
The VSC system helps prevent the vehicle from slipping sideways as a result of a strong front or rear wheel skid during cornering.



(1) Operation description

The skid control ECU determines the vehicle operating conditions based on signals received from the wheel speed sensors, yaw rate and acceleration sensor, and steering angle sensor. The skid control ECU sends signals via CAN communication to the ECM in order to control engine torque. The skid control ECU controls brake hydraulic pressure using the pump and solenoid valves.

The SLIP indicator light will blink, and the skid control system buzzer will sound when the system is operating. If a malfunction occurs in the VSC system, both the master caution indicator light and the SLIP indicator light will come on. In addition to this, the DTC will appear on the multi-information display. Vehicles without a multi-information display will illuminate the VSC warning light and SLIP indicator light if a malfunction occurs.

3. ABS with EBD, BA, TRAC and VSC OPERATION

(a) The skid control ECU calculates vehicle stability tendency based on the signals from the speed sensor, yaw rate and acceleration sensor, and steering angle sensor. In addition, it evaluates the results of the calculations to determine whether any control actions (control of the engine output torque by electronic throttle control and of the wheel brake pressure by the brake actuator assembly) should be implemented.

(b) The SLIP indicator blinks and the skid control buzzer sounds to inform the driver that the VSC system is operating. The SLIP indicator also blinks when traction control is operating, and the operation being performed is displayed.

4. FAIL SAFE

(a) When a failure occurs in the ABS with BA, TRAC and VSC systems, the ABS and VSC warning (with multi-information display) lights, and SLIP indicator light come on and ABS with BA, TRAC and VSC operations are prohibited. In addition, when there is a failure that disables the EBD operation, the BRAKE warning light also comes on and the EBD operation is prohibited.

(b) If control is prohibited due to a malfunction during operation, control will be disabled gradually. This is to avoid sudden vehicle instability.

5. INITIAL CHECK

(a) When the vehicle speed first becomes approximately 4 mph (6 km/h) or more after the ignition switch is turned on (IG), each solenoid valve and motor of the brake actuator assembly is sequentially activated to perform an electrical check. During the initial check, the operating sound of solenoid valve and motor can be heard from the engine compartment, but this is not a malfunction.

6. FUNCTION OF COMPONENTS

Components	Function
Brake actuator assembly	• Changes the fluid path based on the signals from the skid control ECU during the operation of the ABS with EBD & Brake Assist & TRAC & VSC system, in order to control the fluid pressure that is applied to the wheel cylinders. • Houses the skid control ECU.
Skid control ECU (housed in brake actuator assembly)	• Judges the vehicle driving condition based on the signals from each sensor, and controls the brake actuator assembly. • Sends and receives the control signals to or from the ECM, yaw rate and acceleration sensor, and steering angle sensor via CAN communication.
Master cylinder pressure sensor	• Detects the fluid pressure in the master cylinder. • Housed in the brake actuator assembly.
Speed sensor	Detects speed of each wheel and inputs the data into the skid control ECU.
Stop light switch	Illuminates the brake light when the brake pedal is depressed. (Sends a brake on signal to the skid control ECU)
Motor relay	• Supplies power to the pump motor. • Housed in the skid control ECU.
Solenoid relay	• Supplies power to each solenoid. • Housed in the skid control ECU.
ECM	• Controls the engine output based on the signals received from the skid control ECU. • Sends the accelerator pedal position signal and the engine speed signal to the skid control ECU.
ABS warning light	• Comes on to inform the driver that a malfunction in the ABS, EBD or BA (Brake Assist) has occurred. • Blinks to output DTC.
BRAKE warning light	• Comes on to inform the driver that the parking brake is ON when the system is normal. • Comes on to inform the driver that a malfunction in the EBD has occurred.
VSC warning light	Comes on to inform the driver that a malfunction in the VSC system has occurred.
SLIP indicator light	Blinks to inform the driver that TRC and VSC are operating.
Brake fluid level warning switch	Detects the brake fluid level.
Skid control buzzer	Intermittently sounds to inform the driver that the VSC is operating.
Yaw rate and acceleration sensor	• Acceleration sensor measures the capacity of the condenser that changes the distance between the electrodes depending on G force, which occurs when the vehicle is accelerated, and converts the measured value into electrical signals. • Yaw rate sensor detects the vehicle's angular velocity (yaw rate) in the vertical direction based on the amount and direction of the piezoelectric ceramics deflection. • Sends signals to the skid control ECU via CAN communication.
Steering angle sensor	• Installed in the steering column. • Detects the steering amount and direction and sends the signals to the skid control ECU via CAN communication. • Has the magnetic resistance element, which detects the rotation of the magnet housed in the detection gear in order to detect the changes in magnetic resistance and the steering amount and direction.

HOW TO PROCEED WITH TROUBLESHOOTING

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS

(a) Interview the customer to confirm the trouble.

NEXT

3	CHECK CAN COMMUNICATION SYSTEM

(a) Check for DTCs (See page BC-302).
HINT:
The skid control ECU is connected to the CAN communication system.
Therefore, before starting troubleshooting, make sure to check that there is no trouble in the CAN communication system.

Result

Result	Proceed to
DTC is not output	A
DTC is output	B

B → CHECK CAN COMMUNICATION CIRCUIT

A

4	CHECK DTC AND FREEZE FRAME DATA

(a) Check for DTCs and Freeze Frame Data (See page BC-302 for DTC Check / Clear, BC-305 for Freeze Frame Data).
(1) Record the DTCs and Freeze Frame Data.
(b) Clear the DTCs.
(c) Recheck for DTCs.
(1) Reproduce the malfunction and check if the DTCs are output again.

Result

Result	Proceed to
DTC is output	A
DTC is not output (Problem symptom does not occur)	B
DTC is not output (Problem symptom occurs)	C

TEST MODE PROCEDURE

1. WARNING LIGHT AND INDICATOR LIGHT INITIAL CHECK

(a) Release the parking brake.

NOTICE:

Before releasing the parking brake, move the shift lever to the P position for safety (Automatic Transaxle model) or set the chocks to hold the vehicle for safety (Manual Transaxle model).

HINT:

When the parking brake is applied or the level of the brake fluid is low, the BRAKE warning light comes on.

(b) When the ignition switch is turned on (IG), check that the ABS, VSC (without multi-information display), BRAKE warning lights, and master caution, SLIP indicator lights come on for approximately 3 seconds.

HINT:

If the ECU stores any DTCs, the ABS, BRAKE, VSC warning (without multi-information display and master caution indicator light) lights, and SLIP indicator light come on.

If the indicator remains on or does not come on, proceed to troubleshooting for the light circuits listed below.

Trouble Area	See procedure
ABS warning light (Remains on)	BC-380
ABS warning light (Does not come on)	BC-385
BRAKE warning light (Remains on)	BC-395
BRAKE warning light (Does not come on)	BC-404
VSC warning light (Remains on)	BC-388
VSC warning light (Does not come on)	BC-392
SLIP indicator light (Remains on)	BC-408
SLIP indicator light (Does not come on)	BC-412

2. SENSOR SIGNAL CHECK BY TEST MODE (SIGNAL CHECK) (INTELLIGENT TESTER)

HINT:

If the ignition switch is turned from on (IG) to on (ACC) or off during Test Mode (signal check), DTCs recorded during the signal check function will be erased.

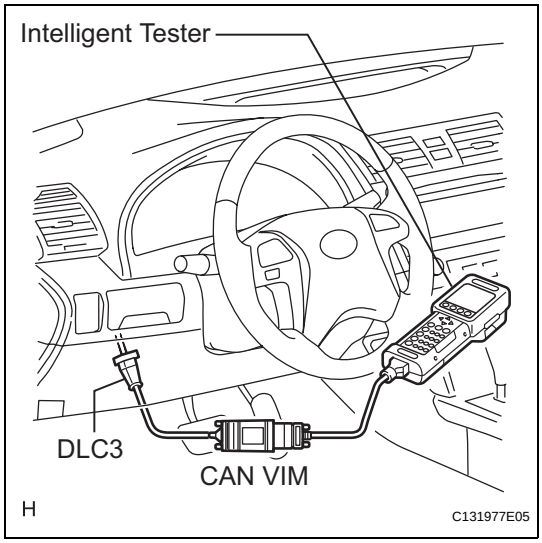
(a) Procedure to enter Test Mode.

(1) Turn the ignition switch off.

(2) Connect the intelligent tester to the DLC3.

(3) Check that the steering wheel is centered and move the shift lever to the P position (Automatic Transaxle) or apply the parking brake (Manual Transaxle).

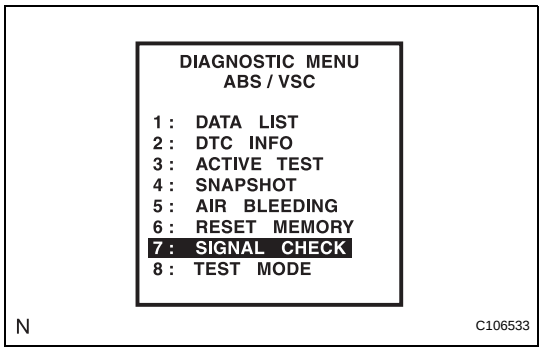
(4) Turn the ignition switch on (IG).

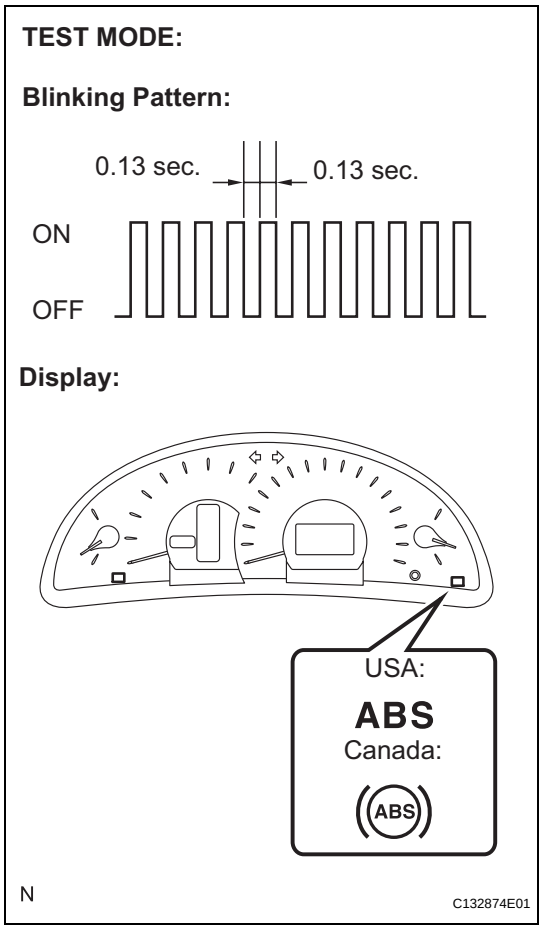


(5) Set the intelligent tester to Test Mode (select "SIGNAL CHECK").

HINT:

Refer to the intelligent tester operator's manual for further details.





(6) Check that the ABS warning light comes on for several seconds and then blinks in Test Mode.
HINT:
If the ABS warning light does not blink, inspect the ABS warning light circuit.

Trouble Area	See procedure
ABS warning light (Does not come on)	BC-404

(b) Check the sensor signal.
(1) Drive the vehicle straight ahead.
Accelerate the vehicle to a speed of 28 mph (45 km/h) or more for several seconds and check that the ABS warning light goes off when the brake pedal is depressed.
HINT:
- The sensor check may not be completed if wheelspin occurs, or if the steering wheel is turned during this check.
- The ABS warning light goes off when the sensor signal check has been completed and the brake pedal is depressed.
- The ABS warning light comes on immediately after a malfunction has been detected during the speed sensor signal check.

(c) Stop the vehicle.
NOTICE:
- **The speed sensor check may not be completed if the speed sensor check is started while turning the steering wheel or spinning the wheels.**
- **If the signal check has not been completed, the ABS warning light will blink while driving and the ABS system will not operate.**

(d) Read the DTC(s) by following the tester screen.
NOTICE:
- **If only the DTCs are displayed, repair the malfunction area and clear the DTCs.**
- **If the DTCs or Test Mode codes (DTC of signal check function) are displayed, repair the malfunction area, clear the DTCs and perform the Test Mode inspection.**

HINT:
See the list of DTCs (See procedure "A").

3. SENSOR SIGNAL CHECK BY TEST MODE (SIGNAL CHECK) (SST CHECK WIRE)

HINT:
If the ignition switch is turned from on (IG) to on (ACC) or off during Test Mode (signal check), DTCs recorded during the signal check will be erased.

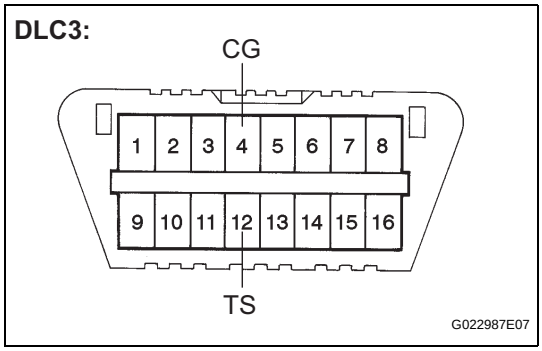
(a) Procedure to enter Test Mode.
(1) Turn the ignition switch off.

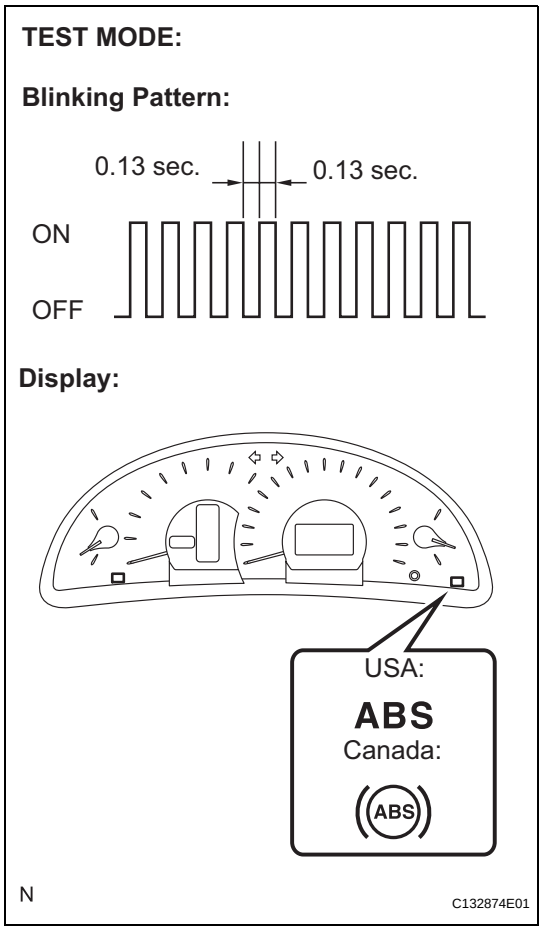
BC

(2) Check that the steering wheel is centered and move the shift lever to the P position (Automatic Transaxle) or apply the parking brake (Manual Transaxle).

(3) Using SST, connect terminals TS and CG of the DLC3.
SST 09843-18040

(4) Turn the ignition switch on (IG).



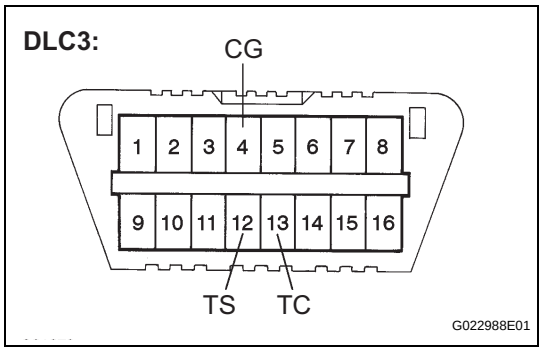


(5) Check that the ABS warning light comes on for several seconds and then blinks in Test Mode.
HINT:
If the ABS warning light does not blink, inspect the TS and CG terminal circuit, and ABS warning light circuit.

Trouble Area	See procedure
TS and CG terminal circuit	BC-421
ABS warning light circuit (Does not come on)	BC-385

(b) Check the sensor signal.
(1) Drive the vehicle straight ahead.
Accelerate the vehicle to a speed of 28 mph (45 km/h) or more for several seconds and check that the ABS warning light goes off when the brake pedal is depressed.
HINT:
- The sensor check may not be completed if wheelspin occurs, or if the steering wheel is turned during this check.
- The ABS warning light goes off when the sensor signal check has been completed and the brake pedal is depressed.
- The ABS warning light comes on immediately after a malfunction has been detected during the speed sensor signal check.

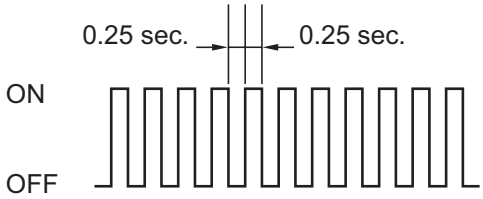
(c) Stop the vehicle.
NOTICE:
- **The speed sensor check may not be completed if the speed sensor check is started while turning the steering wheel or spinning the wheels.**
- **If the signal check has not been completed, the ABS warning light will blink while driving and the ABS system will not operate.**



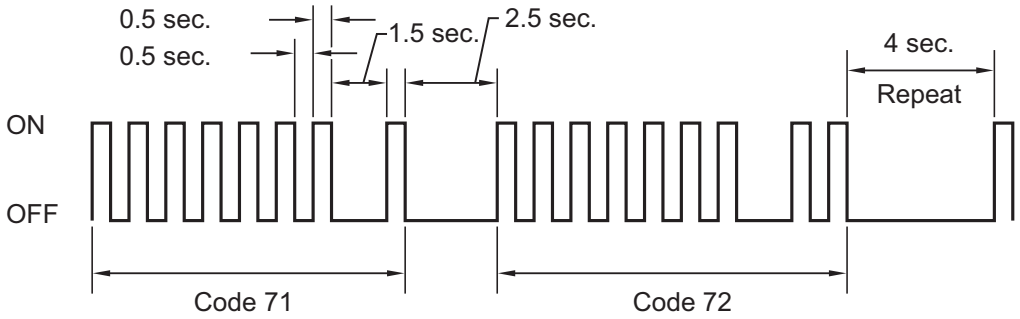
(d) Using SST, connect terminals TC and CG of the DLC3.
SST 09843-18040

(e) Count the number of blinks of the ABS warning light.

Blinking Pattern of Normal System Code:



Blinking Pattern of Trouble Code (Example Codes 71 and 72):



N

C132876E01

NOTICE:

- **If only the DTCs are displayed, repair the malfunction area and clear the DTCs.**
- **If the DTCs or Test Mode codes (DTC of signal check function) are displayed, repair the malfunction area, clear the DTCs and perform the Test Mode inspection.**

HINT:

- If more than 1 malfunction is detected at the same time, the lowest numbered code will be displayed first.
- See the list of DTCs (See procedure "A").

(f) After performing the check, disconnect the SST from terminals TS and CG, and TC and CG of the DLC3, and turn the ignition switch off.

BC

(g) Turn the engine switch on (IG) to cancel the Test Mode.
HINT:
- If the ignition switch is not turned on (IG) after the SST is removed from the DLC3, the previous Test Mode will continue.
- If the ignition switch is turned on (IG) with terminals TS and CG shorted, the previous Test Mode will continue.

4. DTC OF TEST MODE (SIGNAL CHECK) FUNCTION (Procedure "A")

DTC of Test Mode (Signal Check):

Code No.	Diagnosis	Trouble Area
C1271/71	Low output signal of front speed sensor RH	• Front speed sensor RH • Sensor installation • Speed sensor rotor
C1272/72	Low output signal of front speed sensor LH	• Front speed sensor LH • Sensor installation • Speed sensor rotor
C1273/73	Low output signal of rear speed sensor RH	• Rear speed sensor RH • Sensor installation • Speed sensor rotor
C1274/74	Low output signal of rear speed sensor LH	• Rear speed sensor LH • Sensor installation • Speed sensor rotor
C1275/75	Abnormal change in output signal of front speed sensor RH	• Front speed sensor RH • Sensor installation • Sensor rotor
C1276/76	Abnormal change in output signal of front speed sensor LH	• Front speed sensor LH • Sensor installation • Sensor rotor
C1277/77	Abnormal change in output signal of rear speed sensor RH	• Rear speed sensor RH • Sensor installation • Sensor rotor
C1278/78	Abnormal change in output signal of rear speed sensor LH	• Rear speed sensor LH • Sensor installation • Sensor rotor

HINT:
The codes in this table are output only in Test Mode (signal check).

5. ENGINE VARIANT LEARNING
- Engine variant learning is automatically performed immediately after the Test Mode is entered.
- The ABS, VSC, BRAKE, and SLIP indicators come on for 3 seconds after learning.

PROBLEM SYMPTOMS TABLE

If there are no DTCs output but the problem still occurs, check the circuits for each problem symptom in the order given in the table below, and proceed to the relevant troubleshooting page.

NOTICE:

Before replacing the brake actuator assembly, sensor, or other related parts, turn the ignition switch off.

Vehicle stability control system:

Symptom	Suspected area	See page
ABS, BA and/or EBD does not operate	1. Check for the DTC again and make sure that the normal system code is output.	BC-302
	2. IG power source circuit	BC-361
	3. Front speed sensor circuit	BC-316
	4. Rear speed sensor circuit	BC-324
	5. Check the brake actuator assembly with the intelligent tester (Check brake actuator assembly operation using the active test function). If abnormal, check the hydraulic circuit for leakage.	BC-431
	6. If the symptoms still occur even after the above circuits in suspected areas have been inspected and proved to be normal, replace the brake actuator assembly (skid control ECU).	BC-432
ABS, BA and/or EBD does not operate efficiently	1. Check for the DTC again and make sure that the normal system code is output.	BC-302
	2. Front speed sensor circuit	BC-316
	3. Rear speed sensor circuit	BC-324
	4. Stop light switch circuit	BC-368
	5. Check the brake actuator assembly with the intelligent tester (Check brake actuator assembly operation using the active test function). If abnormal, check the hydraulic circuit for leakage.	BC-431
	6. If the symptoms still occur even after the above circuits in suspected areas have been inspected and proved to be normal, replace the brake actuator assembly (skid control ECU).	BC-432
VSC and/or TRACTION does not operate	1. Check for the DTC again and make sure that the normal system code is output.	BC-302
	2. IG power source circuit	BC-361
	3. Check the hydraulic circuit for leakage.	-
	4. Front speed sensor circuit	BC-316
	5. Rear speed sensor circuit	BC-324
	6. Yaw rate and deceleration sensor circuit	BC-343
	7. Steering angle sensor circuit	BC-350
	8. If the symptoms still occur even after the above circuits in suspected areas have been inspected and proved to be normal, replace the brake actuator assembly (skid control ECU).	BC-432
ABS sensor DTC check cannot be done	1. Check for the DTC again and make sure that the normal system code is output.	BC-302
	2. TC and CG terminal circuit	BC-418
	3. If the symptoms still occur even after the above circuits in suspected areas have been inspected and proved to be normal, replace the brake actuator assembly (skid control ECU).	BC-432

Symptom	Suspected area	See page
VSC sensor DTC check cannot be done	1. Check for the DTC again and make sure that the normal system code is output.	BC-302
	2. TC and CG terminal circuit	BC-418
	3. If the symptoms still occur even after the above circuits in suspected areas have been inspected and proved to be normal, replace the brake actuator assembly (skid control ECU).	BC-432
Sensor signal check cannot be done	1. TS and CG terminal circuit	BC-421
	2. Brake actuator assembly (skid control ECU)	BC-432
ABS warning light abnormal (Remains on)	ABS warning light circuit	BC-380
ABS warning light abnormal (Does not come on)	ABS warning light circuit	BC-385
VSC warning light abnormal (Remains on)	VSC warning light circuit	BC-388
VSC warning light abnormal (Does not come on)	VSC warning light circuit	BC-392
Brake warning light abnormal (Remains on)	Brake warning light circuit	BC-395
Brake warning light abnormal (Does not come on)	Brake warning light circuit	BC-404
SLIP indicator light abnormal (Remains on)	SLIP indicator light circuit	BC-408
SLIP indicator light abnormal (Does not come on)	SLIP indicator light circuit	BC-412
Skid control buzzer abnormal	Skid control buzzer circuit	BC-415

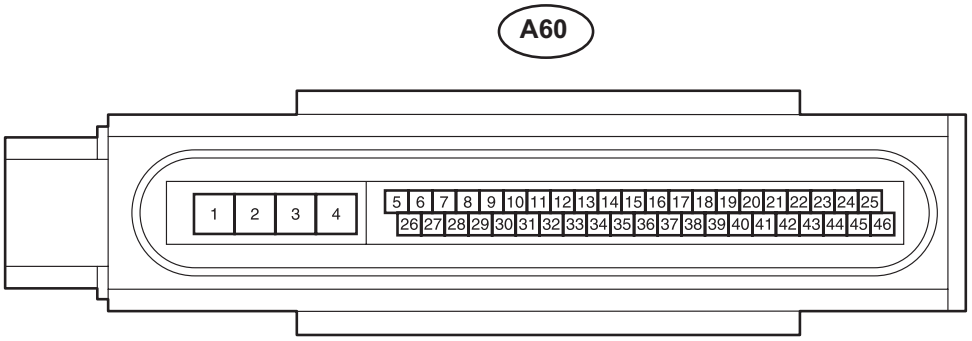
Symbols (Terminal No.)	Terminal Description
GND2 (1)	Skid control ECU ground
+BM (2)	Power supply for motor
+BS (3)	Power supply for solenoid
GND1 (4)	Skid control ECU ground
FL+ (5)	Front left wheel speed sensor input
FL- (6)	Front left wheel speed sensor ground
RL+ (7)	Rear left wheel speed sensor input
RR- (8)	Rear right wheel speed sensor ground
FR- (9)	Front right wheel speed sensor ground
FR+ (10)	Front right wheel speed sensor input
D/G (11)	Diagnosis tester communication line
CANL (14)	CAN communication line L
BZ (23)	Buzzer output
RL- (27)	Rear left wheel speed sensor ground
IG1 (28)	ECU power supply
RR+ (29)	Rear right wheel speed sensor input
STP1 (30)	Stop light switch input
SP1 (33)	Speed signal output
CANH (35)	CAN communication line H
TS (39)	Sensor check switch input

2. TERMINAL INSPECTION

(a) Disconnect the connector and measure the voltage and resistance according to the value(s) in the table below.

Skid Control ECU (Harness Side Connector Front View):



N

C137467E01

BC

HINT:
Voltage cannot be measured with the connector connected to the skid control ECU, as the connector is watertight.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
GND2 (A60-1) - Body ground	W-B - Body ground	Actuator pump motor ground	Always	Below 1 Ω
+BM (A60-2) - Body ground	B - Body ground	Power supply for motor	Always	10 to 14 V
+BS (A60-3) - Body ground	L - Body ground	Power supply for solenoid	Always	10 to 14 V
GND1 (A60-4) - Body ground	W-B - Body ground	Skid control ECU ground	Always	Below 1 Ω
BZ (A60-23) - Body ground	R - Body ground	Buzzer warning light output	Ignition switch on (IG), Buzzer does not sound	6 to 10 V
IG1 (A60-28) - Body ground	P - Body ground	IG1 power supply	Ignition switch on (IG)	10 to 14 V
STP1 (A60-30) - Body ground	P - Body ground	Stop light switch input	Stop light switch ON →OFF (Brake pedal depressed → released)	5 to 14 V → Below 3 V

DIAGNOSIS SYSTEM

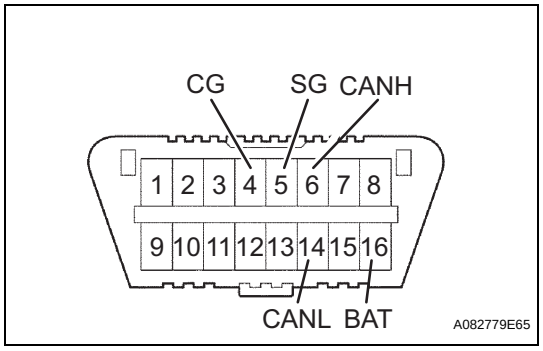
1. DIAGNOSIS SYSTEM

(a) Inspect the battery voltage.

Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge the battery before proceeding.



(b) The vehicle's ECU uses the ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

HINT:

Connect the cable of the intelligent tester to the DLC3, turn the ignition switch on (IG) and attempt to use the intelligent tester. If the screen displays a communication error message, a problem exists on either the vehicle side or the tester side.

If the communication is normal when the tester is connected to another vehicle, inspect the DLC3 on the original vehicle.

If the communication is still impossible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.

BC

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	9 to 14 V
CANH (6) - CANL (14)	HIGH-level CAN bus line	Ignition switch OFF*	54 to 69 Ω
CANH (6) - Battery positive	HIGH-level CAN bus line	Ignition switch OFF*	6 kΩ or higher
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANL (14) - Battery positive	LOW-level CAN bus line	Ignition switch OFF*	6 kΩ or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 Ω or higher

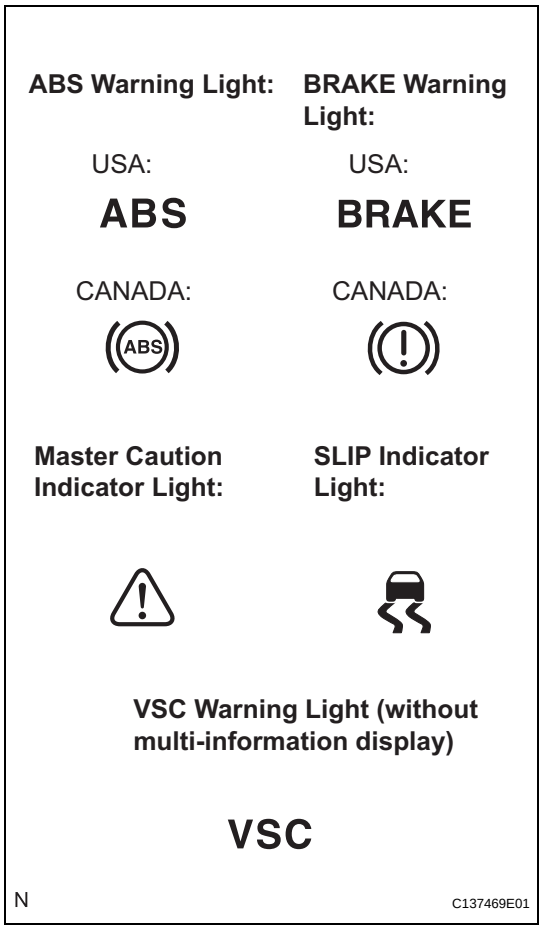
NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**

2. DESCRIPTION

NOTICE:

When releasing the parking brake, set chocks to hold the vehicle for safety.

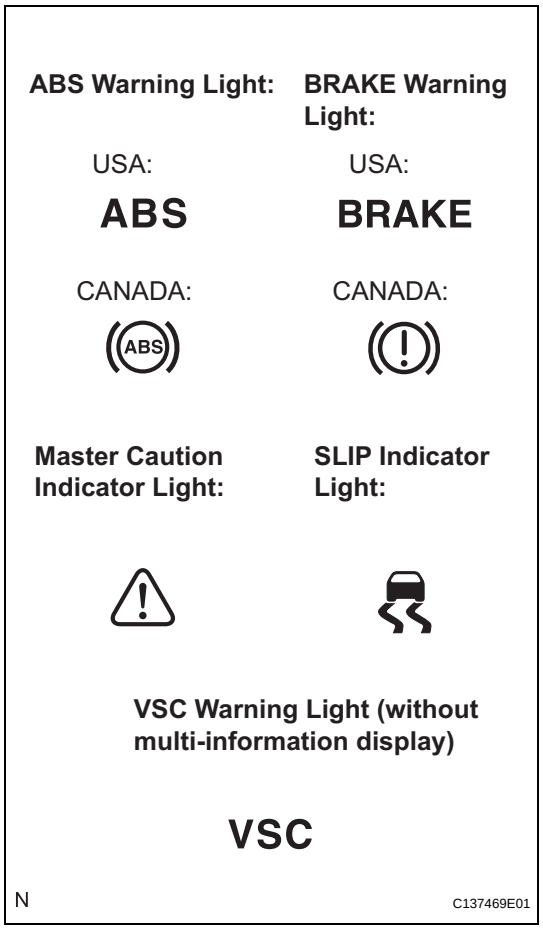


(a) If the skid control ECU detects a malfunction, the ABS, VSC (without multi-information display), and BRAKE warning lights, and master caution and SLIP indicator lights will come on and the multi-information display shows a warning message in order to warn the driver.
The table below indicates which lights will come on when there is a malfunction in a particular function.

Item/Trouble Area	ABS	EBD	BA	TRAC	VSC
ABS Warning Light	O	O	O	-	-
BRAKE Warning Light	-	O	-	-	-
VSC Warning Light (without multi-information display)	O	O	O	O	O
SLIP Indicator Light	O	O	O	O	O

O: Light ON
-: Light OFF

- The DTCs are simultaneously stored in the memory. The DTCs can be read by connecting the SST between terminals TC and CG of the DLC3 and observing the blinking pattern of the ABS warning light by connecting the intelligent tester (See page BC-302).
- This system has a signal check function (TEST MODE) (See page BC-290).
  The DTC can be read by connecting the intelligent tester and observing the blinking pattern of the ABS warning.



3. WARNING LIGHT AND INDICATOR LIGHT INITIAL CHECK

(a) Release the parking brake.

NOTICE:

Before releasing the parking brake, move the shift lever to the P position for safety (Automatic Transaxle model) or set the chocks to hold the vehicle for safety (Manual Transaxle model).

HINT:

When the parking brake is applied or the level of the brake fluid is low, the BRAKE warning light comes on.

(b) When the ignition switch is turned on (IG), check that the ABS, VSC (without multi-information display), and BRAKE warning lights, and master caution and SLIP indicator lights come on for approximately 3 seconds.

HINT:

If the ECU stores any DTCs, the ABS, BRAKE, and VSC warning (multi-information display and master caution indicator light) lights, and SLIP indicator light come on.

If the indicator remains on or does not come on, proceed to troubleshooting for the light circuits listed below.

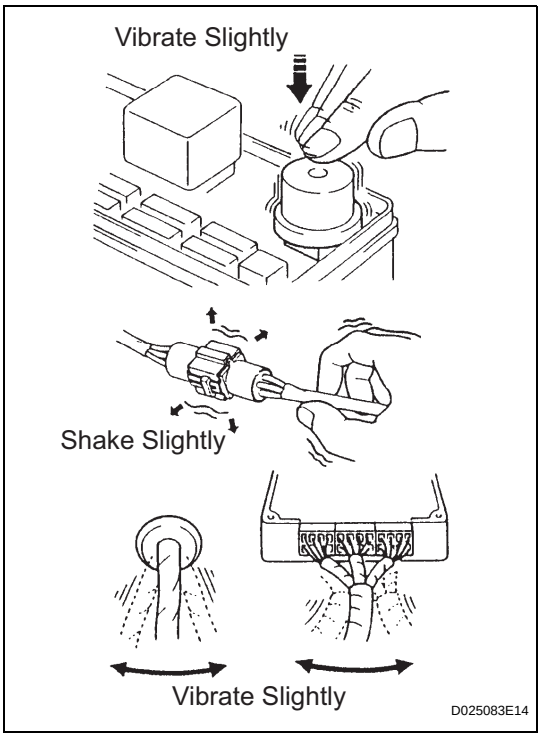
BC

Trouble Area	See procedure
ABS warning light (Remains on)	BC-380
ABS warning light (Does not come on)	BC-385
BRAKE warning light (Remains on)	BC-395
BRAKE warning light (Does not come on)	BC-404
VSC warning light (Remains on)	BC-388
VSC warning light (Does not come on)	BC-392
SLIP indicator light (Remains on)	BC-408
SLIP indicator light (Does not come on)	BC-412

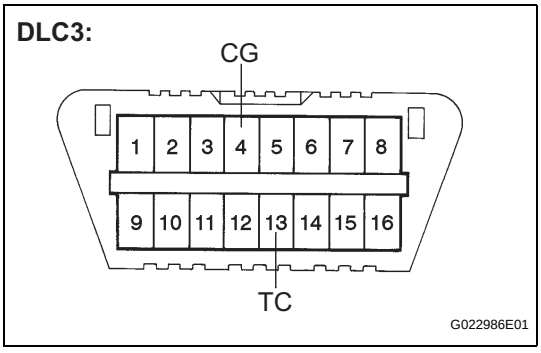
4. SYMPTOM SIMULATION

HINT:

The most difficult case in troubleshooting is when no symptoms occur. In such cases, a thorough customer problem analysis must be carried out. Then the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be reproduced. No matter how experienced or skilled a technician may be, if he proceeds to troubleshoot without confirming the problem symptoms, he will likely overlook something important and make a wrong guess at some points in the repair operation. This leads to a standstill in troubleshooting.



(a) Vibration method: When vibration seems to be the major cause.
HINT:
Perform the simulation method only during the primary check period (for approximately 6 seconds after the ignition switch is turned on (IG)).
(1) Slightly vibrate the part of the sensor considered to be the problem cause with your fingers and check whether the malfunction occurs.
(2) Slightly shake the connector vertically and horizontally.
HINT:
Shaking the relays too strongly may result in open relays.
(3) Slightly shake the wire harness vertically and horizontally. The connector joint and fulcrum of the vibration are the major areas to be checked thoroughly.

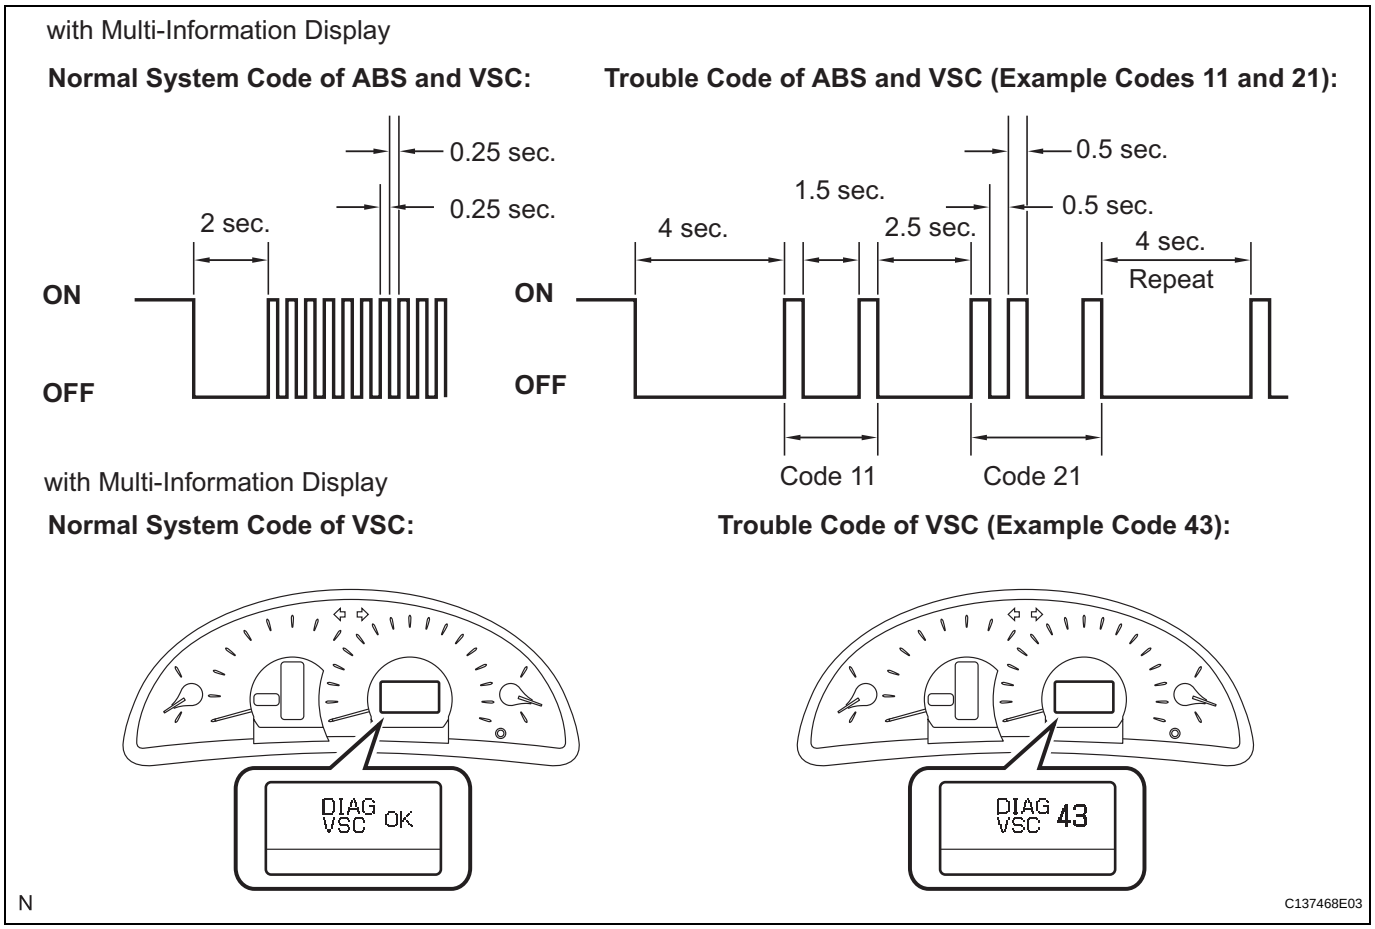


DTC CHECK / CLEAR

1. DTC CHECK/CLEAR (WHEN USING SST CHECK WIRE:)

(a) DTC check
(1) Using SST, connect terminals TC and CG of the DLC3.
SST 09843-18040
(2) Turn the ignition switch on (IG).

(3) Observe the blinking pattern of the ABS and VSC (without multi-information display) warning lights or read the multi information display (with multi-information display) in order to identify the DTC.



HINT:
If no code appears, inspect the TC and CG terminal circuit, the ABS warning light circuit, and the VSC warning light circuit.

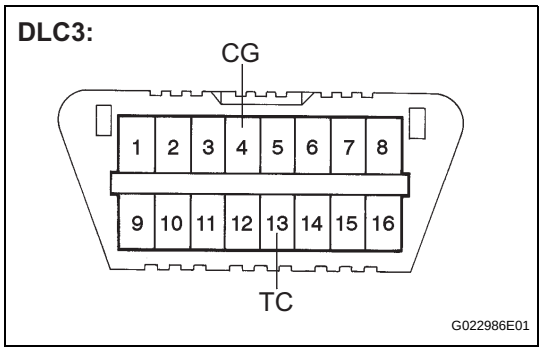
Trouble Area	See procedure
ABS warning light (Remains on)	BC-380
ABS warning light (Does not come on)	BC-385
VSC warning light (Remains on)	BC-388
VSC warning light (Does not come on)	BC-392
TC and CG Terminal Circuit	BC-418

- As an example, the blinking patterns for a normal system code and trouble codes 11 and 21 are shown in the illustration.

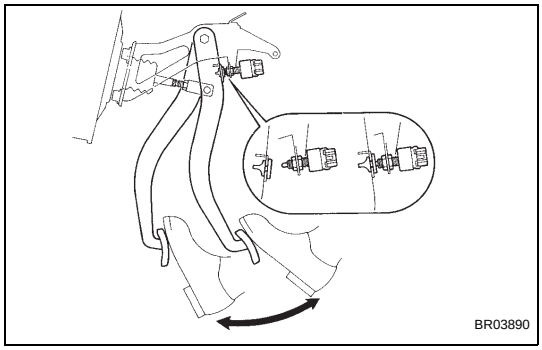
(4) Codes are explained in the code table (See page BC-311).

(5) After completing the check, disconnect terminals TC and CG of the DLC3, and turn off the display. If 2 or more DTCs are detected at the same time, the DTCs will be displayed in ascending order.

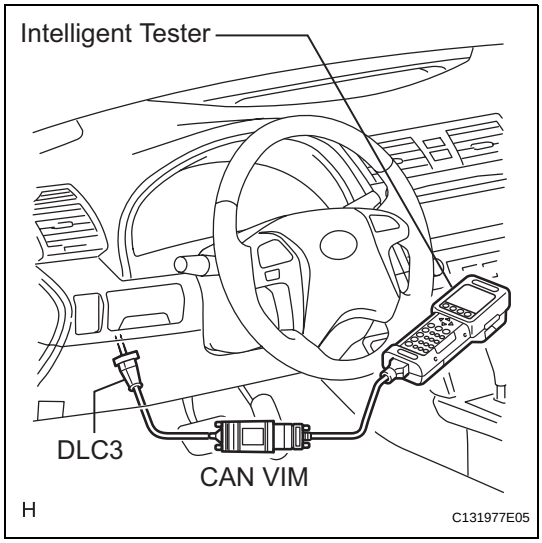
BC



(b) DTC clear
(1) Using SST, connect terminals TC and CG of the DLC3.
SST 09843-18040
(2) Turn the ignition switch on (IG).



(3) Clear the DTCs stored in the ECU by depressing the brake pedal 8 times or more within 5 seconds.
(4) Check that the warning light indicates a normal system code.
(5) Remove the SST.
HINT:
Clearing the DTCs cannot be performed by disconnecting the battery terminal or the ECU-IG fuse.



2. DTC CHECK/CLEAR (WHEN USING INTELLIGENT TESTER:)
(a) DTC check
(1) Connect the intelligent tester to the DLC3.
(2) Turn the ignition switch on (IG).
(3) Read the DTCs by following the prompts on the tester screen.
(b) DTC clear
(1) Connect the intelligent tester to the DLC3.
(2) Turn the ignition switch on (IG).
(3) Operate the intelligent tester to clear the codes.
HINT:
Refer to the intelligent tester operator's manual for further details.

3. END OF DTC CHECK/CLEAR
(a) Turn the ignition switch on (IG).
(b) Check that the ABS warning light goes off within approximately 3 seconds.

FREEZE FRAME DATA

1. FREEZE FRAME DATA

(a) Whenever an ABS DTC is detected, the skid control ECU stores the current vehicle (sensor) state as Freeze Frame Data.
The skid control ECU stores the number of times (maximum: 31) the ignition switch has been turned from off to on (IG) since the last time the ABS was activated.
HINT:
- However, if the vehicle is stopped or at a low speed (4.3 mph (7 km/h) or less), or if a DTC is detected, the skid control ECU will stop counting the number.
- Freeze Frame Data at the time the ABS operates:
  The skid control ECU stores and updates data whenever the ABS system operates.
  When the ECU stores data at the time a DTC is detected, the data stored during ABS operation is erased.
- Freeze Frame Data at the time a DTC is detected:
  When the skid control ECU stores data at the time a DTC is detected, no updates will be performed until the data is cleared.

(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch on (IG).
(d) Select the "DTC INFO" on the tester display.
(e) On the DTC data display screen, select the DTC data display with "*".

Item (Display)	Measurement Item	Reference Value
VEHICLE SPD	Vehicle speed reading	Min.: 0 mph (0 km/h), Max.: 202 mph (326.4 km/h)
STOP LAMP SW	Stop light switch signal	Stop light switch ON: ON, OFF: OFF
#IG ON	Number of operations of engine switch on (IG) after storing freeze frame data	0 to 31
MAS CYL PRESS 1	Master cylinder pressure sensor reading	Brake pedal released: 0.3 to 0.5 V
M/C PRESS GRADE	Master cylinder pressure sensor change	Min.: -30 MPa/s, Max.: 225 MPa/s
YAW RATE	Yaw rate sensor reading	Min.: -128 deg/s, Max.: 127 deg/s
STEERING SEN	Steering angle sensor reading	Left turn: Increase Right turn: Decrease
SPD GRADE	Vehicle speed grade	Min.: -25.11 m/s^2, Max.: 24.91 m/s^2
BUZZER	Skid control buzzer signal	Skid control buzzer ON: ON, OFF: OFF
PARKING BRAKE SW	Parking brake switch signal	Parking brake switch ON: ON, OFF: OFF
ENGINE TORQUE	Real engine torque	Min.: -1024 Nm, Max.: 1023 Nm
FR WHEEL SPD	FR wheel speed	Min.: 0 mph (0 km/h), Max.: 202 mph (326.4 km/h)
FL WHEEL SPD	FL wheel speed	Min.: 0 mph (0 km/h), Max.: 202 mph (326.4 km/h)
RR WHEEL SPD	RR wheel speed	Min.: 0 mph (0 km/h), Max.: 202 mph (326.4 km/h)
RL WHEEL SPD	RL wheel speed	Min.: 0 mph (0 km/h), Max.: 202 mph (326.4 km/h)

Item (Display)	Measurement Item	Reference Value
LATERAL G	Lateral G	Min.: -25.11 m/s^2, Max.: 24.91 m/s^2
GEAR POSITION *	Gear position information	FAIL 1st 2nd 3rd 4th 5th 6th P, N R NOT R
LEVER POSITION *	Shift lever position information	FAIL 1st 2nd 3rd 4th 5th 6th/B D/M P, N R
OPERATED SYSTEM	Operated system status	ABS activated: ABS VSC activated: VSC TRAC activated: TRAC BA activated: BA PB activated: PB Fail safe mode activated: FAIL No system activated: NON System prohibited: SYS
FREEZE TIME	Elapsed time after freeze trigger	Min.: 0 ms, Max.: 500 ms
TROUBLE CODE	Freeze frame DTC	Displays to output DTC
INSPECTION MODE	Inspection mode	OTHER: Normal, INSPECT: Service

*: Automatic Transaxle

FAIL-SAFE CHART

1. FAIL SAFE OPERATION

(a) If there is a problem with sensor signals or actuator systems, the skid control ECU prohibits power supply to the brake actuator assembly and informs the ECM of the VSC system failure.

(b) The brake actuator assembly turns off each solenoid and the ECM shuts off the VSC control (traction control signal) from the skid control ECU accordingly, which turns out to be as if the vehicle stability control system was not installed.

(c) ABS, VSC, and TRAC control will be prohibited, but EBD control continues as much as possible. If EBD control is impossible, the brake warning light comes on to warn the driver (See page BC-298).

Malfunction	Symptom
ABS system	Prohibits the ABS, BA, TRAC, and VSC control
BA system	Prohibits the ABS, BA, TRAC, and VSC control
EBD system	Prohibits the ABS, EBD, BA, TRAC, and VSC control
TRAC system	Prohibits the TRAC and VSC control
VSC system	Prohibits the TRAC and VSC control

HINT:

- A malfunction in either the ABS or BA system results in an identical operation, with ABS, BA, TRAC, and VSC system control prohibited.
- If control is prohibited due to a malfunction during operation, control will be disabled gradually to prevent the vehicle from becoming unstable suddenly.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

With the intelligent tester connected to the DLC3 and the ignition switch on (IG), the ABS, TRAC and VSC Data List can be displayed. Follow the prompts on the tester screen to access the Data List.

Item (Display)	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
MTR RELAY	ABS motor relay / ON or OFF	ON: Motor relay ON OFF: Motor relay OFF	-
SOL RELAY	Solenoid relay / ON or OFF	ON: Solenoid relay ON OFF: Solenoid relay OFF	-
IDLE SW	Main idle switch / ON or OFF	ON: Accelerator pedal released OFF: Accelerator pedal depressed	-
STOP LAMP SW	Stop light switch / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
PARKING BRAKE SW	Parking brake switch / ON or OFF	ON: Parking brake applied OFF: Parking brake released	-
ENG REVOLUTIONS	Engine revolutions / min.: 0 r/min, max.: 65,535 r/min	-	-
GEAR POSITION *	Gear position information / P/N, R, 1st-6th, FAIL, NOT R	-	-
LEVER POSITION *	Shift lever position information / P/N, R, D/M, 1st-6th/B, FAIL	-	-
SHIFT INFO	Shift information / ON or OFF	ON: During gear change	-
FR WHEEL SPD	FR wheel speed sensor reading / min.: 0 mph (0 km/h), max.: 202 mph (326 km/h)	Actual wheel speed	Similar speed as indicated on speedometer
FL WHEEL SPD	FL wheel speed sensor reading / min.: 0 mph (0 km/h), max.: 202 mph (326 km/h)	Actual wheel speed	Similar speed as indicated on speedometer
RR WHEEL SPD	RR wheel speed sensor reading / min.: 0 mph (0 km/h), max.: 202 mph (326 km/h)	Actual wheel speed	Similar speed as indicated on speedometer
RL WHEEL SPD	RL wheel speed sensor reading / min.: 0 mph (0 km/h), max.: 202 mph (326 km/h)	Actual wheel speed	Similar speed as indicated on speedometer
DECELERAT SEN	Acceleration sensor 1 reading / min.: -18.52 m/s^2, max.: 18.39 m/s^2	Approximately 0+-0.13 G while stationary	Reading changes when vehicle is bounced
SFRR	ABS solenoid (SFRR) / ON or OFF	ON: Operates	-

*: Automatic Transaxle

2. ACTIVE TEST

HINT:

Performing the Active Test using the intelligent tester allows the relay, actuator, and other items to operate without removing any parts. Performing the Active Test as the first step in troubleshooting is one of the methods to save labor time.

It is possible to display the Data List during the Active Test.

(a) Connect the intelligent tester to the DLC3.

(b) Turn the ignition switch on (IG).

(c) From the display on the tester, select the Active Test.

HINT:

The ignition switch must be turned on (IG) to proceed to the Active Test using the intelligent tester.

Item (Display)	Vehicle Condition / Test Details	Diagnostic Note
SFRR	Turns ABS solenoid (SFRR) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SFRH	Turns ABS solenoid (SFRH) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SFLR	Turns ABS solenoid (SFLR) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SFLH	Turns ABS solenoid (SFLH) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SRRR	Turns ABS solenoid (SRRR) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SRRH	Turns ABS solenoid (SRRH) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SRLR	Turns ABS solenoid (SRLR) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SRLH	Turns ABS solenoid (SRLH) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SRM2	Turns master cut solenoid (SRM2) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SRM1	Turns master cut solenoid (SRM1) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SRC2	Turns master cut solenoid (SRC2) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SRC1	Turns master cut solenoid (SRC1) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
MOTOR RELAY	Turns ABS motor relay ON / OFF	Operating sound of relay (clicking sound) and motor can be heard
ABS WARN LAMP	Turns ABS warning light ON / OFF	Observe combination meter
VSC WARN LAMP	Turns VSC warning (master caution indicator) light ON / OFF	Observe combination meter
SLIP INDI LAMP	Turns SLIP indicator light ON / OFF	Observe combination meter
BRAKE WARN LAMP	Turns BRAKE warning light ON / OFF	Observe combination meter
BUZZER	Turns skid control buzzer ON / OFF	Buzzer can be heard

DIAGNOSTIC TROUBLE CODE CHART

- If a trouble code is displayed during the DTC check, check the circuit indicated by the DTC. For details of each code, refer to the page for the respective "DTC No." in the DTC chart.
- Inspect the fuse and relay before investigating the trouble areas as shown in the table below.

DTC chart of ABS:

DTC No.	Detection Item	Trouble Area	See page
C0200/31	Right Front Wheel Speed Sensor Signal Malfunction	1. Front speed sensor RH 2. Front speed sensor circuit RH 3. Front speed sensor rotor RH 4. Sensor installation 5. Brake actuator assembly (skid control ECU)	BC-316
C0205/32	Left Front Wheel Speed Sensor Signal Malfunction	1. Front speed sensor LH 2. Front speed sensor circuit LH 3. Front speed sensor rotor LH 4. Sensor installation 5. Brake actuator assembly (skid control ECU)	BC-316

U0073/94	Control Module Communication Bus OFF	CAN communication system	BC-377

(*1, *2):
Even after the trouble areas are repaired, the ABS warning light will not go off unless the following operations are performed:

- (*1):
  (a) Drive the vehicle at 12 mph (20 km/h) for 30 seconds or more and check that the ABS warning light goes off.
  (b) Clear the DTC.
- (*2):
  (a) Keep the vehicle stationary for 5 seconds or more and depress the brake pedal lightly 2 or 3 times.
  (b) Drive the vehicle at the vehicle speed of 31 mph (50 km/h) and keep depressing the brake pedal strongly for approximately 3 seconds.
  (c) Repeat the above operation 3 times or more and check that the ABS warning light goes off.
  (d) Clear the DTC.

HINT:
In some cases, the intelligent tester cannot be used when the ABS warning light remains on.

DTC chart of VSC:

DTC	43	ABS Control System Malfunction

DESCRIPTION

This DTC is output when the VSC system detects a malfunction in the ABS control system.

DTC No.	DTC Detection Condition	Trouble Area
43	Malfunction in the ABS control system	ABS control system

INSPECTION PROCEDURE

1	CHECK ABS CONTROL SYSTEM

(a) Clear the DTC (See page BC-302).
(b) Turn the ignition switch on (IG).
(c) Check if the same DTC is recorded (See page BC-302).

Result

Condition	Proceed to
DTC (ABS control system DTC) is not output	A
DTC (ABS control system DTC) is output	B

B → **REPAIR CIRCUITS INDICATED BY OUTPUT DTCS (BRAKE CONTROL SYSTEM) (See page BC-311)**

A

2	CONFIRM DTC

(a) Clear the DTC (See page BC-302).
(b) Turn the ignition switch on (IG).
(c) Check if the same DTC is recorded (See page BC-302).

Result

Condition	Proceed to
DTC (43) is not output	A
DTC (43) is output	B

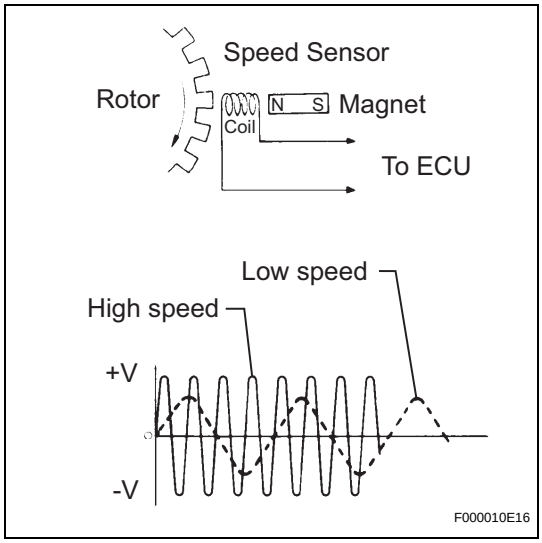
BC

DESCRIPTION

The speed sensors detects wheel speed and transmit the signals to the skid control ECU. These signals are used for control of the ABS control system. Each of the front and rear rotors has 48 serrations. When the rotors rotate, the magnetic field generated by the permanent magnet in the speed sensor induces AC voltage. Since the frequency of this AC voltage changes in direct proportion to the speed of the rotor, the frequency is used by the ECU to detect the speed of each wheel.

DTCs C1271/71 to C1276/76 can be deleted when the speed sensor sends a wheel speed signal or the test mode ends. DTCs C1271/71 to C1276/76 are output only in the test mode.

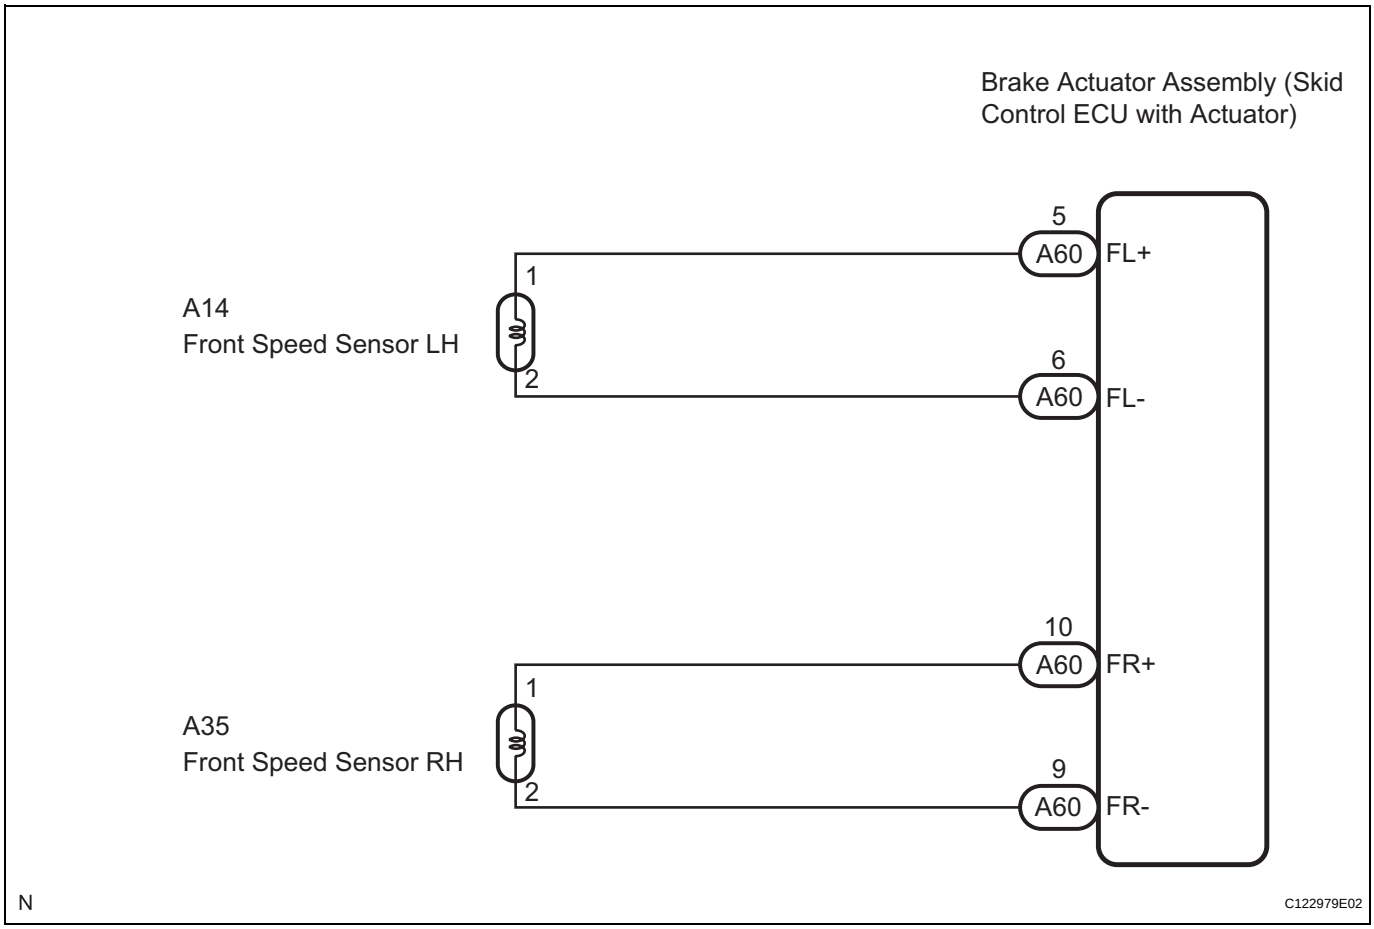


DTC No.	DTC Detecting Condition	Trouble Area
C0200/31 C0205/32	When either of the following is detected: • Vehicle speed is more than 25 mph (40 km/h), and pulses are not input for 0.03 sec. • When the vehicle speed has reached 8 mph (12 km/h) after the initial start or restart, a wheel speed of 0 mph (0 km/h) is detected.	• Front speed sensor RH and/or LH • Front speed sensor circuit RH and/or LH • Front speed sensor rotor RH and/or LH • Sensor installation • Brake actuator assembly (skid control ECU)
C1330/35 C1331/36	Abnormality in the resistance value of each speed sensor is detected.	• Front speed sensor RH and/or LH • Front speed sensor circuit RH and/or LH • Sensor installation
C1271/71 C1272/72	Detected only during test mode.	• Front speed sensor • Sensor installation • Sensor rotor
C1275/75 C1276/76	Detected only during test mode.	• Front speed sensor • Sensor installation • Sensor rotor

HINT:
DTC No. C0200/31 and C1330/35 are for the front speed sensor RH.
DTC No. C0205/32 and C1331/36 are for the front speed sensor LH.

BC

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	READ VALUE OF INTELLIGENT TESTER (FRONT SPEED SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Select "DATA LIST" and read the value displayed on the intelligent tester (See page BC-307).

DATA LIST: ABS/TRAC/VSC

Item	Measurement Item / Range (Display)	Normal Condition
FR WHEEL SPD	Wheel speed sensor (FR) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed
FL WHEEL SPD	Wheel speed sensor (FL) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed

(d) Check that there is no difference between the speed value output from the speed sensor displayed on the intelligent tester and the speed value displayed on the speedometer when driving the vehicle.

OK:

The speed value output from the speed sensor displayed on the intelligent tester is the same as the actual vehicle speed.

NG → **Go to step 5**

OK

2	PERFORM TEST MODE INSPECTION (SIGNAL CHECK)

(a) Check if test mode (signal check) DTCs are detected (See page BC-290).

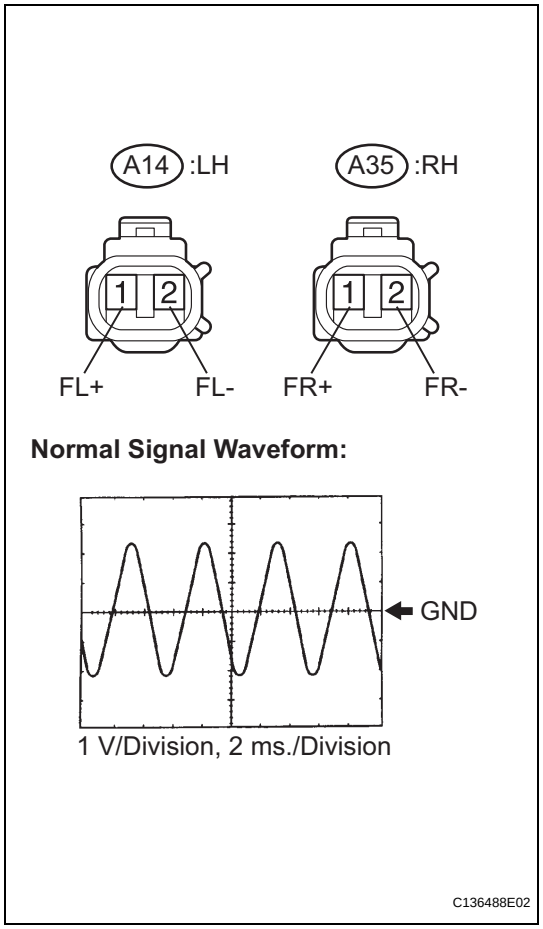
Result

Condition	Proceed to
Test mode (signal check) DTC is not output	A
Test mode (signal check) DTC is output	B

B → **Go to step 5**

A

3 INSPECT SPEED SENSOR SIGNAL WAVEFORM



(a) Lift up the vehicle.
(b) Perform the inspection using an oscilloscope.
  (1) Disconnect the front speed sensor connector.
  (2) Connect the oscilloscope to terminals 1 and 2 of the front speed sensor.
  (3) Check that a waveform is output when the tires are rotated.
  OK:
  The same waveform is output from front wheels and there is no noise or interference in the waveform.
  HINT:
  - As vehicle speed (wheel rotation speed) increases, the width of the waveform narrows and the output voltage becomes greater.
  - When noise is identified in the waveform on the oscilloscope, the erratic signals are generated due to rotor scratches, looseness or foreign matter attached to the speed sensor.
  (4) Connect the connector.

NG	Go to step 11

OK

4 RECONFIRM DTC

(a) Clear the DTCs (See page BC-302).
(b) Drive the vehicle at a speed of approximately 25 mph (40 km/h) or more for 60 seconds or more.
(c) Check if the same DTCs are recorded (See page BC-302).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTCs (C0200/31, C0205/32, C1330/35 and C1331/36) are output	A
DTCs (C0200/31, C0205/32, C1330/35 and C1331/36) are output (When troubleshooting in accordance with the PROBLEM SYMPTOMS TABLE)	B
DTCs (C0200/31, C0205/32, C1330/35 and C1331/36) are not output (When troubleshooting in accordance with the DTC CHART)	C

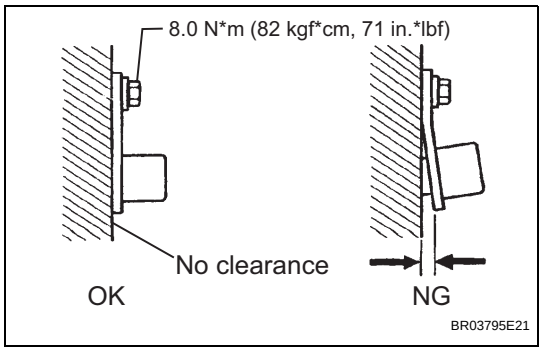
BC

B → PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page BC-295)

C → END

A

5 INSPECT FRONT SPEED SENSOR INSTALLATION



(a) Check the front speed sensor installation.

OK:

The installation bolt is tightened properly.
There is no clearance between the sensor and front steering knuckle.

Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

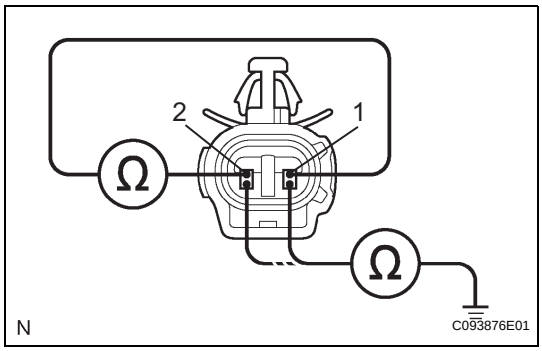
NOTICE:

Check the speed sensor signal after replacement (See page BC-290).

NG → **INSTALL FRONT SPEED SENSOR CORRECTLY (See page BC-440)**

OK

6 INSPECT FRONT SPEED SENSOR



(a) Make sure that there is no looseness at the locking part and the connecting part of the connectors.

(b) Disconnect the front speed sensor connectors.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance:

LH

Tester Connection	Specified Condition
A14-1 (FL+) - A14-2 (FL-)	0.92 to 1.22 kΩ at 20°C
A14-1 (FL+) - Body ground	10 kΩ or higher
A14-2 (FL-) - Body ground	10 kΩ or higher

RH

Tester Connection	Specified Condition
A35-1 (FR+) - A35-2 (FR-)	0.92 to 1.22 kΩ at 20°C
A35-1 (FR+) - Body ground	10 kΩ or higher
A35-2 (FR-) - Body ground	10 kΩ or higher

NOTICE:

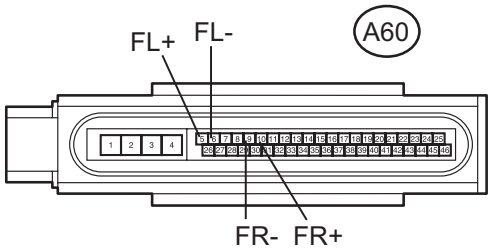
Check the speed sensor signal after replacement (See page BC-290).

NG → **REPLACE FRONT SPEED SENSOR (See page BC-438)**

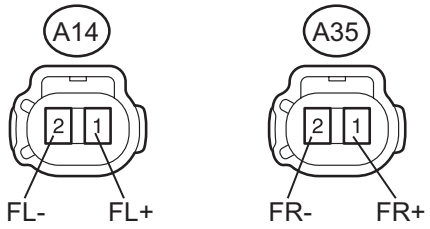
OK

7	CHECK HARNESS AND CONNECTOR (FRONT SPEED SENSOR TO SKID CONTROL ECU)

Skid Control ECU (Harness Side Connector Front View):



Front Speed Sensor (Harness Side Connecotor Front View):



N

C139143E01

(a) Disconnect the skid control ECU connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

LH

Tester Connection	Specified Condition
A60-5 (FL+) - A14-1 (FL+)	Below 1 Ω
A60-6 (FL-) - A14-2 (FL-)	Below 1 Ω
A60-5 (FL+) - Body ground	10 kΩ or higher
A60-6 (FL-) - Body ground	10 kΩ or higher

RH

Tester Connection	Specified Condition
A60-10 (FR+) - A35-1 (FR+)	Below 1 Ω
A60-9 (FR-) - A35-2 (FR-)	Below 1 Ω
A60-10 (FR+) - Body ground	10 kΩ or higher
A60-9 (FR-) - Body ground	10 kΩ or higher

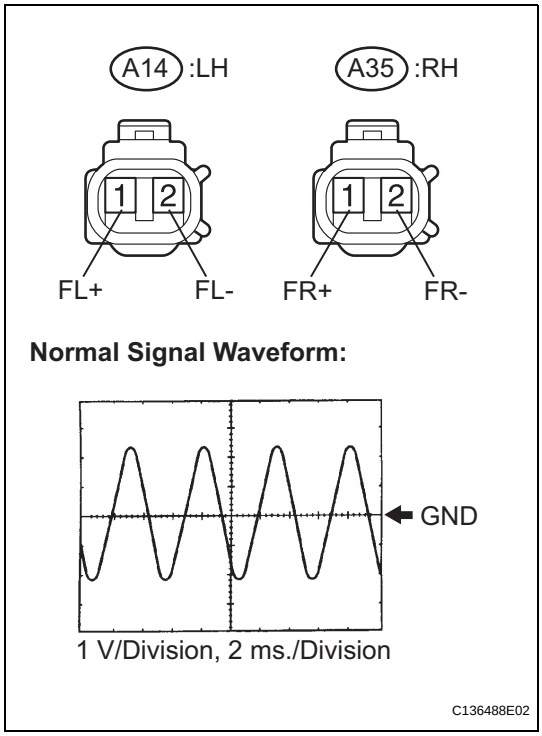
(c) Connect the connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (FRONT SPEED SENSOR TO SKID CONTROL ECU)**

OK

BC

8	INSPECT SPEED SENSOR SIGNAL WAVEFORM



(a) Lift up the vehicle.
(b) Perform the inspection using an oscilloscope.
  (1) Disconnect the front speed sensor connector.
  (2) Connect the oscilloscope to terminals 1 and 2 of the front speed sensor.
  (3) Check that a waveform is output when the tires are rotated.
    OK:
    The same waveform is output from all the 4 wheels and there is no noise or interference in the waveform.
    HINT:
    - As vehicle speed (wheel rotation speed) increases, the width of the waveform narrows and the output voltage becomes greater.
    - When noise is identified in the waveform on the oscilloscope, the erratic signals are generated due to rotor scratches, looseness or foreign matter attached to the speed sensor.
  (4) Connect the connector.

NG → **Go to step 11**

OK

9	READ VALUE OF INTELLIGENT TESTER (FRONT SPEED SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Select "DATA LIST" and read the value displayed on the intelligent tester (See page BC-307).

DATA LIST: ABS/TRAC/VSC

Item	Measurement Item / Range (Display)	Normal Condition
FR WHEEL SPD	Wheel speed sensor (FR) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed
FL WHEEL SPD	Wheel speed sensor (FL) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed

(d) Check that there is no difference between the speed value output from the speed sensor displayed on the intelligent tester and the speed value displayed on the speedometer when driving the vehicle.
OK:
The speed value output from the speed sensor displayed on the intelligent tester is the same as the actual vehicle speed.
HINT:
If troubleshooting has been carried out according to the "PROBLEM SYMPTOMS TABLE", refer back to the table and proceed to the next step before replacing the part (See page BC-295).

NG → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

OK

10 RECONFIRM DTC

(a) Clear the DTCs (See page BC-302).
(b) Drive the vehicle at a speed of approximately 25 mph (40 km/h) or more for 60 seconds or more.
(c) Check if the same DTCs are recorded (See page BC-302).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTCs (C0200/31, C0205/32, C1330/35 and C1331/36) are output	A
DTCs (C0200/31, C0205/32, C1330/35 and C1331/36) are output (When troubleshooting in accordance with the PROBLEM SYMPTOMS TABLE)	B
DTCs (C0200/31, C0205/32, C1330/35 and C1331/36) are not output (When troubleshooting in accordance with the DTC CHART)	C

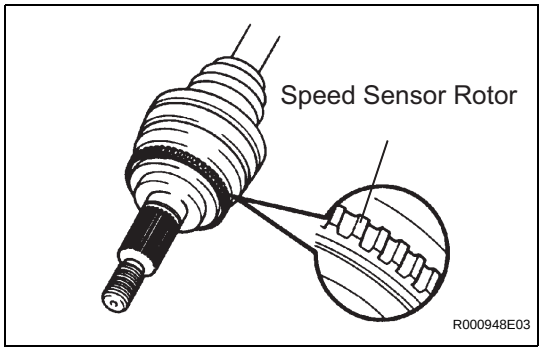
BC

B → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page BC-295)**

C → **END**

A

11 INSPECT SPEED SENSOR TIP



(a) Remove the front speed sensor.
(b) Check the sensor tip.
OK:
No scratches or foreign matter on the sensor tip.
NOTICE:
Check the speed sensor signal after cleaning or replacement (See page BC-290).
(c) Install the speed sensor.

NG → **CLEAN OR REPLACE SPEED SENSOR**

OK

CLEAN OR REPLACE SPEED SENSOR ROTOR

DTC	**C0210/33**	**Right Rear Wheel Speed Sensor Signal Malfunction**
DTC	**C0215/34**	**Left Rear Wheel Speed Sensor Signal Malfunction**
DTC	**C1273/73**	**Low Output Signal of Rear Speed Sensor RH (Test Mode DTC)**
DTC	**C1274/74**	**Low Output Signal of Rear Speed Sensor LH (Test Mode DTC)**
DTC	**C1277/77**	**Abnormal Change in Output Signal of Rear Speed Sensor RH (Test Mode DTC)**
DTC	**C1278/78**	**Abnormal Change in Output Signal of Rear Speed Sensor LH (Test Mode DTC)**
DTC	**C1332/38**	**Right Rear Speed Sensor Circuit**
DTC	**C1333/39**	**Left Rear Speed Sensor Circuit**

BC

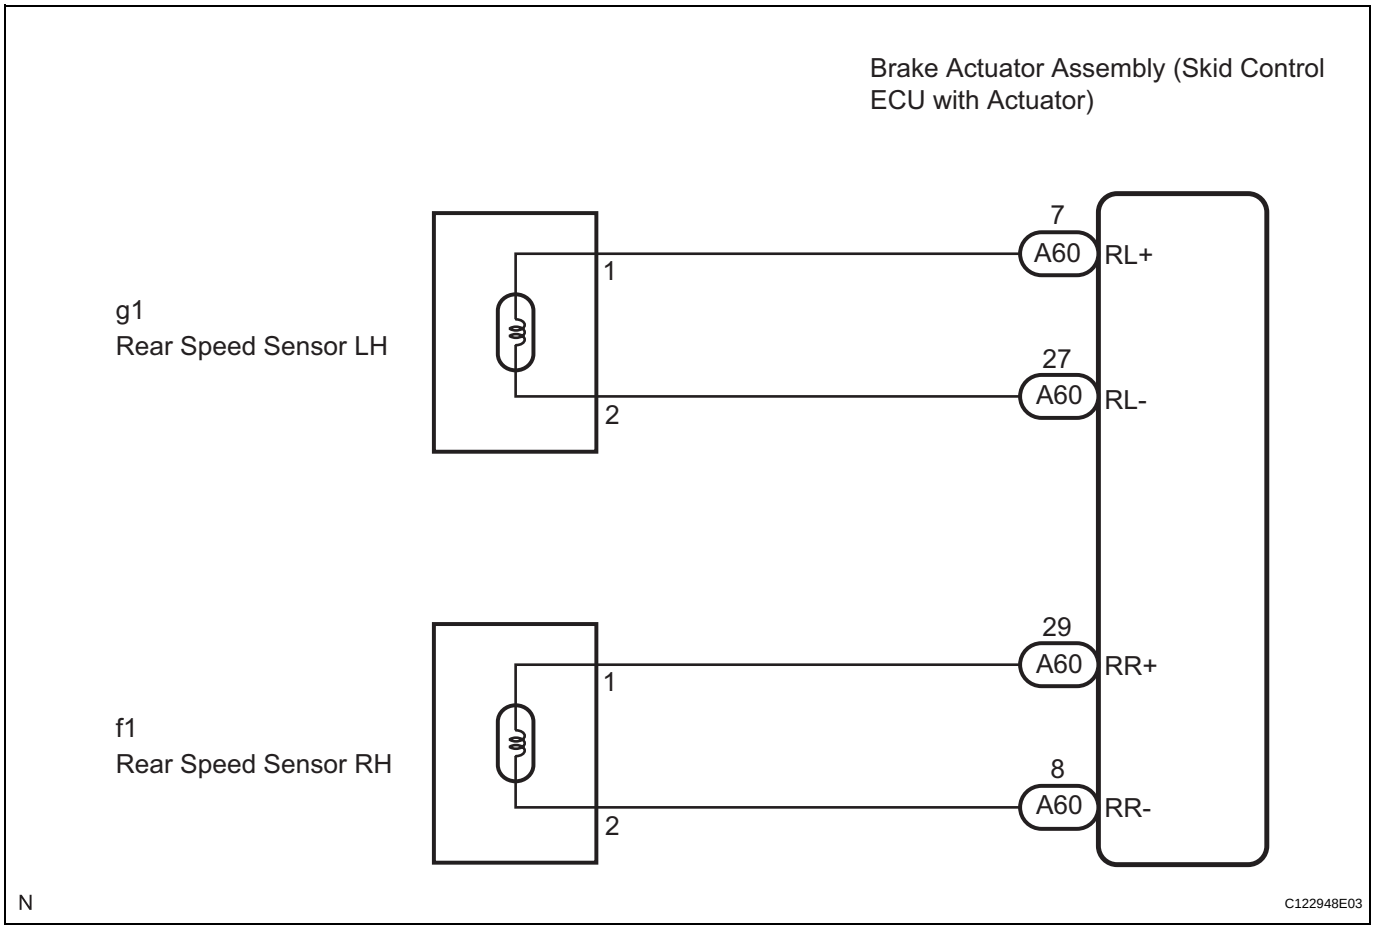
DESCRIPTION

Refer to DTCs C0200/31, C0205/32, C1330/35, and C1331/36 (See page BC-316).
DTCs from C1273/73 to C1278/78 can be deleted when the speed sensor sends a vehicle speed signal or the test mode ends. DTCs from C1273/73 to C1278/78 are output only in the test mode.

DTC No.	DTC Detecting Condition	Trouble Area
C0210/33 C0215/34	When either of the following is detected: • Vehicle speed is more than 25 mph (40 km/h) and pulses are not input for 0.03 sec. • When the vehicle speed has reached 8 mph (12 km/h), after the initial start or restart, a wheel speed of 0 mph (0 km/h) is detected.	• Rear speed sensor RH and/or LH • Rear speed sensor circuit RH and/or LH • Rear speed sensor rotor RH and/or LH • Sensor installation • Brake actuator assembly (skid control ECU)
C1332/38 C1333/39	Abnormality in the resistance value of each speed sensor is detected.	• Rear speed sensor RH and/or LH • Rear speed sensor circuit RH and/or LH • Sensor installation
C1273/73 C1274/74	Detected only during test mode.	• Rear speed sensor • Sensor installation • Sensor rotor
C1277/77 C1278/78	Detected only during test mode.	• Rear speed sensor • Sensor installation • Sensor rotor

HINT:
DTC No. C0210/33 and C1332/38 are for the rear speed sensor RH.
DTC No. C0215/34 and C1333/39 are for the rear speed sensor LH.

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	READ VALUE OF INTELLIGENT TESTER (REAR SPEED SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Select "DATA LIST" and read the value displayed on the intelligent tester (See page BC-307).

DATA LIST: ABS/TRAC/VSC

Item	Measurement Item / Range (Display)	Normal Condition
RR WHEEL SPD	Wheel speed sensor (RR) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed
RL WHEEL SPD	Wheel speed sensor (RL) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed

(d) Check that there is no difference between the speed value output from the speed sensor displayed on the intelligent tester and the speed value displayed on the speedometer when driving the vehicle.

OK:

The speed value output from the speed sensor displayed on the intelligent tester is the same as the actual vehicle speed.

NG → **Go to step 5**

OK

2 PERFORM TEST MODE INSPECTION (SIGNAL CHECK)

(a) Check if test mode (signal check) DTCs are detected (See page BC-290).

Result

Condition	Proceed to
Test mode (signal check) DTC is not output	A
Test mode (signal check) DTC is output	B

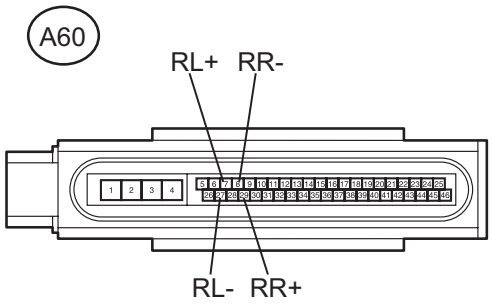
BC

B → **Go to step 5**

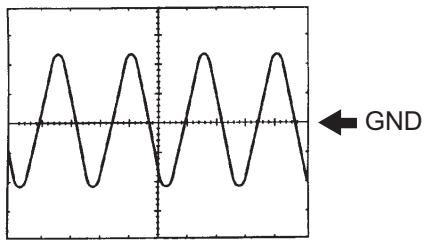
A

3 INSPECT SPEED SENSOR SIGNAL WAVEFORM

Skid Control ECU (Harness Side Connector Front View):



Normal Signal Waveform:



1 V/Division, 2 ms./Division

C139144E01

(a) Lift up the vehicle.
(b) Perform the inspection using an oscilloscope.
  (1) Disconnect the skid control ECU connector.
  (2) Connect the oscilloscope to the rear speed sensor terminals of the skid control ECU.
  (3) Check that a waveform is output when the tires are rotated.

  OK:

  The same waveform is output from all the 4 wheels and there is no noise or interference in the waveform.

  HINT:
  - As vehicle speed (wheel rotation speed) increases, the width of the waveform narrows and the output voltage becomes greater.
  - When noise is identified in the waveform on the oscilloscope, the erratic signals are generated due to rotor scratches, looseness or foreign matter attached to the speed sensor.

  (4) Connect the connector.

NG → **REPAIR OR REPLACE SPEED SENSOR AND SENSOR ROTOR**

OK

4 RECONFIRM DTC

(a) Clear the DTCs (See page BC-302).
(b) Drive the vehicle at a speed of approximately 25 mph (40 km/h) or more for 60 seconds or more.
(c) Check if the same DTCs are recorded (See page BC-302).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTCs (C0210/33, C0215/34, C1332/38 and C1333/39) are output	A
DTCs (C0210/33, C0215/34, C1332/38 and C1333/39) are output (When troubleshooting in accordance with the PROBLEM SYMPTOMS TABLE)	B
DTCs (C0210/33, C0215/34, C1332/38 and C1333/39) are not output (When troubleshooting in accordance with the DTC CHART)	C

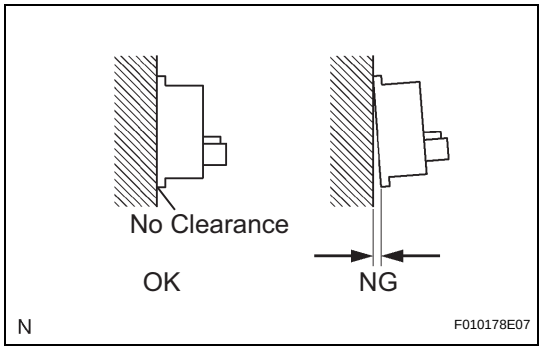
BC

B → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page BC-295)**

C → **END**

A

5 INSPECT SPEED SENSOR INSTALLATION

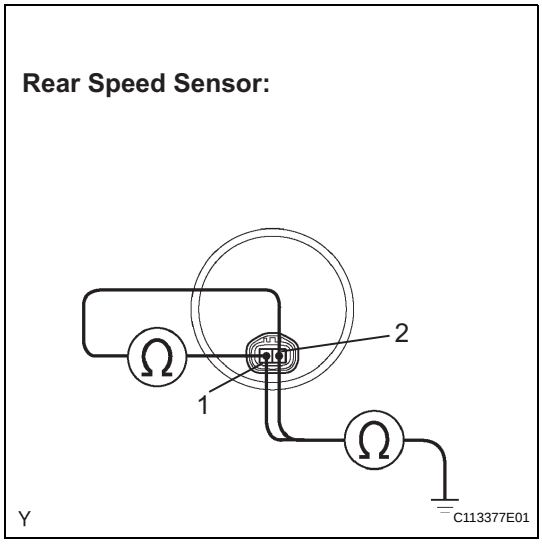


(a) Check the rear speed sensor installation.
OK:
There is no clearance between the sensor and rear axle carrier.
NOTICE:
Check the speed sensor signal after replacement (See page BC-290).

NG → **INSTALL REAR SPEED SENSOR CORRECTLY**

OK

6	INSPECT REAR SPEED SENSOR



(a) Disconnect the rear speed sensor connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

LH

Tester Connection	Specified Condition
g1-1 (RR+) - g1-2 (RR-)	Below 2.2 kΩ
g1-1 (RR+) - Body ground	10 kΩ or higher
g1-2 (RR-) - Body ground	10 kΩ or higher

RH

Tester Connection	Specified Condition
f1-1 (RL+) - f1-2 (RL-)	Below 2.2 kΩ
f1-1 (RL+) - Body ground	10 kΩ or higher
f1-2 (RL-) - Body ground	10 kΩ or higher

NOTICE:
Check the speed sensor signal after replacement (See page BC-290).

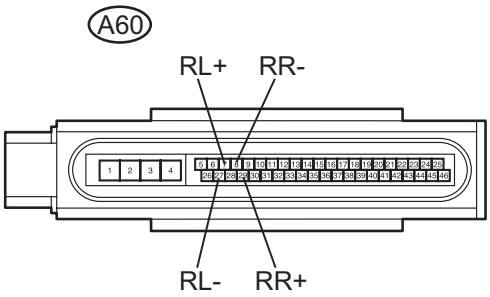
NG → **REPLACE REAR SPEED SENSOR (See page BC-443)**

OK

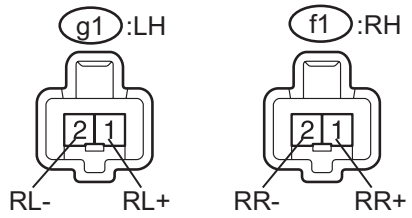
BC

7 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU TO SKID CONTROL SENSOR WIRE)

Skid Control ECU (Harness Side Connector Front View):



Rear Speed Sensor (Harness Side Connector Front View):



N

C139145E02

(a) Check the harness and connector.
(1) Disconnect the skid control ECU connector and the rear speed sensor connector.
(2) Disconnect the skid control sensor wire.
(3) Measure the resistance according to the value(s) in the table below.

Standard resistance:

LH

Tester Connection	Specified Condition
A60-7 (RL+) - g1-1 (RL+)	Below 1 Ω
A60-27 (RL-) - g1-2 (RL-)	Below 1 Ω
A60-7 (RL+) - Body ground	10 kΩ or higher
A60-27 (RL-) - Body ground	10 kΩ or higher

RH

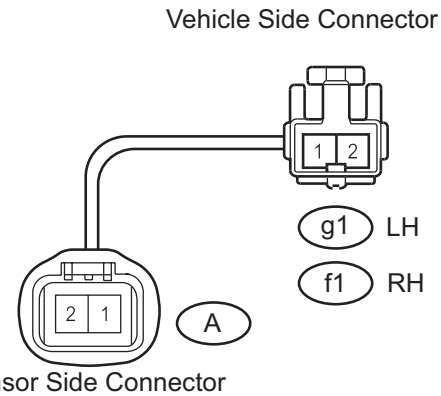
Tester Connection	Specified Condition
A60-29 (RR+) - f1-1 (RR+)	Below 1 Ω
A60-8 (RR-) - f1-2 (RR-)	Below 1 Ω
A60-29 (RR+) - Body ground	10 kΩ or higher
A60-8 (RR-) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SKID CONTROL ECU TO SKID CONTROL SENSOR WIRE)**

OK

8 CHECK HARNESS AND CONNECTOR (SKID CONTROL SENSOR WIRE TO REAR SPEED SENSOR)

Skid Control Sensor Wire:



C113396E05

(a) Check harness and connector (skid control sensor wire).
(1) Measure the resistance according to the value(s) in the table below.

Standard resistance:

LH

Tester Connection	Specified Condition
g1-1 - A-1	Below 1 Ω
g1-1 - A-2	10 kΩ or higher
g1-1 - Body ground	10 kΩ or higher
g1-2 - A-2	Below 1 Ω
g1-2 - A-1	10 kΩ or higher
g1-2 - Body ground	10 kΩ or higher

RH

Tester Connection	Specified Condition
f1-1 - A-1	Below 1 Ω

BC

Tester Connection	Specified Condition
f1-1 - A-2	10 kΩ or higher
f1-1 - Body ground	10 kΩ or higher
f1-2 - A-2	Below 1 Ω
f1-2 - A-1	10 kΩ or higher
f1-2 - Body ground	10 kΩ or higher

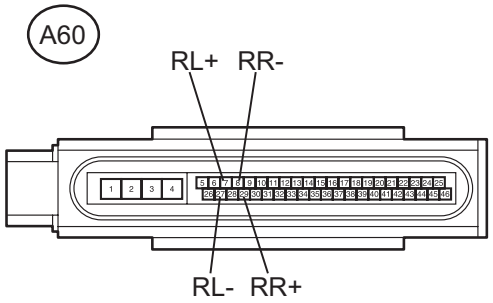
(2) Connect the connector.

NG → **REPAIR OR REPLACE SKID CONTROL SENSOR WIRE**

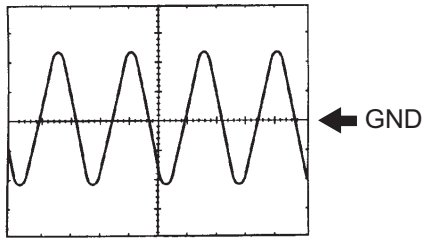
OK

9 INSPECT SPEED SENSOR SIGNAL WAVEFORM

Skid Control ECU (Harness Side Connector Front View):



Normal Signal Waveform:



1 V/Division, 2 ms./Division

C139144E01

(a) Lift up the vehicle.
(b) Perform the inspection using an oscilloscope.
(1) Disconnect the skid control ECU connector.
(2) Connect the oscilloscope to the rear speed sensor terminals of the skid control ECU.
(3) Check that a waveform is output when the tires are rotated.
OK:
The same waveforms is output from rear wheels and there is no noise or interference in the waveform.
HINT:
- As vehicle speed (wheel rotation speed) increases, the width of the waveform narrows and the output voltage becomes greater.
- When noise is identified in the waveform on the oscilloscope, the erratic signals are generated due to rotor scratches, looseness or foreign matter attached to the speed sensor.

(4) Connect the connector.

NG → **CLEAN OR REPLACE SPEED SENSOR AND SENSOR ROTOR**

OK

10 READ VALUE OF INTELLIGENT TESTER (REAR SPEED SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.

(c) Select "DATA LIST" and read the value displayed on the intelligent tester (See page BC-307).

DATA LIST: ABS/TRAC/VSC

Item	Measurement Item / Range (Display)	Normal Condition
RR WHEEL SPD	Wheel speed sensor (RR) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed
RL WHEEL SPD	Wheel speed sensor (RL) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed

(d) Check that there is no difference between the speed value output from the speed sensor displayed on the intelligent tester and the speed value displayed on the speedometer when driving the vehicle.

OK:

The speed value output from the speed sensor displayed on the intelligent tester is the same as the actual vehicle speed.

HINT:

- It is suspected that the DTCs were output due to a bad connection of the connector terminal.
- If troubleshooting has been carried out according to the "PROBLEM SYMPTOMS TABLE", refer back to the table and proceed to the next step (See page BC-295).

NG → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

OK

11 RECONFIRM DTC

(a) Clear the DTCs (See page BC-302).

(b) Drive the vehicle at a speed of approximately 25 mph (40 km/h) or more for 60 seconds or more.

(c) Check if the same DTCs are recorded (See page BC-302).

HINT:

Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTCs (C0210/33, C0215/34, C1332/38 and C1333/39) are output	**A**
DTCs (C0210/33, C0215/34, C1332/38 and C1333/39) are output (When troubleshooting in accordance with the PROBLEM SYMPTOMS TABLE)	**B**
DTCs (C0210/33, C0215/34, C1332/38 and C1333/39) are not output (When troubleshooting in accordance with the DTC CHART)	**C**

C → **END**

A

12	INSPECT SPEED SENSOR ROTOR

(a) Turn the ignition switch off.
(b) Remove the rear axle.
(c) Check the rotor.
OK:
No scratches, cracks, oil, or foreign matter on the rotors.
NOTICE:
Check the speed sensor signal after cleaning or replacement (See page BC-290).
(d) Install the rear axle.

NG → **CLEAN OR REPLACE SPEED SENSOR ROTOR**

BC

OK

REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

DTC	C0226/21	SFR Solenoid Circuit

DTC	C0236/22	SFL Solenoid Circuit

DTC	C0246/23	SRR Solenoid Circuit

DTC	C0256/24	SRL Solenoid Circuit

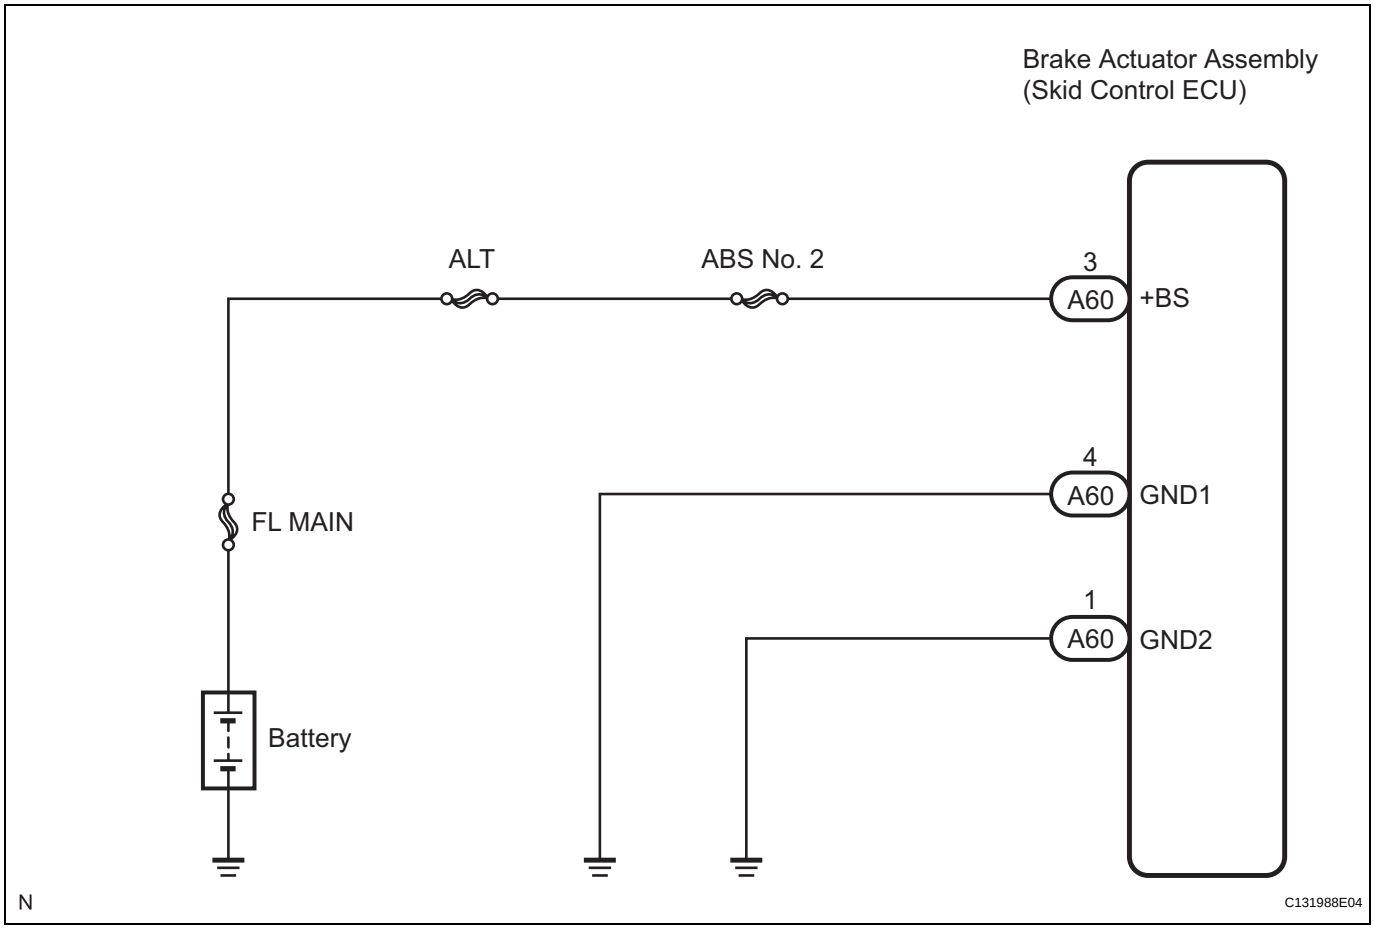
DESCRIPTION

These solenoids turn on when signals are received from the skid control ECU and they control the pressure acting on the wheel cylinders to control the braking force.

DTC No.	DTC Detection Condition	Trouble Area
C0226/21 C0236/22 C0246/23 C0256/24	Solenoid valve signal does not match the check result.	• Each solenoid circuit • Brake actuator assembly

BC

WIRING DIAGRAM



INSPECTION PROCEDURE

1	RECONFIRM DTC

HINT:
These codes are detected when a problem is identified in the brake actuator assembly.
The solenoid circuits are located in the brake actuator assembly.
Therefore, solenoid circuit inspection and solenoid unit inspection cannot be performed. Be sure to check if the DTC is output before replacing the brake actuator assembly.

(a) Clear the DTC (See page BC-302).
(b) Start the engine.
(c) Drive the vehicle at a speed of 12 mph (20 km/h) or more for 30 seconds or more.
(d) Check if the same DTC is recorded (See page BC-302).

BC

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

HINT:
- If the normal system code is output (the trouble code is not output), slightly jiggle the connectors, wire harness, and fuses of the brake actuator assembly (skid control ECU). Make sure that no DTCs are output.
- If any DTCs are output while jiggling a connector or wire harness of the brake actuator (skid control ECU), inspect and repair the connector or wire harness.
- It is suspected that the DTCs were output due to a bad connection of the connector terminal.

B → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

A

END

DTC	C0273/13	Open or Short Circuit in ABS Motor Relay Circuit

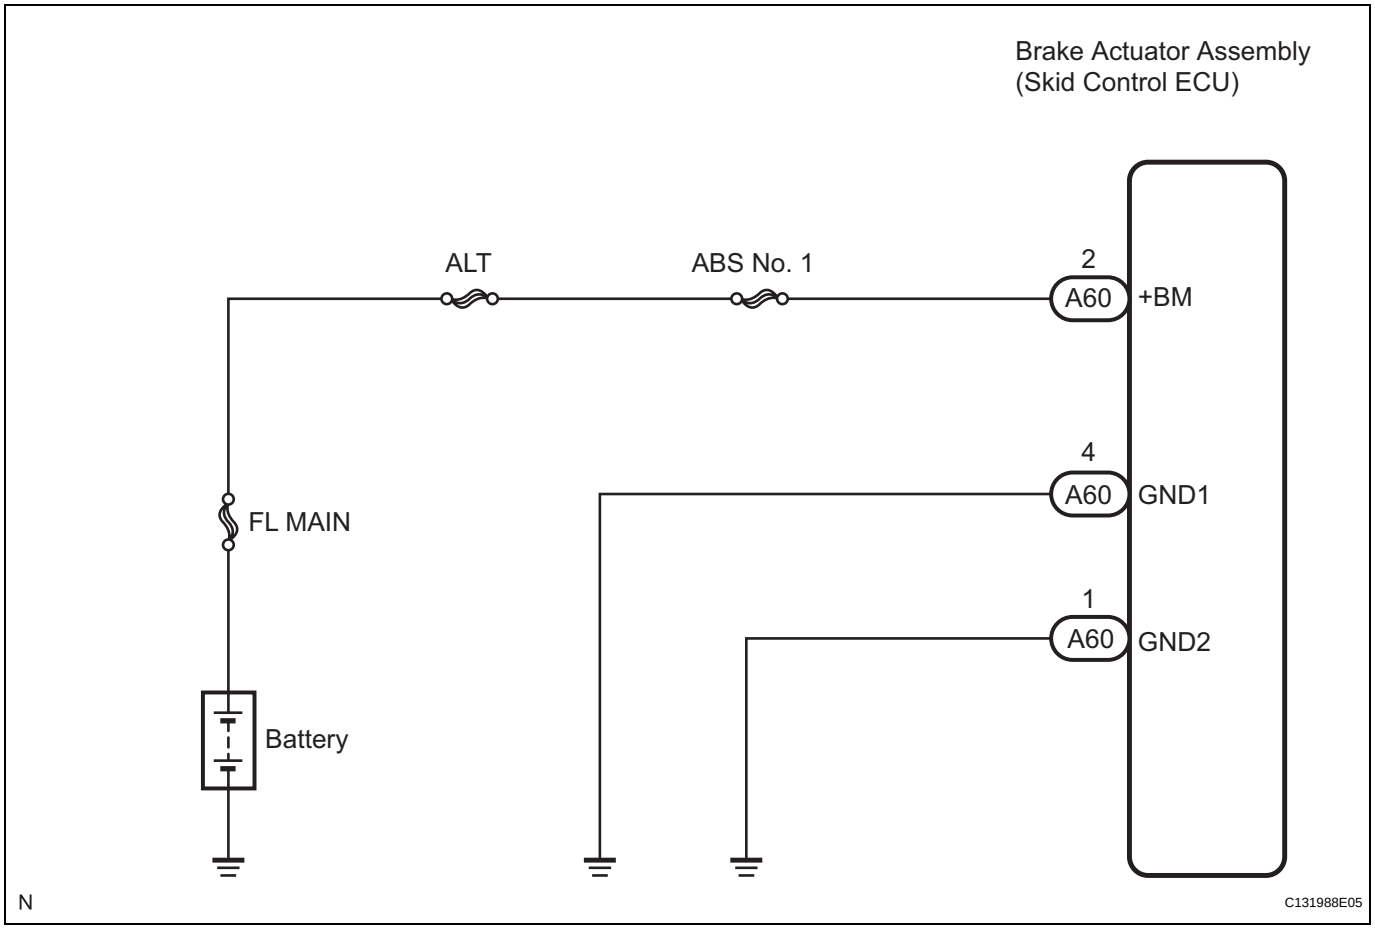
DESCRIPTION

The ABS motor relay supplies power to the ABS pump motor. While the ABS is activated, the ECU switches the motor relay on and operates the ABS pump motor.
If the voltage supplied to the motor relay (+BM) is below the DTCs detection threshold due to low voltage from the battery or alternator, the DTC may be stored.

DTC No.	DTC Detection Condition	Trouble Area
C0273/13	When any of the following is detected: • When the motor relay is actuated, voltage is not supplied to the pump motor within 0.1 seconds. • For 30 to 125 ms after the motor relay is turned from ON to OFF, the remaining high voltage is out of range. The motor relay is turned from ON to OFF 3 times. If the voltage is still out of range in the 3rd operation, this failure is detected. • When the motor relay is changed from ON to OFF, the remaining high voltage is more than 2 V for 1 second.	• ABS No. 1 fuse (Fusible link) • Brake actuator assembly (skid control ECU) • Motor relay circuit

BC

WIRING DIAGRAM



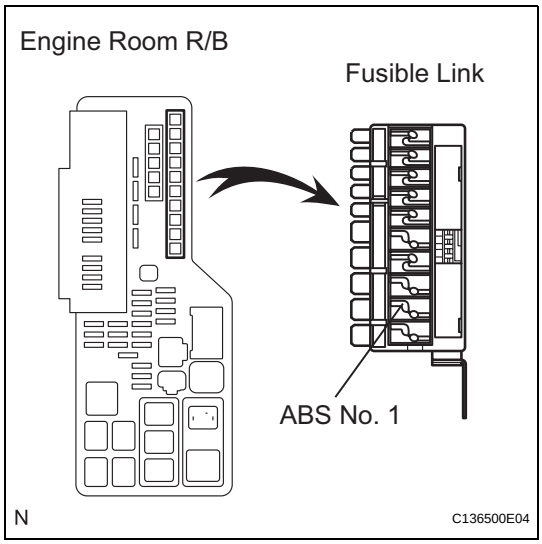
INSPECTION PROCEDURE

HINT:

- When C1241/41 is output together with C0273/13, inspect and repair the trouble areas indicated by C1241/41 (See page BC-361).

- Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	INSPECT FUSIBLE LINK (ABS NO. 1 FUSE)



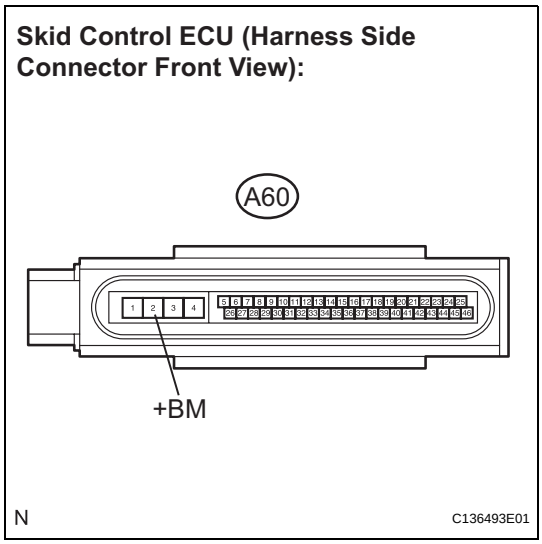
(a) Remove the fusible link from the engine room R/B.
(b) Check if the fusible link is malted.
OK:
The fusible link is not melted.
(c) Install the fusible link to the engine room R/B with the nut.

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

NG → **REPLACE FUSIBLE LINK**

OK

2	INSPECT SKID CONTROL ECU (+BM TERMINAL VOLTAGE)



(a) Disconnect the skid control ECU connector.
(b) Measure the voltage according to the value(s) in the table below.
Standard voltage

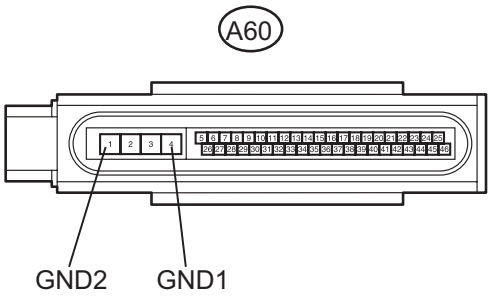
Tester Connection	Condition	Specified Condition
A60-2 (+BM) - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (+BM CIRCUIT)**

OK

3 INSPECT SKID CONTROL ECU (GND TERMINAL CONTINUITY)

Skid Control ECU (Harness Side Connector Front View):



N C136493E02

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
A60-4 (GND1) - Body ground	Below 1 Ω
A60-1 (GND2) - Body ground	Below 1 Ω

(b) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

4 PERFORM ACTIVE TEST BY INTELLIGENT TESTER (ABS MOTOR RELAY)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Select "ACTIVE TEST" on the intelligent tester (See page BC-307).

ACTIVE TEST: ABS/TRAC/VSC

Item	Measurement Item/Range (Display)	Normal Condition
ABS MTR RELAY	Turns ABS motor relay ON/OFF	Operating sound of motor is heard.

(d) Check the operating sound of the ABS motor relay when operating it with the intelligent tester.

OK:

The operating sound of the ABS motor relay is heard.

NG → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

OK

5 RECONFIRM DTC

HINT:
This code is detected when a problem is identified in the brake actuator assembly.
The ABS motor relay is located in the brake actuator assembly.
Therefore, ABS motor relay inspection and motor relay unit inspection cannot be performed. Be sure to check if the DTC is output before replacing the brake actuator assembly.

(a) Clear the DTC (See page BC-302).

BC

(b) Start the engine.
(c) Drive the vehicle at a speed of 12 mph (20 km/h) or more for 30 seconds or more.
(d) Check if the same DTC is recorded (See page BC-302).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

HINT:
- If the normal system code is output (the trouble code is not output), slightly jiggle the connectors, wire harness, and fuses of the brake actuator assembly (skid control ECU). Make sure that no DTCs are output.
- If any DTCs are output while jiggling a connector or wire harness of the brake actuator assembly (skid control ECU), inspect and repair the connector or wire harness.
- It is suspected that the DTCs were output due to a bad connection of the connector terminal.

B → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

A →

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION) (See page BC-298)

DTC	C0278/11	Open or Short Circuit in ABS Solenoid Relay Circuit

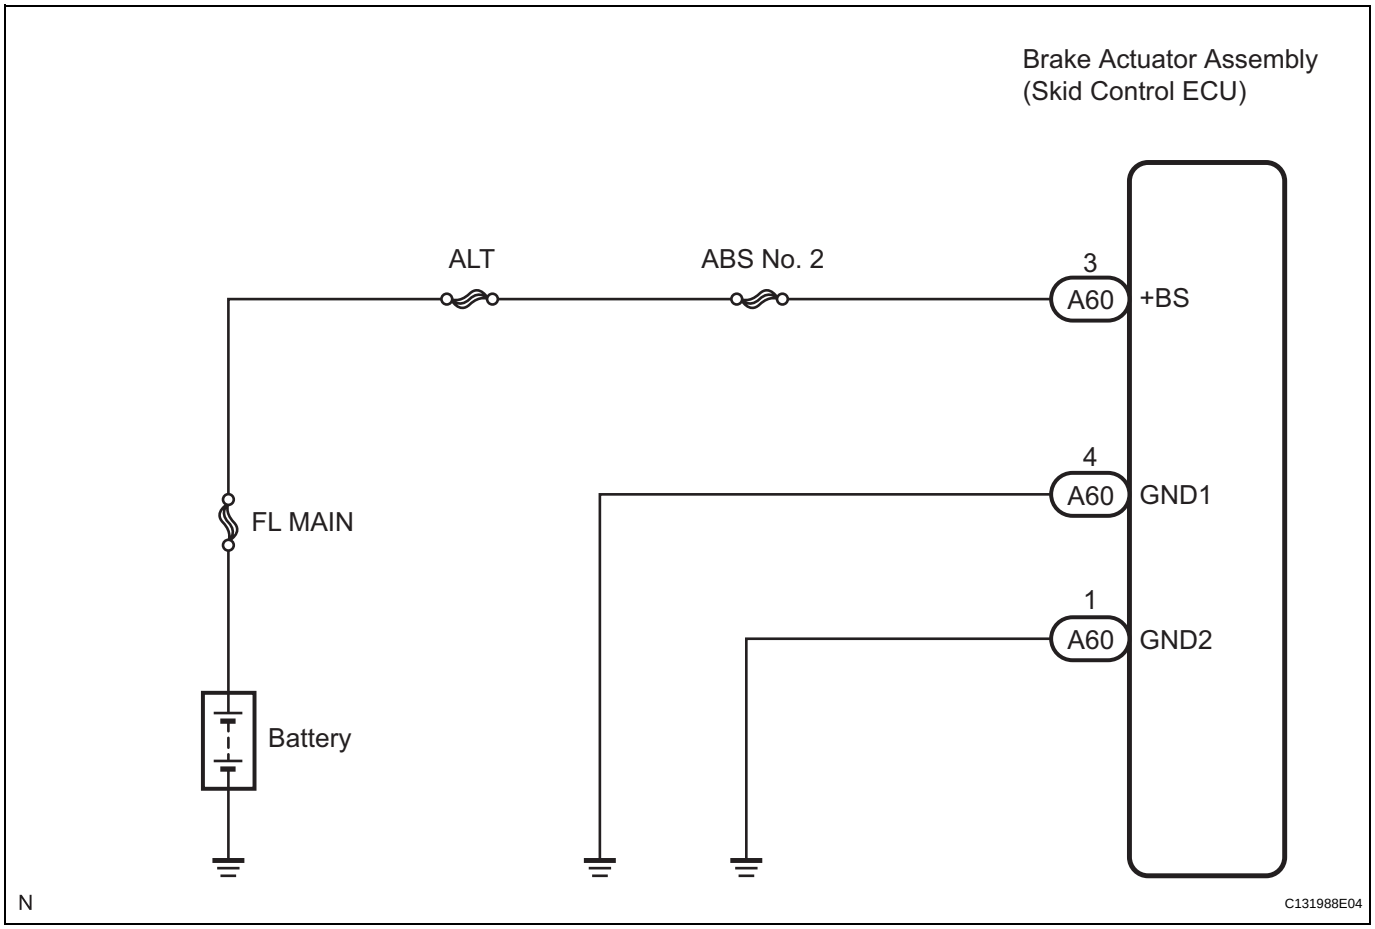
DESCRIPTION

The ABS solenoid relay supplies power to the ABS solenoid.
The solenoid relay is turned on 1.5 seconds after the ignition switch is turned on (IG), and is turned off if an open or short in the solenoid is detected by self diagnosis performed when the vehicle starts running.
The ABS solenoid relay is housed in the skid control ECU in the brake actuator assembly.
HINT:
If a speed signal of 4 mph (6 km/h) or more is input to the skid control ECU, with the ignition switch on (IG) and the stop light switch off, the skid control ECU performs self diagnosis of the motor and solenoid circuits.

DTC No.	DTC Detection Condition	Trouble Area
C0278/11	When any of the following is detected: • When the relay is ON, the voltage is less than IG terminal voltage x 0.8 V for 0.5 seconds. • When the relay is OFF, the voltage is out of range (IG terminal voltage x 0.1 to IG terminal voltage x 0.8).	• ABS No. 2 fuse (Fusible link) • Brake actuator assembly (skid control ECU) • Solenoid relay circuit

BC

WIRING DIAGRAM

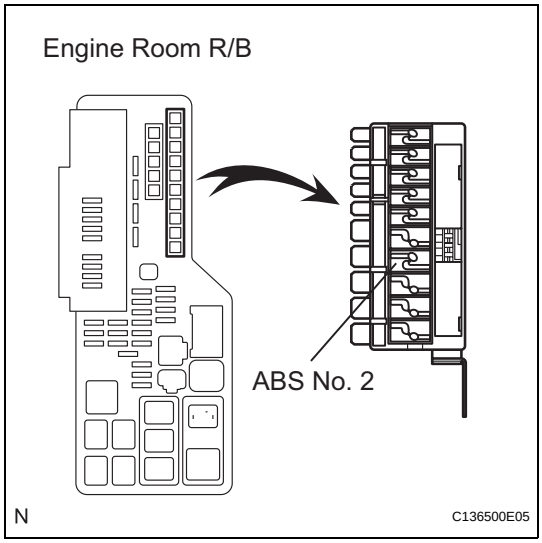


INSPECTION PROCEDURE

HINT:

- When C1241/41 is output together with C0278/11, inspect and repair the trouble areas indicated by C1241/41 (See page BC-361).
- Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1 INSPECT FUSIBLE LINK (ABS NO. 2 FUSE)



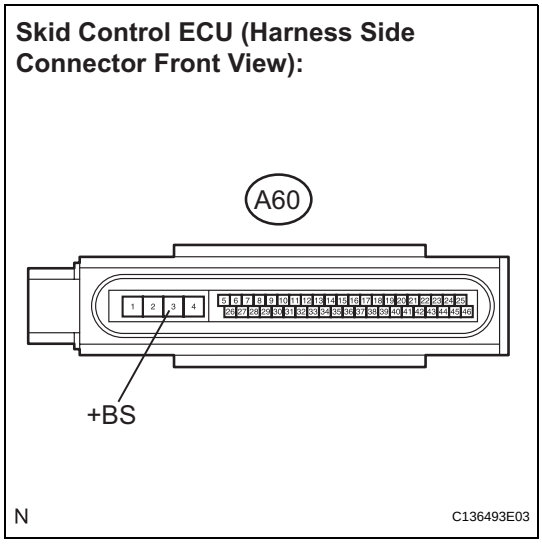
(a) Remove the fusible link from the engine room R/B.
(b) Check if the fusible link is melted.
OK:
The fusible link is not melted.
(c) Install the fusible link to the engine room R/B with the nut.

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

NG → **REPLACE FUSIBLE LINK**

OK

2 INSPECT SKID CONTROL ECU (+BS TERMINAL VOLTAGE)



(a) Disconnect the skid control ECU connector.
(b) Measure the voltage according to the value(s) in the table below.
Standard voltage

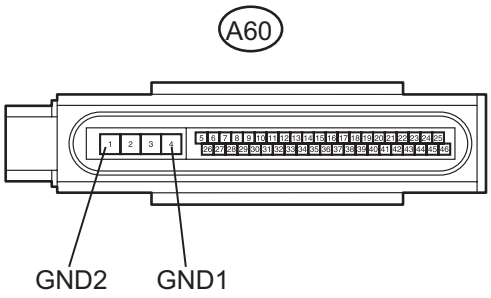
Tester Connection	Condition	Specified Condition
A60-3 (+BS) - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (+BS CIRCUIT)**

OK

3 INSPECT SKID CONTROL ECU (GND TERMINAL CONTINUITY)

Skid Control ECU (Harness Side Connector Front View):



N C136493E02

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
A60-4 (GND1) - Body ground	Below 1 Ω
A60-1 (GND2) - Body ground	Below 1 Ω

(b) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

4 RECONFIRM DTC

HINT:
This code is detected when a problem is identified in the brake actuator assembly.
The solenoid circuit is located in the brake actuator assembly. Therefore, solenoid circuit inspection and solenoid unit inspection cannot be performed. Be sure to check if the DTC code is output before replacing the brake actuator assembly.

(a) Clear the DTC (See page BC-302).
(b) Start the engine.
(c) Drive the vehicle at a speed of 12 mph (20 km/h) or more for 30 seconds or more.
(d) Check if the same DTC is recorded (See page BC-302).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

HINT:
- If the normal system code is output (the trouble code is not output), slightly jiggle the connectors, wire harnesses, and fuses of the brake actuator assembly. Make sure that no DTCs are output.
- If any DTCs are output while jiggling a connector or wire harness of the brake actuator (skid control ECU), inspect and repair the connector or wire harness.
- It is suspected that the DTCs were output due to a bad connection of the connector terminal.

BC

B → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

A

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION) (See page BC-298)

DTC	C0365/28	Malfunction in Deceleration Sensor

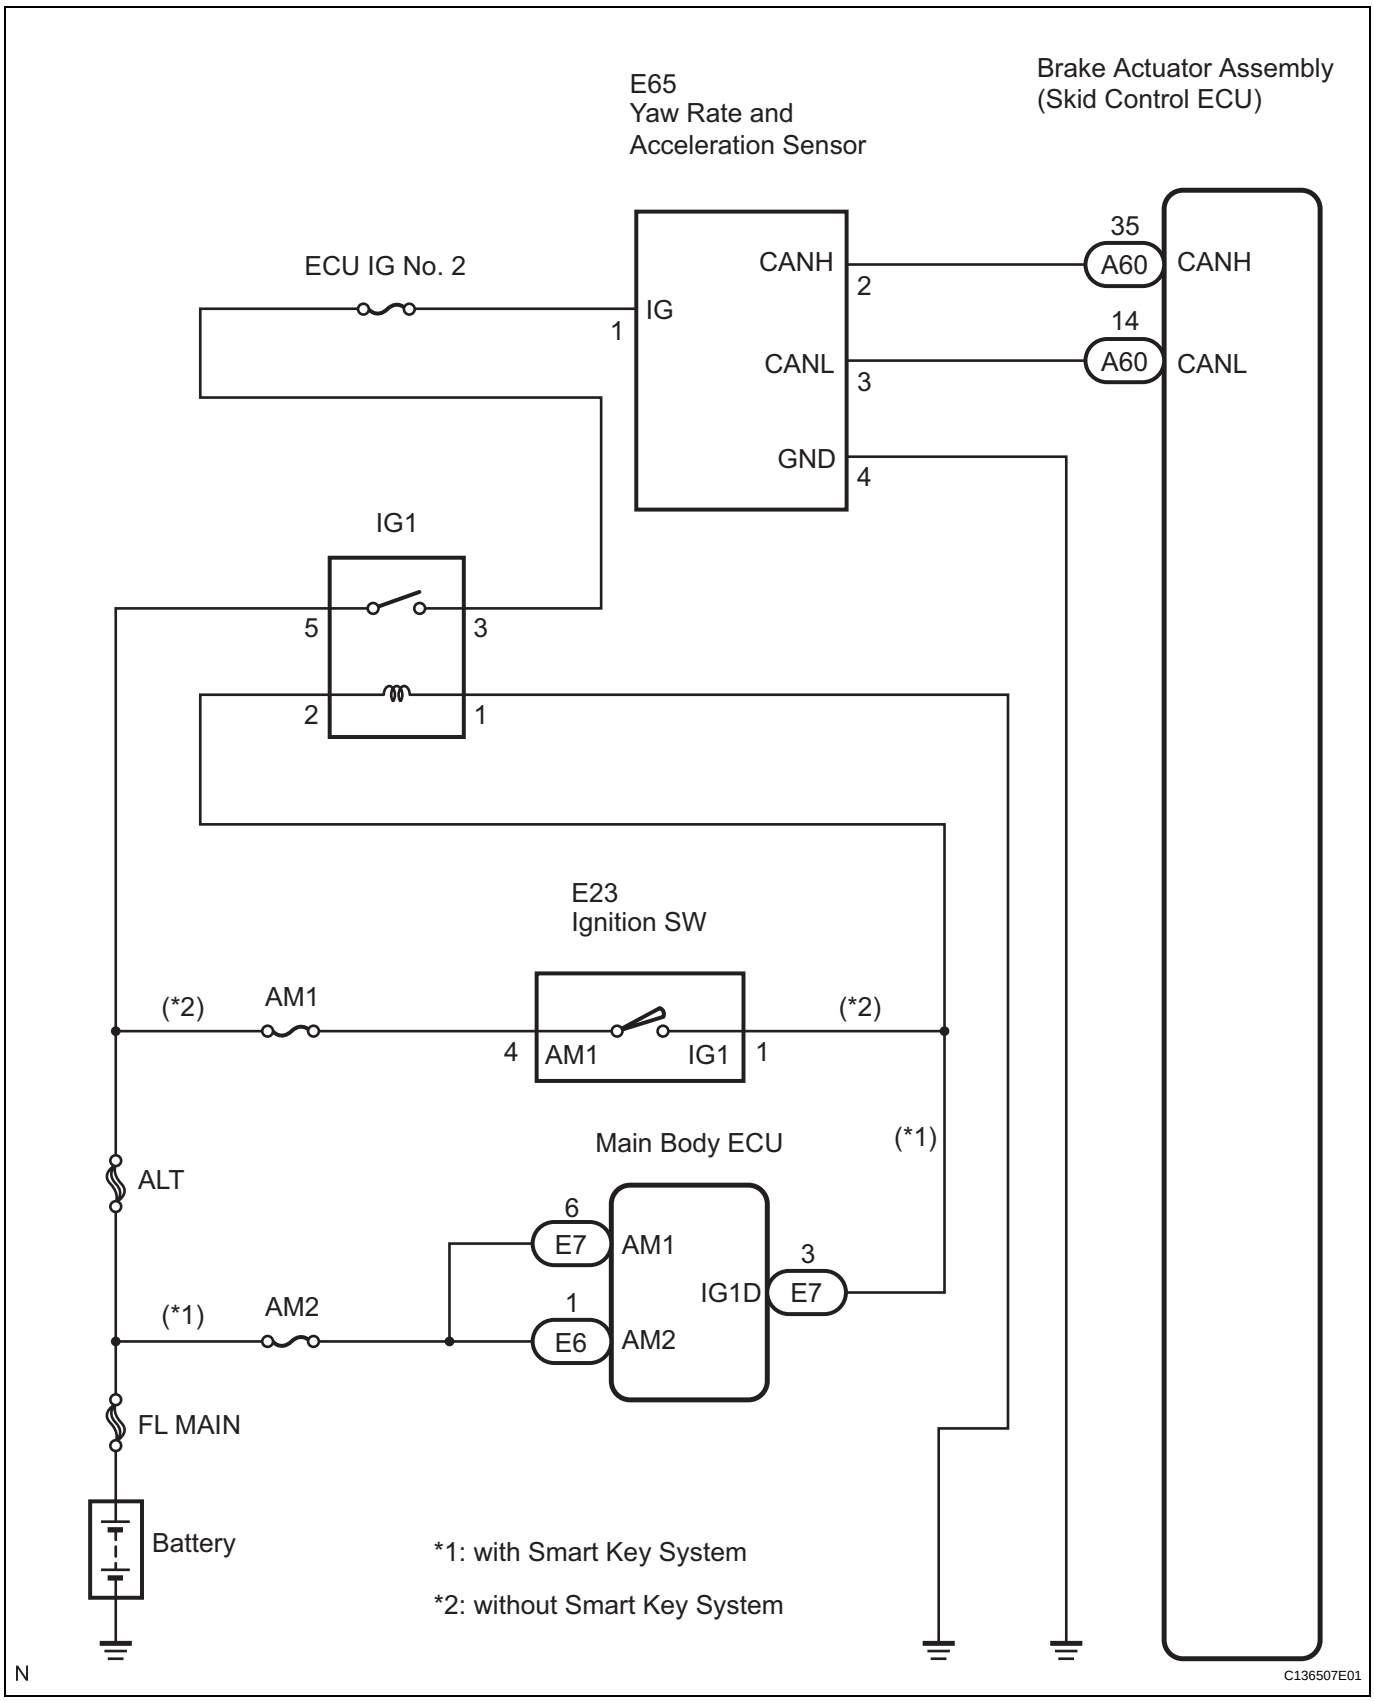
DTC	C1234/34	Yaw Rate Sensor Malfunction

DESCRIPTION

The deceleration sensor is combined with the yaw rate and acceleration sensor.
The brake actuator receives signals from the yaw rate and acceleration sensor via the CAN communication system.
If there is trouble in the CAN communication system, DTCs U0073/94 and U0123/62 are output.

DTC No.	DTC Detection Condition	Trouble Area
C0365/28	When any of the following is detected: • Lateral acceleration difference between sensor signal and reference value is large. • Offset value of sensor signal is higher than the standard value. • Sensor signal is out of range (2.25 m/s^2).	• Yaw rate and acceleration sensor • Yaw rate and acceleration sensor circuit • Sensor installation • Brake actuator assembly (skid control ECU)
C1234/34	Sensor malfunction signal is received from the yaw rate sensor.	• Yaw rate and acceleration sensor • Yaw rate and acceleration sensor circuit

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

- Check the condition of each related circuit connector before troubleshooting (See page IN-40).

- When U0073/94, U0100/65, U0123/62 and/or U0126/63 is output together with C0365/28, inspect and repair the trouble areas indicated by U0073/94, U0100/65, U0123/62 and/or U0126/63 first.

1 CHECK DTC

(a) Clear the DTCs (See page BC-302).
(b) Start the engine.
(c) At a speed of 18 mph (30 km/h) or more, drive the vehicle, turn the steering wheel, and decelerate (depress the brake pedal) the vehicle.
(d) Turn the ignition switch on (IG) again and check that no CAN communication system DTC is output (See page BC-302).

Result

Condition	Proceed to
CAN communication system DTC is not output	A
CAN communication system DTC is output	B

BC

B → **INSPECT CAN COMMUNICATION SYSTEM (See page CA-8)**

A

2 INSPECT YAW RATE AND ACCELERATION SENSOR INSTALLATION

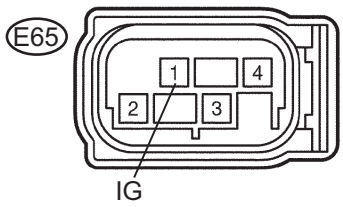
(a) Check that the yaw rate and acceleration sensor has been installed properly (See page BC-448).
OK:
The sensor should be tightened to the specified torque.
The sensor should not be titled.

NG → **INSTALL YAW RATE AND ACCELERATION SENSOR CORRECTLY**

OK

3 INSPECT YAW RATE AND ACCELERATION SENSOR (IG TERMINAL)

Yaw Rate and Acceleration Sensor (Harness Side Connector Front View):



F048983E13

(a) Disconnect the yaw rate and acceleration sensor connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.
Standard voltage

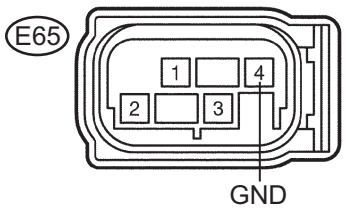
Tester Connection	Condition	Specified Condition
E65-1 (IG) - Body ground	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (IG CIRCUIT)**

OK

4 INSPECT YAW RATE AND ACCELERATION SENSOR (GND TERMINAL)

Yaw Rate and Acceleration Sensor (Harness Side Connector Front View):



(a) Turn the ignition switch off.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E65-4 (GND) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

BC

5 RECONFIRM DTC

(a) Clear the DTCs (See page BC-302).
(b) Start the engine.
(c) At a speed of 18 mph (30 km/h) or more, drive the vehicle, turn the steering wheel, and decelerate (depress the brake pedal) the vehicle.
(d) Turn the ignition switch on (IG) again and check that no CAN communication system DTC is output (See page BC-302).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTC is output	A
DTC is output (When troubleshooting in accordance with the PROBLEM SYMPTOMS TABLE)	B
DTC is not output (When troubleshooting in accordance with the DTC CHART)	C

C → **CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION) (See page BC-298)**

A

REPLACE YAW RATE AND ACCELERATION SENSOR (See page BC-447)

DTC	C1201/51	Engine Control System Malfunction

DESCRIPTION

If a malfunction in the engine control system is detected, the operations of VSC and TRAC are prohibited by the fail safe function (See page BC-306).
When the signals from the engine are input normally, the fail safe is cancelled and the DTC is not stored.

DTC No.	DTC Detecting Condition	Trouble Area
C1201/51	A trouble signal in the engine control system is input.	Engine control system

INSPECTION PROCEDURE

1	CHECK DTC (ENGINE CONTROL SYSTEM)

(a) Clear the DTC (engine control system) (See page ES-38 for 2AZ-FE, ES-45 for 2GR-FE).
(b) Perform a road test.
(c) Check for the DTC (engine control system).

BC

Result

Display (DTC Output)	Proceed to
DTC (engine control system) is not output	A
DTC (engine control system) is output	B

B → REPAIR CIRCUITS INDICATED BY OUTPUT DTCS (ENGINE CONTROL SYSTEM)

A → REPLACE ECM

DTC	C1225/25	SMC Solenoid Circuit

DTC	C1226/26	SMC Solenoid Circuit

DTC	C1227/27	SRC Solenoid Circuit

DTC	C1228/28	SRC Solenoid Circuit

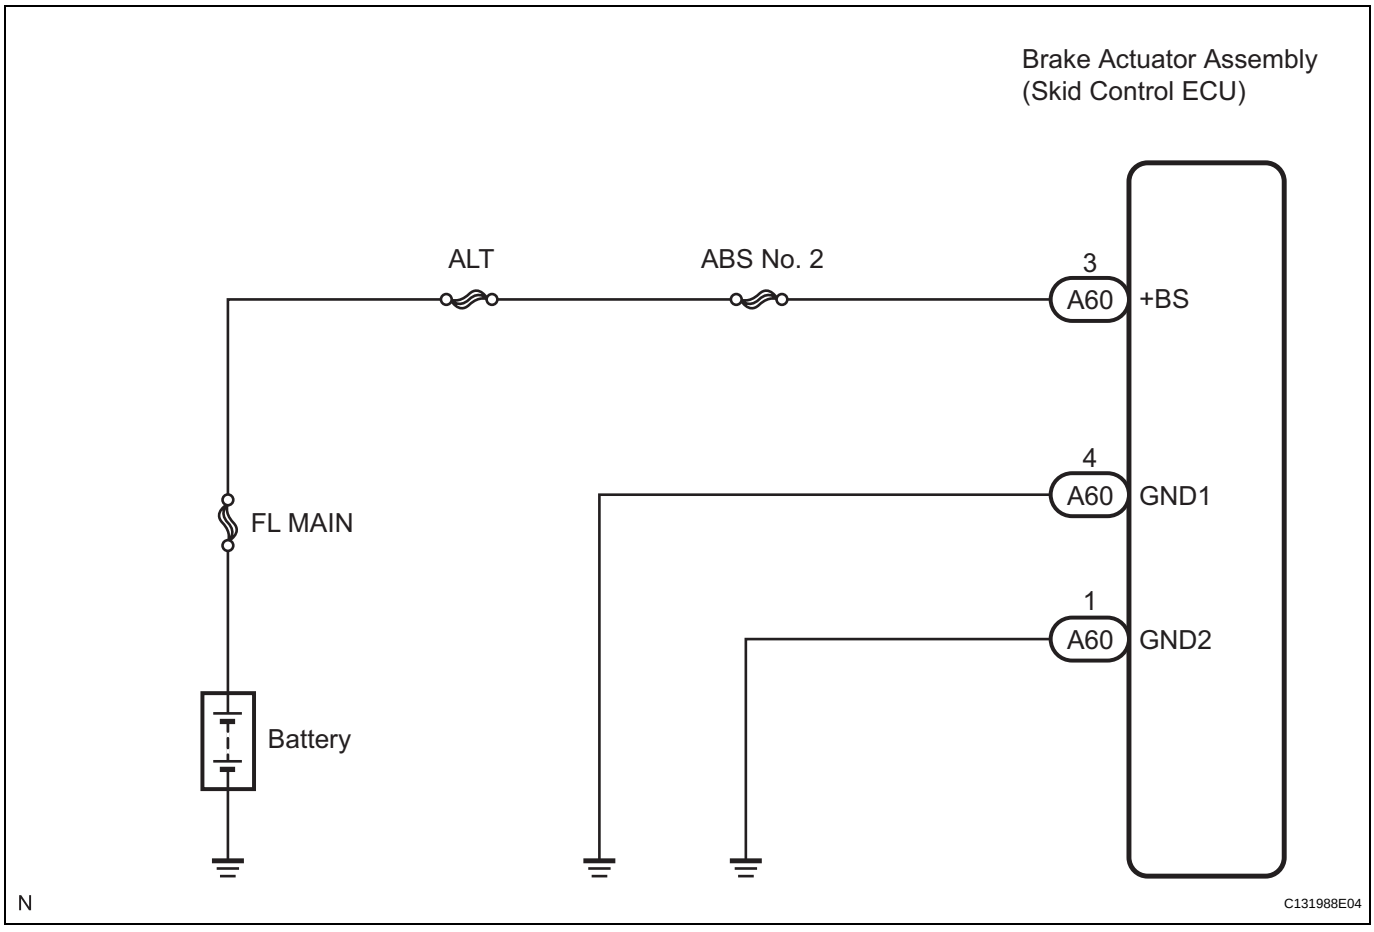
DESCRIPTION

These solenoids turn on when signals are received from the skid control ECU and they control the pressure acting on the wheel cylinders to control the braking force.

DTC No.	DTC Detecting Condition	Trouble Area
C1225/25	Solenoid valve signal does not match the check result	• Brake actuator assembly (skid control ECU) • SMC1 circuit
C1226/26	Solenoid valve signal does not match the check result	• Brake actuator assembly (skid control ECU) • SMC2 circuit
C1227/27	Solenoid valve signal does not match the check result	• Brake actuator assembly (skid control ECU) • SRC1 circuit
C1228/28	Solenoid valve signal does not match the check result	• Brake actuator assembly (skid control ECU) • SRC2 circuit

BC

WIRING DIAGRAM



INSPECTION PROCEDURE

1	RECONFIRM DTC

HINT:
These codes are detected when a problem is identified in the brake actuator assembly.
The solenoid circuits are located in the brake actuator assembly.
Therefore, solenoid circuit inspection and solenoid unit inspection cannot be performed. Be sure to check if the DTC is output before replacing the brake actuator assembly.

(a) Clear the DTC (See page BC-302).
(b) Start the engine.
(c) Drive the vehicle at a speed of 12 mph (20 km/h) or more for 30 seconds or more.
(d) Check if the same DTC is recorded (See page BC-302).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

HINT:
- If the normal system code is output (the trouble code is not output), slightly jiggle the connectors, wire harness, and fuses of the brake actuator assembly (skid control ECU). Make sure that no DTCs are output.
- If any DTCs are output while jiggling a connector or wire harness of the brake actuator (skid control ECU), inspect and repair the connector or wire harness.
- It is suspected that the DTCs were output due to a bad connection of the connector terminal.

B → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

A

END

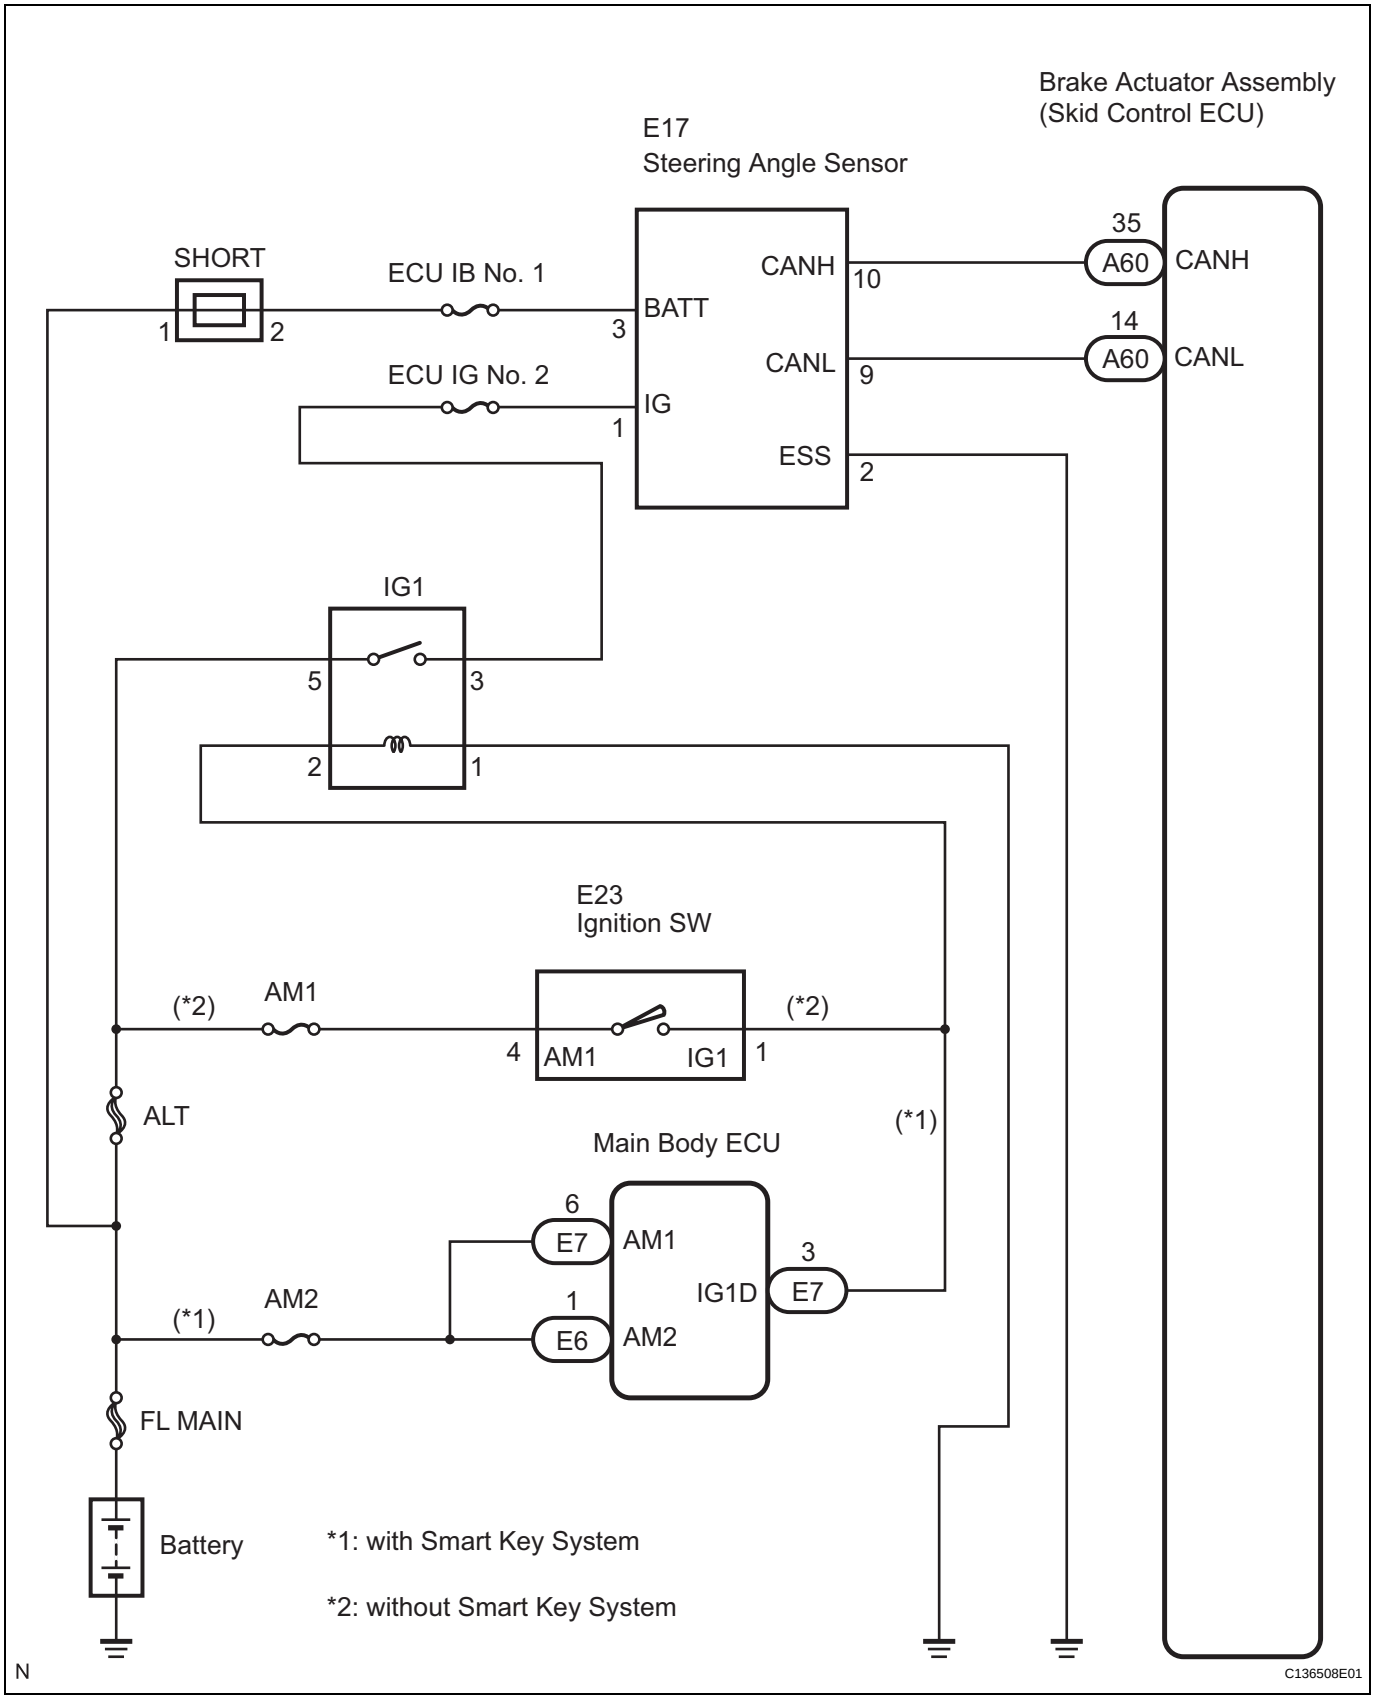
DTC	C1231/31	Steering Angle Sensor Circuit Malfunction

DESCRIPTION

The steering angle sensor signal is sent to the skid control ECU via the CAN communication system. When there is a malfunction in the CAN communication system, it will be detected by the steering angle sensor zero point malfunction diagnostic function.

DTC No.	DTC Detection Condition	Trouble Area
C1231/31	When any of the following is detected: • With ECU terminal IG1 voltage 9.8 V or more, the condition that the ECU does not receive data from the steering angle sensor continues. • Internal sensor failure • The offset value is out of range. • Sensor signal changes too rapidly. • Steering angle value difference between measured and reference is out of range. • Steering angle sensor signal is out of range.	• Steering angle sensor • Steering angle sensor circuit • Steering angle sensor power supply

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

HINT:

- When U0073/94, U0100/63, U0123/62 and/or U0126/63 is output together with C1231/31, inspect and repair the trouble areas indicated by U0073/94, U0100/65, U0123/62 and/or U0126/63 first.
- When the speed sensor or the yaw rate and acceleration sensor has trouble, DTCs for the steering angle sensor may be output even when the steering angle sensor is normal. When DTCs for the speed sensor or yaw rate and acceleration sensor are output together with other DTCs for the steering angle sensor, inspect and repair the speed sensor and yaw rate and acceleration sensor first, and then inspect and repair the steering angle sensor.
- Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK DTC

(a) Clear the DTC (See page BC-302).
(b) Turn the ignition switch off.
(c) Turn the ignition switch on (IG) again and check that no CAN communication system DTC is output.
(d) Drive the vehicle and turn the steering wheel to the right and left at the speed of 22 mph (35 km/h) and check that no speed sensor and yaw rate and acceleration sensor DTCs are output (See page BC-302).

BC

Result

Condition	Proceed to
No CAN communication system DTC and the speed sensor or yaw rate and acceleration sensor DTC are output	A
CAN communication system DTC is output	B
Speed sensor or yaw rate and acceleration sensor DTC is output	C

HINT:

- If there is a malfunction in the speed sensor or the yaw rate and acceleration sensor, an abnormal value may be output although the steering angle sensor is normal.
- If the speed sensor and the yaw rate and acceleration sensor DTCs are output simultaneously, repair the sensors and inspect the steering angle sensor.

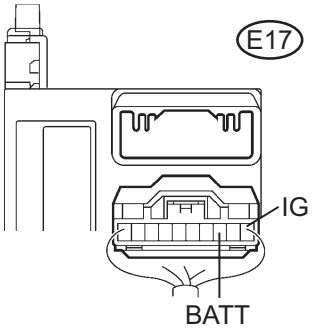
B → **INSPECT CAN COMMUNICATION SYSTEM (See page CA-8)**

C → **REPAIR CIRCUITS INDICATED BY OUTPUT DTCS (See page BC-311)**

A

2 INSPECT STEERING ANGLE SENSOR (POWER SOURCE TERMINAL)

Steering Angle Sensor Wire Harness View:



G030156E17

(a) Remove the column cover lower.
(b) Disconnect the steering angle sensor connector.
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

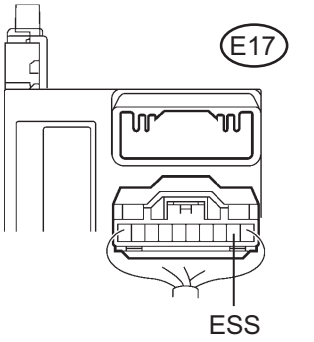
Tester Connection	Condition	Specified Condition
E17-1 (IG) - Body ground	Ignition switch on (IG)	10 to 14 V
E17-3 (BAT) - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER SOURCE CIRCUIT)**

OK

3 INSPECT STEERING ANGLE SENSOR (GROUND TERMINAL)

Steering Angle Sensor Wire Harness View:



G030156E18

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E17-2 (ESS) - Body ground	Always	Below 1 Ω

(b) Connect the connector.
(c) Install the column cover lower.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GROUND CIRCUIT)**

OK

REPLACE STEERING ANGLE SENSOR (See page BC-450)

BC

DTC	C1237/37	Tires of Different Size

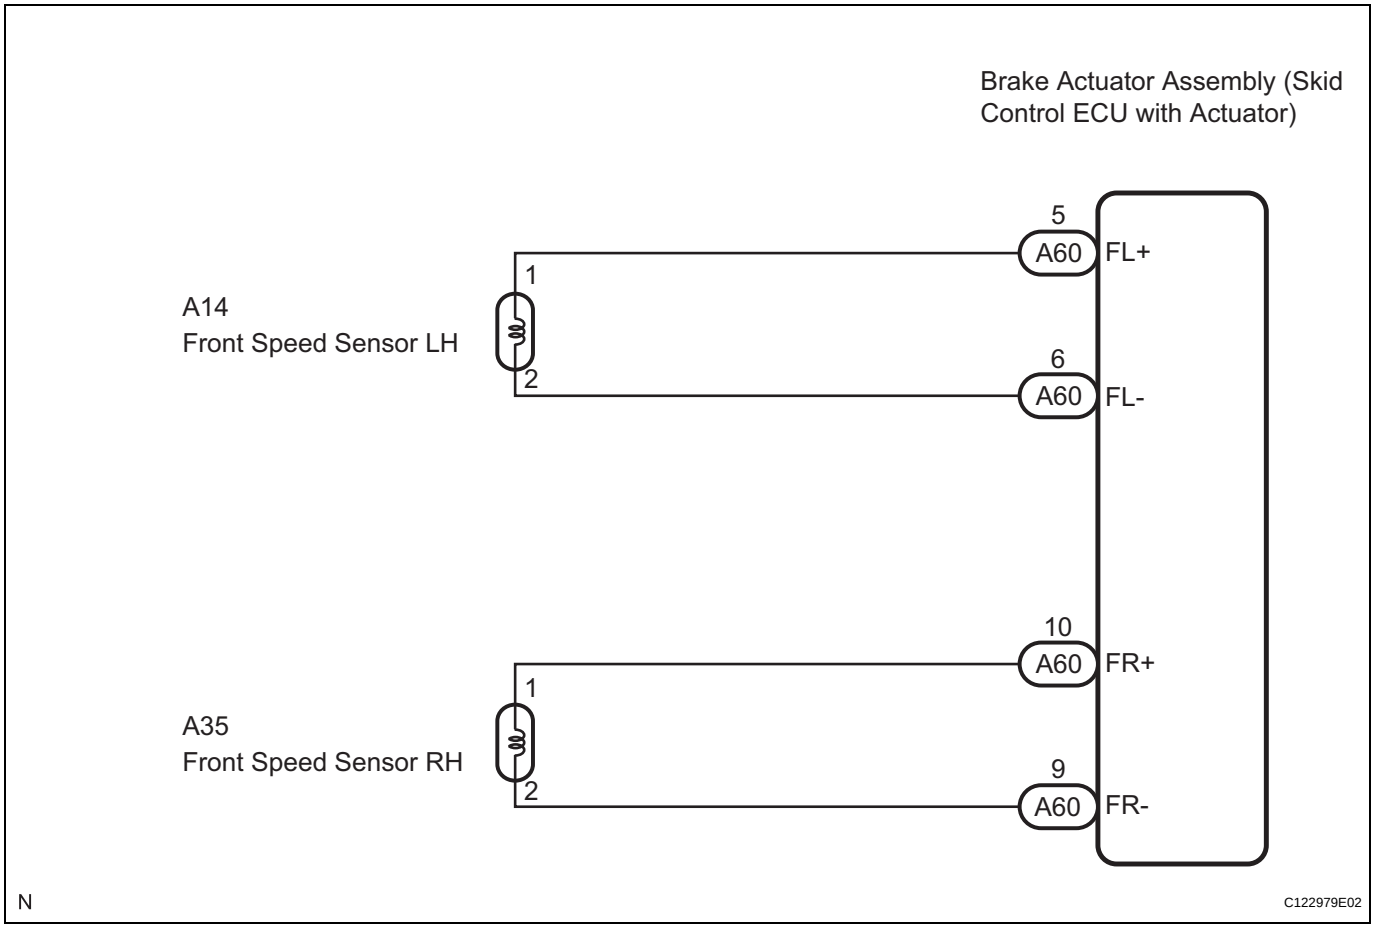
DESCRIPTION

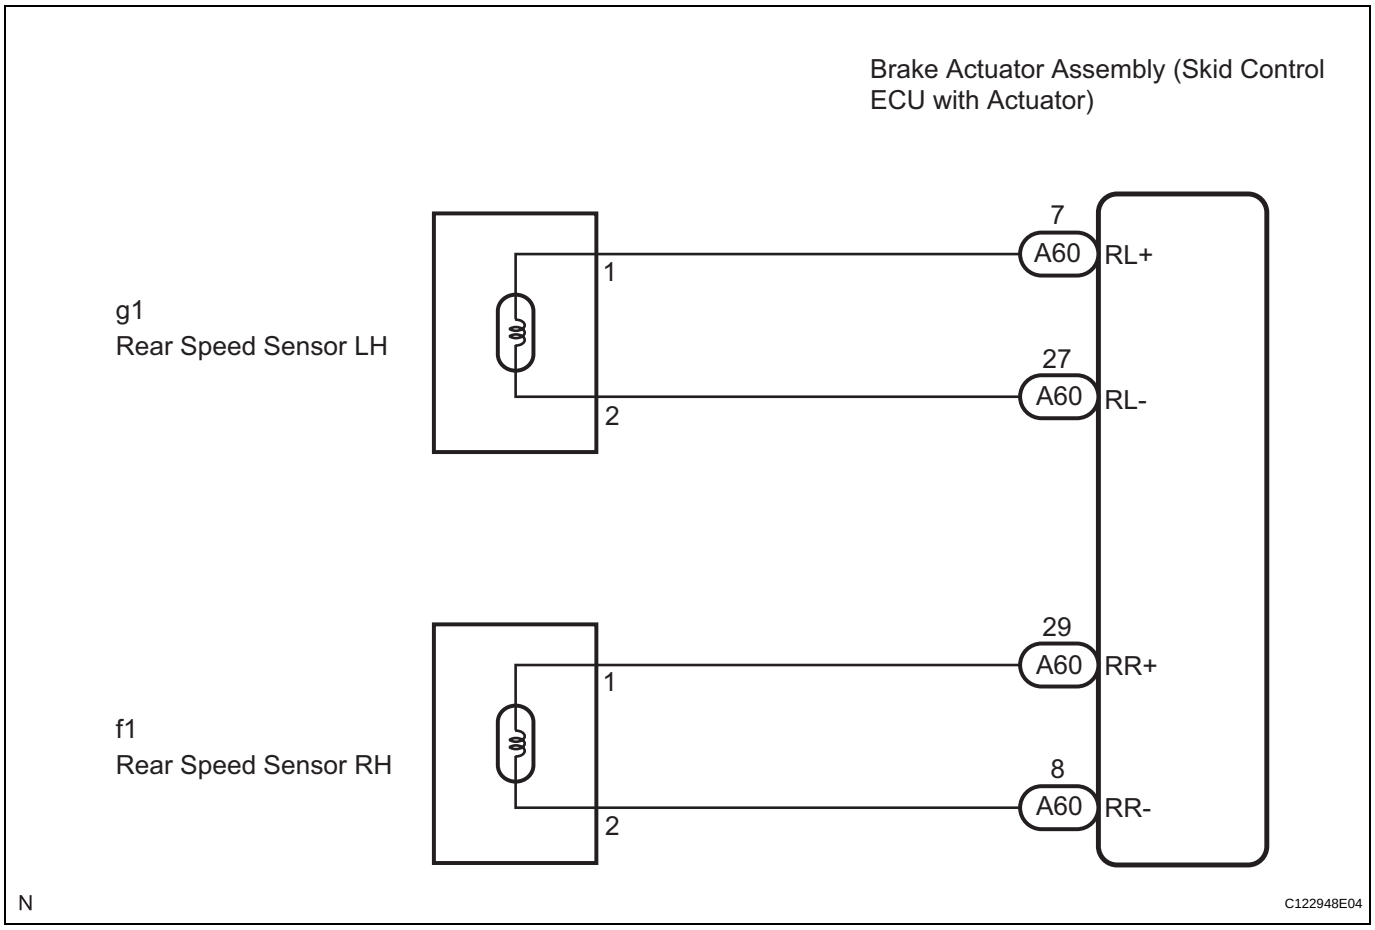
The skid control ECU measures the speed of each wheel by receiving signals from the speed sensor. These signals are used for recognizing that all 4 wheels are operating properly.
Therefore, all wheel signals must be equal.

DTC No.	DTC Detecting Condition	Trouble Area
C1237/37	When any of the following is detected: • Wheel speed difference between the wheels. • Wheel sensor signal failure. • ABS control continues for 60 sec. or more.	• Brake actuator assembly (skid control ECU) • Speed sensor rotor (Front) • Rear axle hub and bearing assembly • Speed sensor • Speed sensor circuit • Tire and wheel size • Tire deformation

WIRING DIAGRAM

BC





BC

INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK TIRES

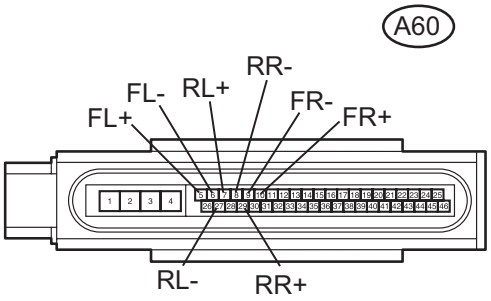
(a) Check the size and condition of all 4 wheels (See page TW-3).
HINT:
The DTC is output when tire deformation or a difference in tire size is detected.
OK:
The diameter of all 4 tires and air pressure are the same.

NG → **REPLACE TIRES SO THAT ALL 4 TIRES ARE THE SAME SIZE**

OK

2 INSPECT SPEED SENSOR AND SENSOR ROTOR SERRATIONS

Skid Control ECU (Harness Side Connector Front View):



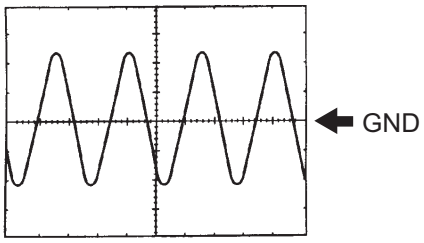
N C136493E04

(a) Lift up the vehicle.
(b) Disconnect the skid control ECU connector.
(c) Connect the oscilloscope to each speed sensor terminal of the skid control ECU connector.

Terminals

Connector	Circuit
A60-5 (FL+) - A60-6 (FL-)	Front left speed sensor
A60-10 (FR+) - A60-9 (FR-)	Front right speed sensor
A60-7 (RL+) - A60-27 (RL-)	Rear left speed sensor
A60-29 (RR+) - A60-8 (RR-)	Rear right speed sensor

Normal Signal Waveform:



1 V/Division, 2 ms./Division

C140980E03

(d) Check that a waveform is output when the tires are rotated (by the sensor circuit).

OK:

A waveform as shown in the figure is output.

HINT:

- Each sensor circuit outputs the same waveform without noise.
- As vehicle speed (wheel rotation speed) increases, the width of the waveform narrows and the fluctuation in the output voltage becomes greater.
- When noise is identified in the waveform on the oscilloscope, the erratic signals are generated due to rotor scratches, looseness or foreign matter attached to the speed sensor.

(e) Make sure that the waveform does not change while jiggling a connector or a wire harness.

OK:

The waveform does not change.

HINT:

If the waveform changes while jiggling a connector or a wire harness, there may be a malfunction in the connector or the wire harness.

(f) Connect the connector.

NG → **Go to step 4**

OK

3 RECONFIRM DTC

(a) Clear the DTC (See page BC-302).
(b) Start the engine.
(c) Drive the vehicle at a speed of 20 mph (32 km/h) or more for 60 seconds or more.

(d) Check if the same DTC is recorded (See page BC-302).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

A

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION) (See page BC-298)

BC

4 CHECK SPEED SENSOR ROTOR

(a) Check the speed sensor rotor.
Front Speed Sensor Rotor (Front drive outboard joint shaft assembly): (See page DS-23)
Rear Speed Sensor Rotor (Rear axle hub and bearing assembly): (See page AH-14)
OK:
No scratches or foreign matter on the rotors.
NOTICE:
Check the speed sensor signal after the cleaning/ replacement (See page BC-290).

NG → **CLEAN OR REPLACE SPEED SENSOR ROTOR**

OK

5 CHECK SPEED SENSOR TIP

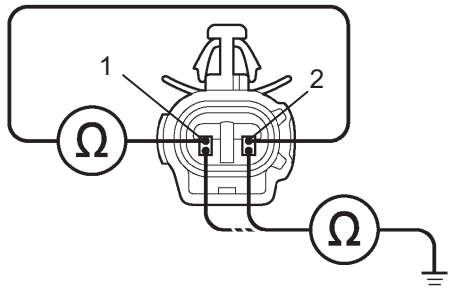
(a) Remove each speed sensor (See page BC-438 for front, BC-443 for rear).
(b) Check the speed sensor tip.
OK:
No scratches or foreign matter on the sensor tip.
NOTICE:
Check the speed sensor signal after the cleaning/ replacement (See page BC-290).
(c) Install the speed sensor.

NG → **CLEAN OR REPLACE SPEED SENSOR**

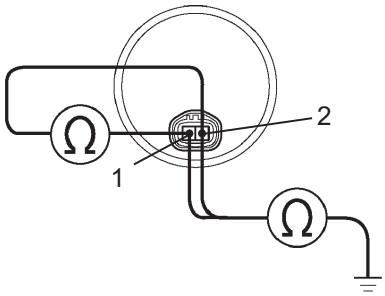
OK

6	INSPECT SPEED SENSOR

Front Speed Sensor:



Rear Speed Sensor:



C136027E02

(a) Disconnect each speed sensor connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

FRONT

Tester Connection	Condition	Specified Condition
A14-1 (FL+) - A14-2 (FL-)	Always	0.92 to 1.22 kΩ at 20°C
A14-1 (FL+) - Body ground	Always	10 kΩ or higher
A14-2 (FL-) - Body ground	Always	10 kΩ or higher
A35-1 (FR+) - A35-2 (FR-)	Always	0.92 to 1.22 kΩ at 20°C
A35-1 (FR+) - Body ground	Always	10 kΩ or higher
A35-2 (FR-) - Body ground	Always	10 kΩ or higher

REAR

Tester Connection	Condition	Specified Condition
g1-1 (RL+) - g1-2 (RL-)	Always	Below 2.2 kΩ
g1-1 (RL+) - Body ground	Always	10 kΩ or higher
g1-2 (RL-) - Body ground	Always	10 kΩ or higher
f1-1 (RR+) - f1-2 (RR-)	Always	Below 2.2 kΩ
f1-1 (RR+) - Body ground	Always	10 kΩ or higher
f1-2 (RR-) - Body ground	Always	10 kΩ or higher

NOTICE:

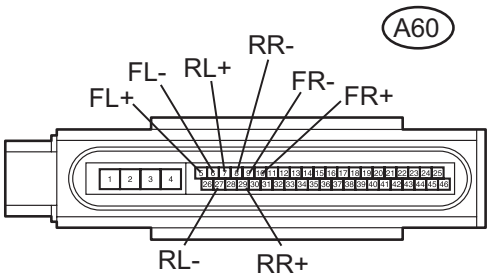
Check the speed sensor signal after replacement (See page BC-290).

NG → **REPLACE EACH SPEED SENSOR**

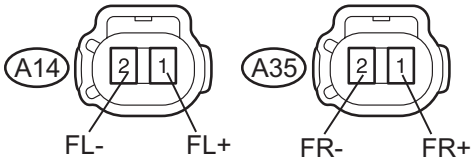
OK

7 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU TO EACH SPEED SENSOR)

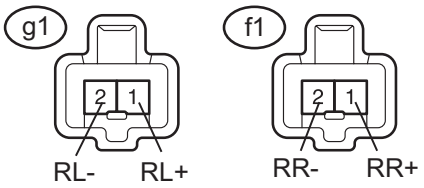
Skid Control ECU (Harness Side Connector Front View):



Front Speed Sensor Harness Side Connector Front View:



Rear Speed Sensor Harness Side Connector Front View:



C139146E02

(a) Disconnect the skid control ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

FRONT

Tester Connection	Condition	Specified Condition
A60-5 (FL+) - A14-1 (FL+)	Always	Below 1 Ω
A60-5 (FL+) - Body ground	Always	10 kΩ or higher
A60-6 (FL-) - A14-2 (FL-)	Always	Below 1 Ω
A60-6 (FL-) - Body ground	Always	10 kΩ or higher
A60-10 (FR+) - A35-1 (FR+)	Always	Below 1 Ω
A60-10 (FR+) - Body ground	Always	10 kΩ or higher
A60-9 (FR-) - A35-2 (FR-)	Always	Below 1 Ω
A60-9 (FR-) - Body ground	Always	10 kΩ or higher

REAR

Tester Connection	Condition	Specified Condition
A60-7 (RL+) - g1-1 (RL+)	Always	Below 1 Ω
A60-7 (RL+) - Body ground	Always	10 kΩ or higher
A60-27 (RL-) - g1-2 (RL-)	Always	Below 1 Ω
A60-27 (RL-) - Body ground	Always	10 kΩ or higher
A60-29 (RR+) - f1-1 (RR+)	Always	Below 1 Ω
A60-29 (RR+) - Body ground	Always	10 kΩ or higher
A60-8 (RR-) - f1-2 (RR-)	Always	Below 1 Ω
A60-8 (RR-) - Body ground	Always	10 kΩ or higher

(c) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SKID CONTROL ECU TO EACH SPEED SENSOR)**

OK

8 RECONFIRM DTC

(a) Clear the DTC (See page BC-302).
(b) Start the engine.

BC

(c) Drive the vehicle at a speed of 20 mph (32 km/h) or more for at least 60 seconds.

(d) Check if the same DTC is recorded (See page BC-302).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTC (C1237/37) is not output	A
DTC (C1237/37) is output	B

B → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

A → **CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION) (See page BC-298)**

DTC	C1241/41	Low Battery Positive Voltage or Abnormally High Battery Positive Voltage

DESCRIPTION

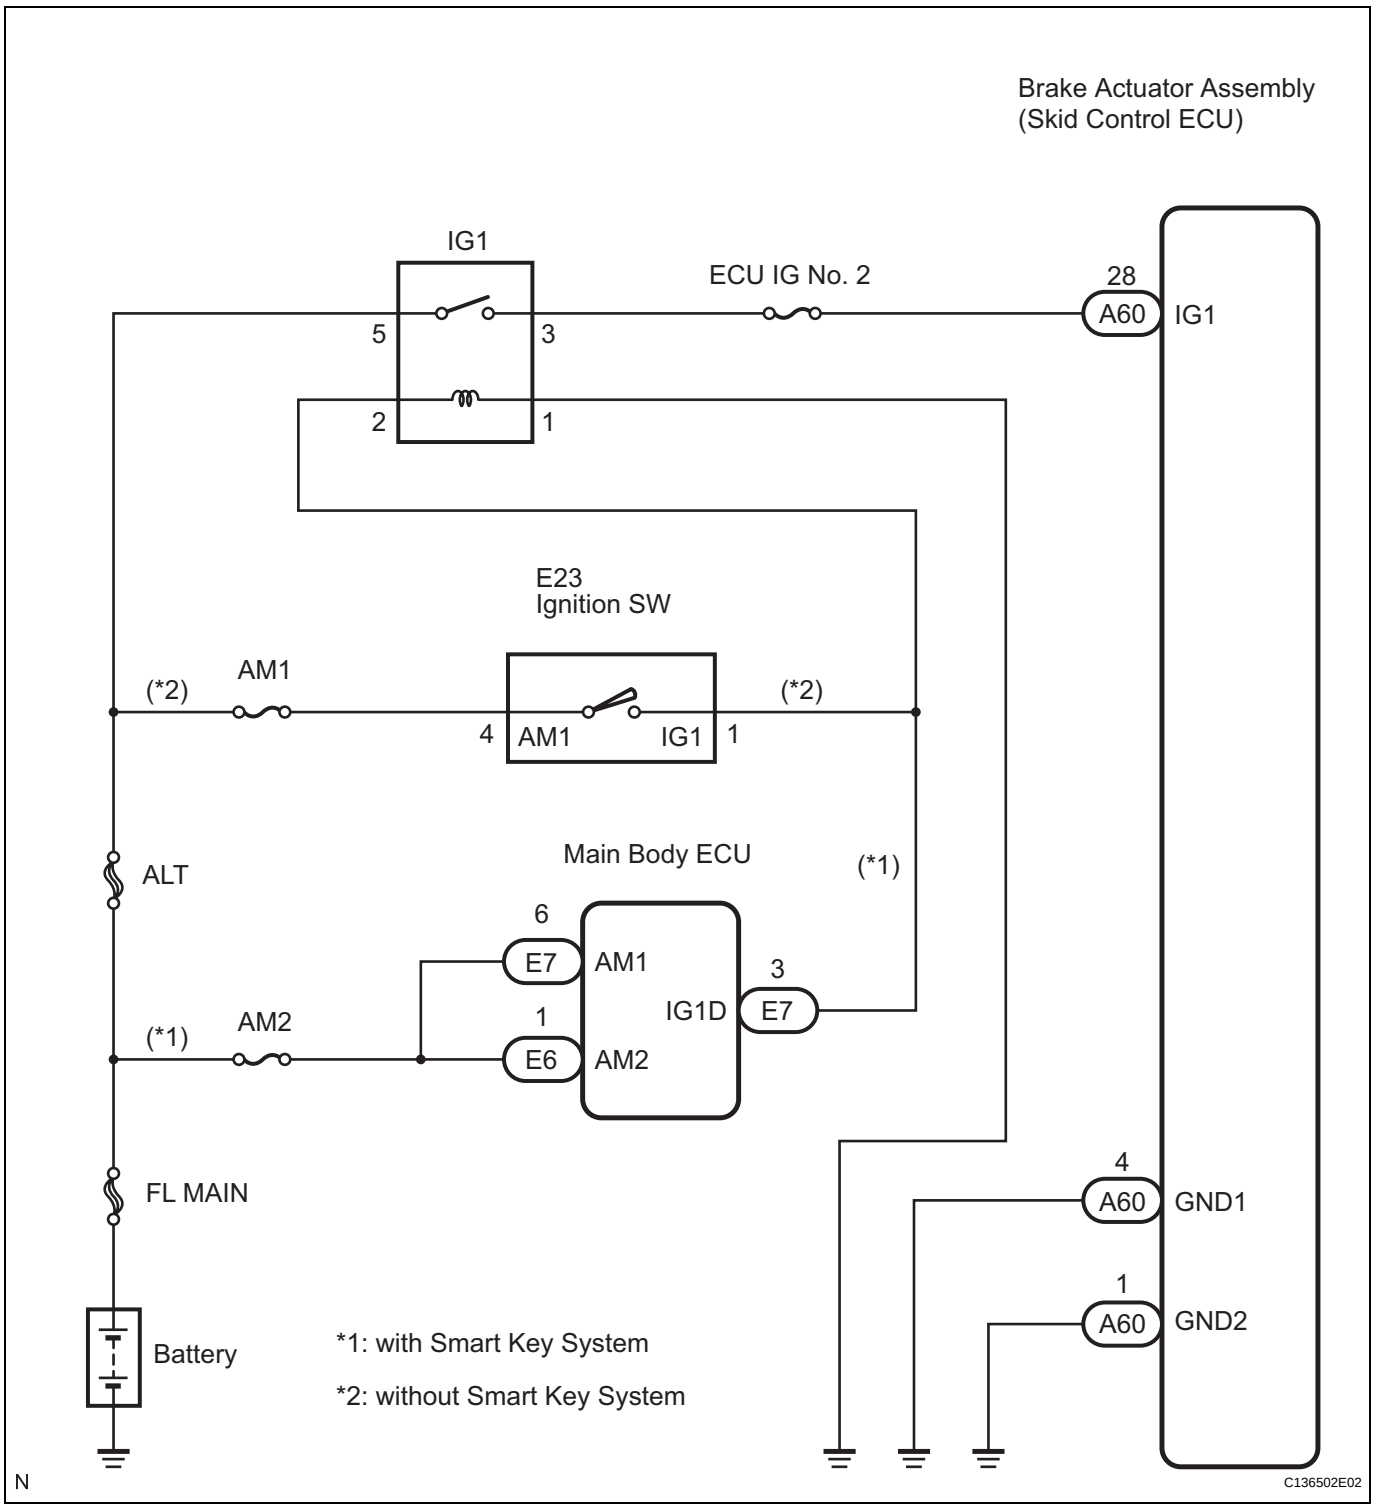
If a malfunction is detected in the power supply circuit of the brake actuator assembly (skid control ECU), the skid control ECU (housed in the actuator assembly) stores this DTC and the fail-safe function prohibits ABS operation.

This DTC is output when the IG1 terminal voltage deviates from the normal condition due to a malfunction in the power supply or charging circuit such as the battery or alternator circuit.

This DTC is cancelled when the IG1 terminal voltage returns to normal (only when the voltage returns to normal from a voltage lower than the specified value).

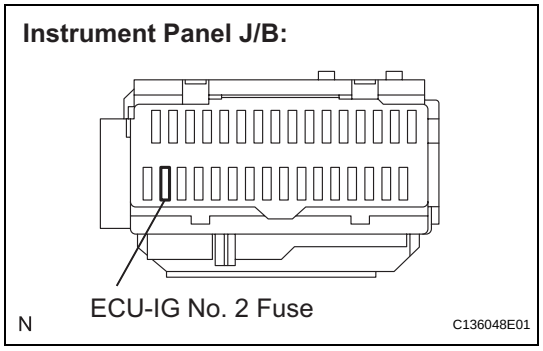
DTC No.	DTC Detection Condition	Trouble Area
C1241/41	When either of the following is detected: • Battery voltage is 16.8 V or more. • Battery voltage is 9.2 V or less.	• Battery • ECU-IG No. 2 fuse • Charging system • Power source circuit • Brake actuator assembly (internal power source circuit)

WIRING DIAGRAM



INSPECTION PROCEDURE

1 INSPECT FUSE (ECU-IG NO. 2 FUSE)



(a) Remove the ECU-IG No. 2 fuse from the instrument panel J/B.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition
ECU-IG No. 2 fuse	Below 1 Ω (Continuity)

(c) Install the fuse.

NG → **REPLACE FUSE**

OK

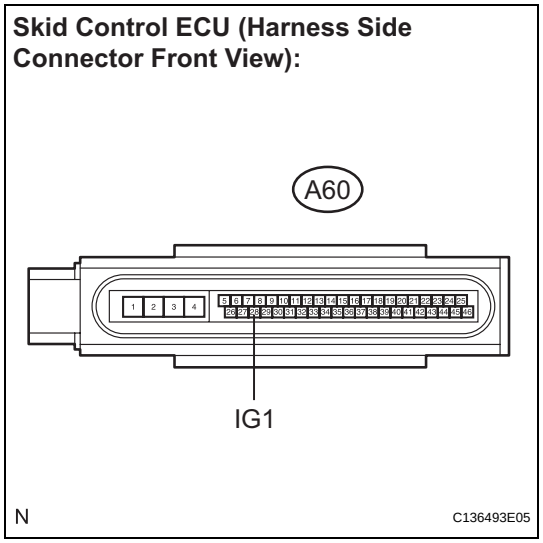
2 INSPECT BATTERY

(a) Check the battery voltage.
Standard voltage:
11 to 14 V

NG → **INSPECT CHARGING SYSTEM**

OK

3 INSPECT SKID CONTROL ECU (IG1 TERMINAL VOLTAGE)



(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Condition	Specified Condition
A60-28 (IG1) - Body ground	Ignition switch on (IG)	10 to 14 V

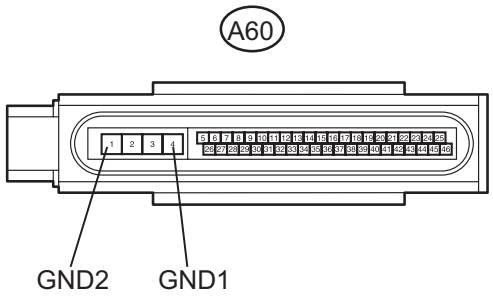
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (IG1 CIRCUIT)**

OK

BC

4 INSPECT SKID CONTROL ECU (GND TERMINAL CONTINUITY)

Skid Control ECU (Harness Side Connector Front View):



N C136493E02

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
A60-4 (GND1) - Body ground	Below 1 Ω
A60-1 (GND2) - Body ground	Below 1 Ω

(b) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

BC

OK

5 RECONFIRM DTC

(a) Clear the DTC (See page BC-302).
(b) Start the engine.
(c) Check if the same DTC is recorded (See page BC-302).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTC is not output	A
DTC is output (When troubleshooting in accordance with the PROBLEM SYMPTOMS TABLE)	B
DTC is output (When troubleshooting in accordance with the DTC CHART)	C

B → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page BC-295)**

C → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

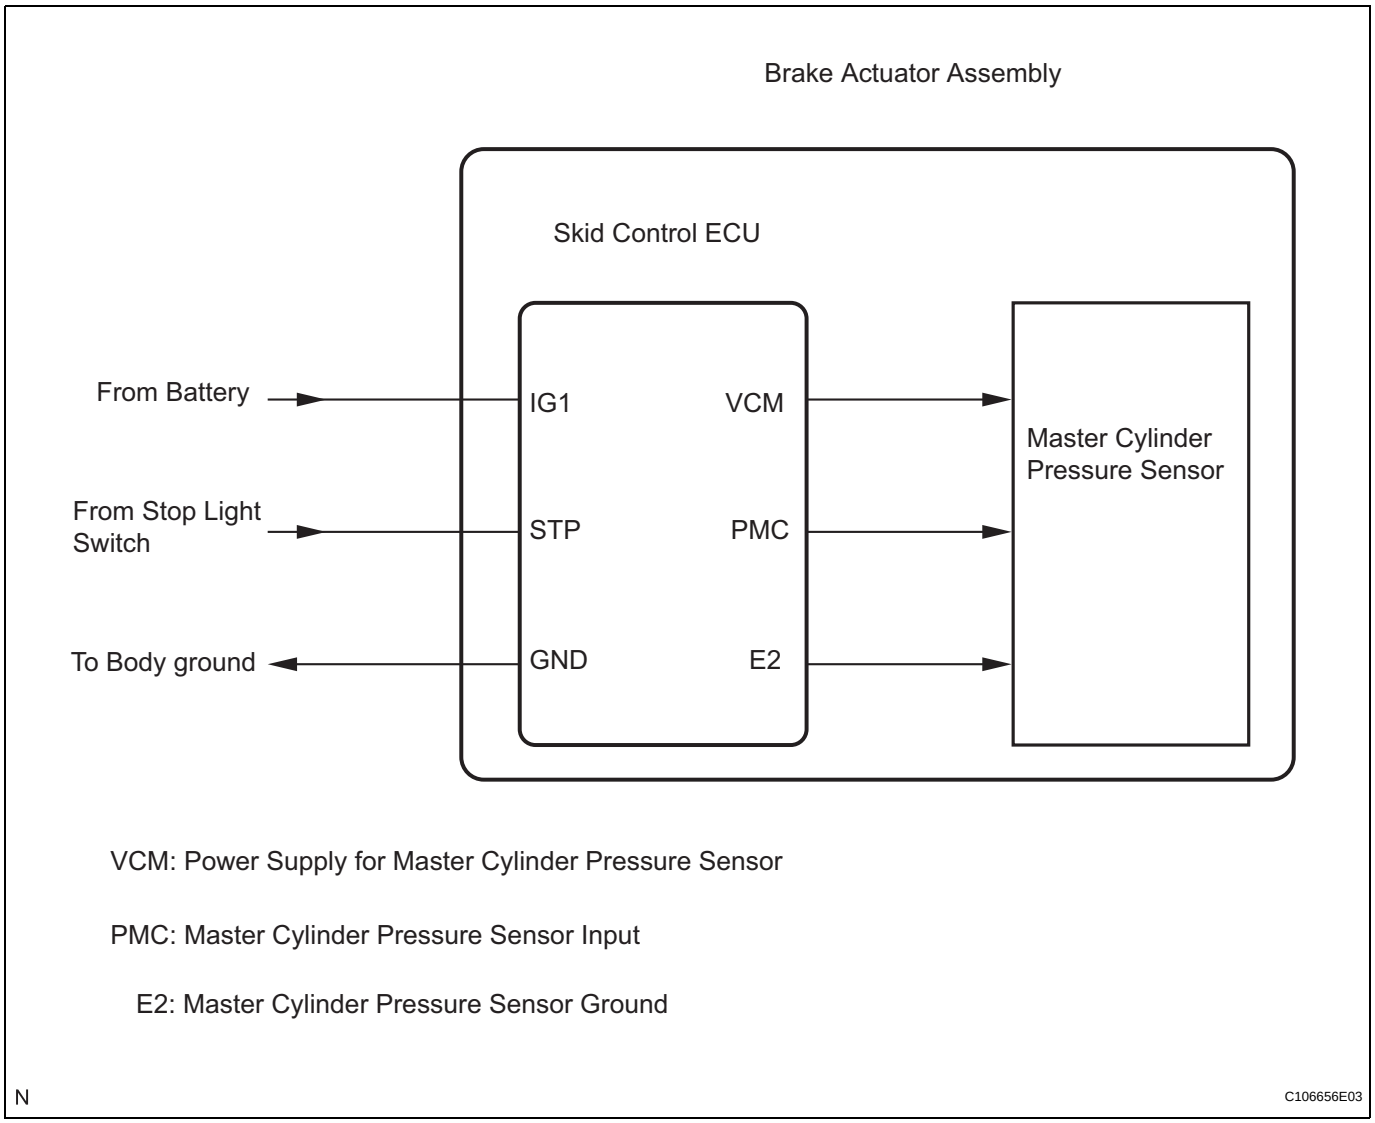
A

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION) (See page BC-298)

DTC	C1246/46	Master Cylinder Pressure Sensor Malfunction

DESCRIPTION

The master cylinder pressure sensor is connected to the skid control ECU in the brake actuator assembly.



DTC No.	DTC Detection Condition	Trouble Area
C1246/46	When any of the following is detected: • The voltage of the sensor signal is out of range (less than 0.3 V, more than 4.86 V). • The sensor supply voltage is out of range (above 5.3 V, below 4.7 V). • The sensor signal offset value is out of range. • The sum of signal 1 and signal 2 is out of range (above 5.5 V, below 4.5 V).	• Master cylinder pressure sensor • Master cylinder pressure sensor circuit • Stop light switch circuit • Brake actuator assembly (skid control ECU)

INSPECTION PROCEDURE

HINT:

Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK STOP LIGHT OPERATION

(a) Check that the stop light comes on when the brake pedal is depressed, and goes off when the brake pedal is released.

OK

Condition	Illumination Condition
Brake pedal depressed	ON
Brake pedal released	OFF

NG → **INSPECT STOP LIGHT CIRCUIT**

OK ↓

2	READ VALUE OF INTELLIGENT TESTER (MASTER CYLINDER PRESSURE SENSOR)

BC

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Select the "DATA LIST" mode on the intelligent tester (See page BC-307).

DATA LIST: ABS/TRAC/VSC

Item (Display)	Measurement Item / Range (Display)	Normal Condition
MAS CYL PRESS 1	Master cylinder pressure sensor 1 reading / min.: 0 V, max.: 5 V	When brake pedal is released: 0.3 to 0.5 V

(d) Check that the hydraulic pressure value of the master cylinder pressure sensor observed on the intelligent tester changes when the brake pedal is depressed.
OK:
When the pedal is depressed, voltage displayed on the intelligent tester increases.

NG → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

OK ↓

3	READ VALUE OF INTELLIGENT TESTER (STOP LIGHT SWITCH)

(a) Select the "DATA LIST" mode on the intelligent tester (See page BC-307).

DATA LIST: ABS/TRAC/VSC

Item (Display)	Measurement Item / Range (Display)	Normal Condition
STOP LAMP SW	Stop light switch / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released

(b) Check that the stop light condition observed on the intelligent tester changes when the brake pedal is depressed.
OK:
When the brake pedal is depressed, the intelligent tester displays "ON".

NG → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

OK

4	RECONFIRM DTC

(a) Clear the DTC (See page BC-302).
(b) Start the engine.
(c) At a speed of 18 mph (30 km/h) or more, drive the vehicle and perform braking test (decelerate the vehicle by depressing the brake pedal).
(d) Check if the same DTC is recorded (See page BC-302).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTC (C1246/46) is not output	A
DTC (C1246/46) is output	B

B → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

A

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION) (See page BC-298)

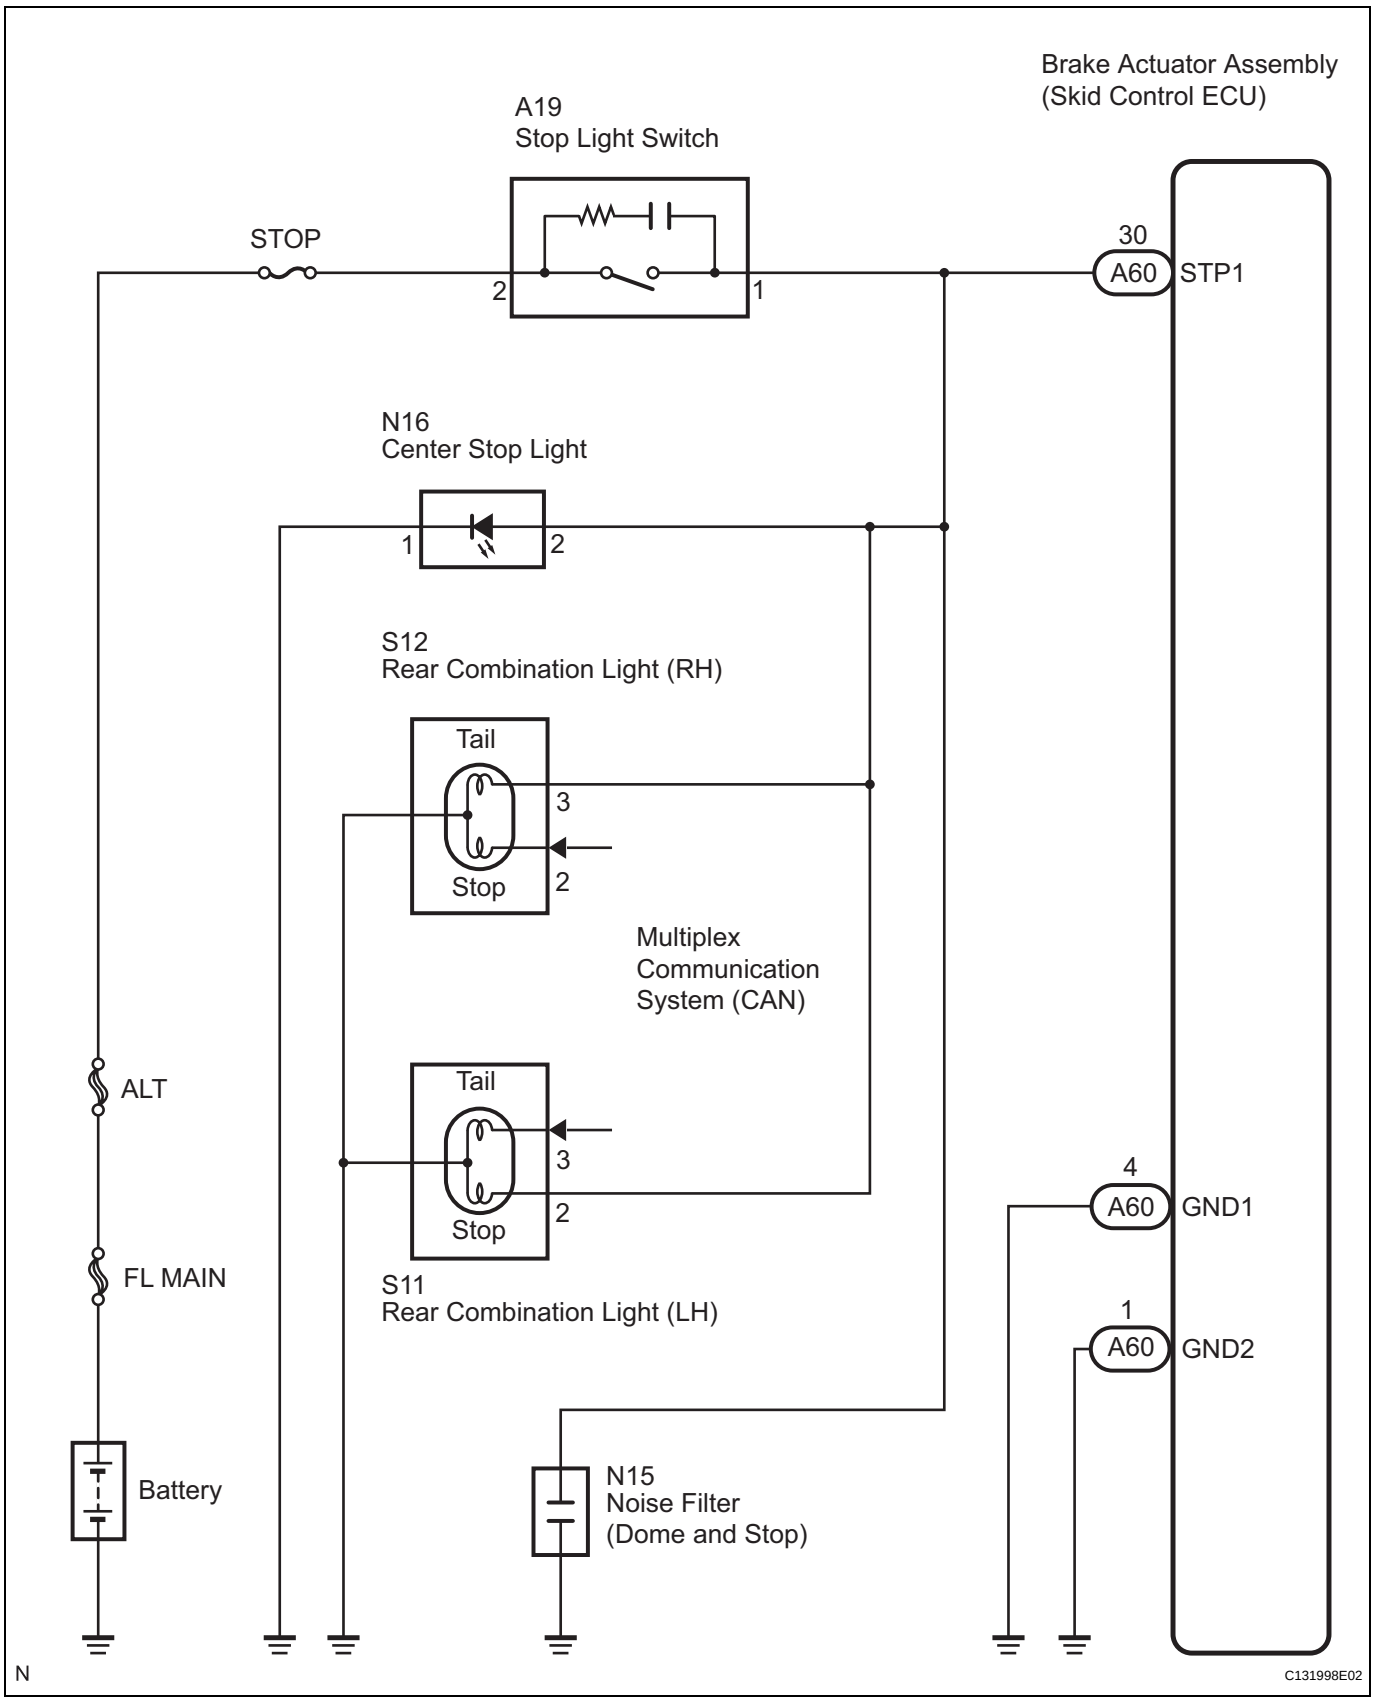
DTC	C1249/49	Open in Stop Light Switch Circuit

DESCRIPTION

This circuit recognizes brake operation by sending a stop light signal to the skid control ECU.
The skid control ECU has an open detection circuit, which outputs this DTC when detecting an open in the stop light signal input line (STP terminal) or the ground line of the stop light circuit with the stop light switch off (brake pedal not depressed).

DTC No.	DTC Detection Condition	Trouble Area
C1249/49	When either of the following is detected: • After the ignition switch is turned on (IG), the STP terminal voltage of the ECU is 40% to 67% of its supplied voltage for 0.5 seconds. • When STP signal is OFF (release the brake pedal), the pressure sensor value exceeds 725 bar for 1 second.	• Stop light switch • Stop light switch circuit • Brake actuator assembly (skid control ECU)

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

HINT:

Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK STOP LIGHT SWITCH OPERATION (STOP LIGHT SWITCH CIRCUIT)

(a) Check that the stop lights come on when the brake pedal is depressed and go off when the brake pedal is released.

OK

Pedal Condition	Illumination Condition
Brake pedal depressed	ON
Brake pedal released	OFF

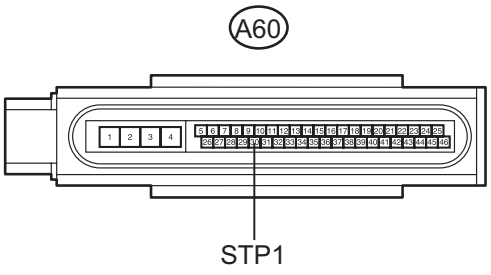
NG → **Go to step 5**

OK

2	INSPECT SKID CONTROL ECU (STP TERMINAL)

BC

Skid Control ECU (Harness Side Connector Front View):



(a) Disconnect the skid control ECU connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

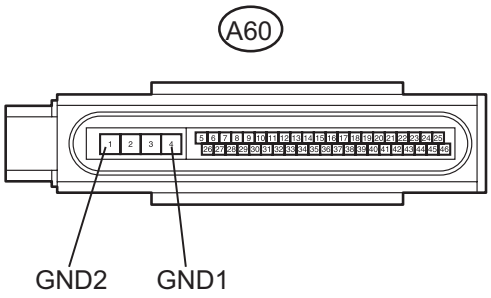
Tester Connection	Switch Condition	Specified Condition
A60-30 (STP1) - Body ground	Brake pedal depressed	8 to 14 V
A60-30 (STP1) - Body ground	Brake pedal released	Below 4.0 V

NG → **Go to step 7**

OK

3 INSPECT SKID CONTROL ECU (GND TERMINAL CONTINUITY)

Skid Control ECU (Harness Side Connector Front View):



N C136493E02

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
A60-4 (GND1) - Body ground	Below 1 Ω
A60-1 (GND2) - Body ground	Below 1 Ω

(b) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

4 RECONFIRM DTC

(a) Clear the DTC (See page BC-302).
(b) Start the engine.
(c) Depress the brake pedal several times to test the stop light circuit.
(d) Check if the same DTC is recorded (See page BC-302).

HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

HINT:
It is suspected that the DTCs were output due to a bad connection of the connector terminal.

B → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

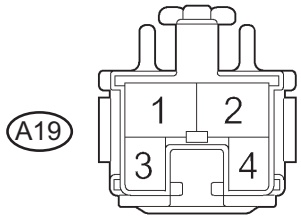
A

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION) (See page BC-298)

BC

5	CHECK HARNESS AND CONNECTOR (STOP LIGHT SWITCH POWER SOURCE TERMINAL VOLTAGE)

Stop Light Switch (Harness Side Connector Front View):



I042363E18

(a) Disconnect the stop light switch connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
A19-2 - Body ground	Always	10 to 14 V

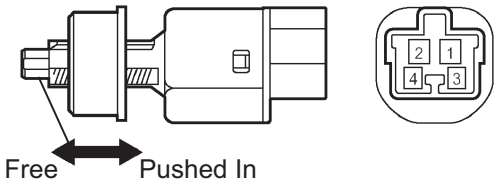
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (STOP LIGHT SWITCH POWER SOURCE CIRCUIT)**

OK

BC

6	INSPECT STOP LIGHT SWITCH ASSEMBLY

Stop Light Switch Assembly:



H

F047752E04

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Switch Condition	Specified Condition
1 - 2	Switch pin free	Below 1 Ω
1 - 2	Switch pin pushed in	10 kΩ or higher

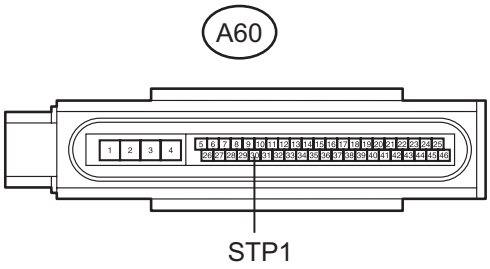
(b) Connect the connector.

NG → **REPLACE STOP LIGHT SWITCH ASSEMBLY**

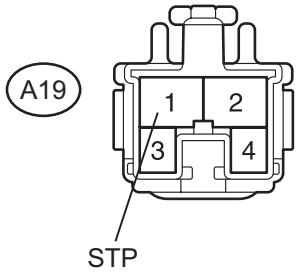
OK

7	CHECK HARNESS AND CONNECTOR (STOP LIGHT SWITCH TO SKID CONTROL ECU)

Skid Control ECU (Harness Side Connector Front View):



Stop Lignt Switch (Harness Side Connector Front View):



N C139147E01

(a) Disconnect the stop light switch connector and skid control ECU connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
A60-30 (STP1) - A19-1 (STP1)	Below 1 Ω

(c) Connect the connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (STOP LIGHT SWITCH TO SKID CONTROL ECU)**

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR (STOP LIGHT CIRCUIT)

BC

DTC	C1288/88	ECU Version Miss Match

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
C1288/88	ECM does not match	ECM

INSPECTION PROCEDURE

1 CHECK CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication system DTC is output (See page BC-302).

Result

Condition	Proceed to
CAN communication system DTC is not output	A
CAN communication system DTC is output	B

BC

B → **INSPECT CAN COMMUNICATION SYSTEM (See page CA-8)**

(a) Perform engine variant learning (See page BC-290).

NEXT

3 CONFIRM RECONFIRM DTC

(a) Clear the DTC (See page BC-302).
(b) Start the engine.
(c) Check if the same DTC is recorded (See page BC-302).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → **REPLACE ECM**

A

END

DTC	C1300/62	Skid Control ECU Malfunction

DESCRIPTION

The skid control ECU is housed in the brake actuator assembly.
The skid control ECU judges the vehicle driving condition based on the signals from each sensor, and controls the brake actuator assembly.

DTC No.	DTC Detection Condition	Trouble Area
C1300/62	Internal failure of the skid control ECU control unit	Brake actuator assembly (skid control ECU)

INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK DTC

(a) Check the DTC (See page BC-302).

BC

Result

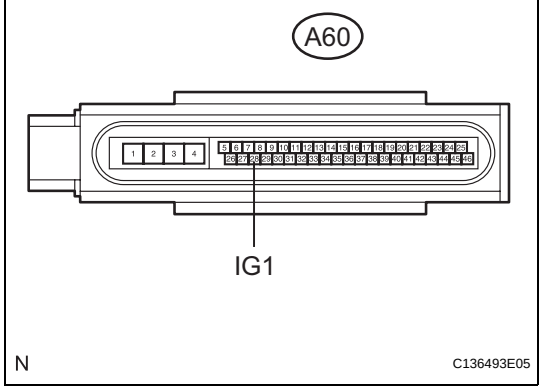
Condition	Proceed to
DTC C1300/62 is output (only C1300/62)	A
Other DTCs are output	B

B → **REPAIR CIRCUITS INDICATED BY OUTPUT DTCS (See page BC-302)**

A

2	INSPECT SKID CONTROL ECU (IG1 TERMINAL VOLTAGE)

Skid Control ECU (Harness Side Connector Front View):



(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

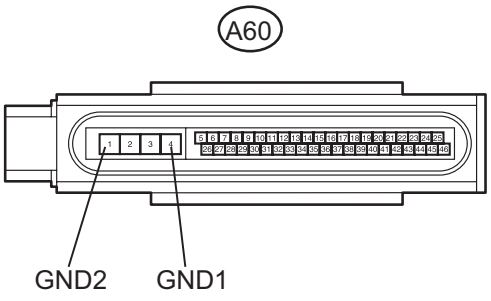
Tester Connection	Condition	Specified Condition
A60-28 (IG1) - Body ground	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (IG1 CIRCUIT)**

OK

3	INSPECT SKID CONTROL ECU (GND TERMINAL CONTINUITY)

Skid Control ECU (Harness Side Connector Front View):



N C136493E02

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
A60-4 (GND1) - Body ground	Below 1 Ω
A60-1 (GND2) - Body ground	Below 1 Ω

(b) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

BC

DTC	U0073/94	Control Module Communication Bus OFF

DTC	U0100/65	Lost Communication with ECM / PCM

DTC	U0123/62	Lost Communication with Yaw Rate Sensor Module

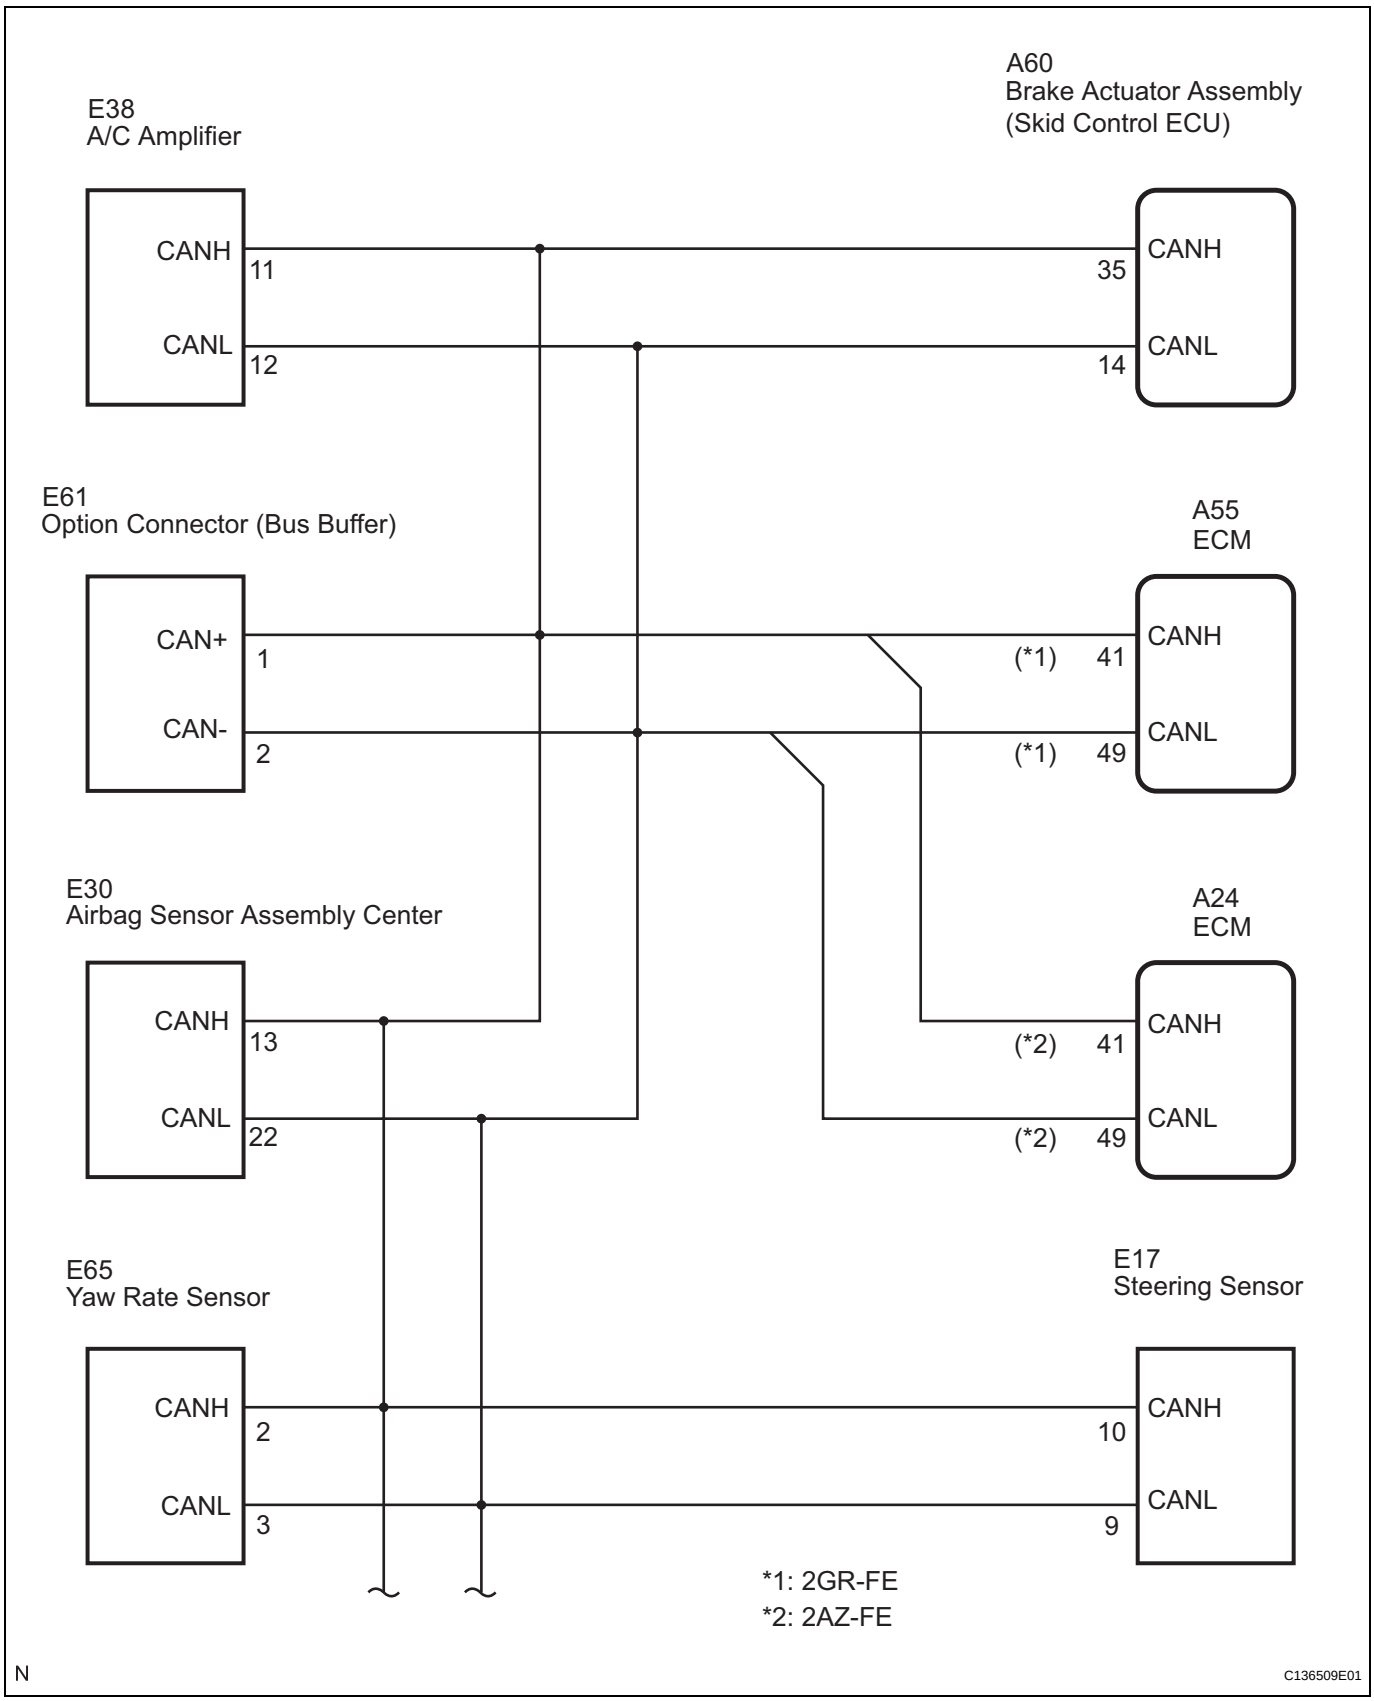
DTC	U0126/63	Lost Communication with Steering Angle Sensor Module

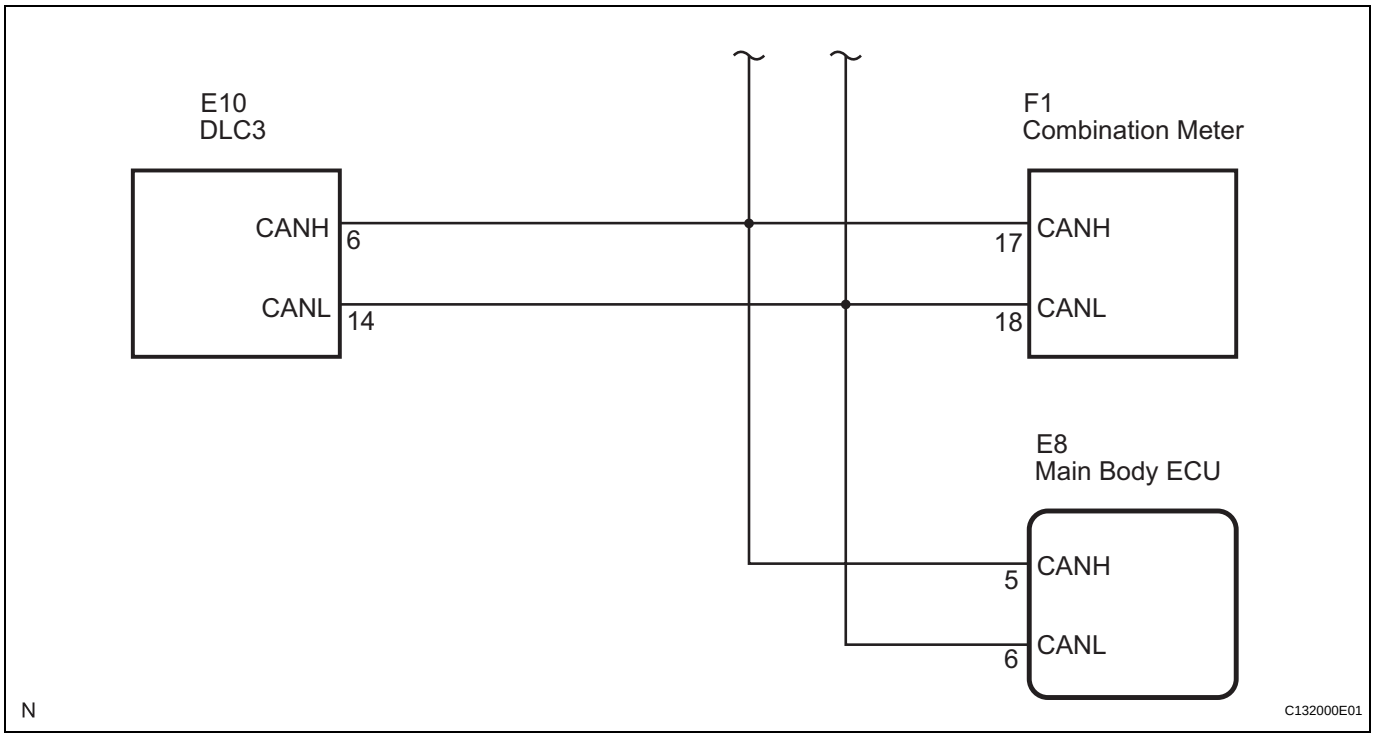
DESCRIPTION

The skid control ECU receives the signals from the ECM, steering angle sensor, and yaw rate and acceleration sensor via the CAN communication system.

DTC No.	DTC Detection Condition	Trouble Area
U0073/94	When either of the following is detected: 1. Bus OFF state continues for 300 msec. 2. The ECU detects that it cannot send a signal.	CAN communication system
U0100/65	When either of the following is detected: 1. At a vehicle speed of 4 mph (6 km/h) or more, the skid control ECU receives data that is out of range from the engine. 2. At a vehicle speed of 4 mph (6 km/h) or more, the skid control ECU receives abnormal data from the engine (5 cycles).	CAN communication system (Skid control ECU to ECM)
U0123/62	When any r of the following is detected: 1. The skid control ECU receives an abnormal signal from the yaw rate sensor (5 cycles). 2. The skid control ECU receives a signal that has a shorter message than normal. 3. The skid control ECU cannot receive a signal from the yaw rate sensor.	CAN communication system (Skid control ECU to yaw rate and acceleration sensor)
U0126/63	When any of the following is detected: 1. The skid control ECU receives an abnormal signal from the steering angle sensor (5 cycles). 2. The skid control ECU receives a signal that has a shorter message than normal. 3. The skid control ECU cannot receive a signal from the steering angle sensor.	CAN communication system (Skid control ECU to steering angle sensor)

WIRING DIAGRAM





BC

INSPECTION PROCEDURE

Proceed to CAN communication system troubleshooting (See page CA-8).

HINT:

When a DTC indicating a CAN communication system malfunction is output, repair the CAN communication system before repairing each corresponding sensor.

ABS Warning Light Remains ON

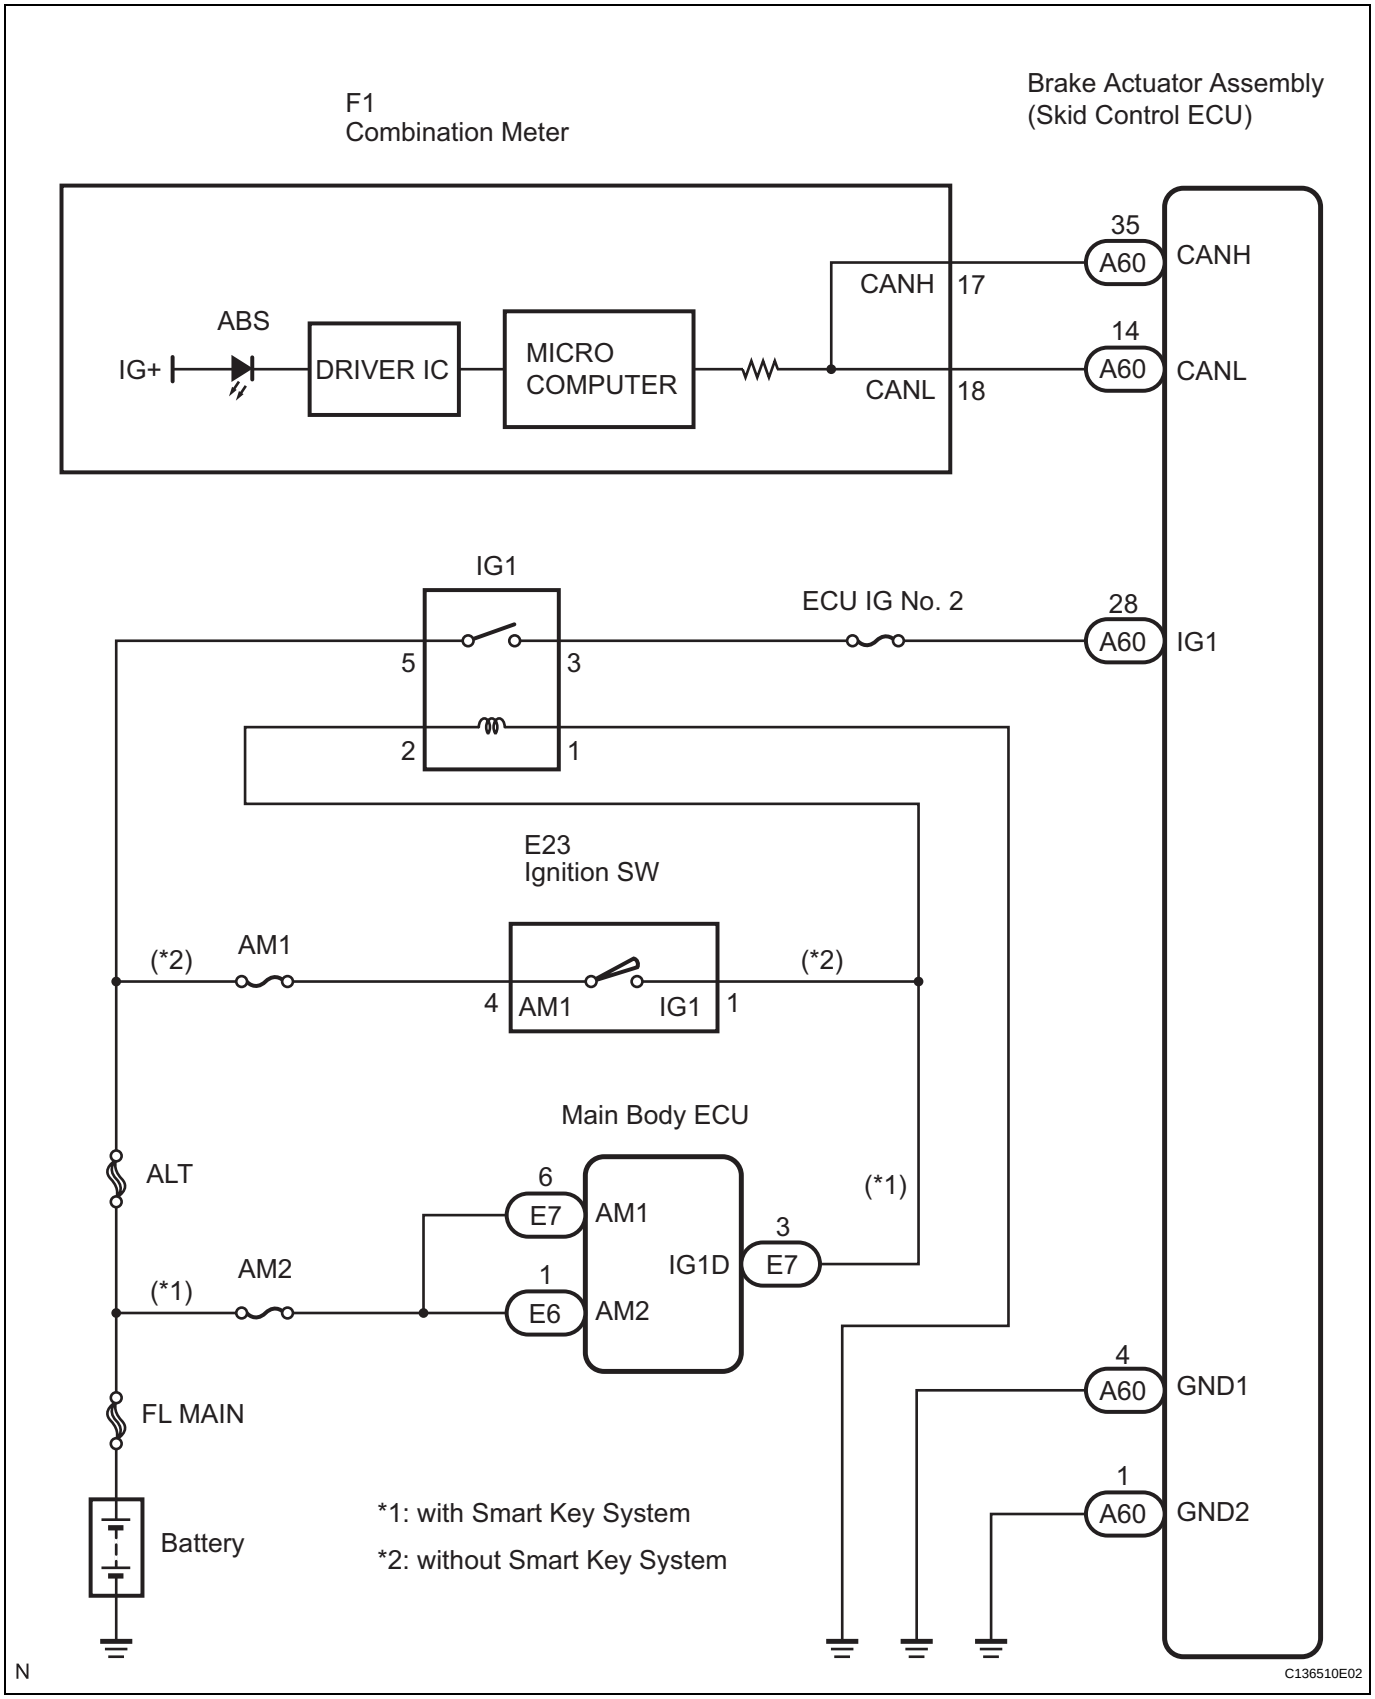
DESCRIPTION

The skid control ECU is connected to the combination meter assembly via CAN communication.
If any of the following is detected, the ABS warning light remains on.

- The skid control ECU connectors are disconnected from the skid control ECU.
- There is a malfunction in the skid control ECU internal circuit.
- There is an open in the wire harness between the combination meter assembly and the skid control ECU.

HINT:
In some cases, the intelligent tester cannot be used when the skid control ECU is abnormal.

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

HINT:

Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication system DTC is output (See page BC-302).

Result

Condition	Proceed to
CAN communication system DTC is not output	A
CAN communication system DTC is output	B

B → **INSPECT CAN COMMUNICATION SYSTEM (See page CA-8)**

A

2	CHECK IF SKID CONTROL ECU CONNECTOR IS SECURELY CONNECTED

BC

(a) Check if the skid control ECU connector is securely connected.
OK:
The connector is securely connected.

NG → **CONNECT CONNECTOR TO ECU CORRECTLY**

OK

3	CHECK BATTERY

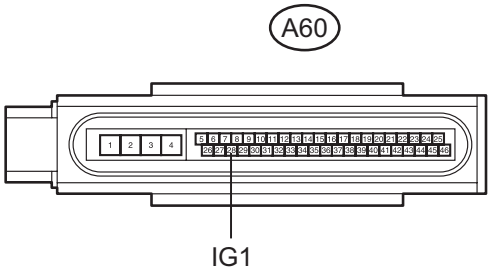
(a) Check the battery voltage.
Standard voltage:
11 to 14 V

NG → **CHECK AND REPLACE CHARGING SYSTEM OR BATTERY**

OK

4 INSPECT SKID CONTROL ECU (IG1 TERMINAL)

Skid Control ECU (Harness Side Connector Front View):



N C136493E05

(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

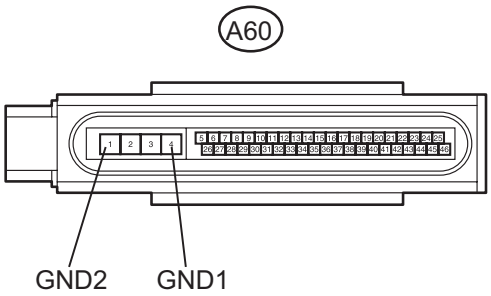
Tester Connection	Condition	Specified Condition
A60-28 (IG1) - Body ground	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (IG1 CIRCUIT)**

OK

5 INSPECT SKID CONTROL ECU (GND TERMINAL)

Skid Control ECU (Harness Side Connector Front View):



N C136493E02

(a) Turn the ignition switch off.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A60-4 (GND1) - Body ground	Always	Below 1 Ω
A60-1 (GND2) - Body ground	Always	Below 1 Ω

(c) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

6 INSPECT COMBINATION METER ASSEMBLY

(a) Connect the intelligent tester to the DLC3.
(b) Perform "ACTIVE TEST" of the combination meter assembly using the intelligent tester (See page ME-32).
(c) Check the ABS warning light operation.

OK:

The ABS warning light turns on or off in accordance with the intelligent tester.

BC

NG → **REPLACE COMBINATION METER ASSEMBLY (See page ME-63)**

OK

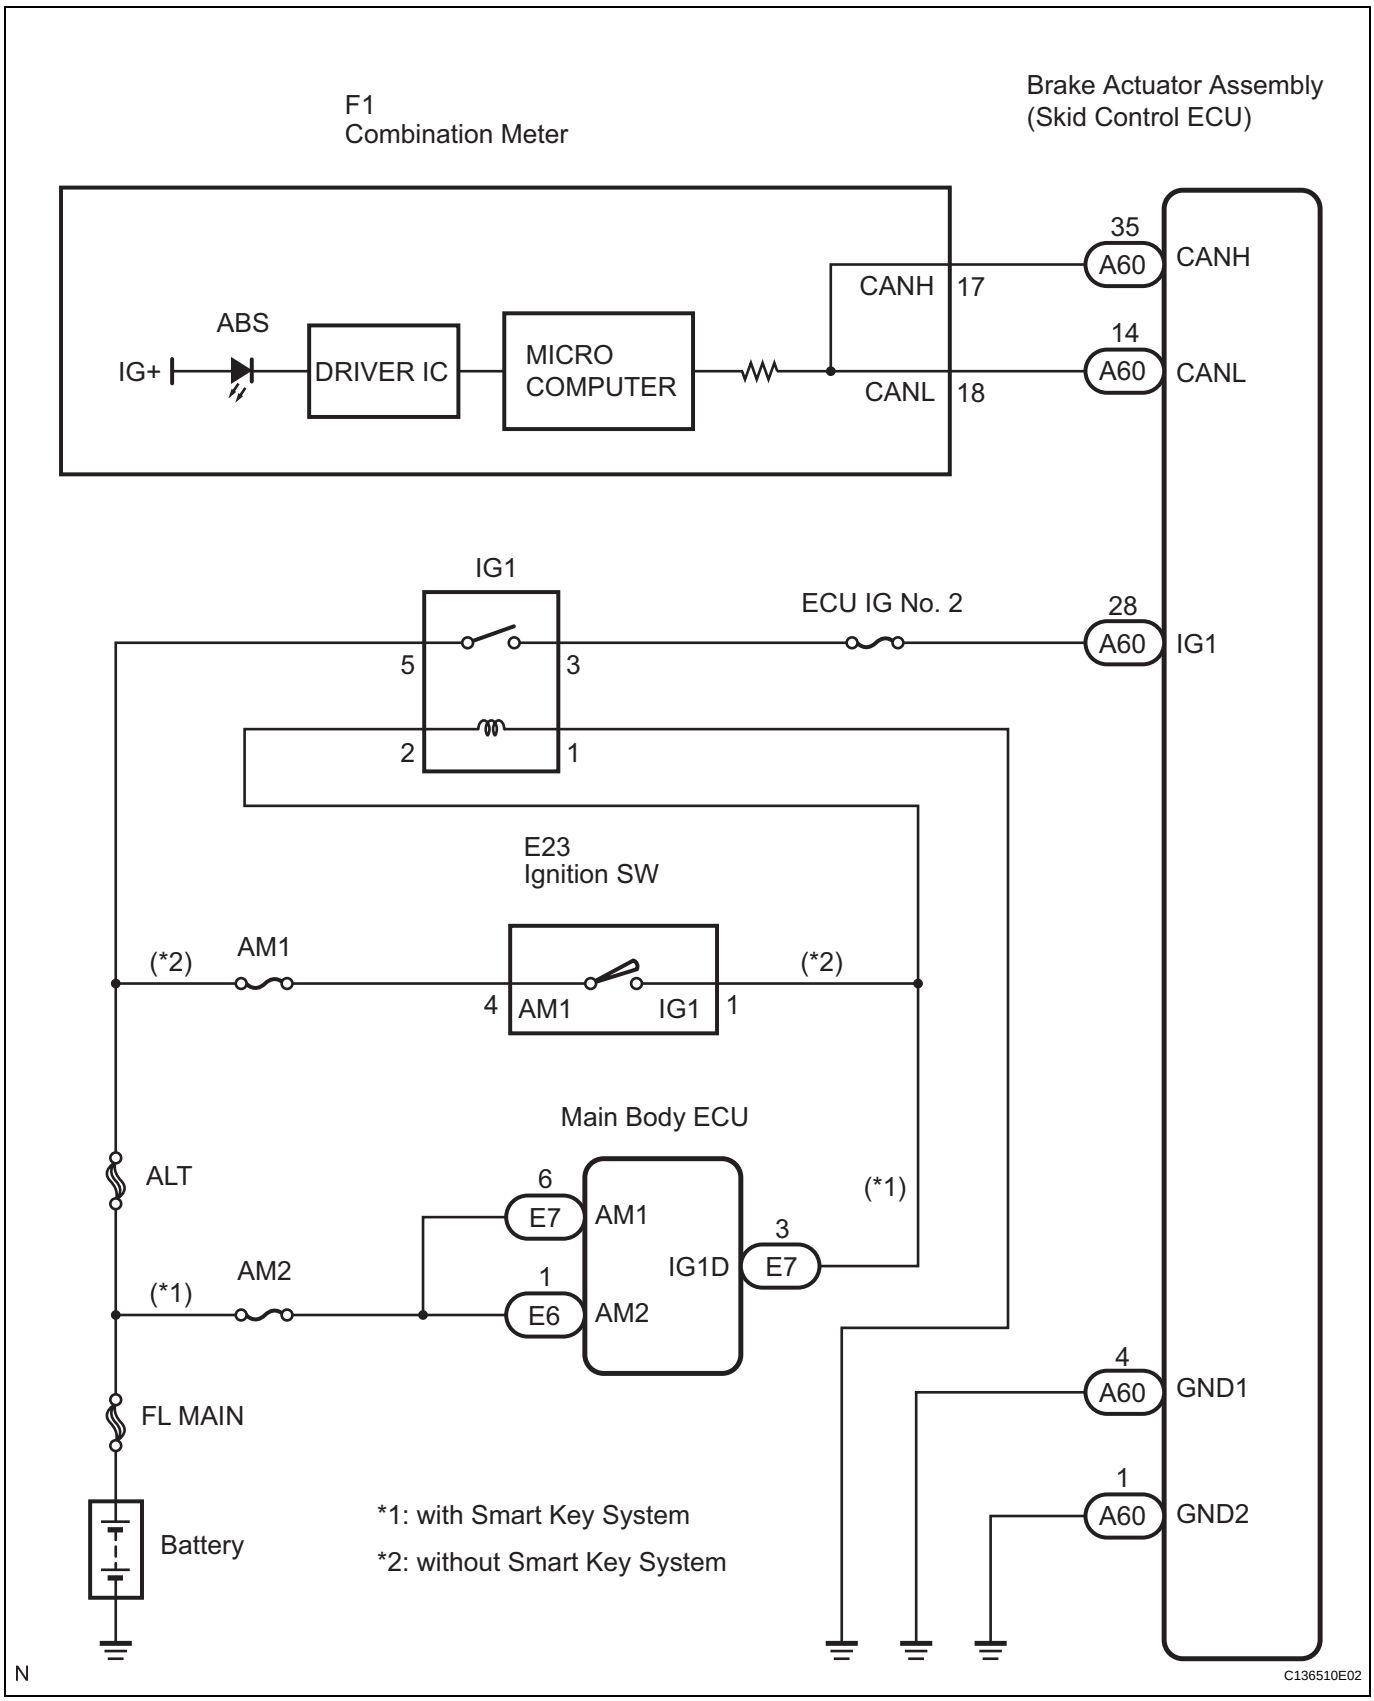
REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

ABS Warning Light does not Come ON

DESCRIPTION

The skid control ECU is connected to the combination meter assembly via CAN communication.

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication system DTC is output (See page BC-302).

Result

Condition	Proceed to
CAN communication system DTC is not output	A
CAN communication system DTC is output	B

B → **INSPECT CAN COMMUNICATION SYSTEM (See page CA-8)**

A

2	CHECK ABS WARNING LIGHT

(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch on (IG).
(c) Check that the ABS warning light comes on.
OK:
The ABS warning light comes on.
(d) Connect the connector.

OK → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

NG

3	INSPECT COMBINATION METER ASSEMBLY

(a) Connect the intelligent tester to the DLC3.
(b) Perform "ACTIVE TEST" of the combination meter assembly using the intelligent tester (See page ME-32).
(c) Check ABS warning light operation.
OK:
The ABS warning light turns on or off in accordance with the intelligent tester.

NG → **REPLACE COMBINATION METER ASSEMBLY (See page ME-63)**

OK

REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

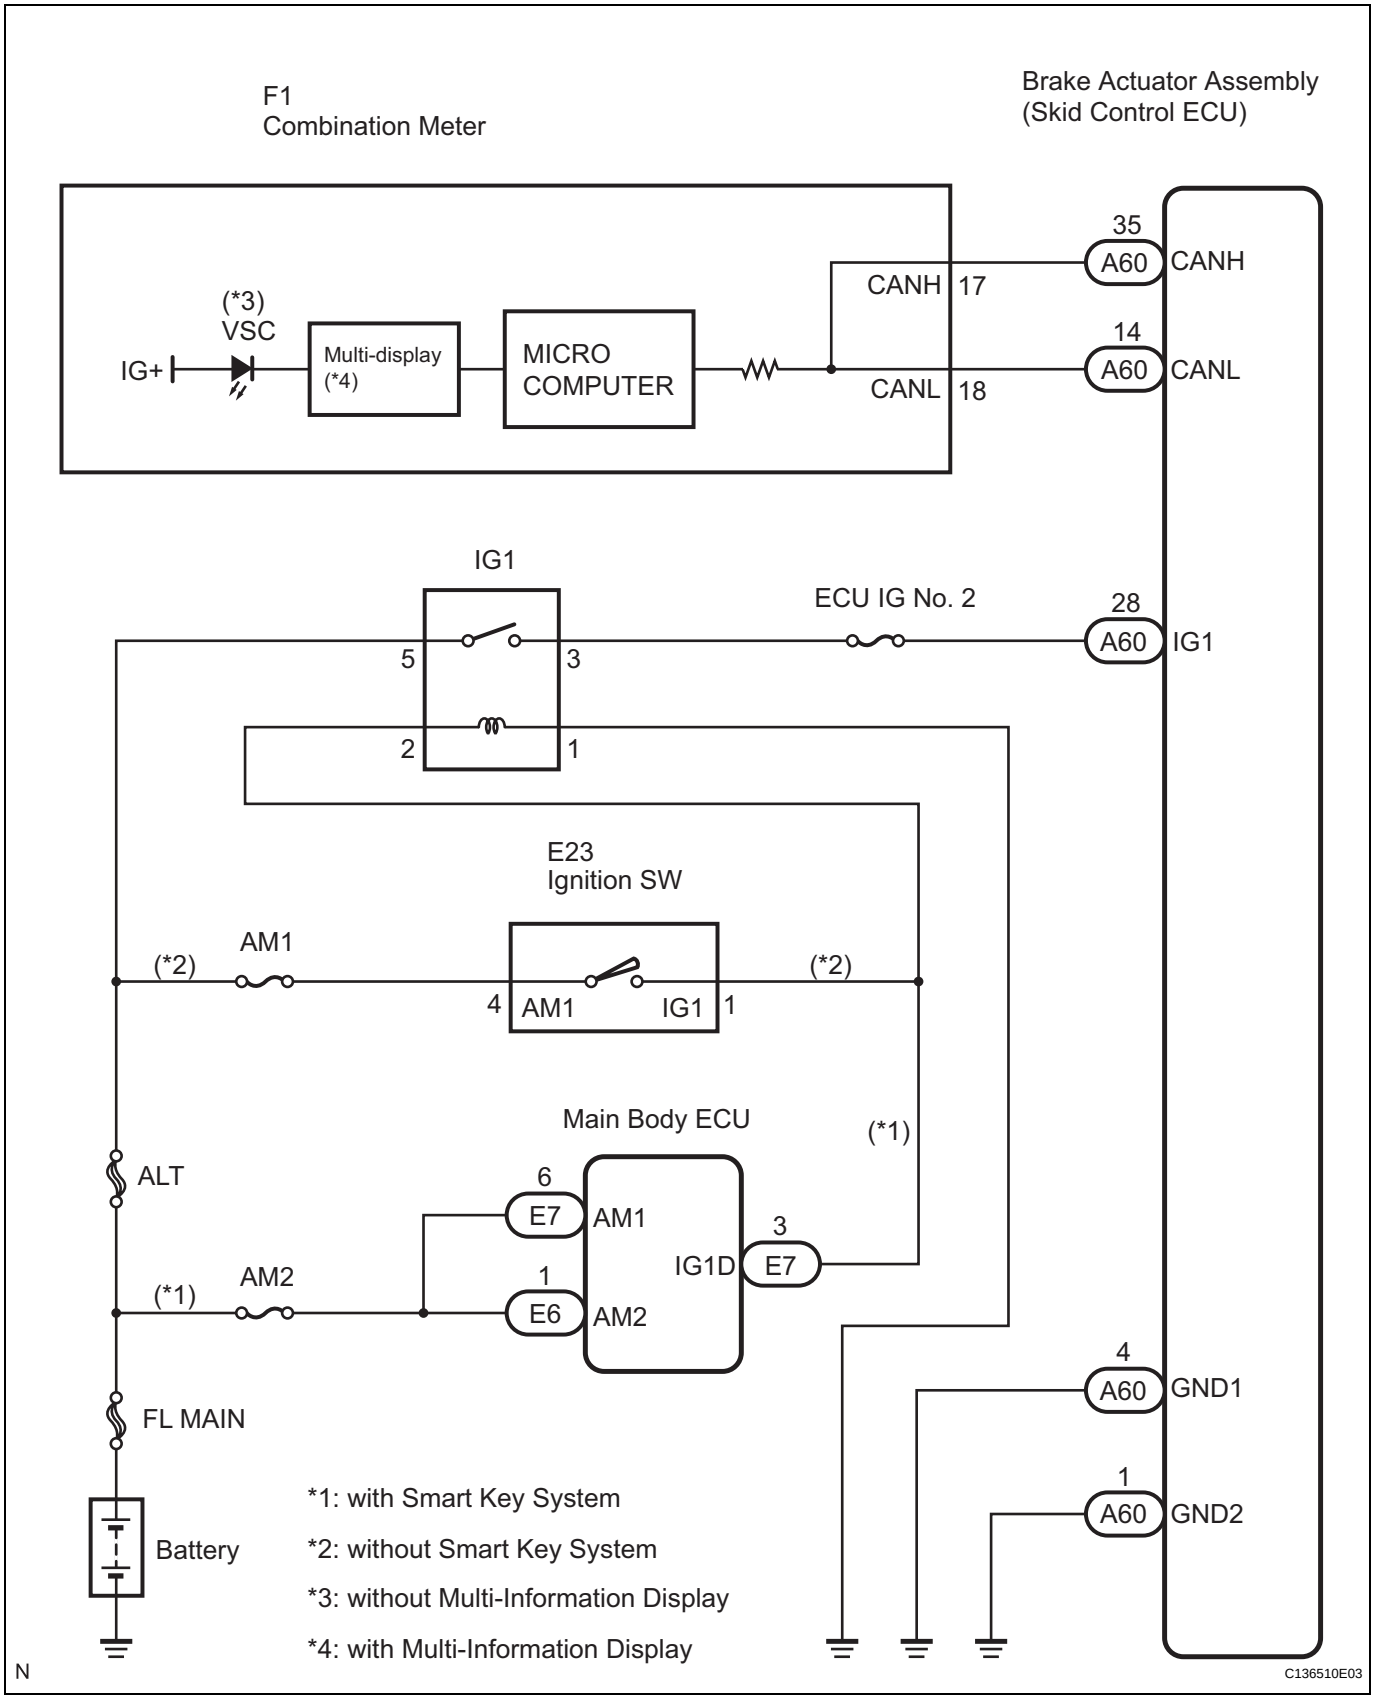
BC

VSC Warning Light Remains ON

DESCRIPTION

The skid control ECU communicates with the combination meter assembly via CAN communication. If the ECU stores a DTC, the master caution indicator light will illuminate, and the DTC will be displayed on the multi-information display in the combination meter (models with multi-information display). On models without a multi-information display, the VSC warning light will come on when the skid control ECU stores a DTC.

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

HINT:

Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication system DTC is output (See page BC-302).

Result

Condition	Proceed to
CAN communication system DTC is not output	A
CAN communication system DTC is output	B

B → **INSPECT CAN COMMUNICATION SYSTEM (See page CA-8)**

A

2	CHECK IF SKID CONTROL ECU CONNECTOR IS SECURELY CONNECTED

(a) Check if the skid control ECU connector is securely connected.
OK:
The connector is securely connected.

NG → **CONNECT CONNECTOR TO ECU CORRECTLY**

OK

3	CHECK BATTERY

(a) Check the battery voltage.
Standard voltage:
11 to 14 V

NG → **CHECK AND REPLACE CHARGING SYSTEM OR BATTERY**

OK

4	INSPECT COMBINATION METER ASSEMBLY

(a) Connect the intelligent tester to the DLC3.
(b) Perform "ACTIVE TEST" of the combination meter assembly using the intelligent tester (See page ME-32).
(c) Check VSC warning (multi-information display)/VSC warning light (without multi-information display) operation.
OK:
The VSC warning (multi-information display) or VSC warning light turns on or off in accordance with the intelligent tester.

NG → **REPLACE COMBINATION METER ASSEMBLY (See page ME-63)**

OK

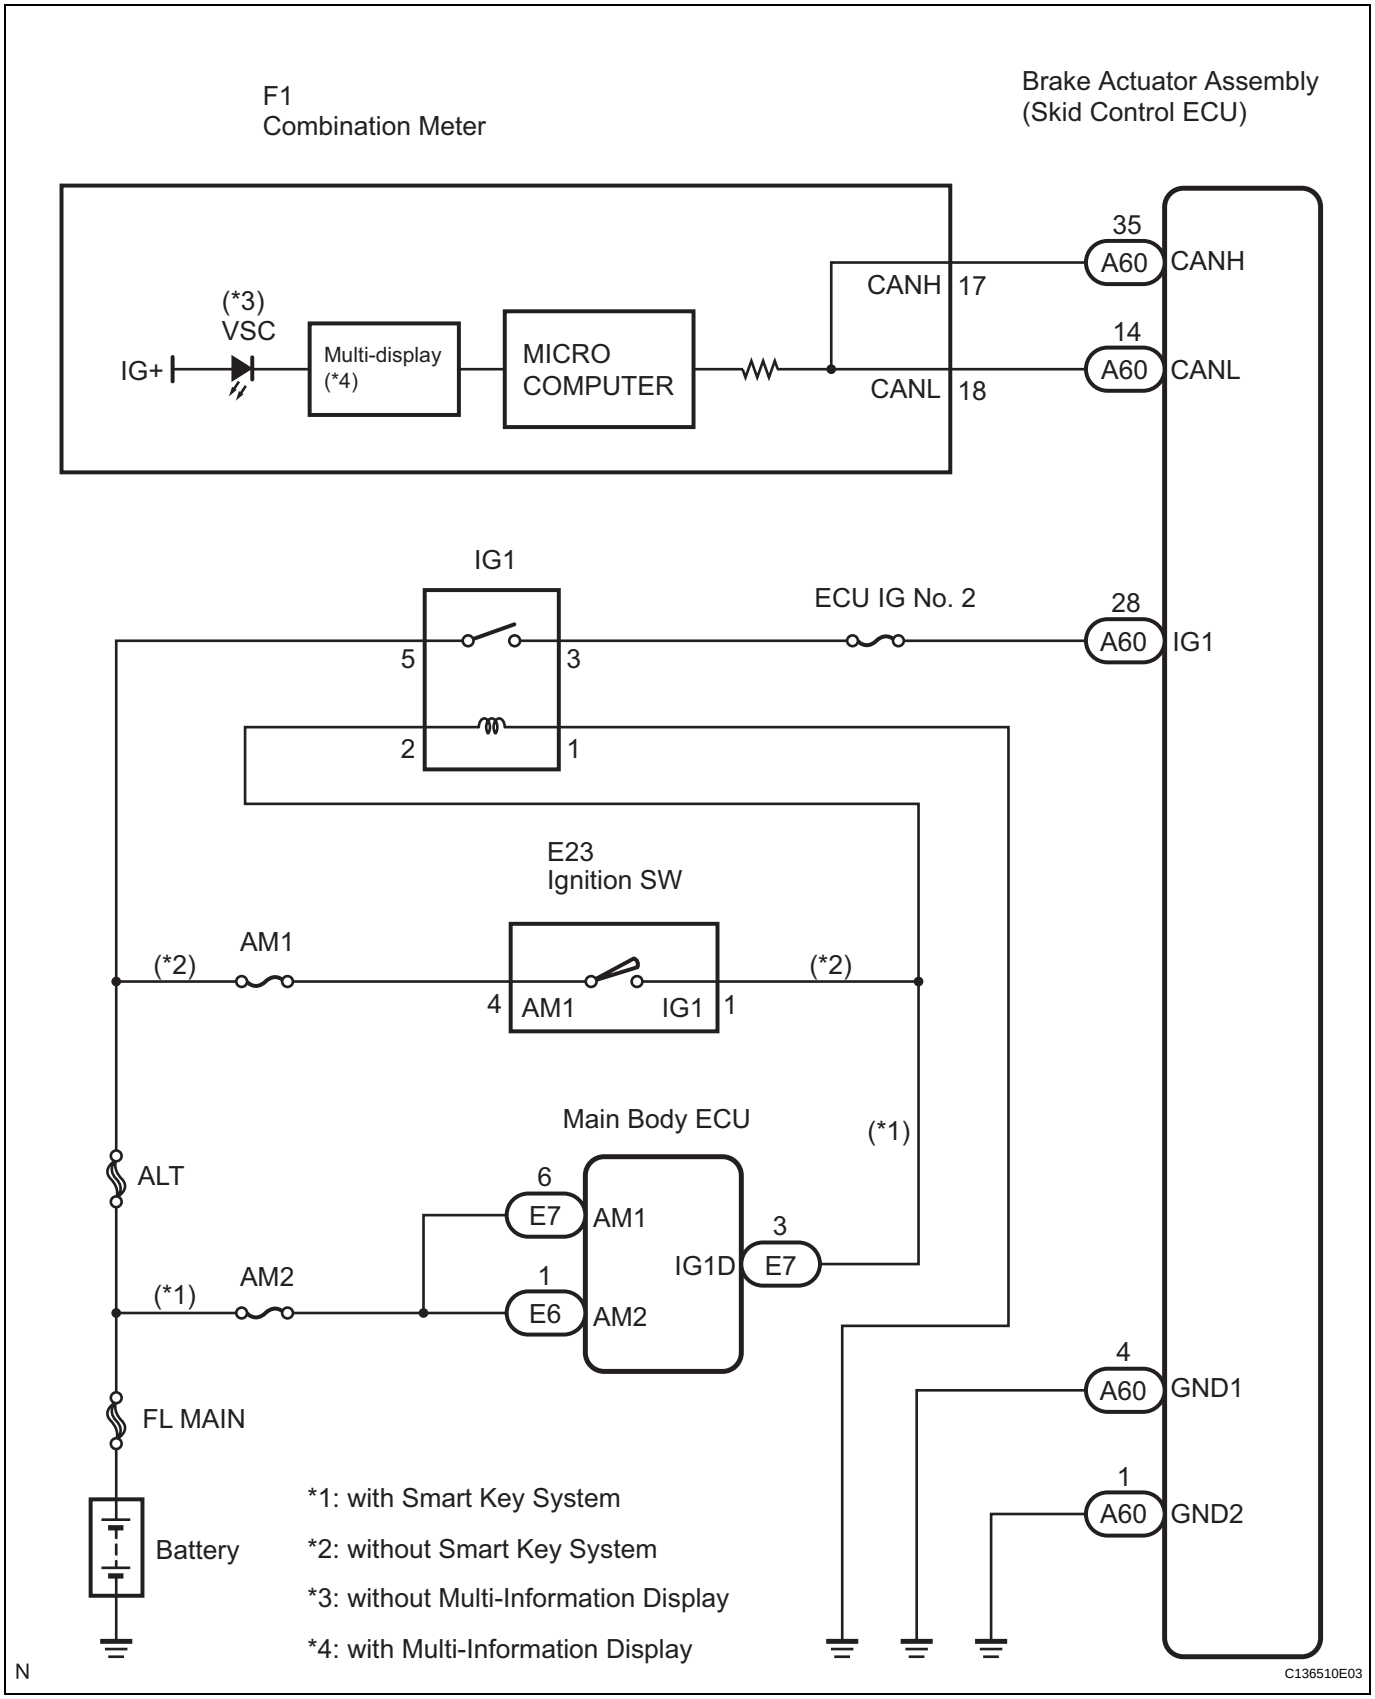
REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

VSC Warning Light does not Come ON

DESCRIPTION

The skid control ECU communicates with the combination meter assembly via CAN communication. If the ECU stores a DTC, the master caution indicator light will illuminate, and the DTC will be displayed on the multi-information display in the combination meter (models with multi-information display). On models without a multi-information display, the VSC warning light will come on when the skid control ECU stores a DTC.

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication system DTC is output (See page BC-302).

Result

Condition	Proceed to
CAN communication system DTC is not output	A
CAN communication system DTC is output	B

B → **INSPECT CAN COMMUNICATION SYSTEM (See page CA-8)**

A

2	INSPECT COMBINATION METER ASSEMBLY

(a) Connect the intelligent tester to the DLC3.
(b) Perform "ACTIVE TEST" of the combination meter assembly using the intelligent tester (See page ME-32).
(c) Check that "ON" and "OFF" of the VSC warning (multi-information display) or VSC warning light are indicated on the combination meter assembly when using the intelligent tester.

OK:

The VSC warning (multi-information display) turns on or off in accordance with the intelligent tester.

NG → **REPLACE COMBINATION METER ASSEMBLY (See page ME-63)**

OK

REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

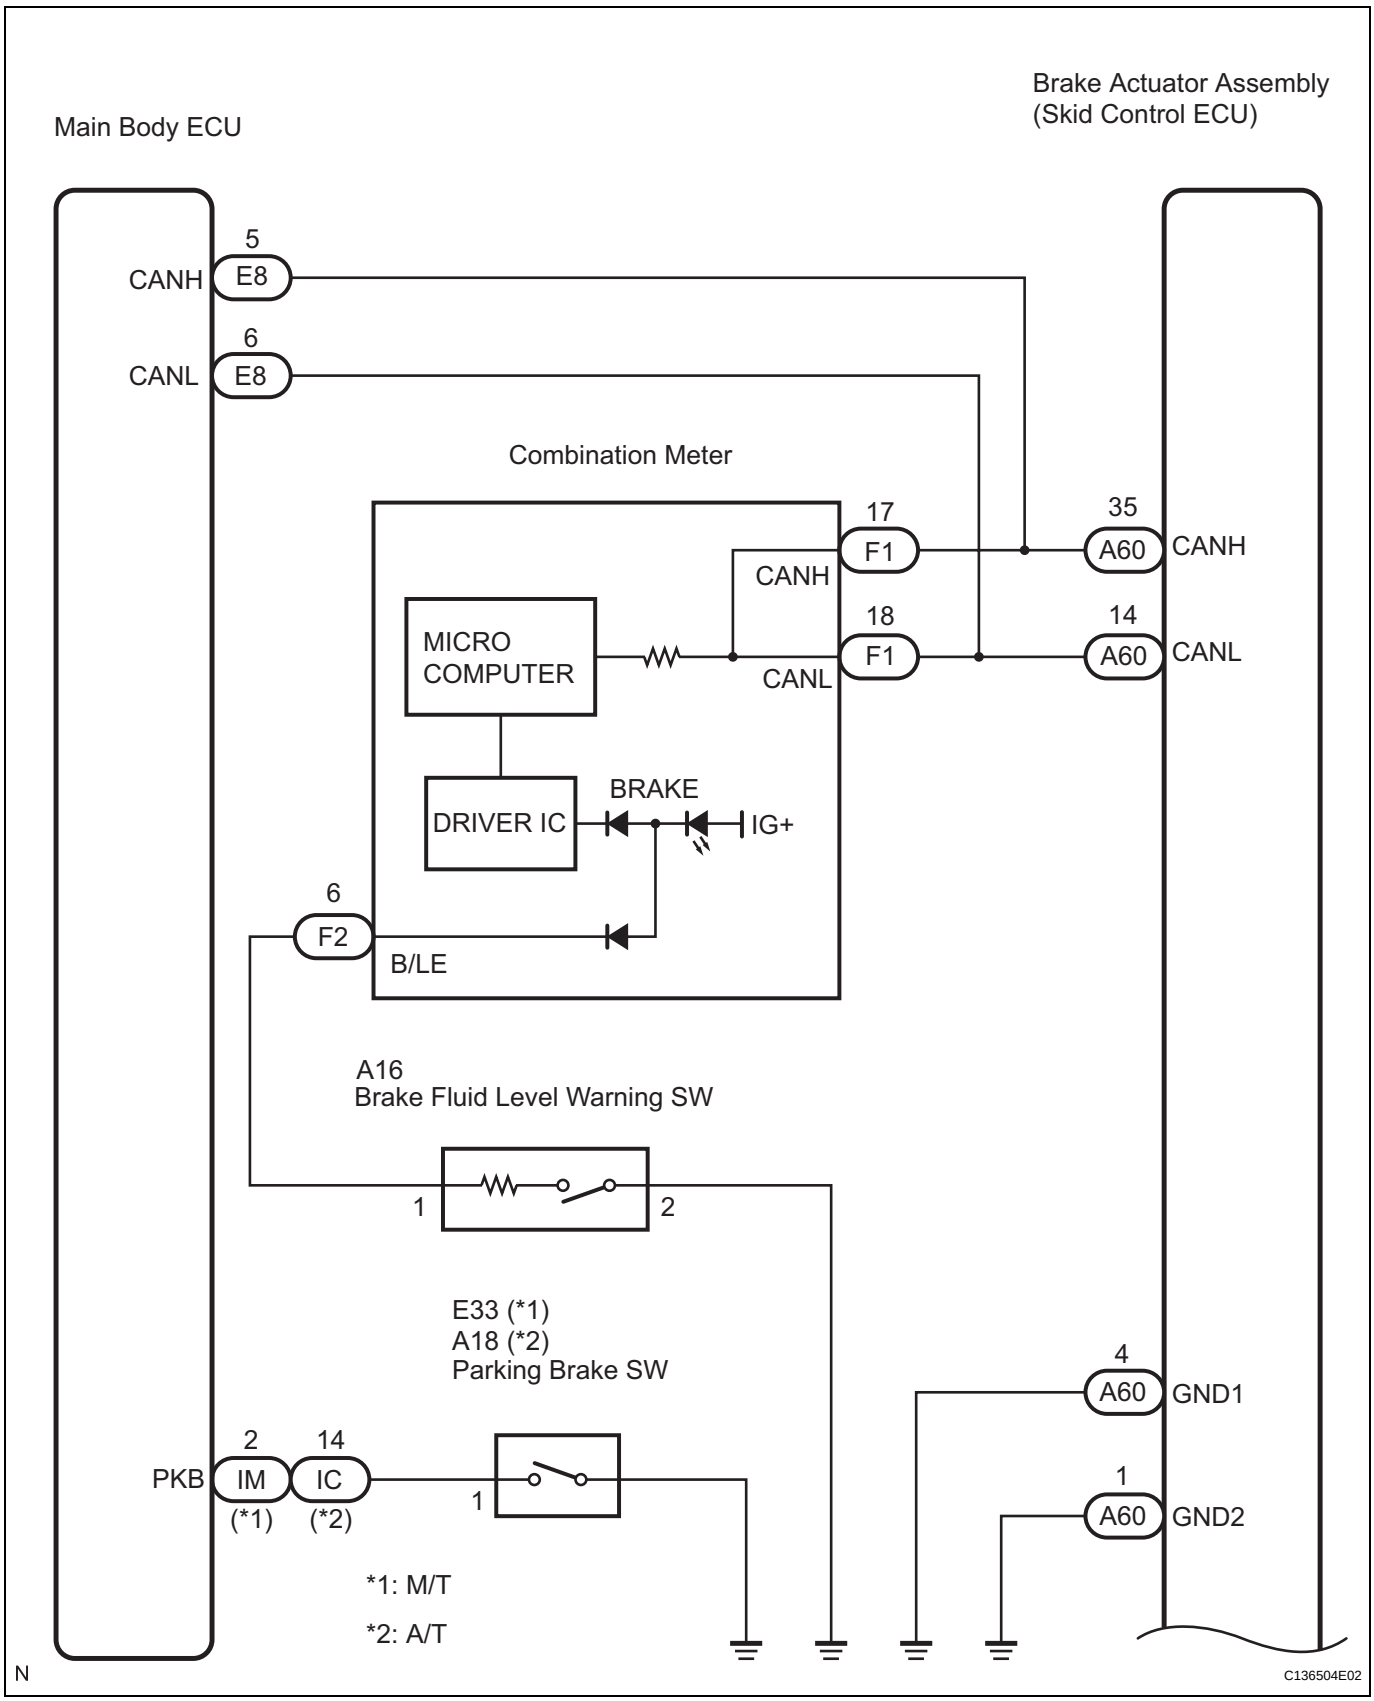
Brake Warning Light Remains ON

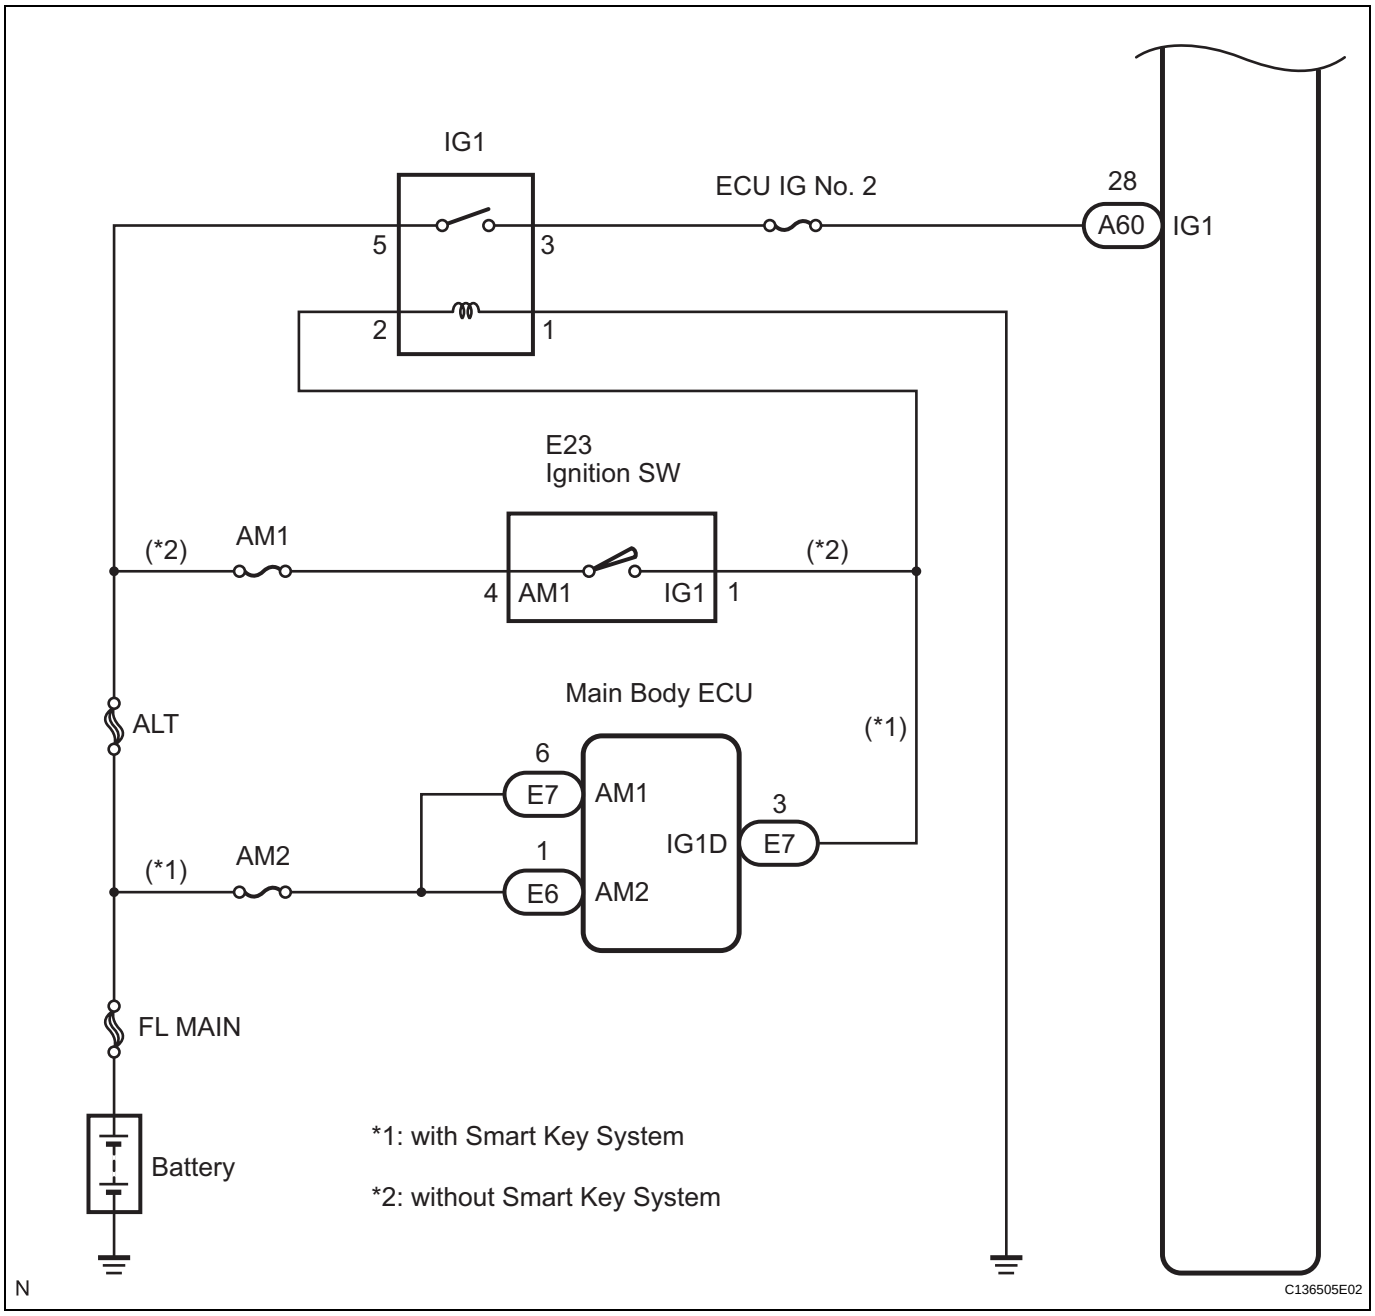
DESCRIPTION

The skid control ECU is connected to the combination meter assembly via CAN communication.
If any of the following is detected, the BRAKE warning light remains on:

- The skid control ECU connector is disconnected from the skid control ECU.
- The brake fluid level is insufficient.
- The parking brake is applied.
- EBD operation is not possible.

WIRING DIAGRAM





BC

INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication system DTC is output (See page BC-302).

Result

Condition	Proceed to
CAN communication system DTC is not output	A
CAN communication system DTC is output	B

B → **INSPECT CAN COMMUNICATION SYSTEM (See page CA-8)**

A

2 CHECK IF SKID CONTROL ECU CONNECTOR IS SECURELY CONNECTED

(a) Check if the skid control ECU connector is securely connected.
OK:
The connector is securely connected.

NG → **CONNECT CONNECTOR TO ECU CORRECTLY**

OK

BC

3 CHECK BATTERY

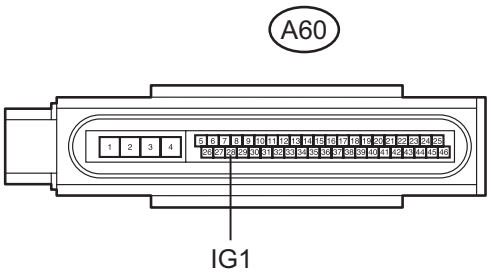
(a) Check the battery voltage.
Standard voltage:
11 to 14 V

NG → **CHECK AND REPLACE CHARGING SYSTEM OR BATTERY**

OK

4 INSPECT SKID CONTROL ECU (IG1 TERMINAL)

Skid Control ECU (Harness Side Connector Front View):



(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.
Standard voltage

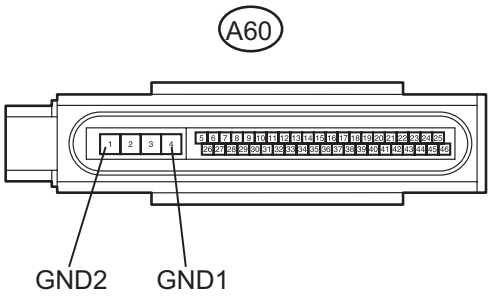
Tester Connection	Condition	Specified Condition
A60-28 (IG1) - Body ground	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (IG1 CIRCUIT)**

OK

5 INSPECT SKID CONTROL ECU (GND TERMINAL)

Skid Control ECU (Harness Side Connector Front View):



N C136493E02

(a) Turn the ignition switch off.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A60-4 (GND1) - Body ground	Always	Below 1 Ω
A60-1 (GND2) - Body ground	Always	Below 1 Ω

(c) Connect the connector.

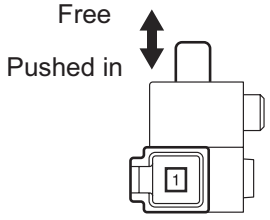
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

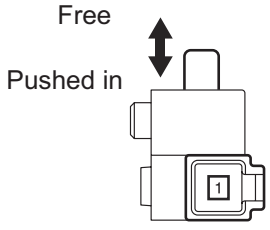
6 INSPECT PARKING BRAKE SWITCH

Parking Brake Switch:

Automatic Transaxle:



Manual Transaxle:



N C109430E03

(a) Disconnect the parking brake switch connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - Body ground	Parking brake switch ON (Switch pin free)	Below 1 Ω
1 - Body ground	Parking brake switch OFF (Switch pin pushed in)	10 kΩ or higher

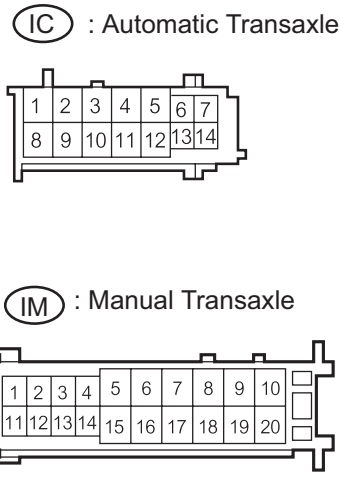
NG → **REPLACE PARKING BRAKE SWITCH**

OK

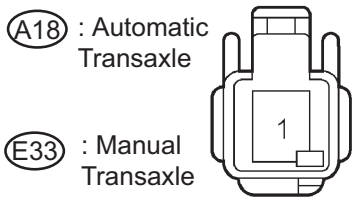
BC

7	CHECK HARNESS AND CONNECTOR (MAIN BODY ECU TO PARKING BRAKE SWITCH)

Main Body ECU
Wire Harness View:



Parking Brake Switch Harness Side Connector Front View:



C136418E03

OK

(a) Measure the resistance according to the value(s) in the table below.
Standard resistance:
Automatic Transaxle

Tester Connection	Condition	Specified Condition
IC-14 (PKB) - A18-1	Always	Below 1 Ω
IC-14 (PKB) - Body ground	Always	10 kΩ or higher

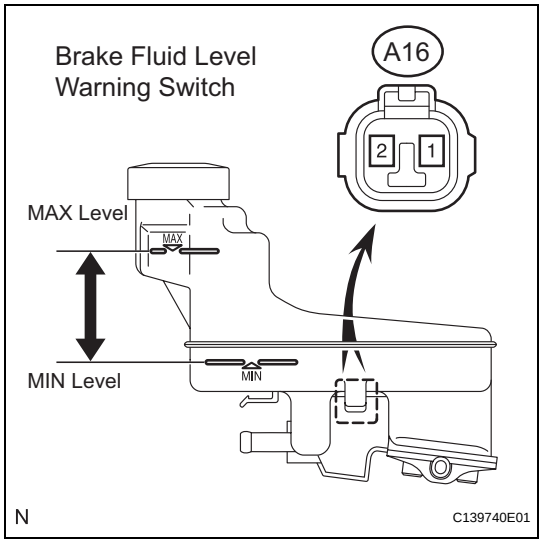
Manual Transaxle

Tester Connection	Condition	Specified Condition
IM-2 (PKB) - E33-1	Always	Below 1 Ω
IM-2 (PKB) - Body ground	Always	10 kΩ or higher

(b) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (MAIN BODY ECU TO PARKING BRAKE SWITCH)**

8	INSPECT BRAKE FLUID LEVEL WARNING SWITCH



(a) Remove the reservoir tank cap and strainer.
(b) Disconnect the brake fluid level warning switch connector.
(c) Measure the resistance according to the value(s) in the table below.
HINT:
A float is located inside the reservoir. Its position can be changed by increasing or decreasing the level of brake fluid.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Float up (Switch OFF)	1.9 to 2.1 kΩ
1 - 2	Float down (Switch ON)	Below 1 Ω

HINT:
If there is no problem after finishing the above check, adjust the brake fluid level to the MAX level.

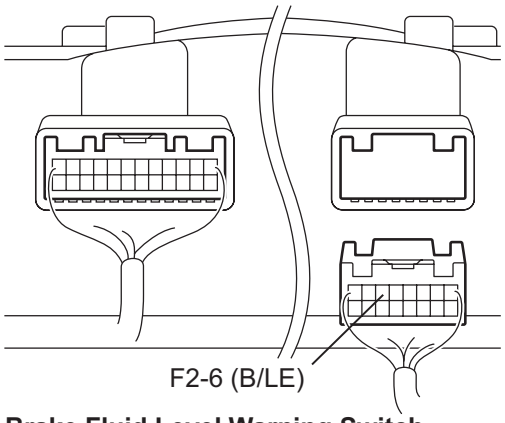
NG → **REPLACE BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY (BRAKE FLUID LEVEL WARNING SWITCH)**

OK

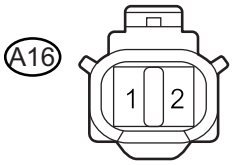
BC

9	CHECK HARNESS AND CONNECTOR (COMBINATION METER TO BRAKE FLUID LEVEL WARNING SWITCH)

Combination Meter Wire Harness View:



Brake Fluid Level Warning Switch Harness Side Connector Front View:



C136033E01

(a) Disconnect the combination meter connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
F2-6 (B/LE) - A16-1	Always	Below 1 Ω
F2-6 (B/LE) - Body ground	Always	10 kΩ or higher
A16-2 - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (COMBINATION METER TO BRAKE FLUID LEVEL WARNING SWITCH)**

OK

10	INSPECT COMBINATION METER ASSEMBLY

(a) Connect the intelligent tester to the DLC3.
(b) Select the "ACTIVE TEST" on the tester (See page BC-307).

ACTIVE TEST: ABS/TRAC/VSC

Item	Vehicle Condition/Test Details	Diagnostic Note
BRAKE WRN LIGHT	Turns brake warning light on / off	Observe combination meter

(c) Check BRAKE warning light operation.

OK:

The BRAKE warning light turns on or off in accordance with the intelligent tester.

NG → **REPLACE COMBINATION METER ASSEMBLY (See page ME-63)**

OK

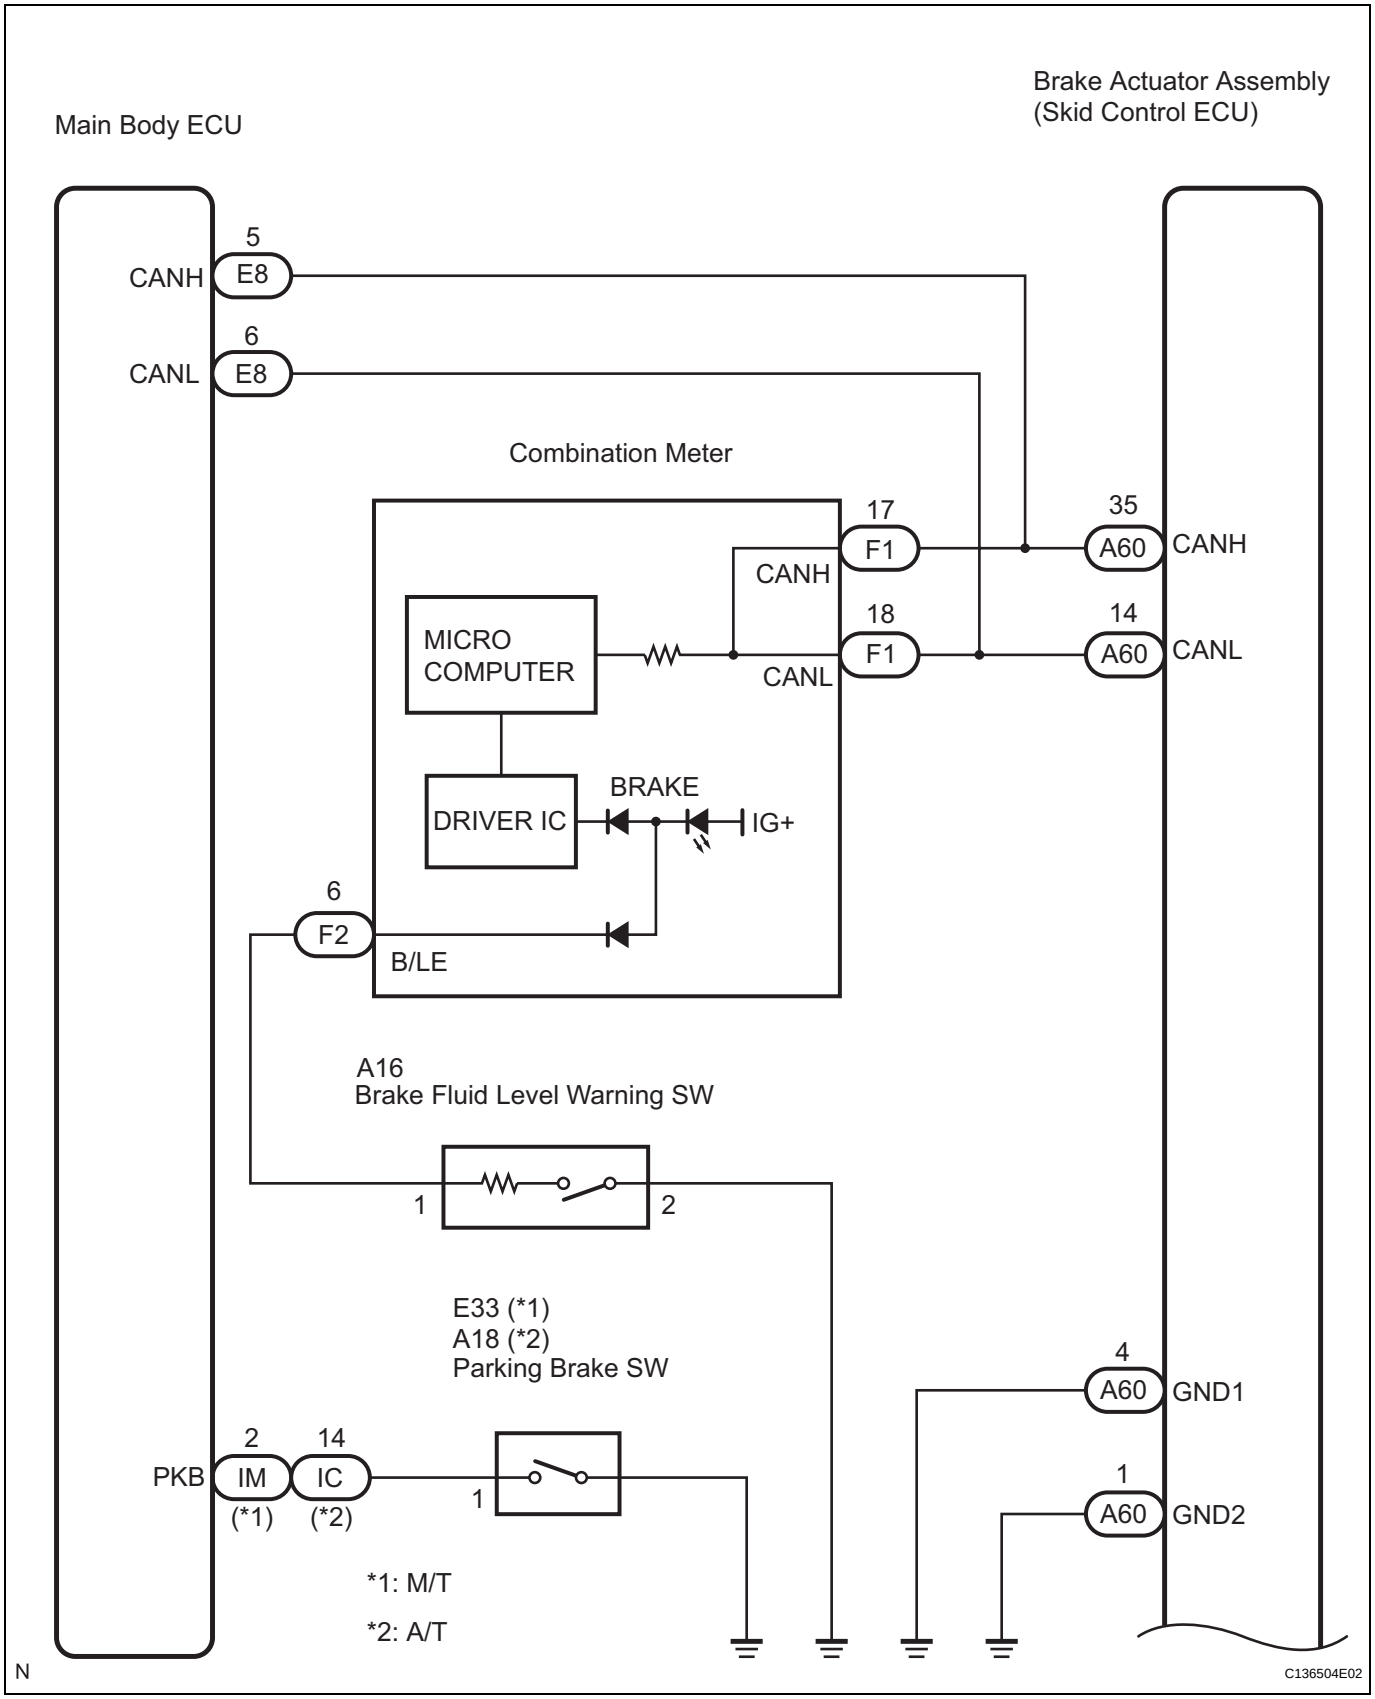
REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

Brake Warning Light does not Come ON

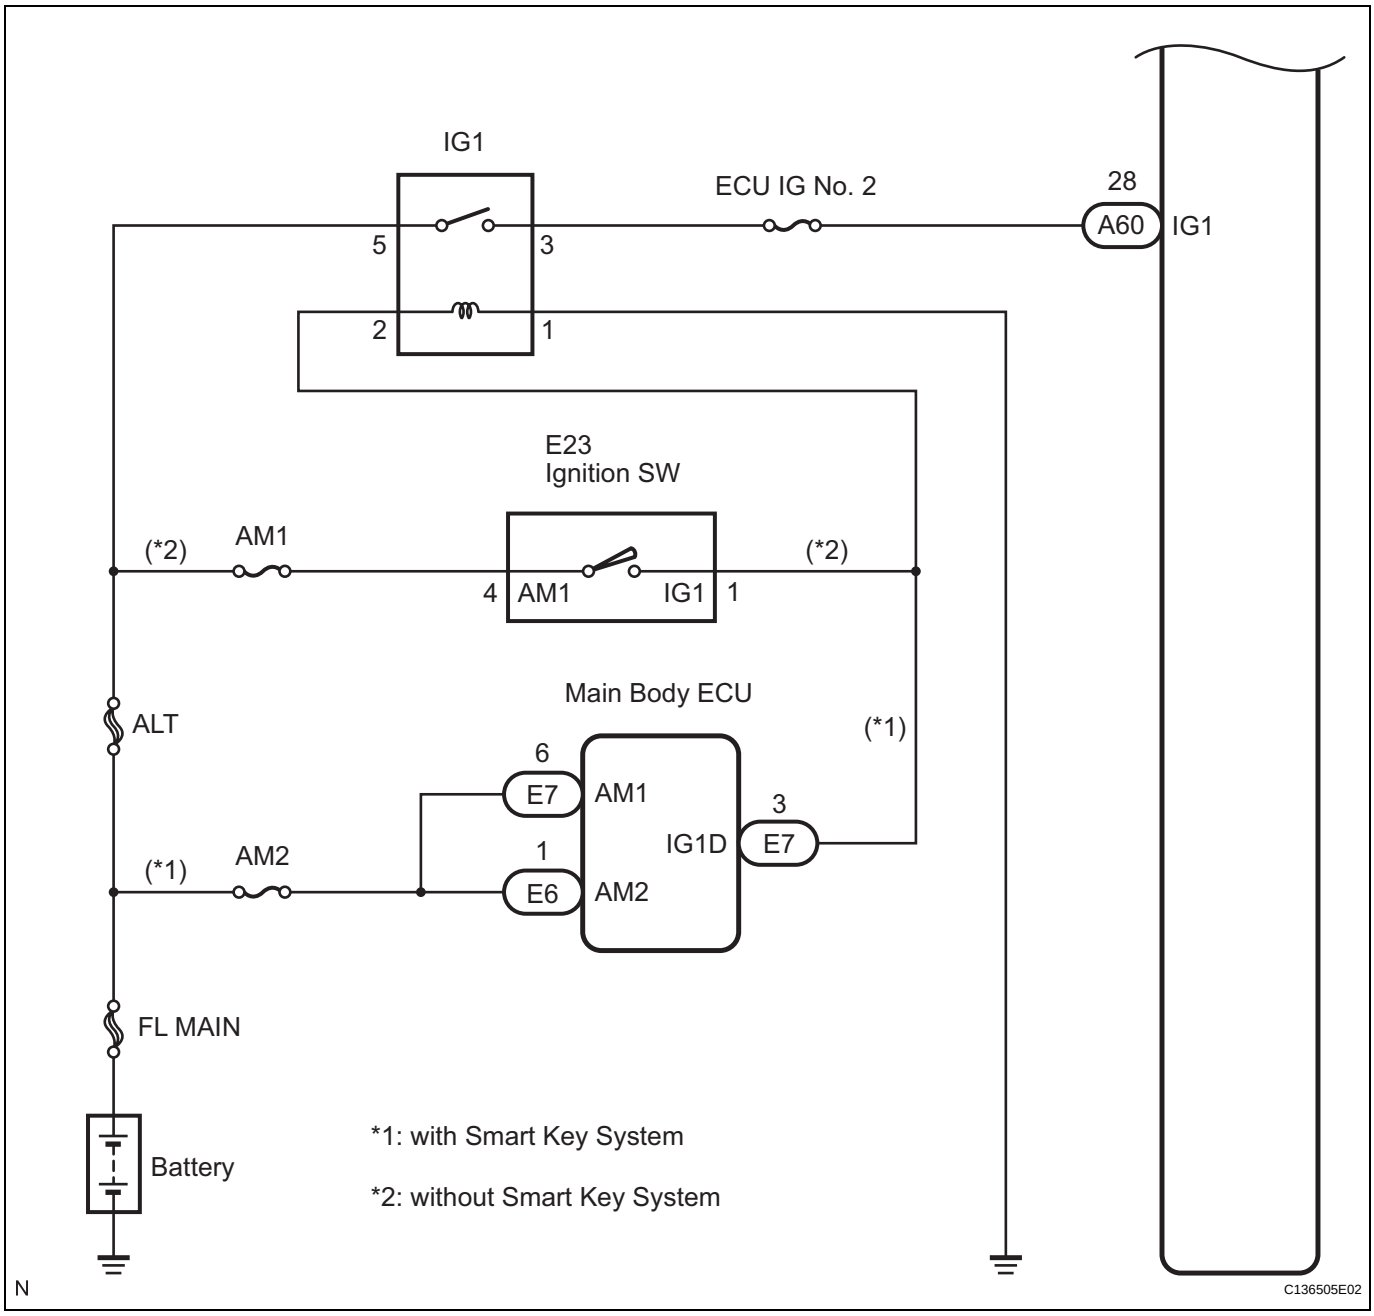
DESCRIPTION

The skid control ECU is connected to the combination meter assembly via CAN communication.

WIRING DIAGRAM



BC



BC

INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication system DTC is output (See page BC-302).

Result

Condition	Proceed to
CAN communication system DTC is not output	A
CAN communication system DTC is output	B

B → **INSPECT CAN COMMUNICATION SYSTEM (See page CA-8)**

A

2	CHECK BRAKE WARNING LIGHT

(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch on (IG).
(c) Check that the BRAKE warning light comes on.
OK:
The BRAKE warning light comes on.
(d) Connect the connector.

OK → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

NG

BC

3	INSPECT COMBINATION METER ASSEMBLY

(a) Connect the intelligent tester to the DLC3.
(b) Perform "ACTIVE TEST" of the combination meter assembly using the intelligent tester (See page ME-32).
(c) Check BRAKE warning light operation.
OK:
The BRAKE warning light turns on or off in accordance with the intelligent tester.

NG → **REPLACE COMBINATION METER ASSEMBLY (See page ME-63)**

OK

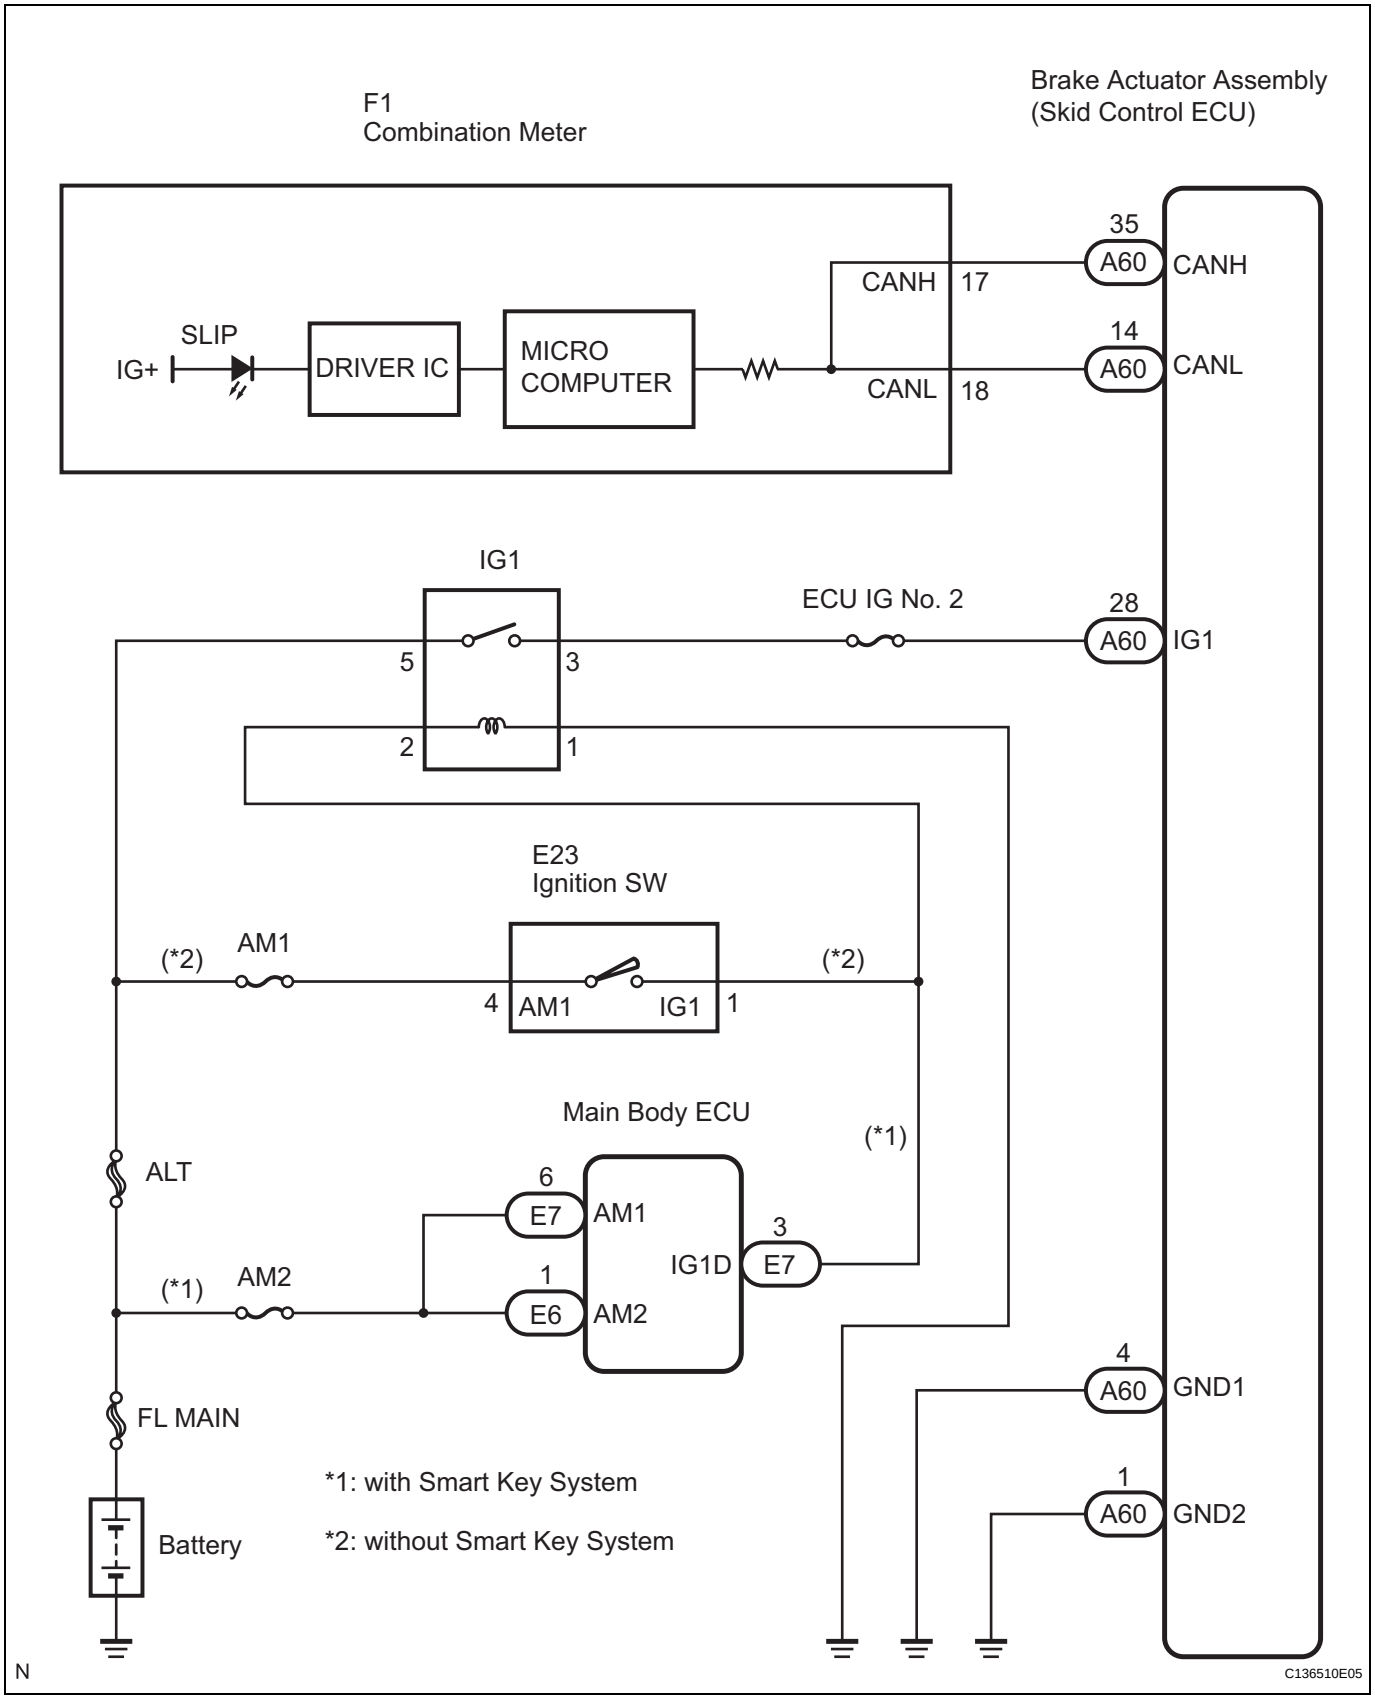
REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

Slip Indicator Light Remains ON

DESCRIPTION

The skid control ECU is connected to the combination meter assembly via CAN communication.
The SLIP indicator light blinks during VSC and/or TRAC operation.
When the system fails, the SLIP indicator light comes on to warn the driver (See page BC-278).

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

HINT:

Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication system DTC is output (See page BC-302).

Result

Condition	Proceed to
CAN communication system DTC is not output	A
CAN communication system DTC is output	B

B → **INSPECT CAN COMMUNICATION SYSTEM (See page CA-8)**

A

2	CHECK IF SKID CONTROL ECU CONNECTOR IS SECURELY CONNECTED

(a) Check if the skid control ECU connector is securely connected.
OK:
The connector is securely connected.

NG → **CONNECT CONNECTOR TO ECU CORRECTLY**

OK

3	CHECK BATTERY

(a) Check the battery voltage.
Standard voltage:
11 to 14 V

NG → **CHECK AND REPLACE CHARGING SYSTEM OR BATTERY**

OK

4	INSPECT COMBINATION METER ASSEMBLY

(a) Connect the intelligent tester to the DLC3.
(b) Perform "ACTIVE TEST" of the combination meter assembly using the intelligent tester (See page ME-32).
(c) Check SLIP indicator light operation.
OK:
The SLIP indicator light turns on or off in accordance with the intelligent tester.

NG → **REPLACE COMBINATION METER ASSEMBLY (See page ME-63)**

OK

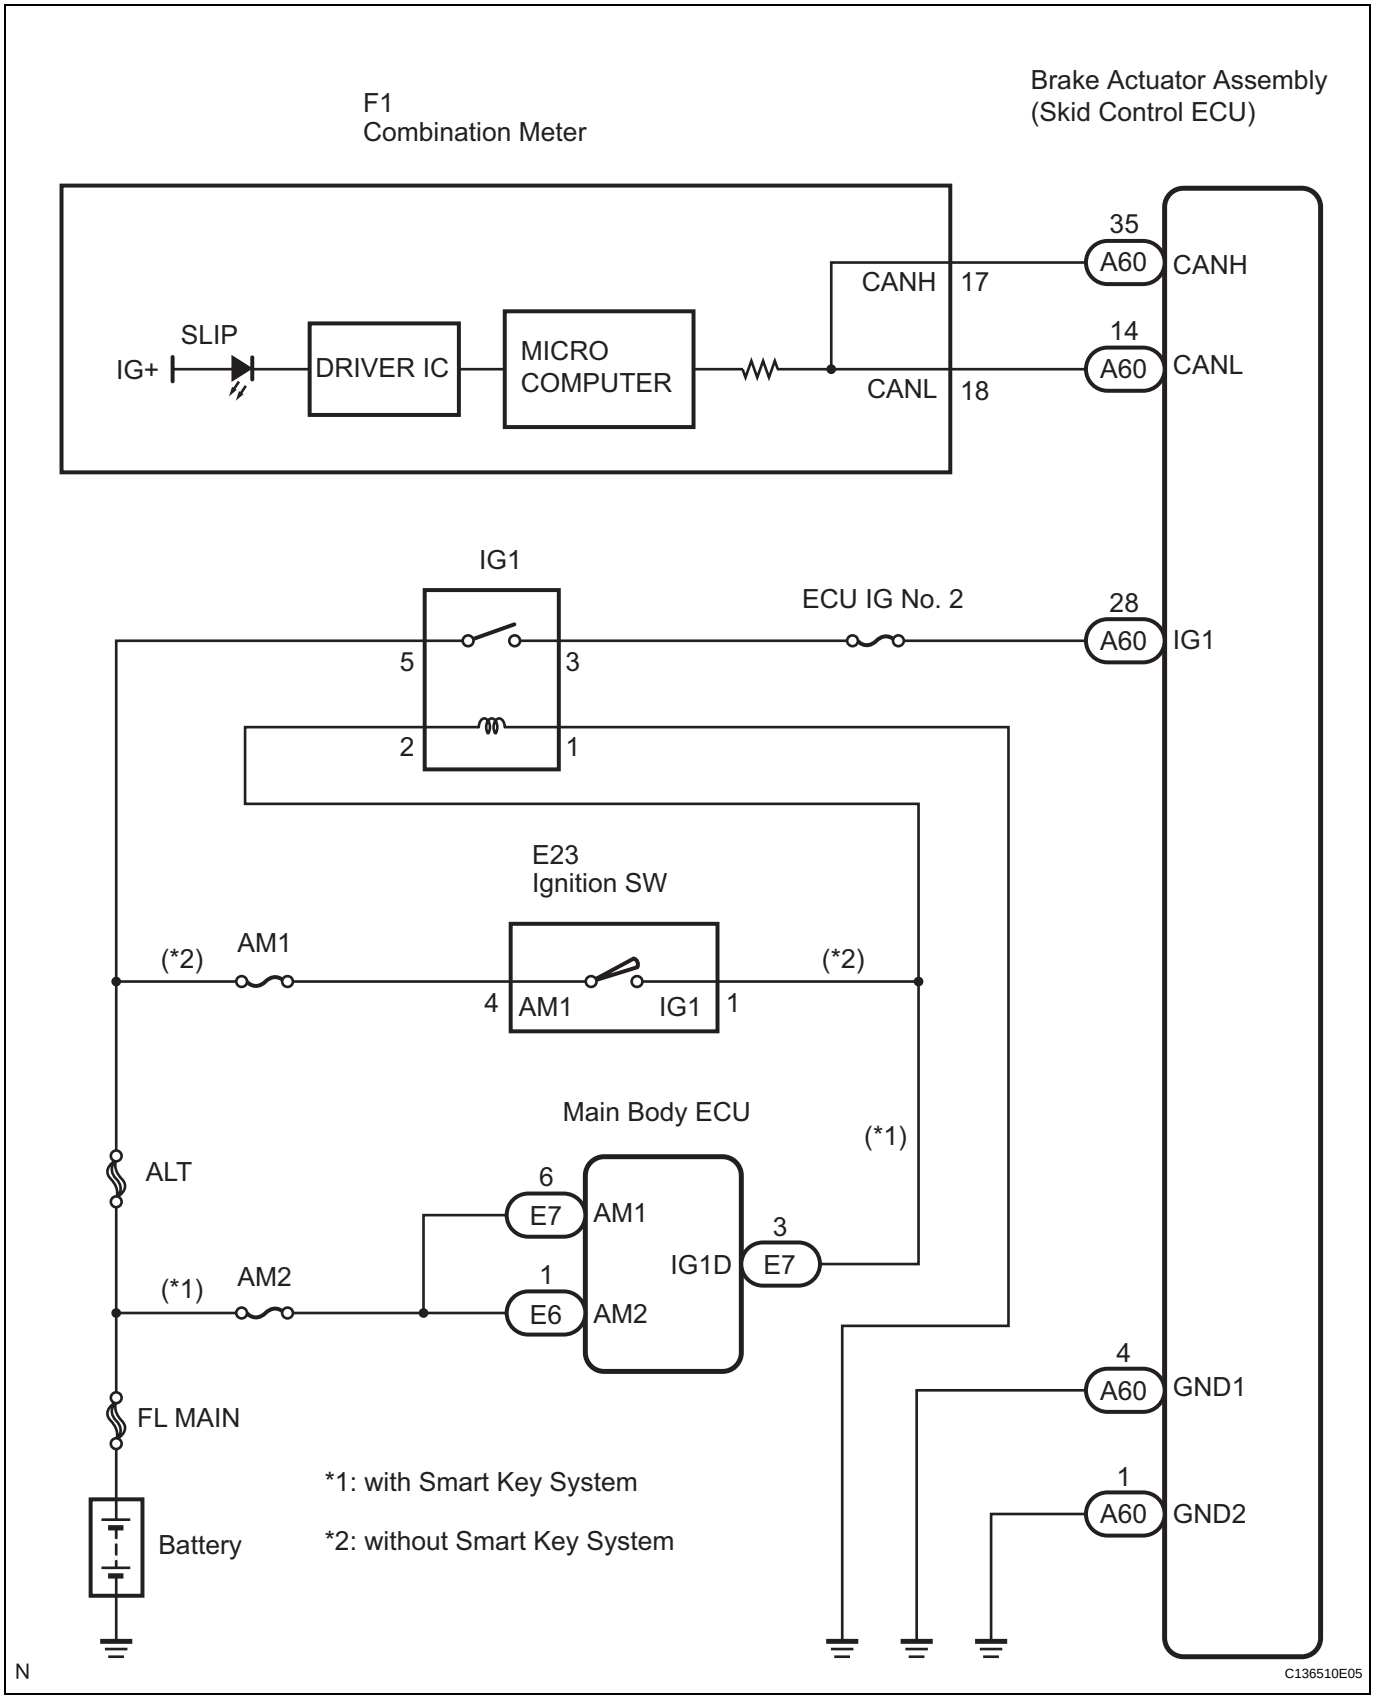
REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

Slip Indicator Light does not Come ON

DESCRIPTION

The skid control ECU is connected to the combination meter assembly via CAN communication.
The SLIP indicator light blinks during VSC and/or TRAC operation.
When the system fails, the SLIP indicator light comes on to warn the driver (See page BC-278).

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

HINT:

Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication system DTC is output (See page BC-302).

Result

Condition	Proceed to
CAN communication system DTC is not output	A
CAN communication system DTC is output	B

B → **INSPECT CAN COMMUNICATION SYSTEM (See page CA-8)**

A

2	INSPECT COMBINATION METER ASSEMBLY

(a) Connect the intelligent tester to the DLC3.
(b) Perform "ACTIVE TEST" of the combination meter assembly using the intelligent tester (See page ME-32).
(c) Check the SLIP indicator light operation.
OK:
The SLIP indicator light turns on or off in accordance with the intelligent tester.

NG → **REPLACE COMBINATION METER ASSEMBLY (See page ME-63)**

OK

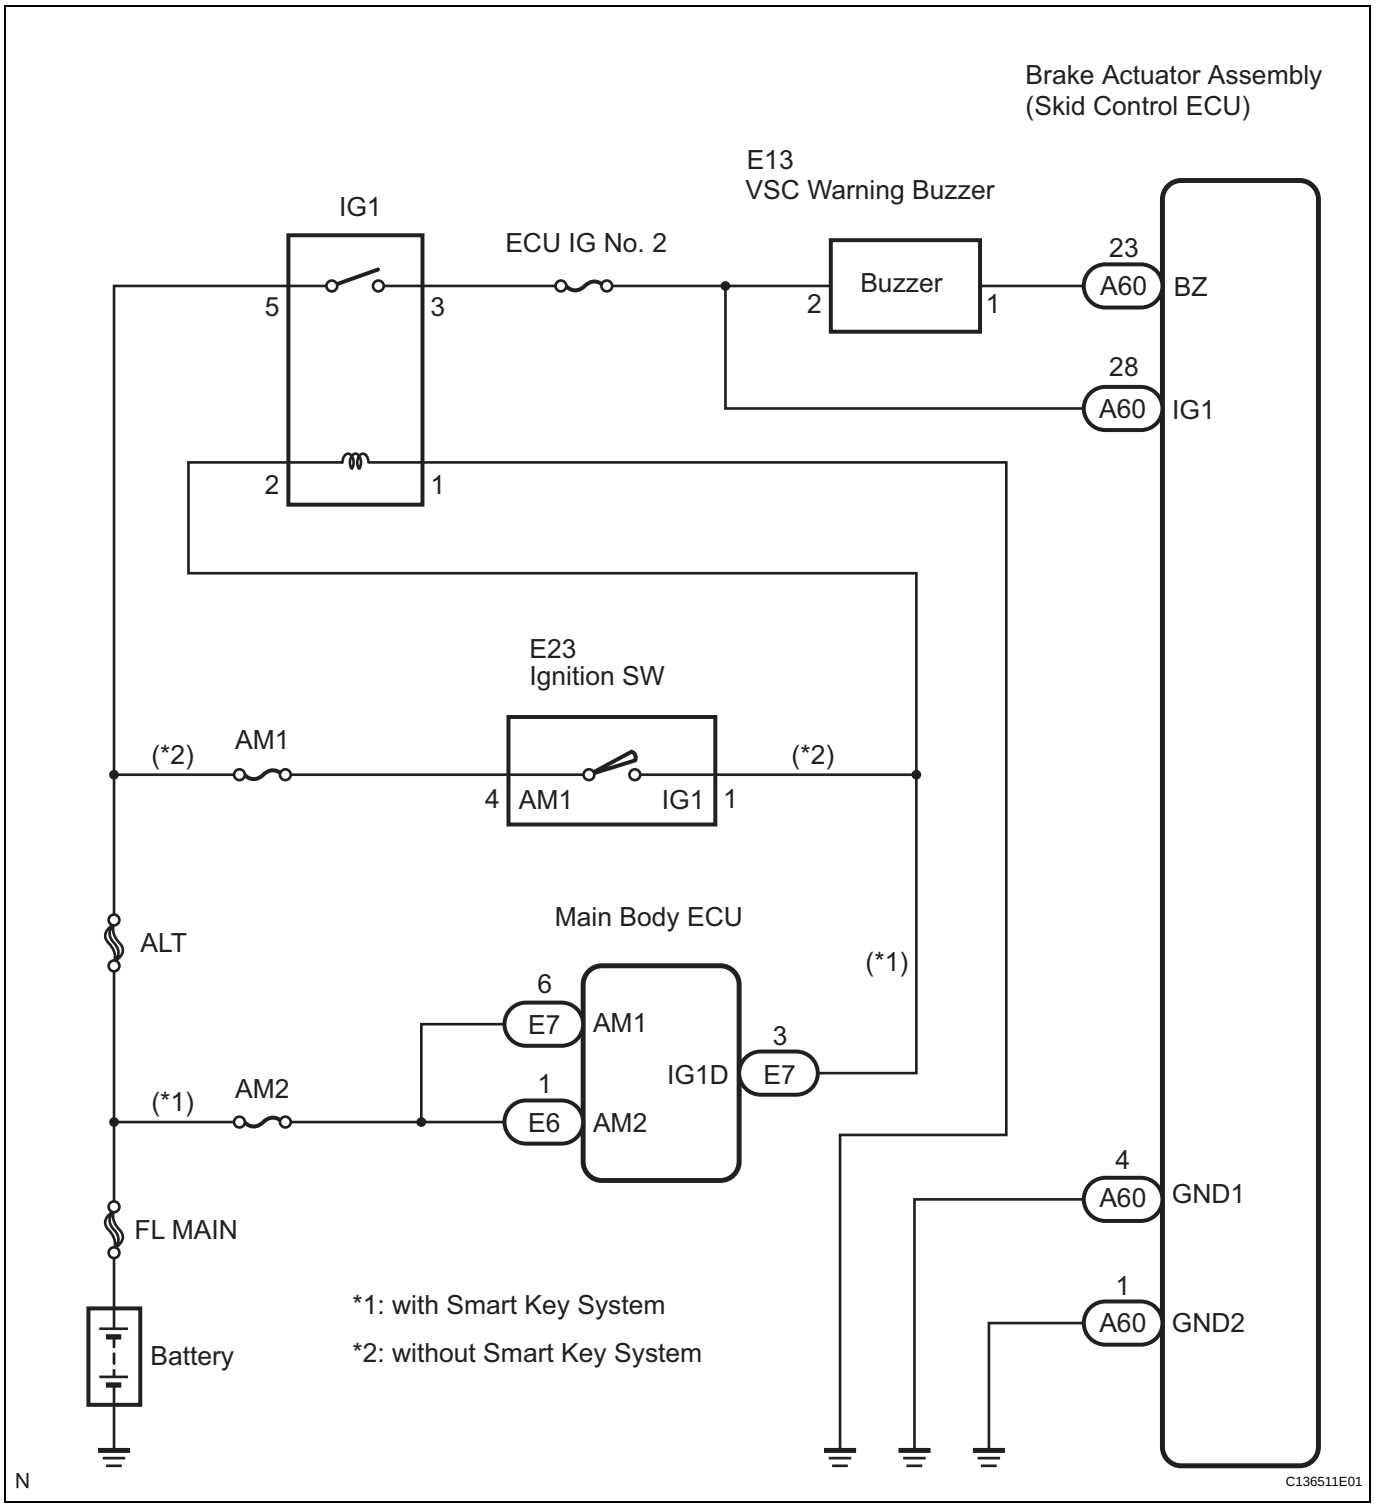
REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

Skid Control Buzzer Circuit

DESCRIPTION

The skid control buzzer sounds and the SLIP indicator light blinks during VSC operation.

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1 PERFORM ACTIVE TEST BY INTELLIGENT TESTER (SKID CONTROL BUZZER)

(a) Connect the intelligent tester to the DLC3.
(b) Select the "ACTIVE TEST" on the intelligent tester (See page BC-307).

ACTIVE TEST: ABS/TRAC/VSC

Item (Display)	Vehicle Condition / Test Details	Diagnostic Note
BUZZER	Turns skid control buzzer ON / OFF	Buzzer can be heard

(c) Check that the buzzer sounds/stops when turning the skid control buzzer on/off by using the intelligent tester.

Result

Condition	Proceed to
Buzzer does not sound or sounds constantly	A
Buzzer sounds/stops	B

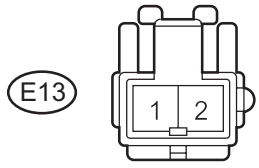
BC

B → **CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION) (See page BC-298)**

A

2 INSPECT SKID CONTROL BUZZER (POWER SOURCE TERMINAL)

Skid Control Buzzer (Harness Side Connector Front View):



(a) Disconnect the skid control buzzer connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

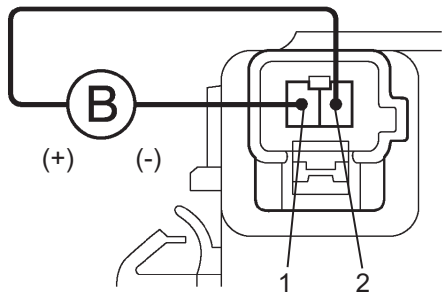
Tester Connection	Condition	Specified Condition
E13-2 - Body ground	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER SOURCE CIRCUIT)**

OK

3	INSPECT SKID CONTROL BUZZER

Skid Control Buzzer:



C125130E01

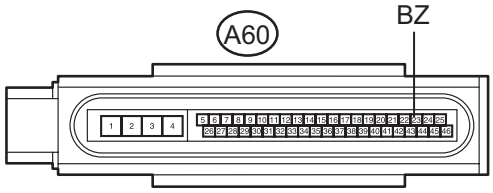
(a) Apply battery negative voltage to terminal 1, and battery positive voltage to terminal 2 of the skid control buzzer, and then check that the buzzer sounds.
OK:
The skid control buzzer sounds.

NG → **REPLACE SKID CONTROL BUZZER (See page BC-453)**

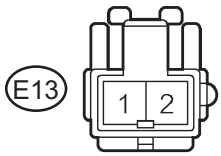
OK

4	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU TO SKID CONTROL BUZZER)

Skid Control ECU (Harness Side Connector Front View):



Skid Control Buzzer (Harness Side Connector Front View):



C139149E01

(a) Disconnect the skid control ECU connector.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
A60-23 (BZ) - E13-1	Always	Below 1 Ω
A60-23 (BZ) - Body ground	Always	10 kΩ or higher

(c) Connect the connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SKID CONTROL ECU TO SKID CONTROL BUZZER)**

OK

REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

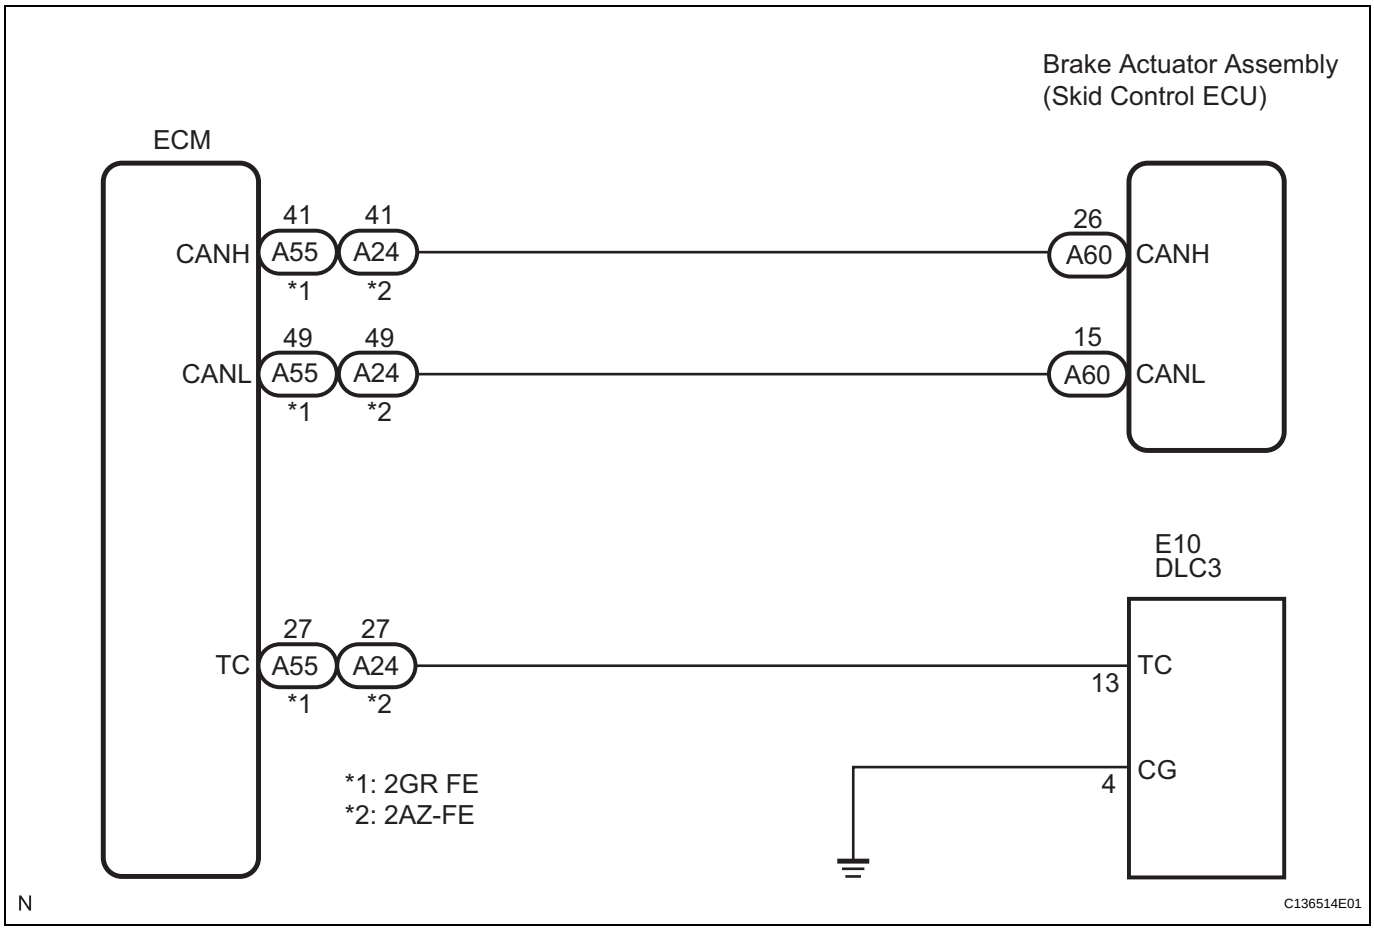
BC

TC and CG Terminal Circuit

DESCRIPTION

DTC output mode is set by connecting terminals TC and CG of the DLC3.
DTCs are indicated by the blinking pattern of the ABS warning light.

WIRING DIAGRAM



HINT:
When warning lights continue to blink, a ground short in the wiring of terminal TC of the DLC3 or an internal ground short in one or more ECUs is suspected.

INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication DTC is output (See page BC-302).

Result

Result	Proceed to
CAN communication system DTC is output	A
CAN communication system DTC is not output	B

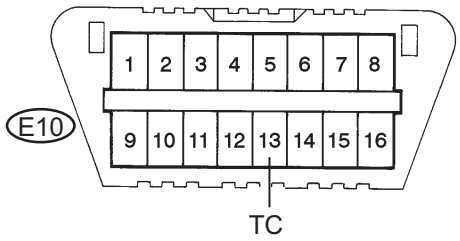
B → Go to step 2

A

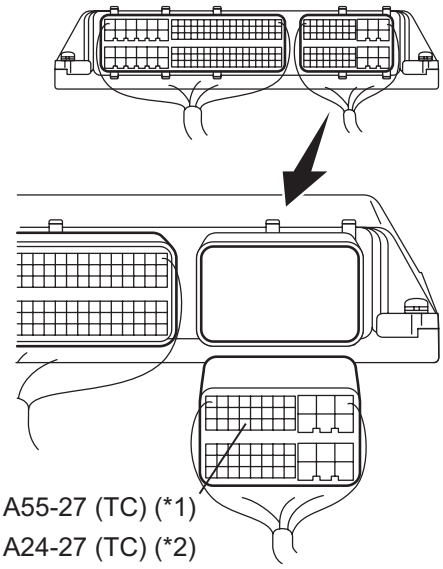
GO TO CAN COMMUNICATION SYSTEM (See page CA-8)

2 CHECK HARNESS AND CONNECTOR (ECM TO DLC3)

DLC3:



ECM Wire Harness View:



(*1): 2GR-FE (*2): 2AZ-FE

C136035E02

(a) Disconnect the ECM connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

2GR-FE

Tester Connection	Specified Condition
E10-13 (TC) - A55-27 (TC)	Below 1 Ω
E10-13 (TC) - Body ground	10 kΩ or higher

2AZ-FE

Tester Connection	Specified Condition
E10-13 (TC) - A24-27 (TC)	Below 1 Ω
E10-13 (TC) - Body ground	10 kΩ or higher

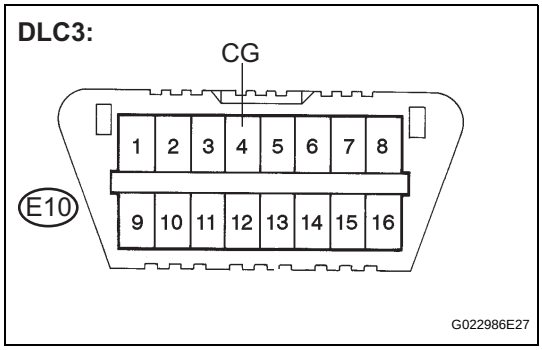
(c) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (TC TERMINAL CIRCUIT)**

OK

BC

3	CHECK HARNESS AND CONNECTOR (DLC3 TO CG CIRCUIT)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

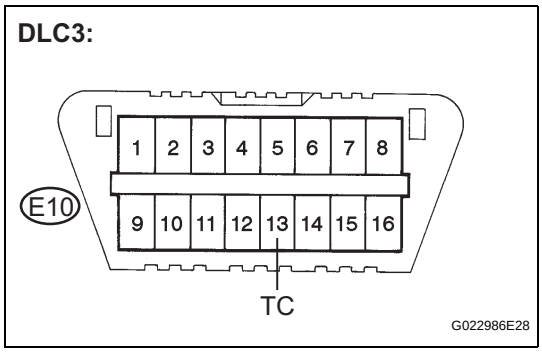
Tester Connection	Specified Condition
E10-4 (CG) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (CG TERMINAL CIRCUIT)**

OK

4	CHECK HARNESS AND CONNECTOR (TC TERMINAL CIRCUIT)

BC



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
E10-13 (TC) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (TC TERMINAL CIRCUIT)**

OK

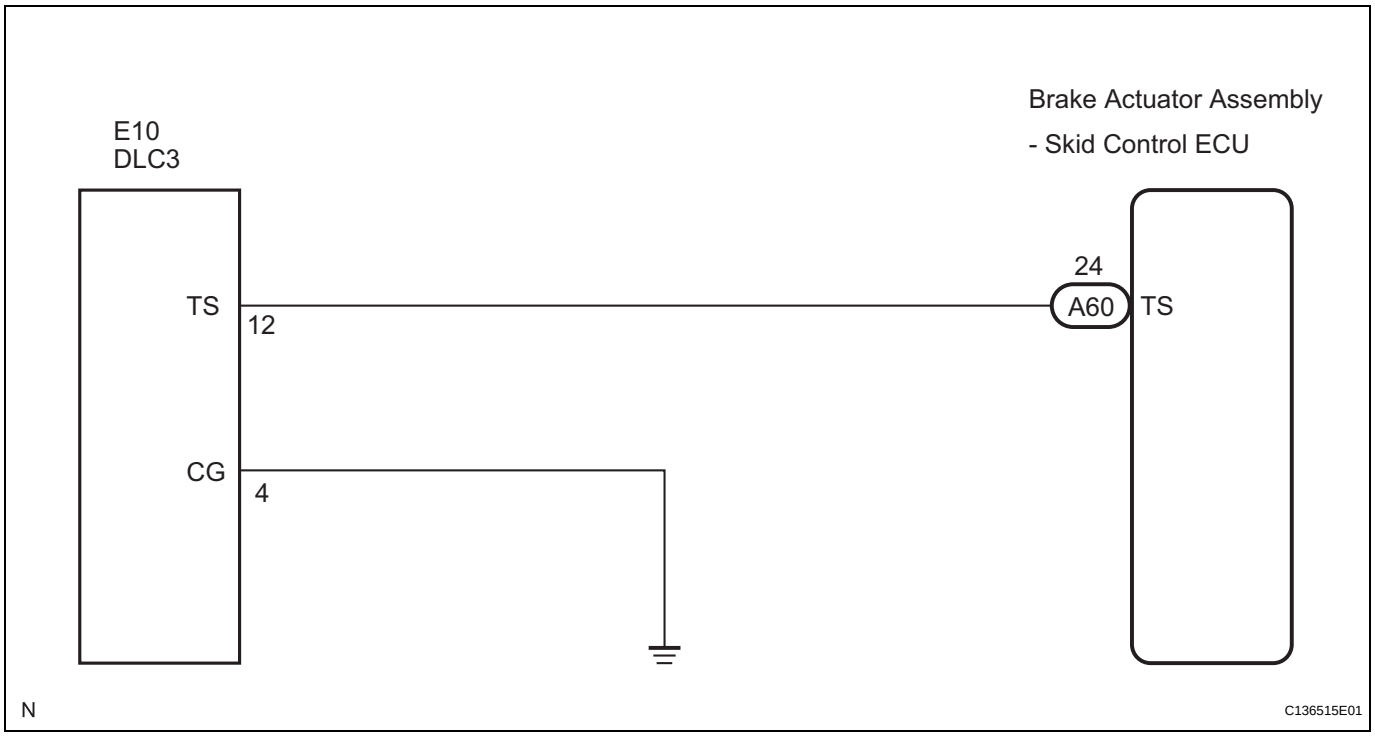
REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

TS and CG Terminal Circuit

DESCRIPTION

In the Test Mode (signal check), a malfunction of the speed sensor that cannot be detected when the vehicle is stopped can be detected while driving.
Transition to the sensor check mode can be performed by connecting terminals TS and CG of the DLC3 and turning the ignition switch from off to on (IG).

WIRING DIAGRAM

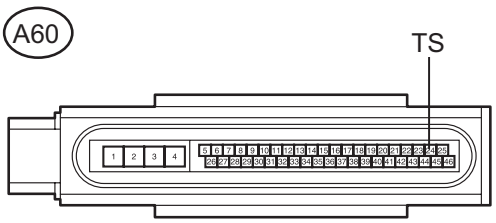


INSPECTION PROCEDURE

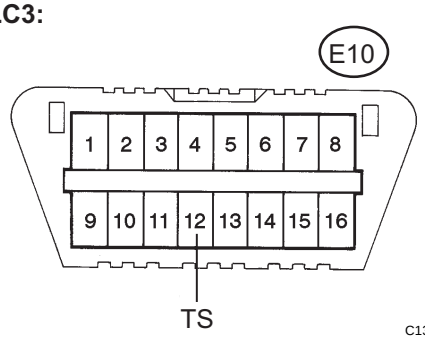
HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU TO DLC3)

Skid Control ECU (Harness Side Connector Front View):



DLC3:



C139177E01

(a) Disconnect the skid control ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A60-24 (TS) - E10-12 (TS)	Always	Below 1 Ω

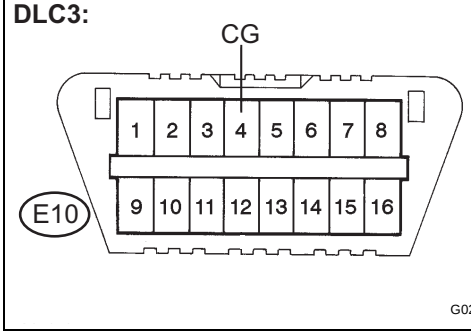
(c) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SKID CONTROL ECU TO DLC3)**

OK

2 CHECK HARNESS AND CONNECTOR (DLC3 TO BODY GROUND)

DLC3:



G022987E25

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

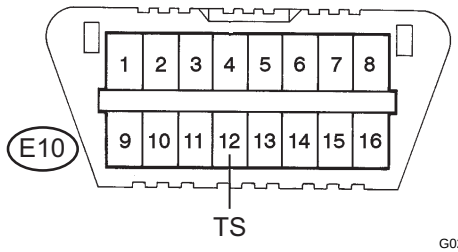
Tester Connection	Condition	Specified Condition
E10-4 (CG) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (DLC3 TO BODY GROUND)**

OK

3	CHECK HARNESS AND CONNECTOR (TS TERMINAL CIRCUIT)

DLC3:



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E10-12 (TS) - Body ground	Always	10 kΩ or higher

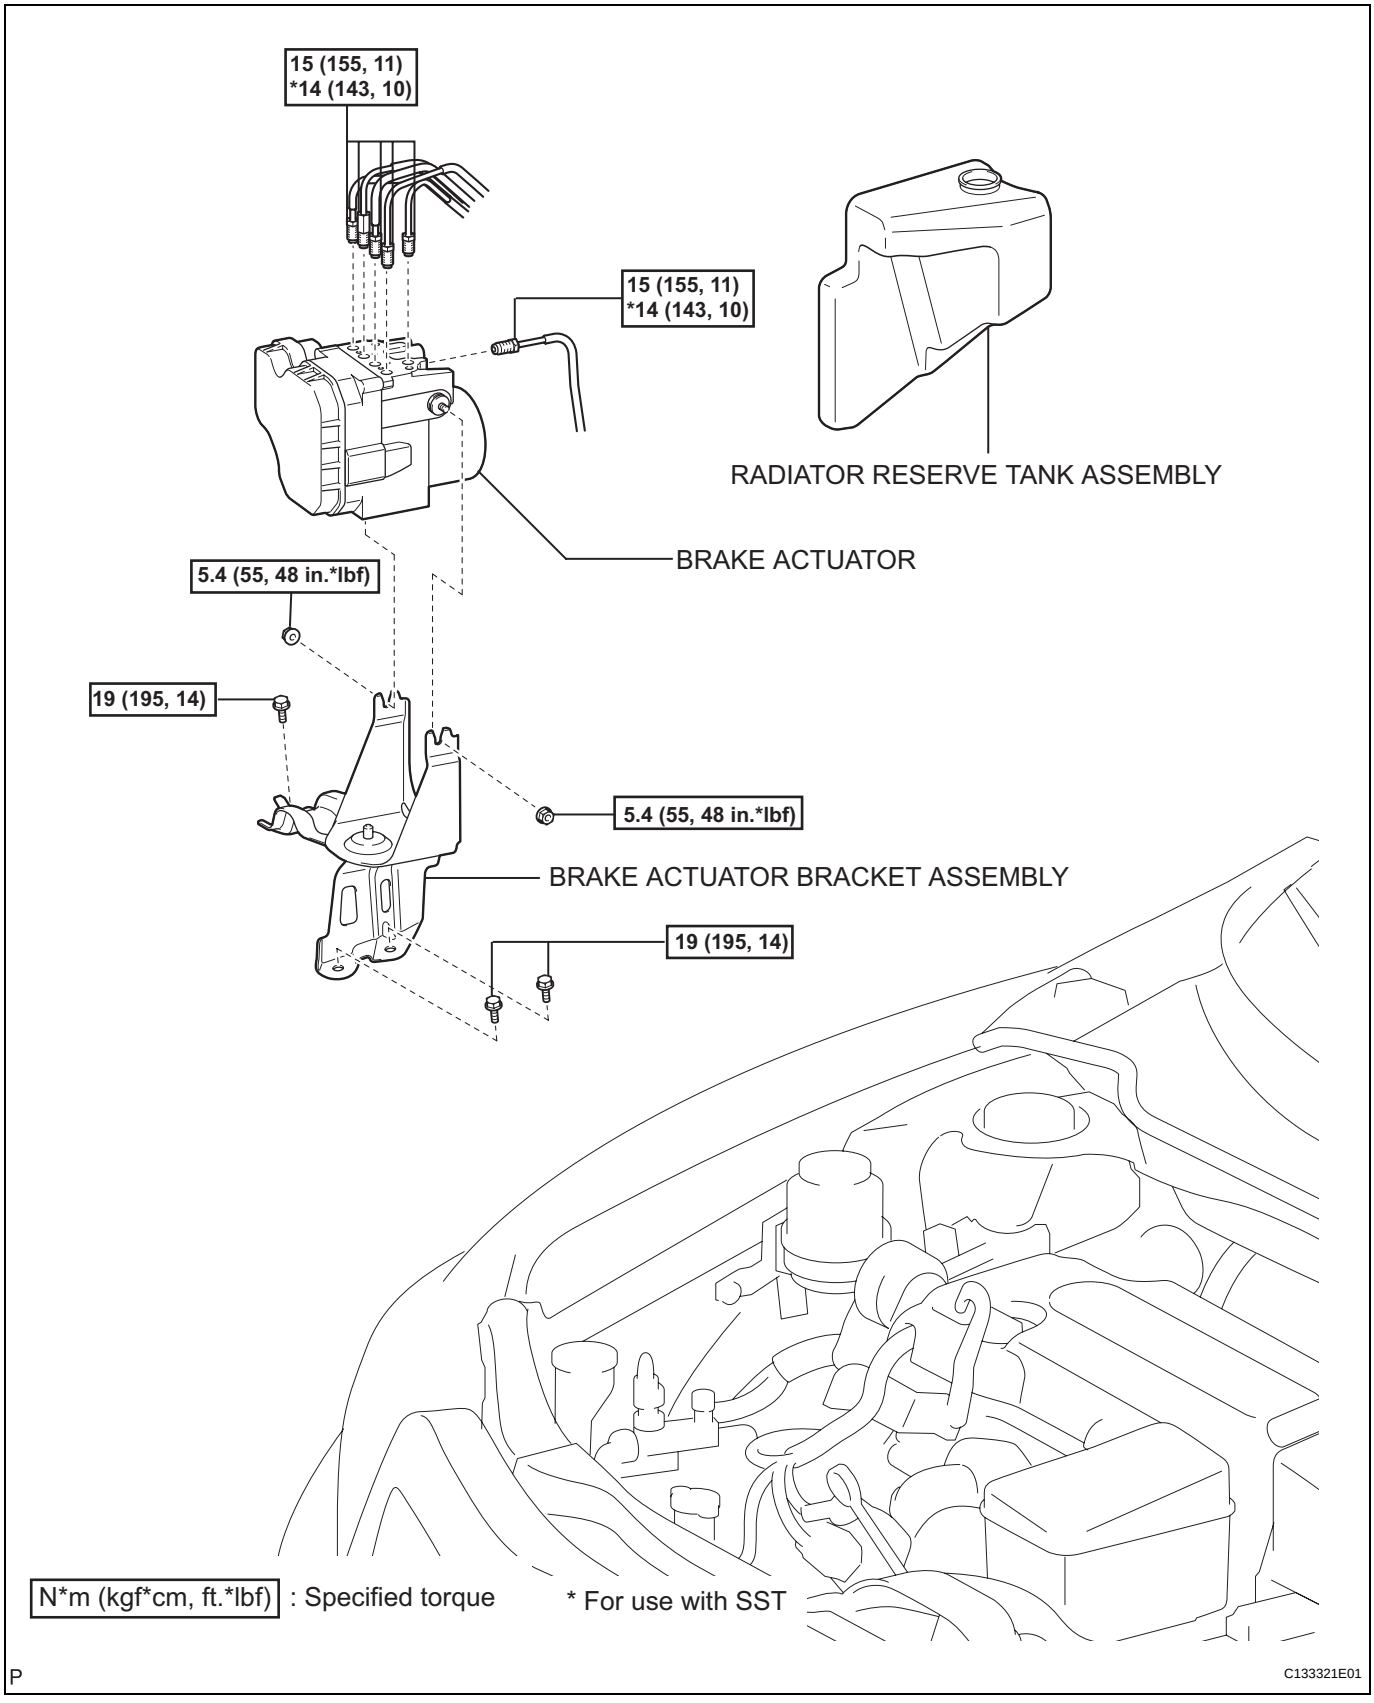
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (TS TERMINAL CIRCUIT)**

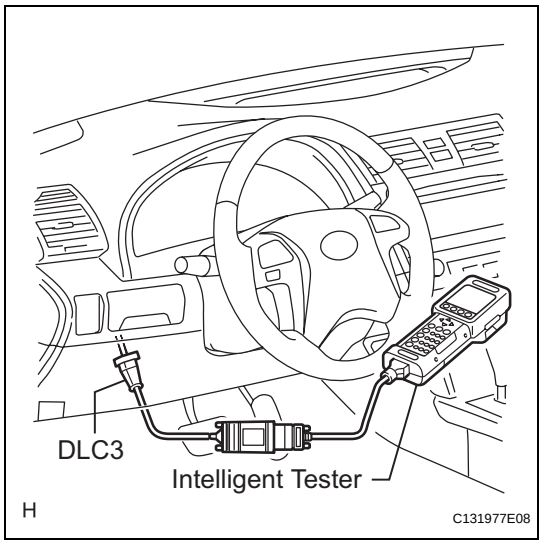
OK

REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

BRAKE ACTUATOR (for ADVICS Made)

COMPONENTS





ON-VEHICLE INSPECTION

1. CONNECT INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and run it at idle .
(c) Select the Active Test mode on the intelligent tester.
HINT:
Refer to the intelligent tester operator's manual for further details.

2. INSPECT ACTUATOR MOTOR OPERATION

NOTICE:
Do not keep a motor relay on continuously for more than 5 seconds. When operating it continuously, set an interval of more than 20 seconds.

(a) With the motor relay on, check the actuator motor operation sounds.
(b) Turn the motor relay off.
(c) Depress the brake pedal and hold it for approximately 15 seconds. Check that the brake pedal cannot be depressed farther.
(d) With the motor relay on, check that the pedal does not pulsate.
(e) Turn the motor relay off and release the brake pedal.

3. INSPECT RIGHT FRONT WHEEL OPERATION

NOTICE:
Do not turn on a solenoid in a manner different than described below.

(a) Depress the brake pedal and hold it.
(b) Turn the SFRH and SFRR solenoids on simultaneously, and check that the pedal cannot be depressed.
(c) Turn the SFRH and SFRR solenoids off simultaneously, and check that the pedal can be depressed.
NOTICE:
Do not keep the motor relay on continuously for more than 5 seconds. When operating them continuously, set an interval of more than 20 seconds.
(d) Turn the motor relay on and check that the pedal returns.
NOTICE:
Do not keep the motor relay on continuously for more than 5 seconds. When operating it continuously, set an interval of more than 20 seconds.
(e) Turn the motor relay off and release the brake pedal.

4. INSPECT OTHER WHEEL OPERATION

(a) Using the same procedure, check the solenoids of the other wheels.
HINT:
- Left front wheel: SFLH, SFLR
- Right rear wheel: SRRH, SRRR
- Left rear wheel: SRLH, SRLR

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE RADIATOR RESERVE TANK ASSEMBLY

(a) Separate the radiator reserve tank hose.

(b) Remove the radiator reserve tank assembly.

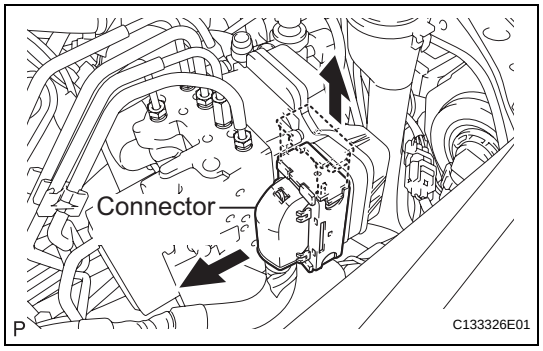
3. DRAIN BRAKE FLUID

NOTICE:

If brake fluid leaks onto any painted surface, immediately clean it off completely.

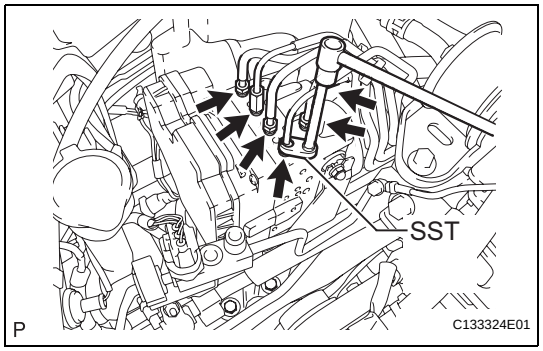
4. REMOVE BRAKE ACTUATOR

(a) Release the lock lever and disconnect the actuator connector.



(b) Using SST, disconnect the 6 brake lines from the actuator assembly with bracket.

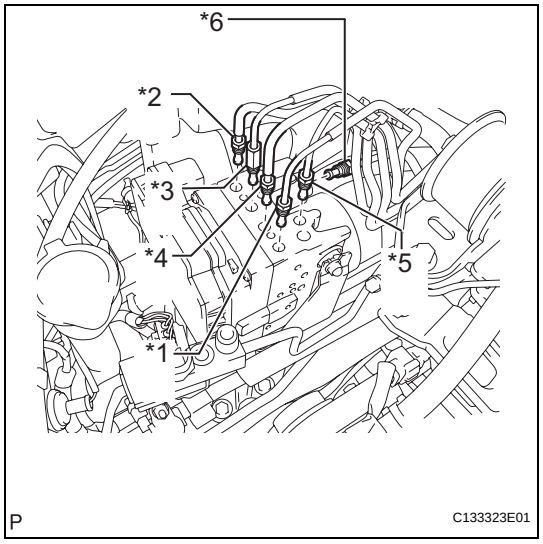
SST 09023-00101

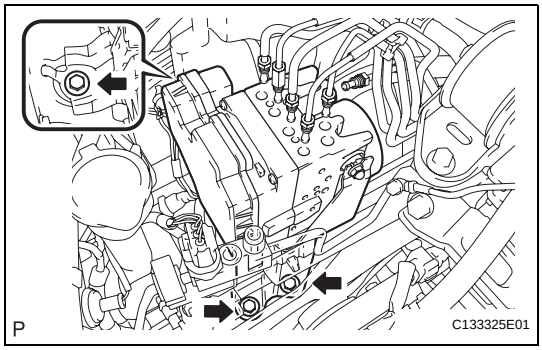


(c) Use tags or make a memo to identify the places to reconnect.

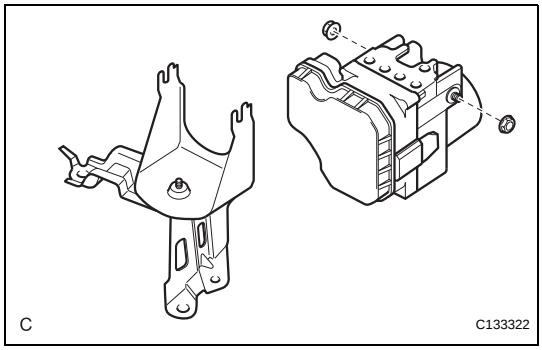
HINT:

- *1: To Front Wheel Cylinder RH
- *2: To Front Wheel Cylinder LH
- *3: To Rear Wheel Cylinder RH
- *4: To Rear Wheel Cylinder LH
- *5: From 1st Master Cylinder
- *6: From 2nd Master Cylinder





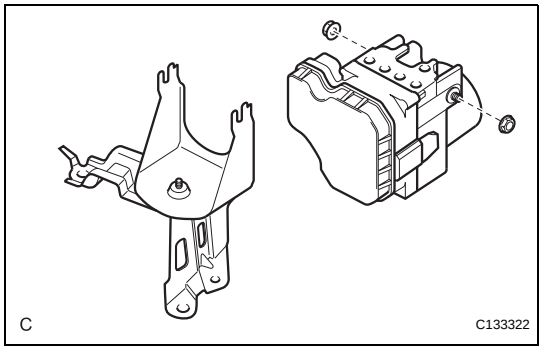
(d) Remove the 3 bolts and brake actuator assembly with bracket from the body.
NOTICE:
Do not damage the brake tubes and wire harness.



DISASSEMBLY

1. REMOVE BRAKE ACTUATOR BRACKET ASSEMBLY

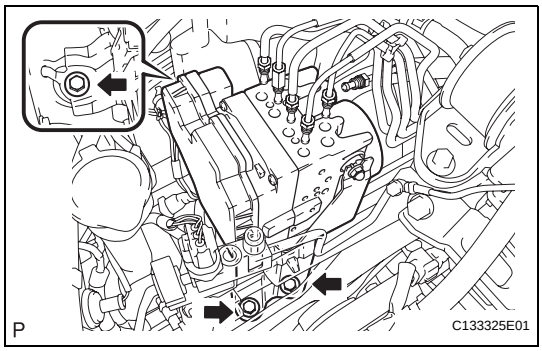
(a) Remove the 2 nuts and the brake actuator assembly from the actuator bracket assembly.



REASSEMBLY

1. INSTALL BRAKE ACTUATOR BRACKET ASSEMBLY

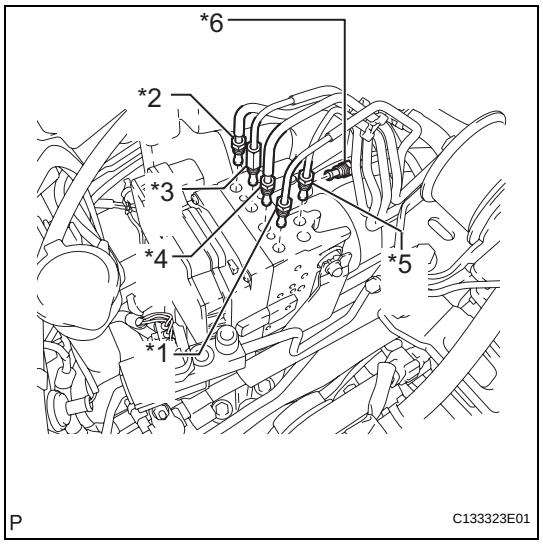
(a) Install the actuator assembly to the brake actuator bracket assembly with the 2 nuts.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
NOTICE:
Do not remove the hole plug before installing a new brake actuator because the brake actuator assembly is filled with brake fluid.



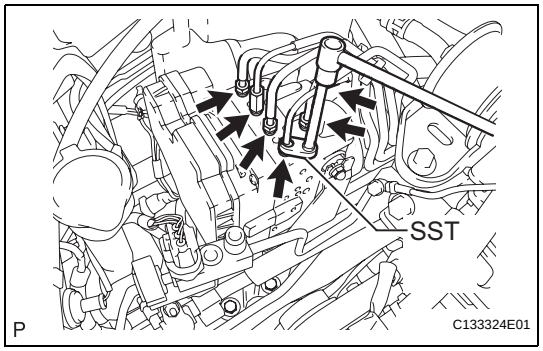
INSTALLATION

1. INSTALL BRAKE ACTUATOR

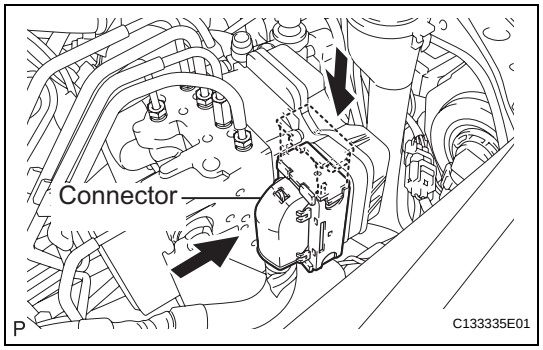
(a) Install the brake actuator assembly with bracket to the body with the 3 bolts.
Torque: 19 N*m (195 kgf*cm, 14 ft.*lbf)
NOTICE:
Do not damage the brake tubes and wire harness.



(b) Temporarily tighten each brake tube to the correct positions of the brake actuator assembly with bracket as shown in the illustration.
HINT:
- *1: To Front Wheel Cylinder RH
- *2: To Front Wheel Cylinder LH
- *3: To Rear Wheel Cylinder RH
- *4: To Rear Wheel Cylinder LH
- *5: From 1st Master Cylinder
- *6: From 2nd Master Cylinder



(c) Using SST, fully tighten each brake tube.
SST 09023-00101
Torque: without SST
15 N*m (155 kgf*cm, 11 ft.*lbf)
with SST
14 N*m (143 kgf*cm, 10 ft.*lbf)
NOTICE:
- **Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).**
- **This torque value is effective when SST is parallel to a torque wrench.**



(d) Connect the actuator connector.
NOTICE:
Make sure that the connector is locked securely.

2. INSTALL RADIATOR RESERVE TANK ASSEMBLY
(a) Install the radiator reserve tank assembly.
(b) Connect the radiator reservoir tank hose.

3. FILL RESERVOIR WITH BRAKE FLUID (See page BR-6)

4. BLEED BRAKE LINE (See page BR-7)

5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

6. BLEED BRAKE ACTUATOR (See page BR-8)

7. INSPECT BRAKE FLUID LEVEL (See page BR-10)

8. INSPECT FOR BRAKE FLUID LEAKAGE

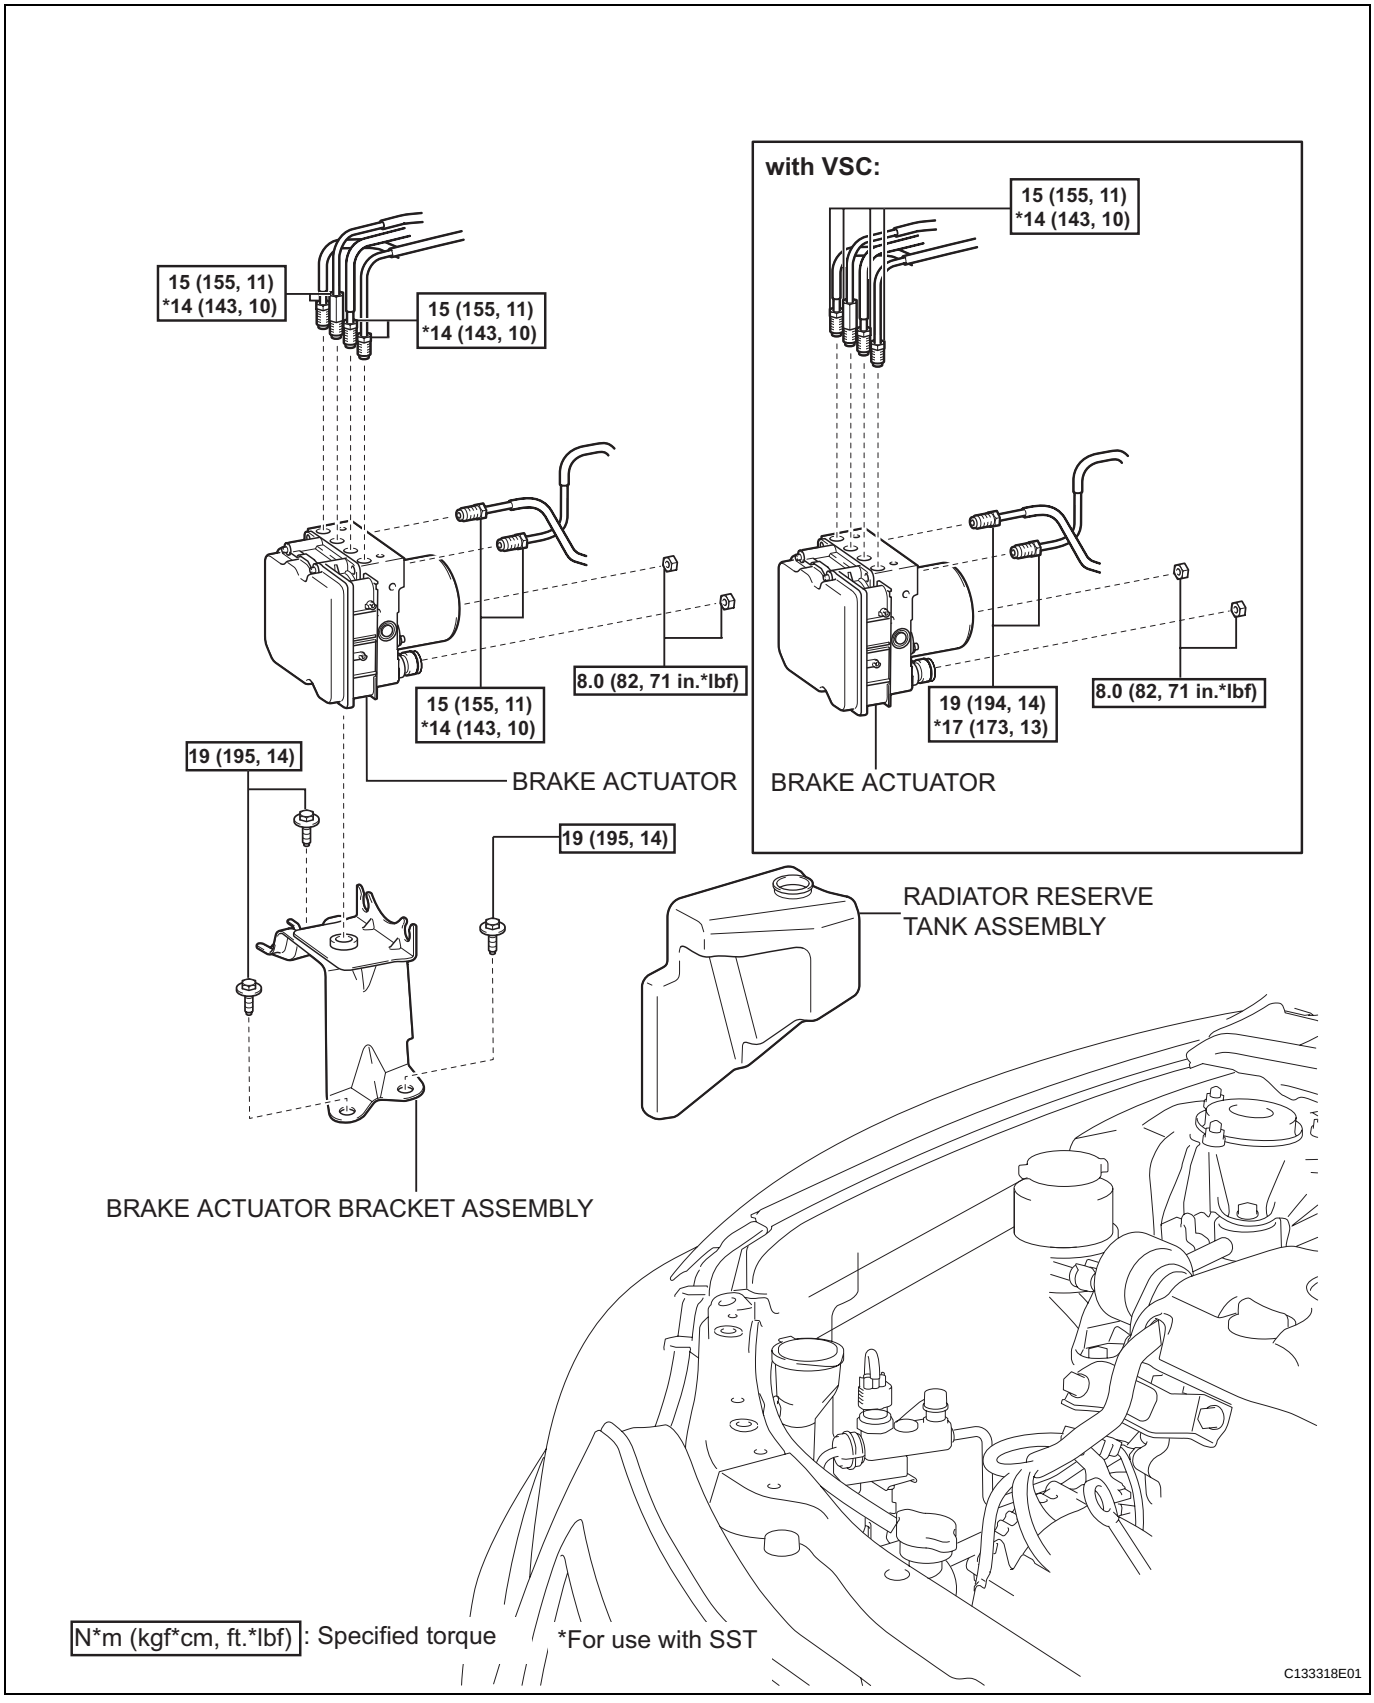
9. PERFORM YAW RATE SENSOR ZERO POINT CALIBRATION
HINT:
(See page BC-119)

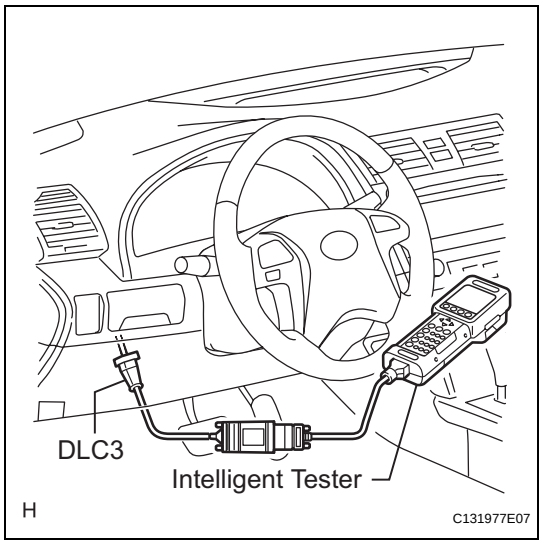
10. INSPECT ACTUATOR WITH INTELLIGENT TESTER
HINT:
(See page BC-425)

BC

BRAKE ACTUATOR (for BOSCH Made)

COMPONENTS





ON-VEHICLE INSPECTION

1. CONNECT INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and run it at idle.
(c) Select the Active Test mode on the intelligent tester.
HINT:
Refer to the intelligent tester operator's manual for further details.

2. INSPECT ACTUATOR MOTOR OPERATION

NOTICE:
Do not keep a motor relay on continuously for more than 5 seconds. When operating it continuously, set an interval of more than 20 seconds.

(a) With the motor relay on, check the actuator motor operation sounds.
(b) Turn the motor relay off.
(c) Depress the brake pedal and hold it for approximately 15 seconds. Check that the brake pedal cannot be depressed farther.
(d) With the motor relay on, check that the pedal does not pulsate.
(e) Turn the motor relay off and release the brake pedal.

3. INSPECT RIGHT FRONT WHEEL OPERATION

NOTICE:
Do not turn on a solenoid in a manner different than described below.

(a) Depress the brake pedal and hold it.
(b) Turn the SFRH and SFRR solenoids on simultaneously, and check that the pedal cannot be depressed.
(c) Turn the SFRH and SFRR solenoids off simultaneously, and check that the pedal can be depressed.
NOTICE:
Do not keep the motor relay on continuously for more than 5 seconds. When operating them continuously, set an interval of more than 20 seconds.
(d) Turn the motor relay on and check that the pedal returns.
NOTICE:
Do not keep the motor relay on continuously for more than 5 seconds. When operating it continuously, set an interval of more than 20 seconds.
(e) Turn the motor relay off and release the brake pedal.

4. INSPECT OTHER WHEEL OPERATION

(a) Using the same procedure, check the solenoids of the other wheels.

HINT:

- Left front wheel: SFLH, SFLR
- Right rear wheel: SRRH, SRRR
- Left rear wheel: SRLH, SRLR

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE RADIATOR RESERVE TANK ASSEMBLY

(a) Separate the radiator reserve tank hose.

(b) Remove the radiator reserve tank assembly.

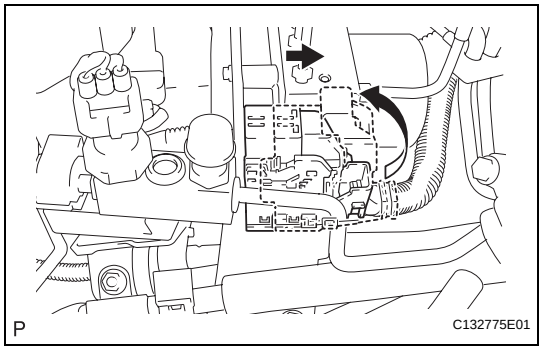
3. DRAIN BRAKE FLUID

NOTICE:

If brake fluid leaks onto any painted surface, immediately clean it off completely.

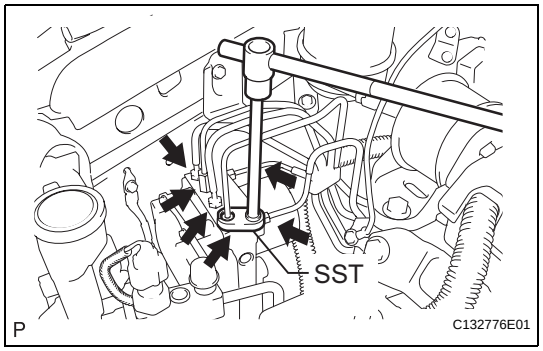
4. REMOVE BRAKE ACTUATOR

(a) Release the lock lever and disconnect the actuator connector.



(b) Using SST, disconnect the 6 brake lines from the actuator assembly with bracket.

SST 09023-00101



(c) Use tags or make a memo to identify the places to reconnect.

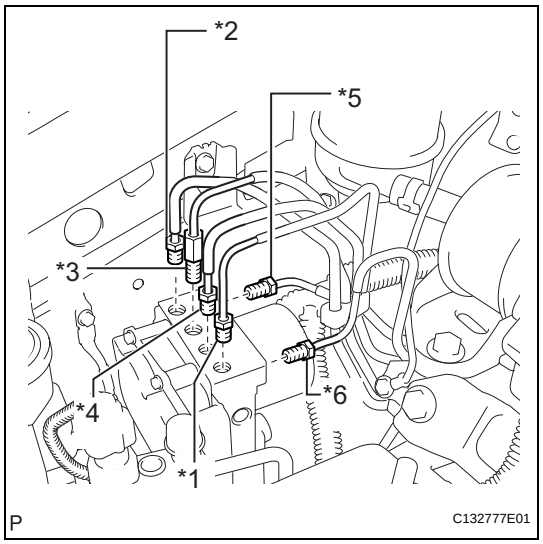
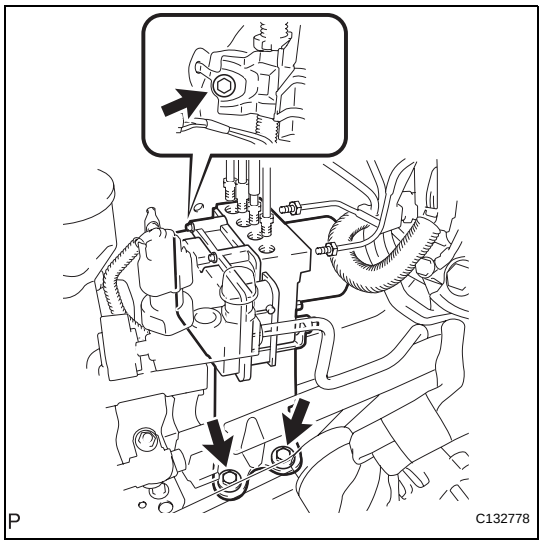
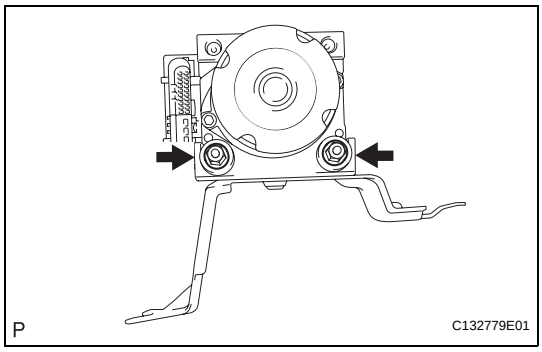
- *1: To Front Wheel Cylinder RH
- *2: To Front Wheel Cylinder LH
- *3: To Rear Wheel Cylinder RH
- *4: To Rear Wheel Cylinder LH
- *5: From 2nd Master Cylinder
- *6: From 1st Master Cylinder





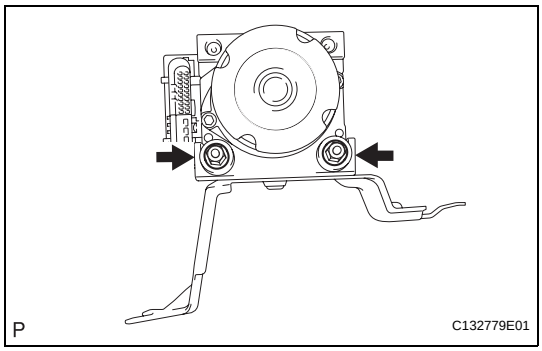
(d) Remove the 3 bolts and actuator assembly from the body with bracket.
NOTICE:
Do not damage the brake tubes and wire harness.



DISASSEMBLY

1. REMOVE BRAKE ACTUATOR BRACKET ASSEMBLY

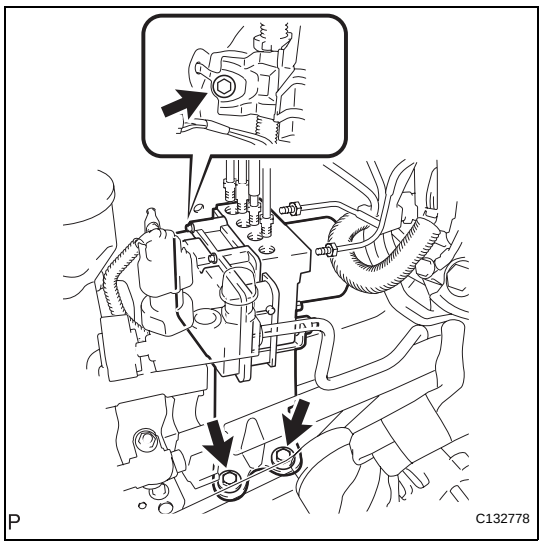
(a) Remove the 2 nuts and the brake actuator assembly from the actuator bracket assembly.



REASSEMBLY

1. INSTALL BRAKE ACTUATOR BRACKET ASSEMBLY

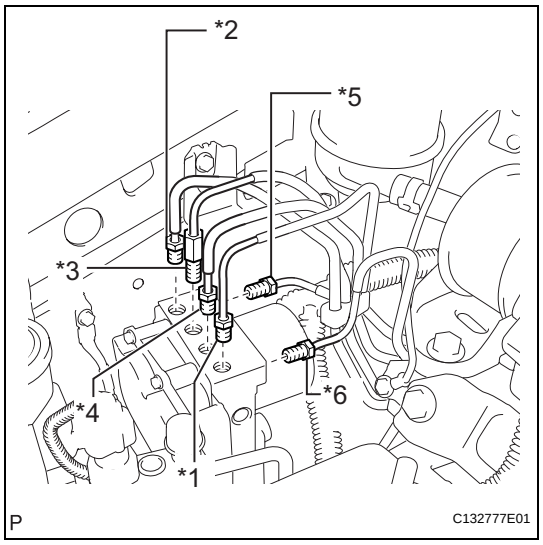
(a) Install the actuator assembly to the actuator bracket assembly with the 2 nuts.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
NOTICE:
Do not remove the hole plug before installing a new brake actuator because the brake actuator assembly is filled with brake fluid.



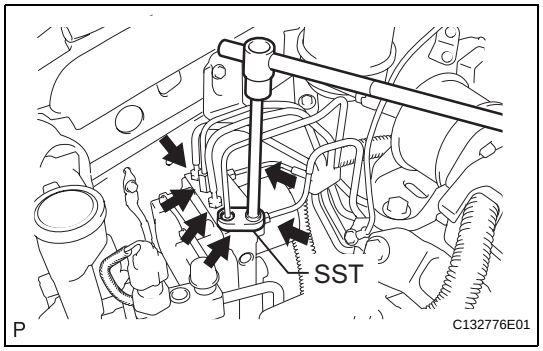
INSTALLATION

1. INSTALL BRAKE ACTUATOR (w/o VSC)

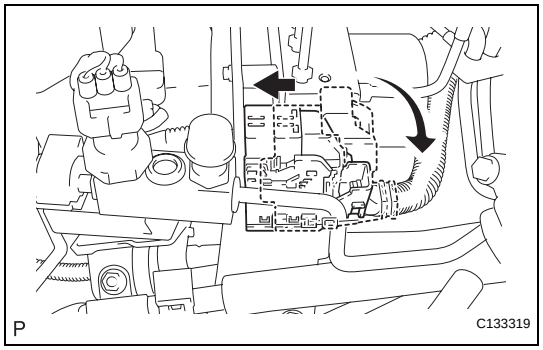
(a) Install the actuator assembly with bracket to the body with the 3 bolts.
Torque: 19 N*m (195 kgf*cm, 14 ft.*lbf)
NOTICE:
Do not damage the brake tubes and wire harness.



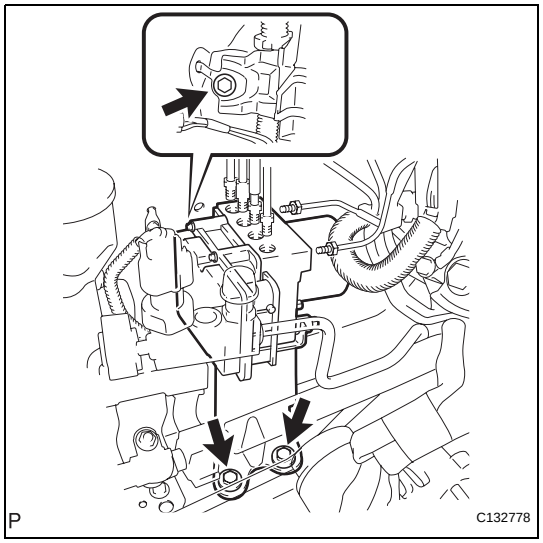
(b) Temporarily tighten each brake tube to the correct positions of the actuator assembly with bracket as shown in the illustration.
HINT:
- *1: To Front Wheel Cylinder RH
- *2: To Front Wheel Cylinder LH
- *3: To Rear Wheel Cylinder RH
- *4: To Rear Wheel Cylinder LH
- *5: From 2nd Master Cylinder
- *6: From 1st Master Cylinder



(c) Using SST, fully tighten each brake tube.
SST 09023-00101
Torque: without SST
15 N*m (155 kgf*cm, 11 ft.*lbf)
with SST
14 N*m (143 kgf*cm, 10 ft.*lbf)
NOTICE:
- **Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).**
- **This torque value is effective when SST is parallel to a torque wrench.**



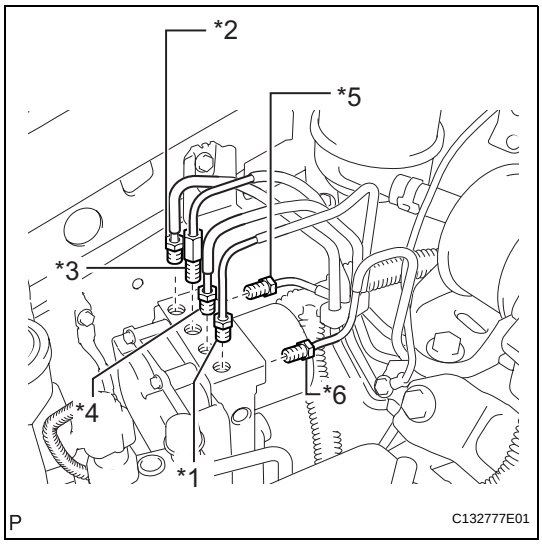
(d) Connect the actuator connector.
NOTICE:
Make sure that the connector is locked securely.



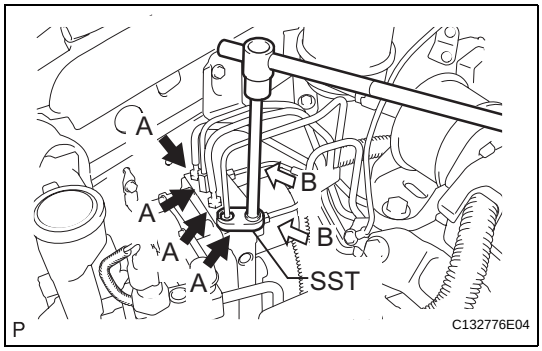
2. INSTALL BRAKE ACTUATOR (w/ VSC)

(a) Install the actuator assembly with bracket to the body with the 3 bolts.
Torque: 19 N*m (195 kgf*cm, 14 ft.*lbf)
NOTICE:
Do not damage the brake tubes.

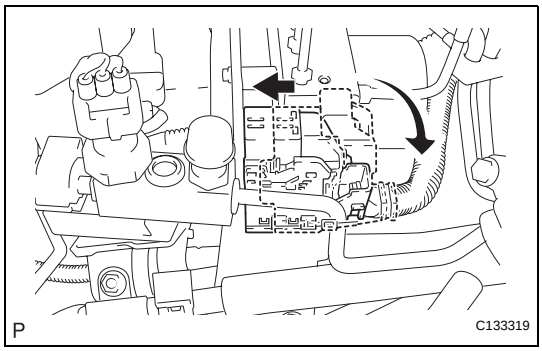
BC



(b) Temporarily tighten each brake tube to the correct positions of the actuator assembly with bracket as shown in the illustration.
HINT:
- *1: To Front Wheel Cylinder RH
- *2: To Front Wheel Cylinder LH
- *3: To Rear Wheel Cylinder RH
- *4: To Rear Wheel Cylinder LH
- *5: From 2nd Master Cylinder
- *6: From 1st Master Cylinder



(c) Using SST, fully tighten each brake tube.
SST 09023-00101, 09023-38200
Torque: bolt A M10 without SST
15 N*m (155 kgf*cm, 11 ft.*lbf)
bolt A M10 with SST
14 N*m (143 kgf*cm, 10 ft.*lbf)
bolt B M12 without SST
19 N*m (194 kgf*cm, 14 ft.*lbf)
bolt B M12 with SST
17 N*m (173 kgf*cm, 13 ft.*lbf)
NOTICE:
- **Use a torque wrench with a fulcrum length of 30 cm (11.81 in.).**
- **This torque value is effective when SST is parallel to a torque wrench.**



(d) Connect the actuator connector.
NOTICE:
Make sure that the connector is locked securely.

3. **INSTALL RADIATOR RESERVE TANK ASSEMBLY**
(a) Install the radiator reserve tank assembly.
(b) Connect the radiator reservoir tank hose.

4. **FILL RESERVOIR WITH BRAKE FLUID (See page BR-6)**

5. **BLEED BRAKE LINE (See page BR-7)**

6. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

7. **BLEED BRAKE ACTUATOR ASSEMBLY (w/ VSC) (See page BR-8)**

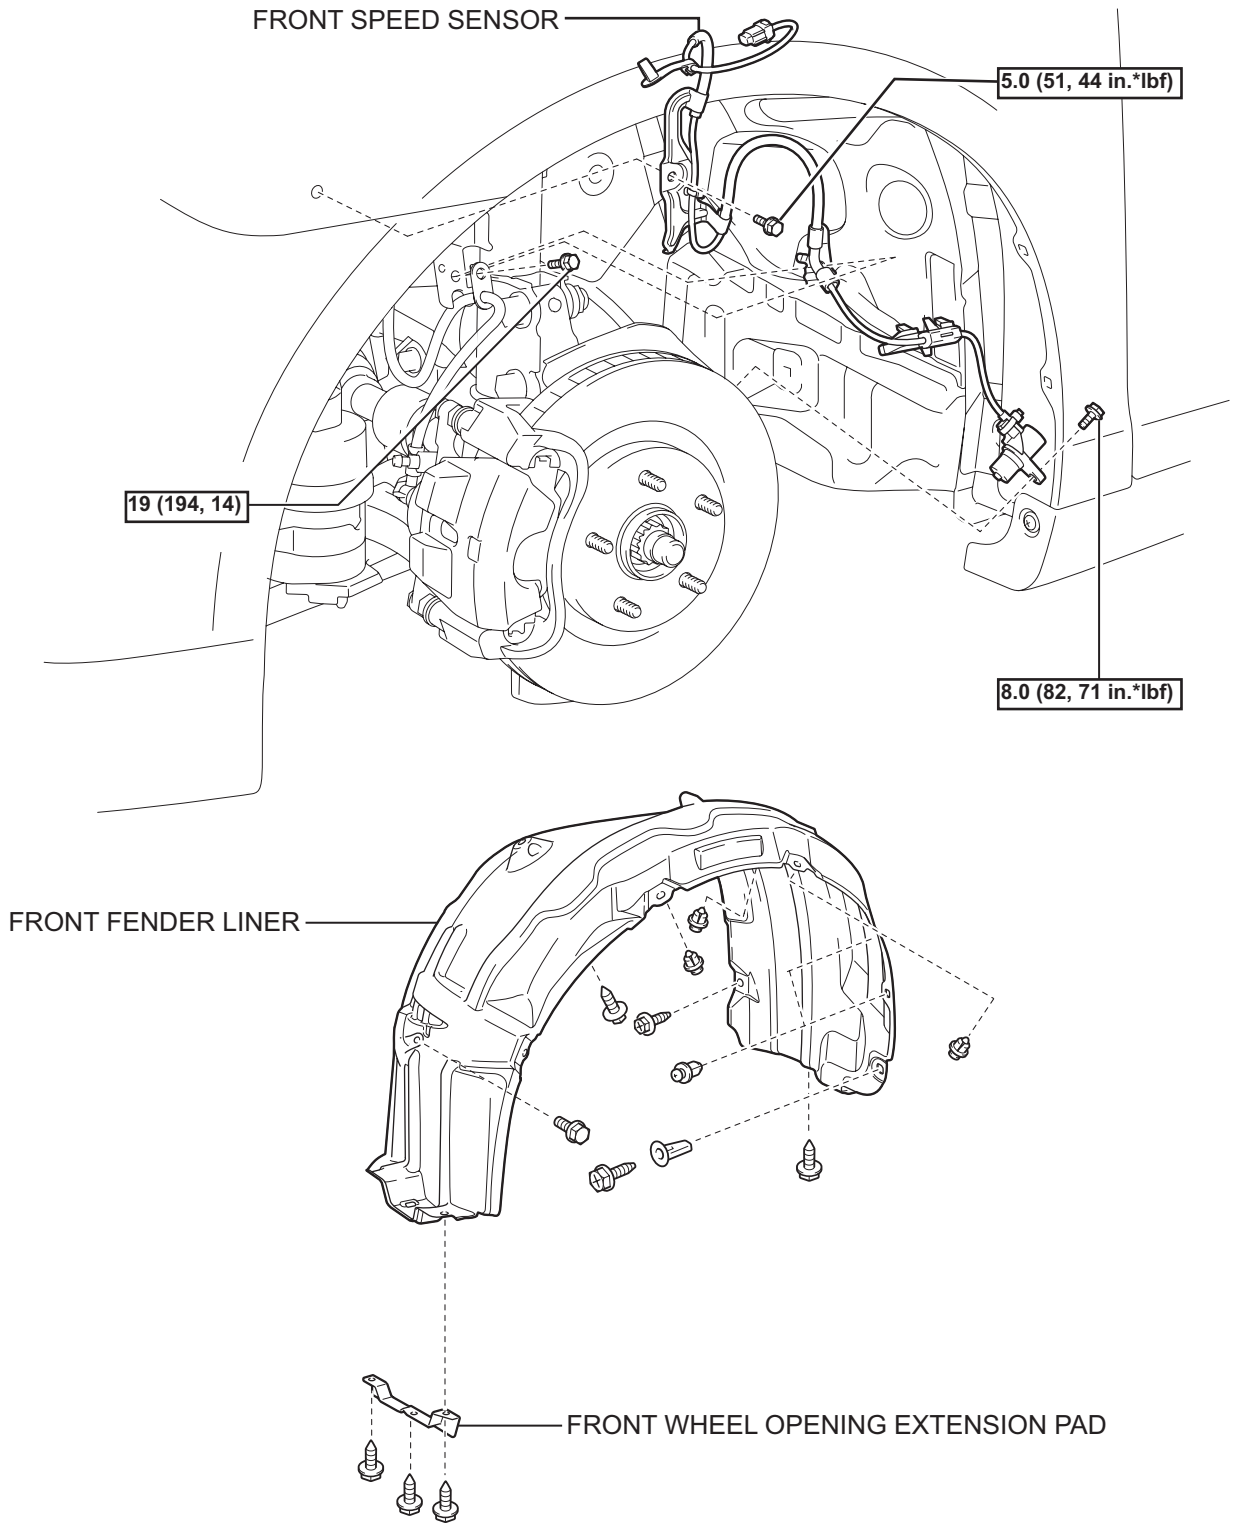
FRONT SPEED SENSOR

COMPONENTS

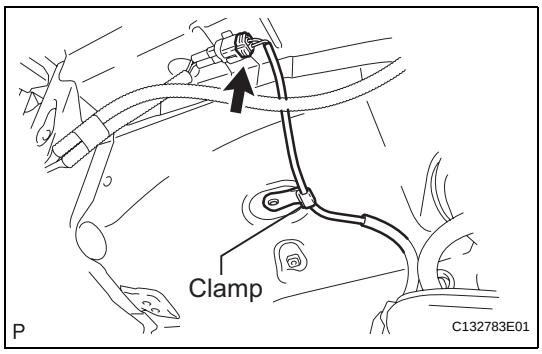


N*m (kgf*cm, ft.*lbf): Specified torque

C132784E01

REMOVAL

1. **REMOVE FRONT WHEEL**
2. **REMOVE FRONT WHEEL OPENING EXTENSION PAD LH (See page ED-6)**
3. **REMOVE FRONT FENDER LINER (See page ED-6)**
4. **REMOVE FRONT SPEED SENSOR**
   (a) Disconnect the front speed sensor connector and clamp.



BC

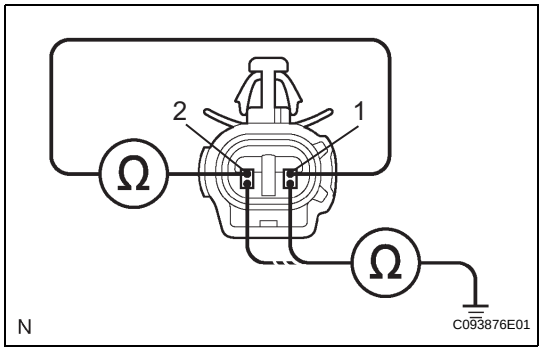
   (b) Remove the 2 bolts from the body and the shock absorber assembly.
   (c) Disengage the 2 claws from the steering knuckle and body.

   (d) Remove the bolt and the front speed sensor.
   NOTICE:
   - **Prevent foreign matter from attaching to the sensor tip.**
   - **Clean the installation hole and the surface for the speed sensor every time the speed sensor is removed.**

INSPECTION

1. INSPECT FRONT SPEED SENSOR (for BOSCH Made)

(a) Inspect the front speed sensor. If any of the following occurs, replace the front speed sensor with a new one:
- The surface of the front speed sensor is cracked, dented, or chipped off.
- The connector or wire harness is scratched, cracked, or damaged.
- The front speed sensor has been dropped.



(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

LH

Tester Connection	Specified Condition
1 (FL+) - 2 (FL-)	0.92 to 1.22 kΩ at 20 °C (68°F)
1 (FL+) - Body ground	10 kΩ or higher
2 (FL-) - Body ground	10 kΩ or higher

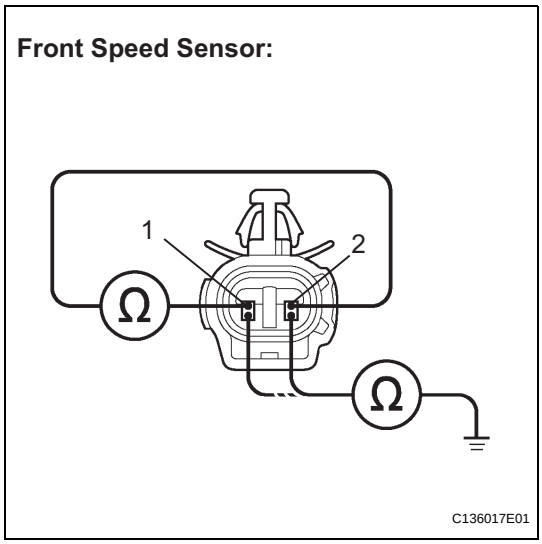
RH

Tester Connection	Specified Condition
1 (FR+) - 2 (FR-)	0.92 to 1.22 kΩ at 20 °C(68°F)
1 (FR+) - Body ground	10 kΩ or higher
2 (FR-) - Body ground	10 kΩ or higher

If the value is not as specified, replace the front speed sensor.

2. INSPECT FRONT SPEED SENSOR (for ADVICS Made)

(a) Inspect the front speed sensor. If any of the following occurs, replace the front speed sensor with a new one:
- The surface of the front speed sensor is cracked, dented, or chipped off.
- The connector or wire harness is scratched, cracked, or damaged.
- The front speed sensor has been dropped.



(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

RH

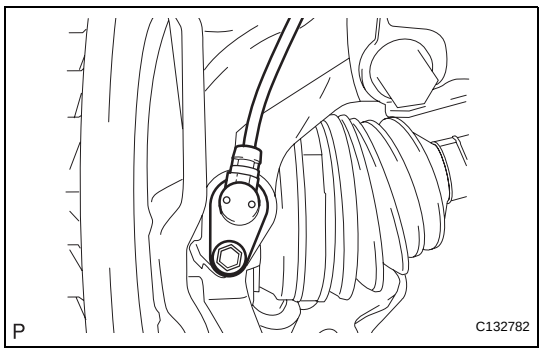
Tester Connection	Condition	Specified Condition
1 (FR+) - 2 (FR-)	Always	1.4 to 1.8 kΩ at 20°C (68 °F)
1 (FR+) - Body ground	Always	10 kΩ or higher
2 (FR-) - Body ground	Always	10 kΩ or higher

LH

Tester Connection	Condition	Specified Condition
1 (FL+) - 2 (FL-)	Always	1.4 to 1.8 kΩ at 20°C (68 °F)
1 (FL+) - Body ground	Always	10 kΩ or higher
2 (FL-) - Body ground	Always	10 kΩ or higher

If the value is not as specified, replace the front speed sensor.

BC



INSTALLATION

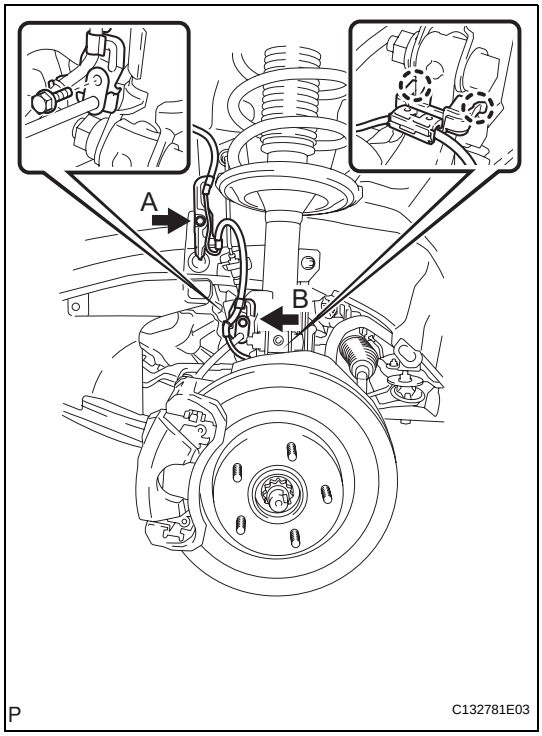
1. INSTALL FRONT SPEED SENSOR

(a) Install the front speed sensor with the bolt.

Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

NOTICE:

Prevent foreign matter from attaching to the sensor tip.



(b) Install the front speed sensor with the 2 bolts and engage the 2 claws.

Torque: Bolt A

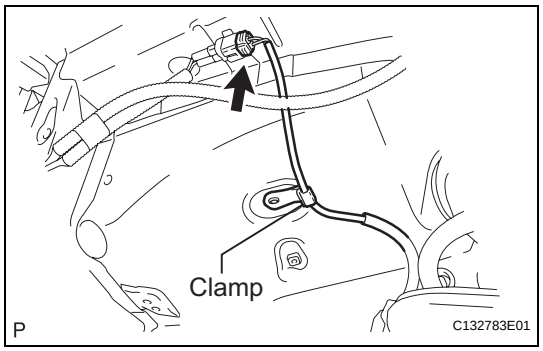
5.0 N*m (51 kgf*cm, 44 in.*lbf)

Bolt B

19 N*m (194 kgf*cm, 14 ft.*lbf)

NOTICE:

Do not twist the wire harness for the front speed sensor when installing the speed sensor.



(c) Connect the front speed sensor connector and clamp.

2. **INSTALL FRONT FENDER LINER (See page ED-10)**

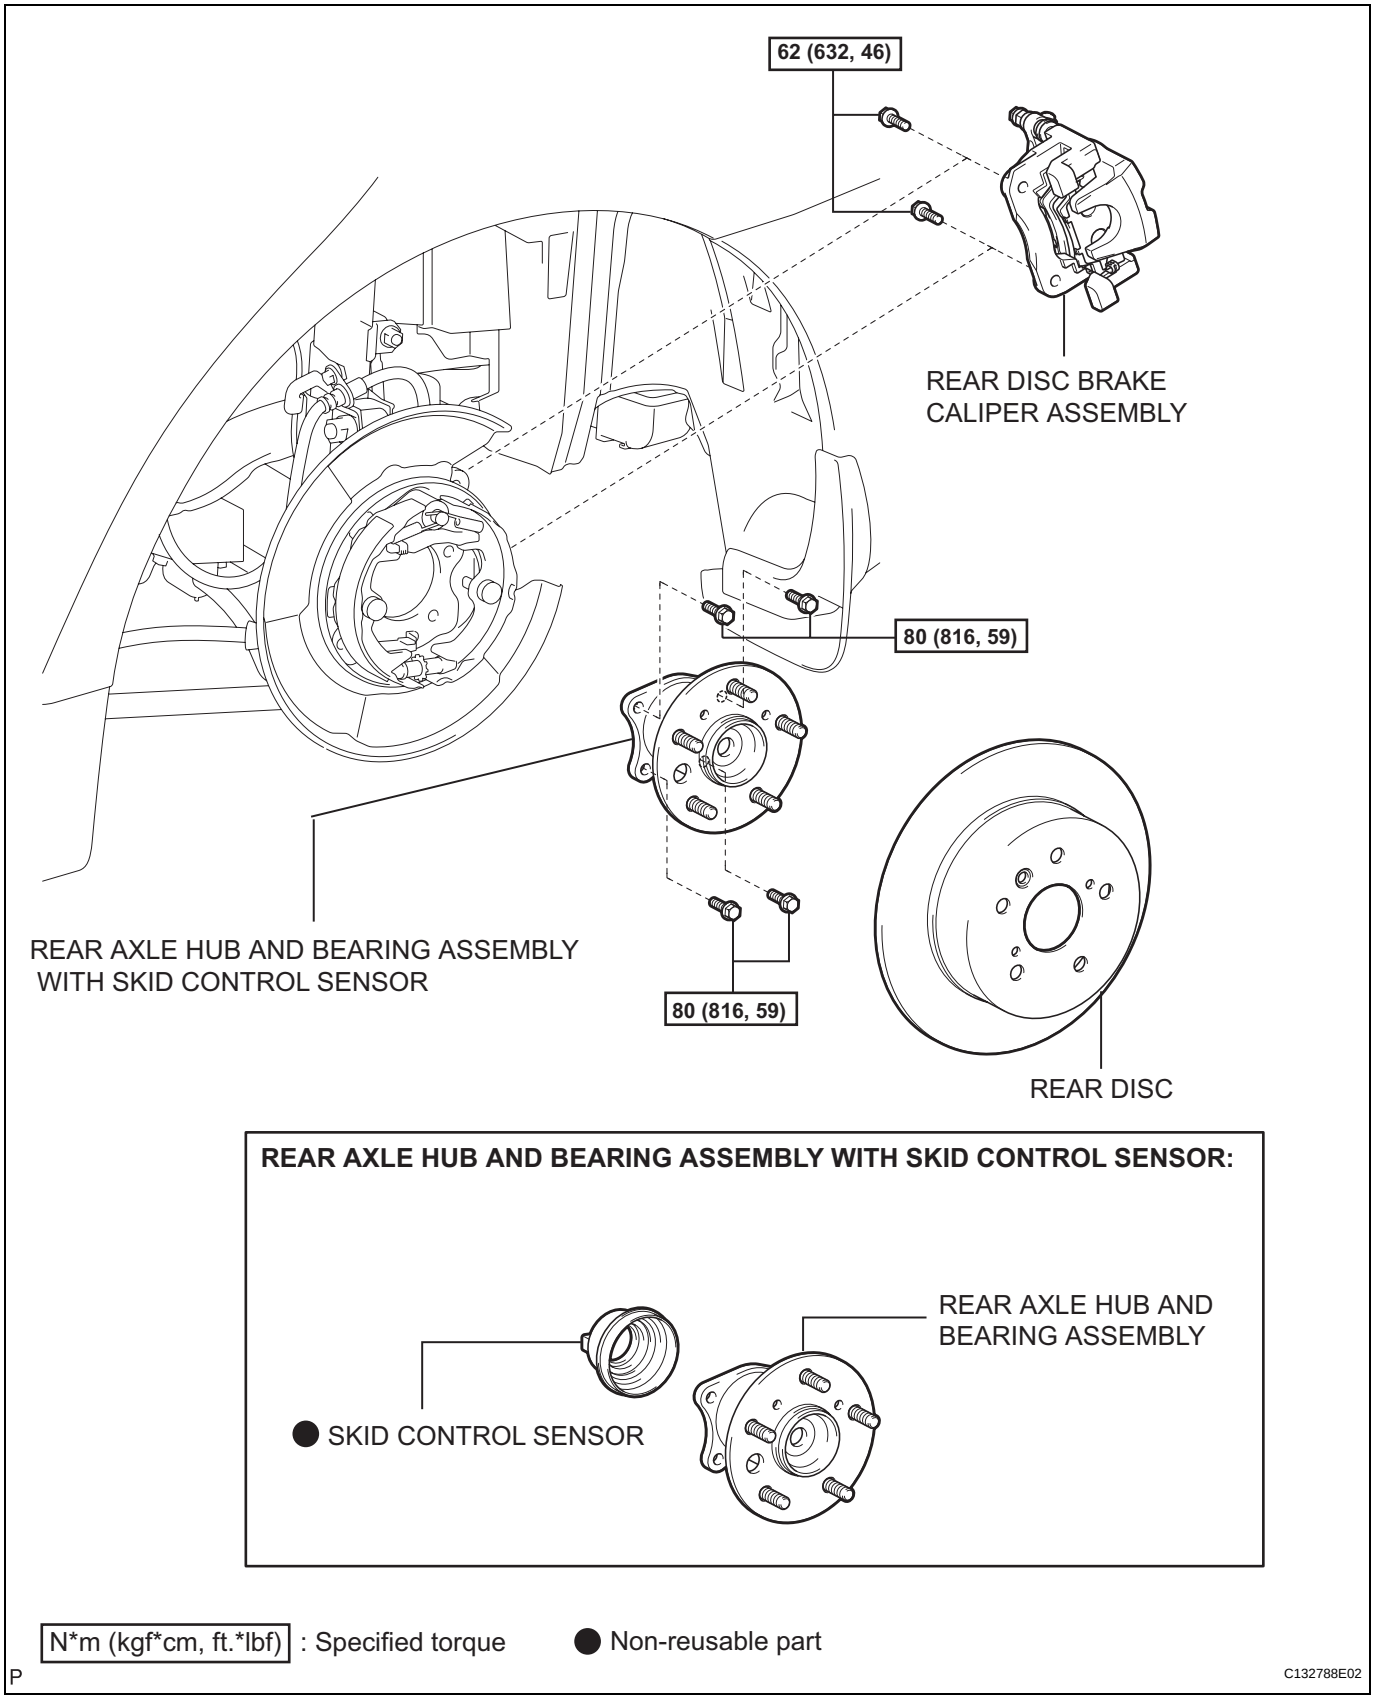
3. **INSTALL FRONT WHEEL OPENING EXTENSION PAD LH (See page ED-10)**

4. **INSTALL FRONT WHEEL**
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

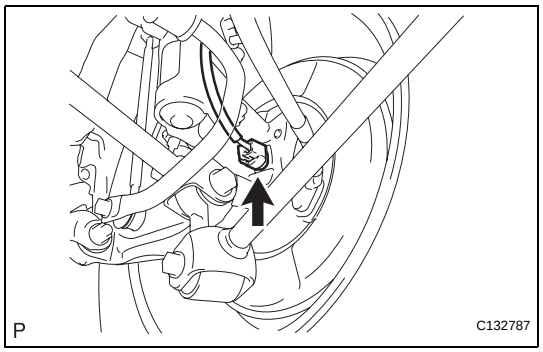
5. **CHECK SPEED SENSOR SIGNAL**
HINT:
- for BOSCH without VSC (See page BC-11)
- for BOSCH with VSC (See page BC-290)
- for ADVICS (See page BC-123)

SKID CONTROL SENSOR

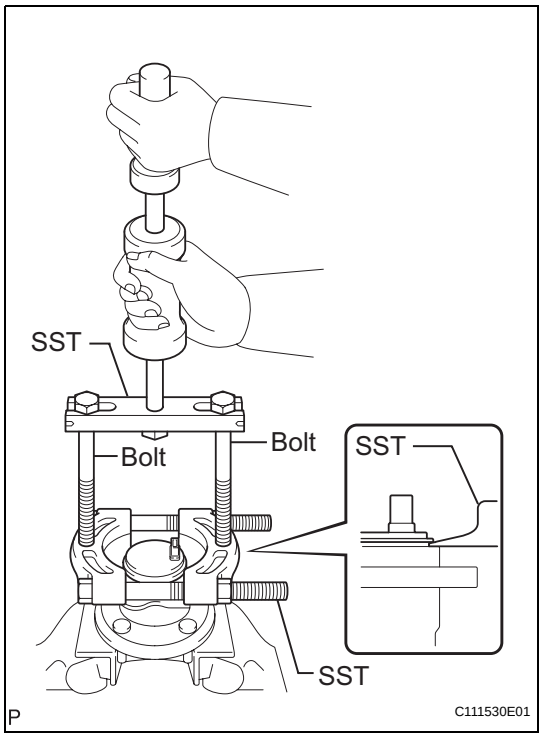
COMPONENTS



REMOVAL



1. **REMOVE REAR WHEEL**
2. **DISCONNECT SKID CONTROL SENSOR WIRE**
   (a) Disconnect the connector from the skid control sensor.
   NOTICE:
   Be careful not to damage the speed sensor.
3. **REMOVE REAR DISC BRAKE CALIPER ASSEMBLY (See page AH-18)**
4. **REMOVE REAR DISC (See page BR-62)**
5. **REMOVE REAR AXLE HUB AND BEARING ASSEMBLY WITH SKID CONTROL SENSOR (See page AH-15)**



6. **REMOVE SKID CONTROL SENSOR**
   (a) Mount the rear axle hub in a vise using aluminum plates.
   NOTICE:
   Replace the hub and bearing assembly if it is dropped or receives a strong shock.
   (b) Using a pin punch and hammer, drive out the 2 pins and remove the 2 attachments from SST.
   SST 09520-00031 (09521-00010, 09520-00040), 09521-00020
   (c) Using SST and 2 bolts (Diameter: 12 mm, pitch: 1.5 mm), remove the skid control sensor from the hub and bearing assembly.
   SST 09520-00031 (09521-00010, 09520-00040), 09521-00020, 09950-00020
   NOTICE:
   - **Keep the sensor away from magnets.**
   - **Pull the skid control sensor off straight, taking care not to make contact with the skid control sensor rotor.**
   - **If the speed sensor rotor is damaged or deformed, replace the hub and bearing assembly.**
   - **Do not scratch the contact surface between the axle hub and the skid control sensor.**
   - **Do not attach foreign matter to the speed sensor rotor and tip.**

INSPECTION

1. INSPECT SKID CONTROL SENSOR (for BOSCH Made)

(a) Inspect the skid control sensor. If any of the following occurs, replace the skid control sensor with a new one:
- The surface of the skid control sensor is cracked, dented, or chipped off.
- The connector is scratched, cracked, or damaged.
- The skid control sensor has been dropped.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

LH

Tester Connection	Specified Condition
1 (RR+) - 2 (RR-)	Below 2.2 kΩ
1 (RR+) - Body ground	10 kΩ or higher
2 (RR-) - Body ground	10 kΩ or higher

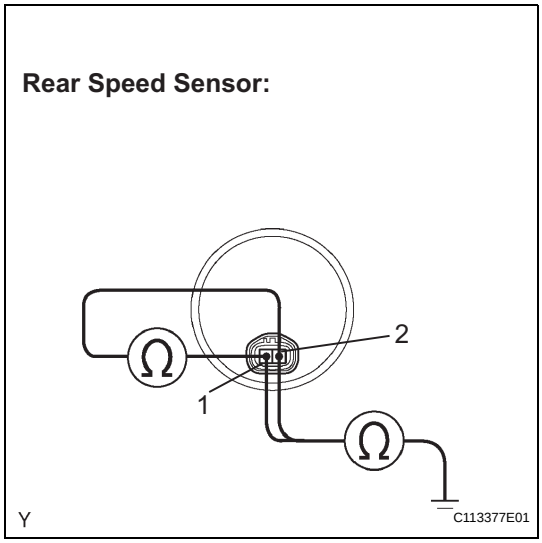
RH

Tester Connection	Specified Condition
1 (RL+) - 2 (RL-)	Below 2.2 kΩ
1 (RL+) - Body ground	10 kΩ or higher
2 (RL-) - Body ground	10 kΩ or higher

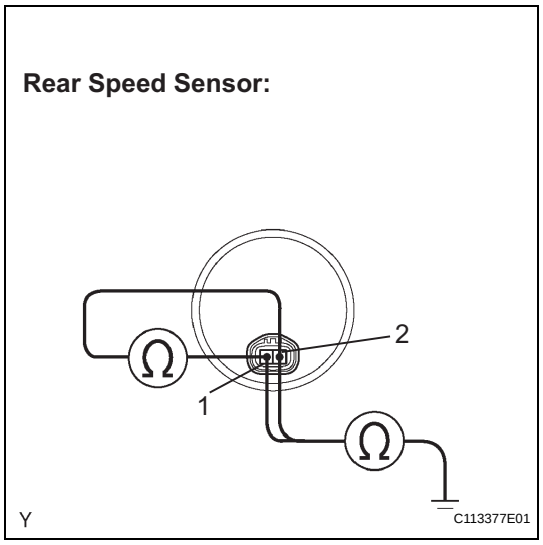
If the value is not as specified, replace the skid control sensor.

2. INSPECT SKID CONTROL SENSOR (for ADVICS Made)

(a) Inspect the skid control sensor. If any of the following occurs, replace the skid control sensor with a new one:
- The surface of the skid control sensor is cracked, dented, or chipped off.
- The connector is scratched, cracked, or damaged.
- The skid control sensor has been dropped.



BC



(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

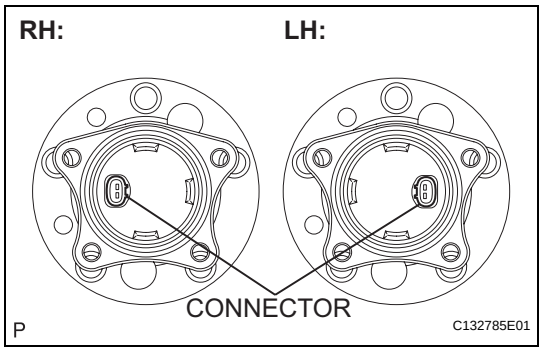
RH

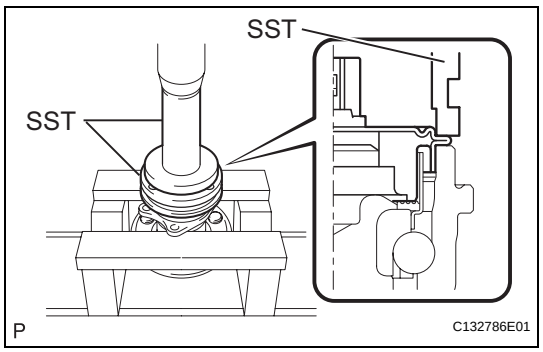
Tester Connection	Condition	Specified Condition
2 (RR+) - 1 (RR-)	Always	0.9 to 2.1 kΩ
2 (RR+) - Body ground	Always	10 kΩ or higher
1 (RR-) - Body ground	Always	10 kΩ or higher

LH

Tester Connection	Condition	Specified Condition
2 (RL+) - 1 (RL-)	Always	0.9 to 2.1 kΩ
2 (RL+) - Body ground	Always	10 kΩ or higher
1 (RL-) - Body ground	Always	10 kΩ or higher

If the value is not as specified, replace the skid control sensor.





INSTALLATION

1. **INSTALL SKID CONTROL SENSOR**

(a) Clean the contact surface between the axle hub and a new skid control sensor.

NOTICE:

Prevent foreign matter from attaching to the sensor rotor.

(b) Place the skid control sensor on the axle hub so that the connector is positioned as shown in the illustration.

(c) Using SST, a press, 2 V-blocks, and 2 steel plates, install the skid control sensor to the axle hub.

SST 09309-36010, 09213-58013

NOTICE:

- **Keep the sensor away from magnets.**
- **Do not use a hammer on the skid control sensor.**
- **Check that there is no foreign matter such as iron chips on the detecting portion of the skid control sensor.**
- **Slowly press the skid control sensor straight.**

2. **INSTALL REAR AXLE HUB AND BEARING ASSEMBLY WITH SKID CONTROL SENSOR (See page AH-16)**

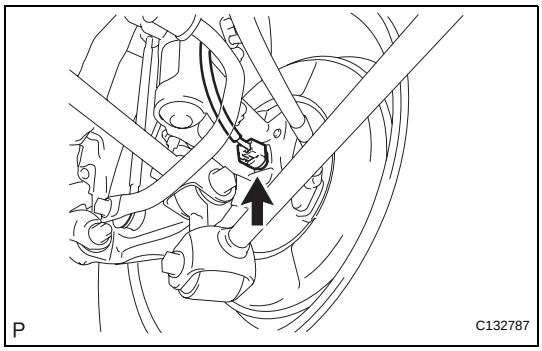
3. **INSPECT REAR AXLE HUB BEARING LOOSENESS (See page AH-15)**

4. **INSPECT REAR AXLE HUB RUNOUT (See page AH-15)**

5. **INSTALL REAR DISC (See page BR-63)**

6. **INSTALL REAR DISC BRAKE CALIPER ASSEMBLY (See page AH-20)**

BC



7. **CONNECT SKID CONTROL SENSOR WIRE**
   (a) Connect the connector to the skid control sensor.

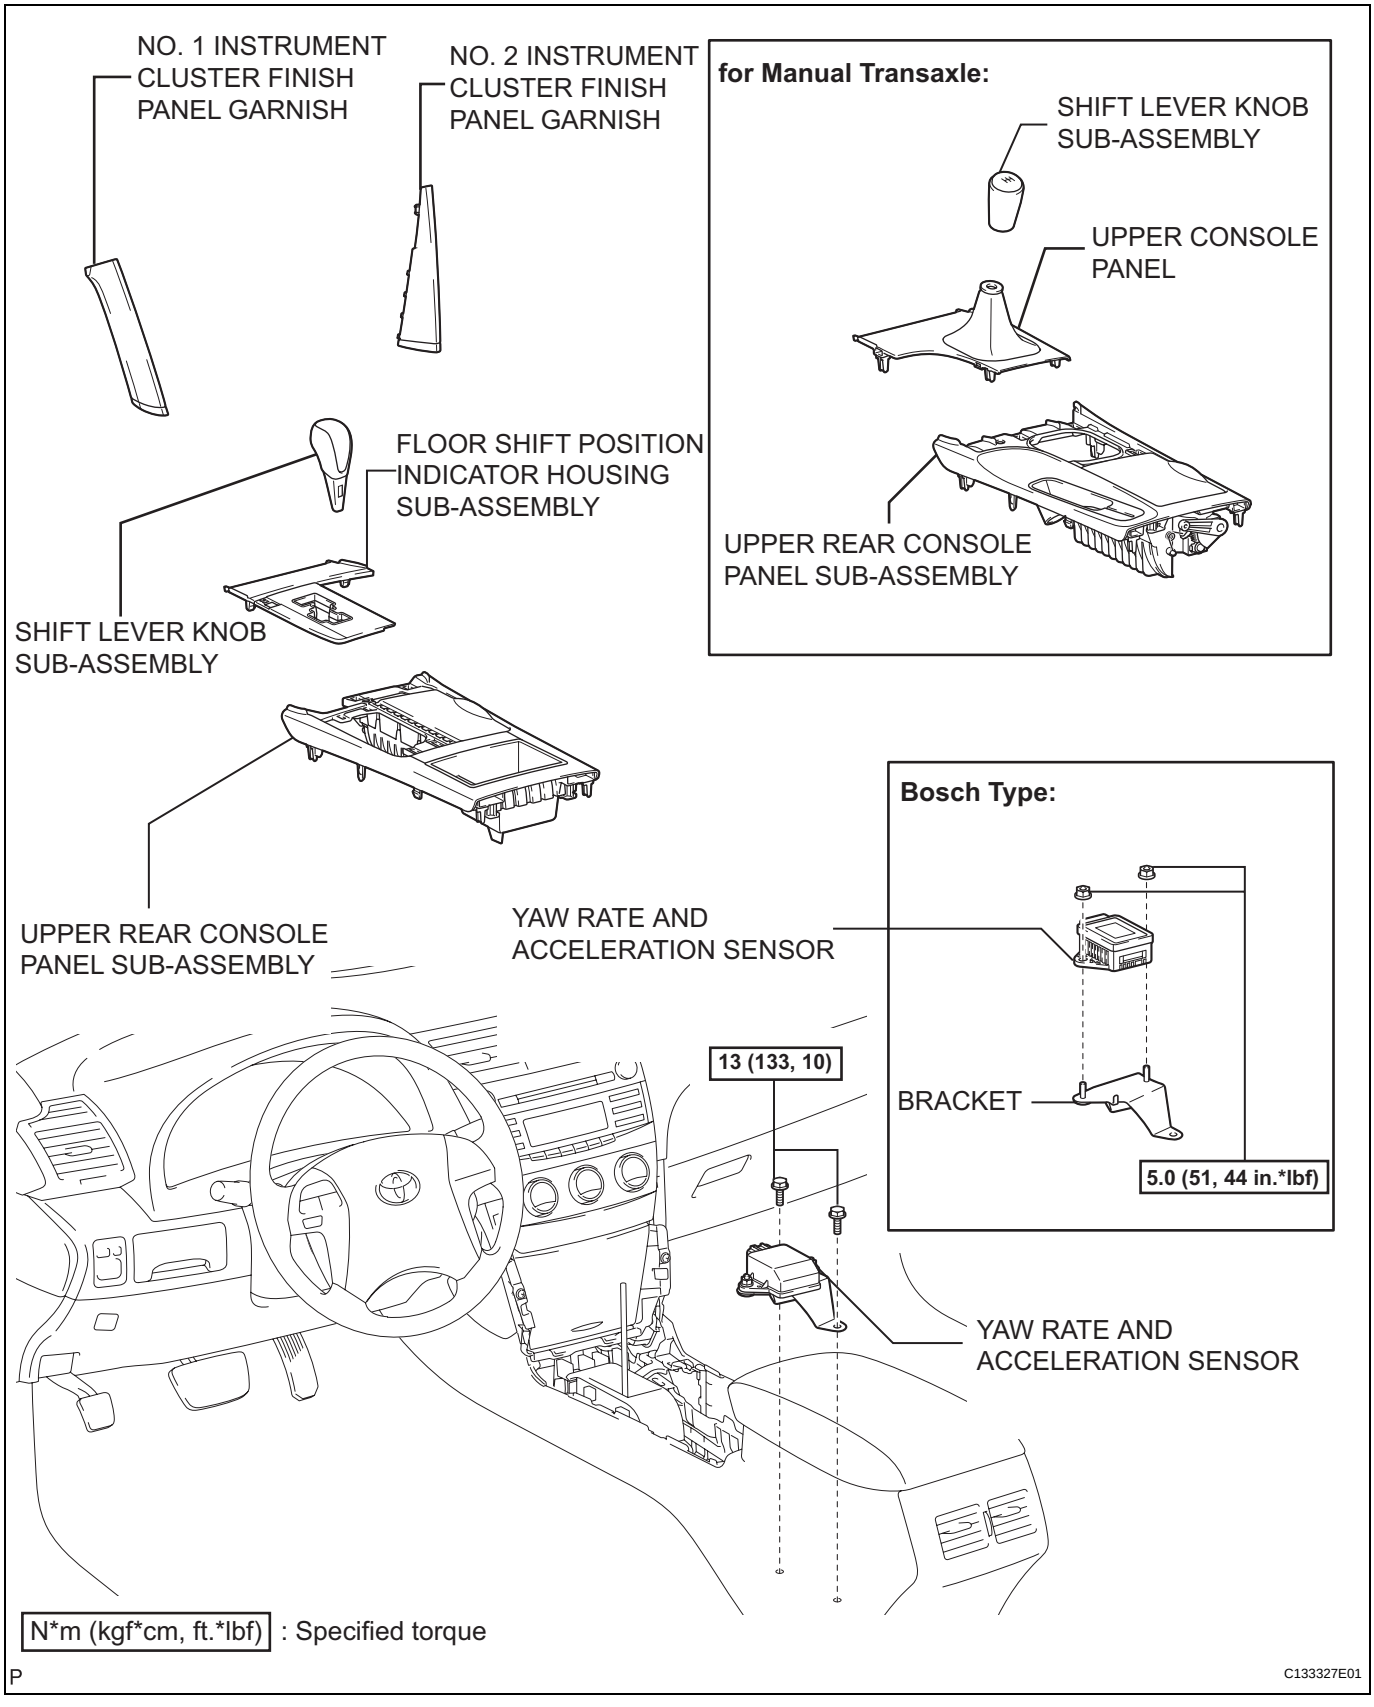
8. **INSTALL REAR WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

9. **INSPECT AND ADJUST REAR WHEEL ALIGNMENT**
   HINT:
   (See page SP-13)

10. **CHECK SPEED SENSOR SIGNAL**
    HINT:
    - for BOSCH without VSC (See page BC-11)
    - for BOSCH with VSC (See page BC-290)
    - for ADVICS (See page BC-123)

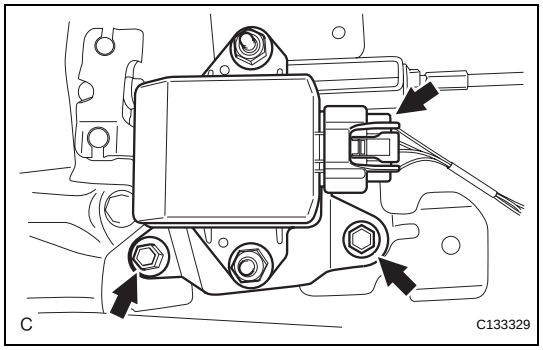
YAW RATE AND ACCELERATION SENSOR (w/ VSC)

COMPONENTS

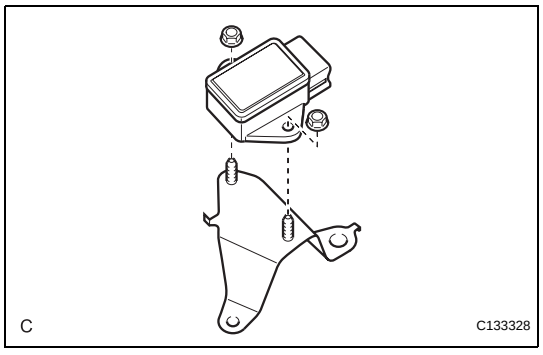


REMOVAL

1. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-24)**
2. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-24)**
3. **REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-24)**
4. **REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-25)**
5. **REMOVE FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-25)**
6. **REMOVE UPPER CONSOLE PANEL (for Manual Transaxle) (See page IP-25)**
7. **REMOVE UPPER REAR CONSOLE PANEL SUB-ASSEMBLY (for Manual Transaxle) (See page IP-26)**
8. **REMOVE UPPER REAR CONSOLE PANEL SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-26)**
9. **REMOVE YAW RATE AND ACCELERATION SENSOR**
   (a) Disconnect the yaw rate sensor connector.
   (b) Remove the 2 bolts and yaw rate sensor.
   NOTICE:
   Do not remove the sensor from the bracket.



10. **REMOVE YAW RATE AND ACCELERATION SENSOR (for BOSCH Made)**
    (a) Remove the 2 nuts and yaw rate sensor from the bracket.

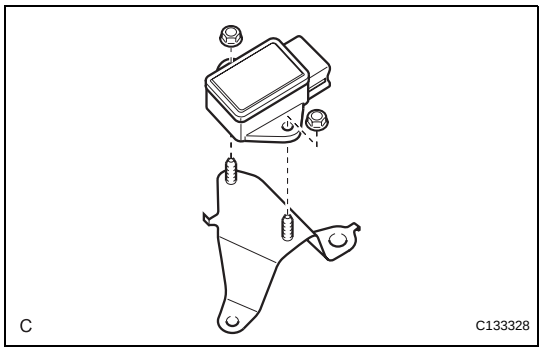


BC

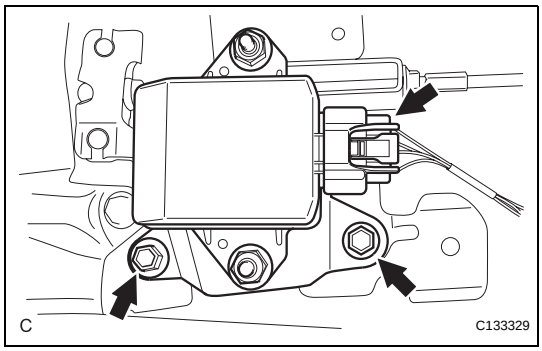
INSPECTION

1. **INSPECT YAW RATE AND ACCELERATION SENSOR**
   (a) Inspect the yaw rate sensor. If any of the following occurs, replace the yaw rate sensor with a new one:
   - The surface of the yaw rate sensor is cracked, dented, or chipped off.
   - The connector is scratched, cracked, or damaged.
   - The yaw rate sensor has been dropped.

INSTALLATION



1. **INSTALL YAW RATE AND ACCELERATION SENSOR (for BOSCH Made)**
   (a) Install the yaw rate and acceleration sensor to the bracket with the 2 nuts.
   Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)



2. **INSTALL YAW RATE AND ACCELERATION SENSOR**
   (a) Install the yaw rate sensor and acceleration with the 2 bolts.
   NOTICE:
   - **Do not damage the yaw rate and acceleration sensor.**
   - **Make sure that the yaw rate and acceleration sensor is installed securely.**

   Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)
   (b) Connect the yaw rate and acceleration sensor connector.

3. **INSTALL UPPER REAR CONSOLE PANEL SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-53)**
4. **INSTALL UPPER REAR CONSOLE PANEL SUB-ASSEMBLY (for Manual Transaxle) (See page IP-53)**
5. **INSTALL UPPER CONSOLE PANEL (for Manual Transaxle) (See page IP-54)**
6. **INSTALL FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-53)**
7. **INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-54)**
8. **INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-55)**
9. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-55)**
10. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-55)**

BC

11. PERFORM YAW RATE SENSOR ZERO POINT CALIBRATION

HINT:

- for BOSCH (See page BC-278)
- for ADVICS (See page BC-119)

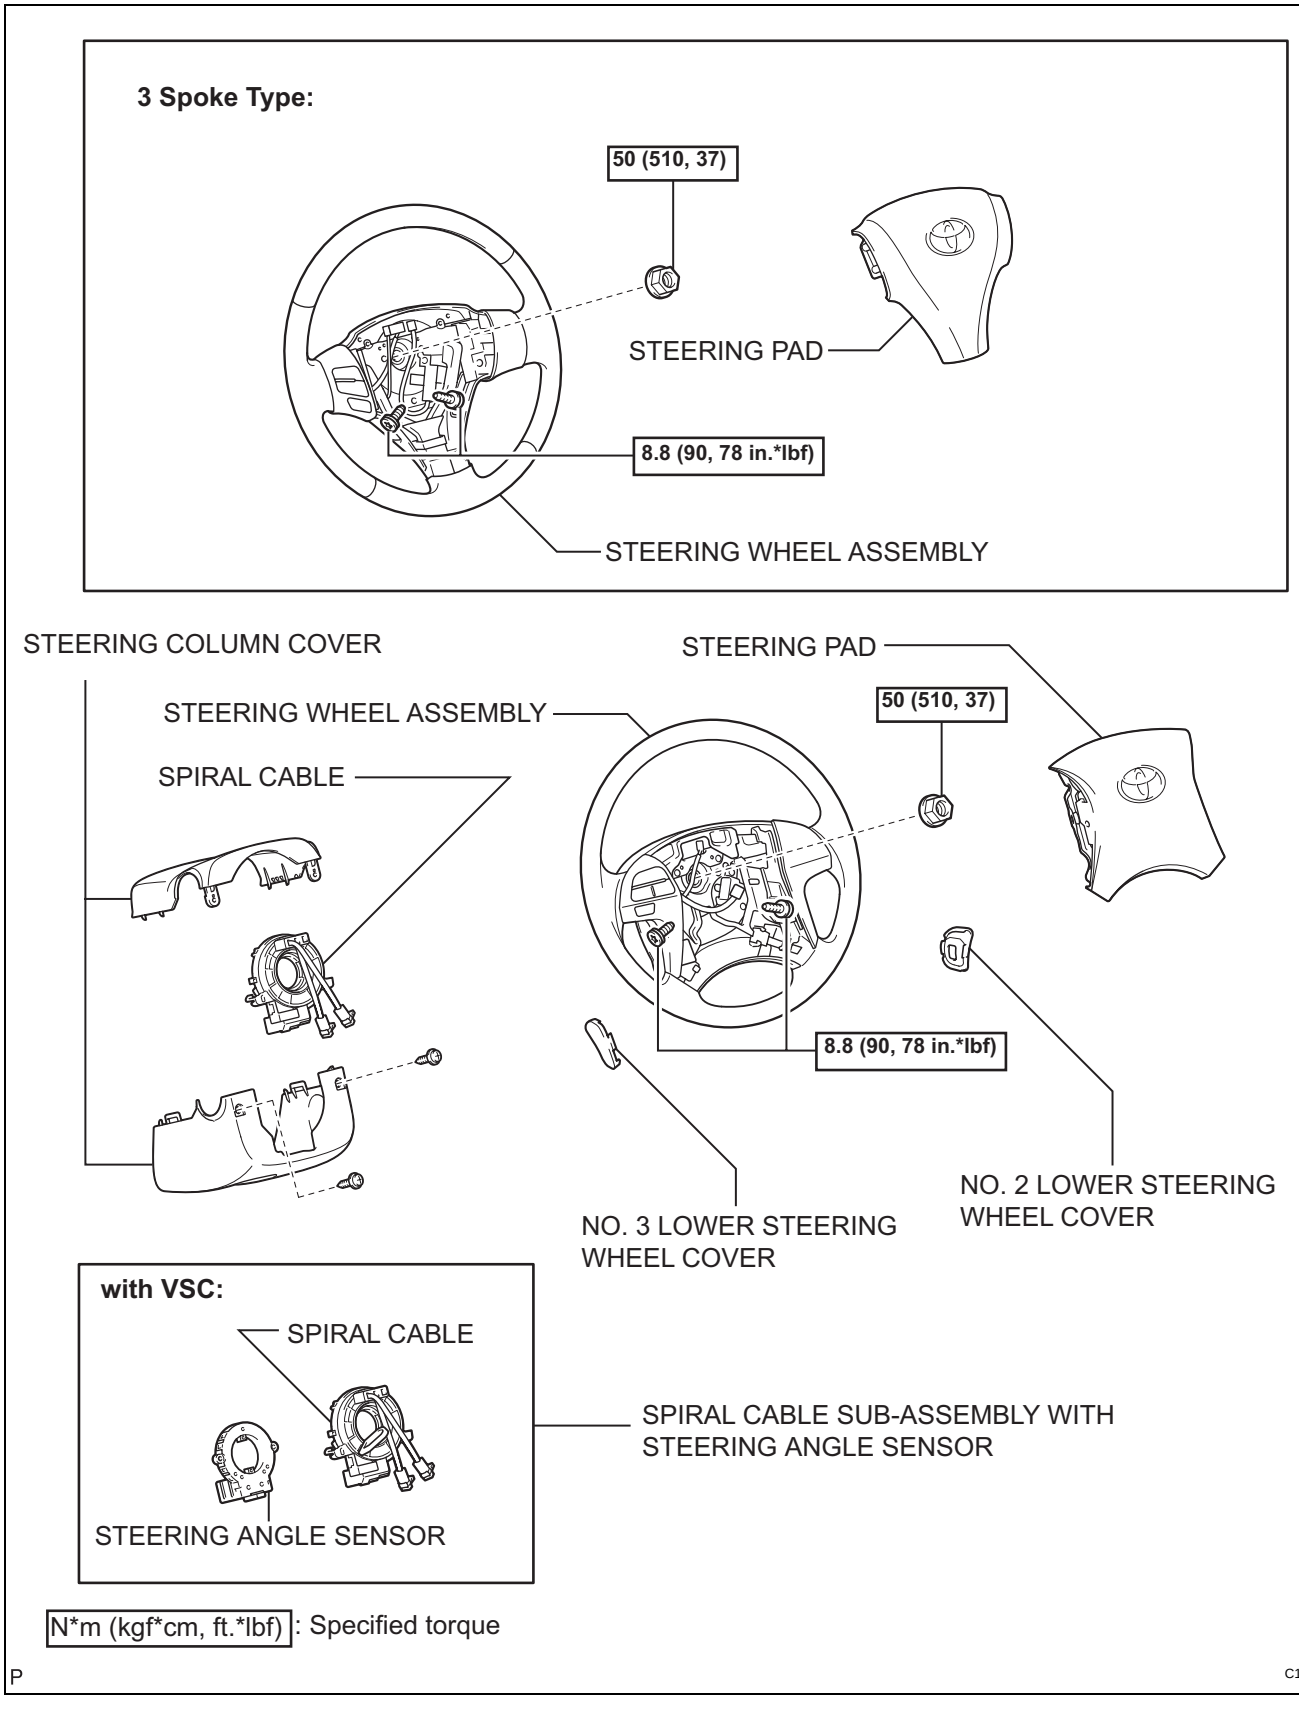
12. INSPECT SENSOR SIGNAL

HINT:

- for BOSCH (See page BC-290)
- for ADVICS (See page BC-123)

STEERING ANGLE SENSOR (w/ VSC)

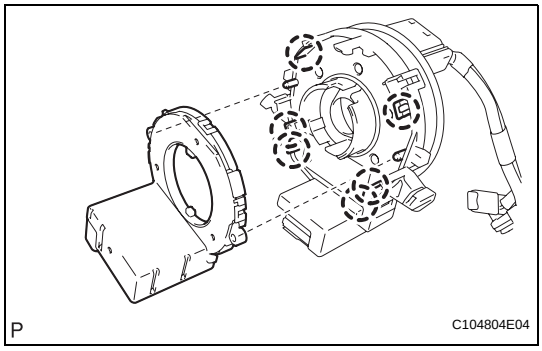
COMPONENTS



BC

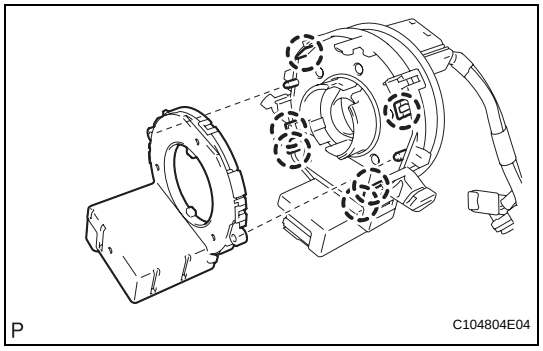
REMOVAL

1. **PRECAUTION**
   CAUTION:
   Be sure to read "PRECAUTION" thoroughly before servicing (See page RS-1).
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
3. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**
   NOTICE:
   When reconnecting the cable to the negative battery terminal after installing the steering sensor, check that the front tires and steering wheel are kept aligned straight ahead before and after connecting the cable to the negative battery terminal.
4. **REMOVE NO. 2 STEERING WHEEL COVER LOWER (See page RS-349)**
5. **REMOVE NO. 3 STEERING WHEEL COVER LOWER (See page RS-349)**
6. **REMOVE STEERING PAD (See page RS-350)**
7. **REMOVE STEERING WHEEL ASSEMBLY (See page SR-38)**
8. **REMOVE STEERING COLUMN COVER (See page SR-39)**
9. **REMOVE SPIRAL CABLE SUB-ASSEMBLY WITH STEERING ANGLE SENSOR (See page RS-364)**
10. **REMOVE STEERING ANGLE SENSOR**
    (a) Disengage the claws and remove the steering angle sensor from the spiral cable.



INSPECTION

1. **INSPECT STEERING ANGLE SENSOR**
   (a) Inspect the steering angle sensor. If any of the following occurs, replace the steering angle sensor with a new one:
   - The surface of the steering angle sensor is cracked, dented, or chipped off.
   - The connector is scratched, cracked, or damaged.
   - The steering angle sensor has been dropped.



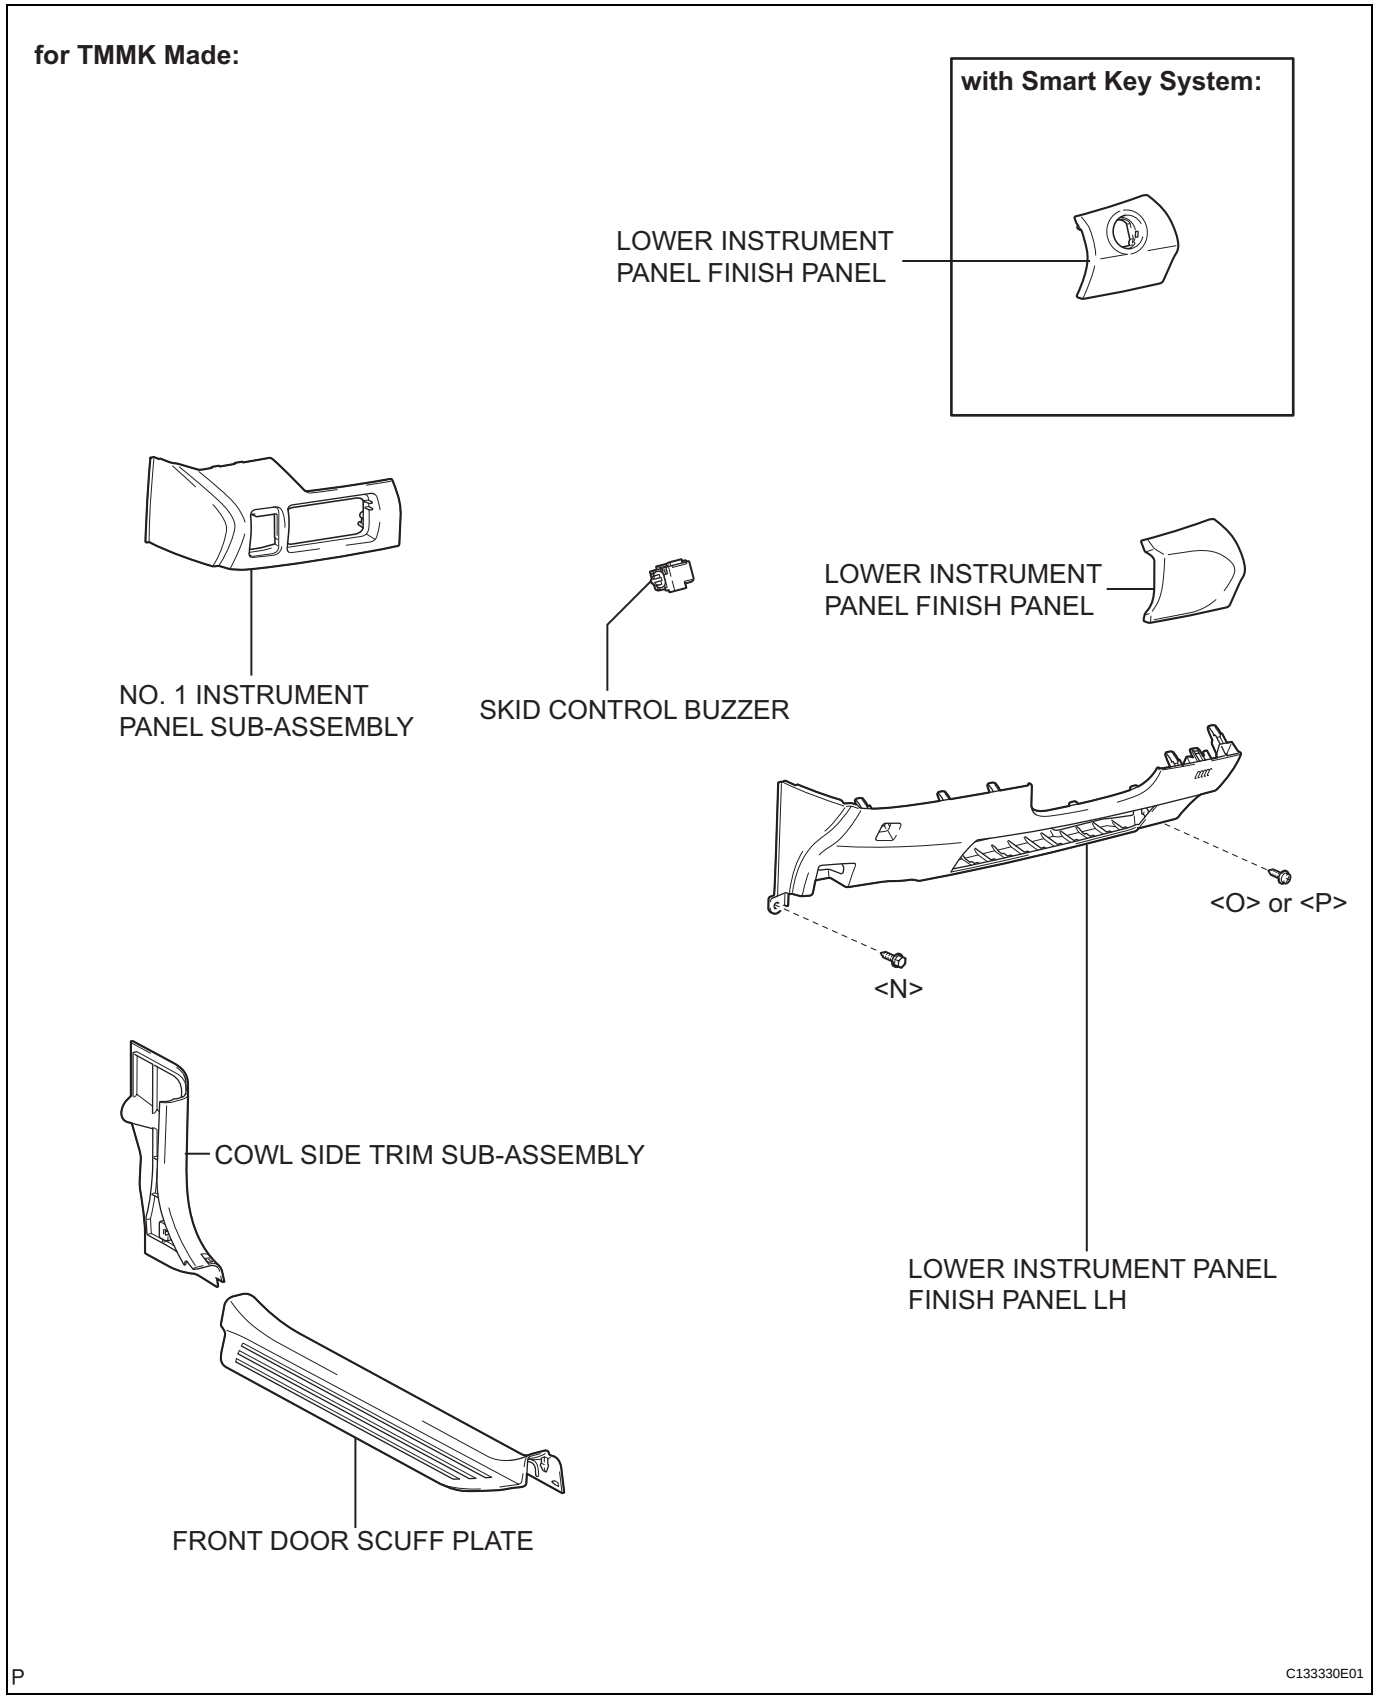
INSTALLATION

1. **INSTALL STEERING ANGLE SENSOR**
   (a) Align the locating pins, engage the claws, and install the steering angle sensor to the spiral cable sub-assembly.
2. **INSTALL SPIRAL CABLE SUB-ASSEMBLY WITH STEERING ANGLE SENSOR (See page RS-366)**
3. **INSTALL STEERING COLUMN COVER (See page SR-50)**
4. **ADJUST SPIRAL CABLE (See page RS-367)**
5. **INSTALL STEERING WHEEL ASSEMBLY (See page SR-51)**
6. **INSPECT STEERING WHEEL CENTER POINT (See page SR-47)**
7. **INSTALL STEERING PAD (See page RS-350)**
8. **INSTALL NO. 2 STEERING WHEEL COVER LOWER (See page RS-352)**
9. **INSTALL NO. 3 STEERING WHEEL COVER LOWER (See page RS-351)**
10. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
11. **INSPECT STEERING PAD (See page RS-347)**
12. **INSPECT SRS WARNING LIGHT**
    HINT:
    (See page RS-32)

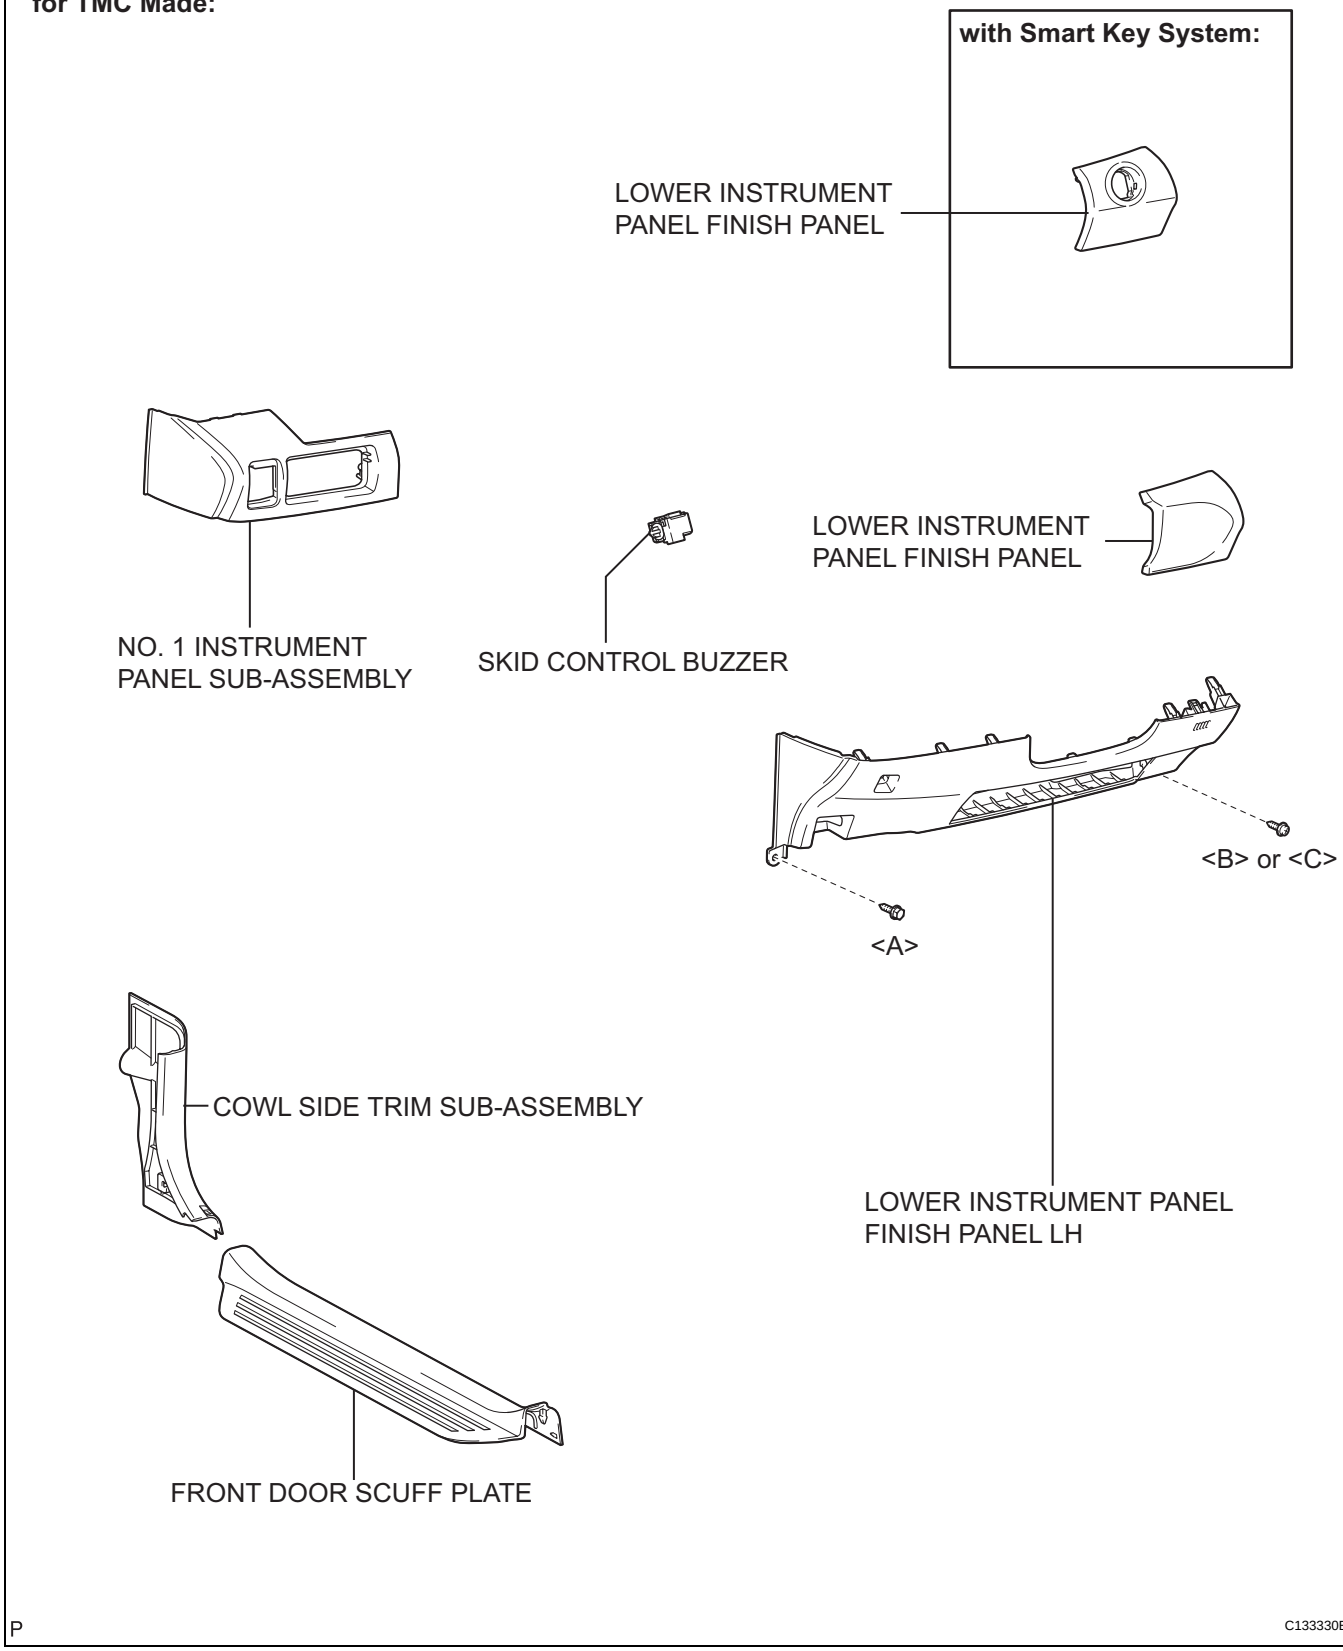
BC

SKID CONTROL BUZZER (w/ VSC)

COMPONENTS



for TMC Made:



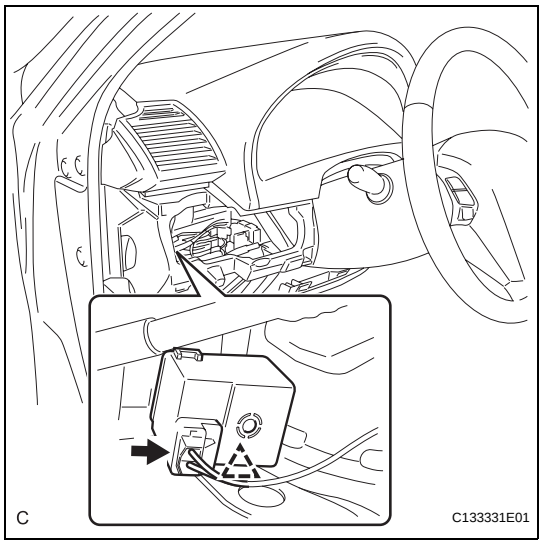
P

C133330E03

BC

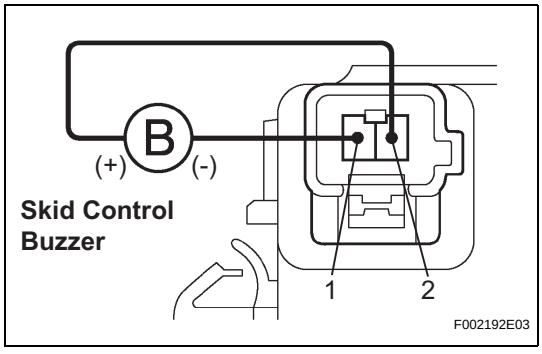
REMOVAL

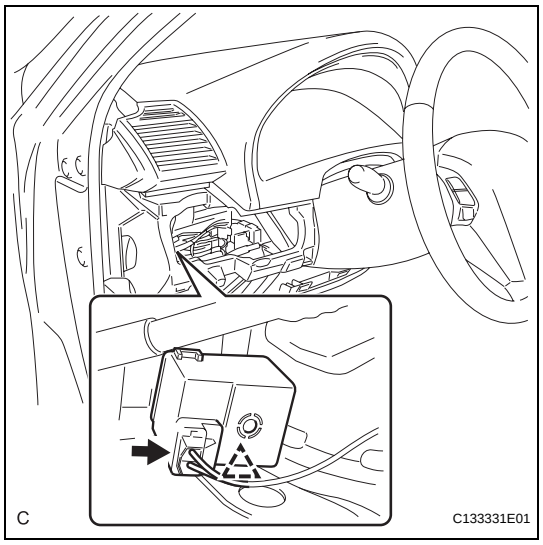
1. **PRECAUTION (See page IP-20)**
2. **REMOVE FRONT DOOR SCUFF PLATE (See page IR-24)**
3. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY (See page IR-25)**
4. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-20)**
5. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-21)**
6. **REMOVE NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-22)**
7. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/o Smart Key System) (See page IP-22)**
8. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/ Smart Key System) (See page IP-22)**
9. **REMOVE SKID CONTROL BUZZER**
   (a) Disconnect the skid control buzzer connector.
   (b) Remove the clip and skid control buzzer assembly.



INSPECTION

1. **INSPECT SKID CONTROL BUZZER**
   (a) Apply battery negative voltage to terminal 1, and battery positive voltage to terminal 2 of the skid control buzzer, and then check that the buzzer sounds.
   OK:
   The skid control buzzer sounds.
   If the skid control buzzer does not sound, replace the skid control buzzer.





INSTALLATION

1. **INSTALL SKID CONTROL BUZZER**
   (a) Attach the claw and install the skid control buzzer.
   (b) Connect the skid control buzzer assembly connector.
2. **INSTALL NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-57)**
3. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (w/ Smart Key System) (See page IP-57)**
4. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (w/o Smart Key System) (See page IP-57)**
5. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-58)**
6. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-59)**
7. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY (See page IR-54)**
8. **INSTALL FRONT DOOR SCUFF PLATE (See page IR-54)**

ABS MOTOR RELAY (w/ VSC)

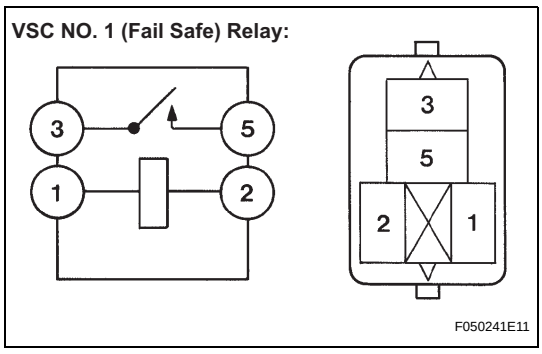
ON-VEHICLE INSPECTION

1. INSPECT VSC NO. 1 (FAIL SAFE) RELAY

(a) Remove the VSC NO. 1 (fail safe) relay.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance



Tester Connection	Condition	Specified Condition
3 - 5	Always	10 kΩ or higher
3 - 5	Apply B+ between terminals 1 and 2	Below 1 Ω

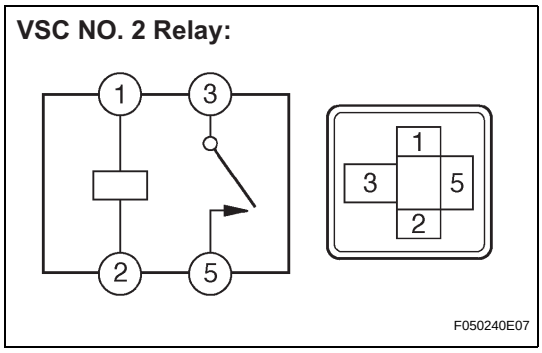
If the value is not as specified, replace the VSC NO. 1 (fail safe) relay.

2. INSPECT VSC NO. 2 RELAY

(a) Remove the VSC NO. 2 relay.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance



Tester Connection	Condition	Specified Condition
3 - 5	Always	10 kΩ or higher
3 - 5	Apply B+ between terminals 1 and 2	Below 1 Ω

If the value is not as specified, replace the VSC NO. 2 relay.

BC

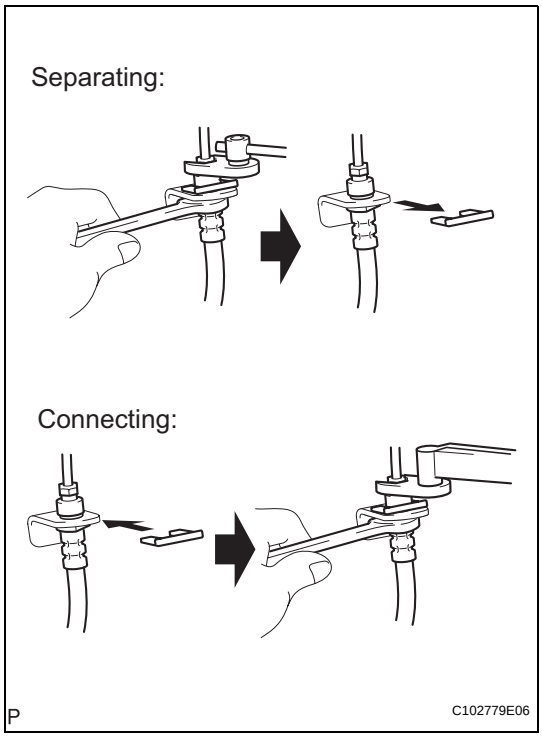
BRAKE SYSTEM

PRECAUTION

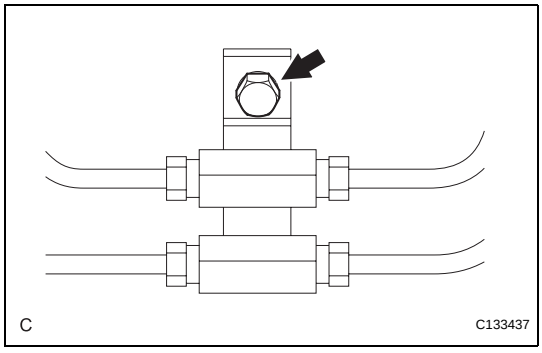
1. TROUBLESHOOTING PRECAUTION

NOTICE:

- **Care must be taken to replace each part properly as it could affect the performance of the brake system and result in a driving hazard. Replace the parts with those having the same part number or equivalent.**
- **It is very important to keep parts and the area clean when repairing the brake system.**
- **If the vehicle is equipped with a mobile communication system, refer to the precaution in the INTRODUCTION section.**
- **Care must be taken when using magnets as it could affect the performance of the speed sensors.**
- **Since the brake line is classified as one of the critical safety related parts, be sure to disassemble the components if a brake fluid leak is found. If any abnormality is found, replace the component with a new one.**
- **When removing brake components, cover the brake tube connections to prevent foreign matter such as dust or dirt from entering the tubes.**
- **Do not damage or deform the brake tubes when removing or installing them.**
- **When installing a grommet to the body, ensure that the brake tube passes through the center of the grommet.**
- **When installing a brake tube or flexible hose, ensure that they are free from twisting or bending.**
- **If the cap of the flexible hose does not match the groove on the bracket, twist the hose slightly to insert it.**
- **Flexible hoses must be free from absorber oil, grease, etc.**
- **When installing a brake tube to a plastic clamp, ensure that the brake tube is not loose or being pinched.**
- **Do not reuse a clip or plastic clamp removed from a flexible hose.**
- **After installing a brake tube and flexible hose, ensure that they do not interfere with any other components.**
- **Do not allow brake fluid to adhere to any painted surface such as the vehicle body. If brake fluid leaks onto any painted surface, immediately wash it off.**



- **Disconnect and connect the flexible hose and brake tube:**
  (a) Hold the flexible hose with a wrench and disconnect the brake tube with a union nut wrench without deforming the tube.
  (b) Remove the clip.
  (c) Install a new clip.
  (d) Connect the brake tube with a union nut wrench without deforming the tube.



- **Connect the brake tube and way:**
  (a) Support the way to prevent deformation of the brake tube and connect the brake tube to the way with a union nut wrench.
  (b) Support the way to prevent deformation of the brake tube and install the bolt to fix the way to the body.

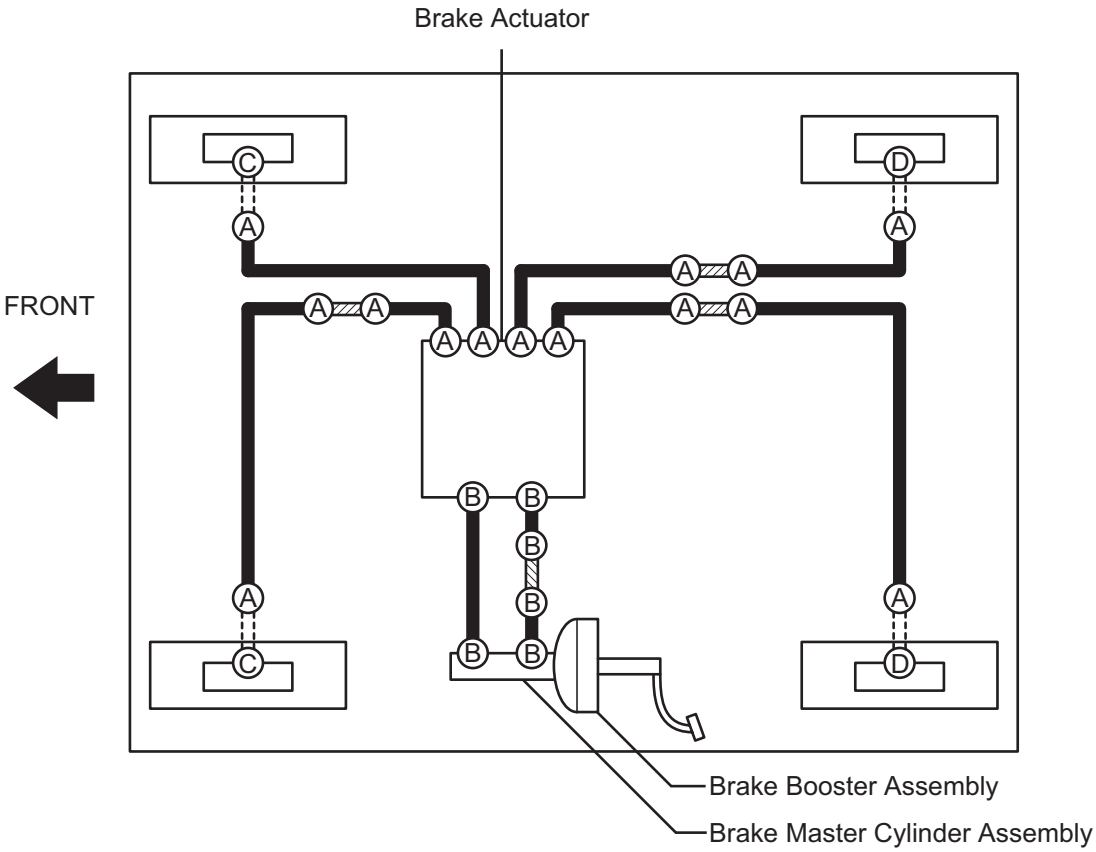
2. EXPRESSIONS OF IGNITION SWITCH

The type of ignition switch used on this model differs according to the specifications of the vehicle.
The expressions listed in the table below are used in this section.

Switch Type		Ignition Switch (position)	Engine Switch (condition)
Expression	Ignition Switch off	LOCK	Off
	Ignition Switch on (IG)	ON	On (IG)
	Ignition Switch on (ACC)	ACC	On (ACC)
	Engine Start	START	Start

SYSTEM DIAGRAM

HINT:
See the layout drawing to confirm the locations and tightening torque of flexible hoses and brake tubes.



: Brake Tube

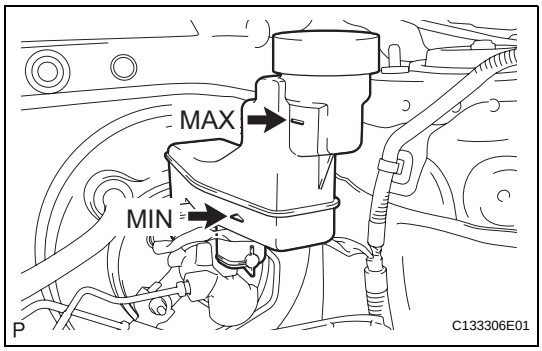
PROBLEM SYMPTOMS TABLE

Use the table below to help determine the cause of the problem. The numbers indicate the priority of the likely cause of the problem. Check each part in order. If necessary, replace these parts.

BRAKE SYSTEM

Symptom	Suspected area	See page
Low pedal or spongy pedal	1. Fluid leaks in brake system	BR-6
	2. Air in brake system	BR-6
	3. Piston seals (Worn or damaged) (FRONT)	BR-47
	4. Piston seals (Worn or damaged) (REAR)	BR-59
	5. Master cylinder (Faulty)	BR-28
	6. Booster push rod (Out of adjustment)	BR-31
Brake drag	1. Brake pedal free play (Insufficient)	BR-19
	2. Parking brake lever travel (Out of adjustment)	PB-2
	3. Parking brake pedal travel (Out of adjustment)	PB-1
	4. Parking brake cable (Sticking)	PB-48
	5. Parking brake shoe clearance (Out of adjustment)	PB-1
	6. Pad (Cracked or distorted) (FRONT)	BR-47
	7. Pad (Cracked or distorted) (REAR)	BR-59
	8. Piston (Stuck) (FRONT)	BR-47
	9. Piston (Stuck) (REAR)	BR-59
	10. Piston (Seized) (FRONT)	BR-47
	11. Piston (Seized) (REAR)	BR-59
	12. Booster push rod (Out of adjustment)	BR-31
	13. Vacuum leaks in booster systems	BR-42
	14. Master cylinder (Faulty)	BR-28
Brake pull	1. Piston (Stuck) (FRONT)	BR-47
	2. Piston (Stuck) (REAR)	BR-59
	3. Pad (Oily) (FRONT)	BR-47
	4. Pad (Oily) (REAR)	BR-59
	5. Piston (Seized) (FRONT)	BR-47
	6. Piston (Seized) (REAR)	BR-59
	7. Disc (Scored) (FRONT)	BR-50
	8. Disc (Scored) (REAR)	BR-62
	9. Pad (Cracked or distorted) (FRONT)	BR-50
	10. Pad (Cracked or distorted) (REAR)	BR-62

Symptom	Suspected area	See page
Hard pedal but brake inefficient	1. Fluid leaks in brake systems	BR-6
	2. Air in brake system	BR-6
	3. Pad (Worn) (FRONT)	BR-50
	4. Pad (Worn) (REAR)	BR-62
	5. Pad (Cracked or distorted) (FRONT)	BR-50
	6. Pad (Cracked or distorted) (REAR)	BR-62
	7. Pad (Oily) (FRONT)	BR-50
	8. Pad (Oily) (REAR)	BR-62
	9. Pad (Glazed) (FRONT)	BR-50
	10. Pad (Glazed) (REAR)	BR-62
	11. Disc (Scored) (FRONT)	BR-50
	12. Disc (Scored) (REAR)	BR-62
	13. Booster push rod (Out of adjustment)	BR-31
	14. Vacuum leaks in booster system	BR-42
Noise from brakes	1. Pad (Cracked or distorted) (FRONT)	BR-50
	2. Pad (Cracked or distorted) (REAR)	BR-62
	3. Cylinder mounting bolt (Loose) (FRONT)	BR-47
	4. Caliper support bolt (Loose) (REAR)	PB-58
	5. Disc (Scored) (FRONT)	BR-50
	6. Disc (Scored) (REAR)	BR-62
	7. Pad support plate (Loose) (FRONT)	BR-50
	8. Pad support plate (Loose) (REAR)	BR-62
	9. Sliding pin (Worn) (FRONT)	BR-47
	10. Sliding pin (Worn) (REAR)	BR-59
	11. Pad (Dirty) (FRONT)	BR-47
	12. Pad (Dirty) (REAR)	BR-59
	13. Pad (Glazed) (FRONT)	BR-47
	14. Pad (Glazed) (REAR)	BR-59
	15. Anti-squeal shim (Damaged) (FRONT)	BR-47
	16. Anti-squeal shim (Damaged) (REAR)	BR-59



BRAKE FLUID

ON-VEHICLE INSPECTION

1. INSPECT FLUID LEVEL IN RESERVOIR

(a) Inspect the fluid level.

If brake fluid level is lowered, check for leakage and inspect the disc brake pad. If necessary, refill the reservoir with brake fluid after repair and replacement.

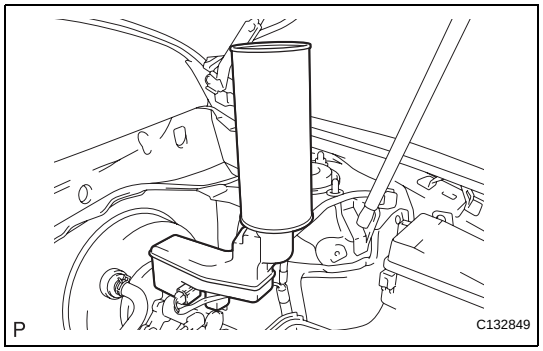
Fluid:

SAE J1703 or FMVSS No. 116 DOT 3

BLEEDING

HINT:
If any work is performed on the brake system or if air in the brake lines is suspected, bleed the air from the brake system.
NOTICE:

- **Move the shift lever to the P position and apply the parking brake before bleeding the brakes.**
- **Add brake fluid to keep the level between MIN and MAX lines of the reservoir while bleeding the brakes.**
- **If brake fluid leaks onto any painted surface, wash or remove it completely.**



1. FILL RESERVOIR WITH BRAKE FLUID

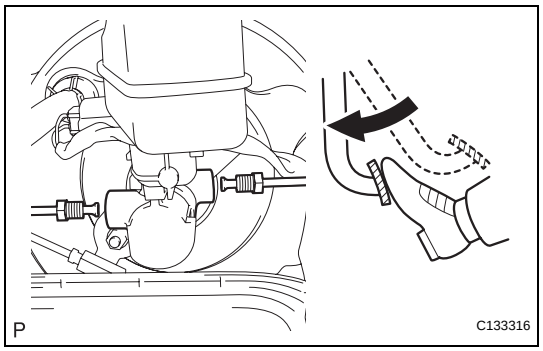
(a) Fill the reservoir with brake fluid.
Fluid:
SAE J1703 or FMVSS No. 116 DOT3

2. BLEED MASTER CYLINDER

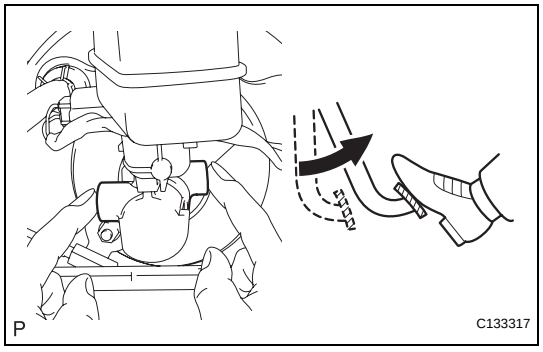
HINT:

- If the master cylinder is reinstalled or if the reservoir becomes empty, bleed the air from the master cylinder.
- To avoid brake fluid from adhering, cover the painted surface with a shop rag or piece of cloth.

(a) Disconnect the 2 brake lines from the master cylinder.

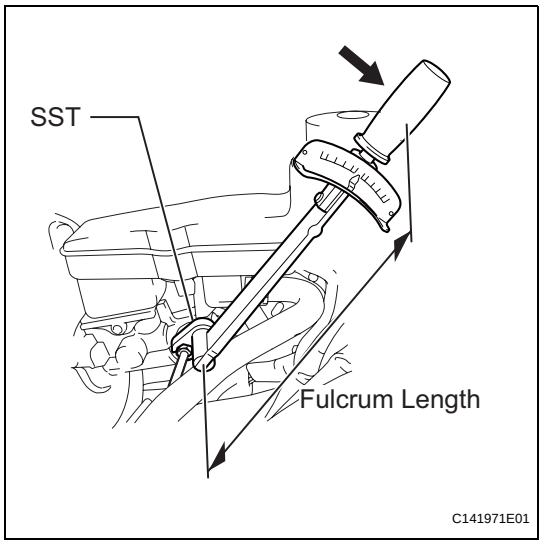


(b) Slowly depress the brake pedal and hold it (*1).



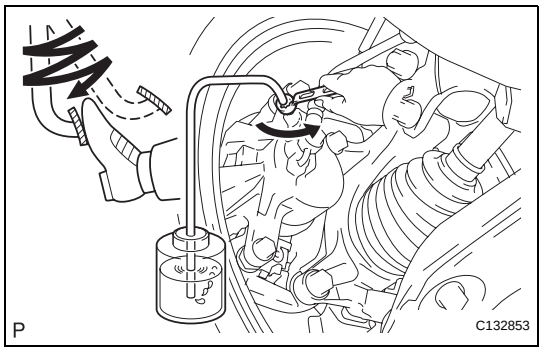
(c) Cover the 2 outer holes with fingers, and release the brake pedal (*2).
(d) Repeat (*1) and (*2) 3 or 4 times.

BR

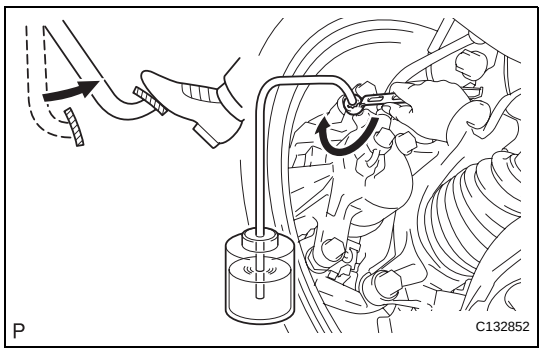


(e) Using SST, connect the brake lines to the master cylinder.
SST 09023-00101, 09023-38200
Torque: without SST
15 N*m (155 kgf*cm, 11 ft.*lbf)
with SST
14 N*m (143 kgf*cm, 10 ft.*lbf)
for TMMK made with VSC without SST
19 N*m (194 kgf*cm, 14 ft.*lbf)
for TMMK made with VSC with SST
17 N*m (173 kgf*cm, 13 ft.*lbf)
NOTICE:
- **Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).**
- **This torque value is effective when SST is parallel to a torque wrench.**

3. BLEED BRAKE LINE
NOTICE:
Bleed the air from the brake line of the wheel furthest from the master cylinder.

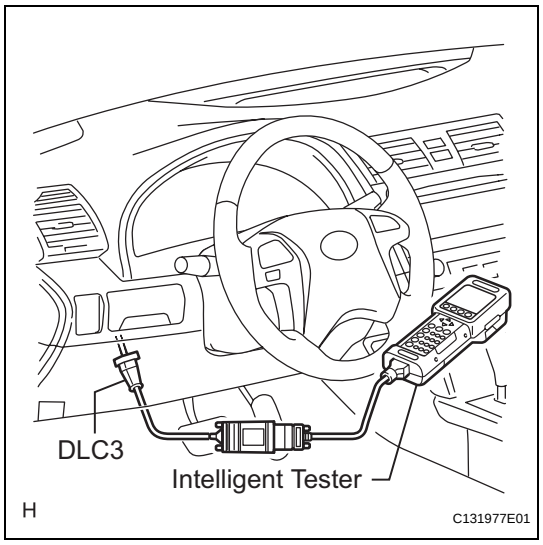


(a) Connect a vinyl tube to the bleeder plug.
(b) Depress the brake pedal several times, then loosen the bleeder plug with the pedal depressed (*3).



(c) When fluid stops coming out, tighten the bleeder plug, then release the brake pedal (*4).
(d) Repeat (*3) and (*4) until all the air in the fluid is completely bled out.
(e) Tighten the bleeder plug completely.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
(f) Repeat the above procedures for each wheel to bleed the air from the brake line.

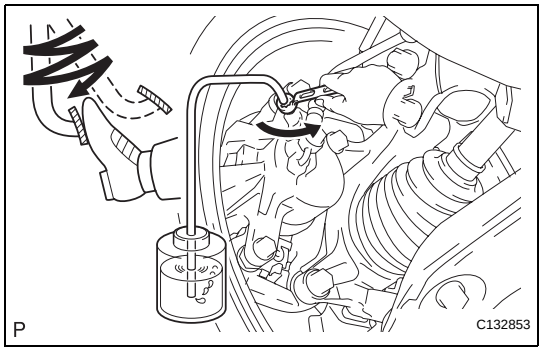
4. BLEED BRAKE ACTUATOR ASSEMBLY (w/ VSC)
NOTICE:
After bleeding the air from the brake system, if the height or feel of the brake pedal cannot be obtained, bleed the air from the brake actuator assembly with the intelligent tester by following the procedures below.
(a) Depress the brake pedal more than 20 times with the ignition switch off.



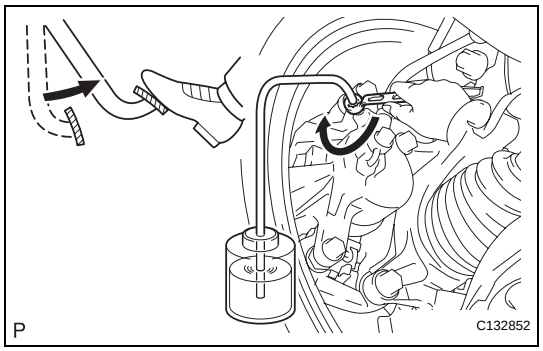
(b) Connect the intelligent tester to the DLC3, then turn the ignition switch on (IG).
NOTICE:
Do not start the engine.

(c) Turn the intelligent tester power on and select "AIR BLEEDING" on the screen.
NOTICE:
- **Refer to the intelligent tester operator's manual for further details.**
- **Bleed the air by following the steps displayed on the intelligent tester.**

(d) Bleed the air according to "Step 1: Increase" on the intelligent tester display.
NOTICE:
Make sure that the master cylinder reservoir tank does not become empty of brake fluid.

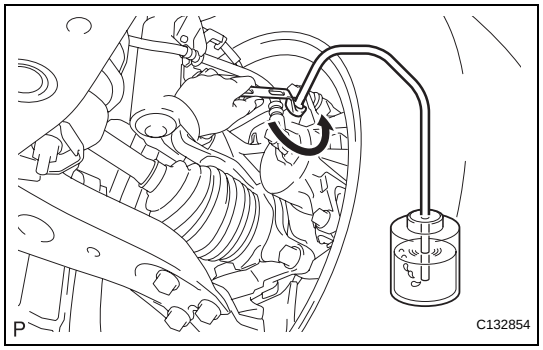


(1) Connect a vinyl tube to either one of the bleeder plugs.
(2) Depress the brake pedal several times, then loosen the bleeder plug connected to the vinyl tube with the pedal depressed (*5).



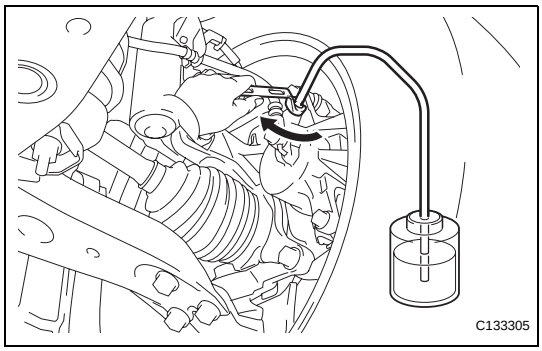
(3) When fluid stops coming out, tighten the bleeder plug, then release the brake pedal (*6).
(4) Repeat (*5) and (*6) until all the air in the fluid is completely bled out.
(5) Tighten the bleeder plug completely.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
(6) Repeat the above procedures for the rest of the wheels to bleed the air from the brake line.

(e) Bleed the air from the suction line according to "Step 2: Inhalation" on the intelligent tester display.
NOTICE:
- **Bleed the suction line by following the steps displayed on the intelligent tester.**
- **Make sure that the master cylinder reservoir tank does not become empty of brake fluid.**



(1) Connect a vinyl tube to the bleeder plug at the right front wheel or the right rear wheel and loosen the bleeder plug.
(2) Operate the brake actuator assembly to bleed the air using the intelligent tester (*7).
NOTICE:
- **The operation stops automatically in 4 seconds.**
- **At this time, be sure to release the brake pedal.**

BR

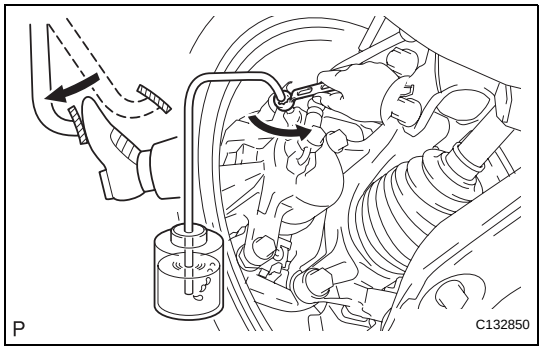


(3) Check that the operation has stopped by referring to the intelligent tester display and tighten the bleeder plug (*8).
(4) Repeat (*7) and (*8) until all the air in the fluid is completely bled out.
(5) Tighten the bleeder plug completely.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
(6) For the rest of the wheels, bleed the air in the same way as stated in the above procedures.

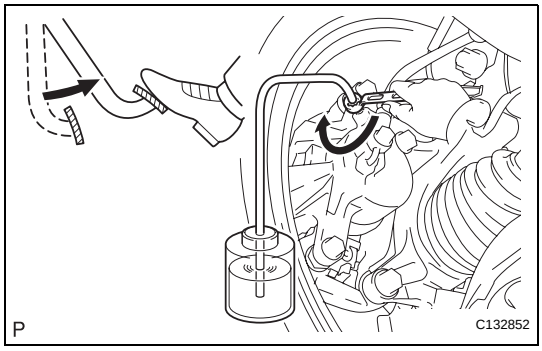
(f) Bleed the air from the pressure reduction line according to "Step 3: Decrease" on the intelligent tester display.

NOTICE:

- **Bleed the pressure reduction line by following the steps displayed on the intelligent tester.**
- **Make sure that the master cylinder reservoir tank does not become empty of brake fluid.**



(1) Connect a vinyl tube to either one of the bleeder plugs.
(2) Loosen the bleeder plug (*9).
(3) Using the intelligent tester, operate the brake actuator assembly, completely depress the brake pedal, and hold it.
NOTICE:
- **The operation stops automatically in 4 seconds. When performing this procedure continuously, an interval of at least 20 seconds is required.**
- **When the operation is completed, the brake pedal slightly goes down. This is a normal phenomenon when the solenoid opens.**
- **During this procedure, the pedal seems heavy, but completely depress it so that the brake fluid comes out from the bleeder plug.**
- **Be sure to keep the brake pedal depressed. Never depress and release the pedal repeatedly.**

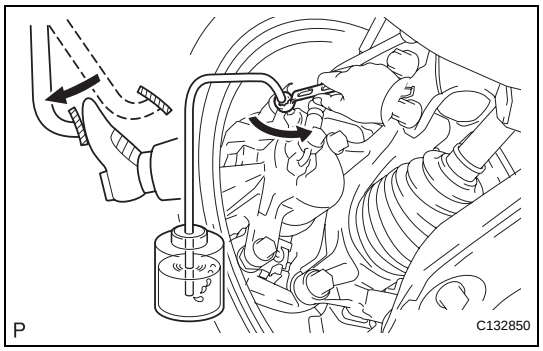


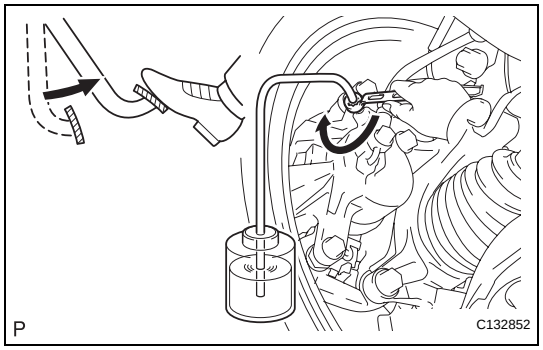
(4) Tighten the bleeder plug, then release the brake pedal (*10).
(5) Repeat steps (*9) to (*10) until all the air in the fluid is completely bled out.
(6) Tighten the bleeder plug completely.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
(7) Repeat the above procedures for the rest of the brakes to bleed the air from the brake line.

(g) Bleed the air from the brake line again according to "Step 4: Increase" on the intelligent tester display.

NOTICE:

- **Bleed the air by following the steps displayed on the intelligent tester.**





- **Make sure that the master cylinder reservoir tank does not become empty of brake fluid.**

(1) Connect a vinyl tube to either one of the bleeder plugs.
(2) Depress the brake pedal several times, then loosen the bleeder plug connected to the vinyl tube with the pedal depressed (*11).
(3) When fluid stops coming out, tighten the bleeder plug, then release the brake pedal (*12).
(4) Repeat (*11) and (*12) until all the air in the fluid is completely bled out.
(5) Tighten the bleeder plug completely.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
(6) Repeat the above procedures for each brake to bleed the air from the brake line.

(h) Finish "AIR BLEEDING" on the intelligent tester and turn off the power.
(i) Disconnect the intelligent tester from the DLC3.
(j) Turn the ignition switch off.

5. INSPECT FLUID LEVEL IN RESERVOIR

(a) Check the fluid level and add fluid if necessary.
Fluid:
SAE J1703 or FMVSS No. 116 DOT3
If fluid leaks, tighten or replace the leaking part.

BRAKE PEDAL

COMPONENTS

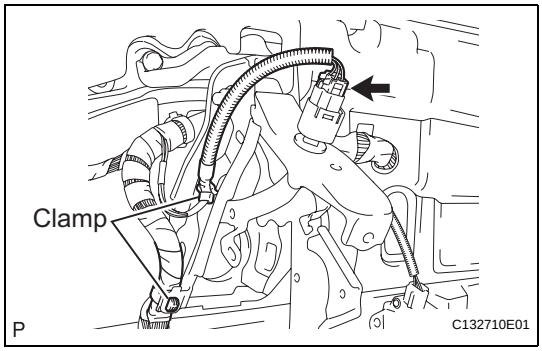
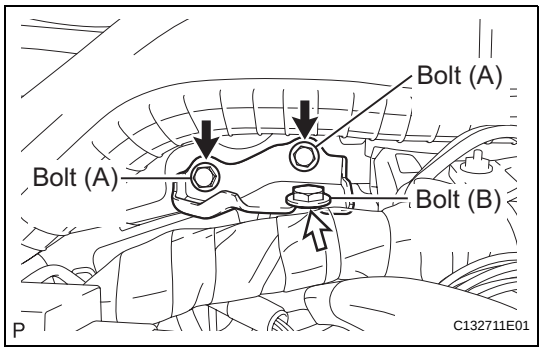
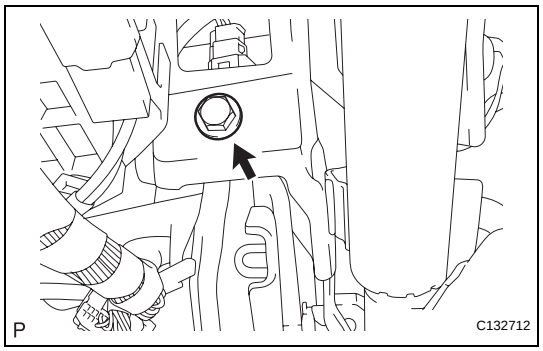
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-24)**
3. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-25)**
4. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (See page ME-63)**
5. **REMOVE NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-22)**
6. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/o Smart Key System) (See page IP-22)**
7. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/ Smart Key System) (See page IP-22)**
8. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page ME-65)**
9. **REMOVE COMBINATION METER ASSEMBLY (See page ME-65)**
10. **REMOVE BRAKE BOOSTER ASSEMBLY**
    HINT:
    Refer to the procedures up to "REMOVE BRAKE BOOSTER". (See page BR-42)
11. **REMOVE BRAKE PEDAL SUPPORT ASSEMBLY**
    (a) Disconnect the stop light switch connector and disengage the 2 clamps.

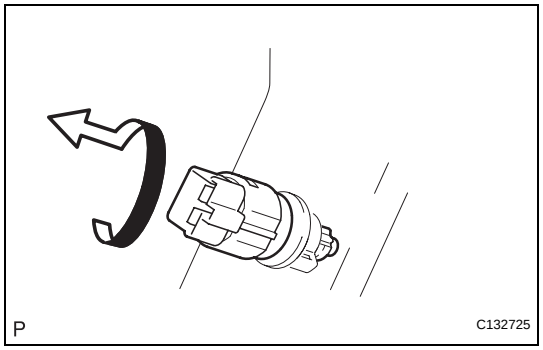


(b) Remove 2 bolts (A), bolt (B) and the No. 1 brake pedal support plate.





(c) Remove the bolt and the brake pedal support assembly.



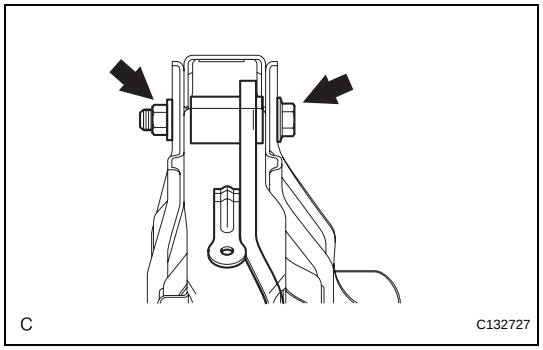
DISASSEMBLY

1. REMOVE STOP LIGHT SWITCH ASSEMBLY

(a) Turn the stop light switch assembly and remove it as shown in the illustration.

2. REMOVE STOP LIGHT SWITCH MOUNTING ADJUSTER

(a) Remove the stop light switch mounting adjuster.



3. REMOVE BRAKE PEDAL SUB-ASSEMBLY

(a) Remove the bolt and the nut.

(b) Remove the 2 brake pedal bushings, the brake pedal shaft collar, and the brake pedal sub-assembly.

4. REMOVE BRAKE PEDAL PAD

(a) Remove the brake pedal pad.

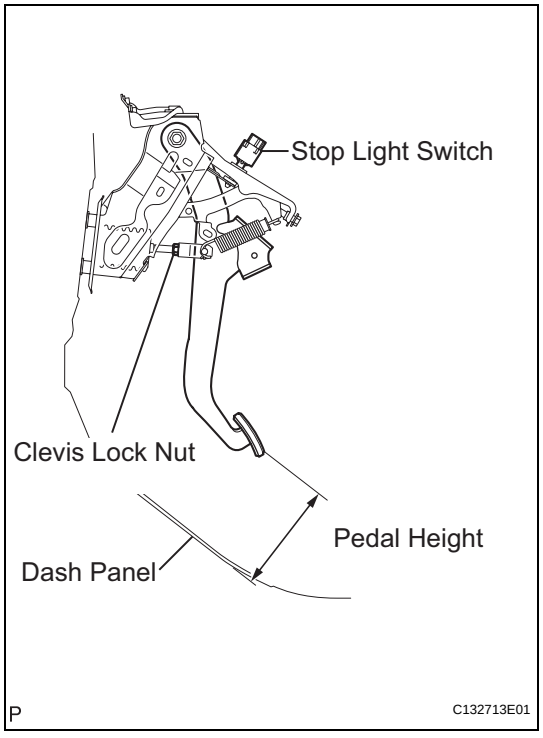
ADJUSTMENT

1. INSPECT AND ADJUST BRAKE PEDAL HEIGHT

(a) Inspect the brake pedal height.

Pedal height from dash panel

Transaxle	Specified condition
Automatic	129.9 to 139.9 mm (5.114 to 5.508 in.)
Manual	131.9 to 141.9 mm (5.193 to 5.587 in.)



(b) Adjust the brake pedal height.

(1) Disconnect the connector from the stop light switch assembly.

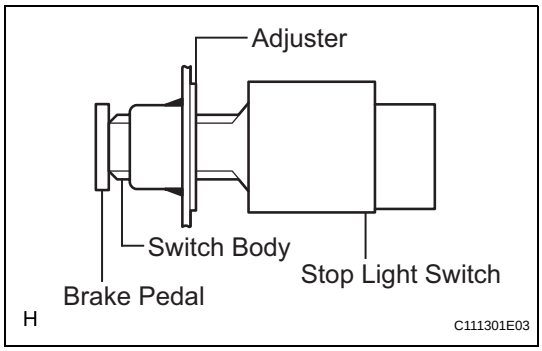
(2) Remove the stop light switch.

(3) Loosen the push rod clevis lock nut.

(4) Adjust the pedal height by turning the push rod.

(5) Tighten the clevis lock nut.

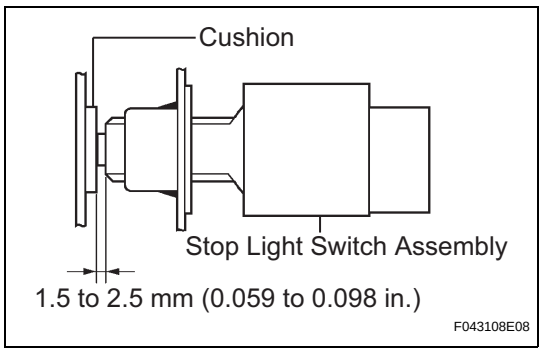
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)



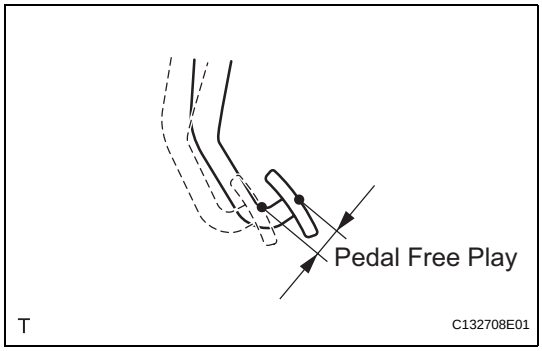
(6) Insert the switch into the adjuster until the switch body touches the pedal.
NOTICE:
Do not depress the pedal.

(7) Rotate the switch a quarter turn clockwise.
Torque: 1.5 N*m (15 kgf*cm, 13 in.*lbf) or less
NOTICE:
Do not depress the pedal.

(8) Connect the connector.



(9) Check the switch clearance.
Standard stop light switch clearance:
1.5 to 2.5 mm (0.059 to 0.098 in.)

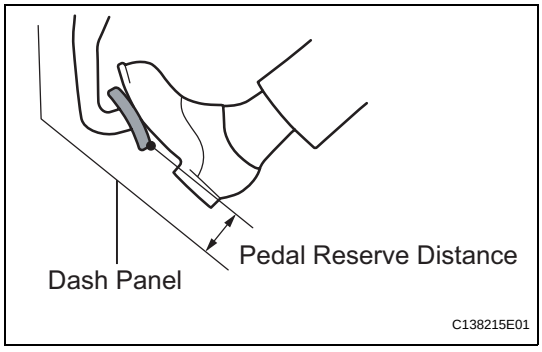


2. INSPECT PEDAL FREE PLAY

(a) Stop the engine. Press the pedal several times until no vacuum is left in the booster. Then release the pedal.

(b) Depress the pedal until a slight resistance is felt. Measure the distance as shown in the illustration.
Pedal free play:
1.0 to 6.0 mm (0.039 to 0.236 in.)
If the pedal free play is not as specified, check the switch clearance in the next step. If the pedal free play is as specified, proceed to the "CHECK PEDAL RESERVE DISTANCE" procedure.

(c) Check the switch clearance.
Standard stop light clearance:
1.5 to 2.5 mm (0.059 to 0.098 in.)
If the clearance is not as specified, reinstall the switch and recheck the pedal free play. If the clearance is as specified, troubleshoot the brake system and proceed to the "CHECK PEDAL RESERVE DISTANCE" procedure.



3. INSPECT PEDAL RESERVE DISTANCE

(a) Release the parking brake pedal or parking brake lever.

(b) With the engine running, depress the brake pedal and measure the pedal reserve distance as shown in the illustration.
Pedal reserve distance from the dash panel at 500 N (51 kgf, 112 lbf)

Transaxle	Specified condition
Automatic	61 mm (2.402 in.)
Manual	63 mm (2.480 in.)

If the distance is not as specified, troubleshoot the brake system.

REASSEMBLY

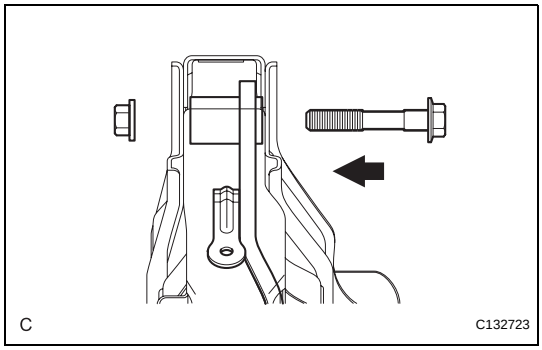
1. INSTALL BRAKE PEDAL PAD

(a) Install the brake pedal pad.

2. INSTALL BRAKE PEDAL SUB-ASSEMBLY

(a) Apply lithium soap base glycol grease to 2 new brake pedal bushings.

(b) Install the brake pedal sub-assembly, the 2 brake pedal bushings, and the brake pedal shaft collar to the brake pedal support assembly with the bolt and the nut as shown in the illustration.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)

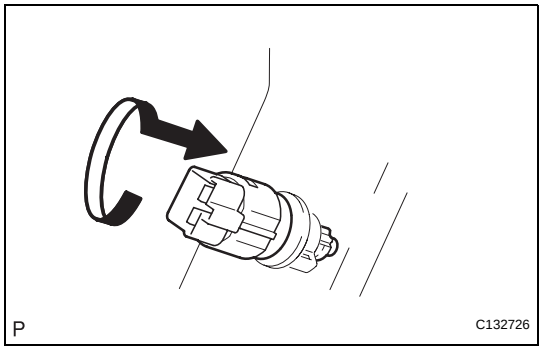


3. INSTALL STOP LIGHT SWITCH MOUNTING ADJUSTER

(a) Install the stop light switch mounting adjuster.

4. TEMPORARILY TIGHTEN STOP LIGHT SWITCH ASSEMBLY

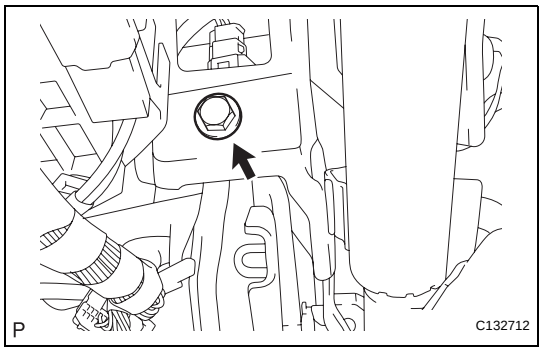
(a) Temporarily tighten the stop light switch assembly as shown in the illustration.
Torque: 1.5 N*m (15 kgf*cm, 13 in.*lbf) or less
HINT:
Completely install the stop light switch assembly after adjusting the brake pedal height.



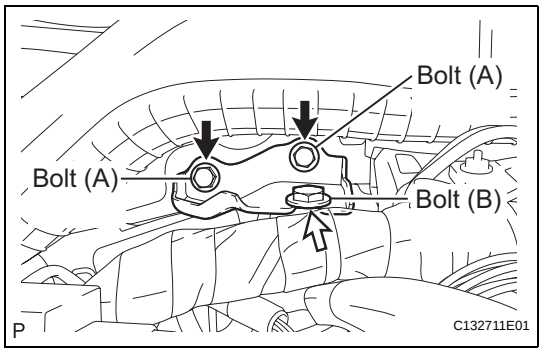
INSTALLATION

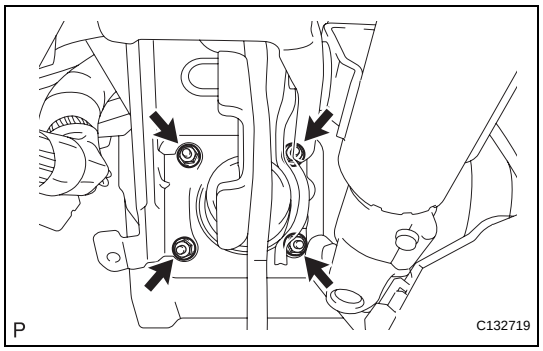
1. INSTALL BRAKE PEDAL SUPPORT ASSEMBLY

(a) Temporarily install the brake pedal support assembly with the bolt.
NOTICE:
Fully tighten the bolt after installing the brake booster assembly.

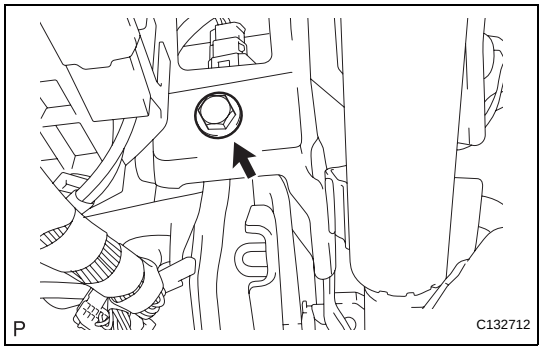


(b) Temporarily install the No. 1 brake pedal support plate with 2 bolts (A) and bolt (B).
NOTICE:
Fully tighten 2 bolts (A) and bolt (B) after installing the brake booster assembly.

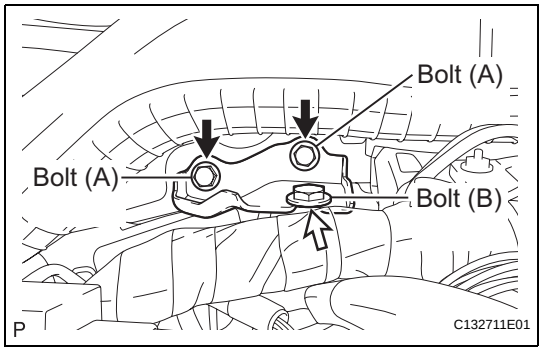




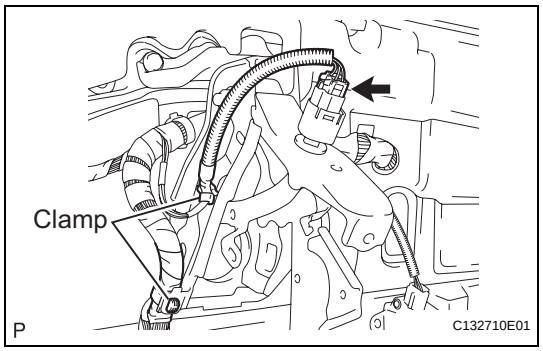
(c) Temporarily install the brake booster assembly and the gasket with the 4 nuts.



(d) Fully tighten the bolt.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)



(e) Fully tighten 2 bolts (A) and bolt (B).
Torque: Bolt (A)
19 N*m (194 kgf*cm, 14 ft.*lbf)
Bolt (B)
13 N*m (133 kgf*cm, 10 ft.*lbf)



(f) Engage the 2 clamps and connect the stop light switch connector.

2. **INSTALL BRAKE BOOSTER ASSEMBLY**
HINT:
Refer to the procedures up to "INSTALL BRAKE BOOSTER ASSEMBLY". (See page BR-43)
3. **INSTALL COMBINATION METER ASSEMBLY (See page ME-67)**
4. **INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page ME-68)**
5. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (w/o Smart Key System) (See page IP-57)**
6. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (w/ Smart Key System) (See page IP-57)**
7. **INSTALL NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-57)**
8. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (See page ME-68)**

9. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-54)**
10. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-54)**
11. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

REMOVAL

NOTICE:

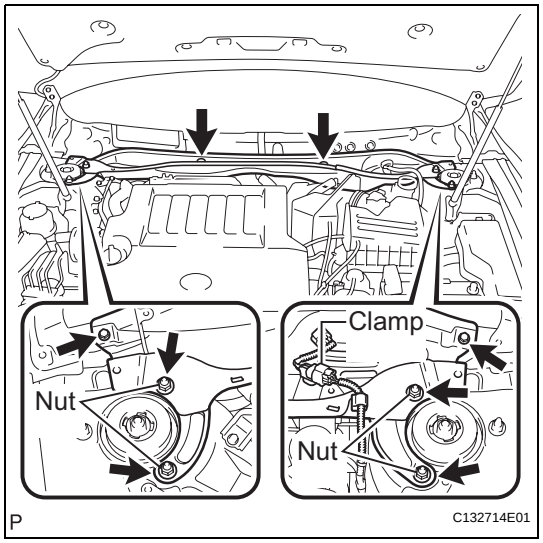
- **The structure of the master cylinder allows the piston to pop out, so observe the following:**
  - **(a) for TMC made:**
    - **(1) The master cylinder requires careful handling. Do not allow the master cylinder to receive any impact, such as from being dropped. Do not reuse a master cylinder that has been dropped.**
    - **(2) Do not scratch or damage the circumference of the piston. For the seal to function correctly, all sliding surfaces must not have any damage.**
    - **(3) Do not pull out the master cylinder piston.**
    - **(4) Make sure to release the vacuum from the brake booster (by removing a vacuum hose, etc.) before removing the master cylinder from the brake booster.**
    - **(5) When installing the master cylinder, remove the protectors for the piston and the discharge port.**
    - **(6) Apply the supplied grease to the outer diameter of the piston and the inner diameter of the brake booster.**
  - **(b) for TMMK made:**
    - **(1) Do not hold the master cylinder by the piston. (Hold the master cylinder by its body or its reservoir while transporting it.)**
    - **(2) Do not pull out the master cylinder piston.**
    - **(3) Do not strike or pinch the master cylinder piston, and do not cause any damage to the master cylinder piston by any other means.**
    - **(4) Make sure to release the vacuum from the brake booster before removing the master cylinder from the brake booster.**
    - **(5) When installing the master cylinder to the brake booster, or when removing the master cylinder from the brake booster, make sure that the master cylinder is kept horizontal or its tip faces downward (the piston faces upward) to prevent the master cylinder piston from falling off.**
    - **(6) Do not allow any foreign objects to contaminate the master cylinder piston. If a foreign object gets on the piston, remove it by using a shop rag or a piece of cloth and then apply an even layer of lithium soap based glycol grease around the circumference (sliding part) of the piston**
    - **(7) Do not use any other type of grease.**

1. DRAIN BRAKE FLUID

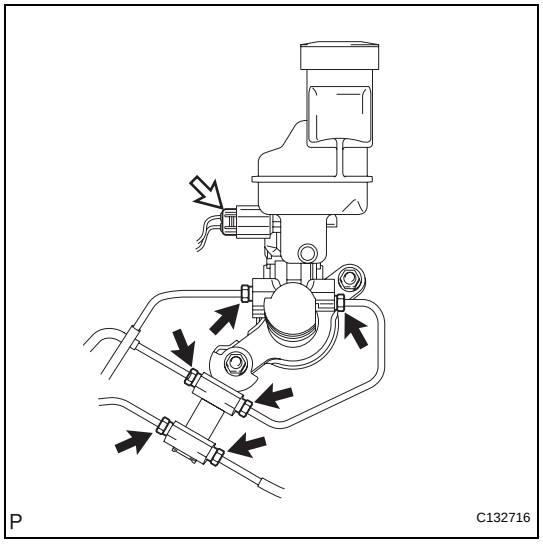
NOTICE:

- **Stop the engine and depress the brake pedal several times until no vacuum is left in the brake booster.**
- **If the brake fluid leaks onto any painted surface, wash off or remove the brake fluid completely.**

2. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-416)**
3. **REMOVE AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY**
4. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-9)**
5. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-9)**
6. **REMOVE FRONT FENDER TO COWL SIDE SEAL LH (See page WW-9)**
7. **REMOVE FRONT FENDER TO COWL SIDE SEAL RH (See page WW-9)**
8. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-10)**
9. **REMOVE WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY (See page WW-10)**
10. **REMOVE COWL TOP OUTER FRONT PANEL SUB-ASSEMBLY**
    (a) Disengage the clamp.
    (b) Remove the 4 nuts, the 4 bolts and the cowl top outer front panel sub-assembly.

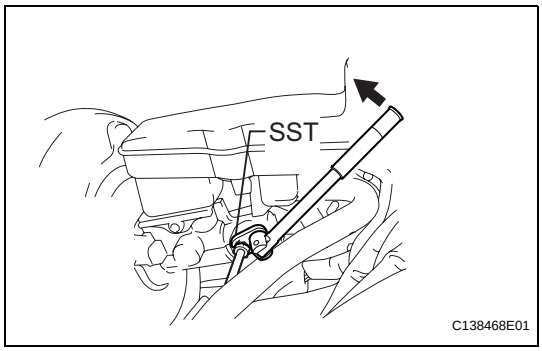


11. **DISCONNECT CLUTCH RESERVOIR TUBE (for Manual Transaxle)**
    (a) Move the clip and disconnect the clutch reservoir tube from the brake master cylinder sub-assembly.

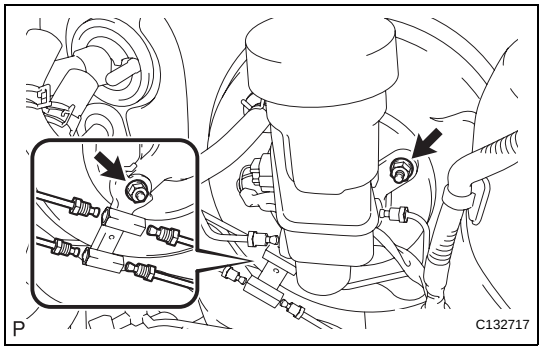


12. **REMOVE BRAKE MASTER CYLINDER SUB-ASSEMBLY (for TMC Made)**
    (a) Disconnect the connector.

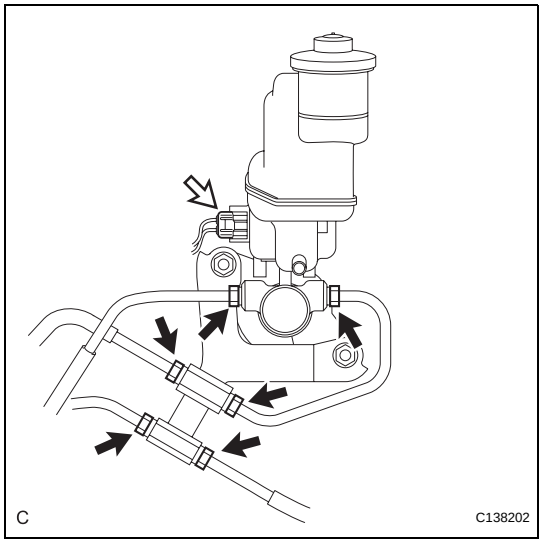
BR



(b) Using SST, disconnect the 6 brake lines and remove the brake master cylinder to way tube.
SST 09023-00101

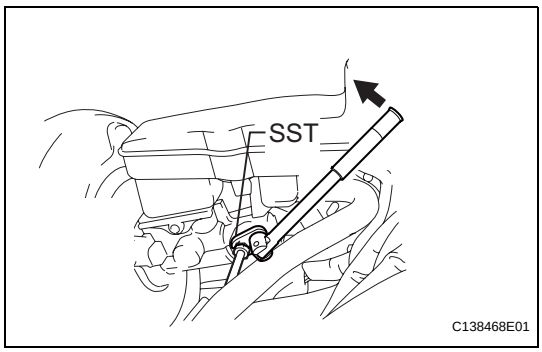


(c) Remove the 2 nuts, the front brake tube way, the O-ring and the brake master cylinder sub-assembly.

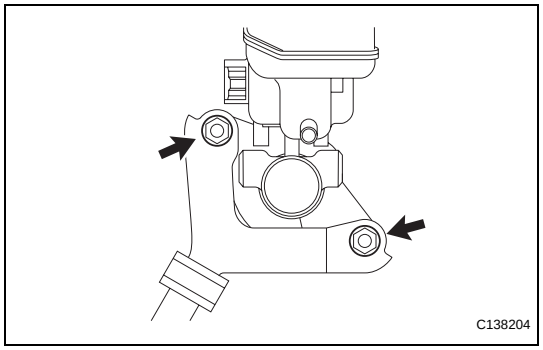


13. REMOVE BRAKE MASTER CYLINDER SUB-ASSEMBLY (for TMMK Made without VSC)

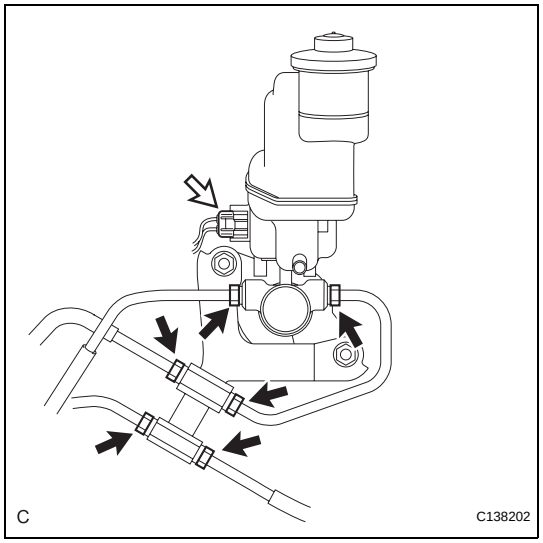
(a) Disconnect the connector.



(b) Using SST, disconnect the 6 brake lines and remove the brake master cylinder to way tube.
SST 09023-00101

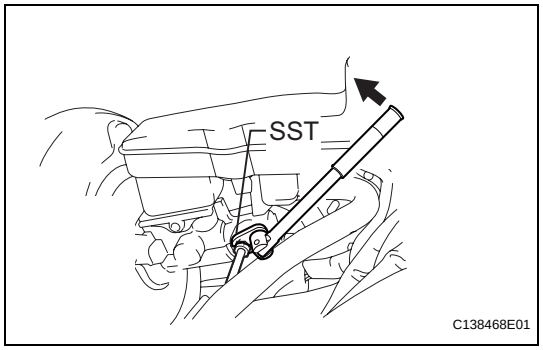


(c) Remove the 2 nuts, the front brake tube way, the O-ring and the brake master cylinder sub-assembly.

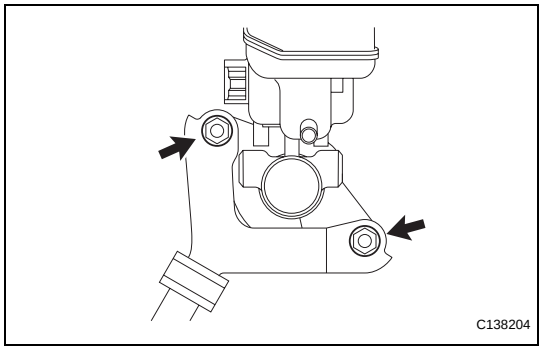


14. REMOVE BRAKE MASTER CYLINDER SUB-ASSEMBLY (for TMMK Made with VSC)

(a) Disconnect the connector.



(b) Using SST, disconnect the 6 brake lines and remove the brake master cylinder to way tube.
SST 09023-38200, 09023-00101



(c) Remove the 2 nuts, the front brake tube way, the O-ring and the brake master cylinder sub-assembly.

INSPECTION

1. INSPECT AND ADJUST BRAKE BOOSTER PUSH ROD (for TMMK Made)

NOTICE:

- **Make an adjustment with no vacuum in the brake booster assembly. (Depress the brake pedal several times with the engine stopped.)**
- **The brake booster made by TMC does not need adjustment.**

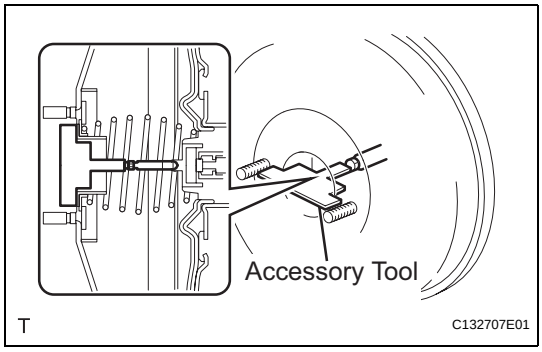
HINT:

- Adjustment of the brake booster push rod is required when the brake master cylinder sub-assembly is replaced with a new one.
- Adjustment is not necessary when the removed brake master cylinder sub-assembly is reused and the brake booster assembly is replaced with a new one.

(a) Apply chalk to the tip of the accessory tool.

HINT:

An accessory tool is enclosed with a new brake master cylinder sub-assembly.



(b) Place the accessory tool on the brake booster assembly.

(c) Measure the clearance between the brake booster push rod and accessory tool.

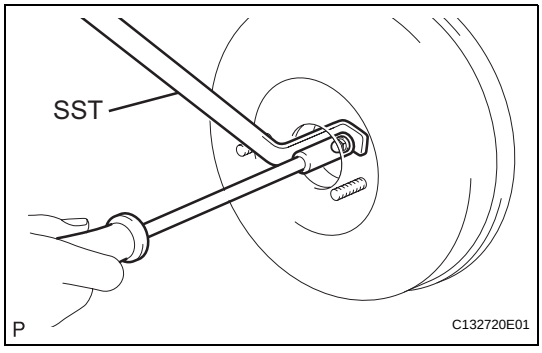
Standard clearance:

0 mm (0 in.)

HINT:

Adjust the clearance in the following cases:

- If there is a clearance between the accessory tool and the shell of the brake booster (floating accessory tool), the push rod is protruding too far.
- If the chalk does not stick on the tip of the brake booster push rod, the push rod protrusion is insufficient.

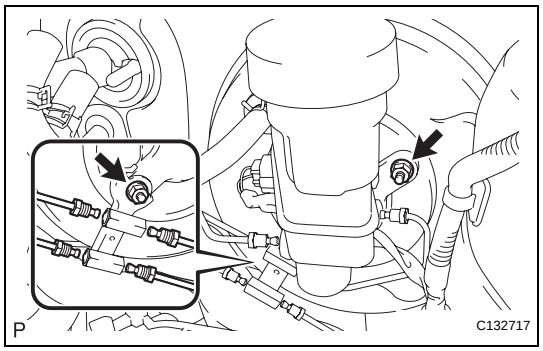


(d) If the clearance is not as specified, adjust the push rod length by holding the rod using SST and turning the tip of the rod using a socket driver (7 mm, 0.28 in.).

SST 09737-00020

HINT:

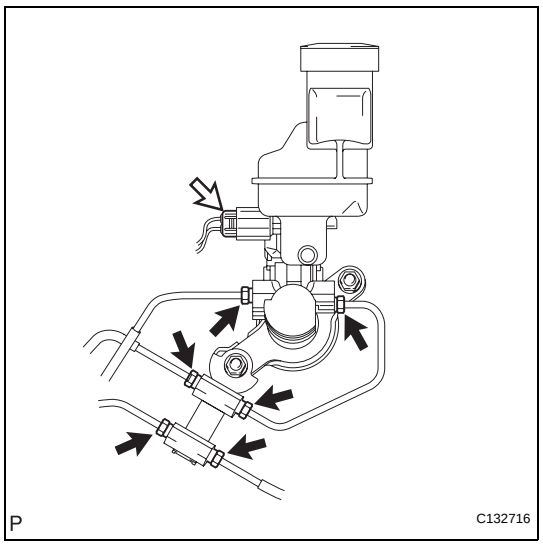
Check the push rod clearance again after adjustment.



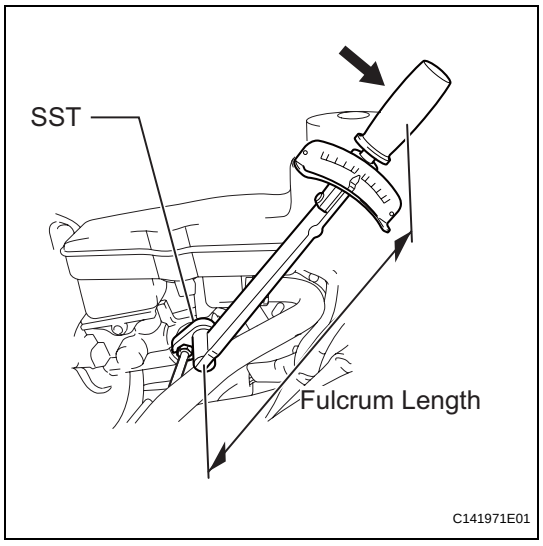
INSTALLATION

1. INSTALL BRAKE MASTER CYLINDER SUB-ASSEMBLY (for TMC Made)

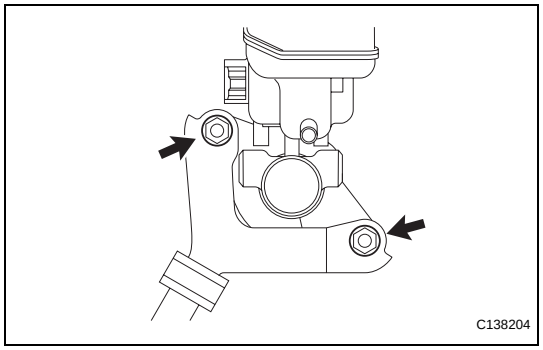
(a) Install the O-ring, the brake master cylinder sub-assembly and the front brake tube way with the 2 nuts .
Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)



(b) Connect the connector.
(c) Install the brake master cylinder to way tube and temporarily tighten the 6 brake lines.



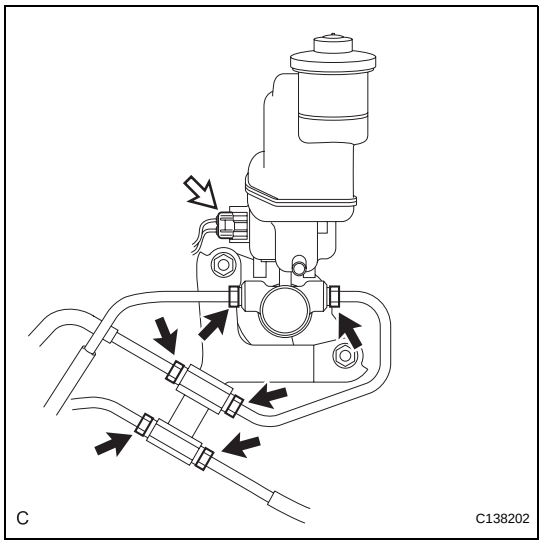
(d) Using the SST, fully tighten the 6 brake lines.
SST 09023-00101
Torque: without SST
15 N*m (155 kgf*cm, 11 ft.*lbf)
with SST
14 N*m (143 kgf*cm, 10 ft.*lbf)
NOTICE:
- **Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).**
- **This torque value is effective when SST is parallel to a torque wrench.**



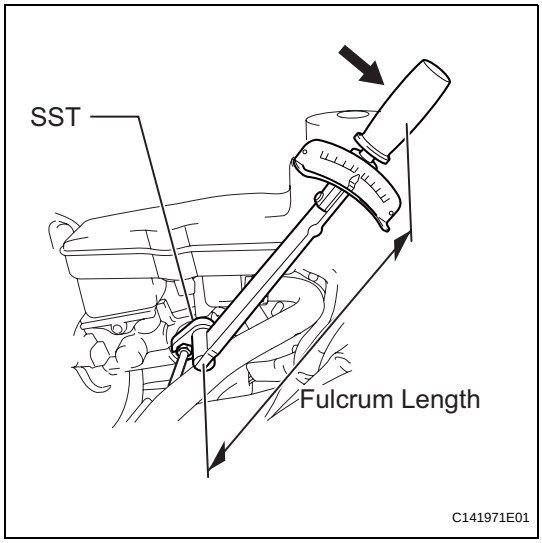
2. INSTALL BRAKE MASTER CYLINDER SUB-ASSEMBLY (for TMMK Made without VSC)

(a) Install the O-ring, the brake master cylinder sub-assembly and the front brake tube way with the 2 nuts .
Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)

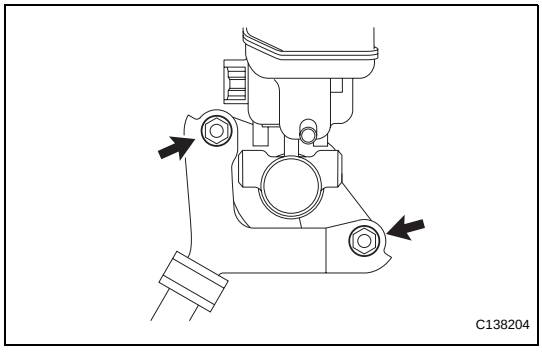
BR



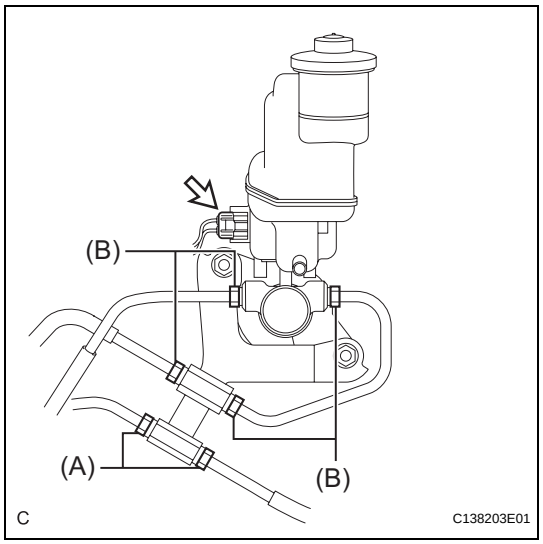
(b) Connect the connector.
(c) Install the brake master cylinder to way tube and temporarily tighten the 6 brake lines.



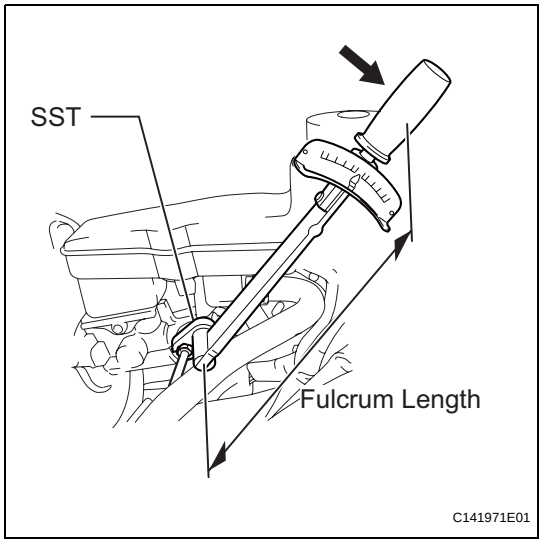
(d) Using the SST, fully tighten the 6 brake lines.
SST 09023-00101
Torque: without SST
15 N*m (155 kgf*cm, 11 ft.*lbf)
with SST
14 N*m (143 kgf*cm, 10 ft.*lbf)
NOTICE:
- **Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).**
- **This torque value is effective when SST is parallel to a torque wrench.**



3. INSTALL BRAKE MASTER CYLINDER SUB-ASSEMBLY (for TMMK Made with VSC)
(a) Install the O-ring, the brake master cylinder sub-assembly and the front brake tube way with the 2 nuts .
Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)



(b) Connect the connector.
(c) Install the brake master cylinder to way tube and temporarily tighten the 6 brake lines.



(d) Using the SST, fully tighten the 6 brake lines.
SST 09023-00101, 09023-38200
Torque: (A) without SST
15 N*m (155 kgf*cm, 11 ft.*lbf)
(A) with SST
14 N*m (143 kgf*cm, 10 ft.*lbf)
(B) without SST
19 N*m (194 kgf*cm, 14 ft.*lbf)
(B) with SST
17 N*m (173 kgf*cm, 13 ft.*lbf)
NOTICE:
- **Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).**
- **This torque value is effective when SST is parallel to a torque wrench.**

4. CONNECT CLUTCH RESERVOIR TUBE (for Manual Transaxle)
(a) Connect the clutch reservoir tube to the brake master cylinder sub-assembly and move the clip.

5. FILL RESERVOIR WITH BRAKE FLUID (See page BR-6)

6. BLEED CLUTCH PIPE LINE (for Manual Transaxle) (See page CL-19)

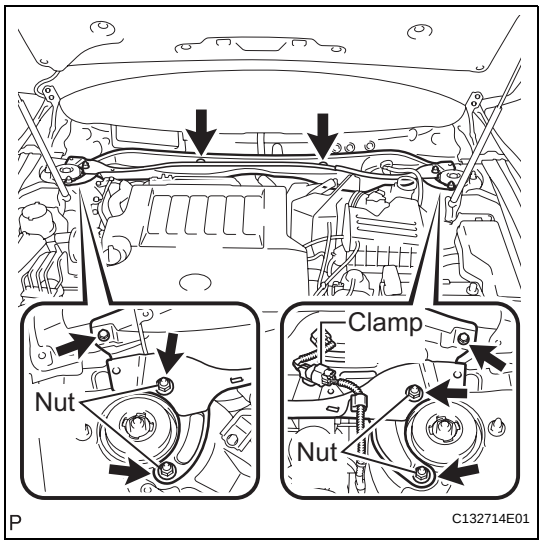
7. BLEED MASTER CYLINDER (See page BR-6)

8. BLEED BRAKE LINE (See page BR-7)

9. BLEED BRAKE ACTUATOR ASSEMBLY (w/ VSC) (See page BR-8)

10. INSPECT FLUID LEVEL IN RESERVOIR (See page BR-10)

11. INSPECT FOR BRAKE FLUID LEAKAGE



12. **INSTALL COWL TOP OUTER FRONT PANEL SUB-ASSEMBLY**
    (a) Install the cowl top outer front panel sub-assembly with the 4 nuts, the 4 bolts and the clamp.
    Torque: Nut
    85 N*m (867 kgf*cm, 63 ft.*lbf)
    Bolt
    5.0 N*m (51 kgf*cm, 44 in.*lbf)
13. **INSTALL WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY (See page WW-14)**
14. **INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-15)**
15. **INSTALL FRONT FENDER TO COWL SIDE SEAL LH (See page WW-15)**
16. **INSTALL FRONT FENDER TO COWL SIDE SEAL RH (See page WW-15)**
17. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-15)**
18. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-16)**
19. **INSTALL AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY**
20. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-419)**

BR

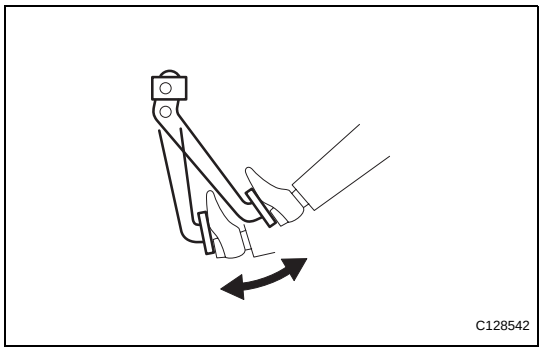
ON-VEHICLE INSPECTION

1. INSPECT BRAKE BOOSTER ASSEMBLY

(a) Airtightness check.

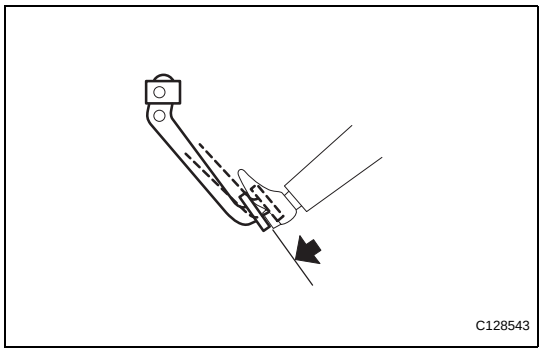
(1) Start the engine and stop it after 1 or 2 minutes. Slowly depress the brake pedal several times.
HINT:
If the pedal can be depressed to the floor the first time, but on the 2nd and 3rd time cannot be depressed as far, the booster is airtight.

(2) Depress the brake pedal while the engine is running, and stop the engine with the pedal depressed.
HINT:
If there is no change in the pedal reserve distance while holding the pedal for 30 seconds, the booster is airtight.



(b) Operation check.

(1) Depress the brake pedal several times with the ignition switch off and check that there is no change in the pedal reserve distance when the pedal is depressed.



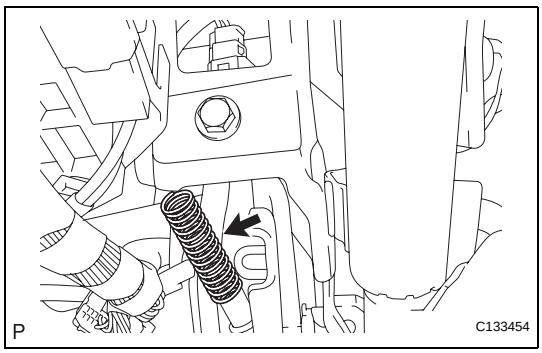
(2) Depress and hold down the pedal, and start the engine.
HINT:
If the pedal goes down slightly, operation is normal.

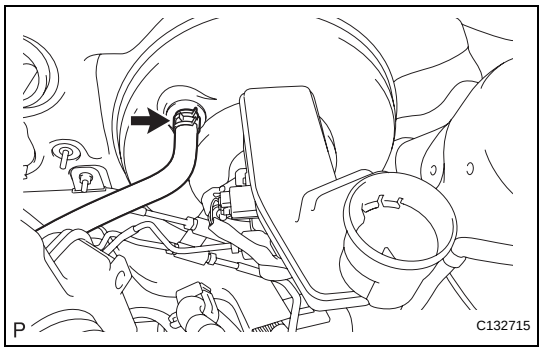
REMOVAL

1. REMOVE BRAKE PEDAL RETURN SPRING

(a) Remove the brake pedal return spring.

2. SEPARATE BRAKE MASTER CYLINDER PUSH ROD CLEVIS





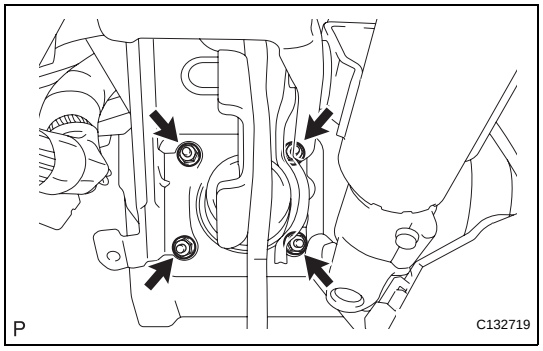
3. DISCONNECT NO. 2 VACUUM HOSE

(a) Move the clip and disconnect the No. 2 vacuum hose.

4. REMOVE BRAKE MASTER CYLINDER SUB-ASSEMBLY

HINT:

Refer to the procedures up to "REMOVE MASTER CYLINDER". (See page BR-28)

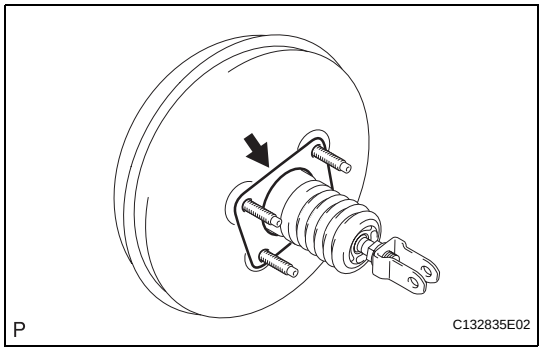


5. REMOVE BRAKE BOOSTER ASSEMBLY

(a) Remove the 4 nuts and the brake booster assembly.

NOTICE:

Do not damage the brake lines.



6. REMOVE BRAKE BOOSTER GASKET

(a) Remove the brake booster gasket.

7. REMOVE BRAKE MASTER CYLINDER PUSH ROD CLEVIS

(a) Loosen the lock nut and remove the brake master cylinder push rod clevis.

BR

INSPECTION

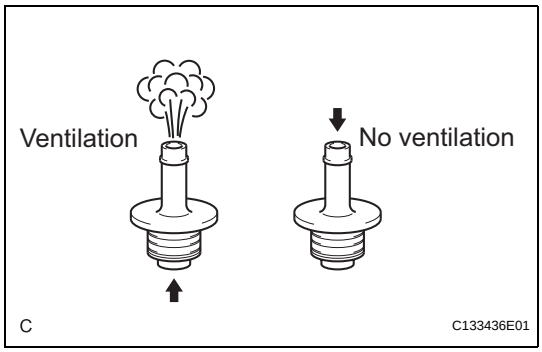
1. INSPECT VACUUM CHECK VALVE

(a) Inspect the vacuum check valve.

(1) Slide the clip and disconnect the vacuum hose.

(2) Remove the vacuum check valve.

(3) Check that there is ventilation from the booster to the engine, and no ventilation from the engine to the booster. If the results are not as specified, replace the brake booster assembly.



INSTALLATION

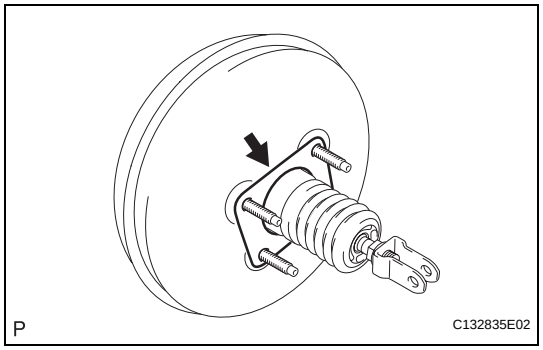
1. INSTALL BRAKE MASTER CYLINDER PUSH ROD CLEVIS

(a) Temporarily install the lock nut and the brake master cylinder push rod clevis to the brake booster assembly.

NOTICE:
Fully tighten the lock nut after adjusting the pedal height.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)

2. INSTALL BRAKE BOOSTER GASKET

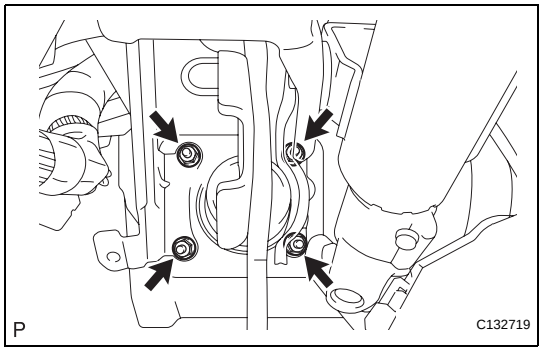
(a) Install a new brake booster gasket.



3. INSTALL BRAKE BOOSTER ASSEMBLY

(a) Install the brake booster assembly and the gasket with the 4 nuts.

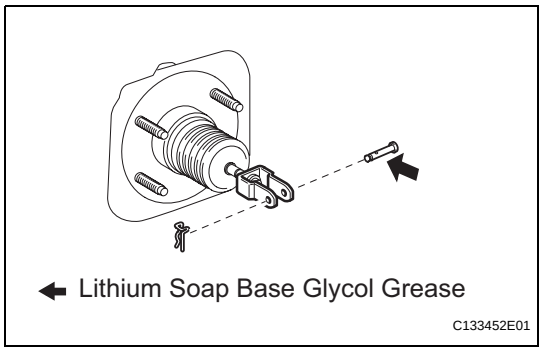
Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)
NOTICE:
Do not damage the brake lines.



4. CONNECT BRAKE MASTER CYLINDER PUSH ROD CLEVIS

(a) Apply lithium soap base glycol grease to the push rod pin.

(b) Connect the brake master cylinder push rod clevis to the brake pedal with the push rod pin and a new clip as shown in the illustration.



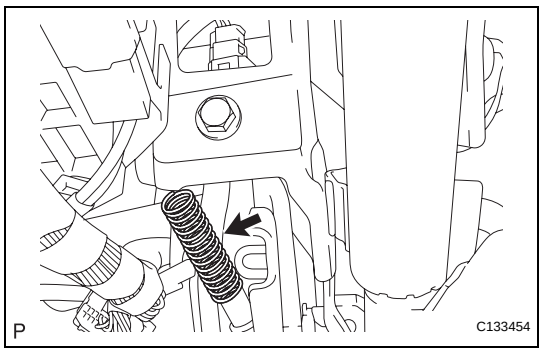
5. INSTALL BRAKE PEDAL RETURN SPRING

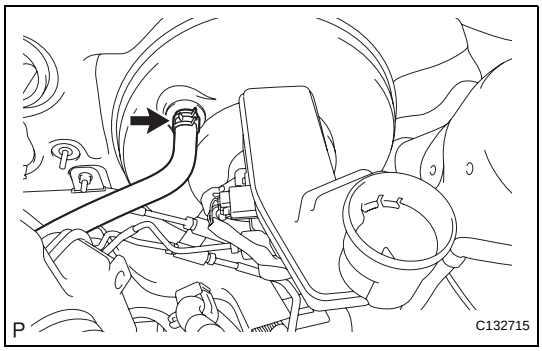
(a) Install the brake pedal return spring.

6. INSPECT AND ADJUST BRAKE PEDAL HEIGHT (See page BR-19)

7. INSTALL BRAKE MASTER CYLINDER SUB-ASSEMBLY

HINT:
Refer to the procedures up to "INSTALL BRAKE MASTER CYLINDER". (See page BR-32)





8. CONNECT NO. 2 VACUUM HOSE

(a) Connect the No. 2 vacuum hose and move the clip.

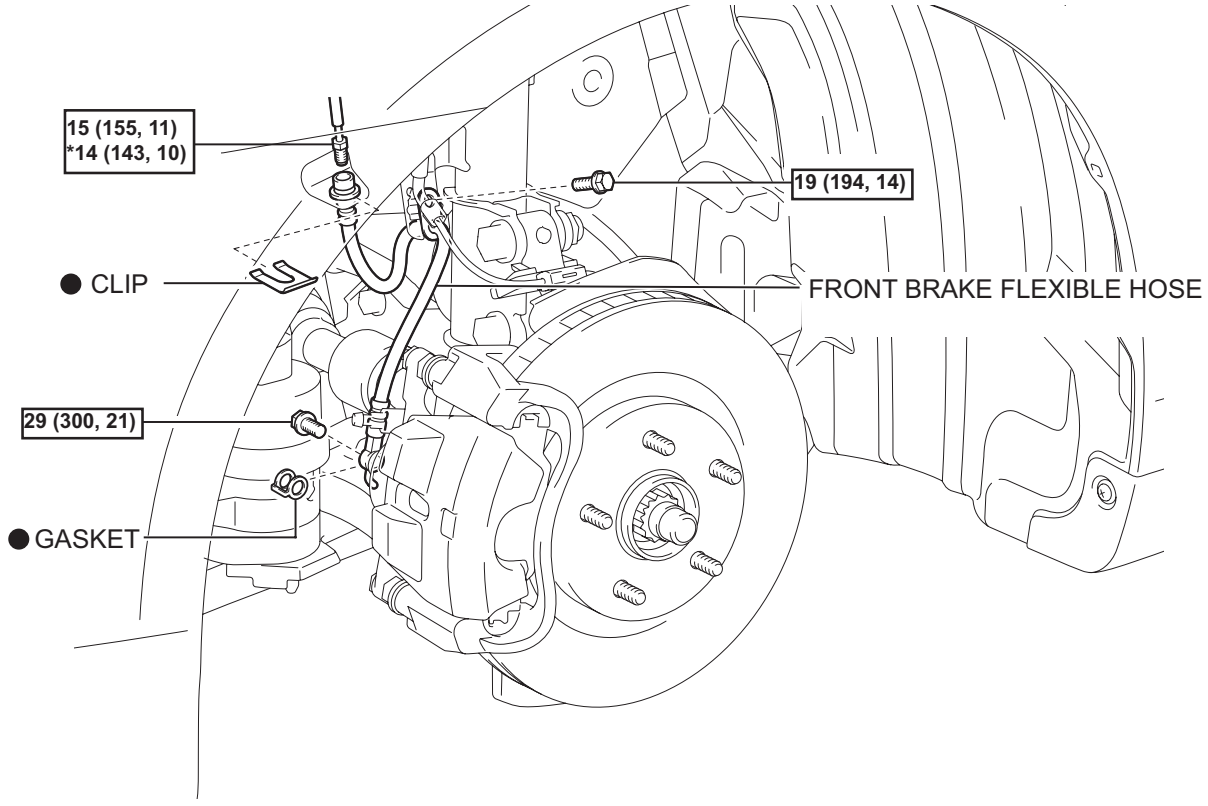
FRONT BRAKE FLEXIBLE HOSE

COMPONENTS



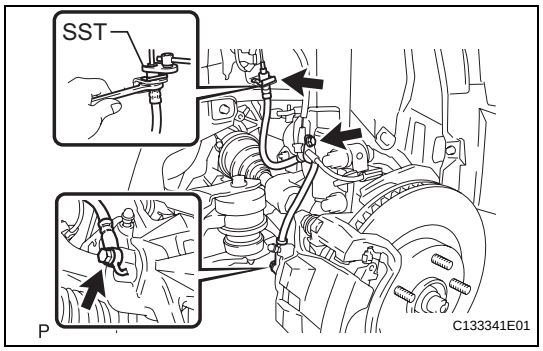
N*m (kgf*cm, ft.*lbf) : Specified torque ● Non-reusable part * For use with SST

C132792E01

REMOVAL

1. REMOVE FRONT WHEEL

2. DRAIN BRAKE FLUID



3. REMOVE FRONT BRAKE FLEXIBLE HOSE

(a) Remove the clip.

(b) Remove the brake tube with SST while holding the front brake flexible hose with a wrench.

SST 09023-00101

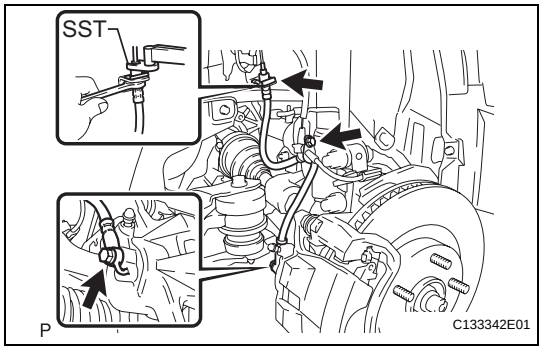
NOTICE:

- **Do not bend or damage the brake tube.**
- **Do not allow any foreign matter such as dirt and dust to enter the brake tube from the connecting points.**

(c) Remove the bolt, and separate the front brake flexible hose and the speed sensor from the shock absorber.

(d) Remove the union bolt, the front brake flexible hose and gasket.

INSTALLATION



1. INSTALL FRONT BRAKE FLEXIBLE HOSE

(a) Connect the front brake flexible hose with the union bolt and a new gasket.

Torque: 29 N*m (300 kgf*cm, 21 ft.*lbf)

(b) Connect the front flexible hose and the speed sensor to the shock absorber with the bolt.

Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)

NOTICE:

When installing the front flexible hose and the speed sensor, the bracket must face toward the exterior of the vehicle.

(c) Connect the brake tube to the front brake flexible hose with SST while holding the flexible hose with a wrench.

SST 09023-00101

Torque: Without SST

15 N*m (155 kgf*cm, 11 ft.*lbf)

With SST

14 N*m (143 kgf*cm, 10 ft.*lbf)

NOTICE:

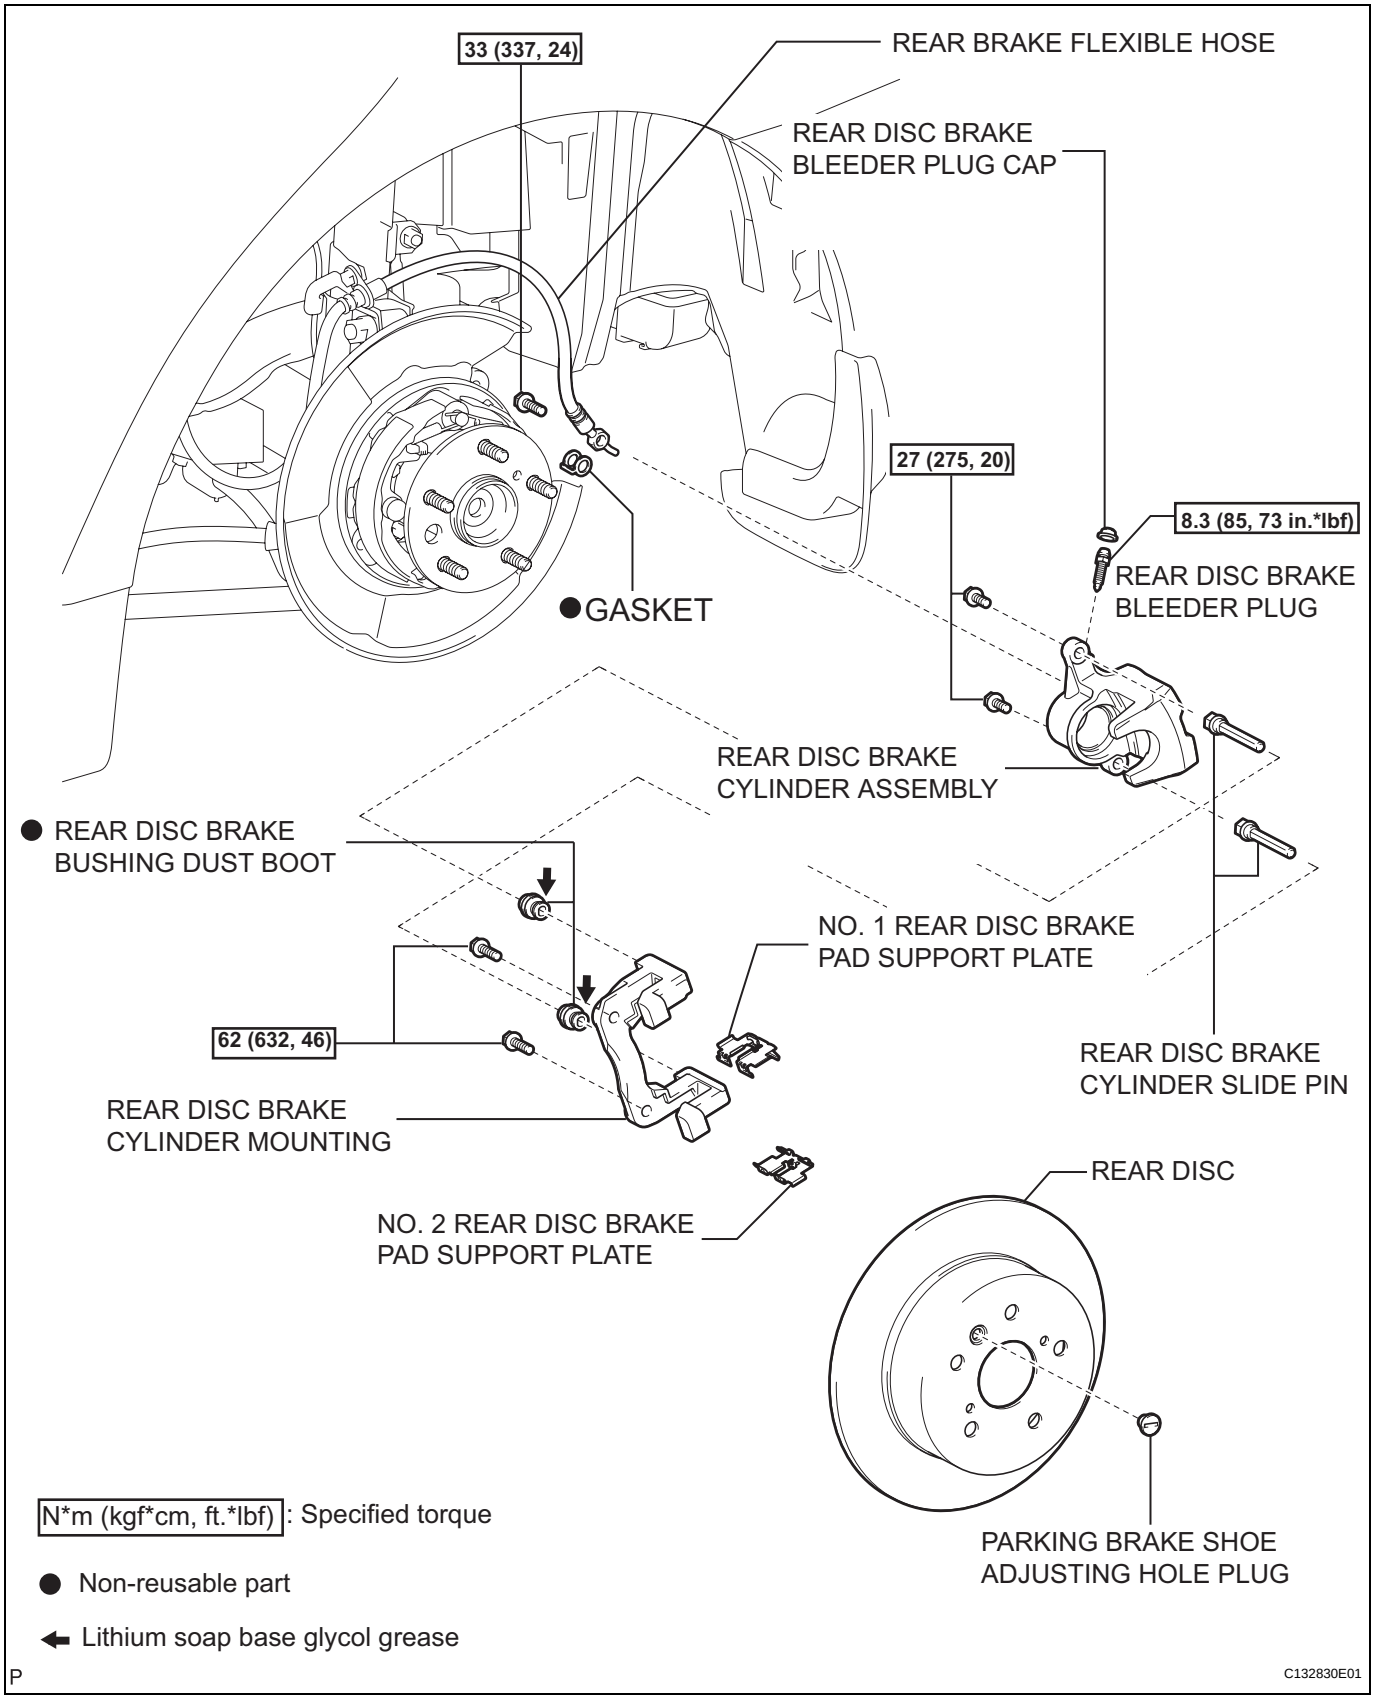
- **Do not bend or damage the brake tube.**
- **Do not allow any foreign matter such as dirt and dust to enter the brake tube from the connecting points.**
- **Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).**
- **This torque value is effective when SST is parallel to a torque wrench.**

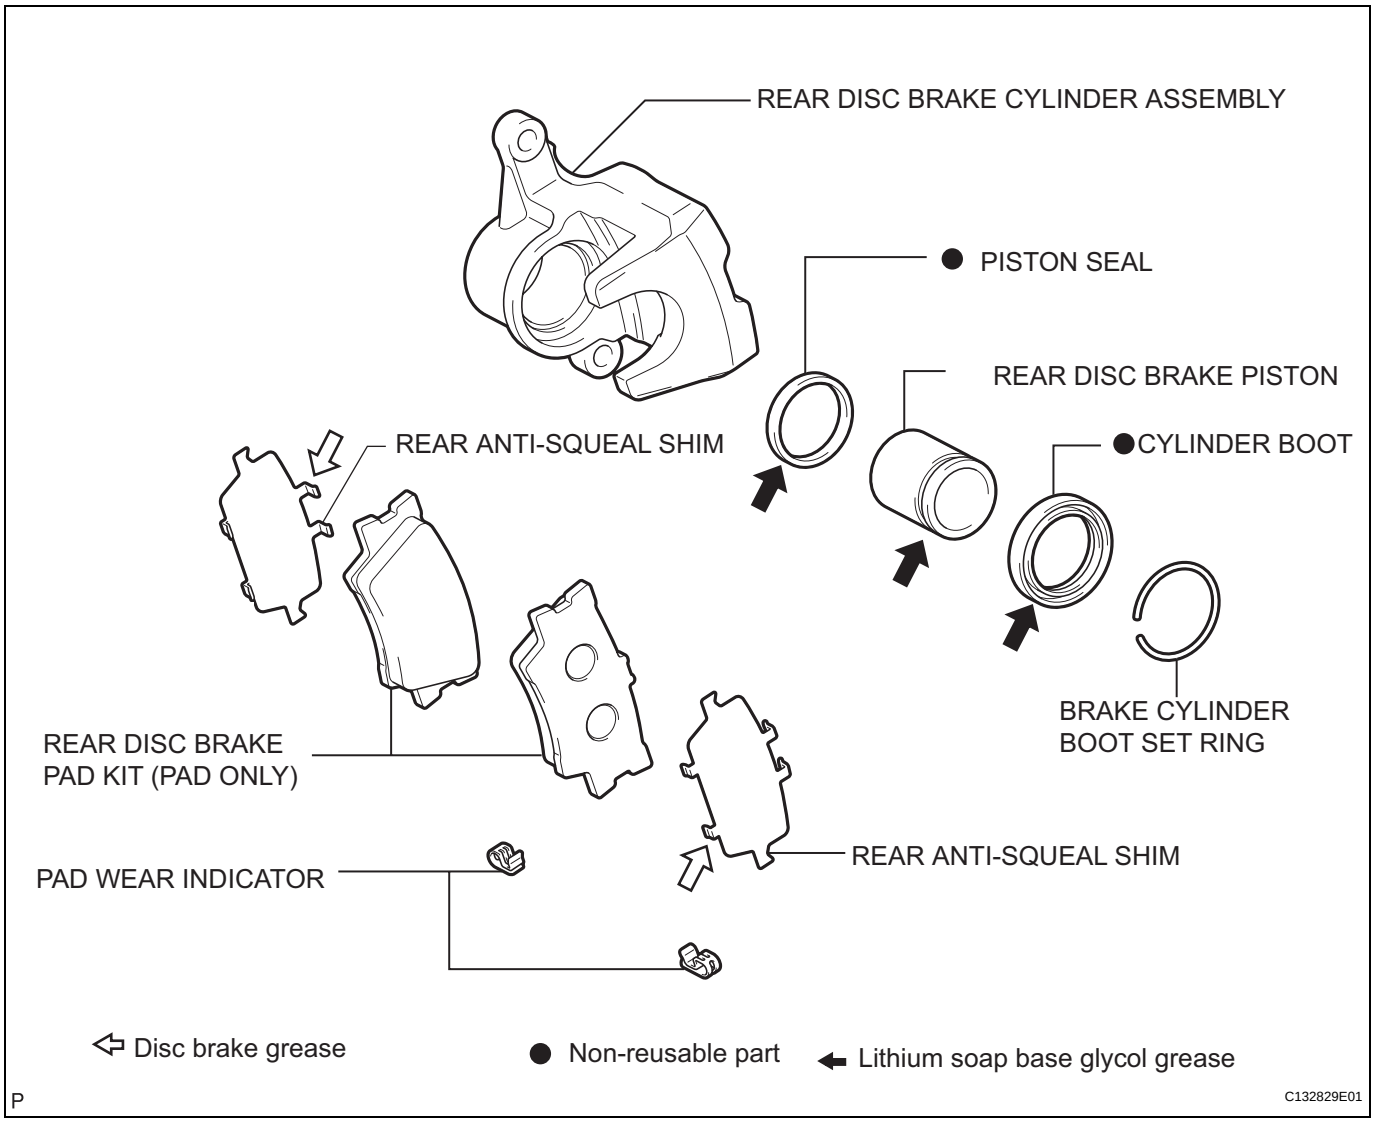
(d) Install the front brake flexible hose with a new clip.
NOTICE:
- **When installing the front brake flexible hose, face the identification mark toward the exterior of the vehicle and minimize twisting of the hose.**
- **Install the clip as far as it will go.**

2. **FILL RESERVOIR WITH BRAKE FLUID (See page BR-6)**
3. **BLEED MASTER CYLINDER (See page BR-6)**
4. **BLEED BRAKE LINE (See page BR-7)**
5. **BLEED BRAKE ACTUATOR ASSEMBLY (w/ VSC) (See page BR-8)**
6. **INSPECT BRAKE FLUID LEVEL IN RESERVOIR (See page BR-10)**
7. **INSPECT FOR BRAKE FLUID LEAKAGE**
8. **INSTALL FRONT WHEEL**
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

REAR BRAKE

COMPONENTS





REAR DISC BRAKE CYLINDER ASSEMBLY

BR

REMOVAL

HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. REMOVE FRONT WHEEL

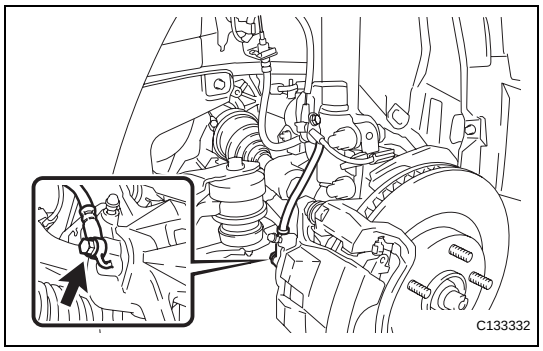
2. DRAIN BRAKE FLUID

NOTICE:

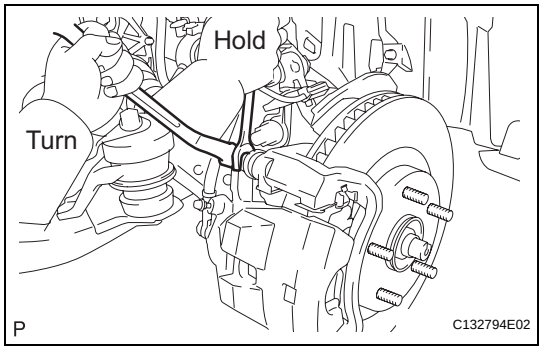
If brake fluid leaks onto any painted surface of the vehicle, wash or remove it completely.

3. REMOVE DISC BRAKE CYLINDER ASSEMBLY

(a) Remove the union bolt and gasket from the disc brake cylinder assembly, then disconnect the flexible hose.



(b) Hold the front disc brake cylinder slide pin and remove the 2 bolts and disc brake cylinder assembly.



BR

DISASSEMBLY

1. REMOVE FRONT BRAKE PAD

(a) Remove the 2 brake pads from the front disc brake cylinder mounting.

2. REMOVE FRONT ANTI-SQUEAL SHIM

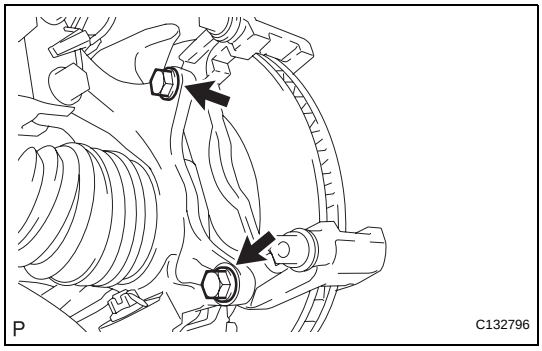
(a) Remove the 2 anti-squeal shims and the 2 pad wear indicator plates from each pad.

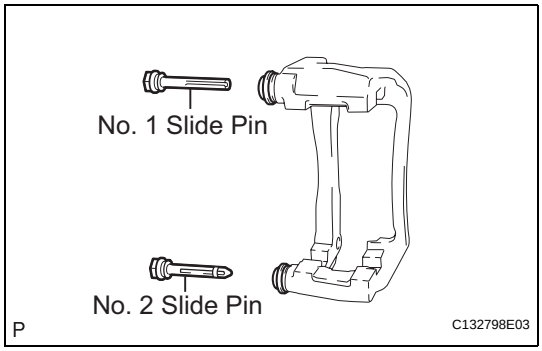
3. REMOVE FRONT DISC BRAKE PAD SUPPORT PLATE

(a) Remove the 4 front disc brake pad support plates.

4. REMOVE FRONT DISC BRAKE CYLINDER MOUNTING

(a) Remove the 2 bolts and front disc brake cylinder mounting.



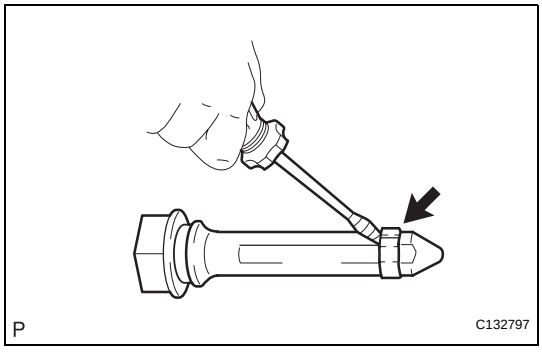


5. REMOVE NO. 1 FRONT DISC BRAKE CYLINDER SLIDE PIN

(a) Remove the No. 1 front disc brake cylinder slide pin from the front disc brake cylinder mounting.

6. REMOVE NO. 2 FRONT DISC BRAKE CYLINDER SLIDE PIN

(a) Remove the No. 2 front disc brake cylinder slide pin from the front disc brake cylinder mounting.



7. REMOVE FRONT DISC BRAKE CYLINDER SLIDE BUSHING

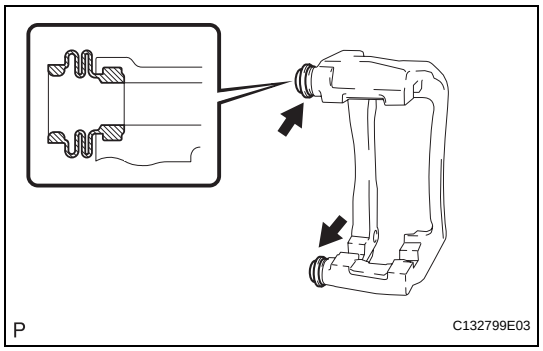
(a) Using a screwdriver, remove the cylinder slide bushing from the No. 2 front disc brake cylinder slide pin.

NOTICE:

Do not damage the No. 2 front disc brake cylinder slide pin.

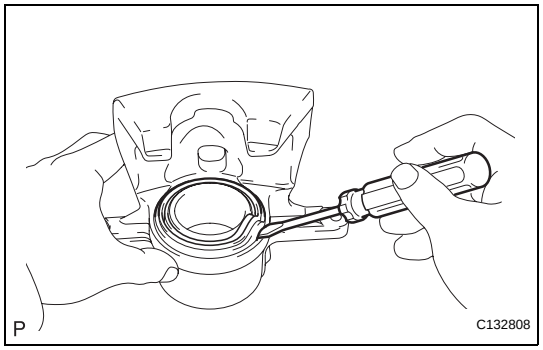
HINT:

Tape the screwdriver tip before use.



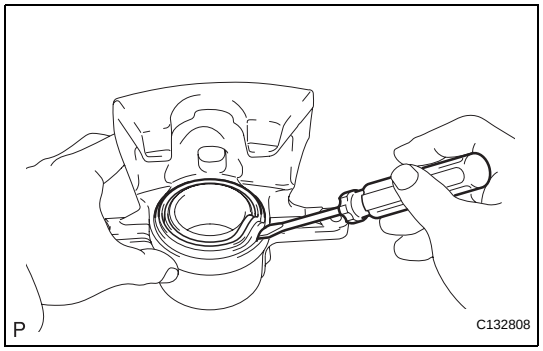
8. REMOVE FRONT DISC BRAKE BUSHING DUST BOOT

(a) Remove the 2 bushing dust boots from the front disc brake cylinder mounting.



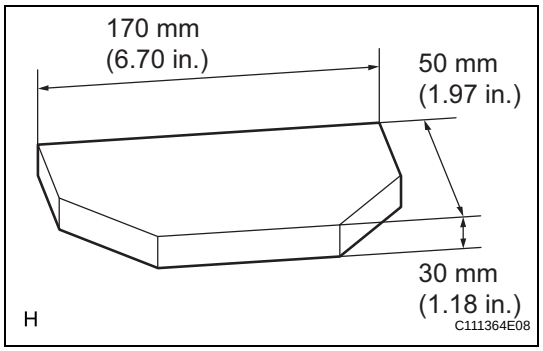
9. REMOVE CYLINDER BOOT (for TMC Made)

(a) Using a screwdriver, remove the cylinder boot set ring and the cylinder boot.
NOTICE:
Be careful not to damage the brake piston and cylinder.



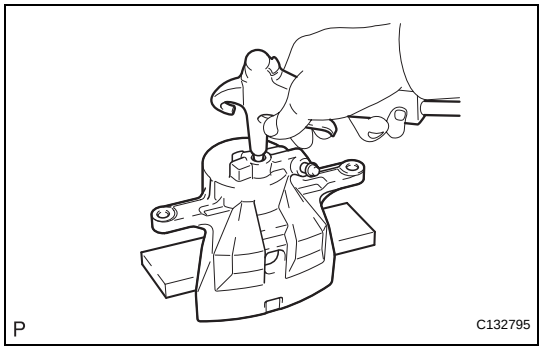
10. REMOVE CYLINDER BOOT (for TMMK Made)

(a) Using a screwdriver, remove the cylinder boot.
NOTICE:
Be careful not to damage the brake piston and cylinder.

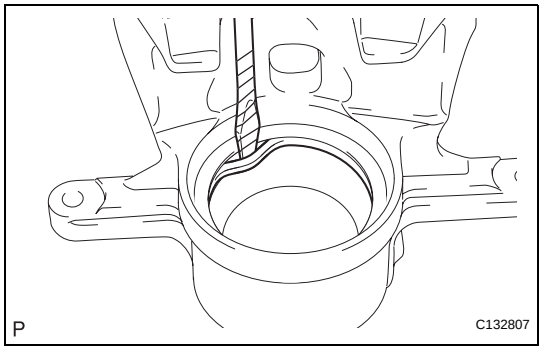


11. REMOVE FRONT DISC BRAKE PISTON

(a) Prepare a wooden plate to hold the pistons.
(b) Place the wooden plate between the piston and the disc brake cylinder assembly.



(c) Use compressed air to remove the piston from the disc brake cylinder assembly.
CAUTION:
Do not place your fingers in front of the piston when using compressed air.
NOTICE:
Do not spatter the brake fluid.



12. REMOVE PISTON SEAL

(a) Using a screwdriver, remove the piston seal from the disc brake cylinder assembly.
NOTICE:
Do do not damage the inner cylinder or cylinder groove.
HINT:
Tape the screwdriver tip before use.

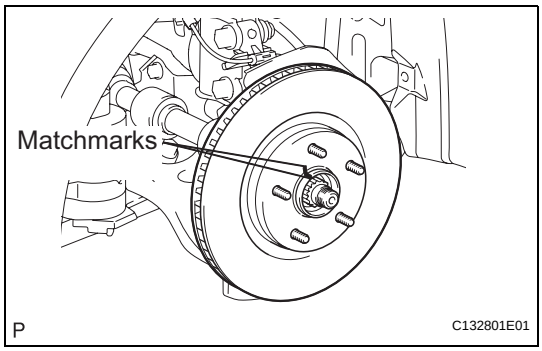
13. REMOVE FRONT DISC BRAKE BLEEDER PLUG CAP

(a) Remove the front disc brake bleeder plug cap.

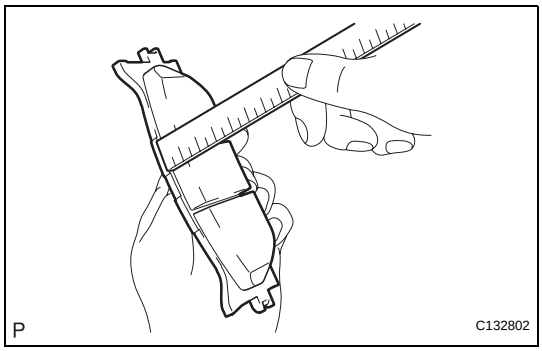
14. REMOVE FRONT DISC BRAKE BLEEDER PLUG

15. REMOVE FRONT DISC

(a) Remove the front disc.
HINT:
Put matchmarks on the disc and the axle hub.



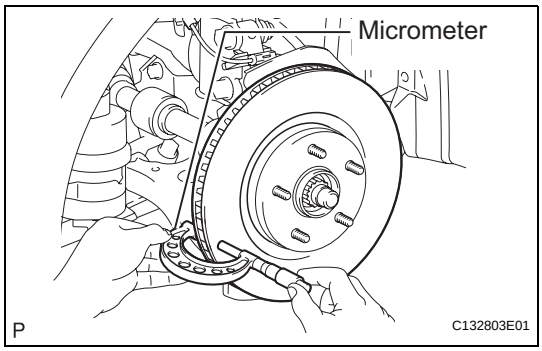
BR



INSPECTION

1. INSPECT PAD LINING THICKNESS

(a) Using a ruler, measure the pad lining thickness.
Standard thickness:
12.0 mm (0.472 in.)
Minimum thickness:
1.0 mm (0.039 in.)
If the pad lining thickness is less than the minimum, replace the brake pads.
HINT:
Be sure to check wear of the front disc after replacing the brake pad with a new one.



2. INSPECT DISC THICKNESS

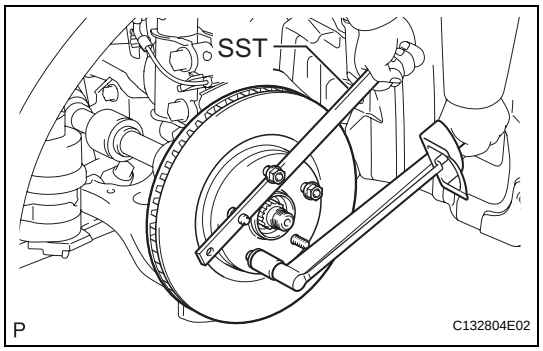
(a) Using a micrometer, measure the disc thickness.
Standard thickness:
28.0 mm (1.102 in.)
Minimum thickness :
25.0 mm (0.983 in.)
If the disc thickness is less than the minimum, replace the front disc.

3. INSPECT BRAKE CYLINDER AND PISTON

(a) Check the cylinder bore and piston for rust or scoring. If necessary, replace the disc brake cylinder assembly.

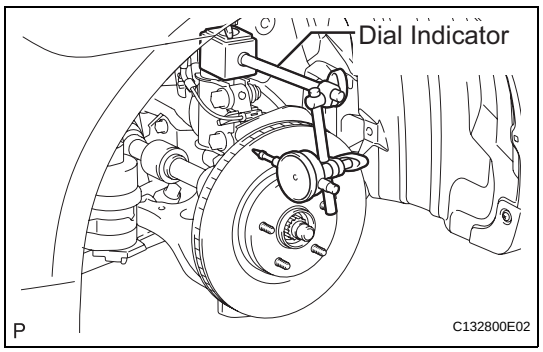
4. INSPECT FRONT DISC BRAKE PAD SUPPORT PLATE

(a) Make sure that the pad support plate has sufficient rebound, has no deformation, cracks or wear, and that all rust and dirt are cleaned off. If necessary, replace the brake pad support plate.



5. INSPECT DISC RUNOUT

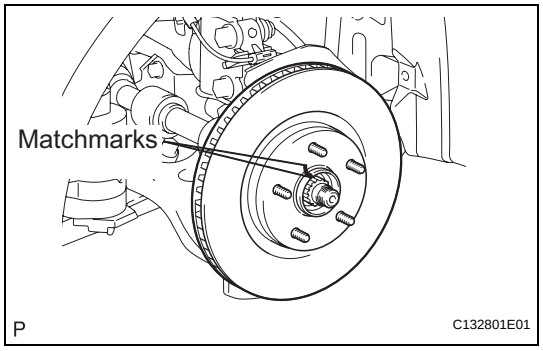
(a) Using SST to hold the disc, tighten the disc with the 3 hub nuts.
SST 09330-00021
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
HINT:
Use the SST to hold the disc while torquing the nuts.



(b) Using a dial indicator, measure the disc runout 10 mm (0.39 in.) away from the outer edge of the disc.
Maximum disc runout:
0.05 mm (0.0020 in)
NOTICE:
- **Keep the magnet of the dial indicator away from the axle hub and speed sensor.**
- **Install the dial indicator to the shock absorber.**

(c) If the runout exceeds the maximum value, change the installation positions of the disc and axle so that the runout will become minimal. If the runout exceeds the maximum even after the installation positions are changed, check the bearing play in the axial direction and the axle hub runout (See page AH-16). If the bearing play and the axle hub runout are normal and if the disc thickness is not within the specified range, grind the disc. If the disc thickness is less than the minimum, replace the disc.

(d) Remove the front disc.



REASSEMBLY

1. INSTALL FRONT DISC

(a) Align the matchmarks and install the front disc.
NOTICE:
When replacing the disc with a new one, select the installation position where the front disc has the minimum runout.

2. TEMPORARILY TIGHTEN FRONT DISC BRAKE BLEEDER PLUG

(a) Temporarily tighten the front disc brake bleeder plug to the disc brake cylinder sub-assembly.

3. INSTALL FRONT DISC BRAKE BLEEDER PLUG CAP

(a) Install the bleeder plug cap to the front disc brake bleeder plug.

4. INSTALL PISTON SEAL

(a) Apply lithium soap base glycol grease to a new piston seal.

(b) Install the piston seal to the disc brake cylinder assembly.

BR

5. INSTALL FRONT DISC BRAKE PISTON (for TMC Made)

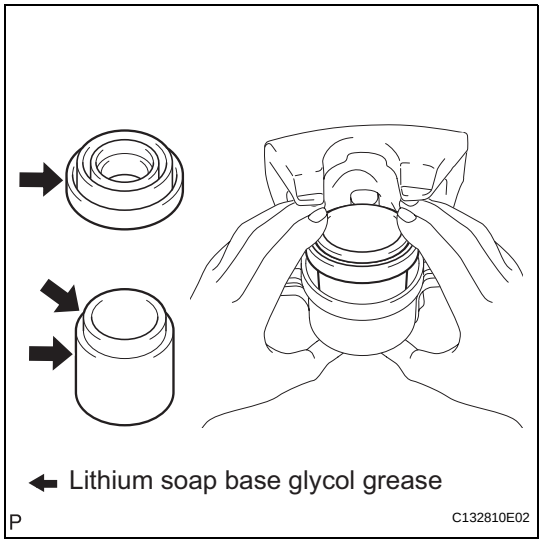
(a) Apply lithium soap base glycol grease to the piston and a new cylinder boot.

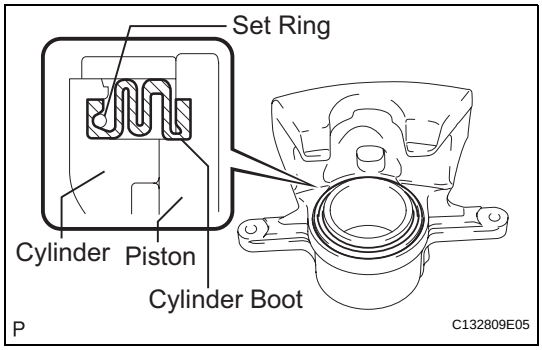
(b) Install the cylinder boot to the piston.

(c) Install the piston to the disc brake cylinder assembly.

NOTICE:

Do not install the piston forcibly in the cylinder assembly.





6. INSTALL CYLINDER BOOT (for TMC Made)

(a) Install the cylinder boot to the disc brake cylinder assembly.

NOTICE:

Install the boot securely to the grooves of the cylinder and piston.

(b) Using a screwdriver, install a new set ring.

NOTICE:

- **Install the set ring securely to the grooves of the cylinder boot.**
- **Do not damage the cylinder boot.**

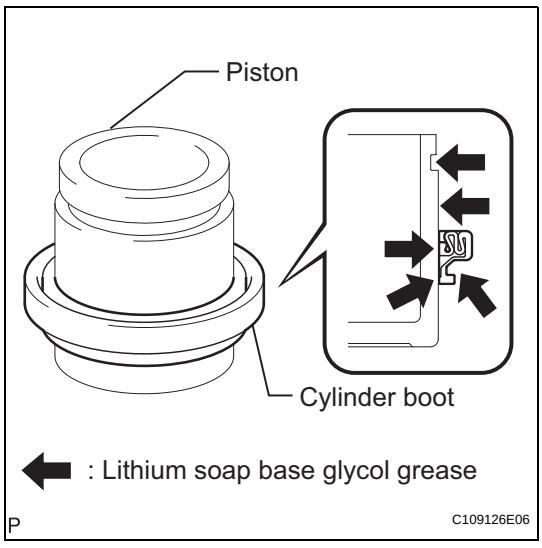
HINT:

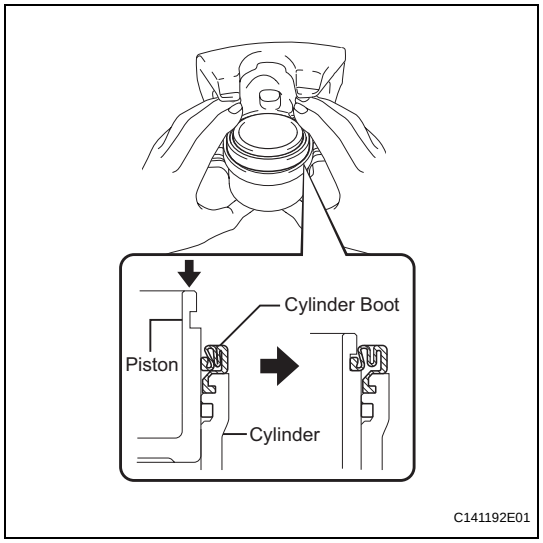
Tape the screwdriver tip before use.

7. INSTALL CYLINDER BOOT (for TMMK Made)

(a) Apply lithium soap base glycol grease to the piston and a new cylinder boot.

(b) Install the cylinder boot to the piston as shown in the illustration.

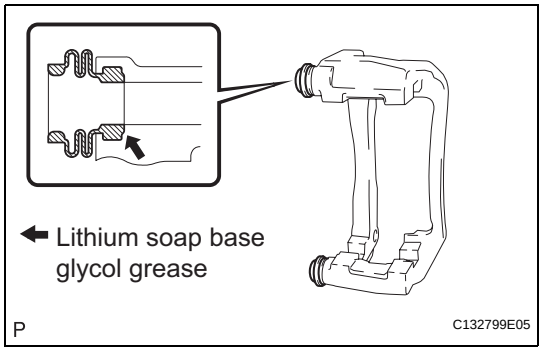




8. INSTALL FRONT DISC BRAKE PISTON (for TMMK Made)

(a) Install the cylinder boot to the cylinder assembly.
NOTICE:
Install the boot securely to the grooves of the cylinder.

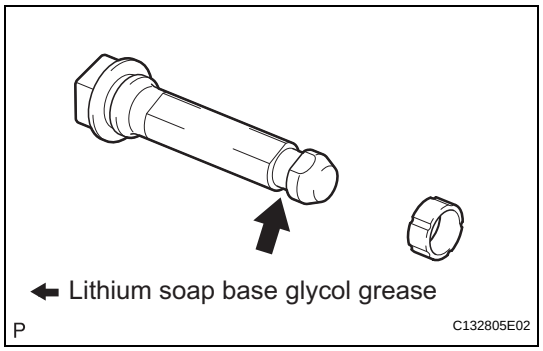
(b) Push in the piston by hand and install the boot seal onto the grooves of the piston.
NOTICE:
Install the boot securely to the grooves of the piston.



9. INSTALL FRONT DISC BRAKE BUSHING DUST BOOT

(a) Apply lithium soap base glycol grease to the seal surface of 2 new bushing dust boots.

(b) Install the 2 bushing dust boots to the front disc brake cylinder mounting.



10. INSTALL FRONT DISC BRAKE CYLINDER SLIDE BUSHING

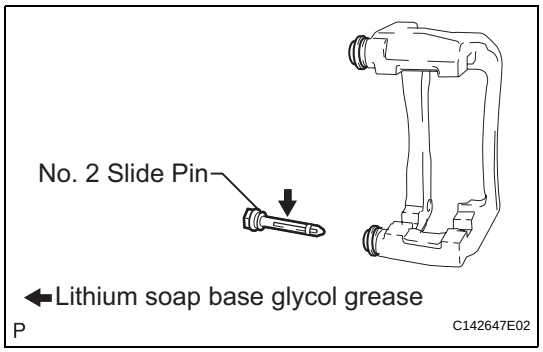
(a) Apply lithium soap base glycol grease to a new front disc brake cylinder slide bushing.

(b) Install the front disc brake cylinder slide bushing to the No. 2 front disc brake cylinder slide pin.

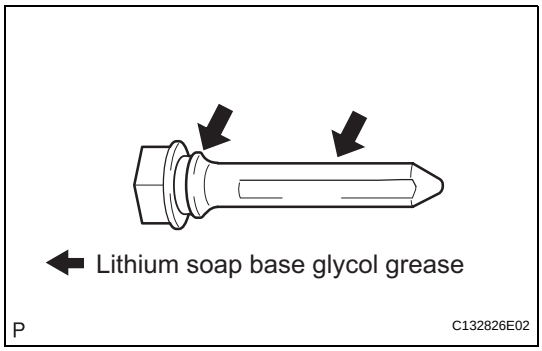
11. INSTALL NO. 2 FRONT DISC BRAKE CYLINDER SLIDE PIN

(a) Apply lithium soap base glycol grease to the sliding part and the seal surface of the No. 2 front disc brake cylinder slide pin.

(b) Install the No. 2 front disc brake cylinder slide pin to the bottom side of the cylinder mounting.

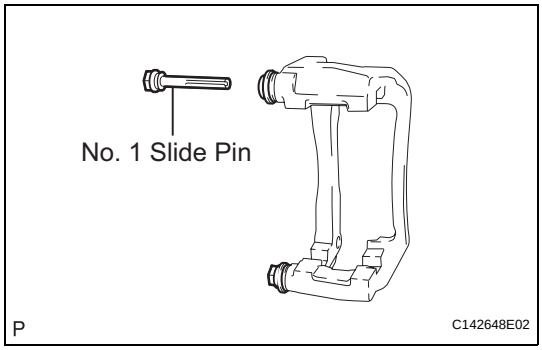


BR

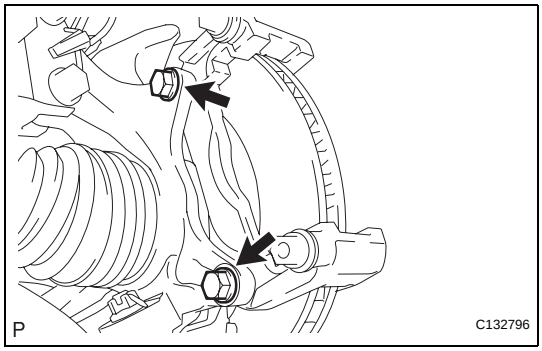


12. INSTALL NO. 1 FRONT DISC BRAKE CYLINDER SLIDE PIN

(a) Apply lithium soap base glycol grease to the sliding part and the seal surface of the No. 1 front disc brake cylinder slide pin.



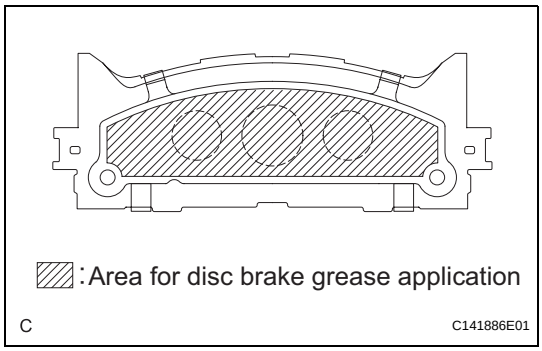
(b) Install the No. 1 front disc brake cylinder slide pin.



13. INSTALL FRONT DISC BRAKE CYLINDER MOUNTING

(a) Install the cylinder mounting with the 2 bolts.
Torque: 107 N*m (1,090 kgf*cm, 79 ft.*lbf)

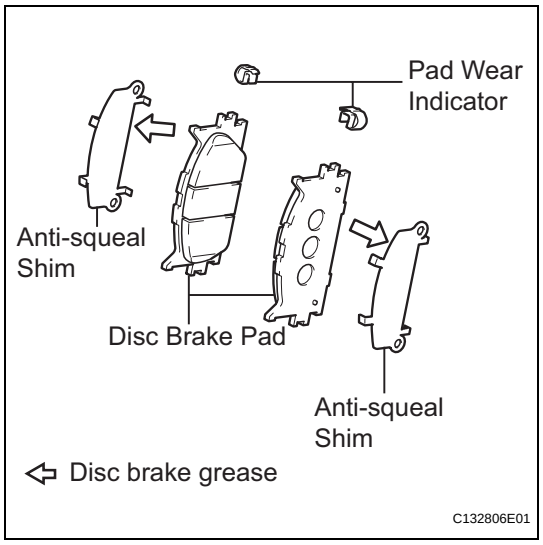
14. INSTALL FRONT DISC BRAKE PAD SUPPORT PLATE



15. INSTALL FRONT ANTI-SQUEAL SHIM

(a) Apply disc brake grease to the anti-squeal shims.
NOTICE:

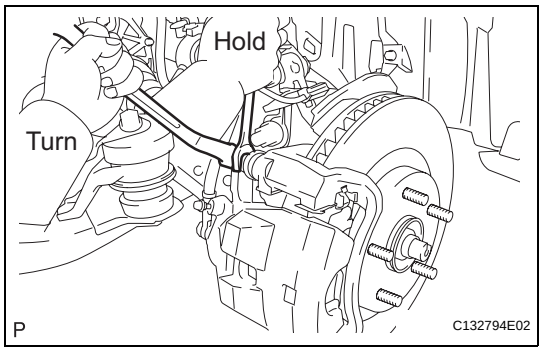
- **When replacing worn pads, the anti-squeal shims must be replaced together with the pads.**
- **Install the shims in the correct positions and directions.**
- **Apply disc brake grease to the area that contacts the anti-squeal shim.**
- **Disc brake grease can come out slightly from the area where the anti-squeal shim is installed.**
- **Make sure that disc brake grease is not applied onto the lining surface.**



(b) Install the 2 anti-squeal shims and the 2 pad wear indicators to each pad.
NOTICE:
Install the pad wear indicators in the correct positions and directions.

16. INSTALL FRONT BRAKE PAD

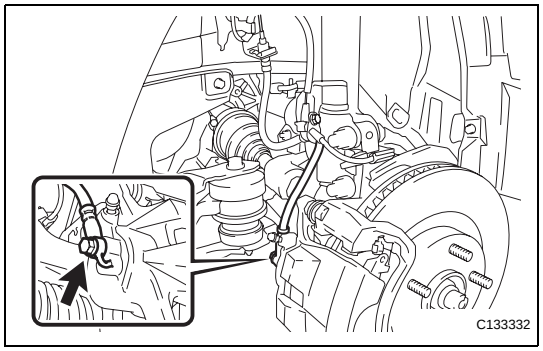
(a) Install the 2 brake pads with anti-squeal shims to the disc brake cylinder mounting.



INSTALLATION

1. INSTALL DISC BRAKE CYLINDER ASSEMBLY

(a) Install the disc brake cylinder assembly with the 2 bolts.
Torque: 34 N*m (350 kgf*cm, 25 ft.*lbf)



(b) Connect the flexible hose with the union bolt and the new gasket.
NOTICE:
Install the flexible hose lock securely in the lock hole in the disc brake cylinder.
Torque: 29 N*m (300 kgf*cm, 21 ft.*lbf)

2. FILL RESERVOIR WITH BRAKE FLUID (See page BR-6)

3. BLEED MASTER CYLINDER (See page BR-6)

4. BLEED BRAKE LINE (See page BR-7)

5. BLEED BRAKE ACTUATOR ASSEMBLY (w/ VSC) (See page BR-8)

6. INSPECT BRAKE FLUID LEVEL IN RESERVOIR (See page BR-10)

7. INSPECT FOR BRAKE FLUID LEAKAGE

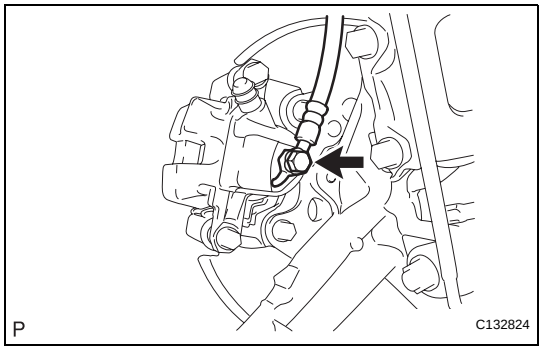
8. INSTALL FRONT WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

REMOVAL

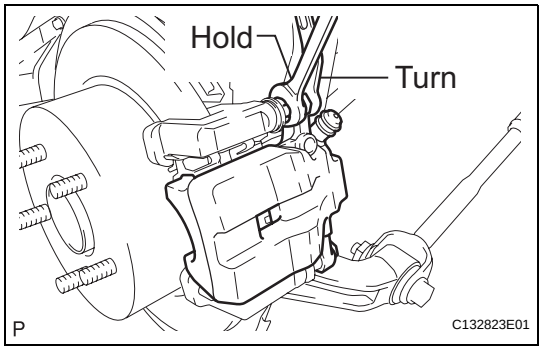
1. **REMOVE REAR WHEEL**

2. **DRAIN BRAKE FLUID**
   NOTICE:
   If brake fluid leaks onto any painted surface, wash or remove it completely.

3. **DISCONNECT REAR BRAKE FLEXIBLE HOSE**
   (a) Remove the union bolt and the gasket from the rear disc brake cylinder assembly, then disconnect the flexible hose.



4. **REMOVE REAR DISC BRAKE CYLINDER ASSEMBLY**
   (a) Hold the 2 front disc brake cylinder slide pins and remove the 2 bolts and rear disc brake cylinder assembly.



BR

DISASSEMBLY

1. REMOVE REAR DISC BRAKE PAD KIT (PAD ONLY)

(a) Remove the 2 brake pads with the anti-squeal shims.

2. REMOVE REAR ANTI-SQUEAL SHIM KIT

(a) Remove the 2 anti-squeal shims and the 2 pad wear indicator plates from each pad.

3. REMOVE NO. 1 REAR DISC BRAKE PAD SUPPORT PLATE

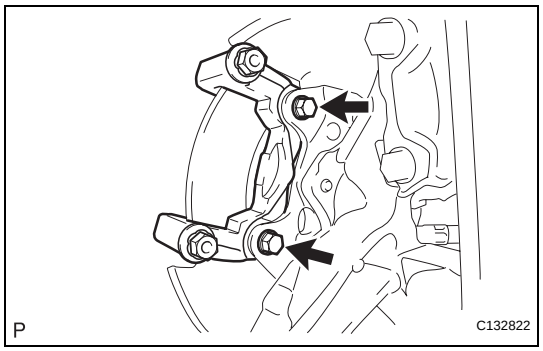
(a) Remove the No. 1 rear disc brake pad support plate from the rear disc brake cylinder mounting.

4. REMOVE NO. 2 REAR DISC BRAKE PAD SUPPORT PLATE

(a) Remove the No. 2 rear disc brake pad support plate from the rear disc brake cylinder mounting.

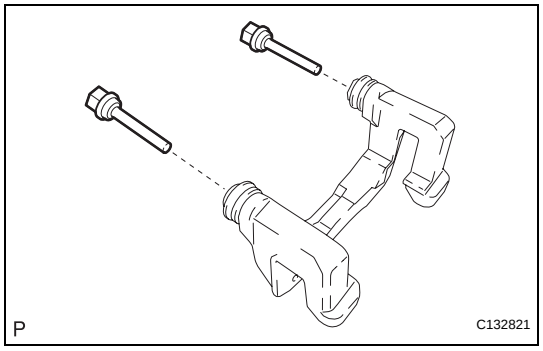
5. REMOVE REAR DISC BRAKE CYLINDER MOUNTING

(a) Remove the 2 bolts and the rear disc brake cylinder mounting.



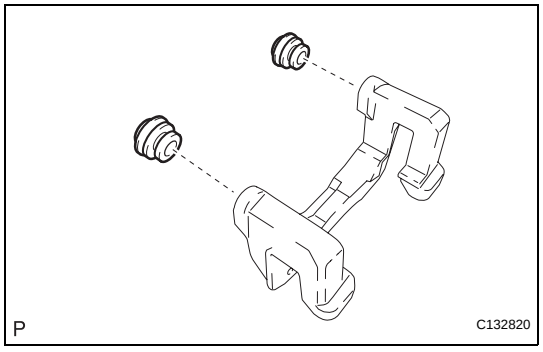
6. REMOVE REAR DISC BRAKE CYLINDER SLIDE PIN

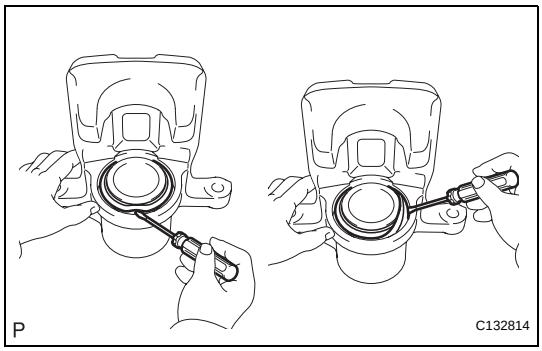
(a) Remove the 2 pins (upper and lower) from the rear brake cylinder mounting.



7. REMOVE REAR DISC BRAKE BUSHING DUST BOOT

(a) Remove the 2 rear disc brake bushing dust boots from the rear disc brake cylinder mounting.





8. REMOVE CYLINDER BOOT

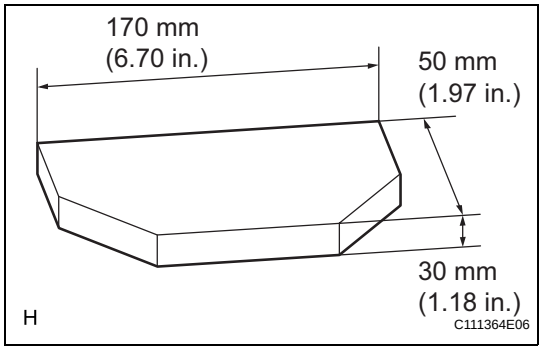
(a) Using a screwdriver, pry out the set ring and cylinder boot.

NOTICE:

Be careful not to damage the brake piston and cylinder.

HINT:

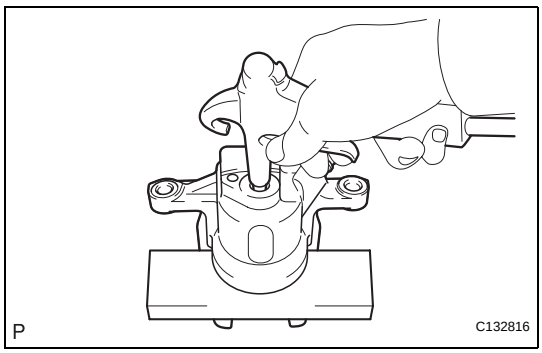
Tape the screwdriver tip before use.



9. REMOVE REAR DISC BRAKE PISTON

(a) Prepare a wooden plate to hold the brake pistons.

(b) Place the wooden plate between the brake piston and the rear disc brake cylinder sub-assembly.



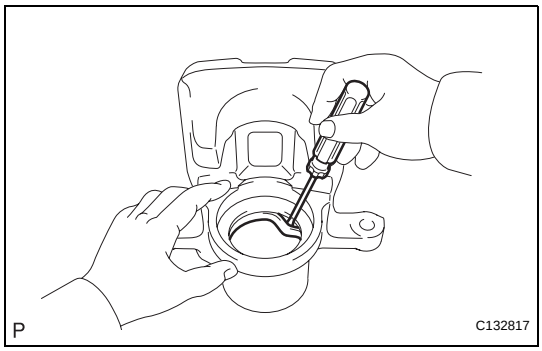
(c) Use compressed air to remove the piston from the disc brake cylinder assembly.

CAUTION:

Do not place your fingers in front of the brake piston when using compressed air.

NOTICE:

Be careful not to spatter the brake fluid.



10. REMOVE PISTON SEAL

(a) Using a screwdriver, remove the piston seal from the rear disc brake cylinder sub-assembly.

NOTICE:

Be careful not to damage the inner cylinder and cylinder groove.

HINT:

Tape the screwdriver tip before use.

11. REMOVE REAR DISC BRAKE BLEEDER PLUG CAP

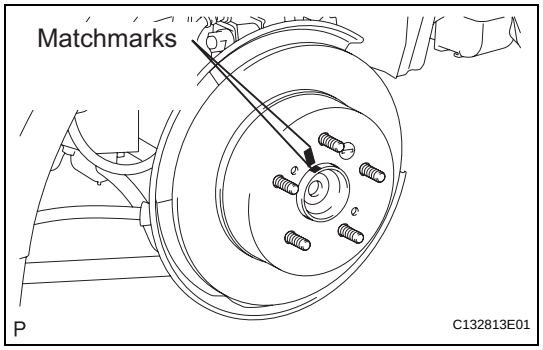
(a) Remove the bleeder plug cap from the rear disc brake bleeder plug.

12. REMOVE REAR DISC BRAKE BLEEDER PLUG

(a) Remove the rear disc brake bleeder plug from the rear disc brake cylinder sub-assembly.

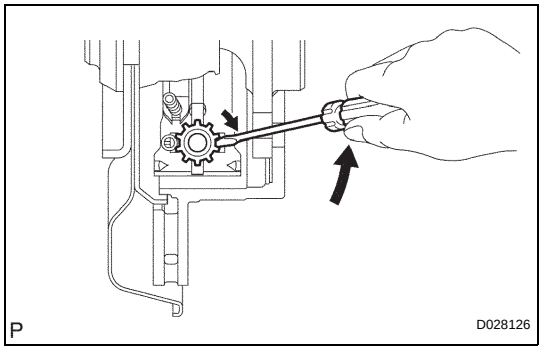
13. REMOVE PARKING BRAKE SHOE ADJUSTING HOLE PLUG

(a) Remove the parking brake shoe adjusting hole plug.



14. REMOVE REAR DISC

(a) Put matchmarks on the rear disc and the axle hub.

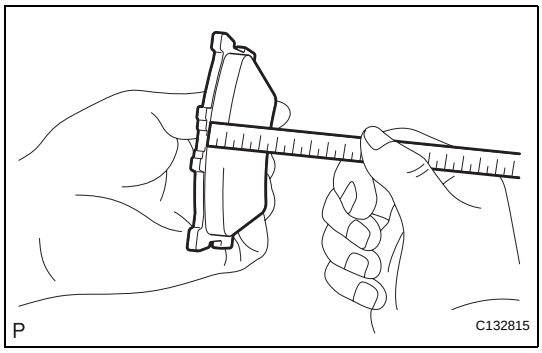


(b) Release the parking brake and remove the rear disc.
HINT:
If the disc cannot be removed easily, turn and press firmly the shoe adjuster until the wheel comes free.

INSPECTION

1. INSPECT BRAKE CYLINDER AND PISTON

(a) Inspect the cylinder bore and the piston for rust or scoring. If necessary, replace the rear disc brake cylinder assembly and piston.



2. INSPECT PAD LINING THICKNESS

(a) Using a ruler, measure the pad lining thickness.

Standard thickness:
11.0 mm (0.433 in.)
Minimum thickness:
1.0 mm (0.039 in.)

If the pad lining thickness is less than the minimum, replace the brake pads.

HINT:

Be sure to check wear of the front disc after replacing the brake pad with a new one.

3. INSPECT NO. 1 REAR DISC BRAKE PAD SUPPORT PLATE

(a) Inspect the No. 1 rear disc brake pad support plate.

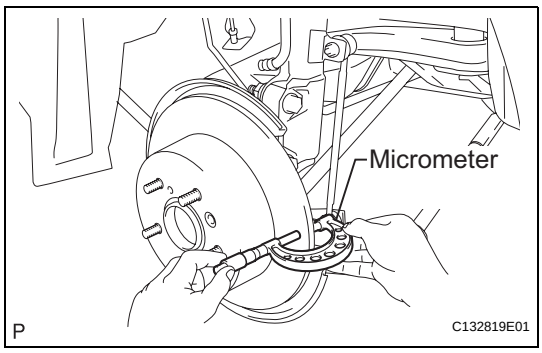
HINT:

Make sure that they have sufficient rebound, and have no deformation, cracks or wear, and all rust and dirt are cleaned off.

4. INSPECT NO. 2 REAR DISC BRAKE PAD SUPPORT PLATE

HINT:

Inspect the No. 2 rear disc brake pad support plate using the same procedure with the No. 1 rear disc brake pad support plate.



5. INSPECT DISC THICKNESS

(a) Using a micrometer, measure the disc thickness.

Standard thickness:
10.0 mm (0.390 in.)
Minimum thickness:
8.5 mm (0.334 in.)

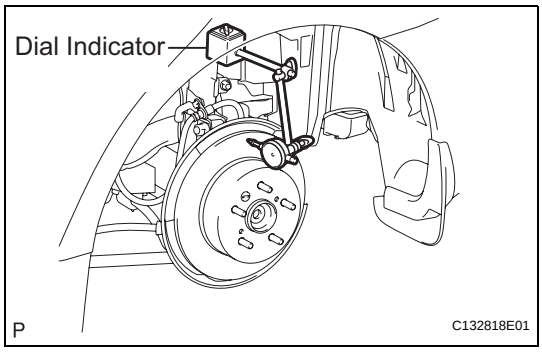
If the disc thickness is less than the minimum, replace the rear disc.

6. INSPECT DISC RUNOUT

(a) Install the rear disc.

(b) Temporarily fasten the rear disc with the 3 hub nuts.

Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

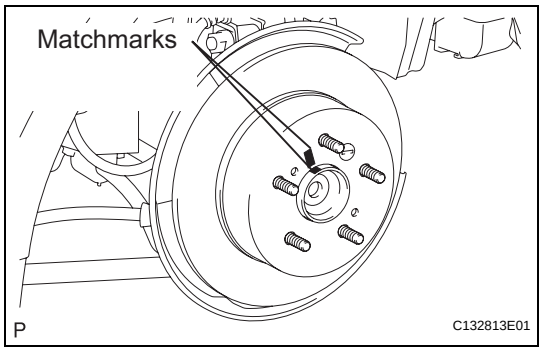


(c) Using a dial indicator, measure the disc runout 10 mm (0.39 in.) away from the outer edge of the rear disc.

Maximum disc runout:
0.15 mm (0.0059 in.)

BR

(d) If the runout exceeds the maximum value, change the installation positions of the disc and axle so that the runout will become minimal. If the runout exceeds the maximum even after the installation positions are changed, check the bearing play in the axial direction and the axle hub runout (See page AH-16). If the bearing play and the axle hub runout are normal and if the disc thickness is not within the specified range, grind the disc. If the disc thickness is less than the minimum, replace the disc.
(e) Remove the 3 hub nuts.
(f) Remove the rear disc.



REASSEMBLY

1. INSTALL REAR DISC

(a) Aligning the matchmarks, install the rear disc.
HINT:
When replacing the rear disc with a new one, select the installation position where the rear disc has the minimum runout.

2. ADJUST PARKING BRAKE SHOE CLEARANCE

(See page PB-63)
HINT:
Hold the rear disc with hub nuts by applying parking brake before adjusting the parking brake shoe clearance.

3. INSTALL PARKING BRAKE SHOE ADJUSTING HOLE PLUG

(a) Install the parking brake shoe adjusting hole plug.

4. TEMPORARILY TIGHTEN REAR DISC BRAKE BLEEDER PLUG

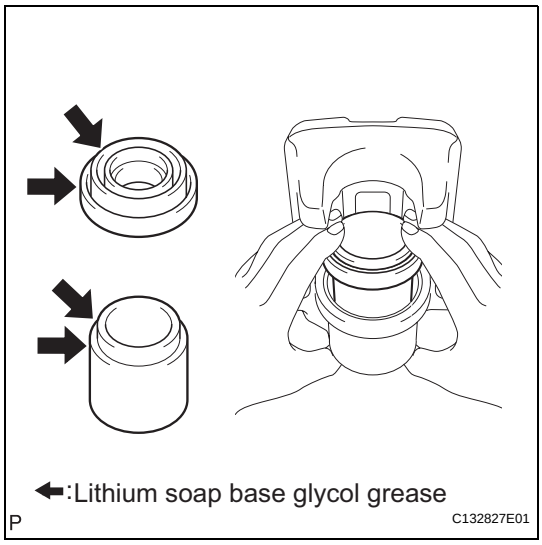
(a) Temporarily install the rear disc brake bleeder plug to the rear disc brake cylinder sub-assembly.

5. INSTALL REAR DISC BRAKE BLEEDER PLUG CAP

(a) Install the rear disc brake bleeder plug cap to the rear disc brake bleeder plug.

6. INSTALL PISTON SEAL

(a) Apply lithium soap base glycol grease to a new piston seal.
(b) Install the piston seal to the rear disc brake cylinder sub-assembly.



7. INSTALL REAR DISC BRAKE PISTON

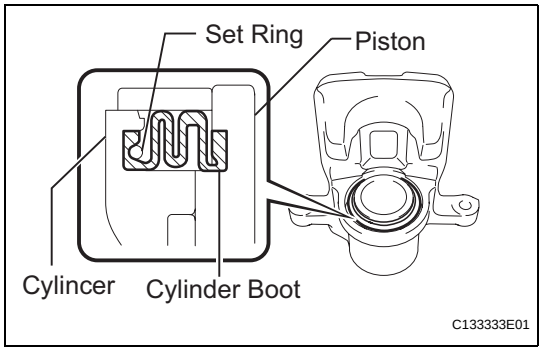
(a) Apply lithium soap base glycol grease to the rear disc brake piston and a new cylinder boot.

(b) Install the cylinder boot to the rear disc brake piston.

(c) Install the piston to the rear disc brake cylinder sub-assembly.

NOTICE:

Do not install the piston forcibly in the disc brake cylinder.



8. INSTALL CYLINDER BOOT

(a) Install the cylinder boot to the rear disc brake cylinder sub-assembly.

NOTICE:

- **Install the boot securely onto the grooves of the cylinder and the piston.**
- **Do not damage the cylinder boot.**

(b) Using a screwdriver, install the set ring.

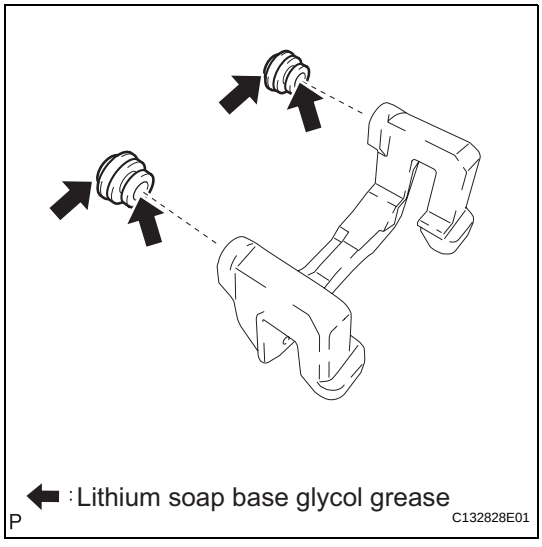
CAUTION:

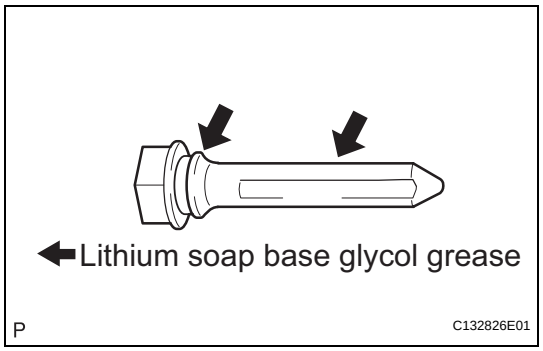
Be careful not to damage the boot.

9. INSTALL REAR DISC BRAKE BUSHING DUST BOOT

(a) Apply lithium soap base glycol grease to the seal surface of 2 new rear disc brake bushing dust boots.

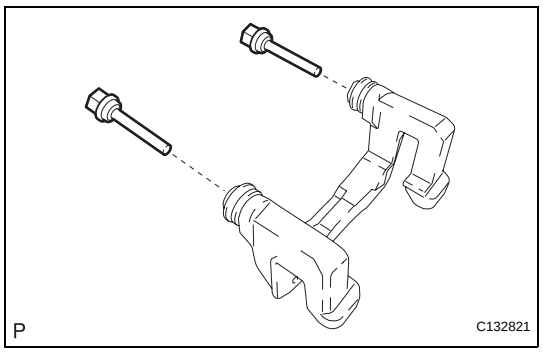
(b) Install the 2 rear disc brake bushing dust boots to the rear disc brake cylinder mounting.



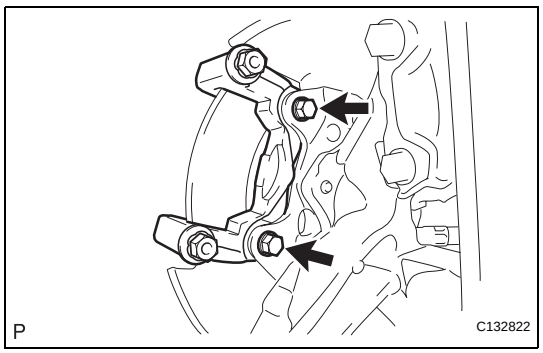


10. INSTALL REAR DISC BRAKE CYLINDER SLIDE PIN

(a) Apply lithium soap base glycol grease to the pins.



(b) Install the 2 pins (upper and lower) to the rear brake cylinder mounting.



11. INSTALL REAR DISC BRAKE CYLINDER MOUNTING

(a) Install the rear disc brake cylinder mounting with the 2 bolts.

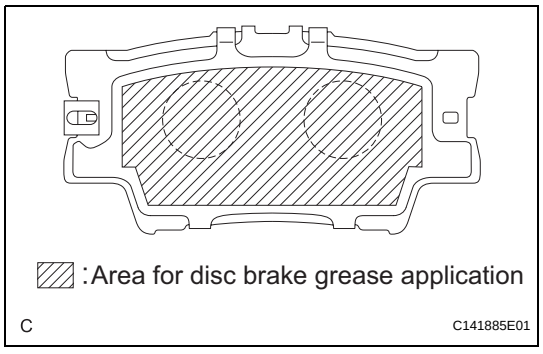
Torque: 62 N*m (632 kgf*cm, 46 ft.*lbf)

12. INSTALL NO. 1 REAR DISC BRAKE PAD SUPPORT PLATE

(a) Install the No. 1 rear disc brake pad support plate to the rear disc brake cylinder mounting.

13. INSTALL NO. 2 REAR DISC BRAKE PAD SUPPORT PLATE

(a) Install the No. 2 rear disc brake pad support plate to the rear disc brake cylinder mounting.

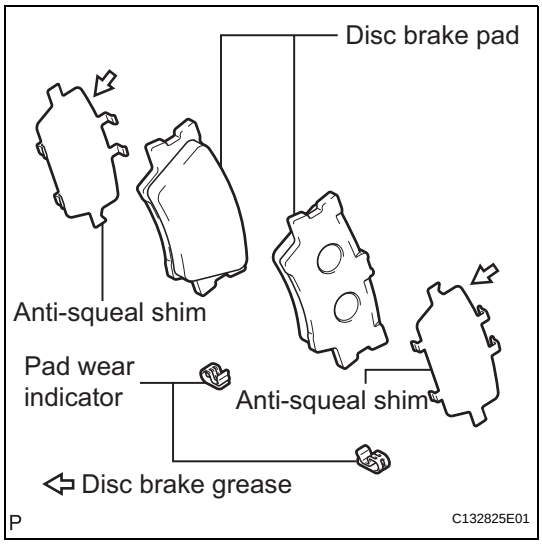


14. INSTALL REAR ANTI-SQUEAL SHIM KIT

(a) Apply disc brake grease to the inside of the anti-squeal shims.

NOTICE:

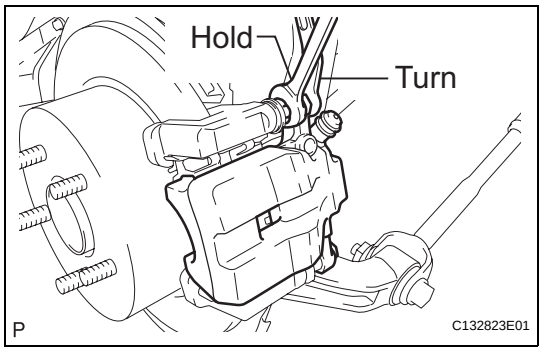
- **When replacing worn pads, the anti-squeal shims must be replaced together with the pads.**
- **Apply disc brake grease to the area that contacts the anti-squeal shim.**
- **Disc brake grease can come out slightly from the area where the anti-squeal shim is installed.**
- **Make sure that disc brake grease is not applied onto the lining surface.**

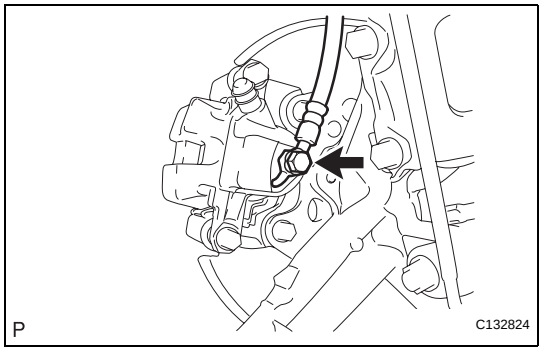


(b) Install the 2 anti-squeal shims and the pad wear indicators to each of the 2 brake pads.
NOTICE:
Install the pad wear indicator and anti-squeal shims in the correct positions and directions.

15. INSTALL REAR DISC BRAKE PAD KIT (PAD ONLY)

(a) Install the 2 brake pads with anti-squeal shims to the rear disc brake cylinder mounting.





INSTALLATION

1. INSTALL REAR DISC BRAKE CYLINDER ASSEMBLY

(a) Install the disc brake cylinder assembly with the 2 bolts.
Torque: 27 N*m (275 kgf*cm, 20 ft.*lbf)
NOTICE:
Install the rear disc brake bushing dust boot onto the groove of the rear disc brake cylinder.

2. CONNECT REAR BRAKE FLEXIBLE HOSE

(a) Connect the flexible hose with the union bolt and a new gasket.
Torque: 33 N*m (337 kgf*cm, 24 ft.*lbf)

3. FILL RESERVOIR WITH BRAKE FLUID (See page BR-6)

4. BLEED MASTER CYLINDER (See page BR-6)

5. BLEED BRAKE LINE (See page BR-7)

6. BLEED BRAKE ACTUATOR ASSEMBLY (w/ VSC) (See page BR-8)

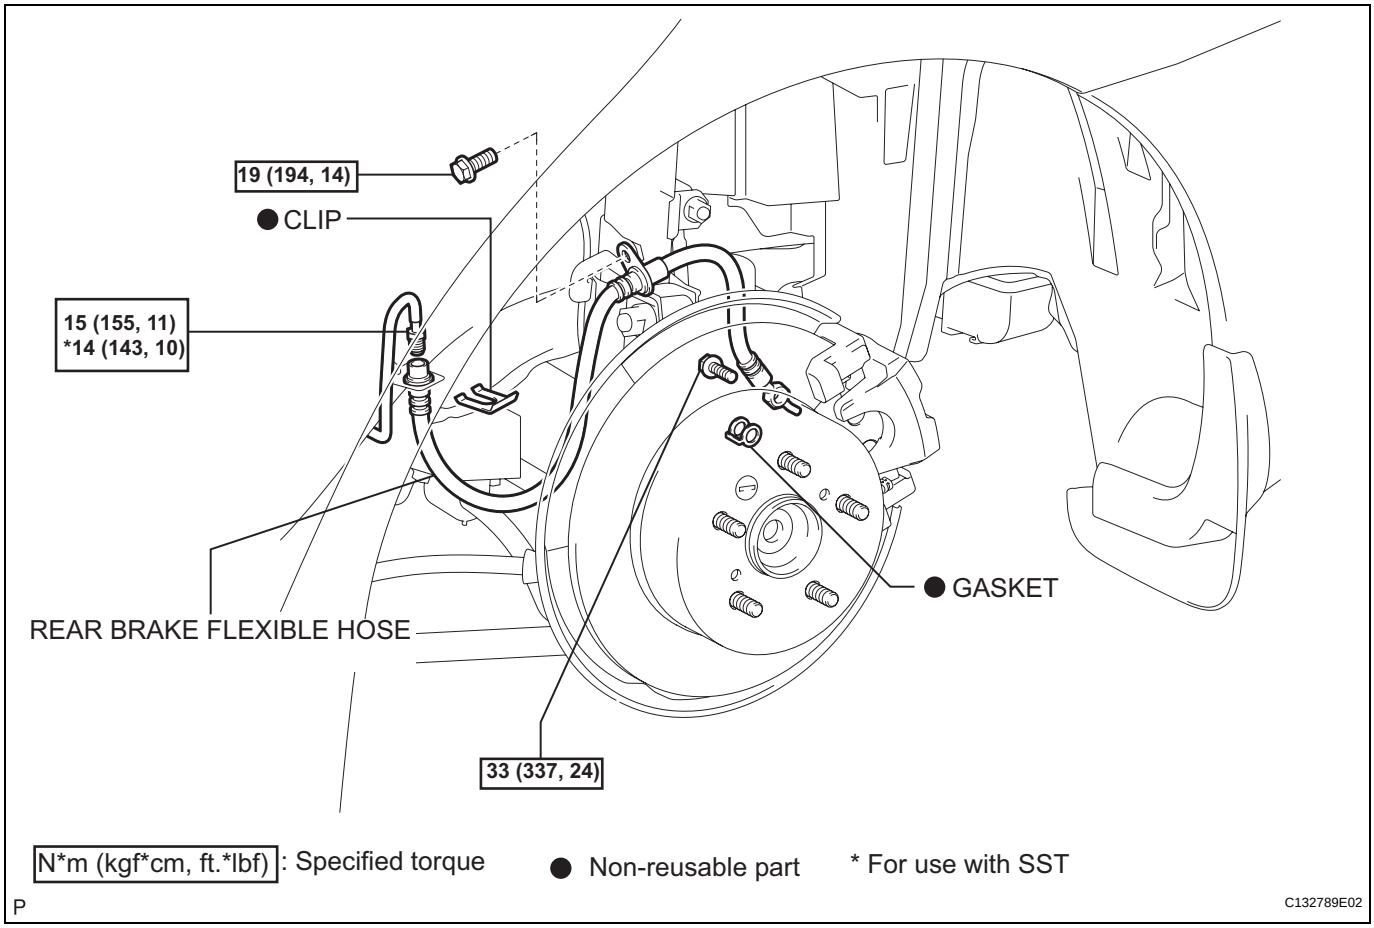
7. INSPECT FLUID LEVEL IN RESERVOIR (See page BR-10)

8. CHECK FOR BRAKE FLUID LEAKAGE

9. INSTALL REAR WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

REAR BRAKE FLEXIBLE HOSE

COMPONENTS



BR

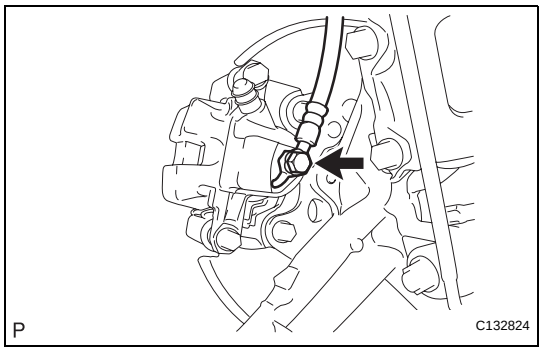
REMOVAL

1. DRAIN BRAKE FLUID

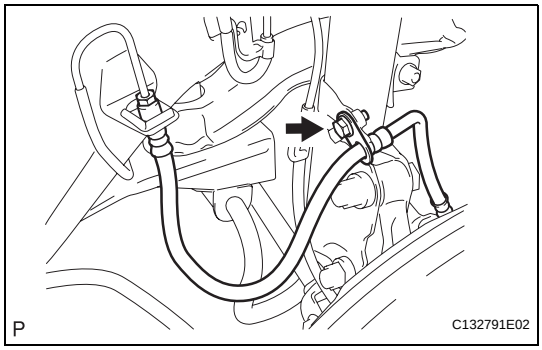
2. REMOVE REAR WHEEL

3. REMOVE REAR BRAKE FLEXIBLE HOSE

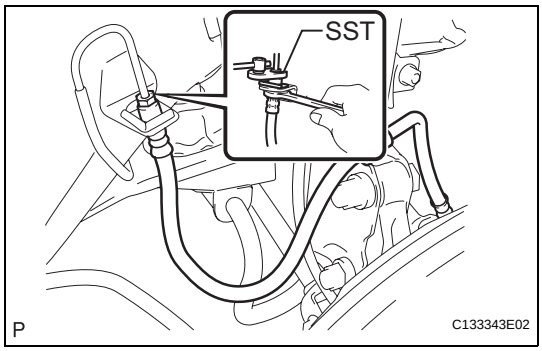
(a) Remove the union bolt, the rear brake flexible hose and gasket.



(b) Remove the bolt and separate the rear brake flexible hose.



(c) Using SST, remove the brake line while holding the rear brake flexible hose with a wrench.
SST 09023-00101
NOTICE:
- **Do not bend or damage the brake line.**
- **Do not allow any foreign matter such as dirt and dust to enter the brake tube from the connecting points.**



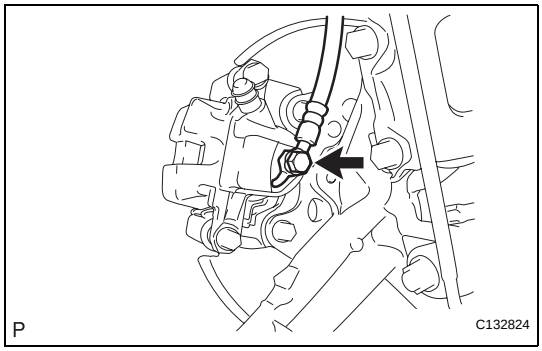
(d) Remove the clip.

INSTALLATION

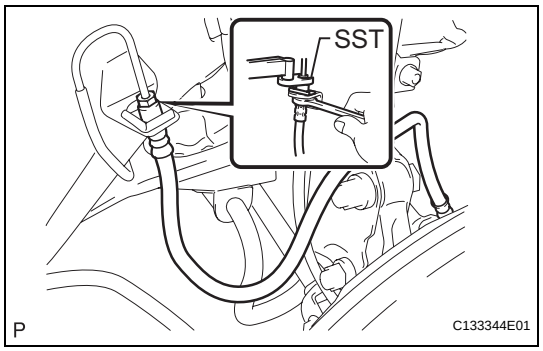
1. INSTALL REAR BRAKE FLEXIBLE HOSE

(a) Connect the rear brake flexible hose with the union bolt and a new gasket.
Torque: 33 N*m (337 kgf*cm, 24 ft.*lbf)

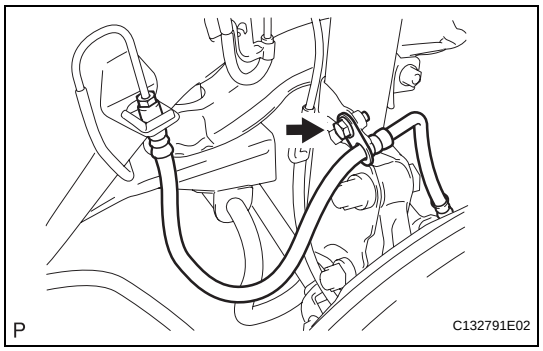
(b) Install the rear brake flexible hose with a new clip.
NOTICE:
- **When installing the rear brake flexible hose, face the identification mark toward the exterior of the vehicle and minimize twisting of the hose.**
- **Install the clip as far as it will go.**



BR



(c) Using SST, connect the brake line to the rear brake flexible hose while holding the flexible hose with a wrench.
SST 09023-00101
Torque: Without SST
15 N*m (155 kgf*cm, 11 ft.*lbf)
With SST
14 N*m (143 kgf*cm, 10 ft.*lbf)
NOTICE:
- **Do not bend or damage the brake tube.**
- **Do not allow any foreign matter such as dirt and dust to enter the brake tube from the connecting points.**
- **Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).**
- **This torque value is effective when SST is parallel to a torque wrench.**

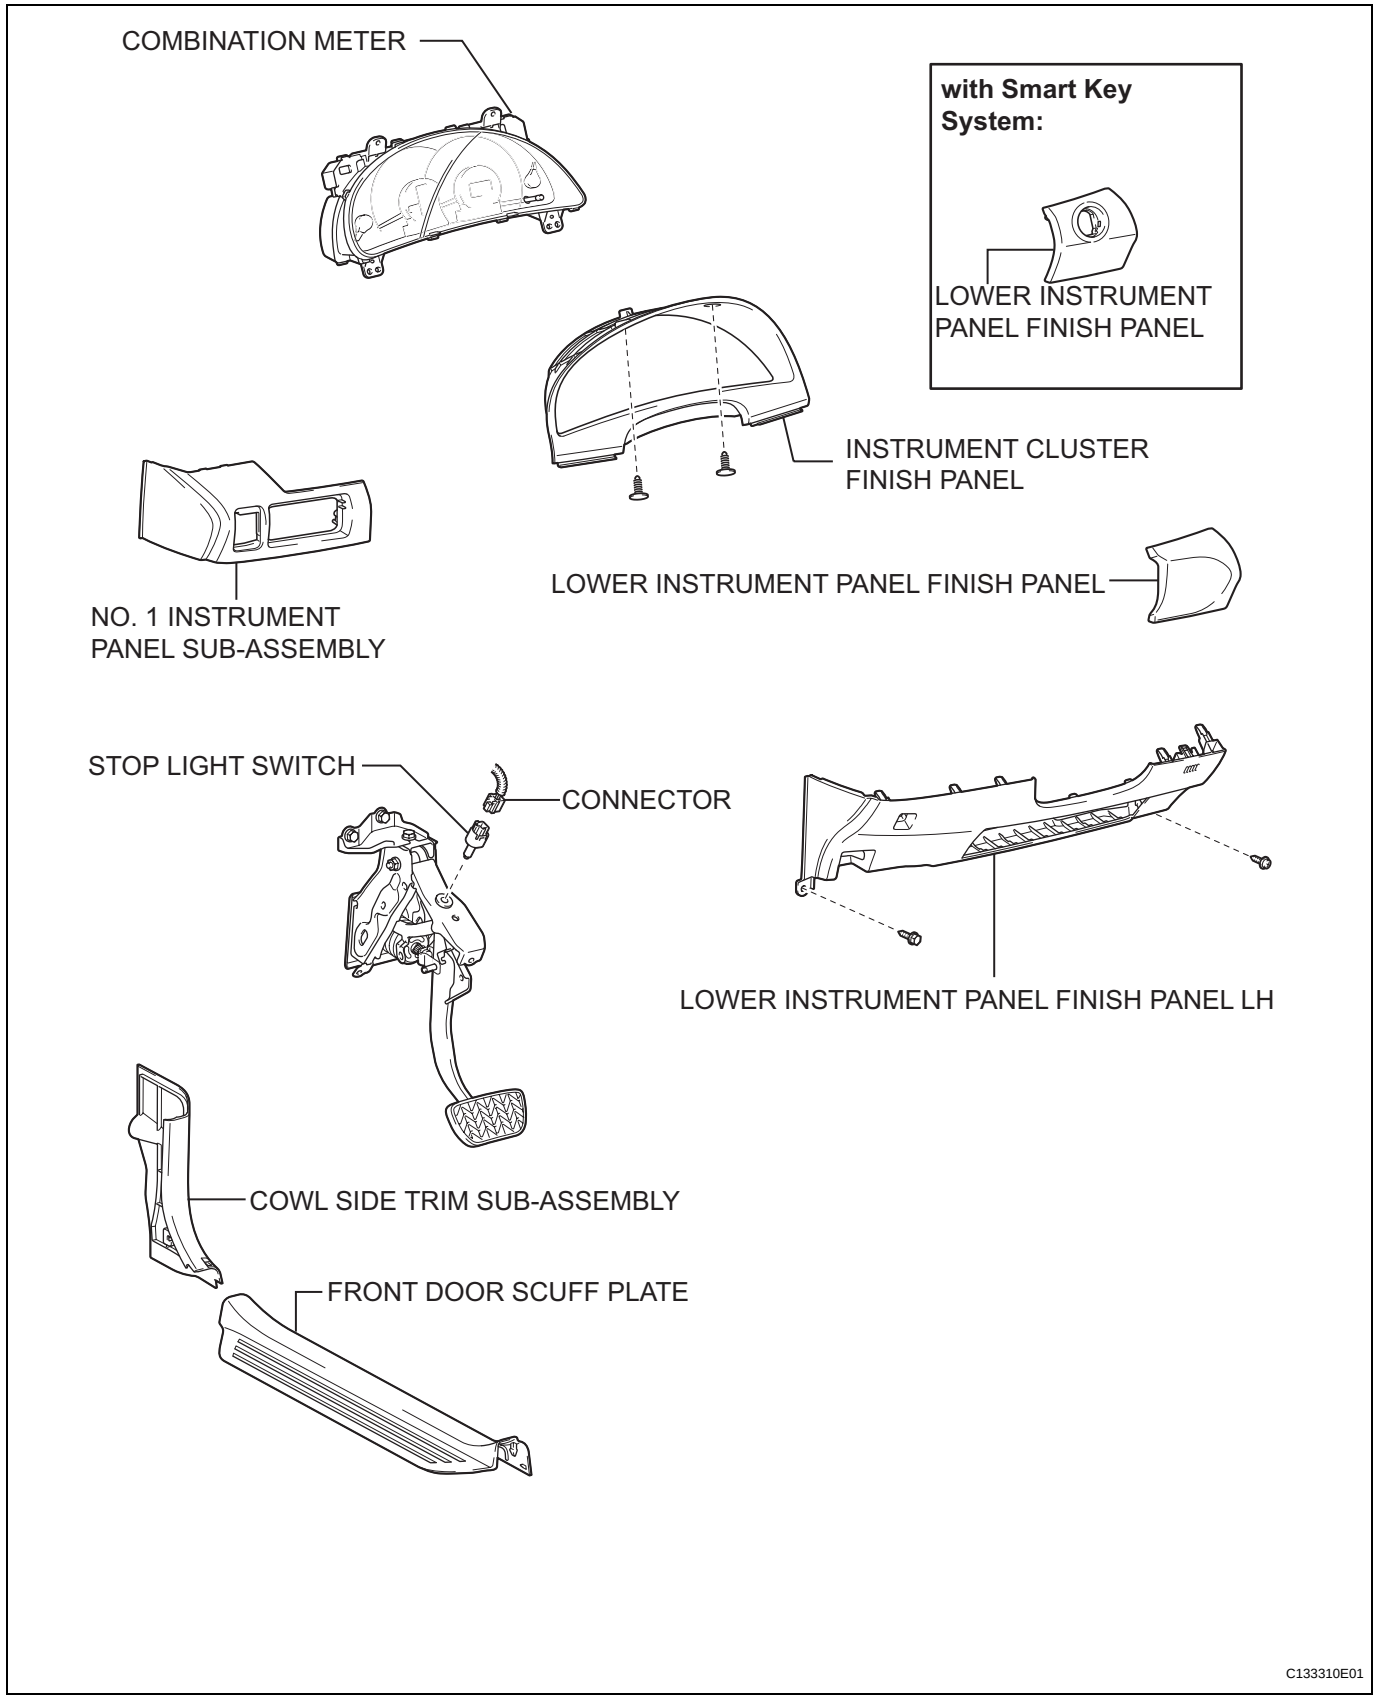


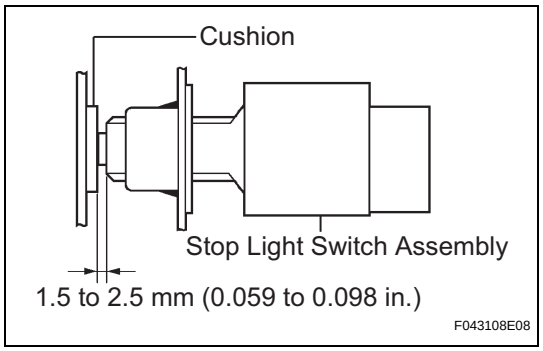
(d) Connect the rear flexible hose and the speed sensor to the shock absorber with the bolt.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)
NOTICE:
When installing the rear flexible hose and the speed sensor, the bracket must face toward the exterior of the vehicle.

2. **FILL RESERVOIR WITH BRAKE FLUID (See page BR-6)**
3. **BLEED BRAKE LINE (See page BR-7)**
4. **BRAKE ACTUATOR ASSEMBLY (w/ VSC) (See page BR-8)**
5. **INSPECT BRAKE FLUID LEVEL IN RESERVOIR (See page BR-10)**
6. **CHECK FOR BRAKE FLUID LEAKAGE**
7. **INSTALL REAR WHEEL**
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

STOP LIGHT SWITCH

COMPONENTS





ON-VEHICLE INSPECTION

1. INSPECT STOP LIGHT SWITCH

(a) Check the protrusion of the rod.

Protrusion of the rod:

1.5 to 2.5 mm (0.059 to 0.098 in.)

If the protrusion is not within the specified range, adjust it.

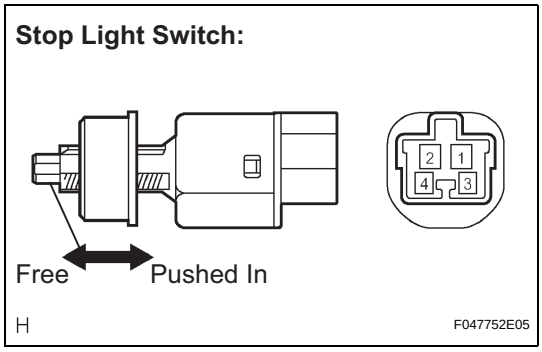
CAUTION:

Do not depress the brake pedal.

REMOVAL

1. **REMOVE FRONT DOOR SCUFF PLATE (See page IR-24)**
2. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY (See page IR-25)**
3. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-20)**
4. **REMOVE NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-22)**
5. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/ Smart Key System) (See page IP-22)**
6. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/o Smart Key System) (See page IP-22)**
7. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page IP-22)**
8. **REMOVE COMBINATION METER (See page IP-32)**
9. **REMOVE STOP LIGHT SWITCH**
   (a) Disconnect the stop light switch assembly connector from the stop light switch assembly.

   (b) Turn the stop light switch assembly counterclockwise and remove the stop light switch assembly.

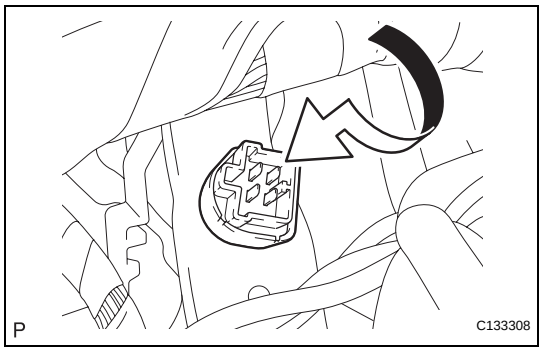


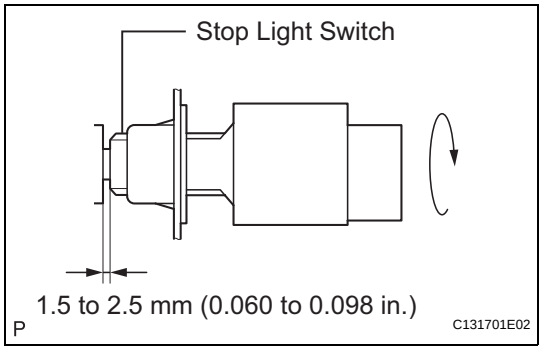
INSPECTION

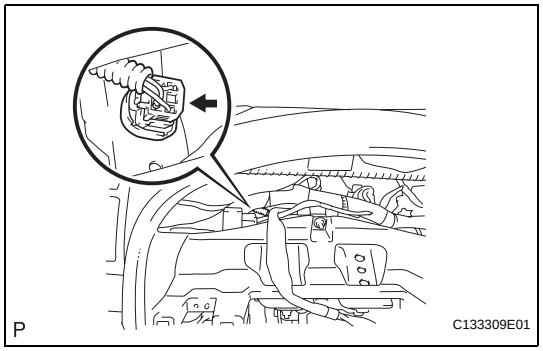
1. **INSPECT STOP LIGHT SWITCH**
   (a) Measure the resistance according to the value(s) in the table below.
   Standard resistance

Tester Connection	Switch Condition	Specified Condition
1 - 2	Switch pin free	Below 1 Ω
1 - 2	Switch pin pushed in	10 kΩ or higher

   If the measurement result is not normal, replace the stop light switch assembly.







INSTALLATION

1. **INSTALL STOP LIGHT SWITCH**
   (a) Insert the stop light switch assembly until the body hits the cushion.
   NOTICE:
   When inserting the stop light switch assembly, support the pedal from behind so that the pedal is not pushed in.

   (b) Make a quarter turn clockwise to install the stop light switch assembly.
   Torque: 1.5 N*m (15 kgf*cm, 13 in.*lbf) or less
   NOTICE:
   When inserting the stop light switch assembly, support the pedal from behind so that the pedal is not pushed in.

   (c) Connect the stop light switch connector to the stop light switch assembly.
   (d) Check the protrusion of the rod (See page BR-71).
2. **INSTALL COMBINATION METER (See page IP-56)**
3. **INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page IP-57)**
4. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (w/ Smart Key System) (See page IP-57)**
5. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (w/o Smart Key System) (See page IP-57)**
6. **INSTALL NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-57)**
7. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-58)**
8. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY (See page IR-54)**
9. **INSTALL FRONT DOOR SCUFF PLATE (See page IR-54)**

PARKING BRAKE SYSTEM

PROBLEM SYMPTOMS TABLE

Use the table below to help determine the cause of the problem. The numbers indicate the priority of the likely cause of the problem. Check each part in order. If necessary, replace these parts.

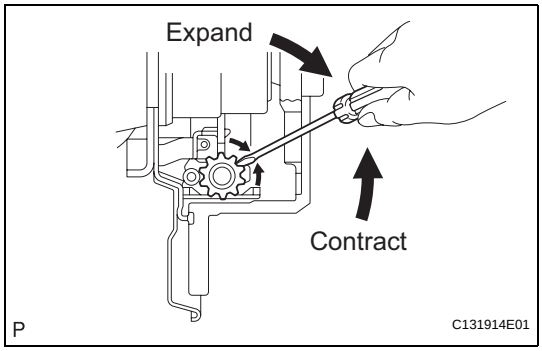
Symptom	Suspected area	See page
Brake drag	1. Parking brake lever travel (Out of adjustment)	PB-1
	2. Parking brake pedal travel (Out of adjustment)	PB-1
	3. Parking brake wire (Sticking) [No. 1 cable]	PB-48
	4. Parking brake wire (Sticking) [No. 2/No. 3 cable]	PB-48
	5. Parking brake shoe clearance (Out of adjustment)	PB-1
	6. Parking brake shoe lining (Cracked or distorted)	PB-60
	7. Tension or return spring (Damaged)	PB-58

ADJUSTMENT

1. REMOVE REAR WHEEL

2. ADJUST PARKING BRAKE SHOE CLEARANCE

(a) Temporarily install the hub nuts.
(b) Remove the shoe adjusting hole plug.

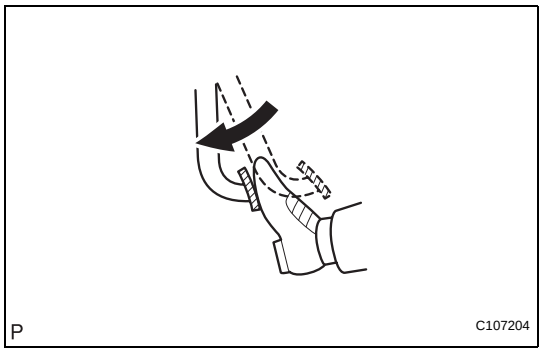


(c) Turn the shoe adjuster and expand the shoe until the disc locks.
(d) Turn and contract the shoe adjuster until the disc can rotate smoothly.
Standard:
Return 8 notches
(e) Check that there is no brake drag against the shoe.
(f) Install the shoe adjusting hole plug.
(g) Remove the hub nuts.

3. INSTALL REAR WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

4. INSPECT PARKING BRAKE PEDAL TRAVEL (for Automatic Transaxle)

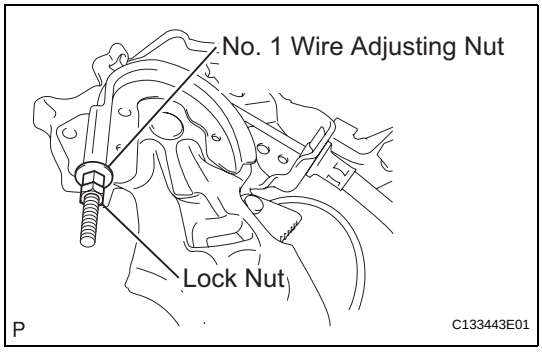
(a) Fully depress the parking brake pedal and release it to engage the parking brake.
(b) Depress the pedal to the floor again, and release it to disengage the parking brake.



(c) Slowly depress the parking brake pedal to the floor, and count the number of clicks.
Parking brake pedal travel:
7 to 10 notches at 300 N (31 kgf, 67 lbf)

5. ADJUST PARKING BRAKE PEDAL TRAVEL (for Automatic Transaxle)

(a) Depress the parking brake pedal. Hold the No. 1 wire adjusting nut using a wrench and loosen the lock nut.
(b) Release the parking brake pedal.

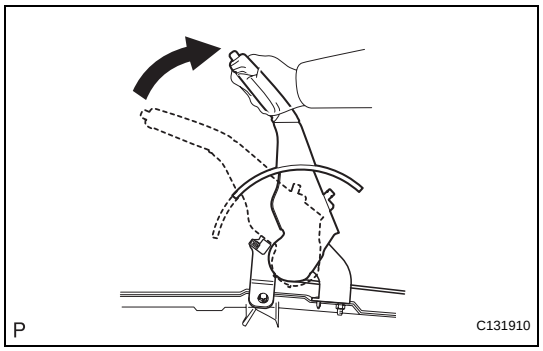


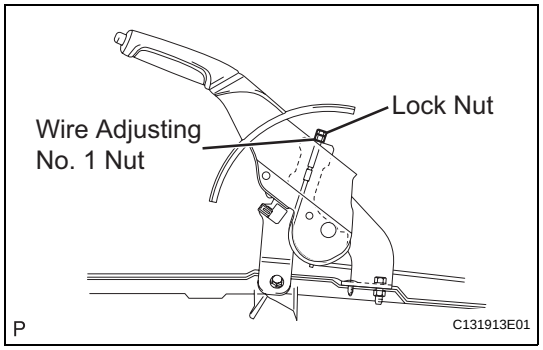
(c) Turn the No. 1 wire adjusting nut until the parking brake pedal travel meets the above specification.
(d) Hold the No. 1 wire adjusting nut using a wrench or an equivalent tool and tighten the lock nut.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
(e) Count the number of clicks after depressing and releasing the parking brake pedal 3 or 4 times.
(f) Check whether the parking brake drags.
(g) When operating the parking brake pedal, check that the parking brake indicator light comes on.

6. INSPECT PARKING BRAKE LEVER TRAVEL (for Manual Transaxle)

(a) Pull the parking brake lever firmly.
(b) Release the parking brake lock, and return the parking brake lever to its off position.

PB





(c) Slowly pull the parking brake lever all the way up, and count the number of clicks.
Parking brake lever travel:
7 to 9 notches at 200 N (20 kgf, 45 lbf)

7. ADJUST PARKING BRAKE LEVER TRAVEL (for Manual Transaxle)

(a) Pull up the parking brake lever. Hold the No. 1 wire adjusting nut using a wrench and loosen the lock nut.

(b) Release the parking brake lever.

(c) Turn the No. 1 wire adjusting nut until the parking brake lever travel meets the above specification.

(d) Hold the No. 1 wire adjusting nut using a wrench or an equivalent tool and tighten the lock nut.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)

(e) Count the number of clicks after depressing and releasing the parking brake lever 3 or 4 times.

(f) Check whether the parking brake drags.

(g) When operating the parking brake lever, check that the parking brake indicator light comes on.

REMOVAL

1. **PRECAUTION**
(See page IP-1)

2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (for Manual Seat)**
CAUTION:
Wait for 90 seconds after disconnecting the cable to prevent the airbag working. (See page RS-1)

3. **REMOVE FRONT SEAT ASSEMBLY LH (for Manual Seat)**
HINT:
Refer to the procedures up to "REMOVE FRONT SEAT ASSEMBLY (for Manual Seat)". (See page SE-16)

4. **REMOVE FRONT SEAT ASSEMBLY RH (for Manual Seat)**
HINT:
Use the same procedures for the RH side and the LH side.

5. **REMOVE FRONT SEAT ASSEMBLY LH (for Power Seat)**
HINT:
Refer to the procedures up to "REMOVE FRONT SEAT ASSEMBLY (for Power Seat)". (See page SE-30)

6. **REMOVE FRONT SEAT ASSEMBLY RH (for Power Seat)**
HINT:
Use the same procedures for the RH side and the LH side.

7. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-25)**

8. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-26)**

9. **REMOVE INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-23)**

10. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-20)**

11. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-21)**

12. **REMOVE DRIVER SIDE KNEE AIRBAG ASSEMBLY (See page RS-370)**

13. **REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-23)**

14. **REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-24)**

15. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-24)**

16. REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-24)
17. REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-25)
18. REMOVE UPPER CONSOLE PANEL (See page IP-25)
19. REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-26)
20. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-27)
21. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-27)
22. REMOVE CONSOLE BOX POCKET (See page IP-28)
23. REMOVE CONSOLE BOX CARPET (See page IP-28)
24. REMOVE CONSOLE BOX ASSEMBLY (for TMC Made) (See page IP-28)
25. REMOVE CONSOLE BOX ASSEMBLY (for TMMK Made) (See page IP-29)
26. REMOVE NO. 2 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-29)
27. REMOVE NO. 2 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-30)
28. REMOVE NO. 1 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-30)
29. REMOVE NO. 1 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-30)
30. REMOVE FLOOR CARPET BRACKET LH (See page AC-155)
31. REMOVE FLOOR CARPET BRACKET RH (See page AC-155)
32. REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-24)
33. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH
34. REMOVE REAR DOOR SCUFF PLATE LH (See page IR-24)
35. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH
36. REMOVE LOWER CENTER PILLAR GARNISH LH (See page IR-25)
37. REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-26)
38. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH

39. REMOVE REAR DOOR SCUFF PLATE RH (See page IR-24)

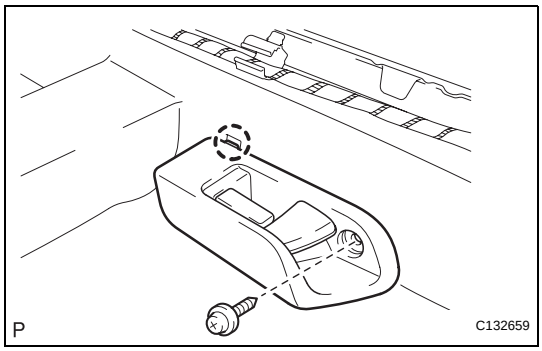
40. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH

41. REMOVE LOWER CENTER PILLAR GARNISH RH (See page IR-26)

42. REMOVE LUGGAGE DOOR LOCK OPEN LEVER SUB-ASSEMBLY

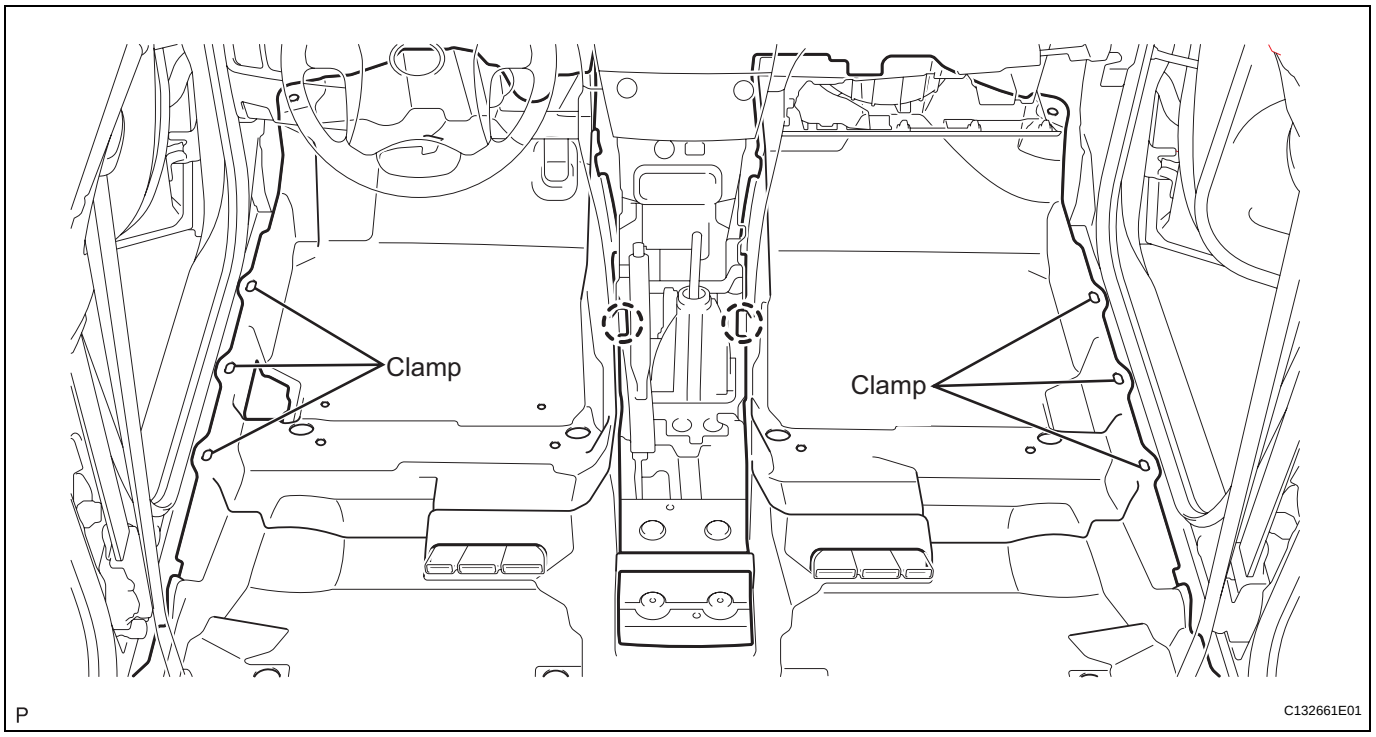
(a) Remove the screw.

(b) Disengage the claw and remove the luggage door open lever sub-assembly.



43. REMOVE FRONT FLOOR CARPET ASSEMBLY

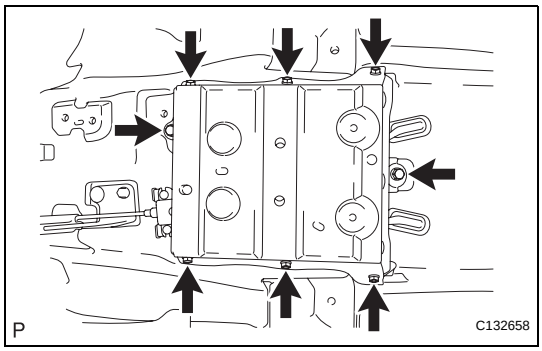
(a) Disengage the 6 clamps and the 2 claws.

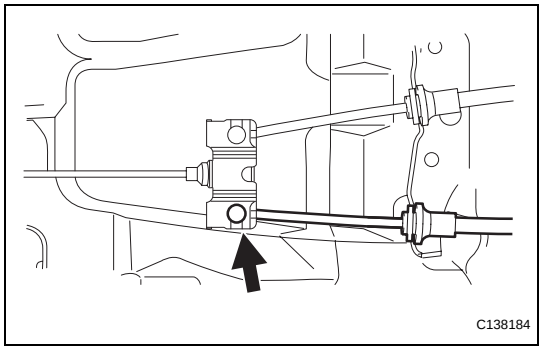


(b) Turn back the front floor carpet assembly until the bolts of the cross member floor No. 4 reinforcement sub-assembly can be seen.

44. REMOVE CROSS MEMBER FLOOR NO. 4 REINFORCEMENT SUB-ASSEMBLY

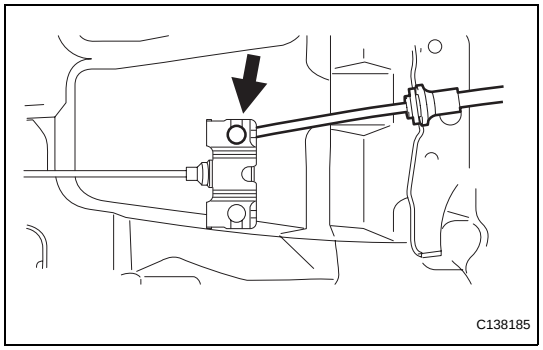
(a) Remove the 8 bolts and the cross member floor No. 4 reinforcement sub-assembly.





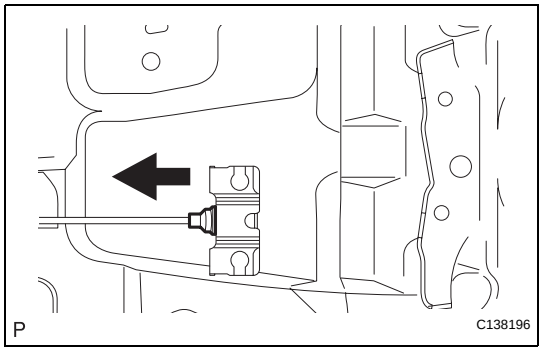
45. SEPARATE NO. 3 PARKING BRAKE CABLE ASSEMBLY

(a) Separate the No. 3 parking brake cable assembly from the parking brake equalizer.



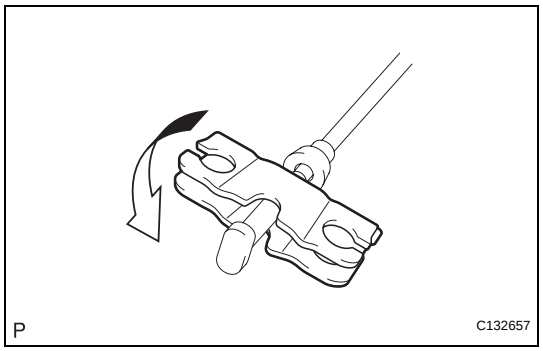
46. SEPARATE NO. 2 PARKING BRAKE CABLE ASSEMBLY

Separate the No. 2 parking brake cable assembly from the parking brake equalizer.

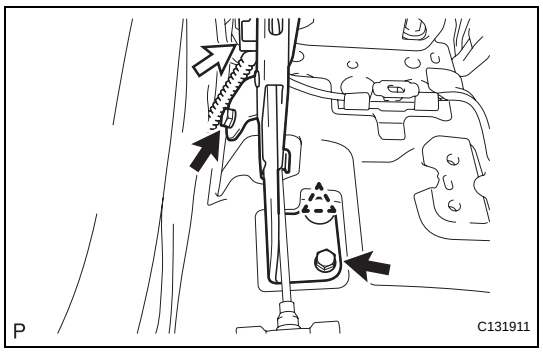


47. REMOVE PARKING BRAKE EQUALIZER

(a) Slide the rubber boot as shown in the illustration.



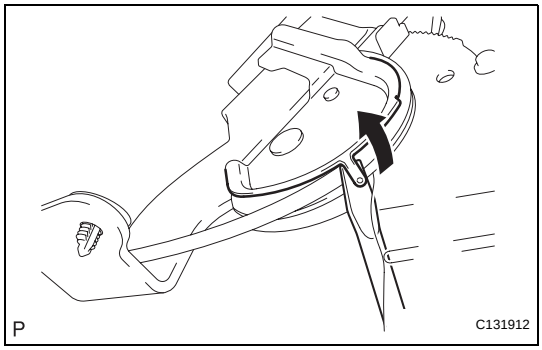
(b) Remove the parking brake equalizer from the No. 1 parking brake cable assembly.



48. REMOVE PARKING BRAKE LEVER SUB-ASSEMBLY

(a) Disconnect the parking brake switch connector.

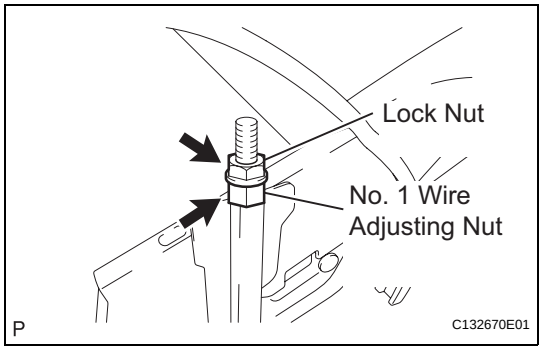
(b) Remove the 2 bolts, the clip, and the parking brake lever.



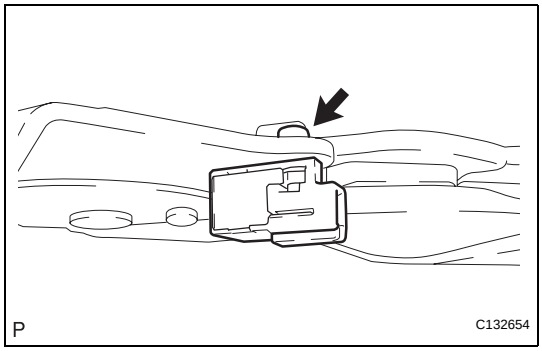
DISASSEMBLY

1. REMOVE NO. 1 PARKING BRAKE CABLE ASSEMBLY

(a) Using a screwdriver, pull up the parking brake lever claw.



(b) Remove the lock nut, the No. 1 wire adjusting nut, and the No. 1 parking brake cable assembly from the parking brake lever sub-assembly.



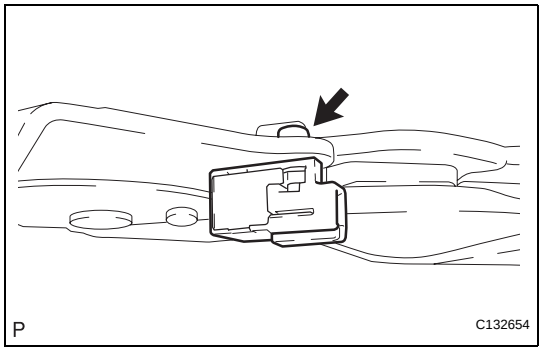
2. REMOVE PARKING BRAKE SWITCH ASSEMBLY

(a) Remove the screw and the parking brake switch assembly.

REASSEMBLY

1. INSTALL PARKING BRAKE SWITCH ASSEMBLY

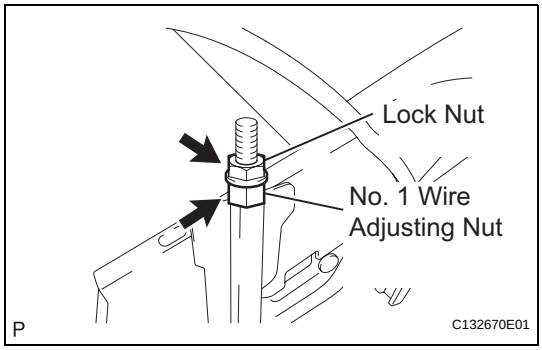
(a) Install the parking brake switch assembly with the screw.
Torque: 1.0 N*m (10 kgf*cm, 9.0 in.*lbf)

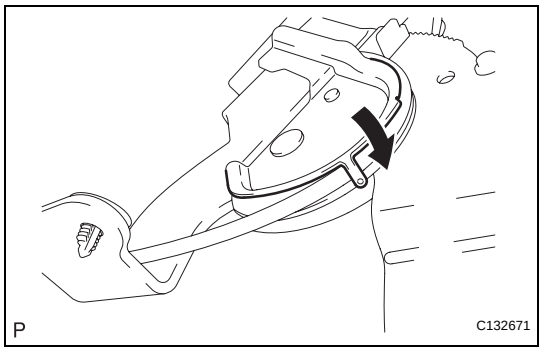


2. INSTALL NO. 1 PARKING BRAKE CABLE ASSEMBLY

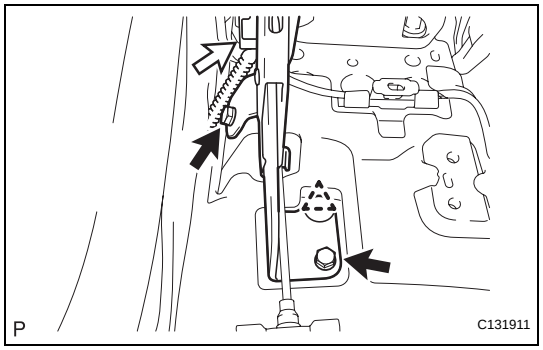
(a) Pass the No. 1 parking brake cable assembly through the parking brake lever sub-assembly.

(b) Temporarily tighten the lock nut and the No. 1 wire adjusting nut.
NOTICE:
Fully tighten the lock nut when adjusting the parking brake lever travel.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)





(c) Bend the parking brake lever claw.



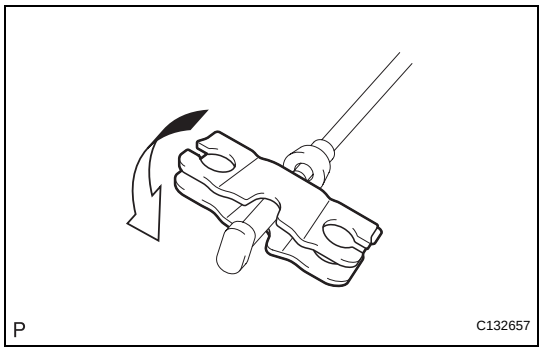
INSTALLATION

1. INSTALL PARKING BRAKE LEVER SUB-ASSEMBLY

(a) Install the parking brake lever sub-assembly with the 2 bolts and the clip.

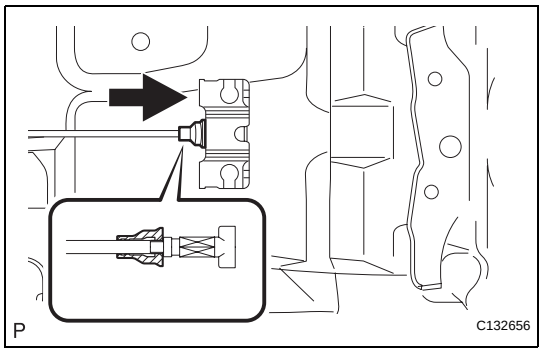
Torque: for TMC made
21 N*m (214 kgf*cm, 15 ft.*lbf)
for TMMK made
22 N*m (224 kgf*cm, 16 ft.*lbf)

(b) Connect the parking brake switch connector.

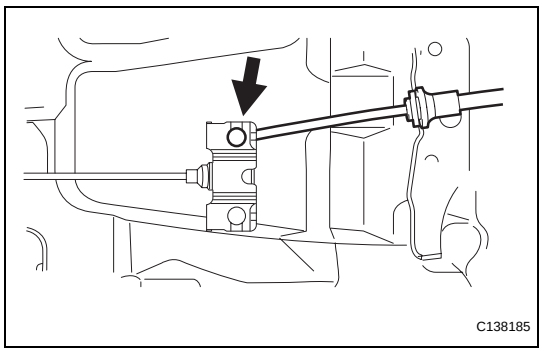


2. INSTALL PARKING BRAKE EQUALIZER

(a) Install the parking brake equalizer to the No. 1 parking brake cable assembly.



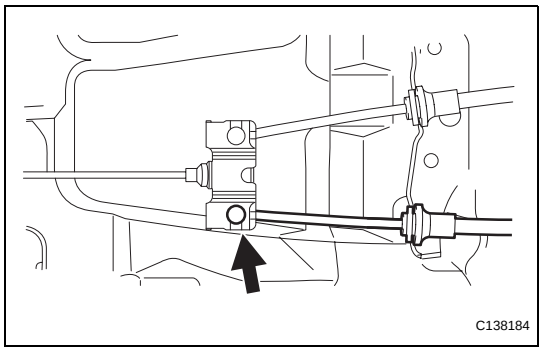
(b) Slide the rubber boot back as shown in the illustration.



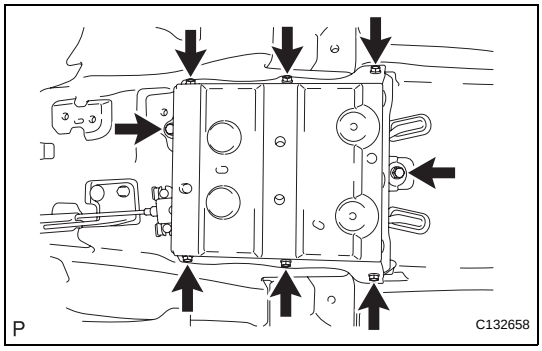
3. INSTALL NO. 2 PARKING BRAKE CABLE ASSEMBLY

(a) Connect the No. 2 parking brake cable assembly to the parking brake equalizer.

PB



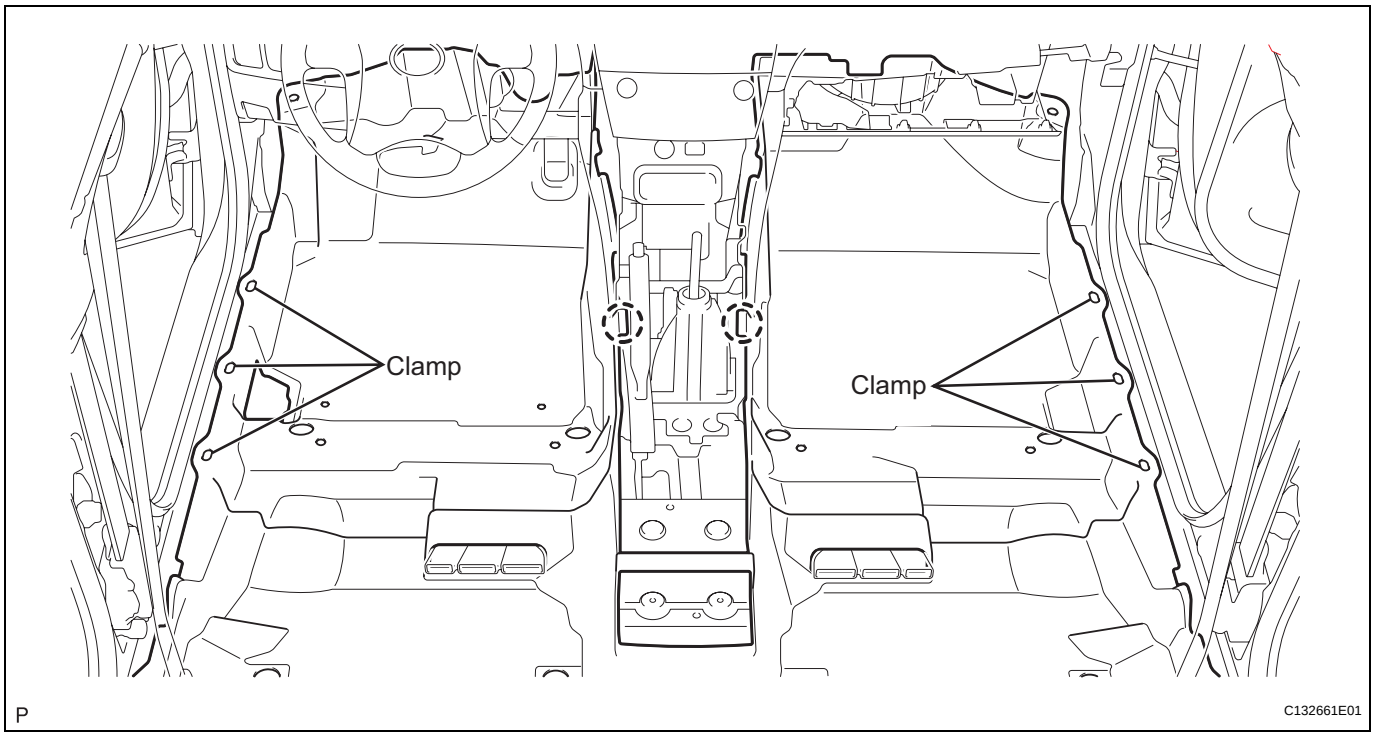
4. **INSTALL NO. 3 PARKING BRAKE CABLE ASSEMBLY**
   (a) Connect the No. 3 parking brake cable assembly to the parking brake equalizer.

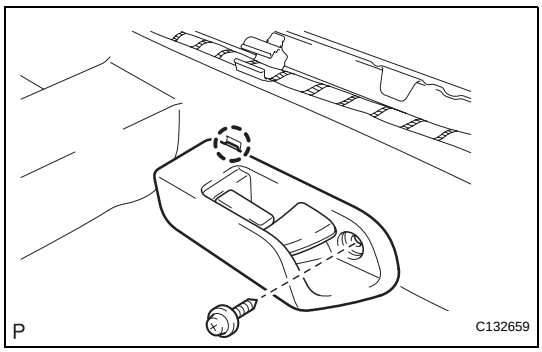


5. **INSTALL CROSS MEMBER FLOOR NO. 4 REINFORCEMENT SUB-ASSEMBLY**
   (a) Install the cross member floor No. 4 reinforcement sub-assembly with the 8 bolts.

6. **INSTALL FRONT FLOOR CARPET ASSEMBLY**
   (a) Engage the 6 clamps and the 2 claws and install the front floor carpet assembly.

PB





7. **INSTALL LUGGAGE DOOR LOCK OPEN LEVER SUB-ASSEMBLY**
   (a) Engage the claw and install the luggage door open lever sub-assembly with the screw.

8. **INSTALL LOWER CENTER PILLAR GARNISH LH (See page IR-53)**

9. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-55)**

10. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-56)**

11. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-54)
12. INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-54)
13. INSTALL LOWER CENTER PILLAR GARNISH RH (See page IR-54)
14. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-56)
15. INSTALL REAR DOOR SCUFF PLATE RH (See page IR-56)
16. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-55)
17. INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-55)
18. INSTALL FLOOR CARPET BRACKET LH
19. INSTALL FLOOR CARPET BRACKET RH
20. INSTALL NO. 2 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-50)
21. INSTALL NO. 2 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-50)
22. INSTALL NO. 1 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-49)
23. INSTALL NO. 1 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-50)
24. INSTALL CONSOLE BOX ASSEMBLY (for TMC Made) (See page IP-51)
25. INSTALL CONSOLE BOX ASSEMBLY (for TMMK Made) (See page IP-51)
26. INSTALL CONSOLE BOX CARPET (See page IP-51)
27. INSTALL CONSOLE BOX POCKET (See page IP-51)
28. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-52)
29. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-52)
30. INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-53)
31. INSTALL UPPER CONSOLE PANEL (See page IP-54)
32. INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-55)
33. INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-54)
34. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-55)

35. **INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-55)**
36. **INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-56)**
37. **INSTALL INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-56)**
38. **INSTALL DRIVER SIDE KNEE AIRBAG ASSEMBLY (See page RS-370)**
39. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-58)**
40. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-59)**
41. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-54)**
42. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-55)**
43. **INSTALL FRONT SEAT ASSEMBLY LH (for Manual Seat)**
    HINT:
    Refer to the procedures up to "INSTALL FRONT SEAT ASSEMBLY (for Manual Seat)". (See page SE-24)
44. **INSTALL FRONT SEAT ASSEMBLY RH (for Manual Seat)**
    HINT:
    Use the same procedures for the RH side and the LH side.
45. **INSTALL FRONT SEAT ASSEMBLY LH (for Power Seat)**
    HINT:
    Refer to the procedures up to "INSTALL FRONT SEAT ASSEMBLY (for Power Seat)". (See page SE-41)
46. **INSTALL FRONT SEAT ASSEMBLY RH (for Power Seat)**
    HINT:
    Use the same procedures for the RH side and the LH side.
47. **INSPECT PARKING BRAKE LEVER TRAVEL (See page PB-2)**
48. **ADJUST PARKING BRAKE LEVER TRAVEL (See page PB-2)**
49. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (for Manual Seat)**
50. **PERFORM ZERO POINT CALIBRATION AND SENSITIVITY CHECK**
    (See page RS-242)
51. **INSPECT SRS WARNING LIGHT**
52. **INSPECT SLIDE ADJUSTER LOCK (for Manual Seat)**

53. INSPECT FRONT SEAT ASSEMBLY (for Power Seat)
(See page SE-42)

24. **REMOVE NO. 2 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-29)**

25. **REMOVE NO. 2 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-30)**

26. **REMOVE NO. 1 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-30)**

27. **REMOVE NO. 1 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-30)**

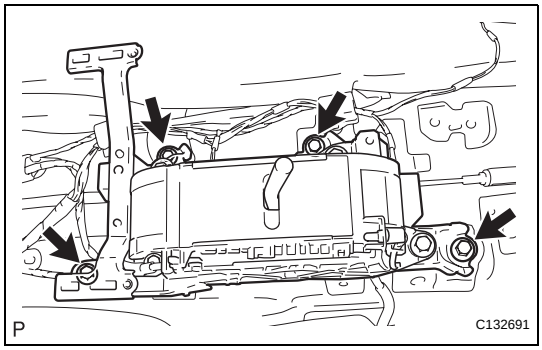
28. **REMOVE NO. 1 CONSOLE BOX DUCT (for Automatic Air Conditioning System) (See page AC-154)**

29. **REMOVE FLOOR CARPET BRACKET LH (See page AC-155)**

30. **REMOVE FLOOR CARPET BRACKET RH (See page AC-155)**

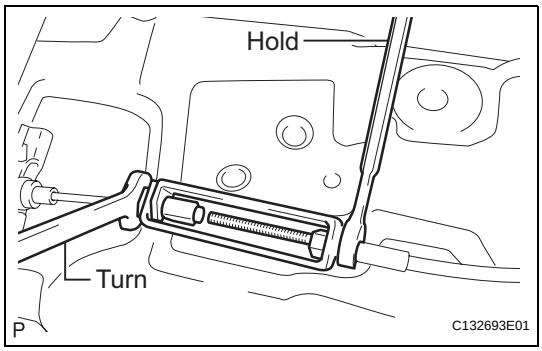
31. **REMOVE YAW RATE AND ACCELERATION SENSOR (w/ VSC) (See page BC-447)**

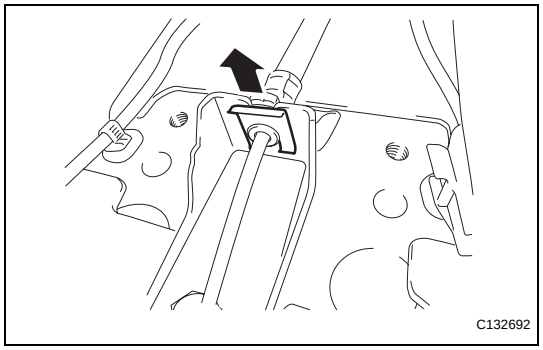
32. **REMOVE FLOOR SHIFT LEVER ASSEMBLY**
    (a) Remove the 4 bolts and the floor shift lever assembly.



33. **REMOVE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-442)**

34. **DISCONNECT NO. 4 PARKING BRAKE CABLE ASSEMBLY**
    (a) Using a wrench, hold the lock nut and loosen the turnbuckle.
    (b) Disconnect the No. 4 parking brake cable assembly from the No. 1 parking brake cable assembly.

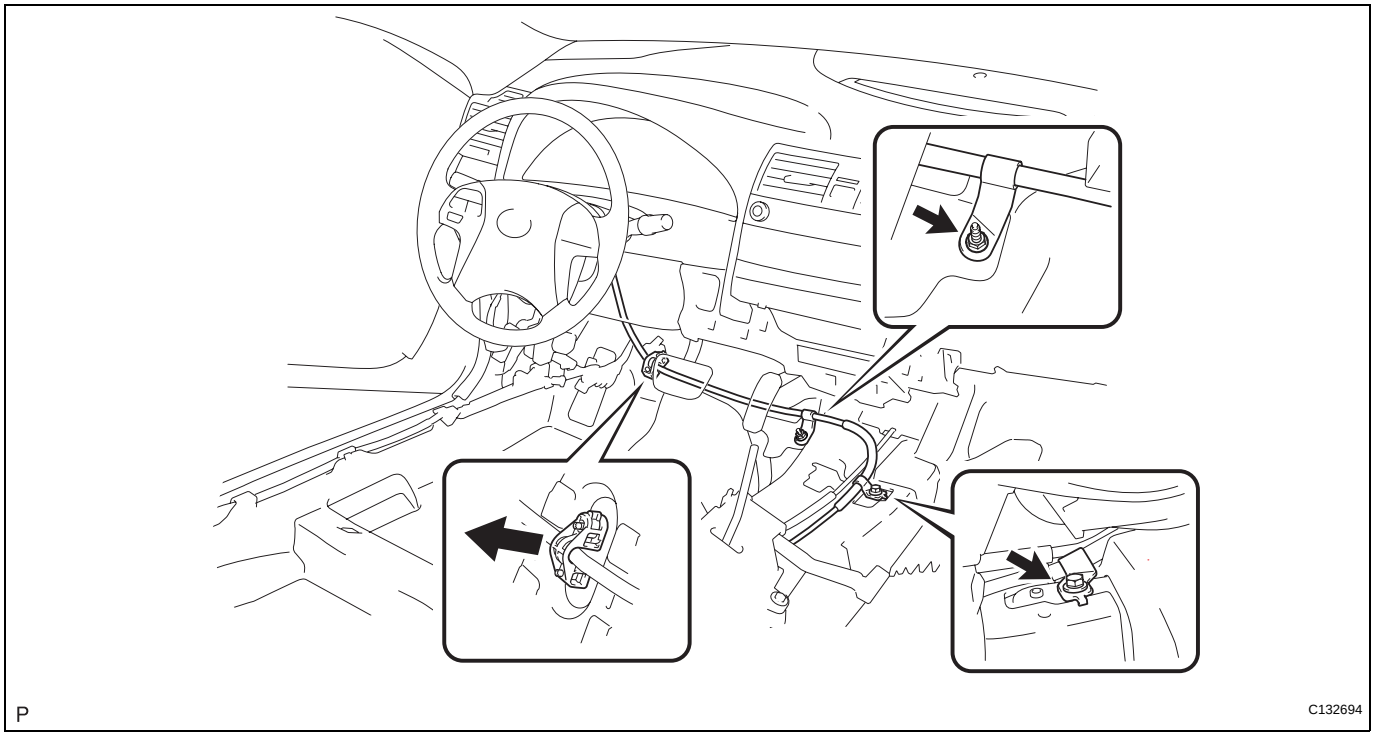




35. REMOVE PARKING BRAKE PEDAL ASSEMBLY

(a) Using needle-nose pliers, remove the clip from the No. 1 parking brake cable assembly.

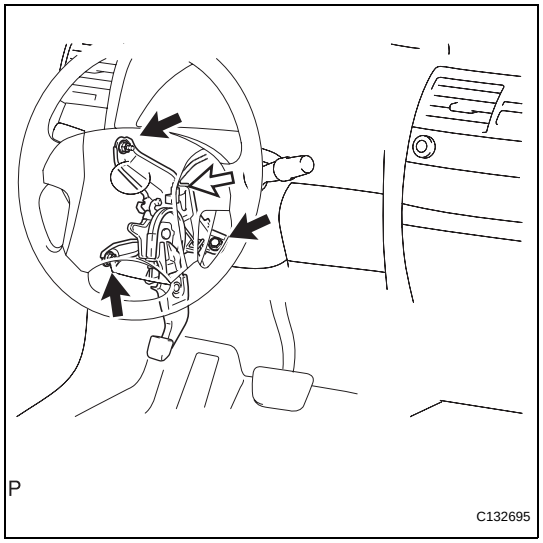
(b) Remove the bolt, nut, and the No. 1 parking brake cable clamp.



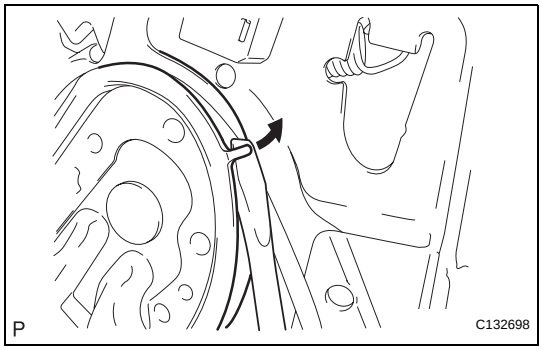
(c) Separate the No. 1 parking brake cable assembly from the body.

(d) Disconnect the parking brake switch connector.

(e) Remove the bolt, 2 nuts, and the parking brake pedal assembly with the No. 1 parking brake cable assembly from the body.



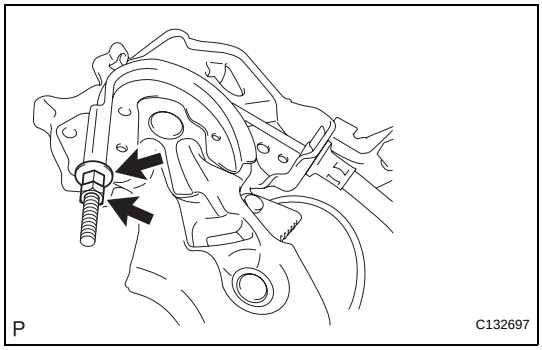
PB



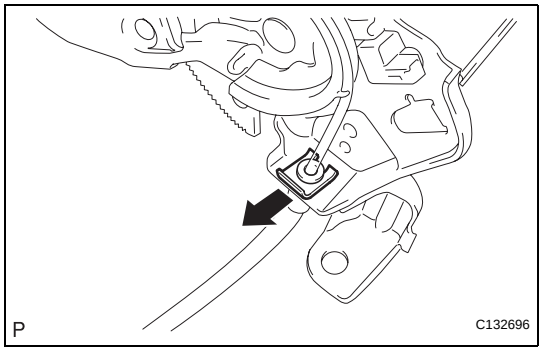
DISASSEMBLY

1. REMOVE NO. 1 PARKING BRAKE CABLE ASSEMBLY

(a) Using a screwdriver, pull up the parking brake pedal claw.

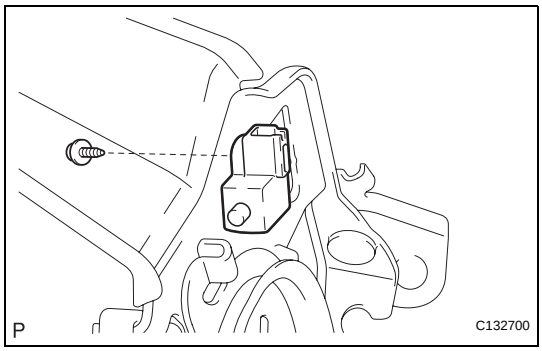


(b) Remove the lock nut and the No. 1 wire adjusting nut.



(c) Using needle nose pliers, remove the clip and the No. 1 parking brake cable from the parking brake pedal assembly.

2. REMOVE PARKING BRAKE SWITCH ASSEMBLY



(a) Remove the screw and the parking brake switch assembly.

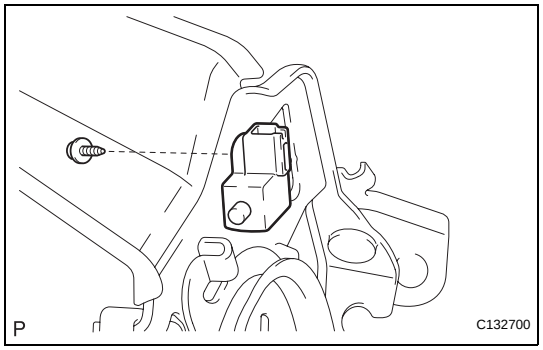
3. REMOVE PARKING PEDAL PAD

(a) Remove the parking pedal pad.

REASSEMBLY

1. INSTALL PARKING PEDAL PAD

(a) Install the parking pedal pad to the parking brake pedal assembly.

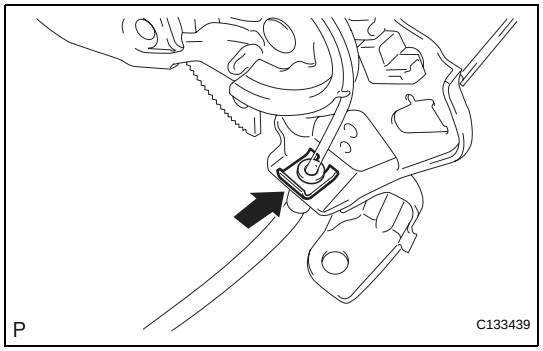


2. INSTALL PARKING BRAKE SWITCH ASSEMBLY

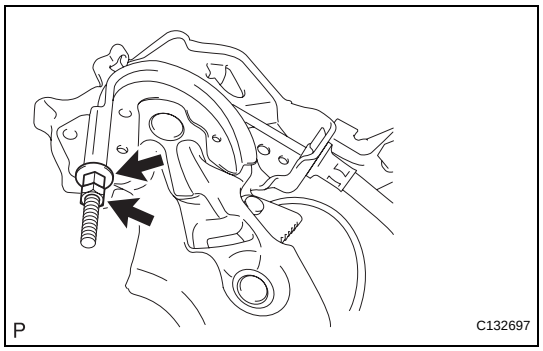
(a) Install the parking brake switch assembly with the screw.
Torque: 1.0 N*m (10 kgf*cm, 9.0 in.*lbf)

3. INSTALL NO. 1 PARKING BRAKE CABLE ASSEMBLY

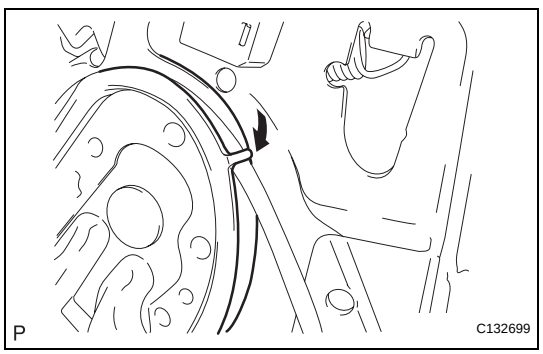
(a) Pass the No. 1 parking brake cable assembly through the pedal guide.



(b) Using a brass bar and a hammer, install the clip to the No. 1 parking brake cable assembly.

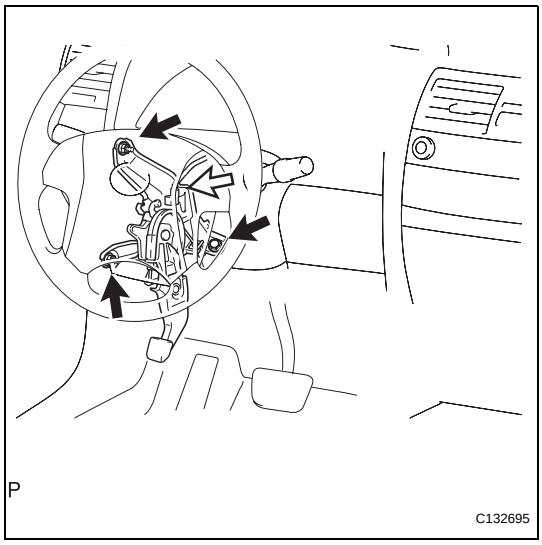


(c) Temporarily tighten the the lock nut and No. 1 wire adjusting nut.
NOTICE:
Fully tighten the lock nut and the No. 1 wire adjusting nut when adjusting the parking brake pedal travel.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



(d) Bend the parking brake pedal claw.

PB



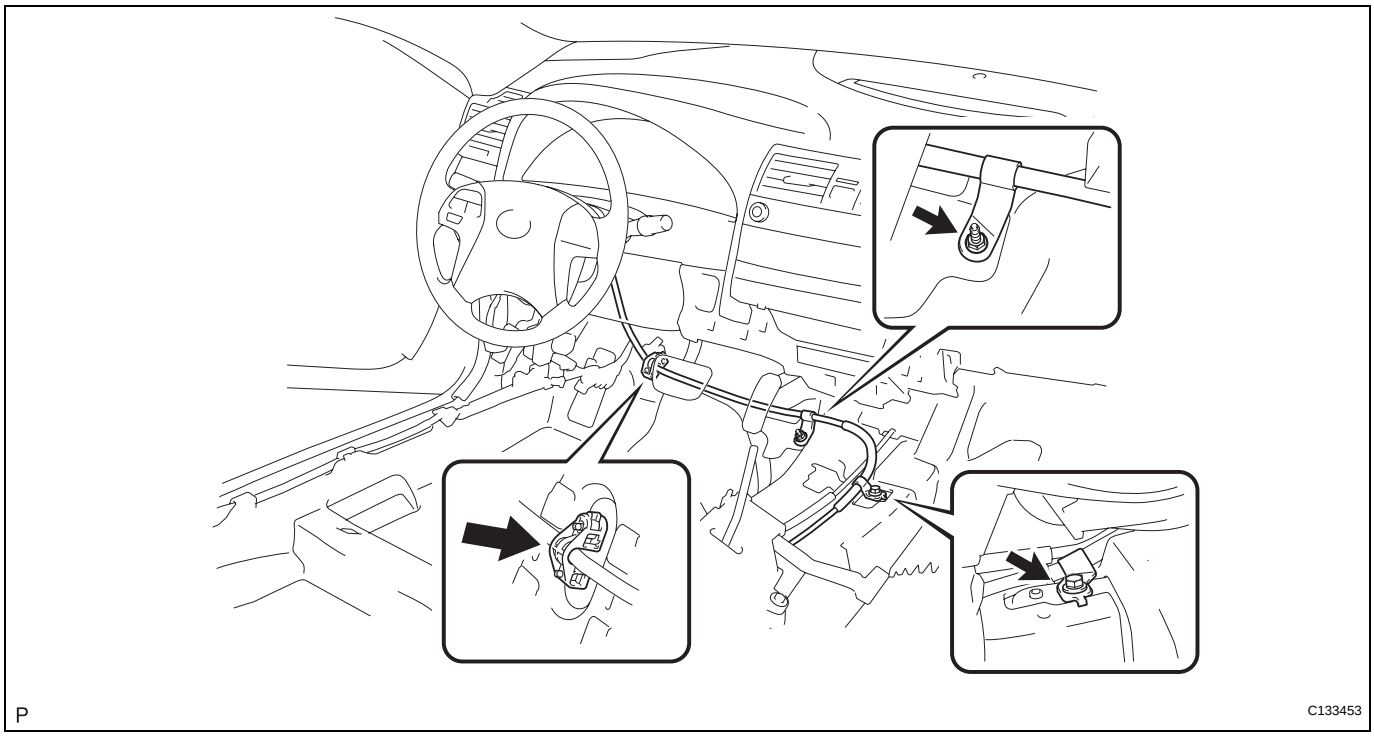
INSTALLATION

1. INSTALL PARKING BRAKE PEDAL ASSEMBLY

(a) Install the parking brake pedal assembly with the bolt and 2 nuts.
Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)

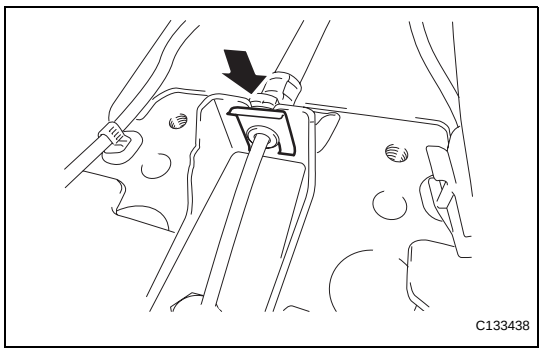
(b) Connect the parking brake switch connector.

(c) Install the No. 1 parking brake cable assembly to the body with the bolt, the nut, and a new No. 1 parking brake cable clamp.



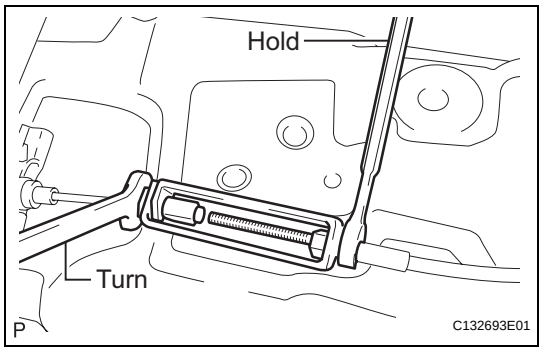
Torque: Bolt
15 N*m (153 kgf*cm, 11 ft.*lbf)
Nut
5.4 N*m (55 kgf*cm, 48 in.*lbf)

(d) Using a brass bar and a hammer, install the clip to the No. 1 parking brake cable assembly.



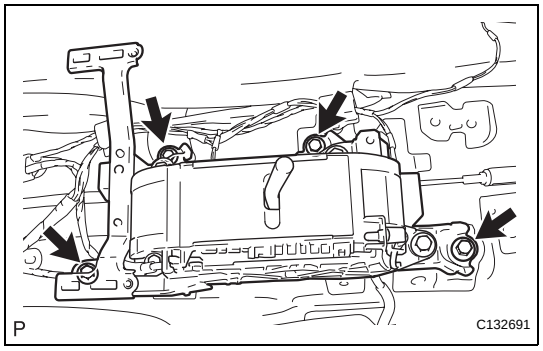
2. CONNECT NO. 4 PARKING BRAKE CABLE ASSEMBLY

(a) Connect the No. 4 parking brake cable assembly to the No. 1 parking brake cable assembly.



(b) Using a wrench, hold the lock nut and tighten the turnbuckle.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

3. **INSTALL CENTER AIRBAG SENSOR ASSEMBLY (See page RS-442)**



4. **INSTALL FLOOR SHIFT LEVER ASSEMBLY**
(a) Install the floor shift lever assembly with the 4 bolts.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)
5. **INSTALL YAW RATE AND ACCELERATION SENSOR (w/ VSC) (See page BC-448)**
6. **INSTALL FLOOR CARPET BRACKET LH**
7. **INSTALL FLOOR CARPET BRACKET RH**
8. **INSTALL NO. 1 CONSOLE BOX DUCT (for Automatic Air Conditioning System) (See page AC-177)**
9. **INSTALL NO. 2 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-50)**
10. **INSTALL NO. 2 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-50)**
11. **INSTALL NO. 1 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-49)**

REMOVAL

HINT:

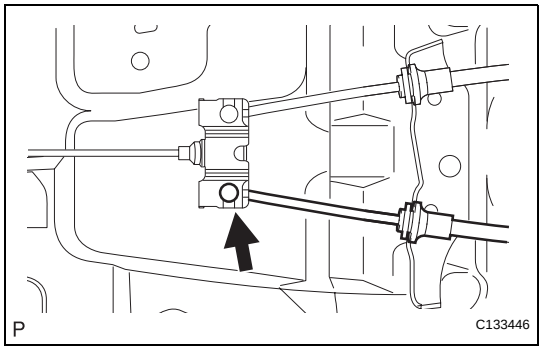
- Use the same procedures for the No. 2 parking brake cable assembly and No. 3 parking brake cable assembly.
- The procedures listed below are for the No. 3 parking brake cable assembly.

1. **PRECAUTION**
   (See page IP-20)
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (for Manual Seat)**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent the airbag working. (See page RS-1)
3. **REMOVE FRONT SEAT ASSEMBLY LH (for Manual Seat)**
   HINT:
   Refer to the procedures up to "REMOVE FRONT SEAT ASSEMBLY (for Manual Seat)". (See page SE-16)
4. **REMOVE FRONT SEAT ASSEMBLY RH (for Manual Seat)**
   HINT:
   Use the same procedures for the RH side and the LH side.
5. **REMOVE FRONT SEAT ASSEMBLY LH (for Power Seat)**
   HINT:
   Refer to the procedures up to "REMOVE FRONT SEAT ASSEMBLY (for Power Seat)". (See page SE-30)
6. **REMOVE FRONT SEAT ASSEMBLY RH (for Power Seat)**
   HINT:
   Use the same procedures for the RH side and the LH side.
7. **REMOVE PARKING BRAKE LEVER SUB-ASSEMBLY (for Manual Transaxle)**
   HINT:
   Refer to the procedures up to "REMOVE PARKING BRAKE LEVER". (See page PB-11)
8. **REMOVE NO. 1 PARKING BRAKE CABLE ASSEMBLY (for Manual Transaxle) (See page PB-15)**
9. **REMOVE PARKING BRAKE PEDAL ASSEMBLY (for Automatic Transaxle)**
   HINT:
   Refer to the procedures up to "REMOVE PARKING BRAKE PEDAL". (See page PB-27)
10. **REMOVE NO. 1 PARKING BRAKE CABLE ASSEMBLY (for Automatic Transaxle) (See page PB-30)**

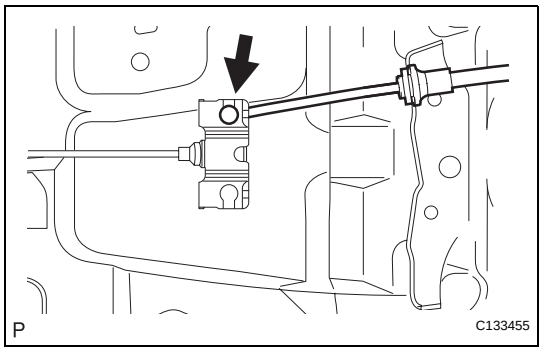
11. **REMOVE LUGGAGE DOOR LOCK OPEN LEVER SUB-ASSEMBLY (for Automatic Transaxle) (See page PB-13)**

12. **REMOVE FRONT FLOOR CARPET ASSEMBLY (for Automatic Transaxle) (See page PB-14)**

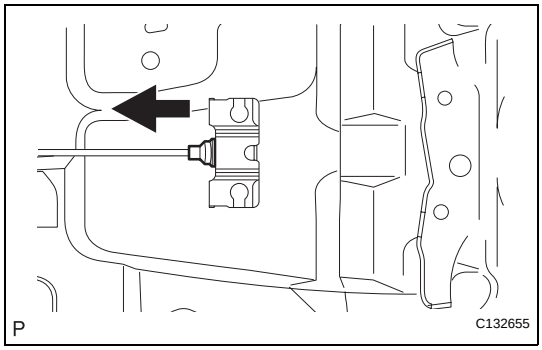
13. **REMOVE CROSS MEMBER FLOOR NO. 4 REINFORCEMENT SUB-ASSEMBLY (for Automatic Transaxle) (See page PB-14)**



14. **SEPARATE NO. 3 PARKING BRAKE CABLE ASSEMBLY (for Automatic Transaxle)**
    (a) Separate the No. 3 parking brake cable assembly from the parking brake equalizer.



15. **SEPARATE NO. 2 PARKING BRAKE CABLE ASSEMBLY (for Automatic Transaxle)**
    (a) Separate the No. 2 parking brake cable assembly from the parking brake equalizer.



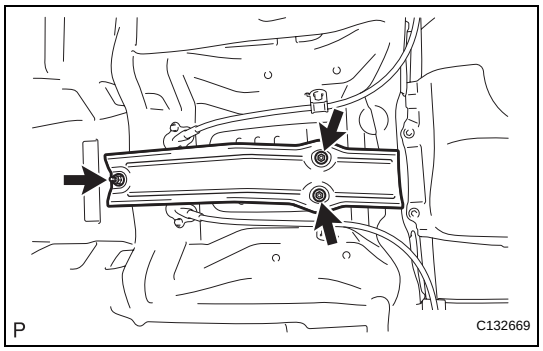
16. **REMOVE NO. 4 PARKING BRAKE CABLE ASSEMBLY (for Automatic Transaxle)**
    (a) Slide the rubber boot as shown in the illustration.

    (b) Remove the No. 4 parking brake cable assembly from the parking brake equalizer as shown in the illustration.

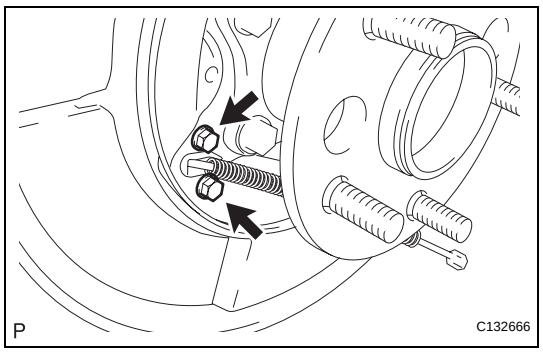
17. **REMOVE CENTER EXHAUST PIPE ASSEMBLY (for 2AZ-FE) (See page EX-2)**

18. **REMOVE EXHAUST TAIL PIPE ASSEMBLY (for 2GR-FE) (See page EX-2)**

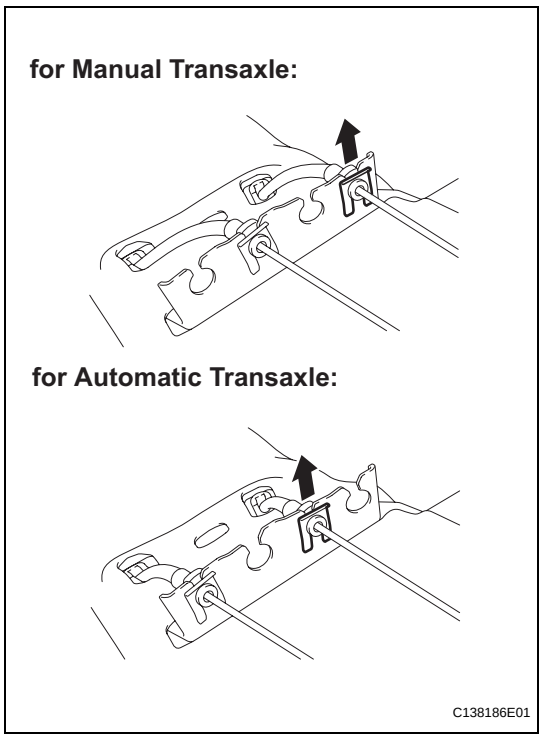
19. **REMOVE EXHAUST CENTER PIPE ASSEMBLY (for 2GR-FE) (See page EX-2)**



20. **REMOVE NO. 2 FRONT FLOOR HEAT LOWER INSULATOR (for 2AZ-FE)**
    (a) Remove the 3 nuts and the No. 2 front floor heat lower insulator.
21. **REMOVE REAR WHEEL**
22. **SEPARATE REAR DISC BRAKE CALIPER ASSEMBLY (See page PB-58)**
23. **REMOVE REAR DISC (See page PB-58)**
24. **REMOVE PARKING BRAKE SHOE RETURN TENSION NO. 1 SPRING (See page PB-58)**
25. **REMOVE PARKING BRAKE SHOE STRUT (See page PB-58)**
26. **REMOVE NO. 1 PARKING BRAKE SHOE ASSEMBLY (See page PB-58)**
27. **REMOVE PARKING BRAKE SHOE ADJUSTING SCREW SET (See page PB-59)**
28. **REMOVE NO. 2 PARKING BRAKE SHOE ASSEMBLY (See page PB-59)**
29. **REMOVE NO. 3 PARKING BRAKE CABLE ASSEMBLY**
    (a) Remove the 2 bolts and separate the No. 3 parking brake cable assembly from the backing plate.

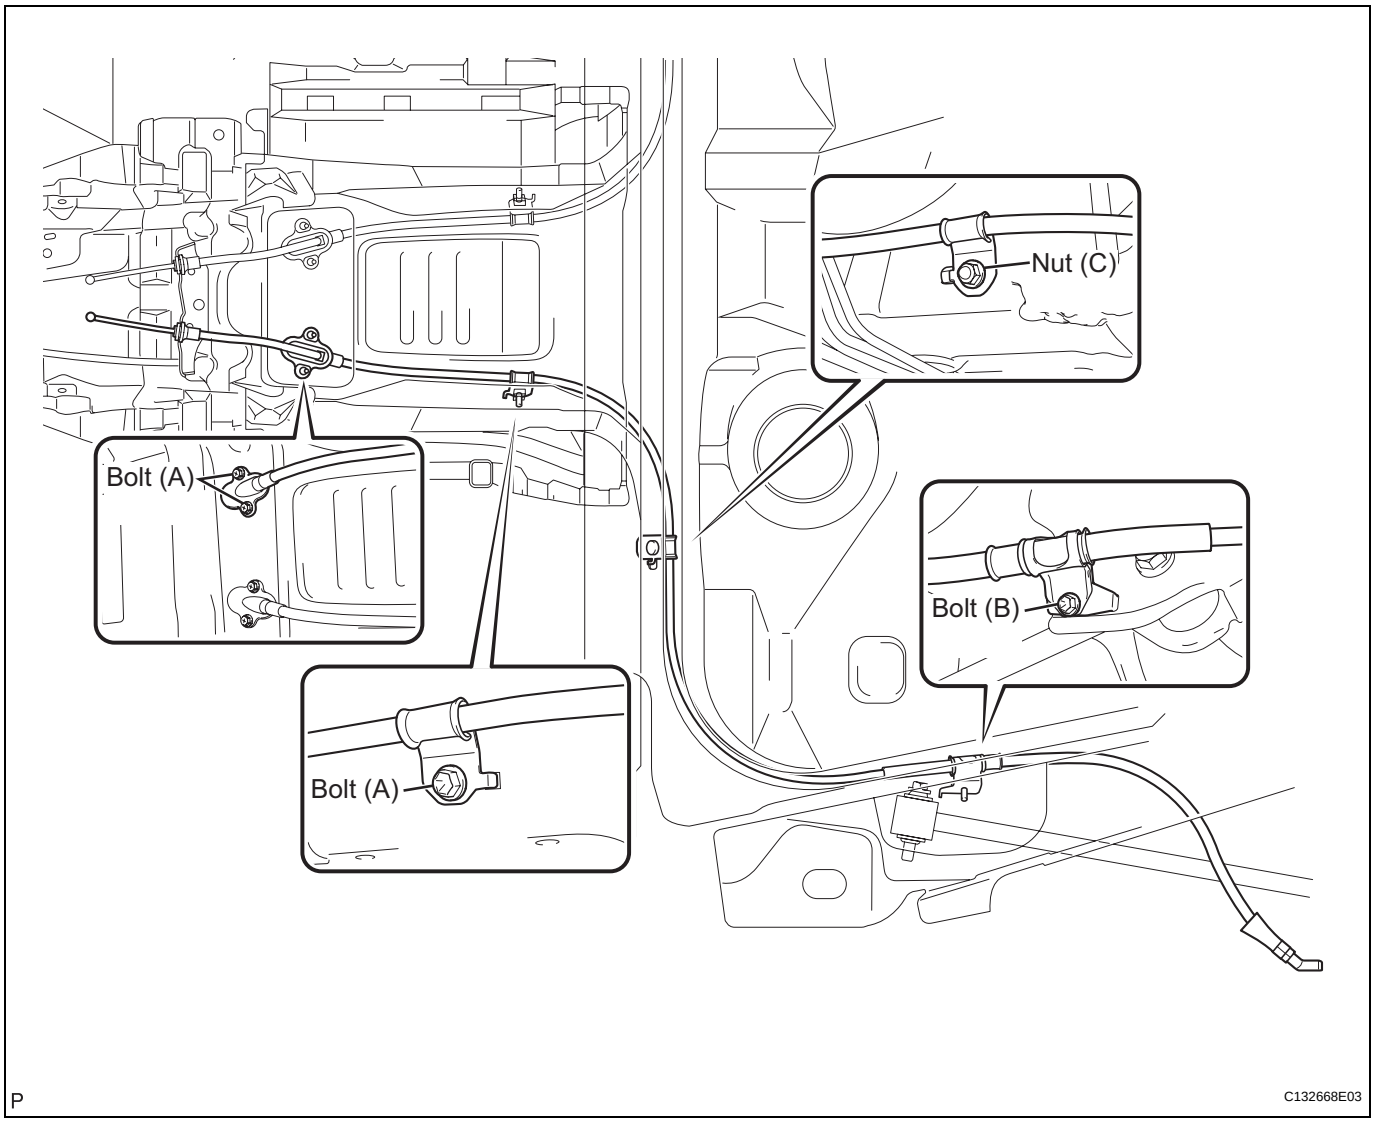


(b) Using needle-nose pliers, remove the clip from the No. 3 parking brake cable assembly.



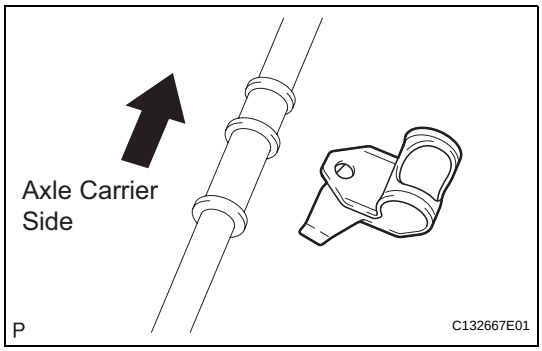
PB

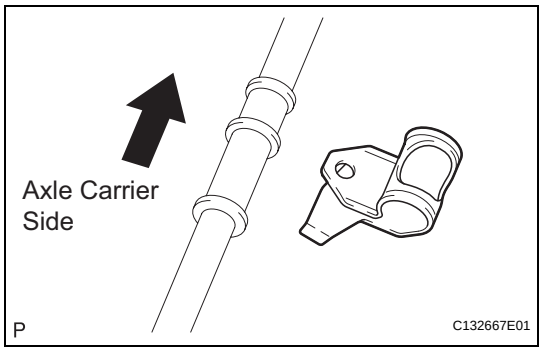
(c) Remove the 3 bolts (A), the bolt (B), and the nut (C), and disengage each claw.



(d) Remove the No. 3 parking brake cable assembly from the body.

(e) Remove the parking brake cable clamp.





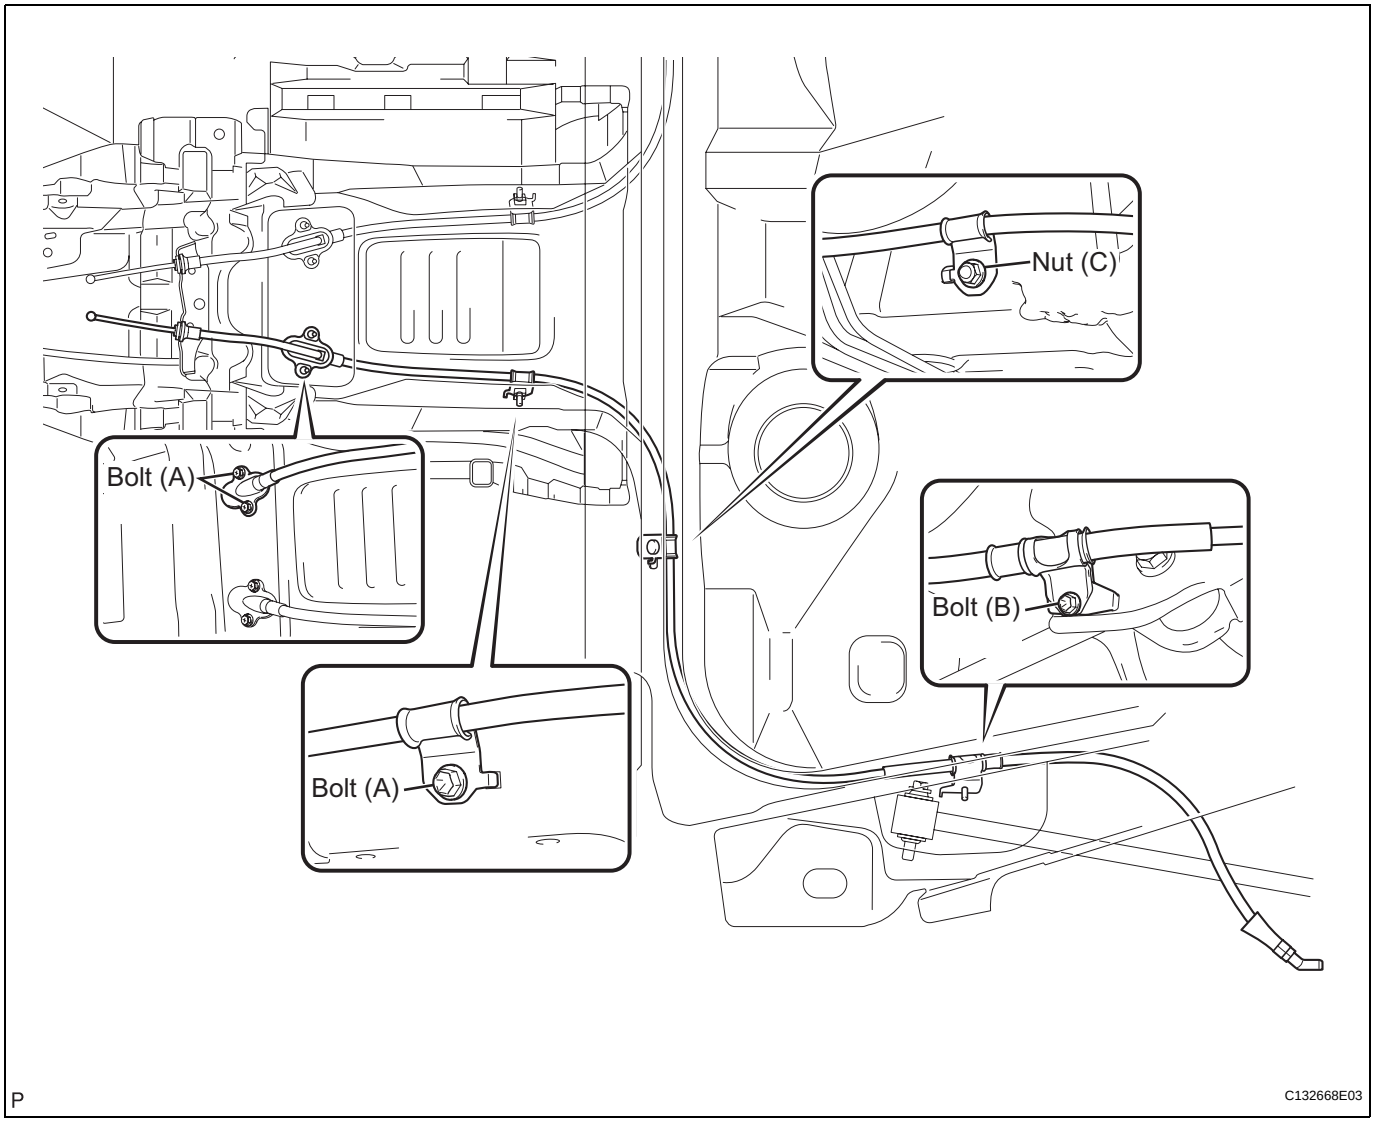
INSTALLATION

1. INSTALL NO. 3 PARKING BRAKE CABLE ASSEMBLY

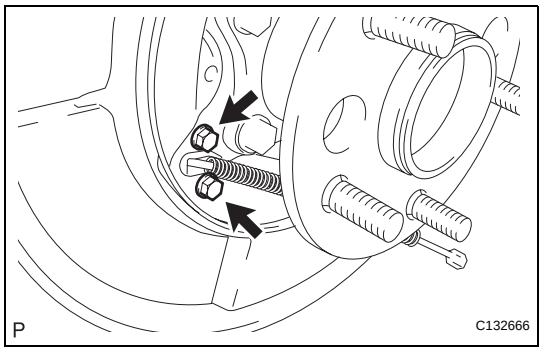
(a) Install the parking brake cable clamp to the No. 3 parking brake cable assembly.

(b) Install the No. 3 parking brake cable assembly with the 3 bolts (A), the bolt (B) and the nut (C), and engage each claw.

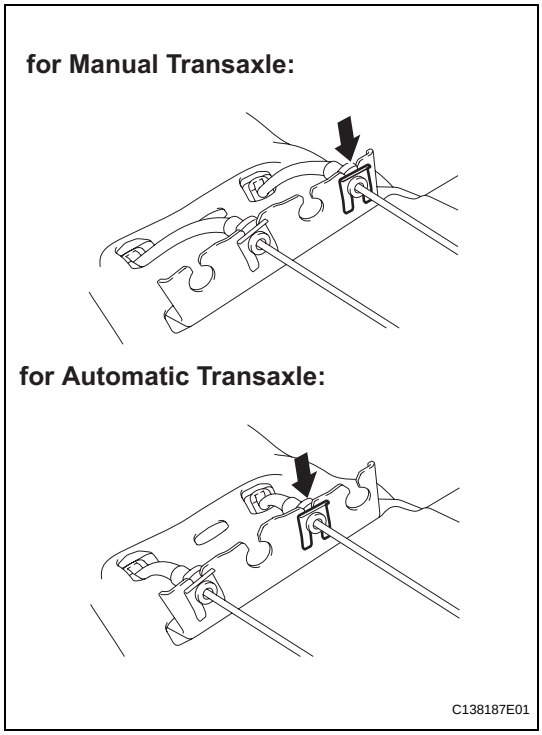
Torque: Bolt (A)
8.5 N*m (87 kgf*cm, 75 in.*lbf)
Bolt (B) and Nut (C)
6.0 N*m (61 kgf*cm, 53 in.*lbf)



PB

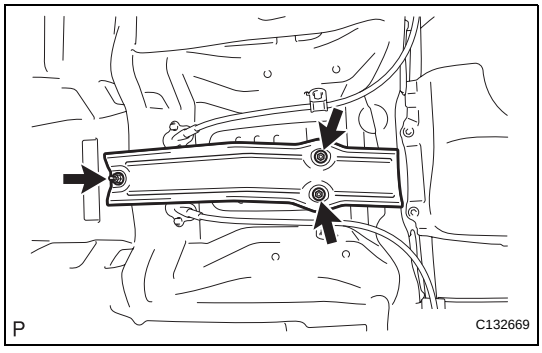


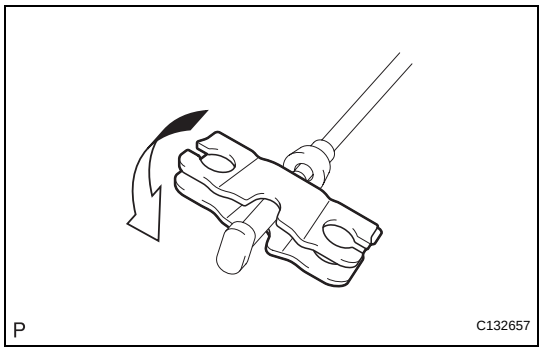
(c) Install the No. 3 parking brake cable assembly to the backing plate with the 2 bolts.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)



(d) Using a brass bar and a hammer, install the clip to the No. 3 parking brake cable assembly.

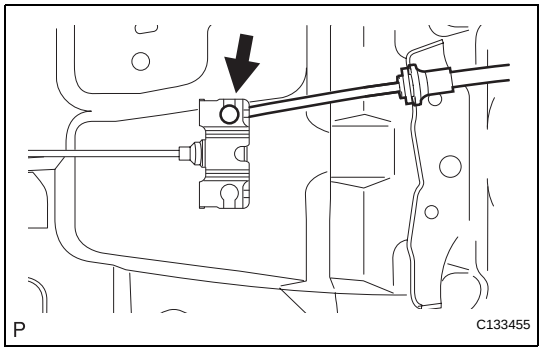
2. **INSTALL NO. 2 PARKING BRAKE SHOE ASSEMBLY (See page PB-61)**
3. **INSTALL PARKING BRAKE SHOE ADJUSTING SCREW SET (See page PB-62)**
4. **INSTALL NO. 1 PARKING BRAKE SHOE ASSEMBLY (See page PB-62)**
5. **INSTALL PARKING BRAKE SHOE STRUT (See page PB-62)**
6. **INSTALL PARKING BRAKE SHOE RETURN TENSION NO. 1 SPRING (See page PB-62)**
7. **CHECK PARKING BRAKE INSTALLATION (See page PB-63)**
8. **INSTALL REAR DISC (See page PB-63)**
9. **ADJUST PARKING BRAKE SHOE CLEARANCE (See page PB-63)**
10. **INSTALL REAR DISC BRAKE CALIPER ASSEMBLY (See page PB-63)**
11. **INSTALL REAR WHEEL**
12. **INSTALL NO. 2 FRONT FLOOR HEAT LOWER INSULATOR (for 2AZ-FE)**
    (a) Install the No. 2 front floor heat lower insulator with the 3 nuts.
    Torque: 4.9 N*m (50 kgf*cm, 43 in.*lbf)
13. **INSTALL CENTER EXHAUST PIPE ASSEMBLY (for 2AZ-FE) (See page EX-4)**
14. **INSTALL EXHAUST CENTER PIPE ASSEMBLY (for 2GR-FE) (See page EX-4)**
15. **INSTALL EXHAUST TAIL PIPE ASSEMBLY (for 2GR-FE) (See page EX-5)**



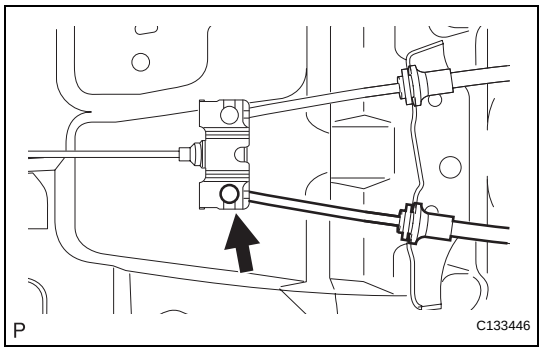


16. **INSTALL NO. 4 PARKING BRAKE CABLE ASSEMBLY (for Automatic Transaxle)**
    (a) Install the No. 4 parking brake cable assembly to the parking brake equalizer.

    (b) Slide the rubber boot back as shown in the illustration.



17. **CONNECT NO. 2 PARKING BRAKE CABLE ASSEMBLY (for Automatic Transaxle)**
    (a) Connect the No. 2 parking brake cable assembly to the parking brake equalizer.



18. **CONNECT NO. 3 PARKING BRAKE CABLE ASSEMBLY (for Automatic Transaxle)**
    (a) Connect the No. 3 parking brake cable assembly to the parking brake equalizer.

19. **INSTALL CROSS MEMBER FLOOR NO. 4 REINFORCEMENT SUB-ASSEMBLY (for Automatic Transaxle) (See page PB-18)**

20. **INSTALL FRONT FLOOR CARPET ASSEMBLY (for Automatic Transaxle) (See page PB-18)**

21. **INSTALL LUGGAGE DOOR LOCK OPEN LEVER SUB-ASSEMBLY (for Automatic Transaxle) (See page PB-18)**

22. **INSTALL NO. 1 PARKING BRAKE CABLE ASSEMBLY (for Manual Transaxle) (See page PB-16)**

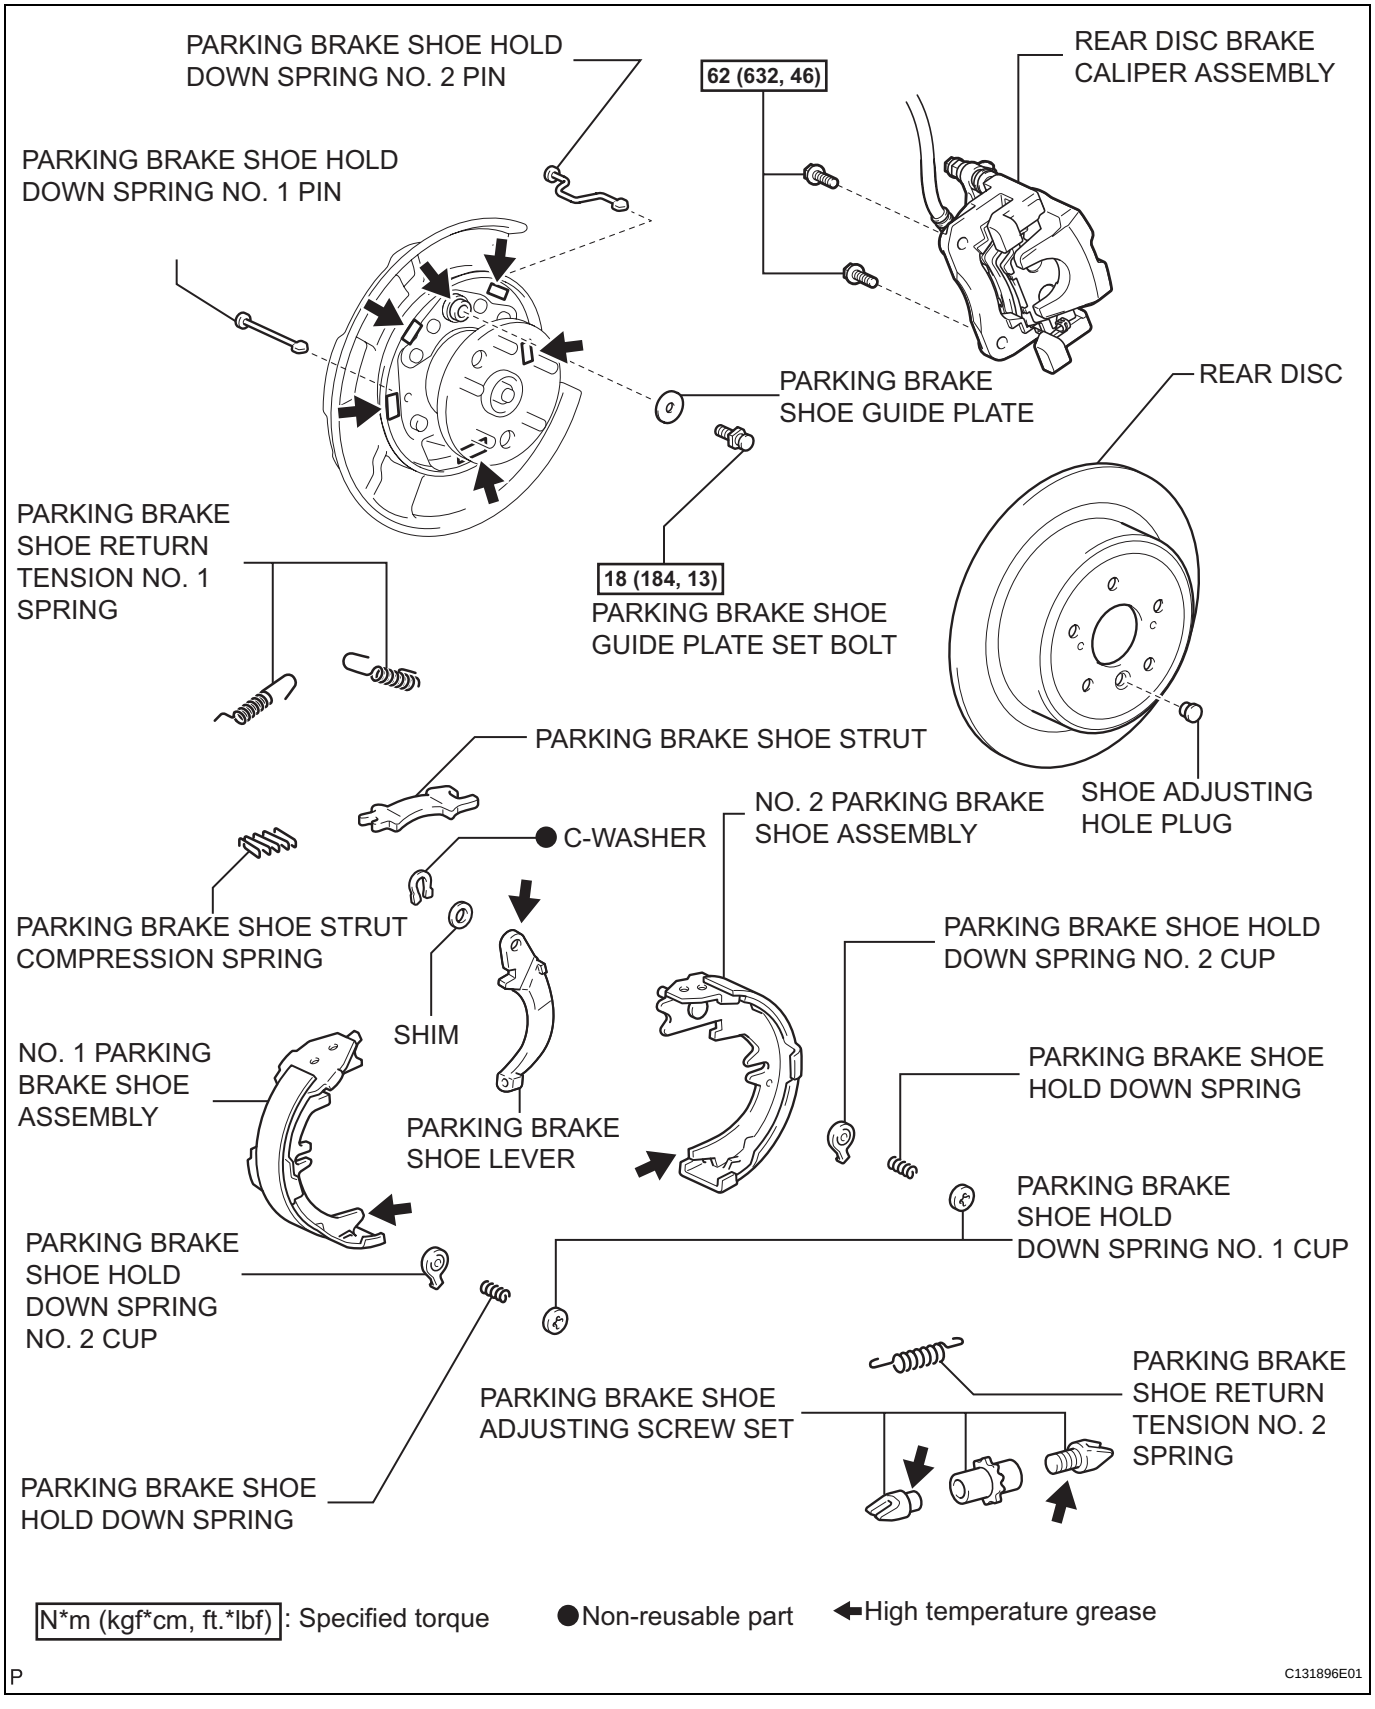
23. **INSTALL PARKING BRAKE LEVER SUB-ASSEMBLY (for Manual Transaxle)**
    HINT:
    Refer to the procedures up to "INSTALL PARKING BRAKE LEVER". (See page PB-17)

PB

24. **INSTALL NO. 1 PARKING BRAKE CABLE ASSEMBLY (for Automatic Transaxle) (See page PB-31)**
25. **INSTALL PARKING BRAKE PEDAL ASSEMBLY (for Automatic Transaxle)**
    HINT:
    Refer to the procedures up to "INSTALL PARKING BRAKE PEDAL". (See page PB-32)
26. **INSTALL FRONT SEAT ASSEMBLY LH (for Manual Seat)**
    HINT:
    Refer to the procedures up to "INSTALL FRONT SEAT ASSEMBLY (for Manual Seat)". (See page SE-24)
27. **INSTALL FRONT SEAT ASSEMBLY RH (for Manual Seat)**
    HINT:
    Use the same procedures for the RH side and the LH side.
28. **INSTALL FRONT SEAT ASSEMBLY LH (for Power Seat)**
    HINT:
    Refer to the procedures up to "INSTALL FRONT SEAT ASSEMBLY (for Power Seat)". (See page SE-41)
29. **INSTALL FRONT SEAT ASSEMBLY RH (for Power Seat)**
    HINT:
    Use the same procedures for the RH side and the LH side.
30. **INSPECT PARKING BRAKE LEVER TRAVEL (for Manual Transaxle) (See page PB-2)**
31. **INSPECT PARKING BRAKE PEDAL TRAVEL (for Automatic Transaxle) (See page PB-1)**
32. **ADJUST PARKING BRAKE LEVER TRAVEL (for Manual Transaxle) (See page PB-2)**
33. **ADJUST PARKING BRAKE PEDAL TRAVEL (for Automatic Transaxle) (See page PB-1)**
34. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (for Manual Seat)**
35. **PERFORM ZERO POINT CALIBRATION AND SENSITIVITY CHECK**
    HINT:
    (See page RS-242)
36. **INSPECT SRS WARNING LIGHT**
37. **INSPECT SLIDE ADJUSTER LOCK (for Manual Seat)**
38. **INSPECT FRONT SEAT ASSEMBLY (for Power Seat) (See page SE-42)**
39. **CHECK FOR EXHAUST GAS LEAKS (See page EX-5)**

PARKING BRAKE ASSEMBLY

COMPONENTS



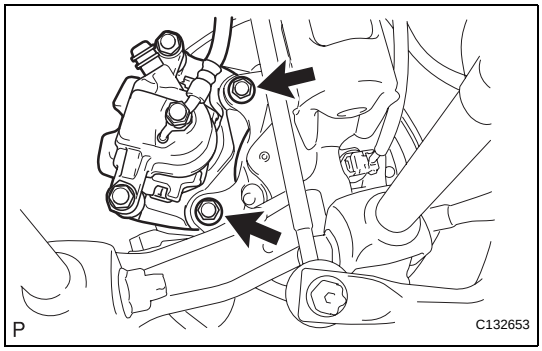
PB

DISASSEMBLY

HINT:

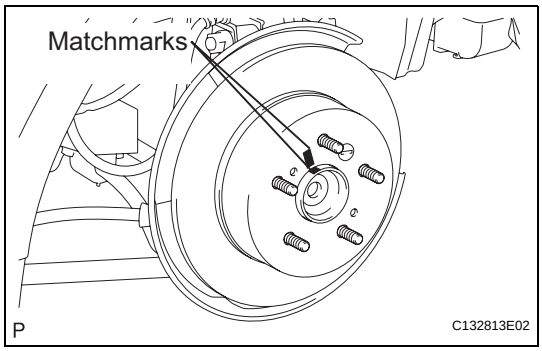
- Use the same procedures for the RH side and the LH side.
- The procedures listed below are for the LH side.

1. REMOVE REAR WHEEL



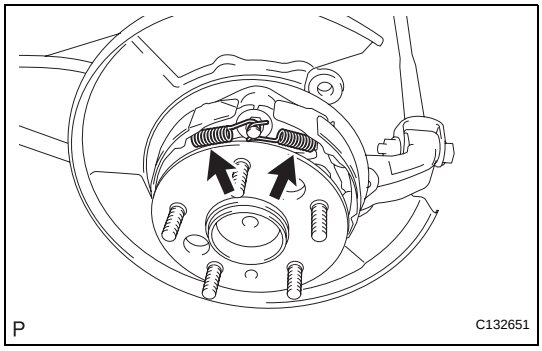
2. SEPARATE REAR DISC BRAKE CALIPER ASSEMBLY

(a) Remove the 2 bolts and separate the rear disc brake caliper assembly.
HINT:
Do not disconnect the flexible hose from the disc brake caliper assembly.



3. REMOVE REAR DISC

(a) Release the parking brake and place the matchmarks on the rear disc and the axle hub.
(b) Remove the rear disc.
HINT:
If the disc cannot be removed easily, turn the shoe adjuster until the wheel turns freely.

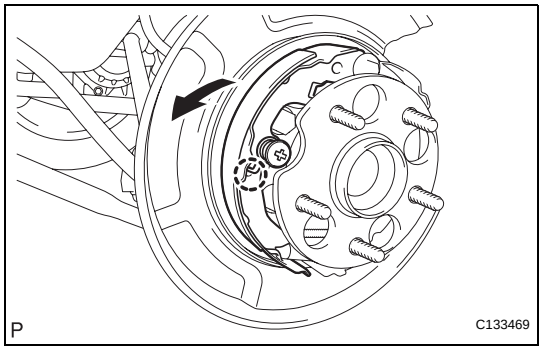


4. REMOVE PARKING BRAKE SHOE RETURN TENSION NO. 1 SPRING

(a) Using needle-nose pliers, remove the 2 parking brake shoe return tension No. 1 springs.

5. REMOVE PARKING BRAKE SHOE STRUT

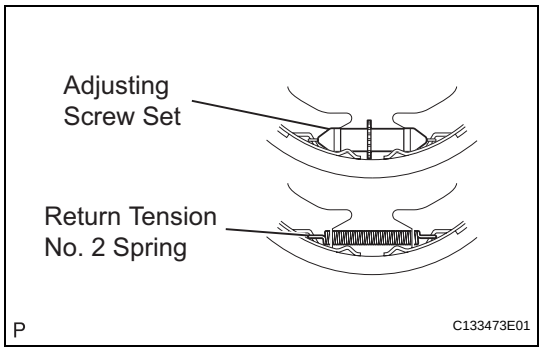
(a) Remove the parking brake shoe strut and the parking brake shoe strut compression spring.



6. REMOVE NO. 1 PARKING BRAKE SHOE ASSEMBLY

(a) Release the claw of the parking brake shoe hold down spring No. 1 cup.
(b) Remove the No. 1 parking brake shoe assembly as shown in the illustration.
(c) Remove the parking brake shoe hold down spring No. 1 cup, the parking brake shoe hold down spring, the parking brake shoe hold down spring No. 2 cup, and the parking brake shoe hold down spring No. 1 pin.

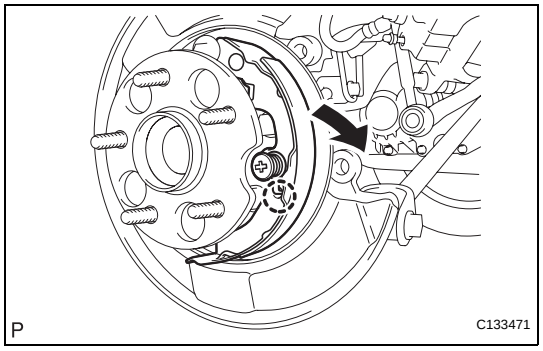
PB



7. REMOVE PARKING BRAKE SHOE ADJUSTING SCREW SET

(a) Remove the parking brake shoe adjusting screw set.

(b) Remove the parking brake shoe return tension No. 2 spring.

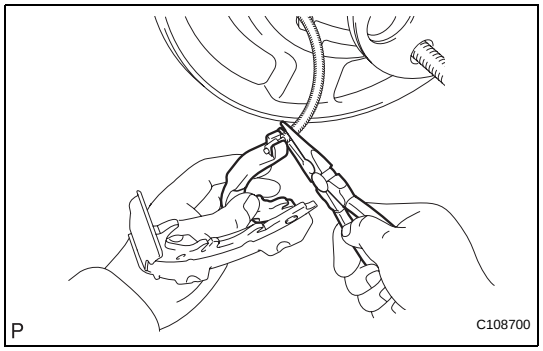


8. REMOVE NO. 2 PARKING BRAKE SHOE ASSEMBLY

(a) Release the claw of the the parking brake shoe hold down spring No. 1 cup.

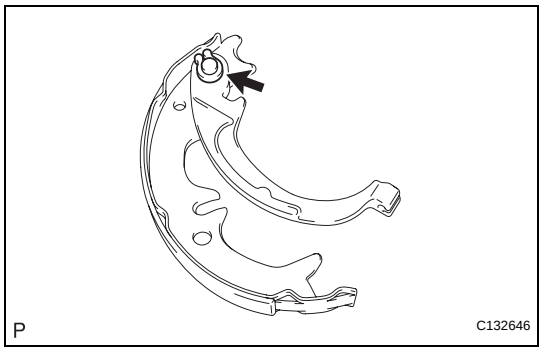
(b) Remove the No. 2 parking brake shoe assembly as shown in the illustration.

(c) Remove the parking brake shoe hold down spring No. 1 cup, the parking brake shoe hold down spring, the parking brake shoe hold down spring No. 2 cup, and the parking brake shoe hold down spring No. 2 pin.



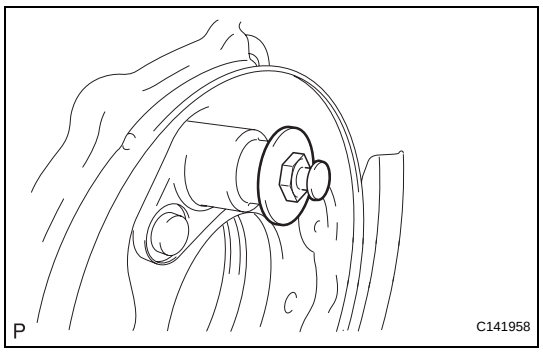
(d) Using needle-nose pliers, disconnect the No. 3 parking brake cable assembly from the parking brake shoe lever.

NOTICE:
Be careful not to damage the No. 3 parking brake cable assembly.



9. REMOVE PARKING BRAKE SHOE LEVER

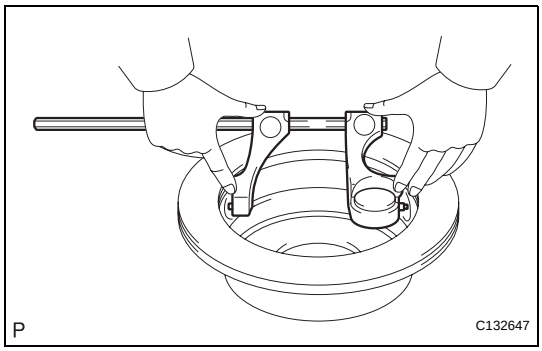
(a) Using a screwdriver, remove the C-washer, shim and the parking brake shoe lever.



10. REMOVE PARKING BRAKE SHOE GUIDE PLATE

(a) Remove the parking brake shoe guide plate set bolt and the parking brake shoe guide plate.

PB



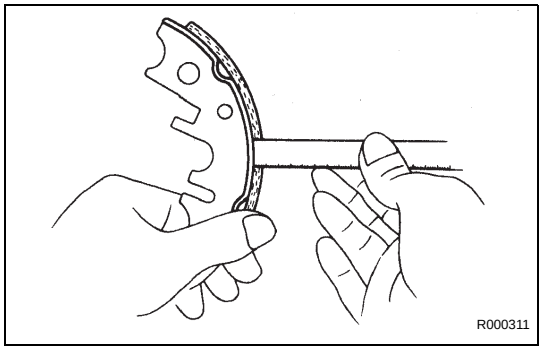
INSPECTION

1. INSPECT BRAKE DISC INSIDE DIAMETER

(a) Using a brake drum gauge or an equivalent tool, measure the inside diameter of the disc.

Standard inside diameter:
170 mm (6.69 in.)
Maximum inside diameter:
171 mm (6.73 in.)

If the inside diameter is more than the maximum, replace the disc.



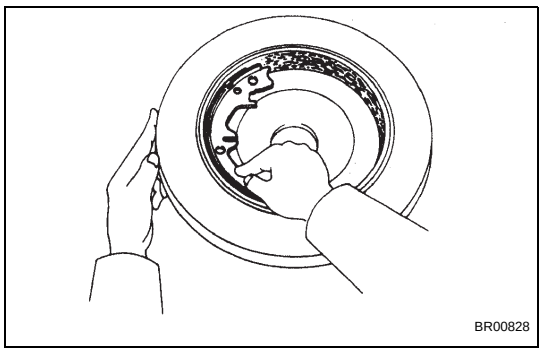
2. INSPECT PARKING BRAKE SHOE LINING THICKNESS

(a) Using a ruler, measure the thickness of the shoe lining.

Standard thickness:
2.0 mm (0.079 in.)
Minimum thickness:
1.0 mm (0.039 in.)

If the lining thickness is less than the minimum, or if there is severe or uneven wear, replace the brake shoe.

NOTICE:
Always replace both the right and left parking brake shoes together.



3. INSPECT BRAKE DISC AND PARKING BRAKE SHOE LINING FOR PROPER CONTACT

(a) Apply chalk to the inside surface of the disc, then grind down the brake shoe lining to fit the disc.
If the contact between the disc and the brake shoe lining is improper, repair it using a brake shoe grinder or replace the brake shoe.

PB

REASSEMBLY

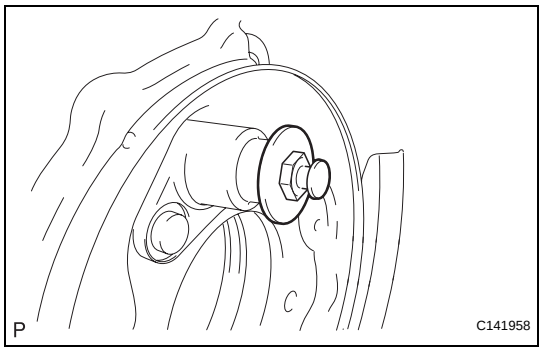
1. APPLY HIGH TEMPERATURE GREASE

(a) Apply high temperature grease to the backing plate which makes contact with the shoe.

2. INSTALL PARKING BRAKE SHOE GUIDE PLATE

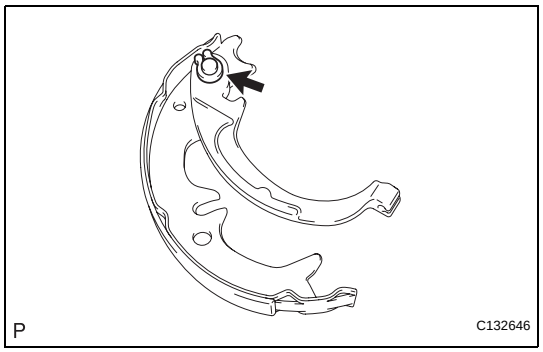
(a) Apply adhesive to the threads of the parking brake shoe guide plate set bolt.
Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

(b) Install the parking brake shoe guide plate with the parking brake shoe guide plate set bolt.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)

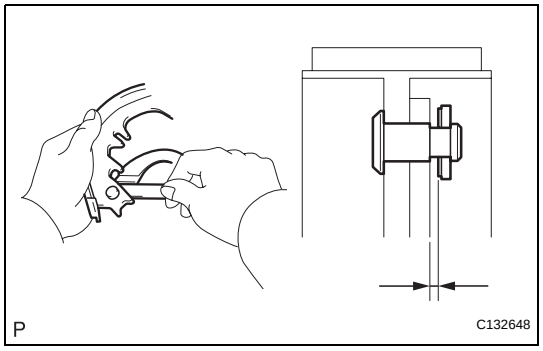


3. INSTALL PARKING BRAKE SHOE LEVER

(a) Install the parking brake shoe lever and shim to the No. 2 parking brake shoe assembly with a new C-washer.



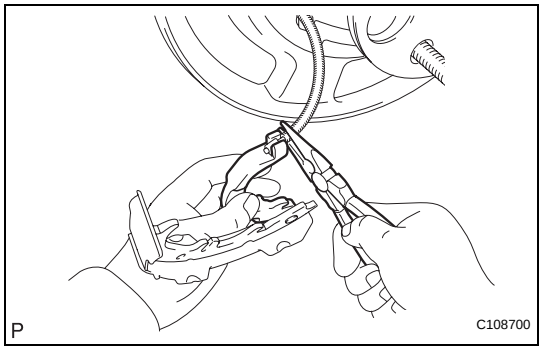
(b) Using a feeler gauge, measure the clearance between the No. 2 parking brake shoe assembly and parking brake shoe lever.
Standard clearance:
Less than 0.35 mm (0.014 in.)
If the clearance is not as specified, replace the shim with one of the correct size.

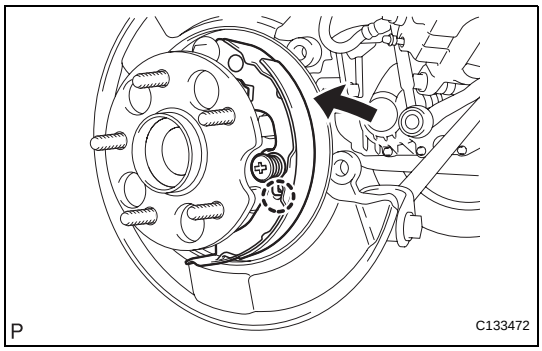


Shim Thickness	Shim Thickness
0.3 mm (0.012 in.)	0.9 mm (0.035 in.)
0.6 mm (0.024 in.)	-

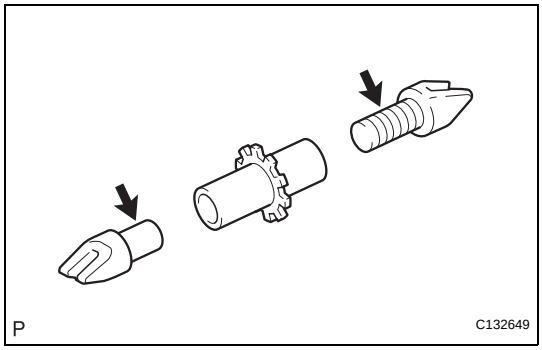
4. INSTALL NO. 2 PARKING BRAKE SHOE ASSEMBLY

(a) Using needle-nose pliers, connect the No. 3 parking brake cable assembly to the parking brake shoe lever.





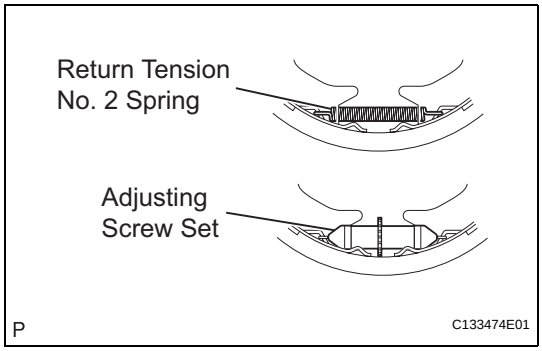
(b) Install the No. 2 parking brake shoe assembly with the parking brake shoe hold down spring No. 2 pin, the parking brake shoe hold down spring No. 2 cup, the parking brake shoe hold down spring and the parking brake shoe hold down spring No. 1 cup.
(c) Engage the claw of the parking brake shoe hold down spring No. 1 cup to the No. 2 parking brake shoe assembly.



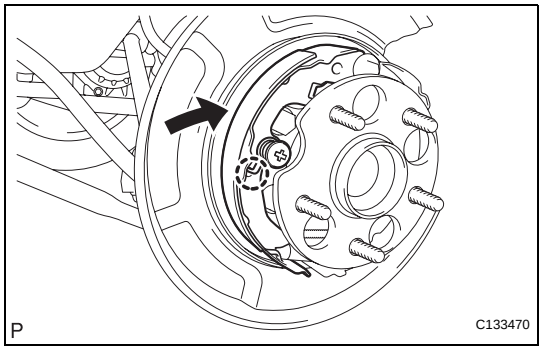
5. INSTALL PARKING BRAKE SHOE ADJUSTING SCREW SET

(a) Apply high temperature grease to the parking brake adjusting screw as shown in the illustration.

PB



(b) Install the parking brake shoe return tension No. 2 spring to the No. 1 parking brake shoe assembly and the No. 2 parking brake shoe assembly.
(c) Install the parking brake shoe adjusting screw set to the No. 1 parking brake shoe assembly and the No. 2 parking brake shoe assembly.

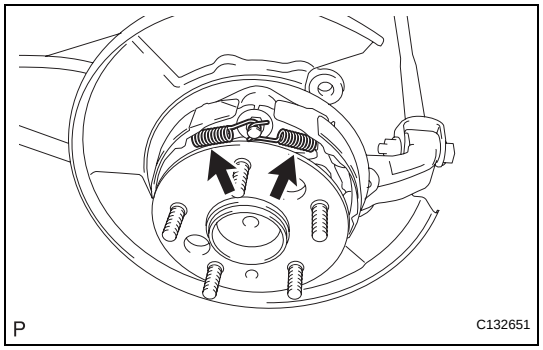


6. INSTALL NO. 1 PARKING BRAKE SHOE ASSEMBLY

(a) Install the No. 1 parking brake shoe assembly with the parking brake shoe hold down spring No. 1 pin, parking brake shoe hold down spring No. 2 cup, parking brake shoe hold down spring and parking brake shoe hold down spring No. 1 cup.

7. INSTALL PARKING BRAKE SHOE STRUT

(a) Attach the parking brake shoe strut and the parking brake shoe strut compression spring to the No. 1 parking brake shoe assembly and No. 2 parking brake shoe assembly.

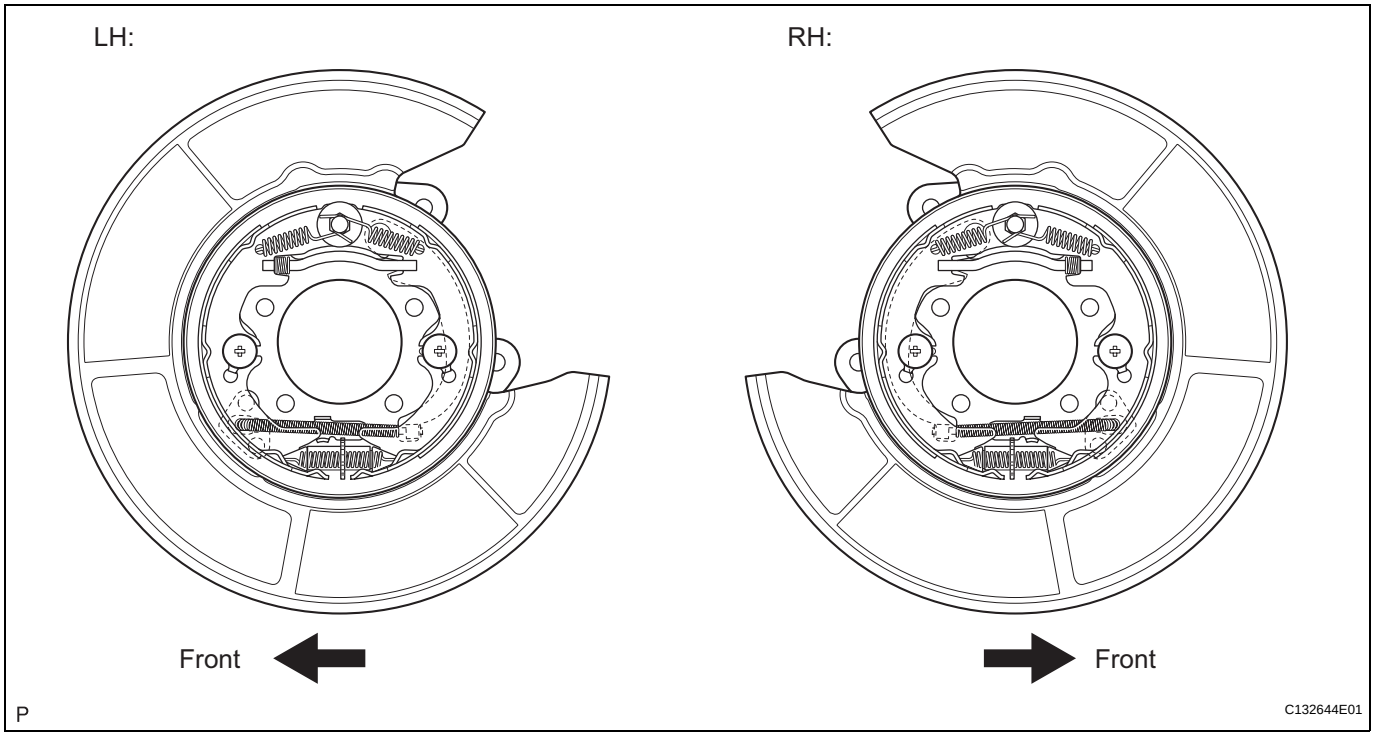


8. INSTALL PARKING BRAKE SHOE RETURN TENSION NO. 1 SPRING

(a) Using needle-nose pliers, install the 2 parking brake shoe return tension No. 1 springs.
HINT:
First install the front side spring and then the rear side spring.

9. CHECK PARKING BRAKE INSTALLATION

(a) Check that each part is installed properly.



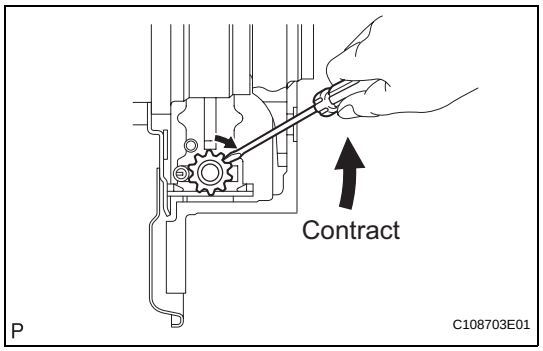
NOTICE:
There should be no oil or grease on the friction surface of the shoe lining and disc.

10. INSTALL REAR DISC

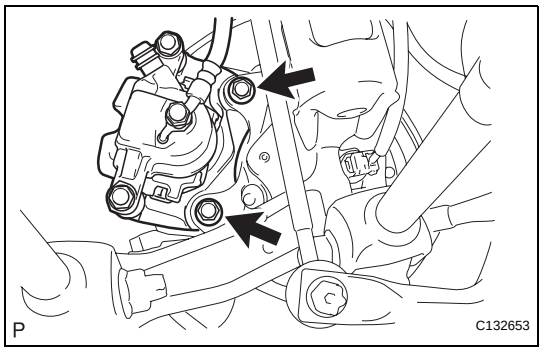
(a) Align the matchmarks and install the rear disc.

11. ADJUST PARKING BRAKE SHOE CLEARANCE

(a) Temporarily install the hub nuts.
(b) Remove the shoe adjusting hole plug.
(c) Turn the adjuster and expand the shoes until the disc locks.
(d) Contract the shoe adjuster until the disc rotates smoothly.
Standard:
Return 8 notches
(e) Check that the shoe has no brake drag.
(f) Install the shoe adjusting hole plug.



PB



12. INSTALL REAR DISC BRAKE CALIPER ASSEMBLY

(a) Install the rear disc brake caliper assembly with the 2 bolts.
Torque: 62 N*m (632 kgf*cm, 46 ft.*lbf)

13. INSTALL REAR WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

14. INSPECT PARKING BRAKE PEDAL TRAVEL (for Automatic Transaxle) (See page PB-1)

15. INSPECT PARKING BRAKE LEVER TRAVEL (for Manual Transaxle) (See page PB-2)

16. ADJUST PARKING BRAKE PEDAL TRAVEL (for Automatic Transaxle) (See page PB-1)

17. ADJUST PARKING BRAKE LEVER TRAVEL (for Manual Transaxle) (See page PB-2)

ANTI-LOCK BRAKE SYSTEM

PRECAUTION

1. EXPRESSIONS OF IGNITION SWITCH

The type of ignition switch used on this model differs according to the specifications of the vehicle.
The expressions listed in the table below are used in this section.

Expression	Switch Type	
	Ignition Switch (Position)	Engine Switch (Condition)
Ignition switch off	LOCK	off
Ignition switch on (IG)	ON	on (IG)
Ignition switch on (ACC)	ACC	on (ACC)
Engine start	START	start

2. TROUBLESHOOTING PRECAUTION

HINT:
The anti-lock brake system includes the ABS and EBD.

(a) When there is a malfunction in the terminal contact points or installation problems with parts, removing and installing the suspected problem parts may return the system to normal, either completely or temporarily.
(b) In order to determine the malfunctioning area, be sure to check the conditions at the time the malfunction occurred, such as by the DTC output and the freeze frame data output, and record it before disconnecting each connector or removing and installing parts.
(c) Be sure to remove and install the brake actuator and each individual sensor with the ignition switch off unless otherwise specified in the inspection procedure.
(d) If the brake actuator or a sensor has been removed and installed, it is necessary to check the system for problems after the parts have been reassembled. Check for DTCs using the intelligent tester, also check that system functions and signals received by the ECU are normal using test mode.

3. CAN COMMUNICATION SYSTEM PRECAUTION

(a) The CAN communication system is used for data communication between each of the ECUs and sensors. If there is trouble in the CAN communication line, a DTC of the communication line is output.
(b) If a DTC of the CAN communication line is output, repair the malfunction in the communication line and troubleshoot the anti-lock brake system.

(c) In order to enable CAN communication, a specific type of wiring is used for the CAN communication lines. The wiring used for each communication line is a twisted pair of wires that have an equal length. A bypass wire should not be used, because the data being transmitted will be corrupted.

SYSTEM DESCRIPTION

1. SYSTEM DESCRIPTION

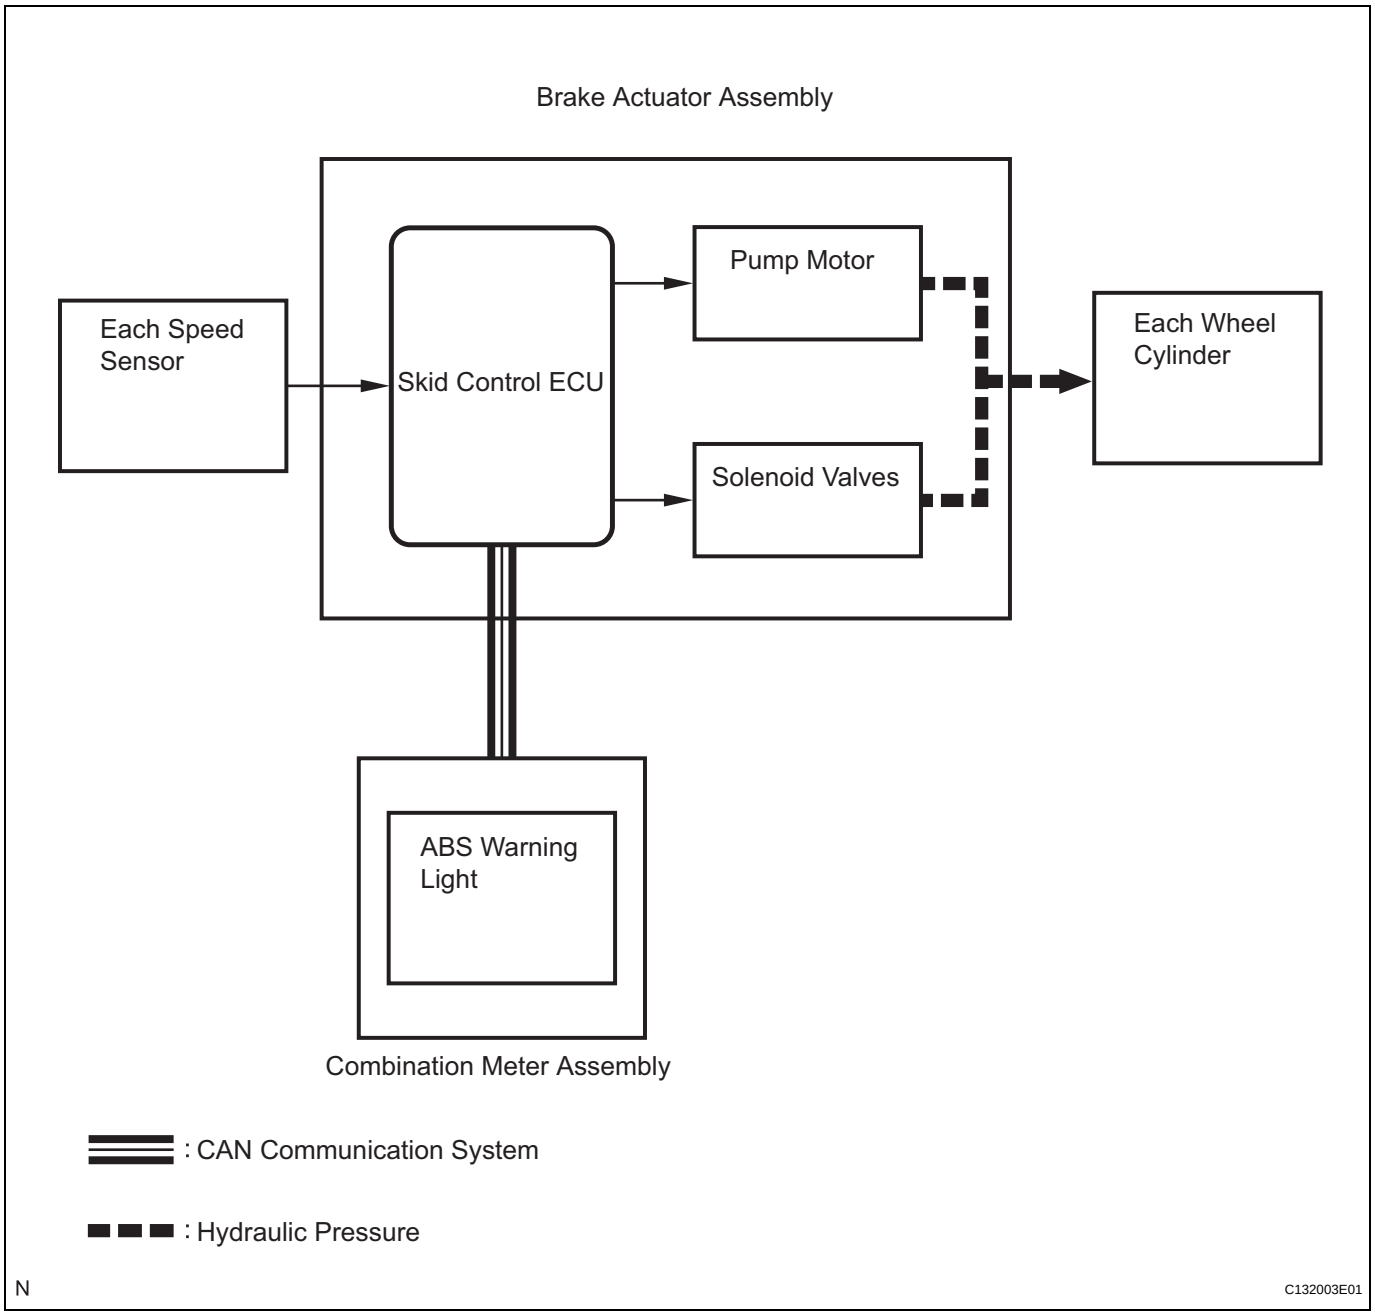
HINT:

The skid control ECU is located within the brake actuator assembly.

(a) ABS

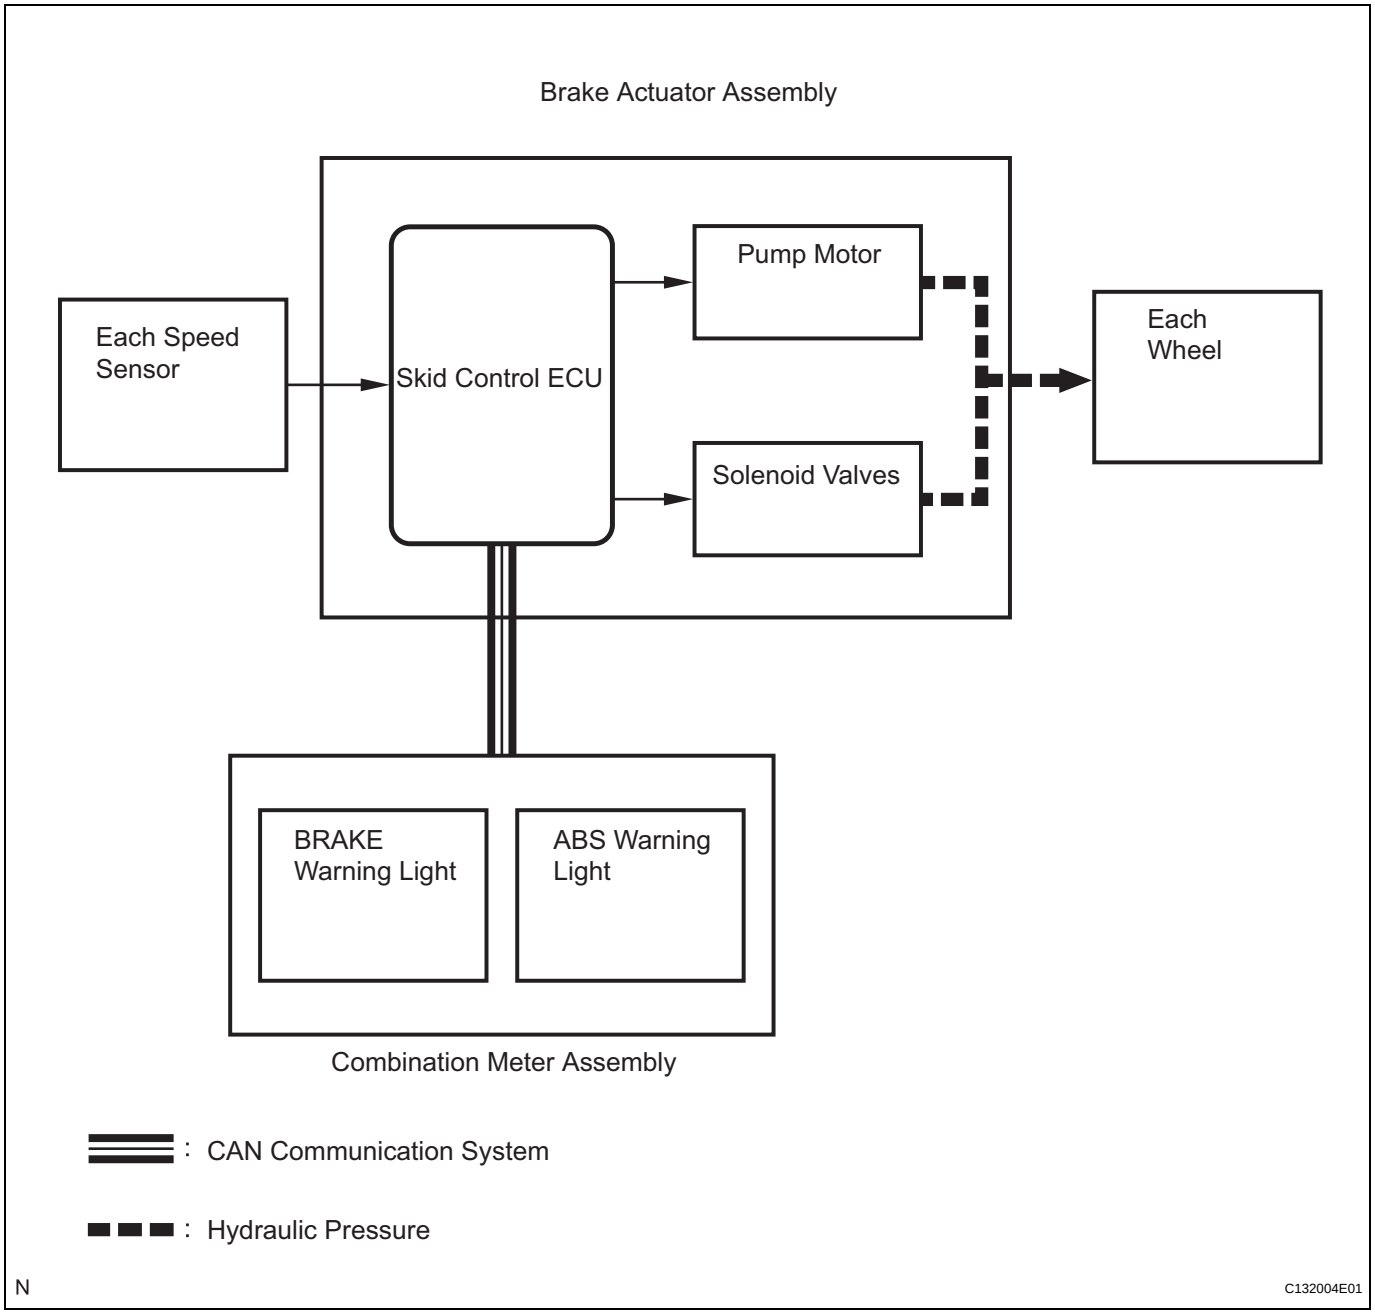
(Anti-lock Brake System)

The ABS helps prevent the wheels from locking when the brakes are applied firmly or when braking on a slippery surface.



Operation description
The skid control ECU detects wheel lock based on speed signals it receives from the wheel speed sensors. Based on this information, the skid control ECU controls the pump motor and solenoid valves. The pump motor and solenoid valves are used to prevent wheel lock by controlling the hydraulic pressure applied to the brakes at each wheel. The ABS warning light will come on when the system is malfunctioning.

(b) EBD
(Electronic Brake force Distribution)
The EBD control utilizes ABS, realizing proper brake force distribution between the front and rear wheels in accordance with driving conditions.
In addition, when braking while cornering, it also controls the brake forces of the right and left wheels, helping to maintain vehicle behavior.



Operation description
The skid control ECU receives a speed signal from each wheel speed sensor, and uses these signals to detect locking of the wheels. The ECU uses this information in order to determine appropriate control of the solenoid valves. The solenoid valves control the hydraulic pressure applied to the brake cylinder at each wheel. In this way, the solenoid valves are used to control the brake power split between the front and rear, and left and right wheels. The ABS and BRAKE warning lights come on if there is a malfunction in the EBD system.

2. ABS with EBD OPERATION

(a) Based on the signals received from the 4 wheel speed sensors, the skid control ECU calculates the deceleration and speed of each wheel, while monitoring for wheel lock. If wheel lock is occurring, the ECU controls the solenoid valves in the brake actuator in order to adjust the hydraulic pressure applied to the brakes at each wheel.

3. FAIL SAFE FUNCTION

(a) When a failure occurs in the anti-lock brake system, the ABS warning light comes on and operation is prohibited. In addition, when a failure which disables EBD operation occurs, the brake warning light also comes on and operation is prohibited (See page BC-24).

4. INITIAL CHECK

(a) When the vehicle speed first becomes approximately 4 mph (6 km/h) or more after the ignition switch is turned on (IG), each solenoid valve and motor of the brake actuator is sequentially activated to perform an electrical check. During the initial check, the operating sound of solenoid valve and motor can be heard from the engine compartment, but this is not a malfunction.

5. FUNCTION OF COMPONENTS

Components	Function
Brake actuator assembly	• Composed of the holding solenoid valve, pressure reduction solenoid valve, pump motor, reservoir, etc., and adjusts the hydraulic pressure applied to each wheel cylinder. • Houses the skid control ECU.
Skid control ECU	Processes the signals sent from each sensor to control ABS and EBD.
Speed sensor	Detects speed of each wheel and inputs the data into the skid control ECU.
Master cylinder	Generates pressure according to pedal effort.
Stop light switch	Illuminates the stop light when the brake pedal is depressed. (Sends a brake on signal to the skid control ECU)
Solenoid relay	• Supplies power to each solenoid. • Housed in the skid control ECU.
Motor relay	• Supplies power to the pump motor. • Housed in the skid control ECU.
ABS warning light	• Comes on to inform the driver that a malfunction in the ABS and EBD has occurred. • Blinks to output DTC.

Components	Function
BRAKE warning light	• Comes on to inform the driver that the parking brake is on when the system is normal or the brake fluid level has decreased. • Comes on to inform the driver that a malfunction in the EBD has occurred.

HOW TO PROCEED WITH TROUBLESHOOTING

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS

(a) Interview the customer to confirm the trouble.

NEXT

3	CHECK CAN COMMUNICATION SYSTEM

BC

(a) Check for DTCs (See page BC-21).
HINT:
The skid control ECU is connected to the CAN communication system.
Therefore, before starting troubleshooting, make sure to check that there is no trouble in the CAN communication system.

Result

Result	Proceed to
DTC is not output	A
DTC is output	B

B → CHECK CAN COMMUNICATION CIRCUIT

A

4	CHECK DTC AND FREEZE FRAME DATA

(a) Check for DTCs and Freeze Frame Data (See page BC-21 for DTC Check / Clear, BC-23 for Freeze Frame Data).
(1) Record the DTCs and Freeze Frame Data.
(b) Clear the DTCs.
(c) Recheck for DTCs.
(1) Reproduce the malfunction and check if the DTCs are output again.

Result

Result	Proceed to
DTC is output	A
DTC is not output (Problem symptom does not occur)	B
DTC is not output (Problem symptom occurs)	C

TEST MODE PROCEDURE

1. WARNING LIGHT AND INDICATOR LIGHT INITIAL CHECK

(a) Release the parking brake.

NOTICE:

Before releasing the parking brake, move the shift lever to the P position for safety (AT model) or set the chocks to hold the vehicle for safety (MT model).

HINT:

When the parking brake is applied or the level of the brake fluid is low, the BRAKE warning light comes on.

(b) When the ignition switch is turned on (IG), check that the ABS warning light comes on for approximately 3 seconds.

HINT:

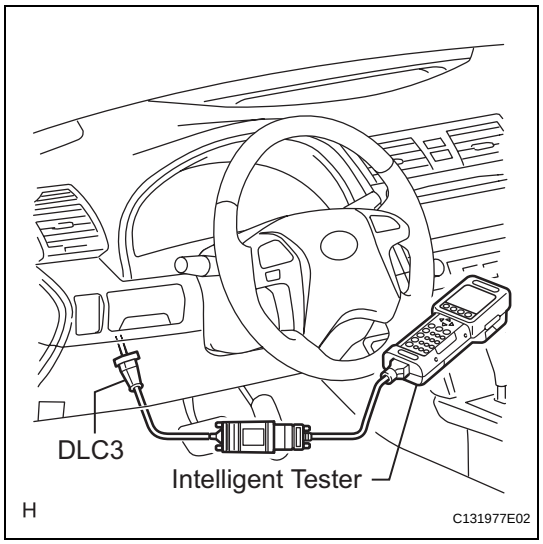
- If the skid control ECU stores any DTCs, the ABS and BRAKE warning lights come on.
- If the indicator remains on or does not come on, proceed to troubleshooting for the light circuits listed below.

Trouble Area	See procedure
ABS warning light (Remains on)	BC-74
ABS warning light circuit (Does not come on)	BC-78
BRAKE warning light (Remains on)	BC-81
BRAKE warning light (Does not come on)	BC-91

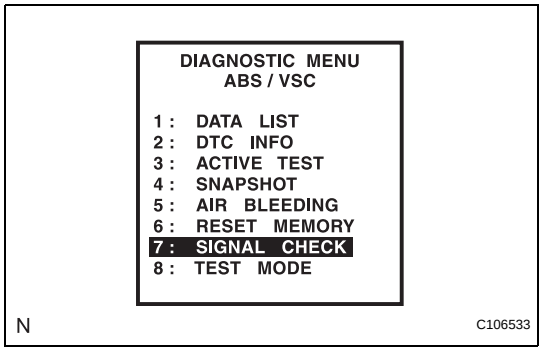
2. SENSOR SIGNAL CHECK USING TEST MODE (SIGNAL CHECK) (INTELLIGENT TESTER)

HINT:

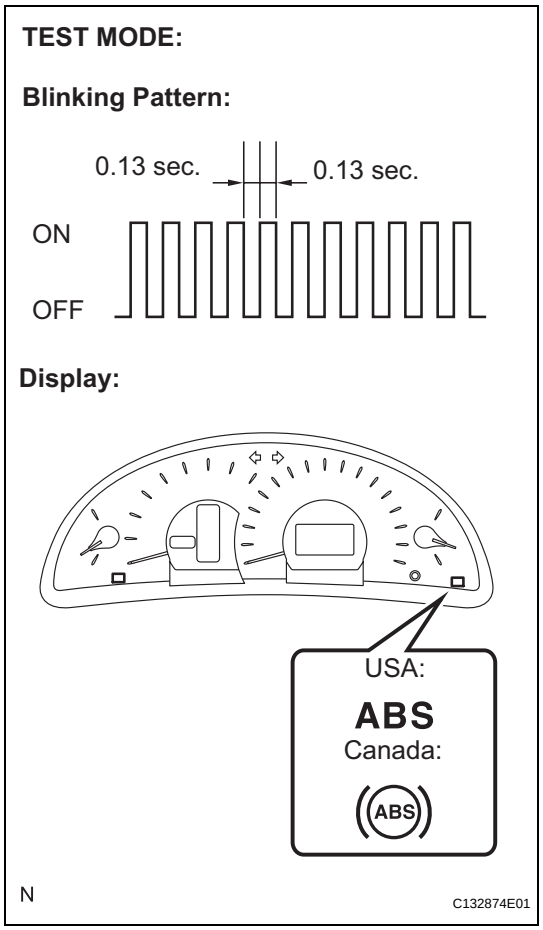
If the ignition switch is turned from on (IG) to on (ACC) or off during Test Mode (signal check), DTCs recorded during the signal check function will be erased.



(a) Procedure to enter Test Mode.
(1) Turn the ignition switch off.
(2) Connect the intelligent tester to the DLC3.
(3) Check that the steering wheel is centered and move the shift lever to the P position (for Automatic Transaxle) or apply the parking brake (Manual Transaxle).
(4) Turn the ignition switch on (IG).



(5) Set the intelligent tester to Test Mode (select "SIGNAL CHECK").
HINT:
Refer to the intelligent tester operator's manual for further details.



(6) Check that the ABS warning light comes on for several seconds and then blinks in test mode.
HINT:
If the ABS warning light does not blink, inspect the ABS warning light circuit.

Trouble Area	See procedure
ABS warning light (Does not come on)	BC-78

(b) Check the sensor signal.
(1) Drive the vehicle straight ahead.
Accelerate the vehicle to a speed of 28 mph (45 km/h) or more for several seconds and check that the ABS warning light goes off when the brake pedal is depressed.
HINT:
- The sensor check may not be completed if wheel spin occurs, or if the steering wheel is turned during this check.
- The ABS warning light goes off when the sensor signal check has been completed and the brake pedal is depressed.
- The ABS warning light comes on immediately after a malfunction has been detected during the speed sensor signal check.

BC

(c) Stop the vehicle.
NOTICE:
- **The speed sensor check may not be completed if the speed sensor check is started while turning the steering wheel or spinning the wheels.**
- **If the signal check has not been completed, the ABS warning light will blink while driving and the ABS system will not operate.**

(d) Read the DTC(s) by following the tester screen.
NOTICE:
- **If only the DTCs are displayed, repair the malfunction area and clear the DTCs.**
- **If the DTCs or Test Mode codes (DTC of signal check function) are displayed, repair the malfunction area, clear the DTCs and perform the Test Mode inspection.**

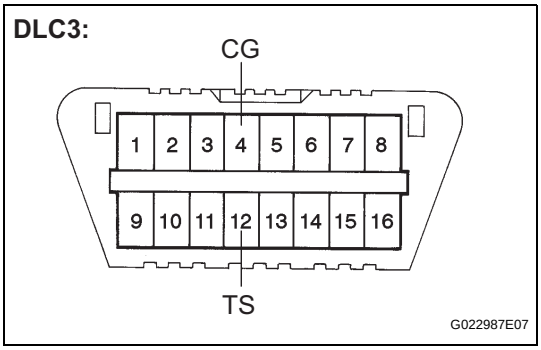
HINT:
See the list of DTCs (See procedure "A").

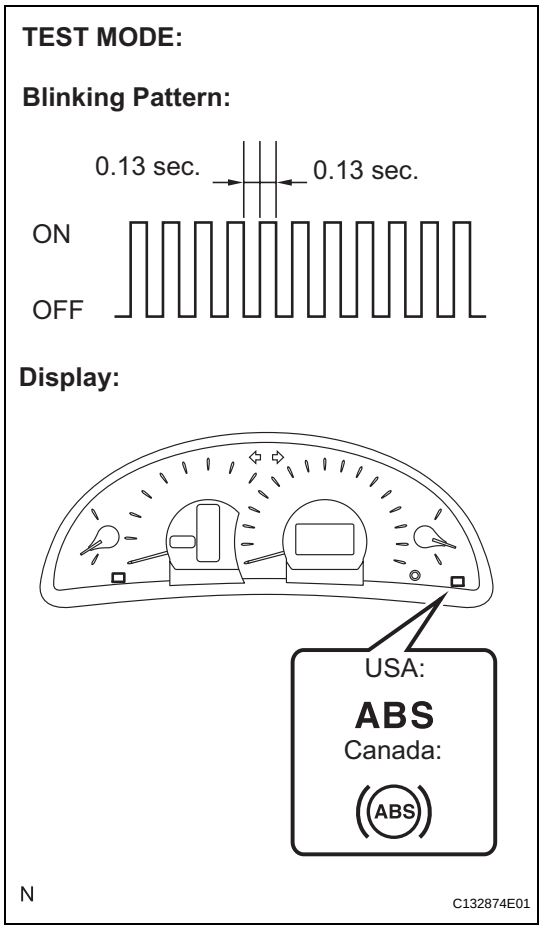
3. SENSOR SIGNAL CHECK BY TEST MODE (SIGNAL CHECK) (SST CHECK WIRE)

HINT:
If the ignition switch is turned from on (IG) to on (ACC) or off during Test Mode (signal check), DTCs recorded during the signal check will be erased.

(a) Procedure for Test Mode.
(1) Turn the ignition switch off.
(2) Check that the steering wheel is centered and move the shift lever to the P position (Automatic Transaxle) or apply the parking brake (Manual Transaxle).
(3) Using SST, connect terminals TS and CG of the DLC3.
SST 09843-18040
(4) Turn the ignition switch on (IG).

DLC3:





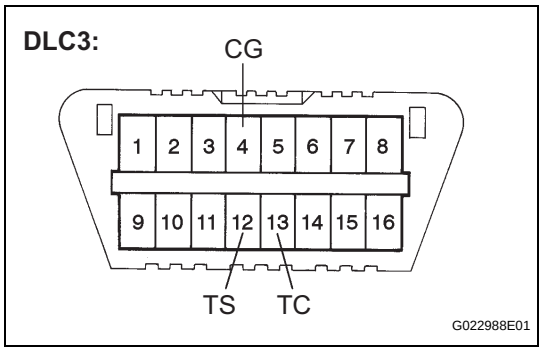
(5) Check that the ABS warning light comes on for several seconds and then blinks in Test Mode.
HINT:
If the ABS warning light does not blink, inspect the TS and CG terminal circuit, and ABS warning light circuit.

Trouble Area	See procedure
TS and CG terminal circuit	BC-97
ABS warning light circuit (Does not come on)	BC-78

(b) Check the sensor signal.
(1) Drive the vehicle straight ahead.
Accelerate the vehicle to a speed of 28 mph (45 km/h) or more for several seconds and check that the ABS warning light goes off when the brake pedal is depressed.
HINT:
- The sensor check may not be completed if wheel spin occurs, or if the steering wheel is turned during this check.
- The ABS warning light goes off when the sensor signal check has been completed and the brake pedal is depressed.
- The ABS warning light comes on immediately after a malfunction has been detected during the speed sensor signal check.

(c) Stop the vehicle.
NOTICE:
- **The speed sensor check may not be completed if the speed sensor check is started while turning the steering wheel or spinning the wheels.**
- **If the signal check has not been completed, the ABS warning light will blink while driving and the ABS system will not operate.**

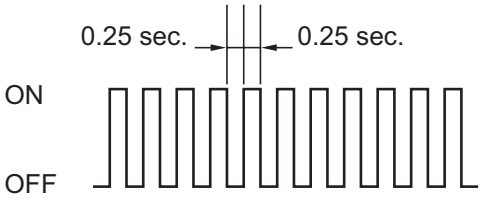
(d) Using SST, connect terminals TC and CG of the DLC3.
SST 09843-18040



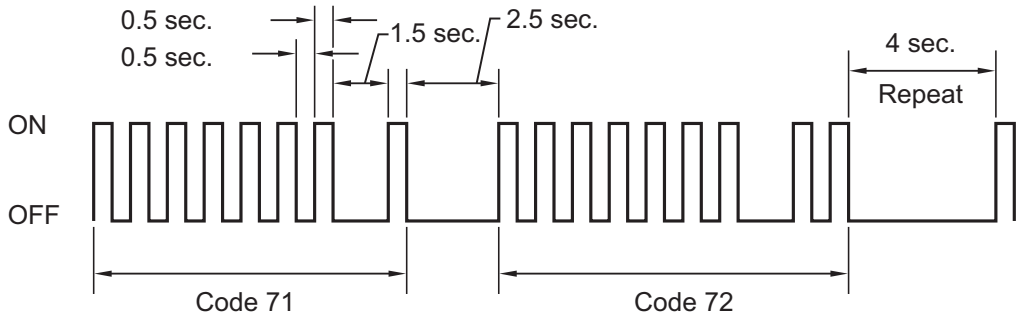
BC

(e) Count the number of blinks of the ABS warning light.

Blinking Pattern of Normal System Code:



Blinking Pattern of Trouble Code (Example Codes 71 and 72):



N

C132876E01

NOTICE:

- **If only the DTCs are displayed, repair the malfunction area and clear the DTCs.**
- **If the DTCs or Test Mode codes (DTC of signal check function) are displayed, repair the malfunction area, clear the DTCs and perform the Test Mode inspection.**

HINT:

- If more than 1 malfunction is detected at the same time, the lowest numbered code will be displayed first.
- See the list of DTCs (See procedure "A").

(f) After performing the check, disconnect the SST from terminals TS and CG, and TC and CG of the DLC3, and turn the ignition switch off.

(g) Turn the ignition switch on (IG) to cancel the test mode.

HINT:

- If the ignition switch is not turned on (IG) after the SST is removed from the DLC3, the previous Test Mode will continue.
- If the ignition switch is turned on (IG) with terminals TS and CG shorted, the previous Test Mode will continue.

4. DTC OF TEST MODE (SIGNAL CHECK) FUNCTION (Procedure "A")

DTC of Test Mode (Signal Check):

Code No.	Diagnosis	Trouble Area
C1271/71	Low output signal of front speed sensor RH	• Front speed sensor RH • Sensor installation • Speed sensor rotor
C1272/72	Low output signal of front speed sensor LH	• Front speed sensor LH • Sensor installation • Speed sensor rotor
C1273/73	Low output signal of rear speed sensor RH	• Rear speed sensor RH • Sensor installation • Speed sensor rotor
C1274/74	Low output signal of rear speed sensor LH	• Rear speed sensor LH • Sensor installation • Speed sensor rotor
C1275/75	Abnormal change in output signal of front speed sensor RH	• Front speed sensor RH • Front speed sensor circuit RH • Sensor installation
C1276/76	Abnormal change in output signal of front speed sensor LH	• Front speed sensor LH • Front speed sensor circuit LH • Sensor installation
C1277/77	Abnormal change in output signal of rear speed sensor RH	• Rear speed sensor RH • Rear speed sensor circuit RH • Sensor installation
C1278/78	Abnormal change in output signal of rear speed sensor LH	• Rear speed sensor LH • Rear speed sensor circuit LH • Sensor installation

HINT:
The codes in this table are output only in Test Mode (signal check).

PROBLEM SYMPTOMS TABLE

If a normal code is displayed during the DTC check but the problem still occurs, check the circuits for each problem symptom in the order given in the table below and proceed to the relevant troubleshooting page.

NOTICE:

When replacing the skid control ECU, sensor, etc., turn the ignition switch off.

HINT:

- Inspect the fuses and relays before investigating the suspected areas as shown in the table below.
- Inspect each malfunction circuit in numerical order for the corresponding symptoms.

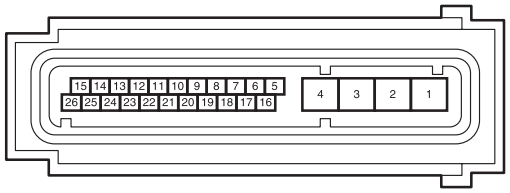
ANTI-LOCK BRAKE SYSTEM:

Symptom	Suspected area	See page
ABS does not operate	1. Check the DTC reconfirming that the normal system code is output	BC-21
	2. IG power source circuit	BC-63
	3. Front speed sensor circuit	BC-30
	4. Rear speed sensor circuit	BC-38
	5. Check the brake actuator assembly with the intelligent tester (Check brake actuator assembly operation using the active test function) If abnormal, check the hydraulic circuit for leakage	BR-42
	6. If the symptoms still occur even after the above circuits in suspected areas have been inspected and proved to be normal, replace the brake actuator assembly (skid control ECU)	BC-432
ABS does not operate efficiently	1. Check the DTC reconfirming that the normal system code is output.	BC-21
	2. Front speed sensor circuit	BC-30
	3. Rear speed sensor circuit	BC-38
	4. Stop light switch circuit	BC-67
	5. Check the brake actuator assembly with the intelligent tester (Check brake actuator assembly operation using the active test function)	BR-42
	6. If the symptoms still occur even after the above circuits in suspected areas have been inspected and proved to be normal, replace the brake actuator assembly (skid control ECU)	BC-432
ABS warning light malfunction (Remains on)	1. ABS warning light circuit	BC-74
	2. Brake actuator assembly (skid control ECU)	BC-432
ABS warning light malfunction (Does not come on)	1. ABS warning light circuit	BC-78
Brake warning light malfunction (Remains on)	1. Brake warning light circuit	BC-81
	2. Brake actuator assembly (skid control ECU)	BC-432
Brake warning light malfunction (Does not come on)	1. Brake warning light circuit	BC-91
	2. Brake actuator assembly (skid control ECU)	BC-432
ABS sensor DTC check cannot be done	1. Check the DTC again and make sure that the normal system code is output	BC-21
	2. TS and CG terminal circuit	BC-97
	3. TC and CG terminal circuit	BC-94
	4. If the symptoms still occur even after the above circuits in suspected areas have been inspected and proved to be normal, replace the brake actuator assembly (skid control ECU)	BC-432

TERMINALS OF ECU

1. TERMINALS OF ECU

Skid Control ECU (Brake Actuator Assembly):



N

C131974E01

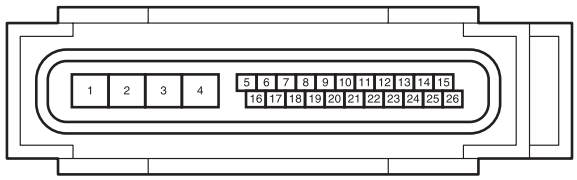
Symbols (Terminal No.)	Terminal Description
GND2 (1)	Actuator pump motor ground
+BM (2)	Motor relay power supply
+BS (3)	Solenoid valves power supply
GND1 (4)	Skid control ground
FL+ (5)	Front LH (+) wheel speed signal input
FL- (6)	Front LH (-) wheel speed signal input
RL+ (7)	Rear LH (+) wheel speed signal input
RR- (8)	Rear RH (-) wheel speed signal input
FR- (9)	Front RH (-) wheel speed signal input
FR+ (10)	Front RH (+) wheel speed signal input
D/G (11)	Diagnosis tester communication line
CANL (15)	CAN communication line L
RL- (17)	Rear LH (-) wheel speed signal input
IG1 (18)	ECU power supply
RR+ (19)	Rear RH (+) wheel speed signal input
STP (20)	Stop light switch input
SP1 (23)	Speed signal output for speedometer
TS (25)	Sensor check input
CANH (26)	CAN communication line H

BC

2. TERMINAL INSPECTION

(a) Disconnect the connector and measure the voltage or resistance on the wire harness side.
HINT:
Voltage cannot be measured with the connector connected to the skid control ECU as the connector is watertight.

Skid Control ECU (Harness Side Connector Front View):



N

C131969E01

BC

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
GND2 (1) - Body ground	W-B - Body ground	Actuator pump motor ground	Always	Below 1 Ω
+BM (2) - Body ground	B - Body ground	Motor relay power supply	Always	10 to 14 V
+BS (3) - Body ground	L - Body ground	Solenoid valves power supply	Always	10 to 14 V
GND1 (4) - Body ground	W-B - Body ground	Skid control ECU ground	Always	Below 1 Ω
IG1 (18) - Body ground	P - Body ground	ECU power supply	Ignition switch on (IG)	10 to 14 V
STP (20) - Body ground	P - Body ground	Stop light switch input	Stop light switch ON (Brake pedal depressed)	8 to 14 V
STP (20) - Body ground	P - Body ground	Stop light switch input	Stop light switch OFF (Brake pedal released)	Below 3 V

DIAGNOSIS SYSTEM

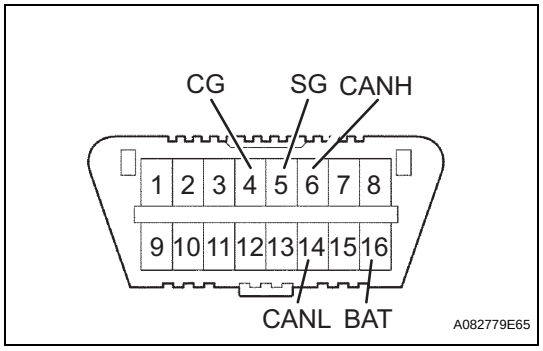
1. DIAGNOSIS SYSTEM

(a) Inspect the battery voltage.

Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge the battery before proceeding.



(b) The vehicle's ECU uses the ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

HINT:

Connect the cable of the intelligent tester to the DLC3, turn the ignition switch on (IG) and attempt to use the intelligent tester. If the screen displays a communication error message, a problem exists on either the vehicle side or the tester side.

If the communication is normal when the tester is connected to another vehicle, inspect the DLC3 on the original vehicle.

If the communication is still impossible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.

BC

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	9 to 14 V
CANH (6) - CANL (14)	HIGH-level CAN bus line	Ignition switch OFF*	54 to 69 Ω
CANH (6) - Battery positive	HIGH-level CAN bus line	Ignition switch OFF*	6 kΩ or higher
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANL (14) - Battery positive	LOW-level CAN bus line	Ignition switch OFF*	6 kΩ or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 Ω or higher

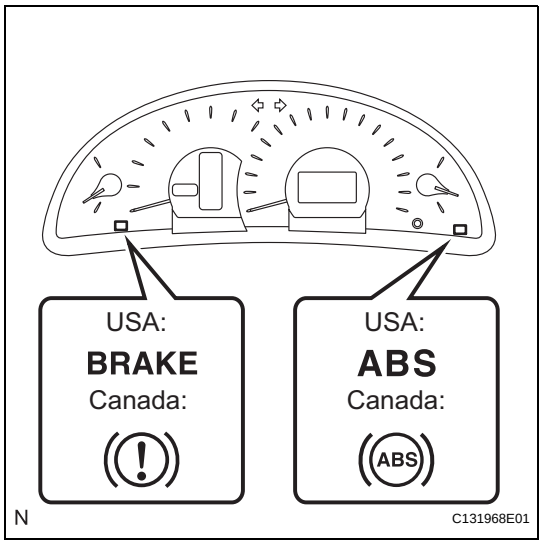
NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**

2. DIAGNOSIS

NOTICE:

When releasing the parking brake, set chocks to hold the vehicle for safety.



(a) Release the parking brake.
(b) Turn the ignition switch on (IG).
(c) If the skid control ECU detects a malfunction, the ABS warning light and brake warning light will come on to warn the driver. The table below indicates which light will come on when there is a malfunction in a particular function.

Item/Trouble Area	ABS System	EBD System	Skid Control ECU
ABS Warning light	○	○	○
Brake Warning light	-	○	○

○: Light ON
-: Light OFF

- The DTCs are simultaneously stored in the memory. The DTCs can be read by connecting the SST (09843-18043) between the TC and CG terminals of the DLC3 and observing the blinking pattern of the ABS warning light, or by connecting an intelligent tester (See page BC-21).
- This system has a sensor signal check function (See page BC-11).

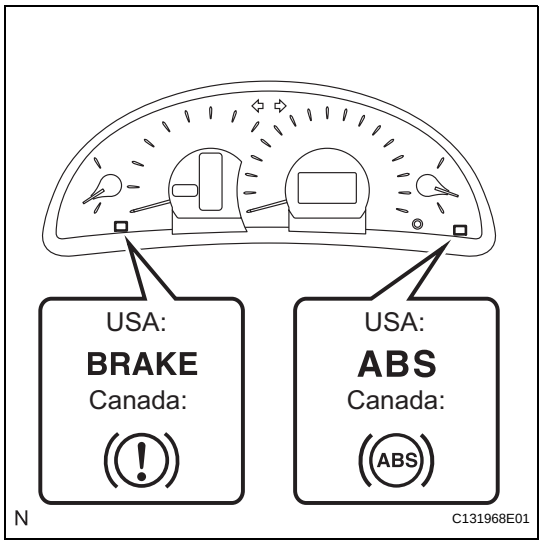
3. WARNING LIGHT INITIAL CHECK

NOTICE:

When releasing the parking brake, set chocks to hold the vehicle for safety.

HINT:

When the parking brake is applied or the level of the brake fluid is low, the brake warning light comes on.



(a) Release the parking brake.
(b) Check that the ABS warning light and brake warning light come on when the ignition switch is turned on (IG) and go off in approximately 3 seconds.
(c) If the warning lights do not come on or remain on, inspect the ABS warning light circuit and/or brake warning light circuit.

Trouble Area	See procedure
ABS warning light circuit (Remains on)	BC-74
ABS warning light circuit (Does not come on)	BC-78
Brake warning light circuit (Remains on)	BC-81
Brake warning light circuit (Does not come on)	BC-91

4. SYMPTOM SIMULATION

HINT:

The most difficult case in troubleshooting is when no symptoms occur. In such cases, a thorough customer problem analysis must be carried out. Then the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be reproduced. No matter how experienced or skilled a technician may be, if he proceeds to troubleshoot without confirming the problem symptoms, he will likely overlook something important and make a wrong guess at some points in the repair operation. This leads to a standstill in troubleshooting.

(a) Vibration method: When vibration seems to be the major cause.

HINT:

Perform the simulation method only during the primary check period (for approximately 6 seconds after the ignition switch is turned on (IG)).

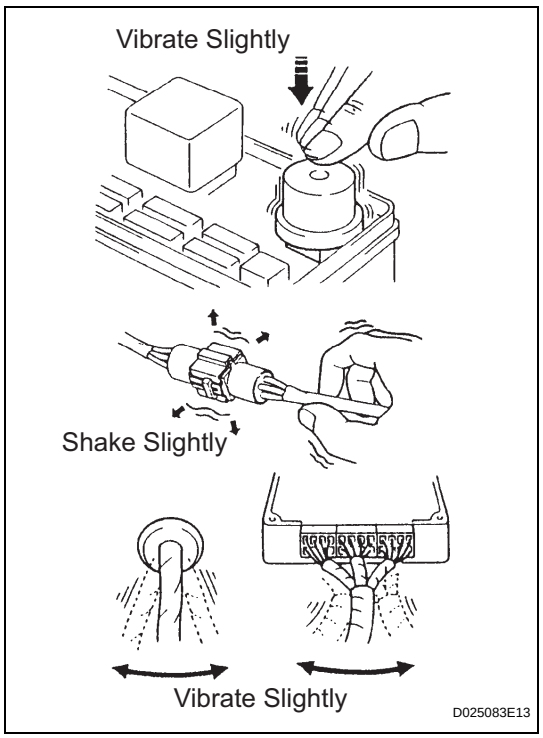
(1) Slightly vibrate the part of the sensor considered to be the problem cause with your fingers and check whether the malfunction occurs.

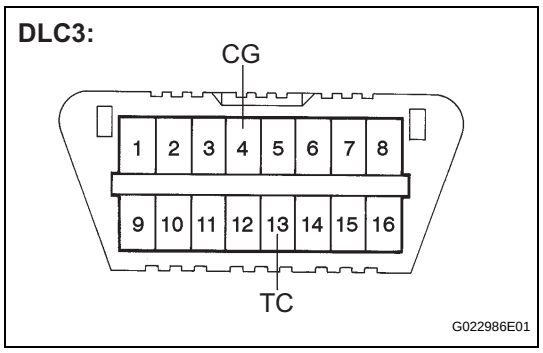
(2) Slightly shake the connector vertically and horizontally.

HINT:

Shaking the relays too strongly may result in open relays.

(3) Slightly shake the wire harness vertically and horizontally. The connector joint and fulcrum of the vibration are the major areas to be checked thoroughly.





DTC CHECK / CLEAR

1. DTC CHECK / CLEAR (SST CHECK WIRE)

(a) DTC check

(1) Using SST, connect terminals TC and CG of the DLC3.

SST 09843-18040

(2) Turn the ignition switch on (IG).

(3) Read the DTCs from the ABS warning light on the combination meter.

HINT:

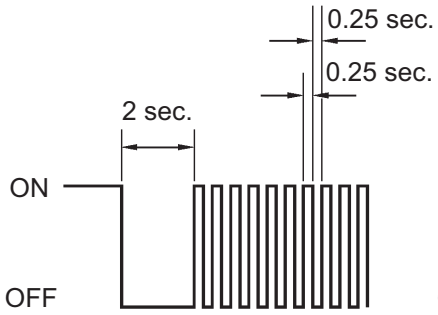
If no code appears, inspect the TC and CG terminal circuit and the ABS warning light circuit.

Trouble Area	See procedure
TC and CG terminal circuit	BC-94
ABS warning light circuit (Remains on)	BC-74
ABS warning light circuit (Does not come on)	BC-78

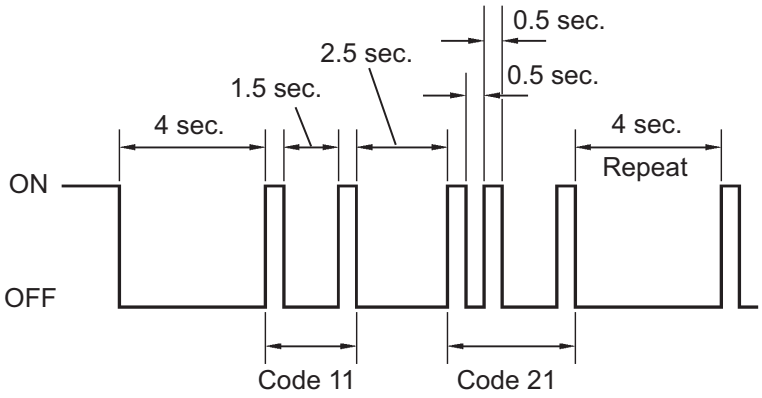
BC

(4) As an example, refer to the chart below for the blinking patterns of the normal system code and trouble codes 11 and 21.

Normal System Code:



Trouble Code (Example Codes 11 and 21):



N

I042843E01

BC

(5) The codes are explained in the code table (See page BC-27).

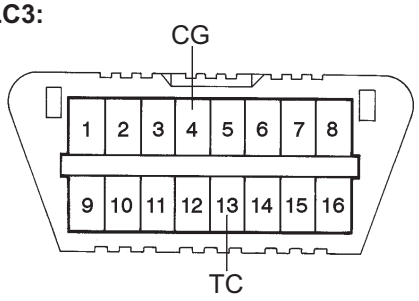
(6) After completing the check, disconnect terminals TC and CG of the DLC3, and turn off the display. If 2 or more DTCs are detected at the same time, the DTCs will be displayed in ascending order.

(b) DTC clear

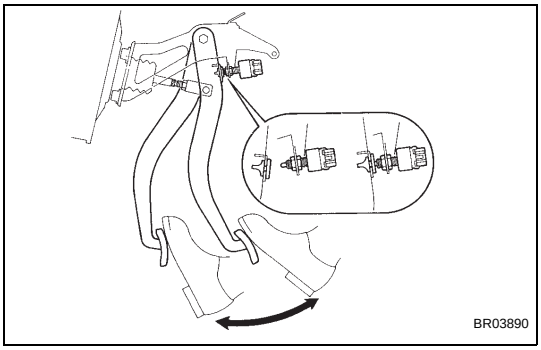
(1) Using SST, connect terminals TC and CG of the DLC3.
SST 09843-18040

(2) Turn the ignition switch on (IG).

DLC3:



G022986E01



BR03890

(3) Clear the DTCs stored in the ECU by depressing the brake pedal 8 times or more within 5 seconds.

(4) Check that the warning light indicates the normal system code.

(5) Remove the SST from the terminals of the DLC3.
HINT:
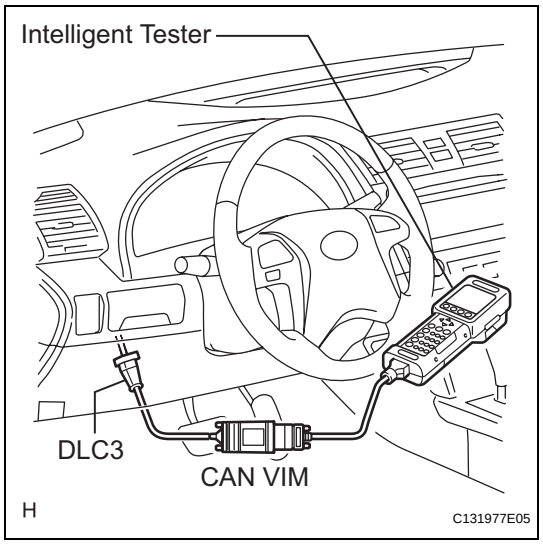
Clearing the DTCs cannot be performed by disconnecting the battery terminal or the ECU-IG fuse.



2. DTC CHECK/CLEAR (WHEN USING INTELLIGENT TESTER:)

(a) DTC check
  (1) Connect the intelligent tester to the DLC3.
  (2) Turn the ignition switch on (IG).
  (3) Read the DTCs by following the prompts on the tester screen.

(b) DTC clear
  (1) Connect the intelligent tester to the DLC3.
  (2) Turn the ignition switch on (IG).
  (3) Operate the intelligent tester to clear the codes.
  HINT:
  Refer to the intelligent tester operator's manual for further details.

3. END OF DTC CHECK/CLEAR

(a) Turn the ignition switch on (IG).

(b) Check that the ABS warning light goes off within approximately 3 seconds.

FREEZE FRAME DATA

1. FREEZE FRAME DATA

(a) Whenever a DTC is detected or the ABS operates, the skid control ECU stores the current vehicle (sensor) status as Freeze Frame Data.

(b) The skid control ECU stores the number of times (maximum: 31) the ignition switch has been turned from off to on (IG) since the last time the ABS was activated.
HINT:
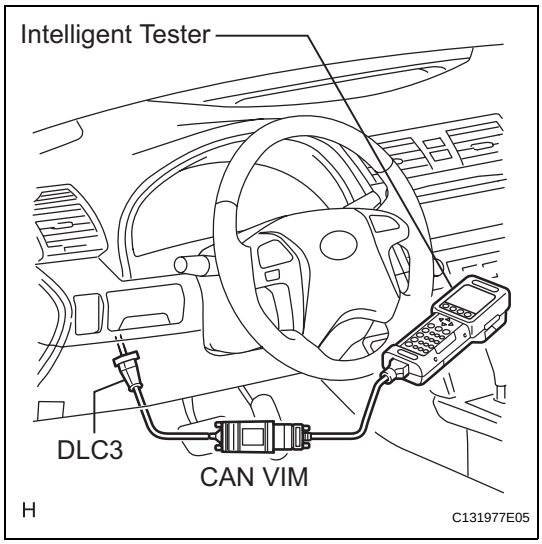
- Freeze frame data at the time the ABS operates: The skid control ECU stores and updates data whenever the ABS system operates.
  When the skid control ECU stores data at the time a DTC is detected, the data stored during ABS operation is erased.
- Freeze frame data at the time a DTC is detected: When the skid control ECU stores data at the time a DTC is detected, no updates will be performed until the data is cleared.

(c) Connect the intelligent tester to the DLC3.

(d) Turn the ignition switch on (IG).

(e) Select "DTC INFO" on the tester display.

(f) On the DTC data display screen, select the DTC data display with "*".



Intelligent Tester Display	Measurement Item	Reference Value
TROUBLE CODE	Freeze DTC	min.: 0, max.: 65535
#DTC	Number of trouble codes	min.: 0, max.: 255
FREEZE TIME	Elapsed time after freeze trigger	Min.: 0 ms, Max.: 500 ms
#IG ON	Number of operations of ignition switch on (IG) after storing freeze frame data	0 to 31
STOP LAMP SW	Stop light switch signal	Stop light switch ON: ON, OFF: OFF
PARKING BRAKE SW	Parking brake condition	ON: Parking brake on OFF: Parking brake off
OPERATED SYSTEM	Operated system	ABS operated: ABS
FR WHEEL SPD	Front right wheel speed	Min.: 0 MPH (0 km/h), Max.: 202 MPH (326 km/h)
FL WHEEL SPD	Front left wheel speed	Min.: 0 MPH (0 km/h), Max.: 202 MPH (326 km/h)
RR WHEEL SPD	Rear right wheel speed	Min.: 0 MPH (0 km/h), Max.: 202 MPH (326 km/h)

Intelligent Tester Display	Measurement Item	Reference Value
RL WHEEL SPD	Rear left wheel speed	Min.: 0 MPH (0 km/h), Max.: 202 MPH (326 km/h)
VEHICLE SPD	Vehicle speed reading	Speed indication on the meter
SPD GRADE	Vehicle speed grade	Min.: -1.869 G, Max.: 1.869 G

FAIL-SAFE CHART

1. FAIL SAFE OPERATION

If there is a problem with sensor signals or brake actuator systems, the skid control ECU will prohibit power supply to the brake actuator and terminate ABS control.

ABS control will be prohibited, but EBD control continues as much as possible. If EBD control is impossible, the brake warning light will come on to warn the driver (See page BC-19).

Malfunction Area	Control Method
ABS system	Prohibits the ABS control
EBD system	Prohibits the ABS and EBD control

HINT:

If the ABS system has a malfunction, the brake system will operate normally without ABS control.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

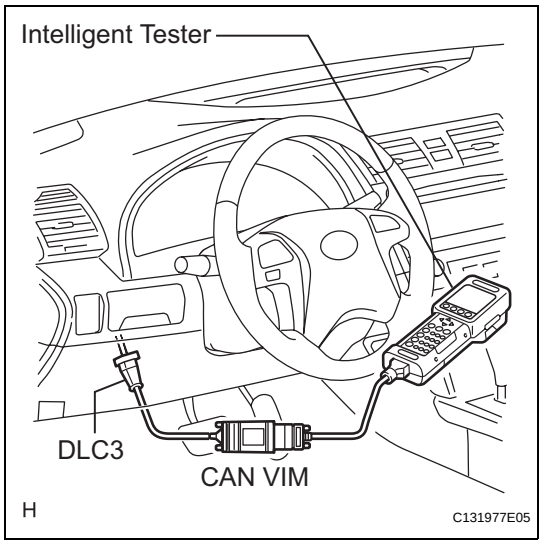
According to the DATA LIST displayed by the intelligent tester, the value of the switch, sensor, actuator and other items can be read without removing any parts. Reading the DATA LIST as a first step in troubleshooting is one of the methods to save labor time.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) According to the display on the tester, read the "DATA LIST".



DATA LIST:

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
ABS MOT RELAY	ABS motor relay / ON or OFF	ON: During pump motor operation OFF: No pump motor operation	-
SOL RELAY	Solenoid relay / ON or OFF	ON: Solenoid relay ON OFF: Solenoid relay OFF	-
STOP LAMP SW	Stop light switch / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
PARKING BRAKE SW	Parking brake switch / ON or OFF	ON: Parking brake applied OFF: Parking brake released	-
FR WHEEL SPD	Wheel speed sensor (FR) reading / min.: 0 km/h (0 MPH), max.: 326 km/h (202 MPH)	Actual wheel speed	Speed indicated on speedometer

RR EBD STATUS	Rear right EBD control status / ON or OFF	ON: During EBD control OFF: Not EBD control	-
RL EBD STATUS	Rear left EBD control status / ON or OFF	ON: During EBD control OFF: Not EBD control	-

BC

2. ACTIVE TEST

HINT:

Performing the ACTIVE TEST using the intelligent tester allows the relay, actuator and other items to operate without removing any parts. Performing the ACTIVE TEST as a first step in troubleshooting is one of the methods to save labor time.

It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.

(b) Turn the ignition switch on (IG).

(c) According to the display on the tester, perform the "ACTIVE TEST".

ACTIVE TEST:

Item	Vehicle Condition / Test Details	Diagnostic Note
SFRR	Turns ABS solenoid (SFRR) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SFRH	Turns ABS solenoid (SFRH) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SFLR	Turns ABS solenoid (SFLR) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SFLH	Turns ABS solenoid (SFLH) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SRRR	Turns ABS solenoid (SRRR) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SRRH	Turns ABS solenoid (SRRH) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SRLR	Turns ABS solenoid (SRLR) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
SRLH	Turns ABS solenoid (SRLH) ON / OFF	Operating sound of solenoid (clicking sound) can be heard
MOT RELAY	Turns ABS motor relay ON / OFF	Operating sound of motor can be heard
ABS WRN LIGHT	Turns ABS warning light ON / OFF	Observe combination meter
BRAKE WRN LIGHT	Turns Brake warning light ON / OFF	Observe combination meter

DIAGNOSTIC TROUBLE CODE CHART

NOTICE:

Turn the ignition switch off before removing parts.

HINT:

- If no abnormality is found when inspecting parts, inspect the skid control ECU and ground points for poor contact.
- If a malfunction code is displayed during the DTC check, check the circuit indicated by the DTC. For details of each code, refer to the "See page" for respective "DTC No." in the DTC chart.
- When 2 or more DTCs are detected, perform circuit inspection one by one until the problem is identified.

ANTI-LOCK BRAKE SYSTEM:

DTC No.	Detection Item	Trouble Area	See page

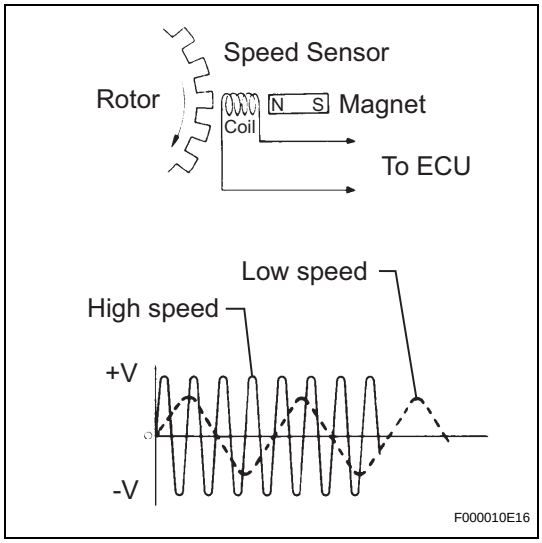
BC

DESCRIPTION

The speed sensors detect wheel speed and transmit the signals to the skid control ECU. These signals are used for control of the ABS control system. Each of the front and rear rotors has 48 serrations. When the rotors rotate, the magnetic field generated by the permanent magnet in the speed sensor induces AC voltage. Since the frequency of this AC voltage changes in direct proportion to the speed of the rotor, the frequency is used by the ECU to detect the speed of each wheel.
DTCs C1271/71 to C1276/76 can be deleted when the speed sensor sends a wheel speed signal or the test mode ends. DTCs C1271/71 to C1276/76 are output only in the test mode.



DTC No.	DTC Detecting Condition	Trouble Area
C0200/31 C0205/32	When either of the following is detected: • Vehicle speed is more than 25 mph (40 km/h), and pulses are not input for 0.03 sec. • When the vehicle speed has reached 8 mph (12 km/h) after the initial start or restart, a wheel speed of 0 mph (0 km/h) is detected.	• Front speed sensor RH and/or LH • Front speed sensor circuit RH and/or LH • Front speed sensor rotor RH and/or LH • Sensor installation • Brake actuator assembly (skid control ECU)
C1330/35 C1331/36	Abnormality in the resistance value of each speed sensor is detected.	• Front speed sensor RH and/or LH • Front speed sensor circuit RH and/or LH • Sensor installation
C1271/71 C1272/72	Detected only during test mode.	• Front speed sensor • Sensor installation • Sensor rotor
C1275/75 C1276/76	Detected only during test mode.	• Front speed sensor • Front speed sensor circuit • Sensor installation

HINT:
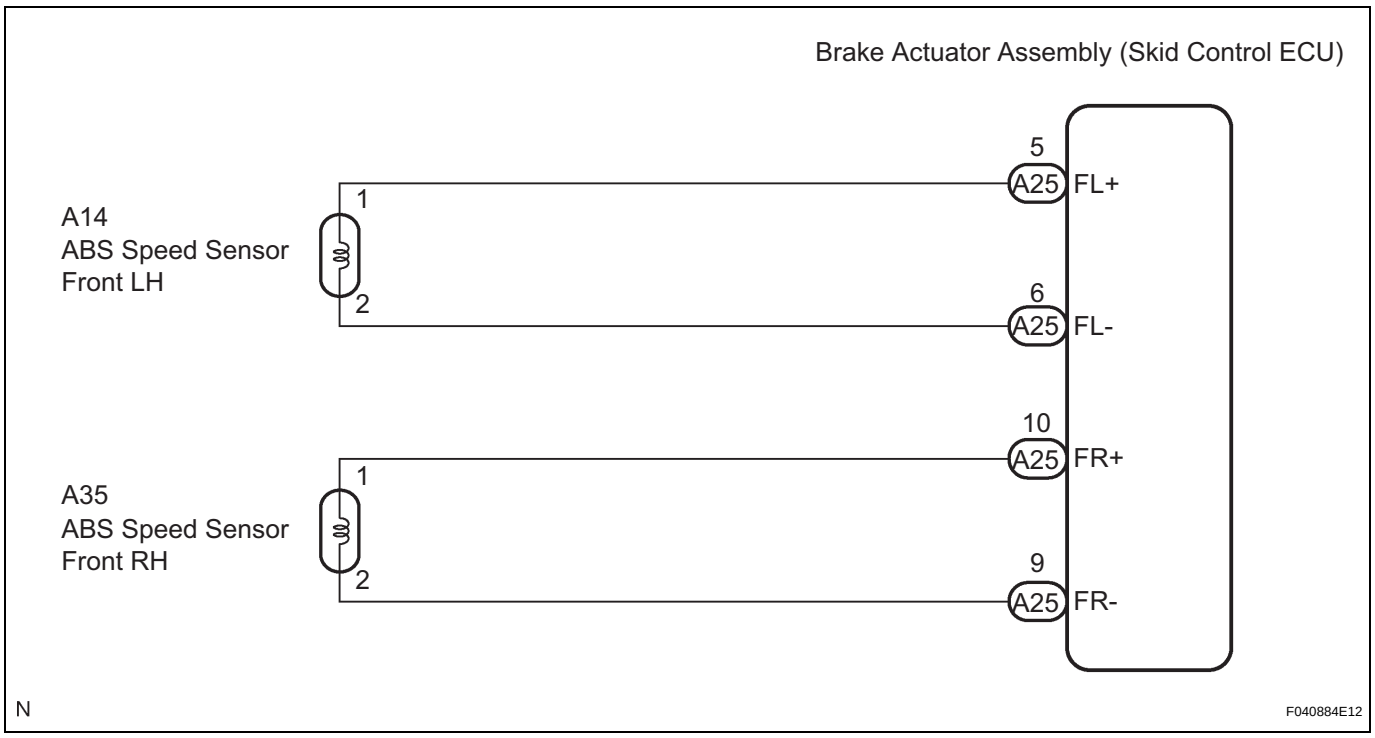
DTC No. C0200/31 and C1330/35 are for the front speed sensor RH.
DTC No. C0205/32 and C1331/36 are for the front speed sensor LH.

BC

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	READ VALUE OF INTELLIGENT TESTER (FRONT SPEED SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.

(c) Select "DATA LIST" and read the value displayed on the intelligent tester (See page BC-25).

DATA LIST: ABS

Item	Measurement Item / Range (Display)	Normal Condition
FR WHEEL SPD	Wheel speed sensor (FR) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed
FL WHEEL SPD	Wheel speed sensor (FL) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed

(d) Check that there is no difference between the speed value output from the speed sensor displayed on the intelligent tester and the speed value displayed on the speedometer when driving the vehicle.
OK:
The speed value output from the speed sensor displayed on the intelligent tester is the same as the actual vehicle speed.

NG → **Go to step 5**

BC

OK

2 PERFORM TEST MODE INSPECTION (SIGNAL CHECK)

(a) Check if test mode (signal check) DTCs are detected (See page BC-11).

Result

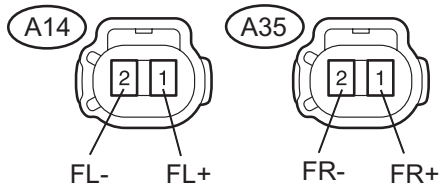
Condition	Proceed to
Test mode (signal check) DTC is not output	A
Test mode (signal check) DTC is output	B

B → **Go to step 5**

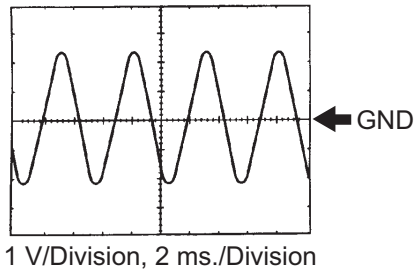
A

3 INSPECT SPEED SENSOR SIGNAL WAVEFORM

Front Speed Sensor (Wire Harness Side) Connector Front View:



Normal Signal Waveform:



C132005E01

(a) Lift up the vehicle.
(b) Perform the inspection using an oscilloscope.
  (1) Disconnect the front speed sensor connector.
  (2) Connect the oscilloscope to terminals 1 and 2 of the front speed sensor.
  (3) Check that a waveform is output when the tires are rotated.
  OK:
  The same waveform is output from front wheels and there is no noise or interference in the waveform.
  HINT:
  - As vehicle speed (wheel rotation speed) increases, the width of the waveform narrows and the output voltage becomes greater.
  - When noise is identified in the waveform on the oscilloscope, the erratic signals are generated due to rotor scratches, looseness or foreign matter attached to the speed sensor.
(c) Connect the connector.

NG → **Go to step 11**

OK

4 RECONFIRM DTC

(a) Clear the DTCs (See page BC-21).
(b) Drive the vehicle at a speed of approximately 25 mph (40 km/h) or more for 60 seconds or more.
(c) Check if the same DTCs are recorded (See page BC-21).
  HINT:
  Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTCs (C0200/31, C0205/32, C1330/35 and C1331/36) are output	A
DTCs (C0200/31, C0205/32, C1330/35 and C1331/36) are output (When troubleshooting in accordance with the PROBLEM SYMPTOMS TABLE)	B
DTCs (C0200/31, C0205/32, C1330/35 and C1331/36) are not output (When troubleshooting in accordance with the DTC CHART)	C

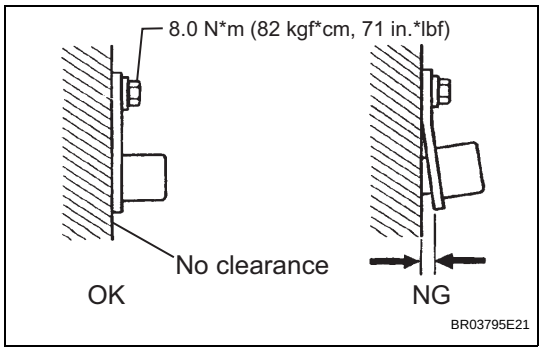
B → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page BC-16)**

C → **END**

BC

A

5 INSPECT FRONT SPEED SENSOR INSTALLATION



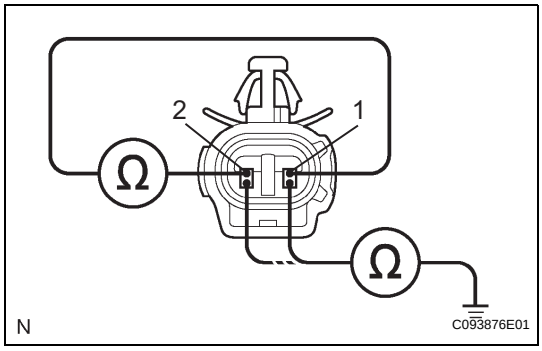
(a) Check the front speed sensor installation.
OK:
The installation bolt is tightened properly.
There is no clearance between the sensor and front steering knuckle.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
NOTICE:
Check the speed sensor signal after replacement (See page BC-11).

NG → **REPLACE FRONT SPEED SENSOR (See page BC-438)**

BC

OK

6 INSPECT FRONT SPEED SENSOR



(a) Make sure that there is no looseness at the locking part and the connecting part of the connectors.
(b) Disconnect the front speed sensor connectors.
(c) Measure the resistance according to the value(s) in the table below.
Standard resistance:
LH

Tester Connection	Specified Condition
A14-1 (FL+) - A14-2 (FL-)	0.92 to 1.22 kΩ at 20 °C (68°F)
A14-1 (FL+) - Body ground	10 kΩ or higher
A14-2 (FL-) - Body ground	10 kΩ or higher

RH

Tester Connection	Specified Condition
A35-1 (FR+) - A35-2 (FR-)	0.92 to 1.22 kΩ at 20 °C(68°F)
A35-1 (FR+) - Body ground	10 kΩ or higher
A35-2 (FR-) - Body ground	10 kΩ or higher

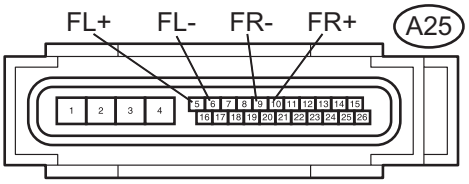
NOTICE:
Check the speed sensor signal after replacement (See page BC-11).

NG → **REPLACE FRONT SPEED SENSOR (See page BC-438)**

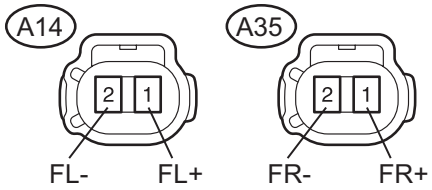
OK

7 CHECK HARNESS AND CONNECTOR (FRONT SPEED SENSOR TO SKID CONTROL ECU)

Skid Control ECU (Wire Harness Side) Connector Front View:



Front Speed Sensor (Wire Harness Side) Connector Front View:



N

C132908E02

(a) Disconnect the skid control ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

LH

Tester Connection	Specified Condition
A25-5 (FL+) - A14-1 (FL+)	Below 1 Ω
A25-6 (FL-) - A14-2 (FL-)	Below 1 Ω
A14-1 (FL+) - Body ground	10 kΩ or higher
A14-2 (FL-) - Body ground	10 kΩ or higher

RH

Tester Connection	Specified Condition
A25-10 (FR+) - A35-1 (FR+)	Below 1 Ω
A25-9 (FR-) - A35-2 (FR-)	Below 1 Ω
A35-1 (FR+) - Body ground	10 kΩ or higher
A35-2 (FR-) - Body ground	10 kΩ or higher

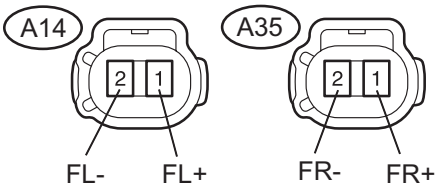
(c) Connect the connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (FRONT SPEED SENSOR TO SKID CONTROL ECU)**

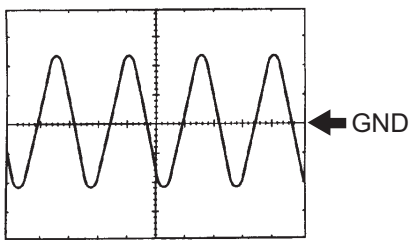
OK

8 INSPECT SPEED SENSOR SIGNAL WAVEFORM

Front Speed Sensor (Wire Harness Side) Connector Front View:



Normal Signal Waveform:



1 V/Division, 2 ms./Division

C132005E01

(a) Lift up the vehicle.
(b) Perform the inspection using an oscilloscope.
  (1) Disconnect the front speed sensor connector.
  (2) Connect the oscilloscope to terminals 1 and 2 of the front speed sensor.
  (3) Check that a waveform is output when the tires are rotated.

  OK:

  The same waveforms is output from front wheels and there is no noise or interference in the waveform.

  HINT:
  - As vehicle speed (wheel rotation speed) increases, the width of the waveform narrows and the output voltage becomes greater.
  - When noise is identified in the waveform on the oscilloscope, the erratic signals are generated due to rotor scratches, looseness or foreign matter attached to the speed sensor.

  (4) Connect the connector.

NG → **Go to step 11**

BC

OK

9	READ VALUE OF INTELLIGENT TESTER (FRONT SPEED SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Select "DATA LIST" and read the value displayed on the intelligent tester (See page BC-25).

DATA LIST: ABS

Item	Measurement Item / Range (Display)	Normal Condition
FR WHEEL SPD	Wheel speed sensor (FR) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed
FL WHEEL SPD	Wheel speed sensor (FL) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed

(d) Check that there is no difference between the speed value output from the speed sensor displayed on the intelligent tester and the speed value displayed on the speedometer when driving the vehicle.
OK:
The speed value output from the speed sensor displayed on the intelligent tester is the same as the actual vehicle speed.
HINT:
If troubleshooting has been carried out according to the "PROBLEM SYMPTOMS TABLE", refer back to the table and proceed to the next step before replacing the part (See page BC-16).

BC

NG → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

OK

10	RECONFIRM DTC

(a) Clear the DTCs (See page BC-21).
(b) Drive the vehicle at a speed of approximately 25 mph (40 km/h) or more for 60 seconds or more.
(c) Check if the same DTCs are recorded (See page BC-21).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTCs (C0200/31, C0205/32, C1330/35 and C1331/36) are output	A
DTCs (C0200/31, C0205/32, C1330/35 and C1331/36) are not output	B

B → **END**

A

11	INSPECT SPEED SENSOR TIP

(a) Remove the front speed sensor (See page BC-438).
(b) Check the sensor tip.
OK:
No scratches or foreign matter on the sensor tip.
NOTICE:
Check the speed sensor signal after cleaning or replacement (See page BC-11).
(c) Install the speed sensor.

NG → **CLEAN OR REPLACE SPEED SENSOR**

OK

CLEAN OR REPLACE SPEED SENSOR ROTOR

DTC	**C0210/33**	**Right Rear Wheel Speed Sensor Signal Malfunction**
DTC	**C0215/34**	**Left Rear Wheel Speed Sensor Signal Malfunction**
DTC	**C1273/73**	**Low Output Signal of Rear Speed Sensor RH (Test Mode DTC)**
DTC	**C1274/74**	**Low Output Signal of Rear Speed Sensor LH (Test Mode DTC)**
DTC	**C1277/77**	**Abnormal Change in Output Signal of Rear Speed Sensor RH (Test Mode DTC)**
DTC	**C1278/78**	**Abnormal Change in Output Signal of Rear Speed Sensor LH (Test Mode DTC)**
DTC	**C1332/38**	**Right Rear Speed Sensor Circuit**
DTC	**C1333/39**	**Left Rear Speed Sensor Circuit**

BC

DESCRIPTION

Refer to DTCs C0200/31, C0205/32, C1330/35, and C1331/36 (See page BC-30).
DTCs from C1273/73 to C1278/78 can be deleted when the speed sensor sends a vehicle speed signal or the test mode ends. DTCs from C1273/73 to C1278/78 are output only in the test mode.

DTC No.	DTC Detecting Condition	Trouble Area
C0210/33 C0215/34	When either of the following is detected: • Vehicle speed is more than 25 mph (40 km/h), and pulses are not input for 0.03 sec. • When the vehicle speed has reached 8 mph (12 km/h), after the initial start or restart a wheel speed of 0 mph (0 km/h) is detected.	• Rear speed sensor RH and/or LH • Rear speed sensor circuit RH and/or LH • Rear speed sensor rotor RH and/or LH • Sensor installation • Brake actuator assembly (skid control ECU)
C1332/38 C1333/39	Abnormality in the resistance value of each speed sensor is detected.	• Rear speed sensor RH and/or LH • Rear speed sensor circuit RH and/or LH • Sensor installation
C1273/73 C1274/74	Detected only during test mode.	• Rear speed sensor • Sensor installation • Sensor rotor
C1277/77 C1278/78	Detected only during test mode.	• Rear speed sensor • Sensor installation • Sensor rotor

HINT:
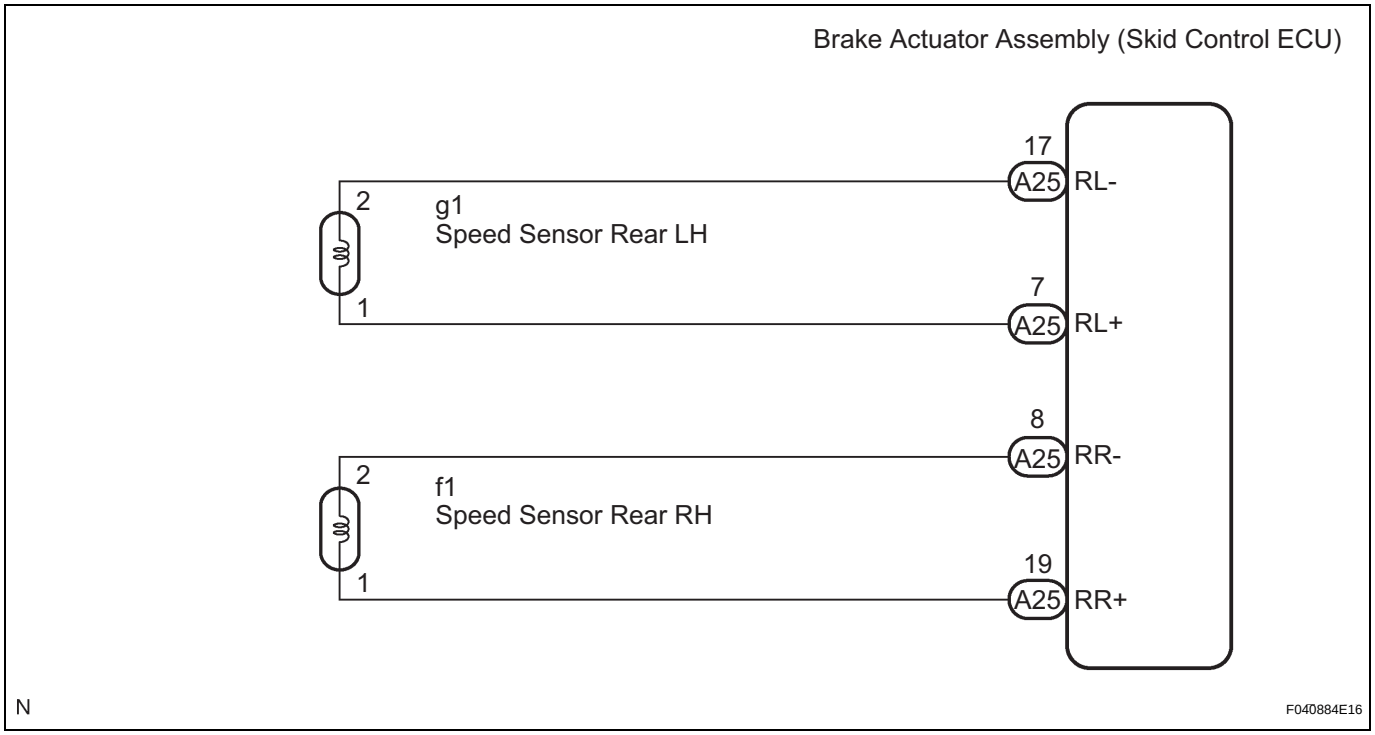
DTC No. C0210/33 and C1332/38 are for the rear speed sensor RH.
DTC No. C0215/34 and C1333/39 are for the rear speed sensor LH.

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	READ VALUE OF INTELLIGENT TESTER (REAR SPEED SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Select "DATA LIST" and read the value displayed on the intelligent tester (See page BC-25).

DATA LIST: ABS

Item	Measurement Item / Range (Display)	Normal Condition
RR WHEEL SPD	Wheel speed sensor (RR) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed
RL WHEEL SPD	Wheel speed sensor (RL) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed

(d) Check that there is no difference between the speed value output from the speed sensor displayed on the intelligent tester and the speed value displayed on the speedometer when driving the vehicle.

OK:

The speed value output from the speed sensor displayed on the intelligent tester is the same as the actual vehicle speed.

NG → **Go to step 5**

OK

2	PERFORM TEST MODE INSPECTION (SIGNAL CHECK)

(a) Check if test mode (signal check) DTCs are detected (See page BC-11).

Result

Condition	Proceed to
Test mode (signal check) DTC is not output	A
Test mode (signal check) DTC is output	B

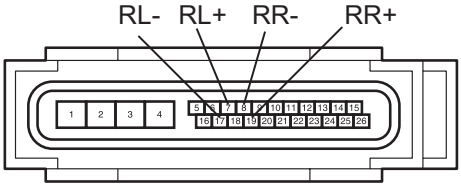
B → **Go to step 5**

A

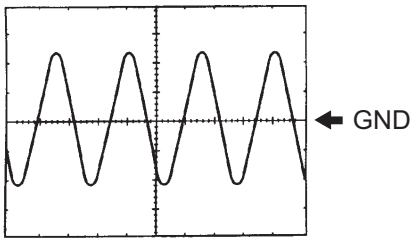
3	INSPECT SPEED SENSOR SIGNAL WAVEFORM

BC

Skid Control ECU (Harness Side Connector Front View):



Normal Signal Waveform:



C132907E02

(a) Lift up the vehicle.
(b) Perform the inspection using an oscilloscope.
  (1) Disconnect the skid control ECU connector.
  (2) Connect the oscilloscope to terminals of the skid control ECU.
  (3) Check that a waveform is output when the tires are rotated.
    OK:
    The same waveform is output from rear wheels and there is no noise or interference in the waveform.
    HINT:
    - As vehicle speed (wheel rotation speed) increases, the width of the waveform narrows and the output voltage becomes greater.
    - When noise is identified in the waveform on the oscilloscope, the erratic signals are generated due to rotor scratches, looseness or foreign matter attached to the speed sensor.
  (4) Connect the connector.

NG → **CLEAN OR REPLACE SPEED SENSOR AND SENSOR ROTOR**

OK

4	RECONFIRM DTC

(a) Clear the DTCs (See page BC-21).
(b) Drive the vehicle at a speed of approximately 25 mph (40 km/h) or more for 60 seconds or more.

(c) Check if the same DTCs are recorded (See page BC-21).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTCs (C0210/33, C0215/34, C1332/38 and C1333/39) are output	A
DTCs (C0210/33, C0215/34, C1332/38 and C1333/39) are output (When troubleshooting in accordance with the PROBLEM SYMPTOMS TABLE)	B
DTCs (C0210/33, C0215/34, C1332/38 and C1333/39) are not output (When troubleshooting in accordance with the DTC CHART)	C

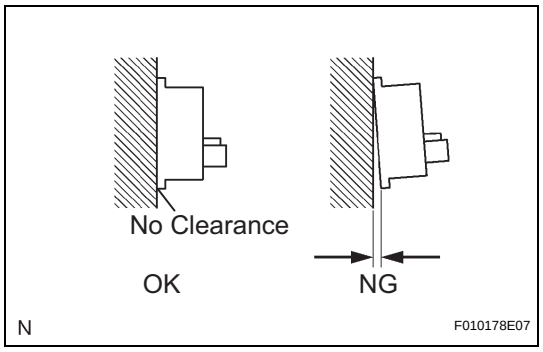
B → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page BC-16)**

C → **END**

BC

A

5 INSPECT SPEED SENSOR INSTALLATION

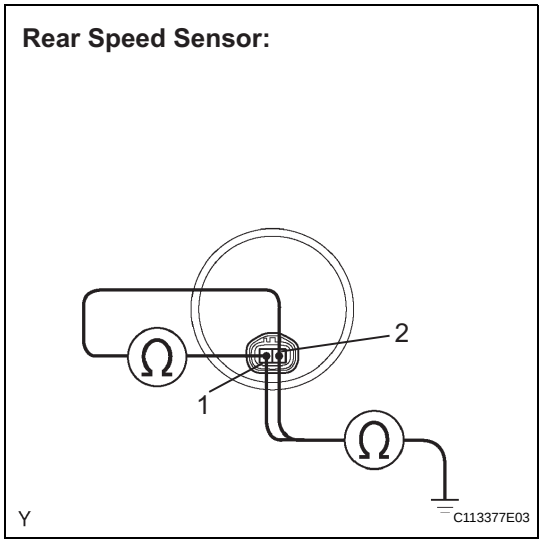


(a) Check the rear speed sensor installation.
OK:
There is no clearance between the sensor and rear axle carrier.
NOTICE:
Check the speed sensor signal after replacement (See page BC-11).

NG → **REPLACE REAR SPEED SENSOR (See page BC-443)**

OK

6	INSPECT REAR SPEED SENSOR



(a) Disconnect the rear speed sensor connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

LH

Tester Connection	Specified Condition
g1-1 (RL+) - g1-2 (RL-)	Below 2.2 kΩ
g1-1 (RL+) - Body ground	10 kΩ or higher
g1-2 (RL-) - Body ground	10 kΩ or higher

RH

Tester Connection	Specified Condition
f1-1 (RR+) - f1-2 (RR-)	Below 2.2 kΩ
f1-1 (RR+) - Body ground	10 kΩ or higher
f1-2 (RR-) - Body ground	10 kΩ or higher

NOTICE:
Check the speed sensor signal after replacement (See page BC-11).

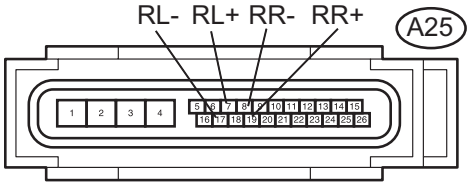
NG → **REPLACE REAR SPEED SENSOR (See page BC-443)**

OK

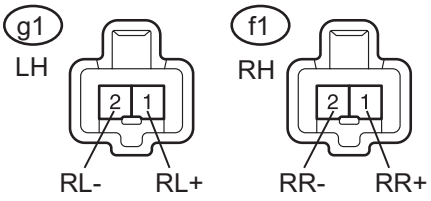
BC

7 CHECK HARNESS AND CONNECTOR (SKID CONTROL SENSOR WIRE TO SKID CONTROL ECU)

Skid Control ECU (Wire Harness Side) Connector Front View:



Front Speed Sensor (Wire Harness Side) Connector Front View:



N

C132909E03

(a) Check harness and connector.
(1) Disconnect the skid control ECU connector.
(2) Disconnect the skid control sensor wire.
(3) Measure the resistance according to the value(s) in the table below.

Standard resistance:

LH

Tester Connection	Specified Condition
A25-7 (RL+) - g1-1 (RL+)	Below 1 Ω
A25-17 (RL-) - g1-2 (RL-)	Below 1 Ω
g1-1 (RL+) - Body ground	10 kΩ or higher
g1-2 (RL-) - Body ground	10 kΩ or higher

RH

Tester Connection	Specified Condition
A25-19 (RR+) - f1-1 (RR+)	Below 1 Ω
A25-8 (RR-) - f1-2 (RR-)	Below 1 Ω
f1-1 (RR+) - Body ground	10 kΩ or higher
f1-2 (RR-) - Body ground	10 kΩ or higher

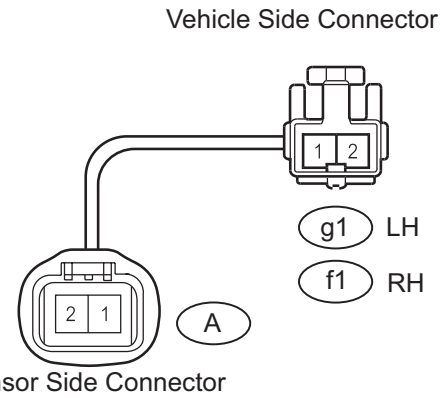
BC

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SKID CONTROL ECU TO SKID CONTROL SENSOR WIRE)**

OK

8 CHECK HARNESS AND CONNECTOR (SKID CONTROL SENSOR WIRE TO REAR SPEED SENSOR)

Skid Control Sensor Wire:



C113396E04

(a) Check harness and connector (skid control sensor wire).
(1) Measure the resistance according to the value(s) in the table below.

Standard resistance:

LH

Tester Connection	Specified Condition
g1-1 - A-1	Below 1 Ω
g1-1 - A-2	10 kΩ or higher
g1-1 - Body ground	10 kΩ or higher
g1-2 - A-2	Below 1 Ω
g1-2 - A-1	10 kΩ or higher
g1-2 - Body ground	10 kΩ or higher

RH

Tester Connection	Specified Condition
f1-1 - A-1	Below 1 Ω

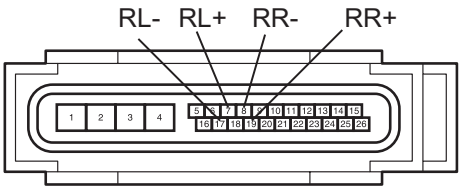
Tester Connection	Specified Condition
f1-1 - A-2	10 kΩ or higher
f1-1 - Body ground	10 kΩ or higher
f1-2 - A-2	Below 1 Ω
f1-2 - A-1	10 kΩ or higher
f1-2 - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE SKID CONTROL SENSOR WIRE**

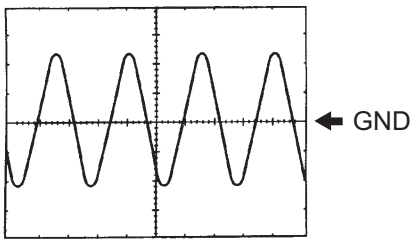
OK

9 INSPECT SPEED SENSOR SIGNAL WAVEFORM

Skid Control ECU (Harness Side Connector Front View):



Normal Signal Waveform:



1 V/Division, 2 ms./Division

C132907E02

(a) Lift up the vehicle.
(b) Perform the inspection using the oscilloscope.
  (1) Disconnect the skid control ECU connector.
  (2) Connect the oscilloscope to terminals of the skid control ECU.
  (3) Check that a waveform is output when the tires are rotated.
    OK:
    The same waveforms is output from rear wheels and there is no noise or interference in the waveform.
    HINT:
    - As vehicle speed (wheel rotation speed) increases, the width of the waveform narrows and the output voltage becomes greater.
    - When noise is identified in the waveform on the oscilloscope, the erratic signals are generated due to rotor scratches, looseness or foreign matter attached to the speed sensor.
  (4) Connect the connectors.

NG → **CLEAN OR REPLACE SPEED SENSOR AND SENSOR ROTOR**

OK

10 READ VALUE OF INTELLIGENT TESTER (REAR SPEED SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.

(c) Select "DATA LIST" and read the value displayed on the intelligent tester (See page BC-25).

DATA LIST: ABS

Item	Measurement Item / Range (Display)	Normal Condition
RR WHEEL SPD	Wheel speed sensor (RR) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed
RL WHEEL SPD	Wheel speed sensor (RL) reading / min.: 0 MPH (0 km/h), max.: 202 MPH (326 km/h)	Actual wheel speed

(d) Check that there is no difference between the speed value output from the speed sensor displayed on the intelligent tester and the speed value displayed on the speedometer when driving the vehicle.

OK:

The speed value output from the speed sensor displayed on the intelligent tester is the same as the actual vehicle speed.

HINT:

- It is suspected that the DTCs were output due to a bad connection of the connector terminal.
- If troubleshooting has been carried out according to the "PROBLEM SYMPTOMS TABLE", refer back to the table and proceed to the next step (See page BC-16).

NG → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

OK

11 RECONFIRM DTC

(a) Clear the DTCs (See page BC-21).
(b) Drive the vehicle at a speed of approximately 25 mph (40 km/h) or more for 60 seconds or more.
(c) Check if the same DTCs are recorded (See page BC-21).

HINT:

Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTCs (C0210/33, C0215/34, C1332/38 and C1333/39) are output	A
DTCs (C0210/33, C0215/34, C1332/38 and C1333/39) are not output	B

B → **END**

A

12 INSPECT SPEED SENSOR ROTOR

(a) Turn the ignition switch off.
(b) Remove the rear axle (See page AH-15).

(c) Check the rotor.
OK:
No scratches, cracks, oil, or foreign matter on the rotors.
NOTICE:
Check the speed sensor signal after cleaning or replacement (See page BC-11).

(d) Install the rear axle (See page AH-16).

NG → **CLEAN OR REPLACE SPEED SENSOR ROTOR**

OK

REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)

DTC	C0226/21	SFR Solenoid Circuit

DTC	C0236/22	SFL Solenoid Circuit

DTC	C0246/23	SRR Solenoid Circuit

DTC	C0256/24	SRL Solenoid Circuit

DESCRIPTION

These solenoids turn on when signals are received from the ECU and they control the pressure acting on the wheel cylinders thus controlling braking force.

DTC No.	DTC Detecting Condition	Trouble Area
C0226/21 C0236/22 C0246/23 C0256/24	Solenoid valve signal does not match the check result.	• Each solenoid circuit • Brake actuator assembly

BC

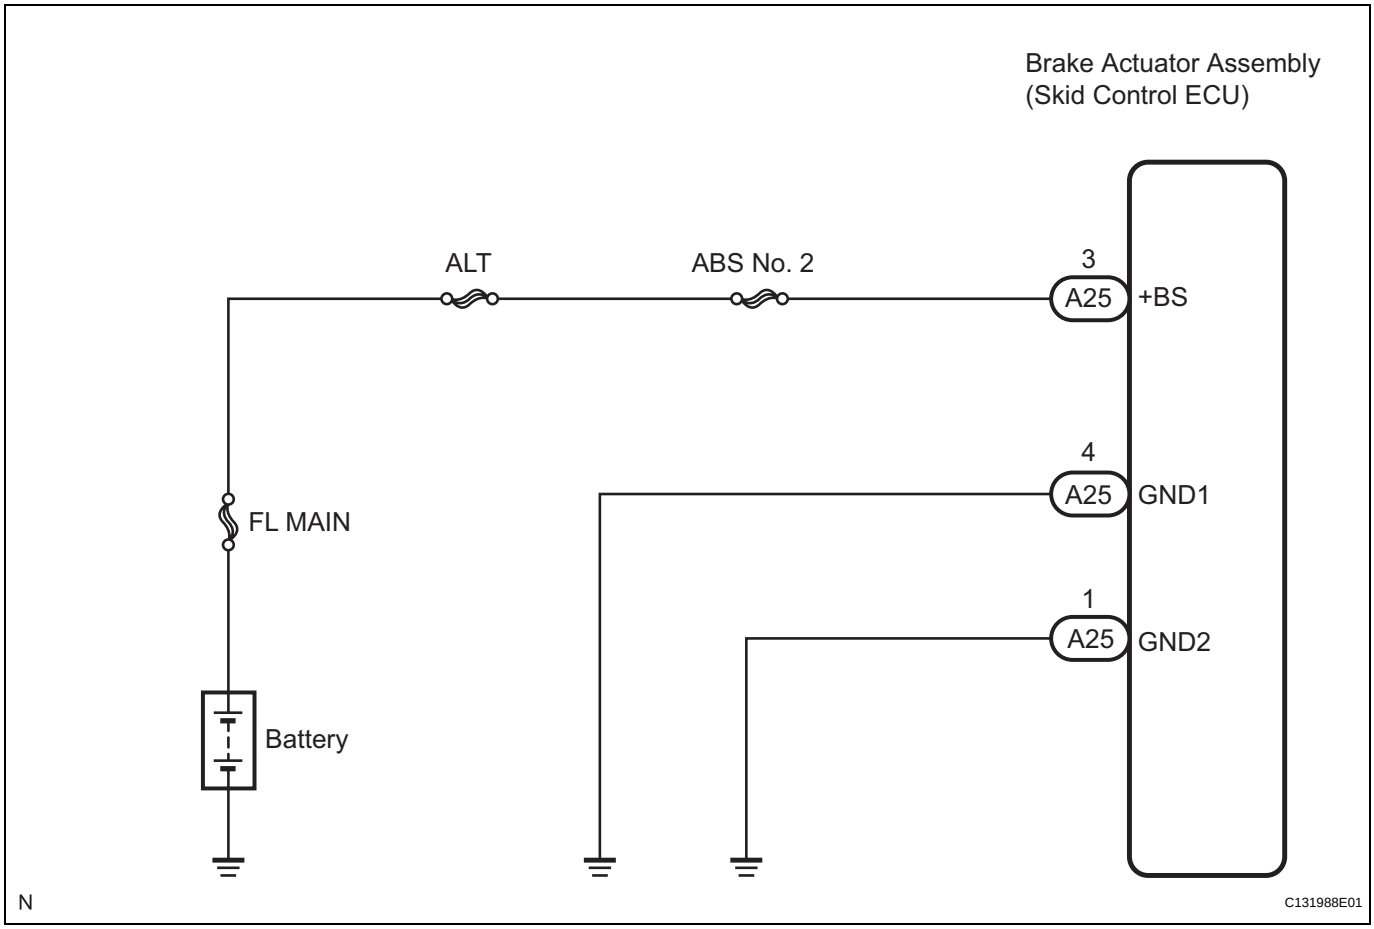
WIRING DIAGRAM



INSPECTION PROCEDURE

1	RECONFIRM DTC

HINT:
These codes are detected when a problem is identified in the brake actuator assembly.
The solenoid circuit is in the brake actuator assembly. Therefore, solenoid circuit inspection and solenoid unit inspection cannot be performed. Be sure to check if the DTC is output before replacing the brake actuator assembly.

(a) Clear the DTC (See page BC-21).
(b) Start the engine.
(c) Drive the vehicle at a speed of 12 mph (20 km/h) or more for 30 seconds or more.
(d) Check if the same DTC is recorded (See page BC-21).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

HINT:

- If the normal system code is output (the trouble code is not output), slightly jiggle the connectors, wire harness, and fuses of the brake actuator assembly. Make sure that no DTCs are output.
- If any DTCs are output while jiggling a connector or wire harness of the brake actuator (skid control ECU), inspect and repair the connector or wire harness.
- It is suspected that the DTCs were output due to a bad connection of the connector terminal.

B → **REPAIR BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

A

END

DTC	C0273/13	Open or Short Circuit in ABS Motor Relay Circuit

DESCRIPTION

The ABS motor relay supplies power to the ABS pump motor. While the ABS is activated, the ECU turns the motor relay on and operates the ABS pump motor.
If the voltage supplied to the motor relay (+BM) is below the DTCs detection threshold due to low voltage from the battery or alternator, the DTC may be stored.

DTC No.	DTC Detecting Condition	Trouble Area
C0273/13	When any of the following is detected: • When the motor relay is actuated, voltage is not supplied to the pump motor within 0.1 second. • When the motor relay is changed from ON to OFF, the remaining high voltage is more than 2 V for 1 second. • For 30 to 125 msec. after the motor relay is turned from ON to OFF, the remaining high voltage is out of range. The voltage is still out of range when the motor relay is turned from ON to OFF 3 times.	• ABS No. 1 fuse (Fusible link) • Wire harness (+BM circuit) • Brake actuator assembly (motor relay)

BC

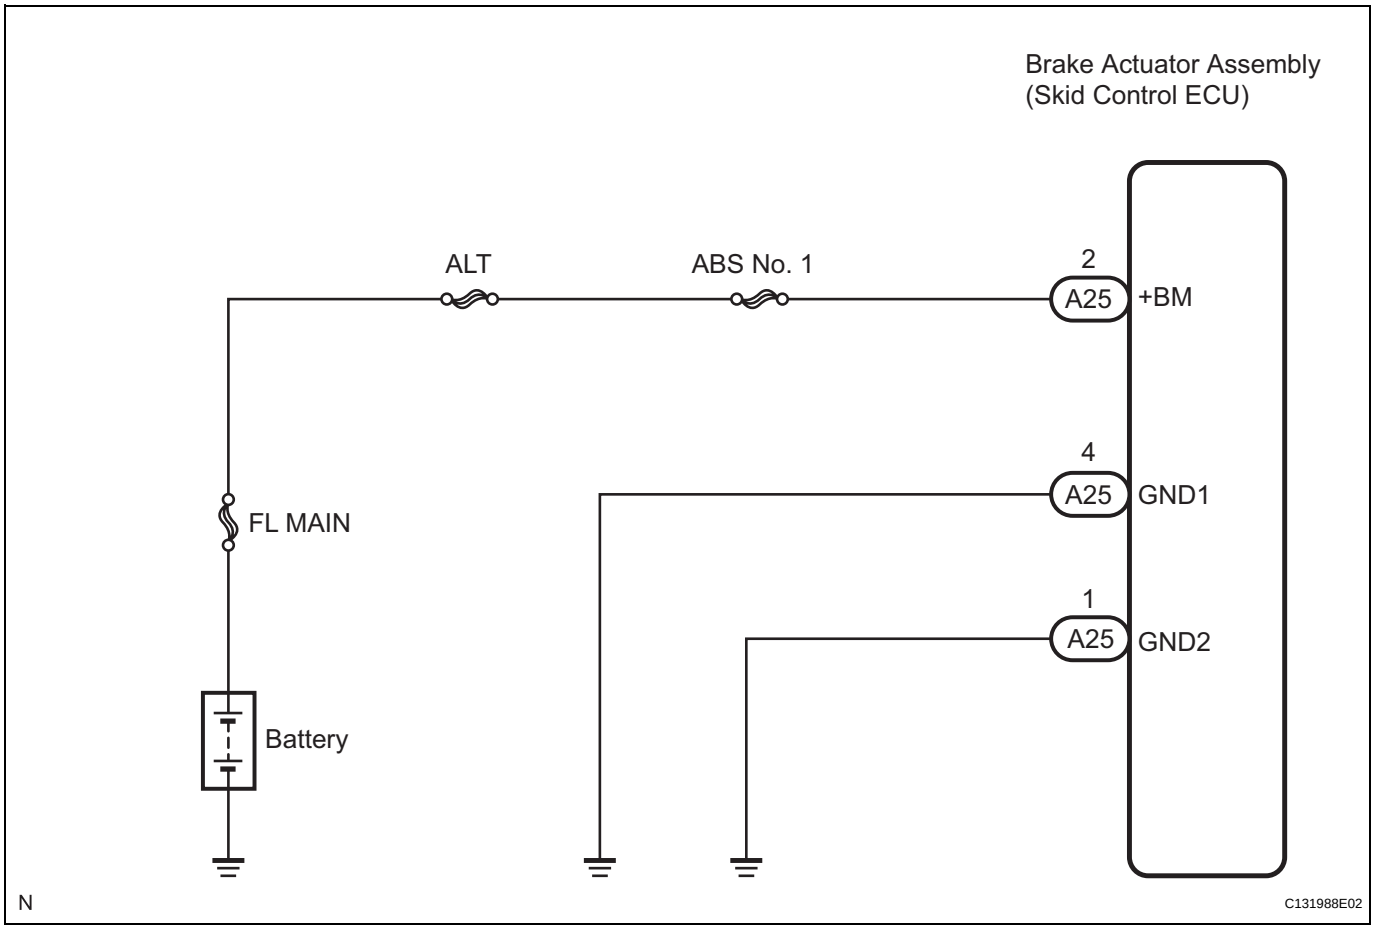
WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

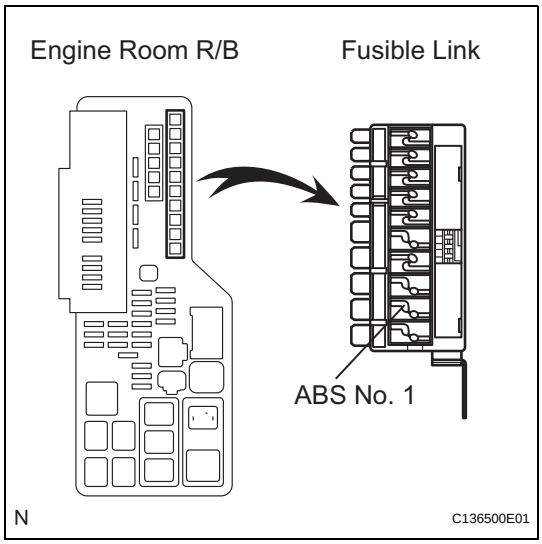
- When C1241/41 is output together with C0273/13, inspect and repair the trouble areas indicated by C1241/41 (See page BC-63).

- Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	INSPECT FUSIBLE LINK (ABS NO. 1 FUSE)



(a) Remove the fusible link from the engine room R/B.
(b) Check if the fusible link is melted.
OK:
The fusible link is not melted.
(c) Install the fusible link to the engine room R/B with the nut.

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

NG → **REPLACE FUSIBLE LINK**

OK

2	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (ABS MOTOR RELAY)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine.
(c) Select "ACTIVE TEST" on the intelligent tester (See page BC-25).

ACTIVE TEST: ABS

Item	Measurement Item / Range (Display)	Normal Condition
ABS MTR RELAY	Turns ABS motor relay ON / OFF	Operating sound of motor is heard

(d) Check the operating sound of the ABS motor relay when operating it with the intelligent tester.
OK:
The operating sound of the ABS motor relay should be heard.

Result

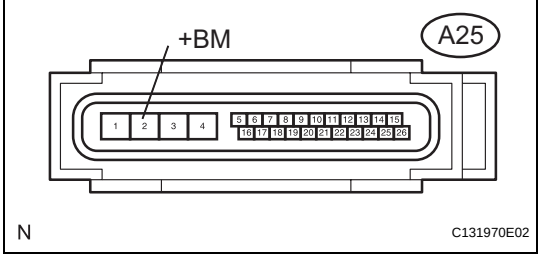
Result	Proceed to
The operating sound is not heard	A
The operating sound is heard	B

B → **Go to step 5**

A

3 INSPECT SKID CONTROL ECU CONNECTOR (+BM TERMINAL VOLTAGE)

Skid Control ECU (Harness Side Connector Front View):



(a) Disconnect the skid control ECU connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

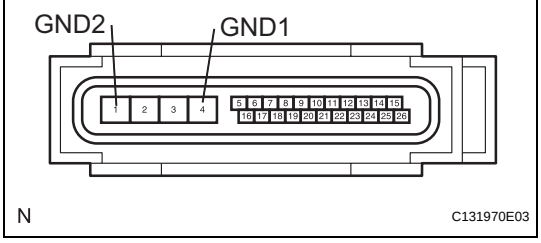
Tester Connection	Condition	Specified Condition
A25-2 (+BM) - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (+BM CIRCUIT)**

OK

4 INSPECT SKID CONTROL ECU CONNECTOR (GND TERMINAL CONTINUITY)

Skid Control ECU (Harness Side Connector Front View):



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
A25-4 (GND1) - Body ground	Below 1 Ω
A25-1 (GND2) - Body ground	Below 1 Ω

(b) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

5 RECONFIRM DTC

HINT:
This code is detected when a problem is identified in the brake actuator assembly.
The ABS motor relay is in the brake actuator assembly. Therefore, ABS motor relay inspection and motor relay unit inspection cannot be performed. Be sure to check if the DTC is output before replacing the brake actuator assembly.

(a) Clear the DTC (See page BC-21).
(b) Start the engine.
(c) Drive the vehicle at a speed of 12 mph (20 km/h) or more for 30 seconds or more.
(d) Check if the same DTC is recorded (See page BC-21).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTC is not output	A

Condition	Proceed to
DTC is output	B

HINT:

- If the normal system code is output (the trouble code is not output), slightly jiggle the connectors, wire harness, and fuses of the brake actuator assembly. Make sure that no DTCs are output.
- If any DTCs are output while jiggling a connector or wire harness of the brake actuator (skid control ECU), inspect and repair the connector or wire harness.
- It is suspected that the DTCs were output due to a bad connection of the connector terminal.

B → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

A

BC

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION) (See page BC-19)

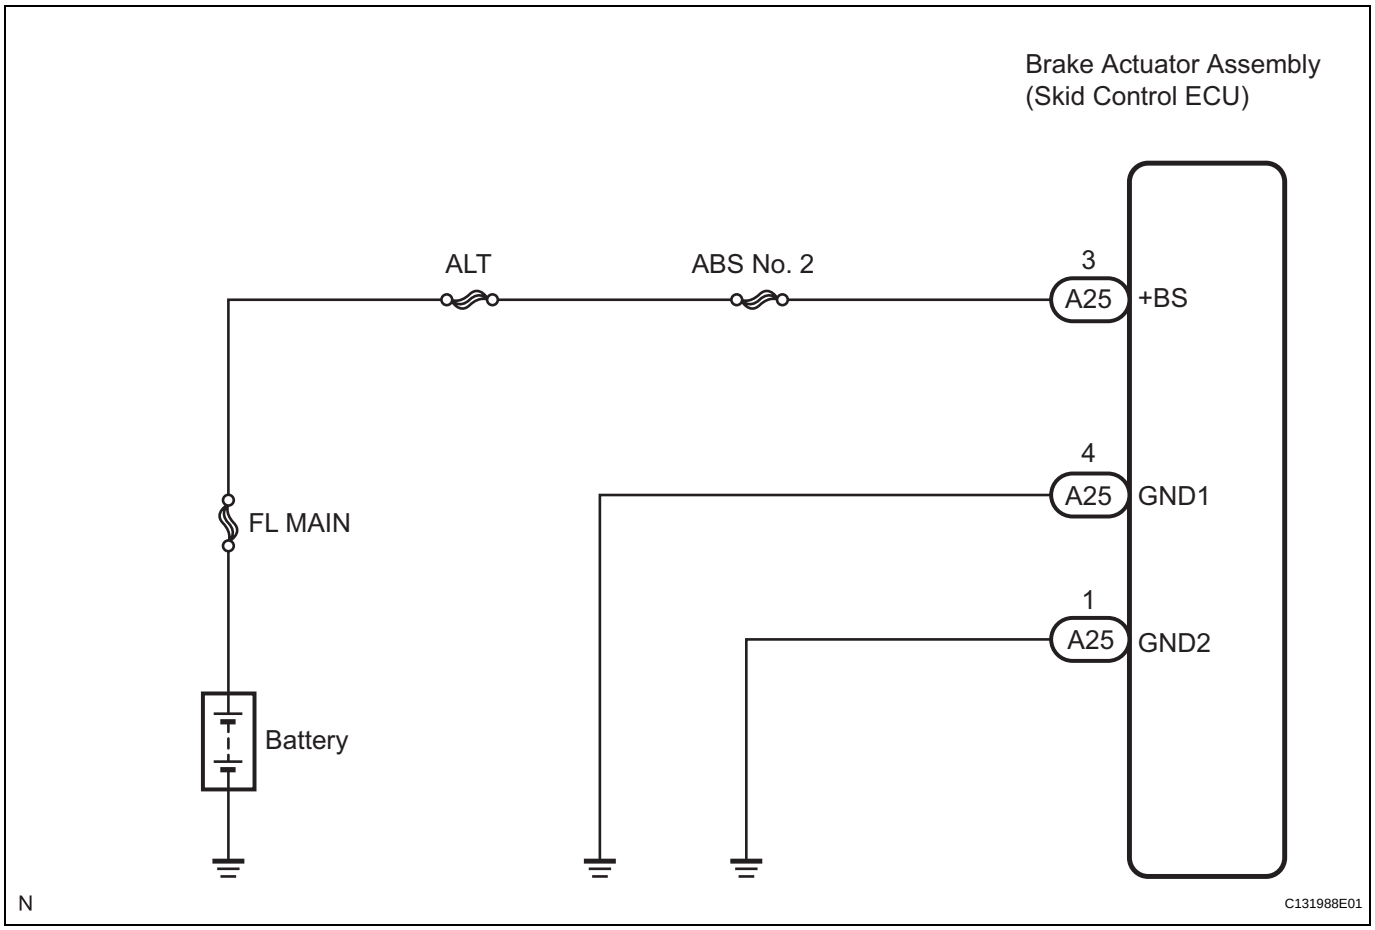
DTC	C0278/11	Open or Short Circuit in ABS Solenoid Relay Circuit

DESCRIPTION

This relay supplies power to each ABS solenoid. If the ABS initial check is OK after the ignition switch is turned on (IG), the skid control ECU will turn the ABS solenoid relay on.

DTC No.	DTC Detecting Condition	Trouble Area
C0278/11	When any of the following is detected: • 3 or more solenoid valves are found faulty and simultaneously valve supply voltage is detected to be abnormal. • Solenoid valve relay is not switched off. • Valve relay is stuck open even through the valve relay supply voltage is high.	• Wire harness (+BS circuit) • ABS No. 2 fuse (Fusible link) • Brake actuator assembly (Solenoid relay)

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

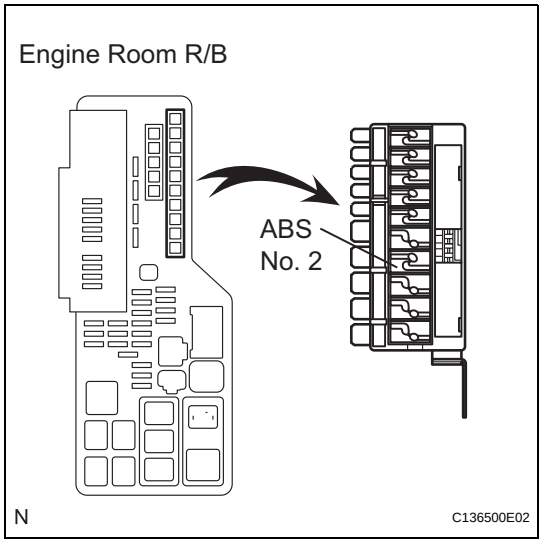
- When C1241/41 is output together with C0278/11, inspect and repair the trouble areas indicated by C1241/41 (See page BC-63).
- Check the condition of each related circuit before troubleshooting (See page IN-40).

1 INSPECT FUSIBLE LINK (ABS NO. 2 FUSE)



(a) Remove the fusible link from the engine room R/B.
(b) Check if the fusible link is melted.
OK:
The fusible link is not melted.
(c) Install the fusible link to the engine room R/B with the nut.

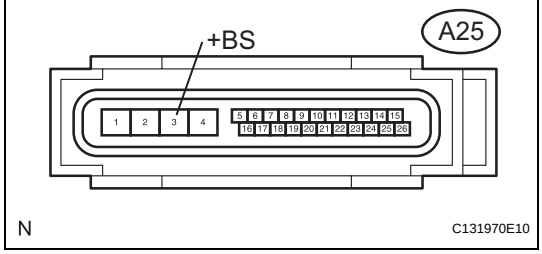
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

NG → **REPLACE FUSIBLE LINK**

OK

2 INSPECT SKID CONTROL ECU CONNECTOR (+BS CIRCUIT)

Skid Control ECU (Harness Side Connector Front View):



(a) Disconnect the skid control ECU connector.
(b) Measure the voltage according to the value(s) in the table below.
Standard voltage

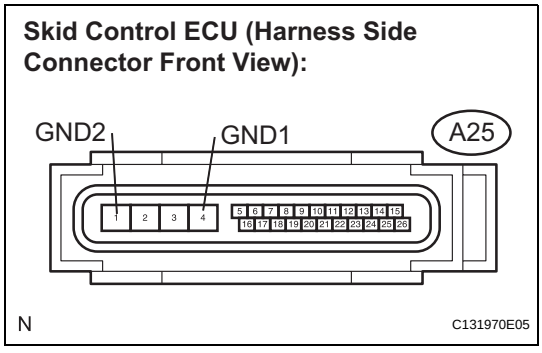
Tester Connection	Condition	Specified Condition
A25-3 (+BS) - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (+BS CIRCUIT)**

OK

3 INSPECT SKID CONTROL ECU CONNECTOR (GND TERMINAL CONTINUITY)

Skid Control ECU (Harness Side Connector Front View):



(a) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition
A25-4 (GND1) - Body ground	Below 1 Ω
A25-1 (GND2) - Body ground	Below 1 Ω

(b) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

4	RECONFIRM DTC

HINT:
This code is detected when a problem is identified in the brake actuator assembly.
The solenoid circuit is in the brake actuator assembly. Therefore, solenoid circuit inspection and solenoid unit inspection cannot be performed. Be sure to check if the DTC is output before replacing the brake actuator assembly.

(a) Clear the DTC (See page BC-21).
(b) Start the engine.
(c) Drive the vehicle at a speed of 12 mph (20 km/h) or more for 30 seconds or more.
(d) Check if the same DTC is recorded (See page BC-21).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

BC

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

HINT:
- If the normal system code is output (the trouble code is not output), slightly jiggle the connectors, wire harnesses, and fuses of the brake actuator assembly. Make sure that no DTCs are output.
- If any DTCs are output while jiggling a connector or wire harness of the brake actuator (skid control ECU), inspect and repair the connector or wire harness.
- It is suspected that the DTCs were output due to a bad connection of the connector terminal.

B → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

A

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION) (See page BC-19)

DTC	C1237/37	Speed Sensor Rotor Faulty

DESCRIPTION

The skid control ECU measures the speed of each wheel by receiving signals from the speed sensor. These signals are used for recognizing that all 4 wheels are operating properly.
Therefore, all wheel signals must be equal.

DTC No.	DTC Detecting Condition	Trouble Area
C1237/37	When any of the following is detected: • Wheel speed difference between the wheels. • Wheel sensor signal failure. • ABS control continues for 60 sec. or more.	• Brake actuator assembly (skid control ECU) • Speed sensor rotor (Front) • Rear axle hub and bearing assembly • Speed sensor • Speed sensor circuit • Tire and wheel size • Tire deformation

WIRING DIAGRAM

BC

BC

INSPECTION PROCEDURE

HINT:
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1	CHECK TIRES

(a) Check the size and condition of all 4 tires (See page TW-3).
HINT:
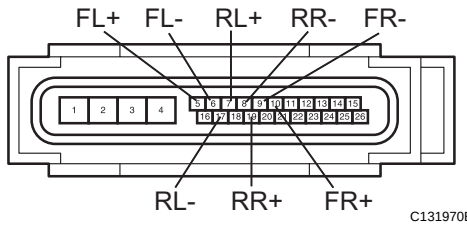
This DTC is output when tire deformation or a difference in tire size is detected.
OK:
The diameters of all 4 tires and air pressure are the same.

NG → **REPLACE TIRES SO THAT ALL 4 TIRES ARE THE SAME SIZE**

OK

2 INSPECT SPEED SENSOR AND SENSOR ROTOR SERRATIONS

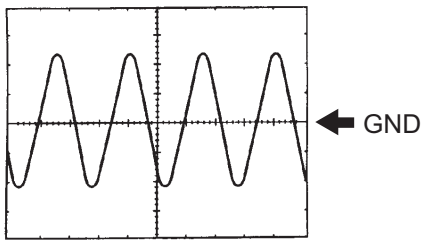
Skid Control ECU (Harness Side Connector Front View):



(a) Disconnect the skid control ECU connector.
(b) Connect the oscilloscope to each speed sensor terminal of the skid control ECU connector.
Terminals

Connector	Circuit
A25-5 (FL+) - A25-6 (FL-)	Front left speed sensor
A25-10 (FR+) - A25-9 (FR-)	Front right speed sensor
A25-7 (RL+) - A25-17 (RL-)	Rear left speed sensor
A25-19 (RR+) - A25-8 (RR-)	Rear right speed sensor

Normal Signal Waveform:



1 V / Division, 2 ms. / Division

(c) Check that a waveform is output when the tires are rotated (by the sensor circuit).
OK:
A waveform as shown in the figure should be output.
HINT:
- Each sensor circuit outputs the same waveform without noise.
- As vehicle speed (wheel rotation speed) increases, the width of the waveform narrows and the output voltage becomes greater.
- When noise is identified in the waveform on the oscilloscope, the erratic signals are generated due to rotor scratches, looseness or foreign matter attached to the speed sensor.

(d) Make sure that the waveform does not change while jiggling a connector or a wire harness.
OK:
The waveform does not change.
HINT:
If the waveform changes while jiggling a connector or a wire harness, there may be a malfunction in the connector or the wire harness.
(e) Connect the connector.

NG → **Go to step 4**

OK

3 RECONFIRM DTC

(a) Clear the DTC (See page BC-21).
(b) Start the engine.
(c) Drive the vehicle at a speed of 20 mph (32 km/h) or more for 60 seconds or more.
(d) Check if the same DTC is recorded (See page BC-21).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

A

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION) (See page BC-19)

4 CHECK SPEED SENSOR ROTOR

(a) Check the speed sensor rotor.
Front Speed Sensor Rotor: (See page DS-25)
Rear Speed Sensor Rotor: (See page AH-15)
OK:
No scratches or foreign matter on the rotors.
NOTICE:
Check the speed sensor signal after the cleaning/ replacement (See page BC-11).

NG → **CLEAN OR REPLACE SPEED SENSOR ROTOR**

OK

5 CHECK SPEED SENSOR TIP

(a) Remove each speed sensor.
(b) Check the speed sensor tip.
OK:
No scratches or foreign matter on the sensor tip.
NOTICE:
Check the speed sensor signal after the cleaning/ replacement (See page BC-11).
(c) Install speed sensor.

NG → **CLEAN OR REPLACE SPEED SENSOR**

OK

BC

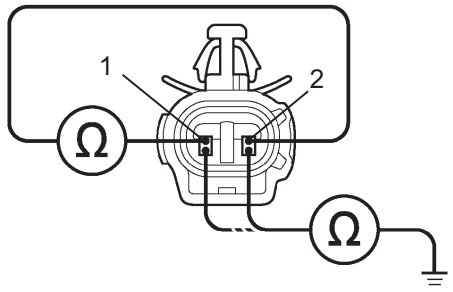
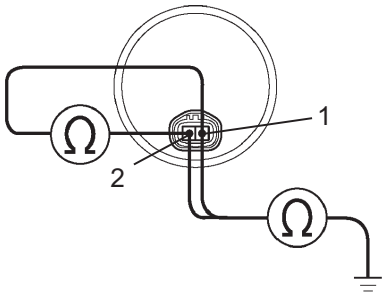
6	INSPECT EACH SPEED SENSOR

Front Speed Sensor:



Rear Speed Sensor:



C136027E01

(a) Disconnect each speed sensor connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

FRONT

Tester Connection	Condition	Specified Condition
A14-1 (FL+) - A14-2 (FL-)	Always	1.4 to 1.8 kΩ at 20°C (68°F)
A14-1 (FL+) - Body ground	Always	10 kΩ or higher
A14-2 (FL-) - Body ground	Always	10 kΩ or higher
A35-1 (FR+) - A35-2 (FR-)	Always	1.4 to 1.8 kΩ at 20°C (68°F)
A35-1 (FR+) - Body ground	Always	10 kΩ or higher
A35-2 (FR-) - Body ground	Always	10 kΩ or higher

REAR

Tester Connection	Condition	Specified Condition
g1-1 (RL+) - g1-2 (RL-)	Always	Below 2.2 kΩ
g1-1 (RL+) - Body ground	Always	10 kΩ or higher
g1-2 (RL-) - Body ground	Always	10 kΩ or higher
f1-1 (RR+) - f1-2 (RR-)	Always	Below 2.2 kΩ
f1-1 (RR+) - Body ground	Always	10 kΩ or higher
f1-2 (RR-) - Body ground	Always	10 kΩ or higher

(c) Connect the connector.

NOTICE:

Check the speed sensor signal after replacement (See page BC-11).

NG → **REPLACE EACH SPEED SENSOR**

OK

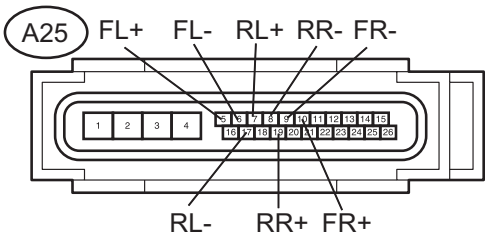
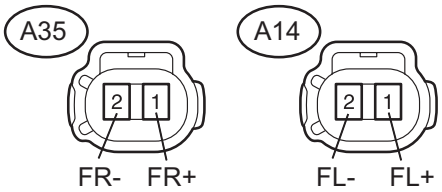
7 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU TO EACH SPEED SENSOR)

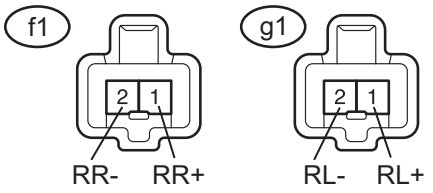
Skid Control ECU Harness Side Connector Front View:



Front Speed Sensor Harness Side Connector Front View:



Rear Speed Sensor Harness Side Connector Front View:



C136491E02

(a) Disconnect the skid control ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

FRONT

Tester Connection	Condition	Specified Condition
A25-5 (FL+) - A14-1 (FL+)	Always	Below 1 Ω
A25-6 (FL-) - A14-2 (FL-)	Always	Below 1 Ω
A25-10 (FR+) - A35-1 (FR+)	Always	Below 1 Ω
A25-9 (FR-) - A35-2 (FR-)	Always	Below 1 Ω
A25-5 (FL+) - Body ground	Always	10 kΩ or higher
A25-6 (FL-) - Body ground	Always	10 kΩ or higher
A25-10 (FR+) - Body ground	Always	10 kΩ or higher
A25-9 (FR-) - Body ground	Always	10 kΩ or higher

REAR

Tester Connection	Condition	Specified Condition
A25-7 (RL+) - g1-1 (RL+)	Always	Below 1 Ω
A25-17 (RL-) - g1-2 (RL-)	Always	Below 1 Ω
A25-19 (RR+) - f1-1 (RR+)	Always	Below 1 Ω
A25-8 (RR-) - f1-2 (RR-)	Always	Below 1 Ω
A25-7 (RL+) - Body ground	Always	10 kΩ or higher
A25-17 (RL-) - Body ground	Always	10 kΩ or higher
A25-19 (RR+) - Body ground	Always	10 kΩ or higher
A25-8 (RR-) - Body ground	Always	10 kΩ or higher

(c) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SKID CONTROL ECU TO EACH SPEED SENSOR)**

OK

8 RECONFIRM DTC

(a) Clear the DTC (See page BC-21).
(b) Start the engine.

BC

(c) Drive the vehicle at the speed of 20 mph (32 km/h) or more for at least 60 seconds.
(d) Check if the same DTC is recorded (See page BC-21).
HINT:
Reinstall the sensors, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTC (C1237/37) is not output	A
DTC (C1237/37) is output	B

B → **REPLACE BRAKE ACTUATOR ASSEMBLY (See page BC-432)**

A → **CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION) (See page BC-19)**

DTC	C1241/41	Low Battery Positive Voltage or Abnormally High Battery Positive Voltage

DESCRIPTION

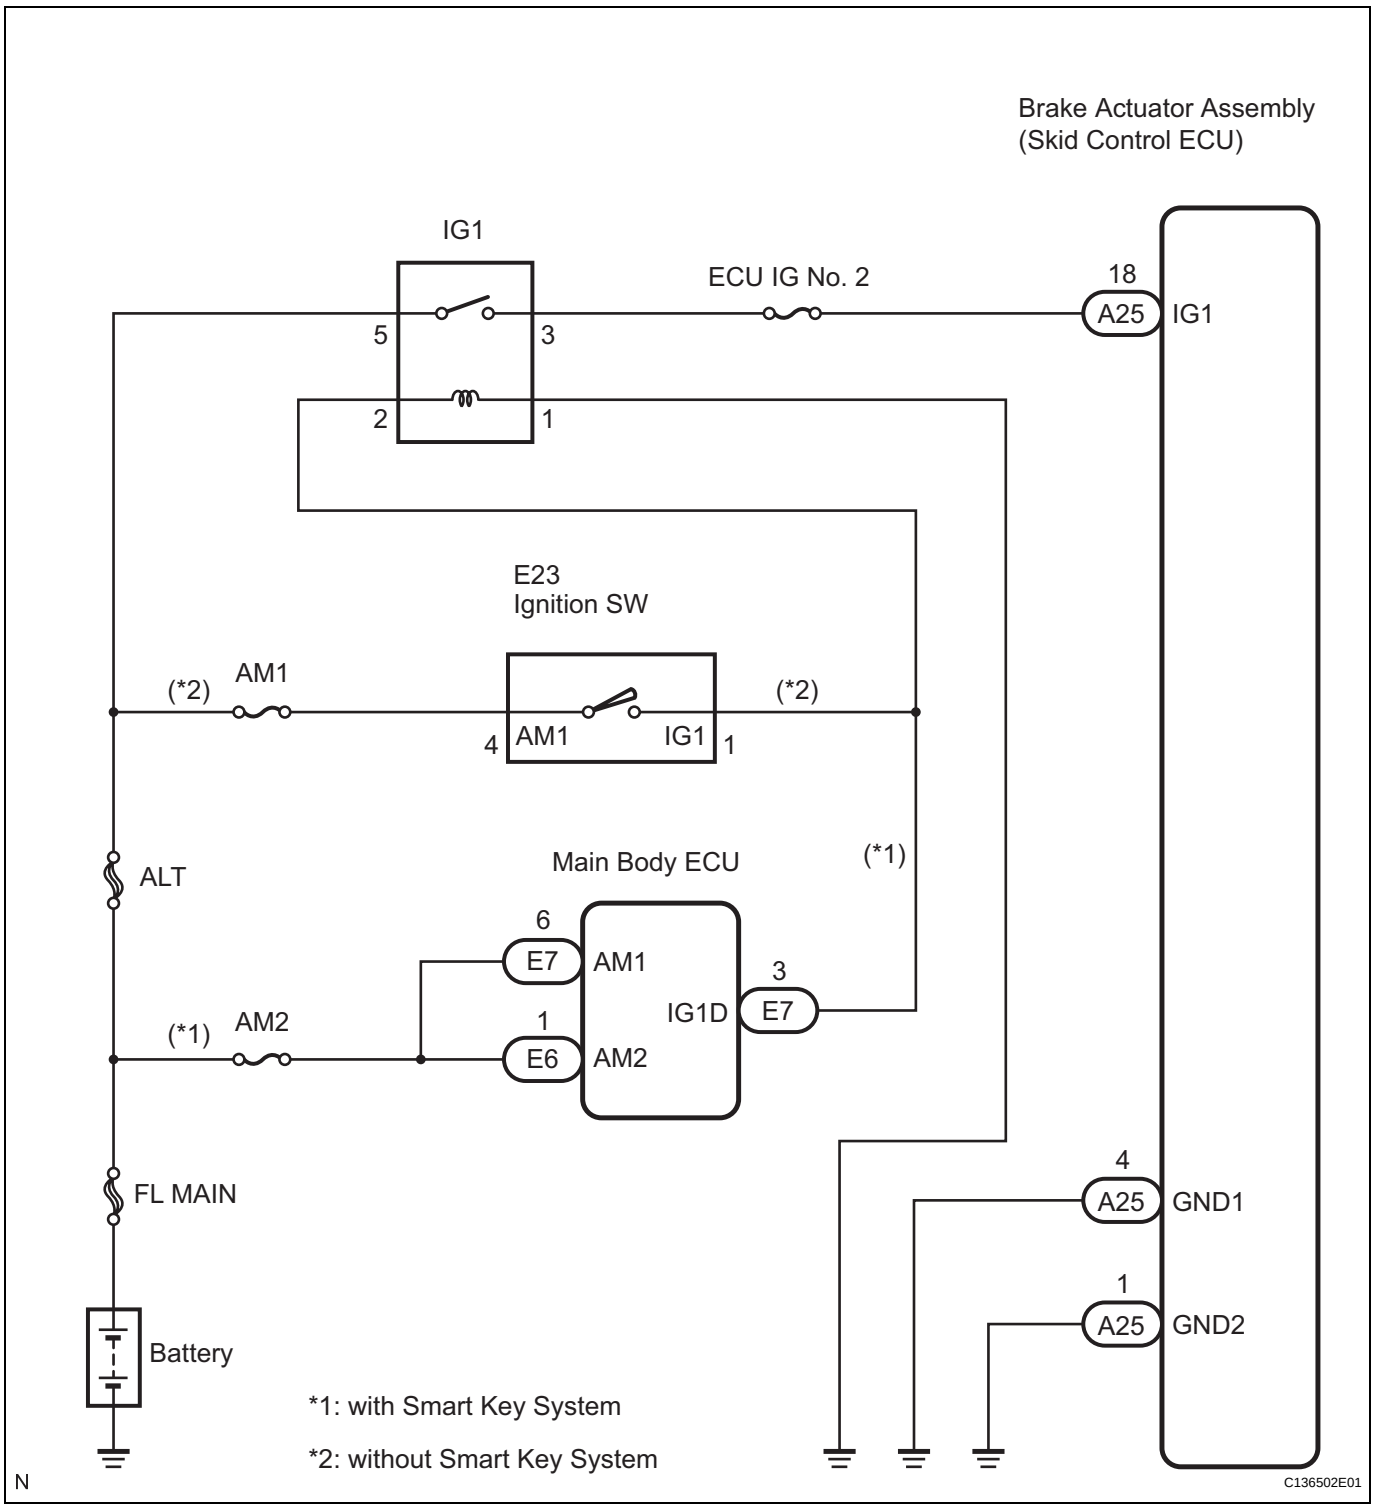
If a malfunction is detected in the power supply circuit of the brake actuator assembly (skid control ECU), the skid control ECU (housed in the actuator assembly) stores this DTC and the fail-safe function prohibits ABS operation (See page BC-24).

This DTC is output when the IG1 terminal voltage deviates from the normal condition due to a malfunction in the power supply or charging circuit such as the battery or alternator circuit, etc.

This DTC is cancelled when the IG1 terminal voltage returns to normal (only when the voltage returns to normal from a voltage lower than the specified value).

DTC No.	DTC Detecting Condition	Trouble Area
C1241/41	With vehicle speed more than 4 mph (6 km/h), when any of the following is detected: • Battery voltage is 16.9 V or more. • Battery voltage is 9.4 V or less when ABS does not operate. • Battery voltage is 9.2 V or less when ABS operates.	• Battery • Charging system • Power source circuit • Brake actuator assembly (Skid control ECU)

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

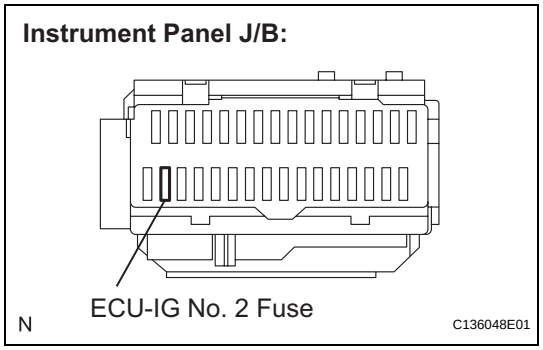
Check the condition of each related circuit connector before troubleshooting (See page IN-40).

1 INSPECT FUSE (ECU-IG NO. 2 FUSE)



(a) Remove the ECU-IG No. 2 fuse from the instrument panel J/B.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition
ECU-IG No. 2 fuse	Below 1 Ω (Continuity)

(c) Install the fuse.

NG → **REPLACE FUSE**

OK

2 INSPECT BATTERY

(a) Check the battery voltage.
Standard voltage:
11 to 14 V

NG → **INSPECT CHARGING SYSTEM**

OK

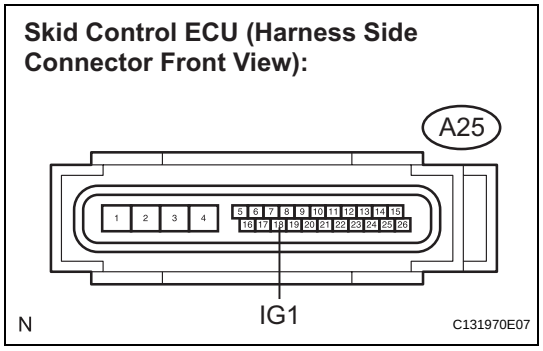
3 INSPECT SKID CONTROL ECU CONNECTOR (IG1 TERMINAL VOLTAGE)



(a) Disconnect the skid control ECU connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Condition	Specified Condition
A25-18 (IG1) - Body ground	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (IG1 CIRCUIT)**

OK

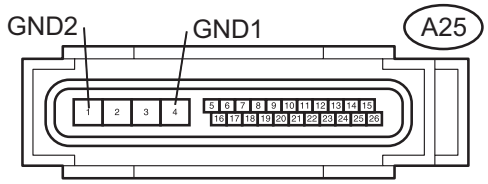
4 INSPECT SKID CONTROL ECU CONNECTOR (GND TERMINAL CONTINUITY)

Skid Control ECU (Harness Side Connector Front View):



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
A25-4 (GND1) - Body ground	Below 1 Ω
A25-1 (GND2) - Body ground	Below 1 Ω

(b) Connect the connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

BC

5 RECONFIRM DTC

(a) Clear the DTC (See page BC-21).
(b) Turn the ignition switch on (IG).
(c) Check if the same DTC is recorded (See page BC-21).
HINT:
